**Note**: Chart assumes that conservation incentive costs are available for amortization while administration cost are not. Although there is variable from year to year, incentives represent about two-thirds of conservation spending in Ontario. Chart assumes conservation spending continues at a similar rate beyond 2020. Chart assumes a 10-year borrowing rate of 3.0%.

# 4. Amortize Conservation Program Costs (cont'd)

## Considerations

- Under **Public Sector Accounting Board (PSAB) accounting standards**, used by both the Province and IESO, only certain assets can be amortized: 1) pensions and 2) tangible capital assets. Under PSAB an asset must meet several criteria to be considered a capital asset, including:
  - A tangible capital asset must be tangible and substantive and the Ontario government must have title and operate the asset.
  - A tangible capital asset must bring a tangible benefit to the government or to Ontario.

- CDM costs, on their own, do not meet the criteria of a tangible capital asset because customers would have ownership and control of installed CDM measures, not the Province or IESO.

- **Rate-regulated accounting** was developed to recognize the unique nature of regulated entities (e.g., electricity generators, LDCs). Under rate-regulated accounting certain costs can be treated as amortizable assets that would not normally be considered assets under accounting principles.
  - Over the past several years, the Auditor General (AG) has expressed concerns about the appropriateness of recognizing rate-regulated assets in the Province's consolidated financial statements.
  - Rate-regulated accounting is currently under review by international accounting standard setting bodies and is currently permitted only on an interim basis, so its future is unclear at present.

# 4. Amortize Conservation Program Costs (cont'd)

**Considerations**

- If some of Ontario's CDM costs could be amortized, analysis shows that ratepayer impacts would be reduced in the short-term but interest charges on the loan would result in increased overall ratepayer costs in the longer-term.

- Legislative amendments would be needed to allow recovery of loan interest charges from GA.

- If there is a desire to proceed:
  - Formal accounting advice will need to be sought from IESO's external auditor as well as the Ontario Provincial Controller (OPC) to determine whether CDM costs could be amortized according to rate-regulated accounting standards.
  - Further legal analysis would also be required to confirm legal viability and possible approaches to implementation.

# 5. LDC Efficiencies

- Consider opportunities for future LDC cost reductions and efficiencies through the regulatory framework.

**Considerations**

- The Ontario Energy Board has a mandate to regulate the electricity distribution sector in the public interest, ensuring the financial viability of the sector while promoting reliable service to customers at just and reasonable rates.
- Since 2012, the OEB has taken action – through the Renewed Regulatory Framework for Energy – to more closely link rate regulation with performance measures and outcomes.
- There maybe opportunities to promote further cost reductions and performance improvements within the distribution sector as there is continued evolution of the regulatory framework in Ontario.
  - Tightening LDC requirements may also indirectly incent other desired policy outcomes, such as LDC consolidation and grid modernization to realize further cost reductions.
- ENERGY could help promote or accelerate these efforts by asking the OEB through the LTEP Implementation Directive, s. 35 of the *Ontario Energy Board Act, 1998*, and the 2017 Mandate Letter and other agency business planning processes.
- In addition, further changes to the departure and transfer tax regimes could be considered to provide a further incentive for LDC mergers and acquisitions.

# 6. Rate Design Initiatives

- OEB continues to move forward with its Regulated Price Plan (RPP) Roadmap:
  - The OEB is undertaking a comprehensive review of the RPP, including exploring the introduction of offering different pricing plan options for customers following the completion of pilot programs in 2018. The plan is expected to be implemented over a 3-5 year period.

- Until new pricing plans are available, the OEB could provide an "opt-in flat rate RPP" structure that could be made available to residential, farm and small business consumers on an interim basis (2-3 years) until a wider range of price plans are available.
- Time-of-Use (TOU) pricing could also be introduced for non-RPP Class B consumers to reduce Global Adjustment (GA) volatility and reduce system costs.

| Current TOU | New Flat Rate |
|---|---|
| On: 18.0 ¢/kWh | 11.1 ¢/kWh |
| Mid: 13.2 ¢/kWh | |
| Off: 8.7 ¢/kWh | |

**Considerations**

- The OEB has indicated that the option would lead to no overall change in system costs. Consumers with higher peak and mid-peak usage patterns would see a decrease in their electricity bills, while those with higher off-peak usage patterns would see an increase.
  - While the current strong supply conditions may allow for such an RPP structure (i.e., peak demand requirements can be easily met), administrative costs could be high (distributors would need to design/implement an opt-in process and associated billing system on an interim basis).

| | Current TOU | New Flat Rate |
|---|---|---|
| 1) Monthly electricity bill- higher peak and mid-peak usage patterns | $172 | $163 |
| 2) Monthly electricity bill- higher off-peak usage patterns | $152 | $163 |

***Note:** 1) assumes a consumer consumption pattern of 45%:30%:25% (Off-peak: Mid-peak: On-peak), while 2) assumes consumer consumption pattern of 80%:10%:10% (Off-peak: Mid-peak: On-peak). Estimates are based on OEB's online electricity bill calculator (for Toronto Hydro-November 2016 rates)

# 6. Rate Design Initiatives (cont'd)

**Considerations**

- The decision to undertake smart meter investments was partly justified on the basis of TOU pricing. If TOU pricing were to be made optional, some stakeholders could question the rationale for smart meter investments.
  - Rationale for offering a flat rate option could focus on providing customers with choice until new pricing plans are rolled out under the RPP roadmap.

- If a flat rate design is introduced, there could be significant consumer opposition to any return to a mandatory TOU.

- After the interim flat rate period, the OEB could offer a wider range of pricing plans to consumers.
  - As part of its RPP review, the OEB will be running pilots with LDCs to assess customer response to alternative time periods and pricing structures.
  - Learnings from these pilots will help inform potential changes to the RPP. Pilots are expected to be in market May 2017 and run for one year.

- Non-RPP Class B electricity consumers currently pay Global Adjustment (GA) on a volumetric basis. Moving them to TOU would provide an incentive to shift consumption to off-peak periods.
  - Consumers, including manufacturers, who are unwilling to shift would face higher costs and likely not be supportive of the changes.
  - The decision to pursue TOU pricing for non-RPP class B consumers will impact proceeds recycling as there is interplay between the two initiatives.

# 7. Reduced Cost of OPG Borrowing

- OPG currently borrows for corporate purposes from the OEFC
- Seek to reduce OPG's borrowing costs and pass on savings to ratepayers by:
  - Reducing or removing the spread that OEFC applies to OPG for any new corporate debt; or
  - Allowing OPG to refinance its existing debt at longer maturities through the OEFC in order to take advantage of the current, favourable interest rate environment.
- Assuming the full spread is removed from all OEFC debt, OPG borrowing costs could be reduced by 50-100 basis points, representing annual savings of about $20-$25 million, increasing to $30-$35 million, as OPG's outstanding OEFC debt rises from ~$3.3 billion in 2016 to ~$4.7 billion in 2020.
- OPG could apply to the OEB as part of its current rate application to flow this benefit to ratepayers.

**Considerations**

- Further work is required to determine potential OPG savings from these initiatives.
- Allowing OPG to refinance would have a negative fiscal impact on the Province.
- Spreads are expected to decline, reducing the relative impact of this change, given lower overall interest rates and reduced volatility.
- Providing OPG with greater access to longer term (20-30 year) debt may also reduce costs:
  - OPG's average term to maturity for OEFC debt is 5.7 years, as compared to 22.2 years for privately financed project debt. This contrasts with most corporations and government which have been working to extend average debt terms in order to take advantage of the low interest rate environment.
  - Longer terms would also better match to the life of OPG's assets.
  - Recently, OEFC has allowed OPG to apply for 50% of its financing requirements in the form of longer term (25-30 year debt). Moving closer to 100% would accelerate this transition.

# 8. End DRC Early for Commercial/Small Industrial Class B Electricity Consumers

- Propose to remove the $0.007/kWh Debt Retirement Charge (DRC) from the bills of commercial/small industrial Class B consumers beginning in 2017, instead of April 1, 2018.
  - **Note:** Class A consumers (e.g., large industrial) would continue to pay DRC until at least April 1, 2018.

**Considerations**

- For a Class B consumer currently paying about $152/MWh, removing the DRC would represent a savings of about 5%.
  - A 50% reduction in the DRC charge would represent a savings of about 2%.

- Alternatively, the reduction of the DRC could be to $0.035/kWh starting in 2017, to provide relief for cap and trade until proceeds recycling is fully operational.

- Residential consumers have had the DRC removed from bills since January 1, 2016. Taking DRC off commercial and small industrial bills would result in equal treatment for these groups of consumers.

- The savings for commercial and small industrial consumers associated with this proposal would drop to zero in April 2018, since this is the current planned date for removing the DRC from non-residential bills.

- Prior to moving forward with this proposal, additional analysis from Legal Services and the MOF would be needed.

# 9. Dedicate Departure Tax

- In connection with the IPO, as a result of leaving the PILs regime and entering the corporate tax regime, Hydro One was deemed to dispose of its assets for proceeds equal to its fair market value, triggering a PILs liability of $2.6 billion (Departure Tax).
- This was paid to the Ontario Electricity Financial Corporation (OEFC), to be dedicated towards repayment of electricity sector stranded debt.
- The Province could explore repurposing some of those funds to the benefit of ratepayers.
- This may reduce the risk that the Ontario Energy Board (OEB) assigns to ratepayers the benefit from an associated tax asset, resulting in lower earnings and decreased share value for Hydro One. This decision is currently before the OEB, as part of Hydro One's Transmission rate application.

**Considerations**

- Cost savings to ratepayers would depend on timing and which ratepayers (e.g., Hydro One customers, or all Ontario customers) will benefit from some or all of the $2.6 billion value.
- While this is a shift from messaging that value from the broadening of ownership of Hydro One is being used pay down debt and fund transit and transportation, the Province could link to electricity infrastructure investments (e.g., as an offset to infrastructure investments already made in the sector, or to specific initiatives such as conservation).
- These funds were paid to the Ontario Electricity Financial Corporation (OEFC), ~~to be~~ dedicated towards repayment of electricity sector stranded debt. Repurposing may have an impact on the pay down / defeasance of this debt.

# 10. Cancel/Adjust Renewable Energy Procurements

- The Ministry could consider the following actions to further mitigate future impacts to electricity bills:

| Unallocated/Terminated Capacity | Announced Procurements | Executed Contracts |
|---|---|---|
| A. Do not procure unallocated or terminated capacity | B. Revise FIT 5 target | D. Cancel LRP I contracts |
| | C. Cancel FIT 6 | |

**Overarching Considerations**

- Cost savings associated with reducing or cancelling renewable energy procurements and programs will not reduce current electricity bills, but would result in future cost reductions relative to Ontario Planning Outlook forecasts.
- The IESO estimates implementing options A to C will reduce system costs by approximately $592 million ($2016) between 2019 and 2028, resulting in an average of approximately $0.50/month in savings to a typical residential electricity bill over the same period. [cost reductions from LRP I contract cancellations TBC]
- The microFIT program is winding down end of 2017. Annual microFIT procurement targets have been undersubscribed.
- With a few exceptions (e.g., rollover of unallocated microFIT capacity; addition of terminated microFIT and small FIT capacity to FIT 5), plans for unallocated or terminated capacity are not defined in announcements or existing directions.

**Cancel/Adjust Announced Procurements**

- Amendments to existing directions to the IESO would be required to reduce FIT 5 and cancel FIT 6.
- The FIT 5 procurement is underway with a base target of 150 MW and inclusion of any capacity available from contract terminations under prior small FIT and microFIT procurements. The application window closed on November 25, 2016.

# 10. Cancel/Adjust Renewable Energy Procurements – Existing Contracts

**Cancel Existing LRP I Contracts**

- 16 LRP I contracts (approx. 455 MW) have been executed and projects are under development.
- None have met Key Development Milestones. Total value of LRP I estimated at approx. $1 billion (NPV to 2016).

[Placeholder for IESO: Cost calculation relative to OPO and associated bill impact]

**Considerations**

- To help inform a decision, IESO or OEB could be asked to evaluate and provide guidance to the Ministry on the system need for LRP I projects and potential ratepayer impacts/benefits.
- 13 of 16 LRP I contracts have Indigenous participation. Cancelling LRP I contracts would remove this economic development opportunity and likely damage relationships between Indigenous communities and the government.
- LRP I Contract includes an “Optional Termination” provision allowing IESO to terminate any contract prior to the “Commercial Operation Date” with 6 months written notice.
- The IESO obligations under the Optional Termination provision depend on whether the project has met all “Key Development Milestones”.
  - As no projects have met their Key Development Milestones, the estimated total cost payable to contract holders is about $8 million.

# 10. Cancel/Adjust Renewable Energy Procurements – Existing Contracts (cont'd)

## Legal Analysis

- Under the *Electricity Act, 1998*, the Minister has the authority to amend previous directions without approval from Cabinet. Although an amendment to an existing direction would not require Cabinet approval, it is unlikely that a direction to cancel LRP I contracts could be considered as amending an existing direction. The previous LRP directions set out the broad policy framework that was reflected in the procurement, but the contracts themselves, once executed, are stand alone documents which the IESO had legal authority to execute. Revoking previous LRP directions does not affect that authority or have the effect of cancelling the procurement.
- As a result, any new directive to cancel LRP I contracts would need to be approved by Cabinet, either as part of an LTEP implementation directive to IESO, or pursuant to the overall power to direct IESO with respect to procurements outside the LTEP process. However, there is a risk that such a directive could be subject to challenge.
- ENERGY has previously received advice that there is a high risk that a court would conclude that the Minister has no authority under the *Electricity Act , 1998* to issue a direction requiring IESO to terminate microFIT Conditional Offers and FIT Offer Notices that have already been issued to applicants, because these offers create vested contractual rights and the Minister would require clear legislative authority to interfere with those rights. This reasoning would likely apply equally to any direction or directive to IESO to cancel LRP I contracts.
- Previous advice has also flagged a moderately high risk that the Province could be liable for damages in tort for inducing a breach of contract if it issues a direction to IESO that interferes with vested contractual rights without clear statutory authority to do so. LRP I contract holders could also assert other claims, such as misfeasance in public office.
- The risk and costs associated with potential law suits resulting from the cancellation of contracts requires further analysis, including analysis of whether any statutory amendments would be required to provide clear authority to cancel the contracts. LSB recommends ENERGY seek an opinion from Crown Law Office Civil before proceeding.

# Summary

- Reductions in electricity rates could be achieved by eliminating existing, planned or directed initiatives from the rate-base or shifting these costs to the tax-base.

- The timing of the impact of these rate mitigation initiatives varies.
  - Immediate and near-term impacts can be achieved by shifting costs to the tax-base or changing how certain costs are recovered from consumers or eliminating certain programs.
  - Over the longer term, changes to the electricity supply mix and achieving efficiencies in the electricity market could yield system savings.

- Pursuing the initiatives would require regulatory amendments and working with the electricity sector agencies, LDCs and other stakeholders to implement the initiatives.

- As shown before the positive impact to residential ratepayers is very limited from the proposals with ratepayer impacts estimated by Energy (between $8 and $9 per month) while the impact to the Province's fiscal position would be material (about $1.2 to $1.5 billion a year). If additional proposals are also fiscally-funded, the fiscal cost could be substantially higher from, e.g., accounting treatment of conservation amortisation or a class B DRC exemption.

# Appendix

# Electricity Consumer Classes

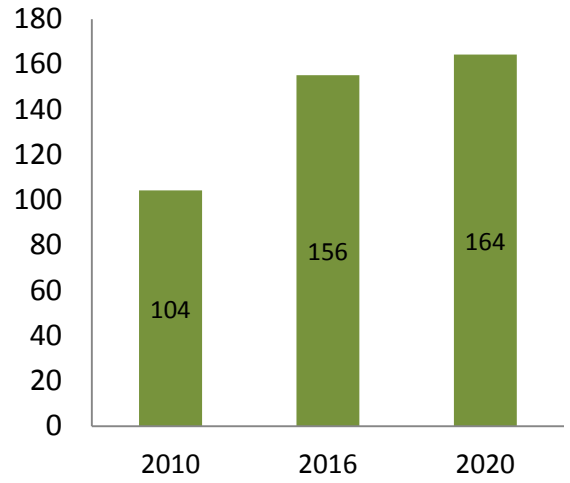
- In Ontario, there are three classes of electricity consumers:

| | Regulated Price Plan | Class B | Class A |
|---|---|---|---|
| **Consumer Types** | • Residential<br>• Small Business<br>• Farms | • Commercial<br>• Institutional<br>• Small industrial | • Large commercial<br>• Large industrial |
| **Load Size** | Below 0.05 MW | Between 0.05 MW and 1 MW | Above 1 MW |
| **Total Consumption** | 58 TWh | 57 TWh | 26 TWh |
| **Share of Consumption** | 41.1% | 40.4% | 18.4% |

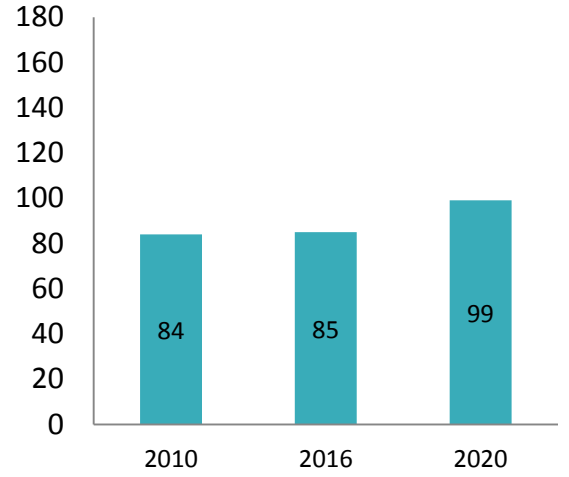
# Prices by Electricity Consumer Class

- Since 2010, average bills for residential consumers (i.e., using 750 kWh/month) have increased by over 50%. Rates are forecast to continue to increase, with residential consumers paying an estimated 6% by 2020.
- Industrial electricity rates have remained relatively flat over the same time period, due primarily to the Industrial Conservation Initiative (ICI). ICI represents a cost shift of about $5/month for residential electricity consumers. Industrial electricity consumers are forecast to see an increase of 16% by and 2020.

**Typical Residential Bill (750/kWh per month)**



**Typical Class A (Industrial) Price ($/MWh)**



**Note:** 2016 represents year-to-date September 2016 for industrial. Cap and trade proceeds recycling is included for the industrial consumer for 2020.

# Rate Mitigation Levers

- To provide further rate relief to Ontario electricity consumers, the government can use one or more of the levers outlined below:
  - **Tax-based Lever:**
    - Provide rebates funded from the tax-base or transfer items currently paid through the rate-base to the tax-base.
  - **Rate-based Lever:**
    - Shifts costs within the rate-base from one customer group to another to achieve electricity system benefits and/or policy goals.
  - **Cap and Trade Proceeds Lever:**
    - Use cap and trade proceeds on initiatives that help reduce greenhouse gas (GHG) emissions from the electricity sector (e.g., recycling proceeds during off-peak periods) while providing benefits to some or all electricity consumers.

# Traditional Rate Mitigation Programs

- Ontario has implemented a number of rate-based programs to help residential and industrial electricity consumers:
  - The Ontario Electricity Support Program (OESP) provides ongoing assistance directly on the bills of eligible low-income electricity consumers
  - The Rural or Remote Rate Protection (RRRP) program is provided to rural and remote residential and farm customers because the cost of distributing power to remote areas is much higher than for urban areas.
  - The Industrial Conservation Initiative (ICI) encourages Ontario's largest consumers to reduce consumption during peak periods while reducing system costs.
- There are also tax-base programs to help manage electricity prices:
  - Rebate the provincial portion of the HST from the electricity bills of residential, small business and farms as of January 1, 2017.
  - Northern Industrial Electricity Rate Program (NIERP), in which participants receive a rebate of two cents per kilowatt hour. On average, industrial electricity prices can be reduced by up to 20%.
- While rate-based programs provide relief to certain electricity consumers, they shift other costs to remaining ratepayers (See Appendix for additional details).

# Driving Down Prices for Consumers

- Since 2013, a number of actions have been taken to drive down prices for consumers wherever possible:
  - Renegotiating the Green Energy Investment Agreement, reducing contract costs by $3.7 billion;
  - Deferring the construction of two new nuclear reactors at Ontario Power Generation's Darlington facility, avoiding an estimated $15 billion in new construction costs;
  - Approving Ontario Power Generation's plans to enable the ongoing operation of Pickering up to 2024, which is expected to save ratepayers as much as $600 million;
  - Reducing Feed-In-Tariff (FIT) prices through annual price reviews, saving ratepayers at least $1.9 billion relative to the 2013 Long-Term Energy Plan (2013 LTEP) forecast; and
  - Suspending the second round of the Large Renewable Procurement (LRP II) process and the Energy-from-Waste Standard Offer Program to save up to $3.8 billion in electricity system costs relative to 2013 LTEP.

# Cost Shifts in the Electricity Sector – Current Programs

- Several programs in the electricity sector “shift costs” from one group of electricity consumers to another:
  - **Rural or Remote Rate Protect** (**RRRP)** is a longstanding program that reduces the delivery charge for rural electricity consumers and is paid for by all consumers in Ontario through a regulatory charge on bills.
  - **Ontario Electricity Support Program (OESP)** is funded via a regulatory charge on consumer bills and provides support for qualifying low income electricity consumers.
  - **Industrial Conservation Initiative (ICI)** empowers large consumers to lower their costs by reducing their demand during peak hours. In the process, ICI shifts costs from large electricity consumers to all other consumers in Ontario.
  - **Industrial Electricity Incentive** (**IEI**) program, offers reduced electricity prices for companies starting or expanding operations in Ontario. All electricity consumers in Ontario pay for the price reduction that IEI participants receive.

# Cost Shifts in the Electricity Sector (Cont'd)

- The tables on the right show the estimated cost shifts that result from existing government programs.
- ICI has had the largest cost shift of all the programs, due to the large size of Global Adjustment (GA) and the way that it is recovered from consumer classes.
- RRRP and OESP impact the regulatory line on consumer bills, while ICI, IEI and conservation affect GA (i.e., Electricity line on bills of Regulated Price Plan consumers).

**Cost Shift Impacts - Residential Bill**

*Typical 750 kWh/month Toronto Hydro consumer*

| *$/month* | 2011 | 2012 | 2013 | 2014 | 2015 | 2016 |
|---|---|---|---|---|---|---|
| ICI | 2.65 | 3.25 | 3.88 | 3.53 | 4.75 | 4.77 |
| RRRP | 0.90 | 0.82 | 0.84 | 0.92 | 0.93 | 0.94 |
| OESP | - | - | - | - | - | 0.84 |
| Conservation | 1.85 | 1.92 | 2.00 | 1.58 | 2.43 | 2.45 |
| IEI | - | - | 0.08 | 0.09 | 0.11 | 0.12 |
| **Total** | **5.41** | **5.99** | **6.81** | **6.13** | **8.21** | **9.12** |

**Cost Shift Impacts - Industrial Bill**

*Typical Class A consumer*

| *$/MWh* | 2011 | 2012 | 2013 | 2014 | 2015 | 2016 |
|---|---|---|---|---|---|---|
| ICI | -22.17 | -26.36 | -30.29 | -25.91 | -33.79 | -33.92 |
| RRRP | 1.20 | 1.10 | 1.12 | 1.23 | 1.24 | 1.25 |
| OESP | - | - | - | - | - | 1.13 |
| Conservation | 1.53 | 1.59 | 1.66 | 1.31 | 2.01 | 2.02 |
| IEI | - | - | 0.07 | 0.08 | 0.09 | 0.10 |
| **Total** | **-19.43** | **-23.67** | **-27.44** | **-23.29** | **-30.45** | **-29.43** |

**Note:** OESP did not come into effect until 2016. The 2016 values represent forecasts and are subject to change.

# Cost Shifts in the Electricity Sector (Cont'd)

- The table on the right shows the total cost for various government electricity programs. These programs are currently funded through the electricity system ratebase.

- Funding of these programs through the fiscal plan would remove these costs from the electricity system (i.e., Placing these costs on the taxbase).

**Cost of Programs**

*By government program*

| *$M* | 2011 | 2012 | 2013 | 2014 | 2015 | 2016 |
|---|---|---|---|---|---|---|
| ICI | 506 | 615 | 736 | 670 | 890 | 893 |
| RRRP | 172 | 156 | 159 | 176 | 174 | 176 |
| OESP | - | - | - | - | - | 158 |
| Conservation | 329 | 339 | 354 | 280 | 425 | 428 |
| IEI | - | - | 15 | 16 | 18 | 19 |

- For example, removing the roughly $900 million of program cost from the Industrial Conservation Initiative (ICI) program would save the typical residential electricity consumer $4.77 per month in 2016.

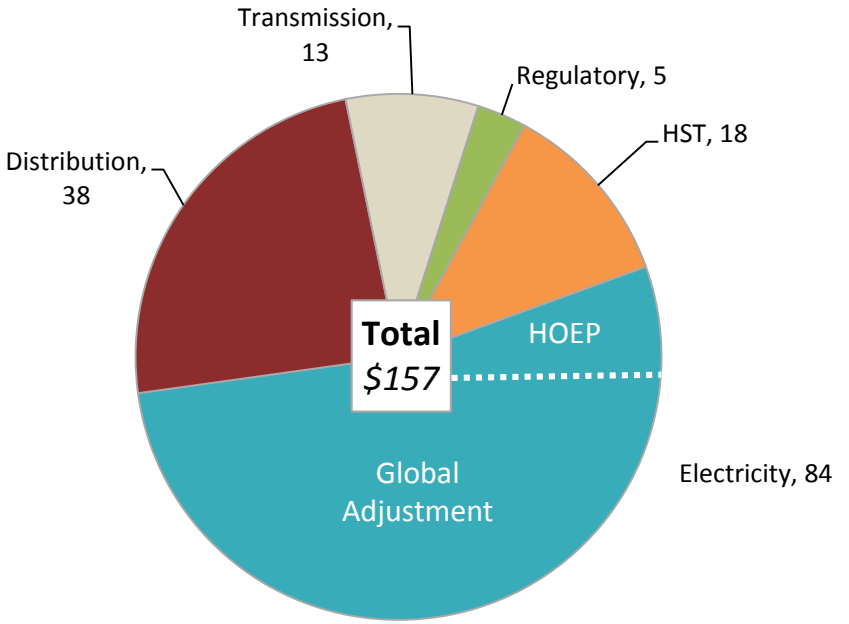
**Note:** OESP did not come into effect until 2016. The 2016 values represent forecasts and are subject to change.

# Residential Electricity Prices

- There are approximately 4.5 million residential consumers in Ontario.
- The Regulated Price Plan includes nearly all residential consumers, as well as small businesses. Regulated Price Plan consumers pay a blended commodity rate regulated by the OEB, which is set every six months.
- For households, the Debt Retirement Charge (DRC) was removed from residential electricity bills as of January 1, 2016.
- In addition, the Ontario Electricity Support Program (OESP) provides an ongoing rate reduction directly on the bills of low-income electricity consumers who have applied and meet the eligibility requirements. The program is funded through the rate base.
- Rural customers, in particular those with electrical heating, pay higher monthly bills.

**Typical Residential Monthly Bills ($)**

*As of November 1, 2016 (750 kWh/month)*



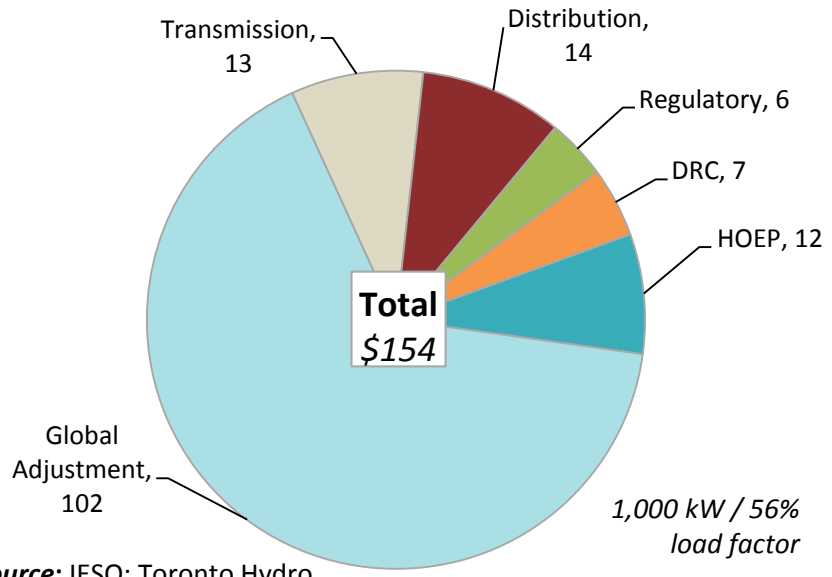
***Source*: OEB, Toronto Hydro**

# Commercial Electricity Prices

- There are approximately 55,000 commercial and institutional consumers in the province. These consumers are Class B consumers, and have separate line items on the electricity bill for HOEP and GA.
- There is a high degree of differentiation amongst consumers within the commercial sector in terms of size and consumption patterns. For example, an elementary school has a much different hourly load profile compared to a full service restaurant. This is an important consideration when looking at the bill impacts of policy options.

**Typical Commercial Price ($/MWh)**

*YTD June 2016 (Non-RPP Class B)*



***Source*:** IESO; Toronto Hydro

- Consumers in the commercial sector do not pay time-of-use prices and have little incentive to shift demand away from high demand hours.
- Targeted pricing programs are currently not available for Class B consumers.

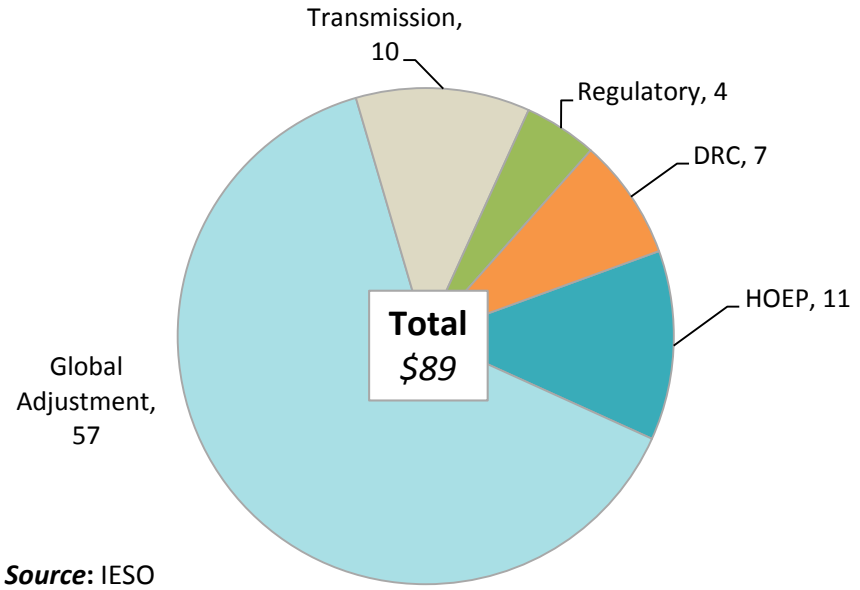
*** Note**: Most commercial consumers receive input tax credits for their HST.

# Industrial Electricity Prices

- There are about 300 large industrial consumers in Ontario.
- Measures in place to mitigate industrial electricity prices include ICI and NIERP.
- ICI lowers costs for eligible large electricity consumers (i.e., those with monthly peak demand exceeding 3 MW) that reduce consumption during peak periods.
  - ICI consumers reduce their electricity rates by 25% on average.

**Typical Large Industrial Price ($/MWh)**

*YTD June 2016*



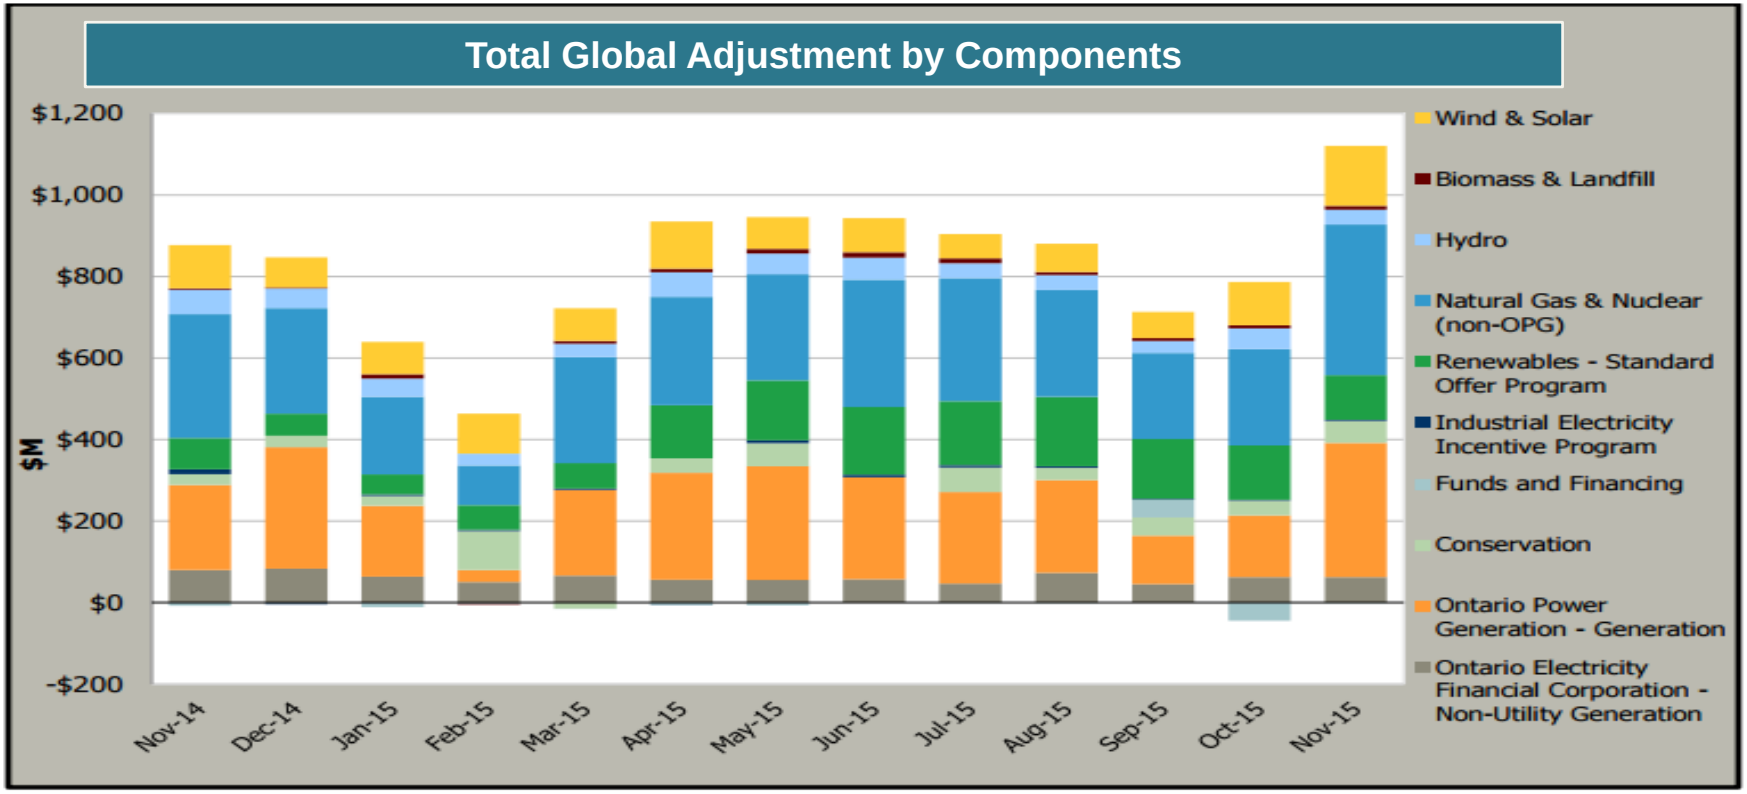
***Source*: IESO**

- Participants in NIERP receive a rebate of $20/MWh. On average, industrial electricity prices are reduced by about 20% through the program, reducing all-in prices to $69/MWh for these consumers. The program is funded through the tax base.

*** Note:** Industrial consumers receive input tax credits for their HST.

# Total Components of Global Adjustment

- Global Adjustment (GA) is a market mechanism that recovers costs from electricity consumers, including the cost of almost all conservation programs in the province (i.e., approximately half a billion dollars in 2016).



**Source:** IESO Monthly Market Report (November 2015)

# Cancel/Adjust Renewable Energy Procurements

# LRP I Pre-Construction Liability Limits

- All 16 successful LRP I developers accepted Optional Termination Provisions when the LRP I Contracts were executed in April 2016.
- If IESO chooses to enact the Optional Termination provision before a project has met all Key Development Milestones, IESO is required to pay pre-construction development costs up to the Pre Construction Liability Limit.
- Pre-construction development costs include costs incurred for feasibility studies, obtaining site access rights, work towards environmental approvals, business development plans, negotiation of contracts for design, equipment, construction and financing, reasonable overhead expenses, and other reasonable costs incurred.
- The Pre Construction Liability Limits are:
  - Non-Rooftop Solar: $250,000 plus $10.00/kW of Contract Capacity
  - Waterpower: $500,000 plus $20.00/kW of Contract Capacity
  - On-Shore Wind: $400,000 plus $2.00/kW of Contract Capacity
- According to the LRP I Optional Termination provision, the developer has a duty to take reasonable steps to mitigate losses, liabilities, costs and damages incurred as a result of the Optional Termination.
  - The IESO will not provide compensation for amounts which are attributable to a developer's failure to take reasonable steps to mitigate.

> Hi,

See attached and below. We are aiming to turn around a new version of the deck, incorporating any comments your ministries might have before major projects on Thursday. As such, could you please pass along your comments by end of day tomorrow?

If there are questions, I'm happy to discuss.

Thanks,
Keley

Cc: Orsini, Steve (CAB); Bromm, William (CAB); Katona, Keley (ENERGY)
Subject: Potential Rate Mitigation

Hi,

Attached is a draft of the rate mitigation deck. This is tracking to major projects on Thursday for a preliminary discussion. As you can see there are a number of initiatives that have fiscal implications so your input and comments would be appreciated. Keley can coordinate with your EAs. I understand that Andrew T. plans to share with PO/your MOs.

Serge

DRAFT

# Electricity Price Mitigation

Corporate and Electricity Finance Division
December 7, 2016

# General Comments on Energy's Deck

- Energy's deck note various actions taken to-date to reduce costs or cost pressures, such as deferring generation supply investments, improving market efficiency, and reducing the costs of existing procurements.
- Aside from reducing costs on the electricity bill, it is not clear what principles are being applied, short term or long term for electricity pricing.
  - A principle that was applied in the past was to ensure that electricity consumers paid the true cost of electricity, for example.
  - The Energy proposals appear to be about, in part at least, moving some costs from the rate base to the tax base.
- However, the Energy proposals may be seen as having a fairly limited impact, e.g., a little over $8/month for residential, or a little over 5% of the monthly bill (though not all of the proposals have been costed / assessed).
  - The proposals would have a significant fiscal cost.
- There is already significant amounts of existing fiscally-funded electricity price mitigation
  - Averages over $1.5 billion per year over the past five years, and estimated to increase to about $2 bn in 17-18 (see subsequent slide for estimated costs over time, and likely increasing over time).
  - These existing mitigation costs are not presented in Energy's deck.
  - Also not included is any "hidden" price mitigation through constrained financial performance of, e.g., OPG.

DRAFT

# Context: Taxpayer Funded Electricity Price Mitigation

| ($M) | 2011-12 | 2012-13 | 2013-14 | 2014-15 | 2015-16 | 2016-17[1] | 2017-18[1] |
|---|---|---|---|---|---|---|---|
| OCEB | 1,033 | 994 | 1,006 | 1,078 | 860 | - | - |
| OREC | - | - | - | - | - | 300 | 1,100* |
| Ending DRC[2] | - | - | - | - | 85 | 330 | 330 |
| NIERP | 120 | 120 | 115 | 108 | 120 | 120 | 120 |
| NOEC | 23 | 24 | 25 | 24 | 26 | 25 | 25 |
| OEPTC[3] | 354 | 406 | 418 | 429 | 444 | 450 | 460 |
| **TOTAL** | **1,530** | **1,544** | **1,564** | **1,639** | **1,525** | **1,195** | **2,005** |

1. 2016-17, 2017-18 based on forecasted numbers
2. 2015-16 estimated for 3 months of reduced DRC revenue
3. OEPTC amounts in all years based on energy component of the rebate.

* * Sourced from Energy PRRT submission

OCEB – Ontario Clean Energy Benefit
OREC – Ontario Rebate for Electricity Consumers
DRC – Debt Retirement Charge
NIERP – Northern Ontario Electricity Rate Program
NOEC – Northern Ontario Energy Credit
OEPTC – Ontario Energy and Property Tax Credit

- The table above shows the annual amount of taxpayer funded electricity price mitigation from 2011-12 to 2017-18.
- From 2011-12 to 2015-16 there has been an annual fiscal impact of approximately $1.6 billion due to electricity price mitigation programs.
- In 2016-17, the fiscal impact due to electricity price mitigation programs is estimated at approximately $1.2 billion.
- In 2017-18, due primarily to the start of the Ontario Rebate for Electricity Consumers, the expected fiscal impact due to electricity price mitigation programs is approximately $2.1 billion.

# Electricity Price Mitigation

General Decision Points on Program Features:

- Funding: Rate base vs Tax base
  - Tax base programs have a direct fiscal impact on the Province's finances, and shift costs based on taxpayer incidence and impact on expenditure room for other, non-electricity, programs.
  - Rate base programs shift costs from one group of ratepayers to another.
- On-bill vs Not On-bill
  - Recent focus has been on on-bill programs, such as OESP and OREC.
  - Older tax-base funded programs that are not visible on the bill are still in place, such as NOEC and OEPTC.
  - As OESP enrollment increases, could consider phasing out the non-bill benefits of NOEC and OEPTC.
- Targeted vs General
  - Recent new programs include both general (OREC) and targeted (OESP) programs.
  - Consideration could be made to make OREC more conservation-friendly (e.g., a monthly eligible consumption cap brought in, as with the former Ontario Clean Energy Benefit), and maybe a higher cap in the winter to allow for space heating costs.
  - A targeted industrial program recently extended and made on-going is the Northern Industrial Electricity Rate (NIER) program.

# Energy's Proposals

Energy is proposing additional electricity price mitigation programs, currently funded through the electricity system, be fiscally-funded. They could be upwards of $2 bn/year, (plus the departure tax), which is not included in the fiscal plan, which would challenge the path to balance.

- OESP & RRRP (Total of about $0.4 Bn/yr): This includes shifting the cost of the Ontario Electricity Support Program (OESP) and the Rural or Remote Electricity Rate Program (RRRP) to the tax base. Note that the fiscal exposure is larger if the OESP take up rate is larger, faster than assumed.

- Industrial Conservation Initiative (ICI -- About $900+ M/yr): Energy also shows, as a potential residential price mitigation measure, the cancellation of the ICI.
  - Energy is not initially proposing it be continued instead as taxpayer funded, but notes the about 30% price increase (from $85/MWH to $110), if ICI is cancelled, for the large Class A customers benefiting from ICI currently.
  - As this cost estimate is for 2016, prior to the planned expansion of the ICI, this could further increase the fiscal exposure by about $xxx million).

- Departure Tax: As a result of the IPO, Hydro One paid a "departure tax" payment in lieu of tax (PIL) of $2.6 billion, as a final true-up of its PILs tax obligation.
  - This was paid to the Ontario Electricity Financial Corporation and helped reduce stranded debt.
  - Using some or all of it for price mitigation would change the net stranded debt paydown by OEFC resulting from the IPO. This would also be a one-time measure (potentially over a few years), and fiscal impact, as the departure tax amount was one-time.

- Other fiscal cost risks (Total of about $0.8+ Bn):
  - Amortisation of conservation costs also poses a fiscal risk (about $0.4 bn/yr),
  - Ending the DRC early for Class B customers (commercial, small industrial) (about $0.4 bn/yr to 2017-18)
  - Lowering of the debt interest paid by OPG (about $xx – yy million/yr),

DRAFT

# Fiscal Mitigation Options

- With the addition of recent and new price mitigation measures, a review should be initiated on fiscally-funded programs. There could be a phase down / out transition period considered. Examples include the following:

- Ontario Energy and Property Tax Credit (OEPTC) and Northern Ontario Energy Credit (NOEC):
  - Phase down and/or out the non-on-bill benefits of. (Save up to about $460 M/yr)
  - These targeted, low-income measures were introduced after the HST was introduced.
  - The OESP provides a larger, targeted and on-bill relief to qualifying consumers.

- Ontario Rebate for Electricity Consumers (OREC):
  - Introduce over time a monthly eligible consumption cap, with perhaps a higher cap in the winter to allow for space heating costs.
  - As with the prior OCEB cap, provides a rough incentive for conservation and correlation to larger homes. A higher cap in winter may help with space-heating issue.
  - May be challenging to implement.

- Greenhouse Gas Reduction Account:
  - If ICI is put on the tax-base, make it eligible for GGRA funding.
  - Positioned as, e.g., providing annual benefits from participants conserving and shifting off-peak to reduce reliance on GHG-emitting peaking plants

# Appendix

DRAFT

# Background on Taxpayer-funded Electricity Price Mitigation

| Program | Annual Fiscal Impacts ($M) | Date | Details |
|---|---|---|---|
| **Ontario Clean Energy Benefit (OCEB)** | ~1,000 | Jan 1 2011 to Dec 31, 2015 | OCEB provided over four million residential customers, and over 400,000 farm, small business and other small users with a benefit equal to 10 per cent of the total cost of electricity on their bills, including tax. Effective September 1, 2012, 10 per cent benefit was capped for the first 3,000 kWh of electricity consumed per month. OCEB expired December 31, 2015, as legislated. |
| **Removed Debt Retirement Charge (DRC) from Residential Bills** | ~330 | Jan 1, 2016 to Mar 31, 2018 | The government removed the DRC from residential electricity users' bills as of January 1, 2016. This is saving a typical residential user about $70 each year and meant ending the DRC earlier for these users than otherwise provided for in the *Electricity Act, 1998*. |
| **Ontario Rebate for Electricity Consumers (OREC)** | ~1,200 | Jan 1, 2017 onward | This ongoing program will rebate -- directly on consumers' residential electricity bills -- an amount equal to the provincial portion of the Harmonized Sales Tax (HST). |
| **Northern Industrial Electricity Rate (NIER) Program** | 120 | March 2010 | As announced in Budget 2015, the government committed to ongoing support for northern industrials with $120 million allocated annually. NIER was previously extended in 2012 for an additional three-year term, effective April 1, 2013 and also for a year effective April 1, 2016, with an allocation up to $120 million per year.<br>Qualifying participants receive a rebate of two cents per kilowatt-hour (kWh) up to a maximum of $20 million per year per company.<br>NIER initially established as a three-year program in Budget 2010, effective April 1, 2010. |
| **Northern Ontario Energy Credit** | ~25 | Budget 2010 | Delivered as part of the Ontario Trillium Benefit, provides individuals living in northern Ontario with a credit of up to $146 per year for the 2016 benefit year, and families up to $224.[1] |
| **Ontario Energy Property Tax Credit** | ~445[1] | Budget 2010 | Delivered as part of the Ontario Trillium Benefit, energy portion provides up to $224 per year (inflation adjusted) for low-to moderate-income individuals and families, and for qualifying seniors.[1] |

1. Energy portion cost only. Both the energy portion of the Ontario Energy and Property Tax Credit (OEPTC) and NOEC were introduced/enhanced following the introduction of the HST and have a significant annual fiscal cost (totalling about $500 million annually).

DRAFT

# Timeline: Taxpayer-funded Electricity Price Mitigation

**Budget 2010: OEPTC, NOEC Proposed as part of the Ontario Trillium Benefit**

*In the 2011 Budget, the government combined the payments of three existing tax credits — the Ontario Sales Tax Credit, the Ontario Energy and Property Tax Credit, and the Northern Ontario Energy Credit — to create the OTB. The OTB is paid in monthly instalments throughout the year, which helps people meet their expenses as bills arrive.*

**Ontario Clean Energy Benefit** (Jan 1 2011 to Dec 31 2015)

*The OCEB was introduced in the 2010 Ontario Economic Outlook and Fiscal Review to help consumers transition to a cleaner electricity system. As set out in legislation, the OCEB ended on December 31, 2015. The Province has introduced rate mitigation measures to be implemented after December 31, 2015.*

*OCEB provided over four million residential customers, and over 400,000 farm, small business and other small users with a benefit equal to 10 per cent of the total cost of electricity on their bills, including tax, for the first 3,000 kilowatt-hours (kWh) of monthly electricity consumption.*

**Removing DRC from Residential Bills** (Jan 1 2016 to Mar 31 2018)

*The government removed the DRC from residential electricity users' bills beginning on January 1, 2016. This saves a typical residential user about $70 each year and ends the DRC earlier for these users than otherwise provided for in the Electricity Act, 1998.*

**Ontario Rebate for Electricity Consumers**

*As of January 1, 2017, OREC will reduce electricity costs by an amount equal to the provincial portion of the HST for about five million residential consumers, farms and small businesses.*

2010 2011 2012 2013 2014 2015 2016 2017

## History of Northern Industrial Electricity Price Relief

**November 2006**

*The Ontario government announced the Northern Pulp and Paper Electricity Transition Program (NPPETP), a three-year $140 million, to be effective retroactively to October 1, 2006*

**Budget 2009**

*The government announced extension of the NPPETP by one year providing about $58 million with electricity price rebates of 1.8 cents/kWh.*

**Budget 2010**

*NIER program announced, with a projected fiscal cost of $150 M per year, to provide electricity price rebates for qualifying large industrial facilities in northern Ontario. An additional $21.8 million allocated for existing NPPETP in 2010-11 to be integrated with NIER.*

**September 2010**

*Transition from NPPETP to NIER: pulp and paper mills participating in NPPETP continued to receive the NPPETP rebate of 1.8 cents/kWh until September 30, 2010, with those qualifying for NIER receiving a top-up rebate of 0.2 cents/kWh.*

**December 2012**

*The government announced the extension of the NIER for three years, capping the rebates to a maximum of 2011-12 consumptions levels or $20 million, whichever is lower.*

DRAFT

# Potential Fiscal Impact to the Electricity Sector

- The electricity sector has a significant impact on the Province's fiscal position; through both the revenue and expense sides of the Province's fiscal position.
  - Electricity Rate mitigation programs funded through the tax base have a direct fiscal impact on the Province's finances.
  - Alternatively, electricity rate mitigation programs funded by the rate base shift costs from one group of ratepayers to another.
- The Province's electricity sector agencies and corporations are each consolidated into the government's financial statements, and directly affect the Province's surplus/deficit position.
  - Ontario Power Generation (OPG) financial results have a dollar-for-dollar impact on the Province.
    - Electricity price mitigation strategies involving OPG would lead to a direct fiscal impact.
  - Hydro One financial results have a direct impact on the Province, based on the Province's proportionate ownership.
    - The Province currently holds about 70 per cent of Hydro One.

DRAFT

# Proposed Taxpayer Funded Electricity Price Mitigation
(To be revised)

| ($M) | 2016-17[1] | 2017-18[1] | 2018-19[1] | 2019-20[1] | 2020-21[1] |
|---|---|---|---|---|---|
| OCEB | - | - | - | - | - |
| OREC | 300 | 1,100* | 1,100* | 1,200* | 1,200* |
| Ending DRC[2] | 330 | 330 | -- | -- | -- |
| NIERP | 120 | 120 | 120 | 120 | 120 |
| NOEC | 25 | 25 | 25 | 25 | 25 |
| OEPTC[3] | 450 | 460 | 470 | 481 | 481 |
| **CURRENT TOTAL** | **1,195** | **2,005** | **1,715** | **1,826** | **1,826** |
| 1. OESP | | 106 | 119 | 127 | 132 |
| 2. RRRP | | 292 | 300 | 306 | 315 |
| 3. First Nations Delivery Rate | | 18 | 18 | 18 | 18 |
| 4. Fund ICI through Tax Base | | 900+ | 900+ | 900+ | 900+ |
| 5. Departure Tax | | TBD | TBD | TBD | TBD |
| 6. Conservation Amortisation | | | | | |
| 7. DRC Ended for Class B | | | | | |
| 8. Other | | | | | |
| **TOTAL** | **1195** | **3,421** | **3,152** | **3,177** | **3,191** |

1. 2016-17, 2017-18 based on forecasted numbers
2. Estimated impact up to March 31, 2018
3. OEPTC amounts in all years based on energy component of the rebate.

- As shown above, if all measures proposed in this deck were to be accepted taxpayer funded contributions to electricity price mitigation would increase to about $3.2 billion, or more, by 2020-21. That is about a 60% increase from the current forecast for 2017-18.
- These amounts were not considered in the 2016-17 Fiscal Plan and could put at risk the Province's fiscal objectives for 2017-18 and beyond.

# Electricity Price Mitigation

Corporate and Electricity Finance Division
December 7, 2016

# General Comments on Energy's Deck

- Energy's deck note various actions taken to-date to reduce costs or cost pressures, such as deferring generation supply investments, improving market efficiency, and reducing the costs of existing procurements.
- Aside from reducing costs on the electricity bill, it is not clear what principles are being applied, short term or long term for electricity pricing.
  - A principle that was applied in the past was to ensure that electricity consumers paid the true cost of electricity, for example.
  - The Energy proposals appear to be about, in part at least, moving some costs from the rate base to the tax base.
- However, the Energy proposals may be seen as having a fairly limited impact, e.g., a little over $8/month for residential, or a little over 5% of the monthly bill (though not all of the proposals have been costed / assessed).
  - The proposals would have a significant fiscal cost.
- There is already significant amounts of existing fiscally-funded electricity price mitigation
  - Averages over $1.5 billion per year over the past five years, and estimated to increase to about $2 bn in 17-18 (see subsequent slide for estimated costs over time, and likely increasing over time).
  - These existing mitigation costs are not presented in Energy's deck.
  - Also not included is any "hidden" price mitigation through constrained financial performance of, e.g., OPG.

DRAFT

# General Comments on Energy's Deck (cont.)

- Energy is proposing additional electricity price mitigation programs, currently funded through the electricity system, be fiscally-funded, with an estimated impact of about $0.4 billion initially, and rising over time.
  - This includes shifting the cost of the Ontario Electricity Support Program (OESP) and the Rural or Remote Electricity Rate Program (RRRP) to the tax base.
  - Note that the fiscal exposure is larger if the OESP take up rate is larger, faster than assumed.

- Industrial Conservation Initiative (ICI): Energy also shows, as a potential residential price mitigation measure, the cancellation of the ICI.
  - Energy is not initially proposing it be continued instead as taxpayer funded, but notes the about 30% price increase (from $85/MWH to $110), if ICI is cancelled, for the large Class A customers benefiting from ICI currently (at a cost shift of about $900 million per year in 2016).
  - As this cost estimate is for 2016, prior to the planned expansion of the ICI, this could further increase the fiscal exposure by about $xxx million).

- Departure Tax: As a result of the IPO, Hydro One paid a "departure tax" payment in lieu of tax (PIL) of $2.6 billion, as a final true-up of its PILs tax obligation.
  - This was paid to the Ontario Electricity Financial Corporation and helped reduce stranded debt.
  - Using some or all of it for price mitigation would change the net stranded debt paydown by OEFC resulting from the IPO. This would also be a one-time measure (potentially over a few years), and fiscal impact, as the departure tax amount was one-time.

- Other fiscal cost risks:
  - Amortisation of conservation costs also poses a fiscal risk (about $0.4 bn/yr),
  - Ending the DRC early for Class B customers (commercial, small industrial) (about $0.4 bn/yr to 2017-18)
  - Lowering of the debt interest paid by OPG (about $xx – yy million/yr),

# Electricity Price Mitigation

General Decision Points on Program Features:

- Funding: Rate base vs Tax base
  - Tax base programs have a direct fiscal impact on the Province's finances, and shift costs based on taxpayer incidence and impact on expenditure room for other, non-electricity, programs.
  - Rate base programs shift costs from one group of ratepayers to another.
- On-bill vs Not On-bill
  - Recent focus has been on on-bill programs, such as OESP and OREC.
  - Older tax-base funded programs that are not visible on the bill are still in place, such as NOEC and OEPTC.
  - As OESP enrollment increases, could consider phasing out the non-bill benefits of NOEC and OEPTC.
- Targeted vs General
  - Recent new programs include both general (OREC) and targeted (OESP) programs.
  - Consideration could be made to make OREC more conservation-friendly (e.g., a monthly eligible consumption cap brought in, as with the former Ontario Clean Energy Benefit), and maybe a higher cap in the winter to allow for space heating costs.
  - A targeted industrial program recently extended and made on-going is the Northern Industrial Electricity Rate (NIER) program.

NOEC – Northern Ontario Energy Credit
OEPTC – Ontario Energy and Property Tax Credit

- The table above shows the annual amount of taxpayer funded electricity price mitigation from 2011-12 to 2017-18.
- From 2011-12 to 2015-16 there has been an annual fiscal impact of approximately $1.6 billion due to electricity price mitigation programs.
- In 2016-17, the fiscal impact due to electricity price mitigation programs is estimated at approximately $1.2 billion.
- In 2017-18, due primarily to the start of the Ontario Rebate for Electricity Consumers, the expected fiscal impact due to electricity price mitigation programs is approximately $2.1 billion.

DRAFT

# Fiscal Mitigation Options

- With the addition of recent and new price mitigation measures, a review should be initiated on fiscally-funded programs. There could be a phase down / out transition period considered. Examples include the following:

- Ontario Energy and Property Tax Credit (OEPTC) and Northern Ontario Energy Credit (NOEC):
  - Phase down and/or out the non-on-bill benefits of. (Save up to about $460 M/yr)
  - These targeted, low-income measures were introduced after the HST was introduced.
  - The OESP provides a larger, targeted and on-bill relief to qualifying consumers.

- Ontario Rebate for Electricity Consumers (OREC):
  - Introduce over time a monthly eligible consumption cap, with perhaps a higher cap in the winter to allow for space heating costs.
  - As with the prior OCEB cap, provides a rough incentive for conservation and correlation to larger homes. A higher cap in winter may help with space-heating issue.
  - May be challenging to implement.

- Greenhouse Gas Reduction Account:
  - If ICI is put on the tax-base, make it eligible for GGRA funding.
  - Positioned as, e.g., providing annual benefits from participants conserving and shifting off-peak to reduce reliance on GHG-emitting peaking plants

# Appendix

DRAFT

# Background on Taxpayer-funded Electricity Price Mitigation

| Program | Annual Fiscal Impacts ($M) | Date | Details |
|---|---|---|---|
| **Ontario Clean Energy Benefit (OCEB)** | ~1,000 | Jan 1 2011 to Dec 31, 2015 | OCEB provided over four million residential customers, and over 400,000 farm, small business and other small users with a benefit equal to 10 per cent of the total cost of electricity on their bills, including tax. Effective September 1, 2012, 10 per cent benefit was capped for the first 3,000 kWh of electricity consumed per month. OCEB expired December 31, 2015, as legislated. |
| **Removed Debt Retirement Charge (DRC) from Residential Bills** | ~330 | Jan 1, 2016 to Mar 31, 2018 | The government removed the DRC from residential electricity users' bills as of January 1, 2016. This is saving a typical residential user about $70 each year and meant ending the DRC earlier for these users than otherwise provided for in the *Electricity Act, 1998*. |
| **Ontario Rebate for Electricity Consumers (OREC)** | ~1,200 | Jan 1, 2017 onward | This ongoing program will rebate -- directly on consumers' residential electricity bills -- an amount equal to the provincial portion of the Harmonized Sales Tax (HST). |
| **Northern Industrial Electricity Rate (NIER) Program** | 120 | March 2010 | As announced in Budget 2015, the government committed to ongoing support for northern industrials with $120 million allocated annually. NIER was previously extended in 2012 for an additional three-year term, effective April 1, 2013 and also for a year effective April 1, 2016, with an allocation up to $120 million per year.<br>Qualifying participants receive a rebate of two cents per kilowatt-hour (kWh) up to a maximum of $20 million per year per company.<br>NIER initially established as a three-year program in Budget 2010, effective April 1, 2010. |
| **Northern Ontario Energy Credit** | ~25 | Budget 2010 | Delivered as part of the Ontario Trillium Benefit, provides individuals living in northern Ontario with a credit of up to $146 per year for the 2016 benefit year, and families up to $224.[1] |
| **Ontario Energy Property Tax Credit** | ~445[1] | Budget 2010 | Delivered as part of the Ontario Trillium Benefit, energy portion provides up to $224 per year (inflation adjusted) for low-to moderate-income individuals and families, and for qualifying seniors.[1] |

1. Energy portion cost only. Both the energy portion of the Ontario Energy and Property Tax Credit (OEPTC) and NOEC were introduced/enhanced following the introduction of the HST and have a significant annual fiscal cost (totalling about $500 million annually).

DRAFT

# Timeline: Taxpayer-funded Electricity Price Mitigation

**Budget 2010: OEPTC, NOEC Proposed as part of the Ontario Trillium Benefit**

*In the 2011 Budget, the government combined the payments of three existing tax credits — the Ontario Sales Tax Credit, the Ontario Energy and Property Tax Credit, and the Northern Ontario Energy Credit — to create the OTB. The OTB is paid in monthly instalments throughout the year, which helps people meet their expenses as bills arrive.*

**Ontario Clean Energy Benefit** (Jan 1 2011 to Dec 31 2015)

*The OCEB was introduced in the 2010 Ontario Economic Outlook and Fiscal Review to help consumers transition to a cleaner electricity system. As set out in legislation, the OCEB ended on December 31, 2015. The Province has introduced rate mitigation measures to be implemented after December 31, 2015.*

*OCEB provided over four million residential customers, and over 400,000 farm, small business and other small users with a benefit equal to 10 per cent of the total cost of electricity on their bills, including tax, for the first 3,000 kilowatt-hours (kWh) of monthly electricity consumption.*

**Removing DRC from Residential Bills** (Jan 1 2016 to Mar 31 2018)

*The government removed the DRC from residential electricity users' bills beginning on January 1, 2016. This saves a typical residential user about $70 each year and ends the DRC earlier for these users than otherwise provided for in the Electricity Act, 1998.*

**Ontario Rebate for Electricity Consumers**

*As of January 1, 2017, OREC will reduce electricity costs by an amount equal to the provincial portion of the HST for about five million residential consumers, farms and small businesses.*

2010 2011 2012 2013 2014 2015 2016 2017

## History of Northern Industrial Electricity Price Relief

**November 2006**

*The Ontario government announced the Northern Pulp and Paper Electricity Transition Program (NPPETP), a three-year $140 million, to be effective retroactively to October 1, 2006*

**Budget 2009**

*The government announced extension of the NPPETP by one year providing about $58 million with electricity price rebates of 1.8 cents/kWh.*

**Budget 2010**

*NIER program announced, with a projected fiscal cost of $150 M per year, to provide electricity price rebates for qualifying large industrial facilities in northern Ontario. An additional $21.8 million allocated for existing NPPETP in 2010-11 to be integrated with NIER.*

**September 2010**

*Transition from NPPETP to NIER: pulp and paper mills participating in NPPETP continued to receive the NPPETP rebate of 1.8 cents/kWh until September 30, 2010, with those qualifying for NIER receiving a top-up rebate of 0.2 cents/kWh.*

**December 2012**

*The government announced the extension of the NIER for three years, capping the rebates to a maximum of 2011-12 consumptions levels or $20 million, whichever is lower.*

DRAFT

# Potential Fiscal Impact to the Electricity Sector

- The electricity sector has a significant impact on the Province's fiscal position; through both the revenue and expense sides of the Province's fiscal position.
  - Electricity Rate mitigation programs funded through the tax base have a direct fiscal impact on the Province's finances.
  - Alternatively, electricity rate mitigation programs funded by the rate base shift costs from one group of ratepayers to another.
- The Province's electricity sector agencies and corporations are each consolidated into the government's financial statements, and directly affect the Province's surplus/deficit position.
  - Ontario Power Generation (OPG) financial results have a dollar-for-dollar impact on the Province.
    - Electricity price mitigation strategies involving OPG would lead to a direct fiscal impact.
  - Hydro One financial results have a direct impact on the Province, based on the Province's proportionate ownership.
    - The Province currently holds about 70 per cent of Hydro One.

Hi Francisco,

See slide 11 of the attached that Shajee has prepared. We will look to use include this in the Price Mitigation Proposals slide deck instead of the Slide #7 that you may have seen.

Let us know if you have any comments. John is consolidating his and your comments at the moment.

Hi,

Attached is a draft of the rate mitigation deck. This is tracking to major projects on Thursday for a preliminary discussion. As you can see there are a number of initiatives that have fiscal implications so your input and comments would be appreciated. Keley can coordinate with your EAs. I understand that Andrew T. plans to share with PO/your MOs.

Serge

DRAFT

# Electricity Price Mitigation

Corporate and Electricity Finance Division
December 7, 2016

# General Comments on Energy's Deck

- The Energy proposals may be seen as having a fairly limited impact, e.g., a little over $8/month for residential, or a little over 5% of the monthly bill.
  - The proposals would have a significant fiscal cost.
- There is already significant amounts of existing electricity price mitigation that has a fiscal impact (averaging over $1.5 billion per year over the past five years, and estimated to increase to about $2 bn in 17-18 (see following slide for estimated costs over time, and likely increasing over time).
  - That is not presented in Energy's deck.
  - Also not included is any "hidden" price mitigation through constrained financial performance of, e.g., OPG.
- Energy is proposing additional electricity price mitigation programs, currently funded through the electricity system, be fiscally-funded, with an estimated impact of about $0.4 billion initially, and rising over time.
  - This includes shifting the cost of the Ontario Electricity Support Program (OESP) and the Rural or Remote Electricity Rate Program (RRRP) to the tax base.
  - Note that the fiscal exposure is larger if the OESP take up rate is larger, faster than assumed.

# General Comments on Energy's Deck (cont.)

- Industrial Conservation Initiative (ICI): Energy also presents as a residential mitigation measure the cancellation of the ICI.
  - Energy is not initially proposing it continue as taxpayer funded, but notes the about 30% price increase for the large Class A customers benefiting from ICI currently (at a cost shift of about $900 million per year).
  - This cost is for 2016, prior to the planned expansion of the ICI, which could further increase the fiscal exposure.
- Departure Tax:
- Other fiscal cost risks include amortisation of conservation costs also poses a fiscal risk (about $0.4 bn/yr), and a lowering of the debt interest paid by OPG.

# Electricity Price Mitigation

General Decision Points on Program Features:

- Funding: Rate base vs Tax base
  - Tax base programs have a direct fiscal impact on the Province's finances, and shift costs based on taxpayer incidence and impact on expenditure room for other, non-electricity, programs.
  - Rate base programs shift costs from one group of ratepayers to another.
- On-bill vs Not On-bill
  - Recent focus has been on on-bill programs, such as OESP and OREC.
  - Older tax-base funded programs that are not visible on the bill are still in place, such as NOEC and OEPTC.
  - As OESP enrollment increases, could consider phasing out the non-bill benefits of NOEC and OEPTC.
- Targeted vs General
  - Recent new programs include both general (OREC) and targeted (OESP) programs.
  - Consideration could be made to make OREC more conservation-friendly (e.g., a monthly eligible consumption cap brought in, as with the former Ontario Clean Energy Benefit), and maybe a higher cap in the winter to allow for space heating costs.
  - A targeted industrial program recently extended and made on-going is the Northern Industrial Electricity Rate (NIER) program.

DRAFT

# Context: Taxpayer Funded Electricity Price Mitigation

| ($M) | 2011-12 | 2012-13 | 2013-14 | 2014-15 | 2015-16 | 2016-17[1] | 2017-18[1] |
|---|---|---|---|---|---|---|---|
| OCEB | 1,033 | 994 | 1,006 | 1,078 | 860 | - | - |
| OREC | - | - | - | - | - | 300 | 1,100* |
| Ending DRC[2] | - | - | - | - | 85 | 330 | 330 |
| NIERP | 120 | 120 | 115 | 108 | 120 | 120 | 120 |
| NOEC | 23 | 24 | 25 | 24 | 26 | 25 | 25 |
| OEPTC[3] | 354 | 406 | 418 | 429 | 444 | 450 | 460 |
| **TOTAL** | **1,530** | **1,544** | **1,564** | **1,639** | **1,525** | **1,195** | **2,005** |

1. 2016-17, 2017-18 based on forecasted numbers
2. 2015-16 estimated for 3 months of reduced DRC revenue
3. OEPTC amounts in all years based on energy component of the rebate.

* * Sourced from Energy PRRT submission

OCEB – Ontario Clean Energy Benefit
OREC – Ontario Rebate for Electricity Consumers
DRC – Debt Retirement Charge
NIERP – Northern Ontario Electricity Rate Program
NOEC – Northern Ontario Energy Credit
OEPTC – Ontario Energy and Property Tax Credit

- The table above shows the annual amount of taxpayer funded electricity price mitigation from 2011-12 to 2017-18.
- From 2011-12 to 2015-16 there has been an annual fiscal impact of approximately $1.6 billion due to electricity price mitigation programs.
- In 2016-17, the fiscal impact due to electricity price mitigation programs is estimated at approximately $1.2 billion.
- In 2017-18, due primarily to the start of the Ontario Rebate for Electricity Consumers, the expected fiscal impact due to electricity price mitigation programs is approximately $2.1 billion.

# Fiscal Mitigation Options

- With the addition of recent and new price mitigation measures, a review should be initiated on fiscally-funded programs. There could be a phase down / out transition period considered. Examples include the following:

- Ontario Energy and Property Tax Credit (OEPTC) and Northern Ontario Energy Credit (NOEC):
  - Phase down and/or out the non-on-bill benefits of. (Save up to about $460 M/yr)
- Ontario Rebate for Electricity Consumers (OREC):
  - Introduce over time a monthly eligible consumption cap, with perhaps a higher cap in the winter to allow for space heating costs.
- Greenhouse Gas Reduction Account:
  - If ICI is put on the tax-base, make it eligible for GGRA funding.
  - Positioned as, e.g., providing annual benefits from participants conserving and shifting off-peak to reduce reliance on GHG-emitting peaking plants

# Appendix

DRAFT

# Background on Taxpayer-funded Electricity Price Mitigation

| Program | Annual Fiscal Impacts ($M) | Date | Details |
|---|---|---|---|
| **Ontario Clean Energy Benefit (OCEB)** | ~1,000 | Jan 1 2011 to Dec 31, 2015 | OCEB provided over four million residential customers, and over 400,000 farm, small business and other small users with a benefit equal to 10 per cent of the total cost of electricity on their bills, including tax. Effective September 1, 2012, 10 per cent benefit was capped for the first 3,000 kWh of electricity consumed per month. OCEB expired December 31, 2015, as legislated. |
| **Removed Debt Retirement Charge (DRC) from Residential Bills** | ~330 | Jan 1, 2016 to Mar 31, 2018 | The government removed the DRC from residential electricity users' bills as of January 1, 2016. This is saving a typical residential user about $70 each year and meant ending the DRC earlier for these users than otherwise provided for in the *Electricity Act, 1998*. |
| **Ontario Rebate for Electricity Consumers (OREC)** | ~1,200 | Jan 1, 2017 onward | This ongoing program will rebate -- directly on consumers' residential electricity bills -- an amount equal to the provincial portion of the Harmonized Sales Tax (HST). |
| **Northern Industrial Electricity Rate (NIER) Program** | 120 | March 2010 | As announced in Budget 2015, the government committed to ongoing support for northern industrials with $120 million allocated annually. NIER was previously extended in 2012 for an additional three-year term, effective April 1, 2013 and also for a year effective April 1, 2016, with an allocation up to $120 million per year.<br>Qualifying participants receive a rebate of two cents per kilowatt-hour (kWh) up to a maximum of $20 million per year per company.<br>NIER initially established as a three-year program in Budget 2010, effective April 1, 2010. |
| **Northern Ontario Energy Credit** | ~25 | Budget 2010 | Delivered as part of the Ontario Trillium Benefit, provides individuals living in northern Ontario with a credit of up to $146 per year for the 2016 benefit year, and families up to $224.[1] |
| **Ontario Energy Property Tax Credit** | ~445[1] | Budget 2010 | Delivered as part of the Ontario Trillium Benefit, energy portion provides up to $224 per year (inflation adjusted) for low-to moderate-income individuals and families, and for qualifying seniors.[1] |

1. Energy portion cost only. Both the energy portion of the Ontario Energy and Property Tax Credit (OEPTC) and NOEC were introduced/enhanced following the introduction of the HST and have a significant annual fiscal cost (totalling about $500 million annually).

DRAFT

# Timeline: Taxpayer-funded Electricity Price Mitigation

**Budget 2010: OEPTC, NOEC Proposed as part of the Ontario Trillium Benefit**

*In the 2011 Budget, the government combined the payments of three existing tax credits — the Ontario Sales Tax Credit, the Ontario Energy and Property Tax Credit, and the Northern Ontario Energy Credit — to create the OTB. The OTB is paid in monthly instalments throughout the year, which helps people meet their expenses as bills arrive.*

**Ontario Clean Energy Benefit** (Jan 1 2011 to Dec 31 2015)

*The OCEB was introduced in the 2010 Ontario Economic Outlook and Fiscal Review to help consumers transition to a cleaner electricity system. As set out in legislation, the OCEB ended on December 31, 2015. The Province has introduced rate mitigation measures to be implemented after December 31, 2015.*

*OCEB provided over four million residential customers, and over 400,000 farm, small business and other small users with a benefit equal to 10 per cent of the total cost of electricity on their bills, including tax, for the first 3,000 kilowatt-hours (kWh) of monthly electricity consumption.*

**Removing DRC from Residential Bills** (Jan 1 2016 to Mar 31 2018)

*The government removed the DRC from residential electricity users' bills beginning on January 1, 2016. This saves a typical residential user about $70 each year and ends the DRC earlier for these users than otherwise provided for in the Electricity Act, 1998.*

**Ontario Rebate for Electricity Consumers**

*As of January 1, 2017, OREC will reduce electricity costs by an amount equal to the provincial portion of the HST for about five million residential consumers, farms and small businesses.*

2010 2011 2012 2013 2014 2015 2016 2017

## History of Northern Industrial Electricity Price Relief

**November 2006**

*The Ontario government announced the Northern Pulp and Paper Electricity Transition Program (NPPETP), a three-year $140 million, to be effective retroactively to October 1, 2006*

**Budget 2009**

*The government announced extension of the NPPETP by one year providing about $58 million with electricity price rebates of 1.8 cents/kWh.*

**Budget 2010**

*NIER program announced, with a projected fiscal cost of $150 M per year, to provide electricity price rebates for qualifying large industrial facilities in northern Ontario. An additional $21.8 million allocated for existing NPPETP in 2010-11 to be integrated with NIER.*

**September 2010**

*Transition from NPPETP to NIER: pulp and paper mills participating in NPPETP continued to receive the NPPETP rebate of 1.8 cents/kWh until September 30, 2010, with those qualifying for NIER receiving a top-up rebate of 0.2 cents/kWh.*

**December 2012**

*The government announced the extension of the NIER for three years, capping the rebates to a maximum of 2011-12 consumptions levels or $20 million, whichever is lower.*

DRAFT

# Potential Fiscal Impact to the Electricity Sector

- The electricity sector has a significant impact on the Province's fiscal position; through both the revenue and expense sides of the Province's fiscal position.
  - Electricity Rate mitigation programs funded through the tax base have a direct fiscal impact on the Province's finances.
  - Alternatively, electricity rate mitigation programs funded by the rate base shift costs from one group of ratepayers to another.
- The Province's electricity sector agencies and corporations are each consolidated into the government's financial statements, and directly affect the Province's surplus/deficit position.
  - Ontario Power Generation (OPG) financial results have a dollar-for-dollar impact on the Province.
    - Electricity price mitigation strategies involving OPG would lead to a direct fiscal impact.
  - Hydro One financial results have a direct impact on the Province, based on the Province's proportionate ownership.
    - The Province currently holds about 70 per cent of Hydro One.

DRAFT

# Effect of Additional Proposed Taxpayer Funded Electricity Price Mitigation

| Proposal | Fiscal Costs ($M) | *Residential* Ratepayer Savings |
|---|---|---|
| **EXISTING MEASURES** | | |
| OREC | 1,100 | $11/month |
| NIERP | 120 | n/a* |
| NOEC | 25 | n/a* |
| OEPTC[3] | 460 | n/a* |
| **TOTAL Costs from Existing Measures** | **1,705** | **11** |
| | | |
| **PROPOSED MEASURES** | | |
| **Proposal 2:** Fund Electricity Support Programs Through the Tax-Base (OESP, RRRP, First Nations Delivery Rate) | 421 (yr 2017-18)** | $2.45/month |
| **Proposal 3:** Eliminate the Industrial Conservation Initiative funding from ratebase, and shift to tax base | 900 | $4/month |
| **Proposal 7:** Reduced cost of OPG Borrowing | 30-35 | $0.18/month |
| **Proposal 8:** End DRC Early for Commercial/Small Industrial Class B Electricity Consumers, or DRC reduced to $3.5/MWh | 189-378 (yr 2017-18)*** | n/a* |
| **TOTAL Costs/Savings from Proposed Measures** | 1,584 – 1,778 | $6.63/month |
| **TOTAL Costs/Savings from All Taxpayer funded Measures** | **3,289 – 3,483** | **$17.63/month** |

* Costs were not borne by the ratebase.
** Assumes 75%/25% split between 2017 and 2018 costs
*** DRC is removed from all electricity bill by April 1, 2018

**Subject: Fw: Potential Rate Mitigation**

Ron - can CEFD take the lead on assessing Energy's rate mitigation deck? Per energy this is apparently tracking to MPC on Thursday, though that's news to us here. Will share with MO shortly.

Subject: FW: Potential Rate Mitigation

Hi,

See attached and below. We are aiming to turn around a new version of the deck, incorporating any comments your ministries might have before major projects on Thursday. As such, could you please pass along your comments by end of day tomorrow?

If there are questions, I'm happy to discuss.

Thanks,
Keley

Subject: Potential Rate Mitigation

Hi,

Attached is a draft of the rate mitigation deck. This is tracking to major projects on Thursday for a preliminary discussion. As you can see there are a number of initiatives that have fiscal implications so your input and comments would be appreciated. Keley can coordinate with your EAs. I understand that Andrew T. plans to share with PO/your MOs.

Serge

DRAFT

# Electricity Price Mitigation

Corporate and Electricity Finance Division
December 7, 2016

# General Comments on Energy's Deck

- The Energy proposals may be seen as having a fairly limited impact, e.g., a little over $8/month for residential, or a little over 5% of the monthly bill.
  - The proposals would have a significant fiscal cost.
- There is already significant amounts of existing electricity price mitigation that has a fiscal impact (averaging over $1.5 billion per year over the past five years, and estimated to increase to about $2 bn in 17-18 (see following slide for estimated costs over time, and likely increasing over time).
  - That is not presented in Energy's deck.
  - Also not included is any "hidden" price mitigation through constrained financial performance of, e.g., OPG.
- Energy is proposing additional electricity price mitigation programs, currently funded through the electricity system, be fiscally-funded, with an estimated impact of about $0.4 billion initially, and rising over time.
  - This includes shifting the cost of the Ontario Electricity Support Program (OESP) and the Rural or Remote Electricity Rate Program (RRRP) to the tax base.
  - Note that the fiscal exposure is larger if the OESP take up rate is larger, faster than assumed.

# General Comments on Energy's Deck (cont.)

- Industrial Conservation Initiative (ICI): Energy also presents as a residential mitigation measure the cancellation of the ICI.
  - Energy is not initially proposing it continue as taxpayer funded, but notes the about 30% price increase for the large Class A customers benefiting from ICI currently (at a cost shift of about $900 million per year).
  - This cost is for 2016, prior to the planned expansion of the ICI, which could further increase the fiscal exposure.
- Departure Tax:
- Other fiscal cost risks include amortisation of conservation costs also poses a fiscal risk (about $0.4 bn/yr), and a lowering of the debt interest paid by OPG.

# Electricity Price Mitigation

General Decision Points on Program Features:

- Funding: Rate base vs Tax base
  - Tax base programs have a direct fiscal impact on the Province's finances, and shift costs based on taxpayer incidence and impact on expenditure room for other, non-electricity, programs.
  - Rate base programs shift costs from one group of ratepayers to another.
- On-bill vs Not On-bill
  - Recent focus has been on on-bill programs, such as OESP and OREC.
  - Older tax-base funded programs that are not visible on the bill are still in place, such as NOEC and OEPTC.
  - As OESP enrollment increases, could consider phasing out the non-bill benefits of NOEC and OEPTC.
- Targeted vs General
  - Recent new programs include both general (OREC) and targeted (OESP) programs.
  - Consideration could be made to make OREC more conservation-friendly (e.g., a monthly eligible consumption cap brought in, as with the former Ontario Clean Energy Benefit), and maybe a higher cap in the winter to allow for space heating costs.
  - A targeted industrial program recently extended and made on-going is the Northern Industrial Electricity Rate (NIER) program.

DRAFT

# Context: Taxpayer Funded Electricity Price Mitigation

| ($M) | 2011-12 | 2012-13 | 2013-14 | 2014-15 | 2015-16 | 2016-17[1] | 2017-18[1] |
|---|---|---|---|---|---|---|---|
| OCEB | 1,033 | 994 | 1,006 | 1,078 | 860 | - | - |
| OREC | - | - | - | - | - | 300 | 1,100* |
| Ending DRC[2] | - | - | - | - | 85 | 330 | 330 |
| NIERP | 120 | 120 | 115 | 108 | 120 | 120 | 120 |
| NOEC | 23 | 24 | 25 | 24 | 26 | 25 | 25 |
| OEPTC[3] | 354 | 406 | 418 | 429 | 444 | 450 | 460 |
| **TOTAL** | **1,530** | **1,544** | **1,564** | **1,639** | **1,525** | **1,195** | **2,005** |

1. 2016-17, 2017-18 based on forecasted numbers
2. 2015-16 estimated for 3 months of reduced DRC revenue
3. OEPTC amounts in all years based on energy component of the rebate.

* * Sourced from Energy PRRT submission

OCEB – Ontario Clean Energy Benefit
OREC – Ontario Rebate for Electricity Consumers
DRC – Debt Retirement Charge
NIERP – Northern Ontario Electricity Rate Program
NOEC – Northern Ontario Energy Credit
OEPTC – Ontario Energy and Property Tax Credit

- The table above shows the annual amount of taxpayer funded electricity price mitigation from 2011-12 to 2017-18.
- From 2011-12 to 2015-16 there has been an annual fiscal impact of approximately $1.6 billion due to electricity price mitigation programs.
- In 2016-17, the fiscal impact due to electricity price mitigation programs is estimated at approximately $1.2 billion.
- In 2017-18, due primarily to the start of the Ontario Rebate for Electricity Consumers, the expected fiscal impact due to electricity price mitigation programs is approximately $2.1 billion.

# Fiscal Mitigation Options

- With the addition of recent and new price mitigation measures, a review should be initiated on fiscally-funded programs. There could be a phase down / out transition period considered. Examples include the following:

- Ontario Energy and Property Tax Credit (OEPTC) and Northern Ontario Energy Credit (NOEC):
  - Phase down and/or out the non-on-bill benefits of. (Save up to about $460 M/yr)
- Ontario Rebate for Electricity Consumers (OREC):
  - Introduce over time a monthly eligible consumption cap, with perhaps a higher cap in the winter to allow for space heating costs.
- Greenhouse Gas Reduction Account:
  - If ICI is put on the tax-base, make it eligible for GGRA funding.
  - Positioned as, e.g., providing annual benefits from participants conserving and shifting off-peak to reduce reliance on GHG-emitting peaking plants

# Appendix

DRAFT

# Background on Taxpayer-funded Electricity Price Mitigation

| Program | Annual Fiscal Impacts ($M) | Date | Details |
|---|---|---|---|
| **Ontario Clean Energy Benefit (OCEB)** | ~1,000 | Jan 1 2011 to Dec 31, 2015 | OCEB provided over four million residential customers, and over 400,000 farm, small business and other small users with a benefit equal to 10 per cent of the total cost of electricity on their bills, including tax. Effective September 1, 2012, 10 per cent benefit was capped for the first 3,000 kWh of electricity consumed per month. OCEB expired December 31, 2015, as legislated. |
| **Removed Debt Retirement Charge (DRC) from Residential Bills** | ~330 | Jan 1, 2016 to Mar 31, 2018 | The government removed the DRC from residential electricity users' bills as of January 1, 2016. This is saving a typical residential user about $70 each year and meant ending the DRC earlier for these users than otherwise provided for in the *Electricity Act, 1998*. |
| **Ontario Rebate for Electricity Consumers (OREC)** | ~1,200 | Jan 1, 2017 onward | This ongoing program will rebate -- directly on consumers' residential electricity bills -- an amount equal to the provincial portion of the Harmonized Sales Tax (HST). |
| **Northern Industrial Electricity Rate (NIER) Program** | 120 | March 2010 | As announced in Budget 2015, the government committed to ongoing support for northern industrials with $120 million allocated annually. NIER was previously extended in 2012 for an additional three-year term, effective April 1, 2013 and also for a year effective April 1, 2016, with an allocation up to $120 million per year.<br>Qualifying participants receive a rebate of two cents per kilowatt-hour (kWh) up to a maximum of $20 million per year per company.<br>NIER initially established as a three-year program in Budget 2010, effective April 1, 2010. |
| **Northern Ontario Energy Credit** | ~25 | Budget 2010 | Delivered as part of the Ontario Trillium Benefit, provides individuals living in northern Ontario with a credit of up to $146 per year for the 2016 benefit year, and families up to $224.[1] |
| **Ontario Energy Property Tax Credit** | ~445[1] | Budget 2010 | Delivered as part of the Ontario Trillium Benefit, energy portion provides up to $224 per year (inflation adjusted) for low-to moderate-income individuals and families, and for qualifying seniors.[1] |

1. Energy portion cost only. Both the energy portion of the Ontario Energy and Property Tax Credit (OEPTC) and NOEC were introduced/enhanced following the introduction of the HST and have a significant annual fiscal cost (totalling about $500 million annually).

DRAFT

# Timeline: Taxpayer-funded Electricity Price Mitigation

**Budget 2010: OEPTC, NOEC Proposed as part of the Ontario Trillium Benefit**

*In the 2011 Budget, the government combined the payments of three existing tax credits — the Ontario Sales Tax Credit, the Ontario Energy and Property Tax Credit, and the Northern Ontario Energy Credit — to create the OTB. The OTB is paid in monthly instalments throughout the year, which helps people meet their expenses as bills arrive.*

**Ontario Clean Energy Benefit** (Jan 1 2011 to Dec 31 2015)

*The OCEB was introduced in the 2010 Ontario Economic Outlook and Fiscal Review to help consumers transition to a cleaner electricity system. As set out in legislation, the OCEB ended on December 31, 2015. The Province has introduced rate mitigation measures to be implemented after December 31, 2015.*

*OCEB provided over four million residential customers, and over 400,000 farm, small business and other small users with a benefit equal to 10 per cent of the total cost of electricity on their bills, including tax, for the first 3,000 kilowatt-hours (kWh) of monthly electricity consumption.*

**Removing DRC from Residential Bills** (Jan 1 2016 to Mar 31 2018)

*The government removed the DRC from residential electricity users' bills beginning on January 1, 2016. This saves a typical residential user about $70 each year and ends the DRC earlier for these users than otherwise provided for in the Electricity Act, 1998.*

**Ontario Rebate for Electricity Consumers**

*As of January 1, 2017, OREC will reduce electricity costs by an amount equal to the provincial portion of the HST for about five million residential consumers, farms and small businesses.*

2010 2011 2012 2013 2014 2015 2016 2017

## History of Northern Industrial Electricity Price Relief

**November 2006**

*The Ontario government announced the Northern Pulp and Paper Electricity Transition Program (NPPETP), a three-year $140 million, to be effective retroactively to October 1, 2006*

**Budget 2009**

*The government announced extension of the NPPETP by one year providing about $58 million with electricity price rebates of 1.8 cents/kWh.*

**Budget 2010**

*NIER program announced, with a projected fiscal cost of $150 M per year, to provide electricity price rebates for qualifying large industrial facilities in northern Ontario. An additional $21.8 million allocated for existing NPPETP in 2010-11 to be integrated with NIER.*

**September 2010**

*Transition from NPPETP to NIER: pulp and paper mills participating in NPPETP continued to receive the NPPETP rebate of 1.8 cents/kWh until September 30, 2010, with those qualifying for NIER receiving a top-up rebate of 0.2 cents/kWh.*

**December 2012**

*The government announced the extension of the NIER for three years, capping the rebates to a maximum of 2011-12 consumptions levels or $20 million, whichever is lower.*

DRAFT

# Potential Fiscal Impact to the Electricity Sector

- The electricity sector has a significant impact on the Province's fiscal position; through both the revenue and expense sides of the Province's fiscal position.
  - Electricity Rate mitigation programs funded through the tax base have a direct fiscal impact on the Province's finances.
  - Alternatively, electricity rate mitigation programs funded by the rate base shift costs from one group of ratepayers to another.
- The Province's electricity sector agencies and corporations are each consolidated into the government's financial statements, and directly affect the Province's surplus/deficit position.
  - Ontario Power Generation (OPG) financial results have a dollar-for-dollar impact on the Province.
    - Electricity price mitigation strategies involving OPG would lead to a direct fiscal impact.
  - Hydro One financial results have a direct impact on the Province, based on the Province's proportionate ownership.
    - The Province currently holds about 70 per cent of Hydro One.

Hi,

From the first attached spreadsheet, Class B consumption in 2015 was 114 TWh. From the second attached spreadsheet, residential consumption in 2015 was 52 TWh.

So, Class B less residential was 62 TWh. This amount would include small business and farm customers in the RPP.

Hi Emily,

Would you know the composition of Class B consumption from the total? Just wondering if you have that readily available….

Thanks,

John.

> If you recall, we did that table a couple weeks ago on existing fiscally funded mitigation programs. We can suggest adding that in. And, as for the GGRA, I think one of the challenges is it was supposed to be for incremental measures to reduce GHGs (not replacing funding for existing measures. But, that said, that was notion I noodled on too, but it would require at least a change in positioning, convincing the Minister of MOECC, as the arbiter of such and/or change the legislation.

Table 1: Assumptions across Demand Outlooks

| Sector | Outlook A | Outlook B |
|---|---|---|
| Residential (52 TWh in 2015) | 48 TWh in 2035 | 51 TWh in 2035 |
| Commercial (51 TWh in 2015) | 49 TWh in 2035 | 54 TWh in 2035 |
| Industrial (35 TWh in 2015) | 29 TWh in 2035 | 35 TWh in 2035 |
| Electric Vehicles (<1 TWh in 2015) | 2 TWh in 2035 | 3 TWh in 2035 |
| Transit (<1 TWh in 2015) | 1 TWh in 2035 | 1 TWh in 2035 |
| Other* | 5 TWh | 5 TWh |
| Total** (143 TWh in 2015) | 133 TWh in 2035 | 148 TWh in 2035 |

* Others = Agriculture, Remote Communities, Generator Demand, IEI, and S

** At Generator Level. Total may not add up due to rounding

| Outlook C | Outlook D |
|---|---|
| Oil heating switches to heat pumps, electric space and water heating gain 25% of gas market share (58 TWh in 2035) | Oil heating switches to heat pumps, electric space and water heating gain 50% of gas market share (64TWh in 2035) |
| Oil heating switches to heat pumps, electric space and water heating gain 25% of gas market share (63 TWh in 2035) | Oil heating switches to heat pumps, electric space and water heating gain 50% of gas market share (69 TWh in 2035) |
| 5% of 2012 fossil energy switches to electric equivalent (43 TWh in 2035) | 10% of 2012 fossil energy switches to electric equivalent (51 TWh in 2035) |
| 2.4 million electric vehicles (EVs) by 2035 (8 TWh in 2035) | 2.4 million EVs by 2035 (8 TWh in 2035) |
| Planned projects, 2017-2035 (1 TWh in 2035) | Planned projects, 2017-2035 (1 TWh in 2035) |
| 5 TWh | 5 TWh |
| 177 TWh in 2035 | 197 TWh in 2035 |

Hi Gadi,

I agree. The option should be put out on the table.

Ron

> I also agree with your last line, but only two of the three parts (price mitigation, the fiscal plan and use of proceeds) can stand. Given that it's obviously an imperative of the government to provide more price mitigation, the simplest way to minimize damage to the fiscal plan is to tweak the positioning on uses of cap and trade proceeds, although as Tim mentioned in a meeting I was in today, the current direction is to go the other way. I think we need to at least throw the idea on the table, though.

>>
>> If you recall, we did that table a couple weeks ago on existing fiscally funded mitigation programs. We can suggest adding that in. And, as for the GGRA, I think one of the challenges is it was supposed to be for incremental measures to reduce GHGs (not replacing funding for existing measures. But, that said, that was notion I noodled on too, but it would require at least a change in positioning, convincing the Minister of MOECC, as the arbiter of such and/or change the legislation.

Hi,

Lets meet in the morning to discuss.

We'll need a product for EOD. Could be an annotated slide deck, as well as a markup. Suggestion on any other formats?

Ron

Subject: Potential Rate Mitigation

Hi,

Attached is a draft of the rate mitigation deck. This is tracking to major projects on Thursday for a preliminary discussion. As you can see there are a number of initiatives that have fiscal implications so your input and comments would be appreciated. Keley can coordinate with your EAs. I understand that Andrew T. plans to share with PO/your MOs.

Serge

Ontario

MINISTRY OF
ENERGY

# Proposed Initiatives to Transform Ontario's Electricity Sector

## Working Draft

December 5, 2016

CONFIDENTIAL DRAFT

# Context

- Electricity costs are increasing as the necessary investments are made to decarbonize and modernize the province's electricity infrastructure.
  - Since 2003, the Province has invested more than $35 billion in over 16,000 megawatts (MW) of new and refurbished cleaner generation, including nuclear, natural gas and renewables.
  - Over the same period, Hydro One has invested $15.5 billion to enhance and renew its transmission and distribution systems.
  - As additional electricity generation comes online, nuclear units are refurbished and distribution and transmission investments are made, prices are forecast to continue to increase.

- Actions have been taken to drive down electricity costs, including deferring investments in generation (e.g., new build nuclear), improving market efficiency (e.g., introduction of wind dispatch) and decreasing the cost of renewable procurements (e.g., GEIA renegotiation, decreasing FIT prices).

- Additional steps have been taken to increase cost effectiveness and improve efficiency by adopting new electricity market approaches, such as:
  - Enhancing competition between developers of large renewable projects through the Large Renewable Procurement (LRP) process to drive down price and secure clean, reliable generation for the province;
  - Directing IESO to end the process of negotiating new NUG contracts pending the development of a Capacity Auction (i.e., Market Renewal); and
  - Launching the first IESO Demand Response Auction (i.e., a competitive process through which demand-side resources are selected to be available to reduce their electricity consumption as needed).

# Context (Cont'd)

- Following the 2016 Throne Speech, a number of actions were announced to further reduce electricity costs, such as:
  - Providing an 8 per cent rebate, equivalent to the provincial portion of HST, for approximately 5 million eligible electricity consumers including residences, small businesses and farms;
  - Increasing the amount of rate protection available to approximately 330,000 eligible rural customers living in low-density areas by updating the Rural or Remote Rate Protection (RRRP) program;
  - Lowering the Industrial Conservation Initiative (ICI) threshold to 1 MW and removing sector restrictions so that more consumers can benefit;
  - Suspending the second round of the Large Renewable Procurement (LRP II); and
  - Recycling a portion of cap and trade auction proceeds to keep rates affordable for industrial and commercial electricity consumers.

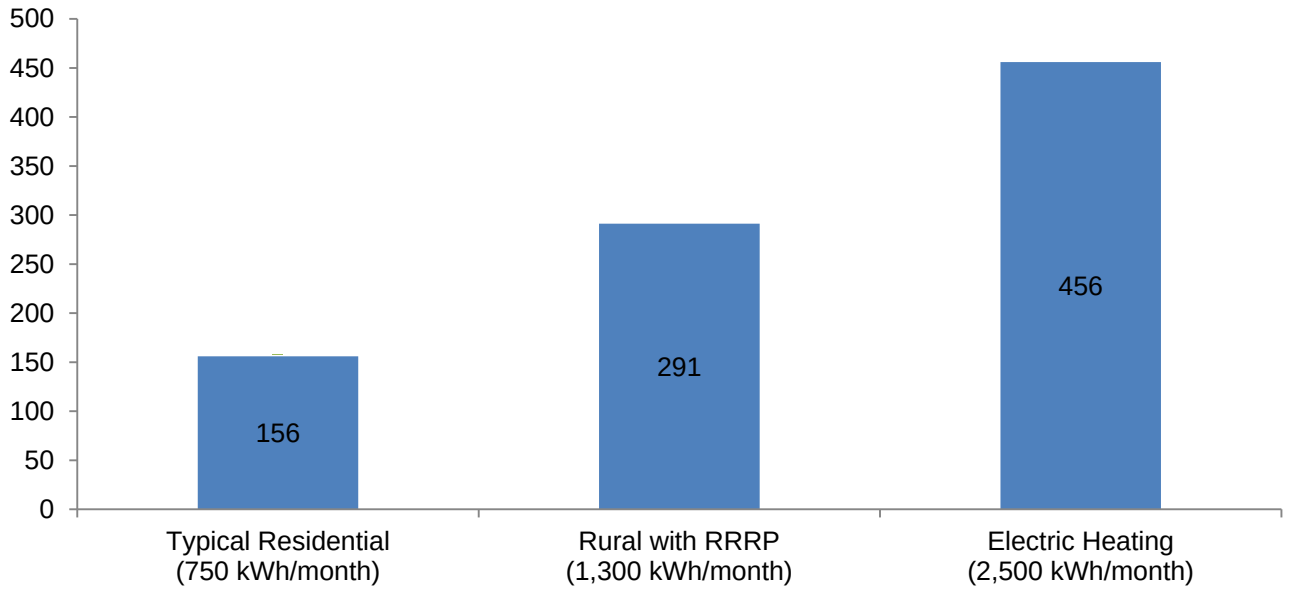
- On November 28, 2016, the Minister of Energy announced the need for changes in how electricity resources are procured and the need for wholesale market renewal.

- The Ministry of Energy is currently updating its Long-Term Energy Plan (LTEP), which provides an opportunity to consider a range of policy changes to how the Ontario energy sector operates.

# Current Electricity Prices – Residential

- Residential consumers electricity prices continue to be a concern for many Ontarians, particularly those that rely on electric heat.
  - **Note:** The typical residential bills are currently below the 2013 Long-Term Energy Plan (2013 LTEP) forecasts ($159 / 750kWh)

**Residential Electricity Bills**
*in $/month*

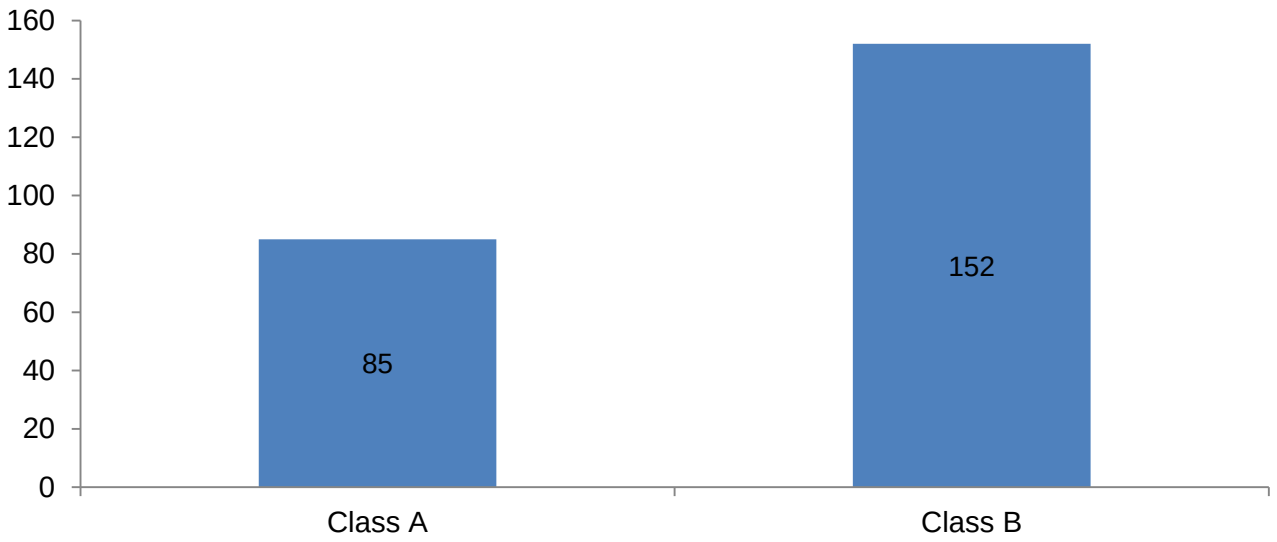


**Note**: Typical residential and electric heating shown above are based on Toronto Hydro; rural is based on connection to Hydro One as a R2 customer eligible to receive the Rural or Remote Rate Protection (RRRP) credit of $31.50.

# Current Electricity Prices – Industrial and Commercial

- While large industrial electricity consumers (i.e., Class A) rates are competitive with other jurisdictions, rates for commercial/small industrial consumers (i.e., Class B) are higher by comparison.
  - **Note:** Current industrial and commercial prices are below 2013 LTEP forecasts ($96 / MWh)

**Current All-In electricity Price**
*in $/MWh*



**Note**: Based on year-to-date (YTD) September 2016 prices. Class A reflects a transmission-connected consumer. Class B reflects a 1 MW load operating at 56% load factor and connected to Toronto Hydro.

# Proposed Initiatives – Overview

- The suite of proposed initiatives are intended to:
  - Transform how the electricity market operates in Ontario;
  - Re-set how government programs are funded (i.e., rate-base vs tax-base);
  - Provide system benefits (e.g., industrial load retention);
  - Lower the cost of electricity for residential and industrial consumers; and
  - Increase cost effectiveness and improve efficiency.

- The proposed initiatives include:
  1. Implement Market Renewal Initiatives
  2. Fund Electricity Support Programs Through The Tax-base
  3. Eliminate the Industrial Conservation Initiative (ICI)
  4. Amortize Conservation Program Costs
  5. LDC Efficiencies
  6. Rate Design Initiatives
  7. Reduced Cost of OPG Borrowing
  8. End Debt Retirement Charge (DRC) Early for Commercial/Small Industrial Class B Electricity Consumers
  9. Dedicate Departure Tax
  10. Cancel/Adjust Renewable Energy Procurements

- The proposed initiatives provide opportunities to reduce electricity costs for residential and industrial consumers while at the same time transforming the province's electricity market and yielding benefits for the electricity system.

# Proposed Initiatives – Impacts

- Each of the proposed initiatives under consideration target different government programs and different parts of the electricity bill. The proposals impact different classes of electricity consumers to varying degrees.

| Proposal | Program / Initiative | Line on Bills | Who Benefits |
|---|---|---|---|
| 1. Implement Market Renewal Initiatives | Market Renewal | Electricity, Global Adjustment, Regulatory | Market Renewal: All electricity consumers |
| 2. Fund Electricity Support Programs Through The Tax-base | OESP, RRRP | Regulatory | All electricity consumers evenly |
| 3. Eliminate the Industrial Conservation Initiative (ICI) | ICI | Electricity, Global Adjustment | Only Class B electricity consumers (i.e., residential) **Note:** Will have a negative impact on Industrial consumers. |
| 4. Amortize Conservation Program Costs | Amortization | Electricity, Global Adjustment | Class B electricity consumers and to a lesser extent Class A consumers |
| 5. LDC Efficiencies | Distribution efficiencies | Delivery | All embedded consumers |
| 6. Rate Design Initiatives | Rate structures | Electricity, Global Adjustment | Rate Design Initiatives: Participating electricity consumers |
| 7. Reduced Cost of OPG Borrowing | n/a | Electricity, Global Adjustment | Class B electricity consumers and to a lesser extent Class A consumers |
| 8. End DRC Early for Commercial/Small Industrial Class B Electricity Consumers | Debt Retirement Charge (DRC) | DRC | Class B consumers (i.e., small business and commercial consumers, etc) |
| 9. Dedicate Departure Tax | Departure Tax | TBD | TBD |
| 10. Cancel/Adjust Renewable Energy Procurements | FIT, LRP | Electricity, Global Adjustment | Class B electricity consumers and to a lesser extent Class A consumers |

# Proposed Initiatives – Potential Savings for Typical Residential Electricity Consumers

| *$/750kWh* | 2017 | 2018 | 2019 | 2020 | 2021 | 2022 | Timing of Benefit |
|---|---|---|---|---|---|---|---|
| 1. Implement Market Renewal Initiatives | - | - | - | 1.58 | 1.59 | 1.60 | Longer-Term |
| 2. Fund Electricity Support Programs through the Tax-base | 2.18 | 2.30 | 2.31 | 2.45 | 2.48 | 2.51 | Immediate |
| 3. Eliminate the Industrial Conservation Initiative (ICI) | 4.40 | 4.24 | 4.10 | 4.24 | 3.73 | 3.58 | Immediate |
| 4. Amortize Conservation Program Costs | 1.67 | 1.56 | 1.21 | 0.81 | 0.54 | 0.3 | Immediate |
| 5. LDC Efficiencies | TBD | TBD | TBD | TBD | TBD | TBD | Near-Term |
| 6. Rate Design Initiatives* | - | - | - | - | - | - | Immediate |
| 7. Reduced Cost of OPG Borrowing | 0.13 | 0.13 | 0.13 | 0.18 | 0.18 | 0.18 | Immediate |
| 8. End DRC Early for Class B Electricity Consumers** | - | - | - | - | - | - | n/a |
| 9. Dedicate Departure Tax | TBD | TBD | TBD | TBD | TBD | TBD | Immediate |
| 10. Cancel / Adjust Renewable Energy Procurements | - | - | TBD | TBD | TBD | TBD | Longer-Term |
| **Total** | | | | | | | |

**Note:** The above initiatives will provide similar benefits for non-RPP Class B electricity consumers. Proposal 2 assumes OESP participation of 50% and 5-year maturity. *Savings estimates do not include changes related to rate design. ** Class B includes small-medium enterprises (SMEs).

# Proposed Initiatives – Potential Savings for Average Industrial Electricity Consumers

| *$/MWh* | 2017 | 2018 | 2019 | 2020 | 2021 | 2022 | Timing of Benefit |
|---|---|---|---|---|---|---|---|
| 1. Implement Market Renewal Initiatives | - | - | - | 2.11 | 2.12 | 2.13 | Longer-Term |
| 2. Fund Electricity Support Programs through the Tax-base | 2.91 | 3.06 | 3.17 | 3.27 | 3.33 | 3.38 | Immediate |
| 3. Eliminate the Industrial Conservation Initiative (ICI) | (24.12) | (23.21) | (22.45) | (23.23) | (20.42) | (19.61) | Immediate |
| 4. Amortize Conservation Program Costs | 1.15 | 1.08 | 0.84 | 0.56 | 0.37 | 0.25 | Immediate |
| 5. LDC Efficiencies | n/a | n/a | n/a | n/a | n/a | n/a | Near-Term |
| 6. Rate Design Initiatives* | - | - | - | - | - | - | Immediate |
| 7. Reduced Cost of OPG Borrowing | 0.10 | 0.10 | 0.10 | 0.15 | 0.15 | 0.15 | Immediate |
| 8. End DRC Early for Class B Electricity Consumers** | - | - | - | - | - | - | n/a |
| 9. Dedicate Departure Tax | TBD | TBD | TBD | TBD | TBD | TBD | Immediate |
| 10. Cancel / Adjust Renewable Energy Procurements | - | - | TBD | TBD | TBD | TBD | Longer-Term |
| **Total** | | | | | | | |

**Note:** Proposal 2 assumes OESP participation of 50% and 5-year maturity. Proposal 3 reflects the elimination of ICI, as opposed to moving ICI cost shift to the taxbase. The $1.75/MWh savings associated with Proposal 7 in 2018 accounts for the fact that under the status quo, DRC will be removed from bills in April 2018. *Savings estimates do not include changes related to rate design. ** Class B includes small-medium enterprises (SMEs).

# Fiscal Considerations

- Funding electricity support programs (i.e., OESP, RRRP, First Nations Delivery Rate) from the tax-base represents approximately $440 million on average annually.

- Ending the Debt Retirement Charge (DRC) for commercial and small industrial electricity consumers (i.e., Class B) early would represent an additional fiscal pressure of $xx [placeholder for OFA] on the province.

- If the Industrial Conservation Initiative were funded though the tax-base instead of being eliminated, this would represent a $900 million annual cost to the fiscal plan.

- Reducing OPG borrowing costs to the Province's cost of funds is expected to result in a $20 to $35 million annual fiscal pressure to the province [TBC by OPG / OFA].

- Fiscal impacts of allocating a portion of the departure tax to ratepayers will depend on the size of the allocation, as well as timing for the flow of value. The maximum, direct one-time impact is $2.6 billion, with potential ancillary impacts on residual stranded debt defeasance.

# 1. Electricity Market Renewal Initiatives

- Continue to move forward with IESO's Market Renewal initiatives:
  - Market Renewal encompasses projects such as a single-schedule system (from the current two-schedule system), more frequent intertie scheduling to better align with other jurisdictions and a day-ahead market. There will be up front capital costs to enable the initiative. IESO is currently assessing these costs.
  - Moving to "technology-agnostic" procurements will provide new opportunities for innovation and modernization and ensure ratepayers receive the best prices possible.

**Considerations**

- Changes related to IESO's Market Renewal initiatives, reflected in HOEP and uplifts, are estimated to save up to $300 million per year, starting in 2020, leading to a reduction of:
  - About $1.60/month or about 1% at current retail prices for a typical residential bill; and
  - About $2/MWh or more than 2% at current all-in prices for industrial and SME electricity consumers.
- The IESO's Market Renewal is a broad initiative that will impact all aspects of Ontario's electricity market. Ontario has had a uniform price since market opening.
- Adopting a technology-agnostic stance will lower the overall cost of providing electricity service by selecting the most cost-effective resources to fulfill various system needs.

# 2. Fund Electricity Support Programs Through the Tax-Base

- Propose to fund electricity support programs, including Ontario Electricity Support Program (OESB) and Rural or Remote Electricity Rate Protection (RRRP), through the tax-base instead of a regulated charge. This would allow the OESP and the RRRP charges to be removed from the Regulatory line on electricity bills.

**Considerations**

*Consumer Impacts and implementation*

- Transitioning OESP and RRRP to the tax-base would reduce a typical residential bill by about $2.35/month by 2020, and delivering the First Nation rate reduction through tax base would avoid about $0.10/month for a potential total savings of $2.45/month by 2020). As all programs provide strong social benefits, there is precedent for funding these programs through the tax-base.
- To address concerns from low income electricity consumers improvements to OESP could be implemented by increasing credits (could be up to double the current credits)
  - Single low income consumer would see a change from $30 to $45/ month ($540/year):
  - Family of four with electric heat could see a credit of $82.50/month ($990/year); and
  - Would mean no impact on consumer bills and no change to current OESP charge.
- RRRP and OESP are included in the “Regulatory” line on bills. If RRRP and OESP were eliminated from bills, the Regulatory line would decrease; however, as the Regulatory line is the smallest line item component of invoices, there is risk the decrease may not be perceived by customers.
- The RRRP regulation provides a funding mechanism for transmission infrastructure required to grid connect remote First Nation communities. Considerations for how that funding will be supported by the tax base will need to be determined.
- The non-rate mechanism to remove delivery charges from on-reserve First Nation customer monthly bills needs to be further explored.Funding RRRP and/or OESP with tax revenue would require amendments to existing legislation and regulations.

# 2. Fund Electricity Support Programs Through the Tax-Base (cont'd)

- Table below shows estimates of program costs up to 2020:

| Year | OESP | RRRP | First Nations Delivery Rate | TOTAL |
|---|---|---|---|---|
| 2017 | $106M | $292M | $18M | **$416M** |
| 2018 | $119M | $300M | $18M | **$437M** |
| 2019 | $127M | $306M | $18M | **$451M** |
| 2020 | $132M | $315M | $18M | **$465M** |

1) Ontario Electricity Support Program (OESP)
   - After almost a year in market, close to 30% of potentially eligible customers are signed up.
   - The cost projections below assume the program grows to 50% of eligible consumers by 2020 (also assumes 10% administration costs).

2) Rural and Remote Rate Protection (RRRP)
   - Provides benefits to R2 Hydro One consumers, Algoma, and remote communities.
   - Includes the expanded coverage that will begin on January 1, 2017.

3) First Nation rate reduction (currently under development)
   - On November 14, 2016, OEB presented options to the Ministry on reducing costs for on-reserve First Nation customers.
   - OEB's recommended option to provide 100% delivery rate credit, which is estimated at $18.4 million per year.
     - Other options includes a seasonal fixed credit to account for demand changes over the year ($13 million) or a 50% total bill reduction ($23 million).

# 3. Eliminate the Industrial Conservation Initiative (ICI)

- The cost shift from the Industrial Conservation Initiative (ICI) could be removed from electricity bills by eliminating ICI.
  - The ICI allows large electricity consumers to lower their electricity costs by reducing their demand during peak hours.

