**Cc:** Emily Kerr <Emily.Kerr@ofina.on.ca>; Tomasz Bugajski <Tomasz.Bugajski@ofina.on.ca>; John Kim <John.Kim@ofina.on.ca>
**Subject:** RE: Cost Shifts in the Electricity Sector

Thanks.

We should be able to get some historical year-by-year OEPTC and NOEC and NIER numbers.

DRC amount forgone I think was a little higher in the original submission. And the OREC amount in the LRC submission earlier this month is now at $1.2.

Can we do comments/markups of Energy's slides too?

Ron

Ontario

MINISTRY OF
ENERGY

# Cost Shifts in Ontario's Electricity Sector

## Working Draft

November 2016

CONFIDENTIAL DRAFT

# Context

- Necessary investments in Ontario's electricity system have led to increased prices, prompting government to introduced a number of price mitigation programs for all consumer types.
  - In addition to existing rate mitigation programs, the 2016 Throne Speech announced a package of rate mitigation initiatives to address electricity prices for residential, commercial and industrial consumers.

- Ontario has a number of programs in place to manage residential electricity prices, including:
  - Ontario Electricity Support Program (OESP);
  - Rural or Remote Rate Protect (RRRP);
  - Northern Ontario Energy Credit (NOEC); and
  - Ontario Energy and Property Tax Credit (OEPTC).

- Ontario also has a number of programs in place to manage industrial electricity prices, including:
  - Industrial Conservation Initiative (ICI);
  - Industrial Electricity Incentive (IEI);
  - Industrial Accelerator Program (IAP);
  - saveONenergy for Business Program; and
  - Demand Response.

# Context (cont'd)

- Several programs in the electricity sector “shift costs” from one group of electricity consumers to another:
  - **Rural or Remote Rate Protect** (**RRRP)** is a longstanding program that reduces the delivery charge for rural electricity consumers and is paid for by all consumers in Ontario through a regulatory charge on bills.
  - **Ontario Electricity Support Program (OESP)** is funded via a regulatory charge on consumer bills and provides support for qualifying low income electricity consumers.
  - **Industrial Conservation Initiative (ICI)** empowers large consumers to lower their costs by reducing their demand during peak hours. In the process, ICI shifts costs from large electricity consumers to all other consumers in Ontario.
  - **Industrial Electricity Incentive** (**IEI**) program, offers reduced electricity prices for companies starting or expanding operations in Ontario. All electricity consumers in Ontario pay for the price reduction that IEI participants receive.

# Cost Shifts in Ontario's Electricity Sector

- The tables on the right show the estimated cost shifts that result from existing government programs.
- ICI has had the largest cost shift of all the programs, due to the large size of Global Adjustment (GA) and the way that it is recovered from consumer classes.
- RRRP and OESP impact the regulatory line on consumer bills, while ICI, IEI and conservation affect GA (i.e., Electricity line on bills of Regulated Price Plan consumers).

**Cost Shift Impacts - Residential Bill**

*Typical 750 kWh/month Toronto Hydro consumer*

| *$/month* | 2011 | 2012 | 2013 | 2014 | 2015 | 2016 |
|---|---|---|---|---|---|---|
| ICI | 2.65 | 3.25 | 3.88 | 3.53 | 4.75 | 4.77 |
| RRRP | 0.90 | 0.82 | 0.84 | 0.92 | 0.93 | 0.94 |
| OESP | - | - | - | - | - | 0.84 |
| Conservation | 1.85 | 1.92 | 2.00 | 1.58 | 2.43 | 2.45 |
| IEI | - | - | 0.08 | 0.09 | 0.11 | 0.12 |
| **Total** | **5.41** | **5.99** | **6.81** | **6.13** | **8.21** | **9.12** |

**Cost Shift Impacts - Industrial Bill**

*Typical Class A consumer*

| *$/MWh* | 2011 | 2012 | 2013 | 2014 | 2015 | 2016 |
|---|---|---|---|---|---|---|
| ICI | -22.17 | -26.36 | -30.29 | -25.91 | -33.79 | -33.92 |
| RRRP | 1.20 | 1.10 | 1.12 | 1.23 | 1.24 | 1.25 |
| OESP | - | - | - | - | - | 1.13 |
| Conservation | 1.53 | 1.59 | 1.66 | 1.31 | 2.01 | 2.02 |
| IEI | - | - | 0.07 | 0.08 | 0.09 | 0.10 |
| **Total** | **-19.43** | **-23.67** | **-27.44** | **-23.29** | **-30.45** | **-29.43** |

**Note:** OESP did not come into effect until 2016. The 2016 values represent forecasts and are subject to change.

# Cost Shifts in Ontario's Electricity Sector (cont'd)

- The table on the right shows the total cost for various government electricity programs. These programs are currently funded through the electricity system ratebase.

- Funding of these programs through the fiscal plan would remove these costs from the electricity system (i.e., Placing these costs on the taxbase).

**Cost of Programs**

*By government program*

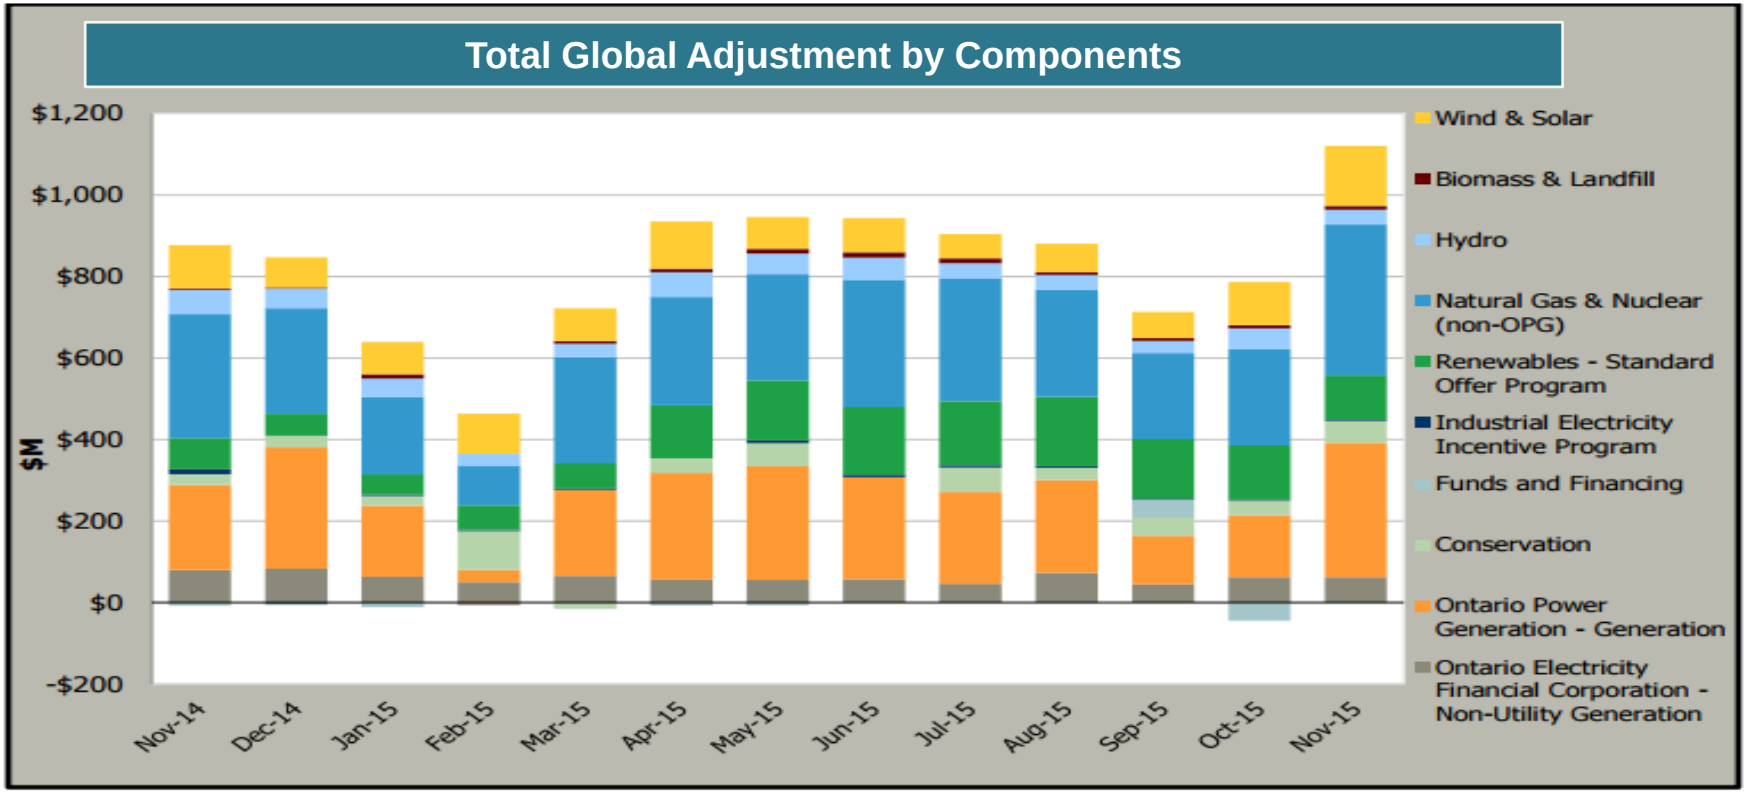
| *$M* | 2011 | 2012 | 2013 | 2014 | 2015 | 2016 |
|---|---|---|---|---|---|---|
| ICI | 506 | 615 | 736 | 670 | 890 | 893 |
| RRRP | 172 | 156 | 159 | 176 | 174 | 176 |
| OESP | - | - | - | - | - | 158 |
| Conservation | 329 | 339 | 354 | 280 | 425 | 428 |
| IEI | - | - | 15 | 16 | 18 | 19 |

- For example, removing the roughly $900 million of program cost from the Industrial Conservation Initiative (ICI) program would save the typical residential electricity consumer $4.77 per month in 2016.

**Note:** OESP did not come into effect until 2016. The 2016 values represent forecasts and are subject to change.

# Total Components of Global Adjustment

- Global Adjustment (GA) is a market mechanism that recovers costs from electricity consumers, including the cost of almost all conservation programs in the province (i.e., approximately half a billion dollars in 2016).



**Source:** IESO Monthly Market Report (November 2015)

# Taxpayer Funded Electricity Price Mitigation

| ($M) | 2011-12 | 2012-13 | 2013-14 | 2014-15 | 2015-16 | 2016-17[1] | 2017-18[1] |
|---|---|---|---|---|---|---|---|
| OCEB | 1,033 | 994 | 1,006 | 1,078 | 860 | - | - |
| OREC | - | - | - | - | - | 300 | 1,000 |
| Ending DRC[2] | - | - | - | - | 75 | 300 | 300 |
| NIERP | 120 | 120 | 115 | 108 | 120 | 120 | 120 |
| NOEC | 23 | 24 | 25 | 24 | 26 | 25 | 25 |
| OEPTC[2] | 445 | 445 | 445 | 445 | 445 | 445 | 445 |
| TOTAL | 1,621 | 1,583 | 1,591 | 1,654 | 1,526 | 1,190 | 1,890 |

1. 2016-17 onwards based on forecasted numbers
2. 2015-16 estimated for 3 months of reduced DRC revenue
3. OEPTC amounts in all years based on estimates of Energy component of the rebate.

OCEB – Ontario Clean Energy Benefit
OREC – Ontario Rebate for Electricity Consumers
DRC – Debt Retirement Charge
NIERP – Northern Ontario Electricity Rate Program
NOEC – Northern Ontario Energy Credit
OEPTC – Ontario Energy and Property Tax Credit

- The table above shows the annual amount of taxpayer funded electricity price mitigation from 2011 – 2017.
- From 2011-12 to 2015-16 there has been an annual fiscal impact of approximately $1.6 billion due to electricity price mitigation programs.
- In 2016-17, the fiscal impact due to electricity price mitigation programs is estimated at approximately $1,190 million.
- In 2017-18, due primarily to the start of the Ontario Rebate for Electricity Consumers, the expected fiscal impact due to electricity price mitigation programs is approximately $1.9 billion.

DRAFT

# Additional Background on Taxpayer funded Electricity Price Mitigation

| Program | Annual Fiscal Impacts ($M) | Date | Details |
|---|---|---|---|
| **Ontario Clean Energy Benefit (OCEB)** | ~1,000 | Jan 1 2011 to Dec 31, 2015 | OCEB provided over four million residential customers, and over 400,000 farm, small business and other small users with a benefit equal to 10 per cent of the total cost of electricity on their bills, including tax. Effective September 1, 2012, electricity consumption eligible for the 10 per cent benefit was capped at the first 3,000 kWh of electricity consumed per month, and provided a full 10 per cent benefit to almost all residential customers and most small retail businesses.<br><br>OCEB expired December 31, 2015, as planned. OCEB was put in place following the implementation of the Harmonised Sales Tax (HST). Unlike the previous provincial Retail Sales Tax (RST), the HST (and GST) included electricity in the taxable base. |
| **Ending DRC from Residential Bills** | ~300 | Jan 1, 2016 to Mar 31, 2018 | The government removed the Debt Retirement Charge (DRC) from residential electricity users' bills as of January 1, 2016.<br><br>This is saving a typical residential user about $70 each year and meant ending the DRC earlier for these users than otherwise provided for in the *Electricity Act, 1998*. |
| **Ontario Rebate for Electricity Consumers (OREC)** | ~1,000 | Jan 1, 2017 onward | This ongoing program will rebate -- directly on consumers' residential electricity bills -- an amount equal to the provincial portion of the Harmonized Sales Tax (HST), an eight per cent savings. |
| **Northern Industrial Electricity Rate Program** | 120 | March 2010 | The Northern Industrial Electricity Rate (NIER) was extended in 2012 for an additional three-year term, effective April 1, 2013, and expiring March 31, 2016, with an allocation up to $120 million per year.<br><br>Qualifying participants receive a rebate of two cents per kilowatt-hour (kWh) up to a maximum of $20 million per year per company.<br><br>NIER was initially established as a three-year program in Budget 2010 and effective as of April 1, 2010, to provide an estimated $150 million per year to eligible large industrial companies in northern Ontario. |
| **Northern Ontario Energy Credit** | 25 | Budget 2010 Announcement | Delivered as part of the Ontario Trillium Benefit, provides individuals living in northern Ontario with a credit of up to $146 per year for the 2016 benefit year, and families up to $224.[1] |
| **Ontario Energy Property Tax Credit** | 445 | Budget 2010 Announcement | Delivered as part of the Ontario Trillium Benefit, provides up to $1,008 per year for low-to moderate-income individuals and families, and up to $1,148 for qualifying seniors. [1] |

1. Both the energy portion of the Ontario Energy and Property Tax Credit (OEPTC) and NOEC were introduced/enhanced following the introduction of the HST and have a significant annual fiscal cost (totalling about $500 million annually).

DRAFT

# Timeline - Taxpayer funded Electricity Price Mitigation

**Budget 2010: OEPTC, NOEC Proposed as part of the Ontario Trillium Benefit**

*In the 2011 Budget, the government combined the payments of three existing tax credits — the Ontario Sales Tax Credit, the Ontario Energy and Property Tax Credit, and the Northern Ontario Energy Credit — to create the OTB.*
*The OTB is paid in monthly instalments throughout the year, which helps people meet their expenses as bills arrive.*

**Ontario Clean Energy Benefit** (Jan 1 2011 to Dec 31 2015)

*The OCEB was introduced in the 2010 Ontario Economic Outlook and Fiscal Review to help consumers transition to a cleaner electricity system. As set out in legislation, the OCEB ended on December 31, 2015. The Province has introduced rate mitigation measures to be implemented after December 31, 2015.*

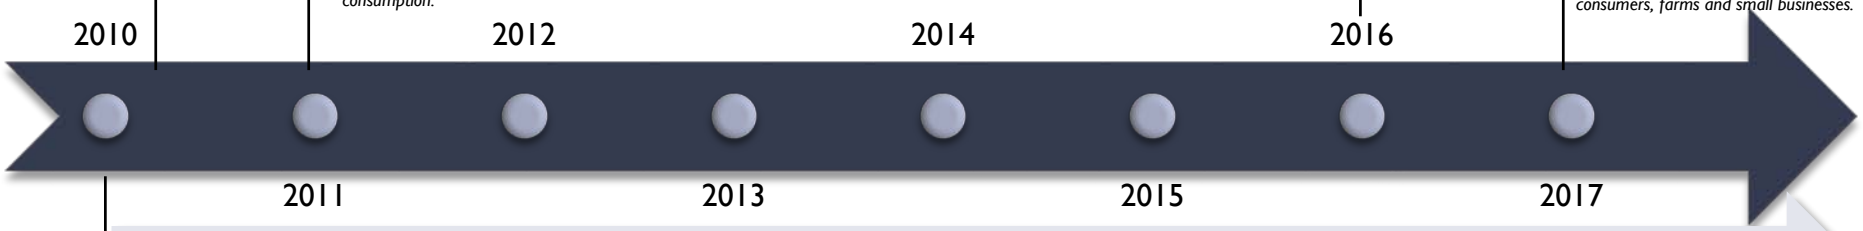
*OCEB provided over four million residential customers, and over 400,000 farm, small business and other small users with a benefit equal to 10 per cent of the total cost of electricity on their bills, including tax, for the first 3,000 kilowatt-hours (kWh) of monthly electricity consumption.*

**Removing DRC from Residential Bills**

*As part of its commitment to reduce electricity cost pressures, the government has removed the Debt Retirement Charge (DRC) from residential electricity users' bills beginning on January 1, 2016. This will save a typical residential user about $70 each year and will mean ending the DRC earlier for these users than otherwise provided for in the Electricity Act, 1998.*

**Ontario Rebate for Electricity Consumers**

*As of January 1, 2017, OREC will reduce electricity costs by an amount equal to the provincial portion of the HST for about five million residential consumers, farms and small businesses.*



**Northern Industrial Electricity Rate Program**

## History of Northern Industrial Relief

**November 2006**
*The Ontario government announced the Northern Pulp and Paper Electricity Transition Program (NPPETP), a three-year $140 million, to be effective retroactively to October 1, 2006*

**Budget 2009**
*The government announced extension of the NPPETP by one year providing about $58 million with electricity price rebates of 1.8 cents/kWh.*

**Budget 2010**
*The government announced the NIER program, with a projected fiscal cost of $150 million per year, to provide electricity price rebates for qualifying large industrial facilities in Northern Ontario. An additional $21.8 million allocated for existing NPPETP in 2010-11 to be integrated with NIER.*

**September 2010**
*Transition from NPPETP to NIER: pulp and paper mills participating in NPPETP continued to receive the NPPETP rebate of 1.8 cents/kWh until September 30, 2010, with those qualifying for NIER receiving a top-up rebate of 0.2 cents/kWh.*

**December 2012**
*The government announced the extension of the NIER for three years, capping the rebates to a maximum of 2011-12 consumptions levels or $20 million, whichever is lower.*

Hi,

I made some changes in the attached. Would you want to include a table showing the taxpayer funded amounts annually, similar to the table Energy has on slide 5? I have included a draft in the attached.

---

**From:** Shajee Kathirgamanathan
**Sent:** Monday, November 21, 2016 3:26 PM
**To:** Emily Kerr <Emily.Kerr@ofina.on.ca>
**Cc:** John Kim <John.Kim@ofina.on.ca>
**Subject:** FW: Cost Shifts in the Electricity Sector

Hi Emily,

We drafted a table to outline a list of electricity price mitigation programs with fiscal impacts. I'm still working on a timeline, will have that ready shortly. In the meantime just wanted to share this with you.

Please see file attached or found here:
S:\Users\CEF\Hydro 2016\Electricity Prices\Cost Shifts\Cost Shifting - Sent to MO on 2016-11-18 - w CEFD Slides v2-Table.pptx

If you have any comments/issues please let us know.

Thanks,
Shajee

# Cost Shifts in Ontario's Electricity Sector

## Working Draft

November 2016

CONFIDENTIAL DRAFT

# Context

- Necessary investments in Ontario's electricity system have led to increased prices, prompting government to introduced a number of price mitigation programs for all consumer types.
  - In addition to existing rate mitigation programs, the 2016 Throne Speech announced a package of rate mitigation initiatives to address electricity prices for residential, commercial and industrial consumers.

- Ontario has a number of programs in place to manage residential electricity prices, including:
  - Ontario Electricity Support Program (OESP);
  - Rural or Remote Rate Protect (RRRP);
  - Northern Ontario Energy Credit (NOEC); and
  - Ontario Energy and Property Tax Credit (OEPTC).

- Ontario also has a number of programs in place to manage industrial electricity prices, including:
  - Industrial Conservation Initiative (ICI);
  - Industrial Electricity Incentive (IEI);
  - Industrial Accelerator Program (IAP);
  - saveONenergy for Business Program; and
  - Demand Response.

# Context (cont'd)

- Several programs in the electricity sector “shift costs” from one group of electricity consumers to another:
  - **Rural or Remote Rate Protect** (**RRRP)** is a longstanding program that reduces the delivery charge for rural electricity consumers and is paid for by all consumers in Ontario through a regulatory charge on bills.
  - **Ontario Electricity Support Program (OESP)** is funded via a regulatory charge on consumer bills and provides support for qualifying low income electricity consumers.
  - **Industrial Conservation Initiative (ICI)** empowers large consumers to lower their costs by reducing their demand during peak hours. In the process, ICI shifts costs from large electricity consumers to all other consumers in Ontario.
  - **Industrial Electricity Incentive** (**IEI**) program, offers reduced electricity prices for companies starting or expanding operations in Ontario. All electricity consumers in Ontario pay for the price reduction that IEI participants receive.

# Cost Shifts in Ontario's Electricity Sector

- The tables on the right show the estimated cost shifts that result from existing government programs.
- ICI has had the largest cost shift of all the programs, due to the large size of Global Adjustment (GA) and the way that it is recovered from consumer classes.
- RRRP and OESP impact the regulatory line on consumer bills, while ICI, IEI and conservation affect GA (i.e., Electricity line on bills of Regulated Price Plan consumers).

**Cost Shift Impacts - Residential Bill**

*Typical 750 kWh/month Toronto Hydro consumer*

| *$/month* | 2011 | 2012 | 2013 | 2014 | 2015 | 2016 |
|---|---|---|---|---|---|---|
| ICI | 2.65 | 3.25 | 3.88 | 3.53 | 4.75 | 4.77 |
| RRRP | 0.90 | 0.82 | 0.84 | 0.92 | 0.93 | 0.94 |
| OESP | - | - | - | - | - | 0.84 |
| Conservation | 1.85 | 1.92 | 2.00 | 1.58 | 2.43 | 2.45 |
| IEI | - | - | 0.08 | 0.09 | 0.11 | 0.12 |
| **Total** | **5.41** | **5.99** | **6.81** | **6.13** | **8.21** | **9.12** |

**Cost Shift Impacts - Industrial Bill**

*Typical Class A consumer*

| *$/MWh* | 2011 | 2012 | 2013 | 2014 | 2015 | 2016 |
|---|---|---|---|---|---|---|
| ICI | -22.17 | -26.36 | -30.29 | -25.91 | -33.79 | -33.92 |
| RRRP | 1.20 | 1.10 | 1.12 | 1.23 | 1.24 | 1.25 |
| OESP | - | - | - | - | - | 1.13 |
| Conservation | 1.53 | 1.59 | 1.66 | 1.31 | 2.01 | 2.02 |
| IEI | - | - | 0.07 | 0.08 | 0.09 | 0.10 |
| **Total** | **-19.43** | **-23.67** | **-27.44** | **-23.29** | **-30.45** | **-29.43** |

**Note:** OESP did not come into effect until 2016. The 2016 values represent forecasts and are subject to change.

# Cost Shifts in Ontario's Electricity Sector (cont'd)

- The table on the right shows the total cost for various government electricity programs. These programs are currently funded through the electricity system ratebase.

- Funding of these programs through the fiscal plan would remove these costs from the electricity system (i.e., Placing these costs on the taxbase).

**Cost of Programs**

*By government program*

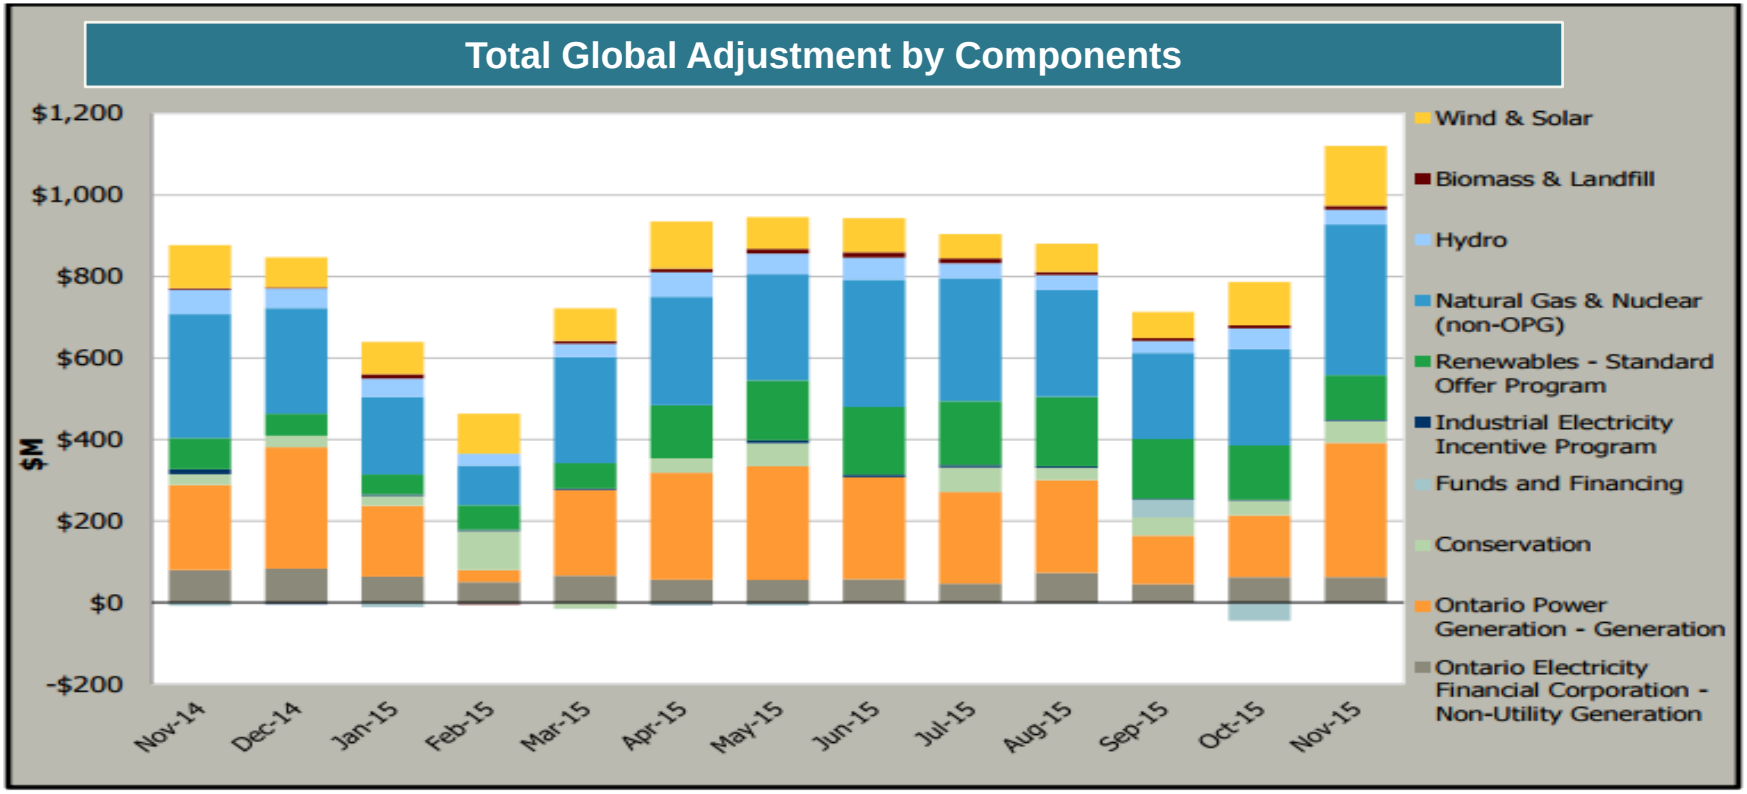
| *$M* | 2011 | 2012 | 2013 | 2014 | 2015 | 2016 |
|---|---|---|---|---|---|---|
| ICI | 506 | 615 | 736 | 670 | 890 | 893 |
| RRRP | 172 | 156 | 159 | 176 | 174 | 176 |
| OESP | - | - | - | - | - | 158 |
| Conservation | 329 | 339 | 354 | 280 | 425 | 428 |
| IEI | - | - | 15 | 16 | 18 | 19 |

- For example, removing the roughly $900 million of program cost from the Industrial Conservation Initiative (ICI) program would save the typical residential electricity consumer $4.77 per month in 2016.

**Note:** OESP did not come into effect until 2016. The 2016 values represent forecasts and are subject to change.

# Total Components of Global Adjustment

- Global Adjustment (GA) is a market mechanism that recovers costs from electricity consumers, including the cost of almost all conservation programs in the province (i.e., approximately half a billion dollars in 2016).



**Source:** IESO Monthly Market Report (November 2015)

# Taxpayer Funded Electricity Price Mitigation

| ($M) | 2011 | 2012 | 2013 | 2014 | 2015 | 2016 | 2017 |
|---|---|---|---|---|---|---|---|
| **OCEB** | 1,000 | 1,000 | 1,000 | 1,000 | 1,000 | N/A | N/A |
| **OREC** | N/A | N/A | N/A | N/A | N/A | N/A | 1,000 |
| **Ending DRC** | | | | | | 300 | 300 |
| **NIERP** | 120 | 120 | 120 | 120 | 120 | 120 | 120 |
| **NOEC** | 25 | 25 | 25 | 25 | 25 | 25 | 25 |
| **OEPTC** | 445 | 445 | 445 | 445 | 445 | 445 | 445 |
| **Total** | **1,590** | **1,590** | **1,590** | **1,590** | **1,590** | **890** | **1,890** |

OCEB – Ontario Clean Energy Benefit
OREC – Ontario Rebate for Electricity Consumers
DRC – Debt Retirement Charge
NIERP – Northern Ontario Electricity Rate Program
NOEC – Northern Ontario Energy Credit
OEPTC – Ontario Energy and Property Tax Credit

- The table above shows the annual amount of taxpayer funded electricity price mitigation from 2011 – 2017.
- From 2011 – 2015 there has been an annual fiscal impact of approximately $1.6 billion due to electricity price mitigation programs.
- In 2016, the fiscal impact due to electricity price mitigation programs is estimated at approximately $900 million.
- In 2017, due primarily to the start of the Ontario Rebate for Electricity Consumers, the expected fiscal impact due to electricity price mitigation programs is approximately $1.9 billion.

DRAFT

# Additional Background on Taxpayer funded Electricity Price Mitigation

| Program | Annual Fiscal Impacts ($M) | Date | Details |
|---|---|---|---|
| **Ontario Clean Energy Benefit (OCEB)** | ~1,000 | Jan 1 2011 to Dec 31, 2015 | OCEB provided over four million residential customers, and over 400,000 farm, small business and other small users with a benefit equal to 10 per cent of the total cost of electricity on their bills, including tax. Effective September 1, 2012, electricity consumption eligible for the 10 per cent benefit was capped at the first 3,000 kWh of electricity consumed per month, and provided a full 10 per cent benefit to almost all residential customers and most small retail businesses.<br><br>~~OCEB was a responsible way of helping Ontario families through the transition to a more reliable and cleaner electricity system, with the monthly cap balancing the fiscal implications of providing electricity relief.~~<br><br>~~Ontario Clean Energy Benefit (~~OCEB~~)~~ expired December 31, 2015, as ~~part of the originally~~ planned. OCEB was ~~also~~ put in place following the implementation of the Harmonised Sales Tax (HST). Unlike the previous provincial Retail Sales Tax (RST), the HST (and GST) included electricity in the taxable base. |
| **Ending DRC from Residential Bills** | ~300 | Jan 1, 2016 to Mar 31, 2018 | ~~As part of its commitment to reduce electricity cost pressures,~~ The government ~~has~~ removed the Debt Retirement Charge (DRC) from residential electricity users' bills as of January 1, 2016.<br><br>This is saving a typical residential user about $70 each year and meant ending the DRC earlier for these users than otherwise provided for in the *Electricity Act, 1998*. |
| **Ontario Rebate for Electricity Consumers (OREC)** | ~1,000 | Jan 1, 2017 onward | This ongoing program will rebate -- directly on consumers' residential electricity bills -- an amount equal to the provincial portion of the Harmonized Sales Tax (HST), an eight per cent savings. |
| **Northern Industrial Electricity Rate Program** | 120 | March 2010 | The Northern Industrial Electricity Rate (NIER) was extended in 2012 for an additional three-year term, effective April 1, 2013, and expiring March 31, 2016, with an allocation up to $120 million per year.<br><br>Qualifying participants receive a rebate of two cents per kilowatt-hour (kWh) up to a maximum of $20 million per year per company.<br><br>NIER was initially established as a three-year program in Budget 2010 and effective as of April 1, 2010, to provide an estimated $150 million per year to eligible large industrial companies in northern Ontario. |
| **Northern Ontario Energy Credit** | 25 | Budget 2010 Announcement | Delivered as part of the Ontario Trillium Benefit, provides individuals living in northern Ontario with a credit of up to $146 per year for the 2016 benefit year, and families up to $224.[1] |
| **Ontario Energy Property Tax Credit** | 445 | Budget 2010 Announcement | Delivered as part of the Ontario Trillium Benefit, provides up to $1,008 per year for low-to moderate-income individuals and families, and up to $1,148 for qualifying seniors. [1] |

1. Both the energy portion of the Ontario Energy and Property Tax Credit (OEPTC) and NOEC were introduced/enhanced following the introduction of the HST and have a significant annual fiscal cost (totalling about $500 million annually).

**Attachments:** Cost Shift - Calculations.xlsx

---

Hi Emily, John,

Please see attached, my attempt at quantifying the cost shifts into 2017 from the programs. Only substantial change is RRRP which becomes into effect. All other programs are essentially copied from the prior year.

File also found here:
S:\Users\CEF\Hydro 2016\Electricity Prices\Cost Shifts\Cost Shift - Calculations.xlsx

Thanks,
Shajee

This looks great….a bit of a win. Could you take a look at Ron's request?

**Subject:** RE: Cost Shifts in the Electricity Sector

Hi John,

I made some edits (not marked) on the added CEFD slides (as excerpted).

Any way to estimate the 2017 costs and impacts of the ratepayer programs in the Energy slides?

Thanks,
Ron

**Subject:** RE: Cost Shifts in the Electricity Sector

Hi Ron,

Pls. see attached with input from both branches. We have actual numbers from OEP on OEPTC. NOEC and NIER were PA figures even in the previous version.

Thanks,

John.

Thanks.

We should be able to get some historical year-by-year OEPTC and NOEC and NIER numbers.

DRC amount forgone I think was a little higher in the original submission. And the OREC amount in the LRC submission earlier this month is now at $1.2.

Can we do comments/markups of Energy's slides too?

Ron

Hi Ron,

EFB and SPFB developed some additional slides providing an overview of tax payer funded electricity price mitigation programs; fiscal impacts, overview and history/timeline.

File attached, also found here:
S:\Users\CEF\Hydro 2016\Electricity Prices\Cost Shifts\Cost Shifting - Sent to MO on 2016-11-18 - w CEFD Slides v5.pptx

Thanks,
Shajee

---

Hi John,

Just skimmed through the slides. There are no material change for GA debt financing section, and I added some general comments on slide 18-19 on the delivery charge relief option.

The other deck is an expanded version of the delivery charge relief option, and didn't get a chance to review it in details.

Not sure if much can be done at this point, since the meeting is at 10:00 a.m. tomorrow.

Regards,
Gavin He

MINISTRY OF
ENERGY

# Rate Mitigation Plan Options

## Working Draft

January 2017

CONFIDENTIAL DRAFT

# Context

- Electricity costs are increasing as the necessary investments are made to decarbonize and modernize the province's electricity infrastructure (i.e., $35 billion+ investment in cleaner generation and $15.5 billion investment in Hydro One transmission and distribution systems).

- Ontario has taken a number of actions to lower electricity costs for all consumers by:
  - Deferring investments in generation (e.g., new build nuclear), improving market efficiency (e.g., wind dispatch) and decreasing the cost of renewable procurements (e.g., GEIA renegotiation, decreasing FIT prices).
  - Increasing cost effectiveness and improving efficiency by adopting new electricity market approaches (e.g., competitive LRP, no new NUG contracting).

- Following the 2016 Throne Speech, actions were announced to further reduce electricity costs by:
  - Providing an 8% rebate ($11/month savings), updating RRRP ($45/month savings), expanding ICI (up to one-third savings for participants) and suspending the LRP II and the EFWSOP (up to $3.8 billion in cost savings).

- On November 28, 2016, the Minister of Energy announced the need for changes in how electricity resources are procured, the need for wholesale market renewal and greater electricity consumer choice.

- The Ministry of Energy is currently updating its Long-Term Energy Plan (LTEP), which provides an opportunity to consider a range of policy changes to how the Ontario energy sector operates.

# Options

- In recognition of the costs borne by ratepayers related to decarbonizing and modernizing the province's electricity sector, options for further rate mitigation include:

  1. Global Adjustment (GA) Financing

  2. Delivery Rate Relief

  3. Other Electricity Support Programs Funded Through the Tax-base:
     - Ontario Electricity Support Program (OESP);
     - Low-Income Conservation; and
     - First Nations Rate.

- As an alternative to the GA financing, in addition to Delivery Rate Relief and Other Electricity Support Programs Funded Through the Tax-base, other mitigation measures could be pursued, including:

  1. Enhanced Tax-based RPP Rebate (5%)

  2. Contract Renegotiations
     - Contract Extensions – Wind and Solar; and
     - Clean Energy Supply (CES) Contracts.

  3. Amortization of Conservation Expenses

# Proposed Options – Potential Savings for Typical Residential Electricity Consumers

| *$/750kWh* | 2016 | 2017 | 2018 | 2019 | 2020 | 2021 | 2022 | Timing of Benefit |
|---|---|---|---|---|---|---|---|---|
| 1. Global Adjustment (GA) Financing (Moderate) | - | 17.49 | 15.01 | 12.49 | 14.91 | 6.32 | 4.03 | Immediate |
| 2.. Delivery Rate Relief | - | TBD | TBD | TBD | TBD | TBD | TBD | Immediate |
| 3. Electricity Support Programs Funded through the Tax-Base | | | | | | | | |
| a. Ontario Electricity Support Program (OESP)* | - | 0.83 | 0.83 | 0.83 | 0.83 | 0.83 | 0.83 | Immediate |
| b. Low-Income Conservation | - | - | - | - | - | - | - | N/A |
| c. First Nations Rate | - | - | - | - | - | - | - | N/A |

**Other Options to Consider:**

| *$/750kWh* | 2016 | 2017 | 2018 | 2019 | 2020 | 2021 | 2022 | Timing of Benefit |
|---|---|---|---|---|---|---|---|---|
| 1. Enhanced Tax-based RPP Rebate (5%) | - | 7.04 | 7.17 | 7.31 | 7.77 | 7.61 | 7.83 | Immediate |
| 2. Contract Renegotiations | | | | | | | | |
| a. Contract Extensions – Wind and Solar | - | TBD | TBD | TBD | TBD | TBD | TBD | TBD |
| b. Clean Energy Supply Contract | - | TBD | TBD | TBD | TBD | TBD | TBD | Immediate |
| 3. Conservation Amortization | - | 1.62 | 1.88 | 1.16 | 1.20 | 0.82 | 0.69 | Immediate |

***Note**: Savings based on currently approved OESP rate set by OEB.
**Note:** The above initiatives will provide similar benefits for non-RPP Class B electricity consumers. Class B includes small-medium enterprises (SMEs).

# Proposed Options – Potential Savings for Average Industrial Electricity Consumers

| *$/MWh* | 2016 | 2017 | 2018 | 2019 | 2020 | 2021 | 2022 | Timing of Benefit |
|---|---|---|---|---|---|---|---|---|
| 1. Global Adjustment (GA) Financing (Moderate) | - | 17.49 | 15.01 | 12.49 | 14.91 | 6.32 | 4.03 | Immediate |
| 2.. Delivery Rate Relief | - | - | - | - | - | - | - | N/A |
| 3. Electricity Support Programs | | | | | | | | |
| a. Ontario Electricity Support Program (OESP)* | - | 1.10 | 1.10 | 1.10 | 1.10 | 1.10 | 1.10 | Immediate |
| b. Low-Income Conservation | - | - | - | - | - | - | - | N/A |
| c. First Nations Rate | - | - | - | - | - | - | - | N/A |

**Other Options to Consider:**

| *$/750kWh* | 2016 | 2017 | 2018 | 2019 | 2020 | 2021 | 2022 | Timing of Benefit |
|---|---|---|---|---|---|---|---|---|
| 1. Enhanced Tax-based RPP Rebate (5%) | - | - | - | - | - | - | - | N/A |
| 2. Contract Renegotiations | | | | | | | | |
| a. Contract Extensions – Wind and Solar | - | TBD | TBD | TBD | TBD | TBD | TBD | TBD |
| b. Clean Energy Supply Contract | - | TBD | TBD | TBD | TBD | TBD | TBD | Immediate |
| 3. Conservation Amortization | - | 1.12 | 1.30 | 0.80 | 0.83 | 0.57 | 0.47 | Immediate |

***Note:** Savings based on current OESP charge as set by OEB.

# Fiscal Impacts

| *$M* | 2016-17 | 2017-18 | 2018-19 | 2019-20 | 2020-21 |
|---|---|---|---|---|---|
| 1. Global Adjustment (GA) Financing (Moderate) | TBC | TBC | TBC | TBC | TBC |
| 2.. Delivery Rate Relief | TBD | TBD | TBD | TBD | TBD |
| 3. Electricity Support Programs | | | | | |
| a. Ontario Electricity Support Program (OESP)* | - | 162 | 225 | 279 | 323 |
| b. Low-Income Conservation | - | 60 | 60 | 60 | 60 |
| c. First Nations Rate | - | 18 | 18 | 18 | 18 |

**Other Options to Consider:**

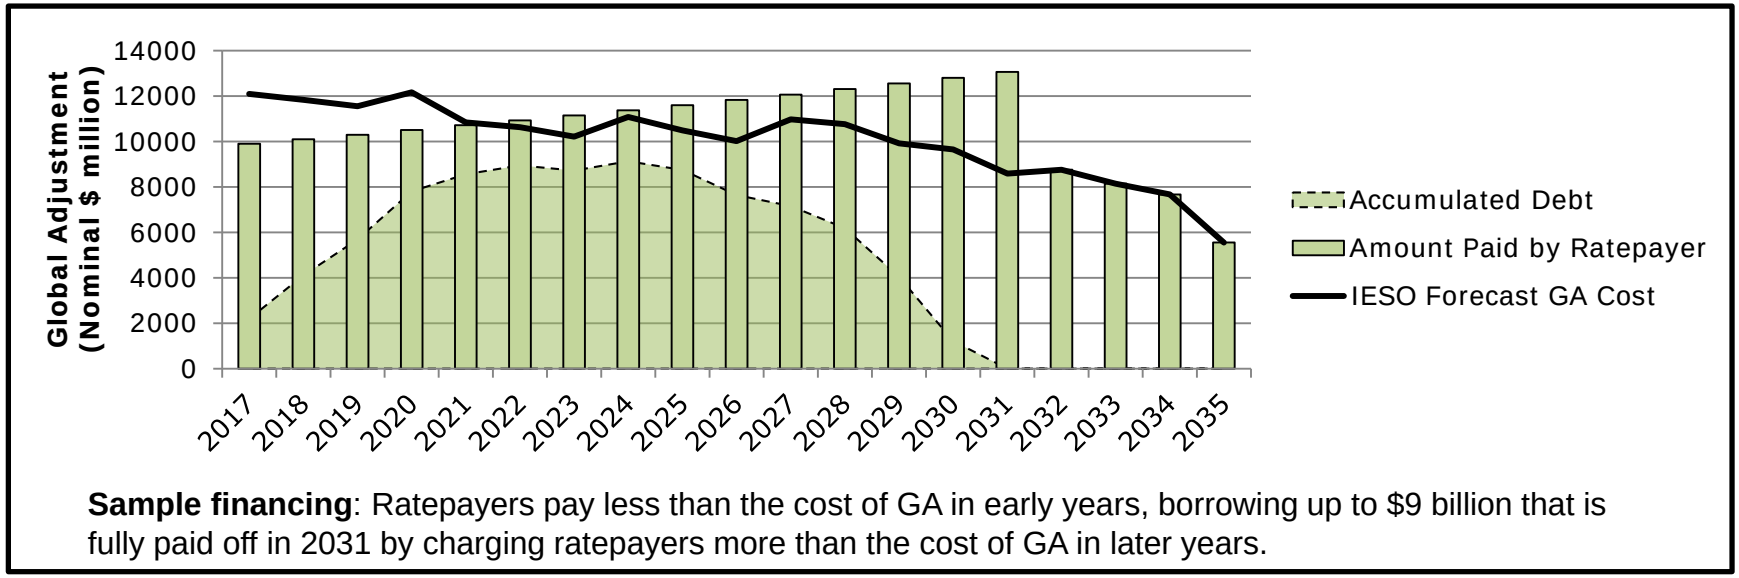
| *$M* | 2016-17 | 2017-18 | 2018-19 | 2019-20 | 2020-21 |
|---|---|---|---|---|---|
| 1. Enhanced Tax-based RPP Rebate (5%) | 169 | 699 | 679 | 732 | 724 |
| 2. Alternative to GA Financing – Contract Renegotiations | | | | | |
| a. Contract Extensions – Wind and Solar | - | - | - | - | - |
| b. Clean Energy Supply Contract | - | - | - | - | - |
| 3. Conservation Amortization | - | - | - | - | - |

***Note:** Includes costs of program expansion and various assumptions as detailed on relevant slides.
****Note:** Risk to fiscal plan of up to $240 million annually (foregone net income) if OPG is unable to reach more aggressive operational efficiency targets.

**Source:** Ministry of Finance, Energy

# 1. Global Adjustment (GA) Financing

- It is proposed that the amount of global adjustment (GA) paid by ratepayers in each year over the forecast period is set at a fixed amount and money is borrowed to make up the remainder of the GA cost in each year.
- Starting on January 1, 2017, the amount of GA paid by ratepayers is set at a value lower than the true cost of GA in 2017 and is increased according to a pre-defined schedule until the debt has been paid off.
- GA costs will be “smoothed” over time by lowering costs in the short term and increasing costs in the long term.
- In some scenarios, the amount of GA paid by ratepayers *above* the expected actual cost of GA is capped so as to limit large increases in the cost of electricity in any given year.
- All analysis is based on forecasts from Independent Electricity System Operator (IESO), assumes a 5% annual borrowing interest rate and an inflation rate of 2% per year.

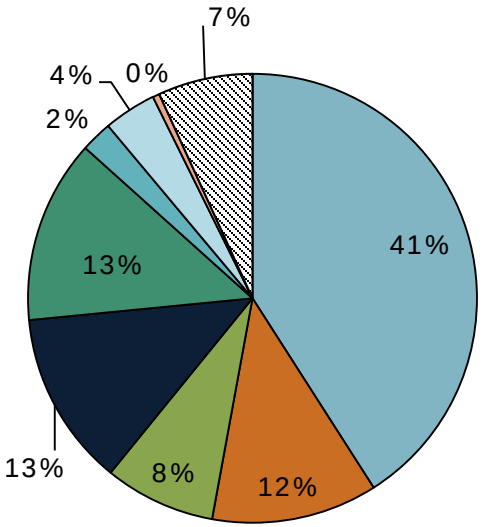


**Sample financing**: Ratepayers pay less than the cost of GA in early years, borrowing up to $9 billion that is fully paid off in 2031 by charging ratepayers more than the cost of GA in later years.

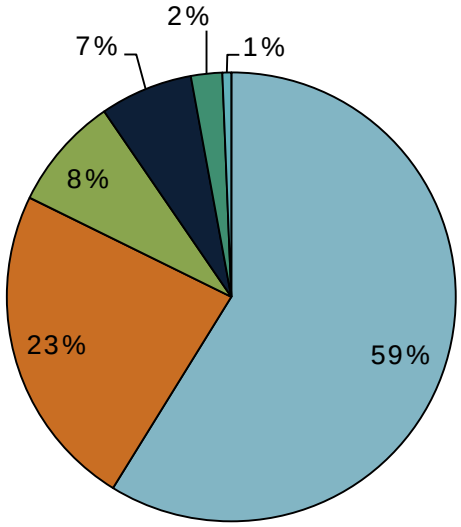
# 1. GA Financing – Cost Breakout

- The allocation of GA costs in 2016 is compared to the proportion of generation in the graph below.
- This cost breakdown will evolve over time as 2,181 MW of contracted generation comes online in the coming years.

**2016 GA Cost: $12.3 billion**



**2016 Generation: 155 TWh**



| | GA ($M) | Gen. (TWh) |
|---|---|---|
| Nuclear | 5,053 | 91 |
| Hydro | 1,473 | 36 |
| Natural Gas | 985 | 13 |
| Wind | 1,552 | 10 |
| Solar | 1,630 | 3 |
| Biomass, Landfill and Byproduct | 278 | 1 |
| Conservation | 467 | |
| IEI Program | 60 | |
| OEFC* | 842 | |

*OEFC indicates the cost of generator contracts managed by the OEFC which include contracts for natural gas, hydro and biomass generators.
** Conservation measures, not quantified here, serve to reduce Ontario energy demand. Actual electricity generation would be larger than 155 TWh in the absence of conservation programs.

# 1. GA Financing – Options

1a. Moderate / GA Financing

- The amount of GA paid by ratepayers in 2017 is lowered by $3.1 and $3.3 billion below the true cost of GA and increases at 2% in each subsequent year until the total amount of money borrowed is paid off in 25 and 30 years respectively.
- Future GA over-payments above the true cost of GA are capped at $2 billion to limit electricity cost increases in any given year.

1b. Moderate / GA Financing with Delayed Increase

- The starting GA payment from all ratepayers in 2017 is lowered by $1.1 and $1.4 billion, ratepayer payments *decrease* in the short term to keep residential bills relatively flat, then increases at 3% each year – up to a maximum of $2 billion above the true cost of GA – until the borrowed money is paid back over a 25 and 30 year financing period respectively.

Low / GA Financing (see in Appendix)

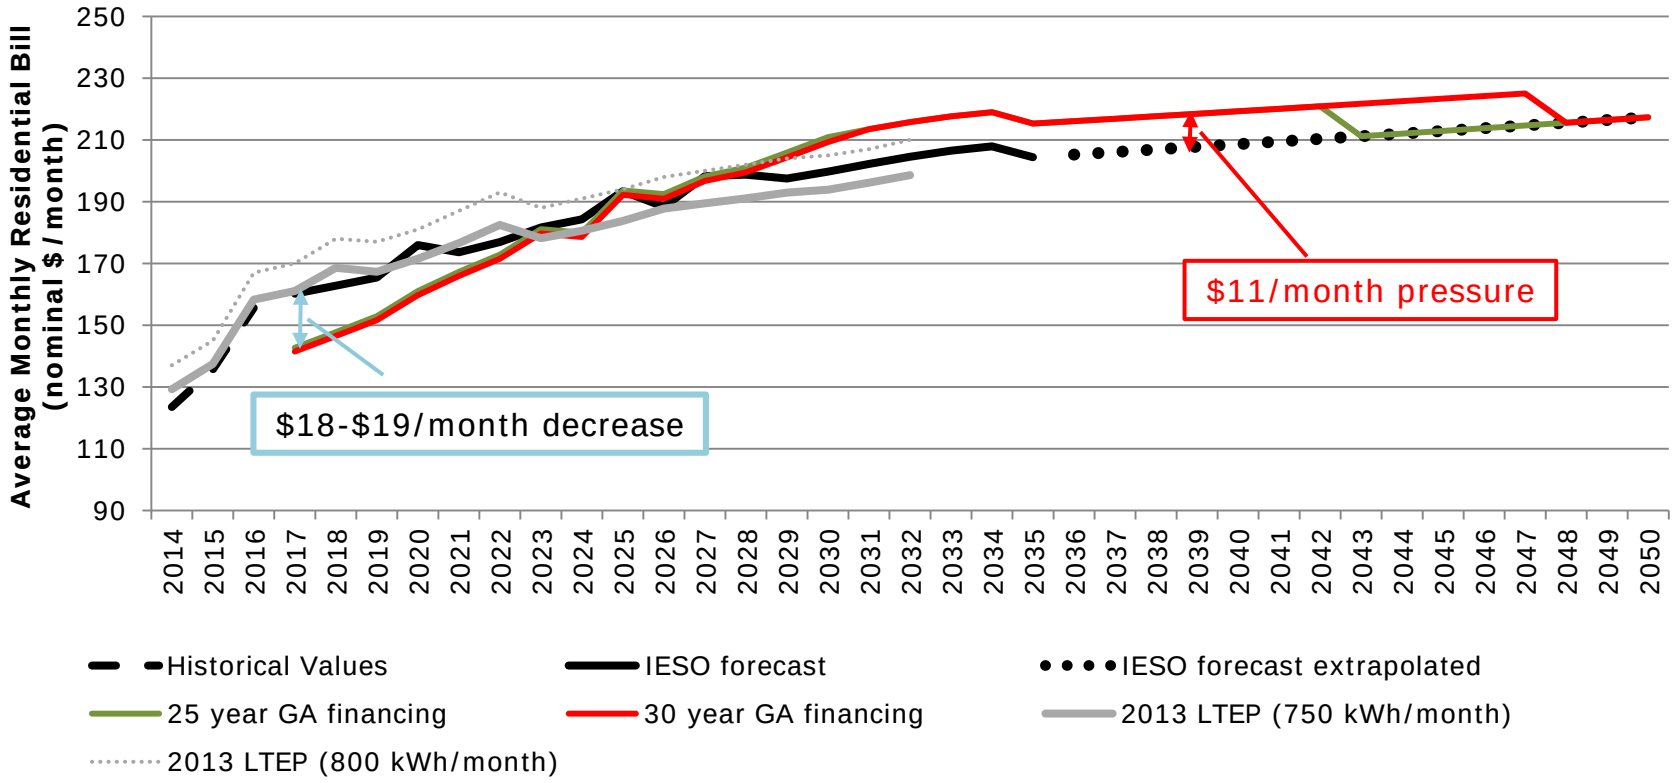
- The amount of GA paid by ratepayers in 2017 is lowered by $2.5 billion below the true cost of GA and increases in each subsequent year until the total amount of money borrowed is paid off.
- Future GA over-payments above the true cost of GA are capped at $2 billion to limit electricity cost increases in any given year.

High / GA Financing (see in Appendix)

- The amount of GA paid by ratepayers in 2017 is lowered by $4.4 and $5 billion below the true cost of GA and increases at 2% in each subsequent year until the total amount of money borrowed is paid off in 25 and 30 years respectively.
- No limit is placed on the amount charged to ratepayers above the true cost of GA.

# 1a. Moderate / GA Financing – Impact on Residential Electricity Bills

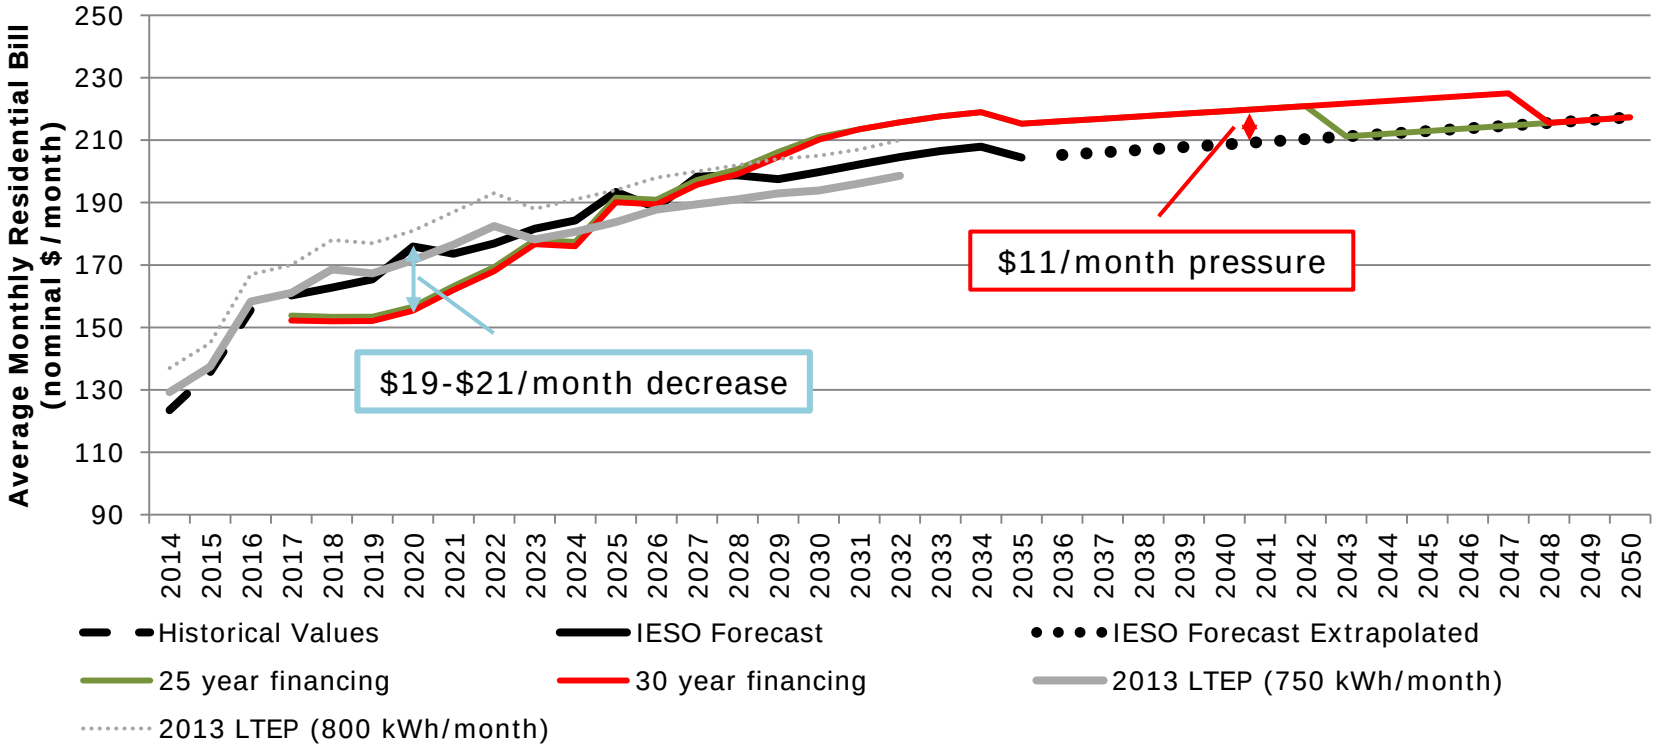
- In this scenario, the starting GA payment from all ratepayers in 2017 is lowered by $3.1 billion (green line) and $3.3 billion (red line) and increases at 2% each year – up to a cap of no more than $2 billion more than the true cost of GA in any year – until the borrowed money is paid back in 25 and 30 years respectively.



- By **borrowing up to $19-$23 billion**, this scenario results in **a short-term residential electricity cost reduction of up to $17-$19/month** at the cost of **increased future electricity bills over 14-19 years of up to $11/month** above the true cost of electricity production.

# 1b. Moderate / GA Financing with Delayed Increase in Payments – Impact on Residential Electricity Bills

- In this option, the starting GA payment from all ratepayers in 2017 is lowered by $1.1 billion (green line) and $1.4 billion (red line), ratepayer payments *decrease* in the short term to keep residential bills relatively flat, then increases at 3% each year – up to a maximum of $2 billion above the true cost of GA – until the borrowed money is paid back over a 25 and 30 year financing period respectively.



- By **borrowing up to $19-$23 billion**, this scenario results in **a short-term residential electricity cost reduction of up to $19-$21/month** at the cost of **increased future electricity bills over 14-19 years of up to $11/month** above the true cost of electricity production.

# 1. GA Financing – Accounting (cont'd)

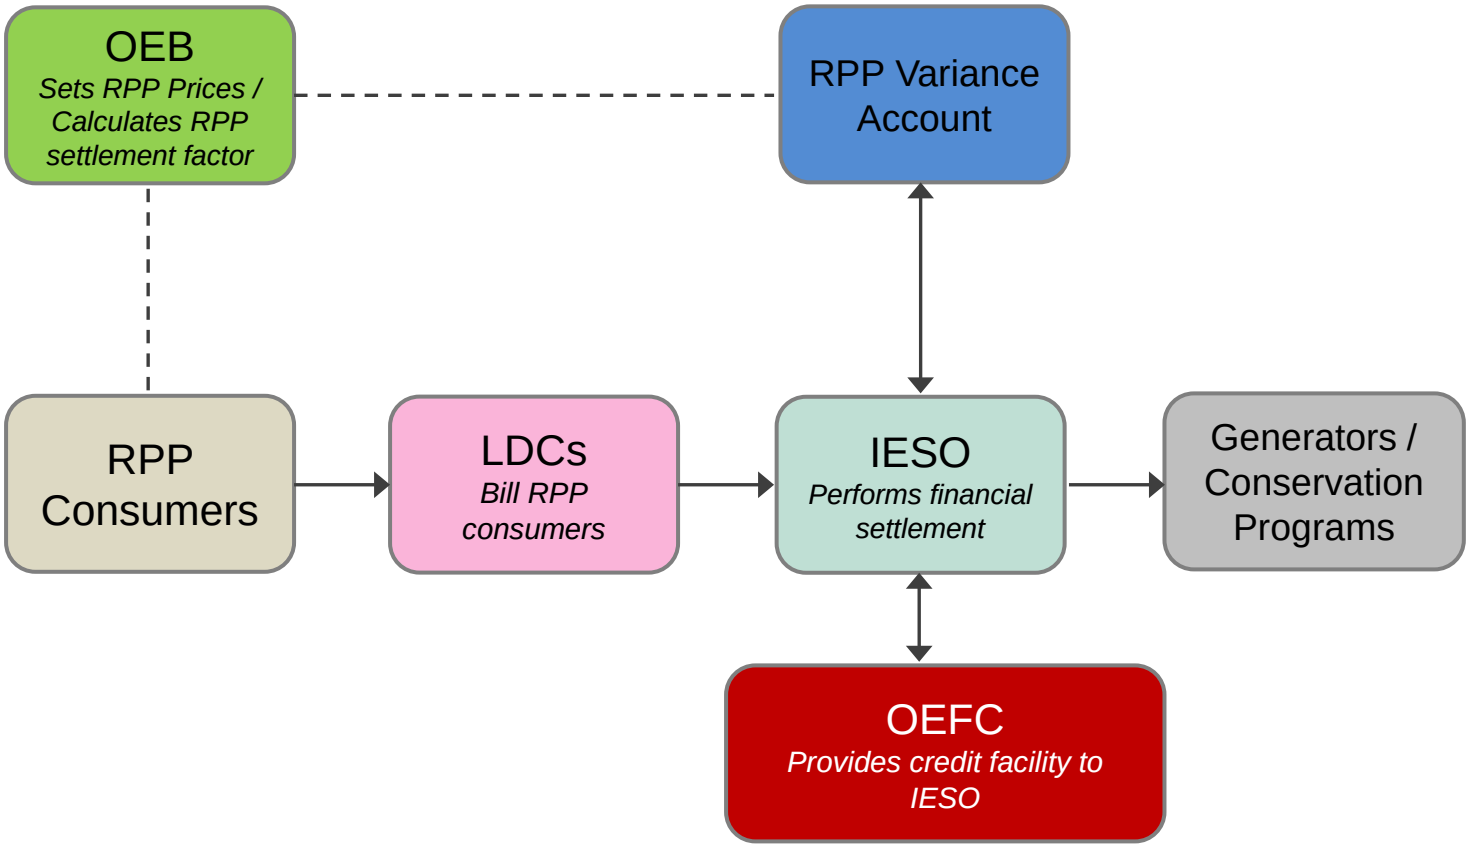
**Considerations**

- ENERGY continues to work with LSB, IESO, MOF/OFA, TBS and external accountants to identify legislative, regulatory, borrowing and accounting requirements associated with GA financing option.
  - Ongoing analysis on whether such changes to the financing of the GA would affect the Province's current accounting treatment for the GA and represent a potential fiscal risk (i.e., consolidation).
  - Historically electricity sector financing has been conducted by the Ontario Financing Authority (i.e., managing OEFC's stranded debt and borrowing on behalf of IESO).
  - The significant amount of additional Provincial borrowing needed to finance the GA, and associated risks (e.g., interest rates, repayment timelines), could put pressure on the Province's credit rating and overall borrowing capacity.
  - The Auditor General (AG) may comment on the appropriateness of financing the Global Adjustment and/or on the need to consolidate any financing on the Province's books.

- Discussions have broadly focused on:
  - Consolidation risks;
  - Creating an "asset" (and confirm that it meets accounting requirements);
  - Identifying who will hold the asset(s), this could include:
    - Province (e.g., OEFC, etc);
    - IESO;
    - LDCs; or
    - New entity.
  - Determine the source of the financing (e.g., third party, OFA, IO, etc)
  - Exploring different recovery / administrative options (e.g., DRC, RPP, etc)

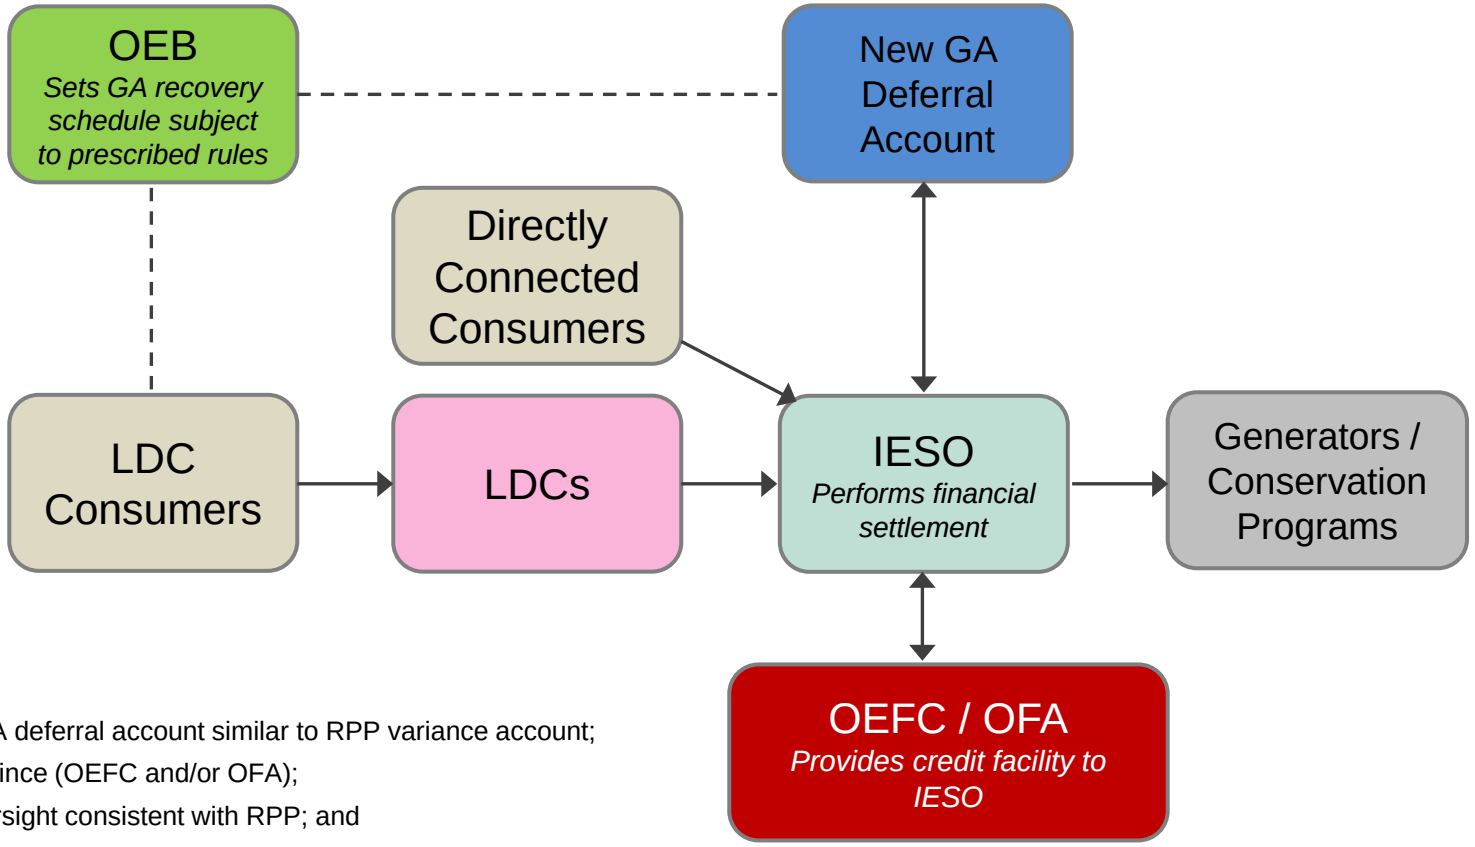
# 1. GA Financing – Current Regulated Price Plan (RPP) Variance Recovery

- The diagram outlines current Regulated Price Plan (RPP) structure and related flow of funds.



# 1. GA Financing – Recovery Approach (Option 1)

- The diagram outlines an option that is a variation on the current RPP approach.

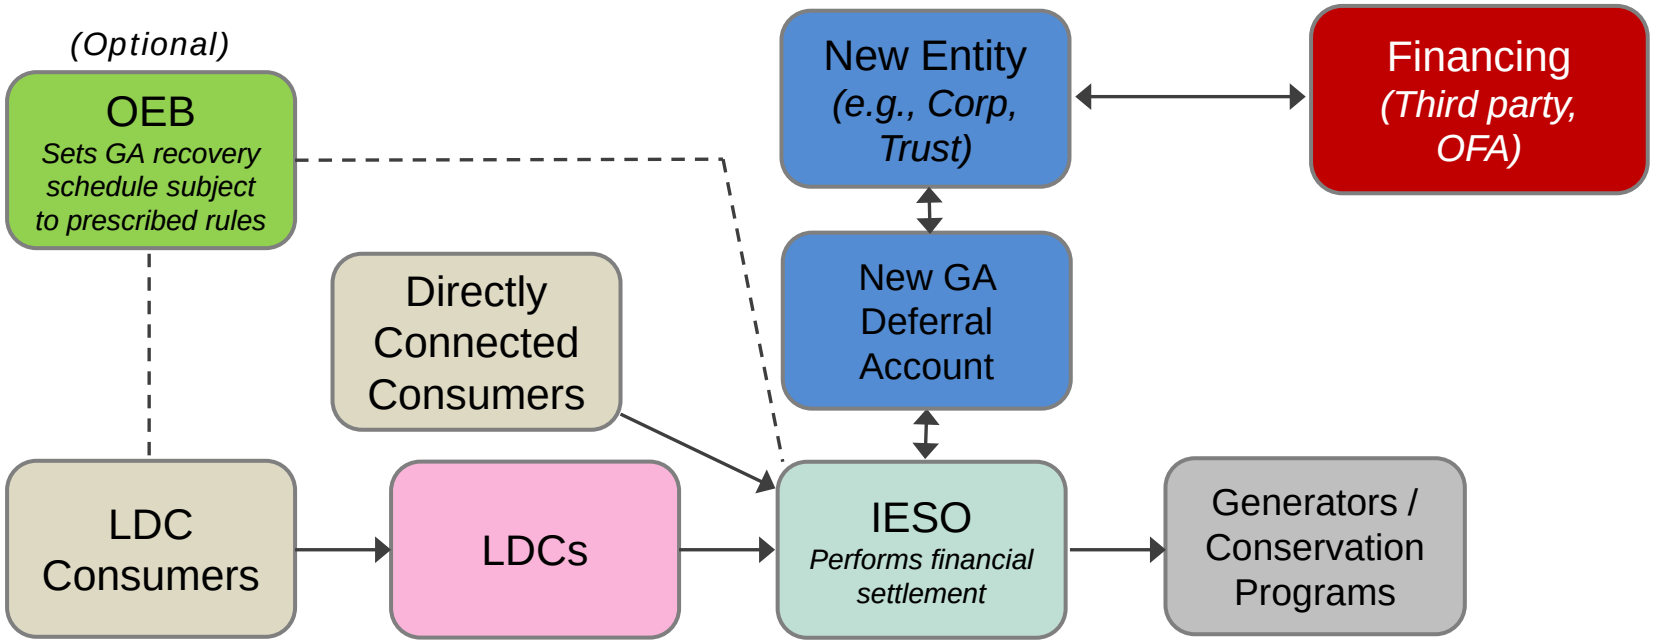


**Key Assumptions**

- Establish an new GA deferral account similar to RPP variance account;
- Financing from Province (OEFC and/or OFA);
- OEB regulatory oversight consistent with RPP; and
- GA Financing available to all consumers.

# 1. GA Financing – Recovery Approach (Option 2)

- The diagram outlines an alternative approach that introduces a new arms-length entity.



**Key Assumptions**

- GA Financing available to all consumers;
- Establish a new arms-length entity (e.g., corporation, trust, etc.) with trustees or a board of either public sector employees or stakeholders / bondholders;
- Purpose of the entity in legislation is to recover deferred GA amounts over 25-30 years from electricity consumers (i.e., ensure guaranteed repayment);
- Financing either through OFA or could be independent or from Province (TBD); and
- Set up outside of the OEB construct (i.e., not regulated). Alternatively, light touch regulatory oversight similar to RPP.

# 1. GA Financing – Considerations (cont'd)

**Considerations**

*Legal:*

- Legislation would be required to authorize the financing proposal.
  - Amendments to the *Electricity Act, 1998* (EA) could authorize the financing of certain costs within or part of the GA. However, whether any other legislation requires amendment is not known at this time.
  - The GA regime currently provides that "true costs" represent the true costs of making payments to generators or counter parties to contracts, not the incurring of discretionary financing or interest costs.
  - Considerations such as the need to analyze legal risks or the need to address costs retroactively (if the proposal requires a January 1, 2017 start) could add to the legal and drafting complexity. Further legal analysis is required.

# 2. Delivery Charge Relief – Background

- The **Delivery** line on a typical consumer bill accounts for roughly 25-35% of the total bill before taxes.
- Delivery covers the costs of getting electricity from generating stations across the province to homes and businesses and combines three cost components of the electricity sector into one line item charge:
  - **Transmission:** The costs of moving electricity across high voltage lines from generating stations to the distribution system. This cost is recovered through a variable charge that is approved by the OEB.
  - **Distribution:** The costs of moving electricity from the transmission system to homes and businesses. Depending on the LDC, distribution costs makes up about 60% to 80% of the Delivery line.
    - This cost is currently recovered through both a variable charge and fixed charge, approved by the OEB. Distribution rates are moving to a fully-fixed charge over next 5 years.
  - **Line Loss:** The costs to recover electricity that is lost as heat when its delivered over a power line, as well as power theft. Each LDC is assigned by the OEB a specific line-loss adjustment factor to reflect their loses particular to their assets. This factor is multiplied against the monthly electricity cost to determine the monthly cost.
- To help mitigate delivery costs, the Province has expanded the Rural or Remote Protection Program (RRRP) to further reduce distribution costs for rural customers across the province.
  - Starting on January 1 2017, 330,000 Hydro One low density (R2 class) customers will receive $60.50 per month in RRRP to bring their total Delivery line costs to roughly $95 for 1,000 kWh/month.

SAMPLE MONTHLY BILL STATEMENT

**Anytown Hydro-Electric Limited**

Account Number:
000 000 000 000 0000

Meter Number:
00000000

| Your Electricity Charges | |
|---|---|
| **Electricity** | |

* Toronto Hydro Bill @ 750Kwhs

# 2. Delivery Charge Relief – Proposed Program Overview

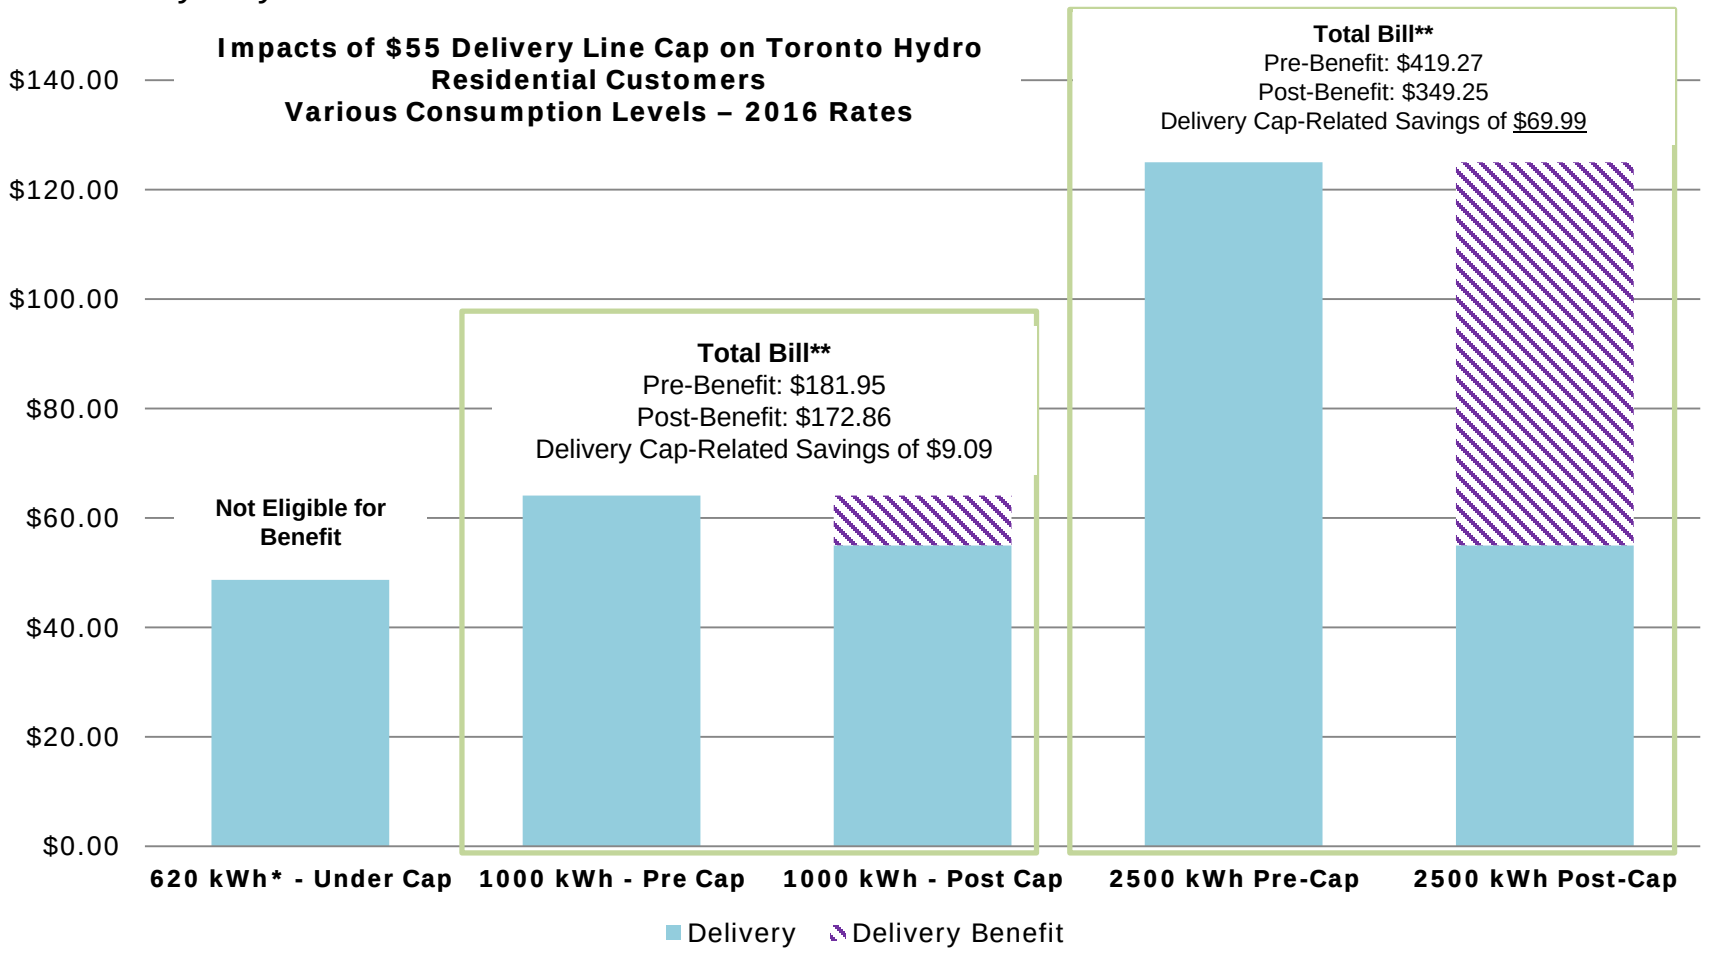
- To provide further relief for customers across the province, the province could create a ‘customer-specific’ program that would cap the delivery line cost.
- The proposed program would limit the amount an LDC can bill consumers for Delivery at a to-be-determined reasonable cost. Delivery costs that exceed the cap would be covered by support from the fiscal plan.
- The proposed program would target customers within the LDC territory based on their Delivery cost.
  - Delivery costs vary month to month and LDCs will need to keep track of the customers who will receive the receive the additional support.
- Eligibility for increased protection would be based solely on delivery charges above the established threshold and therefore would not be specific to any one LDC. All LDCs must be prepared to offer the program to some of their customers

**Considerations**

- Costs and ratepayer impacts depend on the number of customers within each LDC whose delivery charges exceed the cap.
  - Costs will fluctuate seasonally and will have year-over-year changes, creating uncertainty in forecasting. Ministry is preparing case study analysis.
- There may be implementation challenges for some LDCs and could take them up to 6 months to implement the program.
- Capping delivery charges may impact OEB rate-setting processes and create disincentives towards utility productivity and performance improvements.

# 2. Delivery Charge Relief – Proposed Program Overview (cont'd)

- Below is an example of a Toronto Hydro customer at different consumption levels and the level of subsidy they would receive.



*620kWh is the average Toronto Hydro residential consumption level. ENERGY estimates 17.5% of Toronto Hydro consumers average >1000kWh/month.

** Includes Electricity, Delivery, and Regulatory Charges. Excludes HST and 8% rebate.

Ontario

MINISTRY OF ENERGY

# 3a. Ontario Electricity Support Program (OESP) Expansion

- The OESP is an income-tested, application based program that lowers the electricity costs of the most vulnerable consumers by providing a rebate directly on their electricity bills.
- The OESP provides basic benefits to most consumers and enhanced benefits to Indigenous customers and customers with electric heat and medical devices.
- OESP funding is collected from a charge levied on all electricity ratepayers. Based on current level of program up-take and funding collection, OESP program benefits could be increased across the board by 50%. This would mean:
  - Single low income consumers would see an increase from $30 to $45/ month ($540/year);
  - Families of four with electric heat could see an increase from $55 to $82.50/month ($990/year); and
  - Indigenous and Métis consumers would also see benefit increases at the same level as those with electric heat and medical devices.
    - The Ministry is also considering options to support a “Delivery” line credit for Indigenous consumers. This would cost ~$18 million/year (Option 2d on slide 8) and would save Indigenous consumers between $75 and $100/month.
- Greater focus and support can be placed on lower income Ontarians by funding OESP through the tax base. This would also reduce costs for all consumers as a result of eliminating the OESP charge.
  - Average residential customer savings: $0.83/month; and
  - Average industrial customer savings: $1.10/MWh.

# 3a. OESP Expansion – Fiscal Impacts

- Table below shows estimate of program costs up to 2022:

| Year | OESP Status Quo($M) | +50%($M) | TOTAL ($M) |
|---|---|---|---|
| 2017 | $108 | $54 | **$162** |
| 2018 | $150 | $75 | **$225** |
| 2019 | $186 | $93 | **$279** |
| 2020 | $215 | $108 | **$323** |
| 2021 | $243 | $122 | **$365** |
| 2022 | $272 | $136 | **$408** |

- 2017 program costs are based at current program sign-up rate – 30% of eligible consumers. Cost projections assume the program grows to 100% of eligible consumers by 2022 and remains at that level.
- At the time of program design, it was estimated that 40-50% participation would be high for an application-based program delivered through electricity bills. However OESP can be enhanced by working to ensure the program uptake is as close as possible to 100%:
  - Streamlining the application process to make it easier and quicker to get through;
  - Putting in place a more aggressive communications strategy to make sure people are aware of the program;
  - Increasing funding for key partner agencies to work directly with individuals who are applying; and
  - Exploring automatic OESP qualification for those who receive provincial programs (e.g., ODSP).
- OEB is currently exploring options for simplifying the OESP process, including exploring options with MCSS on auto-enrollment options, discussing options to eliminate wet signature consent forms with the federal government, and working with partners to do open houses to better reach vulnerable consumers.

# 3a. OESP Expansion – Considerations

- **Framework:** New legislation would be required to establish and define the parameters of a tax-based OESP. This may reveal additional considerations, including possible assessment as a tax credit.
- **Implementation:** Financial flow-through mechanisms would need to be considered in consultation with IESO and LDCs. Likely to be modeled after processes used for the Ontario Rebate for Electricity Consumers (OREC).
- **Alternative Delivery:** If the OESP was funded by the tax-base, it could also be explored whether the OESP could be better delivered as a provincial program via the tax system. This may help ensure that the program's participation rate is as high as possible, and could expand coverage to the ~142,000 low-income households that do not receive an electricity bill.
- **Transition to Social Assistance:** Moving OESP to the taxbase can be a transitional step in folding this program into a reform of social and disability assistance programs and enhancement of MCSS' Social Assistance Management System moving forward.
- **Additional Enhancements:** The enhanced credit could be expanded to include additional eligibility categories of customers. For example, a new "Low Density Consumer" category could be introduced that provides Hydro One R2 and/or R1 customers (highest distribution rates) who are already OESP eligible with the enhanced credit.
- **Variance Account:** The OEB has been collecting program funding in excess of program costs and has accrued a positive balance. This balance must be addressed when moving to the tax base.

# 3b. Low Income Conservation Benefit Program

- Existing low income programs delivered by LDCs and IESO help qualified homeowners and social and/or assisted housing providers improve the energy efficiency of their homes.
  - Programs include the Home Assistance Program and the Retrofit Program (Social Housing Stream).
- A new Low Income Conservation Benefit Program would build on existing programs.
  - Participants could receive incentives for conservation measures not currently covered (e.g. air conditioning, heat pumps (electric heated homes)).
  - Increased incentive amounts (e.g., under the existing Retrofit Program, incentives cover up to 50% of the total cost of the energy efficiency upgrade).
  - Targeted education and awareness initiatives.
- The new program would be delivered through LDCs and/or IESO.
- The new program would coordinate with CCAP initiatives.
- The budget estimate below is illustrative and assumes annual program budgets three times the 2015 spending for the Home Assistance Program.

| | 2017 | 2018 | 2019 | 2020 | 2021 | 2022 |
|---|---|---|---|---|---|---|
| Proposed Budget ($ Million) | $60 | $60 | $60 | $60 | $60 | $60 |

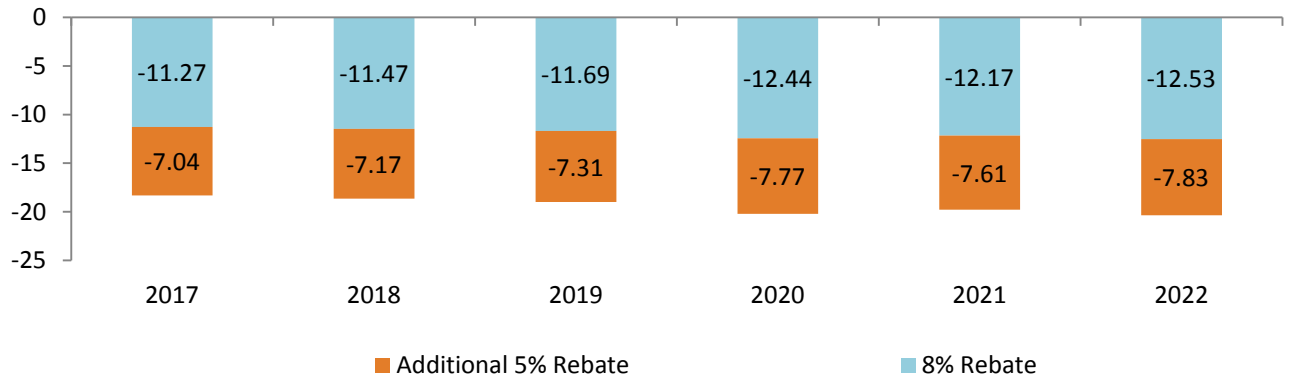
- Further analysis is required on costing and implementation details, including alignment with the Conservation First Framework.

# Other Options to Consider

# 1. Enhanced Tax-Base RPP Rebate (5%)

- Enhancing the rebate by a further 5% on the amount before tax provides an average savings of about $7 each month or $84 annually for a typical residential electricity consumer.
- As of January 1, 2017, electricity consumers eligible for the Regulated Price Plan (RPP) receive an 8% rebate equivalent to the provincial portion of HST on their pre-tax bill.
- The eligibility criteria for the 8% rebate is as follows:
  - Consumers with a demand of 50 kW or less;
  - Consumers with a demand of 250,000 kWh/year or less;
  - Farms;
  - Multi-unit residential buildings and other facilities used as residential rental units;
  - Dwellings;
  - Condominiums; and
  - Co-operatives with housing units.

**Benefit for a Typical Residential RPP Consumer**
*in $/750-kWh month*



# 1. Enhanced Tax-Base RPP Rebate (5%) (cont'd)

**Considerations**

- Amendments would be required related to the *Ontario Rebate for Electricity Consumers Act, 2016.*
- The Act authorizes the making of regulations to reimburse electricity vendors for amounts credited to consumers' accounts under the Act. The Act authorizes the making of other regulations to put in place mechanisms needed to implement the financial assistance.
- The rebate could be made retroactive to January 1, 2017. Similar to the current 8% rebate, electricity consumers would receive a retroactive payment once the local distributor begins issuing the rebates if the distributor needs more time to adjust its billing systems.

**Fiscal Cost of an Enhanced Rebate**
*in $millions*

| Cost ($M) | 2016-2017 | 2017-2018 | 2018-2019 | 2019-2020 | 2020-2021 | 2021-2022 |
|---|---|---|---|---|---|---|
| **Cost of 8% rebate** | 271 | 1,119 | 1,086 | 1,171 | 1,159 | 1,208 |
| **Cost of 13% rebate** | 440 | 1,818 | 1,764 | 1,903 | 1,884 | 1,963 |
| **Cost of incremental 5% rebate** | 169 | 699 | 679 | 732 | 724 | 755 |

# 2a. Extend Length of Existing Wind / Solar Contracts

- Wind and solar developments are typically contracted through standard offer procurements on 20 year fixed terms at fixed pricing.
- Many of these projects have already reached commercial operation.
- The province could explore options for IESO to negotiate extensions to existing renewable energy contracts, for example, by 10 years, in return for the contract holders agreeing to a lower price in the near term.
- Since extending the contracts would lock in an additional 10 years of GHG emissions free generation to support electrification of transportation and other sectors, consideration could be given to funding the contract extensions with future cap and trade proceeds.

**Considerations**

- Projects in commercial operation offer potential for near-term rate reduction whereas projects that have yet to reach commercial operation provide potential to mitigate future rate increases only.
- The attractiveness of this option to contract holders would vary from project to project and would depend on project economics.
- Revised pricing would be subject to negotiation, and associated ratepayer savings would be difficult to forecast accurately.
- The duration of contract renegotiation is difficult to forecast and may not be achievable in the near term.
  - Proponents may have to renegotiate their project financing arrangements, ensure project investors are satisfied with any changes in ROI, and extend land leases.
- Project host communities and Indigenous communities whose traditional territory the projects are sited in may not be interested in these projects extending their operational period; discussions/consultation may be required in advance of this potential option moving forward.

# 2a. Extend Length of Existing Wind / Solar Contracts (cont'd)

**Considerations**

- Should Ontario be successful in negotiating lower prices in the near term, it should be noted that contract holders will be in a strong bargaining position (given their existing fixed-priced contracts), and will likely extract additional value from the negotiations.

- The Province is not a party to the contracts and has never been involved in the negotiation of the contracts themselves. IESO would be required to renegotiate the contracts, which would likely involve a direction or directive to IESO.

- Further analysis is required as to how ENERGY could express its policy intent to have IESO renegotiate the contracts for a reduced rate at a longer term, however it is unlikely that IESO could guarantee the outcome.

- Further analysis is also required to ascertain whether there is scope within the existing contracts for IESO to renegotiate their terms in this manner.

- Extending contract terms may require investments in component replacement and additional operation and maintenance costs that developers would seek to recover under any renegotiated contract.

- Extending contract terms would reduce planned flexibility and increase the risk of overpayment as this existing capacity would now be contracted into the 2040s and not the 2030s.

# 2a. Extend Length of Existing Wind / Solar Contracts (cont'd)

**Considerations**

- Ontario has over 4,500 MW of wind in commercial operation, with the vast majority being large scale (>500kW) developments.
  - This includes over 2,700 MW of large FIT 1 and GEIA wind projects representing 47 contracts (average size ~58 MW) and over 1,000 MW of solar projects representing 103 contracts.
- Below are two potential approaches to reducing ratepayer costs in the near term by extending contract terms at reduced prices. An illustrative example of a typical large wind project is used.
- **Example:** 100 MW FIT 1 wind project achieving Commercial Operation in 2014 (i.e., 17 years remaining on initial 20 year contract), assuming a 10 year contract extension negotiated at the LRP I low weighted average wind price of $64.5/MWh
  - (17 years @ $135/MWh + 10 years @ $64.5/MWh)
- **Potential Approach 1:** Provide a single new contract price that is the average of the lower extension price and the FIT contract price over the new contract term. The new price would be lower over a longer term.
  - **Illustrative Example:** New contract for 27 years at $129/MWh.
  - New contract price set to allow 10% rate of return over 27 year contract per FIT pricing approach.

| 100 MW Wind Project | Status Quo | 27 Year Contract (remaining term extended for 10 additional years) |
|---|---|---|
| Contract Cost (NPV 2017) | $550 Million | $582 Million |
| Average Monthly Ratepayer Impact Over First 5 Years | $0.03 savings | |
| Average Monthly Ratepayer Impact Over Remaining 22 Years | $0.02 increase | |
| Average Monthly Ratepayer Impact Over Entire 27 Year Contract | $0.01 increase | |

# 2a. Extend Length of Existing Wind / Solar Contracts (cont'd)

**Considerations**

- **Potential Approach 2:** Offer facilities a revised contract that extends terms and is structured to offer lower pricing in the initial contract years and higher pricing in the later years of the contract.
  - **Illustrative Example:** New contract for 27 years at $85.9/MWh over the first 5 years and $169/MWh over the remaining 22 years.
    - Price over first 5 years is LRP I weighted average wind price.
    - Price over remaining 22 years is set to allow 10% rate of return over entire 27 year contract per FIT pricing approach.

| 100 MW Wind Project | Status Quo | 27 Year Contract | |
|---|---|---|---|
| | | Initial 5 Years | Last 22 Years |
| Contract Cost (NPV 2017) | $550 Million | $632 Million | |
| Monthly Average Ratepayer Impact Over First 5 Years | $0.09 savings | | |
| Monthly Average Ratepayer Impact Over Remaining 22 Years | $0.07 increase | | |
| Monthly Average Ratepayer Impact Over Entire 27 Year Contract | $0.04 increase | | |

# 2a. Extend Length of Existing Wind / Solar Contracts (cont'd)

- Below are illustrative estimates of potential GA savings if all contracts for large FIT and GEIA wind and solar projects in commercial operation are renegotiated according to the approaches illustrated above.
- Estimates are for large (10 MW or greater) FIT 1 and GEIA wind and solar projects in commercial operation, totalling about 2,700 MW of wind and about 900 MW of solar capacity. A 10 year contract extension is assumed at a price of:
  - **For Wind:** LRP I low weighted wind price of $64.5/MWh
  - **For Solar:** LRP I low weighted solar price of $141.5/MWh

**Potential Approach 1:**

| | **Current Contracts*** | **New Extended Contracts** |
|---|---|---|
| Total Value (NPV 2017) | $23.3 Billion | $23.1 Billion |
| Average Annual Contract Value (First 5 Years) | $1.6 Billion | $1.4 Billion |
| *Figures assume projects remain operational after contract expiry at the LRP I low weighted price inflated to the year of contract expiry, as per OPO assumptions . | | |

**Potential Approach 2:**

| | **Current Contracts** | **New Extended Contracts** |
|---|---|---|
| Total Value (NPV 2017) | $23.3 Billion | $25.6 Billion |
| Average Annual Contract Value (First 5 Years) | $ 1.6 Billion | $0.8 Billion |

**Source**: Figures reflect IESO contract data current as of Sept 2016. Also includes two Phase III solar projects (100 MW combined) that came online in late 2016 not included in Sept 2016 IESO contract data.

# 2a. Extend Length of Existing Wind / Solar Contracts (cont'd)

- Contract re-negotiations could be piloted with large wind and solar contract holders.
- For example, the top 5 contract holders by portfolio value (online projects 10 MW and larger) include:

| Contract Holder | Technology | # of Contracts | Capacity (MW) | Estimated Value (NPV 2017) |
|---|---|---|---|---|
| Samsung* | Wind & Solar | 7 | 899 | $5.0 Billion |
| NextERA | Wind | 6 | 534 | $2.7 Billion |
| Northland Power | Wind & Solar | 15 | 290 | $1.8 ~~2~~ Billion |
| Pattern / Capital Power | Wind | 1 | 270 | $1.4 ~~5~~ Billion |
| ENGIE | Wind | 4 | 265 | $1.2 Billion |
| All Other | Wind & Solar | 76 | 1398 | $8.1 Billion |
| **Total** | **Wind & Solar** | **109** | **3654** | **$20.2 Billion** |

Source: IESO contract data current as of Sept 2016.
*Includes two Phase III solar projects (100 MW combined) that came online in late 2016 not included in Sept 2016 IESO contract data.

# 2b. Clean Energy Supply (CES) Contracts

- There are 13 natural gas facilities operating under Clean Energy Supply (CES) contracts. Given the current excess capacity, some of these facilities could be renegotiated to reduce output in the near term.

- In conjunction, OPG could seek to negotiate outright purchases of certain Ontario gas assets. Given the current excess capacity in electricity supply in Ontario, OPG can seek to negotiate outright purchases of certain Ontario gas assets and reposition them such that ratepayers would pay only for the "current need" component:
  - Contract terms would be renegotiated with the Province to temporarily idle the facilities;
  - Variable expenditures would be largely avoided with the facilities only incurring fixed costs; and
  - Plant life would be extended to a period post-2024 when additional power would be required.

- OPG has estimated monthly residential bill reductions of $2.37 to $4.00 from 2017 to 2019 if such an approach was taken for Ontario's gas portfolio.

- Natural targets would be assets that OPG either jointly owns (e.g., Portland, Brighton Beach) or operate on OPG's site with acquisition funding coming from Provincial borrowing.
  - Although OPG could also look beyond its facilities to the broader natural gas fleet in Ontario.

**Considerations**

- This proposal would reduce GHGs and provide some near-term cost benefits through lower staffing and maintenance costs:
  - Contract terms would be renegotiated with to temporarily idle the facilities;
  - Variable expenditures would be largely avoided with the facilities only incurring fixed costs; and
  - Plant life would be extended to a period post-2024 when additional power would be required.

- It will likely be challenging to find a willing seller and/or to negotiate a favourable price:
  - Sellers that are approached are in a strong position to extract value from OPG/the Province; and
  - Similarly, OPG's negotiating position would be weakened if this was viewed as part of the broader rate mitigation strategy.

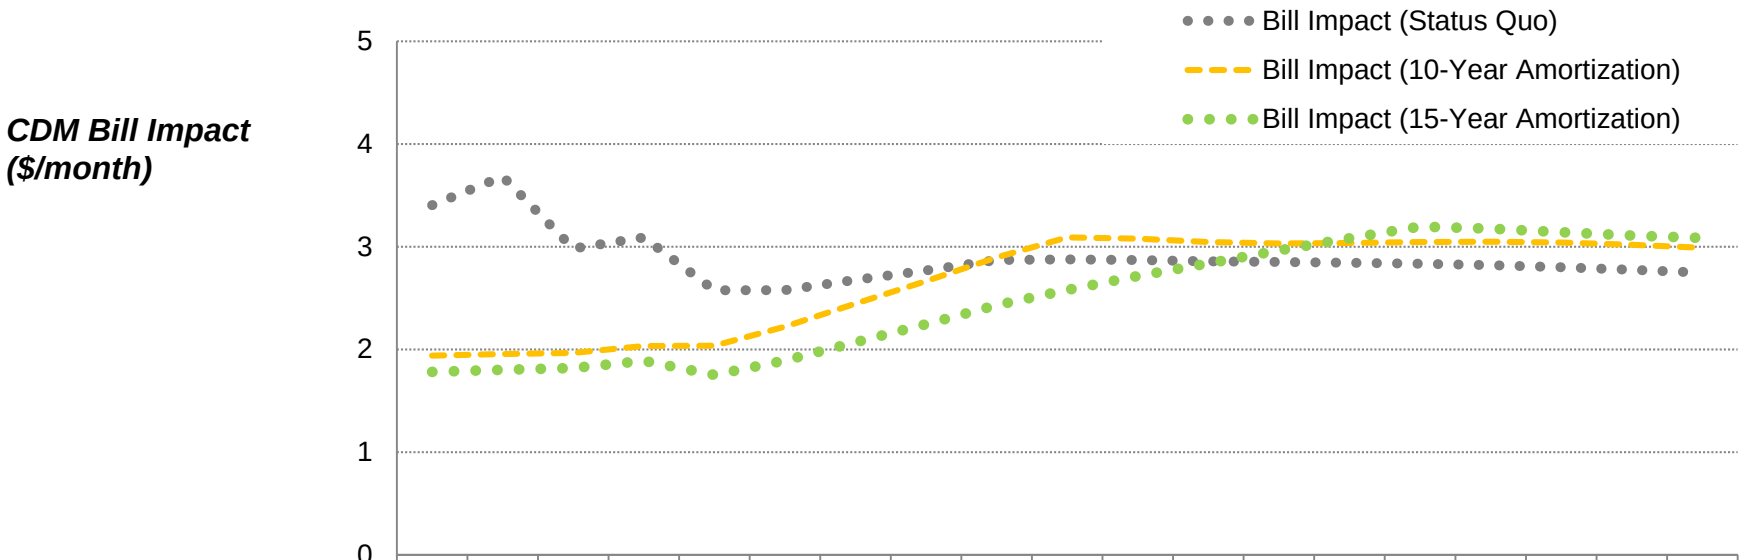
- In the past, OPG and IESO's contract renegotiations have been contentious and lengthy.

# 3. Amortize Conservation Program Costs

- This option would not be pursued if the Global Adjustment (GA) was financed (Option 1).
- ~$3 billion from the electricity ratepayer base will be spent on conservation programs delivered under the Conservation First Framework (CFF) and the Industrial Accelerator Program (IAP) between 2015 and 2020.
- Currently, Conservation and Demand Management (CDM) program costs are recovered from the Global Adjustment (GA) mechanism about one month after expenses are incurred.
- As a potential rate mitigation measure, certain CDM costs could be amortized. This would involve IESO borrowing funds from the Ontario Financing Authority (OFA) on an annual basis to fund program incentives (non-administrative costs).
  - The time period over which costs could be amortized would be over the lifetime of funded CDM measures.
  - ENERGY would work with IESO to determine the appropriate lifetime period – the graph on the next slide, which illustrates residential bill impacts, presents two cases: **10-year and 15-year measure lifetimes**.
- In both cases, amortizing a portion of conservation spending would produce a benefit for electricity ratepayers in excess of $1/month from 2017 to 2020. Over time the benefit would decrease and turn into a cost (higher electricity rates than would otherwise occur), as interest charges begin to grow. Estimated interest charges are as follows (a 3% interest rate is assumed; increases in interest rates could result in higher overall interest charges):
  - $712 million ($2016) – Amortizing eligible 2017-2035 CDM costs for 10-year period; and
  - $1.3 billion ($2016) – Amortizing eligible 2017-2035 CDM costs for 15-year period .
- Legislative changes would be needed to allow recovery of interest payments from ratepayers, or these costs could be recovered from the Consolidated Revenue Fund (CRF, or taxes).
- An alternative that could be explored would be to pay for CDM costs, or for a portion of these, from the tax-base (*see Appendix for more detail on tax funding option*).

# 3. Amortize Conservation Program Costs (cont'd)

## Conservation Residential Bill Impact – Status Quo, 10-Year and 15-Year Amortization



| | 2017 | 2018 | 2019 | 2020 | 2021 | 2022 | 2023 | 2024 | 2025 | 2026 | 2027 | 2028 | 2029 | 2030 | 2031 | 2032 | 2033 | 2034 | 2035 |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| Bill Impact (Status Quo) | 3.40 | 3.68 | 2.98 | 3.09 | 2.58 | 2.58 | 2.68 | 2.77 | 2.87 | 2.88 | 2.87 | 2.86 | 2.85 | 2.84 | 2.83 | 2.82 | 2.80 | 2.78 | 2.75 |
| Bill Impact (10-Year Amortization) | 1.94 | 1.95 | 1.97 | 2.03 | 2.04 | 2.22 | 2.45 | 2.67 | 2.90 | 3.09 | 3.08 | 3.05 | 3.03 | 3.04 | 3.04 | 3.05 | 3.04 | 3.02 | 2.99 |
| Bill Impact (15-Year Amortization) | 1.78 | 1.80 | 1.82 | 1.89 | 1.75 | 1.89 | 2.07 | 2.25 | 2.43 | 2.58 | 2.71 | 2.84 | 2.96 | 3.08 | 3.20 | 3.18 | 3.14 | 3.11 | 3.09 |

Source: IESO; Ministry of Energy

**Note**: Chart assumes that conservation incentive costs are available for amortization while administration cost are not. Although there is variable from year to year, incentives represent about two-thirds of conservation spending in Ontario. Chart assumes conservation spending continues at a similar rate beyond 2020. Chart assumes a 10 of 15-year borrowing rate of 3.0%.

# 3. Amortize Conservation Program Costs (cont'd)

**Considerations**

- Under **Public Sector Accounting Board (PSAB) accounting standards**, used by both the Province and IESO, only certain assets can be amortized: 1) pensions and 2) tangible capital assets. Under PSAB an asset must meet several criteria to be considered a capital asset, including:
  - A tangible capital asset must be tangible and substantive and the Ontario government must have title and operate the asset.
  - A tangible capital asset must bring a tangible benefit to the government or to Ontario.

- **Rate-regulated accounting** was developed to recognize the unique nature of regulated entities (e.g., electricity generators, LDCs). Under rate-regulated accounting certain costs can be treated as amortizable assets that would not normally be considered assets under accounting principles.
  - Over the past several years, the Auditor General (AG) has expressed concerns about the appropriateness of recognizing rate-regulated assets in the Province's consolidated financial statements.
  - Rate-regulated accounting is currently under review by international accounting standard setting bodies and is currently permitted only on an interim basis, so its future is unclear at present.

# 3. Amortize Conservation Program Costs (cont'd)

**Considerations**

- If some of Ontario's CDM costs could be amortized, analysis shows that ratepayer impacts would be reduced in the short-term but interest charges on the loan would result in increased overall ratepayer costs in the longer-term.

- Legislative amendments would be needed to allow recovery of loan interest charges from GA.

- ENERGY has received an opinion on the proposal to amortize CDM costs from IESO's external auditor.
  - Ernst and Young indicated that an argument could be made to support the recognition of the costs as an asset as the costs meet essential asset characteristics, as prescribed by PSAB.

- ENERGY staff have developed a note to seek an opinion from the Ontario Provincial Controller (OPC) to determine whether CDM costs could be amortized according to rate-regulated accounting standards.

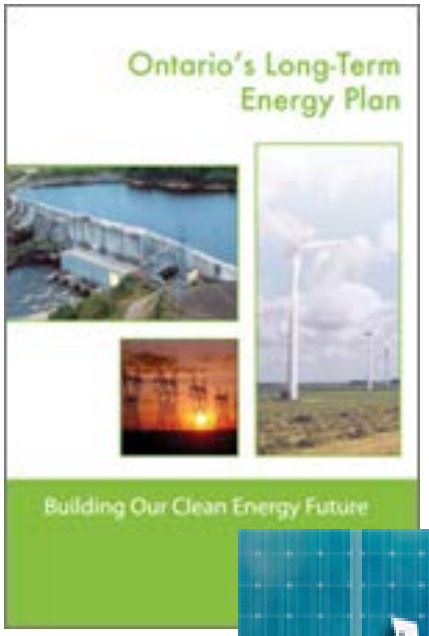
- If there is a desire to pursue this option, ENERGY would seek a formal opinion from the OPC on whether CDM costs could be amortized according to rate-regulated accounting standards, ENERGY would send its note along with IESO external auditor's opinion to OPC.
  - In 2013 when this option had been explored, staff at the OPC agreed with the view that amortized conservation costs can be considered as assets, but noted that the Auditor General may disagree with considering amortized conservation costs as assets.

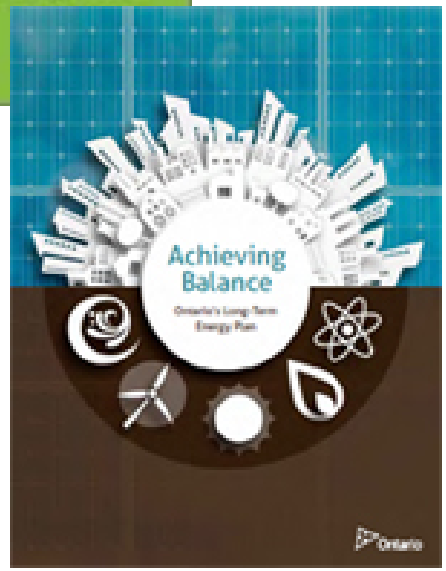
- Further legal analysis would also be required to confirm legal viability and possible approaches to implementation.

# Long-Term Energy Plan

# Longer-Term Energy Plan – Overview

- The Long-Term Energy Plan (LTEP) is the energy sector's roadmap, with a focus on integrated policy and setting the direction for Ontario's energy future.
- The 2013 LTEP included content on both Ontario's electricity as well as fuels sub-sectors. The next LTEP will integrate the electricity and fuels sub-sectors to provide a complete picture of Ontario's energy system.
- Developing the LTEP is a highly collaborative process in which ENERGY and IESO directly engage with stakeholders, indigenous communities and the public.
- The Ministry sought stakeholder as well as public feedback through in-person engagement sessions, online tools, and an Environmental Registry posting.
- The Ministry is currently developing the next LTEP, and is targeting a tentative April 2017 release date.





# LTEP – Process and Timeline

**Jan - Feb**
Policy Development

- Ministry staff to review engagement feedback and to provide recommendations for DMO/ MO and Minister on LTEP policies and themes.

**Feb - March**
Modeling

- Additional modelling to inform potential initiatives and themes will be made to IESO/other modelers to update outlooks.
- Policy decisions may be adjusted based on modeling outcomes.

**March**
Plan development

- Ministry will prepare LTEP submission and IESO/OEB implementation directives for Cabinet Approval.

**Early April**
Cabinet Approval

- Cabinet approves LTEP document; as well as IESO/OEB implementation directives

*Writer to work alongside and participate in briefings and theme development.*

**Early – Mid April**
Finalize and produce document

- Layout/ graphics/ translation of final document
- Ministry staff provide final review

**End April**
Publish LTEP and implementation directives

- Final LTEP published on ENERGY website
- Minister issues Cabinet-approved implementation directives to IESO & OEB
- LTEP lockup

**May – July**
Implementation Plan Development

- IESO and OEB develop implementation plans based on directives

**Aug – Sept 2017**
Implementation Plan Approval

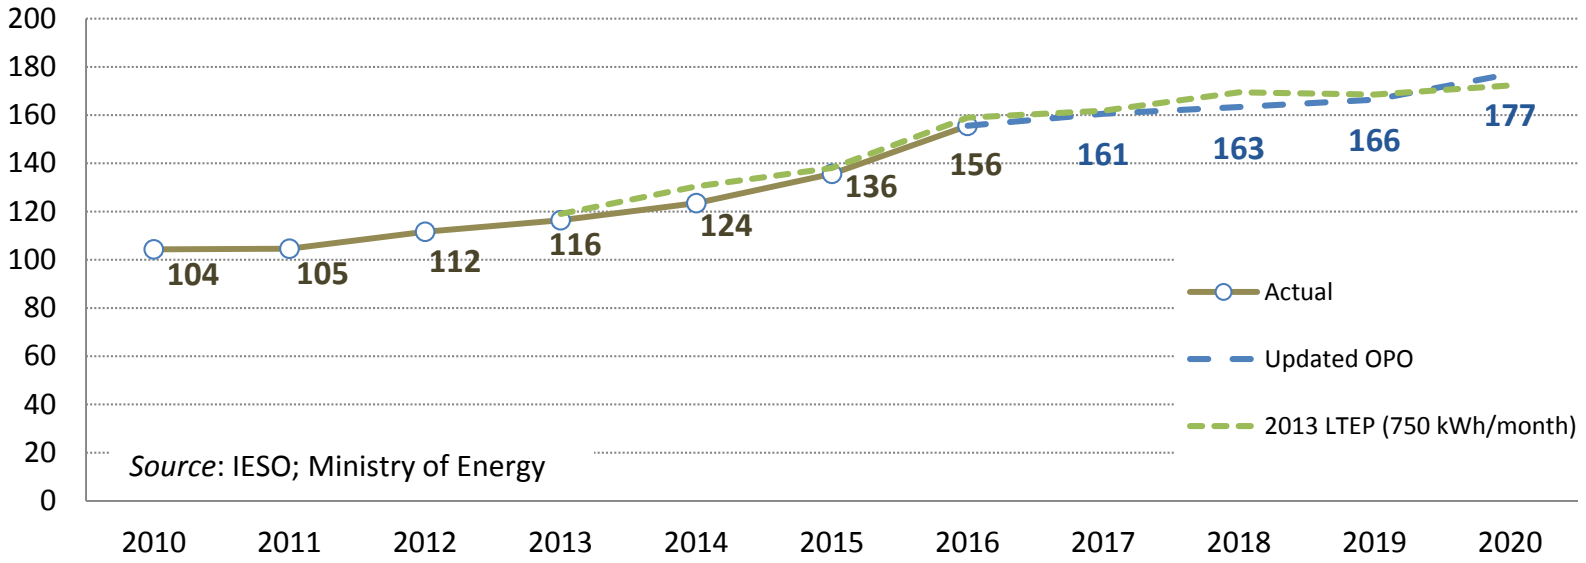
- Implementation plans submitted to Minister of Energy for approval

# Appendix

# Context – Residential Electricity Prices

- Residential consumers electricity prices continue to be a concern for many Ontarians, particularly those that rely on electric heat.
  - **Note:** The typical residential bill is currently below the 2013 Long-Term Energy Plan (2013 LTEP) forecast.

**Typical Residential Electricity Bills**
*Historical and Forecast in $/month*

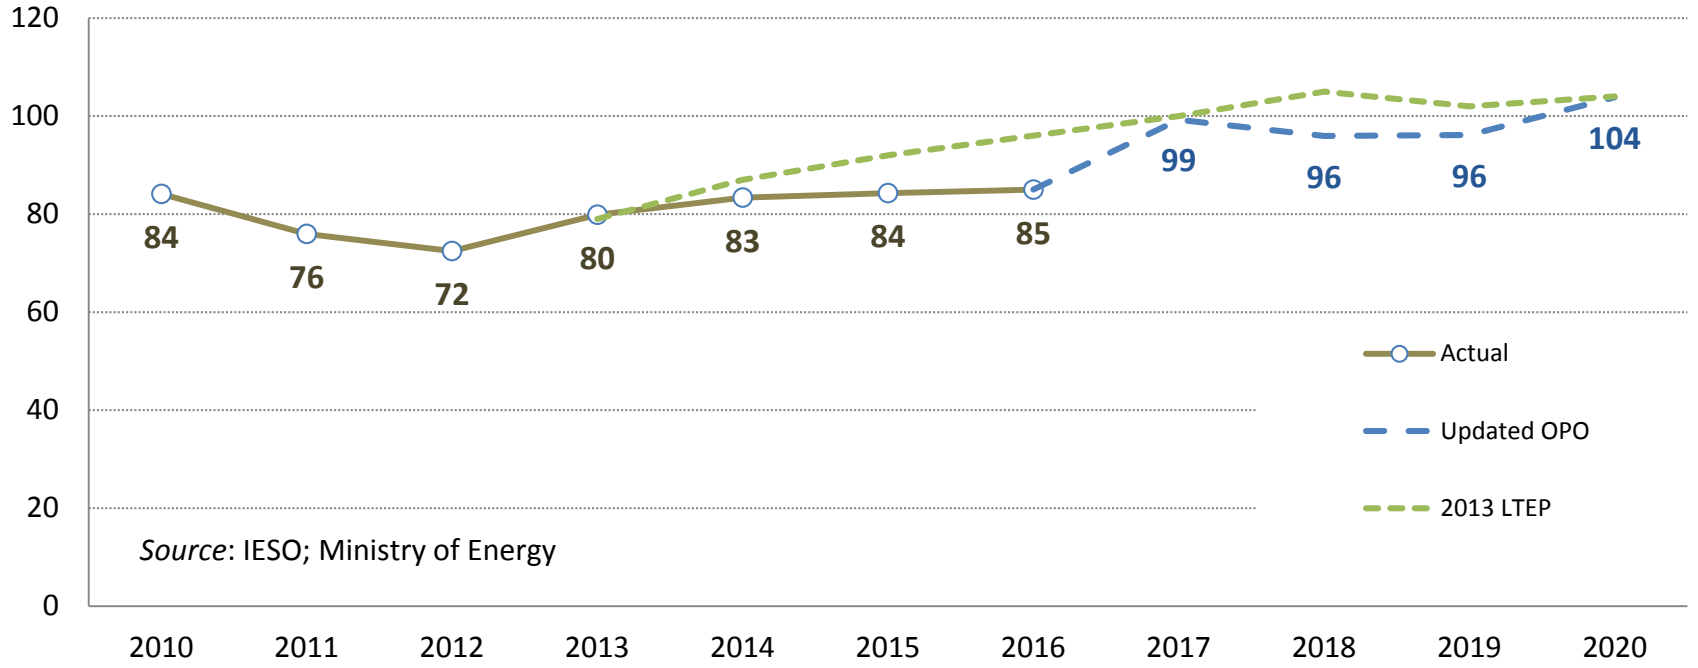


**Note**: The 2013 LTEP forecast for residential bills was based on 800 kWh/month without RRRP or electric heating; the above has been rebased to 750 kWh/month for comparison purposes. Typical residential are based on Toronto Hydro. The updated OPO forecast above includes the 8% rebate to offset the provincial portion of HST, ICI expansion and RRRP expansion.

# Context – Large Industrial Electricity Prices

- Industrial electricity prices continue to be a concern for many businesses.
  - **Note:** The typical industrial electricity price is currently below the 2013 LTEP forecast.

**Typical Class A Electricity Prices**
*Historical and Forecast in $/MWh*



**Note**: The 2013 LTEP forecast for industrial reflects a transmission connected Class A electricity consumer. The updated OPO forecast above includes ICI expansion and RRRP expansion.

# Global Adjustment (GA) Financing

- The global adjustment (GA) is comprised of costs for regulated and contracted generation, as well as conservation.
- Some contracted generation assets are expected to have a useful life that extends beyond the term of their current financial contracts (typically 20-years).
- Similarly, conservation costs are recovered through the GA on an annual basis while conservation initiatives provide benefits to the electricity system over the course of many years.
- Since the GA only includes costs related to the contractual life of these assets, there may be an opportunity to recognize the longer-term benefit of these assets to the electricity system and “bring forward” that benefit for ratepayers today, while deferring some of the current costs.
- An indicative GA financing proposal is presented that lowers ratepayers costs over the short term by borrowing money but increases costs over the long term when GA costs are forecast to be lower.
- **Note:** Not all generating assets will continue operations at the end of their contract term. Regulatory constraints (i.e., nuclear licences) or low demand conditions (i.e., as experienced with current expiring NUGs) would mean that some generators will shutdown at the expiry of their contract. Future ratepayers would be paying for these assets that are no longer producing power.

# GA Financing – Considerations

**Considerations**

- Borrowing money to finance the GA, while lowering costs in the short term, results in a more rapid rise in electricity prices beyond the rate of increase already expected.
  - Deferral of electricity system costs over a long time-horizon and associated interest costs may draw criticism from some stakeholders as creating a new "stranded debt" in the sector. **Note:** the Debt Retirement Charge (DRC) was removed from residential bills in 2016 and will be removed for remaining customers in 2018.

- The GA financing proposal involves borrowing large amounts of money over a long period of time (16-30 years, depending on the scenario) to reduce electricity rates. This debt would be highly sensitive to interest rates which could extend repayment timelines or put significant pressure on electricity rates. A long-term interest rate of 5% is assumed for this analysis.

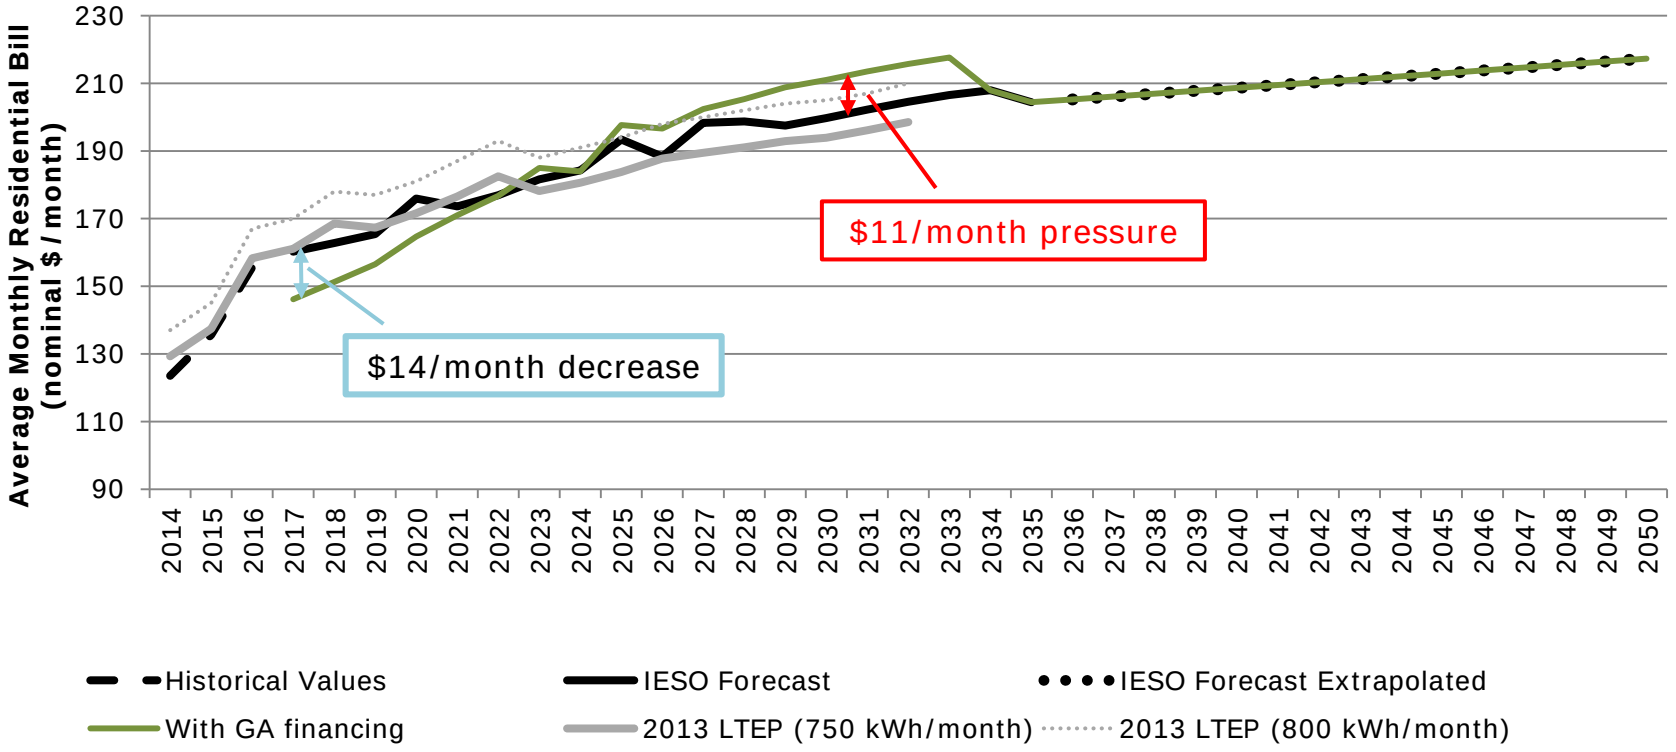
- GA and HOEP provide a natural hedge against each other – when one goes up, the other goes down – keeping total electricity costs relatively stable and predictable. Smoothing only the GA would lead to greater price volatility for consumers unless the schedule and amount of ratepayer payments was defined relative to the actual cost of GA.

- Some Class A consumers pay limited GA and would receive little benefit under the financing proposal. These consumers also currently pay very low rates. In addition, in recognition that Class B electricity consumers pay the majority of GA costs, could limit GA cost reductions through financing to Class B consumers only.

- Should Ontario electricity demand be lower than forecasted, the cost of paying off the debt will be spread over a smaller pool of consumption, further increasing future costs for individual ratepayers.

# Low / GA Financing – Impact on Residential Electricity Bills

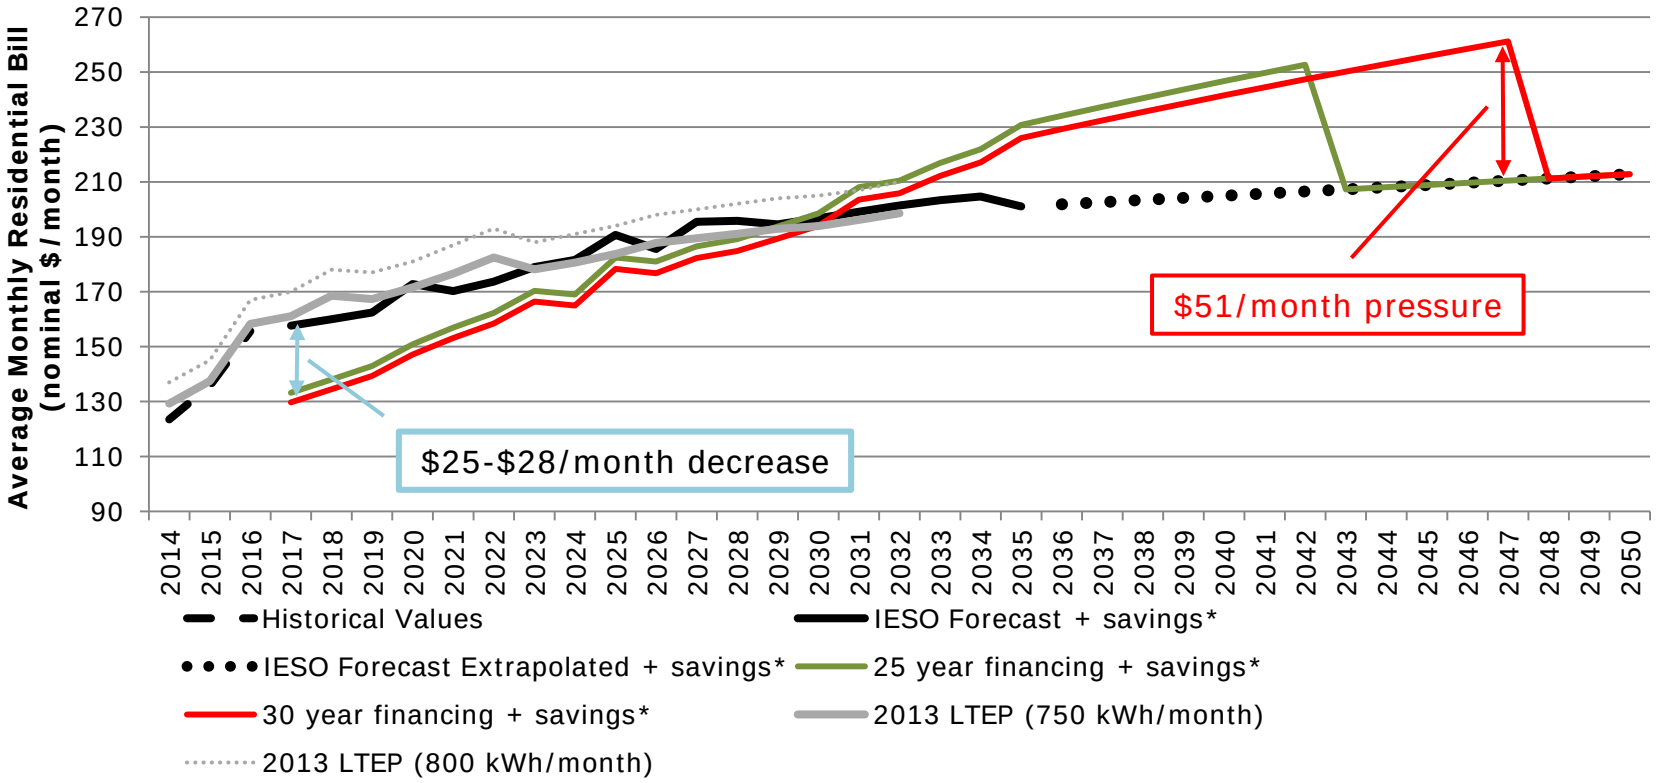
- In this option, the starting GA payment from all ratepayers in 2017 is lowered by $2.5 billion and increases at 2% each year – up to a cap of no more than $2 billion more than the true cost of GA in any year – until the borrowed money is paid back in 2032.



- By **borrowing up to $9.3 billion**, this scenario results in **a short-term residential electricity cost reduction of up to $14/month** at the cost of **increased future electricity bills over 10 years of up to $11/month** above the true cost of electricity production.

# High / GA Financing – Impact on Residential Electricity Bills

- In this option, the starting GA payment from all ratepayers in 2017 is lowered by $4.4 and $5 billion and increases at 2% each year until the borrowed money is paid back over a 25 and 30 year financing period respectively.

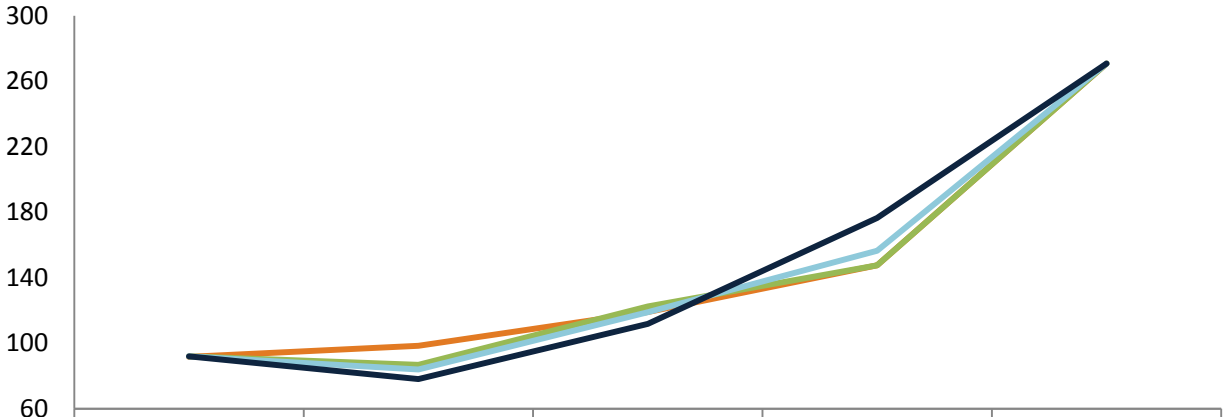


- By **borrowing up to $65 billion**, this scenario results in **a short-term residential electricity cost reduction of up to $25-$28/month** at the cost of **increased future electricity bills over 12-17 years of up to $46-$51/month** above the true cost of electricity production.

# GA Financing – Impact of the Level of Financing on Large Industrial Electricity Consumers

- Below graph illustrates the estimated impact of the level of GA financing for an average Class A electricity consumer over a 25 year amortization period.

**Estimated All-In Electricity Price**
*for Average Class A in $/MWh*



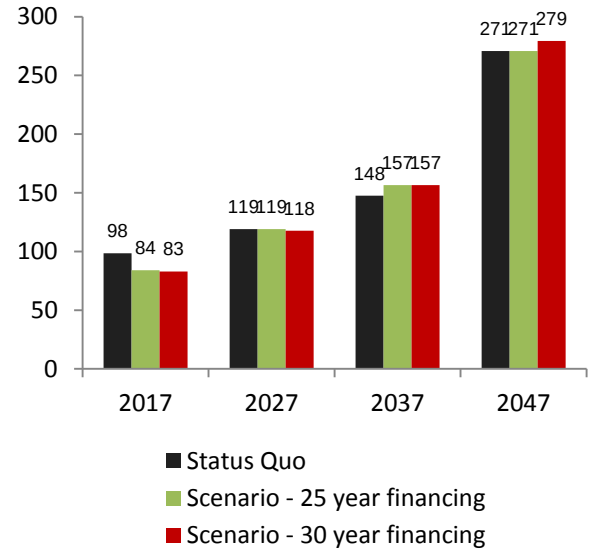
| | 2016 | 2017 | 2027 | 2037 | 2047 |
|---|---|---|---|---|---|
| Status Quo | 92 | 98 | 119 | 148 | 271 |
| Low Financing | - | 87 | 122 | 148 | 271 |
| Moderate Financing | | 84 | 119 | 157 | 271 |
| High Financing | | 78 | 112 | 177 | 271 |

**Note:** Assumes that demand by industrial sector continues at average 2011-2015 levels. Please see the Appendix or more information on the estimated impact on large industrial electricity consumers.

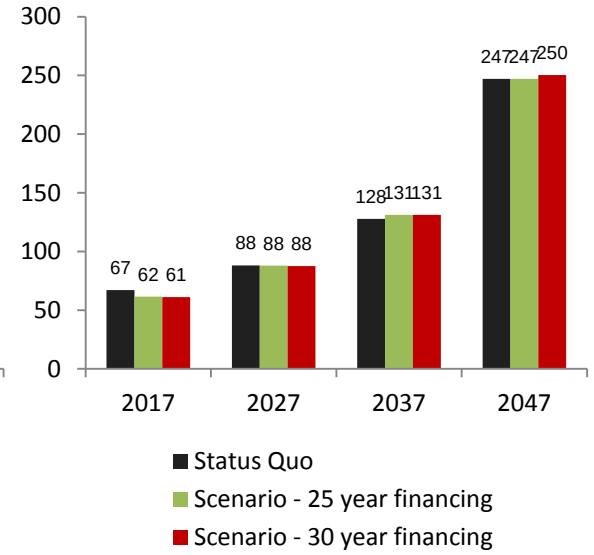
# GA Financing – Illustrative Impact for Large Industrial Electricity Consumers

- Below graphs illustrate the estimated impact under the moderate GA financing scenario for an average Class A electricity consumer, a consumer that pays low GA (i.e., pulp and paper) and high GA (i.e., refining and chemical manufacturing).

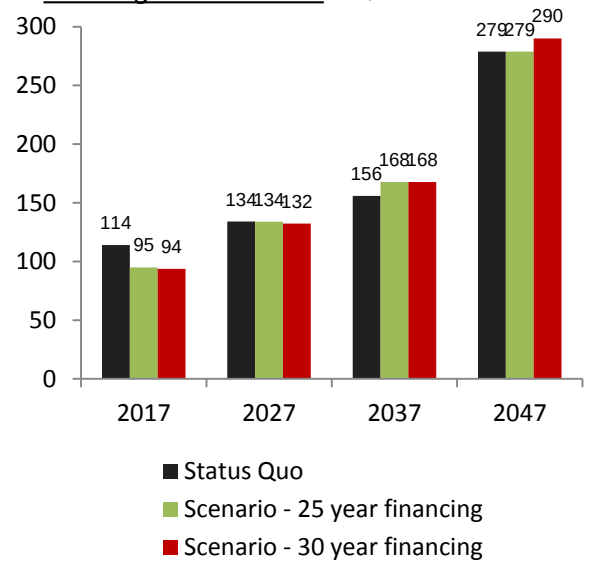
**Estimated All-In Electricity Price**
*for Average Class A in $/MWh*



**Estimated All-In Electricity Price**
*for Pulp & Paper in $/MWh*



**Estimated All-In Electricity Price**
*for Refining & Chemicals in $/MWh*



**Note:** Assumes that demand by industrial sector continues at average 2011-2015 levels.

# Other Options Considered – Typical Residential Electricity Consumer

| *$/750kWh* | 2017 | 2018 | 2019 | 2020 | 2021 | 2022 | Timing of Benefit |
|---|---|---|---|---|---|---|---|

---

Hi Ron,

The main deck appears to have updated the earlier version with information shared in the distributed material from last Friday.

Some early comments:

Accountants will hammer out the use of trust to hold the GA or the new GA deferral account but currently the deck has the fiscal impact for the option as 'moderate' and the impacts TBC. It would be helpful to start putting numbers on the fiscal impact as the decision makers should be able to assess the downside risk related to the option. My understanding is that under both USGAAP and IFRS, the criteria of control is key in determining whether the entity is to be consolidated or not.

In the support deck on LDC and delivery line overview, it indicates that the program structure could be temporary until the start of 'revenue decoupling'. Given that the structure would still leave distribution cost variance cost across different LDCs, I don't believe the comment is valid.

John.

Hi John,

When did the request go to $300M for 16-17, $1.1B for 17-18, 18-19, and $1.2B for 19-20?

And there still does seem to be any more specification in the Minute on the RRRP adjustment mechanism.

Were either of those discussed at the prior briefings?

Ron

Attached is an updated draft briefing note for TB/MBC on Monday. Cap and trade minutes updated to reflect MOECC and CO input. The Financial Summary table future year numbers have moved back to the numbers used at Chair's briefing, in consultation with Energy (there's a minute explicitly saying Energy will through the upcoming PRRT process update the outyear numbers). The $300M for 2016-17 remains and aligns with the signed admin sheet for the TB/MBC item.

James

**TREASURY BOARD / MANAGEMENT BOARD OF CABINET**
**REQUEST ASSESSMENT NOTE**

| | | |
|---|---|---|
| **Ministry:** | Energy | |
| **Meeting Date:** | September 12, 2016 | |
| **Agenda Class:** | Major | |
| **Last reviewed by:** N/A | | **Tracking to:** Cabinet - September 12, 2016 |

| **SUBMISSION TITLE:** | Electricity Price Mitigation |
|---|---|

## I. DECISION BEFORE THE BOARD

The Ministry of Energy is requesting approval of a suite of initiatives providing relief to various electricity consumer classes.

## II. RECOMMENDATIONS:

| | |
|---|---|
| • Approve a suite of initiatives to provide relief to various electricity consumer classes (pending Cabinet policy approval):<br>– Providing an 8% rebate to Regulated Price Plan consumers;<br>– Expanding the Industrial Conservation Initiative;<br>– Updating the Rural or Remote Rate Protection program; and,<br>– Using $270M in cap and trade proceeds to ensure industrial and commercial consumers are not negatively impacted by cap and trade by providing a modest reduction in rates. Balance of proceeds intended for electricity relief through the Climate Change Action Plan ($60M), could provide some fiscal offsets.<br>• Approve $300M in Supplementary Estimates for electricity price mitigation.<br>• Direct the Ministry to report back to TB/MBC through the annual planning process with updated future year impacts, and obtain any required TB/MBC approvals to implement the initiatives.<br>• Recommend proceeding to Cabinet with the proposed legislation amendments to existing regulations to implement the initiatives. | *Board Judgment* |

## III. FINANCIAL SUMMARY

| **$ Millions** | **2016-17** | **2017-18** | **2018-19** |
|---|---|---|---|
| Initiative cost requested | 300.0 | 1006.0 | 1004.0 |
| Initiative cost recommended | 300.0 | 1006.0 | 1004.0 |
| Recommended program base | 300.0 | 1006.0 | 1004.0 |
| Offset Recommended – Applies if cap and trade proceeds diverted to in-plan initiatives | 0.0 | (60.0) | (60.0) |
| Total Fiscal Impact | 300.0 | 946.0 | 944.0 |

## IV. KEY COMMENTS AND CONSIDERATIONS

Context

Electricity costs have increased as the province has made investments in clean energy generation and modernized electricity infrastructure. Electricity bills are expected to continue to increase as more renewable energy projects come online. Since 2010, average bills for residential consumers (i.e., using 750 kWh/month) have increased by over 50%. Rates paid by commercial and industrial electricity consumers have increased by 56% and 6% respectively over the same period. Appendix C provides supporting background information.

As part of the 2016 Budget, the government committed to offset the impact of cap and trade in Ontario for commercial and industrial electricity consumers, while also providing a benefit of up to $2 per month for residential electricity consumers. The Climate Change Action Plan (CCAP) included up to $1.32B over 4 years to help keep electricity rates affordable.

The Ontario Clean Energy Benefit (OCEB) expired December 31, 2015, as part of the originally planned, five-year legislated program put in place as a broad-based, transitional measure to a cleaner electricity system. OCEB was also put in place following the implementation of the Harmonised Sales Tax (HST). Unlike the previous provincial Retail Sales Tax (RST), the HST (and GST) included electricity in the taxable base. With the end of OCEB, the government ended the electricity Debt Retirement Charge (DRC) on residential users earlier than planned, as of January 1, 2016, and also put in place the low-income targeted Ontario Electricity Support Program (OESP).

In order to achieve the Budget commitment and additional price mitigation, while delivering on the Province's climate change objectives, the Ministry of Energy has developed price mitigation initiatives that consider tax-based levers, cap and trade proceeds, and shifting costs within the rate-base.

Proposal

The Ministry is proposing the following to mitigate electricity prices for consumers (Appendix D provides more information on each item below):

- Provide an 8% rebate on the pre-tax cost of electricity to consumers eligible for the Regulated Price Plan (i.e., residential, small business and farms), equivalent to the provincial portion of HST.
- Expand Industrial Conservation Initiative (ICI) eligibility by lowering the threshold to 1 MW, to provide support to Class B eligible electricity consumers (i.e., commercial, institutional and small industrial).
- Update the Rural or Remote Rate Protection (RRRP) program, to provide relief to rural customers.
- Use cap and trade proceeds to provide a modest rate reduction for commercial and industrial electricity consumers.

Public high-profile communications would coincide with introduction of legislation (September 2016). Currently, the 8% rebate would be available starting January 1, 2017, along with updating the RRRP. Expanding ICI won't be added to bills until 2018 due to the time required to implement the expansion and for billing changes. The impact of cap and trade would not be added to electricity bills until 2017.

The following tables provide an overview of the four initiatives, recipients, projected financial impact, grouping them based on whether taxpayers or ratepayers cover the costs:

| | Measure | Annual Impact | Targeted Recipients |
|---|---|---|---|
| **Taxpayers cover the costs (Potential to impact the Province's Fiscal Plan)** | | | |
| **1.** | 8% Rebate to Regulated Price Plan | Fiscal<br>About $1.0B | Residential, small business and small farms, and other small users |
| **2a.** | Use cap and trade proceeds to provide a modest reduction in rates for commercial and industrial electricity consumers. (Implementation details under development). | ($270M) in cap and trade proceeds to offset $270M in costs for reducing rates<br><br>No Fiscal Impact | The CCAP allocated up to $330M/year in cap and trade proceeds for electricity price mitigation.<br><br>See item 2b. regarding the residual amount of cap and trade proceeds ($330M - $270M = $60M) |
| **2b.** | While CCAP anticipated $330M/year was required to keep electricity affordable, the residential portion of this commitment is met by the 8% rebate. As such, some of the CCAP allocated proceeds can be redirected to other GHG reduction initiatives already in the fiscal plan. | Fiscal<br>($60M) | Provides fiscal plan flexibility of $60M/year if these proceeds are diverted to offset costs of other existing in-plan initiatives that reduce GHG emissions. |
| | **Total Fiscal Impact** | $946M | Matches Financial Summary on page 1 for 2017-18 |

| | Measure | Annual Impact | Targeted Recipients |
|---|---|---|---|
| **Ratepayers cover the costs (No impact to the Province's Fiscal Plan)** | | | |
| **3** | Expanding ICI eligibility to customers above 1MW in all sectors | Rate base<br>($47M/$82M)** | Intermediate and large-sized industrial, commercial and institutional consumers above 1MW in all sectors |
| **4.** | Updating Rural or Remote Rate Protection | Rate base<br>($110M) | Residents in rural or remote locations: Hydro One's lowest-density R2 customers. |

** Short-term/Long-term rate base impact, where short term is one year after expanded eligibility takes place and long-term is expected impact once new customers have time to change behavior.

Due to the nature of the ICI Global Adjustment mechanism and cost recovery of RRRP, the rate base proposals (#3 and #4) above benefit the targeted recipients, but come at a cost to all other electricity ratepayers in Ontario.

The following table from the Ministry highlights the benefits by electricity consumer class.

| | Average Annual Fiscal Impact | Average Annual Greenhouse Gas Reduction Account (GGRA) Proceeds Impact | Regulated Price Plan (Residential) Benefit | | Class B (Commercial) Benefit | Class A (Industrial) Benefit | |
|---|---|---|---|---|---|---|---|
| | | | *Average (750 kWh/ month)* | *Rural (1000 kWh/ month)* | | *Existing* | *New* |
| • 8% rebate to Regulated Price Plan eligible consumers<br>• ICI Expansion<br>• RRRP Update<br>• Proceeds Recycling | $1.0 billion annually | $0.27 billion annually<br>(Reduction of $0.06 billion annually or $0.24 billion total from the CCAP commitment) | -$11/ month<br>(-8%) | -$45/ month<br>(-20%) | -$3/MWh<br>(-2%) | -$3/ MWh<br>(-3%) | Up to -$52/MWh<br>(-34%) |

**Notes:** * The above benefits do not include the cost of ICI expansion and the RRRP update (total impact of $1.74/MWh). Proceeds recycling is net of the cost of carbon and represents an estimated average of the proceeds required over the first compliance period (2017-2020).

See Appendix E for more illustrative bill impacts. See Appendix F for an electricity bill mock-up.

Fiscal Impact

The Ministry estimates proceeding with an 8% Regulated Price Plan (RPP) rebate without a cap would cost an estimated $1.1 billion per year. The Ministry's estimate of $300M needed for 2016-17 (to cover the first three months of 2017 when the 8% rebate applies) will be addressed through Supplementary Estimates. The Ministry will use the annual planning process to update future year impacts.

The Ministry also indicates the current proposal would use cap and trade proceeds to eliminate carbon price impacts/ grid emission reductions to ratepayers, as was established through the CCAP. This proposal does not require the full $330M/year notionally allocated through the CCAP, which could provide fiscal plan flexibility of about $60M per year to commit to other GHG reduction initiatives in the fiscal plan.

Cap and Trade Proceeds

The 2016 Budget committed to offset the impact of cap and trade for commercial and industrial consumers, while also providing a benefit of up to $2 per month for residential consumers (on average). While residential and other consumers would benefit from the 8% pre-tax rebate, this does not apply to non-Regulated Price Plan eligible consumers (larger industrial, commercial, and other consumers). As such, the Ministry is proposing to direct a portion of cap and trade auction proceeds to industrial and commercial consumers not in the RPP to provide a modest rate reduction. This proposal fulfills the policy objective established in the Climate Change Action Plan to eliminate carbon price impacts/ grid emission reductions to electricity ratepayers.

To be characterized as a regulatory charge under the cap and trade program, auction proceeds need to be spent on programs that are reasonably likely to reduce or support the reduction of greenhouse gases. The Ministry has indicated that their proposal would use proceeds to offset

the costs of committed investments that reduce greenhouse gases (e.g., non-emitting generation and conservation programs) and could incent fuel-switching away from fossil fuels.

Considerations – Implementation

At this point, the Ministry has presented a high level overview of major implementation pieces:

- New legislation would be required to enable the 8% rebate proposal. Legislation would closely mirror the Ontario Clean Energy Benefit Act, 2010. If passed, the legislation would require a general regulation. Amendments would also be required to various regulations to expand ICI and RRRP.
- On-bill rebate delivery would likely require adjustments to LDC billing systems, which could impact delivery costs and timelines. The Ministry indicates it will consult with LDCs (possibly through the Ontario Energy Board) to accurately assess these impacts once the program has been announced. In the past, LDCs have asked for at least six months' notice when implementing billing system changes. Timing concerns may be alleviated by allowing LDCs to provide retroactive payments rebates if their systems cannot be updated in time for January 1, 2017. This was done with the OCEB.
- Detailed messaging on bills could be implemented. The rebate would not be directly linked to HST. With electricity invoices containing multiple line items and LDC bill presentment varying widely, direction on rebate presentment will need to be flexible to allow LDCs to incorporate easily while ensuring government-preferred branding and messaging is conveyed.
- The Ministry will need to continue to consult with the Independent Electricity System Operator (IESO), Ontario Energy Board (OEB) and LDCs regarding implementation of proceeds recycling.

Legal Considerations

8% Rebate (shift costs from rate-base to tax base by providing a rebate equal to the provincial portion of HST):

- Providing the contemplated rebate under the proposed Bill does not, in and of itself, give rise to legal issues. As policy direction is given on the specifics of supporting regulations, any associated legal risks can be identified.

ICI Expansion (shift costs within rate-base by expanding eligibility for the ICI program to consumers of >1 MW):

- To establish that the charge is legitimate, it must be established that the purpose and effect of the charge is to facilitate the maintenance of a financially viable electricity system by way of load management or some other feature under which those who are subsidized provide an overall system benefit enjoyed by those who subsidize them.

RRRP Update (shift costs within the rate-base by increasing the RRRP benefit paid to rural and remote customers):

- Increasing the amount of revenue devoted to the RRRP or expanding the scope of consumers eligible for the program does not raise new legal risk. There is a good argument that the RRRP is a regulatory charge, as it socializes some of the costs of distributing electricity to rural consumers. Overall the risk that the RRRP would be characterized as a tax is assessed as moderate (meaning equally good arguments on

both sides).

Cap and Trade Proceeds Recycling (reduce impact on rate base and tax base by directing cap and trade auction proceeds to industrial consumers):

- To be characterized as regulatory charges under the cap and trade program, auction revenues should be spent on programs that reduce GHGs.

Other Considerations

- This request does not align with the 2016 Budget fiscal plan and there are no proposed offsets for the 8% rebate.
- The 8% rebate would provide a typical residential consumer about an $11 per month benefit on average, exceeding the Budget 2016 $2 per month on average cap and trade commitment. The proposal to offer a modest rate reduction for industrial and commercial consumers also exceeds the Budget commitment to simply offset the impact of cap and trade on these consumers.
- Reduction in electricity prices that do not consider consumption amounts (e.g., without the cap in the previous OCEB program) does not promote electricity conservation and may be seen as unaligned with climate change objectives.
- Other price mitigation measures introduced following the implementation of the HST, as well as the end of OCEB, would continue.
  - Both the energy portion of the Ontario Energy and Property Tax Credit (OEPTC) and NOEC were introduced/ enhanced following the introduction of the HST and have a significant annual fiscal cost (totalling about $500 million annually).
  - The DRC on residential consumers was ended early, as of January 1, 2016 (about a $340 million impact in 2016-17).
  - OESP is a low-income targeted program funded by electricity consumers through the electricity rate base.

## APPENDIX A: PROPOSED MINUTE

Approve electricity price mitigation for residential, commercial and industrial consumers.

In this regard:

i) Approve a suite of initiatives to provide relief to various electricity consumer classes:

   a) Provide a rebate of 8% on the pre-tax cost of electricity for all electricity consumers eligible to be billed under the Ontario Energy Board's Regulated Price Plan (RPP); and any other consumers who would be eligible for RPP if their electricity account was with a licensed distributor, starting January 1, 2017.

   b) Increase the total amount of rate protection available to R2 low density electricity consumers under the Rural or Remote Rate Protection Program (RRRP) by increasing the subsidy by $110 million from its current level of $127 million which has been capped since 2003.

   c) Implement a mechanism to periodically adjust the total annual amount of rate protection available to R2 low density electricity consumers under the RRRP, effective on or after January 1, 2018.

   d) Expand eligibility for participation in the Industrial Conservation Initiative (ICI) to smaller industrial, institutional and commercial customers by lowering the eligibility threshold to 1 MW and removing restrictions on eligible sectors.

   e) Provide a modest rate reduction to commercial and industrial electricity consumers using cap and trade auction proceeds to offset the cost.

ii) Recommend to Cabinet the proposed Ontario Rebate for Electricity Consumers Act, 2016 and that the Ministry proceed to Legislation and Regulations Committee before the end of 2016 with supporting regulations under the proposed Ontario Rebate for Electricity Consumers Act, 2016.

iii) Approve the implementation details associated with the suite of initiatives:

   a) Approve:

      1. The creation of a new item entitled "Ontario Rebate for Electricity Consumers" in the Electricity Price Mitigation Program (Vote/Item 2905-3).

      2. The creation of a new Transfer Payment entitled "Ontario Rebate for Electricity Consumers" in Rebate for Electricity Consumers (Vote/Item 2905-3).

      3. An expenditure increase in the amount of $300,000,000 in 2016-17 in the Transfer Payment entitled "Rebate for Electricity Consumers[1]" in Rebate for Electricity Consumers (Vote/Item 2905-3). Direct the Ministry to return any under-spending to the Treasury Board Contingency Fund.

[1] Pending approval of the proposed Ontario Rebate for Electricity Consumers Act, 2016

b) Note:

1. Funding for 2016-17 will be implemented through Supplementary Estimates in the Fall of 2016.

2. Future year impacts of $1,006,000,000 in 2017-18 and $1,004,000,000 in 2018-19, and $1,004,000,000 in 2019-20 and ongoing.

c) Direct the Ministry to report back to Treasury Board/Management Board of Cabinet in the 2017-18 Program Review, Renewal, and Transformation process on updated future year impacts, and a potential offset strategy for resource requirements to support program implementation

iv) Note the reallocation of cap and trade auction proceeds from the up to $1,320,000,000 that was previously allocated through the Climate Change Action Plan for electricity price mitigation, as follows:

a) The Ministry of Energy to work with the Ministry of the Environment and Climate Change to invest an estimated amount of up to $1,080,000,000, from 2017-18 to 2020-21, of Cap and Trade auction proceeds for non- Regulated Price Plan electricity consumers over the first compliance period (2017-2020) through a volumetric rebate mechanism with a linkage to GHG emission reductions and the government's Climate Change Action Plan. Cap and trade auction proceeds would be used to promote fuel switching to make electricity more competitive with traditionally cheaper fossil fuels, supporting the Government's Climate Change Action Plan.

b) The remaining up to $240,000,000, from 2017-18 to 2020-21, which was previously allocated in the Climate Change Action Plan to eliminate carbon price impacts/ grid emission reductions to ratepayers, to be used for other existing initiatives within the fiscal plan and the Climate Change Action Plan that reduce greenhouse gas emissions.

In this regard:

1) Note any redirection of proceeds previously allocated in the Climate Change Action Plan is subject to the evaluation of the Minister of the Environment and Climate Change.

2) Direct the Ministry of the Environment and Climate Change to work with Treasury Board Secretariat and Ministry of Finance to identify other existing initiatives within the fiscal plan that reduce greenhouse gas emissions that can be funded with the remaining up to $240,000,000, from 2017-18 to 2020-21, which was allocated in the Climate Change Action Plan to eliminate carbon price impacts/ grid emission reductions to ratepayers.

v) To support implementation of electricity price mitigation, the Ministry is proceeding with the following amendments to existing regulations:

a) Amendments to Ontario Regulation 429/04 (Adjustments Under Section 25.33 of the Act) made under the Electricity Act, 1998 to lower the Industrial Conservation Initiative (ICI) threshold to 1 megawatt and require electricity consumers and market participants between 1 MW and 5 MW to opt in.

b) Amendments to Ontario Regulation 442/01 (Rural or Remote Electricity Rate Protection) made under the Ontario Energy Board Act, 1998, to increase support through the Rural or Remote Rate Protection Plan to R2 low density electricity customers and provide for a periodic adjustment mechanism.

vi) Direct the Ministry to work with the Premier's Office and Cabinet Office on the development and implementation of an integrated communications strategy.

## APPENDIX C: ELECTRICITY SECTOR BACKGROUND

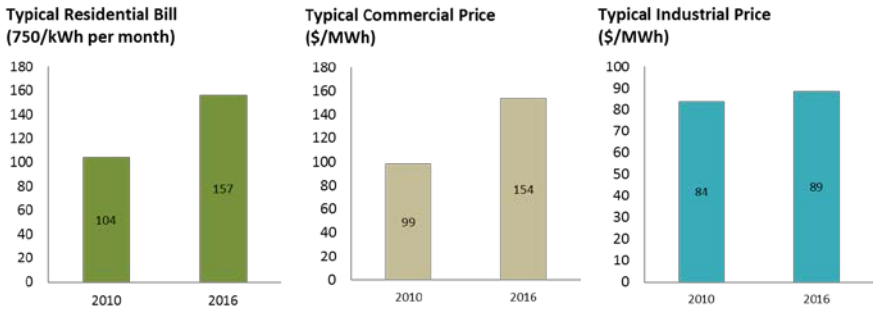
The Ministry has provided the following information to provide electricity sector context this item.

There are three classes of electricity consumers:

| | Regulated Price Plan | Class B | Class A |
|---|---|---|---|
| **Consumer Types** | • Residential<br>• Small Business<br>• Farms | • Commercial<br>• Institutional<br>• Small industrial | • Large commercial<br>• Large industrial |
| **Load Size** | Below 0.05 MW | Between 0.05 MW and 3 MW | Above 3 MW* |
| **Total Consumption** | 58 TWh | 57 TWh | 26 TWh |
| **Share of Consumption** | 41.1% | 40.4% | 18.4% |

*** Note:** Consumers with peak demand between 3-5 MW in the manufacturing, mining, refrigerated warehousing, greenhouses and data-processing industries are currently eligible for Class A. All other 3-5MW consumers are Class B.

Since 2010, average bills for residential consumers (i.e., using 750 kWh/month) have increased by over 50%. Rates paid by commercial and industrial electricity consumers have increased by 56% and 6% respectively over the same period.



**Note:** 2016 represents May 2016 for residential and YTD June 2016 for commercial and industrial.

Existing Rate Mitigation efforts are on-going:

- Ontario currently provides rate mitigation to various electricity consumer classes through a combination of tax-based and rate-based programs.
  - For example, Northern Ontario residential electricity consumers receive tax credits in recognition of higher electricity costs in the north and rural consumers receive a subsidy funded through the rate-base due to the higher cost of delivering power to rural areas.
  - As of 2016, the government removed the Debt Retirement Charge (DRC) from residential electricity bills. While this saves a typical residential electricity ratepayer about $60 per year, it is less than the benefit previously provided through the Ontario Clean Energy Benefit (OCEB).
  - The Ontario Electricity Support Program (OESP) provides ongoing assistance directly on the bills of eligible low-income electricity consumers.

- The Industrial Conservation Initiative (ICI) encourages Ontario's largest consumers to reduce consumption during peak periods while reducing system costs.
- The Rural or Remote Rate Protection (RRRP) program is provided to rural and remote residential and farm customers because the cost of distributing power to remote areas is much higher than for urban areas.

- Because electricity costs must be fully recovered from electricity consumers, rate mitigation funded through the rate-base often represents a shifting of costs from one consumer group to another (i.e., industrial to residential and commercial consumers).
  - Rate-based initiatives are generally associated with incenting changes in behaviour that provide electricity system benefits (i.e., shifting electricity consumption from on-peak to off-peak periods).

The table below shows the estimated cost shifts in the province's electricity system that result from three existing government programs (i.e., ICI, RRRP and OESP):

| Cost Shift Impact | 2011 | 2012 | 2013 | 2014 | 2015 | 2016 |
|---|---|---|---|---|---|---|
| Residential Bill ($/month for 750 kWh) | 3.55 | 4.07 | 3.85 | 4.46 | 5.68 | 6.55 |
| Commercial – Class B ($/MWh) | 4.74 | 5.43 | 5.14 | 5.94 | 7.57 | 8.73 |
| Industrial – Class A ($/MWh) | -20.97 | -25.26 | -22.38 | -24.68 | -32.56 | -31.55 |

**Note:** Negative values indicate a benefit; positive values denote an incremental charge.

Since 2013, a number of actions have and are being taken to reduce overall electricity system costs. Despite these actions to reduce system costs, electricity rates continue to increase for consumers:

- Renegotiating the Green Energy Investment Agreement, reducing contract costs by $3.7 billion;
- Deferring the construction of two new nuclear reactors at Ontario Power Generation's Darlington facility, avoiding an estimated $15 billion in new construction costs;
- Approving Ontario Power Generation's plans to enable the ongoing operation of Pickering up to 2024, which is expected to save ratepayers as much as $600 million.
- Reducing Feed-In-Tariff (FIT) prices through annual price reviews, saving ratepayers at least $1.9 billion relative to the 2013 Long-Term Energy Plan (2013 LTEP) forecast; and
- Removing an expected $3.3 billion in Large Renewable Procurement (LRP) costs relative to the 2013 Long-Term Energy Plan (2013 LTEP) forecast, based on the results of the first phase of the LRP.

## APPENDIX D: FURTHER INFORMATION SUPPORTING PROPOSED INITIATIVES

The following information has been provided by the Ministry.

**1. Provide an 8% rebate to consumers eligible for the Regulated Price Plan* (i.e., residential, small business and farms), equivalent to the provincial portion of HST**

The Ministry is proposing to introduce legislation/regulation to provide a rebate of 8% to consumers eligible for the Regulated Price Plan. The below table indicates which consumers would or would not receive the benefit. This would be equivalent to the provincial portion of the HST.

- Those ineligible to receive the 8% rebate will benefit from one or more of the other initiatives under this proposal (e.g., ICI expansion, proceeds recycling, etc).
- An HST exemption would require federal approval. Engaging in discussions with the federal government would take time and would likely result in not meeting the targeted implementation date.

| **Eligible for the 8% rebate** (< 50 kW or < 250,000 kWh/year) | **Not eligible for the 8% rebate** (> 50 kW or > 250,000 kWh/year) |
|---|---|
| • Residential Regulated Price Plan consumers<br>• Residential retail consumers<br>• Multi-unit residential buildings and other facilities used as residential rental units<br>• Long-term care homes and school residences<br>• Farms eligible for Regulated Price Plan (Including Class B farms that opted out of the Regulated Price Plan)<br>• Small businesses<br>  – Coffee / snack retailer<br>  – Convenience store<br>  – Apparel store<br>  – Hair salon<br>  – Small insurance office | • Class A consumers<br>  – Manufacturer<br>  – Large grocery store<br>  – Mines<br>  – Auto assembly plants<br>• Class B consumers<br>  – Commercial offices (low rise)<br>  – Hotel<br>  – General warehousing |

**2. Expand ICI eligibility by lowering the threshold to 1 MW, to provide support to Class B electricity consumers (i.e., commercial, institutional and small industrial)**

Currently, electricity consumers over 5 MW and consumers from 3-5 MW in certain energy intensive sectors are eligible for ICI (i.e., approximately 300 Class A consumers). Consumers participating in ICI include the following sectors: pulp and paper, auto, manufacturing, chemicals and mines.

ICI would be expanded so that all consumers over 1 MW are eligible for the program, which would (the benefit would be seen by consumers starting in 2018):

- Reduce electricity peak demand and electricity system costs by incenting more consumers to lower their electricity demand during peak periods;
- Reduce electricity bills for new ICI participants who are able to reduce their electricity demand during peak demand periods; and
- Increase the electricity bills for non-ICI participants to ensure full cost recovery in the electricity system.

| | Benefit to New ICI Participants | System Benefit | Financial Impact | Residential Bill Impact |
|---|---|---|---|---|
| | Bill Savings | Peak Demand Reduction (MW) | GA shifted to Class B ($M) | |
| Short-term | Up to 21% | 80 | 47 | Increase of $0.42/month |
| Long-term | Up to 34% | 165 | 82 | Increase of $0.74/month |

The different impacts refer to the amount of time it takes for new Class A consumers to respond to the expanded ICI eligibility. The bill impacts assume a 25% uptake, which would increase Class A consumption by roughly 3 TWh, leaving an estimated 54 TWh in Class B that are either between 0.05-1 MW or choose not to opt in to ICI. This would represent an estimated 300 additional consumers in ICI, though they would represent a much smaller share of the consumption than the 300 consumers currently participating. Newly eligible consumers in the program would mostly fall into the small industrial, institutional and commercial category, including: automotive supply chain companies, office tower, large shopping mall, greenhouses and others.

## 3. Update the Rural and Remote Rate Protection (RRRP) program, to provide relief to rural customers

The Ministry is proposing to provide an additional $110M in rate protection to eligible rural or remote electricity consumers, and consider options to periodically adjust the amount of rate protection available to these consumers going forward.

RRRP is a rate-based funded program that helps offset the higher costs to distribute electricity to Ontario residents who live in rural or remote locations all across the Province.

- Today, RRRP is a $175M program. For an average residential customer, the cost of supporting RRRP is roughly $1 per month. For other customers, the cost can range from $65 for a greenhouse to $8,000 for a medium industrial.
- The majority of the program funding ($127M) provided to Hydro One's lowest-density customers – classified as R2 customers. There are approximately 329,000 R2 customers. The current program provides a rebate of $31.50. The proposed update to the program would increase the benefit to $60/month
- RRRP funding supporting R2 customers has been capped at the current level since 2003. As a result, the impact of its assistance has diluted over time as electricity costs have risen.

An additional $110M in program funding would see an increased benefit of ~$28 /month. This would bring R2 bills in line with Hydro One R1 (medium density) bills at 1000kWh.

- This would increase the R2 portion of the RRRP to $237 million with a monthly impact on an average residential consumer of ~$0.60.
- The RRRP could be indexed at inflation or "trued up" on a regular basis to ensure the benefit remains constant.

## 4. Recycle cap and trade proceeds to commercial and industrial electricity consumers to provide a modest reduction in rates

The 2016 Budget committed to offset the impact of cap and trade for commercial and industrial consumers, while also providing a benefit of up to $2 per month for residential consumers.

- To meet the 2016 Budget commitment, the Climate Change Action Plan (CCAP), committed $1.3 billion from the GGRA over the first compliance period (2017-2020).
- However, providing an 8% rebate to Regulated Price Plan consumers would allow for GGRA proceeds previously committed to residential consumers to be redirected to other GHG reduction initiatives in the fiscal plan.

The rate reduction proposal would provide additional benefit to commercial and industrial consumers, while requiring an estimated $60 million less per year (i.e., a reduction of $240M over the first four year compliance period).

# APPENDIX F: ILLUSTRATIVE BILL IMPACTS

The Ministry has provided the following illustrative bill impacts:

| | Current Bill ( before tax) | Current Rate mitigation initiatives* | New Rate Mitigation initiatives | New Bill (before tax) |
|---|---|---|---|---|
| Average Residential (Toronto – 750 kWh/month) | $139 /month | N/A | 8% pre-tax rebate: - $11 | $128 /month |
| Rural Residential (Hydro One R2 – 1000 kWh/month) | $229 /month | RRRP: –$32 | 8% pre-tax rebate + Updated RRRP: - $45 | $184 /month |
| Low-income Residential ** (Toronto – 750 kWh/month) | $101 /month | OESP: -$38 | 8% pre-tax rebate: - $8 | $93 /month |
| Small Business (Toronto – 403,200 kWh/month) | $149 /MWh | N/A | 8% pre-tax rebate: - $12/MWh | $137 /MWh |
| Small Farm (Hydro One R1 – 4,000 kWh/month) | $203 /MWh | N/A | 8% pre-tax rebate: - $16/MWh | $187 /MWh |

**Notes:**

***** Some residential consumers can also receive tax credits based on income, age and geography (Northern Ontario Energy Credit and Ontario Energy and Property Tax Credit). These credits are delivered through the Trillium Tax Credit and can be as high as $1,332 per year for a family.

** Income of less than $28,000, family of 4.

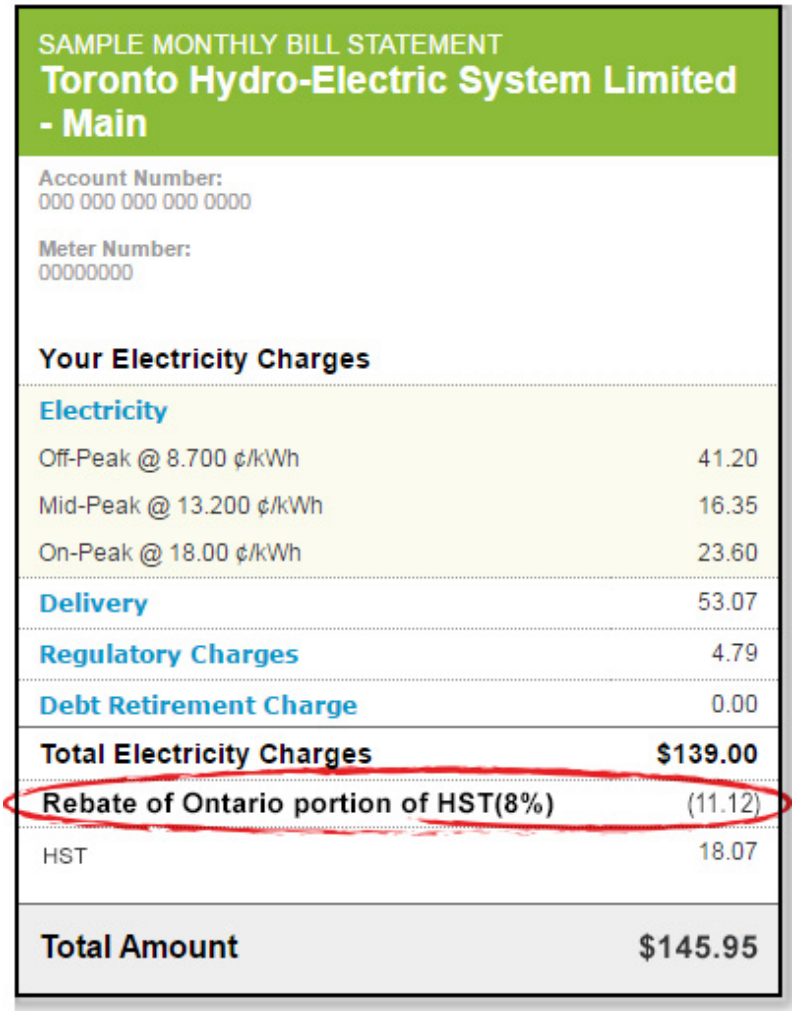
The above benefits do not include the cost of ICI expansion and the RRRP update (total impact of $1.74/MWh). Totals may not add due to rounding.

| | Current Rate | Current Rate mitigation initiatives* | New Rate Mitigation initiatives | New Rate |
|---|---|---|---|---|
| Large Institutional (Toronto – distribution-connected, 10 MW) | $108 /MWh | ICI: -$49/MWh | Proceeds Recycling: -$2.60/MWh (2017-2020 average) | $105 /MWh |
| Large Industrial (Timmins – transmission-connected, 10 MW) | $69 /MWh | ICI + NIERP: -$69/MWh | Proceeds Recycling: -$2.60/MWh | $66 /MWh |
| Small Industrial – opt-in to ICI (Toronto – 2 MW) | $152 /MWh | N/A | Proceeds Recycling + ICI: Up to -$52/MWh | $100 /MWh |
| Large Commercial – does not opt-in to ICI (Toronto – 2 MW) | $152 /MWh | N/A | Proceeds Recycling: -$2.60/MWh | $149 /MWh |
| Small Institutional (Toronto – 500 kw) | $154 /MWh | N/A | Proceeds Recycling: -$2.60/MWh | $151 /MWh |

**Notes:**

The above benefits do not include the cost of ICI expansion and the RRRP update (total impact of $1.74/MWh). Proceeds recycling is net of the cost of carbon and represents an estimated average of the proceeds required over the first compliance period (2017-2020).

## APPENDIX E: ILLUSTRATIVE BILL MOCK-UP



SAMPLE MONTHLY BILL STATEMENT

**Toronto Hydro-Electric System Limited - Main**

Account Number:
000 000 000 000 0000

Meter Number:
00000000

**Your Electricity Charges**

| | |
|---|---|
| **Electricity** | |
| Off-Peak @ 8.700 ¢/kWh | 41.20 |
| Mid-Peak @ 13.200 ¢/kWh | 16.35 |
| On-Peak @ 18.00 ¢/kWh | 23.60 |
| **Delivery** | 53.07 |
| **Regulatory Charges** | 4.79 |
| **Debt Retirement Charge** | 0.00 |
| **Total Electricity Charges** | **$139.00** |
| **Rebate of Ontario portion of HST(8%)** | (11.12) |
| HST | 18.07 |
| **Total Amount** | **$145.95** |

**Note:** Final bill presentment pending submission to LRC.

Hi James,

In the email below, you indicated that you'd be briefing Karen last Friday.

Could you update me on where things are? Also, could you share the assessment note? We have some input to provide.

Thanks,

John.

Hi Ron,

We have not heard anything from James but at branch meeting this morning staff did a summary deck to go over the key items as a group.

I can reach out to him to see what has happened.

Is there a product you have in mind?

Thanks,

John.

**Subject:** Electricity Item - Cabinet/TB on Monday at 9 am

Hi everyone,

This is to let everyone know that Energy's Electricity item will be going to TB/MBC on Monday morning at 9 am. The meeting will be at the Council Chambers, Room 275, in the Legislature.

Due to the room size, not everyone may be able to go inside the room - but we are happy to have folks outside in the anteroom should questions come up.

If you plan to attend, please arrive by 8:45 am.

We will be sharing the next version of the assessment note and TB minute later today / this evening.

Thanks,
Felix

**TREASURY BOARD / MANAGEMENT BOARD OF CABINET**
**REQUEST ASSESSMENT NOTE**

| | |
|---|---|
| **Ministry:** | Energy |
| **Meeting Date:** | September 12, 2016 |
| **Agenda Class:** | Major |
| **Last reviewed by:** N/A | **Tracking to:** Cabinet - September 12, 2016 |

| **SUBMISSION TITLE:** | Electricity Price Mitigation |
|---|---|

## I. DECISION BEFORE THE BOARD

The Ministry of Energy is requesting approval of a suite of initiatives providing relief to various electricity consumer classes.

## II. RECOMMENDATIONS:

| | |
|---|---|
| • Approve a suite of initiatives to provide relief to various electricity consumer classes (pending Cabinet policy approval):<br>– Providing an 8% rebate to Regulated Price Plan eligible consumers;<br>– Expanding the Industrial Conservation Initiative;<br>– Updating the Rural or Remote Rate Protection program; and,<br>– Using $270M in cap and trade proceeds to ensure industrial and commercial consumers are not negatively impacted by cap and trade by providing a modest reduction in rates. Balance of proceeds intended for electricity relief through the Climate Change Action Plan ($60M), could provide some fiscal offsets.<br>• Approve $300M in 2016-17 in Supplementary Estimates for electricity price mitigation.<br>• Direct the Ministry to report back to TB/MBC through the annual planning process with updated future year impacts, and obtain any required TB/MBC approvals to implement the initiatives.<br>• Recommend proceeding to Cabinet with the proposed legislation and amendments to existing regulations to implement the initiatives. | *Board Judgment* |

## III. FINANCIAL SUMMARY

| **$ Millions** | **2016-17** | **2017-18** | **2018-19** |
|---|---|---|---|
| Initiative cost requested | 300.0 | 1006.0 | 1004.0 |
| Initiative cost recommended | 300.0 | 1006.0 | 1004.0 |
| Recommended program base | 300.0 | 1006.0 | 1004.0 |
| Offset Recommended – Applies if cap and trade proceeds diverted to in-plan initiatives | 0.0 | (60.0) | (60.0) |
| Total Fiscal Impact | 300.0 | 946.0 | 944.0 |

## IV. KEY COMMENTS AND CONSIDERATIONS

Context

Electricity costs have increased as the province has made investments in clean energy generation and modernized electricity infrastructure. Electricity bills are expected to continue to increase as more renewable energy projects come online. Since 2010, average bills for residential consumers (i.e., using 750 kWh/month) have increased by over 50%. Rates paid by commercial and industrial electricity consumers have increased by 56% and 6% respectively over the same period. Appendix C provides supporting background information.

As part of the 2016 Budget, the government committed to offset the impact of cap and trade in Ontario for commercial and industrial electricity consumers, while also providing a benefit of up to $2 per month for residential electricity consumers. The Climate Change Action Plan (CCAP) included up to $1.32B over 4 years to help keep electricity rates affordable.

The Ontario Clean Energy Benefit (OCEB) expired December 31, 2015, as part of the originally planned, five-year legislated program put in place as a broad-based, transitional measure to a cleaner electricity system. OCEB was also put in place following the implementation of the Harmonised Sales Tax (HST). Unlike the previous provincial Retail Sales Tax (RST), the HST (and GST) included electricity in the taxable base. With the end of OCEB, the government ended the electricity Debt Retirement Charge (DRC) on residential users earlier than planned, as of January 1, 2016, and also put in place the low-income targeted Ontario Electricity Support Program (OESP).

In order to achieve the Budget commitment and additional price mitigation, while delivering on the Province's climate change objectives, the Ministry of Energy has developed price mitigation initiatives that consider tax-based levers, cap and trade proceeds, and shifting costs within the rate-base.

Proposal

The Ministry is proposing the following to mitigate electricity prices for consumers (Appendix D provides more information on each item below):

- Provide an 8% rebate on the pre-tax cost of electricity to consumers eligible for the Regulated Price Plan (i.e., residential, small business and farms), equivalent to the provincial portion of HST.
- Expand Industrial Conservation Initiative (ICI) eligibility by lowering the threshold to 1 MW, to provide support to additional commercial, institutional and small industrial consumers.
- Update the Rural or Remote Rate Protection (RRRP) program, to provide relief to rural customers.
- Use cap and trade proceeds to provide a modest rate reduction for commercial and industrial electricity consumers.

Public high-profile communications would coincide with introduction of legislation (September 2016). Currently, the 8% rebate would be available starting January 1, 2017, along with updating the RRRP. Expanding ICI won't be added to bills until 2018 due to the time required to implement the expansion and for billing changes. The impact of cap and trade would not be added to electricity bills until 2017.

The following tables provide an overview of the four initiatives, recipients, projected financial impact, grouping them based on whether taxpayers or ratepayers cover the costs:

| | Measure | Annual Impact | Targeted Recipients |
|---|---|---|---|
| **Taxpayers cover the costs (Potential to impact the Province's Fiscal Plan)** | | | |
| **1.** | 8% Rebate to Regulated Price Plan | Fiscal<br>About $1.0B | Residential, small business and farms, and other small users |
| **2a.** | Use cap and trade proceeds to provide a modest reduction in rates for commercial and industrial electricity consumers. (Implementation details under development). | ($270M) in cap and trade proceeds to offset $270M in costs for reducing rates<br><br>No Fiscal Impact | The CCAP allocated up to $330M/year in cap and trade proceeds for electricity price mitigation.<br><br>See item 2b. regarding the residual amount of cap and trade proceeds ($330M - $270M = $60M) |
| **2b.** | While CCAP anticipated $330M/year was required to keep electricity affordable, the residential portion of this commitment is met by the 8% rebate. As such, some of the CCAP allocated proceeds can be redirected to other GHG reduction initiatives already in the fiscal plan. | Fiscal<br>($60M) | Provides fiscal plan flexibility of $60M/year if these proceeds are diverted to offset costs of other existing in-plan initiatives that reduce GHG emissions. |
| | **Total Fiscal Impact** | $946M | Matches Financial Summary on page 1 for 2017-18 |

| | Measure | Annual Impact | Targeted Recipients |
|---|---|---|---|
| **Ratepayers cover the costs (No impact to the Province's Fiscal Plan)** | | | |
| **3** | Expanding ICI eligibility to customers above 1MW in all sectors | Rate base<br>($47M/$82M)** | Intermediate and large-sized industrial, commercial and institutional consumers above 1MW in all sectors |
| **4.** | Updating Rural or Remote Rate Protection | Rate base<br>($110M) | Residents in rural or remote locations: Hydro One's lowest-density R2 customers. |

** Short-term/Long-term rate base impact, where short term is one year after expanded eligibility takes place and long-term is expected impact once new customers have time to change behavior.

Due to the nature of the ICI Global Adjustment mechanism and cost recovery of RRRP, the rate base proposals (#3 and #4) above benefit the targeted recipients, but come at a cost to all other electricity ratepayers in Ontario.

The following table from the Ministry highlights the benefits by electricity consumer class.

| | Average Annual Fiscal Impact | Average Annual Greenhouse Gas Reduction Account (GGRA) Proceeds Impact | Regulated Price Plan (Residential) Benefit | | Class B (Commercial) Benefit | Class A (Industrial) Benefit | |
|---|---|---|---|---|---|---|---|
| | | | *Average (750 kWh/ month)* | *Rural (1000 kWh/ month)* | | *Existing* | *New* |
| • 8% rebate to Regulated Price Plan eligible consumers<br>• ICI Expansion<br>• RRRP Update<br>• Proceeds Recycling | $1.0 billion annually | $0.27 billion annually<br>(Reduction of $0.06 billion annually or $0.24 billion total from the CCAP commitment) | -$11/ month<br>(-8%) | -$45/ month<br>(-20%) | -$3/MWh<br>(-2%) | -$3/ MWh<br>(-3%) | Up to -$52/MWh<br>(-34%) |

**Notes:** * The above benefits do not include the cost of ICI expansion and the RRRP update (total impact of $1.74/MWh). Proceeds recycling is net of the cost of carbon and represents an estimated average of the proceeds required over the first compliance period (2017-2020).

See Appendix E for more illustrative bill impacts. See Appendix F for an electricity bill mock-up.

Fiscal Impact

The Ministry estimates proceeding with an 8% Regulated Price Plan (RPP) rebate without a cap would cost an estimated $1.0 billion per year. The Ministry's estimate of $300M needed for 2016-17 (to cover the first three months of 2017 when the 8% rebate applies) will be addressed through Supplementary Estimates. The Ministry will use the annual planning process to update future year impacts.

The Ministry also indicates the current proposal would use cap and trade proceeds to eliminate carbon price impacts/ grid emission reductions to ratepayers, as was established through the CCAP. This proposal does not require the full $330M/year notionally allocated through the CCAP, which could provide fiscal plan flexibility of about $60M per year to commit to other GHG reduction initiatives in the fiscal plan.