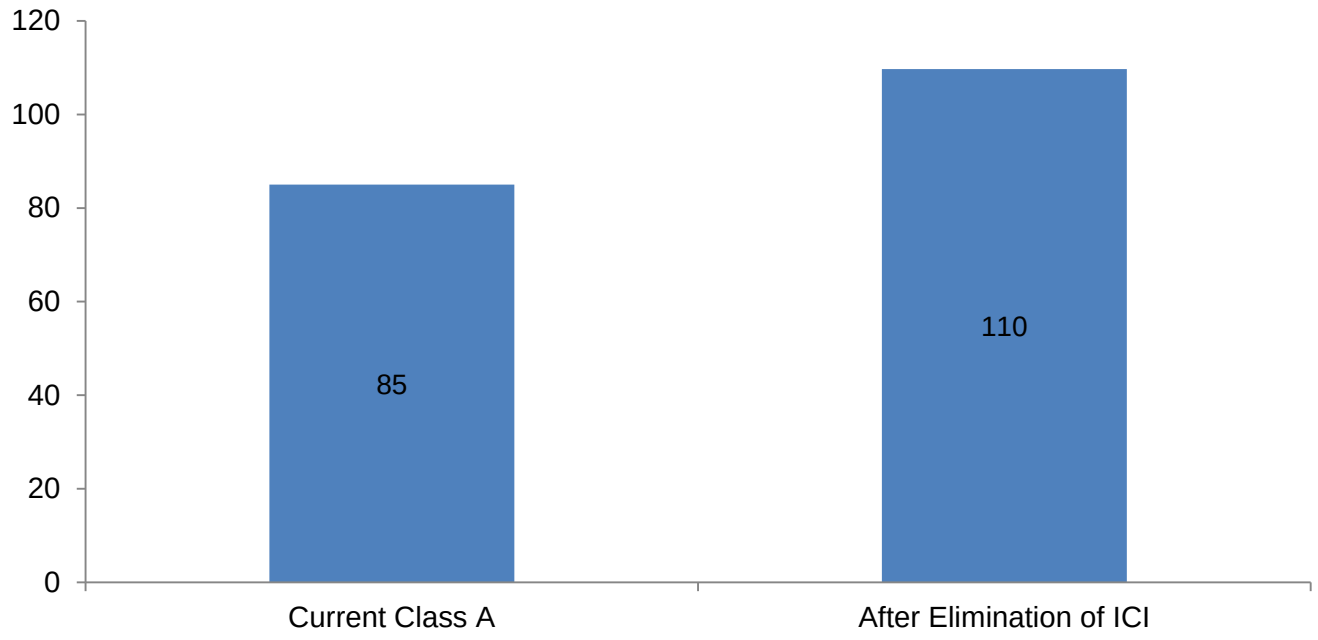
**Considerations**

- Eliminating ICI would result in a benefit of more than $4/month for residential electricity consumers in 2017.
  - However, unless government took action to mitigate the associated cost shift back to industrial consumers, typical industrial prices would increase by about one-third. Such a price increase would pose significant challenges for energy-intensive consumers.
- Industrial stakeholders have indicated that ICI as an integral factor in maintaining competitiveness and retaining industry in the province.
  - Eliminating ICI would limit the “cost shift” onto residential consumers, but it would also lead to a reduction in industrial demand. The large industrial contribution to the fixed costs of running the electricity system would then need to be covered by remaining consumers.
- If ICI is retained, current IESO projections indicate that the cost shift will decrease each year going forward as Global Adjustment (GA) decreases (due to an expected increase in HOEP).
- Alternatively, ICI could be funded through the tax-base at a cost of $900 million annually. There is precedent to use the tax-base for industrial support programs, including the Northern Industrial Electricity Rate Program (NIERP) and the Jobs and Prosperity Fund.

# 3. Eliminate the Industrial Conservation Initiative (cont'd)

- ICI currently provides a benefit of about $25/MWh to Class A electricity consumers.

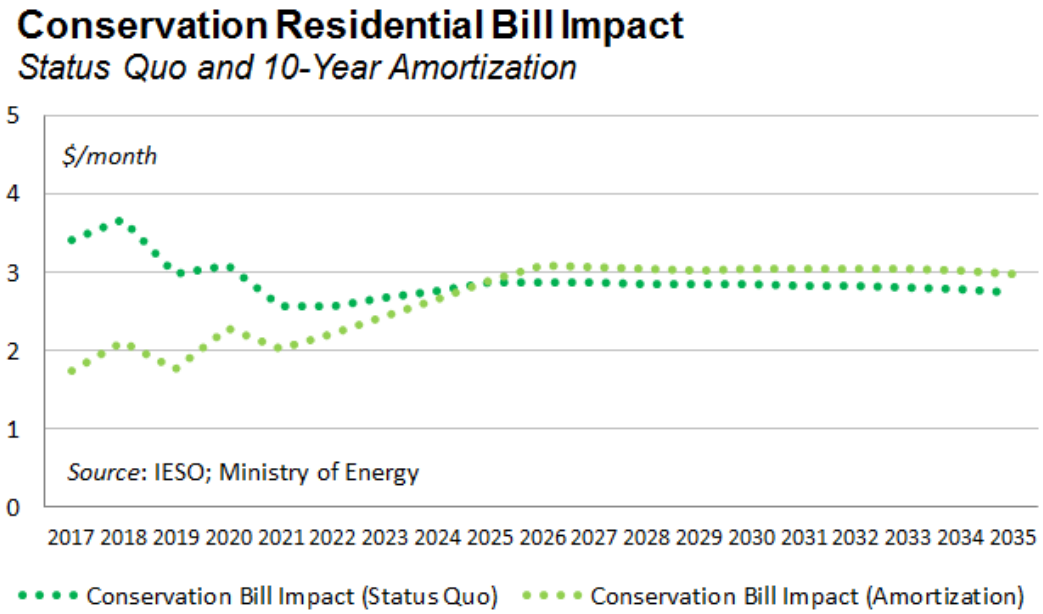
**All-In Electricity Price**
*in $/MWh*



**Note**: Based on year-to-date (YTD) September 2016 prices. Class A reflects a transmission-connected consumer.

# 4. Amortize Conservation Program Costs

- ~$3 billion from the electricity ratepayer base will be spent on conservation programs delivered under the Conservation First Framework and the Industrial Accelerator Program (IAP) between 2015 and 2020.
- Currently, Conservation and Demand Management (CDM) program costs are recovered from the Global Adjustment (GA) mechanism about one month after expenses are incurred.
- As a potential rate mitigation measure, certain CDM costs could be amortized.
- Amortizing a portion of conservation spending would produce a benefit for electricity ratepayers in excess of $1/month at the outset. Over time, the benefit would decrease and turn into a cost, as interest charges begin to grow.



**Note**: Chart assumes that conservation incentive costs are available for amortization while administration cost are not. Although there is variable from year to year, incentives represent about two-thirds of conservation spending in Ontario. Chart assumes conservation spending continues at a similar rate beyond 2020. Chart assumes a 10-year borrowing rate of 3.0%.

# 4. Amortize Conservation Program Costs (cont'd)

## Considerations

- Under **Public Sector Accounting Board (PSAB) accounting standards**, used by both the Province and IESO, only certain assets can be amortized: 1) pensions and 2) tangible capital assets. Under PSAB an asset must meet several criteria to be considered a capital asset, including:
  - A tangible capital asset must be tangible and substantive and the Ontario government must have title and operate the asset.
  - A tangible capital asset must bring a tangible benefit to the government or to Ontario.

- CDM costs, on their own, do not meet the criteria of a tangible capital asset because customers would have ownership and control of installed CDM measures, not the Province or IESO.

- **Rate-regulated accounting** was developed to recognize the unique nature of regulated entities (e.g., electricity generators, LDCs). Under rate-regulated accounting certain costs can be treated as amortizable assets that would not normally be considered assets under accounting principles.
  - Over the past several years, the Auditor General (AG) has expressed concerns about the appropriateness of recognizing rate-regulated assets in the Province's consolidated financial statements.
  - Rate-regulated accounting is currently under review by international accounting standard setting bodies and is currently permitted only on an interim basis, so its future is unclear at present.

# 4. Amortize Conservation Program Costs (cont'd)

**Considerations**

- If some of Ontario's CDM costs could be amortized, analysis shows that ratepayer impacts would be reduced in the short-term but interest charges on the loan would result in increased overall ratepayer costs in the longer-term.

- Legislative amendments would be needed to allow recovery of loan interest charges from GA.

- If there is a desire to proceed:
  - Formal accounting advice will need to be sought from IESO's external auditor as well as the Ontario Provincial Controller (OPC) to determine whether CDM costs could be amortized according to rate-regulated accounting standards.
  - Further legal analysis would also be required to confirm legal viability and possible approaches to implementation.

# 5. LDC Efficiencies

- Consider opportunities for future LDC cost reductions and efficiencies through the regulatory framework.

**Considerations**

- The Ontario Energy Board has a mandate to regulate the electricity distribution sector in the public interest, ensuring the financial viability of the sector while promoting reliable service to customers at just and reasonable rates.
- Since 2012, the OEB has taken action – through the Renewed Regulatory Framework for Energy – to more closely link rate regulation with performance measures and outcomes.
- There maybe opportunities to promote further cost reductions and performance improvements within the distribution sector as there is continued evolution of the regulatory framework in Ontario.
  - Tightening LDC requirements may also indirectly incent other desired policy outcomes, such as LDC consolidation and grid modernization to realize further cost reductions.
- ENERGY could help promote or accelerate these efforts by asking the OEB through the LTEP Implementation Directive, s. 35 of the *Ontario Energy Board Act, 1998*, and the 2017 Mandate Letter and other agency business planning processes.
- In addition, further changes to the departure and transfer tax regimes could be considered to provide a further incentive for LDC mergers and acquisitions.

# 6. Rate Design Initiatives

- OEB continues to move forward with its Regulated Price Plan (RPP) Roadmap:
  - The OEB is undertaking a comprehensive review of the RPP, including exploring the introduction of offering different pricing plan options for customers following the completion of pilot programs in 2018. The plan is expected to be implemented over a 3-5 year period.

- Until new pricing plans are available, the OEB could provide an "opt-in flat rate RPP" structure that could be made available to residential, farm and small business consumers on an interim basis (2-3 years) until a wider range of price plans are available.
- Time-of-Use (TOU) pricing could also be introduced for non-RPP Class B consumers to reduce Global Adjustment (GA) volatility and reduce system costs.

| Current TOU | New Flat Rate |
|---|---|
| On: 18.0 ¢/kWh | 11.1 ¢/kWh |
| Mid: 13.2 ¢/kWh | |
| Off: 8.7 ¢/kWh | |

**Considerations**

- The OEB has indicated that the option would lead to no overall change in system costs. Consumers with higher peak and mid-peak usage patterns would see a decrease in their electricity bills, while those with higher off-peak usage patterns would see an increase.
  - While the current strong supply conditions may allow for such an RPP structure (i.e., peak demand requirements can be easily met), administrative costs could be high (distributors would need to design/implement an opt-in process and associated billing system on an interim basis).

| | Current TOU | New Flat Rate |
|---|---|---|
| 1) Monthly electricity bill- higher peak and mid-peak usage patterns | $172 | $163 |
| 2) Monthly electricity bill- higher off-peak usage patterns | $152 | $163 |

***Note:** 1) assumes a consumer consumption pattern of 45%:30%:25% (Off-peak: Mid-peak: On-peak), while 2) assumes consumer consumption pattern of 80%:10%:10% (Off-peak: Mid-peak: On-peak). Estimates are based on OEB's online electricity bill calculator (for Toronto Hydro-November 2016 rates)

# 6. Rate Design Initiatives (cont'd)

**Considerations**

- The decision to undertake smart meter investments was partly justified on the basis of TOU pricing. If TOU pricing were to be made optional, some stakeholders could question the rationale for smart meter investments.
  - Rationale for offering a flat rate option could focus on providing customers with choice until new pricing plans are rolled out under the RPP roadmap.

- If a flat rate design is introduced, there could be significant consumer opposition to any return to a mandatory TOU.

- After the interim flat rate period, the OEB could offer a wider range of pricing plans to consumers.
  - As part of its RPP review, the OEB will be running pilots with LDCs to assess customer response to alternative time periods and pricing structures.
  - Learnings from these pilots will help inform potential changes to the RPP. Pilots are expected to be in market May 2017 and run for one year.

- Non-RPP Class B electricity consumers currently pay Global Adjustment (GA) on a volumetric basis. Moving them to TOU would provide an incentive to shift consumption to off-peak periods.
  - Consumers, including manufacturers, who are unwilling to shift would face higher costs and likely not be supportive of the changes.
  - The decision to pursue TOU pricing for non-RPP class B consumers will impact proceeds recycling as there is interplay between the two initiatives.

# 7. Reduced Cost of OPG Borrowing

- OPG currently borrows for corporate purposes from the OEFC
- Seek to reduce OPG's borrowing costs and pass on savings to ratepayers by:
  - Reducing or removing the spread that OEFC applies to OPG for any new corporate debt; or
  - Allowing OPG to refinance its existing debt at longer maturities through the OEFC in order to take advantage of the current, favourable interest rate environment.
- Assuming the full spread is removed from all OEFC debt, OPG borrowing costs could be reduced by 50-100 basis points, representing annual savings of about $20-$25 million, increasing to $30-$35 million, as OPG's outstanding OEFC debt rises from ~$3.3 billion in 2016 to ~$4.7 billion in 2020.
- OPG could apply to the OEB as part of its current rate application to flow this benefit to ratepayers.

**Considerations**

- Further work is required to determine potential OPG savings from these initiatives.
- Allowing OPG to refinance would have a negative fiscal impact on the Province.
- Spreads are expected to decline, reducing the relative impact of this change, given lower overall interest rates and reduced volatility.
- Providing OPG with greater access to longer term (20-30 year) debt may also reduce costs:
  - OPG's average term to maturity for OEFC debt is 5.7 years, as compared to 22.2 years for privately financed project debt. This contrasts with most corporations and government which have been working to extend average debt terms in order to take advantage of the low interest rate environment.
  - Longer terms would also better match to the life of OPG's assets.
  - Recently, OEFC has allowed OPG to apply for 50% of its financing requirements in the form of longer term (25-30 year debt). Moving closer to 100% would accelerate this transition.

# 8. End DRC Early for Commercial/Small Industrial Class B Electricity Consumers

- Propose to remove the $0.07/kWh Debt Retirement Charge (DRC) from the bills of commercial/small industrial Class B consumers beginning in 2017, instead of April 1, 2018.
  - **Note:** Class A consumers (e.g., large industrial) would continue to pay DRC until at least April 1, 2018.

**Considerations**

- For a Class B consumer currently paying about $152/MWh, removing the DRC would represent a savings of about 5%.
  - A 50% reduction in the DRC charge would represent a savings of about 2%.

- Alternatively, the reduction of the DRC could be to $0.035/kWh starting in 2017, to provide relief for cap and trade until proceeds recycling is fully operational.

- Residential consumers have had the DRC removed from bills since January 1, 2016. Taking DRC off commercial and small industrial bills would result in equal treatment for these groups of consumers.

- The savings for commercial and small industrial consumers associated with this proposal would drop to zero in April 2018, since this is the current planned date for removing the DRC from non-residential bills.

- Prior to moving forward with this proposal, additional analysis from Legal Services and the MOF would be needed.

# 9. Dedicate Departure Tax

- In connection with the IPO, as a result of leaving the PILs regime and entering the corporate tax regime, Hydro One was deemed to dispose of its assets for proceeds equal to its fair market value, triggering a PILs liability of $2.6 billion (Departure Tax).
- This was paid to the Ontario Electricity Financial Corporation (OEFC), to be dedicated towards repayment of electricity sector stranded debt.
- The Province could explore repurposing some of those funds to the benefit of ratepayers.
- This may reduce the risk that the Ontario Energy Board (OEB) assigns to ratepayers the benefit from an associated tax asset, resulting in lower earnings and decreased share value for Hydro One. This decision is currently before the OEB, as part of Hydro One's Transmission rate application.

**Considerations**

- Cost savings to ratepayers would depend on timing and which ratepayers (e.g., Hydro One customers, or all Ontario customers) will benefit from some or all of the $2.6 billion value.
- While this is a shift from messaging that value from the broadening of ownership of Hydro One is being used pay down debt and fund transit and transportation, the Province could link to electricity infrastructure investments (e.g., as an offset to infrastructure investments already made in the sector, or to specific initiatives such as conservation).
- These funds were paid to the Ontario Electricity Financial Corporation (OEFC), to be dedicated towards repayment of electricity sector stranded debt. Repurposing may have an impact on the defeasance of this debt.

# 10. Cancel/Adjust Renewable Energy Procurements

- The Ministry could consider the following actions to further mitigate future impacts to electricity bills:

| Unallocated/Terminated Capacity | Announced Procurements | Executed Contracts |
|---|---|---|
| A. Do not procure unallocated or terminated capacity | B. Revise FIT 5 target | D. Cancel LRP I contracts |
| | C. Cancel FIT 6 | |

**Overarching Considerations**

- Cost savings associated with reducing or cancelling renewable energy procurements and programs will not reduce current electricity bills, but would result in future cost reductions relative to Ontario Planning Outlook forecasts.
- The IESO estimates implementing options A to C will reduce system costs by approximately $592 million ($2016) between 2019 and 2028, resulting in an average of approximately $0.50/month in savings to a typical residential electricity bill over the same period. [cost reductions from LRP I contract cancellations TBC]
- The microFIT program is winding down end of 2017. Annual microFIT procurement targets have been undersubscribed.
- With a few exceptions (e.g., rollover of unallocated microFIT capacity; addition of terminated microFIT and small FIT capacity to FIT 5), plans for unallocated or terminated capacity are not defined in announcements or existing directions.

**Cancel/Adjust Announced Procurements**

- Amendments to existing directions to the IESO would be required to reduce FIT 5 and cancel FIT 6.
- The FIT 5 procurement is underway with a base target of 150 MW and inclusion of any capacity available from contract terminations under prior small FIT and microFIT procurements. The application window closed on November 25, 2016.

# 10. Cancel/Adjust Renewable Energy Procurements – Existing Contracts

**Cancel Existing LRP I Contracts**

- 16 LRP I contracts (approx. 455 MW) have been executed and projects are under development.
- None have met Key Development Milestones. Total value of LRP I estimated at approx. $1 billion (NPV to 2016).

[Placeholder for IESO: Cost calculation relative to OPO and associated bill impact]

**Considerations**

- To help inform a decision, IESO or OEB could be asked to evaluate and provide guidance to the Ministry on the system need for LRP I projects and potential ratepayer impacts/benefits.
- 13 of 16 LRP I contracts have Indigenous participation. Cancelling LRP I contracts would remove this economic development opportunity and likely damage relationships between Indigenous communities and the government.
- LRP I Contract includes an “Optional Termination” provision allowing IESO to terminate any contract prior to the “Commercial Operation Date” with 6 months written notice.
- The IESO obligations under the Optional Termination provision depend on whether the project has met all “Key Development Milestones”.
  - As no projects have met their Key Development Milestones, the estimated total cost payable to contract holders is about $8 million.

# 10. Cancel/Adjust Renewable Energy Procurements – Existing Contracts (cont'd)

## Legal Analysis

- Under the *Electricity Act, 1998*, the Minister has the authority to amend previous directions without approval from Cabinet. Although an amendment to an existing direction would not require Cabinet approval, it is unlikely that a direction to cancel LRP I contracts could be considered as amending an existing direction. The previous LRP directions set out the broad policy framework that was reflected in the procurement, but the contracts themselves, once executed, are stand alone documents which the IESO had legal authority to execute. Revoking previous LRP directions does not affect that authority or have the effect of cancelling the procurement.
- As a result, any new directive to cancel LRP I contracts would need to be approved by Cabinet, either as part of an LTEP implementation directive to IESO, or pursuant to the overall power to direct IESO with respect to procurements outside the LTEP process. However, there is a risk that such a directive could be subject to challenge.
- ENERGY has previously received advice that there is a high risk that a court would conclude that the Minister has no authority under the *Electricity Act , 1998* to issue a direction requiring IESO to terminate microFIT Conditional Offers and FIT Offer Notices that have already been issued to applicants, because these offers create vested contractual rights and the Minister would require clear legislative authority to interfere with those rights. This reasoning would likely apply equally to any direction or directive to IESO to cancel LRP I contracts.
- Previous advice has also flagged a moderately high risk that the Province could be liable for damages in tort for inducing a breach of contract if it issues a direction to IESO that interferes with vested contractual rights without clear statutory authority to do so. LRP I contract holders could also assert other claims, such as misfeasance in public office.
- The risk and costs associated with potential law suits resulting from the cancellation of contracts requires further analysis, including analysis of whether any statutory amendments would be required to provide clear authority to cancel the contracts. LSB recommends ENERGY seek an opinion from Crown Law Office Civil before proceeding.

# Summary

- Reductions in electricity rates could be achieved by eliminating existing, planned or directed initiatives from the rate-base or shifting these costs to the tax-base.

- The timing of the impact of these rate mitigation initiatives varies.
  - Immediate and near-term impacts can be achieved by shifting costs to the tax-base or changing how certain costs are recovered from consumers or eliminating certain programs.
  - Over the longer term, changes to the electricity supply mix and achieving efficiencies in the electricity market could yield system savings.

- Pursuing the initiatives would require regulatory amendments and working with the electricity sector agencies, LDCs and other stakeholders to implement the initiatives.

# Appendix

# Electricity Consumer Classes

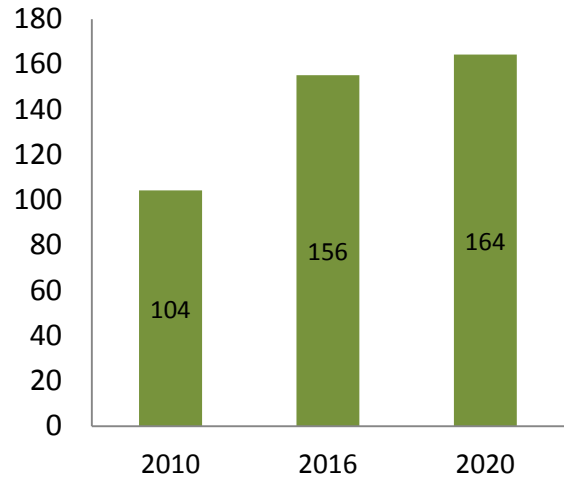
- In Ontario, there are three classes of electricity consumers:

| | Regulated Price Plan | Class B | Class A |
|---|---|---|---|
| **Consumer Types** | • Residential<br>• Small Business<br>• Farms | • Commercial<br>• Institutional<br>• Small industrial | • Large commercial<br>• Large industrial |
| **Load Size** | Below 0.05 MW | Between 0.05 MW and 1 MW | Above 1 MW |
| **Total Consumption** | 58 TWh | 57 TWh | 26 TWh |
| **Share of Consumption** | 41.1% | 40.4% | 18.4% |

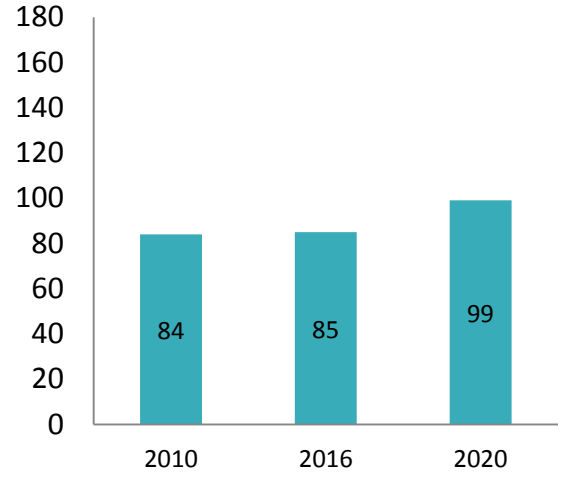
# Prices by Electricity Consumer Class

- Since 2010, average bills for residential consumers (i.e., using 750 kWh/month) have increased by over 50%. Rates are forecast to continue to increase, with residential consumers paying an estimated 6% by 2020.
- Industrial electricity rates have remained relatively flat over the same time period, due primarily to the Industrial Conservation Initiative (ICI). ICI represents a cost shift of about $5/month for residential electricity consumers. Industrial electricity consumers are forecast to see an increase of 16% by and 2020.

**Typical Residential Bill (750/kWh per month)**



**Typical Class A (Industrial) Price ($/MWh)**



**Note:** 2016 represents year-to-date September 2016 for industrial. Cap and trade proceeds recycling is included for the industrial consumer for 2020.

# Rate Mitigation Levers

- To provide further rate relief to Ontario electricity consumers, the government can use one or more of the levers outlined below:
  - **Tax-based Lever:**
    - Provide rebates funded from the tax-base or transfer items currently paid through the rate-base to the tax-base.
  - **Rate-based Lever:**
    - Shifts costs within the rate-base from one customer group to another to achieve electricity system benefits and/or policy goals.
  - **Cap and Trade Proceeds Lever:**
    - Use cap and trade proceeds on initiatives that help reduce greenhouse gas (GHG) emissions from the electricity sector (e.g., recycling proceeds during off-peak periods) while providing benefits to some or all electricity consumers.

# Traditional Rate Mitigation Programs

- Ontario has implemented a number of rate-based programs to help residential and industrial electricity consumers:
  - The Ontario Electricity Support Program (OESP) provides ongoing assistance directly on the bills of eligible low-income electricity consumers
  - The Rural or Remote Rate Protection (RRRP) program is provided to rural and remote residential and farm customers because the cost of distributing power to remote areas is much higher than for urban areas.
  - The Industrial Conservation Initiative (ICI) encourages Ontario's largest consumers to reduce consumption during peak periods while reducing system costs.
- There are also tax-base programs to help manage electricity prices:
  - Rebate the provincial portion of the HST from the electricity bills of residential, small business and farms as of January 1, 2017.
  - Northern Industrial Electricity Rate Program (NIERP), in which participants receive a rebate of two cents per kilowatt hour. On average, industrial electricity prices can be reduced by up to 20%.
- While rate-based programs provide relief to certain electricity consumers, they shift other costs to remaining ratepayers (See Appendix for additional details).

# Driving Down Prices for Consumers

- Since 2013, a number of actions have been taken to drive down prices for consumers wherever possible:
  - Renegotiating the Green Energy Investment Agreement, reducing contract costs by $3.7 billion;
  - Deferring the construction of two new nuclear reactors at Ontario Power Generation's Darlington facility, avoiding an estimated $15 billion in new construction costs;
  - Approving Ontario Power Generation's plans to enable the ongoing operation of Pickering up to 2024, which is expected to save ratepayers as much as $600 million;
  - Reducing Feed-In-Tariff (FIT) prices through annual price reviews, saving ratepayers at least $1.9 billion relative to the 2013 Long-Term Energy Plan (2013 LTEP) forecast; and
  - Suspending the second round of the Large Renewable Procurement (LRP II) process and the Energy-from-Waste Standard Offer Program to save up to $3.8 billion in electricity system costs relative to 2013 LTEP.

# Cost Shifts in the Electricity Sector – Current Programs

- Several programs in the electricity sector “shift costs” from one group of electricity consumers to another:
  - **Rural or Remote Rate Protect** (**RRRP)** is a longstanding program that reduces the delivery charge for rural electricity consumers and is paid for by all consumers in Ontario through a regulatory charge on bills.
  - **Ontario Electricity Support Program (OESP)** is funded via a regulatory charge on consumer bills and provides support for qualifying low income electricity consumers.
  - **Industrial Conservation Initiative (ICI)** empowers large consumers to lower their costs by reducing their demand during peak hours. In the process, ICI shifts costs from large electricity consumers to all other consumers in Ontario.
  - **Industrial Electricity Incentive** (**IEI**) program, offers reduced electricity prices for companies starting or expanding operations in Ontario. All electricity consumers in Ontario pay for the price reduction that IEI participants receive.

# Cost Shifts in the Electricity Sector (Cont'd)

- The tables on the right show the estimated cost shifts that result from existing government programs.
- ICI has had the largest cost shift of all the programs, due to the large size of Global Adjustment (GA) and the way that it is recovered from consumer classes.
- RRRP and OESP impact the regulatory line on consumer bills, while ICI, IEI and conservation affect GA (i.e., Electricity line on bills of Regulated Price Plan consumers).

**Cost Shift Impacts - Residential Bill**

*Typical 750 kWh/month Toronto Hydro consumer*

| *$/month* | 2011 | 2012 | 2013 | 2014 | 2015 | 2016 |
|---|---|---|---|---|---|---|
| ICI | 2.65 | 3.25 | 3.88 | 3.53 | 4.75 | 4.77 |
| RRRP | 0.90 | 0.82 | 0.84 | 0.92 | 0.93 | 0.94 |
| OESP | - | - | - | - | - | 0.84 |
| Conservation | 1.85 | 1.92 | 2.00 | 1.58 | 2.43 | 2.45 |
| IEI | - | - | 0.08 | 0.09 | 0.11 | 0.12 |
| **Total** | **5.41** | **5.99** | **6.81** | **6.13** | **8.21** | **9.12** |

**Cost Shift Impacts - Industrial Bill**

*Typical Class A consumer*

| *$/MWh* | 2011 | 2012 | 2013 | 2014 | 2015 | 2016 |
|---|---|---|---|---|---|---|
| ICI | -22.17 | -26.36 | -30.29 | -25.91 | -33.79 | -33.92 |
| RRRP | 1.20 | 1.10 | 1.12 | 1.23 | 1.24 | 1.25 |
| OESP | - | - | - | - | - | 1.13 |
| Conservation | 1.53 | 1.59 | 1.66 | 1.31 | 2.01 | 2.02 |
| IEI | - | - | 0.07 | 0.08 | 0.09 | 0.10 |
| **Total** | **-19.43** | **-23.67** | **-27.44** | **-23.29** | **-30.45** | **-29.43** |

**Note:** OESP did not come into effect until 2016. The 2016 values represent forecasts and are subject to change.

# Cost Shifts in the Electricity Sector (Cont'd)

- The table on the right shows the total cost for various government electricity programs. These programs are currently funded through the electricity system ratebase.

- Funding of these programs through the fiscal plan would remove these costs from the electricity system (i.e., Placing these costs on the taxbase).

**Cost of Programs**

*By government program*

| *$M* | 2011 | 2012 | 2013 | 2014 | 2015 | 2016 |
|---|---|---|---|---|---|---|
| ICI | 506 | 615 | 736 | 670 | 890 | 893 |
| RRRP | 172 | 156 | 159 | 176 | 174 | 176 |
| OESP | - | - | - | - | - | 158 |
| Conservation | 329 | 339 | 354 | 280 | 425 | 428 |
| IEI | - | - | 15 | 16 | 18 | 19 |

- For example, removing the roughly $900 million of program cost from the Industrial Conservation Initiative (ICI) program would save the typical residential electricity consumer $4.77 per month in 2016.

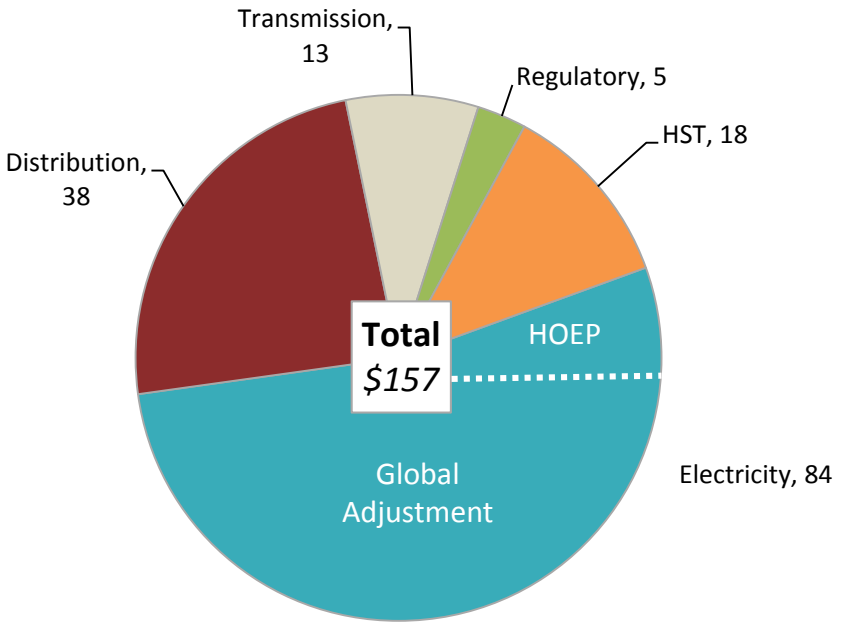
**Note:** OESP did not come into effect until 2016. The 2016 values represent forecasts and are subject to change.

# Residential Electricity Prices

- There are approximately 4.5 million residential consumers in Ontario.
- The Regulated Price Plan includes nearly all residential consumers, as well as small businesses. Regulated Price Plan consumers pay a blended commodity rate regulated by the OEB, which is set every six months.
- For households, the Debt Retirement Charge (DRC) was removed from residential electricity bills as of January 1, 2016.
- In addition, the Ontario Electricity Support Program (OESP) provides an ongoing rate reduction directly on the bills of low-income electricity consumers who have applied and meet the eligibility requirements. The program is funded through the rate base.
- Rural customers, in particular those with electrical heating, pay higher monthly bills.

**Typical Residential Monthly Bills ($)**

*As of November 1, 2016 (750 kWh/month)*



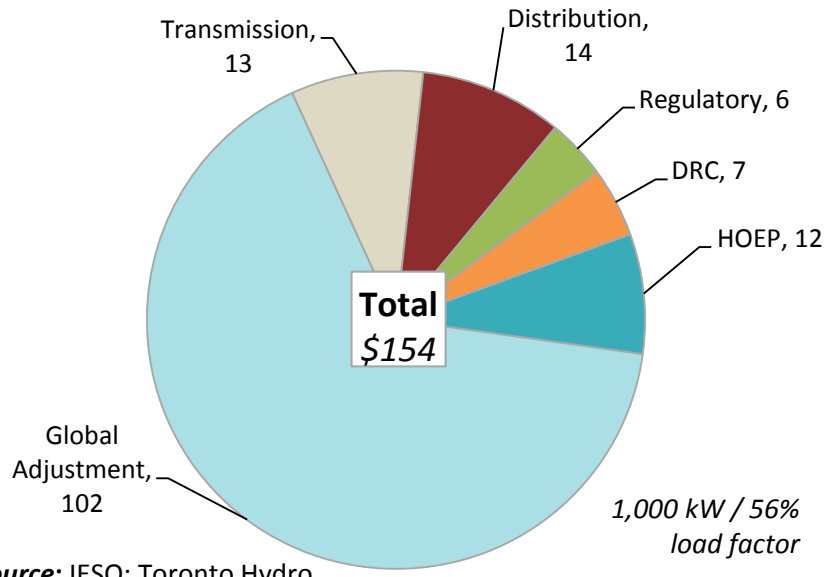
***Source*:** OEB, Toronto Hydro

# Commercial Electricity Prices

- There are approximately 55,000 commercial and institutional consumers in the province. These consumers are Class B consumers, and have separate line items on the electricity bill for HOEP and GA.
- There is a high degree of differentiation amongst consumers within the commercial sector in terms of size and consumption patterns. For example, an elementary school has a much different hourly load profile compared to a full service restaurant. This is an important consideration when looking at the bill impacts of policy options.

**Typical Commercial Price ($/MWh)**

*YTD June 2016 (Non-RPP Class B)*



***Source*:** IESO; Toronto Hydro

- Consumers in the commercial sector do not pay time-of-use prices and have little incentive to shift demand away from high demand hours.
- Targeted pricing programs are currently not available for Class B consumers.

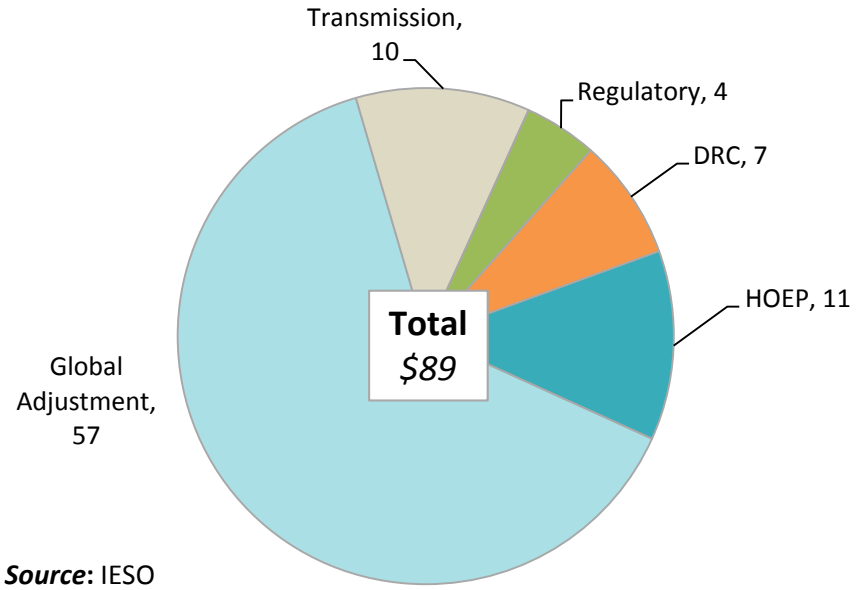
*** Note**: Most commercial consumers receive input tax credits for their HST.

# Industrial Electricity Prices

- There are about 300 large industrial consumers in Ontario.
- Measures in place to mitigate industrial electricity prices include ICI and NIERP.
- ICI lowers costs for eligible large electricity consumers (i.e., those with monthly peak demand exceeding 3 MW) that reduce consumption during peak periods.
  - ICI consumers reduce their electricity rates by 25% on average.

**Typical Large Industrial Price ($/MWh)**

*YTD June 2016*



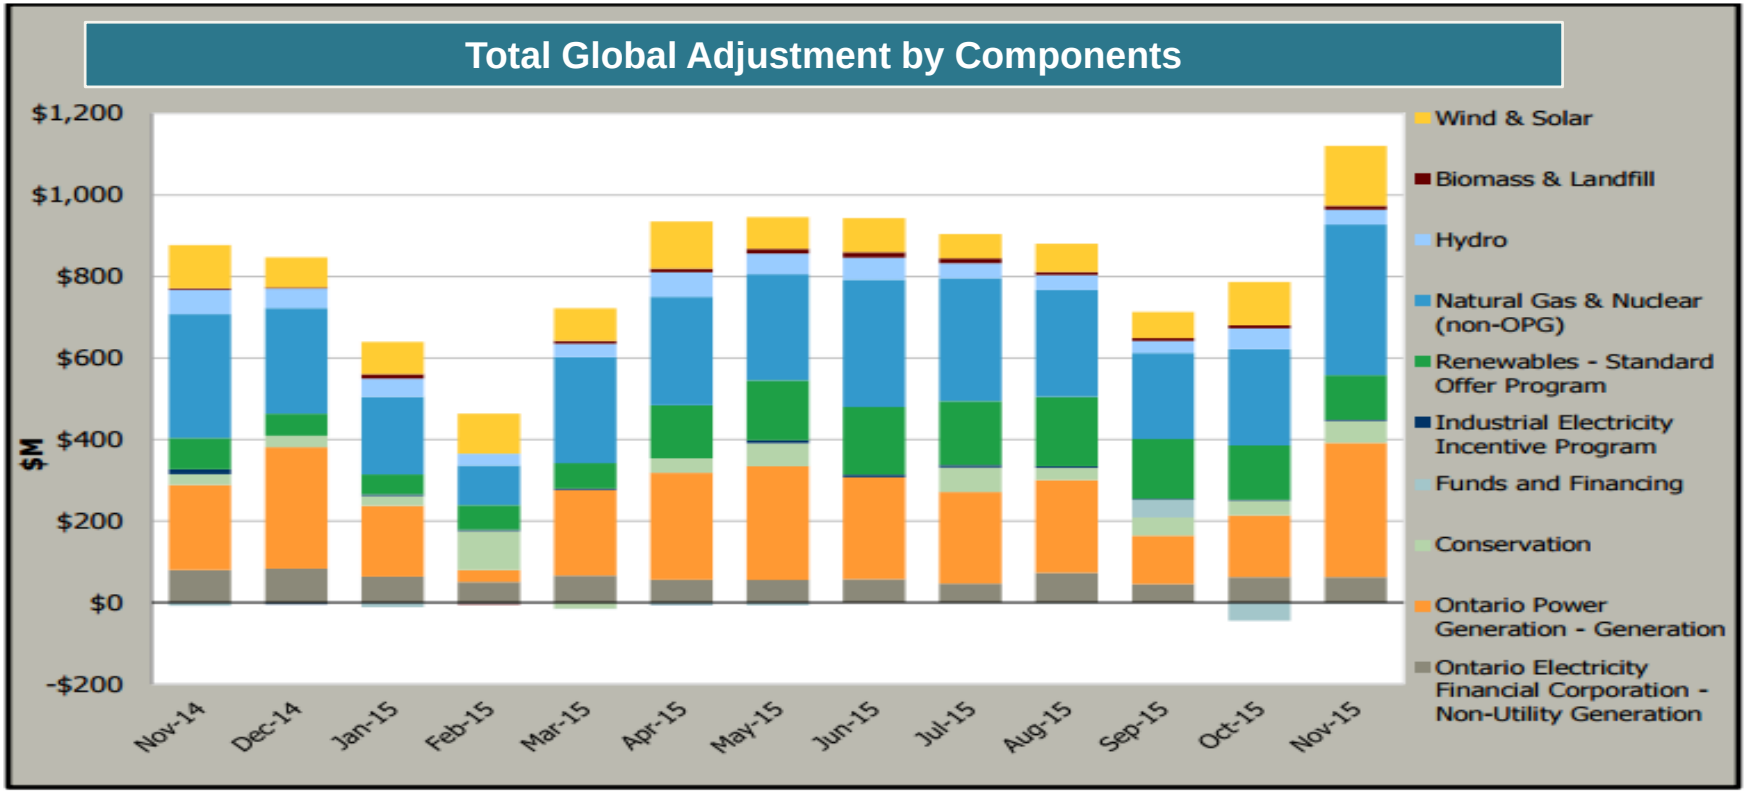
***Source*: IESO**

- Participants in NIERP receive a rebate of $20/MWh. On average, industrial electricity prices are reduced by about 20% through the program, reducing all-in prices to $69/MWh for these consumers. The program is funded through the tax base.

*** Note:** Industrial consumers receive input tax credits for their HST.

# Total Components of Global Adjustment

- Global Adjustment (GA) is a market mechanism that recovers costs from electricity consumers, including the cost of almost all conservation programs in the province (i.e., approximately half a billion dollars in 2016).



**Source:** IESO Monthly Market Report (November 2015)

# Cancel/Adjust Renewable Energy Procurements

# LRP I Pre-Construction Liability Limits

- All 16 successful LRP I developers accepted Optional Termination Provisions when the LRP I Contracts were executed in April 2016.
- If IESO chooses to enact the Optional Termination provision before a project has met all Key Development Milestones, IESO is required to pay pre-construction development costs up to the Pre Construction Liability Limit.
- Pre-construction development costs include costs incurred for feasibility studies, obtaining site access rights, work towards environmental approvals, business development plans, negotiation of contracts for design, equipment, construction and financing, reasonable overhead expenses, and other reasonable costs incurred.
- The Pre Construction Liability Limits are:
  - Non-Rooftop Solar: $250,000 plus $10.00/kW of Contract Capacity
  - Waterpower: $500,000 plus $20.00/kW of Contract Capacity
  - On-Shore Wind: $400,000 plus $2.00/kW of Contract Capacity
- According to the LRP I Optional Termination provision, the developer has a duty to take reasonable steps to mitigate losses, liabilities, costs and damages incurred as a result of the Optional Termination.
  - The IESO will not provide compensation for amounts which are attributable to a developer's failure to take reasonable steps to mitigate.

HI,
Here’s the latest version of the deck. We tried to incorporate comments from MOF / TBS. This version is with my MO for review but it will likely be the version we will use at Major Projects tomorrow. Keley can share with your EAs.

Subject: Potential Rate Mitigation

Hi,

Attached is a draft of the rate mitigation deck. This is tracking to major projects on Thursday for a preliminary discussion. As you can see there are a number of initiatives that have fiscal implications so your input and comments would be appreciated. Keley can coordinate with your EAs. I understand that Andrew T. plans to share with PO/your MOs.

Serge

MINISTRY OF
ENERGY

# Proposed Initiatives to Transform Ontario's Electricity Sector

## Working Draft

December 2016

CONFIDENTIAL DRAFT

# Context

- Electricity costs are increasing as the necessary investments are made to decarbonize and modernize the province's electricity infrastructure.
  - Since 2003, the Province has invested more than $35 billion in over 16,000 megawatts (MW) of new and refurbished cleaner generation, including nuclear, natural gas and renewables.
  - Over the same period, Hydro One has invested $15.5 billion to enhance and renew its transmission and distribution systems.
  - As additional electricity generation comes online, nuclear units are refurbished and distribution and transmission investments are made, prices are forecast to continue to increase.

- Actions have been taken to drive down electricity costs, including deferring investments in generation (e.g., new build nuclear), improving market efficiency (e.g., introduction of wind dispatch) and decreasing the cost of renewable procurements (e.g., Green Energy Investment Agreement renegotiation, decreasing FIT prices).

- Additional steps have been taken to increase cost effectiveness and improve efficiency by adopting new electricity market approaches, such as:
  - Enhancing competition between developers of large renewable projects through the Large Renewable Procurement (LRP) process to drive down price and secure clean, reliable generation for the province;
  - Directing IESO to end the process of negotiating new NUG contracts pending the development of a Capacity Auction (i.e., Market Renewal); and
  - Launching the first IESO Demand Response Auction (i.e., a competitive process through which demand-side resources are selected to be available to reduce their electricity consumption as needed).

# Context (Cont'd)

- Following the 2016 Throne Speech, a number of actions were announced to further reduce electricity costs, such as:
  - Providing an 8 per cent rebate before tax, equivalent to the provincial portion of HST, for approximately 5 million eligible electricity consumers including residences, small businesses and farms. The rebate will result in a savings of about $11/month for a typical residential consumer;
  - Increasing the amount of rate protection available to approximately 330,000 eligible rural customers living in low-density areas by updating the Rural or Remote Rate Protection (RRRP) program. In combination with the 8% rebate, the updated RRRP program will result in a savings of about $45/month for a typical rural customer;
  - Lowering the Industrial Conservation Initiative (ICI) threshold to 1 MW and removing sector restrictions so that more consumers can benefit. ICI provides participating consumers with an electricity bill savings of up to one-third;
  - Suspending the second round of the Large Renewable Procurement (LRP II) and the Energy-from-Waste Standard Offer Program to save up to $3.8 billion in costs; and
  - Recycling a portion of cap and trade auction proceeds to keep rates affordable for industrial and commercial electricity consumers.

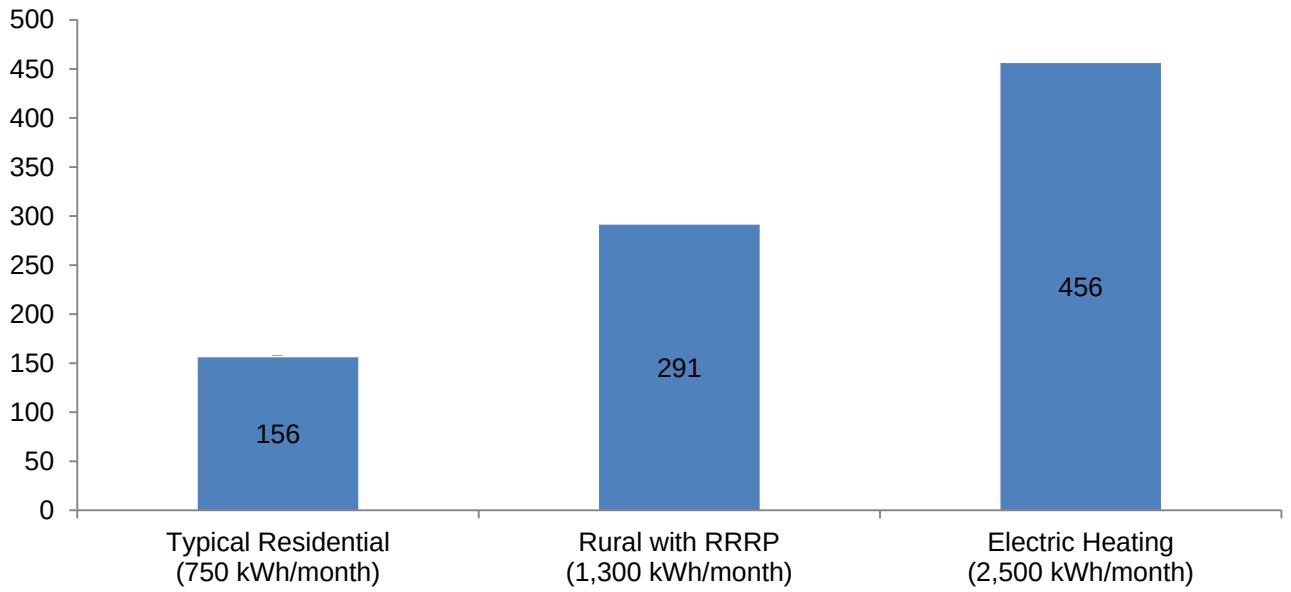
- On November 28, 2016, the Minister of Energy announced the need for changes in how electricity resources are procured and the need for wholesale market renewal.

- The Ministry of Energy is currently updating its Long-Term Energy Plan (LTEP), which provides an opportunity to consider a range of policy changes to how the Ontario energy sector operates.

# Current Electricity Prices – Residential

- Residential consumers electricity prices continue to be a concern for many Ontarians, particularly those that rely on electric heat.
  - **Note:** The typical residential bills are currently below the 2013 Long-Term Energy Plan (2013 LTEP) forecasts ($159 / 750kWh)

**Residential Electricity Bills, After Tax**
*in $/month*

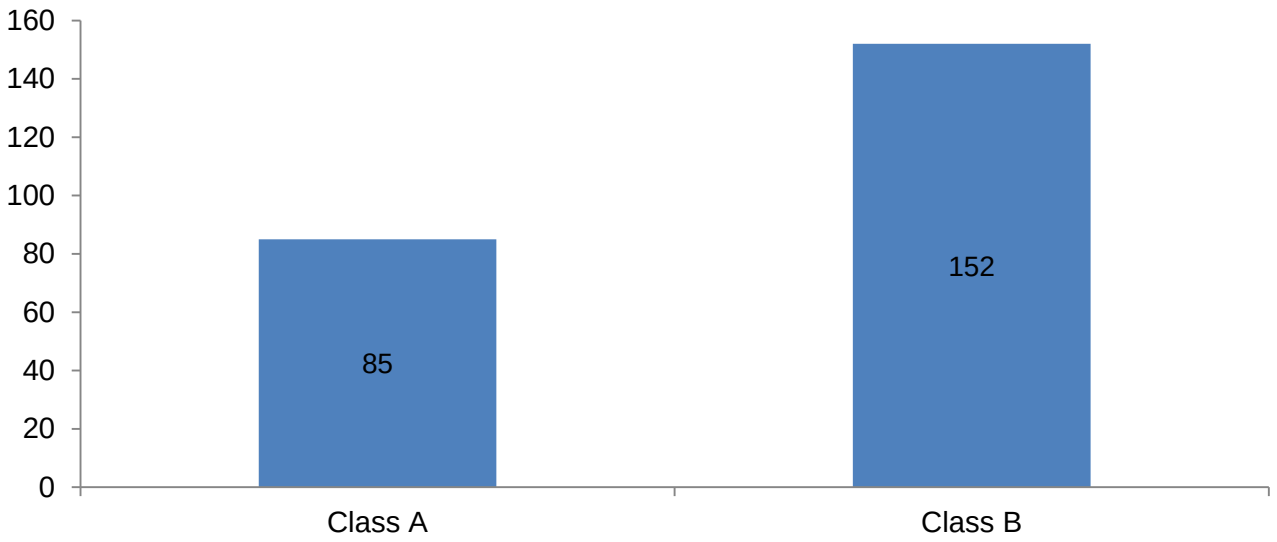


**Note**: Typical residential and electric heating shown above are based on Toronto Hydro; rural is based on connection to Hydro One as a R2 customer eligible to receive the Rural or Remote Rate Protection (RRRP) credit of $31.50.

# Current Electricity Prices – Industrial and Commercial

- While large industrial electricity consumers (i.e., Class A) rates are competitive with other jurisdictions, rates for commercial/small industrial consumers (i.e., Class B) are higher by comparison.
  - **Note:** Current industrial and commercial prices are below 2013 LTEP forecasts ($96 / MWh)

**Current All-In Electricity Price**
*in $/MWh*



**Note**: Based on year-to-date (YTD) September 2016 prices. Class A reflects a transmission-connected consumer. Class B reflects a 1 MW load operating at 56% load factor and connected to Toronto Hydro.

# Proposed Initiatives – Overview

- The suite of proposed initiatives are intended to:
  - Transform how the electricity market operates in Ontario;
  - Re-set how electricity sector programs are funded (i.e., rate-base vs tax-base);
  - Provide system benefits (e.g., industrial load retention);
  - Lower the cost of electricity for residential and industrial consumers; and
  - Increase cost effectiveness and improve efficiency.

- The proposed initiatives include:
  1. Implement Market Renewal Initiatives
  2. Fund Electricity Support Programs Through The Tax-base
  3. Eliminate the Industrial Conservation Initiative (ICI)
  4. Amortize Conservation Program Costs
  5. LDC Efficiencies
  6. Rate Design Initiatives
  7. Reduced Cost of OPG Borrowing
  8. End Debt Retirement Charge (DRC) Early for Commercial/Small Industrial Class B Electricity Consumers
  9. Dedicate Departure Tax
  10. Cancel/Adjust Renewable Energy Procurements

- The proposed initiatives provide opportunities to reduce electricity costs for residential and industrial consumers while at the same time transforming the province's electricity market and yielding benefits for the electricity system.

# Proposed Initiatives – Impacts

- Each of the proposed initiatives under consideration target different government programs and different parts of the electricity bill. The proposals impact different classes of electricity consumers to varying degrees.

| Proposal | Program / Initiative | Line on Bills | Who Benefits |
|---|---|---|---|
| 1. Implement Market Renewal Initiatives | Market Renewal | Electricity, Global Adjustment, Regulatory | Market Renewal: All electricity consumers |
| 2. Fund Electricity Support Programs Through The Tax-base | OESP, RRRP | Regulatory | All electricity consumers evenly |
| 3. Eliminate the Industrial Conservation Initiative (ICI) | ICI | Electricity, Global Adjustment | Only Class B electricity consumers (i.e., residential) **Note:** Will have a negative impact on Industrial consumers. |
| 4. Amortize Conservation Program Costs | Amortization | Electricity, Global Adjustment | Class B electricity consumers and to a lesser extent Class A consumers |
| 5. LDC Efficiencies | Distribution efficiencies | Delivery | All embedded consumers |
| 6. Rate Design Initiatives | Rate structures | Electricity, Global Adjustment | Rate Design Initiatives: Participating electricity consumers |
| 7. Reduced Cost of OPG Borrowing | n/a | Electricity, Global Adjustment | Class B electricity consumers and to a lesser extent Class A consumers |
| 8. End DRC Early for Commercial/Small Industrial Class B Electricity Consumers | Debt Retirement Charge (DRC) | DRC | Class B consumers (i.e., small business and commercial consumers, etc) |
| 9. Dedicate Departure Tax | Departure Tax | TBD | TBD |
| 10. Cancel/Adjust Renewable Energy Procurements | FIT, LRP | Electricity, Global Adjustment | Class B electricity consumers and to a lesser extent Class A consumers |

# Proposed Initiatives – Potential Savings for Typical Residential Electricity Consumers

| *$/750kWh* | 2017 | 2018 | 2019 | 2020 | 2021 | 2022 | Timing of Benefit |
|---|---|---|---|---|---|---|---|
| 1. Implement Market Renewal Initiatives | - | - | - | - | 1.00 | 1.03 | Longer-Term |
| 2. Fund Electricity Support Programs through the Tax-base | 2.18 | 2.30 | 2.31 | 2.45 | 2.48 | 2.51 | Immediate |
| 3. Eliminate the Industrial Conservation Initiative (ICI) | 4.40 | 4.24 | 4.10 | 4.24 | 3.73 | 3.58 | Immediate |
| 4. Amortize Conservation Program Costs | 1.67 | 1.56 | 1.21 | 0.81 | 0.54 | 0.3 | Immediate |
| 5. LDC Efficiencies*** | TBD | TBD | TBD | TBD | TBD | TBD | Medium-to-Long-Term |
| 6. Rate Design Initiatives* | - | - | - | - | - | - | Immediate |
| 7. Reduced Cost of OPG Borrowing | 0.13 | 0.13 | 0.13 | 0.18 | 0.18 | 0.18 | Immediate |
| 8. End DRC Early for Class B Electricity Consumers** | - | - | - | - | - | - | n/a |
| 9. Dedicate Departure Tax | TBD | TBD | TBD | TBD | TBD | TBD | Immediate |
| 10. Cancel / Adjust Renewable Energy Procurements | - | - | TBD | TBD | TBD | TBD | Longer-Term |

**Note:** The above initiatives will provide similar benefits for non-RPP Class B electricity consumers. Proposal 2 assumes OESP participation of 50% and 5-year maturity. *Savings estimates do not include changes related to rate design. ** Class B includes small-medium enterprises (SMEs). ***Assessing the range of ratepayer impacts will be done through the LTEP development and implementation process in conjunction with the OEB

# Proposed Initiatives – Potential Savings for Average Industrial Electricity Consumers

| *$/MWh* | 2017 | 2018 | 2019 | 2020 | 2021 | 2022 | Timing of Benefit |
|---|---|---|---|---|---|---|---|
| 1. Implement Market Renewal Initiatives | - | - | - | - | 1.34 | 1.38 | Longer-Term |
| 2. Fund Electricity Support Programs through the Tax-base | 2.91 | 3.06 | 3.17 | 3.27 | 3.33 | 3.38 | Immediate |
| 3. Eliminate the Industrial Conservation Initiative (ICI) | (24.12) | (23.21) | (22.45) | (23.23) | (20.42) | (19.61) | Immediate |
| 4. Amortize Conservation Program Costs | 1.15 | 1.08 | 0.84 | 0.56 | 0.37 | 0.25 | Immediate |
| 5. LDC Efficiencies | n/a | n/a | n/a | n/a | n/a | n/a | Medium-to-Long-Term |
| 6. Rate Design Initiatives* | - | - | - | - | - | - | Immediate |
| 7. Reduced Cost of OPG Borrowing | 0.10 | 0.10 | 0.10 | 0.15 | 0.15 | 0.15 | Immediate |
| 8. End DRC Early for Class B Electricity Consumers** | - | - | - | - | - | - | n/a |
| 9. Dedicate Departure Tax | TBD | TBD | TBD | TBD | TBD | TBD | Immediate |
| 10. Cancel / Adjust Renewable Energy Procurements | - | - | TBD | TBD | TBD | TBD | Longer-Term |

**Note:** Proposal 2 assumes OESP participation of 50% and 5-year maturity. Proposal 3 reflects the elimination of ICI, as opposed to moving ICI cost shift to the taxbase. The $1.75/MWh savings associated with Proposal 7 in 2018 accounts for the fact that under the status quo, DRC will be removed from bills in April 2018. *Savings estimates do not include changes related to rate design. ** Class B includes small-medium enterprises (SMEs).

# Fiscal Considerations

- A number of the social assistance programs such as the OESP, RRRP and First Nations rates can be funded through the tax-base. **Note:** Table on slide 13 shows some preliminary costs based on some assumptions which could mean up to $416 million in costs to taxpayers in 2017 and up to $465 million in costs in 2020

- Ending the Debt Retirement Charge (DRC) for commercial and small industrial electricity consumers (i.e., Class B) early would represent an additional fiscal pressure of about $450 million annually on the Province until April 2018 (i.e., The current planned date for removing DRC from all electricity bills) and zero thereafter.

- If the Industrial Conservation Initiative were funded though the tax-base instead of being eliminated, this would represent a $900 million annual cost to the fiscal plan.

- Reducing OPG borrowing costs to the Province's cost of funds is expected to result in a $30 million annual fiscal pressure in 2017 to the province based on new borrowing and increasing to about $70 million by 2021.

- Fiscal impacts of allocating a portion of the departure tax to ratepayers will depend on the size of the allocation, as well as timing for the flow of value. The maximum, direct one-time impact is $2.6 billion, with potential ancillary impacts on residual stranded debt defeasance.

# Proposed Taxpayer Funded Electricity Price Mitigation

- As shown in the Ministry of Finance table, if various measures proposed in this deck were to be accepted, taxpayer funded contributions to electricity price mitigation would increase to about $3.4 – 3.9 billion in 2017-18. That is a 65-95% increase from the current forecast for 2017-18.
- These amounts were not considered in the 2016 Fiscal Plan and could put at risk the Province's fiscal objectives for 2017-18 and beyond.

| ($M) | 2016-17[1] | 2017-18[1] | 2018-19[1] | 2019-20[1] | 2020-21[1] |
|---|---|---|---|---|---|
| **OCEB** | - | - | - | - | - |
| **OREC** | 300 | 1,100* | 1,100* | 1,200* | 1,200* |
| **Ending DRC[2]** | 330 | 330 | -- | -- | -- |
| **NIERP** | 120 | 120 | 120 | 120 | 120 |
| **NOEC** | 25 | 25 | 25 | 25 | 25 |
| **OEPTC[3]** | 450 | 460 | 470 | 481 | 481 |
| **CURRENT TOTAL** | **1,195** | **2,005** | **1,715** | **1,826** | **1,826** |
| **1. OESP** | | 106 | 119 | 127 | 132 |
| **2. RRRP** | | 292 | 300 | 306 | 315 |
| **3. First Nations Delivery Rate** | | 18 | 18 | 18 | 18 |
| **4. Fund ICI through Tax Base** | | 900+100 | 900+100 | 900+ | 900+ |
| **5. Departure Tax** | | TBD | TBD | TBD | TBD |
| **6. Conservation Amortisation** | TBD | TBD | TBD | TBD | TBD |
| **7. DRC Ended for Class B** | 110 | 450 | -- | -- | -- |
| **8. Other** | | 30 | 45 | 60 | 70 |
| **TOTAL** | **1,305** | **3,901** | **3,197** | **3,237** | **3,261** |

1. 2016-17, 2017-18 based on forecasted numbers
2. 2015-16 estimated for 3 months of reduced DRC revenue
3. OEPTC amounts in all years based on energy component of the rebate.

OCEB – Ontario Clean Energy Benefit
OREC – Ontario Rebate for Electricity Consumers
DRC – Debt Retirement Charge
NIERP – Northern Ontario Electricity Rate Program
NOEC – Northern Ontario Energy Credit
OEPTC – Ontario Energy and Property Tax Credit

# 1. Electricity Market Renewal Initiatives

- Continue to move forward with IESO's Market Renewal initiatives:
  - Market Renewal encompasses projects such as a single-schedule system (from the current two-schedule system), more frequent intertie scheduling to better align with other jurisdictions and a day-ahead market. There will be up front capital costs to enable the initiative. IESO is currently assessing these costs.
  - Moving to "technology-agnostic" procurements will provide new opportunities for innovation and modernization and ensure ratepayers receive the best prices possible.

**Considerations**

- Changes related to IESO's Market Renewal initiatives, reflected in HOEP and uplifts, are estimated to save up to $300 million per year, starting in 2021, leading to a reduction of:
  - About $1/month or less than 1% at current retail prices for a typical residential bill; and
  - About $1.30/MWh at current all-in prices for industrial and SME electricity consumers.
- The IESO's Market Renewal is a broad initiative that will impact all aspects of Ontario's electricity market. Ontario has had a uniform price since market opening.
- Adopting a technology-agnostic stance will lower the overall cost of providing electricity service by selecting the most cost-effective resources to fulfill various system needs.
- IESO estimates that the total implementation cost – including a 15% contingency and net of avoided costs – will be about $150 million. The bulk of the costs (i.e., capital) would only be recovered once the project has been implemented and as the benefits are being realized.

# 2. Fund Electricity Support Programs Through the Tax-Base

- Propose to fund electricity support programs, including Ontario Electricity Support Program (OESB) and Rural or Remote Electricity Rate Protection (RRRP), through the tax-base instead of a regulated charge. This would allow the OESP and the RRRP charges to be removed from the Regulatory line on electricity bills.

**Considerations**

*Consumer Impacts and implementation*

- By 2020, funding the OESP, RRRP and the First Nation rate reduction through a regulatory charge is estimated to cost approximately $2.45 for a typical residential customer using 750 kWh per month. Transitioning that funding to the tax-base would reduce a typical residential customer bill by that same amount. As all programs provide strong social benefits, there is precedent for funding these programs through the tax-base. To address concerns from low income electricity consumers improvements to OESP could be implemented by increasing credits (could be up to double the current credits).

- To address concerns from low income electricity consumers improvements to OESP could be implemented by increasing credits (could be up to double the current credits)
  - Single low income consumer would see a change from $30 to $45/ month ($540/year):
  - Family of four with electric heat could see a credit of $82.50/month ($990/year); and
  - Would mean no impact on consumer bills and no change to current OESP charge.

- RRRP and OESP are included in the “Regulatory” line on bills. If RRRP and OESP were eliminated from bills, the Regulatory line would decrease; however, as the Regulatory line is the smallest line item component of invoices, there is risk the decrease may not be perceived by customers.

- The RRRP regulation provides a funding mechanism for transmission infrastructure required to grid connect remote First Nation communities. The estimated fiscal impacts of funding the RRRP through the tax base do not include these costs, and future consideration of how these costs could be supported by the tax base will have to be undertaken.

- The non-rate mechanism to remove delivery charges from on-reserve First Nation customer monthly bills needs to be further explored.Funding RRRP and/or OESP with tax revenue would require amendments to existing legislation and regulations.

# 2. Fund Electricity Support Programs Through the Tax-Base (cont'd)

- Table below shows estimates of program costs up to 2020:

| Year | OESP | RRRP | First Nations Delivery Rate | TOTAL |
|---|---|---|---|---|
| 2017 | $106M | $292M | $18M | **$416M** |
| 2018 | $119M | $300M | $18M | **$437M** |
| 2019 | $127M | $306M | $18M | **$451M** |
| 2020 | $132M | $315M | $18M | **$465M** |

1) Ontario Electricity Support Program (OESP)
   - After almost a year in market, close to 30% of potentially eligible customers are signed up.
   - The cost projections below assume the program grows to 50% of eligible consumers by 2020 (also assumes 10% administration costs) and remains steady at this participation level in 2021 and 2022, with no increase in credit amounts.

2) Rural and Remote Rate Protection (RRRP)
   - Provides benefits to R2 Hydro One consumers, Algoma, and remote communities.
   - Includes the expanded coverage that will begin on January 1, 2017.

3) First Nation rate reduction (currently under development)
   - On November 14, 2016, OEB presented options to the Ministry on reducing costs for on-reserve First Nation customers.
   - OEB's recommended option to provide 100% delivery rate credit, which is estimated at $18.4 million per year.
     - Other options includes a seasonal fixed credit to account for demand changes over the year ($13 million) or a 50% total bill reduction ($23 million).

# 3. Eliminate the Industrial Conservation Initiative (ICI)

- The cost shift from the Industrial Conservation Initiative (ICI) could be removed from electricity bills by eliminating ICI.
  - The ICI allows large electricity consumers to lower their electricity costs by reducing their demand during peak hours.

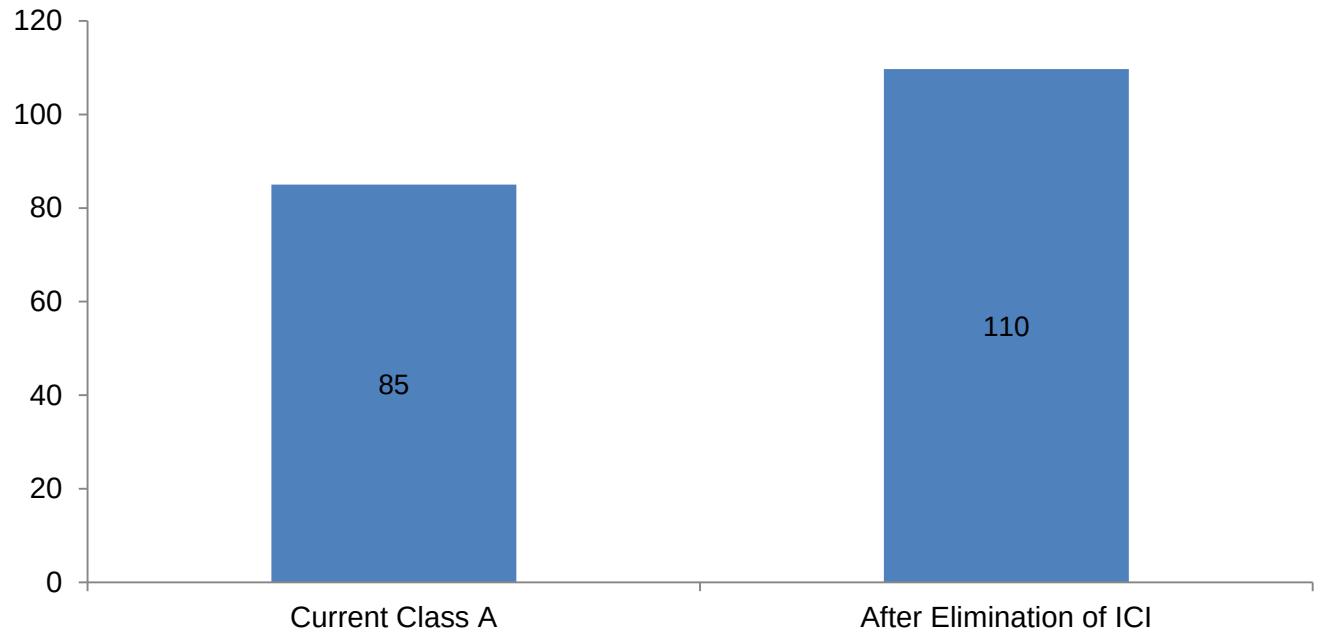
**Considerations**

- Eliminating ICI would result in a benefit of more than $4/month for residential electricity consumers in 2017.
  - However, unless government took action to mitigate the associated cost shift back to industrial consumers, typical industrial prices would increase by about one-third. Such a price increase would pose significant challenges for energy-intensive consumers.
- Industrial stakeholders have indicated that ICI as an integral factor in maintaining competitiveness and retaining industry in the province.
  - Eliminating ICI would limit the “cost shift” onto residential consumers, but it would also lead to a reduction in industrial demand. The large industrial contribution to the fixed costs of running the electricity system would then need to be covered by remaining consumers.
- If ICI is retained, current IESO projections indicate that the cost shift will decrease each year going forward as Global Adjustment (GA) decreases (due to an expected increase in HOEP).
- Alternatively, ICI could be funded through the tax-base at a cost of $900 million annually. There is precedent to use the tax-base for industrial support programs, including the Northern Industrial Electricity Rate Program (NIERP) and the Jobs and Prosperity Fund.

# 3. Eliminate the Industrial Conservation Initiative (cont'd)

- ICI currently provides a benefit of about $25/MWh to Class A electricity consumers.

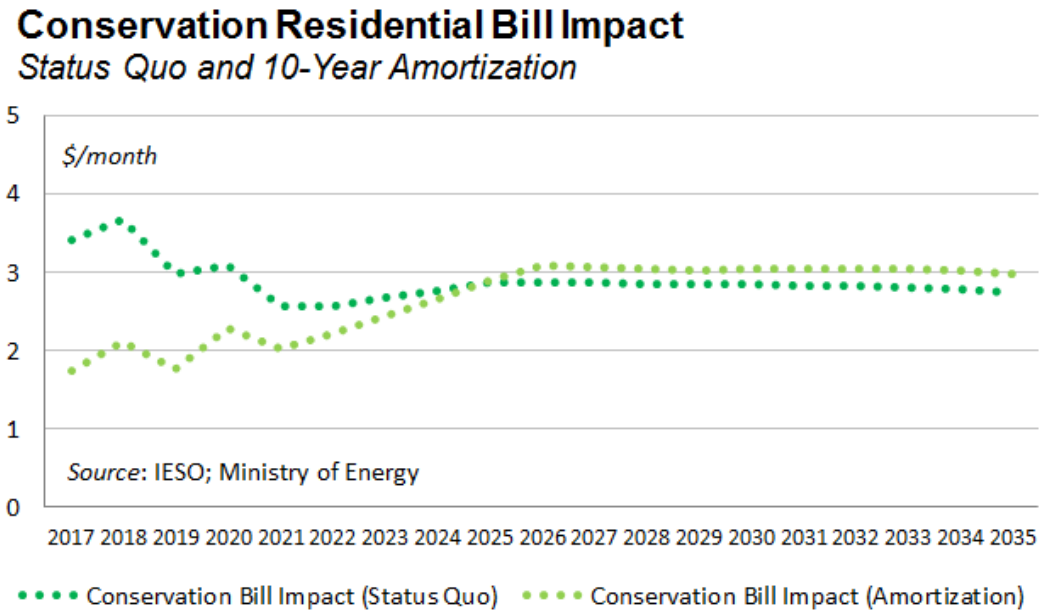
**All-In Electricity Price**
*in $/MWh*



**Note**: Based on year-to-date (YTD) September 2016 prices. Class A reflects a transmission-connected consumer.

# 4. Amortize Conservation Program Costs

- ~$3 billion from the electricity ratepayer base will be spent on conservation programs delivered under the Conservation First Framework and the Industrial Accelerator Program (IAP) between 2015 and 2020.
- Currently, Conservation and Demand Management (CDM) program costs are recovered from the Global Adjustment (GA) mechanism about one month after expenses are incurred.
- As a potential rate mitigation measure, certain CDM costs could be amortized.
- Amortizing a portion of conservation spending would produce a benefit for electricity ratepayers in excess of $1/month at the outset. Over time, the benefit would decrease and turn into a cost, as interest charges begin to grow.



**Note**: Chart assumes that conservation incentive costs are available for amortization while administration cost are not. Although there is variable from year to year, incentives represent about two-thirds of conservation spending in Ontario. Chart assumes conservation spending continues at a similar rate beyond 2020. Chart assumes a 10-year borrowing rate of 3.0%.

# 4. Amortize Conservation Program Costs (cont'd)

## Considerations

- Under **Public Sector Accounting Board (PSAB) accounting standards**, used by both the Province and IESO, only certain assets can be amortized: 1) pensions and 2) tangible capital assets. Under PSAB an asset must meet several criteria to be considered a capital asset, including:
  - A tangible capital asset must be tangible and substantive and the Ontario government must have title and operate the asset.
  - A tangible capital asset must bring a tangible benefit to the government or to Ontario.

- CDM costs, on their own, do not meet the criteria of a tangible capital asset because customers would have ownership and control of installed CDM measures, not the Province or IESO.

- **Rate-regulated accounting** was developed to recognize the unique nature of regulated entities (e.g., electricity generators, LDCs). Under rate-regulated accounting certain costs can be treated as amortizable assets that would not normally be considered assets under accounting principles.
  - Over the past several years, the Auditor General (AG) has expressed concerns about the appropriateness of recognizing rate-regulated assets in the Province's consolidated financial statements.
  - Rate-regulated accounting is currently under review by international accounting standard setting bodies and is currently permitted only on an interim basis, so its future is unclear at present.

# 4. Amortize Conservation Program Costs (cont'd)

**Considerations**

- If some of Ontario's CDM costs could be amortized, analysis shows that ratepayer impacts would be reduced in the short-term but interest charges on the loan would result in increased overall ratepayer costs in the longer-term.

- Legislative amendments would be needed to allow recovery of loan interest charges from GA.

- If there is a desire to proceed:
  - Formal accounting advice will need to be sought from IESO's external auditor as well as the Ontario Provincial Controller (OPC) to determine whether CDM costs could be amortized according to rate-regulated accounting standards.
  - Further legal analysis would also be required to confirm legal viability and possible approaches to implementation.

# 5. LDC Efficiencies

- Consider opportunities for future LDC cost reductions and efficiencies through the regulatory framework.

**Considerations**

- The Ontario Energy Board has a mandate to regulate the electricity distribution sector in the public interest, ensuring the financial viability of the sector while promoting reliable service to customers at just and reasonable rates.
- Since 2012, the OEB has taken action – through the Renewed Regulatory Framework for Energy – to more closely link rate regulation with performance measures and outcomes.
- There maybe opportunities to promote further cost reductions and performance improvements within the distribution sector as there is continued evolution of the regulatory framework in Ontario.
  - Tightening LDC requirements may also indirectly incent other desired policy outcomes, such as LDC consolidation and grid modernization to realize further cost reductions.
- ENERGY could help promote or accelerate these efforts by asking the OEB through the LTEP Implementation Directive, s. 35 of the *Ontario Energy Board Act, 1998*, and the 2017 Mandate Letter and other agency business planning processes.
- In addition, further changes to the departure and transfer tax regimes could be considered to provide a further incentive for LDC mergers and acquisitions.

# 6. Rate Design Initiatives

- OEB continues to move forward with its Regulated Price Plan (RPP) Roadmap:
  - The OEB is undertaking a comprehensive review of the RPP, including exploring the introduction of offering different pricing plan options for customers following the completion of pilot programs in 2018. The plan is expected to be implemented over a 3-5 year period.

- Until new pricing plans are available, the OEB could provide an "opt-in flat rate RPP" structure that could be made available to residential, farm and small business consumers on an interim basis (2-3 years) until a wider range of price plans are available.
- Time-of-Use (TOU) pricing could also be introduced for non-RPP Class B consumers to reduce Global Adjustment (GA) volatility and reduce system costs.

| Current TOU | New Flat Rate |
|---|---|
| On: 18.0 ¢/kWh | 11.1 ¢/kWh |
| Mid: 13.2 ¢/kWh | |
| Off: 8.7 ¢/kWh | |

**Considerations**

- The OEB has indicated that the option would lead to no overall change in system costs. Consumers with higher peak and mid-peak usage patterns would see a decrease in their electricity bills, while those with higher off-peak usage patterns would see an increase.
  - While the current strong supply conditions may allow for such an RPP structure (i.e., peak demand requirements can be easily met), administrative costs could be high (distributors would need to design/implement an opt-in process and associated billing system on an interim basis).

| | Current TOU | New Flat Rate |
|---|---|---|
| 1) Monthly electricity bill- higher peak and mid-peak usage patterns | $172 | $163 |
| 2) Monthly electricity bill- higher off-peak usage patterns | $152 | $163 |

***Note:** 1) assumes a consumer consumption pattern of 45%:30%:25% (Off-peak: Mid-peak: On-peak), while 2) assumes consumer consumption pattern of 80%:10%:10% (Off-peak: Mid-peak: On-peak). Estimates are based on OEB's online electricity bill calculator (for Toronto Hydro- November 2016 rates)

# 6. Rate Design Initiatives (cont'd)

**Considerations**

- The decision to undertake smart meter investments was partly justified on the basis of TOU pricing. If TOU pricing were to be made optional, some stakeholders could question the rationale for smart meter investments.
  - Rationale for offering a flat rate option could focus on providing customers with choice until new pricing plans are rolled out under the RPP roadmap.

- If a flat rate design is introduced, there could be significant consumer opposition to any return to a mandatory TOU.

- After the interim flat rate period, the OEB could offer a wider range of pricing plans to consumers.
  - As part of its RPP review, the OEB will be running pilots with LDCs to assess customer response to alternative time periods and pricing structures.
  - Learnings from these pilots will help inform potential changes to the RPP. Pilots are expected to be in market May 2017 and run for one year.

- Non-RPP Class B electricity consumers currently pay Global Adjustment (GA) on a volumetric basis. Moving them to TOU would provide an incentive to shift consumption to off-peak periods.
  - Consumers, including manufacturers, who are unwilling to shift would face higher costs and likely not be supportive of the changes.
  - The decision to pursue TOU pricing for non-RPP class B consumers will impact proceeds recycling as there is interplay between the two initiatives.

# 7. Reduced Cost of OPG Borrowing

- OPG currently borrows for corporate purposes from the OEFC
- Seek to reduce OPG's borrowing costs and pass on savings to ratepayers by:
  - Reducing or removing the spread that OEFC applies to OPG for any new corporate debt; or
  - Allowing OPG to refinance its existing debt at longer maturities through the OEFC in order to take advantage of the current, favourable interest rate environment.
- Reducing OPG borrowing costs to the Province's cost of funds is expected to result in a $30 million annual fiscal pressure in 2017 to the province based on new borrowing and increasing to about $70 million by 2021, as OPG's outstanding OEFC debt rises from ~$3.3 billion in 2016 to ~$4.7 billion in 2020.
- OPG could apply to the OEB as part of its current rate application to flow this benefit to ratepayers.

**Considerations**

- Further work is required to determine potential OPG savings from these initiatives.
- Allowing OPG to refinance would have a negative fiscal impact on the Province.
- Spreads are expected to decline, reducing the relative impact of this change, given lower overall interest rates and reduced volatility.
- Providing OPG with greater access to longer term (20-30 year) debt may also reduce costs:
  - OPG's average term to maturity for OEFC debt is 5.7 years, as compared to 22.2 years for privately financed project debt. This contrasts with most corporations and government which have been working to extend average debt terms in order to take advantage of the low interest rate environment.
  - Longer terms would also better match to the life of OPG's assets.
  - Recently, OEFC has allowed OPG to apply for 50% of its financing requirements in the form of longer term (25-30 year debt). Moving closer to 100% would accelerate this transition.

# 8. End DRC Early for Commercial/Small Industrial Class B Electricity Consumers

- Propose to remove the $0.07/kWh Debt Retirement Charge (DRC) from the bills of commercial/small industrial Class B consumers beginning in 2017, instead of April 1, 2018.
  - **Note:** Class A consumers (e.g., large industrial) would continue to pay DRC until at least April 1, 2018.

**Considerations**

- For a Class B consumer currently paying about $152/MWh, removing the DRC would represent a savings of about 5%.
  - A 50% reduction in the DRC charge would represent a savings of about 2%.

- Alternatively, the reduction of the DRC could be to $0.035/kWh starting in 2017, to provide relief for cap and trade until proceeds recycling is fully operational.

- Residential consumers have had the DRC removed from bills since January 1, 2016. Taking DRC off commercial and small industrial bills would result in equal treatment for these groups of consumers.

- The savings for commercial and small industrial consumers associated with this proposal would drop to zero in April 2018, since this is the current planned date for removing the DRC from non-residential bills.

- Prior to moving forward with this proposal, additional analysis from Legal Services and the MOF would be needed.

# 9. Dedicate Departure Tax

- In connection with the IPO, as a result of leaving the PILs regime and entering the corporate tax regime, Hydro One was deemed to dispose of its assets for proceeds equal to its fair market value, triggering a PILs liability of $2.6 billion (Departure Tax).
- This was paid to the Ontario Electricity Financial Corporation (OEFC), to be dedicated towards repayment of electricity sector stranded debt.
- The Province could explore repurposing some of those funds to the benefit of ratepayers.
- This may reduce the risk that the Ontario Energy Board (OEB) assigns to ratepayers the benefit from an associated tax asset, resulting in lower earnings and decreased share value for Hydro One. This decision is currently before the OEB, as part of Hydro One's Transmission rate application.
- If the Province were to transfer $2.6 billion in economic benefits to the rate base over 10 years suggest the following impacts (assuming 140TWh per year):
  - Residential Ratepayer Impact (if spread over 10 years): up to $1.39 per month on a typical bill; and
  - Industrial Ratepayer Impact (if spread over 10 years): up to $1.86 / MWh

**Considerations**

- Cost savings to ratepayers and associated fiscal impacts would depend on timing and which ratepayers (e.g., Hydro One customers, or all Ontario customers) will benefit from some or all of the $2.6 billion value.
- The departure tax was effectively a true-up for lower PILs payments from Hydro One in previous years – it was not a one-time windfall for the Province. In other words, it ensures that Hydro One paid all its tax obligations under the PILs regime before moving into the normal corporate tax regime.
- The related ~$2.4 billion fiscal benefit to the Province (from the deferred tax benefit) has already been credited to the Trillium Trust to be used to build infrastructure under Moving Ontario Forward.
- Repurposing funds paid to OEFC may have an impact on the defeasance of electricity stranded debt.
- While this is a shift from messaging that value from the broadening of ownership of Hydro One is being used pay down debt and fund transit and transportation, the Province could link to electricity infrastructure investments (e.g., as an offset to infrastructure investments already made in the sector, or to specific initiatives such as conservation).

# 10. Cancel/Adjust Renewable Energy Procurements

- The Ministry could consider the following actions to further mitigate future impacts to electricity bills:

| Unallocated/Terminated Capacity | Announced Procurements | Executed Contracts |
|---|---|---|
| A. Do not procure unallocated or terminated capacity | B. Revise FIT 5 target | D. Cancel LRP I contracts |
| | C. Cancel FIT 6 | |

**Overarching Considerations**

- Cost savings associated with reducing or cancelling renewable energy procurements and programs will not reduce current electricity bills, but would result in future cost reductions relative to Ontario Planning Outlook forecasts.
- The IESO estimates implementing options A to C will reduce system costs by approximately $592 million ($2016) between 2019 and 2028, resulting in an average of approximately $0.50/month in savings to a typical residential electricity bill over the same period. [cost reductions from LRP I contract cancellations TBC]
- The microFIT program is winding down end of 2017. Annual microFIT procurement targets have been undersubscribed.
- With a few exceptions (e.g., rollover of unallocated microFIT capacity; addition of terminated microFIT and small FIT capacity to FIT 5), plans for unallocated or terminated capacity are not defined in announcements or existing directions.

**Cancel/Adjust Announced Procurements**

- Amendments to existing directions to IESO would be required to reduce FIT 5 and cancel FIT 6.
- The FIT 5 procurement is underway with a base target of 150 MW and inclusion of any capacity available from contract terminations under prior small FIT and microFIT procurements. The application window closed on November 25, 2016.

# 10. Cancel/Adjust Renewable Energy Procurements – Existing Contracts

**Cancel Existing LRP I Contracts**

- 16 LRP I contracts (approx. 455 MW) have been executed and projects are under development.
- None have met Key Development Milestones. Total value of LRP I estimated at approx. $1 billion (NPV to 2016).

*[Placeholder for IESO: Cost calculation relative to OPO and associated bill impact]*

**Considerations**

- To help inform a decision, IESO or OEB could be asked to evaluate and provide guidance to the Ministry on the system need for LRP I projects and potential ratepayer impacts/benefits.
- 13 of 16 LRP I contracts have Indigenous participation. Cancelling LRP I contracts would remove this economic development opportunity and likely damage relationships between Indigenous communities and the government.
- LRP I Contract includes an “Optional Termination” provision allowing IESO to terminate any contract prior to the “Commercial Operation Date” with 6 months written notice.
- The IESO obligations under the Optional Termination provision depend on whether the project has met all “Key Development Milestones”.
  - As no projects have met their Key Development Milestones, the estimated total cost payable to contract holders is about $8 million.

# 10. Cancel/Adjust Renewable Energy Procurements – Existing Contracts (cont'd)

## Legal Analysis

- Under the *Electricity Act, 1998*, the Minister has the authority to amend previous directions without approval from Cabinet. Although an amendment to an existing direction would not require Cabinet approval, it is unlikely that a direction to cancel LRP I contracts could be considered as amending an existing direction. The previous LRP directions set out the broad policy framework that was reflected in the procurement, but the contracts themselves, once executed, are stand alone documents which the IESO had legal authority to execute. Revoking previous LRP directions does not affect that authority or have the effect of cancelling the procurement.
- As a result, any new directive to cancel LRP I contracts would need to be approved by Cabinet, either as part of an LTEP implementation directive to IESO, or pursuant to the overall power to direct IESO with respect to procurements outside the LTEP process. However, there is a risk that such a directive could be subject to challenge.
- ENERGY has previously received advice that there is a high risk that a court would conclude that the Minister has no authority under the *Electricity Act , 1998* to issue a direction requiring IESO to terminate microFIT Conditional Offers and FIT Offer Notices that have already been issued to applicants, because these offers create vested contractual rights and the Minister would require clear legislative authority to interfere with those rights. This reasoning would likely apply equally to any direction or directive to IESO to cancel LRP I contracts.
- Previous advice has also flagged a moderately high risk that the Province could be liable for damages in tort for inducing a breach of contract if it issues a direction to IESO that interferes with vested contractual rights without clear statutory authority to do so. LRP I contract holders could also assert other claims, such as misfeasance in public office.
- The risk and costs associated with potential law suits resulting from the cancellation of contracts requires further analysis, including analysis of whether any statutory amendments would be required to provide clear authority to cancel the contracts. LSB recommends ENERGY seek an opinion from Crown Law Office Civil before proceeding.

# Summary

- Reductions in electricity rates could be achieved by eliminating existing, planned or directed initiatives from the rate-base or shifting these costs to the tax-base.

- The timing of the impact of these rate mitigation initiatives varies.
  - Immediate and near-term impacts can be achieved by shifting costs to the tax-base or changing how certain costs are recovered from consumers or eliminating certain programs.
  - Over the longer term, changes to the electricity supply mix and achieving efficiencies in the electricity market could yield system savings.

- Pursuing the initiatives would require regulatory amendments and working with the electricity sector agencies, LDCs and other stakeholders to implement the initiatives.

# Appendix

# Electricity Consumer Classes

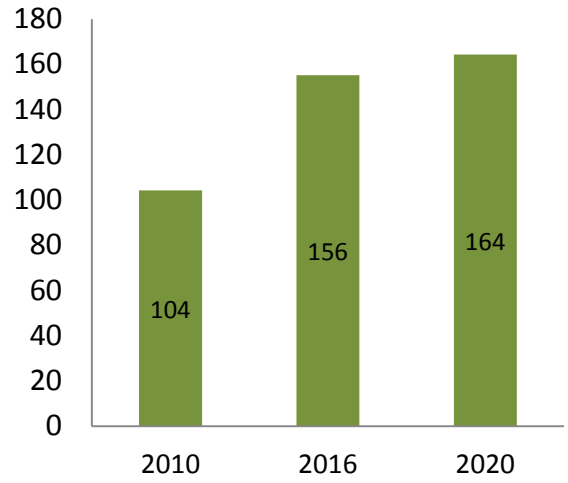
- In Ontario, there are three classes of electricity consumers:

| | Regulated Price Plan | Class B | Class A |
|---|---|---|---|
| **Consumer Types** | • Residential<br>• Small Business<br>• Farms | • Commercial<br>• Institutional<br>• Small industrial | • Large commercial<br>• Large industrial |
| **Load Size** | Below 0.05 MW | Between 0.05 MW and 1 MW | Above 1 MW |
| **Total Consumption** | 58 TWh | 57 TWh | 26 TWh |
| **Share of Consumption** | 41.1% | 40.4% | 18.4% |

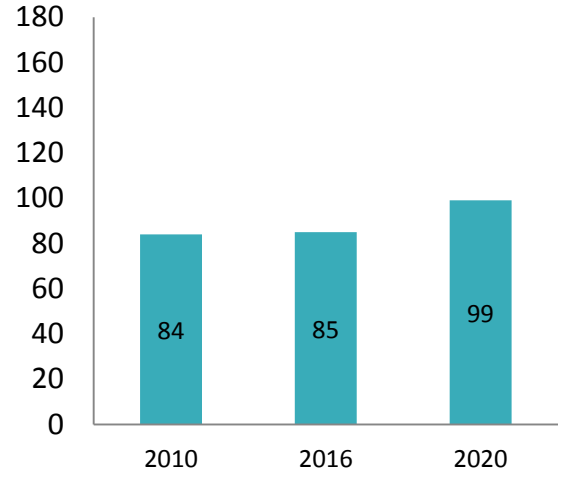
# Prices by Electricity Consumer Class

- Since 2010, average bills for residential consumers (i.e., using 750 kWh/month) have increased by over 50%. Rates are forecast to continue to increase, with residential consumers paying an estimated 6% by 2020.
- Industrial electricity rates have remained relatively flat over the same time period, due primarily to the Industrial Conservation Initiative (ICI). ICI represents a cost shift of about $5/month for residential electricity consumers. Industrial electricity consumers are forecast to see an increase of 16% by and 2020.

**Typical Residential Bill (750/kWh per month)**



**Typical Class A (Industrial) Price ($/MWh)**



**Note:** 2016 represents year-to-date September 2016 for industrial. Cap and trade proceeds recycling is included for the industrial consumer for 2020.

# 2015 Indicative Industrial Electricity Prices – Jurisdictional Comparison

| 2015 Indicative Industrial Electricity Prices (Canadian ¢/kWh) | | | | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|---|
| | Jurisdiction | Cost | | Jurisdiction | Cost | | Jurisdiction | Cost | | Jurisdiction | Cost |
| 1 | Manitoba | 4.67 | 17 | Arkansas | 7.49 | 33 | Newfoundland | 8.65 | 49 | Nova Scotia | 10.02 |
| 2 | Quebec | 5.17 | 18 | Tennessee | 7.53 | **34** | **U.S. Average** | **8.71** | 50 | North Dakota | 10.75 |
| 3 | Washington | 5.64 | 19 | Alabama | 7.58 | 35 | New York | 8.72 | 51 | Florida | 10.79 |
| 4 | Alberta | 5.87 | 20 | South Carolina | 7.68 | 36 | Indiana | 8.74 | 52 | Delaware | 10.96 |
| 5 | Ontario - North | 6.35 | 21 | Utah | 7.70 | 37 | Ohio | 8.75 | 53 | Maryland | 11.86 |
| 6 | Oklahoma | 6.64 | 22 | Oregon | 7.72 | 38 | Wyoming | 8.87 | 54 | Maine | 12.64 |
| 7 | Montana | 6.68 | 23 | West Virginia | 7.80 | 39 | Minnesota | 8.89 | 55 | Vermont | 13.14 |
| 8 | Kentucky | 6.80 | 24 | Saskatchewan | 7.81 | 40 | Prince Edward Island | 8.90 | 56 | California | 13.85 |
| 9 | British Columbia | 7.04 | 25 | Nevada | 7.83 | 41 | Colorado | 9.05 | 57 | New Jersey | 14.44 |
| 10 | Iowa | 7.06 | 26 | Arizona | 8.00 | 42 | Michigan | 9.13 | 58 | New Hampshire | 17.17 |
| 11 | Louisiana | 7.06 | 27 | Idaho | 8.05 | 43 | Virginia | 9.23 | 59 | Massachusetts | 17.56 |
| **12** | **Canadian Average** | **7.31** | 28 | North Carolina | 8.09 | 44 | South Dakota | 9.31 | 60 | Connecticut | 17.58 |
| 13 | Missouri | 7.32 | 29 | New Mexico | 8.09 | 45 | Kansas | 9.54 | 61 | Alaska | 18.85 |
| 14 | Georgia | 7.35 | 30 | Illinois | 8.24 | 46 | Nebraska | 9.56 | 62 | Rhode Island | 19.97 |
| 15 | Texas | 7.37 | 31 | Ontario - South | 8.35 | 47 | Pennsylvania | 9.59 | 63 | Hawaii | 31.10 |
| 16 | New Brunswick | 7.48 | 32 | Mississippi | 8.41 | 48 | Wisconsin | 9.87 | | | |

Note: Estimates may differ from actual costs to a consumer based on location, connection, and operational characteristics. Prices exclude taxes and, in other jurisdictions, participation in any applicable jurisdictional benefit programs.

The Ontario industrial price is based on the average all-in price for year-to-date May 2015, and includes the Hourly Ontario Energy Price (arithmetic average), Class A Global Adjustment, delivery, wholesale market service charges and the Debt Retirement Charge. The 2 cent per kilowatt hour difference between northern Ontario and southern Ontario reflects the Northern Industrial Electricity Rate Program rebate.

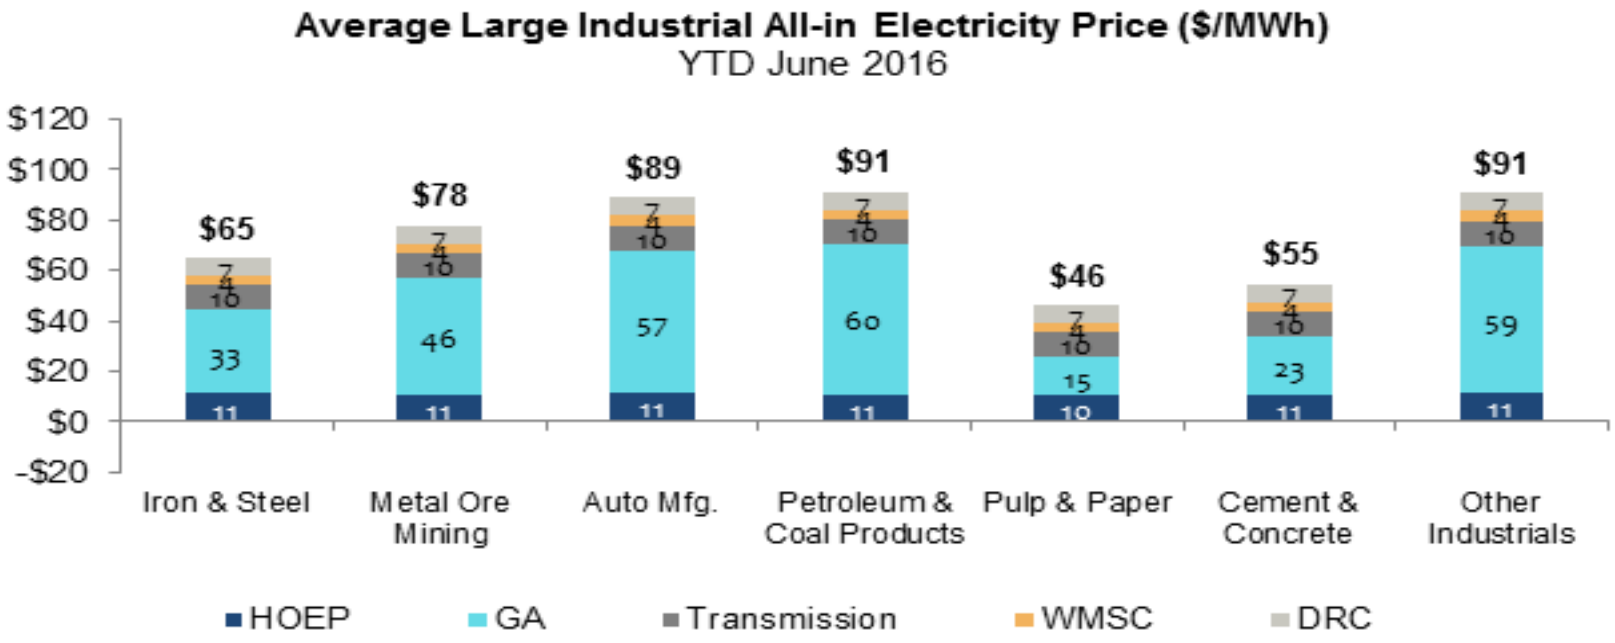
All other Canadian prices (except Ontario) are from the Hydro Quebec Rate Comparison for rates effective April 1, 2015 for select local distribution companies servicing specific cities. Where Hydro Quebec reports prices for two cities in a province (e.g., Calgary and Edmonton), an average of the two is used; in provinces where only one city is reported (e.g., Vancouver in BC, Montreal in QC), that one price is used to represent the province for indicative comparison purposes. In the Hydro Quebec Rate Comparison, a large consumer reflects 5 MW with monthly consumption of 3,060 MWh.

American jurisdictions reflect year-to-date May 2015 data from the US Energy Information Administration's survey of approximately 500 of the largest electric utilities. The price reflects the average revenue reported by the electric utility from electricity sold to the industrial sector. The value represents an estimated average retail price, but does not necessarily reflect the price charged to an individual consumer. Prices are converted at an exchange rate of 1 USD = 1.30 CAD, an approximation of the average for 2015 (1 USD = 1.2787 CAD).

# Indicative Electricity Prices Across Industrial Sectors

- The chart below shows estimated average all-in electricity prices by sector.

- Prices vary across sectors mainly due to differences in the level of Global Adjustment (GA) paid, which in turn reflects both the ability and willingness of companies to lower usage in the highest demand hours.



# Rate Mitigation Levers

- To provide further rate relief to Ontario electricity consumers, the government can use one or more of the levers outlined below:
  - **Tax-based Lever:**
    - Provide rebates funded from the tax-base or transfer items currently paid through the rate-base to the tax-base.
  - **Rate-based Lever:**
    - Shifts costs within the rate-base from one customer group to another to achieve electricity system benefits and/or policy goals.
  - **Cap and Trade Proceeds Lever:**
    - Use cap and trade proceeds on initiatives that help reduce greenhouse gas (GHG) emissions from the electricity sector (e.g., recycling proceeds during off-peak periods) while providing benefits to some or all electricity consumers.

# Traditional Rate Mitigation Programs

- Ontario has implemented a number of rate-based programs to help residential and industrial electricity consumers:
  - The Ontario Electricity Support Program (OESP) provides ongoing assistance directly on the bills of eligible low-income electricity consumers
  - The Rural or Remote Rate Protection (RRRP) program is provided to rural and remote residential and farm customers because the cost of distributing power to remote areas is much higher than for urban areas.
  - The Industrial Conservation Initiative (ICI) encourages Ontario's largest consumers to reduce consumption during peak periods while reducing system costs.
- There are also tax-base programs to help manage electricity prices:
  - Rebate the provincial portion of the HST from the electricity bills of residential, small business and farms as of January 1, 2017.
  - Northern Industrial Electricity Rate Program (NIERP), in which participants receive a rebate of two cents per kilowatt hour. On average, industrial electricity prices can be reduced by up to 20%.
- While rate-based programs provide relief to certain electricity consumers, they shift other costs to remaining ratepayers (See Appendix for additional details).

# Driving Down Prices for Consumers

- Since 2013, a number of actions have been taken to drive down prices for consumers wherever possible:
  - Renegotiating the Green Energy Investment Agreement, reducing contract costs by $3.7 billion;
  - Deferring the construction of two new nuclear reactors at Ontario Power Generation's Darlington facility, avoiding an estimated $15 billion in new construction costs;
  - Approving Ontario Power Generation's plans to enable the ongoing operation of Pickering up to 2024, which is expected to save ratepayers as much as $600 million;
  - Reducing Feed-In-Tariff (FIT) prices through annual price reviews, saving ratepayers at least $1.9 billion relative to the 2013 Long-Term Energy Plan (2013 LTEP) forecast; and
  - Suspending the second round of the Large Renewable Procurement (LRP II) process and the Energy-from-Waste Standard Offer Program to save up to $3.8 billion in electricity system costs relative to 2013 LTEP.

# Cost Shifts in the Electricity Sector – Current Programs

- Several programs in the electricity sector “shift costs” from one group of electricity consumers to another:
  - **Rural or Remote Rate Protect** (**RRRP)** is a longstanding program that reduces the delivery charge for rural electricity consumers and is paid for by all consumers in Ontario through a regulatory charge on bills.
  - **Ontario Electricity Support Program (OESP)** is funded via a regulatory charge on consumer bills and provides support for qualifying low income electricity consumers.
  - **Industrial Conservation Initiative (ICI)** empowers large consumers to lower their costs by reducing their demand during peak hours. In the process, ICI shifts costs from large electricity consumers to all other consumers in Ontario.
  - **Industrial Electricity Incentive** (**IEI**) program, offers reduced electricity prices for companies starting or expanding operations in Ontario. All electricity consumers in Ontario pay for the price reduction that IEI participants receive.

# Current Status on Taxpayer Funded Electricity Price Mitigation

- The Ministry of Finance table shows the annual amount of taxpayer funded electricity price mitigation from 2011-12 to 2017-18.
- From 2011-12 to 2015-16 there has been an annual fiscal impact of approximately $1.5 billion due to electricity price mitigation programs.
- In 2016-17, the fiscal impact due to electricity price mitigation programs is estimated at approximately $1.2 billion.
- In 2017-18, due primarily to the start of the Ontario Rebate for Electricity Consumers, the expected fiscal impact due to electricity price mitigation programs is approximately $2.0 billion and before considering any additional funding from the tax base.

| ($M) | 2011-12 | 2012-13 | 2013-14 | 2014-15 | 2015-16 | 2016-17[1] | 2017-18[1] |
|---|---|---|---|---|---|---|---|
| **OCEB** | 1,033 | 994 | 1,006 | 1,078 | 860 | - | - |
| **OREC** | - | - | - | - | - | 300 | 1,100* |
| **Ending DRC[2]** | - | - | - | - | 85 | 330 | 330 |
| **NIERP** | 120 | 120 | 115 | 108 | 120 | 120 | 120 |
| **NOEC** | 23 | 24 | 25 | 24 | 26 | 25 | 25 |
| **OEPTC[3]** | 354 | 406 | 418 | 429 | 444 | 450 | 460 |
| **TOTAL** | **1,530** | **1,544** | **1,564** | **1,639** | **1,525** | **1,195** | **2,005** |

1. 2016-17, 2017-18 based on forecasted numbers
2. 2015-16 estimated for 3 months of reduced DRC revenue
3. OEPTC amounts in all years based on energy component of the rebate.

OREC – Ontario Rebate for Electricity Consumers
DRC – Debt Retirement Charge
NIERP – Northern Ontario Electricity Rate Program
NOEC – Northern Ontario Energy Credit
OEPTC – Ontario Energy and Property Tax Credit

# Cost Shifts in the Electricity Sector (Cont'd)

- The tables on the right show the estimated cost shifts that result from existing government programs.
- ICI has had the largest cost shift of all the programs, due to the large size of Global Adjustment (GA) and the way that it is recovered from consumer classes.
- RRRP and OESP impact the regulatory line on consumer bills, while ICI, IEI and conservation affect GA (i.e., Electricity line on bills of Regulated Price Plan consumers).

**Cost Shift Impacts - Residential Bill**

*Typical 750 kWh/month Toronto Hydro consumer*

| *$/month* | 2011 | 2012 | 2013 | 2014 | 2015 | 2016 |
|---|---|---|---|---|---|---|
| ICI | 2.65 | 3.25 | 3.88 | 3.53 | 4.75 | 4.77 |
| RRRP | 0.90 | 0.82 | 0.84 | 0.92 | 0.93 | 0.94 |
| OESP | - | - | - | - | - | 0.84 |
| Conservation | 1.85 | 1.92 | 2.00 | 1.58 | 2.43 | 2.45 |
| IEI | - | - | 0.08 | 0.09 | 0.11 | 0.12 |
| **Total** | **5.41** | **5.99** | **6.81** | **6.13** | **8.21** | **9.12** |

**Cost Shift Impacts - Industrial Bill**

*Typical Class A consumer*

| *$/MWh* | 2011 | 2012 | 2013 | 2014 | 2015 | 2016 |
|---|---|---|---|---|---|---|
| ICI | -22.17 | -26.36 | -30.29 | -25.91 | -33.79 | -33.92 |
| RRRP | 1.20 | 1.10 | 1.12 | 1.23 | 1.24 | 1.25 |
| OESP | - | - | - | - | - | 1.13 |
| Conservation | 1.53 | 1.59 | 1.66 | 1.31 | 2.01 | 2.02 |
| IEI | - | - | 0.07 | 0.08 | 0.09 | 0.10 |
| **Total** | **-19.43** | **-23.67** | **-27.44** | **-23.29** | **-30.45** | **-29.43** |

**Note:** OESP did not come into effect until 2016. The 2016 values represent forecasts and are subject to change.

# Cost Shifts in the Electricity Sector (Cont'd)

- The table on the right shows the total cost for various government electricity programs. These programs are currently funded through the electricity system ratebase.

- Funding of these programs through the fiscal plan would remove these costs from the electricity system (i.e., Placing these costs on the taxbase).

**Cost of Programs**

*By government program*

| *$M* | 2011 | 2012 | 2013 | 2014 | 2015 | 2016 |
|---|---|---|---|---|---|---|
| ICI | 506 | 615 | 736 | 670 | 890 | 893 |
| RRRP | 172 | 156 | 159 | 176 | 174 | 176 |
| OESP | - | - | - | - | - | 158 |
| Conservation | 329 | 339 | 354 | 280 | 425 | 428 |
| IEI | - | - | 15 | 16 | 18 | 19 |

- For example, removing the roughly $900 million of program cost from the Industrial Conservation Initiative (ICI) program would save the typical residential electricity consumer $4.77 per month in 2016.

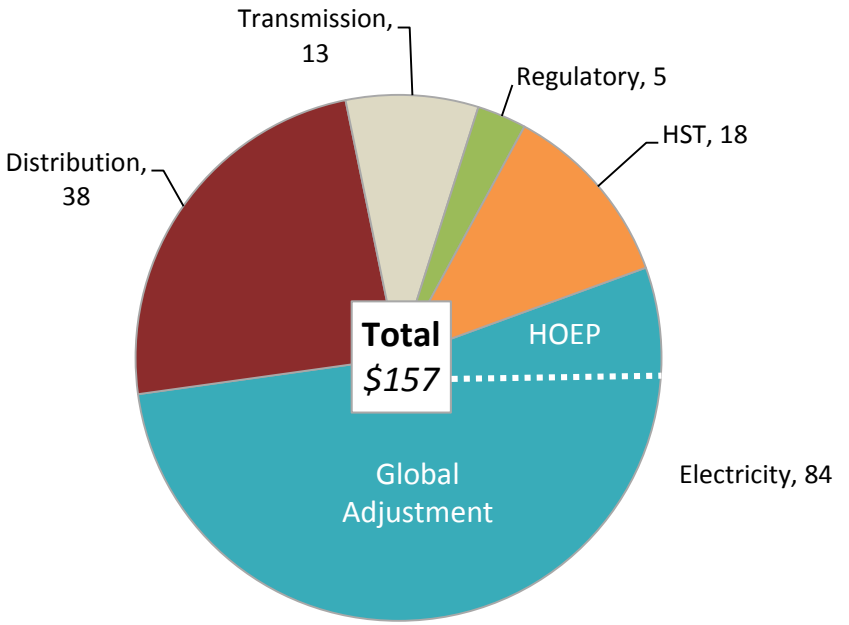
**Note:** OESP did not come into effect until 2016. The 2016 values represent forecasts and are subject to change.

# Residential Electricity Prices

- There are approximately 4.5 million residential consumers in Ontario.
- The Regulated Price Plan includes nearly all residential consumers, as well as small businesses. Regulated Price Plan consumers pay a blended commodity rate regulated by the OEB, which is set every six months.
- For households, the Debt Retirement Charge (DRC) was removed from residential electricity bills as of January 1, 2016.
- In addition, the Ontario Electricity Support Program (OESP) provides an ongoing rate reduction directly on the bills of low-income electricity consumers who have applied and meet the eligibility requirements. The program is funded through the rate base.
- Rural customers, in particular those with electrical heating, pay higher monthly bills.

**Typical Residential Monthly Bills ($)**

*As of November 1, 2016 (750 kWh/month)*



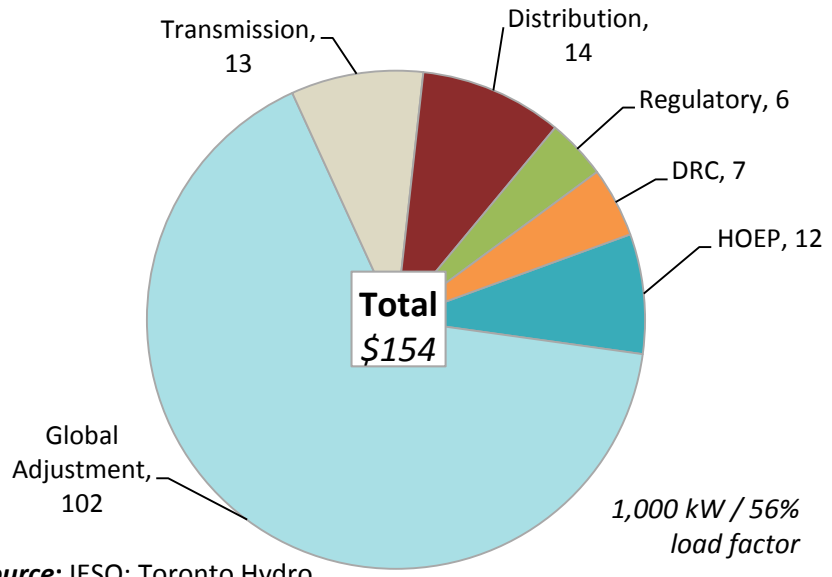
***Source*:** OEB, Toronto Hydro

# Commercial Electricity Prices

- There are approximately 55,000 commercial and institutional consumers in the province. These consumers are Class B consumers, and have separate line items on the electricity bill for HOEP and GA.
- There is a high degree of differentiation amongst consumers within the commercial sector in terms of size and consumption patterns. For example, an elementary school has a much different hourly load profile compared to a full service restaurant. This is an important consideration when looking at the bill impacts of policy options.

**Typical Commercial Price ($/MWh)**

*YTD June 2016 (Non-RPP Class B)*



***Source*:** IESO; Toronto Hydro

- Consumers in the commercial sector do not pay time-of-use prices and have little incentive to shift demand away from high demand hours.
- Targeted pricing programs are currently not available for Class B consumers.

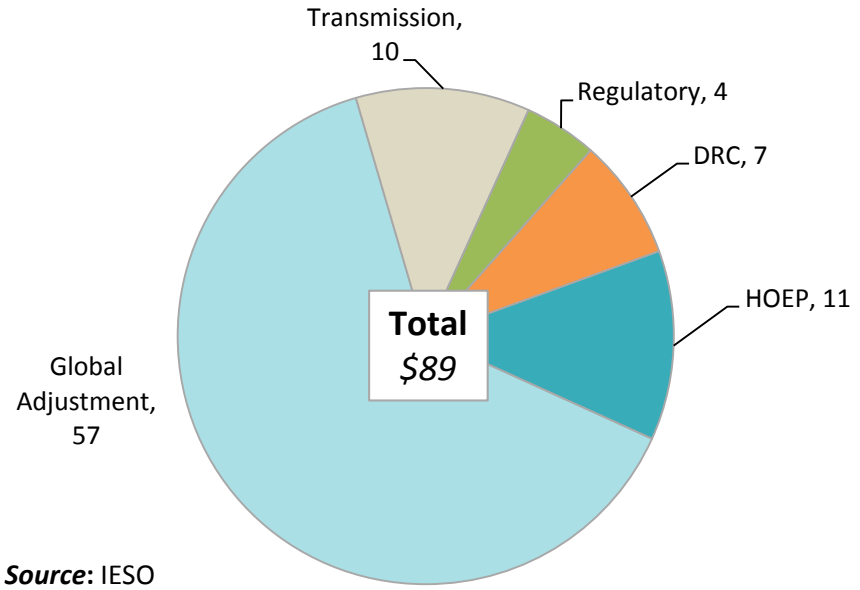
*** Note**: Most commercial consumers receive input tax credits for their HST.

# Industrial Electricity Prices

- There are about 300 large industrial consumers in Ontario.
- Measures in place to mitigate industrial electricity prices include ICI and NIERP.
- ICI lowers costs for eligible large electricity consumers (i.e., those with monthly peak demand exceeding 3 MW) that reduce consumption during peak periods.
  - ICI consumers reduce their electricity rates by 25% on average.

**Typical Large Industrial Price ($/MWh)**

*YTD June 2016*



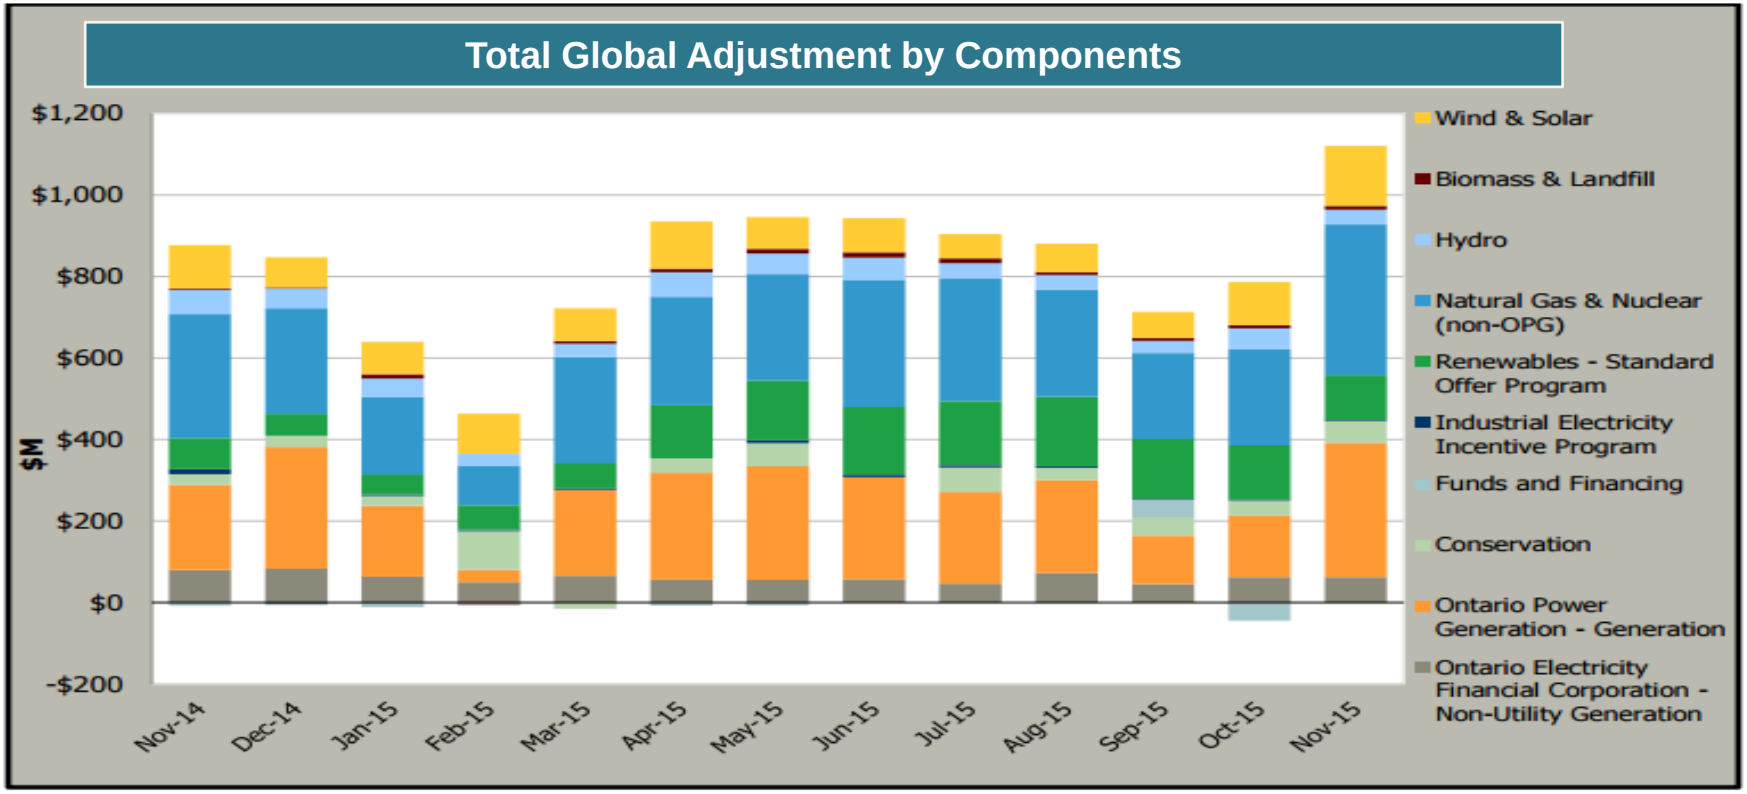
***Source*: IESO**

- Participants in NIERP receive a rebate of $20/MWh. On average, industrial electricity prices are reduced by about 20% through the program, reducing all-in prices to $69/MWh for these consumers. The program is funded through the tax base.

*** Note:** Industrial consumers receive input tax credits for their HST.

# Total Components of Global Adjustment

- Global Adjustment (GA) is a market mechanism that recovers costs from electricity consumers, including the cost of almost all conservation programs in the province (i.e., approximately half a billion dollars in 2016).



**Source:** IESO Monthly Market Report (November 2015)

# Cancel/Adjust Renewable Energy Procurements

# LRP I Pre-Construction Liability Limits

- All 16 successful LRP I developers accepted Optional Termination Provisions when the LRP I Contracts were executed in April 2016.
- If IESO chooses to enact the Optional Termination provision before a project has met all Key Development Milestones, IESO is required to pay pre-construction development costs up to the Pre Construction Liability Limit.
- Pre-construction development costs include costs incurred for feasibility studies, obtaining site access rights, work towards environmental approvals, business development plans, negotiation of contracts for design, equipment, construction and financing, reasonable overhead expenses, and other reasonable costs incurred.
- The Pre Construction Liability Limits are:
  - Non-Rooftop Solar: $250,000 plus $10.00/kW of Contract Capacity
  - Waterpower: $500,000 plus $20.00/kW of Contract Capacity
  - On-Shore Wind: $400,000 plus $2.00/kW of Contract Capacity
- According to the LRP I Optional Termination provision, the developer has a duty to take reasonable steps to mitigate losses, liabilities, costs and damages incurred as a result of the Optional Termination.
  - The IESO will not provide compensation for amounts which are attributable to a developer's failure to take reasonable steps to mitigate.

---

Hi Salman,

Let's consolidate SPFB's too.

Thanks,

John.

**Subject:** Price Mitigation Deck

Hi John,

I have included comments in the attached version of the price mitigation deck on slides 3, 4, 5, 8, 13, 14, 15, 20.

I will be out this afternoon, so could you combine with comments on the deck you will submit to Ron.

Emily

MINISTRY OF
ENERGY

# Proposed Initiatives to Transform Ontario's Electricity Sector

## Working Draft

December 5, 2016

CONFIDENTIAL DRAFT

# Context

- Electricity costs are increasing as the necessary investments are made to decarbonize and modernize the province's electricity infrastructure.
  - Since 2003, the Province has invested more than $35 billion in over 16,000 megawatts (MW) of new and refurbished cleaner generation, including nuclear, natural gas and renewables.
  - Over the same period, Hydro One has invested $15.5 billion to enhance and renew its transmission and distribution systems.
  - As additional electricity generation comes online, nuclear units are refurbished and distribution and transmission investments are made, prices are forecast to continue to increase.

- Actions have been taken to drive down electricity costs, including deferring investments in generation (e.g., new build nuclear), improving market efficiency (e.g., introduction of wind dispatch) and decreasing the cost of renewable procurements (e.g., GEIA renegotiation, decreasing FIT prices).

- Additional steps have been taken to increase cost effectiveness and improve efficiency by adopting new electricity market approaches, such as:
  - Enhancing competition between developers of large renewable projects through the Large Renewable Procurement (LRP) process to drive down price and secure clean, reliable generation for the province;
  - Directing IESO to end the process of negotiating new NUG contracts pending the development of a Capacity Auction (i.e., Market Renewal); and
  - Launching the first IESO Demand Response Auction (i.e., a competitive process through which demand-side resources are selected to be available to reduce their electricity consumption as needed).

# Context (Cont'd)

- Following the 2016 Throne Speech, a number of actions were announced to further reduce electricity costs, such as:
  - Providing an 8 per cent rebate, equivalent to the provincial portion of HST, for approximately 5 million eligible electricity consumers including residences, small businesses and farms;
  - Increasing the amount of rate protection available to approximately 330,000 eligible rural customers living in low-density areas by updating the Rural or Remote Rate Protection (RRRP) program;
  - Lowering the Industrial Conservation Initiative (ICI) threshold to 1 MW and removing sector restrictions so that more consumers can benefit;
  - Suspending the second round of the Large Renewable Procurement (LRP II); and
  - Recycling a portion of cap and trade auction proceeds to keep rates affordable for industrial and commercial electricity consumers.

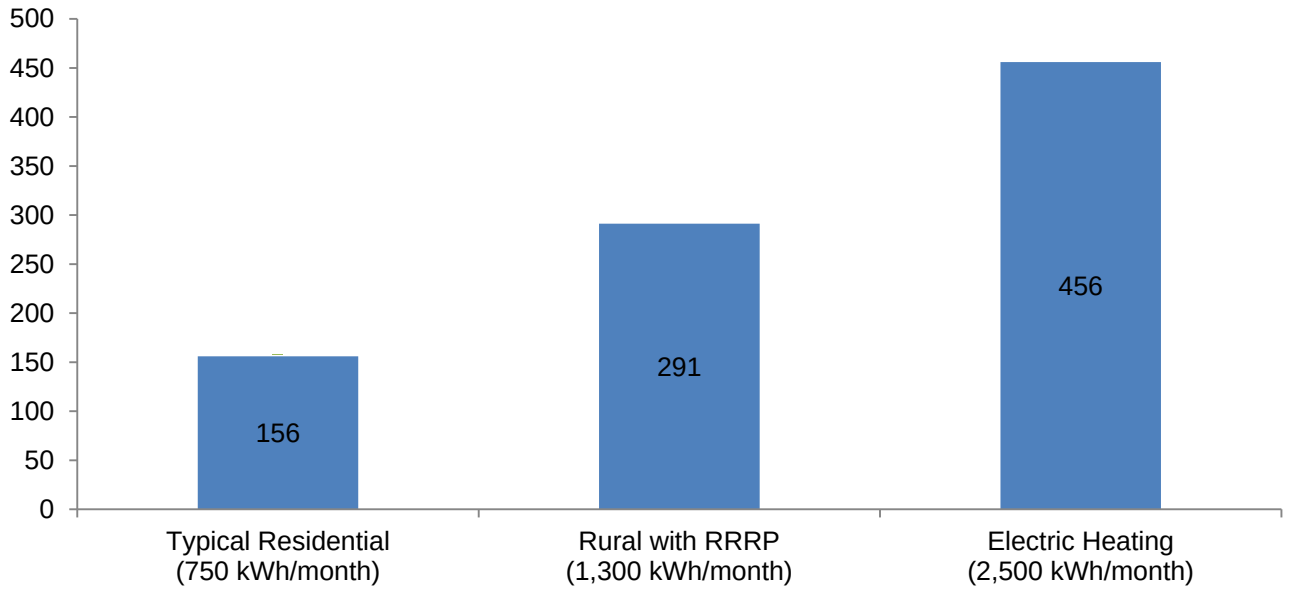
- On November 28, 2016, the Minister of Energy announced the need for changes in how electricity resources are procured and the need for wholesale market renewal.

- The Ministry of Energy is currently updating its Long-Term Energy Plan (LTEP), which provides an opportunity to consider a range of policy changes to how the Ontario energy sector operates.

# Current Electricity Prices – Residential

- Residential consumers electricity prices continue to be a concern for many Ontarians, particularly those that rely on electric heat.
  - **Note:** The typical residential bills are currently below the 2013 Long-Term Energy Plan (2013 LTEP) forecasts ($159 / 750kWh)

**Residential Electricity Bills**
*in $/month*

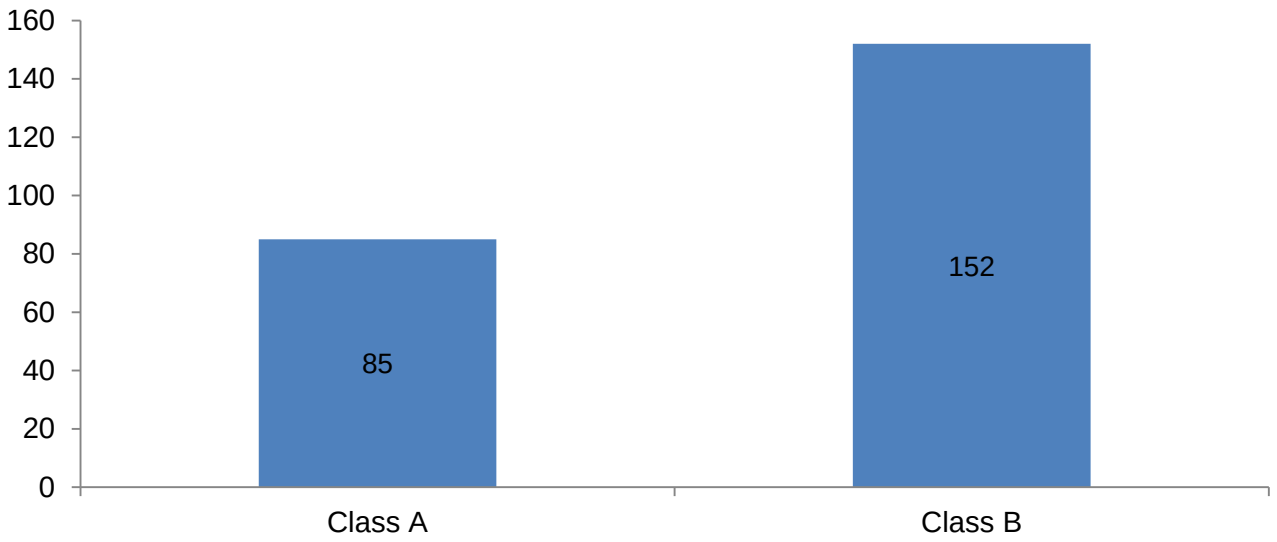


**Note**: Typical residential and electric heating shown above are based on Toronto Hydro; rural is based on connection to Hydro One as a R2 customer eligible to receive the Rural or Remote Rate Protection (RRRP) credit of $31.50.

# Current Electricity Prices – Industrial and Commercial

- While large industrial electricity consumers (i.e., Class A) rates are competitive with other jurisdictions, rates for commercial/small industrial consumers (i.e., Class B) are higher by comparison.
  - **Note:** Current industrial and commercial prices are below 2013 LTEP forecasts ($96 / MWh)

**Current All-In electricity Price**
*in $/MWh*



**Note**: Based on year-to-date (YTD) September 2016 prices. Class A reflects a transmission-connected consumer. Class B reflects a 1 MW load operating at 56% load factor and connected to Toronto Hydro.

# Proposed Initiatives – Overview

- The suite of proposed initiatives are intended to:
  - Transform how the electricity market operates in Ontario;
  - Re-set how government programs are funded (i.e., rate-base vs tax-base);
  - Provide system benefits (e.g., industrial load retention);
  - Lower the cost of electricity for residential and industrial consumers; and
  - Increase cost effectiveness and improve efficiency.

- The proposed initiatives include:
  1. Implement Market Renewal Initiatives
  2. Fund Electricity Support Programs Through The Tax-base
  3. Eliminate the Industrial Conservation Initiative (ICI)
  4. Amortize Conservation Program Costs
  5. LDC Efficiencies
  6. Rate Design Initiatives
  7. Reduced Cost of OPG Borrowing
  8. End Debt Retirement Charge (DRC) Early for Commercial/Small Industrial Class B Electricity Consumers
  9. Dedicate Departure Tax
  10. Cancel/Adjust Renewable Energy Procurements

- The proposed initiatives provide opportunities to reduce electricity costs for residential and industrial consumers while at the same time transforming the province's electricity market and yielding benefits for the electricity system.

# Proposed Initiatives – Impacts

- Each of the proposed initiatives under consideration target different government programs and different parts of the electricity bill. The proposals impact different classes of electricity consumers to varying degrees.

| Proposal | Program / Initiative | Line on Bills | Who Benefits |
|---|---|---|---|
| 1. Implement Market Renewal Initiatives | Market Renewal | Electricity, Global Adjustment, Regulatory | Market Renewal: All electricity consumers |
| 2. Fund Electricity Support Programs Through The Tax-base | OESP, RRRP | Regulatory | All electricity consumers evenly |
| 3. Eliminate the Industrial Conservation Initiative (ICI) | ICI | Electricity, Global Adjustment | Only Class B electricity consumers (i.e., residential) **Note:** Will have a negative impact on Industrial consumers. |
| 4. Amortize Conservation Program Costs | Amortization | Electricity, Global Adjustment | Class B electricity consumers and to a lesser extent Class A consumers |
| 5. LDC Efficiencies | Distribution efficiencies | Delivery | All embedded consumers |
| 6. Rate Design Initiatives | Rate structures | Electricity, Global Adjustment | Rate Design Initiatives: Participating electricity consumers |
| 7. Reduced Cost of OPG Borrowing | n/a | Electricity, Global Adjustment | Class B electricity consumers and to a lesser extent Class A consumers |
| 8. End DRC Early for Commercial/Small Industrial Class B Electricity Consumers | Debt Retirement Charge (DRC) | DRC | Class B consumers (i.e., small business and commercial consumers, etc) |
| 9. Dedicate Departure Tax | Departure Tax | TBD | TBD |
| 10. Cancel/Adjust Renewable Energy Procurements | FIT, LRP | Electricity, Global Adjustment | Class B electricity consumers and to a lesser extent Class A consumers |

# Proposed Initiatives – Potential Savings for Typical Residential Electricity Consumers

| *$/750kWh* | 2017 | 2018 | 2019 | 2020 | 2021 | 2022 | Timing of Benefit |
|---|---|---|---|---|---|---|---|
| 1. Implement Market Renewal Initiatives | - | - | - | 1.58 | 1.59 | 1.60 | Longer-Term |
| 2. Fund Electricity Support Programs through the Tax-base | 2.18 | 2.30 | 2.31 | 2.45 | 2.48 | 2.51 | Immediate |
| 3. Eliminate the Industrial Conservation Initiative (ICI) | 4.40 | 4.24 | 4.10 | 4.24 | 3.73 | 3.58 | Immediate |
| 4. Amortize Conservation Program Costs | 1.67 | 1.56 | 1.21 | 0.81 | 0.54 | 0.3 | Immediate |
| 5. LDC Efficiencies | TBD | TBD | TBD | TBD | TBD | TBD | Near-Term |
| 6. Rate Design Initiatives* | - | - | - | - | - | - | Immediate |
| 7. Reduced Cost of OPG Borrowing | 0.13 | 0.13 | 0.13 | 0.18 | 0.18 | 0.18 | Immediate |
| 8. End DRC Early for Class B Electricity Consumers** | - | - | - | - | - | - | n/a |
| 9. Dedicate Departure Tax | TBD | TBD | TBD | TBD | TBD | TBD | Immediate |
| 10. Cancel / Adjust Renewable Energy Procurements | - | - | TBD | TBD | TBD | TBD | Longer-Term |
| **Total** | | | | | | | |

**Note:** The above initiatives will provide similar benefits for non-RPP Class B electricity consumers. Proposal 2 assumes OESP participation of 50% and 5-year maturity. *Savings estimates do not include changes related to rate design. ** Class B includes small-medium enterprises (SMEs).

# Proposed Initiatives – Potential Savings for Average Industrial Electricity Consumers

| *$/MWh* | 2017 | 2018 | 2019 | 2020 | 2021 | 2022 | Timing of Benefit |
|---|---|---|---|---|---|---|---|
| 1. Implement Market Renewal Initiatives | - | - | - | 2.11 | 2.12 | 2.13 | Longer-Term |
| 2. Fund Electricity Support Programs through the Tax-base | 2.91 | 3.06 | 3.17 | 3.27 | 3.33 | 3.38 | Immediate |
| 3. Eliminate the Industrial Conservation Initiative (ICI) | (24.12) | (23.21) | (22.45) | (23.23) | (20.42) | (19.61) | Immediate |
| 4. Amortize Conservation Program Costs | 1.15 | 1.08 | 0.84 | 0.56 | 0.37 | 0.25 | Immediate |
| 5. LDC Efficiencies | n/a | n/a | n/a | n/a | n/a | n/a | Near-Term |
| 6. Rate Design Initiatives* | - | - | - | - | - | - | Immediate |
| 7. Reduced Cost of OPG Borrowing | 0.10 | 0.10 | 0.10 | 0.15 | 0.15 | 0.15 | Immediate |
| 8. End DRC Early for Class B Electricity Consumers** | - | - | - | - | - | - | n/a |
| 9. Dedicate Departure Tax | TBD | TBD | TBD | TBD | TBD | TBD | Immediate |
| 10. Cancel / Adjust Renewable Energy Procurements | - | - | TBD | TBD | TBD | TBD | Longer-Term |
| **Total** | | | | | | | |

**Note:** Proposal 2 assumes OESP participation of 50% and 5-year maturity. Proposal 3 reflects the elimination of ICI, as opposed to moving ICI cost shift to the taxbase. The $1.75/MWh savings associated with Proposal 7 in 2018 accounts for the fact that under the status quo, DRC will be removed from bills in April 2018. *Savings estimates do not include changes related to rate design. ** Class B includes small-medium enterprises (SMEs).

# Fiscal Considerations

- Funding electricity support programs (i.e., OESP, RRRP, First Nations Delivery Rate) from the tax-base represents approximately $440 million on average annually.

- Ending the Debt Retirement Charge (DRC) for commercial and small industrial electricity consumers (i.e., Class B) early would represent an additional fiscal pressure of $xx [placeholder for OFA] on the province.

- If the Industrial Conservation Initiative were funded though the tax-base instead of being eliminated, this would represent a $900 million annual cost to the fiscal plan.

- Reducing OPG borrowing costs to the Province's cost of funds is expected to result in a $20 to $35 million annual fiscal pressure to the province [TBC by OPG / OFA].

- Fiscal impacts of allocating a portion of the departure tax to ratepayers will depend on the size of the allocation, as well as timing for the flow of value. The maximum, direct one-time impact is $2.6 billion, with potential ancillary impacts on residual stranded debt defeasance.

# 1. Electricity Market Renewal Initiatives

- Continue to move forward with IESO's Market Renewal initiatives:
  - Market Renewal encompasses projects such as a single-schedule system (from the current two-schedule system), more frequent intertie scheduling to better align with other jurisdictions and a day-ahead market. There will be up front capital costs to enable the initiative. IESO is currently assessing these costs.
  - Moving to "technology-agnostic" procurements will provide new opportunities for innovation and modernization and ensure ratepayers receive the best prices possible.

**Considerations**

- Changes related to IESO's Market Renewal initiatives, reflected in HOEP and uplifts, are estimated to save up to $300 million per year, starting in 2020, leading to a reduction of:
  - About $1.60/month or about 1% at current retail prices for a typical residential bill; and
  - About $2/MWh or more than 2% at current all-in prices for industrial and SME electricity consumers.
- The IESO's Market Renewal is a broad initiative that will impact all aspects of Ontario's electricity market. Ontario has had a uniform price since market opening.
- Adopting a technology-agnostic stance will lower the overall cost of providing electricity service by selecting the most cost-effective resources to fulfill various system needs.

# 2. Fund Electricity Support Programs Through the Tax-Base

- Propose to fund electricity support programs, including Ontario Electricity Support Program (OESB) and Rural or Remote Electricity Rate Protection (RRRP), through the tax-base instead of a regulated charge. This would allow the OESP and the RRRP charges to be removed from the Regulatory line on electricity bills.

**Considerations**

*Consumer Impacts and implementation*

- Transitioning OESP and RRRP to the tax-base would reduce a typical residential bill by about $2.35/month by 2020, and delivering the First Nation rate reduction through tax base would avoid about $0.10/month for a potential total savings of $2.45/month by 2020). As all programs provide strong social benefits, there is precedent for funding these programs through the tax-base.
- To address concerns from low income electricity consumers improvements to OESP could be implemented by increasing credits (could be up to double the current credits)
  - Single low income consumer would see a change from $30 to $45/ month ($540/year):
  - Family of four with electric heat could see a credit of $82.50/month ($990/year); and
  - Would mean no impact on consumer bills and no change to current OESP charge.
- RRRP and OESP are included in the “Regulatory” line on bills. If RRRP and OESP were eliminated from bills, the Regulatory line would decrease; however, as the Regulatory line is the smallest line item component of invoices, there is risk the decrease may not be perceived by customers.
- The RRRP regulation provides a funding mechanism for transmission infrastructure required to grid connect remote First Nation communities. Considerations for how that funding will be supported by the tax base will need to be determined.
- The non-rate mechanism to remove delivery charges from on-reserve First Nation customer monthly bills needs to be further explored.Funding RRRP and/or OESP with tax revenue would require amendments to existing legislation and regulations.

# 2. Fund Electricity Support Programs Through the Tax-Base (cont'd)

- Table below shows estimates of program costs up to 2020:

| Year | OESP | RRRP | First Nations Delivery Rate | TOTAL |
|---|---|---|---|---|
| 2017 | $106M | $292M | $18M | **$416M** |
| 2018 | $119M | $300M | $18M | **$437M** |
| 2019 | $127M | $306M | $18M | **$451M** |
| 2020 | $132M | $315M | $18M | **$465M** |

1) Ontario Electricity Support Program (OESP)
   - After almost a year in market, close to 30% of potentially eligible customers are signed up.
   - The cost projections below assume the program grows to 50% of eligible consumers by 2020 (also assumes 10% administration costs).

2) Rural and Remote Rate Protection (RRRP)
   - Provides benefits to R2 Hydro One consumers, Algoma, and remote communities.
   - Includes the expanded coverage that will begin on January 1, 2017.

3) First Nation rate reduction (currently under development)
   - On November 14, 2016, OEB presented options to the Ministry on reducing costs for on-reserve First Nation customers.
   - OEB's recommended option to provide 100% delivery rate credit, which is estimated at $18.4 million per year.
     - Other options includes a seasonal fixed credit to account for demand changes over the year ($13 million) or a 50% total bill reduction ($23 million).

# 3. Eliminate the Industrial Conservation Initiative (ICI)

- The cost shift from the Industrial Conservation Initiative (ICI) could be removed from electricity bills by eliminating ICI.
  - The ICI allows large electricity consumers to lower their electricity costs by reducing their demand during peak hours.

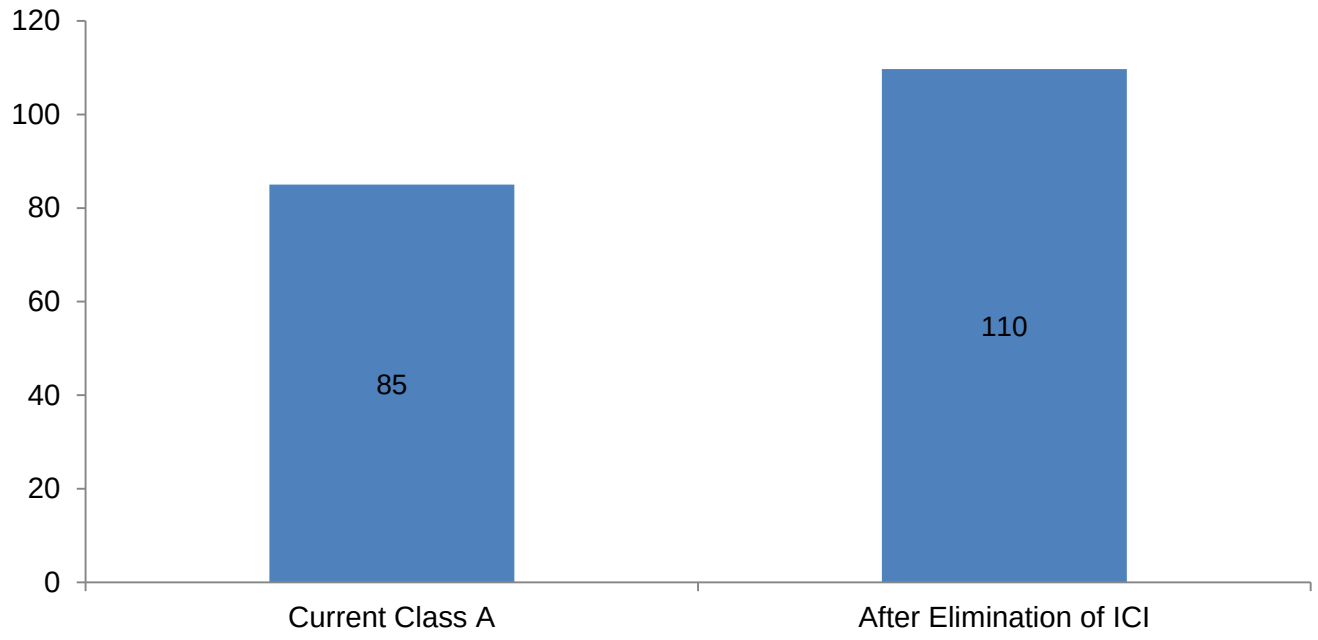
**Considerations**

- Eliminating ICI would result in a benefit of more than $4/month for residential electricity consumers in 2017.
  - However, unless government took action to mitigate the associated cost shift back to industrial consumers, typical industrial prices would increase by about one-third. Such a price increase would pose significant challenges for energy-intensive consumers.
- Industrial stakeholders have indicated that ICI as an integral factor in maintaining competitiveness and retaining industry in the province.
  - Eliminating ICI would limit the “cost shift” onto residential consumers, but it would also lead to a reduction in industrial demand. The large industrial contribution to the fixed costs of running the electricity system would then need to be covered by remaining consumers.
- If ICI is retained, current IESO projections indicate that the cost shift will decrease each year going forward as Global Adjustment (GA) decreases (due to an expected increase in HOEP).
- Alternatively, ICI could be funded through the tax-base at a cost of $900 million annually. There is precedent to use the tax-base for industrial support programs, including the Northern Industrial Electricity Rate Program (NIERP) and the Jobs and Prosperity Fund.

# 3. Eliminate the Industrial Conservation Initiative (cont'd)

- ICI currently provides a benefit of about $25/MWh to Class A electricity consumers.

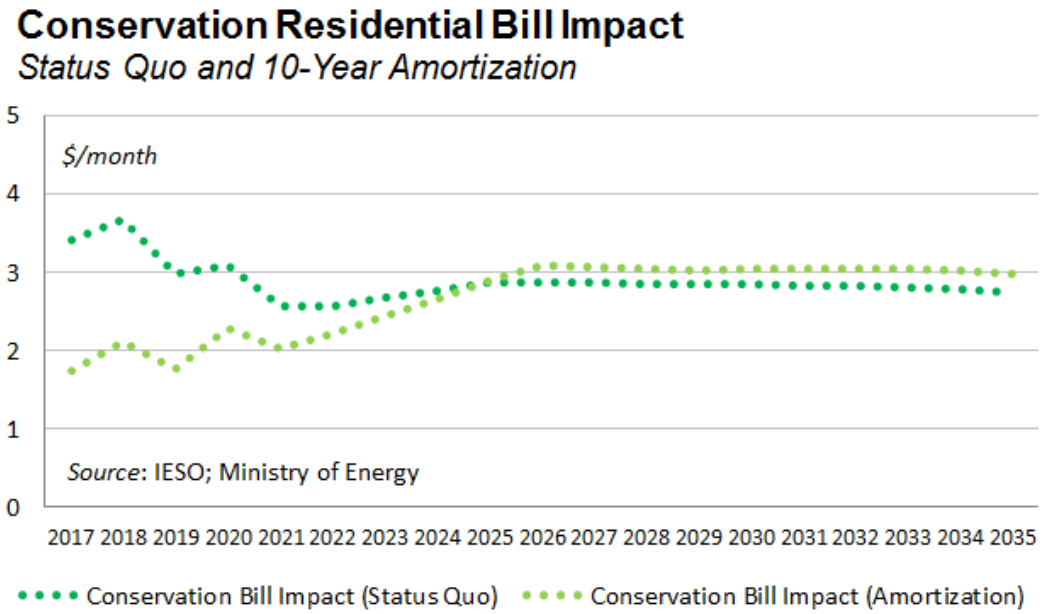
**All-In Electricity Price**
*in $/MWh*



**Note**: Based on year-to-date (YTD) September 2016 prices. Class A reflects a transmission-connected consumer.

# 4. Amortize Conservation Program Costs

- ~$3 billion from the electricity ratepayer base will be spent on conservation programs delivered under the Conservation First Framework and the Industrial Accelerator Program (IAP) between 2015 and 2020.
- Currently, Conservation and Demand Management (CDM) program costs are recovered from the Global Adjustment (GA) mechanism about one month after expenses are incurred.
- As a potential rate mitigation measure, certain CDM costs could be amortized.
- Amortizing a portion of conservation spending would produce a benefit for electricity ratepayers in excess of $1/month at the outset. Over time, the benefit would decrease and turn into a cost, as interest charges begin to grow.



**Note**: Chart assumes that conservation incentive costs are available for amortization while administration cost are not. Although there is variable from year to year, incentives represent about two-thirds of conservation spending in Ontario. Chart assumes conservation spending continues at a similar rate beyond 2020. Chart assumes a 10-year borrowing rate of 3.0%.

# 4. Amortize Conservation Program Costs (cont'd)

## Considerations

- Under **Public Sector Accounting Board (PSAB) accounting standards**, used by both the Province and IESO, only certain assets can be amortized: 1) pensions and 2) tangible capital assets. Under PSAB an asset must meet several criteria to be considered a capital asset, including:
  - A tangible capital asset must be tangible and substantive and the Ontario government must have title and operate the asset.
  - A tangible capital asset must bring a tangible benefit to the government or to Ontario.

- CDM costs, on their own, do not meet the criteria of a tangible capital asset because customers would have ownership and control of installed CDM measures, not the Province or IESO.

- **Rate-regulated accounting** was developed to recognize the unique nature of regulated entities (e.g., electricity generators, LDCs). Under rate-regulated accounting certain costs can be treated as amortizable assets that would not normally be considered assets under accounting principles.
  - Over the past several years, the Auditor General (AG) has expressed concerns about the appropriateness of recognizing rate-regulated assets in the Province's consolidated financial statements.
  - Rate-regulated accounting is currently under review by international accounting standard setting bodies and is currently permitted only on an interim basis, so its future is unclear at present.

# 4. Amortize Conservation Program Costs (cont'd)

**Considerations**

- If some of Ontario's CDM costs could be amortized, analysis shows that ratepayer impacts would be reduced in the short-term but interest charges on the loan would result in increased overall ratepayer costs in the longer-term.

- Legislative amendments would be needed to allow recovery of loan interest charges from GA.

- If there is a desire to proceed:
  - Formal accounting advice will need to be sought from IESO's external auditor as well as the Ontario Provincial Controller (OPC) to determine whether CDM costs could be amortized according to rate-regulated accounting standards.
  - Further legal analysis would also be required to confirm legal viability and possible approaches to implementation.

# 5. LDC Efficiencies

- Consider opportunities for future LDC cost reductions and efficiencies through the regulatory framework.

**Considerations**

- The Ontario Energy Board has a mandate to regulate the electricity distribution sector in the public interest, ensuring the financial viability of the sector while promoting reliable service to customers at just and reasonable rates.
- Since 2012, the OEB has taken action – through the Renewed Regulatory Framework for Energy – to more closely link rate regulation with performance measures and outcomes.
- There maybe opportunities to promote further cost reductions and performance improvements within the distribution sector as there is continued evolution of the regulatory framework in Ontario.
  - Tightening LDC requirements may also indirectly incent other desired policy outcomes, such as LDC consolidation and grid modernization to realize further cost reductions.
- ENERGY could help promote or accelerate these efforts by asking the OEB through the LTEP Implementation Directive, s. 35 of the *Ontario Energy Board Act, 1998*, and the 2017 Mandate Letter and other agency business planning processes.
- In addition, further changes to the departure and transfer tax regimes could be considered to provide a further incentive for LDC mergers and acquisitions.

# 6. Rate Design Initiatives

- OEB continues to move forward with its Regulated Price Plan (RPP) Roadmap:
  - The OEB is undertaking a comprehensive review of the RPP, including exploring the introduction of offering different pricing plan options for customers following the completion of pilot programs in 2018. The plan is expected to be implemented over a 3-5 year period.

- Until new pricing plans are available, the OEB could provide an "opt-in flat rate RPP" structure that could be made available to residential, farm and small business consumers on an interim basis (2-3 years) until a wider range of price plans are available.
- Time-of-Use (TOU) pricing could also be introduced for non-RPP Class B consumers to reduce Global Adjustment (GA) volatility and reduce system costs.

| Current TOU | New Flat Rate |
|---|---|
| On: 18.0 ¢/kWh | 11.1 ¢/kWh |
| Mid: 13.2 ¢/kWh | |
| Off: 8.7 ¢/kWh | |

**Considerations**

- The OEB has indicated that the option would lead to no overall change in system costs. Consumers with higher peak and mid-peak usage patterns would see a decrease in their electricity bills, while those with higher off-peak usage patterns would see an increase.
  - While the current strong supply conditions may allow for such an RPP structure (i.e., peak demand requirements can be easily met), administrative costs could be high (distributors would need to design/implement an opt-in process and associated billing system on an interim basis).

| | Current TOU | New Flat Rate |
|---|---|---|
| 1) Monthly electricity bill- higher peak and mid-peak usage patterns | $172 | $163 |
| 2) Monthly electricity bill- higher off-peak usage patterns | $152 | $163 |

***Note:** 1) assumes a consumer consumption pattern of 45%:30%:25% (Off-peak: Mid-peak: On-peak), while 2) assumes consumer consumption pattern of 80%:10%:10% (Off-peak: Mid-peak: On-peak). Estimates are based on OEB's online electricity bill calculator (for Toronto Hydro-November 2016 rates)

# 6. Rate Design Initiatives (cont'd)

**Considerations**

- The decision to undertake smart meter investments was partly justified on the basis of TOU pricing. If TOU pricing were to be made optional, some stakeholders could question the rationale for smart meter investments.
  - Rationale for offering a flat rate option could focus on providing customers with choice until new pricing plans are rolled out under the RPP roadmap.

- If a flat rate design is introduced, there could be significant consumer opposition to any return to a mandatory TOU.

- After the interim flat rate period, the OEB could offer a wider range of pricing plans to consumers.
  - As part of its RPP review, the OEB will be running pilots with LDCs to assess customer response to alternative time periods and pricing structures.
  - Learnings from these pilots will help inform potential changes to the RPP. Pilots are expected to be in market May 2017 and run for one year.

- Non-RPP Class B electricity consumers currently pay Global Adjustment (GA) on a volumetric basis. Moving them to TOU would provide an incentive to shift consumption to off-peak periods.
  - Consumers, including manufacturers, who are unwilling to shift would face higher costs and likely not be supportive of the changes.
  - The decision to pursue TOU pricing for non-RPP class B consumers will impact proceeds recycling as there is interplay between the two initiatives.

# 7. Reduced Cost of OPG Borrowing

- OPG currently borrows for corporate purposes from the OEFC
- Seek to reduce OPG's borrowing costs and pass on savings to ratepayers by:
  - Reducing or removing the spread that OEFC applies to OPG for any new corporate debt; or
  - Allowing OPG to refinance its existing debt at longer maturities through the OEFC in order to take advantage of the current, favourable interest rate environment.
- Assuming the full spread is removed from all OEFC debt, OPG borrowing costs could be reduced by 50-100 basis points, representing annual savings of about $20-$25 million, increasing to $30-$35 million, as OPG's outstanding OEFC debt rises from ~$3.3 billion in 2016 to ~$4.7 billion in 2020.
- OPG could apply to the OEB as part of its current rate application to flow this benefit to ratepayers.

**Considerations**

- Further work is required to determine potential OPG savings from these initiatives.
- Allowing OPG to refinance would have a negative fiscal impact on the Province.
- Spreads are expected to decline, reducing the relative impact of this change, given lower overall interest rates and reduced volatility.
- Providing OPG with greater access to longer term (20-30 year) debt may also reduce costs:
  - OPG's average term to maturity for OEFC debt is 5.7 years, as compared to 22.2 years for privately financed project debt. This contrasts with most corporations and government which have been working to extend average debt terms in order to take advantage of the low interest rate environment.
  - Longer terms would also better match to the life of OPG's assets.
  - Recently, OEFC has allowed OPG to apply for 50% of its financing requirements in the form of longer term (25-30 year debt). Moving closer to 100% would accelerate this transition.

# 8. End DRC Early for Commercial/Small Industrial Class B Electricity Consumers

- Propose to remove the $0.07/kWh Debt Retirement Charge (DRC) from the bills of commercial/small industrial Class B consumers beginning in 2017, instead of April 1, 2018.
  - **Note:** Class A consumers (e.g., large industrial) would continue to pay DRC until at least April 1, 2018.

**Considerations**

- For a Class B consumer currently paying about $152/MWh, removing the DRC would represent a savings of about 5%.
  - A 50% reduction in the DRC charge would represent a savings of about 2%.

- Alternatively, the reduction of the DRC could be to $0.035/kWh starting in 2017, to provide relief for cap and trade until proceeds recycling is fully operational.

- Residential consumers have had the DRC removed from bills since January 1, 2016. Taking DRC off commercial and small industrial bills would result in equal treatment for these groups of consumers.

- The savings for commercial and small industrial consumers associated with this proposal would drop to zero in April 2018, since this is the current planned date for removing the DRC from non-residential bills.

- Prior to moving forward with this proposal, additional analysis from Legal Services and the MOF would be needed.

# 9. Dedicate Departure Tax

- In connection with the IPO, as a result of leaving the PILs regime and entering the corporate tax regime, Hydro One was deemed to dispose of its assets for proceeds equal to its fair market value, triggering a PILs liability of $2.6 billion (Departure Tax).
- This was paid to the Ontario Electricity Financial Corporation (OEFC), to be dedicated towards repayment of electricity sector stranded debt.
- The Province could explore repurposing some of those funds to the benefit of ratepayers.
- This may reduce the risk that the Ontario Energy Board (OEB) assigns to ratepayers the benefit from an associated tax asset, resulting in lower earnings and decreased share value for Hydro One. This decision is currently before the OEB, as part of Hydro One's Transmission rate application.

**Considerations**

- Cost savings to ratepayers would depend on timing and which ratepayers (e.g., Hydro One customers, or all Ontario customers) will benefit from some or all of the $2.6 billion value.
- While this is a shift from messaging that value from the broadening of ownership of Hydro One is being used pay down debt and fund transit and transportation, the Province could link to electricity infrastructure investments (e.g., as an offset to infrastructure investments already made in the sector, or to specific initiatives such as conservation).
- These funds were paid to the Ontario Electricity Financial Corporation (OEFC), to be dedicated towards repayment of electricity sector stranded debt. Repurposing may have an impact on the defeasance of this debt.

# 10. Cancel/Adjust Renewable Energy Procurements

- The Ministry could consider the following actions to further mitigate future impacts to electricity bills:

| Unallocated/Terminated Capacity | Announced Procurements | Executed Contracts |
|---|---|---|
| A. Do not procure unallocated or terminated capacity | B. Revise FIT 5 target | D. Cancel LRP I contracts |
| | C. Cancel FIT 6 | |

**Overarching Considerations**

- Cost savings associated with reducing or cancelling renewable energy procurements and programs will not reduce current electricity bills, but would result in future cost reductions relative to Ontario Planning Outlook forecasts.
- The IESO estimates implementing options A to C will reduce system costs by approximately $592 million ($2016) between 2019 and 2028, resulting in an average of approximately $0.50/month in savings to a typical residential electricity bill over the same period. [cost reductions from LRP I contract cancellations TBC]
- The microFIT program is winding down end of 2017. Annual microFIT procurement targets have been undersubscribed.
- With a few exceptions (e.g., rollover of unallocated microFIT capacity; addition of terminated microFIT and small FIT capacity to FIT 5), plans for unallocated or terminated capacity are not defined in announcements or existing directions.

**Cancel/Adjust Announced Procurements**

- Amendments to existing directions to the IESO would be required to reduce FIT 5 and cancel FIT 6.
- The FIT 5 procurement is underway with a base target of 150 MW and inclusion of any capacity available from contract terminations under prior small FIT and microFIT procurements. The application window closed on November 25, 2016.

# 10. Cancel/Adjust Renewable Energy Procurements – Existing Contracts

**Cancel Existing LRP I Contracts**

- 16 LRP I contracts (approx. 455 MW) have been executed and projects are under development.
- None have met Key Development Milestones. Total value of LRP I estimated at approx. $1 billion (NPV to 2016).

[Placeholder for IESO: Cost calculation relative to OPO and associated bill impact]

**Considerations**

- To help inform a decision, IESO or OEB could be asked to evaluate and provide guidance to the Ministry on the system need for LRP I projects and potential ratepayer impacts/benefits.
- 13 of 16 LRP I contracts have Indigenous participation. Cancelling LRP I contracts would remove this economic development opportunity and likely damage relationships between Indigenous communities and the government.
- LRP I Contract includes an “Optional Termination” provision allowing IESO to terminate any contract prior to the “Commercial Operation Date” with 6 months written notice.
- The IESO obligations under the Optional Termination provision depend on whether the project has met all “Key Development Milestones”.
  - As no projects have met their Key Development Milestones, the estimated total cost payable to contract holders is about $8 million.

# 10. Cancel/Adjust Renewable Energy Procurements – Existing Contracts (cont'd)

## Legal Analysis

- Under the *Electricity Act, 1998*, the Minister has the authority to amend previous directions without approval from Cabinet. Although an amendment to an existing direction would not require Cabinet approval, it is unlikely that a direction to cancel LRP I contracts could be considered as amending an existing direction. The previous LRP directions set out the broad policy framework that was reflected in the procurement, but the contracts themselves, once executed, are stand alone documents which the IESO had legal authority to execute. Revoking previous LRP directions does not affect that authority or have the effect of cancelling the procurement.
- As a result, any new directive to cancel LRP I contracts would need to be approved by Cabinet, either as part of an LTEP implementation directive to IESO, or pursuant to the overall power to direct IESO with respect to procurements outside the LTEP process. However, there is a risk that such a directive could be subject to challenge.
- ENERGY has previously received advice that there is a high risk that a court would conclude that the Minister has no authority under the *Electricity Act , 1998* to issue a direction requiring IESO to terminate microFIT Conditional Offers and FIT Offer Notices that have already been issued to applicants, because these offers create vested contractual rights and the Minister would require clear legislative authority to interfere with those rights. This reasoning would likely apply equally to any direction or directive to IESO to cancel LRP I contracts.
- Previous advice has also flagged a moderately high risk that the Province could be liable for damages in tort for inducing a breach of contract if it issues a direction to IESO that interferes with vested contractual rights without clear statutory authority to do so. LRP I contract holders could also assert other claims, such as misfeasance in public office.
- The risk and costs associated with potential law suits resulting from the cancellation of contracts requires further analysis, including analysis of whether any statutory amendments would be required to provide clear authority to cancel the contracts. LSB recommends ENERGY seek an opinion from Crown Law Office Civil before proceeding.

# Summary

- Reductions in electricity rates could be achieved by eliminating existing, planned or directed initiatives from the rate-base or shifting these costs to the tax-base.

- The timing of the impact of these rate mitigation initiatives varies.
  - Immediate and near-term impacts can be achieved by shifting costs to the tax-base or changing how certain costs are recovered from consumers or eliminating certain programs.
  - Over the longer term, changes to the electricity supply mix and achieving efficiencies in the electricity market could yield system savings.

- Pursuing the initiatives would require regulatory amendments and working with the electricity sector agencies, LDCs and other stakeholders to implement the initiatives.

# Appendix

# Electricity Consumer Classes

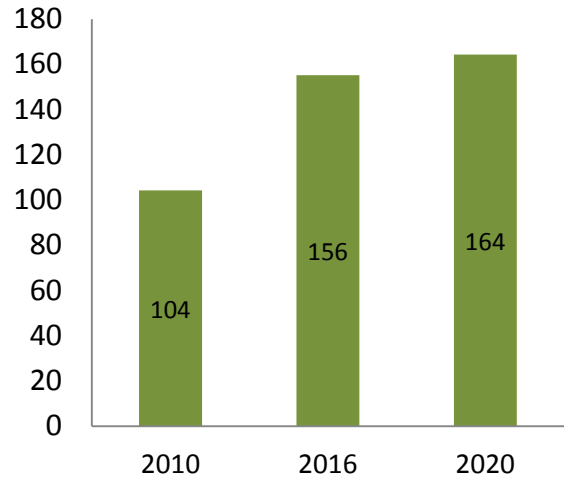
- In Ontario, there are three classes of electricity consumers:

| | Regulated Price Plan | Class B | Class A |
|---|---|---|---|
| **Consumer Types** | • Residential<br>• Small Business<br>• Farms | • Commercial<br>• Institutional<br>• Small industrial | • Large commercial<br>• Large industrial |
| **Load Size** | Below 0.05 MW | Between 0.05 MW and 1 MW | Above 1 MW |
| **Total Consumption** | 58 TWh | 57 TWh | 26 TWh |
| **Share of Consumption** | 41.1% | 40.4% | 18.4% |

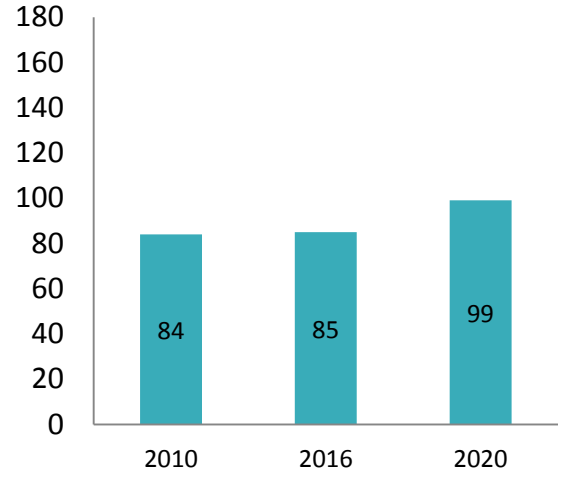
# Prices by Electricity Consumer Class

- Since 2010, average bills for residential consumers (i.e., using 750 kWh/month) have increased by over 50%. Rates are forecast to continue to increase, with residential consumers paying an estimated 6% by 2020.
- Industrial electricity rates have remained relatively flat over the same time period, due primarily to the Industrial Conservation Initiative (ICI). ICI represents a cost shift of about $5/month for residential electricity consumers. Industrial electricity consumers are forecast to see an increase of 16% by and 2020.

**Typical Residential Bill (750/kWh per month)**



**Typical Class A (Industrial) Price ($/MWh)**



**Note:** 2016 represents year-to-date September 2016 for industrial. Cap and trade proceeds recycling is included for the industrial consumer for 2020.

# Rate Mitigation Levers

- To provide further rate relief to Ontario electricity consumers, the government can use one or more of the levers outlined below:
  - **Tax-based Lever:**
    - Provide rebates funded from the tax-base or transfer items currently paid through the rate-base to the tax-base.
  - **Rate-based Lever:**
    - Shifts costs within the rate-base from one customer group to another to achieve electricity system benefits and/or policy goals.
  - **Cap and Trade Proceeds Lever:**
    - Use cap and trade proceeds on initiatives that help reduce greenhouse gas (GHG) emissions from the electricity sector (e.g., recycling proceeds during off-peak periods) while providing benefits to some or all electricity consumers.

# Traditional Rate Mitigation Programs

- Ontario has implemented a number of rate-based programs to help residential and industrial electricity consumers:
  - The Ontario Electricity Support Program (OESP) provides ongoing assistance directly on the bills of eligible low-income electricity consumers
  - The Rural or Remote Rate Protection (RRRP) program is provided to rural and remote residential and farm customers because the cost of distributing power to remote areas is much higher than for urban areas.
  - The Industrial Conservation Initiative (ICI) encourages Ontario's largest consumers to reduce consumption during peak periods while reducing system costs.
- There are also tax-base programs to help manage electricity prices:
  - Rebate the provincial portion of the HST from the electricity bills of residential, small business and farms as of January 1, 2017.
  - Northern Industrial Electricity Rate Program (NIERP), in which participants receive a rebate of two cents per kilowatt hour. On average, industrial electricity prices can be reduced by up to 20%.
- While rate-based programs provide relief to certain electricity consumers, they shift other costs to remaining ratepayers (See Appendix for additional details).

# Driving Down Prices for Consumers

- Since 2013, a number of actions have been taken to drive down prices for consumers wherever possible:
  - Renegotiating the Green Energy Investment Agreement, reducing contract costs by $3.7 billion;
  - Deferring the construction of two new nuclear reactors at Ontario Power Generation's Darlington facility, avoiding an estimated $15 billion in new construction costs;
  - Approving Ontario Power Generation's plans to enable the ongoing operation of Pickering up to 2024, which is expected to save ratepayers as much as $600 million;
  - Reducing Feed-In-Tariff (FIT) prices through annual price reviews, saving ratepayers at least $1.9 billion relative to the 2013 Long-Term Energy Plan (2013 LTEP) forecast; and
  - Suspending the second round of the Large Renewable Procurement (LRP II) process and the Energy-from-Waste Standard Offer Program to save up to $3.8 billion in electricity system costs relative to 2013 LTEP.

# Cost Shifts in the Electricity Sector – Current Programs

- Several programs in the electricity sector “shift costs” from one group of electricity consumers to another:
  - **Rural or Remote Rate Protect** (**RRRP)** is a longstanding program that reduces the delivery charge for rural electricity consumers and is paid for by all consumers in Ontario through a regulatory charge on bills.
  - **Ontario Electricity Support Program (OESP)** is funded via a regulatory charge on consumer bills and provides support for qualifying low income electricity consumers.
  - **Industrial Conservation Initiative (ICI)** empowers large consumers to lower their costs by reducing their demand during peak hours. In the process, ICI shifts costs from large electricity consumers to all other consumers in Ontario.
  - **Industrial Electricity Incentive** (**IEI**) program, offers reduced electricity prices for companies starting or expanding operations in Ontario. All electricity consumers in Ontario pay for the price reduction that IEI participants receive.

# Cost Shifts in the Electricity Sector (Cont'd)

- The tables on the right show the estimated cost shifts that result from existing government programs.
- ICI has had the largest cost shift of all the programs, due to the large size of Global Adjustment (GA) and the way that it is recovered from consumer classes.
- RRRP and OESP impact the regulatory line on consumer bills, while ICI, IEI and conservation affect GA (i.e., Electricity line on bills of Regulated Price Plan consumers).

**Cost Shift Impacts - Residential Bill**

*Typical 750 kWh/month Toronto Hydro consumer*

| *$/month* | 2011 | 2012 | 2013 | 2014 | 2015 | 2016 |
|---|---|---|---|---|---|---|
| ICI | 2.65 | 3.25 | 3.88 | 3.53 | 4.75 | 4.77 |
| RRRP | 0.90 | 0.82 | 0.84 | 0.92 | 0.93 | 0.94 |
| OESP | - | - | - | - | - | 0.84 |
| Conservation | 1.85 | 1.92 | 2.00 | 1.58 | 2.43 | 2.45 |
| IEI | - | - | 0.08 | 0.09 | 0.11 | 0.12 |
| **Total** | **5.41** | **5.99** | **6.81** | **6.13** | **8.21** | **9.12** |

**Cost Shift Impacts - Industrial Bill**

*Typical Class A consumer*

| *$/MWh* | 2011 | 2012 | 2013 | 2014 | 2015 | 2016 |
|---|---|---|---|---|---|---|
| ICI | -22.17 | -26.36 | -30.29 | -25.91 | -33.79 | -33.92 |
| RRRP | 1.20 | 1.10 | 1.12 | 1.23 | 1.24 | 1.25 |
| OESP | - | - | - | - | - | 1.13 |
| Conservation | 1.53 | 1.59 | 1.66 | 1.31 | 2.01 | 2.02 |
| IEI | - | - | 0.07 | 0.08 | 0.09 | 0.10 |
| **Total** | **-19.43** | **-23.67** | **-27.44** | **-23.29** | **-30.45** | **-29.43** |

**Note:** OESP did not come into effect until 2016. The 2016 values represent forecasts and are subject to change.

# Cost Shifts in the Electricity Sector (Cont'd)

- The table on the right shows the total cost for various government electricity programs. These programs are currently funded through the electricity system ratebase.

- Funding of these programs through the fiscal plan would remove these costs from the electricity system (i.e., Placing these costs on the taxbase).

**Cost of Programs**

*By government program*

| *$M* | 2011 | 2012 | 2013 | 2014 | 2015 | 2016 |
|---|---|---|---|---|---|---|
| ICI | 506 | 615 | 736 | 670 | 890 | 893 |
| RRRP | 172 | 156 | 159 | 176 | 174 | 176 |
| OESP | - | - | - | - | - | 158 |
| Conservation | 329 | 339 | 354 | 280 | 425 | 428 |
| IEI | - | - | 15 | 16 | 18 | 19 |

- For example, removing the roughly $900 million of program cost from the Industrial Conservation Initiative (ICI) program would save the typical residential electricity consumer $4.77 per month in 2016.

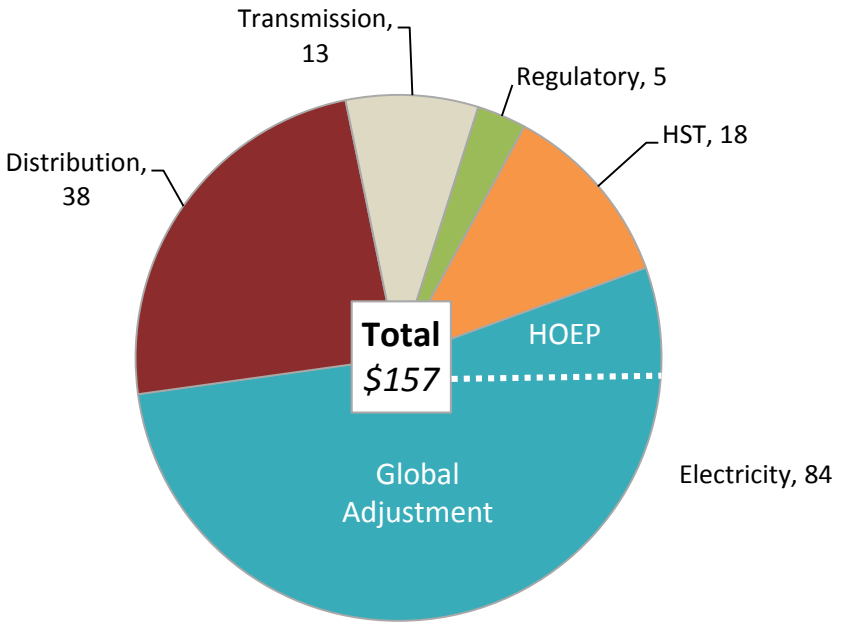
**Note:** OESP did not come into effect until 2016. The 2016 values represent forecasts and are subject to change.

# Residential Electricity Prices

- There are approximately 4.5 million residential consumers in Ontario.
- The Regulated Price Plan includes nearly all residential consumers, as well as small businesses. Regulated Price Plan consumers pay a blended commodity rate regulated by the OEB, which is set every six months.
- For households, the Debt Retirement Charge (DRC) was removed from residential electricity bills as of January 1, 2016.
- In addition, the Ontario Electricity Support Program (OESP) provides an ongoing rate reduction directly on the bills of low-income electricity consumers who have applied and meet the eligibility requirements. The program is funded through the rate base.
- Rural customers, in particular those with electrical heating, pay higher monthly bills.

**Typical Residential Monthly Bills ($)**

*As of November 1, 2016 (750 kWh/month)*



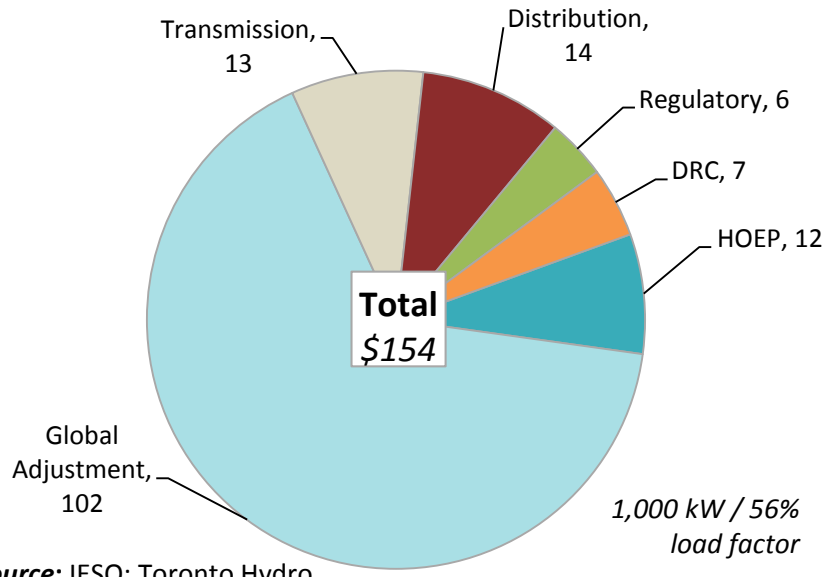
***Source*:** OEB, Toronto Hydro

# Commercial Electricity Prices

- There are approximately 55,000 commercial and institutional consumers in the province. These consumers are Class B consumers, and have separate line items on the electricity bill for HOEP and GA.
- There is a high degree of differentiation amongst consumers within the commercial sector in terms of size and consumption patterns. For example, an elementary school has a much different hourly load profile compared to a full service restaurant. This is an important consideration when looking at the bill impacts of policy options.

**Typical Commercial Price ($/MWh)**

*YTD June 2016 (Non-RPP Class B)*



***Source*:** IESO; Toronto Hydro

- Consumers in the commercial sector do not pay time-of-use prices and have little incentive to shift demand away from high demand hours.
- Targeted pricing programs are currently not available for Class B consumers.

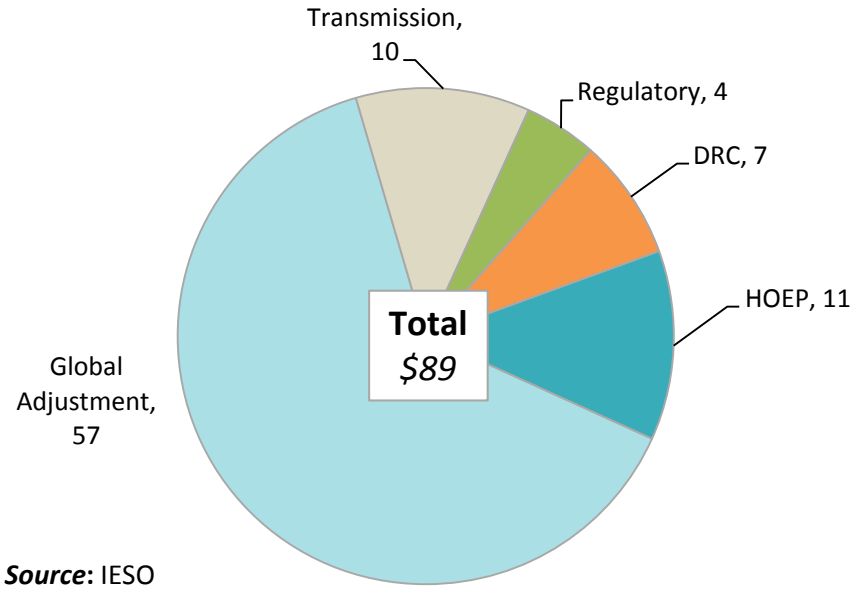
*** Note**: Most commercial consumers receive input tax credits for their HST.

# Industrial Electricity Prices

- There are about 300 large industrial consumers in Ontario.
- Measures in place to mitigate industrial electricity prices include ICI and NIERP.
- ICI lowers costs for eligible large electricity consumers (i.e., those with monthly peak demand exceeding 3 MW) that reduce consumption during peak periods.
  - ICI consumers reduce their electricity rates by 25% on average.

**Typical Large Industrial Price ($/MWh)**

*YTD June 2016*



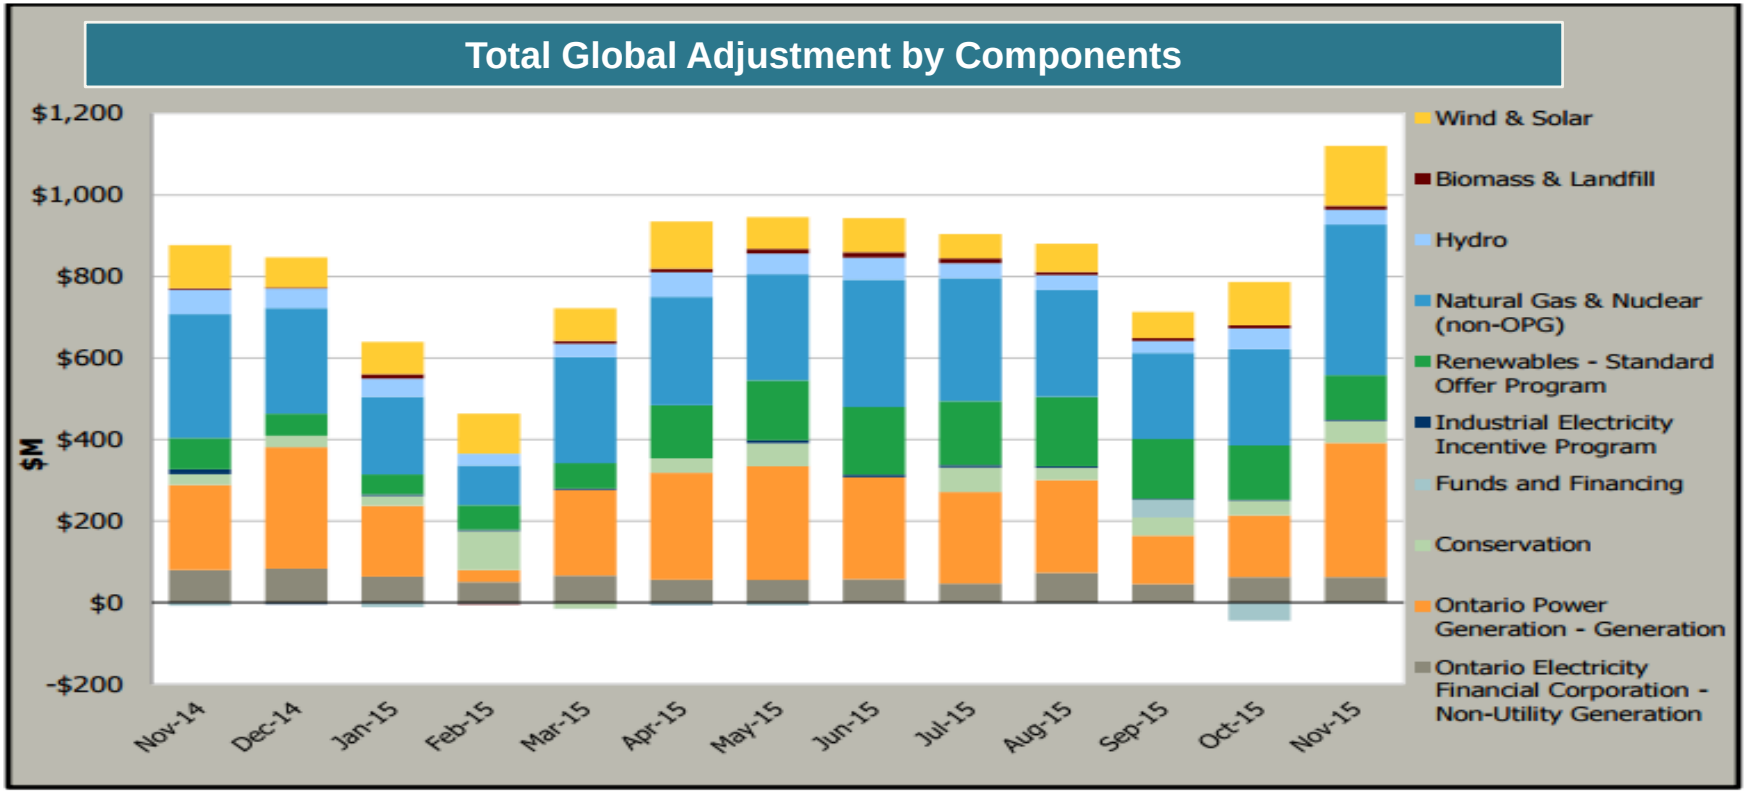
***Source*: IESO**

- Participants in NIERP receive a rebate of $20/MWh. On average, industrial electricity prices are reduced by about 20% through the program, reducing all-in prices to $69/MWh for these consumers. The program is funded through the tax base.

*** Note:** Industrial consumers receive input tax credits for their HST.

# Total Components of Global Adjustment

- Global Adjustment (GA) is a market mechanism that recovers costs from electricity consumers, including the cost of almost all conservation programs in the province (i.e., approximately half a billion dollars in 2016).



**Source:** IESO Monthly Market Report (November 2015)

# Cancel/Adjust Renewable Energy Procurements

# LRP I Pre-Construction Liability Limits

- All 16 successful LRP I developers accepted Optional Termination Provisions when the LRP I Contracts were executed in April 2016.
- If IESO chooses to enact the Optional Termination provision before a project has met all Key Development Milestones, IESO is required to pay pre-construction development costs up to the Pre Construction Liability Limit.
- Pre-construction development costs include costs incurred for feasibility studies, obtaining site access rights, work towards environmental approvals, business development plans, negotiation of contracts for design, equipment, construction and financing, reasonable overhead expenses, and other reasonable costs incurred.
- The Pre Construction Liability Limits are:
  - Non-Rooftop Solar: $250,000 plus $10.00/kW of Contract Capacity
  - Waterpower: $500,000 plus $20.00/kW of Contract Capacity
  - On-Shore Wind: $400,000 plus $2.00/kW of Contract Capacity
- According to the LRP I Optional Termination provision, the developer has a duty to take reasonable steps to mitigate losses, liabilities, costs and damages incurred as a result of the Optional Termination.
  - The IESO will not provide compensation for amounts which are attributable to a developer's failure to take reasonable steps to mitigate.

**Subject:** FW: Price Mitigation Deck

Hi Salman,

Let's consolidate SPFB's too.

Thanks,

John.

**Subject:** Price Mitigation Deck

Hi John,

I have included comments in the attached version of the price mitigation deck on slides 3, 4, 5, 8, 13, 14, 15, 20.

I will be out this afternoon, so could you combine with comments on the deck you will submit to Ron.

Emily

ENERGY

# Proposed Initiatives to Transform Ontario's Electricity Sector

## Working Draft

December 5, 2016

CONFIDENTIAL DRAFT

# Context

- Electricity costs are increasing as the necessary investments are made to decarbonize and modernize the province's electricity infrastructure.
  - Since 2003, the Province has invested more than $35 billion in over 16,000 megawatts (MW) of new and refurbished cleaner generation, including nuclear, natural gas and renewables.
  - Over the same period, Hydro One has invested $15.5 billion to enhance and renew its transmission and distribution systems.
  - As additional electricity generation comes online, nuclear units are refurbished and distribution and transmission investments are made, prices are forecast to continue to increase.

- Actions have been taken to drive down electricity costs, including deferring investments in generation (e.g., new build nuclear), improving market efficiency (e.g., introduction of wind dispatch) and decreasing the cost of renewable procurements (e.g., Green Energy Investment Agreement ~~GEIA~~ renegotiation, decreasing FIT prices).

- Additional steps have been taken to increase cost effectiveness and improve efficiency by adopting new electricity market approaches, such as:
  - Enhancing competition between developers of large renewable projects through the Large Renewable Procurement (LRP) process to drive down price and secure clean, reliable generation for the province;
  - Directing IESO to end the process of negotiating new NUG contracts pending the development of a Capacity Auction (i.e., Market Renewal); and
  - Launching the first IESO Demand Response Auction (i.e., a competitive process through which demand-side resources are selected to be available to reduce their electricity consumption as needed).

# Context (Cont'd)

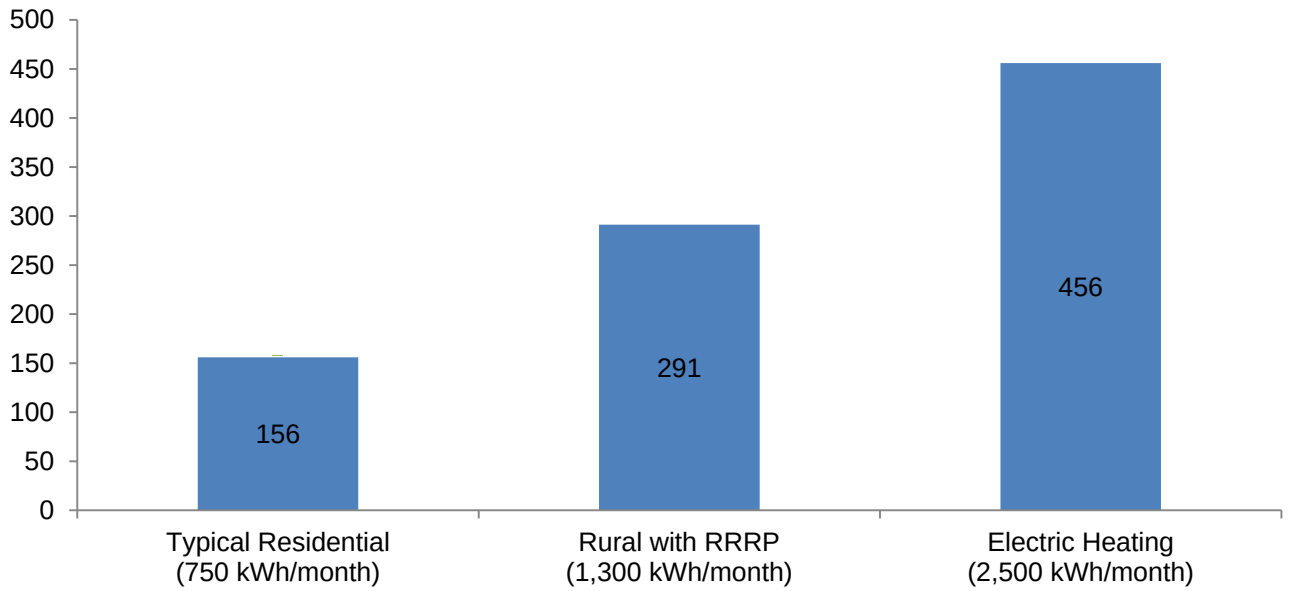
- Following the 2016 Throne Speech, a number of actions were announced to further reduce electricity costs, such as:
  - Providing an 8 per cent rebate before tax, equivalent to the provincial portion of HST, for approximately 5 million eligible electricity consumers including residences, small businesses and farms;
  - Increasing the amount of rate protection available to approximately 330,000 eligible rural customers living in low-density areas by updating the Rural or Remote Rate Protection (RRRP) program;
  - Lowering the Industrial Conservation Initiative (ICI) threshold to 1 MW and removing sector restrictions so that more consumers can benefit;
  - Suspending the second round of the Large Renewable Procurement (LRP II) and the Energy-from-Waste Standard Offer Program to save up to $3.8 billion in costs; and
  - Recycling a portion of cap and trade auction proceeds to keep rates affordable for industrial and commercial electricity consumers.
- On November 28, 2016, the Minister of Energy announced the need for changes in how electricity resources are procured and the need for wholesale market renewal.

- The Ministry of Energy is currently updating its Long-Term Energy Plan (LTEP), which provides an opportunity to consider a range of policy changes to how the Ontario energy sector operates.

# Current Electricity Prices – Residential

- Residential consumers electricity prices continue to be a concern for many Ontarians, particularly those that rely on electric heat.
  - **Note:** The typical residential bills are currently below the 2013 ~~Long-Term Energy Plan (2013~~ LTEP~~)~~ forecasts ($159 / 750kWh)

**Residential Electricity Bills**
*in $/month*

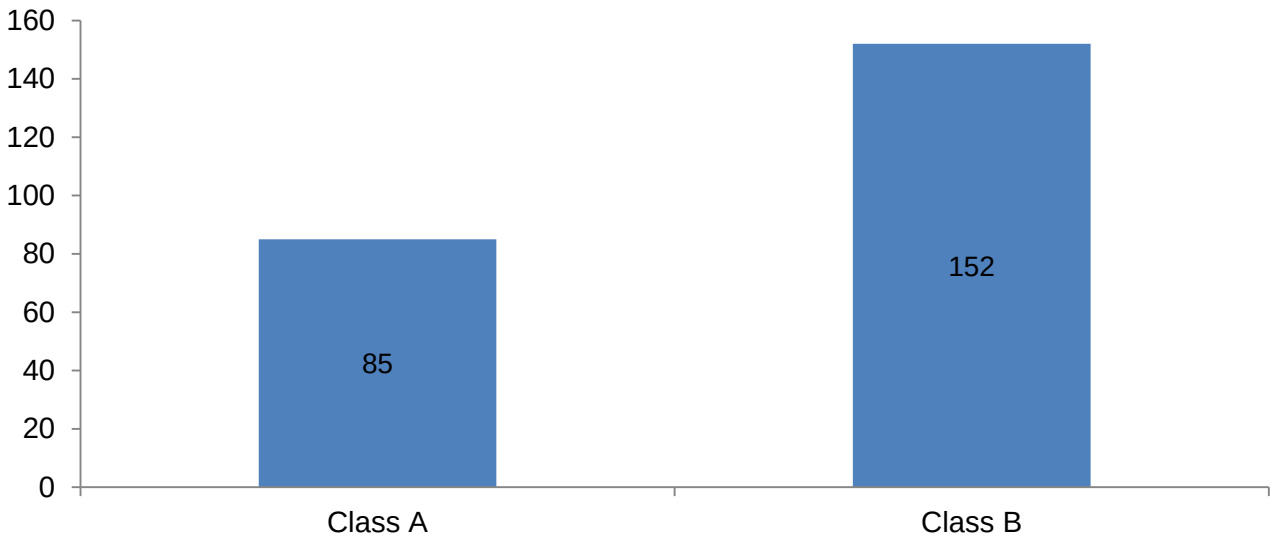


**Note**: Typical residential and electric heating shown above are based on Toronto Hydro; rural is based on connection to Hydro One as a R2 customer eligible to receive the Rural or Remote Rate Protection (RRRP) credit of $31.50.

# Current Electricity Prices – Industrial and Commercial

- While large industrial electricity consumers (i.e., Class A) rates are competitive with other jurisdictions, rates for commercial/small industrial consumers (i.e., Class B) are higher by comparison.
  - **Note:** Current industrial and commercial prices are below 2013 LTEP forecasts ($96 / MWh)

**Current All-In electricity Price**
*in $/MWh*



**Note**: Based on year-to-date (YTD) September 2016 prices. Class A reflects a transmission-connected consumer. Class B reflects a 1 MW load operating at 56% load factor and connected to Toronto Hydro.

# Taxpayer Funded Electricity Price Mitigation

| ($M) | 2011-12 | 2012-13 | 2013-14 | 2014-15 | 2015-16 | 2016-17[1] | 2017-18[1] |
|---|---|---|---|---|---|---|---|
| OCEB | 1,033 | 994 | 1,006 | 1,078 | 860 | - | - |
| OREC | - | - | - | - | - | 300 | 1,200* |
| Ending DRC[2] | - | - | - | - | 85 | 330 | 330 |
| NIERP | 120 | 120 | 115 | 108 | 120 | 120 | 120 |
| NOEC | 23 | 24 | 25 | 24 | 26 | 25 | 25 |
| OEPTC[3] | 354 | 406 | 418 | 429 | 444 | 450 | 460 |
| **TOTAL** | **1,530** | **1,544** | **1,564** | **1,639** | **1,525** | **1,195** | **2,105** |

1. 2016-17, 2017-18 based on forecasted numbers
2. 2015-16 estimated for 3 months of reduced DRC revenue
3. OEPTC amounts in all years based on energy component of the rebate.

* Sourced from November LRC Submission

OCEB – Ontario Clean Energy Benefit
OREC – Ontario Rebate for Electricity Consumers
DRC – Debt Retirement Charge
NIERP – Northern Ontario Electricity Rate Program
NOEC – Northern Ontario Energy Credit
OEPTC – Ontario Energy and Property Tax Credit

- The table above shows the annual amount of taxpayer funded electricity price mitigation from 2011-12 to 2017-18.
- From 2011-12 to 2015-16 there has been an annual fiscal impact of approximately $1.6 billion due to electricity price mitigation programs.
- In 2016-17, the fiscal impact due to electricity price mitigation programs is estimated at approximately $1.2 billion.
- In 2017-18, due primarily to the start of the Ontario Rebate for Electricity Consumers, the expected fiscal impact due to electricity price mitigation programs is approximately $2.1 billion.

| **TOTAL** | **1195** | **3,421** | **3,482** | **3,507** | **3,521** |

1. 2016-17, 2017-18 based on forecasted numbers
2. 2015-16 estimated for 3 months of reduced DRC revenue
3. OEPTC amounts in all years based on energy component of the rebate.

# Proposed Initiatives – Overview

- The suite of proposed initiatives are intended to:
  - Transform how the electricity market operates in Ontario;
  - Re-set how government programs are funded (i.e., rate-base vs tax-base);
  - Provide system benefits (e.g., industrial load retention);
  - Lower the cost of electricity for residential and industrial consumers; and
  - Increase cost effectiveness and improve efficiency.

- The proposed initiatives include:
  1. Implement Market Renewal Initiatives
  2. Fund Electricity Support Programs Through The Tax-base
  3. Eliminate the Industrial Conservation Initiative (ICI)
  4. Amortize Conservation Program Costs
  5. LDC Efficiencies
  6. Rate Design Initiatives
  7. Reduced Cost of OPG Borrowing
  8. End Debt Retirement Charge (DRC) Early for Commercial/Small Industrial Class B Electricity Consumers
  9. Dedicate Departure Tax
  10. Cancel/Adjust Renewable Energy Procurements

- The proposed initiatives provide opportunities to reduce electricity costs for residential and industrial consumers while at the same time transforming the province's electricity market and yielding benefits for the electricity system.

# Proposed Initiatives – Impacts

- Each of the proposed initiatives under consideration target different government programs and different parts of the electricity bill. The proposals impact different classes of electricity consumers to varying degrees.

| Proposal | Program / Initiative | Line on Bills | Who Benefits |
|---|---|---|---|
| 1. Implement Market Renewal Initiatives | Market Renewal | Electricity, Global Adjustment, Regulatory | Market Renewal: All electricity consumers |
| 2. Fund Electricity Support Programs Through The Tax-base | OESP, RRRP | Regulatory | All electricity consumers evenly |
| 3. Eliminate the Industrial Conservation Initiative (ICI) | ICI | Electricity, Global Adjustment | Only Class B electricity consumers (i.e., residential) **Note:** Will have a negative impact on Industrial consumers. |
| 4. Amortize Conservation Program Costs | Amortization | Electricity, Global Adjustment | Class B electricity consumers and to a lesser extent Class A consumers |
| 5. LDC Efficiencies | Distribution efficiencies | Delivery | All embedded consumers |
| 6. Rate Design Initiatives | Rate structures | Electricity, Global Adjustment | Rate Design Initiatives: Participating electricity consumers |
| 7. Reduced Cost of OPG Borrowing | n/a | Electricity, Global Adjustment | Class B electricity consumers and to a lesser extent Class A consumers |
| 8. End DRC Early for Commercial/Small Industrial Class B Electricity Consumers | Debt Retirement Charge (DRC) | DRC | Class B consumers (i.e., small business and commercial consumers, etc) |
| 9. Dedicate Departure Tax | Departure Tax | TBD | TBD |
| 10. Cancel/Adjust Renewable Energy Procurements | FIT, LRP | Electricity, Global Adjustment | Class B electricity consumers and to a lesser extent Class A consumers |

# Proposed Initiatives – Potential Savings for Typical Residential Electricity Consumers

| *$/750kWh* | 2017 | 2018 | 2019 | 2020 | 2021 | 2022 | Timing of Benefit |
|---|---|---|---|---|---|---|---|
| 1. Implement Market Renewal Initiatives | - | - | - | 1.58 | 1.59 | 1.60 | Longer-Term |
| 2. Fund Electricity Support Programs through the Tax-base | 2.18 | 2.30 | 2.31 | 2.45 | 2.48 | 2.51 | Immediate |
| 3. Eliminate the Industrial Conservation Initiative (ICI) | 4.40 | 4.24 | 4.10 | 4.24 | 3.73 | 3.58 | Immediate |
| 4. Amortize Conservation Program Costs | 1.67 | 1.56 | 1.21 | 0.81 | 0.54 | 0.3 | Immediate |
| 5. LDC Efficiencies | TBD | TBD | TBD | TBD | TBD | TBD | Near-Term |
| 6. Rate Design Initiatives* | - | - | - | - | - | - | Immediate |
| 7. Reduced Cost of OPG Borrowing | 0.13 | 0.13 | 0.13 | 0.18 | 0.18 | 0.18 | Immediate |
| 8. End DRC Early for Class B Electricity Consumers** | - | - | - | - | - | - | n/a |
| 9. Dedicate Departure Tax | TBD | TBD | TBD | TBD | TBD | TBD | Immediate |
| 10. Cancel / Adjust Renewable Energy Procurements | - | - | TBD | TBD | TBD | TBD | Longer-Term |
| **Total** | | | | | | | |

**Note:** The above initiatives will provide similar benefits for non-RPP Class B electricity consumers. Proposal 2 assumes OESP participation of 50% and 5-year maturity. *Savings estimates do not include changes related to rate design. ** Class B includes small-medium enterprises (SMEs).

# Proposed Initiatives – Potential Savings for Average Industrial Electricity Consumers

| *$/MWh* | 2017 | 2018 | 2019 | 2020 | 2021 | 2022 | Timing of Benefit |
|---|---|---|---|---|---|---|---|
| 1. Implement Market Renewal Initiatives | - | - | - | 2.11 | 2.12 | 2.13 | Longer-Term |
| 2. Fund Electricity Support Programs through the Tax-base | 2.91 | 3.06 | 3.17 | 3.27 | 3.33 | 3.38 | Immediate |
| 3. Eliminate the Industrial Conservation Initiative (ICI) | (24.12) | (23.21) | (22.45) | (23.23) | (20.42) | (19.61) | Immediate |
| 4. Amortize Conservation Program Costs | 1.15 | 1.08 | 0.84 | 0.56 | 0.37 | 0.25 | Immediate |
| 5. LDC Efficiencies | n/a | n/a | n/a | n/a | n/a | n/a | Near-Term |
| 6. Rate Design Initiatives* | - | - | - | - | - | - | Immediate |
| 7. Reduced Cost of OPG Borrowing | 0.10 | 0.10 | 0.10 | 0.15 | 0.15 | 0.15 | Immediate |
| 8. End DRC Early for Class B Electricity Consumers** | - | - | - | - | - | - | n/a |
| 9. Dedicate Departure Tax | TBD | TBD | TBD | TBD | TBD | TBD | Immediate |
| 10. Cancel / Adjust Renewable Energy Procurements | - | - | TBD | TBD | TBD | TBD | Longer-Term |
| **Total** | | | | | | | |

**Note:** Proposal 2 assumes OESP participation of 50% and 5-year maturity. Proposal 3 reflects the elimination of ICI, as opposed to moving ICI cost shift to the taxbase. The $1.75/MWh savings associated with Proposal 7 in 2018 accounts for the fact that under the status quo, DRC will be removed from bills in April 2018. *Savings estimates do not include changes related to rate design. ** Class B includes small-medium enterprises (SMEs).

# Fiscal Considerations

- Funding electricity support programs (i.e., OESP, RRRP, First Nations Delivery Rate) from the tax-base represents approximately $440 million on average annually.

- Ending the Debt Retirement Charge (DRC) for commercial and small industrial electricity consumers (i.e., Class B) early would represent an additional fiscal pressure of $xx [placeholder for OFA] on the province.

- If the Industrial Conservation Initiative were funded though the tax-base instead of being eliminated, this would represent a $900 million annual cost to the fiscal plan.

- Reducing OPG borrowing costs to the Province's cost of funds is expected to result in a $20 to $35 million annual fiscal pressure to the province [TBC by OPG / OFA].

- Fiscal impacts of allocating a portion of the departure tax to ratepayers will depend on the size of the allocation, as well as timing for the flow of value. The maximum, direct one-time impact is $2.6 billion, with potential ancillary impacts on residual stranded debt defeasance.

# 1. Electricity Market Renewal Initiatives

- Continue to move forward with IESO's Market Renewal initiatives:
  - Market Renewal encompasses projects such as a single-schedule system (from the current two-schedule system), more frequent intertie scheduling to better align with other jurisdictions and a day-ahead market. There will be up front capital costs to enable the initiative. IESO is currently assessing these costs.
  - Moving to "technology-agnostic" procurements will provide new opportunities for innovation and modernization and ensure ratepayers receive the best prices possible.

**Considerations**

- Changes related to IESO's Market Renewal initiatives, reflected in HOEP and uplifts, are estimated to save up to $300 million per year, starting in 2020, leading to a reduction of:
  - About $1.60/month or about 1% at current retail prices for a typical residential bill; and
  - About $2/MWh or more than 2% at current all-in prices for industrial and SME electricity consumers.
- The IESO's Market Renewal is a broad initiative that will impact all aspects of Ontario's electricity market. Ontario has had a uniform price since market opening.
- Adopting a technology-agnostic stance will lower the overall cost of providing electricity service by selecting the most cost-effective resources to fulfill various system needs.

# 2. Fund Electricity Support Programs Through the Tax-Base

- Propose to fund electricity support programs, including Ontario Electricity Support Program (OESBP) and Rural or Remote Electricity Rate Protection (RRRP), through the tax-base instead of a regulated charge. This would allow the OESP and the RRRP charges to be removed from the Regulatory line on electricity bills.

**Considerations**

*Consumer Impacts and implementation*

- Transitioning OESP and RRRP to the tax-base would reduce a typical residential bill by about $2.35/month by 2020, and delivering the First Nation rate reduction through tax base would avoid about $0.10/month for a potential total savings of $2.45/month by 2020). As all programs provide strong social benefits, there is precedent for funding these programs through the tax-base.

- To address concerns from low income electricity consumers improvements to OESP could be implemented by increasing credits (could be up to double the current credits)
  - Single low income consumer would see a change from $30 to $45/ month ($540/year):
  - Family of four with electric heat could see a credit of $82.50/month ($990/year); and
  - Would mean no impact on consumer bills and no change to current OESP charge.
- RRRP and OESP are included in the “Regulatory” line on bills. If RRRP and OESP were eliminated from bills, the Regulatory line would decrease; however, as the Regulatory line is the smallest line item component of invoices, there is risk the decrease may not be perceived by customers.

- The RRRP regulation provides a funding mechanism for transmission infrastructure required to grid connect remote First Nation communities. Considerations for how that funding will be supported by the tax base will need to be determined.

- The non-rate mechanism to remove delivery charges from on-reserve First Nation customer monthly bills needs to be further explored.Funding RRRP and/or OESP with tax revenue would require amendments to existing legislation and regulations.

# 2. Fund Electricity Support Programs Through the Tax-Base (cont'd)

- Table below shows estimates of program costs up to 2020:

| Year | OESP | RRRP | First Nations Delivery Rate | TOTAL |
|---|---|---|---|---|
| 2017 | $106M | $292M | $18M | **$416M** |
| 2018 | $119M | $300M | $18M | **$437M** |
| 2019 | $127M | $306M | $18M | **$451M** |
| 2020 | $132M | $315M | $18M | **$465M** |

1) Ontario Electricity Support Program (OESP)
   - After almost a year in market, close to 30% of potentially eligible customers are signed up.
   - The cost projections below assume the program grows to 50% of eligible consumers by 2020 (also assumes 10% administration costs).

2) Rural and Remote Rate Protection (RRRP)
   - Provides benefits to R2 Hydro One consumers, Algoma, and remote communities.
   - Includes the expanded coverage that will begin on January 1, 2017.

3) First Nation rate reduction (currently under development)
   - On November 14, 2016, OEB presented options to the Ministry on reducing costs for on-reserve First Nation customers.
   - OEB's recommended option to provide 100% delivery rate credit, which is estimated at $18.4 million per year.
     - Other options includes a seasonal fixed credit to account for demand changes over the year ($13 million) or a 50% total bill reduction ($23 million).

# 3. Eliminate the Industrial Conservation Initiative (ICI)

- The cost shift from the Industrial Conservation Initiative (ICI) could be removed from electricity bills by eliminating ICI.
  - The ICI allows large electricity consumers to lower their electricity costs by reducing their demand during peak hours.

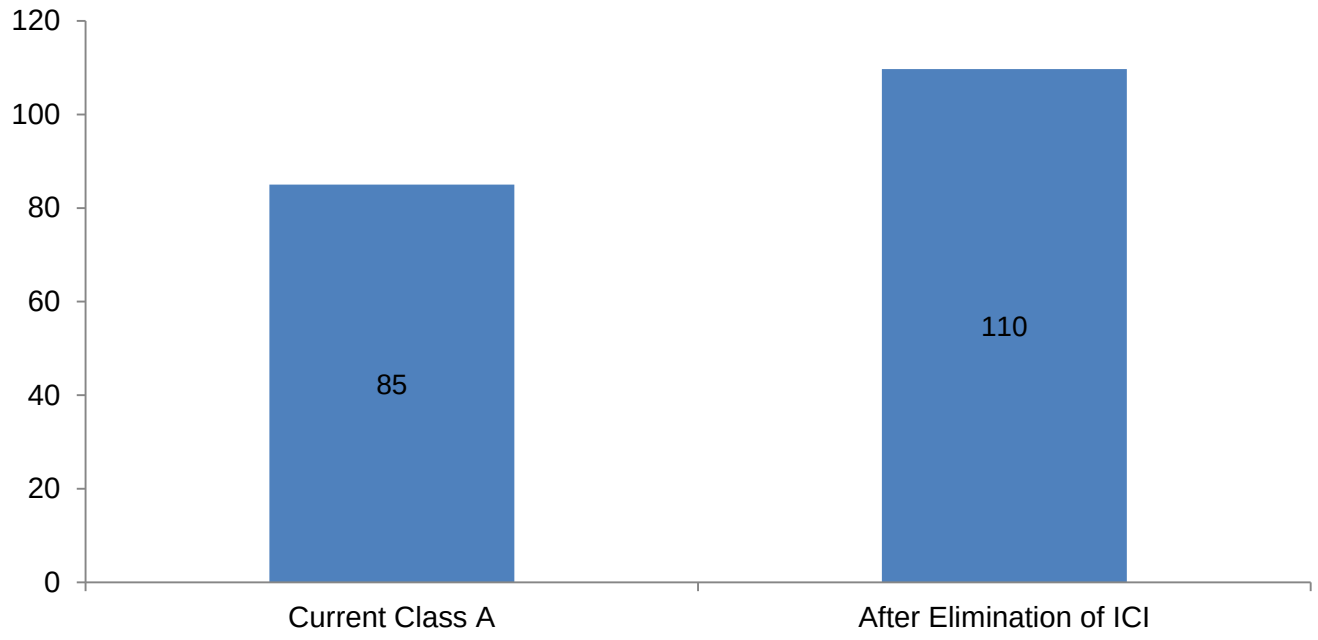
**Considerations**

- Eliminating ICI would result in a benefit of more than $4/month for residential electricity consumers in 2017.
  - However, unless government took action to mitigate the associated cost shift back to industrial consumers, typical industrial prices would increase by about one-third. Such a price increase would pose significant challenges for energy-intensive consumers.
- Industrial stakeholders have indicated that ICI as an integral factor in maintaining competitiveness and retaining industry in the province.
  - Eliminating ICI would limit the “cost shift” onto residential consumers, but it would also lead to a reduction in industrial demand. The large industrial contribution to the fixed costs of running the electricity system would then need to be covered by remaining consumers.
- If ICI is retained, current IESO projections indicate that the cost shift will decrease each year going forward as Global Adjustment (GA) decreases (due to an expected increase in HOEP).
- Alternatively, ICI could be funded through the tax-base at a cost of $900 million annually. There is precedent to use the tax-base for industrial support programs, including the Northern Industrial Electricity Rate Program (NIERP) and the Jobs and Prosperity Fund.

# 3. Eliminate the Industrial Conservation Initiative (cont'd)

- ICI currently provides a benefit of about $25/MWh to Class A electricity consumers.

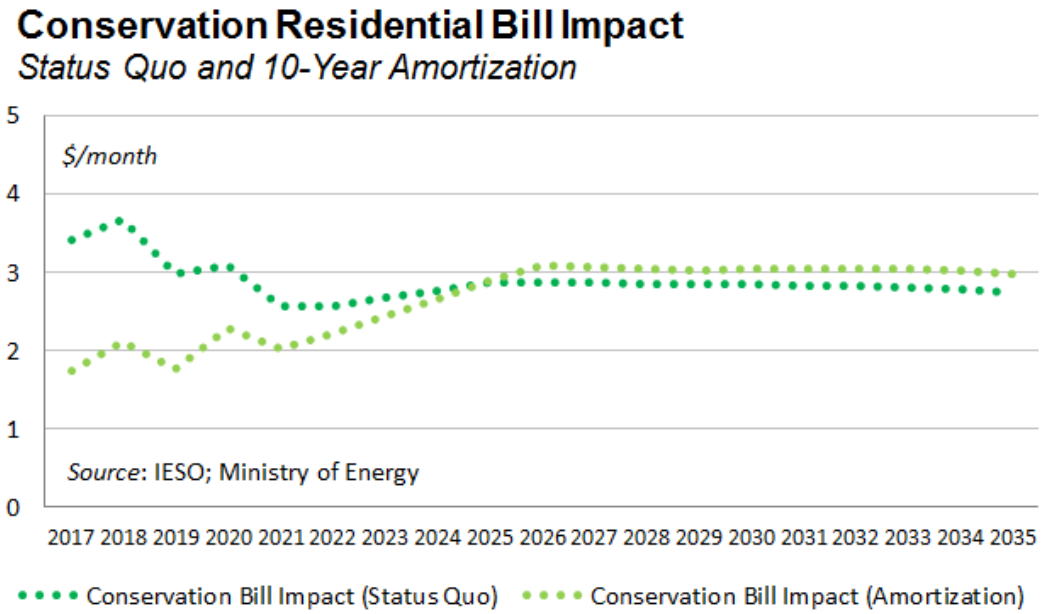
**All-In Electricity Price**
*in $/MWh*



**Note**: Based on year-to-date (YTD) September 2016 prices. Class A reflects a transmission-connected consumer.

# 4. Amortize Conservation Program Costs

- ~$3 billion from the electricity ratepayer base will be spent on conservation programs delivered under the Conservation First Framework and the Industrial Accelerator Program (IAP) between 2015 and 2020.
- Currently, Conservation and Demand Management (CDM) program costs are recovered from the Global Adjustment (GA) mechanism about one month after expenses are incurred.
- As a potential rate mitigation measure, certain CDM costs could be amortized.
- Amortizing a portion of conservation spending would produce a benefit for electricity ratepayers in excess of $1/month at the outset. Over time, the benefit would decrease and turn into a cost, as interest charges begin to grow.



**Note**: Chart assumes that conservation incentive costs are available for amortization while administration cost are not. Although there is variable from year to year, incentives represent about two-thirds of conservation spending in Ontario. Chart assumes conservation spending continues at a similar rate beyond 2020. Chart assumes a 10-year borrowing rate of 3.0%.

# 4. Amortize Conservation Program Costs (cont'd)

## Considerations

- Under **Public Sector Accounting Board (PSAB) accounting standards**, used by both the Province and IESO, only certain assets can be amortized: 1) pensions and 2) tangible capital assets. Under PSAB an asset must meet several criteria to be considered a capital asset, including:
  - A tangible capital asset must be tangible and substantive and the Ontario government must have title and operate the asset.
  - A tangible capital asset must bring a tangible benefit to the government or to Ontario.

- CDM costs, on their own, do not meet the criteria of a tangible capital asset because customers would have ownership and control of installed CDM measures, not the Province or IESO.

- **Rate-regulated accounting** was developed to recognize the unique nature of regulated entities (e.g., electricity generators, LDCs). Under rate-regulated accounting certain costs can be treated as amortizable assets that would not normally be considered assets under accounting principles.
  - Over the past several years, the Auditor General (AG) has expressed concerns about the appropriateness of recognizing rate-regulated assets in the Province's consolidated financial statements.
  - Rate-regulated accounting is currently under review by international accounting standard setting bodies and is currently permitted only on an interim basis, so its future is unclear at present.

# 4. Amortize Conservation Program Costs (cont'd)

**Considerations**

- If some of Ontario's CDM costs could be amortized, analysis shows that ratepayer impacts would be reduced in the short-term but interest charges on the loan would result in increased overall ratepayer costs in the longer-term.

- Legislative amendments would be needed to allow recovery of loan interest charges from GA.

- If there is a desire to proceed:
  - Formal accounting advice will need to be sought from IESO's external auditor as well as the Ontario Provincial Controller (OPC) to determine whether CDM costs could be amortized according to rate-regulated accounting standards.
  - Further legal analysis would also be required to confirm legal viability and possible approaches to implementation.

# 5. LDC Efficiencies

- Consider opportunities for future LDC cost reductions and efficiencies through the regulatory framework.

**Considerations**

- The Ontario Energy Board has a mandate to regulate the electricity distribution sector in the public interest, ensuring the financial viability of the sector while promoting reliable service to customers at just and reasonable rates.
- Since 2012, the OEB has taken action – through the Renewed Regulatory Framework for Energy – to more closely link rate regulation with performance measures and outcomes.
- There maybe opportunities to promote further cost reductions and performance improvements within the distribution sector as there is continued evolution of the regulatory framework in Ontario.
  - Tightening LDC requirements may also indirectly incent other desired policy outcomes, such as LDC consolidation and grid modernization to realize further cost reductions.
- ENERGY could help promote or accelerate these efforts by asking the OEB through the LTEP Implementation Directive, s. 35 of the *Ontario Energy Board Act, 1998*, and the 2017 Mandate Letter and other agency business planning processes.
- In addition, further changes to the departure and transfer tax regimes could be considered to provide a further incentive for LDC mergers and acquisitions.

# 6. Rate Design Initiatives

- OEB continues to move forward with its Regulated Price Plan (RPP) Roadmap:
  - The OEB is undertaking a comprehensive review of the RPP, including exploring the introduction of offering different pricing plan options for customers following the completion of pilot programs in 2018. The plan is expected to be implemented over a 3-5 year period.

- Until new pricing plans are available, the OEB could provide an "opt-in flat rate RPP" structure that could be made available to residential, farm and small business consumers on an interim basis (2-3 years) until a wider range of price plans are available.
- Time-of-Use (TOU) pricing could also be introduced for non-RPP Class B consumers to reduce Global Adjustment (GA) volatility and reduce system costs.

| Current TOU | New Flat Rate |
|---|---|
| On: 18.0 ¢/kWh | 11.1 ¢/kWh |
| Mid: 13.2 ¢/kWh | |
| Off: 8.7 ¢/kWh | |

**Considerations**

- The OEB has indicated that the option would lead to no overall change in system costs. Consumers with higher peak and mid-peak usage patterns would see a decrease in their electricity bills, while those with higher off-peak usage patterns would see an increase.
  - While the current strong supply conditions may allow for such an RPP structure (i.e., peak demand requirements can be easily met), administrative costs could be high (distributors would need to design/implement an opt-in process and associated billing system on an interim basis).

| | Current TOU | New Flat Rate |
|---|---|---|
| 1) Monthly electricity bill- higher peak and mid-peak usage patterns | $172 | $163 |
| 2) Monthly electricity bill- higher off-peak usage patterns | $152 | $163 |

***Note:** 1) assumes a consumer consumption pattern of 45%:30%:25% (Off-peak: Mid-peak: On-peak), while 2) assumes consumer consumption pattern of 80%:10%:10% (Off-peak: Mid-peak: On-peak). Estimates are based on OEB's online electricity bill calculator (for Toronto Hydro-November 2016 rates)

# 6. Rate Design Initiatives (cont'd)

**Considerations**

- The decision to undertake smart meter investments was partly justified on the basis of TOU pricing. If TOU pricing were to be made optional, some stakeholders could question the rationale for smart meter investments.
  - Rationale for offering a flat rate option could focus on providing customers with choice until new pricing plans are rolled out under the RPP roadmap.

- If a flat rate design is introduced, there could be significant consumer opposition to any return to a mandatory TOU.

- After the interim flat rate period, the OEB could offer a wider range of pricing plans to consumers.
  - As part of its RPP review, the OEB will be running pilots with LDCs to assess customer response to alternative time periods and pricing structures.
  - Learnings from these pilots will help inform potential changes to the RPP. Pilots are expected to be in market May 2017 and run for one year.

- Non-RPP Class B electricity consumers currently pay Global Adjustment (GA) on a volumetric basis. Moving them to TOU would provide an incentive to shift consumption to off-peak periods.
  - Consumers, including manufacturers, who are unwilling to shift would face higher costs and likely not be supportive of the changes.
  - The decision to pursue TOU pricing for non-RPP class B consumers will impact proceeds recycling as there is interplay between the two initiatives.

# 7. Reduced Cost of OPG Borrowing

- OPG currently borrows for corporate purposes from the OEFC
- Seek to reduce OPG's borrowing costs and pass on savings to ratepayers by:
  - Reducing or removing the spread that OEFC applies to OPG for any new corporate debt; or
  - Allowing OPG to refinance its existing debt at longer maturities through the OEFC in order to take advantage of the current, favourable interest rate environment.
- Assuming the full spread is removed from all OEFC debt, OPG borrowing costs could be reduced by 50-100 basis points, representing annual savings of about $20-$25 million, increasing to $30-$35 million, as OPG's outstanding OEFC debt rises from ~$3.3 billion in 2016 to ~$4.7 billion in 2020.
- OPG could apply to the OEB as part of its current rate application to flow this benefit to ratepayers.

**Considerations**

- Further work is required to determine potential OPG savings from these initiatives.
- Allowing OPG to refinance would have a negative fiscal impact on the Province.
- Spreads are expected to decline, reducing the relative impact of this change, given lower overall interest rates and reduced volatility.
- Providing OPG with greater access to longer term (20-30 year) debt may also reduce costs:
  - OPG's average term to maturity for OEFC debt is 5.7 years, as compared to 22.2 years for privately financed project debt. This contrasts with most corporations and government which have been working to extend average debt terms in order to take advantage of the low interest rate environment.
  - Longer terms would also better match to the life of OPG's assets.
  - Recently, OEFC has allowed OPG to apply for 50% of its financing requirements in the form of longer term (25-30 year debt). Moving closer to 100% would accelerate this transition.

# 8. End DRC Early for Commercial/Small Industrial Class B Electricity Consumers

- Propose to remove the $0.07/kWh Debt Retirement Charge (DRC) from the bills of commercial/small industrial Class B consumers beginning in 2017, instead of April 1, 2018.
  - **Note:** Class A consumers (e.g., large industrial) would continue to pay DRC until at least April 1, 2018.

**Considerations**

- For a Class B consumer currently paying about $152/MWh, removing the DRC would represent a savings of about 5%.
  - A 50% reduction in the DRC charge would represent a savings of about 2%.

- Alternatively, the reduction of the DRC could be to $0.035/kWh starting in 2017, to provide relief for cap and trade until proceeds recycling is fully operational.

- Residential consumers have had the DRC removed from bills since January 1, 2016. Taking DRC off commercial and small industrial bills would result in equal treatment for these groups of consumers.

- The savings for commercial and small industrial consumers associated with this proposal would drop to zero in April 2018, since this is the current planned date for removing the DRC from non-residential bills.

- Prior to moving forward with this proposal, additional analysis from Legal Services and the MOF would be needed.

# 9. Dedicate Departure Tax

- In connection with the IPO, as a result of leaving the PILs regime and entering the corporate tax regime, Hydro One was deemed to dispose of its assets for proceeds equal to its fair market value, triggering a PILs liability of $2.6 billion (Departure Tax).
- This was paid to the Ontario Electricity Financial Corporation (OEFC), to be dedicated towards repayment of electricity sector stranded debt.
- The Province could explore repurposing some of those funds to the benefit of ratepayers.
- This may reduce the risk that the Ontario Energy Board (OEB) assigns to ratepayers the benefit from an associated tax asset, resulting in lower earnings and decreased share value for Hydro One. This decision is currently before the OEB, as part of Hydro One's Transmission rate application.

**Considerations**

- Cost savings to ratepayers would depend on timing and which ratepayers (e.g., Hydro One customers, or all Ontario customers) will benefit from some or all of the $2.6 billion value.
- While this is a shift from messaging that value from the broadening of ownership of Hydro One is being used pay down debt and fund transit and transportation, the Province could link to electricity infrastructure investments (e.g., as an offset to infrastructure investments already made in the sector, or to specific initiatives such as conservation).
- These funds were paid to the Ontario Electricity Financial Corporation (OEFC), to be dedicated towards repayment of electricity sector stranded debt. Repurposing may have an impact on the defeasance of this debt.

# 10. Cancel/Adjust Renewable Energy Procurements

- The Ministry could consider the following actions to further mitigate future impacts to electricity bills:

| Unallocated/Terminated Capacity | Announced Procurements | Executed Contracts |
|---|---|---|
| A. Do not procure unallocated or terminated capacity | B. Revise FIT 5 target | D. Cancel LRP I contracts |
| | C. Cancel FIT 6 | |

**Overarching Considerations**

- Cost savings associated with reducing or cancelling renewable energy procurements and programs will not reduce current electricity bills, but would result in future cost reductions relative to Ontario Planning Outlook forecasts.
- The IESO estimates implementing options A to C will reduce system costs by approximately $592 million ($2016) between 2019 and 2028, resulting in an average of approximately $0.50/month in savings to a typical residential electricity bill over the same period. [cost reductions from LRP I contract cancellations TBC]
- The microFIT program is winding down end of 2017. Annual microFIT procurement targets have been undersubscribed.
- With a few exceptions (e.g., rollover of unallocated microFIT capacity; addition of terminated microFIT and small FIT capacity to FIT 5), plans for unallocated or terminated capacity are not defined in announcements or existing directions.

**Cancel/Adjust Announced Procurements**

- Amendments to existing directions to the IESO would be required to reduce FIT 5 and cancel FIT 6.
- The FIT 5 procurement is underway with a base target of 150 MW and inclusion of any capacity available from contract terminations under prior small FIT and microFIT procurements. The application window closed on November 25, 2016.

# 10. Cancel/Adjust Renewable Energy Procurements – Existing Contracts

**Cancel Existing LRP I Contracts**

- 16 LRP I contracts (approx. 455 MW) have been executed and projects are under development.
- None have met Key Development Milestones. Total value of LRP I estimated at approx. $1 billion (NPV to 2016).

[Placeholder for IESO: Cost calculation relative to OPO and associated bill impact]

**Considerations**

- To help inform a decision, IESO or OEB could be asked to evaluate and provide guidance to the Ministry on the system need for LRP I projects and potential ratepayer impacts/benefits.
- 13 of 16 LRP I contracts have Indigenous participation. Cancelling LRP I contracts would remove this economic development opportunity and likely damage relationships between Indigenous communities and the government.
- LRP I Contract includes an “Optional Termination” provision allowing IESO to terminate any contract prior to the “Commercial Operation Date” with 6 months written notice.
- The IESO obligations under the Optional Termination provision depend on whether the project has met all “Key Development Milestones”.
  - As no projects have met their Key Development Milestones, the estimated total cost payable to contract holders is about $8 million.