Cap and Trade Proceeds

The 2016 Budget committed to offset the impact of cap and trade for commercial and industrial consumers, while also providing a benefit of up to $2 per month for residential consumers (on average). While residential and other consumers would benefit from the 8% pre-tax rebate, this does not apply to non-Regulated Price Plan eligible consumers (larger industrial, commercial, and other consumers). As such, the Ministry is proposing to direct a portion of cap and trade auction proceeds to industrial and commercial consumers not in the RPP to provide a modest rate reduction. This proposal fulfills the policy objective established in the Climate Change Action Plan to eliminate carbon price impacts/ grid emission reductions to electricity ratepayers.

To be characterized as a regulatory charge under the cap and trade program, auction proceeds need to be spent on programs that are reasonably likely to reduce or support the reduction of greenhouse gases. The Ministry has indicated that their proposal would use proceeds to offset the costs of committed investments that reduce greenhouse gases (e.g., non-emitting generation and conservation programs) and incent fuel-switching away from fossil fuels.

Considerations – Implementation

At this point, the Ministry has presented a high level overview of major implementation pieces:

- New legislation would be required to enable the 8% rebate proposal. Legislation would closely mirror the Ontario Clean Energy Benefit Act, 2010. If passed, the legislation would require a general regulation. Amendments would also be required to various regulations to expand ICI and RRRP.
- On-bill rebate delivery would likely require adjustments to LDC billing systems, which could impact delivery costs and timelines. The Ministry indicates it will consult with LDCs (possibly through the Ontario Energy Board) to accurately assess these impacts once the program has been announced. In the past, LDCs have asked for at least six months' notice when implementing billing system changes. Timing concerns may be alleviated by allowing LDCs to provide retroactive payments rebates if their systems cannot be updated in time for January 1, 2017. This was done with the OCEB.
- Detailed messaging on bills could be implemented. The rebate would not be directly linked to HST. With electricity invoices containing multiple line items and LDC bill presentment varying widely, direction on rebate presentment will need to be flexible to allow LDCs to incorporate easily while ensuring government-preferred branding and messaging is conveyed.
- The Ministry will need to continue to consult with the Independent Electricity System Operator (IESO), Ontario Energy Board (OEB) and LDCs regarding implementation of proceeds recycling.

Legal Considerations

8% Rebate (shift costs from rate-base to tax base by providing a rebate equal to the provincial portion of HST):

- Providing the contemplated rebate under the proposed Bill does not, in and of itself, give rise to legal issues. As policy direction is given on the specifics of supporting regulations, any associated legal risks can be identified.

ICI Expansion (shift costs within rate-base by expanding eligibility for the ICI program to consumers of >1 MW):

- To establish that the charge is legitimate, it must be established that the purpose and effect of the charge is to facilitate the maintenance of a financially viable electricity system by way of load management or some other feature under which those who are subsidized provide an overall system benefit enjoyed by those who subsidize them.

RRRP Update (shift costs within the rate-base by increasing the RRRP benefit paid to rural or remote customers):

- Increasing the amount of revenue devoted to the RRRP or expanding the scope of consumers eligible for the program does not raise new legal risk. There is a good argument that the RRRP is a regulatory charge, as it socializes some of the costs of distributing electricity to rural consumers. Overall the risk that the RRRP would be characterized as a tax is assessed as moderate (meaning equally good arguments on both sides).

Cap and Trade Proceeds Recycling (reduce impact on rate base and tax base by directing cap and trade auction proceeds to industrial consumers):

- To be characterized as regulatory charges under the cap and trade program, auction revenues should be spent on programs that reduce GHGs.

Other Considerations

- This request does not align with the 2016 Budget fiscal plan and there are no proposed offsets for the 8% rebate.
- The 8% rebate would provide a typical residential consumer about an $11 per month benefit on average, exceeding the Budget 2016 $2 per month on average cap and trade commitment. The proposal to offer a modest rate reduction for industrial and commercial consumers also exceeds the Budget commitment to simply offset the impact of cap and trade on these consumers.
- Reductions in electricity prices that do not consider consumption amounts (e.g., without the cap in the previous OCEB program) do not promote electricity conservation and may be seen as unaligned with climate change objectives.
- Other price mitigation measures introduced following the implementation of the HST, as well as the end of OCEB, would continue.
  - Both the energy portion of the Ontario Energy and Property Tax Credit (OEPTC) and NOEC were introduced/ enhanced following the introduction of the HST and have a significant annual fiscal cost (totalling about $500 million annually).
  - The DRC on residential consumers was ended early, as of January 1, 2016 (about a $340 million impact in 2016-17).
  - OESP is a low-income targeted program funded by electricity consumers through the electricity rate base.

## APPENDIX A: PROPOSED MINUTE

Approve electricity price mitigation for residential, commercial and industrial consumers.

In this regard:

i) Approve a suite of initiatives to provide relief to various electricity consumer classes:

   a) Provide a rebate of 8% on the pre-tax cost of electricity for all electricity consumers eligible to be billed under the Ontario Energy Board's Regulated Price Plan (RPP); and any other consumers who would be eligible for RPP if their electricity account was with a licensed distributor, starting January 1, 2017.

   b) Increase the total amount of rate protection available to R2 low density electricity consumers under the Rural or Remote Rate Protection Program (RRRP) by increasing the subsidy by $110 million from its current level of $127 million which has been capped since 2003.

   c) Implement a mechanism to periodically adjust the total annual amount of rate protection available to R2 low density electricity consumers under the RRRP, effective on or after January 1, 2018.

   d) Expand eligibility for participation in the Industrial Conservation Initiative (ICI) to smaller industrial, institutional and commercial customers by lowering the eligibility threshold to 1 MW and removing restrictions on eligible sectors.

   e) Provide a modest rate reduction to commercial and industrial electricity consumers using cap and trade auction proceeds to offset the cost.

ii) Recommend to Cabinet the proposed Ontario Rebate for Electricity Consumers Act, 2016 and that the Ministry proceed to Legislation and Regulations Committee before the end of 2016 with supporting regulations under the proposed Ontario Rebate for Electricity Consumers Act, 2016.

iii) Approve the implementation details associated with the suite of initiatives:

   a) Approve:

      1. The creation of a new item entitled "Ontario Rebate for Electricity Consumers" in the Electricity Price Mitigation Program (Vote/Item 2905-3).

      2. The creation of a new Transfer Payment entitled "Ontario Rebate for Electricity Consumers" in Rebate for Electricity Consumers (Vote/Item 2905-3).

      3. An expenditure increase in the amount of $300,000,000 in 2016-17 in the Transfer Payment entitled "Rebate for Electricity Consumers[1]" in Rebate for Electricity Consumers (Vote/Item 2905-3). Direct the Ministry to return any under-spending to the Treasury Board Contingency Fund.

[1] Pending approval of the proposed Ontario Rebate for Electricity Consumers Act, 2016

b) Note:

1. Funding for 2016-17 will be implemented through Supplementary Estimates in the Fall of 2016.

2. Future year impacts of $1,006,000,000 in 2017-18 and $1,004,000,000 in 2018-19, and $1,004,000,000 in 2019-20 and ongoing.

c) Direct the Ministry to report back to Treasury Board/Management Board of Cabinet in the 2017-18 Program Review, Renewal, and Transformation process on updated future year impacts, and a potential offset strategy for resource requirements to support program implementation

iv) Further to the Cabinet Minute of May 11, 2016 and the Treasury Board Minute of May 19, 2016, note the reallocation of cap and trade auction proceeds from the up to $1,320,000,000 that was previously allocated through the Climate Change Action Plan for electricity price mitigation, as follows:

a) The Ministry of Energy to work with the Ministry of the Environment and Climate Change, Treasury Board Secretariat, Ministry of Finance, Cabinet Office and Office of the Premier, to allocate up to $1,080,000,000, from 2017-18 to 2020-21, of Cap and Trade auction proceeds to address rate-impacts on non-Regulated Price Plan electricity consumers (e.g., industrial, commercial and institutional) related to cap and trade and the expansion of other rate-based programs, subject to the evaluation by the Minister of the Environment and Climate Change.

In this regard:

1) Direct the Ministry of Energy to work with the Ministry of the Environment and Climate Change and report back to Cabinet by the end of 2016 with options on the appropriate mechanism.

b) The remaining up to $240,000,000, from 2017-18 to 2020-21, which was previously allocated in the Climate Change Action Plan to eliminate carbon price impacts/ grid emission reductions to ratepayers, to be used for other existing initiatives within the fiscal plan and the Climate Change Action Plan that reduce greenhouse gas emissions, subject to the evaluation by the Minister of the Environment and Climate Change.

In this regard:

1) Direct the Ministry of the Environment and Climate Change to work with Treasury Board Secretariat and Ministry of Finance to identify other existing initiatives within the fiscal plan and the Climate Change Action Plan that reduce greenhouse gas emissions that can be funded with the remaining up to $240,000,000, from 2017-18 to 2020-21.

v) To support implementation of electricity price mitigation, the Ministry is proceeding with the following amendments to existing regulations:

a) Amendments to Ontario Regulation 429/04 (Adjustments Under Section 25.33 of the Act) made under the Electricity Act, 1998 to lower the Industrial Conservation Initiative (ICI) threshold to 1 megawatt and allow electricity consumers and market participants between 1 MW and 5 MW to opt in.

b) Amendments to Ontario Regulation 442/01 (Rural or Remote Electricity Rate Protection) made under the Ontario Energy Board Act, 1998, to increase support through the Rural or Remote Rate Protection Plan to R2 low density electricity customers and provide for a periodic adjustment mechanism.

vi) Direct the Ministry to work with Office of the Premier and Cabinet Office on the development and implementation of an integrated communications strategy.

# APPENDIX B: FINANCIAL TABLES

| FINANCIAL IMPACTS: CHANGES TO EXPENSE AND REVENUE | | | | | TABLE B1 |
|---|---|---|---|---|---|

# APPENDIX C: ELECTRICITY SECTOR BACKGROUND

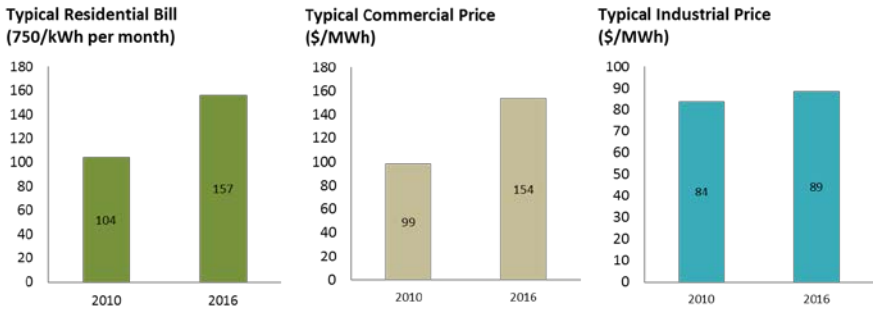
The Ministry has provided the following information to provide electricity sector context this item.

There are three classes of electricity consumers:

| | Regulated Price Plan | Class B | Class A |
|---|---|---|---|
| **Consumer Types** | • Residential<br>• Small Business<br>• Farms | • Commercial<br>• Institutional<br>• Small industrial | • Large commercial<br>• Large industrial |
| **Load Size** | Below 0.05 MW | Between 0.05 MW and 3 MW | Above 3 MW* |
| **Total Consumption** | 58 TWh | 57 TWh | 26 TWh |
| **Share of Consumption** | 41.1% | 40.4% | 18.4% |

*** Note:** Consumers with peak demand between 3-5 MW in the manufacturing, mining, refrigerated warehousing, greenhouses and data-processing industries are currently eligible for Class A. All other 3-5MW consumers are Class B.

Since 2010, average bills for residential consumers (i.e., using 750 kWh/month) have increased by over 50%. Rates paid by commercial and industrial electricity consumers have increased by 56% and 6% respectively over the same period.



**Note:** 2016 represents May 2016 for residential and YTD June 2016 for commercial and industrial.

Existing Rate Mitigation efforts are on-going:

- Ontario currently provides rate mitigation to various electricity consumer classes through a combination of tax-based and rate-based programs.
  - For example, Northern Ontario residential electricity consumers receive tax credits in recognition of higher electricity costs in the north and rural consumers receive a subsidy funded through the rate-base due to the higher cost of delivering power to rural areas.
  - As of 2016, the government removed the Debt Retirement Charge (DRC) from residential electricity bills. While this saves a typical residential electricity ratepayer about $60 per year, it is less than the benefit previously provided through the Ontario Clean Energy Benefit (OCEB).
  - The Ontario Electricity Support Program (OESP) provides ongoing assistance directly on the bills of eligible low-income electricity consumers.

- The Industrial Conservation Initiative (ICI) encourages Ontario's largest consumers to reduce consumption during peak periods while reducing system costs.
- The Rural or Remote Rate Protection (RRRP) program is provided to rural or remote residential and farm customers because the cost of distributing power to remote areas is much higher than for urban areas.

- Because electricity costs must be fully recovered from electricity consumers, rate mitigation funded through the rate-base often represents a shifting of costs from one consumer group to another (i.e., industrial to residential and commercial consumers).
  - Rate-based initiatives are generally associated with incenting changes in behaviour that provide electricity system benefits (i.e., shifting electricity consumption from on-peak to off-peak periods).

The table below shows the estimated cost shifts in the province's electricity system that result from three existing government programs (i.e., ICI, RRRP and OESP):

| Cost Shift Impact | 2011 | 2012 | 2013 | 2014 | 2015 | 2016 |
|---|---|---|---|---|---|---|
| Residential Bill ($/month for 750 kWh) | 3.55 | 4.07 | 3.85 | 4.46 | 5.68 | 6.55 |
| Commercial – Class B ($/MWh) | 4.74 | 5.43 | 5.14 | 5.94 | 7.57 | 8.73 |
| Industrial – Class A ($/MWh) | -20.97 | -25.26 | -22.38 | -24.68 | -32.56 | -31.55 |

**Note:** Negative values indicate a benefit; positive values denote an incremental charge.

Since 2013, a number of actions have and are being taken to reduce overall electricity system costs. Despite these actions to reduce system costs, electricity rates continue to increase for consumers:

- Renegotiating the Green Energy Investment Agreement, reducing contract costs by $3.7 billion;
- Deferring the construction of two new nuclear reactors at Ontario Power Generation's Darlington facility, avoiding an estimated $15 billion in new construction costs;
- Approving Ontario Power Generation's plans to enable the ongoing operation of Pickering up to 2024, which is expected to save ratepayers as much as $600 million.
- Reducing Feed-In-Tariff (FIT) prices through annual price reviews, saving ratepayers at least $1.9 billion relative to the 2013 Long-Term Energy Plan (2013 LTEP) forecast; and
- Removing an expected $3.3 billion in Large Renewable Procurement (LRP) costs relative to the 2013 Long-Term Energy Plan (2013 LTEP) forecast, based on the results of the first phase of the LRP.

## APPENDIX D: FURTHER INFORMATION SUPPORTING PROPOSED INITIATIVES

The following information has been provided by the Ministry.

**1. Provide an 8% rebate to consumers eligible for the Regulated Price Plan* (i.e., residential, small business and farms), equivalent to the provincial portion of HST**

The Ministry is proposing to introduce legislation/regulation to provide a rebate of 8% to consumers eligible for the Regulated Price Plan. The below table indicates which consumers would or would not receive the benefit. This would be equivalent to the provincial portion of the HST.

- Those ineligible to receive the 8% rebate will benefit from one or more of the other initiatives under this proposal (e.g., ICI expansion, proceeds recycling, etc).
- An HST exemption would require federal approval. Engaging in discussions with the federal government would take time and would likely result in not meeting the targeted implementation date.

| **Eligible for the 8% rebate** (< 50 kW or < 250,000 kWh/year) | **Not eligible for the 8% rebate** (> 50 kW or > 250,000 kWh/year) |
|---|---|
| • Residential Regulated Price Plan consumers<br>• Residential retail consumers<br>• Multi-unit residential buildings and other facilities used as residential rental units<br>• Long-term care homes and school residences<br>• Farms eligible for Regulated Price Plan (Including Class B farms that opted out of the Regulated Price Plan)<br>• Small businesses<br>– Coffee / snack retailer<br>– Convenience store<br>– Apparel store<br>– Hair salon<br>– Small insurance office | • Class A consumers<br>– Manufacturer<br>– Large grocery store<br>– Mines<br>– Auto assembly plants<br>• Class B consumers<br>– Commercial offices (low rise)<br>– Hotel<br>– General warehousing |

**2. Expand ICI eligibility by lowering the threshold to 1 MW, to provide support to Class B electricity consumers (i.e., commercial, institutional and small industrial)**

Currently, electricity consumers over 5 MW and consumers from 3-5 MW in certain energy intensive sectors are eligible for ICI (i.e., approximately 300 Class A consumers). Consumers participating in ICI include the following sectors: pulp and paper, auto, manufacturing, chemicals and mines.

ICI would be expanded so that all consumers over 1 MW are eligible for the program, which would (the benefit would be seen by consumers starting in 2018):

- Reduce electricity peak demand and electricity system costs by incenting more consumers to lower their electricity demand during peak periods;
- Reduce electricity bills for new ICI participants who are able to reduce their electricity demand during peak demand periods; and
- Increase the electricity bills for non-ICI participants to ensure full cost recovery in the electricity system.

| | Benefit to New ICI Participants | System Benefit | Financial Impact | Residential Bill Impact |
|---|---|---|---|---|
| | Bill Savings | Peak Demand Reduction (MW) | GA shifted to Class B ($M) | |
| Short-term | Up to 21% | 80 | 47 | Increase of $0.42/month |
| Long-term | Up to 34% | 165 | 82 | Increase of $0.74/month |

The different impacts refer to the amount of time it takes for new Class A consumers to respond to the expanded ICI eligibility. The bill impacts assume a 25% uptake, which would increase Class A consumption by roughly 3 TWh, leaving an estimated 54 TWh in Class B that are either between 0.05-1 MW or choose not to opt in to ICI. This would represent an estimated 300 additional consumers in ICI, though they would represent a much smaller share of the consumption than the 300 consumers currently participating. Newly eligible consumers in the program would mostly fall into the small industrial, institutional and commercial category, including: automotive supply chain companies, office tower, large shopping mall, greenhouses and others.

## 3. Update the Rural or Remote Rate Protection (RRRP) program, to provide relief to rural customers

The Ministry is proposing to provide an additional $110M in rate protection to eligible rural or remote electricity consumers, and consider options to periodically adjust the amount of rate protection available to these consumers going forward.

RRRP is a rate-based funded program that helps offset the higher costs to distribute electricity to Ontario residents who live in rural or remote locations all across the Province.

- Today, RRRP is a $175M program. For an average residential customer, the cost of supporting RRRP is roughly $1 per month. For other customers, the cost can range from $65 for a greenhouse to $8,000 for a medium industrial.
- The majority of the program funding ($127M) provided to Hydro One's lowest-density customers – classified as R2 customers. There are approximately 329,000 R2 customers. The current program provides a rebate of $31.50. The proposed update to the program would increase the benefit to $60/month
- RRRP funding supporting R2 customers has been capped at the current level since 2003. As a result, the impact of its assistance has diluted over time as electricity costs have risen.

An additional $110M in program funding would see an increased benefit of ~$28 /month. This would bring R2 bills in line with Hydro One R1 (medium density) bills at 1000kWh.

- This would increase the R2 portion of the RRRP to $237 million with a monthly impact on an average residential consumer of ~$0.60.
- The RRRP could be indexed at inflation or "trued up" on a regular basis to ensure the benefit remains constant.

## 4. Recycle cap and trade proceeds to commercial and industrial electricity consumers to provide a modest reduction in rates

The 2016 Budget committed to offset the impact of cap and trade for commercial and industrial consumers, while also providing a benefit of up to $2 per month for residential consumers.

- To meet the 2016 Budget commitment, the Climate Change Action Plan (CCAP), committed $1.3 billion from the GGRA over the first compliance period (2017-2020).
- However, providing an 8% rebate to Regulated Price Plan consumers would allow for GGRA proceeds previously committed to residential consumers to be redirected to other GHG reduction initiatives in the fiscal plan.

The rate reduction proposal would provide additional benefit to commercial and industrial consumers, while requiring an estimated $60 million less per year (i.e., a reduction of $240M over the first four year compliance period).

# APPENDIX E: ILLUSTRATIVE BILL IMPACTS

The Ministry has provided the following illustrative bill impacts:

| | Current Bill ( before tax) | Current Rate mitigation initiatives* | New Rate Mitigation initiatives | New Bill (before tax) |
|---|---|---|---|---|
| Average Residential (Toronto – 750 kWh/month) | $139 /month | N/A | 8% pre-tax rebate: - $11 | $128 /month |
| Rural Residential (Hydro One R2 – 1000 kWh/month) | $229 /month | RRRP: –$32 | 8% pre-tax rebate + Updated RRRP: - $45 | $184 /month |
| Low-income Residential ** (Toronto – 750 kWh/month) | $101 /month | OESP: -$38 | 8% pre-tax rebate: - $8 | $93 /month |
| Small Business (Toronto – 403,200 kWh/month) | $149 /MWh | N/A | 8% pre-tax rebate: - $12/MWh | $137 /MWh |
| Small Farm (Hydro One R1 – 4,000 kWh/month) | $203 /MWh | N/A | 8% pre-tax rebate: - $16/MWh | $187 /MWh |

**Notes:**

***** Some residential consumers can also receive tax credits based on income, age and geography (Northern Ontario Energy Credit and Ontario Energy and Property Tax Credit). These credits are delivered through the Trillium Tax Credit and can be as high as $1,332 per year for a family.

** Income of less than $28,000, family of 4.

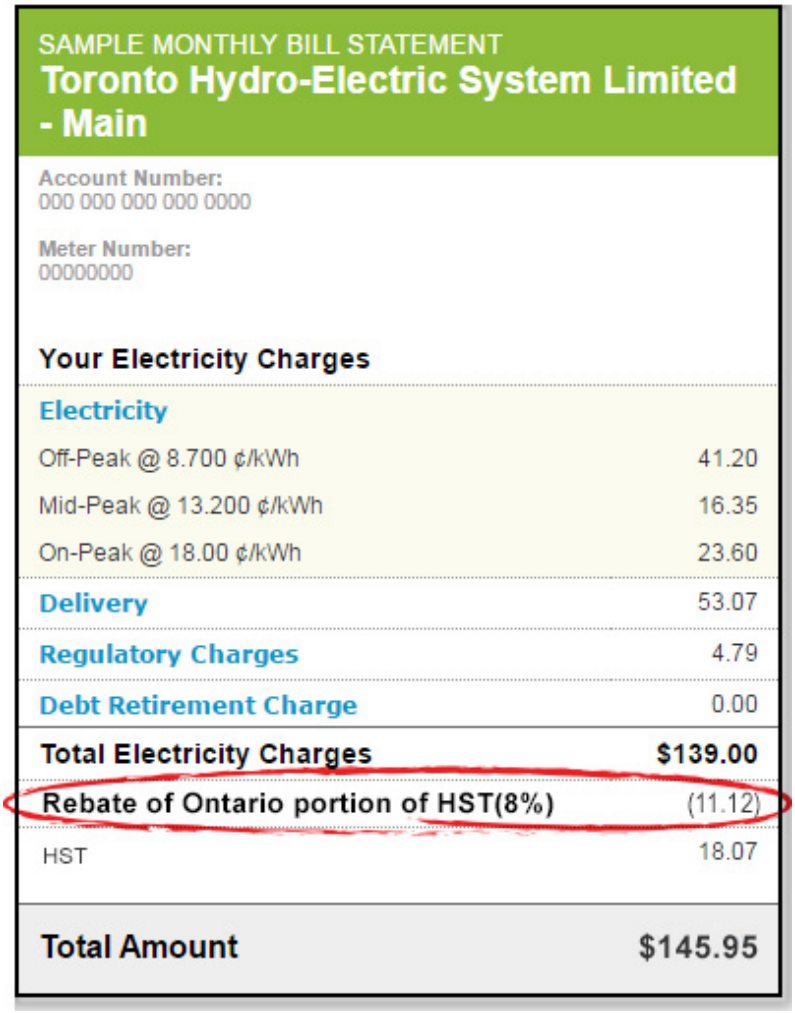
The above benefits do not include the cost of ICI expansion and the RRRP update (total impact of $1.74/MWh). Totals may not add due to rounding.

| | Current Rate | Current Rate mitigation initiatives* | New Rate Mitigation initiatives | New Rate |
|---|---|---|---|---|
| Large Institutional (Toronto – distribution-connected, 10 MW) | $108 /MWh | ICI: -$49/MWh | Proceeds Recycling: -$2.60/MWh (2017-2020 average) | $105 /MWh |
| Large Industrial (Timmins – transmission-connected, 10 MW) | $69 /MWh | ICI + NIERP: -$69/MWh | Proceeds Recycling: -$2.60/MWh | $66 /MWh |
| Small Industrial – opt-in to ICI (Toronto – 2 MW) | $152 /MWh | N/A | Proceeds Recycling + ICI: Up to -$52/MWh | $100 /MWh |
| Large Commercial – does not opt-in to ICI (Toronto – 2 MW) | $152 /MWh | N/A | Proceeds Recycling: -$2.60/MWh | $149 /MWh |
| Small Institutional (Toronto – 500 kw) | $154 /MWh | N/A | Proceeds Recycling: -$2.60/MWh | $151 /MWh |

**Notes:**

The above benefits do not include the cost of ICI expansion and the RRRP update (total impact of $1.74/MWh). Proceeds recycling is net of the cost of carbon and represents an estimated average of the proceeds required over the first compliance period (2017-2020).

## APPENDIX F: ILLUSTRATIVE BILL MOCK-UP



SAMPLE MONTHLY BILL STATEMENT

**Toronto Hydro-Electric System Limited - Main**

Account Number:
000 000 000 000 0000

Meter Number:
00000000

**Your Electricity Charges**

|---|---|
| **Electricity** | |
| Off-Peak @ 8.700 ¢/kWh | 41.20 |
| Mid-Peak @ 13.200 ¢/kWh | 16.35 |
| On-Peak @ 18.00 ¢/kWh | 23.60 |
| **Delivery** | 53.07 |
| **Regulatory Charges** | 4.79 |
| **Debt Retirement Charge** | 0.00 |
| **Total Electricity Charges** | **$139.00** |
| **Rebate of Ontario portion of HST(8%)** | (11.12) |
| HST | 18.07 |
| **Total Amount** | **$145.95** |

**Note:** Final bill presentment pending submission to LRC.

## APPENDIX G: BACKGROUND CONTEXT

**Budget commitment** (*2016 Ontario Budget - Chapter I: Building Prosperity and Creating Jobs*)**:**

The government will also take steps to ensure that the net impact of cap and trade would not result in an overall increase in electricity costs for commercial and industrial consumers, and that there would be a modest benefit of up to $2 per month, on average, to residential consumers.

**CCAP public document** (under *Action Area – Buildings and Homes: Reduce emissions from fossil-fuel use in buildings*)**:**

Keep Electricity Rates Affordable: Use cap and trade proceeds to offset the cost of greenhouse gas pollution reduction initiatives that are currently funded by residential and industrial consumers through their bills.

**CCAP policy minute** (May 11, 2016)**:**

ENERGY develop additional options to addressing rate-impacts on electricity consumers and work with MOECC, the Premier's Office and Cabinet Office regarding the selected option for inclusion in the action plan

**CCAP TB/MBC minute** (May 19, 2016)**:**

i) Approve-in-principle the following estimated ranges to guide potential investment of cap and trade proceeds over four years, from 2017-18 to 2020-21, should proceeds be available:

| **CCAP Action** | **Initiative** | **Potential Funding range from proceeds over 4-year period** | **Estimated GHG reduction in 2020 associated with potential funding** |
|---|---|---|---|
| Moving toward a lower-carbon energy supply with adequate capacity and affordable low-carbon electricity. | Eliminate Carbon Price Impacts / Grid Emission Reductions to Ratepayers | · Range - $1,000,000,000 to $1,320,000,000 | 3,000,000 Tonnes (Energy Planning) |

---

Hi Nadine,

If we could keep the discussion now to the generality, it'd be best. I can try to provide comments to the attached for maybe end of day.

Thanks,

John.

**Importance:** High

Hi John,
In advance of our meeting, just sharing a draft summary I prepared based on what I heard on the call. There are likely many errors as I joined the call late. Can you perhaps suggest edits based on your understanding (in track changes mode).
Thanks. N

Hi,

Attached is the latest version of the note, which will be updated based on our conversation with our Minister this afternoon.

And yes – it looks like ENE is proposing to use $270M annually in proceeds for commercial and industrial consumers, and has suggested the remaining $60M annually (from what was proposed through CCAP) could provide some flexibility in the fiscal plan.

We currently have two briefings on this scheduled for tomorrow – the Cabinet pre-brief with Karen Hughes/our MO and the Chair's briefing for Sept. 13 TB/MBC. Stay tuned as to whether this item will stay on the agenda for those briefings given the evolving status.

Thanks,
Madeleine

**Subject:** Re: Electricity item

Thanks for passing on. Can you forward your note when it's done? We're briefing our Minister tomorrow. It looks like they're using 270m of the cap and trade proceeds, unless I'm misreading it.

Sent from my BlackBerry 10 smartphone on the Rogers network.

**Subject:** Electricity item

Hi everyone,

Just received a draft Cab Sub from ENE, which they expect will change again based on comments from their MO. We are reviewing this now as we understand our MO may be interested in a briefing. We will forward invites and any additional materials as we receive. Password is the external Budget password.

Thanks,
Madeleine

# TREASURY BOARD / MANAGEMENT BOARD OF CABINET REQUEST ASSESSMENT NOTE

| | |
|---|---|
| **Ministry:** | Energy |
| **Meeting Date:** | September 13, 2016 |
| **Agenda Class:** | Major |
| **Last reviewed by:** N/A | **Tracking to:** Cabinet - September 14, 2016 |

| **SUBMISSION TITLE:** | Electricity Price Mitigation |
|---|---|

**NO MATERIALS RECEIVED –BASED ON DRAFT POLICY SUBMISSION**

## I. DECISION BEFORE THE BOARD

The Ministry of Energy is requesting approval of a suite of initiatives providing relief to various electricity consumer classes.

## II. RECOMMENDATIONS:

| | |
|---|---|
| • Approve a suite of initiatives to provide relief to various electricity consumer classes (pending Cabinet policy approval):<br>– Providing a pre-tax 8% rebate to Regulated Price Plan consumers;<br>– Expanding the Industrial Conservation Initiative;<br>– Updating the Rural and Remote Rate Protection program; and,<br>– Using cap and trade proceeds to ensure industrial and commercial consumers are not negatively impacted by cap and trade (A 1% reduction in rates). Balance of proceeds intended for electricity relief through the Climate Change Action Plan could provide some fiscal offsets.<br>• Approve in principle an expenditure increase estimated at $261M in 2016-17 for the Electricity Price Mitigation, offset from the Treasury Board Contingency Fund. [estimate subject to refinement from the Ministry]<br>• Direct the Ministry to report back to TB/MBC with implementation details, including confirmation of financial implications, and required TB/MBC approvals to implement.<br>• Recommend to Cabinet that the Ministry proceed to Cabinet with the proposed legislation (TBD). | *Board Judgment* |

## III. FINANCIAL SUMMARY

| **$ Millions** | **2016-17** | **2017-18** | **2018-19** |
|---|---|---|---|
| Initiative cost requested | 261.0 | 1006.0 | 1004.0 |
| Initiative cost recommended | 261.0 | 1006.0 | 1004.0 |
| Recommended program base | 261.0 | 1006.0 | 1004.0 |
| Offset Recommended | 0.0 | 60.0 (TBD) | 60.0 (TBD) |
| Total Fiscal Impact | 261.0 | 946.0 | 944.0 |

## IV. KEY COMMENTS AND CONSIDERATIONS

Context

Electricity costs have increased as the province has made investments in clean energy generation and modernized electricity infrastructure. Electricity bills are expected to continue to increase as more renewable energy projects come online. Since 2010, average bills for residential consumers (i.e., using 750 kWh/month) have increased by over 50%. Rates paid by commercial and industrial electricity consumers have increased by 56% and 6% respectively over the same period. Appendix C provides supporting background information.

As part of the 2016 Budget, the government committed to offset the impact of cap and trade in Ontario for commercial and industrial electricity consumers, while also providing a benefit of up to $2 per month for residential electricity consumers. This included a commitment to provide a modest benefit of up to $2 per month, on average, to residential consumers. The Climate Change Action Plan (CCAP) included up to $1.32B over 4 years to help keep electricity rates affordable for residential and industrial consumers.

The Ontario Clean Energy Benefit (OCEB) expired December 31, 2015, as part of the originally planned, five-year legislated program put in place as a broad-based, transitional measure to a cleaner electricity system. OCEB was also put in place following the implementation of the Harmonised Sales Tax (HST). Unlike the previous provincial Retail Sales Tax (RST), the HST (and GST) included electricity in the taxable base. With the end of OCEB, the government ended the electricity Debt Retirement Charge (DRC) on residential users earlier than planned, as of January 1, 2016, and also put in place the low-income targeted Ontario Electricity Support Program (OESP).

In order to achieve the CCAP commitment and additional price mitigation, the Ministry of Energy has developed price mitigation options that consider tax-based levers, cap and trade proceeds, and shifting costs within the rate-base.

Proposal

The Ministry is proposing the following to mitigate electricity prices for consumers (Appendix D provides more information on each item below):

- Provide an 8% rebate on the pre-tax cost of electricity to consumers eligible for the Regulated Price Plan* (i.e., residential, small business and farms), equivalent to the provincial portion of HST
- Expand Industrial Conservation Initiative (ICI) eligibility by lowering the threshold to 1 MW, to provide support to Class B electricity consumers (i.e., commercial, institutional and small industrial)
- Update the Rural and Remote Rate Protection (RRRP) program, to provide relief to rural customers
- Recycle cap and trade proceeds to commercial and industrial electricity consumers to provide a modest (1%) reduction in rates

Public high-profile communications would coincide with introduction of legislation (September 2016). Currently, the 8% rebate would be available starting January 1, 2017 (it could be prescribed earlier), along with updating the RRRP. Expanding ICI won't be added to bills until 2018 due to the time required to implement the expansion and for billing changes. Recycling

cap and trade proceeds would commence in 2017.

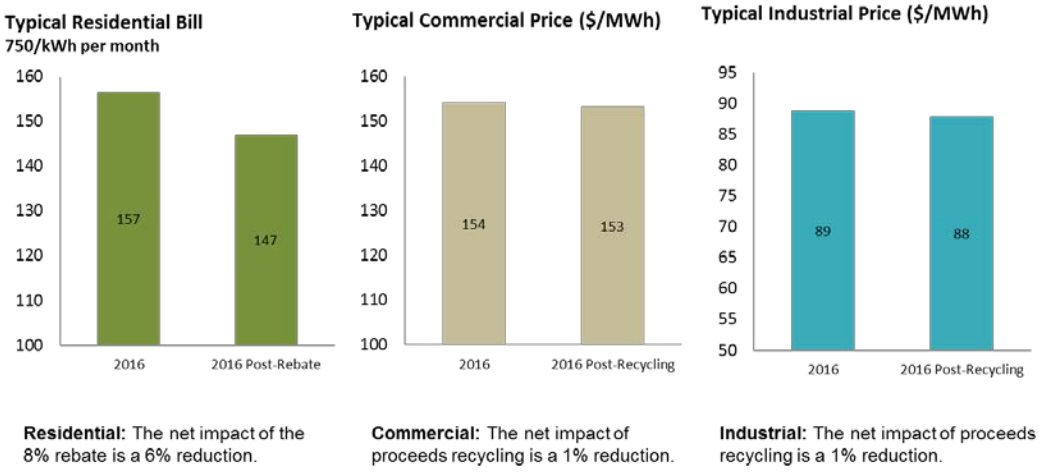
The following table provides an overview of the four initiatives, recipients, projected financial impact, and whether taxpayers or ratepayers cover the costs:

| | Measure | Annual Impact | Targeted Recipients |
|---|---|---|---|
| **1.** | 8% Rebate to Regulated Price Plan | Fiscal ($1B)* | Residential, small business and small farms, and other small users |
| **2.** | Expanding ICI eligibility to customers above 1MW in all sectors | Rate base ($47M/$82M)** | Intermediate and large-sized industrial, commercial and institutional consumers above 1MW in all sectors |
| **3.** | Updating Rural and Remote Rate Protection | Rate base ($110M) | Residents in rural or remote locations: Hydro One's lowest-density R2 customers. |
| **4.** | Use cap and trade proceeds to commercial and industrial electricity consumers to provide a modest reduction in rates. | $270M | The projected $330M in cap and trade proceeds/year were estimated to go to different electricity consumer classes:<br>- $120M residential consumers<br>- $170M commercial consumers<br>- $40M for industrial consumers<br><br>The 8% rebate above allows for cap and trade previously committed to residential consumers to be redirected to other consumers classes and/or GHG reduction initiatives in the fiscal plan, requiring about $60M less in proceeds |

* Annual numbers from ENERGY.

** Short-term/Long-term rate base impact, where short term is one year after expanded eligibility takes place and long-term is expected impact once new customers have time to change behavior.

The following graphic from the Ministry highlights the bill impacts by electricity consumer class.



**Residential:** The net impact of the 8% rebate is a 6% reduction.

**Commercial:** The net impact of proceeds recycling is a 1% reduction.

**Industrial:** The net impact of proceeds recycling is a 1% reduction.

Due to the nature of the ICI Global Adjustment mechanism and cost recovery of RRRP, the rate base proposals (#2 and #3) benefit the targeted recipients, but come at a cost to all other electricity rate payers in Ontario.

Fiscal Impact

The most recent Electricity Price Mitigation Options deck notes that "proceeding with an 8% Regulated Price Plan (RPP) rebate without a cap would cost an estimated $1 billion per year".

The $1 billion figure is a 2017 to 2020 calendar year average of cost estimates developed by Ministry of Energy staff, as follows:

| *$ millions* | **2017** | **2018** | **2019** | **2020** |
|---|---|---|---|---|
| | 1,003 | 1,014 | 975 | 1,049 |
| Avg. 2017-20 | 1,010 | | | |

- On a fiscal year basis, the above estimates become:

| *$ millions* | **2016-17** | **2017-18** | **2018-19** | **2019-20** |
|---|---|---|---|---|
| | 261 | 1,006 | 1,004 | 994 |
| 3-Year Avg. | 1,001 | | | |

The Ministry also indicates the current proposal would provide recycling of cap and trade proceeds to commercial and industrial consumers on a volumetric basis. This would require an estimated $60 million less per year in proceeds than previously estimated (i.e., providing fiscal plan flexibility of about $60M per year to commit to other GHG reduction initiatives in the fiscal plan).

There are no details as this point if the $261M in 2016-17 would be offset from the Treasury Board Contingency Fund or provided through supplementary estimates.

Cap and Trade Proceeds

The 2016 Budget committed to offset the impact of cap and trade for commercial and industrial consumers, while also providing a benefit of up to $2 per month for residential consumers (on average). While residential and other consumers would benefit from the 8% pre-tax rebate, this does not apply to non-Regulated Price Plan consumers (larger industrial, commercial, and other consumers). As such, the Ministry is proposing to direct a portion of cap and trade auction proceeds to industrial and commercial consumers not in the RPP to go beyond mitigating cap and trade impacts and provide a 1% bill impact (shown in the graphic at the bottom of page 3).

To be characterized as a regulatory charge under the cap and trade program, auction proceeds need to be spent on programs that are reasonably likely to reduce or support the reduction of greenhouse gases. It is unclear from current materials whether this proposal meets this requirement.

Considerations – Implementation

At this point, the Ministry has presented a high level overview of major implementation pieces:

- New legislation would be required to enable the 8% rebate proposal. Legislation would closely mirror the Ontario Clean Energy Benefit Act, 2010. If passed, the legislation would require a general regulation. Amendments would also be required to various regulations to expand ICI and RRRP.
- On-bill rebate delivery would likely require adjustments to LDC billing systems, which could impact delivery costs and timelines. The Ministry indicates will consult with LDCs (possibly

through Ontario Energy Board) to accurately assess these impacts once the program has been announced. In the past, LDCs have asked for at least six months' notice when implementing billing system changes. Timing concerns may be alleviated by allowing LDCs to provide retroactive payments rebates if their systems cannot be updated in time for January 1, 2017. This was done with the OCEB.

- Detailed messaging on bills could be implemented (A bill mock-up is pending from the Ministry). The rebate would not be directly linked to HST. With electricity invoices containing multiple line items and LDC bill presentment varying widely, direction on rebate presentment will need to be flexible to allow LDCs to incorporate easily while ensuring government-preferred branding and messaging is conveyed.
- The Ministry will need to continue to consult with the Independent Electricity System Operator (IESO), Ontario Energy Board (OEB) and LDCs regarding implementation of proceeds recycling.

Legal Considerations

8% Rebate (shift costs from rate-base to tax base by providing a rebate equal to the provincial portion of HST):

- Providing the contemplated rebate under the proposed Bill does not, in and of itself, give rise to legal issues. As policy direction is given on the specifics of supporting regulations, any associated legal risks can be identified.

ICI Expansion (shift costs within rate-base by expanding eligibility for the ICI program to consumers of >1 MW):

- To establish that the charge is legitimate, it must be established that the purpose and effect of the charge is to facilitate the maintenance of a financially viable electricity system by way of load management or some other feature under which those who are subsidized provide an overall system benefit enjoyed by those who subsidize them.

RRRP Update (shift costs within the rate-base by increasing the RRRP benefit paid to rural and remote customers):

- Increasing the amount of revenue devoted to the RRRP or expanding the scope of consumers eligible for the program does not raise new legal risk. There is a good argument that the RRRP is a regulatory charge, as it socializes some of the costs of distributing electricity to rural consumers. Overall the risk that the RRRP would be characterized as a tax is assessed as moderate (meaning equally good arguments on both sides).

Cap and Trade Proceeds Recycling (reduce impact on rate base and tax base by directing cap and trade auction proceeds to industrial consumers):

- To be characterized as regulatory charges under the cap and trade program, auction revenues should be spent on programs that reduce GHGs.

Other Considerations

- This request does not align with the 2016 Budget fiscal plan and there are no proposed offsets.
- The 8% rebate would provide a typical residential consumer about an $11 per month

benefit on average (about $10, after the impact of RRRP and ICI expansion), exceeding the Budget 2016 $2 per month on average cap and trade commitment. Also, the budget committed to offsetting the impact of cap an trade on industrial and commercial consumers, a 1% reduction is being proposed using cap and trade proceeds, which could be recycled elsewhere on GHG reduction initiatives.

- Reduction in electricity prices that does not consider consumption amounts (e.g., without the cap in the previous OCEB program) does not promote electricity conservation and may be seen as unaligned with climate change objectives.
- There is potentially a need for supplementary estimates as the existing vote (2905) Electricity Price Mitigation does not include a separate item for the 8% rebate (2905 was used for the Ontario Clean Energy Benefit and currently includes the Northern Ontario Energy Credit).
- Other price mitigation measures introduced following the implementation of the HST, as well as the end of OCEB, would continue.
  - Both the energy portion of the Ontario Energy and Property Tax Credit (OEPTC) and NOEC were introduced/ enhanced following the introduction of the HST and have a significant annual fiscal cost (totalling about $500 million annually).
  - The DRC on residential consumers was ended early, as of January 1, 2016 (about a $340 million impact in 2016-17).
  - OESP is a low-income targeted program funded by electricity consumers through the electricity rate base.

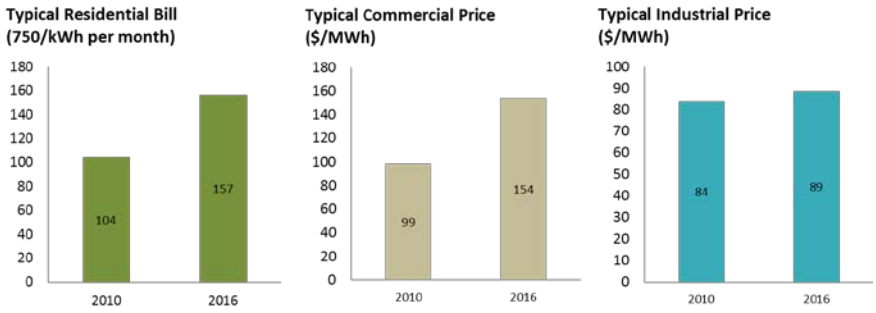
## APPENDIX C: ELECTRICITY SECTOR BACKGROUND

The Ministry has provided the following information to provide electricity sector context this item.

There are three classes of electricity consumers:

| | Regulated Price Plan | Class B | Class A |
|---|---|---|---|
| **Consumer Types** | • Residential<br>• Small Business<br>• Farms | • Commercial<br>• Institutional<br>• Small industrial | • Large commercial<br>• Large industrial |
| **Load Size** | Below 0.05 MW | Between 0.05 MW and 3 MW | Above 3 MW* |
| **Total Consumption** | 58 TWh | 57 TWh | 26 TWh |
| **Share of Consumption** | 41.1% | 40.4% | 18.4% |

Since 2010, average bills for residential consumers (i.e., using 750 kWh/month) have increased by over 50%. Rates paid by commercial and industrial electricity consumers have increased by 56% and 6% respectively over the same period.



**Note:** 2016 represents May 2016 for residential and YTD June 2016 for commercial and industrial.

Existing Rate Mitigation efforts are on-going:

- Ontario currently provides rate mitigation to various electricity consumer classes through a combination of tax-based and rate-based programs.
  - For example, Northern Ontario residential electricity consumers receive tax credits in recognition of higher electricity costs in the north and rural consumers receive a subsidy funded through the rate-base due to the higher cost of delivering power to rural areas.
  - As of 2016, the government removed the Debt Retirement Charge (DRC) from residential electricity bills. While this saves a typical residential electricity ratepayer about $60 per year, it is less than the benefit previously provided through the Ontario Clean Energy Benefit (OCEB).
  - OCEB provided a tax-base rebate of 10% rebate on the total cost of electricity charges related to electricity consumption on eligible bills between 2011 and 2015.
- Because electricity costs must be fully recovered from electricity consumers, rate mitigation funded through the rate-base often represents a shifting of costs from one consumer group to another (i.e., industrial to residential and commercial consumers).

- Rate-based initiatives are generally associated with incenting changes in behaviour that provide electricity system benefits (i.e., shifting electricity consumption from on-peak to off-peak periods).

- The following slides provide an overview of the programs currently available to different electricity consumer classes along with the cost shift associated with several of the programs:

| Program | Consumer Type | Rate/Tax-based | Description |
|---|---|---|---|
| Northern Ontario Energy Credit | **Residential** | Tax | Delivered as part of the Ontario Trillium Benefit, provides individuals living in northern Ontario with a credit of up to $146 per year for the 2016 benefit year. |
| Ontario Energy and Property Tax Credit | | Tax | Also delivered as part of the Ontario Trillium Benefit, provides up to $1,008 per year for low-to moderate-income individuals and families. |
| Ontario Electricity Support Program | | Rate | Provides ongoing assistance directly on the bills of eligible low-income electricity consumers. |
| Rural or Remote Rate Protection | | Rate | Provided to rural and remote residential and farm customers because the cost of distributing power to remote areas is much higher than for urban areas. |
| saveONenergy Conservation Programs (including Home Assistance Program for low income customers) | | Rate | Delivered by LDCs which provide financial incentives for electricity-saving measures like LEDs, ENERGYSTAR certified ceiling fans, baseboard programmable thermostats, clotheslines, and advanced powerbars. |
| saveONenergy Conservation Programs (including Retrofit Program for Buildings and other programs) | **Commercial** | Rate | saveONenergy suite of electricity conservation programs for commercial customers offered by local distribution companies (LDCs) help businesses save energy to better manage their electricity consumption and reduce their annual electricity costs. See Appendix for more information. |
| Industrial Conservation Initiative | **Industrial** | Rate | Encourages Ontario's largest consumers to reduce consumption during peak periods to save on average 25% on their electricity bills. |
| Industrial Accelerator Program | | Rate | Provides financial incentives of up to $10 million to transmission-connected electricity consumers, to invest in energy-efficiency or self-generation which would reduce the amount of electricity withdrawn from the provincial grid. |
| Industrial Electricity Incentive | | Rate | Provides reduced electricity rates for companies starting or expanding operations in Ontario. |
| Northern Industrial Electricity Rate Program | | Tax | Provides $20 megawatt per hour (MWh) rebate for qualifying large northern industrial consumers. |
| Demand Response | | Rate | Provides payments to businesses and industry to shift consumption at times when the electricity system is stressed. DR currently provides ~500 MW of capacity to the system. |

Ontario has implemented several programs that have shifted costs amongst electricity consumer classes (i.e., residential, commercial and industrial). The table below shows the estimated cost shifts in the province's electricity system that result from three existing government programs (i.e., ICI, RRRP and OESP):

| Cost Shift Impact | 2011 | 2012 | 2013 | 2014 | 2015 | 2016 |
|---|---|---|---|---|---|---|
| Residential Bill ($/month for 750 kWh) | 3.55 | 4.07 | 3.85 | 4.46 | 5.68 | 6.55 |
| Commercial – Class B ($/MWh) | 4.74 | 5.43 | 5.14 | 5.94 | 7.57 | 8.73 |
| Industrial – Class A ($/MWh) | -20.97 | -25.26 | -22.38 | -24.68 | -32.56 | -31.55 |

**Note:** Negative values indicate a benefit; positive values denote an incremental charge.

A number of actions have and are being taken to reduce overall electricity system costs. Despite these actions to reduce system costs, electricity rates continue to increase for consumers:

- Renegotiating the Green Energy Investment Agreement, reducing contract costs by $3.7 billion;
- Deferring the construction of two new nuclear reactors at Ontario Power Generation's Darlington facility, avoiding an estimated $15 billion in new construction costs;
- Approving Ontario Power Generation's plans to enable the ongoing operation of Pickering up to 2024, which is expected to save ratepayers as much as $600 million.

- Reducing Feed-In-Tariff (FIT) prices through annual price reviews, saving ratepayers at least $1.9 billion relative to the 2013 Long-Term Energy Plan (2013 LTEP) forecast; and
- Removing an expected $3.3 billion in Large Renewable Procurement (LRP) costs relative to the 2013 Long-Term Energy Plan (2013 LTEP) forecast, based on the results of the first phase of the LRP.
- Despite these actions to reduce system costs, electricity rates continue to increase for consumers.

## APPENDIX D: FURTHER INFORMATION SUPPORTING PROPOSED INITIATIVES

he following information has been provided by the Ministry.

**1. Provide an 8% rebate to consumers eligible for the Regulated Price Plan* (i.e., residential, small business and farms), equivalent to the provincial portion of HST**

The Ministry is proposing to introduce legislation/regulation to provide a rebate of 8% to consumers eligible for the Regulated Price Plan. The below table indicates which consumers would or would not receive the benefit. This would be equivalent to the provincial portion of the HST.

- Those ineligible to receive the 8% rebate will benefit from one or more of the other initiatives under this proposal (e.g., ICI expansion, proceeds recycling, etc).
- An HST exemption would require federal approval. Engaging in discussions with the federal government would take time and would likely result in not meeting the targeted implementation date.

| **Eligible for the 8% rebate** (< 50 kW or < 250,000 kWh/year) | **Not eligible for the 8% rebate** (> 50 kW or > 250,000 kWh/year) |
|---|---|
| • Residential Regulated Price Plan consumers<br>• Residential retail consumers<br>• Multi-unit residential buildings and other facilities used as residential rental units<br>• Long-term care homes and school residences<br>• Regulated Price Plan eligible farms<br>• Small businesses<br>– Coffee / snack retailer<br>– Convenience store<br>– Apparel store<br>– Hair salon<br>– Small insurance office | • Class A consumers<br>– Manufacturer<br>– Large grocery store<br>– Mines<br>– Auto assembly plants<br>• Class B consumers (except farms that have opted out of the Regulated Price Plan)<br>– Commercial offices (low rise)<br>– Hotel<br>– General warehousing |

**2. Expand ICI eligibility by lowering the threshold to 1 MW, to provide support to Class B electricity consumers (i.e., commercial, institutional and small industrial)**

Currently, electricity consumers over 5 MW and consumers from 3-5 MW in certain energy intensive sectors are eligible for ICI (i.e., approximately 300 Class A consumers). Consumers participating in ICI include the following sectors: pulp and paper, auto, manufacturing, chemicals and mines.

ICI would be expanded so that all consumers over 1 MW are eligible for the program, which would:

- Reduce electricity peak demand by incenting more consumers to lower their electricity demand during peak periods;
- Reduce electricity bills for new ICI participants who are able to reduce their electricity demand during peak demand periods; and
- Increase the electricity bills for non-ICI participants to ensure full cost recovery in the electricity system.

| | **Benefit to New ICI Participants** | **System Benefit** | **Financial Impact** | **Residential Bill Impact** |
|---|---|---|---|---|
| | **Bill Savings** | **Peak Demand Reduction (MW)** | **GA shifted to Class B ($M)** | |
| **Short-term** | Up to 21% | 80 | 47 | Increase of $0.42/month |
| **Long-term** | Up to 34% | 165 | 82 | Increase of $0.74/month |

The different impacts refer to the amount of time it takes for new Class A consumers to respond to the expanded ICI eligibility. The bill impacts assume a 25% uptake, which would increase Class A consumption by roughly 3 TWh, leaving an estimated 54 TWh in Class B that are either between 0.05-1 MW or choose not to opt in to ICI. This would represent an estimated 300 additional consumers in ICI, though they would represent a much smaller share of the consumption than the 300 consumers currently participating. Newly eligible consumers in the program would mostly fall into the small industrial, institutional and commercial category, including: automotive supply chain companies, office tower, large shopping mall, greenhouses and others.

## 3. Update the Rural and Remote Rate Protection (RRRP) program, to provide relief to rural customers

The Ministry is proposing to provide an additional $110M in rate protection to eligible rural or remote electricity consumers, and consider options to periodically adjust the amount of rate protection available to these consumers going forward.

RRRP is a rate-based funded subsidy program that helps offset the higher costs to distribute electricity to Ontario residents who live in rural or remote locations all across the Province.

- Today, RRRP is a $175M program. For an average residential customer, the cost of supporting RRRP is roughly $1 per month. For other customers, the cost can range from $65 for a greenhouse to $8,000 for a medium industrial.
- The majority of the program funding ($125.5M) provides a subsidy to Hydro One's lowest-density customers – classified as R2 customers. There are approximately 329,000 R2 customers. The current program provides a monthly subsidy for R2 customers of $31.50.
- RRRP funding supporting R2 customers has been capped at the current level since 2004. As a result, the impact of its assistance has diluted over time as electricity costs have risen.

An additional $110Mn in program funding would see an increased subsidy of ~$28 /month. This would bring R2 bills in line with Hydro One R1 (medium density) bills at 1000kWh.

- This would increase the R2 portion of the RRRP to $235 million with a monthly impact on an average residential consumer of ~$0.60.
- The RRRP could be indexed at inflation or "trued up" on a regular basis to ensure the subsidy remains constant.

## 4. Recycle cap and trade proceeds to commercial and industrial electricity consumers to provide a modest reduction in rates

The 2016 Budget committed to offset the impact of cap and trade for commercial and industrial consumers, while also providing a benefit of up to $2 per month for residential consumers.

- To meet the 2016 Budget commitment, the Climate Change Action Plan (CCAP), committed $1.3 billion from the GGRA over the first compliance period (2017-2020).
- However, providing a 8% rebate to Regulated Price Plan consumers would allow for GGRA proceeds previously committed to residential consumers to be redirected to other consumers classes and/or GHG reduction initiatives in the fiscal plan.

The current proposal would provide additional recycling to commercial and industrial consumers, while requiring an estimated $60 million less per year (i.e., a reduction of $240M over the first four year compliance period).

The following table identifies the illustrative impacts.

| | Average Annual Fiscal Impact | Average Annual Greenhouse Gas Reduction Account (GGRA) Proceeds Impact | Regulated Price Plan (Residential) Impact | | Class B (Commercial) Impact | Class A (Industrial) Impact | |
|---|---|---|---|---|---|---|---|
| | | | *Average (750 kWh/ month)* | *Rural** (1000 kWh/ month)* | | *Existing* | *New* |
| • 8% rebate to Regulated Price Plan consumers<br>• ICI Expansion<br>• RRRP Update<br>• Proceeds Recycling | $1.0 billion | $270 million annually | -$10/ month<br><br>(-6%) | -$45/ month<br><br>(-20%) | -$1/MWh<br><br>(-1%) | -$1/ MWh<br><br>(-1%) | Up to -$52/MWh<br><br>(-34%) |

***Note:** The impact of cap and trade would not be added to electricity bills until 2017 and the impact of ICI would not be added to bills until 2018 due to the time required to implement the expansion and for billing changes. However, both the impact of cap and trade and ICI have been included above for illustrative purposes.

****Note**: Rural customers refers to customers of Hydro One eligible to receive RRRP (R2 rate class customers)

## APPENDIX E: PROPOSED POLICY MINUTE

CABINET AGREED THAT:

1. THE MINISTRY OF ENERGY (ENERGY), WITH SUPPORT FROM THE MINISTRY OF FINANCE (MOF), SHALL PREPARE LEGISLATION THAT WOULD PROVIDE AN EIGHT PERCENT (8%) REBATE ON THE PRE-TAX COST OF ELECTRICITY FOR THE FOLLOWING CLASSES OF CONSUMERS:
   A. ALL CONSUMERS ELIGIBLE TO BE BILLED UNDER THE ONTARIO ENERGY BOARD'S REGULATED PRICE PLAN; AND
   B. ANY OTHER CONSUMERS WHO WERE ELIGIBLE FOR FINANCIAL ASSISTANCE UNDER THE *ONTARIO CLEAN ENERGY BENEFIT ACT, 2010* (OCEBA) DURING THE PERIOD THAT PROGRAM WAS IN PLACE.

2. THE LEGISLATION SHALL BE GENERALLY MODELLED UPON THE OCEBA, AND WOULD INCLUDE THE FOLLOWING ELEMENTS:
   A. THE REBATE WOULD BE AVAILABLE STARTING JANUARY 1, 2017 AND BEFORE SUCH DATE AS MAY BE PRESCRIBED;
   B. THE REBATE WOULD NOT BE SUBJECT TO A CAP UNLESS A CAP IS PRESCRIBED;
   C. THE LEGISLATION WOULD SPECIFY THE TYPES OF COSTS TO WHICH THE REBATE WOULD OR WOULD NOT BE APPLIED, WITH AUTHORITY TO MAKE CHANGES BY REGULATION;
   D. THE LEGISLATION WOULD ADDRESS INVOICING REQUIREMENTS, INCLUDING AUTHORITY TO PRESCRIBE HOW THE REBATE IS TO APPEAR ON CONSUMER ELECTRICITY BILLS;
   E. THE LEGISLATION WOULD INCLUDE AUTHORITY TO PRESCRIBE THE WAY IN WHICH THE REBATE IS TO BE FLOWED THROUGH TO CONSUMERS, AND THE WAY IN WHICH ELECTRICITY VENDORS PROVIDING THE REBATE ARE TO BE REIMBURSED;
   F. THE LEGISLATION WOULD INCLUDE RECORD-KEEPING REQUIREMENTS FOR ELECTRICITY VENDORS AND ANY OTHER PRESCRIBED PERSONS; AND
   G. THE LEGISLATION WOULD INCLUDE INSPECTION POWERS FOR INSPECTORS APPOINTED BY THE MINISTER OF FINANCE, INCLUDING POWERS RELATED TO RECOVERY OF OVERPAYMENTS.
3. ENERGY AMEND O. REG. 429/04 (ADJUSTMENTS UNDER SECTION 25.33 OF THE ACT) MADE UNDER THE ELECTRICITY ACT, 1998 TO EXPAND ELIGIBILITY FOR CLASS A CONSUMERS AND CLASS A MARKET PARTICIPANTS UNDER THE INDUSTRIAL CONSERVATION INITIATIVE (ICI) TO ALL ELECTRICITY CONSUMERS AND MARKET PARTICIPANTS WITH A PEAK DEMAND ABOVE AN AVERAGE OF ONE MEGAWATT (1MW) WITH NO SECTORAL RESTRICTIONS ON PARTICIPATION.
4. ENERGY AMEND O. REG 442/01 (RURAL OR REMOTE ELECTRICITY RATE PROTECTION) MADE UNDER THE ONTARIO ENERGY BOARD ACT, 1998 TO INCREASE THE TOTAL AMOUNT OF RATE PROTECTION AVAILABLE TO LOW DENSITY HYDRO ONE INC. CONSUMERS UNDER THE RURAL OR REMOTE RATE PROTECTION PROGRAM BY $110 MILLION, EFFECTIVE JANUARY 1, 2017.
5. ENERGY CONSIDER AND, IF APPROPRIATE, UTILIZE A MECHANISM TO PERIODICALLY ADJUST THE TOTAL ANNUAL AMOUNT OF RATE PROTECTION AVAILABLE TO HYDRO ONE INC. CONSUMERS UNDER THE RURAL OR REMOTE ELECTRICITY RATE PROTECTION REGULATION / PROGRAM, EFFECTIVE JANUARY 1, 2018.
6. ENERGY TO RECYCLE UP TO AN AVERAGE OF $270 MILLION OF CAP AND TRADE AUCTION PROCEEDS FROM THE GREENHOUSE GAS REDUCTION ACCOUNT PER YEAR OVER THE FIRST COMPLIANCE PERIOD (2017-2020) TO COMMERCIAL AND INDUSTRIAL ELECTRICITY CONSUMERS.
7. ENERGY AND MOF TO WORK WITH CABINET OFFICE (CO) AND PREMIER'S OFFICE (PO) ON COMMUNICATIONS PLAN.

Hi,

Apparently a draft "bootleg" copy.

Please review and do a markup. A short note with staff comments would be helpful too.

Is a draft for EOD doable?

The "Trillium Trust" would notionally be either all incremental electricity projects vs Moving Ontario Forward, and hitting the bottom line once in-service and amortised. Or crowds out Moving Ontario Forward projects. However, could hurt the fiscal bottom line if it is perceived as detracting from

Hydro One potential rate base growth, hurting market value upfront, and net income (and corporate taxes) over time.  Does that make sense?

And little or no near-term rate impact, as new projects would affect the rate base years out, unless the Trillium Trust is used for existing Tx projects already about to come on line.

I might want to argue that if they do the DRC one, it is in effect giving up a chunk of the Departure Tax benefit to OEFC.  And on the departure tax, aside from all the regulatory principles arguments, I might think about saying that the elimination of the deferred tax liability portion was just truing up the PILs amounts owing.

Thanks,
Ron

# Comments on Proposed Initiatives to Transform Ontario's Electricity Sector

The Ministry of Energy (Energy) is providing an update on progress related to transforming the province's electricity sector by elaborating on the potential initiatives, as outlined in its deck.

## CONTEXT

- As outlined in Energy's update, electricity costs have been increasing following investments to transform towards cleaner generation (i.e. meeting goals towards decarbonize) and modernize the electricity infrastructure (i.e. more than $35 billion in cleaner generation and $15.5 billion investment by Hydro One alone in transmission and distribution systems).

- The government has taken action to lower electricity cost pressures to all consumers by taking actions, including deferring investments in generation (e.g., new build nuclear), improving market efficiency and decreasing costs related to renewable procurement (e.g. GEIA renegotiation, decreasing FIT prices, etc).

- The government introduced the Ontario Rebate for Electricity Consumers (OREC) which will provide a rebate equal to the 8% provincial portion of the Harmonized Sales Tax, saving $11 per month starting January 1, 2017 for eligible small businesses, farms and residential consumers and has taken steps to expand the Rural or Remote Electricity Rate Protection program, expected to save eligible RRRP customers about $45 per month, when combined with OREC.

## COMMENTS

Energy's proposals generally involve shifting costs from the rate base to the tax base. While these proposals may have a fairly limited residential rate payer impact (e.g. about $5-6/month for residential, less than 5% of the average monthly bill), the proposals would come at a material incremental fiscal cost ($1 billion to $1.3 billion). Note these impacts are lower than those prestend in an earlier deck ($1.3 billion to $1.9 billion).

Over the past five years, the fiscally funded electricity price mitigation efforts have averaged about $1.5 billion and is already expected to increase to about $2 billion with the introduction of OREC. The existing program costs are summarized in the table below:

| ($M) | 2011-12 | 2012-13 | 2013-14 | 2014-15 | 2015-16 | 2016-17[1] | 2017-18[1] |
|---|---|---|---|---|---|---|---|
| OCEB | 1,033 | 994 | 1,006 | 1,078 | 860 | - | - |
| OREC | - | - | - | - | - | 300 | 1,100* |
| Ending DRC[2] | - | - | - | - | 85 | 330 | 330 |
| NIERP | 120 | 120 | 115 | 108 | 120 | 120 | 120 |
| NOEC | 23 | 24 | 25 | 24 | 26 | 25 | 25 |
| OEPTC[3] | 354 | 406 | 418 | 429 | 444 | 450 | 460 |
| TOTAL | 1,530 | 1,544 | 1,564 | 1,639 | 1,525 | 1,225 | 2,005 |

1. 2016-17, 2017-18 based on forecasted numbers
2. 2015-16 estimated for 3 months of reduced DRC revenue
3. OEPTC amounts in all years based on energy component of the rebate.

* Sourced from Energy PRRT submission

OCEB – Ontario Clean Energy Benefit
OREC – Ontario Rebate for Electricity Consumers
DRC – Debt etirement Charge
NIERP – Northern Ontario Electricity Rate program
NOEC – Northern Ontario Energy Credit
OEPTC – Ontario Energy and Property Tax Credit

**Proposals**

Energy has outlined the following rate mitigation proposals with significant bearing on the fiscal plan:

OESP & RRRP (Total of about $0.4 to 0.45 Billion/year):

This would shift the cost of the current and proposed expanded Ontario Electricity Support Program (OESP), and the Rural or Remote Electricity Rate Program (RRRP), to the tax base. *Note: that the fiscal exposure would increase if the OESP take up rate is larger, and faster than assumed.*

- The fiscal impact from shifting OESP and RRRP to the tax base may also be larger if future changes are made to the programs. Energy noted in previous drafts of its price mitigation deck that
  - OESP credits could be increased to address concerns from low income electricity consumers improvements to OESP could be implemented by increasing credits (could be up to double the current credits).
  - The RRRP regulation provides a funding mechanism for transmission infrastructure required to grid connect remote First Nation communities. Considerations for how that funding will be supported by the tax base will need to be determined. [The current deck links Trillium Trust for remote electrification.]

Fund Conservation Programs through the Tax-Base:

This would be for the remaining term of the existing Conservation and Demand Management framework. Over time the costs would transition to the new "green bank entity".

- Energy's rationale for the cost shift would be in recognition of the burden borne by ratepayers in phasing out coal generation.

Expanding the scope of the Trillium Trust to invest in energy infrastructure:

The Province is currently targeting $5.7 billion from asset optimization to dedicate to the Trillium Trust for investment in infrastructure under Moving Ontario Forward.

- Expanding access to natural gas is already included under Moving Ontario Forward.
- Using the Trillium Trust for additional energy projects would require additional funding from asset optimization, given that the government is committed to using the targeted $5.7 billion to fund across Moving Ontario Forward projects. Incremental investments would have negative fiscal impacts once the assets are in-service and amortized.
- Investments through the Trillium Trust instead of through other electricity sector entities (Hydro One, OPG, LDCs) could have additional negative fiscal impacts as these entities could see reduced ratebase growth, lowering the revenues that the Province realizes from these entities (e.g., consolidated net income, payments-in-lieu of taxes, etc.) May also negatively impact Hydro One share price if the measure is perceived by the market as reducing Hydro One's potential ratebase growth.
- Unless applied to existing projects, this measure would have little or no near-term rate impact.

Departure Tax:

As a result of the IPO, Hydro One paid a "departure tax" payment in lieu of tax (PIL) of $2.6 billion, as a final true-up of its PILs tax obligation. Energy is proposed using some or all of this departure tax for price mitigation.

- This was paid to the Ontario Electricity Financial Corporation (OEFC). The departure tax payment was fiscally neutral to the Province as the income to the OEFC was fully offset by a reduction in ESDI resulting from reduced net income of Hydro One.
- Using some or all of it for price mitigation would require restating the net stranded debt paydown by OEFC related to the IPO. [As the departure tax paid was fiscally neutral, OEFC's uplift was primarily related to the deferred tax benefit and the s.50.3 benefit under the *Electricity Act, 1998*.]
- This would be a one-time measure, potentially spread out over a few years, and fiscal impact, as the departure tax amount was one-time.

Debt Retirement Charge (Total of about $0.45 Billion in annualized rate to 2017-18):
Ending the DRC early for Class B customers (commercial, small industrial) would have an impact of about $0.45 billion in 2017-18.

- The end of the DRC had previously been linked with the end retirement of the residual stranded debt.
- Removing additional DRC revenue from the OEFC would call into question the proposed end date of the DRC.

| ($M) | 2016-17[1] | 2017-18[1] | 2018-19[1] | 2019-20[1] | 2020-21[1] |
|---|---|---|---|---|---|
| OESP, RRRP, First Nation rate | | 398 | 419 | 433 | 447 |
| Conservation Programs through Tax Base | 110 | 450 | 450 | 450 | 450 |
| [Trillium Trust] | TBD | TBD | TBD | TBD | TBD |
| Departure Tax | | TBD | TBD | TBD | TBD |
| DRC removal for Class B | 110 | 450 | | | |
| **Proposed Program Total:** | **220** | **1,298** | **869** | **883** | **897** |
| | | | | | |
| OREC | 300 | 1,100* | 1,100* | 1,200* | 1,200* |
| Ending DRC | 330 | 330 | -- | -- | -- |
| NIERP | 120 | 120 | 120 | 120 | 120 |
| NOEC | 25 | 25 | 25 | 25 | 25 |
| OEPTC[2] | 450 | 460 | 470 | 481 | 481 |
| **Existing Program Total:[3]** | **1,225** | **2,005** | **1,715** | **1,826** | **1,826** |
| **TOTAL[3]** | **1,445** | **3,303** | **2,584** | **2,709** | **2,723** |

1. Based on forecasted numbers
2. OEPTC amounts in all years based on energy component of the rebate.

* Sourced from Energy PRRT submission

3. Total would be significantly larger with the TBDs crystalized.

ENERGY

# Proposed Initiatives to Transform Ontario's Electricity Sector – Update

## Working Draft

December 2016

CONFIDENTIAL DRAFT

# Context

- Electricity costs are increasing as the necessary investments are made to decarbonize and modernize the province's electricity infrastructure (i.e., $35 billion+ investment in cleaner generation and $15.5 billion investment in Hydro One transmission and distribution systems).

- Ontario has taken a number of actions to lower electricity cost for all consumers by:
  - Deferring investments in generation (e.g., new build nuclear), improving market efficiency (e.g., wind dispatch) and decreasing the cost of renewable procurements (e.g., GEIA renegotiation, decreasing FIT prices).
  - Increasing cost effectiveness and improving efficiency by adopting new electricity market approaches (e.g., competitive LRP, no new NUG contracting).

- Following the 2016 Throne Speech, actions were announced to further reduce electricity costs by:
  - Providing an 8%  per cent rebate ($11/month savings), updating RRRP ($45/month savings, combined with the 8% rebate), expanding ICI (up to one-third savings for participants), suspending the LRP II and the EFWSOP (up to $3.8 billion in cost savings) and recycling proceeds to industrial/ commercial consumers.

- On November 28, 2016, the Minister of Energy announced the need for changes in how electricity resources are procured,  the need for wholesale market renewal and greater electricity consumer choice.

- The Ministry of Energy is currently updating its Long-Term Energy Plan (LTEP),  which provides an opportunity to consider a range of policy changes to  how the Ontario energy sector operates.

# Broad Policy Themes / Rationale

- No longer use rate-base to pay for social programs [despite the system benefit rationale] by shifting cost of OESP, RRRP and proposed First Nation Rate to tax-base.
- Provide greater support for lower income Ontarians by enhancing the OESP or expanding eligibility.
- Fund conservation programs through the tax-base for the remaining term of the existing CDM framework and transition costs to the new "green bank entity" over time. Costs would be shifted in recognition of the burden borne by ratepayers in phasing out coal generation.
- Expand the scope of the "Trillium Trust" beyond the Moving Ontario Forward initiative to make certain investments in energy infrastructure eligible for funding, such as remote electrification, large transmission projects, new or expanded interties ~~and expansion of natural gas to rural areas~~, etc. (note that expanding access to natural gas is already included under Moving Ontario Forward.)
- Empower energy agencies to increase cost effectiveness and improve efficiency by having – IESO modernize Ontario's electricity market through electricity market renewal initiatives, the OEB identify opportunities for future LDC cost reductions/efficiencies and work with OPG to find further efficiencies in operations and pass on savings to ratepayers.
- Give consumers more choice by allowing households to "opt into" a single rate plan as an interim measure as the Ontario Energy Board (OEB) develops more pricing options over time.
- Help small business manage their electricity costs and provide relief for cap and trade until proceeds recycling is fully operational by ending the Debt Retirement Charge (DRC) early for commercial and small industrial Class B electricity consumers.

# Proposed Initiatives – Potential Savings for Typical Residential Electricity Consumers

| *$/750kWh* | 2017 | 2018 | 2019 | 2020 | 2021 | 2022 | Timing of Benefit |
|---|---|---|---|---|---|---|---|
| **Recommended Initiatives** | | | | | | | |
| 1. No Longer Fund Social Programs Through the Rate-Base (i.e., OESP, RRRP, First Nations rate) | 2.16 | 2.31 | 2.41 | 2.49 | 2.54 | 2.58 | Immediate |
| 2. Expand the OESP (i.e., 50% increase) | - | - | - | - | - | - | n/a |
| 3. Fund Conservation Programs Through The Tax-Base | 3.40 | 3.68 | 2.98 | 3.09 | 2.58 | 2.58 | Immediate |
| 4. Expand the Scope of Trillium Trust to Make Investments in Energy Infrastructure (e.g., Transmission upgrade, etc) | TBD | TBD | TBD | TBD | TBD | TBD | TBD |
| 5. Empower Energy Agencies to Increase Cost Effectiveness and Improve efficiency* | | | | | | | |
| a. IESO – Market Renewal | - | - | - | - | 1.00 | 1.03 | Long-Term |
| b. OEB – LDC efficiencies | TBD | TBD | TBD | TBD | TBD | TBD | Medium-Term |
| c. OPG – Operational efficiencies | TBD | TBD | TBD | TBD | TBD | TBD | Medium-Term |
| 6. Give Residential Consumers More Rate Choices | - | - | - | - | - | - | n/a |
| 7. Help Small Business Manage Their Electricity Costs (i.e., End DRC early for Class B electricity consumers)** | - | - | - | - | - | - | n/a |
| 8. Cancel / Adjust FIT | - | - | 0.13 | 0.13 | 0.14 | 0.14 | Long-Term |
| 9. Dedicate Departure Tax | TBD | TBD | TBD | TBD | TBD | TBD | Immediate |
| **Considered but not Recommended** | | | | | | | |
| 1. Eliminate the Industrial Conservation Initiative (ICI) | 4.40 | 4.24 | 4.10 | 4.24 | 3.73 | 3.58 | Immediate |
| 2. Cancel LRP I | - | - | TBD | TBD | TBD | TBD | Medium-Term |

**Note:** The above initiatives will provide similar benefits for non-RPP Class B electricity consumers. Proposal 1 assumes OESP participation of 50% and 5-year maturity. *Assessing the range of ratepayer impacts will be done through the LTEP development and implementation process in conjunction with the OEB. **Class B includes small-medium enterprises (SMEs).

# Proposed Initiatives – Potential Savings for Average Industrial Electricity Consumers

| 2. Cancel LRP I | - | - | - | - | - |

**Source:** Ministry of Finance, Energy

# Considerations / Outcomes

- The proposed initiatives provide the following opportunities to:
  - Lower the cost of electricity for all consumers;
  - Re-set how electricity programs and energy infrastructure is funded (i.e., shifting costs to the tax-base from rate-base);
  - Provide electricity consumers with greater choices (i.e., signal rate plan);
  - Provide system benefits (e.g., market renewal); and
  - Increase cost effectiveness and improve efficiency.

- The timing of the impact of these rate mitigation initiatives varies.
  - Immediate and near-term impacts can be achieved by shifting costs to the tax-base or changing how certain costs are recovered from consumers or eliminating certain programs.
  - Over the longer term, changes to the electricity supply mix and achieving efficiencies in the electricity market could yield system savings.

- Pursuing the initiatives would require regulatory amendments and working with the electricity sector agencies, LDCs and other stakeholders to implement the initiatives.

**Subject:** Energy and Price Mitigation

Hi,

Apparently a draft "bootleg" copy.

Please review and do a markup. A short note with staff comments would be helpful too.

Is a draft for EOD doable?

The "Trillium Trust" would notionally be either all incremental electricity projects vs Moving Ontario Forward, and hitting the bottom line once in-service and amortised. Or crowds out Moving Ontario Forward projects. However, could hurt the fiscal bottom line if it is perceived as detracting from Hydro One potential rate base growth, hurting market value upfront, and net income (and corporate taxes) over time. Does that make sense?

And little or no near-term rate impact, as new projects would affect the rate base years out, unless the Trillium Trust is used for existing Tx projects already about to come on line.

I might want to argue that if they do the DRC one, it is in effect giving up a chunk of the Departure Tax benefit to OEFC. And on the departure tax, aside from all the regulatory principles arguments, I might think about saying that the elimination of the deferred tax liability portion was just truing up the PILs amounts owing.

Thanks,
Ron

# Comments on Ministry of Energy's Draft "Proposed Initiatives to Transform Ontario's Electricity Sector"

The Ministry of Energy (Energy) is providing an update on progress related to transforming the province's electricity sector by elaborating on ~~the~~ potential price mitigation initiatives, as outlined in its deck.

## CONTEXT

- As outlined in Energy's update, electricity costs have been increasing following investments to transform towards cleaner generation (i.e., meeting goals to~~wards~~ decarbonize) and modernize the electricity infrastructure (~~i.~~e.g., more than $35 billion in cleaner generation and $15.5 billion investment by Hydro One alone in transmission and distribution systems).

- The government has taken action to lower electricity cost pressures to all consumers by taking actions, including deferring investments in generation (e.g., new build nuclear), improving market efficiency and decreasing costs related to renewable procurement (e.g. GEIA renegotiation, decreasing FIT prices, etc).

- The government introduced the Ontario Rebate for Electricity Consumers (OREC) which will provide a rebate equal to the 8% provincial portion of the Harmonized Sales Tax, saving $11 per month starting January 1, 2017 for eligible small businesses, farms and residential consumers and has taken steps to expand the Rural or Remote Electricity Rate Protection program, expected to save eligible RRRP customers about $45 per month, when combined with OREC.

## COMMENTS

Energy's proposals generally involve shifting costs from the rate base to the tax base. While the~~se~~ subset of costed proposals may have a fairly limited residential rate payer impact (e.g. about $5-6/month for residential, less than 5% of the average monthly bill), th~~e~~ose proposals would come at a material incremental fiscal cost ($1 billion to $1.3 billion). Note these impacts are lower than those pres~~t~~ented in an earlier deck ($1.3 billion to $1.9 billion). Energy also presents other proposals where costs and impacts are "TBD".

Over the past five years, the fiscally funded electricity price mitigation efforts have averaged about $1.5 billion and is already expected to increase to about $2 billion with the introduction of OREC. The existing program costs are summarized in the table below:

| ($M) | 2011-12 | 2012-13 | 2013-14 | 2014-15 | 2015-16 | 2016-17[1] | 2017-18[1] |
|---|---|---|---|---|---|---|---|
| OCEB | 1,033 | 994 | 1,006 | 1,078 | 860 | - | - |
| OREC | - | - | - | - | - | 300 | 1,100* |
| Ending DRC[2] | - | - | - | - | 85 | 330 | 330 |
| NIERP | 120 | 120 | 115 | 108 | 120 | 120 | 120 |
| NOEC | 23 | 24 | 25 | 24 | 26 | 25 | 25 |
| OEPTC[3] | 354 | 406 | 418 | 429 | 444 | 450 | 460 |
| TOTAL | 1,530 | 1,544 | 1,564 | 1,639 | 1,525 | 1,225 | 2,005 |

1. 2016-17, 2017-18 based on forecasted numbers
2. 2015-16 estimated for 3 months of reduced DRC revenue
3. OEPTC amounts in all years based on energy component of the rebate.

* Sourced from Energy PRRT submission

OCEB – Ontario Clean Energy Benefit NIERP – Northern ~~Ontario~~Industrial Electricity Rate program DRC – Debt etirement Charge

OREC – Ontario Rebate for Electricity Consumers NOEC – Northern Ontario Energy Credit OEPTC – Ont. Energy & Property Tax Credit
~~DRC – Debt etirement Charge~~ ~~OEPTC – Ontario Energy and Property Tax Credit~~

## Energy's Broad Policy Themes / Rationales

A key theme / rationale cited by Energy is to no longer use rate-base to pay for "social programs" by shifting cost of OESP, RRRP and proposed First Nation Rate to tax-base.

- Energy has typically in the past provided a constitutional law assessment on these programs, providing support for these programs to be ratepayer-supported programs as they provide electricity system benefits / are part of a comprehensive regulatory framework.
- Switching messaging may risk criticism and legal challenges on these and other remaining rate-base funded programs.

| Energy Theme / Rationale | Key Staff Comments |
|---|---|
| Provide greater support for lower income Ontarians by enhancing the **OESP or expanding eligibility** | • Significant fiscal exposure -- $0.4-0.45 bn at current levels, higher if enhanced. On-bill benefits.<br>• Could contemplate phase-in to manage fiscal impact.<br>• Could look at phasing out existing fiscal-funded programs also targeted to low income or identified groups (e.g., OEPTC, NOEC).<br>o Not on the bill, so less direct and visible electricity cost mitigation.<br>o Phase-out to reflect time to increase application based OESP reaching an increasing portion of eligible households. |
| Fund conservation programs through the tax-base for the remaining term of the existing CDM framework and transition costs to the ne**w "green bank entity" over time** | • Potentially significant fiscal impact – current program costs are about $0.45 bn<br>• Conservation programs do provide an electricity system benefits, but would now be fiscally-funded, so a cross-subsidisation from tax-base<br>• Accessing the cap&trade amount in the GGRA would crowd-out other GGRA programs, affecting overall GHG reductions and negatively affect the diccal plan |
| Expand the scope of the "Trillium Trust" to make investments in energy infr**astructure eligible for funding** | • Would require either squeezing out existing Moving Ontario Forward project funding from the Trillium Trust, requiring funding from another source; or additional funding from asset optimization, given that the government is committed to using the targeted $5.7 billion to fund across Moving Ontario Forward projects<br>• Would have little near-term impact, unless TT funding displaces near-term, non-incremental projects coming onto service<br>• Could lower utility value, including Hydro One, by removing projects, currently and prospectively, that they might have been able to add to their ratebase and earn a return on |
| **E**nd the Debt Retirement Charge (DRC) early for commercial and small industrial Class B electricity consumers | • End of the DRC had previously been linked with a balance between rate mitigation and managing stranded debt<br>• Provides only temporary incremental mitigation, as DRC legislated to end April 1, 2018.<br>• End of the DRC had previously been linked to retirement of residual stranded debt<br>• Removing additional DRC revenue from the OEFC would call into question the position that the debt and liabilities of the old Ontario Hydro can continue to be supported |

## Detail on Proposals

Energy has outlined the following rate mitigation proposals with significant bearing on the fiscal plan:

OESP & RRRP (Total of about $0.4 to 0.45 Billion/year):

This would shift the cost of the current and proposed expanded Ontario Electricity Support Program (OESP), and the Rural or Remote Electricity Rate Program (RRRP), to the tax base. *Note: that the fiscal exposure would increase if the OESP take up rate is larger, and faster than assumed.*

- The fiscal impact from shifting OESP and RRRP to the tax base may also be larger if future changes are made to the programs. Energy noted ~~in previous drafts of its price mitigation deck~~ that
  - The programs could provide greater support for lower income Ontarians by enhancing the OESP or expanding eligibility (e.g., by 50% in the table).
  - ~~OESP credits could be increased to address concerns from low income electricity consumers improvements to OESP could be implemented by increasing credits (could be up to double the current credits).~~
  - The RRRP regulation provides a funding mechanism for transmission infrastructure required to grid connect remote First Nation communities. Considerations for how that funding will be supported by the tax base will need to be determined. [The current deck links Trillium Trust for remote electrification.]

Fund Conservation Programs through the Tax-Base:

This would be for the remaining term of the existing Conservation and Demand Management framework. Over time, the costs would be transitioned to the new "green bank entity", to shift cost recovery from ratepayers to cap and trade revenues.

- Energy's rationale for the cost shift would be in recognition of the burden borne by ratepayers in phasing out coal generation.

Expanding the scope of the Trillium Trust to invest in energy infrastructure:

The Province is currently targeting $5.7 billion from asset optimization to dedicate to the Trillium Trust for investment in infrastructure under Moving Ontario Forward.

- Expanding access to natural gas is already included under Moving Ontario Forward.
- Using the Trillium Trust for additional energy projects would require either
  - squeeze out existing Moving Ontario Forward project funding from the Trillium Trust, requiring funding from another source, or
  - additional funding from asset optimization, given that the government is committed to using the targeted $5.7 billion to fund across Moving Ontario Forward projects,
  - in effect, in both cases above, ~~.~~ ~~I~~incremental investments for energy infrastructure from the Trillium Trust would have negative fiscal impacts once the assets are in-service and amortized.~~.~~
  - ~~o~~
- Investments through the Trillium Trust instead of through other electricity sector entities (Hydro One, OPG, LDCs) could have additional negative fiscal impacts as these entities could see reduced ratebase growth, lowering the revenues that the Province realizes from these entities (e.g., consolidated net income, payments-in-lieu of taxes, etc.).

  - May also negatively impact Hydro One share price if the measure is perceived by the market as reducing Hydro One's potential ratebase growth.
- Unless applied to existing projects, to displace ratepayer-supported costs, this measure would have little or no near-term rate impact.

Departure Tax:

As a result of the IPO, Hydro One paid a "departure tax" payment in lieu of tax (PIL) of $2.6 billion, as a final true-up of its PILs tax obligation. Energy ~~is proposed~~lists using some or all of this departure tax for price mitigation.

- This was paid to the Ontario Electricity Financial Corporation (OEFC). The departure tax payment was fiscally neutral to the Province as the income to the OEFC was fully offset by a reduction in ESDI resulting from reduced net income of Hydro One.
- Using some or all of it for price mitigation would require restating the net stranded debt paydown by OEFC related to the IPO. [As the departure tax paid was fiscally neutral, OEFC's uplift was primarily the result of the related ~~to the~~ deferred tax benefit, as well ~~and~~ as the s.50.3 benefit under the *Electricity Act, 1998*.]
- This would be a one-time measure, potentially spread out over a few years, and fiscal impact, as the departure tax amount was one-time.

Debt Retirement Charge (Total of about $0.45 Billion in annualized rate to 2017-18):
Ending the DRC early for Class B customers (commercial, small industrial) would have an impact of about $0.45 billion in 2017-18.

- The end of the DRC had previously been linked with balancing mitigation and progress on stranded debt reductionthe end retirement of the residual stranded debt.
- Removing additional DRC revenue from the OEFC would call into question the position that the debt and liabilities of the old Ontario Hydro can continue to be supported~~proposed end date of the DRC~~.

| ($M) | 2016-17[1] | 2017-18[1] | 2018-19[1] | 2019-20[1] | 2020-21[1] |

DRAFT

# Electricity Price Mitigation

Corporate and Electricity Finance Division
December 7, 2016

DRAFT

# General Comments on Energy's Deck

- Energy's deck note various actions taken to-date to reduce costs or cost pressures, such as deferring generation supply investments, improving market efficiency, and reducing the costs of existing procurements.
- Aside from reducing costs on the electricity bill, it is not clear what principles are being applied, short term or long term for electricity pricing.
  - A principle that was applied in the past was to ensure that electricity consumers paid the true cost of electricity, for example.
  - The Energy proposals appear to be about, in part at least, moving some costs from the rate base to the tax base.
- However, the Energy proposals may be seen as having a fairly limited impact, e.g., a little over $8/month for residential, or a little over 5% of the monthly bill (though not all of the proposals have been costed / assessed).
  - The proposals would have a significant fiscal cost [about $1.5 billion per year in new fiscal costs].
- There is already significant amounts of existing fiscally-funded electricity price mitigation
  - Averages over $1.5 billion per year over the past five years, and estimated to increase to about $2 billion in 17-18 (see subsequent slide for estimated costs over time, and likely increasing over time), with the total tax-based costs rising to about $3.5 billion in 2017-18.
  - These existing mitigation costs are not presented in Energy's deck.
  - Also not included is any "hidden" price mitigation through constrained financial performance of, e.g., OPG.

DRAFT

# Context: Taxpayer Funded Electricity Price Mitigation

| ($M) | 2011-12 | 2012-13 | 2013-14 | 2014-15 | 2015-16 | 2016-17[1] | 2017-18[1] |
|---|---|---|---|---|---|---|---|
| OCEB | 1,033 | 994 | 1,006 | 1,078 | 860 | - | - |
| OREC | - | - | - | - | - | 300 | 1,100* |
| Ending DRC[2] | - | - | - | - | 85 | 330 | 330 |
| NIERP | 120 | 120 | 115 | 108 | 120 | 120 | 120 |
| NOEC | 23 | 24 | 25 | 24 | 26 | 25 | 25 |
| OEPTC[3] | 354 | 406 | 418 | 429 | 444 | 450 | 460 |
| **TOTAL** | **1,530** | **1,544** | **1,564** | **1,639** | **1,525** | **1,195** | **2,005** |

1. 2016-17, 2017-18 based on forecasted numbers
2. 2015-16 estimated for 3 months of reduced DRC revenue
3. OEPTC amounts in all years based on energy component of the rebate.

* Sourced from Energy PRRT submission

OCEB – Ontario Clean Energy Benefit
OREC – Ontario Rebate for Electricity Consumers
DRC – Debt Retirement Charge
NIERP – Northern Ontario Electricity Rate Program
NOEC – Northern Ontario Energy Credit
OEPTC – Ontario Energy and Property Tax Credit

- The table above shows the annual amount of taxpayer funded electricity price mitigation from 2011-12 to 2017-18.
- From 2011-12 to 2015-16 there has been an annual fiscal impact of approximately $1.6 billion due to electricity price mitigation programs.
- In 2016-17, the fiscal impact due to electricity price mitigation programs is estimated at approximately $1.2 billion.
- In 2017-18, due primarily to the start of the Ontario Rebate for Electricity Consumers, the expected fiscal impact due to electricity price mitigation programs is approximately $2.0 billion.

# Electricity Price Mitigation

General Decision Points on Program Features:

- Funding: Rate base vs Tax base
  - Tax base programs have a direct fiscal impact on the Province's finances, and shift costs based on taxpayer incidence and impact on expenditure room for other, non-electricity, programs.
  - Rate base programs shift costs from one group of ratepayers to another.
- On-bill vs Not On-bill
  - Recent focus has been on on-bill programs, such as OESP and OREC.
  - Older tax-base funded programs that are not visible on the bill are still in place, such as NOEC and OEPTC.
  - As OESP enrollment increases, could consider phasing out the non-bill benefits of NOEC and OEPTC.
- Targeted vs General
  - Recent new programs include both general (OREC) and targeted (OESP) programs.
  - Consideration could be made to make OREC more conservation-friendly (e.g., a monthly eligible consumption cap brought in, as with the former Ontario Clean Energy Benefit), and maybe a higher cap in the winter to allow for space heating costs.
  - A targeted industrial program recently extended and made on-going is the Northern Industrial Electricity Rate (NIER) program.

# Energy's Proposals

Energy is proposing additional electricity price mitigation programs, currently funded through the electricity system, be fiscally-funded. They could be upwards of $2 bn/year, (plus the departure tax), which is not included in the fiscal plan, which would challenge the path to balance.

- OESP & RRRP (Total of about $0.4 Bn/yr): This includes shifting the cost of the Ontario Electricity Support Program (OESP) and the Rural or Remote Electricity Rate Program (RRRP) to the tax base. Note that the fiscal exposure is larger if the OESP take up rate is larger, faster than assumed.

- Industrial Conservation Initiative (ICI -- About $900+ M/yr): Energy also shows, as a potential residential price mitigation measure, the cancellation of the ICI.
  - Energy is not initially proposing it be continued instead as taxpayer funded, but notes that about 30% price increase (from $85/MWh to $110), if ICI is cancelled, for the large Class A customers benefiting from ICI currently.
  - As this cost estimate is for 2016, prior to the planned expansion of the ICI, this could further increase the fiscal exposure by about $100 million).

- Departure Tax: As a result of the IPO, Hydro One paid a "departure tax" payment in lieu of tax (PIL) of $2.6 billion, as a final true-up of its PILs tax obligation.
  - This was paid to the Ontario Electricity Financial Corporation and helped reduce stranded debt.
  - Using some or all of it for price mitigation would change the net stranded debt paydown by OEFC resulting from the IPO. This would also be a one-time measure (potentially over a few years), and fiscal impact, as the departure tax amount was one-time.

- Other fiscal cost risks (Total of about $0.8+ Bn):
  - Amortisation of conservation costs also poses a fiscal risk (about $0.4 bn/yr),
  - Ending the DRC early for Class B customers (commercial, small industrial) (about $0.4 bn/yr to 2017-18)
  - Lowering of the debt interest paid by OPG (about $30 – 70 million/yr between 2017 and 2021),

DRAFT

# Fiscal Mitigation Options

- With the addition of recent and new price mitigation measures, a review should be initiated on fiscally-funded programs. There could be a phase down / out transition period considered. Examples include the following:

- Ontario Energy and Property Tax Credit (OEPTC) and Northern Ontario Energy Credit (NOEC):
  - Phase down and/or out the non-on-bill benefits of. (Save up to about $460 M/yr)
  - These targeted, low-income measures were introduced after the HST was introduced.
  - The OESP provides a larger, targeted and on-bill relief to qualifying consumers.

- Ontario Rebate for Electricity Consumers (OREC):
  - Introduce over time a monthly eligible consumption cap, with perhaps a higher cap in the winter to allow for space heating costs.
  - As with the prior OCEB cap, provides a rough incentive for conservation and correlation to larger homes. A higher cap in winter may help with space-heating issue.
  - May be challenging to implement.

- Greenhouse Gas Reduction Account:
  - If ICI is put on the tax-base, make it eligible for GGRA funding.
  - Positioned as, e.g., providing annual benefits from participants conserving and shifting off-peak to reduce reliance on GHG-emitting peaking plants

# Appendix

DRAFT

# Background on Taxpayer-funded Electricity Price Mitigation

| Program | Annual Fiscal Impacts ($M) | Date | Details |
|---|---|---|---|
| **Ontario Clean Energy Benefit (OCEB)** | ~1,000 | Jan 1 2011 to Dec 31, 2015 | OCEB provided over four million residential customers, and over 400,000 farm, small business and other small users with a benefit equal to 10 per cent of the total cost of electricity on their bills, including tax. Effective September 1, 2012, 10 per cent benefit was capped for the first 3,000 kWh of electricity consumed per month. OCEB expired December 31, 2015, as legislated. |
| **Removed Debt Retirement Charge (DRC) from Residential Bills** | ~330 | Jan 1, 2016 to Mar 31, 2018 | The government removed the DRC from residential electricity users' bills as of January 1, 2016. This is saving a typical residential user about $70 each year and meant ending the DRC earlier for these users than otherwise provided for in the *Electricity Act, 1998*. |
| **Ontario Rebate for Electricity Consumers (OREC)** | ~1,200 | Jan 1, 2017 onward | This ongoing program will rebate -- directly on consumers' residential electricity bills -- an amount equal to the provincial portion of the Harmonized Sales Tax (HST). |
| **Northern Industrial Electricity Rate (NIER) Program** | 120 | March 2010 | As announced in Budget 2015, the government committed to ongoing support for northern industrials with $120 million allocated annually. NIER was previously extended in 2012 for an additional three-year term, effective April 1, 2013 and also for a year effective April 1, 2016, with an allocation up to $120 million per year.<br>Qualifying participants receive a rebate of two cents per kilowatt-hour (kWh) up to a maximum of $20 million per year per company.<br>NIER initially established as a three-year program in Budget 2010, effective April 1, 2010. |
| **Northern Ontario Energy Credit** | ~25 | Budget 2010 | Delivered as part of the Ontario Trillium Benefit, provides individuals living in northern Ontario with a credit of up to $146 per year for the 2016 benefit year, and families up to $224.[1] |
| **Ontario Energy Property Tax Credit** | ~445[1] | Budget 2010 | Delivered as part of the Ontario Trillium Benefit, energy portion provides up to $224 per year (inflation adjusted) for low-to moderate-income individuals and families, and for qualifying seniors.[1] |

1. Energy portion cost only. Both the energy portion of the Ontario Energy and Property Tax Credit (OEPTC) and NOEC were introduced/enhanced following the introduction of the HST and have a significant annual fiscal cost (totalling about $500 million annually).

DRAFT

# Timeline: Taxpayer-funded Electricity Price Mitigation

**Budget 2010: OEPTC, NOEC Proposed as part of the Ontario Trillium Benefit**

*In the 2011 Budget, the government combined the payments of three existing tax credits — the Ontario Sales Tax Credit, the Ontario Energy and Property Tax Credit, and the Northern Ontario Energy Credit — to create the OTB. The OTB is paid in monthly instalments throughout the year, which helps people meet their expenses as bills arrive.*

**Ontario Clean Energy Benefit** (Jan 1 2011 to Dec 31 2015)

*The OCEB was introduced in the 2010 Ontario Economic Outlook and Fiscal Review to help consumers transition to a cleaner electricity system. As set out in legislation, the OCEB ended on December 31, 2015. The Province has introduced rate mitigation measures to be implemented after December 31, 2015.*

*OCEB provided over four million residential customers, and over 400,000 farm, small business and other small users with a benefit equal to 10 per cent of the total cost of electricity on their bills, including tax, for the first 3,000 kilowatt-hours (kWh) of monthly electricity consumption.*

**Removing DRC from Residential Bills** (Jan 1 2016 to Mar 31 2018)

*The government removed the DRC from residential electricity users' bills beginning on January 1, 2016. This saves a typical residential user about $70 each year and ends the DRC earlier for these users than otherwise provided for in the Electricity Act, 1998.*

**Ontario Rebate for Electricity Consumers**

*As of January 1, 2017, OREC will reduce electricity costs by an amount equal to the provincial portion of the HST for about five million residential consumers, farms and small businesses.*

2010 2011 2012 2013 2014 2015 2016 2017

## History of Northern Industrial Electricity Price Relief

**November 2006**

*The Ontario government announced the Northern Pulp and Paper Electricity Transition Program (NPPETP), a three-year $140 million, to be effective retroactively to October 1, 2006*

**Budget 2009**

*The government announced extension of the NPPETP by one year providing about $58 million with electricity price rebates of 1.8 cents/kWh.*

**Budget 2010**

*NIER program announced, with a projected fiscal cost of $150 M per year, to provide electricity price rebates for qualifying large industrial facilities in northern Ontario. An additional $21.8 million allocated for existing NPPETP in 2010-11 to be integrated with NIER.*

**September 2010**

*Transition from NPPETP to NIER: pulp and paper mills participating in NPPETP continued to receive the NPPETP rebate of 1.8 cents/kWh until September 30, 2010, with those qualifying for NIER receiving a top-up rebate of 0.2 cents/kWh.*

**December 2012**

*The government announced the extension of the NIER for three years, capping the rebates to a maximum of 2011-12 consumptions levels or $20 million, whichever is lower.*

DRAFT

# Potential Fiscal Impact to the Electricity Sector

- The electricity sector has a significant impact on the Province's fiscal position; through both the revenue and expense sides of the Province's fiscal position.
  - Electricity Rate mitigation programs funded through the tax base have a direct fiscal impact on the Province's finances.
  - Alternatively, electricity rate mitigation programs funded by the rate base shift costs from one group of ratepayers to another.
- The Province's electricity sector agencies and corporations are each consolidated into the government's financial statements, and directly affect the Province's surplus/deficit position.
  - Ontario Power Generation (OPG) financial results have a dollar-for-dollar impact on the Province.
    - Electricity price mitigation strategies involving OPG would lead to a direct fiscal impact.
  - Hydro One financial results have a direct impact on the Province, based on the Province's proportionate ownership.
    - The Province currently holds about 70 per cent of Hydro One.

DRAFT

# Proposed Taxpayer Funded Electricity Price Mitigation
(To be revised)

| ($M) | 2016-17[1] | 2017-18[1] | 2018-19[1] | 2019-20[1] | 2020-21[1] |
|---|---|---|---|---|---|
| OCEB | - | - | - | - | - |
| OREC | 300 | 1,100* | 1,100* | 1,200* | 1,200* |
| Ending DRC[2] | 330 | 330 | -- | -- | -- |
| NIERP | 120 | 120 | 120 | 120 | 120 |
| NOEC | 25 | 25 | 25 | 25 | 25 |
| OEPTC[3] | 450 | 460 | 470 | 481 | 481 |
| **CURRENT TOTAL** | **1,195** | **2,005** | **1,715** | **1,826** | **1,826** |
| 1. OESP | | 106 | 119 | 127 | 132 |
| 2. RRRP | | 292 | 300 | 306 | 315 |
| 3. First Nations Delivery Rate | | 18 | 18 | 18 | 18 |
| 4. Fund ICI through Tax Base | | 900+ | 900+ | 900+ | 900+ |
| 5. Departure Tax | | TBD | TBD | TBD | TBD |
| 6. Conservation Amortisation | | | | | |
| 7. DRC Ended for Class B | | | | | |
| 8. Other | | | | | |
| **TOTAL** | **1195** | **3,421** | **3,152** | **3,177** | **3,191** |

1. 2016-17, 2017-18 based on forecasted numbers
2. Estimated impact up to March 31, 2018
3. OEPTC amounts in all years based on energy component of the rebate.

- As shown above, if all measures proposed in this deck were to be accepted taxpayer funded contributions to electricity price mitigation would increase to about $3.2 billion, or more, by 2020-21. That is about a 60% increase from the current forecast for 2017-18.
- These amounts were not considered in the 2016-17 Fiscal Plan and could put at risk the Province's fiscal objectives for 2017-18 and beyond.

Hi Ron,

I have some comments but will talk to you first, offline. It has to do with how much we want to get explicit on what the MOU covers.

Thanks,

John.

Hi,

So assumption is borrowing is all end of year, not 1/12 per month, or even assumed mid-year on average? Not realistic, if so.

And can we label it fiscal exposure, and footnote it as accounting treatment is TBD?

Thanks,
Ron

John, here's the data you requested. Note that we have not included in-year interest costs (so any deferral doesn't start accumulating interest until the next year). We have since done it using a monthly schedule, but this is the version that was used in the deck. Let me know if you have any questions.

Hi Tim,

Hope all's well.

I left you a voicemail and wanted to clarify what I'm looking for. Would you have the accumulated debt figure, by year, for the 23bn scenario?

Thanks,

John.

Hi Ron,

You're absolutely correct. This is confirmed in the original email response below from Tim Christie as well.

I've changed the language to Fiscal Exposure and added a Notes box with that note.

Saved it here:

**Subject:** RE: GA scenario

Hi,

So assumption is borrowing is all end of year, not 1/12 per month, or even assumed mid-year on average? Not realistic, if so.

And can we label it fiscal exposure, and footnote it as accounting treatment is TBD?

Thanks,
Ron

Hi John,

Attached is a few charts for the fiscal impact for each scenario. Note that the assumption is that the debt is drawn down at the end of the year and interest on that drawdown incurs the following year.

Hi Salman,

Would you mind doing a fiscal impact chart for each scenarios? Essentially, the bump up in the debt would potentially be fiscal impact on the downside.

Thanks,

John.

Hello John,

Yes, the table Tim sent you yesterday is the 30-year financing version of scenario 1a. Below is the same table but for the 30-year financing version of scenario 1b. Don't hesitate to let us know if there is anything else you need.

Cheers,

Justin Malecki, PhD

**Cc:** Salman Qadir; Gavin He
**Subject:** RE: GA scenario
**Date:** Thursday, January 26, 2017 5:04:30 PM

Hi,

So assumption is borrowing is all end of year, not 1/12 per month, or even assumed mid-year on average? Not realistic, if so.

And can we label it fiscal exposure, and footnote it as accounting treatment is TBD?

Thanks,
Ron

**Subject:** FW: GA scenario

Hi Ron,

Pls. see attached spreadsheet from Salman which ties in with the scenarios provided.

Thanks,

John.

**Subject:** RE: GA scenario

Hi John,

Attached is a few charts for the fiscal impact for each scenario. Note that the assumption is that the debt is drawn down at the end of the year and interest on that drawdown incurs the following year.

Salman

**Subject:** FW: GA scenario

Hi Salman,

Would you mind doing a fiscal impact chart for each scenarios? Essentially, the bump up in the debt would potentially be fiscal impact on the downside.

Thanks,

John.

Hello John,

Yes, the table Tim sent you yesterday is the 30-year financing version of scenario 1a. Below is the same table but for the 30-year financing version of scenario 1b. Don't hesitate to let us know if there is anything else you need.

Cheers,

Justin Malecki, PhD

**Subject:** RE: GA scenario

John, here's the data you requested. Note that we have not included in-year interest costs (so any deferral doesn't start accumulating interest until the next year). We have since done it using a monthly schedule, but this is the version that was used in the deck. Let me know if you have any questions.

Hi Tim,

Hope all's well.

I left you a voicemail and wanted to clarify what I'm looking for. Would you have the accumulated debt figure, by year, for the 23bn scenario?

Thanks,

John.

Hi John,

Attached is a few charts for the fiscal impact for each scenario. Note that the assumption is that the debt is drawn down at the end of the year and interest on that drawdown incurs the following year.

Salman

Hi Salman,

Would you mind doing a fiscal impact chart for each scenarios? Essentially, the bump up in the debt would potentially be fiscal impact on the downside.

Thanks,

John.

Hello John,

Yes, the table Tim sent you yesterday is the 30-year financing version of scenario 1a. Below is the same table but for the 30-year financing version of scenario 1b. Don't hesitate to let us know if there is anything else you need.

Cheers,

Justin Malecki, PhD
Senior Advisor, Energy System Planning
Ontario Ministry of Energy

**Date:** Thursday, January 26, 2017 12:08:49 PM
**Attachments:** GA Financing - Scenario 1a 1b v1.xlsx

Hi John,

Attached is a few charts for the fiscal impact for each scenario. Note that the assumption is that the debt is drawn down at the end of the year and interest on that drawdown incurs the following year.

Salman

**Subject:** FW: GA scenario

Hi Salman,

Would you mind doing a fiscal impact chart for each scenarios? Essentially, the bump up in the debt would potentially be fiscal impact on the downside.

Thanks,

John.

Hello John,

Yes, the table Tim sent you yesterday is the 30-year financing version of scenario 1a. Below is the same table but for the 30-year financing version of scenario 1b. Don't hesitate to let us know if there is anything else you need.

Cheers,

Justin Malecki, PhD
Senior Advisor, Energy System Planning
Ontario Ministry of Energy

**Subject:** RE: GA scenario

John, here's the data you requested. Note that we have not included in-year interest costs (so any deferral doesn't start accumulating interest until the next year). We have since done it using a monthly schedule, but this is the version that was used in the deck. Let me know if you have any questions.

| **Debt Borrowing/Payment Schedule for Scenario 1a. **To:** Christie, Tim (ENERGY)
**Cc:** Kerr, Emily (OFA)
**Subject:** GA scenario

Hi Tim,

Hope all's well.

I left you a voicemail and wanted to clarify what I'm looking for. Would you have the accumulated debt figure, by year, for the 23bn scenario?

Thanks,

John.

Y. John Kim

Hi Salman,

Would you mind doing a fiscal impact chart for each scenarios? Essentially, the bump up in the debt would potentially be fiscal impact on the downside.

Thanks,

John.

Hello John,

Yes, the table Tim sent you yesterday is the 30-year financing version of scenario 1a. Below is the same table but for the 30-year financing version of scenario 1b. Don't hesitate to let us know if there is anything else you need.

Cheers,

Justin Malecki, PhD
Senior Advisor, Energy System Planning

John, here's the data you requested. Note that we have not included in-year interest costs (so any deferral doesn't start accumulating interest until the next year). We have since done it using a monthly schedule, but this is the version that was used in the deck. Let me know if you have any questions.

Hi Tim,

Hope all's well.

I left you a voicemail and wanted to clarify what I'm looking for. Would you have the accumulated debt figure, by year, for the 23bn scenario?

Thanks,

John.

John, here's the data you requested. Note that we have not included in-year interest costs (so any deferral doesn't start accumulating interest until the next year). We have since done it using a monthly schedule, but this is the version that was used in the deck. Let me know if you have any questions.

Hi Ron,

You're absolutely correct. This is confirmed in the original email response below from Tim Christie as well.

I've changed the language to Fiscal Exposure and added a Notes box with that note.

Saved it here:
Z\Users\CEF\Hydro 2017\Electricity Prices\Mitigation Proposals\Debt Financing the GA

**Subject:** RE: GA scenario

Hi,

So assumption is borrowing is all end of year, not 1/12 per month, or even assumed mid-year on average? Not realistic, if so.

And can we label it fiscal exposure, and footnote it as accounting treatment is TBD?

Thanks,
Ron

Hi John,

Attached is a few charts for the fiscal impact for each scenario. Note that the assumption is that the debt is drawn down at the end of the year and interest on that drawdown incurs the following year.

Hi Salman,

Would you mind doing a fiscal impact chart for each scenarios? Essentially, the bump up in the debt would potentially be fiscal impact on the downside.

Thanks,

John.

Hi John,

I just whipped this together.

File found here:
S:\Users\CEF\Hydro 2016\Electricity Prices\Mitigation -- Energy\Electricity Data Request.docx

Also in this folder you can find the past letters in the Portal from Energy to the LDCs stipulating the data requests. Similar to what we are asking but not excat:
S:\Users\CEF\Hydro 2016\Electricity Prices\Mitigation -- Energy\Portal Data Letters\

Thanks,
Shajees

Hi,

FYI on Energy's request.

Do you have a few minutes to chat, right now.

John (and Darren, Shajee?), when was the last time we received price forecasts from Energy for the purposes of the MOU, and that we provided cost projections?

Serge called Scott and asked if the OFA could provide the same services for the LDCs with this new rebate as we did for OCEB. I told Scott that we could talk to him about it at the beginning of the OFA / OEFC briefing at 10:45 this morning, so please be ready for that and bring along anybody that you'll need to assist in the conversation

Thanks,
Gadi

## DATA REQUEST – ONTARIO REBATE FOR ELECTRICITY CONSUMERS

The following note provides details of data request related to the proposals under the Ontario Rebate ~~for the Ontario Rebate~~ for Electricity Consumers Act if the central reporting mechanism or the portal used for the Ontario Clean Energy Benefit (OCEB) is to be revived for the new rebate program proposed in September 2016.

~~**ISSUE**~~

### CONTEXT

- The Ontario Rebate for Electricity Consumers Act proposes to rebate the provincial portion of the HST from the electricity bills of residential, small business and farms as of January 1, 2017.
- ~~Like~~ Similar to the previous ~~Ontario Clean Energy Benefit (~~OCEB~~)~~ program, which started on January 1, 2011 and ended on December 31, 2015, the proposed rebate under the Ontario Rebate for Electricity Consumers Act would serve to provide electricity rate mitigation from~~as a transfer from the tax base to~~ the ~~rate~~ tax base. The proposal would rebate the provincial portion of the HST (8%) from the electricity bills of Regulated Price Plan eligible consumers. More details on the OCEB program in Appendix B.
- Under the prior OCEB program, Local Distribution Companies (LDCs) were requested to provide a variety of data on electricity consumption~~,~~ and rebates ~~and~~ through a central~~ly~~ reporting mechanism, ~~(henceforth referred to as~~ the 'OCEB Portal'~~)~~.
- Accurate data was required from LDCs ~~In~~ in order to effectively assess the fiscal impact of this proposed initiative and forecast future program costs~~, accurate data would be required from Local Distribution Companies~~.
  - However due to issues with data consistency and accuracy, the resulting data from the OCEB Portal across LDCs were insufficiently calibrated for fiscal projection purposes.
  - In addition, delays in setting up the data request process meant the **first 8 months of the OCEB program did not have data available in the Portal**.
- This note serves to inform the data request for the proposed Ontario Rebate for Electricity Consumers (OREC).
  - **Should the nature of the OREC program change (eg. the introduction of caps, inclusion/exclusion of certain customer classes), the data requested will change. This note relates to the data request under the current proposal of the OREC.**

### DATA REQUEST

The following data is requested from the LDCs, Submeter Providers (SMP), Retailers. See Column 3 of Appendix A for a detailed breakdown.

- Name of each LDC / Submeter provider ~~(SMP)~~ / Retailer

**Commented [JK1]:** Can we say when it started, etc. Also provide a flavor of the portal data as it existed before.

**Commented [SK22R1]:** Done. Also provided details on prior OCEB portal data in the last section.

**Formatted:** Font: Bold

- For each class of customer: Residential, Multi-Unit Residential, Small Business and Farms:
  - Volume of Electricity
  - Rebated amount
    - Nice to have: Information on the portion of the rebate that is directed to offsetting the 8% of *Electricity, Delivery, Regulatory*
  - Number of Customers/Eligible Accounts
- Information on the billing period/cycle that the ~~the~~ volume, ~~/~~rebate, and ~~d amount/~~customer~~s~~ data relates.
  - If this varies by Customer Class, provide details.
- Contact information or an ability to get in touch with the person inputting the data to confirm minor typos and other transcription errors.

**CURRENT DATA REQUEST RELATIVE TO PRIOR REQUEST**

- The prior OCEB Portal had a request for a wide assortment of data (See Table in Appendix A, Columns 1 and 2). However, only a portion of that data was utilized for OCEB fiscal forecasting.
  - To alleviate the workload of the reporting requirements for LDCs and enable accurate data entry, LDCs and ~~Submeter providers~~ SMPs are requested to provide a breakdown of only the above information (in section 'DATA REQUEST'), see column 3 of table in ~~Appendix~~ Appendix A.
- Prior data from LDCs and SMPs had minor errors and typos. Providing an ability to contact the individual – via email, phone or internal portal messaging system – would allow the correction/clarification of this suspect information.
- ~~This~~ The reduced reporting requirement under the OREC proposal will be sufficient for OFA/MOF/CEFD for fiscal projection purposes. However the Ministry of ~~ENERGY~~ Energy may have additional data requirements from the LDCs.
- The OCEB data request made an initial questionnaire for data from LDCs and SMPs, such as the number of customers, proportion of customers on a billing cycle and methodology to forecast OCEB payments for the upcoming months.
  - Note: Though LDC developed OCEB forecasts for the upcoming months may have been useful, due to the discrepancy in the OCEB forecasts across LDCs and the longer term nature of the OCEB model, these distributor provided forecasts were not utilized.
- Some of the information from the questionnaires was not needed for fiscal reporting purposes. Other information would vary over time, and as a result would be out-of-date shortly after the initial questionnaire.
  - The current data request asks for specific data – all for fiscal projection purposes – to be provided on a regular basis rather than on an initial detailed questionnaire.

## APPENDIX B – BACKGROUND: ONTARIO CLEAN ENERGY BENEFIT

- OCEB was in effect from 2011 to 2015, and provided residential, farm, small business and other small users with a benefit equal to 10 per cent of the total cost of electricity on their bills, including tax.
    - Effective September 2012 electricity consumption eligible for the 10 per cent benefit was capped at the first 3,000 kWh of electricity consumed per month.
- OCEB helped Ontario families through the transition to a more reliable and cleaner electricity system, with the monthly cap balancing the fiscal implications of providing electricity relief.
- OCEB costs totalled $1,006 million in 2013-14 and $1,078 million in 2014-15, with a projected cost for 2015-16 of $860 million (for the 9 months remaining in the program).

| **Eligible Consumers** | |
|---|---|
| **Categories Listed in Legislation (coincides with categories eligible for RPP)** | |
| **Residential** | • a dwelling<br>• a property within the meaning of the Condominium Act, 1998<br>• a residential complex, within the meaning of the Residential Tenancies Act, 2006<br>• a property that includes one or more housing units and that is owned or leased by a co-operative within the meaning of the Co-operative Corporations Act |
| **Farms** | • carries on a business that is a farming business for the purposes of the Farm Registration and Farm Organizations Funding Act, 1993, and<br>• holds a valid registration number assigned under that Act or the consumer's obligation to file a farming business registration form was waived pursuant to an order made under subsection 22 (6) of that Act |
| **Demand for electricity of 50 kW or less, or consumes not more than 250,000 kWh annually** | Would include small business, smaller broader- public-sector entities, and other small users. |
| **Special Cases (not eligible for RPP, but eligible for OCEB)** | |
| **Consumers On Retail Contracts** | Includes consumers with existing retail contracts and those who sign them during the duration of the program. |
| **Cornwall Electric and Hydro One Remote Communities Inc.** | Included since they are licensed distributors. |
| **Other Consumers Prescribed by Regulation** | 10 First Nations remote unlicensed distributors have been added by regulation. |
| **Exclusions** | |
| **Generators** | Generation station service and the microFIT distribution service charge are excluded in legislation. |

**LEGISLATION AND REGULATIONS COMMITTEE**
**BRIEFING NOTE**

Energy
**Electricity Rate Mitigation**

| CAB | TB/MBC | LRC | CAB | Effective Date |
|---|---|---|---|---|
| Sept. 12, 2016 | Sept. 12, 2016 | Nov. 14, 2016 | Nov. 16, 2016 | January 1, 2017 |

## Summary of Proposal

The following proposal contains a variance from Cabinet direction, which is detailed in the Cabinet Office Analysis section of this note and attached variance memo.

The following proposal is posted on the Regulatory Registry until November 12th. This note contains a placeholder for a summary of feedback from the Regulatory Registry.

**Context for Decision:**

On Sept. 12, 2016 the Ministry of Energy received Cabinet Approval to introduce legislation that would enable a broader Electricity Rate Mitigation Strategy for electricity consumers across the province. On September 15, the Minister of Energy introduced Bill 13, the *Ontario Rebate for Electricity for Electricity Consumers Act, 2016,* (ORECA~~)~~), that puts in place an 8% rebate for residential, small business customers and farms. ~~Bill 13 is scheduled to come into force on January 1, 2017.~~

Bill 13 passed on October 19, 2016 and received Royal Assent on November 2, 2016 and is scheduled to come into force on January 1, 2017.

**Commented [RK1]:** Could include wording that the Bill passed and has received Royal Assent.

DONE

**Summary of Proposal:**

To implement the rate relief provided for under Bill 13, one additional regulation and several regulatory amendments are needed.

1. Creating a new General regulation under the *Ontario Rebate for Electricity Consumers Act, 2016*.

   This proposed new regulation will provide the necessary mechanics to support the implementation of the 8% rebate. Provisions in this regulation include direction to Local Distribution Companies (LDCs) on:

   - Base invoice amounts for invoices (direction on what amounts should be included in the calculation of the 8% rebate).

- Flow through of financial assistance (direction on passing through the rebate to eligible consumers).
- Records keeping, reimbursement requirements for vendors, financial assistance re: fees and charges imposed by unit sub-meter providers.

2. Amending O. Reg. 442/01(Rural or Remote Electricity Rate Protection) made under the *Ontario Energy Board Act, 1998*.
   - This proposed amendment will update the Rural or Remote Rate Protection (RRRP) program, to provide increased rate relief to eligible rural customers (low-density customers of Hydro One). The increased subsidy would result in an approximate increased monthly subsidy from $31.50 to $60.50.
   - Cabinet previously approved an increase of $110 million. Hydro One has provided updated numbers of eligible customers and ENERGY is seeking approval for a regulation that would result in an additional $6.4 million from the rate base in order to fulfill the intention of the proposal.
3. Amending O. Reg. 429/04 (Adjustments under Section 25.33 of the Act) made under the *Electricity Act, 1998.*
   - This regulation governs how the Global Adjustment is charged to different classes of electricity consumers. This includes setting eligibility requirements for being a participant in the Industrial Conservation Initiative).
   - Under this proposed amendment, the Industrial Conservation Initiative would be expanded so that all electricity consumers over 1 MW would be eligible for the program. Currently, only electricity consumers over 5 MW and consumers from 3-5 MW in certain energy intensive sectors are eligible for ICI (i.e., approximately 300 Class A electricity consumers). ~~This proposed amendment would provide eligible electricity consumers with an average monthly peak demand between 1 MW and 5 MW with the opportunity to participate in the Industrial Conservation Initiative.~~ Current sector restrictions for consumers in the 3 to 5 MW range would be removed and smaller industrial, institutional and commercial businesses between 1 and 3 MW would be eligible. Newly eligible consumers would have to opt-in, should they wish to participate.
4. Amending O. Reg 495/10 (General) made under the *Ontario Clean Energy Benefit Act, 2010.*
   - For the period of 2011-2015 the Ontario Clean Energy Benefit provided certain consumers with a credit of ten percent of the total cost of electricity. The credit was put in place as a temporary measure, and there is currently no end date by which to claim retroactive payments.
   - The proposed amendment will prescribe an end date for electricity consumers to submit Ontario Clean Energy Benefit claims to service providers, and a second end date for licensed distributors and sub-meter providers to submit invoices.

**Formatted:** English (Canada)

**Formatted:** Font: 12 pt

**Formatted:** Font: 12 pt

**Commented [KJ2]:** Energy deck: Currently, electricity consumers over 5 MW and consumers from 3-5 MW in certain energy intensive sectors are eligible for ICI (i.e., approximately 300 Class A electricity consumers).

Under the reg change:

ICI would be expanded so that all electricity consumers over 1 MW are eligible for the program.

5. and 6. Amending O. Reg. 275/04 (Information on Invoices to Certain Classes of Consumer of Electricity) made under the *Ontario Energy Board Act, 1998* and O. Reg 161/99 (Definitions and Exemptions) made under the *Ontario Energy Board Act, 1998*.

    - These proposed amendments are consequential to the implementation of the *Ontario Rebate for Electricity Consumers Act, 2016,* including adding the ORECA to the list of Acts and Regulations that can alter the presentation of the invoice from the standard messaging.

**Terms you need to know**

- **Local Distribution Companies (LDCs)** – Local electricity utilities, responsible for distributing power from transmission lines to people's homes (e.g., Hydro Ottawa, Toronto Hydro, etc.)
- **Regulated Price Plan (RPP)** - Since April 2005, the Ontario Energy Board (OEB) has administered an electricity price plan that provides stable and predictable electricity pricing, encourages conservation and ensures the price consumers pay for electricity better reflects the price paid to generators. This pricing plan is known as the Regulated Price Plan (RPP). About 5 million residential consumers, small businesses and farms are eligible for the RPP.
- **Class B Consumer** – commercial, institutional and small industrial consumers, typically with load size between 0.05 – 3 MW. Class B consumers pay GA as a flat rate applied to electricity consumption. Class B consumers include those that choose not to become Class A.
- **Class A Consumer** – large commercial and large industrial consumers with average peak load size above 3 MW, subject to eligibility. Class A consumers pay GA based on their electricity consumption during the five highest peak demand hours during the year.

**Why does Ontario need these changes? Why now?**

Electricity costs have been increasing as investments have been made to decarbonize and modernize the province's electricity infrastructure. Since 2010, electricity prices have risen considerably, particularly for households and small businesses.

The Ministry of Energy, working with the ~~and~~ Ministry of Finance ~~were~~, ~~were~~as asked to develop a proposal to provide rate relief to Ontario electricity consumers. On September 12, in the Speech from the Throne, the government committed to introducing measures that would provide consumers with rate relief on their electricity bills.

**What is the expected cost to government?**

The 8% rebate is expected to cost about $1.2 billion per year (approximately $4 billion from 2017-2020). Other smaller incremental costs include that LDCs and other providers will likely incur some costs with updating their systems~~;~~, however, as the

LDCs recently delivered the OCEB set up costs should not be substantial, and increased administrative costs or borrowing costs for the IESO.

The cost of the ICI and RRRP program expansions will be shared across the electricity rate base, and are estimated to cost approximately $0.60/month (RRRP) and $0.74/month (ICI) for the average residential customer. The total new costs to the rate base for each program expansion are $82 million and $116.4 million, respectively (pending Cabinet approval of the additional support for the RRRP through this proposal).

## Cabinet Office Analysis

Following the ~~Speech from the Throne and the~~ ~~introduction~~ passage of the ORECA ~~in~~, 2016 ~~in~~on October 19, 2016 ~~September~~, Ontarians are expecting to see electricity rate relief as of January 1, ~~in January~~ 2017. This proposal provides the mechanisms to implement this commitment. For the rate relief to be implementation by January 1, there is a need to move forward with the regulation changes as soon as possible (e.g. so that bill issuers can prepare Customer Information Systems for setting new RRRP rates and calculate associated benefits, so that LDCs have time to prepare for the expected increase in the ICI program, all in advance of the January implementation). The following regulations and regulatory amendments are being proposed:

**Commented [RK3]:** Substitute as passage and the date

DONE

1. General Regulation

The proposed General Regulation under the *Ontario Rebate for Electricity Consumers ~~Rebate~~ Act, 2016* will put in place a framework very similar to the framework developed to deliver the Ontario Clean Energy Benefit. The regulation provides instruction to LDCs on how the rebate is to be calculated (e.g., rebate is calculated before taxes; clarifies how the rebate is applied to those receiving Ontario Electricity Support Program assistance).

**Formatted:** Font: Italic

The proposed General Regulation also provides an outline on how the payments flow through to customers. Through the proposed General Regulation, a parallel process will be created to ensure that Independent Power Authorities and have the opportunity to participate and have their customers receive the provincial rebate. There were six communities that did not enroll to receive the OCEB. These communities would be eligible for the 8% rebate, but would need to go through the enrollment process.

2. Rural or Remote Electricity Rate Protection (RRRP) Expansion – Regulation

The RRRP framework was put in place to ensure that all Ontario residents pay similar prices for electricity distribution, regardless of their geographic location. The Ministry of Energy is seeking to increase the amount of rate protection available for eligible rural or remote electricity customers. Under the RRRP regulation the amount of rate protection available to Hydro One's R2 customers (residential customers who are classified as low density) is capped at a fixed amount of $127 million – which amounts to a monthly

subsidy of $31.50. The RRRP program is paid for by all electricity customers across the province, and costs the average residential consumer approximately $1/month.

In September 2016, Cabinet approved an additional $110 million in RRRP program funding that was intended to provide an increased benefit of approximately $29/month for all eligible Hydro One R2~~RRRP~~ customers. The additional monthly cost of this proposal for an average residential consumer was estimated to be $0.60.

**Variance from cabinet direction:** The Ministry of Energy is proposing to increase rate protection for eligible customers by an additional $6.4M, based on a revised estimate of eligible customers provided by Hydro One. The additional $6.4M will not increase the monthly cost for an average residential consumer.

As part of the Price Mitigation initiatives, Cabinet directed that the funding for R2 customers be adjusted annually to reflect any increases on their electricity bills. The proposed amendments to the regulation will add an escalating factor to the new base rate protection amount. Starting in 2018, and every year after, the total amount of rate protection available to Hydro One's R2 customers would be increased by a percentage, as calculated by the Ontario Energy Board~~.~~. This percentage would be based on the simple average, as calculated by the OEB, of the change in base distribution rates of all distributors from the previous year

3. Industrial Conservation Initiative Expansion (ICI)

The ICI is intended to incent a greater number of Ontario businesses to lower their electricity costs by shifting energy demand away from peak demand periods. Reducing peak demand increases the reliability of the power grid, reduces greenhouse gas (GHG) emissions and helps to defer the need to procure more resources. In 2010, when Ontario introduced ICI, the program was available to customers with a peak demand greater than 5 MW and in 2013 was subsequently expanded to allow eligible customers in certain sectors with a peak demand for electricity above 3 MW and less than or equal to 5 MW to opt in to the program.

The Ministry of Energy is proposing to expand eligibility under ICI to include all electricity consumers and market participants with an average monthly peak demand greater than one MW and to remove sector restrictions so that smaller (1-5MW?) institutional and commercial businesses would also be eligible. This would expand the ICI to include more than 1000 new customers. Non-ICI participants will likely see an increase on their bills but the extent of the impact is dependent on the uptake of the expanded ICI program.

4. Amending O. Reg. 495/10 (General) made under the Ontario Clean Energy Benefit Act, 2010

In addition to enacting the provisions for the 8% rebate, Bill 13 also included amendments to the Ontario Clean Energy Benefit Act, 2010 that provided the necessary

**Commented [KJ4]:** This calculation is based on the total cost of the RRRP program - $174 million, not $127 million as implied in the text.

OEB "This RRRP rate is underpinned by a RRRP amount to be provided to eligible customers in 2015 of $174 million. Also, the IESO's 2015 demand forecast is 136 TWh. The resulting RRRP rate is therefore 0.13 cents (rounded) per kilowatt-hour."

**Commented [MC5]:** ENERGY to fact check

**Commented [KJ6]:** RRRP is funded by ratepayers. Might be better to change to:

The impact of this $6.4 million increase is minimal and has no material impact on the estimated cost of approximately $0.60 per month for an average consumer using 750 kWh per month.

(From LRC Appendix C)

**Commented [RK7]:** Should Energy be asked to specify, at least for the Minute, what the escalating factor would be – e.g., linked to CPI, or to an index of urban residential electricity prices?

K: They have identified the mechanism in their deck

**Commented [RK8]:** How? Based on what?

K: Added language from Energy deck. According to Energy, this is a similar mechanism that is used with Algoma Power which is also a recipient of RRRP and has RRRP adjusted every year by the OEB

authority to prescribe end dates for retroactive claims, eliminating further crown liability for reimbursements after the prescribed date. Proposed amendments will establish February 1, 2017 as the cut-off date for customers with an eligible account to claim unpaid OCEB amounts.

Although this proposal is not expected to affect the majority of OCEB customers (as the Ministry of Finance has concluded that there were minimal errors in the application of the program), the potential size of the liability related to retroactive payments is highly uncertain due to data limitations. ENERGY's rough estimate for this liability is $10 million.

**Commented [MC9]:** ENERGY to provide a sense of magnitude – how much was paid out under OCEB during the life of the program?

5. Amending O. Reg. 161/99 (Definitions and Exemptions) made under the Ontario Energy Board Act, 1998.

This proposed amendment is required to help ensure that the 8% rebate is passed on to individual units in multi-unit complexes.

**Commented [MC10]:** ENERGY to clarify - to what degree of certainty? To individually metered units or to all individual units?

6. Amending O. Reg. 275/04 (Information on Invoices to Certain Classes of Consumer of Electricity) made under the Ontario Energy Board Act, 1998

This amendment allows for the rebate legislation and any regulations under it to alter the presentation of invoices. This proposal is necessary for the invoice to present the 8% rebate as a separate line item.

There is also one related Minister's Regulation on invoicing requirements (to provide clear direction to energy vendors) that is moving forward in parallel with this package.

**Linkages:**

Ontario's Climate Change Action Plan (CCAP)

The CCAP, released in summer 2016, reiterated the 2016 Budget commitment and stated that Ontario intends to invest in initiatives that both reduce greenhouse gas (GHG) emissions and ensure that the net impact of cap and trade would not result in an overall increase in electricity costs for commercial and industrial consumers, and that there would be a modest benefit of up to $2 per month, on average, to residential consumers.

At the time, it was estimated that redirecting cap and trade auction proceeds to lower the cost of electricity would reduce up to 3,000,000 tonnes of greenhouse gas (GHG) emissions by 2020.

Electricity Rate Mitigation Initiatives:

The OCEB was a five-year legislated program put in place as a broad-based, transitional measure to a cleaner electricity system. ~~OCEB was also put in place following the implementation of the Harmonised Sales Tax (HST).~~ The Province also put in place the energy portion of the Ontario Energy and Property Tax Credit, as well as the Northern Ontario Energy Credit at that time to provide on-going targeted relief, in addition to the

**Commented [MK11]:** OCEB was created in response to the expected 46% increase in residential electricity prices over the life of the program (see LTEP 2010).

The HST was never a stated reason for the creation of OCEB.

general sales tax credit. ~~Unlike the previous provincial Retail Sales Tax (RST), the HST (and GST) included electricity in the taxable base.~~ OCEB expired on December 31, 2015.

~~The~~As part of the transition to the end of the OCEB, ~~T~~the government also recently ended the electricity Debt Retirement Charge (DRC) on residential users earlier than planned, as of January 1, 2016, and put in place the low-income targeted Ontario Electricity Support Program (OESP).

**Delivery:**

For the 8% rebate, LDCs have indicated they will likely be operational by January 1 2017. However, the legislation gives LDCs until July 1 2017 to begin delivering the 8% rebate and associated messaging. If LDCs are not operational on January 1 2017, customers would receive any back-owed rebate in a lump sum once the LDC is able to deliver the rebate.

A dedicated information portal will be created by ENERGY for oversight and tracking of the rebate (similar to what was created under the Clean Energy Benefit program).

Pending approval of the increased amount of rate protection through the RRRP, the OEB will be required to set the RRRP rate. This rate is typically set by the OEB in December and then Hydro One would implement the changes. This would be complete by January 1 2017.

**Commented [MC12]:** ENERGY to confirm

The ICI expansion would be implemented by the IESO and LDCs by XXX

**Commented [MC13]:** ENERGY to provide.

**Stakeholder Consultations:**

Regulatory Registry

- On September 28, the Ministry of Energy posted a proposal for comment on the Regulatory Registry to provide stakeholders with the opportunity to comment on the electricity mitigation initiative.
- The posting included the proposed changes to the RRRP, ICI and new regulations needed to support the 8% rebate.
- **[placeholder – summary of RR feedback]**

LDC Working Group

- In October 2016 The Ministry hosted an LDC Working Group with nearly 40 LDCs representatives where feedback was provided to the ministry to consider in the development of the regulatory package. This included feedback on the billing system limitations that was incorporated into proposed bill presentment requirements.

**Commented [MC14]:** What was the specific change?

Standing Committee of Justice – Public Hearings for Bill 13

- On October 3, a number of organizations as well as individual citizens made presentations to the standing committee on Justice regarding Bill 13, including requesting additional rate relief, support for the rate relief package, and support for provisions that would limit disconnection of customers.

**Risks**

- The 8% rebate would be structured and delivered in a similar fashion to the former OCEB. There is a risk that the government could be criticized for replacing the OCEB with a smaller rate relief package, just one year after the OCEB ended.
    - The new rebate would have a wider base, and would be uncapped, compared to the OCEB, which was capped at 3,000 kWh per month (and per residential unit in a bulk-metered, multi-residential building).
- The rebate is likely to have a higher annualised fiscal cost than the earlier presented annualised cost estimate of $1 billion. With the increase in the base of eligible consumers that was decided on in the latter part of the policy development, the Ministry of Energy had circulated cost estimates that were rising to about $1.1 to $1.2 billion over the next two years. It was indicated that revised estimates would be part of Energy's PRRT submission.
- For the rate-based portions of the proposal (i.e., the expansion of ICI and RRRP) the result is an increase in costs for ratepayers not included in those programs (i.e., primarily residential, small business and farms). Shifting costs to some electricity consumers to lower rates for others carries the risk that the charge would be characterized as an unconstitutional tax. To establish that the charge is legitimate, it must be established that the purpose and effect of the charge is to facilitate the maintenance of a financially viable electricity system by way of load management or some other feature under which those who are subsidized provide an overall system benefit enjoyed by those who subsidize them.
- Under the proposal, some eligible consumers (e.g., multi-unit residential buildings) may receive multiple benefits (8% rebate and proceeds recycling), while others would be eligible for only one type of benefit.
- The Electricity Distributor Association raised concerns related to the costs of supporting the proposed increased RRRP, as the RRRP is paid for by a charge across all LDCs

**Commented [MC15]:** ENERGY to note any additional risks

**Formatted**

**Commented [KJ16]:** Ro: Earlier in the note they say the 8% rebate is expected to cost about $1.2 billion per year (approximately $4 billion from 2017-2020), so we could say:

The 8% rebate is expected to cost about $1.2 billion per year (approximately $4 billion from 2017-2020). It was indicated that revised estimates would be part of Energy's PRRT submission.

**Commented [MC17]:** ENERGY to comment

**Commented [KJ18]:** Legal should review this language. It is likely too strong given recent com law opinions.

**Commented [MC19]:** ENERGY to provide – response to the concern/mitigation measures

## APPENDIX A: Multi-Year Action Plan (Electricity Rate Mitigation)

*Below is an extract taken from the MYAP which demonstrates the overall strategic plan for the initiative that this policy submission supports. This excerpt represents the approved plan to date, and may not reflect the specific policy and delivery timelines identified in the Cabinet Minute above.*

**LEGISLATION AND REGULATIONS COMMITTEE**
**BRIEFING NOTE**

Energy
**Electricity Rate Mitigation**

| CAB | TB/MBC | LRC | CAB | Effective Date |
|---|---|---|---|---|
| Sept. 12, 2016 | Sept. 12, 2016 | Nov. 14, 2016 | Nov. 16, 2016 | January 1, 2017 |

## Summary of Proposal

The following proposal contains a variance from Cabinet direction, which is detailed in the Cabinet Office Analysis section of this note and attached variance memo.

The following proposal is posted on the Regulatory Registry until November 12th. This note contains a placeholder for a summary of feedback from the Regulatory Registry.

**Context for Decision:**

On Sept. 12, 2016 the Ministry of Energy received Cabinet Approval to introduce legislation that would enable a broader Electricity Rate Mitigation Strategy for electricity consumers across the province. On September 15, the Minister of Energy introduced Bill 13, the *Ontario Rebate for Electricity for Electricity Consumers Act, 2016,* (ORECA) that puts in place an 8% rebate for residential, small business customers and farms. Bill 13 is scheduled to come into force on January 1, 2017.

**Summary of Proposal:**

To implement the rate relief provided for under Bill 13, one additional regulation and several regulatory amendments are needed.

1. Creating a new General regulation under the *Ontario Rebate for Electricity Consumers Act, 2016*.

   This proposed new regulation will provide the necessary mechanics to support the implementation of the 8% rebate. Provisions in this regulation include direction to Local Distribution Companies (LDCs) on:

   - Base invoice amounts for invoices (direction on what amounts should be included in the calculation of the 8% rebate).
   - Flow through of financial assistance (direction on passing through the rebate to eligible consumers).

- Records keeping, reimbursement requirements for vendors, financial assistance re: fees and charges imposed by unit sub-meter providers.

2. Amending O. Reg. 442/01(Rural or Remote Electricity Rate Protection) made under the *Ontario Energy Board Act, 1998*.

   - This proposed amendment will update the Rural or Remote Rate Protection (RRRP) program, to provide increased rate relief to eligible rural customers (low-density customers of Hydro One). The increased subsidy would result in an approximate increased monthly subsidy from $31.50 to $60.50.
   - Cabinet previously approved an increase of $110 million. Hydro One has provided updated numbers of eligible customers and ENERGY is seeking an additional 6.4 million from the rate base in order to fulfill the intention of the proposal.

3. Amending O. Reg. 429/04 (Adjustments under Section 25.33 of the Act) made under the *Electricity Act, 1998.*

   - This regulation governs how the Global Adjustment is charged to different classes of electricity consumers. This includes setting eligibility requirements for being a participant in the Industrial Conservation Initiative).
   - This proposed amendment would provide eligible electricity consumers with an average monthly peak demand between 1 MW and 5 MW with the opportunity to participate in the Industrial Conservation Initiative. Current sector restrictions would be removed and smaller institutional and commercial businesses would be eligible. Newly eligible consumers would have to opt-in, should they wish to participate.

4. Amending O. Reg 495/10 (General) made under the *Ontario Clean Energy Benefit Act, 2010.*

   - For the period of 2011-2015 the Ontario Clean Energy Benefit provided certain consumers with a credit of ten percent of the total cost of electricity. The credit was put in place as a temporary measure, and there is currently no end date by which to claim retroactive payments.
   - The proposed amendment will prescribe an end date for electricity consumers to submit Ontario Clean Energy Benefit claims to service providers, and a second end date for licensed distributors and sub-meter providers to submit invoices.

5. and 6. Amending O. Reg. 275/04 (Information on Invoices to Certain Classes of Consumer of Electricity) made under the *Ontario Energy Board Act, 1998* and O. Reg 161/99 (Definitions and Exemptions) made under the *Ontario Energy Board Act, 1998*.

   - These proposed amendments are consequential to the implementation of the *Ontario Rebate for Electricity Consumers Act, 2016,* including adding the ORECA to the list of Acts and Regulations that can alter the presentation of the invoice from the standard messaging.

**Terms you need to know**

- **Local Distribution Companies (LDCs)** – Local electricity utilities, responsible for distributing power from transmission lines to people's homes (e.g., Hydro Ottawa, Toronto Hydro, etc.)
- **Regulated Price Plan (RPP)** - Since April 2005, the Ontario Energy Board (OEB) has administered an electricity price plan that provides stable and predictable electricity pricing, encourages conservation and ensures the price consumers pay for electricity better reflects the price paid to generators. This pricing plan is known as the Regulated Price Plan (RPP). About 5 million residential consumers, small businesses and farms are eligible for the RPP.
- **Class B Consumer** – commercial, institutional and small industrial consumers, typically with load size between 0.05 – 3 MW. Class B consumers pay GA as a flat rate applied to electricity consumption. Class B consumers include those that choose not to become Class A.
- **Class A Consumer** – large commercial and large industrial consumers with average peak load size above 3 MW, subject to eligibility. Class A consumers pay GA based on their electricity consumption during the five highest peak demand hours during the year.

**Why does Ontario need these changes? Why now?**

Electricity costs have been increasing as investments have been made to decarbonize and modernize the province's electricity infrastructure. Since 2010, electricity prices have risen considerably, particularly for households and small businesses.

The Ministry of Energy and Ministry of Finance were asked to develop a proposal to provide rate relief to Ontario electricity consumers. On September 12, in the Speech from the Throne, the government committed to introducing measures that would provide consumers with rate relief on their electricity bills.

**What is the expected cost to government?**

The 8% rebate is expected to cost about $1.2 billion per year (approximately $4 billion from 2017-2020). Other smaller incremental costs include that LDCs and other providers will likely incur some costs with updating their systems, however as the LDCs recently delivered the OCEB set up costs should not be substantial, and increased administrative costs or borrowing costs for the IESO.

The cost of the ICI and RRRP program expansions will be shared across the electricity rate base, and are estimated to cost approximately $0.60/month (RRRP) and $0.74/month (ICI) for the average residential customer. The total new costs to the rate base for each program expansion are $82 million and $116.4 million, respectively (pending Cabinet approval of the additional support for the RRRP through this proposal).

## Cabinet Office Analysis

Following the Speech from the Throne and the introduction of the ORECA in September, Ontarians are expecting to see electricity rate relief in January 2017. This proposal provides the mechanisms to implement this commitment. For the rate relief to be implementation by January 1, there is a need to move forward with the regulation changes as soon as possible (e.g. so that bill issuers can prepare Customer Information Systems for setting new RRRP rates and calculate associated benefits, so that LDCs have time to prepare for the expected increase in the ICI program, all in advance of the January implementation). The following regulations and regulatory amendments are being proposed:

1. General Regulation

The proposed General Regulation under the *Ontario Rebate for Electricity Consumers ~~Rebate~~ Act, 2016* will put in place a framework very similar to the framework developed to deliver the Ontario Clean Energy Benefit. The regulation provides instruction to LDCs on how the rebate is to be calculated (e.g., rebate is calculated before taxes; clarifies how the rebate is applied to those receiving Ontario Electricity Support Program assistance).

Formatted: Font: Italic

The proposed General Regulation also provides an outline on how the payments flow through to customers. Through the proposed General Regulation, a parallel process will be created to ensure that Independent Power Authorities and have the opportunity to participate and have their customers receive the provincial rebate. There were six communities that did not enroll to receive the OCEB. These communities would be eligible for the 8% rebate, but would need to go through the enrollment process.

2. Rural or Remote Electricity Rate Protection (RRRP) Expansion – Regulation

The RRRP framework was put in place to ensure that all Ontario residents pay similar prices for electricity distribution, regardless of their geographic location. The Ministry of Energy is seeking to increase the amount of rate protection available for eligible rural or remote electricity customers. Under the RRRP regulation the amount of rate protection available to Hydro One's R2 customers (residential customers who are classified as low density) is capped at a fixed amount of $127 million – which amounts to a monthly subsidy of $31.50. The RRRP program is paid for by all electricity customers across the province, and costs the average residential consumer approximately $1/month.

In September 2016, Cabinet approved an additional $110 million in RRRP program funding that was intended to provide an increased benefit of approximately $29/month for all eligible RRRP customers. The additional monthly cost of this proposal for an average residential consumer was estimated to be $0.60.

**Variance from cabinet direction:** The Ministry of Energy is proposing to increase rate protection for eligible customers by an additional $6.4M, based on a revised estimate of

eligible customers provided by Hydro One. The additional $6.4M will not increase the monthly cost for an average residential consumer.

Commented [MC1]: ENERGY to fact check

As part of the Price Mitigation initiatives, Cabinet directed that the funding for R2 customers be adjusted annually to reflect any increases on their electricity bills. The proposed amendments to the regulation will add an escalating factor to the new base rate protection amount. Starting in 2018, and every year after, the total amount of rate protection available to Hydro One's R2 customers would be increased by a percentage, as calculated by the Ontario Energy Board.

3. Industrial Conservation Initiative Expansion (ICI)

The ICI is intended to incent a greater number of Ontario businesses to lower their electricity costs by shifting energy demand away from peak demand periods. Reducing peak demand increases the reliability of the power grid, reduces greenhouse gas (GHG) emissions and helps to defer the need to procure more resources. In 2010, when Ontario introduced ICI, the program was available to customers with a peak demand greater than 5 MW and in 2013 was subsequently expanded to allow eligible customers with a peak demand for electricity above 3 MW and less than or equal to 5 MW to opt in to the program.

The Ministry of Energy is proposing to expand eligibility under ICI to include all electricity consumers and market participants with an average monthly peak demand greater than one MW and to remove sector restrictions so that smaller institutional and commercial businesses would be eligible. This would expand the ICI to include more than 1000 new customers. Non-ICI participants will likely see an increase on their bills but the extent of the impact is dependent on the uptake of the expanded ICI program.

4. Amending O. Reg. 495/10 (General) made under the Ontario Clean Energy Benefit Act, 2010

In addition to enacting the provisions for the 8% rebate, Bill 13 also included amendments to the Ontario Clean Energy Benefit Act, 2010 that provided the necessary authority to prescribe end dates for retroactive claims, eliminating further crown liability for reimbursements after the prescribed date. Proposed amendments will establish February 1, 2017 as the cut-off date for customers with an eligible account to claim unpaid OCEB amounts.

Although this proposal is not expected to affect the majority of OCEB customers (as the Ministry of Finance has concluded that there were minimal errors in the application of the program), the potential size of the liability related to retroactive payments is highly uncertain due to data limitations. ENERGY's rough estimate for this liability is $10 million.

Commented [MC2]: ENERGY to provide a sense of magnitude – how much was paid out under OCEB during the life of the program?

5. Amending O. Reg. 161/99 (Definitions and Exemptions) made under the Ontario Energy Board Act, 1998.

This proposed amendment is required to help ensure that the 8% rebate is passed on to individual units in multi-unit complexes.

Commented [MC3]: ENERGY to clarify - to what degree of certainty? To individually metered units or to all individual units?

6. Amending O. Reg. 275/04 (Information on Invoices to Certain Classes of Consumer of Electricity) made under the Ontario Energy Board Act, 1998

This amendment allows for the rebate legislation and any regulations under it to alter the presentation of invoices. This proposal is necessary for the invoice to present the 8% rebate as a separate line item.

There is also one related Minister's Regulation on invoicing requirements (to provide clear direction to energy vendors) that is moving forward in parallel with this package.

**Linkages:**

Ontario's Climate Change Action Plan (CCAP)

The CCAP, released in summer 2016, reiterated the 2016 Budget commitment and stated that Ontario intends to invest in initiatives that both reduce greenhouse gas (GHG) emissions and ensure that the net impact of cap and trade would not result in an overall increase in electricity costs for commercial and industrial consumers, and that there would be a modest benefit of up to $2 per month, on average, to residential consumers.

At the time, it was estimated that redirecting cap and trade auction proceeds to lower the cost of electricity would reduce up to 3,000,000 tonnes of greenhouse gas (GHG) emissions by 2020.

Electricity Rate Mitigation Initiatives:

The OCEB was a five-year legislated program put in place as a broad-based, transitional measure to a cleaner electricity system. ~~OCEB was also put in place following the implementation of the Harmonised Sales Tax (HST). Unlike the previous provincial Retail Sales Tax (RST), the HST (and GST) included electricity in the taxable base.~~ OCEB expired on December 31, 2015.

Commented [MK4]: OCEB was created in response to the expected 46% increase in residential electricity prices over the life of the program (see LTEP 2010).

The HST was never a stated reason for the creation of OCEB.

The government also recently ended the electricity Debt Retirement Charge (DRC) on residential users earlier than planned, as of January 1, 2016, and put in place the low-income targeted Ontario Electricity Support Program (OESP).

**Delivery:**

For the 8% rebate, LDCs have indicated they will likely be operational by January 1 2017. However, the legislation gives LDCs until July 1 2017 to begin delivering the 8% rebate and associated messaging. If LDCs are not operational on January 1 2017, customers would receive any back-owed rebate in a lump sum once the LDC is able to deliver the rebate.

A dedicated information portal will be created by ENERGY for oversight and tracking of the rebate (similar to what was created under the Clean Energy Benefit program).

Pending approval of the increased amount of rate protection through the RRRP, the OEB will be required to set the RRRP rate. This rate is typically set by the OEB in December and then Hydro One would implement the changes. This would be complete by January 1 2017.

Commented [MC5]: ENERGY to confirm

The ICI expansion would be implemented by the IESO and LDCs by XXX

Commented [MC6]: ENERGY to provide.

**Stakeholder Consultations:**

Regulatory Registry

- On September 28, the Ministry of Energy posted a proposal for comment on the Regulatory Registry to provide stakeholders with the opportunity to comment on the electricity mitigation initiative.
- The posting included the proposed changes to the RRRP, ICI and new regulations needed to support the 8% rebate.
- **[placeholder – summary of RR feedback]**

LDC Working Group

- In October 2016 The Ministry hosted an LDC Working Group with nearly 40 LDCs representatives where feedback was provided to the ministry to consider in the development of the regulatory package. This included feedback on the billing system limitations that was incorporated into proposed bill presentment requirements.

Commented [MC7]: What was the specific change?

Standing Committee of Justice – Public Hearings for Bill 13

- On October 3, a number of organizations as well as individual citizens made presentations to the standing committee on Justice regarding Bill 13, including requesting additional rate relief, support for the rate relief package, and support for provisions that would limit disconnection of customers.

**Risks**

Commented [MC8]: ENERGY to note any additional risks

- The 8% rebate would be structured and delivered in a similar fashion to the former OCEB. There is a risk that the government could be criticized for replacing the OCEB with a smaller rate relief package, just one year after the OCEB ended.
- For the rate-based portions of the proposal (i.e., the expansion of ICI and RRRP) the result is an increase in costs for ratepayers not included in those programs (i.e., primarily residential, small business and farms). Shifting costs to some electricity consumers to lower rates for others carries the risk that the charge

would be characterized as an unconstitutional tax. To establish that the charge is legitimate, it must be established that the purpose and effect of the charge is to facilitate the maintenance of a financially viable electricity system by way of load management or some other feature under which those who are subsidized provide an overall system benefit enjoyed by those who subsidize them.

- Under the proposal, some eligible consumers (e.g., multi-unit residential buildings) may receive multiple benefits (8% rebate and proceeds recycling), while others would be eligible for only one type of benefit.
- The Electricity Distributor Association raised concerns related to the costs of supporting the proposed increased RRRP, as the RRRP is paid for by a charge across all LDCs

**Commented [MC9]:** ENERGY to comment

**Commented [MC10]:** ENERGY to provide – response to the concern/mitigation measures

## APPENDIX A: Multi-Year Action Plan (Electricity Rate Mitigation)

Thanks. Pease remove the internal comments and comments and comments.

We should clarify my earlier comment on fiscal cost risk that what was presented in September was an annualized cost of $1 bn, and communicated that way publicly. And the fiscal plan includes that amount, not the $1.2 bn.

Thanks,
Ron

Hi,

Thanks. I made a few suggested edits.

Do we know if others in MOF (TPD?) or TBS are reviewing and commenting?

And can we get copies of the proposed regulations too?

**BRIEFING NOTE**

Energy
**Electricity Rate Mitigation**

| CAB | TB/MBC | LRC | CAB | Effective Date |
|---|---|---|---|---|
| Sept. 12, 2016 | Sept. 12, 2016 | Nov. 14, 2016 | Nov. 16, 2016 | January 1, 2017 |

## Summary of Proposal

The following proposal contains a variance from Cabinet direction, which is detailed in the Cabinet Office Analysis section of this note and attached variance memo.

The following proposal is posted on the Regulatory Registry until November 12th. This note contains a placeholder for a summary of feedback from the Regulatory Registry.

**Context for Decision:**

On Sept. 12, 2016 the Ministry of Energy received Cabinet Approval to introduce legislation that would enable a broader Electricity Rate Mitigation Strategy for electricity consumers across the province. On September 15, the Minister of Energy introduced Bill 13, the *Ontario Rebate for Electricity for Electricity Consumers Act, 2016,* (ORECA~~)~~), that puts in place an 8% rebate for residential, small business customers and farms. ~~Bill 13 is scheduled to come into force on January 1, 2017.~~

Bill 13 passed on October 19, 2016 and received Royal Assent on November 2, 2016 and is scheduled to come into force on January 1, 2017.

**Summary of Proposal:**

To implement the rate relief provided for under Bill 13, one additional regulation and several regulatory amendments are needed.

1. Creating a new General regulation under the *Ontario Rebate for Electricity Consumers Act, 2016*.

   This proposed new regulation will provide the necessary mechanics to support the implementation of the 8% rebate. Provisions in this regulation include direction to Local Distribution Companies (LDCs) on:

   - Base invoice amounts for invoices (direction on what amounts should be included in the calculation of the 8% rebate).

- Flow through of financial assistance (direction on passing through the rebate to eligible consumers).
- Records keeping, reimbursement requirements for vendors, financial assistance re: fees and charges imposed by unit sub-meter providers.

2. Amending O. Reg. 442/01(Rural or Remote Electricity Rate Protection) made under the *Ontario Energy Board Act, 1998*.
   - This proposed amendment will update the Rural or Remote Rate Protection (RRRP) program, to provide increased rate relief to eligible rural customers (low-density customers of Hydro One). The increased subsidy would result in an approximate increased monthly subsidy from $31.50 to $60.50.
   - Cabinet previously approved an increase of $110 million. Hydro One has provided updated numbers of eligible customers and ENERGY is seeking approval for a regulation that would result in an additional $6.4 million from the rate base in order to fulfill the intention of the proposal.
3. Amending O. Reg. 429/04 (Adjustments under Section 25.33 of the Act) made under the *Electricity Act, 1998.*
   - This regulation governs how the Global Adjustment is charged to different classes of electricity consumers. This includes setting eligibility requirements for being a participant in the Industrial Conservation Initiative).
   - Under this proposed amendment, the Industrial Conservation Initiative would be expanded so that all electricity consumers over 1 MW would be eligible for the program. Currently, only electricity consumers over 5 MW and consumers from 3-5 MW in certain energy intensive sectors are eligible for ICI (i.e., approximately 300 Class A electricity consumers). ~~This proposed amendment would provide eligible electricity consumers with an average monthly peak demand between 1 MW and 5 MW with the opportunity to participate in the Industrial Conservation Initiative.~~ Current sector restrictions for consumers in the 3 to 5 MW range would be removed and smaller industrial, institutional and commercial businesses between 1 and 3 MW would be eligible. Newly eligible consumers would have to opt-in, should they wish to participate.
4. Amending O. Reg 495/10 (General) made under the *Ontario Clean Energy Benefit Act, 2010.*
   - For the period of 2011-2015 the Ontario Clean Energy Benefit provided certain consumers with a credit of ten percent of the total cost of electricity. The credit was put in place as a temporary measure, and there is currently no end date by which to claim retroactive payments.
   - The proposed amendment will prescribe an end date for electricity consumers to submit Ontario Clean Energy Benefit claims to service providers, and a second end date for licensed distributors and sub-meter providers to submit invoices.

**Formatted:** English (Canada)

**Formatted:** Font: 12 pt

**Formatted:** Font: 12 pt

5. and 6. Amending O. Reg. 275/04 (Information on Invoices to Certain Classes of Consumer of Electricity) made under the *Ontario Energy Board Act, 1998* and O. Reg 161/99 (Definitions and Exemptions) made under the *Ontario Energy Board Act, 1998*.

    - These proposed amendments are consequential to the implementation of the *Ontario Rebate for Electricity Consumers Act, 2016,* including adding the ORECA to the list of Acts and Regulations that can alter the presentation of the invoice from the standard messaging.

**Terms you need to know**

- **Local Distribution Companies (LDCs)** – Local electricity utilities, responsible for distributing power from transmission lines to people's homes (e.g., Hydro Ottawa, Toronto Hydro, etc.)
- **Regulated Price Plan (RPP)** - Since April 2005, the Ontario Energy Board (OEB) has administered an electricity price plan that provides stable and predictable electricity pricing, encourages conservation and ensures the price consumers pay for electricity better reflects the price paid to generators. This pricing plan is known as the Regulated Price Plan (RPP). About 5 million residential consumers, small businesses and farms are eligible for the RPP.
- **Class B Consumer** – commercial, institutional and small industrial consumers, typically with load size between 0.05 – 3 MW. Class B consumers pay GA as a flat rate applied to electricity consumption. Class B consumers include those that choose not to become Class A.
- **Class A Consumer** – large commercial and large industrial consumers with average peak load size above 3 MW, subject to eligibility. Class A consumers pay GA based on their electricity consumption during the five highest peak demand hours during the year.

**Why does Ontario need these changes? Why now?**

Electricity costs have been increasing as investments have been made to decarbonize and modernize the province's electricity infrastructure. Since 2010, electricity prices have risen considerably, particularly for households and small businesses.

The Ministry of Energy, working with the ~~and~~ Ministry of Finance ~~were~~, were~~as~~ asked to develop a proposal to provide rate relief to Ontario electricity consumers. On September 12, in the Speech from the Throne, the government committed to introducing measures that would provide consumers with rate relief on their electricity bills.

**What is the expected cost to government?**

The 8% rebate is expected to cost about $1.2 billion per year (approximately $4 billion from 2017-2020). Other smaller incremental costs include that LDCs and other providers will likely incur some costs with updating their systems~~;~~, however, as the

LDCs recently delivered the OCEB set up costs should not be substantial, and increased administrative costs or borrowing costs for the IESO.

The cost of the ICI and RRRP program expansions will be shared across the electricity rate base, and are estimated to cost approximately $0.60/month (RRRP) and $0.74/month (ICI) for the average residential customer. The total new costs to the rate base for each program expansion are $82 million and $116.4 million, respectively (pending Cabinet approval of the additional support for the RRRP through this proposal).

## Cabinet Office Analysis

Following the ~~Speech from the Throne and the introduction~~ passage of the ORECA ~~in~~, 2016 ~~in~~on October 19, 2016 ~~September~~, Ontarians are expecting to see electricity rate relief as of January 1, ~~in January~~ 2017. This proposal provides the mechanisms to implement this commitment. For the rate relief to be implementation by January 1, there is a need to move forward with the regulation changes as soon as possible (e.g. so that bill issuers can prepare Customer Information Systems for setting new RRRP rates and calculate associated benefits, so that LDCs have time to prepare for the expected increase in the ICI program, all in advance of the January implementation). The following regulations and regulatory amendments are being proposed:

1. General Regulation

The proposed General Regulation under the *Ontario Rebate for Electricity Consumers ~~Rebate~~ Act, 2016* will put in place a framework very similar to the framework developed to deliver the Ontario Clean Energy Benefit. The regulation provides instruction to LDCs on how the rebate is to be calculated (e.g., rebate is calculated before taxes; clarifies how the rebate is applied to those receiving Ontario Electricity Support Program assistance).

**Formatted:** Font: Italic

The proposed General Regulation also provides an outline on how the payments flow through to customers. Through the proposed General Regulation, a parallel process will be created to ensure that Independent Power Authorities and have the opportunity to participate and have their customers receive the provincial rebate. There were six communities that did not enroll to receive the OCEB. These communities would be eligible for the 8% rebate, but would need to go through the enrollment process.

2. Rural or Remote Electricity Rate Protection (RRRP) Expansion – Regulation

The RRRP framework was put in place to ensure that all Ontario residents pay similar prices for electricity distribution, regardless of their geographic location. The Ministry of Energy is seeking to increase the amount of rate protection available for eligible rural or remote electricity customers. Under the RRRP regulation the amount of rate protection available to Hydro One's R2 customers (residential customers who are classified as low density) is capped at a fixed amount of $127 million – which amounts to a monthly

subsidy of $31.50. The RRRP program is paid for by all electricity customers across the province, and costs the average residential consumer approximately $1/month.

In September 2016, Cabinet approved an additional $110 million in RRRP program funding that was intended to provide an increased benefit of approximately $29/month for all eligible Hydro One R2~~RRRP~~ customers. The additional monthly cost of this proposal for an average residential consumer was estimated to be $0.60.

**Variance from cabinet direction:** The Ministry of Energy is proposing to increase rate protection for eligible customers by an additional $6.4M, based on a revised estimate of eligible customers provided by Hydro One. The additional $6.4M will not increase the monthly cost for an average residential consumer.

As part of the Price Mitigation initiatives, Cabinet directed that the funding for R2 customers be adjusted annually to reflect any increases on their electricity bills. The proposed amendments to the regulation will add an escalating factor to the new base rate protection amount. Starting in 2018, and every year after, the total amount of rate protection available to Hydro One's R2 customers would be increased by a percentage, as calculated by the Ontario Energy Board~~.~~. This percentage would be based on the simple average, as calculated by the OEB, of the change in base distribution rates of all distributors from the previous year

3. Industrial Conservation Initiative Expansion (ICI)

The ICI is intended to incent a greater number of Ontario businesses to lower their electricity costs by shifting energy demand away from peak demand periods. Reducing peak demand increases the reliability of the power grid, reduces greenhouse gas (GHG) emissions and helps to defer the need to procure more resources. In 2010, when Ontario introduced ICI, the program was available to customers with a peak demand greater than 5 MW and in 2013 was subsequently expanded to allow eligible customers in certain sectors with a peak demand for electricity above 3 MW and less than or equal to 5 MW to opt in to the program.

The Ministry of Energy is proposing to expand eligibility under ICI to include all electricity consumers and market participants with an average monthly peak demand greater than one MW and to remove sector restrictions so that smaller (1-5MW?) institutional and commercial businesses would also be eligible. This would expand the ICI to include more than 1000 new customers. Non-ICI participants will likely see an increase on their bills but the extent of the impact is dependent on the uptake of the expanded ICI program.

4. Amending O. Reg. 495/10 (General) made under the Ontario Clean Energy Benefit Act, 2010

In addition to enacting the provisions for the 8% rebate, Bill 13 also included amendments to the Ontario Clean Energy Benefit Act, 2010 that provided the necessary

**Commented [KJ1]:** This calculation is based on the total cost of the RRRP program - $174 million, not $127 million as implied in the text.

OEB "This RRRP rate is underpinned by a RRRP amount to be provided to eligible customers in 2015 of $174 million. Also, the IESO's 2015 demand forecast is 136 TWh. The resulting RRRP rate is therefore 0.13 cents (rounded) per kilowatt-hour."

**Commented [MC2]:** ENERGY to fact check

**Commented [KJ3]:** RRRP is funded by ratepayers. Might be better to change to:

The impact of this $6.4 million increase is minimal and has no material impact on the estimated cost of approximately $0.60 per month for an average consumer using 750 kWh per month.

(From Energy's LRC Submission Appendix C)

authority to prescribe end dates for retroactive claims, eliminating further crown liability for reimbursements after the prescribed date. Proposed amendments will establish February 1, 2017 as the cut-off date for customers with an eligible account to claim unpaid OCEB amounts.

Although this proposal is not expected to affect the majority of OCEB customers (as the Ministry of Finance has concluded that there were minimal errors in the application of the program), the potential size of the liability related to retroactive payments is highly uncertain due to data limitations. ENERGY's rough estimate for this liability is $10 million.

**Commented [MC4]:** ENERGY to provide a sense of magnitude – how much was paid out under OCEB during the life of the program?

5. Amending O. Reg. 161/99 (Definitions and Exemptions) made under the Ontario Energy Board Act, 1998.

This proposed amendment is required to help ensure that the 8% rebate is passed on to individual units in multi-unit complexes.

**Commented [MC5]:** ENERGY to clarify - to what degree of certainty? To individually metered units or to all individual units?

6. Amending O. Reg. 275/04 (Information on Invoices to Certain Classes of Consumer of Electricity) made under the Ontario Energy Board Act, 1998

This amendment allows for the rebate legislation and any regulations under it to alter the presentation of invoices. This proposal is necessary for the invoice to present the 8% rebate as a separate line item.

There is also one related Minister's Regulation on invoicing requirements (to provide clear direction to energy vendors) that is moving forward in parallel with this package.

**Linkages:**

Ontario's Climate Change Action Plan (CCAP)

The CCAP, released in summer 2016, reiterated the 2016 Budget commitment and stated that Ontario intends to invest in initiatives that both reduce greenhouse gas (GHG) emissions and ensure that the net impact of cap and trade would not result in an overall increase in electricity costs for commercial and industrial consumers, and that there would be a modest benefit of up to $2 per month, on average, to residential consumers.

At the time, it was estimated that redirecting cap and trade auction proceeds to lower the cost of electricity would reduce up to 3,000,000 tonnes of greenhouse gas (GHG) emissions by 2020.

Electricity Rate Mitigation Initiatives:

The OCEB was a five-year legislated program put in place as a broad-based, transitional measure to a cleaner electricity system. ~~OCEB was also put in place following the implementation of the Harmonised Sales Tax (HST).~~ The Province also put in place the energy portion of the Ontario Energy and Property Tax Credit, as well as the Northern Ontario Energy Credit at that time to provide on-going targeted relief, in addition to the

**Commented [MK6]:** OCEB was created in response to the expected 46% increase in residential electricity prices over the life of the program (see LTEP 2010).

The HST was never a stated reason for the creation of OCEB.

general sales tax credit. ~~Unlike the previous provincial Retail Sales Tax (RST), the HST (and GST) included electricity in the taxable base.~~ OCEB expired on December 31, 2015.

~~The~~As part of the transition to the end of the OCEB, ~~T~~the government also recently ended the electricity Debt Retirement Charge (DRC) on residential users earlier than planned, as of January 1, 2016, and put in place the low-income targeted Ontario Electricity Support Program (OESP).

**Delivery:**

For the 8% rebate, LDCs have indicated they will likely be operational by January 1 2017. However, the legislation gives LDCs until July 1 2017 to begin delivering the 8% rebate and associated messaging. If LDCs are not operational on January 1 2017, customers would receive any back-owed rebate in a lump sum once the LDC is able to deliver the rebate.

A dedicated information portal will be created by ENERGY for oversight and tracking of the rebate (similar to what was created under the Clean Energy Benefit program).

Pending approval of the increased amount of rate protection through the RRRP, the OEB will be required to set the RRRP rate. This rate is typically set by the OEB in December and then Hydro One would implement the changes. This would be complete by January 1 2017.

**Commented [MC7]:** ENERGY to confirm

The ICI expansion would be implemented by the IESO and LDCs by XXX

**Commented [MC8]:** ENERGY to provide.

**Stakeholder Consultations:**

Regulatory Registry

- On September 28, the Ministry of Energy posted a proposal for comment on the Regulatory Registry to provide stakeholders with the opportunity to comment on the electricity mitigation initiative.
- The posting included the proposed changes to the RRRP, ICI and new regulations needed to support the 8% rebate.
- **[placeholder – summary of RR feedback]**

LDC Working Group

- In October 2016 The Ministry hosted an LDC Working Group with nearly 40 LDCs representatives where feedback was provided to the ministry to consider in the development of the regulatory package. This included feedback on the billing system limitations that was incorporated into proposed bill presentment requirements.

**Commented [MC9]:** What was the specific change?

Standing Committee of Justice – Public Hearings for Bill 13

- On October 3, a number of organizations as well as individual citizens made presentations to the standing committee on Justice regarding Bill 13, including requesting additional rate relief, support for the rate relief package, and support for provisions that would limit disconnection of customers.

**Risks**

Commented [MC10]: ENERGY to note any additional risks

- The 8% rebate would be structured and delivered in a similar fashion to the former OCEB. There is a risk that the government could be criticized for replacing the OCEB with a smaller rate relief package, just one year after the OCEB ended.
    - The new rebate would have a wider base, and would be uncapped, compared to the OCEB, which was capped at 3,000 kWh per month (and per residential unit in a bulk-metered, multi-residential building).

Formatted

- The rebate was earlier estimated as part of the fiscal plan to cost $1 billion on an annualized fiscal basis, and this estimate has since increased to $1.2 billion. ENERGY has also indicated that the rebate is expected to cost approximately $4 billion from 2017-2020. It was indicated that revised estimates would be part of Energy's PRRT submission.
- For the rate-based portions of the proposal (i.e., the expansion of ICI and RRRP) the result is an increase in costs for ratepayers not included in those programs (i.e., primarily residential, small business and farms). Shifting costs to some electricity consumers to lower rates for others carries the risk that the charge would be characterized as an unconstitutional tax. To establish that the charge is legitimate, it must be established that the purpose and effect of the charge is to facilitate the maintenance of a financially viable electricity system by way of load management or some other feature under which those who are subsidized provide an overall system benefit enjoyed by those who subsidize them.

Commented [MC11]: ENERGY to comment

Commented [KJ12]: Legal should review this language. It is likely too strong given recent com law opinions.

- Under the proposal, some eligible consumers (e.g., multi-unit residential buildings) may receive multiple benefits (8% rebate and proceeds recycling), while others would be eligible for only one type of benefit.
- The Electricity Distributor Association raised concerns related to the costs of supporting the proposed increased RRRP, as the RRRP is paid for by a charge across all LDCs

Commented [MC13]: ENERGY to provide – response to the concern/mitigation measures

## APPENDIX A: Multi-Year Action Plan (Electricity Rate Mitigation)

*Below is an extract taken from the MYAP which demonstrates the overall strategic plan for the initiative that this policy submission supports. This excerpt represents the approved plan to date, and may not reflect the specific policy and delivery timelines identified in the Cabinet Minute above.*

**Subject:** Latest price mitigation deck

Hi Ron, John,

Just got a call from Helen G. at OPCD. They received the latest draft of Energy's price mitigation deck and they would want to discuss the concept of a potential amortization of the GA (or the concept included in the deck) as there might be reporting/accounting issues. She is happy to discuss once you have reviewed the deck…

Thanks,

Francisco

Hi John,

I was thinking of elaborating on these points:

**ISSUE**

What are the upcoming policy files, issues, milestones and decision points with respect to the Ontario Electricity Financial Corporation (OEFC) and electricity sector policy with fiscal implications?

**CONTEXT**

Ontario Electricity Financial Corporation

- OPG Lending
- DRC ending

Electricity Policy Matters

- OREC and other Price Mitigation
- Darlington Refurb
- Hydro One Rate application
- OPG Rates
- OPG Business Plan
- LTEP 2017
- Updating ONFA reference plan (SIFB?)

**Cc:** Gavin He <Gavin.He@ofina.on.ca>
**Subject:** RE: MO Bi-Weekly

On the policy one-pager (with upcoming milestones and/or decision points and a quick refresher on any pertinent acronyms related to the file) I took it as 1-2 pages overall for electricity-related issues coming up over the next several months, so maybe a short section, with a few bullets each to describe the issue, how it relates to mandate/priorities, decision points/ approvals required and milestones/timing, for each of the items the branches have to bring forward.

Would that work?

Thanks,
Ron

Hi all,

Ron will be having his next MO bi-weekly meeting on Monday, January 23rd, 2017. To help him prepare for the meeting, could you please provide me with your annotated agenda by **EOD Thursday, January 19th, 2017**?

I have attached the previous agenda for your reference.

Please let me know if you have any questions.

Thanks,
Gavin He

**ANNOTATED AGENDA**
**MO UPDATE: January 23, 2017**

## ELECTRICITY & ASSET OPTIMISATION RELATED ISSUES

### 1. Global Adjustment Lawsuit

- On January 19, 2017, the Supreme Court of Canada dismissed OEFC's application seeking leave to appeal the Ontario Court of Appeal decision on OEFC's compliance with the payment provisions of 12 Power Purchase Agreements.
    - On April 19, 2016 the Ontario Court of Appeal dismissed OEFC's appeal of a March 12, 2015 lower court decision.
    - On March 12, 2015 the Ontario Superior Court of Justice determined that OEFC has incorrectly calculated payment provisions of 12 Power Purchase Agreements.

- While OEFC's position has consistently been that it has administered these power purchase agreements in a manner that it believes has been correct, OEFC has been complying with the decision and orders of the lower courts, and no further avenues of appeal are available.
    - ~~Since there already had been the March 12, 2015, Ontario Superior Court judgment against~~ OEFC~~, it had been required to~~ make retroactive payments of approximately $180 million in the fall of 2016 to the applicant non-utility generators (NUGs) for electricity delivered during the period from January 2011 to January 2015 that predates the Ontario Superior Court decision.
    - As well, for electricity delivered from February 2015 onwards, the applicant NUGs have been paid at rates determined in accordance with the Ontario Superior Court decision. Therefore, the Supreme Court decision requires no further changes to the manner in which OEFC determines the payments to the applicant NUGs.

- There are several NUGs not involved in the lawsuit which have PPAs that contain similar terms and price provisions as those that were under consideration by the courts. As OEFC's application for leave to appeal was unsuccessful, OEFC may also have to address payments under these PPAs.
    - ~~Some additional payments would also be required due to an Ancillary Agreement OEFC entered into with an applicant NUG.~~

- As OEFC recovers the full cost of contracts through the Global Adjustment, there is no impact expected on the stranded debt. This recovery is done through the monthly settlement process of the Independent Electricity System Operator (IESO).

**Commented [RK1]:** Can you remind me about what this entails.

**Commented [EK2R1]:** This referred to the agreement with Iroquois Falls to make a payment in lieu of the facility providing additional generation as a result of its steam host closing.

- ~~In January 2013, notices of application commencing legal proceedings were served on OEFC in relation to 12 NUG contracts that have rate escalation based on a Total Market Cost (TMC) index.~~

    - ~~TMC is defined in NUG contracts to be the cost of electricity delivered on a 100 per cent load firm basis to a wholesale market participant loan customer. TMC includes Hourly Ontario Energy Price (HOEP), Wholesale Market Service Charges, Transmission Service Charges, the Debt Retirement Charge and the Global Adjustment.~~
    - ~~A regulation change effective January 1, 2011, changed the allocation of the Global Adjustment between large industrial and other electricity consumers.~~
    - ~~As a result of the change in the GA allocation, the TMC index is lower, which reduced the contract price escalation for NUG power purchase agreements (PPAs) using this index.~~

**2. Trillium Trust**

- CEFD staff have been working with MOF Legal on the drafting of a regulation under the Trillium Trust Act to credit the Trillium Trust with the net proceeds from the secondary offering of Hydro One shares.

- As part of this regulation, staff are proposing to include language that would allow the Province to credit, over time, the Trillium Trust with the net revenue gains related to the Hydro One shares purchased by the Power Workers' Union (PWU) and Society of Energy Professionals (the "Society") as part of the IPO using Provincial loans, as well as the Hydro One shares purchased by OPG as part of the secondary offering.

- Staff are working closely with MOF Legal and Legislative Counsel to draft proposed~~establish~~ language for the regulation that will allow for on-going, future crediting of the Trillium Trust as the gains related to the sale of shares to the union trusts and OPG are realized, as opposed to introducing a new regulation to credit the Trust each year, as preferred by Legislative Counsel.

**3. Hydro One Brampton**

- The sale of Hydro One Brampton to a new merged company ("Alectra", scheduled to be effective as at February 1, 2017) comprised of Powerstream, Enersource, and Horizon Utilities (typically referred to as "MergeCo") is tracking to close at the end of February.

- CEFD s~~S~~taff are working with EIGS staff, Torys and Hydro One Brampton on the final steps required to facilitate the transaction.

    - The key steps include the following:

**Commented [RK3]:** Placement is subject to misinterpretation.

Do you mean that Leg Counsel prefers to do annual regs, given the placement of the clause, or that Leg. Counsel prefers enabling wording. If so, the clause should be moved.

**Commented [GH4R3]:** Leg. Counsel prefers we introduced a new reg. every year but we are still discussing with them a different option.

- -At the Provincial Holdco level, swapping Hydro One Brampton debt for equity to sell the company debt free as per the agreement with MergeCo.
- -and tThe payment of a dividend to the Province prior to the sale to bring the enterprise value close to the agreed purchase price of $607 M.
- Note that the "enterprise value" for the transaction is not the net fiscal benefit to the Province, as the book value, the value of the retained debt, and costs of the transaction have to be taken into account.

- **[NOT PUBLIC]** Based on a revised financial outlook provided by Hydro One Brampton, the sale would provide an estimated ~$160 M fiscal benefit to the Province (~$80 M gain on sale and ~$80 M in PILs). **[TBC]**
    - This is subject to change as Hydro One Brampton refines its information. Staff have also connected with OPCD to finalize the accounting treatment under a sale.

**4. Debt-Financing Global Adjustment**

The Ministry of Energy (ENERGY) has provided a presentation on an electricity price mitigation options to defer the pass-through to ratepayers of some generation supply costs by partially financing the cost of the global adjustment (GA) and incurring debt to pay the generators their contracted or regulated payments.

The options generally involve reducing current cost pass-through to consumers and deferring part of the costs forinto longer-term recovery from future consumers.

~~The presentation analyzes the system cost and ratepayer impacts of the options, but does not address~~Ministry of Energy is starting to discuss with an external accounting firm and OPCD the accounting issues and treatment, which would affect the fiscal impact~~/accounting treatment~~.

Energy's slides do not provide more details on~~, or~~ implementation considerations.

- It should be noted that under any of these options the relief period is quite limited when compare to the period under where future ratepayers will have to pay the cost of the deferral. Based on some of the illustrative charts, the impact of the relief would not last beyond 2022 and 2024, and the higher cost caused by the deferral would hit electricity bills until 2042 at the least.
- In the latest iteration of the proposal, Energy has proposed a moderate GA financing with delayed increase in payments:
    - In 2017, the starting GA payment will be lowered by $1.1 billion
    - Ratepayer payments will increase at 3% each year – up to a maximum of $2 billion above the true cost of GA
    - The proposal will involve borrowing up to $23 billion, and will be expected to pay back over a 25 and 30 year financing period.
- Preliminary discussions between ~~us~~CEFD and OPCD staff suggest that there are material challenges / fiscal and reporting risks associated with this proposal.

- OPCD staff have been contacted directly by Energy and they have met, along with KPMG and the IESO on accounting considerations.
- New "asset" needs to be created and needs to meet required accounting requirements, including who will hold the asset (Province, IESO, or LDCs) and the source of the financing.
    - Consultation with the OFA will be required to determine the appropriate vehicle for additional borrowing
    - Additional provincial borrowing could pressure on the Province's credit rating.
    - This may create a new "stranded debt" in the electricity sector.
- There might be some legal issues associated with this proposal:
    - Currently, it's unknown if any other legislation would require amendment.
    - The GA regime currently does not take any incurring of discretionary financing or interest costs into consideration of the true costs.
- Meeting held on January 20 – attended by IESO, KPMG, Energy, OPCD and CEFD:
    - In what was described as the RPP (Regulated Price Plan) model, the discussion focused on the current practice of the IESO of not accounting for the "market books" (versus operating books).
        - CFO of IESO noted that it does not account for its debt under the market books in its financial statements – a revelation to some participants, including OPCD staff, in the meeting.
        - CEFD staff are of the understanding that IESO's borrowing under its credit facility with the OFA is considered the "market books" type activities. [IESO also borrows from the OEFC through a loan and a short-term credit facility, which are recorded under its financial statements, likely qualifying as "operating books".]
    - The RPP model discussed would legislative changes at a minimum. Whether the current use of "market books" passes the scrutiny of accounting standards, PSAB or in the absence of PSAB coverage, IFRS, is open to discussion. OPCD are having discussions with KPMG and IESO counterparts on January 23 [today].
    - Prudence would require that the accounting implications are fully scoped out prior to moving forward on analyzing the proposal.
        - The current market books arrangement may not pass the accounting scrutiny/review.

**5. Hydro One / Secondary Offering Update**

**~~5.~~6. Outlook Forecast/OPG Business Plan**

- CEFD received the draft OPG 2017-19 Business Plan from the Ministry of Energy and is ~~has~~ drafting~~ed~~ a list of proposed questions to OPG.

**~~6.~~7. LTEP Consultations and the ALGP**

- In fall 2016, Ministry of Energy conducted consultations regarding Ontario's Long-Term Energy Plan (LTEP).
    - Energy last updated the LTEP in 2013 and expects to release a revised LTEP in 2017.
- As part of the consultation and engagement process, Energy held information sessions across the province, including sessions in Indigenous communities.
- Energy staff have noted that there were comments at these sessions on the Aboriginal Loan Guarantee Program (ALGP) and new and emerging financing gaps in relation to Indigenous communities investing in energy projects.
- Energy staff have not provided details on these comments, but have requested a discussion on this and to explore options to address some of the issues.

## 8. Constance Lake First Nation

- Constance Lake First Nation (Constance Lake) have brought forward a grievance to the Ministry of Energy (Energy) and Ministry of Indigenous Relations and Reconciliation (MIRR), claiming that the First Nation was not properly consulted by the original developer of the Nagagami hydro project, which is located in the traditional territory of Constance Lake, and only agreed to participate under duress.
    - Constance Lake First Nation, along with Brookfield, are owners of the Nagagami hydro project. Nagagami has a non-utility generator (NUG) contract with Ontario Electricity Financial Corporation (OEFC).
    - Nagagami is a 15 MW hydro facility that has been in-service since 1996.
- In June 2016, Constance Lake entered into a Framework Agreement with Energy and MIRR which includes as a purpose addressing the ongoing operation of the facility and how Constance Lake may become a more active participant in its operation, and derive benefits from the continued operation of the facility.
    - The Nagagami project has performed poorly and has not provided significant returns to Constance Lake.
    - Due to the facility's poor performance, the project has accumulated approximately $50 million in debt owed to OEFC.
- Energy staff have inquired about options that could be available under the NUG contract that could provide benefits to Constance Lake, if it was determined that the First Nation's grievance needed to be settled.
    - Staff for OEFC have noted to Energy staff that it cannot make general adjustments to the PPA related to settling a grievance without direction from the Minister. Staff for OEFC have also noted that OEFC does have a process

by which NUGs that are not financially viable under their existing contract may make a submission requesting changes to the PPA.

**ANNOTATED AGENDA**
**MO UPDATE: January 23, 2017**

## OTHER ISSUES

### ~~7.~~9. FAA Section 28 Sharing Protocol

- Minister of Finance approved the protocol on ~~-~~January 9
- President of Treasury Board approval is still pending
- Sharing protocol will be shared with all DMs via a joint memo from DM MoF and DM TBS
- An OFA/MOF/TBS working group is reviewing options for modernizing s.28 of the FAA, for possible inclusion in ~~the~~a 2017 ~~Budget~~Spring bill.
- Regulation has been drafted for college class exemption and is being reviewed by MAESD. The regulation would exempt transactions above certain percentage thresholds from requiring s. 28 approval. Exempt transactions would still be subject to ministry oversight (to be spelled out in a binding policy directive prepared by MAESD).
- Regulation for OLG/LCBO class exemption to be drafted by RAOD in early 2017 along with a financial directive.