# 10. Cancel/Adjust Renewable Energy Procurements – Existing Contracts (cont'd)

## Legal Analysis

- Under the *Electricity Act, 1998*, the Minister has the authority to amend previous directions without approval from Cabinet. Although an amendment to an existing direction would not require Cabinet approval, it is unlikely that a direction to cancel LRP I contracts could be considered as amending an existing direction. The previous LRP directions set out the broad policy framework that was reflected in the procurement, but the contracts themselves, once executed, are stand alone documents which the IESO had legal authority to execute. Revoking previous LRP directions does not affect that authority or have the effect of cancelling the procurement.
- As a result, any new directive to cancel LRP I contracts would need to be approved by Cabinet, either as part of an LTEP implementation directive to IESO, or pursuant to the overall power to direct IESO with respect to procurements outside the LTEP process. However, there is a risk that such a directive could be subject to challenge.
- ENERGY has previously received advice that there is a high risk that a court would conclude that the Minister has no authority under the *Electricity Act , 1998* to issue a direction requiring IESO to terminate microFIT Conditional Offers and FIT Offer Notices that have already been issued to applicants, because these offers create vested contractual rights and the Minister would require clear legislative authority to interfere with those rights. This reasoning would likely apply equally to any direction or directive to IESO to cancel LRP I contracts.
- Previous advice has also flagged a moderately high risk that the Province could be liable for damages in tort for inducing a breach of contract if it issues a direction to IESO that interferes with vested contractual rights without clear statutory authority to do so. LRP I contract holders could also assert other claims, such as misfeasance in public office.
- The risk and costs associated with potential law suits resulting from the cancellation of contracts requires further analysis, including analysis of whether any statutory amendments would be required to provide clear authority to cancel the contracts. LSB recommends ENERGY seek an opinion from Crown Law Office Civil before proceeding.

# Summary

- Reductions in electricity rates could be achieved by eliminating existing, planned or directed initiatives from the rate-base or shifting these costs to the tax-base.

- The timing of the impact of these rate mitigation initiatives varies.
  - Immediate and near-term impacts can be achieved by shifting costs to the tax-base or changing how certain costs are recovered from consumers or eliminating certain programs.
  - Over the longer term, changes to the electricity supply mix and achieving efficiencies in the electricity market could yield system savings.

- Pursuing the initiatives would require regulatory amendments and working with the electricity sector agencies, LDCs and other stakeholders to implement the initiatives.

# Appendix

# Electricity Consumer Classes

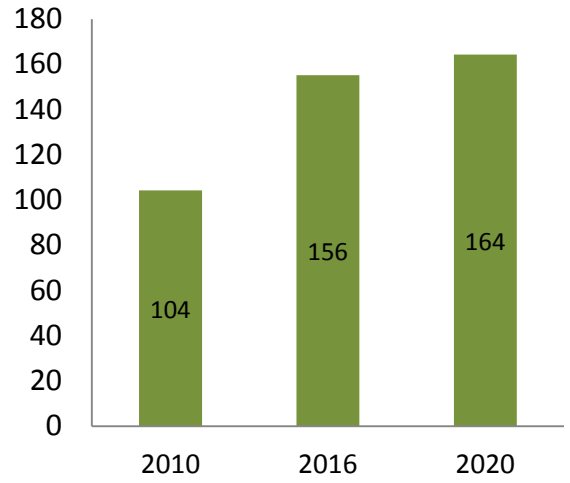
- In Ontario, there are three classes of electricity consumers:

| | Regulated Price Plan | Class B | Class A |
|---|---|---|---|
| **Consumer Types** | • Residential<br>• Small Business<br>• Farms | • Commercial<br>• Institutional<br>• Small industrial | • Large commercial<br>• Large industrial |
| **Load Size** | Below 0.05 MW | Between 0.05 MW and 1 MW | Above 1 MW |
| **Total Consumption** | 58 TWh | 57 TWh | 26 TWh |
| **Share of Consumption** | 41.1% | 40.4% | 18.4% |

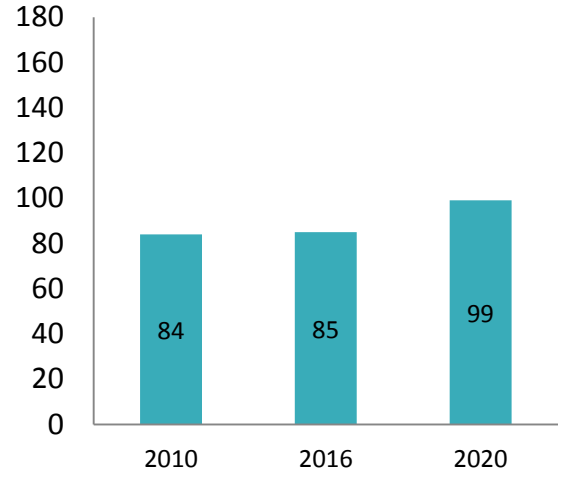
# Prices by Electricity Consumer Class

- Since 2010, average bills for residential consumers (i.e., using 750 kWh/month) have increased by over 50%. Rates are forecast to continue to increase, with residential consumers paying an estimated 6% by 2020.
- Industrial electricity rates have remained relatively flat over the same time period, due primarily to the Industrial Conservation Initiative (ICI). ICI represents a cost shift of about $5/month for residential electricity consumers. Industrial electricity consumers are forecast to see an increase of 16% by and 2020.

**Typical Residential Bill (750/kWh per month)**



**Typical Class A (Industrial) Price ($/MWh)**



**Note:** 2016 represents year-to-date September 2016 for industrial. Cap and trade proceeds recycling is included for the industrial consumer for 2020.

# Rate Mitigation Levers

- To provide further rate relief to Ontario electricity consumers, the government can use one or more of the levers outlined below:
  - **Tax-based Lever:**
    - Provide rebates funded from the tax-base or transfer items currently paid through the rate-base to the tax-base.
  - **Rate-based Lever:**
    - Shifts costs within the rate-base from one customer group to another to achieve electricity system benefits and/or policy goals.
  - **Cap and Trade Proceeds Lever:**
    - Use cap and trade proceeds on initiatives that help reduce greenhouse gas (GHG) emissions from the electricity sector (e.g., recycling proceeds during off-peak periods) while providing benefits to some or all electricity consumers.

# Traditional Rate Mitigation Programs

- Ontario has implemented a number of rate-based programs to help residential and industrial electricity consumers:
  - The Ontario Electricity Support Program (OESP) provides ongoing assistance directly on the bills of eligible low-income electricity consumers
  - The Rural or Remote Rate Protection (RRRP) program is provided to rural and remote residential and farm customers because the cost of distributing power to remote areas is much higher than for urban areas.
  - The Industrial Conservation Initiative (ICI) encourages Ontario's largest consumers to reduce consumption during peak periods while reducing system costs.
- There are also tax-base programs to help manage electricity prices:
  - Rebate the provincial portion of the HST from the electricity bills of residential, small business and farms as of January 1, 2017.
  - Northern Industrial Electricity Rate Program (NIERP), in which participants receive a rebate of two cents per kilowatt hour. On average, industrial electricity prices can be reduced by up to 20%.
- While rate-based programs provide relief to certain electricity consumers, they shift other costs to remaining ratepayers (See Appendix for additional details).

# Driving Down Prices for Consumers

- Since 2013, a number of actions have been taken to drive down prices for consumers wherever possible:
  - Renegotiating the Green Energy Investment Agreement, reducing contract costs by $3.7 billion;
  - Deferring the construction of two new nuclear reactors at Ontario Power Generation's Darlington facility, avoiding an estimated $15 billion in new construction costs;
  - Approving Ontario Power Generation's plans to enable the ongoing operation of Pickering up to 2024, which is expected to save ratepayers as much as $600 million;
  - Reducing Feed-In-Tariff (FIT) prices through annual price reviews, saving ratepayers at least $1.9 billion relative to the 2013 Long-Term Energy Plan (2013 LTEP) forecast; and
  - Suspending the second round of the Large Renewable Procurement (LRP II) process and the Energy-from-Waste Standard Offer Program to save up to $3.8 billion in electricity system costs relative to 2013 LTEP.

# Cost Shifts in the Electricity Sector – Current Programs

- Several programs in the electricity sector “shift costs” from one group of electricity consumers to another:
  - **Rural or Remote Rate Protect** (**RRRP)** is a longstanding program that reduces the delivery charge for rural electricity consumers and is paid for by all consumers in Ontario through a regulatory charge on bills.
  - **Ontario Electricity Support Program (OESP)** is funded via a regulatory charge on consumer bills and provides support for qualifying low income electricity consumers.
  - **Industrial Conservation Initiative (ICI)** empowers large consumers to lower their costs by reducing their demand during peak hours. In the process, ICI shifts costs from large electricity consumers to all other consumers in Ontario.
  - **Industrial Electricity Incentive** (**IEI**) program, offers reduced electricity prices for companies starting or expanding operations in Ontario. All electricity consumers in Ontario pay for the price reduction that IEI participants receive.

# Cost Shifts in the Electricity Sector (Cont'd)

- The tables on the right show the estimated cost shifts that result from existing government programs.
- ICI has had the largest cost shift of all the programs, due to the large size of Global Adjustment (GA) and the way that it is recovered from consumer classes.
- RRRP and OESP impact the regulatory line on consumer bills, while ICI, IEI and conservation affect GA (i.e., Electricity line on bills of Regulated Price Plan consumers).

**Cost Shift Impacts - Residential Bill**

*Typical 750 kWh/month Toronto Hydro consumer*

| *$/month* | 2011 | 2012 | 2013 | 2014 | 2015 | 2016 |
|---|---|---|---|---|---|---|
| ICI | 2.65 | 3.25 | 3.88 | 3.53 | 4.75 | 4.77 |
| RRRP | 0.90 | 0.82 | 0.84 | 0.92 | 0.93 | 0.94 |
| OESP | - | - | - | - | - | 0.84 |
| Conservation | 1.85 | 1.92 | 2.00 | 1.58 | 2.43 | 2.45 |
| IEI | - | - | 0.08 | 0.09 | 0.11 | 0.12 |
| **Total** | **5.41** | **5.99** | **6.81** | **6.13** | **8.21** | **9.12** |

**Cost Shift Impacts - Industrial Bill**

*Typical Class A consumer*

| *$/MWh* | 2011 | 2012 | 2013 | 2014 | 2015 | 2016 |
|---|---|---|---|---|---|---|
| ICI | -22.17 | -26.36 | -30.29 | -25.91 | -33.79 | -33.92 |
| RRRP | 1.20 | 1.10 | 1.12 | 1.23 | 1.24 | 1.25 |
| OESP | - | - | - | - | - | 1.13 |
| Conservation | 1.53 | 1.59 | 1.66 | 1.31 | 2.01 | 2.02 |
| IEI | - | - | 0.07 | 0.08 | 0.09 | 0.10 |
| **Total** | **-19.43** | **-23.67** | **-27.44** | **-23.29** | **-30.45** | **-29.43** |

**Note:** OESP did not come into effect until 2016. The 2016 values represent forecasts and are subject to change.

# Cost Shifts in the Electricity Sector (Cont'd)

- The table on the right shows the total cost for various government electricity programs. These programs are currently funded through the electricity system ratebase.

- Funding of these programs through the fiscal plan would remove these costs from the electricity system (i.e., Placing these costs on the taxbase).

**Cost of Programs**

*By government program*

| *$M* | 2011 | 2012 | 2013 | 2014 | 2015 | 2016 |
|---|---|---|---|---|---|---|
| ICI | 506 | 615 | 736 | 670 | 890 | 893 |
| RRRP | 172 | 156 | 159 | 176 | 174 | 176 |
| OESP | - | - | - | - | - | 158 |
| Conservation | 329 | 339 | 354 | 280 | 425 | 428 |
| IEI | - | - | 15 | 16 | 18 | 19 |

- For example, removing the roughly $900 million of program cost from the Industrial Conservation Initiative (ICI) program would save the typical residential electricity consumer $4.77 per month in 2016.

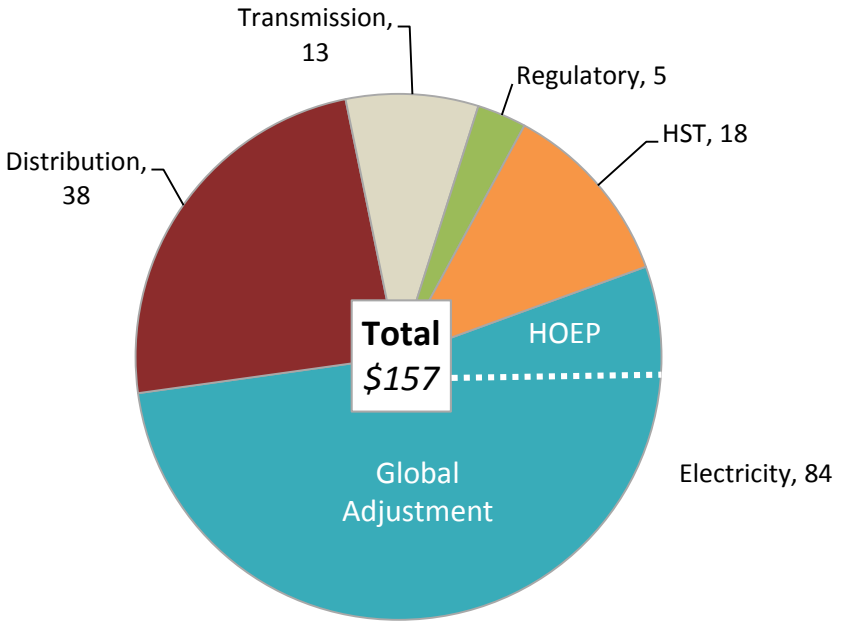
**Note:** OESP did not come into effect until 2016. The 2016 values represent forecasts and are subject to change.

# Residential Electricity Prices

- There are approximately 4.5 million residential consumers in Ontario.
- The Regulated Price Plan includes nearly all residential consumers, as well as small businesses. Regulated Price Plan consumers pay a blended commodity rate regulated by the OEB, which is set every six months.
- For households, the Debt Retirement Charge (DRC) was removed from residential electricity bills as of January 1, 2016.
- In addition, the Ontario Electricity Support Program (OESP) provides an ongoing rate reduction directly on the bills of low-income electricity consumers who have applied and meet the eligibility requirements. The program is funded through the rate base.
- Rural customers, in particular those with electrical heating, pay higher monthly bills.

**Typical Residential Monthly Bills ($)**

*As of November 1, 2016 (750 kWh/month)*



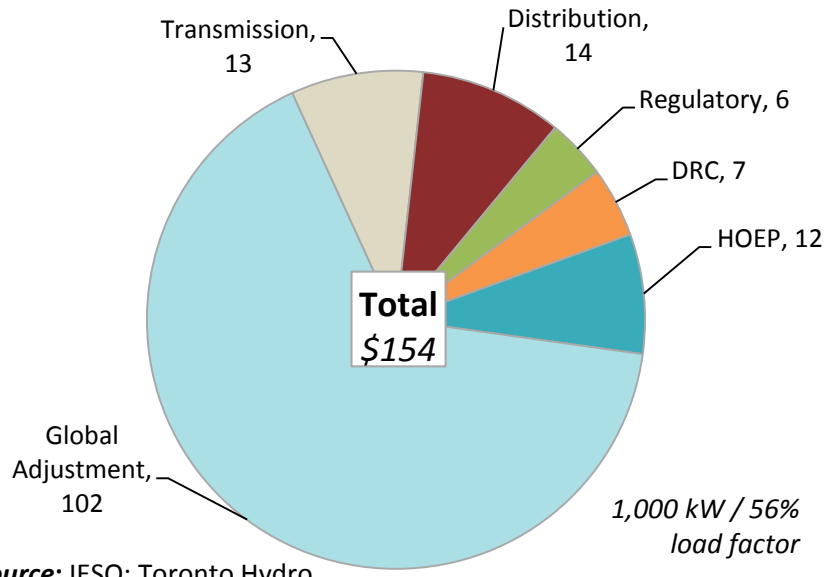
***Source*: OEB, Toronto Hydro**

# Commercial Electricity Prices

- There are approximately 55,000 commercial and institutional consumers in the province. These consumers are Class B consumers, and have separate line items on the electricity bill for HOEP and GA.
- There is a high degree of differentiation amongst consumers within the commercial sector in terms of size and consumption patterns. For example, an elementary school has a much different hourly load profile compared to a full service restaurant. This is an important consideration when looking at the bill impacts of policy options.

**Typical Commercial Price ($/MWh)**

*YTD June 2016 (Non-RPP Class B)*



***Source*:** IESO; Toronto Hydro

- Consumers in the commercial sector do not pay time-of-use prices and have little incentive to shift demand away from high demand hours.
- Targeted pricing programs are currently not available for Class B consumers.

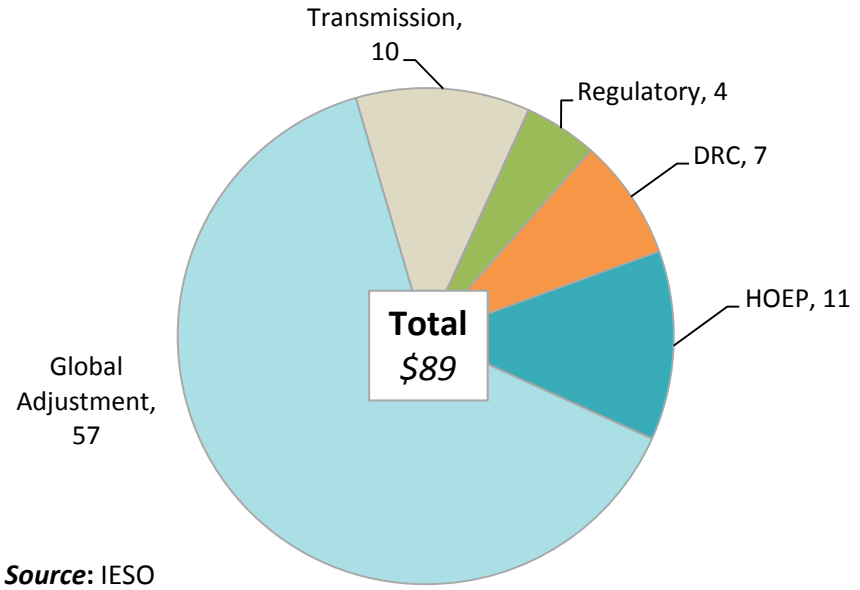
*** Note**: Most commercial consumers receive input tax credits for their HST.

# Industrial Electricity Prices

- There are about 300 large industrial consumers in Ontario.
- Measures in place to mitigate industrial electricity prices include ICI and NIERP.
- ICI lowers costs for eligible large electricity consumers (i.e., those with monthly peak demand exceeding 3 MW) that reduce consumption during peak periods.
  - ICI consumers reduce their electricity rates by 25% on average.

**Typical Large Industrial Price ($/MWh)**

*YTD June 2016*



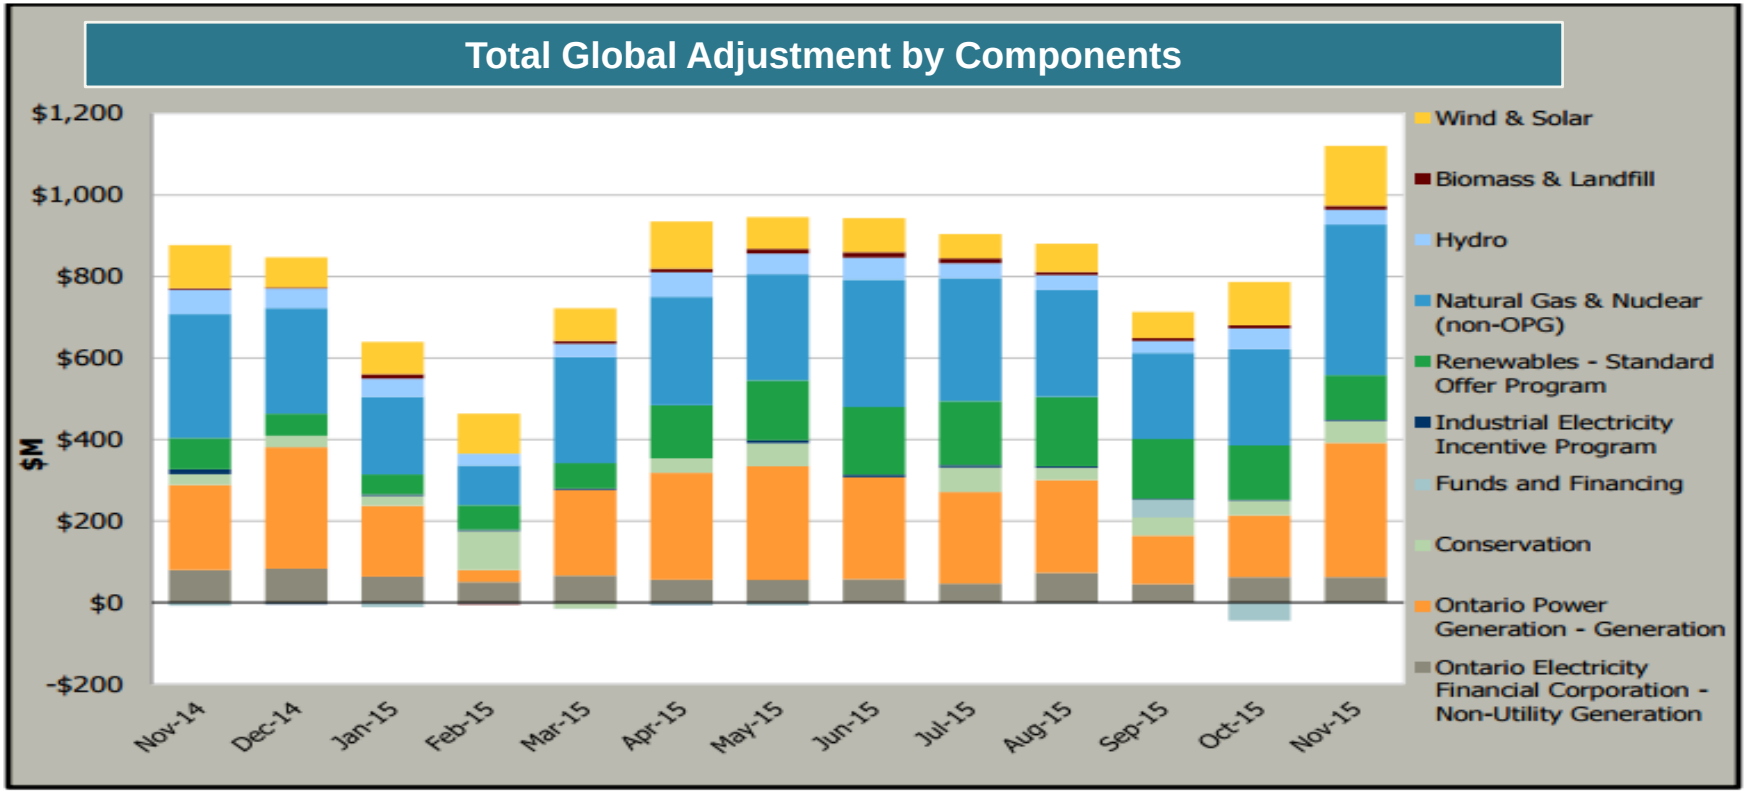
***Source*: IESO**

- Participants in NIERP receive a rebate of $20/MWh. On average, industrial electricity prices are reduced by about 20% through the program, reducing all-in prices to $69/MWh for these consumers. The program is funded through the tax base.

*** Note:** Industrial consumers receive input tax credits for their HST.

# Total Components of Global Adjustment

- Global Adjustment (GA) is a market mechanism that recovers costs from electricity consumers, including the cost of almost all conservation programs in the province (i.e., approximately half a billion dollars in 2016).



**Source:** IESO Monthly Market Report (November 2015)

# Cancel/Adjust Renewable Energy Procurements

# LRP I Pre-Construction Liability Limits

- All 16 successful LRP I developers accepted Optional Termination Provisions when the LRP I Contracts were executed in April 2016.
- If IESO chooses to enact the Optional Termination provision before a project has met all Key Development Milestones, IESO is required to pay pre-construction development costs up to the Pre Construction Liability Limit.
- Pre-construction development costs include costs incurred for feasibility studies, obtaining site access rights, work towards environmental approvals, business development plans, negotiation of contracts for design, equipment, construction and financing, reasonable overhead expenses, and other reasonable costs incurred.
- The Pre Construction Liability Limits are:
  - Non-Rooftop Solar: $250,000 plus $10.00/kW of Contract Capacity
  - Waterpower: $500,000 plus $20.00/kW of Contract Capacity
  - On-Shore Wind: $400,000 plus $2.00/kW of Contract Capacity
- According to the LRP I Optional Termination provision, the developer has a duty to take reasonable steps to mitigate losses, liabilities, costs and damages incurred as a result of the Optional Termination.
  - The IESO will not provide compensation for amounts which are attributable to a developer's failure to take reasonable steps to mitigate.

**Subject:** RE: Price Mitigation Minute

Hi Shajee,

Here's the final TB note for the electricity item.

Thanks,
Madeleine

---

**From:** Shajee Kathirgamanathan [mailto:Shajee.Kathirgamanathan@ofina.on.ca]
**Sent:** September-20-16 2:57 PM
**To:** Morgenstern, Madeleine (TBS)
**Subject:** Price Mitigation Minute

Hi Madeleine,

Hope you're well.

Would you have the finalized Minute from the Electricity Price Mitigation initiative?

I have the attached note, but considering it says Proposed Minute, would there be any sort of document we could have on what was finalized?

Thanks,
Shajee

**TREASURY BOARD / MANAGEMENT BOARD OF CABINET**
**REQUEST ASSESSMENT NOTE**

| | |
|---|---|
| **Ministry:** | Energy |
| **Meeting Date:** | September 12, 2016 |
| **Agenda Class:** | Major |
| **Last reviewed by:** N/A | **Tracking to:** Cabinet - September 12, 2016 |

| **SUBMISSION TITLE:** | Electricity Price Mitigation |
|---|---|

## I. DECISION BEFORE THE BOARD

The Ministry of Energy is requesting approval of a suite of initiatives providing relief to various electricity consumer classes.

## II. RECOMMENDATIONS:

| | |
|---|---|
| • Approve a suite of initiatives to provide relief to various electricity consumer classes (pending Cabinet policy approval):<br>– Providing an 8% rebate to Regulated Price Plan eligible consumers;<br>– Expanding the Industrial Conservation Initiative;<br>– Updating the Rural or Remote Rate Protection program; and,<br>– Using $270M in cap and trade proceeds to ensure industrial and commercial consumers are not negatively impacted by cap and trade by providing a modest reduction in rates. Balance of proceeds intended for electricity relief through the Climate Change Action Plan ($60M), could provide some fiscal offsets.<br>• Approve $300M in 2016-17 in Supplementary Estimates for electricity price mitigation.<br>• Direct the Ministry to report back to TB/MBC through the annual planning process with updated future year impacts, and obtain any required TB/MBC approvals to implement the initiatives.<br>• Recommend proceeding to Cabinet with the proposed legislation and amendments to existing regulations to implement the initiatives. | *Board Judgment* |

## III. FINANCIAL SUMMARY

| **$ Millions** | **2016-17** | **2017-18** | **2018-19** |
|---|---|---|---|
| Initiative cost requested | 300.0 | 1006.0 | 1004.0 |
| Initiative cost recommended | 300.0 | 1006.0 | 1004.0 |
| Recommended program base | 300.0 | 1006.0 | 1004.0 |
| Offset Recommended – Applies if cap and trade proceeds diverted to in-plan initiatives | 0.0 | (60.0) | (60.0) |
| Total Fiscal Impact | 300.0 | 946.0 | 944.0 |

## IV. KEY COMMENTS AND CONSIDERATIONS

Context

Electricity costs have increased as the province has made investments in clean energy generation and modernized electricity infrastructure. Electricity bills are expected to continue to increase as more renewable energy projects come online. Since 2010, average bills for residential consumers (i.e., using 750 kWh/month) have increased by over 50%. Rates paid by commercial and industrial electricity consumers have increased by 56% and 6% respectively over the same period. Appendix C provides supporting background information.

As part of the 2016 Budget, the government committed to offset the impact of cap and trade in Ontario for commercial and industrial electricity consumers, while also providing a benefit of up to $2 per month for residential electricity consumers. The Climate Change Action Plan (CCAP) included up to $1.32B over 4 years to help keep electricity rates affordable.

The Ontario Clean Energy Benefit (OCEB) expired December 31, 2015, as part of the originally planned, five-year legislated program put in place as a broad-based, transitional measure to a cleaner electricity system. OCEB was also put in place following the implementation of the Harmonised Sales Tax (HST). Unlike the previous provincial Retail Sales Tax (RST), the HST (and GST) included electricity in the taxable base. With the end of OCEB, the government ended the electricity Debt Retirement Charge (DRC) on residential users earlier than planned, as of January 1, 2016, and also put in place the low-income targeted Ontario Electricity Support Program (OESP).

In order to achieve the Budget commitment and additional price mitigation, while delivering on the Province's climate change objectives, the Ministry of Energy has developed price mitigation initiatives that consider tax-based levers, cap and trade proceeds, and shifting costs within the rate-base.

Proposal

The Ministry is proposing the following to mitigate electricity prices for consumers (Appendix D provides more information on each item below):

- Provide an 8% rebate on the pre-tax cost of electricity to consumers eligible for the Regulated Price Plan (i.e., residential, small business and farms), equivalent to the provincial portion of HST.
- Expand Industrial Conservation Initiative (ICI) eligibility by lowering the threshold to 1 MW, to provide support to additional commercial, institutional and small industrial consumers.
- Update the Rural or Remote Rate Protection (RRRP) program, to provide relief to rural customers.
- Use cap and trade proceeds to provide a modest rate reduction for commercial and industrial electricity consumers.

Public high-profile communications would coincide with introduction of legislation (September 2016). Currently, the 8% rebate would be available starting January 1, 2017, along with updating the RRRP. Expanding ICI won't be added to bills until 2018 due to the time required to implement the expansion and for billing changes. The impact of cap and trade would not be added to electricity bills until 2017.

The following tables provide an overview of the four initiatives, recipients, projected financial impact, grouping them based on whether taxpayers or ratepayers cover the costs:

| | Measure | Annual Impact | Targeted Recipients |
|---|---|---|---|
| **Taxpayers cover the costs (Potential to impact the Province's Fiscal Plan)** | | | |
| **1.** | 8% Rebate to Regulated Price Plan | Fiscal<br>About $1.0B | Residential, small business and farms, and other small users |
| **2a.** | Use cap and trade proceeds to provide a modest reduction in rates for commercial and industrial electricity consumers. (Implementation details under development). | ($270M) in cap and trade proceeds to offset $270M in costs for reducing rates<br><br>No Fiscal Impact | The CCAP allocated up to $330M/year in cap and trade proceeds for electricity price mitigation.<br><br>See item 2b. regarding the residual amount of cap and trade proceeds ($330M - $270M = $60M) |
| **2b.** | While CCAP anticipated $330M/year was required to keep electricity affordable, the residential portion of this commitment is met by the 8% rebate. As such, some of the CCAP allocated proceeds can be redirected to other GHG reduction initiatives already in the fiscal plan. | Fiscal<br>($60M) | Provides fiscal plan flexibility of $60M/year if these proceeds are diverted to offset costs of other existing in-plan initiatives that reduce GHG emissions. |
| | **Total Fiscal Impact** | $946M | Matches Financial Summary on page 1 for 2017-18 |

| | Measure | Annual Impact | Targeted Recipients |
|---|---|---|---|
| **Ratepayers cover the costs (No impact to the Province's Fiscal Plan)** | | | |
| **3** | Expanding ICI eligibility to customers above 1MW in all sectors | Rate base<br>($47M/$82M)** | Intermediate and large-sized industrial, commercial and institutional consumers above 1MW in all sectors |
| **4.** | Updating Rural or Remote Rate Protection | Rate base<br>($110M) | Residents in rural or remote locations: Hydro One's lowest-density R2 customers. |

** Short-term/Long-term rate base impact, where short term is one year after expanded eligibility takes place and long-term is expected impact once new customers have time to change behavior.

Due to the nature of the ICI Global Adjustment mechanism and cost recovery of RRRP, the rate base proposals (#3 and #4) above benefit the targeted recipients, but come at a cost to all other electricity ratepayers in Ontario.

The following table from the Ministry highlights the benefits by electricity consumer class.

| | Average Annual Fiscal Impact | Average Annual Greenhouse Gas Reduction Account (GGRA) Proceeds Impact | Regulated Price Plan (Residential) Benefit | | Class B (Commercial) Benefit | Class A (Industrial) Benefit | |
|---|---|---|---|---|---|---|---|
| | | | *Average (750 kWh/ month)* | *Rural (1000 kWh/ month)* | | *Existing* | *New* |
| • 8% rebate to Regulated Price Plan eligible consumers<br>• ICI Expansion<br>• RRRP Update<br>• Proceeds Recycling | $1.0 billion annually | $0.27 billion annually<br>(Reduction of $0.06 billion annually or $0.24 billion total from the CCAP commitment) | -$11/ month<br>(-8%) | -$45/ month<br>(-20%) | -$3/MWh<br>(-2%) | -$3/ MWh<br>(-3%) | Up to -$52/MWh<br>(-34%) |

**Notes:** * The above benefits do not include the cost of ICI expansion and the RRRP update (total impact of $1.74/MWh). Proceeds recycling is net of the cost of carbon and represents an estimated average of the proceeds required over the first compliance period (2017-2020).

See Appendix E for more illustrative bill impacts. See Appendix F for an electricity bill mock-up.

Fiscal Impact

The Ministry estimates proceeding with an 8% Regulated Price Plan (RPP) rebate without a cap would cost an estimated $1.0 billion per year. The Ministry's estimate of $300M needed for 2016-17 (to cover the first three months of 2017 when the 8% rebate applies) will be addressed through Supplementary Estimates. The Ministry will use the annual planning process to update future year impacts.

The Ministry also indicates the current proposal would use cap and trade proceeds to eliminate carbon price impacts/ grid emission reductions to ratepayers, as was established through the CCAP. This proposal does not require the full $330M/year notionally allocated through the CCAP, which could provide fiscal plan flexibility of about $60M per year to commit to other GHG reduction initiatives in the fiscal plan.

Cap and Trade Proceeds

The 2016 Budget committed to offset the impact of cap and trade for commercial and industrial consumers, while also providing a benefit of up to $2 per month for residential consumers (on average). While residential and other consumers would benefit from the 8% pre-tax rebate, this does not apply to non-Regulated Price Plan eligible consumers (larger industrial, commercial, and other consumers). As such, the Ministry is proposing to direct a portion of cap and trade auction proceeds to industrial and commercial consumers not in the RPP to provide a modest rate reduction. This proposal fulfills the policy objective established in the Climate Change Action Plan to eliminate carbon price impacts/ grid emission reductions to electricity ratepayers.

To be characterized as a regulatory charge under the cap and trade program, auction proceeds need to be spent on programs that are reasonably likely to reduce or support the reduction of greenhouse gases. The Ministry has indicated that their proposal would use proceeds to offset the costs of committed investments that reduce greenhouse gases (e.g., non-emitting generation and conservation programs) and incent fuel-switching away from fossil fuels.

Considerations – Implementation

At this point, the Ministry has presented a high level overview of major implementation pieces:

- New legislation would be required to enable the 8% rebate proposal. Legislation would closely mirror the Ontario Clean Energy Benefit Act, 2010. If passed, the legislation would require a general regulation. Amendments would also be required to various regulations to expand ICI and RRRP.
- On-bill rebate delivery would likely require adjustments to LDC billing systems, which could impact delivery costs and timelines. The Ministry indicates it will consult with LDCs (possibly through the Ontario Energy Board) to accurately assess these impacts once the program has been announced. In the past, LDCs have asked for at least six months' notice when implementing billing system changes. Timing concerns may be alleviated by allowing LDCs to provide retroactive payments rebates if their systems cannot be updated in time for January 1, 2017. This was done with the OCEB.
- Detailed messaging on bills could be implemented. The rebate would not be directly linked to HST. With electricity invoices containing multiple line items and LDC bill presentment varying widely, direction on rebate presentment will need to be flexible to allow LDCs to incorporate easily while ensuring government-preferred branding and messaging is conveyed.
- The Ministry will need to continue to consult with the Independent Electricity System Operator (IESO), Ontario Energy Board (OEB) and LDCs regarding implementation of proceeds recycling.

Legal Considerations

8% Rebate (shift costs from rate-base to tax base by providing a rebate equal to the provincial portion of HST):

- Providing the contemplated rebate under the proposed Bill does not, in and of itself, give rise to legal issues. As policy direction is given on the specifics of supporting regulations, any associated legal risks can be identified.

ICI Expansion (shift costs within rate-base by expanding eligibility for the ICI program to consumers of >1 MW):

- To establish that the charge is legitimate, it must be established that the purpose and effect of the charge is to facilitate the maintenance of a financially viable electricity system by way of load management or some other feature under which those who are subsidized provide an overall system benefit enjoyed by those who subsidize them.

RRRP Update (shift costs within the rate-base by increasing the RRRP benefit paid to rural or remote customers):

- Increasing the amount of revenue devoted to the RRRP or expanding the scope of consumers eligible for the program does not raise new legal risk. There is a good argument that the RRRP is a regulatory charge, as it socializes some of the costs of distributing electricity to rural consumers. Overall the risk that the RRRP would be characterized as a tax is assessed as moderate (meaning equally good arguments on both sides).

Cap and Trade Proceeds Recycling (reduce impact on rate base and tax base by directing cap and trade auction proceeds to industrial consumers):

- To be characterized as regulatory charges under the cap and trade program, auction revenues should be spent on programs that reduce GHGs.

Other Considerations

- This request does not align with the 2016 Budget fiscal plan and there are no proposed offsets for the 8% rebate.
- The 8% rebate would provide a typical residential consumer about an $11 per month benefit on average, exceeding the Budget 2016 $2 per month on average cap and trade commitment. The proposal to offer a modest rate reduction for industrial and commercial consumers also exceeds the Budget commitment to simply offset the impact of cap and trade on these consumers.
- Reductions in electricity prices that do not consider consumption amounts (e.g., without the cap in the previous OCEB program) do not promote electricity conservation and may be seen as unaligned with climate change objectives.
- Other price mitigation measures introduced following the implementation of the HST, as well as the end of OCEB, would continue.
  - Both the energy portion of the Ontario Energy and Property Tax Credit (OEPTC) and NOEC were introduced/ enhanced following the introduction of the HST and have a significant annual fiscal cost (totalling about $500 million annually).
  - The DRC on residential consumers was ended early, as of January 1, 2016 (about a $340 million impact in 2016-17).
  - OESP is a low-income targeted program funded by electricity consumers through the electricity rate base.

## APPENDIX A: PROPOSED MINUTE

Approve electricity price mitigation for residential, commercial and industrial consumers.

In this regard:

i) Approve a suite of initiatives to provide relief to various electricity consumer classes:

   a) Provide a rebate of 8% on the pre-tax cost of electricity for all electricity consumers eligible to be billed under the Ontario Energy Board's Regulated Price Plan (RPP); and any other consumers who would be eligible for RPP if their electricity account was with a licensed distributor, starting January 1, 2017.

   b) Increase the total amount of rate protection available to R2 low density electricity consumers under the Rural or Remote Rate Protection Program (RRRP) by increasing the subsidy by $110 million from its current level of $127 million which has been capped since 2003.

   c) Implement a mechanism to periodically adjust the total annual amount of rate protection available to R2 low density electricity consumers under the RRRP, effective on or after January 1, 2018.

   d) Expand eligibility for participation in the Industrial Conservation Initiative (ICI) to smaller industrial, institutional and commercial customers by lowering the eligibility threshold to 1 MW and removing restrictions on eligible sectors.

   e) Provide a modest rate reduction to commercial and industrial electricity consumers using cap and trade auction proceeds to offset the cost.

ii) Recommend to Cabinet the proposed Ontario Rebate for Electricity Consumers Act, 2016 and that the Ministry proceed to Legislation and Regulations Committee before the end of 2016 with supporting regulations under the proposed Ontario Rebate for Electricity Consumers Act, 2016.

iii) Approve the implementation details associated with the suite of initiatives:

   a) Approve:

      1. The creation of a new item entitled "Ontario Rebate for Electricity Consumers" in the Electricity Price Mitigation Program (Vote/Item 2905-3).

      2. The creation of a new Transfer Payment entitled "Ontario Rebate for Electricity Consumers" in Rebate for Electricity Consumers (Vote/Item 2905-3).

      3. An expenditure increase in the amount of $300,000,000 in 2016-17 in the Transfer Payment entitled "Rebate for Electricity Consumers[1]" in Rebate for Electricity Consumers (Vote/Item 2905-3). Direct the Ministry to return any under-spending to the Treasury Board Contingency Fund.

[1] Pending approval of the proposed Ontario Rebate for Electricity Consumers Act, 2016

b) Note:

1. Funding for 2016-17 will be implemented through Supplementary Estimates in the Fall of 2016.

2. Future year impacts of $1,006,000,000 in 2017-18 and $1,004,000,000 in 2018-19, and $1,004,000,000 in 2019-20 and ongoing.

c) Direct the Ministry to report back to Treasury Board/Management Board of Cabinet in the 2017-18 Program Review, Renewal, and Transformation process on updated future year impacts, and a potential offset strategy for resource requirements to support program implementation

iv) Further to the Cabinet Minute of May 11, 2016 and the Treasury Board Minute of May 19, 2016, note the reallocation of cap and trade auction proceeds from the up to $1,320,000,000 that was previously allocated through the Climate Change Action Plan for electricity price mitigation, as follows:

a) The Ministry of Energy to work with the Ministry of the Environment and Climate Change, Treasury Board Secretariat, Ministry of Finance, Cabinet Office and Office of the Premier, to allocate up to $1,080,000,000, from 2017-18 to 2020-21, of Cap and Trade auction proceeds to address rate-impacts on non-Regulated Price Plan electricity consumers (e.g., industrial, commercial and institutional) related to cap and trade and the expansion of other rate-based programs, subject to the evaluation by the Minister of the Environment and Climate Change.

In this regard:

1) Direct the Ministry of Energy to work with the Ministry of the Environment and Climate Change and report back to Cabinet by the end of 2016 with options on the appropriate mechanism.

b) The remaining up to $240,000,000, from 2017-18 to 2020-21, which was previously allocated in the Climate Change Action Plan to eliminate carbon price impacts/ grid emission reductions to ratepayers, to be used for other existing initiatives within the fiscal plan and the Climate Change Action Plan that reduce greenhouse gas emissions, subject to the evaluation by the Minister of the Environment and Climate Change.

In this regard:

1) Direct the Ministry of the Environment and Climate Change to work with Treasury Board Secretariat and Ministry of Finance to identify other existing initiatives within the fiscal plan and the Climate Change Action Plan that reduce greenhouse gas emissions that can be funded with the remaining up to $240,000,000, from 2017-18 to 2020-21.

v) To support implementation of electricity price mitigation, the Ministry is proceeding with the following amendments to existing regulations:

a) Amendments to Ontario Regulation 429/04 (Adjustments Under Section 25.33 of the Act) made under the Electricity Act, 1998 to lower the Industrial Conservation Initiative (ICI) threshold to 1 megawatt and allow electricity consumers and market participants between 1 MW and 5 MW to opt in.

b) Amendments to Ontario Regulation 442/01 (Rural or Remote Electricity Rate Protection) made under the Ontario Energy Board Act, 1998, to increase support through the Rural or Remote Rate Protection Plan to R2 low density electricity customers and provide for a periodic adjustment mechanism.

vi) Direct the Ministry to work with Office of the Premier and Cabinet Office on the development and implementation of an integrated communications strategy.

# APPENDIX B: FINANCIAL TABLES

| FINANCIAL IMPACTS: CHANGES TO EXPENSE AND REVENUE | | | | | TABLE B1 |
|---|---|---|---|---|---|
| | | *Fiscal Plan Basis* | | | *Appropriations Basis* |

| **Total Fiscal Impact (draw from c-funds)** | | **300.0000** | **946.0000** | **940.0000** | **0.0000** |

# APPENDIX C: ELECTRICITY SECTOR BACKGROUND

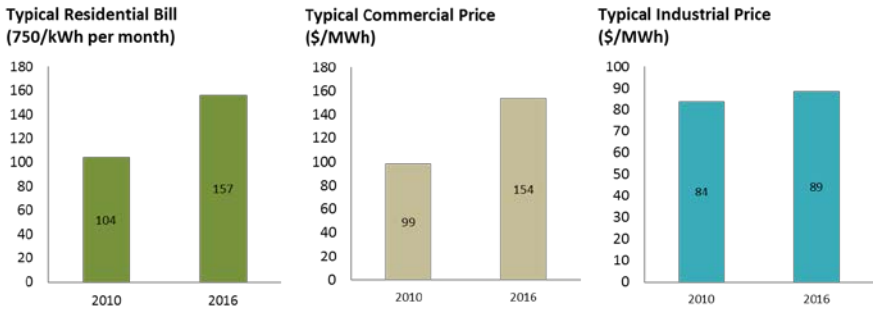
The Ministry has provided the following information to provide electricity sector context this item.

There are three classes of electricity consumers:

| | Regulated Price Plan | Class B | Class A |
|---|---|---|---|
| **Consumer Types** | • Residential<br>• Small Business<br>• Farms | • Commercial<br>• Institutional<br>• Small industrial | • Large commercial<br>• Large industrial |
| **Load Size** | Below 0.05 MW | Between 0.05 MW and 3 MW | Above 3 MW* |
| **Total Consumption** | 58 TWh | 57 TWh | 26 TWh |
| **Share of Consumption** | 41.1% | 40.4% | 18.4% |

*** Note:** Consumers with peak demand between 3-5 MW in the manufacturing, mining, refrigerated warehousing, greenhouses and data-processing industries are currently eligible for Class A. All other 3-5MW consumers are Class B.

Since 2010, average bills for residential consumers (i.e., using 750 kWh/month) have increased by over 50%. Rates paid by commercial and industrial electricity consumers have increased by 56% and 6% respectively over the same period.



**Note:** 2016 represents May 2016 for residential and YTD June 2016 for commercial and industrial.

Existing Rate Mitigation efforts are on-going:

- Ontario currently provides rate mitigation to various electricity consumer classes through a combination of tax-based and rate-based programs.
  - For example, Northern Ontario residential electricity consumers receive tax credits in recognition of higher electricity costs in the north and rural consumers receive a subsidy funded through the rate-base due to the higher cost of delivering power to rural areas.
  - As of 2016, the government removed the Debt Retirement Charge (DRC) from residential electricity bills. While this saves a typical residential electricity ratepayer about $60 per year, it is less than the benefit previously provided through the Ontario Clean Energy Benefit (OCEB).
  - The Ontario Electricity Support Program (OESP) provides ongoing assistance directly on the bills of eligible low-income electricity consumers.

- The Industrial Conservation Initiative (ICI) encourages Ontario's largest consumers to reduce consumption during peak periods while reducing system costs.
- The Rural or Remote Rate Protection (RRRP) program is provided to rural or remote residential and farm customers because the cost of distributing power to remote areas is much higher than for urban areas.

- Because electricity costs must be fully recovered from electricity consumers, rate mitigation funded through the rate-base often represents a shifting of costs from one consumer group to another (i.e., industrial to residential and commercial consumers).
  - Rate-based initiatives are generally associated with incenting changes in behaviour that provide electricity system benefits (i.e., shifting electricity consumption from on-peak to off-peak periods).

The table below shows the estimated cost shifts in the province's electricity system that result from three existing government programs (i.e., ICI, RRRP and OESP):

| Cost Shift Impact | 2011 | 2012 | 2013 | 2014 | 2015 | 2016 |
|---|---|---|---|---|---|---|
| Residential Bill ($/month for 750 kWh) | 3.55 | 4.07 | 3.85 | 4.46 | 5.68 | 6.55 |
| Commercial – Class B ($/MWh) | 4.74 | 5.43 | 5.14 | 5.94 | 7.57 | 8.73 |
| Industrial – Class A ($/MWh) | -20.97 | -25.26 | -22.38 | -24.68 | -32.56 | -31.55 |

**Note:** Negative values indicate a benefit; positive values denote an incremental charge.

Since 2013, a number of actions have and are being taken to reduce overall electricity system costs. Despite these actions to reduce system costs, electricity rates continue to increase for consumers:

- Renegotiating the Green Energy Investment Agreement, reducing contract costs by $3.7 billion;
- Deferring the construction of two new nuclear reactors at Ontario Power Generation's Darlington facility, avoiding an estimated $15 billion in new construction costs;
- Approving Ontario Power Generation's plans to enable the ongoing operation of Pickering up to 2024, which is expected to save ratepayers as much as $600 million.
- Reducing Feed-In-Tariff (FIT) prices through annual price reviews, saving ratepayers at least $1.9 billion relative to the 2013 Long-Term Energy Plan (2013 LTEP) forecast; and
- Removing an expected $3.3 billion in Large Renewable Procurement (LRP) costs relative to the 2013 Long-Term Energy Plan (2013 LTEP) forecast, based on the results of the first phase of the LRP.

## APPENDIX D: FURTHER INFORMATION SUPPORTING PROPOSED INITIATIVES

The following information has been provided by the Ministry.

**1. Provide an 8% rebate to consumers eligible for the Regulated Price Plan* (i.e., residential, small business and farms), equivalent to the provincial portion of HST**

The Ministry is proposing to introduce legislation/regulation to provide a rebate of 8% to consumers eligible for the Regulated Price Plan. The below table indicates which consumers would or would not receive the benefit. This would be equivalent to the provincial portion of the HST.

- Those ineligible to receive the 8% rebate will benefit from one or more of the other initiatives under this proposal (e.g., ICI expansion, proceeds recycling, etc).
- An HST exemption would require federal approval. Engaging in discussions with the federal government would take time and would likely result in not meeting the targeted implementation date.

| **Eligible for the 8% rebate** (< 50 kW or < 250,000 kWh/year) | **Not eligible for the 8% rebate** (> 50 kW or > 250,000 kWh/year) |
|---|---|
| • Residential Regulated Price Plan consumers<br>• Residential retail consumers<br>• Multi-unit residential buildings and other facilities used as residential rental units<br>• Long-term care homes and school residences<br>• Farms eligible for Regulated Price Plan (Including Class B farms that opted out of the Regulated Price Plan)<br>• Small businesses<br>– Coffee / snack retailer<br>– Convenience store<br>– Apparel store<br>– Hair salon<br>– Small insurance office | • Class A consumers<br>– Manufacturer<br>– Large grocery store<br>– Mines<br>– Auto assembly plants<br>• Class B consumers<br>– Commercial offices (low rise)<br>– Hotel<br>– General warehousing |

**2. Expand ICI eligibility by lowering the threshold to 1 MW, to provide support to Class B electricity consumers (i.e., commercial, institutional and small industrial)**

Currently, electricity consumers over 5 MW and consumers from 3-5 MW in certain energy intensive sectors are eligible for ICI (i.e., approximately 300 Class A consumers). Consumers participating in ICI include the following sectors: pulp and paper, auto, manufacturing, chemicals and mines.

ICI would be expanded so that all consumers over 1 MW are eligible for the program, which would (the benefit would be seen by consumers starting in 2018):

- Reduce electricity peak demand and electricity system costs by incenting more consumers to lower their electricity demand during peak periods;
- Reduce electricity bills for new ICI participants who are able to reduce their electricity demand during peak demand periods; and
- Increase the electricity bills for non-ICI participants to ensure full cost recovery in the electricity system.

| | Benefit to New ICI Participants | System Benefit | Financial Impact | Residential Bill Impact |
|---|---|---|---|---|
| | Bill Savings | Peak Demand Reduction (MW) | GA shifted to Class B ($M) | |
| Short-term | Up to 21% | 80 | 47 | Increase of $0.42/month |
| Long-term | Up to 34% | 165 | 82 | Increase of $0.74/month |

The different impacts refer to the amount of time it takes for new Class A consumers to respond to the expanded ICI eligibility. The bill impacts assume a 25% uptake, which would increase Class A consumption by roughly 3 TWh, leaving an estimated 54 TWh in Class B that are either between 0.05-1 MW or choose not to opt in to ICI. This would represent an estimated 300 additional consumers in ICI, though they would represent a much smaller share of the consumption than the 300 consumers currently participating. Newly eligible consumers in the program would mostly fall into the small industrial, institutional and commercial category, including: automotive supply chain companies, office tower, large shopping mall, greenhouses and others.

## 3. Update the Rural or Remote Rate Protection (RRRP) program, to provide relief to rural customers

The Ministry is proposing to provide an additional $110M in rate protection to eligible rural or remote electricity consumers, and consider options to periodically adjust the amount of rate protection available to these consumers going forward.

RRRP is a rate-based funded program that helps offset the higher costs to distribute electricity to Ontario residents who live in rural or remote locations all across the Province.

- Today, RRRP is a $175M program. For an average residential customer, the cost of supporting RRRP is roughly $1 per month. For other customers, the cost can range from $65 for a greenhouse to $8,000 for a medium industrial.
- The majority of the program funding ($127M) provided to Hydro One's lowest-density customers – classified as R2 customers. There are approximately 329,000 R2 customers. The current program provides a rebate of $31.50. The proposed update to the program would increase the benefit to $60/month
- RRRP funding supporting R2 customers has been capped at the current level since 2003. As a result, the impact of its assistance has diluted over time as electricity costs have risen.

An additional $110M in program funding would see an increased benefit of ~$28 /month. This would bring R2 bills in line with Hydro One R1 (medium density) bills at 1000kWh.

- This would increase the R2 portion of the RRRP to $237 million with a monthly impact on an average residential consumer of ~$0.60.
- The RRRP could be indexed at inflation or "trued up" on a regular basis to ensure the benefit remains constant.

## 4. Recycle cap and trade proceeds to commercial and industrial electricity consumers to provide a modest reduction in rates

The 2016 Budget committed to offset the impact of cap and trade for commercial and industrial consumers, while also providing a benefit of up to $2 per month for residential consumers.

- To meet the 2016 Budget commitment, the Climate Change Action Plan (CCAP), committed $1.3 billion from the GGRA over the first compliance period (2017-2020).
- However, providing an 8% rebate to Regulated Price Plan consumers would allow for GGRA proceeds previously committed to residential consumers to be redirected to other GHG reduction initiatives in the fiscal plan.

The rate reduction proposal would provide additional benefit to commercial and industrial consumers, while requiring an estimated $60 million less per year (i.e., a reduction of $240M over the first four year compliance period).

# APPENDIX E: ILLUSTRATIVE BILL IMPACTS

The Ministry has provided the following illustrative bill impacts:

| | Current Bill ( before tax) | Current Rate mitigation initiatives* | New Rate Mitigation initiatives | New Bill (before tax) |
|---|---|---|---|---|
| Average Residential (Toronto – 750 kWh/month) | $139 /month | N/A | 8% pre-tax rebate: - $11 | $128 /month |
| Rural Residential (Hydro One R2 – 1000 kWh/month) | $229 /month | RRRP: –$32 | 8% pre-tax rebate + Updated RRRP: - $45 | $184 /month |
| Low-income Residential ** (Toronto – 750 kWh/month) | $101 /month | OESP: -$38 | 8% pre-tax rebate: - $8 | $93 /month |
| Small Business (Toronto – 403,200 kWh/month) | $149 /MWh | N/A | 8% pre-tax rebate: - $12/MWh | $137 /MWh |
| Small Farm (Hydro One R1 – 4,000 kWh/month) | $203 /MWh | N/A | 8% pre-tax rebate: - $16/MWh | $187 /MWh |

**Notes:**

***** Some residential consumers can also receive tax credits based on income, age and geography (Northern Ontario Energy Credit and Ontario Energy and Property Tax Credit). These credits are delivered through the Trillium Tax Credit and can be as high as $1,332 per year for a family.

** Income of less than $28,000, family of 4.

The above benefits do not include the cost of ICI expansion and the RRRP update (total impact of $1.74/MWh). Totals may not add due to rounding.

| | Current Rate | Current Rate mitigation initiatives* | New Rate Mitigation initiatives | New Rate |
|---|---|---|---|---|
| Large Institutional (Toronto – distribution-connected, 10 MW) | $108 /MWh | ICI: -$49/MWh | Proceeds Recycling: -$2.60/MWh (2017-2020 average) | $105 /MWh |
| Large Industrial (Timmins – transmission-connected, 10 MW) | $69 /MWh | ICI + NIERP: -$69/MWh | Proceeds Recycling: -$2.60/MWh | $66 /MWh |
| Small Industrial – opt-in to ICI (Toronto – 2 MW) | $152 /MWh | N/A | Proceeds Recycling + ICI: Up to -$52/MWh | $100 /MWh |
| Large Commercial – does not opt-in to ICI (Toronto – 2 MW) | $152 /MWh | N/A | Proceeds Recycling: -$2.60/MWh | $149 /MWh |
| Small Institutional (Toronto – 500 kw) | $154 /MWh | N/A | Proceeds Recycling: -$2.60/MWh | $151 /MWh |

**Notes:**

The above benefits do not include the cost of ICI expansion and the RRRP update (total impact of $1.74/MWh). Proceeds recycling is net of the cost of carbon and represents an estimated average of the proceeds required over the first compliance period (2017-2020).

**Note:** Final bill presentment pending submission to LRC.

## APPENDIX G: BACKGROUND CONTEXT

**Budget commitment** (*2016 Ontario Budget - Chapter I: Building Prosperity and Creating Jobs*)**:**

The government will also take steps to ensure that the net impact of cap and trade would not result in an overall increase in electricity costs for commercial and industrial consumers, and that there would be a modest benefit of up to $2 per month, on average, to residential consumers.

**CCAP public document** (under *Action Area – Buildings and Homes: Reduce emissions from fossil-fuel use in buildings*)**:**

Keep Electricity Rates Affordable: Use cap and trade proceeds to offset the cost of greenhouse gas pollution reduction initiatives that are currently funded by residential and industrial consumers through their bills.

**CCAP policy minute** (May 11, 2016)**:**

ENERGY develop additional options to addressing rate-impacts on electricity consumers and work with MOECC, the Premier's Office and Cabinet Office regarding the selected option for inclusion in the action plan

**CCAP TB/MBC minute** (May 19, 2016)**:**

i) Approve-in-principle the following estimated ranges to guide potential investment of cap and trade proceeds over four years, from 2017-18 to 2020-21, should proceeds be available:

| **CCAP Action** | **Initiative** | **Potential Funding range from proceeds over 4-year period** | **Estimated GHG reduction in 2020 associated with potential funding** |
|---|---|---|---|
| Moving toward a lower-carbon energy supply with adequate capacity and affordable low-carbon electricity. | Eliminate Carbon Price Impacts / Grid Emission Reductions to Ratepayers | · Range - $1,000,000,000 to $1,320,000,000 | 3,000,000 Tonnes (Energy Planning) |

DRAFT

# Electricity Price Mitigation

Corporate and Electricity Finance Division
December 7, 2016

DRAFT

# General Comments on Energy's Deck

- Energy's deck note various actions taken to-date to reduce costs or cost pressures, such as deferring generation supply investments, improving market efficiency, and reducing the costs of existing procurements.
- Aside from reducing costs on the electricity bill, it is not clear what principles are being applied, short term or long term for electricity pricing.
  - A principle that was applied in the past was to ensure that electricity consumers paid the true cost of electricity, for example.
  - The Energy proposals appear to be about, in part at least, moving some costs from the rate base to the tax base.
- However, the Energy proposals may be seen as having a fairly limited impact, e.g., a little over $8/month for residential, or a little over 5% of the monthly bill (though not all of the proposals have been costed / assessed).
  - The proposals would have a significant fiscal cost [about $1.5 billion per year in new fiscal costs].
- There is already significant amounts of existing fiscally-funded electricity price mitigation
  - Averages over $1.5 billion per year over the past five years, and estimated to increase to about $2 billion in 17-18 (see subsequent slide for estimated costs over time, and likely increasing over time), with the total tax-based costs rising to about $3.5 billion in 2017-18.
  - These existing mitigation costs are not presented in Energy's deck.
  - Also not included is any "hidden" price mitigation through constrained financial performance of, e.g., OPG.

DRAFT

# Context: Taxpayer Funded Electricity Price Mitigation

| ($M) | 2011-12 | 2012-13 | 2013-14 | 2014-15 | 2015-16 | 2016-17[1] | 2017-18[1] |
|---|---|---|---|---|---|---|---|
| OCEB | 1,033 | 994 | 1,006 | 1,078 | 860 | - | - |
| OREC | - | - | - | - | - | 300 | 1,100* |
| Ending DRC[2] | - | - | - | - | 85 | 330 | 330 |
| NIERP | 120 | 120 | 115 | 108 | 120 | 120 | 120 |
| NOEC | 23 | 24 | 25 | 24 | 26 | 25 | 25 |
| OEPTC[3] | 354 | 406 | 418 | 429 | 444 | 450 | 460 |
| **TOTAL** | **1,530** | **1,544** | **1,564** | **1,639** | **1,525** | **1,195** | **2,005** |

1. 2016-17, 2017-18 based on forecasted numbers
2. 2015-16 estimated for 3 months of reduced DRC revenue
3. OEPTC amounts in all years based on energy component of the rebate.

* Sourced from Energy PRRT submission

OCEB – Ontario Clean Energy Benefit
OREC – Ontario Rebate for Electricity Consumers
DRC – Debt Retirement Charge
NIERP – Northern Ontario Electricity Rate Program
NOEC – Northern Ontario Energy Credit
OEPTC – Ontario Energy and Property Tax Credit

- The table above shows the annual amount of taxpayer funded electricity price mitigation from 2011-12 to 2017-18.
- From 2011-12 to 2015-16 there has been an annual fiscal impact of approximately $1.6 billion due to electricity price mitigation programs.
- In 2016-17, the fiscal impact due to electricity price mitigation programs is estimated at approximately $1.2 billion.
- In 2017-18, due primarily to the start of the Ontario Rebate for Electricity Consumers, the expected fiscal impact due to electricity price mitigation programs is approximately $2.0 billion.

# Electricity Price Mitigation

General Decision Points on Program Features:

- Funding: Rate base vs Tax base
  - Tax base programs have a direct fiscal impact on the Province's finances, and shift costs based on taxpayer incidence and impact on expenditure room for other, non-electricity, programs.
  - Rate base programs shift costs from one group of ratepayers to another.
- On-bill vs Not On-bill
  - Recent focus has been on on-bill programs, such as OESP and OREC.
  - Older tax-base funded programs that are not visible on the bill are still in place, such as NOEC and OEPTC.
  - As OESP enrollment increases, could consider phasing out the non-bill benefits of NOEC and OEPTC.
- Targeted vs General
  - Recent new programs include both general (OREC) and targeted (OESP) programs.
  - Consideration could be made to make OREC more conservation-friendly (e.g., a monthly eligible consumption cap brought in, as with the former Ontario Clean Energy Benefit), and maybe a higher cap in the winter to allow for space heating costs.
  - A targeted industrial program recently extended and made on-going is the Northern Industrial Electricity Rate (NIER) program.

# Energy's Proposals

Energy is proposing additional electricity price mitigation programs, currently funded through the electricity system, be fiscally-funded. They could be upwards of $2 bn/year, (plus the departure tax), which is not included in the fiscal plan, which would challenge the path to balance.

- OESP & RRRP (Total of about $0.4 Bn/yr): This includes shifting the cost of the Ontario Electricity Support Program (OESP) and the Rural or Remote Electricity Rate Program (RRRP) to the tax base. Note that the fiscal exposure is larger if the OESP take up rate is larger, faster than assumed.

- Industrial Conservation Initiative (ICI -- About $900+ M/yr): Energy also shows, as a potential residential price mitigation measure, the cancellation of the ICI.
  - Energy is not initially proposing it be continued instead as taxpayer funded, but notes that about 30% price increase (from $85/MWh to $110), if ICI is cancelled, for the large Class A customers benefiting from ICI currently.
  - As this cost estimate is for 2016, prior to the planned expansion of the ICI, this could further increase the fiscal exposure by about $100 million).

- Departure Tax: As a result of the IPO, Hydro One paid a "departure tax" payment in lieu of tax (PIL) of $2.6 billion, as a final true-up of its PILs tax obligation.
  - This was paid to the Ontario Electricity Financial Corporation and helped reduce stranded debt.
  - Using some or all of it for price mitigation would change the net stranded debt paydown by OEFC resulting from the IPO. This would also be a one-time measure (potentially over a few years), and fiscal impact, as the departure tax amount was one-time.

- Other fiscal cost risks (Total of about $0.8+ Bn):
  - Amortisation of conservation costs also poses a fiscal risk (about $0.4 bn/yr),
  - Ending the DRC early for Class B customers (commercial, small industrial) (about $0.4 bn/yr to 2017-18)
  - Lowering of the debt interest paid by OPG (about $30 – 70 million/yr between 2017 and 2021),

DRAFT

# Fiscal Mitigation Options

- With the addition of recent and new price mitigation measures, a review should be initiated on fiscally-funded programs. There could be a phase down / out transition period considered. Examples include the following:

- Ontario Energy and Property Tax Credit (OEPTC) and Northern Ontario Energy Credit (NOEC):
  - Phase down and/or out the non-on-bill benefits of. (Save up to about $460 M/yr)
  - These targeted, low-income measures were introduced after the HST was introduced.
  - The OESP provides a larger, targeted and on-bill relief to qualifying consumers.

- Ontario Rebate for Electricity Consumers (OREC):
  - Introduce over time a monthly eligible consumption cap, with perhaps a higher cap in the winter to allow for space heating costs.
  - As with the prior OCEB cap, provides a rough incentive for conservation and correlation to larger homes. A higher cap in winter may help with space-heating issue.
  - May be challenging to implement.

- Greenhouse Gas Reduction Account:
  - If ICI is put on the tax-base, make it eligible for GGRA funding.
  - Positioned as, e.g., providing annual benefits from participants conserving and shifting off-peak to reduce reliance on GHG-emitting peaking plants

# Appendix

DRAFT

# Background on Taxpayer-funded Electricity Price Mitigation

| Program | Annual Fiscal Impacts ($M) | Date | Details |
|---|---|---|---|
| **Ontario Clean Energy Benefit (OCEB)** | ~1,000 | Jan 1 2011 to Dec 31, 2015 | OCEB provided over four million residential customers, and over 400,000 farm, small business and other small users with a benefit equal to 10 per cent of the total cost of electricity on their bills, including tax. Effective September 1, 2012, 10 per cent benefit was capped for the first 3,000 kWh of electricity consumed per month. OCEB expired December 31, 2015, as legislated. |
| **Removed Debt Retirement Charge (DRC) from Residential Bills** | ~330 | Jan 1, 2016 to Mar 31, 2018 | The government removed the DRC from residential electricity users' bills as of January 1, 2016. This is saving a typical residential user about $70 each year and meant ending the DRC earlier for these users than otherwise provided for in the *Electricity Act, 1998*. |
| **Ontario Rebate for Electricity Consumers (OREC)** | ~1,200 | Jan 1, 2017 onward | This ongoing program will rebate -- directly on consumers' residential electricity bills -- an amount equal to the provincial portion of the Harmonized Sales Tax (HST). |
| **Northern Industrial Electricity Rate (NIER) Program** | 120 | March 2010 | As announced in Budget 2015, the government committed to ongoing support for northern industrials with $120 million allocated annually. NIER was previously extended in 2012 for an additional three-year term, effective April 1, 2013 and also for a year effective April 1, 2016, with an allocation up to $120 million per year.<br>Qualifying participants receive a rebate of two cents per kilowatt-hour (kWh) up to a maximum of $20 million per year per company.<br>NIER initially established as a three-year program in Budget 2010, effective April 1, 2010. |
| **Northern Ontario Energy Credit** | ~25 | Budget 2010 | Delivered as part of the Ontario Trillium Benefit, provides individuals living in northern Ontario with a credit of up to $146 per year for the 2016 benefit year, and families up to $224.[1] |
| **Ontario Energy Property Tax Credit** | ~445[1] | Budget 2010 | Delivered as part of the Ontario Trillium Benefit, energy portion provides up to $224 per year (inflation adjusted) for low-to moderate-income individuals and families, and for qualifying seniors.[1] |

1. Energy portion cost only. Both the energy portion of the Ontario Energy and Property Tax Credit (OEPTC) and NOEC were introduced/enhanced following the introduction of the HST and have a significant annual fiscal cost (totalling about $500 million annually).

DRAFT

# Timeline: Taxpayer-funded Electricity Price Mitigation

**Budget 2010: OEPTC, NOEC Proposed as part of the Ontario Trillium Benefit**

*In the 2011 Budget, the government combined the payments of three existing tax credits — the Ontario Sales Tax Credit, the Ontario Energy and Property Tax Credit, and the Northern Ontario Energy Credit — to create the OTB. The OTB is paid in monthly instalments throughout the year, which helps people meet their expenses as bills arrive.*

**Ontario Clean Energy Benefit** (Jan 1 2011 to Dec 31 2015)

*The OCEB was introduced in the 2010 Ontario Economic Outlook and Fiscal Review to help consumers transition to a cleaner electricity system. As set out in legislation, the OCEB ended on December 31, 2015. The Province has introduced rate mitigation measures to be implemented after December 31, 2015.*

*OCEB provided over four million residential customers, and over 400,000 farm, small business and other small users with a benefit equal to 10 per cent of the total cost of electricity on their bills, including tax, for the first 3,000 kilowatt-hours (kWh) of monthly electricity consumption.*

**Removing DRC from Residential Bills** (Jan 1 2016 to Mar 31 2018)

*The government removed the DRC from residential electricity users' bills beginning on January 1, 2016. This saves a typical residential user about $70 each year and ends the DRC earlier for these users than otherwise provided for in the Electricity Act, 1998.*

**Ontario Rebate for Electricity Consumers**

*As of January 1, 2017, OREC will reduce electricity costs by an amount equal to the provincial portion of the HST for about five million residential consumers, farms and small businesses.*

2010 2011 2012 2013 2014 2015 2016 2017

## History of Northern Industrial Electricity Price Relief

**November 2006**

*The Ontario government announced the Northern Pulp and Paper Electricity Transition Program (NPPETP), a three-year $140 million, to be effective retroactively to October 1, 2006*

**Budget 2009**

*The government announced extension of the NPPETP by one year providing about $58 million with electricity price rebates of 1.8 cents/kWh.*

**Budget 2010**

*NIER program announced, with a projected fiscal cost of $150 M per year, to provide electricity price rebates for qualifying large industrial facilities in northern Ontario. An additional $21.8 million allocated for existing NPPETP in 2010-11 to be integrated with NIER.*

**September 2010**

*Transition from NPPETP to NIER: pulp and paper mills participating in NPPETP continued to receive the NPPETP rebate of 1.8 cents/kWh until September 30, 2010, with those qualifying for NIER receiving a top-up rebate of 0.2 cents/kWh.*

**December 2012**

*The government announced the extension of the NIER for three years, capping the rebates to a maximum of 2011-12 consumptions levels or $20 million, whichever is lower.*

DRAFT

# Potential Fiscal Impact to the Electricity Sector

- The electricity sector has a significant impact on the Province's fiscal position; through both the revenue and expense sides of the Province's fiscal position.
  - Electricity Rate mitigation programs funded through the tax base have a direct fiscal impact on the Province's finances.
  - Alternatively, electricity rate mitigation programs funded by the rate base shift costs from one group of ratepayers to another.
- The Province's electricity sector agencies and corporations are each consolidated into the government's financial statements, and directly affect the Province's surplus/deficit position.
  - Ontario Power Generation (OPG) financial results have a dollar-for-dollar impact on the Province.
    - Electricity price mitigation strategies involving OPG would lead to a direct fiscal impact.
  - Hydro One financial results have a direct impact on the Province, based on the Province's proportionate ownership.
    - The Province currently holds about 70 per cent of Hydro One.

DRAFT

# Proposed Taxpayer Funded Electricity Price Mitigation
(To be revised)

| ($M) | 2016-17[1] | 2017-18[1] | 2018-19[1] | 2019-20[1] | 2020-21[1] |
|---|---|---|---|---|---|
| OCEB | - | - | - | - | - |
| OREC | 300 | 1,100* | 1,100* | 1,200* | 1,200* |
| Ending DRC[2] | 330 | 330 | -- | -- | -- |
| NIERP | 120 | 120 | 120 | 120 | 120 |
| NOEC | 25 | 25 | 25 | 25 | 25 |
| OEPTC[3] | 450 | 460 | 470 | 481 | 481 |
| **CURRENT TOTAL** | **1,195** | **2,005** | **1,715** | **1,826** | **1,826** |
| 1. OESP | | 106 | 119 | 127 | 132 |
| 2. RRRP | | 292 | 300 | 306 | 315 |
| 3. First Nations Delivery Rate | | 18 | 18 | 18 | 18 |
| 4. Fund ICI through Tax Base | | 900+ | 900+ | 900+ | 900+ |
| 5. Departure Tax | | TBD | TBD | TBD | TBD |
| 6. Conservation Amortisation | | | | | |
| 7. DRC Ended for Class B | | | | | |
| 8. Other | | | | | |
| **TOTAL** | **1195** | **3,421** | **3,152** | **3,177** | **3,191** |

1. 2016-17, 2017-18 based on forecasted numbers
2. Estimated impact up to March 31, 2018
3. OEPTC amounts in all years based on energy component of the rebate.

- As shown above, if all measures proposed in this deck were to be accepted taxpayer funded contributions to electricity price mitigation would increase to about $3.2 billion, or more, by 2020-21. That is about a 60% increase from the current forecast for 2017-18.
- These amounts were not considered in the 2016-17 Fiscal Plan and could put at risk the Province's fiscal objectives for 2017-18 and beyond.

Hi John/Shajee,

Just a quick update from the meeting. Ron wants a short presentation deck on the Departure Tax proposal, which will include contents on Departure Tax, Deferred Tax Benefit, Stranded Debt impact, and etc. SIFB will lead on this task and will share the deck with EFB for comments on SD related materials.

Francisco/Darren – please feel free to add anything that I might have missed or stated incorrectly.

Thanks,
Gavin He

FYI. This was shared with us as a bootleg, noting that further work is ongoing, including around potential fiscal impact. In addition to obvious electricity sector and fiscal plan tie-ins, there is mention of potential expansion of the Trillium Trust to fund electricity infrastructure projects.

Subject: Proposed Initiatives to Transform Ontario's Electricity Sector_Dec9-16_v15 copy.pptx

Hi Steve,

Here's an early draft of a rate mitigation package that provides a policy rationale for the proposed measures. It's still an early draft and we need to firm up on the rate relief numbers and fiscal impact. My MO is still reviewing but I wanted you to have an early look.

Serge

<Comments on Electricity Sector Transformation Proposals v5 (CEFD).docx>

# Comments on Ministry of Energy's Draft "Proposed Initiatives to Transform Ontario's Electricity Sector"

The Ministry of Energy (Energy) is providing an update on progress related to transforming the province's electricity sector by elaborating on potential price mitigation initiatives, as outlined in its deck.

## CONTEXT

- As outlined in Energy's update, electricity costs have been increasing following investments to transform towards cleaner generation (i.e., meeting goals to decarbonize) and modernize the electricity infrastructure (e.g., more than $35 billion in cleaner generation and $15.5 billion investment by Hydro One alone in transmission and distribution systems).

- The government has taken action to lower electricity cost pressures to all consumers by taking actions, including deferring investments in generation (e.g., new build nuclear), improving market efficiency and decreasing costs related to renewable procurement (e.g. GEIA renegotiation, decreasing FIT prices, etc).

- The government introduced the Ontario Rebate for Electricity Consumers (OREC) which will provide a rebate equal to the 8% provincial portion of the Harmonized Sales Tax, saving $11 per month starting January 1, 2017 for eligible small businesses, farms and residential consumers and has taken steps to expand the Rural or Remote Electricity Rate Protection program, expected to save eligible RRRP customers about $45 per month, when combined with OREC.

## COMMENTS

Energy's proposals generally involve shifting costs from the rate base to the tax base. While the subset of costed proposals may have a fairly limited residential rate payer impact (e.g. about $5-6/month for residential, less than 5% of the average monthly bill), those proposals would come at a material incremental fiscal cost ($1 billion to $1.3 billion). Note these impacts are lower than those presented in an earlier deck ($1.3 billion to $1.9 billion). Energy also presents other proposals where costs and impacts are "TBD".

Over the past five years, the existing fiscally funded electricity price mitigation efforts have averaged about $1.5 billion and is already expected to increase to about $2 billion with the introduction of OREC. The existing program costs are summarized in the table below:

| ($M) | 2011-12 | 2012-13 | 2013-14 | 2014-15 | 2015-16 | 2016-17[1] | 2017-18[1] |
|---|---|---|---|---|---|---|---|
| OCEB | 1,033 | 994 | 1,006 | 1,078 | 860 | - | - |
| OREC | - | - | - | - | - | 300 | 1,100* |
| Ending DRC[2] | - | - | - | - | 85 | 330 | 330 |
| NIERP | 120 | 120 | 115 | 108 | 120 | 120 | 120 |
| NOEC | 23 | 24 | 25 | 24 | 26 | 25 | 25 |
| OEPTC[3] | 354 | 406 | 418 | 429 | 444 | 450 | 460 |
| TOTAL | 1,530 | 1,544 | 1,564 | 1,639 | 1,525 | 1,225 | 2,005 |

1. 2016-17, 2017-18 based on forecasted numbers
2. 2015-16 estimated for 3 months of reduced DRC revenue
3. OEPTC amounts in all years based on energy component of the rebate.

* Sourced from Energy PRRT submission

OCEB – Ontario Clean Energy Benefit
OREC – Ont. Rebate for Electricity Consumers
NIERP – Northern Industrial Electricity Rate program
NOEC – Northern Ontario Energy Credit
DRC – Debt etirement Charge
OEPTC – Ont. Energy & Property Tax Credit

**Energy's Broad Policy Themes / Rationales**

A key theme / rationale cited by Energy is to no longer use rate-base to pay for "social programs" by shifting cost of OESP, RRRP and proposed First Nation Rate to tax-base.

- Energy has typically in the past provided a constitutional law assessment on these programs, providing support for these programs to be ratepayer-supported programs as they provide electricity system benefits / are part of a comprehensive regulatory framework.
- Switching messaging may risk criticism and legal challenges on these and other remaining rate-base funded programs.

| Energy Theme / Rationale | Key Staff Comments |
|---|---|
| Provide greater support for lower income Ontarians by enhancing the OESP or expanding eligibility | • Significant fiscal exposure -- $0.4-0.45 bn at current levels, higher if enhanced. On-bill benefits.<br>• Could contemplate phase-in to manage fiscal impact.<br>• Could look at phasing out existing fiscal-funded programs also targeted to low income or identified groups (e.g., OEPTC, NOEC).<br>o Not on the bill, so less direct and visible electricity cost mitigation.<br>o Phase-out to reflect time to increase application based OESP reaching an increasing portion of eligible households. |
| Fund conservation programs through the tax-base for the remaining term of the existing CDM framework and transition costs to the new "green bank entity" over time | • Potentially significant fiscal impact – current program costs are about $0.45 bn<br>• Conservation programs do provide an electricity system benefits, but would now be fiscally-funded, so a cross-subsidisation from tax-base<br>• Accessing the cap&trade amount in the GGRA would crowd-out other GGRA programs, affecting overall GHG reductions and negatively affect the diccal plan |
| Expand the scope of the "Trillium Trust" to make investments in energy infrastructure eligible for funding | • Would require either squeezing out existing Moving Ontario Forward project funding from the Trillium Trust, requiring funding from another source; or additional funding from asset optimization, given that the government is committed to using the targeted $5.7 billion to fund across Moving Ontario Forward projects<br>• Would have little near-term impact, unless TT funding displaces near-term, non-incremental projects coming onto service<br>• Could lower utility value, including Hydro One, by removing projects, currently and prospectively, that they might have been able to add to their ratebase and earn a return |
| **E**nd the Debt Retirement Charge (DRC) early for commercial and small industrial Class B electricity consumers | • End of the DRC had previously been linked with a balance between rate mitigation and managing stranded debt<br>• Provides only temporary incremental mitigation, as DRC legislated to end April 1, 2018.<br>• End of the DRC had previously been linked to retirement of residual stranded debt<br>• Removing additional DRC revenue from the OEFC would call into question the position that the debt and liabilities of the old Ontario Hydro can continue to be supported |

**Detail on Proposals**

Energy has outlined the following rate mitigation proposals with significant bearing on the fiscal plan:

<u>OESP & RRRP (Total of about $0.4 to 0.45 Billion/year</u>):

This would shift the cost of the current and proposed expanded Ontario Electricity Support Program (OESP), and the Rural or Remote Electricity Rate Program (RRRP), to the tax base. *Note: that the fiscal exposure would increase if the OESP take up rate is larger, and faster than assumed.*

- The fiscal impact from shifting OESP and RRRP to the tax base may also be larger if future changes are made to the programs. Energy notes that
  - The programs could provide greater support for lower income Ontarians by enhancing the OESP or expanding eligibility (e.g., by 50% in the table).
  - The RRRP regulation provides a funding mechanism for transmission infrastructure required to grid connect remote First Nation communities. Considerations for how that funding will be supported by the tax base will need to be determined. [The current deck links Trillium Trust for remote electrification.]

<u>Fund Conservation Programs through the Tax-Base</u>:

This would be for the remaining term of the existing Conservation and Demand Management framework. Over time, the costs would be transitioned to the new "green bank entity", to shift cost recovery from ratepayers to cap and trade revenues.

- Energy's rationale for the cost shift would be in recognition of the burden borne by ratepayers in phasing out coal generation.

<u>Expanding the scope of the Trillium Trust to invest in energy infrastructure:</u>

The Province is currently targeting $5.7 billion from asset optimization to dedicate to the Trillium Trust for investment in infrastructure under Moving Ontario Forward.

- Expanding access to natural gas is already included under Moving Ontario Forward.
- Using the Trillium Trust for additional energy projects would require either
  - squeeze out existing Moving Ontario Forward project funding from the Trillium Trust, requiring funding from another source, or
  - additional funding from asset optimization, given that the government is committed to using the targeted $5.7 billion to fund across Moving Ontario Forward projects,
  - in effect, in both cases above, incremental investments for energy infrastructure from the Trillium Trust would have negative fiscal impacts once the assets are in-service and amortized.
- Investments through the Trillium Trust instead of through other electricity sector entities (Hydro One, OPG, LDCs) could have additional negative fiscal impacts as these entities could see reduced ratebase growth, lowering the revenues that the Province realizes from these entities (e.g., consolidated net income, payments-in-lieu of taxes, etc.).
  - May also negatively impact Hydro One share price if the measure is perceived by the market as reducing Hydro One's potential ratebase growth.
- Unless applied to existing projects, to displace ratepayer-supported costs, this measure would have little or no near-term rate impact.

Departure Tax:

As a result of the IPO, Hydro One paid a "departure tax" payment in lieu of tax (PIL) of $2.6 billion, as a final true-up of its PILs tax obligation. Energy lists using some or all of this departure tax for price mitigation.

- This was paid to the Ontario Electricity Financial Corporation (OEFC). The departure tax payment was fiscally neutral to the Province as the income to the OEFC was fully offset by a reduction in ESDI resulting from reduced net income of Hydro One.
- Using some or all of it for price mitigation would require restating the net stranded debt paydown by OEFC related to the IPO. [As the departure tax paid was fiscally neutral, OEFC's uplift was primarily the result of the related deferred tax benefit, as well as the s.50.3 benefit under the *Electricity Act, 1998*.]
- This would be a one-time measure, potentially spread out over a few years, and fiscal impact, as the departure tax amount was one-time.

Debt Retirement Charge (Total of about $0.45 Billion in annualized rate to 2017-18):
Ending the DRC early for Class B customers (commercial, small industrial) would have an impact of about $0.45 billion in 2017-18.

- The end of the DRC had previously been linked with balancing mitigation and progress on stranded debt reductionthe end retirement of the residual stranded debt.
- Removing additional DRC revenue from the OEFC would call into question the position that the debt and liabilities of the old Ontario Hydro can continue to be supported.

| ($M) | 2016-17[1] | 2017-18[1] | 2018-19[1] | 2019-20[1] | 2020-21[1] |

MINISTRY OF
ENERGY

# Proposed Initiatives to Transform Ontario's Electricity Sector – Update

## Working Draft

December 2016

CONFIDENTIAL DRAFT

# Context

- Electricity costs are increasing as the necessary investments are made to decarbonize and modernize the province's electricity infrastructure (i.e., $35 billion+ investment in cleaner generation and $15.5 billion investment in Hydro One transmission and distribution systems).

- Ontario has taken a number of actions to lower electricity cost for all consumers by:
  - Deferring investments in generation (e.g., new build nuclear), improving market efficiency (e.g., wind dispatch) and decreasing the cost of renewable procurements (e.g., GEIA renegotiation, decreasing FIT prices).
  - Increasing cost effectiveness and improving efficiency by adopting new electricity market approaches (e.g., competitive LRP, no new NUG contracting).

- Following the 2016 Throne Speech, actions were announced to further reduce electricity costs by:
  - Providing an 8%  per cent rebate ($11/month savings), updating RRRP ($45/month savings, combined with the 8% rebate), expanding ICI (up to one-third savings for participants), suspending the LRP II and the EFWSOP (up to $3.8 billion in cost savings) and recycling proceeds to industrial/ commercial consumers.

- On November 28, 2016, the Minister of Energy announced the need for changes in how electricity resources are procured,  the need for wholesale market renewal and greater electricity consumer choice.

- The Ministry of Energy is currently updating its Long-Term Energy Plan (LTEP),  which provides an opportunity to consider a range of policy changes to  how the Ontario energy sector operates.

# Broad Policy Themes / Rationale

- No longer use rate-base to pay for social programs [despite the system benefit rationale] by shifting cost of OESP, RRRP and proposed First Nation Rate to tax-base.
- Provide greater support for lower income Ontarians by enhancing the OESP or expanding eligibility.
- Fund conservation programs through the tax-base for the remaining term of the existing CDM framework and transition costs to the new "green bank entity" over time. Costs would be shifted in recognition of the burden borne by ratepayers in phasing out coal generation.
- Expand the scope of the "Trillium Trust" beyond the Moving Ontario Forward initiative to make certain investments in energy infrastructure eligible for funding, such as remote electrification, large transmission projects, new or expanded interties ~~and expansion of natural gas to rural areas~~, etc. (note that expanding access to natural gas is already included under Moving Ontario Forward.)
- Empower energy agencies to increase cost effectiveness and improve efficiency by having – IESO modernize Ontario's electricity market through electricity market renewal initiatives, the OEB identify opportunities for future LDC cost reductions/efficiencies and work with OPG to find further efficiencies in operations and pass on savings to ratepayers.
- Give consumers more choice by allowing households to "opt into" a single rate plan as an interim measure as the Ontario Energy Board (OEB) develops more pricing options over time.
- Help small business manage their electricity costs and provide relief for cap and trade until proceeds recycling is fully operational by ending the Debt Retirement Charge (DRC) early for commercial and small industrial Class B electricity consumers.

# Proposed Initiatives – Potential Savings for Typical Residential Electricity Consumers

| *$/750kWh* | 2017 | 2018 | 2019 | 2020 | 2021 | 2022 | Timing of Benefit |
|---|---|---|---|---|---|---|---|
| **Recommended Initiatives** | | | | | | | |
| 1. No Longer Fund Social Programs Through the Rate-Base (i.e., OESP, RRRP, First Nations rate) | 2.16 | 2.31 | 2.41 | 2.49 | 2.54 | 2.58 | Immediate |
| 2. Expand the OESP (i.e., 50% increase) | - | - | - | - | - | - | n/a |
| 3. Fund Conservation Programs Through The Tax-Base | 3.40 | 3.68 | 2.98 | 3.09 | 2.58 | 2.58 | Immediate |
| 4. Expand the Scope of Trillium Trust to Make Investments in Energy Infrastructure (e.g., Transmission upgrade, etc) | TBD | TBD | TBD | TBD | TBD | TBD | TBD |
| 5. Empower Energy Agencies to Increase Cost Effectiveness and Improve efficiency* | | | | | | | |
| a. IESO – Market Renewal | - | - | - | - | 1.00 | 1.03 | Long-Term |
| b. OEB – LDC efficiencies | TBD | TBD | TBD | TBD | TBD | TBD | Medium-Term |
| c. OPG – Operational efficiencies | TBD | TBD | TBD | TBD | TBD | TBD | Medium-Term |
| 6. Give Residential Consumers More Rate Choices | - | - | - | - | - | - | n/a |
| 7. Help Small Business Manage Their Electricity Costs (i.e., End DRC early for Class B electricity consumers)** | - | - | - | - | - | - | n/a |
| 8. Cancel / Adjust FIT | - | - | 0.13 | 0.13 | 0.14 | 0.14 | Long-Term |
| 9. Dedicate Departure Tax | TBD | TBD | TBD | TBD | TBD | TBD | Immediate |
| **Considered but not Recommended** | | | | | | | |
| 1. Eliminate the Industrial Conservation Initiative (ICI) | 4.40 | 4.24 | 4.10 | 4.24 | 3.73 | 3.58 | Immediate |
| 2. Cancel LRP I | - | - | TBD | TBD | TBD | TBD | Medium-Term |

**Note:** The above initiatives will provide similar benefits for non-RPP Class B electricity consumers. Proposal 1 assumes OESP participation of 50% and 5-year maturity. *Assessing the range of ratepayer impacts will be done through the LTEP development and implementation process in conjunction with the OEB. **Class B includes small-medium enterprises (SMEs).

# Proposed Initiatives – Potential Savings for Average Industrial Electricity Consumers

| *$/MWh* | 2017 | 2018 | 2019 | 2020 | 2021 | 2022 | Timing of Benefit |
|---|---|---|---|---|---|---|---|

**Source:** Ministry of Finance, Energy

# Considerations / Outcomes

- The proposed initiatives provide the following opportunities to:
  - Lower the cost of electricity for all consumers;
  - Re-set how electricity programs and energy infrastructure is funded (i.e., shifting costs to the tax-base from rate-base);
  - Provide electricity consumers with greater choices (i.e., signal rate plan);
  - Provide system benefits (e.g., market renewal); and
  - Increase cost effectiveness and improve efficiency.

- The timing of the impact of these rate mitigation initiatives varies.
  - Immediate and near-term impacts can be achieved by shifting costs to the tax-base or changing how certain costs are recovered from consumers or eliminating certain programs.
  - Over the longer term, changes to the electricity supply mix and achieving efficiencies in the electricity market could yield system savings.

- Pursuing the initiatives would require regulatory amendments and working with the electricity sector agencies, LDCs and other stakeholders to implement the initiatives.

DRAFT

# Electricity Price Mitigation

Corporate and Electricity Finance Division
December 7, 2016

DRAFT

# General Comments on Energy's Deck

- Energy's deck note various actions taken to-date to reduce costs or cost pressures, such as deferring generation supply investments, improving market efficiency, and reducing the costs of existing procurements.
- Aside from reducing costs on the electricity bill, it is not clear what principles are being applied, short term or long term for electricity pricing.
  - A principle that was applied in the past was to ensure that electricity consumers paid the true cost of electricity, for example.
  - The Energy proposals appear to be about, in part at least, moving some costs from the rate base to the tax base.
- However, the Energy proposals may be seen as having a fairly limited impact, e.g., a little over $8/month for residential, or a little over 5% of the monthly bill (though not all of the proposals have been costed / assessed).
  - The proposals would have a significant fiscal cost [about $1.3 – 1.9 plus bn per year in new fiscal costs].
- There is already significant amounts of existing fiscally-funded electricity price mitigation
  - Averages over $1.5 billion per year over the past five years, and estimated to increase to about $2 billion in 17-18 (see subsequent slide for estimated costs over time, and likely increasing over time), with the total tax-based costs rising to about $3.3-3.9 plus billion in 2017-18, if Energy`s proposals are adopted.
  - These existing mitigation costs are not presented in Energy's deck.
  - Not included is any "hidden" price mitigation through constrained financial performance of, e.g., OPG.

OCEB – Ontario Clean Energy Benefit
OREC – Ontario Rebate for Electricity Consumers
DRC – Debt Retirement Charge
NIERP – Northern Ontario Electricity Rate Program
NOEC – Northern Ontario Energy Credit
OEPTC – Ontario Energy and Property Tax Credit

- The table above shows the annual amount of taxpayer funded electricity price mitigation from 2011-12 to 2017-18.
- From 2011-12 to 2015-16 there has been an annual fiscal impact of approximately $1.6 billion due to electricity price mitigation programs.
- In 2016-17, the fiscal impact due to electricity price mitigation programs is estimated at approximately $1.2 billion.
- In 2017-18, due primarily to the start of the Ontario Rebate for Electricity Consumers, the expected fiscal impact due to electricity price mitigation programs is approximately $2.0 billion.

- The table above shows the annual amount of taxpayer funded electricity price mitigation from 2011-12 to 2017-18.
- From 2011-12 to 2015-16 there has been an annual fiscal impact of approximately $1.6 billion due to electricity price mitigation programs.
- In 2016-17, the fiscal impact due to electricity price mitigation programs is estimated at approximately $900 million.
- In 2017-18, due primarily to the start of the Ontario Rebate for Electricity Consumers, the expected fiscal impact due to electricity price mitigation programs is approximately $1.7 billion.

# Electricity Price Mitigation

General Decision Points on Program Features:

- Funding: Rate base vs Tax base
  - Tax base programs have a direct fiscal impact on the Province's finances, and shift costs based on taxpayer incidence and impact on expenditure room for other, non-electricity, programs.
  - Rate base programs shift costs from one group of ratepayers to another.
- On-bill vs Not On-bill
  - Recent focus has been on on-bill programs, such as OESP and OREC.
  - Older tax-base funded programs that are not visible on the bill are still in place, such as NOEC and OEPTC.
  - As OESP enrollment increases, could consider phasing out the non-bill benefits of NOEC and OEPTC.
- Targeted vs General
  - Recent new programs include both general (OREC) and targeted (OESP) programs.
  - Consideration could be made to make OREC more conservation-friendly (e.g., a monthly eligible consumption cap brought in, as with the former Ontario Clean Energy Benefit), and maybe a higher cap in the winter to allow for space heating costs.
  - A targeted industrial program recently extended and made on-going is the Northern Industrial Electricity Rate (NIER) program.

DRAFT

# Energy's Proposals

Energy is proposing additional electricity price mitigation programs, currently funded through the electricity system, be fiscally-funded. They could be upwards of $2 bn/year, (plus the departure tax), which is not included in the fiscal plan, which would challenge the path to balance.

- OESP & RRRP (Total of about $0.4 Bn/yr): This includes shifting the cost of the Ontario Electricity Support Program (OESP) and the Rural or Remote Electricity Rate Program (RRRP) to the tax base. Note that the fiscal exposure is larger if the OESP take up rate is larger, faster than assumed.

- Industrial Conservation Initiative (ICI -- About $900+ M/yr): Energy also shows, as a potential residential price mitigation measure, the cancellation of the ICI.
  - Energy is not initially proposing it be continued instead as taxpayer funded, but notes that about 30% price increase (from $85/MWh to $110), if ICI is cancelled, for the large Class A customers benefiting from ICI currently.
  - As this cost estimate is for 2016, prior to the planned expansion of the ICI, this could further increase the fiscal exposure by about $100 million).

- Departure Tax: As a result of the IPO, Hydro One paid a "departure tax" payment in lieu of tax (PIL) of $2.6 billion, as a final true-up of its PILs tax obligation.
  - This was paid to the Ontario Electricity Financial Corporation and helped reduce stranded debt.
  - Using some or all of it for price mitigation would change the net stranded debt paydown by OEFC resulting from the IPO. This would also be a one-time measure (potentially over a few years), and fiscal impact, as the departure tax amount was one-time.

- Other fiscal cost risks (Total of about $0.8+ Bn):
  - Amortisation of conservation costs also poses a fiscal risk (about $0.4 bn/yr),
  - Ending the DRC early for Class B customers (commercial, small industrial) (about $0.4 bn/yr to 2017-18)
  - Lowering of the debt interest paid by OPG (about $30 – 70 million/yr between 2017 and 2021),

DRAFT

# Fiscal Mitigation Options

- With the addition of recent and new price mitigation measures, a review should be initiated on fiscally-funded programs. There could be a phase down / out transition period considered. Examples include the following:

- Ontario Energy and Property Tax Credit (OEPTC) and Northern Ontario Energy Credit (NOEC):
  - Phase down and/or out the non-on-bill benefits of. (Save up to about $460 M/yr)
  - These targeted, low-income measures were introduced after the HST was introduced.
  - The OESP provides a larger, targeted and on-bill relief to qualifying consumers.

- Ontario Rebate for Electricity Consumers (OREC):
  - Introduce over time a monthly eligible consumption cap, with perhaps a higher cap in the winter to allow for space heating costs.
  - As with the prior OCEB cap, provides a rough incentive for conservation and correlation to larger homes. A higher cap in winter may help with space-heating issue.
  - May be challenging to implement.

- Greenhouse Gas Reduction Account:
  - If ICI is put on the tax-base, make it eligible for GGRA funding.
  - Positioned as, e.g., providing annual benefits from participants conserving and shifting off-peak to reduce reliance on GHG-emitting peaking plants

# Background on Taxpayer-funded Electricity Price Mitigation

Option 1

| Program | Annual Fiscal Impacts ($M) | Date | Details |
|---|---|---|---|
| **Ontario Clean Energy Benefit (OCEB)** | ~1,000 | Jan 1 2011 to Dec 31, 2015 | OCEB provided over four million residential customers, and over 400,000 farm, small business and other small users with a benefit equal to 10 per cent of the total cost of electricity on their bills, including tax. Effective September 1, 2012, 10 per cent benefit was capped for the first 3,000 kWh of electricity consumed per month. OCEB expired December 31, 2015, as legislated. |
| **Removed Debt Retirement Charge (DRC) from Residential Bills** | ~330 | Jan 1, 2016 to Mar 31, 2018 | Removing the DRC from residential users was a policy decision to help mitigate residential rate pressures – particularly in the context of the end of OCEB – rather than based on defeasance as per the original conception of the DRC. ~~The government removed the DRC from residential electricity users' bills as of January 1, 2016.~~ This is saving a typical residential user about $70 each year and meant ending the DRC earlier for these users than otherwise provided for in the *Electricity Act, 1998*. |
| **Ontario Rebate for Electricity Consumers (OREC)** | ~1,200 | Jan 1, 2017 onward | This ongoing program will rebate -- directly on consumers' residential electricity bills -- an amount equal to the provincial portion of the Harmonized Sales Tax (HST). |
| **Northern Industrial Electricity Rate (NIER) Program** | 120 | March 2010 | As announced in Budget 2015, the government committed to ongoing support for northern industrials with $120 million allocated annually. NIER was previously extended in 2012 for an additional three-year term, effective April 1, 2013 and also for a year effective April 1, 2016, with an allocation up to $120 million per year.<br>Qualifying participants receive a rebate of two cents per kilowatt-hour (kWh) up to a maximum of $20 million per year per company.<br>NIER initially established as a three-year program in Budget 2010, effective April 1, 2010. |
| **Northern Ontario Energy Credit** | ~25 | Budget 2010 | Delivered as part of the Ontario Trillium Benefit, provides individuals living in northern Ontario with a credit of up to $146 per year for the 2016 benefit year, and families up to $224.[1] |
| **Ontario Energy Property Tax Credit** | ~445[1] | Budget 2010 | Delivered as part of the Ontario Trillium Benefit, energy portion provides up to $224 per year (inflation adjusted) for low-to moderate-income individuals and families, and for qualifying seniors.[1] |

1. Energy portion cost only. Both the energy portion of the Ontario Energy and Property Tax Credit (OEPTC) and NOEC were introduced/enhanced following the introduction of the HST and have a significant annual fiscal cost (totalling about $500 million annually).

# Timeline: Taxpayer-funded Electricity Price Mitigation

DRAFT

Option 1

**Budget 2010: OEPTC, NOEC Proposed as part of the Ontario Trillium Benefit**

*In the 2011 Budget, the government combined the payments of three existing tax credits — the Ontario Sales Tax Credit, the Ontario Energy and Property Tax Credit, and the Northern Ontario Energy Credit — to create the OTB. The OTB is paid in monthly instalments throughout the year, which helps people meet their expenses as bills arrive.*

**Ontario Clean Energy Benefit** (Jan 1 2011 to Dec 31 2015)

*The OCEB was introduced in the 2010 Ontario Economic Outlook and Fiscal Review to help consumers transition to a cleaner electricity system. As set out in legislation, the OCEB ended on December 31, 2015. The Province has introduced rate mitigation measures to be implemented after December 31, 2015.*

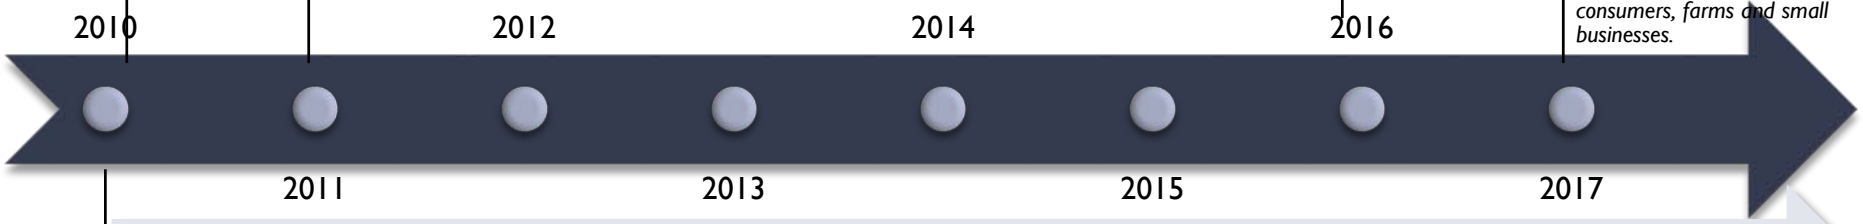
*OCEB provided over four million residential customers, and over 400,000 farm, small business and other small users with a benefit equal to 10 per cent of the total cost of electricity on their bills, including tax, for the first 3,000 kilowatt-hours (kWh) of monthly electricity consumption.*

**Removing DRC from Residential Bills** (Jan 1 2016 to Mar 31 2018)

*Removing the DRC from residential users was a policy decision to help mitigate residential rate pressures rather than based on defeasance as per the original conception of the DRC. This saves a typical residential user about $70 each year and ends the DRC earlier for these users than otherwise provided for in the Electricity Act, 1998.*

**Ontario Rebate for Electricity Consumers**

*As of January 1, 2017, OREC will reduce electricity costs by an amount equal to the provincial portion of the HST for about five million residential consumers, farms and small businesses.*



**History of Northern Industrial Electricity Price Relief**

**November 2006**

*The Ontario government announced the Northern Pulp and Paper Electricity Transition Program (NPPETP), a three-year $140 million, to be effective retroactively to October 1, 2006*

**Budget 2009**

*The government announced extension of the NPPETP by one year providing about $58 million with electricity price rebates of 1.8 cents/kWh.*

**Budget 2010**

*NIER program announced, with a projected fiscal cost of $150 M per year, to provide electricity price rebates for qualifying large industrial facilities in northern Ontario. An additional $21.8 million allocated for existing NPPETP in 2010-11 to be integrated with NIER.*

**September 2010**

*Transition from NPPETP to NIER: pulp and paper mills participating in NPPETP continued to receive the NPPETP rebate of 1.8 cents/kWh until September 30, 2010, with those qualifying for NIER receiving a top-up rebate of 0.2 cents/kWh.*

**December 2012**

*The government announced the extension of the NIER for three years, capping the rebates to a maximum of 2011-12 consumptions levels or $20 million, whichever is lower.*

# Timeline: Taxpayer-funded Electricity Price Mitigation

DRAFT

Option 2

**Budget 2010: OEPTC, NOEC Proposed as part of the Ontario Trillium Benefit**

*In the 2011 Budget, the government combined the payments of three existing tax credits — the Ontario Sales Tax Credit, the Ontario Energy and Property Tax Credit, and the Northern Ontario Energy Credit — to create the OTB. The OTB is paid in monthly instalments throughout the year, which helps people meet their expenses as bills arrive.*

**Ontario Clean Energy Benefit** (Jan 1 2011 to Dec 31 2015)

*The OCEB was introduced in the 2010 Ontario Economic Outlook and Fiscal Review to help consumers transition to a cleaner electricity system. As set out in legislation, the OCEB ended on December 31, 2015. The Province has introduced rate mitigation measures to be implemented after December 31, 2015.*

*OCEB provided over four million residential customers, and over 400,000 farm, small business and other small users with a benefit equal to 10 per cent of the total cost of electricity on their bills, including tax, for the first 3,000 kilowatt-hours (kWh) of monthly electricity consumption.*

**Ontario Rebate for Electricity Consumers**

**Budget 2009**

*The government announced extension of the NPPETP by one year providing about $58 million with electricity price rebates of 1.8 cents/kWh.*

**Budget 2010**

*NIER program announced, with a projected fiscal cost of $150 M per year, to provide electricity price rebates for qualifying large industrial facilities in northern Ontario. An additional $21.8 million allocated for existing NPPETP in 2010-11 to be integrated with NIER.*

**September 2010**

*Transition from NPPETP to NIER: pulp and paper mills participating in NPPETP continued to receive the NPPETP rebate of 1.8 cents/kWh until September 30, 2010, with those qualifying for NIER receiving a top-up rebate of 0.2 cents/kWh.*

**December 2012**

*The government announced the extension of the NIER for three years, capping the rebates to a maximum of 2011-12 consumptions levels or $20 million, whichever is lower.*

DRAFT

# Potential Fiscal Impact to the Electricity Sector

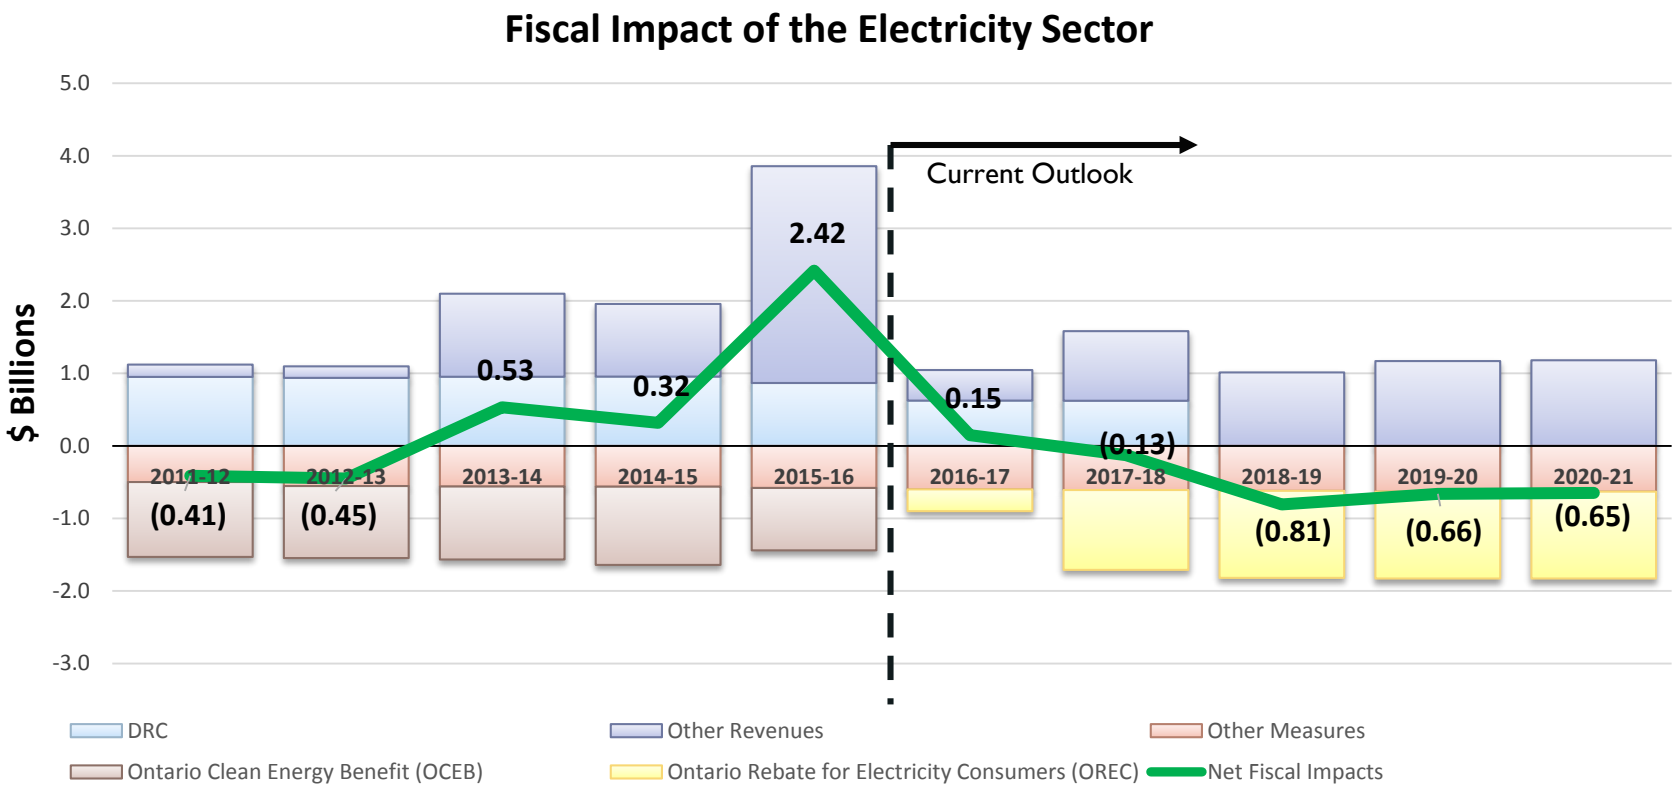
- The electricity sector has a significant impact on the Province's fiscal position; through both the revenue and expense sides of the Province's fiscal position.
  - Electricity Rate mitigation programs funded through the tax base have a direct fiscal impact on the Province's finances.
  - Alternatively, electricity rate mitigation programs funded by the rate base shift costs from one group of ratepayers to another.
- The Province's electricity sector agencies and corporations are each consolidated into the government's financial statements, and directly affect the Province's surplus/deficit position.
  - Note: The Province has invested capital into OPG and Hydro One with the expectation that as commercial corporations, the Province would receive a risk-adjusted return in exchange for these investments.
  - Ontario Power Generation (OPG) financial results have a dollar-for-dollar impact on the Province.
    - Electricity price mitigation strategies involving OPG would lead to a direct fiscal impact.
  - Hydro One financial results have a direct impact on the Province, based on the Province's proportionate ownership.
    - The Province currently holds about 70 per cent of Hydro One.

# Potential Fiscal Impact to the Electricity Sector

DRAFT

Option 2

- The below chart provides an overview of the fiscal impact from the electricity sector



Other Revenues include payments in lieu of taxes (PILs), and property tax PILs in the case of Hydro One, directed to the OEFC. The provincial portion of these taxes would be a fiscal benefit to the province, regardless of company ownership.

---

Hi Arie, Wentao,

Please see below. Can you start on drafting a more thorough note on the departure tax proposal? I think we need to focus on how exactly the proposal would work, and what exactly it means to OEFC / Province and ratepayers. I know when we first received ENERGY's deck we did some analysis on the ratepayer impacts, so perhaps we can revisit that. Can you also work with Shajee on bullets on the implications for stranded debt?

Thanks,
Darren

Hi Ron,

The DM has asked if you and your team could build on the analysis contained in this note on the departure tax component. He'd like something thorough focused specifically on that proposal.

If possible, he'd like to see something as early as feasible next week. Is that doable?

Thanks,

Dave

Thanks Chris.

Scott, Gadi, and Tim, staff have drafted a preliminary note based on the "bootleg" preliminary deck, including some comments on the broad theme/rationale and the more fiscally-based proposals, as attached. It is a work-in-progress and subject to update for any revisions of Energy's deck to be received.

Hi Steve,

Here's an early draft of a rate mitigation package that provides a policy rationale for the proposed measures.  It's still an early draft and

we need to firm up on the rate relief numbers and fiscal impact. My MO is still reviewing but I wanted you to have an early look.

Serge

<Comments on Electricity Sector Transformation Proposals v5 (CEFD).docx>

# Comments on Ministry of Energy's Draft "Proposed Initiatives to Transform Ontario's Electricity Sector"

The Ministry of Energy (Energy) is providing an update on progress related to transforming the province's electricity sector by elaborating on potential price mitigation initiatives, as outlined in its deck.

## CONTEXT

- As outlined in Energy's update, electricity costs have been increasing following investments to transform towards cleaner generation (i.e., meeting goals to decarbonize) and modernize the electricity infrastructure (e.g., more than $35 billion in cleaner generation and $15.5 billion investment by Hydro One alone in transmission and distribution systems).

- The government has taken action to lower electricity cost pressures to all consumers by taking actions, including deferring investments in generation (e.g., new build nuclear), improving market efficiency and decreasing costs related to renewable procurement (e.g. GEIA renegotiation, decreasing FIT prices, etc).

- The government introduced the Ontario Rebate for Electricity Consumers (OREC) which will provide a rebate equal to the 8% provincial portion of the Harmonized Sales Tax, saving $11 per month starting January 1, 2017 for eligible small businesses, farms and residential consumers and has taken steps to expand the Rural or Remote Electricity Rate Protection program, expected to save eligible RRRP customers about $45 per month, when combined with OREC.

## COMMENTS

Energy's proposals generally involve shifting costs from the rate base to the tax base. While the subset of costed proposals may have a fairly limited residential rate payer impact (e.g. about $5-6/month for residential, less than 5% of the average monthly bill), those proposals would come at a material incremental fiscal cost ($1 billion to $1.3 billion). Note these impacts are lower than those presented in an earlier deck ($1.3 billion to $1.9 billion). Energy also presents other proposals where costs and impacts are "TBD".

Over the past five years, the existing fiscally funded electricity price mitigation efforts have averaged about $1.5 billion and is already expected to increase to about $2 billion with the introduction of OREC. The existing program costs are summarized in the table below:

| ($M) | 2011-12 | 2012-13 | 2013-14 | 2014-15 | 2015-16 | 2016-17[1] | 2017-18[1] |
|---|---|---|---|---|---|---|---|
| OCEB | 1,033 | 994 | 1,006 | 1,078 | 860 | - | - |
| OREC | - | - | - | - | - | 300 | 1,100* |
| Ending DRC[2] | - | - | - | - | 85 | 330 | 330 |
| NIERP | 120 | 120 | 115 | 108 | 120 | 120 | 120 |
| NOEC | 23 | 24 | 25 | 24 | 26 | 25 | 25 |

NOEC – Northern Ontario Energy Credit
DRC – Debt etirement Charge
OEPTC – Ont. Energy & Property Tax Credit

**Energy's Broad Policy Themes / Rationales**

A key theme / rationale cited by Energy is to no longer use rate-base to pay for "social programs" by shifting cost of OESP, RRRP and proposed First Nation Rate to tax-base.

- Energy has typically in the past provided a constitutional law assessment on these programs, providing support for these programs to be ratepayer-supported programs as they provide electricity system benefits / are part of a comprehensive regulatory framework.
- Switching messaging may risk criticism and legal challenges on these and other remaining rate-base funded programs.

| Energy Theme / Rationale | Key Staff Comments |
|---|---|
| Provide greater support for lower income Ontarians by enhancing the OESP or expanding eligibility | • Significant fiscal exposure -- $0.4-0.45 bn at current levels, higher if enhanced. On-bill benefits.<br>• Could contemplate phase-in to manage fiscal impact.<br>• Could look at phasing out existing fiscal-funded programs also targeted to low income or identified groups (e.g., OEPTC, NOEC).<br>o Not on the bill, so less direct and visible electricity cost mitigation.<br>o Phase-out to reflect time to increase application based OESP reaching an increasing portion of eligible households. |
| Fund conservation programs through the tax-base for the remaining term of the existing CDM framework and transition costs to the new "green bank entity" over time | • Potentially significant fiscal impact – current program costs are about $0.45 bn<br>• Conservation programs do provide an electricity system benefits, but would now be fiscally-funded, so a cross-subsidisation from tax-base<br>• Accessing the cap&trade amount in the GGRA would crowd-out other GGRA programs, affecting overall GHG reductions and negatively affect the diccal plan |
| Expand the scope of the "Trillium Trust" to make investments in energy infrastructure eligible for funding | • Would require either squeezing out existing Moving Ontario Forward project funding from the Trillium Trust, requiring funding from another source; or additional funding from asset optimization, given that the government is committed to using the targeted $5.7 billion to fund across Moving Ontario Forward projects<br>• Would have little near-term impact, unless TT funding displaces near-term, non-incremental projects coming onto service<br>• Could lower utility value, including Hydro One, by removing projects, currently and prospectively, that they might have been able to add to their ratebase and earn a return |
| **E**nd the Debt Retirement Charge (DRC) early for commercial and small industrial Class B electricity consumers | • End of the DRC had previously been linked with a balance between rate mitigation and managing stranded debt<br>• Provides only temporary incremental mitigation, as DRC legislated to end April 1, 2018.<br>• End of the DRC had previously been linked to retirement of residual stranded debt<br>• Removing additional DRC revenue from the OEFC would call into question the position that the debt and liabilities of the old Ontario Hydro can continue to be supported |

**Detail on Proposals**

Energy has outlined the following rate mitigation proposals with significant bearing on the fiscal plan:

OESP & RRRP (Total of about $0.4 to 0.45 Billion/year):

This would shift the cost of the current and proposed expanded Ontario Electricity Support Program (OESP), and the Rural or Remote Electricity Rate Program (RRRP), to the tax base. *Note: that the fiscal exposure would increase if the OESP take up rate is larger, and faster than assumed.*

- The fiscal impact from shifting OESP and RRRP to the tax base may also be larger if future changes are made to the programs. Energy notes that
  - The programs could provide greater support for lower income Ontarians by enhancing the OESP or expanding eligibility (e.g., by 50% in the table).
  - The RRRP regulation provides a funding mechanism for transmission infrastructure required to grid connect remote First Nation communities. Considerations for how that funding will be supported by the tax base will need to be determined. [The current deck links Trillium Trust for remote electrification.]

Fund Conservation Programs through the Tax-Base:

This would be for the remaining term of the existing Conservation and Demand Management framework. Over time, the costs would be transitioned to the new "green bank entity", to shift cost recovery from ratepayers to cap and trade revenues.

- Energy's rationale for the cost shift would be in recognition of the burden borne by ratepayers in phasing out coal generation.

Expanding the scope of the Trillium Trust to invest in energy infrastructure:

The Province is currently targeting $5.7 billion from asset optimization to dedicate to the Trillium Trust for investment in infrastructure under Moving Ontario Forward.

- Expanding access to natural gas is already included under Moving Ontario Forward.
- Using the Trillium Trust for additional energy projects would require either
  - squeeze out existing Moving Ontario Forward project funding from the Trillium Trust, requiring funding from another source, or
  - additional funding from asset optimization, given that the government is committed to using the targeted $5.7 billion to fund across Moving Ontario Forward projects,
  - in effect, in both cases above, incremental investments for energy infrastructure from the Trillium Trust would have negative fiscal impacts once the assets are in-service and amortized.
- Investments through the Trillium Trust instead of through other electricity sector entities (Hydro One, OPG, LDCs) could have additional negative fiscal impacts as these entities could see reduced ratebase growth, lowering the revenues that the Province realizes from these entities (e.g., consolidated net income, payments-in-lieu of taxes, etc.).
  - May also negatively impact Hydro One share price if the measure is perceived by the market as reducing Hydro One's potential ratebase growth.
- Unless applied to existing projects, to displace ratepayer-supported costs, this measure would have little or no near-term rate impact.

Departure Tax:

As a result of the IPO, Hydro One paid a "departure tax" payment in lieu of tax (PIL) of $2.6 billion, as a final true-up of its PILs tax obligation. Energy lists using some or all of this departure tax for price mitigation.

- This was paid to the Ontario Electricity Financial Corporation (OEFC). The departure tax payment was fiscally neutral to the Province as the income to the OEFC was fully offset by a reduction in ESDI resulting from reduced net income of Hydro One.
- Using some or all of it for price mitigation would require restating the net stranded debt paydown by OEFC related to the IPO. [As the departure tax paid was fiscally neutral, OEFC's uplift was primarily the result of the related deferred tax benefit, as well as the s.50.3 benefit under the *Electricity Act, 1998*.]
- This would be a one-time measure, potentially spread out over a few years, and fiscal impact, as the departure tax amount was one-time.

Debt Retirement Charge (Total of about $0.45 Billion in annualized rate to 2017-18):
Ending the DRC early for Class B customers (commercial, small industrial) would have an impact of about $0.45 billion in 2017-18.

- The end of the DRC had previously been linked with balancing mitigation and progress on stranded debt reductionthe end retirement of the residual stranded debt.
- Removing additional DRC revenue from the OEFC would call into question the position that the debt and liabilities of the old Ontario Hydro can continue to be supported.

| ($M) | 2016-17[1] | 2017-18[1] | 2018-19[1] | 2019-20[1] | 2020-21[1] |

Hi John/Shajee,

Just a quick update from the meeting. Ron wants a short presentation deck on the Departure Tax proposal, which will include contents on Departure Tax, Deferred Tax Benefit, Stranded Debt impact, and etc. SIFB will lead on this task and will share the deck with EFB for comments on SD related materials.

Francisco/Darren – please feel free to add anything that I might have missed or stated incorrectly.

Thanks,
Gavin He

FYI. This was shared with us as a bootleg, noting that further work is ongoing, including around potential fiscal impact. In addition to obvious electricity sector and fiscal plan tie-ins, there is mention of potential expansion of the Trillium Trust to fund electricity infrastructure projects.

Hi Steve,

Here's an early draft of a rate mitigation package that provides a policy rationale for the proposed measures. It's still an early draft and we need to firm up on the rate relief numbers and fiscal impact. My MO is still reviewing but I wanted you to have an early look.

Serge

<Comments on Electricity Sector Transformation Proposals v5 (CEFD).docx>

# Comments on Ministry of Energy's Draft "Proposed Initiatives to Transform Ontario's Electricity Sector"

The Ministry of Energy (Energy) is providing an update on progress related to transforming the province's electricity sector by elaborating on potential price mitigation initiatives, as outlined in its deck.

## CONTEXT

- As outlined in Energy's update, electricity costs have been increasing following investments to transform towards cleaner generation (i.e., meeting goals to decarbonize) and modernize the electricity infrastructure (e.g., more than $35 billion in cleaner generation and $15.5 billion investment by Hydro One alone in transmission and distribution systems).

- The government has taken action to lower electricity cost pressures to all consumers by taking actions, including deferring investments in generation (e.g., new build nuclear), improving market efficiency and decreasing costs related to renewable procurement (e.g. GEIA renegotiation, decreasing FIT prices, etc).

- The government introduced the Ontario Rebate for Electricity Consumers (OREC) which will provide a rebate equal to the 8% provincial portion of the Harmonized Sales Tax, saving $11 per month starting January 1, 2017 for eligible small businesses, farms and residential consumers and has taken steps to expand the Rural or Remote Electricity Rate Protection program, expected to save eligible RRRP customers about $45 per month, when combined with OREC.

## COMMENTS

Energy's proposals generally involve shifting costs from the rate base to the tax base. While the subset of costed proposals may have a fairly limited residential rate payer impact (e.g. about $5-6/month for residential, less than 5% of the average monthly bill), those proposals would come at a material incremental fiscal cost ($1 billion to $1.3 billion). Note these impacts are lower than those presented in an earlier deck ($1.3 billion to $1.9 billion). Energy also presents other proposals where costs and impacts are "TBD".

Over the past five years, the existing fiscally funded electricity price mitigation efforts have averaged about $1.5 billion and is already expected to increase to about $2 billion with the introduction of OREC. The existing program costs are summarized in the table below:

| ($M) | 2011-12 | 2012-13 | 2013-14 | 2014-15 | 2015-16 | 2016-17[1] | 2017-18[1] |
|---|---|---|---|---|---|---|---|
| OCEB | 1,033 | 994 | 1,006 | 1,078 | 860 | - | - |
| OREC | - | - | - | - | - | 300 | 1,100* |
| Ending DRC[2] | - | - | - | - | 85 | 330 | 330 |
| NIERP | 120 | 120 | 115 | 108 | 120 | 120 | 120 |
| NOEC | 23 | 24 | 25 | 24 | 26 | 25 | 25 |
| OEPTC[3] | 354 | 406 | 418 | 429 | 444 | 450 | 460 |
| TOTAL | 1,530 | 1,544 | 1,564 | 1,639 | 1,525 | 1,225 | 2,005 |

1. 2016-17, 2017-18 based on forecasted numbers
2. 2015-16 estimated for 3 months of reduced DRC revenue
3. OEPTC amounts in all years based on energy component of the rebate.

| Fund conservation programs through the tax-base for the remaining term of the existing CDM framework and transition costs to the new "green bank entity" over time | • Potentially significant fiscal impact – current program costs are about $0.45 bn<br>• Conservation programs do provide an electricity system benefits, but would now be fiscally-funded, so a cross-subsidisation from tax-base<br>• Accessing the cap&trade amount in the GGRA would crowd-out other GGRA programs, affecting overall GHG reductions and negatively affect the diccal plan |
| Expand the scope of the "Trillium Trust" to make investments in energy infrastructure eligible for funding | • Would require either squeezing out existing Moving Ontario Forward project funding from the Trillium Trust, requiring funding from another source; or additional funding from asset optimization, given that the government is committed to using the targeted $5.7 billion to fund across Moving Ontario Forward projects<br>• Would have little near-term impact, unless TT funding displaces near-term, non-incremental projects coming onto service<br>• Could lower utility value, including Hydro One, by removing projects, currently and prospectively, that they might have been able to add to their ratebase and earn a return |
| **E**nd the Debt Retirement Charge (DRC) early for commercial and small industrial Class B electricity consumers | • End of the DRC had previously been linked with a balance between rate mitigation and managing stranded debt<br>• Provides only temporary incremental mitigation, as DRC legislated to end April 1, 2018.<br>• End of the DRC had previously been linked to retirement of residual stranded debt<br>• Removing additional DRC revenue from the OEFC would call into question the position that the debt and liabilities of the old Ontario Hydro can continue to be supported |

**Detail on Proposals**

Energy has outlined the following rate mitigation proposals with significant bearing on the fiscal plan:

<u>OESP & RRRP (Total of about $0.4 to 0.45 Billion/year</u>):

This would shift the cost of the current and proposed expanded Ontario Electricity Support Program (OESP), and the Rural or Remote Electricity Rate Program (RRRP), to the tax base. *Note: that the fiscal exposure would increase if the OESP take up rate is larger, and faster than assumed.*

- The fiscal impact from shifting OESP and RRRP to the tax base may also be larger if future changes are made to the programs. Energy notes that
  - The programs could provide greater support for lower income Ontarians by enhancing the OESP or expanding eligibility (e.g., by 50% in the table).
  - The RRRP regulation provides a funding mechanism for transmission infrastructure required to grid connect remote First Nation communities. Considerations for how that funding will be supported by the tax base will need to be determined. [The current deck links Trillium Trust for remote electrification.]

<u>Fund Conservation Programs through the Tax-Base</u>:

This would be for the remaining term of the existing Conservation and Demand Management framework. Over time, the costs would be transitioned to the new "green bank entity", to shift cost recovery from ratepayers to cap and trade revenues.

- Energy's rationale for the cost shift would be in recognition of the burden borne by ratepayers in phasing out coal generation.

<u>Expanding the scope of the Trillium Trust to invest in energy infrastructure:</u>

The Province is currently targeting $5.7 billion from asset optimization to dedicate to the Trillium Trust for investment in infrastructure under Moving Ontario Forward.

- Expanding access to natural gas is already included under Moving Ontario Forward.
- Using the Trillium Trust for additional energy projects would require either
  - squeeze out existing Moving Ontario Forward project funding from the Trillium Trust, requiring funding from another source, or
  - additional funding from asset optimization, given that the government is committed to using the targeted $5.7 billion to fund across Moving Ontario Forward projects,
  - in effect, in both cases above, incremental investments for energy infrastructure from the Trillium Trust would have negative fiscal impacts once the assets are in-service and amortized.
- Investments through the Trillium Trust instead of through other electricity sector entities (Hydro One, OPG, LDCs) could have additional negative fiscal impacts as these entities could see reduced ratebase growth, lowering the revenues that the Province realizes from these entities (e.g., consolidated net income, payments-in-lieu of taxes, etc.).
  - May also negatively impact Hydro One share price if the measure is perceived by the market as reducing Hydro One's potential ratebase growth.
- Unless applied to existing projects, to displace ratepayer-supported costs, this measure would have little or no near-term rate impact.

Departure Tax:

As a result of the IPO, Hydro One paid a "departure tax" payment in lieu of tax (PIL) of $2.6 billion, as a final true-up of its PILs tax obligation. Energy lists using some or all of this departure tax for price mitigation.

- This was paid to the Ontario Electricity Financial Corporation (OEFC). The departure tax payment was fiscally neutral to the Province as the income to the OEFC was fully offset by a reduction in ESDI resulting from reduced net income of Hydro One.
- Using some or all of it for price mitigation would require restating the net stranded debt paydown by OEFC related to the IPO. [As the departure tax paid was fiscally neutral, OEFC's uplift was primarily the result of the related deferred tax benefit, as well as the s.50.3 benefit under the *Electricity Act, 1998*.]
- This would be a one-time measure, potentially spread out over a few years, and fiscal impact, as the departure tax amount was one-time.

Debt Retirement Charge (Total of about $0.45 Billion in annualized rate to 2017-18):
Ending the DRC early for Class B customers (commercial, small industrial) would have an impact of about $0.45 billion in 2017-18.

- The end of the DRC had previously been linked with balancing mitigation and progress on stranded debt reductionthe end retirement of the residual stranded debt.
- Removing additional DRC revenue from the OEFC would call into question the position that the debt and liabilities of the old Ontario Hydro can continue to be supported.

| ($M) | 2016-17[1] | 2017-18[1] | 2018-19[1] | 2019-20[1] | 2020-21[1] |

# Proposed Initiatives to Transform Ontario's Electricity Sector – Update

## Working Draft

December 2016

CONFIDENTIAL DRAFT

# Context

- Electricity costs are increasing as the necessary investments are made to decarbonize and modernize the province's electricity infrastructure (i.e., $35 billion+ investment in cleaner generation and $15.5 billion investment in Hydro One transmission and distribution systems).

- Ontario has taken a number of actions to lower electricity cost for all consumers by:
  - Deferring investments in generation (e.g., new build nuclear), improving market efficiency (e.g., wind dispatch) and decreasing the cost of renewable procurements (e.g., GEIA renegotiation, decreasing FIT prices).
  - Increasing cost effectiveness and improving efficiency by adopting new electricity market approaches (e.g., competitive LRP, no new NUG contracting).

- Following the 2016 Throne Speech, actions were announced to further reduce electricity costs by:
  - Providing an 8%  per cent rebate ($11/month savings), updating RRRP ($45/month savings, combined with the 8% rebate), expanding ICI (up to one-third savings for participants), suspending the LRP II and the EFWSOP (up to $3.8 billion in cost savings) and recycling proceeds to industrial/ commercial consumers.

- On November 28, 2016, the Minister of Energy announced the need for changes in how electricity resources are procured,  the need for wholesale market renewal and greater electricity consumer choice.

- The Ministry of Energy is currently updating its Long-Term Energy Plan (LTEP),  which provides an opportunity to consider a range of policy changes to  how the Ontario energy sector operates.

# Broad Policy Themes / Rationale

- No longer use rate-base to pay for social programs [despite the system benefit rationale] by shifting cost of OESP, RRRP and proposed First Nation Rate to tax-base.
- Provide greater support for lower income Ontarians by enhancing the OESP or expanding eligibility.
- Fund conservation programs through the tax-base for the remaining term of the existing CDM framework and transition costs to the new "green bank entity" over time. Costs would be shifted in recognition of the burden borne by ratepayers in phasing out coal generation.
- Expand the scope of the "Trillium Trust" beyond the Moving Ontario Forward initiative to make certain investments in energy infrastructure eligible for funding, such as remote electrification, large transmission projects, new or expanded interties ~~and expansion of natural gas to rural areas~~, etc. (note that expanding access to natural gas is already included under Moving Ontario Forward.)
- Empower energy agencies to increase cost effectiveness and improve efficiency by having – IESO modernize Ontario's electricity market through electricity market renewal initiatives, the OEB identify opportunities for future LDC cost reductions/efficiencies and work with OPG to find further efficiencies in operations and pass on savings to ratepayers.
- Give consumers more choice by allowing households to "opt into" a single rate plan as an interim measure as the Ontario Energy Board (OEB) develops more pricing options over time.
- Help small business manage their electricity costs and provide relief for cap and trade until proceeds recycling is fully operational by ending the Debt Retirement Charge (DRC) early for commercial and small industrial Class B electricity consumers.

# Proposed Initiatives – Potential Savings for Typical Residential Electricity Consumers

| *$/750kWh* | 2017 | 2018 | 2019 | 2020 | 2021 | 2022 | Timing of Benefit |
|---|---|---|---|---|---|---|---|
| **Recommended Initiatives** | | | | | | | |
| 1. No Longer Fund Social Programs Through the Rate-Base (i.e., OESP, RRRP, First Nations rate) | 2.16 | 2.31 | 2.41 | 2.49 | 2.54 | 2.58 | Immediate |
| 2. Expand the OESP (i.e., 50% increase) | - | - | - | - | - | - | n/a |
| 3. Fund Conservation Programs Through The Tax-Base | 3.40 | 3.68 | 2.98 | 3.09 | 2.58 | 2.58 | Immediate |
| 4. Expand the Scope of Trillium Trust to Make Investments in Energy Infrastructure (e.g., Transmission upgrade, etc) | TBD | TBD | TBD | TBD | TBD | TBD | TBD |
| 5. Empower Energy Agencies to Increase Cost Effectiveness and Improve efficiency* | | | | | | | |
| a. IESO – Market Renewal | - | - | - | - | 1.00 | 1.03 | Long-Term |
| b. OEB – LDC efficiencies | TBD | TBD | TBD | TBD | TBD | TBD | Medium-Term |
| c. OPG – Operational efficiencies | TBD | TBD | TBD | TBD | TBD | TBD | Medium-Term |
| 6. Give Residential Consumers More Rate Choices | - | - | - | - | - | - | n/a |
| 7. Help Small Business Manage Their Electricity Costs (i.e., End DRC early for Class B electricity consumers)** | - | - | - | - | - | - | n/a |
| 8. Cancel / Adjust FIT | - | - | 0.13 | 0.13 | 0.14 | 0.14 | Long-Term |
| 9. Dedicate Departure Tax | TBD | TBD | TBD | TBD | TBD | TBD | Immediate |
| **Considered but not Recommended** | | | | | | | |
| 1. Eliminate the Industrial Conservation Initiative (ICI) | 4.40 | 4.24 | 4.10 | 4.24 | 3.73 | 3.58 | Immediate |
| 2. Cancel LRP I | - | - | TBD | TBD | TBD | TBD | Medium-Term |

**Note:** The above initiatives will provide similar benefits for non-RPP Class B electricity consumers. Proposal 1 assumes OESP participation of 50% and 5-year maturity. *Assessing the range of ratepayer impacts will be done through the LTEP development and implementation process in conjunction with the OEB. **Class B includes small-medium enterprises (SMEs).

# Proposed Initiatives – Potential Savings for Average Industrial Electricity Consumers

| *$/MWh* | 2017 | 2018 | 2019 | 2020 | 2021 | 2022 | Timing of Benefit |

**Source:** Ministry of Finance, Energy

# Considerations / Outcomes

- The proposed initiatives provide the following opportunities to:
  - Lower the cost of electricity for all consumers;
  - Re-set how electricity programs and energy infrastructure is funded (i.e., shifting costs to the tax-base from rate-base);
  - Provide electricity consumers with greater choices (i.e., signal rate plan);
  - Provide system benefits (e.g., market renewal); and
  - Increase cost effectiveness and improve efficiency.

- The timing of the impact of these rate mitigation initiatives varies.
  - Immediate and near-term impacts can be achieved by shifting costs to the tax-base or changing how certain costs are recovered from consumers or eliminating certain programs.
  - Over the longer term, changes to the electricity supply mix and achieving efficiencies in the electricity market could yield system savings.

- Pursuing the initiatives would require regulatory amendments and working with the electricity sector agencies, LDCs and other stakeholders to implement the initiatives.

DRAFT

# Electricity Price Mitigation

Corporate and Electricity Finance Division
December 7, 2016

DRAFT

# General Comments on Energy's Deck

- Energy's deck note various actions taken to-date to reduce costs or cost pressures, such as deferring generation supply investments, improving market efficiency, and reducing the costs of existing procurements.
- Aside from reducing costs on the electricity bill, it is not clear what principles are being applied, short term or long term for electricity pricing.
  - A principle that was applied in the past was to ensure that electricity consumers paid the true cost of electricity, for example.
  - The Energy proposals appear to be about, in part at least, moving some costs from the rate base to the tax base.
- However, the Energy proposals may be seen as having a fairly limited impact, e.g., a little over $8/month for residential, or a little over 5% of the monthly bill (though not all of the proposals have been costed / assessed).
  - The proposals would have a significant fiscal cost [about $1.3 – 1.9 plus bn per year in new fiscal costs].
- There is already significant amounts of existing fiscally-funded electricity price mitigation
  - Averages over $1.5 billion per year over the past five years, and estimated to increase to about $2 billion in 17-18 (see subsequent slide for estimated costs over time, and likely increasing over time), with the total tax-based costs rising to about $3.3-3.9 plus billion in 2017-18, if Energy`s proposals are adopted.
  - These existing mitigation costs are not presented in Energy's deck.
  - Not included is any "hidden" price mitigation through constrained financial performance of, e.g., OPG.

OCEB – Ontario Clean Energy Benefit
OREC – Ontario Rebate for Electricity Consumers
DRC – Debt Retirement Charge
NIERP – Northern Ontario Electricity Rate Program
NOEC – Northern Ontario Energy Credit
OEPTC – Ontario Energy and Property Tax Credit

- The table above shows the annual amount of taxpayer funded electricity price mitigation from 2011-12 to 2017-18.
- From 2011-12 to 2015-16 there has been an annual fiscal impact of approximately $1.6 billion due to electricity price mitigation programs.
- In 2016-17, the fiscal impact due to electricity price mitigation programs is estimated at approximately $1.2 billion.
- In 2017-18, due primarily to the start of the Ontario Rebate for Electricity Consumers, the expected fiscal impact due to electricity price mitigation programs is approximately $2.0 billion.

- The table above shows the annual amount of taxpayer funded electricity price mitigation from 2011-12 to 2017-18.
- From 2011-12 to 2015-16 there has been an annual fiscal impact of approximately $1.6 billion due to electricity price mitigation programs.
- In 2016-17, the fiscal impact due to electricity price mitigation programs is estimated at approximately $900 million.
- In 2017-18, due primarily to the start of the Ontario Rebate for Electricity Consumers, the expected fiscal impact due to electricity price mitigation programs is approximately $1.7 billion.

# Electricity Price Mitigation

General Decision Points on Program Features:

- Funding: Rate base vs Tax base
  - Tax base programs have a direct fiscal impact on the Province's finances, and shift costs based on taxpayer incidence and impact on expenditure room for other, non-electricity, programs.
  - Rate base programs shift costs from one group of ratepayers to another.
- On-bill vs Not On-bill
  - Recent focus has been on on-bill programs, such as OESP and OREC.
  - Older tax-base funded programs that are not visible on the bill are still in place, such as NOEC and OEPTC.
  - As OESP enrollment increases, could consider phasing out the non-bill benefits of NOEC and OEPTC.
- Targeted vs General
  - Recent new programs include both general (OREC) and targeted (OESP) programs.
  - Consideration could be made to make OREC more conservation-friendly (e.g., a monthly eligible consumption cap brought in, as with the former Ontario Clean Energy Benefit), and maybe a higher cap in the winter to allow for space heating costs.
  - A targeted industrial program recently extended and made on-going is the Northern Industrial Electricity Rate (NIER) program.

DRAFT

# Energy's Proposals

Energy is proposing additional electricity price mitigation programs, currently funded through the electricity system, be fiscally-funded. They could be upwards of $2 bn/year, (plus the departure tax), which is not included in the fiscal plan, which would challenge the path to balance.

- OESP & RRRP (Total of about $0.4 Bn/yr): This includes shifting the cost of the Ontario Electricity Support Program (OESP) and the Rural or Remote Electricity Rate Program (RRRP) to the tax base. Note that the fiscal exposure is larger if the OESP take up rate is larger, faster than assumed.

- Industrial Conservation Initiative (ICI -- About $900+ M/yr): Energy also shows, as a potential residential price mitigation measure, the cancellation of the ICI.
  - Energy is not initially proposing it be continued instead as taxpayer funded, but notes that about 30% price increase (from $85/MWh to $110), if ICI is cancelled, for the large Class A customers benefiting from ICI currently.
  - As this cost estimate is for 2016, prior to the planned expansion of the ICI, this could further increase the fiscal exposure by about $100 million).

- Departure Tax: As a result of the IPO, Hydro One paid a "departure tax" payment in lieu of tax (PIL) of $2.6 billion, as a final true-up of its PILs tax obligation.
  - This was paid to the Ontario Electricity Financial Corporation and helped reduce stranded debt.
  - Using some or all of it for price mitigation would change the net stranded debt paydown by OEFC resulting from the IPO. This would also be a one-time measure (potentially over a few years), and fiscal impact, as the departure tax amount was one-time.

- Other fiscal cost risks (Total of about $0.8+ Bn):
  - Amortisation of conservation costs also poses a fiscal risk (about $0.4 bn/yr),
  - Ending the DRC early for Class B customers (commercial, small industrial) (about $0.4 bn/yr to 2017-18)
  - Lowering of the debt interest paid by OPG (about $30 – 70 million/yr between 2017 and 2021),

DRAFT

# Fiscal Mitigation Options

- With the addition of recent and new price mitigation measures, a review should be initiated on fiscally-funded programs. There could be a phase down / out transition period considered. Examples include the following:

- Ontario Energy and Property Tax Credit (OEPTC) and Northern Ontario Energy Credit (NOEC):
  - Phase down and/or out the non-on-bill benefits of. (Save up to about $460 M/yr)
  - These targeted, low-income measures were introduced after the HST was introduced.
  - The OESP provides a larger, targeted and on-bill relief to qualifying consumers.

- Ontario Rebate for Electricity Consumers (OREC):
  - Introduce over time a monthly eligible consumption cap, with perhaps a higher cap in the winter to allow for space heating costs.
  - As with the prior OCEB cap, provides a rough incentive for conservation and correlation to larger homes. A higher cap in winter may help with space-heating issue.
  - May be challenging to implement.

- Greenhouse Gas Reduction Account:
  - If ICI is put on the tax-base, make it eligible for GGRA funding.
  - Positioned as, e.g., providing annual benefits from participants conserving and shifting off-peak to reduce reliance on GHG-emitting peaking plants

# Background on Taxpayer-funded Electricity Price Mitigation

Option 1

| Program | Annual Fiscal Impacts ($M) | Date | Details |
|---|---|---|---|
| **Ontario Clean Energy Benefit (OCEB)** | ~1,000 | Jan 1 2011 to Dec 31, 2015 | OCEB provided over four million residential customers, and over 400,000 farm, small business and other small users with a benefit equal to 10 per cent of the total cost of electricity on their bills, including tax. Effective September 1, 2012, 10 per cent benefit was capped for the first 3,000 kWh of electricity consumed per month. OCEB expired December 31, 2015, as legislated. |
| **Removed Debt Retirement Charge (DRC) from Residential Bills** | ~330 | Jan 1, 2016 to Mar 31, 2018 | Removing the DRC from residential users was a policy decision to help mitigate residential rate pressures – particularly in the context of the end of OCEB – rather than based on defeasance as per the original conception of the DRC. ~~The government removed the DRC from residential electricity users' bills as of January 1, 2016.~~ This is saving a typical residential user about $70 each year and meant ending the DRC earlier for these users than otherwise provided for in the *Electricity Act, 1998*. |
| **Ontario Rebate for Electricity Consumers (OREC)** | ~1,200 | Jan 1, 2017 onward | This ongoing program will rebate -- directly on consumers' residential electricity bills -- an amount equal to the provincial portion of the Harmonized Sales Tax (HST). |
| **Northern Industrial Electricity Rate (NIER) Program** | 120 | March 2010 | As announced in Budget 2015, the government committed to ongoing support for northern industrials with $120 million allocated annually. NIER was previously extended in 2012 for an additional three-year term, effective April 1, 2013 and also for a year effective April 1, 2016, with an allocation up to $120 million per year.<br>Qualifying participants receive a rebate of two cents per kilowatt-hour (kWh) up to a maximum of $20 million per year per company.<br>NIER initially established as a three-year program in Budget 2010, effective April 1, 2010. |
| **Northern Ontario Energy Credit** | ~25 | Budget 2010 | Delivered as part of the Ontario Trillium Benefit, provides individuals living in northern Ontario with a credit of up to $146 per year for the 2016 benefit year, and families up to $224.[1] |
| **Ontario Energy Property Tax Credit** | ~445[1] | Budget 2010 | Delivered as part of the Ontario Trillium Benefit, energy portion provides up to $224 per year (inflation adjusted) for low-to moderate-income individuals and families, and for qualifying seniors.[1] |

1. Energy portion cost only. Both the energy portion of the Ontario Energy and Property Tax Credit (OEPTC) and NOEC were introduced/enhanced following the introduction of the HST and have a significant annual fiscal cost (totalling about $500 million annually).

# Timeline: Taxpayer-funded Electricity Price Mitigation

DRAFT

Option 1

**Budget 2010: OEPTC, NOEC Proposed as part of the Ontario Trillium Benefit**

*In the 2011 Budget, the government combined the payments of three existing tax credits — the Ontario Sales Tax Credit, the Ontario Energy and Property Tax Credit, and the Northern Ontario Energy Credit — to create the OTB. The OTB is paid in monthly instalments throughout the year, which helps people meet their expenses as bills arrive.*

**Ontario Clean Energy Benefit** (Jan 1 2011 to Dec 31 2015)

*The OCEB was introduced in the 2010 Ontario Economic Outlook and Fiscal Review to help consumers transition to a cleaner electricity system. As set out in legislation, the OCEB ended on December 31, 2015. The Province has introduced rate mitigation measures to be implemented after December 31, 2015.*

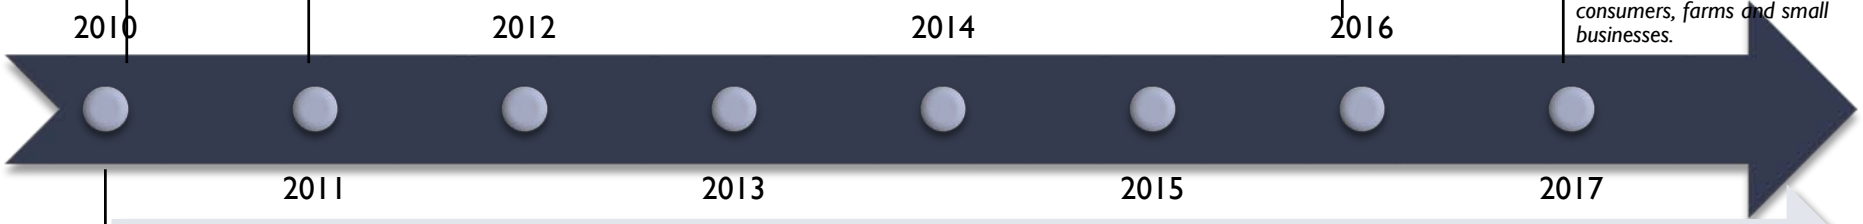
*OCEB provided over four million residential customers, and over 400,000 farm, small business and other small users with a benefit equal to 10 per cent of the total cost of electricity on their bills, including tax, for the first 3,000 kilowatt-hours (kWh) of monthly electricity consumption.*

**Removing DRC from Residential Bills** (Jan 1 2016 to Mar 31 2018)

*Removing the DRC from residential users was a policy decision to help mitigate residential rate pressures rather than based on defeasance as per the original conception of the DRC. This saves a typical residential user about $70 each year and ends the DRC earlier for these users than otherwise provided for in the Electricity Act, 1998.*

**Ontario Rebate for Electricity Consumers**

*As of January 1, 2017, OREC will reduce electricity costs by an amount equal to the provincial portion of the HST for about five million residential consumers, farms and small businesses.*



**History of Northern Industrial Electricity Price Relief**

**November 2006**

*The Ontario government announced the Northern Pulp and Paper Electricity Transition Program (NPPETP), a three-year $140 million, to be effective retroactively to October 1, 2006*

**Budget 2009**

*The government announced extension of the NPPETP by one year providing about $58 million with electricity price rebates of 1.8 cents/kWh.*

**Budget 2010**

*NIER program announced, with a projected fiscal cost of $150 M per year, to provide electricity price rebates for qualifying large industrial facilities in northern Ontario. An additional $21.8 million allocated for existing NPPETP in 2010-11 to be integrated with NIER.*

**September 2010**

*Transition from NPPETP to NIER: pulp and paper mills participating in NPPETP continued to receive the NPPETP rebate of 1.8 cents/kWh until September 30, 2010, with those qualifying for NIER receiving a top-up rebate of 0.2 cents/kWh.*

**December 2012**

*The government announced the extension of the NIER for three years, capping the rebates to a maximum of 2011-12 consumptions levels or $20 million, whichever is lower.*

DRAFT

# Potential Fiscal Impact to the Electricity Sector

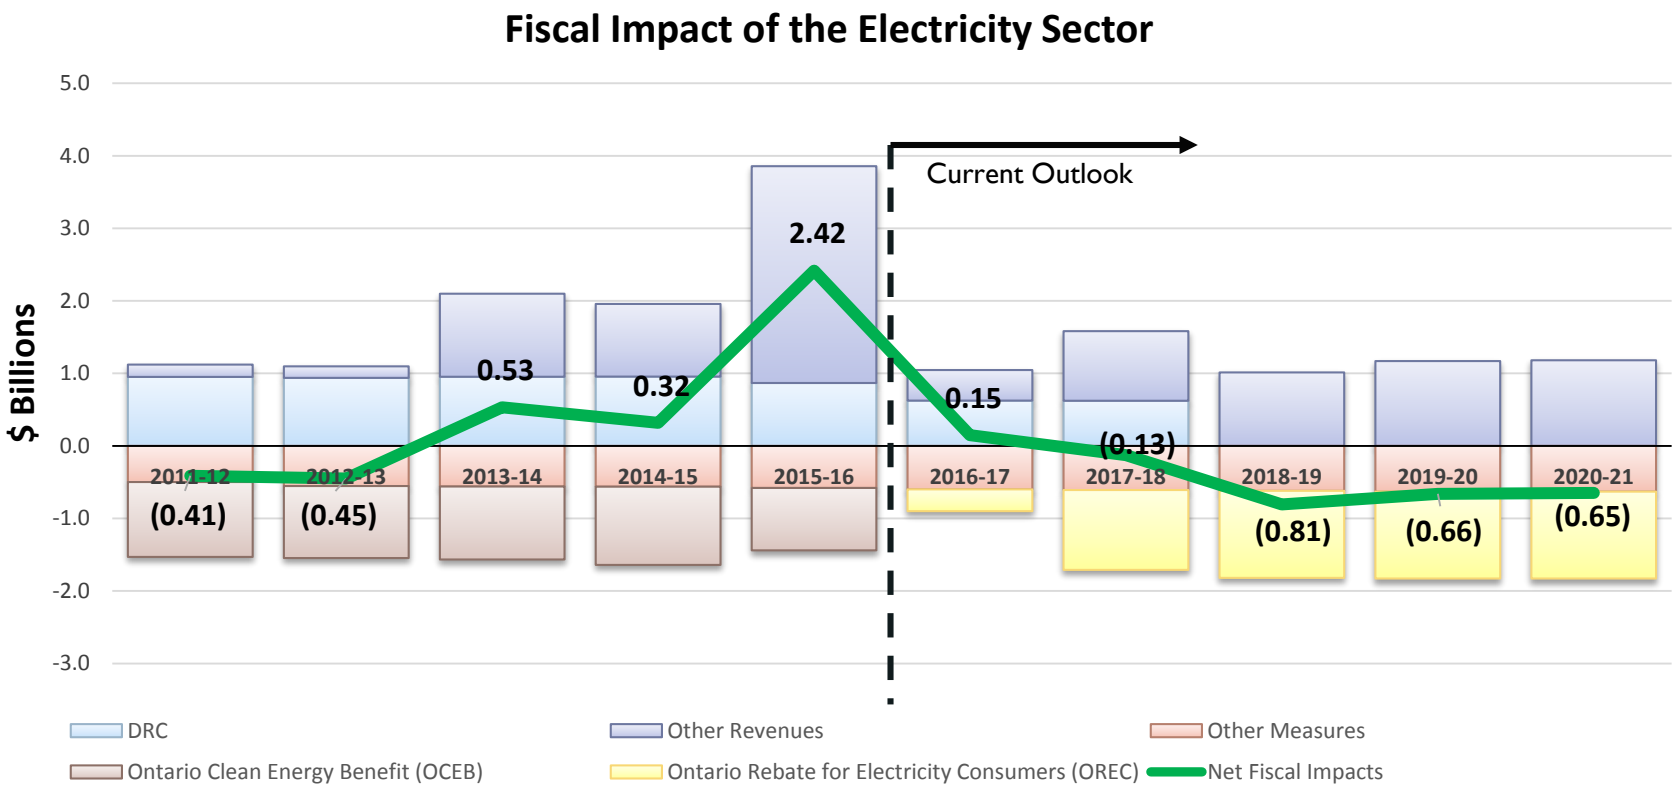
- The electricity sector has a significant impact on the Province's fiscal position; through both the revenue and expense sides of the Province's fiscal position.
  - Electricity Rate mitigation programs funded through the tax base have a direct fiscal impact on the Province's finances.
  - Alternatively, electricity rate mitigation programs funded by the rate base shift costs from one group of ratepayers to another.
- The Province's electricity sector agencies and corporations are each consolidated into the government's financial statements, and directly affect the Province's surplus/deficit position.
  - Note: The Province has invested capital into OPG and Hydro One with the expectation that as commercial corporations, the Province would receive a risk-adjusted return in exchange for these investments.
  - Ontario Power Generation (OPG) financial results have a dollar-for-dollar impact on the Province.
    - Electricity price mitigation strategies involving OPG would lead to a direct fiscal impact.
  - Hydro One financial results have a direct impact on the Province, based on the Province's proportionate ownership.
    - The Province currently holds about 70 per cent of Hydro One.

# Potential Fiscal Impact to the Electricity Sector

DRAFT

Option 2

- The below chart provides an overview of the fiscal impact from the electricity sector



Other Revenues include payments in lieu of taxes (PILs), and property tax PILs in the case of Hydro One, directed to the OEFC. The provincial portion of these taxes would be a fiscal benefit to the province, regardless of company ownership.

**Subject:** RE: Question....

Hi John, no, I don't have any new estimates. The set of numbers that I have were from Energy when the item when to TB/MBC (see attached assessment note).

We did build the approximately $1B/year into the Ministry's preliminary allocation.

Thanks,
Felix

Hi Felix….question for you. Do you have any new materials that show the OREC cost estimates? If so, could you share?

Thanks,

John.

**TREASURY BOARD / MANAGEMENT BOARD OF CABINET**
**REQUEST ASSESSMENT NOTE**

| | |
|---|---|
| **Ministry:** | Energy |
| **Meeting Date:** | September 12, 2016 |
| **Agenda Class:** | Major |
| **Last reviewed by:** N/A | **Tracking to:** Cabinet - September 12, 2016 |

| **SUBMISSION TITLE:** | Electricity Price Mitigation |
|---|---|

## I. DECISION BEFORE THE BOARD

The Ministry of Energy is requesting approval of a suite of initiatives providing relief to various electricity consumer classes.

## II. RECOMMENDATIONS:

| | |
|---|---|
| • Approve a suite of initiatives to provide relief to various electricity consumer classes (pending Cabinet policy approval):<br>– Providing an 8% rebate to Regulated Price Plan eligible consumers;<br>– Expanding the Industrial Conservation Initiative;<br>– Updating the Rural or Remote Rate Protection program; and,<br>– Using $270M in cap and trade proceeds to ensure industrial and commercial consumers are not negatively impacted by cap and trade by providing a modest reduction in rates. Balance of proceeds intended for electricity relief through the Climate Change Action Plan ($60M), could provide some fiscal offsets.<br>• Approve $300M in 2016-17 in Supplementary Estimates for electricity price mitigation.<br>• Direct the Ministry to report back to TB/MBC through the annual planning process with updated future year impacts, and obtain any required TB/MBC approvals to implement the initiatives.<br>• Recommend proceeding to Cabinet with the proposed legislation and amendments to existing regulations to implement the initiatives. | *Board Judgment* |

## III. FINANCIAL SUMMARY

| **$ Millions** | **2016-17** | **2017-18** | **2018-19** |
|---|---|---|---|
| Initiative cost requested | 300.0 | 1006.0 | 1004.0 |
| Initiative cost recommended | 300.0 | 1006.0 | 1004.0 |
| Recommended program base | 300.0 | 1006.0 | 1004.0 |
| Offset Recommended – Applies if cap and trade proceeds diverted to in-plan initiatives | 0.0 | (60.0) | (60.0) |
| Total Fiscal Impact | 300.0 | 946.0 | 944.0 |

## IV. KEY COMMENTS AND CONSIDERATIONS

Context

Electricity costs have increased as the province has made investments in clean energy generation and modernized electricity infrastructure. Electricity bills are expected to continue to increase as more renewable energy projects come online. Since 2010, average bills for residential consumers (i.e., using 750 kWh/month) have increased by over 50%. Rates paid by commercial and industrial electricity consumers have increased by 56% and 6% respectively over the same period. Appendix C provides supporting background information.

As part of the 2016 Budget, the government committed to offset the impact of cap and trade in Ontario for commercial and industrial electricity consumers, while also providing a benefit of up to $2 per month for residential electricity consumers. The Climate Change Action Plan (CCAP) included up to $1.32B over 4 years to help keep electricity rates affordable.

The Ontario Clean Energy Benefit (OCEB) expired December 31, 2015, as part of the originally planned, five-year legislated program put in place as a broad-based, transitional measure to a cleaner electricity system. OCEB was also put in place following the implementation of the Harmonised Sales Tax (HST). Unlike the previous provincial Retail Sales Tax (RST), the HST (and GST) included electricity in the taxable base. With the end of OCEB, the government ended the electricity Debt Retirement Charge (DRC) on residential users earlier than planned, as of January 1, 2016, and also put in place the low-income targeted Ontario Electricity Support Program (OESP).

In order to achieve the Budget commitment and additional price mitigation, while delivering on the Province's climate change objectives, the Ministry of Energy has developed price mitigation initiatives that consider tax-based levers, cap and trade proceeds, and shifting costs within the rate-base.

Proposal

The Ministry is proposing the following to mitigate electricity prices for consumers (Appendix D provides more information on each item below):

- Provide an 8% rebate on the pre-tax cost of electricity to consumers eligible for the Regulated Price Plan (i.e., residential, small business and farms), equivalent to the provincial portion of HST.
- Expand Industrial Conservation Initiative (ICI) eligibility by lowering the threshold to 1 MW, to provide support to additional commercial, institutional and small industrial consumers.
- Update the Rural or Remote Rate Protection (RRRP) program, to provide relief to rural customers.
- Use cap and trade proceeds to provide a modest rate reduction for commercial and industrial electricity consumers.

Public high-profile communications would coincide with introduction of legislation (September 2016). Currently, the 8% rebate would be available starting January 1, 2017, along with updating the RRRP. Expanding ICI won't be added to bills until 2018 due to the time required to implement the expansion and for billing changes. The impact of cap and trade would not be added to electricity bills until 2017.

The following tables provide an overview of the four initiatives, recipients, projected financial impact, grouping them based on whether taxpayers or ratepayers cover the costs:

| | Measure | Annual Impact | Targeted Recipients |
|---|---|---|---|
| **Taxpayers cover the costs (Potential to impact the Province's Fiscal Plan)** | | | |
| **1.** | 8% Rebate to Regulated Price Plan | Fiscal<br>About $1.0B | Residential, small business and farms, and other small users |
| **2a.** | Use cap and trade proceeds to provide a modest reduction in rates for commercial and industrial electricity consumers. (Implementation details under development). | ($270M) in cap and trade proceeds to offset $270M in costs for reducing rates<br><br>No Fiscal Impact | The CCAP allocated up to $330M/year in cap and trade proceeds for electricity price mitigation.<br><br>See item 2b. regarding the residual amount of cap and trade proceeds ($330M - $270M = $60M) |
| **2b.** | While CCAP anticipated $330M/year was required to keep electricity affordable, the residential portion of this commitment is met by the 8% rebate. As such, some of the CCAP allocated proceeds can be redirected to other GHG reduction initiatives already in the fiscal plan. | Fiscal<br>($60M) | Provides fiscal plan flexibility of $60M/year if these proceeds are diverted to offset costs of other existing in-plan initiatives that reduce GHG emissions. |
| | **Total Fiscal Impact** | $946M | Matches Financial Summary on page 1 for 2017-18 |

| | Measure | Annual Impact | Targeted Recipients |
|---|---|---|---|
| **Ratepayers cover the costs (No impact to the Province's Fiscal Plan)** | | | |
| **3** | Expanding ICI eligibility to customers above 1MW in all sectors | Rate base<br>($47M/$82M)** | Intermediate and large-sized industrial, commercial and institutional consumers above 1MW in all sectors |
| **4.** | Updating Rural or Remote Rate Protection | Rate base<br>($110M) | Residents in rural or remote locations: Hydro One's lowest-density R2 customers. |

** Short-term/Long-term rate base impact, where short term is one year after expanded eligibility takes place and long-term is expected impact once new customers have time to change behavior.

Due to the nature of the ICI Global Adjustment mechanism and cost recovery of RRRP, the rate base proposals (#3 and #4) above benefit the targeted recipients, but come at a cost to all other electricity ratepayers in Ontario.

The following table from the Ministry highlights the benefits by electricity consumer class.

| | Average Annual Fiscal Impact | Average Annual Greenhouse Gas Reduction Account (GGRA) Proceeds Impact | Regulated Price Plan (Residential) Benefit | | Class B (Commercial) Benefit | Class A (Industrial) Benefit | |
|---|---|---|---|---|---|---|---|
| | | | *Average (750 kWh/ month)* | *Rural (1000 kWh/ month)* | | *Existing* | *New* |
| • 8% rebate to Regulated Price Plan eligible consumers<br>• ICI Expansion<br>• RRRP Update<br>• Proceeds Recycling | $1.0 billion annually | $0.27 billion annually<br>(Reduction of $0.06 billion annually or $0.24 billion total from the CCAP commitment) | -$11/ month<br>(-8%) | -$45/ month<br>(-20%) | -$3/MWh<br>(-2%) | -$3/ MWh<br>(-3%) | Up to -$52/MWh<br>(-34%) |

**Notes:** * The above benefits do not include the cost of ICI expansion and the RRRP update (total impact of $1.74/MWh). Proceeds recycling is net of the cost of carbon and represents an estimated average of the proceeds required over the first compliance period (2017-2020).

See Appendix E for more illustrative bill impacts. See Appendix F for an electricity bill mock-up.

Fiscal Impact

The Ministry estimates proceeding with an 8% Regulated Price Plan (RPP) rebate without a cap would cost an estimated $1.0 billion per year. The Ministry's estimate of $300M needed for 2016-17 (to cover the first three months of 2017 when the 8% rebate applies) will be addressed through Supplementary Estimates. The Ministry will use the annual planning process to update future year impacts.

The Ministry also indicates the current proposal would use cap and trade proceeds to eliminate carbon price impacts/ grid emission reductions to ratepayers, as was established through the CCAP. This proposal does not require the full $330M/year notionally allocated through the CCAP, which could provide fiscal plan flexibility of about $60M per year to commit to other GHG reduction initiatives in the fiscal plan.

Cap and Trade Proceeds

The 2016 Budget committed to offset the impact of cap and trade for commercial and industrial consumers, while also providing a benefit of up to $2 per month for residential consumers (on average). While residential and other consumers would benefit from the 8% pre-tax rebate, this does not apply to non-Regulated Price Plan eligible consumers (larger industrial, commercial, and other consumers). As such, the Ministry is proposing to direct a portion of cap and trade auction proceeds to industrial and commercial consumers not in the RPP to provide a modest rate reduction. This proposal fulfills the policy objective established in the Climate Change Action Plan to eliminate carbon price impacts/ grid emission reductions to electricity ratepayers.

To be characterized as a regulatory charge under the cap and trade program, auction proceeds need to be spent on programs that are reasonably likely to reduce or support the reduction of greenhouse gases. The Ministry has indicated that their proposal would use proceeds to offset the costs of committed investments that reduce greenhouse gases (e.g., non-emitting generation and conservation programs) and incent fuel-switching away from fossil fuels.

Considerations – Implementation

At this point, the Ministry has presented a high level overview of major implementation pieces:

- New legislation would be required to enable the 8% rebate proposal. Legislation would closely mirror the Ontario Clean Energy Benefit Act, 2010. If passed, the legislation would require a general regulation. Amendments would also be required to various regulations to expand ICI and RRRP.
- On-bill rebate delivery would likely require adjustments to LDC billing systems, which could impact delivery costs and timelines. The Ministry indicates it will consult with LDCs (possibly through the Ontario Energy Board) to accurately assess these impacts once the program has been announced. In the past, LDCs have asked for at least six months' notice when implementing billing system changes. Timing concerns may be alleviated by allowing LDCs to provide retroactive payments rebates if their systems cannot be updated in time for January 1, 2017. This was done with the OCEB.
- Detailed messaging on bills could be implemented. The rebate would not be directly linked to HST. With electricity invoices containing multiple line items and LDC bill presentment varying widely, direction on rebate presentment will need to be flexible to allow LDCs to incorporate easily while ensuring government-preferred branding and messaging is conveyed.
- The Ministry will need to continue to consult with the Independent Electricity System Operator (IESO), Ontario Energy Board (OEB) and LDCs regarding implementation of proceeds recycling.

Legal Considerations

8% Rebate (shift costs from rate-base to tax base by providing a rebate equal to the provincial portion of HST):

- Providing the contemplated rebate under the proposed Bill does not, in and of itself, give rise to legal issues. As policy direction is given on the specifics of supporting regulations, any associated legal risks can be identified.

ICI Expansion (shift costs within rate-base by expanding eligibility for the ICI program to consumers of >1 MW):

- To establish that the charge is legitimate, it must be established that the purpose and effect of the charge is to facilitate the maintenance of a financially viable electricity system by way of load management or some other feature under which those who are subsidized provide an overall system benefit enjoyed by those who subsidize them.

RRRP Update (shift costs within the rate-base by increasing the RRRP benefit paid to rural or remote customers):

- Increasing the amount of revenue devoted to the RRRP or expanding the scope of consumers eligible for the program does not raise new legal risk. There is a good argument that the RRRP is a regulatory charge, as it socializes some of the costs of distributing electricity to rural consumers. Overall the risk that the RRRP would be characterized as a tax is assessed as moderate (meaning equally good arguments on both sides).

Cap and Trade Proceeds Recycling (reduce impact on rate base and tax base by directing cap and trade auction proceeds to industrial consumers):

- To be characterized as regulatory charges under the cap and trade program, auction revenues should be spent on programs that reduce GHGs.

Other Considerations

- This request does not align with the 2016 Budget fiscal plan and there are no proposed offsets for the 8% rebate.
- The 8% rebate would provide a typical residential consumer about an $11 per month benefit on average, exceeding the Budget 2016 $2 per month on average cap and trade commitment. The proposal to offer a modest rate reduction for industrial and commercial consumers also exceeds the Budget commitment to simply offset the impact of cap and trade on these consumers.
- Reductions in electricity prices that do not consider consumption amounts (e.g., without the cap in the previous OCEB program) do not promote electricity conservation and may be seen as unaligned with climate change objectives.
- Other price mitigation measures introduced following the implementation of the HST, as well as the end of OCEB, would continue.
  - Both the energy portion of the Ontario Energy and Property Tax Credit (OEPTC) and NOEC were introduced/ enhanced following the introduction of the HST and have a significant annual fiscal cost (totalling about $500 million annually).
  - The DRC on residential consumers was ended early, as of January 1, 2016 (about a $340 million impact in 2016-17).
  - OESP is a low-income targeted program funded by electricity consumers through the electricity rate base.

## APPENDIX A: PROPOSED MINUTE

Approve electricity price mitigation for residential, commercial and industrial consumers.

In this regard:

i) Approve a suite of initiatives to provide relief to various electricity consumer classes:

   a) Provide a rebate of 8% on the pre-tax cost of electricity for all electricity consumers eligible to be billed under the Ontario Energy Board's Regulated Price Plan (RPP); and any other consumers who would be eligible for RPP if their electricity account was with a licensed distributor, starting January 1, 2017.

   b) Increase the total amount of rate protection available to R2 low density electricity consumers under the Rural or Remote Rate Protection Program (RRRP) by increasing the subsidy by $110 million from its current level of $127 million which has been capped since 2003.

   c) Implement a mechanism to periodically adjust the total annual amount of rate protection available to R2 low density electricity consumers under the RRRP, effective on or after January 1, 2018.

   d) Expand eligibility for participation in the Industrial Conservation Initiative (ICI) to smaller industrial, institutional and commercial customers by lowering the eligibility threshold to 1 MW and removing restrictions on eligible sectors.

   e) Provide a modest rate reduction to commercial and industrial electricity consumers using cap and trade auction proceeds to offset the cost.

ii) Recommend to Cabinet the proposed Ontario Rebate for Electricity Consumers Act, 2016 and that the Ministry proceed to Legislation and Regulations Committee before the end of 2016 with supporting regulations under the proposed Ontario Rebate for Electricity Consumers Act, 2016.

iii) Approve the implementation details associated with the suite of initiatives:

   a) Approve:

      1. The creation of a new item entitled "Ontario Rebate for Electricity Consumers" in the Electricity Price Mitigation Program (Vote/Item 2905-3).

      2. The creation of a new Transfer Payment entitled "Ontario Rebate for Electricity Consumers" in Rebate for Electricity Consumers (Vote/Item 2905-3).

      3. An expenditure increase in the amount of $300,000,000 in 2016-17 in the Transfer Payment entitled "Rebate for Electricity Consumers[1]" in Rebate for Electricity Consumers (Vote/Item 2905-3). Direct the Ministry to return any under-spending to the Treasury Board Contingency Fund.

[1] Pending approval of the proposed Ontario Rebate for Electricity Consumers Act, 2016

b) Note:

1. Funding for 2016-17 will be implemented through Supplementary Estimates in the Fall of 2016.

2. Future year impacts of $1,006,000,000 in 2017-18 and $1,004,000,000 in 2018-19, and $1,004,000,000 in 2019-20 and ongoing.

c) Direct the Ministry to report back to Treasury Board/Management Board of Cabinet in the 2017-18 Program Review, Renewal, and Transformation process on updated future year impacts, and a potential offset strategy for resource requirements to support program implementation

iv) Further to the Cabinet Minute of May 11, 2016 and the Treasury Board Minute of May 19, 2016, note the reallocation of cap and trade auction proceeds from the up to $1,320,000,000 that was previously allocated through the Climate Change Action Plan for electricity price mitigation, as follows:

a) The Ministry of Energy to work with the Ministry of the Environment and Climate Change, Treasury Board Secretariat, Ministry of Finance, Cabinet Office and Office of the Premier, to allocate up to $1,080,000,000, from 2017-18 to 2020-21, of Cap and Trade auction proceeds to address rate-impacts on non-Regulated Price Plan electricity consumers (e.g., industrial, commercial and institutional) related to cap and trade and the expansion of other rate-based programs, subject to the evaluation by the Minister of the Environment and Climate Change.

In this regard:

1) Direct the Ministry of Energy to work with the Ministry of the Environment and Climate Change and report back to Cabinet by the end of 2016 with options on the appropriate mechanism.

b) The remaining up to $240,000,000, from 2017-18 to 2020-21, which was previously allocated in the Climate Change Action Plan to eliminate carbon price impacts/ grid emission reductions to ratepayers, to be used for other existing initiatives within the fiscal plan and the Climate Change Action Plan that reduce greenhouse gas emissions, subject to the evaluation by the Minister of the Environment and Climate Change.

In this regard:

1) Direct the Ministry of the Environment and Climate Change to work with Treasury Board Secretariat and Ministry of Finance to identify other existing initiatives within the fiscal plan and the Climate Change Action Plan that reduce greenhouse gas emissions that can be funded with the remaining up to $240,000,000, from 2017-18 to 2020-21.

v) To support implementation of electricity price mitigation, the Ministry is proceeding with the following amendments to existing regulations:

a) Amendments to Ontario Regulation 429/04 (Adjustments Under Section 25.33 of the Act) made under the Electricity Act, 1998 to lower the Industrial Conservation Initiative (ICI) threshold to 1 megawatt and allow electricity consumers and market participants between 1 MW and 5 MW to opt in.

b) Amendments to Ontario Regulation 442/01 (Rural or Remote Electricity Rate Protection) made under the Ontario Energy Board Act, 1998, to increase support through the Rural or Remote Rate Protection Plan to R2 low density electricity customers and provide for a periodic adjustment mechanism.

vi) Direct the Ministry to work with Office of the Premier and Cabinet Office on the development and implementation of an integrated communications strategy.

# APPENDIX B: FINANCIAL TABLES

| FINANCIAL IMPACTS: CHANGES TO EXPENSE AND REVENUE | | | | | TABLE B1 |
|---|---|---|---|---|---|
| | | *Fiscal Plan Basis* | | | *Appropriations Basis* |
| **$ Millions** | | **2016-17** | **2017-18** | **2018-19** | **2016-17** |
| Initiative cost recommended | | 0.0000 | 0.0000 | 0.0000 | |
| *Expense changes:* | | | | | |
| Operating item (Supplementary Estimates inclusion for 2016-17 amount) | Oper | 300.0000 | 1006.0000 | 1004.0000 | 0.0000 |
| Operating Offset | Oper | 0.0000 | 0.0000 | 0.0000 | 0.0000 |
| | | | | | |
| | | | | | |
| *Revenue changes:* | | | | | |
| Revenue Increase/ Offset - Applies if cap and trade proceeds diverted to in-plan initiatives | | 0.0000 | (60.0000) | (60.0000) | |
| Revenue decrease | | 0.0000 | 0.0000 | 0.0000 | |
| **Total Fiscal Impact (draw from c-funds)** | | **300.0000** | **946.0000** | **940.0000** | **0.0000** |

# APPENDIX C: ELECTRICITY SECTOR BACKGROUND

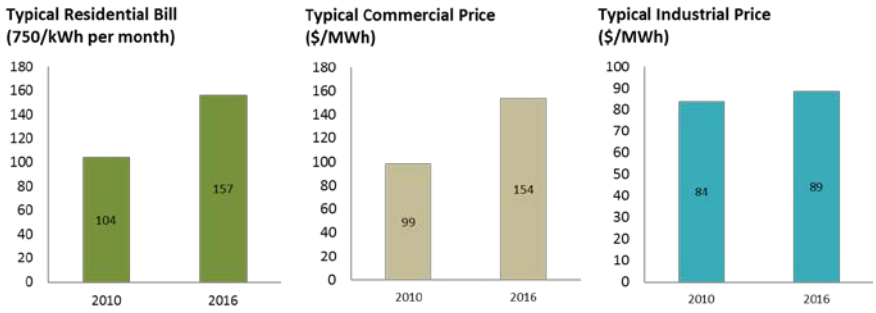
The Ministry has provided the following information to provide electricity sector context this item.

There are three classes of electricity consumers:

| | Regulated Price Plan | Class B | Class A |
|---|---|---|---|
| **Consumer Types** | • Residential<br>• Small Business<br>• Farms | • Commercial<br>• Institutional<br>• Small industrial | • Large commercial<br>• Large industrial |
| **Load Size** | Below 0.05 MW | Between 0.05 MW and 3 MW | Above 3 MW* |
| **Total Consumption** | 58 TWh | 57 TWh | 26 TWh |
| **Share of Consumption** | 41.1% | 40.4% | 18.4% |

*** Note:** Consumers with peak demand between 3-5 MW in the manufacturing, mining, refrigerated warehousing, greenhouses and data-processing industries are currently eligible for Class A. All other 3-5MW consumers are Class B.

Since 2010, average bills for residential consumers (i.e., using 750 kWh/month) have increased by over 50%. Rates paid by commercial and industrial electricity consumers have increased by 56% and 6% respectively over the same period.



**Note:** 2016 represents May 2016 for residential and YTD June 2016 for commercial and industrial.

Existing Rate Mitigation efforts are on-going:

- Ontario currently provides rate mitigation to various electricity consumer classes through a combination of tax-based and rate-based programs.
  - For example, Northern Ontario residential electricity consumers receive tax credits in recognition of higher electricity costs in the north and rural consumers receive a subsidy funded through the rate-base due to the higher cost of delivering power to rural areas.
  - As of 2016, the government removed the Debt Retirement Charge (DRC) from residential electricity bills. While this saves a typical residential electricity ratepayer about $60 per year, it is less than the benefit previously provided through the Ontario Clean Energy Benefit (OCEB).
  - The Ontario Electricity Support Program (OESP) provides ongoing assistance directly on the bills of eligible low-income electricity consumers.

- The Industrial Conservation Initiative (ICI) encourages Ontario's largest consumers to reduce consumption during peak periods while reducing system costs.
- The Rural or Remote Rate Protection (RRRP) program is provided to rural or remote residential and farm customers because the cost of distributing power to remote areas is much higher than for urban areas.

- Because electricity costs must be fully recovered from electricity consumers, rate mitigation funded through the rate-base often represents a shifting of costs from one consumer group to another (i.e., industrial to residential and commercial consumers).
  - Rate-based initiatives are generally associated with incenting changes in behaviour that provide electricity system benefits (i.e., shifting electricity consumption from on-peak to off-peak periods).

The table below shows the estimated cost shifts in the province's electricity system that result from three existing government programs (i.e., ICI, RRRP and OESP):

| Cost Shift Impact | 2011 | 2012 | 2013 | 2014 | 2015 | 2016 |
|---|---|---|---|---|---|---|
| Residential Bill ($/month for 750 kWh) | 3.55 | 4.07 | 3.85 | 4.46 | 5.68 | 6.55 |
| Commercial – Class B ($/MWh) | 4.74 | 5.43 | 5.14 | 5.94 | 7.57 | 8.73 |
| Industrial – Class A ($/MWh) | -20.97 | -25.26 | -22.38 | -24.68 | -32.56 | -31.55 |

**Note:** Negative values indicate a benefit; positive values denote an incremental charge.

Since 2013, a number of actions have and are being taken to reduce overall electricity system costs. Despite these actions to reduce system costs, electricity rates continue to increase for consumers:

- Renegotiating the Green Energy Investment Agreement, reducing contract costs by $3.7 billion;
- Deferring the construction of two new nuclear reactors at Ontario Power Generation's Darlington facility, avoiding an estimated $15 billion in new construction costs;
- Approving Ontario Power Generation's plans to enable the ongoing operation of Pickering up to 2024, which is expected to save ratepayers as much as $600 million.
- Reducing Feed-In-Tariff (FIT) prices through annual price reviews, saving ratepayers at least $1.9 billion relative to the 2013 Long-Term Energy Plan (2013 LTEP) forecast; and
- Removing an expected $3.3 billion in Large Renewable Procurement (LRP) costs relative to the 2013 Long-Term Energy Plan (2013 LTEP) forecast, based on the results of the first phase of the LRP.

## APPENDIX D: FURTHER INFORMATION SUPPORTING PROPOSED INITIATIVES

The following information has been provided by the Ministry.

**1. Provide an 8% rebate to consumers eligible for the Regulated Price Plan* (i.e., residential, small business and farms), equivalent to the provincial portion of HST**

The Ministry is proposing to introduce legislation/regulation to provide a rebate of 8% to consumers eligible for the Regulated Price Plan. The below table indicates which consumers would or would not receive the benefit. This would be equivalent to the provincial portion of the HST.

- Those ineligible to receive the 8% rebate will benefit from one or more of the other initiatives under this proposal (e.g., ICI expansion, proceeds recycling, etc).
- An HST exemption would require federal approval. Engaging in discussions with the federal government would take time and would likely result in not meeting the targeted implementation date.

| **Eligible for the 8% rebate** (< 50 kW or < 250,000 kWh/year) | **Not eligible for the 8% rebate** (> 50 kW or > 250,000 kWh/year) |
|---|---|
| • Residential Regulated Price Plan consumers<br>• Residential retail consumers<br>• Multi-unit residential buildings and other facilities used as residential rental units<br>• Long-term care homes and school residences<br>• Farms eligible for Regulated Price Plan (Including Class B farms that opted out of the Regulated Price Plan)<br>• Small businesses<br>– Coffee / snack retailer<br>– Convenience store<br>– Apparel store<br>– Hair salon<br>– Small insurance office | • Class A consumers<br>– Manufacturer<br>– Large grocery store<br>– Mines<br>– Auto assembly plants<br>• Class B consumers<br>– Commercial offices (low rise)<br>– Hotel<br>– General warehousing |

**2. Expand ICI eligibility by lowering the threshold to 1 MW, to provide support to Class B electricity consumers (i.e., commercial, institutional and small industrial)**

Currently, electricity consumers over 5 MW and consumers from 3-5 MW in certain energy intensive sectors are eligible for ICI (i.e., approximately 300 Class A consumers). Consumers participating in ICI include the following sectors: pulp and paper, auto, manufacturing, chemicals and mines.

ICI would be expanded so that all consumers over 1 MW are eligible for the program, which would (the benefit would be seen by consumers starting in 2018):

- Reduce electricity peak demand and electricity system costs by incenting more consumers to lower their electricity demand during peak periods;
- Reduce electricity bills for new ICI participants who are able to reduce their electricity demand during peak demand periods; and
- Increase the electricity bills for non-ICI participants to ensure full cost recovery in the electricity system.

| | Benefit to New ICI Participants | System Benefit | Financial Impact | Residential Bill Impact |
|---|---|---|---|---|
| | Bill Savings | Peak Demand Reduction (MW) | GA shifted to Class B ($M) | |
| Short-term | Up to 21% | 80 | 47 | Increase of $0.42/month |
| Long-term | Up to 34% | 165 | 82 | Increase of $0.74/month |

The different impacts refer to the amount of time it takes for new Class A consumers to respond to the expanded ICI eligibility. The bill impacts assume a 25% uptake, which would increase Class A consumption by roughly 3 TWh, leaving an estimated 54 TWh in Class B that are either between 0.05-1 MW or choose not to opt in to ICI. This would represent an estimated 300 additional consumers in ICI, though they would represent a much smaller share of the consumption than the 300 consumers currently participating. Newly eligible consumers in the program would mostly fall into the small industrial, institutional and commercial category, including: automotive supply chain companies, office tower, large shopping mall, greenhouses and others.

## 3. Update the Rural or Remote Rate Protection (RRRP) program, to provide relief to rural customers

The Ministry is proposing to provide an additional $110M in rate protection to eligible rural or remote electricity consumers, and consider options to periodically adjust the amount of rate protection available to these consumers going forward.

RRRP is a rate-based funded program that helps offset the higher costs to distribute electricity to Ontario residents who live in rural or remote locations all across the Province.

- Today, RRRP is a $175M program. For an average residential customer, the cost of supporting RRRP is roughly $1 per month. For other customers, the cost can range from $65 for a greenhouse to $8,000 for a medium industrial.
- The majority of the program funding ($127M) provided to Hydro One's lowest-density customers – classified as R2 customers. There are approximately 329,000 R2 customers. The current program provides a rebate of $31.50. The proposed update to the program would increase the benefit to $60/month
- RRRP funding supporting R2 customers has been capped at the current level since 2003. As a result, the impact of its assistance has diluted over time as electricity costs have risen.

An additional $110M in program funding would see an increased benefit of ~$28 /month. This would bring R2 bills in line with Hydro One R1 (medium density) bills at 1000kWh.

- This would increase the R2 portion of the RRRP to $237 million with a monthly impact on an average residential consumer of ~$0.60.
- The RRRP could be indexed at inflation or "trued up" on a regular basis to ensure the benefit remains constant.

## 4. Recycle cap and trade proceeds to commercial and industrial electricity consumers to provide a modest reduction in rates

The 2016 Budget committed to offset the impact of cap and trade for commercial and industrial consumers, while also providing a benefit of up to $2 per month for residential consumers.

- To meet the 2016 Budget commitment, the Climate Change Action Plan (CCAP), committed $1.3 billion from the GGRA over the first compliance period (2017-2020).
- However, providing an 8% rebate to Regulated Price Plan consumers would allow for GGRA proceeds previously committed to residential consumers to be redirected to other GHG reduction initiatives in the fiscal plan.

The rate reduction proposal would provide additional benefit to commercial and industrial consumers, while requiring an estimated $60 million less per year (i.e., a reduction of $240M over the first four year compliance period).

# APPENDIX E: ILLUSTRATIVE BILL IMPACTS

The Ministry has provided the following illustrative bill impacts:

| | Current Bill ( before tax) | Current Rate mitigation initiatives* | New Rate Mitigation initiatives | New Bill (before tax) |
|---|---|---|---|---|
| Average Residential (Toronto – 750 kWh/month) | $139 /month | N/A | 8% pre-tax rebate: - $11 | $128 /month |
| Rural Residential (Hydro One R2 – 1000 kWh/month) | $229 /month | RRRP: –$32 | 8% pre-tax rebate + Updated RRRP: - $45 | $184 /month |
| Low-income Residential ** (Toronto – 750 kWh/month) | $101 /month | OESP: -$38 | 8% pre-tax rebate: - $8 | $93 /month |
| Small Business (Toronto – 403,200 kWh/month) | $149 /MWh | N/A | 8% pre-tax rebate: - $12/MWh | $137 /MWh |
| Small Farm (Hydro One R1 – 4,000 kWh/month) | $203 /MWh | N/A | 8% pre-tax rebate: - $16/MWh | $187 /MWh |

**Notes:**

***** Some residential consumers can also receive tax credits based on income, age and geography (Northern Ontario Energy Credit and Ontario Energy and Property Tax Credit). These credits are delivered through the Trillium Tax Credit and can be as high as $1,332 per year for a family.

** Income of less than $28,000, family of 4.

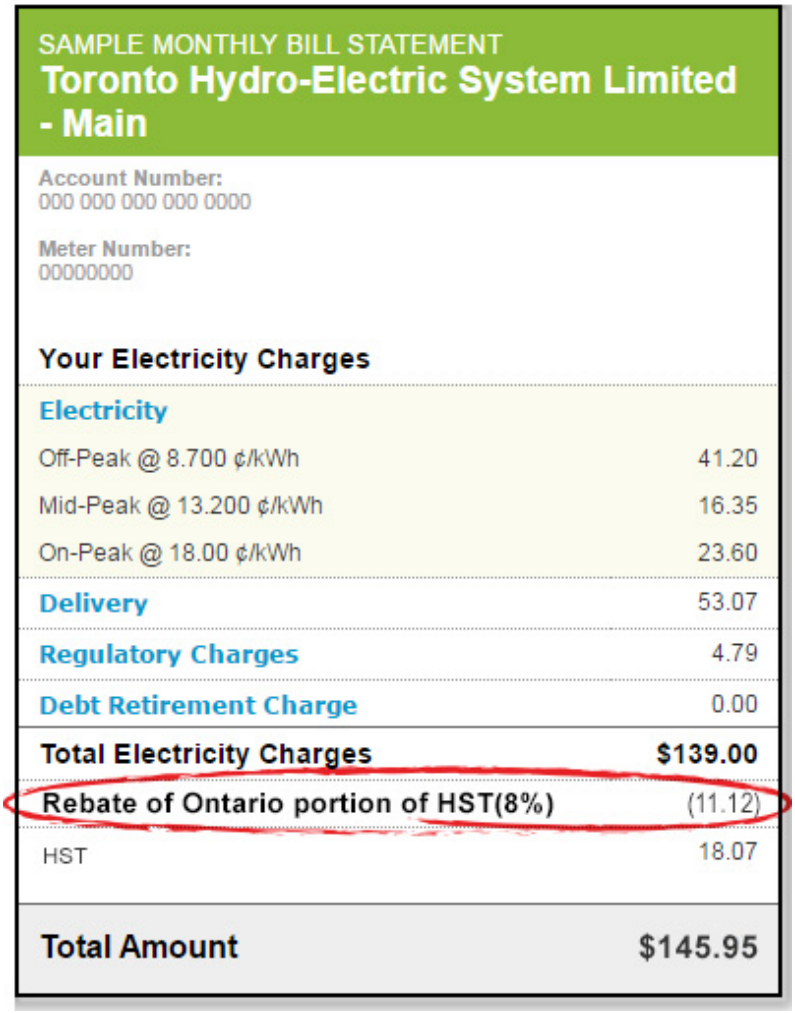
The above benefits do not include the cost of ICI expansion and the RRRP update (total impact of $1.74/MWh). Totals may not add due to rounding.

| | Current Rate | Current Rate mitigation initiatives* | New Rate Mitigation initiatives | New Rate |
|---|---|---|---|---|
| Large Institutional (Toronto – distribution-connected, 10 MW) | $108 /MWh | ICI: -$49/MWh | Proceeds Recycling: -$2.60/MWh (2017-2020 average) | $105 /MWh |
| Large Industrial (Timmins – transmission-connected, 10 MW) | $69 /MWh | ICI + NIERP: -$69/MWh | Proceeds Recycling: -$2.60/MWh | $66 /MWh |
| Small Industrial – opt-in to ICI (Toronto – 2 MW) | $152 /MWh | N/A | Proceeds Recycling + ICI: Up to -$52/MWh | $100 /MWh |
| Large Commercial – does not opt-in to ICI (Toronto – 2 MW) | $152 /MWh | N/A | Proceeds Recycling: -$2.60/MWh | $149 /MWh |
| Small Institutional (Toronto – 500 kw) | $154 /MWh | N/A | Proceeds Recycling: -$2.60/MWh | $151 /MWh |

**Notes:**

The above benefits do not include the cost of ICI expansion and the RRRP update (total impact of $1.74/MWh). Proceeds recycling is net of the cost of carbon and represents an estimated average of the proceeds required over the first compliance period (2017-2020).

## APPENDIX F: ILLUSTRATIVE BILL MOCK-UP



SAMPLE MONTHLY BILL STATEMENT

**Toronto Hydro-Electric System Limited - Main**

Account Number:
000 000 000 000 0000

Meter Number:
00000000

**Your Electricity Charges**

| | |
|---|---|
| **Electricity** | |
| Off-Peak @ 8.700 ¢/kWh | 41.20 |
| Mid-Peak @ 13.200 ¢/kWh | 16.35 |
| On-Peak @ 18.00 ¢/kWh | 23.60 |
| **Delivery** | 53.07 |
| **Regulatory Charges** | 4.79 |
| **Debt Retirement Charge** | 0.00 |
| **Total Electricity Charges** | **$139.00** |
| **Rebate of Ontario portion of HST(8%)** | (11.12) |
| HST | 18.07 |
| **Total Amount** | **$145.95** |

**Note:** Final bill presentment pending submission to LRC.

## APPENDIX G: BACKGROUND CONTEXT

**Budget commitment** (*2016 Ontario Budget - Chapter I: Building Prosperity and Creating Jobs*)**:**

The government will also take steps to ensure that the net impact of cap and trade would not result in an overall increase in electricity costs for commercial and industrial consumers, and that there would be a modest benefit of up to $2 per month, on average, to residential consumers.

**CCAP public document** (under *Action Area – Buildings and Homes: Reduce emissions from fossil-fuel use in buildings*)**:**

Keep Electricity Rates Affordable: Use cap and trade proceeds to offset the cost of greenhouse gas pollution reduction initiatives that are currently funded by residential and industrial consumers through their bills.

**CCAP policy minute** (May 11, 2016)**:**

ENERGY develop additional options to addressing rate-impacts on electricity consumers and work with MOECC, the Premier's Office and Cabinet Office regarding the selected option for inclusion in the action plan

**CCAP TB/MBC minute** (May 19, 2016)**:**

i) Approve-in-principle the following estimated ranges to guide potential investment of cap and trade proceeds over four years, from 2017-18 to 2020-21, should proceeds be available:

| **CCAP Action** | **Initiative** | **Potential Funding range from proceeds over 4-year period** | **Estimated GHG reduction in 2020 associated with potential funding** |
|---|---|---|---|
| Moving toward a lower-carbon energy supply with adequate capacity and affordable low-carbon electricity. | Eliminate Carbon Price Impacts / Grid Emission Reductions to Ratepayers | · Range - $1,000,000,000 to $1,320,000,000 | 3,000,000 Tonnes (Energy Planning) |

---

Fyi, I just put down a marker so that we could combine the effort tomorrow.

Pls. review my comments and I think we can check and update the details. I think Francisco will focus on the DT and TT so I haven't shared with him yet.

John.

Hi Emily,

Just put down some quick updates to the existing note so that we could have a reasonable starting point. Pls. feel free to edit and update and maybe we could try to combine tomorrow.

Thanks,

John.

HI John,

Let me know if there are parts of the note you want me to review and update. I will be around tomorrow to add material or comments to the note/deck.

Emily

Hi,

There's a meeting on Monday on Energy's rate mitigation decks.

Would you be able to review over the weekend -- perhaps updating the materials from December, as applicable -- so comments can get to the DMO Sunday night?

Apologies on the timing.

Thanks,
Ron

**DRAFT: COMMERCIALLY SENSITIVE AND CONFIDENTIAL ADVICE TO MINISTERS**

# Comments on Ministry of Energy's Draft "Proposed Initiatives to Transform Ontario's Electricity Sector"

The Ministry of Energy (Energy) is providing an update on progress related to transforming the province's electricity sector by elaborating on potential price mitigation initiatives, as outlined in its decks.

## CONTEXT

- As outlined in Energy's update, electricity costs have been increasing following investments to transform towards cleaner generation (i.e., meeting goals to decarbonize) and modernize the electricity infrastructure (e.g., more than $35 billion in cleaner generation and $15.5 billion investment by Hydro One alone in transmission and distribution systems).

- The government has taken action to lower electricity cost pressures to all consumers by taking actions, including deferring investments in generation (e.g., new build nuclear), improving market efficiency and decreasing costs related to renewable procurement (e.g. GEIA renegotiation, decreasing FIT prices, etc).

- The government introduced the Ontario Rebate for Electricity Consumers (OREC) which will provide a rebate equal to the 8% provincial portion of the Harmonized Sales Tax, saving $11 per month starting January 1, 2017 for eligible small businesses, farms and residential consumers and has taken steps to expand the Rural or Remote Electricity Rate Protection program, expected to save eligible RRRP customers about $45 per month, when combined with OREC.

- On November 28, 2016, the Minister of Energy announced the need for changes in how electricity resources are procured, the need for wholesale market renewal and greater electricity consumer choice.

- The Ministry of Energy is currently updating its Long-Term Energy Plan (LTEP), which provides an opportunity to consider a range of policy changes to how the Ontario energy sector operates.

## COMMENTS

A significant number of Energy's proposals ~~generally~~ involve shifting costs from the rate base to the tax base. While the subset of costed proposals may have a fairly limited residential rate payer impact (e.g. about $5-6/month for residential, less than 5% of the average monthly bill), those proposals would come at a material incremental fiscal cost ($1 billion to $1.3 billion). Note these impacts are lower than those presented in an earlier deck ($1.3 billion to $1.9 billion). Energy also presents other proposals where costs and impacts are "TBD".

Over the past five years, the existing fiscally funded electricity price mitigation efforts have averaged about $1.5 billion and is already expected to increase to about $2 billion with the introduction of OREC. The existing program costs are summarized in the table below:

| ($M) | 2011-12 | 2012-13 | 2013-14 | 2014-15 | 2015-16 | 2016-17[1] | 2017-18[1] |
|---|---|---|---|---|---|---|---|
| OCEB | 1,033 | 994 | 1,006 | 1,078 | 860 | - | - |
| OREC | - | - | - | - | - | 300 | 1,100* |
| Ending DRC[2] | - | - | - | - | 85 | 330 | 330 |

| | | | | | | | |
|---|---|---|---|---|---|---|---|
| NIERP | 120 | 120 | 115 | 108 | 120 | 120 | 120 |
| NOEC | 23 | 24 | 25 | 24 | 26 | 25 | 25 |
| OEPTC[3] | 354 | 406 | 418 | 429 | 444 | 450 | 460 |
| TOTAL | 1,530 | 1,544 | 1,564 | 1,639 | 1,525 | 1,225 | 2,005 |

1. 2016-17, 2017-18 based on forecasted numbers
2. 2015-16 estimated for 3 months of reduced DRC revenue
3. OEPTC amounts in all years based on energy component of the rebate.

* Sourced from Energy PRRT submission

OCEB – Ontario Clean Energy Benefit
OREC – Ont. Rebate for Electricity Consumers
NIERP – Northern Industrial Electricity Rate program
NOEC – Northern Ontario Energy Credit
DRC – Debt etirement Charge
OEPTC – Ont. Energy & Property Tax Credit

**Energy's Broad Policy Themes / Rationales**

A key theme / rationale cited by Energy is to no longer use rate-base to pay for "social programs" by shifting cost of OESP, RRRP and proposed First Nation Rate to tax-base.

- Energy has typically in the past provided a constitutional law assessment on these programs, providing support for these programs to be ratepayer-supported programs as they provide electricity system benefits / are part of a comprehensive regulatory framework.
- Switching messaging may risk criticism and legal challenges on these and other remaining rate-base funded programs.

| Energy Theme / Rationale | Key Staff Comments |
|---|---|
| **Provide greater support for lower income Ontarians by enhancing the OESP or expanding eligibility** | • Significant fiscal exposure -- $0.4-0.45 bn at current levels, higher if enhanced. On-bill benefits.<br>• Could contemplate phase-in to manage fiscal impact.<br>• Could look at phasing out existing fiscal-funded programs also targeted to low income or identified groups (e.g., OEPTC, NOEC).<br>o Not on the bill, so less direct and visible electricity cost mitigation.<br>o Phase-out to reflect time to increase application based OESP reaching an increasing portion of eligible households. |
| **Fund conservation programs through the tax-base for the remaining term of the existing CDM framework and transition costs to the new "green bank entity" over time** | • Potentially significant fiscal impact – current program costs are about $0.45 bn<br>• Conservation programs do provide an electricity system benefits, but would now be fiscally-funded, so a cross-subsidisation from tax-base<br>• Accessing the cap&trade amount in the GGRA would crowd-out other GGRA programs, affecting overall GHG reductions and negatively affect the diccal plan |
| **Expand the scope of the "Trillium Trust" to make investments in energy infrastructure eligible for funding** | • Would require either squeezing out existing Moving Ontario Forward project funding from the Trillium Trust, requiring funding from another source; or additional funding from asset optimization, given that the government is committed to using the targeted $5.7 billion to fund across Moving Ontario Forward projects<br>• Would have little near-term impact, unless TT funding displaces near-term, non-incremental projects coming onto service<br>• Could lower utility value, including Hydro One, by removing projects, currently and prospectively, that they might have been able to add to their ratebase and earn a return |
| **Empower Energy Agencies to Increase Cost Effectiveness and Improve Efficiency** | • IESO to modernize the electricity market through market renewal<br>• OEB to identify opportunities for future LDC efficiencies/rates |

Formatted Table

| | |
|---|---|
| | • OEB to work with OPG operational efficiencies and pass on to ratepayers |
| **Give consumers more choice by allowing to "opt into" alternate rate plan** | • Start with the option of flat electricity rate option<br>• OEB to develop more options over time<br>• ~~Provide more details regarding th Global Adjustment (GA)~~ |

Formatted: Font: Bold

**Detail on Proposals**

Energy has outlined the following rate mitigation proposals with significant bearing on the fiscal plan:

OESP & RRRP (Total of about $0.4 to 0.45 Billion/year):

This would shift the cost of the current and proposed expanded Ontario Electricity Support Program (OESP), and the Rural or Remote Electricity Rate Program (RRRP), to the tax base. *Note: that the fiscal exposure would increase if the OESP take up rate is larger, and faster than assumed.*

- The fiscal impact from shifting OESP and RRRP to the tax base may also be larger if future changes are made to the programs. Energy notes that
  - The programs could provide greater support for lower income Ontarians by enhancing the OESP or expanding eligibility (e.g., by 50% in the table).
  - The RRRP regulation provides a funding mechanism for transmission infrastructure required to grid connect remote First Nation communities. Considerations for how that funding will be supported by the tax base will need to be determined. [The current deck links Trillium Trust for remote electrification.]

Fund Conservation Programs through the Tax-Base:

This would be for the remaining term of the existing Conservation and Demand Management framework. Over time, the costs would be transitioned to the new "green bank entity", to shift cost recovery from ratepayers to cap and trade revenues.

- Energy's rationale for the cost shift would be in recognition of the burden borne by ratepayers in phasing out coal generation.

Expanding the scope of the Trillium Trust to invest in energy infrastructure:

The Province is currently targeting $5.7 billion from asset optimization to dedicate to the Trillium Trust for investment in infrastructure under Moving Ontario Forward.

- Expanding access to natural gas is already included under Moving Ontario Forward.
- Using the Trillium Trust for additional energy projects would require either
    - squeeze out existing Moving Ontario Forward project funding from the Trillium Trust, requiring funding from another source, or
    - additional funding from asset optimization, given that the government is committed to using the targeted $5.7 billion to fund across Moving Ontario Forward projects,
    - in effect, in both cases above, incremental investments for energy infrastructure from the Trillium Trust would have negative fiscal impacts once the assets are in-service and amortized.
- Investments through the Trillium Trust instead of through other electricity sector entities (Hydro One, OPG, LDCs) could have additional negative fiscal impacts as these entities could see reduced ratebase growth, lowering the revenues that the Province realizes from these entities (e.g., consolidated net income, payments-in-lieu of taxes, etc.).
    - May also negatively impact Hydro One share price if the measure is perceived by the market as reducing Hydro One's potential ratebase growth.
- Unless applied to existing projects, to displace ratepayer-supported costs, this measure would have little or no near-term rate impact.

Departure Tax:

As a result of the IPO, Hydro One paid a "departure tax" payment in lieu of tax (PIL) of $2.6 billion, as a final true-up of its PILs tax obligation. Energy lists using some or all of this departure tax for price mitigation.

- This was paid to the Ontario Electricity Financial Corporation (OEFC). The departure tax payment was fiscally neutral to the Province as the income to the OEFC was fully offset by a reduction in ESDI resulting from reduced net income of Hydro One.
- Using some or all of it for price mitigation would require restating the net stranded debt paydown by OEFC related to the IPO. [As the departure tax paid was fiscally neutral, OEFC's uplift was primarily the result of the related deferred tax benefit, as well as the s.50.3 benefit under the *Electricity Act, 1998*.]
- This would be a one-time measure, potentially spread out over a few years, and fiscal impact, as the departure tax amount was one-time.

Energy Agencies' Cost Effectiveness and Efficiencies:

By empowering energy agencies to continue to move forward with various programs, the initiative is expected to lead to cost effectiveness and efficiencies that could be passed through to the benefit of the rate payers. These initiatives, other than the tax incentives for consolidations, are generally not considered to have fiscal impacts. [Check.]

- IESO's Market Renewal Initiatives – the current "two-schedule price setting system", which is used to settle and dispatch resources in the IESO- administered market, is under review by the IESO.

**Commented [JK1]:** Not sure what exactly the single schedule system means...stayed away from mentioning as a result.

- This review is part of a series of consultations launched by the IESO to consider the efficiency and effectiveness of various aspects of the electricity market, and will focus on the energy market pricing system.
- As part of this review, potential design alternatives will be compared against the status quo with an overall objective of providing "an efficient dispatch and pricing process that produces transparent prices."
- Moving to "technology-agnostic" procurements will provide new opportunities for innovation and modernization and ensure ratepayers receive the best prices possible.
- IESO estimates that the total implementation cost – including a 15% contingency and net of avoided costs – will be $150 million. The bulk of the costs (capital) would only be recovered once the project has been implemented and as the benefits are being realized.

- LDC Efficiencies and Rates – reducing osts and having LDCs become more efficient could result in a reduction of Distribution costs on electricity bills, now accounting for about 20% of the total bill.
  - The OEB has a mandate to regulate the electricity distribution sector in the public interest, ensuring the financial viability of the sector while promoting reliable service to customers at just and reasonable rates.
  - Since 2012, the OEB has taken action – through the Renewed Regulatory Framework for Energy – to more closely link rate regulation with performance measures and outcomes.
  - In 2012, the government asked the Ontario Distribution Sector Review Panel to review the distribution sector and make recommendations about how it could become more efficient. While the Panel concluded that a $1.2 billion net present value in savings could be achieved by consolidating LDCs into 8-12 regional entities, the government response was to pursue voluntary consolidation and put in place tax incentives for consolidation.
- OPG Operational Efficiencies – provide expectation that OPG meet more aggressive cost targets, improving efficiency by about $3/Megawatt hour (MWh).
  - The Province could provide instructions to OPG to focus on its stretch target as part of the Minister's Concurrence letter. This would be a public document that would likely be reviewed by OEB and, if adopted by OEB, would be incorporated as part of OPG's current rate application.
  - If OPG is unable to meet more aggressive cost targets, this could impact net income, and the Province's fiscal plan.

Debt Retirement Charge (Total of about $0.45 Billion in annualized rate to 2017-18):
Ending the DRC early for Class B customers (commercial, small industrial) would have an impact of about $0.45 billion in 2017-18.

- The end of the DRC had previously been linked with balancing mitigation and progress on stranded debt reductionthe end retirement of the residual stranded debt.
- Removing additional DRC revenue from the OEFC would call into question the position that the debt and liabilities of the old Ontario Hydro can continue to be supported.

Debt Financing of the Global Adjustment Proposal :
In a draft Energy deck shared with the Ministry of Finance, Energy considers a number of options to delay recovery of part of the Global Adjustment (GA) by debt financing and recovering over a 25 to 30 year period.

- Energy's deck analyzes the system cost and ratepayer impacts of the option, but does not address the fiscal impact/accounting treatment, or implementation. There are four options considered:
  - Option 1:
  - Option 2:
  - Option 3:

**Formatted**

**Commented [JK2]:** http://www.ieso.ca/Pages/Participate/Stakeholder-Engagement/SE-114.aspx

**Formatted**

**Formatted:** Bulleted + Level: 1 + Aligned at: 0" + Indent at: 0.25"

**Formatted:** Bulleted + Level: 2 + Aligned at: 0.5" + Indent at: 0.75"

- Option4:

- While the details of the proposal would need to be analyzed prior to a decision to proceed with further consideration of the proposal, the Office of the Provincial Controller Division's (OPCD) preliminary assessment is that this would lead to a negative fiscal impact, such as having to book a large deficit amount.

Subject: Fwd: Rate Mitigation

Hi,

There's a meeting on Monday on Energy's rate mitigation decks.

Would you be able to review over the weekend -- perhaps updating the materials from December, as applicable -- so comments can get to the DMO Sunday night?

Apologies on the timing.

Thanks,
Ron

# Financing the Global Adjustment

January 13, 2017

*Working Draft for Discussion Purposes Only*

# Purpose

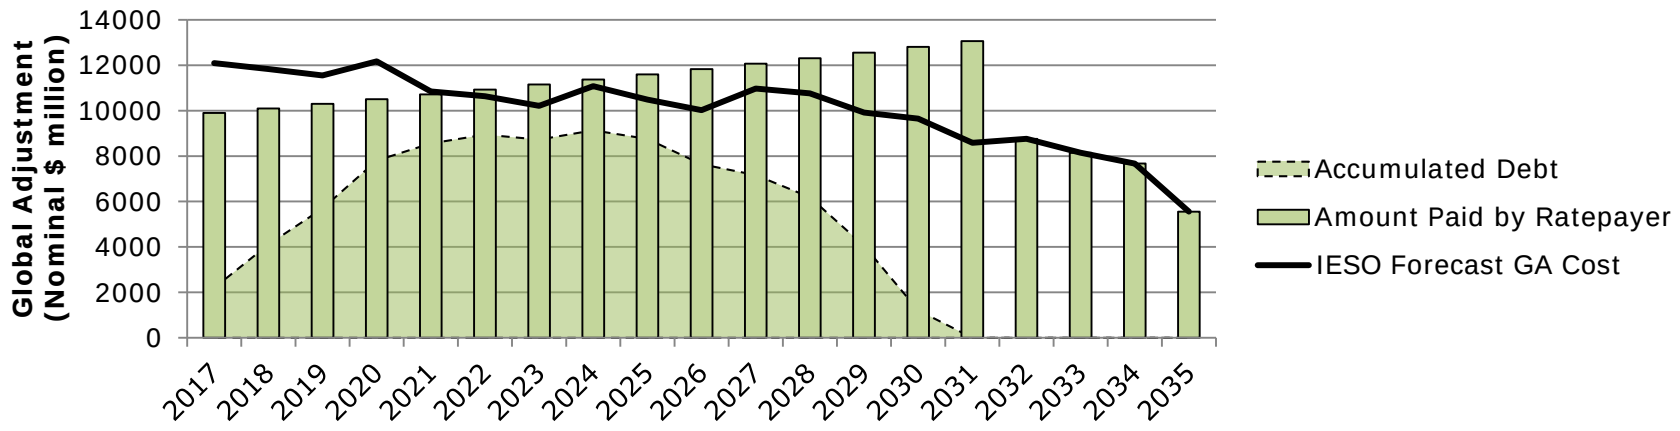
- To analyze the impact of partially financing the cost of the global adjustment (GA) to defer some of the cost to later years.
- The economic, legal and fiscal risks to ratepayers, stakeholders and government are qualitatively discussed.
- The remainder of the presentation quantitatively examines several different scenarios for financing the GA, showing:
  - The impact on residential bills; and
  - The amount of debt incurred.

# Rationale for Financing the GA

- The GA is comprised of costs for regulated and contracted generation, as well as conservation.
- Some contracted generation assets are expected to have a useful life that extends beyond the term of their current financial contracts (typically 20-years).
- Similarly, conservation costs are recovered through the GA on an annual basis while conservation initiatives provide benefits to the electricity system over the course of many years.
- Since the GA only includes costs related to the contractual life of these assets, there may be an opportunity to recognize the longer-term benefit of these assets to the electricity system and “bring forward” that benefit for ratepayers today, while deferring some of the current costs.
- An indicative GA financing proposal is presented that lowers ratepayers costs over the short term by borrowing money but increases costs over the long term when GA costs are forecast to be lower.
- Note that not all generating assets will continue operations at the end of their contract term. Regulatory constraints (i.e., nuclear licences) or low demand conditions (i.e., as experienced with current expiring NUGs) would mean that some generators will shutdown at the expiry of their contract. Future ratepayers would be paying for these assets that are no longer producing power.

# Indicative Proposal to Finance the Global Adjustment

- For the purpose of discussion, it is proposed that the amount of GA paid by ratepayers in each year over the forecast period is set at a fixed amount until the total amount of money borrowed has been completely paid back.
- All scenarios are assumed to begin January 1, 2017, setting the 2017 amount of GA paid by ratepayers at a value lower than the true cost of GA and increasing that amount year-over-year at inflation (assumed to be 2%) until the debt has been paid off.
- In this way, GA costs will be "smoothed" over time by lowering costs in the short term and increasing costs in the long term.
- In some scenarios, the amount of GA paid by ratepayers *above* the expected true cost of GA is capped so as to limit large increases in the cost of electricity in any given year.
- All analysis is based on forecasts from Independent Electricity System Operator's (IESO) Ontario Planning Outlook and assumes a 5% borrowing interest rate.



**Sample financing**: Ratepayers pay less than the cost of GA in early years, borrowing up to $9 billion that is fully paid off in 2031 by charging ratepayers more than the cost of GA in later years.

# Considerations and Risks – Ratepayer

Ratepayer:

- Borrowing money to finance the GA, while lowering costs in the short term, results in a more rapid rise in electricity prices beyond the rate of increase already expected.

- The GA financing proposal involves borrowing large amounts of money over a long period of time (16-30 years, depending on the scenario) to reduce electricity rates. This debt would be highly sensitive to interest rates which could extend repayment timelines or put significant pressure on electricity rates. A long-term interest rate of 5% is assumed for this analysis.

- GA and HOEP provide a natural hedge against each other – when one goes up, the other goes down – keeping total electricity costs relatively stable and predictable. Smoothing only the GA would lead to greater price volatility for consumers.

    - For example, if HOEP is higher than expected (due to higher gas or carbon prices, for example), all-in rates will rise significantly as the natural decrease in GA would not occur given the prescribed GA rate described in the indicative proposal.

- Should Ontario electricity demand be lower than forecasted, the cost of paying off the debt will be spread over a smaller pool of consumption, further increasing future costs for individual ratepayers.

# Considerations and Risks – Fiscal and Stakeholder

Fiscal / Accounting:

- Further analysis is required on whether such changes to the financing of the GA would affect the Province's current accounting treatment for the GA and represent a potential fiscal risk. As such, early engagement with Legal Services Branch and Treasury Board Secretariat is advised.
    - It is unclear whether legislation could determine the manner in which this initiative is accounted for. Further work is required.
- Historically electricity sector financing has been conducted by the Ontario Financing Authority, e.g., managing OEFC's stranded debt and borrowing on behalf of IESO. Further consultation with the OFA will be required to determine the appropriate vehicle for additional borrowing.
- The significant amount of additional Provincial borrowing needed to finance the GA, and associated risks (e.g., interest rates, repayment timelines), could put pressure on the Province's credit rating and overall borrowing capacity. Further analysis is required and would suggest early engagement with the OFA through which money will be borrowed.

Stakeholder:

- The significant deferral of electricity system costs over a long time-horizon and associated interest costs may draw criticism from some stakeholders as creating a new "stranded debt" in the sector. Note: the Debt Retirement Charge was removed from residential bills in 2016 and will be removed for remaining customers in 2018.

# Considerations and Risks – Legal

Legal:

- Legislation would be required to authorize the financing proposal.
  - Amendments to the *Electricity Act, 1998* (EA) could authorize the financing of certain costs within or part of the GA. However, whether any other legislation requires amendment is not known at this time.
  - The GA regime currently provides that “true costs” represent the true costs of making payments to generators or counter parties to contracts, not the incurring of discretionary financing or interest costs.
  - Considerations such as the need to analyze legal risks or the need to address costs retroactively (if the proposal requires a January 1, 2017 start) could add to the legal and drafting complexity;

- Introduction of a bill in the week of February 20th is an aggressive timeline that could require diversion of resources from other initiatives.

# GA Debt Financing Scenarios

1. Status Quo

   - Ratepayers continue paying the full cost of the GA in each year without incurring any debt.

2. Moderate short-term cost reductions with limits

   - The amount of GA paid by ratepayers in 2017 is lowered by $2.5 billion below the true cost of GA and increases at inflation (assumed to be 2%) in each subsequent year until the total amount of money borrowed is paid off.
   - Future GA over-payments above the true cost of GA are capped at $2 billion to limit electricity cost increases in any given year.

3. Maximized short-term cost reductions with limits

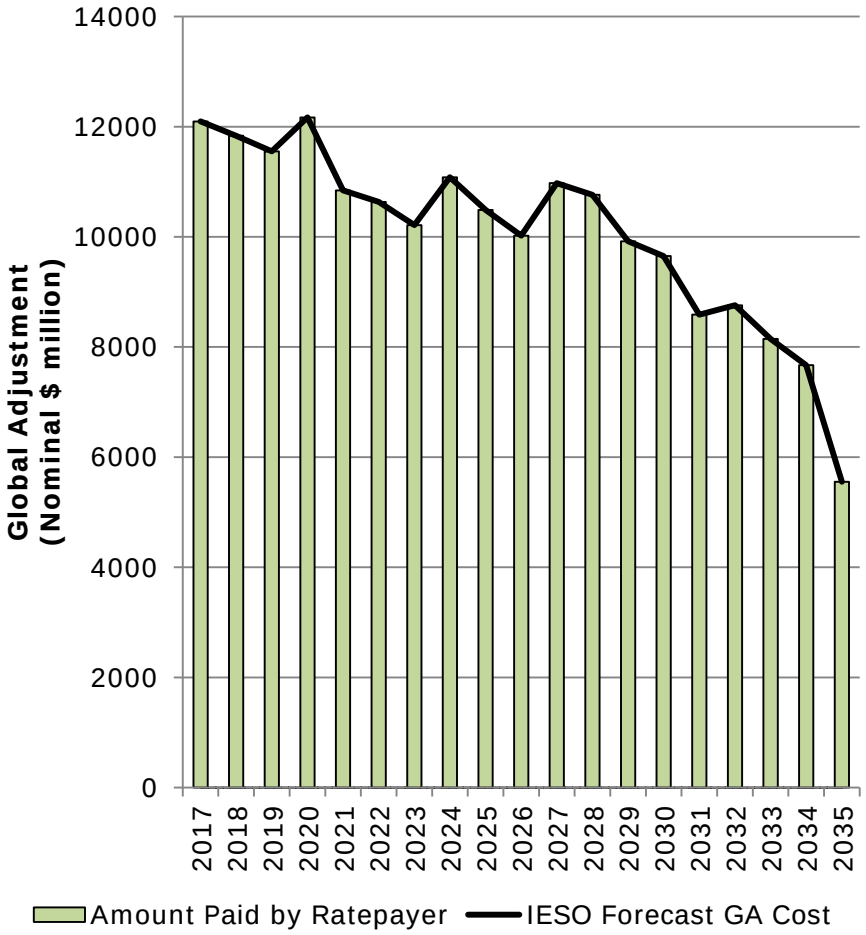
   - This scenario considers the maximum amount by which ratepayer GA costs in 2017 can be reduced such that the total amount of money borrowed is paid off over a 25-30 year financing period.
   - Future GA over-payments above the true cost of GA are capped at $2 billion to limit electricity cost increases in any given year.

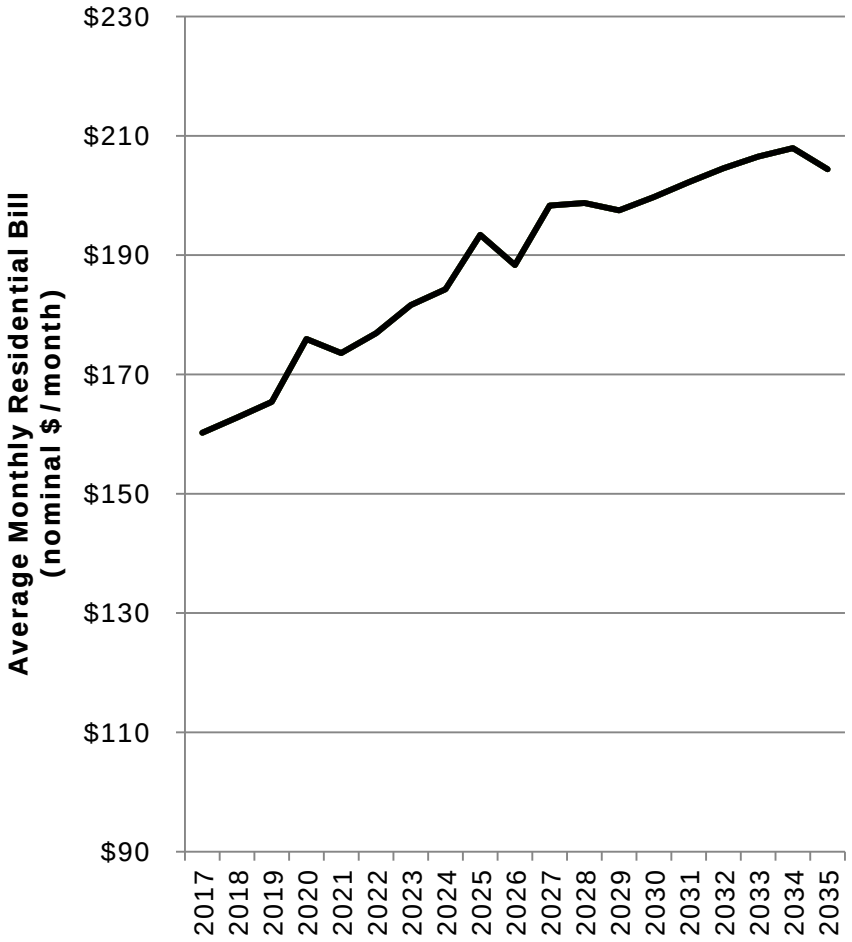
4. Maximized short-term cost reductions, no limits

   - This scenario considers the maximum amount by which ratepayer GA costs in 2017 can be reduced such that the total amount of money borrowed is paid off over a 25-30 year financing period.
   - No limit is placed on the amount charged to ratepayers above the true cost of GA.

# 1. Status Quo – Global and Residential Impacts

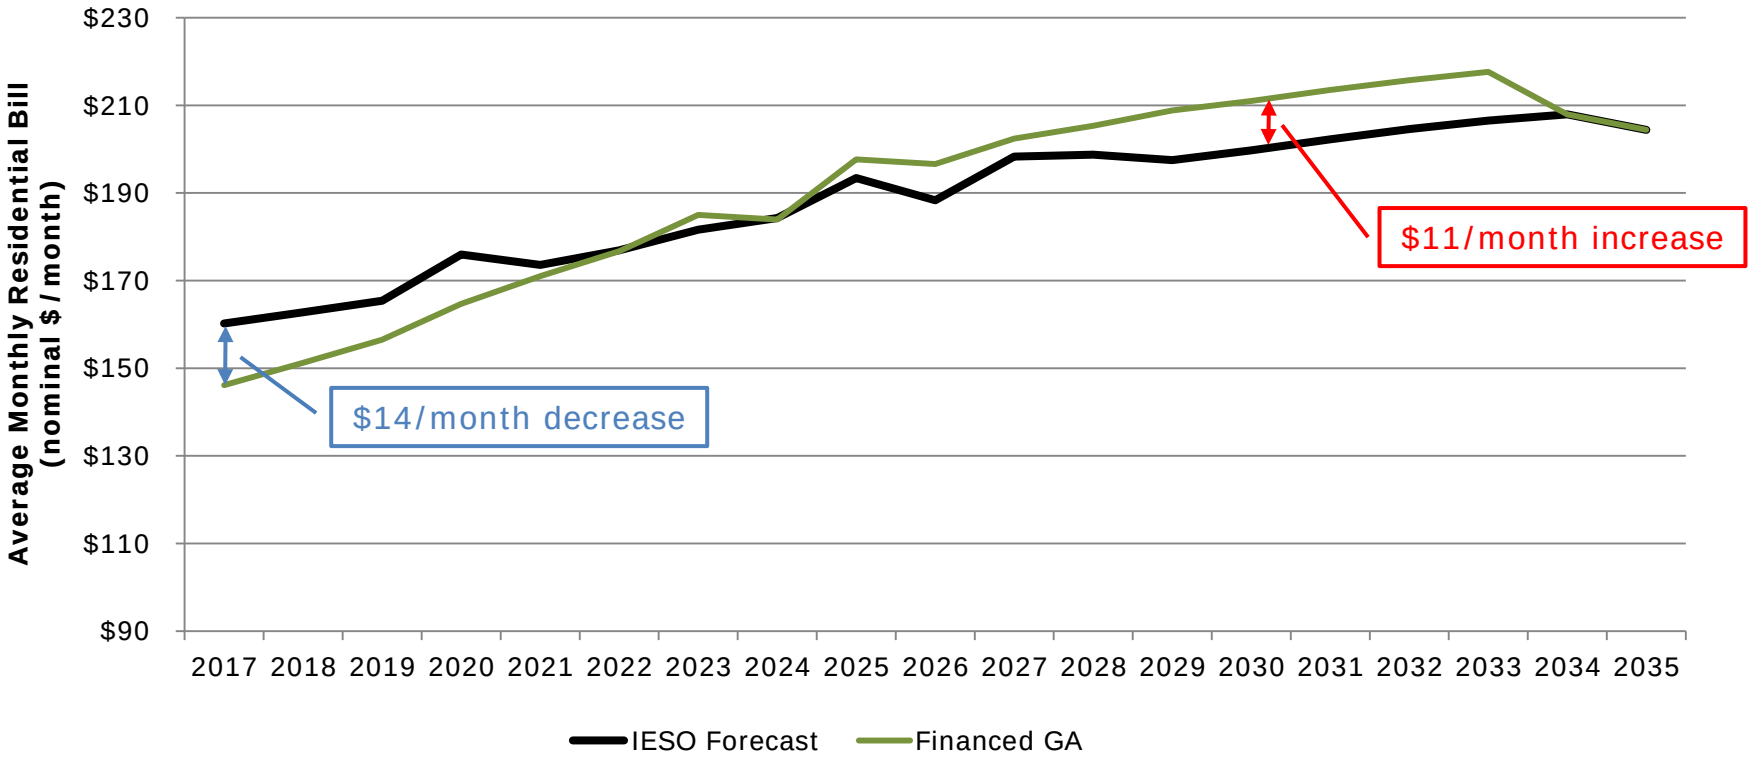
- Ratepayers continue paying the true cost of GA.





# 2. Moderate Short-term Cost Reduction with limits – Residential Impacts

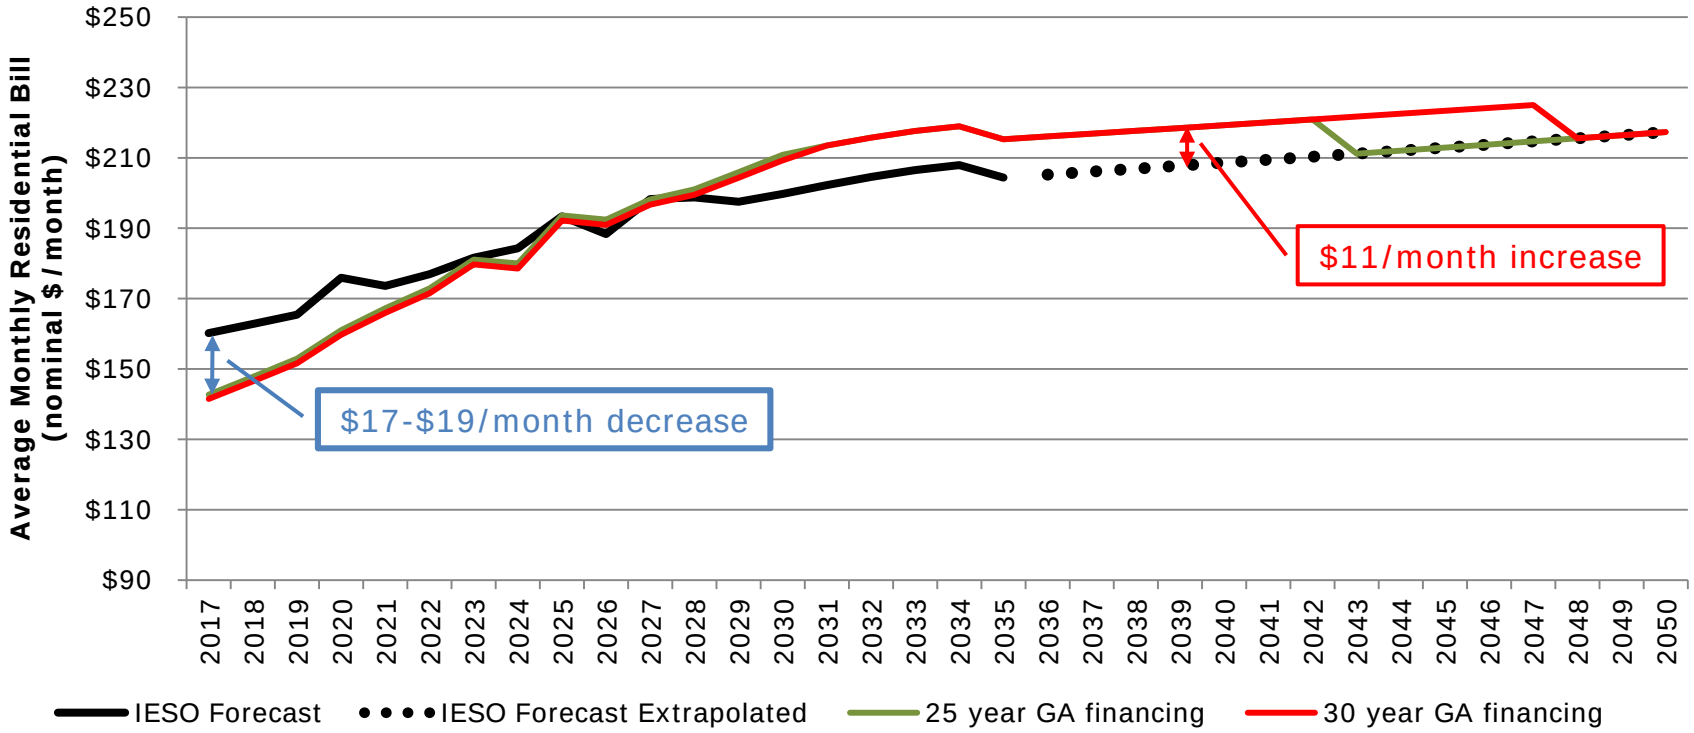
- In this scenario, the starting GA payment from all ratepayers in 2017 is lowered by $2.5 billion below the true cost of GA and is increased at inflation in subsequent years – subject to a cap of no more than $2 billion above the true cost of GA in any given year – until the borrowed money is repaid.