### ~~8.~~10. Ontario Climate Change Solutions Deployment Corporation (OCCSDC)

- OFA staff to meet with MOECC representatives on Jan 23rd to discuss how key roles and responsibilities could be shared by the OCCSDC and the OFA. Key information on the OFA/agency relationship will be included in MOECC's report back to TB on the final regulation setting up this agency as well as the accountability framework and some details on programs offerings.
- The purpose of the agency is to accelerate the deployment of greenhouse gas reducing technologies, through services, offering grants and rebates and using financing tools to ensure Ontario residents and businesses can access low-interest financing for these technologies.

### ~~9.~~11. Highway 427 Expansion AFP Project – S. 28 approval

- OFA has received Project Agreement drafts from IO Legal to start section 28 approval process
- MTO has yet to provide formal request along with other supporting documents
- Kick-off meeting with OFA, MTO, IO and MOF Legal to be scheduled for next week.
- Commercial close is scheduled for February 28 while financial close is scheduled for March 3.

**Formatted:** Indent: Left: 0.25", No bullets or numbering

**Formatted:** Space Before: 12 pt, Add space between paragraphs of the same style

**~~10.~~12. MAESD as Guarantor for UOIT's $220M Debenture**

- MAESD is contemplating replacing Durham College as guarantor of UOIT's debenture.
- MAESD staff ~~The ministry~~ agree~~s~~ with the college that the guarantor covenants are too restrictive for the college to manage its capital needs.
- MAESD staff will brief their senior management about whether to proceed to TB with submission.
- CFB staff have informed MAESD staff what steps would be required in order for MAESD to take on the guarantor role so that senior management at MAESD can make an informed decision.
- It would not be appropriate for MAESD to simply take on the guarantor role for Durham College, as the covenants written in the case of the college as guarantor would not be appropriate in the case of the Province, e.g., restrictions on disposition of assets and cross-default provisions.
- ~~OFA briefing note has been shared with DMO and TBS.~~
- ~~OFA could not estimate the cost of re-writing the debenture issue (vs. seeking approval of debenture holders to re-purpose certain buildings). MAESD to look into the cost of issuing the debenture in 2004.~~
- ~~MAESD will brief their senior management about whether to proceed to TB with submission.~~

**~~11.~~13. OCWA**

- OCWA is seeking approval for an investing by-law to allow OCWA to make short-term investments of surplus funds, for the period of 2017 to 2018.
    - Only funds not currently required for OCWA's immediate operating or capital needs would be invested, and would be done so with the assistance of the OFA.
- OFA staff have reviewed the by-law, as well as an associated statement of investment policies and procedures, and recommend that the Minister of Finance approve the by-law.
- This by-law must be approved by both the Minister of the Environment and Climate Change and the Minister of Finance before it can take effect. The Minister of the Environment and Climate Change has approved the by-law.

**ANNOTATED AGENDA**
**MO UPDATE: January 23, 2017**

## ELECTRICITY & ASSET OPTIMISATION RELATED ISSUES

Formatted: Font: Bold

Formatted: Font: Bold

### 1. Global Adjustment Lawsuit

- On January 19, 2017, the Supreme Court of Canada dismissed OEFC's application seeking leave to appeal the Ontario Court of Appeal decision on OEFC's compliance with the payment provisions of 12 Power Purchase Agreements.
    - On April 19, 2016 the Ontario Court of Appeal dismissed OEFC's appeal of a March 12, 2015 lower court decision.
    - On March 12, 2015 the Ontario Superior Court of Justice determined that OEFC has incorrectly calculated payment provisions of 12 Power Purchase Agreements.

- While OEFC's position has consistently been that it has administered these power purchase agreements in a manner that it believes has been correct, OEFC has been complying with the decision and orders of the lower courts, and no further avenues of appeal are available.
    - ~~Since there already had been the March 12, 2015, Ontario Superior Court judgment against~~ OEFC~~, it had been required to~~ make retroactive payments of approximately $180 million in the fall of 2016 to the applicant non-utility generators (NUGs) for electricity delivered during the period from January 2011 to January 2015 that predates the Ontario Superior Court decision.
    - As well, for electricity delivered from February 2015 onwards, the applicant NUGs have been paid at rates determined in accordance with the Ontario Superior Court decision. Therefore, the Supreme Court decision requires no further changes to the manner in which OEFC determines the payments to the applicant NUGs.

- There are several NUGs not involved in the lawsuit which have PPAs that contain similar terms and price provisions as those that were under consideration by the courts. As OEFC's application for leave to appeal was unsuccessful, OEFC may also have to address payments under these PPAs.
    - ~~Some additional payments would also be required due to an Ancillary Agreement OEFC entered into with an applicant NUG.~~

Commented [RK1]: Can you remind me about what this entails.

- As OEFC recovers the full cost of contracts through the Global Adjustment, there is no impact expected on the stranded debt. This recovery is done through the monthly settlement process of the Independent Electricity System Operator (IESO).

- ~~In January 2013, notices of application commencing legal proceedings were served on OEFC in relation to 12 NUG contracts that have rate escalation based on a Total Market Cost (TMC) index.~~

    - ~~TMC is defined in NUG contracts to be the cost of electricity delivered on a 100 per cent load firm basis to a wholesale market participant loan customer. TMC includes Hourly Ontario Energy Price (HOEP), Wholesale Market Service Charges, Transmission Service Charges, the Debt Retirement Charge and the Global Adjustment.~~
    - ~~A regulation change effective January 1, 2011, changed the allocation of the Global Adjustment between large industrial and other electricity consumers.~~
    - ~~As a result of the change in the GA allocation, the TMC index is lower, which reduced the contract price escalation for NUG power purchase agreements (PPAs) using this index.~~

## 2. Trillium Trust

- CEFD staff have been working with MOF Legal on the drafting of a regulation under the Trillium Trust Act to credit the Trillium Trust with the net proceeds from the secondary offering of Hydro One shares.

- As part of this regulation, staff are proposing to include language that would allow the Province to credit, over time, the Trillium Trust with the net revenue gains related to the Hydro One shares purchased by the Power Workers' Union (PWU) and Society of Energy Professionals (the "Society") as part of the IPO using Provincial loans, as well as the Hydro One shares purchased by OPG as part of the secondary offering.

- Staff are working closely with MOF Legal and Legislative Counsel to draft proposed~~establish~~ language for the regulation that will allow for on-going, future crediting of the Trillium Trust as the gains related to the sale of shares to the union trusts and OPG are realized, as opposed to introducing a new regulation to credit the Trust each year, as preferred by Legislative Counsel.

**Commented [RK2]:** Placement is subject to misinterpretation.

Do you mean that Leg Counsel prefers to do annual regs, given the placement of the clause, or that Leg. Counsel prefers enabling wording. If so, the clause should be moved.

## 3. Hydro One Brampton

- The sale of Hydro One Brampton to a new merged company ("Alectra", scheduled to be effective as at February 1, 2017) comprised of Powerstream, Enersource, and Horizon Utilities (typically referred to as "MergeCo") is tracking to close at the end of February.

- CEFD s~~S~~taff are working with EIGS staff, Torys and Hydro One Brampton on the final steps required to facilitate the transaction.

    - The key steps include the following:

- -At the Provincial Holdco level, swapping Hydro One Brampton debt for equity to sell the company debt free as per the agreement with MergeCo.
- -and tThe payment of a dividend to the Province prior to the sale to bring the enterprise value close to the agreed purchase price of $607 M.
- Note that the "enterprise value" for the transaction is not the net fiscal benefit to the Province, as the book value, the value of the retained debt, and costs of the transaction have to be taken into account.

- **[NOT PUBLIC]** Based on a revised financial outlook provided by Hydro One Brampton, the sale would provide an estimated ~$160 M fiscal benefit to the Province (~$80 M gain on sale and ~$80 M in PILs). **[TBC]**

    - This is subject to change as Hydro One Brampton refines its information. Staff have also connected with OPCD to finalize the accounting treatment under a sale.

**4. Debt-Financing Global Adjustment**

The Ministry of Energy (ENERGY) has provided a presentation on an electricity price mitigation options to defer the pass-through to ratepayers of some generation supply costs by partially financing the cost of the global adjustment (GA) and incurring debt to pay the generators their contracted or regulated payments.

The options generally involve reducing current cost pass-through to consumers and deferring part of the costs forinto longer-term recovery from future consumers.

The presentation analyzes the system cost and ratepayer impacts of the options, but does not addressMinistry of Energy is starting to discuss with an external accounting firm and OPCD the accounting issues and treatment, which would affect the fiscal impact/accounting treatment.

Energy's slides do not provide more details on, or implementation considerations.

- It should be noted that under any of these options the relief period is quite limited when compare to the period under where future ratepayers will have to pay the cost of the deferral. Based on some of the illustrative charts, the impact of the relief would not last beyond 2022 and 2024, and the higher cost caused by the deferral would hit electricity bills until 2042 at the least.
- Preliminary discussions between usCEFD and OPCD staff suggest that there are material challenges / fiscal and reporting risks associated with this proposal.
- OPCD staff have been contacted directly by Energy and they have met, along with KPMG and the IESO on accounting considerations.

**5. Outlook Forecast/OPG Business Plan**

- CEFD received the draft OPG 2017-19 Business Plan from the Ministry of Energy and is has draftinged a list of proposed questions to OPG.

**ANNOTATED AGENDA**
**MO UPDATE: January 23, 2017**

## OTHER ISSUES

### ~~6.~~8. FAA Section 28 Sharing Protocol

- Minister of Finance approved the protocol on ~~-~~January 9
- President of Treasury Board approval is still pending
- Sharing protocol will be shared with all DMs via a joint memo from DM MoF and DM TBS
- An OFA/MOF/TBS working group is reviewing options for modernizing s.28 of the FAA, for possible inclusion in ~~the~~a 2017 ~~Budget~~Spring bill.
- Regulation has been drafted for college class exemption and is being reviewed by MAESD. The regulation would exempt transactions above certain percentage thresholds from requiring s. 28 approval. Exempt transactions would still be subject to ministry oversight (to be spelled out in a binding policy directive prepared by MAESD).
- Regulation for OLG/LCBO class exemption to be drafted by RAOD in early 2017 along with a financial directive.

### ~~7.~~9. Ontario Climate Change Solutions Deployment Corporation (OCCSDC)

- OFA staff to meet with MOECC representatives on Jan 23rd to discuss how key roles and responsibilities could be shared by the OCCSDC and the OFA. Key information on the OFA/agency relationship will be included in MOECC's report back to TB on the final regulation setting up this agency as well as the accountability framework and some details on programs offerings.
- The purpose of the agency is to accelerate the deployment of greenhouse gas reducing technologies, through services, offering grants and rebates and using financing tools to ensure Ontario residents and businesses can access low-interest financing for these technologies.

### ~~8.~~10. Highway 427 Expansion AFP Project – S. 28 approval

- OFA has received Project Agreement drafts from IO Legal to start section 28 approval process
- MTO has yet to provide formal request along with other supporting documents
- Kick-off meeting with OFA, MTO, IO and MOF Legal to be scheduled for next week.
- Commercial close is scheduled for February 28 while financial close is scheduled for March 3.

**Formatted:** Indent: Left: 0.25", No bullets or numbering

**Formatted:** Space Before: 12 pt, Add space between paragraphs of the same style

## ~~9.~~11. MAESD as Guarantor for UOIT's $220M Debenture

- MAESD is contemplating replacing Durham College as guarantor of UOIT's debenture.
- MAESD staff ~~The ministry~~ agree~~s~~ with the college that the guarantor covenants are too restrictive for the college to manage its capital needs.
- MAESD staff will brief their senior management about whether to proceed to TB with submission.
- CFB staff have informed MAESD staff what steps would be required in order for MAESD to take on the guarantor role so that senior management at MAESD can make an informed decision.
- It would not be appropriate for MAESD to simply take on the guarantor role for Durham College, as the covenants written in the case of the college as guarantor would not be appropriate in the case of the Province, e.g., restrictions on disposition of assets and cross-default provisions.
- ~~OFA briefing note has been shared with DMO and TBS.~~
- ~~OFA could not estimate the cost of re-writing the debenture issue (vs. seeking approval of debenture holders to re-purpose certain buildings). MAESD to look into the cost of issuing the debenture in 2004.~~
- ~~MAESD will brief their senior management about whether to proceed to TB with submission.~~

## ~~10.~~12. OCWA

- OCWA is seeking approval for an investing by-law to allow OCWA to make short-term investments of surplus funds, for the period of 2017 to 2018.
    - Only funds not currently required for OCWA's immediate operating or capital needs would be invested, and would be done so with the assistance of the OFA.
- OFA staff have reviewed the by-law, as well as an associated statement of investment policies and procedures, and recommend that the Minister of Finance approve the by-law.
- This by-law must be approved by both the Minister of the Environment and Climate Change and the Minister of Finance before it can take effect. The Minister of the Environment and Climate Change has approved the by-law.

Hi all,

Ron will be having his next MO bi-weekly meeting on Monday, January 23 , 2017. To help him prepare for the meeting, could you please provide me with your annotated agenda by **EOD Thursday, January 19th, 2017**?

I have attached the previous agenda for your reference.

Please let me know if you have any questions.

Thanks,
Gavin He

**ANNOTATED AGENDA**
**MO UPDATE: January 23, 2017**

## 1. Net-Metering: Debt Retirement Charge (DRC) Regulation Update

Ministry of Energy has proposed amendments to the 2005 Net Metering Regulation (O. Reg. 541/05) in the Ontario Energy Board Act, 1998, (OEBA) which includes removing the 500 kilowatts (kW) maximum output capacity restriction to expand the eligibility to larger customers.

- This proposal requires corresponding change to the definition of net metered generation facility in O. Reg 493/01 related to the DRC, a regulation under the Electricity Act, 1998.
    - As a DRC regulation, this proposed amendment is under the purview of the Minister of Finance.
- This change is expected to have a small fiscal impact ($25K or less, based on Energy's estimates) for the 2017-18 fiscal year only. (Budget 2016 projected about $625 million in DRC revenues.)
    - CEFD has provided the ADM-approved MB20 Business Case and the draft LRC approval form to CQSD for the TB delegation.
        - For non-material financial implications, i.e., $5 million or 1% of the ministry's total voted appropriation (whichever is less), *Delegations of Authority under the Treasury Board Act, 1991, Protocols and Processes*, May 2006 allows for Ministries to directly proceed to LRC following a letter from the Minister to the Chair of TB/MBC.
- CEFD staff worked with TPD and MOF Legal staff to seek stakeholder feedback of proposed regulation change through a posting on the regulatory registry: http://www.ontariocanada.com/registry/view.do?postingId=23283&language=en
    - Following DMO contact with CO, the posting period was set to 30 days and will be complete early in January, to ensure LRC approval for January 31, 2017.
    - The posting was closed on January 6, 2017 and no feedback was received.
- Both Energy and Finance are tracking to LRC on January 31 and two options are currently being considered: A joint or separate LRC package(s) for the January 31 meeting.
    - ***DECISION REQUIRED:*** *Will Energy and Finance maintain separate LRC packages, allowing for an independent sign off process, or submit a single package.*
    - Energy staff have expressed the view that separate submissions going together would be more expeditious for internal approvals processes.

- CEFD drafted an LRC approval form, to be provided to the CO advisor this week.

Commented [GH1]: Update after today's briefing.

## 2. Debt-Financing Global Adjustment

The Ministry of Energy (ENERGY) has provided a presentation on an electricity price mitigation options to defer the pass-through to ratepayers of some generation supply costs by partially financing the cost of the global adjustment (GA) and incurring debt to pay the generators their contracted or regulated payments.

The options generally involve reducing current costs and deferring part of the costs into long-term. The presentation analyzes the system cost and ratepayer impacts of the options, but does not address the fiscal impact/accounting treatment, or implementation.

- It should be noted that under any of these options the relief period is quite limited when compare to the period under where future ratepayers will have to pay the cost of the deferral. Based on some of the illustrative charts, the impact of the relief would not last beyond 2022 and 2024, and the higher cost caused by the deferral would hit electricity bills until 2042 at the least.
- Preliminary discussions between us and OPCD staff suggest that there are material fiscal and reporting risk associated with this proposal.

## 3. Outlook Forecast/OPG Business Plan

- CEFD received the draft OPG 2017-19 Business Plan from the Ministry of Energy and will provide a list of proposed questions to OPG.

**ANNOTATED AGENDA**
**MO UPDATE: January 23, 2017**

## ELECTRICITY & ASSET OPTIMISATION RELATED ISSUES

### 1. Electricity Price Mitigation: Debt-Financing Global Adjustment

The Ministry of Energy (ENERGY) has provided a presentation on an electricity price mitigation options, including an option to defer the pass-through to ratepayers of some generation supply costs by partially financing the cost of the global adjustment (GA) and incurring debt to pay the generators their contracted or regulated payments.

The options generally involve reducing current cost pass-through to consumers and deferring part of the costs for longer-term future recovery from consumers.

Energy's slides do not provide more details on implementation considerations.

- Based on some of Energy's illustrative charts, the relief would last to about 2022 / 2024, and the higher cost caused by the deferral would hit electricity bills of future ratepayers until 2042 or 2047.
- Preliminary discussions between CEFD and OPCD staff suggest that there are material challenges / fiscal and reporting risks associated with this proposal.
- OPCD staff have been contacted directly by Energy and they have met, along with KPMG and the IESO on accounting considerations.
- Additional provincial borrowing could put pressure on the Province's credit rating.
- Ministry of Energy has initiated an accounting analysis workstream and a legal workstream to put together potential legislative (including regulations) amendments that might be needed, including to the OEG regulatory framework.
- Meeting held on January 20 – attended by IESO, KPMG, Energy, OPCD and CEFD:
    - There was a brief discussion of the historical OEFC structure, noting that OEFC is consolidated into Public Accounts, and that OEFC has a bottom-line impact on the Province, so it is not a model to achieve the fiscal objective for the GA option.
    - Energy is also looking to the Regulated Price Plan as a potential model, writ large, for the GA option.
        - The discussion focused on the current practice of the IESO of not accounting for the "market books" (versus operating books).
        - CFO of IESO noted that it records its Global Adjustment activities, including draws on the line-of-credit with the OFA, under the market books, not on in its operating financial statements.
        - The RPP model discussed would require legislative changes.
        - Whether the current use of "market books" passes the scrutiny of accounting standards, PSAB or otherwise, is subject to further investigation. OPCD are having discussions with KPMG and IESO

counterparts on January 23 [today]. OPCD did raise the caveat that the AG may have its own view.

- Energy also briefly discussed the LDC option; however, it was considered to be problematic for LDC balance sheets.
    - It would also be complicated and time-consuming if it were to be implemented, and LDCs would likely not respond favourably.

## 2. Hydro One / Secondary Offering Update

## 3. Trillium Trust

- CEFD staff have been working with MOF Legal on the drafting of a regulation under the Trillium Trust Act to credit the Trillium Trust with the net proceeds from the secondary offering of Hydro One shares.

- As part of this regulation, staff are proposing to include language that would allow the Province to credit, over time, the Trillium Trust with the net revenue gains related to the Hydro One shares purchased by the Power Workers' Union (PWU) and Society of Energy Professionals (the "Society") as part of the IPO using Provincial loans, as well as the Hydro One shares purchased by OPG as part of the secondary offering.

- Staff are working closely with MOF Legal and Legislative Counsel to draft potential language for the regulation that would allow for on-going, future crediting of the Trillium Trust as the gains related to the sale of shares to the union trusts and OPG are realized, as opposed to introducing a new regulation to credit the Trust, e.g., each year. Legislative Counsel has indicated a preference for separate regulations.

## 4. Hydro One Brampton

- The sale of Hydro One Brampton to a new merged company ("Alectra", scheduled to be effective as at February 1, 2017) comprised of Powerstream, Enersource, and Horizon Utilities (typically referred to as "MergeCo") is tracking to close at the end of February.

- CEFD staff are working with EIGS staff, Torys and Hydro One Brampton on the final steps required to facilitate the transaction.

    - The key steps include the following:
        - At the Provincial Holdco level, swapping Hydro One Brampton debt for equity to sell the company debt free as per the agreement with MergeCo.
        - The payment of a dividend to the Province prior to the sale to bring the enterprise value close to the agreed purchase price of $607 M.

        - Note that the “enterprise value” for the transaction is not the net fiscal benefit to the Province, as the book value, the value of the retained debt, and costs of the transaction have to be taken into account.

- **[NOT PUBLIC]** Based on a revised financial outlook provided by Hydro One Brampton, the sale would provide an estimated ~$160 M fiscal benefit to the Province (~$80 M gain on sale and ~$80 M in PILs). **[TBC]**

    - This is subject to change as Hydro One Brampton refines its information. Staff have also connected with OPCD to finalize the accounting treatment under a sale.

## 5. Outlook Forecast/OPG Business Plan

- CEFD received the draft OPG 2017-19 Business Plan from the Ministry of Energy and is drafting a list of proposed questions to OPG.

## 6. LTEP Consultations and the ALGP

- As part of the LTEP consultation and engagement process, Energy held information sessions across the province, including sessions in Indigenous communities.

- Energy staff have noted that there were comments at these sessions on the Aboriginal Loan Guarantee Program (ALGP) and new and emerging financing gaps in relation to Indigenous communities investing in energy projects.

- Energy staff have not provided details on these comments, but have requested a discussion on this and to explore options to address some of the issues.

## 7. Constance Lake First Nation

- Constance Lake First Nation (Constance Lake) have brought forward a grievance to the Ministry of Energy (Energy) and Ministry of Indigenous Relations and Reconciliation (MIRR), claiming that the First Nation was not properly consulted by the original developer of the Nagagami hydro project, which is located in the traditional territory of Constance Lake, and only agreed to participate under duress.
    - Constance Lake First Nation, along with Brookfield, are owners of the Nagagami hydro project. Nagagami has a non-utility generator (NUG) contract with Ontario Electricity Financial Corporation (OEFC).
    - Nagagami is a 15 MW hydro facility that has been in-service since 1996.

- In June 2016, Constance Lake entered into a Framework Agreement with Energy and MIRR, which includes as a purpose addressing the ongoing operation of the facility and how Constance Lake may become a more active participant in its operation, and derive benefits from the continued operation of the facility.

- The Nagagami project has performed poorly and has not provided significant returns to Constance Lake.
- Due to the facility's poor performance, the project has accumulated approximately $50 million in debt owed to OEFC.

- Energy staff have inquired about options that could be available under the NUG contract that could provide benefits to Constance Lake, if it was determined that the First Nation's grievance needed to be settled.
  - Staff for OEFC have noted to Energy staff that OEFC would not make general adjustments to the PPA related to settling a grievance without direction from the Minister of Finance.
  - Staff for OEFC have also noted that OEFC does have a process by which NUGs that are not financially viable under their existing contract may make a submission requesting changes to the PPA.

## 8. Global Adjustment Lawsuit

- On January 19, 2017, the Supreme Court of Canada dismissed OEFC's application seeking leave to appeal the Ontario Court of Appeal decision on OEFC's compliance with the payment provisions of 12 Power Purchase Agreements.
  - On April 19, 2016 the Ontario Court of Appeal dismissed OEFC's appeal of a March 12, 2015 lower court decision.
  - On March 12, 2015 the Ontario Superior Court of Justice determined that OEFC has incorrectly calculated payment provisions of 12 Power Purchase Agreements.

- While OEFC's position has consistently been that it has administered these power purchase agreements in a manner that it believes has been correct, OEFC has been complying with the decision and orders of the lower courts, and no further avenues of appeal are available.
  - OEFC made retroactive payments of approximately $180 million in the fall of 2016 to the applicant non-utility generators (NUGs) for electricity delivered during the period from January 2011 to January 2015 that predates the Ontario Superior Court decision.
  - As well, for electricity delivered from February 2015 onwards, the applicant NUGs have been paid at rates determined in accordance with the Ontario Superior Court decision. Therefore, the Supreme Court decision requires no further changes to the manner in which OEFC determines the payments to the applicant NUGs.

- There are several NUGs not involved in the lawsuit which have PPAs that contain similar terms and price provisions as those that were under consideration by the courts. As OEFC's application for leave to appeal was unsuccessful, OEFC may also have to address payments under these PPAs.
  - As OEFC recovers the full cost of contracts through the Global Adjustment, there is no impact expected on the stranded debt. This recovery is done through the monthly settlement process of the IESO.

**ANNOTATED AGENDA**
**MO UPDATE: January 23, 2017**

## OTHER ISSUES

### 9. FAA Section 28 Sharing Protocol

- Minister of Finance approved the protocol on January 9
- President of Treasury Board approval is still pending
- Sharing protocol will be shared with all DMs via a joint memo from DM MoF and DM TBS
- An OFA/MOF/TBS working group is reviewing options for modernizing s.28 of the FAA, for possible inclusion in a 2017 Spring bill.
- Regulation has been drafted for college class exemption and is being reviewed by MAESD. The regulation would exempt transactions above certain percentage thresholds from requiring s. 28 approval. Exempt transactions would still be subject to ministry oversight (to be spelled out in a binding policy directive prepared by MAESD).
- Regulation for OLG/LCBO class exemption to be drafted by RAOD in early 2017 along with a financial directive.

### 10. Ontario Climate Change Solutions Deployment Corporation (OCCSDC)

- OFA staff to meet with MOECC representatives on Jan 23rd to discuss how key roles and responsibilities could be shared by the OCCSDC and the OFA. Key information on the OFA/agency relationship will be included in MOECC's report back to TB on the final regulation setting up this agency as well as the accountability framework and some details on programs offerings.
- The purpose of the agency is to accelerate the deployment of greenhouse gas reducing technologies, through services, offering grants and rebates and using financing tools to ensure Ontario residents and businesses can access low-interest financing for these technologies.

### 11. Highway 427 Expansion AFP Project – S. 28 approval

- OFA has received Project Agreement drafts from IO Legal to start section 28 approval process
- MTO has yet to provide formal request along with other supporting documents
- Kick-off meeting with OFA, MTO, IO and MOF Legal to be scheduled for next week.
- Commercial close is scheduled for February 28 while financial close is scheduled for March 3.

### 12. MAESD as Guarantor for UOIT's $220M Debenture

- MAESD is contemplating replacing Durham College as guarantor of UOIT's debenture.

- MAESD staff agree with the college that the guarantor covenants are too restrictive for the college to manage its capital needs.
- MAESD staff will brief their senior management about whether to proceed to TB with submission.
- CFB staff have informed MAESD staff what steps would be required in order for MAESD to take on the guarantor role so that senior management at MAESD can make an informed decision.
- It would not be appropriate for MAESD to simply take on the guarantor role for Durham College, as the covenants written in the case of the college as guarantor would not be appropriate in the case of the Province, e.g., restrictions on disposition of assets and cross-default provisions.

## 13. OCWA

- OCWA is seeking approval for an investing by-law to allow OCWA to make short-term investments of surplus funds, for the period of 2017 to 2018.
    - Only funds not currently required for OCWA's immediate operating or capital needs would be invested, and would be done so with the assistance of the OFA.

- OFA staff have reviewed the by-law, as well as an associated statement of investment policies and procedures, and recommend that the Minister of Finance approve the by-law.

- This by-law must be approved by both the Minister of the Environment and Climate Change and the Minister of Finance before it can take effect. The Minister of the Environment and Climate Change has approved the by-law.

**ANNOTATED AGENDA**
**MO UPDATE: January 23, 2017**

## ELECTRICITY & ASSET OPTIMISATION RELATED ISSUES

### 1. Electricity Price Mitigation: Debt-Financing Global Adjustment

The Ministry of Energy (ENERGY) has provided a presentation on an electricity price mitigation options, including an option to defer the pass-through to ratepayers of some generation supply costs by partially financing the cost of the global adjustment (GA) and incurring debt to pay the generators their contracted or regulated payments.

The options generally involve reducing current cost pass-through to consumers and deferring part of the costs for~~into~~ longer-term future recovery from consumers.

~~The presentation analyzes the system cost and ratepayer impacts of the options, but does not address the fiscal impact/accounting treatment~~Energy's slides do not provide more details on~~, or~~ implementation considerations.

- ~~It should be noted that under any of these options the relief period is quite limited when compare to the period under where future ratepayers will have to pay the cost of the deferral.~~ Based on some of ~~the~~Energy's illustrative charts, the ~~impact of the~~ relief would ~~not~~ last ~~beyond~~to about 2022 ~~and/~~ 2024, and the higher cost caused by the deferral would hit electricity bills of future ratepayers until 2042 or 2047 ~~at the least~~.

~~In the latest iteration of the proposal, Energy has proposed a moderate GA financing with delayed increase in payments:~~

- ~~In 2017, the starting GA payment will be lowered by $1.1 billion~~
- ~~Ratepayer payments will increase at 3% each year – up to a maximum of $2 billion above the true cost of GA~~
- ~~The proposal will involve borrowing up to $23 billion, and will be expected to pay back over a 25 and 30 year financing period.~~

- Preliminary discussions between ~~us~~CEFD and OPCD staff suggest that there are material challenges / fiscal and reporting risks associated with this proposal.
- OPCD staff have been contacted directly by Energy and they have met, along with KPMG and the IESO on accounting considerations.
  - ~~New "asset" needs to be created and needs to meet required accounting requirements, including who will hold the asset (Province, IESO, or LDCs) and the source of the financing.~~
  - ~~Consultation with the OFA will be required to determine the appropriate vehicle for additional borrowing~~
- Additional provincial borrowing could put pressure on the Province's credit rating.
  - ~~This may create a new "stranded debt" in the electricity sector.~~

~~Ministry of Energy has initiated an accounting analysis workstream and a legal workstream to put together potential legislative (including regulations) amendments~~

**Formatted:** Top: 0.81"

**Formatted:** Space After: 0 pt, Add space between paragraphs of the same style

**Formatted:** Space After: 0 pt, Add space between paragraphs of the same style

**Formatted:** Space After: 0 pt, Add space between paragraphs of the same style

**Formatted:** Space After: 0 pt, Add space between paragraphs of the same style

**Formatted:** Space After: 0 pt, Add space between paragraphs of the same style

that might be needed, including to the OEG regulatory framework. ~~There might be some legal issues associated with this proposal:~~

- ~~Currently, it's unknown if any other legislation would require amendment.~~
- ~~The GA regime currently does not take any incurring of discretionary financing or interest costs into consideration of the true costs.~~
- Meeting held on January 20 – attended by IESO, KPMG, Energy, OPCD and CEFD:
  - There was a brief discussion of the historical OEFC structure, noting that OEFC is consolidated into Public Accounts, and that OEFC has a bottom-line impact on the Province, so it is not a model to achieve the fiscal objective for the GA option.
  - Energy is also looking to the Regulated Price Plan as a potential model, writ large, for the GA option.
    - ~~In what was described as the RPP (Regulated Price Plan) model, t~~The discussion focused on the current practice of the IESO of not accounting for the "market books" (versus operating books).
    - CFO of IESO noted that it ~~does not account for~~records its ~~debt~~Global Adjustment activities, including draws on the line-of-credit with the OFA, under the market books, not on in its operating financial statements~~ – a revelation to some participants, including OPCD staff, in the meeting~~.
    - ~~CEFD staff are of the understanding that IESO's borrowing under its credit facility with the OFA is considered the "market books" type activities. [IESO also borrows from the OEFC through a loan and a short-term credit facility, which are recorded under its financial statements, likely qualifying as "operating books".]~~
    - The RPP model discussed would require legislative changes~~ at a minimum~~.
    - Whether the current use of "market books" passes the scrutiny of accounting standards, PSAB or ~~in the absence of PSAB coverage, IFRS~~otherwise, is ~~open~~ subject to further investigation~~discussion~~. OPCD are having discussions with KPMG and IESO counterparts on January 23 [today]. OPCD did raise the caveat that the AG may have its own view.
  - Energy also briefly discussed the LDC option; however, it was considered to be problematic for LDC balance sheets.
    - It would also be complicated and time-consuming if it were to be implemented, and LDCs would likely not respond favourably.
  - ~~Prudence would require that the accounting implications are fully scoped out prior to moving forward on analyzing the proposal.~~
    - ~~The current market books arrangement may not pass the accounting scrutiny/review.~~

## 2. Hydro One / Secondary Offering Update

### 3. Trillium Trust

- CEFD staff have been working with MOF Legal on the drafting of a regulation under the Trillium Trust Act to credit the Trillium Trust with the net proceeds from the secondary offering of Hydro One shares.

- As part of this regulation, staff are proposing to include language that would allow the Province to credit, over time, the Trillium Trust with the net revenue gains related to the Hydro One shares purchased by the Power Workers' Union (PWU) and Society of Energy Professionals (the "Society") as part of the IPO using Provincial loans, as well as the Hydro One shares purchased by OPG as part of the secondary offering.

- Staff are working closely with MOF Legal and Legislative Counsel to draft potential~~establish~~ language for the regulation that would~~ill~~ allow for on-going, future crediting of the Trillium Trust as the gains related to the sale of shares to the union trusts and OPG are realized, as opposed to introducing a new regulation to credit the Trust, e.g., each year. ~~as preferred by~~ Legislative Counsel has indicated a preference for separate regulations.

### 4. Hydro One Brampton

Formatted: Keep with next

- The sale of Hydro One Brampton to a new merged company ("Alectra", scheduled to be effective as at February 1, 2017) comprised of Powerstream, Enersource, and Horizon Utilities (typically referred to as "MergeCo") is tracking to close at the end of February.

- CEFD s~~S~~taff are working with EIGS staff, Torys and Hydro One Brampton on the final steps required to facilitate the transaction.

    - The key steps include the following:
        - ~~-~~At the Provincial Holdco level, swapping Hydro One Brampton debt for equity to sell the company debt free as per the agreement with MergeCo.
        - ~~and t~~The payment of a dividend to the Province prior to the sale to bring the enterprise value close to the agreed purchase price of $607 M.
        - Note that the "enterprise value" for the transaction is not the net fiscal benefit to the Province, as the book value, the value of the retained debt, and costs of the transaction have to be taken into account.

- **[NOT PUBLIC]** Based on a revised financial outlook provided by Hydro One Brampton, the sale would provide an estimated ~$160 M fiscal benefit to the Province (~$80 M gain on sale and ~$80 M in PILs). **[TBC]**

    - This is subject to change as Hydro One Brampton refines its information. Staff have also connected with OPCD to finalize the accounting treatment under a sale.

~~**1. Hydro One / Secondary Offering Update**~~

**5. Outlook Forecast/OPG Business Plan**

- CEFD received the draft OPG 2017-19 Business Plan from the Ministry of Energy and is ~~has~~ drafting~~ed~~ a list of proposed questions to OPG.

**6. LTEP Consultations and the ALGP**

~~In fall 2016, Ministry of Energy conducted consultations regarding Ontario's Long-Term Energy Plan (LTEP).~~

~~Energy last updated the LTEP in 2013 and expects to release a revised LTEP in 2017.~~

- As part of the LTEP consultation and engagement process, Energy held information sessions across the province, including sessions in Indigenous communities.

- Energy staff have noted that there were comments at these sessions on the Aboriginal Loan Guarantee Program (ALGP) and new and emerging financing gaps in relation to Indigenous communities investing in energy projects.

- Energy staff have not provided details on these comments, but have requested a discussion on this and to explore options to address some of the issues.

**7. Constance Lake First Nation**

Formatted: Keep with next

- Constance Lake First Nation (Constance Lake) have brought forward a grievance to the Ministry of Energy (Energy) and Ministry of Indigenous Relations and Reconciliation (MIRR), claiming that the First Nation was not properly consulted by the original developer of the Nagagami hydro project, which is located in the traditional territory of Constance Lake, and only agreed to participate under duress.

    - Constance Lake First Nation, along with Brookfield, are owners of the Nagagami hydro project. Nagagami has a non-utility generator (NUG) contract with Ontario Electricity Financial Corporation (OEFC).
    - Nagagami is a 15 MW hydro facility that has been in-service since 1996.

- In June 2016, Constance Lake entered into a Framework Agreement with Energy and MIRR, which includes as a purpose addressing the ongoing operation of the facility and how Constance Lake may become a more active participant in its operation, and derive benefits from the continued operation of the facility.

    - The Nagagami project has performed poorly and has not provided significant returns to Constance Lake.
    - Due to the facility's poor performance, the project has accumulated approximately $50 million in debt owed to OEFC.

- Energy staff have inquired about options that could be available under the NUG contract that could provide benefits to Constance Lake, if it was determined that the First Nation's grievance needed to be settled.

    - Staff for OEFC have noted to Energy staff that ~~it~~OEFC ~~can~~would not make general adjustments to the PPA related to settling a grievance without direction from the Minister of Finance.
    - Staff for OEFC have also noted that OEFC does have a process by which NUGs that are not financially viable under their existing contract may make a submission requesting changes to the PPA.

**~~7.~~8. Global Adjustment L~~l~~awsuit**

- On January 19, 2017, the Supreme Court of Canada dismissed OEFC's application seeking leave to appeal the Ontario Court of Appeal decision on OEFC's compliance with the payment provisions of 12 Power Purchase Agreements.

    - On April 19, 2016 the Ontario Court of Appeal dismissed OEFC's appeal of a March 12, 2015 lower court decision.
    - On March 12, 2015 the Ontario Superior Court of Justice determined that OEFC has incorrectly calculated payment provisions of 12 Power Purchase Agreements.

- While OEFC's position has consistently been that it has administered these power purchase agreements in a manner that it believes has been correct, OEFC has been complying with the decision and orders of the lower courts, and no further avenues of appeal are available.

    - ~~Since there already had been the March 12, 2015, Ontario Superior Court judgment against~~ OEFC~~, it had been required to~~ ma~~k~~de retroactive payments of approximately $180 million in the fall of 2016 to the applicant non-utility generators (NUGs) for electricity delivered during the period from January 2011 to January 2015 that predates the Ontario Superior Court decision.
    - As well, for electricity delivered from February 2015 onwards, the applicant NUGs have been paid at rates determined in accordance with the Ontario Superior Court decision. Therefore, the Supreme Court decision requires no further changes to the manner in which OEFC determines the payments to the applicant NUGs.

- There are several NUGs not involved in the lawsuit which have PPAs that contain similar terms and price provisions as those that were under consideration by the courts. As OEFC's application for leave to appeal was unsuccessful, OEFC may also have to address payments under these PPAs.

  As OEFC recovers the full cost of contracts through the Global Adjustment, there is no impact expected on the stranded debt. This recovery is done through the monthly settlement process of the ~~Independent Electricity System Operator (~~IESO~~).~~

~~Some additional payments would also be required due to an Ancillary Agreement OEFC entered into with an applicant NUG.~~

  - 

~~- As OEFC recovers the full cost of contracts through the Global Adjustment, there is no impact expected on the stranded debt. This recovery is done through the monthly settlement process of the Independent Electricity System Operator (IESO).~~

~~- In January 2013, notices of application commencing legal proceedings were served on OEFC in relation to 12 NUG contracts that have rate escalation based on a Total Market Cost (TMC) index.~~

  - ~~TMC is defined in NUG contracts to be the cost of electricity delivered on a 100 per cent load firm basis to a wholesale market participant loan customer. TMC includes Hourly Ontario Energy Price (HOEP), Wholesale Market Service Charges, Transmission Service Charges, the Debt Retirement Charge and the Global Adjustment.~~
  - ~~A regulation change effective January 1, 2011, changed the allocation of the Global Adjustment between large industrial and other electricity consumers.~~
  - ~~As a result of the change in the GA allocation, the TMC index is lower, which reduced the contract price escalation for NUG power purchase agreements (PPAs) using this index.~~

**ANNOTATED AGENDA**
**MO UPDATE: January 23, 2017**

**OTHER ISSUES**

### ~~8.~~9. FAA Section 28 Sharing Protocol

- Minister of Finance approved the protocol on ~~-~~January 9
- President of Treasury Board approval is still pending
- Sharing protocol will be shared with all DMs via a joint memo from DM MoF and DM TBS
- An OFA/MOF/TBS working group is reviewing options for modernizing s.28 of the FAA, for possible inclusion in ~~the~~a 2017 ~~Budget~~Spring bill.

**Commented [RK1]:** Can you remind me about what this entails.

**Commented [EK2R1]:** This referred to the agreement with Iroquois Falls to make a payment in lieu of the facility providing additional generation as a result of its steam host closing.

**Formatted:** Normal

**Formatted:** Bulleted + Level: 1 + Aligned at: 0" + Indent at: 0.25"

**Formatted:** Normal

**Formatted:** Indent: Left: 0.25", No bullets or numbering

- Regulation has been drafted for college class exemption and is being reviewed by MAESD. The regulation would exempt transactions above certain percentage thresholds from requiring s. 28 approval. Exempt transactions would still be subject to ministry oversight (to be spelled out in a binding policy directive prepared by MAESD).
- Regulation for OLG/LCBO class exemption to be drafted by RAOD in early 2017 along with a financial directive.

### ~~9.~~10. Ontario Climate Change Solutions Deployment Corporation (OCCSDC)

- OFA staff to meet with MOECC representatives on Jan 23rd to discuss how key roles and responsibilities could be shared by the OCCSDC and the OFA. Key information on the OFA/agency relationship will be included in MOECC's report back to TB on the final regulation setting up this agency as well as the accountability framework and some details on programs offerings.
- The purpose of the agency is to accelerate the deployment of greenhouse gas reducing technologies, through services, offering grants and rebates and using financing tools to ensure Ontario residents and businesses can access low-interest financing for these technologies.

**Formatted:** Space Before: 12 pt, Add space between paragraphs of the same style

### ~~10.~~11. Highway 427 Expansion AFP Project – S. 28 approval

- OFA has received Project Agreement drafts from IO Legal to start section 28 approval process
- MTO has yet to provide formal request along with other supporting documents
- Kick-off meeting with OFA, MTO, IO and MOF Legal to be scheduled for next week.
- Commercial close is scheduled for February 28 while financial close is scheduled for March 3.

### ~~11.~~12. MAESD as Guarantor for UOIT's $220M Debenture

- MAESD is contemplating replacing Durham College as guarantor of UOIT's debenture.
- MAESD staff ~~The ministry~~ agree~~s~~ with the college that the guarantor covenants are too restrictive for the college to manage its capital needs.
- MAESD staff will brief their senior management about whether to proceed to TB with submission.
- CFB staff have informed MAESD staff what steps would be required in order for MAESD to take on the guarantor role so that senior management at MAESD can make an informed decision.
- It would not be appropriate for MAESD to simply take on the guarantor role for Durham College, as the covenants written in the case of the college as guarantor would not be appropriate in the case of the Province, e.g., restrictions on disposition of assets and cross-default provisions.
- ~~OFA briefing note has been shared with DMO and TBS.~~

~~• OFA could not estimate the cost of re-writing the debenture issue (vs. seeking approval of debenture holders to re-purpose certain buildings). MAESD to look into the cost of issuing the debenture in 2004.~~

~~• MAESD will brief their senior management about whether to proceed to TB with submission.~~

## ~~12.~~13. OCWA

- OCWA is seeking approval for an investing by-law to allow OCWA to make short-term investments of surplus funds, for the period of 2017 to 2018.
    - Only funds not currently required for OCWA's immediate operating or capital needs would be invested, and would be done so with the assistance of the OFA.
- OFA staff have reviewed the by-law, as well as an associated statement of investment policies and procedures, and recommend that the Minister of Finance approve the by-law.
- This by-law must be approved by both the Minister of the Environment and Climate Change and the Minister of Finance before it can take effect. The Minister of the Environment and Climate Change has approved the by-law.

**Subject:** Meeting with the MO

Hi

I'll be unable to make this weekly meeting because I am up at OLG. I'll touch base with you after. I imagine the main topic for discussion is explaining what we are doing to explore options on mitigation, per the email exchange this weekend. I'd walk her through the LDC issue.

Best,
Nancy

**ANNOTATED AGENDA**
**MO UPDATE: January 23, 2017**

## ELECTRICITY & ASSET OPTIMISATION RELATED ISSUES

### 1. Global Adjustment Lawsuit

- On January 19, 2017, the Supreme Court of Canada dismissed OEFC's application seeking leave to appeal the Ontario Court of Appeal decision on OEFC's compliance with the payment provisions of 12 Power Purchase Agreements.
    - On April 19, 2016 the Ontario Court of Appeal dismissed OEFC's appeal of a March 12, 2015 lower court decision.
    - On March 12, 2015 the Ontario Superior Court of Justice determined that OEFC has incorrectly calculated payment provisions of 12 Power Purchase Agreements.

- While OEFC's position has consistently been that it has administered these power purchase agreements in a manner that it believes has been correct, OEFC has been complying with the decision and orders of the lower courts, and no further avenues of appeal are available.
    - ~~Since there already had been the March 12, 2015, Ontario Superior Court judgment against~~ OEFC~~, it had been required to~~ ma~~k~~de retroactive payments of approximately $180 million in the fall of 2016 to the applicant non-utility generators (NUGs) for electricity delivered during the period from January 2011 to January 2015 that predates the Ontario Superior Court decision.
    - As well, for electricity delivered from February 2015 onwards, the applicant NUGs have been paid at rates determined in accordance with the Ontario Superior Court decision. Therefore, the Supreme Court decision requires no further changes to the manner in which OEFC determines the payments to the applicant NUGs.

- There are several NUGs not involved in the lawsuit which have PPAs that contain similar terms and price provisions as those that were under consideration by the courts. As OEFC's application for leave to appeal was unsuccessful, OEFC may also have to address payments under these PPAs.
    - ~~Some additional payments would also be required due to an Ancillary Agreement OEFC entered into with an applicant NUG.~~

**Commented [RK1]:** Can you remind me about what this entails.

- As OEFC recovers the full cost of contracts through the Global Adjustment, there is no impact expected on the stranded debt. This recovery is done through the monthly settlement process of the Independent Electricity System Operator (IESO).

- ~~In January 2013, notices of application commencing legal proceedings were served on OEFC in relation to 12 NUG contracts that have rate escalation based on a Total Market Cost (TMC) index.~~

    - ~~TMC is defined in NUG contracts to be the cost of electricity delivered on a 100 per cent load firm basis to a wholesale market participant loan customer. TMC includes Hourly Ontario Energy Price (HOEP), Wholesale Market Service Charges, Transmission Service Charges, the Debt Retirement Charge and the Global Adjustment.~~
    - ~~A regulation change effective January 1, 2011, changed the allocation of the Global Adjustment between large industrial and other electricity consumers.~~
    - ~~As a result of the change in the GA allocation, the TMC index is lower, which reduced the contract price escalation for NUG power purchase agreements (PPAs) using this index.~~

## 2. Trillium Trust

- CEFD staff have been working with MOF Legal on the drafting of a regulation under the Trillium Trust Act to credit the Trillium Trust with the net proceeds from the secondary offering of Hydro One shares.

- As part of this regulation, staff are proposing to include language that would allow the Province to credit, over time, the Trillium Trust with the net revenue gains related to the Hydro One shares purchased by the Power Workers' Union (PWU) and Society of Energy Professionals (the "Society") as part of the IPO using Provincial loans, as well as the Hydro One shares purchased by OPG as part of the secondary offering.

- Staff are working closely with MOF Legal and Legislative Counsel to draft proposed~~establish~~ language for the regulation that will allow for on-going, future crediting of the Trillium Trust as the gains related to the sale of shares to the union trusts and OPG are realized, as opposed to introducing a new regulation to credit the Trust each year, as preferred by Legislative Counsel.

**Commented [RK2]:** Placement is subject to misinterpretation.

Do you mean that Leg Counsel prefers to do annual regs, given the placement of the clause, or that Leg. Counsel prefers enabling wording. If so, the clause should be moved.

**Commented [GH3R2]:** Leg. Counsel prefers we introduced a new reg. every year but we are still discussing with them a different option.

## 3. Hydro One Brampton

- The sale of Hydro One Brampton to a new merged company ("Alectra", scheduled to be effective as at February 1, 2017) comprised of Powerstream, Enersource, and Horizon Utilities (typically referred to as "MergeCo") is tracking to close at the end of February.

- CEFD s~~S~~taff are working with EIGS staff, Torys and Hydro One Brampton on the final steps required to facilitate the transaction.

    - The key steps include the following:

- -At the Provincial Holdco level, swapping Hydro One Brampton debt for equity to sell the company debt free as per the agreement with MergeCo.
- ~~and t~~The payment of a dividend to the Province prior to the sale to bring the enterprise value close to the agreed purchase price of $607 M.
- Note that the "enterprise value" for the transaction is not the net fiscal benefit to the Province, as the book value, the value of the retained debt, and costs of the transaction have to be taken into account.

- **[NOT PUBLIC]** Based on a revised financial outlook provided by Hydro One Brampton, the sale would provide an estimated ~$160 M fiscal benefit to the Province (~$80 M gain on sale and ~$80 M in PILs). **[TBC]**
    - This is subject to change as Hydro One Brampton refines its information. Staff have also connected with OPCD to finalize the accounting treatment under a sale.

**4. Debt-Financing Global Adjustment**

The Ministry of Energy (ENERGY) has provided a presentation on an electricity price mitigation option~~s~~ to defer the pass-through to ratepayers of some generation supply costs by partially financing the cost of the global adjustment (GA) and incurring debt to pay the generators their contracted or regulated payments.

The options generally involve reducing current cost pass-through to consumers and deferring part of the costs for~~into~~ longer-term recovery from future consumers.

~~The presentation analyzes the system cost and ratepayer impacts of the options, but does not address~~Ministry of Energy is starting to discuss with an external accounting firm and OPCD the accounting issues and treatment, which would affect the fiscal impact~~/accounting treatment~~.

Energy's slides do not provide more details on~~, or~~ implementation considerations.

- It should be noted that under any of these options the relief period is quite limited when compare to the period under where future ratepayers will have to pay the cost of the deferral. Based on some of the illustrative charts, the impact of the relief would not last beyond 2022 and 2024, and the higher cost caused by the deferral would hit electricity bills until 2042 at the least.
- Energy has proposed a moderate GA financing with delayed increase in payments:
    - In 2017, the starting GA payment will be lowered by $1.1 billion
    - Ratepayer payments will increase at 3% each year – up to a maximum of $2 billion above the true cost of GA
    - The proposal will involve borrowing up to $23 billion, and will be expected to pay back over a 25 and 30 year financing period.
- Preliminary discussions between ~~us~~CEFD and OPCD staff suggest that there are material challenges / fiscal and reporting risks associated with this proposal.
- OPCD staff have been contacted directly by Energy and they have met, along with KPMG and the IESO on accounting considerations.

Formatted

- New “asset” needs to be created and needs to meet required accounting requirements, including who will hold the asset (Province, IESO, or LDCs) and the source of the financing.
    - Consultation with the OFA will be required to determine the appropriate vehicle for additional borrowing
    - Additional provincial borrowing could pressure on the Province’s credit rating.
    - This may create a new “stranded debt” in the electricity sector.
- There might be some legal issues associated with this proposal:
    - Currently, it’s unknown if any other legislation would require amendment.
    - The GA regime currently does not take any incurring of discretionary financing or interest costs into consideration of the true costs.
-

## ~~9.~~12. MAESD as Guarantor for UOIT's $220M Debenture

- MAESD is contemplating replacing Durham College as guarantor of UOIT's debenture.
- MAESD staff ~~The ministry~~ agree~~s~~ with the college that the guarantor covenants are too restrictive for the college to manage its capital needs.
- MAESD staff will brief their senior management about whether to proceed to TB with submission.
- CFB staff have informed MAESD staff what steps would be required in order for MAESD to take on the guarantor role so that senior management at MAESD can make an informed decision.
- It would not be appropriate for MAESD to simply take on the guarantor role for Durham College, as the covenants written in the case of the college as guarantor would not be appropriate in the case of the Province, e.g., restrictions on disposition of assets and cross-default provisions.
- ~~OFA briefing note has been shared with DMO and TBS.~~
- ~~OFA could not estimate the cost of re-writing the debenture issue (vs. seeking approval of debenture holders to re-purpose certain buildings). MAESD to look into the cost of issuing the debenture in 2004.~~
- ~~MAESD will brief their senior management about whether to proceed to TB with submission.~~

## ~~10.~~13. OCWA

- OCWA is seeking approval for an investing by-law to allow OCWA to make short-term investments of surplus funds, for the period of 2017 to 2018.
    - Only funds not currently required for OCWA's immediate operating or capital needs would be invested, and would be done so with the assistance of the OFA.
- OFA staff have reviewed the by-law, as well as an associated statement of investment policies and procedures, and recommend that the Minister of Finance approve the by-law.
- This by-law must be approved by both the Minister of the Environment and Climate Change and the Minister of Finance before it can take effect. The Minister of the Environment and Climate Change has approved the by-law.

Hi Ken,

In addition to the question below, Energy updated the language in the MOU Section 3. (b) to be:

"The OFA will keep and maintain all records related to the OREC for a period of seven (7) years, and will provide the Ministry with electronic copies (or paper copies, if requested by the Ministry) of such of those records as the Ministry may request from time to time."

Can you please let us know if you are okay with the revised language?

Thanks,

Hi Ken,

Quick question in the attached MOU. In bullet #2, "reimbursements" was defined, and then in #3, "reimbursements" was re-defined as "payments". Can we not just use the term "payments" across the whole document? Could you please let us know what your thoughts are on this?

Thanks,
Gavin He

**Memorandum of Understanding**
**Relating to the**
**Ontario Rebate for Electricity Consumers**

**Dated:** **, 2016**

Commented [RH1]: TBD

**Between:**

**Her Majesty the Queen in right of Ontario**
as represented by the Minister of Energy ("**Ministry**")

**And:**

**Ontario Financing Authority**
an agency of the Province of Ontario (the "**OFA**")

**Whereas:**

1. Pursuant to the ~~[~~*Ontario Rebate for Electricity Consumers Act, 2016*~~] – NTD, pending the legislature considering the Bill], including~~ and the regulations thereunder (the "Act"), certain consumers will be entitled to receive ~~a credit, known as the~~ financial assistance, in this Memorandum of Understanding ("MOU") called the "Ontario Rebate for Electricity Consumers ("" or "OREC"), against", in respect of the cost of electricity consumed by them ~~during the period~~ commencing January 1, 2017;

2. ~~Funds in respect of the~~ Reimbursement for OREC provided to consumers and persons receiving invoices from unit sub-meter providers ("Reimbursement") will flow to ~~most~~specified electricity distributors, retailers and unit sub-metering providers ("Payment Recipients") through the Independent Electricity System Operator ("IESO") in accordance with the Act~~, its regulations and the Market Rules~~;

3. Under the Act, the Ministry will be required to pay amounts to the IESO on account of the OREC Reimbursement (the "Payments") out of amounts appropriated by the Legislature for that purpose ("Appropriated Amount");

4. The Ministry considers it advisable for the OFA to make the Payments on behalf of the Ministry and the OFA has agreed to make the Payments on behalf of the Ministry;

5. The Ministry and the OFA have also agreed to work together on OREC cost forecasting;

6. The Ministry and the OFA wish to enter into this MOU pursuant to clause 7 (3)(f) of the *Ministry of Energy Act* and subsection 30 (1) of the *Capital Investment Plan Act, 1993* to confirm their agreement regarding the terms on which the OFA will make the Payments and on which the Ministry and the OFA will work together on OREC cost forecasting.

**Therefore:**

The Ministry and the OFA agree as follows:

**1. Payment Authorization**

(i) The Ministry authorizes the OFA to make the Payments on behalf of the Ministry and the OFA agrees to make the Payments on behalf of the Ministry.

(ii) The Ministy shall ensure that the certificate under section 11.4 of the *Financial Administration Act* required for each of the Payments is obtained.

(iii) It is agreed by the Ministry and the OFA that the OFA is acting as agent, on behalf of the Ministry, for the purposes of

i. Transacting with the Ontario Shared Services "IFIS" system in order to access funds appropriated for the Ministry in respect of the Act, and

ii. Making the required Payments on behalf of the Ministry as further described in this MOU.

**2. Payment Process**

~~a) The Ministry is registered with the IESO as an IESO Program Participant.~~

a) The Ministry has an account with the IESO under which the IESO will issue invoices to the Ministry for the Payments. The IESO will provide the Ministry with access to these invoices by giving the Ministry access to a secure IESO portal containing these invoices ("IESO Portal").

~~c)~~b) The Ministry will take all necessary steps to provide the OFA with access to the ~~Ministry's~~ IESO ~~account and will arrange for~~Portal so that the OFA ~~to~~will have access to each IESO invoice to the Ministry, at the same time the IESO issues the invoice to the Ministry.

~~d)~~c) The OFA will make the Payments on behalf of the Ministry, in the amount of the IESO invoices.

~~e)~~d) The Payments will be made in accordance with the IESO Market Rules and IESO Manuals for settlements and billing of market participants, as amended from time to time.

~~f)~~e) The Payments will be made from the Consolidated Revenue Fund and the amount of each Payment will be entered by the OFA into the Province's IFIS system under a pre-defined Ministry account immediately upon the completion of the Payment or shortly thereafter.

**3. Reporting Requirements and Records**

a) The OFA will deliver a notice by e-mail to the Ministry's contact person to confirm the completion of each Payment in the amount of the IESO invoice.

b) The OFA will keep and maintain all records related to the OREC for a period of seven (7) years, and will ~~ensure that~~provide the Ministry with electronic copies (or paper copies, if requested by the Ministry) of ~~has full access to~~ such of those records as the Ministry may request from time to time.

c) The requirements under this section shall survive any termination of the MOU.

d) The Public Accounts, Volume 3 reporting related to the Payments will be performed by the Ministry.

~~e)~~

**4. OREC Cost Forecasting**

a) The Ministry and the OFA will work together to prepare and review cost forecasts, estimates, and analysis related to the OREC.

b) The Ministry will provide to the Corporate and Electricity Finance Division of the OFA all IESO invoices and settlement statements relating to the OREC, and any reports by OREC transfer payment recipients (e.g. Local Distribution Companies, retailers, and unit sub-metering providers) to the IESO, that are received by the Ministry. This includes providing electronic portal access to ~~complete and accurate~~ data and reports by OREC transfer payment recipients expected to be provided through an electronic portal reporting process~~.~~.

c) The OFA and the Ministry will collaborate to prepare fiscal year cost estimates and monthly cashflow estimates for OREC.

~~d)a) The Ministry and the OFA acknowledge and agree that the actual costs of OREC may not be the same as the forecasted costs, and the OFA bears no liability for any differences between the forecast and actual costs of OREC, nor does the OFA have any responsibility for any application to Treasury Board for a change in the appropriated amount for OREC.~~

d) ~~e)~~ The OFA and the Ministry will ensure senior management in their respective organizations are briefed and updated on the OREC forecasting on a regular basis to ensure there is mutual understanding and agreement ~~of~~on the forecasts.

e) The Ministry and the OFA acknowledge and agree that the actual costs of OREC may not be the same as the forecasted costs, and the OFA bears no liability for any differences between the forecast and actual costs of OREC, nor does the OFA have any responsibility for any application to Treasury Board for the appropriated amount or for a change in the appropriated amount for OREC.

**5. Limited Role of the OFA**

**Formatted:** Indent: Left: 0.25", Numbered + Level: 1 + Numbering Style: a, b, c, ... + Start at: 1 + Alignment: Left + Aligned at: 0.75" + Indent at: 1"

**Commented [SQ22]:** The only change outlined in the latest version.

**Commented [KR3]:** Does the OFA agree that there should be a provision contemplating agreement on the forecasts? Would it be sufficient to simply reqire tht senior management be briefed?

**Commented [RK4R3]:** How about dealing with it by switching the order and slightly amending the new "e)"?

The OFA will only be responsible for making the Payments in accordance with section 2 and assisting in OREC cost forecasting in accordance with section 4. For greater clarity, the OFA will not be responsible for auditing or otherwise verifying the correctness of the IESO invoices, monitoring the IESO's application of the Payments, monitoring the balance from time to time of the Appropriated Amount, or ensuring the Appropriated Amount is sufficient.

**6. Review and Termination**

a) The Ministry and the OFA will review this MOU annually.

b) This MOU may be terminated by either party at any time, on 90 days notice.

c) Upon termination of this MOU, the OFA will cease to make any Payments.

d) The parties will cooperate to help to ensure a smooth transition of the payment function upon termination.

**7. No Service Charges**

The OFA will not charge the Ministry for the OFA's services or for its disbursements or other expenses incurred under this MOU.

**8. Contacts**

a) Each party shall designate a member of its staff to be a contact person for the purposes of administering this MOU.

b) As of the date of this MOU the OFA's contact person is:

Tel:
email:

c) As of the date of this MOU the Ministry's contact person is:

Tel:
email:

d) Either party may designate a different member of its staff as its contact person by providing notice to the other party in accordance with section 9.

**9. Notice**

a) Any notice under this MOU shall be in writing and shall be deemed given when delivered by hand or email, and addressed to the party's contact person.

b) In the case of the OFA, the addresses for notice are:
Hand Delivery:
Ontario Financing Authority
Suite 1400
1 Dundas St. W.
Attention:
email:

c) In the case of the Ministry, the addresses for notice are:
Hand Delivery:
Ministry of Energy
880 Bay Street, 5th Floor
Attention:
email:

**10. Execution**

The parties have executed this MOU, effective as of the date first above written.

Hi Caroline/Ken,

We have received a marked up version of the MOU between the OFA and MoE related to the OREC regulation. I did a quick blackline and there were actually other changes that were not highlighted and was advisable to check with you whether you see any issues/comments. The changes seem to revolve around the definitions of the program etc.

V3_clean = what we had last sent over
DAP Nov 25 = the latest markup we received
Track changes to v3_clean - quick blackline to show additional changes not shown in the markup received.

Hoping you can take a quick look.

Thank you,
Salman

**Memorandum of Understanding**
**Relating to the**
**Ontario Rebate for Electricity Consumers**

**Dated:** **, 2016**

Commented [RH1]: TBD

**Between:**

**Her Majesty the Queen in right of Ontario**
as represented by the Minister of Energy ("**Ministry**")

**And:**

**Ontario Financing Authority**
an agency of the Province of Ontario (the "**OFA**")

**Whereas:**

1. Pursuant to the [*Ontario Rebate for Electricity Consumers Act, 2016* (the "Act")] ~~– NTD, pending the legislature considering the Bill], including~~ and the regulations thereunder ~~(~~the ~~"~~Act~~")~~, certain electricity consumers will be entitled to receive ~~a credit, known as the~~ financial assistance, which is called the "Ontario Rebate for Electricity Consumers" or "OREC" in this Memorandum of Understanding ("MOU") ~~called the "Ontario Rebate for Electricity Consumers ("" or "OREC"), against"~~, in respect of the cost of electricity consumed by them ~~during the period~~ commencing January 1, 2017;

2. ~~Funds in respect of the~~ Reimbursement for OREC provided to electricity consumers and persons receiving invoices from unit sub-meter providers ("~~Reimbursement~~Payments") will flow to ~~most~~specified electricity distributors, retailers and unit sub-metering providers ("Payment Recipients") through the Independent Electricity System Operator ("IESO") in accordance with the Act~~, its regulations and the Market Rules~~;

Commented [GH2]: Not sure what this means. Are they different kind of electricity consumers?

Commented [GH3]: I changed this term to "Payments" to avoid double definition. In #3 it seems that "reimbursement" was re-defined as "Payments".

3. Under the Act, the Ministry will be required to pay amounts to the IESO on account of the ~~OREC~~Reimbursement ~~(the "~~Payments~~")~~ out of amounts appropriated by the Legislature for that purpose ("Appropriated Amount");

4. The Ministry considers it advisable for the OFA to make the Payments on behalf of the Ministry and the OFA has agreed to make the Payments on behalf of the Ministry;

5. The Ministry and the OFA have also agreed to work together on OREC cost forecasting;

6. The Ministry and the OFA wish to enter into this MOU pursuant to clause 7 (3)(f) of the *Ministry of Energy Act, 2011* and subsection 30 (1) of the *Capital Investment Plan Act, 1993* to confirm their agreement regarding the terms on which the OFA will make the

Payments and on which the Ministry and the OFA will work together on OREC cost forecasting.

**Therefore:**

The Ministry and the OFA agree as follows:

1. **Payment Authorization**

   (i) The Ministry authorizes the OFA to make the Payments on behalf of the Ministry and the OFA agrees to make the Payments on behalf of the Ministry.

   (ii) The Ministy shall ensure that the certificate under section 11.4 of the *Financial Administration Act* required for each of the Payments is obtained.

   (iii) It is agreed by the Ministry and the OFA that the OFA is acting as agent, on behalf of the Ministry, for the purposes of

      i. Transacting with the Ontario Shared Services "IFIS" system in order to access funds appropriated for the Ministry in respect of the Act, and

      ii. Making the required Payments on behalf of the Ministry as further described in this MOU.

2. **Payment Process**

   ~~a) The Ministry is registered with the IESO as an IESO Program Participant.~~

   a) The Ministry has an account with the IESO under which the IESO will issue invoices to the Ministry for the Payments. The IESO will provide the Ministry with access to these invoices by giving the Ministry access to a secure IESO portal containing these invoices ("IESO Portal").

   ~~c)~~b) The Ministry will take all necessary steps to provide the OFA with access to the ~~Ministry's~~ IESO ~~account and will arrange for~~Portal so that the OFA ~~to~~will have access to each IESO invoice to the Ministry, at the same time the IESO issues the invoice to the Ministry.

   ~~d)~~c) The OFA will make the Payments on behalf of the Ministry, in the amount of the IESO invoices.

   ~~e)~~d) The Payments will be made in accordance with the IESO Market Rules and IESO Manuals for settlements and billing of market participants, as amended from time to time.

   ~~f)~~e) The Payments will be made from the Consolidated Revenue Fund and the amount of each Payment will be entered by the OFA into the Province's IFIS system under a pre-defined Ministry account immediately upon the completion of the Payment or shortly thereafter.

3. **Reporting Requirements and Records**

a) The OFA will deliver a notice by e-mail to the Ministry's contact person to confirm the completion of each Payment in the amount of the IESO invoice.

b) The OFA will keep and maintain all records related to the OREC for a period of seven (7) years, and will ensure that the Ministry has full access to such records.

c) The requirements under this section shall survive any termination of the MOU.

d) The Public Accounts, Volume 3 reporting related to the Payments will be performed by the Ministry.

~~e)~~

**4. OREC Cost Forecasting**

a) The Ministry and the OFA will work together to prepare and review cost forecasts, estimates, and analysis related to the OREC.

b) The Ministry will provide to the Corporate and Electricity Finance Division of the OFA all IESO invoices and settlement statements relating to the OREC, and any reports by OREC transfer payment recipients (e.g. Local Distribution Companies, retailers, and unit sub-metering providers) to the IESO, that are received by the Ministry. This includes providing electronic portal access to ~~complete and accurate~~related data and reports by OREC transfer payment recipients expected to be provided through an electronic portal reporting process~~.~~

c) The OFA will collaborate with ~~and~~ the Ministry ~~will collaborate~~ to prepare fiscal year cost estimates and monthly cashflow estimates for OREC.

d) The Ministry and the OFA acknowledge and agree that the actual costs of OREC may not be the same as the forecasted costs, and the OFA bears no liability for any differences between the forecast and actual costs of OREC, nor does the OFA have any responsibility for any application to Treasury Board for a change in the appropriated amount for OREC.

e) The OFA and the Ministry will ensure senior management in their respective organizations are briefed and updated on the OREC forecasting on a regular basis to ensure there is mutual understanding and agreement ~~of~~on the forecasts.

**5. Limited Role of the OFA**

The OFA will only be responsible for making the Payments in accordance with section 2 and assisting in OREC cost forecasting in accordance with section 4. For greater clarity, the OFA will not be responsible for any differences between the forecast and actual costs of OREC, auditing or otherwise verifying the correctness of the IESO invoices, monitoring the IESO's application of the Payments, monitoring the balance from time to time of the Appropriated Amount, or ensuring the Appropriated Amount is sufficient.

**Commented [SQ24]:** What would this access look like? Are they expecting us to set up up an external site with all of our files/modeling as well?

Just need to clarify expectations.

**Commented [KR5]:** I would not expect this ti be anything other than physical access. You may wish to clarify this point.

**Commented [GH6]:** I am not sure what this sentence means or trying to say.

**Commented [GH7]:** According to section 5 below, the OFA is only assisting in cost forecasting.

**Commented [GH8]:** Question – then who is responsible for this?

**Formatted:** Font: Not Bold

**Formatted:** Indent: Left: 0.25", Hanging: 0.25"

**Commented [SQ29]:** The only change outlined in the latest version.

**Commented [KR10]:** Does the OFA agree that there should be a provision contemplating agreement on the forecasts? Would it be sufficient to simply reqire tht senior management be briefed?

**Formatted:** Font: Not Bold

**Formatted:** Font: Not Bold

**6. Review and Termination**

a) The Ministry and the OFA will review this MOU annually.

b) This MOU may be terminated by either party at any time, on 90 days notice.

c) Upon termination of this MOU, the OFA will cease to make any Payments.

d) The parties will cooperate to help to ensure a smooth transition of the payment function upon termination.

**7. No Service Charges**

The OFA will not charge the Ministry for the OFA's services or for its disbursements or other expenses incurred under this MOU.

**8. Contacts**

a) Each party shall designate a member of its staff to be a contact person for the purposes of administering this MOU.

**Subject:** Fwd: MoE - OFA MOU for OREC

Hi John,

See Kens comment in the attached. He has a good point in the sense as to what sort of "are in agreement" looks like, especially since we seen that Energys PRRT didn't really mention the OFA as playing a role in the forecasting.

Hi Caroline/Ken,

We have received a marked up version of the MOU between the OFA and MoE related to the OREC regulation. I did a quick blackline and there were actually other changes that were not highlighted and was advisable to check with you whether you see any issues/comments. The changes seem to revolve around the definitions of the program etc.

V3_clean = what we had last sent over
DAP Nov 25 = the latest markup we received
Track changes to v3_clean - quick blackline to show additional changes not shown in the markup received.

Hoping you can take a quick look.

Thank you,
Salman

**Memorandum of Understanding**
**Relating to the**
**Ontario Rebate for Electricity Consumers**

**Dated:** **, 2016**

Commented [RH1]: TBD

**Between:**

**Her Majesty the Queen in right of Ontario**
as represented by the Minister of Energy ("**Ministry**")

**And:**

**Ontario Financing Authority**
an agency of the Province of Ontario (the "**OFA**")

**Whereas:**

1. Pursuant to the [*Ontario Rebate for Electricity Consumers Act, 2016* (the "Act")] ~~– NTD, pending the legislature considering the Bill], including~~ and the regulations thereunder ~~(~~the ~~"~~Act~~")~~, certain electricity consumers will be entitled to receive ~~a credit, known as the~~ financial assistance, which is called the "Ontario Rebate for Electricity Consumers" or "OREC" in this Memorandum of Understanding ("MOU") ~~called the "Ontario Rebate for Electricity Consumers ("" or "OREC"), against"~~, in respect of the cost of electricity consumed by them ~~during the period~~ commencing January 1, 2017;

2. ~~Funds in respect of the~~ Reimbursement for OREC provided to electricity consumers and persons receiving invoices from unit sub-meter providers ("~~Reimbursement~~Payments") will flow to ~~most~~specified electricity distributors, retailers and unit sub-metering providers ("Payment Recipients") through the Independent Electricity System Operator ("IESO") in accordance with the Act~~, its regulations and the Market Rules~~;

Commented [GH2]: Not sure what this means. Are they different kind of electricity consumers?

Commented [GH3]: I changed this term to "Payments" to avoid double definition. In #3 it seems that "reimbursement" was re-defined as "Payments".

3. Under the Act, the Ministry will be required to pay amounts to the IESO on account of the ~~OREC~~Reimbursement ~~(the "~~Payments~~")~~ out of amounts appropriated by the Legislature for that purpose ("Appropriated Amount");

4. The Ministry considers it advisable for the OFA to make the Payments on behalf of the Ministry, which ~~and~~ the OFA has agreed to ~~make the Payments on behalf of the Ministry~~;

5. The Ministry and the OFA have also agreed to work together on OREC cost forecasting;

6. The Ministry and the OFA wish to enter into this MOU pursuant to clause 7 (3)(f) of the *Ministry of Energy Act, 2011* and subsection 30 (1) of the *Capital Investment Plan Act, 1993* to confirm their agreement regarding the terms on which the OFA will make the

Payments and on which the Ministry and the OFA will work together on OREC cost forecasting.

**Therefore:**

The Ministry and the OFA agree as follows:

**1. Payment Authorization**

(i) The Ministry authorizes the OFA to make the Payments on behalf of the Ministry and the OFA agrees to make the Payments on behalf of the Ministry.

(ii) The Ministy shall ensure that the certificate under section 11.4 of the *Financial Administration Act* required for each of the Payments is obtained.

(iii) It is agreed by the Ministry and the OFA that the OFA is acting as an agent, on behalf of the Ministry, for the purposes of

i. Transacting with the Ontario Shared Services "IFIS" system in order to access funds appropriated for the Ministry in respect of the Act, and

ii. Making the required Payments on behalf of the Ministry as further described in this MOU.

**2. Payment Process**

~~a) The Ministry is registered with the IESO as an IESO Program Participant.~~

a) The Ministry has an account with the IESO under which the IESO will issue invoices to the Ministry for the Payments. The IESO will provide the Ministry with access to these invoices by giving the Ministry access to a secure IESO portal containing these invoices ("IESO Portal").

~~c)~~b) The Ministry will take all necessary steps to provide the OFA with access to the ~~Ministry's~~ IESO ~~account and will arrange for~~Portal so that the OFA ~~to~~will have access to each IESO invoice to the Ministry, at the same time the IESO issues the invoice to the Ministry.

~~d)~~c) The OFA will make the Payments on behalf of the Ministry, in the amount of the IESO invoices, within XX business days upon receiving the invoices.

~~e)~~d) The Payments will be made in accordance with the IESO Market Rules and IESO Manuals for settlements and billing of market participants, as amended from time to time.

~~f)~~e) The Payments will be made from the Consolidated Revenue Fund and the amount of each Payment will be entered by the OFA into the Province's IFIS system under a pre-defined Ministry account immediately upon the completion of the Payment or shortly thereafter.

**3. Reporting Requirements and Records**

**Commented [GH4]:** Do we need to define in how many business days?

a) The OFA will deliver a notice by e-mail to the Ministry's contact person to confirm the completion of each Payment in the amount of the IESO invoice.

b) The OFA will keep and maintain all records related to the OREC for a period of seven (7) years, and will ensure that the Ministry has full access to such records.

c) The requirements under this section shall survive any termination of the MOU.

d) The Public Accounts, Volume 3 reporting related to the Payments will be performed by the Ministry.

~~e)~~

**4. OREC Cost Forecasting**

a) The Ministry and the OFA will work together to prepare and review cost forecasts, estimates, and analysis related to the OREC.

b) The Ministry will provide to the Corporate and Electricity Finance Division of the OFA all IESO invoices and settlement statements relating to the OREC, and any reports by OREC transfer payment recipients (e.g. Local Distribution Companies, retailers, and unit sub-metering providers) to the IESO, that are received by the Ministry. This includes providing electronic portal access to ~~complete and accurate~~related data and reports by OREC transfer payment recipients expected to be provided through an electronic portal reporting process~~.~~.

c) The OFA will collaborate with ~~and~~ the Ministry ~~will collaborate~~ to prepare fiscal year cost estimates and monthly cashflow estimates for OREC.

d) The Ministry and the OFA acknowledge and agree that the actual costs of OREC may not be the same as the forecasted costs, and the OFA bears no liability for any differences between the forecast and actual costs of OREC, nor does the OFA have any responsibility for any application to Treasury Board for a change in the appropriated amount for OREC.

e) The OFA and the Ministry will ensure senior management in their respective organizations are briefed and updated on the OREC forecasting on a regular basis to ensure there is mutual understanding and agreement ~~of~~on the forecasts.

**5. Limited Role of the OFA**

The OFA will only be responsible for making the Payments in accordance with section 2 and assisting in OREC cost forecasting in accordance with section 4. For greater clarity, the OFA will not be responsible for any differences between the forecast and actual costs of OREC, auditing or otherwise verifying the correctness of the IESO invoices, monitoring the IESO's application of the Payments, monitoring the balance from time to time of the Appropriated Amount, or ensuring the Appropriated Amount is sufficient.

**Commented [GH5]:** Will there be a general mailbox? The contact person might change from time to time.

**Commented [SQ26]:** What would this access look like? Are they expecting us to set up up an external site with all of our files/modeling as well?

Just need to clarify expectations.

**Commented [KR7]:** I would not expect this ti be anything other than physical access. You may wish to clarify this point.

**Commented [GH8]:** I am not sure what this sentence means or trying to say.

**Commented [GH9]:** According to section 5 below, the OFA is only assisting in cost forecasting.

**Commented [GH10]:** Question – then who is responsible for this?

**Formatted:** Font: Not Bold

**Formatted:** Indent: Left: 0.25", Hanging: 0.25"

**Commented [SQ211]:** The only change outlined in the latest version.

**Commented [KR12]:** Does the OFA agree that there should be a provision contemplating agreement on the forecasts? Would it be sufficient to simply reqire tht senior management be briefed?

**Formatted:** Font: Not Bold

**Formatted:** Font: Not Bold

**6. Review and Termination**

a) The Ministry and the OFA will review this MOU annually.

b) This MOU may be terminated by either party at any time, on 90 days notice.

c) Upon termination of this MOU, the OFA will cease to make any Payments.

d) The parties will cooperate to help to ensure a smooth transition of the payment function upon termination.

**7. No Service Charges**

The OFA will not charge the Ministry for the OFA's services or for its disbursements or other expenses incurred under this MOU.

**8. Contacts**

a) Each party shall designate a member of its staff to be a contact person for the purposes of administering this MOU.

b) As of the date of this MOU the OFA's contact person is:

Tel:
email:

Formatted: Highlight

c) As of the date of this MOU the Ministry's contact person is:

Tel:
email:

Formatted: Highlight

d) Either party may designate a different member of its staff as its contact person by providing notice to the other party in accordance with section 9.

**9. Notice**

a) Any notice under this MOU shall be in writing and shall be deemed given when delivered by hand or email, and addressed to the party's contact person.

b) In the case of the OFA, the addresses for notice are:
Hand Delivery:
Ontario Financing Authority
Suite 1400
1 Dundas St. W.
Attention:

Formatted: Highlight

email:

c) In the case of the Ministry, the addresses for notice are:
Hand Delivery:
Ministry of Energy
880 Bay Street, 5th Floor
Attention:
email:

Formatted: Highlight

1. Pursuant to the ~~[~~*Ontario Rebate for Electricity Consumers Act, 2016*~~] – NTD, pending the legislature considering the Bill], including~~ and the regulations thereunder (the "Act"), certain consumers will be entitled to receive ~~a credit, known as the~~ financial assistance, in this Memorandum of Understanding ("MOU") called the "Ontario Rebate for Electricity Consumers ("~~" or "~~OREC"), against~~", in respect of~~ the cost of electricity consumed by them ~~during the period~~ commencing January 1, 2017;

2. ~~Funds in respect of the~~ Reimbursement for OREC provided to consumers and persons receiving invoices from unit sub-meter providers ("Reimbursement") will flow to ~~most~~specified electricity distributors, retailers and unit sub-metering providers ("Payment Recipients") through the Independent Electricity System Operator ("IESO") in accordance with the Act~~, its regulations and the Market Rules~~;

3. Under the Act, the Ministry will be required to pay amounts to the IESO on account of the OREC Reimbursement (the "Payments") out of amounts appropriated by the Legislature for that purpose ("Appropriated Amount");

4. The Ministry considers it advisable for the OFA to make the Payments on behalf of the Ministry and the OFA has agreed to make the Payments on behalf of the Ministry;

5. The Ministry and the OFA have also agreed to work together on OREC cost forecasting;

6. The Ministry and the OFA wish to enter into this MOU pursuant to clause 7 (3)(f) of the *Ministry of Energy Act* and subsection 30 (1) of the *Capital Investment Plan Act, 1993* to confirm their agreement regarding the terms on which the OFA will make the Payments and on which the Ministry and the OFA will work together on OREC cost forecasting.

**Therefore:**

The Ministry and the OFA agree as follows:

1. **Payment Authorization**

   (i) The Ministry authorizes the OFA to make the Payments on behalf of the Ministry and the OFA agrees to make the Payments on behalf of the Ministry.

   (ii) The Ministy shall ensure that the certificate under section 11.4 of the *Financial Administration Act* required for each of the Payments is obtained.

   (iii) It is agreed by the Ministry and the OFA that the OFA is acting as agent, on behalf of the Ministry, for the purposes of

      i. Transacting with the Ontario Shared Services "IFIS" system in order to access funds appropriated for the Ministry in respect of the Act, and

      ii. Making the required Payments on behalf of the Ministry as further described in this MOU.

2. **Payment Process**

   ~~a) The Ministry is registered with the IESO as an IESO Program Participant.~~

   a) The Ministry has an account with the IESO under which the IESO will issue invoices to the Ministry for the Payments. The IESO will provide the Ministry with access to these invoices by giving the Ministry access to a secure IESO portal containing these invoices ("IESO Portal").

   ~~c)~~b) The Ministry will take all necessary steps to provide the OFA with access to the ~~Ministry's~~ IESO ~~account and will arrange for~~Portal so that the OFA ~~to~~will have access to each IESO invoice to the Ministry, at the same time the IESO issues the invoice to the Ministry.

   ~~d)~~c) The OFA will make the Payments on behalf of the Ministry, in the amount of the IESO invoices.

   ~~e)~~d) The Payments will be made in accordance with the IESO Market Rules and IESO Manuals for settlements and billing of market participants, as amended from time to time.

   ~~f)~~e) The Payments will be made from the Consolidated Revenue Fund and the amount of each Payment will be entered by the OFA into the Province's IFIS system under a pre-defined Ministry account immediately upon the completion of the Payment or shortly thereafter.

3. **Reporting Requirements and Records**

a) The OFA will deliver a notice by e-mail to the Ministry's contact person to confirm the completion of each Payment in the amount of the IESO invoice.

b) The OFA will keep and maintain all records related to the OREC for a period of seven (7) years, and will ~~ensure that~~provide the Ministry with electronic copies (or paper copies, if requested by the Ministry) of ~~has full access to~~ such of those records as the Ministry may request from time to time.

c) The requirements under this section shall survive any termination of the MOU.

d) The Public Accounts, Volume 3 reporting related to the Payments will be performed by the Ministry.

~~e)~~

**4. OREC Cost Forecasting**

a) The Ministry and the OFA will work together to prepare and review cost forecasts, estimates, and analysis related to the OREC.

b) The Ministry will provide to the Corporate and Electricity Finance Division of the OFA all IESO invoices and settlement statements relating to the OREC, and any reports by OREC transfer payment recipients (e.g. Local Distribution Companies, retailers, and unit sub-metering providers) to the IESO, that are received by the Ministry. This includes providing electronic portal access to ~~complete and accurate~~ data and reports by OREC transfer payment recipients expected to be provided through an electronic portal reporting process~~.~~.

c) The OFA and the Ministry will collaborate to prepare fiscal year cost estimates and monthly cashflow estimates for OREC.

d) The Ministry and the OFA acknowledge and agree that the actual costs of OREC may not be the same as the forecasted costs, and the OFA bears no liability for any differences between the forecast and actual costs of OREC, nor does the OFA have any responsibility for any application to Treasury Board for a change in the appropriated amount for OREC.

e) The OFA and the Ministry will ensure senior management in their respective organizations are briefed and updated on the OREC forecasting on a regular basis to ensure there is mutual understanding and agreement ~~of~~on the forecasts.

**Commented [SQ22]:** The only change outlined in the latest version.

**Commented [KR3]:** Does the OFA agree that there should be a provision contemplating agreement on the forecasts? Would it be sufficient to simply reqire tht senior management be briefed?

**5. Limited Role of the OFA**

The OFA will only be responsible for making the Payments in accordance with section 2 and assisting in OREC cost forecasting in accordance with section 4. For greater clarity, the OFA will not be responsible for auditing or otherwise verifying the correctness of the IESO invoices, monitoring the IESO's application of the Payments, monitoring the balance from time to time of the Appropriated Amount, or ensuring the Appropriated Amount is sufficient.

**6. Review and Termination**

a) The Ministry and the OFA will review this MOU annually.

b) This MOU may be terminated by either party at any time, on 90 days notice.

c) Upon termination of this MOU, the OFA will cease to make any Payments.

d) The parties will cooperate to help to ensure a smooth transition of the payment function upon termination.

**7. No Service Charges**

The OFA will not charge the Ministry for the OFA's services or for its disbursements or other expenses incurred under this MOU.

**8. Contacts**

a) Each party shall designate a member of its staff to be a contact person for the purposes of administering this MOU.

b) As of the date of this MOU the OFA's contact person is:

Tel:
email:

c) As of the date of this MOU the Ministry's contact person is:

Tel:
email:

d) Either party may designate a different member of its staff as its contact person by providing notice to the other party in accordance with section 9.

**9. Notice**

a) Any notice under this MOU shall be in writing and shall be deemed given when delivered by hand or email, and addressed to the party's contact person.

b) In the case of the OFA, the addresses for notice are:
Hand Delivery:
Ontario Financing Authority
Suite 1400
1 Dundas St. W.

Attention:
email:

c) In the case of the Ministry, the addresses for notice are:
Hand Delivery:
Ministry of Energy
880 Bay Street, 5th Floor
Attention:
email:

**10. Execution**

The parties have executed this MOU, effective as of the date first above written.

**Her Majesty the Queen in right of Ontario**

Hi Ken,

Quick question in the attached MOU. In bullet #2, "reimbursements" was defined, and then in #3, "reimbursements" was re-defined as "payments". Can we not just use the term "payments" across the whole document? Could you please let us know what your thoughts are on this?

Thanks,
Gavin He

Hi Caroline/Ken,

We have received a marked up version of the MOU between the OFA and MoE related to the OREC regulation. I did a quick blackline and there were actually other changes that were not highlighted and was advisable to check with you whether you see any issues/comments. The changes seem to revolve around the definitions of the program etc.

V3_clean = what we had last sent over
DAP Nov 25 = the latest markup we received
Track changes to v3_clean - quick blackline to show additional changes not shown in the markup received.

Hoping you can take a quick look.

Thank you,
Salman

**Memorandum of Understanding**
**Relating to the**
**Ontario Rebate for Electricity Consumers**

**Dated:** **, 2016**

Commented [RH1]: TBD

**Between:**

**Her Majesty the Queen in right of Ontario**
as represented by the Minister of Energy ("**Ministry**")

**And:**

**Ontario Financing Authority**
an agency of the Province of Ontario (the "**OFA**")

**Whereas:**

1. Pursuant to the ~~[~~*Ontario Rebate for Electricity Consumers Act, 2016*~~] – NTD, pending the legislature considering the Bill], including~~ and the regulations thereunder (the "Act"), certain consumers will be entitled to receive ~~a credit, known as the~~ financial assistance, in this Memorandum of Understanding ("MOU") called the "Ontario Rebate for Electricity Consumers ("~~" or "~~OREC"), against~~", in respect of~~ the cost of electricity consumed by them ~~during the period~~ commencing January 1, 2017;

2. ~~Funds in respect of the~~ Reimbursement for OREC provided to consumers and persons receiving invoices from unit sub-meter providers ("~~Reimbursement~~Payments") will flow to ~~most~~specified electricity distributors, retailers and unit sub-metering providers ("Payment Recipients") through the Independent Electricity System Operator ("IESO") in accordance with the Act~~, its regulations and the Market Rules~~;

Commented [GH2]: Not sure what this means. Are they different kind of electricity consumers?

Commented [GH3]: I changed this term to "Payments" to avoid double definition. In #3 it seems that "reimbursement" was re-defined as "Payments".

3. Under the Act, the Ministry will be required to pay amounts to the IESO on account of the ~~OREC~~Reimbursement ~~(the "~~Payments~~")~~ out of amounts appropriated by the Legislature for that purpose ("Appropriated Amount");

4. The Ministry considers it advisable for the OFA to make the Payments on behalf of the Ministry and the OFA has agreed to make the Payments on behalf of the Ministry;

5. The Ministry and the OFA have also agreed to work together on OREC cost forecasting;

6. The Ministry and the OFA wish to enter into this MOU pursuant to clause 7 (3)(f) of the *Ministry of Energy Act* and subsection 30 (1) of the *Capital Investment Plan Act, 1993* to confirm their agreement regarding the terms on which the OFA will make the Payments and on which the Ministry and the OFA will work together on OREC cost forecasting.

**Therefore:**

The Ministry and the OFA agree as follows:

1. **Payment Authorization**

   (i) The Ministry authorizes the OFA to make the Payments on behalf of the Ministry and the OFA agrees to make the Payments on behalf of the Ministry.

   (ii) The Ministy shall ensure that the certificate under section 11.4 of the *Financial Administration Act* required for each of the Payments is obtained.

   (iii) It is agreed by the Ministry and the OFA that the OFA is acting as agent, on behalf of the Ministry, for the purposes of

      i. Transacting with the Ontario Shared Services "IFIS" system in order to access funds appropriated for the Ministry in respect of the Act, and

      ii. Making the required Payments on behalf of the Ministry as further described in this MOU.

2. **Payment Process**

   ~~a) The Ministry is registered with the IESO as an IESO Program Participant.~~

   a) The Ministry has an account with the IESO under which the IESO will issue invoices to the Ministry for the Payments. The IESO will provide the Ministry with access to these invoices by giving the Ministry access to a secure IESO portal containing these invoices ("IESO Portal").

   ~~c)~~b) The Ministry will take all necessary steps to provide the OFA with access to the ~~Ministry's~~ IESO ~~account and will arrange for~~Portal so that the OFA ~~to~~will have access to each IESO invoice to the Ministry, at the same time the IESO issues the invoice to the Ministry.

   ~~d)~~c) The OFA will make the Payments on behalf of the Ministry, in the amount of the IESO invoices.

   ~~e)~~d) The Payments will be made in accordance with the IESO Market Rules and IESO Manuals for settlements and billing of market participants, as amended from time to time.

   ~~f)~~e) The Payments will be made from the Consolidated Revenue Fund and the amount of each Payment will be entered by the OFA into the Province's IFIS system under a pre-defined Ministry account immediately upon the completion of the Payment or shortly thereafter.

3. **Reporting Requirements and Records**

a) The OFA will deliver a notice by e-mail to the Ministry's contact person to confirm the completion of each Payment in the amount of the IESO invoice.

b) The OFA will keep and maintain all records related to the OREC for a period of seven (7) years, and will ensure that the Ministry has full access to such records.

c) The requirements under this section shall survive any termination of the MOU.

d) The Public Accounts, Volume 3 reporting related to the Payments will be performed by the Ministry.

~~e)~~

**Commented [SQ24]:** What would this access look like? Are they expecting us to set up up an external site with all of our files/modeling as well?

Just need to clarify expectations.

**Commented [KR5]:** I would not expect this ti be anything other than physical access. You may wish to clarify this point.

## 4. OREC Cost Forecasting

a) The Ministry and the OFA will work together to prepare and review cost forecasts, estimates, and analysis related to the OREC.

b) The Ministry will provide to the Corporate and Electricity Finance Division of the OFA all IESO invoices and settlement statements relating to the OREC, and any reports by OREC transfer payment recipients (e.g. Local Distribution Companies, retailers, and unit sub-metering providers) to the IESO, that are received by the Ministry. This includes providing electronic portal access to ~~complete and accurate~~ data and reports by OREC transfer payment recipients expected to be provided through an electronic portal reporting process~~-~~.

c) The OFA and the Ministry will collaborate to prepare fiscal year cost estimates and monthly cashflow estimates for OREC.

d) The Ministry and the OFA acknowledge and agree that the actual costs of OREC may not be the same as the forecasted costs, and the OFA bears no liability for any differences between the forecast and actual costs of OREC, nor does the OFA have any responsibility for any application to Treasury Board for a change in the appropriated amount for OREC.

e) The OFA and the Ministry will ensure senior management in their respective organizations are briefed and updated on the OREC forecasting on a regular basis to ensure there is mutual understanding and agreement ~~of~~on the forecasts.

**Formatted:** Font: Not Bold

**Formatted:** Indent: Left: 0.25", Hanging: 0.25"

**Commented [SQ26]:** The only change outlined in the latest version.

**Commented [KR7]:** Does the OFA agree that there should be a provision contemplating agreement on the forecasts? Would it be sufficient to simply reqire tht senior management be briefed?

## 5. Limited Role of the OFA

The OFA will only be responsible for making the Payments in accordance with section 2 and assisting in OREC cost forecasting in accordance with section 4. For greater clarity, the OFA will not be responsible for auditing or otherwise verifying the correctness of the IESO invoices, monitoring the IESO's application of the Payments, monitoring the balance from time to time of the Appropriated Amount, or ensuring the Appropriated Amount is sufficient.

## 6. Review and Termination

a) The Ministry and the OFA will review this MOU annually.

b) This MOU may be terminated by either party at any time, on 90 days notice.

c) Upon termination of this MOU, the OFA will cease to make any Payments.

d) The parties will cooperate to help to ensure a smooth transition of the payment function upon termination.

**7. No Service Charges**

The OFA will not charge the Ministry for the OFA's services or for its disbursements or other expenses incurred under this MOU.

**8. Contacts**

a) Each party shall designate a member of its staff to be a contact person for the purposes of administering this MOU.

b) As of the date of this MOU the OFA's contact person is:

Tel:
email:

Formatted: Highlight

c) As of the date of this MOU the Ministry's contact person is:

Tel:
email:

Formatted: Highlight

d) Either party may designate a different member of its staff as its contact person by providing notice to the other party in accordance with section 9.

**9. Notice**

a) Any notice under this MOU shall be in writing and shall be deemed given when delivered by hand or email, and addressed to the party's contact person.

b) In the case of the OFA, the addresses for notice are:
Hand Delivery:
Ontario Financing Authority
Suite 1400
1 Dundas St. W.
Attention:
email:

Formatted: Highlight

c) In the case of the Ministry, the addresses for notice are:

Hi Ken,

In addition to the question below, Energy updated the language in the MOU Section 3. (b) to be:

"The OFA will keep and maintain all records related to the OREC for a period of seven (7) years, and will provide the Ministry with electronic copies (or paper copies, if requested by the Ministry) of such of those records as the Ministry may request from time to time."

Can you please let us know if you are okay with the revised language?

Hi,

All look fine to me. I've got very minor comments in two of the files with v2a or v3a versions.

Two comments. On RRRP, the drafts generally leave out "per year" in the cost figures and just mention $110million, for example. I take it that it's implied and deliberate so did not touch. It says in one of the above mentioned versions that ICI benefits by reducing bills by about a third. In 2016 Budget, we had about 25%.

Also, agree on the 330,000 R2. My suggestion would be to point out and suggest Energy to reword. In the final submission, it says about 329,000 R2 customers. While unlikely to be problematic, not sure if we want to take the liberty of saying "more than".

John.

Hi Shajee,

Thanks. I'll leave it to Energy on "Electricity" -- it does appear elsewhere, but the program short form of RRRP leaves out the "E", so it may be considered implied in the context.

Subject: New price mitigation products for review

Hi everyone,

Please find attached new MOE products for review. I have tracked changes on the new September 15 news release that speaks to the introduction of the bill to ensure it was consistent with the language in last news release we just finalized. MOE has also added small farms to the users that benefit from this program in this new release - I have deleted that, but it may be worth considering if we want to add it. New components on the release include mention of additional programs and a new quote from Minister Thibeault that definitely should be reviewed.

Please send your edits/changes to these products as soon as possible as CO/PO still needs to review everything. A reminder to please keep changes consistent with the discussions we've been having throughout the day, if possible - I realize there is also some new material that may warrant further discussion.

Thanks,
Lesley

Subject: New price mitigation products for review

Hi everyone,

Please find attached new MOE products for review. I have tracked changes on the new September 15 news release that speaks to the introduction of the bill to ensure it was consistent with the language in last news release we just finalized. MOE has also added small farms to the users that benefit from this program in this new release - I have deleted that, but it may be worth considering if we want to add it. New components on the release include mention of additional programs and a new quote from Minister Thibeault that definitely should be reviewed.

Please send your edits/changes to these products as soon

as possible as CO/PO still needs to review everything. A reminder to please keep changes consistent with the discussions we've been having throughout the day, if possible - I realize there is also some new material that may warrant further discussion.

Thanks,
Lesley

Hi Ron,

Sure, that's a possibility. Not really a major point but in the Cab sub (p.19), it says that the benefit to ICI participants in the long-term could be "up to 34%", seemingly signalling that that's the top end estimate for the newly eligible participants.

It may end up being the new factchecked messaging for use going forward. :)

John.

Hi,

Sorry for not watching the auto correct.

I meant to write "I could speculate that because the 1-3 MW customers pay more than the larger, excluding the impact of ICI, then the percentage reduction from ICI is potentially larger."

Ron

My thinking was that the budget number was on average a reduction of 25% vs the reference here being 'up to' one third reduction.

Depending on the load shifting abilities of the consumer I don't think there's anything inconsistent with these statements.

Sent from my mobile device, please excuse any typos or brevity.

Hi John,

Thanks. If energy has not provided their calculations, I could speculate that because the 1-3 MW customers at more now that the larger, excluding the impact of ICI, that the recent age reduction is potentially larger.

No rush, but Can EFB do an estimate?

Ron

>
> Two comments. On RRRP, the drafts generally leave out "per year" in the cost figures and just mention $110million, for example. I take it that it's implied and deliberate so did not touch. It says in one of the above mentioned versions that ICI benefits by reducing bills by about a third. In 2016 Budget, we had about 25%.
>
> Also, agree on the 330,000 R2. My suggestion would be to point out and suggest Energy to reword. In the final submission, it says about 329,000 R2 customers. While unlikely to be problematic, not sure if we want to take the liberty of saying "more than".

Hi Shajee,

Thanks. I'll leave it to Energy on "Electricity" -- it does appear elsewhere, but the program short form of RRRP leaves out the "E", so it may be considered implied in the context.

Ron

Hi Ron,

I'm fine with all edits, just two questions:

- In the Key Facts - New Initiatives, my understanding is the program will still be called 'Remote or Rural Electricity Rate Protection (RRRP) program'. I noticed the that edit was rejected.

- For clarification, the RRRP as it currently stands (~175M) includes support for R2 customers (125-127M). This initiative raises the support for R2 customers by $110M.
  - Would you know who are the non-R2 RRRP customers?
  - I agree, with your comment in the September 15 NR near the end. This might have to be reworded.

Thanks,
Shajee

Hi Shajee,

What I am thinking is getting a stock of all the tax-based price support program, of which NIER might be the only one, and start building a policy options deck on offsets for the big 1bn one. The C&T could definitely be another one.

Thanks,

John.

I was thinking of elaborating on #1 and #4 from this table, below. (Granted for #4 we can mention the $270M vs $330M below). Is that what you're thinking:

| | Measure | Targeted Recipients | Impact (annually) | |
|---|---|---|---|---|
| | | | Fiscal | Rate Base |
| **1.** | 8% Rebate to Regulated Price Plan | Residential, small business, small farms and other small users | $1B | - |
| **2.** | Expanding ICI eligibility to customers above 1MW in all sectors | Intermediate and large-sized industrial, commercial and institutional consumers above 1MW in all sectors | - | $47M/ $82M* |
| **3.** | Updating Rural or Remote Rate Protection | Residents in rural or remote locations: Hydro One's lowest-density R2 customers. | - | $110M |
| **4.** | Redirecting cap and trade proceeds recycling; provide fiscal offsets to the 8% rebate | Commercial and industrial electricity customers | -$60M** | - |

Scott dropped by this morning and wanted to make sure we were already taking steps to build the next fiscal architecture deck that included options for closing the gap – of course, all pending the outcome of the FPC discussion this morning and other conversations taking place over the next day or so on the deck.

My folks have already started thinking about the structure of such a deck, but like all these things, it will require collaboration across our divisions.

The deck will essentially take the hand-off from today's deck by showing the gap, then outlining considerations for approaching it and options for consideration – and will need to have revenue, expense and other option.

This is potentially a conversation that will be needed at FPC next week.

Darren,

Your name was provided by a colleague at the Ministry of Finance as a potential point of contact regarding some potential changes to an electricity rebate program.

You may know that the PO is looking at ways to shift costs out of the electricity rate base. I would like to touch base with the OFA on one option in particular – the Ontario Electricity Support Program.

We have begun a discussion with MCSS to better understand if there are opportunities to align with existing low-income support programs. However, it's important to also consider other tax-based methods to deliver this program (e.g. Ontario Trillium Benefit).

I will be away next week, but hope there's a chance to connect early in the week of January 9th. Michael Beare is the file lead and will be available to answer questions prior to meeting.

Regards,
Brett

Hi Nadine,

I`d rather not speak for the IESO on its market books vs its operating statements. It did seem that it recorded the RPP amounts, including the amounts related to the draws on the OFA credit facility to finance short-term variances, on the market books, not its operating statements.

Perhaps John could recap more, but reaching out to Kim and her staff would be best.

Ron

**Subject:** RE: OFA-IESO loan

Thanks Ronald. Is there something that explains more about the two sets of books? I joined the call late and I'm trying to piece together the comments that were being made on the call. Kim indicated that only debt related to the IESO's operating costs is reflected on the f/s. Additional insight into the two sets of books and how the debt referenced below factors in would be most appreciated.
Thanks in advance.

**Subject:** RE: OFA-IESO loan

Hi Nadine,

Leaving to Ken to respond on how this is recorded in the OFA, but for your benefit, a few bits of background:

- The IESO has an up to $975 million credit facility in place with the OFA. This credit facility is part of a series that was originally put in place for the Ontario Power Authority, and helps support its obligations under the regulated price plan.
- It is provided on a revolving basis, with each draw maturing within one, two or three month(s).
- The interest rate charged on any balance of the credit facility is equal to the Province's cost of borrowing for a similar term, plus 25 basis points.

- In the last five years, the IESO has had an outstanding amount as high as $280 million in February 2013 under this credit facility.
- Recent IESO draws have included approximately $95 million under the facility on August 19, 2016, which was repaid on September 19, 2016, approximately $46 million on September 19, 2016, repaid on October 19, 2016 and $15.4 million on October 19, 2016, repaid November 30, 2016 (TBC). This is based on a BN from last fall, when a new credit facility was being approved to replace the expiring one. Staff can likely provide information on more recent activity.

This information is for your background information and I hope that it helps provide some context. It may not be in the public domain, so not sure about sharing it more widely.

Ken/John,

Not sure if you are the right person to ask, but can you please help to get the answer for $100M RRP program support that OFA provides to IESO? We are interested in how this loan is recorded (i.e. on the books vs. market)? if on the books where? And if market how it works?

Thanks,
Bharat

**Attachments:** MO Bi-Weekly November 28a.docx

---

Hi Gavin,

I need to check one more thing on Monday but take a look to see if this is okay.

On MO weekly, I don't usually engage EFB staff. Only when I am really pressed and when seeking ideas.

Thanks,

John.

**Subject:** PLEASE REVIEW: MO Bi-Weekly

Hi Team,

I have updated the MO Bi-weekly based on what we provided on November 15th. I am not sure if there's any update on IESO credit facility, Salman could you please verify?

I made some updates to the DRC regulation based on the updates we had this week. Please take a look and let me know if there's anything I missed.

With regards to the policy one-pager, I am not sure if we have any update for that?

Please note that we need to provide the updates back to Ron on Monday morning.

For your convenience, below is the update for DRC:

## 1. Debt Retirement Charge (DRC) Regulation Update:

- Ministry of Energy has proposed amendments to the 2005 Net Metering Regulation (O. Reg. 541/05) in the Ontario Energy Board Act, 1998, which includes removing the 500 kilowatts (kW) maximum output capacity restriction to expand the eligibility to larger customers. The intention of that proposal is to enable larger customers to right-size renewable energy systems to their load.
    - Based on the most recent information, Energy is tracking to LRC on

December 13th, 2016.

- This proposal will require some changes in the Electricity Act, 1998 as well, specifically O. Reg 493/01 related to the DRC.
- This change may create fiscal impact since it will reduce DRC revenues. However, according to the impact analysis provided by Energy, the fiscal impact is very little to no impact, given the proposed change will not be implemented until July 1, 2017, and DRC is ending on April 1, 2018 (9 months overlap).
    - o According to Energy, the negative impact on DRC revenue will be up to $100,000 in the worst case scenario.
    - o TB/MBC approval is required prior to the LRC approval, although the fiscal impact is small.
- The suggested change may require a regulatory registry process, CEFD staff and MOF Legal are checking if an exemption can be granted.

Thanks,
Gavin He

**Cc:** Gavin He <Gavin.He@ofina.on.ca>
**Subject:** RE: MO Bi-Weekly

On the policy one-pager (with upcoming milestones and/or decision points and a quick refresher on

any pertinent acronyms related to the file) I took it as 1-2 pages overall for electricity-related issues coming up over the next several months, so maybe a short section, with a few bullets each to describe the issue, how it relates to mandate/priorities, decision points/ approvals required and milestones/timing, for each of the items the branches have to bring forward.

Would that work?

Thanks,
Ron

**ANNOTATED AGENDA**
**MO UPDATE: November 28, 2016**

## 1. IESO $975M Line of Credit Extension Minister's Directive Package

- CEFD staff have put together a Minister's Directive package following t~~T~~he Independent Electricity System Operator's (IESO) has request~~ed~~ for a three-year extension to December 31, 2019, of the $975 million revolving credit facility provided by the Province through the Ontario Financing Authority (OFA).
  - To accommodate this request, ~~the OFA requires~~ a new Lending Directive from the Minister of Finance before the end of November (ideally on Monday, November 28)~~in the near term~~.
  - The Minister's directive is required before OFA can proceed to finalize and enter into an amending credit agreement – all prior to the December 31, 2016 expiration date of the current agreement.
- Maintaining the $975 million credit limit will allow the IESO to provide liquidity into the electricity market to support various initiatives including the Regulated Price Plan (RPP), the Rural or Remote Electricity Rate Protection (RRRP), the new Ontario Electricity Support Program (OESP), the various conservation programs and overall market liquidity.
- The existing credit facility agreement, which expires on December 31, 2016, was last amended in December 2014 following the amalgamation of the Ontario Power Authority (OPA) and the IESO where the new "IESO" assumed all rights and obligations under the existing OFA-OPA $975 million credit agreement.

## 2. Debt Retirement Charge (DRC) Regulation Update:

- Ministry of Energy has proposed amendments to the 2005 Net Metering Regulation (O. Reg. 541/05) in the Ontario Energy Board Act, 1998, which includes removing the 500 kilowatts (kW) maximum output capacity restriction to expand the eligibility to larger customers. The intention of that proposal is to enable larger customers to right-size renewable energy systems to their load.
  - Based on the most recent information, Energy is tracking to LRC on ~~November 28~~December 13th, 2016.
- ~~CEFD staff was informed during a call with Energy counterparts last week that t~~This proposal will~~/may~~ require ~~some~~ corresponding change~~s in the Electricity Act, 1998 as well, specifically~~ to the definition of net metering generation facility in O. Reg 493/01 related to the DRC, a regulation under the Electricity Act, 1998. ~~Energy is suggesting to remove the 500 kilowatts (kW) maximum output capacity restriction under the "net metered generation facility" definition to make both regulations consistent.~~
  This change ~~may create~~ is expected to have a small fiscal impact, up to $100,000, ~~since it will reduce~~in reduced DRC revenues. ~~However, according to the impact analysis provided by Energy, the fiscal impact is very little to no impact, given the proposed change will not be implemented until July 1, 2017, and DRC is ending on April 1, 2018 (9 months overlap).~~
- ~~According to Energy, the negative impact on DRC revenue will be up to $100,000 in the worst case scenario.~~

Formatted: No underline

Formatted: No underline

- TB/MBC approval is required prior to the LRC approval~~, although the fiscal impact is small~~, and TBS staff are liaising with CO on the logistic for the December 6, 2016 TB date.
- TBS staff stressed that due to the timeline, a strong rationale regarding the timeline as well as MO (MOF) to MO (TBS) outreach would likely be required.

- The suggested change may require a regulatory registry process, CEFD staff ~~are verifying this with MOF Legal to establish for next steps. In addition, we are working with Energy to get further clarification on the requirements and alternatives.~~and MOF Legal are checking if an exemption can be granted [if pursuing the December 13 LRC date].

Hi,

Other than the addition of the fiscal slide the deck isn't significantly different from the previous version. There are a couple of additional slides in the appendix showing a jurisdictional comparison of industrial electricity prices (33) and industrial prices in Ontario by sector (34). On slide 24 (ending DRC for class B) the additional "0" in the DRC rate is still missing.

Emily

DRAFT

# Electricity Price Mitigation

Corporate and Electricity Finance Division
December 7, 2016

# General Comments on Energy's Deck

- Energy's deck note various actions taken to-date to reduce costs or cost pressures, such as deferring generation supply investments, improving market efficiency, and reducing the costs of existing procurements.
- Aside from reducing costs on the electricity bill, it is not clear what principles are being applied, short term or long term for electricity pricing.
  - A principle that was applied in the past was to ensure that electricity consumers paid the true cost of electricity, for example.
  - The Energy proposals appear to be about, in part at least, moving some costs from the rate base to the tax base.
- However, the Energy proposals may be seen as having a fairly limited impact, e.g., a little over $8/month for residential, or a little over 5% of the monthly bill (though not all of the proposals have been costed / assessed).
  - The proposals would have a significant fiscal cost.
- There is already significant amounts of existing fiscally-funded electricity price mitigation
  - Averages over $1.5 billion per year over the past five years, and estimated to increase to about $2 bn in 17-18 (see subsequent slide for estimated costs over time, and likely increasing over time).
  - These existing mitigation costs are not presented in Energy's deck.
  - Also not included is any "hidden" price mitigation through constrained financial performance of, e.g., OPG.

DRAFT

# General Comments on Energy's Deck (cont.)

- Energy is proposing additional electricity price mitigation programs, currently funded through the electricity system, be fiscally-funded, with an estimated impact of about $0.4 billion initially, and rising over time.
  - This includes shifting the cost of the Ontario Electricity Support Program (OESP) and the Rural or Remote Electricity Rate Program (RRRP) to the tax base.
  - Note that the fiscal exposure is larger if the OESP take up rate is larger, faster than assumed.

- Industrial Conservation Initiative (ICI): Energy also shows, as a potential residential price mitigation measure, the cancellation of the ICI.
  - Energy is not initially proposing it be continued instead as taxpayer funded, but notes the about 30% price increase (from $85/MWH to $110), if ICI is cancelled, for the large Class A customers benefiting from ICI currently (at a cost shift of about $900 million per year in 2016).
  - As this cost estimate is for 2016, prior to the planned expansion of the ICI, this could further increase the fiscal exposure by about $xxx million).

- Departure Tax: As a result of the IPO, Hydro One paid a "departure tax" payment in lieu of tax (PIL) of $2.6 billion, as a final true-up of its PILs tax obligation.
  - This was paid to the Ontario Electricity Financial Corporation and helped reduce stranded debt.
  - Using some or all of it for price mitigation would change the net stranded debt paydown by OEFC resulting from the IPO. This would also be a one-time measure (potentially over a few years), and fiscal impact, as the departure tax amount was one-time.

- Other fiscal cost risks:
  - Amortisation of conservation costs also poses a fiscal risk (about $0.4 bn/yr),
  - Ending the DRC early for Class B customers (commercial, small industrial) (about $0.4 bn/yr to 2017-18)
  - Lowering of the debt interest paid by OPG (about $xx – yy million/yr),

# Electricity Price Mitigation

General Decision Points on Program Features:

- Funding: Rate base vs Tax base
  - Tax base programs have a direct fiscal impact on the Province's finances, and shift costs based on taxpayer incidence and impact on expenditure room for other, non-electricity, programs.
  - Rate base programs shift costs from one group of ratepayers to another.
- On-bill vs Not On-bill
  - Recent focus has been on on-bill programs, such as OESP and OREC.
  - Older tax-base funded programs that are not visible on the bill are still in place, such as NOEC and OEPTC.
  - As OESP enrollment increases, could consider phasing out the non-bill benefits of NOEC and OEPTC.
- Targeted vs General
  - Recent new programs include both general (OREC) and targeted (OESP) programs.
  - Consideration could be made to make OREC more conservation-friendly (e.g., a monthly eligible consumption cap brought in, as with the former Ontario Clean Energy Benefit), and maybe a higher cap in the winter to allow for space heating costs.
  - A targeted industrial program recently extended and made on-going is the Northern Industrial Electricity Rate (NIER) program.

DRAFT

# Context: Taxpayer Funded Electricity Price Mitigation

| ($M) | 2011-12 | 2012-13 | 2013-14 | 2014-15 | 2015-16 | 2016-17[1] | 2017-18[1] |
|---|---|---|---|---|---|---|---|
| OCEB | 1,033 | 994 | 1,006 | 1,078 | 860 | - | - |
| OREC | - | - | - | - | - | 300 | 1,100* |
| Ending DRC[2] | - | - | - | - | 85 | 330 | 330 |
| NIERP | 120 | 120 | 115 | 108 | 120 | 120 | 120 |
| NOEC | 23 | 24 | 25 | 24 | 26 | 25 | 25 |
| OEPTC[3] | 354 | 406 | 418 | 429 | 444 | 450 | 460 |
| **TOTAL** | **1,530** | **1,544** | **1,564** | **1,639** | **1,525** | **1,195** | **2,005** |

1. 2016-17, 2017-18 based on forecasted numbers
2. 2015-16 estimated for 3 months of reduced DRC revenue
3. OEPTC amounts in all years based on energy component of the rebate.

* * Sourced from Energy PRRT submission

OCEB – Ontario Clean Energy Benefit
OREC – Ontario Rebate for Electricity Consumers
DRC – Debt Retirement Charge
NIERP – Northern Ontario Electricity Rate Program
NOEC – Northern Ontario Energy Credit
OEPTC – Ontario Energy and Property Tax Credit

- The table above shows the annual amount of taxpayer funded electricity price mitigation from 2011-12 to 2017-18.
- From 2011-12 to 2015-16 there has been an annual fiscal impact of approximately $1.6 billion due to electricity price mitigation programs.
- In 2016-17, the fiscal impact due to electricity price mitigation programs is estimated at approximately $1.2 billion.
- In 2017-18, due primarily to the start of the Ontario Rebate for Electricity Consumers, the expected fiscal impact due to electricity price mitigation programs is approximately $2.1 billion.

DRAFT

# Fiscal Mitigation Options

- With the addition of recent and new price mitigation measures, a review should be initiated on fiscally-funded programs. There could be a phase down / out transition period considered. Examples include the following:

- Ontario Energy and Property Tax Credit (OEPTC) and Northern Ontario Energy Credit (NOEC):
  - Phase down and/or out the non-on-bill benefits of. (Save up to about $460 M/yr)
  - These targeted, low-income measures were introduced after the HST was introduced.
  - The OESP provides a larger, targeted and on-bill relief to qualifying consumers.

- Ontario Rebate for Electricity Consumers (OREC):
  - Introduce over time a monthly eligible consumption cap, with perhaps a higher cap in the winter to allow for space heating costs.
  - As with the prior OCEB cap, provides a rough incentive for conservation and correlation to larger homes. A higher cap in winter may help with space-heating issue.
  - May be challenging to implement.

- Greenhouse Gas Reduction Account:
  - If ICI is put on the tax-base, make it eligible for GGRA funding.
  - Positioned as, e.g., providing annual benefits from participants conserving and shifting off-peak to reduce reliance on GHG-emitting peaking plants

# Appendix

DRAFT

# Background on Taxpayer-funded Electricity Price Mitigation

| Program | Annual Fiscal Impacts ($M) | Date | Details |
|---|---|---|---|
| **Ontario Clean Energy Benefit (OCEB)** | ~1,000 | Jan 1 2011 to Dec 31, 2015 | OCEB provided over four million residential customers, and over 400,000 farm, small business and other small users with a benefit equal to 10 per cent of the total cost of electricity on their bills, including tax. Effective September 1, 2012, 10 per cent benefit was capped for the first 3,000 kWh of electricity consumed per month. OCEB expired December 31, 2015, as legislated. |
| **Removed Debt Retirement Charge (DRC) from Residential Bills** | ~330 | Jan 1, 2016 to Mar 31, 2018 | The government removed the DRC from residential electricity users' bills as of January 1, 2016. This is saving a typical residential user about $70 each year and meant ending the DRC earlier for these users than otherwise provided for in the *Electricity Act, 1998*. |
| **Ontario Rebate for Electricity Consumers (OREC)** | ~1,200 | Jan 1, 2017 onward | This ongoing program will rebate -- directly on consumers' residential electricity bills -- an amount equal to the provincial portion of the Harmonized Sales Tax (HST). |
| **Northern Industrial Electricity Rate (NIER) Program** | 120 | March 2010 | As announced in Budget 2015, the government committed to ongoing support for northern industrials with $120 million allocated annually. NIER was previously extended in 2012 for an additional three-year term, effective April 1, 2013 and also for a year effective April 1, 2016, with an allocation up to $120 million per year.<br>Qualifying participants receive a rebate of two cents per kilowatt-hour (kWh) up to a maximum of $20 million per year per company.<br>NIER initially established as a three-year program in Budget 2010, effective April 1, 2010. |
| **Northern Ontario Energy Credit** | ~25 | Budget 2010 | Delivered as part of the Ontario Trillium Benefit, provides individuals living in northern Ontario with a credit of up to $146 per year for the 2016 benefit year, and families up to $224.[1] |
| **Ontario Energy Property Tax Credit** | ~445[1] | Budget 2010 | Delivered as part of the Ontario Trillium Benefit, energy portion provides up to $224 per year (inflation adjusted) for low-to moderate-income individuals and families, and for qualifying seniors.[1] |

1. Energy portion cost only. Both the energy portion of the Ontario Energy and Property Tax Credit (OEPTC) and NOEC were introduced/enhanced following the introduction of the HST and have a significant annual fiscal cost (totalling about $500 million annually).

DRAFT

# Timeline: Taxpayer-funded Electricity Price Mitigation

**Budget 2010: OEPTC, NOEC Proposed as part of the Ontario Trillium Benefit**

*In the 2011 Budget, the government combined the payments of three existing tax credits — the Ontario Sales Tax Credit, the Ontario Energy and Property Tax Credit, and the Northern Ontario Energy Credit — to create the OTB. The OTB is paid in monthly instalments throughout the year, which helps people meet their expenses as bills arrive.*

**Ontario Clean Energy Benefit** (Jan 1 2011 to Dec 31 2015)

*The OCEB was introduced in the 2010 Ontario Economic Outlook and Fiscal Review to help consumers transition to a cleaner electricity system. As set out in legislation, the OCEB ended on December 31, 2015. The Province has introduced rate mitigation measures to be implemented after December 31, 2015.*

*OCEB provided over four million residential customers, and over 400,000 farm, small business and other small users with a benefit equal to 10 per cent of the total cost of electricity on their bills, including tax, for the first 3,000 kilowatt-hours (kWh) of monthly electricity consumption.*

**Removing DRC from Residential Bills** (Jan 1 2016 to Mar 31 2018)

*The government removed the DRC from residential electricity users' bills beginning on January 1, 2016. This saves a typical residential user about $70 each year and ends the DRC earlier for these users than otherwise provided for in the Electricity Act, 1998.*

**Ontario Rebate for Electricity Consumers**

*As of January 1, 2017, OREC will reduce electricity costs by an amount equal to the provincial portion of the HST for about five million residential consumers, farms and small businesses.*

2010 2011 2012 2013 2014 2015 2016 2017

## History of Northern Industrial Electricity Price Relief

**November 2006**

*The Ontario government announced the Northern Pulp and Paper Electricity Transition Program (NPPETP), a three-year $140 million, to be effective retroactively to October 1, 2006*

**Budget 2009**

*The government announced extension of the NPPETP by one year providing about $58 million with electricity price rebates of 1.8 cents/kWh.*

**Budget 2010**

*NIER program announced, with a projected fiscal cost of $150 M per year, to provide electricity price rebates for qualifying large industrial facilities in northern Ontario. An additional $21.8 million allocated for existing NPPETP in 2010-11 to be integrated with NIER.*

**September 2010**

*Transition from NPPETP to NIER: pulp and paper mills participating in NPPETP continued to receive the NPPETP rebate of 1.8 cents/kWh until September 30, 2010, with those qualifying for NIER receiving a top-up rebate of 0.2 cents/kWh.*

**December 2012**

*The government announced the extension of the NIER for three years, capping the rebates to a maximum of 2011-12 consumptions levels or $20 million, whichever is lower.*

DRAFT

# Potential Fiscal Impact to the Electricity Sector

- The electricity sector has a significant impact on the Province's fiscal position; through both the revenue and expense sides of the Province's fiscal position.
  - Electricity Rate mitigation programs funded through the tax base have a direct fiscal impact on the Province's finances.
  - Alternatively, electricity rate mitigation programs funded by the rate base shift costs from one group of ratepayers to another.
- The Province's electricity sector agencies and corporations are each consolidated into the government's financial statements, and directly affect the Province's surplus/deficit position.
  - Ontario Power Generation (OPG) financial results have a dollar-for-dollar impact on the Province.
    - Electricity price mitigation strategies involving OPG would lead to a direct fiscal impact.
  - Hydro One financial results have a direct impact on the Province, based on the Province's proportionate ownership.
    - The Province currently holds about 70 per cent of Hydro One.

---

Hi John,

See attached. The fiscal impact benefit could range up to $38 million in 2018 and goes even higher, in a 50/50 weight. Or $50 million in 2018 and high as $72 million in 2021 with 100% weight in long.

Z:\Users\CEF\Hydro 2016\Electricity Prices\Mitigation Proposals - Dec 2016\Calculations

Based on OPG BP borrowing requirements, assuming 100% is borrowed and kept outstanding for the forecast.

They seem to be estimating the number based on total outstanding:
From deck:

- *Assuming the full spread is removed from all OEFC debt, OPG borrowing costs could be reduced by 50-100 basis points, representing annual savings of about $20-$25 million, increasing to $30-$35 million, as OPG's outstanding OEFC debt rises from ~$3.3 billion in 2016 to ~$4.7 billion in 2020.*

Ron - can CEFD take the lead on assessing Energy's rate mitigation deck? Per energy this is apparently tracking to MPC on Thursday, though that's news to us here. Will share with MO shortly.

Hi,

See attached and below. We are aiming to turn around a new version of the deck, incorporating any comments your ministries might have before major projects on Thursday. As such, could you please pass along your comments by end of day tomorrow?

If there are questions, I'm happy to discuss.

Thanks,
Keley

Subject: Potential Rate Mitigation

Hi,

Attached is a draft of the rate mitigation deck. This is tracking to major projects on Thursday for a preliminary discussion. As you can see there are a number of initiatives that have fiscal implications so your input and comments would be appreciated. Keley can coordinate with your EAs. I understand that Andrew T. plans to share with PO/your MOs.

DRAFT

# Electricity Price Mitigation

Corporate and Electricity Finance Division
December 7, 2016

# General Comments on Energy's Deck

- The Energy proposals may be seen as having a fairly limited impact, e.g., a little over $8/month for residential, or a little over 5% of the monthly bill.
  - The proposals would have a significant fiscal cost (about $1.5 billion per year).
- There is already significant amounts of existing electricity price mitigation that has a fiscal impact (averaging over $1.5 billion per year over the past five years, and estimated to increase to about $2 bn in 17-18 (see following slide for estimated costs over time, and likely increasing over time).
  - That is not presented in Energy's deck and would take the total contributions from the tax base to about $3.5 billion per year.
  - Also not included is any "hidden" price mitigation through constrained financial performance of, e.g., OPG.
- Energy is proposing additional electricity price mitigation programs, currently funded through the electricity system, be fiscally-funded, with an estimated impact of about $0.4 billion initially, and rising over time.
  - This includes shifting the cost of the Ontario Electricity Support Program (OESP) and the Rural or Remote Electricity Rate Program (RRRP) to the tax base.
  - Note that the fiscal exposure is larger if the OESP take up rate is larger, faster than assumed.

DRAFT

# General Comments on Energy's Deck (cont.)

- Industrial Conservation Initiative (ICI): Energy also presents as a residential mitigation measure the cancellation of the ICI.
  - Although Energy is not initially proposing the program to be ~~it~~ continue as taxpayer funded, but notes the about 30% price increase for the large Class A customers benefiting from ICI currently (at a cost shift of about $900 million per year) would see an increase of about $20 per MWh.
  - This cost is for 2016, prior to the planned expansion of the ICI, which could further increase the fiscal exposure.
- Departure Tax:
- Other fiscal cost risks include amortisation of conservation costs also poses a fiscal risk (about $0.4 bn/yr), and a lowering of the debt interest paid by OPG.

# Electricity Price Mitigation

General Decision Points on Program Features:

- Funding: Rate base vs Tax base
  - Tax base programs have a direct fiscal impact on the Province's finances, and shift costs based on taxpayer incidence and impact on expenditure room for other, non-electricity, programs.
  - Rate base programs shift costs from one group of ratepayers to another.
- On-bill vs Not On-bill
  - Recent focus has been on on-bill programs, such as OESP and OREC.
  - Older tax-base funded programs that are not visible on the bill are still in place, such as NOEC and OEPTC.
  - As OESP enrollment increases, could consider phasing out the non-bill benefits of NOEC and OEPTC.
- Targeted vs General
  - Recent new programs include both general (OREC) and targeted (OESP) programs.
  - Consideration could be made to make OREC more conservation-friendly (e.g., a monthly eligible consumption cap brought in, as with the former Ontario Clean Energy Benefit), and maybe a higher cap in the winter to allow for space heating costs.
  - A targeted industrial program recently extended and made on-going is the Northern Industrial Electricity Rate (NIER) program.
  - In the past the government applied caps (OCEB) to programs in an effort to focused assistance to those that need it the most or to better align with conservation policy.

DRAFT

# Context: Taxpayer Funded Electricity Price Mitigation

| ($M) | 2011-12 | 2012-13 | 2013-14 | 2014-15 | 2015-16 | 2016-17[1] | 2017-18[1] |
|---|---|---|---|---|---|---|---|
| OCEB | 1,033 | 994 | 1,006 | 1,078 | 860 | - | - |
| OREC | - | - | - | - | - | 300 | 1,100* |
| Ending DRC[2] | - | - | - | - | 85 | 330 | 330 |
| NIERP | 120 | 120 | 115 | 108 | 120 | 120 | 120 |
| NOEC | 23 | 24 | 25 | 24 | 26 | 25 | 25 |
| OEPTC[3] | 354 | 406 | 418 | 429 | 444 | 450 | 460 |
| **TOTAL** | **1,530** | **1,544** | **1,564** | **1,639** | **1,525** | **1,195** | **2,005** |

1. 2016-17, 2017-18 based on forecasted numbers
2. 2015-16 estimated for 3 months of reduced DRC revenue
3. OEPTC amounts in all years based on energy component of the rebate.

* * Sourced from Energy PRRT submission

OCEB – Ontario Clean Energy Benefit
OREC – Ontario Rebate for Electricity Consumers
DRC – Debt Retirement Charge
NIERP – Northern Ontario Electricity Rate Program
NOEC – Northern Ontario Energy Credit
OEPTC – Ontario Energy and Property Tax Credit

- The table above shows the annual amount of taxpayer funded electricity price mitigation from 2011-12 to 2017-18.
- From 2011-12 to 2015-16 there has been an annual fiscal impact of approximately $1.6 billion due to electricity price mitigation programs.
- In 2016-17, the fiscal impact due to electricity price mitigation programs is estimated at approximately $1.2 billion.
- In 2017-18, due primarily to the start of the Ontario Rebate for Electricity Consumers, the expected fiscal impact due to electricity price mitigation programs is approximately $2.1 billion.

DRAFT

# Proposed Taxpayer Funded Electricity Price Mitigation

| ($M) | 2016-17[1] | 2017-18[1] | 2018-19[1] | 2019-20[1] | 2020-21[1] |
|---|---|---|---|---|---|
| OCEB | - | - | - | - | - |
| OREC | 300 | 1,200* | 1,200* | 1,200* | 1,200* |
| Ending DRC[2] | 330 | 330 | 330 | 330 | 330 |
| NIERP | 120 | 120 | 120 | 120 | 120 |
| NOEC | 25 | 25 | 25 | 25 | 25 |
| OEPTC[3] | 450 | 460 | 470 | 481 | 481 |
| **TOTAL** | **1,195** | **2,105** | **2145** | **2156** | **2156** |
| 1. Electricity Market Renewal Initiative | | TBD | TBD | TBD | TBD |
| 2. OESP | | 106 | 119 | 127 | 132 |
| 2. RRRP | | 292 | 300 | 306 | 315 |
| 2. First Nations Delivery Rate | | 18 | 18 | 18 | 18 |
| 3. Fund ICI through Tax Base | | 900 | 900 | 900 | 900 |
| **TOTAL** | **1195** | **3,421** | **3,482** | **3,507** | **3,521** |

1. 2016-17, 2017-18 based on forecasted numbers
2. 2015-16 estimated for 3 months of reduced DRC revenue
3. OEPTC amounts in all years based on energy component of the rebate.

- As shown above if all measures proposed in this deck were to be accepted taxpayer funded contributions to electricity price mitigation would increase to about $3.5 billion by 2020-21. That is a 67% increase from the current forecast for 2017-18.
- These amounts were not considered in the 2016-17 Fiscal Plan and could put at risk the Province's fiscal objectives for 2017-18 and beyond.

# Fiscal Mitigation Options

- With the addition of recent and new price mitigation measures, a review should be initiated on fiscally-funded programs. There could be a phase down / out transition period considered. Examples include the following:

- Ontario Energy and Property Tax Credit (OEPTC) and Northern Ontario Energy Credit (NOEC):
  - Phase down and/or out the non-on-bill benefits of. (Save up to about $460 M/yr)

- Ontario Rebate for Electricity Consumers (OREC):
  - Introduce over time a monthly eligible consumption cap, with perhaps a higher cap in the winter to allow for space heating costs.

- Greenhouse Gas Reduction Account:
  - If ICI is put on the tax-base, make it eligible for GGRA funding.
  - Positioned as, e.g., providing annual benefits from participants conserving and shifting off-peak to reduce reliance on GHG-emitting peaking plants

- The government could explore options to income test programs funded from the tax base to allow a better focus on those in need.

# Appendix

DRAFT

# Background on Taxpayer-funded Electricity Price Mitigation

| Program | Annual Fiscal Impacts ($M) | Date | Details |
|---|---|---|---|
| **Ontario Clean Energy Benefit (OCEB)** | ~1,000 | Jan 1 2011 to Dec 31, 2015 | OCEB provided over four million residential customers, and over 400,000 farm, small business and other small users with a benefit equal to 10 per cent of the total cost of electricity on their bills, including tax. Effective September 1, 2012, 10 per cent benefit was capped for the first 3,000 kWh of electricity consumed per month. OCEB expired December 31, 2015, as legislated. |
| **Removed Debt Retirement Charge (DRC) from Residential Bills** | ~330 | Jan 1, 2016 to Mar 31, 2018 | The government removed the DRC from residential electricity users' bills as of January 1, 2016. This is saving a typical residential user about $70 each year and meant ending the DRC earlier for these users than otherwise provided for in the *Electricity Act, 1998*. |
| **Ontario Rebate for Electricity Consumers (OREC)** | ~1,200 | Jan 1, 2017 onward | This ongoing program will rebate -- directly on consumers' residential electricity bills -- an amount equal to the provincial portion of the Harmonized Sales Tax (HST). |
| **Northern Industrial Electricity Rate (NIER) Program** | 120 | March 2010 | As announced in Budget 2015, the government committed to ongoing support for northern industrials with $120 million allocated annually. NIER was previously extended in 2012 for an additional three-year term, effective April 1, 2013 and also for a year effective April 1, 2016, with an allocation up to $120 million per year.<br>Qualifying participants receive a rebate of two cents per kilowatt-hour (kWh) up to a maximum of $20 million per year per company.<br>NIER initially established as a three-year program in Budget 2010, effective April 1, 2010. |
| **Northern Ontario Energy Credit** | ~25 | Budget 2010 | Delivered as part of the Ontario Trillium Benefit, provides individuals living in northern Ontario with a credit of up to $146 per year for the 2016 benefit year, and families up to $224.[1] |
| **Ontario Energy Property Tax Credit** | ~445[1] | Budget 2010 | Delivered as part of the Ontario Trillium Benefit, energy portion provides up to $224 per year (inflation adjusted) for low-to moderate-income individuals and families, and for qualifying seniors.[1] |

1. Energy portion cost only. Both the energy portion of the Ontario Energy and Property Tax Credit (OEPTC) and NOEC were introduced/enhanced following the introduction of the HST and have a significant annual fiscal cost (totalling about $500 million annually).

DRAFT

# Timeline: Taxpayer-funded Electricity Price Mitigation

**Budget 2010: OEPTC, NOEC Proposed as part of the Ontario Trillium Benefit**

*In the 2011 Budget, the government combined the payments of three existing tax credits — the Ontario Sales Tax Credit, the Ontario Energy and Property Tax Credit, and the Northern Ontario Energy Credit — to create the OTB. The OTB is paid in monthly instalments throughout the year, which helps people meet their expenses as bills arrive.*

**Ontario Clean Energy Benefit** (Jan 1 2011 to Dec 31 2015)

*The OCEB was introduced in the 2010 Ontario Economic Outlook and Fiscal Review to help consumers transition to a cleaner electricity system. As set out in legislation, the OCEB ended on December 31, 2015. The Province has introduced rate mitigation measures to be implemented after December 31, 2015.*

*OCEB provided over four million residential customers, and over 400,000 farm, small business and other small users with a benefit equal to 10 per cent of the total cost of electricity on their bills, including tax, for the first 3,000 kilowatt-hours (kWh) of monthly electricity consumption.*

**Removing DRC from Residential Bills** (Jan 1 2016 to Mar 31 2018)

*The government removed the DRC from residential electricity users' bills beginning on January 1, 2016. This saves a typical residential user about $70 each year and ends the DRC earlier for these users than otherwise provided for in the Electricity Act, 1998.*

**Ontario Rebate for Electricity Consumers**

*As of January 1, 2017, OREC will reduce electricity costs by an amount equal to the provincial portion of the HST for about five million residential consumers, farms and small businesses.*

2010 2011 2012 2013 2014 2015 2016 2017

## History of Northern Industrial Electricity Price Relief

**November 2006**

*The Ontario government announced the Northern Pulp and Paper Electricity Transition Program (NPPETP), a three-year $140 million, to be effective retroactively to October 1, 2006*

**Budget 2009**

*The government announced extension of the NPPETP by one year providing about $58 million with electricity price rebates of 1.8 cents/kWh.*

**Budget 2010**

*NIER program announced, with a projected fiscal cost of $150 M per year, to provide electricity price rebates for qualifying large industrial facilities in northern Ontario. An additional $21.8 million allocated for existing NPPETP in 2010-11 to be integrated with NIER.*

**September 2010**

*Transition from NPPETP to NIER: pulp and paper mills participating in NPPETP continued to receive the NPPETP rebate of 1.8 cents/kWh until September 30, 2010, with those qualifying for NIER receiving a top-up rebate of 0.2 cents/kWh.*

**December 2012**

*The government announced the extension of the NIER for three years, capping the rebates to a maximum of 2011-12 consumptions levels or $20 million, whichever is lower.*

DRAFT

# Potential Fiscal Impact to the Electricity Sector

- The electricity sector has a significant impact on the Province's fiscal position; through both the revenue and expense sides of the Province's fiscal position.
  - Electricity Rate mitigation programs funded through the tax base have a direct fiscal impact on the Province's finances.
  - Alternatively, electricity rate mitigation programs funded by the rate base shift costs from one group of ratepayers to another.
- The Province's electricity sector agencies and corporations are each consolidated into the government's financial statements, and directly affect the Province's surplus/deficit position.
  - Ontario Power Generation (OPG) financial results have a dollar-for-dollar impact on the Province.
    - Electricity price mitigation strategies involving OPG would lead to a direct fiscal impact.
  - Hydro One financial results have a direct impact on the Province, based on the Province's proportionate ownership.
    - The Province currently holds about 70 per cent of Hydro One.

Hi,

See attached and below. We are aiming to turn around a new version of the deck, incorporating any comments your ministries might have before major projects on Thursday. As such, could you please pass along your comments by end of day tomorrow?

If there are questions, I'm happy to discuss.

Thanks,
Keley

Hi,

Attached is a draft of the rate mitigation deck. This is tracking to major projects on Thursday for a preliminary discussion. As you can see there are a number of initiatives that have fiscal implications so your input and comments would be appreciated. Keley can coordinate with your EAs. I understand that Andrew T. plans to share with PO/your MOs.

DRAFT

# Electricity Price Mitigation

Corporate and Electricity Finance Division
December 7, 2016

# General Comments on Energy's Deck

- The Energy proposals may be seen as having a fairly limited impact, e.g., a little over $8/month for residential, or a little over 5% of the monthly bill.
  - The proposals would have a significant fiscal cost.
- There is already significant amounts of existing electricity price mitigation that has a fiscal impact (averaging over $1.5 billion per year over the past five years, and estimated to increase to about $2 bn in 17-18 (see following slide for estimated costs over time, and likely increasing over time).
  - That is not presented in Energy's deck.
  - Also not included is any "hidden" price mitigation through constrained financial performance of, e.g., OPG.
- Energy is proposing additional electricity price mitigation programs, currently funded through the electricity system, be fiscally-funded, with an estimated impact of about $0.4 billion initially, and rising over time.
  - This includes shifting the cost of the Ontario Electricity Support Program (OESP) and the Rural or Remote Electricity Rate Program (RRRP) to the tax base.
  - Note that the fiscal exposure is larger if the OESP take up rate is larger, faster than assumed.

# General Comments on Energy's Deck (cont.)

- Industrial Conservation Initiative (ICI): Energy also presents as a residential mitigation measure the cancellation of the ICI.
  - Energy is not initially proposing it continue as taxpayer funded, but notes the about 30% price increase for the large Class A customers benefiting from ICI currently (at a cost shift of about $900 million per year).
  - This cost is for 2016, prior to the planned expansion of the ICI, which could further increase the fiscal exposure.
- Departure Tax:
- Other fiscal cost risks include amortisation of conservation costs also poses a fiscal risk (about $0.4 bn/yr), and a lowering of the debt interest paid by OPG.

# Electricity Price Mitigation

General Decision Points on Program Features:

- Funding: Rate base vs Tax base
  - Tax base programs have a direct fiscal impact on the Province's finances, and shift costs based on taxpayer incidence and impact on expenditure room for other, non-electricity, programs.
  - Rate base programs shift costs from one group of ratepayers to another.
- On-bill vs Not On-bill
  - Recent focus has been on on-bill programs, such as OESP and OREC.
  - Older tax-base funded programs that are not visible on the bill are still in place, such as NOEC and OEPTC.
  - As OESP enrollment increases, could consider phasing out the non-bill benefits of NOEC and OEPTC.
- Targeted vs General
  - Recent new programs include both general (OREC) and targeted (OESP) programs.
  - Consideration could be made to make OREC more conservation-friendly (e.g., a monthly eligible consumption cap brought in, as with the former Ontario Clean Energy Benefit), and maybe a higher cap in the winter to allow for space heating costs.
  - A targeted industrial program recently extended and made on-going is the Northern Industrial Electricity Rate (NIER) program.

DRAFT

# Context: Taxpayer Funded Electricity Price Mitigation

| ($M) | 2011-12 | 2012-13 | 2013-14 | 2014-15 | 2015-16 | 2016-17[1] | 2017-18[1] |
|---|---|---|---|---|---|---|---|
| OCEB | 1,033 | 994 | 1,006 | 1,078 | 860 | - | - |
| OREC | - | - | - | - | - | 300 | 1,100* |
| Ending DRC[2] | - | - | - | - | 85 | 330 | 330 |
| NIERP | 120 | 120 | 115 | 108 | 120 | 120 | 120 |
| NOEC | 23 | 24 | 25 | 24 | 26 | 25 | 25 |
| OEPTC[3] | 354 | 406 | 418 | 429 | 444 | 450 | 460 |
| **TOTAL** | **1,530** | **1,544** | **1,564** | **1,639** | **1,525** | **1,195** | **2,005** |

1. 2016-17, 2017-18 based on forecasted numbers
2. 2015-16 estimated for 3 months of reduced DRC revenue
3. OEPTC amounts in all years based on energy component of the rebate.

* * Sourced from Energy PRRT submission

OCEB – Ontario Clean Energy Benefit
OREC – Ontario Rebate for Electricity Consumers
DRC – Debt Retirement Charge
NIERP – Northern Ontario Electricity Rate Program
NOEC – Northern Ontario Energy Credit
OEPTC – Ontario Energy and Property Tax Credit

- The table above shows the annual amount of taxpayer funded electricity price mitigation from 2011-12 to 2017-18.
- From 2011-12 to 2015-16 there has been an annual fiscal impact of approximately $1.6 billion due to electricity price mitigation programs.
- In 2016-17, the fiscal impact due to electricity price mitigation programs is estimated at approximately $1.2 billion.
- In 2017-18, due primarily to the start of the Ontario Rebate for Electricity Consumers, the expected fiscal impact due to electricity price mitigation programs is approximately $2.1 billion.

# Fiscal Mitigation Options

- With the addition of recent and new price mitigation measures, a review should be initiated on fiscally-funded programs. There could be a phase down / out transition period considered. Examples include the following:

- Ontario Energy and Property Tax Credit (OEPTC) and Northern Ontario Energy Credit (NOEC):
  - Phase down and/or out the non-on-bill benefits of. (Save up to about $460 M/yr)
- Ontario Rebate for Electricity Consumers (OREC):
  - Introduce over time a monthly eligible consumption cap, with perhaps a higher cap in the winter to allow for space heating costs.
- Greenhouse Gas Reduction Account:
  - If ICI is put on the tax-base, make it eligible for GGRA funding.
  - Positioned as, e.g., providing annual benefits from participants conserving and shifting off-peak to reduce reliance on GHG-emitting peaking plants

# Appendix

DRAFT

# Background on Taxpayer-funded Electricity Price Mitigation

| Program | Annual Fiscal Impacts ($M) | Date | Details |
|---|---|---|---|
| **Ontario Clean Energy Benefit (OCEB)** | ~1,000 | Jan 1 2011 to Dec 31, 2015 | OCEB provided over four million residential customers, and over 400,000 farm, small business and other small users with a benefit equal to 10 per cent of the total cost of electricity on their bills, including tax. Effective September 1, 2012, 10 per cent benefit was capped for the first 3,000 kWh of electricity consumed per month. OCEB expired December 31, 2015, as legislated. |
| **Removed Debt Retirement Charge (DRC) from Residential Bills** | ~330 | Jan 1, 2016 to Mar 31, 2018 | The government removed the DRC from residential electricity users' bills as of January 1, 2016. This is saving a typical residential user about $70 each year and meant ending the DRC earlier for these users than otherwise provided for in the *Electricity Act, 1998*. |
| **Ontario Rebate for Electricity Consumers (OREC)** | ~1,200 | Jan 1, 2017 onward | This ongoing program will rebate -- directly on consumers' residential electricity bills -- an amount equal to the provincial portion of the Harmonized Sales Tax (HST). |
| **Northern Industrial Electricity Rate (NIER) Program** | 120 | March 2010 | As announced in Budget 2015, the government committed to ongoing support for northern industrials with $120 million allocated annually. NIER was previously extended in 2012 for an additional three-year term, effective April 1, 2013 and also for a year effective April 1, 2016, with an allocation up to $120 million per year.<br>Qualifying participants receive a rebate of two cents per kilowatt-hour (kWh) up to a maximum of $20 million per year per company.<br>NIER initially established as a three-year program in Budget 2010, effective April 1, 2010. |
| **Northern Ontario Energy Credit** | ~25 | Budget 2010 | Delivered as part of the Ontario Trillium Benefit, provides individuals living in northern Ontario with a credit of up to $146 per year for the 2016 benefit year, and families up to $224.[1] |
| **Ontario Energy Property Tax Credit** | ~445[1] | Budget 2010 | Delivered as part of the Ontario Trillium Benefit, energy portion provides up to $224 per year (inflation adjusted) for low-to moderate-income individuals and families, and for qualifying seniors.[1] |

1. Energy portion cost only. Both the energy portion of the Ontario Energy and Property Tax Credit (OEPTC) and NOEC were introduced/enhanced following the introduction of the HST and have a significant annual fiscal cost (totalling about $500 million annually).

DRAFT

# Timeline: Taxpayer-funded Electricity Price Mitigation

**Budget 2010: OEPTC, NOEC Proposed as part of the Ontario Trillium Benefit**

*In the 2011 Budget, the government combined the payments of three existing tax credits — the Ontario Sales Tax Credit, the Ontario Energy and Property Tax Credit, and the Northern Ontario Energy Credit — to create the OTB. The OTB is paid in monthly instalments throughout the year, which helps people meet their expenses as bills arrive.*

**Ontario Clean Energy Benefit** (Jan 1 2011 to Dec 31 2015)

*The OCEB was introduced in the 2010 Ontario Economic Outlook and Fiscal Review to help consumers transition to a cleaner electricity system. As set out in legislation, the OCEB ended on December 31, 2015. The Province has introduced rate mitigation measures to be implemented after December 31, 2015.*

*OCEB provided over four million residential customers, and over 400,000 farm, small business and other small users with a benefit equal to 10 per cent of the total cost of electricity on their bills, including tax, for the first 3,000 kilowatt-hours (kWh) of monthly electricity consumption.*

**Removing DRC from Residential Bills** (Jan 1 2016 to Mar 31 2018)

*The government removed the DRC from residential electricity users' bills beginning on January 1, 2016. This saves a typical residential user about $70 each year and ends the DRC earlier for these users than otherwise provided for in the Electricity Act, 1998.*

**Ontario Rebate for Electricity Consumers**

*As of January 1, 2017, OREC will reduce electricity costs by an amount equal to the provincial portion of the HST for about five million residential consumers, farms and small businesses.*

2010 2011 2012 2013 2014 2015 2016 2017

## History of Northern Industrial Electricity Price Relief

**November 2006**

*The Ontario government announced the Northern Pulp and Paper Electricity Transition Program (NPPETP), a three-year $140 million, to be effective retroactively to October 1, 2006*

**Budget 2009**

*The government announced extension of the NPPETP by one year providing about $58 million with electricity price rebates of 1.8 cents/kWh.*

**Budget 2010**

*NIER program announced, with a projected fiscal cost of $150 M per year, to provide electricity price rebates for qualifying large industrial facilities in northern Ontario. An additional $21.8 million allocated for existing NPPETP in 2010-11 to be integrated with NIER.*

**September 2010**

*Transition from NPPETP to NIER: pulp and paper mills participating in NPPETP continued to receive the NPPETP rebate of 1.8 cents/kWh until September 30, 2010, with those qualifying for NIER receiving a top-up rebate of 0.2 cents/kWh.*

**December 2012**

*The government announced the extension of the NIER for three years, capping the rebates to a maximum of 2011-12 consumptions levels or $20 million, whichever is lower.*

DRAFT

# Potential Fiscal Impact to the Electricity Sector

- The electricity sector has a significant impact on the Province's fiscal position; through both the revenue and expense sides of the Province's fiscal position.
  - Electricity Rate mitigation programs funded through the tax base have a direct fiscal impact on the Province's finances.
  - Alternatively, electricity rate mitigation programs funded by the rate base shift costs from one group of ratepayers to another.
- The Province's electricity sector agencies and corporations are each consolidated into the government's financial statements, and directly affect the Province's surplus/deficit position.
  - Ontario Power Generation (OPG) financial results have a dollar-for-dollar impact on the Province.
    - Electricity price mitigation strategies involving OPG would lead to a direct fiscal impact.
  - Hydro One financial results have a direct impact on the Province, based on the Province's proportionate ownership.
    - The Province currently holds about 70 per cent of Hydro One.

DRAFT

# Effect of Additional Proposed Taxpayer Funded Electricity Price Mitigation

| Proposal | Fiscal Costs ($M) | *Residential* Ratepayer Savings |
|---|---|---|
| **EXISTING MEASURES** | | |
| OREC | 1,100 | $11/month |
| NIERP | 120 | n/a* |
| NOEC | 25 | n/a* |
| OEPTC[3] | 460 | n/a* |
| **TOTAL Costs from Existing Measures** | **1,705** | **11** |
| | | |
| **PROPOSED MEASURES** | | |
| **Proposal 2:** Fund Electricity Support Programs Through the Tax-Base (OESP, RRRP, First Nations Delivery Rate) | 421 (yr 2017-18)** | $2.45/month |
| **Proposal 3:** Eliminate the Industrial Conservation Initiative funding from ratebase, and shift to tax base | 900 | $4/month |
| **Proposal 7:** Reduced cost of OPG Borrowing | 30-35 | $0.18/month |
| **Proposal 8:** End DRC Early for Commercial/Small Industrial Class B Electricity Consumers, or DRC reduced to $3.5/MWh | 189-378 (yr 2017-18)*** | n/a* |
| **TOTAL Costs/Savings from Proposed Measures** | 1,584 – 1,778 | $6.63/month |
| **TOTAL Costs/Savings from All Taxpayer funded Measures** | **3,289 – 3,483** | **$17.63/month** |

* Costs were not borne by the ratebase.
** Assumes 75%/25% split between 2017 and 2018 costs
*** DRC is removed from all electricity bill by April 1, 2018

Hi,

Lets meet in the morning to discuss.

We'll need a product for EOD. Could be an annotated slide deck, as well as a markup. Suggestion on any other formats?

Ron

Hi,

See attached and below. We are aiming to turn around a new version of the deck, incorporating any comments your ministries might have before major projects on Thursday. As such, could you please pass along your comments by end of day tomorrow?

If there are questions, I'm happy to discuss.

Thanks,
Keley

Subject: Potential Rate Mitigation

Hi,

Attached is a draft of the rate mitigation deck. This is tracking to major projects on Thursday for a preliminary discussion. As you can see there are a number of initiatives that have fiscal implications so your input and comments would be appreciated. Keley can coordinate with your EAs. I understand that Andrew T. plans to share with PO/your MOs.

Serge

DRAFT

# Electricity Price Mitigation

Corporate and Electricity Finance Division
December 7, 2016

# General Comments on Energy's Deck

- The Energy proposals may be seen as having a fairly limited impact, e.g., a little over $8/month for residential, or a little over 5% of the monthly bill.
  - The proposals would have a significant fiscal cost.
- There is already significant amounts of existing electricity price mitigation that has a fiscal impact (averaging over $1.5 billion per year over the past five years, and estimated to increase to about $2 bn in 17-18 (see following slide for estimated costs over time, and likely increasing over time).
  - That is not presented in Energy's deck.
  - Also not included is any "hidden" price mitigation through constrained financial performance of, e.g., OPG.
- Energy is proposing additional electricity price mitigation programs, currently funded through the electricity system, be fiscally-funded, with an estimated impact of about $0.4 billion initially, and rising over time.
  - This includes shifting the cost of the Ontario Electricity Support Program (OESP) and the Rural or Remote Electricity Rate Program (RRRP) to the tax base.
  - Note that the fiscal exposure is larger if the OESP take up rate is larger, faster than assumed.

# General Comments on Energy's Deck (cont.)

- Industrial Conservation Initiative (ICI): Energy also presents as a residential mitigation measure the cancellation of the ICI.
  - Energy is not initially proposing it continue as taxpayer funded, but notes the about 30% price increase for the large Class A customers benefiting from ICI currently (at a cost shift of about $900 million per year).
  - This cost is for 2016, prior to the planned expansion of the ICI, which could further increase the fiscal exposure.
- Departure Tax:
- Other fiscal cost risks include amortisation of conservation costs also poses a fiscal risk (about $0.4 bn/yr), and a lowering of the debt interest paid by OPG.

# Electricity Price Mitigation

General Decision Points on Program Features:

- Funding: Rate base vs Tax base
  - Tax base programs have a direct fiscal impact on the Province's finances, and shift costs based on taxpayer incidence and impact on expenditure room for other, non-electricity, programs.
  - Rate base programs shift costs from one group of ratepayers to another.
- On-bill vs Not On-bill
  - Recent focus has been on on-bill programs, such as OESP and OREC.
  - Older tax-base funded programs that are not visible on the bill are still in place, such as NOEC and OEPTC.
  - As OESP enrollment increases, could consider phasing out the non-bill benefits of NOEC and OEPTC.
- Targeted vs General
  - Recent new programs include both general (OREC) and targeted (OESP) programs.
  - Consideration could be made to make OREC more conservation-friendly (e.g., a monthly eligible consumption cap brought in, as with the former Ontario Clean Energy Benefit), and maybe a higher cap in the winter to allow for space heating costs.
  - A targeted industrial program recently extended and made on-going is the Northern Industrial Electricity Rate (NIER) program.

DRAFT

# Context: Taxpayer Funded Electricity Price Mitigation

| ($M) | 2011-12 | 2012-13 | 2013-14 | 2014-15 | 2015-16 | 2016-17[1] | 2017-18[1] |
|---|---|---|---|---|---|---|---|
| OCEB | 1,033 | 994 | 1,006 | 1,078 | 860 | - | - |
| OREC | - | - | - | - | - | 300 | 1,100* |
| Ending DRC[2] | - | - | - | - | 85 | 330 | 330 |
| NIERP | 120 | 120 | 115 | 108 | 120 | 120 | 120 |
| NOEC | 23 | 24 | 25 | 24 | 26 | 25 | 25 |
| OEPTC[3] | 354 | 406 | 418 | 429 | 444 | 450 | 460 |
| **TOTAL** | **1,530** | **1,544** | **1,564** | **1,639** | **1,525** | **1,195** | **2,005** |

1. 2016-17, 2017-18 based on forecasted numbers
2. 2015-16 estimated for 3 months of reduced DRC revenue
3. OEPTC amounts in all years based on energy component of the rebate.

* * Sourced from Energy PRRT submission

OCEB – Ontario Clean Energy Benefit
OREC – Ontario Rebate for Electricity Consumers
DRC – Debt Retirement Charge
NIERP – Northern Ontario Electricity Rate Program
NOEC – Northern Ontario Energy Credit
OEPTC – Ontario Energy and Property Tax Credit

- The table above shows the annual amount of taxpayer funded electricity price mitigation from 2011-12 to 2017-18.
- From 2011-12 to 2015-16 there has been an annual fiscal impact of approximately $1.6 billion due to electricity price mitigation programs.
- In 2016-17, the fiscal impact due to electricity price mitigation programs is estimated at approximately $1.2 billion.
- In 2017-18, due primarily to the start of the Ontario Rebate for Electricity Consumers, the expected fiscal impact due to electricity price mitigation programs is approximately $2.1 billion.

# Fiscal Mitigation Options

- With the addition of recent and new price mitigation measures, a review should be initiated on fiscally-funded programs. There could be a phase down / out transition period considered. Examples include the following:

- Ontario Energy and Property Tax Credit (OEPTC) and Northern Ontario Energy Credit (NOEC):
  - Phase down and/or out the non-on-bill benefits of. (Save up to about $460 M/yr)
- Ontario Rebate for Electricity Consumers (OREC):
  - Introduce over time a monthly eligible consumption cap, with perhaps a higher cap in the winter to allow for space heating costs.
- Greenhouse Gas Reduction Account:
  - If ICI is put on the tax-base, make it eligible for GGRA funding.
  - Positioned as, e.g., providing annual benefits from participants conserving and shifting off-peak to reduce reliance on GHG-emitting peaking plants

# Appendix

DRAFT

# Background on Taxpayer-funded Electricity Price Mitigation

| Program | Annual Fiscal Impacts ($M) | Date | Details |
|---|---|---|---|
| **Ontario Clean Energy Benefit (OCEB)** | ~1,000 | Jan 1 2011 to Dec 31, 2015 | OCEB provided over four million residential customers, and over 400,000 farm, small business and other small users with a benefit equal to 10 per cent of the total cost of electricity on their bills, including tax. Effective September 1, 2012, 10 per cent benefit was capped for the first 3,000 kWh of electricity consumed per month. OCEB expired December 31, 2015, as legislated. |
| **Removed Debt Retirement Charge (DRC) from Residential Bills** | ~330 | Jan 1, 2016 to Mar 31, 2018 | The government removed the DRC from residential electricity users' bills as of January 1, 2016. This is saving a typical residential user about $70 each year and meant ending the DRC earlier for these users than otherwise provided for in the *Electricity Act, 1998*. |
| **Ontario Rebate for Electricity Consumers (OREC)** | ~1,200 | Jan 1, 2017 onward | This ongoing program will rebate -- directly on consumers' residential electricity bills -- an amount equal to the provincial portion of the Harmonized Sales Tax (HST). |
| **Northern Industrial Electricity Rate (NIER) Program** | 120 | March 2010 | As announced in Budget 2015, the government committed to ongoing support for northern industrials with $120 million allocated annually. NIER was previously extended in 2012 for an additional three-year term, effective April 1, 2013 and also for a year effective April 1, 2016, with an allocation up to $120 million per year.<br>Qualifying participants receive a rebate of two cents per kilowatt-hour (kWh) up to a maximum of $20 million per year per company.<br>NIER initially established as a three-year program in Budget 2010, effective April 1, 2010. |
| **Northern Ontario Energy Credit** | ~25 | Budget 2010 | Delivered as part of the Ontario Trillium Benefit, provides individuals living in northern Ontario with a credit of up to $146 per year for the 2016 benefit year, and families up to $224.[1] |
| **Ontario Energy Property Tax Credit** | ~445[1] | Budget 2010 | Delivered as part of the Ontario Trillium Benefit, energy portion provides up to $224 per year (inflation adjusted) for low-to moderate-income individuals and families, and for qualifying seniors.[1] |

1. Energy portion cost only. Both the energy portion of the Ontario Energy and Property Tax Credit (OEPTC) and NOEC were introduced/enhanced following the introduction of the HST and have a significant annual fiscal cost (totalling about $500 million annually).

DRAFT

# Timeline: Taxpayer-funded Electricity Price Mitigation

**Budget 2010: OEPTC, NOEC Proposed as part of the Ontario Trillium Benefit**

*In the 2011 Budget, the government combined the payments of three existing tax credits — the Ontario Sales Tax Credit, the Ontario Energy and Property Tax Credit, and the Northern Ontario Energy Credit — to create the OTB. The OTB is paid in monthly instalments throughout the year, which helps people meet their expenses as bills arrive.*

**Ontario Clean Energy Benefit** (Jan 1 2011 to Dec 31 2015)

*The OCEB was introduced in the 2010 Ontario Economic Outlook and Fiscal Review to help consumers transition to a cleaner electricity system. As set out in legislation, the OCEB ended on December 31, 2015. The Province has introduced rate mitigation measures to be implemented after December 31, 2015.*

*OCEB provided over four million residential customers, and over 400,000 farm, small business and other small users with a benefit equal to 10 per cent of the total cost of electricity on their bills, including tax, for the first 3,000 kilowatt-hours (kWh) of monthly electricity consumption.*

**Removing DRC from Residential Bills** (Jan 1 2016 to Mar 31 2018)

*The government removed the DRC from residential electricity users' bills beginning on January 1, 2016. This saves a typical residential user about $70 each year and ends the DRC earlier for these users than otherwise provided for in the Electricity Act, 1998.*

**Ontario Rebate for Electricity Consumers**

*As of January 1, 2017, OREC will reduce electricity costs by an amount equal to the provincial portion of the HST for about five million residential consumers, farms and small businesses.*

2010 2011 2012 2013 2014 2015 2016 2017

## History of Northern Industrial Electricity Price Relief

**November 2006**

*The Ontario government announced the Northern Pulp and Paper Electricity Transition Program (NPPETP), a three-year $140 million, to be effective retroactively to October 1, 2006*

**Budget 2009**

*The government announced extension of the NPPETP by one year providing about $58 million with electricity price rebates of 1.8 cents/kWh.*

**Budget 2010**

*NIER program announced, with a projected fiscal cost of $150 M per year, to provide electricity price rebates for qualifying large industrial facilities in northern Ontario. An additional $21.8 million allocated for existing NPPETP in 2010-11 to be integrated with NIER.*

**September 2010**

*Transition from NPPETP to NIER: pulp and paper mills participating in NPPETP continued to receive the NPPETP rebate of 1.8 cents/kWh until September 30, 2010, with those qualifying for NIER receiving a top-up rebate of 0.2 cents/kWh.*

**December 2012**

*The government announced the extension of the NIER for three years, capping the rebates to a maximum of 2011-12 consumptions levels or $20 million, whichever is lower.*

DRAFT

# Potential Fiscal Impact to the Electricity Sector

- The electricity sector has a significant impact on the Province's fiscal position; through both the revenue and expense sides of the Province's fiscal position.
  - Electricity Rate mitigation programs funded through the tax base have a direct fiscal impact on the Province's finances.
  - Alternatively, electricity rate mitigation programs funded by the rate base shift costs from one group of ratepayers to another.
- The Province's electricity sector agencies and corporations are each consolidated into the government's financial statements, and directly affect the Province's surplus/deficit position.
  - Ontario Power Generation (OPG) financial results have a dollar-for-dollar impact on the Province.
    - Electricity price mitigation strategies involving OPG would lead to a direct fiscal impact.
  - Hydro One financial results have a direct impact on the Province, based on the Province's proportionate ownership.
    - The Province currently holds about 70 per cent of Hydro One.

Hi,

From the first attached spreadsheet, Class B consumption in 2015 was 114 TWh. From the second attached spreadsheet, residential consumption in 2015 was 52 TWh.

So, Class B less residential was 62 TWh. This amount would include small business and farm customers in the RPP.

> If you recall, we did that table a couple weeks ago on existing fiscally funded mitigation programs. We can suggest adding that in. And, as for the GGRA, I think one of the challenges is it was supposed to be for incremental measures to reduce GHGs (not replacing funding for existing measures. But, that said, that was notion I noodled on too, but it would require at least a change in positioning, convincing the Minister of MOECC, as the arbiter of such and/or change the legislation.

Hi,

Attached is a draft of the rate

mitigation deck. This is tracking to major projects on Thursday for a preliminary discussion. As you can see there are a number of initiatives that have fiscal implications so your input and comments would be appreciated. Keley can coordinate with your EAs. I understand that Andrew T. plans to share with PO/your MOs.

---

Hi,

From the first attached spreadsheet, Class B consumption in 2015 was 114 TWh. From the second attached spreadsheet, residential consumption in 2015 was 52 TWh.

So, Class B less residential was 62 TWh. This amount would include small business and farm customers in the RPP.

I don't have the information directly, but I will look and see if I can figure it out from other info.

And, as for the GGRA, I think one of the challenges is it was supposed to be for incremental measures to reduce GHGs (not replacing funding for existing measures. But, that said, that was notion I noodled on too, but it would require at least a change in positioning, convincing the Minister of MOECC, as the arbiter of such and/or change the legislation.

credit given to the fiscal sacrifices already made. Maybe those amounts could be added in the context section?

Would any of the fiscal plan hits be eligible as offsets for our Cap and Trade revenues? I suppose because so little of our electricity production is carbon producing, probably not, but if ICI moves consumption off-peak does it reduce the need for gas plants to operate?

And at least the idea of offsetting the federal portion of the HST is gone

Subject: FW: Potential Rate Mitigation

Hi,

See attached and below. We are aiming to turn around a new version of the deck, incorporating any comments your ministries might have before major projects on Thursday. As such, could you please pass along your comments by end of day tomorrow?

If there are questions, I'm happy to discuss.

Thanks,

Keley

Table 1: Assumptions across Demand Outlooks

| Sector | Outlook A | Outlook B |
|---|---|---|
| Residential (52 TWh in 2015) | 48 TWh in 2035 | 51 TWh in 2035 |
| Commercial (51 TWh in 2015) | 49 TWh in 2035 | 54 TWh in 2035 |
| Industrial (35 TWh in 2015) | 29 TWh in 2035 | 35 TWh in 2035 |
| Electric Vehicles (<1 TWh in 2015) | 2 TWh in 2035 | 3 TWh in 2035 |
| Transit (<1 TWh in 2015) | 1 TWh in 2035 | 1 TWh in 2035 |
| Other* | 5 TWh | 5 TWh |
| Total** (143 TWh in 2015) | 133 TWh in 2035 | 148 TWh in 2035 |

* Others = Agriculture, Remote Communities, Generator Demand, IEI, and S

** At Generator Level. Total may not add up due to rounding

| Outlook C | Outlook D |
|---|---|
| Oil heating switches to heat pumps, electric space and water heating gain 25% of gas market share (58 TWh in 2035) | Oil heating switches to heat pumps, electric space and water heating gain 50% of gas market share (64TWh in 2035) |
| Oil heating switches to heat pumps, electric space and water heating gain 25% of gas market share (63 TWh in 2035) | Oil heating switches to heat pumps, electric space and water heating gain 50% of gas market share (69 TWh in 2035) |
| 5% of 2012 fossil energy switches to electric equivalent (43 TWh in 2035) | 10% of 2012 fossil energy switches to electric equivalent (51 TWh in 2035) |
| 2.4 million electric vehicles (EVs) by 2035 (8 TWh in 2035) | 2.4 million EVs by 2035 (8 TWh in 2035) |
| Planned projects, 2017-2035 (1 TWh in 2035) | Planned projects, 2017-2035 (1 TWh in 2035) |
| 5 TWh | 5 TWh |
| 177 TWh in 2035 | 197 TWh in 2035 |

Street Lighting

Ontario Net Electricity Demand by Sector, TWh

| Residential Net Energy (TWh) | 2015 | 2016 | 2017 | 2018 | 2019 |

Hi Ron,

I have consolidated the comments from Francisco and Emily, and I have compared this to the markup version we provided to DMO and TBS. Below is the list of proposed edits that were not accepted:

- The charts on slide 8&9, the proposed total decrease/increase on bills impacts were not included.
- On slide 10, "before the planned ICI expansion" was not added to the end of the 3rd bullet point.
- On slide 13, the typo "OESB" was not fixed.
- On slide 24, the DRC charge "$0.007/kWh" was not corrected.
- Slide 25 – additional bullet points were added; however, our proposed edits were not accepted.
- On slide 29, our proposed bullet "As shown before the positive impact to residential ratepayers is very limited from the proposals with ratepayer impacts estimated by Energy…" was not included.
- Slide 33 & 34 are new, which include jurisdictional comparison charts.

Hope that helps.

Regards,
Gavin He

Hi,

Other than the addition of the fiscal slide the deck isn't significantly different from the previous version. There are a couple of additional slides in the appendix showing a jurisdictional comparison of industrial electricity prices (33) and industrial prices in Ontario by sector (34). On slide 24 (ending DRC for class B) the additional "0" in the DRC rate is still missing.

Emily

Hi,

Attached is a draft of the rate mitigation deck. This is tracking to major projects on Thursday for a preliminary discussion. As you can see there are a number of initiatives that have fiscal implications so your input and comments would be appreciated. Keley can coordinate with your EAs. I understand that Andrew T. plans to share with PO/your MOs.

If you recall, we did that table a couple weeks ago on existing fiscally funded mitigation programs. We can suggest adding that in. And, as for the GGRA, I think one of the challenges is it was supposed to be for incremental measures to reduce GHGs (not replacing funding for existing measures. But, that said, that was notion I noodled on too, but it would require at least a change in positioning, convincing the Minister of MOECC, as the arbiter of such and/or change the legislation.

Hi Ron,

Attached are three decks:

1. A markup of  Energy's deck to be shared with Energy.
2. A draft annotated version for the DMO/MO at MOF.
3. A draft summary deck.

John and I made several edits to the annotated version to make it more readable for the DMO. Hopefully we didn't misinterpret any of the comments received earlier today.

Thanks to everyone in the three branches for pulling this together on a very short time.

MINISTRY OF
ENERGY

# Proposed Initiatives to Transform Ontario's Electricity Sector

## Working Draft

December 5, 2016

CONFIDENTIAL DRAFT

# Context

- Electricity costs are increasing as the necessary investments are made to decarbonize and modernize the province's electricity infrastructure.
  - Since 2003, the Province has invested more than $35 billion in over 16,000 megawatts (MW) of new and refurbished cleaner generation, including nuclear, natural gas and renewables.
  - Over the same period, Hydro One has invested $15.5 billion to enhance and renew its transmission and distribution systems.
  - As additional electricity generation comes online, nuclear units are refurbished and distribution and transmission investments are made, prices are forecast to continue to increase.

- Actions have been taken to drive down electricity costs, including deferring investments in generation (e.g., new build nuclear), improving market efficiency (e.g., introduction of wind dispatch) and decreasing the cost of renewable procurements (e.g., Green Energy Investment Agreement ~~GEIA~~ renegotiation, decreasing FIT prices).

- Additional steps have been taken to increase cost effectiveness and improve efficiency by adopting new electricity market approaches, such as:
  - Enhancing competition between developers of large renewable projects through the Large Renewable Procurement (LRP) process to drive down price and secure clean, reliable generation for the province;
  - Directing IESO to end the process of negotiating new NUG contracts pending the development of a Capacity Auction (i.e., Market Renewal); and
  - Launching the first IESO Demand Response Auction (i.e., a competitive process through which demand-side resources are selected to be available to reduce their electricity consumption as needed).

# Context (Cont'd)

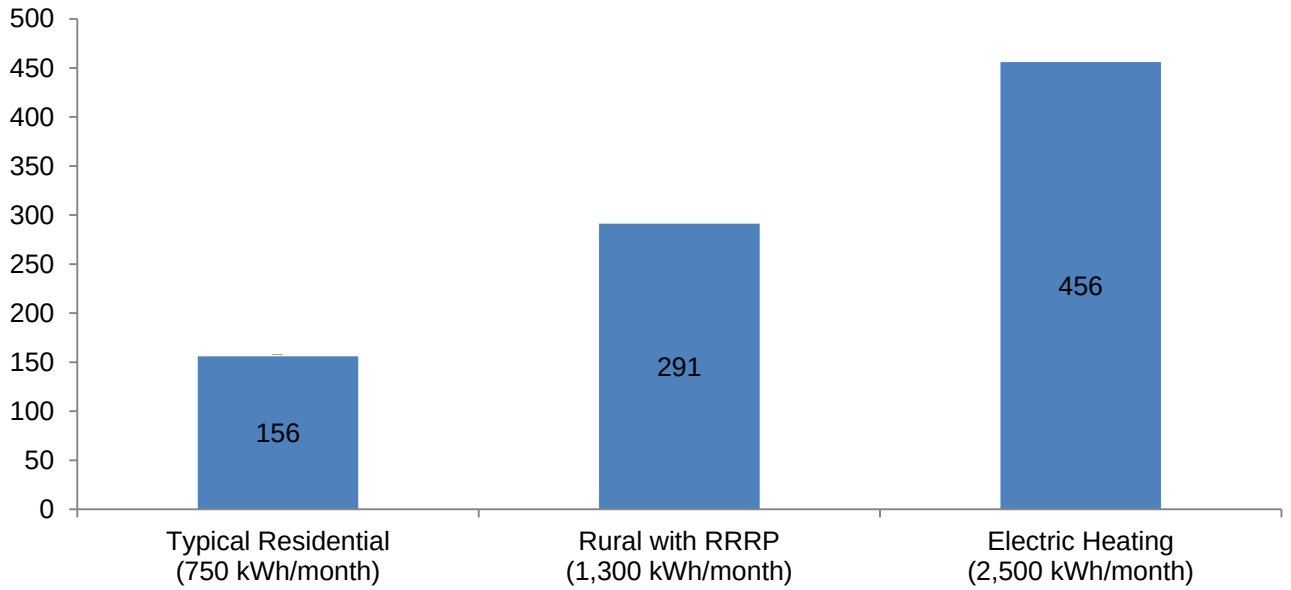
- Following the 2016 Throne Speech, a number of actions were announced to further reduce electricity costs, such as:
  - Providing an 8 per cent rebate before tax, equivalent to the provincial portion of HST, for approximately 5 million eligible electricity consumers including residences, small businesses and farms;
  - Increasing the amount of rate protection available to approximately 330,000 eligible rural customers living in low-density areas by updating the Rural or Remote Rate Protection (RRRP) program;
  - Lowering the Industrial Conservation Initiative (ICI) threshold to 1 MW and removing sector restrictions so that more consumers can benefit;
  - Suspending the second round of the Large Renewable Procurement (LRP II) and the Energy-from-Waste Standard Offer Program to save up to $3.8 billion in costs; and
  - Recycling a portion of cap and trade auction proceeds to keep rates affordable for industrial and commercial electricity consumers.
- On November 28, 2016, the Minister of Energy announced the need for changes in how electricity resources are procured and the need for wholesale market renewal.

- The Ministry of Energy is currently updating its Long-Term Energy Plan (LTEP), which provides an opportunity to consider a range of policy changes to how the Ontario energy sector operates.

# Current Electricity Prices – Residential

- Residential consumers electricity prices continue to be a concern for many Ontarians, particularly those that rely on electric heat.
  - **Note:** The typical residential bills are currently below the 2013 Long-Term Energy Plan (2013 LTEP) forecasts ($159 / 750kWh)

**Residential Electricity Bills**
*in $/month*

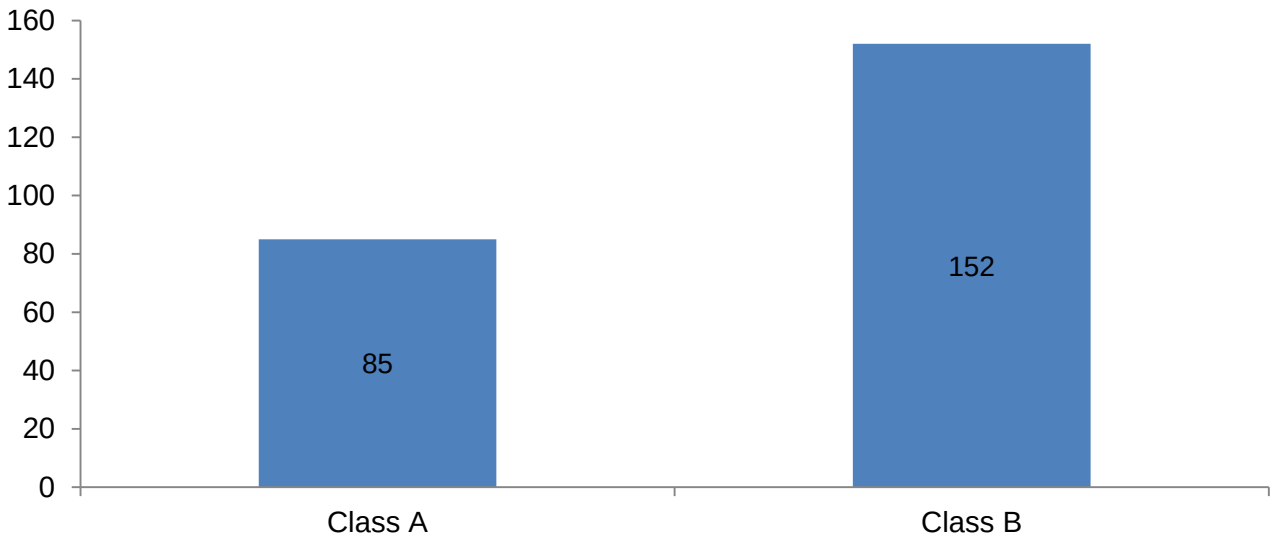


**Note**: Typical residential and electric heating shown above are based on Toronto Hydro; rural is based on connection to Hydro One as a R2 customer eligible to receive the Rural or Remote Rate Protection (RRRP) credit of $31.50.

# Current Electricity Prices – Industrial and Commercial

- While large industrial electricity consumers (i.e., Class A) rates are competitive with other jurisdictions, rates for commercial/small industrial consumers (i.e., Class B) are higher by comparison.
  - **Note:** Current industrial and commercial prices are below 2013 LTEP forecasts ($96 / MWh)

**Current All-In electricity Price**
*in $/MWh*



**Note**: Based on year-to-date (YTD) September 2016 prices. Class A reflects a transmission-connected consumer. Class B reflects a 1 MW load operating at 56% load factor and connected to Toronto Hydro.

# Current Status on Taxpayer Funded Electricity Price Mitigation

| ($M) | 2011-12 | 2012-13 | 2013-14 | 2014-15 | 2015-16 | 2016-17[1] | 2017-18[1] |
|---|---|---|---|---|---|---|---|
| OCEB | 1,033 | 994 | 1,006 | 1,078 | 860 | - | - |
| OREC | - | - | - | - | - | 300 | 1,100* |
| Ending DRC[2] | - | - | - | - | 85 | 330 | 330 |
| NIERP | 120 | 120 | 115 | 108 | 120 | 120 | 120 |
| NOEC | 23 | 24 | 25 | 24 | 26 | 25 | 25 |
| OEPTC[3] | 354 | 406 | 418 | 429 | 444 | 450 | 460 |
| **TOTAL** | **1,530** | **1,544** | **1,564** | **1,639** | **1,525** | **1,195** | **2,005** |

1. 2016-17, 2017-18 based on forecasted numbers
2. 2015-16 estimated for 3 months of reduced DRC revenue
3. OEPTC amounts in all years based on energy component of the rebate.

* Sourced from Energy PRRT Submission

OCEB – Ontario Clean Energy Benefit
OREC – Ontario Rebate for Electricity Consumers
DRC – Debt Retirement Charge
NIERP – Northern Ontario Electricity Rate Program
NOEC – Northern Ontario Energy Credit
OEPTC – Ontario Energy and Property Tax Credit

- The table above shows the annual amount of taxpayer funded electricity price mitigation from 2011-12 to 2017-18.
- From 2011-12 to 2015-16 there has been an annual fiscal impact of approximately $1.5 billion due to electricity price mitigation programs.
- In 2016-17, the fiscal impact due to electricity price mitigation programs is estimated at approximately $1.2 billion.
- In 2017-18, due primarily to the start of the Ontario Rebate for Electricity Consumers, the expected fiscal impact due to electricity price mitigation programs is approximately $2.0 billion and before considering any additional funding from the tax base.

# Proposed Initiatives – Overview

- The suite of proposed initiatives are intended to:
  - Transform how the electricity market operates in Ontario;
  - Re-set how ~~government~~ electricity sector programs are funded (i.e., rate-base vs tax-base);
  - Provide system benefits (e.g., industrial load retention);¸(**NTD: If it provides system benefits, why not paid through the rate base)**
  - Lower the cost of electricity for residential and industrial consumers; and
  - Increase cost effectiveness and improve efficiency.

- The proposed initiatives include:
  1. Implement Market Renewal Initiatives
  2. Fund Electricity Support Programs Through The Tax-base
  3. Eliminate the Industrial Conservation Initiative (ICI)
  4. Amortize Conservation Program Costs
  5. LDC Efficiencies
  6. Rate Design Initiatives
  7. Reduced Cost of OPG Borrowing
  8. End Debt Retirement Charge (DRC) Early for Commercial/Small Industrial Class B Electricity Consumers
  9. Dedicate Departure Tax
  10. Cancel/Adjust Renewable Energy Procurements

- The proposed initiatives provide opportunities to reduce electricity costs for residential and industrial consumers while at the same time transforming the province's electricity market and yielding benefits for the electricity system.

# Proposed Initiatives – Impacts

- Each of the proposed initiatives under consideration target different government programs and different parts of the electricity bill. The proposals impact different classes of electricity consumers to varying degrees.

| Proposal | Program / Initiative | Line on Bills | Who Benefits |
|---|---|---|---|
| 1. Implement Market Renewal Initiatives | Market Renewal | Electricity, Global Adjustment, Regulatory | Market Renewal: All electricity consumers |
| 2. Fund Electricity Support Programs Through The Tax-base | OESP, RRRP | Regulatory | All electricity consumers evenly |
| 3. Eliminate the Industrial Conservation Initiative (ICI) | ICI | Electricity, Global Adjustment | Only Class B electricity consumers (i.e., residential) **Note:** Will have a negative impact on Industrial consumers. |
| 4. Amortize Conservation Program Costs | Amortization | Electricity, Global Adjustment | Class B electricity consumers and to a lesser extent Class A consumers |
| 5. LDC Efficiencies | Distribution efficiencies | Delivery | All embedded consumers |
| 6. Rate Design Initiatives | Rate structures | Electricity, Global Adjustment | Rate Design Initiatives: Participating electricity consumers |
| 7. Reduced Cost of OPG Borrowing | n/a | Electricity, Global Adjustment | Class B electricity consumers and to a lesser extent Class A consumers |
| 8. End DRC Early for Commercial/Small Industrial Class B Electricity Consumers | Debt Retirement Charge (DRC) | DRC | Class B consumers (i.e., small business and commercial consumers, etc) |
| 9. Dedicate Departure Tax | Departure Tax | TBD | TBD |
| 10. Cancel/Adjust Renewable Energy Procurements | FIT, LRP | Electricity, Global Adjustment | Class B electricity consumers and to a lesser extent Class A consumers |

# Proposed Initiatives – Potential Savings for Typical Residential Electricity Consumers

| *$/750kWh* | 2017 | 2018 | 2019 | 2020 | 2021 | 2022 | Timing of Benefit |
|---|---|---|---|---|---|---|---|
| 1. Implement Market Renewal Initiatives | - | - | - | 1.58 | 1.59 | 1.60 | Longer-Term |
| 2. Fund Electricity Support Programs through the Tax-base | 2.18 | 2.30 | 2.31 | 2.45 | 2.48 | 2.51 | Immediate |
| 3. Eliminate the Industrial Conservation Initiative (ICI) | 4.40 | 4.24 | 4.10 | 4.24 | 3.73 | 3.58 | Immediate |
| 4. Amortize Conservation Program Costs | 1.67 | 1.56 | 1.21 | 0.81 | 0.54 | 0.3 | Immediate |
| 5. LDC Efficiencies | TBD | TBD | TBD | TBD | TBD | TBD | Near-Term |
| 6. Rate Design Initiatives* | - | - | - | - | - | - | Immediate |
| 7. Reduced Cost of OPG Borrowing | 0.13 | 0.13 | 0.13 | 0.18 | 0.18 | 0.18 | Immediate |
| 8. End DRC Early for Class B Electricity Consumers** | - | - | - | - | - | - | n/a |
| 9. Dedicate Departure Tax | TBD | TBD | TBD | TBD | TBD | TBD | Immediate |
| 10. Cancel / Adjust Renewable Energy Procurements | - | - | TBD | TBD | TBD | TBD | Longer-Term |
| **Total decrease on typical monthly bill** | **8.38** | **8.23** | **7.75** | **9.26** | **8.52** | **8.17** | |

**Note:** The above initiatives will provide similar benefits for non-RPP Class B electricity consumers. Proposal 2 assumes OESP participation of 50% and 5-year maturity. *Savings estimates do not include changes related to rate design. ** Class B includes small-medium enterprises (SMEs).

# Proposed Initiatives – Potential Savings for Average Industrial Electricity Consumers

| *$/MWh* | 2017 | 2018 | 2019 | 2020 | 2021 | 2022 | Timing of Benefit |
|---|---|---|---|---|---|---|---|
| 1. Implement Market Renewal Initiatives | - | - | - | 2.11 | 2.12 | 2.13 | Longer-Term |
| 2. Fund Electricity Support Programs through the Tax-base | 2.91 | 3.06 | 3.17 | 3.27 | 3.33 | 3.38 | Immediate |
| 3. Eliminate the Industrial Conservation Initiative (ICI) | (24.12) | (23.21) | (22.45) | (23.23) | (20.42) | (19.61) | Immediate |
| 4. Amortize Conservation Program Costs | 1.15 | 1.08 | 0.84 | 0.56 | 0.37 | 0.25 | Immediate |
| 5. LDC Efficiencies | n/a | n/a | n/a | n/a | n/a | n/a | Near-Term |
| 6. Rate Design Initiatives* | - | - | - | - | - | - | Immediate |
| 7. Reduced Cost of OPG Borrowing | 0.10 | 0.10 | 0.10 | 0.15 | 0.15 | 0.15 | Immediate |
| 8. End DRC Early for Class B Electricity Consumers** | - | - | - | - | - | - | n/a |
| 9. Dedicate Departure Tax | TBD | TBD | TBD | TBD | TBD | TBD | Immediate |
| 10. Cancel / Adjust Renewable Energy Procurements | - | - | TBD | TBD | TBD | TBD | Longer-Term |
| **Total increase on industrial bill** | **19.96** | **18.97** | **18.34** | **17.14** | **14.45** | **13.7** | |

**Note:** Proposal 2 assumes OESP participation of 50% and 5-year maturity. Proposal 3 reflects the elimination of ICI, as opposed to moving ICI cost shift to the taxbase. The $1.75/MWh savings associated with Proposal 7 in 2018 accounts for the fact that under the status quo, DRC will be removed from bills in April 2018. *Savings estimates do not include changes related to rate design. ** Class B includes small-medium enterprises (SMEs).