- By **borrowing up to $10.7 billion**, this scenario results in **a short-term residential electricity cost reduction of up to $14/month** at the cost of **a long-term increase over 12 years of up to $11/month** above the true cost of electricity production.

# 3. Maximized Short-term Cost Reduction with limits – Residential Impacts

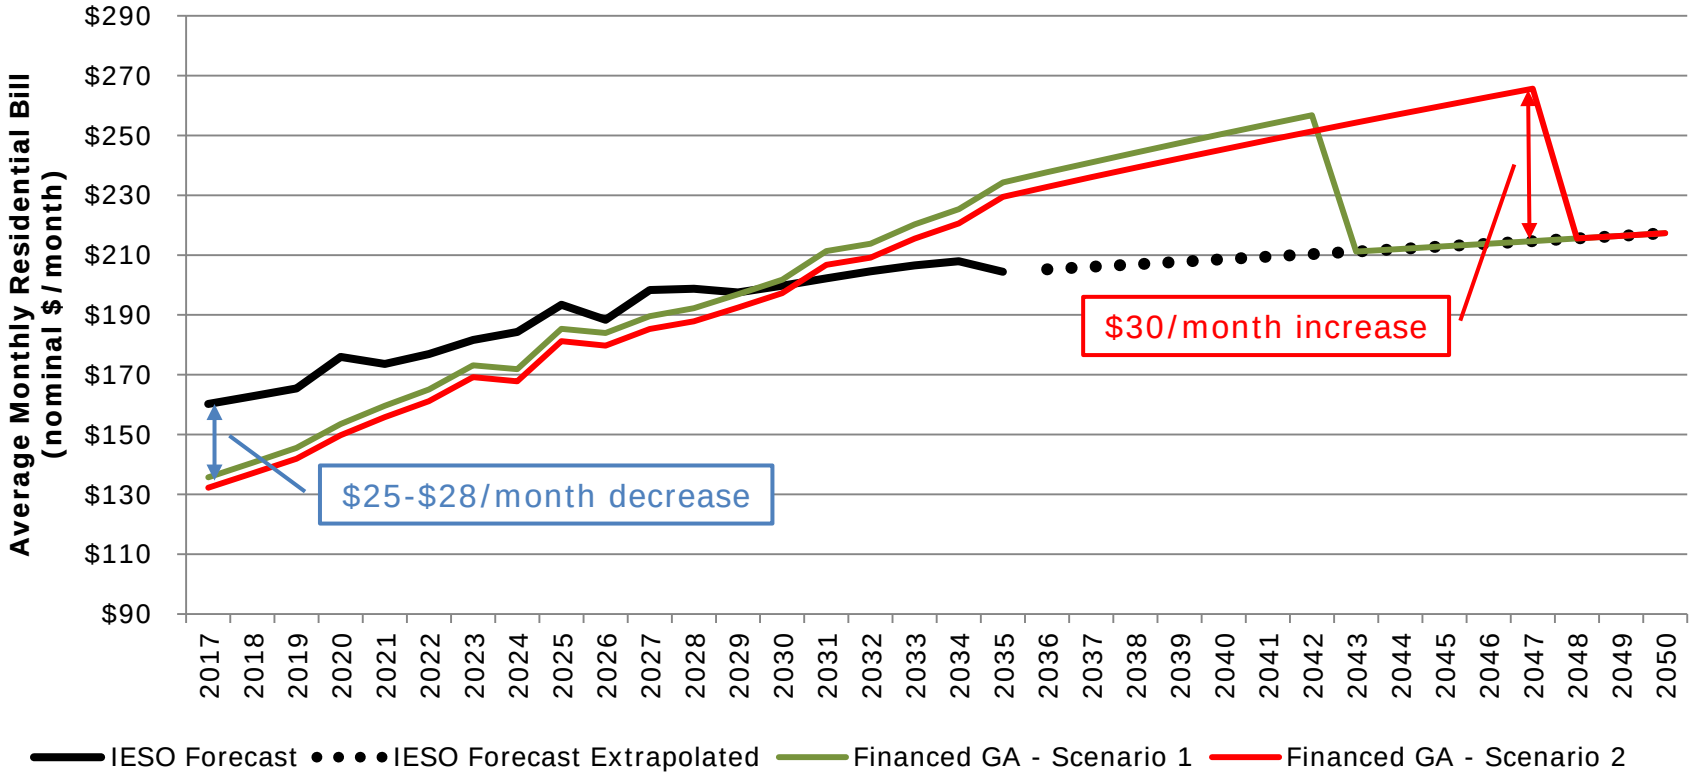
- In this scenario, the starting GA payment from all ratepayers in 2017 is lowered as much as possible and is increased at inflation in subsequent years – subject to a cap of no more than $2 billion above the true cost of GA in any given year – such that the borrowed money is paid back in 25 years (green line) and 30 years (red line) respectively.



- By **borrowing up to $23 billion**, this scenario results in **a short-term residential electricity cost reduction of up to $17-$19/month** at the cost of **a long-term increase over 17-22 years of up to $11/month** above the true cost of electricity production.

# 4. Maximized Short-term Cost Reduction, no limits – Residential Impacts

- In this scenario, the starting GA payment from all ratepayers in 2017 is lowered as much as possible and is increased at inflation in subsequent years such that the borrowed money is paid back in 25 years (green line) and 30 years (red line) respectively. No limit is placed on the ratepayer GA over-payments in later years.



- By **borrowing up to $66 billion**, this scenario results in **a short-term residential electricity cost reduction of up to $25-$28/month** at the cost of **a long-term increase over 12-17 years of up to $25-$30/month** above the true cost of electricity production.

MINISTRY OF
ENERGY

# Proposed Initiatives to Transform Ontario's Electricity Sector – Update

## Working Draft

December 2016

CONFIDENTIAL DRAFT

# Context

- Electricity costs are increasing as the necessary investments are made to decarbonize and modernize the province's electricity infrastructure (i.e., $35 billion+ investment in cleaner generation and $15.5 billion investment in Hydro One transmission and distribution systems).

- Ontario has taken a number of actions to lower electricity cost for all consumers by:
  - Deferring investments in generation (e.g., new build nuclear), improving market efficiency (e.g., wind dispatch) and decreasing the cost of renewable procurements (e.g., GEIA renegotiation, decreasing FIT prices).
  - Increasing cost effectiveness and improving efficiency by adopting new electricity market approaches (e.g., competitive LRP, no new NUG contracting).

- Following the 2016 Throne Speech, actions were announced to further reduce electricity costs by:
  - Providing an 8% rebate ($11/month savings), updating RRRP ($45/month savings), expanding ICI (up to one-third savings for participants), suspending the LRP II and the EFWSOP (up to $3.8 billion in cost savings) and recycling proceeds to industrial/ commercial consumers.

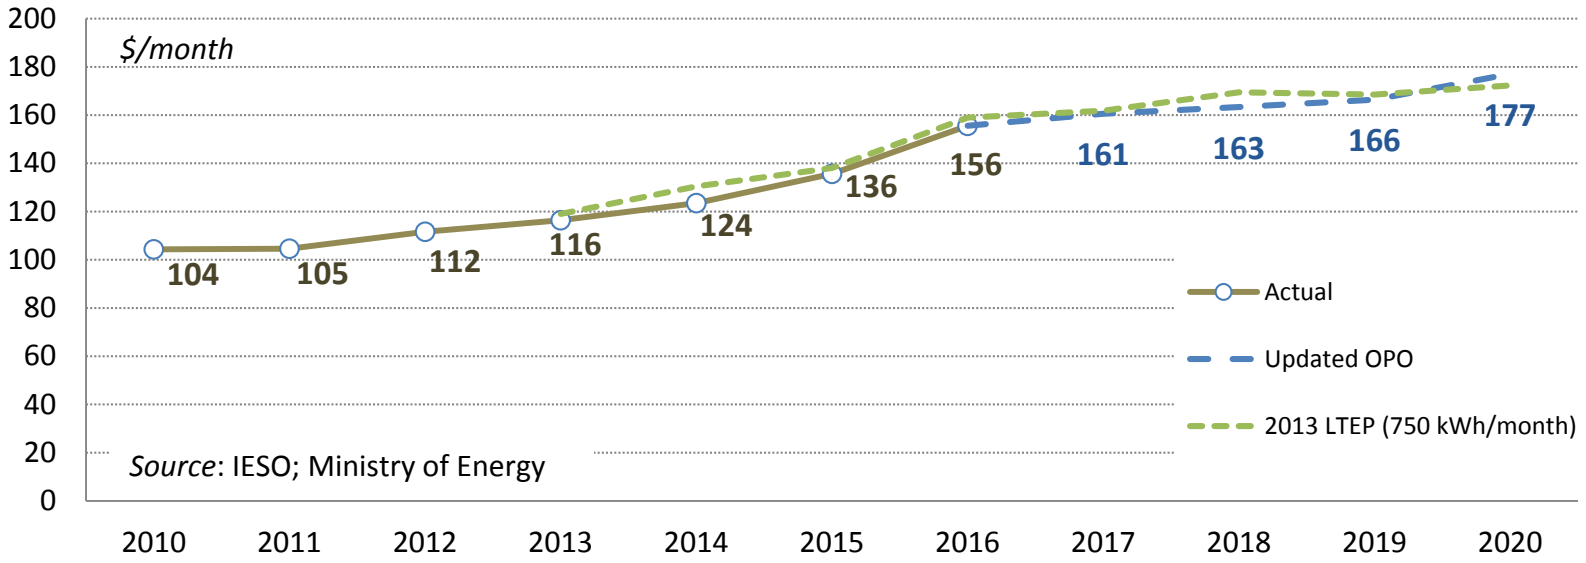
- On November 28, 2016, the Minister of Energy announced the need for changes in how electricity resources are procured, the need for wholesale market renewal and greater electricity consumer choice.

- The Ministry of Energy is currently updating its Long-Term Energy Plan (LTEP), which provides an opportunity to consider a range of policy changes to how the Ontario energy sector operates.

# Electricity Prices – Residential

- Residential consumers electricity prices continue to be a concern for many Ontarians, particularly those that rely on electric heat.
  - **Note:** The typical residential bill is currently below the 2013 Long-Term Energy Plan (2013 LTEP) forecast.

**Typical Residential Electricity Bills**
*Historical and Forecast*



**Note**: The 2013 LTEP forecast for residential bills was based on 800 kWh/month without RRRP or electric heating; the above has been rebased to 750 kWh/month for comparison purposes. Typical residential are based on Toronto Hydro. The updated OPO forecast above includes the 8% rebate to offset the provincial portion of HST, ICI expansion and RRRP expansion.

# Broad Policy Themes / Rationale

- Support the continued reduction in the differential across distribution rates (as charged by Local Distribution Companies) across the Province through the potential enhancement of Rural or Remote Electricity Rate Protection, (RRRP). In order to not increase regulatory costs to customers as a result, this program can be moved to the tax-base.
- Provide a greater focus and support on lower income Ontarians by funding the Ontario Electricity Support Program (OESP) through the tax-base, as well as enhancing the support available through the program.
- Amortize electricity conservation and demand management (DM) programs over 15-years to provide lower costs for electricity consumers.
  - Alternatively, pay for conservation/DM programs through the tax-base and transition costs to the new "green bank entity" over time. Costs would be shifted in recognition of the burden borne by ratepayers in phasing out coal generation.
- Expand the scope of the "Trillium Trust" to make investments in energy infrastructure eligible for funding, such as remote electrification, large transmission projects, new or expanded interties and expansion of natural gas to underserved areas (i.e., rural and remote communities), etc.
- Empower energy agencies to increase cost effectiveness and improve efficiency by having – IESO modernize Ontario's electricity market through electricity market renewal initiatives, the OEB identify opportunities for future LDC cost reductions/efficiencies and work with OPG to find further efficiencies in operations and pass on savings to ratepayers.
- Give consumers more choice by allowing households to "opt into" an alternative rate plan, based on a flat electricity rate, as an interim measure as the Ontario Energy Board (OEB) develops more pricing options over time. Also give consumer greater transparency with respect to electricity costs by providing more details regarding the Global Adjustment (GA).
- Help small business manage their electricity costs and provide relief for cap and trade until proceeds recycling is fully operational by ending the Debt Retirement Charge (DRC) early for commercial and small industrial Class B electricity consumers, a benefit of $7/MWh.

# Proposed Initiatives – Potential Savings for Typical Residential Electricity Consumers

| *$/750kWh* | 2017 | 2018 | 2019 | 2020 | 2021 | 2022 | Timing of Benefit |
|---|---|---|---|---|---|---|---|

Not included in chart is additional $18M/year to fund potential First Nations rate program through the Tax-Base.

# Existing Rate Mitigation Programs – Overview

- There are a number of existing programs funded by electricity ratepayers that help mitigate electricity bills for some customers, each of which has a unique policy rationale.

- Programs such as the as the Rural or Remote Rate Protection (RRRP) program are targeted at all customers who face the highest delivery costs in the province, while others such as the Ontario Electricity Support Program (OESP), are income tested and targeted at the most vulnerable energy consumers.
  - These program are not mutually exclusive and a customer could receive both the RRRP and the OESP.
  - There are other programs that are still under development such as options for a First Nations Rate currently being developed by the OEB as per the request of the Minister of Energy. These options are aimed to alleviate high delivery costs for on-reserve indigenous consumers.

- There are opportunities to enhance each of these programs. However, if enhancements are funded through the electricity rate-base, while they would lower costs for eligible consumers, they would raise costs for all other ratepayers.

- Given that these programs focus on promoting equity between different areas of the province (RRRP) or on social equity (OESP), they could be funded by the tax-base rather than the rate-base. This would allow their goals to be achieved and enhanced without increasing electricity rates. The following slides explore options to enhance each program using the tax-base.
  - These enhancements would also work in conjunction with the Ontario Energy Board's focus on reducing LDC costs outlined in option 6b.

# 1. Rural or Remote Rate Protection (RRRP) Expansion

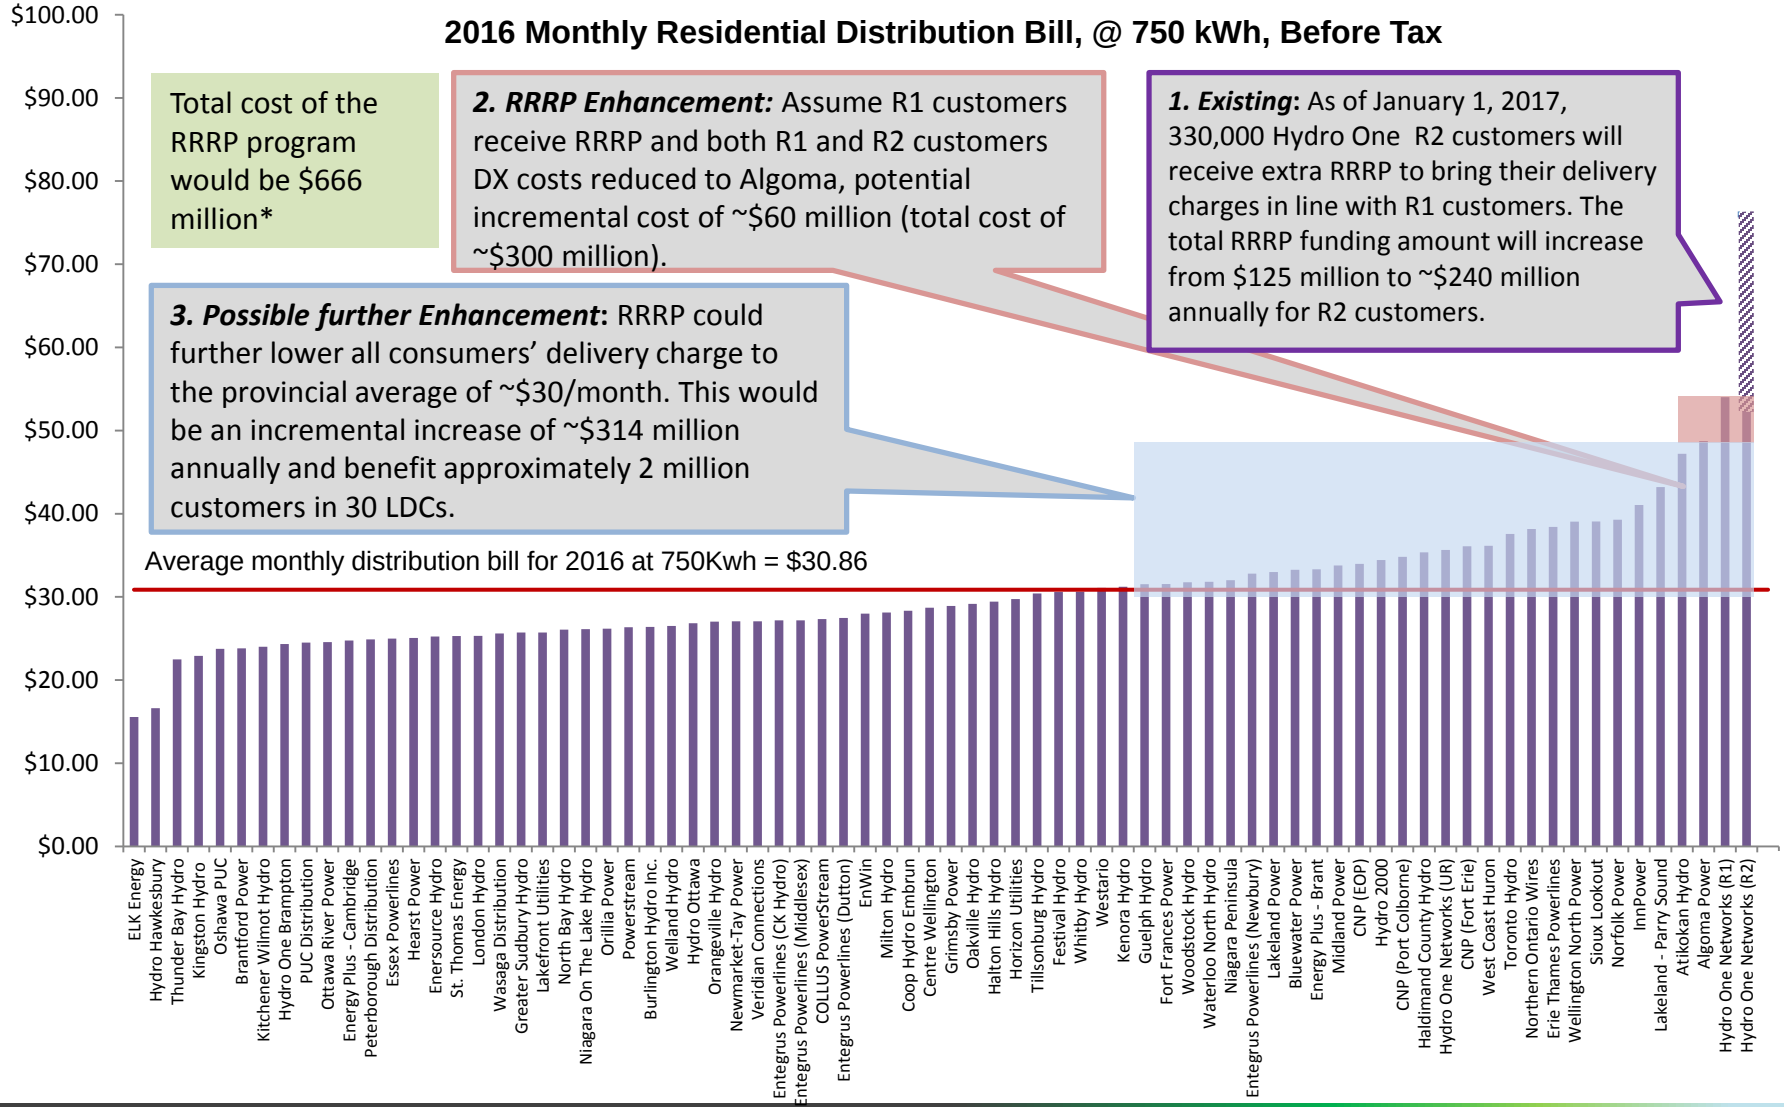
- The Rural or Remote Rate Protection (RRRP) program supports the most costly-to-serve distribution customers in Ontario. It is not income tested and most of the support goes to Hydro One's R2 (low density) rate class and remote communities.
  - Costs to these Hydro One customers are higher than average because of their relatively low density. The OEB mandates that they pay the full cost of service and in recent rate filings has asked Hydro One to ensure this through cost allocation studies.
  - To mitigate these costs, the RRRP was recently enhanced to help lower the bills of Hydro One's R2 customers to around those of its R1 (medium density) customers.
- Although other LDCs do not have medium- and high-density rates, there is a wide range of distribution costs between LDCs. The RRRP could be expanded to mitigate delivery costs for not only Hydro One customers but other high-cost LDCs.
  - Could be done on its own or as part of exploring an Ontario-wide uniform "postage stamp" delivery rate.

**Considerations**

- RRRP will be enhanced for R2 customers on January 1, 2017 to have their costs reduced to approximately R1 distribution costs levels. The RRRP could be further enhanced to include R1 customers, and have R2 and R1 customers reduce their costs down to Algoma (see next slide). This would cost $300 million in the first year (and would adjust year over year).
- If there was a desire to reduce costs for all LDCs, a simple average of distribution cost before tax, across all rate zones is $30.86 per month, for a residential customer consuming 750 kWh per month.** Bringing all delivery rates down to this average would cost approximately $500 million for the first year, with escalation in line with average distribution rate increases.
  - This assumes Hydro One R2 consume 1,200 kWh and H1 R1 customers consume 1,000 kWh per month.
- If all customers were brought down to the average costs (see the chart on the next slide for more detail):
  - It is assumed that residential customers with bills less than the provincial average see no change;
  - Majority of the enhanced benefit would go to Hydro One R1 and Toronto Hydro customers; and
  - Mechanism to ensure that LDCs continue to be motivated to achieve efficiencies would need to be designed (see section 4).
- Enhanced RRRP support may be best provided from the tax-base, because if funded from the rate-base, it would increase the costs for all customers who may argue that it is unfair that they are being asked to pay more to subsidize those in other LDCs.
- In conjunction with using the tax-base to reduce delivery charges to the provincial average, the OEB could be asked to explore moving to a province-wide "postage stamp" delivery rate that would be the same across the province to be implemented over time.
  - Could be "winners and losers" as delivery rates less than the average would go up in a postage stamp model;
  - A "postage stamp" model could help incent LDC consolidation.

**Note:** This is based on preliminary estimates and the amount will fluctuate on monthly consumption from customers and LDCs have different customer base with different consumption types.

# 1. Rural or Remote Rate Protection (RRRP) Expansion (cont'd)



*Note: this includes the ~$50M currently supporting Algoma Power and Hydro One Remotes.*

# 2a. Enhance Ontario Electricity Support Program (OESP) Benefit

- The OESP is an income-tested, application based program that lowers the electricity costs of the most vulnerable consumers by providing a rebate directly on their electricity bills. The OESP provides basic benefits to most consumers and enhanced benefits to Indigenous customers and customers with electric heat and medical devices and at launch, it was estimated ~560,000 families could be eligible and some 261,000 applications have been submitted.

- The OESP program benefits could be increased across the board by 50%, which would mean:
  - Single low income consumers would see an increase from $30 to $45/ month ($540/year); and
  - Families of four with electric heat could see an increase from $55 to $82.50/month ($990/year).

- The OESP program could also be further enhanced by working to ensure the program uptake is as close as possible to 100%:
  - Streamlining the application process to make it easier and quicker to get through;
  - Putting in place a more aggressive communications strategy to make sure people are aware of the program;
  - Increasing funding for key partner agencies to work directly with individuals who are applying; and
  - Exploring automatic OESP qualification for those who receive provincial programs (e.g., ODSP).

**Considerations**

- If the OESP was funded by the tax-base, it could also be explored whether the OESP could be better delivered as a provincial program via the tax system. This may help ensure that the program's participation rate is as high as possible.
  - At the time of program design, advice was given that a 40-50% participation rate would be high for an application-based program delivered through electricity bills.
  - The province would need to work with LDCs if the rebate was to appear on electricity bills rather than be delivered via the income tax system (e.g., through the Trillium Benefit).

# 1 & 2a. Fiscal Impacts of RRRP, OESP and First Nation Rate

- Table below shows estimates of program costs up to 2022:

| Year | OESP ($M) | OESP + 50%($M) | RRRP($M) | RRRP Enhancement ($M) | First Nations Delivery Rate($M) | TOTAL RANGE ($M) (from status quo to OESP and RRRP enhancements) |
|---|---|---|---|---|---|---|
| 2017 | $108 | $162 | $292 | $374 | $18 | $418 to $846 |
| 2018 | $150 | $226 | $300 | $384 | $18 | $468 to $928 |
| 2019 | $186 | $279 | $306 | $394 | $18 | $510 to $997 |
| 2020 | $215 | $322 | $315 | $404 | $18 | $548 to $1,059 |
| 2021 | $243 | $365 | $322 | $415 | $18 | $583 to $1,120 |
| 2022 | $272 | $408 | $329 | $426 | $18 | $619 to $1,181 |

1) Ontario Electricity Support Program (OESP)
   - After almost a year in market, close to 30% of potentially eligible customers are signed up.
   - The cost projections above assume the program grows to 100% of eligible consumers by 2022 and remains at that level.
   - The second column forecast also assumes the existing credit amounts increase by 50%.
     - Forecast assumes 10% administration costs
     - Forecast does not account for the approximately 142,000 low-income households that OEB estimated are not eligible because they do not directly receive an electricity bill.

2) Rural and Remote Rate Protection (RRRP)
   - Provides benefits to R2 Hydro One consumers, Algoma, and remote communities.
   - Includes the expanded coverage that will begin on January 1, 2017.
   - Expansion to cap distribution rates for other customers is based at $374M and assumes escalation of 2.6% (historical average dx rate increase). This is a conservative estimate, as Hydro One and Toronto Hydro increases could drive program costs beyond the average increase.

3) First Nation rate reduction (currently under development)
   - On November 14, 2016, OEB presented options to the Ministry on reducing costs for on-reserve First Nation customers.
   - OEB's recommended option to provide 100% delivery rate credit, which is estimated at $18.4 million per year.
     - Other options includes a seasonal fixed credit to account for demand changes over the year ($13 million) or a 50% total bill reduction ($23 million).

# 2b. Expand OESP Eligibility

**Expanded Coverage**

- When OESP was being created, the OEB estimated that are 713,000 low-income households, of which 20% do not receive electricity bills. Thus, only 571,000 would potentially be eligible for OESP.
- If moved to the tax base, the OESP could be broadened to include all potential low-income households, despite whether they directly pay for electricity.

**Eligibility Categories**

- OESP has two credits amounts:
    1) Basic credit of $30-50 per month, based on the level of income and the number of residents.
    2) Enhanced credit of $45-75 per month for those with unique electricity needs:
        a) Electric heating,
        b) Indigenous customers, and
        c) Certain electrically intensive medical devices.
- The enhanced credit can be expanded to include additional eligibility categories of customers. For example, a new “Low Density Consumer” category could be introduced that provides Hydro One R2 customers (highest distribution rates) eligible for OESP the enhanced credit.

**Considerations**

- Potential costs for expanded coverage and new eligibility categories depend on updated estimates and changes to program design and delivery.
- There would be value in keeping the OESP as an income-tested program to distinguish it from other initiatives (e.g. RRRP, which is designed to address disparity between rural and urban distribution costs).

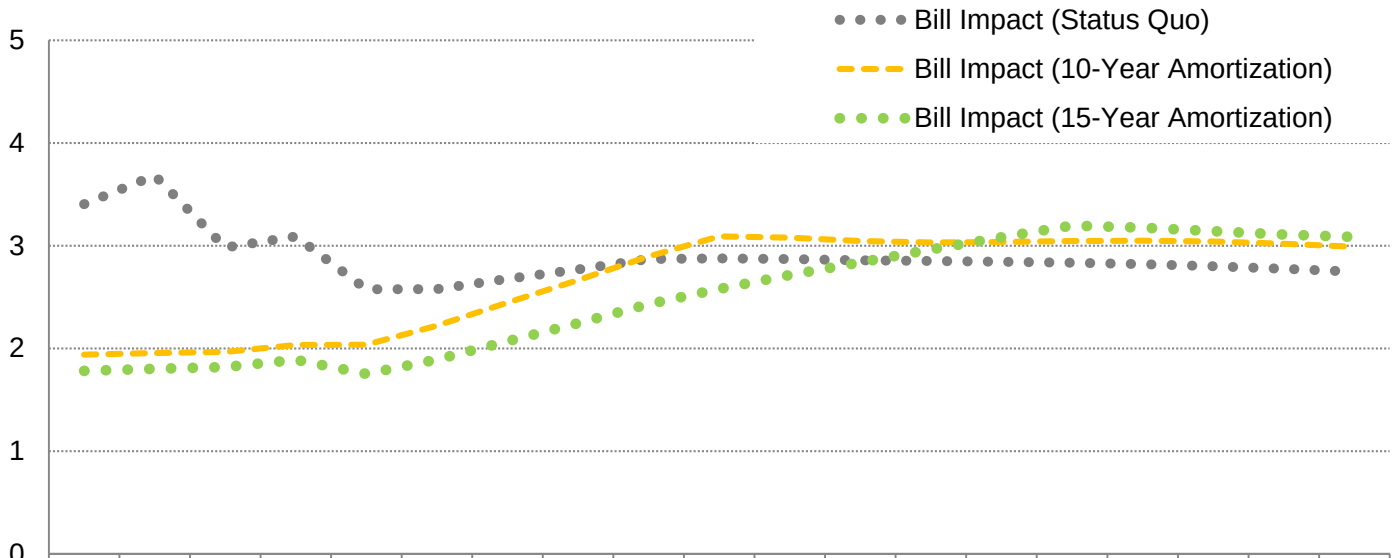
# 3a. Amortize Conservation Program Costs

- ~$3 billion from the electricity ratepayer base will be spent on conservation programs delivered under the Conservation First Framework (CFF) and the Industrial Accelerator Program (IAP) between 2015 and 2020.
- Currently, Conservation and Demand Management (CDM) program costs are recovered from the Global Adjustment (GA) mechanism about one month after expenses are incurred.
- As a potential rate mitigation measure, certain CDM costs could be amortized. This would involve IESO borrowing funds from the Ontario Financing Authority (OFA) on an annual basis to fund program incentives (non-administrative costs).
  - The time period over which costs could be amortized would be over the lifetime of funded CDM measures.
  - ENERGY is working with IESO to determine the appropriate lifetime period – the graph on the next slide, which illustrates residential bill impacts, presents two cases: **10-year and 15-year measure lifetimes**.
- In both cases, amortizing a portion of conservation spending would produce a benefit for electricity ratepayers in excess of $1/month from 2017 to 2020. Over time the benefit would decrease and turn into a cost (higher electricity rates than would otherwise occur), as interest charges begin to grow. Estimated interest charges are as follows (a 3% interest rate is assumed; increases in interest rates could result in higher overall interest charges):
  - $712 million ($2016) – Amortizing eligible 2017-2035 CDM costs for 10-year period; and
  - $1.3 billion ($2016) – Amortizing eligible 2017-2035 CDM costs for 15-year period .
- Legislative changes would be needed to allow recovery of interest payments from ratepayers, or these costs could be recovered from the Consolidated Revenue Fund (CRF, or taxes).
- An alternative that could be explored would be to pay for CDM costs, or for a portion of these, from the tax-base (*see Appendix for more detail on tax funding option*).

# 3a. Amortize Conservation Program Costs (cont'd)

## Conservation Residential Bill Impact – Status Quo, 10-Year and 15-Year Amortization

***CDM Bill Impact ($/month)***



| | 2017 | 2018 | 2019 | 2020 | 2021 | 2022 | 2023 | 2024 | 2025 | 2026 | 2027 | 2028 | 2029 | 2030 | 2031 | 2032 | 2033 | 2034 | 2035 |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| Bill Impact (Status Quo) | 3.40 | 3.68 | 2.98 | 3.09 | 2.58 | 2.58 | 2.68 | 2.77 | 2.87 | 2.88 | 2.87 | 2.86 | 2.85 | 2.84 | 2.83 | 2.82 | 2.80 | 2.78 | 2.75 |
| Bill Impact (10-Year Amortization) | 1.94 | 1.95 | 1.97 | 2.03 | 2.04 | 2.22 | 2.45 | 2.67 | 2.90 | 3.09 | 3.08 | 3.05 | 3.03 | 3.04 | 3.04 | 3.05 | 3.04 | 3.02 | 2.99 |
| Bill Impact (15-Year Amortization) | 1.78 | 1.80 | 1.82 | 1.89 | 1.75 | 1.89 | 2.07 | 2.25 | 2.43 | 2.58 | 2.71 | 2.84 | 2.96 | 3.08 | 3.20 | 3.18 | 3.14 | 3.11 | 3.09 |

Source: IESO; Ministry of Energy

**Note**: Chart assumes that conservation incentive costs are available for amortization while administration cost are not. Although there is variable from year to year, incentives represent about two-thirds of conservation spending in Ontario. Chart assumes conservation spending continues at a similar rate beyond 2020. Chart assumes a 10 of 15-year borrowing rate of 3.0%.

# 3a. Amortize Conservation Program Costs (cont'd)

**Considerations**

- Under **Public Sector Accounting Board (PSAB) accounting standards**, used by both the Province and IESO, only certain assets can be amortized: 1) pensions and 2) tangible capital assets. Under PSAB an asset must meet several criteria to be considered a capital asset, including:
  - A tangible capital asset must be tangible and substantive and the Ontario government must have title and operate the asset.
  - A tangible capital asset must bring a tangible benefit to the government or to Ontario.

- CDM costs, on their own, do not meet the criteria of a tangible capital asset because customers would have ownership and control of installed CDM measures, not the Province or IESO.

- **Rate-regulated accounting** was developed to recognize the unique nature of regulated entities (e.g., electricity generators, LDCs). Under rate-regulated accounting certain costs can be treated as amortizable assets that would not normally be considered assets under accounting principles.
  - Over the past several years, the Auditor General (AG) has expressed concerns about the appropriateness of recognizing rate-regulated assets in the Province's consolidated financial statements.
  - Rate-regulated accounting is currently under review by international accounting standard setting bodies and is currently permitted only on an interim basis, so its future is unclear at present.

# 3a. Amortize Conservation Program Costs (cont'd)

**Considerations**

- If some of Ontario's CDM costs could be amortized, analysis shows that ratepayer impacts would be reduced in the short-term but interest charges on the loan would result in increased overall ratepayer costs in the longer-term.
- Legislative amendments would be needed to allow recovery of loan interest charges from GA.
- ENERGY staff have developed a note to seek an opinion from IESO's external auditor and from the Ontario Provincial Controller (OPC) to determine whether CDM costs could be amortized according to rate-regulated accounting standards.
- ENERGY is working with IESO to seek an opinion on the proposal from IESO's external auditor.
- ENERGY would then send the IESO external auditor's opinion along with ENERGY's explanatory note to the Ontario Provincial Controller (OPC) to seek a formal opinion on whether CDM costs could be amortized according to rate-regulated accounting standards.
- Further legal analysis would also be required to confirm legal viability and possible approaches to implementation.

# 3b. Rate Smoothing of Conservation Program Costs

- "Rate smoothing" could achieve the same rate reduction effect as amortization.
- Instead of taking out a loan to amortize conservation costs, a regulatory amendment could allow IESO to establish a deferral account for conservation costs.
  - Each year, IESO would defer recovery of a portion of annual conservation costs. Financing would also be required, such as from the OFA, to pay the interest on the deferral account. Interest would accrue on the deferred amounts, likely at the same rates as for the amortization option.
- Deferred costs could be recovered over any time period. If a 10 or 15 year-period was chosen, the rate impacts would be the same as in the amortization option.

**Considerations**

- Option would **not** require approval of the Provincial Controller. However, choosing this option as an alternative to amortization may open the Ministry to criticism by the Controller and/or Auditor General since the rate impact is the same.
- The Ministry would have more control under this option to change deferred amounts each year, as opposed to the terms set by a loan agreement under the amortization example.
- There is precedence to this approach for nuclear investments, which otherwise would result in volatile increases and decreases for Ontario ratepayers over the investment period. In 2015, the Ministry amended a regulation that requires the Ontario Energy Board (OEB) to set "smoothed" nuclear rates for OPG's Darlington and Pickering nuclear stations over a 20-year period.
  - The regulation allows OPG to defer recovery in rates of a portion of its nuclear revenue during the Darlington refurbishment (expected to be complete in 2026) and recover these deferred costs over the remaining ten years.
  - OPG will establish a "deferral account" to record the deferred amounts each year up to 2026 plus accumulated interest on the balance to reflect OPG's financing costs as a result of rate smoothing. The deferral account is then drawn down on a straight-line basis between 2026 and 2036.
- At minimum, new regulation would be required. However, further analysis is needed to determine the relevant regulation or legislation, to be amended for IESO (e.g., OEB regulation of IESO costs and fees, GA regulation for how IESO recovers its conservation costs from ratepayers).

# 4. Expand the Scope of Trillium Trust to Make Investments in Energy Infrastructure

- Fund investments in specific energy infrastructure projects through the tax-base. **Note:** This could include the provincial portion of funding for the Remote First Nation Connection Project, a fund to support projects that improve adequacy and reliability in areas where new transmission would unlock economic growth and expansion of natural gas service to underserved communities.

**Considerations**

- Tax-base funding would allow for energy infrastructure to be built without impacting electricity and natural gas rates.

*Remote Connection Project:*

- Ontario ratepayers currently support costs of remote electricity service through RRRP on the order of $28 million/year
- Connecting 21 remote communities to the Ontario grid is supported by a positive business case due to diesel cost savings over time. If RRRP is funded through the tax base as proposed above, this project represents an opportunity to reduce impacts from RRRP.
- Direct investment in Ontario's portion of the capital costs of the project through a provincial fund (e.g., Trillium Trust) could also be considered along with mechanisms for cost recovery through transmission rates to refresh the fund as industry benefits from the transmission investment.
- The amount of investment and long-term savings depend on a federal contribution to the project and ENERGY is currently in discussions with Canada with the goal of concluding a cost-sharing agreement by spring 2017.
- A move to tax-based funding may have implications for cost oversight, since the OEB's mandate is to have oversight of ratepayer impacts. Alternative methods to review cost prudence of tax-based funding may be needed.

# 4. Expand the Scope of Trillium Trust to Make Investments in Energy Infrastructure (cont'd)

**Considerations (cont'd)**

*Transmission Projects to Enhance Economic Growth:*

- A tax-based fund could target investments in projects that have been identified in IESO regional plans and that would stimulate economic growth but are not proceeding due to cost barriers under the OEB's beneficiary pays principle. Investments could also target areas where the existing system poses challenges for delivering reliable service such as in parts of Northern Ontario with long single circuits.
- Potential opportunities for investment could include a transmission reinforcement in the **Greenstone area**, upgrades south of **Red Lake** and others TBD based on program design.
- This approach would allow a potion of project costs to be socialized to advance key projects without impacting rates or OEB's principles of cost allocation. Scope and scale of fund would be refined through program design.

*Natural Gas Expansion to Underserved Communities:*

- The Government has currently committed to expanding natural gas access to more communities in Ontario (i.e., $200 million Natural Gas Access Loan and $30 million Natural Gas Economic Development Grant).
  - Natural gas is an affordable heating source in Ontario. Its continues to be less expensive than alternative sources such as electric baseboards, heating oil and propane. For example, switching from oil to natural gas can save an average consumer an estimated $1,500 annually.
  - Increasing access to other energy sources such as natural gas, provides Ontarians with more options to meet their needs, reduce their energy costs and improve their quality of life.
  - Expansion of natural gas delivery infrastructure is widely supported in underserved communities (i.e., a recurring theme at ROMA) as a means to provide consumers and businesses in underserved communities with more affordable energy choices, attract new industry to Ontario and benefit agricultural producers.
- A grant program complements the Ontario Energy Board's recent decision enabling greater rate-based expansion to unserved areas, including rural and remote communities.
  - Applying Trillium Trust funding would make it possible to enhance the Grant Program and service more communities.

# 5. Dedicate Departure Tax

- In connection with the IPO, as a result of leaving the PILs regime and entering the corporate tax regime, Hydro One was deemed to dispose of its assets for proceeds equal to its fair market value, triggering a PILs liability of $2.6 billion (Departure Tax).
- This was paid to the Ontario Electricity Financial Corporation (OEFC), to be dedicated towards repayment of electricity sector stranded debt.
- The Province could explore repurposing some of those funds to the benefit of ratepayers.
- This may reduce the risk that the Ontario Energy Board (OEB) assigns to ratepayers the benefit from an associated tax asset, resulting in lower earnings and decreased share value for Hydro One. This decision is currently before the OEB, as part of Hydro One's Transmission rate application.
- If the Province were to transfer $2.6 billion in economic benefits to the rate base over 10 years suggest the following impacts (assuming 140TWh per year):
  - Residential Ratepayer Impact (if spread over 10 years): up to $1.39 per month on a typical bill; and
  - Industrial Ratepayer Impact (if spread over 10 years): up to $1.86 / MWh

**Considerations**

- Cost savings to ratepayers and associated fiscal impacts would depend on timing and which ratepayers (e.g., Hydro One customers, or all Ontario customers) will benefit from some or all of the $2.6 billion value.
- The departure tax was effectively a true-up for lower PILs payments from Hydro One in previous years – it was not a one-time windfall for the Province. In other words, it ensures that Hydro One paid all its tax obligations under the PILs regime before moving into the normal corporate tax regime.
- The related ~$2.4 billion fiscal benefit to the Province (from the deferred tax benefit) has already been credited to the Trillium Trust to be used to build infrastructure under Moving Ontario Forward.
- Repurposing funds paid to OEFC may have an impact on the defeasance of electricity stranded debt.
- While this is a shift from messaging that value from the broadening of ownership of Hydro One is being used pay down debt and fund transit and transportation, the Province could link to electricity infrastructure investments (e.g., as an offset to infrastructure investments already made in the sector, or to specific initiatives such as conservation).

# 6a. Empower Energy Agencies – IESO / Market Renewal

- Continue to move forward with IESO's Market Renewal initiatives:
  - Market Renewal encompasses projects such as a single-schedule system (from the current two-schedule system), more frequent intertie scheduling to better align with other jurisdictions and a day-ahead market. There will be up front capital costs to enable the initiative. IESO is currently assessing these costs.
  - Moving to "technology-agnostic" procurements will provide new opportunities for innovation and modernization and ensure ratepayers receive the best prices possible.

**Considerations**

- Changes related to IESO's Market Renewal initiatives, reflected in HOEP and uplifts, are estimated to save up to $300 million per year, starting in 2021, leading to a reduction of:
  - About $1/month or less than 1% at current retail prices for a typical residential bill; and
  - About $1.30/MWh at current all-in prices for industrial and SME electricity consumers.
- The IESO's Market Renewal is a broad initiative that will impact all aspects of Ontario's electricity market. Ontario has had a uniform price since market opening.
- Adopting a technology-agnostic stance will lower the overall cost of providing electricity service by selecting the most cost-effective resources to fulfill various system needs.
- IESO estimates that the total implementation cost – including a 15% contingency and net of avoided costs – will be $150 million. The bulk of the costs (capital) would only be recovered once the project has been implemented and as the benefits are being realized.

# 6b. LDC Efficiencies and Rates

- Reducing costs and having LDCs become more efficient could result in a reduction of Distribution costs on electricity bills.
  - Currently, LDCs recover costs through the Delivery line of the electricity bill, which is broken into Distribution and Transmission costs. LDCs are responsible for the Distribution costs of the electricity bill which account which account for about 20% of the total bill.
  - Distribution costs vary across the province as LDCs have different service territories and needs (e.g., geography, number of customers, density of customers, life/health of capital assets, etc). See next slide for more detail.
    - For example, comparing 2016 with 2006, distribution rates have increased by about 24.5% (or about 2.2% per year, compounded annually) across the Province, with significant variation between regions and LDCs (-17% to 148%). Overall consumer price inflation in Ontario for the same period increased by about 19% or 1.8% per year.

**Considerations**

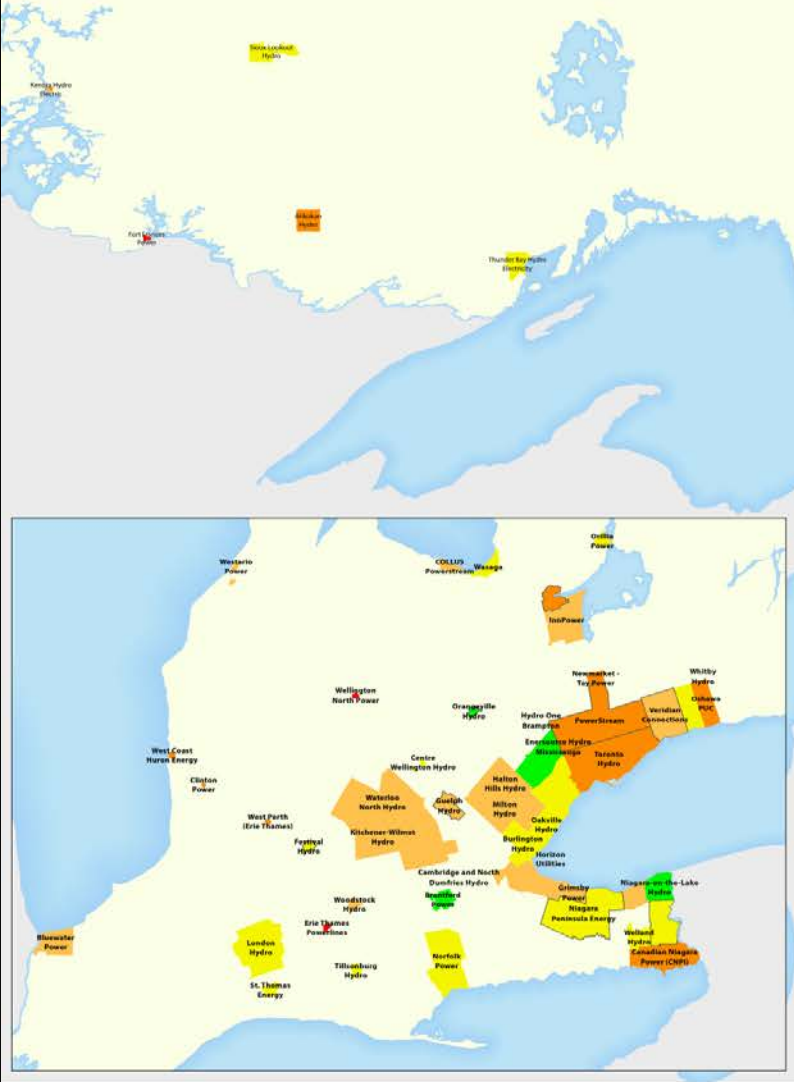
- The Ontario Energy Board (OEB) has a mandate to regulate the electricity distribution sector in the public interest, ensuring the financial viability of the sector while promoting reliable service to customers at just and reasonable rates. Since 2012, the OEB has taken action – through the Renewed Regulatory Framework for Energy – to more closely link rate regulation with performance measures and outcomes.

- There maybe opportunities to promote further cost reductions and performance improvements within the distribution sector as there is continued evolution of the regulatory framework in Ontario.
  - Tightening LDC requirements may also indirectly incent other desired policy outcomes, such as LDC consolidation and grid modernization to realize further cost reductions.
  - To further help address the costs associated with the Delivery line of the electricity bill, program such as the RRRP (previous slide) could be expanded to include other customers that may face higher costs.

- ENERGY could help promote or accelerate these efforts by asking the OEB through the LTEP Implementation Directive, s. 35 of the *Ontario Energy Board Act, 1998*, and the 2017 Mandate Letter and other agency business planning processes.

- In 2012, the government asked the Ontario Distribution Sector Review Panel to review the distribution sector and make recommendations about how it could become more efficient. The Panel concluded that a $1.2 billion net present value in savings could be achieved by consolidating LDCs into 8-12 regional entities. The panel recommended legislation to mandate consolidation.
  - Rather than mandating consolidation, the government response was to pursue voluntary consolidation and put in place tax incentives for consolidation. Further changes to the tax incentives and/or revisiting legislated consolidation could be considered.

# LDC Distribution Rate Changes (2006 vs 2016)



| Total Dx Rate | 2006 | 2016 | % Rate Change |
|---|---|---|---|
| Hydro One UR (High Density) | $29.13 | $35.65 | 22.4% |
| Hydro One R1 (Medium Density) | $37.73 | $54.02 | 43.2% |
| Hydro One R2 (Low Density) | $44.65 | $76.14 | 70.5% |

## Legend

**LDC Rate Comparison 2006 vs 2016**

**% Total Rate Change ( # of LDCs )**

- -17.3% to 0% ( 5 )
- 0.1% to 15% ( 25 )

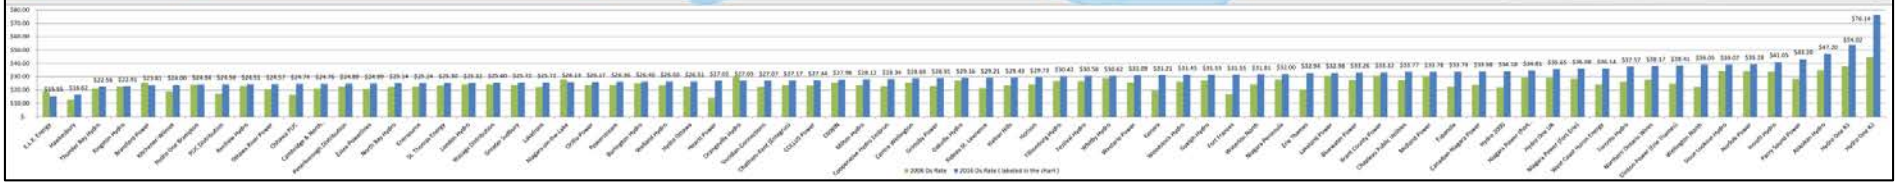
## KEY FINDINGS

- In summary, distribution rates (including rate riders) have increased by about 24.5% across the Province, with significant variation between regions and LDCs (-17% to 148%).
- There is generally no correlation between LDC size or location and distribution rate increase in absolute or percentage terms.
- The current analysis shows no clear relationship between the percentage rate increase and the absolute rate level (that is, high rate increase LDCs may still have among the lowest rates, and low rate increases may have higher rates.
- No clear relationship between amalgamation and rates.
- The analysis does suggest that Hydro One has the highest rates, and some of their customers have seen higher than average rate increases.

## NOTES

- **Rate Calculation:** Monthly residential distribution bill rates, before taxes, are based on consumption of 750 kWh. Distribution charges account for approximately 23% of the average 2016 residential bill.
  All figures calculated by ENERGY staff without input from OEB.
- **Colours:** Colour coding of the map only depicts the change in LDC rate amounts (i.e. LDCs in red don't necessarily have the highest total rates).
- **Mergers:** Rates for customers in merged LDCs have experienced different levels of change. For merged entities, the largest LDC in 2006 was used. An accompanying map focuses on merged entities.
- **Points in Time:** Current analysis compares 2016 and 2006 only. Rates could have had an uneven trajectory, especially considering regulatory decisions such as time limited charges/rebates with temporary impacts.



# 6c. Empower Energy Agencies – OPG / Operational Efficiencies

- Provide expectation that OPG meet more aggressive cost targets, improving efficiency by ~$3/Megawatt hour (MWh).

**Considerations**

- OPG recently submitted its 2017-19 business plan to the Province for concurrence. That plan includes the following:
  - Enterprise total generating cost increasing from $48/MWh in 2016 to an average of $55/MWh over the plan period.
  - An average residential monthly bill increases of $1.05/month annually from 2017-2021.
- Much of this increase is due to the Darlington refurbishment project, which increases costs and reduces OPG's generation over the planning period.
- OPG has also shared its stretch targets for total cost of generation, which average $52/MWh over the 2017-19 plan, a ~$3/MWh reduction (5-6%) relative to its $55/MWh business plan targets.
- The Province could provide instructions to OPG to focus on its stretch target as part of the Minister's Concurrence letter. This is a public document that OEB would likely review and incorporate as part of OPG's current rate application.
- Consistent with regulations under the *Ontario Energy Board Act*, OPG is seeking smoothed rates for nuclear as part of its 2017-2021 rate application.
  - As a result, the benefit to ratepayers of reducing generation costs is uncertain.
  - Given that the application extends beyond the business plan period, and to ensure OPG does not delay costs beyond the planning horizon, the Province may want to provide additional direction for out year expenditures.
- If OPG is unable to meet more aggressive cost targets, this could impact net income, and the Province's fiscal plan.
  - The total cost of $3/MWh based on OPG's forecast production of 74 TWh/yr is about $240 million per year.
- The Province could work with OPG to craft language in the concurrence letter in order to avoid setting unintended precedents for future rate application processes.

# 7a. Give Consumers More Rate Choices and Greater Transparency – Interim Flat Rate

- OEB continues to move forward with its Regulated Price Plan (RPP) Roadmap:
  - The OEB is undertaking a comprehensive review of the RPP, including exploring the introduction of offering different pricing plan options for customers following the completion of pilot programs in 2018. The plan is expected to be implemented over a 3-5 year period.
- Until new pricing plans are available, the OEB could provide an "opt-in flat rate RPP" structure that could be made available to residential, farm and small business consumers on an interim basis (2-3 years) until a wider range of price plans are available, providing customers with pricing choice.
- Time-of-Use (TOU) pricing could also be introduced for non-RPP Class B consumers to reduce Global Adjustment (GA) volatility and reduce system costs.

| Current TOU | New Flat Rate |
|---|---|
| On: 18.0 ¢/kWh | 11.1 ¢/kWh |
| Mid: 13.2 ¢/kWh | |
| Off: 8.7 ¢/kWh | |

**Considerations**

- Would provide consumers with electricity pricing choice.
- The OEB has indicated that the option would lead to no overall change in system costs. Consumers with higher peak and mid-peak usage patterns would see a decrease in their electricity bills, while those with higher off-peak usage patterns would see an increase.
  - While the current strong supply conditions may allow for such an RPP structure (i.e., peak demand requirements can be easily met), administrative costs could be high (distributors would need to design/implement an opt-in process and associated billing system on an interim basis).

| | Current TOU | New Flat Rate |
|---|---|---|
| 1) Monthly electricity bill- higher peak and mid-peak usage patterns | $172 | $163 |
| 2) Monthly electricity bill- higher off-peak usage patterns | $152 | $163 |

***Note:** 1) assumes a consumer consumption pattern of 45%:30%:25% (Off-peak: Mid-peak: On-peak), while 2) assumes consumer consumption pattern of 80%:10%:10% (Off-peak: Mid-peak: On-peak). Estimates are based on OEB's online electricity bill calculator (for Toronto Hydro- November 2016 rates)

# 7a. Give Consumers More Rate Choices and Greater Transparency – Interim Flat Rate (cont'd)

**Considerations**

- The decision to undertake smart meter investments was partly justified on the basis of TOU pricing. If TOU pricing were to be made optional, some stakeholders could question the rationale for smart meter investments.
  - Rationale for offering a flat rate option could focus on providing customers with choice until new pricing plans are rolled out under the RPP roadmap.

- If a flat rate design is introduced, there could be significant consumer opposition to any return to a mandatory TOU.

- After the interim flat rate period, the OEB could offer a wider range of pricing plans to consumers.
  - As part of its RPP review, the OEB will be running pilots with LDCs to assess customer response to alternative time periods and pricing structures.
  - Learnings from these pilots will help inform potential changes to the RPP. Pilots are expected to be in market May 2017 and run for one year.

- Non-RPP Class B electricity consumers currently pay Global Adjustment (GA) on a volumetric basis. Moving them to TOU would provide an incentive to shift consumption to off-peak periods.
  - Consumers, including manufacturers, who are unwilling to shift would face higher costs and likely not be supportive of the changes.
  - The decision to pursue TOU pricing for non-RPP class B consumers will impact proceeds recycling as there is interplay between the two initiatives.

# 7b. Give Consumers More Rate Choices and Greater Transparency – Detailed Global Adjustment

- Provide electricity consumers greater transparency with respect to electricity generation costs by providing more details regarding the Global Adjustment (e.g., adding a line on hydro bills, quarterly energy reports, etc).

**Considerations**

- As electricity bills have increased, many consumers have complained about a lack of transparency on the drivers of electricity costs. In particular, consumers and legislative officers have singled out the GA.

- Providing consumers with additional information on the cost components and amounts recovered through the GA would help consumers understand how the different forms of electricity generation in Ontario contribute to consumers costs.

- Providing additional information to consumers on electricity commodity cost drivers without sufficient context or background could simply lead to increased complaints about particular generating technologies that make up large shares of costs (e.g., nuclear).

- Adding a breakout of the amount of GA on residential electricity bills could lead to further confusion due to the existing breakout of multiple time-of-use buckets.

- Alternatively, the existing quarterly Ontario Energy Report, which provides various energy sector data, could be leveraged to show a breakout of quarterly GA costs by fuel type. A link on electricity bills could point to this information.

# 8. Help Small Business Manage Their Electricity Cost – End DRC Early for Class B Electricity Consumers

- Propose to remove the $0.07/kWh Debt Retirement Charge (DRC) from the bills of commercial/small industrial Class B consumers beginning in 2017, instead of April 1, 2018.
  - **Note:** Class A consumers (e.g., large industrial) would continue to pay DRC until at least April 1, 2018.

**Considerations**

- For a Class B consumer currently paying about $152/MWh, removing the DRC would represent a savings of about 5%.
  - A 50% reduction in the DRC charge would represent a savings of about 2%.

- Alternatively, the reduction of the DRC could be to $0.035/kWh starting in 2017, to provide relief for cap and trade until proceeds recycling is fully operational.

- Residential consumers have had the DRC removed from bills since January 1, 2016. Taking DRC off commercial and small industrial bills would result in equal treatment for these groups of consumers.

- The savings for commercial and small industrial consumers associated with this proposal would drop to zero in April 2018, since this is the current planned date for removing the DRC from non-residential bills.

- Prior to moving forward with this proposal, additional analysis from Legal Services and the MOF would be needed.

# 9. Extend Length of Existing Wind / Solar Contracts

- Wind and solar developments are typically contracted through standard offer procurements on 20 year fixed terms at fixed pricing.
- Many of these projects have already reached commercial operation.
- The province could explore options for IESO to negotiate extensions to existing renewable energy contracts, for example, by 10 years, in return for the proponents agreeing to a lower price in the near term.

**Considerations**

- Projects in commercial operation offer potential for near-term rate reduction whereas projects that have yet to reach commercial operation provide potential to mitigate future rate increases only.
- The attractiveness of this option to contract holders would vary from project to project and would depend on project economics.
- Revised pricing would be subject to negotiation, and associated ratepayer savings would be difficult to forecast accurately.
- The duration of contract renegotiation is difficult to forecast and may not be achievable in the near term.
  - Proponents may have to renegotiate their project financing arrangements, ensure project investors are satisfied with any changes in ROI, and extend land leases.
- Project host communities and Indigenous communities whose traditional territory the projects are sited in may not be interested in these projects extending their operational period ; discussions/consultation may be required in advance of this potential option moving forward.

# 9. Extend Length of Existing Wind / Solar Contracts (cont'd)

**Considerations (cont'd)**

- Should Ontario be successful in negotiating lower prices in the near term, it should be noted that contract holders will be in a strong bargaining position (given their existing fixed-priced contracts), and will likely extract additional value from the negotiations.

- Since the Minister of Energy is not a party, IESO would be required to renegotiate the contracts, which would likely involve a direction or directive to IESO.

- Further analysis is required as to how ENERGY could express its policy intent to have IESO renegotiate the contracts for a reduced rate at a longer term, however it is unlikely that IESO could guarantee the outcome.

- Further analysis is required to ascertain whether there is scope within the existing contracts for IESO to renegotiate their terms in this manner.

- Extending contract terms would also reduce planned flexibility and increase the risk of overpayment as this existing capacity would now be contracted into the 2040s and not the 2030s.

- Extending contract terms may require investments in component replacement and additional operation and maintenance costs that developers would seek to recover under any renegotiated contract.

# 9. Extend Length of Existing Wind / Solar Contracts (cont'd)

**Considerations (cont'd)**

- Ontario has over 4,500 MW of wind in commercial operation, with the vast majority being large scale (>500kW) developments.
  - This includes over 2,700 MW of large FIT 1 and GEIA wind projects representing 47 contracts (average size ~58 MW) and over 1,000 MW of solar projects representing 103 contracts.

- Projects over 500 kW would offer the most savings potential as they represent the majority of installed renewables capacity and are spread across fewer contracts.

- Below are two potential approaches to reducing ratepayer costs in the near term by extending contract terms at reduced prices. An illustrative example of a typical large wind project is used.

- **Example:** 100 MW FIT 1 wind project achieving Commercial Operation in 2014 (i.e., 17 years remaining on initial 20 year contract), assuming a 10 year contract extension negotiated at the LRP I low weighted average wind price of $64.5/MWh;
  - (17 years @ $135/MWh + 10 years @ $64.5/MWh)
  - **Potential Approach 1:** Provide a single new contract price that is the average of the lower extension price and the FIT contract price over the new contract term. The new price would be lower over a longer term.
  - **Illustrative Example:** New contract for 27 years at $129/MWh.
  - New contract price set to allow 10% rate of return over 27 year contract per FIT pricing approach.

| 100 MW Wind Project | Status Quo | 27 Year Contract (remaining term extended for 10 additional years) |
|---|---|---|
| Contract Cost (NPV 2017) | $550 million | $582 million |
| Average Monthly Ratepayer Impact Over First 5 Years | $0.03 savings | |
| Average Monthly Ratepayer Impact Over Remaining 22 Years | $0.02 increase | |
| Average Monthly Ratepayer Impact Over Entire 27 Year Contract | $0.01 increase | |

# 9. Extend Length of Existing Wind / Solar Contracts (cont'd)

**Considerations (cont'd)**

- **Potential Approach 2:** Offer facilities a revised contract that extends terms and is structured to offer lower pricing in the initial contract years and higher pricing in the later years of the contract.
  - For example, the New contract is $85.9/MWh over the first 5 years and $169/MWh over the remaining 22 years.
    - Price over first 5 years is LRP I weighted average wind price.
    - Price over remaining 22 years is set to allow 10% rate of return over entire 27 year contract per FIT pricing approach.

| 100 MW Wind Project | Status Quo | 27 Year Contract | |
|---|---|---|---|
| | | Initial 5 Years | Last 22 Years |
| Contract Cost (NPV 2017) | $550 million | $632 million | |
| Monthly Average Ratepayer Impact Over First 5 Years | $0.09 savings | | |
| Monthly Average Ratepayer Impact Over Remaining 22 Years | $0.07 increase | | |
| Monthly Average Ratepayer Impact Over Entire 27 Year Contract | $0.04 increase | | |

# 10. Tax Relief for Solar and Wind Contracts

- In 2010 and 2011 Ontario procured large scale projects (>500 kW) through the FIT program at standard offer pricing.

- The FIT program was the centerpiece of the GEA which established the economic and social goals of growing the green economy, including establishing a local renewable energy manufacturing base, supporting the development of green energy jobs, and providing incentives for Indigenous participation.

- To help achieve these economic and social goals, the FIT program offered pricing at above competitive procurement rates, and provided Indigenous and Community participation adders, which resulted in economic benefits to all Ontarians, but resulted in additional costs borne by Ontario's electricity ratepayers.

- Ontario could fund the added cost of some or all of these economic and social incentives by shifting their costs from the rate-base to the tax-base.
    1. The tax-base could fund the portion of FIT pricing that is above the cost of wind and solar generation procured through a competitive process.
    2. The tax base could absorb the cost of the incentives paid to encourage Indigenous and Community participation in FIT.

**Considerations**

- If applied to projects in commercial operation the benefit to the ratepayer would be immediate.
- Comparing FIT pricing to competitive procurement pricing could provide a reasonable representation of energy procurement without the added cost of economic and social incentives.

# 10. Tax Relief for Solar and Wind Contracts (cont'd)

1. The tax-base could fund the portion of FIT pricing that is above the cost of wind and solar generation procured through a competitive process.
   - For example, from 2017 onward, the estimated value of the more than 1,800 MW of large wind projects in commercial operation under the FIT 1 program at a price of $135/MWh is approximately $9.4 billion (NPV 2017).
   - The weighted average price for large wind projects over the RES I, II and III competitive procurements was $95.1/MWh.
   - If the competitive RES wind pricing were applied to the 1,800 MW of FIT 1 large wind projects, total program value would be estimated at $6.1 billion (NPV 2017).
   - The $3.3 billion difference could be considered the value of above competitive procurement pricing and could be shifted from the rate-base to the tax-base.
   - This represents estimated average ratepayer savings of $1.50/ month relative to OPO forecasts.
   - The same approach could be considered for solar projects however, prior to LRP I in 2016, Ontario had not procured solar capacity competitively and international cost comparisons are challenging given differences in regional development costs.
   - This example does not include the value of participation price adders available for community and indigenous participation.

# 10. Tax Relief for Solar and Wind Contracts (cont'd)

2. The tax-base could absorb the cost of the incentives paid to encourage Indigenous and Community participation in FIT 1 solar and wind projects.

   - For example, 17 large FIT 1 wind and solar projects have Indigenous and/or Community participation making them eligible for a price adder in addition to their base contract price.

   - The estimated value of these price adders is approximately $17.1 million (NPV 2017) over the expected remaining term of their contracts.

   - This represents estimated ratepayer savings of approximately $0.01/month relative to OPO forecasts.

| 46 | GEIA | 148.6 | Dec-14 |
| 47 | GEIA | 270 | May-15 |

# Key Outcomes / Next Steps

- The proposed initiatives provide the following opportunities to:
  - Provide a greater focus on vulnerable consumers by funding electricity support programs through the tax-base.
    - Enhance existing and new support programs targeted at the most vulnerable consumers (i.e., OESP and RRRP); and
    - Better harmonize delivery rates across the province.
  - Re-set how energy infrastructure is funded by shifting costs to the tax-base from the rate-base.
  - Provide electricity consumers with greater choices and transparency (e.g., alternative rate plan based on a flat electricity rate, unpacking the Global Adjustment costs, etc);
  - Provide system benefits (e.g., market renewal);
  - Increase cost effectiveness and improve efficiency; and
  - Lower the cost of electricity for all consumers.

- The timing of the impact of these rate mitigation initiatives varies.
  - Immediate and near-term impacts can be achieved by shifting costs to the tax-base or changing how certain costs are recovered from consumers or eliminating certain programs.
  - Over the longer term, changes to the electricity supply mix and achieving efficiencies in the electricity market could yield system savings.

- Pursuing the initiatives would require legislative and/or regulatory amendments and working with the electricity sector agencies, LDCs and other stakeholders to implement the initiatives.

# Appendix

A. Rural or Remote Rate Protection (RRRP) – Overview and Enhancements
B. Fund Conservation Programs Through the Tax-Base
C. Eliminate the Industrial Conservation Initiative (ICI)
D. Cancel Large Renewable Procurement I (LRP I)

# A. RRRP Overview and Enhancements

- The Delivery line of the electricity bill is composed of Distribution and Transmission Costs. While transmission costs are uniform across the province, LDC costs vary by distributor and account for about 20% of the total bill for the electricity customers.
  - See slide X for a map of delivery rate increases between 2006 and 2016.
- The Rural or Remote Rate Protection (RRRP) framework was put in place in 2001 to help offset the higher costs to distribute electricity to Ontario residents who live in rural or remote locations.
- RRRP is available to: residential Hydro One R2 customers (~350,000 customers), Algoma Power customers (~11,600 customers); H1 remote customers (~3,500 customers).
  - To date, R2 customers receive a fixed amount of $125 million a year distributed amongst the customers. Algoma and Remote customers have RRRP calculated by the OEB each year that fluctuates based on average provincial distribution increases.
- Because the amount had been fixed for over a decade, the Province recently increased funding of the RRRP program for Hydro One R2 customers from $125 million to $240 million. This will be effective as of January 1, 2017, and will bring their delivery charges in line with the next highest charges from Hydro One's R1 customer class.

# B. Fund Conservation Programs Through the Tax-Base

- Propose to fund 2017-2020 electricity conservation and demand management program costs* using tax dollars instead of ratepayer dollars.
  - Funds received through the Hydro One Departure Tax could potentially be repurposed towards this.
- Total remaining 2017-2020 electricity conservation program costs are expected to be ~$2.1 billion.
- Post 2020, this option could evolve to funding conservation programs through the Greenhouse Gas Reduction Account.

**Considerations**

- Electricity conservation programs provide a number of benefits to society, however, Ontario's ratepayers have been covering these costs:
  - Avoiding/deferring future energy infrastructure investments, reducing disruption in communities (e.g., avoiding the need to build new natural gas generation);
  - Environmental benefits (e.g., reduced natural gas peaking generation and GHG emissions); and
  - Social and economic benefits (e.g., job creation and assistance managing electricity bills).
- There is precedence for using tax dollars to fund conservation programs.
  - Between 2007 and 2011, Ontario funded the Home Energy Savings retrofit program using tax dollars.
- Funding conservation programs though the tax-base is expected to result in a benefit of $3.40/month for residential electricity consumers in 2017. This could provide immediate short term relief to consumers while other rate mitigation initiatives are developed (e.g., market renewal, LDC efficiencies).

*** Note:** This includes costs towards the Conservation First Framework, Industrial Accelerator Program, Demand Response and the Conservation Fund)

# C. Eliminate the Industrial Conservation Initiative (ICI)

- The cost shift from the Industrial Conservation Initiative (ICI) could be removed from electricity bills by eliminating ICI.
  - The ICI allows large electricity consumers to lower their electricity costs by reducing their demand during peak hours.

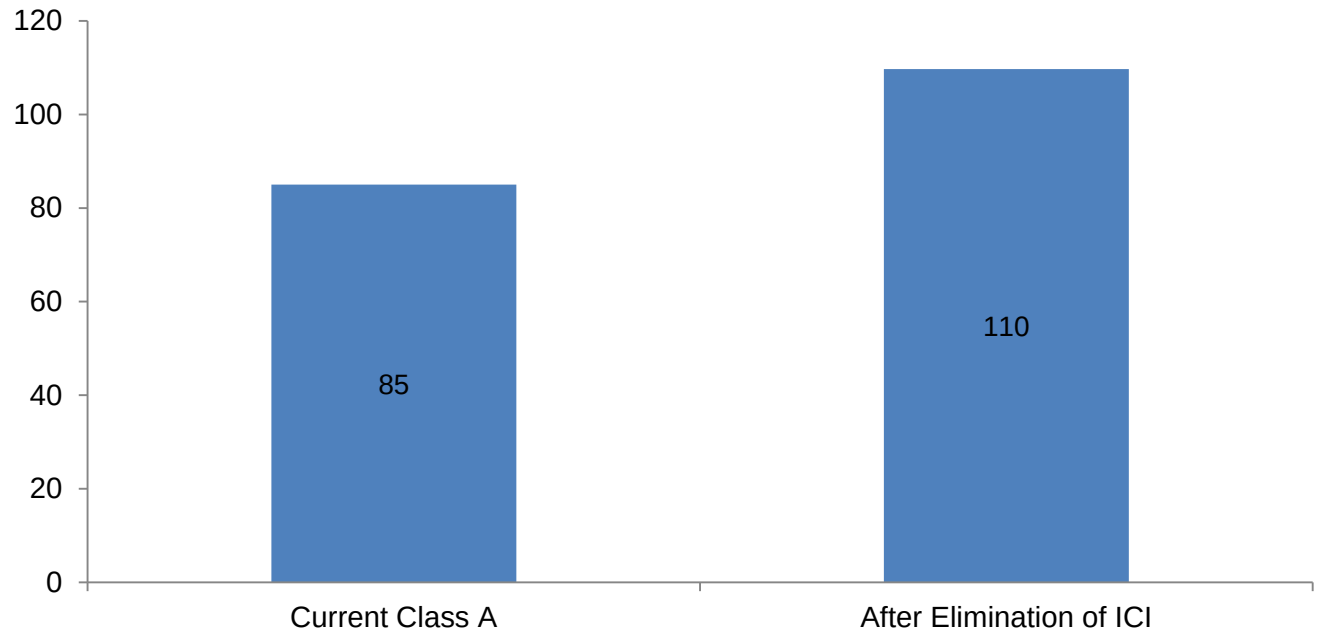
**Considerations**

- Eliminating ICI would result in a benefit of more than $4/month for residential electricity consumers in 2017.
  - However, unless government took action to mitigate the associated cost shift back to industrial consumers, typical industrial prices would increase by about one-third. Such a price increase would pose significant challenges for energy-intensive consumers.
- Industrial stakeholders have indicated that ICI as an integral factor in maintaining competitiveness and retaining industry in the province.
  - Eliminating ICI would limit the “cost shift” onto residential consumers, but it would also lead to a reduction in industrial demand. The large industrial contribution to the fixed costs of running the electricity system would then need to be covered by remaining consumers.
- If ICI is retained, current IESO projections indicate that the cost shift will decrease each year going forward as Global Adjustment (GA) decreases (due to an expected increase in HOEP).
- Alternatively, ICI could be funded through the tax-base at a cost of $900 million annually. There is precedent to use the tax-base for industrial support programs, including the Northern Industrial Electricity Rate Program (NIERP) and the Jobs and Prosperity Fund.

# C. Eliminate the Industrial Conservation Initiative (cont'd)

- ICI currently provides a benefit of about $25/MWh to Class A electricity consumers.

**All-In Electricity Price**
*in $/MWh*



**Note**: Based on year-to-date (YTD) September 2016 prices. Class A reflects a transmission-connected consumer.

# D. Cancel/Adjust Renewable Energy Procurements

- The Ministry could consider the following actions to further mitigate future impacts to electricity bills:

| Unallocated/Terminated Capacity | Announced Procurements | Executed Contracts |
|---|---|---|
| A. Do not procure unallocated or terminated capacity | B. Revise FIT 5 target | D. Cancel LRP I contracts |
| | C. Cancel FIT 6 | |

**Overarching Considerations**

- Cost savings associated with reducing or cancelling renewable energy procurements and programs will not reduce current electricity bills, but would result in future cost reductions relative to Ontario Planning Outlook forecasts.
- The IESO estimates implementing options A to C will reduce system costs by approximately $592 million ($2016) between 2019 and 2028, resulting in an average of approximately $0.50/month in savings to a typical residential electricity bill over the same period.
- The microFIT program is winding down end of 2017. Annual microFIT procurement targets have been undersubscribed.
- With a few exceptions (e.g. rollover of unallocated microFIT capacity; addition of terminated microFIT and small FIT capacity to FIT 5), plans for unallocated or terminated capacity are not defined in announcements or existing directions.

*Cancel/Adjust Announced Procurements:*

- Amendments to existing directions to IESO would be required to reduce FIT 5 and cancel FIT 6.
- The FIT 5 procurement is underway with a base target of 150 MW and inclusion of any capacity available from contract terminations under prior small FIT and microFIT procurements. The application window closed on November 25, 2016.

# D. Cancel/Adjust Renewable Energy Procurements – Existing Contracts

*Cancel Existing LRP I Contracts:*

- 16 LRP I contracts (approx. 455 MW) have been executed and projects are under development.
- None have met Key Development Milestones. Total value of LRP I estimated at approx. $1 billion (NPV to 2016).

**Considerations**

- To help inform a decision, IESO or OEB could be asked to evaluate and provide guidance to the Ministry on the system need for LRP I projects and potential ratepayer impacts/benefits.
- 13 of 16 LRP I contracts have Indigenous participation. Cancelling LRP I contracts would remove this economic development opportunity and likely damage relationships between Indigenous communities and the government.
- LRP I Contract includes an “Optional Termination” provision allowing IESO to terminate any contract prior to the “Commercial Operation Date” with 6 months written notice.
- The IESO obligations under the Optional Termination provision depend on whether the project has met all “Key Development Milestones”.
  - As no projects have met their Key Development Milestones, the estimated total cost payable to contract holders is about $8 million.

# D. Cancel/Adjust Renewable Energy Procurements – Existing Contracts (cont'd)

**Legal Analysis**

- Any new directive to cancel LRP I contracts would need to be approved by Cabinet, either as part of an LTEP implementation directive to IESO, or pursuant to the overall power to direct IESO with respect to procurements.
  - An amendment to an existing direction would not require Cabinet approval, however, further analysis is required to determine if direction to cancel LRP I contracts could be considered as amending existing direction.
- ENERGY has previously received advice that there is a high risk that a court would conclude that the Minister has no authority under the *Electricity Act , 1998* to issue a direction requiring IESO to terminate microFIT Conditional Offers and FIT Offer Notices that have already been issued to applicants, because these offers create vested contractual rights. This reasoning would likely apply equally to any direction to IESO to cancel LRP I contracts. Previous advice has also flagged a risk that the Province could be liable for damages in tort for inducing a breach of contract (or other claims).
- The risk and costs associated with potential law suits resulting from the cancellation of contracts requires further analysis. LSB recommends ENERGY seek an opinion from Crown Law Office Civil before proceeding.

Hi Shajee,

I have a more urgent request.....could you review these versus the next email I will send?

Gavin is working on the GA financing piece so if you could take a look at this, that'd be great.

Thanks,

John.

Hi Directors,

FYI - In case you don't have it, please attached the note that was shared with DMO back in December. In addition, I have attached the "Proposed Initiatives to Transform Ontario's Electricity Sector" deck with edits from your Branch last month.

Regards,
Gavin He

Subject: Fwd: Rate Mitigation

Hi,

There's a meeting on Monday on Energy's rate mitigation decks.

Would you be able to review over the weekend -- perhaps updating the materials from December, as applicable -- so comments can get to the DMO Sunday night?

Apologies on the timing.

Thanks,
Ron

# Comments on Ministry of Energy's Draft "Proposed Initiatives to Transform Ontario's Electricity Sector"

The Ministry of Energy (Energy) is providing an update on progress related to transforming the province's electricity sector by elaborating on potential price mitigation initiatives, as outlined in its deck.

## CONTEXT

- As outlined in Energy's update, electricity costs have been increasing following investments to transform towards cleaner generation (i.e., meeting goals to decarbonize) and modernize the electricity infrastructure (e.g., more than $35 billion in cleaner generation and $15.5 billion investment by Hydro One alone in transmission and distribution systems).

- The government has taken action to lower electricity cost pressures to all consumers by taking actions, including deferring investments in generation (e.g., new build nuclear), improving market efficiency and decreasing costs related to renewable procurement (e.g. GEIA renegotiation, decreasing FIT prices, etc).

- The government introduced the Ontario Rebate for Electricity Consumers (OREC) which will provide a rebate equal to the 8% provincial portion of the Harmonized Sales Tax, saving $11 per month starting January 1, 2017 for eligible small businesses, farms and residential consumers and has taken steps to expand the Rural or Remote Electricity Rate Protection program, expected to save eligible RRRP customers about $45 per month, when combined with OREC.

## COMMENTS

Energy's proposals generally involve shifting costs from the rate base to the tax base. While the subset of costed proposals may have a fairly limited residential rate payer impact (e.g. about $5-6/month for residential, less than 5% of the average monthly bill), those proposals would come at a material incremental fiscal cost ($1 billion to $1.3 billion). Note these impacts are lower than those presented in an earlier deck ($1.3 billion to $1.9 billion). Energy also presents other proposals where costs and impacts are "TBD".

Over the past five years, the existing fiscally funded electricity price mitigation efforts have averaged about $1.5 billion and is already expected to increase to about $2 billion with the introduction of OREC. The existing program costs are summarized in the table below:

| ($M) | 2011-12 | 2012-13 | 2013-14 | 2014-15 | 2015-16 | 2016-17[1] | 2017-18[1] |
|---|---|---|---|---|---|---|---|
| OCEB | 1,033 | 994 | 1,006 | 1,078 | 860 | - | - |
| OREC | - | - | - | - | - | 300 | 1,100* |
| Ending DRC[2] | - | - | - | - | 85 | 330 | 330 |
| NIERP | 120 | 120 | 115 | 108 | 120 | 120 | 120 |
| NOEC | 23 | 24 | 25 | 24 | 26 | 25 | 25 |
| OEPTC[3] | 354 | 406 | 418 | 429 | 444 | 450 | 460 |
| TOTAL | 1,530 | 1,544 | 1,564 | 1,639 | 1,525 | 1,225 | 2,005 |

1. 2016-17, 2017-18 based on forecasted numbers
2. 2015-16 estimated for 3 months of reduced DRC revenue
3. OEPTC amounts in all years based on energy component of the rebate.

* Sourced from Energy PRRT submission

OCEB – Ontario Clean Energy Benefit
OREC – Ont. Rebate for Electricity Consumers
NIERP – Northern Industrial Electricity Rate program
NOEC – Northern Ontario Energy Credit
DRC – Debt etirement Charge
OEPTC – Ont. Energy & Property Tax Credit

**Energy's Broad Policy Themes / Rationales**

A key theme / rationale cited by Energy is to no longer use rate-base to pay for "social programs" by shifting cost of OESP, RRRP and proposed First Nation Rate to tax-base.

- Energy has typically in the past provided a constitutional law assessment on these programs, providing support for these programs to be ratepayer-supported programs as they provide electricity system benefits / are part of a comprehensive regulatory framework.
- Switching messaging may risk criticism and legal challenges on these and other remaining rate-base funded programs.

| Energy Theme / Rationale | Key Staff Comments |
|---|---|
| Provide greater support for lower income Ontarians by enhancing the OESP or expanding eligibility | • Significant fiscal exposure -- $0.4-0.45 bn at current levels, higher if enhanced. On-bill benefits.<br>• Could contemplate phase-in to manage fiscal impact.<br>• Could look at phasing out existing fiscal-funded programs also targeted to low income or identified groups (e.g., OEPTC, NOEC).<br>o Not on the bill, so less direct and visible electricity cost mitigation.<br>o Phase-out to reflect time to increase application based OESP reaching an increasing portion of eligible households. |
| Fund conservation programs through the tax-base for the remaining term of the existing CDM framework and transition costs to the new "green bank entity" over time | • Potentially significant fiscal impact – current program costs are about $0.45 bn<br>• Conservation programs do provide an electricity system benefits, but would now be fiscally-funded, so a cross-subsidisation from tax-base<br>• Accessing the cap&trade amount in the GGRA would crowd-out other GGRA programs, affecting overall GHG reductions and negatively affect the diccal plan |
| Expand the scope of the "Trillium Trust" to make investments in energy infrastructure eligible for funding | • Would require either squeezing out existing Moving Ontario Forward project funding from the Trillium Trust, requiring funding from another source; or additional funding from asset optimization, given that the government is committed to using the targeted $5.7 billion to fund across Moving Ontario Forward projects<br>• Would have little near-term impact, unless TT funding displaces near-term, non-incremental projects coming onto service<br>• Could lower utility value, including Hydro One, by removing projects, currently and prospectively, that they might have been able to add to their ratebase and earn a return |
| **E**nd the Debt Retirement Charge (DRC) early for commercial and small industrial Class B electricity consumers | • End of the DRC had previously been linked with a balance between rate mitigation and managing stranded debt<br>• Provides only temporary incremental mitigation, as DRC legislated to end April 1, 2018.<br>• End of the DRC had previously been linked to retirement of residual stranded debt<br>• Removing additional DRC revenue from the OEFC would call into question the position that the debt and liabilities of the old Ontario Hydro can continue to be supported |

**Detail on Proposals**

Energy has outlined the following rate mitigation proposals with significant bearing on the fiscal plan:

<u>OESP & RRRP (Total of about $0.4 to 0.45 Billion/year</u>):

This would shift the cost of the current and proposed expanded Ontario Electricity Support Program (OESP), and the Rural or Remote Electricity Rate Program (RRRP), to the tax base. *Note: that the fiscal exposure would increase if the OESP take up rate is larger, and faster than assumed.*

- The fiscal impact from shifting OESP and RRRP to the tax base may also be larger if future changes are made to the programs. Energy notes that
  - The programs could provide greater support for lower income Ontarians by enhancing the OESP or expanding eligibility (e.g., by 50% in the table).
  - The RRRP regulation provides a funding mechanism for transmission infrastructure required to grid connect remote First Nation communities. Considerations for how that funding will be supported by the tax base will need to be determined. [The current deck links Trillium Trust for remote electrification.]

<u>Fund Conservation Programs through the Tax-Base</u>:

This would be for the remaining term of the existing Conservation and Demand Management framework. Over time, the costs would be transitioned to the new "green bank entity", to shift cost recovery from ratepayers to cap and trade revenues.

- Energy's rationale for the cost shift would be in recognition of the burden borne by ratepayers in phasing out coal generation.

<u>Expanding the scope of the Trillium Trust to invest in energy infrastructure:</u>

The Province is currently targeting $5.7 billion from asset optimization to dedicate to the Trillium Trust for investment in infrastructure under Moving Ontario Forward.

- Expanding access to natural gas is already included under Moving Ontario Forward.
- Using the Trillium Trust for additional energy projects would require either
  - squeeze out existing Moving Ontario Forward project funding from the Trillium Trust, requiring funding from another source, or
  - additional funding from asset optimization, given that the government is committed to using the targeted $5.7 billion to fund across Moving Ontario Forward projects,
  - in effect, in both cases above, incremental investments for energy infrastructure from the Trillium Trust would have negative fiscal impacts once the assets are in-service and amortized.
- Investments through the Trillium Trust instead of through other electricity sector entities (Hydro One, OPG, LDCs) could have additional negative fiscal impacts as these entities could see reduced ratebase growth, lowering the revenues that the Province realizes from these entities (e.g., consolidated net income, payments-in-lieu of taxes, etc.).
  - May also negatively impact Hydro One share price if the measure is perceived by the market as reducing Hydro One's potential ratebase growth.
- Unless applied to existing projects, to displace ratepayer-supported costs, this measure would have little or no near-term rate impact.

Departure Tax:

As a result of the IPO, Hydro One paid a "departure tax" payment in lieu of tax (PIL) of $2.6 billion, as a final true-up of its PILs tax obligation. Energy lists using some or all of this departure tax for price mitigation.

- This was paid to the Ontario Electricity Financial Corporation (OEFC). The departure tax payment was fiscally neutral to the Province as the income to the OEFC was fully offset by a reduction in ESDI resulting from reduced net income of Hydro One.
- Using some or all of it for price mitigation would require restating the net stranded debt paydown by OEFC related to the IPO. [As the departure tax paid was fiscally neutral, OEFC's uplift was primarily the result of the related deferred tax benefit, as well as the s.50.3 benefit under the *Electricity Act, 1998*.]
- This would be a one-time measure, potentially spread out over a few years, and fiscal impact, as the departure tax amount was one-time.

Debt Retirement Charge (Total of about $0.45 Billion in annualized rate to 2017-18):
Ending the DRC early for Class B customers (commercial, small industrial) would have an impact of about $0.45 billion in 2017-18.

- The end of the DRC had previously been linked with balancing mitigation and progress on stranded debt reductionthe end retirement of the residual stranded debt.
- Removing additional DRC revenue from the OEFC would call into question the position that the debt and liabilities of the old Ontario Hydro can continue to be supported.

| ($M) | 2016-17[1] | 2017-18[1] | 2018-19[1] | 2019-20[1] | 2020-21[1] |
|---|---|---|---|---|---|
| OESP, RRRP, First Nation rate | | 398 | 419 | 433 | 447 |
| Conservation Programs through Tax Base | 110 | 450 | 450 | 450 | 450 |
| [Trillium Trust] | TBD | TBD | TBD | TBD | TBD |
| Departure Tax | | TBD | TBD | TBD | TBD |
| DRC removal for Class B | 110 | 450 | | | |
| **Proposed Program Total:** | **220** | **1,298** | **869** | **883** | **897** |
| | | | | | |
| OREC | 300 | 1,100* | 1,100* | 1,200* | 1,200* |
| Ending DRC | 330 | 330 | -- | -- | -- |
| NIERP | 120 | 120 | 120 | 120 | 120 |
| NOEC | 25 | 25 | 25 | 25 | 25 |
| OEPTC[2] | 450 | 460 | 470 | 481 | 481 |
| **Existing Program Total:[3]** | **1,225** | **2,005** | **1,715** | **1,826** | **1,826** |
| **TOTAL[3]** | **1,445** | **3,303** | **2,584** | **2,709** | **2,723** |

1. Based on forecasted numbers
2. OEPTC amounts in all years based on energy component of the rebate.

* Sourced from Energy PRRT submission

3. Total would be significantly larger with the TBDs crystalized.

MINISTRY OF
ENERGY

# Proposed Initiatives to Transform Ontario's Electricity Sector – Update

## Working Draft

December 2016

CONFIDENTIAL DRAFT

# Context

- Electricity costs are increasing as the necessary investments are made to decarbonize and modernize the province's electricity infrastructure (i.e., $35 billion+ investment in cleaner generation and $15.5 billion investment in Hydro One transmission and distribution systems).

- Ontario has taken a number of actions to lower electricity cost for all consumers by:
  - Deferring investments in generation (e.g., new build nuclear), improving market efficiency (e.g., wind dispatch) and decreasing the cost of renewable procurements (e.g., GEIA renegotiation, decreasing FIT prices).
  - Increasing cost effectiveness and improving efficiency by adopting new electricity market approaches (e.g., competitive LRP, no new NUG contracting).

- Following the 2016 Throne Speech, actions were announced to further reduce electricity costs by:
  - Providing an 8%  per cent rebate ($11/month savings), updating RRRP ($45/month savings, combined with the 8% rebate), expanding ICI (up to one-third savings for participants), suspending the LRP II and the EFWSOP (up to $3.8 billion in cost savings) and recycling proceeds to industrial/ commercial consumers.

- On November 28, 2016, the Minister of Energy announced the need for changes in how electricity resources are procured,  the need for wholesale market renewal and greater electricity consumer choice.

- The Ministry of Energy is currently updating its Long-Term Energy Plan (LTEP),  which provides an opportunity to consider a range of policy changes to  how the Ontario energy sector operates.

# Broad Policy Themes / Rationale

- No longer use rate-base to pay for social programs [despite the system benefit rationale] by shifting cost of OESP, RRRP and proposed First Nation Rate to tax-base.
- Provide greater support for lower income Ontarians by enhancing the OESP or expanding eligibility.
- Fund conservation programs through the tax-base for the remaining term of the existing CDM framework and transition costs to the new "green bank entity" over time. Costs would be shifted in recognition of the burden borne by ratepayers in phasing out coal generation.
- Expand the scope of the "Trillium Trust" beyond the Moving Ontario Forward initiative to make certain investments in energy infrastructure eligible for funding, such as remote electrification, large transmission projects, new or expanded interties ~~and expansion of natural gas to rural areas~~, etc. (note that expanding access to natural gas is already included under Moving Ontario Forward.)
- Empower energy agencies to increase cost effectiveness and improve efficiency by having – IESO modernize Ontario's electricity market through electricity market renewal initiatives, the OEB identify opportunities for future LDC cost reductions/efficiencies and work with OPG to find further efficiencies in operations and pass on savings to ratepayers.
- Give consumers more choice by allowing households to "opt into" a single rate plan as an interim measure as the Ontario Energy Board (OEB) develops more pricing options over time.
- Help small business manage their electricity costs and provide relief for cap and trade until proceeds recycling is fully operational by ending the Debt Retirement Charge (DRC) early for commercial and small industrial Class B electricity consumers.

# Proposed Initiatives – Potential Savings for Typical Residential Electricity Consumers

| *$/750kWh* | 2017 | 2018 | 2019 | 2020 | 2021 | 2022 | Timing of Benefit |
|---|---|---|---|---|---|---|---|
| **Recommended Initiatives** | | | | | | | |
| 1. No Longer Fund Social Programs Through the Rate-Base (i.e., OESP, RRRP, First Nations rate) | 2.16 | 2.31 | 2.41 | 2.49 | 2.54 | 2.58 | Immediate |
| 2. Expand the OESP (i.e., 50% increase) | - | - | - | - | - | - | n/a |
| 3. Fund Conservation Programs Through The Tax-Base | 3.40 | 3.68 | 2.98 | 3.09 | 2.58 | 2.58 | Immediate |
| 4. Expand the Scope of Trillium Trust to Make Investments in Energy Infrastructure (e.g., Transmission upgrade, etc) | TBD | TBD | TBD | TBD | TBD | TBD | TBD |
| 5. Empower Energy Agencies to Increase Cost Effectiveness and Improve efficiency* | | | | | | | |
| a. IESO – Market Renewal | - | - | - | - | 1.00 | 1.03 | Long-Term |
| b. OEB – LDC efficiencies | TBD | TBD | TBD | TBD | TBD | TBD | Medium-Term |
| c. OPG – Operational efficiencies | TBD | TBD | TBD | TBD | TBD | TBD | Medium-Term |
| 6. Give Residential Consumers More Rate Choices | - | - | - | - | - | - | n/a |
| 7. Help Small Business Manage Their Electricity Costs (i.e., End DRC early for Class B electricity consumers)** | - | - | - | - | - | - | n/a |
| 8. Cancel / Adjust FIT | - | - | 0.13 | 0.13 | 0.14 | 0.14 | Long-Term |
| 9. Dedicate Departure Tax | TBD | TBD | TBD | TBD | TBD | TBD | Immediate |
| **Considered but not Recommended** | | | | | | | |
| 1. Eliminate the Industrial Conservation Initiative (ICI) | 4.40 | 4.24 | 4.10 | 4.24 | 3.73 | 3.58 | Immediate |
| 2. Cancel LRP I | - | - | TBD | TBD | TBD | TBD | Medium-Term |

**Note:** The above initiatives will provide similar benefits for non-RPP Class B electricity consumers. Proposal 1 assumes OESP participation of 50% and 5-year maturity. *Assessing the range of ratepayer impacts will be done through the LTEP development and implementation process in conjunction with the OEB. **Class B includes small-medium enterprises (SMEs).

# Proposed Initiatives – Potential Savings for Average Industrial Electricity Consumers

| *$/MWh* | 2017 | 2018 | 2019 | 2020 | 2021 | 2022 | Timing of Benefit |
|---|---|---|---|---|---|---|---|
| **Recommended Initiatives** | | | | | | | |

| 2. Cancel LRP I | - | - | - | - | - |

**Source:** Ministry of Finance, Energy

# Considerations / Outcomes

- The proposed initiatives provide the following opportunities to:
  - Lower the cost of electricity for all consumers;
  - Re-set how electricity programs and energy infrastructure is funded (i.e., shifting costs to the tax-base from rate-base);
  - Provide electricity consumers with greater choices (i.e., signal rate plan);
  - Provide system benefits (e.g., market renewal); and
  - Increase cost effectiveness and improve efficiency.

- The timing of the impact of these rate mitigation initiatives varies.
  - Immediate and near-term impacts can be achieved by shifting costs to the tax-base or changing how certain costs are recovered from consumers or eliminating certain programs.
  - Over the longer term, changes to the electricity supply mix and achieving efficiencies in the electricity market could yield system savings.

- Pursuing the initiatives would require regulatory amendments and working with the electricity sector agencies, LDCs and other stakeholders to implement the initiatives.

> Subject: Rate Mitigation - Draft MP Deck
>
> Hi,

Attached is the rate mitigation deck for tomorrow's MP meeting.  I'll send you the pw in a separate email.

Serge

Ontario

MINISTRY OF
ENERGY

# Rate Mitigation Plan Options

## Working Draft

January 2017

CONFIDENTIAL DRAFT

# Context

- Electricity costs are increasing as the necessary investments are made to decarbonize and modernize the province's electricity infrastructure (i.e., $35 billion+ investment in cleaner generation and $15.5 billion investment in Hydro One transmission and distribution systems).

- Ontario has taken a number of actions to lower electricity costs for all consumers by:
  - Deferring investments in generation (e.g., new build nuclear), improving market efficiency (e.g., wind dispatch) and decreasing the cost of renewable procurements (e.g., GEIA renegotiation, decreasing FIT prices).
  - Increasing cost effectiveness and improving efficiency by adopting new electricity market approaches (e.g., competitive LRP, no new NUG contracting).

- Following the 2016 Throne Speech, actions were announced to further reduce electricity costs by:
  - Providing an 8% rebate ($11/month savings), updating RRRP ($45/month savings), expanding ICI (up to one-third savings for participants) and suspending the LRP II and the EFWSOP (up to $3.8 billion in cost savings).

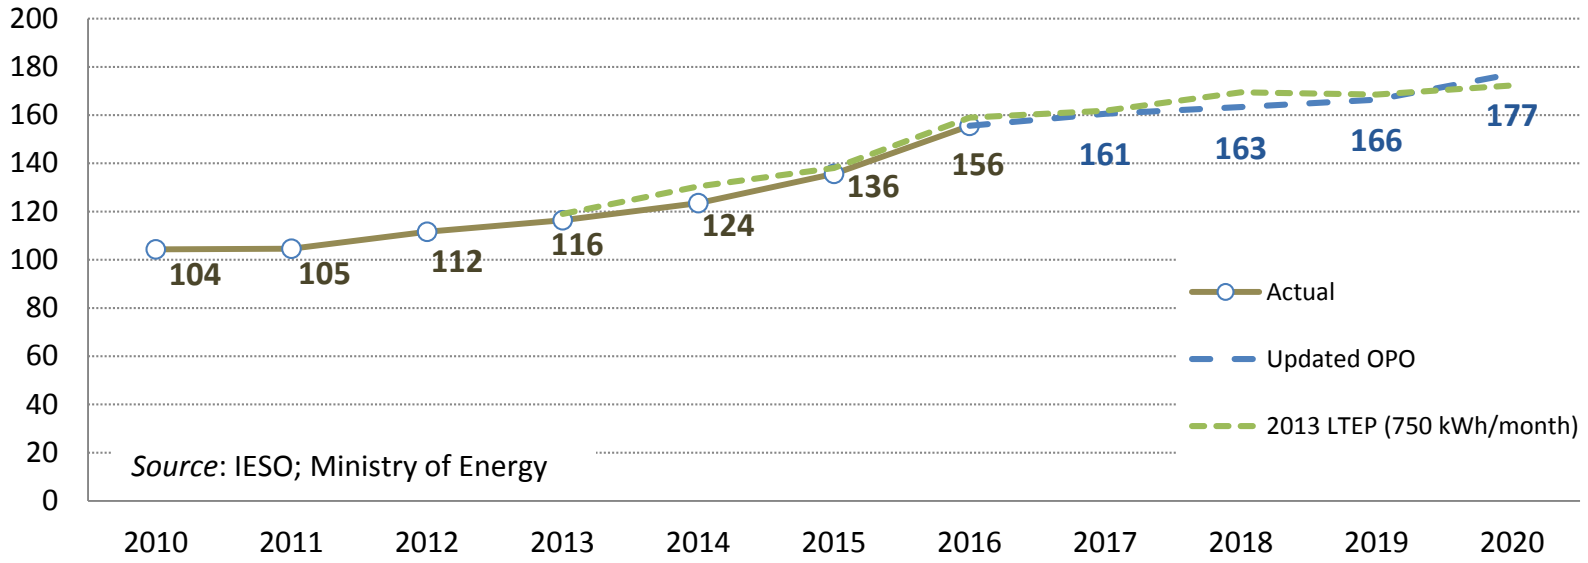
- On November 28, 2016, the Minister of Energy announced the need for changes in how electricity resources are procured, the need for wholesale market renewal and greater electricity consumer choice.

- The Ministry of Energy is currently updating its Long-Term Energy Plan (LTEP), which provides an opportunity to consider a range of policy changes to how the Ontario energy sector operates.

# Context – Residential Electricity Prices

- Residential consumers electricity prices continue to be a concern for many Ontarians, particularly those that rely on electric heat.
  - **Note:** The typical residential bill is currently below the 2013 Long-Term Energy Plan (2013 LTEP) forecast.

**Typical Residential Electricity Bills**
*Historical and Forecast in $/month*

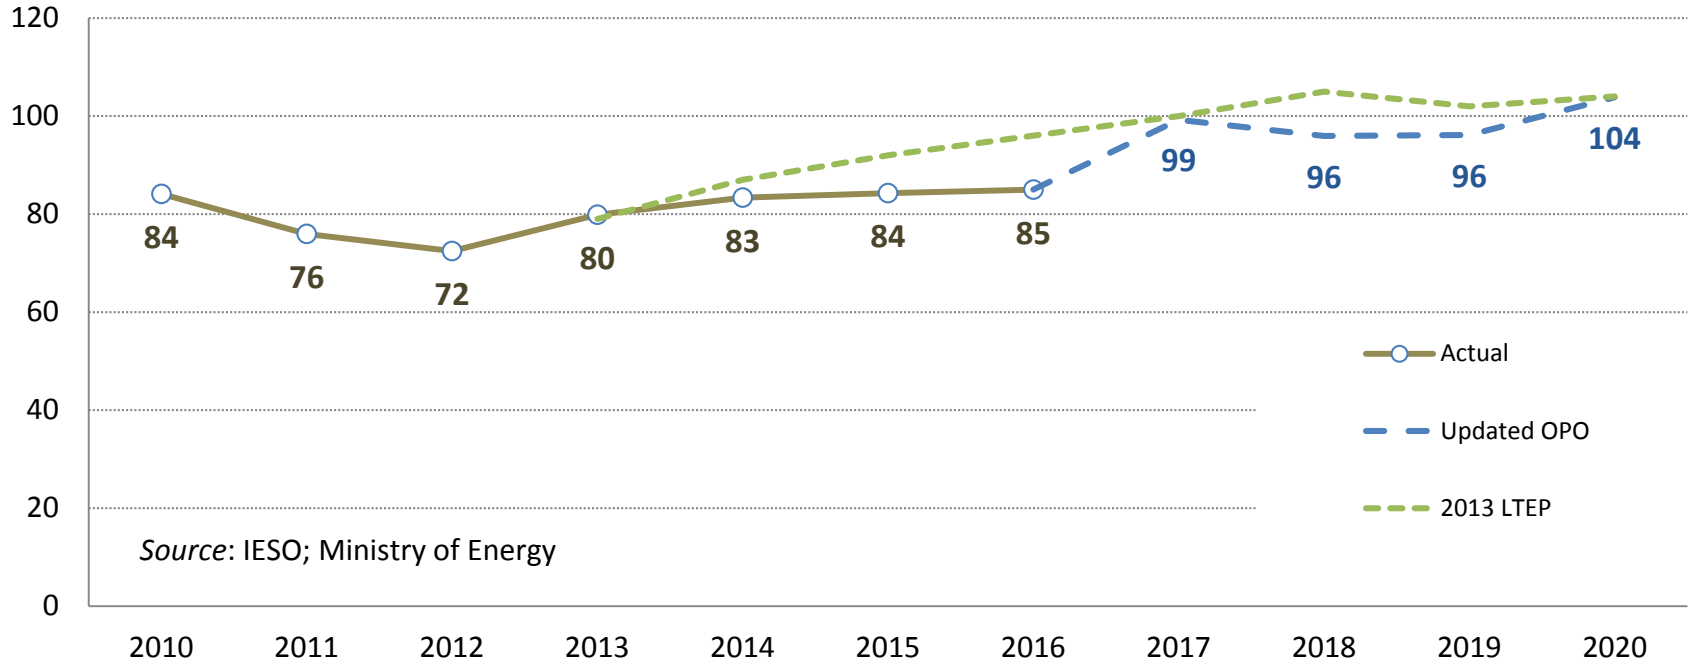


**Note**: The 2013 LTEP forecast for residential bills was based on 800 kWh/month without RRRP or electric heating; the above has been rebased to 750 kWh/month for comparison purposes. Typical residential are based on Toronto Hydro. The updated OPO forecast above includes the 8% rebate to offset the provincial portion of HST, ICI expansion and RRRP expansion.

# Context – Large Industrial Electricity Prices

- Industrial electricity prices continue to be a concern for many businesses.
  - **Note:** The typical industrial electricity price is currently below the 2013 LTEP forecast.

**Typical Class A Electricity Prices**
*Historical and Forecast in $/MWh*



**Note**: The 2013 LTEP forecast for industrial reflects a transmission connected Class A electricity consumer. The updated OPO forecast above includes ICI expansion and RRRP expansion.

# Broad Policy Themes / Rationale

- In recognition of the costs borne by ratepayers related to the to decarbonizing and modernizing the province's electricity sector:
  1. Provide significant and immediate rate relief through cost deferral of the global adjustment (GA).

  2. Provide a greater focus on vulnerable consumers by funding electricity support programs, such as the Ontario Electricity Support Program (OESP) and the Rural or Remote Electricity Rate Protection, (RRRP) through the tax-base. In addition, provide greater support for lower income Ontarians by enhancing the OESP, etc.

  3. Empower energy agencies to increase cost effectiveness and improve efficiency by having – Independent Electricity System Operator (IESO) modernize Ontario's electricity market through electricity market renewal initiatives, the Ontario Energy Board (OEB) identify opportunities for future LDC cost reductions/efficiencies and work with Ontario Power Generation (OPG) to find further efficiencies in operations and pass on savings to ratepayers.

  4. Enhance the existing 8% rebate that went into effect January 1, 2017.

# Proposed Initiatives – Potential Savings for Typical Residential Electricity Consumers

| *$/750kWh* | 2016 | 2017 | 2018 | 2019 | 2020 | 2021 | 2022 | Timing of Benefit |
|---|---|---|---|---|---|---|---|---|
| 1. Global Adjustment (GA) Financing (Moderate) | - | 17.49 | 15.01 | 12.49 | 14.91 | 6.32 | 4.03 | Immediate |
| 2. Fund Electricity Support Programs Through the Tax-Base | | | | | | | | |
| a. Rural or Remote Rate Protection (RRRP) | - | 1.58 | 1.62 | 1.66 | 1.70 | 1.75 | 1.79 | Immediate |
| b. Ontario Electricity Support Program (OESP)* | - | 0.83 | 0.83 | 0.83 | 0.83 | 0.83 | 0.83 | Immediate |
| c. Low-Income Conservation | - | - | - | - | - | - | - | |
| d. First Nations Rate | - | - | - | - | - | - | - | |
| 3. Empowering Energy Agencies To Increase Cost Effectiveness and Improve Efficiency | | | | | | | | |
| a. IESO – Market Renewal | - | - | - | - | - | 1.00 | 1.03 | Long-Term |
| b. OEB – LDC Efficiencies/Rates* | - | TBD | TBD | TBD | TBD | TBD | TBD | Medium-Term |
| c. OPG – Operational Efficiencies | - | 0.71 | 0.89 | 1.08 | 1.22 | 1.35 | 1.24 | Immediate |
| 4. Enhanced Tax-based RPP Rebate (5%) | - | 7.04 | 7.17 | 7.31 | 7.77 | 7.61 | 7.83 | Immediate |

***Note**: Savings based on currently approved OESP rate set by OEB.
**Note:** The above initiatives will provide similar benefits for non-RPP Class B electricity consumers. Class B includes small-medium enterprises (SMEs).

# Proposed Initiatives – Potential Savings for Average Industrial Electricity Consumers

| *$/MWh* | 2016 | 2017 | 2018 | 2019 | 2020 | 2021 | 2022 | Timing of Benefit |
|---|---|---|---|---|---|---|---|---|
| 1. Global Adjustment (GA) Financing (Moderate) | - | 14.49 | 12.43 | 10.33 | 12.35 | 5.23 | 3.33 | Immediate |
| 2. Fund Electricity Support Programs Through the Tax-Base | | | | | | | | |
| a. RRRP | - | 2.10 | 2.15 | 2.21 | 2.26 | 2.32 | 2.38 | Immediate |
| b. OESP* | - | 1.10 | 1.10 | 1.10 | 1.10 | 1.10 | 1.10 | Immediate |
| c. Low-Income Conservation | - | - | - | - | - | - | - | |
| d. First Nations Rate | - | - | - | - | - | - | - | |
| 3. Empowering Energy Agencies To Increase Cost Effectiveness and Improve Efficiency | | | | | | | | |
| a. IESO – Market Renewal | - | - | - | - | - | 1.34 | 1.38 | Long-Term |
| b. OEB – LDC Efficiencies / Rates* | - | TBD | TBD | TBD | TBD | TBD | TBD | Medium-Term |
| c. OPG – Operational Efficiencies | - | 0.59 | 0.74 | 0.89 | 1.01 | 1.12 | 1.03 | Immediate |
| 4. Enhanced Tax-based RPP Rebate (5%) | - | - | - | - | - | - | - | Immediate |

***Note:** Savings based on current OESP charge as set by OEB.

# Fiscal Impacts

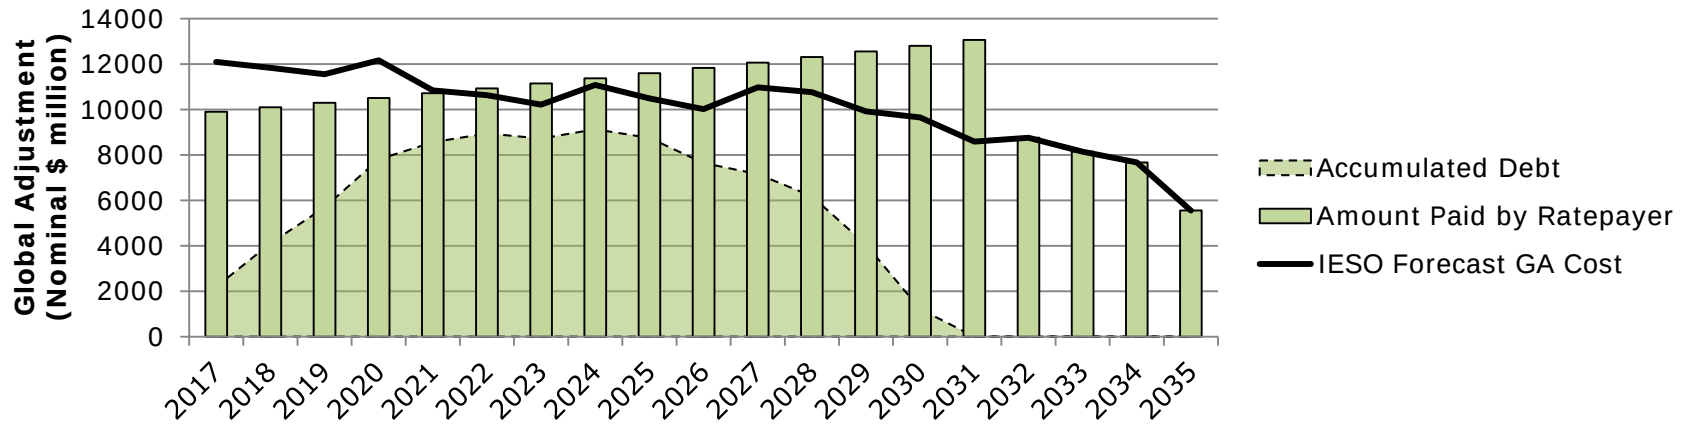
| *$M* | 2016-17 | 2017-18 | 2018-19 | 2019-20 | 2020-21 |
|---|---|---|---|---|---|
| 1. Global Adjustment (GA) Financing (Moderate) | TBC | TBC | TBC | TBC | TBC |
| 2. Fund Electricity Support Programs Through the Tax-Base* | | | | | |
| a. RRRP | - | $457 | $469 | $479 | $493 |
| b. OESP | - | 162 | 225 | 279 | 323 |
| c. Low-Income Conservation | - | 60 | 60 | 60 | 60 |
| d. First Nations Rate | - | 18 | 18 | 18 | 18 |
| 3. Empowering Energy Agencies To Increase Cost Effectiveness and Improve Efficiency | | | | | |
| a. IESO – Market Renewal | - | - | - | - | - |
| b. OEB – LDC Efficiencies / Rates | - | - | - | - | - |
| c. OPG – Operational Efficiencies** | - | - | - | - | - |
| 4. Enhanced Tax-based RPP Rebate (5%) | 169 | 699 | 679 | 732 | 724 |

***Note:** Includes costs of program expansion and various assumptions as detailed on relevant slides.
**** Note:** Risk to fiscal plan of up to $240 million annually (foregone net income) if OPG is unable to reach more aggressive operational efficiency targets.