# Fiscal Considerations

- Funding electricity support programs (i.e., OESP, RRRP, First Nations Delivery Rate) from the tax-base represents approximately $440 million on average annually.

- Ending the Debt Retirement Charge (DRC) for commercial and small industrial electricity consumers (i.e., Class B) early would represent an additional fiscal pressure of about $450 million ~~[placeholder for OFA]~~ on the Province.

- If the Industrial Conservation Initiative were funded though the tax-base instead of being eliminated, this would represent a $900 million annual cost to the fiscal plan (before the planned ICI expansion).

- Reducing OPG borrowing costs to the Province's cost of funds is expected to result in a $30 ~~20 to $35~~ million annual fiscal pressure in 2017 to the province ~~[TBC by OPG / OFA]~~ based on new borrowing and increasing to about $70M by 2021.

- Fiscal impacts of allocating a portion of the departure tax to ratepayers will depend on the size of the allocation, as well as timing for the flow of value. The maximum, direct one-time impact is $2.6 billion, with potential ancillary impacts on residual stranded debt defeasance.
- A summary of the annual fiscal impacts of the proposed initiatives is presented in the next slide.

# Proposed Taxpayer Funded Electricity Price Mitigation

| ($M) | 2016-17[1] | 2017-18[1] | 2018-19[1] | 2019-20[1] | 2020-21[1] |
|---|---|---|---|---|---|
| OCEB | - | - | - | - | - |
| OREC | 300 | 1,100* | 1,100* | 1,200* | 1,200* |
| Ending DRC[2] | 330 | 330 | -- | -- | -- |
| NIERP | 120 | 120 | 120 | 120 | 120 |
| NOEC | 25 | 25 | 25 | 25 | 25 |
| OEPTC[3] | 450 | 460 | 470 | 481 | 481 |
| **CURRENT TOTAL** | **1,195** | **2,005** | **1,715** | **1,826** | **1,826** |
| 1. OESP | | 106 | 119 | 127 | 132 |
| 2. RRRP | | 292 | 300 | 306 | 315 |
| 3. First Nations Delivery Rate | | 18 | 18 | 18 | 18 |
| 4. Fund ICI through Tax Base | | 900+100 | 900+100 | 900+ | 900+ |
| 5. Departure Tax | | TBD | TBD | TBD | TBD |
| 6. Conservation Amortisation | TBD | TBD | TBD | TBD | TBD |
| 7. DRC Ended for Class B | 110 | 450 | -- | -- | -- |
| 8. Other | | 30 | 45 | 60 | 70 |
| **TOTAL** | **1,305** | **3,901** | **3,197** | **3,237** | **3,261** |

1. 2016-17, 2017-18 based on forecasted numbers
2. 2015-16 estimated for 3 months of reduced DRC revenue
3. OEPTC amounts in all years based on energy component of the rebate.

- As shown above if various measures proposed in this deck were to be accepted, taxpayer funded contributions to electricity price mitigation would increase to about $3.4 – 3.9 billion in 2017-18. That is a 65-95% increase from the current forecast for 2017-18.
- These amounts were not considered in the 2016 Fiscal Plan and could put at risk the Province's fiscal objectives for 2017-18 and beyond.

# 1. Electricity Market Renewal Initiatives

- Continue to move forward with IESO's Market Renewal initiatives:
  - Market Renewal encompasses projects such as a single-schedule system (from the current two-schedule system), more frequent intertie scheduling to better align with other jurisdictions and a day-ahead market. There will be up front capital costs to enable the initiative. IESO is currently assessing these costs.
  - Moving to "technology-agnostic" procurements will provide new opportunities for innovation and modernization and ensure ratepayers receive the best prices possible.

**Considerations**

- Changes related to IESO's Market Renewal initiatives, reflected in HOEP and uplifts, are estimated to save up to $300 million per year, starting in 2020, leading to a reduction of:
  - About $1.60/month or about 1% at current retail prices for a typical residential bill; and
  - About $2/MWh or more than 2% at current all-in prices for industrial and SME electricity consumers.
- The IESO's Market Renewal is a broad initiative that will impact all aspects of Ontario's electricity market. Ontario has had a uniform price since market opening.
- Adopting a technology-agnostic stance will lower the overall cost of providing electricity service by selecting the most cost-effective resources to fulfill various system needs.

# 2. Fund Electricity Support Programs Through the Tax-Base

- Propose to fund electricity support programs, including Ontario Electricity Support Program (OESBP) and Rural or Remote Electricity Rate Protection (RRRP), through the tax-base instead of a regulated charge. This would allow the OESP and the RRRP charges to be removed from the Regulatory line on electricity bills.

**Considerations**

*Consumer Impacts and implementation*

- Transitioning OESP and RRRP to the tax-base would reduce a typical residential bill by about $2.35/month by 2020, and delivering the First Nation rate reduction through tax base would avoid about $0.10/month for a potential total savings of $2.45/month by 2020). As all programs provide strong social benefits, there is precedent for funding these programs through the tax-base.

- To address concerns from low income electricity consumers improvements to OESP could be implemented by increasing credits (could be up to double the current credits)
  - Single low income consumer would see a change from $30 to $45/ month ($540/year):
  - Family of four with electric heat could see a credit of $82.50/month ($990/year); and
  - Would mean no impact on consumer bills and no change to current OESP charge.
- RRRP and OESP are included in the “Regulatory” line on bills. If RRRP and OESP were eliminated from bills, the Regulatory line would decrease; however, as the Regulatory line is the smallest line item component of invoices, there is risk the decrease may not be perceived by customers.

- The RRRP regulation provides a funding mechanism for transmission infrastructure required to grid connect remote First Nation communities. Considerations for how that funding will be supported by the tax base will need to be determined.

- The non-rate mechanism to remove delivery charges from on-reserve First Nation customer monthly bills needs to be further explored.Funding RRRP and/or OESP with tax revenue would require amendments to existing legislation and regulations.

# 2. Fund Electricity Support Programs Through the Tax-Base (cont'd)

- Table below shows estimates of program costs up to 2020:

| Year | OESP | RRRP | First Nations Delivery Rate | TOTAL |
|---|---|---|---|---|
| 2017 | $106M | $292M | $18M | **$416M** |
| 2018 | $119M | $300M | $18M | **$437M** |
| 2019 | $127M | $306M | $18M | **$451M** |
| 2020 | $132M | $315M | $18M | **$465M** |

1) Ontario Electricity Support Program (OESP)
   - After almost a year in market, close to 30% of potentially eligible customers are signed up.
   - The cost projections below assume the program grows to 50% of eligible consumers by 2020 (also assumes 10% administration costs).

2) Rural and Remote Rate Protection (RRRP)
   - Provides benefits to R2 Hydro One consumers, Algoma, and remote communities.
   - Includes the expanded coverage that will begin on January 1, 2017.

3) First Nation rate reduction (currently under development)
   - On November 14, 2016, OEB presented options to the Ministry on reducing costs for on-reserve First Nation customers.
   - OEB's recommended option to provide 100% delivery rate credit, which is estimated at $18.4 million per year.
     - Other options includes a seasonal fixed credit to account for demand changes over the year ($13 million) or a 50% total bill reduction ($23 million).

# 3. Eliminate the Industrial Conservation Initiative (ICI)

- The cost shift from the Industrial Conservation Initiative (ICI) could be removed from electricity bills by eliminating ICI.
  - The ICI allows large electricity consumers to lower their electricity costs by reducing their demand during peak hours.

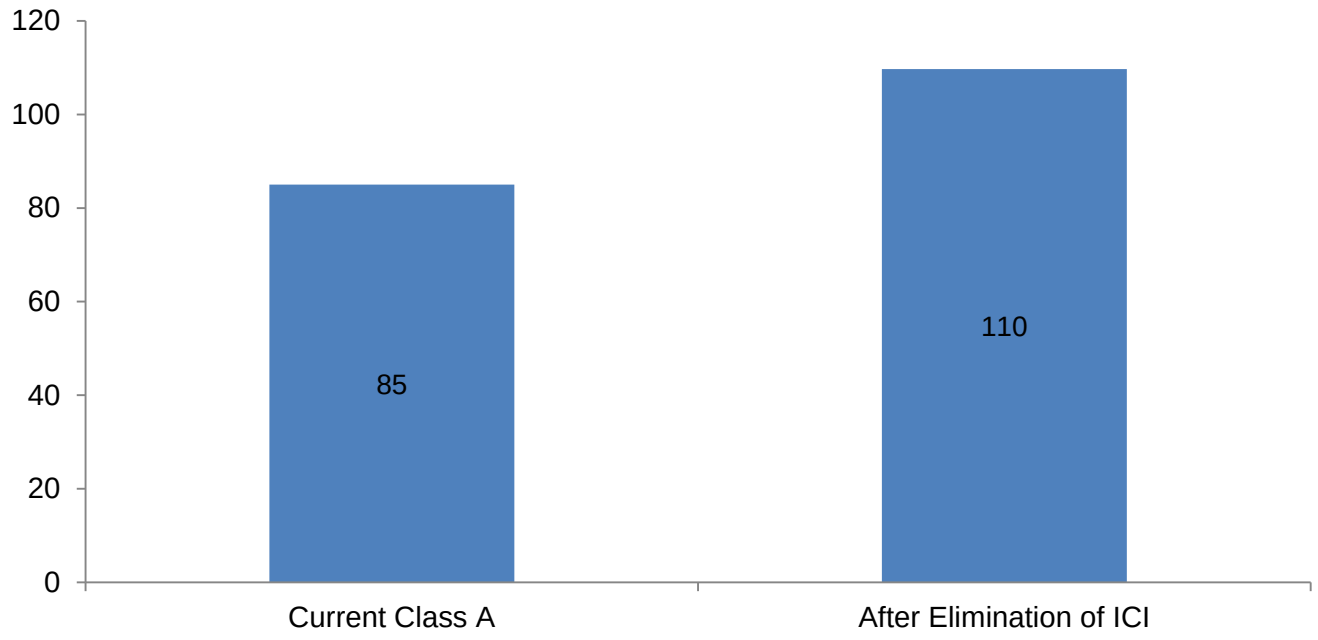
**Considerations**

- Eliminating ICI would result in a benefit of more than $4/month for residential electricity consumers in 2017.
  - However, unless government took action to mitigate the associated cost shift back to industrial consumers, typical industrial prices would increase by about one-third. Such a price increase would pose significant challenges for energy-intensive consumers.
- Industrial stakeholders have indicated that ICI as an integral factor in maintaining competitiveness and retaining industry in the province.
  - Eliminating ICI would limit the “cost shift” onto residential consumers, but it would also lead to a reduction in industrial demand. The large industrial contribution to the fixed costs of running the electricity system would then need to be covered by remaining consumers.
- If ICI is retained, current IESO projections indicate that the cost shift will decrease each year going forward as Global Adjustment (GA) decreases (due to an expected increase in HOEP).
- Alternatively, ICI could be funded through the tax-base at a cost of $900 million annually. There is precedent to use the tax-base for industrial support programs, including the Northern Industrial Electricity Rate Program (NIERP) and the Jobs and Prosperity Fund.

# 3. Eliminate the Industrial Conservation Initiative (cont'd)

- ICI currently provides a benefit of about $25/MWh to Class A electricity consumers.

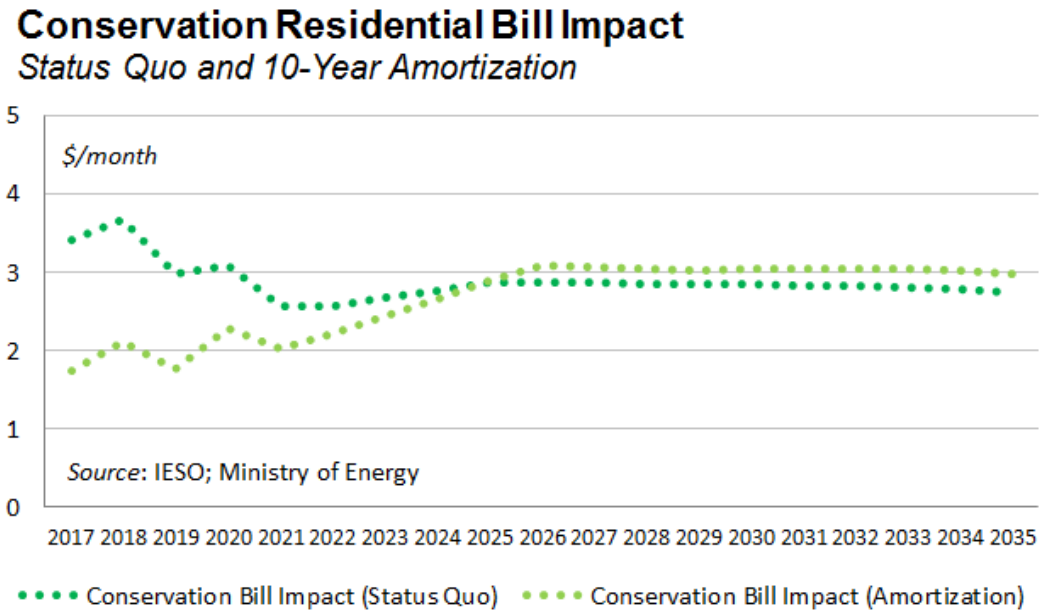
**All-In Electricity Price**
*in $/MWh*



**Note**: Based on year-to-date (YTD) September 2016 prices. Class A reflects a transmission-connected consumer.

# 4. Amortize Conservation Program Costs

- ~$3 billion from the electricity ratepayer base will be spent on conservation programs delivered under the Conservation First Framework and the Industrial Accelerator Program (IAP) between 2015 and 2020.
- Currently, Conservation and Demand Management (CDM) program costs are recovered from the Global Adjustment (GA) mechanism about one month after expenses are incurred.
- As a potential rate mitigation measure, certain CDM costs could be amortized.
- Amortizing a portion of conservation spending would produce a benefit for electricity ratepayers in excess of $1/month at the outset. Over time, the benefit would decrease and turn into a cost, as interest charges begin to grow.



**Note**: Chart assumes that conservation incentive costs are available for amortization while administration cost are not. Although there is variable from year to year, incentives represent about two-thirds of conservation spending in Ontario. Chart assumes conservation spending continues at a similar rate beyond 2020. Chart assumes a 10-year borrowing rate of 3.0%.

# 4. Amortize Conservation Program Costs (cont'd)

## Considerations

- Under **Public Sector Accounting Board (PSAB) accounting standards**, used by both the Province and IESO, only certain assets can be amortized: 1) pensions and 2) tangible capital assets. Under PSAB an asset must meet several criteria to be considered a capital asset, including:
  - A tangible capital asset must be tangible and substantive and the Ontario government must have title and operate the asset.
  - A tangible capital asset must bring a tangible benefit to the government or to Ontario.

- CDM costs, on their own, do not meet the criteria of a tangible capital asset because customers would have ownership and control of installed CDM measures, not the Province or IESO.

- **Rate-regulated accounting** was developed to recognize the unique nature of regulated entities (e.g., electricity generators, LDCs). Under rate-regulated accounting certain costs can be treated as amortizable assets that would not normally be considered assets under accounting principles.
  - Over the past several years, the Auditor General (AG) has expressed concerns about the appropriateness of recognizing rate-regulated assets in the Province's consolidated financial statements.
  - Rate-regulated accounting is currently under review by international accounting standard setting bodies and is currently permitted only on an interim basis, so its future is unclear at present.

# 4. Amortize Conservation Program Costs (cont'd)

**Considerations**

- If some of Ontario's CDM costs could be amortized, analysis shows that ratepayer impacts would be reduced in the short-term but interest charges on the loan would result in increased overall ratepayer costs in the longer-term.

- Legislative amendments would be needed to allow recovery of loan interest charges from GA.

- If there is a desire to proceed:
  - Formal accounting advice will need to be sought from IESO's external auditor as well as the Ontario Provincial Controller (OPC) to determine whether CDM costs could be amortized according to rate-regulated accounting standards.
  - Further legal analysis would also be required to confirm legal viability and possible approaches to implementation.

# 5. LDC Efficiencies

- Consider opportunities for future LDC cost reductions and efficiencies through the regulatory framework.

**Considerations**

- The Ontario Energy Board has a mandate to regulate the electricity distribution sector in the public interest, ensuring the financial viability of the sector while promoting reliable service to customers at just and reasonable rates.
- Since 2012, the OEB has taken action – through the Renewed Regulatory Framework for Energy – to more closely link rate regulation with performance measures and outcomes.
- There maybe opportunities to promote further cost reductions and performance improvements within the distribution sector as there is continued evolution of the regulatory framework in Ontario.
  - Tightening LDC requirements may also indirectly incent other desired policy outcomes, such as LDC consolidation and grid modernization to realize further cost reductions.
- ENERGY could help promote or accelerate these efforts by asking the OEB through the LTEP Implementation Directive, s. 35 of the *Ontario Energy Board Act, 1998*, and the 2017 Mandate Letter and other agency business planning processes.
- In addition, further changes to the departure and transfer tax regimes could be considered to provide a further incentive for LDC mergers and acquisitions.

# 6. Rate Design Initiatives

- OEB continues to move forward with its Regulated Price Plan (RPP) Roadmap:
  - The OEB is undertaking a comprehensive review of the RPP, including exploring the introduction of offering different pricing plan options for customers following the completion of pilot programs in 2018. The plan is expected to be implemented over a 3-5 year period.

- Until new pricing plans are available, the OEB could provide an "opt-in flat rate RPP" structure that could be made available to residential, farm and small business consumers on an interim basis (2-3 years) until a wider range of price plans are available.
- Time-of-Use (TOU) pricing could also be introduced for non-RPP Class B consumers to reduce Global Adjustment (GA) volatility and reduce system costs.

| Current TOU | New Flat Rate |
|---|---|
| On: 18.0 ¢/kWh | 11.1 ¢/kWh |
| Mid: 13.2 ¢/kWh | |
| Off: 8.7 ¢/kWh | |

**Considerations**

- The OEB has indicated that the option would lead to no overall change in system costs. Consumers with higher peak and mid-peak usage patterns would see a decrease in their electricity bills, while those with higher off-peak usage patterns would see an increase.
  - While the current strong supply conditions may allow for such an RPP structure (i.e., peak demand requirements can be easily met), administrative costs could be high (distributors would need to design/implement an opt-in process and associated billing system on an interim basis).

| | Current TOU | New Flat Rate |
|---|---|---|
| 1) Monthly electricity bill- higher peak and mid-peak usage patterns | $172 | $163 |
| 2) Monthly electricity bill- higher off-peak usage patterns | $152 | $163 |

***Note:** 1) assumes a consumer consumption pattern of 45%:30%:25% (Off-peak: Mid-peak: On-peak), while 2) assumes consumer consumption pattern of 80%:10%:10% (Off-peak: Mid-peak: On-peak). Estimates are based on OEB's online electricity bill calculator (for Toronto Hydro-November 2016 rates)

# 6. Rate Design Initiatives (cont'd)

**Considerations**

- The decision to undertake smart meter investments was partly justified on the basis of TOU pricing. If TOU pricing were to be made optional, some stakeholders could question the rationale for smart meter investments.
  - Rationale for offering a flat rate option could focus on providing customers with choice until new pricing plans are rolled out under the RPP roadmap.

- If a flat rate design is introduced, there could be significant consumer opposition to any return to a mandatory TOU.

- After the interim flat rate period, the OEB could offer a wider range of pricing plans to consumers.
  - As part of its RPP review, the OEB will be running pilots with LDCs to assess customer response to alternative time periods and pricing structures.
  - Learnings from these pilots will help inform potential changes to the RPP. Pilots are expected to be in market May 2017 and run for one year.

- Non-RPP Class B electricity consumers currently pay Global Adjustment (GA) on a volumetric basis. Moving them to TOU would provide an incentive to shift consumption to off-peak periods.
  - Consumers, including manufacturers, who are unwilling to shift would face higher costs and likely not be supportive of the changes.
  - The decision to pursue TOU pricing for non-RPP class B consumers will impact proceeds recycling as there is interplay between the two initiatives.

# 7. Reduced Cost of OPG Borrowing

- OPG currently borrows for corporate purposes from the OEFC
- Seek to reduce OPG's borrowing costs and pass on savings to ratepayers by:
  - Reducing or removing the spread that OEFC applies to OPG for any new corporate debt; or
  - Allowing OPG to refinance its existing debt at longer maturities through the OEFC in order to take advantage of the current, favourable interest rate environment.
- Assuming the full spread is removed from all OEFC debt, OPG borrowing costs could be reduced by 50-100 basis points, representing annual savings of about $20-$25 million, increasing to $30-$35 million, as OPG's outstanding OEFC debt rises from ~$3.3 billion in 2016 to ~$4.7 billion in 2020.
- OPG could apply to the OEB as part of its current rate application to flow this benefit to ratepayers.

**Considerations**

- Further work is required to determine potential OPG savings from these initiatives.
- Allowing OPG to refinance would have a negative fiscal impact on the Province.
- Spreads are expected to decline, reducing the relative impact of this change, given lower overall interest rates and reduced volatility.
- Providing OPG with greater access to longer term (20-30 year) debt may also reduce costs:
  - OPG's average term to maturity for OEFC debt is 5.7 years, as compared to 22.2 years for privately financed project debt. This contrasts with most corporations and government which have been working to extend average debt terms in order to take advantage of the low interest rate environment.
  - Longer terms would also better match to the life of OPG's assets.
  - Recently, OEFC has allowed OPG to apply for 50% of its financing requirements in the form of longer term (25-30 year debt). Moving closer to 100% would accelerate this transition.

# 8. End DRC Early for Commercial/Small Industrial Class B Electricity Consumers

- Propose to remove the $0.007/kWh Debt Retirement Charge (DRC) from the bills of commercial/small industrial Class B consumers beginning in 2017, instead of April 1, 2018.
  - **Note:** Class A consumers (e.g., large industrial) would continue to pay DRC until at least April 1, 2018.

**Considerations**

- For a Class B consumer currently paying about $152/MWh, removing the DRC would represent a savings of about 5%.
  - A 50% reduction in the DRC charge would represent a savings of about 2%.

- Alternatively, the reduction of the DRC could be to $0.035/kWh starting in 2017, to provide relief for cap and trade until proceeds recycling is fully operational.

- Residential consumers have had the DRC removed from bills since January 1, 2016. Taking DRC off commercial and small industrial bills would result in equal treatment for these groups of consumers.

- The savings for commercial and small industrial consumers associated with this proposal would drop to zero in April 2018, since this is the current planned date for removing the DRC from non-residential bills.

- Prior to moving forward with this proposal, additional analysis from Legal Services and the MOF would be needed.

# 9. Dedicate Departure Tax

- In connection with the IPO, as a result of leaving the PILs regime and entering the corporate tax regime, Hydro One was deemed to dispose of its assets for proceeds equal to its fair market value, triggering a PILs liability of $2.6 billion (Departure Tax).
- This was paid to the Ontario Electricity Financial Corporation (OEFC), to be dedicated towards repayment of electricity sector stranded debt.
- The Province could explore repurposing some of those funds to the benefit of ratepayers.
- This may reduce the risk that the Ontario Energy Board (OEB) assigns to ratepayers the benefit from an associated tax asset, resulting in lower earnings and decreased share value for Hydro One. This decision is currently before the OEB, as part of Hydro One's Transmission rate application.

**Considerations**

- Cost savings to ratepayers would depend on timing and which ratepayers (e.g., Hydro One customers, or all Ontario customers) will benefit from some or all of the $2.6 billion value.
- While this is a shift from messaging that value from the broadening of ownership of Hydro One is being used pay down debt and fund transit and transportation, the Province could link to electricity infrastructure investments (e.g., as an offset to infrastructure investments already made in the sector, or to specific initiatives such as conservation).
- These funds were paid to the Ontario Electricity Financial Corporation (OEFC), ~~to be~~ dedicated towards repayment of electricity sector stranded debt. Repurposing may have an impact on the pay down / defeasance of this debt.

# 10. Cancel/Adjust Renewable Energy Procurements

- The Ministry could consider the following actions to further mitigate future impacts to electricity bills:

| Unallocated/Terminated Capacity | Announced Procurements | Executed Contracts |
|---|---|---|
| A. Do not procure unallocated or terminated capacity | B. Revise FIT 5 target | D. Cancel LRP I contracts |
| | C. Cancel FIT 6 | |

**Overarching Considerations**

- Cost savings associated with reducing or cancelling renewable energy procurements and programs will not reduce current electricity bills, but would result in future cost reductions relative to Ontario Planning Outlook forecasts.
- The IESO estimates implementing options A to C will reduce system costs by approximately $592 million ($2016) between 2019 and 2028, resulting in an average of approximately $0.50/month in savings to a typical residential electricity bill over the same period. [cost reductions from LRP I contract cancellations TBC]
- The microFIT program is winding down end of 2017. Annual microFIT procurement targets have been undersubscribed.
- With a few exceptions (e.g., rollover of unallocated microFIT capacity; addition of terminated microFIT and small FIT capacity to FIT 5), plans for unallocated or terminated capacity are not defined in announcements or existing directions.

**Cancel/Adjust Announced Procurements**

- Amendments to existing directions to the IESO would be required to reduce FIT 5 and cancel FIT 6.
- The FIT 5 procurement is underway with a base target of 150 MW and inclusion of any capacity available from contract terminations under prior small FIT and microFIT procurements. The application window closed on November 25, 2016.

# 10. Cancel/Adjust Renewable Energy Procurements – Existing Contracts

**Cancel Existing LRP I Contracts**

- 16 LRP I contracts (approx. 455 MW) have been executed and projects are under development.
- None have met Key Development Milestones. Total value of LRP I estimated at approx. $1 billion (NPV to 2016).

[Placeholder for IESO: Cost calculation relative to OPO and associated bill impact]

**Considerations**

- To help inform a decision, IESO or OEB could be asked to evaluate and provide guidance to the Ministry on the system need for LRP I projects and potential ratepayer impacts/benefits.
- 13 of 16 LRP I contracts have Indigenous participation. Cancelling LRP I contracts would remove this economic development opportunity and likely damage relationships between Indigenous communities and the government.
- LRP I Contract includes an “Optional Termination” provision allowing IESO to terminate any contract prior to the “Commercial Operation Date” with 6 months written notice.
- The IESO obligations under the Optional Termination provision depend on whether the project has met all “Key Development Milestones”.
  - As no projects have met their Key Development Milestones, the estimated total cost payable to contract holders is about $8 million.

# 10. Cancel/Adjust Renewable Energy Procurements – Existing Contracts (cont'd)

## Legal Analysis

- Under the *Electricity Act, 1998*, the Minister has the authority to amend previous directions without approval from Cabinet. Although an amendment to an existing direction would not require Cabinet approval, it is unlikely that a direction to cancel LRP I contracts could be considered as amending an existing direction. The previous LRP directions set out the broad policy framework that was reflected in the procurement, but the contracts themselves, once executed, are stand alone documents which the IESO had legal authority to execute. Revoking previous LRP directions does not affect that authority or have the effect of cancelling the procurement.
- As a result, any new directive to cancel LRP I contracts would need to be approved by Cabinet, either as part of an LTEP implementation directive to IESO, or pursuant to the overall power to direct IESO with respect to procurements outside the LTEP process. However, there is a risk that such a directive could be subject to challenge.
- ENERGY has previously received advice that there is a high risk that a court would conclude that the Minister has no authority under the *Electricity Act , 1998* to issue a direction requiring IESO to terminate microFIT Conditional Offers and FIT Offer Notices that have already been issued to applicants, because these offers create vested contractual rights and the Minister would require clear legislative authority to interfere with those rights. This reasoning would likely apply equally to any direction or directive to IESO to cancel LRP I contracts.
- Previous advice has also flagged a moderately high risk that the Province could be liable for damages in tort for inducing a breach of contract if it issues a direction to IESO that interferes with vested contractual rights without clear statutory authority to do so. LRP I contract holders could also assert other claims, such as misfeasance in public office.
- The risk and costs associated with potential law suits resulting from the cancellation of contracts requires further analysis, including analysis of whether any statutory amendments would be required to provide clear authority to cancel the contracts. LSB recommends ENERGY seek an opinion from Crown Law Office Civil before proceeding.

# Summary

- Reductions in electricity rates could be achieved by eliminating existing, planned or directed initiatives from the rate-base or shifting these costs to the tax-base.

- The timing of the impact of these rate mitigation initiatives varies.
  - Immediate and near-term impacts can be achieved by shifting costs to the tax-base or changing how certain costs are recovered from consumers or eliminating certain programs.
  - Over the longer term, changes to the electricity supply mix and achieving efficiencies in the electricity market could yield system savings.

- Pursuing the initiatives would require regulatory amendments and working with the electricity sector agencies, LDCs and other stakeholders to implement the initiatives.

- As shown before the positive impact to residential ratepayers is very limited from the proposals with ratepayer impacts estimated by Energy (between $8 and $9 per month) while the impact to the Province's fiscal position would be material (about $1.2 to $1.5 billion a year). If additional proposals are also fiscally-funded, the fiscal cost could be substantially higher from, e.g., accounting treatment of conservation amortisation or a class B DRC exemption.

# Appendix

# Electricity Consumer Classes

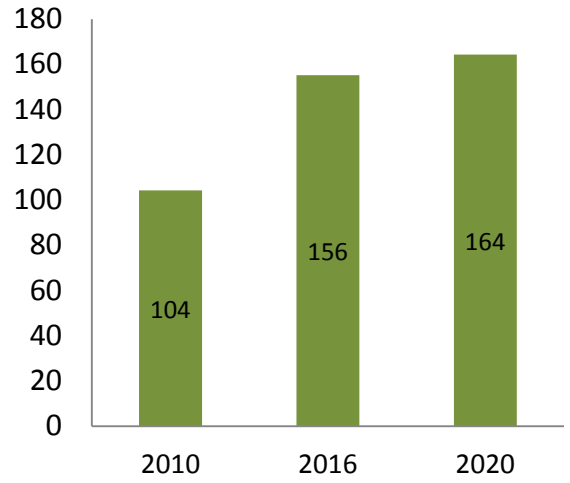
- In Ontario, there are three classes of electricity consumers:

| | Regulated Price Plan | Class B | Class A |
|---|---|---|---|
| **Consumer Types** | • Residential<br>• Small Business<br>• Farms | • Commercial<br>• Institutional<br>• Small industrial | • Large commercial<br>• Large industrial |
| **Load Size** | Below 0.05 MW | Between 0.05 MW and 1 MW | Above 1 MW |
| **Total Consumption** | 58 TWh | 57 TWh | 26 TWh |
| **Share of Consumption** | 41.1% | 40.4% | 18.4% |

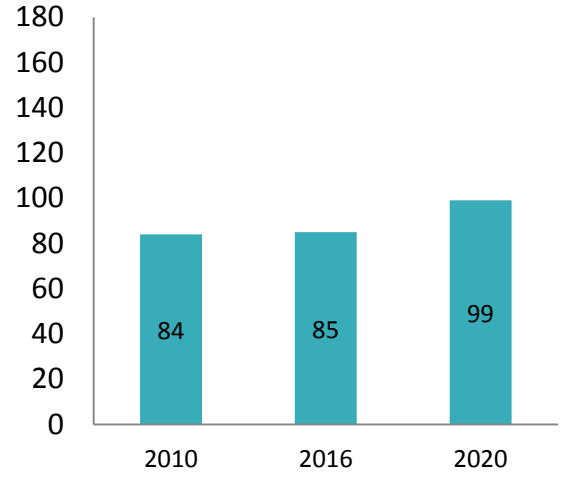
# Prices by Electricity Consumer Class

- Since 2010, average bills for residential consumers (i.e., using 750 kWh/month) have increased by over 50%. Rates are forecast to continue to increase, with residential consumers paying an estimated 6% by 2020.
- Industrial electricity rates have remained relatively flat over the same time period, due primarily to the Industrial Conservation Initiative (ICI). ICI represents a cost shift of about $5/month for residential electricity consumers. Industrial electricity consumers are forecast to see an increase of 16% by and 2020.

**Typical Residential Bill (750/kWh per month)**



**Typical Class A (Industrial) Price ($/MWh)**



**Note:** 2016 represents year-to-date September 2016 for industrial. Cap and trade proceeds recycling is included for the industrial consumer for 2020.

# Rate Mitigation Levers

- To provide further rate relief to Ontario electricity consumers, the government can use one or more of the levers outlined below:
  - **Tax-based Lever:**
    - Provide rebates funded from the tax-base or transfer items currently paid through the rate-base to the tax-base.
  - **Rate-based Lever:**
    - Shifts costs within the rate-base from one customer group to another to achieve electricity system benefits and/or policy goals.
  - **Cap and Trade Proceeds Lever:**
    - Use cap and trade proceeds on initiatives that help reduce greenhouse gas (GHG) emissions from the electricity sector (e.g., recycling proceeds during off-peak periods) while providing benefits to some or all electricity consumers.

# Traditional Rate Mitigation Programs

- Ontario has implemented a number of rate-based programs to help residential and industrial electricity consumers:
  - The Ontario Electricity Support Program (OESP) provides ongoing assistance directly on the bills of eligible low-income electricity consumers
  - The Rural or Remote Rate Protection (RRRP) program is provided to rural and remote residential and farm customers because the cost of distributing power to remote areas is much higher than for urban areas.
  - The Industrial Conservation Initiative (ICI) encourages Ontario's largest consumers to reduce consumption during peak periods while reducing system costs.
- There are also tax-base programs to help manage electricity prices:
  - Rebate the provincial portion of the HST from the electricity bills of residential, small business and farms as of January 1, 2017.
  - Northern Industrial Electricity Rate Program (NIERP), in which participants receive a rebate of two cents per kilowatt hour. On average, industrial electricity prices can be reduced by up to 20%.
- While rate-based programs provide relief to certain electricity consumers, they shift other costs to remaining ratepayers (See Appendix for additional details).

# Driving Down Prices for Consumers

- Since 2013, a number of actions have been taken to drive down prices for consumers wherever possible:
  - Renegotiating the Green Energy Investment Agreement, reducing contract costs by $3.7 billion;
  - Deferring the construction of two new nuclear reactors at Ontario Power Generation's Darlington facility, avoiding an estimated $15 billion in new construction costs;
  - Approving Ontario Power Generation's plans to enable the ongoing operation of Pickering up to 2024, which is expected to save ratepayers as much as $600 million;
  - Reducing Feed-In-Tariff (FIT) prices through annual price reviews, saving ratepayers at least $1.9 billion relative to the 2013 Long-Term Energy Plan (2013 LTEP) forecast; and
  - Suspending the second round of the Large Renewable Procurement (LRP II) process and the Energy-from-Waste Standard Offer Program to save up to $3.8 billion in electricity system costs relative to 2013 LTEP.

# Cost Shifts in the Electricity Sector – Current Programs

- Several programs in the electricity sector “shift costs” from one group of electricity consumers to another:
  - **Rural or Remote Rate Protect** (**RRRP)** is a longstanding program that reduces the delivery charge for rural electricity consumers and is paid for by all consumers in Ontario through a regulatory charge on bills.
  - **Ontario Electricity Support Program (OESP)** is funded via a regulatory charge on consumer bills and provides support for qualifying low income electricity consumers.
  - **Industrial Conservation Initiative (ICI)** empowers large consumers to lower their costs by reducing their demand during peak hours. In the process, ICI shifts costs from large electricity consumers to all other consumers in Ontario.
  - **Industrial Electricity Incentive** (**IEI**) program, offers reduced electricity prices for companies starting or expanding operations in Ontario. All electricity consumers in Ontario pay for the price reduction that IEI participants receive.

# Cost Shifts in the Electricity Sector (Cont'd)

- The tables on the right show the estimated cost shifts that result from existing government programs.
- ICI has had the largest cost shift of all the programs, due to the large size of Global Adjustment (GA) and the way that it is recovered from consumer classes.
- RRRP and OESP impact the regulatory line on consumer bills, while ICI, IEI and conservation affect GA (i.e., Electricity line on bills of Regulated Price Plan consumers).

**Cost Shift Impacts - Residential Bill**

*Typical 750 kWh/month Toronto Hydro consumer*

| *$/month* | 2011 | 2012 | 2013 | 2014 | 2015 | 2016 |
|---|---|---|---|---|---|---|
| ICI | 2.65 | 3.25 | 3.88 | 3.53 | 4.75 | 4.77 |
| RRRP | 0.90 | 0.82 | 0.84 | 0.92 | 0.93 | 0.94 |
| OESP | - | - | - | - | - | 0.84 |
| Conservation | 1.85 | 1.92 | 2.00 | 1.58 | 2.43 | 2.45 |
| IEI | - | - | 0.08 | 0.09 | 0.11 | 0.12 |
| **Total** | **5.41** | **5.99** | **6.81** | **6.13** | **8.21** | **9.12** |

**Cost Shift Impacts - Industrial Bill**

*Typical Class A consumer*

| *$/MWh* | 2011 | 2012 | 2013 | 2014 | 2015 | 2016 |
|---|---|---|---|---|---|---|
| ICI | -22.17 | -26.36 | -30.29 | -25.91 | -33.79 | -33.92 |
| RRRP | 1.20 | 1.10 | 1.12 | 1.23 | 1.24 | 1.25 |
| OESP | - | - | - | - | - | 1.13 |
| Conservation | 1.53 | 1.59 | 1.66 | 1.31 | 2.01 | 2.02 |
| IEI | - | - | 0.07 | 0.08 | 0.09 | 0.10 |
| **Total** | **-19.43** | **-23.67** | **-27.44** | **-23.29** | **-30.45** | **-29.43** |

**Note:** OESP did not come into effect until 2016. The 2016 values represent forecasts and are subject to change.

# Cost Shifts in the Electricity Sector (Cont'd)

- The table on the right shows the total cost for various government electricity programs. These programs are currently funded through the electricity system ratebase.

- Funding of these programs through the fiscal plan would remove these costs from the electricity system (i.e., Placing these costs on the taxbase).

**Cost of Programs**

*By government program*

| *$M* | 2011 | 2012 | 2013 | 2014 | 2015 | 2016 |
|---|---|---|---|---|---|---|
| ICI | 506 | 615 | 736 | 670 | 890 | 893 |
| RRRP | 172 | 156 | 159 | 176 | 174 | 176 |
| OESP | - | - | - | - | - | 158 |
| Conservation | 329 | 339 | 354 | 280 | 425 | 428 |
| IEI | - | - | 15 | 16 | 18 | 19 |

- For example, removing the roughly $900 million of program cost from the Industrial Conservation Initiative (ICI) program would save the typical residential electricity consumer $4.77 per month in 2016.

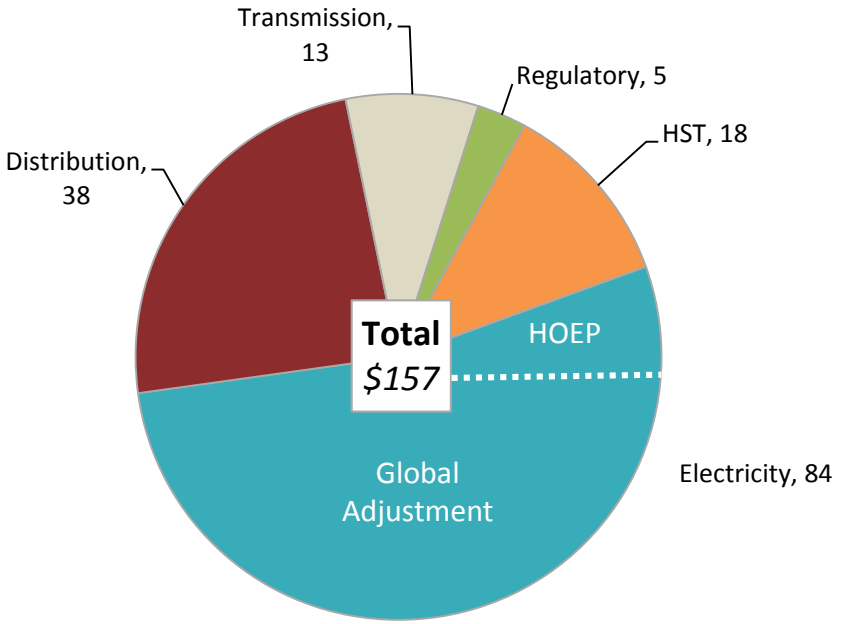
**Note:** OESP did not come into effect until 2016. The 2016 values represent forecasts and are subject to change.

# Residential Electricity Prices

- There are approximately 4.5 million residential consumers in Ontario.
- The Regulated Price Plan includes nearly all residential consumers, as well as small businesses. Regulated Price Plan consumers pay a blended commodity rate regulated by the OEB, which is set every six months.
- For households, the Debt Retirement Charge (DRC) was removed from residential electricity bills as of January 1, 2016.
- In addition, the Ontario Electricity Support Program (OESP) provides an ongoing rate reduction directly on the bills of low-income electricity consumers who have applied and meet the eligibility requirements. The program is funded through the rate base.
- Rural customers, in particular those with electrical heating, pay higher monthly bills.

**Typical Residential Monthly Bills ($)**

*As of November 1, 2016 (750 kWh/month)*



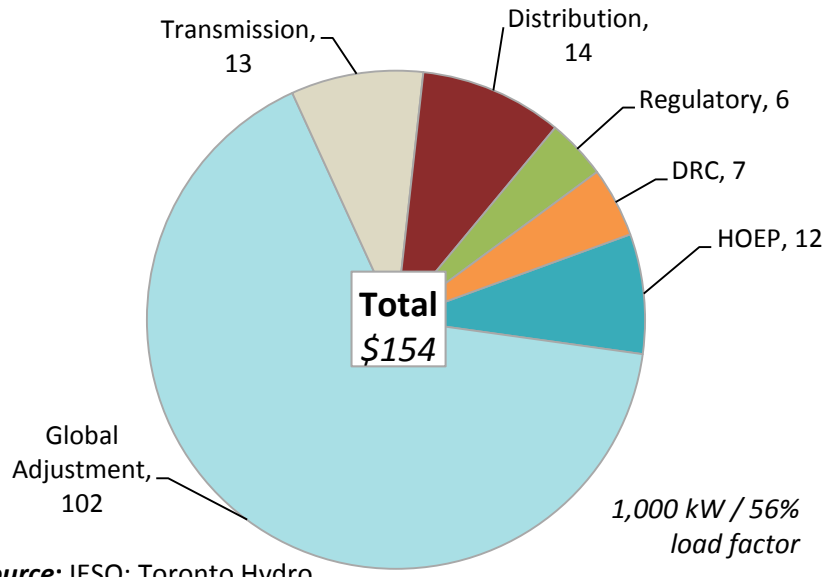
***Source*: OEB, Toronto Hydro**

# Commercial Electricity Prices

- There are approximately 55,000 commercial and institutional consumers in the province. These consumers are Class B consumers, and have separate line items on the electricity bill for HOEP and GA.
- There is a high degree of differentiation amongst consumers within the commercial sector in terms of size and consumption patterns. For example, an elementary school has a much different hourly load profile compared to a full service restaurant. This is an important consideration when looking at the bill impacts of policy options.

**Typical Commercial Price ($/MWh)**

*YTD June 2016 (Non-RPP Class B)*



***Source*:** IESO; Toronto Hydro

- Consumers in the commercial sector do not pay time-of-use prices and have little incentive to shift demand away from high demand hours.
- Targeted pricing programs are currently not available for Class B consumers.

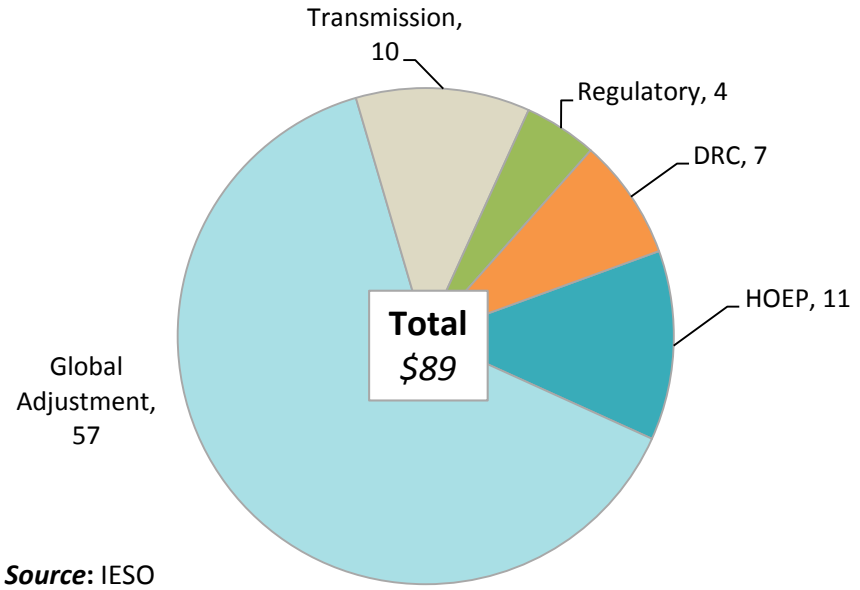
*** Note**: Most commercial consumers receive input tax credits for their HST.

# Industrial Electricity Prices

- There are about 300 large industrial consumers in Ontario.
- Measures in place to mitigate industrial electricity prices include ICI and NIERP.
- ICI lowers costs for eligible large electricity consumers (i.e., those with monthly peak demand exceeding 3 MW) that reduce consumption during peak periods.
  - ICI consumers reduce their electricity rates by 25% on average.

**Typical Large Industrial Price ($/MWh)**

*YTD June 2016*



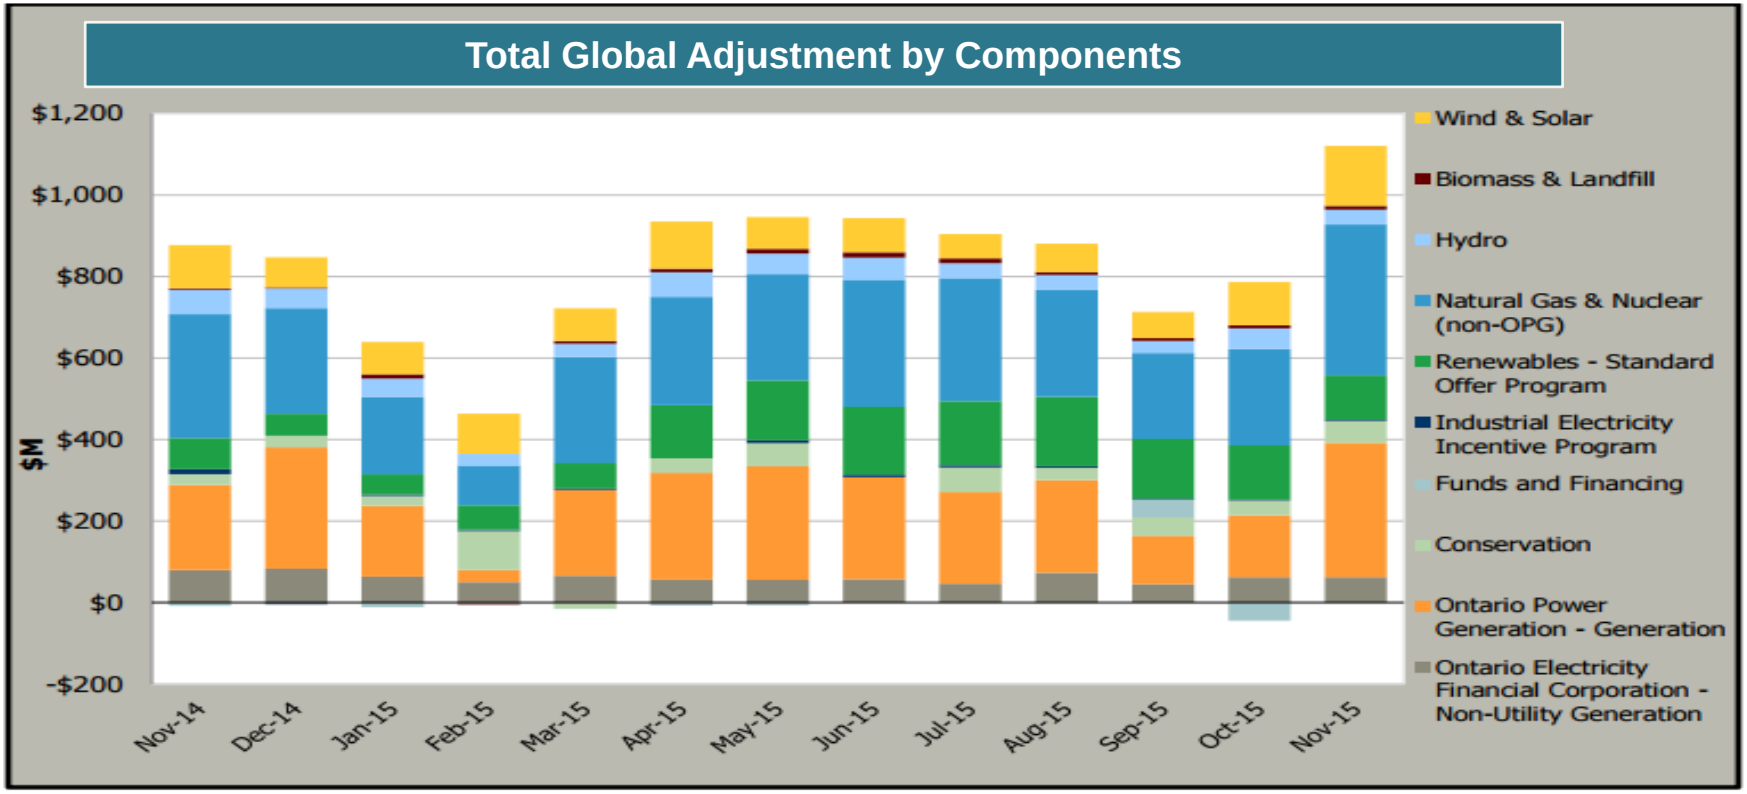
***Source*: IESO**

- Participants in NIERP receive a rebate of $20/MWh. On average, industrial electricity prices are reduced by about 20% through the program, reducing all-in prices to $69/MWh for these consumers. The program is funded through the tax base.

*** Note:** Industrial consumers receive input tax credits for their HST.

# Total Components of Global Adjustment

- Global Adjustment (GA) is a market mechanism that recovers costs from electricity consumers, including the cost of almost all conservation programs in the province (i.e., approximately half a billion dollars in 2016).



**Source:** IESO Monthly Market Report (November 2015)

# Cancel/Adjust Renewable Energy Procurements

# LRP I Pre-Construction Liability Limits

- All 16 successful LRP I developers accepted Optional Termination Provisions when the LRP I Contracts were executed in April 2016.
- If IESO chooses to enact the Optional Termination provision before a project has met all Key Development Milestones, IESO is required to pay pre-construction development costs up to the Pre Construction Liability Limit.
- Pre-construction development costs include costs incurred for feasibility studies, obtaining site access rights, work towards environmental approvals, business development plans, negotiation of contracts for design, equipment, construction and financing, reasonable overhead expenses, and other reasonable costs incurred.
- The Pre Construction Liability Limits are:
  - Non-Rooftop Solar: $250,000 plus $10.00/kW of Contract Capacity
  - Waterpower: $500,000 plus $20.00/kW of Contract Capacity
  - On-Shore Wind: $400,000 plus $2.00/kW of Contract Capacity
- According to the LRP I Optional Termination provision, the developer has a duty to take reasonable steps to mitigate losses, liabilities, costs and damages incurred as a result of the Optional Termination.
  - The IESO will not provide compensation for amounts which are attributable to a developer's failure to take reasonable steps to mitigate.

DRAFT

# Electricity Price Mitigation

Corporate and Electricity Finance Division
December 7, 2016

DRAFT

# General Comments on Energy's Deck

- Energy's deck note various actions taken to-date to reduce costs or cost pressures, such as deferring generation supply investments, improving market efficiency, and reducing the costs of existing procurements.
- Aside from reducing costs on the electricity bill, it is not clear what principles are being applied, short term or long term for electricity pricing.
  - A principle that was applied in the past was to ensure that electricity consumers paid the true cost of electricity, for example.
  - The Energy proposals appear to be about, in part at least, moving some costs from the rate base to the tax base.
- However, the Energy proposals may be seen as having a fairly limited impact, e.g., a little over $8/month for residential, or a little over 5% of the monthly bill (though not all of the proposals have been costed / assessed).
  - The proposals would have a significant fiscal cost [about $1.3 – 1.9 plus bn per year in new fiscal costs].
- There is already significant amounts of existing fiscally-funded electricity price mitigation
  - Averages over $1.5 billion per year over the past five years, and estimated to increase to about $2 billion in 17-18 (see subsequent slide for estimated costs over time, and likely increasing over time), with the total tax-based costs rising to about $3.3-3.9 plus billion in 2017-18, if Energy`s proposals are adopted.
  - These existing mitigation costs are not presented in Energy's deck.
  - Not included is any "hidden" price mitigation through constrained financial performance of, e.g., OPG.

DRAFT

# Context: Current Status on Taxpayer Funded Electricity Price Mitigation

| ($M) | 2011-12 | 2012-13 | 2013-14 | 2014-15 | 2015-16 | 2016-17[1] | 2017-18[1] |
|---|---|---|---|---|---|---|---|
| OCEB | 1,033 | 994 | 1,006 | 1,078 | 860 | - | - |

1. 2016-17, 2017-18 based on forecasted numbers
2. 2015-16 estimated for 3 months of reduced DRC revenue
3. OEPTC amounts in all years based on energy component of the rebate.

* Sourced from Energy PRRT submission

OCEB – Ontario Clean Energy Benefit
OREC – Ontario Rebate for Electricity Consumers
DRC – Debt Retirement Charge
NIERP – Northern Ontario Electricity Rate Program
NOEC – Northern Ontario Energy Credit
OEPTC – Ontario Energy and Property Tax Credit

- The table above shows the annual amount of taxpayer funded electricity price mitigation from 2011-12 to 2017-18.
- From 2011-12 to 2015-16 there has been an annual fiscal impact of approximately $1.6 billion due to electricity price mitigation programs.
- In 2016-17, the fiscal impact due to electricity price mitigation programs is estimated at approximately $1.2 billion.
- In 2017-18, due primarily to the start of the Ontario Rebate for Electricity Consumers, the expected fiscal impact due to electricity price mitigation programs is approximately $2.0 billion.

# Electricity Price Mitigation

General Decision Points on Program Features:

- Funding: Rate base vs Tax base
  - Tax base programs have a direct fiscal impact on the Province's finances, and shift costs based on taxpayer incidence and impact on expenditure room for other, non-electricity, programs.
  - Rate base programs shift costs from one group of ratepayers to another.
- On-bill vs Not On-bill
  - Recent focus has been on on-bill programs, such as OESP and OREC.
  - Older tax-base funded programs that are not visible on the bill are still in place, such as NOEC and OEPTC.
  - As OESP enrollment increases, could consider phasing out the non-bill benefits of NOEC and OEPTC.
- Targeted vs General
  - Recent new programs include both general (OREC) and targeted (OESP) programs.
  - Consideration could be made to make OREC more conservation-friendly (e.g., a monthly eligible consumption cap brought in, as with the former Ontario Clean Energy Benefit), and maybe a higher cap in the winter to allow for space heating costs.
  - A targeted industrial program recently extended and made on-going is the Northern Industrial Electricity Rate (NIER) program.

# Energy's Proposals

Energy is proposing additional electricity price mitigation programs, currently funded through the electricity system, be fiscally-funded. They could be upwards of $2 bn/year, (plus the departure tax), which is not included in the fiscal plan, which would challenge the path to balance.

- OESP & RRRP (Total of about $0.4 Bn/yr): This includes shifting the cost of the Ontario Electricity Support Program (OESP) and the Rural or Remote Electricity Rate Program (RRRP) to the tax base. Note that the fiscal exposure is larger if the OESP take up rate is larger, faster than assumed.

- Industrial Conservation Initiative (ICI -- About $900+ M/yr): Energy also shows, as a potential residential price mitigation measure, the cancellation of the ICI.
  - Energy is not initially proposing it be continued instead as taxpayer funded, but notes that about 30% price increase (from $85/MWh to $110), if ICI is cancelled, for the large Class A customers benefiting from ICI currently.
  - As this cost estimate is for 2016, prior to the planned expansion of the ICI, this could further increase the fiscal exposure by about $100 million).

- Departure Tax: As a result of the IPO, Hydro One paid a "departure tax" payment in lieu of tax (PIL) of $2.6 billion, as a final true-up of its PILs tax obligation.
  - This was paid to the Ontario Electricity Financial Corporation and helped reduce stranded debt.
  - Using some or all of it for price mitigation would change the net stranded debt paydown by OEFC resulting from the IPO. This would also be a one-time measure (potentially over a few years), and fiscal impact, as the departure tax amount was one-time.

- Other fiscal cost risks (Total of about $0.8+ Bn):
  - Amortisation of conservation costs also poses a fiscal risk (about $0.4 bn/yr),
  - Ending the DRC early for Class B customers (commercial, small industrial) (about $0.4 bn/yr to 2017-18)
  - Lowering of the debt interest paid by OPG (about $30 – 70 million/yr between 2017 and 2021),

DRAFT

# Fiscal Mitigation Options

- With the addition of recent and new price mitigation measures, a review should be initiated on fiscally-funded programs. There could be a phase down / out transition period considered. Examples include the following:

- Ontario Energy and Property Tax Credit (OEPTC) and Northern Ontario Energy Credit (NOEC):
  - Phase down and/or out the non-on-bill benefits of. (Save up to about $460 M/yr)
  - These targeted, low-income measures were introduced after the HST was introduced.
  - The OESP provides a larger, targeted and on-bill relief to qualifying consumers.

- Ontario Rebate for Electricity Consumers (OREC):
  - Introduce over time a monthly eligible consumption cap, with perhaps a higher cap in the winter to allow for space heating costs.
  - As with the prior OCEB cap, provides a rough incentive for conservation and correlation to larger homes. A higher cap in winter may help with space-heating issue.
  - May be challenging to implement.

- Greenhouse Gas Reduction Account:
  - If ICI is put on the tax-base, make it eligible for GGRA funding.
  - Positioned as, e.g., providing annual benefits from participants conserving and shifting off-peak to reduce reliance on GHG-emitting peaking plants

| 6. Conservation Amortisation | | TBD | TBD | TBD | TBD |
| 7. DRC Ended for Class B | 110 | 450 | | | |
| 8. Other | | 30 | 45 | 60 | 70 |
| TOTAL | 1,305 | 3,901 | 3,197 | 3,237 | 3,261 |

1. 2016-17, 2017-18 based on forecasted numbers
2. Estimated impact up to March 31, 2018
3. OEPTC amounts in all years based on energy component of the rebate.

- As shown above, if all measures proposed in this deck were to be accepted taxpayer funded contributions to electricity price mitigation would increase to about $3.4 – 3.9 billion in 2017-18. That is a 65-95% increase from the current forecast for 2017-18..
- These amounts were not considered in the 2016-17 Fiscal Plan and could put at risk the Province's fiscal objectives for 2017-18 and beyond.

# Appendix

DRAFT

# Background on Taxpayer-funded Electricity Price Mitigation

| Program | Annual Fiscal Impacts ($M) | Date | Details |
|---|---|---|---|
| **Ontario Clean Energy Benefit (OCEB)** | ~1,000 | Jan 1 2011 to Dec 31, 2015 | OCEB provided over four million residential customers, and over 400,000 farm, small business and other small users with a benefit equal to 10 per cent of the total cost of electricity on their bills, including tax. Effective September 1, 2012, 10 per cent benefit was capped for the first 3,000 kWh of electricity consumed per month. OCEB expired December 31, 2015, as legislated. |
| **Removed Debt Retirement Charge (DRC) from Residential Bills** | ~330 | Jan 1, 2016 to Mar 31, 2018 | The government removed the DRC from residential electricity users' bills as of January 1, 2016. This is saving a typical residential user about $70 each year and meant ending the DRC earlier for these users than otherwise provided for in the *Electricity Act, 1998*. |
| **Ontario Rebate for Electricity Consumers (OREC)** | ~1,200 | Jan 1, 2017 onward | This ongoing program will rebate -- directly on consumers' residential electricity bills -- an amount equal to the provincial portion of the Harmonized Sales Tax (HST). |
| **Northern Industrial Electricity Rate (NIER) Program** | 120 | March 2010 | As announced in Budget 2015, the government committed to ongoing support for northern industrials with $120 million allocated annually. NIER was previously extended in 2012 for an additional three-year term, effective April 1, 2013 and also for a year effective April 1, 2016, with an allocation up to $120 million per year.<br>Qualifying participants receive a rebate of two cents per kilowatt-hour (kWh) up to a maximum of $20 million per year per company.<br>NIER initially established as a three-year program in Budget 2010, effective April 1, 2010. |
| **Northern Ontario Energy Credit** | ~25 | Budget 2010 | Delivered as part of the Ontario Trillium Benefit, provides individuals living in northern Ontario with a credit of up to $146 per year for the 2016 benefit year, and families up to $224.[1] |
| **Ontario Energy Property Tax Credit** | ~445[1] | Budget 2010 | Delivered as part of the Ontario Trillium Benefit, energy portion provides up to $224 per year (inflation adjusted) for low-to moderate-income individuals and families, and for qualifying seniors.[1] |

1. Energy portion cost only. Both the energy portion of the Ontario Energy and Property Tax Credit (OEPTC) and NOEC were introduced/enhanced following the introduction of the HST and have a significant annual fiscal cost (totalling about $500 million annually).

DRAFT

# Timeline: Taxpayer-funded Electricity Price Mitigation

**Budget 2010: OEPTC, NOEC Proposed as part of the Ontario Trillium Benefit**

*In the 2011 Budget, the government combined the payments of three existing tax credits — the Ontario Sales Tax Credit, the Ontario Energy and Property Tax Credit, and the Northern Ontario Energy Credit — to create the OTB. The OTB is paid in monthly instalments throughout the year, which helps people meet their expenses as bills arrive.*

**Ontario Clean Energy Benefit** (Jan 1 2011 to Dec 31 2015)

*The OCEB was introduced in the 2010 Ontario Economic Outlook and Fiscal Review to help consumers transition to a cleaner electricity system. As set out in legislation, the OCEB ended on December 31, 2015. The Province has introduced rate mitigation measures to be implemented after December 31, 2015.*

*OCEB provided over four million residential customers, and over 400,000 farm, small business and other small users with a benefit equal to 10 per cent of the total cost of electricity on their bills, including tax, for the first 3,000 kilowatt-hours (kWh) of monthly electricity consumption.*

**Removing DRC from Residential Bills** (Jan 1 2016 to Mar 31 2018)

*The government removed the DRC from residential electricity users' bills beginning on January 1, 2016. This saves a typical residential user about $70 each year and ends the DRC earlier for these users than otherwise provided for in the Electricity Act, 1998.*

**Ontario Rebate for Electricity Consumers**

*As of January 1, 2017, OREC will reduce electricity costs by an amount equal to the provincial portion of the HST for about five million residential consumers, farms and small businesses.*

2010 2011 2012 2013 2014 2015 2016 2017

## History of Northern Industrial Electricity Price Relief

**November 2006**

*The Ontario government announced the Northern Pulp and Paper Electricity Transition Program (NPPETP), a three-year $140 million, to be effective retroactively to October 1, 2006*

**Budget 2009**

*The government announced extension of the NPPETP by one year providing about $58 million with electricity price rebates of 1.8 cents/kWh.*

**Budget 2010**

*NIER program announced, with a projected fiscal cost of $150 M per year, to provide electricity price rebates for qualifying large industrial facilities in northern Ontario. An additional $21.8 million allocated for existing NPPETP in 2010-11 to be integrated with NIER.*

**September 2010**

*Transition from NPPETP to NIER: pulp and paper mills participating in NPPETP continued to receive the NPPETP rebate of 1.8 cents/kWh until September 30, 2010, with those qualifying for NIER receiving a top-up rebate of 0.2 cents/kWh.*

**December 2012**

*The government announced the extension of the NIER for three years, capping the rebates to a maximum of 2011-12 consumptions levels or $20 million, whichever is lower.*

DRAFT

# Potential Fiscal Impact to the Electricity Sector

- The electricity sector has a significant impact on the Province's fiscal position; through both the revenue and expense sides of the Province's fiscal position.
  - Electricity Rate mitigation programs funded through the tax base have a direct fiscal impact on the Province's finances.
  - Alternatively, electricity rate mitigation programs funded by the rate base shift costs from one group of ratepayers to another.
- The Province's electricity sector agencies and corporations are each consolidated into the government's financial statements, and directly affect the Province's surplus/deficit position.
  - Ontario Power Generation (OPG) financial results have a dollar-for-dollar impact on the Province.
    - Electricity price mitigation strategies involving OPG would lead to a direct fiscal impact.
  - Hydro One financial results have a direct impact on the Province, based on the Province's proportionate ownership.
    - The Province currently holds about 70 per cent of Hydro One.

Hi,

I made a few edits to the summary deck too, and to the table on slide 12 on the markup of the Energy deck.

Ron

**Subject:** RE: Potential Rate Mitigation

Hi,

I adjusted the comments and annotations a little, and I`m inclined to send to both the DMO and Energy. I took out the debt comment on OPG borrowing, which I would not want to send to Energy.

Hi Ron,

Attached are three decks:

1. A markup of  Energy's deck to be shared with Energy.
2. A draft annotated version for the DMO/MO at MOF.
3. A draft summary deck.

John and I made several edits to the annotated version to make it more readable for the DMO. Hopefully we didn't misinterpret any of the comments received earlier today.

Thanks to everyone in the three branches for pulling this together on a very short time.

**Subject:** Fwd: Potential Rate Mitigation

Hi,

Lets meet in the morning to discuss.

We'll need a product for EOD. Could be an annotated slide deck, as well as a markup. Suggestion on any other formats?

Ron

Hi,

See attached and below. We are aiming to turn around a new version of the deck, incorporating any comments your ministries might have before major projects on Thursday. As such, could you please pass along your comments by end of day tomorrow?

If there are questions, I'm happy to discuss.

Thanks,
Keley

Subject: Potential Rate Mitigation

Hi,

Attached is a draft of the rate mitigation deck. This is tracking to major projects on Thursday for a preliminary discussion. As you can see there are a number of initiatives that have fiscal implications so your input and comments would be appreciated. Keley can coordinate with your EAs. I understand that Andrew T. plans to share with PO/your MOs.

DRAFT

# Electricity Price Mitigation

Corporate and Electricity Finance Division
December 7, 2016

DRAFT

# General Comments on Energy's Deck

- Energy's deck note various actions taken to-date to reduce costs or cost pressures, such as deferring generation supply investments, improving market efficiency, and reducing the costs of existing procurements.
- Aside from reducing costs on the electricity bill, it is not clear what principles are being applied, short term or long term for electricity pricing.
  - A principle that was applied in the past was to ensure that electricity consumers paid the true cost of electricity, for example.
  - The Energy proposals appear to be about, in part at least, moving some costs from the rate base to the tax base.
- However, the Energy proposals may be seen as having a fairly limited impact, e.g., a little over $8/month for residential, or a little over 5% of the monthly bill (though not all of the proposals have been costed / assessed).
  - The proposals would have a significant fiscal cost [about $1.3 – 1.9 plus bn per year in new fiscal costs].
- There is already significant amounts of existing fiscally-funded electricity price mitigation
  - Averages over $1.5 billion per year over the past five years, and estimated to increase to about $2 billion in 17-18 (see subsequent slide for estimated costs over time, and likely increasing over time), with the total tax-based costs rising to about $3.3-3.9 plus billion in 2017-18, if Energy`s proposals are adopted.
  - These existing mitigation costs are not presented in Energy's deck.
  - Not included is any "hidden" price mitigation through constrained financial performance of, e.g., OPG.

DRAFT

# Context: Current Status on Taxpayer Funded Electricity Price Mitigation

| ($M) | 2011-12 | 2012-13 | 2013-14 | 2014-15 | 2015-16 | 2016-17[1] | 2017-18[1] |
|---|---|---|---|---|---|---|---|
| OCEB | 1,033 | 994 | 1,006 | 1,078 | 860 | - | - |
| OREC | - | - | - | - | - | 300 | 1,100* |
| Ending DRC[2] | - | - | - | - | 85 | 330 | 330 |

| NOEC | 23 | 24 | 25 | 24 | 26 | 25 | 25 |
| OEPTC[3] | 354 | 406 | 418 | 429 | 444 | 450 | 460 |
| **TOTAL** | **1,530** | **1,544** | **1,564** | **1,639** | **1,525** | **1,195** | **2,005** |

1. 2016-17, 2017-18 based on forecasted numbers
2. 2015-16 estimated for 3 months of reduced DRC revenue
3. OEPTC amounts in all years based on energy component of the rebate.

* Sourced from Energy PRRT submission

OCEB – Ontario Clean Energy Benefit
OREC – Ontario Rebate for Electricity Consumers
DRC – Debt Retirement Charge
NIERP – Northern Ontario Electricity Rate Program
NOEC – Northern Ontario Energy Credit
OEPTC – Ontario Energy and Property Tax Credit

- The table above shows the annual amount of taxpayer funded electricity price mitigation from 2011-12 to 2017-18.
- From 2011-12 to 2015-16 there has been an annual fiscal impact of approximately $1.6 billion due to electricity price mitigation programs.
- In 2016-17, the fiscal impact due to electricity price mitigation programs is estimated at approximately $1.2 billion.
- In 2017-18, due primarily to the start of the Ontario Rebate for Electricity Consumers, the expected fiscal impact due to electricity price mitigation programs is approximately $2.0 billion.

# Electricity Price Mitigation

General Decision Points on Program Features:

- Funding: Rate base vs Tax base
  - Tax base programs have a direct fiscal impact on the Province's finances, and shift costs based on taxpayer incidence and impact on expenditure room for other, non-electricity, programs.
  - Rate base programs shift costs from one group of ratepayers to another.
- On-bill vs Not On-bill
  - Recent focus has been on on-bill programs, such as OESP and OREC.
  - Older tax-base funded programs that are not visible on the bill are still in place, such as NOEC and OEPTC.
  - As OESP enrollment increases, could consider phasing out the non-bill benefits of NOEC and OEPTC.
- Targeted vs General
  - Recent new programs include both general (OREC) and targeted (OESP) programs.
  - Consideration could be made to make OREC more conservation-friendly (e.g., a monthly eligible consumption cap brought in, as with the former Ontario Clean Energy Benefit), and maybe a higher cap in the winter to allow for space heating costs.
  - A targeted industrial program recently extended and made on-going is the Northern Industrial Electricity Rate (NIER) program.

# Energy's Proposals

Energy is proposing additional electricity price mitigation programs, currently funded through the electricity system, be fiscally-funded. They could be upwards of $2 bn/year, (plus the departure tax), which is not included in the fiscal plan, which would challenge the path to balance.

- OESP & RRRP (Total of about $0.4 Bn/yr): This includes shifting the cost of the Ontario Electricity Support Program (OESP) and the Rural or Remote Electricity Rate Program (RRRP) to the tax base. Note that the fiscal exposure is larger if the OESP take up rate is larger, faster than assumed.

- Industrial Conservation Initiative (ICI -- About $900+ M/yr): Energy also shows, as a potential residential price mitigation measure, the cancellation of the ICI.
  - Energy is not initially proposing it be continued instead as taxpayer funded, but notes that about 30% price increase (from $85/MWh to $110), if ICI is cancelled, for the large Class A customers benefiting from ICI currently.
  - As this cost estimate is for 2016, prior to the planned expansion of the ICI, this could further increase the fiscal exposure by about $100 million).

- Departure Tax: As a result of the IPO, Hydro One paid a "departure tax" payment in lieu of tax (PIL) of $2.6 billion, as a final true-up of its PILs tax obligation.
  - This was paid to the Ontario Electricity Financial Corporation and helped reduce stranded debt.
  - Using some or all of it for price mitigation would change the net stranded debt paydown by OEFC resulting from the IPO. This would also be a one-time measure (potentially over a few years), and fiscal impact, as the departure tax amount was one-time.

- Other fiscal cost risks (Total of about $0.8+ Bn):
  - Amortisation of conservation costs also poses a fiscal risk (about $0.4 bn/yr),
  - Ending the DRC early for Class B customers (commercial, small industrial) (about $0.4 bn/yr to 2017-18)
  - Lowering of the debt interest paid by OPG (about $30 – 70 million/yr between 2017 and 2021),

DRAFT

# Fiscal Mitigation Options

- With the addition of recent and new price mitigation measures, a review should be initiated on fiscally-funded programs. There could be a phase down / out transition period considered. Examples include the following:

- Ontario Energy and Property Tax Credit (OEPTC) and Northern Ontario Energy Credit (NOEC):
  - Phase down and/or out the non-on-bill benefits of. (Save up to about $460 M/yr)
  - These targeted, low-income measures were introduced after the HST was introduced.
  - The OESP provides a larger, targeted and on-bill relief to qualifying consumers.

- Ontario Rebate for Electricity Consumers (OREC):
  - Introduce over time a monthly eligible consumption cap, with perhaps a higher cap in the winter to allow for space heating costs.
  - As with the prior OCEB cap, provides a rough incentive for conservation and correlation to larger homes. A higher cap in winter may help with space-heating issue.
  - May be challenging to implement.

- Greenhouse Gas Reduction Account:
  - If ICI is put on the tax-base, make it eligible for GGRA funding.
  - Positioned as, e.g., providing annual benefits from participants conserving and shifting off-peak to reduce reliance on GHG-emitting peaking plants

DRAFT

# Background on Taxpayer-funded Electricity Price Mitigation

| Program | Annual Fiscal Impacts ($M) | Date | Details |
|---|---|---|---|
| **Ontario Clean Energy Benefit (OCEB)** | ~1,000 | Jan 1 2011 to Dec 31, 2015 | OCEB provided over four million residential customers, and over 400,000 farm, small business and other small users with a benefit equal to 10 per cent of the total cost of electricity on their bills, including tax. Effective September 1, 2012, 10 per cent benefit was capped for the first 3,000 kWh of electricity consumed per month. OCEB expired December 31, 2015, as legislated. |
| **Removed Debt Retirement Charge (DRC) from Residential Bills** | ~330 | Jan 1, 2016 to Mar 31, 2018 | The government removed the DRC from residential electricity users' bills as of January 1, 2016. This is saving a typical residential user about $70 each year and meant ending the DRC earlier for these users than otherwise provided for in the *Electricity Act, 1998*. |
| **Ontario Rebate for Electricity Consumers (OREC)** | ~1,200 | Jan 1, 2017 onward | This ongoing program will rebate -- directly on consumers' residential electricity bills -- an amount equal to the provincial portion of the Harmonized Sales Tax (HST). |
| **Northern Industrial Electricity Rate (NIER) Program** | 120 | March 2010 | As announced in Budget 2015, the government committed to ongoing support for northern industrials with $120 million allocated annually. NIER was previously extended in 2012 for an additional three-year term, effective April 1, 2013 and also for a year effective April 1, 2016, with an allocation up to $120 million per year.<br>Qualifying participants receive a rebate of two cents per kilowatt-hour (kWh) up to a maximum of $20 million per year per company.<br>NIER initially established as a three-year program in Budget 2010, effective April 1, 2010. |
| **Northern Ontario Energy Credit** | ~25 | Budget 2010 | Delivered as part of the Ontario Trillium Benefit, provides individuals living in northern Ontario with a credit of up to $146 per year for the 2016 benefit year, and families up to $224.[1] |
| **Ontario Energy Property Tax Credit** | ~445[1] | Budget 2010 | Delivered as part of the Ontario Trillium Benefit, energy portion provides up to $224 per year (inflation adjusted) for low-to moderate-income individuals and families, and for qualifying seniors.[1] |

1. Energy portion cost only. Both the energy portion of the Ontario Energy and Property Tax Credit (OEPTC) and NOEC were introduced/enhanced following the introduction of the HST and have a significant annual fiscal cost (totalling about $500 million annually).

DRAFT

# Timeline: Taxpayer-funded Electricity Price Mitigation

**Budget 2010: OEPTC, NOEC Proposed as part of the Ontario Trillium Benefit**

*In the 2011 Budget, the government combined the payments of three existing tax credits — the Ontario Sales Tax Credit, the Ontario Energy and Property Tax Credit, and the Northern Ontario Energy Credit — to create the OTB. The OTB is paid in monthly instalments throughout the year, which helps people meet their expenses as bills arrive.*

**Ontario Clean Energy Benefit** (Jan 1 2011 to Dec 31 2015)

*The OCEB was introduced in the 2010 Ontario Economic Outlook and Fiscal Review to help consumers transition to a cleaner electricity system. As set out in legislation, the OCEB ended on December 31, 2015. The Province has introduced rate mitigation measures to be implemented after December 31, 2015.*

*OCEB provided over four million residential customers, and over 400,000 farm, small business and other small users with a benefit equal to 10 per cent of the total cost of electricity on their bills, including tax, for the first 3,000 kilowatt-hours (kWh) of monthly electricity consumption.*

**Removing DRC from Residential Bills** (Jan 1 2016 to Mar 31 2018)

*The government removed the DRC from residential electricity users' bills beginning on January 1, 2016. This saves a typical residential user about $70 each year and ends the DRC earlier for these users than otherwise provided for in the Electricity Act, 1998.*

**Ontario Rebate for Electricity Consumers**

*As of January 1, 2017, OREC will reduce electricity costs by an amount equal to the provincial portion of the HST for about five million residential consumers, farms and small businesses.*

2010 2011 2012 2013 2014 2015 2016 2017

## History of Northern Industrial Electricity Price Relief

**November 2006**

*The Ontario government announced the Northern Pulp and Paper Electricity Transition Program (NPPETP), a three-year $140 million, to be effective retroactively to October 1, 2006*

**Budget 2009**

*The government announced extension of the NPPETP by one year providing about $58 million with electricity price rebates of 1.8 cents/kWh.*

**Budget 2010**

*NIER program announced, with a projected fiscal cost of $150 M per year, to provide electricity price rebates for qualifying large industrial facilities in northern Ontario. An additional $21.8 million allocated for existing NPPETP in 2010-11 to be integrated with NIER.*

**September 2010**

*Transition from NPPETP to NIER: pulp and paper mills participating in NPPETP continued to receive the NPPETP rebate of 1.8 cents/kWh until September 30, 2010, with those qualifying for NIER receiving a top-up rebate of 0.2 cents/kWh.*

**December 2012**

*The government announced the extension of the NIER for three years, capping the rebates to a maximum of 2011-12 consumptions levels or $20 million, whichever is lower.*

DRAFT

# Potential Fiscal Impact to the Electricity Sector

- The electricity sector has a significant impact on the Province's fiscal position; through both the revenue and expense sides of the Province's fiscal position.
  - Electricity Rate mitigation programs funded through the tax base have a direct fiscal impact on the Province's finances.
  - Alternatively, electricity rate mitigation programs funded by the rate base shift costs from one group of ratepayers to another.
- The Province's electricity sector agencies and corporations are each consolidated into the government's financial statements, and directly affect the Province's surplus/deficit position.
  - Ontario Power Generation (OPG) financial results have a dollar-for-dollar impact on the Province.
    - Electricity price mitigation strategies involving OPG would lead to a direct fiscal impact.
  - Hydro One financial results have a direct impact on the Province, based on the Province's proportionate ownership.
    - The Province currently holds about 70 per cent of Hydro One.

MINISTRY OF
ENERGY

# Proposed Initiatives to Transform Ontario's Electricity Sector

## Working Draft

December 5, 2016

CONFIDENTIAL DRAFT

# Context

- Electricity costs are increasing as the necessary investments are made to decarbonize and modernize the province's electricity infrastructure.
  - Since 2003, the Province has invested more than $35 billion in over 16,000 megawatts (MW) of new and refurbished cleaner generation, including nuclear, natural gas and renewables.
  - Over the same period, Hydro One has invested $15.5 billion to enhance and renew its transmission and distribution systems.
  - As additional electricity generation comes online, nuclear units are refurbished and distribution and transmission investments are made, prices are forecast to continue to increase.

- Actions have been taken to drive down electricity costs, including deferring investments in generation (e.g., new build nuclear), improving market efficiency (e.g., introduction of wind dispatch) and decreasing the cost of renewable procurements (e.g., Green Energy Investment Agreement ~~GEIA~~ renegotiation, decreasing FIT prices).

- Additional steps have been taken to increase cost effectiveness and improve efficiency by adopting new electricity market approaches, such as:
  - Enhancing competition between developers of large renewable projects through the Large Renewable Procurement (LRP) process to drive down price and secure clean, reliable generation for the province;
  - Directing IESO to end the process of negotiating new NUG contracts pending the development of a Capacity Auction (i.e., Market Renewal); and
  - Launching the first IESO Demand Response Auction (i.e., a competitive process through which demand-side resources are selected to be available to reduce their electricity consumption as needed).

# Context (Cont'd)

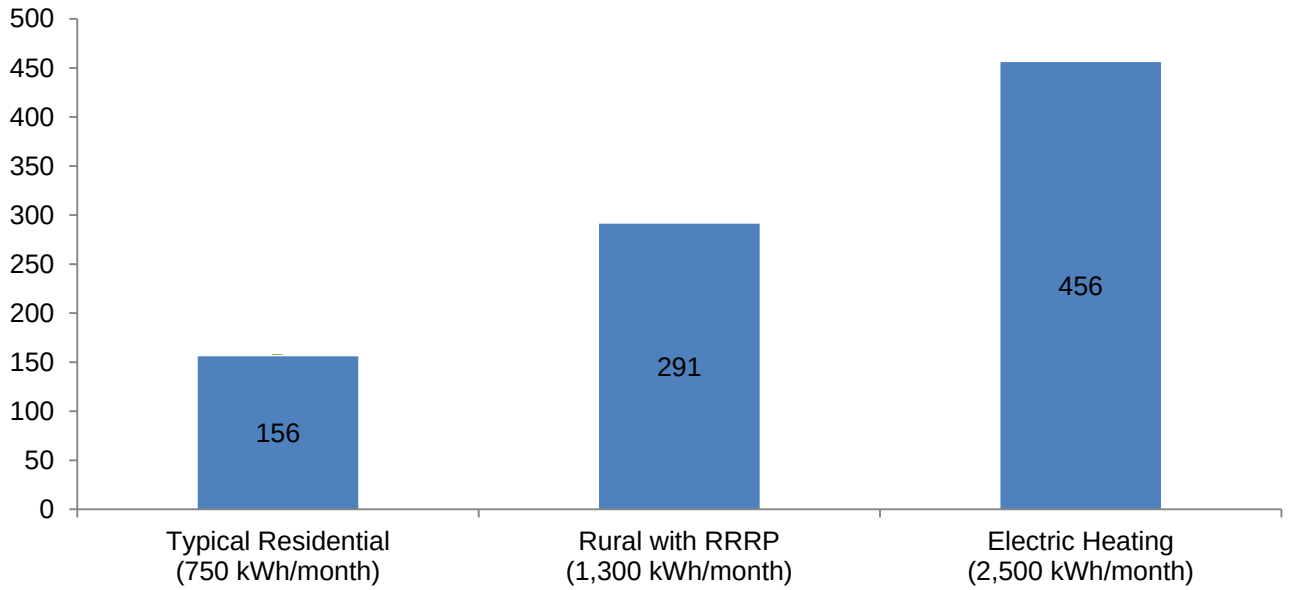
- Following the 2016 Throne Speech, a number of actions were announced to further reduce electricity costs, such as:
  - Providing an 8 per cent rebate before tax, equivalent to the provincial portion of HST, for approximately 5 million eligible electricity consumers including residences, small businesses and farms;
  - Increasing the amount of rate protection available to approximately 330,000 eligible rural customers living in low-density areas by updating the Rural or Remote Rate Protection (RRRP) program;
  - Lowering the Industrial Conservation Initiative (ICI) threshold to 1 MW and removing sector restrictions so that more consumers can benefit;
  - Suspending the second round of the Large Renewable Procurement (LRP II) and the Energy-from-Waste Standard Offer Program to save up to $3.8 billion in costs; and
  - Recycling a portion of cap and trade auction proceeds to keep rates affordable for industrial and commercial electricity consumers.
- On November 28, 2016, the Minister of Energy announced the need for changes in how electricity resources are procured and the need for wholesale market renewal.

- The Ministry of Energy is currently updating its Long-Term Energy Plan (LTEP), which provides an opportunity to consider a range of policy changes to how the Ontario energy sector operates.

# Current Electricity Prices – Residential

- Residential consumers electricity prices continue to be a concern for many Ontarians, particularly those that rely on electric heat.
  - **Note:** The typical residential bills are currently below the 2013 Long-Term Energy Plan (2013 LTEP) forecasts ($159 / 750kWh)

**Residential Electricity Bills**
*in $/month*

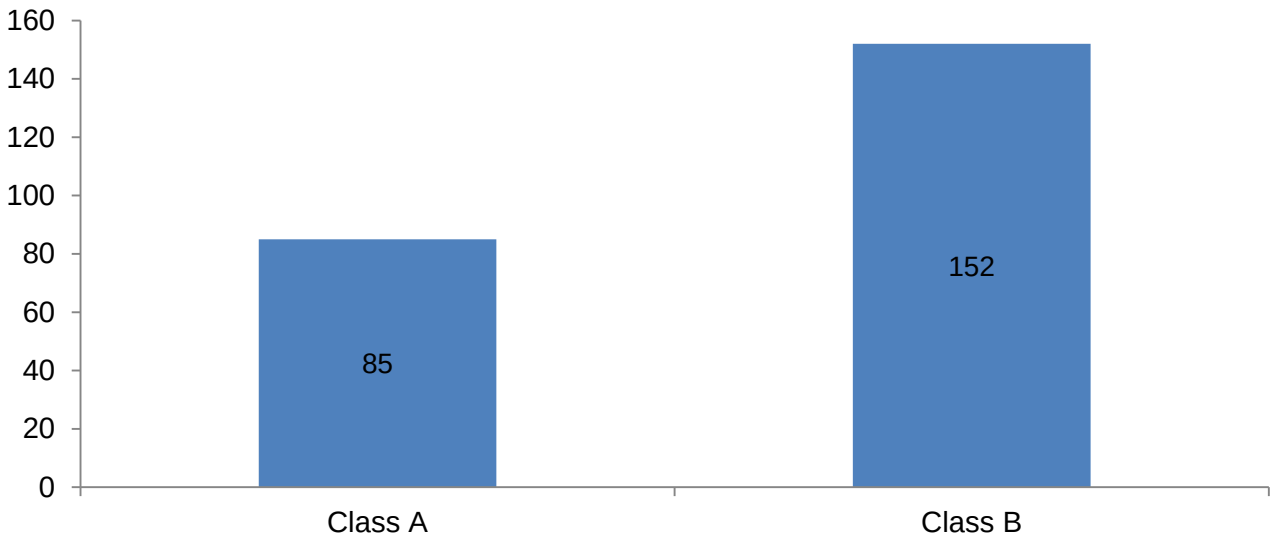


**Note**: Typical residential and electric heating shown above are based on Toronto Hydro; rural is based on connection to Hydro One as a R2 customer eligible to receive the Rural or Remote Rate Protection (RRRP) credit of $31.50.

# Current Electricity Prices – Industrial and Commercial

- While large industrial electricity consumers (i.e., Class A) rates are competitive with other jurisdictions, rates for commercial/small industrial consumers (i.e., Class B) are higher by comparison.
  - **Note:** Current industrial and commercial prices are below 2013 LTEP forecasts ($96 / MWh)

**Current All-In electricity Price**
*in $/MWh*



**Note**: Based on year-to-date (YTD) September 2016 prices. Class A reflects a transmission-connected consumer. Class B reflects a 1 MW load operating at 56% load factor and connected to Toronto Hydro.

# Current Status on Taxpayer Funded Electricity Price Mitigation

| ($M) | 2011-12 | 2012-13 | 2013-14 | 2014-15 | 2015-16 | 2016-17[1] | 2017-18[1] |
|---|---|---|---|---|---|---|---|
| OCEB | 1,033 | 994 | 1,006 | 1,078 | 860 | - | - |
| OREC | - | - | - | - | - | 300 | 1,100* |
| Ending DRC[2] | - | - | - | - | 85 | 330 | 330 |
| NIERP | 120 | 120 | 115 | 108 | 120 | 120 | 120 |
| NOEC | 23 | 24 | 25 | 24 | 26 | 25 | 25 |
| OEPTC[3] | 354 | 406 | 418 | 429 | 444 | 450 | 460 |
| **TOTAL** | **1,530** | **1,544** | **1,564** | **1,639** | **1,525** | **1,195** | **2,005** |

1. 2016-17, 2017-18 based on forecasted numbers
2. 2015-16 estimated for 3 months of reduced DRC revenue
3. OEPTC amounts in all years based on energy component of the rebate.

* Sourced from Energy PRRT Submission

OCEB – Ontario Clean Energy Benefit
OREC – Ontario Rebate for Electricity Consumers
DRC – Debt Retirement Charge
NIERP – Northern Ontario Electricity Rate Program
NOEC – Northern Ontario Energy Credit
OEPTC – Ontario Energy and Property Tax Credit

- The table above shows the annual amount of taxpayer funded electricity price mitigation from 2011-12 to 2017-18.
- From 2011-12 to 2015-16 there has been an annual fiscal impact of approximately $1.5 billion due to electricity price mitigation programs.
- In 2016-17, the fiscal impact due to electricity price mitigation programs is estimated at approximately $1.2 billion.
- In 2017-18, due primarily to the start of the Ontario Rebate for Electricity Consumers, the expected fiscal impact due to electricity price mitigation programs is approximately $2.0 billion and before considering any additional funding from the tax base.

# Proposed Initiatives – Overview

- The suite of proposed initiatives are intended to:
  - Transform how the electricity market operates in Ontario;
  - Re-set how ~~government~~ electricity sector programs are funded (i.e., rate-base vs tax-base);
  - Provide system benefits (e.g., industrial load retention);¸(**NTD: If it provides system benefits, why not paid through the rate base)**
  - Lower the cost of electricity for residential and industrial consumers; and
  - Increase cost effectiveness and improve efficiency.

- The proposed initiatives include:
  1. Implement Market Renewal Initiatives
  2. Fund Electricity Support Programs Through The Tax-base
  3. Eliminate the Industrial Conservation Initiative (ICI)
  4. Amortize Conservation Program Costs
  5. LDC Efficiencies
  6. Rate Design Initiatives
  7. Reduced Cost of OPG Borrowing
  8. End Debt Retirement Charge (DRC) Early for Commercial/Small Industrial Class B Electricity Consumers
  9. Dedicate Departure Tax
  10. Cancel/Adjust Renewable Energy Procurements

- The proposed initiatives provide opportunities to reduce electricity costs for residential and industrial consumers while at the same time transforming the province's electricity market and yielding benefits for the electricity system.

# Proposed Initiatives – Impacts

- Each of the proposed initiatives under consideration target different government programs and different parts of the electricity bill. The proposals impact different classes of electricity consumers to varying degrees.

| Proposal | Program / Initiative | Line on Bills | Who Benefits |
|---|---|---|---|
| 1. Implement Market Renewal Initiatives | Market Renewal | Electricity, Global Adjustment, Regulatory | Market Renewal: All electricity consumers |
| 2. Fund Electricity Support Programs Through The Tax-base | OESP, RRRP | Regulatory | All electricity consumers evenly |
| 3. Eliminate the Industrial Conservation Initiative (ICI) | ICI | Electricity, Global Adjustment | Only Class B electricity consumers (i.e., residential) **Note:** Will have a negative impact on Industrial consumers. |
| 4. Amortize Conservation Program Costs | Amortization | Electricity, Global Adjustment | Class B electricity consumers and to a lesser extent Class A consumers |
| 5. LDC Efficiencies | Distribution efficiencies | Delivery | All embedded consumers |
| 6. Rate Design Initiatives | Rate structures | Electricity, Global Adjustment | Rate Design Initiatives: Participating electricity consumers |
| 7. Reduced Cost of OPG Borrowing | n/a | Electricity, Global Adjustment | Class B electricity consumers and to a lesser extent Class A consumers |
| 8. End DRC Early for Commercial/Small Industrial Class B Electricity Consumers | Debt Retirement Charge (DRC) | DRC | Class B consumers (i.e., small business and commercial consumers, etc) |
| 9. Dedicate Departure Tax | Departure Tax | TBD | TBD |
| 10. Cancel/Adjust Renewable Energy Procurements | FIT, LRP | Electricity, Global Adjustment | Class B electricity consumers and to a lesser extent Class A consumers |

# Proposed Initiatives – Potential Savings for Typical Residential Electricity Consumers

| *$/750kWh* | 2017 | 2018 | 2019 | 2020 | 2021 | 2022 | Timing of Benefit |
|---|---|---|---|---|---|---|---|
| 1. Implement Market Renewal Initiatives | - | - | - | 1.58 | 1.59 | 1.60 | Longer-Term |
| 2. Fund Electricity Support Programs through the Tax-base | 2.18 | 2.30 | 2.31 | 2.45 | 2.48 | 2.51 | Immediate |
| 3. Eliminate the Industrial Conservation Initiative (ICI) | 4.40 | 4.24 | 4.10 | 4.24 | 3.73 | 3.58 | Immediate |
| 4. Amortize Conservation Program Costs | 1.67 | 1.56 | 1.21 | 0.81 | 0.54 | 0.3 | Immediate |
| 5. LDC Efficiencies | TBD | TBD | TBD | TBD | TBD | TBD | Near-Term |
| 6. Rate Design Initiatives* | - | - | - | - | - | - | Immediate |
| 7. Reduced Cost of OPG Borrowing | 0.13 | 0.13 | 0.13 | 0.18 | 0.18 | 0.18 | Immediate |
| 8. End DRC Early for Class B Electricity Consumers** | - | - | - | - | - | - | n/a |
| 9. Dedicate Departure Tax | TBD | TBD | TBD | TBD | TBD | TBD | Immediate |
| 10. Cancel / Adjust Renewable Energy Procurements | - | - | TBD | TBD | TBD | TBD | Longer-Term |
| **Total decrease on typical monthly bill** | **8.38** | **8.23** | **7.75** | **9.26** | **8.52** | **8.17** | |

**Note:** The above initiatives will provide similar benefits for non-RPP Class B electricity consumers. Proposal 2 assumes OESP participation of 50% and 5-year maturity. *Savings estimates do not include changes related to rate design. ** Class B includes small-medium enterprises (SMEs).

# Proposed Initiatives – Potential Savings for Average Industrial Electricity Consumers

| *$/MWh* | 2017 | 2018 | 2019 | 2020 | 2021 | 2022 | Timing of Benefit |
|---|---|---|---|---|---|---|---|
| 1. Implement Market Renewal Initiatives | - | - | - | 2.11 | 2.12 | 2.13 | Longer-Term |
| 2. Fund Electricity Support Programs through the Tax-base | 2.91 | 3.06 | 3.17 | 3.27 | 3.33 | 3.38 | Immediate |
| 3. Eliminate the Industrial Conservation Initiative (ICI) | (24.12) | (23.21) | (22.45) | (23.23) | (20.42) | (19.61) | Immediate |
| 4. Amortize Conservation Program Costs | 1.15 | 1.08 | 0.84 | 0.56 | 0.37 | 0.25 | Immediate |
| 5. LDC Efficiencies | n/a | n/a | n/a | n/a | n/a | n/a | Near-Term |
| 6. Rate Design Initiatives* | - | - | - | - | - | - | Immediate |
| 7. Reduced Cost of OPG Borrowing | 0.10 | 0.10 | 0.10 | 0.15 | 0.15 | 0.15 | Immediate |
| 8. End DRC Early for Class B Electricity Consumers** | - | - | - | - | - | - | n/a |
| 9. Dedicate Departure Tax | TBD | TBD | TBD | TBD | TBD | TBD | Immediate |
| 10. Cancel / Adjust Renewable Energy Procurements | - | - | TBD | TBD | TBD | TBD | Longer-Term |
| **Total increase on industrial bill** | **19.96** | **18.97** | **18.34** | **17.14** | **14.45** | **13.7** | |

**Note:** Proposal 2 assumes OESP participation of 50% and 5-year maturity. Proposal 3 reflects the elimination of ICI, as opposed to moving ICI cost shift to the taxbase. The $1.75/MWh savings associated with Proposal 7 in 2018 accounts for the fact that under the status quo, DRC will be removed from bills in April 2018. *Savings estimates do not include changes related to rate design. ** Class B includes small-medium enterprises (SMEs).

# Fiscal Considerations

- Funding electricity support programs (i.e., OESP, RRRP, First Nations Delivery Rate) from the tax-base represents approximately $440 million on average annually.

- Ending the Debt Retirement Charge (DRC) for commercial and small industrial electricity consumers (i.e., Class B) early would represent an additional fiscal pressure of about $450 million ~~[placeholder for OFA]~~ on the Province.

- If the Industrial Conservation Initiative were funded though the tax-base instead of being eliminated, this would represent a $900 million annual cost to the fiscal plan (before the planned ICI expansion).

- Reducing OPG borrowing costs to the Province's cost of funds is expected to result in a $30 ~~20 to $35~~ million annual fiscal pressure in 2017 to the province ~~[TBC by OPG / OFA]~~ based on new borrowing and increasing to about $70M by 2021.

- Fiscal impacts of allocating a portion of the departure tax to ratepayers will depend on the size of the allocation, as well as timing for the flow of value. The maximum, direct one-time impact is $2.6 billion, with potential ancillary impacts on residual stranded debt defeasance.
- A summary of the annual fiscal impacts of the proposed initiatives is presented in the next slide.

# Proposed Taxpayer Funded Electricity Price Mitigation

| ($M) | 2016-17[1] | 2017-18[1] | 2018-19[1] | 2019-20[1] | 2020-21[1] |
|---|---|---|---|---|---|
| OCEB | - | - | - | - | - |
| OREC | 300 | 1,100* | 1,100* | 1,200* | 1,200* |
| Ending DRC[2] | 330 | 330 | -- | -- | -- |
| NIERP | 120 | 120 | 120 | 120 | 120 |
| NOEC | 25 | 25 | 25 | 25 | 25 |
| OEPTC[3] | 450 | 460 | 470 | 481 | 481 |
| **CURRENT TOTAL** | **1,195** | **2,005** | **1,715** | **1,826** | **1,826** |
| 1. OESP | | 106 | 119 | 127 | 132 |
| 2. RRRP | | 292 | 300 | 306 | 315 |
| 3. First Nations Delivery Rate | | 18 | 18 | 18 | 18 |
| 4. Fund ICI through Tax Base | | 900+100 | 900+100 | 900+ | 900+ |
| 5. Departure Tax | | TBD | TBD | TBD | TBD |
| 6. Conservation Amortisation | TBD | TBD | TBD | TBD | TBD |
| 7. DRC Ended for Class B | 110 | 450 | -- | -- | -- |
| 8. Other | | 30 | 45 | 60 | 70 |
| **TOTAL** | **1,305** | **3,901** | **3,197** | **3,237** | **3,261** |

1. 2016-17, 2017-18 based on forecasted numbers
2. 2015-16 estimated for 3 months of reduced DRC revenue
3. OEPTC amounts in all years based on energy component of the rebate.

- As shown above if various measures proposed in this deck were to be accepted, taxpayer funded contributions to electricity price mitigation would increase to about $3.4 – 3.9 billion in 2017-18. That is a 65-95% increase from the current forecast for 2017-18.
- These amounts were not considered in the 2016 Fiscal Plan and could put at risk the Province's fiscal objectives for 2017-18 and beyond.

# 1. Electricity Market Renewal Initiatives

- Continue to move forward with IESO's Market Renewal initiatives:
  - Market Renewal encompasses projects such as a single-schedule system (from the current two-schedule system), more frequent intertie scheduling to better align with other jurisdictions and a day-ahead market. There will be up front capital costs to enable the initiative. IESO is currently assessing these costs.
  - Moving to "technology-agnostic" procurements will provide new opportunities for innovation and modernization and ensure ratepayers receive the best prices possible.

**Considerations**

- Changes related to IESO's Market Renewal initiatives, reflected in HOEP and uplifts, are estimated to save up to $300 million per year, starting in 2020, leading to a reduction of:
  - About $1.60/month or about 1% at current retail prices for a typical residential bill; and
  - About $2/MWh or more than 2% at current all-in prices for industrial and SME electricity consumers.
- The IESO's Market Renewal is a broad initiative that will impact all aspects of Ontario's electricity market. Ontario has had a uniform price since market opening.
- Adopting a technology-agnostic stance will lower the overall cost of providing electricity service by selecting the most cost-effective resources to fulfill various system needs.

# 2. Fund Electricity Support Programs Through the Tax-Base

- Propose to fund electricity support programs, including Ontario Electricity Support Program (OESBP) and Rural or Remote Electricity Rate Protection (RRRP), through the tax-base instead of a regulated charge. This would allow the OESP and the RRRP charges to be removed from the Regulatory line on electricity bills.

**Considerations**

*Consumer Impacts and implementation*

- Transitioning OESP and RRRP to the tax-base would reduce a typical residential bill by about $2.35/month by 2020, and delivering the First Nation rate reduction through tax base would avoid about $0.10/month for a potential total savings of $2.45/month by 2020). As all programs provide strong social benefits, there is precedent for funding these programs through the tax-base.

- To address concerns from low income electricity consumers improvements to OESP could be implemented by increasing credits (could be up to double the current credits)
  - Single low income consumer would see a change from $30 to $45/ month ($540/year):
  - Family of four with electric heat could see a credit of $82.50/month ($990/year); and
  - Would mean no impact on consumer bills and no change to current OESP charge.
- RRRP and OESP are included in the “Regulatory” line on bills. If RRRP and OESP were eliminated from bills, the Regulatory line would decrease; however, as the Regulatory line is the smallest line item component of invoices, there is risk the decrease may not be perceived by customers.

- The RRRP regulation provides a funding mechanism for transmission infrastructure required to grid connect remote First Nation communities. Considerations for how that funding will be supported by the tax base will need to be determined.

- The non-rate mechanism to remove delivery charges from on-reserve First Nation customer monthly bills needs to be further explored.Funding RRRP and/or OESP with tax revenue would require amendments to existing legislation and regulations.

# 2. Fund Electricity Support Programs Through the Tax-Base (cont'd)

- Table below shows estimates of program costs up to 2020:

| Year | OESP | RRRP | First Nations Delivery Rate | TOTAL |
|---|---|---|---|---|
| 2017 | $106M | $292M | $18M | **$416M** |
| 2018 | $119M | $300M | $18M | **$437M** |
| 2019 | $127M | $306M | $18M | **$451M** |
| 2020 | $132M | $315M | $18M | **$465M** |

1) Ontario Electricity Support Program (OESP)
   - After almost a year in market, close to 30% of potentially eligible customers are signed up.
   - The cost projections below assume the program grows to 50% of eligible consumers by 2020 (also assumes 10% administration costs).

2) Rural and Remote Rate Protection (RRRP)
   - Provides benefits to R2 Hydro One consumers, Algoma, and remote communities.
   - Includes the expanded coverage that will begin on January 1, 2017.

3) First Nation rate reduction (currently under development)
   - On November 14, 2016, OEB presented options to the Ministry on reducing costs for on-reserve First Nation customers.
   - OEB's recommended option to provide 100% delivery rate credit, which is estimated at $18.4 million per year.
     - Other options includes a seasonal fixed credit to account for demand changes over the year ($13 million) or a 50% total bill reduction ($23 million).

# 3. Eliminate the Industrial Conservation Initiative (ICI)

- The cost shift from the Industrial Conservation Initiative (ICI) could be removed from electricity bills by eliminating ICI.
  - The ICI allows large electricity consumers to lower their electricity costs by reducing their demand during peak hours.

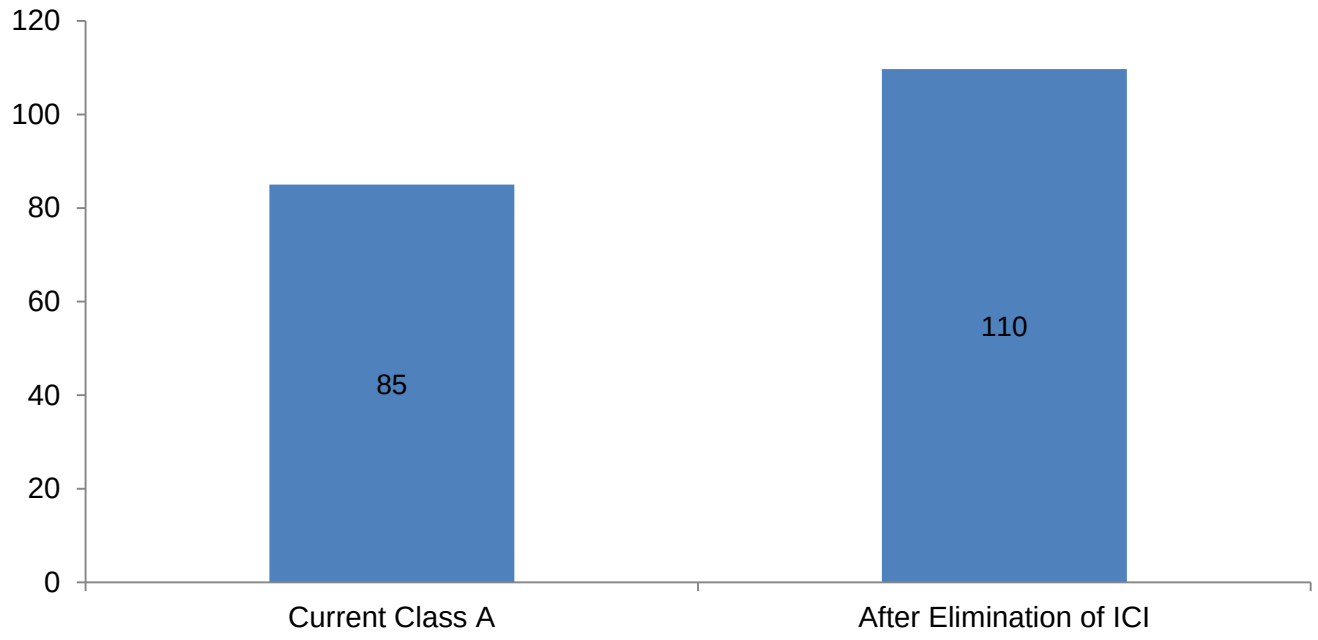
**Considerations**

- Eliminating ICI would result in a benefit of more than $4/month for residential electricity consumers in 2017.
  - However, unless government took action to mitigate the associated cost shift back to industrial consumers, typical industrial prices would increase by about one-third. Such a price increase would pose significant challenges for energy-intensive consumers.
- Industrial stakeholders have indicated that ICI as an integral factor in maintaining competitiveness and retaining industry in the province.
  - Eliminating ICI would limit the “cost shift” onto residential consumers, but it would also lead to a reduction in industrial demand. The large industrial contribution to the fixed costs of running the electricity system would then need to be covered by remaining consumers.
- If ICI is retained, current IESO projections indicate that the cost shift will decrease each year going forward as Global Adjustment (GA) decreases (due to an expected increase in HOEP).
- Alternatively, ICI could be funded through the tax-base at a cost of $900 million annually. There is precedent to use the tax-base for industrial support programs, including the Northern Industrial Electricity Rate Program (NIERP) and the Jobs and Prosperity Fund.

# 3. Eliminate the Industrial Conservation Initiative (cont'd)

- ICI currently provides a benefit of about $25/MWh to Class A electricity consumers.

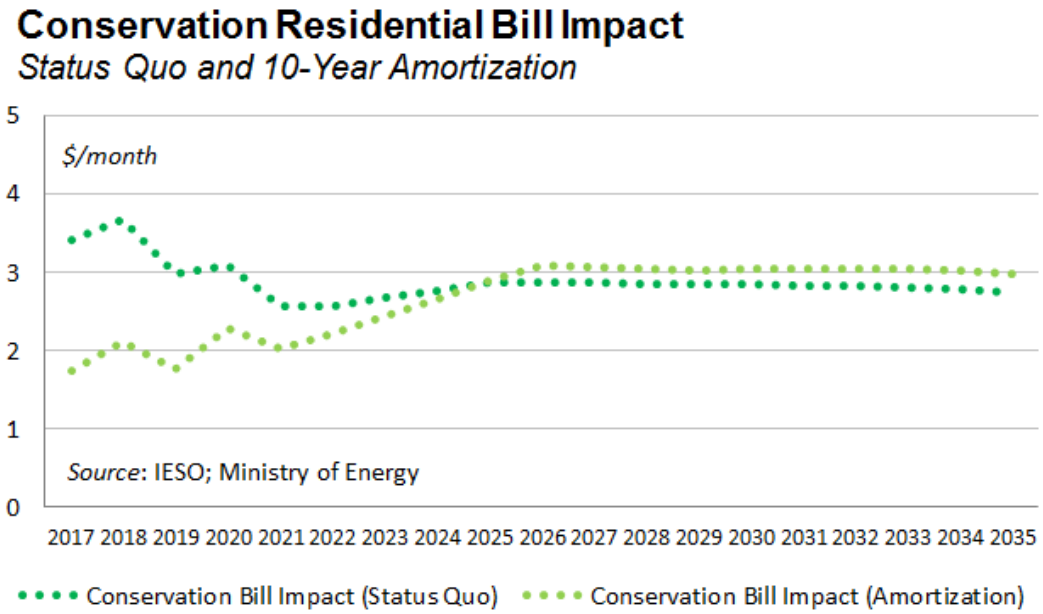
**All-In Electricity Price**
*in $/MWh*



**Note**: Based on year-to-date (YTD) September 2016 prices. Class A reflects a transmission-connected consumer.

# 4. Amortize Conservation Program Costs

- ~$3 billion from the electricity ratepayer base will be spent on conservation programs delivered under the Conservation First Framework and the Industrial Accelerator Program (IAP) between 2015 and 2020.
- Currently, Conservation and Demand Management (CDM) program costs are recovered from the Global Adjustment (GA) mechanism about one month after expenses are incurred.
- As a potential rate mitigation measure, certain CDM costs could be amortized.
- Amortizing a portion of conservation spending would produce a benefit for electricity ratepayers in excess of $1/month at the outset. Over time, the benefit would decrease and turn into a cost, as interest charges begin to grow.



**Note**: Chart assumes that conservation incentive costs are available for amortization while administration cost are not. Although there is variable from year to year, incentives represent about two-thirds of conservation spending in Ontario. Chart assumes conservation spending continues at a similar rate beyond 2020. Chart assumes a 10-year borrowing rate of 3.0%.

# 4. Amortize Conservation Program Costs (cont'd)

## Considerations

- Under **Public Sector Accounting Board (PSAB) accounting standards**, used by both the Province and IESO, only certain assets can be amortized: 1) pensions and 2) tangible capital assets. Under PSAB an asset must meet several criteria to be considered a capital asset, including:
  - A tangible capital asset must be tangible and substantive and the Ontario government must have title and operate the asset.
  - A tangible capital asset must bring a tangible benefit to the government or to Ontario.

- CDM costs, on their own, do not meet the criteria of a tangible capital asset because customers would have ownership and control of installed CDM measures, not the Province or IESO.

- **Rate-regulated accounting** was developed to recognize the unique nature of regulated entities (e.g., electricity generators, LDCs). Under rate-regulated accounting certain costs can be treated as amortizable assets that would not normally be considered assets under accounting principles.
  - Over the past several years, the Auditor General (AG) has expressed concerns about the appropriateness of recognizing rate-regulated assets in the Province's consolidated financial statements.
  - Rate-regulated accounting is currently under review by international accounting standard setting bodies and is currently permitted only on an interim basis, so its future is unclear at present.

# 4. Amortize Conservation Program Costs (cont'd)

**Considerations**

- If some of Ontario's CDM costs could be amortized, analysis shows that ratepayer impacts would be reduced in the short-term but interest charges on the loan would result in increased overall ratepayer costs in the longer-term.

- Legislative amendments would be needed to allow recovery of loan interest charges from GA.

- If there is a desire to proceed:
  - Formal accounting advice will need to be sought from IESO's external auditor as well as the Ontario Provincial Controller (OPC) to determine whether CDM costs could be amortized according to rate-regulated accounting standards.
  - Further legal analysis would also be required to confirm legal viability and possible approaches to implementation.

# 5. LDC Efficiencies

- Consider opportunities for future LDC cost reductions and efficiencies through the regulatory framework.

**Considerations**

- The Ontario Energy Board has a mandate to regulate the electricity distribution sector in the public interest, ensuring the financial viability of the sector while promoting reliable service to customers at just and reasonable rates.
- Since 2012, the OEB has taken action – through the Renewed Regulatory Framework for Energy – to more closely link rate regulation with performance measures and outcomes.
- There maybe opportunities to promote further cost reductions and performance improvements within the distribution sector as there is continued evolution of the regulatory framework in Ontario.
  - Tightening LDC requirements may also indirectly incent other desired policy outcomes, such as LDC consolidation and grid modernization to realize further cost reductions.
- ENERGY could help promote or accelerate these efforts by asking the OEB through the LTEP Implementation Directive, s. 35 of the *Ontario Energy Board Act, 1998*, and the 2017 Mandate Letter and other agency business planning processes.
- In addition, further changes to the departure and transfer tax regimes could be considered to provide a further incentive for LDC mergers and acquisitions.

# 6. Rate Design Initiatives

- OEB continues to move forward with its Regulated Price Plan (RPP) Roadmap:
  - The OEB is undertaking a comprehensive review of the RPP, including exploring the introduction of offering different pricing plan options for customers following the completion of pilot programs in 2018. The plan is expected to be implemented over a 3-5 year period.

- Until new pricing plans are available, the OEB could provide an "opt-in flat rate RPP" structure that could be made available to residential, farm and small business consumers on an interim basis (2-3 years) until a wider range of price plans are available.
- Time-of-Use (TOU) pricing could also be introduced for non-RPP Class B consumers to reduce Global Adjustment (GA) volatility and reduce system costs.

| Current TOU | New Flat Rate |
|---|---|
| On: 18.0 ¢/kWh | 11.1 ¢/kWh |
| Mid: 13.2 ¢/kWh | |
| Off: 8.7 ¢/kWh | |

**Considerations**

- The OEB has indicated that the option would lead to no overall change in system costs. Consumers with higher peak and mid-peak usage patterns would see a decrease in their electricity bills, while those with higher off-peak usage patterns would see an increase.
  - While the current strong supply conditions may allow for such an RPP structure (i.e., peak demand requirements can be easily met), administrative costs could be high (distributors would need to design/implement an opt-in process and associated billing system on an interim basis).

| | Current TOU | New Flat Rate |
|---|---|---|
| 1) Monthly electricity bill- higher peak and mid-peak usage patterns | $172 | $163 |
| 2) Monthly electricity bill- higher off-peak usage patterns | $152 | $163 |

***Note:** 1) assumes a consumer consumption pattern of 45%:30%:25% (Off-peak: Mid-peak: On-peak), while 2) assumes consumer consumption pattern of 80%:10%:10% (Off-peak: Mid-peak: On-peak). Estimates are based on OEB's online electricity bill calculator (for Toronto Hydro-November 2016 rates)

# 6. Rate Design Initiatives (cont'd)

**Considerations**

- The decision to undertake smart meter investments was partly justified on the basis of TOU pricing. If TOU pricing were to be made optional, some stakeholders could question the rationale for smart meter investments.
  - Rationale for offering a flat rate option could focus on providing customers with choice until new pricing plans are rolled out under the RPP roadmap.

- If a flat rate design is introduced, there could be significant consumer opposition to any return to a mandatory TOU.

- After the interim flat rate period, the OEB could offer a wider range of pricing plans to consumers.
  - As part of its RPP review, the OEB will be running pilots with LDCs to assess customer response to alternative time periods and pricing structures.
  - Learnings from these pilots will help inform potential changes to the RPP. Pilots are expected to be in market May 2017 and run for one year.

- Non-RPP Class B electricity consumers currently pay Global Adjustment (GA) on a volumetric basis. Moving them to TOU would provide an incentive to shift consumption to off-peak periods.
  - Consumers, including manufacturers, who are unwilling to shift would face higher costs and likely not be supportive of the changes.
  - The decision to pursue TOU pricing for non-RPP class B consumers will impact proceeds recycling as there is interplay between the two initiatives.

# 7. Reduced Cost of OPG Borrowing

- OPG currently borrows for corporate purposes from the OEFC
- Seek to reduce OPG's borrowing costs and pass on savings to ratepayers by:
  - Reducing or removing the spread that OEFC applies to OPG for any new corporate debt; or
  - Allowing OPG to refinance its existing debt at longer maturities through the OEFC in order to take advantage of the current, favourable interest rate environment.
- Assuming the full spread is removed from all OEFC debt, OPG borrowing costs could be reduced by 50-100 basis points, representing annual savings of about $20-$25 million, increasing to $30-$35 million, as OPG's outstanding OEFC debt rises from ~$3.3 billion in 2016 to ~$4.7 billion in 2020.
- OPG could apply to the OEB as part of its current rate application to flow this benefit to ratepayers.

**Considerations**

- Further work is required to determine potential OPG savings from these initiatives.
- Allowing OPG to refinance would have a negative fiscal impact on the Province.
- Spreads are expected to decline, reducing the relative impact of this change, given lower overall interest rates and reduced volatility.
- Providing OPG with greater access to longer term (20-30 year) debt may also reduce costs:
  - OPG's average term to maturity for OEFC debt is 5.7 years, as compared to 22.2 years for privately financed project debt. This contrasts with most corporations and government which have been working to extend average debt terms in order to take advantage of the low interest rate environment.
  - Longer terms would also better match to the life of OPG's assets.
  - Recently, OEFC has allowed OPG to apply for 50% of its financing requirements in the form of longer term (25-30 year debt). Moving closer to 100% would accelerate this transition.

# 8. End DRC Early for Commercial/Small Industrial Class B Electricity Consumers

- Propose to remove the $0.007/kWh Debt Retirement Charge (DRC) from the bills of commercial/small industrial Class B consumers beginning in 2017, instead of April 1, 2018.
  - **Note:** Class A consumers (e.g., large industrial) would continue to pay DRC until at least April 1, 2018.

**Considerations**

- For a Class B consumer currently paying about $152/MWh, removing the DRC would represent a savings of about 5%.
  - A 50% reduction in the DRC charge would represent a savings of about 2%.

- Alternatively, the reduction of the DRC could be to $0.035/kWh starting in 2017, to provide relief for cap and trade until proceeds recycling is fully operational.

- Residential consumers have had the DRC removed from bills since January 1, 2016. Taking DRC off commercial and small industrial bills would result in equal treatment for these groups of consumers.

- The savings for commercial and small industrial consumers associated with this proposal would drop to zero in April 2018, since this is the current planned date for removing the DRC from non-residential bills.

- Prior to moving forward with this proposal, additional analysis from Legal Services and the MOF would be needed.

# 9. Dedicate Departure Tax

- In connection with the IPO, as a result of leaving the PILs regime and entering the corporate tax regime, Hydro One was deemed to dispose of its assets for proceeds equal to its fair market value, triggering a PILs liability of $2.6 billion (Departure Tax).
- This was paid to the Ontario Electricity Financial Corporation (OEFC), to be dedicated towards repayment of electricity sector stranded debt.
- The Province could explore repurposing some of those funds to the benefit of ratepayers.
- This may reduce the risk that the Ontario Energy Board (OEB) assigns to ratepayers the benefit from an associated tax asset, resulting in lower earnings and decreased share value for Hydro One. This decision is currently before the OEB, as part of Hydro One's Transmission rate application.

**Considerations**

- Cost savings to ratepayers would depend on timing and which ratepayers (e.g., Hydro One customers, or all Ontario customers) will benefit from some or all of the $2.6 billion value.
- While this is a shift from messaging that value from the broadening of ownership of Hydro One is being used pay down debt and fund transit and transportation, the Province could link to electricity infrastructure investments (e.g., as an offset to infrastructure investments already made in the sector, or to specific initiatives such as conservation).
- These funds were paid to the Ontario Electricity Financial Corporation (OEFC), ~~to be~~ dedicated towards repayment of electricity sector stranded debt. Repurposing may have an impact on the pay down / defeasance of this debt.

# 10. Cancel/Adjust Renewable Energy Procurements

- The Ministry could consider the following actions to further mitigate future impacts to electricity bills:

| Unallocated/Terminated Capacity | Announced Procurements | Executed Contracts |
|---|---|---|
| A. Do not procure unallocated or terminated capacity | B. Revise FIT 5 target | D. Cancel LRP I contracts |
| | C. Cancel FIT 6 | |

**Overarching Considerations**

- Cost savings associated with reducing or cancelling renewable energy procurements and programs will not reduce current electricity bills, but would result in future cost reductions relative to Ontario Planning Outlook forecasts.
- The IESO estimates implementing options A to C will reduce system costs by approximately $592 million ($2016) between 2019 and 2028, resulting in an average of approximately $0.50/month in savings to a typical residential electricity bill over the same period. [cost reductions from LRP I contract cancellations TBC]
- The microFIT program is winding down end of 2017. Annual microFIT procurement targets have been undersubscribed.
- With a few exceptions (e.g., rollover of unallocated microFIT capacity; addition of terminated microFIT and small FIT capacity to FIT 5), plans for unallocated or terminated capacity are not defined in announcements or existing directions.

**Cancel/Adjust Announced Procurements**

- Amendments to existing directions to the IESO would be required to reduce FIT 5 and cancel FIT 6.
- The FIT 5 procurement is underway with a base target of 150 MW and inclusion of any capacity available from contract terminations under prior small FIT and microFIT procurements. The application window closed on November 25, 2016.

# 10. Cancel/Adjust Renewable Energy Procurements – Existing Contracts

**Cancel Existing LRP I Contracts**

- 16 LRP I contracts (approx. 455 MW) have been executed and projects are under development.
- None have met Key Development Milestones. Total value of LRP I estimated at approx. $1 billion (NPV to 2016).

[Placeholder for IESO: Cost calculation relative to OPO and associated bill impact]

**Considerations**

- To help inform a decision, IESO or OEB could be asked to evaluate and provide guidance to the Ministry on the system need for LRP I projects and potential ratepayer impacts/benefits.
- 13 of 16 LRP I contracts have Indigenous participation. Cancelling LRP I contracts would remove this economic development opportunity and likely damage relationships between Indigenous communities and the government.
- LRP I Contract includes an “Optional Termination” provision allowing IESO to terminate any contract prior to the “Commercial Operation Date” with 6 months written notice.
- The IESO obligations under the Optional Termination provision depend on whether the project has met all “Key Development Milestones”.
  - As no projects have met their Key Development Milestones, the estimated total cost payable to contract holders is about $8 million.

# 10. Cancel/Adjust Renewable Energy Procurements – Existing Contracts (cont'd)

## Legal Analysis

- Under the *Electricity Act, 1998*, the Minister has the authority to amend previous directions without approval from Cabinet. Although an amendment to an existing direction would not require Cabinet approval, it is unlikely that a direction to cancel LRP I contracts could be considered as amending an existing direction. The previous LRP directions set out the broad policy framework that was reflected in the procurement, but the contracts themselves, once executed, are stand alone documents which the IESO had legal authority to execute. Revoking previous LRP directions does not affect that authority or have the effect of cancelling the procurement.
- As a result, any new directive to cancel LRP I contracts would need to be approved by Cabinet, either as part of an LTEP implementation directive to IESO, or pursuant to the overall power to direct IESO with respect to procurements outside the LTEP process. However, there is a risk that such a directive could be subject to challenge.
- ENERGY has previously received advice that there is a high risk that a court would conclude that the Minister has no authority under the *Electricity Act , 1998* to issue a direction requiring IESO to terminate microFIT Conditional Offers and FIT Offer Notices that have already been issued to applicants, because these offers create vested contractual rights and the Minister would require clear legislative authority to interfere with those rights. This reasoning would likely apply equally to any direction or directive to IESO to cancel LRP I contracts.
- Previous advice has also flagged a moderately high risk that the Province could be liable for damages in tort for inducing a breach of contract if it issues a direction to IESO that interferes with vested contractual rights without clear statutory authority to do so. LRP I contract holders could also assert other claims, such as misfeasance in public office.
- The risk and costs associated with potential law suits resulting from the cancellation of contracts requires further analysis, including analysis of whether any statutory amendments would be required to provide clear authority to cancel the contracts. LSB recommends ENERGY seek an opinion from Crown Law Office Civil before proceeding.

# Summary

- Reductions in electricity rates could be achieved by eliminating existing, planned or directed initiatives from the rate-base or shifting these costs to the tax-base.

- The timing of the impact of these rate mitigation initiatives varies.
  - Immediate and near-term impacts can be achieved by shifting costs to the tax-base or changing how certain costs are recovered from consumers or eliminating certain programs.
  - Over the longer term, changes to the electricity supply mix and achieving efficiencies in the electricity market could yield system savings.

- Pursuing the initiatives would require regulatory amendments and working with the electricity sector agencies, LDCs and other stakeholders to implement the initiatives.

- As shown before the positive impact to residential ratepayers is very limited from the proposals with ratepayer impacts estimated by Energy (between $8 and $9 per month) while the impact to the Province's fiscal position would be material (about $1.2 to $1.5 billion a year). If additional proposals are also fiscally-funded, the fiscal cost could be substantially higher from, e.g., accounting treatment of conservation amortisation or a class B DRC exemption.

# Appendix

# Electricity Consumer Classes

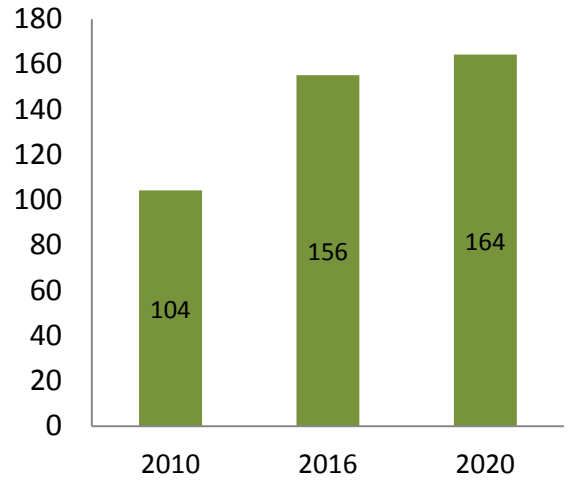
- In Ontario, there are three classes of electricity consumers:

| | Regulated Price Plan | Class B | Class A |
|---|---|---|---|
| **Consumer Types** | • Residential<br>• Small Business<br>• Farms | • Commercial<br>• Institutional<br>• Small industrial | • Large commercial<br>• Large industrial |
| **Load Size** | Below 0.05 MW | Between 0.05 MW and 1 MW | Above 1 MW |
| **Total Consumption** | 58 TWh | 57 TWh | 26 TWh |
| **Share of Consumption** | 41.1% | 40.4% | 18.4% |

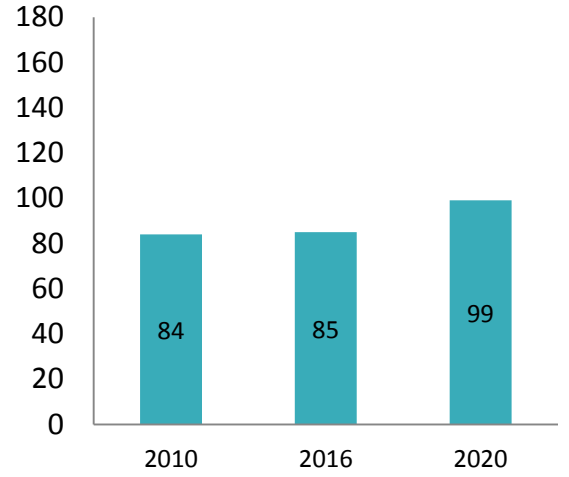
# Prices by Electricity Consumer Class

- Since 2010, average bills for residential consumers (i.e., using 750 kWh/month) have increased by over 50%. Rates are forecast to continue to increase, with residential consumers paying an estimated 6% by 2020.
- Industrial electricity rates have remained relatively flat over the same time period, due primarily to the Industrial Conservation Initiative (ICI). ICI represents a cost shift of about $5/month for residential electricity consumers. Industrial electricity consumers are forecast to see an increase of 16% by and 2020.

**Typical Residential Bill (750/kWh per month)**



**Typical Class A (Industrial) Price ($/MWh)**



**Note:** 2016 represents year-to-date September 2016 for industrial. Cap and trade proceeds recycling is included for the industrial consumer for 2020.

# Rate Mitigation Levers

- To provide further rate relief to Ontario electricity consumers, the government can use one or more of the levers outlined below:
  - **Tax-based Lever:**
    - Provide rebates funded from the tax-base or transfer items currently paid through the rate-base to the tax-base.
  - **Rate-based Lever:**
    - Shifts costs within the rate-base from one customer group to another to achieve electricity system benefits and/or policy goals.
  - **Cap and Trade Proceeds Lever:**
    - Use cap and trade proceeds on initiatives that help reduce greenhouse gas (GHG) emissions from the electricity sector (e.g., recycling proceeds during off-peak periods) while providing benefits to some or all electricity consumers.

# Traditional Rate Mitigation Programs

- Ontario has implemented a number of rate-based programs to help residential and industrial electricity consumers:
  - The Ontario Electricity Support Program (OESP) provides ongoing assistance directly on the bills of eligible low-income electricity consumers
  - The Rural or Remote Rate Protection (RRRP) program is provided to rural and remote residential and farm customers because the cost of distributing power to remote areas is much higher than for urban areas.
  - The Industrial Conservation Initiative (ICI) encourages Ontario's largest consumers to reduce consumption during peak periods while reducing system costs.
- There are also tax-base programs to help manage electricity prices:
  - Rebate the provincial portion of the HST from the electricity bills of residential, small business and farms as of January 1, 2017.
  - Northern Industrial Electricity Rate Program (NIERP), in which participants receive a rebate of two cents per kilowatt hour. On average, industrial electricity prices can be reduced by up to 20%.
- While rate-based programs provide relief to certain electricity consumers, they shift other costs to remaining ratepayers (See Appendix for additional details).

# Driving Down Prices for Consumers

- Since 2013, a number of actions have been taken to drive down prices for consumers wherever possible:
  - Renegotiating the Green Energy Investment Agreement, reducing contract costs by $3.7 billion;
  - Deferring the construction of two new nuclear reactors at Ontario Power Generation's Darlington facility, avoiding an estimated $15 billion in new construction costs;
  - Approving Ontario Power Generation's plans to enable the ongoing operation of Pickering up to 2024, which is expected to save ratepayers as much as $600 million;
  - Reducing Feed-In-Tariff (FIT) prices through annual price reviews, saving ratepayers at least $1.9 billion relative to the 2013 Long-Term Energy Plan (2013 LTEP) forecast; and
  - Suspending the second round of the Large Renewable Procurement (LRP II) process and the Energy-from-Waste Standard Offer Program to save up to $3.8 billion in electricity system costs relative to 2013 LTEP.

# Cost Shifts in the Electricity Sector – Current Programs

- Several programs in the electricity sector “shift costs” from one group of electricity consumers to another:
  - **Rural or Remote Rate Protect** (**RRRP)** is a longstanding program that reduces the delivery charge for rural electricity consumers and is paid for by all consumers in Ontario through a regulatory charge on bills.
  - **Ontario Electricity Support Program (OESP)** is funded via a regulatory charge on consumer bills and provides support for qualifying low income electricity consumers.
  - **Industrial Conservation Initiative (ICI)** empowers large consumers to lower their costs by reducing their demand during peak hours. In the process, ICI shifts costs from large electricity consumers to all other consumers in Ontario.
  - **Industrial Electricity Incentive** (**IEI**) program, offers reduced electricity prices for companies starting or expanding operations in Ontario. All electricity consumers in Ontario pay for the price reduction that IEI participants receive.

# Cost Shifts in the Electricity Sector (Cont'd)

- The tables on the right show the estimated cost shifts that result from existing government programs.
- ICI has had the largest cost shift of all the programs, due to the large size of Global Adjustment (GA) and the way that it is recovered from consumer classes.
- RRRP and OESP impact the regulatory line on consumer bills, while ICI, IEI and conservation affect GA (i.e., Electricity line on bills of Regulated Price Plan consumers).

**Cost Shift Impacts - Residential Bill**

*Typical 750 kWh/month Toronto Hydro consumer*

| *$/month* | 2011 | 2012 | 2013 | 2014 | 2015 | 2016 |
|---|---|---|---|---|---|---|
| ICI | 2.65 | 3.25 | 3.88 | 3.53 | 4.75 | 4.77 |
| RRRP | 0.90 | 0.82 | 0.84 | 0.92 | 0.93 | 0.94 |
| OESP | - | - | - | - | - | 0.84 |
| Conservation | 1.85 | 1.92 | 2.00 | 1.58 | 2.43 | 2.45 |
| IEI | - | - | 0.08 | 0.09 | 0.11 | 0.12 |
| **Total** | **5.41** | **5.99** | **6.81** | **6.13** | **8.21** | **9.12** |

**Cost Shift Impacts - Industrial Bill**

*Typical Class A consumer*

| *$/MWh* | 2011 | 2012 | 2013 | 2014 | 2015 | 2016 |
|---|---|---|---|---|---|---|
| ICI | -22.17 | -26.36 | -30.29 | -25.91 | -33.79 | -33.92 |
| RRRP | 1.20 | 1.10 | 1.12 | 1.23 | 1.24 | 1.25 |
| OESP | - | - | - | - | - | 1.13 |
| Conservation | 1.53 | 1.59 | 1.66 | 1.31 | 2.01 | 2.02 |
| IEI | - | - | 0.07 | 0.08 | 0.09 | 0.10 |
| **Total** | **-19.43** | **-23.67** | **-27.44** | **-23.29** | **-30.45** | **-29.43** |

**Note:** OESP did not come into effect until 2016. The 2016 values represent forecasts and are subject to change.

# Cost Shifts in the Electricity Sector (Cont'd)

- The table on the right shows the total cost for various government electricity programs. These programs are currently funded through the electricity system ratebase.

- Funding of these programs through the fiscal plan would remove these costs from the electricity system (i.e., Placing these costs on the taxbase).

**Cost of Programs**

*By government program*

| *$M* | 2011 | 2012 | 2013 | 2014 | 2015 | 2016 |
|---|---|---|---|---|---|---|
| ICI | 506 | 615 | 736 | 670 | 890 | 893 |
| RRRP | 172 | 156 | 159 | 176 | 174 | 176 |
| OESP | - | - | - | - | - | 158 |
| Conservation | 329 | 339 | 354 | 280 | 425 | 428 |
| IEI | - | - | 15 | 16 | 18 | 19 |

- For example, removing the roughly $900 million of program cost from the Industrial Conservation Initiative (ICI) program would save the typical residential electricity consumer $4.77 per month in 2016.

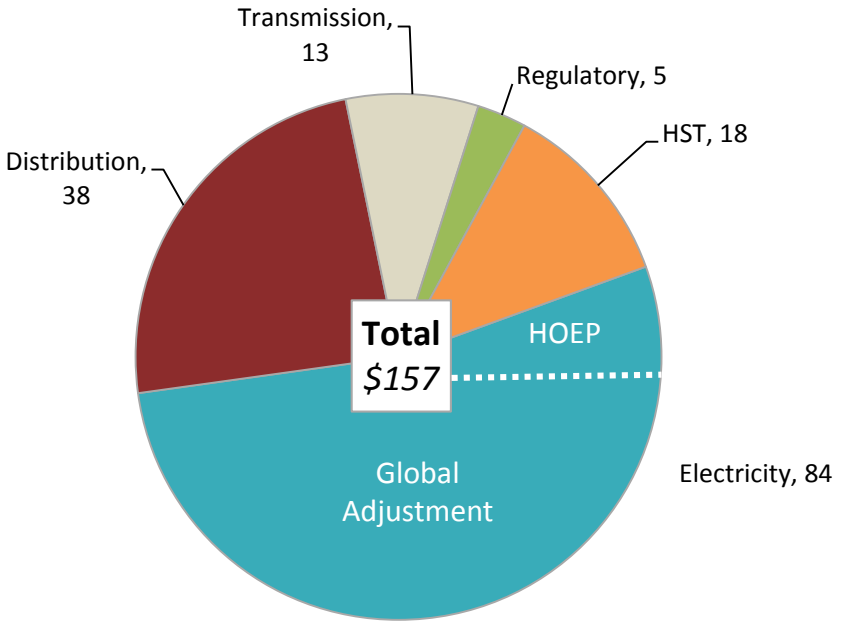
**Note:** OESP did not come into effect until 2016. The 2016 values represent forecasts and are subject to change.

# Residential Electricity Prices

- There are approximately 4.5 million residential consumers in Ontario.
- The Regulated Price Plan includes nearly all residential consumers, as well as small businesses. Regulated Price Plan consumers pay a blended commodity rate regulated by the OEB, which is set every six months.
- For households, the Debt Retirement Charge (DRC) was removed from residential electricity bills as of January 1, 2016.
- In addition, the Ontario Electricity Support Program (OESP) provides an ongoing rate reduction directly on the bills of low-income electricity consumers who have applied and meet the eligibility requirements. The program is funded through the rate base.
- Rural customers, in particular those with electrical heating, pay higher monthly bills.

**Typical Residential Monthly Bills ($)**

*As of November 1, 2016 (750 kWh/month)*



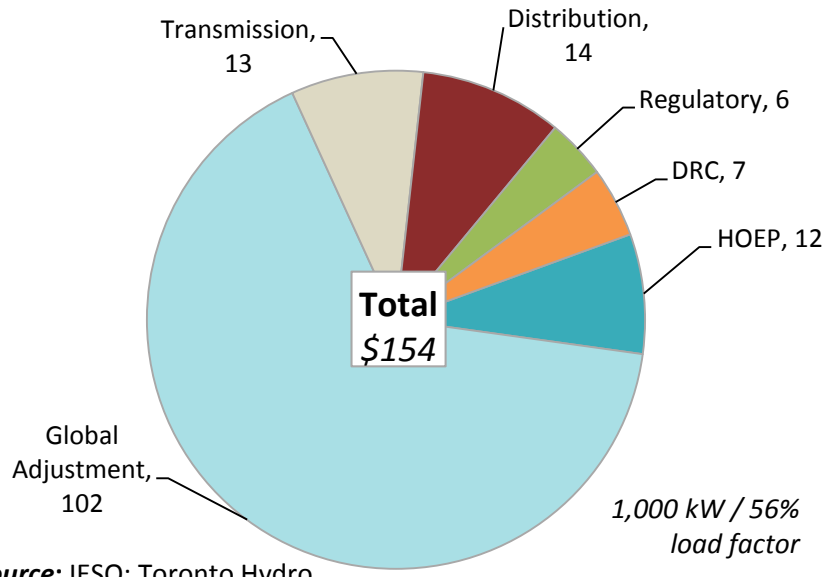
***Source*: OEB, Toronto Hydro**

# Commercial Electricity Prices

- There are approximately 55,000 commercial and institutional consumers in the province. These consumers are Class B consumers, and have separate line items on the electricity bill for HOEP and GA.
- There is a high degree of differentiation amongst consumers within the commercial sector in terms of size and consumption patterns. For example, an elementary school has a much different hourly load profile compared to a full service restaurant. This is an important consideration when looking at the bill impacts of policy options.

**Typical Commercial Price ($/MWh)**

*YTD June 2016 (Non-RPP Class B)*



***Source*:** IESO; Toronto Hydro

- Consumers in the commercial sector do not pay time-of-use prices and have little incentive to shift demand away from high demand hours.
- Targeted pricing programs are currently not available for Class B consumers.

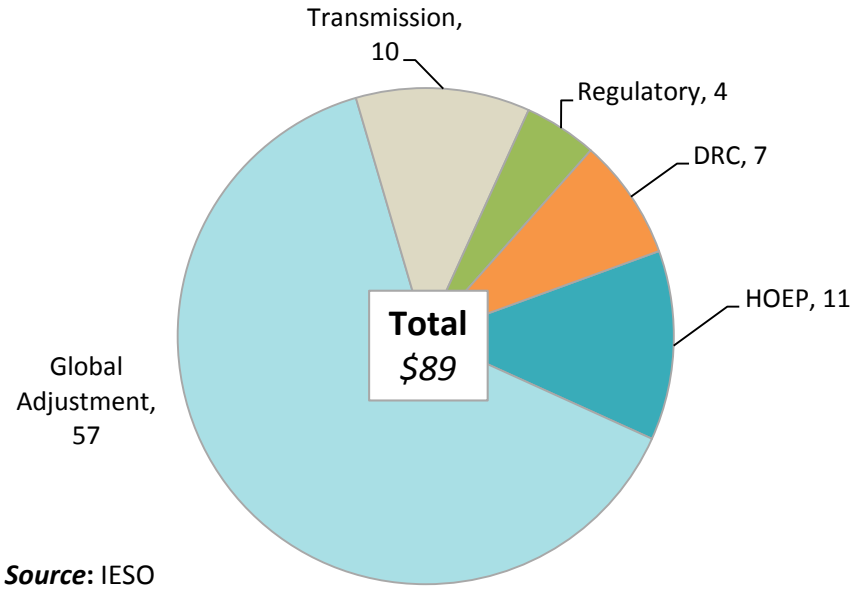
*** Note**: Most commercial consumers receive input tax credits for their HST.

# Industrial Electricity Prices

- There are about 300 large industrial consumers in Ontario.
- Measures in place to mitigate industrial electricity prices include ICI and NIERP.
- ICI lowers costs for eligible large electricity consumers (i.e., those with monthly peak demand exceeding 3 MW) that reduce consumption during peak periods.
  - ICI consumers reduce their electricity rates by 25% on average.

**Typical Large Industrial Price ($/MWh)**

*YTD June 2016*



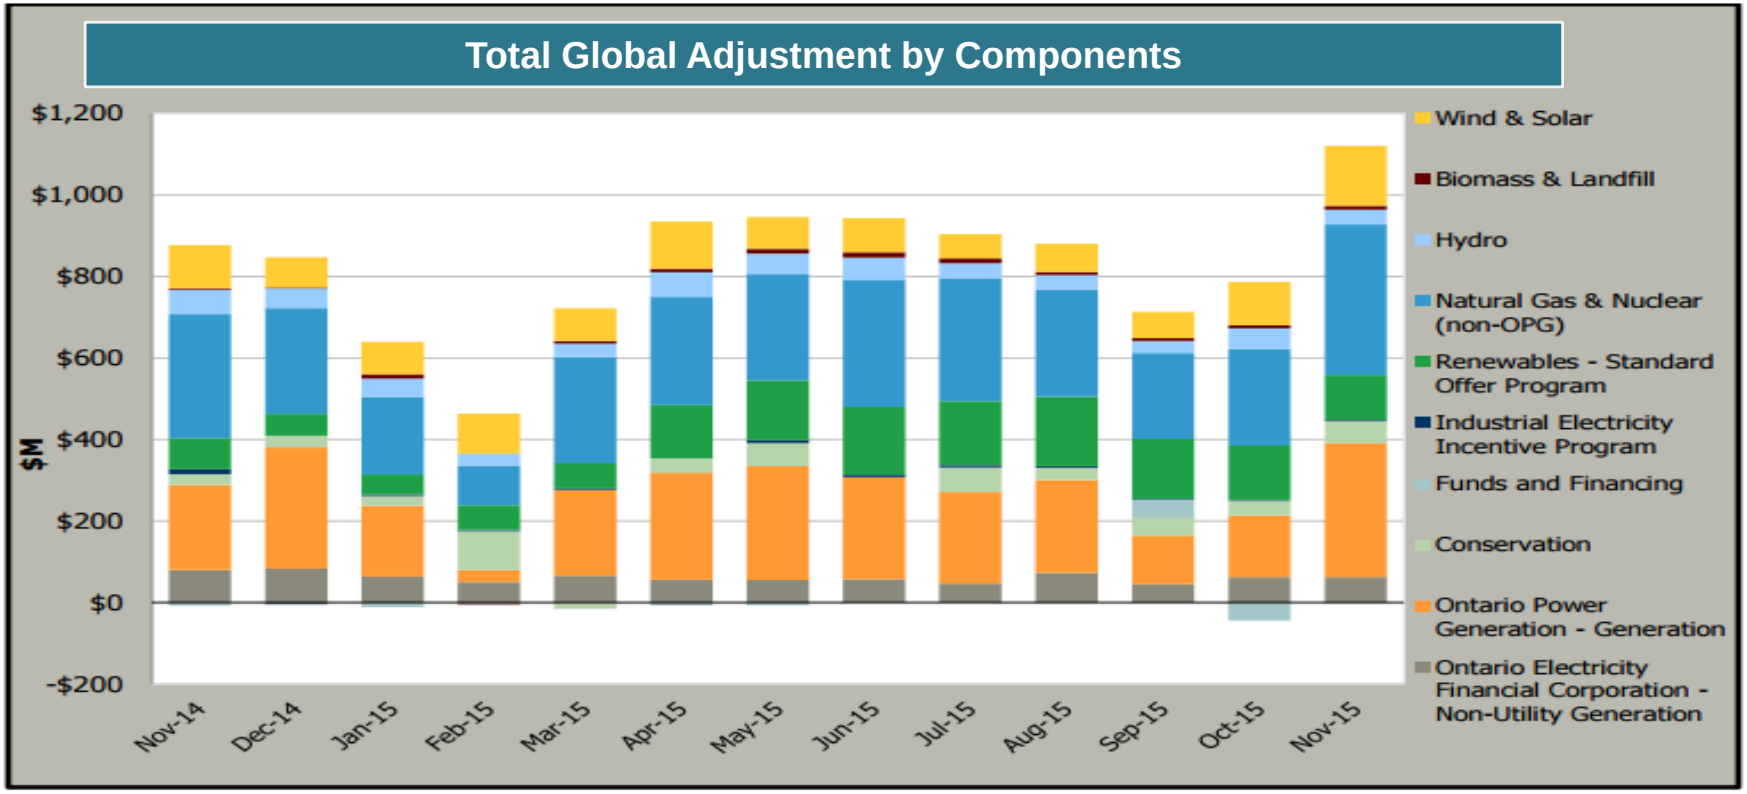
***Source*: IESO**

- Participants in NIERP receive a rebate of $20/MWh. On average, industrial electricity prices are reduced by about 20% through the program, reducing all-in prices to $69/MWh for these consumers. The program is funded through the tax base.

*** Note:** Industrial consumers receive input tax credits for their HST.

# Total Components of Global Adjustment

- Global Adjustment (GA) is a market mechanism that recovers costs from electricity consumers, including the cost of almost all conservation programs in the province (i.e., approximately half a billion dollars in 2016).



**Source:** IESO Monthly Market Report (November 2015)

# Cancel/Adjust Renewable Energy Procurements

# LRP I Pre-Construction Liability Limits

- All 16 successful LRP I developers accepted Optional Termination Provisions when the LRP I Contracts were executed in April 2016.
- If IESO chooses to enact the Optional Termination provision before a project has met all Key Development Milestones, IESO is required to pay pre-construction development costs up to the Pre Construction Liability Limit.
- Pre-construction development costs include costs incurred for feasibility studies, obtaining site access rights, work towards environmental approvals, business development plans, negotiation of contracts for design, equipment, construction and financing, reasonable overhead expenses, and other reasonable costs incurred.
- The Pre Construction Liability Limits are:
  - Non-Rooftop Solar: $250,000 plus $10.00/kW of Contract Capacity
  - Waterpower: $500,000 plus $20.00/kW of Contract Capacity
  - On-Shore Wind: $400,000 plus $2.00/kW of Contract Capacity
- According to the LRP I Optional Termination provision, the developer has a duty to take reasonable steps to mitigate losses, liabilities, costs and damages incurred as a result of the Optional Termination.
  - The IESO will not provide compensation for amounts which are attributable to a developer's failure to take reasonable steps to mitigate.

Hi,

I adjusted the comments and annotations a little, and I`m inclined to send to both the DMO and Energy. I took out the debt comment on OPG borrowing, which I would not want to send to Energy.

Ron

**Subject:** RE: Potential Rate Mitigation

Hi Ron,

Attached are three decks:

1. A markup of Energy's deck to be shared with Energy.
2. A draft annotated version for the DMO/MO at MOF.
3. A draft summary deck.

John and I made several edits to the annotated version to make it more readable for the DMO. Hopefully we didn't misinterpret any of the comments received earlier today.

Thanks to everyone in the three branches for pulling this together on a very short time.

**Subject:** Fwd: Potential Rate Mitigation

Hi,

Lets meet in the morning to discuss.

We'll need a product for EOD. Could be an annotated slide deck, as well as a markup. Suggestion on any other formats?

Ron

Subject: FW: Potential Rate Mitigation

Hi,

See attached and below. We are aiming to turn around a new version of the deck, incorporating any comments your ministries might have before major projects on Thursday. As such, could you please pass along your comments by end of day tomorrow?

If there are questions, I'm happy to discuss.

Thanks,
Keley

Subject: Potential Rate Mitigation

Hi,

Attached is a draft of the rate mitigation deck. This is tracking to major projects on Thursday for a preliminary discussion. As you can see there are a number of initiatives that have fiscal implications so your input and comments would be appreciated. Keley can coordinate with your EAs. I understand that Andrew T. plans to share with PO/your MOs.

Serge

MINISTRY OF
ENERGY

# Proposed Initiatives to Transform Ontario's Electricity Sector

## Working Draft

December 5, 2016

CONFIDENTIAL DRAFT

# Context

- Electricity costs are increasing as the necessary investments are made to decarbonize and modernize the province's electricity infrastructure.
  - Since 2003, the Province has invested more than $35 billion in over 16,000 megawatts (MW) of new and refurbished cleaner generation, including nuclear, natural gas and renewables.
  - Over the same period, Hydro One has invested $15.5 billion to enhance and renew its transmission and distribution systems.
  - As additional electricity generation comes online, nuclear units are refurbished and distribution and transmission investments are made, prices are forecast to continue to increase.

- Actions have been taken to drive down electricity costs, including deferring investments in generation (e.g., new build nuclear), improving market efficiency (e.g., introduction of wind dispatch) and decreasing the cost of renewable procurements (e.g., Green Energy Investment Agreement ~~GEIA~~ renegotiation, decreasing FIT prices).

- Additional steps have been taken to increase cost effectiveness and improve efficiency by adopting new electricity market approaches, such as:
  - Enhancing competition between developers of large renewable projects through the Large Renewable Procurement (LRP) process to drive down price and secure clean, reliable generation for the province;
  - Directing IESO to end the process of negotiating new NUG contracts pending the development of a Capacity Auction (i.e., Market Renewal); and
  - Launching the first IESO Demand Response Auction (i.e., a competitive process through which demand-side resources are selected to be available to reduce their electricity consumption as needed).

# Context (Cont'd)

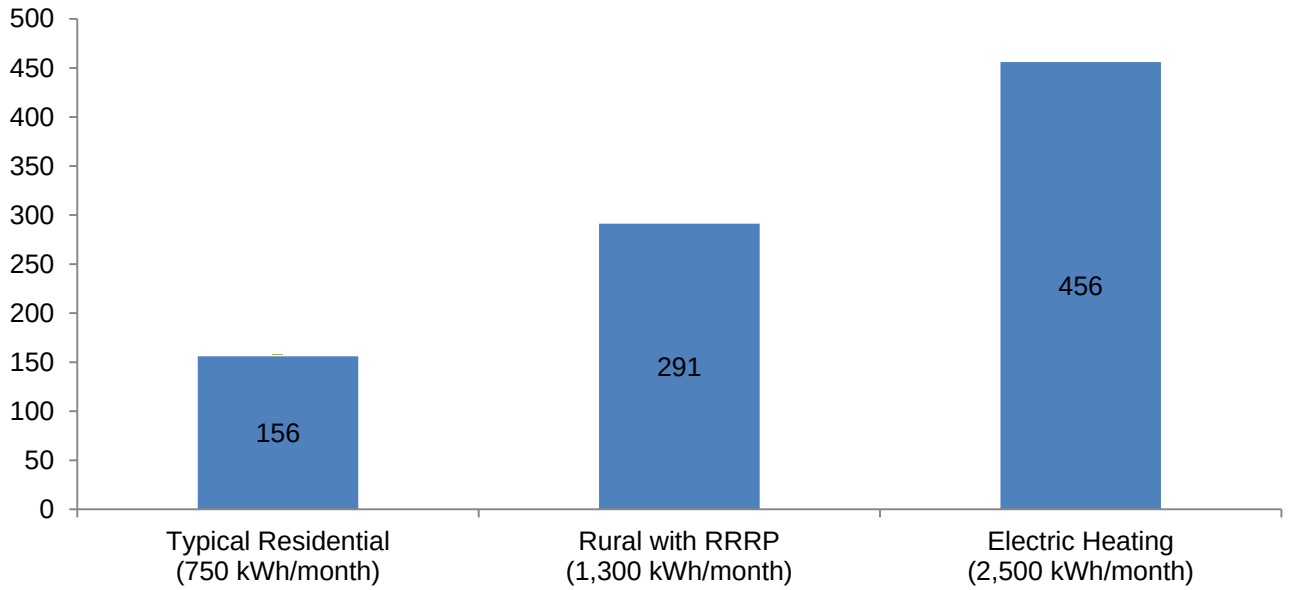
- Following the 2016 Throne Speech, a number of actions were announced to further reduce electricity costs, such as:
  - Providing an 8 per cent rebate before tax, equivalent to the provincial portion of HST, for approximately 5 million eligible electricity consumers including residences, small businesses and farms;
  - Increasing the amount of rate protection available to approximately 330,000 eligible rural customers living in low-density areas by updating the Rural or Remote Rate Protection (RRRP) program;
  - Lowering the Industrial Conservation Initiative (ICI) threshold to 1 MW and removing sector restrictions so that more consumers can benefit;
  - Suspending the second round of the Large Renewable Procurement (LRP II) and the Energy-from-Waste Standard Offer Program to save up to $3.8 billion in costs; and
  - Recycling a portion of cap and trade auction proceeds to keep rates affordable for industrial and commercial electricity consumers.
- On November 28, 2016, the Minister of Energy announced the need for changes in how electricity resources are procured and the need for wholesale market renewal.

- The Ministry of Energy is currently updating its Long-Term Energy Plan (LTEP), which provides an opportunity to consider a range of policy changes to how the Ontario energy sector operates.

# Current Electricity Prices – Residential

- Residential consumers electricity prices continue to be a concern for many Ontarians, particularly those that rely on electric heat.
  - **Note:** The typical residential bills are currently below the 2013 Long-Term Energy Plan (2013 LTEP) forecasts ($159 / 750kWh)

**Residential Electricity Bills**
*in $/month*

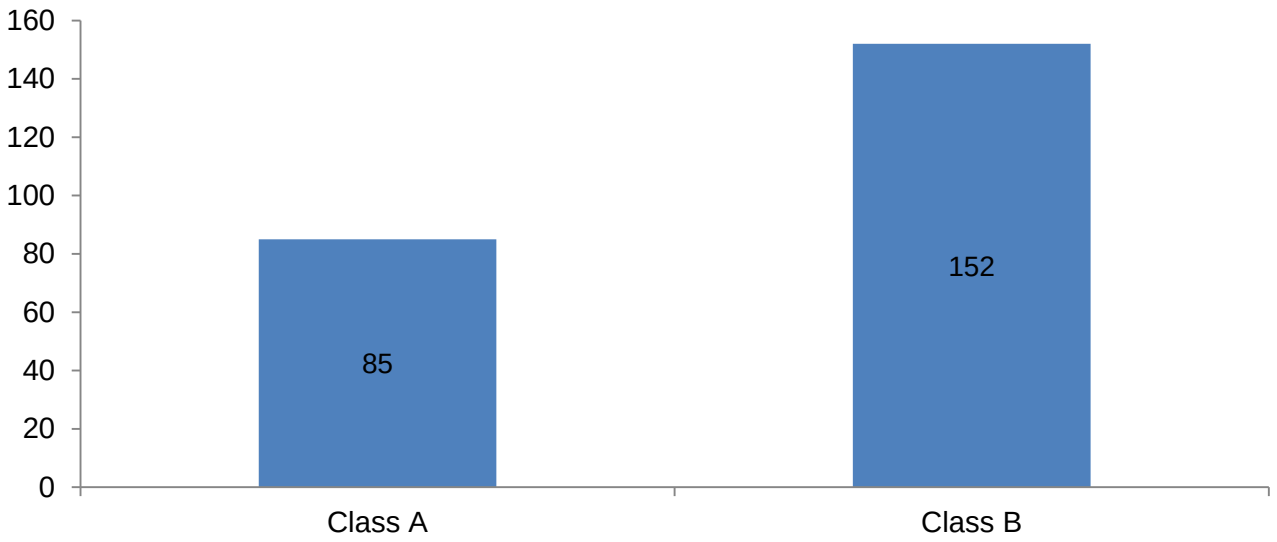


**Note**: Typical residential and electric heating shown above are based on Toronto Hydro; rural is based on connection to Hydro One as a R2 customer eligible to receive the Rural or Remote Rate Protection (RRRP) credit of $31.50.

# Current Electricity Prices – Industrial and Commercial

- While large industrial electricity consumers (i.e., Class A) rates are competitive with other jurisdictions, rates for commercial/small industrial consumers (i.e., Class B) are higher by comparison.
  - **Note:** Current industrial and commercial prices are below 2013 LTEP forecasts ($96 / MWh)

**Current All-In electricity Price**
*in $/MWh*



**Note**: Based on year-to-date (YTD) September 2016 prices. Class A reflects a transmission-connected consumer. Class B reflects a 1 MW load operating at 56% load factor and connected to Toronto Hydro.

# Current Status on Taxpayer Funded Electricity Price Mitigation

| ($M) | 2011-12 | 2012-13 | 2013-14 | 2014-15 | 2015-16 | 2016-17[1] | 2017-18[1] |
|---|---|---|---|---|---|---|---|
| OCEB | 1,033 | 994 | 1,006 | 1,078 | 860 | - | - |
| OREC | - | - | - | - | - | 300 | 1,100* |
| Ending DRC[2] | - | - | - | - | 85 | 330 | 330 |
| NIERP | 120 | 120 | 115 | 108 | 120 | 120 | 120 |
| NOEC | 23 | 24 | 25 | 24 | 26 | 25 | 25 |
| OEPTC[3] | 354 | 406 | 418 | 429 | 444 | 450 | 460 |
| **TOTAL** | **1,530** | **1,544** | **1,564** | **1,639** | **1,525** | **1,195** | **2,005** |

1. 2016-17, 2017-18 based on forecasted numbers
2. 2015-16 estimated for 3 months of reduced DRC revenue
3. OEPTC amounts in all years based on energy component of the rebate.

* Sourced from Energy PRRT Submission

OCEB – Ontario Clean Energy Benefit
OREC – Ontario Rebate for Electricity Consumers
DRC – Debt Retirement Charge
NIERP – Northern Ontario Electricity Rate Program
NOEC – Northern Ontario Energy Credit
OEPTC – Ontario Energy and Property Tax Credit

- The table above shows the annual amount of taxpayer funded electricity price mitigation from 2011-12 to 2017-18.
- From 2011-12 to 2015-16 there has been an annual fiscal impact of approximately $1.5 billion due to electricity price mitigation programs.
- In 2016-17, the fiscal impact due to electricity price mitigation programs is estimated at approximately $1.2 billion.
- In 2017-18, due primarily to the start of the Ontario Rebate for Electricity Consumers, the expected fiscal impact due to electricity price mitigation programs is approximately $2.0 billion and before considering any additional funding from the tax base.

# Proposed Initiatives – Overview

- The suite of proposed initiatives are intended to:
  - Transform how the electricity market operates in Ontario;
  - Re-set how ~~government~~ electricity sector programs are funded (i.e., rate-base vs tax-base);
  - Provide system benefits (e.g., industrial load retention);¸(**NTD: If it provides system benefits, why not paid through the rate base)**
  - Lower the cost of electricity for residential and industrial consumers; and
  - Increase cost effectiveness and improve efficiency.

- The proposed initiatives include:
  1. Implement Market Renewal Initiatives
  2. Fund Electricity Support Programs Through The Tax-base
  3. Eliminate the Industrial Conservation Initiative (ICI)
  4. Amortize Conservation Program Costs
  5. LDC Efficiencies
  6. Rate Design Initiatives
  7. Reduced Cost of OPG Borrowing
  8. End Debt Retirement Charge (DRC) Early for Commercial/Small Industrial Class B Electricity Consumers
  9. Dedicate Departure Tax
  10. Cancel/Adjust Renewable Energy Procurements

- The proposed initiatives provide opportunities to reduce electricity costs for residential and industrial consumers while at the same time transforming the province's electricity market and yielding benefits for the electricity system.

# Proposed Initiatives – Impacts

- Each of the proposed initiatives under consideration target different government programs and different parts of the electricity bill. The proposals impact different classes of electricity consumers to varying degrees.

| Proposal | Program / Initiative | Line on Bills | Who Benefits |
|---|---|---|---|
| 1. Implement Market Renewal Initiatives | Market Renewal | Electricity, Global Adjustment, Regulatory | Market Renewal: All electricity consumers |
| 2. Fund Electricity Support Programs Through The Tax-base | OESP, RRRP | Regulatory | All electricity consumers evenly |
| 3. Eliminate the Industrial Conservation Initiative (ICI) | ICI | Electricity, Global Adjustment | Only Class B electricity consumers (i.e., residential) **Note:** Will have a negative impact on Industrial consumers. |
| 4. Amortize Conservation Program Costs | Amortization | Electricity, Global Adjustment | Class B electricity consumers and to a lesser extent Class A consumers |
| 5. LDC Efficiencies | Distribution efficiencies | Delivery | All embedded consumers |
| 6. Rate Design Initiatives | Rate structures | Electricity, Global Adjustment | Rate Design Initiatives: Participating electricity consumers |
| 7. Reduced Cost of OPG Borrowing | n/a | Electricity, Global Adjustment | Class B electricity consumers and to a lesser extent Class A consumers |
| 8. End DRC Early for Commercial/Small Industrial Class B Electricity Consumers | Debt Retirement Charge (DRC) | DRC | Class B consumers (i.e., small business and commercial consumers, etc) |
| 9. Dedicate Departure Tax | Departure Tax | TBD | TBD |
| 10. Cancel/Adjust Renewable Energy Procurements | FIT, LRP | Electricity, Global Adjustment | Class B electricity consumers and to a lesser extent Class A consumers |

# Proposed Initiatives – Potential Savings for Typical Residential Electricity Consumers

| *$/750kWh* | 2017 | 2018 | 2019 | 2020 | 2021 | 2022 | Timing of Benefit |
|---|---|---|---|---|---|---|---|
| 1. Implement Market Renewal Initiatives | - | - | - | 1.58 | 1.59 | 1.60 | Longer-Term |
| 2. Fund Electricity Support Programs through the Tax-base | 2.18 | 2.30 | 2.31 | 2.45 | 2.48 | 2.51 | Immediate |
| 3. Eliminate the Industrial Conservation Initiative (ICI) | 4.40 | 4.24 | 4.10 | 4.24 | 3.73 | 3.58 | Immediate |
| 4. Amortize Conservation Program Costs | 1.67 | 1.56 | 1.21 | 0.81 | 0.54 | 0.3 | Immediate |
| 5. LDC Efficiencies | TBD | TBD | TBD | TBD | TBD | TBD | Near-Term |
| 6. Rate Design Initiatives* | - | - | - | - | - | - | Immediate |
| 7. Reduced Cost of OPG Borrowing | 0.13 | 0.13 | 0.13 | 0.18 | 0.18 | 0.18 | Immediate |
| 8. End DRC Early for Class B Electricity Consumers** | - | - | - | - | - | - | n/a |
| 9. Dedicate Departure Tax | TBD | TBD | TBD | TBD | TBD | TBD | Immediate |
| 10. Cancel / Adjust Renewable Energy Procurements | - | - | TBD | TBD | TBD | TBD | Longer-Term |
| **Total decrease on typical monthly bill** | **8.38** | **8.23** | **7.75** | **9.26** | **8.52** | **8.17** | |

**Note:** The above initiatives will provide similar benefits for non-RPP Class B electricity consumers. Proposal 2 assumes OESP participation of 50% and 5-year maturity. *Savings estimates do not include changes related to rate design. ** Class B includes small-medium enterprises (SMEs).

# Proposed Initiatives – Potential Savings for Average Industrial Electricity Consumers

| *$/MWh* | 2017 | 2018 | 2019 | 2020 | 2021 | 2022 | Timing of Benefit |
|---|---|---|---|---|---|---|---|
| 1. Implement Market Renewal Initiatives | - | - | - | 2.11 | 2.12 | 2.13 | Longer-Term |
| 2. Fund Electricity Support Programs through the Tax-base | 2.91 | 3.06 | 3.17 | 3.27 | 3.33 | 3.38 | Immediate |
| 3. Eliminate the Industrial Conservation Initiative (ICI) | (24.12) | (23.21) | (22.45) | (23.23) | (20.42) | (19.61) | Immediate |
| 4. Amortize Conservation Program Costs | 1.15 | 1.08 | 0.84 | 0.56 | 0.37 | 0.25 | Immediate |
| 5. LDC Efficiencies | n/a | n/a | n/a | n/a | n/a | n/a | Near-Term |
| 6. Rate Design Initiatives* | - | - | - | - | - | - | Immediate |
| 7. Reduced Cost of OPG Borrowing | 0.10 | 0.10 | 0.10 | 0.15 | 0.15 | 0.15 | Immediate |
| 8. End DRC Early for Class B Electricity Consumers** | - | - | - | - | - | - | n/a |
| 9. Dedicate Departure Tax | TBD | TBD | TBD | TBD | TBD | TBD | Immediate |
| 10. Cancel / Adjust Renewable Energy Procurements | - | - | TBD | TBD | TBD | TBD | Longer-Term |
| **Total increase on industrial bill** | **19.96** | **18.97** | **18.34** | **17.14** | **14.45** | **13.7** | |

**Note:** Proposal 2 assumes OESP participation of 50% and 5-year maturity. Proposal 3 reflects the elimination of ICI, as opposed to moving ICI cost shift to the taxbase. The $1.75/MWh savings associated with Proposal 7 in 2018 accounts for the fact that under the status quo, DRC will be removed from bills in April 2018. *Savings estimates do not include changes related to rate design. ** Class B includes small-medium enterprises (SMEs).

# Fiscal Considerations

- Funding electricity support programs (i.e., OESP, RRRP, First Nations Delivery Rate) from the tax-base represents approximately $440 million on average annually.

- Ending the Debt Retirement Charge (DRC) for commercial and small industrial electricity consumers (i.e., Class B) early would represent an additional fiscal pressure of about $450 million ~~[placeholder for OFA]~~ on the Province.

- If the Industrial Conservation Initiative were funded though the tax-base instead of being eliminated, this would represent a $900 million annual cost to the fiscal plan (before the planned ICI expansion).

- Reducing OPG borrowing costs to the Province's cost of funds is expected to result in a $30 ~~20 to $35~~ million annual fiscal pressure in 2017 to the province ~~[TBC by OPG / OFA]~~ based on new borrowing and increasing to about $70M by 2021.

- Fiscal impacts of allocating a portion of the departure tax to ratepayers will depend on the size of the allocation, as well as timing for the flow of value. The maximum, direct one-time impact is $2.6 billion, with potential ancillary impacts on residual stranded debt defeasance.
- A summary of the annual fiscal impacts of the proposed initiatives is presented in the next slide.

# Proposed Taxpayer Funded Electricity Price Mitigation

| ($M) | 2016-17[1] | 2017-18[1] | 2018-19[1] | 2019-20[1] | 2020-21[1] |
|---|---|---|---|---|---|
| OCEB | - | - | - | - | - |
| OREC | 300 | 1,100* | 1,100* | 1,200* | 1,200* |
| Ending DRC[2] | 330 | 330 | -- | -- | -- |
| NIERP | 120 | 120 | 120 | 120 | 120 |
| NOEC | 25 | 25 | 25 | 25 | 25 |
| OEPTC[3] | 450 | 460 | 470 | 481 | 481 |
| **CURRENT TOTAL** | **1,195** | **2,005** | **1,715** | **1,826** | **1,826** |
| 1. OESP | | 106 | 119 | 127 | 132 |
| 2. RRRP | | 292 | 300 | 306 | 315 |
| 3. First Nations Delivery Rate | | 18 | 18 | 18 | 18 |
| 4. Fund ICI through Tax Base | | 900+100 | 900+100 | 900+ | 900+ |
| 5. Departure Tax | | TBD | TBD | TBD | TBD |
| 6. Conservation Amortisation | TBD | TBD | TBD | TBD | TBD |
| 7. DRC Ended for Class B | 110 | 450 | -- | -- | -- |
| 8. Other | | 30 | 45 | 60 | 70 |
| **TOTAL** | **1,305** | **3,901** | **3,197** | **3,237** | **3,261** |

1. 2016-17, 2017-18 based on forecasted numbers
2. 2015-16 estimated for 3 months of reduced DRC revenue
3. OEPTC amounts in all years based on energy component of the rebate.

- As shown above if various measures proposed in this deck were to be accepted, taxpayer funded contributions to electricity price mitigation would increase to about $3.4 – 3.9 billion by 2020-21. That is a 65-95% increase from the current forecast for 2017-18.
- These amounts were not considered in the 2016 Fiscal Plan and could put at risk the Province's fiscal objectives for 2017-18 and beyond.

# 1. Electricity Market Renewal Initiatives

- Continue to move forward with IESO's Market Renewal initiatives:
  - Market Renewal encompasses projects such as a single-schedule system (from the current two-schedule system), more frequent intertie scheduling to better align with other jurisdictions and a day-ahead market. There will be up front capital costs to enable the initiative. IESO is currently assessing these costs.
  - Moving to "technology-agnostic" procurements will provide new opportunities for innovation and modernization and ensure ratepayers receive the best prices possible.

**Considerations**

- Changes related to IESO's Market Renewal initiatives, reflected in HOEP and uplifts, are estimated to save up to $300 million per year, starting in 2020, leading to a reduction of:
  - About $1.60/month or about 1% at current retail prices for a typical residential bill; and
  - About $2/MWh or more than 2% at current all-in prices for industrial and SME electricity consumers.
- The IESO's Market Renewal is a broad initiative that will impact all aspects of Ontario's electricity market. Ontario has had a uniform price since market opening.
- Adopting a technology-agnostic stance will lower the overall cost of providing electricity service by selecting the most cost-effective resources to fulfill various system needs.

# 2. Fund Electricity Support Programs Through the Tax-Base

- Propose to fund electricity support programs, including Ontario Electricity Support Program (OESBP) and Rural or Remote Electricity Rate Protection (RRRP), through the tax-base instead of a regulated charge. This would allow the OESP and the RRRP charges to be removed from the Regulatory line on electricity bills.

**Considerations**

*Consumer Impacts and implementation*

- Transitioning OESP and RRRP to the tax-base would reduce a typical residential bill by about $2.35/month by 2020, and delivering the First Nation rate reduction through tax base would avoid about $0.10/month for a potential total savings of $2.45/month by 2020). As all programs provide strong social benefits, there is precedent for funding these programs through the tax-base.

- To address concerns from low income electricity consumers improvements to OESP could be implemented by increasing credits (could be up to double the current credits)
  - Single low income consumer would see a change from $30 to $45/ month ($540/year):
  - Family of four with electric heat could see a credit of $82.50/month ($990/year); and
  - Would mean no impact on consumer bills and no change to current OESP charge.
- RRRP and OESP are included in the “Regulatory” line on bills. If RRRP and OESP were eliminated from bills, the Regulatory line would decrease; however, as the Regulatory line is the smallest line item component of invoices, there is risk the decrease may not be perceived by customers.

- The RRRP regulation provides a funding mechanism for transmission infrastructure required to grid connect remote First Nation communities. Considerations for how that funding will be supported by the tax base will need to be determined.

- The non-rate mechanism to remove delivery charges from on-reserve First Nation customer monthly bills needs to be further explored.Funding RRRP and/or OESP with tax revenue would require amendments to existing legislation and regulations.

# 2. Fund Electricity Support Programs Through the Tax-Base (cont'd)

- Table below shows estimates of program costs up to 2020:

| Year | OESP | RRRP | First Nations Delivery Rate | TOTAL |
|---|---|---|---|---|
| 2017 | $106M | $292M | $18M | **$416M** |
| 2018 | $119M | $300M | $18M | **$437M** |
| 2019 | $127M | $306M | $18M | **$451M** |
| 2020 | $132M | $315M | $18M | **$465M** |

1) Ontario Electricity Support Program (OESP)
   - After almost a year in market, close to 30% of potentially eligible customers are signed up.
   - The cost projections below assume the program grows to 50% of eligible consumers by 2020 (also assumes 10% administration costs).

2) Rural and Remote Rate Protection (RRRP)
   - Provides benefits to R2 Hydro One consumers, Algoma, and remote communities.
   - Includes the expanded coverage that will begin on January 1, 2017.

3) First Nation rate reduction (currently under development)
   - On November 14, 2016, OEB presented options to the Ministry on reducing costs for on-reserve First Nation customers.
   - OEB's recommended option to provide 100% delivery rate credit, which is estimated at $18.4 million per year.
     - Other options includes a seasonal fixed credit to account for demand changes over the year ($13 million) or a 50% total bill reduction ($23 million).

# 3. Eliminate the Industrial Conservation Initiative (ICI)

- The cost shift from the Industrial Conservation Initiative (ICI) could be removed from electricity bills by eliminating ICI.
  - The ICI allows large electricity consumers to lower their electricity costs by reducing their demand during peak hours.

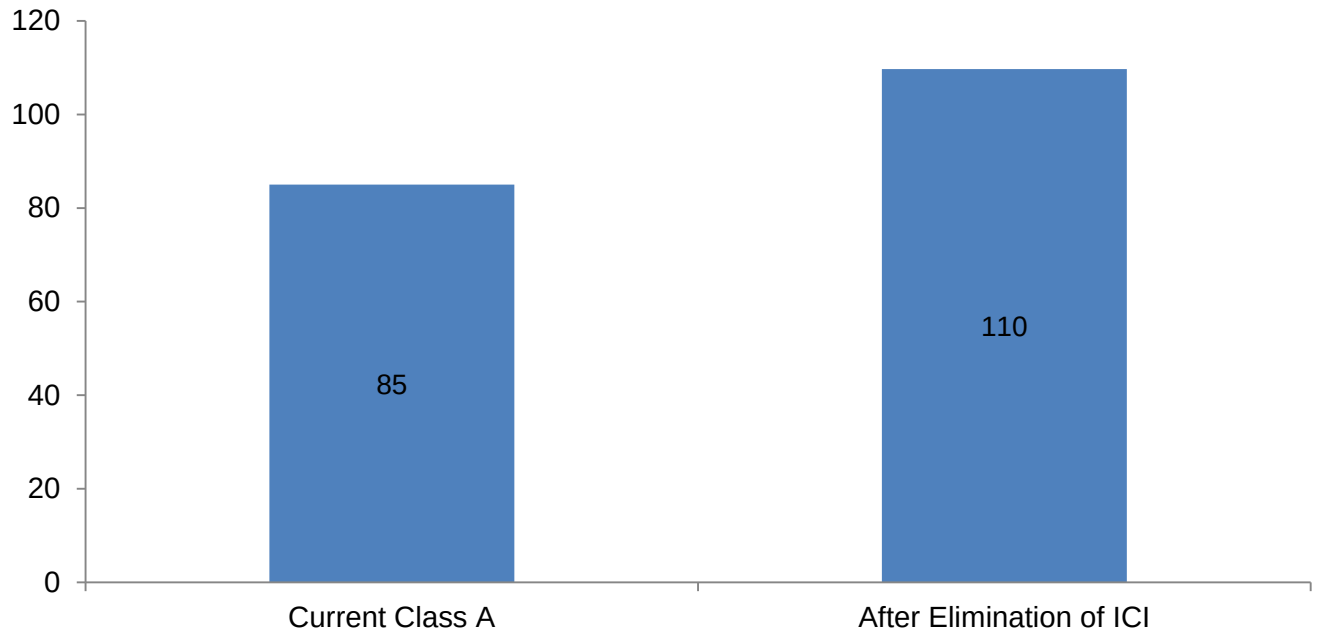
**Considerations**

- Eliminating ICI would result in a benefit of more than $4/month for residential electricity consumers in 2017.
  - However, unless government took action to mitigate the associated cost shift back to industrial consumers, typical industrial prices would increase by about one-third. Such a price increase would pose significant challenges for energy-intensive consumers.
- Industrial stakeholders have indicated that ICI as an integral factor in maintaining competitiveness and retaining industry in the province.
  - Eliminating ICI would limit the “cost shift” onto residential consumers, but it would also lead to a reduction in industrial demand. The large industrial contribution to the fixed costs of running the electricity system would then need to be covered by remaining consumers.
- If ICI is retained, current IESO projections indicate that the cost shift will decrease each year going forward as Global Adjustment (GA) decreases (due to an expected increase in HOEP).
- Alternatively, ICI could be funded through the tax-base at a cost of $900 million annually. There is precedent to use the tax-base for industrial support programs, including the Northern Industrial Electricity Rate Program (NIERP) and the Jobs and Prosperity Fund.

# 3. Eliminate the Industrial Conservation Initiative (cont'd)

- ICI currently provides a benefit of about $25/MWh to Class A electricity consumers.

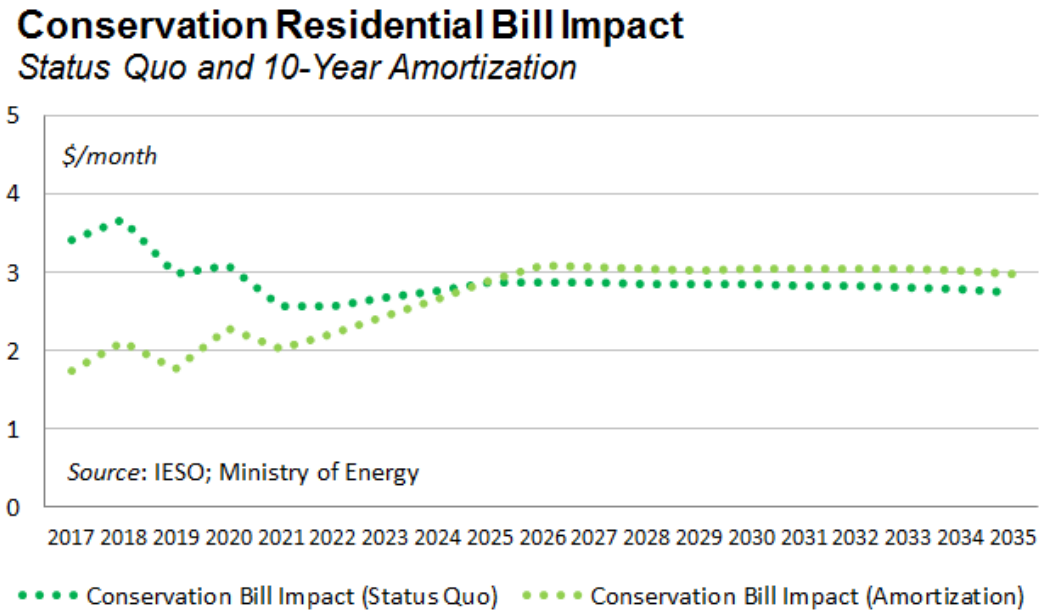
**All-In Electricity Price**
*in $/MWh*



**Note**: Based on year-to-date (YTD) September 2016 prices. Class A reflects a transmission-connected consumer.

# 4. Amortize Conservation Program Costs

- ~$3 billion from the electricity ratepayer base will be spent on conservation programs delivered under the Conservation First Framework and the Industrial Accelerator Program (IAP) between 2015 and 2020.
- Currently, Conservation and Demand Management (CDM) program costs are recovered from the Global Adjustment (GA) mechanism about one month after expenses are incurred.
- As a potential rate mitigation measure, certain CDM costs could be amortized.
- Amortizing a portion of conservation spending would produce a benefit for electricity ratepayers in excess of $1/month at the outset. Over time, the benefit would decrease and turn into a cost, as interest charges begin to grow.



**Note**: Chart assumes that conservation incentive costs are available for amortization while administration cost are not. Although there is variable from year to year, incentives represent about two-thirds of conservation spending in Ontario. Chart assumes conservation spending continues at a similar rate beyond 2020. Chart assumes a 10-year borrowing rate of 3.0%.

# 4. Amortize Conservation Program Costs (cont'd)

## Considerations

- Under **Public Sector Accounting Board (PSAB) accounting standards**, used by both the Province and IESO, only certain assets can be amortized: 1) pensions and 2) tangible capital assets. Under PSAB an asset must meet several criteria to be considered a capital asset, including:
  - A tangible capital asset must be tangible and substantive and the Ontario government must have title and operate the asset.
  - A tangible capital asset must bring a tangible benefit to the government or to Ontario.

- CDM costs, on their own, do not meet the criteria of a tangible capital asset because customers would have ownership and control of installed CDM measures, not the Province or IESO.

- **Rate-regulated accounting** was developed to recognize the unique nature of regulated entities (e.g., electricity generators, LDCs). Under rate-regulated accounting certain costs can be treated as amortizable assets that would not normally be considered assets under accounting principles.
  - Over the past several years, the Auditor General (AG) has expressed concerns about the appropriateness of recognizing rate-regulated assets in the Province's consolidated financial statements.
  - Rate-regulated accounting is currently under review by international accounting standard setting bodies and is currently permitted only on an interim basis, so its future is unclear at present.

# 4. Amortize Conservation Program Costs (cont'd)

**Considerations**

- If some of Ontario's CDM costs could be amortized, analysis shows that ratepayer impacts would be reduced in the short-term but interest charges on the loan would result in increased overall ratepayer costs in the longer-term.

- Legislative amendments would be needed to allow recovery of loan interest charges from GA.

- If there is a desire to proceed:
  - Formal accounting advice will need to be sought from IESO's external auditor as well as the Ontario Provincial Controller (OPC) to determine whether CDM costs could be amortized according to rate-regulated accounting standards.
  - Further legal analysis would also be required to confirm legal viability and possible approaches to implementation.

# 5. LDC Efficiencies

- Consider opportunities for future LDC cost reductions and efficiencies through the regulatory framework.

**Considerations**

- The Ontario Energy Board has a mandate to regulate the electricity distribution sector in the public interest, ensuring the financial viability of the sector while promoting reliable service to customers at just and reasonable rates.
- Since 2012, the OEB has taken action – through the Renewed Regulatory Framework for Energy – to more closely link rate regulation with performance measures and outcomes.
- There maybe opportunities to promote further cost reductions and performance improvements within the distribution sector as there is continued evolution of the regulatory framework in Ontario.
  - Tightening LDC requirements may also indirectly incent other desired policy outcomes, such as LDC consolidation and grid modernization to realize further cost reductions.
- ENERGY could help promote or accelerate these efforts by asking the OEB through the LTEP Implementation Directive, s. 35 of the *Ontario Energy Board Act, 1998*, and the 2017 Mandate Letter and other agency business planning processes.
- In addition, further changes to the departure and transfer tax regimes could be considered to provide a further incentive for LDC mergers and acquisitions.

# 6. Rate Design Initiatives

- OEB continues to move forward with its Regulated Price Plan (RPP) Roadmap:
  - The OEB is undertaking a comprehensive review of the RPP, including exploring the introduction of offering different pricing plan options for customers following the completion of pilot programs in 2018. The plan is expected to be implemented over a 3-5 year period.