**Source:** Ministry of Finance, Energy

# 1. Global Adjustment (GA) Financing

- It is proposed that the amount of global adjustment (GA) paid by ratepayers in each year over the forecast period is set at a fixed amount and money is borrowed to make up the remainder of the GA cost in each year.
- Starting on January 1, 2017, the amount of GA paid by ratepayers is set at a value lower than the true cost of GA in 2017 and is increased according to a pre-defined schedule until the debt has been paid off.
- GA costs will be "smoothed" over time by lowering costs in the short term and increasing costs in the long term.
- In some scenarios, the amount of GA paid by ratepayers *above* the expected actual cost of GA is capped so as to limit large increases in the cost of electricity in any given year.
- All analysis is based on forecasts from Independent Electricity System Operator (IESO), assumes a 5% annual borrowing interest rate and an inflation rate of 2% per year.



**Sample financing**: Ratepayers pay less than the cost of GA in early years, borrowing up to $9 billion that is fully paid off in 2031 by charging ratepayers more than the cost of GA in later years.

# 1. GA Financing – Options

1a. Moderate / GA Financing

- The amount of GA paid by ratepayers in 2017 is lowered by $3.2 and $3.4 billion below the true cost of GA and increases at 2% in each subsequent year until the total amount of money borrowed is paid off in 25 and 30 years respectively.
- Future GA over-payments above the true cost of GA are capped at $2 billion to limit electricity cost increases in any given year.

1b. Moderate / GA Financing with Delayed Increase

- The starting GA payment from all ratepayers in 2017 is lowered by $1.1 billion, ratepayer payments *decrease* in the short term to keep residential bills relatively flat, then increases at 3% each year – up to a maximum of $2 billion above the true cost of GA – until the borrowed money is paid back over a 25 and 30 year financing period respectively.

Low / GA Financing (see in Appendix)

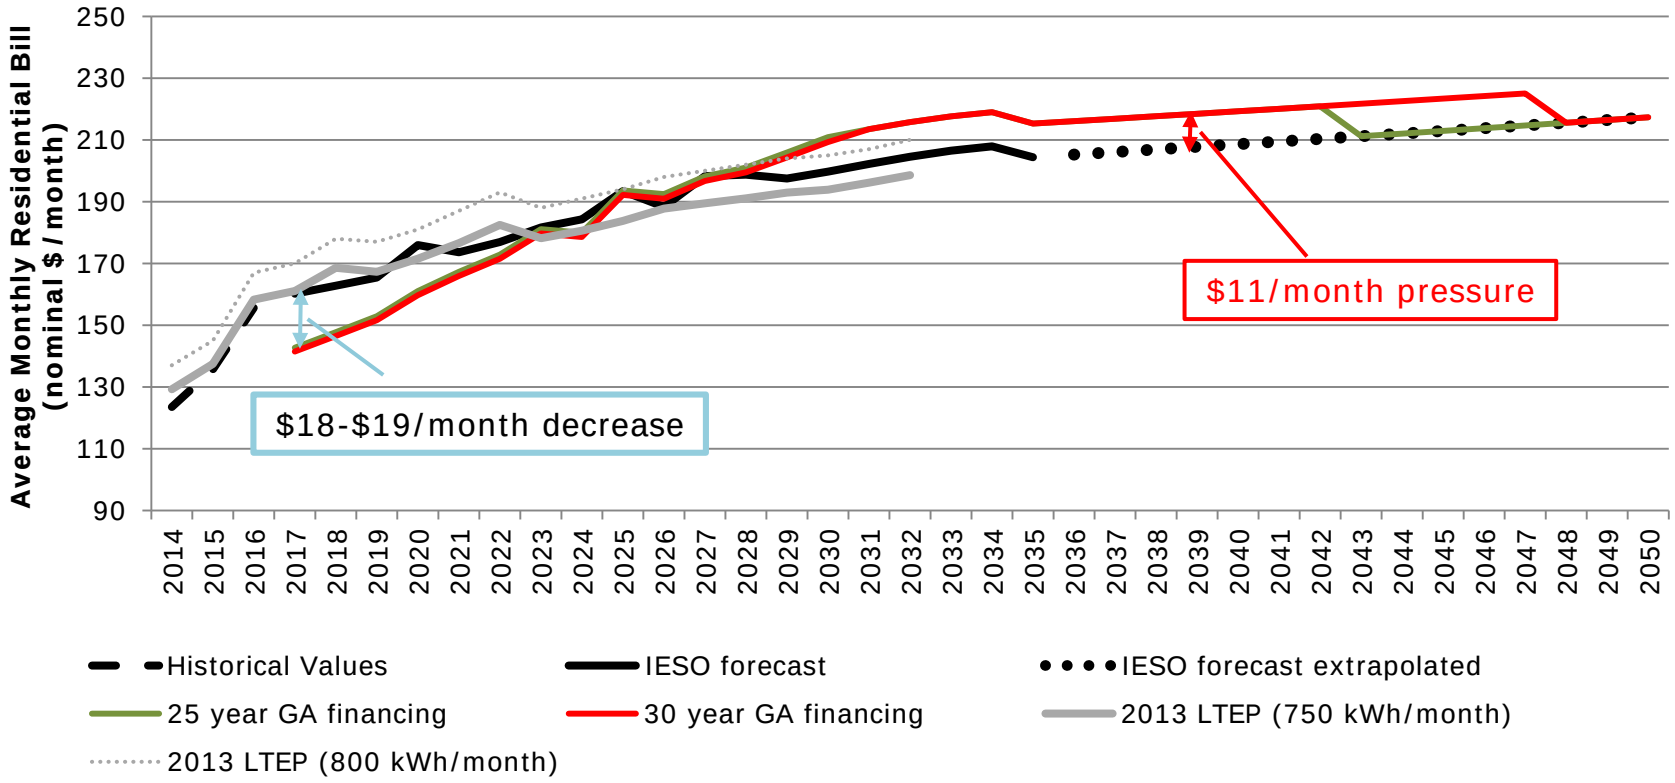
- The amount of GA paid by ratepayers in 2017 is lowered by $2.5 billion below the true cost of GA and increases in each subsequent year until the total amount of money borrowed is paid off.
- Future GA over-payments above the true cost of GA are capped at $2 billion to limit electricity cost increases in any given year.

High / GA Financing (see in Appendix)

- The amount of GA paid by ratepayers in 2017 is lowered by $4.4 and $5 billion below the true cost of GA and increases at 2% in each subsequent year until the total amount of money borrowed is paid off in 25 and 30 years respectively.
- No limit is placed on the amount charged to ratepayers above the true cost of GA.

# 1a. Moderate / GA Financing – Impact on Residential Electricity Bills

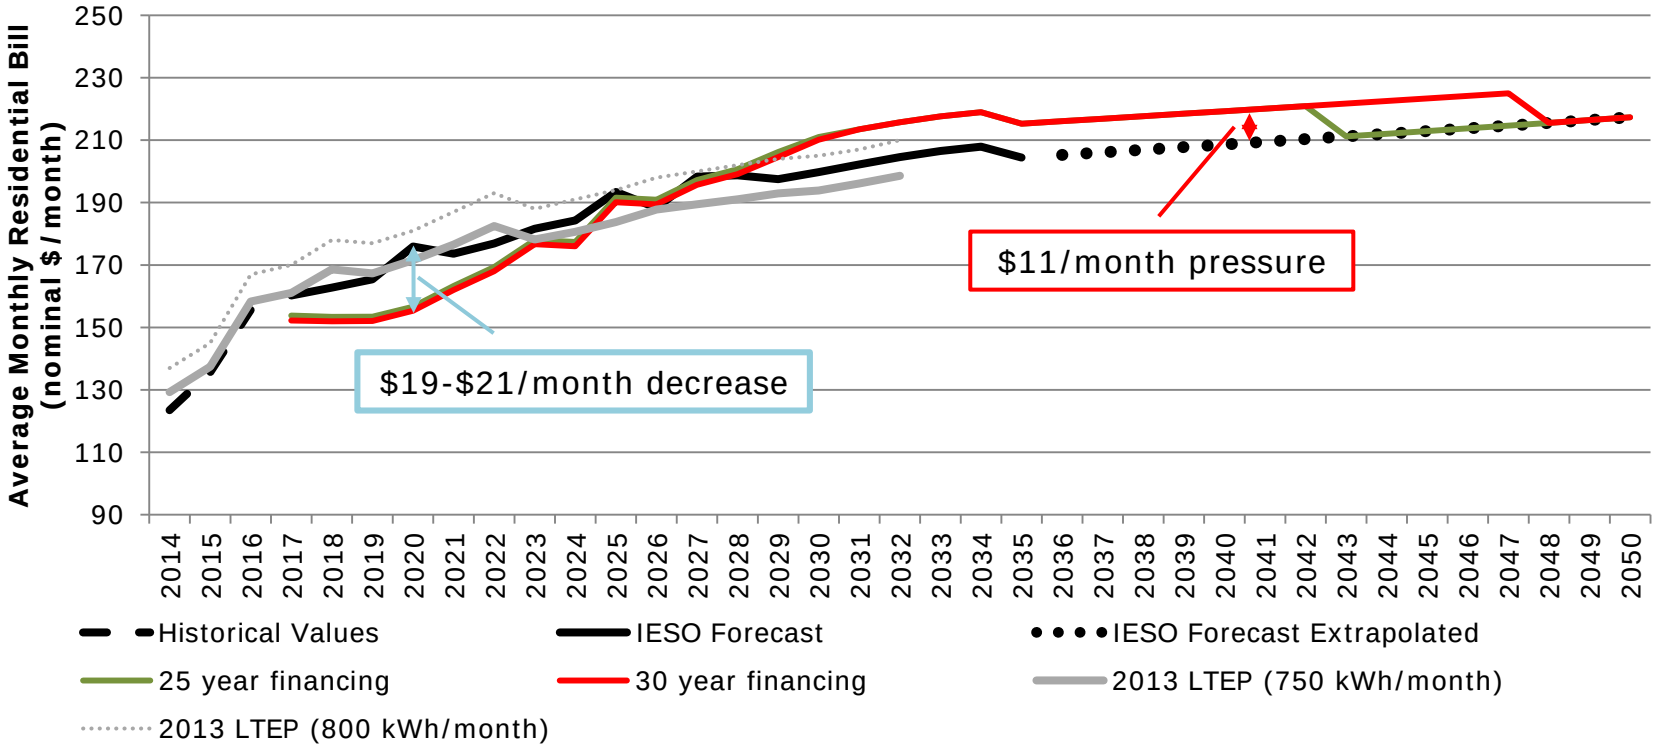
- In this scenario, the starting GA payment from all ratepayers in 2017 is lowered by $3.1 billion (green line) and $3.3 billion (red line) and increases at 2% each year – up to a cap of no more than $2 billion more than the true cost of GA in any year – until the borrowed money is paid back in 25 and 30 years respectively.



- By **borrowing up to $23 billion**, this scenario results in **a short-term residential electricity cost reduction of up to $17-$19/month** at the cost of **increased future electricity bills over 14-19 years of up to $11/month** above the true cost of electricity production.

# 1b. Moderate / GA Financing with Delayed Increase in Payments – Impact on Residential Electricity Bills

- In this option, the starting GA payment from all ratepayers in 2017 is lowered by $1.1 billion, ratepayer payments *decrease* in the short term to keep residential bills relatively flat, then increases at 3% each year – up to a maximum of $2 billion above the true cost of GA – until the borrowed money is paid back over a 25 and 30 year financing period respectively.

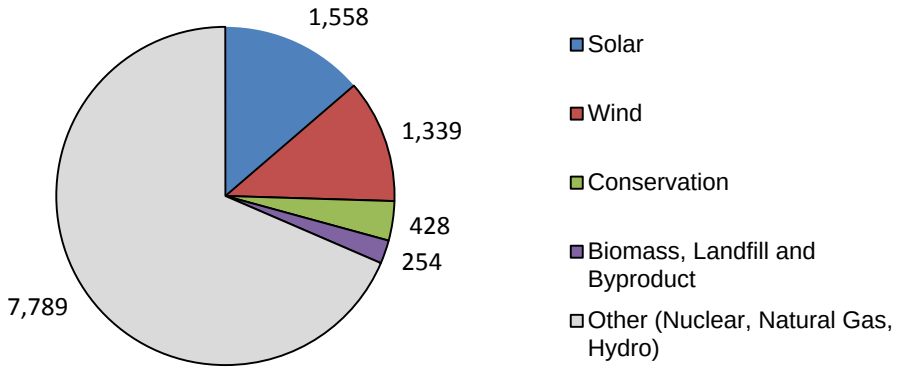


- By **borrowing up to $23 billion**, this scenario results in **a short-term residential electricity cost reduction of up to $19-$21/month** at the cost of **increased future electricity bills over 14-19 years of up to $11/month** above the true cost of electricity production.

# 1. GA Financing – Cost Breakout

- The allocation of GA costs for most of 2016 are as follows:

GA costs year-to-date November 2016 ($ million)



- This cost breakdown will evolve over time as 2,181 MW of contracted generation comes online in the coming years.
- The proportion of GA costs is compared with the proportion of generation in the table below:

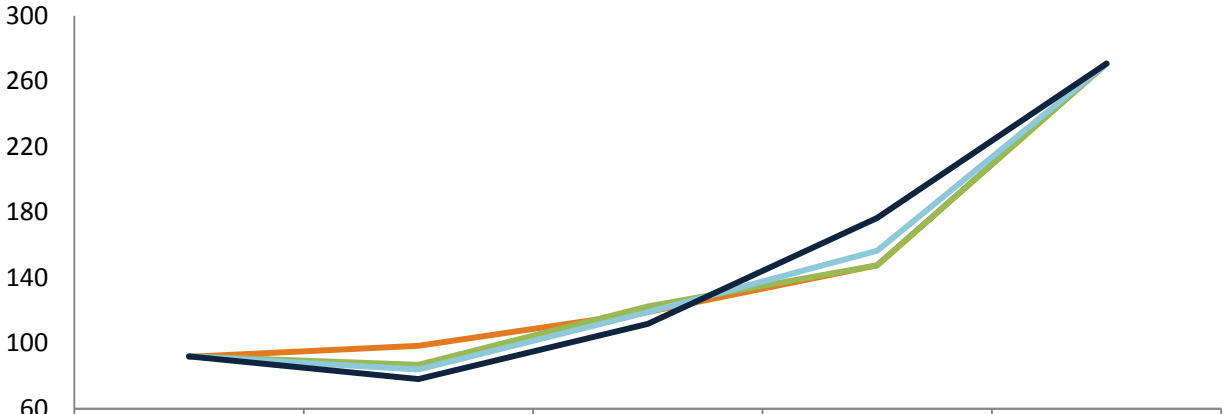
| | Fraction of GA Cost | Fraction of Generation* |
|---|---|---|
| **Solar** | 14% | 0.3% |
| **Wind** | 12% | 6.0% |
| **Biomass, Landfill and Byproduct** | 2% | 0.3% |
| **Conservation** | 4% | 0.0% |
| **Other (Nuclear, Natural Gas, Hydro)** | 69% | 93.4% |

***Note:** Only includes generation directly connected to the transmission system. Most solar generation, for example, is connected to the distribution system and is not represented in the generation column.

# 1. GA Financing – Impact of the Level of Financing on Large Industrial Electricity Consumers

- Below graph illustrates the estimated impact of the level of GA financing for an average Class A electricity consumer over a 25 year amortization period.

**Estimated All-In Electricity Price**
*for Average Class A in $/MWh*



| | 2016 | 2017 | 2027 | 2037 | 2047 |
|---|---|---|---|---|---|
| Status Quo | 92 | 98 | 119 | 148 | 271 |
| Low Financing | | 87 | 122 | 148 | 271 |
| Moderate Financing | - | 84 | 119 | 157 | 271 |
| High Financing | | 78 | 112 | 177 | 271 |

**Note:** Assumes that demand by industrial sector continues at average 2011-2015 levels. Please see the Appendix or more information on the estimated impact on large industrial electricity consumers.

# 1. GA Financing – Considerations

**Considerations**

*Ratepayer:*

- Borrowing money to finance the GA, while lowering costs in the short term, results in a more rapid rise in electricity prices beyond the rate of increase already expected.

- The GA financing proposal involves borrowing large amounts of money over a long period of time (16-30 years, depending on the scenario) to reduce electricity rates. This debt would be highly sensitive to interest rates which could extend repayment timelines or put significant pressure on electricity rates. A long-term interest rate of 5% is assumed for this analysis.

- GA and HOEP provide a natural hedge against each other – when one goes up, the other goes down – keeping total electricity costs relatively stable and predictable. Smoothing only the GA would lead to greater price volatility for consumers unless the schedule and amount of ratepayer payments was defined relative to the actual cost of GA.

- Some Class A consumers pay limited Global Adjustment and would receive little benefit under the financing proposal. These consumers also currently pay very low rates.

- Should Ontario electricity demand be lower than forecasted, the cost of paying off the debt will be spread over a smaller pool of consumption, further increasing future costs for individual ratepayers.

- In recognition that Class B electricity consumers pay the majority of GA costs, could limit GA cost reductions through financing to Class B consumers only.

# 1. GA Financing – Considerations (cont'd)

**Considerations**

*Fiscal / Accounting:*

- Further analysis is required on whether such changes to the financing of the GA would affect the Province's current accounting treatment for the GA and represent a potential fiscal risk. As such, early engagement with Legal Services Branch and Treasury Board Secretariat is advised.
  - It is unclear whether legislation could determine the manner in which this initiative is accounted for. Further work is required.

- Historically electricity sector financing has been conducted by the Ontario Financing Authority (i.e., managing OEFC's stranded debt and borrowing on behalf of IESO). Further consultation with the OFA will be required to determine the appropriate vehicle for additional borrowing.

- The significant amount of additional Provincial borrowing needed to finance the GA, and associated risks (e.g., interest rates, repayment timelines), could put pressure on the Province's credit rating and overall borrowing capacity. Further analysis is required and would suggest early engagement with the OFA through which money will be borrowed.

- The significant deferral of electricity system costs over a long time-horizon and associated interest costs may draw criticism from some stakeholders as creating a new "stranded debt" in the sector. **Note:** the Debt Retirement Charge (DRC) was removed from residential bills in 2016 and will be removed for remaining customers in 2018.

# 1. GA Financing – Guiding Principles (cont'd)

- Based on preliminary discussions with KPMG, the following key steps have been identified:
  - Create an "asset" (and confirm that it meets accounting requirements);
  - Identify who will hold the asset(s), this could include:
    - Province (e.g., OEFC, etc);
    - IESO; or
    - LDCs.
  - Determine the source of the financing (e.g., OFA, IO, etc)

- ENERGY is working with LSB, IESO, MOF, TBS and external accountants to identify legislative, regulatory and accounting requirements associated with GA financing option.

# 1. GA Financing – Considerations (cont'd)

**Considerations**

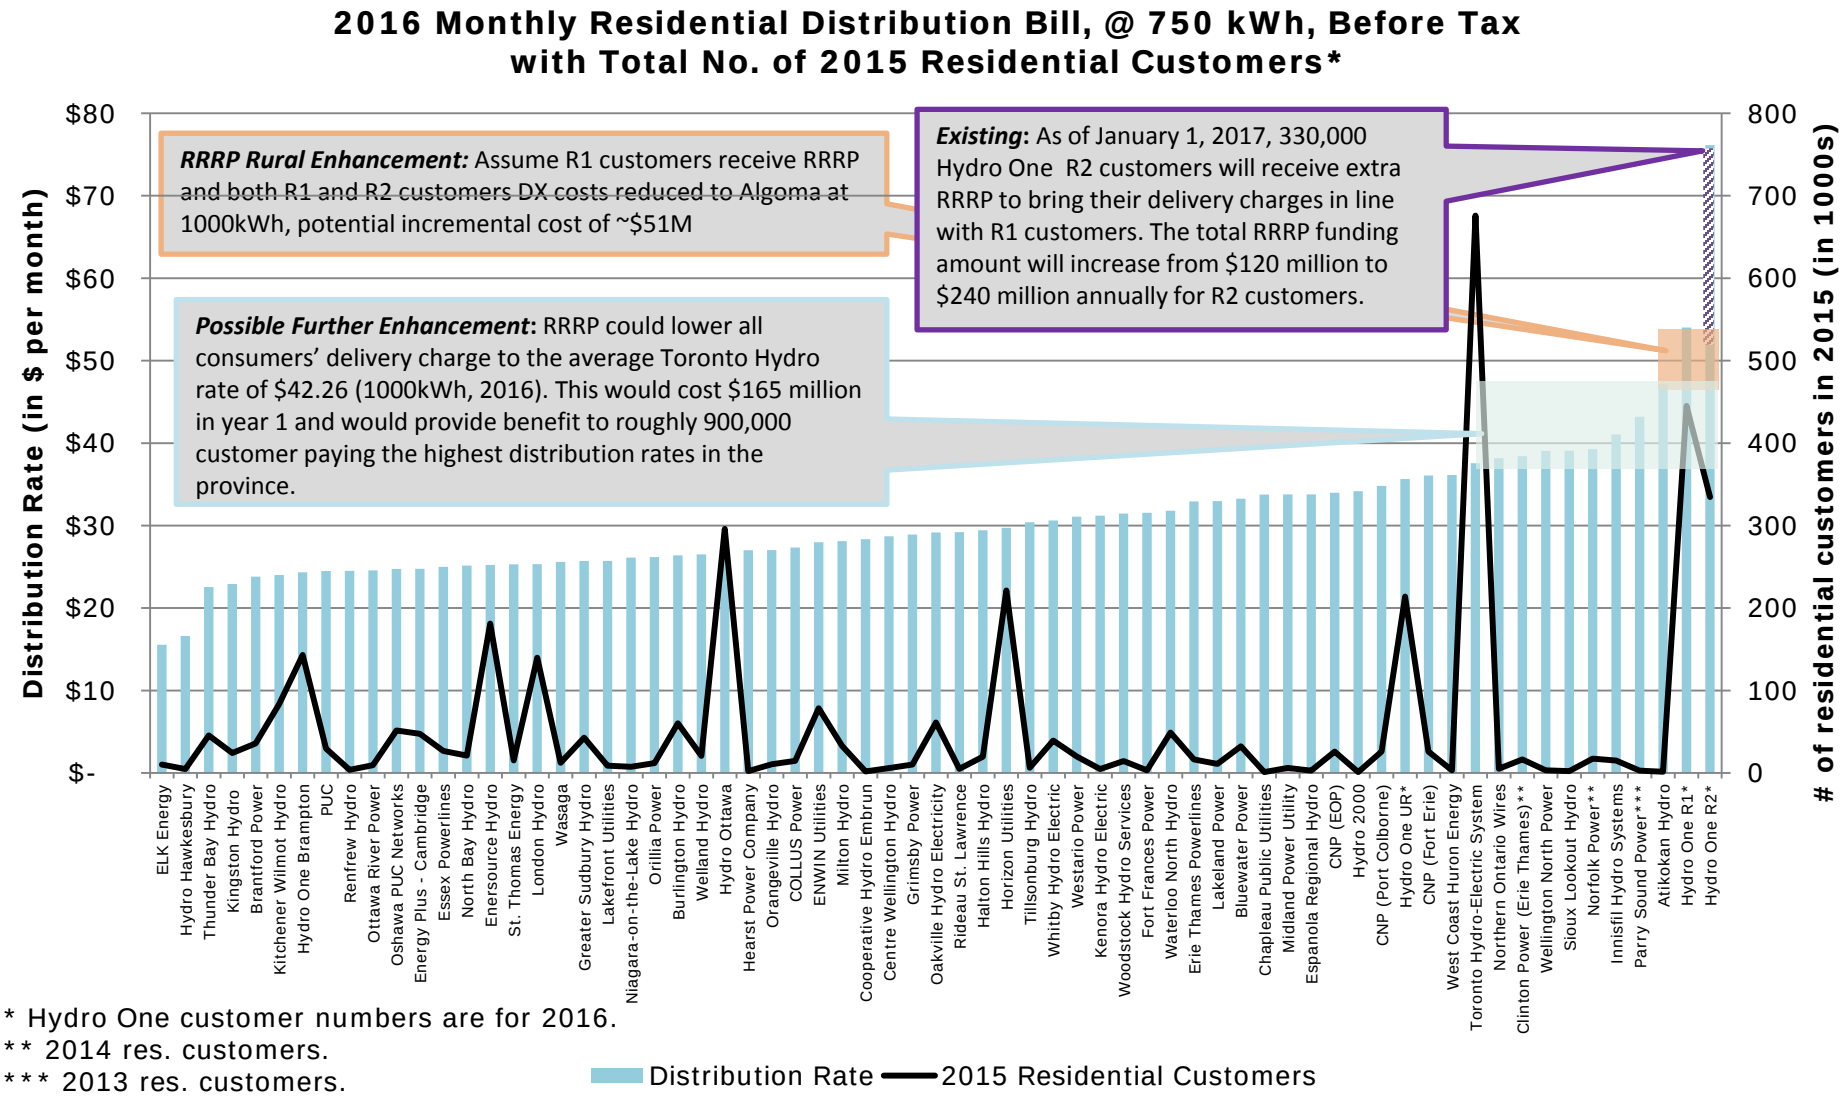
*Legal:*

- Legislation would be required to authorize the financing proposal.
  - Amendments to the *Electricity Act, 1998* (EA) could authorize the financing of certain costs within or part of the GA. However, whether any other legislation requires amendment is not known at this time.
  - The GA regime currently provides that "true costs" represent the true costs of making payments to generators or counter parties to contracts, not the incurring of discretionary financing or interest costs.
  - Considerations such as the need to analyze legal risks or the need to address costs retroactively (if the proposal requires a January 1, 2017 start) could add to the legal and drafting complexity. Further legal analysis is required.

# 2a. Fund Electricity Support Programs Through the Tax-Base – Rural or Remote Rate Protection (RRRP)

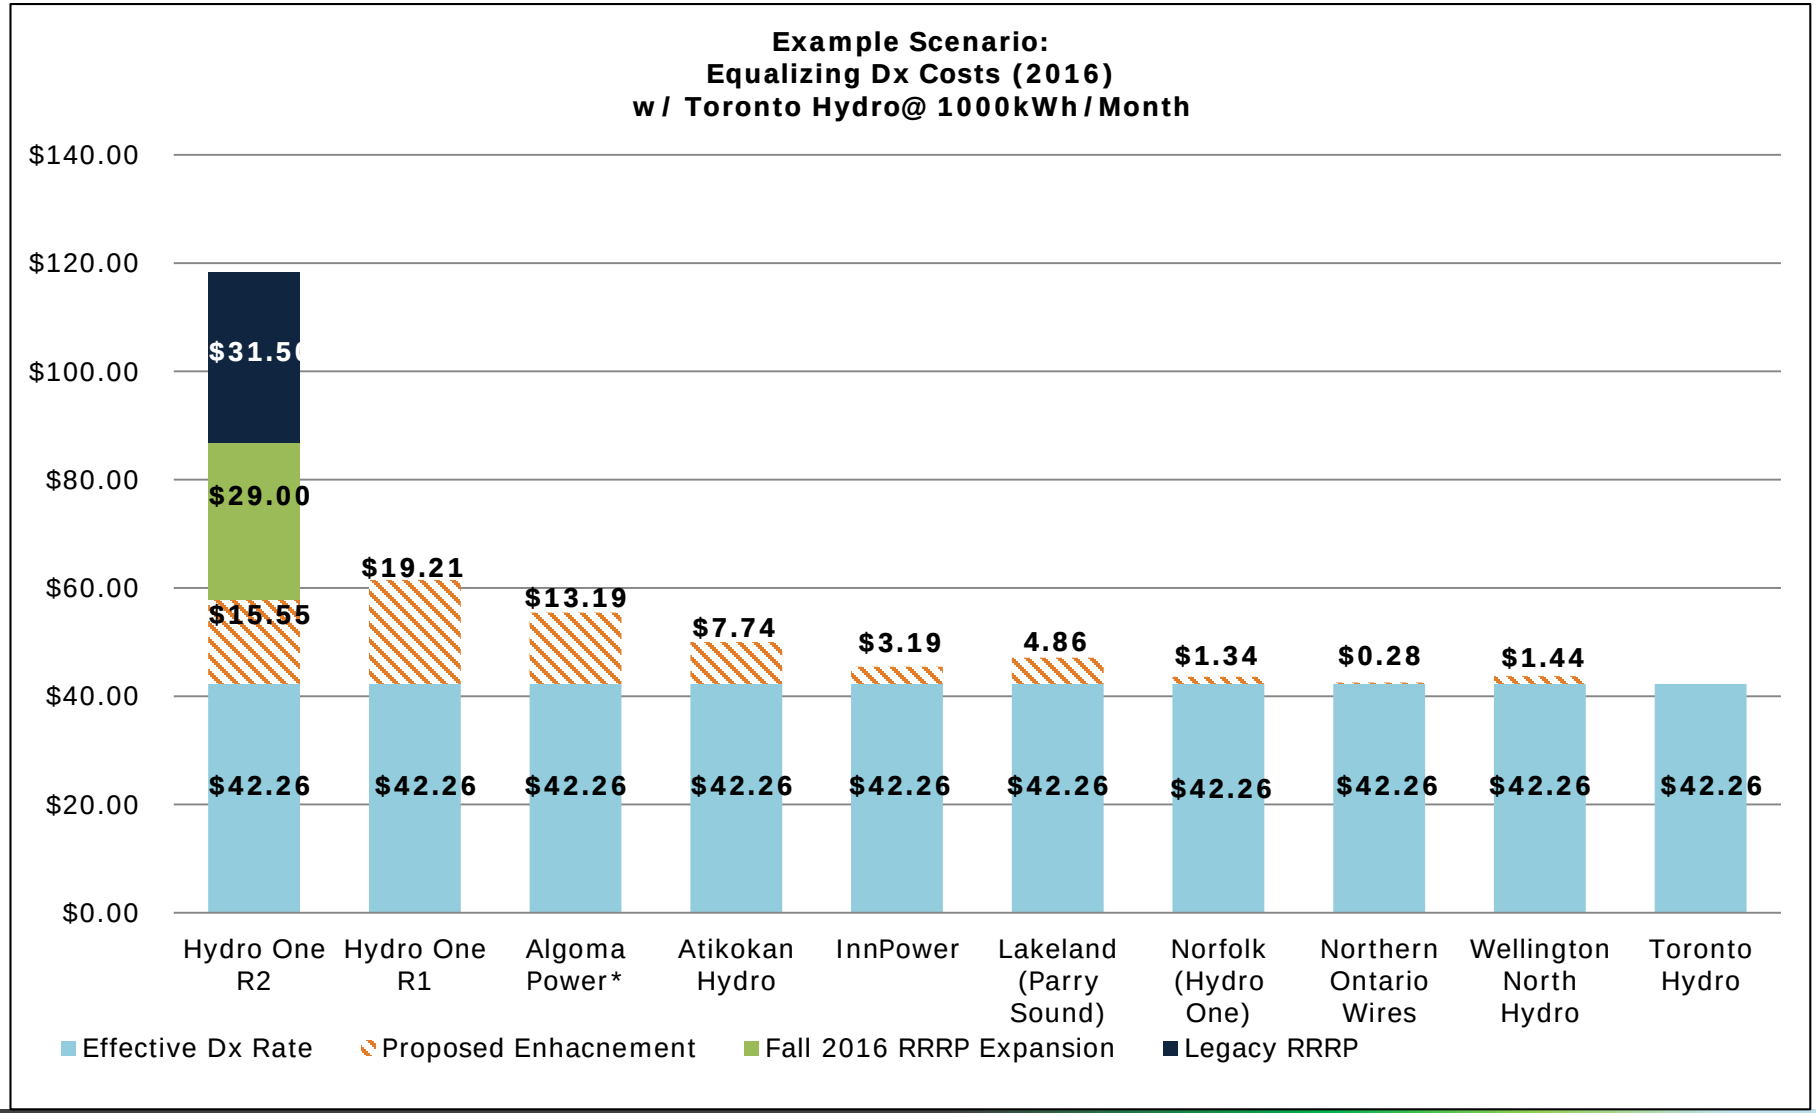
- RRRP supports the most costly-to-serve distributors in Ontario. It is not income tested and most of the support goes to Hydro One's R2 (low density) rate class and remote communities.
- The objective of the program is to reduce extreme distribution costs experienced in low density communities, and bring rates closer to those paid by other customers across the Province.
  - The OEB mandates that low density consumers pay the full cost of service and in recent rate filings has asked Hydro One to ensure this through cost allocation studies. RRRP is thus the mechanism by which these costs can be partly subsidized by all provincial ratepayers.
- Effective January 1, 2017, Ontario has enhanced program funding to further reduce Hydro One R2 distribution rates. As a result, a typical Hydro One R2 customer now pays roughly the same as a Hydro One R1 (medium density) customers, the next highest distribution rate.
- There is opportunity to continue the mitigation of delivery costs for the most costly-to-serve Ontario consumers by revising the program to either:
  - Bring other density based rural costs down by providing benefits to Hydro One R1 customers and ensuring that all RRRP recipients would pay roughly the same delivery costs; or
  - Expanding the program to other distributors that are costly to serve for reasons beyond density (e.g. to bring their distribution rates down to levels currently paid by customers of Toronto Hydro).
- An expansion of the program would result in a cost for all other ratepayers as the RRRP regulatory charge would need to be increased. In order to avoid this and not place an additional burden on consumers, the RRRP program could be transferred to the taxbase.
  - If left on the ratebase, program costs to consumers could rise from an average of $1.58/month to roughly $3.15/month.

# 2a. RRRP Expansion (cont'd)



* Hydro One customer numbers are for 2016.
** 2014 res. customers.
*** 2013 res. customers.

# 2a. RRRP Expansion – Ratepayer Impacts



***Note:** Algoma Power also receives $13.5 million (2017) to support operational costs.

# 2a. RRRP Expansion – Fiscal Impacts

- Table below shows estimate of program costs up to 2022

| Year | RRRP Status Quo($M) | RRRP Enhancement Phase 1 ($M) | RRRP Enhancement Phase 2 ($M) | TOTAL RANGE ($M) |
|---|---|---|---|---|
| 2017 | $292 | $51 | $114 | **$343 - $457** |
| 2018 | $300 | $52 | $117 | **$352 - $469** |
| 2019 | $306 | $54 | $119 | **$360 - $479** |
| 2020 | $315 | $55 | $123 | **$370 - $493** |
| 2021 | $322 | $56 | $127 | **$378 - $505** |
| 2022 | $329 | $58 | $129 | **$387 - $516** |

- Baseline cost of $292M includes all existing funding for Hydro One R2 (including recent $116 million expansion), Hydro One Remotes, and Algoma Power. Providing the enhanced support would cost an additional $165 million (Phase 1 – $51 million + Phase 2 – $114 million) in year 1.
- For forecast purposes, fiscal impacts are escalated at 2.6%/year. This reflects an estimate of the average yearly distribution rate increase.
  - The current RRRP program includes an adjustment mechanism to increase program funding by the same percentage as the average yearly distribution rate increase.
  - The continuation and appropriateness of this mechanism (and in fact all program design characteristics) would be considered in moving the program to the tax base.

# 2a. RRRP Expansion – Considerations

**Considerations**

- **Framework:** New legislation would be required to establish and define the parameters of a tax based RRRP. This may reveal additional considerations.
- **Policy Rationale:** Historically, RRRP has supported costs of LDCs that meet a density threshold. Expanding funding to additional LDCs that do not represent a density threshold (and selecting a specific LDC rate to serve as a cost cap) results in a fundamental change in the program. Program objectives must be considered if expansion is limited to specific LDCs.
- **Program Design:** Program specifics will affect eligible customers, credit amounts, and fiscal impact widely. Issues such as how eligibility is determined and if benefits are equal for all customers within an eligible LDC need to be examined. Financial flow-through mechanisms would need to be considered in consultation with IESO and LDCs. Likely to be modeled after processes used for the Ontario Rebate for Electricity Consumers (OREC).
- **Continuing Support:** There are multiple options and mechanisms available to adjust funding year-over-year depending on desired objective (continuously peg to Toronto, cover annual rate increases, provide inflationary support, amend as needed, etc…). Selection will impact fiscal projections.
- **Fiscal Risk:** As LDC rates change year-over-year, LDCs eligible for tax-based support will change and can cause significant fluctuation in fiscal projects and impacts. For example, if Toronto Hydro meets eligibility criteria in any given year, over 700,000 customers could become newly entitled to taxbase support.
- **Legal Risk:** The OEB is the energy sector's independent regulator and has sole authority to set rates. Ministry-OEB authority must be considered when prescribing cost levels.
- **Hydro One:** Providing tax-based support for Hydro One may be controversial following the broadening of ownership. Hydro One is also transitioning seasonal customers to its R2 and R1 classes; program eligibility will need to be considered.

# 2b. Ontario Electricity Support Program (OESP) Expansion

- The OESP is an income-tested, application based program that lowers the electricity costs of the most vulnerable consumers by providing a rebate directly on their electricity bills.
- The OESP provides basic benefits to most consumers and enhanced benefits to Indigenous customers and customers with electric heat and medical devices.
- OESP funding is collected from a charge levied on all electricity ratepayers. Based on current level of program up-take and funding collection, OESP program benefits could be increased across the board by 50%. This would mean:
  - Single low income consumers would see an increase from $30 to $45/ month ($540/year);
  - Families of four with electric heat could see an increase from $55 to $82.50/month ($990/year); and
  - Indigenous and Métis consumers would also see benefit increases at the same level as those with electric heat and medical devices.
    - The Ministry is also considering options to support a “Delivery” line credit for Indigenous consumers. This would cost ~$18 million/year (Option 2d on slide 8) and would save Indigenous consumers between $75 and $100/month.
- Greater focus and support can be placed on lower income Ontarians by funding OESP through the tax base. This would also reduce costs for all consumers as a result of eliminating the OESP charge.
  - Average residential customer savings: $0.83/month; and
  - Average industrial customer savings: $1.10/MWh.

# 2b. OESP Expansion – Fiscal Impacts

- Table below shows estimate of program costs up to 2022:

| Year | OESP Status Quo($M) | +50%($M) | TOTAL ($M) |
|---|---|---|---|
| 2017 | $108 | $54 | **$162** |
| 2018 | $150 | $75 | **$225** |
| 2019 | $186 | $93 | **$279** |
| 2020 | $215 | $108 | **$323** |
| 2021 | $243 | $122 | **$365** |
| 2022 | $272 | $136 | **$408** |

- 2017 program costs are based at current program sign-up rate – 30% of eligible consumers. Cost projections assume the program grows to 100% of eligible consumers by 2022 and remains at that level.
- At the time of program design, it was estimated that 40-50% participation would be high for an application-based program delivered through electricity bills. However OESP can be enhanced by working to ensure the program uptake is as close as possible to 100%:
  - Streamlining the application process to make it easier and quicker to get through;
  - Putting in place a more aggressive communications strategy to make sure people are aware of the program;
  - Increasing funding for key partner agencies to work directly with individuals who are applying; and
  - Exploring automatic OESP qualification for those who receive provincial programs (e.g., ODSP).
- OEB is currently exploring options for simplifying the OESP process, including exploring options with MCSS on auto-enrollment options, discussing options to eliminate wet signature consent forms with the federal government, and working with partners to do open houses to better reach vulnerable consumers.

# 2b. OESP Expansion – Considerations

- **Framework:** New legislation would be required to establish and define the parameters of a tax-based OESP. This may reveal additional considerations, including possible assessment as a tax credit.
- **Implementation:** Financial flow-through mechanisms would need to be considered in consultation with IESO and LDCs. Likely to be modeled after processes used for the Ontario Rebate for Electricity Consumers (OREC).
- **Alternative Delivery:** If the OESP was funded by the tax-base, it could also be explored whether the OESP could be better delivered as a provincial program via the tax system. This may help ensure that the program's participation rate is as high as possible, and could expand coverage to the ~142,000 low-income households that do not receive an electricity bill.
- **Transition to Social Assistance:** Moving OESP to the taxbase can be a transitional step in folding this program into a reform of social and disability assistance programs and enhancement of MCSS' Social Assistance Management System moving forward.
- **Additional Enhancements:** The enhanced credit could be expanded to include additional eligibility categories of customers. For example, a new "Low Density Consumer" category could be introduced that provides Hydro One R2 and/or R1 customers (highest distribution rates) who are already OESP eligible with the enhanced credit.
- **Variance Account:** The OEB has been collecting program funding in excess of program costs and has accrued a positive balance. This balance must be addressed when moving to the tax base.

# 2c. Low Income Conservation Benefit Program

- Existing low income programs delivered by LDCs and IESO help qualified homeowners and social and/or assisted housing providers improve the energy efficiency of their homes.
  - Programs include the Home Assistance Program and the Retrofit Program (Social Housing Stream).
- A new Low Income Conservation Benefit Program would build on existing programs.
  - Participants could receive incentives for conservation measures not currently covered (e.g. air conditioning, heat pumps (electric heated homes)).
  - Increased incentive amounts (e.g., under the existing Retrofit Program, incentives cover approx. 60% of the total cost of the energy efficiency upgrade).
  - Targeted education and awareness initiatives.
- The new program would be delivered through LDCs and/or IESO.
- The new program would coordinate with CCAP initiatives.
- The budget estimate below is illustrative and assumes annual program budgets three times the 2015 spending for the Home Assistance Program.

| | 2017 | 2018 | 2019 | 2020 | 2021 | 2022 |
|---|---|---|---|---|---|---|
| Proposed Budget ($ Million) | $60 | $60 | $60 | $60 | $60 | $60 |

- Further analysis is required on costing and implementation details, including alignment with the Conservation First Framework.

# 3a. IESO – Market Renewal

- Continue to move forward with Independent Electricity System Operator's (IESO) Market Renewal initiatives:
  - Market Renewal encompasses projects such as a single-schedule system (from the current two-schedule system), more frequent intertie scheduling to better align with other jurisdictions and a day-ahead market. There will be up front capital costs to enable the initiative. IESO is currently assessing these costs.
  - Moving to "technology-agnostic" procurements will provide new opportunities for innovation and modernization and ensure ratepayers receive the best prices possible.

**Considerations**

- Changes related to IESO's Market Renewal initiatives, reflected in HOEP and uplifts, are estimated to save up to $300 million per year, starting in 2021, leading to a reduction of:
  - About $1/month or less than 1% at current retail prices for a typical residential bill; and
  - About $1.30/MWh at current all-in prices for industrial and SME electricity consumers.
- The IESO's Market Renewal is a broad initiative that will impact all aspects of Ontario's electricity market. Ontario has had a uniform price since market opening.
- Adopting a technology-agnostic stance will lower the overall cost of providing electricity service by selecting the most cost-effective resources to fulfill various system needs.
- IESO estimates that the total implementation cost – including a 15% contingency and net of avoided costs – will be $150 million. The bulk of the costs (capital) would only be recovered once the project has been implemented and as the benefits are being realized.

# 3b. OEB – LDC Efficiencies and Rates

- Reducing costs and having LDCs become more efficient could result in a reduction of distribution costs on electricity bills.
  - Currently, LDCs recover costs through the Delivery line of the electricity bill, which is broken into Distribution and Transmission costs. LDCs are responsible for the Distribution costs of the electricity bill which account which account for about 20% of the total bill.
- Distribution costs vary across the province as LDCs have different service territories and needs (e.g., geography, number of customers, density of customers, life/health of capital assets, etc). See next slide for more detail.
  - For example, comparing 2016 with 2006, distribution rates have increased by about 24.5% (or about 2.2% per year, compounded annually) across the Province, with significant variation between regions and LDCs (-17% to 148%). Overall consumer price inflation in Ontario for the same period increased by about 19% or 1.8% per year.
- Over the same time period, distribution sector productivity and cost efficiency have decreased. This trend raises concern that customers are not realizing a net benefit from sector cost increases, as customers receive less value from the distribution portion of their bill.
  - OM&A costs per customer have increased on average from $235 in 2006 to $319 in 2015.
  - For the period 2002-2012, sector productivity has decreased by an annual average of -0.93% when including Hydro One and Toronto Hydro, the worst performers.
- In 2012, the government asked the Ontario Distribution Sector Review Panel to review the distribution sector and make recommendations about how it could become more efficient. The Panel concluded that a $1.2 billion net present value in savings could be achieved by consolidating LDCs into 8-12 regional entities. The panel recommended legislation to mandate consolidation.
  - Rather than mandating consolidation, the government response was to pursue voluntary consolidation and put in place tax incentive for consolidation \further changes to the tax incentives and/or revisiting legislated consolidation could be considered.
- The Ontario Energy Board (OEB) has a mandate to regulate the electricity distribution sector in the public interest, ensuring the financial viability of the sector while promoting reliable service to customers at just and reasonable rates. Since 2012, the OEB has taken action – through the Renewed Regulatory Framework for Energy – to more closely link rate regulation with performance measures and outcomes.
- ENERGY could help promote or accelerate these efforts by asking the OEB – through the LTEP Implementation Directive, s. 35 of the *Ontario Energy Board Act, 1998*, and/or the 2017 Mandate Letter and other agency business planning processes – to consider opportunities to further drive these efficiency, productivity, and performance improvements.

# 3b. OEB – LDC Efficiencies and Rates – Potential LDC Cost Reduction Measures (cont'd)

| Option | Description | Potential Cost Impacts* | Timeline** | Notes |
|---|---|---|---|---|
| **Performance Standards with Rewards & Penalties** | Strengthen LDC scorecard by connecting to LDC financial performance through earnings sharing or penalties paid to consumers.<br>Ex: SAIDI/SAIFI; OM&A per customer | • 1-2% of revenue requirement could be recycled back to customers.<br>• Performance penalties would be real, periodic on-bill $ reductions.<br>• Cost reduction would only occur if standards are not met. | 1 year | UK Regulator Ofgem requires utilities to pay consumers up to £50 if reliability standards are not met. |
| **Enhanced Economic Regulation** | Revise rate-setting to reflect tightening productivity requirements and capital cost avoidance. | • <1% reduction in rates annually, with additional capital investment avoidance.<br>• Methods include stronger productivity factors, broader peer comparisons, and elimination of ICM. | 1-3 years | Incents innovation by requiring LDCs to provide equal or better service on less inflation-adjusted revenue annually. |
| **LDC Collaboration Incentives** | Create regulatory incentives for LDCs to pursue efficiencies and service sharing agreements. | • Potential to avoid individual LDC capital investments of up to six figures, plus additional OM&A tightening.<br>• Actual level of rate reduction dependent on specific LDC proposals. | 1 year for new guidelines, savings to be realized through LDC planning process. | LDCs have already indicated an interest in pursuing such arrangements but have expressed concern on regulatory barriers and costs. |
| **Line Loss Accountability** | Create appropriate benefit-sharing mechanism so LDCs are incented to pursue line loss reductions. | • Potential for 1-3% reduction in commodity charges associated with losses.<br>• Requirements dependent on business cases so costs don't outweigh benefits. | 1-2 years | Potential linkages with related proposal for in-front of the meter conservation. |

***Note:** Dependent on implementation specifics as determined by OEB

****Note:** Timelines begin from Ministry approval of OEB LTEP Implementation Plan

# 3b. OEB – LDC Efficiencies and Rates – Considerations

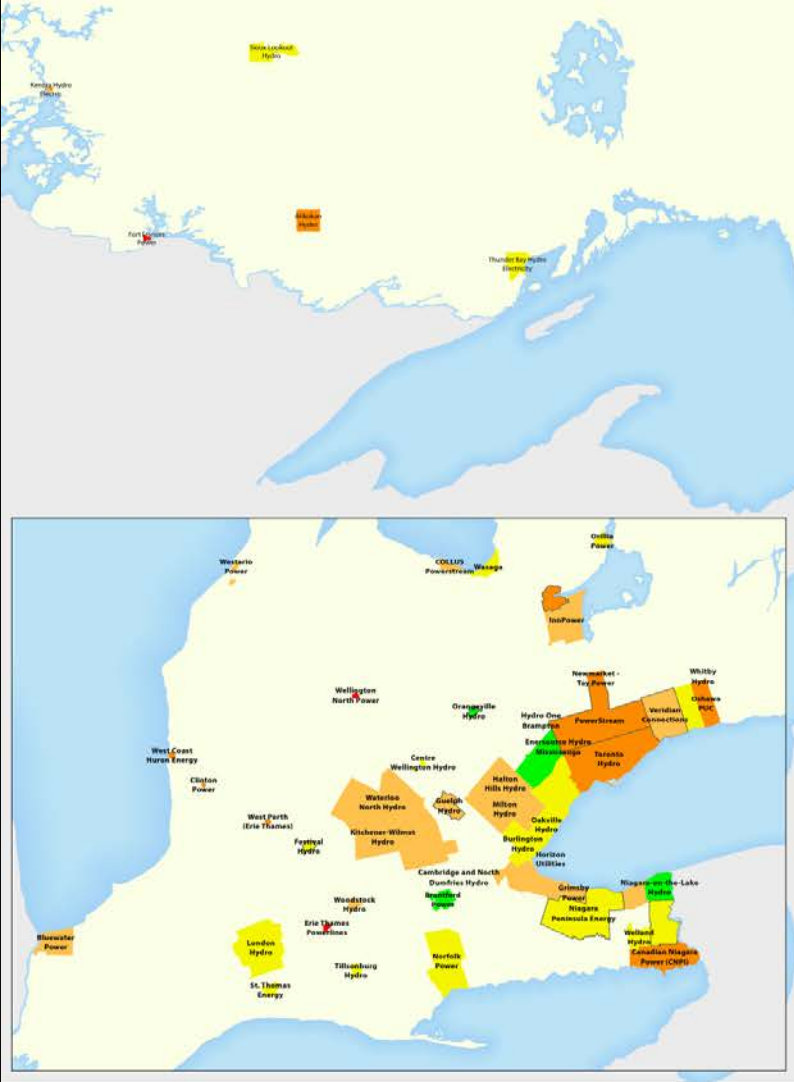
***Sector:***

- Exact bill reduction levels are unknown, but real OM&A and some capital cost avoidance can reasonably be expected.
- Could indirectly incent consolidation if LDCs feel they are unable to adequately manage their assets in light of tightening requirements.
- Any initiatives that have a direct impact on LDC profitability could affect the value of Hydro One.
- There is a tension between requiring productivity enhancements and creating firm performance standards. LDCs have to invest to maintain system levels, but also finding cost efficiencies, which is an incentive for innovation. The Ministry and the OEB may have to also explore reducing regulatory burden/barriers on LDCs so they have the tools available to satisfy new performance expectations.

***Regulatory:***

- The OEB is the electricity distribution sector's independent regulator and as such is responsible for establishing rate-setting mechanisms in line with its statutory objectives.
  - The Ministry would engage with OEB to align on approach, and provide only high-level direction so as to respect OEB's role in determining implementation specifics.
  - The OEB would likely need to conduct policy hearings and stakeholder consultations on these initiatives, though Ministry could request new rules be in place for next major LDC rate cycle.
- LDCs are resistant to peer comparison for a variety of historical and service territory issues. OEB econometric analysis has generally supported limiting peer comparisons. As comparisons would be an important component of benchmarking performance standards, the Ministry may experience sector pushback.
- Updating rate-setting mechanisms and regulatory processes could create regulatory uncertainty and limit LDC activity. The OEB has revised its processes multiple times over the past 15 years.

# LDC Distribution Rate Changes (2006 vs 2016)



| Total Dx Rate | 2006 | 2016 | % Rate Change |
|---|---|---|---|
| Hydro One UR (High Density) | $29.13 | $35.65 | 22.4% |
| Hydro One R1 (Medium Density) | $37.73 | $54.02 | 43.2% |
| Hydro One R2 (Low Density) | $44.65 | $76.14 | 70.5% |

## Legend

**LDC Rate Comparison 2006 vs 2016**

**% Total Rate Change ( # of LDCs )**

- -17.3% to 0% ( 5 )
- 0.1% to 15% ( 25 )
- 15.1% to 30% ( 21 )
- 30.1% to 60% ( 16 )
- 60.1% to 89.3% ( 4 )
- Merged LDCs

Below LDCs had either acquired or merged: (# of merged LDCs)

a. Powerstream Inc. ( 5 )
b. Chatham-Kent Hydro Inc. ( 13 )
c. Veridian Connections Inc. ( 4 )
d. Guelph Hydro Electric Systems Inc. ( 2 )
e. Festival Hydro Inc. ( 2 )
f. Orangeville Hydro Limited ( 2 )
g. Niagara Peninsula Energy Inc. ( 3 )
h. Peterborough Distribution Incorporated ( 3 )

*Only LDCs with distribution rates of 2006 and 2016 are shown.*
*Only the largest distribution areas are shown and smaller satellite areas are not all shown.*

*Ministry of Energy*

0 30 60 120 180 240
Kilometers

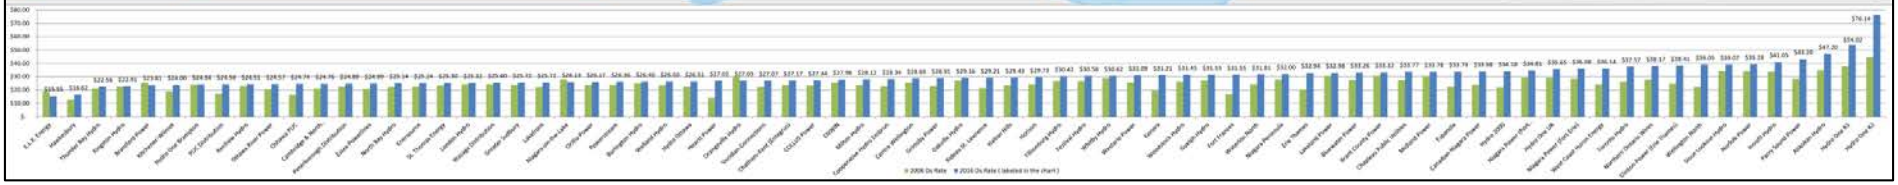
*Published December 2016*

## KEY FINDINGS

- In summary, distribution rates (including rate riders) have increased by about 24.5% across the Province, with significant variation between regions and LDCs (-17% to 148%).
- There is generally no correlation between LDC size or location and distribution rate increase in absolute or percentage terms.
- The current analysis shows no clear relationship between the percentage rate increase and the absolute rate level (that is, high rate increase LDCs may still have among the lowest rates, and low rate increases may have higher rates.
- No clear relationship between amalgamation and rates.
- The analysis does suggest that Hydro One has the highest rates, and some of their customers have seen higher than average rate increases.

## NOTES

- **Rate Calculation:** Monthly residential distribution bill rates, before taxes, are based on consumption of 750 kWh. Distribution charges account for approximately 23% of the average 2016 residential bill.
  All figures calculated by ENERGY staff without input from OEB.
- **Colours:** Colour coding of the map only depicts the change in LDC rate amounts (i.e. LDCs in red don't necessarily have the highest total rates).
- **Mergers:** Rates for customers in merged LDCs have experienced different levels of change. For merged entities, the largest LDC in 2006 was used. An accompanying map focuses on merged entities.
- **Points in Time:** Current analysis compares 2016 and 2006 only. Rates could have had an uneven trajectory, especially considering regulatory decisions such as time limited charges/rebates with temporary impacts.



# 3c. OPG – Operational Efficiencies

- Provide expectation that OPG meet more aggressive cost targets, improving efficiency by ~$3/Megawatt hour (MWh).

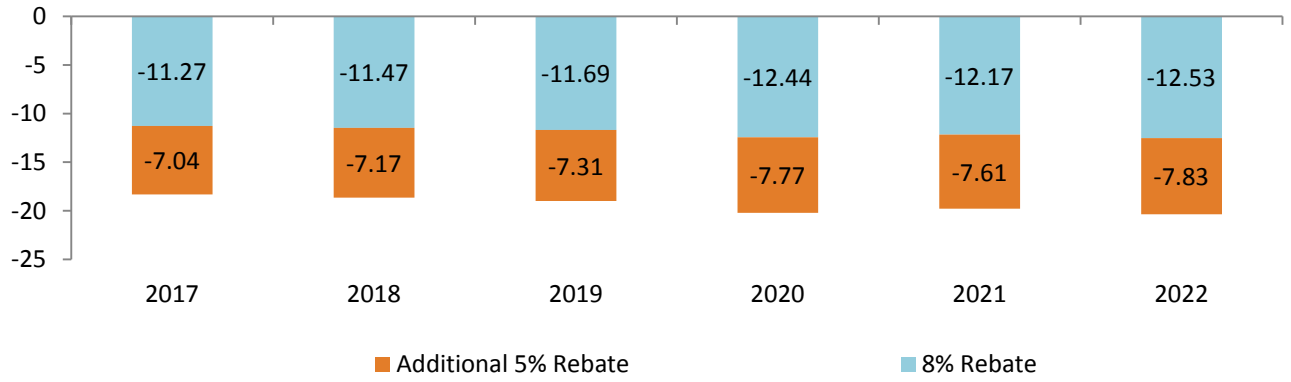
**Considerations**

- OPG recently submitted its 2017-19 business plan to the Province for concurrence. That plan includes the following:
  - Enterprise total generating cost increasing from $48/MWh in 2016 to an average of $55/MWh over the plan period.
  - An average residential monthly bill increases of $1.05/month annually from 2017-2021.
- Much of this increase is due to the Darlington refurbishment project, which increases costs and reduces OPG's generation over the planning period.
- OPG has also shared its stretch targets for total cost of generation, which average $52/MWh over the 2017-19 plan, a ~$3/MWh reduction (5-6%) relative to its $55/MWh business plan targets.
- The Province could provide instructions to OPG to focus on its stretch target as part of the Minister's Concurrence letter. This is a public document that OEB would likely review and incorporate as part of OPG's current rate application.
- Consistent with regulations under the *Ontario Energy Board Act*, OPG is seeking smoothed rates for nuclear as part of its 2017-2021 rate application.
  - As a result, the benefit to ratepayers of reducing generation costs is uncertain.
  - Given that the application extends beyond the business plan period, and to ensure OPG does not delay costs beyond the planning horizon, the Province may want to provide additional direction for out year expenditures.
- If OPG is unable to meet more aggressive cost targets, this could impact net income, and the Province's fiscal plan.
  - The total cost of $3/MWh based on OPG's forecast production of 74 TWh/yr is about $240 million per year.
- The Province could work with OPG to craft language in the concurrence letter in order to avoid setting unintended precedents for future rate application processes.

# 4. Enhanced Tax-Base RPP Rebate (5%)

- Enhancing the rebate by a further 5% on the amount before tax provides an average savings of about $7 each month or $84 annually for a typical residential electricity consumer.
- As of January 1, 2017, electricity consumers eligible for the Regulated Price Plan (RPP) receive an 8% rebate equivalent to the provincial portion of HST on their pre-tax bill.
- The eligibility criteria for the 8% rebate is as follows:
  - Consumers with a demand of 50 kW or less;
  - Consumers with a demand of 250,000 kWh/year or less;
  - Farms;
  - Multi-unit residential buildings and other facilities used as residential rental units;
  - Dwellings;
  - Condominiums; and
  - Co-operatives with housing units.

**Benefit for a Typical Residential RPP Consumer**
*in $/750-kWh month*



# 4. Enhanced Tax-Base RPP Rebate (5%) (cont'd)

**Considerations**

- Amendments would be required related to the *Ontario Rebate for Electricity Consumers Act, 2016.*
- The Act authorizes the making of regulations to reimburse electricity vendors for amounts credited to consumers' accounts under the Act. The Act authorizes the making of other regulations to put in place mechanisms needed to implement the financial assistance.
- The rebate could be made retroactive to January 1, 2017. Similar to the current 8% rebate, electricity consumers would receive a retroactive payment once the local distributor begins issuing the rebates if the distributor needs more time to adjust its billing systems.

**Fiscal Cost of an Enhanced Rebate**
*in $millions*

| Cost ($M) | 2016-2017 | 2017-2018 | 2018-2019 | 2019-2020 | 2020-2021 | 2021-2022 |
|---|---|---|---|---|---|---|
| **Cost of 8% rebate** | 271 | 1,119 | 1,086 | 1,171 | 1,159 | 1,208 |
| **Cost of 13% rebate** | 440 | 1,818 | 1,764 | 1,903 | 1,884 | 1,963 |
| **Cost of incremental 5% rebate** | 169 | 699 | 679 | 732 | 724 | 755 |

# Appendix

# Existing Rate Mitigation Programs – Overview

- There are a number of existing programs funded by electricity ratepayers that help mitigate electricity bills for some customers, each of which has a unique policy rationale.

- Programs such as the as the Rural or Remote Rate Protection (RRRP) program are targeted at all customers who face the highest delivery costs in the province, while others such as the Ontario Electricity Support Program (OESP), are income tested and targeted at the most vulnerable energy consumers.
  - These program are not mutually exclusive and a customer could receive both the RRRP and the OESP.
  - There are other programs that are still under development such as options for a First Nations Rate currently being developed by the OEB as per the request of the Minister of Energy. These options are ailed to alleviate high delivery costs for on-reserve indigenous consumers.

- There are opportunities to enhance each of these programs. However, if enhancements are funded through the electricity rate-base, while they would lower costs for eligible consumers, they would raise costs for all other ratepayers.

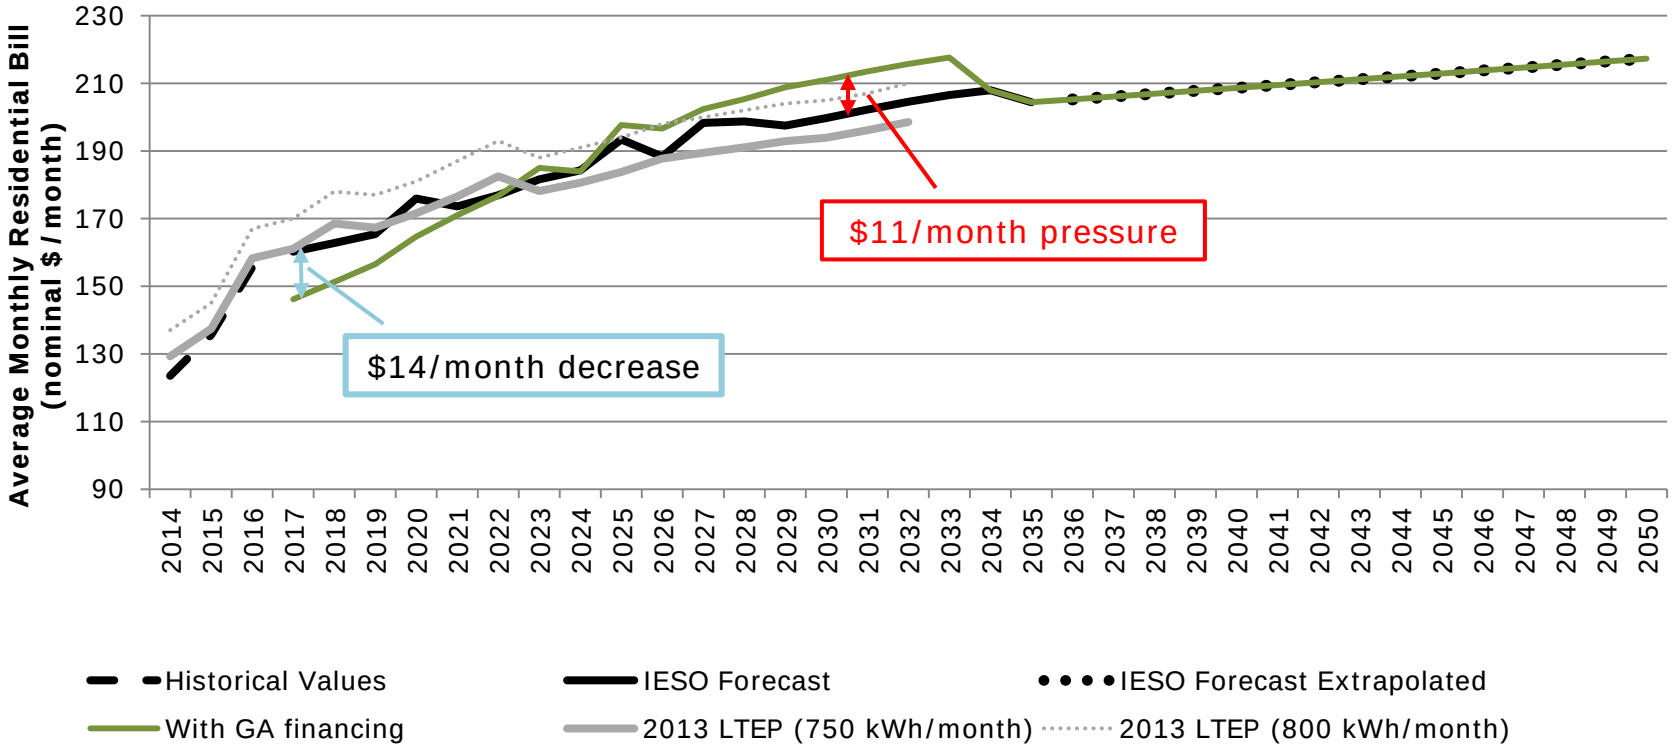
- Given that these programs focus on promoting equity between different area of the province (RRRP) or on social equity (OESP), they could be funded by the tax-base rather than the rate-base. This would allow their goals to be achieved and enhanced without increasing electricity rates. The following slides explore options to enhance each program using the tax-base.

# Global Adjustment (GA) Financing

- The global adjustment (GA) is comprised of costs for regulated and contracted generation, as well as conservation.
- Some contracted generation assets are expected to have a useful life that extends beyond the term of their current financial contracts (typically 20-years).
- Similarly, conservation costs are recovered through the GA on an annual basis while conservation initiatives provide benefits to the electricity system over the course of many years.
- Since the GA only includes costs related to the contractual life of these assets, there may be an opportunity to recognize the longer-term benefit of these assets to the electricity system and “bring forward” that benefit for ratepayers today, while deferring some of the current costs.
- An indicative GA financing proposal is presented that lowers ratepayers costs over the short term by borrowing money but increases costs over the long term when GA costs are forecast to be lower.
- **Note:** Not all generating assets will continue operations at the end of their contract term. Regulatory constraints (i.e., nuclear licences) or low demand conditions (i.e., as experienced with current expiring NUGs) would mean that some generators will shutdown at the expiry of their contract. Future ratepayers would be paying for these assets that are no longer producing power.

# Low / GA Financing – Impact on Residential Electricity Bills

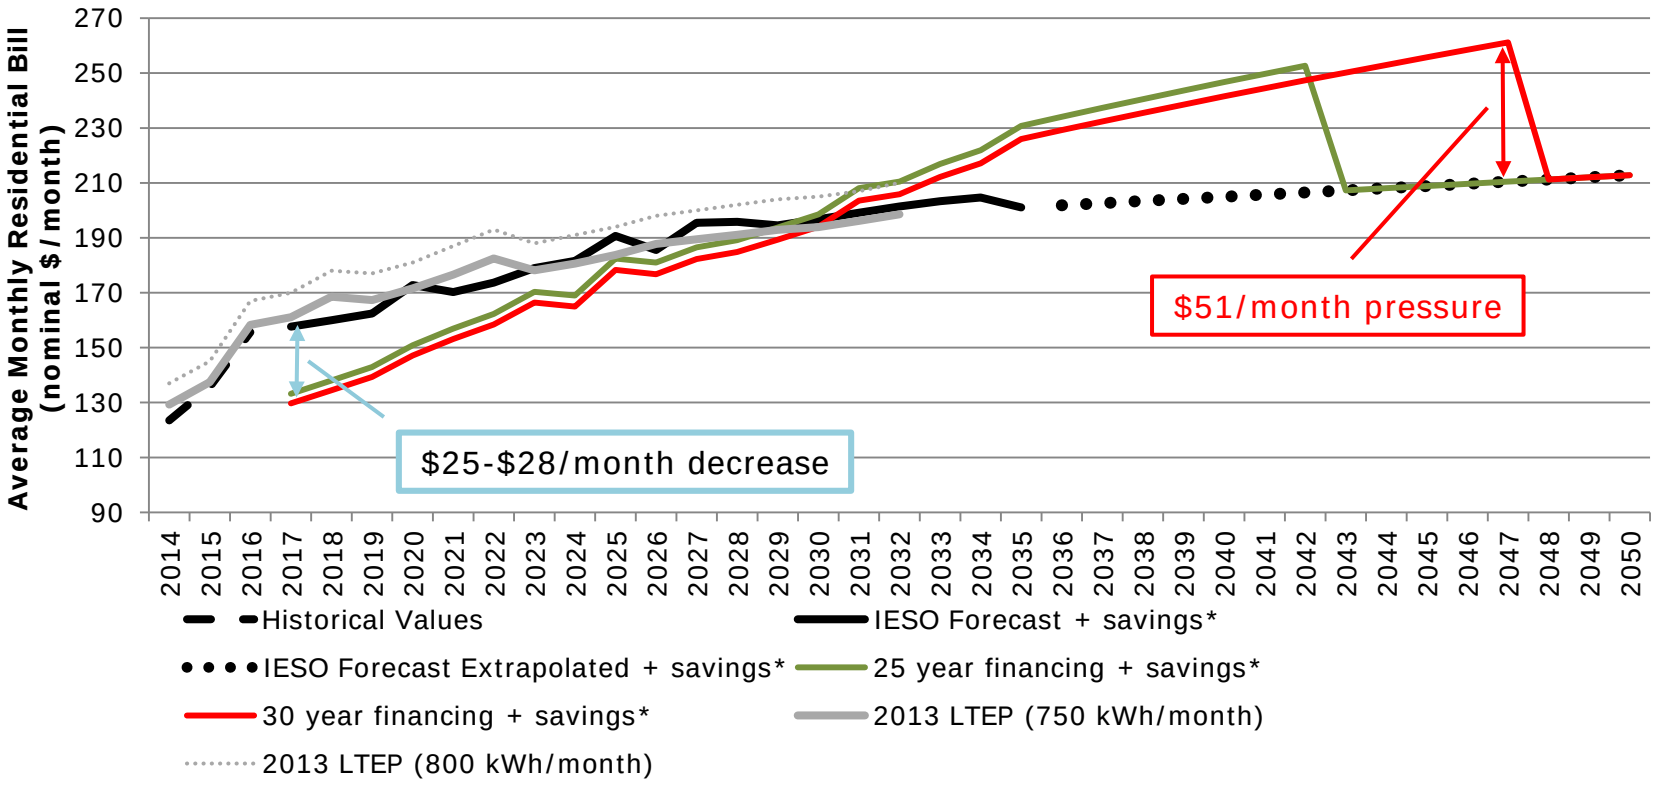
- In this option, the starting GA payment from all ratepayers in 2017 is lowered by $2.5 billion and increases at 2% each year – up to a cap of no more than $2 billion more than the true cost of GA in any year – until the borrowed money is paid back in 2032.



- By **borrowing up to $9.3 billion**, this scenario results in **a short-term residential electricity cost reduction of up to $14/month** at the cost of **increased future electricity bills over 10 years of up to $11/month** above the true cost of electricity production.

# High / GA Financing – Impact on Residential Electricity Bills

- In this option, the starting GA payment from all ratepayers in 2017 is lowered by $4.4 and $5 billion and increases at 2% each year until the borrowed money is paid back over a 25 and 30 year financing period respectively.

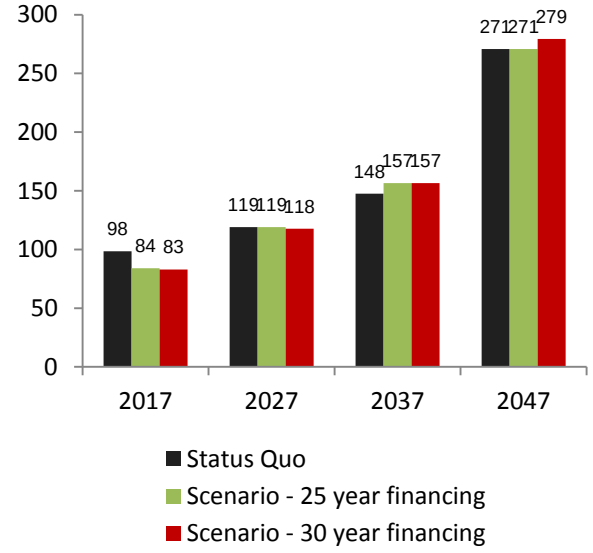


- By **borrowing up to $65 billion**, this scenario results in **a short-term residential electricity cost reduction of up to $25-$28/month** at the cost of **increased future electricity bills over 12-17 years of up to $46-$51/month** above the true cost of electricity production.

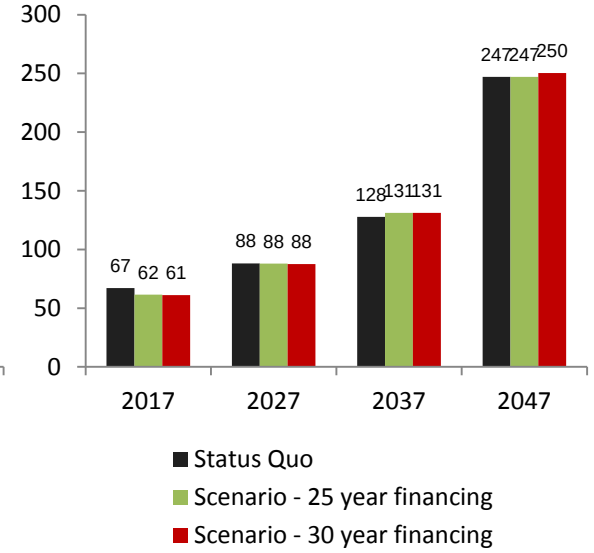
# GA Financing – Illustrative Impact for Large Industrial Electricity Consumers

- Below graphs illustrate the estimated impact under the moderate GA financing scenario for an average Class A electricity consumer, a consumer that pays low GA (i.e., pulp and paper) and high GA (i.e., refining and chemical manufacturing).

**Estimated All-In Electricity Price**
*for Average Class A in $/MWh*



**Estimated All-In Electricity Price**
*for Pulp & Paper in $/MWh*



**Estimated All-In Electricity Price**

# Extend Length of Existing Wind / Solar Contracts

- Wind and solar developments are typically contracted through standard offer procurements on 20 year fixed terms at fixed pricing.
- Many of these projects have already reached commercial operation.
- The province could explore options for IESO to negotiate extensions to existing renewable energy contracts, for example, by 10 years, in return for the contract holders agreeing to a lower price in the near term.

**Considerations**

- Projects in commercial operation offer potential for near-term rate reduction whereas projects that have yet to reach commercial operation provide potential to mitigate future rate increases only.
- The attractiveness of this option to contract holders would vary from project to project and would depend on project economics.
- Revised pricing would be subject to negotiation, and associated ratepayer savings would be difficult to forecast accurately.
- The duration of contract renegotiation is difficult to forecast and may not be achievable in the near term.
  - Proponents may have to renegotiate their project financing arrangements, ensure project investors are satisfied with any changes in ROI, and extend land leases.
- Project host communities and Indigenous communities whose traditional territory the projects are sited in may not be interested in these projects extending their operational period; discussions/consultation may be required in advance of this potential option moving forward.

# Extend Length of Existing Wind / Solar Contracts (cont'd)

**Considerations (cont'd)**

- Should Ontario be successful in negotiating lower prices in the near term, it should be noted that contract holders will be in a strong bargaining position (given their existing fixed-priced contracts), and will likely extract additional value from the negotiations.

- The Province is not a party to the contracts and has never been involved in the negotiation of the contracts themselves. IESO would be required to renegotiate the contracts, which would likely involve a direction or directive to IESO.

- Further analysis is required as to how ENERGY could express its policy intent to have IESO renegotiate the contracts for a reduced rate at a longer term, however it is unlikely that IESO could guarantee the outcome.

- Further analysis is also required to ascertain whether there is scope within the existing contracts for IESO to renegotiate their terms in this manner.

- Extending contract terms may require investments in component replacement and additional operation and maintenance costs that developers would seek to recover under any renegotiated contract.

- Extending contract terms would reduce planned flexibility and increase the risk of overpayment as this existing capacity would now be contracted into the 2040s and not the 2030s.

# Extend Length of Existing Wind / Solar Contracts (cont'd)

**Considerations (cont'd)**

- Ontario has over 4,500 MW of wind in commercial operation, with the vast majority being large scale (>500kW) developments.
  - This includes over 2,700 MW of large FIT 1 and GEIA wind projects representing 47 contracts (average size ~58 MW) and over 1,000 MW of solar projects representing 103 contracts.
- Below are two potential approaches to reducing ratepayer costs in the near term by extending contract terms at reduced prices. An illustrative example of a typical large wind project is used.
- **Example:** 100 MW FIT 1 wind project achieving Commercial Operation in 2014 (i.e., 17 years remaining on initial 20 year contract), assuming a 10 year contract extension negotiated at the LRP I low weighted average wind price of $64.5/MWh
  - (17 years @ $135/MWh + 10 years @ $64.5/MWh)
- **Potential Approach 1:** Provide a single new contract price that is the average of the lower extension price and the FIT contract price over the new contract term. The new price would be lower over a longer term.
  - **Illustrative Example:** New contract for 27 years at $129/MWh.
  - New contract price set to allow 10% rate of return over 27 year contract per FIT pricing approach.

| 100 MW Wind Project | Status Quo | 27 Year Contract (remaining term extended for 10 additional years) |
|---|---|---|
| Contract Cost (NPV 2017) | $550 Million | $582 Million |
| Average Monthly Ratepayer Impact Over First 5 Years | $0.03 savings | |
| Average Monthly Ratepayer Impact Over Remaining 22 Years | $0.02 increase | |
| Average Monthly Ratepayer Impact Over Entire 27 Year Contract | $0.01 increase | |

# Extend Length of Existing Wind / Solar Contracts (cont'd)

**Considerations (cont'd)**

- **Potential Approach 2:** Offer facilities a revised contract that extends terms and is structured to offer lower pricing in the initial contract years and higher pricing in the later years of the contract.
  - **Illustrative Example:** New contract for 27 years at $85.9/MWh over the first 5 years and $169/MWh over the remaining 22 years.
    - Price over first 5 years is LRP I weighted average wind price.
    - Price over remaining 22 years is set to allow 10% rate of return over entire 27 year contract per FIT pricing approach.

| 100 MW Wind Project | Status Quo | 27 Year Contract | |
|---|---|---|---|
| | | Initial 5 Years | Last 22 Years |
| Contract Cost (NPV 2017) | $550 Million | $632 Million | |
| Monthly Average Ratepayer Impact Over First 5 Years | $0.09 savings | | |
| Monthly Average Ratepayer Impact Over Remaining 22 Years | $0.07 increase | | |
| Monthly Average Ratepayer Impact Over Entire 27 Year Contract | $0.04 increase | | |

# Extend Length of Existing Wind / Solar Contracts (cont'd)

- Below are illustrative estimates of potential GA savings if all contracts for large FIT and GEIA wind and solar projects in commercial operation are renegotiated according to the approaches illustrated above.
- Estimates are for large (10 MW or greater) FIT 1 and GEIA wind and solar projects in commercial operation, totalling about 2,700 MW of wind and about 900 MW of solar capacity. A 10 year contract extension is assumed at a price of:
  - **For Wind:** LRP I low weighted wind price of $64.5/MWh
  - **For Solar:** LRP I low weighted solar price of $141.5/MWh

**Potential Approach 1:**

| | **Current Contracts*** | **New Extended Contracts** |
|---|---|---|
| Total Value (NPV 2017) | $22.9 Billion | $22.8 Billion |
| Average Annual Contract Value (First 5 Years) | $1.5 Billion | $1.3 Billion |
| *Figures assume projects remain operational after contract expiry at the LRP I low weighted price inflated to the year of contract expiry, as per OPO assumptions . | | |

**Potential Approach 2"**

| | **Current Contracts** | **New Extended Contracts** |
|---|---|---|
| Total Value (NPV 2017) | $ 22.9 Billion | $ 25.3 Billion |
| Average Annual Contract Value (First 5 Years) | 1.5 Billion | $1.0 Billion |

# Extend Length of Existing Wind / Solar Contracts (cont'd)

- Contract re-negotiations could be piloted with large wind and solar contract holders.
- For example, the top 5 contract holders by portfolio value (online projects 10 MW and larger) include:

| Contract Holder | Technology | # of Contracts | Capacity (MW) | Estimated Value (NPV 2017) |
|---|---|---|---|---|
| Samsung | Wind & Solar | 5 | 799 | $4.6 Billion |
| NextERA | Wind | 6 | 534 | $2.7 Billion |
| Pattern / Capital Power | Wind | 1 | 270 | $1.5 Billion |
| ENGIE | Wind | 4 | 265 | $1.2 Billion |
| Northland Power | Wind & Solar | 15 | 290 | $1.2 Billion |

# Other Options Considered – Typical Residential Electricity Consumer

| *$/750kWh* | 2017 | 2018 | 2019 | 2020 | 2021 | 2022 | Timing of Benefit |
|---|---|---|---|---|---|---|---|
| Conservation Funding Options | | | | | | | |
| a. Amortize Conservation Program Costs (15-Year Amortization) | 1.62 | 1.88 | 1.16 | 1.20 | 0.82 | 0.69 | Immediate |
| b. Fund Conservation Programs Through The Tax-Base | 3.47 | 3.83 | 3.17 | 3.35 | 2.84 | 2.90 | Immediate |
| Eliminate the Industrial Conservation Initiative (ICI) | 4.40 | 4.24 | 4.10 | 4.24 | 3.73 | 3.58 | Immediate |
| Cancel LRP I | - | - | TBD | TBD | TBD | TBD | Medium-Term |
| Expand the Scope of Trillium Trust to Make Investments in Energy Infrastructure (e.g., Transmission upgrade, etc.) | - | - | - | 2.16 | 2.16 | 2.17 | Medium to Long-Term |
| Dedicate Departure Tax | 1.39 | 1.39 | 1.39 | 1.39 | 1.39 | 1.39 | Immediate |
| Give Residential Consumers More Rate Choices | - | - | - | - | - | - | n/a |
| Help Small Business Manage Their Electricity Costs (i.e., End DRC early for Class B electricity consumers)** | - | - | - | - | - | - | n/a |

**Note:** The above initiatives will provide similar benefits for non-RPP Class B electricity consumers. Proposal 1 assumes OESP participation of 50% and 5-year maturity. *Assessing the range of ratepayer impacts will be done through the LTEP development and implementation process in conjunction with the OEB. **Class B includes small-medium enterprises (SMEs).

# Options Considered – Average Industrial Electricity Consumers

| *$/MWh* | 2017 | 2018 | 2019 | 2020 | 2021 | 2022 | Timing of Benefit |
|---|---|---|---|---|---|---|---|
| Conservation Funding Options | | | | | | | |
| a. Amortize Conservation Program Costs (15-Year Amortization) | 1.12 | 1.30 | 0.80 | 0.83 | 0.57 | 0.47 | Immediate |
| b. Fund Conservation Programs Through The Tax-Base | 2.88 | 3.17 | 2.66 | 2.77 | 2.36 | 2.41 | Immediate |
| Eliminate the Industrial Conservation Initiative (ICI) | (24.12) | (23.21) | (22.45) | (23.23) | (20.42) | (19.61) | Immediate |
| Cancel LRP I | - | - | TBD | TBD | TBD | TBD | Medium-Term |
| Expand the Scope of Trillium Trust to Make Investments in Energy Infrastructure (e.g., Transmission upgrade, etc.) | - | - | - | 1.79 | 1.79 | 1.79 | Medium to Long-Term |
| Dedicate Departure Tax | 1.86 | 1.86 | 1.86 | 1.86 | 1.86 | 1.86 | Immediate |
| Give Residential Consumers More Rate Choices | - | - | - | - | - | - | n/a |
| Help Small Business Manage Their Electricity Costs (i.e., End DRC early for Class B electricity consumers)** | - | - | - | - | - | - | n/a |

**Note:** The above initiatives will provide similar benefits for non-RPP Class B electricity consumers. Proposal 1 assumes OESP participation of 50% and 5-year maturity. *Assessing the range of ratepayer impacts will be done through the LTEP development and implementation process in conjunction with the OEB. **Class B includes small-medium enterprises (SMEs).

**Date:** Monday, January 23, 2017 9:54:24 AM

---

Hi,

Can we see what we can pull out of the charts in the various presentations on annual fiscal impacts, direct and indirect (IOD), as well as cumulative debt, each year.

Thanks,
Ron

**Subject:** RE: Rate Mitigation - Draft MP Deck

Hi Chris,

We can see what we can glean from the apparent amounts to be financed annually and cumulatively, based on Energy's charts; however, Energy would have the underlying data to the options.

The fiscal impact will depend on the accounting treatment, which I think OPCD working with Energy, IESO and KPMG are better placed to comment on.

Ron

**Subject:** FW: Rate Mitigation - Draft MP Deck

Hi Ron,
See below. SoC asking for an analysis of the fiscal impact of the GA options assuming it has to be added to the fiscal plan. The request was routed through to OPCD and Karen Hughes' office as well, but not sure who is best placed to lead the analysis. Note the attached appears to be the same version as was circulated before last Thursday's trip to Major Projects.

**Subject:** Rate Mitigation - H1 Options

Hi Nancy, Ron,

The attached responds to a request from the SoC for options dealing with the Hydro One deferred tax benefit. This doesn't include a lot by way of pre-amble, as I think we have spent a fair bit of time discussing the issue. Ron, we attempted to take the key elements from your presentation, as well as the note that ENE prepared before the holidays. Please let me know if you have any edits / comments. Apologies for short notice, but I have been asked to share a draft with ENE DMO by EOD.

Thanks,
Scott

# Rate Mitigation Options
# Hydro One Options

# Purpose

- The following presentation considers the following three options in the context of electricity rate mitigation, and the Ontario Energy Board's upcoming transmission rate decision that will include treatment of Hydro One's Deferred Tax Benefit:

    1. Dedicate the Departure Tax to ratepayers
    2. Allocate Trillium Trust Funds to Energy Projects
    3. Await OEB Decision (Status Quo)

# Context: Tax Benefit and the Ontario Energy Board Review

- Hydro One paid a one time Departure Tax of $2.6 B to the Province prior to exiting the payments-in-lieu of tax regime and then recorded a Deferred Tax Benefit (DTB) of ~$2.8 B, as it entered the income tax regime, post-IPO
  - The Province recorded increased revenues of ~$2.4B due to the DTB, which it has allocated to the Trillium Trust
- The Ontario Energy Board (OEB) is currently reviewing Hydro One's 2017-18 transmission rate application to determine whether the DTB should be allocated to the benefit of ratepayers rather than shareholders
  - There is no clear precedent, as it is rare for the seller to benefit from tax collections
  - Hydro One believes it has a strong argument to keep the DTB, as Hydro One paid the departure tax, investors purchased shares on the basis that the value of the tax shield would flow to their benefit, and ratepayers are no worse off as a result of the transaction
    - This argument is complicated by the Province's equity injection of $2.6 B to Hydro One pre-IPO, which was done to mitigate the negative financial consequences arising from the Departure Tax payment
  - Hydro One and the IPO lead bookrunners reached out to regulatory experts in 2015 for an assessment and although outlined as a risk in the prospectus, this was viewed as an unlikely outcome at the time of the IPO
- In the event the OEB requires the benefit from the DTB to flow to ratepayers, the lead bookrunners calculated an earnings impact of ~$1 B on a present value basis (~$1.85 per share). Further impacts to share value could arise depending on whether analysts and investors reconsider regulatory risk
- OEB's transmission rate decision is expected in late winter / early spring 2017, and a similar decision on distribution rates is expected at the end of 2017

# Option 1: Dedicate Departure Tax to Ratepayers

- Dedicate the $2.6B Departure Tax to ratepayers over 5-10 years

- Prior to the OEB's decision on the Hydro One transmission rate application, the Province could commit to providing value equivalent to the tax payment to ratepayers
- This would reduce the likelihood that OEB would require providing the DTB to ratepayers

| | |
|---|---|
| **Ratepayer Impact** | • Typical Residential ratepayers would save $2.79/month if allocated over 5 years or $1.39/month if allocated over 10 years<br>• Relief would be temporary and could result in a spike in electricity bills following the conclusion of the mitigation initiative<br>• This benefit could apply to all Ontario ratepayers, or be conveyed as targeted relief |
| **Fiscal Impact** | • The tax payment did not result in a net fiscal benefit to the Province as it was offset upon consolidation by the tax expense on Hydro One's financial statements<br>• Dedicating the departure tax to ratepayers would have a negative fiscal impact as the Province would record an annual expense of $520M (5yrs) or $260M (10yrs)<br>• Reallocating the departure tax from OEFC to ratepayers would also cause an equivalent increase to the unfunded liability of OEFC (or "stranded debt") |
| **Other** | • Discussions with OEB would be required to ensure this tradeoff is acceptable. Otherwise, there may be additional fiscal risk pending an OEB decision on the treatment of the DTB<br>• This decision may lead to pressure for the Province to adopt a similar policy for future departure tax payments (e.g. municipal utility transactions)<br>• Implementation mechanisms require further consideration |

# Option 2: Allocate Trillium Trust Funds to Energy Projects

- Allocate a portion of the Trillium Trust to investments in electricity sector projects

- In advance of OEB's decision on Hydro One's rate application, the Province could expand the Trillium Trust by allocating a portion of the benefit that the Province received from the broadening of ownership of Hydro One, to electricity infrastructure projects
- In addition to mitigating the risk of an adverse regulatory decision, this would help defray the cost of investments that are made to modernize the province's electricity infrastructure (Potential projects could include transmission connection to remote communities and natural gas expansion)

| | |
|---|---|
| **Ratepayer Impact** | • The ratepayer impact may be small and/or deferred until projects are in-service<br>• Benefits may accrue to a select group of ratepayers depending on the projects that are funded |
| **Fiscal Impact** | • If invested in Provincially-owned assets, the cost would be spread over the life of the asset<br>• Incremental interest costs associated with funding any Moving Ontario Forward projects which had funding reallocated |
| **Other** | • Discussions with OEB would be required to ensure this trade-off is acceptable. Otherwise, there may be additional fiscal risk pending an OEB decision on the treatment of the DTB<br>• This represents a policy shift, as the asset optimisation amounts have been allocated to go to Moving Ontario Forward projects<br>• Depending on structuring, the Province may have expenses (upfront or over time) associated with electricity infrastructure spending without a mechanism for cost recovery<br>• Implementation mechanisms require further consideration |

# Option 3: Await OEB Decision (Status Quo)

- Take no action and let the OEB decide, as part of Hydro One's rate filing, whether the DTB should benefit ratepayers or shareholders

- The following table highlights considerations assuming the OEB rules in favour of ratepayers

| | |
|---|---|
| **Ratepayer Impact** | • Residential customers could benefit from a small reduction in rates (~8 cents/month for transmission customers), potentially continuing over several years<br>• Assuming a similar decision is applied to the distribution application, typical medium density Hydro One customers would experience a reduction of ~78 cents/month. However, this benefit would flow only to Hydro One customers |
| **Fiscal and Shareholder Impact** | • Share price could decline by ~$1.85 per share, due in part to the reduction in expected future earnings, and also because this surprise decision would affect perceived regulatory risk<br>• Hydro One may also write down the DTB, which could trigger a write down the Province's $2.4B portion of this benefit that has already credited to the Trillium Trust<br>• As a result of both the decline in share price, and write down of the tax benefit, the Province may have difficulty in reaching its objective of $4B in net gains from the broadening of ownership of Hydro One to be dedicated to the Trillium Trust |
| **Other** | • This option would allow for targeted benefits to flow to Hydro One customers, but the Province would not control the size or timing of those benefits<br>• The Province would not be credited for any rate mitigation resulting from this outcome, although the Province could emphasize the OEB's role in protecting consumers<br>• Some of the downside would be absorbed by private investors |

Fyi, I just put down a few updates quickly so that maybe the effort could be combined later on. So is just a marker to start the effort.

I know you mentioned will focus on DT and TT and I'm totally flexible how to move this.

John.

Hi,

There's a meeting on Monday on Energy's rate mitigation decks.

Would you be able to review over the weekend -- perhaps updating the materials from December, as applicable -- so comments can get to the DMO Sunday night?

Apologies on the timing.

Thanks,
Ron

**DRAFT: COMMERCIALLY SENSITIVE AND CONFIDENTIAL ADVICE TO MINISTERS**

# Comments on Ministry of Energy's Draft "Proposed Initiatives to Transform Ontario's Electricity Sector"

The Ministry of Energy (Energy) is providing an update on progress related to transforming the province's electricity sector by elaborating on potential price mitigation initiatives, as outlined in its decks.

## CONTEXT

- As outlined in Energy's update, electricity costs have been increasing following investments to transform towards cleaner generation (i.e., meeting goals to decarbonize) and modernize the electricity infrastructure (e.g., more than $35 billion in cleaner generation and $15.5 billion investment by Hydro One alone in transmission and distribution systems).

- The government has taken action to lower electricity cost pressures to all consumers by taking actions, including deferring investments in generation (e.g., new build nuclear), improving market efficiency and decreasing costs related to renewable procurement (e.g. GEIA renegotiation, decreasing FIT prices, etc).

- The government introduced the Ontario Rebate for Electricity Consumers (OREC) which will provide a rebate equal to the 8% provincial portion of the Harmonized Sales Tax, saving $11 per month starting January 1, 2017 for eligible small businesses, farms and residential consumers and has taken steps to expand the Rural or Remote Electricity Rate Protection program, expected to save eligible RRRP customers about $45 per month, when combined with OREC.

- On November 28, 2016, the Minister of Energy announced the need for changes in how electricity resources are procured, the need for wholesale market renewal and greater electricity consumer choice.

- The Ministry of Energy is currently updating its Long-Term Energy Plan (LTEP), which provides an opportunity to consider a range of policy changes to how the Ontario energy sector operates.

## COMMENTS

A significant number of Energy's proposals ~~generally~~ involve shifting costs from the rate base to the tax base. While the subset of costed proposals may have a fairly limited residential rate payer impact (e.g. about $5-6/month for residential, less than 5% of the average monthly bill), those proposals would come at a material incremental fiscal cost ($1 billion to $1.3 billion). Note these impacts are lower than those presented in an earlier deck ($1.3 billion to $1.9 billion). Energy also presents other proposals where costs and impacts are "TBD".

Over the past five years, the existing fiscally funded electricity price mitigation efforts have averaged about $1.5 billion and is already expected to increase to about $2 billion with the introduction of OREC. The existing program costs are summarized in the table below:

| ($M) | 2011-12 | 2012-13 | 2013-14 | 2014-15 | 2015-16 | 2016-17[1] | 2017-18[1] |
|---|---|---|---|---|---|---|---|
| OCEB | 1,033 | 994 | 1,006 | 1,078 | 860 | - | - |
| OREC | - | - | - | - | - | 300 | 1,100* |
| Ending DRC[2] | - | - | - | - | 85 | 330 | 330 |

| | | | | | | | |
|---|---|---|---|---|---|---|---|
| NIERP | 120 | 120 | 115 | 108 | 120 | 120 | 120 |
| NOEC | 23 | 24 | 25 | 24 | 26 | 25 | 25 |
| OEPTC[3] | 354 | 406 | 418 | 429 | 444 | 450 | 460 |
| TOTAL | 1,530 | 1,544 | 1,564 | 1,639 | 1,525 | 1,225 | 2,005 |

1. 2016-17, 2017-18 based on forecasted numbers
2. 2015-16 estimated for 3 months of reduced DRC revenue
3. OEPTC amounts in all years based on energy component of the rebate.

* Sourced from Energy PRRT submission

OCEB – Ontario Clean Energy Benefit
OREC – Ont. Rebate for Electricity Consumers
NIERP – Northern Industrial Electricity Rate program
NOEC – Northern Ontario Energy Credit
DRC – Debt etirement Charge
OEPTC – Ont. Energy & Property Tax Credit

**Energy's Broad Policy Themes / Rationales**

A key theme / rationale cited by Energy is to no longer use rate-base to pay for "social programs" by shifting cost of OESP, RRRP and proposed First Nation Rate to tax-base.

- Energy has typically in the past provided a constitutional law assessment on these programs, providing support for these programs to be ratepayer-supported programs as they provide electricity system benefits / are part of a comprehensive regulatory framework.
- Switching messaging may risk criticism and legal challenges on these and other remaining rate-base funded programs.

| Energy Theme / Rationale | Key Staff Comments |
|---|---|
| **Provide greater support for lower income Ontarians by enhancing the OESP or expanding eligibility** | • Significant fiscal exposure -- $0.4-0.45 bn at current levels, higher if enhanced. On-bill benefits.<br>• Could contemplate phase-in to manage fiscal impact.<br>• Could look at phasing out existing fiscal-funded programs also targeted to low income or identified groups (e.g., OEPTC, NOEC).<br>o Not on the bill, so less direct and visible electricity cost mitigation.<br>o Phase-out to reflect time to increase application based OESP reaching an increasing portion of eligible households. |
| **Fund conservation programs through the tax-base for the remaining term of the existing CDM framework and transition costs to the new "green bank entity" over time** | • Potentially significant fiscal impact – current program costs are about $0.45 bn<br>• Conservation programs do provide an electricity system benefits, but would now be fiscally-funded, so a cross-subsidisation from tax-base<br>• Accessing the cap&trade amount in the GGRA would crowd-out other GGRA programs, affecting overall GHG reductions and negatively affect the diccal plan |
| **Expand the scope of the "Trillium Trust" to make investments in energy infrastructure eligible for funding** | • Would require either squeezing out existing Moving Ontario Forward project funding from the Trillium Trust, requiring funding from another source; or additional funding from asset optimization, given that the government is committed to using the targeted $5.7 billion to fund across Moving Ontario Forward projects<br>• Would have little near-term impact, unless TT funding displaces near-term, non-incremental projects coming onto service<br>• Could lower utility value, including Hydro One, by removing projects, currently and prospectively, that they might have been able to add to their ratebase and earn a return |
| **Empower Energy Agencies to Increase Cost Effectiveness and Improve Efficiency** | • IESO to modernize the electricity market through market renewal<br>• OEB to identify opportunities for future LDC efficiencies/rates |

Formatted Table

| | |
|---|---|
| | • OEB to work with OPG operational efficiencies and pass on to ratepayers |
| **Give consumers more choice by allowing to "opt into" alternate rate plan** | • Start with the option of flat electricity rate option<br>• OEB to develop more options over time<br>• ~~Provide more details regarding th Global Adjustment (GA)~~ |
| **End the Debt Retirement Charge (DRC) early for commercial and small industrial Class B electricity consumers** | • End of the DRC had previously been linked with a balance between rate mitigation and managing stranded debt<br>• Provides only temporary incremental mitigation, as DRC legislated to end April 1, 2018.<br>• End of the DRC had previously been linked to retirement of residual stranded debt<br>• Removing additional DRC revenue from the OEFC would call into question the position that the debt and liabilities of the old Ontario Hydro can continue to be supported |
| **Consider options to defer the pass-through to ratepayers of some generation supply costs by partially financing the cost of the global adjustment (GA)** | • Incurring debt to pay the generators their contracted or regulated payments<br>• Energy's deck analyzes the system cost and ratepayer impacts of the option, but does not address the fiscal ~~impact/accounting treatment, or implementation~~<br>• Likely will lead to significant fiscal impact due to creation of large liability item (estimated to be up to $66Bn) either directly on the Province's books or upon consolidation<br>• Furthermore, likely entails significant legal / Constitutional Law risks. |

Formatted: Font: Bold

Formatted: Font: Bold

**Detail on Proposals**

Energy has outlined the following rate mitigation proposals with significant bearing on the fiscal plan:

OESP & RRRP (Total of about $0.4 to 0.45 Billion/year):

This would shift the cost of the current and proposed expanded Ontario Electricity Support Program (OESP), and the Rural or Remote Electricity Rate Program (RRRP), to the tax base. *Note: that the fiscal exposure would increase if the OESP take up rate is larger, and faster than assumed.*

- The fiscal impact from shifting OESP and RRRP to the tax base may also be larger if future changes are made to the programs. Energy notes that
  - The programs could provide greater support for lower income Ontarians by enhancing the OESP or expanding eligibility (e.g., by 50% in the table).
  - The RRRP regulation provides a funding mechanism for transmission infrastructure required to grid connect remote First Nation communities. Considerations for how that funding will be supported by the tax base will need to be determined. [The current deck links Trillium Trust for remote electrification.]

Fund Conservation Programs through the Tax-Base:

This would be for the remaining term of the existing Conservation and Demand Management framework. Over time, the costs would be transitioned to the new "green bank entity", to shift cost recovery from ratepayers to cap and trade revenues.

- Energy's rationale for the cost shift would be in recognition of the burden borne by ratepayers in phasing out coal generation.

Expanding the scope of the Trillium Trust to invest in energy infrastructure:

The Province is currently targeting $5.7 billion from asset optimization to dedicate to the Trillium Trust for investment in infrastructure under Moving Ontario Forward.

- Expanding access to natural gas is already included under Moving Ontario Forward.
- Using the Trillium Trust for additional energy projects would require either
    - squeeze out existing Moving Ontario Forward project funding from the Trillium Trust, requiring funding from another source, or
    - additional funding from asset optimization, given that the government is committed to using the targeted $5.7 billion to fund across Moving Ontario Forward projects,
    - in effect, in both cases above, incremental investments for energy infrastructure from the Trillium Trust would have negative fiscal impacts once the assets are in-service and amortized.
- Investments through the Trillium Trust instead of through other electricity sector entities (Hydro One, OPG, LDCs) could have additional negative fiscal impacts as these entities could see reduced ratebase growth, lowering the revenues that the Province realizes from these entities (e.g., consolidated net income, payments-in-lieu of taxes, etc.).
    - May also negatively impact Hydro One share price if the measure is perceived by the market as reducing Hydro One's potential ratebase growth.
- Unless applied to existing projects, to displace ratepayer-supported costs, this measure would have little or no near-term rate impact.

Departure Tax:

As a result of the IPO, Hydro One paid a "departure tax" payment in lieu of tax (PIL) of $2.6 billion, as a final true-up of its PILs tax obligation. Energy lists using some or all of this departure tax for price mitigation.

- This was paid to the Ontario Electricity Financial Corporation (OEFC). The departure tax payment was fiscally neutral to the Province as the income to the OEFC was fully offset by a reduction in ESDI resulting from reduced net income of Hydro One.
- Using some or all of it for price mitigation would require restating the net stranded debt paydown by OEFC related to the IPO. [As the departure tax paid was fiscally neutral, OEFC's uplift was primarily the result of the related deferred tax benefit, as well as the s.50.3 benefit under the *Electricity Act, 1998*.]
- This would be a one-time measure, potentially spread out over a few years, and fiscal impact, as the departure tax amount was one-time.

Energy Agencies' Cost Effectiveness and Efficiencies:

By empowering energy agencies to continue to move forward with various programs, the initiative is expected to lead to cost effectiveness and efficiencies that could be passed through to the benefit of the rate payers. These initiatives, other than the tax incentives for consolidations, are generally not considered to have fiscal impacts. [Check.]

- IESO's Market Renewal Initiatives – the current "two-schedule price setting system", which is used to settle and dispatch resources in the IESO- administered market, is under review by the IESO.

**Commented [JK1]:** Not sure what exactly the single schedule system means...stayed away from mentioning as a result.

- This review is part of a series of consultations launched by the IESO to consider the efficiency and effectiveness of various aspects of the electricity market, and will focus on the energy market pricing system.
- As part of this review, potential design alternatives will be compared against the status quo with an overall objective of providing "an efficient dispatch and pricing process that produces transparent prices."
- Moving to "technology-agnostic" procurements will provide new opportunities for innovation and modernization and ensure ratepayers receive the best prices possible.
- IESO estimates that the total implementation cost – including a 15% contingency and net of avoided costs – will be $150 million. The bulk of the costs (capital) would only be recovered once the project has been implemented and as the benefits are being realized.

- LDC Efficiencies and Rates – reducing osts and having LDCs become more efficient could result in a reduction of Distribution costs on electricity bills, now accounting for about 20% of the total bill.
  - The OEB has a mandate to regulate the electricity distribution sector in the public interest, ensuring the financial viability of the sector while promoting reliable service to customers at just and reasonable rates.
  - Since 2012, the OEB has taken action – through the Renewed Regulatory Framework for Energy – to more closely link rate regulation with performance measures and outcomes.
  - In 2012, the government asked the Ontario Distribution Sector Review Panel to review the distribution sector and make recommendations about how it could become more efficient. While the Panel concluded that a $1.2 billion net present value in savings could be achieved by consolidating LDCs into 8-12 regional entities, the government response was to pursue voluntary consolidation and put in place tax incentives for consolidation.
- OPG Operational Efficiencies – provide expectation that OPG meet more aggressive cost targets, improving efficiency by about $3/Megawatt hour (MWh).
  - The Province could provide instructions to OPG to focus on its stretch target as part of the Minister's Concurrence letter. This would be a public document that would likely be reviewed by OEB and, if adopted by OEB, would be incorporated as part of OPG's current rate application.
  - If OPG is unable to meet more aggressive cost targets, this could impact net income, and the Province's fiscal plan.

Debt Retirement Charge (Total of about $0.45 Billion in annualized rate to 2017-18):
Ending the DRC early for Class B customers (commercial, small industrial) would have an impact of about $0.45 billion in 2017-18.

- The end of the DRC had previously been linked with balancing mitigation and progress on stranded debt reductionthe end retirement of the residual stranded debt.
- Removing additional DRC revenue from the OEFC would call into question the position that the debt and liabilities of the old Ontario Hydro can continue to be supported.

Debt Financing of the Global Adjustment Proposal :
In a draft Energy deck shared with the Ministry of Finance, Energy considers a number of options to delay recovery of part of the Global Adjustment (GA) by debt financing and recovering over a 25 to 30 year period.

- Energy's deck analyzes the system cost and ratepayer impacts of the option, but does not address the fiscal impact/accounting treatment, or implementation. There are four options considered:
  - Option 1:
  - Option 2:
  - Option 3:

**Formatted**

**Commented [JK2]:** http://www.ieso.ca/Pages/Participate/Stakeholder-Engagement/SE-114.aspx

**Formatted**

**Formatted:** Bulleted + Level: 1 + Aligned at: 0" + Indent at: 0.25"

**Formatted:** Bulleted + Level: 2 + Aligned at: 0.5" + Indent at: 0.75"

- Option4:

- While the details of the proposal would need to be analyzed prior to a decision to proceed with further consideration of the proposal, the Office of the Provincial Controller Division's (OPCD) preliminary assessment is that this would lead to a negative fiscal impact, such as having to book a large deficit amount.

Hi,

Attached is a rate mitigation idea we've been asked to work on related to financing the global adjustment. Ideally, it would provide immediate rate relief without having a fiscal impact. The amounts are scalable but we've provided some illustrative numbers.

# Debt Financing the Global Adjustment

January 10, 2017

*Working Draft for Discussion Purposes Only*

# Purpose

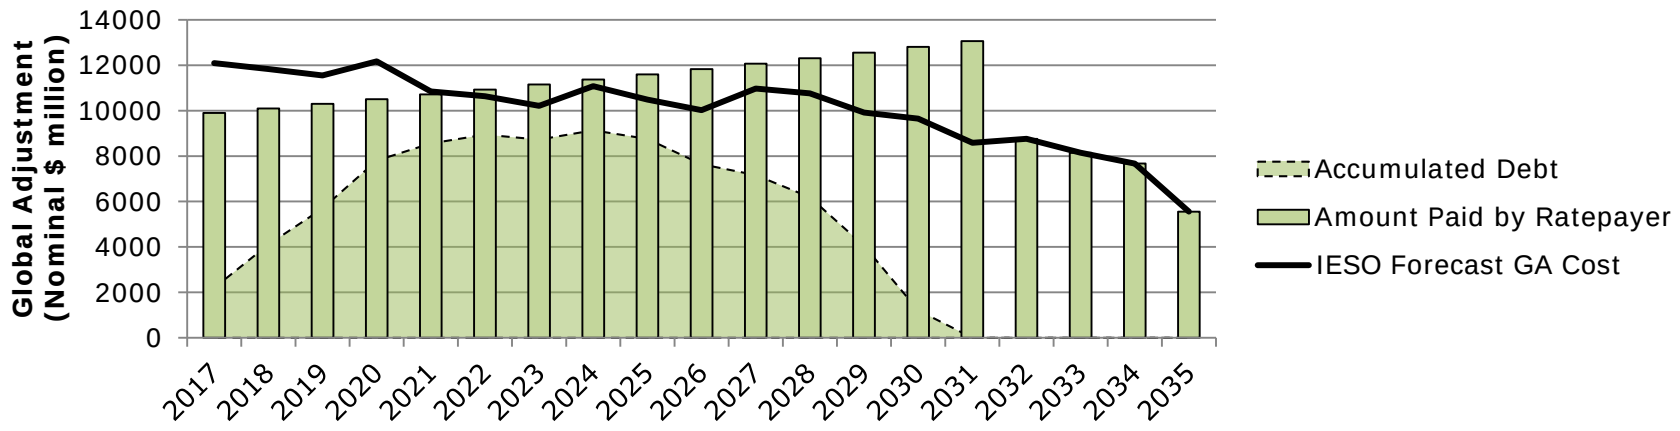
- To analyze the system cost and ratepayer impact of partially financing the cost of the global adjustment (GA) by incurring debt to defer some of the cost.

- An indicative GA financing proposal is presented followed by a qualitative discussion of the proposal's risks.

- The remainder of the presentation quantitatively examines several different scenarios for debt financing the GA, showing:
  - The amount of debt incurred;
  - Impact on total system cost; and
  - Impact on residential bills.

# Indicative Proposal to Debt Finance the Global Adjustment

- For the purpose of discussion, the amount of GA paid by ratepayers in each year over the forecast period is set at a fixed amount until the accumulated debt has been completely paid off.
- All scenarios consider setting the 2017 amount of GA paid by ratepayers at a value lower than the true cost of GA and increasing that amount year-over-year at inflation (assumed to be 2%) until the debt has been paid off.
- In this way, GA costs will be "tilted" over time by lowering costs in the short term and increasing costs in the long term.
- In some scenarios, the amount of GA paid by ratepayers *above* the expected true cost of GA is capped so as to limit large increases in the cost of electricity in any given year.
- Analysis is based on forecasts from Independent Electricity System Operator's (IESO) Ontario Planning Outlook.



**Sample debt financing**: Ratepayers pay less than the cost of GA in early years, accumulating $9 billion of debt that is paid off in 2031 by paying more than the cost of GA in later years.

# Considerations and Risks – Ratepayer

Ratepayer:

- Incurring debt to finance the GA, while lowering costs in the short term, results in a more rapid rise in electricity prices beyond the rate of increase already expected.

- The GA financing proposal involves accruing large amounts of debt to reduce electricity rates. This debt would be highly sensitive to interest rates which could extend repayment timelines or put significant pressure on rates (see Scenario 3 for an example of such interest rate risk).

- GA and HOEP provide a natural hedge against each other. Smoothing only one component would lead to greater price volatility. For example, if HOEP is higher than expected (due to higher gas or carbon prices, for example), all-in rates will rise significantly as the natural decrease in GA would not occur given the prescribed GA rate.

- Conversely, if GA is higher than forecast (i.e., because of lower HOEP or additional out-of-market costs), the debt would increase to a higher amount, requiring additional debt service payments and/or a longer recovery period.

- Should Ontario demand be lower than forecasted, the cost of paying off the debt will be shared by a smaller pool of consumption, further increasing future costs for individual ratepayers.

# Considerations and Risks – Legal, Fiscal and Stakeholder

Legal:

- Such changes to the financing of the GA may require legislative or other amendments and will require further consultation with Legal Services Branch.

Fiscal / Accounting:

- Further analysis is required on whether such changes to the financing of the GA would affect the Province's current accounting treatment for the GA and represent a potential fiscal risk. As such, early engagement with Legal Services Branch and Treasury Board Secretariat is advised.

- The significant amount of additional Provincial borrowing needed to debt finance the GA, and associated risks (e.g., interest rates, repayment timelines), could put pressure on the Province's credit rating. Further analysis is required and would suggest early engagement with Ministry of Finance / Ontario Financing Authority.

Stakeholder:

- The significant deferral of electricity system costs over a long time-horizon and associated interest costs may draw criticism from some stakeholders as creating a new "stranded debt" of the sector. Note: the Debt Retirement Charge was removed from residential bills in 2016 and will be removed for remaining customers in 2018.