- Until new pricing plans are available, the OEB could provide an "opt-in flat rate RPP" structure that could be made available to residential, farm and small business consumers on an interim basis (2-3 years) until a wider range of price plans are available.
- Time-of-Use (TOU) pricing could also be introduced for non-RPP Class B consumers to reduce Global Adjustment (GA) volatility and reduce system costs.

| Current TOU | New Flat Rate |
|---|---|
| On: 18.0 ¢/kWh | 11.1 ¢/kWh |
| Mid: 13.2 ¢/kWh | |
| Off: 8.7 ¢/kWh | |

**Considerations**

- The OEB has indicated that the option would lead to no overall change in system costs. Consumers with higher peak and mid-peak usage patterns would see a decrease in their electricity bills, while those with higher off-peak usage patterns would see an increase.
  - While the current strong supply conditions may allow for such an RPP structure (i.e., peak demand requirements can be easily met), administrative costs could be high (distributors would need to design/implement an opt-in process and associated billing system on an interim basis).

| | Current TOU | New Flat Rate |
|---|---|---|
| 1) Monthly electricity bill- higher peak and mid-peak usage patterns | $172 | $163 |
| 2) Monthly electricity bill- higher off-peak usage patterns | $152 | $163 |

***Note:** 1) assumes a consumer consumption pattern of 45%:30%:25% (Off-peak: Mid-peak: On-peak), while 2) assumes consumer consumption pattern of 80%:10%:10% (Off-peak: Mid-peak: On-peak). Estimates are based on OEB's online electricity bill calculator (for Toronto Hydro-November 2016 rates)

# 6. Rate Design Initiatives (cont'd)

**Considerations**

- The decision to undertake smart meter investments was partly justified on the basis of TOU pricing. If TOU pricing were to be made optional, some stakeholders could question the rationale for smart meter investments.
  - Rationale for offering a flat rate option could focus on providing customers with choice until new pricing plans are rolled out under the RPP roadmap.

- If a flat rate design is introduced, there could be significant consumer opposition to any return to a mandatory TOU.

- After the interim flat rate period, the OEB could offer a wider range of pricing plans to consumers.
  - As part of its RPP review, the OEB will be running pilots with LDCs to assess customer response to alternative time periods and pricing structures.
  - Learnings from these pilots will help inform potential changes to the RPP. Pilots are expected to be in market May 2017 and run for one year.

- Non-RPP Class B electricity consumers currently pay Global Adjustment (GA) on a volumetric basis. Moving them to TOU would provide an incentive to shift consumption to off-peak periods.
  - Consumers, including manufacturers, who are unwilling to shift would face higher costs and likely not be supportive of the changes.
  - The decision to pursue TOU pricing for non-RPP class B consumers will impact proceeds recycling as there is interplay between the two initiatives.

# 7. Reduced Cost of OPG Borrowing

- OPG currently borrows for corporate purposes from the OEFC
- Seek to reduce OPG's borrowing costs and pass on savings to ratepayers by:
  - Reducing or removing the spread that OEFC applies to OPG for any new corporate debt; or
  - Allowing OPG to refinance its existing debt at longer maturities through the OEFC in order to take advantage of the current, favourable interest rate environment.
- Assuming the full spread is removed from all OEFC debt, OPG borrowing costs could be reduced by 50-100 basis points, representing annual savings of about $20-$25 million, increasing to $30-$35 million, as OPG's outstanding OEFC debt rises from ~$3.3 billion in 2016 to ~$4.7 billion in 2020.
- OPG could apply to the OEB as part of its current rate application to flow this benefit to ratepayers.

**Considerations**

- Further work is required to determine potential OPG savings from these initiatives.
- Allowing OPG to refinance would have a negative fiscal impact on the Province.
- Spreads are expected to decline, reducing the relative impact of this change, given lower overall interest rates and reduced volatility.
- Providing OPG with greater access to longer term (20-30 year) debt may also reduce costs:
  - OPG's average term to maturity for OEFC debt is 5.7 years, as compared to 22.2 years for privately financed project debt. This contrasts with most corporations and government which have been working to extend average debt terms in order to take advantage of the low interest rate environment.
  - Longer terms would also better match to the life of OPG's assets.
  - Recently, OEFC has allowed OPG to apply for 50% of its financing requirements in the form of longer term (25-30 year debt). Moving closer to 100% would accelerate this transition.

# 8. End DRC Early for Commercial/Small Industrial Class B Electricity Consumers

- Propose to remove the $0.007/kWh Debt Retirement Charge (DRC) from the bills of commercial/small industrial Class B consumers beginning in 2017, instead of April 1, 2018.
  - **Note:** Class A consumers (e.g., large industrial) would continue to pay DRC until at least April 1, 2018.

**Considerations**

- For a Class B consumer currently paying about $152/MWh, removing the DRC would represent a savings of about 5%.
  - A 50% reduction in the DRC charge would represent a savings of about 2%.

- Alternatively, the reduction of the DRC could be to $0.035/kWh starting in 2017, to provide relief for cap and trade until proceeds recycling is fully operational.

- Residential consumers have had the DRC removed from bills since January 1, 2016. Taking DRC off commercial and small industrial bills would result in equal treatment for these groups of consumers.

- The savings for commercial and small industrial consumers associated with this proposal would drop to zero in April 2018, since this is the current planned date for removing the DRC from non-residential bills.

- Prior to moving forward with this proposal, additional analysis from Legal Services and the MOF would be needed.

# 9. Dedicate Departure Tax

- In connection with the IPO, as a result of leaving the PILs regime and entering the corporate tax regime, Hydro One was deemed to dispose of its assets for proceeds equal to its fair market value, triggering a PILs liability of $2.6 billion (Departure Tax).
- This was paid to the Ontario Electricity Financial Corporation (OEFC), to be dedicated towards repayment of electricity sector stranded debt.
- The Province could explore repurposing some of those funds to the benefit of ratepayers.
- This may reduce the risk that the Ontario Energy Board (OEB) assigns to ratepayers the benefit from an associated tax asset, resulting in lower earnings and decreased share value for Hydro One. This decision is currently before the OEB, as part of Hydro One's Transmission rate application.

**Considerations**

- Cost savings to ratepayers would depend on timing and which ratepayers (e.g., Hydro One customers, or all Ontario customers) will benefit from some or all of the $2.6 billion value.
- While this is a shift from messaging that value from the broadening of ownership of Hydro One is being used pay down debt and fund transit and transportation, the Province could link to electricity infrastructure investments (e.g., as an offset to infrastructure investments already made in the sector, or to specific initiatives such as conservation).
- These funds were paid to the Ontario Electricity Financial Corporation (OEFC), ~~to be~~ dedicated towards repayment of electricity sector stranded debt. Repurposing may have an impact on the pay down / defeasance of this debt.

# 10. Cancel/Adjust Renewable Energy Procurements

- The Ministry could consider the following actions to further mitigate future impacts to electricity bills:

| Unallocated/Terminated Capacity | Announced Procurements | Executed Contracts |
|---|---|---|
| A. Do not procure unallocated or terminated capacity | B. Revise FIT 5 target | D. Cancel LRP I contracts |
| | C. Cancel FIT 6 | |

**Overarching Considerations**

- Cost savings associated with reducing or cancelling renewable energy procurements and programs will not reduce current electricity bills, but would result in future cost reductions relative to Ontario Planning Outlook forecasts.
- The IESO estimates implementing options A to C will reduce system costs by approximately $592 million ($2016) between 2019 and 2028, resulting in an average of approximately $0.50/month in savings to a typical residential electricity bill over the same period. [cost reductions from LRP I contract cancellations TBC]
- The microFIT program is winding down end of 2017. Annual microFIT procurement targets have been undersubscribed.
- With a few exceptions (e.g., rollover of unallocated microFIT capacity; addition of terminated microFIT and small FIT capacity to FIT 5), plans for unallocated or terminated capacity are not defined in announcements or existing directions.

**Cancel/Adjust Announced Procurements**

- Amendments to existing directions to the IESO would be required to reduce FIT 5 and cancel FIT 6.
- The FIT 5 procurement is underway with a base target of 150 MW and inclusion of any capacity available from contract terminations under prior small FIT and microFIT procurements. The application window closed on November 25, 2016.

# 10. Cancel/Adjust Renewable Energy Procurements – Existing Contracts

**Cancel Existing LRP I Contracts**

- 16 LRP I contracts (approx. 455 MW) have been executed and projects are under development.
- None have met Key Development Milestones. Total value of LRP I estimated at approx. $1 billion (NPV to 2016).

[Placeholder for IESO: Cost calculation relative to OPO and associated bill impact]

**Considerations**

- To help inform a decision, IESO or OEB could be asked to evaluate and provide guidance to the Ministry on the system need for LRP I projects and potential ratepayer impacts/benefits.
- 13 of 16 LRP I contracts have Indigenous participation. Cancelling LRP I contracts would remove this economic development opportunity and likely damage relationships between Indigenous communities and the government.
- LRP I Contract includes an “Optional Termination” provision allowing IESO to terminate any contract prior to the “Commercial Operation Date” with 6 months written notice.
- The IESO obligations under the Optional Termination provision depend on whether the project has met all “Key Development Milestones”.
  - As no projects have met their Key Development Milestones, the estimated total cost payable to contract holders is about $8 million.

# 10. Cancel/Adjust Renewable Energy Procurements – Existing Contracts (cont'd)

## Legal Analysis

- Under the *Electricity Act, 1998*, the Minister has the authority to amend previous directions without approval from Cabinet. Although an amendment to an existing direction would not require Cabinet approval, it is unlikely that a direction to cancel LRP I contracts could be considered as amending an existing direction. The previous LRP directions set out the broad policy framework that was reflected in the procurement, but the contracts themselves, once executed, are stand alone documents which the IESO had legal authority to execute. Revoking previous LRP directions does not affect that authority or have the effect of cancelling the procurement.
- As a result, any new directive to cancel LRP I contracts would need to be approved by Cabinet, either as part of an LTEP implementation directive to IESO, or pursuant to the overall power to direct IESO with respect to procurements outside the LTEP process. However, there is a risk that such a directive could be subject to challenge.
- ENERGY has previously received advice that there is a high risk that a court would conclude that the Minister has no authority under the *Electricity Act , 1998* to issue a direction requiring IESO to terminate microFIT Conditional Offers and FIT Offer Notices that have already been issued to applicants, because these offers create vested contractual rights and the Minister would require clear legislative authority to interfere with those rights. This reasoning would likely apply equally to any direction or directive to IESO to cancel LRP I contracts.
- Previous advice has also flagged a moderately high risk that the Province could be liable for damages in tort for inducing a breach of contract if it issues a direction to IESO that interferes with vested contractual rights without clear statutory authority to do so. LRP I contract holders could also assert other claims, such as misfeasance in public office.
- The risk and costs associated with potential law suits resulting from the cancellation of contracts requires further analysis, including analysis of whether any statutory amendments would be required to provide clear authority to cancel the contracts. LSB recommends ENERGY seek an opinion from Crown Law Office Civil before proceeding.

# Summary

- Reductions in electricity rates could be achieved by eliminating existing, planned or directed initiatives from the rate-base or shifting these costs to the tax-base.

- The timing of the impact of these rate mitigation initiatives varies.
  - Immediate and near-term impacts can be achieved by shifting costs to the tax-base or changing how certain costs are recovered from consumers or eliminating certain programs.
  - Over the longer term, changes to the electricity supply mix and achieving efficiencies in the electricity market could yield system savings.

- Pursuing the initiatives would require regulatory amendments and working with the electricity sector agencies, LDCs and other stakeholders to implement the initiatives.

- As shown before the positive impact to residential ratepayers is very limited from the proposals with ratepayer impacts estimated by Energy (between $8 and $9 per month) while the impact to the Province's fiscal position would be material (about $1.2 to $1.5 billion a year). If additional proposals are also fiscally-funded, the fiscal cost could be substantially higher from, e.g., accounting treatment of conservation amortisation or a class B DRC exemption.

# Appendix

# Electricity Consumer Classes

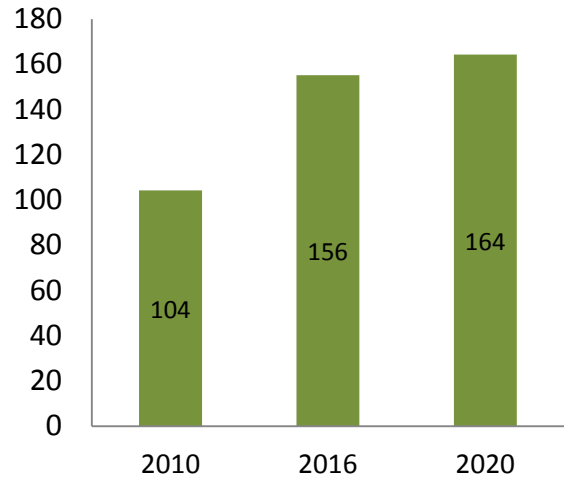
- In Ontario, there are three classes of electricity consumers:

| | Regulated Price Plan | Class B | Class A |
|---|---|---|---|
| **Consumer Types** | • Residential<br>• Small Business<br>• Farms | • Commercial<br>• Institutional<br>• Small industrial | • Large commercial<br>• Large industrial |
| **Load Size** | Below 0.05 MW | Between 0.05 MW and 1 MW | Above 1 MW |
| **Total Consumption** | 58 TWh | 57 TWh | 26 TWh |
| **Share of Consumption** | 41.1% | 40.4% | 18.4% |

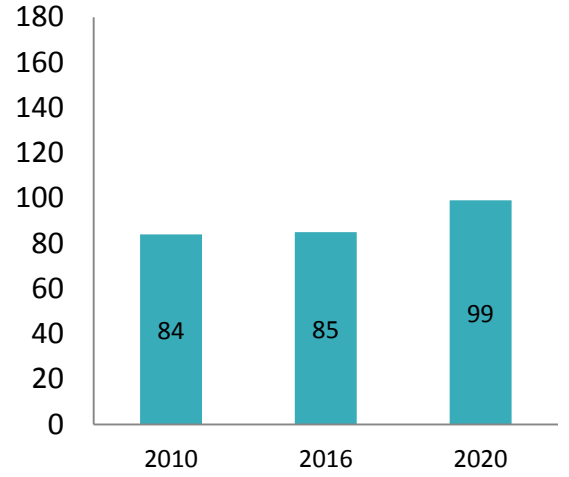
# Prices by Electricity Consumer Class

- Since 2010, average bills for residential consumers (i.e., using 750 kWh/month) have increased by over 50%. Rates are forecast to continue to increase, with residential consumers paying an estimated 6% by 2020.
- Industrial electricity rates have remained relatively flat over the same time period, due primarily to the Industrial Conservation Initiative (ICI). ICI represents a cost shift of about $5/month for residential electricity consumers. Industrial electricity consumers are forecast to see an increase of 16% by and 2020.

**Typical Residential Bill (750/kWh per month)**



**Typical Class A (Industrial) Price ($/MWh)**



**Note:** 2016 represents year-to-date September 2016 for industrial. Cap and trade proceeds recycling is included for the industrial consumer for 2020.

# Rate Mitigation Levers

- To provide further rate relief to Ontario electricity consumers, the government can use one or more of the levers outlined below:
  - **Tax-based Lever:**
    - Provide rebates funded from the tax-base or transfer items currently paid through the rate-base to the tax-base.
  - **Rate-based Lever:**
    - Shifts costs within the rate-base from one customer group to another to achieve electricity system benefits and/or policy goals.
  - **Cap and Trade Proceeds Lever:**
    - Use cap and trade proceeds on initiatives that help reduce greenhouse gas (GHG) emissions from the electricity sector (e.g., recycling proceeds during off-peak periods) while providing benefits to some or all electricity consumers.

# Traditional Rate Mitigation Programs

- Ontario has implemented a number of rate-based programs to help residential and industrial electricity consumers:
  - The Ontario Electricity Support Program (OESP) provides ongoing assistance directly on the bills of eligible low-income electricity consumers
  - The Rural or Remote Rate Protection (RRRP) program is provided to rural and remote residential and farm customers because the cost of distributing power to remote areas is much higher than for urban areas.
  - The Industrial Conservation Initiative (ICI) encourages Ontario's largest consumers to reduce consumption during peak periods while reducing system costs.
- There are also tax-base programs to help manage electricity prices:
  - Rebate the provincial portion of the HST from the electricity bills of residential, small business and farms as of January 1, 2017.
  - Northern Industrial Electricity Rate Program (NIERP), in which participants receive a rebate of two cents per kilowatt hour. On average, industrial electricity prices can be reduced by up to 20%.
- While rate-based programs provide relief to certain electricity consumers, they shift other costs to remaining ratepayers (See Appendix for additional details).

# Driving Down Prices for Consumers

- Since 2013, a number of actions have been taken to drive down prices for consumers wherever possible:
  - Renegotiating the Green Energy Investment Agreement, reducing contract costs by $3.7 billion;
  - Deferring the construction of two new nuclear reactors at Ontario Power Generation's Darlington facility, avoiding an estimated $15 billion in new construction costs;
  - Approving Ontario Power Generation's plans to enable the ongoing operation of Pickering up to 2024, which is expected to save ratepayers as much as $600 million;
  - Reducing Feed-In-Tariff (FIT) prices through annual price reviews, saving ratepayers at least $1.9 billion relative to the 2013 Long-Term Energy Plan (2013 LTEP) forecast; and
  - Suspending the second round of the Large Renewable Procurement (LRP II) process and the Energy-from-Waste Standard Offer Program to save up to $3.8 billion in electricity system costs relative to 2013 LTEP.

# Cost Shifts in the Electricity Sector – Current Programs

- Several programs in the electricity sector “shift costs” from one group of electricity consumers to another:
  - **Rural or Remote Rate Protect** (**RRRP)** is a longstanding program that reduces the delivery charge for rural electricity consumers and is paid for by all consumers in Ontario through a regulatory charge on bills.
  - **Ontario Electricity Support Program (OESP)** is funded via a regulatory charge on consumer bills and provides support for qualifying low income electricity consumers.
  - **Industrial Conservation Initiative (ICI)** empowers large consumers to lower their costs by reducing their demand during peak hours. In the process, ICI shifts costs from large electricity consumers to all other consumers in Ontario.
  - **Industrial Electricity Incentive** (**IEI**) program, offers reduced electricity prices for companies starting or expanding operations in Ontario. All electricity consumers in Ontario pay for the price reduction that IEI participants receive.

# Cost Shifts in the Electricity Sector (Cont'd)

- The tables on the right show the estimated cost shifts that result from existing government programs.
- ICI has had the largest cost shift of all the programs, due to the large size of Global Adjustment (GA) and the way that it is recovered from consumer classes.
- RRRP and OESP impact the regulatory line on consumer bills, while ICI, IEI and conservation affect GA (i.e., Electricity line on bills of Regulated Price Plan consumers).

**Cost Shift Impacts - Residential Bill**

*Typical 750 kWh/month Toronto Hydro consumer*

| *$/month* | 2011 | 2012 | 2013 | 2014 | 2015 | 2016 |
|---|---|---|---|---|---|---|
| ICI | 2.65 | 3.25 | 3.88 | 3.53 | 4.75 | 4.77 |
| RRRP | 0.90 | 0.82 | 0.84 | 0.92 | 0.93 | 0.94 |
| OESP | - | - | - | - | - | 0.84 |
| Conservation | 1.85 | 1.92 | 2.00 | 1.58 | 2.43 | 2.45 |
| IEI | - | - | 0.08 | 0.09 | 0.11 | 0.12 |
| **Total** | **5.41** | **5.99** | **6.81** | **6.13** | **8.21** | **9.12** |

**Cost Shift Impacts - Industrial Bill**

*Typical Class A consumer*

| *$/MWh* | 2011 | 2012 | 2013 | 2014 | 2015 | 2016 |
|---|---|---|---|---|---|---|
| ICI | -22.17 | -26.36 | -30.29 | -25.91 | -33.79 | -33.92 |
| RRRP | 1.20 | 1.10 | 1.12 | 1.23 | 1.24 | 1.25 |
| OESP | - | - | - | - | - | 1.13 |
| Conservation | 1.53 | 1.59 | 1.66 | 1.31 | 2.01 | 2.02 |
| IEI | - | - | 0.07 | 0.08 | 0.09 | 0.10 |
| **Total** | **-19.43** | **-23.67** | **-27.44** | **-23.29** | **-30.45** | **-29.43** |

**Note:** OESP did not come into effect until 2016. The 2016 values represent forecasts and are subject to change.

# Cost Shifts in the Electricity Sector (Cont'd)

- The table on the right shows the total cost for various government electricity programs. These programs are currently funded through the electricity system ratebase.

- Funding of these programs through the fiscal plan would remove these costs from the electricity system (i.e., Placing these costs on the taxbase).

**Cost of Programs**

*By government program*

| *$M* | 2011 | 2012 | 2013 | 2014 | 2015 | 2016 |
|---|---|---|---|---|---|---|
| ICI | 506 | 615 | 736 | 670 | 890 | 893 |
| RRRP | 172 | 156 | 159 | 176 | 174 | 176 |
| OESP | - | - | - | - | - | 158 |
| Conservation | 329 | 339 | 354 | 280 | 425 | 428 |
| IEI | - | - | 15 | 16 | 18 | 19 |

- For example, removing the roughly $900 million of program cost from the Industrial Conservation Initiative (ICI) program would save the typical residential electricity consumer $4.77 per month in 2016.

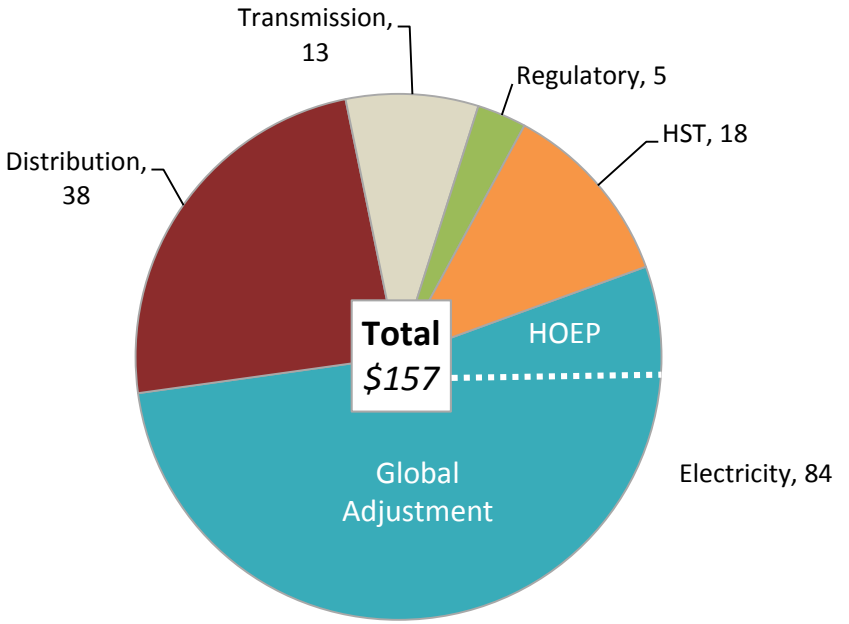
**Note:** OESP did not come into effect until 2016. The 2016 values represent forecasts and are subject to change.

# Residential Electricity Prices

- There are approximately 4.5 million residential consumers in Ontario.
- The Regulated Price Plan includes nearly all residential consumers, as well as small businesses. Regulated Price Plan consumers pay a blended commodity rate regulated by the OEB, which is set every six months.
- For households, the Debt Retirement Charge (DRC) was removed from residential electricity bills as of January 1, 2016.
- In addition, the Ontario Electricity Support Program (OESP) provides an ongoing rate reduction directly on the bills of low-income electricity consumers who have applied and meet the eligibility requirements. The program is funded through the rate base.
- Rural customers, in particular those with electrical heating, pay higher monthly bills.

**Typical Residential Monthly Bills ($)**

*As of November 1, 2016 (750 kWh/month)*



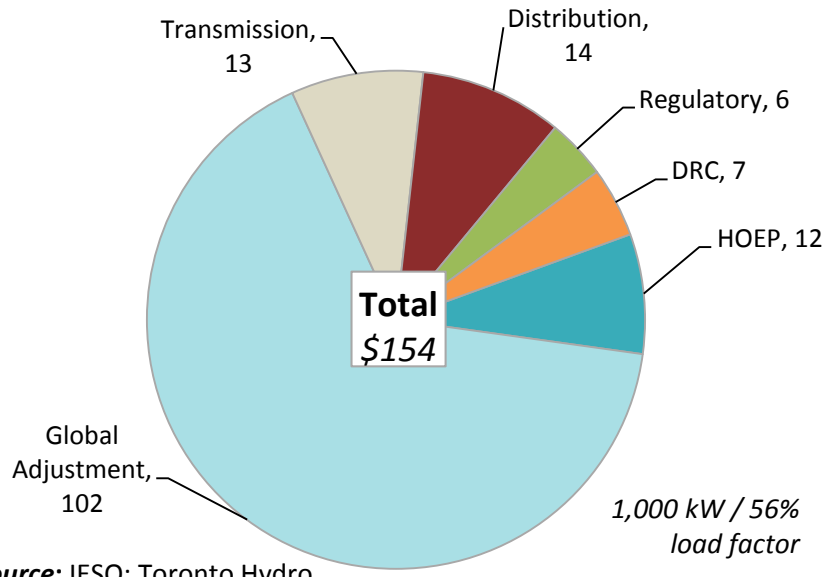
***Source*: OEB, Toronto Hydro**

# Commercial Electricity Prices

- There are approximately 55,000 commercial and institutional consumers in the province. These consumers are Class B consumers, and have separate line items on the electricity bill for HOEP and GA.
- There is a high degree of differentiation amongst consumers within the commercial sector in terms of size and consumption patterns. For example, an elementary school has a much different hourly load profile compared to a full service restaurant. This is an important consideration when looking at the bill impacts of policy options.

**Typical Commercial Price ($/MWh)**

*YTD June 2016 (Non-RPP Class B)*



***Source*:** IESO; Toronto Hydro

- Consumers in the commercial sector do not pay time-of-use prices and have little incentive to shift demand away from high demand hours.
- Targeted pricing programs are currently not available for Class B consumers.

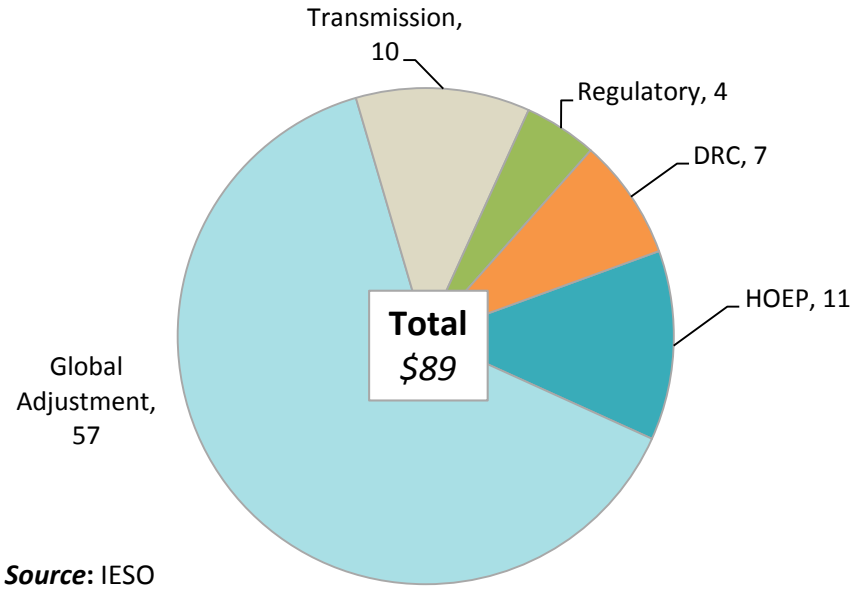
*** Note**: Most commercial consumers receive input tax credits for their HST.

# Industrial Electricity Prices

- There are about 300 large industrial consumers in Ontario.
- Measures in place to mitigate industrial electricity prices include ICI and NIERP.
- ICI lowers costs for eligible large electricity consumers (i.e., those with monthly peak demand exceeding 3 MW) that reduce consumption during peak periods.
  - ICI consumers reduce their electricity rates by 25% on average.

**Typical Large Industrial Price ($/MWh)**

*YTD June 2016*



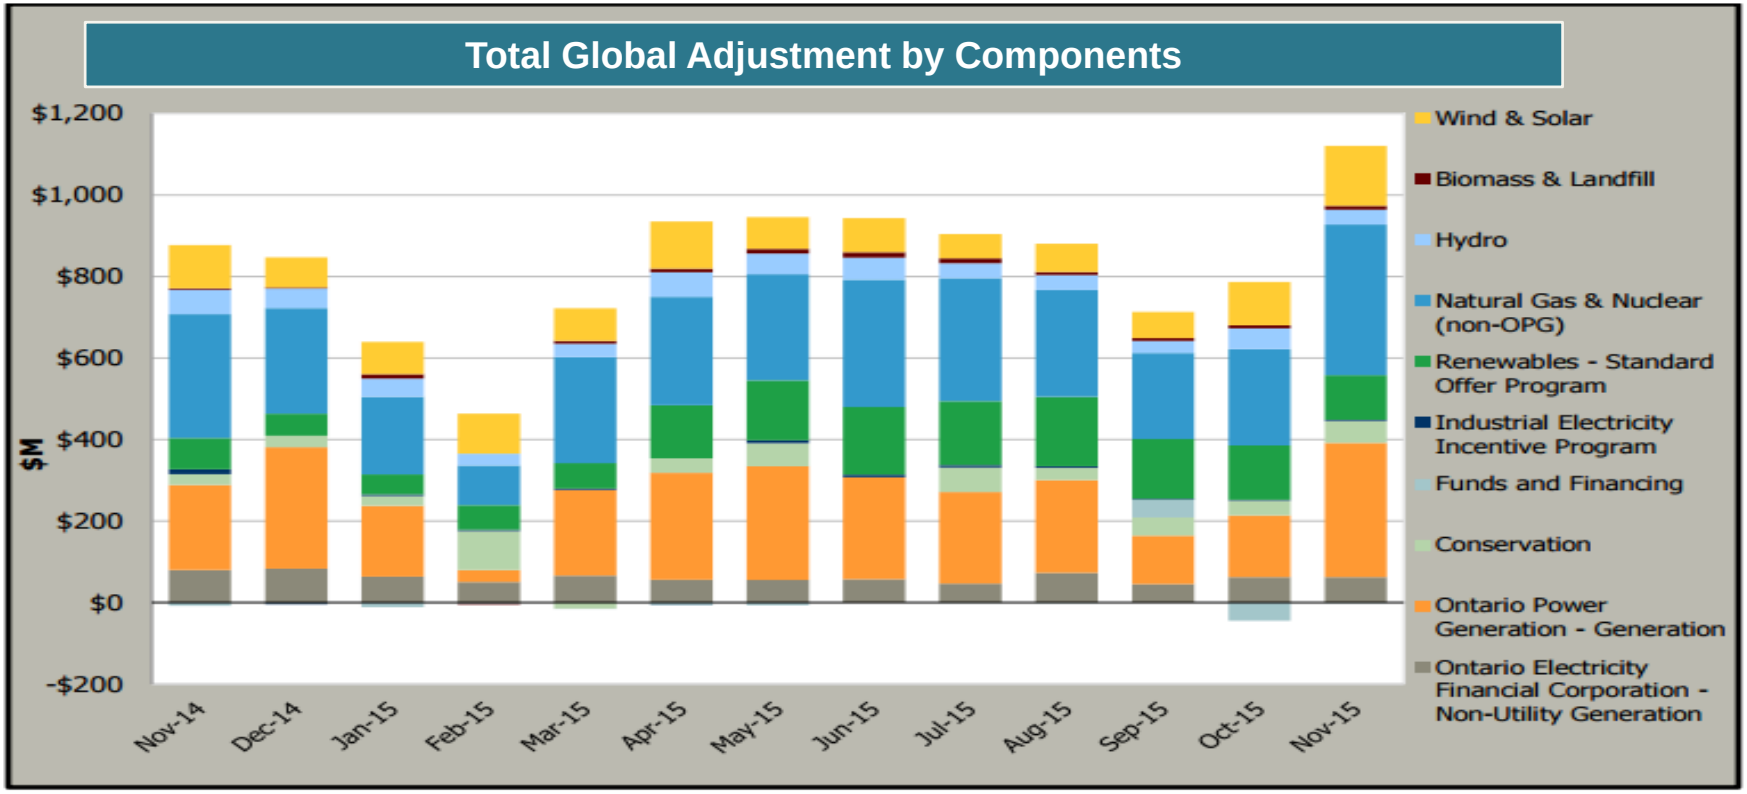
***Source*: IESO**

- Participants in NIERP receive a rebate of $20/MWh. On average, industrial electricity prices are reduced by about 20% through the program, reducing all-in prices to $69/MWh for these consumers. The program is funded through the tax base.

*** Note:** Industrial consumers receive input tax credits for their HST.

# Total Components of Global Adjustment

- Global Adjustment (GA) is a market mechanism that recovers costs from electricity consumers, including the cost of almost all conservation programs in the province (i.e., approximately half a billion dollars in 2016).



**Source:** IESO Monthly Market Report (November 2015)

# Cancel/Adjust Renewable Energy Procurements

# LRP I Pre-Construction Liability Limits

- All 16 successful LRP I developers accepted Optional Termination Provisions when the LRP I Contracts were executed in April 2016.
- If IESO chooses to enact the Optional Termination provision before a project has met all Key Development Milestones, IESO is required to pay pre-construction development costs up to the Pre Construction Liability Limit.
- Pre-construction development costs include costs incurred for feasibility studies, obtaining site access rights, work towards environmental approvals, business development plans, negotiation of contracts for design, equipment, construction and financing, reasonable overhead expenses, and other reasonable costs incurred.
- The Pre Construction Liability Limits are:
  - Non-Rooftop Solar: $250,000 plus $10.00/kW of Contract Capacity
  - Waterpower: $500,000 plus $20.00/kW of Contract Capacity
  - On-Shore Wind: $400,000 plus $2.00/kW of Contract Capacity
- According to the LRP I Optional Termination provision, the developer has a duty to take reasonable steps to mitigate losses, liabilities, costs and damages incurred as a result of the Optional Termination.
  - The IESO will not provide compensation for amounts which are attributable to a developer's failure to take reasonable steps to mitigate.

Hi Ron,

Following our discussion EFB updated the table.

Thanks,

Francisco

**Subject:** RE: Potential Rate Mitigation

Hi Ron,

Attached are three decks:

1. A markup of  Energy's deck to be shared with Energy.
2. A draft annotated version for the DMO/MO at MOF.
3. A draft summary deck.

John and I made several edits to the annotated version to make it more readable for the DMO. Hopefully we didn't misinterpret any of the comments received earlier today.

Thanks to everyone in the three branches for pulling this together on a very short time.

Francisco

**Subject:** Fwd: Potential Rate Mitigation

Hi,

Lets meet in the morning to discuss.

We'll need a product for EOD. Could be an annotated slide deck, as well as a markup. Suggestion on any other formats?

Ron

Subject: Potential Rate Mitigation

Hi,

Attached is a draft of the rate mitigation deck. This is tracking to major projects on Thursday for a preliminary discussion. As you can see there are a number of initiatives that have fiscal implications so your input and comments would be appreciated. Keley can coordinate with your EAs. I understand that Andrew T. plans to share with PO/your MOs.

Ontario

MINISTRY OF
ENERGY

# Proposed Initiatives to Transform Ontario's Electricity Sector

## Working Draft

December 5, 2016

CONFIDENTIAL DRAFT

# Context

- Electricity costs are increasing as the necessary investments are made to decarbonize and modernize the province's electricity infrastructure.
  - Since 2003, the Province has invested more than $35 billion in over 16,000 megawatts (MW) of new and refurbished cleaner generation, including nuclear, natural gas and renewables.
  - Over the same period, Hydro One has invested $15.5 billion to enhance and renew its transmission and distribution systems.
  - As additional electricity generation comes online, nuclear units are refurbished and distribution and transmission investments are made, prices are forecast to continue to increase.

- Actions have been taken to drive down electricity costs, including deferring investments in generation (e.g., new build nuclear), improving market efficiency (e.g., introduction of wind dispatch) and decreasing the cost of renewable procurements (e.g., Green Energy Investment Agreement ~~GEIA~~ renegotiation, decreasing FIT prices).

- Additional steps have been taken to increase cost effectiveness and improve efficiency by adopting new electricity market approaches, such as:
  - Enhancing competition between developers of large renewable projects through the Large Renewable Procurement (LRP) process to drive down price and secure clean, reliable generation for the province;
  - Directing IESO to end the process of negotiating new NUG contracts pending the development of a Capacity Auction (i.e., Market Renewal); and
  - Launching the first IESO Demand Response Auction (i.e., a competitive process through which demand-side resources are selected to be available to reduce their electricity consumption as needed).

# Context (Cont'd)

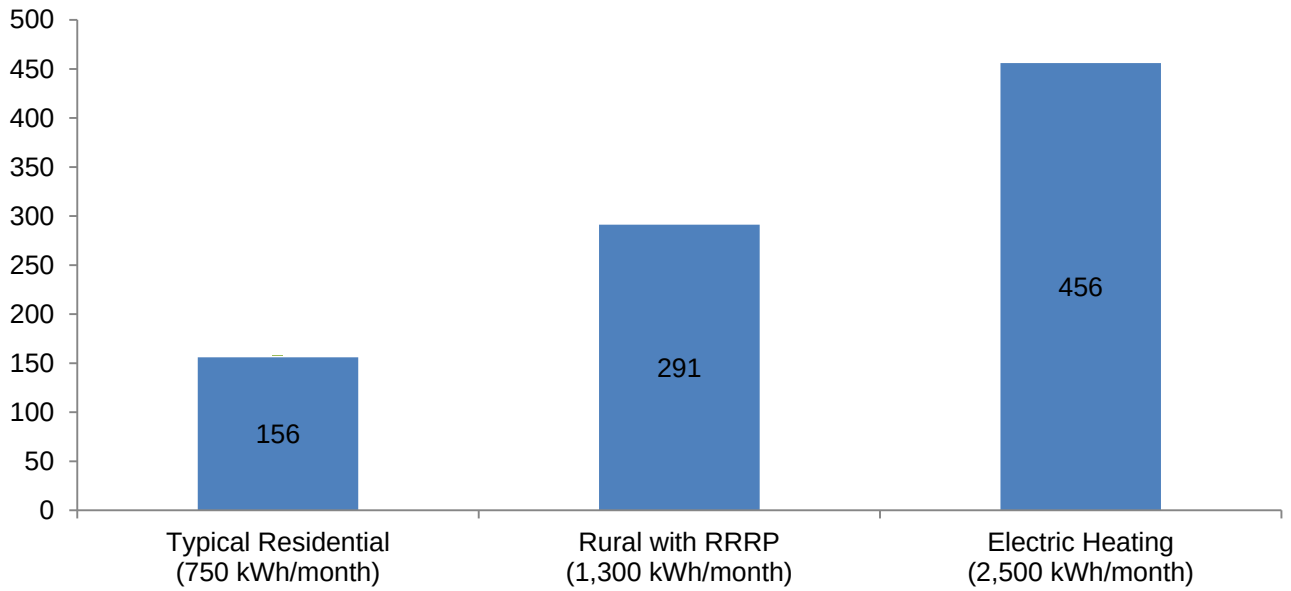
- Following the 2016 Throne Speech, a number of actions were announced to further reduce electricity costs, such as:
  - Providing an 8 per cent rebate before tax, equivalent to the provincial portion of HST, for approximately 5 million eligible electricity consumers including residences, small businesses and farms;
  - Increasing the amount of rate protection available to approximately 330,000 eligible rural customers living in low-density areas by updating the Rural or Remote Rate Protection (RRRP) program;
  - Lowering the Industrial Conservation Initiative (ICI) threshold to 1 MW and removing sector restrictions so that more consumers can benefit;
  - Suspending the second round of the Large Renewable Procurement (LRP II) and the Energy-from-Waste Standard Offer Program to save up to $3.8 billion in costs; and
  - Recycling a portion of cap and trade auction proceeds to keep rates affordable for industrial and commercial electricity consumers.
- On November 28, 2016, the Minister of Energy announced the need for changes in how electricity resources are procured and the need for wholesale market renewal.

- The Ministry of Energy is currently updating its Long-Term Energy Plan (LTEP), which provides an opportunity to consider a range of policy changes to how the Ontario energy sector operates.

# Current Electricity Prices – Residential

- Residential consumers electricity prices continue to be a concern for many Ontarians, particularly those that rely on electric heat.
  - **Note:** The typical residential bills are currently below the 2013 ~~Long-Term Energy Plan (2013~~ LTEP~~)~~ forecasts ($159 / 750kWh)

**Residential Electricity Bills**
*in $/month*

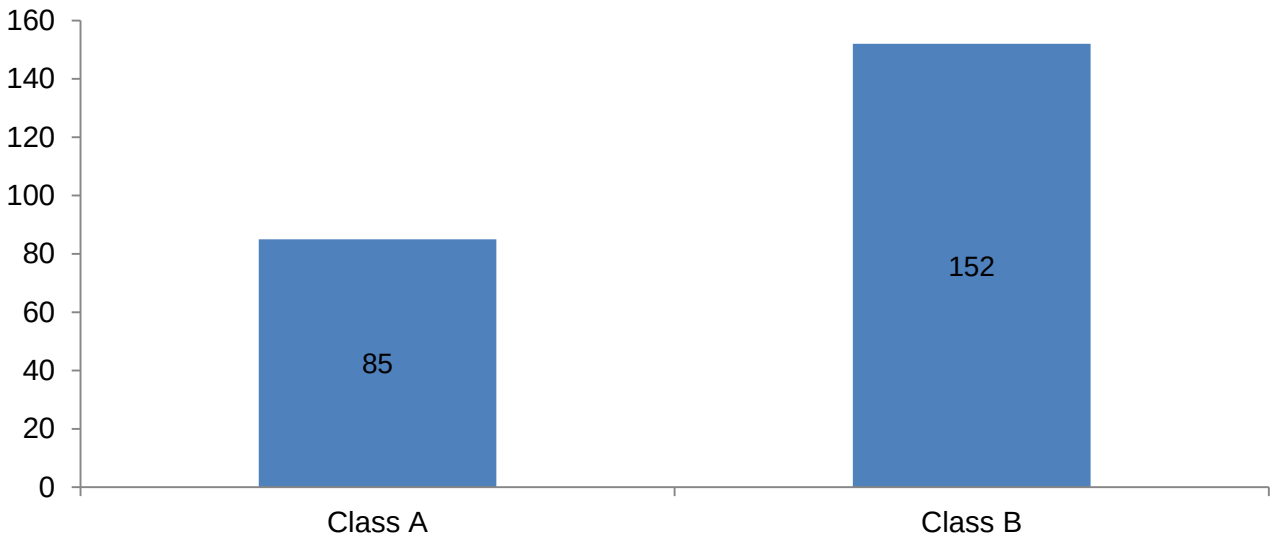


**Note**: Typical residential and electric heating shown above are based on Toronto Hydro; rural is based on connection to Hydro One as a R2 customer eligible to receive the Rural or Remote Rate Protection (RRRP) credit of $31.50.

# Current Electricity Prices – Industrial and Commercial

- While large industrial electricity consumers (i.e., Class A) rates are competitive with other jurisdictions, rates for commercial/small industrial consumers (i.e., Class B) are higher by comparison.
  - **Note:** Current industrial and commercial prices are below 2013 LTEP forecasts ($96 / MWh)

**Current All-In electricity Price**
*in $/MWh*



**Note**: Based on year-to-date (YTD) September 2016 prices. Class A reflects a transmission-connected consumer. Class B reflects a 1 MW load operating at 56% load factor and connected to Toronto Hydro.

# Current Status on Taxpayer Funded Electricity Price Mitigation

| ($M) | 2011-12 | 2012-13 | 2013-14 | 2014-15 | 2015-16 | 2016-17[1] | 2017-18[1] |
|---|---|---|---|---|---|---|---|
| OCEB | 1,033 | 994 | 1,006 | 1,078 | 860 | - | - |
| OREC | - | - | - | - | - | 300 | 1,100* |
| Ending DRC[2] | - | - | - | - | 85 | 330 | 330 |
| NIERP | 120 | 120 | 115 | 108 | 120 | 120 | 120 |
| NOEC | 23 | 24 | 25 | 24 | 26 | 25 | 25 |
| OEPTC[3] | 354 | 406 | 418 | 429 | 444 | 450 | 460 |
| **TOTAL** | **1,530** | **1,544** | **1,564** | **1,639** | **1,525** | **1,195** | **2,005** |

1. 2016-17, 2017-18 based on forecasted numbers
2. 2015-16 estimated for 3 months of reduced DRC revenue
3. OEPTC amounts in all years based on energy component of the rebate.

* Sourced from November LRC Submission

OCEB – Ontario Clean Energy Benefit
OREC – Ontario Rebate for Electricity Consumers
DRC – Debt Retirement Charge
NIERP – Northern Ontario Electricity Rate Program
NOEC – Northern Ontario Energy Credit
OEPTC – Ontario Energy and Property Tax Credit

- The table above shows the annual amount of taxpayer funded electricity price mitigation from 2011-12 to 2017-18.
- From 2011-12 to 2015-16 there has been an annual fiscal impact of approximately $1.6 billion due to electricity price mitigation programs.
- In 2016-17, the fiscal impact due to electricity price mitigation programs is estimated at approximately $1.2 billion.
- In 2017-18, due primarily to the start of the Ontario Rebate for Electricity Consumers, the expected fiscal impact due to electricity price mitigation programs is approximately $2.0 billion and before considering any additional funding from the tax base.

# Proposed Initiatives – Overview

- The suite of proposed initiatives are intended to:
  - Transform how the electricity market operates in Ontario;
  - Re-set how government programs are funded (i.e., rate-base vs tax-base);
  - Provide system benefits (e.g., industrial load retention);
  - Lower the cost of electricity for residential and industrial consumers; and
  - Increase cost effectiveness and improve efficiency.

- The proposed initiatives include:
  1. Implement Market Renewal Initiatives
  2. Fund Electricity Support Programs Through The Tax-base
  3. Eliminate the Industrial Conservation Initiative (ICI)
  4. Amortize Conservation Program Costs
  5. LDC Efficiencies
  6. Rate Design Initiatives
  7. Reduced Cost of OPG Borrowing
  8. End Debt Retirement Charge (DRC) Early for Commercial/Small Industrial Class B Electricity Consumers
  9. Dedicate Departure Tax
  10. Cancel/Adjust Renewable Energy Procurements

- The proposed initiatives provide opportunities to reduce electricity costs for residential and industrial consumers while at the same time transforming the province's electricity market and yielding benefits for the electricity system.

# Proposed Initiatives – Impacts

- Each of the proposed initiatives under consideration target different government programs and different parts of the electricity bill. The proposals impact different classes of electricity consumers to varying degrees.

| Proposal | Program / Initiative | Line on Bills | Who Benefits |
|---|---|---|---|
| 1. Implement Market Renewal Initiatives | Market Renewal | Electricity, Global Adjustment, Regulatory | Market Renewal: All electricity consumers |
| 2. Fund Electricity Support Programs Through The Tax-base | OESP, RRRP | Regulatory | All electricity consumers evenly |

# Proposed Initiatives – Potential Savings for Typical Residential Electricity Consumers

| *$/750kWh* | 2017 | 2018 | 2019 | 2020 | 2021 | 2022 | Timing of Benefit |
|---|---|---|---|---|---|---|---|
| 1. Implement Market Renewal Initiatives | - | - | - | 1.58 | 1.59 | 1.60 | Longer-Term |
| 2. Fund Electricity Support Programs through the Tax-base | 2.18 | 2.30 | 2.31 | 2.45 | 2.48 | 2.51 | Immediate |
| 3. Eliminate the Industrial Conservation Initiative (ICI) | 4.40 | 4.24 | 4.10 | 4.24 | 3.73 | 3.58 | Immediate |
| 4. Amortize Conservation Program Costs | 1.67 | 1.56 | 1.21 | 0.81 | 0.54 | 0.3 | Immediate |
| 5. LDC Efficiencies | TBD | TBD | TBD | TBD | TBD | TBD | Near-Term |
| 6. Rate Design Initiatives* | - | - | - | - | - | - | Immediate |
| 7. Reduced Cost of OPG Borrowing | 0.13 | 0.13 | 0.13 | 0.18 | 0.18 | 0.18 | Immediate |
| 8. End DRC Early for Class B Electricity Consumers** | - | - | - | - | - | - | n/a |
| 9. Dedicate Departure Tax | TBD | TBD | TBD | TBD | TBD | TBD | Immediate |
| 10. Cancel / Adjust Renewable Energy Procurements | - | - | TBD | TBD | TBD | TBD | Longer-Term |
| **Total decrease on typical monthly bill** | **8.38** | **8.23** | **7.75** | **9.26** | **8.52** | **8.17** | |

**Note:** The above initiatives will provide similar benefits for non-RPP Class B electricity consumers. Proposal 2 assumes OESP participation of 50% and 5-year maturity. *Savings estimates do not include changes related to rate design. ** Class B includes small-medium enterprises (SMEs).

# Proposed Initiatives – Potential Savings for Average Industrial Electricity Consumers

| *$/MWh* | 2017 | 2018 | 2019 | 2020 | 2021 | 2022 | Timing of Benefit |
|---|---|---|---|---|---|---|---|
| 1. Implement Market Renewal Initiatives | - | - | - | 2.11 | 2.12 | 2.13 | Longer-Term |
| 2. Fund Electricity Support Programs through the Tax-base | 2.91 | 3.06 | 3.17 | 3.27 | 3.33 | 3.38 | Immediate |
| 3. Eliminate the Industrial Conservation Initiative (ICI) | (24.12) | (23.21) | (22.45) | (23.23) | (20.42) | (19.61) | Immediate |
| 4. Amortize Conservation Program Costs | 1.15 | 1.08 | 0.84 | 0.56 | 0.37 | 0.25 | Immediate |
| 5. LDC Efficiencies | n/a | n/a | n/a | n/a | n/a | n/a | Near-Term |
| 6. Rate Design Initiatives* | - | - | - | - | - | - | Immediate |
| 7. Reduced Cost of OPG Borrowing | 0.10 | 0.10 | 0.10 | 0.15 | 0.15 | 0.15 | Immediate |
| 8. End DRC Early for Class B Electricity Consumers** | - | - | - | - | - | - | n/a |
| 9. Dedicate Departure Tax | TBD | TBD | TBD | TBD | TBD | TBD | Immediate |
| 10. Cancel / Adjust Renewable Energy Procurements | - | - | TBD | TBD | TBD | TBD | Longer-Term |
| **Total increase on industrial bill** | **19.96** | **18.97** | **18.34** | **17.14** | **14.45** | **13.7** | |

**Note:** Proposal 2 assumes OESP participation of 50% and 5-year maturity. Proposal 3 reflects the elimination of ICI, as opposed to moving ICI cost shift to the taxbase. The $1.75/MWh savings associated with Proposal 7 in 2018 accounts for the fact that under the status quo, DRC will be removed from bills in April 2018. *Savings estimates do not include changes related to rate design. ** Class B includes small-medium enterprises (SMEs).

# Fiscal Considerations

- Funding electricity support programs (i.e., OESP, RRRP, First Nations Delivery Rate) from the tax-base represents approximately $440 million on average annually.

- Ending the Debt Retirement Charge (DRC) for commercial and small industrial electricity consumers (i.e., Class B) early would represent an additional fiscal pressure of about $[TBD based on Energy's estimate of affected consumption] ~~[placeholder for OFA]~~ on the province.

- If the Industrial Conservation Initiative were funded though the tax-base instead of being eliminated, this would represent a $900 million annual cost to the fiscal plan.

- Reducing OPG borrowing costs to the Province's cost of funds is expected to result in a $30 ~~20 to $35~~ million annual fiscal pressure in 2017 to the province ~~[TBC by OPG / OFA]~~ based only new borrowing and increasing to about $70M by 2021.

- Fiscal impacts of allocating a portion of the departure tax to ratepayers will depend on the size of the allocation, as well as timing for the flow of value. The maximum, direct one-time impact is $2.6 billion, with potential ancillary impacts on residual stranded debt defeasance.

- A summary of the annual fiscal impacts of the proposed initiatives is presented in the next slide.

# Proposed Taxpayer Funded Electricity Price Mitigation

| ($M) | 2016-17[1] | 2017-18[1] | 2018-19[1] | 2019-20[1] | 2020-21[1] |
|---|---|---|---|---|---|
| OCEB | - | - | - | - | - |
| OREC | 300 | 1,100* | 1,100* | 1,200* | 1,200* |
| Ending DRC[2] | 330 | 330 | -- | -- | -- |
| NIERP | 120 | 120 | 120 | 120 | 120 |
| NOEC | 25 | 25 | 25 | 25 | 25 |
| OEPTC[3] | 450 | 460 | 470 | 481 | 481 |
| **CURRENT TOTAL** | **1,195** | **2,005** | **1,715** | **1,826** | **1,826** |
| 1. OESP | | 106 | 119 | 127 | 132 |
| 2. RRRP | | 292 | 300 | 306 | 315 |
| 3. First Nations Delivery Rate | | 18 | 18 | 18 | 18 |
| 4. Fund ICI through Tax Base | | 900+ | 900+ | 900+ | 900+ |
| 5. Departure Tax | | TBD | TBD | TBD | TBD |
| 6. Conservation Amortisation | N/A | N/A | N/A | N/A | N/A |
| 7. DRC Ended for Class B | 110 | 450 | -- | -- | -- |
| 8. Other | | | | | |
| **TOTAL** | **1,305** | **3,871** | **3,152** | **3,177** | **3,191** |

1. 2016-17, 2017-18 based on forecasted numbers
2. 2015-16 estimated for 3 months of reduced DRC revenue
3. OEPTC amounts in all years based on energy component of the rebate.

- As shown above if all measures proposed in this deck were to be accepted taxpayer funded contributions to electricity price mitigation would increase to about $3.2 billion by 2020-21. That is a 145% increase from the current forecast for 2016-17 or a 93% increase when comparing against the current expected funding for 2017-18.
- These amounts were not considered in the 2016-17 Fiscal Plan and could put at risk the Province's fiscal objectives for 2017-18 and beyond.

# 1. Electricity Market Renewal Initiatives

- Continue to move forward with IESO's Market Renewal initiatives:
  - Market Renewal encompasses projects such as a single-schedule system (from the current two-schedule system), more frequent intertie scheduling to better align with other jurisdictions and a day-ahead market. There will be up front capital costs to enable the initiative. IESO is currently assessing these costs.
  - Moving to "technology-agnostic" procurements will provide new opportunities for innovation and modernization and ensure ratepayers receive the best prices possible.

**Considerations**

- Changes related to IESO's Market Renewal initiatives, reflected in HOEP and uplifts, are estimated to save up to $300 million per year, starting in 2020, leading to a reduction of:
  - About $1.60/month or about 1% at current retail prices for a typical residential bill; and
  - About $2/MWh or more than 2% at current all-in prices for industrial and SME electricity consumers.
- The IESO's Market Renewal is a broad initiative that will impact all aspects of Ontario's electricity market. Ontario has had a uniform price since market opening.
- Adopting a technology-agnostic stance will lower the overall cost of providing electricity service by selecting the most cost-effective resources to fulfill various system needs.

# 2. Fund Electricity Support Programs Through the Tax-Base

- Propose to fund electricity support programs, including Ontario Electricity Support Program (OESBP) and Rural or Remote Electricity Rate Protection (RRRP), through the tax-base instead of a regulated charge. This would allow the OESP and the RRRP charges to be removed from the Regulatory line on electricity bills.

**Considerations**

*Consumer Impacts and implementation*

- Transitioning OESP and RRRP to the tax-base would reduce a typical residential bill by about $2.35/month by 2020, and delivering the First Nation rate reduction through tax base would avoid about $0.10/month for a potential total savings of $2.45/month by 2020). As all programs provide strong social benefits, there is precedent for funding these programs through the tax-base.

- To address concerns from low income electricity consumers improvements to OESP could be implemented by increasing credits (could be up to double the current credits)
  - Single low income consumer would see a change from $30 to $45/ month ($540/year):
  - Family of four with electric heat could see a credit of $82.50/month ($990/year); and
  - Would mean no impact on consumer bills and no change to current OESP charge.
- RRRP and OESP are included in the “Regulatory” line on bills. If RRRP and OESP were eliminated from bills, the Regulatory line would decrease; however, as the Regulatory line is the smallest line item component of invoices, there is risk the decrease may not be perceived by customers.

- The RRRP regulation provides a funding mechanism for transmission infrastructure required to grid connect remote First Nation communities. Considerations for how that funding will be supported by the tax base will need to be determined.

- The non-rate mechanism to remove delivery charges from on-reserve First Nation customer monthly bills needs to be further explored.Funding RRRP and/or OESP with tax revenue would require amendments to existing legislation and regulations.

# 2. Fund Electricity Support Programs Through the Tax-Base (cont'd)

- Table below shows estimates of program costs up to 2020:

| Year | OESP | RRRP | First Nations Delivery Rate | TOTAL |
|---|---|---|---|---|
| 2017 | $106M | $292M | $18M | **$416M** |
| 2018 | $119M | $300M | $18M | **$437M** |
| 2019 | $127M | $306M | $18M | **$451M** |
| 2020 | $132M | $315M | $18M | **$465M** |

1) Ontario Electricity Support Program (OESP)
   - After almost a year in market, close to 30% of potentially eligible customers are signed up.
   - The cost projections below assume the program grows to 50% of eligible consumers by 2020 (also assumes 10% administration costs).

2) Rural and Remote Rate Protection (RRRP)
   - Provides benefits to R2 Hydro One consumers, Algoma, and remote communities.
   - Includes the expanded coverage that will begin on January 1, 2017.

3) First Nation rate reduction (currently under development)
   - On November 14, 2016, OEB presented options to the Ministry on reducing costs for on-reserve First Nation customers.
   - OEB's recommended option to provide 100% delivery rate credit, which is estimated at $18.4 million per year.
     - Other options includes a seasonal fixed credit to account for demand changes over the year ($13 million) or a 50% total bill reduction ($23 million).

# 3. Eliminate the Industrial Conservation Initiative (ICI)

- The cost shift from the Industrial Conservation Initiative (ICI) could be removed from electricity bills by eliminating ICI.
  - The ICI allows large electricity consumers to lower their electricity costs by reducing their demand during peak hours.

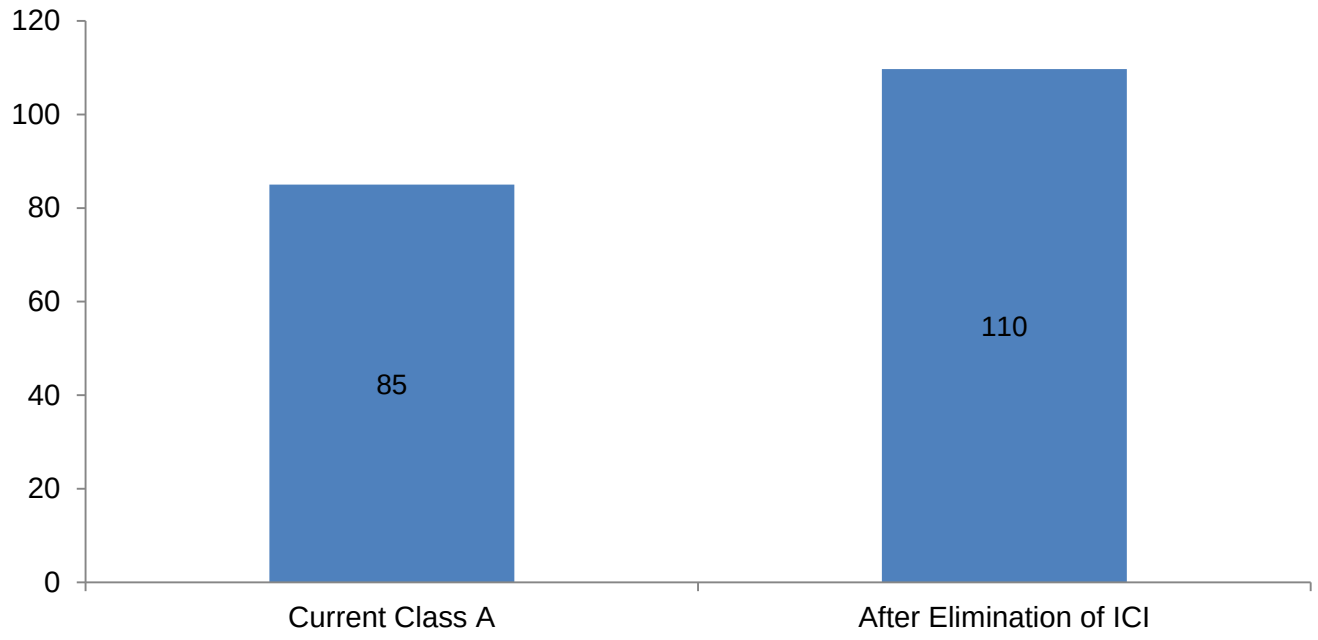
**Considerations**

- Eliminating ICI would result in a benefit of more than $4/month for residential electricity consumers in 2017.
  - However, unless government took action to mitigate the associated cost shift back to industrial consumers, typical industrial prices would increase by about one-third. Such a price increase would pose significant challenges for energy-intensive consumers.
- Industrial stakeholders have indicated that ICI as an integral factor in maintaining competitiveness and retaining industry in the province.
  - Eliminating ICI would limit the “cost shift” onto residential consumers, but it would also lead to a reduction in industrial demand. The large industrial contribution to the fixed costs of running the electricity system would then need to be covered by remaining consumers.
- If ICI is retained, current IESO projections indicate that the cost shift will decrease each year going forward as Global Adjustment (GA) decreases (due to an expected increase in HOEP).
- Alternatively, ICI could be funded through the tax-base at a cost of $900 million annually. There is precedent to use the tax-base for industrial support programs, including the Northern Industrial Electricity Rate Program (NIERP) and the Jobs and Prosperity Fund.

# 3. Eliminate the Industrial Conservation Initiative (cont'd)

- ICI currently provides a benefit of about $25/MWh to Class A electricity consumers.

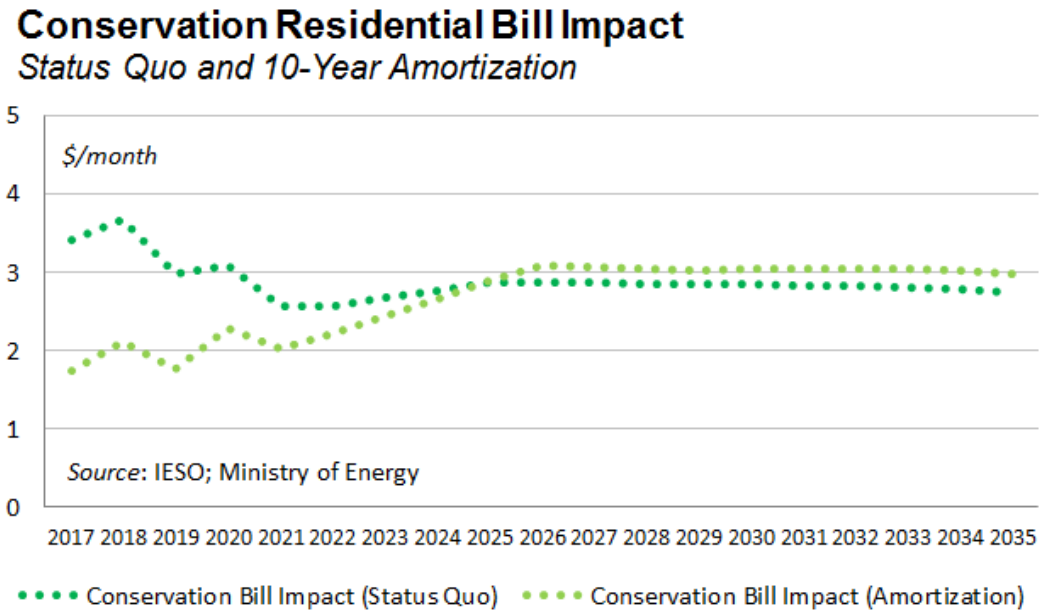
**All-In Electricity Price**
*in $/MWh*



**Note**: Based on year-to-date (YTD) September 2016 prices. Class A reflects a transmission-connected consumer.

# 4. Amortize Conservation Program Costs

- ~$3 billion from the electricity ratepayer base will be spent on conservation programs delivered under the Conservation First Framework and the Industrial Accelerator Program (IAP) between 2015 and 2020.
- Currently, Conservation and Demand Management (CDM) program costs are recovered from the Global Adjustment (GA) mechanism about one month after expenses are incurred.
- As a potential rate mitigation measure, certain CDM costs could be amortized.
- Amortizing a portion of conservation spending would produce a benefit for electricity ratepayers in excess of $1/month at the outset. Over time, the benefit would decrease and turn into a cost, as interest charges begin to grow.



**Note**: Chart assumes that conservation incentive costs are available for amortization while administration cost are not. Although there is variable from year to year, incentives represent about two-thirds of conservation spending in Ontario. Chart assumes conservation spending continues at a similar rate beyond 2020. Chart assumes a 10-year borrowing rate of 3.0%.

# 4. Amortize Conservation Program Costs (cont'd)

## Considerations

- Under **Public Sector Accounting Board (PSAB) accounting standards**, used by both the Province and IESO, only certain assets can be amortized: 1) pensions and 2) tangible capital assets. Under PSAB an asset must meet several criteria to be considered a capital asset, including:
  - A tangible capital asset must be tangible and substantive and the Ontario government must have title and operate the asset.
  - A tangible capital asset must bring a tangible benefit to the government or to Ontario.

- CDM costs, on their own, do not meet the criteria of a tangible capital asset because customers would have ownership and control of installed CDM measures, not the Province or IESO.

- **Rate-regulated accounting** was developed to recognize the unique nature of regulated entities (e.g., electricity generators, LDCs). Under rate-regulated accounting certain costs can be treated as amortizable assets that would not normally be considered assets under accounting principles.
  - Over the past several years, the Auditor General (AG) has expressed concerns about the appropriateness of recognizing rate-regulated assets in the Province's consolidated financial statements.
  - Rate-regulated accounting is currently under review by international accounting standard setting bodies and is currently permitted only on an interim basis, so its future is unclear at present.

# 4. Amortize Conservation Program Costs (cont'd)

**Considerations**

- If some of Ontario's CDM costs could be amortized, analysis shows that ratepayer impacts would be reduced in the short-term but interest charges on the loan would result in increased overall ratepayer costs in the longer-term.

- Legislative amendments would be needed to allow recovery of loan interest charges from GA.

- If there is a desire to proceed:
  - Formal accounting advice will need to be sought from IESO's external auditor as well as the Ontario Provincial Controller (OPC) to determine whether CDM costs could be amortized according to rate-regulated accounting standards.
  - Further legal analysis would also be required to confirm legal viability and possible approaches to implementation.

# 5. LDC Efficiencies

- Consider opportunities for future LDC cost reductions and efficiencies through the regulatory framework.

**Considerations**

- The Ontario Energy Board has a mandate to regulate the electricity distribution sector in the public interest, ensuring the financial viability of the sector while promoting reliable service to customers at just and reasonable rates.
- Since 2012, the OEB has taken action – through the Renewed Regulatory Framework for Energy – to more closely link rate regulation with performance measures and outcomes.
- There maybe opportunities to promote further cost reductions and performance improvements within the distribution sector as there is continued evolution of the regulatory framework in Ontario.
  - Tightening LDC requirements may also indirectly incent other desired policy outcomes, such as LDC consolidation and grid modernization to realize further cost reductions.
- ENERGY could help promote or accelerate these efforts by asking the OEB through the LTEP Implementation Directive, s. 35 of the *Ontario Energy Board Act, 1998*, and the 2017 Mandate Letter and other agency business planning processes.
- In addition, further changes to the departure and transfer tax regimes could be considered to provide a further incentive for LDC mergers and acquisitions.

# 6. Rate Design Initiatives

- OEB continues to move forward with its Regulated Price Plan (RPP) Roadmap:
  - The OEB is undertaking a comprehensive review of the RPP, including exploring the introduction of offering different pricing plan options for customers following the completion of pilot programs in 2018. The plan is expected to be implemented over a 3-5 year period.

- Until new pricing plans are available, the OEB could provide an "opt-in flat rate RPP" structure that could be made available to residential, farm and small business consumers on an interim basis (2-3 years) until a wider range of price plans are available.
- Time-of-Use (TOU) pricing could also be introduced for non-RPP Class B consumers to reduce Global Adjustment (GA) volatility and reduce system costs.

| Current TOU | New Flat Rate |
|---|---|
| On: 18.0 ¢/kWh | 11.1 ¢/kWh |
| Mid: 13.2 ¢/kWh | |
| Off: 8.7 ¢/kWh | |

**Considerations**

- The OEB has indicated that the option would lead to no overall change in system costs. Consumers with higher peak and mid-peak usage patterns would see a decrease in their electricity bills, while those with higher off-peak usage patterns would see an increase.
  - While the current strong supply conditions may allow for such an RPP structure (i.e., peak demand requirements can be easily met), administrative costs could be high (distributors would need to design/implement an opt-in process and associated billing system on an interim basis).

| | Current TOU | New Flat Rate |
|---|---|---|
| 1) Monthly electricity bill- higher peak and mid-peak usage patterns | $172 | $163 |
| 2) Monthly electricity bill- higher off-peak usage patterns | $152 | $163 |

***Note:** 1) assumes a consumer consumption pattern of 45%:30%:25% (Off-peak: Mid-peak: On-peak), while 2) assumes consumer consumption pattern of 80%:10%:10% (Off-peak: Mid-peak: On-peak). Estimates are based on OEB's online electricity bill calculator (for Toronto Hydro-November 2016 rates)

# 6. Rate Design Initiatives (cont'd)

**Considerations**

- The decision to undertake smart meter investments was partly justified on the basis of TOU pricing. If TOU pricing were to be made optional, some stakeholders could question the rationale for smart meter investments.
  - Rationale for offering a flat rate option could focus on providing customers with choice until new pricing plans are rolled out under the RPP roadmap.

- If a flat rate design is introduced, there could be significant consumer opposition to any return to a mandatory TOU.

- After the interim flat rate period, the OEB could offer a wider range of pricing plans to consumers.
  - As part of its RPP review, the OEB will be running pilots with LDCs to assess customer response to alternative time periods and pricing structures.
  - Learnings from these pilots will help inform potential changes to the RPP. Pilots are expected to be in market May 2017 and run for one year.

- Non-RPP Class B electricity consumers currently pay Global Adjustment (GA) on a volumetric basis. Moving them to TOU would provide an incentive to shift consumption to off-peak periods.
  - Consumers, including manufacturers, who are unwilling to shift would face higher costs and likely not be supportive of the changes.
  - The decision to pursue TOU pricing for non-RPP class B consumers will impact proceeds recycling as there is interplay between the two initiatives.

# 7. Reduced Cost of OPG Borrowing

- OPG currently borrows for corporate purposes from the OEFC
- Seek to reduce OPG's borrowing costs and pass on savings to ratepayers by:
  - Reducing or removing the spread that OEFC applies to OPG for any new corporate debt; or
  - Allowing OPG to refinance its existing debt at longer maturities through the OEFC in order to take advantage of the current, favourable interest rate environment.
- Assuming the full spread is removed from all OEFC debt, OPG borrowing costs could be reduced by 50-100 basis points, representing annual savings of about $20-$25 million, increasing to $30-$35 million, as OPG's outstanding OEFC debt rises from ~$3.3 billion in 2016 to ~$4.7 billion in 2020.
- OPG could apply to the OEB as part of its current rate application to flow this benefit to ratepayers.

**Considerations**

- Further work is required to determine potential OPG savings from these initiatives.
- Allowing OPG to refinance would have a negative fiscal impact on the Province.
- Spreads are expected to decline, reducing the relative impact of this change, given lower overall interest rates and reduced volatility.
- Providing OPG with greater access to longer term (20-30 year) debt may also reduce costs:
  - OPG's average term to maturity for OEFC debt is 5.7 years, as compared to 22.2 years for privately financed project debt. This contrasts with most corporations and government which have been working to extend average debt terms in order to take advantage of the low interest rate environment.
  - Longer terms would also better match to the life of OPG's assets.
  - Recently, OEFC has allowed OPG to apply for 50% of its financing requirements in the form of longer term (25-30 year debt). Moving closer to 100% would accelerate this transition.

# 8. End DRC Early for Commercial/Small Industrial Class B Electricity Consumers

- Propose to remove the $0.07/kWh Debt Retirement Charge (DRC) from the bills of commercial/small industrial Class B consumers beginning in 2017, instead of April 1, 2018.
  - **Note:** Class A consumers (e.g., large industrial) would continue to pay DRC until at least April 1, 2018.

**Considerations**

- For a Class B consumer currently paying about $152/MWh, removing the DRC would represent a savings of about 5%.
  - A 50% reduction in the DRC charge would represent a savings of about 2%.

- Alternatively, the reduction of the DRC could be to $0.035/kWh starting in 2017, to provide relief for cap and trade until proceeds recycling is fully operational.

- Residential consumers have had the DRC removed from bills since January 1, 2016. Taking DRC off commercial and small industrial bills would result in equal treatment for these groups of consumers.

- The savings for commercial and small industrial consumers associated with this proposal would drop to zero in April 2018, since this is the current planned date for removing the DRC from non-residential bills.

- Prior to moving forward with this proposal, additional analysis from Legal Services and the MOF would be needed.

# 9. Dedicate Departure Tax

- In connection with the IPO, as a result of leaving the PILs regime and entering the corporate tax regime, Hydro One was deemed to dispose of its assets for proceeds equal to its fair market value, triggering a PILs liability of $2.6 billion (Departure Tax).
- This was paid to the Ontario Electricity Financial Corporation (OEFC), to be dedicated towards repayment of electricity sector stranded debt.
- The Province could explore repurposing some of those funds to the benefit of ratepayers.
- This may reduce the risk that the Ontario Energy Board (OEB) assigns to ratepayers the benefit from an associated tax asset, resulting in lower earnings and decreased share value for Hydro One. This decision is currently before the OEB, as part of Hydro One's Transmission rate application.

**Considerations**

- Cost savings to ratepayers would depend on timing and which ratepayers (e.g., Hydro One customers, or all Ontario customers) will benefit from some or all of the $2.6 billion value.
- While this is a shift from messaging that value from the broadening of ownership of Hydro One is being used pay down debt and fund transit and transportation, the Province could link to electricity infrastructure investments (e.g., as an offset to infrastructure investments already made in the sector, or to specific initiatives such as conservation).
- These funds were paid to the Ontario Electricity Financial Corporation (OEFC), to be dedicated towards repayment of electricity sector stranded debt. Repurposing may have an impact on the defeasance of this debt.

# 10. Cancel/Adjust Renewable Energy Procurements

- The Ministry could consider the following actions to further mitigate future impacts to electricity bills:

| Unallocated/Terminated Capacity | Announced Procurements | Executed Contracts |
|---|---|---|
| A. Do not procure unallocated or terminated capacity | B. Revise FIT 5 target | D. Cancel LRP I contracts |
| | C. Cancel FIT 6 | |

**Overarching Considerations**

- Cost savings associated with reducing or cancelling renewable energy procurements and programs will not reduce current electricity bills, but would result in future cost reductions relative to Ontario Planning Outlook forecasts.
- The IESO estimates implementing options A to C will reduce system costs by approximately $592 million ($2016) between 2019 and 2028, resulting in an average of approximately $0.50/month in savings to a typical residential electricity bill over the same period. [cost reductions from LRP I contract cancellations TBC]
- The microFIT program is winding down end of 2017. Annual microFIT procurement targets have been undersubscribed.
- With a few exceptions (e.g., rollover of unallocated microFIT capacity; addition of terminated microFIT and small FIT capacity to FIT 5), plans for unallocated or terminated capacity are not defined in announcements or existing directions.

**Cancel/Adjust Announced Procurements**

- Amendments to existing directions to the IESO would be required to reduce FIT 5 and cancel FIT 6.
- The FIT 5 procurement is underway with a base target of 150 MW and inclusion of any capacity available from contract terminations under prior small FIT and microFIT procurements. The application window closed on November 25, 2016.

# 10. Cancel/Adjust Renewable Energy Procurements – Existing Contracts

**Cancel Existing LRP I Contracts**

- 16 LRP I contracts (approx. 455 MW) have been executed and projects are under development.
- None have met Key Development Milestones. Total value of LRP I estimated at approx. $1 billion (NPV to 2016).

[Placeholder for IESO: Cost calculation relative to OPO and associated bill impact]

**Considerations**

- To help inform a decision, IESO or OEB could be asked to evaluate and provide guidance to the Ministry on the system need for LRP I projects and potential ratepayer impacts/benefits.
- 13 of 16 LRP I contracts have Indigenous participation. Cancelling LRP I contracts would remove this economic development opportunity and likely damage relationships between Indigenous communities and the government.
- LRP I Contract includes an “Optional Termination” provision allowing IESO to terminate any contract prior to the “Commercial Operation Date” with 6 months written notice.
- The IESO obligations under the Optional Termination provision depend on whether the project has met all “Key Development Milestones”.
  - As no projects have met their Key Development Milestones, the estimated total cost payable to contract holders is about $8 million.

# 10. Cancel/Adjust Renewable Energy Procurements – Existing Contracts (cont'd)

## Legal Analysis

- Under the *Electricity Act, 1998*, the Minister has the authority to amend previous directions without approval from Cabinet. Although an amendment to an existing direction would not require Cabinet approval, it is unlikely that a direction to cancel LRP I contracts could be considered as amending an existing direction. The previous LRP directions set out the broad policy framework that was reflected in the procurement, but the contracts themselves, once executed, are stand alone documents which the IESO had legal authority to execute. Revoking previous LRP directions does not affect that authority or have the effect of cancelling the procurement.
- As a result, any new directive to cancel LRP I contracts would need to be approved by Cabinet, either as part of an LTEP implementation directive to IESO, or pursuant to the overall power to direct IESO with respect to procurements outside the LTEP process. However, there is a risk that such a directive could be subject to challenge.
- ENERGY has previously received advice that there is a high risk that a court would conclude that the Minister has no authority under the *Electricity Act , 1998* to issue a direction requiring IESO to terminate microFIT Conditional Offers and FIT Offer Notices that have already been issued to applicants, because these offers create vested contractual rights and the Minister would require clear legislative authority to interfere with those rights. This reasoning would likely apply equally to any direction or directive to IESO to cancel LRP I contracts.
- Previous advice has also flagged a moderately high risk that the Province could be liable for damages in tort for inducing a breach of contract if it issues a direction to IESO that interferes with vested contractual rights without clear statutory authority to do so. LRP I contract holders could also assert other claims, such as misfeasance in public office.
- The risk and costs associated with potential law suits resulting from the cancellation of contracts requires further analysis, including analysis of whether any statutory amendments would be required to provide clear authority to cancel the contracts. LSB recommends ENERGY seek an opinion from Crown Law Office Civil before proceeding.

# Summary

- Reductions in electricity rates could be achieved by eliminating existing, planned or directed initiatives from the rate-base or shifting these costs to the tax-base.

- The timing of the impact of these rate mitigation initiatives varies.
  - Immediate and near-term impacts can be achieved by shifting costs to the tax-base or changing how certain costs are recovered from consumers or eliminating certain programs.
  - Over the longer term, changes to the electricity supply mix and achieving efficiencies in the electricity market could yield system savings.

- Pursuing the initiatives would require regulatory amendments and working with the electricity sector agencies, LDCs and other stakeholders to implement the initiatives.

- As shown before the positive impact to residential ratepayers is very limited (between $8 and $9 per month) while the impact to the Province's fiscal position would be material (about $1.5 billion a year).

# Appendix

# Electricity Consumer Classes

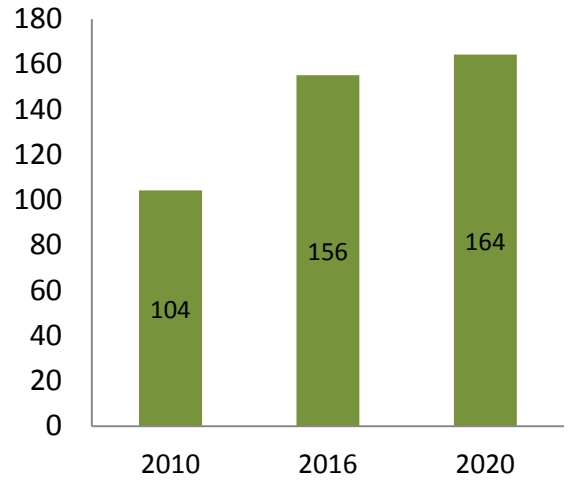
- In Ontario, there are three classes of electricity consumers:

| | Regulated Price Plan | Class B | Class A |
|---|---|---|---|
| **Consumer Types** | • Residential<br>• Small Business<br>• Farms | • Commercial<br>• Institutional<br>• Small industrial | • Large commercial<br>• Large industrial |
| **Load Size** | Below 0.05 MW | Between 0.05 MW and 1 MW | Above 1 MW |
| **Total Consumption** | 58 TWh | 57 TWh | 26 TWh |
| **Share of Consumption** | 41.1% | 40.4% | 18.4% |

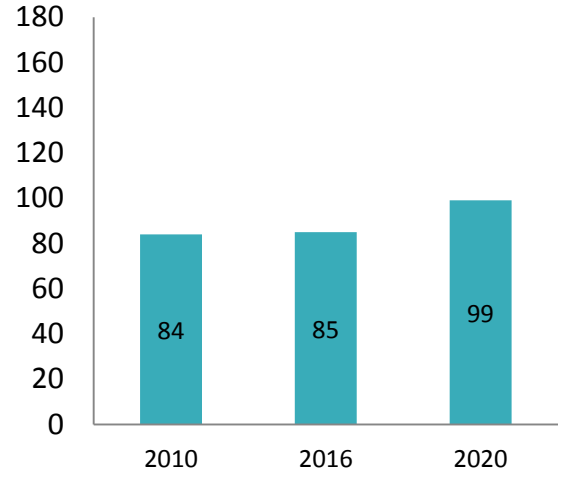
# Prices by Electricity Consumer Class

- Since 2010, average bills for residential consumers (i.e., using 750 kWh/month) have increased by over 50%. Rates are forecast to continue to increase, with residential consumers paying an estimated 6% by 2020.
- Industrial electricity rates have remained relatively flat over the same time period, due primarily to the Industrial Conservation Initiative (ICI). ICI represents a cost shift of about $5/month for residential electricity consumers. Industrial electricity consumers are forecast to see an increase of 16% by and 2020.

**Typical Residential Bill (750/kWh per month)**



**Typical Class A (Industrial) Price ($/MWh)**



**Note:** 2016 represents year-to-date September 2016 for industrial. Cap and trade proceeds recycling is included for the industrial consumer for 2020.

# Rate Mitigation Levers

- To provide further rate relief to Ontario electricity consumers, the government can use one or more of the levers outlined below:
  - **Tax-based Lever:**
    - Provide rebates funded from the tax-base or transfer items currently paid through the rate-base to the tax-base.
  - **Rate-based Lever:**
    - Shifts costs within the rate-base from one customer group to another to achieve electricity system benefits and/or policy goals.
  - **Cap and Trade Proceeds Lever:**
    - Use cap and trade proceeds on initiatives that help reduce greenhouse gas (GHG) emissions from the electricity sector (e.g., recycling proceeds during off-peak periods) while providing benefits to some or all electricity consumers.

# Traditional Rate Mitigation Programs

- Ontario has implemented a number of rate-based programs to help residential and industrial electricity consumers:
  - The Ontario Electricity Support Program (OESP) provides ongoing assistance directly on the bills of eligible low-income electricity consumers
  - The Rural or Remote Rate Protection (RRRP) program is provided to rural and remote residential and farm customers because the cost of distributing power to remote areas is much higher than for urban areas.
  - The Industrial Conservation Initiative (ICI) encourages Ontario's largest consumers to reduce consumption during peak periods while reducing system costs.
- There are also tax-base programs to help manage electricity prices:
  - Rebate the provincial portion of the HST from the electricity bills of residential, small business and farms as of January 1, 2017.
  - Northern Industrial Electricity Rate Program (NIERP), in which participants receive a rebate of two cents per kilowatt hour. On average, industrial electricity prices can be reduced by up to 20%.
- While rate-based programs provide relief to certain electricity consumers, they shift other costs to remaining ratepayers (See Appendix for additional details).

# Driving Down Prices for Consumers

- Since 2013, a number of actions have been taken to drive down prices for consumers wherever possible:
  - Renegotiating the Green Energy Investment Agreement, reducing contract costs by $3.7 billion;
  - Deferring the construction of two new nuclear reactors at Ontario Power Generation's Darlington facility, avoiding an estimated $15 billion in new construction costs;
  - Approving Ontario Power Generation's plans to enable the ongoing operation of Pickering up to 2024, which is expected to save ratepayers as much as $600 million;
  - Reducing Feed-In-Tariff (FIT) prices through annual price reviews, saving ratepayers at least $1.9 billion relative to the 2013 Long-Term Energy Plan (2013 LTEP) forecast; and
  - Suspending the second round of the Large Renewable Procurement (LRP II) process and the Energy-from-Waste Standard Offer Program to save up to $3.8 billion in electricity system costs relative to 2013 LTEP.

# Cost Shifts in the Electricity Sector – Current Programs

- Several programs in the electricity sector “shift costs” from one group of electricity consumers to another:
  - **Rural or Remote Rate Protect** (**RRRP)** is a longstanding program that reduces the delivery charge for rural electricity consumers and is paid for by all consumers in Ontario through a regulatory charge on bills.
  - **Ontario Electricity Support Program (OESP)** is funded via a regulatory charge on consumer bills and provides support for qualifying low income electricity consumers.
  - **Industrial Conservation Initiative (ICI)** empowers large consumers to lower their costs by reducing their demand during peak hours. In the process, ICI shifts costs from large electricity consumers to all other consumers in Ontario.
  - **Industrial Electricity Incentive** (**IEI**) program, offers reduced electricity prices for companies starting or expanding operations in Ontario. All electricity consumers in Ontario pay for the price reduction that IEI participants receive.

# Cost Shifts in the Electricity Sector (Cont'd)

- The tables on the right show the estimated cost shifts that result from existing government programs.
- ICI has had the largest cost shift of all the programs, due to the large size of Global Adjustment (GA) and the way that it is recovered from consumer classes.
- RRRP and OESP impact the regulatory line on consumer bills, while ICI, IEI and conservation affect GA (i.e., Electricity line on bills of Regulated Price Plan consumers).

**Cost Shift Impacts - Residential Bill**

*Typical 750 kWh/month Toronto Hydro consumer*

| *$/month* | 2011 | 2012 | 2013 | 2014 | 2015 | 2016 |
|---|---|---|---|---|---|---|
| ICI | 2.65 | 3.25 | 3.88 | 3.53 | 4.75 | 4.77 |
| RRRP | 0.90 | 0.82 | 0.84 | 0.92 | 0.93 | 0.94 |
| OESP | - | - | - | - | - | 0.84 |
| Conservation | 1.85 | 1.92 | 2.00 | 1.58 | 2.43 | 2.45 |
| IEI | - | - | 0.08 | 0.09 | 0.11 | 0.12 |
| **Total** | **5.41** | **5.99** | **6.81** | **6.13** | **8.21** | **9.12** |

**Cost Shift Impacts - Industrial Bill**

*Typical Class A consumer*

| *$/MWh* | 2011 | 2012 | 2013 | 2014 | 2015 | 2016 |
|---|---|---|---|---|---|---|
| ICI | -22.17 | -26.36 | -30.29 | -25.91 | -33.79 | -33.92 |
| RRRP | 1.20 | 1.10 | 1.12 | 1.23 | 1.24 | 1.25 |
| OESP | - | - | - | - | - | 1.13 |
| Conservation | 1.53 | 1.59 | 1.66 | 1.31 | 2.01 | 2.02 |
| IEI | - | - | 0.07 | 0.08 | 0.09 | 0.10 |
| **Total** | **-19.43** | **-23.67** | **-27.44** | **-23.29** | **-30.45** | **-29.43** |

**Note:** OESP did not come into effect until 2016. The 2016 values represent forecasts and are subject to change.

# Cost Shifts in the Electricity Sector (Cont'd)

- The table on the right shows the total cost for various government electricity programs. These programs are currently funded through the electricity system ratebase.

- Funding of these programs through the fiscal plan would remove these costs from the electricity system (i.e., Placing these costs on the taxbase).

**Cost of Programs**

*By government program*

| *$M* | 2011 | 2012 | 2013 | 2014 | 2015 | 2016 |
|---|---|---|---|---|---|---|
| ICI | 506 | 615 | 736 | 670 | 890 | 893 |
| RRRP | 172 | 156 | 159 | 176 | 174 | 176 |
| OESP | - | - | - | - | - | 158 |
| Conservation | 329 | 339 | 354 | 280 | 425 | 428 |
| IEI | - | - | 15 | 16 | 18 | 19 |

- For example, removing the roughly $900 million of program cost from the Industrial Conservation Initiative (ICI) program would save the typical residential electricity consumer $4.77 per month in 2016.

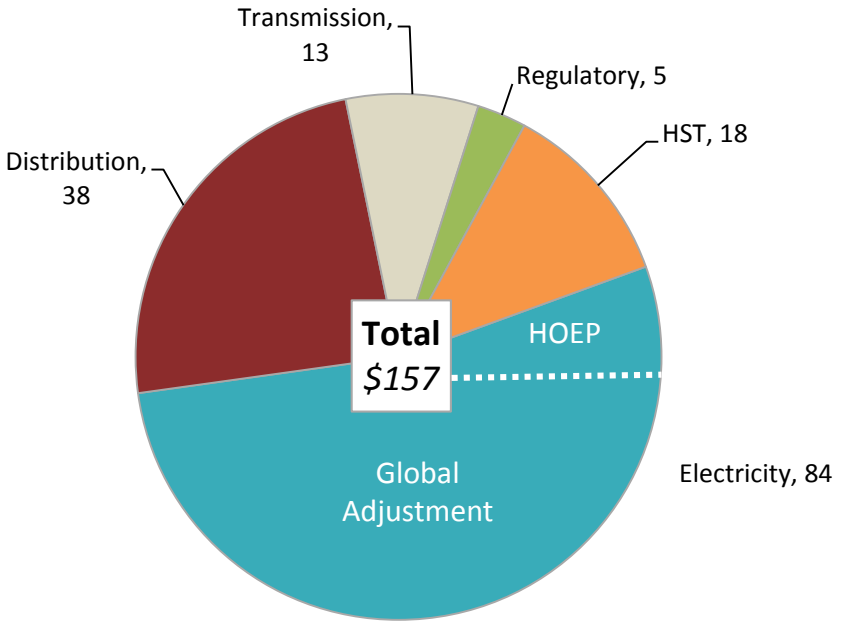
**Note:** OESP did not come into effect until 2016. The 2016 values represent forecasts and are subject to change.

# Residential Electricity Prices

- There are approximately 4.5 million residential consumers in Ontario.
- The Regulated Price Plan includes nearly all residential consumers, as well as small businesses. Regulated Price Plan consumers pay a blended commodity rate regulated by the OEB, which is set every six months.
- For households, the Debt Retirement Charge (DRC) was removed from residential electricity bills as of January 1, 2016.
- In addition, the Ontario Electricity Support Program (OESP) provides an ongoing rate reduction directly on the bills of low-income electricity consumers who have applied and meet the eligibility requirements. The program is funded through the rate base.
- Rural customers, in particular those with electrical heating, pay higher monthly bills.

**Typical Residential Monthly Bills ($)**

*As of November 1, 2016 (750 kWh/month)*



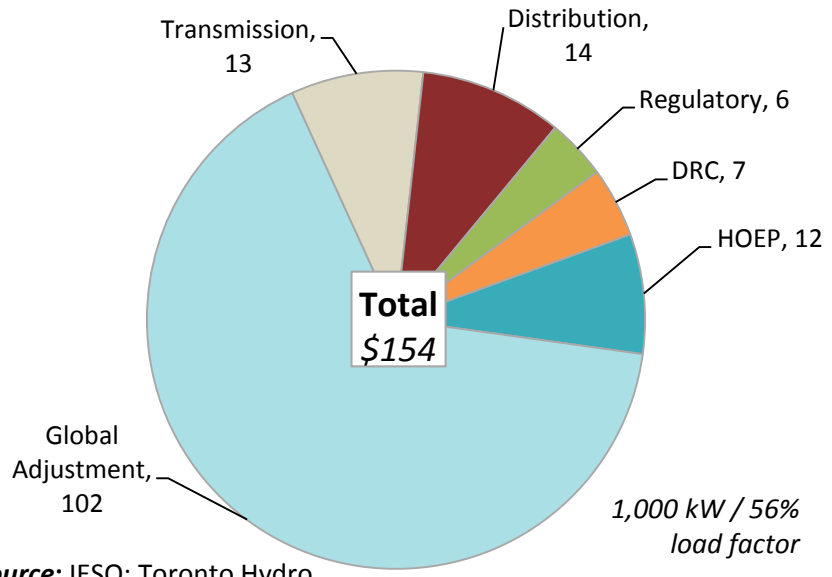
***Source*: OEB, Toronto Hydro**

# Commercial Electricity Prices

- There are approximately 55,000 commercial and institutional consumers in the province. These consumers are Class B consumers, and have separate line items on the electricity bill for HOEP and GA.
- There is a high degree of differentiation amongst consumers within the commercial sector in terms of size and consumption patterns. For example, an elementary school has a much different hourly load profile compared to a full service restaurant. This is an important consideration when looking at the bill impacts of policy options.

**Typical Commercial Price ($/MWh)**

*YTD June 2016 (Non-RPP Class B)*



***Source*:** IESO; Toronto Hydro

- Consumers in the commercial sector do not pay time-of-use prices and have little incentive to shift demand away from high demand hours.
- Targeted pricing programs are currently not available for Class B consumers.

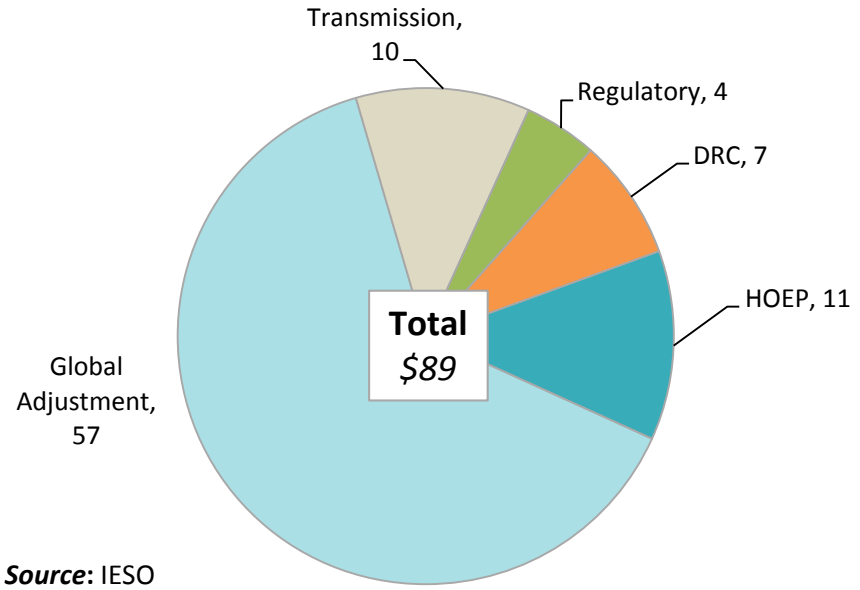
*** Note**: Most commercial consumers receive input tax credits for their HST.

# Industrial Electricity Prices

- There are about 300 large industrial consumers in Ontario.
- Measures in place to mitigate industrial electricity prices include ICI and NIERP.
- ICI lowers costs for eligible large electricity consumers (i.e., those with monthly peak demand exceeding 3 MW) that reduce consumption during peak periods.
  - ICI consumers reduce their electricity rates by 25% on average.

**Typical Large Industrial Price ($/MWh)**

*YTD June 2016*



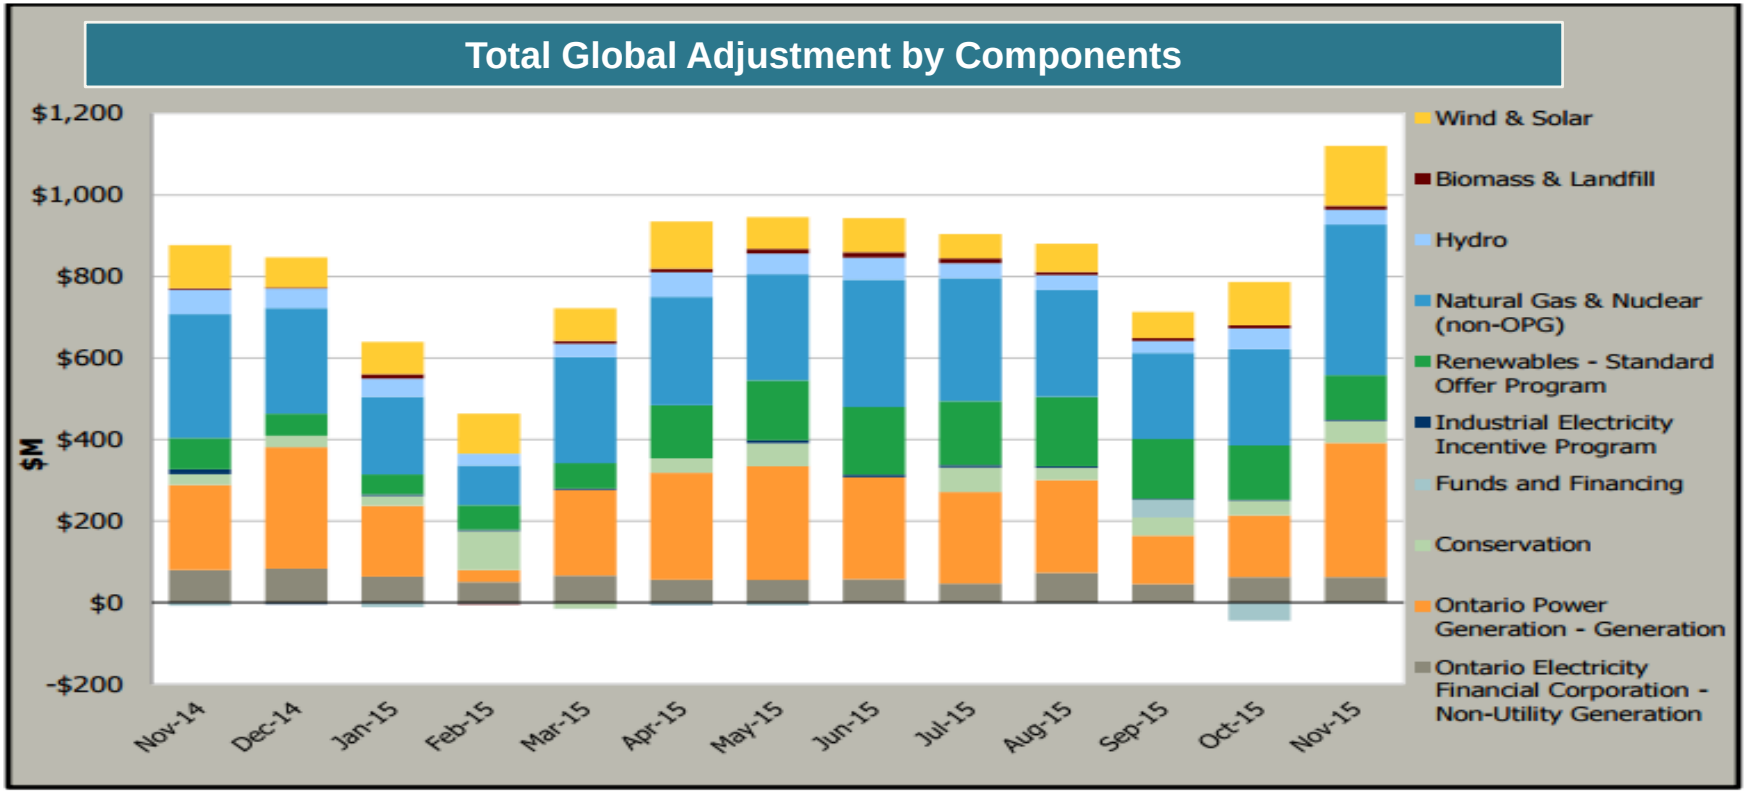
***Source*: IESO**

- Participants in NIERP receive a rebate of $20/MWh. On average, industrial electricity prices are reduced by about 20% through the program, reducing all-in prices to $69/MWh for these consumers. The program is funded through the tax base.

*** Note:** Industrial consumers receive input tax credits for their HST.

# Total Components of Global Adjustment

- Global Adjustment (GA) is a market mechanism that recovers costs from electricity consumers, including the cost of almost all conservation programs in the province (i.e., approximately half a billion dollars in 2016).



**Source:** IESO Monthly Market Report (November 2015)

# Cancel/Adjust Renewable Energy Procurements

# LRP I Pre-Construction Liability Limits

- All 16 successful LRP I developers accepted Optional Termination Provisions when the LRP I Contracts were executed in April 2016.
- If IESO chooses to enact the Optional Termination provision before a project has met all Key Development Milestones, IESO is required to pay pre-construction development costs up to the Pre Construction Liability Limit.
- Pre-construction development costs include costs incurred for feasibility studies, obtaining site access rights, work towards environmental approvals, business development plans, negotiation of contracts for design, equipment, construction and financing, reasonable overhead expenses, and other reasonable costs incurred.
- The Pre Construction Liability Limits are:
  - Non-Rooftop Solar: $250,000 plus $10.00/kW of Contract Capacity
  - Waterpower: $500,000 plus $20.00/kW of Contract Capacity
  - On-Shore Wind: $400,000 plus $2.00/kW of Contract Capacity
- According to the LRP I Optional Termination provision, the developer has a duty to take reasonable steps to mitigate losses, liabilities, costs and damages incurred as a result of the Optional Termination.
  - The IESO will not provide compensation for amounts which are attributable to a developer's failure to take reasonable steps to mitigate.

MINISTRY OF
ENERGY

# Proposed Initiatives to Transform Ontario's Electricity Sector

## Working Draft

December 5, 2016

CONFIDENTIAL DRAFT

# Context

- Electricity costs are increasing as the necessary investments are made to decarbonize and modernize the province's electricity infrastructure.
  - Since 2003, the Province has invested more than $35 billion in over 16,000 megawatts (MW) of new and refurbished cleaner generation, including nuclear, natural gas and renewables.
  - Over the same period, Hydro One has invested $15.5 billion to enhance and renew its transmission and distribution systems.
  - As additional electricity generation comes online, nuclear units are refurbished and distribution and transmission investments are made, prices are forecast to continue to increase.

- Actions have been taken to drive down electricity costs, including deferring investments in generation (e.g., new build nuclear), improving market efficiency (e.g., introduction of wind dispatch) and decreasing the cost of renewable procurements (e.g., Green Energy Investment Agreement ~~GEIA~~ renegotiation, decreasing FIT prices).

- Additional steps have been taken to increase cost effectiveness and improve efficiency by adopting new electricity market approaches, such as:
  - Enhancing competition between developers of large renewable projects through the Large Renewable Procurement (LRP) process to drive down price and secure clean, reliable generation for the province;
  - Directing IESO to end the process of negotiating new NUG contracts pending the development of a Capacity Auction (i.e., Market Renewal); and
  - Launching the first IESO Demand Response Auction (i.e., a competitive process through which demand-side resources are selected to be available to reduce their electricity consumption as needed).

# Context (Cont'd)

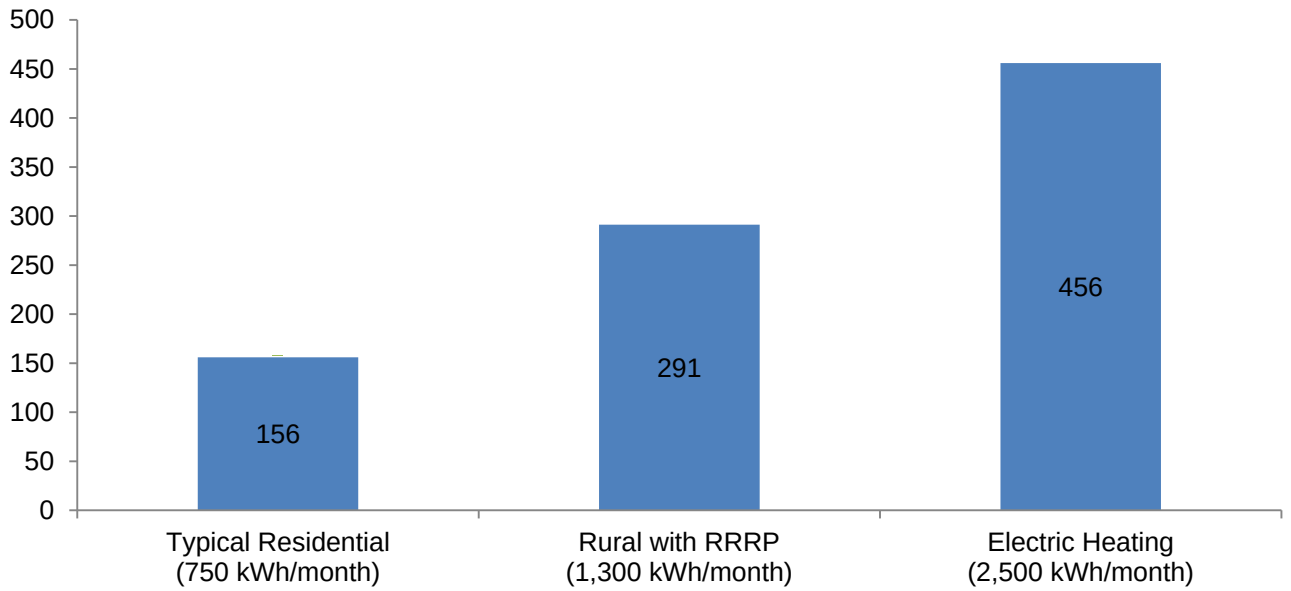
- Following the 2016 Throne Speech, a number of actions were announced to further reduce electricity costs, such as:
  - Providing an 8 per cent rebate before tax, equivalent to the provincial portion of HST, for approximately 5 million eligible electricity consumers including residences, small businesses and farms;
  - Increasing the amount of rate protection available to approximately 330,000 eligible rural customers living in low-density areas by updating the Rural or Remote Rate Protection (RRRP) program;
  - Lowering the Industrial Conservation Initiative (ICI) threshold to 1 MW and removing sector restrictions so that more consumers can benefit;
  - Suspending the second round of the Large Renewable Procurement (LRP II) and the Energy-from-Waste Standard Offer Program to save up to $3.8 billion in costs; and
  - Recycling a portion of cap and trade auction proceeds to keep rates affordable for industrial and commercial electricity consumers.
- On November 28, 2016, the Minister of Energy announced the need for changes in how electricity resources are procured and the need for wholesale market renewal.

- The Ministry of Energy is currently updating its Long-Term Energy Plan (LTEP), which provides an opportunity to consider a range of policy changes to how the Ontario energy sector operates.

# Current Electricity Prices – Residential

- Residential consumers electricity prices continue to be a concern for many Ontarians, particularly those that rely on electric heat.
  - **Note:** The typical residential bills are currently below the 2013 ~~Long-Term Energy Plan (2013~~ LTEP~~)~~ forecasts ($159 / 750kWh)

**Residential Electricity Bills**
*in $/month*

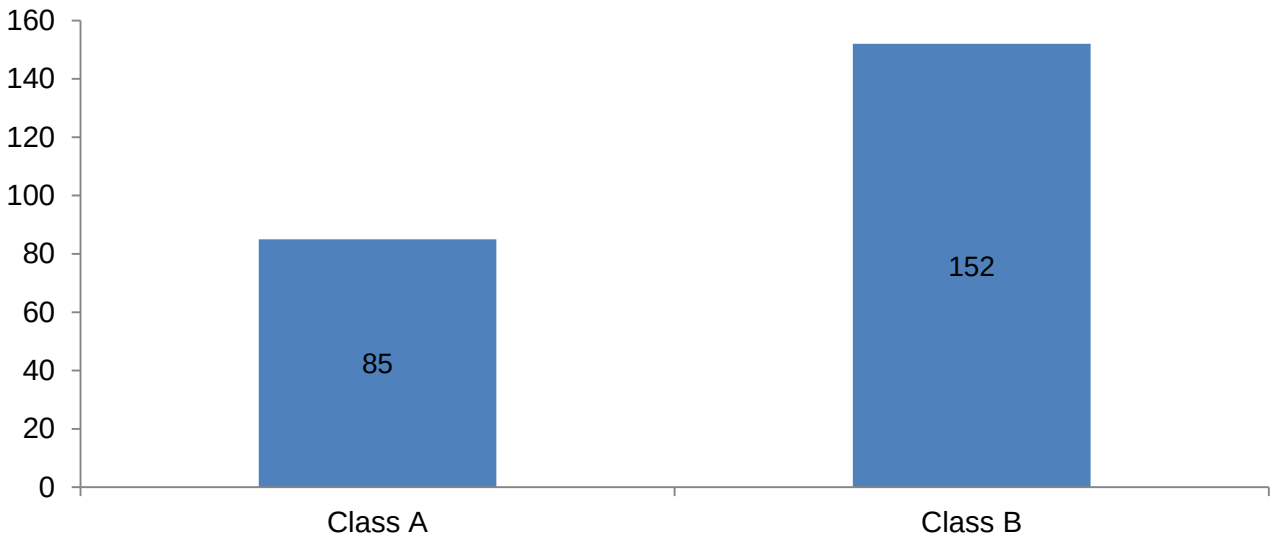


**Note**: Typical residential and electric heating shown above are based on Toronto Hydro; rural is based on connection to Hydro One as a R2 customer eligible to receive the Rural or Remote Rate Protection (RRRP) credit of $31.50.

# Current Electricity Prices – Industrial and Commercial

- While large industrial electricity consumers (i.e., Class A) rates are competitive with other jurisdictions, rates for commercial/small industrial consumers (i.e., Class B) are higher by comparison.
  - **Note:** Current industrial and commercial prices are below 2013 LTEP forecasts ($96 / MWh)

**Current All-In electricity Price**
*in $/MWh*



**Note**: Based on year-to-date (YTD) September 2016 prices. Class A reflects a transmission-connected consumer. Class B reflects a 1 MW load operating at 56% load factor and connected to Toronto Hydro.

# Current Status on Taxpayer Funded Electricity Price Mitigation

| ($M) | 2011-12 | 2012-13 | 2013-14 | 2014-15 | 2015-16 | 2016-17[1] | 2017-18[1] |
|---|---|---|---|---|---|---|---|
| OCEB | 1,033 | 994 | 1,006 | 1,078 | 860 | - | - |
| OREC | - | - | - | - | - | 300 | 1,100* |
| Ending DRC[2] | - | - | - | - | 85 | 330 | 330 |
| NIERP | 120 | 120 | 115 | 108 | 120 | 120 | 120 |
| NOEC | 23 | 24 | 25 | 24 | 26 | 25 | 25 |
| OEPTC[3] | 354 | 406 | 418 | 429 | 444 | 450 | 460 |
| **TOTAL** | **1,530** | **1,544** | **1,564** | **1,639** | **1,525** | **1,195** | **2,005** |

1. 2016-17, 2017-18 based on forecasted numbers
2. 2015-16 estimated for 3 months of reduced DRC revenue
3. OEPTC amounts in all years based on energy component of the rebate.

* Sourced from November LRC Submission

OCEB – Ontario Clean Energy Benefit
OREC – Ontario Rebate for Electricity Consumers
DRC – Debt Retirement Charge
NIERP – Northern Ontario Electricity Rate Program
NOEC – Northern Ontario Energy Credit
OEPTC – Ontario Energy and Property Tax Credit

- The table above shows the annual amount of taxpayer funded electricity price mitigation from 2011-12 to 2017-18.
- From 2011-12 to 2015-16 there has been an annual fiscal impact of approximately $1.6 billion due to electricity price mitigation programs.
- In 2016-17, the fiscal impact due to electricity price mitigation programs is estimated at approximately $1.2 billion.
- In 2017-18, due primarily to the start of the Ontario Rebate for Electricity Consumers, the expected fiscal impact due to electricity price mitigation programs is approximately $2.0 billion and before considering any additional funding from the tax base.

# Proposed Initiatives – Overview

- The suite of proposed initiatives are intended to:
  - Transform how the electricity market operates in Ontario;
  - Re-set how government programs are funded (i.e., rate-base vs tax-base);
  - Provide system benefits (e.g., industrial load retention);
  - Lower the cost of electricity for residential and industrial consumers; and
  - Increase cost effectiveness and improve efficiency.

- The proposed initiatives include:
  1. Implement Market Renewal Initiatives
  2. Fund Electricity Support Programs Through The Tax-base
  3. Eliminate the Industrial Conservation Initiative (ICI)
  4. Amortize Conservation Program Costs
  5. LDC Efficiencies
  6. Rate Design Initiatives
  7. Reduced Cost of OPG Borrowing
  8. End Debt Retirement Charge (DRC) Early for Commercial/Small Industrial Class B Electricity Consumers
  9. Dedicate Departure Tax
  10. Cancel/Adjust Renewable Energy Procurements

- The proposed initiatives provide opportunities to reduce electricity costs for residential and industrial consumers while at the same time transforming the province's electricity market and yielding benefits for the electricity system.

# Proposed Initiatives – Impacts

- Each of the proposed initiatives under consideration target different government programs and different parts of the electricity bill. The proposals impact different classes of electricity consumers to varying degrees.

| Proposal | Program / Initiative | Line on Bills | Who Benefits |
|---|---|---|---|
| 1. Implement Market Renewal Initiatives | Market Renewal | Electricity, Global Adjustment, Regulatory | Market Renewal: All electricity consumers |
| 2. Fund Electricity Support Programs Through The Tax-base | OESP, RRRP | Regulatory | All electricity consumers evenly |
| 3. Eliminate the Industrial Conservation Initiative (ICI) | ICI | Electricity, Global Adjustment | Only Class B electricity consumers (i.e., residential) **Note:** Will have a negative impact on Industrial consumers. |
| 4. Amortize Conservation Program Costs | Amortization | Electricity, Global Adjustment | Class B electricity consumers and to a lesser extent Class A consumers |
| 5. LDC Efficiencies | Distribution efficiencies | Delivery | All embedded consumers |
| 6. Rate Design Initiatives | Rate structures | Electricity, Global Adjustment | Rate Design Initiatives: Participating electricity consumers |
| 7. Reduced Cost of OPG Borrowing | n/a | Electricity, Global Adjustment | Class B electricity consumers and to a lesser extent Class A consumers |
| 8. End DRC Early for Commercial/Small Industrial Class B Electricity Consumers | Debt Retirement Charge (DRC) | DRC | Class B consumers (i.e., small business and commercial consumers, etc) |
| 9. Dedicate Departure Tax | Departure Tax | TBD | TBD |
| 10. Cancel/Adjust Renewable Energy Procurements | FIT, LRP | Electricity, Global Adjustment | Class B electricity consumers and to a lesser extent Class A consumers |

# Proposed Initiatives – Potential Savings for Typical Residential Electricity Consumers

| *$/750kWh* | 2017 | 2018 | 2019 | 2020 | 2021 | 2022 | Timing of Benefit |
|---|---|---|---|---|---|---|---|
| 1. Implement Market Renewal Initiatives | - | - | - | 1.58 | 1.59 | 1.60 | Longer-Term |
| 2. Fund Electricity Support Programs through the Tax-base | 2.18 | 2.30 | 2.31 | 2.45 | 2.48 | 2.51 | Immediate |
| 3. Eliminate the Industrial Conservation Initiative (ICI) | 4.40 | 4.24 | 4.10 | 4.24 | 3.73 | 3.58 | Immediate |
| 4. Amortize Conservation Program Costs | 1.67 | 1.56 | 1.21 | 0.81 | 0.54 | 0.3 | Immediate |
| 5. LDC Efficiencies | TBD | TBD | TBD | TBD | TBD | TBD | Near-Term |
| 6. Rate Design Initiatives* | - | - | - | - | - | - | Immediate |
| 7. Reduced Cost of OPG Borrowing | 0.13 | 0.13 | 0.13 | 0.18 | 0.18 | 0.18 | Immediate |
| 8. End DRC Early for Class B Electricity Consumers** | - | - | - | - | - | - | n/a |
| 9. Dedicate Departure Tax | TBD | TBD | TBD | TBD | TBD | TBD | Immediate |
| 10. Cancel / Adjust Renewable Energy Procurements | - | - | TBD | TBD | TBD | TBD | Longer-Term |
| **Total decrease on typical monthly bill** | **8.38** | **8.23** | **7.75** | **9.26** | **8.52** | **8.17** | |

**Note:** The above initiatives will provide similar benefits for non-RPP Class B electricity consumers. Proposal 2 assumes OESP participation of 50% and 5-year maturity. *Savings estimates do not include changes related to rate design. ** Class B includes small-medium enterprises (SMEs).

# Proposed Initiatives – Potential Savings for Average Industrial Electricity Consumers

| *$/MWh* | 2017 | 2018 | 2019 | 2020 | 2021 | 2022 | Timing of Benefit |
|---|---|---|---|---|---|---|---|
| 1. Implement Market Renewal Initiatives | - | - | - | 2.11 | 2.12 | 2.13 | Longer-Term |
| 2. Fund Electricity Support Programs through the Tax-base | 2.91 | 3.06 | 3.17 | 3.27 | 3.33 | 3.38 | Immediate |
| 3. Eliminate the Industrial Conservation Initiative (ICI) | (24.12) | (23.21) | (22.45) | (23.23) | (20.42) | (19.61) | Immediate |
| 4. Amortize Conservation Program Costs | 1.15 | 1.08 | 0.84 | 0.56 | 0.37 | 0.25 | Immediate |
| 5. LDC Efficiencies | n/a | n/a | n/a | n/a | n/a | n/a | Near-Term |
| 6. Rate Design Initiatives* | - | - | - | - | - | - | Immediate |
| 7. Reduced Cost of OPG Borrowing | 0.10 | 0.10 | 0.10 | 0.15 | 0.15 | 0.15 | Immediate |
| 8. End DRC Early for Class B Electricity Consumers** | - | - | - | - | - | - | n/a |
| 9. Dedicate Departure Tax | TBD | TBD | TBD | TBD | TBD | TBD | Immediate |
| 10. Cancel / Adjust Renewable Energy Procurements | - | - | TBD | TBD | TBD | TBD | Longer-Term |
| **Total increase on industrial bill** | **19.96** | **18.97** | **18.34** | **17.14** | **14.45** | **13.7** | |

**Note:** Proposal 2 assumes OESP participation of 50% and 5-year maturity. Proposal 3 reflects the elimination of ICI, as opposed to moving ICI cost shift to the taxbase. The $1.75/MWh savings associated with Proposal 7 in 2018 accounts for the fact that under the status quo, DRC will be removed from bills in April 2018. *Savings estimates do not include changes related to rate design. ** Class B includes small-medium enterprises (SMEs).

# Fiscal Considerations

- Funding electricity support programs (i.e., OESP, RRRP, First Nations Delivery Rate) from the tax-base represents approximately $440 million on average annually.

- Ending the Debt Retirement Charge (DRC) for commercial and small industrial electricity consumers (i.e., Class B) early would represent an additional fiscal pressure of about $[TBD based on Energy's estimate of affected consumption] ~~[placeholder for OFA]~~ on the province.

- If the Industrial Conservation Initiative were funded though the tax-base instead of being eliminated, this would represent a $900 million annual cost to the fiscal plan.

- Reducing OPG borrowing costs to the Province's cost of funds is expected to result in a $30 ~~20 to $35~~ million annual fiscal pressure in 2017 to the province ~~[TBC by OPG / OFA]~~ based only new borrowing and increasing to about $70M by 2021.

- Fiscal impacts of allocating a portion of the departure tax to ratepayers will depend on the size of the allocation, as well as timing for the flow of value. The maximum, direct one-time impact is $2.6 billion, with potential ancillary impacts on residual stranded debt defeasance.

- A summary of the annual fiscal impacts of the proposed initiatives is presented in the next slide.

# Proposed Taxpayer Funded Electricity Price Mitigation

| ($M) | 2016-17[1] | 2017-18[1] | 2018-19[1] | 2019-20[1] | 2020-21[1] |
|---|---|---|---|---|---|
| OCEB | - | - | - | - | - |
| OREC | 300 | 1,100* | 1,100* | 1,200* | 1,200* |
| Ending DRC[2] | 330 | 330 | -- | -- | -- |
| NIERP | 120 | 120 | 120 | 120 | 120 |
| NOEC | 25 | 25 | 25 | 25 | 25 |
| OEPTC[3] | 450 | 460 | 470 | 481 | 481 |
| **CURRENT TOTAL** | **1,195** | **2,005** | **1,715** | **1,826** | **1,826** |
| 1. OESP | | 106 | 119 | 127 | 132 |
| 2. RRRP | | 292 | 300 | 306 | 315 |
| 3. First Nations Delivery Rate | | 18 | 18 | 18 | 18 |
| 4. Fund ICI through Tax Base | | 900+ | 900+ | 900+ | 900+ |
| 5. Departure Tax | | TBD | TBD | TBD | TBD |
| 6. Conservation Amortisation | N/A | N/A | N/A | N/A | N/A |
| 7. DRC Ended for Class B | 110 | 450 | -- | -- | -- |
| 8. Other | | | | | |
| **TOTAL** | **1,305** | **3,871** | **3,152** | **3,177** | **3,191** |

1. 2016-17, 2017-18 based on forecasted numbers
2. 2015-16 estimated for 3 months of reduced DRC revenue
3. OEPTC amounts in all years based on energy component of the rebate.

- As shown above if all measures proposed in this deck were to be accepted taxpayer funded contributions to electricity price mitigation would increase to about $3.2 billion by 2020-21. That is a 145% increase from the current forecast for 2016-17 or a 93% increase when comparing against the current expected funding for 2017-18.
- These amounts were not considered in the 2016-17 Fiscal Plan and could put at risk the Province's fiscal objectives for 2017-18 and beyond.

# 1. Electricity Market Renewal Initiatives

- Continue to move forward with IESO's Market Renewal initiatives:
  - Market Renewal encompasses projects such as a single-schedule system (from the current two-schedule system), more frequent intertie scheduling to better align with other jurisdictions and a day-ahead market. There will be up front capital costs to enable the initiative. IESO is currently assessing these costs.
  - Moving to "technology-agnostic" procurements will provide new opportunities for innovation and modernization and ensure ratepayers receive the best prices possible.

**Considerations**

- Changes related to IESO's Market Renewal initiatives, reflected in HOEP and uplifts, are estimated to save up to $300 million per year, starting in 2020, leading to a reduction of:
  - About $1.60/month or about 1% at current retail prices for a typical residential bill; and
  - About $2/MWh or more than 2% at current all-in prices for industrial and SME electricity consumers.
- The IESO's Market Renewal is a broad initiative that will impact all aspects of Ontario's electricity market. Ontario has had a uniform price since market opening.
- Adopting a technology-agnostic stance will lower the overall cost of providing electricity service by selecting the most cost-effective resources to fulfill various system needs.

# 2. Fund Electricity Support Programs Through the Tax-Base

- Propose to fund electricity support programs, including Ontario Electricity Support Program (OESBP) and Rural or Remote Electricity Rate Protection (RRRP), through the tax-base instead of a regulated charge. This would allow the OESP and the RRRP charges to be removed from the Regulatory line on electricity bills.

**Considerations**

*Consumer Impacts and implementation*

- Transitioning OESP and RRRP to the tax-base would reduce a typical residential bill by about $2.35/month by 2020, and delivering the First Nation rate reduction through tax base would avoid about $0.10/month for a potential total savings of $2.45/month by 2020). As all programs provide strong social benefits, there is precedent for funding these programs through the tax-base.

- To address concerns from low income electricity consumers improvements to OESP could be implemented by increasing credits (could be up to double the current credits)
  - Single low income consumer would see a change from $30 to $45/ month ($540/year):
  - Family of four with electric heat could see a credit of $82.50/month ($990/year); and
  - Would mean no impact on consumer bills and no change to current OESP charge.
- RRRP and OESP are included in the “Regulatory” line on bills. If RRRP and OESP were eliminated from bills, the Regulatory line would decrease; however, as the Regulatory line is the smallest line item component of invoices, there is risk the decrease may not be perceived by customers.

- The RRRP regulation provides a funding mechanism for transmission infrastructure required to grid connect remote First Nation communities. Considerations for how that funding will be supported by the tax base will need to be determined.

- The non-rate mechanism to remove delivery charges from on-reserve First Nation customer monthly bills needs to be further explored.Funding RRRP and/or OESP with tax revenue would require amendments to existing legislation and regulations.

# 2. Fund Electricity Support Programs Through the Tax-Base (cont'd)

- Table below shows estimates of program costs up to 2020:

| Year | OESP | RRRP | First Nations Delivery Rate | TOTAL |
|---|---|---|---|---|
| 2017 | $106M | $292M | $18M | **$416M** |
| 2018 | $119M | $300M | $18M | **$437M** |
| 2019 | $127M | $306M | $18M | **$451M** |
| 2020 | $132M | $315M | $18M | **$465M** |

1) Ontario Electricity Support Program (OESP)
   - After almost a year in market, close to 30% of potentially eligible customers are signed up.
   - The cost projections below assume the program grows to 50% of eligible consumers by 2020 (also assumes 10% administration costs).

2) Rural and Remote Rate Protection (RRRP)
   - Provides benefits to R2 Hydro One consumers, Algoma, and remote communities.
   - Includes the expanded coverage that will begin on January 1, 2017.

3) First Nation rate reduction (currently under development)
   - On November 14, 2016, OEB presented options to the Ministry on reducing costs for on-reserve First Nation customers.
   - OEB's recommended option to provide 100% delivery rate credit, which is estimated at $18.4 million per year.
     - Other options includes a seasonal fixed credit to account for demand changes over the year ($13 million) or a 50% total bill reduction ($23 million).

# 3. Eliminate the Industrial Conservation Initiative (ICI)

- The cost shift from the Industrial Conservation Initiative (ICI) could be removed from electricity bills by eliminating ICI.
  - The ICI allows large electricity consumers to lower their electricity costs by reducing their demand during peak hours.

**Considerations**

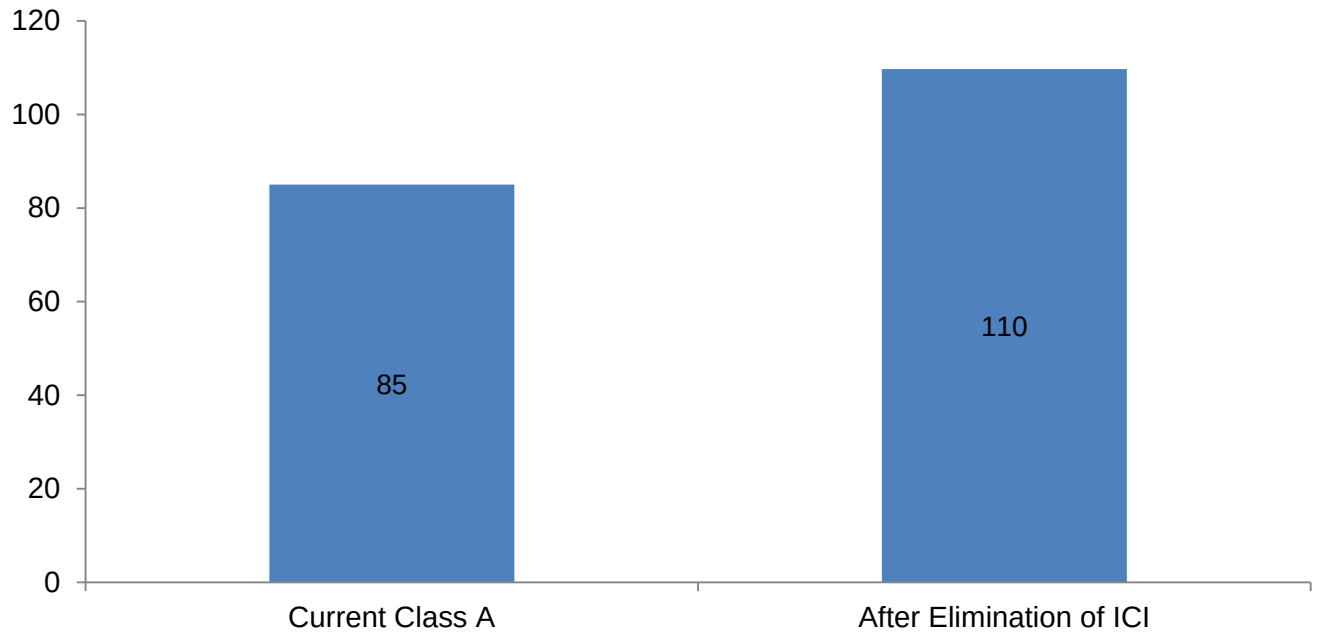
- Eliminating ICI would result in a benefit of more than $4/month for residential electricity consumers in 2017.
  - However, unless government took action to mitigate the associated cost shift back to industrial consumers, typical industrial prices would increase by about one-third. Such a price increase would pose significant challenges for energy-intensive consumers.
- Industrial stakeholders have indicated that ICI as an integral factor in maintaining competitiveness and retaining industry in the province.
  - Eliminating ICI would limit the “cost shift” onto residential consumers, but it would also lead to a reduction in industrial demand. The large industrial contribution to the fixed costs of running the electricity system would then need to be covered by remaining consumers.
- If ICI is retained, current IESO projections indicate that the cost shift will decrease each year going forward as Global Adjustment (GA) decreases (due to an expected increase in HOEP).
- Alternatively, ICI could be funded through the tax-base at a cost of $900 million annually. There is precedent to use the tax-base for industrial support programs, including the Northern Industrial Electricity Rate Program (NIERP) and the Jobs and Prosperity Fund.

# 3. Eliminate the Industrial Conservation Initiative (cont'd)

- ICI currently provides a benefit of about $25/MWh to Class A electricity consumers.

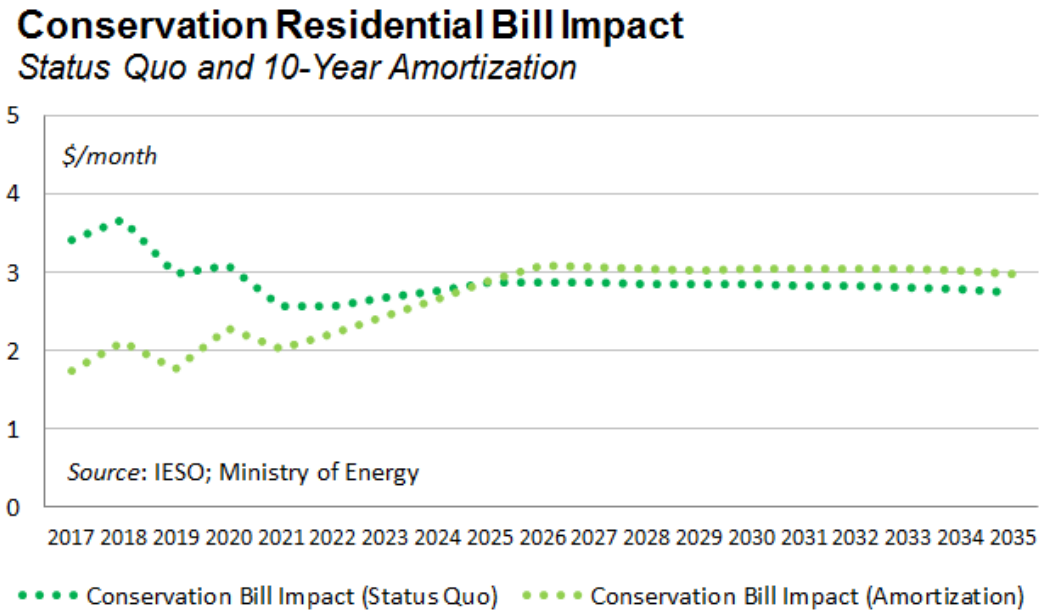
**All-In Electricity Price**
*in $/MWh*



**Note**: Based on year-to-date (YTD) September 2016 prices. Class A reflects a transmission-connected consumer.

# 4. Amortize Conservation Program Costs

- ~$3 billion from the electricity ratepayer base will be spent on conservation programs delivered under the Conservation First Framework and the Industrial Accelerator Program (IAP) between 2015 and 2020.
- Currently, Conservation and Demand Management (CDM) program costs are recovered from the Global Adjustment (GA) mechanism about one month after expenses are incurred.
- As a potential rate mitigation measure, certain CDM costs could be amortized.
- Amortizing a portion of conservation spending would produce a benefit for electricity ratepayers in excess of $1/month at the outset. Over time, the benefit would decrease and turn into a cost, as interest charges begin to grow.



**Note**: Chart assumes that conservation incentive costs are available for amortization while administration cost are not. Although there is variable from year to year, incentives represent about two-thirds of conservation spending in Ontario. Chart assumes conservation spending continues at a similar rate beyond 2020. Chart assumes a 10-year borrowing rate of 3.0%.

# 4. Amortize Conservation Program Costs (cont'd)

## Considerations

- Under **Public Sector Accounting Board (PSAB) accounting standards**, used by both the Province and IESO, only certain assets can be amortized: 1) pensions and 2) tangible capital assets. Under PSAB an asset must meet several criteria to be considered a capital asset, including:
  - A tangible capital asset must be tangible and substantive and the Ontario government must have title and operate the asset.
  - A tangible capital asset must bring a tangible benefit to the government or to Ontario.

- CDM costs, on their own, do not meet the criteria of a tangible capital asset because customers would have ownership and control of installed CDM measures, not the Province or IESO.

- **Rate-regulated accounting** was developed to recognize the unique nature of regulated entities (e.g., electricity generators, LDCs). Under rate-regulated accounting certain costs can be treated as amortizable assets that would not normally be considered assets under accounting principles.
  - Over the past several years, the Auditor General (AG) has expressed concerns about the appropriateness of recognizing rate-regulated assets in the Province's consolidated financial statements.
  - Rate-regulated accounting is currently under review by international accounting standard setting bodies and is currently permitted only on an interim basis, so its future is unclear at present.

# 4. Amortize Conservation Program Costs (cont'd)

**Considerations**

- If some of Ontario's CDM costs could be amortized, analysis shows that ratepayer impacts would be reduced in the short-term but interest charges on the loan would result in increased overall ratepayer costs in the longer-term.

- Legislative amendments would be needed to allow recovery of loan interest charges from GA.

- If there is a desire to proceed:
  - Formal accounting advice will need to be sought from IESO's external auditor as well as the Ontario Provincial Controller (OPC) to determine whether CDM costs could be amortized according to rate-regulated accounting standards.
  - Further legal analysis would also be required to confirm legal viability and possible approaches to implementation.

# 5. LDC Efficiencies

- Consider opportunities for future LDC cost reductions and efficiencies through the regulatory framework.

**Considerations**

- The Ontario Energy Board has a mandate to regulate the electricity distribution sector in the public interest, ensuring the financial viability of the sector while promoting reliable service to customers at just and reasonable rates.
- Since 2012, the OEB has taken action – through the Renewed Regulatory Framework for Energy – to more closely link rate regulation with performance measures and outcomes.
- There maybe opportunities to promote further cost reductions and performance improvements within the distribution sector as there is continued evolution of the regulatory framework in Ontario.
  - Tightening LDC requirements may also indirectly incent other desired policy outcomes, such as LDC consolidation and grid modernization to realize further cost reductions.
- ENERGY could help promote or accelerate these efforts by asking the OEB through the LTEP Implementation Directive, s. 35 of the *Ontario Energy Board Act, 1998*, and the 2017 Mandate Letter and other agency business planning processes.
- In addition, further changes to the departure and transfer tax regimes could be considered to provide a further incentive for LDC mergers and acquisitions.

# 6. Rate Design Initiatives

- OEB continues to move forward with its Regulated Price Plan (RPP) Roadmap:
  - The OEB is undertaking a comprehensive review of the RPP, including exploring the introduction of offering different pricing plan options for customers following the completion of pilot programs in 2018. The plan is expected to be implemented over a 3-5 year period.

- Until new pricing plans are available, the OEB could provide an "opt-in flat rate RPP" structure that could be made available to residential, farm and small business consumers on an interim basis (2-3 years) until a wider range of price plans are available.
- Time-of-Use (TOU) pricing could also be introduced for non-RPP Class B consumers to reduce Global Adjustment (GA) volatility and reduce system costs.

| Current TOU | New Flat Rate |
|---|---|
| On: 18.0 ¢/kWh | 11.1 ¢/kWh |
| Mid: 13.2 ¢/kWh | |
| Off: 8.7 ¢/kWh | |

**Considerations**

- The OEB has indicated that the option would lead to no overall change in system costs. Consumers with higher peak and mid-peak usage patterns would see a decrease in their electricity bills, while those with higher off-peak usage patterns would see an increase.
  - While the current strong supply conditions may allow for such an RPP structure (i.e., peak demand requirements can be easily met), administrative costs could be high (distributors would need to design/implement an opt-in process and associated billing system on an interim basis).

| | Current TOU | New Flat Rate |
|---|---|---|
| 1) Monthly electricity bill- higher peak and mid-peak usage patterns | $172 | $163 |
| 2) Monthly electricity bill- higher off-peak usage patterns | $152 | $163 |

***Note:** 1) assumes a consumer consumption pattern of 45%:30%:25% (Off-peak: Mid-peak: On-peak), while 2) assumes consumer consumption pattern of 80%:10%:10% (Off-peak: Mid-peak: On-peak). Estimates are based on OEB's online electricity bill calculator (for Toronto Hydro-November 2016 rates)

# 6. Rate Design Initiatives (cont'd)

**Considerations**

- The decision to undertake smart meter investments was partly justified on the basis of TOU pricing. If TOU pricing were to be made optional, some stakeholders could question the rationale for smart meter investments.
  - Rationale for offering a flat rate option could focus on providing customers with choice until new pricing plans are rolled out under the RPP roadmap.

- If a flat rate design is introduced, there could be significant consumer opposition to any return to a mandatory TOU.

- After the interim flat rate period, the OEB could offer a wider range of pricing plans to consumers.
  - As part of its RPP review, the OEB will be running pilots with LDCs to assess customer response to alternative time periods and pricing structures.
  - Learnings from these pilots will help inform potential changes to the RPP. Pilots are expected to be in market May 2017 and run for one year.

- Non-RPP Class B electricity consumers currently pay Global Adjustment (GA) on a volumetric basis. Moving them to TOU would provide an incentive to shift consumption to off-peak periods.
  - Consumers, including manufacturers, who are unwilling to shift would face higher costs and likely not be supportive of the changes.
  - The decision to pursue TOU pricing for non-RPP class B consumers will impact proceeds recycling as there is interplay between the two initiatives.

# 7. Reduced Cost of OPG Borrowing

- OPG currently borrows for corporate purposes from the OEFC
- Seek to reduce OPG's borrowing costs and pass on savings to ratepayers by:
  - Reducing or removing the spread that OEFC applies to OPG for any new corporate debt; or
  - Allowing OPG to refinance its existing debt at longer maturities through the OEFC in order to take advantage of the current, favourable interest rate environment.
- Assuming the full spread is removed from all OEFC debt, OPG borrowing costs could be reduced by 50-100 basis points, representing annual savings of about $20-$25 million, increasing to $30-$35 million, as OPG's outstanding OEFC debt rises from ~$3.3 billion in 2016 to ~$4.7 billion in 2020.
- OPG could apply to the OEB as part of its current rate application to flow this benefit to ratepayers.

**Considerations**

- Further work is required to determine potential OPG savings from these initiatives.
- Allowing OPG to refinance would have a negative fiscal impact on the Province.
- Spreads are expected to decline, reducing the relative impact of this change, given lower overall interest rates and reduced volatility.
- Providing OPG with greater access to longer term (20-30 year) debt may also reduce costs:
  - OPG's average term to maturity for OEFC debt is 5.7 years, as compared to 22.2 years for privately financed project debt. This contrasts with most corporations and government which have been working to extend average debt terms in order to take advantage of the low interest rate environment.
  - Longer terms would also better match to the life of OPG's assets.
  - Recently, OEFC has allowed OPG to apply for 50% of its financing requirements in the form of longer term (25-30 year debt). Moving closer to 100% would accelerate this transition.

# 8. End DRC Early for Commercial/Small Industrial Class B Electricity Consumers

- Propose to remove the $0.07/kWh Debt Retirement Charge (DRC) from the bills of commercial/small industrial Class B consumers beginning in 2017, instead of April 1, 2018.
  - **Note:** Class A consumers (e.g., large industrial) would continue to pay DRC until at least April 1, 2018.

**Considerations**

- For a Class B consumer currently paying about $152/MWh, removing the DRC would represent a savings of about 5%.
  - A 50% reduction in the DRC charge would represent a savings of about 2%.

- Alternatively, the reduction of the DRC could be to $0.035/kWh starting in 2017, to provide relief for cap and trade until proceeds recycling is fully operational.

- Residential consumers have had the DRC removed from bills since January 1, 2016. Taking DRC off commercial and small industrial bills would result in equal treatment for these groups of consumers.

- The savings for commercial and small industrial consumers associated with this proposal would drop to zero in April 2018, since this is the current planned date for removing the DRC from non-residential bills.

- Prior to moving forward with this proposal, additional analysis from Legal Services and the MOF would be needed.

# 9. Dedicate Departure Tax

- In connection with the IPO, as a result of leaving the PILs regime and entering the corporate tax regime, Hydro One was deemed to dispose of its assets for proceeds equal to its fair market value, triggering a PILs liability of $2.6 billion (Departure Tax).
- This was paid to the Ontario Electricity Financial Corporation (OEFC), to be dedicated towards repayment of electricity sector stranded debt.
- The Province could explore repurposing some of those funds to the benefit of ratepayers.
- This may reduce the risk that the Ontario Energy Board (OEB) assigns to ratepayers the benefit from an associated tax asset, resulting in lower earnings and decreased share value for Hydro One. This decision is currently before the OEB, as part of Hydro One's Transmission rate application.

**Considerations**

- Cost savings to ratepayers would depend on timing and which ratepayers (e.g., Hydro One customers, or all Ontario customers) will benefit from some or all of the $2.6 billion value.
- While this is a shift from messaging that value from the broadening of ownership of Hydro One is being used pay down debt and fund transit and transportation, the Province could link to electricity infrastructure investments (e.g., as an offset to infrastructure investments already made in the sector, or to specific initiatives such as conservation).
- These funds were paid to the Ontario Electricity Financial Corporation (OEFC), to be dedicated towards repayment of electricity sector stranded debt. Repurposing may have an impact on the defeasance of this debt.

# 10. Cancel/Adjust Renewable Energy Procurements

- The Ministry could consider the following actions to further mitigate future impacts to electricity bills:

| Unallocated/Terminated Capacity | Announced Procurements | Executed Contracts |
|---|---|---|
| A. Do not procure unallocated or terminated capacity | B. Revise FIT 5 target | D. Cancel LRP I contracts |
| | C. Cancel FIT 6 | |

**Overarching Considerations**

- Cost savings associated with reducing or cancelling renewable energy procurements and programs will not reduce current electricity bills, but would result in future cost reductions relative to Ontario Planning Outlook forecasts.
- The IESO estimates implementing options A to C will reduce system costs by approximately $592 million ($2016) between 2019 and 2028, resulting in an average of approximately $0.50/month in savings to a typical residential electricity bill over the same period. [cost reductions from LRP I contract cancellations TBC]
- The microFIT program is winding down end of 2017. Annual microFIT procurement targets have been undersubscribed.
- With a few exceptions (e.g., rollover of unallocated microFIT capacity; addition of terminated microFIT and small FIT capacity to FIT 5), plans for unallocated or terminated capacity are not defined in announcements or existing directions.

**Cancel/Adjust Announced Procurements**

- Amendments to existing directions to the IESO would be required to reduce FIT 5 and cancel FIT 6.
- The FIT 5 procurement is underway with a base target of 150 MW and inclusion of any capacity available from contract terminations under prior small FIT and microFIT procurements. The application window closed on November 25, 2016.

# 10. Cancel/Adjust Renewable Energy Procurements – Existing Contracts

**Cancel Existing LRP I Contracts**

- 16 LRP I contracts (approx. 455 MW) have been executed and projects are under development.
- None have met Key Development Milestones. Total value of LRP I estimated at approx. $1 billion (NPV to 2016).

[Placeholder for IESO: Cost calculation relative to OPO and associated bill impact]

**Considerations**

- To help inform a decision, IESO or OEB could be asked to evaluate and provide guidance to the Ministry on the system need for LRP I projects and potential ratepayer impacts/benefits.
- 13 of 16 LRP I contracts have Indigenous participation. Cancelling LRP I contracts would remove this economic development opportunity and likely damage relationships between Indigenous communities and the government.
- LRP I Contract includes an “Optional Termination” provision allowing IESO to terminate any contract prior to the “Commercial Operation Date” with 6 months written notice.
- The IESO obligations under the Optional Termination provision depend on whether the project has met all “Key Development Milestones”.
  - As no projects have met their Key Development Milestones, the estimated total cost payable to contract holders is about $8 million.

# 10. Cancel/Adjust Renewable Energy Procurements – Existing Contracts (cont'd)

## Legal Analysis

- Under the *Electricity Act, 1998*, the Minister has the authority to amend previous directions without approval from Cabinet. Although an amendment to an existing direction would not require Cabinet approval, it is unlikely that a direction to cancel LRP I contracts could be considered as amending an existing direction. The previous LRP directions set out the broad policy framework that was reflected in the procurement, but the contracts themselves, once executed, are stand alone documents which the IESO had legal authority to execute. Revoking previous LRP directions does not affect that authority or have the effect of cancelling the procurement.
- As a result, any new directive to cancel LRP I contracts would need to be approved by Cabinet, either as part of an LTEP implementation directive to IESO, or pursuant to the overall power to direct IESO with respect to procurements outside the LTEP process. However, there is a risk that such a directive could be subject to challenge.
- ENERGY has previously received advice that there is a high risk that a court would conclude that the Minister has no authority under the *Electricity Act , 1998* to issue a direction requiring IESO to terminate microFIT Conditional Offers and FIT Offer Notices that have already been issued to applicants, because these offers create vested contractual rights and the Minister would require clear legislative authority to interfere with those rights. This reasoning would likely apply equally to any direction or directive to IESO to cancel LRP I contracts.
- Previous advice has also flagged a moderately high risk that the Province could be liable for damages in tort for inducing a breach of contract if it issues a direction to IESO that interferes with vested contractual rights without clear statutory authority to do so. LRP I contract holders could also assert other claims, such as misfeasance in public office.
- The risk and costs associated with potential law suits resulting from the cancellation of contracts requires further analysis, including analysis of whether any statutory amendments would be required to provide clear authority to cancel the contracts. LSB recommends ENERGY seek an opinion from Crown Law Office Civil before proceeding.

# Summary

- Reductions in electricity rates could be achieved by eliminating existing, planned or directed initiatives from the rate-base or shifting these costs to the tax-base.

- The timing of the impact of these rate mitigation initiatives varies.
  - Immediate and near-term impacts can be achieved by shifting costs to the tax-base or changing how certain costs are recovered from consumers or eliminating certain programs.
  - Over the longer term, changes to the electricity supply mix and achieving efficiencies in the electricity market could yield system savings.

- Pursuing the initiatives would require regulatory amendments and working with the electricity sector agencies, LDCs and other stakeholders to implement the initiatives.

- As shown before the positive impact to residential ratepayers is very limited (between $8 and $9 per month) while the impact to the Province's fiscal position would be material (about $1.5 billion a year).

# Appendix

# Electricity Consumer Classes

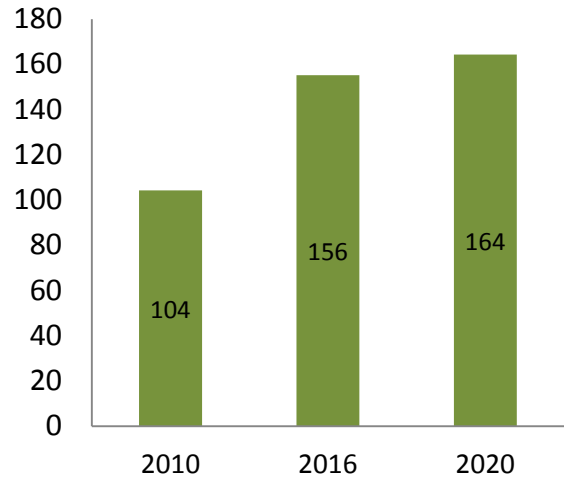
- In Ontario, there are three classes of electricity consumers:

| | Regulated Price Plan | Class B | Class A |
|---|---|---|---|
| **Consumer Types** | • Residential<br>• Small Business<br>• Farms | • Commercial<br>• Institutional<br>• Small industrial | • Large commercial<br>• Large industrial |
| **Load Size** | Below 0.05 MW | Between 0.05 MW and 1 MW | Above 1 MW |
| **Total Consumption** | 58 TWh | 57 TWh | 26 TWh |
| **Share of Consumption** | 41.1% | 40.4% | 18.4% |

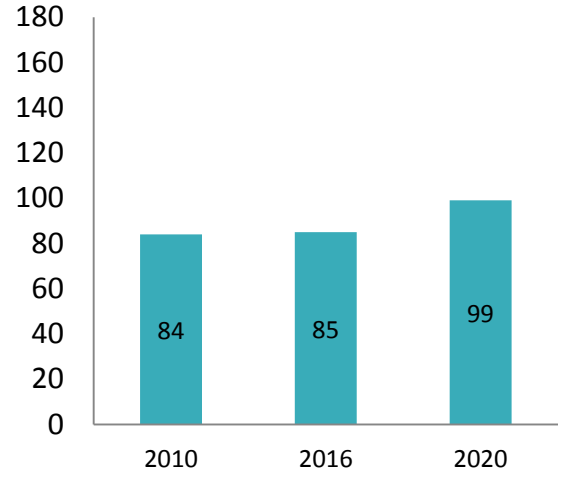
# Prices by Electricity Consumer Class

- Since 2010, average bills for residential consumers (i.e., using 750 kWh/month) have increased by over 50%. Rates are forecast to continue to increase, with residential consumers paying an estimated 6% by 2020.
- Industrial electricity rates have remained relatively flat over the same time period, due primarily to the Industrial Conservation Initiative (ICI). ICI represents a cost shift of about $5/month for residential electricity consumers. Industrial electricity consumers are forecast to see an increase of 16% by and 2020.

**Typical Residential Bill (750/kWh per month)**



**Typical Class A (Industrial) Price ($/MWh)**



**Note:** 2016 represents year-to-date September 2016 for industrial. Cap and trade proceeds recycling is included for the industrial consumer for 2020.

# Rate Mitigation Levers

- To provide further rate relief to Ontario electricity consumers, the government can use one or more of the levers outlined below:
  - **Tax-based Lever:**
    - Provide rebates funded from the tax-base or transfer items currently paid through the rate-base to the tax-base.
  - **Rate-based Lever:**
    - Shifts costs within the rate-base from one customer group to another to achieve electricity system benefits and/or policy goals.
  - **Cap and Trade Proceeds Lever:**
    - Use cap and trade proceeds on initiatives that help reduce greenhouse gas (GHG) emissions from the electricity sector (e.g., recycling proceeds during off-peak periods) while providing benefits to some or all electricity consumers.

# Traditional Rate Mitigation Programs

- Ontario has implemented a number of rate-based programs to help residential and industrial electricity consumers:
  - The Ontario Electricity Support Program (OESP) provides ongoing assistance directly on the bills of eligible low-income electricity consumers
  - The Rural or Remote Rate Protection (RRRP) program is provided to rural and remote residential and farm customers because the cost of distributing power to remote areas is much higher than for urban areas.
  - The Industrial Conservation Initiative (ICI) encourages Ontario's largest consumers to reduce consumption during peak periods while reducing system costs.
- There are also tax-base programs to help manage electricity prices:
  - Rebate the provincial portion of the HST from the electricity bills of residential, small business and farms as of January 1, 2017.
  - Northern Industrial Electricity Rate Program (NIERP), in which participants receive a rebate of two cents per kilowatt hour. On average, industrial electricity prices can be reduced by up to 20%.
- While rate-based programs provide relief to certain electricity consumers, they shift other costs to remaining ratepayers (See Appendix for additional details).

# Driving Down Prices for Consumers

- Since 2013, a number of actions have been taken to drive down prices for consumers wherever possible:
  - Renegotiating the Green Energy Investment Agreement, reducing contract costs by $3.7 billion;
  - Deferring the construction of two new nuclear reactors at Ontario Power Generation's Darlington facility, avoiding an estimated $15 billion in new construction costs;
  - Approving Ontario Power Generation's plans to enable the ongoing operation of Pickering up to 2024, which is expected to save ratepayers as much as $600 million;
  - Reducing Feed-In-Tariff (FIT) prices through annual price reviews, saving ratepayers at least $1.9 billion relative to the 2013 Long-Term Energy Plan (2013 LTEP) forecast; and
  - Suspending the second round of the Large Renewable Procurement (LRP II) process and the Energy-from-Waste Standard Offer Program to save up to $3.8 billion in electricity system costs relative to 2013 LTEP.

# Cost Shifts in the Electricity Sector – Current Programs

- Several programs in the electricity sector “shift costs” from one group of electricity consumers to another:
  - **Rural or Remote Rate Protect** (**RRRP)** is a longstanding program that reduces the delivery charge for rural electricity consumers and is paid for by all consumers in Ontario through a regulatory charge on bills.
  - **Ontario Electricity Support Program (OESP)** is funded via a regulatory charge on consumer bills and provides support for qualifying low income electricity consumers.
  - **Industrial Conservation Initiative (ICI)** empowers large consumers to lower their costs by reducing their demand during peak hours. In the process, ICI shifts costs from large electricity consumers to all other consumers in Ontario.
  - **Industrial Electricity Incentive** (**IEI**) program, offers reduced electricity prices for companies starting or expanding operations in Ontario. All electricity consumers in Ontario pay for the price reduction that IEI participants receive.

# Cost Shifts in the Electricity Sector (Cont'd)

- The tables on the right show the estimated cost shifts that result from existing government programs.
- ICI has had the largest cost shift of all the programs, due to the large size of Global Adjustment (GA) and the way that it is recovered from consumer classes.
- RRRP and OESP impact the regulatory line on consumer bills, while ICI, IEI and conservation affect GA (i.e., Electricity line on bills of Regulated Price Plan consumers).

**Cost Shift Impacts - Residential Bill**

*Typical 750 kWh/month Toronto Hydro consumer*

| *$/month* | 2011 | 2012 | 2013 | 2014 | 2015 | 2016 |
|---|---|---|---|---|---|---|
| ICI | 2.65 | 3.25 | 3.88 | 3.53 | 4.75 | 4.77 |
| RRRP | 0.90 | 0.82 | 0.84 | 0.92 | 0.93 | 0.94 |
| OESP | - | - | - | - | - | 0.84 |
| Conservation | 1.85 | 1.92 | 2.00 | 1.58 | 2.43 | 2.45 |
| IEI | - | - | 0.08 | 0.09 | 0.11 | 0.12 |
| **Total** | **5.41** | **5.99** | **6.81** | **6.13** | **8.21** | **9.12** |

**Cost Shift Impacts - Industrial Bill**

*Typical Class A consumer*

| *$/MWh* | 2011 | 2012 | 2013 | 2014 | 2015 | 2016 |
|---|---|---|---|---|---|---|
| ICI | -22.17 | -26.36 | -30.29 | -25.91 | -33.79 | -33.92 |
| RRRP | 1.20 | 1.10 | 1.12 | 1.23 | 1.24 | 1.25 |
| OESP | - | - | - | - | - | 1.13 |
| Conservation | 1.53 | 1.59 | 1.66 | 1.31 | 2.01 | 2.02 |
| IEI | - | - | 0.07 | 0.08 | 0.09 | 0.10 |
| **Total** | **-19.43** | **-23.67** | **-27.44** | **-23.29** | **-30.45** | **-29.43** |

**Note:** OESP did not come into effect until 2016. The 2016 values represent forecasts and are subject to change.

# Cost Shifts in the Electricity Sector (Cont'd)

- The table on the right shows the total cost for various government electricity programs. These programs are currently funded through the electricity system ratebase.

- Funding of these programs through the fiscal plan would remove these costs from the electricity system (i.e., Placing these costs on the taxbase).

**Cost of Programs**

*By government program*

| *$M* | 2011 | 2012 | 2013 | 2014 | 2015 | 2016 |
|---|---|---|---|---|---|---|
| ICI | 506 | 615 | 736 | 670 | 890 | 893 |
| RRRP | 172 | 156 | 159 | 176 | 174 | 176 |
| OESP | - | - | - | - | - | 158 |
| Conservation | 329 | 339 | 354 | 280 | 425 | 428 |
| IEI | - | - | 15 | 16 | 18 | 19 |

- For example, removing the roughly $900 million of program cost from the Industrial Conservation Initiative (ICI) program would save the typical residential electricity consumer $4.77 per month in 2016.

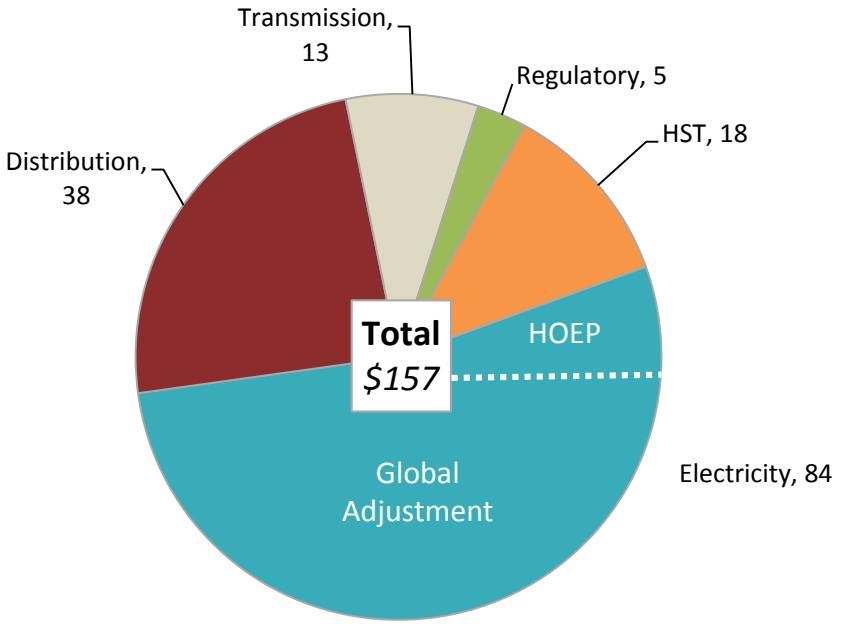
**Note:** OESP did not come into effect until 2016. The 2016 values represent forecasts and are subject to change.

# Residential Electricity Prices

- There are approximately 4.5 million residential consumers in Ontario.
- The Regulated Price Plan includes nearly all residential consumers, as well as small businesses. Regulated Price Plan consumers pay a blended commodity rate regulated by the OEB, which is set every six months.
- For households, the Debt Retirement Charge (DRC) was removed from residential electricity bills as of January 1, 2016.
- In addition, the Ontario Electricity Support Program (OESP) provides an ongoing rate reduction directly on the bills of low-income electricity consumers who have applied and meet the eligibility requirements. The program is funded through the rate base.
- Rural customers, in particular those with electrical heating, pay higher monthly bills.

**Typical Residential Monthly Bills ($)**

*As of November 1, 2016 (750 kWh/month)*



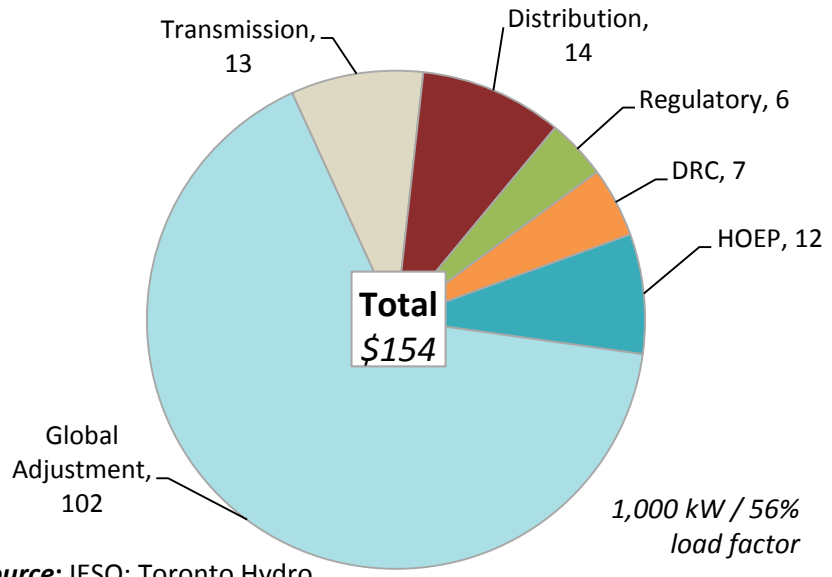
***Source*: OEB, Toronto Hydro**

# Commercial Electricity Prices

- There are approximately 55,000 commercial and institutional consumers in the province. These consumers are Class B consumers, and have separate line items on the electricity bill for HOEP and GA.
- There is a high degree of differentiation amongst consumers within the commercial sector in terms of size and consumption patterns. For example, an elementary school has a much different hourly load profile compared to a full service restaurant. This is an important consideration when looking at the bill impacts of policy options.

**Typical Commercial Price ($/MWh)**

*YTD June 2016 (Non-RPP Class B)*



***Source*:** IESO; Toronto Hydro

- Consumers in the commercial sector do not pay time-of-use prices and have little incentive to shift demand away from high demand hours.
- Targeted pricing programs are currently not available for Class B consumers.

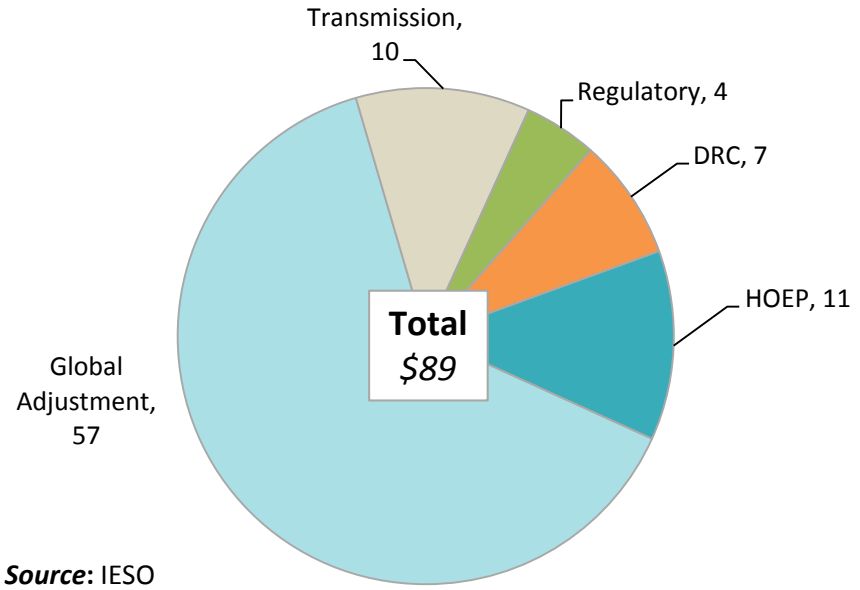
*** Note**: Most commercial consumers receive input tax credits for their HST.

# Industrial Electricity Prices

- There are about 300 large industrial consumers in Ontario.
- Measures in place to mitigate industrial electricity prices include ICI and NIERP.
- ICI lowers costs for eligible large electricity consumers (i.e., those with monthly peak demand exceeding 3 MW) that reduce consumption during peak periods.
  - ICI consumers reduce their electricity rates by 25% on average.

**Typical Large Industrial Price ($/MWh)**

*YTD June 2016*



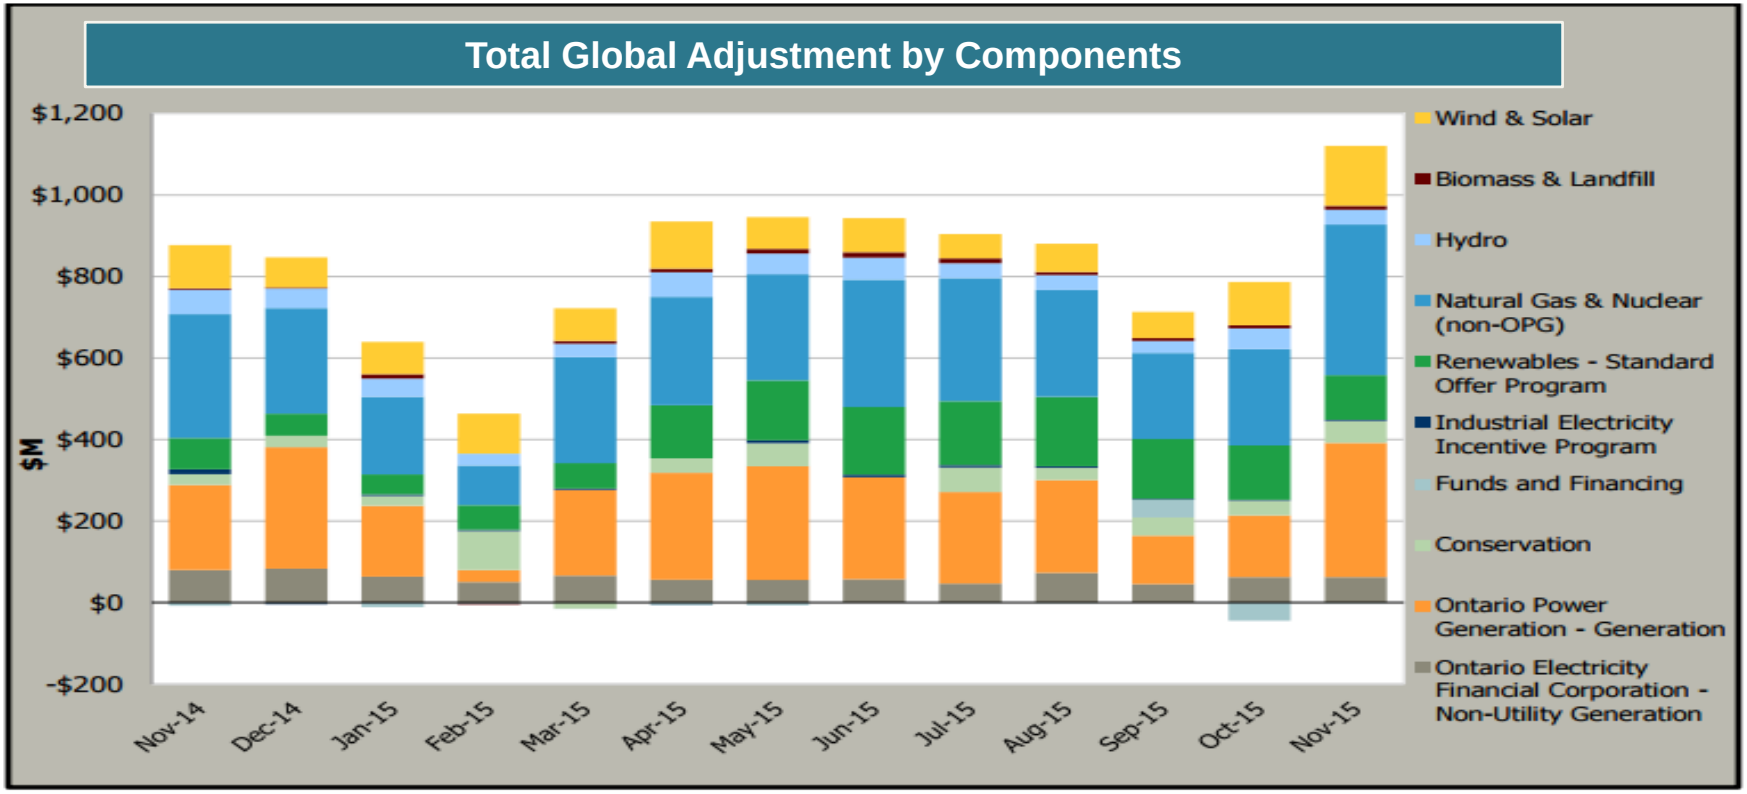
***Source*: IESO**

- Participants in NIERP receive a rebate of $20/MWh. On average, industrial electricity prices are reduced by about 20% through the program, reducing all-in prices to $69/MWh for these consumers. The program is funded through the tax base.

*** Note:** Industrial consumers receive input tax credits for their HST.

# Total Components of Global Adjustment

- Global Adjustment (GA) is a market mechanism that recovers costs from electricity consumers, including the cost of almost all conservation programs in the province (i.e., approximately half a billion dollars in 2016).



**Source:** IESO Monthly Market Report (November 2015)

# Cancel/Adjust Renewable Energy Procurements

# LRP I Pre-Construction Liability Limits

- All 16 successful LRP I developers accepted Optional Termination Provisions when the LRP I Contracts were executed in April 2016.
- If IESO chooses to enact the Optional Termination provision before a project has met all Key Development Milestones, IESO is required to pay pre-construction development costs up to the Pre Construction Liability Limit.
- Pre-construction development costs include costs incurred for feasibility studies, obtaining site access rights, work towards environmental approvals, business development plans, negotiation of contracts for design, equipment, construction and financing, reasonable overhead expenses, and other reasonable costs incurred.
- The Pre Construction Liability Limits are:
  - Non-Rooftop Solar: $250,000 plus $10.00/kW of Contract Capacity
  - Waterpower: $500,000 plus $20.00/kW of Contract Capacity
  - On-Shore Wind: $400,000 plus $2.00/kW of Contract Capacity
- According to the LRP I Optional Termination provision, the developer has a duty to take reasonable steps to mitigate losses, liabilities, costs and damages incurred as a result of the Optional Termination.
  - The IESO will not provide compensation for amounts which are attributable to a developer's failure to take reasonable steps to mitigate.

DRAFT

# General Comments on Energy's Deck

- Energy's deck note various actions taken to-date to reduce costs or cost pressures, such as deferring generation supply investments, improving market efficiency, and reducing the costs of existing procurements.
- Aside from reducing costs on the electricity bill, it is not clear what principles are being applied, short term or long term for electricity pricing.
  - A principle that was applied in the past was to ensure that electricity consumers paid the true cost of electricity, for example.
  - The Energy proposals appear to be about, in part at least, moving some costs from the rate base to the tax base.
- However, the Energy proposals may be seen as having a fairly limited impact, e.g., a little over $8/month for residential, or a little over 5% of the monthly bill (though not all of the proposals have been costed / assessed).
  - The proposals would have a significant fiscal cost [about $1.5 billion per year in new fiscal costs].
- There is already significant amounts of existing fiscally-funded electricity price mitigation
  - Averages over $1.5 billion per year over the past five years, and estimated to increase to about $2 billion in 17-18 (see subsequent slide for estimated costs over time, and likely increasing over time), with the total tax-based costs rising to about $3.4 billion in 2017-18.
  - These existing mitigation costs are not presented in Energy's deck.
  - Also not included is any "hidden" price mitigation through constrained financial performance of, e.g., OPG.

DRAFT

# Context: Current Status on Taxpayer Funded Electricity Price Mitigation

| ($M) | 2011-12 | 2012-13 | 2013-14 | 2014-15 | 2015-16 | 2016-17[1] | 2017-18[1] |
|---|---|---|---|---|---|---|---|
| OCEB | 1,033 | 994 | 1,006 | 1,078 | 860 | - | - |
| OREC | - | - | - | - | - | 300 | 1,100* |
| Ending DRC[2] | - | - | - | - | 85 | 330 | 330 |
| NIERP | 120 | 120 | 115 | 108 | 120 | 120 | 120 |
| NOEC | 23 | 24 | 25 | 24 | 26 | 25 | 25 |
| OEPTC[3] | 354 | 406 | 418 | 429 | 444 | 450 | 460 |
| **TOTAL** | **1,530** | **1,544** | **1,564** | **1,639** | **1,525** | **1,195** | **2,005** |

1. 2016-17, 2017-18 based on forecasted numbers
2. 2015-16 estimated for 3 months of reduced DRC revenue
3. OEPTC amounts in all years based on energy component of the rebate.

* Sourced from Energy PRRT submission

OCEB – Ontario Clean Energy Benefit
OREC – Ontario Rebate for Electricity Consumers
DRC – Debt Retirement Charge
NIERP – Northern Ontario Electricity Rate Program
NOEC – Northern Ontario Energy Credit
OEPTC – Ontario Energy and Property Tax Credit

- The table above shows the annual amount of taxpayer funded electricity price mitigation from 2011-12 to 2017-18.
- From 2011-12 to 2015-16 there has been an annual fiscal impact of approximately $1.6 billion due to electricity price mitigation programs.
- In 2016-17, the fiscal impact due to electricity price mitigation programs is estimated at approximately $1.2 billion.
- In 2017-18, due primarily to the start of the Ontario Rebate for Electricity Consumers, the expected fiscal impact due to electricity price mitigation programs is approximately $2.0 billion.

# Electricity Price Mitigation

General Decision Points on Program Features:

- Funding: Rate base vs Tax base
  - Tax base programs have a direct fiscal impact on the Province's finances, and shift costs based on taxpayer incidence and impact on expenditure room for other, non-electricity, programs.
  - Rate base programs shift costs from one group of ratepayers to another.
- On-bill vs Not On-bill
  - Recent focus has been on on-bill programs, such as OESP and OREC.
  - Older tax-base funded programs that are not visible on the bill are still in place, such as NOEC and OEPTC.
  - As OESP enrollment increases, could consider phasing out the non-bill benefits of NOEC and OEPTC.
- Targeted vs General
  - Recent new programs include both general (OREC) and targeted (OESP) programs.
  - Consideration could be made to make OREC more conservation-friendly (e.g., a monthly eligible consumption cap brought in, as with the former Ontario Clean Energy Benefit), and maybe a higher cap in the winter to allow for space heating costs.
  - A targeted industrial program recently extended and made on-going is the Northern Industrial Electricity Rate (NIER) program.

# Energy's Proposals

Energy is proposing additional electricity price mitigation programs, currently funded through the electricity system, be fiscally-funded. They could be upwards of $2 bn/year, (plus the departure tax), which is not included in the fiscal plan, which would challenge the path to balance.

- OESP & RRRP (Total of about $0.4 Bn/yr): This includes shifting the cost of the Ontario Electricity Support Program (OESP) and the Rural or Remote Electricity Rate Program (RRRP) to the tax base. Note that the fiscal exposure is larger if the OESP take up rate is larger, faster than assumed.

- Industrial Conservation Initiative (ICI -- About $900+ M/yr): Energy also shows, as a potential residential price mitigation measure, the cancellation of the ICI.
  - Energy is not initially proposing it be continued instead as taxpayer funded, but notes that about 30% price increase (from $85/MWh to $110), if ICI is cancelled, for the large Class A customers benefiting from ICI currently.
  - As this cost estimate is for 2016, prior to the planned expansion of the ICI, this could further increase the fiscal exposure by about $100 million).

- Departure Tax: As a result of the IPO, Hydro One paid a "departure tax" payment in lieu of tax (PIL) of $2.6 billion, as a final true-up of its PILs tax obligation.
  - This was paid to the Ontario Electricity Financial Corporation and helped reduce stranded debt.
  - Using some or all of it for price mitigation would change the net stranded debt paydown by OEFC resulting from the IPO. This would also be a one-time measure (potentially over a few years), and fiscal impact, as the departure tax amount was one-time.

- Other fiscal cost risks (Total of about $0.8+ Bn):
  - Amortisation of conservation costs also poses a fiscal risk (about $0.4 bn/yr),
  - Ending the DRC early for Class B customers (commercial, small industrial) (about $0.4 bn/yr to 2017-18)
  - Lowering of the debt interest paid by OPG (about $30 – 70 million/yr between 2017 and 2021),

DRAFT

# Fiscal Mitigation Options

- With the addition of recent and new price mitigation measures, a review should be initiated on fiscally-funded programs. There could be a phase down / out transition period considered. Examples include the following:

- Ontario Energy and Property Tax Credit (OEPTC) and Northern Ontario Energy Credit (NOEC):
  - Phase down and/or out the non-on-bill benefits of. (Save up to about $460 M/yr)
  - These targeted, low-income measures were introduced after the HST was introduced.
  - The OESP provides a larger, targeted and on-bill relief to qualifying consumers.

- Ontario Rebate for Electricity Consumers (OREC):
  - Introduce over time a monthly eligible consumption cap, with perhaps a higher cap in the winter to allow for space heating costs.
  - As with the prior OCEB cap, provides a rough incentive for conservation and correlation to larger homes. A higher cap in winter may help with space-heating issue.
  - May be challenging to implement.

- Greenhouse Gas Reduction Account:
  - If ICI is put on the tax-base, make it eligible for GGRA funding.
  - Positioned as, e.g., providing annual benefits from participants conserving and shifting off-peak to reduce reliance on GHG-emitting peaking plants

DRAFT

# Proposed Taxpayer Funded Electricity Price Mitigation
(To be revised)

| ($M) | 2016-17[1] | 2017-18[1] | 2018-19[1] | 2019-20[1] | 2020-21[1] |
|---|---|---|---|---|---|
| OCEB | - | - | - | - | - |
| OREC | 300 | 1,100* | 1,100* | 1,200* | 1,200* |
| Ending DRC[2] | 330 | 330 | -- | -- | -- |
| NIERP | 120 | 120 | 120 | 120 | 120 |
| NOEC | 25 | 25 | 25 | 25 | 25 |
| OEPTC[3] | 450 | 460 | 470 | 481 | 481 |
| **CURRENT TOTAL** | **1,195** | **2,005** | **1,715** | **1,826** | **1,826** |
| 1. OESP | | 106 | 119 | 127 | 132 |
| 2. RRRP | | 292 | 300 | 306 | 315 |
| 3. First Nations Delivery Rate | | 18 | 18 | 18 | 18 |
| 4. Fund ICI through Tax Base | | 900+ | 900+ | 900+ | 900+ |
| 5. Departure Tax | | TBD | TBD | TBD | TBD |
| 6. Conservation Amortisation | | | | | |
| 7. DRC Ended for Class B | 110 | 450 | | | |
| 8. Other | | | | | |
| **TOTAL** | **1,305** | **3,871** | **3,152** | **3,177** | **3,191** |

1. 2016-17, 2017-18 based on forecasted numbers
2. Estimated impact up to March 31, 2018
3. OEPTC amounts in all years based on energy component of the rebate.

- As shown above, if all measures proposed in this deck were to be accepted taxpayer funded contributions to electricity price mitigation would increase to about $3.2 billion, or more, by 2020-21. That is a 145% increase from the current forecast for 2016-17 or a 93% increase when comparing against the current expected funding for 2017-18.
- These amounts were not considered in the 2016-17 Fiscal Plan and could put at risk the Province's fiscal objectives for 2017-18 and beyond.

# Appendix

DRAFT

# Background on Taxpayer-funded Electricity Price Mitigation

| Program | Annual Fiscal Impacts ($M) | Date | Details |
|---|---|---|---|
| **Ontario Clean Energy Benefit (OCEB)** | ~1,000 | Jan 1 2011 to Dec 31, 2015 | OCEB provided over four million residential customers, and over 400,000 farm, small business and other small users with a benefit equal to 10 per cent of the total cost of electricity on their bills, including tax. Effective September 1, 2012, 10 per cent benefit was capped for the first 3,000 kWh of electricity consumed per month. OCEB expired December 31, 2015, as legislated. |
| **Removed Debt Retirement Charge (DRC) from Residential Bills** | ~330 | Jan 1, 2016 to Mar 31, 2018 | The government removed the DRC from residential electricity users' bills as of January 1, 2016. This is saving a typical residential user about $70 each year and meant ending the DRC earlier for these users than otherwise provided for in the *Electricity Act, 1998*. |
| **Ontario Rebate for Electricity Consumers (OREC)** | ~1,200 | Jan 1, 2017 onward | This ongoing program will rebate -- directly on consumers' residential electricity bills -- an amount equal to the provincial portion of the Harmonized Sales Tax (HST). |
| **Northern Industrial Electricity Rate (NIER) Program** | 120 | March 2010 | As announced in Budget 2015, the government committed to ongoing support for northern industrials with $120 million allocated annually. NIER was previously extended in 2012 for an additional three-year term, effective April 1, 2013 and also for a year effective April 1, 2016, with an allocation up to $120 million per year.<br>Qualifying participants receive a rebate of two cents per kilowatt-hour (kWh) up to a maximum of $20 million per year per company.<br>NIER initially established as a three-year program in Budget 2010, effective April 1, 2010. |
| **Northern Ontario Energy Credit** | ~25 | Budget 2010 | Delivered as part of the Ontario Trillium Benefit, provides individuals living in northern Ontario with a credit of up to $146 per year for the 2016 benefit year, and families up to $224.[1] |
| **Ontario Energy Property Tax Credit** | ~445[1] | Budget 2010 | Delivered as part of the Ontario Trillium Benefit, energy portion provides up to $224 per year (inflation adjusted) for low-to moderate-income individuals and families, and for qualifying seniors.[1] |

1. Energy portion cost only. Both the energy portion of the Ontario Energy and Property Tax Credit (OEPTC) and NOEC were introduced/enhanced following the introduction of the HST and have a significant annual fiscal cost (totalling about $500 million annually).

DRAFT

# Timeline: Taxpayer-funded Electricity Price Mitigation

**Budget 2010: OEPTC, NOEC Proposed as part of the Ontario Trillium Benefit**

*In the 2011 Budget, the government combined the payments of three existing tax credits — the Ontario Sales Tax Credit, the Ontario Energy and Property Tax Credit, and the Northern Ontario Energy Credit — to create the OTB. The OTB is paid in monthly instalments throughout the year, which helps people meet their expenses as bills arrive.*

**Ontario Clean Energy Benefit** (Jan 1 2011 to Dec 31 2015)

*The OCEB was introduced in the 2010 Ontario Economic Outlook and Fiscal Review to help consumers transition to a cleaner electricity system. As set out in legislation, the OCEB ended on December 31, 2015. The Province has introduced rate mitigation measures to be implemented after December 31, 2015.*

*OCEB provided over four million residential customers, and over 400,000 farm, small business and other small users with a benefit equal to 10 per cent of the total cost of electricity on their bills, including tax, for the first 3,000 kilowatt-hours (kWh) of monthly electricity consumption.*

**Removing DRC from Residential Bills** (Jan 1 2016 to Mar 31 2018)

*The government removed the DRC from residential electricity users' bills beginning on January 1, 2016. This saves a typical residential user about $70 each year and ends the DRC earlier for these users than otherwise provided for in the Electricity Act, 1998.*

**Ontario Rebate for Electricity Consumers**

*As of January 1, 2017, OREC will reduce electricity costs by an amount equal to the provincial portion of the HST for about five million residential consumers, farms and small businesses.*

2010 2011 2012 2013 2014 2015 2016 2017

## History of Northern Industrial Electricity Price Relief

**November 2006**

*The Ontario government announced the Northern Pulp and Paper Electricity Transition Program (NPPETP), a three-year $140 million, to be effective retroactively to October 1, 2006*

**Budget 2009**

*The government announced extension of the NPPETP by one year providing about $58 million with electricity price rebates of 1.8 cents/kWh.*

**Budget 2010**

*NIER program announced, with a projected fiscal cost of $150 M per year, to provide electricity price rebates for qualifying large industrial facilities in northern Ontario. An additional $21.8 million allocated for existing NPPETP in 2010-11 to be integrated with NIER.*

**September 2010**

*Transition from NPPETP to NIER: pulp and paper mills participating in NPPETP continued to receive the NPPETP rebate of 1.8 cents/kWh until September 30, 2010, with those qualifying for NIER receiving a top-up rebate of 0.2 cents/kWh.*

**December 2012**

*The government announced the extension of the NIER for three years, capping the rebates to a maximum of 2011-12 consumptions levels or $20 million, whichever is lower.*

DRAFT

# Potential Fiscal Impact to the Electricity Sector

- The electricity sector has a significant impact on the Province's fiscal position; through both the revenue and expense sides of the Province's fiscal position.
  - Electricity Rate mitigation programs funded through the tax base have a direct fiscal impact on the Province's finances.
  - Alternatively, electricity rate mitigation programs funded by the rate base shift costs from one group of ratepayers to another.
- The Province's electricity sector agencies and corporations are each consolidated into the government's financial statements, and directly affect the Province's surplus/deficit position.
  - Ontario Power Generation (OPG) financial results have a dollar-for-dollar impact on the Province.
    - Electricity price mitigation strategies involving OPG would lead to a direct fiscal impact.
  - Hydro One financial results have a direct impact on the Province, based on the Province's proportionate ownership.
    - The Province currently holds about 70 per cent of Hydro One.

---

Hi Ron,

Attached are three decks:

1. A markup of Energy's deck to be shared with Energy.
2. A draft annotated version for the DMO/MO at MOF.
3. A draft summary deck.

John and I made several edits to the annotated version to make it more readable for the DMO. Hopefully we didn't misinterpret any of the comments received earlier today.

Thanks to everyone in the three branches for pulling this together on a very short time.

Francisco

**Subject:** Fwd: Potential Rate Mitigation

Hi,

Lets meet in the morning to discuss.

We'll need a product for EOD. Could be an annotated slide deck, as well as a markup. Suggestion on any other formats?

Ron

Ron - can CEFD take the lead on assessing Energy's rate mitigation deck? Per energy this is apparently tracking to MPC on Thursday, though that's news to us here. Will share with MO shortly.

From: Katona, Keley (ENERGY)
Sent: December 5, 2016 7:44 PM
To: McLean, David (MOF); MacIntyre, Kyle (TBS); Foster, Robert (CAB); Kwamena, Boafoa (CAB)
Subject: FW: Potential Rate Mitigation

Hi,

See attached and below. We are aiming to turn around a new version of the deck, incorporating any comments your ministries might have before major projects on Thursday. As such, could you please pass along your comments by end of day tomorrow?

If there are questions, I'm happy to discuss.

Thanks,
Keley

Subject: Potential Rate Mitigation

Hi,

Attached is a draft of the rate mitigation deck. This is tracking to major projects on Thursday for a preliminary discussion. As you can see there are a number of initiatives that have fiscal implications so your input and comments would be appreciated. Keley can coordinate with your EAs. I understand that Andrew T. plans to share with PO/your MOs.

Serge

Ontario

MINISTRY OF
ENERGY

# Proposed Initiatives to Transform Ontario's Electricity Sector

## Working Draft

December 5, 2016

CONFIDENTIAL DRAFT

# Context

- Electricity costs are increasing as the necessary investments are made to decarbonize and modernize the province's electricity infrastructure.
  - Since 2003, the Province has invested more than $35 billion in over 16,000 megawatts (MW) of new and refurbished cleaner generation, including nuclear, natural gas and renewables.
  - Over the same period, Hydro One has invested $15.5 billion to enhance and renew its transmission and distribution systems.
  - As additional electricity generation comes online, nuclear units are refurbished and distribution and transmission investments are made, prices are forecast to continue to increase.

- Actions have been taken to drive down electricity costs, including deferring investments in generation (e.g., new build nuclear), improving market efficiency (e.g., introduction of wind dispatch) and decreasing the cost of renewable procurements (e.g., Green Energy Investment Agreement ~~GEIA~~ renegotiation, decreasing FIT prices).

- Additional steps have been taken to increase cost effectiveness and improve efficiency by adopting new electricity market approaches, such as:
  - Enhancing competition between developers of large renewable projects through the Large Renewable Procurement (LRP) process to drive down price and secure clean, reliable generation for the province;
  - Directing IESO to end the process of negotiating new NUG contracts pending the development of a Capacity Auction (i.e., Market Renewal); and
  - Launching the first IESO Demand Response Auction (i.e., a competitive process through which demand-side resources are selected to be available to reduce their electricity consumption as needed).

# Context (Cont'd)

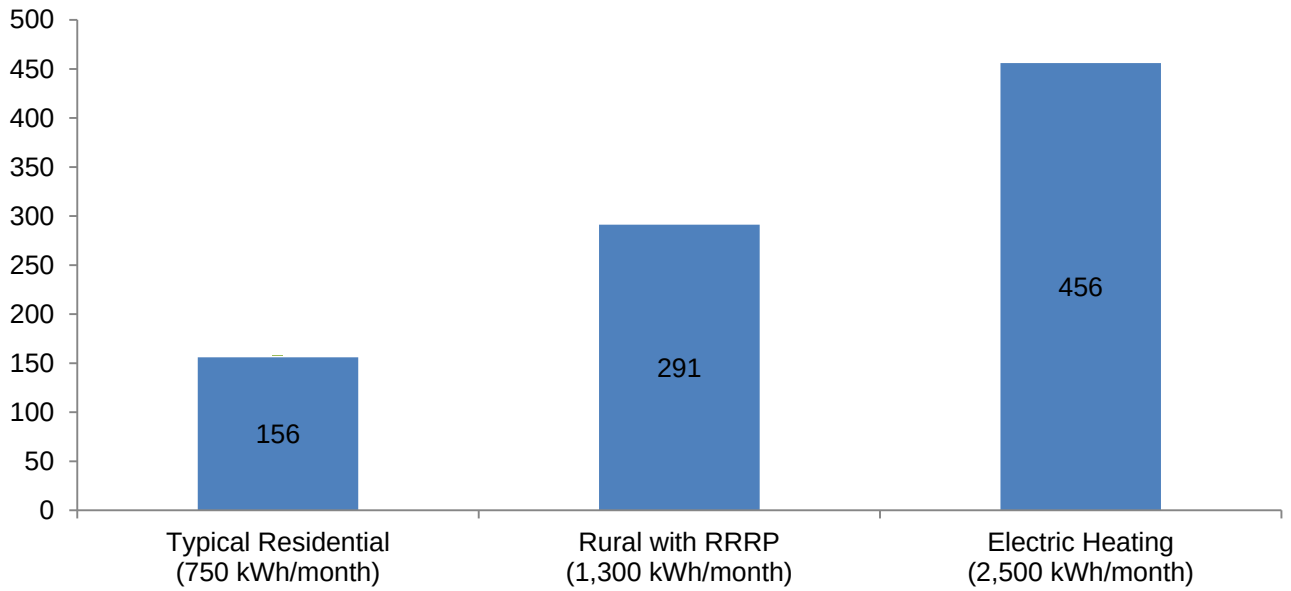
- Following the 2016 Throne Speech, a number of actions were announced to further reduce electricity costs, such as:
  - Providing an 8 per cent rebate before tax, equivalent to the provincial portion of HST, for approximately 5 million eligible electricity consumers including residences, small businesses and farms;
  - Increasing the amount of rate protection available to approximately 330,000 eligible rural customers living in low-density areas by updating the Rural or Remote Rate Protection (RRRP) program;
  - Lowering the Industrial Conservation Initiative (ICI) threshold to 1 MW and removing sector restrictions so that more consumers can benefit;
  - Suspending the second round of the Large Renewable Procurement (LRP II) and the Energy-from-Waste Standard Offer Program to save up to $3.8 billion in costs; and
  - Recycling a portion of cap and trade auction proceeds to keep rates affordable for industrial and commercial electricity consumers.
- On November 28, 2016, the Minister of Energy announced the need for changes in how electricity resources are procured and the need for wholesale market renewal.

- The Ministry of Energy is currently updating its Long-Term Energy Plan (LTEP), which provides an opportunity to consider a range of policy changes to how the Ontario energy sector operates.

# Current Electricity Prices – Residential

- Residential consumers electricity prices continue to be a concern for many Ontarians, particularly those that rely on electric heat.
  - **Note:** The typical residential bills are currently below the 2013 ~~Long-Term Energy Plan (2013~~ LTEP~~)~~ forecasts ($159 / 750kWh)

**Residential Electricity Bills**
*in $/month*

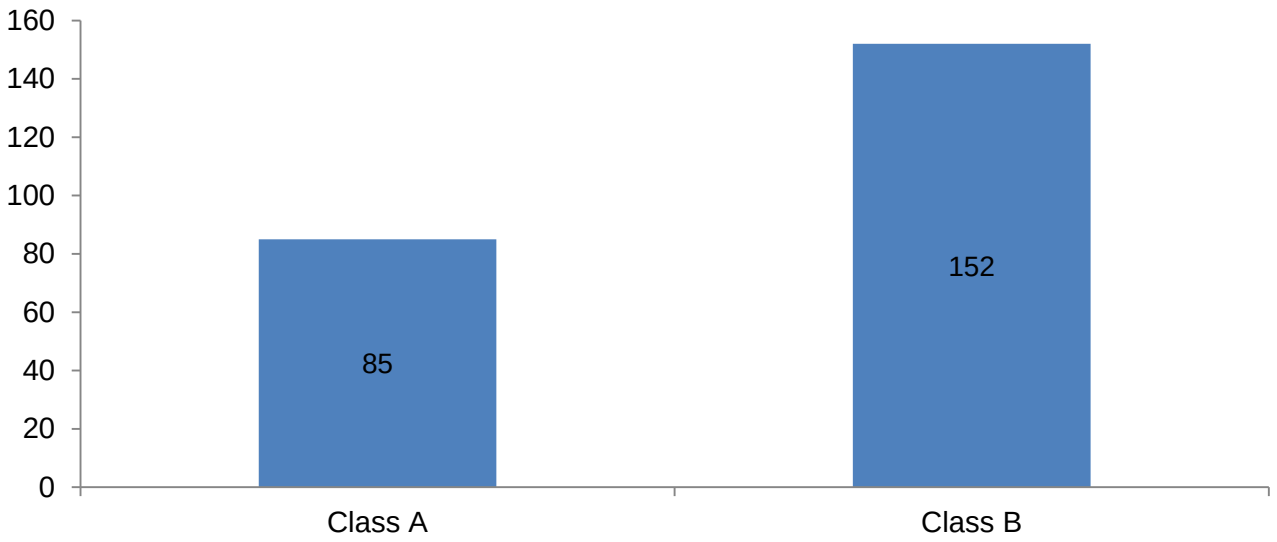


**Note**: Typical residential and electric heating shown above are based on Toronto Hydro; rural is based on connection to Hydro One as a R2 customer eligible to receive the Rural or Remote Rate Protection (RRRP) credit of $31.50.

# Current Electricity Prices – Industrial and Commercial

- While large industrial electricity consumers (i.e., Class A) rates are competitive with other jurisdictions, rates for commercial/small industrial consumers (i.e., Class B) are higher by comparison.
  - **Note:** Current industrial and commercial prices are below 2013 LTEP forecasts ($96 / MWh)

**Current All-In electricity Price**
*in $/MWh*



**Note**: Based on year-to-date (YTD) September 2016 prices. Class A reflects a transmission-connected consumer. Class B reflects a 1 MW load operating at 56% load factor and connected to Toronto Hydro.

# Current Status on Taxpayer Funded Electricity Price Mitigation

| ($M) | 2011-12 | 2012-13 | 2013-14 | 2014-15 | 2015-16 | 2016-17[1] | 2017-18[1] |
|---|---|---|---|---|---|---|---|
| OCEB | 1,033 | 994 | 1,006 | 1,078 | 860 | - | - |
| OREC | - | - | - | - | - | 300 | 1,100* |
| Ending DRC[2] | - | - | - | - | 85 | 330 | 330 |
| NIERP | 120 | 120 | 115 | 108 | 120 | 120 | 120 |
| NOEC | 23 | 24 | 25 | 24 | 26 | 25 | 25 |
| OEPTC[3] | 354 | 406 | 418 | 429 | 444 | 450 | 460 |
| **TOTAL** | **1,530** | **1,544** | **1,564** | **1,639** | **1,525** | **1,195** | **2,005** |

1. 2016-17, 2017-18 based on forecasted numbers
2. 2015-16 estimated for 3 months of reduced DRC revenue
3. OEPTC amounts in all years based on energy component of the rebate.

* Sourced from November LRC Submission

OCEB – Ontario Clean Energy Benefit
OREC – Ontario Rebate for Electricity Consumers
DRC – Debt Retirement Charge
NIERP – Northern Ontario Electricity Rate Program
NOEC – Northern Ontario Energy Credit
OEPTC – Ontario Energy and Property Tax Credit

- The table above shows the annual amount of taxpayer funded electricity price mitigation from 2011-12 to 2017-18.
- From 2011-12 to 2015-16 there has been an annual fiscal impact of approximately $1.6 billion due to electricity price mitigation programs.
- In 2016-17, the fiscal impact due to electricity price mitigation programs is estimated at approximately $1.2 billion.
- In 2017-18, due primarily to the start of the Ontario Rebate for Electricity Consumers, the expected fiscal impact due to electricity price mitigation programs is approximately $2.0 billion and before considering any additional funding from the tax base.

# Proposed Initiatives – Overview

- The suite of proposed initiatives are intended to:
  - Transform how the electricity market operates in Ontario;
  - Re-set how government programs are funded (i.e., rate-base vs tax-base);
  - Provide system benefits (e.g., industrial load retention);
  - Lower the cost of electricity for residential and industrial consumers; and
  - Increase cost effectiveness and improve efficiency.

- The proposed initiatives include:
  1. Implement Market Renewal Initiatives
  2. Fund Electricity Support Programs Through The Tax-base
  3. Eliminate the Industrial Conservation Initiative (ICI)
  4. Amortize Conservation Program Costs
  5. LDC Efficiencies
  6. Rate Design Initiatives
  7. Reduced Cost of OPG Borrowing
  8. End Debt Retirement Charge (DRC) Early for Commercial/Small Industrial Class B Electricity Consumers
  9. Dedicate Departure Tax
  10. Cancel/Adjust Renewable Energy Procurements

- The proposed initiatives provide opportunities to reduce electricity costs for residential and industrial consumers while at the same time transforming the province's electricity market and yielding benefits for the electricity system.

# Proposed Initiatives – Impacts

- Each of the proposed initiatives under consideration target different government programs and different parts of the electricity bill. The proposals impact different classes of electricity consumers to varying degrees.

| Proposal | Program / Initiative | Line on Bills | Who Benefits |
|---|---|---|---|
| 1. Implement Market Renewal Initiatives | Market Renewal | Electricity, Global Adjustment, Regulatory | Market Renewal: All electricity consumers |
| 2. Fund Electricity Support Programs Through The Tax-base | OESP, RRRP | Regulatory | All electricity consumers evenly |
| 3. Eliminate the Industrial Conservation Initiative (ICI) | ICI | Electricity, Global Adjustment | Only Class B electricity consumers (i.e., residential) **Note:** Will have a negative impact on Industrial consumers. |
| 4. Amortize Conservation Program Costs | Amortization | Electricity, Global Adjustment | Class B electricity consumers and to a lesser extent Class A consumers |
| 5. LDC Efficiencies | Distribution efficiencies | Delivery | All embedded consumers |
| 6. Rate Design Initiatives | Rate structures | Electricity, Global Adjustment | Rate Design Initiatives: Participating electricity consumers |
| 7. Reduced Cost of OPG Borrowing | n/a | Electricity, Global Adjustment | Class B electricity consumers and to a lesser extent Class A consumers |
| 8. End DRC Early for Commercial/Small Industrial Class B Electricity Consumers | Debt Retirement Charge (DRC) | DRC | Class B consumers (i.e., small business and commercial consumers, etc) |
| 9. Dedicate Departure Tax | Departure Tax | TBD | TBD |
| 10. Cancel/Adjust Renewable Energy Procurements | FIT, LRP | Electricity, Global Adjustment | Class B electricity consumers and to a lesser extent Class A consumers |

# Proposed Initiatives – Potential Savings for Typical Residential Electricity Consumers

| *$/750kWh* | 2017 | 2018 | 2019 | 2020 | 2021 | 2022 | Timing of Benefit |
|---|---|---|---|---|---|---|---|
| 1. Implement Market Renewal Initiatives | - | - | - | 1.58 | 1.59 | 1.60 | Longer-Term |
| 2. Fund Electricity Support Programs through the Tax-base | 2.18 | 2.30 | 2.31 | 2.45 | 2.48 | 2.51 | Immediate |
| 3. Eliminate the Industrial Conservation Initiative (ICI) | 4.40 | 4.24 | 4.10 | 4.24 | 3.73 | 3.58 | Immediate |
| 4. Amortize Conservation Program Costs | 1.67 | 1.56 | 1.21 | 0.81 | 0.54 | 0.3 | Immediate |
| 5. LDC Efficiencies | TBD | TBD | TBD | TBD | TBD | TBD | Near-Term |
| 6. Rate Design Initiatives* | - | - | - | - | - | - | Immediate |
| 7. Reduced Cost of OPG Borrowing | 0.13 | 0.13 | 0.13 | 0.18 | 0.18 | 0.18 | Immediate |
| 8. End DRC Early for Class B Electricity Consumers** | - | - | - | - | - | - | n/a |
| 9. Dedicate Departure Tax | TBD | TBD | TBD | TBD | TBD | TBD | Immediate |
| 10. Cancel / Adjust Renewable Energy Procurements | - | - | TBD | TBD | TBD | TBD | Longer-Term |
| **Total decrease on typical monthly bill** | **8.38** | **8.23** | **7.75** | **9.26** | **8.52** | **8.17** | |

**Note:** The above initiatives will provide similar benefits for non-RPP Class B electricity consumers. Proposal 2 assumes OESP participation of 50% and 5-year maturity. *Savings estimates do not include changes related to rate design. ** Class B includes small-medium enterprises (SMEs).

# Proposed Initiatives – Potential Savings for Average Industrial Electricity Consumers

| *$/MWh* | 2017 | 2018 | 2019 | 2020 | 2021 | 2022 | Timing of Benefit |
|---|---|---|---|---|---|---|---|
| 1. Implement Market Renewal Initiatives | - | - | - | 2.11 | 2.12 | 2.13 | Longer-Term |
| 2. Fund Electricity Support Programs through the Tax-base | 2.91 | 3.06 | 3.17 | 3.27 | 3.33 | 3.38 | Immediate |
| 3. Eliminate the Industrial Conservation Initiative (ICI) | (24.12) | (23.21) | (22.45) | (23.23) | (20.42) | (19.61) | Immediate |
| 4. Amortize Conservation Program Costs | 1.15 | 1.08 | 0.84 | 0.56 | 0.37 | 0.25 | Immediate |
| 5. LDC Efficiencies | n/a | n/a | n/a | n/a | n/a | n/a | Near-Term |
| 6. Rate Design Initiatives* | - | - | - | - | - | - | Immediate |
| 7. Reduced Cost of OPG Borrowing | 0.10 | 0.10 | 0.10 | 0.15 | 0.15 | 0.15 | Immediate |
| 8. End DRC Early for Class B Electricity Consumers** | - | - | - | - | - | - | n/a |
| 9. Dedicate Departure Tax | TBD | TBD | TBD | TBD | TBD | TBD | Immediate |
| 10. Cancel / Adjust Renewable Energy Procurements | - | - | TBD | TBD | TBD | TBD | Longer-Term |
| **Total increase on industrial bill** | **19.96** | **18.97** | **18.34** | **17.14** | **14.45** | **13.7** | |

**Note:** Proposal 2 assumes OESP participation of 50% and 5-year maturity. Proposal 3 reflects the elimination of ICI, as opposed to moving ICI cost shift to the taxbase. The $1.75/MWh savings associated with Proposal 7 in 2018 accounts for the fact that under the status quo, DRC will be removed from bills in April 2018. *Savings estimates do not include changes related to rate design. ** Class B includes small-medium enterprises (SMEs).

# Fiscal Considerations

- Funding electricity support programs (i.e., OESP, RRRP, First Nations Delivery Rate) from the tax-base represents approximately $440 million on average annually.

- Ending the Debt Retirement Charge (DRC) for commercial and small industrial electricity consumers (i.e., Class B) early would represent an additional fiscal pressure of about $450 ~~[placeholder for OFA]~~ on the province.

- If the Industrial Conservation Initiative were funded though the tax-base instead of being eliminated, this would represent a $900 million annual cost to the fiscal plan.

- Reducing OPG borrowing costs to the Province's cost of funds is expected to result in a $30 ~~20 to $35~~ million annual fiscal pressure in 2017 to the province ~~[TBC by OPG / OFA]~~ based on new borrowing and increasing to about $70M by 2021.

- Fiscal impacts of allocating a portion of the departure tax to ratepayers will depend on the size of the allocation, as well as timing for the flow of value. The maximum, direct one-time impact is $2.6 billion, with potential ancillary impacts on residual stranded debt defeasance.
- A summary of the annual fiscal impacts of the proposed initiatives is presented in the next slide.

# Proposed Taxpayer Funded Electricity Price Mitigation

| ($M) | 2016-17[1] | 2017-18[1] | 2018-19[1] | 2019-20[1] | 2020-21[1] |
|---|---|---|---|---|---|
| OCEB | - | - | - | - | - |
| OREC | 300 | 1,100* | 1,100* | 1,200* | 1,200* |
| Ending DRC[2] | 330 | 330 | -- | -- | -- |
| NIERP | 120 | 120 | 120 | 120 | 120 |
| NOEC | 25 | 25 | 25 | 25 | 25 |
| OEPTC[3] | 450 | 460 | 470 | 481 | 481 |
| **CURRENT TOTAL** | **1,195** | **2,005** | **1,715** | **1,826** | **1,826** |
| 1. OESP | | 106 | 119 | 127 | 132 |
| 2. RRRP | | 292 | 300 | 306 | 315 |
| 3. First Nations Delivery Rate | | 18 | 18 | 18 | 18 |
| 4. Fund ICI through Tax Base | | 900+ | 900+ | 900+ | 900+ |
| 5. Departure Tax | | TBD | TBD | TBD | TBD |
| 6. Conservation Amortisation | | | | | |
| 7. DRC Ended for Class B | | | | | |
| 8. Other | | | | | |
| **TOTAL** | **1195** | **3,421** | **3,152** | **3,177** | **3,191** |

1. 2016-17, 2017-18 based on forecasted numbers
2. 2015-16 estimated for 3 months of reduced DRC revenue
3. OEPTC amounts in all years based on energy component of the rebate.

- As shown above if all measures proposed in this deck were to be accepted taxpayer funded contributions to electricity price mitigation would increase to about $3.2 billion by 2020-21. That is a 67% increase from the current forecast for 2016-17.
- These amounts were not considered in the 2016-17 Fiscal Plan and could put at risk the Province's fiscal objectives for 2017-18 and beyond.

# 1. Electricity Market Renewal Initiatives

- Continue to move forward with IESO's Market Renewal initiatives:
  - Market Renewal encompasses projects such as a single-schedule system (from the current two-schedule system), more frequent intertie scheduling to better align with other jurisdictions and a day-ahead market. There will be up front capital costs to enable the initiative. IESO is currently assessing these costs.
  - Moving to "technology-agnostic" procurements will provide new opportunities for innovation and modernization and ensure ratepayers receive the best prices possible.

**Considerations**

- Changes related to IESO's Market Renewal initiatives, reflected in HOEP and uplifts, are estimated to save up to $300 million per year, starting in 2020, leading to a reduction of:
  - About $1.60/month or about 1% at current retail prices for a typical residential bill; and
  - About $2/MWh or more than 2% at current all-in prices for industrial and SME electricity consumers.
- The IESO's Market Renewal is a broad initiative that will impact all aspects of Ontario's electricity market. Ontario has had a uniform price since market opening.
- Adopting a technology-agnostic stance will lower the overall cost of providing electricity service by selecting the most cost-effective resources to fulfill various system needs.

# 2. Fund Electricity Support Programs Through the Tax-Base

- Propose to fund electricity support programs, including Ontario Electricity Support Program (OESBP) and Rural or Remote Electricity Rate Protection (RRRP), through the tax-base instead of a regulated charge. This would allow the OESP and the RRRP charges to be removed from the Regulatory line on electricity bills.

**Considerations**

*Consumer Impacts and implementation*

- Transitioning OESP and RRRP to the tax-base would reduce a typical residential bill by about $2.35/month by 2020, and delivering the First Nation rate reduction through tax base would avoid about $0.10/month for a potential total savings of $2.45/month by 2020). As all programs provide strong social benefits, there is precedent for funding these programs through the tax-base.

- To address concerns from low income electricity consumers improvements to OESP could be implemented by increasing credits (could be up to double the current credits)
  - Single low income consumer would see a change from $30 to $45/ month ($540/year):
  - Family of four with electric heat could see a credit of $82.50/month ($990/year); and
  - Would mean no impact on consumer bills and no change to current OESP charge.
- RRRP and OESP are included in the “Regulatory” line on bills. If RRRP and OESP were eliminated from bills, the Regulatory line would decrease; however, as the Regulatory line is the smallest line item component of invoices, there is risk the decrease may not be perceived by customers.

- The RRRP regulation provides a funding mechanism for transmission infrastructure required to grid connect remote First Nation communities. Considerations for how that funding will be supported by the tax base will need to be determined.

- The non-rate mechanism to remove delivery charges from on-reserve First Nation customer monthly bills needs to be further explored.Funding RRRP and/or OESP with tax revenue would require amendments to existing legislation and regulations.

# 2. Fund Electricity Support Programs Through the Tax-Base (cont'd)

- Table below shows estimates of program costs up to 2020:

| Year | OESP | RRRP | First Nations Delivery Rate | TOTAL |
|---|---|---|---|---|
| 2017 | $106M | $292M | $18M | **$416M** |
| 2018 | $119M | $300M | $18M | **$437M** |
| 2019 | $127M | $306M | $18M | **$451M** |
| 2020 | $132M | $315M | $18M | **$465M** |

1) Ontario Electricity Support Program (OESP)
   - After almost a year in market, close to 30% of potentially eligible customers are signed up.
   - The cost projections below assume the program grows to 50% of eligible consumers by 2020 (also assumes 10% administration costs).

2) Rural and Remote Rate Protection (RRRP)
   - Provides benefits to R2 Hydro One consumers, Algoma, and remote communities.
   - Includes the expanded coverage that will begin on January 1, 2017.

3) First Nation rate reduction (currently under development)
   - On November 14, 2016, OEB presented options to the Ministry on reducing costs for on-reserve First Nation customers.
   - OEB's recommended option to provide 100% delivery rate credit, which is estimated at $18.4 million per year.
     - Other options includes a seasonal fixed credit to account for demand changes over the year ($13 million) or a 50% total bill reduction ($23 million).

# 3. Eliminate the Industrial Conservation Initiative (ICI)

- The cost shift from the Industrial Conservation Initiative (ICI) could be removed from electricity bills by eliminating ICI.
  - The ICI allows large electricity consumers to lower their electricity costs by reducing their demand during peak hours.

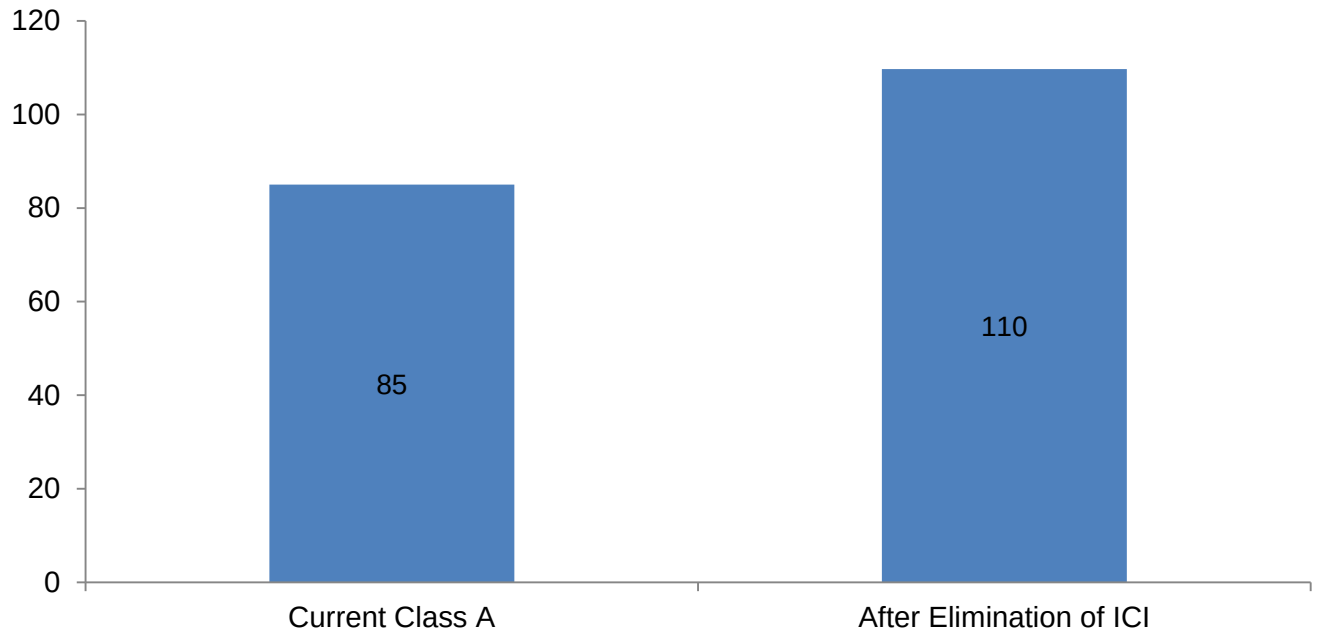
**Considerations**

- Eliminating ICI would result in a benefit of more than $4/month for residential electricity consumers in 2017.
  - However, unless government took action to mitigate the associated cost shift back to industrial consumers, typical industrial prices would increase by about one-third. Such a price increase would pose significant challenges for energy-intensive consumers.
- Industrial stakeholders have indicated that ICI as an integral factor in maintaining competitiveness and retaining industry in the province.
  - Eliminating ICI would limit the “cost shift” onto residential consumers, but it would also lead to a reduction in industrial demand. The large industrial contribution to the fixed costs of running the electricity system would then need to be covered by remaining consumers.
- If ICI is retained, current IESO projections indicate that the cost shift will decrease each year going forward as Global Adjustment (GA) decreases (due to an expected increase in HOEP).
- Alternatively, ICI could be funded through the tax-base at a cost of $900 million annually. There is precedent to use the tax-base for industrial support programs, including the Northern Industrial Electricity Rate Program (NIERP) and the Jobs and Prosperity Fund.

# 3. Eliminate the Industrial Conservation Initiative (cont'd)

- ICI currently provides a benefit of about $25/MWh to Class A electricity consumers.

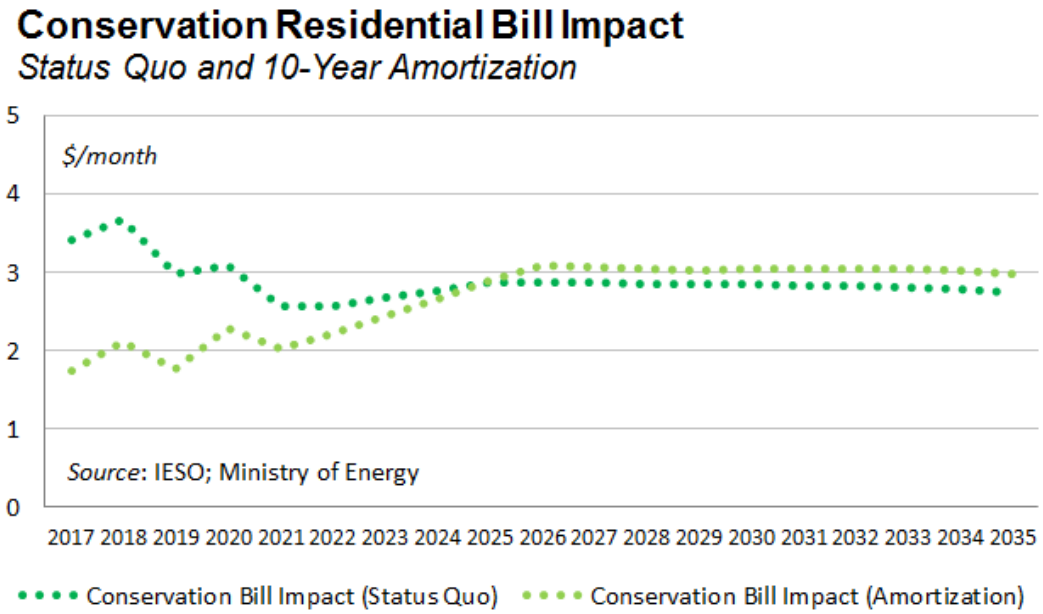
**All-In Electricity Price**
*in $/MWh*



**Note**: Based on year-to-date (YTD) September 2016 prices. Class A reflects a transmission-connected consumer.

# 4. Amortize Conservation Program Costs

- ~$3 billion from the electricity ratepayer base will be spent on conservation programs delivered under the Conservation First Framework and the Industrial Accelerator Program (IAP) between 2015 and 2020.
- Currently, Conservation and Demand Management (CDM) program costs are recovered from the Global Adjustment (GA) mechanism about one month after expenses are incurred.
- As a potential rate mitigation measure, certain CDM costs could be amortized.
- Amortizing a portion of conservation spending would produce a benefit for electricity ratepayers in excess of $1/month at the outset. Over time, the benefit would decrease and turn into a cost, as interest charges begin to grow.



**Note**: Chart assumes that conservation incentive costs are available for amortization while administration cost are not. Although there is variable from year to year, incentives represent about two-thirds of conservation spending in Ontario. Chart assumes conservation spending continues at a similar rate beyond 2020. Chart assumes a 10-year borrowing rate of 3.0%.

# 4. Amortize Conservation Program Costs (cont'd)

## Considerations

- Under **Public Sector Accounting Board (PSAB) accounting standards**, used by both the Province and IESO, only certain assets can be amortized: 1) pensions and 2) tangible capital assets. Under PSAB an asset must meet several criteria to be considered a capital asset, including:
  - A tangible capital asset must be tangible and substantive and the Ontario government must have title and operate the asset.
  - A tangible capital asset must bring a tangible benefit to the government or to Ontario.

- CDM costs, on their own, do not meet the criteria of a tangible capital asset because customers would have ownership and control of installed CDM measures, not the Province or IESO.

- **Rate-regulated accounting** was developed to recognize the unique nature of regulated entities (e.g., electricity generators, LDCs). Under rate-regulated accounting certain costs can be treated as amortizable assets that would not normally be considered assets under accounting principles.
  - Over the past several years, the Auditor General (AG) has expressed concerns about the appropriateness of recognizing rate-regulated assets in the Province's consolidated financial statements.
  - Rate-regulated accounting is currently under review by international accounting standard setting bodies and is currently permitted only on an interim basis, so its future is unclear at present.

# 4. Amortize Conservation Program Costs (cont'd)

**Considerations**

- If some of Ontario's CDM costs could be amortized, analysis shows that ratepayer impacts would be reduced in the short-term but interest charges on the loan would result in increased overall ratepayer costs in the longer-term.

- Legislative amendments would be needed to allow recovery of loan interest charges from GA.

- If there is a desire to proceed:
  - Formal accounting advice will need to be sought from IESO's external auditor as well as the Ontario Provincial Controller (OPC) to determine whether CDM costs could be amortized according to rate-regulated accounting standards.
  - Further legal analysis would also be required to confirm legal viability and possible approaches to implementation.

# 5. LDC Efficiencies

- Consider opportunities for future LDC cost reductions and efficiencies through the regulatory framework.

**Considerations**

- The Ontario Energy Board has a mandate to regulate the electricity distribution sector in the public interest, ensuring the financial viability of the sector while promoting reliable service to customers at just and reasonable rates.
- Since 2012, the OEB has taken action – through the Renewed Regulatory Framework for Energy – to more closely link rate regulation with performance measures and outcomes.
- There maybe opportunities to promote further cost reductions and performance improvements within the distribution sector as there is continued evolution of the regulatory framework in Ontario.
  - Tightening LDC requirements may also indirectly incent other desired policy outcomes, such as LDC consolidation and grid modernization to realize further cost reductions.
- ENERGY could help promote or accelerate these efforts by asking the OEB through the LTEP Implementation Directive, s. 35 of the *Ontario Energy Board Act, 1998*, and the 2017 Mandate Letter and other agency business planning processes.
- In addition, further changes to the departure and transfer tax regimes could be considered to provide a further incentive for LDC mergers and acquisitions.

# 6. Rate Design Initiatives

- OEB continues to move forward with its Regulated Price Plan (RPP) Roadmap:
  - The OEB is undertaking a comprehensive review of the RPP, including exploring the introduction of offering different pricing plan options for customers following the completion of pilot programs in 2018. The plan is expected to be implemented over a 3-5 year period.

- Until new pricing plans are available, the OEB could provide an "opt-in flat rate RPP" structure that could be made available to residential, farm and small business consumers on an interim basis (2-3 years) until a wider range of price plans are available.
- Time-of-Use (TOU) pricing could also be introduced for non-RPP Class B consumers to reduce Global Adjustment (GA) volatility and reduce system costs.

| Current TOU | New Flat Rate |
|---|---|
| On: 18.0 ¢/kWh | 11.1 ¢/kWh |
| Mid: 13.2 ¢/kWh | |
| Off: 8.7 ¢/kWh | |

**Considerations**

- The OEB has indicated that the option would lead to no overall change in system costs. Consumers with higher peak and mid-peak usage patterns would see a decrease in their electricity bills, while those with higher off-peak usage patterns would see an increase.
  - While the current strong supply conditions may allow for such an RPP structure (i.e., peak demand requirements can be easily met), administrative costs could be high (distributors would need to design/implement an opt-in process and associated billing system on an interim basis).

| | Current TOU | New Flat Rate |
|---|---|---|
| 1) Monthly electricity bill- higher peak and mid-peak usage patterns | $172 | $163 |
| 2) Monthly electricity bill- higher off-peak usage patterns | $152 | $163 |

***Note:** 1) assumes a consumer consumption pattern of 45%:30%:25% (Off-peak: Mid-peak: On-peak), while 2) assumes consumer consumption pattern of 80%:10%:10% (Off-peak: Mid-peak: On-peak). Estimates are based on OEB's online electricity bill calculator (for Toronto Hydro-November 2016 rates)

# 6. Rate Design Initiatives (cont'd)

**Considerations**

- The decision to undertake smart meter investments was partly justified on the basis of TOU pricing. If TOU pricing were to be made optional, some stakeholders could question the rationale for smart meter investments.
  - Rationale for offering a flat rate option could focus on providing customers with choice until new pricing plans are rolled out under the RPP roadmap.

- If a flat rate design is introduced, there could be significant consumer opposition to any return to a mandatory TOU.

- After the interim flat rate period, the OEB could offer a wider range of pricing plans to consumers.
  - As part of its RPP review, the OEB will be running pilots with LDCs to assess customer response to alternative time periods and pricing structures.
  - Learnings from these pilots will help inform potential changes to the RPP. Pilots are expected to be in market May 2017 and run for one year.

- Non-RPP Class B electricity consumers currently pay Global Adjustment (GA) on a volumetric basis. Moving them to TOU would provide an incentive to shift consumption to off-peak periods.
  - Consumers, including manufacturers, who are unwilling to shift would face higher costs and likely not be supportive of the changes.
  - The decision to pursue TOU pricing for non-RPP class B consumers will impact proceeds recycling as there is interplay between the two initiatives.

# 7. Reduced Cost of OPG Borrowing

- OPG currently borrows for corporate purposes from the OEFC
- Seek to reduce OPG's borrowing costs and pass on savings to ratepayers by:
  - Reducing or removing the spread that OEFC applies to OPG for any new corporate debt; or
  - Allowing OPG to refinance its existing debt at longer maturities through the OEFC in order to take advantage of the current, favourable interest rate environment.
- Assuming the full spread is removed from all OEFC debt, OPG borrowing costs could be reduced by 50-100 basis points, representing annual savings of about $20-$25 million, increasing to $30-$35 million, as OPG's outstanding OEFC debt rises from ~$3.3 billion in 2016 to ~$4.7 billion in 2020.
- OPG could apply to the OEB as part of its current rate application to flow this benefit to ratepayers.

**Considerations**

- Further work is required to determine potential OPG savings from these initiatives.
- Allowing OPG to refinance would have a negative fiscal impact on the Province.
- Spreads are expected to decline, reducing the relative impact of this change, given lower overall interest rates and reduced volatility.
- Providing OPG with greater access to longer term (20-30 year) debt may also reduce costs:
  - OPG's average term to maturity for OEFC debt is 5.7 years, as compared to 22.2 years for privately financed project debt. This contrasts with most corporations and government which have been working to extend average debt terms in order to take advantage of the low interest rate environment.
  - Longer terms would also better match to the life of OPG's assets.
  - Recently, OEFC has allowed OPG to apply for 50% of its financing requirements in the form of longer term (25-30 year debt). Moving closer to 100% would accelerate this transition.

# 8. End DRC Early for Commercial/Small Industrial Class B Electricity Consumers

- Propose to remove the $0.07/kWh Debt Retirement Charge (DRC) from the bills of commercial/small industrial Class B consumers beginning in 2017, instead of April 1, 2018.
  - **Note:** Class A consumers (e.g., large industrial) would continue to pay DRC until at least April 1, 2018.

**Considerations**

- For a Class B consumer currently paying about $152/MWh, removing the DRC would represent a savings of about 5%.
  - A 50% reduction in the DRC charge would represent a savings of about 2%.

- Alternatively, the reduction of the DRC could be to $0.035/kWh starting in 2017, to provide relief for cap and trade until proceeds recycling is fully operational.

- Residential consumers have had the DRC removed from bills since January 1, 2016. Taking DRC off commercial and small industrial bills would result in equal treatment for these groups of consumers.

- The savings for commercial and small industrial consumers associated with this proposal would drop to zero in April 2018, since this is the current planned date for removing the DRC from non-residential bills.

- Prior to moving forward with this proposal, additional analysis from Legal Services and the MOF would be needed.

# 9. Dedicate Departure Tax

- In connection with the IPO, as a result of leaving the PILs regime and entering the corporate tax regime, Hydro One was deemed to dispose of its assets for proceeds equal to its fair market value, triggering a PILs liability of $2.6 billion (Departure Tax).
- This was paid to the Ontario Electricity Financial Corporation (OEFC), to be dedicated towards repayment of electricity sector stranded debt.
- The Province could explore repurposing some of those funds to the benefit of ratepayers.
- This may reduce the risk that the Ontario Energy Board (OEB) assigns to ratepayers the benefit from an associated tax asset, resulting in lower earnings and decreased share value for Hydro One. This decision is currently before the OEB, as part of Hydro One's Transmission rate application.

**Considerations**

- Cost savings to ratepayers would depend on timing and which ratepayers (e.g., Hydro One customers, or all Ontario customers) will benefit from some or all of the $2.6 billion value.
- While this is a shift from messaging that value from the broadening of ownership of Hydro One is being used pay down debt and fund transit and transportation, the Province could link to electricity infrastructure investments (e.g., as an offset to infrastructure investments already made in the sector, or to specific initiatives such as conservation).
- These funds were paid to the Ontario Electricity Financial Corporation (OEFC), to be dedicated towards repayment of electricity sector stranded debt. Repurposing may have an impact on the defeasance of this debt.

# 10. Cancel/Adjust Renewable Energy Procurements

- The Ministry could consider the following actions to further mitigate future impacts to electricity bills:

| Unallocated/Terminated Capacity | Announced Procurements | Executed Contracts |
|---|---|---|
| A. Do not procure unallocated or terminated capacity | B. Revise FIT 5 target | D. Cancel LRP I contracts |
| | C. Cancel FIT 6 | |

**Overarching Considerations**

- Cost savings associated with reducing or cancelling renewable energy procurements and programs will not reduce current electricity bills, but would result in future cost reductions relative to Ontario Planning Outlook forecasts.
- The IESO estimates implementing options A to C will reduce system costs by approximately $592 million ($2016) between 2019 and 2028, resulting in an average of approximately $0.50/month in savings to a typical residential electricity bill over the same period. [cost reductions from LRP I contract cancellations TBC]
- The microFIT program is winding down end of 2017. Annual microFIT procurement targets have been undersubscribed.
- With a few exceptions (e.g., rollover of unallocated microFIT capacity; addition of terminated microFIT and small FIT capacity to FIT 5), plans for unallocated or terminated capacity are not defined in announcements or existing directions.

**Cancel/Adjust Announced Procurements**

- Amendments to existing directions to the IESO would be required to reduce FIT 5 and cancel FIT 6.
- The FIT 5 procurement is underway with a base target of 150 MW and inclusion of any capacity available from contract terminations under prior small FIT and microFIT procurements. The application window closed on November 25, 2016.

# 10. Cancel/Adjust Renewable Energy Procurements – Existing Contracts

**Cancel Existing LRP I Contracts**

- 16 LRP I contracts (approx. 455 MW) have been executed and projects are under development.
- None have met Key Development Milestones. Total value of LRP I estimated at approx. $1 billion (NPV to 2016).

[Placeholder for IESO: Cost calculation relative to OPO and associated bill impact]

**Considerations**

- To help inform a decision, IESO or OEB could be asked to evaluate and provide guidance to the Ministry on the system need for LRP I projects and potential ratepayer impacts/benefits.
- 13 of 16 LRP I contracts have Indigenous participation. Cancelling LRP I contracts would remove this economic development opportunity and likely damage relationships between Indigenous communities and the government.
- LRP I Contract includes an “Optional Termination” provision allowing IESO to terminate any contract prior to the “Commercial Operation Date” with 6 months written notice.
- The IESO obligations under the Optional Termination provision depend on whether the project has met all “Key Development Milestones”.
  - As no projects have met their Key Development Milestones, the estimated total cost payable to contract holders is about $8 million.

# 10. Cancel/Adjust Renewable Energy Procurements – Existing Contracts (cont'd)

## Legal Analysis

- Under the *Electricity Act, 1998*, the Minister has the authority to amend previous directions without approval from Cabinet. Although an amendment to an existing direction would not require Cabinet approval, it is unlikely that a direction to cancel LRP I contracts could be considered as amending an existing direction. The previous LRP directions set out the broad policy framework that was reflected in the procurement, but the contracts themselves, once executed, are stand alone documents which the IESO had legal authority to execute. Revoking previous LRP directions does not affect that authority or have the effect of cancelling the procurement.
- As a result, any new directive to cancel LRP I contracts would need to be approved by Cabinet, either as part of an LTEP implementation directive to IESO, or pursuant to the overall power to direct IESO with respect to procurements outside the LTEP process. However, there is a risk that such a directive could be subject to challenge.
- ENERGY has previously received advice that there is a high risk that a court would conclude that the Minister has no authority under the *Electricity Act , 1998* to issue a direction requiring IESO to terminate microFIT Conditional Offers and FIT Offer Notices that have already been issued to applicants, because these offers create vested contractual rights and the Minister would require clear legislative authority to interfere with those rights. This reasoning would likely apply equally to any direction or directive to IESO to cancel LRP I contracts.
- Previous advice has also flagged a moderately high risk that the Province could be liable for damages in tort for inducing a breach of contract if it issues a direction to IESO that interferes with vested contractual rights without clear statutory authority to do so. LRP I contract holders could also assert other claims, such as misfeasance in public office.
- The risk and costs associated with potential law suits resulting from the cancellation of contracts requires further analysis, including analysis of whether any statutory amendments would be required to provide clear authority to cancel the contracts. LSB recommends ENERGY seek an opinion from Crown Law Office Civil before proceeding.

# Summary

- Reductions in electricity rates could be achieved by eliminating existing, planned or directed initiatives from the rate-base or shifting these costs to the tax-base.

- The timing of the impact of these rate mitigation initiatives varies.
  - Immediate and near-term impacts can be achieved by shifting costs to the tax-base or changing how certain costs are recovered from consumers or eliminating certain programs.
  - Over the longer term, changes to the electricity supply mix and achieving efficiencies in the electricity market could yield system savings.

- Pursuing the initiatives would require regulatory amendments and working with the electricity sector agencies, LDCs and other stakeholders to implement the initiatives.

- As shown before the positive impact to residential ratepayers is very limited (between $8 and $9 per month) while the impact to the Province's fiscal position would be material (about $1.2 to $1.5 billion a year).

# Appendix

# Electricity Consumer Classes

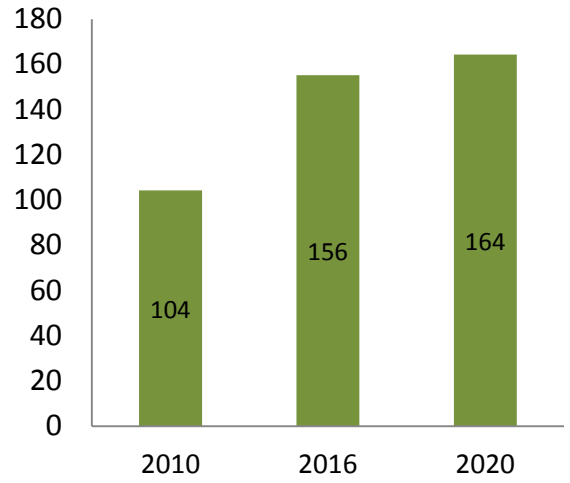
- In Ontario, there are three classes of electricity consumers:

| | Regulated Price Plan | Class B | Class A |
|---|---|---|---|
| **Consumer Types** | • Residential<br>• Small Business<br>• Farms | • Commercial<br>• Institutional<br>• Small industrial | • Large commercial<br>• Large industrial |
| **Load Size** | Below 0.05 MW | Between 0.05 MW and 1 MW | Above 1 MW |
| **Total Consumption** | 58 TWh | 57 TWh | 26 TWh |
| **Share of Consumption** | 41.1% | 40.4% | 18.4% |

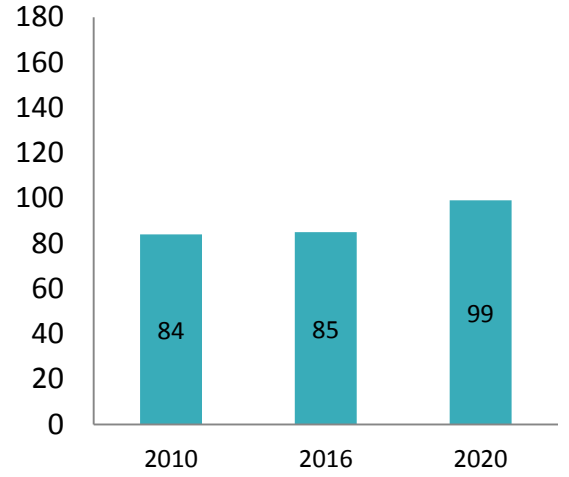
# Prices by Electricity Consumer Class

- Since 2010, average bills for residential consumers (i.e., using 750 kWh/month) have increased by over 50%. Rates are forecast to continue to increase, with residential consumers paying an estimated 6% by 2020.
- Industrial electricity rates have remained relatively flat over the same time period, due primarily to the Industrial Conservation Initiative (ICI). ICI represents a cost shift of about $5/month for residential electricity consumers. Industrial electricity consumers are forecast to see an increase of 16% by and 2020.

**Typical Residential Bill (750/kWh per month)**



**Typical Class A (Industrial) Price ($/MWh)**



**Note:** 2016 represents year-to-date September 2016 for industrial. Cap and trade proceeds recycling is included for the industrial consumer for 2020.

# Rate Mitigation Levers

- To provide further rate relief to Ontario electricity consumers, the government can use one or more of the levers outlined below:
  - **Tax-based Lever:**
    - Provide rebates funded from the tax-base or transfer items currently paid through the rate-base to the tax-base.
  - **Rate-based Lever:**
    - Shifts costs within the rate-base from one customer group to another to achieve electricity system benefits and/or policy goals.
  - **Cap and Trade Proceeds Lever:**
    - Use cap and trade proceeds on initiatives that help reduce greenhouse gas (GHG) emissions from the electricity sector (e.g., recycling proceeds during off-peak periods) while providing benefits to some or all electricity consumers.

# Traditional Rate Mitigation Programs

- Ontario has implemented a number of rate-based programs to help residential and industrial electricity consumers:
  - The Ontario Electricity Support Program (OESP) provides ongoing assistance directly on the bills of eligible low-income electricity consumers
  - The Rural or Remote Rate Protection (RRRP) program is provided to rural and remote residential and farm customers because the cost of distributing power to remote areas is much higher than for urban areas.
  - The Industrial Conservation Initiative (ICI) encourages Ontario's largest consumers to reduce consumption during peak periods while reducing system costs.
- There are also tax-base programs to help manage electricity prices:
  - Rebate the provincial portion of the HST from the electricity bills of residential, small business and farms as of January 1, 2017.
  - Northern Industrial Electricity Rate Program (NIERP), in which participants receive a rebate of two cents per kilowatt hour. On average, industrial electricity prices can be reduced by up to 20%.
- While rate-based programs provide relief to certain electricity consumers, they shift other costs to remaining ratepayers (See Appendix for additional details).

# Driving Down Prices for Consumers

- Since 2013, a number of actions have been taken to drive down prices for consumers wherever possible:
  - Renegotiating the Green Energy Investment Agreement, reducing contract costs by $3.7 billion;
  - Deferring the construction of two new nuclear reactors at Ontario Power Generation's Darlington facility, avoiding an estimated $15 billion in new construction costs;
  - Approving Ontario Power Generation's plans to enable the ongoing operation of Pickering up to 2024, which is expected to save ratepayers as much as $600 million;
  - Reducing Feed-In-Tariff (FIT) prices through annual price reviews, saving ratepayers at least $1.9 billion relative to the 2013 Long-Term Energy Plan (2013 LTEP) forecast; and
  - Suspending the second round of the Large Renewable Procurement (LRP II) process and the Energy-from-Waste Standard Offer Program to save up to $3.8 billion in electricity system costs relative to 2013 LTEP.

# Cost Shifts in the Electricity Sector – Current Programs

- Several programs in the electricity sector “shift costs” from one group of electricity consumers to another:
  - **Rural or Remote Rate Protect** (**RRRP)** is a longstanding program that reduces the delivery charge for rural electricity consumers and is paid for by all consumers in Ontario through a regulatory charge on bills.
  - **Ontario Electricity Support Program (OESP)** is funded via a regulatory charge on consumer bills and provides support for qualifying low income electricity consumers.
  - **Industrial Conservation Initiative (ICI)** empowers large consumers to lower their costs by reducing their demand during peak hours. In the process, ICI shifts costs from large electricity consumers to all other consumers in Ontario.
  - **Industrial Electricity Incentive** (**IEI**) program, offers reduced electricity prices for companies starting or expanding operations in Ontario. All electricity consumers in Ontario pay for the price reduction that IEI participants receive.

# Cost Shifts in the Electricity Sector (Cont'd)

- The tables on the right show the estimated cost shifts that result from existing government programs.
- ICI has had the largest cost shift of all the programs, due to the large size of Global Adjustment (GA) and the way that it is recovered from consumer classes.
- RRRP and OESP impact the regulatory line on consumer bills, while ICI, IEI and conservation affect GA (i.e., Electricity line on bills of Regulated Price Plan consumers).

**Cost Shift Impacts - Residential Bill**

*Typical 750 kWh/month Toronto Hydro consumer*

| *$/month* | 2011 | 2012 | 2013 | 2014 | 2015 | 2016 |
|---|---|---|---|---|---|---|
| ICI | 2.65 | 3.25 | 3.88 | 3.53 | 4.75 | 4.77 |
| RRRP | 0.90 | 0.82 | 0.84 | 0.92 | 0.93 | 0.94 |
| OESP | - | - | - | - | - | 0.84 |
| Conservation | 1.85 | 1.92 | 2.00 | 1.58 | 2.43 | 2.45 |
| IEI | - | - | 0.08 | 0.09 | 0.11 | 0.12 |
| **Total** | **5.41** | **5.99** | **6.81** | **6.13** | **8.21** | **9.12** |

**Cost Shift Impacts - Industrial Bill**

*Typical Class A consumer*

| *$/MWh* | 2011 | 2012 | 2013 | 2014 | 2015 | 2016 |
|---|---|---|---|---|---|---|
| ICI | -22.17 | -26.36 | -30.29 | -25.91 | -33.79 | -33.92 |
| RRRP | 1.20 | 1.10 | 1.12 | 1.23 | 1.24 | 1.25 |
| OESP | - | - | - | - | - | 1.13 |
| Conservation | 1.53 | 1.59 | 1.66 | 1.31 | 2.01 | 2.02 |
| IEI | - | - | 0.07 | 0.08 | 0.09 | 0.10 |
| **Total** | **-19.43** | **-23.67** | **-27.44** | **-23.29** | **-30.45** | **-29.43** |

**Note:** OESP did not come into effect until 2016. The 2016 values represent forecasts and are subject to change.

# Cost Shifts in the Electricity Sector (Cont'd)

- The table on the right shows the total cost for various government electricity programs. These programs are currently funded through the electricity system ratebase.

- Funding of these programs through the fiscal plan would remove these costs from the electricity system (i.e., Placing these costs on the taxbase).

**Cost of Programs**

*By government program*

| *$M* | 2011 | 2012 | 2013 | 2014 | 2015 | 2016 |
|---|---|---|---|---|---|---|
| ICI | 506 | 615 | 736 | 670 | 890 | 893 |
| RRRP | 172 | 156 | 159 | 176 | 174 | 176 |
| OESP | - | - | - | - | - | 158 |
| Conservation | 329 | 339 | 354 | 280 | 425 | 428 |
| IEI | - | - | 15 | 16 | 18 | 19 |

- For example, removing the roughly $900 million of program cost from the Industrial Conservation Initiative (ICI) program would save the typical residential electricity consumer $4.77 per month in 2016.

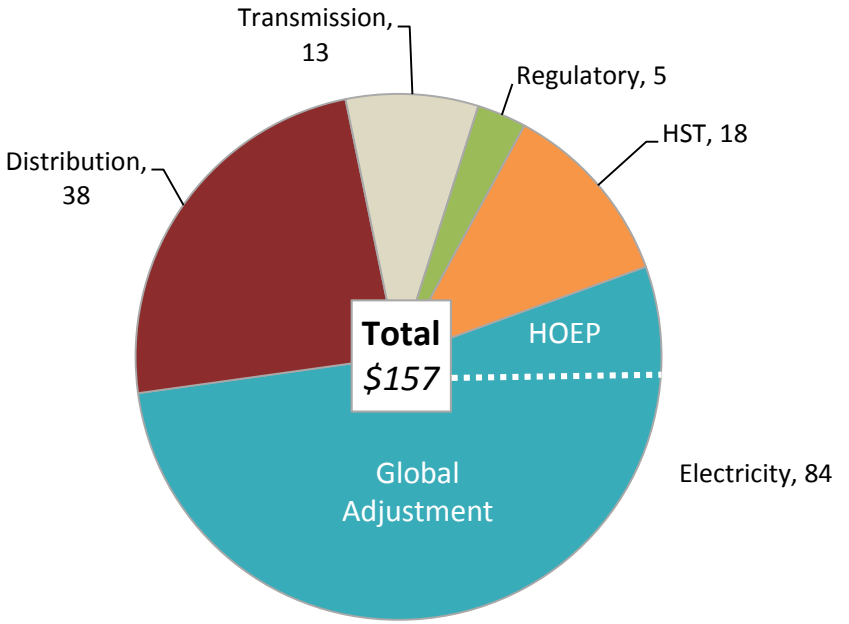
**Note:** OESP did not come into effect until 2016. The 2016 values represent forecasts and are subject to change.

# Residential Electricity Prices

- There are approximately 4.5 million residential consumers in Ontario.
- The Regulated Price Plan includes nearly all residential consumers, as well as small businesses. Regulated Price Plan consumers pay a blended commodity rate regulated by the OEB, which is set every six months.
- For households, the Debt Retirement Charge (DRC) was removed from residential electricity bills as of January 1, 2016.
- In addition, the Ontario Electricity Support Program (OESP) provides an ongoing rate reduction directly on the bills of low-income electricity consumers who have applied and meet the eligibility requirements. The program is funded through the rate base.
- Rural customers, in particular those with electrical heating, pay higher monthly bills.

**Typical Residential Monthly Bills ($)**

*As of November 1, 2016 (750 kWh/month)*



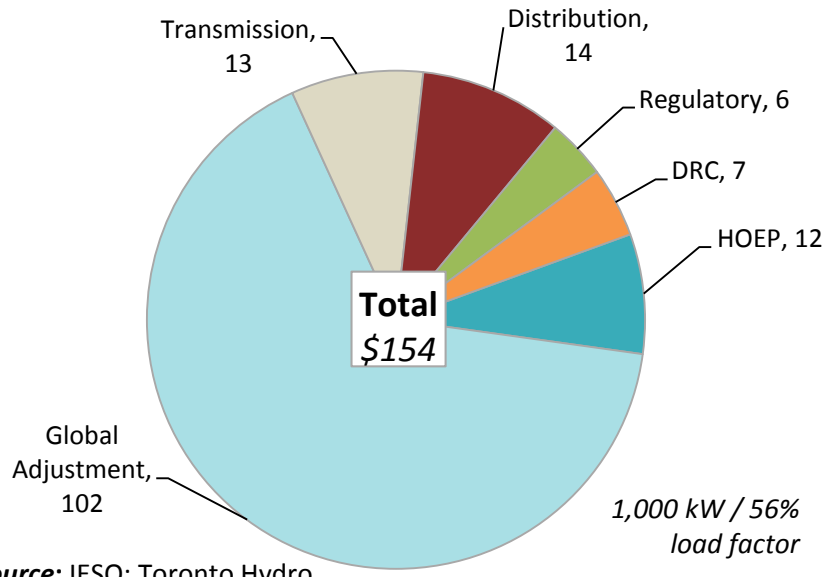
***Source*: OEB, Toronto Hydro**

# Commercial Electricity Prices

- There are approximately 55,000 commercial and institutional consumers in the province. These consumers are Class B consumers, and have separate line items on the electricity bill for HOEP and GA.
- There is a high degree of differentiation amongst consumers within the commercial sector in terms of size and consumption patterns. For example, an elementary school has a much different hourly load profile compared to a full service restaurant. This is an important consideration when looking at the bill impacts of policy options.

**Typical Commercial Price ($/MWh)**

*YTD June 2016 (Non-RPP Class B)*



***Source*:** IESO; Toronto Hydro

- Consumers in the commercial sector do not pay time-of-use prices and have little incentive to shift demand away from high demand hours.
- Targeted pricing programs are currently not available for Class B consumers.

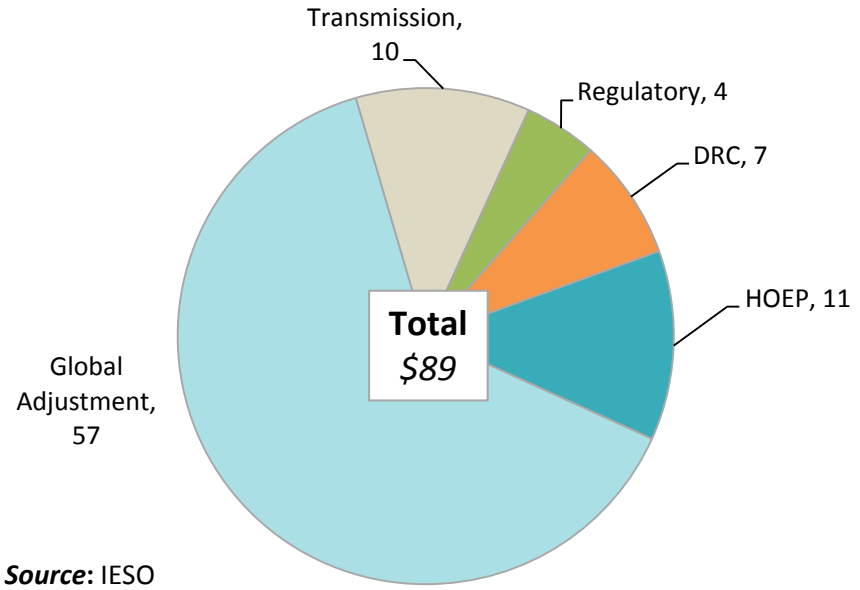
*** Note**: Most commercial consumers receive input tax credits for their HST.

# Industrial Electricity Prices

- There are about 300 large industrial consumers in Ontario.
- Measures in place to mitigate industrial electricity prices include ICI and NIERP.
- ICI lowers costs for eligible large electricity consumers (i.e., those with monthly peak demand exceeding 3 MW) that reduce consumption during peak periods.
  - ICI consumers reduce their electricity rates by 25% on average.

**Typical Large Industrial Price ($/MWh)**

*YTD June 2016*



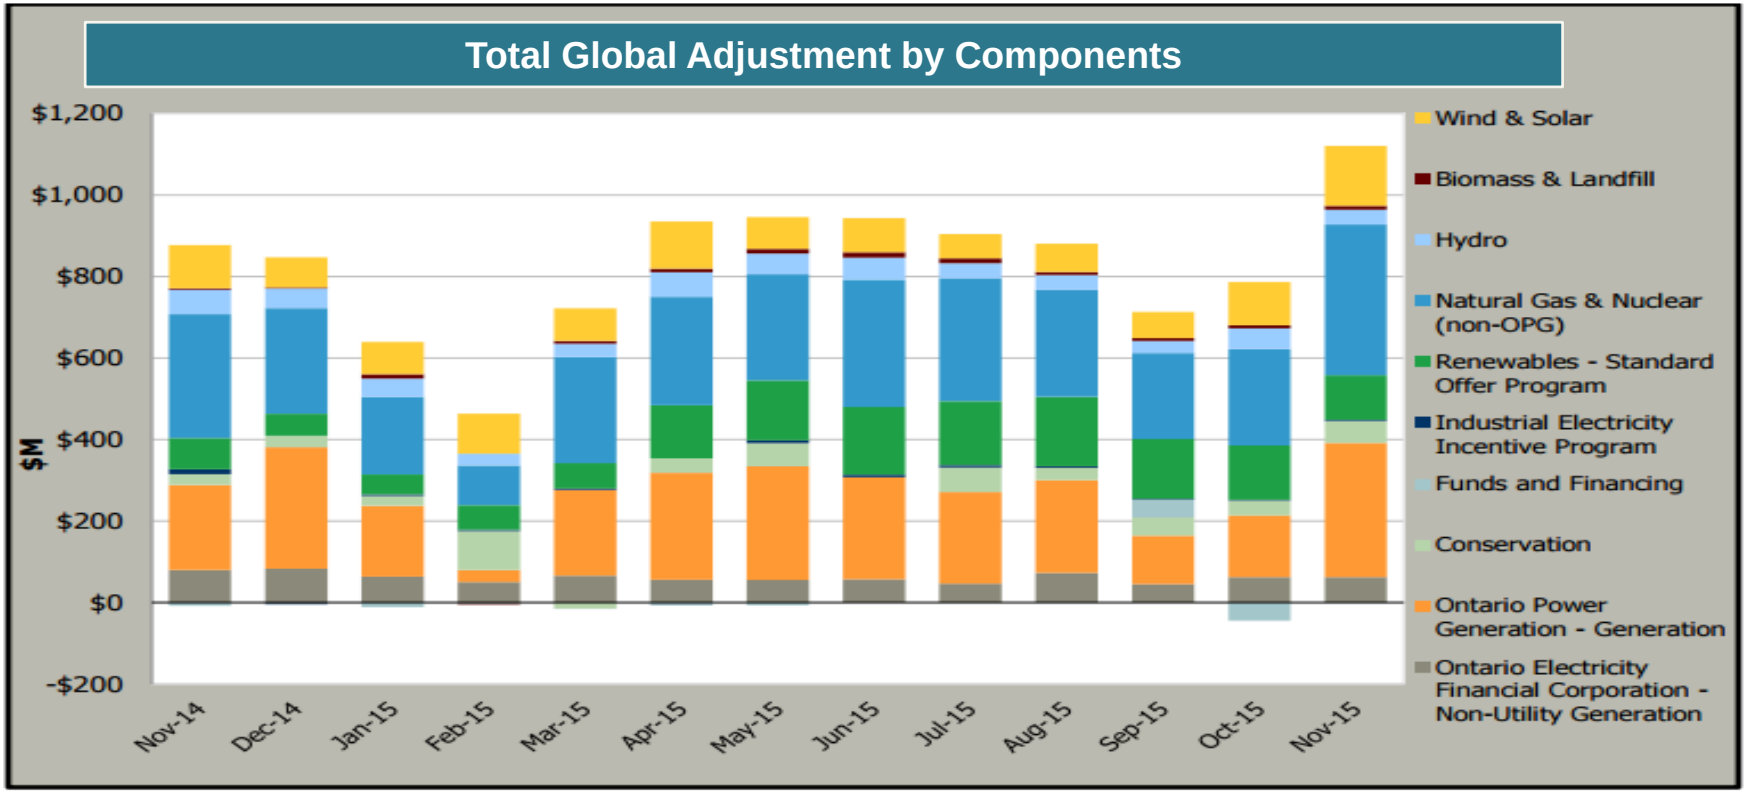
***Source*: IESO**

- Participants in NIERP receive a rebate of $20/MWh. On average, industrial electricity prices are reduced by about 20% through the program, reducing all-in prices to $69/MWh for these consumers. The program is funded through the tax base.

*** Note:** Industrial consumers receive input tax credits for their HST.

# Total Components of Global Adjustment

- Global Adjustment (GA) is a market mechanism that recovers costs from electricity consumers, including the cost of almost all conservation programs in the province (i.e., approximately half a billion dollars in 2016).



**Source:** IESO Monthly Market Report (November 2015)

# Cancel/Adjust Renewable Energy Procurements

# LRP I Pre-Construction Liability Limits

- All 16 successful LRP I developers accepted Optional Termination Provisions when the LRP I Contracts were executed in April 2016.
- If IESO chooses to enact the Optional Termination provision before a project has met all Key Development Milestones, IESO is required to pay pre-construction development costs up to the Pre Construction Liability Limit.
- Pre-construction development costs include costs incurred for feasibility studies, obtaining site access rights, work towards environmental approvals, business development plans, negotiation of contracts for design, equipment, construction and financing, reasonable overhead expenses, and other reasonable costs incurred.
- The Pre Construction Liability Limits are:
  - Non-Rooftop Solar: $250,000 plus $10.00/kW of Contract Capacity
  - Waterpower: $500,000 plus $20.00/kW of Contract Capacity
  - On-Shore Wind: $400,000 plus $2.00/kW of Contract Capacity
- According to the LRP I Optional Termination provision, the developer has a duty to take reasonable steps to mitigate losses, liabilities, costs and damages incurred as a result of the Optional Termination.
  - The IESO will not provide compensation for amounts which are attributable to a developer's failure to take reasonable steps to mitigate.

MINISTRY OF
ENERGY

# Proposed Initiatives to Transform Ontario's Electricity Sector

## Working Draft

December 5, 2016

CONFIDENTIAL DRAFT

# Context

- Electricity costs are increasing as the necessary investments are made to decarbonize and modernize the province's electricity infrastructure.
  - Since 2003, the Province has invested more than $35 billion in over 16,000 megawatts (MW) of new and refurbished cleaner generation, including nuclear, natural gas and renewables.
  - Over the same period, Hydro One has invested $15.5 billion to enhance and renew its transmission and distribution systems.
  - As additional electricity generation comes online, nuclear units are refurbished and distribution and transmission investments are made, prices are forecast to continue to increase.

- Actions have been taken to drive down electricity costs, including deferring investments in generation (e.g., new build nuclear), improving market efficiency (e.g., introduction of wind dispatch) and decreasing the cost of renewable procurements (e.g., Green Energy Investment Agreement ~~GEIA~~ renegotiation, decreasing FIT prices).

- Additional steps have been taken to increase cost effectiveness and improve efficiency by adopting new electricity market approaches, such as:
  - Enhancing competition between developers of large renewable projects through the Large Renewable Procurement (LRP) process to drive down price and secure clean, reliable generation for the province;
  - Directing IESO to end the process of negotiating new NUG contracts pending the development of a Capacity Auction (i.e., Market Renewal); and
  - Launching the first IESO Demand Response Auction (i.e., a competitive process through which demand-side resources are selected to be available to reduce their electricity consumption as needed).

# Context (Cont'd)

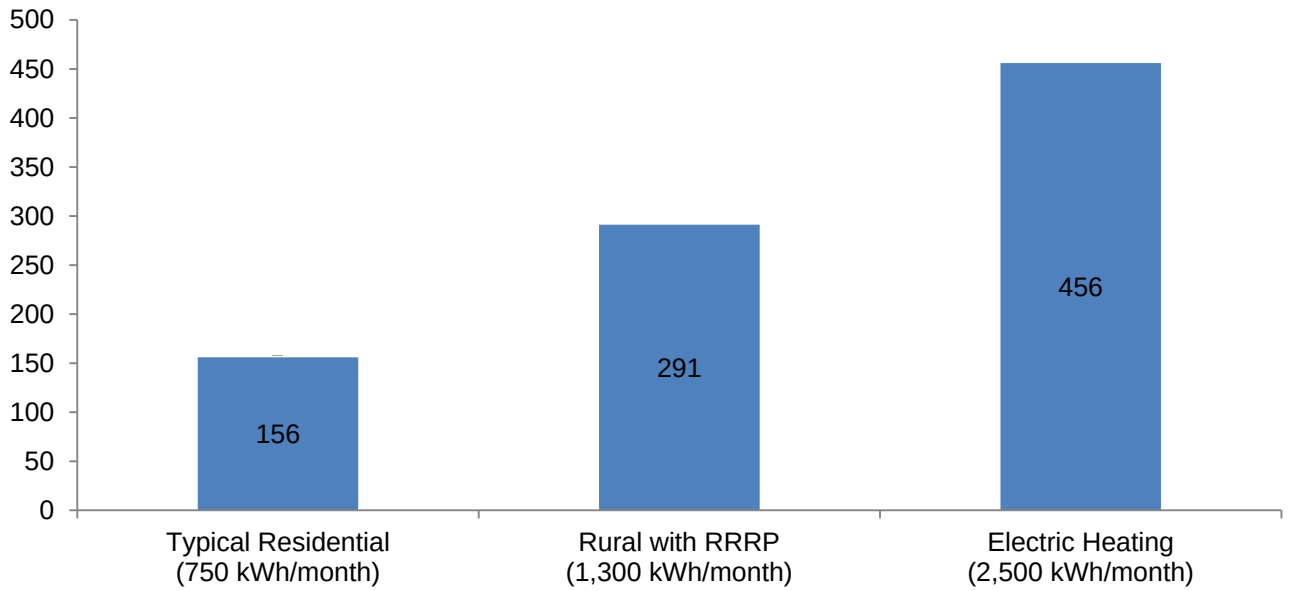
- Following the 2016 Throne Speech, a number of actions were announced to further reduce electricity costs, such as:
  - Providing an 8 per cent rebate before tax, equivalent to the provincial portion of HST, for approximately 5 million eligible electricity consumers including residences, small businesses and farms;
  - Increasing the amount of rate protection available to approximately 330,000 eligible rural customers living in low-density areas by updating the Rural or Remote Rate Protection (RRRP) program;
  - Lowering the Industrial Conservation Initiative (ICI) threshold to 1 MW and removing sector restrictions so that more consumers can benefit;
  - Suspending the second round of the Large Renewable Procurement (LRP II) and the Energy-from-Waste Standard Offer Program to save up to $3.8 billion in costs; and
  - Recycling a portion of cap and trade auction proceeds to keep rates affordable for industrial and commercial electricity consumers.
- On November 28, 2016, the Minister of Energy announced the need for changes in how electricity resources are procured and the need for wholesale market renewal.

- The Ministry of Energy is currently updating its Long-Term Energy Plan (LTEP), which provides an opportunity to consider a range of policy changes to how the Ontario energy sector operates.

# Current Electricity Prices – Residential

- Residential consumers electricity prices continue to be a concern for many Ontarians, particularly those that rely on electric heat.
  - **Note:** The typical residential bills are currently below the 2013 ~~Long-Term Energy Plan (2013~~ LTEP~~)~~ forecasts ($159 / 750kWh)

**Residential Electricity Bills**
*in $/month*

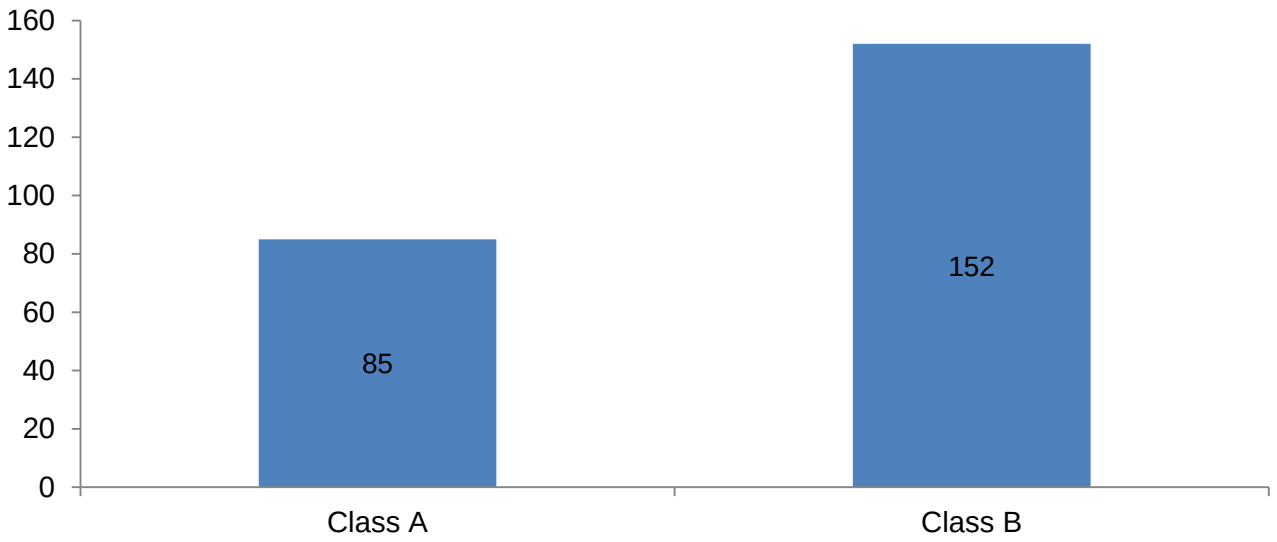


**Note**: Typical residential and electric heating shown above are based on Toronto Hydro; rural is based on connection to Hydro One as a R2 customer eligible to receive the Rural or Remote Rate Protection (RRRP) credit of $31.50.

# Current Electricity Prices – Industrial and Commercial

- While large industrial electricity consumers (i.e., Class A) rates are competitive with other jurisdictions, rates for commercial/small industrial consumers (i.e., Class B) are higher by comparison.
  - **Note:** Current industrial and commercial prices are below 2013 LTEP forecasts ($96 / MWh)

**Current All-In electricity Price**
*in $/MWh*



**Note**: Based on year-to-date (YTD) September 2016 prices. Class A reflects a transmission-connected consumer. Class B reflects a 1 MW load operating at 56% load factor and connected to Toronto Hydro.

# Current Status on Taxpayer Funded Electricity Price Mitigation

| ($M) | 2011-12 | 2012-13 | 2013-14 | 2014-15 | 2015-16 | 2016-17[1] | 2017-18[1] |
|---|---|---|---|---|---|---|---|
| OCEB | 1,033 | 994 | 1,006 | 1,078 | 860 | - | - |
| OREC | - | - | - | - | - | 300 | 1,100* |
| Ending DRC[2] | - | - | - | - | 85 | 330 | 330 |
| NIERP | 120 | 120 | 115 | 108 | 120 | 120 | 120 |
| NOEC | 23 | 24 | 25 | 24 | 26 | 25 | 25 |
| OEPTC[3] | 354 | 406 | 418 | 429 | 444 | 450 | 460 |
| **TOTAL** | **1,530** | **1,544** | **1,564** | **1,639** | **1,525** | **1,195** | **2,005** |

1. 2016-17, 2017-18 based on forecasted numbers
2. 2015-16 estimated for 3 months of reduced DRC revenue
3. OEPTC amounts in all years based on energy component of the rebate.

* Sourced from November LRC Submission

OCEB – Ontario Clean Energy Benefit
OREC – Ontario Rebate for Electricity Consumers
DRC – Debt Retirement Charge
NIERP – Northern Ontario Electricity Rate Program
NOEC – Northern Ontario Energy Credit
OEPTC – Ontario Energy and Property Tax Credit

- The table above shows the annual amount of taxpayer funded electricity price mitigation from 2011-12 to 2017-18.
- From 2011-12 to 2015-16 there has been an annual fiscal impact of approximately $1.6 billion due to electricity price mitigation programs.
- In 2016-17, the fiscal impact due to electricity price mitigation programs is estimated at approximately $1.2 billion.
- In 2017-18, due primarily to the start of the Ontario Rebate for Electricity Consumers, the expected fiscal impact due to electricity price mitigation programs is approximately $2.0 billion and before considering any additional funding from the tax base.

# Proposed Initiatives – Overview

- The suite of proposed initiatives are intended to:
  - Transform how the electricity market operates in Ontario;
  - Re-set how government programs are funded (i.e., rate-base vs tax-base);
  - Provide system benefits (e.g., industrial load retention);
  - Lower the cost of electricity for residential and industrial consumers; and
  - Increase cost effectiveness and improve efficiency.

- The proposed initiatives include:
  1. Implement Market Renewal Initiatives
  2. Fund Electricity Support Programs Through The Tax-base
  3. Eliminate the Industrial Conservation Initiative (ICI)
  4. Amortize Conservation Program Costs
  5. LDC Efficiencies
  6. Rate Design Initiatives
  7. Reduced Cost of OPG Borrowing
  8. End Debt Retirement Charge (DRC) Early for Commercial/Small Industrial Class B Electricity Consumers
  9. Dedicate Departure Tax
  10. Cancel/Adjust Renewable Energy Procurements

- The proposed initiatives provide opportunities to reduce electricity costs for residential and industrial consumers while at the same time transforming the province's electricity market and yielding benefits for the electricity system.

# Proposed Initiatives – Impacts

- Each of the proposed initiatives under consideration target different government programs and different parts of the electricity bill. The proposals impact different classes of electricity consumers to varying degrees.

| Proposal | Program / Initiative | Line on Bills | Who Benefits |
|---|---|---|---|
| 1. Implement Market Renewal Initiatives | Market Renewal | Electricity, Global Adjustment, Regulatory | Market Renewal: All electricity consumers |
| 2. Fund Electricity Support Programs Through The Tax-base | OESP, RRRP | Regulatory | All electricity consumers evenly |
| 3. Eliminate the Industrial Conservation Initiative (ICI) | ICI | Electricity, Global Adjustment | Only Class B electricity consumers (i.e., residential) **Note:** Will have a negative impact on Industrial consumers. |
| 4. Amortize Conservation Program Costs | Amortization | Electricity, Global Adjustment | Class B electricity consumers and to a lesser extent Class A consumers |
| 5. LDC Efficiencies | Distribution efficiencies | Delivery | All embedded consumers |
| 6. Rate Design Initiatives | Rate structures | Electricity, Global Adjustment | Rate Design Initiatives: Participating electricity consumers |
| 7. Reduced Cost of OPG Borrowing | n/a | Electricity, Global Adjustment | Class B electricity consumers and to a lesser extent Class A consumers |
| 8. End DRC Early for Commercial/Small Industrial Class B Electricity Consumers | Debt Retirement Charge (DRC) | DRC | Class B consumers (i.e., small business and commercial consumers, etc) |
| 9. Dedicate Departure Tax | Departure Tax | TBD | TBD |
| 10. Cancel/Adjust Renewable Energy Procurements | FIT, LRP | Electricity, Global Adjustment | Class B electricity consumers and to a lesser extent Class A consumers |

# Proposed Initiatives – Potential Savings for Typical Residential Electricity Consumers

| *$/750kWh* | 2017 | 2018 | 2019 | 2020 | 2021 | 2022 | Timing of Benefit |
|---|---|---|---|---|---|---|---|
| 1. Implement Market Renewal Initiatives | - | - | - | 1.58 | 1.59 | 1.60 | Longer-Term |
| 2. Fund Electricity Support Programs through the Tax-base | 2.18 | 2.30 | 2.31 | 2.45 | 2.48 | 2.51 | Immediate |
| 3. Eliminate the Industrial Conservation Initiative (ICI) | 4.40 | 4.24 | 4.10 | 4.24 | 3.73 | 3.58 | Immediate |
| 4. Amortize Conservation Program Costs | 1.67 | 1.56 | 1.21 | 0.81 | 0.54 | 0.3 | Immediate |
| 5. LDC Efficiencies | TBD | TBD | TBD | TBD | TBD | TBD | Near-Term |
| 6. Rate Design Initiatives* | - | - | - | - | - | - | Immediate |
| 7. Reduced Cost of OPG Borrowing | 0.13 | 0.13 | 0.13 | 0.18 | 0.18 | 0.18 | Immediate |
| 8. End DRC Early for Class B Electricity Consumers** | - | - | - | - | - | - | n/a |
| 9. Dedicate Departure Tax | TBD | TBD | TBD | TBD | TBD | TBD | Immediate |
| 10. Cancel / Adjust Renewable Energy Procurements | - | - | TBD | TBD | TBD | TBD | Longer-Term |
| **Total decrease on typical monthly bill** | **8.38** | **8.23** | **7.75** | **9.26** | **8.52** | **8.17** | |

**Note:** The above initiatives will provide similar benefits for non-RPP Class B electricity consumers. Proposal 2 assumes OESP participation of 50% and 5-year maturity. *Savings estimates do not include changes related to rate design. ** Class B includes small-medium enterprises (SMEs).

# Proposed Initiatives – Potential Savings for Average Industrial Electricity Consumers

| *$/MWh* | 2017 | 2018 | 2019 | 2020 | 2021 | 2022 | Timing of Benefit |
|---|---|---|---|---|---|---|---|
| 1. Implement Market Renewal Initiatives | - | - | - | 2.11 | 2.12 | 2.13 | Longer-Term |
| 2. Fund Electricity Support Programs through the Tax-base | 2.91 | 3.06 | 3.17 | 3.27 | 3.33 | 3.38 | Immediate |
| 3. Eliminate the Industrial Conservation Initiative (ICI) | (24.12) | (23.21) | (22.45) | (23.23) | (20.42) | (19.61) | Immediate |
| 4. Amortize Conservation Program Costs | 1.15 | 1.08 | 0.84 | 0.56 | 0.37 | 0.25 | Immediate |
| 5. LDC Efficiencies | n/a | n/a | n/a | n/a | n/a | n/a | Near-Term |
| 6. Rate Design Initiatives* | - | - | - | - | - | - | Immediate |
| 7. Reduced Cost of OPG Borrowing | 0.10 | 0.10 | 0.10 | 0.15 | 0.15 | 0.15 | Immediate |
| 8. End DRC Early for Class B Electricity Consumers** | - | - | - | - | - | - | n/a |
| 9. Dedicate Departure Tax | TBD | TBD | TBD | TBD | TBD | TBD | Immediate |

| **Total increase on industrial bill** | **19.96** | **18.97** | **18.34** | **17.14** | **14.45** | **13.7** | |

**Note:** Proposal 2 assumes OESP participation of 50% and 5-year maturity. Proposal 3 reflects the elimination of ICI, as opposed to moving ICI cost shift to the taxbase. The $1.75/MWh savings associated with Proposal 7 in 2018 accounts for the fact that under the status quo, DRC will be removed from bills in April 2018. *Savings estimates do not include changes related to rate design. ** Class B includes small-medium enterprises (SMEs).

# Fiscal Considerations

- Funding electricity support programs (i.e., OESP, RRRP, First Nations Delivery Rate) from the tax-base represents approximately $440 million on average annually.

- Ending the Debt Retirement Charge (DRC) for commercial and small industrial electricity consumers (i.e., Class B) early would represent an additional fiscal pressure of about $450 ~~[placeholder for OFA]~~ on the province.

- If the Industrial Conservation Initiative were funded though the tax-base instead of being eliminated, this would represent a $900 million annual cost to the fiscal plan.

- Reducing OPG borrowing costs to the Province's cost of funds is expected to result in a $30 ~~20 to $35~~ million annual fiscal pressure in 2017 to the province ~~[TBC by OPG / OFA]~~ based on new borrowing and increasing to about $70M by 2021.

- Fiscal impacts of allocating a portion of the departure tax to ratepayers will depend on the size of the allocation, as well as timing for the flow of value. The maximum, direct one-time impact is $2.6 billion, with potential ancillary impacts on residual stranded debt defeasance.
- A summary of the annual fiscal impacts of the proposed initiatives is presented in the next slide.

# Proposed Taxpayer Funded Electricity Price Mitigation

| ($M) | 2016-17[1] | 2017-18[1] | 2018-19[1] | 2019-20[1] | 2020-21[1] |
|---|---|---|---|---|---|
| OCEB | - | - | - | - | - |
| OREC | 300 | 1,100* | 1,100* | 1,200* | 1,200* |
| Ending DRC[2] | 330 | 330 | -- | -- | -- |
| NIERP | 120 | 120 | 120 | 120 | 120 |
| NOEC | 25 | 25 | 25 | 25 | 25 |
| OEPTC[3] | 450 | 460 | 470 | 481 | 481 |
| **CURRENT TOTAL** | **1,195** | **2,005** | **1,715** | **1,826** | **1,826** |
| 1. OESP | | 106 | 119 | 127 | 132 |
| 2. RRRP | | 292 | 300 | 306 | 315 |
| 3. First Nations Delivery Rate | | 18 | 18 | 18 | 18 |
| 4. Fund ICI through Tax Base | | 900+ | 900+ | 900+ | 900+ |
| 5. Departure Tax | | TBD | TBD | TBD | TBD |
| 6. Conservation Amortisation | | | | | |
| 7. DRC Ended for Class B | | | | | |
| 8. Other | | | | | |
| **TOTAL** | **1195** | **3,421** | **3,152** | **3,177** | **3,191** |

1. 2016-17, 2017-18 based on forecasted numbers
2. 2015-16 estimated for 3 months of reduced DRC revenue
3. OEPTC amounts in all years based on energy component of the rebate.

- As shown above if all measures proposed in this deck were to be accepted taxpayer funded contributions to electricity price mitigation would increase to about $3.2 billion by 2020-21. That is a 67% increase from the current forecast for 2016-17.
- These amounts were not considered in the 2016-17 Fiscal Plan and could put at risk the Province's fiscal objectives for 2017-18 and beyond.

# 1. Electricity Market Renewal Initiatives

- Continue to move forward with IESO's Market Renewal initiatives:
  - Market Renewal encompasses projects such as a single-schedule system (from the current two-schedule system), more frequent intertie scheduling to better align with other jurisdictions and a day-ahead market. There will be up front capital costs to enable the initiative. IESO is currently assessing these costs.
  - Moving to "technology-agnostic" procurements will provide new opportunities for innovation and modernization and ensure ratepayers receive the best prices possible.

**Considerations**

- Changes related to IESO's Market Renewal initiatives, reflected in HOEP and uplifts, are estimated to save up to $300 million per year, starting in 2020, leading to a reduction of:
  - About $1.60/month or about 1% at current retail prices for a typical residential bill; and
  - About $2/MWh or more than 2% at current all-in prices for industrial and SME electricity consumers.
- The IESO's Market Renewal is a broad initiative that will impact all aspects of Ontario's electricity market. Ontario has had a uniform price since market opening.
- Adopting a technology-agnostic stance will lower the overall cost of providing electricity service by selecting the most cost-effective resources to fulfill various system needs.

# 2. Fund Electricity Support Programs Through the Tax-Base

- Propose to fund electricity support programs, including Ontario Electricity Support Program (OESBP) and Rural or Remote Electricity Rate Protection (RRRP), through the tax-base instead of a regulated charge. This would allow the OESP and the RRRP charges to be removed from the Regulatory line on electricity bills.

**Considerations**

*Consumer Impacts and implementation*

- Transitioning OESP and RRRP to the tax-base would reduce a typical residential bill by about $2.35/month by 2020, and delivering the First Nation rate reduction through tax base would avoid about $0.10/month for a potential total savings of $2.45/month by 2020). As all programs provide strong social benefits, there is precedent for funding these programs through the tax-base.

- To address concerns from low income electricity consumers improvements to OESP could be implemented by increasing credits (could be up to double the current credits)
  - Single low income consumer would see a change from $30 to $45/ month ($540/year):
  - Family of four with electric heat could see a credit of $82.50/month ($990/year); and
  - Would mean no impact on consumer bills and no change to current OESP charge.
- RRRP and OESP are included in the “Regulatory” line on bills. If RRRP and OESP were eliminated from bills, the Regulatory line would decrease; however, as the Regulatory line is the smallest line item component of invoices, there is risk the decrease may not be perceived by customers.

- The RRRP regulation provides a funding mechanism for transmission infrastructure required to grid connect remote First Nation communities. Considerations for how that funding will be supported by the tax base will need to be determined.

- The non-rate mechanism to remove delivery charges from on-reserve First Nation customer monthly bills needs to be further explored.Funding RRRP and/or OESP with tax revenue would require amendments to existing legislation and regulations.

# 2. Fund Electricity Support Programs Through the Tax-Base (cont'd)

- Table below shows estimates of program costs up to 2020:

| Year | OESP | RRRP | First Nations Delivery Rate | TOTAL |
|---|---|---|---|---|
| 2017 | $106M | $292M | $18M | **$416M** |
| 2018 | $119M | $300M | $18M | **$437M** |
| 2019 | $127M | $306M | $18M | **$451M** |
| 2020 | $132M | $315M | $18M | **$465M** |

1) Ontario Electricity Support Program (OESP)
   - After almost a year in market, close to 30% of potentially eligible customers are signed up.
   - The cost projections below assume the program grows to 50% of eligible consumers by 2020 (also assumes 10% administration costs).

2) Rural and Remote Rate Protection (RRRP)
   - Provides benefits to R2 Hydro One consumers, Algoma, and remote communities.
   - Includes the expanded coverage that will begin on January 1, 2017.

3) First Nation rate reduction (currently under development)
   - On November 14, 2016, OEB presented options to the Ministry on reducing costs for on-reserve First Nation customers.
   - OEB's recommended option to provide 100% delivery rate credit, which is estimated at $18.4 million per year.
     - Other options includes a seasonal fixed credit to account for demand changes over the year ($13 million) or a 50% total bill reduction ($23 million).

# 3. Eliminate the Industrial Conservation Initiative (ICI)

- The cost shift from the Industrial Conservation Initiative (ICI) could be removed from electricity bills by eliminating ICI.
  - The ICI allows large electricity consumers to lower their electricity costs by reducing their demand during peak hours.

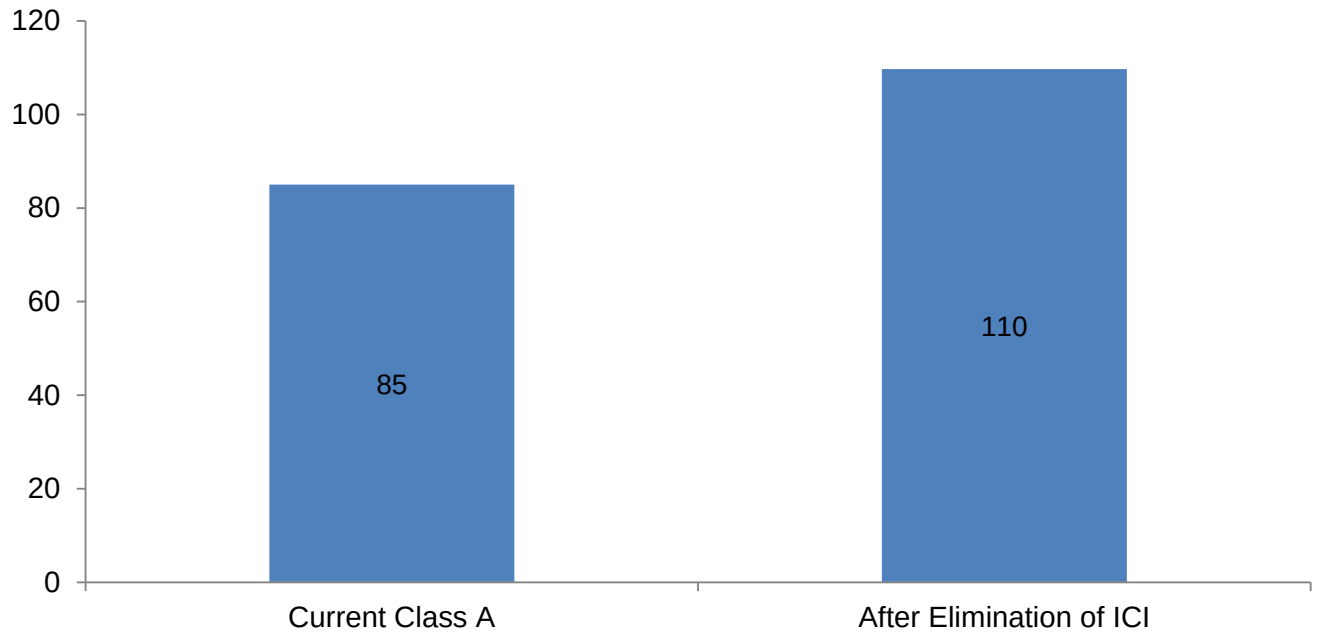
**Considerations**

- Eliminating ICI would result in a benefit of more than $4/month for residential electricity consumers in 2017.
  - However, unless government took action to mitigate the associated cost shift back to industrial consumers, typical industrial prices would increase by about one-third. Such a price increase would pose significant challenges for energy-intensive consumers.
- Industrial stakeholders have indicated that ICI as an integral factor in maintaining competitiveness and retaining industry in the province.
  - Eliminating ICI would limit the “cost shift” onto residential consumers, but it would also lead to a reduction in industrial demand. The large industrial contribution to the fixed costs of running the electricity system would then need to be covered by remaining consumers.
- If ICI is retained, current IESO projections indicate that the cost shift will decrease each year going forward as Global Adjustment (GA) decreases (due to an expected increase in HOEP).
- Alternatively, ICI could be funded through the tax-base at a cost of $900 million annually. There is precedent to use the tax-base for industrial support programs, including the Northern Industrial Electricity Rate Program (NIERP) and the Jobs and Prosperity Fund.

# 3. Eliminate the Industrial Conservation Initiative (cont'd)

- ICI currently provides a benefit of about $25/MWh to Class A electricity consumers.

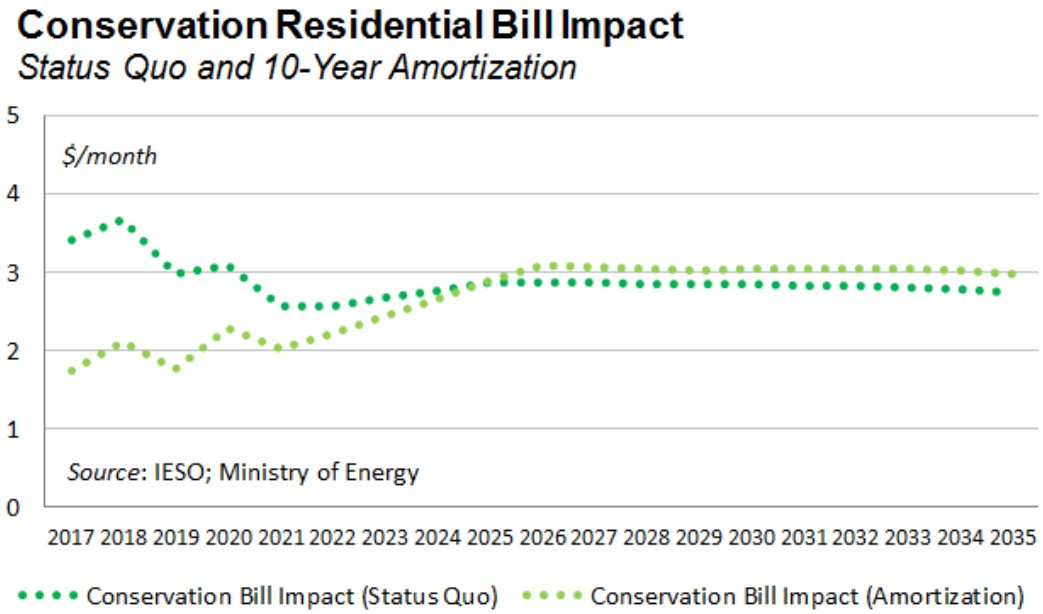
**All-In Electricity Price**
*in $/MWh*



**Note**: Based on year-to-date (YTD) September 2016 prices. Class A reflects a transmission-connected consumer.

# 4. Amortize Conservation Program Costs

- ~$3 billion from the electricity ratepayer base will be spent on conservation programs delivered under the Conservation First Framework and the Industrial Accelerator Program (IAP) between 2015 and 2020.
- Currently, Conservation and Demand Management (CDM) program costs are recovered from the Global Adjustment (GA) mechanism about one month after expenses are incurred.
- As a potential rate mitigation measure, certain CDM costs could be amortized.
- Amortizing a portion of conservation spending would produce a benefit for electricity ratepayers in excess of $1/month at the outset. Over time, the benefit would decrease and turn into a cost, as interest charges begin to grow.



**Note**: Chart assumes that conservation incentive costs are available for amortization while administration cost are not. Although there is variable from year to year, incentives represent about two-thirds of conservation spending in Ontario. Chart assumes conservation spending continues at a similar rate beyond 2020. Chart assumes a 10-year borrowing rate of 3.0%.

# 4. Amortize Conservation Program Costs (cont'd)

## Considerations

- Under **Public Sector Accounting Board (PSAB) accounting standards**, used by both the Province and IESO, only certain assets can be amortized: 1) pensions and 2) tangible capital assets. Under PSAB an asset must meet several criteria to be considered a capital asset, including:
  - A tangible capital asset must be tangible and substantive and the Ontario government must have title and operate the asset.
  - A tangible capital asset must bring a tangible benefit to the government or to Ontario.

- CDM costs, on their own, do not meet the criteria of a tangible capital asset because customers would have ownership and control of installed CDM measures, not the Province or IESO.

- **Rate-regulated accounting** was developed to recognize the unique nature of regulated entities (e.g., electricity generators, LDCs). Under rate-regulated accounting certain costs can be treated as amortizable assets that would not normally be considered assets under accounting principles.
  - Over the past several years, the Auditor General (AG) has expressed concerns about the appropriateness of recognizing rate-regulated assets in the Province's consolidated financial statements.
  - Rate-regulated accounting is currently under review by international accounting standard setting bodies and is currently permitted only on an interim basis, so its future is unclear at present.

# 4. Amortize Conservation Program Costs (cont'd)

**Considerations**

- If some of Ontario's CDM costs could be amortized, analysis shows that ratepayer impacts would be reduced in the short-term but interest charges on the loan would result in increased overall ratepayer costs in the longer-term.

- Legislative amendments would be needed to allow recovery of loan interest charges from GA.

- If there is a desire to proceed:
  - Formal accounting advice will need to be sought from IESO's external auditor as well as the Ontario Provincial Controller (OPC) to determine whether CDM costs could be amortized according to rate-regulated accounting standards.
  - Further legal analysis would also be required to confirm legal viability and possible approaches to implementation.

# 5. LDC Efficiencies

- Consider opportunities for future LDC cost reductions and efficiencies through the regulatory framework.

**Considerations**

- The Ontario Energy Board has a mandate to regulate the electricity distribution sector in the public interest, ensuring the financial viability of the sector while promoting reliable service to customers at just and reasonable rates.
- Since 2012, the OEB has taken action – through the Renewed Regulatory Framework for Energy – to more closely link rate regulation with performance measures and outcomes.
- There maybe opportunities to promote further cost reductions and performance improvements within the distribution sector as there is continued evolution of the regulatory framework in Ontario.
  - Tightening LDC requirements may also indirectly incent other desired policy outcomes, such as LDC consolidation and grid modernization to realize further cost reductions.
- ENERGY could help promote or accelerate these efforts by asking the OEB through the LTEP Implementation Directive, s. 35 of the *Ontario Energy Board Act, 1998*, and the 2017 Mandate Letter and other agency business planning processes.
- In addition, further changes to the departure and transfer tax regimes could be considered to provide a further incentive for LDC mergers and acquisitions.

# 6. Rate Design Initiatives

- OEB continues to move forward with its Regulated Price Plan (RPP) Roadmap:
  - The OEB is undertaking a comprehensive review of the RPP, including exploring the introduction of offering different pricing plan options for customers following the completion of pilot programs in 2018. The plan is expected to be implemented over a 3-5 year period.

- Until new pricing plans are available, the OEB could provide an "opt-in flat rate RPP" structure that could be made available to residential, farm and small business consumers on an interim basis (2-3 years) until a wider range of price plans are available.
- Time-of-Use (TOU) pricing could also be introduced for non-RPP Class B consumers to reduce Global Adjustment (GA) volatility and reduce system costs.

| Current TOU | New Flat Rate |
|---|---|
| On: 18.0 ¢/kWh | 11.1 ¢/kWh |
| Mid: 13.2 ¢/kWh | |
| Off: 8.7 ¢/kWh | |

**Considerations**

- The OEB has indicated that the option would lead to no overall change in system costs. Consumers with higher peak and mid-peak usage patterns would see a decrease in their electricity bills, while those with higher off-peak usage patterns would see an increase.
  - While the current strong supply conditions may allow for such an RPP structure (i.e., peak demand requirements can be easily met), administrative costs could be high (distributors would need to design/implement an opt-in process and associated billing system on an interim basis).

| | Current TOU | New Flat Rate |
|---|---|---|
| 1) Monthly electricity bill- higher peak and mid-peak usage patterns | $172 | $163 |
| 2) Monthly electricity bill- higher off-peak usage patterns | $152 | $163 |

***Note:** 1) assumes a consumer consumption pattern of 45%:30%:25% (Off-peak: Mid-peak: On-peak), while 2) assumes consumer consumption pattern of 80%:10%:10% (Off-peak: Mid-peak: On-peak). Estimates are based on OEB's online electricity bill calculator (for Toronto Hydro-November 2016 rates)

# 6. Rate Design Initiatives (cont'd)

**Considerations**

- The decision to undertake smart meter investments was partly justified on the basis of TOU pricing. If TOU pricing were to be made optional, some stakeholders could question the rationale for smart meter investments.
  - Rationale for offering a flat rate option could focus on providing customers with choice until new pricing plans are rolled out under the RPP roadmap.

- If a flat rate design is introduced, there could be significant consumer opposition to any return to a mandatory TOU.

- After the interim flat rate period, the OEB could offer a wider range of pricing plans to consumers.
  - As part of its RPP review, the OEB will be running pilots with LDCs to assess customer response to alternative time periods and pricing structures.
  - Learnings from these pilots will help inform potential changes to the RPP. Pilots are expected to be in market May 2017 and run for one year.

- Non-RPP Class B electricity consumers currently pay Global Adjustment (GA) on a volumetric basis. Moving them to TOU would provide an incentive to shift consumption to off-peak periods.
  - Consumers, including manufacturers, who are unwilling to shift would face higher costs and likely not be supportive of the changes.
  - The decision to pursue TOU pricing for non-RPP class B consumers will impact proceeds recycling as there is interplay between the two initiatives.

# 7. Reduced Cost of OPG Borrowing

- OPG currently borrows for corporate purposes from the OEFC
- Seek to reduce OPG's borrowing costs and pass on savings to ratepayers by:
  - Reducing or removing the spread that OEFC applies to OPG for any new corporate debt; or
  - Allowing OPG to refinance its existing debt at longer maturities through the OEFC in order to take advantage of the current, favourable interest rate environment.
- Assuming the full spread is removed from all OEFC debt, OPG borrowing costs could be reduced by 50-100 basis points, representing annual savings of about $20-$25 million, increasing to $30-$35 million, as OPG's outstanding OEFC debt rises from ~$3.3 billion in 2016 to ~$4.7 billion in 2020.
- OPG could apply to the OEB as part of its current rate application to flow this benefit to ratepayers.

**Considerations**

- Further work is required to determine potential OPG savings from these initiatives.
- Allowing OPG to refinance would have a negative fiscal impact on the Province.
- Spreads are expected to decline, reducing the relative impact of this change, given lower overall interest rates and reduced volatility.
- Providing OPG with greater access to longer term (20-30 year) debt may also reduce costs:
  - OPG's average term to maturity for OEFC debt is 5.7 years, as compared to 22.2 years for privately financed project debt. This contrasts with most corporations and government which have been working to extend average debt terms in order to take advantage of the low interest rate environment.
  - Longer terms would also better match to the life of OPG's assets.
  - Recently, OEFC has allowed OPG to apply for 50% of its financing requirements in the form of longer term (25-30 year debt). Moving closer to 100% would accelerate this transition.

# 8. End DRC Early for Commercial/Small Industrial Class B Electricity Consumers

- Propose to remove the $0.07/kWh Debt Retirement Charge (DRC) from the bills of commercial/small industrial Class B consumers beginning in 2017, instead of April 1, 2018.
  - **Note:** Class A consumers (e.g., large industrial) would continue to pay DRC until at least April 1, 2018.

**Considerations**

- For a Class B consumer currently paying about $152/MWh, removing the DRC would represent a savings of about 5%.
  - A 50% reduction in the DRC charge would represent a savings of about 2%.

- Alternatively, the reduction of the DRC could be to $0.035/kWh starting in 2017, to provide relief for cap and trade until proceeds recycling is fully operational.

- Residential consumers have had the DRC removed from bills since January 1, 2016. Taking DRC off commercial and small industrial bills would result in equal treatment for these groups of consumers.

- The savings for commercial and small industrial consumers associated with this proposal would drop to zero in April 2018, since this is the current planned date for removing the DRC from non-residential bills.

- Prior to moving forward with this proposal, additional analysis from Legal Services and the MOF would be needed.

# 9. Dedicate Departure Tax

- In connection with the IPO, as a result of leaving the PILs regime and entering the corporate tax regime, Hydro One was deemed to dispose of its assets for proceeds equal to its fair market value, triggering a PILs liability of $2.6 billion (Departure Tax).
- This was paid to the Ontario Electricity Financial Corporation (OEFC), to be dedicated towards repayment of electricity sector stranded debt.
- The Province could explore repurposing some of those funds to the benefit of ratepayers.
- This may reduce the risk that the Ontario Energy Board (OEB) assigns to ratepayers the benefit from an associated tax asset, resulting in lower earnings and decreased share value for Hydro One. This decision is currently before the OEB, as part of Hydro One's Transmission rate application.

**Considerations**

- Cost savings to ratepayers would depend on timing and which ratepayers (e.g., Hydro One customers, or all Ontario customers) will benefit from some or all of the $2.6 billion value.
- While this is a shift from messaging that value from the broadening of ownership of Hydro One is being used pay down debt and fund transit and transportation, the Province could link to electricity infrastructure investments (e.g., as an offset to infrastructure investments already made in the sector, or to specific initiatives such as conservation).
- These funds were paid to the Ontario Electricity Financial Corporation (OEFC), to be dedicated towards repayment of electricity sector stranded debt. Repurposing may have an impact on the defeasance of this debt.

# 10. Cancel/Adjust Renewable Energy Procurements

- The Ministry could consider the following actions to further mitigate future impacts to electricity bills:

| Unallocated/Terminated Capacity | Announced Procurements | Executed Contracts |
|---|---|---|
| A. Do not procure unallocated or terminated capacity | B. Revise FIT 5 target | D. Cancel LRP I contracts |
| | C. Cancel FIT 6 | |

**Overarching Considerations**

- Cost savings associated with reducing or cancelling renewable energy procurements and programs will not reduce current electricity bills, but would result in future cost reductions relative to Ontario Planning Outlook forecasts.
- The IESO estimates implementing options A to C will reduce system costs by approximately $592 million ($2016) between 2019 and 2028, resulting in an average of approximately $0.50/month in savings to a typical residential electricity bill over the same period. [cost reductions from LRP I contract cancellations TBC]
- The microFIT program is winding down end of 2017. Annual microFIT procurement targets have been undersubscribed.
- With a few exceptions (e.g., rollover of unallocated microFIT capacity; addition of terminated microFIT and small FIT capacity to FIT 5), plans for unallocated or terminated capacity are not defined in announcements or existing directions.

**Cancel/Adjust Announced Procurements**

- Amendments to existing directions to the IESO would be required to reduce FIT 5 and cancel FIT 6.
- The FIT 5 procurement is underway with a base target of 150 MW and inclusion of any capacity available from contract terminations under prior small FIT and microFIT procurements. The application window closed on November 25, 2016.

# 10. Cancel/Adjust Renewable Energy Procurements – Existing Contracts

**Cancel Existing LRP I Contracts**

- 16 LRP I contracts (approx. 455 MW) have been executed and projects are under development.
- None have met Key Development Milestones. Total value of LRP I estimated at approx. $1 billion (NPV to 2016).

[Placeholder for IESO: Cost calculation relative to OPO and associated bill impact]

**Considerations**

- To help inform a decision, IESO or OEB could be asked to evaluate and provide guidance to the Ministry on the system need for LRP I projects and potential ratepayer impacts/benefits.
- 13 of 16 LRP I contracts have Indigenous participation. Cancelling LRP I contracts would remove this economic development opportunity and likely damage relationships between Indigenous communities and the government.
- LRP I Contract includes an “Optional Termination” provision allowing IESO to terminate any contract prior to the “Commercial Operation Date” with 6 months written notice.
- The IESO obligations under the Optional Termination provision depend on whether the project has met all “Key Development Milestones”.
  - As no projects have met their Key Development Milestones, the estimated total cost payable to contract holders is about $8 million.

# 10. Cancel/Adjust Renewable Energy Procurements – Existing Contracts (cont'd)

## Legal Analysis

- Under the *Electricity Act, 1998*, the Minister has the authority to amend previous directions without approval from Cabinet. Although an amendment to an existing direction would not require Cabinet approval, it is unlikely that a direction to cancel LRP I contracts could be considered as amending an existing direction. The previous LRP directions set out the broad policy framework that was reflected in the procurement, but the contracts themselves, once executed, are stand alone documents which the IESO had legal authority to execute. Revoking previous LRP directions does not affect that authority or have the effect of cancelling the procurement.
- As a result, any new directive to cancel LRP I contracts would need to be approved by Cabinet, either as part of an LTEP implementation directive to IESO, or pursuant to the overall power to direct IESO with respect to procurements outside the LTEP process. However, there is a risk that such a directive could be subject to challenge.
- ENERGY has previously received advice that there is a high risk that a court would conclude that the Minister has no authority under the *Electricity Act , 1998* to issue a direction requiring IESO to terminate microFIT Conditional Offers and FIT Offer Notices that have already been issued to applicants, because these offers create vested contractual rights and the Minister would require clear legislative authority to interfere with those rights. This reasoning would likely apply equally to any direction or directive to IESO to cancel LRP I contracts.
- Previous advice has also flagged a moderately high risk that the Province could be liable for damages in tort for inducing a breach of contract if it issues a direction to IESO that interferes with vested contractual rights without clear statutory authority to do so. LRP I contract holders could also assert other claims, such as misfeasance in public office.
- The risk and costs associated with potential law suits resulting from the cancellation of contracts requires further analysis, including analysis of whether any statutory amendments would be required to provide clear authority to cancel the contracts. LSB recommends ENERGY seek an opinion from Crown Law Office Civil before proceeding.

# Summary

- Reductions in electricity rates could be achieved by eliminating existing, planned or directed initiatives from the rate-base or shifting these costs to the tax-base.

- The timing of the impact of these rate mitigation initiatives varies.
  - Immediate and near-term impacts can be achieved by shifting costs to the tax-base or changing how certain costs are recovered from consumers or eliminating certain programs.
  - Over the longer term, changes to the electricity supply mix and achieving efficiencies in the electricity market could yield system savings.

- Pursuing the initiatives would require regulatory amendments and working with the electricity sector agencies, LDCs and other stakeholders to implement the initiatives.

- As shown before the positive impact to residential ratepayers is very limited (between $8 and $9 per month) while the impact to the Province's fiscal position would be material (about $1.2 to $1.5 billion a year).

# Appendix

# Electricity Consumer Classes

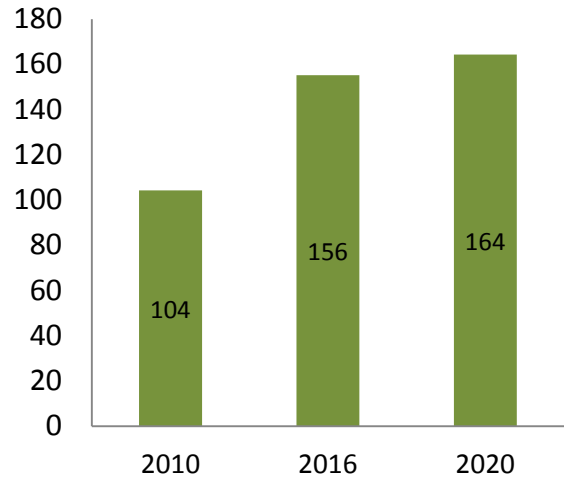
- In Ontario, there are three classes of electricity consumers:

| | Regulated Price Plan | Class B | Class A |
|---|---|---|---|
| **Consumer Types** | • Residential<br>• Small Business<br>• Farms | • Commercial<br>• Institutional<br>• Small industrial | • Large commercial<br>• Large industrial |
| **Load Size** | Below 0.05 MW | Between 0.05 MW and 1 MW | Above 1 MW |
| **Total Consumption** | 58 TWh | 57 TWh | 26 TWh |
| **Share of Consumption** | 41.1% | 40.4% | 18.4% |

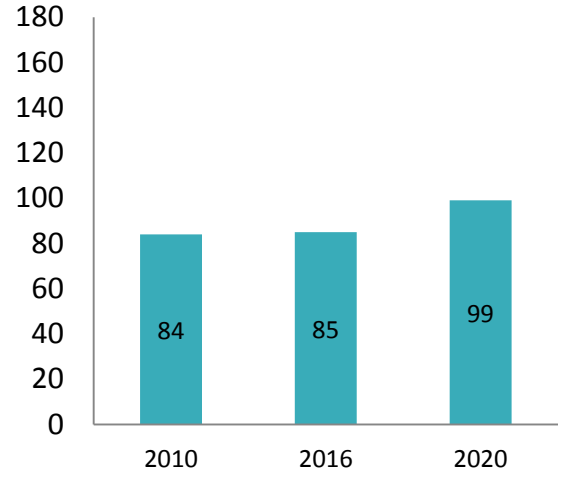
# Prices by Electricity Consumer Class

- Since 2010, average bills for residential consumers (i.e., using 750 kWh/month) have increased by over 50%. Rates are forecast to continue to increase, with residential consumers paying an estimated 6% by 2020.
- Industrial electricity rates have remained relatively flat over the same time period, due primarily to the Industrial Conservation Initiative (ICI). ICI represents a cost shift of about $5/month for residential electricity consumers. Industrial electricity consumers are forecast to see an increase of 16% by and 2020.

**Typical Residential Bill (750/kWh per month)**



**Typical Class A (Industrial) Price ($/MWh)**



**Note:** 2016 represents year-to-date September 2016 for industrial. Cap and trade proceeds recycling is included for the industrial consumer for 2020.

# Rate Mitigation Levers

- To provide further rate relief to Ontario electricity consumers, the government can use one or more of the levers outlined below:
  - **Tax-based Lever:**
    - Provide rebates funded from the tax-base or transfer items currently paid through the rate-base to the tax-base.
  - **Rate-based Lever:**
    - Shifts costs within the rate-base from one customer group to another to achieve electricity system benefits and/or policy goals.
  - **Cap and Trade Proceeds Lever:**
    - Use cap and trade proceeds on initiatives that help reduce greenhouse gas (GHG) emissions from the electricity sector (e.g., recycling proceeds during off-peak periods) while providing benefits to some or all electricity consumers.

# Traditional Rate Mitigation Programs

- Ontario has implemented a number of rate-based programs to help residential and industrial electricity consumers:
  - The Ontario Electricity Support Program (OESP) provides ongoing assistance directly on the bills of eligible low-income electricity consumers
  - The Rural or Remote Rate Protection (RRRP) program is provided to rural and remote residential and farm customers because the cost of distributing power to remote areas is much higher than for urban areas.
  - The Industrial Conservation Initiative (ICI) encourages Ontario's largest consumers to reduce consumption during peak periods while reducing system costs.
- There are also tax-base programs to help manage electricity prices:
  - Rebate the provincial portion of the HST from the electricity bills of residential, small business and farms as of January 1, 2017.
  - Northern Industrial Electricity Rate Program (NIERP), in which participants receive a rebate of two cents per kilowatt hour. On average, industrial electricity prices can be reduced by up to 20%.
- While rate-based programs provide relief to certain electricity consumers, they shift other costs to remaining ratepayers (See Appendix for additional details).

# Driving Down Prices for Consumers

- Since 2013, a number of actions have been taken to drive down prices for consumers wherever possible:
  - Renegotiating the Green Energy Investment Agreement, reducing contract costs by $3.7 billion;
  - Deferring the construction of two new nuclear reactors at Ontario Power Generation's Darlington facility, avoiding an estimated $15 billion in new construction costs;
  - Approving Ontario Power Generation's plans to enable the ongoing operation of Pickering up to 2024, which is expected to save ratepayers as much as $600 million;
  - Reducing Feed-In-Tariff (FIT) prices through annual price reviews, saving ratepayers at least $1.9 billion relative to the 2013 Long-Term Energy Plan (2013 LTEP) forecast; and
  - Suspending the second round of the Large Renewable Procurement (LRP II) process and the Energy-from-Waste Standard Offer Program to save up to $3.8 billion in electricity system costs relative to 2013 LTEP.

# Cost Shifts in the Electricity Sector – Current Programs

- Several programs in the electricity sector “shift costs” from one group of electricity consumers to another:
  - **Rural or Remote Rate Protect** (**RRRP)** is a longstanding program that reduces the delivery charge for rural electricity consumers and is paid for by all consumers in Ontario through a regulatory charge on bills.
  - **Ontario Electricity Support Program (OESP)** is funded via a regulatory charge on consumer bills and provides support for qualifying low income electricity consumers.
  - **Industrial Conservation Initiative (ICI)** empowers large consumers to lower their costs by reducing their demand during peak hours. In the process, ICI shifts costs from large electricity consumers to all other consumers in Ontario.
  - **Industrial Electricity Incentive** (**IEI**) program, offers reduced electricity prices for companies starting or expanding operations in Ontario. All electricity consumers in Ontario pay for the price reduction that IEI participants receive.

# Cost Shifts in the Electricity Sector (Cont'd)

- The tables on the right show the estimated cost shifts that result from existing government programs.
- ICI has had the largest cost shift of all the programs, due to the large size of Global Adjustment (GA) and the way that it is recovered from consumer classes.
- RRRP and OESP impact the regulatory line on consumer bills, while ICI, IEI and conservation affect GA (i.e., Electricity line on bills of Regulated Price Plan consumers).

**Cost Shift Impacts - Residential Bill**

*Typical 750 kWh/month Toronto Hydro consumer*

| *$/month* | 2011 | 2012 | 2013 | 2014 | 2015 | 2016 |
|---|---|---|---|---|---|---|
| ICI | 2.65 | 3.25 | 3.88 | 3.53 | 4.75 | 4.77 |
| RRRP | 0.90 | 0.82 | 0.84 | 0.92 | 0.93 | 0.94 |
| OESP | - | - | - | - | - | 0.84 |
| Conservation | 1.85 | 1.92 | 2.00 | 1.58 | 2.43 | 2.45 |
| IEI | - | - | 0.08 | 0.09 | 0.11 | 0.12 |
| **Total** | **5.41** | **5.99** | **6.81** | **6.13** | **8.21** | **9.12** |

**Cost Shift Impacts - Industrial Bill**

*Typical Class A consumer*

| *$/MWh* | 2011 | 2012 | 2013 | 2014 | 2015 | 2016 |
|---|---|---|---|---|---|---|
| ICI | -22.17 | -26.36 | -30.29 | -25.91 | -33.79 | -33.92 |
| RRRP | 1.20 | 1.10 | 1.12 | 1.23 | 1.24 | 1.25 |
| OESP | - | - | - | - | - | 1.13 |
| Conservation | 1.53 | 1.59 | 1.66 | 1.31 | 2.01 | 2.02 |
| IEI | - | - | 0.07 | 0.08 | 0.09 | 0.10 |
| **Total** | **-19.43** | **-23.67** | **-27.44** | **-23.29** | **-30.45** | **-29.43** |

**Note:** OESP did not come into effect until 2016. The 2016 values represent forecasts and are subject to change.

# Cost Shifts in the Electricity Sector (Cont'd)

- The table on the right shows the total cost for various government electricity programs. These programs are currently funded through the electricity system ratebase.

- Funding of these programs through the fiscal plan would remove these costs from the electricity system (i.e., Placing these costs on the taxbase).

**Cost of Programs**

*By government program*

| *$M* | 2011 | 2012 | 2013 | 2014 | 2015 | 2016 |
|---|---|---|---|---|---|---|
| ICI | 506 | 615 | 736 | 670 | 890 | 893 |
| RRRP | 172 | 156 | 159 | 176 | 174 | 176 |
| OESP | - | - | - | - | - | 158 |
| Conservation | 329 | 339 | 354 | 280 | 425 | 428 |
| IEI | - | - | 15 | 16 | 18 | 19 |

- For example, removing the roughly $900 million of program cost from the Industrial Conservation Initiative (ICI) program would save the typical residential electricity consumer $4.77 per month in 2016.

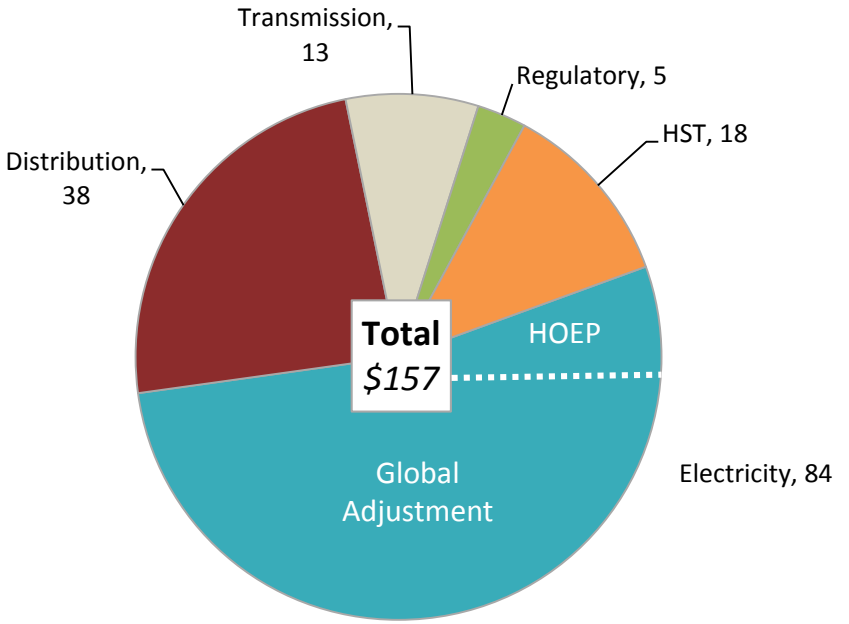
**Note:** OESP did not come into effect until 2016. The 2016 values represent forecasts and are subject to change.

# Residential Electricity Prices

- There are approximately 4.5 million residential consumers in Ontario.
- The Regulated Price Plan includes nearly all residential consumers, as well as small businesses. Regulated Price Plan consumers pay a blended commodity rate regulated by the OEB, which is set every six months.
- For households, the Debt Retirement Charge (DRC) was removed from residential electricity bills as of January 1, 2016.
- In addition, the Ontario Electricity Support Program (OESP) provides an ongoing rate reduction directly on the bills of low-income electricity consumers who have applied and meet the eligibility requirements. The program is funded through the rate base.
- Rural customers, in particular those with electrical heating, pay higher monthly bills.

**Typical Residential Monthly Bills ($)**

*As of November 1, 2016 (750 kWh/month)*



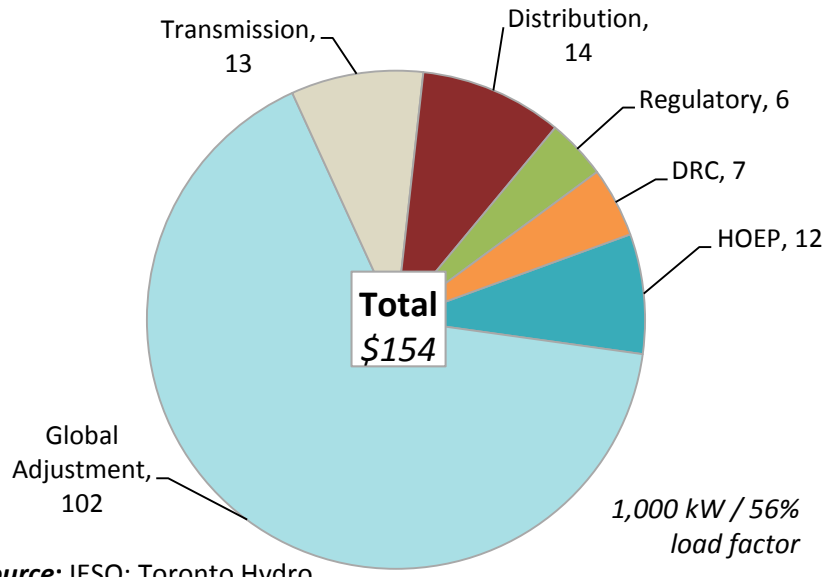
***Source*: OEB, Toronto Hydro**

# Commercial Electricity Prices

- There are approximately 55,000 commercial and institutional consumers in the province. These consumers are Class B consumers, and have separate line items on the electricity bill for HOEP and GA.
- There is a high degree of differentiation amongst consumers within the commercial sector in terms of size and consumption patterns. For example, an elementary school has a much different hourly load profile compared to a full service restaurant. This is an important consideration when looking at the bill impacts of policy options.

**Typical Commercial Price ($/MWh)**

*YTD June 2016 (Non-RPP Class B)*



***Source*:** IESO; Toronto Hydro

- Consumers in the commercial sector do not pay time-of-use prices and have little incentive to shift demand away from high demand hours.
- Targeted pricing programs are currently not available for Class B consumers.

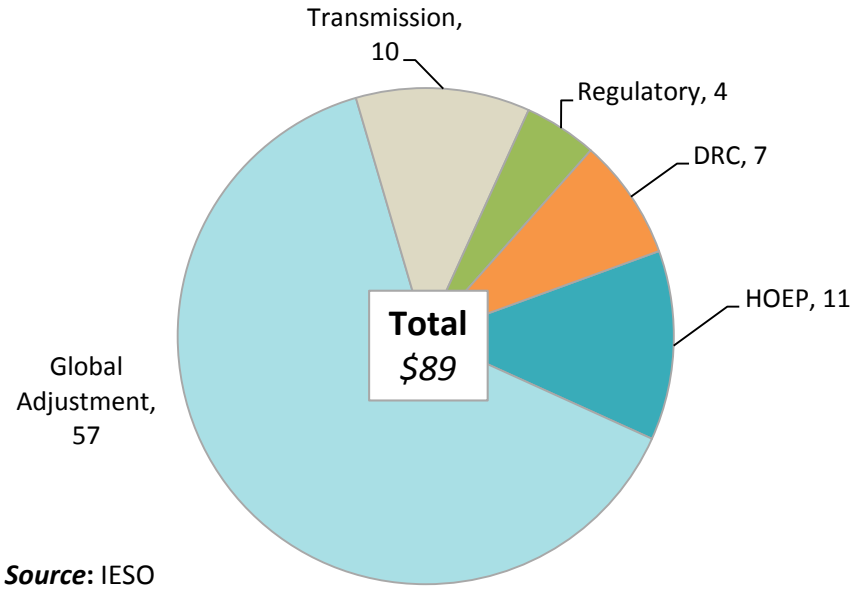
*** Note**: Most commercial consumers receive input tax credits for their HST.

# Industrial Electricity Prices

- There are about 300 large industrial consumers in Ontario.
- Measures in place to mitigate industrial electricity prices include ICI and NIERP.
- ICI lowers costs for eligible large electricity consumers (i.e., those with monthly peak demand exceeding 3 MW) that reduce consumption during peak periods.
  - ICI consumers reduce their electricity rates by 25% on average.

**Typical Large Industrial Price ($/MWh)**

*YTD June 2016*



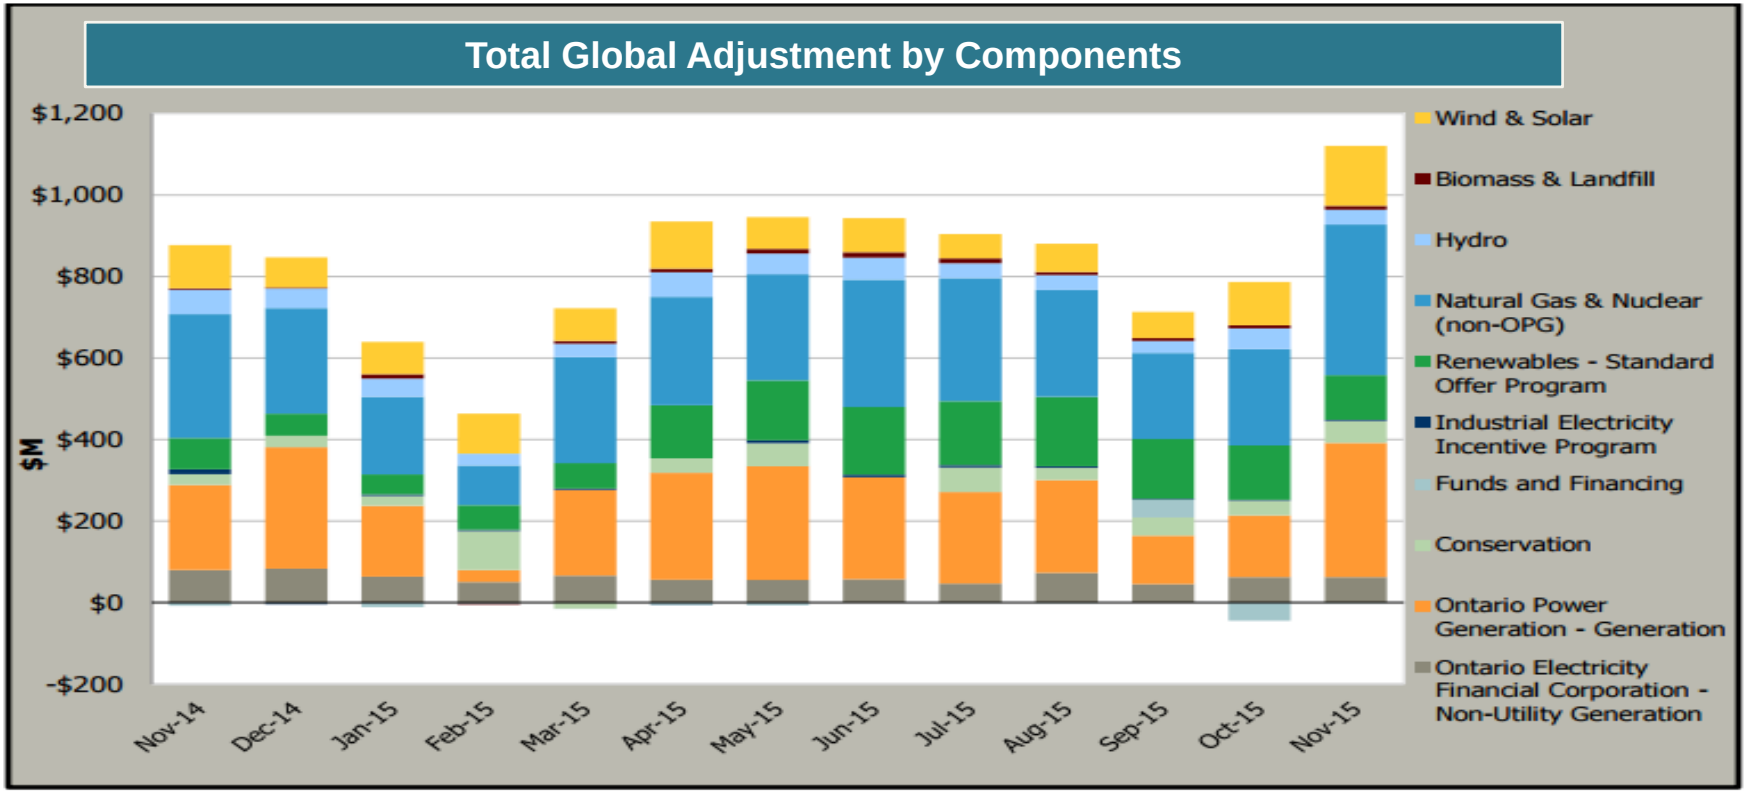
***Source*: IESO**

- Participants in NIERP receive a rebate of $20/MWh. On average, industrial electricity prices are reduced by about 20% through the program, reducing all-in prices to $69/MWh for these consumers. The program is funded through the tax base.

*** Note:** Industrial consumers receive input tax credits for their HST.

# Total Components of Global Adjustment

- Global Adjustment (GA) is a market mechanism that recovers costs from electricity consumers, including the cost of almost all conservation programs in the province (i.e., approximately half a billion dollars in 2016).



**Source:** IESO Monthly Market Report (November 2015)

# Cancel/Adjust Renewable Energy Procurements

# LRP I Pre-Construction Liability Limits

- All 16 successful LRP I developers accepted Optional Termination Provisions when the LRP I Contracts were executed in April 2016.
- If IESO chooses to enact the Optional Termination provision before a project has met all Key Development Milestones, IESO is required to pay pre-construction development costs up to the Pre Construction Liability Limit.
- Pre-construction development costs include costs incurred for feasibility studies, obtaining site access rights, work towards environmental approvals, business development plans, negotiation of contracts for design, equipment, construction and financing, reasonable overhead expenses, and other reasonable costs incurred.
- The Pre Construction Liability Limits are:
  - Non-Rooftop Solar: $250,000 plus $10.00/kW of Contract Capacity
  - Waterpower: $500,000 plus $20.00/kW of Contract Capacity
  - On-Shore Wind: $400,000 plus $2.00/kW of Contract Capacity
- According to the LRP I Optional Termination provision, the developer has a duty to take reasonable steps to mitigate losses, liabilities, costs and damages incurred as a result of the Optional Termination.
  - The IESO will not provide compensation for amounts which are attributable to a developer's failure to take reasonable steps to mitigate.

DRAFT

# Electricity Price Mitigation

Corporate and Electricity Finance Division
December 7, 2016

DRAFT

# General Comments on Energy's Deck

- Energy's deck note various actions taken to-date to reduce costs or cost pressures, such as deferring generation supply investments, improving market efficiency, and reducing the costs of existing procurements.
- Aside from reducing costs on the electricity bill, it is not clear what principles are being applied, short term or long term for electricity pricing.
  - A principle that was applied in the past was to ensure that electricity consumers paid the true cost of electricity, for example.
  - The Energy proposals appear to be about, in part at least, moving some costs from the rate base to the tax base.
- However, the Energy proposals may be seen as having a fairly limited impact, e.g., a little over $8/month for residential, or a little over 5% of the monthly bill (though not all of the proposals have been costed / assessed).
  - The proposals would have a significant fiscal cost [about $1.2 to $1.5 billion per year in new fiscal costs].
- There is already significant amounts of existing fiscally-funded electricity price mitigation
  - Averages over $1.5 billion per year over the past five years, and estimated to increase to about $2 billion in 17-18 (see subsequent slide for estimated costs over time, and likely increasing over time), with the total tax-based costs rising to about $3.4 billion in 2017-18.
  - These existing mitigation costs are not presented in Energy's deck.
  - Also not included is any "hidden" price mitigation through constrained financial performance of, e.g., OPG.

DRAFT

# Context: Current Status on Taxpayer Funded Electricity Price Mitigation

| ($M) | 2011-12 | 2012-13 | 2013-14 | 2014-15 | 2015-16 | 2016-17[1] | 2017-18[1] |
|---|---|---|---|---|---|---|---|
| OCEB | 1,033 | 994 | 1,006 | 1,078 | 860 | - | - |
| OREC | - | - | - | - | - | 300 | 1,100* |
| Ending DRC[2] | - | - | - | - | 85 | 330 | 330 |
| NIERP | 120 | 120 | 115 | 108 | 120 | 120 | 120 |
| NOEC | 23 | 24 | 25 | 24 | 26 | 25 | 25 |
| OEPTC[3] | 354 | 406 | 418 | 429 | 444 | 450 | 460 |
| **TOTAL** | **1,530** | **1,544** | **1,564** | **1,639** | **1,525** | **1,195** | **2,005** |

1. 2016-17, 2017-18 based on forecasted numbers
2. 2015-16 estimated for 3 months of reduced DRC revenue
3. OEPTC amounts in all years based on energy component of the rebate.

* Sourced from Energy PRRT submission

OCEB – Ontario Clean Energy Benefit
OREC – Ontario Rebate for Electricity Consumers
DRC – Debt Retirement Charge
NIERP – Northern Ontario Electricity Rate Program
NOEC – Northern Ontario Energy Credit
OEPTC – Ontario Energy and Property Tax Credit

- The table above shows the annual amount of taxpayer funded electricity price mitigation from 2011-12 to 2017-18.
- From 2011-12 to 2015-16 there has been an annual fiscal impact of approximately $1.6 billion due to electricity price mitigation programs.
- In 2016-17, the fiscal impact due to electricity price mitigation programs is estimated at approximately $1.2 billion.
- In 2017-18, due primarily to the start of the Ontario Rebate for Electricity Consumers, the expected fiscal impact due to electricity price mitigation programs is approximately $2.0 billion.

# Electricity Price Mitigation

General Decision Points on Program Features:

- Funding: Rate base vs Tax base
  - Tax base programs have a direct fiscal impact on the Province's finances, and shift costs based on taxpayer incidence and impact on expenditure room for other, non-electricity, programs.
  - Rate base programs shift costs from one group of ratepayers to another.
- On-bill vs Not On-bill
  - Recent focus has been on on-bill programs, such as OESP and OREC.
  - Older tax-base funded programs that are not visible on the bill are still in place, such as NOEC and OEPTC.
  - As OESP enrollment increases, could consider phasing out the non-bill benefits of NOEC and OEPTC.
- Targeted vs General
  - Recent new programs include both general (OREC) and targeted (OESP) programs.
  - Consideration could be made to make OREC more conservation-friendly (e.g., a monthly eligible consumption cap brought in, as with the former Ontario Clean Energy Benefit), and maybe a higher cap in the winter to allow for space heating costs.
  - A targeted industrial program recently extended and made on-going is the Northern Industrial Electricity Rate (NIER) program.

# Energy's Proposals

Energy is proposing additional electricity price mitigation programs, currently funded through the electricity system, be fiscally-funded. They could be upwards of $2 bn/year, (plus the departure tax), which is not included in the fiscal plan, which would challenge the path to balance.

- OESP & RRRP (Total of about $0.4 Bn/yr): This includes shifting the cost of the Ontario Electricity Support Program (OESP) and the Rural or Remote Electricity Rate Program (RRRP) to the tax base. Note that the fiscal exposure is larger if the OESP take up rate is larger, faster than assumed.

- Industrial Conservation Initiative (ICI -- About $900+ M/yr): Energy also shows, as a potential residential price mitigation measure, the cancellation of the ICI.
  - Energy is not initially proposing it be continued instead as taxpayer funded, but notes that about 30% price increase (from $85/MWh to $110), if ICI is cancelled, for the large Class A customers benefiting from ICI currently.
  - As this cost estimate is for 2016, prior to the planned expansion of the ICI, this could further increase the fiscal exposure by about $100 million).

- Departure Tax: As a result of the IPO, Hydro One paid a "departure tax" payment in lieu of tax (PIL) of $2.6 billion, as a final true-up of its PILs tax obligation.
  - This was paid to the Ontario Electricity Financial Corporation and helped reduce stranded debt.
  - Using some or all of it for price mitigation would change the net stranded debt paydown by OEFC resulting from the IPO. This would also be a one-time measure (potentially over a few years), and fiscal impact, as the departure tax amount was one-time.

- Other fiscal cost risks (Total of about $0.8+ Bn):
  - Amortisation of conservation costs also poses a fiscal risk (about $0.4 bn/yr),
  - Ending the DRC early for Class B customers (commercial, small industrial) (about $0.4 bn/yr to 2017-18)
  - Lowering of the debt interest paid by OPG (about $30 – 70 million/yr between 2017 and 2021),

DRAFT

# Fiscal Mitigation Options

- With the addition of recent and new price mitigation measures, a review should be initiated on fiscally-funded programs. There could be a phase down / out transition period considered. Examples include the following:

- Ontario Energy and Property Tax Credit (OEPTC) and Northern Ontario Energy Credit (NOEC):
  - Phase down and/or out the non-on-bill benefits of. (Save up to about $460 M/yr)
  - These targeted, low-income measures were introduced after the HST was introduced.
  - The OESP provides a larger, targeted and on-bill relief to qualifying consumers.

- Ontario Rebate for Electricity Consumers (OREC):
  - Introduce over time a monthly eligible consumption cap, with perhaps a higher cap in the winter to allow for space heating costs.
  - As with the prior OCEB cap, provides a rough incentive for conservation and correlation to larger homes. A higher cap in winter may help with space-heating issue.
  - May be challenging to implement.

- Greenhouse Gas Reduction Account:
  - If ICI is put on the tax-base, make it eligible for GGRA funding.
  - Positioned as, e.g., providing annual benefits from participants conserving and shifting off-peak to reduce reliance on GHG-emitting peaking plants

DRAFT

# Proposed Taxpayer Funded Electricity Price Mitigation
(To be revised)

| ($M) | 2016-17[1] | 2017-18[1] | 2018-19[1] | 2019-20[1] | 2020-21[1] |
|---|---|---|---|---|---|
| OCEB | - | - | - | - | - |
| OREC | 300 | 1,100* | 1,100* | 1,200* | 1,200* |
| Ending DRC[2] | 330 | 330 | -- | -- | -- |
| NIERP | 120 | 120 | 120 | 120 | 120 |
| NOEC | 25 | 25 | 25 | 25 | 25 |
| OEPTC[3] | 450 | 460 | 470 | 481 | 481 |
| **CURRENT TOTAL** | **1,195** | **2,005** | **1,715** | **1,826** | **1,826** |
| 1. OESP | | 106 | 119 | 127 | 132 |
| 2. RRRP | | 292 | 300 | 306 | 315 |
| 3. First Nations Delivery Rate | | 18 | 18 | 18 | 18 |
| 4. Fund ICI through Tax Base | | 900+ | 900+ | 900+ | 900+ |
| 5. Departure Tax | | TBD | TBD | TBD | TBD |
| 6. Conservation Amortisation | | | | | |
| 7. DRC Ended for Class B | | | | | |
| 8. Other | | | | | |
| **TOTAL** | **1195** | **3,421** | **3,152** | **3,177** | **3,191** |

1. 2016-17, 2017-18 based on forecasted numbers
2. Estimated impact up to March 31, 2018
3. OEPTC amounts in all years based on energy component of the rebate.

- As shown above, if all measures proposed in this deck were to be accepted taxpayer funded contributions to electricity price mitigation would increase to about $3.2 billion, or more, by 2020-21. That is about a 60% increase from the current forecast for 2017-18.
- These amounts were not considered in the 2016-17 Fiscal Plan and could put at risk the Province's fiscal objectives for 2017-18 and beyond.

# Appendix

DRAFT

# Background on Taxpayer-funded Electricity Price Mitigation

| Program | Annual Fiscal Impacts ($M) | Date | Details |
|---|---|---|---|
| **Ontario Clean Energy Benefit (OCEB)** | ~1,000 | Jan 1 2011 to Dec 31, 2015 | OCEB provided over four million residential customers, and over 400,000 farm, small business and other small users with a benefit equal to 10 per cent of the total cost of electricity on their bills, including tax. Effective September 1, 2012, 10 per cent benefit was capped for the first 3,000 kWh of electricity consumed per month. OCEB expired December 31, 2015, as legislated. |
| **Removed Debt Retirement Charge (DRC) from Residential Bills** | ~330 | Jan 1, 2016 to Mar 31, 2018 | The government removed the DRC from residential electricity users' bills as of January 1, 2016. This is saving a typical residential user about $70 each year and meant ending the DRC earlier for these users than otherwise provided for in the *Electricity Act, 1998*. |
| **Ontario Rebate for Electricity Consumers (OREC)** | ~1,200 | Jan 1, 2017 onward | This ongoing program will rebate -- directly on consumers' residential electricity bills -- an amount equal to the provincial portion of the Harmonized Sales Tax (HST). |
| **Northern Industrial Electricity Rate (NIER) Program** | 120 | March 2010 | As announced in Budget 2015, the government committed to ongoing support for northern industrials with $120 million allocated annually. NIER was previously extended in 2012 for an additional three-year term, effective April 1, 2013 and also for a year effective April 1, 2016, with an allocation up to $120 million per year.<br>Qualifying participants receive a rebate of two cents per kilowatt-hour (kWh) up to a maximum of $20 million per year per company.<br>NIER initially established as a three-year program in Budget 2010, effective April 1, 2010. |
| **Northern Ontario Energy Credit** | ~25 | Budget 2010 | Delivered as part of the Ontario Trillium Benefit, provides individuals living in northern Ontario with a credit of up to $146 per year for the 2016 benefit year, and families up to $224.[1] |
| **Ontario Energy Property Tax Credit** | ~445[1] | Budget 2010 | Delivered as part of the Ontario Trillium Benefit, energy portion provides up to $224 per year (inflation adjusted) for low-to moderate-income individuals and families, and for qualifying seniors.[1] |

1. Energy portion cost only. Both the energy portion of the Ontario Energy and Property Tax Credit (OEPTC) and NOEC were introduced/enhanced following the introduction of the HST and have a significant annual fiscal cost (totalling about $500 million annually).

DRAFT

# Timeline: Taxpayer-funded Electricity Price Mitigation

**Budget 2010: OEPTC, NOEC Proposed as part of the Ontario Trillium Benefit**

*In the 2011 Budget, the government combined the payments of three existing tax credits — the Ontario Sales Tax Credit, the Ontario Energy and Property Tax Credit, and the Northern Ontario Energy Credit — to create the OTB. The OTB is paid in monthly instalments throughout the year, which helps people meet their expenses as bills arrive.*

**Ontario Clean Energy Benefit** (Jan 1 2011 to Dec 31 2015)

*The OCEB was introduced in the 2010 Ontario Economic Outlook and Fiscal Review to help consumers transition to a cleaner electricity system. As set out in legislation, the OCEB ended on December 31, 2015. The Province has introduced rate mitigation measures to be implemented after December 31, 2015.*

*OCEB provided over four million residential customers, and over 400,000 farm, small business and other small users with a benefit equal to 10 per cent of the total cost of electricity on their bills, including tax, for the first 3,000 kilowatt-hours (kWh) of monthly electricity consumption.*

**Removing DRC from Residential Bills** (Jan 1 2016 to Mar 31 2018)

*The government removed the DRC from residential electricity users' bills beginning on January 1, 2016. This saves a typical residential user about $70 each year and ends the DRC earlier for these users than otherwise provided for in the Electricity Act, 1998.*

**Ontario Rebate for Electricity Consumers**

*As of January 1, 2017, OREC will reduce electricity costs by an amount equal to the provincial portion of the HST for about five million residential consumers, farms and small businesses.*

2010 2011 2012 2013 2014 2015 2016 2017

## History of Northern Industrial Electricity Price Relief

**November 2006**

*The Ontario government announced the Northern Pulp and Paper Electricity Transition Program (NPPETP), a three-year $140 million, to be effective retroactively to October 1, 2006*

**Budget 2009**

*The government announced extension of the NPPETP by one year providing about $58 million with electricity price rebates of 1.8 cents/kWh.*

**Budget 2010**

*NIER program announced, with a projected fiscal cost of $150 M per year, to provide electricity price rebates for qualifying large industrial facilities in northern Ontario. An additional $21.8 million allocated for existing NPPETP in 2010-11 to be integrated with NIER.*

**September 2010**

*Transition from NPPETP to NIER: pulp and paper mills participating in NPPETP continued to receive the NPPETP rebate of 1.8 cents/kWh until September 30, 2010, with those qualifying for NIER receiving a top-up rebate of 0.2 cents/kWh.*

**December 2012**

*The government announced the extension of the NIER for three years, capping the rebates to a maximum of 2011-12 consumptions levels or $20 million, whichever is lower.*

DRAFT

# Potential Fiscal Impact to the Electricity Sector

- The electricity sector has a significant impact on the Province's fiscal position; through both the revenue and expense sides of the Province's fiscal position.
  - Electricity Rate mitigation programs funded through the tax base have a direct fiscal impact on the Province's finances.
  - Alternatively, electricity rate mitigation programs funded by the rate base shift costs from one group of ratepayers to another.
- The Province's electricity sector agencies and corporations are each consolidated into the government's financial statements, and directly affect the Province's surplus/deficit position.
  - Ontario Power Generation (OPG) financial results have a dollar-for-dollar impact on the Province.
    - Electricity price mitigation strategies involving OPG would lead to a direct fiscal impact.
  - Hydro One financial results have a direct impact on the Province, based on the Province's proportionate ownership.
    - The Province currently holds about 70 per cent of Hydro One.

**Subject:** Fwd: Potential Rate Mitigation

Hi,

Lets meet in the morning to discuss.

We'll need a product for EOD. Could be an annotated slide deck, as well as a markup. Suggestion on any other formats?

Ron

> Subject: Potential Rate Mitigation

Hi,

Attached is a draft of the rate mitigation deck. This is tracking to major projects on Thursday for a preliminary discussion. As you can see there are a number of initiatives that have fiscal implications so your input and comments would be appreciated. Keley can coordinate with your EAs. I understand that Andrew T. plans to share with PO/your MOs.

Serge

DRAFT

# Electricity Price Mitigation

Corporate and Electricity Finance Division
December 7, 2016

# General Comments on Energy's Deck

- Energy's deck note various actions taken to-date to reduce costs or cost pressures, such as deferring generation supply investments, improving market efficiency, and reducing the costs of existing procurements.
- Aside from reducing costs on the electricity bill, it is not clear what principles are being applied, short term or long term for electricity pricing.
  - A principle that was applied in the past was to ensure that electricity consumers paid the true cost of electricity, for example.
  - The Energy proposals appear to be about, in part at least, moving some costs from the rate base to the tax base.
- However, the Energy proposals may be seen as having a fairly limited impact, e.g., a little over $8/month for residential, or a little over 5% of the monthly bill (though not all of the proposals have been costed / assessed).
  - The proposals would have a significant fiscal cost.
- There is already significant amounts of existing fiscally-funded electricity price mitigation
  - Averages over $1.5 billion per year over the past five years, and estimated to increase to about $2 bn in 17-18 (see subsequent slide for estimated costs over time, and likely increasing over time).
  - These existing mitigation costs are not presented in Energy's deck.
  - Also not included is any "hidden" price mitigation through constrained financial performance of, e.g., OPG.

DRAFT

# Context: Taxpayer Funded Electricity Price Mitigation

| ($M) | 2011-12 | 2012-13 | 2013-14 | 2014-15 | 2015-16 | 2016-17[1] | 2017-18[1] |
|---|---|---|---|---|---|---|---|
| OCEB | 1,033 | 994 | 1,006 | 1,078 | 860 | - | - |
| OREC | - | - | - | - | - | 300 | 1,100* |
| Ending DRC[2] | - | - | - | - | 85 | 330 | 330 |
| NIERP | 120 | 120 | 115 | 108 | 120 | 120 | 120 |
| NOEC | 23 | 24 | 25 | 24 | 26 | 25 | 25 |
| OEPTC[3] | 354 | 406 | 418 | 429 | 444 | 450 | 460 |
| **TOTAL** | **1,530** | **1,544** | **1,564** | **1,639** | **1,525** | **1,195** | **2,005** |

1. 2016-17, 2017-18 based on forecasted numbers
2. 2015-16 estimated for 3 months of reduced DRC revenue
3. OEPTC amounts in all years based on energy component of the rebate.

* * Sourced from Energy PRRT submission

OCEB – Ontario Clean Energy Benefit
OREC – Ontario Rebate for Electricity Consumers
DRC – Debt Retirement Charge
NIERP – Northern Ontario Electricity Rate Program
NOEC – Northern Ontario Energy Credit
OEPTC – Ontario Energy and Property Tax Credit

- The table above shows the annual amount of taxpayer funded electricity price mitigation from 2011-12 to 2017-18.
- From 2011-12 to 2015-16 there has been an annual fiscal impact of approximately $1.6 billion due to electricity price mitigation programs.
- In 2016-17, the fiscal impact due to electricity price mitigation programs is estimated at approximately $1.2 billion.
- In 2017-18, due primarily to the start of the Ontario Rebate for Electricity Consumers, the expected fiscal impact due to electricity price mitigation programs is approximately $2.1 billion.

# Electricity Price Mitigation

General Decision Points on Program Features:

- Funding: Rate base vs Tax base
  - Tax base programs have a direct fiscal impact on the Province's finances, and shift costs based on taxpayer incidence and impact on expenditure room for other, non-electricity, programs.
  - Rate base programs shift costs from one group of ratepayers to another.
- On-bill vs Not On-bill
  - Recent focus has been on on-bill programs, such as OESP and OREC.
  - Older tax-base funded programs that are not visible on the bill are still in place, such as NOEC and OEPTC.
  - As OESP enrollment increases, could consider phasing out the non-bill benefits of NOEC and OEPTC.
- Targeted vs General
  - Recent new programs include both general (OREC) and targeted (OESP) programs.
  - Consideration could be made to make OREC more conservation-friendly (e.g., a monthly eligible consumption cap brought in, as with the former Ontario Clean Energy Benefit), and maybe a higher cap in the winter to allow for space heating costs.
  - A targeted industrial program recently extended and made on-going is the Northern Industrial Electricity Rate (NIER) program.

# Energy's Proposals

Energy is proposing additional electricity price mitigation programs, currently funded through the electricity system, be fiscally-funded. They could be upwards of $2 bn/year, (plus the departure tax), which is not included in the fiscal plan, which would challenge the path to balance.

- OESP & RRRP (Total of about $0.4 Bn/yr): This includes shifting the cost of the Ontario Electricity Support Program (OESP) and the Rural or Remote Electricity Rate Program (RRRP) to the tax base. Note that the fiscal exposure is larger if the OESP take up rate is larger, faster than assumed.

- Industrial Conservation Initiative (ICI -- About $900+ M/yr): Energy also shows, as a potential residential price mitigation measure, the cancellation of the ICI.
  - Energy is not initially proposing it be continued instead as taxpayer funded, but notes the about 30% price increase (from $85/MWH to $110), if ICI is cancelled, for the large Class A customers benefiting from ICI currently.
  - As this cost estimate is for 2016, prior to the planned expansion of the ICI, this could further increase the fiscal exposure by about $xxx million).

- Departure Tax: As a result of the IPO, Hydro One paid a "departure tax" payment in lieu of tax (PIL) of $2.6 billion, as a final true-up of its PILs tax obligation.
  - This was paid to the Ontario Electricity Financial Corporation and helped reduce stranded debt.
  - Using some or all of it for price mitigation would change the net stranded debt paydown by OEFC resulting from the IPO. This would also be a one-time measure (potentially over a few years), and fiscal impact, as the departure tax amount was one-time.

- Other fiscal cost risks (Total of about $0.8+ Bn):
  - Amortisation of conservation costs also poses a fiscal risk (about $0.4 bn/yr),
  - Ending the DRC early for Class B customers (commercial, small industrial) (about $0.4 bn/yr to 2017-18)
  - Lowering of the debt interest paid by OPG (about $xx – yy million/yr),

DRAFT

# Fiscal Mitigation Options

- With the addition of recent and new price mitigation measures, a review should be initiated on fiscally-funded programs. There could be a phase down / out transition period considered. Examples include the following:

- Ontario Energy and Property Tax Credit (OEPTC) and Northern Ontario Energy Credit (NOEC):
  - Phase down and/or out the non-on-bill benefits of. (Save up to about $460 M/yr)
  - These targeted, low-income measures were introduced after the HST was introduced.
  - The OESP provides a larger, targeted and on-bill relief to qualifying consumers.

- Ontario Rebate for Electricity Consumers (OREC):
  - Introduce over time a monthly eligible consumption cap, with perhaps a higher cap in the winter to allow for space heating costs.
  - As with the prior OCEB cap, provides a rough incentive for conservation and correlation to larger homes. A higher cap in winter may help with space-heating issue.
  - May be challenging to implement.

- Greenhouse Gas Reduction Account:
  - If ICI is put on the tax-base, make it eligible for GGRA funding.
  - Positioned as, e.g., providing annual benefits from participants conserving and shifting off-peak to reduce reliance on GHG-emitting peaking plants

# Appendix

DRAFT

# Background on Taxpayer-funded Electricity Price Mitigation

| Program | Annual Fiscal Impacts ($M) | Date | Details |
|---|---|---|---|
| **Ontario Clean Energy Benefit (OCEB)** | ~1,000 | Jan 1 2011 to Dec 31, 2015 | OCEB provided over four million residential customers, and over 400,000 farm, small business and other small users with a benefit equal to 10 per cent of the total cost of electricity on their bills, including tax. Effective September 1, 2012, 10 per cent benefit was capped for the first 3,000 kWh of electricity consumed per month. OCEB expired December 31, 2015, as legislated. |
| **Removed Debt Retirement Charge (DRC) from Residential Bills** | ~330 | Jan 1, 2016 to Mar 31, 2018 | The government removed the DRC from residential electricity users' bills as of January 1, 2016. This is saving a typical residential user about $70 each year and meant ending the DRC earlier for these users than otherwise provided for in the *Electricity Act, 1998*. |
| **Ontario Rebate for Electricity Consumers (OREC)** | ~1,200 | Jan 1, 2017 onward | This ongoing program will rebate -- directly on consumers' residential electricity bills -- an amount equal to the provincial portion of the Harmonized Sales Tax (HST). |
| **Northern Industrial Electricity Rate (NIER) Program** | 120 | March 2010 | As announced in Budget 2015, the government committed to ongoing support for northern industrials with $120 million allocated annually. NIER was previously extended in 2012 for an additional three-year term, effective April 1, 2013 and also for a year effective April 1, 2016, with an allocation up to $120 million per year.<br>Qualifying participants receive a rebate of two cents per kilowatt-hour (kWh) up to a maximum of $20 million per year per company.<br>NIER initially established as a three-year program in Budget 2010, effective April 1, 2010. |
| **Northern Ontario Energy Credit** | ~25 | Budget 2010 | Delivered as part of the Ontario Trillium Benefit, provides individuals living in northern Ontario with a credit of up to $146 per year for the 2016 benefit year, and families up to $224.[1] |
| **Ontario Energy Property Tax Credit** | ~445[1] | Budget 2010 | Delivered as part of the Ontario Trillium Benefit, energy portion provides up to $224 per year (inflation adjusted) for low-to moderate-income individuals and families, and for qualifying seniors.[1] |

1. Energy portion cost only. Both the energy portion of the Ontario Energy and Property Tax Credit (OEPTC) and NOEC were introduced/enhanced following the introduction of the HST and have a significant annual fiscal cost (totalling about $500 million annually).

DRAFT

# Timeline: Taxpayer-funded Electricity Price Mitigation

**Budget 2010: OEPTC, NOEC Proposed as part of the Ontario Trillium Benefit**

*In the 2011 Budget, the government combined the payments of three existing tax credits — the Ontario Sales Tax Credit, the Ontario Energy and Property Tax Credit, and the Northern Ontario Energy Credit — to create the OTB. The OTB is paid in monthly instalments throughout the year, which helps people meet their expenses as bills arrive.*

**Ontario Clean Energy Benefit** (Jan 1 2011 to Dec 31 2015)

*The OCEB was introduced in the 2010 Ontario Economic Outlook and Fiscal Review to help consumers transition to a cleaner electricity system. As set out in legislation, the OCEB ended on December 31, 2015. The Province has introduced rate mitigation measures to be implemented after December 31, 2015.*

*OCEB provided over four million residential customers, and over 400,000 farm, small business and other small users with a benefit equal to 10 per cent of the total cost of electricity on their bills, including tax, for the first 3,000 kilowatt-hours (kWh) of monthly electricity consumption.*

**Removing DRC from Residential Bills** (Jan 1 2016 to Mar 31 2018)

*The government removed the DRC from residential electricity users' bills beginning on January 1, 2016. This saves a typical residential user about $70 each year and ends the DRC earlier for these users than otherwise provided for in the Electricity Act, 1998.*

**Ontario Rebate for Electricity Consumers**

*As of January 1, 2017, OREC will reduce electricity costs by an amount equal to the provincial portion of the HST for about five million residential consumers, farms and small businesses.*

2010 2011 2012 2013 2014 2015 2016 2017

## History of Northern Industrial Electricity Price Relief

**November 2006**

*The Ontario government announced the Northern Pulp and Paper Electricity Transition Program (NPPETP), a three-year $140 million, to be effective retroactively to October 1, 2006*

**Budget 2009**

*The government announced extension of the NPPETP by one year providing about $58 million with electricity price rebates of 1.8 cents/kWh.*

**Budget 2010**

*NIER program announced, with a projected fiscal cost of $150 M per year, to provide electricity price rebates for qualifying large industrial facilities in northern Ontario. An additional $21.8 million allocated for existing NPPETP in 2010-11 to be integrated with NIER.*

**September 2010**

*Transition from NPPETP to NIER: pulp and paper mills participating in NPPETP continued to receive the NPPETP rebate of 1.8 cents/kWh until September 30, 2010, with those qualifying for NIER receiving a top-up rebate of 0.2 cents/kWh.*

**December 2012**

*The government announced the extension of the NIER for three years, capping the rebates to a maximum of 2011-12 consumptions levels or $20 million, whichever is lower.*

DRAFT

# Potential Fiscal Impact to the Electricity Sector

- The electricity sector has a significant impact on the Province's fiscal position; through both the revenue and expense sides of the Province's fiscal position.
  - Electricity Rate mitigation programs funded through the tax base have a direct fiscal impact on the Province's finances.
  - Alternatively, electricity rate mitigation programs funded by the rate base shift costs from one group of ratepayers to another.
- The Province's electricity sector agencies and corporations are each consolidated into the government's financial statements, and directly affect the Province's surplus/deficit position.
  - Ontario Power Generation (OPG) financial results have a dollar-for-dollar impact on the Province.
    - Electricity price mitigation strategies involving OPG would lead to a direct fiscal impact.
  - Hydro One financial results have a direct impact on the Province, based on the Province's proportionate ownership.
    - The Province currently holds about 70 per cent of Hydro One.

DRAFT

# Proposed Taxpayer Funded Electricity Price Mitigation
(To be revised)

| ($M) | 2016-17[1] | 2017-18[1] | 2018-19[1] | 2019-20[1] | 2020-21[1] |
|---|---|---|---|---|---|
| OCEB | - | - | - | - | - |
| OREC | 300 | 1,100* | 1,100* | 1,200* | 1,200* |
| Ending DRC[2] | 330 | 330 | -- | -- | -- |
| NIERP | 120 | 120 | 120 | 120 | 120 |
| NOEC | 25 | 25 | 25 | 25 | 25 |
| OEPTC[3] | 450 | 460 | 470 | 481 | 481 |
| **CURRENT TOTAL** | **1,195** | **2,005** | **1,715** | **1,826** | **1,826** |
| 1. OESP | | 106 | 119 | 127 | 132 |
| 2. RRRP | | 292 | 300 | 306 | 315 |
| 3. First Nations Delivery Rate | | 18 | 18 | 18 | 18 |
| 4. Fund ICI through Tax Base | | 900+ | 900+ | 900+ | 900+ |
| 5. Departure Tax | | TBD | TBD | TBD | TBD |
| 6. Conservation Amortisation | | | | | |
| 7. DRC Ended for Class B | | | | | |
| 8. Other | | | | | |
| **TOTAL** | **1195** | **3,421** | **3,152** | **3,177** | **3,191** |

1. 2016-17, 2017-18 based on forecasted numbers
2. Estimated impact up to March 31, 2018
3. OEPTC amounts in all years based on energy component of the rebate.

- As shown above, if all measures proposed in this deck were to be accepted taxpayer funded contributions to electricity price mitigation would increase to about $3.2 billion, or more, by 2020-21. That is about a 60% increase from the current forecast for 2017-18.
- These amounts were not considered in the 2016-17 Fiscal Plan and could put at risk the Province's fiscal objectives for 2017-18 and beyond.

**Subject:** RE: Potential Rate Mitigation

Hi Ron,

I have consolidated the comments from Francisco and Emily, and I have compared this to the markup version we provided to DMO and TBS. Below is the list of proposed edits that were not accepted:

- The charts on slide 8&9, the proposed total decrease/increase on bills impacts were not included.
- On slide 10, "before the planned ICI expansion" was not added to the end of the 3rd bullet point.
- On slide 13, the typo "OESB" was not fixed.
- On slide 24, the DRC charge "$0.007/kWh" was not corrected.
- Slide 25 – additional bullet points were added; however, our proposed edits were not accepted.
- On slide 29, our proposed bullet "As shown before the positive impact to residential ratepayers is very limited from the proposals with ratepayer impacts estimated by Energy…" was not included.
- Slide 33 & 34 are new, which include jurisdictional comparison charts.

Hope that helps.

Regards,
Gavin He

Subject: RE: Potential Rate Mitigation

Hi,

Other than the addition of the fiscal slide the deck isn't significantly different from the previous version. There are a couple of additional slides in the appendix showing a jurisdictional comparison of industrial electricity prices (33) and industrial prices in Ontario by sector (34). On slide 24 (ending DRC for class B) the additional "0" in the DRC rate is still missing.

Just went through the chain of emails. I find the idea of creating an asset via preferreds. It just happens as you pointed out that goes against the policy positions taken by the government, including , e.g. not forcing consolidation.

I can't imagine that there's a perfect solution to this challenge, but if we aren't able to come up with something that, blemishes and all, gets the 25% reduction they're looking for, we're going to end up swallowing all of it in the fiscal plan. Maybe something complex but reasonably viable allows an announcement to be made soon with implementation later in the year - summer might be a good time when bills peak - to allow time to work out the wrinkles.

Subject: Re: Price Mitigation & Accounting Meeting

A few quick comments:

There are non-LDC direct connects, so the policy would have to deal with those. Presumably they are not to be debt-financing. Could be carved out and the cost variance for their load still done through the Province, but without the rate-regulated accounting. It would limit the fiscal impact.

For LDCs there are municipally-owned and private sector ones. So they may respond differently.

And we may need to not just finance this but also their capex (IO has a program for municipally-owned ones) depending on how public capital markets view the balance

sheets with the preferred equity.

LDCs (as should the Province) would also be concerned about people going off grid and never paying in the future "their share" of the accumulated debt. They may argue for exit fees that other jurisdictions have had for their "stranded debt". But I think the government would be sensitive to visibility of a debt amount accruing by customer and a view of forced borrowing by the customer (as compared to debt-financed by the government).

Not sure if Steen had discussed the external advisors' views on the LDC option yet.

Ron

> On Jan 21, 2017, at 10:53 AM, Gadi Mayman <Gadi.Mayman@ofina.on.ca> wrote:
>
> So let's get creative here. The LDCs would give us the accounting treatment we need, but lack the balance sheet. The Province has the balance sheet space, arguably, but not the appropriate accounting ability, which, I assume, is because of the way OEFC or the IESO are consolidated on the Province's books and because neither of us can use rate regulated accounting. As a solution, what if the IESO bills the LDCs, but instead of the LDCs taking on debt to pay the IESO, we have OEFC borrow the money and invest in an equal amount of equity of the LDC (could be common, but maybe preferred is better so it doesn't mess up the other shareholders in privately, or partially privately,

held LDCs like Hydro One). As we get later in the process many years from now and the repayment begins, we'd begin unwinding the equity and paying down OEFC debt.

Sounds crazy, but maybe this, or something like it, puts the debt where it's affordable, gives the accounting treatment we need to not have this impact the fiscal plan, and achieves the policy goal of spreading the GA costs over the actual life, rather then the contractual life, of the contracts.

Is it worth suggesting this to Energy and the internal and external accountants?

Kennedy, Nancy (MOF)

Subject: Price Mitigation & Accounting Meeting

Hi Scott, Gadi, Nancy,

Steen organised a meeting this afternoon with OPCD, IESO and KPMG, as well as various government / OPS staff.

Steen had asked me to talk about the OEFC and DRC, as he had said that some folks were under the impression that OEFC and the DRC could be a model that could be useful for a structure for the GA option.

I explained at the meeting that OEFC was not a rate regulated entity and does not have regulatory assets, and that it's consolidated into Public Accounts such that its shortfalls in revenues vs expense negatively affect the Province's bottom line. I noted that was the case when OEFC did not recover its full NUG contract costs and when it funded the 2002 price freeze. I noted that even with the current structure with legislative cost recovery of NUG costs since 2005, OEFC still records the NUG contract-related expenses and revenues, and if they were ever different there would be a bottomline impact.

Steen was aware of that, but just wanted to have that recounted and move on in the meeting to look at another potential

structure/option.

There was also a brief mention of the LDC option; however, it seemed to have been discussed earlier with KPMG and Pelino (who was there as an external consultant supporting KPMG it seemed) and the view was it was not a viable option, as it would destroy LDC balance sheets by adding too much debt to them relative to their balance sheets. It was also viewed as an option that would take too long to put in place, though there was a feeling that the desired accounting would work in this structure.

Most of the discussion was on how the IESO records the regulated price plan (RPP) variances. Note that in any given period the inflows from RPP customers for electricity does vary from the outflows to pay for the power -- since RPP prices are set every six months to recover costs on a forecast basis, and actuals differ from forecasts, there's a variance. The IESO has a credit facility from the OFA that it can access to cover balances, though the variances are small and short-term compared to the amounts under discussion in the GA option.

The meeting ran long. There was going to be further discussions amongst the accountants from OPCD, IESO and KPMG on how the IESO records the RPP. It wasn't clear if the RPP case would work in the case of the GA option such

that there would not be a bottomline impact.

There was also a brief aside from KPMG and Pelino on how the accounting would work if a third party financial institution got in the middle of this, which was thought to be feasible from a procurement perspective, but way more costly than a government financing of the deferral. As such, folks dismissed this option at the meeting , but I wanted to mention it should it be brought up again. I would think Gadi might have some views on such an option.

I'm not sure if Energy will hold another multi-party meeting or if it will meet just with the various accountants as it prepares to report in to FPC next week.

If I do hear more in the interim, I'll provide an update.

Ron

**Subject:** Price Mitigation Deck

Hi John,

I have included comments in the attached version of the price mitigation deck on slides 3, 4, 5, 8, 13, 14, 15, 20.

I will be out this afternoon, so could you combine with comments on the deck you will submit to Ron.

Emily

ENERGY

# Proposed Initiatives to Transform Ontario's Electricity Sector

## Working Draft

December 5, 2016

CONFIDENTIAL DRAFT

# Context

- Electricity costs are increasing as the necessary investments are made to decarbonize and modernize the province's electricity infrastructure.
  - Since 2003, the Province has invested more than $35 billion in over 16,000 megawatts (MW) of new and refurbished cleaner generation, including nuclear, natural gas and renewables.
  - Over the same period, Hydro One has invested $15.5 billion to enhance and renew its transmission and distribution systems.
  - As additional electricity generation comes online, nuclear units are refurbished and distribution and transmission investments are made, prices are forecast to continue to increase.

- Actions have been taken to drive down electricity costs, including deferring investments in generation (e.g., new build nuclear), improving market efficiency (e.g., introduction of wind dispatch) and decreasing the cost of renewable procurements (e.g., Green Energy Investment Agreement ~~GEIA~~ renegotiation, decreasing FIT prices).

- Additional steps have been taken to increase cost effectiveness and improve efficiency by adopting new electricity market approaches, such as:
  - Enhancing competition between developers of large renewable projects through the Large Renewable Procurement (LRP) process to drive down price and secure clean, reliable generation for the province;
  - Directing IESO to end the process of negotiating new NUG contracts pending the development of a Capacity Auction (i.e., Market Renewal); and
  - Launching the first IESO Demand Response Auction (i.e., a competitive process through which demand-side resources are selected to be available to reduce their electricity consumption as needed).

# Context (Cont'd)

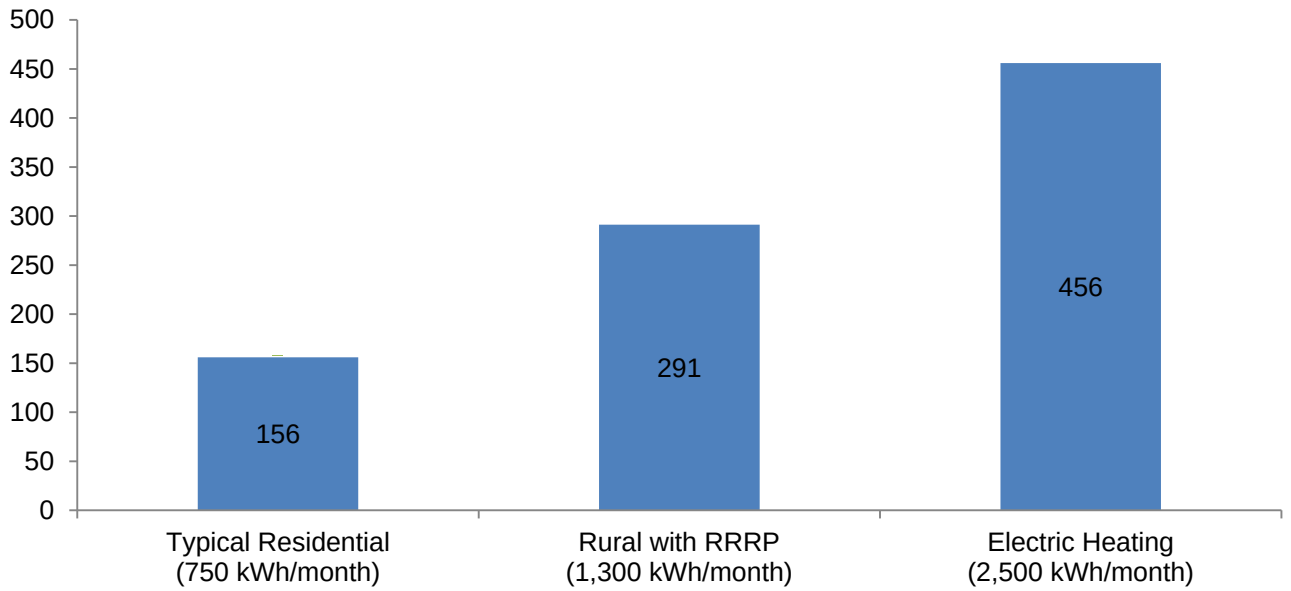
- Following the 2016 Throne Speech, a number of actions were announced to further reduce electricity costs, such as:
  - Providing an 8 per cent rebate before tax, equivalent to the provincial portion of HST, for approximately 5 million eligible electricity consumers including residences, small businesses and farms;
  - Increasing the amount of rate protection available to approximately 330,000 eligible rural customers living in low-density areas by updating the Rural or Remote Rate Protection (RRRP) program;
  - Lowering the Industrial Conservation Initiative (ICI) threshold to 1 MW and removing sector restrictions so that more consumers can benefit;
  - Suspending the second round of the Large Renewable Procurement (LRP II) and the Energy-from-Waste Standard Offer Program to save up to $3.8 billion in costs; and
  - Recycling a portion of cap and trade auction proceeds to keep rates affordable for industrial and commercial electricity consumers.
- On November 28, 2016, the Minister of Energy announced the need for changes in how electricity resources are procured and the need for wholesale market renewal.

- The Ministry of Energy is currently updating its Long-Term Energy Plan (LTEP), which provides an opportunity to consider a range of policy changes to how the Ontario energy sector operates.

# Current Electricity Prices – Residential

- Residential consumers electricity prices continue to be a concern for many Ontarians, particularly those that rely on electric heat.
  - **Note:** The typical residential bills are currently below the 2013 ~~Long-Term Energy Plan (2013~~ LTEP~~)~~ forecasts ($159 / 750kWh)

**Residential Electricity Bills**
*in $/month*

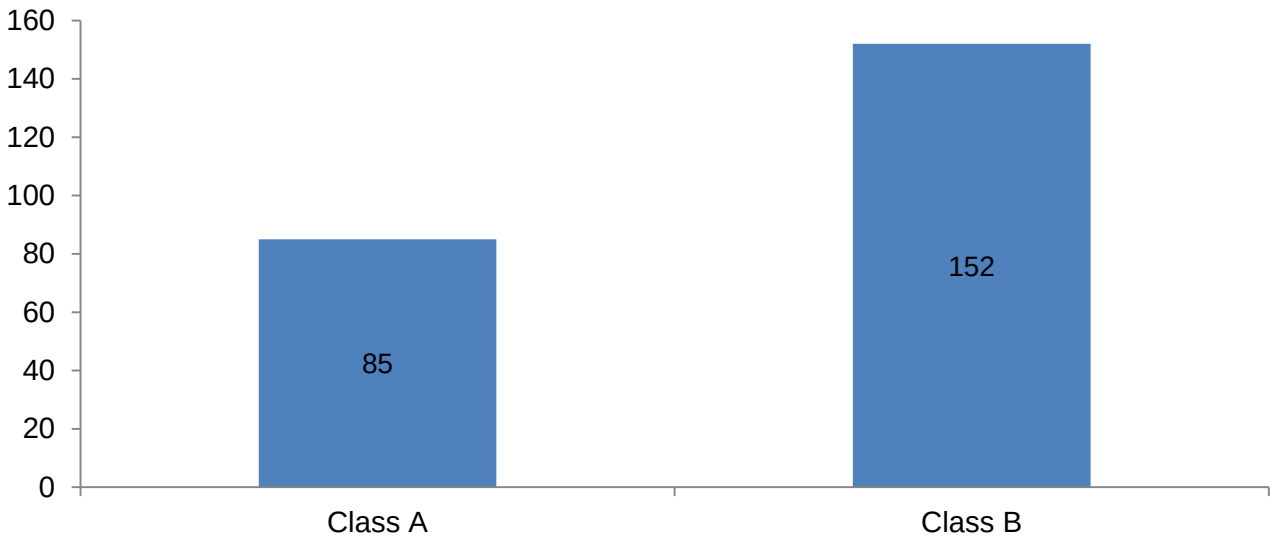


**Note**: Typical residential and electric heating shown above are based on Toronto Hydro; rural is based on connection to Hydro One as a R2 customer eligible to receive the Rural or Remote Rate Protection (RRRP) credit of $31.50.

# Current Electricity Prices – Industrial and Commercial

- While large industrial electricity consumers (i.e., Class A) rates are competitive with other jurisdictions, rates for commercial/small industrial consumers (i.e., Class B) are higher by comparison.
  - **Note:** Current industrial and commercial prices are below 2013 LTEP forecasts ($96 / MWh)

**Current All-In electricity Price**
*in $/MWh*



**Note**: Based on year-to-date (YTD) September 2016 prices. Class A reflects a transmission-connected consumer. Class B reflects a 1 MW load operating at 56% load factor and connected to Toronto Hydro.

# Taxpayer Funded Electricity Price Mitigation

| ($M) | 2011-12 | 2012-13 | 2013-14 | 2014-15 | 2015-16 | 2016-17[1] | 2017-18[1] |
|---|---|---|---|---|---|---|---|
| OCEB | 1,033 | 994 | 1,006 | 1,078 | 860 | - | - |
| OREC | - | - | - | - | - | 300 | 1,200* |
| Ending DRC[2] | - | - | - | - | 85 | 330 | 330 |
| NIERP | 120 | 120 | 115 | 108 | 120 | 120 | 120 |
| NOEC | 23 | 24 | 25 | 24 | 26 | 25 | 25 |
| OEPTC[3] | 354 | 406 | 418 | 429 | 444 | 450 | 460 |
| **TOTAL** | **1,530** | **1,544** | **1,564** | **1,639** | **1,525** | **1,195** | **2,105** |

1. 2016-17, 2017-18 based on forecasted numbers
2. 2015-16 estimated for 3 months of reduced DRC revenue
3. OEPTC amounts in all years based on energy component of the rebate.

* Sourced from November LRC Submission

OCEB – Ontario Clean Energy Benefit
OREC – Ontario Rebate for Electricity Consumers
DRC – Debt Retirement Charge
NIERP – Northern Ontario Electricity Rate Program
NOEC – Northern Ontario Energy Credit
OEPTC – Ontario Energy and Property Tax Credit

- The table above shows the annual amount of taxpayer funded electricity price mitigation from 2011-12 to 2017-18.
- From 2011-12 to 2015-16 there has been an annual fiscal impact of approximately $1.6 billion due to electricity price mitigation programs.
- In 2016-17, the fiscal impact due to electricity price mitigation programs is estimated at approximately $1.2 billion.
- In 2017-18, due primarily to the start of the Ontario Rebate for Electricity Consumers, the expected fiscal impact due to electricity price mitigation programs is approximately $2.1 billion.

| **TOTAL** | **1195** | **3,421** | **3,482** | **3,507** | **3,521** |

1. 2016-17, 2017-18 based on forecasted numbers
2. 2015-16 estimated for 3 months of reduced DRC revenue
3. OEPTC amounts in all years based on energy component of the rebate.

# Proposed Initiatives – Overview

- The suite of proposed initiatives are intended to:
  - Transform how the electricity market operates in Ontario;
  - Re-set how government programs are funded (i.e., rate-base vs tax-base);
  - Provide system benefits (e.g., industrial load retention);
  - Lower the cost of electricity for residential and industrial consumers; and
  - Increase cost effectiveness and improve efficiency.

- The proposed initiatives include:
  1. Implement Market Renewal Initiatives
  2. Fund Electricity Support Programs Through The Tax-base
  3. Eliminate the Industrial Conservation Initiative (ICI)
  4. Amortize Conservation Program Costs
  5. LDC Efficiencies
  6. Rate Design Initiatives
  7. Reduced Cost of OPG Borrowing
  8. End Debt Retirement Charge (DRC) Early for Commercial/Small Industrial Class B Electricity Consumers
  9. Dedicate Departure Tax
  10. Cancel/Adjust Renewable Energy Procurements

- The proposed initiatives provide opportunities to reduce electricity costs for residential and industrial consumers while at the same time transforming the province's electricity market and yielding benefits for the electricity system.

# Proposed Initiatives – Impacts

- Each of the proposed initiatives under consideration target different government programs and different parts of the electricity bill. The proposals impact different classes of electricity consumers to varying degrees.

| Proposal | Program / Initiative | Line on Bills | Who Benefits |
|---|---|---|---|
| 1. Implement Market Renewal Initiatives | Market Renewal | Electricity, Global Adjustment, Regulatory | Market Renewal: All electricity consumers |
| 2. Fund Electricity Support Programs Through The Tax-base | OESP, RRRP | Regulatory | All electricity consumers evenly |
| 3. Eliminate the Industrial Conservation Initiative (ICI) | ICI | Electricity, Global Adjustment | Only Class B electricity consumers (i.e., residential) **Note:** Will have a negative impact on Industrial consumers. |
| 4. Amortize Conservation Program Costs | Amortization | Electricity, Global Adjustment | Class B electricity consumers and to a lesser extent Class A consumers |
| 5. LDC Efficiencies | Distribution efficiencies | Delivery | All embedded consumers |
| 6. Rate Design Initiatives | Rate structures | Electricity, Global Adjustment | Rate Design Initiatives: Participating electricity consumers |
| 7. Reduced Cost of OPG Borrowing | n/a | Electricity, Global Adjustment | Class B electricity consumers and to a lesser extent Class A consumers |
| 8. End DRC Early for Commercial/Small Industrial Class B Electricity Consumers | Debt Retirement Charge (DRC) | DRC | Class B consumers (i.e., small business and commercial consumers, etc) |
| 9. Dedicate Departure Tax | Departure Tax | TBD | TBD |
| 10. Cancel/Adjust Renewable Energy Procurements | FIT, LRP | Electricity, Global Adjustment | Class B electricity consumers and to a lesser extent Class A consumers |

# Proposed Initiatives – Potential Savings for Typical Residential Electricity Consumers

| *$/750kWh* | 2017 | 2018 | 2019 | 2020 | 2021 | 2022 | Timing of Benefit |
|---|---|---|---|---|---|---|---|
| 1. Implement Market Renewal Initiatives | - | - | - | 1.58 | 1.59 | 1.60 | Longer-Term |
| 2. Fund Electricity Support Programs through the Tax-base | 2.18 | 2.30 | 2.31 | 2.45 | 2.48 | 2.51 | Immediate |
| 3. Eliminate the Industrial Conservation Initiative (ICI) | 4.40 | 4.24 | 4.10 | 4.24 | 3.73 | 3.58 | Immediate |
| 4. Amortize Conservation Program Costs | 1.67 | 1.56 | 1.21 | 0.81 | 0.54 | 0.3 | Immediate |
| 5. LDC Efficiencies | TBD | TBD | TBD | TBD | TBD | TBD | Near-Term |
| 6. Rate Design Initiatives* | - | - | - | - | - | - | Immediate |
| 7. Reduced Cost of OPG Borrowing | 0.13 | 0.13 | 0.13 | 0.18 | 0.18 | 0.18 | Immediate |
| 8. End DRC Early for Class B Electricity Consumers** | - | - | - | - | - | - | n/a |
| 9. Dedicate Departure Tax | TBD | TBD | TBD | TBD | TBD | TBD | Immediate |
| 10. Cancel / Adjust Renewable Energy Procurements | - | - | TBD | TBD | TBD | TBD | Longer-Term |
| **Total** | | | | | | | |

**Note:** The above initiatives will provide similar benefits for non-RPP Class B electricity consumers. Proposal 2 assumes OESP participation of 50% and 5-year maturity. *Savings estimates do not include changes related to rate design. ** Class B includes small-medium enterprises (SMEs).

# Proposed Initiatives – Potential Savings for Average Industrial Electricity Consumers

| *$/MWh* | 2017 | 2018 | 2019 | 2020 | 2021 | 2022 | Timing of Benefit |
|---|---|---|---|---|---|---|---|
| 1. Implement Market Renewal Initiatives | - | - | - | 2.11 | 2.12 | 2.13 | Longer-Term |
| 2. Fund Electricity Support Programs through the Tax-base | 2.91 | 3.06 | 3.17 | 3.27 | 3.33 | 3.38 | Immediate |
| 3. Eliminate the Industrial Conservation Initiative (ICI) | (24.12) | (23.21) | (22.45) | (23.23) | (20.42) | (19.61) | Immediate |
| 4. Amortize Conservation Program Costs | 1.15 | 1.08 | 0.84 | 0.56 | 0.37 | 0.25 | Immediate |
| 5. LDC Efficiencies | n/a | n/a | n/a | n/a | n/a | n/a | Near-Term |
| 6. Rate Design Initiatives* | - | - | - | - | - | - | Immediate |
| 7. Reduced Cost of OPG Borrowing | 0.10 | 0.10 | 0.10 | 0.15 | 0.15 | 0.15 | Immediate |
| 8. End DRC Early for Class B Electricity Consumers** | - | - | - | - | - | - | n/a |
| 9. Dedicate Departure Tax | TBD | TBD | TBD | TBD | TBD | TBD | Immediate |
| 10. Cancel / Adjust Renewable Energy Procurements | - | - | TBD | TBD | TBD | TBD | Longer-Term |
| **Total** | | | | | | | |

**Note:** Proposal 2 assumes OESP participation of 50% and 5-year maturity. Proposal 3 reflects the elimination of ICI, as opposed to moving ICI cost shift to the taxbase. The $1.75/MWh savings associated with Proposal 7 in 2018 accounts for the fact that under the status quo, DRC will be removed from bills in April 2018. *Savings estimates do not include changes related to rate design. ** Class B includes small-medium enterprises (SMEs).

# Fiscal Considerations

- Funding electricity support programs (i.e., OESP, RRRP, First Nations Delivery Rate) from the tax-base represents approximately $440 million on average annually.

- Ending the Debt Retirement Charge (DRC) for commercial and small industrial electricity consumers (i.e., Class B) early would represent an additional fiscal pressure of $xx [placeholder for OFA] on the province.

- If the Industrial Conservation Initiative were funded though the tax-base instead of being eliminated, this would represent a $900 million annual cost to the fiscal plan.

- Reducing OPG borrowing costs to the Province's cost of funds is expected to result in a $20 to $35 million annual fiscal pressure to the province [TBC by OPG / OFA].

- Fiscal impacts of allocating a portion of the departure tax to ratepayers will depend on the size of the allocation, as well as timing for the flow of value. The maximum, direct one-time impact is $2.6 billion, with potential ancillary impacts on residual stranded debt defeasance.

# 1. Electricity Market Renewal Initiatives

- Continue to move forward with IESO's Market Renewal initiatives:
  - Market Renewal encompasses projects such as a single-schedule system (from the current two-schedule system), more frequent intertie scheduling to better align with other jurisdictions and a day-ahead market. There will be up front capital costs to enable the initiative. IESO is currently assessing these costs.
  - Moving to "technology-agnostic" procurements will provide new opportunities for innovation and modernization and ensure ratepayers receive the best prices possible.

**Considerations**

- Changes related to IESO's Market Renewal initiatives, reflected in HOEP and uplifts, are estimated to save up to $300 million per year, starting in 2020, leading to a reduction of:
  - About $1.60/month or about 1% at current retail prices for a typical residential bill; and
  - About $2/MWh or more than 2% at current all-in prices for industrial and SME electricity consumers.
- The IESO's Market Renewal is a broad initiative that will impact all aspects of Ontario's electricity market. Ontario has had a uniform price since market opening.
- Adopting a technology-agnostic stance will lower the overall cost of providing electricity service by selecting the most cost-effective resources to fulfill various system needs.

# 2. Fund Electricity Support Programs Through the Tax-Base

- Propose to fund electricity support programs, including Ontario Electricity Support Program (OESBP) and Rural or Remote Electricity Rate Protection (RRRP), through the tax-base instead of a regulated charge. This would allow the OESP and the RRRP charges to be removed from the Regulatory line on electricity bills.

**Considerations**

*Consumer Impacts and implementation*

- Transitioning OESP and RRRP to the tax-base would reduce a typical residential bill by about $2.35/month by 2020, and delivering the First Nation rate reduction through tax base would avoid about $0.10/month for a potential total savings of $2.45/month by 2020). As all programs provide strong social benefits, there is precedent for funding these programs through the tax-base.

- To address concerns from low income electricity consumers improvements to OESP could be implemented by increasing credits (could be up to double the current credits)
  - Single low income consumer would see a change from $30 to $45/ month ($540/year):
  - Family of four with electric heat could see a credit of $82.50/month ($990/year); and
  - Would mean no impact on consumer bills and no change to current OESP charge.
- RRRP and OESP are included in the “Regulatory” line on bills. If RRRP and OESP were eliminated from bills, the Regulatory line would decrease; however, as the Regulatory line is the smallest line item component of invoices, there is risk the decrease may not be perceived by customers.

- The RRRP regulation provides a funding mechanism for transmission infrastructure required to grid connect remote First Nation communities. Considerations for how that funding will be supported by the tax base will need to be determined.

- The non-rate mechanism to remove delivery charges from on-reserve First Nation customer monthly bills needs to be further explored.Funding RRRP and/or OESP with tax revenue would require amendments to existing legislation and regulations.

# 2. Fund Electricity Support Programs Through the Tax-Base (cont'd)

- Table below shows estimates of program costs up to 2020:

| Year | OESP | RRRP | First Nations Delivery Rate | TOTAL |
|---|---|---|---|---|
| 2017 | $106M | $292M | $18M | **$416M** |
| 2018 | $119M | $300M | $18M | **$437M** |
| 2019 | $127M | $306M | $18M | **$451M** |
| 2020 | $132M | $315M | $18M | **$465M** |

1) Ontario Electricity Support Program (OESP)
   - After almost a year in market, close to 30% of potentially eligible customers are signed up.
   - The cost projections below assume the program grows to 50% of eligible consumers by 2020 (also assumes 10% administration costs).

2) Rural and Remote Rate Protection (RRRP)
   - Provides benefits to R2 Hydro One consumers, Algoma, and remote communities.
   - Includes the expanded coverage that will begin on January 1, 2017.

3) First Nation rate reduction (currently under development)
   - On November 14, 2016, OEB presented options to the Ministry on reducing costs for on-reserve First Nation customers.
   - OEB's recommended option to provide 100% delivery rate credit, which is estimated at $18.4 million per year.
     - Other options includes a seasonal fixed credit to account for demand changes over the year ($13 million) or a 50% total bill reduction ($23 million).

# 3. Eliminate the Industrial Conservation Initiative (ICI)

- The cost shift from the Industrial Conservation Initiative (ICI) could be removed from electricity bills by eliminating ICI.
  - The ICI allows large electricity consumers to lower their electricity costs by reducing their demand during peak hours.

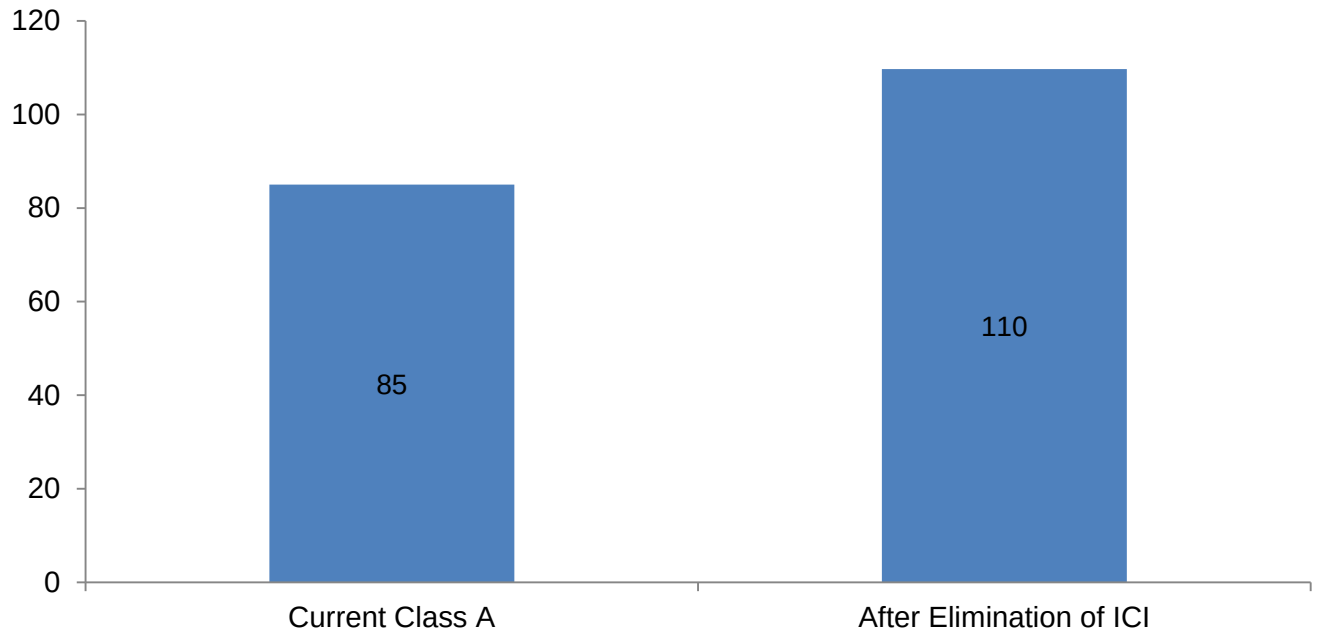
**Considerations**

- Eliminating ICI would result in a benefit of more than $4/month for residential electricity consumers in 2017.
  - However, unless government took action to mitigate the associated cost shift back to industrial consumers, typical industrial prices would increase by about one-third. Such a price increase would pose significant challenges for energy-intensive consumers.
- Industrial stakeholders have indicated that ICI as an integral factor in maintaining competitiveness and retaining industry in the province.
  - Eliminating ICI would limit the “cost shift” onto residential consumers, but it would also lead to a reduction in industrial demand. The large industrial contribution to the fixed costs of running the electricity system would then need to be covered by remaining consumers.
- If ICI is retained, current IESO projections indicate that the cost shift will decrease each year going forward as Global Adjustment (GA) decreases (due to an expected increase in HOEP).
- Alternatively, ICI could be funded through the tax-base at a cost of $900 million annually. There is precedent to use the tax-base for industrial support programs, including the Northern Industrial Electricity Rate Program (NIERP) and the Jobs and Prosperity Fund.

# 3. Eliminate the Industrial Conservation Initiative (cont'd)

- ICI currently provides a benefit of about $25/MWh to Class A electricity consumers.

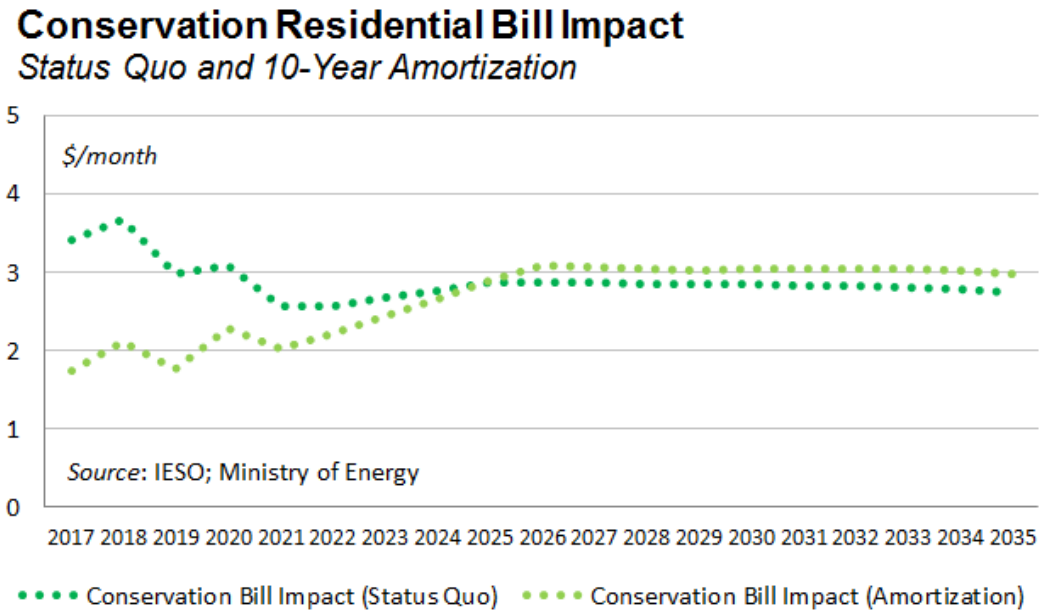
**All-In Electricity Price**
*in $/MWh*



**Note**: Based on year-to-date (YTD) September 2016 prices. Class A reflects a transmission-connected consumer.

# 4. Amortize Conservation Program Costs

- ~$3 billion from the electricity ratepayer base will be spent on conservation programs delivered under the Conservation First Framework and the Industrial Accelerator Program (IAP) between 2015 and 2020.
- Currently, Conservation and Demand Management (CDM) program costs are recovered from the Global Adjustment (GA) mechanism about one month after expenses are incurred.
- As a potential rate mitigation measure, certain CDM costs could be amortized.
- Amortizing a portion of conservation spending would produce a benefit for electricity ratepayers in excess of $1/month at the outset. Over time, the benefit would decrease and turn into a cost, as interest charges begin to grow.



**Note**: Chart assumes that conservation incentive costs are available for amortization while administration cost are not. Although there is variable from year to year, incentives represent about two-thirds of conservation spending in Ontario. Chart assumes conservation spending continues at a similar rate beyond 2020. Chart assumes a 10-year borrowing rate of 3.0%.

# 4. Amortize Conservation Program Costs (cont'd)

## Considerations

- Under **Public Sector Accounting Board (PSAB) accounting standards**, used by both the Province and IESO, only certain assets can be amortized: 1) pensions and 2) tangible capital assets. Under PSAB an asset must meet several criteria to be considered a capital asset, including:
  - A tangible capital asset must be tangible and substantive and the Ontario government must have title and operate the asset.
  - A tangible capital asset must bring a tangible benefit to the government or to Ontario.

- CDM costs, on their own, do not meet the criteria of a tangible capital asset because customers would have ownership and control of installed CDM measures, not the Province or IESO.

- **Rate-regulated accounting** was developed to recognize the unique nature of regulated entities (e.g., electricity generators, LDCs). Under rate-regulated accounting certain costs can be treated as amortizable assets that would not normally be considered assets under accounting principles.
  - Over the past several years, the Auditor General (AG) has expressed concerns about the appropriateness of recognizing rate-regulated assets in the Province's consolidated financial statements.
  - Rate-regulated accounting is currently under review by international accounting standard setting bodies and is currently permitted only on an interim basis, so its future is unclear at present.

# 4. Amortize Conservation Program Costs (cont'd)

**Considerations**

- If some of Ontario's CDM costs could be amortized, analysis shows that ratepayer impacts would be reduced in the short-term but interest charges on the loan would result in increased overall ratepayer costs in the longer-term.

- Legislative amendments would be needed to allow recovery of loan interest charges from GA.

- If there is a desire to proceed:
  - Formal accounting advice will need to be sought from IESO's external auditor as well as the Ontario Provincial Controller (OPC) to determine whether CDM costs could be amortized according to rate-regulated accounting standards.
  - Further legal analysis would also be required to confirm legal viability and possible approaches to implementation.

# 5. LDC Efficiencies

- Consider opportunities for future LDC cost reductions and efficiencies through the regulatory framework.

**Considerations**

- The Ontario Energy Board has a mandate to regulate the electricity distribution sector in the public interest, ensuring the financial viability of the sector while promoting reliable service to customers at just and reasonable rates.
- Since 2012, the OEB has taken action – through the Renewed Regulatory Framework for Energy – to more closely link rate regulation with performance measures and outcomes.
- There maybe opportunities to promote further cost reductions and performance improvements within the distribution sector as there is continued evolution of the regulatory framework in Ontario.
  - Tightening LDC requirements may also indirectly incent other desired policy outcomes, such as LDC consolidation and grid modernization to realize further cost reductions.
- ENERGY could help promote or accelerate these efforts by asking the OEB through the LTEP Implementation Directive, s. 35 of the *Ontario Energy Board Act, 1998*, and the 2017 Mandate Letter and other agency business planning processes.
- In addition, further changes to the departure and transfer tax regimes could be considered to provide a further incentive for LDC mergers and acquisitions.

# 6. Rate Design Initiatives

- OEB continues to move forward with its Regulated Price Plan (RPP) Roadmap:
  - The OEB is undertaking a comprehensive review of the RPP, including exploring the introduction of offering different pricing plan options for customers following the completion of pilot programs in 2018. The plan is expected to be implemented over a 3-5 year period.

- Until new pricing plans are available, the OEB could provide an "opt-in flat rate RPP" structure that could be made available to residential, farm and small business consumers on an interim basis (2-3 years) until a wider range of price plans are available.
- Time-of-Use (TOU) pricing could also be introduced for non-RPP Class B consumers to reduce Global Adjustment (GA) volatility and reduce system costs.

| Current TOU | New Flat Rate |
|---|---|
| On: 18.0 ¢/kWh | 11.1 ¢/kWh |
| Mid: 13.2 ¢/kWh | |
| Off: 8.7 ¢/kWh | |

**Considerations**

- The OEB has indicated that the option would lead to no overall change in system costs. Consumers with higher peak and mid-peak usage patterns would see a decrease in their electricity bills, while those with higher off-peak usage patterns would see an increase.
  - While the current strong supply conditions may allow for such an RPP structure (i.e., peak demand requirements can be easily met), administrative costs could be high (distributors would need to design/implement an opt-in process and associated billing system on an interim basis).

| | Current TOU | New Flat Rate |
|---|---|---|
| 1) Monthly electricity bill- higher peak and mid-peak usage patterns | $172 | $163 |
| 2) Monthly electricity bill- higher off-peak usage patterns | $152 | $163 |

***Note:** 1) assumes a consumer consumption pattern of 45%:30%:25% (Off-peak: Mid-peak: On-peak), while 2) assumes consumer consumption pattern of 80%:10%:10% (Off-peak: Mid-peak: On-peak). Estimates are based on OEB's online electricity bill calculator (for Toronto Hydro-November 2016 rates)

# 6. Rate Design Initiatives (cont'd)

**Considerations**

- The decision to undertake smart meter investments was partly justified on the basis of TOU pricing. If TOU pricing were to be made optional, some stakeholders could question the rationale for smart meter investments.
  - Rationale for offering a flat rate option could focus on providing customers with choice until new pricing plans are rolled out under the RPP roadmap.

- If a flat rate design is introduced, there could be significant consumer opposition to any return to a mandatory TOU.

- After the interim flat rate period, the OEB could offer a wider range of pricing plans to consumers.
  - As part of its RPP review, the OEB will be running pilots with LDCs to assess customer response to alternative time periods and pricing structures.
  - Learnings from these pilots will help inform potential changes to the RPP. Pilots are expected to be in market May 2017 and run for one year.

- Non-RPP Class B electricity consumers currently pay Global Adjustment (GA) on a volumetric basis. Moving them to TOU would provide an incentive to shift consumption to off-peak periods.
  - Consumers, including manufacturers, who are unwilling to shift would face higher costs and likely not be supportive of the changes.
  - The decision to pursue TOU pricing for non-RPP class B consumers will impact proceeds recycling as there is interplay between the two initiatives.

# 7. Reduced Cost of OPG Borrowing

- OPG currently borrows for corporate purposes from the OEFC
- Seek to reduce OPG's borrowing costs and pass on savings to ratepayers by:
  - Reducing or removing the spread that OEFC applies to OPG for any new corporate debt; or
  - Allowing OPG to refinance its existing debt at longer maturities through the OEFC in order to take advantage of the current, favourable interest rate environment.
- Assuming the full spread is removed from all OEFC debt, OPG borrowing costs could be reduced by 50-100 basis points, representing annual savings of about $20-$25 million, increasing to $30-$35 million, as OPG's outstanding OEFC debt rises from ~$3.3 billion in 2016 to ~$4.7 billion in 2020.
- OPG could apply to the OEB as part of its current rate application to flow this benefit to ratepayers.

**Considerations**

- Further work is required to determine potential OPG savings from these initiatives.
- Allowing OPG to refinance would have a negative fiscal impact on the Province.
- Spreads are expected to decline, reducing the relative impact of this change, given lower overall interest rates and reduced volatility.
- Providing OPG with greater access to longer term (20-30 year) debt may also reduce costs:
  - OPG's average term to maturity for OEFC debt is 5.7 years, as compared to 22.2 years for privately financed project debt. This contrasts with most corporations and government which have been working to extend average debt terms in order to take advantage of the low interest rate environment.
  - Longer terms would also better match to the life of OPG's assets.
  - Recently, OEFC has allowed OPG to apply for 50% of its financing requirements in the form of longer term (25-30 year debt). Moving closer to 100% would accelerate this transition.

# 8. End DRC Early for Commercial/Small Industrial Class B Electricity Consumers

- Propose to remove the $0.07/kWh Debt Retirement Charge (DRC) from the bills of commercial/small industrial Class B consumers beginning in 2017, instead of April 1, 2018.
  - **Note:** Class A consumers (e.g., large industrial) would continue to pay DRC until at least April 1, 2018.

**Considerations**

- For a Class B consumer currently paying about $152/MWh, removing the DRC would represent a savings of about 5%.
  - A 50% reduction in the DRC charge would represent a savings of about 2%.

- Alternatively, the reduction of the DRC could be to $0.035/kWh starting in 2017, to provide relief for cap and trade until proceeds recycling is fully operational.

- Residential consumers have had the DRC removed from bills since January 1, 2016. Taking DRC off commercial and small industrial bills would result in equal treatment for these groups of consumers.

- The savings for commercial and small industrial consumers associated with this proposal would drop to zero in April 2018, since this is the current planned date for removing the DRC from non-residential bills.

- Prior to moving forward with this proposal, additional analysis from Legal Services and the MOF would be needed.

# 9. Dedicate Departure Tax

- In connection with the IPO, as a result of leaving the PILs regime and entering the corporate tax regime, Hydro One was deemed to dispose of its assets for proceeds equal to its fair market value, triggering a PILs liability of $2.6 billion (Departure Tax).
- This was paid to the Ontario Electricity Financial Corporation (OEFC), to be dedicated towards repayment of electricity sector stranded debt.
- The Province could explore repurposing some of those funds to the benefit of ratepayers.
- This may reduce the risk that the Ontario Energy Board (OEB) assigns to ratepayers the benefit from an associated tax asset, resulting in lower earnings and decreased share value for Hydro One. This decision is currently before the OEB, as part of Hydro One's Transmission rate application.

**Considerations**

- Cost savings to ratepayers would depend on timing and which ratepayers (e.g., Hydro One customers, or all Ontario customers) will benefit from some or all of the $2.6 billion value.
- While this is a shift from messaging that value from the broadening of ownership of Hydro One is being used pay down debt and fund transit and transportation, the Province could link to electricity infrastructure investments (e.g., as an offset to infrastructure investments already made in the sector, or to specific initiatives such as conservation).
- These funds were paid to the Ontario Electricity Financial Corporation (OEFC), to be dedicated towards repayment of electricity sector stranded debt. Repurposing may have an impact on the defeasance of this debt.

# 10. Cancel/Adjust Renewable Energy Procurements

- The Ministry could consider the following actions to further mitigate future impacts to electricity bills:

| Unallocated/Terminated Capacity | Announced Procurements | Executed Contracts |
|---|---|---|
| A. Do not procure unallocated or terminated capacity | B. Revise FIT 5 target | D. Cancel LRP I contracts |
| | C. Cancel FIT 6 | |

**Overarching Considerations**

- Cost savings associated with reducing or cancelling renewable energy procurements and programs will not reduce current electricity bills, but would result in future cost reductions relative to Ontario Planning Outlook forecasts.
- The IESO estimates implementing options A to C will reduce system costs by approximately $592 million ($2016) between 2019 and 2028, resulting in an average of approximately $0.50/month in savings to a typical residential electricity bill over the same period. [cost reductions from LRP I contract cancellations TBC]
- The microFIT program is winding down end of 2017. Annual microFIT procurement targets have been undersubscribed.
- With a few exceptions (e.g., rollover of unallocated microFIT capacity; addition of terminated microFIT and small FIT capacity to FIT 5), plans for unallocated or terminated capacity are not defined in announcements or existing directions.

**Cancel/Adjust Announced Procurements**

- Amendments to existing directions to the IESO would be required to reduce FIT 5 and cancel FIT 6.
- The FIT 5 procurement is underway with a base target of 150 MW and inclusion of any capacity available from contract terminations under prior small FIT and microFIT procurements. The application window closed on November 25, 2016.

# 10. Cancel/Adjust Renewable Energy Procurements – Existing Contracts

**Cancel Existing LRP I Contracts**

- 16 LRP I contracts (approx. 455 MW) have been executed and projects are under development.
- None have met Key Development Milestones. Total value of LRP I estimated at approx. $1 billion (NPV to 2016).

[Placeholder for IESO: Cost calculation relative to OPO and associated bill impact]

**Considerations**

- To help inform a decision, IESO or OEB could be asked to evaluate and provide guidance to the Ministry on the system need for LRP I projects and potential ratepayer impacts/benefits.
- 13 of 16 LRP I contracts have Indigenous participation. Cancelling LRP I contracts would remove this economic development opportunity and likely damage relationships between Indigenous communities and the government.
- LRP I Contract includes an “Optional Termination” provision allowing IESO to terminate any contract prior to the “Commercial Operation Date” with 6 months written notice.
- The IESO obligations under the Optional Termination provision depend on whether the project has met all “Key Development Milestones”.
  - As no projects have met their Key Development Milestones, the estimated total cost payable to contract holders is about $8 million.

# 10. Cancel/Adjust Renewable Energy Procurements – Existing Contracts (cont'd)

## Legal Analysis

- Under the *Electricity Act, 1998*, the Minister has the authority to amend previous directions without approval from Cabinet. Although an amendment to an existing direction would not require Cabinet approval, it is unlikely that a direction to cancel LRP I contracts could be considered as amending an existing direction. The previous LRP directions set out the broad policy framework that was reflected in the procurement, but the contracts themselves, once executed, are stand alone documents which the IESO had legal authority to execute. Revoking previous LRP directions does not affect that authority or have the effect of cancelling the procurement.
- As a result, any new directive to cancel LRP I contracts would need to be approved by Cabinet, either as part of an LTEP implementation directive to IESO, or pursuant to the overall power to direct IESO with respect to procurements outside the LTEP process. However, there is a risk that such a directive could be subject to challenge.
- ENERGY has previously received advice that there is a high risk that a court would conclude that the Minister has no authority under the *Electricity Act , 1998* to issue a direction requiring IESO to terminate microFIT Conditional Offers and FIT Offer Notices that have already been issued to applicants, because these offers create vested contractual rights and the Minister would require clear legislative authority to interfere with those rights. This reasoning would likely apply equally to any direction or directive to IESO to cancel LRP I contracts.
- Previous advice has also flagged a moderately high risk that the Province could be liable for damages in tort for inducing a breach of contract if it issues a direction to IESO that interferes with vested contractual rights without clear statutory authority to do so. LRP I contract holders could also assert other claims, such as misfeasance in public office.
- The risk and costs associated with potential law suits resulting from the cancellation of contracts requires further analysis, including analysis of whether any statutory amendments would be required to provide clear authority to cancel the contracts. LSB recommends ENERGY seek an opinion from Crown Law Office Civil before proceeding.

# Summary

- Reductions in electricity rates could be achieved by eliminating existing, planned or directed initiatives from the rate-base or shifting these costs to the tax-base.

- The timing of the impact of these rate mitigation initiatives varies.
  - Immediate and near-term impacts can be achieved by shifting costs to the tax-base or changing how certain costs are recovered from consumers or eliminating certain programs.
  - Over the longer term, changes to the electricity supply mix and achieving efficiencies in the electricity market could yield system savings.

- Pursuing the initiatives would require regulatory amendments and working with the electricity sector agencies, LDCs and other stakeholders to implement the initiatives.

# Appendix

# Electricity Consumer Classes

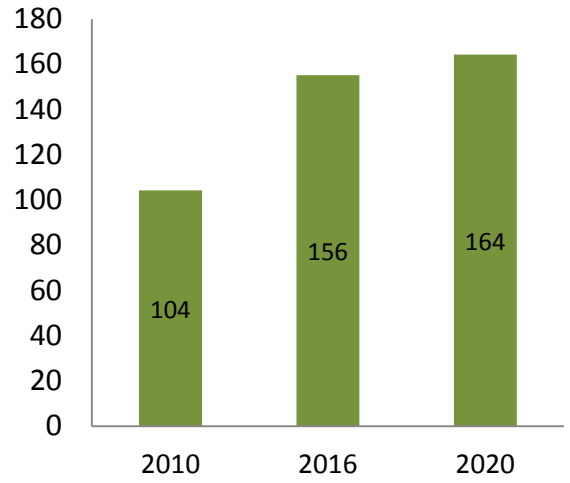
- In Ontario, there are three classes of electricity consumers:

| | Regulated Price Plan | Class B | Class A |
|---|---|---|---|
| **Consumer Types** | • Residential<br>• Small Business<br>• Farms | • Commercial<br>• Institutional<br>• Small industrial | • Large commercial<br>• Large industrial |
| **Load Size** | Below 0.05 MW | Between 0.05 MW and 1 MW | Above 1 MW |
| **Total Consumption** | 58 TWh | 57 TWh | 26 TWh |
| **Share of Consumption** | 41.1% | 40.4% | 18.4% |

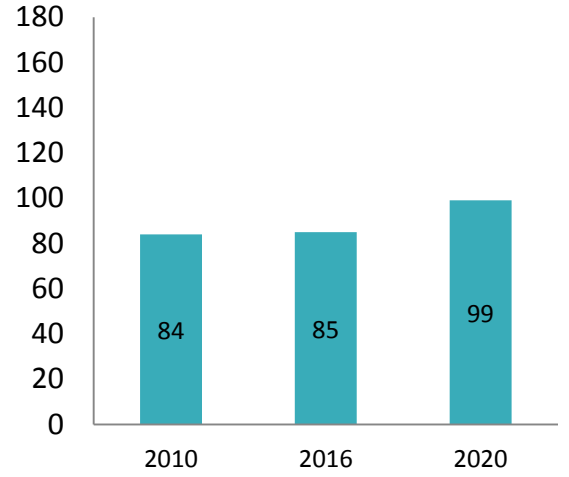
# Prices by Electricity Consumer Class

- Since 2010, average bills for residential consumers (i.e., using 750 kWh/month) have increased by over 50%. Rates are forecast to continue to increase, with residential consumers paying an estimated 6% by 2020.
- Industrial electricity rates have remained relatively flat over the same time period, due primarily to the Industrial Conservation Initiative (ICI). ICI represents a cost shift of about $5/month for residential electricity consumers. Industrial electricity consumers are forecast to see an increase of 16% by and 2020.

**Typical Residential Bill (750/kWh per month)**



**Typical Class A (Industrial) Price ($/MWh)**



**Note:** 2016 represents year-to-date September 2016 for industrial. Cap and trade proceeds recycling is included for the industrial consumer for 2020.

# Rate Mitigation Levers

- To provide further rate relief to Ontario electricity consumers, the government can use one or more of the levers outlined below:
  - **Tax-based Lever:**
    - Provide rebates funded from the tax-base or transfer items currently paid through the rate-base to the tax-base.
  - **Rate-based Lever:**
    - Shifts costs within the rate-base from one customer group to another to achieve electricity system benefits and/or policy goals.
  - **Cap and Trade Proceeds Lever:**
    - Use cap and trade proceeds on initiatives that help reduce greenhouse gas (GHG) emissions from the electricity sector (e.g., recycling proceeds during off-peak periods) while providing benefits to some or all electricity consumers.

# Traditional Rate Mitigation Programs

- Ontario has implemented a number of rate-based programs to help residential and industrial electricity consumers:
  - The Ontario Electricity Support Program (OESP) provides ongoing assistance directly on the bills of eligible low-income electricity consumers
  - The Rural or Remote Rate Protection (RRRP) program is provided to rural and remote residential and farm customers because the cost of distributing power to remote areas is much higher than for urban areas.
  - The Industrial Conservation Initiative (ICI) encourages Ontario's largest consumers to reduce consumption during peak periods while reducing system costs.
- There are also tax-base programs to help manage electricity prices:
  - Rebate the provincial portion of the HST from the electricity bills of residential, small business and farms as of January 1, 2017.
  - Northern Industrial Electricity Rate Program (NIERP), in which participants receive a rebate of two cents per kilowatt hour. On average, industrial electricity prices can be reduced by up to 20%.
- While rate-based programs provide relief to certain electricity consumers, they shift other costs to remaining ratepayers (See Appendix for additional details).

# Driving Down Prices for Consumers

- Since 2013, a number of actions have been taken to drive down prices for consumers wherever possible:
  - Renegotiating the Green Energy Investment Agreement, reducing contract costs by $3.7 billion;
  - Deferring the construction of two new nuclear reactors at Ontario Power Generation's Darlington facility, avoiding an estimated $15 billion in new construction costs;
  - Approving Ontario Power Generation's plans to enable the ongoing operation of Pickering up to 2024, which is expected to save ratepayers as much as $600 million;
  - Reducing Feed-In-Tariff (FIT) prices through annual price reviews, saving ratepayers at least $1.9 billion relative to the 2013 Long-Term Energy Plan (2013 LTEP) forecast; and
  - Suspending the second round of the Large Renewable Procurement (LRP II) process and the Energy-from-Waste Standard Offer Program to save up to $3.8 billion in electricity system costs relative to 2013 LTEP.

# Cost Shifts in the Electricity Sector – Current Programs

- Several programs in the electricity sector “shift costs” from one group of electricity consumers to another:
  - **Rural or Remote Rate Protect** (**RRRP)** is a longstanding program that reduces the delivery charge for rural electricity consumers and is paid for by all consumers in Ontario through a regulatory charge on bills.
  - **Ontario Electricity Support Program (OESP)** is funded via a regulatory charge on consumer bills and provides support for qualifying low income electricity consumers.
  - **Industrial Conservation Initiative (ICI)** empowers large consumers to lower their costs by reducing their demand during peak hours. In the process, ICI shifts costs from large electricity consumers to all other consumers in Ontario.
  - **Industrial Electricity Incentive** (**IEI**) program, offers reduced electricity prices for companies starting or expanding operations in Ontario. All electricity consumers in Ontario pay for the price reduction that IEI participants receive.

# Cost Shifts in the Electricity Sector (Cont'd)

- The tables on the right show the estimated cost shifts that result from existing government programs.
- ICI has had the largest cost shift of all the programs, due to the large size of Global Adjustment (GA) and the way that it is recovered from consumer classes.
- RRRP and OESP impact the regulatory line on consumer bills, while ICI, IEI and conservation affect GA (i.e., Electricity line on bills of Regulated Price Plan consumers).

**Cost Shift Impacts - Residential Bill**

*Typical 750 kWh/month Toronto Hydro consumer*

| *$/month* | 2011 | 2012 | 2013 | 2014 | 2015 | 2016 |
|---|---|---|---|---|---|---|
| ICI | 2.65 | 3.25 | 3.88 | 3.53 | 4.75 | 4.77 |
| RRRP | 0.90 | 0.82 | 0.84 | 0.92 | 0.93 | 0.94 |
| OESP | - | - | - | - | - | 0.84 |
| Conservation | 1.85 | 1.92 | 2.00 | 1.58 | 2.43 | 2.45 |
| IEI | - | - | 0.08 | 0.09 | 0.11 | 0.12 |
| **Total** | **5.41** | **5.99** | **6.81** | **6.13** | **8.21** | **9.12** |

**Cost Shift Impacts - Industrial Bill**

*Typical Class A consumer*

| *$/MWh* | 2011 | 2012 | 2013 | 2014 | 2015 | 2016 |
|---|---|---|---|---|---|---|
| ICI | -22.17 | -26.36 | -30.29 | -25.91 | -33.79 | -33.92 |
| RRRP | 1.20 | 1.10 | 1.12 | 1.23 | 1.24 | 1.25 |
| OESP | - | - | - | - | - | 1.13 |
| Conservation | 1.53 | 1.59 | 1.66 | 1.31 | 2.01 | 2.02 |
| IEI | - | - | 0.07 | 0.08 | 0.09 | 0.10 |
| **Total** | **-19.43** | **-23.67** | **-27.44** | **-23.29** | **-30.45** | **-29.43** |

**Note:** OESP did not come into effect until 2016. The 2016 values represent forecasts and are subject to change.

# Cost Shifts in the Electricity Sector (Cont'd)

- The table on the right shows the total cost for various government electricity programs. These programs are currently funded through the electricity system ratebase.

- Funding of these programs through the fiscal plan would remove these costs from the electricity system (i.e., Placing these costs on the taxbase).

**Cost of Programs**

*By government program*

| *$M* | 2011 | 2012 | 2013 | 2014 | 2015 | 2016 |
|---|---|---|---|---|---|---|
| ICI | 506 | 615 | 736 | 670 | 890 | 893 |
| RRRP | 172 | 156 | 159 | 176 | 174 | 176 |
| OESP | - | - | - | - | - | 158 |
| Conservation | 329 | 339 | 354 | 280 | 425 | 428 |
| IEI | - | - | 15 | 16 | 18 | 19 |

- For example, removing the roughly $900 million of program cost from the Industrial Conservation Initiative (ICI) program would save the typical residential electricity consumer $4.77 per month in 2016.

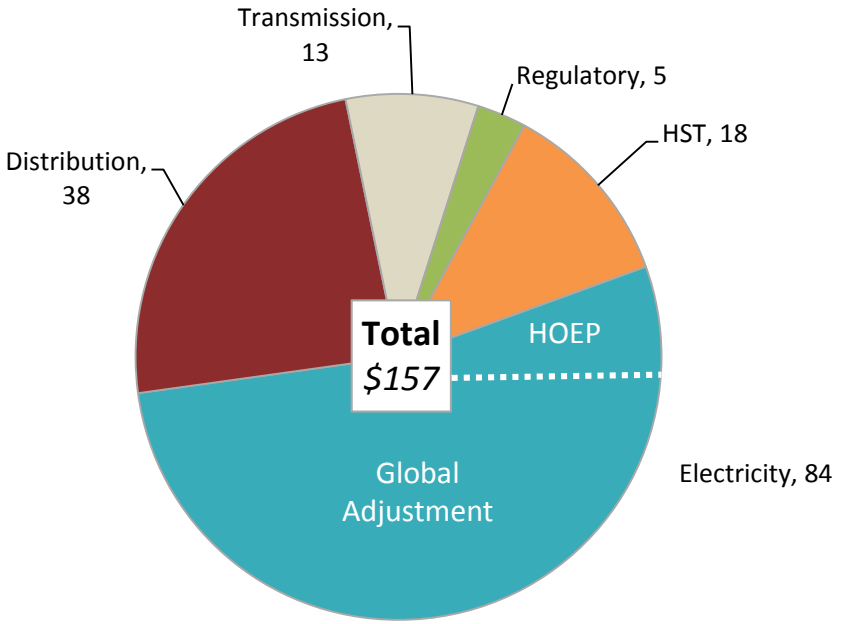
**Note:** OESP did not come into effect until 2016. The 2016 values represent forecasts and are subject to change.

# Residential Electricity Prices

- There are approximately 4.5 million residential consumers in Ontario.
- The Regulated Price Plan includes nearly all residential consumers, as well as small businesses. Regulated Price Plan consumers pay a blended commodity rate regulated by the OEB, which is set every six months.
- For households, the Debt Retirement Charge (DRC) was removed from residential electricity bills as of January 1, 2016.
- In addition, the Ontario Electricity Support Program (OESP) provides an ongoing rate reduction directly on the bills of low-income electricity consumers who have applied and meet the eligibility requirements. The program is funded through the rate base.
- Rural customers, in particular those with electrical heating, pay higher monthly bills.

**Typical Residential Monthly Bills ($)**

*As of November 1, 2016 (750 kWh/month)*



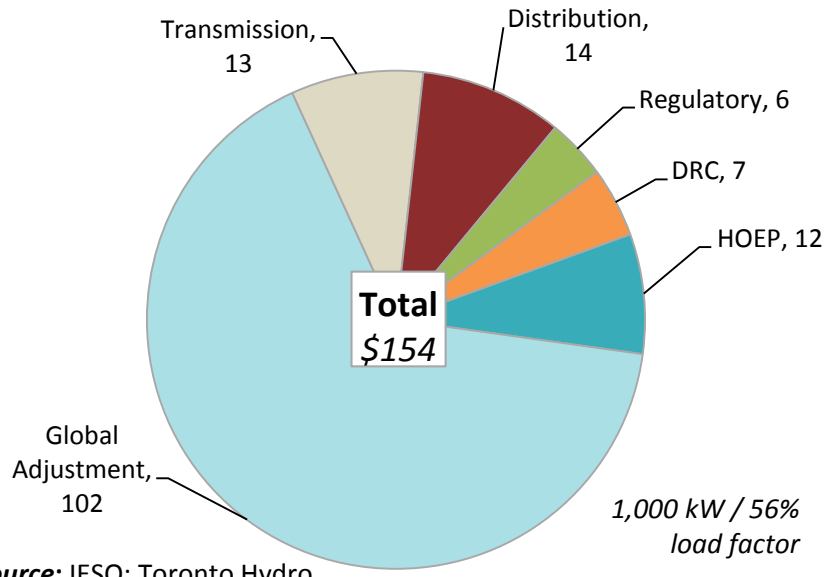
***Source*: OEB, Toronto Hydro**

# Commercial Electricity Prices

- There are approximately 55,000 commercial and institutional consumers in the province. These consumers are Class B consumers, and have separate line items on the electricity bill for HOEP and GA.
- There is a high degree of differentiation amongst consumers within the commercial sector in terms of size and consumption patterns. For example, an elementary school has a much different hourly load profile compared to a full service restaurant. This is an important consideration when looking at the bill impacts of policy options.

**Typical Commercial Price ($/MWh)**

*YTD June 2016 (Non-RPP Class B)*



***Source*:** IESO; Toronto Hydro

- Consumers in the commercial sector do not pay time-of-use prices and have little incentive to shift demand away from high demand hours.
- Targeted pricing programs are currently not available for Class B consumers.

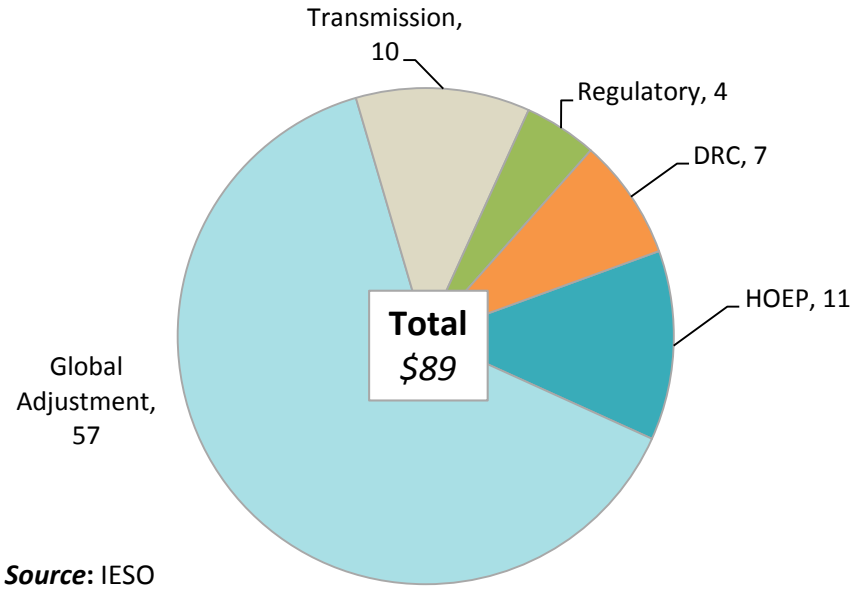
*** Note**: Most commercial consumers receive input tax credits for their HST.

# Industrial Electricity Prices

- There are about 300 large industrial consumers in Ontario.
- Measures in place to mitigate industrial electricity prices include ICI and NIERP.
- ICI lowers costs for eligible large electricity consumers (i.e., those with monthly peak demand exceeding 3 MW) that reduce consumption during peak periods.
  - ICI consumers reduce their electricity rates by 25% on average.

**Typical Large Industrial Price ($/MWh)**

*YTD June 2016*



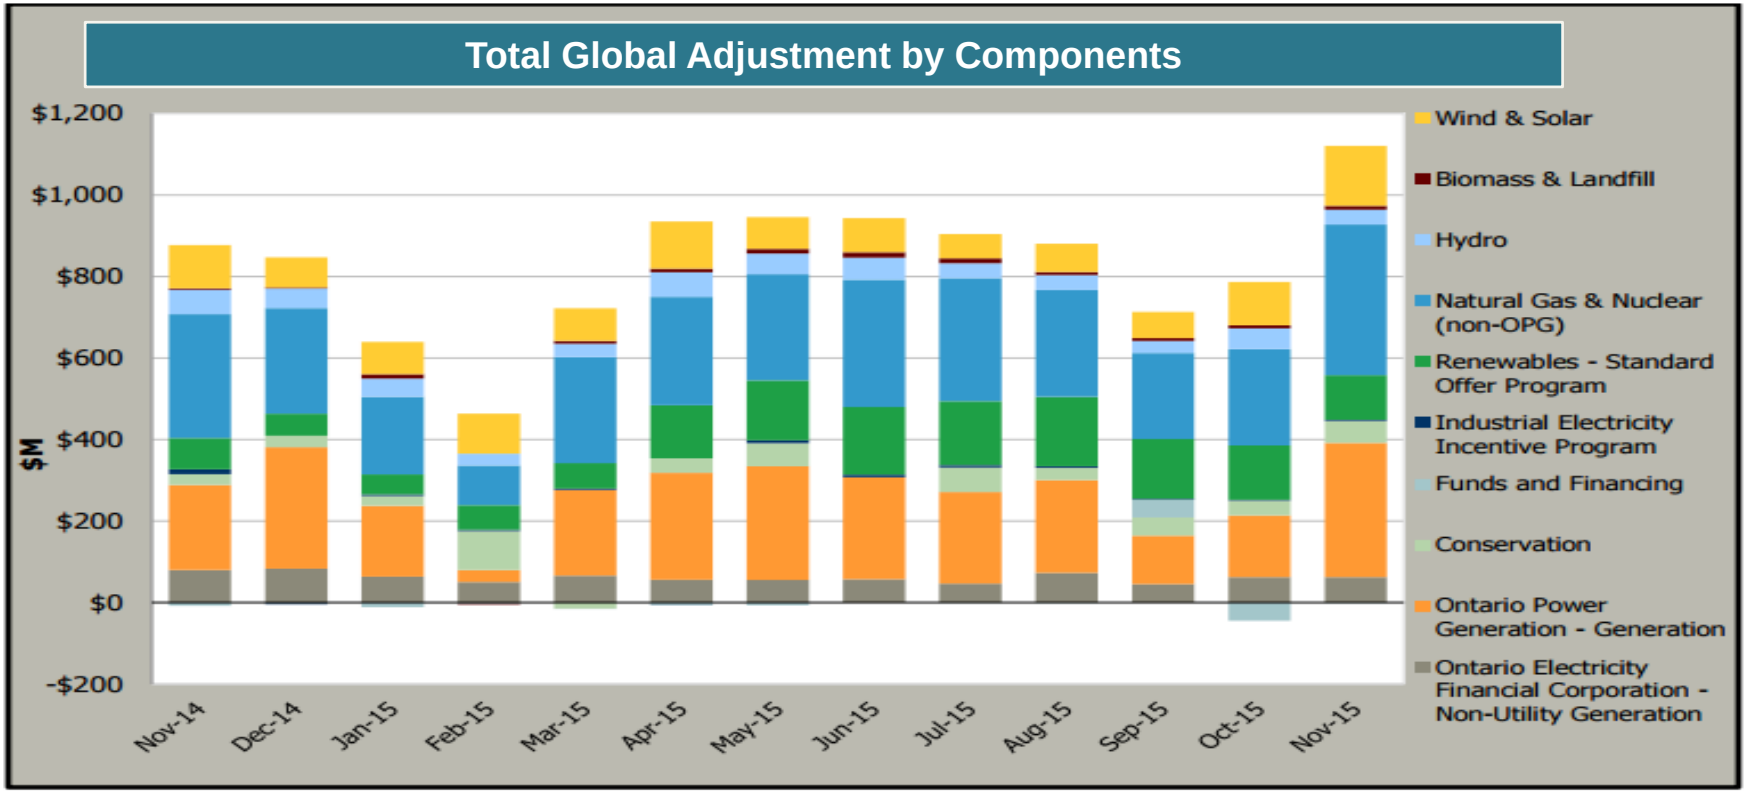
***Source*: IESO**

- Participants in NIERP receive a rebate of $20/MWh. On average, industrial electricity prices are reduced by about 20% through the program, reducing all-in prices to $69/MWh for these consumers. The program is funded through the tax base.

*** Note:** Industrial consumers receive input tax credits for their HST.

# Total Components of Global Adjustment

- Global Adjustment (GA) is a market mechanism that recovers costs from electricity consumers, including the cost of almost all conservation programs in the province (i.e., approximately half a billion dollars in 2016).



**Source:** IESO Monthly Market Report (November 2015)

# Cancel/Adjust Renewable Energy Procurements

# LRP I Pre-Construction Liability Limits

- All 16 successful LRP I developers accepted Optional Termination Provisions when the LRP I Contracts were executed in April 2016.
- If IESO chooses to enact the Optional Termination provision before a project has met all Key Development Milestones, IESO is required to pay pre-construction development costs up to the Pre Construction Liability Limit.
- Pre-construction development costs include costs incurred for feasibility studies, obtaining site access rights, work towards environmental approvals, business development plans, negotiation of contracts for design, equipment, construction and financing, reasonable overhead expenses, and other reasonable costs incurred.
- The Pre Construction Liability Limits are:
  - Non-Rooftop Solar: $250,000 plus $10.00/kW of Contract Capacity
  - Waterpower: $500,000 plus $20.00/kW of Contract Capacity
  - On-Shore Wind: $400,000 plus $2.00/kW of Contract Capacity
- According to the LRP I Optional Termination provision, the developer has a duty to take reasonable steps to mitigate losses, liabilities, costs and damages incurred as a result of the Optional Termination.
  - The IESO will not provide compensation for amounts which are attributable to a developer's failure to take reasonable steps to mitigate.

Hi Salman,

Let's consolidate SPFB's too.

Thanks,

John.

**Subject:** Price Mitigation Deck

Hi John,

I have included comments in the attached version of the price mitigation deck on slides 3, 4, 5, 8, 13, 14, 15, 20.

I will be out this afternoon, so could you combine with comments on the deck you will submit to Ron.

Emily

Ontario

MINISTRY OF
ENERGY

# Proposed Initiatives to Transform Ontario's Electricity Sector

## Working Draft

December 5, 2016

CONFIDENTIAL DRAFT

# Context

- Electricity costs are increasing as the necessary investments are made to decarbonize and modernize the province's electricity infrastructure.
  - Since 2003, the Province has invested more than $35 billion in over 16,000 megawatts (MW) of new and refurbished cleaner generation, including nuclear, natural gas and renewables.
  - Over the same period, Hydro One has invested $15.5 billion to enhance and renew its transmission and distribution systems.
  - As additional electricity generation comes online, nuclear units are refurbished and distribution and transmission investments are made, prices are forecast to continue to increase.

- Actions have been taken to drive down electricity costs, including deferring investments in generation (e.g., new build nuclear), improving market efficiency (e.g., introduction of wind dispatch) and decreasing the cost of renewable procurements (e.g., Green Energy Investment Agreement ~~GEIA~~ renegotiation, decreasing FIT prices).

- Additional steps have been taken to increase cost effectiveness and improve efficiency by adopting new electricity market approaches, such as:
  - Enhancing competition between developers of large renewable projects through the Large Renewable Procurement (LRP) process to drive down price and secure clean, reliable generation for the province;
  - Directing IESO to end the process of negotiating new NUG contracts pending the development of a Capacity Auction (i.e., Market Renewal); and
  - Launching the first IESO Demand Response Auction (i.e., a competitive process through which demand-side resources are selected to be available to reduce their electricity consumption as needed).

# Context (Cont'd)

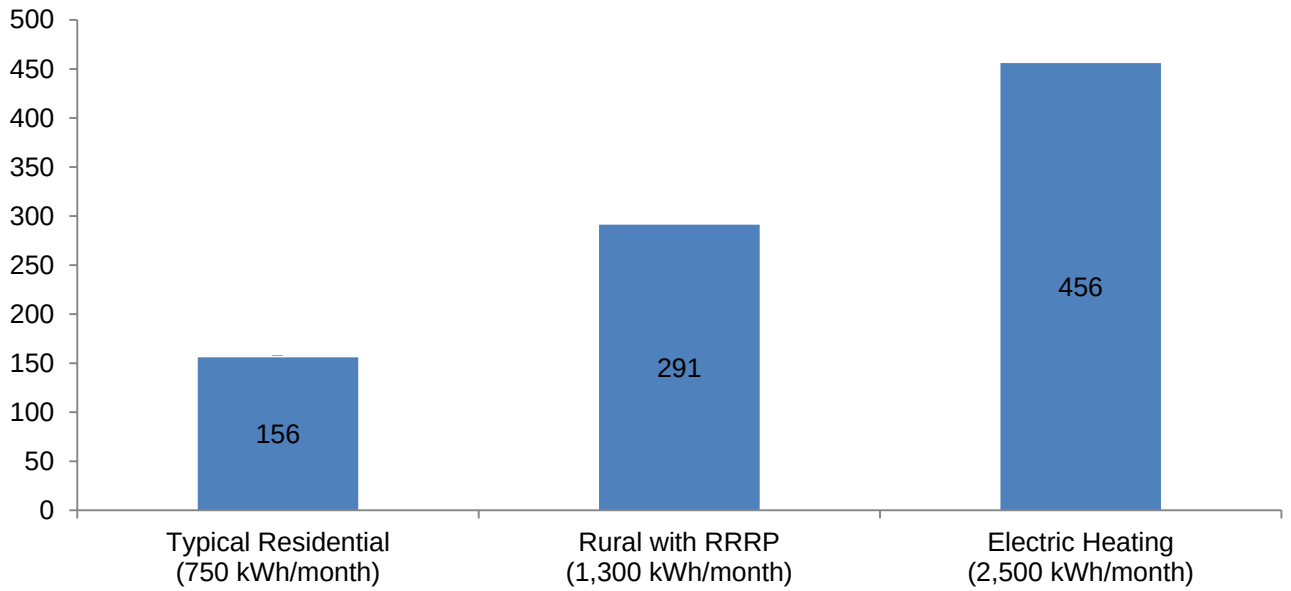
- Following the 2016 Throne Speech, a number of actions were announced to further reduce electricity costs, such as:
  - Providing an 8 per cent rebate before tax, equivalent to the provincial portion of HST, for approximately 5 million eligible electricity consumers including residences, small businesses and farms;
  - Increasing the amount of rate protection available to approximately 330,000 eligible rural customers living in low-density areas by updating the Rural or Remote Rate Protection (RRRP) program;
  - Lowering the Industrial Conservation Initiative (ICI) threshold to 1 MW and removing sector restrictions so that more consumers can benefit;
  - Suspending the second round of the Large Renewable Procurement (LRP II) and the Energy-from-Waste Standard Offer Program to save up to $3.8 billion in costs; and
  - Recycling a portion of cap and trade auction proceeds to keep rates affordable for industrial and commercial electricity consumers.
- On November 28, 2016, the Minister of Energy announced the need for changes in how electricity resources are procured and the need for wholesale market renewal.

- The Ministry of Energy is currently updating its Long-Term Energy Plan (LTEP), which provides an opportunity to consider a range of policy changes to how the Ontario energy sector operates.

# Current Electricity Prices – Residential

- Residential consumers electricity prices continue to be a concern for many Ontarians, particularly those that rely on electric heat.
  - **Note:** The typical residential bills are currently below the 2013 ~~Long-Term Energy Plan (2013~~ LTEP~~)~~ forecasts ($159 / 750kWh)

**Residential Electricity Bills**
*in $/month*

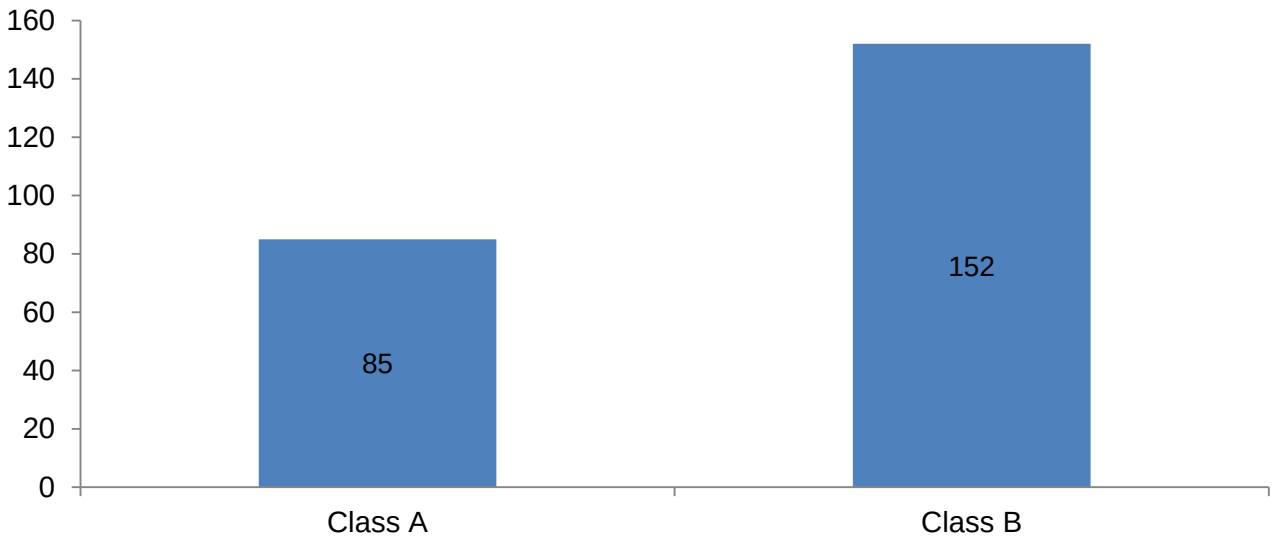


**Note**: Typical residential and electric heating shown above are based on Toronto Hydro; rural is based on connection to Hydro One as a R2 customer eligible to receive the Rural or Remote Rate Protection (RRRP) credit of $31.50.

# Current Electricity Prices – Industrial and Commercial

- While large industrial electricity consumers (i.e., Class A) rates are competitive with other jurisdictions, rates for commercial/small industrial consumers (i.e., Class B) are higher by comparison.
  - **Note:** Current industrial and commercial prices are below 2013 LTEP forecasts ($96 / MWh)

**Current All-In electricity Price**
*in $/MWh*



**Note**: Based on year-to-date (YTD) September 2016 prices. Class A reflects a transmission-connected consumer. Class B reflects a 1 MW load operating at 56% load factor and connected to Toronto Hydro.

# Taxpayer Funded Electricity Price Mitigation

| ($M) | 2011-12 | 2012-13 | 2013-14 | 2014-15 | 2015-16 | 2016-17[1] | 2017-18[1] |
|---|---|---|---|---|---|---|---|
| OCEB | 1,033 | 994 | 1,006 | 1,078 | 860 | - | - |
| OREC | - | - | - | - | - | 300 | 1,200* |
| Ending DRC[2] | - | - | - | - | 85 | 330 | 330 |
| NIERP | 120 | 120 | 115 | 108 | 120 | 120 | 120 |

1. 2016-17, 2017-18 based on forecasted numbers
2. 2015-16 estimated for 3 months of reduced DRC revenue
3. OEPTC amounts in all years based on energy component of the rebate.

* Sourced from November LRC Submission

OCEB – Ontario Clean Energy Benefit
OREC – Ontario Rebate for Electricity Consumers
DRC – Debt Retirement Charge
NIERP – Northern Ontario Electricity Rate Program
NOEC – Northern Ontario Energy Credit
OEPTC – Ontario Energy and Property Tax Credit

- The table above shows the annual amount of taxpayer funded electricity price mitigation from 2011-12 to 2017-18.
- From 2011-12 to 2015-16 there has been an annual fiscal impact of approximately $1.6 billion due to electricity price mitigation programs.
- In 2016-17, the fiscal impact due to electricity price mitigation programs is estimated at approximately $1.2 billion.
- In 2017-18, due primarily to the start of the Ontario Rebate for Electricity Consumers, the expected fiscal impact due to electricity price mitigation programs is approximately $2.1 billion.

# Proposed Initiatives – Overview

- The suite of proposed initiatives are intended to:
  - Transform how the electricity market operates in Ontario;
  - Re-set how government programs are funded (i.e., rate-base vs tax-base);
  - Provide system benefits (e.g., industrial load retention);
  - Lower the cost of electricity for residential and industrial consumers; and
  - Increase cost effectiveness and improve efficiency.

- The proposed initiatives include:
  1. Implement Market Renewal Initiatives
  2. Fund Electricity Support Programs Through The Tax-base
  3. Eliminate the Industrial Conservation Initiative (ICI)
  4. Amortize Conservation Program Costs
  5. LDC Efficiencies
  6. Rate Design Initiatives
  7. Reduced Cost of OPG Borrowing
  8. End Debt Retirement Charge (DRC) Early for Commercial/Small Industrial Class B Electricity Consumers
  9. Dedicate Departure Tax
  10. Cancel/Adjust Renewable Energy Procurements

- The proposed initiatives provide opportunities to reduce electricity costs for residential and industrial consumers while at the same time transforming the province's electricity market and yielding benefits for the electricity system.

# Proposed Initiatives – Impacts

- Each of the proposed initiatives under consideration target different government programs and different parts of the electricity bill. The proposals impact different classes of electricity consumers to varying degrees.

| Proposal | Program / Initiative | Line on Bills | Who Benefits |
|---|---|---|---|
| 1. Implement Market Renewal Initiatives | Market Renewal | Electricity, Global Adjustment, Regulatory | Market Renewal: All electricity consumers |
| 2. Fund Electricity Support Programs Through The Tax-base | OESP, RRRP | Regulatory | All electricity consumers evenly |
| 3. Eliminate the Industrial Conservation Initiative (ICI) | ICI | Electricity, Global Adjustment | Only Class B electricity consumers (i.e., residential) **Note:** Will have a negative impact on Industrial consumers. |
| 4. Amortize Conservation Program Costs | Amortization | Electricity, Global Adjustment | Class B electricity consumers and to a lesser extent Class A consumers |
| 5. LDC Efficiencies | Distribution efficiencies | Delivery | All embedded consumers |
| 6. Rate Design Initiatives | Rate structures | Electricity, Global Adjustment | Rate Design Initiatives: Participating electricity consumers |
| 7. Reduced Cost of OPG Borrowing | n/a | Electricity, Global Adjustment | Class B electricity consumers and to a lesser extent Class A consumers |
| 8. End DRC Early for Commercial/Small Industrial Class B Electricity Consumers | Debt Retirement Charge (DRC) | DRC | Class B consumers (i.e., small business and commercial consumers, etc) |
| 9. Dedicate Departure Tax | Departure Tax | TBD | TBD |
| 10. Cancel/Adjust Renewable Energy Procurements | FIT, LRP | Electricity, Global Adjustment | Class B electricity consumers and to a lesser extent Class A consumers |

# Proposed Initiatives – Potential Savings for Typical Residential Electricity Consumers

| *$/750kWh* | 2017 | 2018 | 2019 | 2020 | 2021 | 2022 | Timing of Benefit |
|---|---|---|---|---|---|---|---|
| 1. Implement Market Renewal Initiatives | - | - | - | 1.58 | 1.59 | 1.60 | Longer-Term |
| 2. Fund Electricity Support Programs through the Tax-base | 2.18 | 2.30 | 2.31 | 2.45 | 2.48 | 2.51 | Immediate |
| 3. Eliminate the Industrial Conservation Initiative (ICI) | 4.40 | 4.24 | 4.10 | 4.24 | 3.73 | 3.58 | Immediate |
| 4. Amortize Conservation Program Costs | 1.67 | 1.56 | 1.21 | 0.81 | 0.54 | 0.3 | Immediate |
| 5. LDC Efficiencies | TBD | TBD | TBD | TBD | TBD | TBD | Near-Term |
| 6. Rate Design Initiatives* | - | - | - | - | - | - | Immediate |
| 7. Reduced Cost of OPG Borrowing | 0.13 | 0.13 | 0.13 | 0.18 | 0.18 | 0.18 | Immediate |
| 8. End DRC Early for Class B Electricity Consumers** | - | - | - | - | - | - | n/a |
| 9. Dedicate Departure Tax | TBD | TBD | TBD | TBD | TBD | TBD | Immediate |
| 10. Cancel / Adjust Renewable Energy Procurements | - | - | TBD | TBD | TBD | TBD | Longer-Term |
| **Total** | | | | | | | |

**Note:** The above initiatives will provide similar benefits for non-RPP Class B electricity consumers. Proposal 2 assumes OESP participation of 50% and 5-year maturity. *Savings estimates do not include changes related to rate design. ** Class B includes small-medium enterprises (SMEs).

# Proposed Initiatives – Potential Savings for Average Industrial Electricity Consumers

| *$/MWh* | 2017 | 2018 | 2019 | 2020 | 2021 | 2022 | Timing of Benefit |
|---|---|---|---|---|---|---|---|
| 1. Implement Market Renewal Initiatives | - | - | - | 2.11 | 2.12 | 2.13 | Longer-Term |
| 2. Fund Electricity Support Programs through the Tax-base | 2.91 | 3.06 | 3.17 | 3.27 | 3.33 | 3.38 | Immediate |
| 3. Eliminate the Industrial Conservation Initiative (ICI) | (24.12) | (23.21) | (22.45) | (23.23) | (20.42) | (19.61) | Immediate |
| 4. Amortize Conservation Program Costs | 1.15 | 1.08 | 0.84 | 0.56 | 0.37 | 0.25 | Immediate |
| 5. LDC Efficiencies | n/a | n/a | n/a | n/a | n/a | n/a | Near-Term |
| 6. Rate Design Initiatives* | - | - | - | - | - | - | Immediate |
| 7. Reduced Cost of OPG Borrowing | 0.10 | 0.10 | 0.10 | 0.15 | 0.15 | 0.15 | Immediate |
| 8. End DRC Early for Class B Electricity Consumers** | - | - | - | - | - | - | n/a |
| 9. Dedicate Departure Tax | TBD | TBD | TBD | TBD | TBD | TBD | Immediate |
| 10. Cancel / Adjust Renewable Energy Procurements | - | - | TBD | TBD | TBD | TBD | Longer-Term |
| **Total** | | | | | | | |

**Note:** Proposal 2 assumes OESP participation of 50% and 5-year maturity. Proposal 3 reflects the elimination of ICI, as opposed to moving ICI cost shift to the taxbase. The $1.75/MWh savings associated with Proposal 7 in 2018 accounts for the fact that under the status quo, DRC will be removed from bills in April 2018. *Savings estimates do not include changes related to rate design. ** Class B includes small-medium enterprises (SMEs).

# Fiscal Considerations

- Funding electricity support programs (i.e., OESP, RRRP, First Nations Delivery Rate) from the tax-base represents approximately $440 million on average annually.

- Ending the Debt Retirement Charge (DRC) for commercial and small industrial electricity consumers (i.e., Class B) early would represent an additional fiscal pressure of $xx [placeholder for OFA] on the province.

- If the Industrial Conservation Initiative were funded though the tax-base instead of being eliminated, this would represent a $900 million annual cost to the fiscal plan.

- Reducing OPG borrowing costs to the Province's cost of funds is expected to result in a $20 to $35 million annual fiscal pressure to the province [TBC by OPG / OFA].

- Fiscal impacts of allocating a portion of the departure tax to ratepayers will depend on the size of the allocation, as well as timing for the flow of value. The maximum, direct one-time impact is $2.6 billion, with potential ancillary impacts on residual stranded debt defeasance.

# 1. Electricity Market Renewal Initiatives

- Continue to move forward with IESO's Market Renewal initiatives:
  - Market Renewal encompasses projects such as a single-schedule system (from the current two-schedule system), more frequent intertie scheduling to better align with other jurisdictions and a day-ahead market. There will be up front capital costs to enable the initiative. IESO is currently assessing these costs.
  - Moving to "technology-agnostic" procurements will provide new opportunities for innovation and modernization and ensure ratepayers receive the best prices possible.

**Considerations**

- Changes related to IESO's Market Renewal initiatives, reflected in HOEP and uplifts, are estimated to save up to $300 million per year, starting in 2020, leading to a reduction of:
  - About $1.60/month or about 1% at current retail prices for a typical residential bill; and
  - About $2/MWh or more than 2% at current all-in prices for industrial and SME electricity consumers.
- The IESO's Market Renewal is a broad initiative that will impact all aspects of Ontario's electricity market. Ontario has had a uniform price since market opening.
- Adopting a technology-agnostic stance will lower the overall cost of providing electricity service by selecting the most cost-effective resources to fulfill various system needs.

# 2. Fund Electricity Support Programs Through the Tax-Base

- Propose to fund electricity support programs, including Ontario Electricity Support Program (OESBP) and Rural or Remote Electricity Rate Protection (RRRP), through the tax-base instead of a regulated charge. This would allow the OESP and the RRRP charges to be removed from the Regulatory line on electricity bills.

**Considerations**

*Consumer Impacts and implementation*

- Transitioning OESP and RRRP to the tax-base would reduce a typical residential bill by about $2.35/month by 2020, and delivering the First Nation rate reduction through tax base would avoid about $0.10/month for a potential total savings of $2.45/month by 2020). As all programs provide strong social benefits, there is precedent for funding these programs through the tax-base.

- To address concerns from low income electricity consumers improvements to OESP could be implemented by increasing credits (could be up to double the current credits)
  - Single low income consumer would see a change from $30 to $45/ month ($540/year):
  - Family of four with electric heat could see a credit of $82.50/month ($990/year); and
  - Would mean no impact on consumer bills and no change to current OESP charge.
- RRRP and OESP are included in the “Regulatory” line on bills. If RRRP and OESP were eliminated from bills, the Regulatory line would decrease; however, as the Regulatory line is the smallest line item component of invoices, there is risk the decrease may not be perceived by customers.

- The RRRP regulation provides a funding mechanism for transmission infrastructure required to grid connect remote First Nation communities. Considerations for how that funding will be supported by the tax base will need to be determined.

- The non-rate mechanism to remove delivery charges from on-reserve First Nation customer monthly bills needs to be further explored.Funding RRRP and/or OESP with tax revenue would require amendments to existing legislation and regulations.

# 2. Fund Electricity Support Programs Through the Tax-Base (cont'd)

- Table below shows estimates of program costs up to 2020:

| Year | OESP | RRRP | First Nations Delivery Rate | TOTAL |
|---|---|---|---|---|
| 2017 | $106M | $292M | $18M | **$416M** |
| 2018 | $119M | $300M | $18M | **$437M** |
| 2019 | $127M | $306M | $18M | **$451M** |
| 2020 | $132M | $315M | $18M | **$465M** |

1) Ontario Electricity Support Program (OESP)
   - After almost a year in market, close to 30% of potentially eligible customers are signed up.
   - The cost projections below assume the program grows to 50% of eligible consumers by 2020 (also assumes 10% administration costs).

2) Rural and Remote Rate Protection (RRRP)
   - Provides benefits to R2 Hydro One consumers, Algoma, and remote communities.
   - Includes the expanded coverage that will begin on January 1, 2017.

3) First Nation rate reduction (currently under development)
   - On November 14, 2016, OEB presented options to the Ministry on reducing costs for on-reserve First Nation customers.
   - OEB's recommended option to provide 100% delivery rate credit, which is estimated at $18.4 million per year.
     - Other options includes a seasonal fixed credit to account for demand changes over the year ($13 million) or a 50% total bill reduction ($23 million).

# 3. Eliminate the Industrial Conservation Initiative (ICI)

- The cost shift from the Industrial Conservation Initiative (ICI) could be removed from electricity bills by eliminating ICI.
  - The ICI allows large electricity consumers to lower their electricity costs by reducing their demand during peak hours.

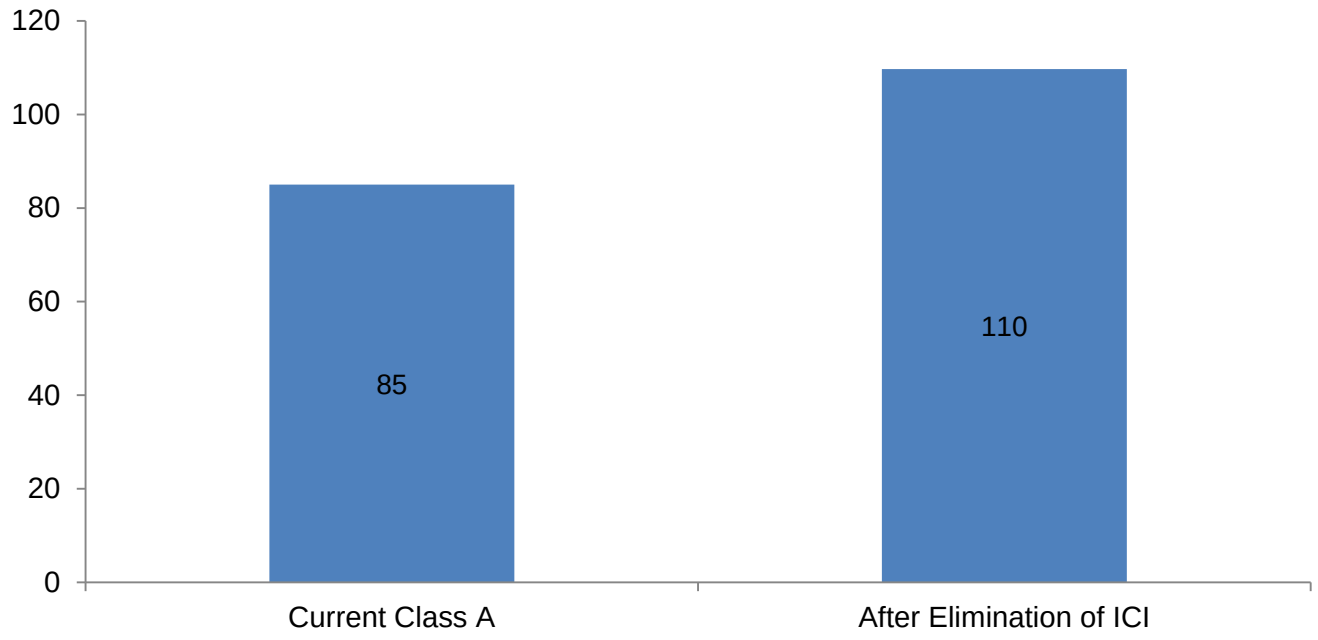
**Considerations**

- Eliminating ICI would result in a benefit of more than $4/month for residential electricity consumers in 2017.
  - However, unless government took action to mitigate the associated cost shift back to industrial consumers, typical industrial prices would increase by about one-third. Such a price increase would pose significant challenges for energy-intensive consumers.
- Industrial stakeholders have indicated that ICI as an integral factor in maintaining competitiveness and retaining industry in the province.
  - Eliminating ICI would limit the “cost shift” onto residential consumers, but it would also lead to a reduction in industrial demand. The large industrial contribution to the fixed costs of running the electricity system would then need to be covered by remaining consumers.
- If ICI is retained, current IESO projections indicate that the cost shift will decrease each year going forward as Global Adjustment (GA) decreases (due to an expected increase in HOEP).
- Alternatively, ICI could be funded through the tax-base at a cost of $900 million annually. There is precedent to use the tax-base for industrial support programs, including the Northern Industrial Electricity Rate Program (NIERP) and the Jobs and Prosperity Fund.

# 3. Eliminate the Industrial Conservation Initiative (cont'd)

- ICI currently provides a benefit of about $25/MWh to Class A electricity consumers.

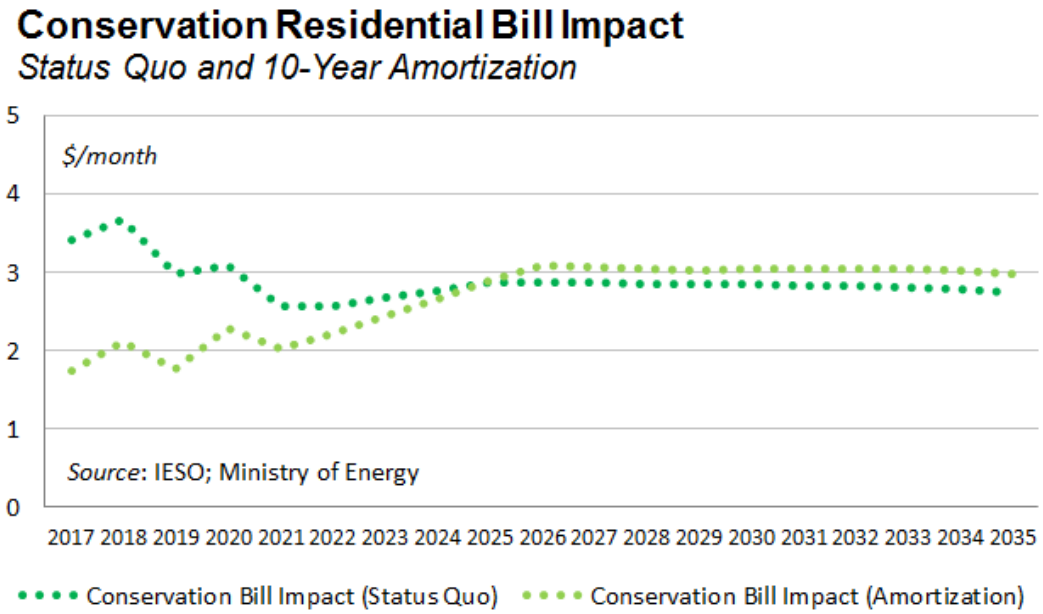
**All-In Electricity Price**
*in $/MWh*



**Note**: Based on year-to-date (YTD) September 2016 prices. Class A reflects a transmission-connected consumer.

# 4. Amortize Conservation Program Costs

- ~$3 billion from the electricity ratepayer base will be spent on conservation programs delivered under the Conservation First Framework and the Industrial Accelerator Program (IAP) between 2015 and 2020.
- Currently, Conservation and Demand Management (CDM) program costs are recovered from the Global Adjustment (GA) mechanism about one month after expenses are incurred.
- As a potential rate mitigation measure, certain CDM costs could be amortized.
- Amortizing a portion of conservation spending would produce a benefit for electricity ratepayers in excess of $1/month at the outset. Over time, the benefit would decrease and turn into a cost, as interest charges begin to grow.



**Note**: Chart assumes that conservation incentive costs are available for amortization while administration cost are not. Although there is variable from year to year, incentives represent about two-thirds of conservation spending in Ontario. Chart assumes conservation spending continues at a similar rate beyond 2020. Chart assumes a 10-year borrowing rate of 3.0%.

# 4. Amortize Conservation Program Costs (cont'd)

## Considerations

- Under **Public Sector Accounting Board (PSAB) accounting standards**, used by both the Province and IESO, only certain assets can be amortized: 1) pensions and 2) tangible capital assets. Under PSAB an asset must meet several criteria to be considered a capital asset, including:
  - A tangible capital asset must be tangible and substantive and the Ontario government must have title and operate the asset.
  - A tangible capital asset must bring a tangible benefit to the government or to Ontario.

- CDM costs, on their own, do not meet the criteria of a tangible capital asset because customers would have ownership and control of installed CDM measures, not the Province or IESO.

- **Rate-regulated accounting** was developed to recognize the unique nature of regulated entities (e.g., electricity generators, LDCs). Under rate-regulated accounting certain costs can be treated as amortizable assets that would not normally be considered assets under accounting principles.
  - Over the past several years, the Auditor General (AG) has expressed concerns about the appropriateness of recognizing rate-regulated assets in the Province's consolidated financial statements.
  - Rate-regulated accounting is currently under review by international accounting standard setting bodies and is currently permitted only on an interim basis, so its future is unclear at present.

# 4. Amortize Conservation Program Costs (cont'd)

**Considerations**

- If some of Ontario's CDM costs could be amortized, analysis shows that ratepayer impacts would be reduced in the short-term but interest charges on the loan would result in increased overall ratepayer costs in the longer-term.

- Legislative amendments would be needed to allow recovery of loan interest charges from GA.

- If there is a desire to proceed:
  - Formal accounting advice will need to be sought from IESO's external auditor as well as the Ontario Provincial Controller (OPC) to determine whether CDM costs could be amortized according to rate-regulated accounting standards.
  - Further legal analysis would also be required to confirm legal viability and possible approaches to implementation.

# 5. LDC Efficiencies

- Consider opportunities for future LDC cost reductions and efficiencies through the regulatory framework.

**Considerations**

- The Ontario Energy Board has a mandate to regulate the electricity distribution sector in the public interest, ensuring the financial viability of the sector while promoting reliable service to customers at just and reasonable rates.
- Since 2012, the OEB has taken action – through the Renewed Regulatory Framework for Energy – to more closely link rate regulation with performance measures and outcomes.
- There maybe opportunities to promote further cost reductions and performance improvements within the distribution sector as there is continued evolution of the regulatory framework in Ontario.
  - Tightening LDC requirements may also indirectly incent other desired policy outcomes, such as LDC consolidation and grid modernization to realize further cost reductions.
- ENERGY could help promote or accelerate these efforts by asking the OEB through the LTEP Implementation Directive, s. 35 of the *Ontario Energy Board Act, 1998*, and the 2017 Mandate Letter and other agency business planning processes.
- In addition, further changes to the departure and transfer tax regimes could be considered to provide a further incentive for LDC mergers and acquisitions.

# 6. Rate Design Initiatives

- OEB continues to move forward with its Regulated Price Plan (RPP) Roadmap:
  - The OEB is undertaking a comprehensive review of the RPP, including exploring the introduction of offering different pricing plan options for customers following the completion of pilot programs in 2018. The plan is expected to be implemented over a 3-5 year period.

- Until new pricing plans are available, the OEB could provide an "opt-in flat rate RPP" structure that could be made available to residential, farm and small business consumers on an interim basis (2-3 years) until a wider range of price plans are available.
- Time-of-Use (TOU) pricing could also be introduced for non-RPP Class B consumers to reduce Global Adjustment (GA) volatility and reduce system costs.

| Current TOU | New Flat Rate |
|---|---|
| On: 18.0 ¢/kWh | 11.1 ¢/kWh |
| Mid: 13.2 ¢/kWh | |
| Off: 8.7 ¢/kWh | |

**Considerations**

- The OEB has indicated that the option would lead to no overall change in system costs. Consumers with higher peak and mid-peak usage patterns would see a decrease in their electricity bills, while those with higher off-peak usage patterns would see an increase.
  - While the current strong supply conditions may allow for such an RPP structure (i.e., peak demand requirements can be easily met), administrative costs could be high (distributors would need to design/implement an opt-in process and associated billing system on an interim basis).

| | Current TOU | New Flat Rate |
|---|---|---|
| 1) Monthly electricity bill- higher peak and mid-peak usage patterns | $172 | $163 |
| 2) Monthly electricity bill- higher off-peak usage patterns | $152 | $163 |

***Note:** 1) assumes a consumer consumption pattern of 45%:30%:25% (Off-peak: Mid-peak: On-peak), while 2) assumes consumer consumption pattern of 80%:10%:10% (Off-peak: Mid-peak: On-peak). Estimates are based on OEB's online electricity bill calculator (for Toronto Hydro-November 2016 rates)

# 6. Rate Design Initiatives (cont'd)

**Considerations**

- The decision to undertake smart meter investments was partly justified on the basis of TOU pricing. If TOU pricing were to be made optional, some stakeholders could question the rationale for smart meter investments.
  - Rationale for offering a flat rate option could focus on providing customers with choice until new pricing plans are rolled out under the RPP roadmap.

- If a flat rate design is introduced, there could be significant consumer opposition to any return to a mandatory TOU.

- After the interim flat rate period, the OEB could offer a wider range of pricing plans to consumers.
  - As part of its RPP review, the OEB will be running pilots with LDCs to assess customer response to alternative time periods and pricing structures.
  - Learnings from these pilots will help inform potential changes to the RPP. Pilots are expected to be in market May 2017 and run for one year.

- Non-RPP Class B electricity consumers currently pay Global Adjustment (GA) on a volumetric basis. Moving them to TOU would provide an incentive to shift consumption to off-peak periods.
  - Consumers, including manufacturers, who are unwilling to shift would face higher costs and likely not be supportive of the changes.
  - The decision to pursue TOU pricing for non-RPP class B consumers will impact proceeds recycling as there is interplay between the two initiatives.

# 7. Reduced Cost of OPG Borrowing

- OPG currently borrows for corporate purposes from the OEFC
- Seek to reduce OPG's borrowing costs and pass on savings to ratepayers by:
  - Reducing or removing the spread that OEFC applies to OPG for any new corporate debt; or
  - Allowing OPG to refinance its existing debt at longer maturities through the OEFC in order to take advantage of the current, favourable interest rate environment.
- Assuming the full spread is removed from all OEFC debt, OPG borrowing costs could be reduced by 50-100 basis points, representing annual savings of about $20-$25 million, increasing to $30-$35 million, as OPG's outstanding OEFC debt rises from ~$3.3 billion in 2016 to ~$4.7 billion in 2020.
- OPG could apply to the OEB as part of its current rate application to flow this benefit to ratepayers.

**Considerations**

- Further work is required to determine potential OPG savings from these initiatives.
- Allowing OPG to refinance would have a negative fiscal impact on the Province.
- Spreads are expected to decline, reducing the relative impact of this change, given lower overall interest rates and reduced volatility.
- Providing OPG with greater access to longer term (20-30 year) debt may also reduce costs:
  - OPG's average term to maturity for OEFC debt is 5.7 years, as compared to 22.2 years for privately financed project debt. This contrasts with most corporations and government which have been working to extend average debt terms in order to take advantage of the low interest rate environment.
  - Longer terms would also better match to the life of OPG's assets.
  - Recently, OEFC has allowed OPG to apply for 50% of its financing requirements in the form of longer term (25-30 year debt). Moving closer to 100% would accelerate this transition.

# 8. End DRC Early for Commercial/Small Industrial Class B Electricity Consumers

- Propose to remove the $0.07/kWh Debt Retirement Charge (DRC) from the bills of commercial/small industrial Class B consumers beginning in 2017, instead of April 1, 2018.
  - **Note:** Class A consumers (e.g., large industrial) would continue to pay DRC until at least April 1, 2018.

**Considerations**

- For a Class B consumer currently paying about $152/MWh, removing the DRC would represent a savings of about 5%.
  - A 50% reduction in the DRC charge would represent a savings of about 2%.

- Alternatively, the reduction of the DRC could be to $0.035/kWh starting in 2017, to provide relief for cap and trade until proceeds recycling is fully operational.

- Residential consumers have had the DRC removed from bills since January 1, 2016. Taking DRC off commercial and small industrial bills would result in equal treatment for these groups of consumers.

- The savings for commercial and small industrial consumers associated with this proposal would drop to zero in April 2018, since this is the current planned date for removing the DRC from non-residential bills.

- Prior to moving forward with this proposal, additional analysis from Legal Services and the MOF would be needed.

# 9. Dedicate Departure Tax

- In connection with the IPO, as a result of leaving the PILs regime and entering the corporate tax regime, Hydro One was deemed to dispose of its assets for proceeds equal to its fair market value, triggering a PILs liability of $2.6 billion (Departure Tax).
- This was paid to the Ontario Electricity Financial Corporation (OEFC), to be dedicated towards repayment of electricity sector stranded debt.
- The Province could explore repurposing some of those funds to the benefit of ratepayers.
- This may reduce the risk that the Ontario Energy Board (OEB) assigns to ratepayers the benefit from an associated tax asset, resulting in lower earnings and decreased share value for Hydro One. This decision is currently before the OEB, as part of Hydro One's Transmission rate application.

**Considerations**

- Cost savings to ratepayers would depend on timing and which ratepayers (e.g., Hydro One customers, or all Ontario customers) will benefit from some or all of the $2.6 billion value.
- While this is a shift from messaging that value from the broadening of ownership of Hydro One is being used pay down debt and fund transit and transportation, the Province could link to electricity infrastructure investments (e.g., as an offset to infrastructure investments already made in the sector, or to specific initiatives such as conservation).
- These funds were paid to the Ontario Electricity Financial Corporation (OEFC), to be dedicated towards repayment of electricity sector stranded debt. Repurposing may have an impact on the defeasance of this debt.

# 10. Cancel/Adjust Renewable Energy Procurements

- The Ministry could consider the following actions to further mitigate future impacts to electricity bills:

| Unallocated/Terminated Capacity | Announced Procurements | Executed Contracts |
|---|---|---|
| A. Do not procure unallocated or terminated capacity | B. Revise FIT 5 target | D. Cancel LRP I contracts |
| | C. Cancel FIT 6 | |

**Overarching Considerations**

- Cost savings associated with reducing or cancelling renewable energy procurements and programs will not reduce current electricity bills, but would result in future cost reductions relative to Ontario Planning Outlook forecasts.
- The IESO estimates implementing options A to C will reduce system costs by approximately $592 million ($2016) between 2019 and 2028, resulting in an average of approximately $0.50/month in savings to a typical residential electricity bill over the same period. [cost reductions from LRP I contract cancellations TBC]
- The microFIT program is winding down end of 2017. Annual microFIT procurement targets have been undersubscribed.
- With a few exceptions (e.g., rollover of unallocated microFIT capacity; addition of terminated microFIT and small FIT capacity to FIT 5), plans for unallocated or terminated capacity are not defined in announcements or existing directions.

**Cancel/Adjust Announced Procurements**

- Amendments to existing directions to the IESO would be required to reduce FIT 5 and cancel FIT 6.
- The FIT 5 procurement is underway with a base target of 150 MW and inclusion of any capacity available from contract terminations under prior small FIT and microFIT procurements. The application window closed on November 25, 2016.

# 10. Cancel/Adjust Renewable Energy Procurements – Existing Contracts

**Cancel Existing LRP I Contracts**

- 16 LRP I contracts (approx. 455 MW) have been executed and projects are under development.
- None have met Key Development Milestones. Total value of LRP I estimated at approx. $1 billion (NPV to 2016).

[Placeholder for IESO: Cost calculation relative to OPO and associated bill impact]

**Considerations**

- To help inform a decision, IESO or OEB could be asked to evaluate and provide guidance to the Ministry on the system need for LRP I projects and potential ratepayer impacts/benefits.
- 13 of 16 LRP I contracts have Indigenous participation. Cancelling LRP I contracts would remove this economic development opportunity and likely damage relationships between Indigenous communities and the government.
- LRP I Contract includes an “Optional Termination” provision allowing IESO to terminate any contract prior to the “Commercial Operation Date” with 6 months written notice.
- The IESO obligations under the Optional Termination provision depend on whether the project has met all “Key Development Milestones”.
  - As no projects have met their Key Development Milestones, the estimated total cost payable to contract holders is about $8 million.

# 10. Cancel/Adjust Renewable Energy Procurements – Existing Contracts (cont'd)

## Legal Analysis

- Under the *Electricity Act, 1998*, the Minister has the authority to amend previous directions without approval from Cabinet. Although an amendment to an existing direction would not require Cabinet approval, it is unlikely that a direction to cancel LRP I contracts could be considered as amending an existing direction. The previous LRP directions set out the broad policy framework that was reflected in the procurement, but the contracts themselves, once executed, are stand alone documents which the IESO had legal authority to execute. Revoking previous LRP directions does not affect that authority or have the effect of cancelling the procurement.
- As a result, any new directive to cancel LRP I contracts would need to be approved by Cabinet, either as part of an LTEP implementation directive to IESO, or pursuant to the overall power to direct IESO with respect to procurements outside the LTEP process. However, there is a risk that such a directive could be subject to challenge.
- ENERGY has previously received advice that there is a high risk that a court would conclude that the Minister has no authority under the *Electricity Act , 1998* to issue a direction requiring IESO to terminate microFIT Conditional Offers and FIT Offer Notices that have already been issued to applicants, because these offers create vested contractual rights and the Minister would require clear legislative authority to interfere with those rights. This reasoning would likely apply equally to any direction or directive to IESO to cancel LRP I contracts.
- Previous advice has also flagged a moderately high risk that the Province could be liable for damages in tort for inducing a breach of contract if it issues a direction to IESO that interferes with vested contractual rights without clear statutory authority to do so. LRP I contract holders could also assert other claims, such as misfeasance in public office.
- The risk and costs associated with potential law suits resulting from the cancellation of contracts requires further analysis, including analysis of whether any statutory amendments would be required to provide clear authority to cancel the contracts. LSB recommends ENERGY seek an opinion from Crown Law Office Civil before proceeding.

# Summary

- Reductions in electricity rates could be achieved by eliminating existing, planned or directed initiatives from the rate-base or shifting these costs to the tax-base.

- The timing of the impact of these rate mitigation initiatives varies.
  - Immediate and near-term impacts can be achieved by shifting costs to the tax-base or changing how certain costs are recovered from consumers or eliminating certain programs.
  - Over the longer term, changes to the electricity supply mix and achieving efficiencies in the electricity market could yield system savings.

- Pursuing the initiatives would require regulatory amendments and working with the electricity sector agencies, LDCs and other stakeholders to implement the initiatives.

# Appendix

# Electricity Consumer Classes

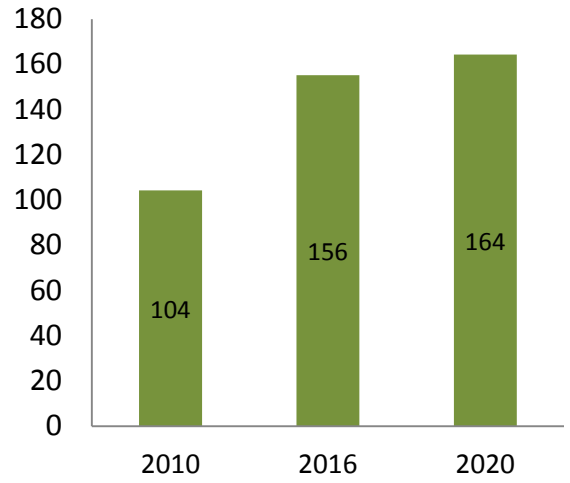
- In Ontario, there are three classes of electricity consumers:

| | Regulated Price Plan | Class B | Class A |
|---|---|---|---|
| **Consumer Types** | • Residential<br>• Small Business<br>• Farms | • Commercial<br>• Institutional<br>• Small industrial | • Large commercial<br>• Large industrial |
| **Load Size** | Below 0.05 MW | Between 0.05 MW and 1 MW | Above 1 MW |
| **Total Consumption** | 58 TWh | 57 TWh | 26 TWh |
| **Share of Consumption** | 41.1% | 40.4% | 18.4% |

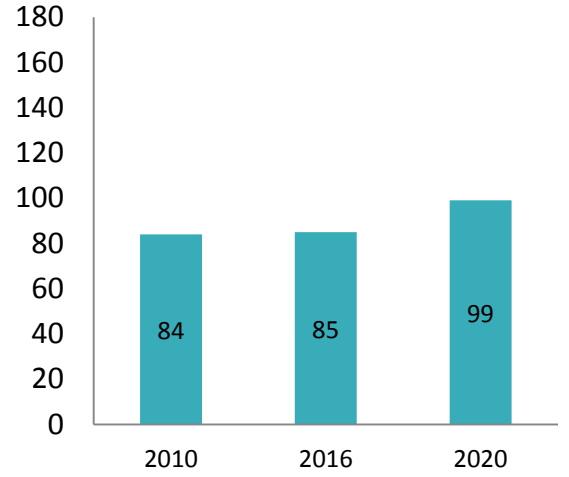
# Prices by Electricity Consumer Class

- Since 2010, average bills for residential consumers (i.e., using 750 kWh/month) have increased by over 50%. Rates are forecast to continue to increase, with residential consumers paying an estimated 6% by 2020.
- Industrial electricity rates have remained relatively flat over the same time period, due primarily to the Industrial Conservation Initiative (ICI). ICI represents a cost shift of about $5/month for residential electricity consumers. Industrial electricity consumers are forecast to see an increase of 16% by and 2020.

**Typical Residential Bill (750/kWh per month)**



**Typical Class A (Industrial) Price ($/MWh)**



**Note:** 2016 represents year-to-date September 2016 for industrial. Cap and trade proceeds recycling is included for the industrial consumer for 2020.

# Rate Mitigation Levers

- To provide further rate relief to Ontario electricity consumers, the government can use one or more of the levers outlined below:
  - **Tax-based Lever:**
    - Provide rebates funded from the tax-base or transfer items currently paid through the rate-base to the tax-base.
  - **Rate-based Lever:**
    - Shifts costs within the rate-base from one customer group to another to achieve electricity system benefits and/or policy goals.
  - **Cap and Trade Proceeds Lever:**
    - Use cap and trade proceeds on initiatives that help reduce greenhouse gas (GHG) emissions from the electricity sector (e.g., recycling proceeds during off-peak periods) while providing benefits to some or all electricity consumers.

# Traditional Rate Mitigation Programs

- Ontario has implemented a number of rate-based programs to help residential and industrial electricity consumers:
  - The Ontario Electricity Support Program (OESP) provides ongoing assistance directly on the bills of eligible low-income electricity consumers
  - The Rural or Remote Rate Protection (RRRP) program is provided to rural and remote residential and farm customers because the cost of distributing power to remote areas is much higher than for urban areas.
  - The Industrial Conservation Initiative (ICI) encourages Ontario's largest consumers to reduce consumption during peak periods while reducing system costs.
- There are also tax-base programs to help manage electricity prices:
  - Rebate the provincial portion of the HST from the electricity bills of residential, small business and farms as of January 1, 2017.
  - Northern Industrial Electricity Rate Program (NIERP), in which participants receive a rebate of two cents per kilowatt hour. On average, industrial electricity prices can be reduced by up to 20%.
- While rate-based programs provide relief to certain electricity consumers, they shift other costs to remaining ratepayers (See Appendix for additional details).

# Driving Down Prices for Consumers

- Since 2013, a number of actions have been taken to drive down prices for consumers wherever possible:
  - Renegotiating the Green Energy Investment Agreement, reducing contract costs by $3.7 billion;
  - Deferring the construction of two new nuclear reactors at Ontario Power Generation's Darlington facility, avoiding an estimated $15 billion in new construction costs;
  - Approving Ontario Power Generation's plans to enable the ongoing operation of Pickering up to 2024, which is expected to save ratepayers as much as $600 million;
  - Reducing Feed-In-Tariff (FIT) prices through annual price reviews, saving ratepayers at least $1.9 billion relative to the 2013 Long-Term Energy Plan (2013 LTEP) forecast; and
  - Suspending the second round of the Large Renewable Procurement (LRP II) process and the Energy-from-Waste Standard Offer Program to save up to $3.8 billion in electricity system costs relative to 2013 LTEP.

# Cost Shifts in the Electricity Sector – Current Programs

- Several programs in the electricity sector “shift costs” from one group of electricity consumers to another:
  - **Rural or Remote Rate Protect** (**RRRP)** is a longstanding program that reduces the delivery charge for rural electricity consumers and is paid for by all consumers in Ontario through a regulatory charge on bills.
  - **Ontario Electricity Support Program (OESP)** is funded via a regulatory charge on consumer bills and provides support for qualifying low income electricity consumers.
  - **Industrial Conservation Initiative (ICI)** empowers large consumers to lower their costs by reducing their demand during peak hours. In the process, ICI shifts costs from large electricity consumers to all other consumers in Ontario.
  - **Industrial Electricity Incentive** (**IEI**) program, offers reduced electricity prices for companies starting or expanding operations in Ontario. All electricity consumers in Ontario pay for the price reduction that IEI participants receive.

# Cost Shifts in the Electricity Sector (Cont'd)

- The tables on the right show the estimated cost shifts that result from existing government programs.
- ICI has had the largest cost shift of all the programs, due to the large size of Global Adjustment (GA) and the way that it is recovered from consumer classes.
- RRRP and OESP impact the regulatory line on consumer bills, while ICI, IEI and conservation affect GA (i.e., Electricity line on bills of Regulated Price Plan consumers).

**Cost Shift Impacts - Residential Bill**

*Typical 750 kWh/month Toronto Hydro consumer*

| *$/month* | 2011 | 2012 | 2013 | 2014 | 2015 | 2016 |
|---|---|---|---|---|---|---|
| ICI | 2.65 | 3.25 | 3.88 | 3.53 | 4.75 | 4.77 |
| RRRP | 0.90 | 0.82 | 0.84 | 0.92 | 0.93 | 0.94 |
| OESP | - | - | - | - | - | 0.84 |
| Conservation | 1.85 | 1.92 | 2.00 | 1.58 | 2.43 | 2.45 |
| IEI | - | - | 0.08 | 0.09 | 0.11 | 0.12 |
| **Total** | **5.41** | **5.99** | **6.81** | **6.13** | **8.21** | **9.12** |

**Cost Shift Impacts - Industrial Bill**

*Typical Class A consumer*

| *$/MWh* | 2011 | 2012 | 2013 | 2014 | 2015 | 2016 |
|---|---|---|---|---|---|---|
| ICI | -22.17 | -26.36 | -30.29 | -25.91 | -33.79 | -33.92 |
| RRRP | 1.20 | 1.10 | 1.12 | 1.23 | 1.24 | 1.25 |
| OESP | - | - | - | - | - | 1.13 |
| Conservation | 1.53 | 1.59 | 1.66 | 1.31 | 2.01 | 2.02 |
| IEI | - | - | 0.07 | 0.08 | 0.09 | 0.10 |
| **Total** | **-19.43** | **-23.67** | **-27.44** | **-23.29** | **-30.45** | **-29.43** |

**Note:** OESP did not come into effect until 2016. The 2016 values represent forecasts and are subject to change.

# Cost Shifts in the Electricity Sector (Cont'd)

- The table on the right shows the total cost for various government electricity programs. These programs are currently funded through the electricity system ratebase.

- Funding of these programs through the fiscal plan would remove these costs from the electricity system (i.e., Placing these costs on the taxbase).

**Cost of Programs**

*By government program*

| *$M* | 2011 | 2012 | 2013 | 2014 | 2015 | 2016 |
|---|---|---|---|---|---|---|
| ICI | 506 | 615 | 736 | 670 | 890 | 893 |
| RRRP | 172 | 156 | 159 | 176 | 174 | 176 |
| OESP | - | - | - | - | - | 158 |
| Conservation | 329 | 339 | 354 | 280 | 425 | 428 |
| IEI | - | - | 15 | 16 | 18 | 19 |

- For example, removing the roughly $900 million of program cost from the Industrial Conservation Initiative (ICI) program would save the typical residential electricity consumer $4.77 per month in 2016.

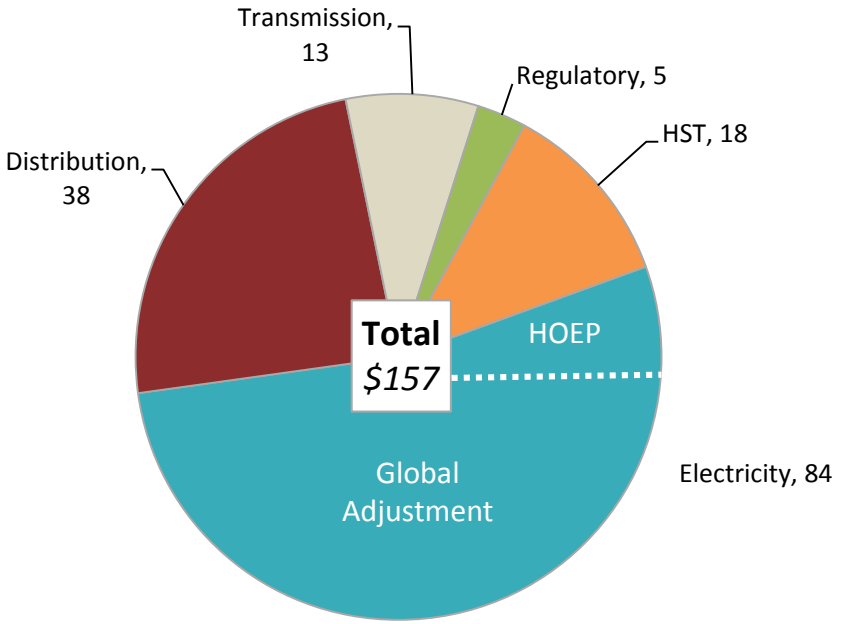
**Note:** OESP did not come into effect until 2016. The 2016 values represent forecasts and are subject to change.

# Residential Electricity Prices

- There are approximately 4.5 million residential consumers in Ontario.
- The Regulated Price Plan includes nearly all residential consumers, as well as small businesses. Regulated Price Plan consumers pay a blended commodity rate regulated by the OEB, which is set every six months.
- For households, the Debt Retirement Charge (DRC) was removed from residential electricity bills as of January 1, 2016.
- In addition, the Ontario Electricity Support Program (OESP) provides an ongoing rate reduction directly on the bills of low-income electricity consumers who have applied and meet the eligibility requirements. The program is funded through the rate base.
- Rural customers, in particular those with electrical heating, pay higher monthly bills.

**Typical Residential Monthly Bills ($)**

*As of November 1, 2016 (750 kWh/month)*



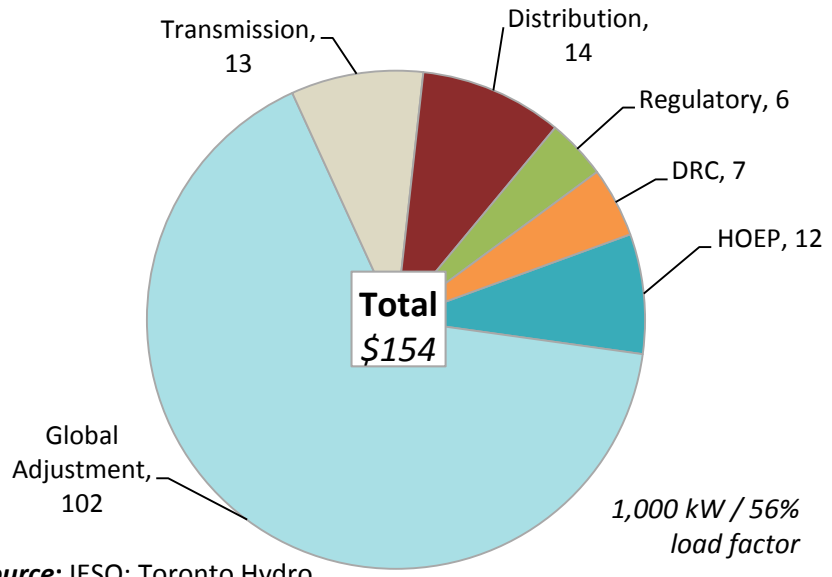
***Source*: OEB, Toronto Hydro**

# Commercial Electricity Prices

- There are approximately 55,000 commercial and institutional consumers in the province. These consumers are Class B consumers, and have separate line items on the electricity bill for HOEP and GA.
- There is a high degree of differentiation amongst consumers within the commercial sector in terms of size and consumption patterns. For example, an elementary school has a much different hourly load profile compared to a full service restaurant. This is an important consideration when looking at the bill impacts of policy options.

**Typical Commercial Price ($/MWh)**

*YTD June 2016 (Non-RPP Class B)*



***Source*:** IESO; Toronto Hydro

- Consumers in the commercial sector do not pay time-of-use prices and have little incentive to shift demand away from high demand hours.
- Targeted pricing programs are currently not available for Class B consumers.

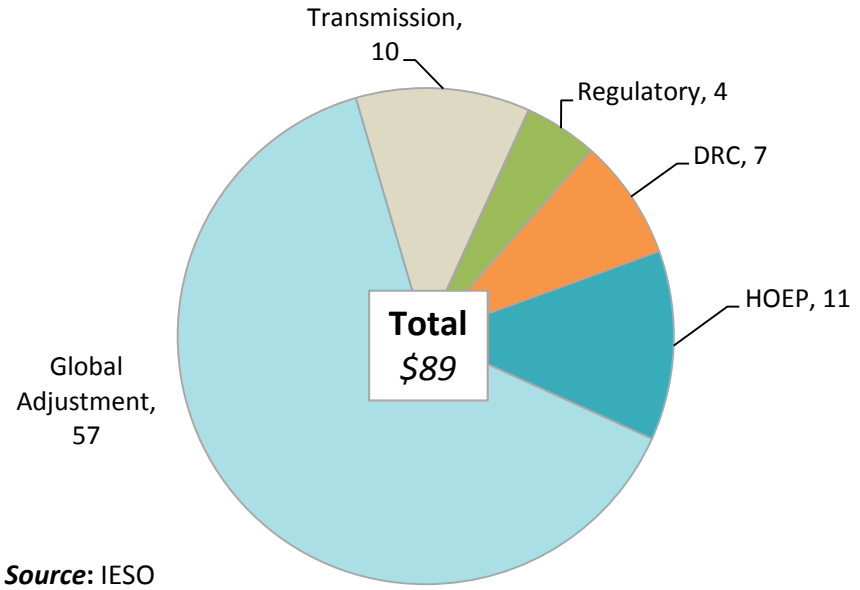
*** Note**: Most commercial consumers receive input tax credits for their HST.

# Industrial Electricity Prices

- There are about 300 large industrial consumers in Ontario.
- Measures in place to mitigate industrial electricity prices include ICI and NIERP.
- ICI lowers costs for eligible large electricity consumers (i.e., those with monthly peak demand exceeding 3 MW) that reduce consumption during peak periods.
  - ICI consumers reduce their electricity rates by 25% on average.

**Typical Large Industrial Price ($/MWh)**

*YTD June 2016*



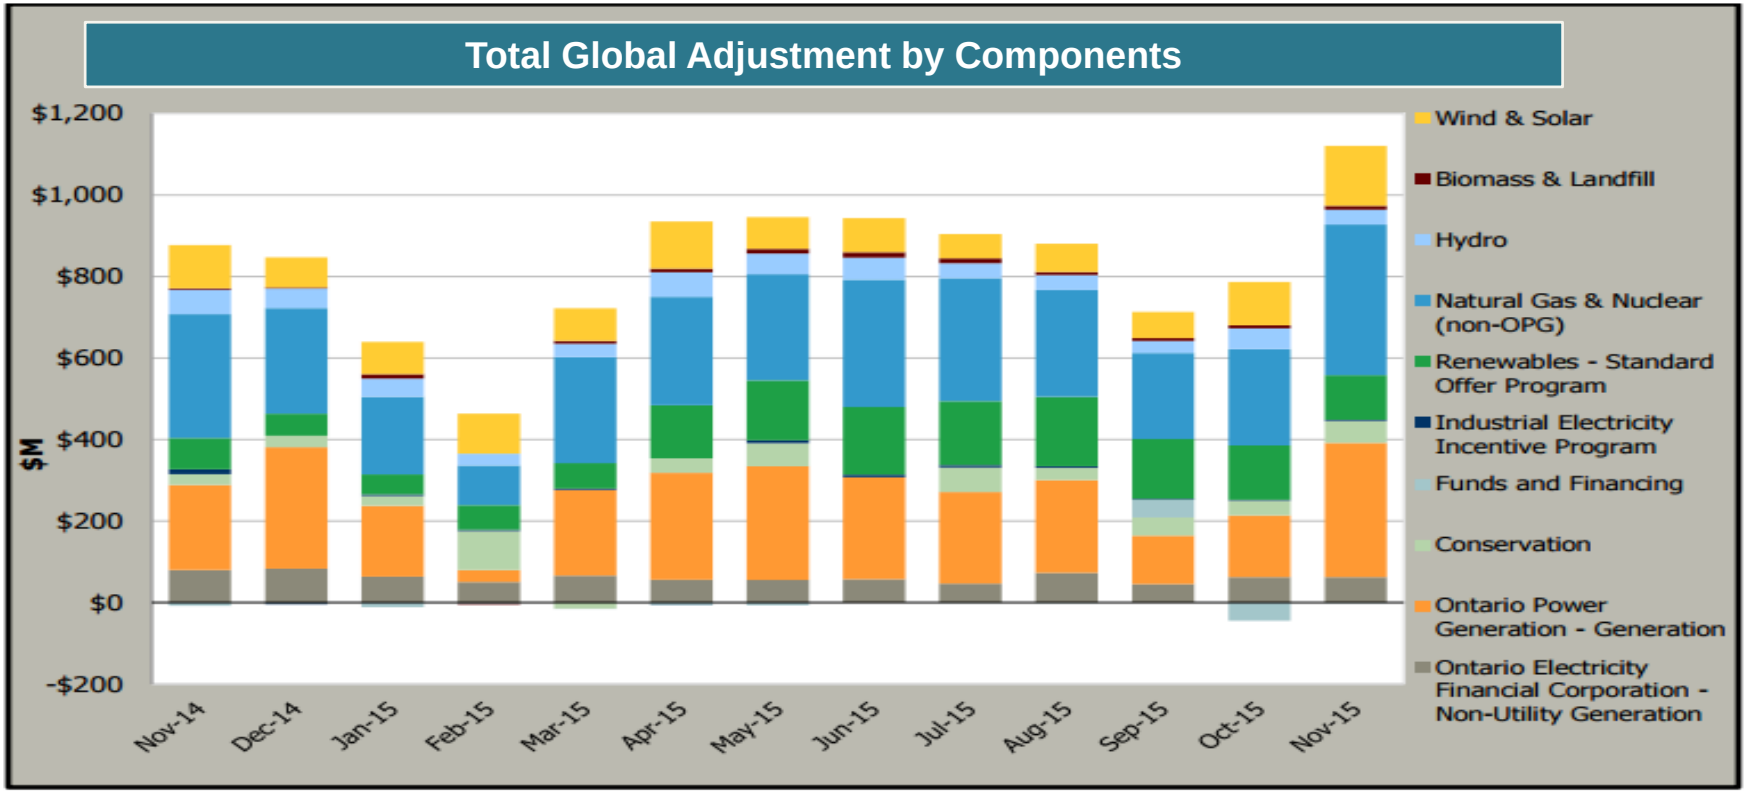
***Source*: IESO**

- Participants in NIERP receive a rebate of $20/MWh. On average, industrial electricity prices are reduced by about 20% through the program, reducing all-in prices to $69/MWh for these consumers. The program is funded through the tax base.

*** Note:** Industrial consumers receive input tax credits for their HST.

# Total Components of Global Adjustment

- Global Adjustment (GA) is a market mechanism that recovers costs from electricity consumers, including the cost of almost all conservation programs in the province (i.e., approximately half a billion dollars in 2016).



**Source:** IESO Monthly Market Report (November 2015)

# Cancel/Adjust Renewable Energy Procurements

# LRP I Pre-Construction Liability Limits

- All 16 successful LRP I developers accepted Optional Termination Provisions when the LRP I Contracts were executed in April 2016.
- If IESO chooses to enact the Optional Termination provision before a project has met all Key Development Milestones, IESO is required to pay pre-construction development costs up to the Pre Construction Liability Limit.
- Pre-construction development costs include costs incurred for feasibility studies, obtaining site access rights, work towards environmental approvals, business development plans, negotiation of contracts for design, equipment, construction and financing, reasonable overhead expenses, and other reasonable costs incurred.
- The Pre Construction Liability Limits are:
  - Non-Rooftop Solar: $250,000 plus $10.00/kW of Contract Capacity
  - Waterpower: $500,000 plus $20.00/kW of Contract Capacity
  - On-Shore Wind: $400,000 plus $2.00/kW of Contract Capacity
- According to the LRP I Optional Termination provision, the developer has a duty to take reasonable steps to mitigate losses, liabilities, costs and damages incurred as a result of the Optional Termination.
  - The IESO will not provide compensation for amounts which are attributable to a developer's failure to take reasonable steps to mitigate.

**Subject:** Price Mitigation Deck

Hi John,

I have included comments in the attached version of the price mitigation deck on slides 3, 4, 5, 8, 13, 14, 15, 20.

I will be out this afternoon, so could you combine with comments on the deck you will submit to Ron.

Emily

MINISTRY OF
ENERGY

# Proposed Initiatives to Transform Ontario's Electricity Sector

## Working Draft

December 5, 2016

CONFIDENTIAL DRAFT

# Context

- Electricity costs are increasing as the necessary investments are made to decarbonize and modernize the province's electricity infrastructure.
  - Since 2003, the Province has invested more than $35 billion in over 16,000 megawatts (MW) of new and refurbished cleaner generation, including nuclear, natural gas and renewables.
  - Over the same period, Hydro One has invested $15.5 billion to enhance and renew its transmission and distribution systems.
  - As additional electricity generation comes online, nuclear units are refurbished and distribution and transmission investments are made, prices are forecast to continue to increase.

- Actions have been taken to drive down electricity costs, including deferring investments in generation (e.g., new build nuclear), improving market efficiency (e.g., introduction of wind dispatch) and decreasing the cost of renewable procurements (e.g., Green Energy Investment Agreement ~~GEIA~~ renegotiation, decreasing FIT prices).

- Additional steps have been taken to increase cost effectiveness and improve efficiency by adopting new electricity market approaches, such as:
  - Enhancing competition between developers of large renewable projects through the Large Renewable Procurement (LRP) process to drive down price and secure clean, reliable generation for the province;
  - Directing IESO to end the process of negotiating new NUG contracts pending the development of a Capacity Auction (i.e., Market Renewal); and
  - Launching the first IESO Demand Response Auction (i.e., a competitive process through which demand-side resources are selected to be available to reduce their electricity consumption as needed).

# Context (Cont'd)

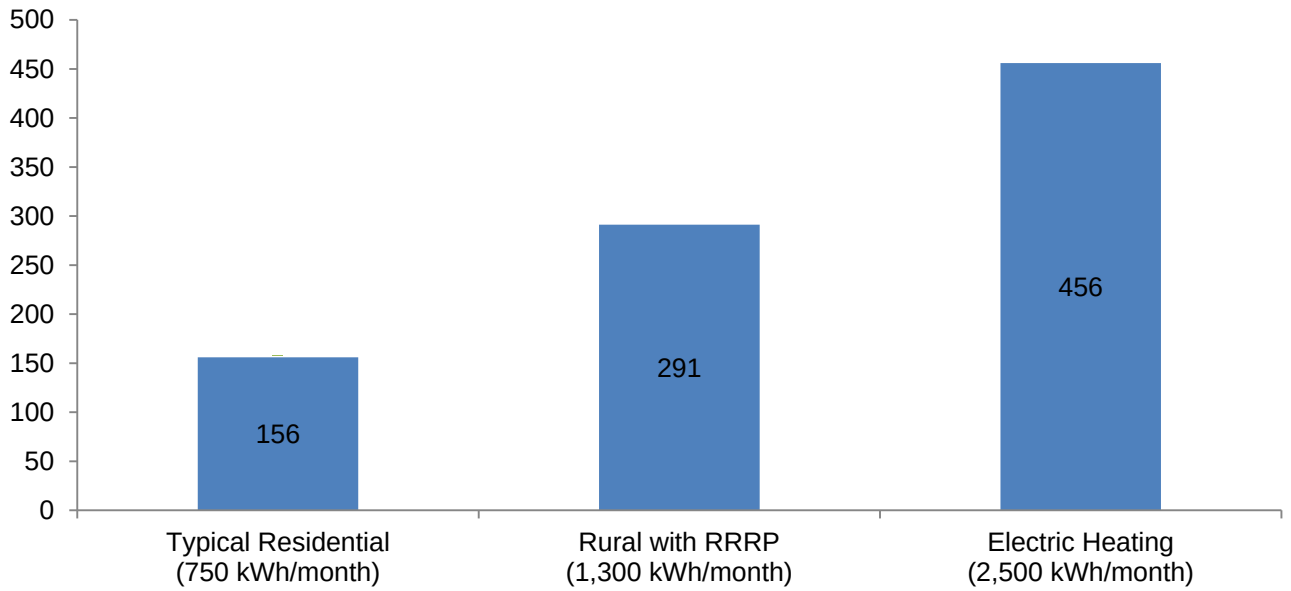
- Following the 2016 Throne Speech, a number of actions were announced to further reduce electricity costs, such as:
  - Providing an 8 per cent rebate before tax, equivalent to the provincial portion of HST, for approximately 5 million eligible electricity consumers including residences, small businesses and farms;
  - Increasing the amount of rate protection available to approximately 330,000 eligible rural customers living in low-density areas by updating the Rural or Remote Rate Protection (RRRP) program;
  - Lowering the Industrial Conservation Initiative (ICI) threshold to 1 MW and removing sector restrictions so that more consumers can benefit;
  - Suspending the second round of the Large Renewable Procurement (LRP II) and the Energy-from-Waste Standard Offer Program to save up to $3.8 billion in costs; and
  - Recycling a portion of cap and trade auction proceeds to keep rates affordable for industrial and commercial electricity consumers.
- On November 28, 2016, the Minister of Energy announced the need for changes in how electricity resources are procured and the need for wholesale market renewal.

- The Ministry of Energy is currently updating its Long-Term Energy Plan (LTEP), which provides an opportunity to consider a range of policy changes to how the Ontario energy sector operates.

# Current Electricity Prices – Residential

- Residential consumers electricity prices continue to be a concern for many Ontarians, particularly those that rely on electric heat.
  - **Note:** The typical residential bills are currently below the 2013 ~~Long-Term Energy Plan (2013~~ LTEP~~)~~ forecasts ($159 / 750kWh)

**Residential Electricity Bills**
*in $/month*

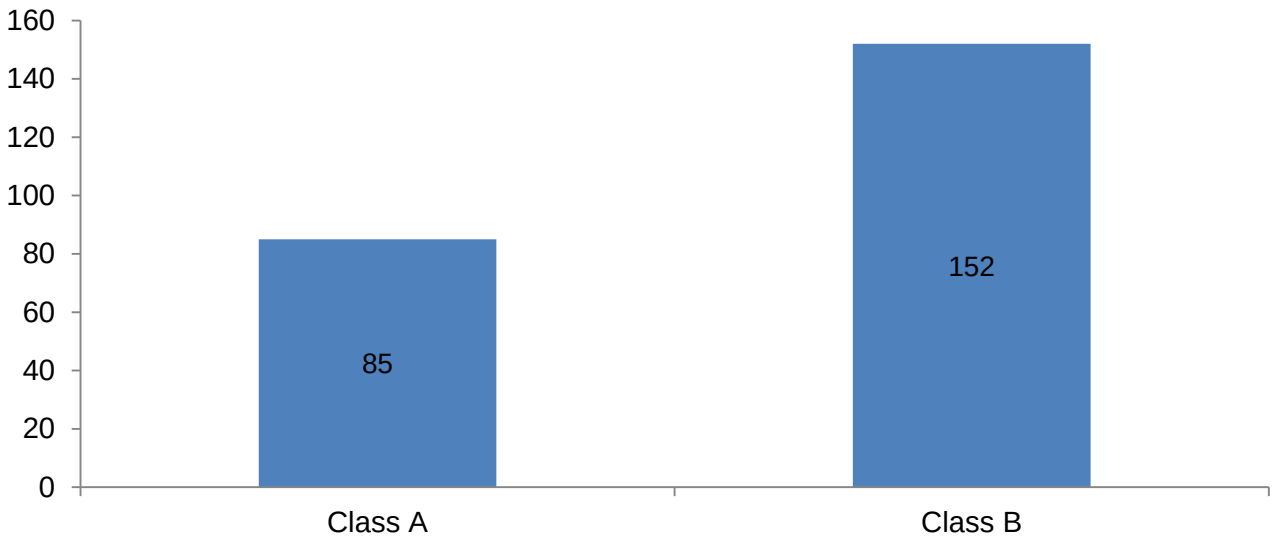


**Note**: Typical residential and electric heating shown above are based on Toronto Hydro; rural is based on connection to Hydro One as a R2 customer eligible to receive the Rural or Remote Rate Protection (RRRP) credit of $31.50.

# Current Electricity Prices – Industrial and Commercial

- While large industrial electricity consumers (i.e., Class A) rates are competitive with other jurisdictions, rates for commercial/small industrial consumers (i.e., Class B) are higher by comparison.
  - **Note:** Current industrial and commercial prices are below 2013 LTEP forecasts ($96 / MWh)

**Current All-In electricity Price**
*in $/MWh*



**Note**: Based on year-to-date (YTD) September 2016 prices. Class A reflects a transmission-connected consumer. Class B reflects a 1 MW load operating at 56% load factor and connected to Toronto Hydro.

# Current Status on Taxpayer Funded Electricity Price Mitigation

| ($M) | 2011-12 | 2012-13 | 2013-14 | 2014-15 | 2015-16 | 2016-17[1] | 2017-18[1] |
|---|---|---|---|---|---|---|---|
| OCEB | 1,033 | 994 | 1,006 | 1,078 | 860 | - | - |
| OREC | - | - | - | - | - | 300 | 1,200* |
| Ending DRC[2] | - | - | - | - | 85 | 330 | 330 |
| NIERP | 120 | 120 | 115 | 108 | 120 | 120 | 120 |
| NOEC | 23 | 24 | 25 | 24 | 26 | 25 | 25 |
| OEPTC[3] | 354 | 406 | 418 | 429 | 444 | 450 | 460 |
| **TOTAL** | **1,530** | **1,544** | **1,564** | **1,639** | **1,525** | **1,195** | **2,105** |

1. 2016-17, 2017-18 based on forecasted numbers
2. 2015-16 estimated for 3 months of reduced DRC revenue
3. OEPTC amounts in all years based on energy component of the rebate.

* Sourced from November LRC Submission

OCEB – Ontario Clean Energy Benefit
OREC – Ontario Rebate for Electricity Consumers
DRC – Debt Retirement Charge
NIERP – Northern Ontario Electricity Rate Program
NOEC – Northern Ontario Energy Credit
OEPTC – Ontario Energy and Property Tax Credit

- The table above shows the annual amount of taxpayer funded electricity price mitigation from 2011-12 to 2017-18.
- From 2011-12 to 2015-16 there has been an annual fiscal impact of approximately $1.6 billion due to electricity price mitigation programs.
- In 2016-17, the fiscal impact due to electricity price mitigation programs is estimated at approximately $1.2 billion.
- In 2017-18, due primarily to the start of the Ontario Rebate for Electricity Consumers, the expected fiscal impact due to electricity price mitigation programs is approximately $2.1 billion and before considering any additional funding from the tax base.

# Proposed Initiatives – Overview

- The suite of proposed initiatives are intended to:
  - Transform how the electricity market operates in Ontario;
  - Re-set how government programs are funded (i.e., rate-base vs tax-base);
  - Provide system benefits (e.g., industrial load retention);
  - Lower the cost of electricity for residential and industrial consumers; and
  - Increase cost effectiveness and improve efficiency.

- The proposed initiatives include:
  1. Implement Market Renewal Initiatives
  2. Fund Electricity Support Programs Through The Tax-base
  3. Eliminate the Industrial Conservation Initiative (ICI)
  4. Amortize Conservation Program Costs
  5. LDC Efficiencies
  6. Rate Design Initiatives
  7. Reduced Cost of OPG Borrowing
  8. End Debt Retirement Charge (DRC) Early for Commercial/Small Industrial Class B Electricity Consumers
  9. Dedicate Departure Tax
  10. Cancel/Adjust Renewable Energy Procurements

- The proposed initiatives provide opportunities to reduce electricity costs for residential and industrial consumers while at the same time transforming the province's electricity market and yielding benefits for the electricity system.

# Proposed Initiatives – Impacts

- Each of the proposed initiatives under consideration target different government programs and different parts of the electricity bill. The proposals impact different classes of electricity consumers to varying degrees.

| Proposal | Program / Initiative | Line on Bills | Who Benefits |
|---|---|---|---|
| 1. Implement Market Renewal Initiatives | Market Renewal | Electricity, Global Adjustment, Regulatory | Market Renewal: All electricity consumers |
| 2. Fund Electricity Support Programs Through The Tax-base | OESP, RRRP | Regulatory | All electricity consumers evenly |
| 3. Eliminate the Industrial Conservation Initiative (ICI) | ICI | Electricity, Global Adjustment | Only Class B electricity consumers (i.e., residential) **Note:** Will have a negative impact on Industrial consumers. |
| 4. Amortize Conservation Program Costs | Amortization | Electricity, Global Adjustment | Class B electricity consumers and to a lesser extent Class A consumers |
| 5. LDC Efficiencies | Distribution efficiencies | Delivery | All embedded consumers |
| 6. Rate Design Initiatives | Rate structures | Electricity, Global Adjustment | Rate Design Initiatives: Participating electricity consumers |
| 7. Reduced Cost of OPG Borrowing | n/a | Electricity, Global Adjustment | Class B electricity consumers and to a lesser extent Class A consumers |
| 8. End DRC Early for Commercial/Small Industrial Class B Electricity Consumers | Debt Retirement Charge (DRC) | DRC | Class B consumers (i.e., small business and commercial consumers, etc) |
| 9. Dedicate Departure Tax | Departure Tax | TBD | TBD |
| 10. Cancel/Adjust Renewable Energy Procurements | FIT, LRP | Electricity, Global Adjustment | Class B electricity consumers and to a lesser extent Class A consumers |

# Proposed Initiatives – Potential Savings for Typical Residential Electricity Consumers

| *$/750kWh* | 2017 | 2018 | 2019 | 2020 | 2021 | 2022 | Timing of Benefit |
|---|---|---|---|---|---|---|---|
| 1. Implement Market Renewal Initiatives | - | - | - | 1.58 | 1.59 | 1.60 | Longer-Term |
| 2. Fund Electricity Support Programs through the Tax-base | 2.18 | 2.30 | 2.31 | 2.45 | 2.48 | 2.51 | Immediate |
| 3. Eliminate the Industrial Conservation Initiative (ICI) | 4.40 | 4.24 | 4.10 | 4.24 | 3.73 | 3.58 | Immediate |
| 4. Amortize Conservation Program Costs | 1.67 | 1.56 | 1.21 | 0.81 | 0.54 | 0.3 | Immediate |
| 5. LDC Efficiencies | TBD | TBD | TBD | TBD | TBD | TBD | Near-Term |
| 6. Rate Design Initiatives* | - | - | - | - | - | - | Immediate |
| 7. Reduced Cost of OPG Borrowing | 0.13 | 0.13 | 0.13 | 0.18 | 0.18 | 0.18 | Immediate |
| 8. End DRC Early for Class B Electricity Consumers** | - | - | - | - | - | - | n/a |
| 9. Dedicate Departure Tax | TBD | TBD | TBD | TBD | TBD | TBD | Immediate |
| 10. Cancel / Adjust Renewable Energy Procurements | - | - | TBD | TBD | TBD | TBD | Longer-Term |
| **Total decrease on typical monthly bill** | **8.38** | **8.23** | **7.75** | **9.26** | **8.52** | **8.17** | |

**Note:** The above initiatives will provide similar benefits for non-RPP Class B electricity consumers. Proposal 2 assumes OESP participation of 50% and 5-year maturity. *Savings estimates do not include changes related to rate design. ** Class B includes small-medium enterprises (SMEs).

# Proposed Initiatives – Potential Savings for Average Industrial Electricity Consumers

| *$/MWh* | 2017 | 2018 | 2019 | 2020 | 2021 | 2022 | Timing of Benefit |
|---|---|---|---|---|---|---|---|
| 1. Implement Market Renewal Initiatives | - | - | - | 2.11 | 2.12 | 2.13 | Longer-Term |
| 2. Fund Electricity Support Programs through the Tax-base | 2.91 | 3.06 | 3.17 | 3.27 | 3.33 | 3.38 | Immediate |
| 3. Eliminate the Industrial Conservation Initiative (ICI) | (24.12) | (23.21) | (22.45) | (23.23) | (20.42) | (19.61) | Immediate |
| 4. Amortize Conservation Program Costs | 1.15 | 1.08 | 0.84 | 0.56 | 0.37 | 0.25 | Immediate |
| 5. LDC Efficiencies | n/a | n/a | n/a | n/a | n/a | n/a | Near-Term |
| 6. Rate Design Initiatives* | - | - | - | - | - | - | Immediate |
| 7. Reduced Cost of OPG Borrowing | 0.10 | 0.10 | 0.10 | 0.15 | 0.15 | 0.15 | Immediate |
| 8. End DRC Early for Class B Electricity Consumers** | - | - | - | - | - | - | n/a |
| 9. Dedicate Departure Tax | TBD | TBD | TBD | TBD | TBD | TBD | Immediate |
| 10. Cancel / Adjust Renewable Energy Procurements | - | - | TBD | TBD | TBD | TBD | Longer-Term |
| **Total increase on industrial bill** | **19.96** | **18.97** | **18.34** | **17.14** | **14.45** | **13.7** | |

**Note:** Proposal 2 assumes OESP participation of 50% and 5-year maturity. Proposal 3 reflects the elimination of ICI, as opposed to moving ICI cost shift to the taxbase. The $1.75/MWh savings associated with Proposal 7 in 2018 accounts for the fact that under the status quo, DRC will be removed from bills in April 2018. *Savings estimates do not include changes related to rate design. ** Class B includes small-medium enterprises (SMEs).

# Fiscal Considerations

- Funding electricity support programs (i.e., OESP, RRRP, First Nations Delivery Rate) from the tax-base represents approximately $440 million on average annually.
- Ending the Debt Retirement Charge (DRC) for commercial and small industrial electricity consumers (i.e., Class B) early would represent an additional fiscal pressure of $xx [placeholder for OFA] on the province.
- If the Industrial Conservation Initiative were funded though the tax-base instead of being eliminated, this would represent a $900 million annual cost to the fiscal plan.
- Reducing OPG borrowing costs to the Province's cost of funds is expected to result in a $20 to $35 million annual fiscal pressure to the province [TBC by OPG / OFA].
- Fiscal impacts of allocating a portion of the departure tax to ratepayers will depend on the size of the allocation, as well as timing for the flow of value. The maximum, direct one-time impact is $2.6 billion, with potential ancillary impacts on residual stranded debt defeasance.
- A summary of the annual fiscal impacts of the proposed initiatives is presented in the next slide

SLIDE ADDED BY CEFD

# Proposed Taxpayer Funded Electricity Price Mitigation

| ($M) | 2016-17[1] | 2017-18[1] | 2018-19[1] | 2019-20[1] | 2020-21[1] |
|---|---|---|---|---|---|
| ~~OCEB~~ | – | – | | | |
| OREC | 300 | 1,200* | 1,200* | 1,200* | 1,200* |
| Ending DRC[2] | 330 | 330 | 330 | 330 | 330 |
| NIERP | 120 | 120 | 120 | 120 | 120 |
| NOEC | 25 | 25 | 25 | 25 | 25 |
| OEPTC[3] | 450 | 460 | 470 | 481 | 481 |
| TOTAL | **1,195** | **2,105** | **2145** | **2156** | **2156** |
| 1. Electricity Market Renewal Initiative | | TBD | TBD | TBD | TBD |
| 2. OESP | | 106 | 119 | 127 | 132 |
| 2. RRRP | | 292 | 300 | 306 | 315 |
| 2. First Nations Delivery Rate | | 18 | 18 | 18 | 18 |
| 3. Fund ICI through Tax Base | | 900 | 900 | 900 | 900 |
| TOTAL | **1195** | **3,421** | **3,482** | **3,507** | **3,521** |

1. 2016-17, 2017-18 based on forecasted numbers
2. 2015-16 estimated for 3 months of reduced DRC revenue
3. OEPTC amounts in all years based on energy component of the rebate.

- As shown above if all measures proposed in this deck were to be accepted taxpayer funded contributions to electricity price mitigation would increase to about $3.5 billion by 2020-21. That is a 67% increase from the current forecast for 2017-18.
- These amounts are were not considered in the 2016-17 Fiscal Plan and could put at risk the Province's fiscal objectives for 2017-18 and beyond.

# 1. Electricity Market Renewal Initiatives

- Continue to move forward with IESO's Market Renewal initiatives:
  - Market Renewal encompasses projects such as a single-schedule system (from the current two-schedule system), more frequent intertie scheduling to better align with other jurisdictions and a day-ahead market. There will be up front capital costs to enable the initiative. IESO is currently assessing these costs.
  - Moving to "technology-agnostic" procurements will provide new opportunities for innovation and modernization and ensure ratepayers receive the best prices possible.

**Considerations**

- Changes related to IESO's Market Renewal initiatives, reflected in HOEP and uplifts, are estimated to save up to $300 million per year, starting in 2020, leading to a reduction of:
  - About $1.60/month or about 1% at current retail prices for a typical residential bill; and
  - About $2/MWh or more than 2% at current all-in prices for industrial and SME electricity consumers.
- The IESO's Market Renewal is a broad initiative that will impact all aspects of Ontario's electricity market. Ontario has had a uniform price since market opening.
- Adopting a technology-agnostic stance will lower the overall cost of providing electricity service by selecting the most cost-effective resources to fulfill various system needs.

# 2. Fund Electricity Support Programs Through the Tax-Base

- Propose to fund electricity support programs, including Ontario Electricity Support Program (OESBP) and Rural or Remote Electricity Rate Protection (RRRP), through the tax-base instead of a regulated charge. This would allow the OESP and the RRRP charges to be removed from the Regulatory line on electricity bills.

**Considerations**

*Consumer Impacts and implementation*

- Transitioning OESP and RRRP to the tax-base would reduce a typical residential bill by about $2.35/month by 2020, and delivering the First Nation rate reduction through tax base would avoid about $0.10/month for a potential total savings of $2.45/month by 2020). As all programs provide strong social benefits, there is precedent for funding these programs through the tax-base.

- To address concerns from low income electricity consumers improvements to OESP could be implemented by increasing credits (could be up to double the current credits)
  - Single low income consumer would see a change from $30 to $45/ month ($540/year):
  - Family of four with electric heat could see a credit of $82.50/month ($990/year); and
  - Would mean no impact on consumer bills and no change to current OESP charge.
- RRRP and OESP are included in the “Regulatory” line on bills. If RRRP and OESP were eliminated from bills, the Regulatory line would decrease; however, as the Regulatory line is the smallest line item component of invoices, there is risk the decrease may not be perceived by customers.

- The RRRP regulation provides a funding mechanism for transmission infrastructure required to grid connect remote First Nation communities. Considerations for how that funding will be supported by the tax base will need to be determined.

- The non-rate mechanism to remove delivery charges from on-reserve First Nation customer monthly bills needs to be further explored.Funding RRRP and/or OESP with tax revenue would require amendments to existing legislation and regulations.

# 2. Fund Electricity Support Programs Through the Tax-Base (cont'd)

- Table below shows estimates of program costs up to 2020:

| Year | OESP | RRRP | First Nations Delivery Rate | TOTAL |
|---|---|---|---|---|
| 2017 | $106M | $292M | $18M | **$416M** |
| 2018 | $119M | $300M | $18M | **$437M** |
| 2019 | $127M | $306M | $18M | **$451M** |
| 2020 | $132M | $315M | $18M | **$465M** |

1) Ontario Electricity Support Program (OESP)
   - After almost a year in market, close to 30% of potentially eligible customers are signed up.
   - The cost projections below assume the program grows to 50% of eligible consumers by 2020 (also assumes 10% administration costs).

2) Rural and Remote Rate Protection (RRRP)
   - Provides benefits to R2 Hydro One consumers, Algoma, and remote communities.
   - Includes the expanded coverage that will begin on January 1, 2017.

3) First Nation rate reduction (currently under development)
   - On November 14, 2016, OEB presented options to the Ministry on reducing costs for on-reserve First Nation customers.
   - OEB's recommended option to provide 100% delivery rate credit, which is estimated at $18.4 million per year.
     - Other options includes a seasonal fixed credit to account for demand changes over the year ($13 million) or a 50% total bill reduction ($23 million).

# 3. Eliminate the Industrial Conservation Initiative (ICI)

- The cost shift from the Industrial Conservation Initiative (ICI) could be removed from electricity bills by eliminating ICI.
  - The ICI allows large electricity consumers to lower their electricity costs by reducing their demand during peak hours.

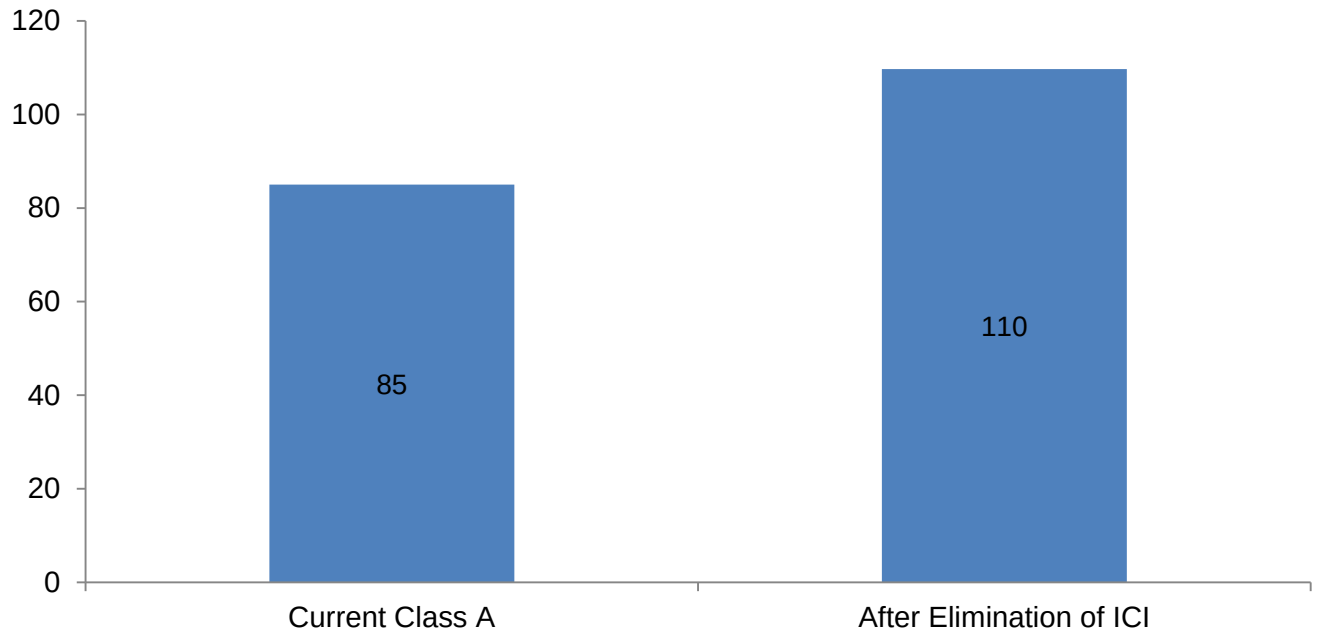
**Considerations**

- Eliminating ICI would result in a benefit of more than $4/month for residential electricity consumers in 2017.
  - However, unless government took action to mitigate the associated cost shift back to industrial consumers, typical industrial prices would increase by about one-third. Such a price increase would pose significant challenges for energy-intensive consumers.
- Industrial stakeholders have indicated that ICI as an integral factor in maintaining competitiveness and retaining industry in the province.
  - Eliminating ICI would limit the “cost shift” onto residential consumers, but it would also lead to a reduction in industrial demand. The large industrial contribution to the fixed costs of running the electricity system would then need to be covered by remaining consumers.
- If ICI is retained, current IESO projections indicate that the cost shift will decrease each year going forward as Global Adjustment (GA) decreases (due to an expected increase in HOEP).
- Alternatively, ICI could be funded through the tax-base at a cost of $900 million annually. There is precedent to use the tax-base for industrial support programs, including the Northern Industrial Electricity Rate Program (NIERP) and the Jobs and Prosperity Fund.

# 3. Eliminate the Industrial Conservation Initiative (cont'd)

- ICI currently provides a benefit of about $25/MWh to Class A electricity consumers.

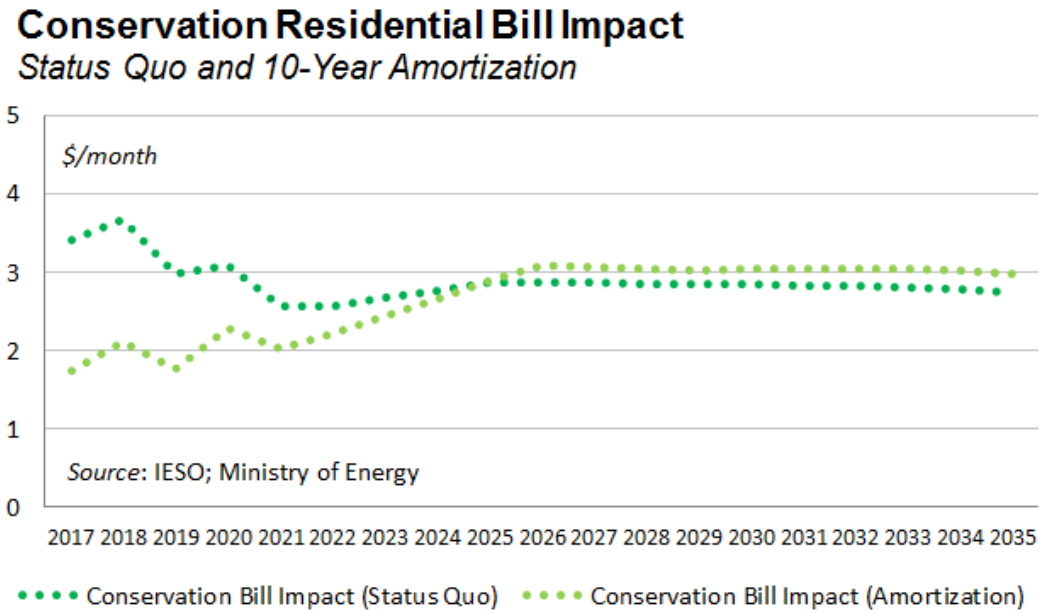
**All-In Electricity Price**
*in $/MWh*



**Note**: Based on year-to-date (YTD) September 2016 prices. Class A reflects a transmission-connected consumer.

# 4. Amortize Conservation Program Costs

- ~$3 billion from the electricity ratepayer base will be spent on conservation programs delivered under the Conservation First Framework and the Industrial Accelerator Program (IAP) between 2015 and 2020.
- Currently, Conservation and Demand Management (CDM) program costs are recovered from the Global Adjustment (GA) mechanism about one month after expenses are incurred.
- As a potential rate mitigation measure, certain CDM costs could be amortized.
- Amortizing a portion of conservation spending would produce a benefit for electricity ratepayers in excess of $1/month at the outset. Over time, the benefit would decrease and turn into a cost, as interest charges begin to grow.



**Note**: Chart assumes that conservation incentive costs are available for amortization while administration cost are not. Although there is variable from year to year, incentives represent about two-thirds of conservation spending in Ontario. Chart assumes conservation spending continues at a similar rate beyond 2020. Chart assumes a 10-year borrowing rate of 3.0%.

# 4. Amortize Conservation Program Costs (cont'd)

## Considerations

- Under **Public Sector Accounting Board (PSAB) accounting standards**, used by both the Province and IESO, only certain assets can be amortized: 1) pensions and 2) tangible capital assets. Under PSAB an asset must meet several criteria to be considered a capital asset, including:
  - A tangible capital asset must be tangible and substantive and the Ontario government must have title and operate the asset.
  - A tangible capital asset must bring a tangible benefit to the government or to Ontario.

- CDM costs, on their own, do not meet the criteria of a tangible capital asset because customers would have ownership and control of installed CDM measures, not the Province or IESO.

- **Rate-regulated accounting** was developed to recognize the unique nature of regulated entities (e.g., electricity generators, LDCs). Under rate-regulated accounting certain costs can be treated as amortizable assets that would not normally be considered assets under accounting principles.
  - Over the past several years, the Auditor General (AG) has expressed concerns about the appropriateness of recognizing rate-regulated assets in the Province's consolidated financial statements.
  - Rate-regulated accounting is currently under review by international accounting standard setting bodies and is currently permitted only on an interim basis, so its future is unclear at present.

# 4. Amortize Conservation Program Costs (cont'd)

**Considerations**

- If some of Ontario's CDM costs could be amortized, analysis shows that ratepayer impacts would be reduced in the short-term but interest charges on the loan would result in increased overall ratepayer costs in the longer-term.

- Legislative amendments would be needed to allow recovery of loan interest charges from GA.

- If there is a desire to proceed:
  - Formal accounting advice will need to be sought from IESO's external auditor as well as the Ontario Provincial Controller (OPC) to determine whether CDM costs could be amortized according to rate-regulated accounting standards.
  - Further legal analysis would also be required to confirm legal viability and possible approaches to implementation.

# 5. LDC Efficiencies

- Consider opportunities for future LDC cost reductions and efficiencies through the regulatory framework.

**Considerations**

- The Ontario Energy Board has a mandate to regulate the electricity distribution sector in the public interest, ensuring the financial viability of the sector while promoting reliable service to customers at just and reasonable rates.
- Since 2012, the OEB has taken action – through the Renewed Regulatory Framework for Energy – to more closely link rate regulation with performance measures and outcomes.
- There maybe opportunities to promote further cost reductions and performance improvements within the distribution sector as there is continued evolution of the regulatory framework in Ontario.
  - Tightening LDC requirements may also indirectly incent other desired policy outcomes, such as LDC consolidation and grid modernization to realize further cost reductions.
- ENERGY could help promote or accelerate these efforts by asking the OEB through the LTEP Implementation Directive, s. 35 of the *Ontario Energy Board Act, 1998*, and the 2017 Mandate Letter and other agency business planning processes.
- In addition, further changes to the departure and transfer tax regimes could be considered to provide a further incentive for LDC mergers and acquisitions.

# 6. Rate Design Initiatives

- OEB continues to move forward with its Regulated Price Plan (RPP) Roadmap:
  - The OEB is undertaking a comprehensive review of the RPP, including exploring the introduction of offering different pricing plan options for customers following the completion of pilot programs in 2018. The plan is expected to be implemented over a 3-5 year period.

- Until new pricing plans are available, the OEB could provide an "opt-in flat rate RPP" structure that could be made available to residential, farm and small business consumers on an interim basis (2-3 years) until a wider range of price plans are available.
- Time-of-Use (TOU) pricing could also be introduced for non-RPP Class B consumers to reduce Global Adjustment (GA) volatility and reduce system costs.

| Current TOU | New Flat Rate |
|---|---|
| On: 18.0 ¢/kWh | 11.1 ¢/kWh |
| Mid: 13.2 ¢/kWh | |
| Off: 8.7 ¢/kWh | |

**Considerations**

- The OEB has indicated that the option would lead to no overall change in system costs. Consumers with higher peak and mid-peak usage patterns would see a decrease in their electricity bills, while those with higher off-peak usage patterns would see an increase.
  - While the current strong supply conditions may allow for such an RPP structure (i.e., peak demand requirements can be easily met), administrative costs could be high (distributors would need to design/implement an opt-in process and associated billing system on an interim basis).

| | Current TOU | New Flat Rate |
|---|---|---|
| 1) Monthly electricity bill- higher peak and mid-peak usage patterns | $172 | $163 |
| 2) Monthly electricity bill- higher off-peak usage patterns | $152 | $163 |

***Note:** 1) assumes a consumer consumption pattern of 45%:30%:25% (Off-peak: Mid-peak: On-peak), while 2) assumes consumer consumption pattern of 80%:10%:10% (Off-peak: Mid-peak: On-peak). Estimates are based on OEB's online electricity bill calculator (for Toronto Hydro-November 2016 rates)

# 6. Rate Design Initiatives (cont'd)

**Considerations**

- The decision to undertake smart meter investments was partly justified on the basis of TOU pricing. If TOU pricing were to be made optional, some stakeholders could question the rationale for smart meter investments.
  - Rationale for offering a flat rate option could focus on providing customers with choice until new pricing plans are rolled out under the RPP roadmap.

- If a flat rate design is introduced, there could be significant consumer opposition to any return to a mandatory TOU.

- After the interim flat rate period, the OEB could offer a wider range of pricing plans to consumers.
  - As part of its RPP review, the OEB will be running pilots with LDCs to assess customer response to alternative time periods and pricing structures.
  - Learnings from these pilots will help inform potential changes to the RPP. Pilots are expected to be in market May 2017 and run for one year.

- Non-RPP Class B electricity consumers currently pay Global Adjustment (GA) on a volumetric basis. Moving them to TOU would provide an incentive to shift consumption to off-peak periods.
  - Consumers, including manufacturers, who are unwilling to shift would face higher costs and likely not be supportive of the changes.
  - The decision to pursue TOU pricing for non-RPP class B consumers will impact proceeds recycling as there is interplay between the two initiatives.

# 7. Reduced Cost of OPG Borrowing

- OPG currently borrows for corporate purposes from the OEFC
- Seek to reduce OPG's borrowing costs and pass on savings to ratepayers by:
  - Reducing or removing the spread that OEFC applies to OPG for any new corporate debt; or
  - Allowing OPG to refinance its existing debt at longer maturities through the OEFC in order to take advantage of the current, favourable interest rate environment.
- Assuming the full spread is removed from all OEFC debt, OPG borrowing costs could be reduced by 50-100 basis points, representing annual savings of about $20-$25 million, increasing to $30-$35 million, as OPG's outstanding OEFC debt rises from ~$3.3 billion in 2016 to ~$4.7 billion in 2020.
- OPG could apply to the OEB as part of its current rate application to flow this benefit to ratepayers.

**Considerations**

- Further work is required to determine potential OPG savings from these initiatives.
- Allowing OPG to refinance would have a negative fiscal impact on the Province.
- Spreads are expected to decline, reducing the relative impact of this change, given lower overall interest rates and reduced volatility.
- Providing OPG with greater access to longer term (20-30 year) debt may also reduce costs:
  - OPG's average term to maturity for OEFC debt is 5.7 years, as compared to 22.2 years for privately financed project debt. This contrasts with most corporations and government which have been working to extend average debt terms in order to take advantage of the low interest rate environment.
  - Longer terms would also better match to the life of OPG's assets.
  - Recently, OEFC has allowed OPG to apply for 50% of its financing requirements in the form of longer term (25-30 year debt). Moving closer to 100% would accelerate this transition.

# 8. End DRC Early for Commercial/Small Industrial Class B Electricity Consumers

- Propose to remove the $0.07/kWh Debt Retirement Charge (DRC) from the bills of commercial/small industrial Class B consumers beginning in 2017, instead of April 1, 2018.
  - **Note:** Class A consumers (e.g., large industrial) would continue to pay DRC until at least April 1, 2018.

**Considerations**

- For a Class B consumer currently paying about $152/MWh, removing the DRC would represent a savings of about 5%.
  - A 50% reduction in the DRC charge would represent a savings of about 2%.

- Alternatively, the reduction of the DRC could be to $0.035/kWh starting in 2017, to provide relief for cap and trade until proceeds recycling is fully operational.

- Residential consumers have had the DRC removed from bills since January 1, 2016. Taking DRC off commercial and small industrial bills would result in equal treatment for these groups of consumers.

- The savings for commercial and small industrial consumers associated with this proposal would drop to zero in April 2018, since this is the current planned date for removing the DRC from non-residential bills.

- Prior to moving forward with this proposal, additional analysis from Legal Services and the MOF would be needed.

# 9. Dedicate Departure Tax

- In connection with the IPO, as a result of leaving the PILs regime and entering the corporate tax regime, Hydro One was deemed to dispose of its assets for proceeds equal to its fair market value, triggering a PILs liability of $2.6 billion (Departure Tax).
- This was paid to the Ontario Electricity Financial Corporation (OEFC), to be dedicated towards repayment of electricity sector stranded debt.
- The Province could explore repurposing some of those funds to the benefit of ratepayers.
- This may reduce the risk that the Ontario Energy Board (OEB) assigns to ratepayers the benefit from an associated tax asset, resulting in lower earnings and decreased share value for Hydro One. This decision is currently before the OEB, as part of Hydro One's Transmission rate application.

**Considerations**

- Cost savings to ratepayers would depend on timing and which ratepayers (e.g., Hydro One customers, or all Ontario customers) will benefit from some or all of the $2.6 billion value.
- While this is a shift from messaging that value from the broadening of ownership of Hydro One is being used pay down debt and fund transit and transportation, the Province could link to electricity infrastructure investments (e.g., as an offset to infrastructure investments already made in the sector, or to specific initiatives such as conservation).
- These funds were paid to the Ontario Electricity Financial Corporation (OEFC), to be dedicated towards repayment of electricity sector stranded debt. Repurposing may have an impact on the defeasance of this debt.

# 10. Cancel/Adjust Renewable Energy Procurements

- The Ministry could consider the following actions to further mitigate future impacts to electricity bills:

| Unallocated/Terminated Capacity | Announced Procurements | Executed Contracts |
|---|---|---|
| A. Do not procure unallocated or terminated capacity | B. Revise FIT 5 target | D. Cancel LRP I contracts |
| | C. Cancel FIT 6 | |

**Overarching Considerations**

- Cost savings associated with reducing or cancelling renewable energy procurements and programs will not reduce current electricity bills, but would result in future cost reductions relative to Ontario Planning Outlook forecasts.
- The IESO estimates implementing options A to C will reduce system costs by approximately $592 million ($2016) between 2019 and 2028, resulting in an average of approximately $0.50/month in savings to a typical residential electricity bill over the same period. [cost reductions from LRP I contract cancellations TBC]
- The microFIT program is winding down end of 2017. Annual microFIT procurement targets have been undersubscribed.
- With a few exceptions (e.g., rollover of unallocated microFIT capacity; addition of terminated microFIT and small FIT capacity to FIT 5), plans for unallocated or terminated capacity are not defined in announcements or existing directions.

**Cancel/Adjust Announced Procurements**

- Amendments to existing directions to the IESO would be required to reduce FIT 5 and cancel FIT 6.
- The FIT 5 procurement is underway with a base target of 150 MW and inclusion of any capacity available from contract terminations under prior small FIT and microFIT procurements. The application window closed on November 25, 2016.

# 10. Cancel/Adjust Renewable Energy Procurements – Existing Contracts

**Cancel Existing LRP I Contracts**

- 16 LRP I contracts (approx. 455 MW) have been executed and projects are under development.
- None have met Key Development Milestones. Total value of LRP I estimated at approx. $1 billion (NPV to 2016).

[Placeholder for IESO: Cost calculation relative to OPO and associated bill impact]

**Considerations**

- To help inform a decision, IESO or OEB could be asked to evaluate and provide guidance to the Ministry on the system need for LRP I projects and potential ratepayer impacts/benefits.
- 13 of 16 LRP I contracts have Indigenous participation. Cancelling LRP I contracts would remove this economic development opportunity and likely damage relationships between Indigenous communities and the government.
- LRP I Contract includes an “Optional Termination” provision allowing IESO to terminate any contract prior to the “Commercial Operation Date” with 6 months written notice.
- The IESO obligations under the Optional Termination provision depend on whether the project has met all “Key Development Milestones”.
  - As no projects have met their Key Development Milestones, the estimated total cost payable to contract holders is about $8 million.

# 10. Cancel/Adjust Renewable Energy Procurements – Existing Contracts (cont'd)

## Legal Analysis

- Under the *Electricity Act, 1998*, the Minister has the authority to amend previous directions without approval from Cabinet. Although an amendment to an existing direction would not require Cabinet approval, it is unlikely that a direction to cancel LRP I contracts could be considered as amending an existing direction. The previous LRP directions set out the broad policy framework that was reflected in the procurement, but the contracts themselves, once executed, are stand alone documents which the IESO had legal authority to execute. Revoking previous LRP directions does not affect that authority or have the effect of cancelling the procurement.
- As a result, any new directive to cancel LRP I contracts would need to be approved by Cabinet, either as part of an LTEP implementation directive to IESO, or pursuant to the overall power to direct IESO with respect to procurements outside the LTEP process. However, there is a risk that such a directive could be subject to challenge.
- ENERGY has previously received advice that there is a high risk that a court would conclude that the Minister has no authority under the *Electricity Act , 1998* to issue a direction requiring IESO to terminate microFIT Conditional Offers and FIT Offer Notices that have already been issued to applicants, because these offers create vested contractual rights and the Minister would require clear legislative authority to interfere with those rights. This reasoning would likely apply equally to any direction or directive to IESO to cancel LRP I contracts.
- Previous advice has also flagged a moderately high risk that the Province could be liable for damages in tort for inducing a breach of contract if it issues a direction to IESO that interferes with vested contractual rights without clear statutory authority to do so. LRP I contract holders could also assert other claims, such as misfeasance in public office.
- The risk and costs associated with potential law suits resulting from the cancellation of contracts requires further analysis, including analysis of whether any statutory amendments would be required to provide clear authority to cancel the contracts. LSB recommends ENERGY seek an opinion from Crown Law Office Civil before proceeding.

# Summary

- Reductions in electricity rates could be achieved by eliminating existing, planned or directed initiatives from the rate-base or shifting these costs to the tax-base.

- The timing of the impact of these rate mitigation initiatives varies.
  - Immediate and near-term impacts can be achieved by shifting costs to the tax-base or changing how certain costs are recovered from consumers or eliminating certain programs.
  - Over the longer term, changes to the electricity supply mix and achieving efficiencies in the electricity market could yield system savings.

- Pursuing the initiatives would require regulatory amendments and working with the electricity sector agencies, LDCs and other stakeholders to implement the initiatives.

- As shown before the positive impact to residential ratepayers is very limited (between $8 and $9 per month) while the impact to the Province's fiscal position would be material (about $1.5 billion a year).

# Appendix

# Electricity Consumer Classes

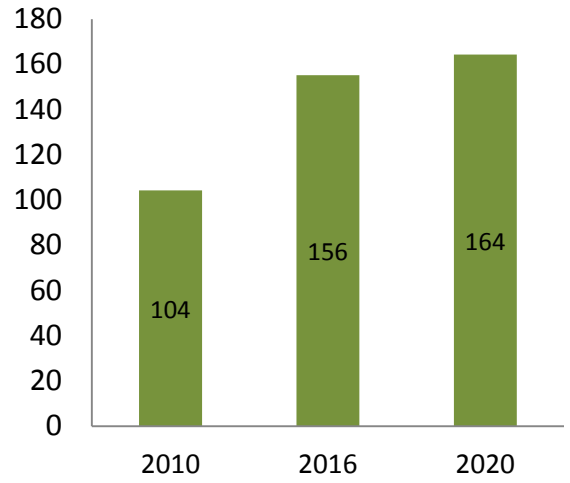
- In Ontario, there are three classes of electricity consumers:

| | Regulated Price Plan | Class B | Class A |
|---|---|---|---|
| **Consumer Types** | • Residential<br>• Small Business<br>• Farms | • Commercial<br>• Institutional<br>• Small industrial | • Large commercial<br>• Large industrial |
| **Load Size** | Below 0.05 MW | Between 0.05 MW and 1 MW | Above 1 MW |
| **Total Consumption** | 58 TWh | 57 TWh | 26 TWh |
| **Share of Consumption** | 41.1% | 40.4% | 18.4% |

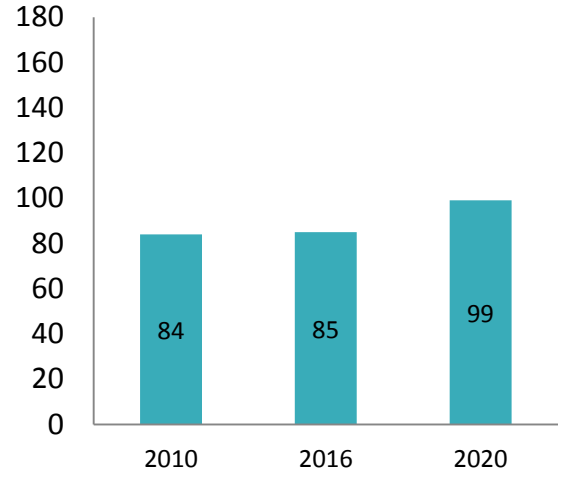
# Prices by Electricity Consumer Class

- Since 2010, average bills for residential consumers (i.e., using 750 kWh/month) have increased by over 50%. Rates are forecast to continue to increase, with residential consumers paying an estimated 6% by 2020.
- Industrial electricity rates have remained relatively flat over the same time period, due primarily to the Industrial Conservation Initiative (ICI). ICI represents a cost shift of about $5/month for residential electricity consumers. Industrial electricity consumers are forecast to see an increase of 16% by and 2020.

**Typical Residential Bill (750/kWh per month)**



**Typical Class A (Industrial) Price ($/MWh)**



**Note:** 2016 represents year-to-date September 2016 for industrial. Cap and trade proceeds recycling is included for the industrial consumer for 2020.

# Rate Mitigation Levers

- To provide further rate relief to Ontario electricity consumers, the government can use one or more of the levers outlined below:
  - **Tax-based Lever:**
    - Provide rebates funded from the tax-base or transfer items currently paid through the rate-base to the tax-base.
  - **Rate-based Lever:**
    - Shifts costs within the rate-base from one customer group to another to achieve electricity system benefits and/or policy goals.
  - **Cap and Trade Proceeds Lever:**
    - Use cap and trade proceeds on initiatives that help reduce greenhouse gas (GHG) emissions from the electricity sector (e.g., recycling proceeds during off-peak periods) while providing benefits to some or all electricity consumers.

# Traditional Rate Mitigation Programs

- Ontario has implemented a number of rate-based programs to help residential and industrial electricity consumers:
  - The Ontario Electricity Support Program (OESP) provides ongoing assistance directly on the bills of eligible low-income electricity consumers
  - The Rural or Remote Rate Protection (RRRP) program is provided to rural and remote residential and farm customers because the cost of distributing power to remote areas is much higher than for urban areas.
  - The Industrial Conservation Initiative (ICI) encourages Ontario's largest consumers to reduce consumption during peak periods while reducing system costs.
- There are also tax-base programs to help manage electricity prices:
  - Rebate the provincial portion of the HST from the electricity bills of residential, small business and farms as of January 1, 2017.
  - Northern Industrial Electricity Rate Program (NIERP), in which participants receive a rebate of two cents per kilowatt hour. On average, industrial electricity prices can be reduced by up to 20%.
- While rate-based programs provide relief to certain electricity consumers, they shift other costs to remaining ratepayers (See Appendix for additional details).

# Driving Down Prices for Consumers

- Since 2013, a number of actions have been taken to drive down prices for consumers wherever possible:
  - Renegotiating the Green Energy Investment Agreement, reducing contract costs by $3.7 billion;
  - Deferring the construction of two new nuclear reactors at Ontario Power Generation's Darlington facility, avoiding an estimated $15 billion in new construction costs;
  - Approving Ontario Power Generation's plans to enable the ongoing operation of Pickering up to 2024, which is expected to save ratepayers as much as $600 million;
  - Reducing Feed-In-Tariff (FIT) prices through annual price reviews, saving ratepayers at least $1.9 billion relative to the 2013 Long-Term Energy Plan (2013 LTEP) forecast; and
  - Suspending the second round of the Large Renewable Procurement (LRP II) process and the Energy-from-Waste Standard Offer Program to save up to $3.8 billion in electricity system costs relative to 2013 LTEP.

# Cost Shifts in the Electricity Sector – Current Programs

- Several programs in the electricity sector “shift costs” from one group of electricity consumers to another:
  - **Rural or Remote Rate Protect** (**RRRP)** is a longstanding program that reduces the delivery charge for rural electricity consumers and is paid for by all consumers in Ontario through a regulatory charge on bills.
  - **Ontario Electricity Support Program (OESP)** is funded via a regulatory charge on consumer bills and provides support for qualifying low income electricity consumers.
  - **Industrial Conservation Initiative (ICI)** empowers large consumers to lower their costs by reducing their demand during peak hours. In the process, ICI shifts costs from large electricity consumers to all other consumers in Ontario.
  - **Industrial Electricity Incentive** (**IEI**) program, offers reduced electricity prices for companies starting or expanding operations in Ontario. All electricity consumers in Ontario pay for the price reduction that IEI participants receive.

# Cost Shifts in the Electricity Sector (Cont'd)

- The tables on the right show the estimated cost shifts that result from existing government programs.
- ICI has had the largest cost shift of all the programs, due to the large size of Global Adjustment (GA) and the way that it is recovered from consumer classes.
- RRRP and OESP impact the regulatory line on consumer bills, while ICI, IEI and conservation affect GA (i.e., Electricity line on bills of Regulated Price Plan consumers).

**Cost Shift Impacts - Residential Bill**

*Typical 750 kWh/month Toronto Hydro consumer*

| *$/month* | 2011 | 2012 | 2013 | 2014 | 2015 | 2016 |
|---|---|---|---|---|---|---|
| ICI | 2.65 | 3.25 | 3.88 | 3.53 | 4.75 | 4.77 |
| RRRP | 0.90 | 0.82 | 0.84 | 0.92 | 0.93 | 0.94 |
| OESP | - | - | - | - | - | 0.84 |
| Conservation | 1.85 | 1.92 | 2.00 | 1.58 | 2.43 | 2.45 |
| IEI | - | - | 0.08 | 0.09 | 0.11 | 0.12 |
| **Total** | **5.41** | **5.99** | **6.81** | **6.13** | **8.21** | **9.12** |

**Cost Shift Impacts - Industrial Bill**

*Typical Class A consumer*

| *$/MWh* | 2011 | 2012 | 2013 | 2014 | 2015 | 2016 |
|---|---|---|---|---|---|---|
| ICI | -22.17 | -26.36 | -30.29 | -25.91 | -33.79 | -33.92 |
| RRRP | 1.20 | 1.10 | 1.12 | 1.23 | 1.24 | 1.25 |
| OESP | - | - | - | - | - | 1.13 |
| Conservation | 1.53 | 1.59 | 1.66 | 1.31 | 2.01 | 2.02 |
| IEI | - | - | 0.07 | 0.08 | 0.09 | 0.10 |
| **Total** | **-19.43** | **-23.67** | **-27.44** | **-23.29** | **-30.45** | **-29.43** |

**Note:** OESP did not come into effect until 2016. The 2016 values represent forecasts and are subject to change.

# Cost Shifts in the Electricity Sector (Cont'd)

- The table on the right shows the total cost for various government electricity programs. These programs are currently funded through the electricity system ratebase.

- Funding of these programs through the fiscal plan would remove these costs from the electricity system (i.e., Placing these costs on the taxbase).

**Cost of Programs**

*By government program*

| *$M* | 2011 | 2012 | 2013 | 2014 | 2015 | 2016 |
|---|---|---|---|---|---|---|
| ICI | 506 | 615 | 736 | 670 | 890 | 893 |
| RRRP | 172 | 156 | 159 | 176 | 174 | 176 |
| OESP | - | - | - | - | - | 158 |
| Conservation | 329 | 339 | 354 | 280 | 425 | 428 |
| IEI | - | - | 15 | 16 | 18 | 19 |

- For example, removing the roughly $900 million of program cost from the Industrial Conservation Initiative (ICI) program would save the typical residential electricity consumer $4.77 per month in 2016.

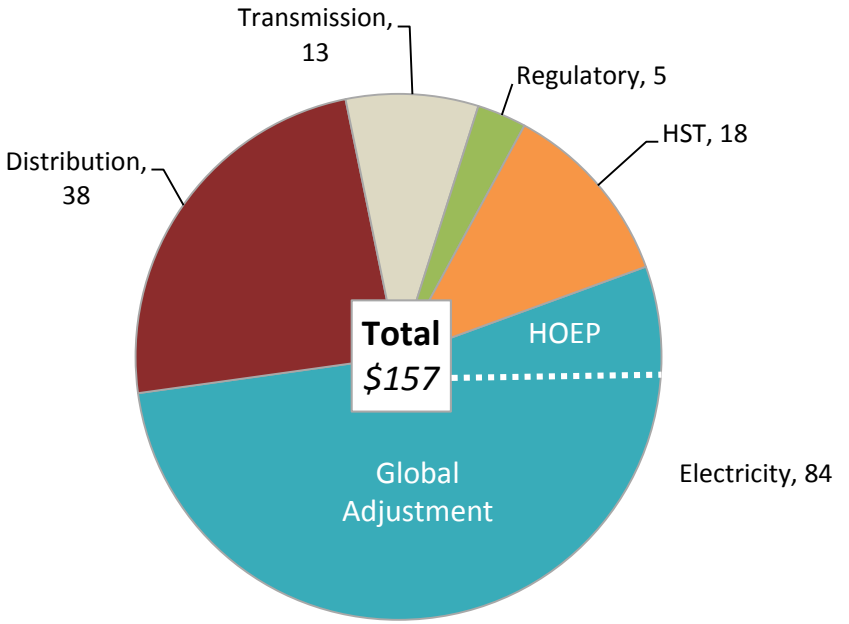
**Note:** OESP did not come into effect until 2016. The 2016 values represent forecasts and are subject to change.

# Residential Electricity Prices

- There are approximately 4.5 million residential consumers in Ontario.
- The Regulated Price Plan includes nearly all residential consumers, as well as small businesses. Regulated Price Plan consumers pay a blended commodity rate regulated by the OEB, which is set every six months.
- For households, the Debt Retirement Charge (DRC) was removed from residential electricity bills as of January 1, 2016.
- In addition, the Ontario Electricity Support Program (OESP) provides an ongoing rate reduction directly on the bills of low-income electricity consumers who have applied and meet the eligibility requirements. The program is funded through the rate base.
- Rural customers, in particular those with electrical heating, pay higher monthly bills.

**Typical Residential Monthly Bills ($)**

*As of November 1, 2016 (750 kWh/month)*



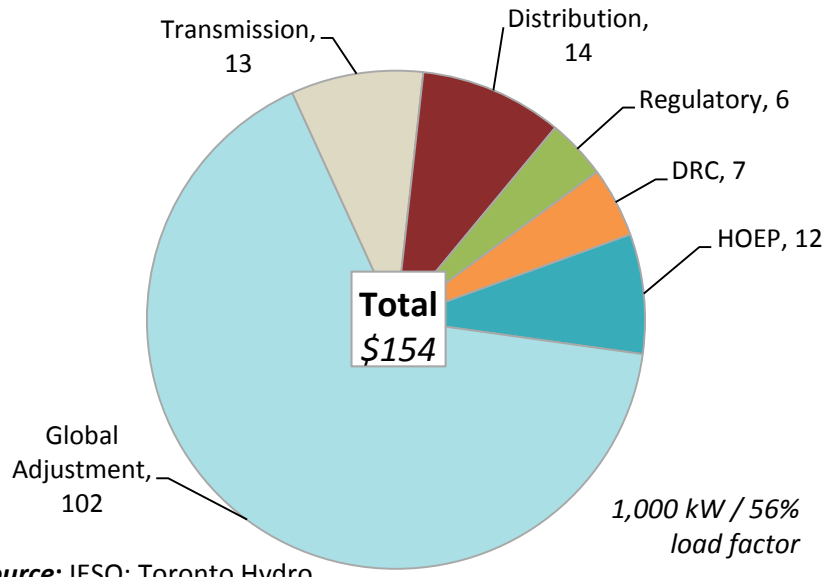
***Source*: OEB, Toronto Hydro**

# Commercial Electricity Prices

- There are approximately 55,000 commercial and institutional consumers in the province. These consumers are Class B consumers, and have separate line items on the electricity bill for HOEP and GA.
- There is a high degree of differentiation amongst consumers within the commercial sector in terms of size and consumption patterns. For example, an elementary school has a much different hourly load profile compared to a full service restaurant. This is an important consideration when looking at the bill impacts of policy options.

**Typical Commercial Price ($/MWh)**

*YTD June 2016 (Non-RPP Class B)*



***Source*:** IESO; Toronto Hydro

- Consumers in the commercial sector do not pay time-of-use prices and have little incentive to shift demand away from high demand hours.
- Targeted pricing programs are currently not available for Class B consumers.

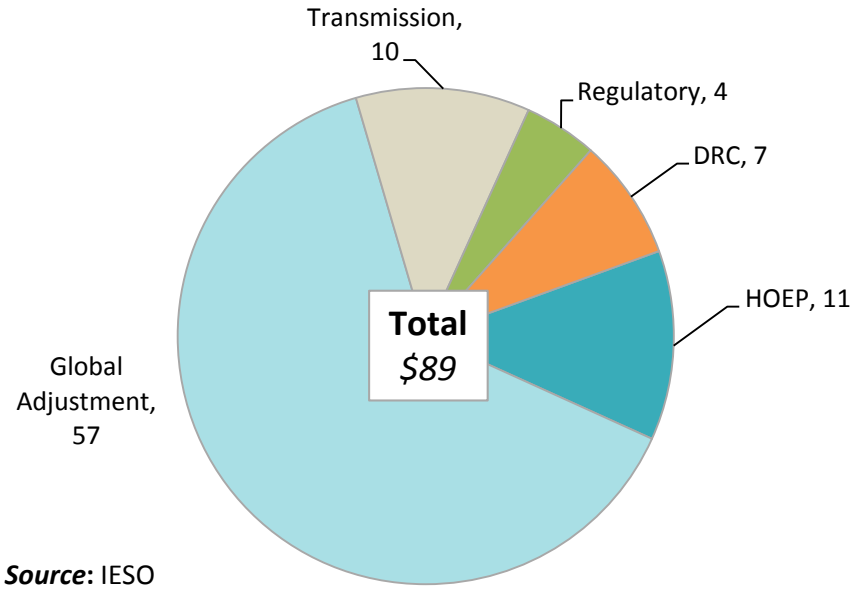
*** Note**: Most commercial consumers receive input tax credits for their HST.

# Industrial Electricity Prices

- There are about 300 large industrial consumers in Ontario.
- Measures in place to mitigate industrial electricity prices include ICI and NIERP.
- ICI lowers costs for eligible large electricity consumers (i.e., those with monthly peak demand exceeding 3 MW) that reduce consumption during peak periods.
  - ICI consumers reduce their electricity rates by 25% on average.

**Typical Large Industrial Price ($/MWh)**

*YTD June 2016*



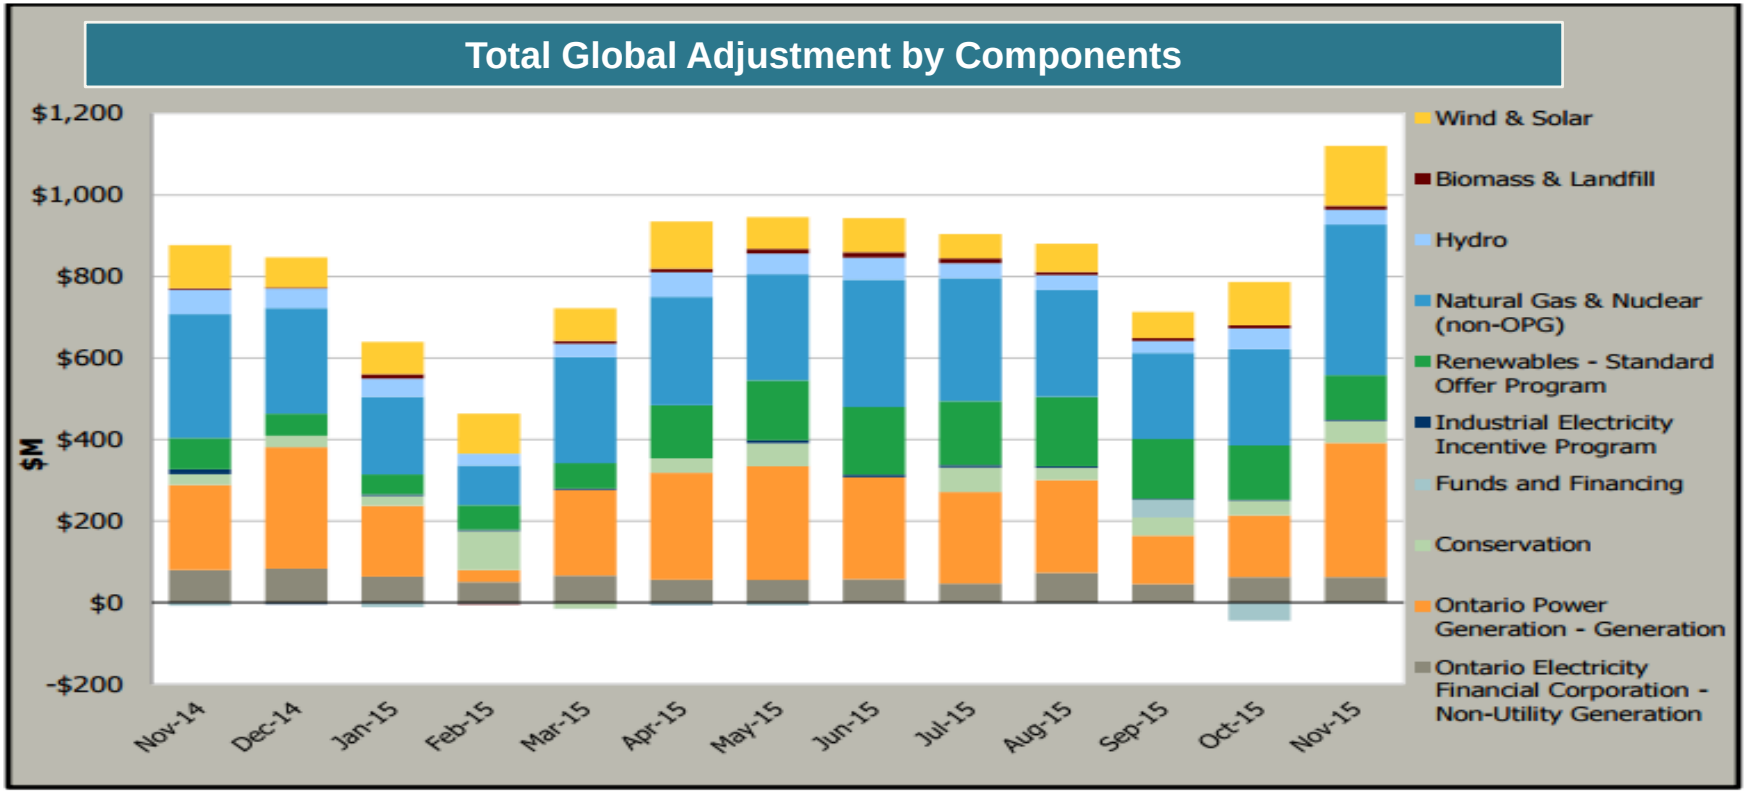
***Source*: IESO**

- Participants in NIERP receive a rebate of $20/MWh. On average, industrial electricity prices are reduced by about 20% through the program, reducing all-in prices to $69/MWh for these consumers. The program is funded through the tax base.

*** Note:** Industrial consumers receive input tax credits for their HST.

# Total Components of Global Adjustment

- Global Adjustment (GA) is a market mechanism that recovers costs from electricity consumers, including the cost of almost all conservation programs in the province (i.e., approximately half a billion dollars in 2016).



**Source:** IESO Monthly Market Report (November 2015)

# Cancel/Adjust Renewable Energy Procurements

# LRP I Pre-Construction Liability Limits

- All 16 successful LRP I developers accepted Optional Termination Provisions when the LRP I Contracts were executed in April 2016.
- If IESO chooses to enact the Optional Termination provision before a project has met all Key Development Milestones, IESO is required to pay pre-construction development costs up to the Pre Construction Liability Limit.
- Pre-construction development costs include costs incurred for feasibility studies, obtaining site access rights, work towards environmental approvals, business development plans, negotiation of contracts for design, equipment, construction and financing, reasonable overhead expenses, and other reasonable costs incurred.
- The Pre Construction Liability Limits are:
  - Non-Rooftop Solar: $250,000 plus $10.00/kW of Contract Capacity
  - Waterpower: $500,000 plus $20.00/kW of Contract Capacity
  - On-Shore Wind: $400,000 plus $2.00/kW of Contract Capacity
- According to the LRP I Optional Termination provision, the developer has a duty to take reasonable steps to mitigate losses, liabilities, costs and damages incurred as a result of the Optional Termination.
  - The IESO will not provide compensation for amounts which are attributable to a developer's failure to take reasonable steps to mitigate.

Thanks Chris.

Scott, Gadi, and Tim, staff have drafted a preliminary note based on the "bootleg" preliminary deck, including some comments on the broad theme/rationale and the more fiscally-based proposals, as attached. It is a work-in-progress and subject to update for any revisions of Energy's deck to be received.

Hi Steve,

Here's an early draft of a rate mitigation package that provides a policy rationale for the proposed measures. It's still an early draft and we need to firm up on the rate relief numbers and fiscal impact. My MO is still reviewing but I wanted you to have an early look.

Serge

<Rate Mitigation Proposals - Departure Tax (2017 01 10 v3).pptx>

DRAFT

# Price Mitigation Proposal: Departure Tax

Corporate and Electricity Finance Division
January 10, 2017

# Purpose

- This presentation provides an overview of the departure tax paid by Hydro One related to the November 2015 initial public offering (IPO), the deferred tax benefit recognised by Hydro One in its 2015 annual financial statements as a result of the IPO and becoming taxable under the federal Income Tax Act and provincial Taxation Act.
- The departure tax and deferred tax benefit are being discussed in the context of potential electricity price mitigation options provided by the Ministry of Energy and of the Ontario Energy Board's review of Hydro One's transmission rate application and the treatment of the cash tax savings (deferral) for Hydro One transmission rates during the rate period related to the deferred tax benefit.
- A key question is what is the intended primary purpose of a departure tax option:
  a. To provide electricity price relief, and how large would it be?
  b. To reduce the risk of an adverse OEB decision for Hydro One that would reduce its value and going-forward financial results?
     a. How likely would an OEB decision on Hydro One rates be affected by a government decision to use departure tax revenues for the benefit of the electricity sector?
- If the primary purpose is to reduce the OEB risk and it is assessed that a departure tax dedication to the electricity sector would materially reduce the risk, what are potential options? Some examples include
  - Provide electricity price relief.
    - It would be one-time relief and/or relatively limited in price mitigation impact, with a significant fiscal cost.
  - Dedicate it to the Trillium Trust towards investments in electricity sector infrastructure.
    - If invested in Provincially-owned assets, would spread out the fiscal cost over the life of the asset, but price mitigation would be very limited.
  - Communicate that the departure tax has already been dedicated to the electricity sector to the Ontario Electricity Financial Corporation (OEFC) to help it manage and pay down its debt and other liabilities.
    - Reallocating the departure tax away from OEFC would increase stranded debt.

DRAFT

# Overview: Ministry of Energy and Price Mitigation

- In December 2016, the Ministry of Energy, as part of a suite of potential initiatives to mitigate the rising cost of electricity, has suggested for consideration the potential dedication to ratepayer price mitigation some or all of the $2.6 billion 'departure tax' (DT) payments in lieu of tax (PILs) made by Hydro One to the Ontario Electricity Financial Corporation (OEFC) in November 2015, arising from the Hydro One initial public offering (IPO), which would have a fiscal impact.

- The discussion of the departure tax is often discussed along with the deferred tax benefit that Hydro One recognised in its 2015 annual financial statements, following the IPO.

- While the departure tax and deferred tax benefit are related, they are also separate and distinct.
  - Both are tax-related and are calculated using the fair value of Hydro One assets (as estimated, in the case of the departure tax paid).
  - The departure tax arose from Hydro One's exit from the system of payments-in-lieu of taxes paid to the OEFC, as part of "truing-up" what Hydro One was required to pay OEFC under the PILs regime based on the fair value of its assets. Hydro One paid $2.6 bn in departure tax to OEFC, as well as an additional about $0.2 bn in PILs to OEFC as a result of exiting the PILs regime.
  - Hydro One recognised a $2.8 bn deferred tax benefit as a result of the IPO, including $1.2 bn in eliminating a previous deferred tax liability amount, and recording a $1.6 bn deferred tax asset, which relates to Hydro One's going-forward obligations under the normal corporate tax system and the Canada Revenue Agency based on the impact on its taxes of the "tax shield" provided by the fair value of its assets.
  - The size of the tax shield under the normal corporate tax regime relates to the fair value of assets for tax purposes that results in higher tax depreciation expenses from taxable income, and does not relate directly to the departure tax amount paid by Hydro One to OEFC.

# OEB Review of 2017-2018 Hydro One Transmission Rates: Deferred Tax Benefit & Departure Tax

- The Ontario Energy Board (OEB) is currently reviewing Hydro One's 2017-18 transmission rate application to determine whether the deferred tax benefit (DTB) recorded by Hydro One, as a result of entering the normal corporate tax regime following the IPO, should be allocated to the benefit of ratepayers rather than shareholders.
  - In its review, OEB staff flagged that Hydro One realized a deferred tax recovery that was triggered by the revaluation of the tax basis of its fixed assets at fair market value as it entered the corporate tax regime (due to the IPO).
- Since Hydro One made its departure tax (DT) payment, and did not seek recovery from ratepayers for this payment, Hydro One's position is that the DTB would receive similar treatment (i.e., not impact ratepayers, but would be to the benefit of shareholders, in part to ensure consistency in treatment).
  - A general regulatory principle would be for ratepayers to receive the benefit from assets that they funded through rates, and equity holders would receive the benefit from their investments.
  - The Province as sole shareholder of Hydro One, funded the departure tax payment by making a capital contribution of the same amount prior to the IPO.
- Note that the departure tax did not have a net fiscal benefit to the Province on consolidation of OEFC and Hydro One.
  - OEFC (and the Province upon consolidation) recorded a higher PILs revenue on receipt of the DT from Hydro One; however, this amount was offset by an equal reduction in provincial revenue from Hydro One's net income as a result of the DT payment (an expense to Hydro One).
  - There is no net 'departure tax benefit' to 'give back' or return to ratepayers, both because there was no net revenue impact and it was not funded by ratepayers.

# OEB Review of 2017-2018 Hydro One Transmission Rates: Departure Tax and Price Mitigation

- The Province using the departure tax amount for price mitigation has been cited as possibly reducing the risk of the OEB deciding to use Hydro One's deferred tax benefit to reduce Hydro One's rate ask in its current transmission rate application.
  - A fiscal risk is that the OEB may still decide to use some or all of the deferred tax amount to reduce Hydro One's rate request, while at the same time the Province uses the departure tax amount for price mitigation.
- Should the OEB decide to reverse the benefit of the DTB from Hydro One's shareholders to ratepayers, there would be significant impacts to the Province.
  - The Province would be subject to negative fiscal impacts based on how the OEB provides the benefit to ratepayers. For example, the OEB could determine that Hydro One's revenue requirement will be reduced over time by the cash tax savings from the DTB. This would negatively affect Hydro One's net income, and, therefore, reduce the Province's revenues upon consolidation of its proportionate share of Hydro One net income. (The Province's recorded increased revenues of ~$2.4B in 2015-16 due to the DTB.)
  - There would likely be a material decline in Hydro One's share price, as the overall company value would be negatively affected, given reduced net income and cash flows available to finance capital expenditures and pay dividends. Lower share prices would reduce future gains on sales as the Province moves forward on its path to sell down to the 40% ownership level in Hydro One.
  - The Province may also face criticism as it has already credited the Trillium Trust with the $2.4 billion DTB.

DRAFT

# Departure Tax and Price Mitigation: Ratepayer/Fiscal Impacts

- The following provides illustrative potential ratepayer and fiscal impacts from allocating the $2.6 billion departure tax to ratepayers.
- The impact to an individual ratepayers' electricity bill may not be very significant, unless used over a very short period of time. If the period that the departure tax amount is used to mitigate prices is increased, the annual ratepayer impact diminishes. In all cases, the annual negative fiscal impacts are significant.
  - As an illustrative scenario, if the $2.6 billion is allocated over 1 year and spread evenly over all Ontario consumption (vs targeted at some consumer classes), the benefit is estimated at about 1.85 cents / kWh.*
    - For a typical residential ratepayer consuming 750 kWh/month, this is estimated at $13.93/month (pre-tax), or less than 10% of a monthly bill.
  - Over a 5-year period or 10-year period, the benefit to a typical residential ratepayer is estimated at $2.79/month and $1.39/month, respectively. Industrial ratepayers are estimated to benefit by about 0.37 ¢/kWh and 0.185 ¢/kWh, respectively.
- Note that the electricity price relief would be temporary and would result in a spike in electricity bills following the conclusion of the mitigation initiative. This may introduce pressure to extend or replace the mitigation, resulting in additional fiscal impacts.

| Departure Tax Savings to Ratepayers | Allocation over 1 year | Allocation over 5 years | Allocation over 10 years |
|---|---|---|---|
| **Typical Residential Ratepayer (savings $/mth)** | $13.93 | $2.79 | $1.39 |
| **Savings: cents per kWh** | 1.85 | 0.37 | 0.185 |
| | | | |
| **Negative Fiscal Impact to the Province per annum** | $2.6 billion | $520 million | $260 million |

**Assumes total TWh supplied of 140 hours and monthly demand of 750 KWh per residential household*

# Key Fiscal Considerations

- Dedicating the departure tax to ratepayers would have a negative fiscal impact as the Province would record an expense of up to $2.6 bn related to this mitigation (up-front or over time, depending on how the amount is dedicated to ratepayers).
  - Note that the departure tax (DT) did not represent a fiscal or cash windfall to the Province.
    - **Fiscal:** OEFC (and the Province upon consolidation) recorded a higher PILs revenue on receipt of the DT from Hydro One; however, this amount was offset by an equal reduction in provincial revenue from Hydro One's net income as a result of the payment (an expense to Hydro One).
    - **Cash:** OEFC (and the Province upon consolidation) received the $2.6 billion in cash from Hydro One as a PILs payment, but the Province also made a $2.6 billion cash capital contribution to Hydro One to invest in additional common shares of the company and support Hydro One's departure tax payment.
    - **Timing**: The DT represents the upfront payment of PILs that Hydro One would have paid to OEFC in absence of exiting the PILs regime. In essence, it is a true up of past deferred PILs / future PILs payments rather than an incremental payment.
- An additional fiscal risk is that the OEB may still decide to allocate some or all of Hydro One's deferred tax benefit (DTB) to reduce Hydro One's rate request, even if the Province moves forward with the use of the DT amount as an electricity price mitigation tool.
  - Using the DT for price mitigation would likely be province-wide, for both Hydro One and non-Hydro One customers, while an OEB rate application decision, if applied to both its transmission and distribution businesses, would affect Hydro One`s rates and its customers.
  - Any use of the DTB by the OEB for Hydro One rate mitigation would result in a negative fiscal impact.
- Dedicating the DT to ratepayers could also put pressure on the Province to adopt a similar policy for all future DT payments (e.g., if a municipality sells its local distribution company to the private sector, it would be subject to a DT)
  - This would lead to additional negative fiscal and stranded debt impacts.

# Stranded Debt Considerations

- Reallocating the departure tax from OEFC to ratepayers would also cause the unfunded liability of OEFC (or "stranded debt") to increase by an equivalent amount.
  - It would be the first time since 2003-04 that OEFC's stranded debt would increase.
  - In fiscal 2015-16, OEFC's unfunded liability decreased by $3.7 billion, from $8.1 billion to $4.4 billion, primarily reflecting the impact of the Hydro One initial public offering (IPO). This was the largest annual paydown of stranded debt.
  - Going forward, OEFC would also forgo the interest expense savings from the debt that the departure tax amount would otherwise have paid down. This may affect its going-forward ability to continue to reduce stranded debt over time.
    - OEFC`s future results are also negatively affected by the loss of Hydro One PILs and reduced Provincial share of Hydro One net income.
    - OEFC Debt Retirement Charge revenue has also been reduced, with the end of the DRC for residential consumption as of January 1, 2016, and the now legislated full end to the DRC as of April 1, 2018.

# Implementation Considerations

- Additional legal discussion would be required regarding implementation, including the Province's authority to direct OEFC to make a payment to the Province to support rate mitigation.
  - For example, the Province may have to amend the objects of OEFC and implement a Minister's directive in order for OEFC to make the payment. Further legal analysis would be needed if the government is to proceed with this option.

- If the Province moves forward with a rate mitigation measure linked to funds received from the departure tax (DT), the government could consider implementing in such a way that it would not directly involve OEFC / increase stranded debt.
  - Rather than having funds transferred from OEFC to the Province (resulting in an expense to OEFC, which would increase stranded debt), the Province could alternatively borrow $2.6 billion to pay for the program from the CRF.
  - The Province would in effect be dedicating an "equivalent benefit" to ratepayers, while keeping the OEFC whole and demonstrating its commitment to reducing stranded debt.
  - The government could face criticism that it is "double counting" the DT cash (since it already made a $2.6 billion capital contribution in cash to Hydro One to facilitate the DT payment) and that the rate mitigation measure is not actually linked to the DT, but is a rate mitigation program funded by taxpayers.
  - Borrowing an additional $2.6 billion (or reducing OEFC's debt paydown by $2.6 billion) would also have associated on-going fiscal impacts from additional interest costs incurred. Net debt would also increase by $2.6 billion.

- The government could also decide to use only a portion of the DT payment for rate mitigation, rather than the entire $2.6 billion.
  - For example, the Province could dedicate the portion of the DT related to capital gains but allow OEFC to keep the portion related to recapturing past depreciation expense.
  - This decision would result in a smaller impact on electricity prices, especially if the amounts were allocated over-time, but would help mitigate negative fiscal impacts.
  - This decision would still face similar policy considerations as previously presented.

# Trillium Trust: Other Risk Mitigation on an Adverse OEB Decision

- The notion has also been raised for the Province to dedicate the departure tax amount to the Trillium Trust to fund electricity infrastructure to the benefit of ratepayers – in order to reduce the risk that the OEB will use some or all of Hydro One's deferred tax benefit to reduce its rate request.
  - This would be a policy shift, as the current policy is for the asset optimisation amounts to go to Moving Ontario Forward projects.
  - Adding energy infrastructure projects would be incremental.
  - There would also be a fiscal and Hydro One value impact over time.
    - As that infrastructure would not be funded by the rate base, there would be a displacement on the rate base growth side, which would affect share value and future net income.
    - The Province would have the expense (upfront or over time) of the electricity infrastructure spending without a future ratebase revenue stream.
  - The ratepayer mitigation impact may be small and deferred:
    - The timing of the impact could be spread out, both on the fiscal side (if the Province were to own the electricity infrastructure so it could amortise the cost over the life of the asset – note that such an action could be seen as contrary to the policy of bringing in private sector capital to fund electricity infrastructure that was part of the Asset Council's report) and the rate impact side, as the rate impact of displaced rate base growth would be deferred to when the assets come into service, and cost recovery would be over the life of the asset.

DRAFT

# Background: Departure Tax and Hydro One's Deferred Tax Benefit

# Departure Tax (DT)

- The "departure tax" is a result of Hydro One exiting the payments in lieu of tax (PILs) regime and entering the corporate tax regime as a result of the IPO in November 2015.
  - The PILs regime applies to tax-exempt electricity utilities in Ontario (e.g., Ontario Power Generation and municipally-owned local distribution companies, and it mirrors the regular tax system, creating a level playing field between publicly-owned and private sector firms.
  - PILS are paid to OEFC to help it manage and pay down electricity sector debt and other liabilities arising from the old Ontario Hydro.
  - Once a utility becomes less than 90% owned by the Province or municipality, its exemption from tax under the federal Income Tax Act and the Taxation Act (Ontario) ends.

- Due to exiting the PILs regime, Hydro One was deemed to have disposed of its assets immediately before it lost its tax exempt status for proceeds equal to the estimated fair market value of those assets at that time.
  - This results in an assessment of potential payments-in-lieu of tax for 'recapture' into taxable income previously claimed depreciation expense that reduced past PILs payable, if the fair value is greater than the depreciated value for tax purposes under the PILs regime.
  - It may also result in a potential taxable capital gain if the fair value is greater than the original value of the assets.
  - Together, this PILs payment is known as a 'departure tax'.
  - It should be noted that this payment is not incremental but rather a true up of the PILs Hydro One would have been expected to pay over time in absence of exiting the PILs regime.
  - The 'departure tax' is also not unique to the PILs regime, but mirrors provisions under the normal tax system when a taxable entity leaves the normal tax system.

- As a result of this deemed disposition, Hydro One was liable to make a DT PIL to OEFC of $2.6 billion. In order to facilitate Hydro One's payment and preserving the equity value of the company prior to the IPO, the Province made a $2.6 billion capital contribution into Hydro One and received new common shares of the company.

# Deferred Tax Benefit (DTB)

- Upon entering the corporate tax regime, Hydro One also revalued the tax basis of its fixed assets at fair market value and recognized eligible capital expenditures.
  - As a result of a higher revaluation of its fixed assets for tax purposes, Hydro One expects to be able to claim higher depreciation expenses for a period of time under the normal corporate tax system to reduce its taxable income and taxes payable.
  - Because of the elimination of the deferred tax liability under the PILs regime (on payment of the departure tax) and the 'tax shield' impact of the depreciation expense, Hydro One recorded $2.81 billion in a one-time non-cash DTB, which increased its net income by the same amount.
    - This DTB was comprised of an elimination of an about $1.2 billion deferred tax liability under the PILs regime, as Hydro One paid the departure tax, and a deferred tax asset recorded by Hydro One of about $1.6 billion.
  - The recording of a DTB contributed to Hydro One's net income in 2015.
    - The Province recognized a non-cash fiscal benefit of approximately $2.4 billion as a result, upon consolidation its proportionate share of 84% of Hydro One's net income on the Province's books.
- From the Province's perspective, allocating the DTB directly as a policy option for rate mitigation is not viable.
  - This benefit was recognized by Hydro One in connection with the IPO, and the Province, as no longer a sole shareholder, does not have the authority to direct the company to provide this benefit to ratepayers, rather than its shareholders.
  - Hydro One's board of directors has a fiduciary duty to act in the best interests of all Hydro One shareholders.
- A decision from the Province to allocate or transfer part or all of the related departure tax payment received by OEFC would not, however, preclude the OEB's ability with respect to Hydro One's rate application and the DTB recognized by Hydro One in 2015.

Hi Steve,

Here's an early draft of a rate mitigation package that provides a policy rationale for the proposed measures. It's still an early draft and we need to firm up on the rate relief numbers and fiscal impact. My MO is still reviewing but I wanted you to have an early look.

<Comments on Electricity Sector Transformation Proposals v5 (CEFD).docx>

*COMMERCIALLY SENSITIVE AND CONFIDENTIAL ADVICE*

**Electricity Price Mitigation Proposal: Dedication Departure Tax**

**Issue:** The Ministry of Energy, as part of a suite of proposed initiatives to mitigate the rising cost of electricity, has suggested for consideration the potential dedication of the Departure Tax payment from the Hydro One IPO, to ratepayers.

**Context: Departure Tax**

- In connection with the Hydro One IPO, Hydro One's exemption from tax under the federal Income Tax Act and the Taxation Act (Ontario) ceased to apply and Hydro One was deemed to have disposed of its assets immediately before it lost its tax exempt status for proceeds equal to the estimated fair market value of those assets at that time.

- As a result of this deemed disposition, Hydro One was liable to make a "departure tax" payment in lieu of tax under the Electricity Act in respect of the income and capital gain, to the OEFC. [In order to facilitate this], ~~P~~prior to the IPO, the Province, as shareholder of Hydro One, made a capital contribution into Hydro One and received new common shares of Hydro One Limited for a total of $2.6 billion. This provided Hydro One with funds that it used to pay the "departure tax" to OEFC.
    - This transaction was fiscally neutral to the Province as the Province consolidates both OEFC's revenue and Hydro One's net income on its books. (Please see the background section for an illustration of the departure tax)
    - OEFC (and the Province upon consolidation) recorded a higher payment in lieu of tax revenue due to the departure tax, but this amount was~~will be~~ offset by the reduction in Hydro One's net income as a result of the payment.

- On November 4, 2015, Hydro One paid OEFC the $2.6 billion "departure tax".

**Proposal Overview:**

- The Ministry of Energy has not provided specifics with regards to the potential implementation of electricity price mitigation measures through the dedication of the departure tax. The methodology noted below is the CEFD's assessment of the likely method of implementation.

- The dedication of the $2.6 billion in departure tax to the benefit of electricity ratepayers would likely involve the transfer of $2.6 billion from OEFC to the Province, resulting in an expense to the OEFC and revenue to the Province credited to the Consolidated Revenue Fund.
    - The Province would then direct $2.6 billion to ratepayers through the Ministry of Energy as a rate mitigation program, which would record an expense related to this new program
        - A decision as to the length of the mitigation measure would also need to be made by the government.
    - The measure could be highlighted as a separate line item on the ratepayers monthly bill, identifying the impact of the reduction to ratepayers from the departure tax payment.
    - Although, there would be implementation and communication challenges with such approach as for example on why non H1 customers are benefiting from the departure tax payment.

**Staff Comments**

**Impact to the Province ~~/~~and OEFC**

- Should the Ministry of Energy decide to dedicate the departure tax to ratepayers, there would be a significant negative fiscal impact of up to $2.6B.
  - The departure tax payment by Hydro One to the OEFC, was effectively a true-up for lower PILs payments from Hydro One in previous years – and therefore should not be viewed as a one-time $2.6B cash windfall for the Province, indeed, it was fiscally neutral.
  - ~~Since the Province already made a $2.6 billion B capital contribution prior to the IPO to Hydro One to fund the departure tax, any amount dedicated from the departure tax to ratepayers would result in a fiscal impact.~~

- ~~[EFB: Please insert a bullet about stranded debt, or feel free to edit this bullet]~~In moving forward with a proposal to dedicate the Departure Tax, the OEFC would record a $2.6B expense on its financial statements
  - Originally, these funds were paid to the OEFC with the purpose to be dedicated towards ~~the repayment of~~ reducing stranded debt. Re-allocating this amount may have an impact on the defeasance schedule of this debt.

- [The Province has removed the Debt Retirement Charge from residential electricity bills beginning January 1, 2016 and introduced legislation ending ~~indicated that it plans on removing~~ the Debt Retirement Charge (DRC) from ~~commercial, industrial and~~ all other electricity bills starting April 1, 2018.
  - ~~The decision to dedicate the departure tax which would cause stranded debt to increase may also make it more difficult for the Province to move forward with this policy initiative. EFB: Please review to ensure comfort with this point as well.~~]
  - Given the above, the measure would put the burden of paying down solely on taxpayers.

**Impact to Ratepayers:**

- CEFD staff have performed an initial analysis of the impact to residential and industrial ratepayers from the allocation of $2.6 billion from the departure tax to ratepayers. Overall the impact to ratepayers from this potential proposal is relatively minimal.
  - Assuming that the $2.6 billion is allocated over a 5 year period, the benefit to residential ratepayers is $2.76 per month and industrial ratepayers is $3.71 per MWh
  - Assuming that the $2.6 billion is allocated over a 10 year period the benefit to residential ratepayers is $1.39 per month and industrial ratepayers is $1.86 per MWh
  - Stakeholders could argue that the use of H1's departure tax payment as a mitigation tool should be for the benefit of H1's ratepayers only. This would only introduce an

**Commented [FC1]:** This is not accurate, the fiscally neutrality comes from the DT being an expense to H1 and revenue to OEFC.
The capital contribution was a balance sheet movement, the Province exchanged cash for shares.

**Commented [SK62]:** Tricky relationship between stranded debt and end of the residual stranded debt and debt retirement charge.

Happy to remove, however, announcement of April 1 2018 end date made in FES 2015; same time period as the IPO.

Clearly there was a consideration (coordination?) between the two policy initiatives.

implementation complexity and could create fiscal pressures to also benefit other ratepayers.

- The measure would create a precedent for future departure tax payments with the consequent fiscal pressure if other LDCs leave the PILs regime and have to pay departure tax.

| Departure Tax Savings to Ratepayers | Allocation over 5 years | Allocation over 10 years |
|---|---|---|
| **Residential Ratepayers (savings $/mth)** | **$2.76** | **$1.39** |
| **Industrial Ratepayers (savings $/MWh** | **$3.71** | **$1.86** |

***Assumes total TWh supplied of 140 hours and monthly demand of 750 KWh per residential household**

**Other Considerations:**

- Aside from the proposed implementation methodology cited above, which results in an expense to the OEFC and revenue to the Province, as an alternative, OEFC could use its existing cash on hand to retire $2.6 billion of existing debt that it currently has outstanding with the Province. (As of March 2016, OEFC had over $3.4 billion in cash and cash equivalents on its balance sheet).
  - This alternative would allow the Province to obtain $2.6 billion in funds without causing a direct fiscal impact to OEFC and negatively impacting stranded debt.

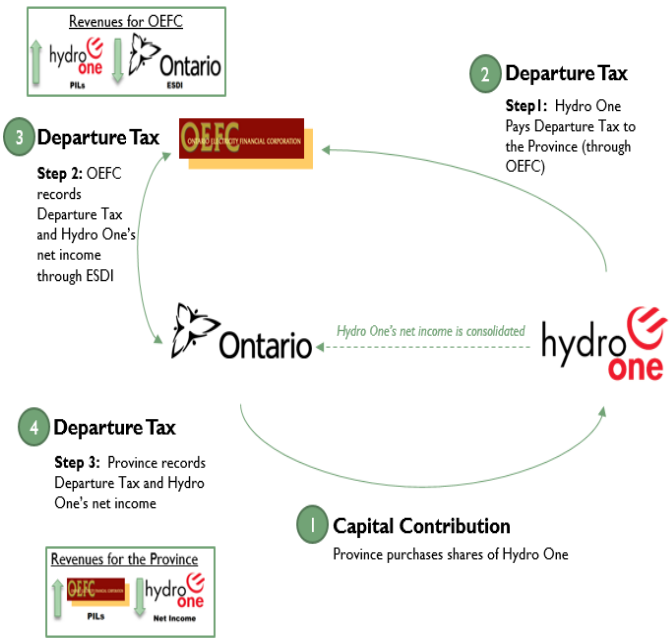
**Commented [FC3]:** This needs to be reworded. That said, there will always be a fiscal impact from spending the $2.6B as a mitigation program.

- It may however be a difficult communication exercise for the Province to link the receipt of $2.6 billion in cash ~~i~~from the retirement of outstanding debt held with the Province to a specific electricity price mitigation measure.

**Background**

*COMMERCIALLY SENSITIVE AND CONFIDENTIAL ADVICE*

**Departure Tax Fiscal Overview**



1. **Capital contribution** of $2.6 B represents a payment of cash for more shares in the company. This is fiscally neutral (the Province is just exchanging one asset for another).
2. **Departure Tax Payment (Step 1):** Hydro One pays the departure tax to OEFC. This is an expense, so Hydro One's net income decreases.
3. **Departure Tax Payment (Step 2):** OEFC records payment in lieu of tax (PILs) revenue from the departure tax but also receives less income through the Electricity Sector Dedicated Income (ESDI) generated from Hydro One's net income. The end result is neutral to the Stranded Debt.
4. **Departure Tax Payment (Step 3):** The Province records PILs (through consolidation of OEFC) and also records Hydro One's net income, which fell in Step 1. The end result is a fiscally neutral transaction.

Hi Arie, Wentao, Darren,

Please see attached note on the departure tax proposal.

Note: I'm a little hesitant on the DRC relationship with stranded debt. I can go either way, hence the square brackets; happy to omit.

Thanks,
Shajee

Hi Steve,

Here's an early draft of a rate mitigation package that provides a policy rationale for the proposed measures. It's still an early draft and we need to firm up on the rate relief numbers and fiscal impact. My MO is still reviewing but I wanted you to have an early look.

Serge

<Comments on Electricity Sector Transformation Proposals v5 (CEFD).docx>

*COMMERCIALLY SENSITIVE AND CONFIDENTIAL ADVICE*

**Electricity Price Mitigation Proposal: Dedication Departure Tax**

**Issue:** The Ministry of Energy, as part of a suite of proposed initiatives to mitigate the rising cost of electricity, has suggested for consideration the potential dedication of the Departure Tax payment from the Hydro One IPO, to ratepayers.

**Context: Departure Tax**

- In connection with the Hydro One IPO, Hydro One's exemption from tax under the federal Income Tax Act and the Taxation Act (Ontario) ceased to apply and Hydro One was deemed to have disposed of its assets immediately before it lost its tax exempt status for proceeds equal to the estimated fair market value of those assets at that time.

- As a result of this deemed disposition, Hydro One was liable to make a "departure tax" payment in lieu of tax under the Electricity Act in respect of the income and capital gain, to the OEFC. [In order to facilitate this], ~~P~~prior to the IPO, the Province, as shareholder of Hydro One, made a capital contribution into Hydro One and received new common shares of Hydro One Limited for a total of $2.6 billion. This provided Hydro One with funds that it used to pay the "departure tax" to OEFC.
    - This transaction was fiscally neutral to the Province as the Province consolidates both OEFC's revenue and Hydro One's net income on its books. (Please see the background section for an illustration of the departure tax)
    - OEFC (and the Province upon consolidation) recorded a higher payment in lieu of tax revenue due to the departure tax, but this amount will be offset by the reduction in Hydro One's net income as a result of the payment.

- On November 4, 2015, Hydro One paid OEFC the $2.6 billion "departure tax".

**Proposal Overview:**

- The Ministry of Energy has not provided specifics with regards to the potential implementation of electricity price mitigation measures through the dedication of the departure tax. The methodology noted below is the CEFD's assessment of the likely method of implementation.

- The dedication of the $2.6 billion in departure tax to the benefit of electricity ratepayers would likely involve the transfer of $2.6 billion from OEFC to the Province, resulting in an expense to the OEFC and revenue to the Province credited to the Consolidated Revenue Fund.
    - The Province would then direct $2.6 billion to ratepayers through the Ministry of Energy as a rate mitigation program, which would record an expense related to this program
        - A decision as to the length of the mitigation measure would also need to be made by the government.
    - The measure could be highlighted as a separate line item on the ratepayers monthly bill, identifying the impact of the reduction to ratepayers from the departure tax payment.

**Staff Comments**

**Impact to the Province ~~/~~and OEFC**

- Should the Ministry of Energy decide to dedicate the departure tax to ratepayers, there would be a significant negative fiscal impact of up to $2.6B.
    - The departure tax payment by Hydro One to the OEFC, was effectively a true-up for lower PILs payments from Hydro One in previous years – and therefore should not be viewed as a one-time $2.6B cash windfall for the Province.
    - Since the Province already made a $2.6 ~~billion~~ B capital contribution prior to the IPO to Hydro One to fund the departure tax, any amount dedicated from the departure tax to ratepayers would result in a fiscal impact.

- ~~[EFB: Please insert a bullet about stranded debt, or feel free to edit this bullet]~~In moving forward with a proposal to dedicate the Departure Tax, the OEFC would record a $2.6B expense on its financial statements
    - Originally, these funds were paid to the OEFC with the purpose to be dedicated towards ~~the repayment of~~ reducing stranded debt. Re-allocating this amount may have an impact on the defeasance schedule of this debt.

- [The Province has removed the Debt Retirement Charge from residential electricity bills beginning January 1, 2016 and indicated that it plans on removing the Debt Retirement Charge (DRC) from commercial, industrial and all other electricity bills starting April 1, 2018.
    - The decision to dedicate the departure tax which would cause stranded debt to increase may also make it more difficult for the Province to move forward with this policy initiative. ~~EFB: Please review to ensure comfort with this point as well.~~]

**Commented [SK61]:** Tricky relationship between stranded debt and end of the residual stranded debt and debt retirement charge.

Happy to remove, however, announcement of April 1 2018 end date made in FES 2015; same time period as the IPO.

Clearly there was a consideration (coordination?) between the two policy initiatives.

**Impact to Ratepayers:**

- CEFD staff have performed an initial analysis of the impact to residential and industrial ratepayers from the allocation of $2.6 billion from the departure tax to ratepayers. Overall the impact to ratepayers from this potential proposal is relatively minimal.
    - Assuming that the $2.6 billion is allocated over a 5 year period, the benefit to residential ratepayers is $2.76 per month and industrial ratepayers is $3.71 per MWh
    - Assuming that the $2.6 billion is allocated over a 10 year period the benefit to residential ratepayers is $1.39 per month and industrial ratepayers is $1.86 per MWh

| Departure Tax Savings to Ratepayers | Allocation over 5 years | Allocation over 10 years |
|---|---|---|
| **Residential Ratepayers (savings $/mth)** | **$2.76** | **$1.39** |
| **Industrial Ratepayers (savings $/MWh** | **$3.71** | **$1.86** |

***Assumes total TWh supplied of 140 hours and monthly demand of 750 KWh per residential household**

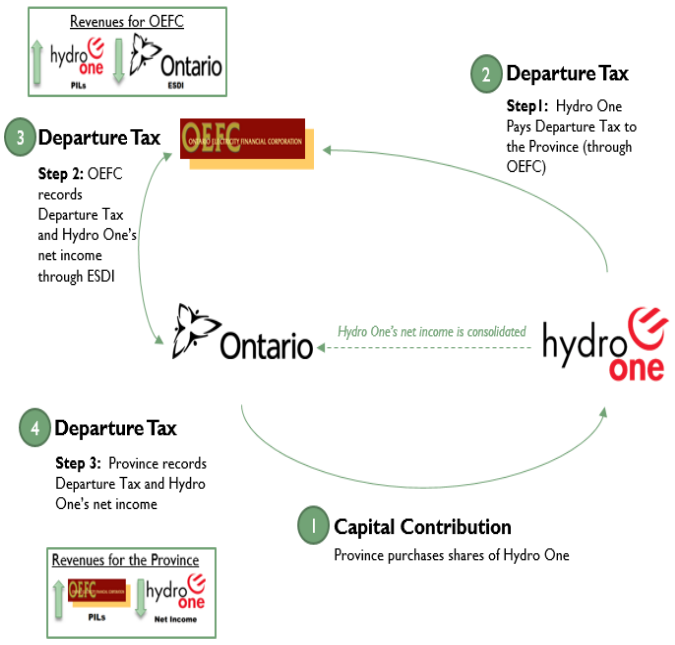
**Other Considerations:**

- Aside from the proposed implementation methodology cited above, which results in an expense to the OEFC and revenue to the Province, as an alternative, OEFC could use its existing cash on hand to retire $2.6 billion of existing debt that it currently has outstanding with the Province. (As of March 2016, OEFC had over $3.4 billion in cash and cash equivalents on its balance sheet).
    - This alternative would allow the Province to obtain $2.6 billion in funds without causing a direct fiscal impact to OEFC and negatively impacting stranded debt.

- It may however be a difficult communication exercise for the Province to link the receipt of $2.6 billion in cash ~~i~~from the retirement of outstanding debt held with the Province to a specific electricity price mitigation measure.

**Background**

**Departure Tax Fiscal Overview**



1. **Capital contribution** of $2.6 B represents a payment of cash for more shares in the company. This is fiscally neutral (the Province is just exchanging one asset for another).
2. **Departure Tax Payment (Step 1):** Hydro One pays the departure tax to OEFC. This is an expense, so Hydro One's net income decreases.
3. **Departure Tax Payment (Step 2):** OEFC records payment in lieu of tax (PILs) revenue from the departure tax but also receives less income through the Electricity Sector Dedicated Income (ESDI) generated from Hydro One's net income. The end result is neutral to the Stranded Debt.
4. **Departure Tax Payment (Step 3):** The Province records PILs (through consolidation of OEFC) and also records Hydro One's net income, which fell in Step 1. The end result is a fiscally neutral transaction.

Thanks Chris.

Scott, Gadi, and Tim, staff have drafted a preliminary note based on the "bootleg" preliminary deck, including some comments on the broad theme/rationale and the more fiscally-based proposals, as attached. It is a work-in-progress and subject to update for any revisions of Energy's deck to be received.

Ron

FYI. This was shared with us as a bootleg, noting that further work is ongoing, including around potential fiscal impact. In addition to obvious electricity sector and fiscal plan tie-ins, there is mention of potential expansion of the Trillium Trust to fund electricity infrastructure projects.

<Comments on Electricity Sector Transformation Proposals v5 (CEFD).docx>

# Comments on Ministry of Energy's Draft "Proposed Initiatives to Transform Ontario's Electricity Sector"

The Ministry of Energy (Energy) is providing an update on progress related to transforming the province's electricity sector by elaborating on potential price mitigation initiatives, as outlined in its deck.

## CONTEXT

- As outlined in Energy's update, electricity costs have been increasing following investments to transform towards cleaner generation (i.e., meeting goals to decarbonize) and modernize the electricity infrastructure (e.g., more than $35 billion in cleaner generation and $15.5 billion investment by Hydro One alone in transmission and distribution systems).

- The government has taken action to lower electricity cost pressures to all consumers by taking actions, including deferring investments in generation (e.g., new build nuclear), improving market efficiency and decreasing costs related to renewable procurement (e.g. GEIA renegotiation, decreasing FIT prices, etc).

- The government introduced the Ontario Rebate for Electricity Consumers (OREC) which will provide a rebate equal to the 8% provincial portion of the Harmonized Sales Tax, saving $11 per month starting January 1, 2017 for eligible small businesses, farms and residential consumers and has taken steps to expand the Rural or Remote Electricity Rate Protection program, expected to save eligible RRRP customers about $45 per month, when combined with OREC.

## COMMENTS

Energy's proposals generally involve shifting costs from the rate base to the tax base. While the subset of costed proposals may have a fairly limited residential rate payer impact (e.g. about $5-6/month for residential, less than 5% of the average monthly bill), those proposals would come at a material incremental fiscal cost ($1 billion to $1.3 billion). Note these impacts are lower than those presented in an earlier deck ($1.3 billion to $1.9 billion). Energy also presents other proposals where costs and impacts are "TBD".

Over the past five years, the existing fiscally funded electricity price mitigation efforts have averaged about $1.5 billion and is already expected to increase to about $2 billion with the introduction of OREC. The existing program costs are summarized in the table below:

| ($M) | 2011-12 | 2012-13 | 2013-14 | 2014-15 | 2015-16 | 2016-17[1] | 2017-18[1] |
|---|---|---|---|---|---|---|---|
| OCEB | 1,033 | 994 | 1,006 | 1,078 | 860 | - | - |
| OREC | - | - | - | - | - | 300 | 1,100* |
| Ending DRC[2] | - | - | - | - | 85 | 330 | 330 |
| NIERP | 120 | 120 | 115 | 108 | 120 | 120 | 120 |
| NOEC | 23 | 24 | 25 | 24 | 26 | 25 | 25 |
| OEPTC[3] | 354 | 406 | 418 | 429 | 444 | 450 | 460 |
| TOTAL | 1,530 | 1,544 | 1,564 | 1,639 | 1,525 | 1,225 | 2,005 |

1. 2016-17, 2017-18 based on forecasted numbers
2. 2015-16 estimated for 3 months of reduced DRC revenue
3. OEPTC amounts in all years based on energy component of the rebate.

* Sourced from Energy PRRT submission

OCEB – Ontario Clean Energy Benefit
OREC – Ont. Rebate for Electricity Consumers
NIERP – Northern Industrial Electricity Rate program
NOEC – Northern Ontario Energy Credit
DRC – Debt etirement Charge
OEPTC – Ont. Energy & Property Tax Credit

**Energy's Broad Policy Themes / Rationales**

A key theme / rationale cited by Energy is to no longer use rate-base to pay for "social programs" by shifting cost of OESP, RRRP and proposed First Nation Rate to tax-base.

- Energy has typically in the past provided a constitutional law assessment on these programs, providing support for these programs to be ratepayer-supported programs as they provide electricity system benefits / are part of a comprehensive regulatory framework.
- Switching messaging may risk criticism and legal challenges on these and other remaining rate-base funded programs.

| Energy Theme / Rationale | Key Staff Comments |
|---|---|
| Provide greater support for lower income Ontarians by enhancing the OESP or expanding eligibility | • Significant fiscal exposure -- $0.4-0.45 bn at current levels, higher if enhanced. On-bill benefits.<br>• Could contemplate phase-in to manage fiscal impact.<br>• Could look at phasing out existing fiscal-funded programs also targeted to low income or identified groups (e.g., OEPTC, NOEC).<br>o Not on the bill, so less direct and visible electricity cost mitigation.<br>o Phase-out to reflect time to increase application based OESP reaching an increasing portion of eligible households. |
| Fund conservation programs through the tax-base for the remaining term of the existing CDM framework and transition costs to the new "green bank entity" over time | • Potentially significant fiscal impact – current program costs are about $0.45 bn<br>• Conservation programs do provide an electricity system benefits, but would now be fiscally-funded, so a cross-subsidisation from tax-base<br>• Accessing the cap&trade amount in the GGRA would crowd-out other GGRA programs, affecting overall GHG reductions and negatively affect the diccal plan |
| Expand the scope of the "Trillium Trust" to make investments in energy infrastructure eligible for funding | • Would require either squeezing out existing Moving Ontario Forward project funding from the Trillium Trust, requiring funding from another source; or additional funding from asset optimization, given that the government is committed to using the targeted $5.7 billion to fund across Moving Ontario Forward projects<br>• Would have little near-term impact, unless TT funding displaces near-term, non-incremental projects coming onto service<br>• Could lower utility value, including Hydro One, by removing projects, currently and prospectively, that they might have been able to add to their ratebase and earn a return |
| **E**nd the Debt Retirement Charge (DRC) early for commercial and small industrial Class B electricity consumers | • End of the DRC had previously been linked with a balance between rate mitigation and managing stranded debt<br>• Provides only temporary incremental mitigation, as DRC legislated to end April 1, 2018.<br>• End of the DRC had previously been linked to retirement of residual stranded debt<br>• Removing additional DRC revenue from the OEFC would call into question the position that the debt and liabilities of the old Ontario Hydro can continue to be supported |

**Detail on Proposals**

Energy has outlined the following rate mitigation proposals with significant bearing on the fiscal plan:

<u>OESP & RRRP (Total of about $0.4 to 0.45 Billion/year</u>):

This would shift the cost of the current and proposed expanded Ontario Electricity Support Program (OESP), and the Rural or Remote Electricity Rate Program (RRRP), to the tax base. *Note: that the fiscal exposure would increase if the OESP take up rate is larger, and faster than assumed.*

- The fiscal impact from shifting OESP and RRRP to the tax base may also be larger if future changes are made to the programs. Energy notes that
  - The programs could provide greater support for lower income Ontarians by enhancing the OESP or expanding eligibility (e.g., by 50% in the table).
  - The RRRP regulation provides a funding mechanism for transmission infrastructure required to grid connect remote First Nation communities. Considerations for how that funding will be supported by the tax base will need to be determined. [The current deck links Trillium Trust for remote electrification.]

<u>Fund Conservation Programs through the Tax-Base</u>:

This would be for the remaining term of the existing Conservation and Demand Management framework. Over time, the costs would be transitioned to the new "green bank entity", to shift cost recovery from ratepayers to cap and trade revenues.

- Energy's rationale for the cost shift would be in recognition of the burden borne by ratepayers in phasing out coal generation.

<u>Expanding the scope of the Trillium Trust to invest in energy infrastructure:</u>

The Province is currently targeting $5.7 billion from asset optimization to dedicate to the Trillium Trust for investment in infrastructure under Moving Ontario Forward.

- Expanding access to natural gas is already included under Moving Ontario Forward.
- Using the Trillium Trust for additional energy projects would require either
  - squeeze out existing Moving Ontario Forward project funding from the Trillium Trust, requiring funding from another source, or
  - additional funding from asset optimization, given that the government is committed to using the targeted $5.7 billion to fund across Moving Ontario Forward projects,
  - in effect, in both cases above, incremental investments for energy infrastructure from the Trillium Trust would have negative fiscal impacts once the assets are in-service and amortized.
- Investments through the Trillium Trust instead of through other electricity sector entities (Hydro One, OPG, LDCs) could have additional negative fiscal impacts as these entities could see reduced ratebase growth, lowering the revenues that the Province realizes from these entities (e.g., consolidated net income, payments-in-lieu of taxes, etc.).
  - May also negatively impact Hydro One share price if the measure is perceived by the market as reducing Hydro One's potential ratebase growth.
- Unless applied to existing projects, to displace ratepayer-supported costs, this measure would have little or no near-term rate impact.

Departure Tax:

As a result of the IPO, Hydro One paid a "departure tax" payment in lieu of tax (PIL) of $2.6 billion, as a final true-up of its PILs tax obligation. Energy lists using some or all of this departure tax for price mitigation.

- This was paid to the Ontario Electricity Financial Corporation (OEFC). The departure tax payment was fiscally neutral to the Province as the income to the OEFC was fully offset by a reduction in ESDI resulting from reduced net income of Hydro One.
- Using some or all of it for price mitigation would require restating the net stranded debt paydown by OEFC related to the IPO. [As the departure tax paid was fiscally neutral, OEFC's uplift was primarily the result of the related deferred tax benefit, as well as the s.50.3 benefit under the *Electricity Act, 1998*.]
- This would be a one-time measure, potentially spread out over a few years, and fiscal impact, as the departure tax amount was one-time.

Debt Retirement Charge (Total of about $0.45 Billion in annualized rate to 2017-18):
Ending the DRC early for Class B customers (commercial, small industrial) would have an impact of about $0.45 billion in 2017-18.

- The end of the DRC had previously been linked with balancing mitigation and progress on stranded debt reductionthe end retirement of the residual stranded debt.
- Removing additional DRC revenue from the OEFC would call into question the position that the debt and liabilities of the old Ontario Hydro can continue to be supported.

| ($M) | 2016-17[1] | 2017-18[1] | 2018-19[1] | 2019-20[1] | 2020-21[1] |
|---|---|---|---|---|---|
| OESP, RRRP, First Nation rate | | 398 | 419 | 433 | 447 |
| Conservation Programs through Tax Base | 110 | 450 | 450 | 450 | 450 |
| [Trillium Trust] | TBD | TBD | TBD | TBD | TBD |
| Departure Tax | | TBD | TBD | TBD | TBD |
| DRC removal for Class B | 110 | 450 | | | |
| **Proposed Program Total:** | **220** | **1,298** | **869** | **883** | **897** |
| | | | | | |
| OREC | 300 | 1,100* | 1,100* | 1,200* | 1,200* |
| Ending DRC | 330 | 330 | -- | -- | -- |
| NIERP | 120 | 120 | 120 | 120 | 120 |
| NOEC | 25 | 25 | 25 | 25 | 25 |
| OEPTC[2] | 450 | 460 | 470 | 481 | 481 |
| **Existing Program Total:[3]** | **1,225** | **2,005** | **1,715** | **1,826** | **1,826** |
| **TOTAL[3]** | **1,445** | **3,303** | **2,584** | **2,709** | **2,723** |

1. Based on forecasted numbers
2. OEPTC amounts in all years based on energy component of the rebate.

* Sourced from Energy PRRT submission

3. Total would be significantly larger with the TBDs crystalized.

Hi Shajee,

My two cents and in the context of Scott's comments:

1. DRC should stay in the deck but you may want to provide further context as for example that removing it for residential users was a policy decision to help mitigate rate pressures rather than based on defeasance as per the initial concepts.

2. With respect to the fiscal contributions from OPG, H1 you may want to add context on how OPG and H1 are commercial business corporations expected to produce a return in exchange for the risk the shareholder assumes. Also that there is an opportunity cost on having capital allocated to them. I recognize this may be more of a controversial point (depending on how people see things) but is technically correct to flag if people are somehow challenging the returns or earnings the Province obtains from its commercial enterprises.

Thanks,

Francisco

Thanks Ron.

I found a similar file, but began from 2011-12 onwards to be consistent with the table we were developing. In Slide 16, I added a revised chart.

Please see file attached, also found here:
S:\Users\CEF\Hydro 2016\Electricity Prices\Mitigation Proposals - Dec 2016\Price-Mitigation - CEFD Slides-Dec6-2016_v6.pptx

Also per Scott's comments below, I left the option open to use the DRC as a fiscal benefit, as

opposed to the DRC ending as a rate mitigation measure (fiscal cost). That's indicated by Option 1 or 2 in the top right corner of the chart.

Happy to update the OEFC Board Orientation file as well to reflect this revision. And please advise if you'd like years going back to 1999-2000.

Thanks,
Shajee

Hi,

I think you had been previously working on updating slide 9 of the attached.

FyI Shajee.

Can you update the chart. I believe you had a run at it last month.

Need to add new scenarios, though.

Ron

> Thanks Ron. Do you mind sharing those out year forecasts? Latest OEFC board materials that I have seen only forecast this fiscal.
>
> The table in your presentation also goes back to 2011-12, so assume that the all-in fiscal impact of the electricity sector might have been very different. Might be interesting to show the evolution from a net positive to net drain, as you describe below. Your comment around DRC is a good one. I wondered in the table whether it might be helpful to show DRC revenues (rather than "ending DRC"). That will show the decline, but that it is still a positive to the Province even out to 2017-18.
>
> However, take my comments with a grain of salt as I am outside my area of expertise.

> Hi Scott,

Thanks.

On your comment as you may recall, we used to do that roll-up (initially when Serge was ADM), but that would also include all the OEFC expenses too. And not all the GRC is OEFC related, but helps with MNR and its costs, so not completely straightforward.

Post-DRC, and post much lower Hydro One net income to the Province and lost PILs, as Nancy may recall from some OEFC board presentations (Serge likely missed those Board presentations), OEFC may be close to flat.

Ron

Hi Ron,

I have not seen a draft since last week. Likely same version you last saw Ron. I did have a chance to speak with folks who are more in the know on this and I can confirm that none of the OPG options are likely to show up in the next iteration.

One suggestion on the note, Ron: if you are going to show all the existing fiscal pressures, it may be helpful to also show the fiscal benefits from the electricity system (OPG/H1 revenues, PILs, GRC etc.).

Thanks,
Scott

Hi Nancy, Scott,

As discussed yesterday, I have not seen any iterations of an Energy deck or other materials on price mitigation options since early last week, when the DMO shared a "bootleg" copy. We sent back some comments on that deck to the Deputy, as attached.

Also attached, for your information, are some comments and a deck we did for the Deputy the previous week, in advance of the Major Projects Committee meeting

that week. I had understood that the Deputy shared back the comments with Energy DMO at that time.

As discussed yesterday, CEFD is looking forward to being able to input into the contemplation of potential initiatives. Having said that, staff availability over the next couple weeks will be very limited.

Thanks Chris.

Scott, Gadi, and Tim, staff have drafted a preliminary note based on the "bootleg" preliminary deck, including some comments on the broad theme/rationale and the more fiscally-based proposals, as attached. It is a work-in-progress and subject to update for any revisions of Energy's deck to be received.

FYI. This was shared with us as a bootleg, noting that further work is ongoing, including around potential fiscal impact. In addition to obvious electricity sector and fiscal plan tie-ins, there is mention of potential expansion of the Trillium Trust to fund electricity infrastructure projects.

Hi Steve,

Here's an early draft of a rate mitigation package that provides a policy rationale for the proposed measures. It's still an early draft and we need to firm up on the rate relief numbers and fiscal impact. My MO is still reviewing but I wanted you to have an early look.

Serge

DRAFT

# Electricity Price Mitigation

Corporate and Electricity Finance Division
December 7, 2016

DRAFT

# General Comments on Energy's Deck

- Energy's deck note various actions taken to-date to reduce costs or cost pressures, such as deferring generation supply investments, improving market efficiency, and reducing the costs of existing procurements.
- Aside from reducing costs on the electricity bill, it is not clear what principles are being applied, short term or long term for electricity pricing.
  - A principle that was applied in the past was to ensure that electricity consumers paid the true cost of electricity, for example.
  - The Energy proposals appear to be about, in part at least, moving some costs from the rate base to the tax base.
- However, the Energy proposals may be seen as having a fairly limited impact, e.g., a little over $8/month for residential, or a little over 5% of the monthly bill (though not all of the proposals have been costed / assessed).
  - The proposals would have a significant fiscal cost [about $1.3 – 1.9 plus bn per year in new fiscal costs].
- There is already significant amounts of existing fiscally-funded electricity price mitigation
  - Averages over $1.5 billion per year over the past five years, and estimated to increase to about $2 billion in 17-18 (see subsequent slide for estimated costs over time, and likely increasing over time), with the total tax-based costs rising to about $3.3-3.9 plus billion in 2017-18, if Energy`s proposals are adopted.
  - These existing mitigation costs are not presented in Energy's deck.
  - Not included is any "hidden" price mitigation through constrained financial performance of, e.g., OPG.

OCEB – Ontario Clean Energy Benefit
OREC – Ontario Rebate for Electricity Consumers
DRC – Debt Retirement Charge
NIERP – Northern Ontario Electricity Rate Program
NOEC – Northern Ontario Energy Credit
OEPTC – Ontario Energy and Property Tax Credit

- The table above shows the annual amount of taxpayer funded electricity price mitigation from 2011-12 to 2017-18.
- From 2011-12 to 2015-16 there has been an annual fiscal impact of approximately $1.6 billion due to electricity price mitigation programs.
- In 2016-17, the fiscal impact due to electricity price mitigation programs is estimated at approximately $1.2 billion.
- In 2017-18, due primarily to the start of the Ontario Rebate for Electricity Consumers, the expected fiscal impact due to electricity price mitigation programs is approximately $2.0 billion.

- The table above shows the annual amount of taxpayer funded electricity price mitigation from 2011-12 to 2017-18.
- From 2011-12 to 2015-16 there has been an annual fiscal impact of approximately $1.6 billion due to electricity price mitigation programs.
- In 2016-17, the fiscal impact due to electricity price mitigation programs is estimated at approximately $900 million.
- In 2017-18, due primarily to the start of the Ontario Rebate for Electricity Consumers, the expected fiscal impact due to electricity price mitigation programs is approximately $1.7 billion.

# Electricity Price Mitigation

General Decision Points on Program Features:

- Funding: Rate base vs Tax base
  - Tax base programs have a direct fiscal impact on the Province's finances, and shift costs based on taxpayer incidence and impact on expenditure room for other, non-electricity, programs.
  - Rate base programs shift costs from one group of ratepayers to another.
- On-bill vs Not On-bill
  - Recent focus has been on on-bill programs, such as OESP and OREC.
  - Older tax-base funded programs that are not visible on the bill are still in place, such as NOEC and OEPTC.
  - As OESP enrollment increases, could consider phasing out the non-bill benefits of NOEC and OEPTC.
- Targeted vs General
  - Recent new programs include both general (OREC) and targeted (OESP) programs.
  - Consideration could be made to make OREC more conservation-friendly (e.g., a monthly eligible consumption cap brought in, as with the former Ontario Clean Energy Benefit), and maybe a higher cap in the winter to allow for space heating costs.
  - A targeted industrial program recently extended and made on-going is the Northern Industrial Electricity Rate (NIER) program.

DRAFT

# Energy's Proposals

Energy is proposing additional electricity price mitigation programs, currently funded through the electricity system, be fiscally-funded. They could be upwards of $2 bn/year, (plus the departure tax), which is not included in the fiscal plan, which would challenge the path to balance.

- OESP & RRRP (Total of about $0.4 Bn/yr): This includes shifting the cost of the Ontario Electricity Support Program (OESP) and the Rural or Remote Electricity Rate Program (RRRP) to the tax base. Note that the fiscal exposure is larger if the OESP take up rate is larger, faster than assumed.

- Industrial Conservation Initiative (ICI -- About $900+ M/yr): Energy also shows, as a potential residential price mitigation measure, the cancellation of the ICI.
  - Energy is not initially proposing it be continued instead as taxpayer funded, but notes that about 30% price increase (from $85/MWh to $110), if ICI is cancelled, for the large Class A customers benefiting from ICI currently.
  - As this cost estimate is for 2016, prior to the planned expansion of the ICI, this could further increase the fiscal exposure by about $100 million).

- Departure Tax: As a result of the IPO, Hydro One paid a "departure tax" payment in lieu of tax (PIL) of $2.6 billion, as a final true-up of its PILs tax obligation.
  - This was paid to the Ontario Electricity Financial Corporation and helped reduce stranded debt.
  - Using some or all of it for price mitigation would change the net stranded debt paydown by OEFC resulting from the IPO. This would also be a one-time measure (potentially over a few years), and fiscal impact, as the departure tax amount was one-time.

- Other fiscal cost risks (Total of about $0.8+ Bn):
  - Amortisation of conservation costs also poses a fiscal risk (about $0.4 bn/yr),
  - Ending the DRC early for Class B customers (commercial, small industrial) (about $0.4 bn/yr to 2017-18)
  - Lowering of the debt interest paid by OPG (about $30 – 70 million/yr between 2017 and 2021),

DRAFT

# Fiscal Mitigation Options

- With the addition of recent and new price mitigation measures, a review should be initiated on fiscally-funded programs. There could be a phase down / out transition period considered. Examples include the following:

- Ontario Energy and Property Tax Credit (OEPTC) and Northern Ontario Energy Credit (NOEC):
  - Phase down and/or out the non-on-bill benefits of. (Save up to about $460 M/yr)
  - These targeted, low-income measures were introduced after the HST was introduced.
  - The OESP provides a larger, targeted and on-bill relief to qualifying consumers.

- Ontario Rebate for Electricity Consumers (OREC):
  - Introduce over time a monthly eligible consumption cap, with perhaps a higher cap in the winter to allow for space heating costs.
  - As with the prior OCEB cap, provides a rough incentive for conservation and correlation to larger homes. A higher cap in winter may help with space-heating issue.
  - May be challenging to implement.

- Greenhouse Gas Reduction Account:
  - If ICI is put on the tax-base, make it eligible for GGRA funding.
  - Positioned as, e.g., providing annual benefits from participants conserving and shifting off-peak to reduce reliance on GHG-emitting peaking plants

DRAFT

# Proposed Taxpayer Funded Electricity Price Mitigation Option 1
(To be revised)

| ($M) | 2016-17[1] | 2017-18[1] | 2018-19[1] | 2019-20[1] | 2020-21[1] |

# Appendix

DRAFT

# Background on Taxpayer-funded Electricity Price Mitigation

Option 1

| Program | Annual Fiscal Impacts ($M) | Date | Details |
|---|---|---|---|
| **Ontario Clean Energy Benefit (OCEB)** | ~1,000 | Jan 1 2011 to Dec 31, 2015 | OCEB provided over four million residential customers, and over 400,000 farm, small business and other small users with a benefit equal to 10 per cent of the total cost of electricity on their bills, including tax. Effective September 1, 2012, 10 per cent benefit was capped for the first 3,000 kWh of electricity consumed per month. OCEB expired December 31, 2015, as legislated. |
| **Removed Debt Retirement Charge (DRC) from Residential Bills** | ~330 | Jan 1, 2016 to Mar 31, 2018 | Removing the DRC from residential users was a policy decision to help mitigate residential rate pressures – particularly in the context of the end of OCEB – rather than based on defeasance as per the original conception of the DRC and therefore came at a fiscal cost.<br>~~The government removed the DRC from residential electricity users' bills as of January 1, 2016.~~ This is saving a typical residential user about $70 each year and meant ending the DRC earlier for these users than otherwise provided for in the *Electricity Act, 1998*. |
| **Ontario Rebate for Electricity Consumers (OREC)** | ~1,200 | Jan 1, 2017 onward | This ongoing program will rebate -- directly on consumers' residential electricity bills -- an amount equal to the provincial portion of the Harmonized Sales Tax (HST). |
| **Northern Industrial Electricity Rate (NIER) Program** | 120 | March 2010 | As announced in Budget 2015, the government committed to ongoing support for northern industrials with $120 million allocated annually. NIER was previously extended in 2012 for an additional three-year term, effective April 1, 2013 and also for a year effective April 1, 2016, with an allocation up to $120 million per year.<br>Qualifying participants receive a rebate of two cents per kilowatt-hour (kWh) up to a maximum of $20 million per year per company.<br>NIER initially established as a three-year program in Budget 2010, effective April 1, 2010. |
| **Northern Ontario Energy Credit** | ~25 | Budget 2010 | Delivered as part of the Ontario Trillium Benefit, provides individuals living in northern Ontario with a credit of up to $146 per year for the 2016 benefit year, and families up to $224.[1] |
| **Ontario Energy Property Tax Credit** | ~445[1] | Budget 2010 | Delivered as part of the Ontario Trillium Benefit, energy portion provides up to $224 per year (inflation adjusted) for low-to moderate-income individuals and families, and for qualifying seniors.[1] |

1. Energy portion cost only. Both the energy portion of the Ontario Energy and Property Tax Credit (OEPTC) and NOEC were introduced/enhanced following the introduction of the HST and have a significant annual fiscal cost (totalling about $500 million annually).

# Background on Taxpayer-funded Electricity Price Mitigation

| **Ontario Clean Energy Benefit (OCEB)** | ~1,000 | Jan 1 2011 to Dec 31, 2015 | OCEB provided over four million residential customers, and over 400,000 farm, small business and other small users with a benefit equal to 10 per cent of the total cost of electricity on their bills, including tax. Effective September 1, 2012, 10 per cent benefit was capped for the first 3,000 kWh of electricity consumed per month. OCEB expired December 31, 2015, as legislated. |
| **Ontario Rebate for Electricity Consumers (OREC)** | ~1,200 | Jan 1, 2017 onward | This ongoing program will rebate -- directly on consumers' residential electricity bills -- an amount equal to the provincial portion of the Harmonized Sales Tax (HST). |
| **Northern Industrial Electricity Rate (NIER) Program** | 120 | March 2010 | As announced in Budget 2015, the government committed to ongoing support for northern industrials with $120 million allocated annually. NIER was previously extended in 2012 for an additional three-year term, effective April 1, 2013 and also for a year effective April 1, 2016, with an allocation up to $120 million per year.<br>Qualifying participants receive a rebate of two cents per kilowatt-hour (kWh) up to a maximum of $20 million per year per company.<br>NIER initially established as a three-year program in Budget 2010, effective April 1, 2010. |
| **Northern Ontario Energy Credit** | ~25 | Budget 2010 | Delivered as part of the Ontario Trillium Benefit, provides individuals living in northern Ontario with a credit of up to $146 per year for the 2016 benefit year, and families up to $224.[1] |
| **Ontario Energy Property Tax Credit** | ~445[1] | Budget 2010 | Delivered as part of the Ontario Trillium Benefit, energy portion provides up to $224 per year (inflation adjusted) for low-to moderate-income individuals and families, and for qualifying seniors.[1] |

1. Energy portion cost only. Both the energy portion of the Ontario Energy and Property Tax Credit (OEPTC) and NOEC were introduced/enhanced following the introduction of the HST and have a significant annual fiscal cost (totalling about $500 million annually).

# Timeline: Taxpayer-funded Electricity Price Mitigation

DRAFT

Option 1

**Budget 2010: OEPTC, NOEC Proposed as part of the Ontario Trillium Benefit**

*In the 2011 Budget, the government combined the payments of three existing tax credits — the Ontario Sales Tax Credit, the Ontario Energy and Property Tax Credit, and the Northern Ontario Energy Credit — to create the OTB. The OTB is paid in monthly instalments throughout the year, which helps people meet their expenses as bills arrive.*

**Ontario Clean Energy Benefit** (Jan 1 2011 to Dec 31 2015)

*The OCEB was introduced in the 2010 Ontario Economic Outlook and Fiscal Review to help consumers transition to a cleaner electricity system. As set out in legislation, the OCEB ended on December 31, 2015. The Province has introduced rate mitigation measures to be implemented after December 31, 2015.*

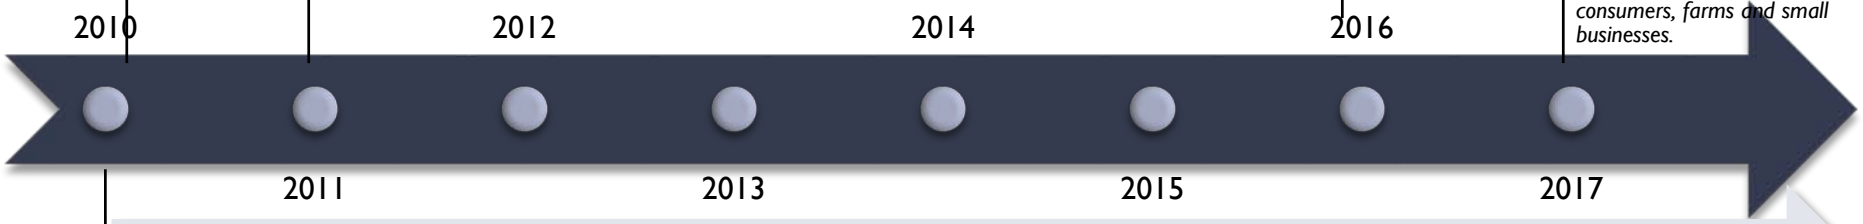
*OCEB provided over four million residential customers, and over 400,000 farm, small business and other small users with a benefit equal to 10 per cent of the total cost of electricity on their bills, including tax, for the first 3,000 kilowatt-hours (kWh) of monthly electricity consumption.*

**Removing DRC from Residential Bills** (Jan 1 2016 to Mar 31 2018)

*Removing the DRC from residential users was a policy decision to help mitigate residential rate pressures rather than based on defeasance as per the original conception of the DRC. This saves a typical residential user about $70 each year and ends the DRC earlier for these users than otherwise provided for in the Electricity Act, 1998.*

**Ontario Rebate for Electricity Consumers**

*As of January 1, 2017, OREC will reduce electricity costs by an amount equal to the provincial portion of the HST for about five million residential consumers, farms and small businesses.*



**History of Northern Industrial Electricity Price Relief**

**November 2006**

*The Ontario government announced the Northern Pulp and Paper Electricity Transition Program (NPPETP), a three-year $140 million, to be effective retroactively to October 1, 2006*

**Budget 2009**

*The government announced extension of the NPPETP by one year providing about $58 million with electricity price rebates of 1.8 cents/kWh.*

**Budget 2010**

*NIER program announced, with a projected fiscal cost of $150 M per year, to provide electricity price rebates for qualifying large industrial facilities in northern Ontario. An additional $21.8 million allocated for existing NPPETP in 2010-11 to be integrated with NIER.*

**September 2010**

*Transition from NPPETP to NIER: pulp and paper mills participating in NPPETP continued to receive the NPPETP rebate of 1.8 cents/kWh until September 30, 2010, with those qualifying for NIER receiving a top-up rebate of 0.2 cents/kWh.*

**December 2012**

*The government announced the extension of the NIER for three years, capping the rebates to a maximum of 2011-12 consumptions levels or $20 million, whichever is lower.*

# Timeline: Taxpayer-funded Electricity Price Mitigation

DRAFT

Option 2

**Budget 2010: OEPTC, NOEC Proposed as part of the Ontario Trillium Benefit**

*In the 2011 Budget, the government combined the payments of three existing tax credits — the Ontario Sales Tax Credit, the Ontario Energy and Property Tax Credit, and the Northern Ontario Energy Credit — to create the OTB. The OTB is paid in monthly instalments throughout the year, which helps people meet their expenses as bills arrive.*

**Ontario Clean Energy Benefit** (Jan 1 2011 to Dec 31 2015)

*The OCEB was introduced in the 2010 Ontario Economic Outlook and Fiscal Review to help consumers transition to a cleaner electricity system. As set out in legislation, the OCEB ended on December 31, 2015. The Province has introduced rate mitigation measures to be implemented after December 31, 2015.*

*OCEB provided over four million residential customers, and over 400,000 farm, small business and other small users with a benefit equal to 10 per cent of the total cost of electricity on their bills, including tax, for the first 3,000 kilowatt-hours (kWh) of monthly electricity consumption.*

**Ontario Rebate for Electricity Consumers**

*As of January 1, 2017, OREC will reduce electricity costs by an amount equal to the provincial portion of the HST for about five million residential consumers, farms and small businesses.*

2010 2011 2012 2013 2014 2015 2016 2017

**History of Northern Industrial Electricity Price Relief**

**November 2006**

*The Ontario government announced the Northern Pulp and Paper Electricity Transition Program (NPPETP), a three-year $140 million, to be effective retroactively to October 1, 2006*

**Budget 2009**

*The government announced extension of the NPPETP by one year providing about $58 million with electricity price rebates of 1.8 cents/kWh.*

**Budget 2010**

*NIER program announced, with a projected fiscal cost of $150 M per year, to provide electricity price rebates for qualifying large industrial facilities in northern Ontario. An additional $21.8 million allocated for existing NPPETP in 2010-11 to be integrated with NIER.*

**December 2012**

*The government announced the extension of the NIER for three years, capping the rebates to a maximum of 2011-12 consumptions levels or $20 million, whichever is lower.*

DRAFT

# Potential Fiscal Impact to the Electricity Sector

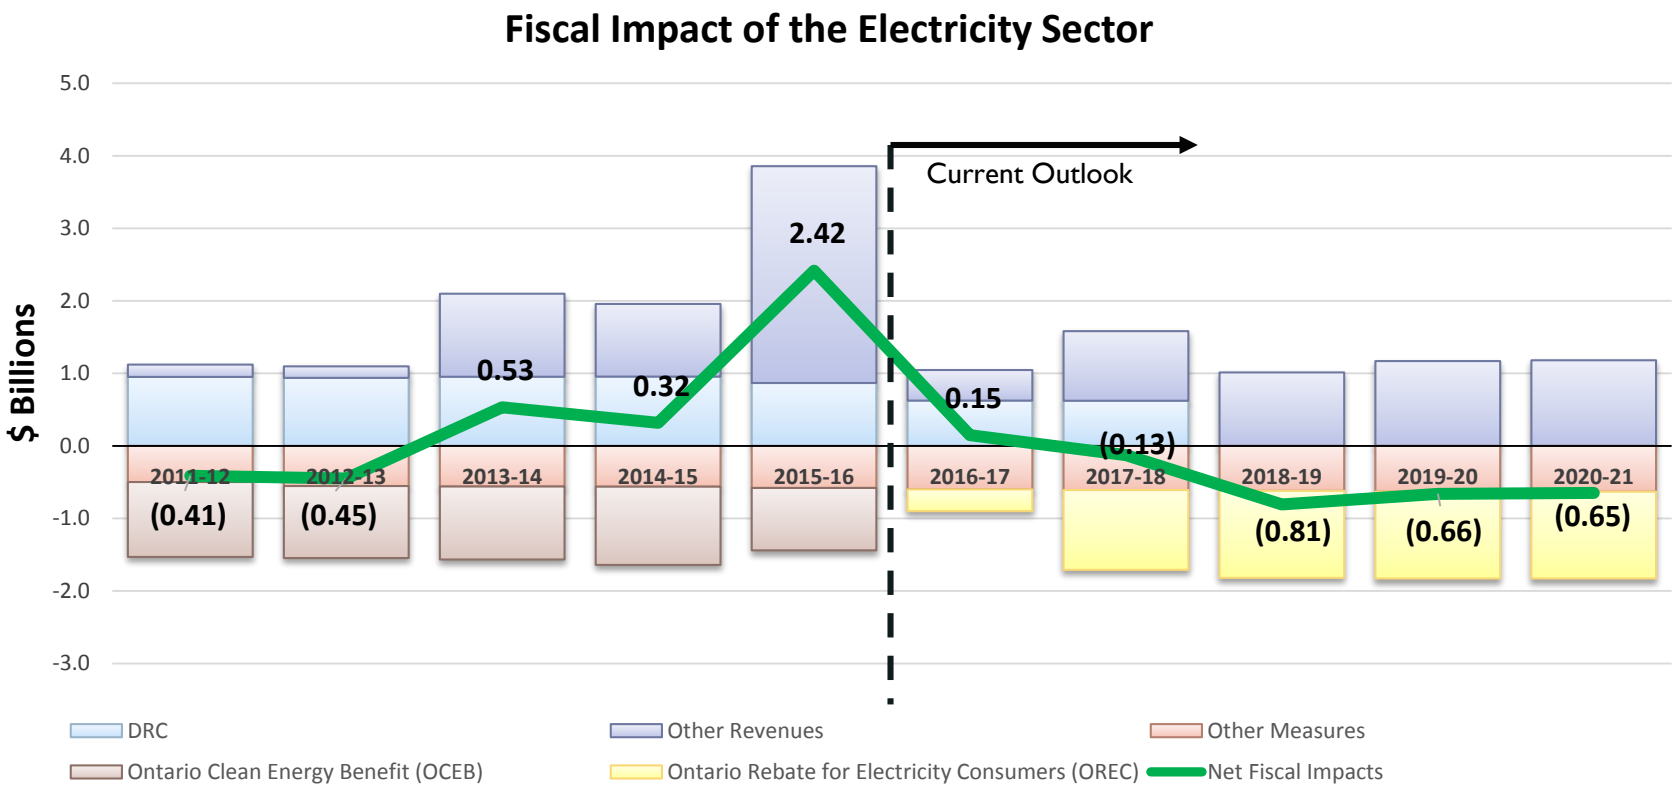
- The electricity sector has a significant impact on the Province's fiscal position; through both the revenue and expense sides of the Province's fiscal position.
  - Electricity Rate mitigation programs funded through the tax base have a direct fiscal impact on the Province's finances.
  - Alternatively, electricity rate mitigation programs funded by the rate base shift costs from one group of ratepayers to another.
- The Province's electricity sector agencies and corporations are each consolidated into the government's financial statements, and directly affect the Province's surplus/deficit position.
  - Note: The Province has invested capital locked into OPG and Hydro One. As business corporations these entities are expected to provide a ~~with the expectation that as commercial corporations, the Province would receive a~~ risk-adjusted return that help the Province deliver on its priorities and commitments.~~in exchange for these investments.~~
  - Ontario Power Generation (OPG) financial results have a dollar-for-dollar impact on the Province.
    - Electricity price mitigation strategies involving OPG would lead to a direct fiscal impact.
  - Hydro One financial results have a direct impact on the Province, based on the Province's proportionate ownership.
    - The Province currently holds about 70 per cent of Hydro One.

# Potential Fiscal Impact to the Electricity Sector

DRAFT

Option 2

- The below chart provides an overview of the fiscal impact from the electricity sector



Other Revenues include payments in lieu of taxes (PILs), and property tax PILs in the case of Hydro One, directed to the OEFC. The provincial portion of these taxes would be a fiscal benefit to the Province, regardless of company ownership.

Hi Shajee,

My two cents and in the context of Scott's comments:

1. DRC should stay in the deck but you may want to provide further context as for example that removing it for residential users was a policy decision to help mitigate rate pressures rather than based on defeasance as per the initial concepts.

2. With respect to the fiscal contributions from OPG, H1 you may want to add context on how OPG and H1 are commercial business corporations expected to produce a return in exchange for the risk the shareholder assumes. Also that there is an opportunity cost on having capital allocated to them. I recognize this may be more of a controversial point (depending on how people see things) but is technically correct to flag if people are somehow challenging the returns or earnings the Province obtains from its commercial enterprises.

Thanks,

Francisco

Thanks Ron.

I found a similar file, but began from 2011-12 onwards to be consistent with the table we were developing. In Slide 16, I added a revised chart.

Please see file attached, also found here:
S:\Users\CEF\Hydro 2016\Electricity Prices\Mitigation Proposals - Dec 2016\Price-Mitigation - CEFD Slides-Dec6-2016_v6.pptx

Also per Scott's comments below, I left the option open to use the DRC as a fiscal benefit, as opposed to the DRC ending as a rate mitigation measure (fiscal cost). That's indicated by Option 1 or 2 in the top right corner of the chart.

Happy to update the OEFC Board Orientation file as well to reflect this revision. And please advise if you'd like years going back to 1999-2000.

Thanks,
Shajee

FyI Shajee.

Can you update the chart. I believe you had a run at it last month.

Need to add new scenarios, though.

Ron

>
> Thanks Ron. Do you mind sharing those out year forecasts? Latest OEFC board materials that I have seen only forecast this fiscal.
>
> The table in your presentation also goes back to 2011-12, so assume that the all-in fiscal impact of the electricity sector might have been very different. Might be interesting to show the evolution from a net positive to net drain, as you describe below. Your comment around DRC is a good one. I wondered in the table whether it might be helpful to show DRC revenues (rather than "ending DRC"). That will show the decline, but that it is still a positive to the Province even out to 2017-18.
>
> However, take my comments with a grain of salt as I am outside my area of expertise.

Hi Ron,

I have not seen a draft since last week. Likely same version you last saw Ron. I did have a chance to speak with folks who are more in the know on this and I can confirm that none of the OPG options are likely to show up in the next iteration.

One suggestion on the note, Ron: if you are going to show all the existing fiscal pressures, it may be helpful to also show the fiscal benefits from the electricity system (OPG/H1 revenues, PILs, GRC etc.).

Thanks,
Scott

Hi Nancy, Scott,

As discussed yesterday, I have not seen any iterations of an Energy deck or other materials on price mitigation options since early last week, when the DMO shared a "bootleg" copy. We sent back some comments on that deck to the Deputy, as attached.

Also attached, for your information, are some comments and a deck we did for the Deputy the previous week, in advance of the Major Projects Committee meeting that week. I had understood that the Deputy shared back the comments with Energy DMO at that time.

As discussed yesterday, CEFD is looking forward to being able to input into the contemplation of potential initiatives. Having said that, staff availability over the next couple weeks will be very limited.

FYI. This was shared with us as a bootleg, noting that further work is ongoing, including around potential fiscal impact. In addition to obvious electricity sector and fiscal plan tie-ins, there is mention of potential expansion of the Trillium Trust to fund electricity infrastructure projects.

Hi Steve,

Here's an early draft of a rate mitigation package that provides a policy rationale for the proposed measures. It's still an early draft and we need to firm up on the rate relief numbers and fiscal impact. My MO is still reviewing but I wanted you to have an early look.

Serge

DRAFT

# Electricity Price Mitigation

Corporate and Electricity Finance Division
December 7, 2016

DRAFT

# General Comments on Energy's Deck

- Energy's deck note various actions taken to-date to reduce costs or cost pressures, such as deferring generation supply investments, improving market efficiency, and reducing the costs of existing procurements.
- Aside from reducing costs on the electricity bill, it is not clear what principles are being applied, short term or long term for electricity pricing.
  - A principle that was applied in the past was to ensure that electricity consumers paid the true cost of electricity, for example.
  - The Energy proposals appear to be about, in part at least, moving some costs from the rate base to the tax base.
- However, the Energy proposals may be seen as having a fairly limited impact, e.g., a little over $8/month for residential, or a little over 5% of the monthly bill (though not all of the proposals have been costed / assessed).
  - The proposals would have a significant fiscal cost [about $1.3 – 1.9 plus bn per year in new fiscal costs].
- There is already significant amounts of existing fiscally-funded electricity price mitigation
  - Averages over $1.5 billion per year over the past five years, and estimated to increase to about $2 billion in 17-18 (see subsequent slide for estimated costs over time, and likely increasing over time), with the total tax-based costs rising to about $3.3-3.9 plus billion in 2017-18, if Energy`s proposals are adopted.
  - These existing mitigation costs are not presented in Energy's deck.
  - Not included is any "hidden" price mitigation through constrained financial performance of, e.g., OPG.

- The table above shows the annual amount of taxpayer funded electricity price mitigation from 2011-12 to 2017-18.
- From 2011-12 to 2015-16 there has been an annual fiscal impact of approximately $1.6 billion due to electricity price mitigation programs.
- In 2016-17, the fiscal impact due to electricity price mitigation programs is estimated at approximately $900 million.
- In 2017-18, due primarily to the start of the Ontario Rebate for Electricity Consumers, the expected fiscal impact due to electricity price mitigation programs is approximately $1.7 billion.

# Electricity Price Mitigation

General Decision Points on Program Features:

- Funding: Rate base vs Tax base
  - Tax base programs have a direct fiscal impact on the Province's finances, and shift costs based on taxpayer incidence and impact on expenditure room for other, non-electricity, programs.
  - Rate base programs shift costs from one group of ratepayers to another.
- On-bill vs Not On-bill
  - Recent focus has been on on-bill programs, such as OESP and OREC.
  - Older tax-base funded programs that are not visible on the bill are still in place, such as NOEC and OEPTC.
  - As OESP enrollment increases, could consider phasing out the non-bill benefits of NOEC and OEPTC.
- Targeted vs General
  - Recent new programs include both general (OREC) and targeted (OESP) programs.
  - Consideration could be made to make OREC more conservation-friendly (e.g., a monthly eligible consumption cap brought in, as with the former Ontario Clean Energy Benefit), and maybe a higher cap in the winter to allow for space heating costs.
  - A targeted industrial program recently extended and made on-going is the Northern Industrial Electricity Rate (NIER) program.

DRAFT

# Energy's Proposals

Energy is proposing additional electricity price mitigation programs, currently funded through the electricity system, be fiscally-funded. They could be upwards of $2 bn/year, (plus the departure tax), which is not included in the fiscal plan, which would challenge the path to balance.

- OESP & RRRP (Total of about $0.4 Bn/yr): This includes shifting the cost of the Ontario Electricity Support Program (OESP) and the Rural or Remote Electricity Rate Program (RRRP) to the tax base. Note that the fiscal exposure is larger if the OESP take up rate is larger, faster than assumed.

- Industrial Conservation Initiative (ICI -- About $900+ M/yr): Energy also shows, as a potential residential price mitigation measure, the cancellation of the ICI.
  - Energy is not initially proposing it be continued instead as taxpayer funded, but notes that about 30% price increase (from $85/MWh to $110), if ICI is cancelled, for the large Class A customers benefiting from ICI currently.
  - As this cost estimate is for 2016, prior to the planned expansion of the ICI, this could further increase the fiscal exposure by about $100 million).

- Departure Tax: As a result of the IPO, Hydro One paid a "departure tax" payment in lieu of tax (PIL) of $2.6 billion, as a final true-up of its PILs tax obligation.
  - This was paid to the Ontario Electricity Financial Corporation and helped reduce stranded debt.
  - Using some or all of it for price mitigation would change the net stranded debt paydown by OEFC resulting from the IPO. This would also be a one-time measure (potentially over a few years), and fiscal impact, as the departure tax amount was one-time.

- Other fiscal cost risks (Total of about $0.8+ Bn):
  - Amortisation of conservation costs also poses a fiscal risk (about $0.4 bn/yr),
  - Ending the DRC early for Class B customers (commercial, small industrial) (about $0.4 bn/yr to 2017-18)
  - Lowering of the debt interest paid by OPG (about $30 – 70 million/yr between 2017 and 2021),

DRAFT

# Fiscal Mitigation Options

- With the addition of recent and new price mitigation measures, a review should be initiated on fiscally-funded programs. There could be a phase down / out transition period considered. Examples include the following:

- Ontario Energy and Property Tax Credit (OEPTC) and Northern Ontario Energy Credit (NOEC):
  - Phase down and/or out the non-on-bill benefits of. (Save up to about $460 M/yr)
  - These targeted, low-income measures were introduced after the HST was introduced.
  - The OESP provides a larger, targeted and on-bill relief to qualifying consumers.

- Ontario Rebate for Electricity Consumers (OREC):
  - Introduce over time a monthly eligible consumption cap, with perhaps a higher cap in the winter to allow for space heating costs.
  - As with the prior OCEB cap, provides a rough incentive for conservation and correlation to larger homes. A higher cap in winter may help with space-heating issue.
  - May be challenging to implement.

- Greenhouse Gas Reduction Account:
  - If ICI is put on the tax-base, make it eligible for GGRA funding.
  - Positioned as, e.g., providing annual benefits from participants conserving and shifting off-peak to reduce reliance on GHG-emitting peaking plants

DRAFT

# Background on Taxpayer-funded Electricity Price Mitigation

Option 1

| Program | Annual Fiscal Impacts ($M) | Date | Details |
|---|---|---|---|
| **Ontario Clean Energy Benefit (OCEB)** | ~1,000 | Jan 1 2011 to Dec 31, 2015 | OCEB provided over four million residential customers, and over 400,000 farm, small business and other small users with a benefit equal to 10 per cent of the total cost of electricity on their bills, including tax. Effective September 1, 2012, 10 per cent benefit was capped for the first 3,000 kWh of electricity consumed per month. OCEB expired December 31, 2015, as legislated. |
| **Removed Debt Retirement Charge (DRC) from Residential Bills** | ~330 | Jan 1, 2016 to Mar 31, 2018 | Removing the DRC from residential users was a policy decision to help mitigate residential rate pressures – particularly in the context of the end of OCEB – rather than based on defeasance as per the original conception of the DRC. ~~The government removed the DRC from residential electricity users' bills as of January 1, 2016.~~ This is saving a typical residential user about $70 each year and meant ending the DRC earlier for these users than otherwise provided for in the *Electricity Act, 1998*. |
| **Ontario Rebate for Electricity Consumers (OREC)** | ~1,200 | Jan 1, 2017 onward | This ongoing program will rebate -- directly on consumers' residential electricity bills -- an amount equal to the provincial portion of the Harmonized Sales Tax (HST). |
| **Northern Industrial Electricity Rate (NIER) Program** | 120 | March 2010 | As announced in Budget 2015, the government committed to ongoing support for northern industrials with $120 million allocated annually. NIER was previously extended in 2012 for an additional three-year term, effective April 1, 2013 and also for a year effective April 1, 2016, with an allocation up to $120 million per year.<br>Qualifying participants receive a rebate of two cents per kilowatt-hour (kWh) up to a maximum of $20 million per year per company.<br>NIER initially established as a three-year program in Budget 2010, effective April 1, 2010. |
| **Northern Ontario Energy Credit** | ~25 | Budget 2010 | Delivered as part of the Ontario Trillium Benefit, provides individuals living in northern Ontario with a credit of up to $146 per year for the 2016 benefit year, and families up to $224.[1] |
| **Ontario Energy Property Tax Credit** | ~445[1] | Budget 2010 | Delivered as part of the Ontario Trillium Benefit, energy portion provides up to $224 per year (inflation adjusted) for low-to moderate-income individuals and families, and for qualifying seniors.[1] |

1. Energy portion cost only. Both the energy portion of the Ontario Energy and Property Tax Credit (OEPTC) and NOEC were introduced/enhanced following the introduction of the HST and have a significant annual fiscal cost (totalling about $500 million annually).

# Timeline: Taxpayer-funded Electricity Price Mitigation

DRAFT

Option 1

**Budget 2010: OEPTC, NOEC Proposed as part of the Ontario Trillium Benefit**

*In the 2011 Budget, the government combined the payments of three existing tax credits — the Ontario Sales Tax Credit, the Ontario Energy and Property Tax Credit, and the Northern Ontario Energy Credit — to create the OTB. The OTB is paid in monthly instalments throughout the year, which helps people meet their expenses as bills arrive.*

**Ontario Clean Energy Benefit** (Jan 1 2011 to Dec 31 2015)

*The OCEB was introduced in the 2010 Ontario Economic Outlook and Fiscal Review to help consumers transition to a cleaner electricity system. As set out in legislation, the OCEB ended on December 31, 2015. The Province has introduced rate mitigation measures to be implemented after December 31, 2015.*

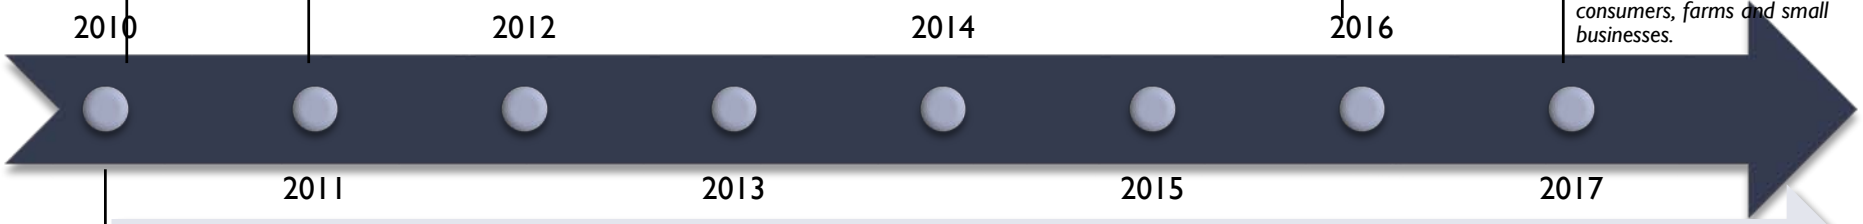
*OCEB provided over four million residential customers, and over 400,000 farm, small business and other small users with a benefit equal to 10 per cent of the total cost of electricity on their bills, including tax, for the first 3,000 kilowatt-hours (kWh) of monthly electricity consumption.*

**Removing DRC from Residential Bills** (Jan 1 2016 to Mar 31 2018)

*Removing the DRC from residential users was a policy decision to help mitigate residential rate pressures rather than based on defeasance as per the original conception of the DRC. This saves a typical residential user about $70 each year and ends the DRC earlier for these users than otherwise provided for in the Electricity Act, 1998.*

**Ontario Rebate for Electricity Consumers**

*As of January 1, 2017, OREC will reduce electricity costs by an amount equal to the provincial portion of the HST for about five million residential consumers, farms and small businesses.*



**History of Northern Industrial Electricity Price Relief**

**November 2006**

*The Ontario government announced the Northern Pulp and Paper Electricity Transition Program (NPPETP), a three-year $140 million, to be effective retroactively to October 1, 2006*

**Budget 2009**

*The government announced extension of the NPPETP by one year providing about $58 million with electricity price rebates of 1.8 cents/kWh.*

**Budget 2010**

*NIER program announced, with a projected fiscal cost of $150 M per year, to provide electricity price rebates for qualifying large industrial facilities in northern Ontario. An additional $21.8 million allocated for existing NPPETP in 2010-11 to be integrated with NIER.*

**September 2010**

*Transition from NPPETP to NIER: pulp and paper mills participating in NPPETP continued to receive the NPPETP rebate of 1.8 cents/kWh until September 30, 2010, with those qualifying for NIER receiving a top-up rebate of 0.2 cents/kWh.*

**December 2012**

*The government announced the extension of the NIER for three years, capping the rebates to a maximum of 2011-12 consumptions levels or $20 million, whichever is lower.*

# Timeline: Taxpayer-funded Electricity Price Mitigation

DRAFT

Option 2

**Budget 2010: OEPTC, NOEC Proposed as part of the Ontario Trillium Benefit**

*In the 2011 Budget, the government combined the payments of three existing tax credits — the Ontario Sales Tax Credit, the Ontario Energy and Property Tax Credit, and the Northern Ontario Energy Credit — to create the OTB. The OTB is paid in monthly instalments throughout the year, which helps people meet their expenses as bills arrive.*

**Ontario Clean Energy Benefit** (Jan 1 2011 to Dec 31 2015)

*The OCEB was introduced in the 2010 Ontario Economic Outlook and Fiscal Review to help consumers transition to a cleaner electricity system. As set out in legislation, the OCEB ended on December 31, 2015. The Province has introduced rate mitigation measures to be implemented after December 31, 2015.*

*OCEB provided over four million residential customers, and over 400,000 farm, small business and other small users with a benefit equal to 10 per cent of the total cost of electricity on their bills, including tax, for the first 3,000 kilowatt-hours (kWh) of monthly electricity consumption.*

**Ontario Rebate for Electricity Consumers**

*As of January 1, 2017, OREC will reduce electricity costs by an amount equal to the provincial portion of the HST for about five million residential consumers, farms and small businesses.*

2010 2011 2012 2013 2014 2015 2016 2017

**History of Northern Industrial Electricity Price Relief**

**November 2006**

*The Ontario government announced the Northern Pulp and Paper Electricity Transition Program (NPPETP), a three-year $140 million, to be effective retroactively to October 1, 2006*

**Budget 2009**

*The government announced extension of the NPPETP by one year providing about $58 million with electricity price rebates of 1.8 cents/kWh.*

**Budget 2010**

*NIER program announced, with a projected fiscal cost of $150 M per year, to provide electricity price rebates for qualifying large industrial facilities in northern Ontario. An additional $21.8 million allocated for existing NPPETP in 2010-11 to be integrated with NIER.*

**September 2010**

*Transition from NPPETP to NIER: pulp and paper mills participating in NPPETP continued to receive the NPPETP rebate of 1.8 cents/kWh until September 30, 2010, with those qualifying for NIER receiving a top-up rebate of 0.2 cents/kWh.*

**December 2012**

*The government announced the extension of the NIER for three years, capping the rebates to a maximum of 2011-12 consumptions levels or $20 million, whichever is lower.*

DRAFT

# Potential Fiscal Impact to the Electricity Sector

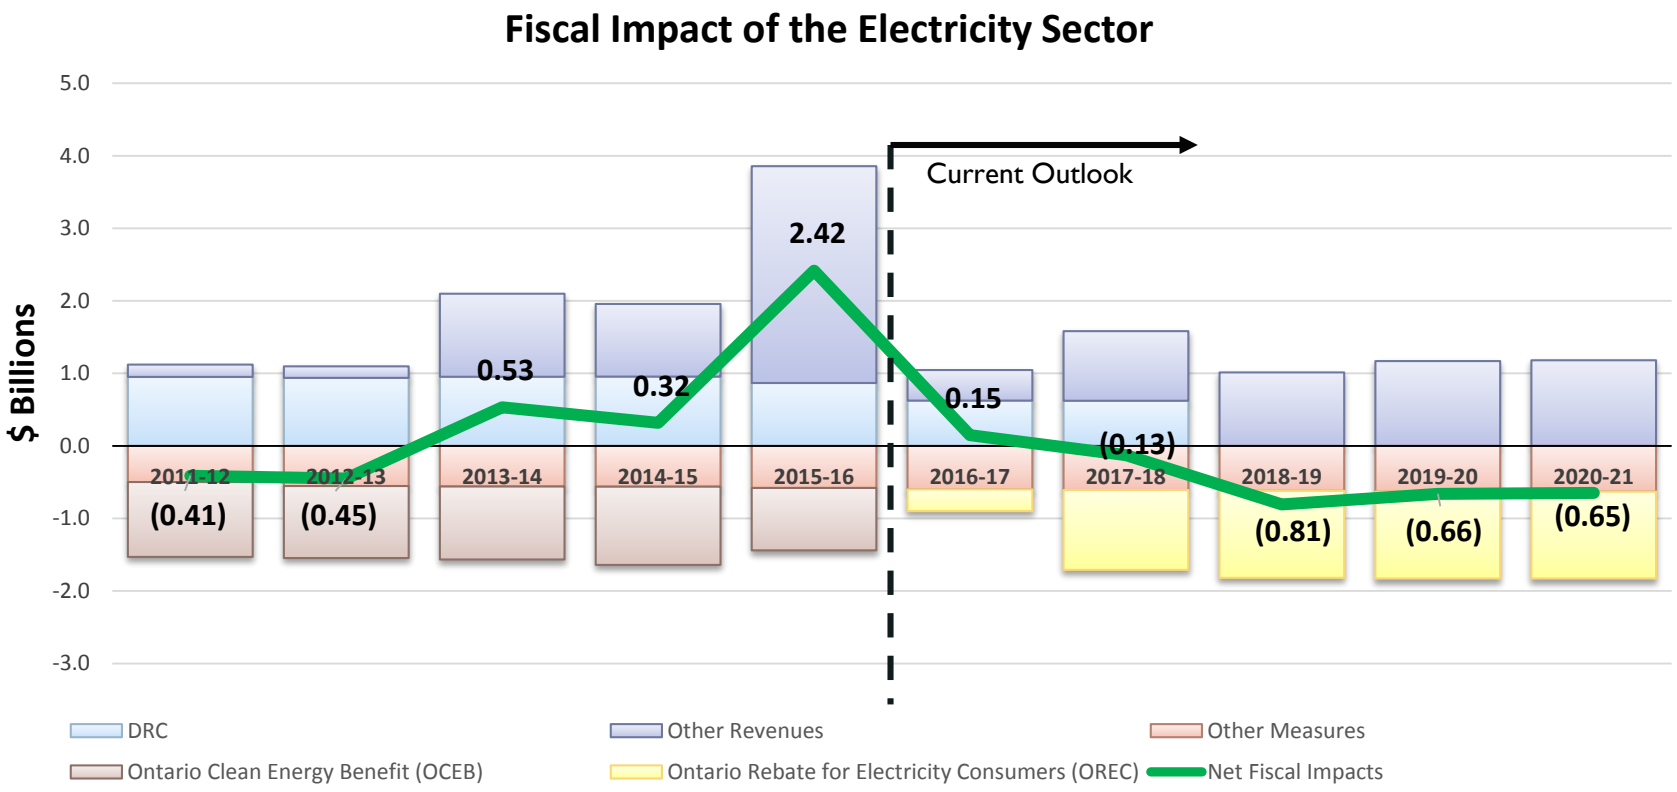
- The electricity sector has a significant impact on the Province's fiscal position; through both the revenue and expense sides of the Province's fiscal position.
  - Electricity Rate mitigation programs funded through the tax base have a direct fiscal impact on the Province's finances.
  - Alternatively, electricity rate mitigation programs funded by the rate base shift costs from one group of ratepayers to another.
- The Province's electricity sector agencies and corporations are each consolidated into the government's financial statements, and directly affect the Province's surplus/deficit position.
  - Note: The Province has invested capital into OPG and Hydro One with the expectation that as commercial corporations, the Province would receive a risk-adjusted return in exchange for these investments.
  - Ontario Power Generation (OPG) financial results have a dollar-for-dollar impact on the Province.
    - Electricity price mitigation strategies involving OPG would lead to a direct fiscal impact.
  - Hydro One financial results have a direct impact on the Province, based on the Province's proportionate ownership.
    - The Province currently holds about 70 per cent of Hydro One.

# Potential Fiscal Impact to the Electricity Sector

DRAFT

Option 2

- The below chart provides an overview of the fiscal impact from the electricity sector



Other Revenues include payments in lieu of taxes (PILs), and property tax PILs in the case of Hydro One, directed to the OEFC. The provincial portion of these taxes would be a fiscal benefit to the province, regardless of company ownership.

Hi Shajee,

My two cents and in the context of Scott's comments:

1. DRC should stay in the deck but you may want to provide further context as for example that removing it for residential users was a policy decision to help mitigate rate pressures rather than based on defeasance as per the initial concepts.

2. With respect to the fiscal contributions from OPG, H1 you may want to add context on how OPG and H1 are commercial business corporations expected to produce a return in exchange for the risk the shareholder assumes. Also that there is an opportunity cost on having capital allocated to them. I recognize this may be more of a controversial point (depending on how people see things) but is technically correct to flag if people are somehow challenging the returns or earnings the Province obtains from its commercial enterprises.

Thanks,

Francisco

Thanks Ron.

I found a similar file, but began from 2011-12 onwards to be consistent with the table we were developing. In Slide 16, I added a revised chart.

Please see file attached, also found here:
S:\Users\CEF\Hydro 2016\Electricity Prices\Mitigation Proposals - Dec 2016\Price-Mitigation - CEFD Slides-Dec6-2016_v6.pptx

Also per Scott's comments below, I left the option open to use the DRC as a fiscal benefit, as opposed to the DRC ending as a rate mitigation measure (fiscal cost). That's indicated by Option 1 or 2 in the top right corner of the chart.

Happy to update the OEFC Board Orientation file as well to reflect this revision. And please advise if you'd like years going back to 1999-2000.

Thanks,
Shajee

FyI Shajee.

Can you update the chart. I believe you had a run at it last month.

Need to add new scenarios, though.

Ron

> Thanks Ron. Do you mind sharing those out year forecasts? Latest OEFC board materials that I have seen only forecast this fiscal.
>
> The table in your presentation also goes back to 2011-12, so assume that the all-in fiscal impact of the electricity sector might have been very different. Might be interesting to show the evolution from a net positive to net drain, as you describe below. Your comment around DRC is a good one. I wondered in the table whether it might be helpful to show DRC revenues (rather than "ending DRC"). That will show the decline, but that it is still a positive to the Province even out to 2017-18.

However, take my comments with a grain of salt as I am outside my area of expertise.

Thanks again for sharing,
Scott

Hi Scott,

Thanks.

On your comment as you may recall, we used to do that roll-up (initially when Serge was ADM), but that would also include all the OEFC expenses too. And not all the GRC is OEFC related, but helps with MNR and its costs, so not completely straightforward.

Post-DRC, and post much lower Hydro One net income to the Province and lost PILs, as Nancy may recall from some OEFC board presentations (Serge likely missed those Board presentations), OEFC may be close to flat.

Ron

Hi Ron,

I have not seen a draft since last week. Likely same version you last saw Ron. I did have a chance to speak with folks who are more in the know on this and I can confirm that none of the OPG options are likely to show up in the next iteration.

One suggestion on the note, Ron: if you are going to show all the existing fiscal pressures, it may be helpful to also show the fiscal benefits from the electricity system (OPG/H1 revenues, PILs, GRC etc.).

Thanks,
Scott

Hi Nancy, Scott,

As discussed yesterday, I have not seen any iterations of an Energy deck or other materials on price mitigation options since early last week, when the DMO shared a "bootleg" copy. We sent back some comments on that deck to the Deputy, as attached.

Also attached, for your information, are some comments and a deck we did for the Deputy the previous week, in advance of the Major Projects Committee meeting that week. I had understood that the Deputy shared back the comments with Energy DMO at that time.

As discussed yesterday, CEFD is looking forward to being able to input into the contemplation of potential initiatives. Having said that, staff availability over the next couple weeks will be very limited.

Ron

Hi Shajee,

My two cents and in the context of Scott's comments:

1. DRC should stay in the deck but you may want to provide further context as for example that removing it for residential users was a policy decision to help mitigate rate pressures rather than based on defeasance as per the initial concepts.

2. With respect to the fiscal contributions from OPG, H1 you may want to add context on how OPG and H1 are commercial business corporations expected to produce a return in exchange for the risk the shareholder assumes. Also that there is an opportunity cost on having capital allocated to them. I recognize this may be more of a controversial point (depending on how people see things) but is technically correct to flag if people are somehow challenging the returns or earnings the Province obtains from its commercial enterprises.

Thanks,

Francisco

Thanks Ron.

I found a similar file, but began from 2011-12 onwards to be consistent with the table we were developing. In Slide 16, I added a revised chart.

Please see file attached, also found here:
S:\Users\CEF\Hydro 2016\Electricity Prices\Mitigation Proposals - Dec 2016\Price-Mitigation - CEFD Slides-Dec6-2016_v6.pptx

Also per Scott's comments below, I left the option open to use the DRC as a fiscal benefit, as opposed to the DRC ending as a rate mitigation measure (fiscal cost). That's indicated by Option 1 or 2 in the top right corner of the chart.

Happy to update the OEFC Board Orientation file as well to reflect this revision. And please advise if you'd like years going back to 1999-2000.

Thanks,
Shajee

>
> The table in your presentation also goes back to 2011-12, so assume that the all-in fiscal impact of the electricity sector might have been very different. Might be interesting to show the evolution from a net positive to net drain, as you describe below. Your comment around DRC is a good one. I wondered in the table whether it might be helpful to show DRC revenues (rather than "ending DRC"). That will show the decline, but that it is still a positive to the Province even out to 2017-18.

On your comment as you may recall, we used to do that roll-up (initially when Serge was ADM), but that would also include all the OEFC expenses too. And not all the GRC is OEFC related, but helps with MNR and its costs, so not completely straightforward.

Post-DRC, and post much lower Hydro One net income to the Province and lost PILs, as Nancy may recall from some OEFC board presentations (Serge likely missed those Board presentations), OEFC may be close to flat.

Hi Ron,

I have not seen a draft since last week. Likely same version you last saw Ron. I did have a chance to speak with folks who are more in the know on this and I can confirm that none of the OPG options are likely to show up in the next iteration.

One suggestion on the note, Ron: if you are going to show all the existing fiscal pressures, it may be helpful to also show the fiscal benefits from the electricity system (OPG/H1 revenues, PILs, GRC etc.).

Thanks,
Scott

Hi Nancy, Scott,

As discussed yesterday, I have not seen any iterations of an Energy deck or other materials on price mitigation options since early last week, when the DMO shared a "bootleg" copy. We sent back some comments on that deck to the Deputy, as attached.

Also attached, for your information, are some comments and a deck we did for the Deputy the previous week, in advance of the Major Projects Committee meeting that week. I had understood that the Deputy shared back the comments with Energy DMO at that time.

As discussed yesterday, CEFD is looking forward to being able to input into the contemplation of potential initiatives. Having said that, staff availability over the next couple weeks will be very limited.

Hi Scott,

Thanks.

On your comment as you may recall, we used to do that roll-up (initially when Serge was ADM), but that would also include all the OEFC expenses too. And not all the GRC is OEFC related, but helps with MNR and its costs, so not completely straightforward.

Post-DRC, and post much lower Hydro One net income to the Province and lost PILs, as Nancy may recall from some OEFC board presentations (Serge likely missed those Board presentations), OEFC may be close to flat.

Ron

Hi Ron,

I have not seen a draft since last week. Likely same version you last saw Ron. I did have a chance to speak with folks who are more in the know on this and I can confirm that none of the OPG options are likely to show up in the next iteration.

One suggestion on the note, Ron: if you are going to show all the existing fiscal pressures, it may be helpful to also show the fiscal benefits from the electricity system (OPG/H1 revenues, PILs, GRC etc.).

Thanks,

Scott

Hi Nancy, Scott,

As discussed yesterday, I have not seen any iterations of an Energy deck or other materials on price mitigation options since early last week, when the DMO shared a "bootleg" copy. We sent back some comments on that deck to the Deputy, as attached.

Also attached, for your information, are some comments and a deck we did for the Deputy the previous week, in advance of the Major Projects Committee meeting that week. I had understood that the Deputy shared back the comments with Energy DMO at that time.

As discussed yesterday, CEFD is looking forward to being able to input into the contemplation of potential initiatives. Having said that, staff availability over the next couple weeks will be very limited.

Ron

Thanks Chris.

Scott, Gadi, and Tim, staff have drafted a preliminary note based on the "bootleg" preliminary deck, including some comments on the broad theme/rationale and the more fiscally-based proposals, as attached. It is a work-in-progress and subject to update for any revisions of Energy's deck to be received.

FYI. This was shared with us as a bootleg, noting that further work is ongoing, including around potential fiscal impact. In addition to obvious electricity sector and fiscal plan tie-ins, there is mention of potential expansion of the Trillium Trust to fund electricity infrastructure projects.

Hi Steve,

Here's an early draft of a rate mitigation package that provides a policy rationale for the proposed measures. It's still an early draft and we need to firm up on the rate relief numbers and fiscal impact. My MO is still reviewing but I wanted you to have an early look.

Serge

# Electricity Price Mitigation

Corporate and Electricity Finance Division
December 7, 2016

DRAFT

# General Comments on Energy's Deck

- Energy's deck note various actions taken to-date to reduce costs or cost pressures, such as deferring generation supply investments, improving market efficiency, and reducing the costs of existing procurements.
- Aside from reducing costs on the electricity bill, it is not clear what principles are being applied, short term or long term for electricity pricing.
  - A principle that was applied in the past was to ensure that electricity consumers paid the true cost of electricity, for example.
  - The Energy proposals appear to be about, in part at least, moving some costs from the rate base to the tax base.
- However, the Energy proposals may be seen as having a fairly limited impact, e.g., a little over $8/month for residential, or a little over 5% of the monthly bill (though not all of the proposals have been costed / assessed).
  - The proposals would have a significant fiscal cost [about $1.3 – 1.9 plus bn per year in new fiscal costs].
- There is already significant amounts of existing fiscally-funded electricity price mitigation
  - Averages over $1.5 billion per year over the past five years, and estimated to increase to about $2 billion in 17-18 (see subsequent slide for estimated costs over time, and likely increasing over time), with the total tax-based costs rising to about $3.3-3.9 plus billion in 2017-18, if Energy`s proposals are adopted.
  - These existing mitigation costs are not presented in Energy's deck.
  - Not included is any "hidden" price mitigation through constrained financial performance of, e.g., OPG.

OREC – Ontario Rebate for Electricity Consumers
DRC – Debt Retirement Charge
NIERP – Northern Ontario Electricity Rate Program
NOEC – Northern Ontario Energy Credit
OEPTC – Ontario Energy and Property Tax Credit

- The table above shows the annual amount of taxpayer funded electricity price mitigation from 2011-12 to 2017-18.
- From 2011-12 to 2015-16 there has been an annual fiscal impact of approximately $1.6 billion due to electricity price mitigation programs.
- In 2016-17, the fiscal impact due to electricity price mitigation programs is estimated at approximately $1.2 billion.
- In 2017-18, due primarily to the start of the Ontario Rebate for Electricity Consumers, the expected fiscal impact due to electricity price mitigation programs is approximately $2.0 billion.

- The table above shows the annual amount of taxpayer funded electricity price mitigation from 2011-12 to 2017-18.
- From 2011-12 to 2015-16 there has been an annual fiscal impact of approximately $1.6 billion due to electricity price mitigation programs.
- In 2016-17, the fiscal impact due to electricity price mitigation programs is estimated at approximately $900 million.
- In 2017-18, due primarily to the start of the Ontario Rebate for Electricity Consumers, the expected fiscal impact due to electricity price mitigation programs is approximately $1.7 billion.

# Electricity Price Mitigation

General Decision Points on Program Features:

- Funding: Rate base vs Tax base
  - Tax base programs have a direct fiscal impact on the Province's finances, and shift costs based on taxpayer incidence and impact on expenditure room for other, non-electricity, programs.
  - Rate base programs shift costs from one group of ratepayers to another.
- On-bill vs Not On-bill
  - Recent focus has been on on-bill programs, such as OESP and OREC.
  - Older tax-base funded programs that are not visible on the bill are still in place, such as NOEC and OEPTC.
  - As OESP enrollment increases, could consider phasing out the non-bill benefits of NOEC and OEPTC.
- Targeted vs General
  - Recent new programs include both general (OREC) and targeted (OESP) programs.
  - Consideration could be made to make OREC more conservation-friendly (e.g., a monthly eligible consumption cap brought in, as with the former Ontario Clean Energy Benefit), and maybe a higher cap in the winter to allow for space heating costs.
  - A targeted industrial program recently extended and made on-going is the Northern Industrial Electricity Rate (NIER) program.

DRAFT

# Energy's Proposals

Energy is proposing additional electricity price mitigation programs, currently funded through the electricity system, be fiscally-funded. They could be upwards of $2 bn/year, (plus the departure tax), which is not included in the fiscal plan, which would challenge the path to balance.

- OESP & RRRP (Total of about $0.4 Bn/yr): This includes shifting the cost of the Ontario Electricity Support Program (OESP) and the Rural or Remote Electricity Rate Program (RRRP) to the tax base. Note that the fiscal exposure is larger if the OESP take up rate is larger, faster than assumed.

- Industrial Conservation Initiative (ICI -- About $900+ M/yr): Energy also shows, as a potential residential price mitigation measure, the cancellation of the ICI.
  - Energy is not initially proposing it be continued instead as taxpayer funded, but notes that about 30% price increase (from $85/MWh to $110), if ICI is cancelled, for the large Class A customers benefiting from ICI currently.
  - As this cost estimate is for 2016, prior to the planned expansion of the ICI, this could further increase the fiscal exposure by about $100 million).

- Departure Tax: As a result of the IPO, Hydro One paid a "departure tax" payment in lieu of tax (PIL) of $2.6 billion, as a final true-up of its PILs tax obligation.
  - This was paid to the Ontario Electricity Financial Corporation and helped reduce stranded debt.
  - Using some or all of it for price mitigation would change the net stranded debt paydown by OEFC resulting from the IPO. This would also be a one-time measure (potentially over a few years), and fiscal impact, as the departure tax amount was one-time.

- Other fiscal cost risks (Total of about $0.8+ Bn):
  - Amortisation of conservation costs also poses a fiscal risk (about $0.4 bn/yr),
  - Ending the DRC early for Class B customers (commercial, small industrial) (about $0.4 bn/yr to 2017-18)
  - Lowering of the debt interest paid by OPG (about $30 – 70 million/yr between 2017 and 2021),

DRAFT

# Fiscal Mitigation Options

- With the addition of recent and new price mitigation measures, a review should be initiated on fiscally-funded programs. There could be a phase down / out transition period considered. Examples include the following:

- Ontario Energy and Property Tax Credit (OEPTC) and Northern Ontario Energy Credit (NOEC):
  - Phase down and/or out the non-on-bill benefits of. (Save up to about $460 M/yr)
  - These targeted, low-income measures were introduced after the HST was introduced.
  - The OESP provides a larger, targeted and on-bill relief to qualifying consumers.

- Ontario Rebate for Electricity Consumers (OREC):
  - Introduce over time a monthly eligible consumption cap, with perhaps a higher cap in the winter to allow for space heating costs.
  - As with the prior OCEB cap, provides a rough incentive for conservation and correlation to larger homes. A higher cap in winter may help with space-heating issue.
  - May be challenging to implement.

- Greenhouse Gas Reduction Account:
  - If ICI is put on the tax-base, make it eligible for GGRA funding.
  - Positioned as, e.g., providing annual benefits from participants conserving and shifting off-peak to reduce reliance on GHG-emitting peaking plants

DRAFT

# Appendix

# Background on Taxpayer-funded Electricity Price Mitigation

DRAFT

Option 1

| Program | Annual Fiscal Impacts ($M) | Date | Details |
|---|---|---|---|
| **Ontario Clean Energy Benefit (OCEB)** | ~1,000 | Jan 1 2011 to Dec 31, 2015 | OCEB provided over four million residential customers, and over 400,000 farm, small business and other small users with a benefit equal to 10 per cent of the total cost of electricity on their bills, including tax. Effective September 1, 2012, 10 per cent benefit was capped for the first 3,000 kWh of electricity consumed per month. OCEB expired December 31, 2015, as legislated. |
| **Removed Debt Retirement Charge (DRC) from Residential Bills** | ~330 | Jan 1, 2016 to Mar 31, 2018 | The government removed the DRC from residential electricity users' bills as of January 1, 2016. This is saving a typical residential user about $70 each year and meant ending the DRC earlier for these users than otherwise provided for in the *Electricity Act, 1998*. |
| **Ontario Rebate for Electricity Consumers (OREC)** | ~1,200 | Jan 1, 2017 onward | This ongoing program will rebate -- directly on consumers' residential electricity bills -- an amount equal to the provincial portion of the Harmonized Sales Tax (HST). |
| **Northern Industrial Electricity Rate (NIER) Program** | 120 | March 2010 | As announced in Budget 2015, the government committed to ongoing support for northern industrials with $120 million allocated annually. NIER was previously extended in 2012 for an additional three-year term, effective April 1, 2013 and also for a year effective April 1, 2016, with an allocation up to $120 million per year.<br>Qualifying participants receive a rebate of two cents per kilowatt-hour (kWh) up to a maximum of $20 million per year per company.<br>NIER initially established as a three-year program in Budget 2010, effective April 1, 2010. |
| **Northern Ontario Energy Credit** | ~25 | Budget 2010 | Delivered as part of the Ontario Trillium Benefit, provides individuals living in northern Ontario with a credit of up to $146 per year for the 2016 benefit year, and families up to $224.[1] |
| **Ontario Energy Property Tax Credit** | ~445[1] | Budget 2010 | Delivered as part of the Ontario Trillium Benefit, energy portion provides up to $224 per year (inflation adjusted) for low-to moderate-income individuals and families, and for qualifying seniors.[1] |

1. Energy portion cost only. Both the energy portion of the Ontario Energy and Property Tax Credit (OEPTC) and NOEC were introduced/enhanced following the introduction of the HST and have a significant annual fiscal cost (totalling about $500 million annually).

# Timeline: Taxpayer-funded Electricity Price Mitigation

DRAFT

Option 1

**Budget 2010: OEPTC, NOEC Proposed as part of the Ontario Trillium Benefit**

*In the 2011 Budget, the government combined the payments of three existing tax credits — the Ontario Sales Tax Credit, the Ontario Energy and Property Tax Credit, and the Northern Ontario Energy Credit — to create the OTB. The OTB is paid in monthly instalments throughout the year, which helps people meet their expenses as bills arrive.*

**Ontario Clean Energy Benefit** (Jan 1 2011 to Dec 31 2015)

*The OCEB was introduced in the 2010 Ontario Economic Outlook and Fiscal Review to help consumers transition to a cleaner electricity system. As set out in legislation, the OCEB ended on December 31, 2015. The Province has introduced rate mitigation measures to be implemented after December 31, 2015.*

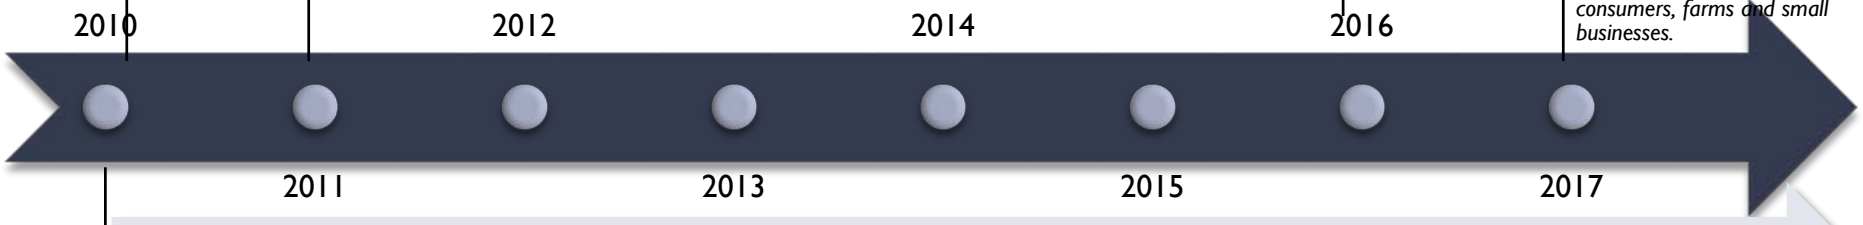
*OCEB provided over four million residential customers, and over 400,000 farm, small business and other small users with a benefit equal to 10 per cent of the total cost of electricity on their bills, including tax, for the first 3,000 kilowatt-hours (kWh) of monthly electricity consumption.*

**Removing DRC from Residential Bills** (Jan 1 2016 to Mar 31 2018)

*The government removed the DRC from residential electricity users' bills beginning on January 1, 2016. This saves a typical residential user about $70 each year and ends the DRC earlier for these users than otherwise provided for in the Electricity Act, 1998.*

**Ontario Rebate for Electricity Consumers**

*As of January 1, 2017, OREC will reduce electricity costs by an amount equal to the provincial portion of the HST for about five million residential consumers, farms and small businesses.*



**History of Northern Industrial Electricity Price Relief**

**November 2006**

*The Ontario government announced the Northern Pulp and Paper Electricity Transition Program (NPPETP), a three-year $140 million, to be effective retroactively to October 1, 2006*

**Budget 2009**

*The government announced extension of the NPPETP by one year providing about $58 million with electricity price rebates of 1.8 cents/kWh.*

**Budget 2010**

*NIER program announced, with a projected fiscal cost of $150 M per year, to provide electricity price rebates for qualifying large industrial facilities in northern Ontario. An additional $21.8 million allocated for existing NPPETP in 2010-11 to be integrated with NIER.*

**September 2010**

*Transition from NPPETP to NIER: pulp and paper mills participating in NPPETP continued to receive the NPPETP rebate of 1.8 cents/kWh until September 30, 2010, with those qualifying for NIER receiving a top-up rebate of 0.2 cents/kWh.*

**December 2012**

*The government announced the extension of the NIER for three years, capping the rebates to a maximum of 2011-12 consumptions levels or $20 million, whichever is lower.*

# Timeline: Taxpayer-funded Electricity Price Mitigation

DRAFT

Option 2

**Budget 2010: OEPTC, NOEC Proposed as part of the Ontario Trillium Benefit**

*In the 2011 Budget, the government combined the payments of three existing tax credits — the Ontario Sales Tax Credit, the Ontario Energy and Property Tax Credit, and the Northern Ontario Energy Credit — to create the OTB. The OTB is paid in monthly instalments throughout the year, which helps people meet their expenses as bills arrive.*

**Ontario Clean Energy Benefit** (Jan 1 2011 to Dec 31 2015)

*The OCEB was introduced in the 2010 Ontario Economic Outlook and Fiscal Review to help consumers transition to a cleaner electricity system. As set out in legislation, the OCEB ended on December 31, 2015. The Province has introduced rate mitigation measures to be implemented after December 31, 2015.*

*OCEB provided over four million residential customers, and over 400,000 farm, small business and other small users with a benefit equal to 10 per cent of the total cost of electricity on their bills, including tax, for the first 3,000 kilowatt-hours (kWh) of monthly electricity consumption.*

**Ontario Rebate for Electricity Consumers**

*As of January 1, 2017, OREC will reduce electricity costs by an amount equal to the provincial portion of the HST for about five million residential consumers, farms and small businesses.*

2010 2011 2012 2013 2014 2015 2016 2017

**History of Northern Industrial Electricity Price Relief**

**November 2006**

*The Ontario government announced the Northern Pulp and Paper Electricity Transition Program (NPPETP), a three-year $140 million, to be effective retroactively to October 1, 2006*

**Budget 2009**

*The government announced extension of the NPPETP by one year providing about $58 million with electricity price rebates of 1.8 cents/kWh.*

**Budget 2010**

*NIER program announced, with a projected fiscal cost of $150 M per year, to provide electricity price rebates for qualifying large industrial facilities in northern Ontario. An additional $21.8 million allocated for existing NPPETP in 2010-11 to be integrated with NIER.*

**September 2010**

*Transition from NPPETP to NIER: pulp and paper mills participating in NPPETP continued to receive the NPPETP rebate of 1.8 cents/kWh until September 30, 2010, with those qualifying for NIER receiving a top-up rebate of 0.2 cents/kWh.*

**December 2012**

*The government announced the extension of the NIER for three years, capping the rebates to a maximum of 2011-12 consumptions levels or $20 million, whichever is lower.*

DRAFT

# Potential Fiscal Impact to the Electricity Sector

- The electricity sector has a significant impact on the Province's fiscal position; through both the revenue and expense sides of the Province's fiscal position.
  - Electricity Rate mitigation programs funded through the tax base have a direct fiscal impact on the Province's finances.
  - Alternatively, electricity rate mitigation programs funded by the rate base shift costs from one group of ratepayers to another.
- The Province's electricity sector agencies and corporations are each consolidated into the government's financial statements, and directly affect the Province's surplus/deficit position.
  - Ontario Power Generation (OPG) financial results have a dollar-for-dollar impact on the Province.
    - Electricity price mitigation strategies involving OPG would lead to a direct fiscal impact.
  - Hydro One financial results have a direct impact on the Province, based on the Province's proportionate ownership.
    - The Province currently holds about 70 per cent of Hydro One.

# Potential Fiscal Impact to the Electricity Sector

DRAFT

Option 2

- The below chart provides an overview of the fiscal impact from the electricity sector

**To:** "Kwan, Ronald (OFA)" <Ronald.Kwan@ofina.on.ca>
**Subject: RE: Proposed Initiatives to Transform Ontario's Electricity Sector_Dec9-16_v15 copy.pptx**

Thanks Ron. Do you mind sharing those out year forecasts? Latest OEFC board materials that I have seen only forecast this fiscal.

The table in your presentation also goes back to 2011-12, so assume that the all-in fiscal impact of the electricity sector might have been very different. Might be interesting to show the evolution from a net positive to net drain, as you describe below. Your comment around DRC is a good one. I wondered in the table whether it might be helpful to show DRC revenues (rather than "ending DRC"). That will show the decline, but that it is still a positive to the Province even out to 2017-18.

However, take my comments with a grain of salt as I am outside my area of expertise.

Thanks again for sharing,
Scott

Subject: RE: Proposed Initiatives to Transform Ontario's Electricity Sector_Dec9-16_v15 copy.pptx

Hi Scott,

Thanks.

On your comment as you may recall, we used to do that roll-up (initially when Serge was ADM), but that would also include all the OEFC expenses too. And not all the GRC is OEFC related, but helps with MNR and its costs, so not completely straightforward.

Post-DRC, and post much lower Hydro One net income to the Province and lost PILs, as Nancy may recall from some OEFC board presentations (Serge likely missed those Board presentations), OEFC may be close to flat.

Hi Ron,

I have not seen a draft since last week. Likely same version you last saw Ron. I did have a chance to speak with folks who are more in the know on this and I can confirm that none of the OPG options are likely to show up in the next iteration.

One suggestion on the note, Ron: if you are going to show all the existing fiscal pressures, it may be helpful to also show the fiscal benefits from the electricity system (OPG/H1 revenues, PILs, GRC etc.).

Thanks,
Scott

Hi Nancy, Scott,

As discussed yesterday, I have not seen any iterations of an Energy deck or other materials on price mitigation options since early last week, when the DMO shared a "bootleg" copy. We sent back some comments on that deck to the Deputy, as attached.

Also attached, for your information, are some comments and a deck we did for the Deputy the previous week, in advance of the Major Projects Committee meeting that week. I had understood that the Deputy shared back the comments with Energy DMO at that time.

As discussed yesterday, CEFD is looking forward to being able to input into the contemplation of potential initiatives. Having said that, staff availability over the next couple weeks will be very limited.

# Electricity Sector Fiscal Interactions

## Corporate and Electricity Finance Division

December xx, 2016

# Purpose

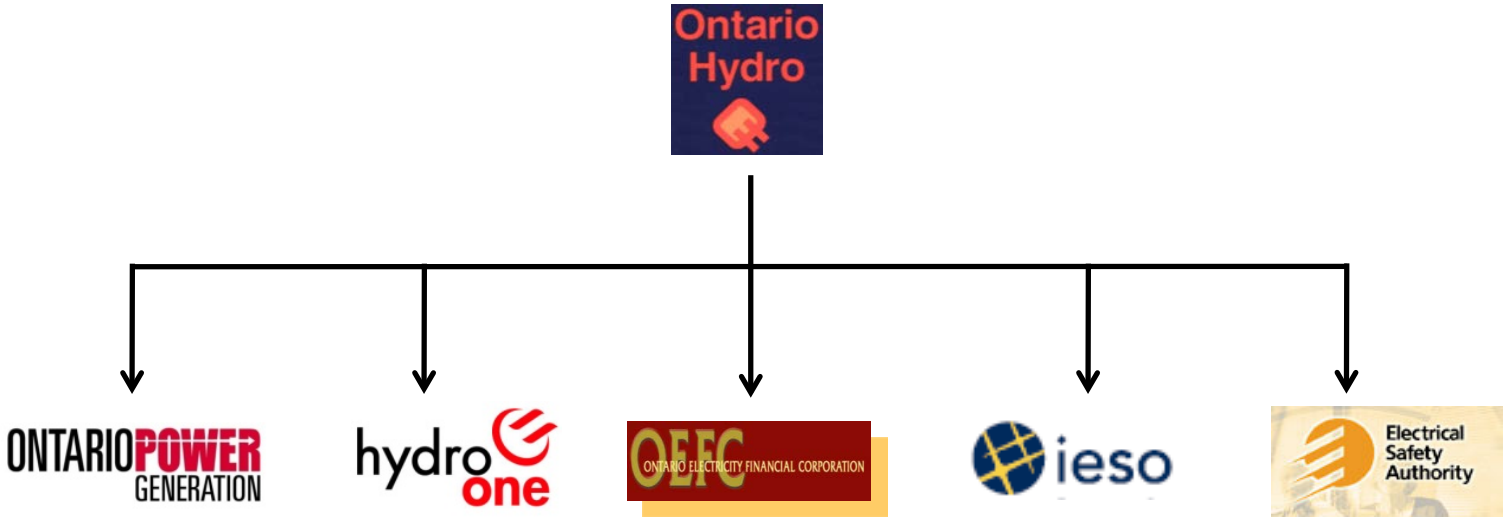
- To provide a financial background on Ontario's electricity sector and its role in the fiscal plan by discussing
  - Ontario Hydro restructuring, stranded debt and residual stranded debt
  - Key interactions between the fiscal plan and the electricity sector

# Key Points

- The electricity sector has a significant impact on the Province's fiscal position
- The Province's electricity sector agencies are each consolidated into the government's financial statements, and directly affect the Province's surplus/deficit position
  - Ontario Power Generation (OPG) financial results have a dollar-for-dollar impact on the Province
  - Hydro One financial results have a direct impact on the Province, based on the Province's proportionate ownership.
    - The Province currently holds about 70 per cent of Hydro One.
  - Ontario Electricity Financial Corporation (OEFC), an agency of the Ministry of Finance, is consolidated line-by-line into the Province's accounts
    - OEFC receives certain revenues from within the electricity sector, including the Debt Retirement Charge (DRC), to manage the debt and liabilities of the old Ontario Hydro, including the stranded debt and residual stranded debt
    - The Minister of Finance also has authority under the Electricity Act with respect to the DRC

# Ontario Hydro Financial Restructuring, Stranded Debt, and Residual Stranded Debt

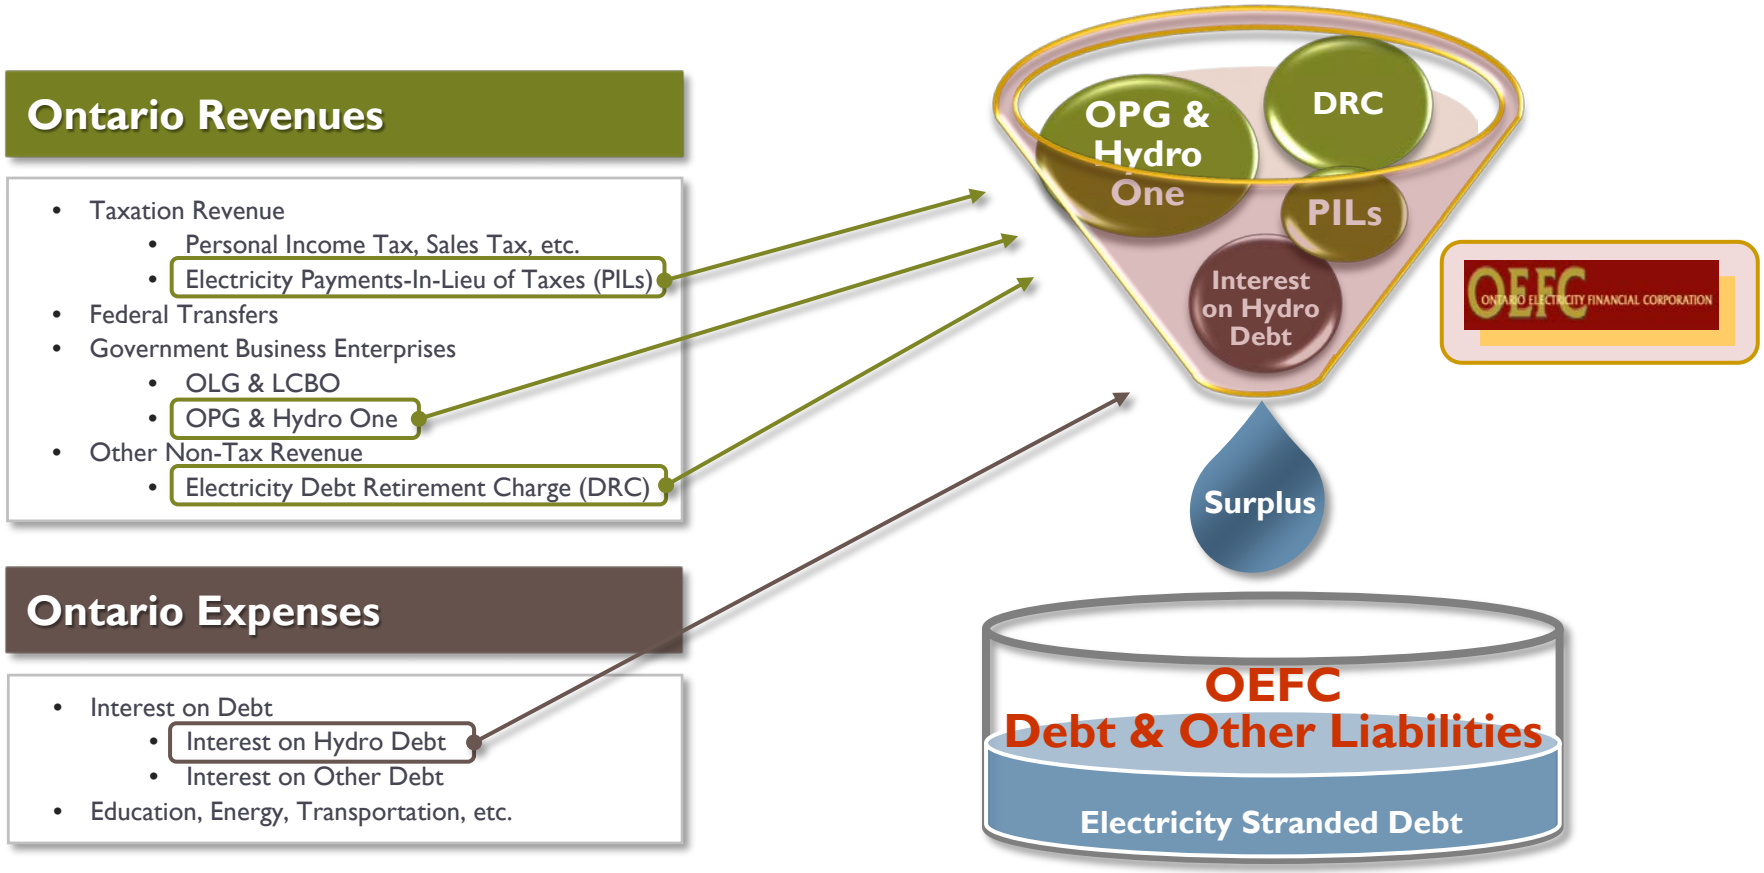
# Ontario Hydro Successor Entities



- Ontario Hydro was restructured into five successor companies on April 1, 1999
  - Ontario Electricity Financial Corporation (OEFC) was established as the legal continuation of Ontario Hydro, managing its debt and other liabilities and is an agency of the Ministry of Finance
  - Ontario Power Generation (OPG), Hydro One, and Independent Electricity System Operator (IESO) acquired Ontario Hydro assets (i.e., OEFC assets) by issuing $17.2 billion in debt to OEFC
- As part of the restructuring, the Province became the sole shareholder of OPG and Hydro One through a debt-for-equity swap, assuming $5.1 Bn and $3.8 Bn of their debt owed to OEFC respectively, in exchange for the shares in the companies

# Electricity Sector Revenues: Part of a "Closed System" via OEFC

- OEFC manages certain dedicated Provincial electricity sector revenues and expenses, and services and pays down its electricity debt to reduce the stranded debt and residual stranded debt of the electricity sector



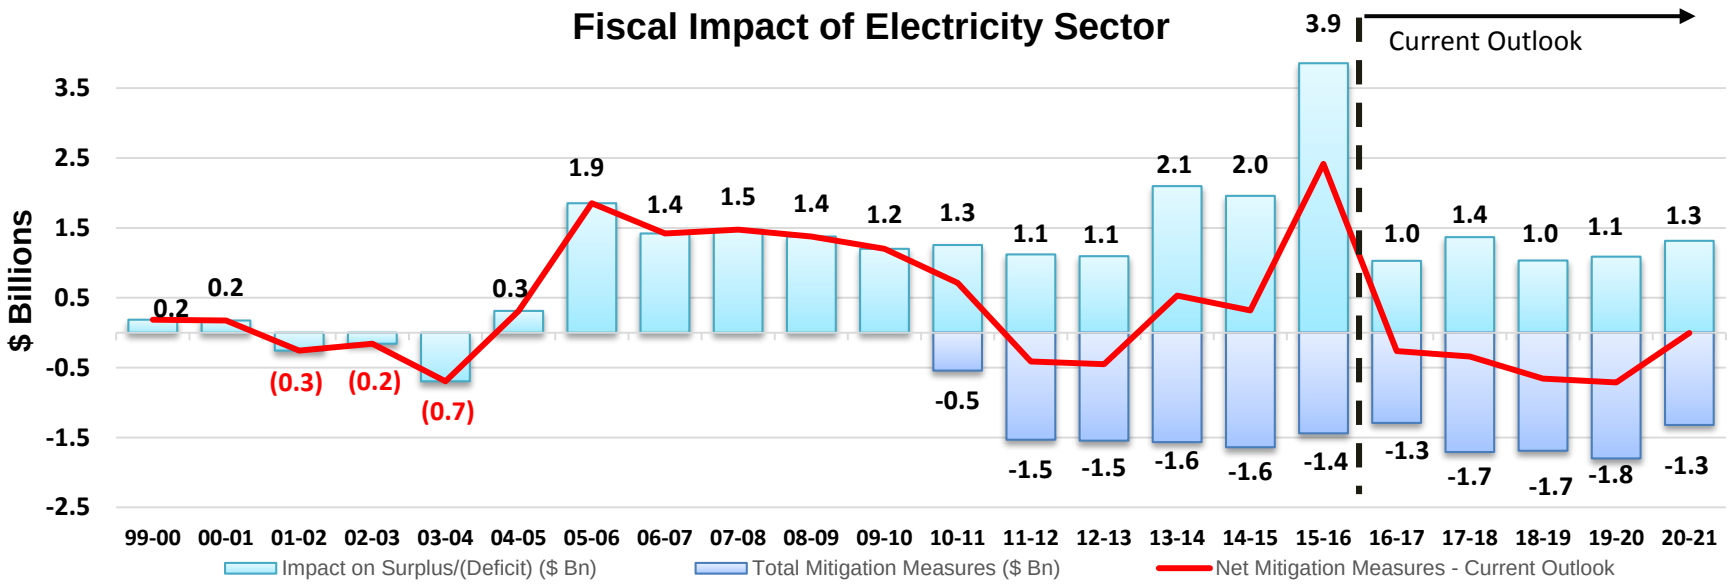
# Fiscal Interactions with the Electricity Sector

# Consolidation of the Electricity Sector

- Each of the Province's electricity sector agencies and corporations is consolidated into the government's financial statements, and directly affects the Province's surplus/deficit position
  - OPG and Hydro One financial (related to the Province's ownership) results have a dollar-for-dollar impact on the Province and are consolidated on a "modified equity basis"
    - Net incomes consolidated as Provincial revenue
    - Equity consolidated as Provincial asset on the balance sheet
  - OEFC, an agency of the Ministry of Finance, is consolidated line-by-line into the Province's accounts, including payments-in-lieu of taxes from OPG, Hydro One and municipal electricity utilities, the Debt Retirement Charge, and OEFC interest costs
  - Other electricity sector entities (Ontario Energy Board – OEB, Ontario Power Authority – OPA, Independent Electricity System Operator – IESO) are consolidated line-by-line through the Ministry of Energy as Government Organizations
    - Regulated and operated on a cost-recovery basis from the ratebase with no significant fiscal impact

# Fiscal Impact of the Electricity Sector [To Be Updated]

- Since reforms in 2004, the electricity sector agencies (OPG, Hydro One, OEFC, including DRC revenue) have had a positive fiscal impact, and OEFC's unfunded liability has decreased by more than $10 billion
- Since 2010-11, the positive impact of these agencies has been offset with spending on electricity price mitigation, namely the Ontario Clean Energy Benefit (OCEB) which provides 10 per cent off the total bill for residential, farm, small business, and other small eligible consumers for the first 3,000 kWh of monthly electricity consumption until December 31, 2015
  - The chart below reflects the start of the Ontario Rebate for Electricity Consumers in 2016-17, which provides an 8% rebate equal to the provincial portion of HST to about 5 million residential consumers, small businesses, and farms.
- ~~Out-year outlook is subject to risks and uncertainty on, for example, performance and regulatory decisions~~



** Excludes impact of HST and other HST mitigation measures. Note the 2014 Budget Plan assumes a reduced OCEB program in 2015-16.*

# Appendix

# Province's Income Statement: Revenues

| Revenue ($ Millions) | 2015-16 |
|---|---|
| Government Business Enterprises | |
| Ontario Lottery and Gaming Corporation | 1,995 |
| Liquor Control Board of Ontario | 1,831 |
| Ontario Power Generation Inc. | 463 |
| Hydro One Inc. | 256 |
| | 4,812 |
| Other Non-tax Revenue | |
| Sales and Rentals | 2,102 |
| Vehicle and Driver Registration Fees | 1,565 |
| Electricity Debt Retirement Charge | 859 |
| Power Supply Contract Recoveries | 875 |
| Other Fees and Licences | 743 |
| Royalties | 274 |
| independent Electricity System Operation revenue | 221 |
| Net Reduction of Power Purchase Contract Liability | 172 |
| Local Services Realignment | 125 |
| Miscellaneous Other Non-Tax Revenue | 1,857 |
| | 8,793 |
| Taxation Revenue | |
| Personal Income Tax | 31,141 |
| Sales Tax | 23,455 |
| Corporations Tax | 11,428 |
| Education Property Tax | 5,839 |
| Employer Health Tax | 5,649 |
| Ontario Health Premium | 3,453 |
| Gasoline Tax | 2,459 |
| Land Transfer Tax | 2,118 |
| Tobacco Tax | 1,226 |
| Fuel Tax | 751 |
| Beer and Wine Tax | 582 |
| Electricity Payments-In-Lieu of Taxes | 3,247 |
| Other Taxes | 470 |
| **Total Taxation** | **91,818** |

OPG and Hydro One net income is consolidated as income from investment in government enterprises

Debt Retirement Charge collected from consumers - shows impact of end of DRC on residential as at Jan 1, 2016

Proceeds from sale of NUG power under power purchase contracts

Draw down of NUG liability

Includes revenues of:
IESO $240 M (Calendar 2015)
OEB $49M

OEFC's payments-in-lieu of taxes from OPG, Hydro One, and MEUs consolidated as taxation revenue

# Province's Income Statement: Expenses

| Total Expense<br>As at March 31 ($ Millions) | 2015-16 |
|---|---|
| Ministry Expense | |
| Economic Development, Employment and Infrastructure/Research and Innovation | 1,134 |
| Education | 24,998 |
| Teachers' Pension | 1,590 |
| Energy | 1,232 |
| Environment | 503 |
| Executive Offices | 37 |
| Finance | 951 |
| Interest on Debt | 10,967 |
| Municipal Partnership Fund | 513 |
| Power Supply Contract Costs | 875 |
| Government Services and consumer Services | 608 |
| Health and Long-Term Care | 51,067 |
| Labour | 304 |
| Municipal Affairs and Housing | 1,088 |
| Natural Resources | 819 |
| Northern Development, and Mines | 701 |
| Northern Industrial Electricity Rate Program | 108 |

**Includes expenditures of:**
**IESO $212M (Calendar 2015)**
**OEB $ 49M**

**Includes OEFC interest expense of $1,319 M**

**Cost of NUG power purchases (fully offset by revenue from NUG power sales)**

**NIER program cost**

# Province's Balance Sheet

| **Province of Ontario**<br>**Consolidated Statement of Financial Position**<br>**As at March 31 ($ Millions)** | **2016** |
|---|---|
| Liabilities | |
| Accounts Payable and Accrued Liabilities | **19,361** |
| Debt | **327,413** |
| Other Long-Term Financing | **14,145** |
| Deferred Revenue and Capital Contributions | **10,779** |
| Pension and Other Employee Future Benefits | **12,107** |
| Other Liabilities | **4,905** |
| | **388,710** |
| Financial Assets | |
| Cash and Cash Equivalents | **13,600** |
| Investments | **21,765** |
| Accounts Receivable | **11,059** |
| Loans Receivable | **11,545** |
| Other Assets | **1,936** |
| Investment in Government Business Enterprises | **23,572** |
| | **83,477** |
| **Net Debt** | **(305,233)** |
| Non-Financial Assets | |
| Tangible Capital Assets | **102,536** |
| **Accumulated Deficit** | **(202,697)** |

**Includes OEFC's debt of $24,345 Millions**

**Includes OEFC liability for Power Purchase Contracts $307 Millions**

**Includes Provincial investment in OPG ($13,005M) and Hydro One ($8,347M), totalling $21,352M (original investment of $8,885M, plus retained earnings, and adjustments for ONFA funds and as related to Hydro One asset optimization in 2015-16)**

**Assets and liabilities of IESO, OPA and OEB are consolidated line-by-line in the Balance Sheet**

Looks good, just a few suggestions. I also confirmed the figures are ok.

Thanks Chris.

Scott, Gadi, and Tim, staff have drafted a preliminary note based on the "bootleg" preliminary deck, including some comments on the broad theme/rationale and the more fiscally-based proposals, as attached. It is a work-in-progress and subject to update for any revisions of Energy's deck to be received.

FYI. This was shared with us as a bootleg, noting that further work is ongoing, including around potential fiscal impact. In addition to obvious electricity sector and fiscal plan tie-ins, there is mention of potential expansion of the Trillium Trust to fund electricity infrastructure projects.

Hi Steve,

Here's an early draft of a rate mitigation package that provides a policy rationale for the proposed measures. It's still an early draft and we need to firm up on the rate relief numbers and fiscal impact. My MO is still reviewing but I wanted you to have an early look.

Serge

DRAFT

# Price Mitigation Proposal: Departure Tax

Corporate and Electricity Finance Division
January 10, 2017

DRAFT

# Overview: Ministry of Energy and Price Mitigation

- In December 2016, the Ministry of Energy, as part of a suite of potential initiatives to mitigate the rising cost of electricity, has suggested for consideration the potential dedication to ratepayer price mitigation some or all of the $2.6 billion 'departure tax' (DT) payments in lieu of tax (PILs) made by Hydro One to the Ontario Electricity Financial Corporation (OEFC) in November 2015, arising from the Hydro One initial public offering (IPO), which would have a fiscal impact.

- The discussion of the departure tax is often discussed along with the deferred tax benefit that Hydro One recognised in its 2015 annual financial statements, following the IPO.

- While the departure tax and deferred tax benefit are related, they are also separate and distinct.
  - Both are tax-related and are calculated using the fair value of Hydro One assets (as estimated, in the case of the departure tax paid).
  - The departure tax arose from Hydro One's exit from the system of payments-in-lieu of taxes paid to the OEFC, as part of "truing-up" what Hydro One was required to pay OEFC under the PILs regime based on the fair value of its assets. Hydro One paid $2.6 bn in departure tax to OEFC, as well as an additional about $0.2 bn in PILs to OEFC as a result of exiting the PILs regime.
  - Hydro One recognised a $2.8 bn deferred tax benefit as a result of the IPO, including $1.2 bn in eliminating a previous deferred tax liability amount, and recording a $1.6 bn deferred tax asset, which relates to Hydro One's going-forward obligations under the normal corporate tax system and the Canada Revenue Agency based on the impact on its taxes of the "tax shield" provided by the fair value of its assets.
  - The size of the tax shield under the normal corporate tax regime relates to the fair value of assets for tax purposes that results in higher tax depreciation expenses from taxable income, and does not relate directly to the departure tax amount paid by Hydro One to OEFC.

# OEB Review of 2017-2018 Hydro One Transmission Rates: Deferred Tax Benefit & Departure Tax

- The Ontario Energy Board (OEB) is currently reviewing Hydro One's 2017-18 transmission rate application to determine whether the deferred tax benefit (DTB) recorded by Hydro One, as a result of entering the normal corporate tax regime following the IPO, should be allocated to the benefit of ratepayers rather than shareholders.
  - In its review, OEB staff flagged that Hydro One realized a deferred tax recovery that was triggered by the revaluation of the tax basis of its fixed assets at fair market value as it entered the corporate tax regime (due to the IPO).
- Since Hydro One made its departure tax (DT) payment, and did not seek recovery from ratepayers for this payment, Hydro One's position is that the DTB would receive similar treatment (i.e., not impact ratepayers, but would be to the benefit of shareholders, in part to ensure consistency in treatment).
  - A general regulatory principle would be for ratepayers to receive the benefit from assets that they funded through rates, and equity holders would receive the benefit from their investments.
  - The Province as sole shareholder of Hydro One, funded the departure tax payment by making a capital contribution of the same amount prior to the IPO.
- Note that the departure tax did not have a net fiscal benefit to the Province on consolidation of OEFC and Hydro One.
  - OEFC (and the Province upon consolidation) recorded a higher PILs revenue on receipt of the DT from Hydro One; however, this amount was offset by an equal reduction in provincial revenue from Hydro One's net income as a result of the DT payment (an expense to Hydro One).
  - There is no net 'departure tax benefit' to 'give back' or return to ratepayers, both because there was no net revenue impact and it was not funded by ratepayers.

# OEB Review of 2017-18 Hydro One Transmission Rates: Departure Tax and Price Mitigation

- The Province using the departure tax amount for price mitigation has been cited as possibly reducing the risk of the OEB deciding to use Hydro One's deferred tax benefit to reduce Hydro One's rate ask in its current transmission rate application.
  - A fiscal risk is that the OEB may still decide to use some or all of the deferred tax amount to reduce Hydro One's rate request, while at the same time the Province uses the departure tax amount for price mitigation.
- Should the OEB decide to reverse the benefit of the DTB from Hydro One's shareholders to ratepayers, there would be significant impacts to the Province.
  - The Province would be subject to negative fiscal impacts based on how the OEB provides the benefit to ratepayers. For example, the OEB could determine that Hydro One's revenue requirement will be reduced over time by the cash tax savings from the DTB. This would negatively affect Hydro One's net income, and, therefore, reduce the Province's revenues upon consolidation of its proportionate share of Hydro One net income. (The Province's recorded increased revenues of ~$2.4B in 2015-16 due to the DTB.)
  - There would likely be a material decline in Hydro One's share price, as the overall company value would be negatively affected, given reduced net income and cash flows available to finance capital expenditures and pay dividends. Lower share prices would reduce future gains on sales as the Province moves forward on its path to sell down to the 40% ownership level in Hydro One.
  - The Province may also face criticism as it has already credited the Trillium Trust with the $2.4 billion DTB.

DRAFT

# Departure Tax and Price Mitigation: Ratepayer/Fiscal Impacts

- The following provides illustrative potential ratepayer and fiscal impacts from allocating the $2.6 billion departure tax to ratepayers.
- The impact to an individual ratepayers' electricity bill may not be very significant, unless used over a very short period of time. If the period that the departure tax amount is used to mitigate prices is increased, the annual ratepayer impact diminishes. In all cases, the annual negative fiscal impacts are significant.
  - As an illustrative scenario, if the $2.6 billion is allocated over 1 year and spread evenly over all Ontario consumption (vs targeted at some consumer classes), the benefit is estimated at about 1.85 cents / kWh.*
    - For a typical residential ratepayer consuming 750 kWh/month, this is estimated at $13.93/month (pre-tax), or less than 10% of a monthly bill.
  - Over a 5-year period or 10-year period, the benefit to a typical residential ratepayer is estimated at $2.79/month and $1.39/month, respectively. Industrial ratepayers are estimated to benefit by about 0.37 ¢/kWh and 0.185 ¢/kWh, respectively.
- Note that the electricity price relief would be temporary and would result in a spike in electricity bills following the conclusion of the mitigation initiative. This may introduce pressure to extend or replace the mitigation, resulting in additional fiscal impacts.

| Departure Tax Savings to Ratepayers | Allocation over 1 year | Allocation over 5 years | Allocation over 10 years |
|---|---|---|---|
| **Typical Residential Ratepayer (savings $/mth)** | $13.93 | $2.79 | $1.39 |
| **Savings: cents per kWh** | 1.85 | 0.37 | 0.185 |
| | | | |
| **Negative Fiscal Impact to the Province per annum** | $2.6 billion | $520 million | $260 million |

**Assumes total TWh supplied of 140 hours and monthly demand of 750 KWh per residential household*

# Key Fiscal Considerations

- Dedicating the departure tax to ratepayers would have a negative fiscal impact as the Province would record an expense of up to $2.6 bn related to this mitigation (up-front or over time, depending on how the amount is dedicated to ratepayers).
  - Note that the departure tax (DT) did not represent a fiscal or cash windfall to the Province.
    - **Fiscal:** OEFC (and the Province upon consolidation) recorded a higher PILs revenue on receipt of the DT from Hydro One; however, this amount was offset by an equal reduction in provincial revenue from Hydro One's net income as a result of the payment (an expense to Hydro One).
    - **Cash:** OEFC (and the Province upon consolidation) received the $2.6 billion in cash from Hydro One as a PILs payment, but the Province also made a $2.6 billion cash capital contribution to Hydro One to invest in additional common shares of the company and support Hydro One's departure tax payment.
    - **Timing**: The DT represents the upfront payment of PILs that Hydro One would have paid to OEFC in absence of exiting the PILs regime. In essence, it is a true up of past deferred PILs / future PILs payments rather than an incremental payment.
- An additional fiscal risk is that the OEB may still decide to allocate some or all of Hydro One's deferred tax benefit (DTB) to reduce Hydro One's rate request, even if the Province moves forward with the use of the DT amount as an electricity price mitigation tool.
  - Using the DT for price mitigation would likely be province-wide, for both Hydro One and non-Hydro One customers, while an OEB rate application decision, if applied to both its transmission and distribution businesses, would affect Hydro One`s rates and its customers.
  - Any use of the DTB by the OEB for Hydro One rate mitigation would result in a negative fiscal impact.
- Dedicating the DT to ratepayers could also put pressure on the Province to adopt a similar policy for all future DT payments (e.g., if a municipality sells its local distribution company to the private sector, it would be subject to a DT)
  - This would lead to additional negative fiscal and stranded debt impacts.

# Stranded Debt Considerations

- Reallocating the departure tax from OEFC to ratepayers would also cause the unfunded liability of OEFC (or "stranded debt") to increase by an equivalent amount.
  - It would be the first time since 2003-04 that OEFC's stranded debt would increase.
  - In fiscal 2015-16, OEFC's unfunded liability decreased by $3.7 billion, from $8.1 billion to $4.4 billion, primarily reflecting the impact of the Hydro One initial public offering (IPO). This was the largest annual paydown of stranded debt.
  - Going forward, OEFC would also forgo the interest expense savings from the debt that the departure tax amount would otherwise have paid down. This may affect its going-forward ability to continue to reduce stranded debt over time.
    - OEFC`s future results are also negatively affected by the loss of Hydro One PILs and reduced Provincial share of Hydro One net income.
    - OEFC Debt Retirement Charge revenue has also been reduced, with the end of the DRC for residential consumption as of January 1, 2016, and the now legislated full end to the DRC as of April 1, 2018.

# Implementation Considerations

- Additional legal discussion would be required regarding implementation, including the Province's authority to direct OEFC to make a payment to the Province to support rate mitigation.
  - For example, the Province may have to amend the objects of OEFC and implement a Minister's directive in order for OEFC to make the payment. Further legal analysis would be needed if the government is to proceed with this option.

- If the Province moves forward with a rate mitigation measure linked to funds received from the departure tax (DT), the government could consider implementing in such a way that it would not directly involve OEFC / increase stranded debt.
  - Rather than having funds transferred from OEFC to the Province (resulting in an expense to OEFC, which would increase stranded debt), the Province could alternatively borrow $2.6 billion to pay for the program from the CRF.
  - The Province would in effect be dedicating an "equivalent benefit" to ratepayers, while keeping the OEFC whole and demonstrating its commitment to reducing stranded debt.
  - The government could face criticism that it is "double counting" the DT cash (since it already made a $2.6 billion capital contribution in cash to Hydro One to facilitate the DT payment) and that the rate mitigation measure is not actually linked to the DT, but is a rate mitigation program funded by taxpayers.
  - Borrowing an additional $2.6 billion (or reducing OEFC's debt paydown by $2.6 billion) would also have associated on-going fiscal impacts from additional interest costs incurred. Net debt would also increase by $2.6 billion.

- The government could also decide to use only a portion of the DT payment for rate mitigation, rather than the entire $2.6 billion.
  - For example, the Province could dedicate the portion of the DT related to capital gains but allow OEFC to keep the portion related to recapturing past depreciation expense.
  - This decision would result in a smaller impact on electricity prices, especially if the amounts were allocated over-time, but would help mitigate negative fiscal impacts.
  - This decision would still face similar policy considerations as previously presented.

# Trillium Trust: Other Risk Mitigation on an Adverse OEB Decision

- The notion has also been raised for the Province to dedicate the departure tax amount to the Trillium Trust to fund electricity infrastructure to the benefit of ratepayers – in order to reduce the risk that the OEB will use some or all of Hydro One's deferred tax benefit to reduce its rate request.
  - This would be a policy shift, as the current policy is for the asset optimisation amounts to go to Moving Ontario Forward projects.
  - Adding energy infrastructure projects would be incremental.
  - There would also be a fiscal and Hydro One value impact over time.
    - As that infrastructure would not be funded by the rate base, there would be a displacement on the rate base growth side, which would affect share value and future net income.
    - The Province would have the expense (upfront or over time) of the electricity infrastructure spending without a future ratebase revenue stream.
  - The ratepayer mitigation impact may be small and deferred:
    - The timing of the impact could be spread out, both on the fiscal side (if the Province were to own the electricity infrastructure so it could amortise the cost over the life of the asset – note that such an action could be seen as contrary to the policy of bringing in private sector capital to fund electricity infrastructure that was part of the Asset Council's report) and the rate impact side, as the rate impact of displaced rate base growth would be deferred to when the assets come into service, and cost recovery would be over the life of the asset.

DRAFT

# Background: Departure Tax and Hydro One's Deferred Tax Benefit

# Departure Tax (DT)

- The "departure tax" is a result of Hydro One exiting the payments in lieu of tax (PILs) regime and entering the corporate tax regime as a result of the IPO in November 2015.
  - The PILs regime applies to tax-exempt electricity utilities in Ontario (e.g., Ontario Power Generation and municipally-owned local distribution companies, and it mirrors the regular tax system, creating a level playing field between publicly-owned and private sector firms.
  - PILS are paid to OEFC to help it manage and pay down electricity sector debt and other liabilities arising from the old Ontario Hydro.
  - Once a utility becomes less than 90% owned by the Province or municipality, its exemption from tax under the federal Income Tax Act and the Taxation Act (Ontario) ends.

- Due to exiting the PILs regime, Hydro One was deemed to have disposed of its assets immediately before it lost its tax exempt status for proceeds equal to the estimated fair market value of those assets at that time.
  - This results in an assessment of potential payments-in-lieu of tax for 'recapture' into taxable income previously claimed depreciation expense that reduced past PILs payable, if the fair value is greater than the depreciated value for tax purposes under the PILs regime.
  - It may also result in a potential taxable capital gain if the fair value is greater than the original value of the assets.
  - Together, this PILs payment is known as a 'departure tax'.
  - It should be noted that this payment is not incremental but rather a true up of the PILs Hydro One would have been expected to pay over time in absence of exiting the PILs regime.
  - The 'departure tax' is also not unique to the PILs regime, but mirrors provisions under the normal tax system when a taxable entity leaves the normal tax system.

- As a result of this deemed disposition, Hydro One was liable to make a DT PIL to OEFC of $2.6 billion. In order to facilitate Hydro One's payment and preserving the equity value of the company prior to the IPO, the Province made a $2.6 billion capital contribution into Hydro One and received new common shares of the company.

# Deferred Tax Benefit (DTB)

- Upon entering the corporate tax regime, Hydro One also revalued the tax basis of its fixed assets at fair market value and recognized eligible capital expenditures.
  - As a result of a higher revaluation of its fixed assets for tax purposes, Hydro One expects to be able to claim higher depreciation expenses for a period of time under the normal corporate tax system to reduce its taxable income and taxes payable.
  - Because of the elimination of the deferred tax liability under the PILs regime (on payment of the departure tax) and the 'tax shield' impact of the depreciation expense, Hydro One recorded $2.81 billion in a one-time non-cash DTB, which increased its net income by the same amount.
    - This DTB was comprised of an elimination of an about $1.2 billion deferred tax liability under the PILs regime, as Hydro One paid the departure tax, and a deferred tax asset recorded by Hydro One of about $1.6 billion.
  - The recording of a DTB contributed to Hydro One's net income in 2015.
    - The Province recognized a non-cash fiscal benefit of approximately $2.4 billion as a result, upon consolidation its proportionate share of 84% of Hydro One's net income on the Province's books.
- From the Province's perspective, allocating the DTB directly as a policy option for rate mitigation is not viable.
  - This benefit was recognized by Hydro One in connection with the IPO, and the Province, as no longer a sole shareholder, does not have the authority to direct the company to provide this benefit to ratepayers, rather than its shareholders.
  - Hydro One's board of directors has a fiduciary duty to act in the best interests of all Hydro One shareholders.
- A decision from the Province to allocate or transfer part or all of the related departure tax payment received by OEFC would not, however, preclude the OEB's ability with respect to Hydro One's rate application and the DTB recognized by Hydro One in 2015.

DRAFT

# Price Mitigation Proposal: Departure Tax

Corporate and Electricity Finance Division
January 10, 2017

# Overview: Ministry of Energy and Price Mitigation

- In December 2016, the Ministry of Energy, as part of a suite of potential initiatives to mitigate the rising cost of electricity, has suggested for consideration the potential dedication to ratepayer price mitigation some or all of the $2.6 billion 'departure tax' (DT) payments in lieu of tax (PILs) made by Hydro One to the Ontario Electricity Financial Corporation (OEFC) in November 2015, arising from the Hydro One initial public offering (IPO), which would have a fiscal impact.

- The discussion of the departure tax is often discussed along with the deferred tax benefit that Hydro One recognised in its 2015 annual financial statements, following the IPO.

- While the departure tax and deferred tax benefit are related, they are also separate and distinct.
  - Both are tax-related and are calculated using the fair value of Hydro One assets (as estimated, in the case of the departure tax paid).
  - The departure tax arose from Hydro One's exit from the system of payments-in-lieu of taxes paid to the OEFC, as part of "truing-up" what Hydro One was required to pay OEFC under the PILs regime based on the fair value of its assets. Hydro One paid $2.6 bn in departure tax to OEFC, as well as an additional about $0.2 bn in PILs to OEFC as a result of exiting the PILs regime.
  - Hydro One recognised a $2.8 bn deferred tax benefit as a result of the IPO, including $1.2 bn in eliminating a previous deferred tax liability amount, and recording a $1.6 bn deferred tax asset, which relates to Hydro One's going-forward obligations under the normal corporate tax system and the Canada Revenue Agency based on the impact on its taxes of the "tax shield" provided by the fair value of its assets.
  - The size of the tax shield under the normal corporate tax regime relates to the fair value of assets for tax purposes that results in higher tax depreciation expenses from taxable income, and does not relate directly to the departure tax amount paid by Hydro One to OEFC.

# OEB Review of 2017-2018 Hydro One Transmission Rates: Deferred Tax Benefit & Departure Tax

- The Ontario Energy Board (OEB) is currently reviewing Hydro One's 2017-18 transmission rate application to determine whether the deferred tax benefit (DTB) recorded by Hydro One, as a result of entering the normal corporate tax regime following the IPO, should be allocated to the benefit of ratepayers rather than shareholders.
  - In its review, OEB staff flagged that Hydro One realized a deferred tax recovery that was triggered by the revaluation of the tax basis of its fixed assets at fair market value as it entered the corporate tax regime (due to the IPO).
- Since Hydro One made its departure tax (DT) payment, and did not seek recovery from ratepayers for this payment, Hydro One's position is that the DTB would receive similar treatment (i.e., not impact ratepayers, but would be to the benefit of shareholders, in part to ensure consistency in treatment).
  - A general regulatory principle would be for ratepayers to receive the benefit from assets that they funded through rates, and equity holders would receive the benefit from their investments.
  - The Province as sole shareholder of Hydro One, funded the departure tax payment by making a capital contribution of the same amount prior to the IPO.
- Note that the departure tax did not have a net fiscal benefit to the Province on consolidation of OEFC and Hydro One.
  - OEFC (and the Province upon consolidation) recorded a higher PILs revenue on receipt of the DT from Hydro One; however, this amount was offset by an equal reduction in provincial revenue from Hydro One's net income as a result of the DT payment (an expense to Hydro One).
  - There is no net 'departure tax benefit' to 'give back' or return to ratepayers, both because there was no net revenue impact and it was not funded by ratepayers.

# OEB Review of 2017-18 Hydro One Transmission Rates: Departure Tax and Price Mitigation

- The Province using the departure tax amount for price mitigation has been cited as possibly reducing the risk of the OEB deciding to use Hydro One's deferred tax benefit to reduce Hydro One's rate ask in its current transmission rate application.
  - A fiscal risk is that the OEB may still decide to use some or all of the deferred tax amount to reduce Hydro One's rate request, while at the same time the Province uses the departure tax amount for price mitigation.
- Should the OEB decide to reverse the benefit of the DTB from Hydro One's shareholders to ratepayers, there would be significant impacts to the Province.
  - The Province would be subject to negative fiscal impacts based on how the OEB provides the benefit to ratepayers. For example, the OEB could determine that Hydro One's revenue requirement will be reduced over time by the cash tax savings from the DTB. This would negatively affect Hydro One's net income, and, therefore, reduce the Province's revenues upon consolidation of its proportionate share of Hydro One net income. (The Province's recorded increased revenues of ~$2.4B in 2015-16 due to the DTB.)
  - There would likely be a material decline in Hydro One's share price, as the overall company value would be negatively affected, given reduced net income and cash flows available to finance capital expenditures and pay dividends. Lower share prices would reduce future gains on sales as the Province moves forward on its path to sell down to the 40% ownership level in Hydro One.
  - The Province may also face criticism as it has already credited the Trillium Trust with the $2.4 billion DTB.

DRAFT

# Departure Tax and Price Mitigation: Ratepayer/Fiscal Impacts

- The following provides illustrative potential ratepayer and fiscal impacts from allocating the $2.6 billion departure tax to ratepayers.
- The impact to an individual ratepayers' electricity bill may not be very significant, unless used over a very short period of time. If the period that the departure tax amount is used to mitigate prices is increased, the annual ratepayer impact diminishes. In all cases, the annual negative fiscal impacts are significant.
  - As an illustrative scenario, if the $2.6 billion is allocated over 1 year and spread evenly over all Ontario consumption (vs targeted at some consumer classes), the benefit is estimated at about 1.85 cents / kWh.*
    - For a typical residential ratepayer consuming 750 kWh/month, this is estimated at $13.93/month (pre-tax), or less than 10% of a monthly bill.
  - Over a 5-year period or 10-year period, the benefit to a typical residential ratepayer is estimated at $2.79/month and $1.39/month, respectively. Industrial ratepayers are estimated to benefit by about 0.37 ¢/kWh and 0.185 ¢/kWh, respectively.
- Note that the electricity price relief would be temporary and would result in a spike in electricity bills following the conclusion of the mitigation initiative. This may introduce pressure to extend or replace the mitigation, resulting in additional fiscal impacts.

| Departure Tax Savings to Ratepayers | Allocation over 1 year | Allocation over 5 years | Allocation over 10 years |
|---|---|---|---|
| **Typical Residential Ratepayer (savings $/mth)** | $13.93 | $2.79 | $1.39 |
| **Savings: cents per kWh** | 1.85 | 0.37 | 0.185 |
| | | | |
| **Negative Fiscal Impact to the Province per annum** | $2.6 billion | $520 million | $260 million |

**Assumes total TWh supplied of 140 hours and monthly demand of 750 KWh per residential household*

# Key Fiscal Considerations

- Dedicating the departure tax to ratepayers would have a negative fiscal impact as the Province would record an expense of up to $2.6 bn related to this mitigation (up-front or over time, depending on how the amount is dedicated to ratepayers).
  - Note that the departure tax (DT) did not represent a fiscal or cash windfall to the Province.
    - **Fiscal:** OEFC (and the Province upon consolidation) recorded a higher PILs revenue on receipt of the DT from Hydro One; however, this amount was offset by an equal reduction in provincial revenue from Hydro One's net income as a result of the payment (an expense to Hydro One).
    - **Cash:** OEFC (and the Province upon consolidation) received the $2.6 billion in cash from Hydro One as a PILs payment, but the Province also made a $2.6 billion cash capital contribution to Hydro One to invest in additional common shares of the company and support Hydro One's departure tax payment.
    - **Timing**: The DT represents the upfront payment of PILs that Hydro One would have paid to OEFC in absence of exiting the PILs regime. In essence, it is a true up of past deferred PILs / future PILs payments rather than an incremental payment.
- An additional fiscal risk is that the OEB may still decide to allocate some or all of Hydro One's deferred tax benefit (DTB) to reduce Hydro One's rate request, even if the Province moves forward with the use of the DT amount as an electricity price mitigation tool.
  - Using the DT for price mitigation would likely be province-wide, for both Hydro One and non-Hydro One customers, while an OEB rate application decision, if applied to both its transmission and distribution businesses, would affect Hydro One`s rates and its customers.
  - Any use of the DTB by the OEB for Hydro One rate mitigation would result in a negative fiscal impact.
- Dedicating the DT to ratepayers could also put pressure on the Province to adopt a similar policy for all future DT payments (e.g., if a municipality sells its local distribution company to the private sector, it would be subject to a DT)
  - This would lead to additional negative fiscal and stranded debt impacts.

# Stranded Debt Considerations

- Reallocating the departure tax from OEFC to ratepayers would also cause the unfunded liability of OEFC (or "stranded debt") to increase by an equivalent amount.
  - It would be the first time since 2003-04 that OEFC's stranded debt would increase.
  - In fiscal 2015-16, OEFC's unfunded liability decreased by $3.7 billion, from $8.1 billion to $4.4 billion, primarily reflecting the impact of the Hydro One initial public offering (IPO). This was the largest annual paydown of stranded debt.
  - Going forward, OEFC would also forgo the interest expense savings from the debt that the departure tax amount would otherwise have paid down. This may affect its going-forward ability to continue to reduce stranded debt over time.
    - OEFC`s future results are also negatively affected by the loss of Hydro One PILs and reduced Provincial share of Hydro One net income.
    - OEFC Debt Retirement Charge revenue has also been reduced, with the end of the DRC for residential consumption as of January 1, 2016, and the now legislated full end to the DRC as of April 1, 2018.

# Implementation Considerations

- Additional legal discussion would be required regarding implementation, including the Province's authority to direct OEFC to make a payment to the Province to support rate mitigation.
  - For example, the Province may have to amend the objects of OEFC and implement a Minister's directive in order for OEFC to make the payment. Further legal analysis would be needed if the government is to proceed with this option.

- If the Province moves forward with a rate mitigation measure linked to funds received from the departure tax (DT), the government could consider implementing in such a way that it would not directly involve OEFC / increase stranded debt.
  - Rather than having funds transferred from OEFC to the Province (resulting in an expense to OEFC, which would increase stranded debt), the Province could alternatively borrow $2.6 billion to pay for the program from the CRF.
  - The Province would in effect be dedicating an "equivalent benefit" to ratepayers, while keeping the OEFC whole and demonstrating its commitment to reducing stranded debt.
  - The government could face criticism that it is "double counting" the DT cash (since it already made a $2.6 billion capital contribution in cash to Hydro One to facilitate the DT payment) and that the rate mitigation measure is not actually linked to the DT, but is a rate mitigation program funded by taxpayers.
  - Borrowing an additional $2.6 billion (or reducing OEFC's debt paydown by $2.6 billion) would also have associated on-going fiscal impacts from additional interest costs incurred. Net debt would also increase by $2.6 billion.

- The government could also decide to use only a portion of the DT payment for rate mitigation, rather than the entire $2.6 billion.
  - For example, the Province could dedicate the portion of the DT related to capital gains but allow OEFC to keep the portion related to recapturing past depreciation expense.
  - This decision would result in a smaller impact on electricity prices, especially if the amounts were allocated over-time, but would help mitigate negative fiscal impacts.
  - This decision would still face similar policy considerations as previously presented.

# Trillium Trust: Other Risk Mitigation on an Adverse OEB Decision

- The notion has also been raised for the Province to dedicate the departure tax amount to the Trillium Trust to fund electricity infrastructure to the benefit of ratepayers – in order to reduce the risk that the OEB will use some or all of Hydro One's deferred tax benefit to reduce its rate request.
  - This would be a policy shift, as the current policy is for the asset optimisation amounts to go to Moving Ontario Forward projects.
  - Adding energy infrastructure projects would be incremental.
  - There would also be a fiscal and Hydro One value impact over time.
    - As that infrastructure would not be funded by the rate base, there would be a displacement on the rate base growth side, which would affect share value and future net income.
    - The Province would have the expense (upfront or over time) of the electricity infrastructure spending without a future ratebase revenue stream.
  - The ratepayer mitigation impact may be small and deferred:
    - The timing of the impact could be spread out, both on the fiscal side (if the Province were to own the electricity infrastructure so it could amortise the cost over the life of the asset – note that such an action could be seen as contrary to the policy of bringing in private sector capital to fund electricity infrastructure that was part of the Asset Council's report) and the rate impact side, as the rate impact of displaced rate base growth would be deferred to when the assets come into service, and cost recovery would be over the life of the asset.

DRAFT

# Background: Departure Tax and Hydro One's Deferred Tax Benefit

# Departure Tax (DT)

- The "departure tax" is a result of Hydro One exiting the payments in lieu of tax (PILs) regime and entering the corporate tax regime as a result of the IPO in November 2015.
  - The PILs regime applies to tax-exempt electricity utilities in Ontario (e.g., Ontario Power Generation and municipally-owned local distribution companies, and it mirrors the regular tax system, creating a level playing field between publicly-owned and private sector firms.
  - PILS are paid to OEFC to help it manage and pay down electricity sector debt and other liabilities arising from the old Ontario Hydro.
  - Once a utility becomes less than 90% owned by the Province or municipality, its exemption from tax under the federal Income Tax Act and the Taxation Act (Ontario) ends.

- Due to exiting the PILs regime, Hydro One was deemed to have disposed of its assets immediately before it lost its tax exempt status for proceeds equal to the estimated fair market value of those assets at that time.
  - This results in an assessment of potential payments-in-lieu of tax for 'recapture' into taxable income previously claimed depreciation expense that reduced past PILs payable, if the fair value is greater than the depreciated value for tax purposes under the PILs regime.
  - It may also result in a potential taxable capital gain if the fair value is greater than the original value of the assets.
  - Together, this PILs payment is known as a 'departure tax'.
  - It should be noted that this payment is not incremental but rather a true up of the PILs Hydro One would have been expected to pay over time in absence of exiting the PILs regime.
  - The 'departure tax' is also not unique to the PILs regime, but mirrors provisions under the normal tax system when a taxable entity leaves the normal tax system.

- As a result of this deemed disposition, Hydro One was liable to make a DT PIL to OEFC of $2.6 billion. In order to facilitate Hydro One's payment and preserving the equity value of the company prior to the IPO, the Province made a $2.6 billion capital contribution into Hydro One and received new common shares of the company.

# Deferred Tax Benefit (DTB)

- Upon entering the corporate tax regime, Hydro One also revalued the tax basis of its fixed assets at fair market value and recognized eligible capital expenditures.
  - As a result of a higher revaluation of its fixed assets for tax purposes, Hydro One expects to be able to claim higher depreciation expenses for a period of time under the normal corporate tax system to reduce its taxable income and taxes payable.
  - Because of the elimination of the deferred tax liability under the PILs regime (on payment of the departure tax) and the 'tax shield' impact of the depreciation expense, Hydro One recorded $2.81 billion in a one-time non-cash DTB, which increased its net income by the same amount.
    - This DTB was comprised of an elimination of an about $1.2 billion deferred tax liability under the PILs regime, as Hydro One paid the departure tax, and a deferred tax asset recorded by Hydro One of about $1.6 billion.
  - The recording of a DTB contributed to Hydro One's net income in 2015.
    - The Province recognized a non-cash fiscal benefit of approximately $2.4 billion as a result, upon consolidation its proportionate share of 84% of Hydro One's net income on the Province's books.
- From the Province's perspective, allocating the DTB directly as a policy option for rate mitigation is not viable.
  - This benefit was recognized by Hydro One in connection with the IPO, and the Province, as no longer a sole shareholder, does not have the authority to direct the company to provide this benefit to ratepayers, rather than its shareholders.
  - Hydro One's board of directors has a fiduciary duty to act in the best interests of all Hydro One shareholders.
- A decision from the Province to allocate or transfer part or all of the related departure tax payment received by OEFC would not, however, preclude the OEB's ability with respect to Hydro One's rate application and the DTB recognized by Hydro One in 2015.

# Overview:
# Ministry of Energy and Price Mitigation

- In December 2016, the Ministry of Energy, as part of a suite of potential initiatives to mitigate the rising cost of electricity, has suggested for consideration the potential dedication to ratepayer price mitigation some or all of the $2.6 billion 'departure tax' (DT) payments in lieu of tax (PILs) made by Hydro One to the Ontario Electricity Financial Corporation (OEFC) in November 2015, arising from the Hydro One initial public offering (IPO).

- The discussion of the departure tax is often discussed along with the deferred tax benefit that Hydro One recognised in its 2015 annual financial statements, following the IPO.

- While the departure tax and deferred tax benefit are related, they are also separate and distinct, as described in the following slides.

# Ratepayer/Fiscal Impacts

- The following provides illustrative potential ratepayer and fiscal impacts from allocating the $2.6 billion departure tax to ratepayers.
- The impact to an individual ratepayers' electricity bill may not be very significant, unless used over a very short period of time. If the period that the departure tax amount is used to mitigate prices is increased, the annual ratepayer impact diminishes. In all cases, the annual negative fiscal impacts are significant.
  - As an illustrative scenario, if the $2.6 billion is allocated over 1 year and spread evenly over all Ontario consumption (vs targeted at some consumer classes), the benefit is estimated at about 1.85 cents / kWh [TBC].*
    - For a typical residential ratepayer consuming 750 kWh/month, this is estimated at $13.93/month (pre-tax), or less than 10% of a monthly bill [TBC].