# GA Debt Financing Scenarios

1. Status Quo
   - Ratepayers continue paying the full cost of the GA in each year without incurring any debt.

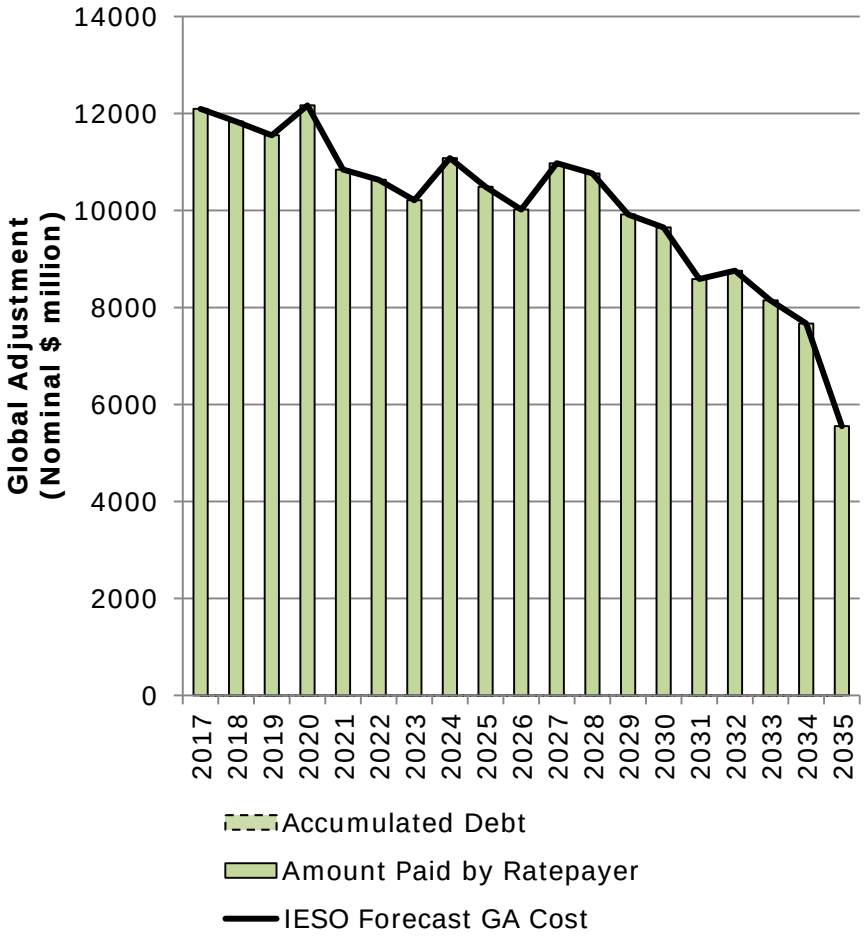
2. Maximize short-term cost reductions
   - This scenario considers the maximum amount by which ratepayer GA costs in 2017 can be reduced such that the accumulated debt is paid off over a 25-30 year financing period. This scenario assumes a 3% borrowing interest rate.

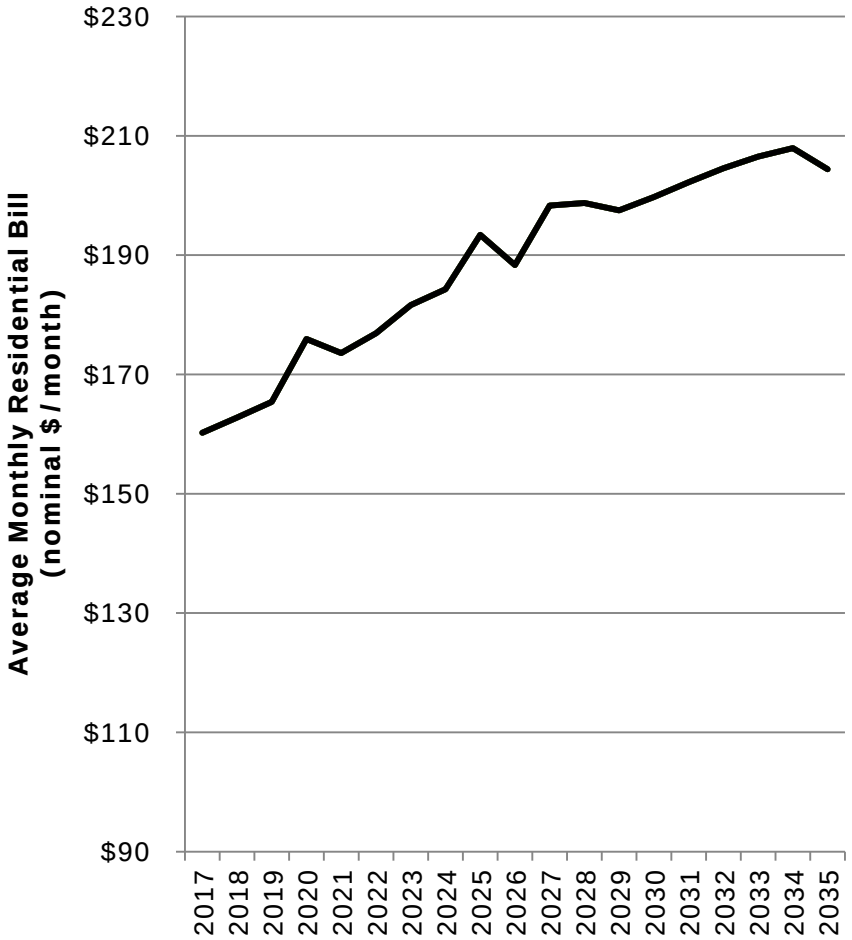
3. Interest Rate Risk
   - Using the 30-year financing case from Scenario 2, this scenario looks at the consequence of an increase of 2 percentage points in the borrowing interest rate.

4. Maximize short-term cost reductions with limits
   - The same as Scenario 2 but with GA over-payments capped at $2 billion above the true cost of GA in any given year.

# 1. Status Quo – Global and Residential Impacts

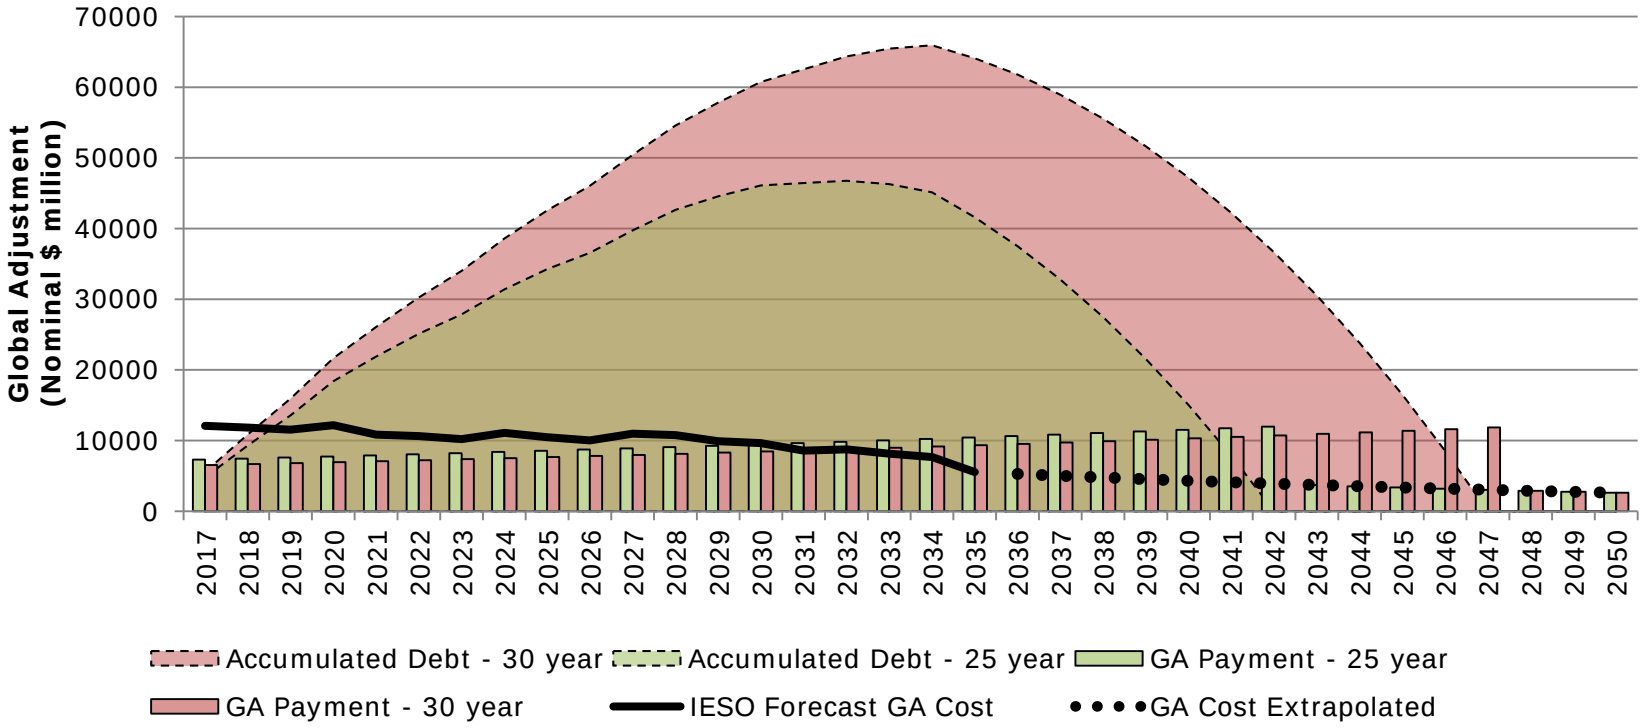
- Ratepayers continue paying the true cost of GA.





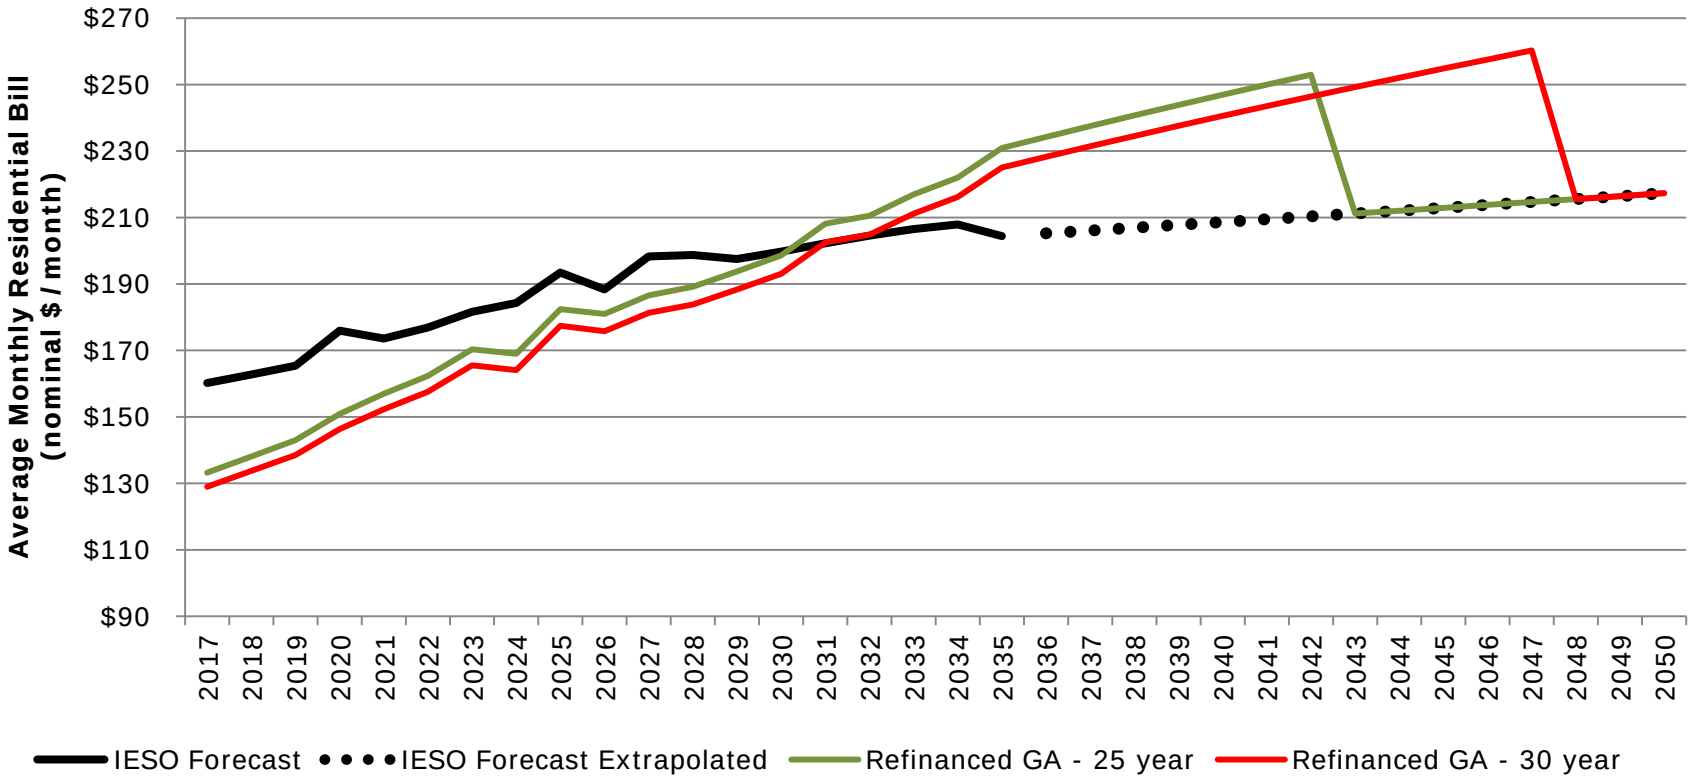
# 2. Maximize Short-term Cost Reduction – Global Impacts

- In this scenario, the starting ratepayer GA payments in 2017 are lowered as far as possible so that the accumulated debt is fully paid in 2042 (25 year financing, green) and 2047 (30 year financing, red) respectively.



- A **reduction of 40-46% in GA payments** in 2017 is possible in this scenario by **accumulating up to $66 billion of debt.**
- Further reductions would require additional payments beyond those indicated in order to pay off the debt by 2042 and 2047 in each of the scenarios respectively.

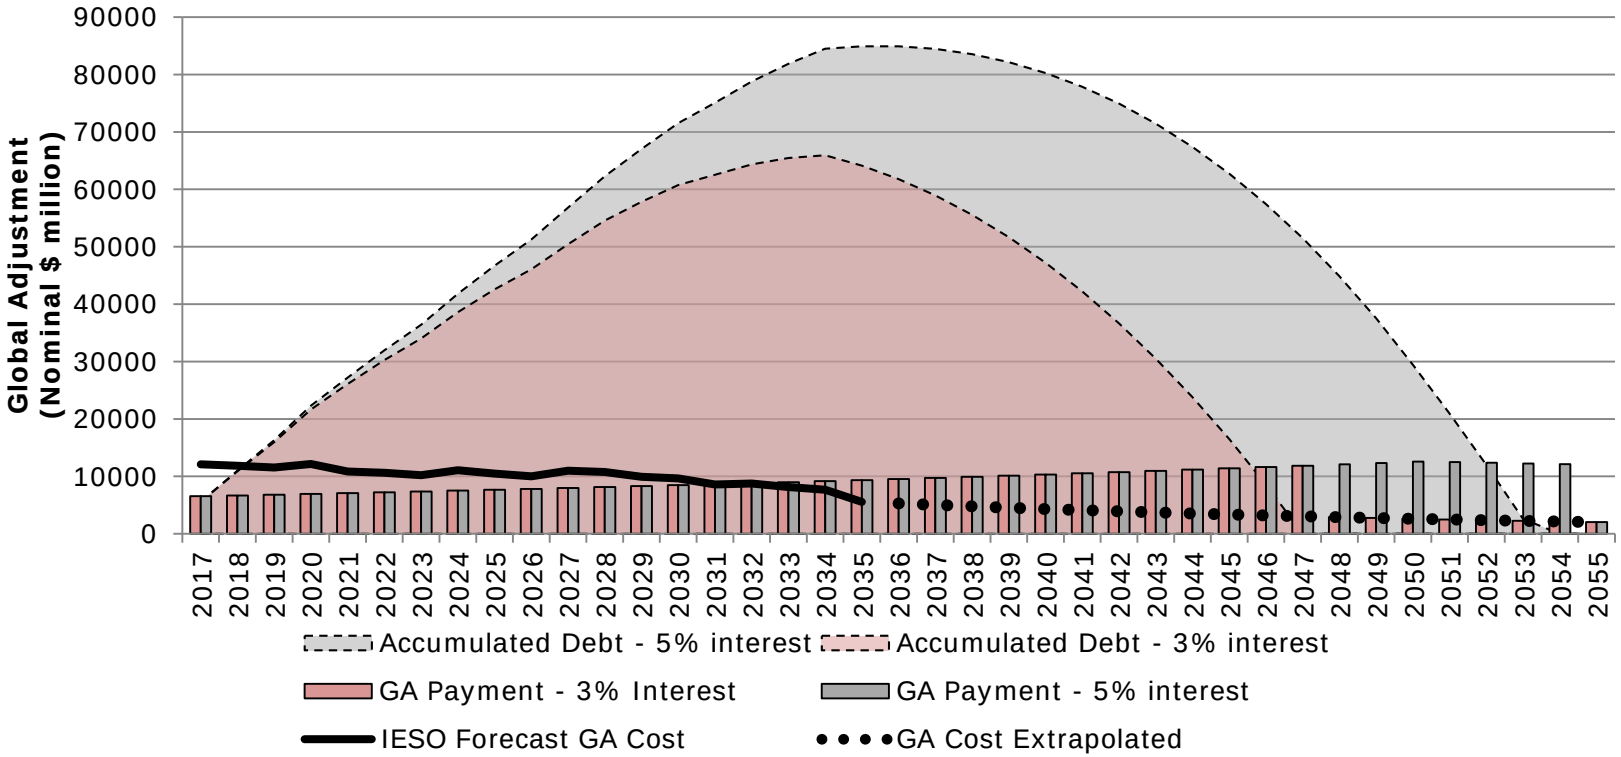
# 2. Maximize Short-term Cost Reduction – Residential Impacts



- This scenario results in a **short-term reduction of up $27-$31/month** in 2017 at the cost of **a long-term increase of up to $43-$46/month** relative to the IESO forecast.
- Due to the significant increase in electricity bills in later years, Scenario 4 considers limiting the amount above the true cost of the GA that is paid by ratepayers.

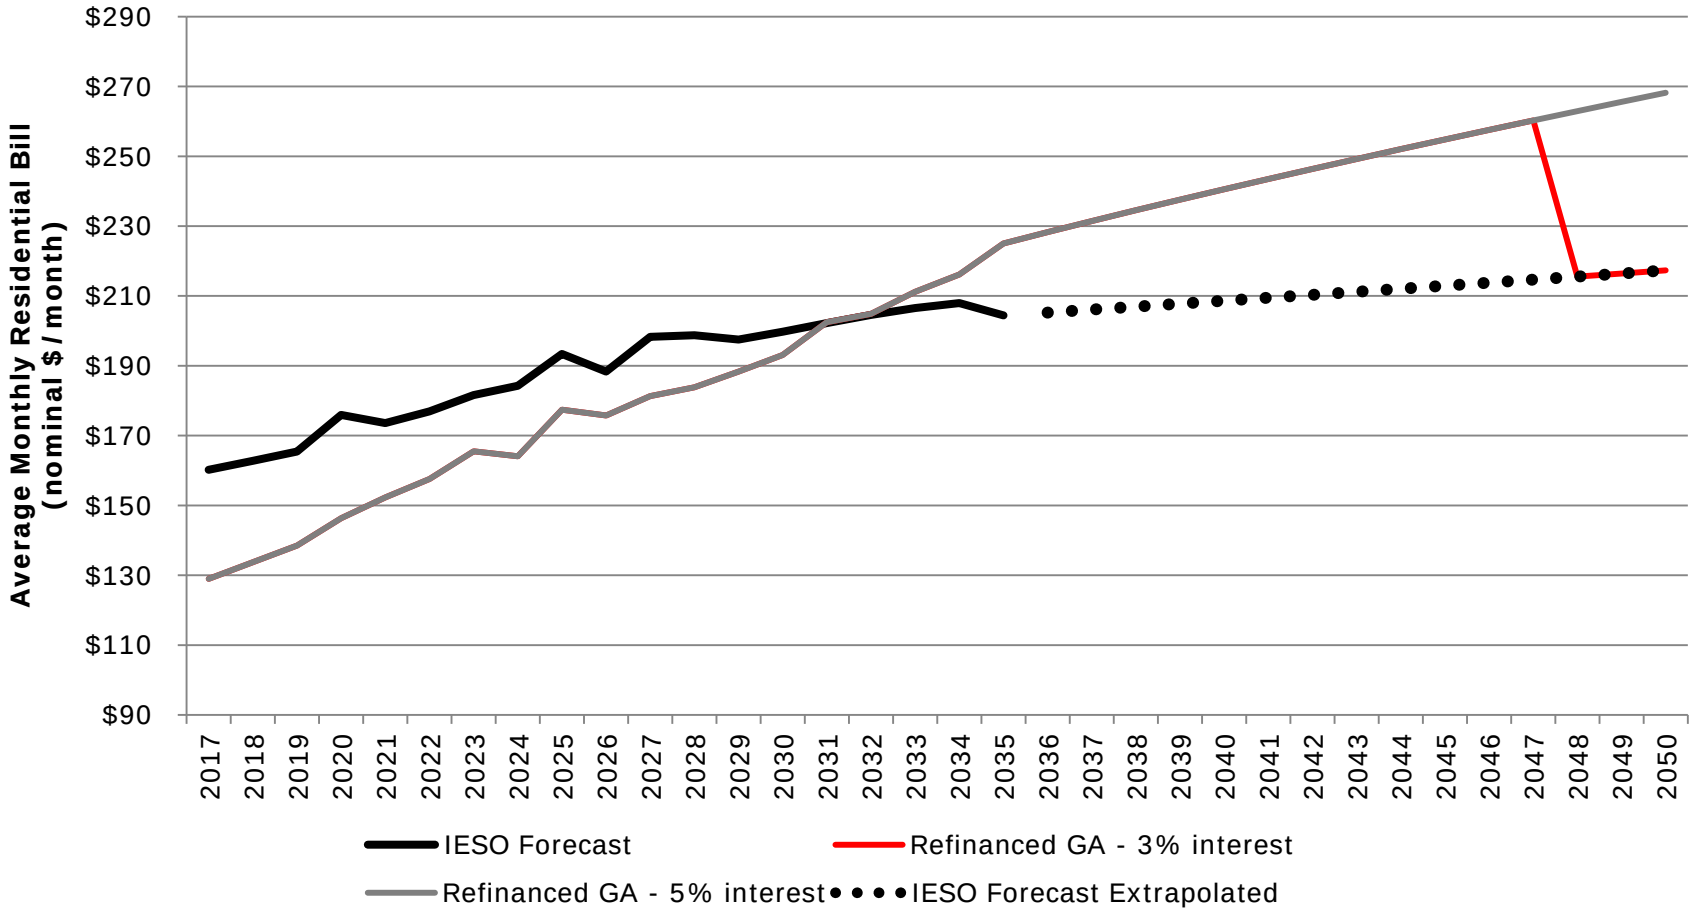
# 3. Interest Rate Risk – Global Impacts

- This scenario compares the maximal 30-year financing case from Scenario 2 (red, assuming a 3% interest rate) and calculates the resulting debt that would accrue due to an increase of two percentage points in the borrowing interest rate (grey, 5% interest).



- Under a 30-year financing payment schedule that assumes a borrowing interest rate of 3% (red), an increase in interest rate to 5% results in **more than $50 billion of accumulated debt in 2047** (grey) requiring further GA over-payments beyond 2047 in order to service the debt.

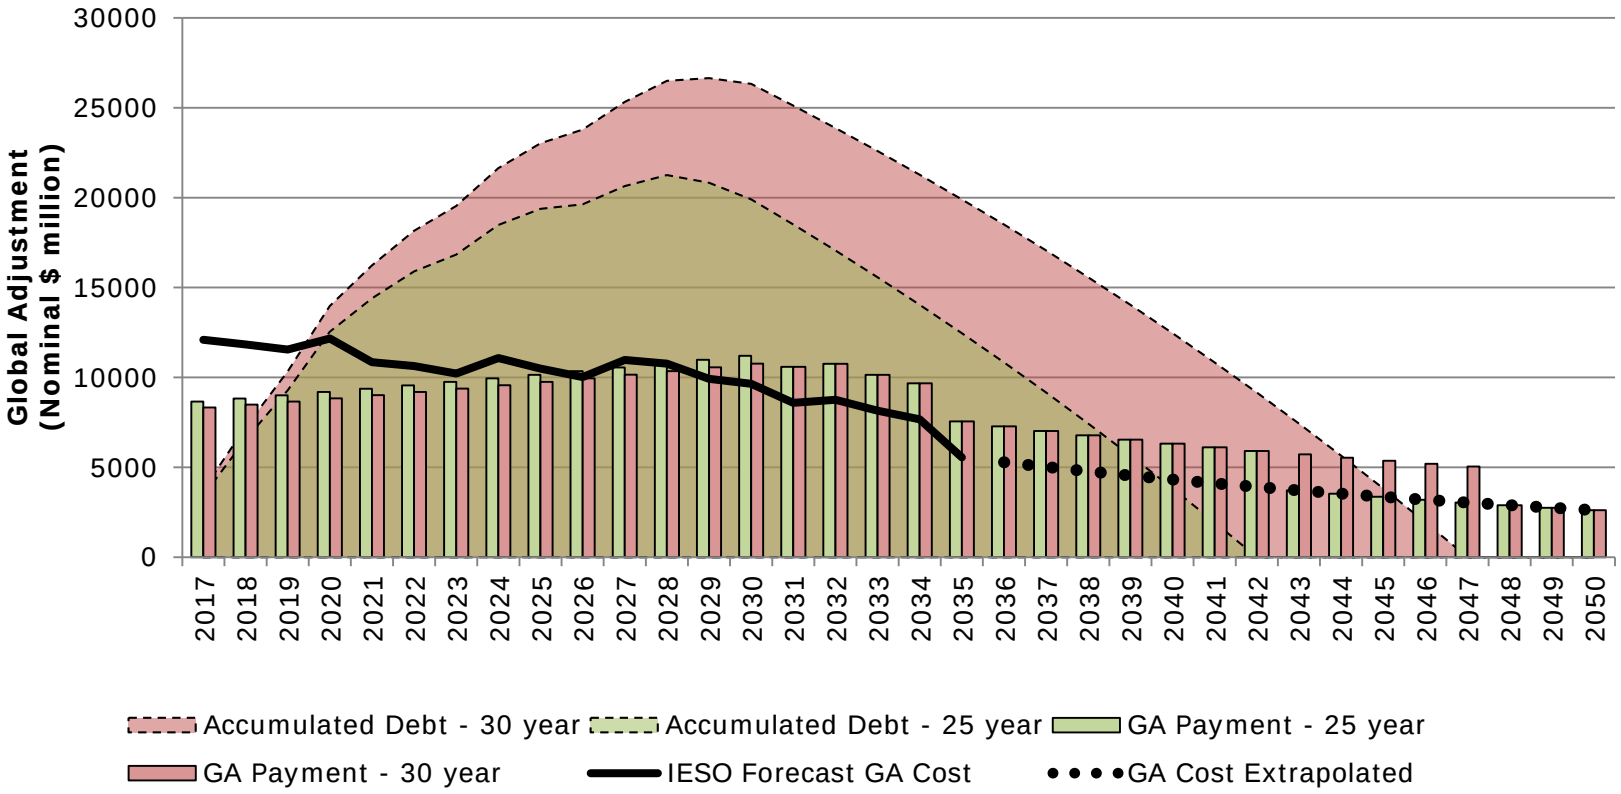
# 3. Interest Rate Risk – Residential Impacts



- In this scenario, an increase in the borrowing interest rate lengthens the financing period beyond 2047.

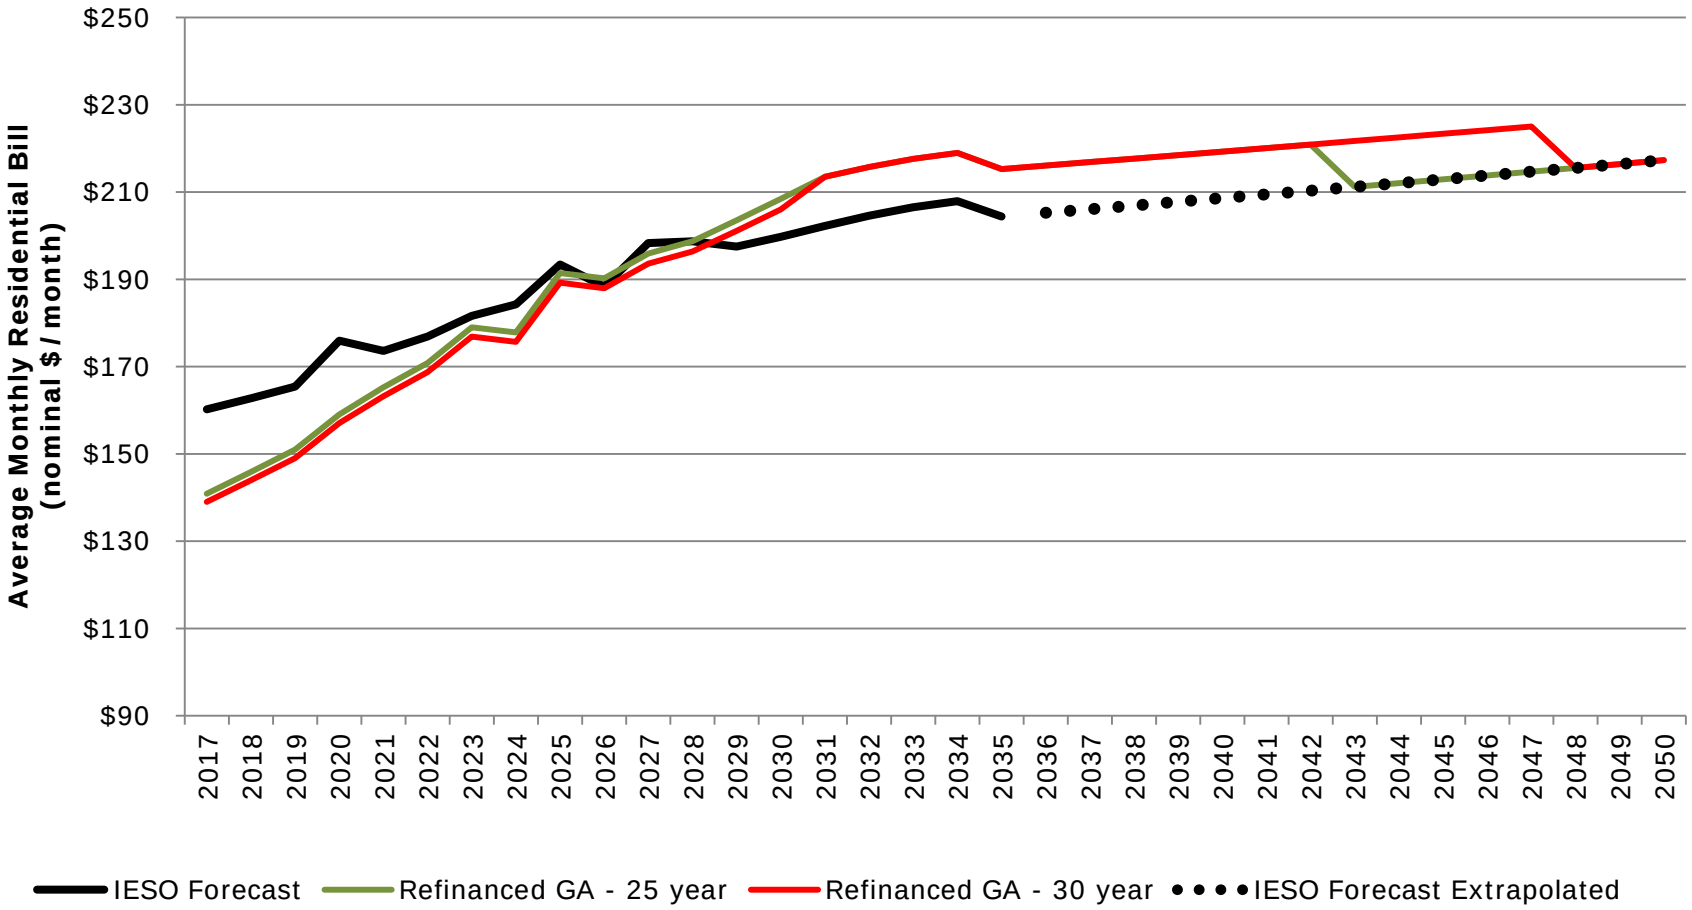
# 4. Maximize Short-term Cost Reduction with Limits – Global Impacts

- In this scenario, the starting ratepayer GA payments in 2017 are lowered as far as possible so that the accumulated debt is fully paid in 2042 (25 year, green) and 2047 (30 year, red) respectively subject to limiting ratepayer over-payments to no more than $2 billion above the true cost of GA.



- A **reduction of 28-31% in GA payments** in 2017 is possible in this scenario by **accumulating up to $26 billion of debt.**

# 4. Maximize Short-term Cost Reduction with Limits – Residential Impacts



- This scenario results in **a short-term reduction of up $19-$21/month** in 2017 at the cost of **a long-term increase of up to $11/month** in 2029-2047 relative to the IESO forecast.

# Debt Financing the Global Adjustment

January 10, 2017

*Working Draft for Discussion Purposes Only*

# Purpose

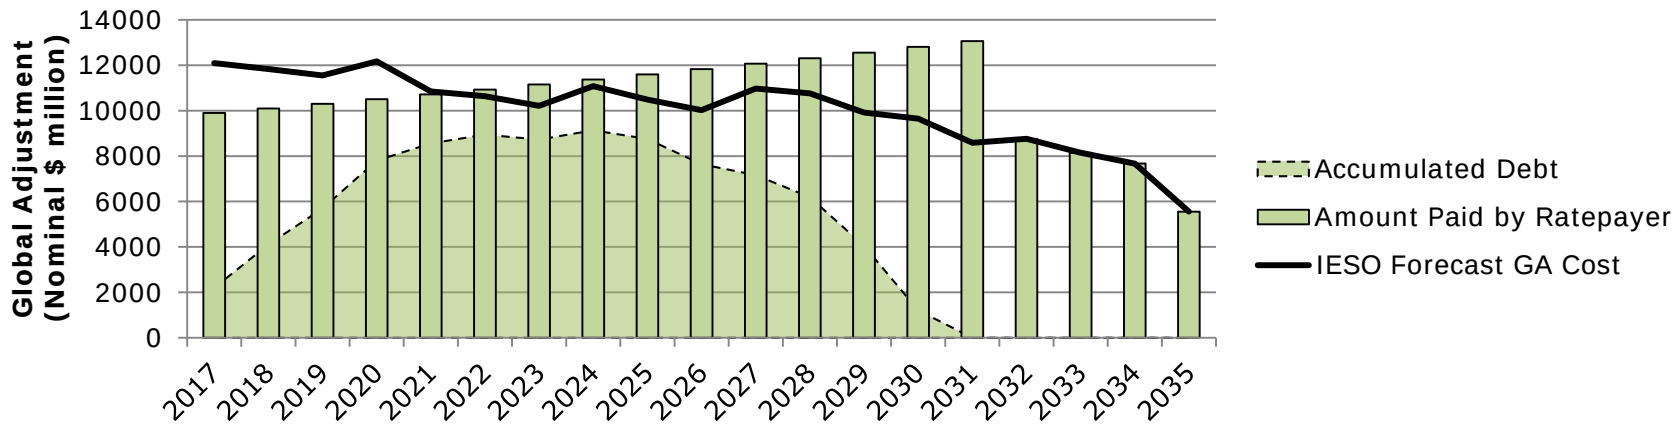
- To analyze the system cost and ratepayer impact of partially financing the cost of the global adjustment (GA) by incurring debt to defer some of the cost.

- An indicative GA financing proposal is presented followed by a qualitative discussion of the proposal's risks.

- The remainder of the presentation quantitatively examines several different scenarios for debt financing the GA, showing:
  - The amount of debt incurred;
  - Impact on total system cost; and
  - Impact on residential bills.

# Indicative Proposal to Debt Finance the Global Adjustment

- For the purpose of discussion, the amount of GA paid by ratepayers in each year over the forecast period is set at a fixed amount until the accumulated debt has been completely paid off.
- All scenarios consider setting the 2017 amount of GA paid by ratepayers at a value lower than the true cost of GA and increasing that amount year-over-year at inflation (assumed to be 2%) until the debt has been paid off.
- In this way, GA costs will be "tilted" over time by lowering costs in the short term and increasing costs in the long term.
- In some scenarios, the amount of GA paid by ratepayers *above* the expected true cost of GA is capped so as to limit large increases in the cost of electricity in any given year.
- Analysis is based on forecasts from Independent Electricity System Operator's (IESO) Ontario Planning Outlook.



**Sample debt financing**: Ratepayers pay less than the cost of GA in early years, accumulating $9 billion of debt that is paid off in 2031 by paying more than the cost of GA in later years.

# Considerations and Risks – Ratepayer

Ratepayer:

- Incurring debt to finance the GA, while lowering costs in the short term, results in a more rapid rise in electricity prices beyond the rate of increase already expected.

- The GA financing proposal involves accruing large amounts of debt to reduce electricity rates. This debt would be highly sensitive to interest rates which could extend repayment timelines or put significant pressure on rates (see Scenario 3 for an example of such interest rate risk).

- GA and HOEP provide a natural hedge against each other. Smoothing only one component would lead to greater price volatility. For example, if HOEP is higher than expected (due to higher gas or carbon prices, for example), all-in rates will rise significantly as the natural decrease in GA would not occur given the prescribed GA rate.

- Conversely, if GA is higher than forecast (i.e., because of lower HOEP or additional out-of-market costs), the debt would increase to a higher amount, requiring additional debt service payments and/or a longer recovery period.

- Should Ontario demand be lower than forecasted, the cost of paying off the debt will be shared by a smaller pool of consumption, further increasing future costs for individual ratepayers.

# Considerations and Risks – Legal, Fiscal and Stakeholder

Legal:

- Such changes to the financing of the GA may require legislative or other amendments and will require further consultation with Legal Services Branch.

Fiscal / Accounting:

- Further analysis is required on whether such changes to the financing of the GA would affect the Province's current accounting treatment for the GA and represent a potential fiscal risk. As such, early engagement with Legal Services Branch and Treasury Board Secretariat is advised.

- The significant amount of additional Provincial borrowing needed to debt finance the GA, and associated risks (e.g., interest rates, repayment timelines), could put pressure on the Province's credit rating. Further analysis is required and would suggest early engagement with Ministry of Finance / Ontario Financing Authority.

Stakeholder:

- The significant deferral of electricity system costs over a long time-horizon and associated interest costs may draw criticism from some stakeholders as creating a new "stranded debt" of the sector. Note: the Debt Retirement Charge was removed from residential bills in 2016 and will be removed for remaining customers in 2018.

# GA Debt Financing Scenarios

1. Status Quo
   - Ratepayers continue paying the full cost of the GA in each year without incurring any debt.

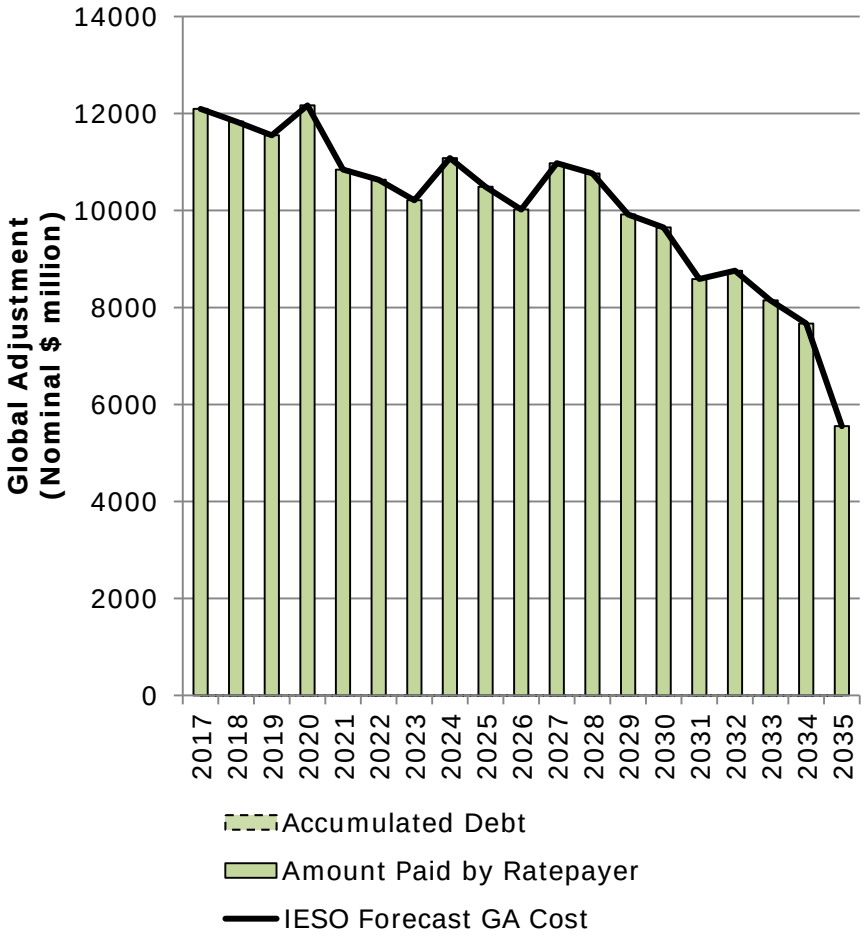
2. Maximize short-term cost reductions
   - This scenario considers the maximum amount by which ratepayer GA costs in 2017 can be reduced such that the accumulated debt is paid off over a 25-30 year financing period. This scenario assumes a 3% borrowing interest rate.

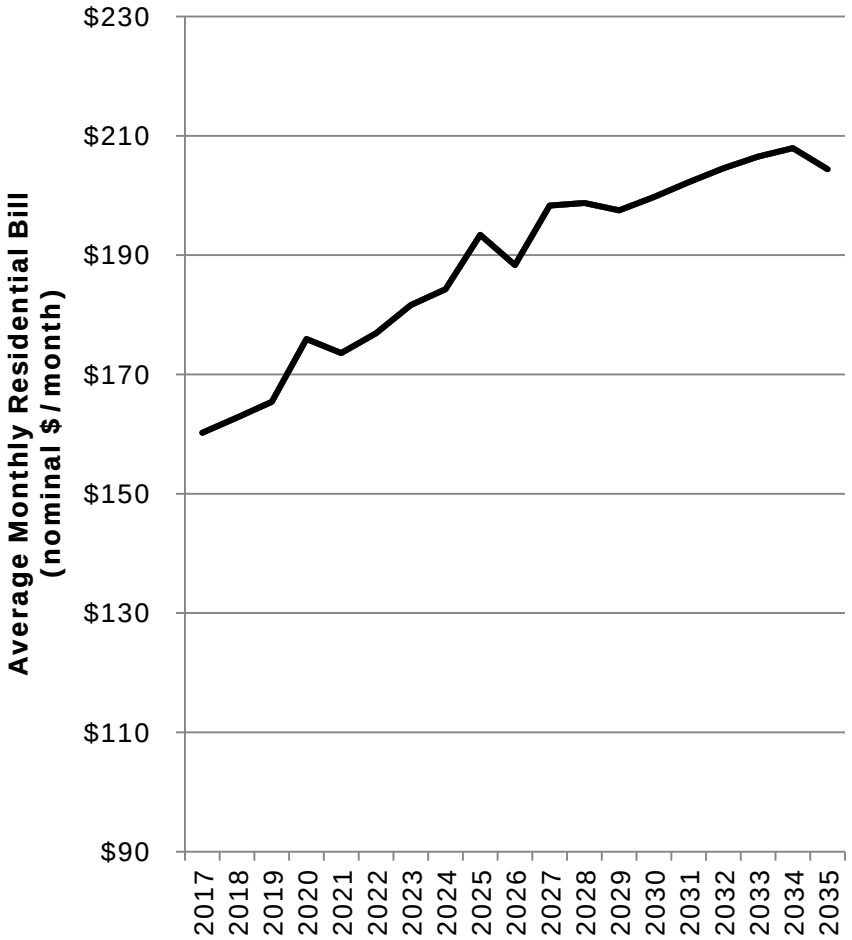
3. Interest Rate Risk
   - Using the 30-year financing case from Scenario 2, this scenario looks at the consequence of an increase of 2 percentage points in the borrowing interest rate.

4. Maximize short-term cost reductions with limits
   - The same as Scenario 2 but with GA over-payments capped at $2 billion above the true cost of GA in any given year.

# 1. Status Quo – Global and Residential Impacts

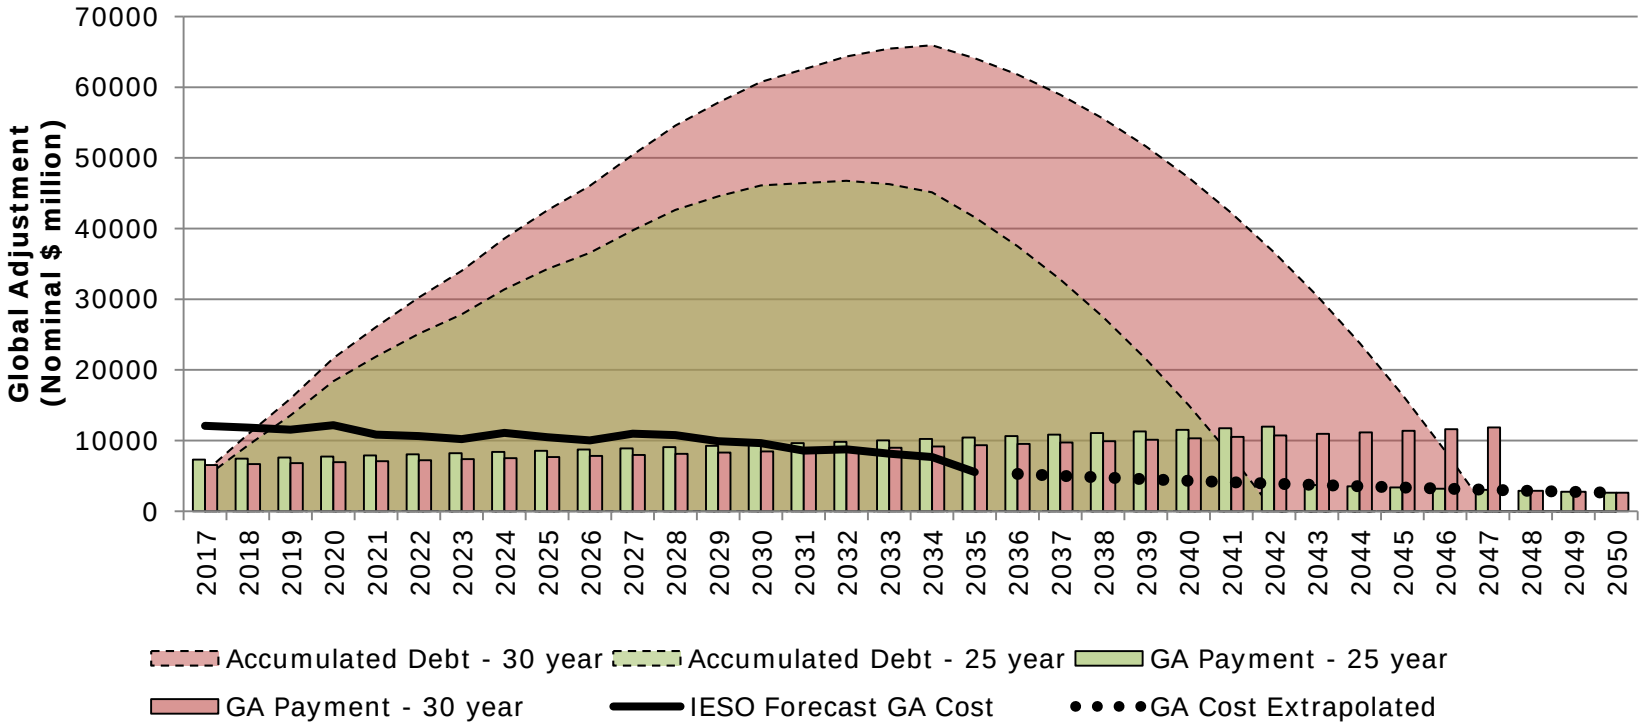
- Ratepayers continue paying the true cost of GA.





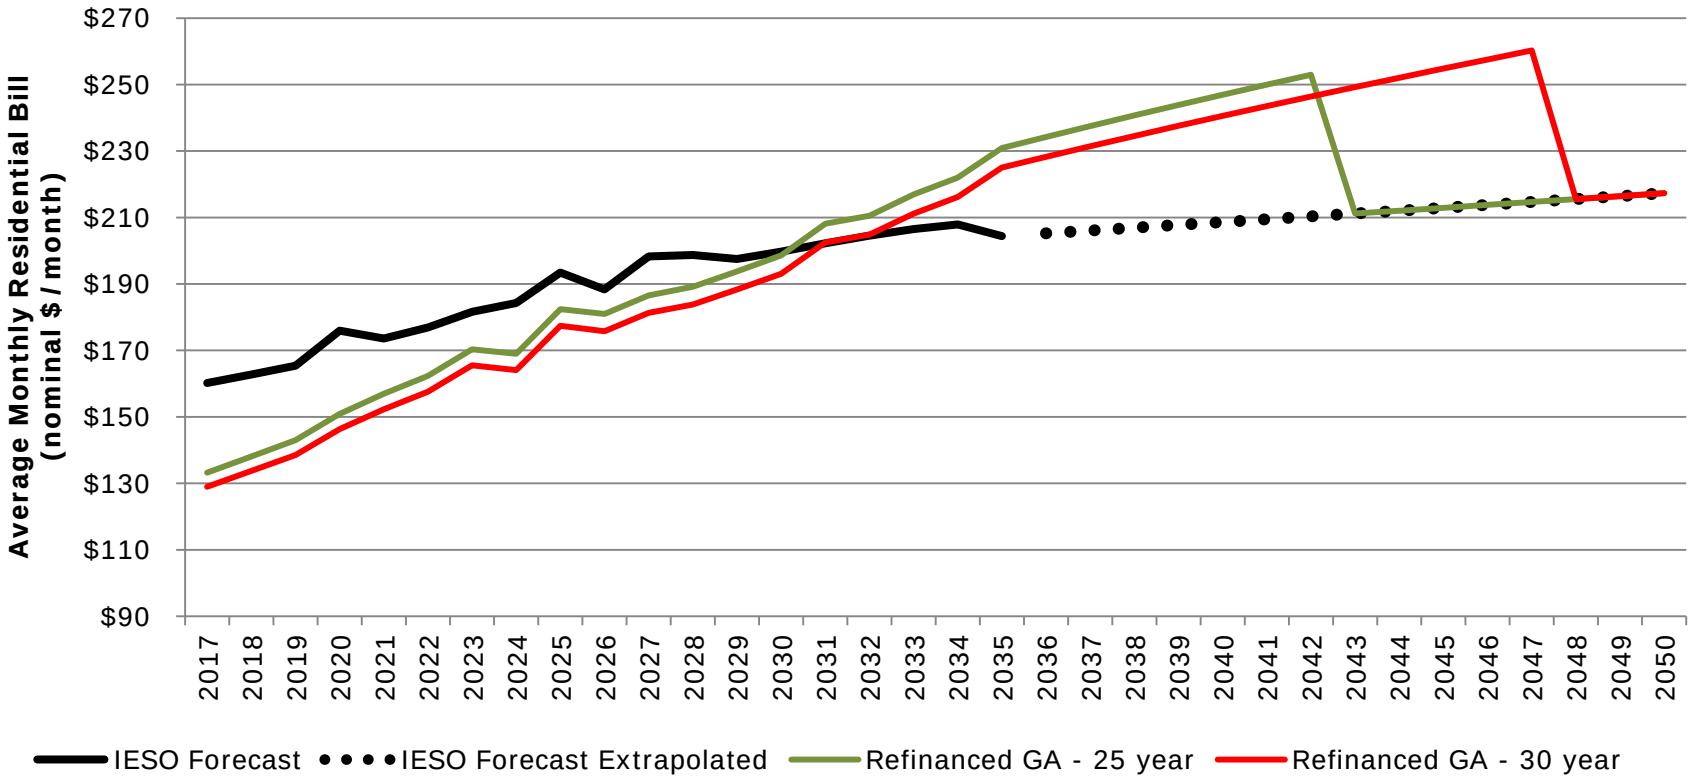
# 2. Maximize Short-term Cost Reduction – Global Impacts

- In this scenario, the starting ratepayer GA payments in 2017 are lowered as far as possible so that the accumulated debt is fully paid in 2042 (25 year financing, green) and 2047 (30 year financing, red) respectively.



- A **reduction of 40-46% in GA payments** in 2017 is possible in this scenario by **accumulating up to $66 billion of debt.**
- Further reductions would require additional payments beyond those indicated in order to pay off the debt by 2042 and 2047 in each of the scenarios respectively.

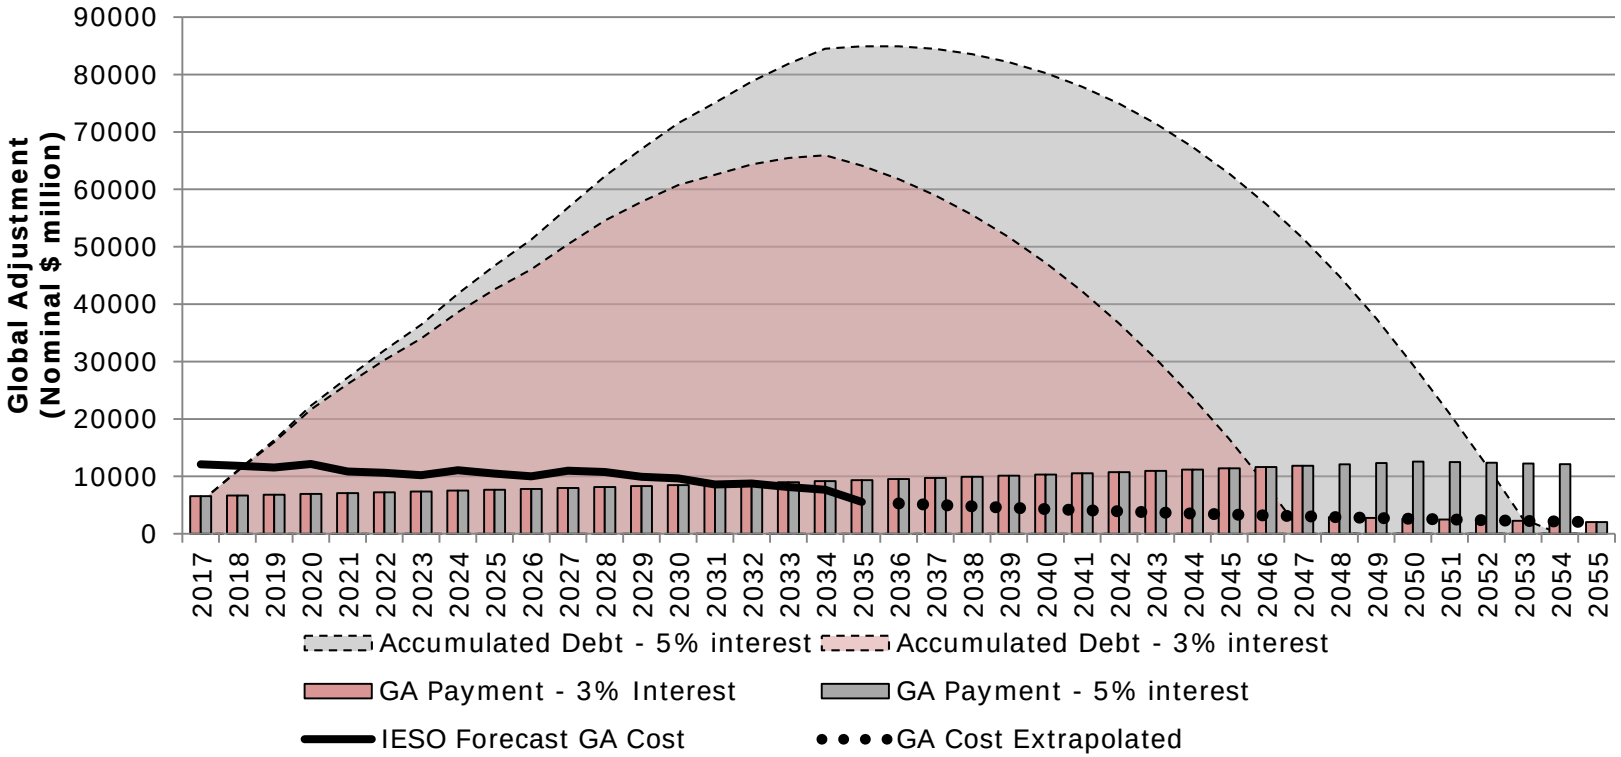
# 2. Maximize Short-term Cost Reduction – Residential Impacts



- This scenario results in a **short-term reduction of up $27-$31/month** in 2017 at the cost of **a long-term increase of up to $43-$46/month** relative to the IESO forecast.
- Due to the significant increase in electricity bills in later years, Scenario 4 considers limiting the amount above the true cost of the GA that is paid by ratepayers.

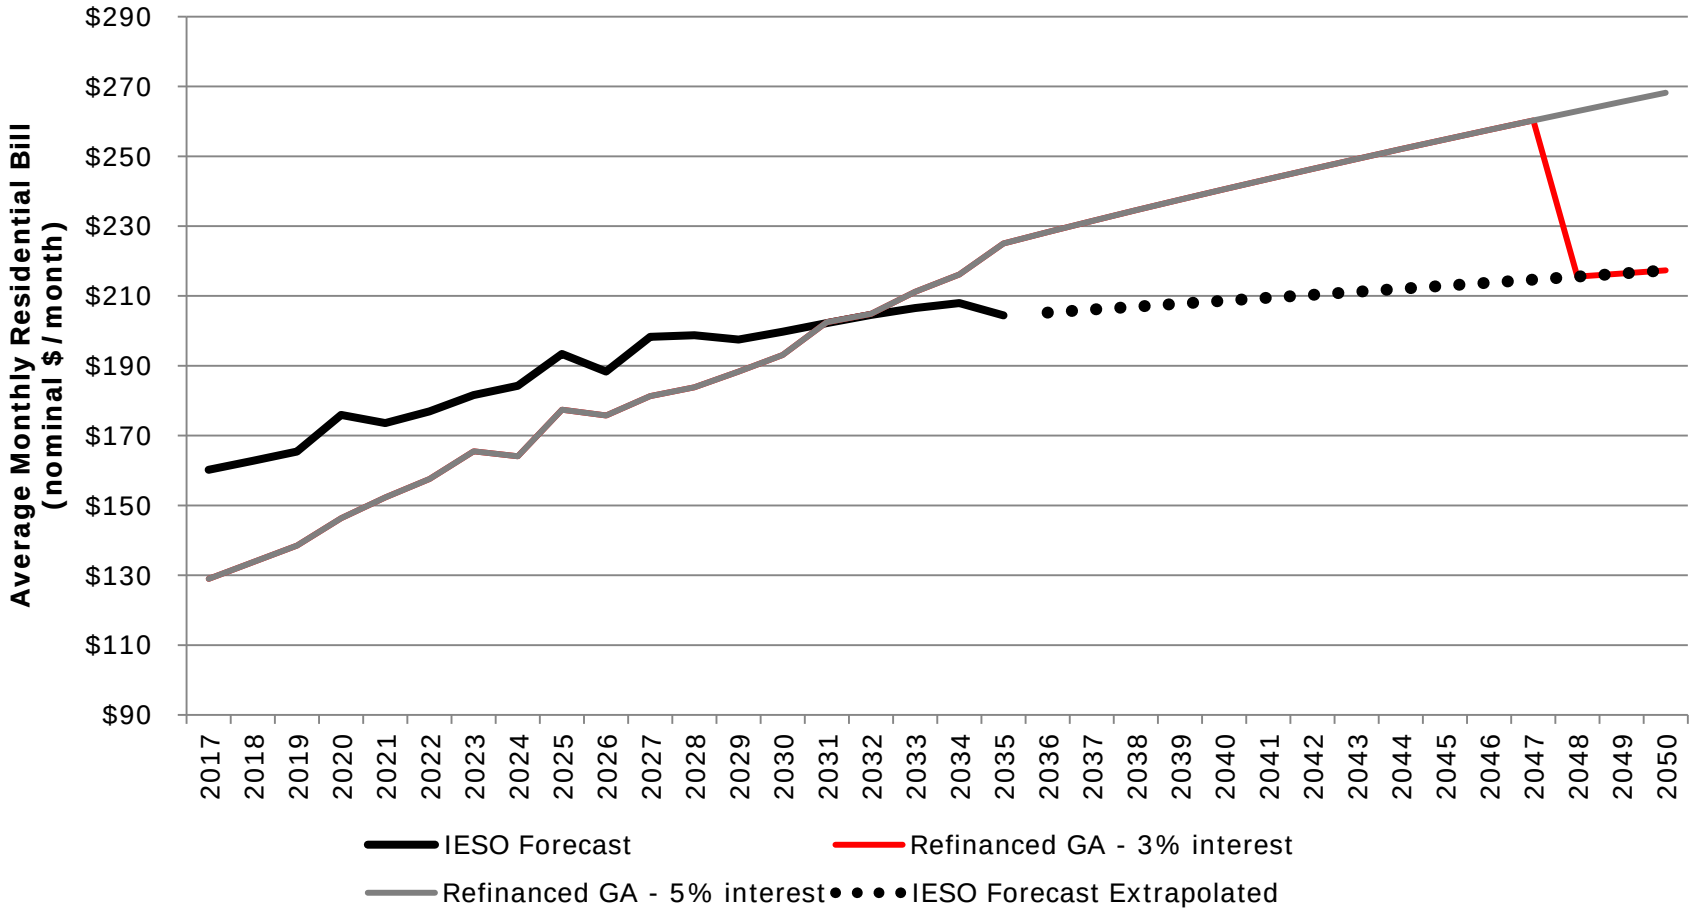
# 3. Interest Rate Risk – Global Impacts

- This scenario compares the maximal 30-year financing case from Scenario 2 (red, assuming a 3% interest rate) and calculates the resulting debt that would accrue due to an increase of two percentage points in the borrowing interest rate (grey, 5% interest).



- Under a 30-year financing payment schedule that assumes a borrowing interest rate of 3% (red), an increase in interest rate to 5% results in **more than $50 billion of accumulated debt in 2047** (grey) requiring further GA over-payments beyond 2047 in order to service the debt.

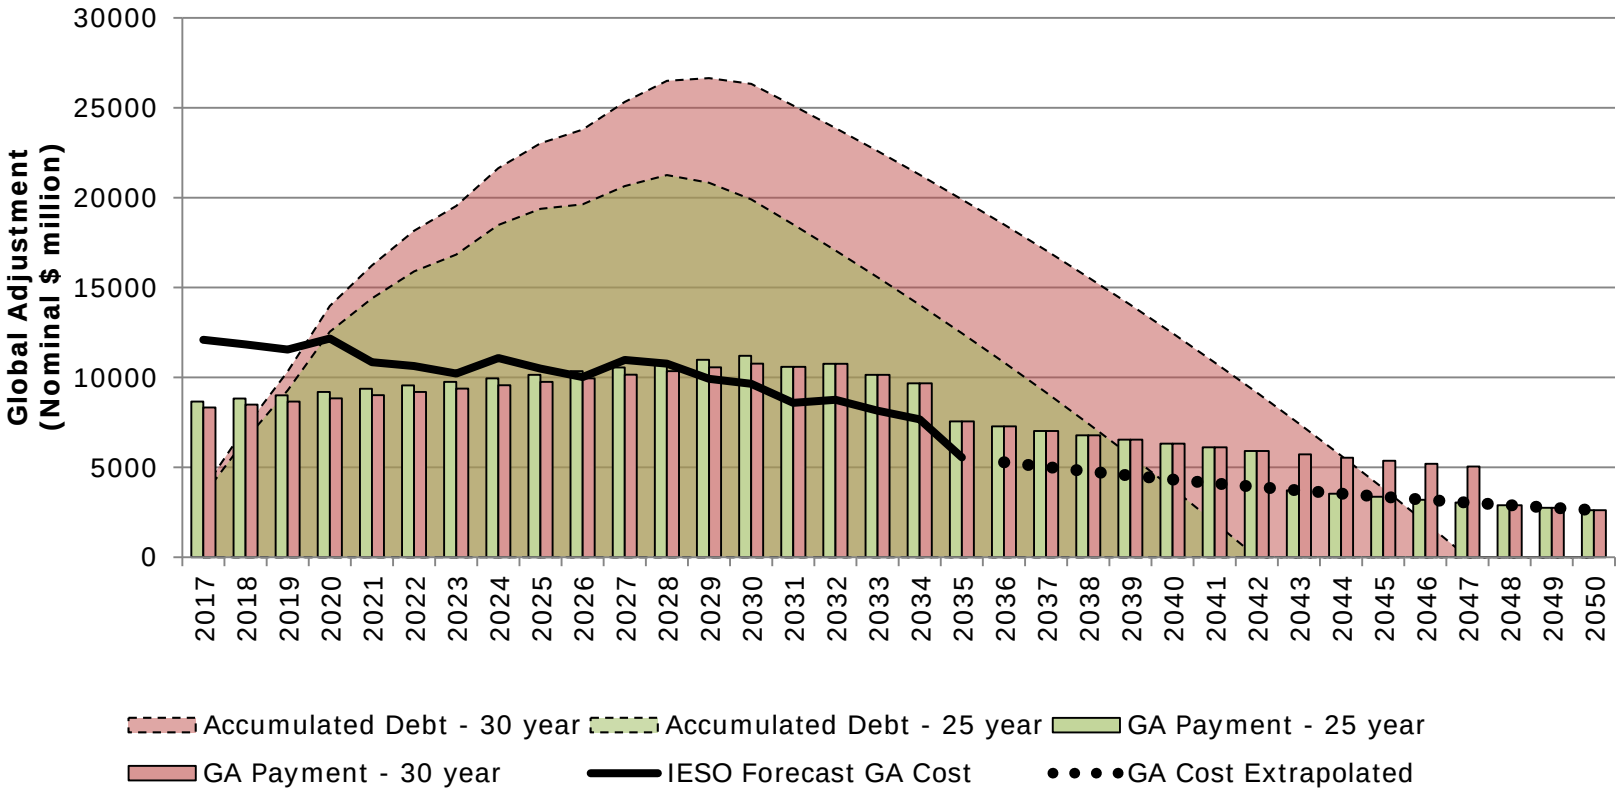
# 3. Interest Rate Risk – Residential Impacts



- In this scenario, an increase in the borrowing interest rate lengthens the financing period beyond 2047.

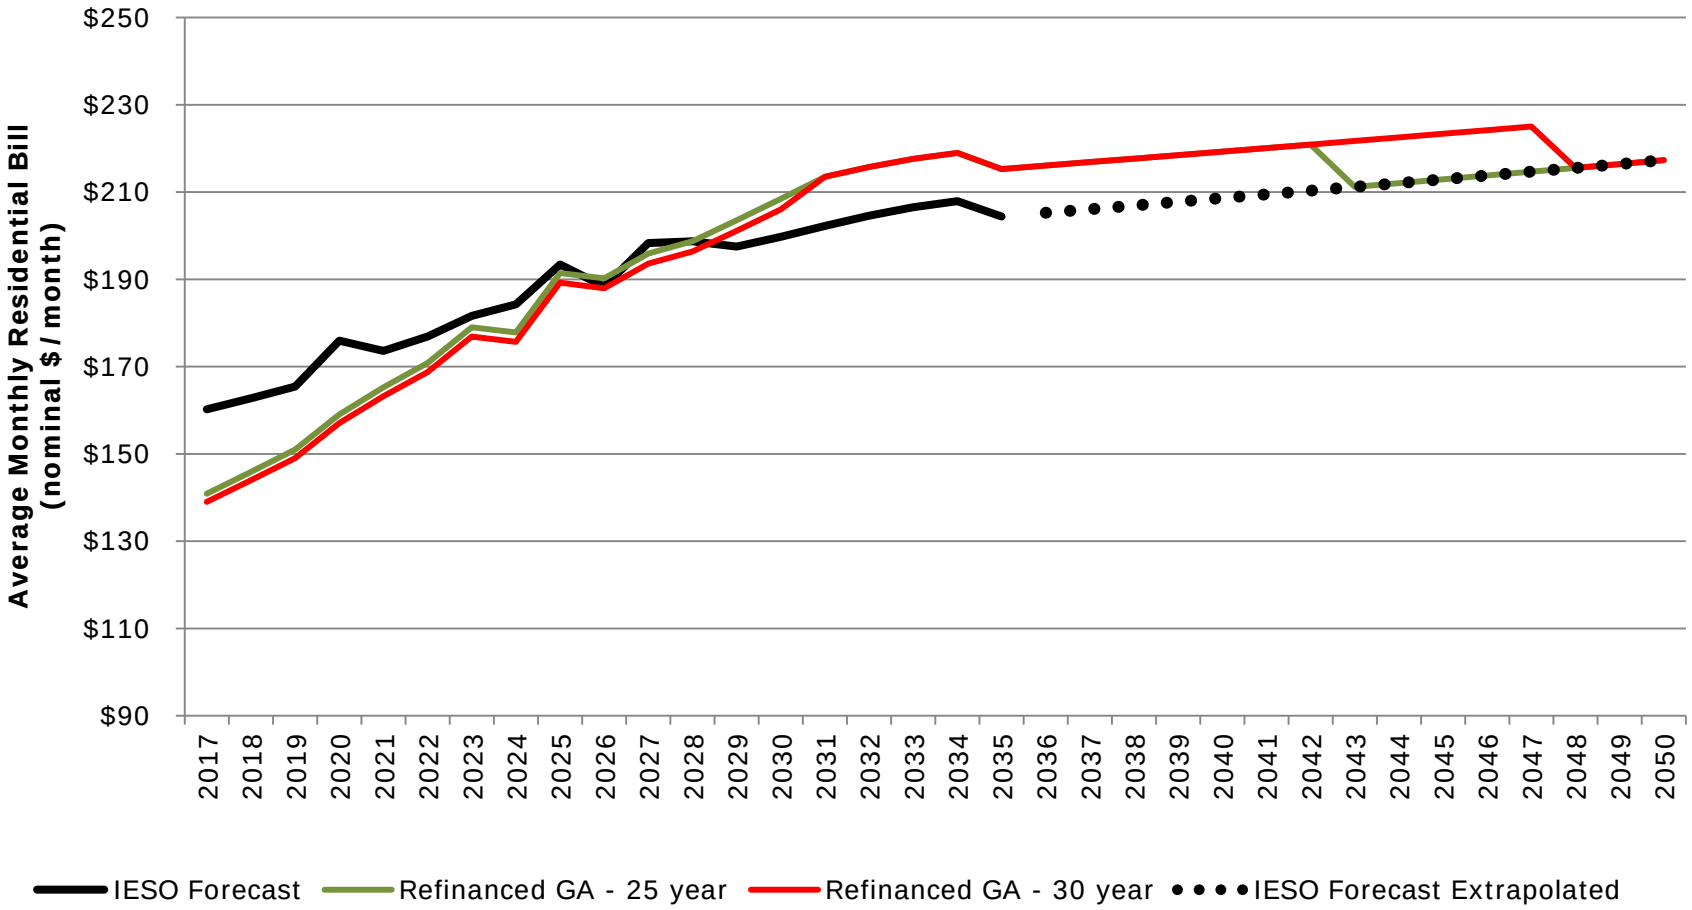
# 4. Maximize Short-term Cost Reduction with Limits – Global Impacts

- In this scenario, the starting ratepayer GA payments in 2017 are lowered as far as possible so that the accumulated debt is fully paid in 2042 (25 year, green) and 2047 (30 year, red) respectively subject to limiting ratepayer over-payments to no more than $2 billion above the true cost of GA.



- A **reduction of 28-31% in GA payments** in 2017 is possible in this scenario by **accumulating up to $26 billion of debt.**

# 4. Maximize Short-term Cost Reduction with Limits – Residential Impacts



- This scenario results in **a short-term reduction of up $19-$21/month** in 2017 at the cost of **a long-term increase of up to $11/month** in 2029-2047 relative to the IESO forecast.

# Debt Financing the Global Adjustment

January 10, 2017

*Working Draft for Discussion Purposes Only*

# Purpose

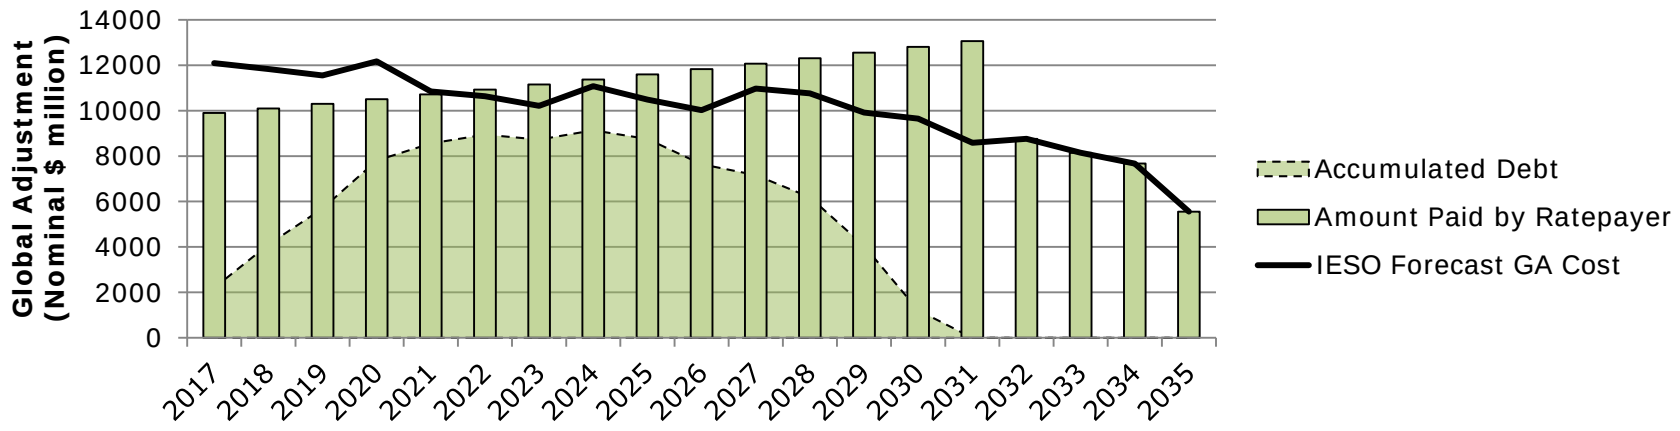
- To analyze the system cost and ratepayer impact of partially financing the cost of the global adjustment (GA) by incurring debt to defer some of the cost.

- An indicative GA financing proposal is presented followed by a qualitative discussion of the proposal's risks.

- The remainder of the presentation quantitatively examines several different scenarios for debt financing the GA, showing:
  - The amount of debt incurred;
  - Impact on total system cost; and
  - Impact on residential bills.

# Indicative Proposal to Debt Finance the Global Adjustment

- For the purpose of discussion, the amount of GA paid by ratepayers in each year over the forecast period is set at a fixed amount until the accumulated debt has been completely paid off.
- All scenarios consider setting the 2017 amount of GA paid by ratepayers at a value lower than the true cost of GA and increasing that amount year-over-year at inflation (assumed to be 2%) until the debt has been paid off.
- In this way, GA costs will be "tilted" over time by lowering costs in the short term and increasing costs in the long term.
- In some scenarios, the amount of GA paid by ratepayers *above* the expected true cost of GA is capped so as to limit large increases in the cost of electricity in any given year.
- Analysis is based on forecasts from Independent Electricity System Operator's (IESO) Ontario Planning Outlook.



**Sample debt financing**: Ratepayers pay less than the cost of GA in early years, accumulating $9 billion of debt that is paid off in 2031 by paying more than the cost of GA in later years.

# Considerations and Risks – Ratepayer

Ratepayer:

- Incurring debt to finance the GA, while lowering costs in the short term, results in a more rapid rise in electricity prices beyond the rate of increase already expected.

- The GA financing proposal involves accruing large amounts of debt to reduce electricity rates. This debt would be highly sensitive to interest rates which could extend repayment timelines or put significant pressure on rates (see Scenario 3 for an example of such interest rate risk).

- GA and HOEP provide a natural hedge against each other. Smoothing only one component would lead to greater price volatility. For example, if HOEP is higher than expected (due to higher gas or carbon prices, for example), all-in rates will rise significantly as the natural decrease in GA would not occur given the prescribed GA rate.

- Conversely, if GA is higher than forecast (i.e., because of lower HOEP or additional out-of-market costs), the debt would increase to a higher amount, requiring additional debt service payments and/or a longer recovery period.

- Should Ontario demand be lower than forecasted, the cost of paying off the debt will be shared by a smaller pool of consumption, further increasing future costs for individual ratepayers.

# Considerations and Risks – Legal, Fiscal and Stakeholder

Legal:

- Such changes to the financing of the GA may require legislative or other amendments and will require further consultation with Legal Services Branch.

Fiscal / Accounting:

- Further analysis is required on whether such changes to the financing of the GA would affect the Province's current accounting treatment for the GA and represent a potential fiscal risk. As such, early engagement with Legal Services Branch and Treasury Board Secretariat is advised.

- The significant amount of additional Provincial borrowing needed to debt finance the GA, and associated risks (e.g., interest rates, repayment timelines), could put pressure on the Province's credit rating. Further analysis is required and would suggest early engagement with Ministry of Finance / Ontario Financing Authority.

Stakeholder:

- The significant deferral of electricity system costs over a long time-horizon and associated interest costs may draw criticism from some stakeholders as creating a new "stranded debt" of the sector. Note: the Debt Retirement Charge was removed from residential bills in 2016 and will be removed for remaining customers in 2018.

# GA Debt Financing Scenarios

1. Status Quo
   - Ratepayers continue paying the full cost of the GA in each year without incurring any debt.

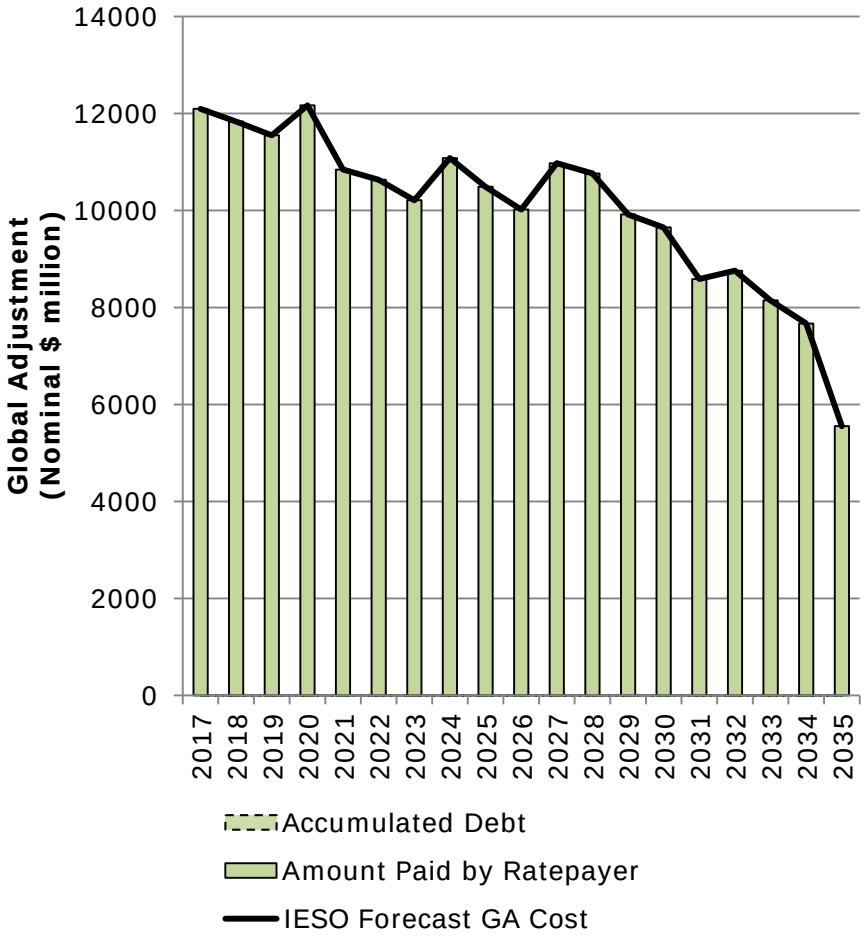
2. Maximize short-term cost reductions
   - This scenario considers the maximum amount by which ratepayer GA costs in 2017 can be reduced such that the accumulated debt is paid off over a 25-30 year financing period. This scenario assumes a 3% borrowing interest rate.

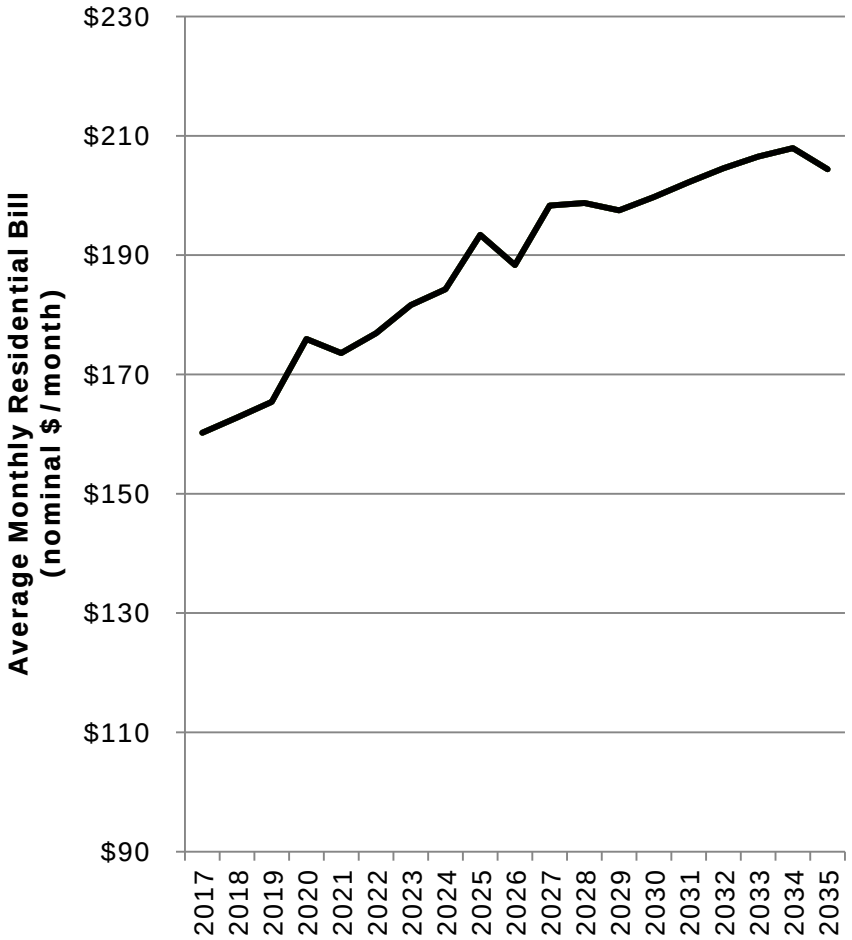
3. Interest Rate Risk
   - Using the 30-year financing case from Scenario 2, this scenario looks at the consequence of an increase of 2 percentage points in the borrowing interest rate.

4. Maximize short-term cost reductions with limits
   - The same as Scenario 2 but with GA over-payments capped at $2 billion above the true cost of GA in any given year.

# 1. Status Quo – Global and Residential Impacts

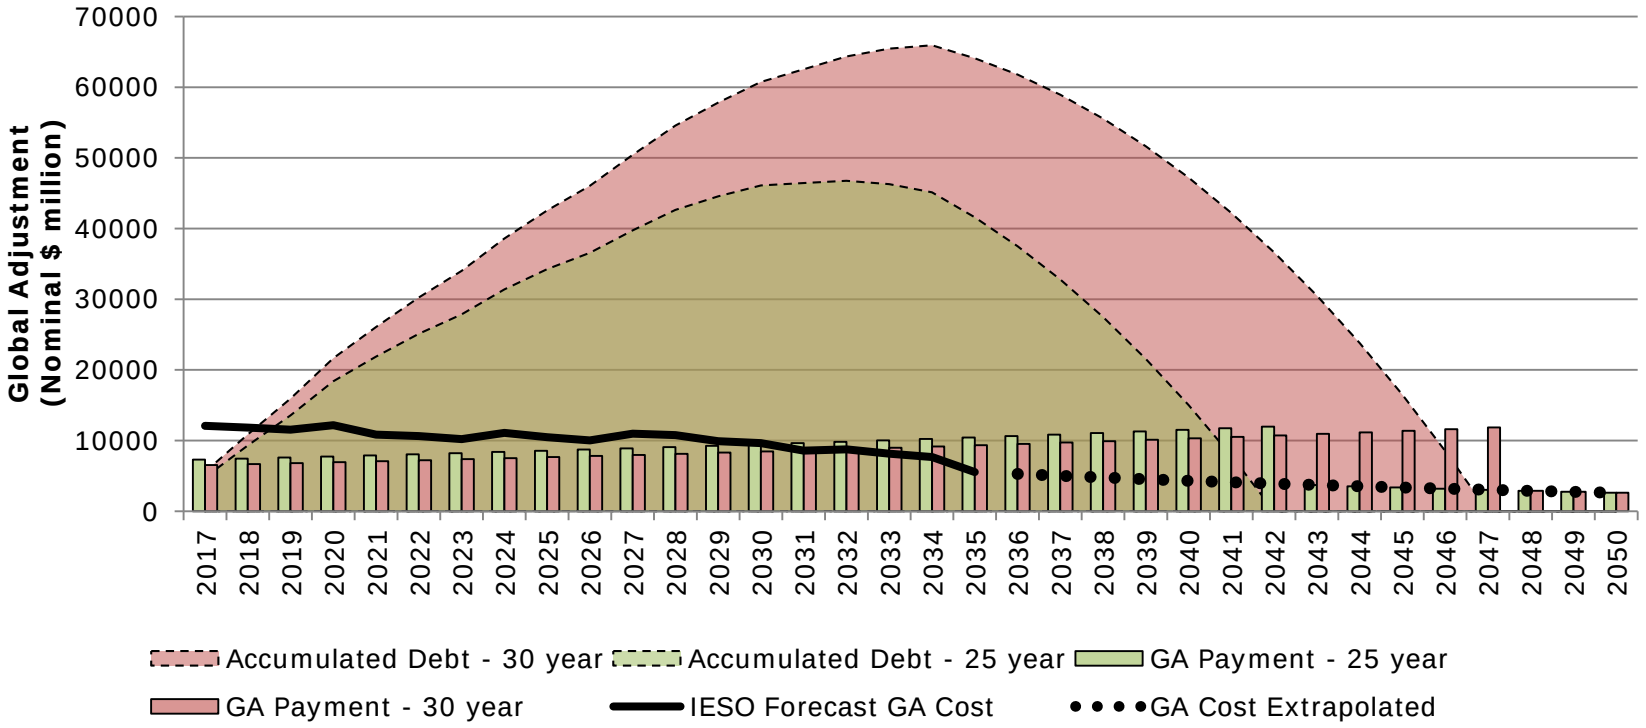
- Ratepayers continue paying the true cost of GA.





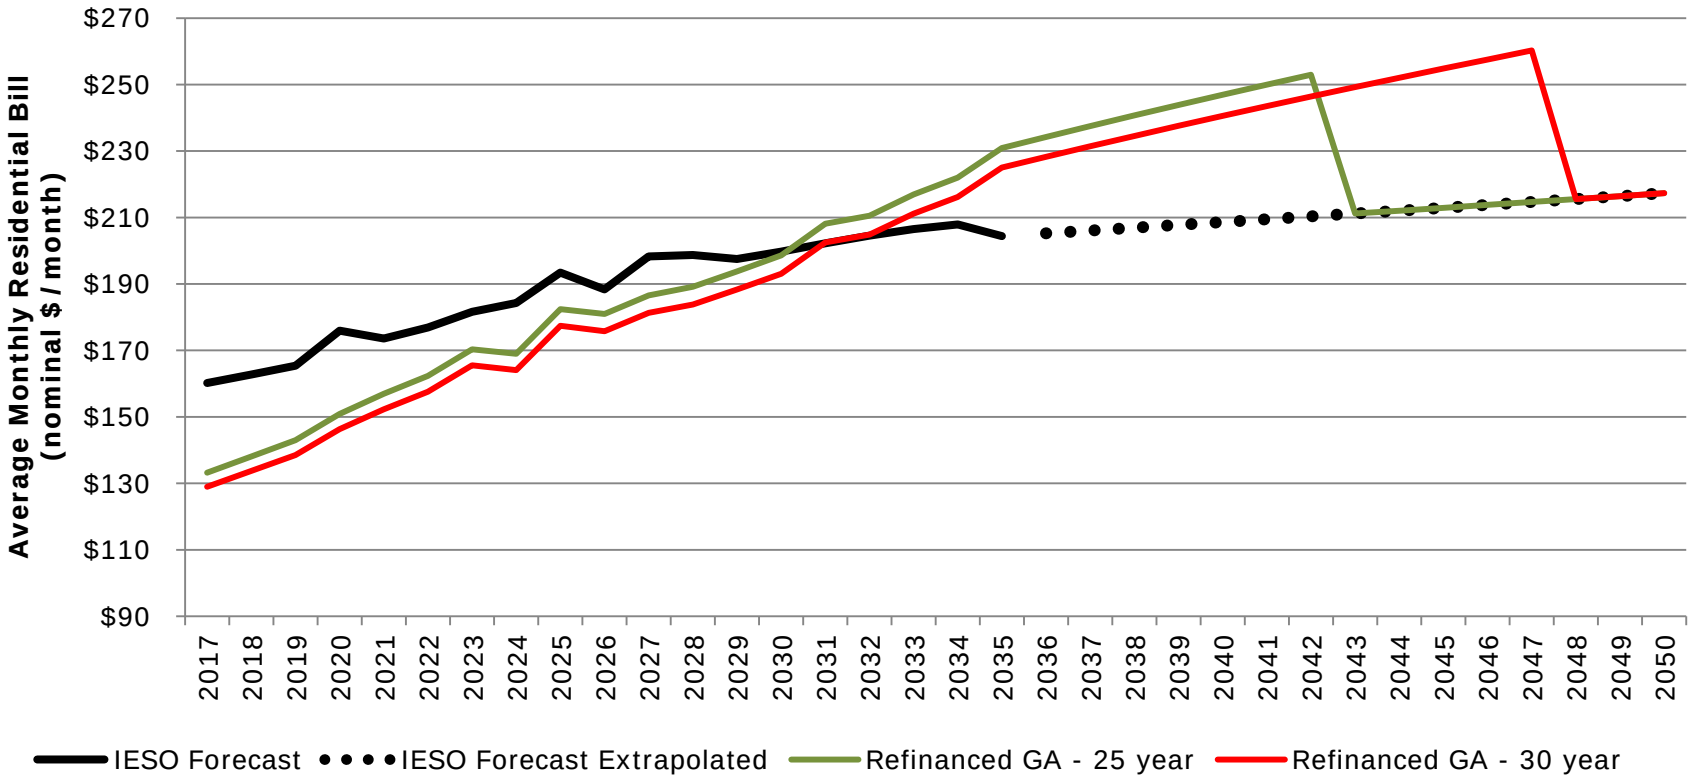
# 2. Maximize Short-term Cost Reduction – Global Impacts

- In this scenario, the starting ratepayer GA payments in 2017 are lowered as far as possible so that the accumulated debt is fully paid in 2042 (25 year financing, green) and 2047 (30 year financing, red) respectively.



- A **reduction of 40-46% in GA payments** in 2017 is possible in this scenario by **accumulating up to $66 billion of debt.**
- Further reductions would require additional payments beyond those indicated in order to pay off the debt by 2042 and 2047 in each of the scenarios respectively.

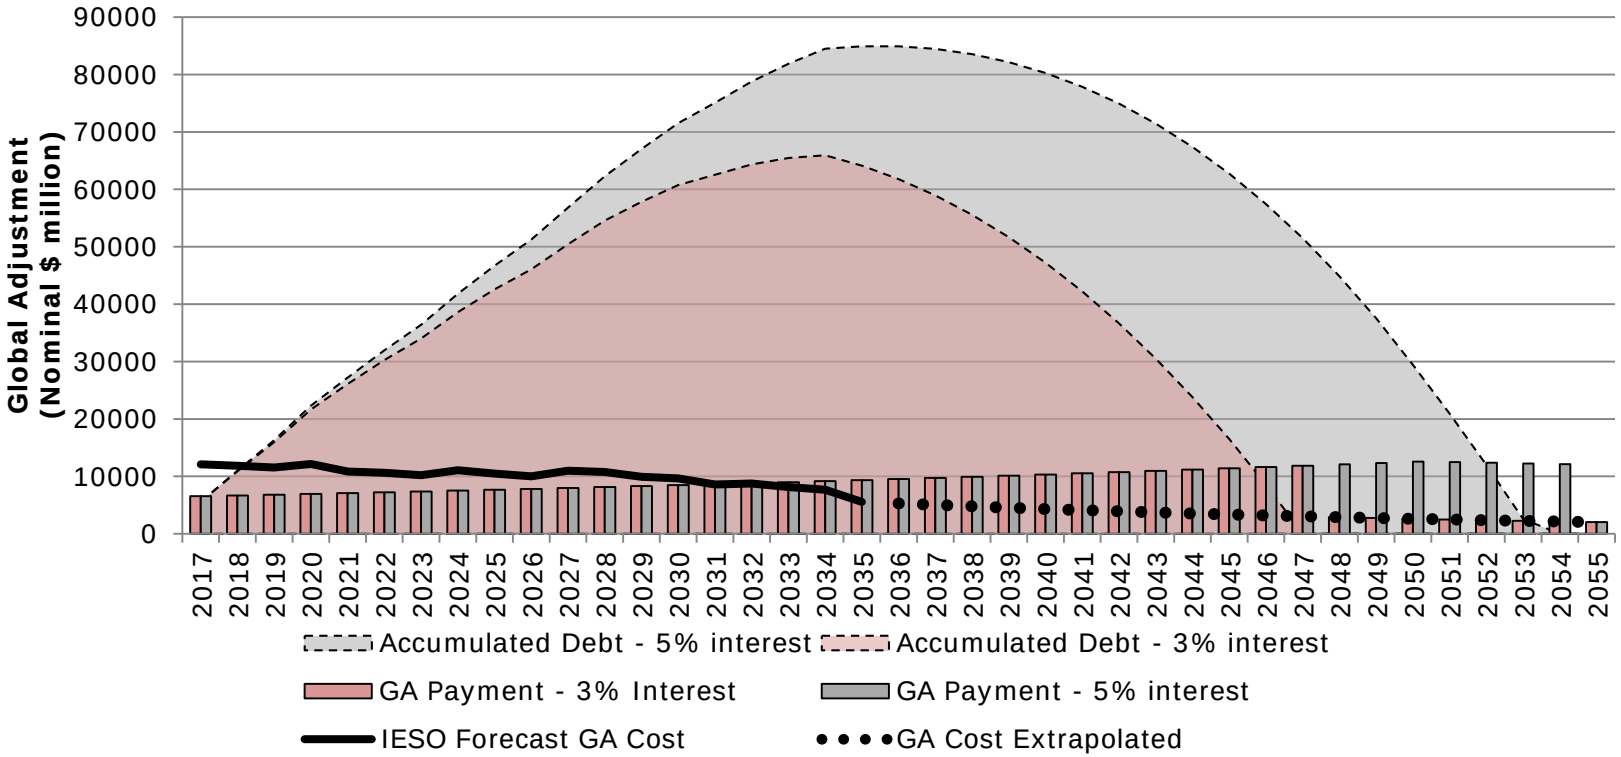
# 2. Maximize Short-term Cost Reduction – Residential Impacts



- This scenario results in a **short-term reduction of up $27-$31/month** in 2017 at the cost of **a long-term increase of up to $43-$46/month** relative to the IESO forecast.
- Due to the significant increase in electricity bills in later years, Scenario 4 considers limiting the amount above the true cost of the GA that is paid by ratepayers.

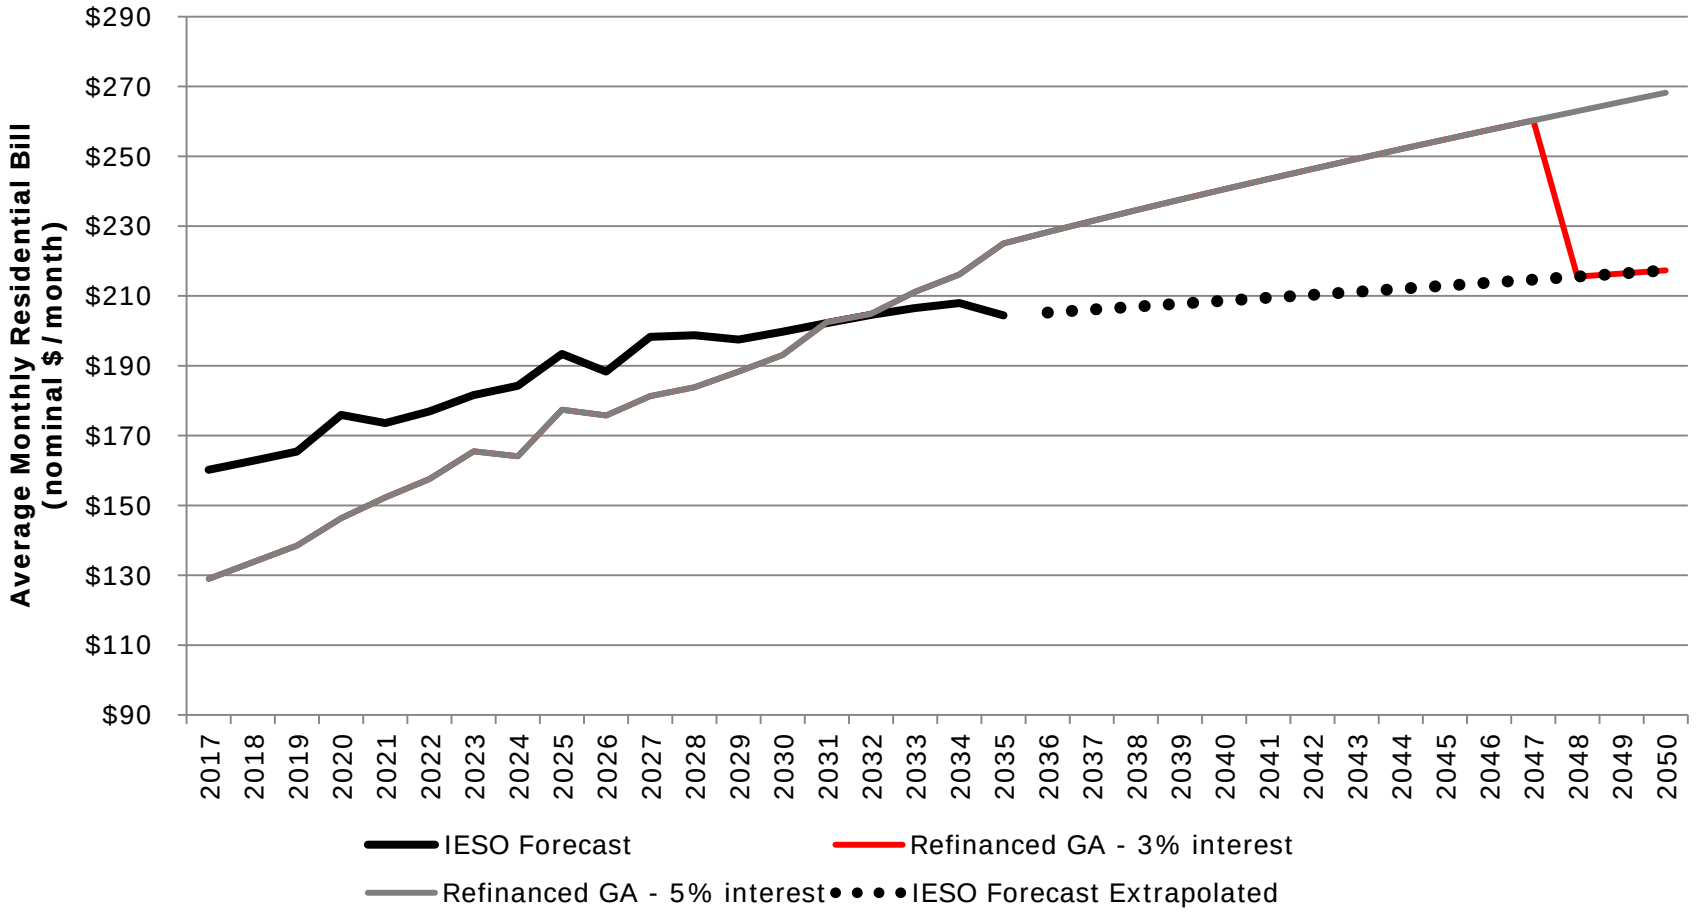
# 3. Interest Rate Risk – Global Impacts

- This scenario compares the maximal 30-year financing case from Scenario 2 (red, assuming a 3% interest rate) and calculates the resulting debt that would accrue due to an increase of two percentage points in the borrowing interest rate (grey, 5% interest).



- Under a 30-year financing payment schedule that assumes a borrowing interest rate of 3% (red), an increase in interest rate to 5% results in **more than $50 billion of accumulated debt in 2047** (grey) requiring further GA over-payments beyond 2047 in order to service the debt.

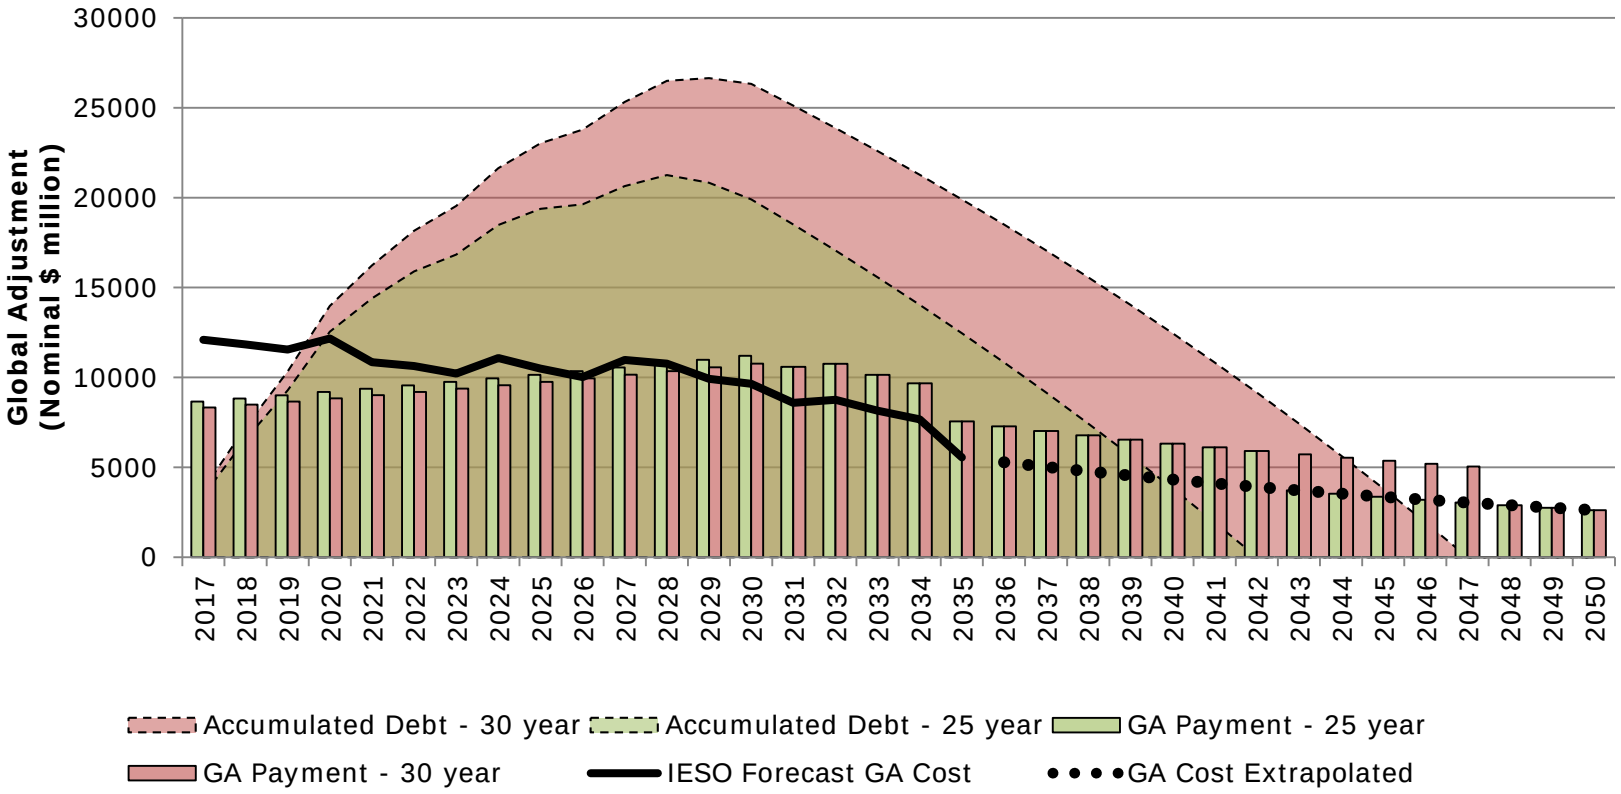
# 3. Interest Rate Risk – Residential Impacts



- In this scenario, an increase in the borrowing interest rate lengthens the financing period beyond 2047.

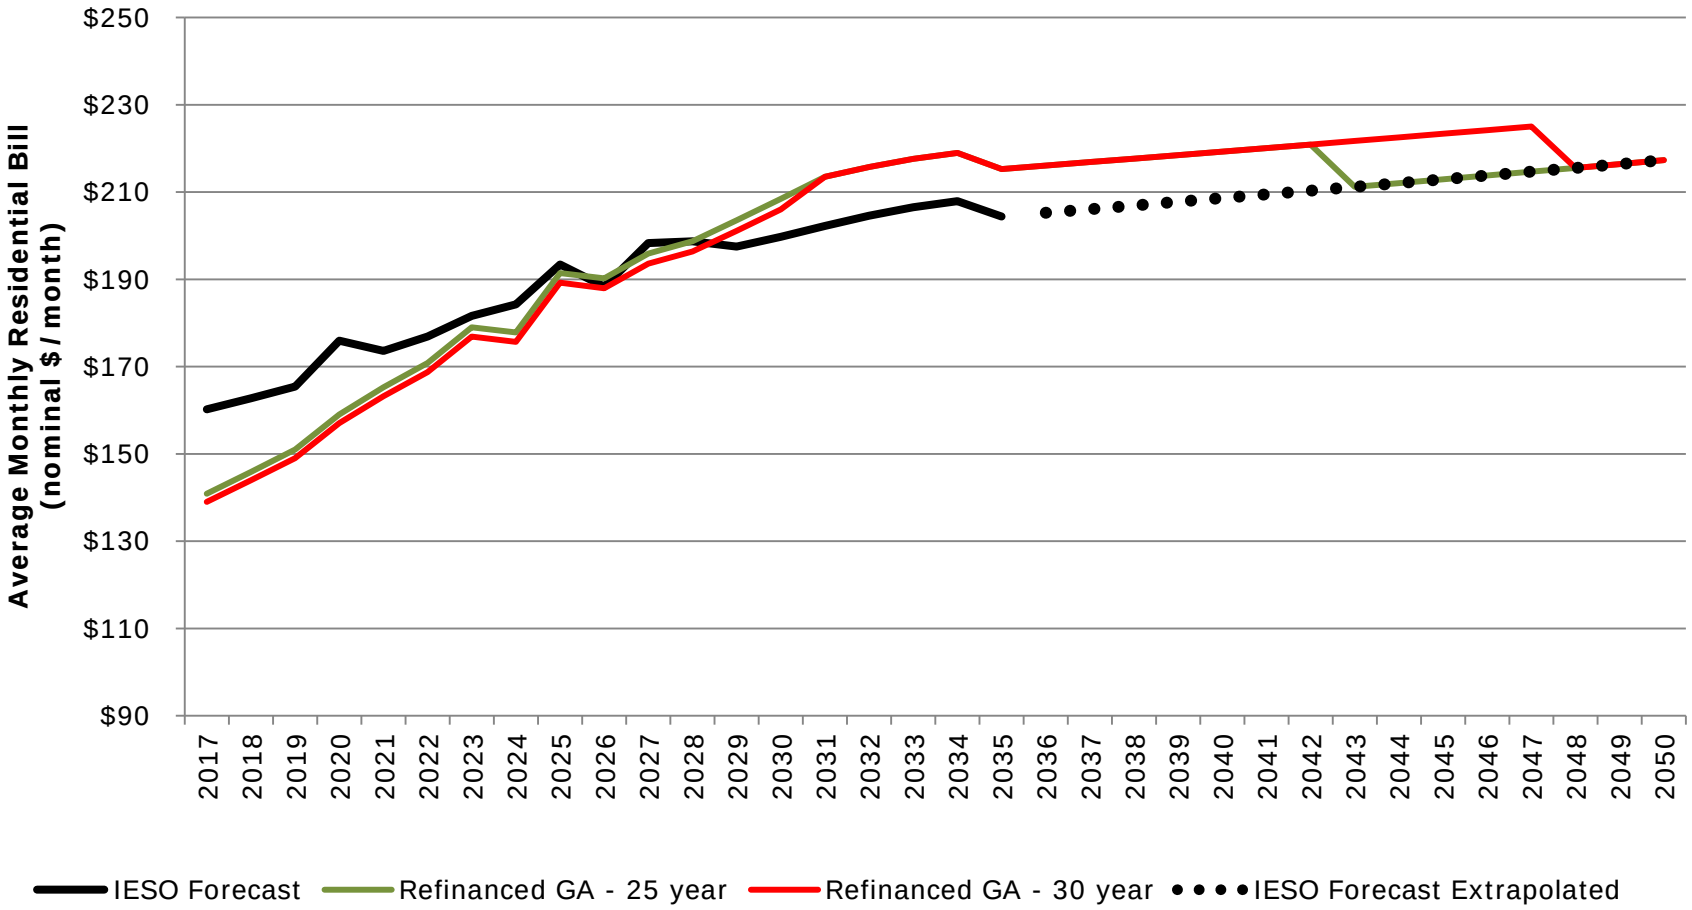
# 4. Maximize Short-term Cost Reduction with Limits – Global Impacts

- In this scenario, the starting ratepayer GA payments in 2017 are lowered as far as possible so that the accumulated debt is fully paid in 2042 (25 year, green) and 2047 (30 year, red) respectively subject to limiting ratepayer over-payments to no more than $2 billion above the true cost of GA.



- A **reduction of 28-31% in GA payments** in 2017 is possible in this scenario by **accumulating up to $26 billion of debt.**

# 4. Maximize Short-term Cost Reduction with Limits – Residential Impacts



- This scenario results in **a short-term reduction of up $19-$21/month** in 2017 at the cost of **a long-term increase of up to $11/month** in 2029-2047 relative to the IESO forecast.

Hi John, Emily,

I added to John's draft with respect to DT and TT. I don't have more to add so feel free to share with Ron once you are ready.

I also made some edits to Energy's slides but not sure those are needed.

Thanks,

Francisco

Hi,

There's a meeting on Monday on Energy's rate mitigation decks.

Would you be able to review over the weekend -- perhaps updating the materials from December, as applicable -- so comments can get to the DMO Sunday night?

Apologies on the timing.

Thanks,
Ron

**DRAFT: COMMERCIALLY SENSITIVE AND CONFIDENTIAL ADVICE TO MINISTERS**

# Comments on Ministry of Energy's Draft "Proposed Initiatives to Transform Ontario's Electricity Sector"

The Ministry of Energy (Energy) is providing an update on progress related to transforming the province's electricity sector by elaborating on potential price mitigation initiatives, as outlined in its decks.

## CONTEXT

- As outlined in Energy's update, electricity costs have been increasing following investments to transform towards cleaner generation (i.e., meeting goals to decarbonize) and modernize the electricity infrastructure (e.g., more than $35 billion in cleaner generation and $15.5 billion investment by Hydro One alone in transmission and distribution systems).

- The government has taken action to lower electricity cost pressures to all consumers by taking actions, including deferring investments in generation (e.g., new build nuclear), improving market efficiency and decreasing costs related to renewable procurement (e.g. GEIA renegotiation, decreasing FIT prices, etc).

- The government introduced the Ontario Rebate for Electricity Consumers (OREC) which will provide a rebate equal to the 8% provincial portion of the Harmonized Sales Tax, saving $11 per month starting January 1, 2017 for eligible small businesses, farms and residential consumers and has taken steps to expand the Rural or Remote Electricity Rate Protection program, expected to save eligible RRRP customers about $45 per month, when combined with OREC.

- On November 28, 2016, the Minister of Energy announced the need for changes in how electricity resources are procured, the need for wholesale market renewal and greater electricity consumer choice.

- The Ministry of Energy is currently updating its Long-Term Energy Plan (LTEP), which provides an opportunity to consider a range of policy changes to how the Ontario energy sector operates.

## COMMENTS

A significant number of Energy's proposals ~~generally~~ involve shifting costs from the rate base to the tax base. While the subset of costed proposals may have a fairly limited residential rate payer impact (e.g. about $5-6/month for residential, less than 5% of the average monthly bill), those proposals would come at a material incremental fiscal cost ($1 billion to $1.3 billion). Note these impacts are lower than those presented in an earlier deck ($1.3 billion to $1.9 billion). Energy also presents other proposals where costs and impacts are "TBD".

Over the past five years, the existing fiscally funded electricity price mitigation efforts have averaged about $1.5 billion and is already expected to increase to about $2 billion with the introduction of OREC. The existing program costs are summarized in the table below:

| ($M) | 2011-12 | 2012-13 | 2013-14 | 2014-15 | 2015-16 | 2016-17[1] | 2017-18[1] |
|---|---|---|---|---|---|---|---|
| OCEB | 1,033 | 994 | 1,006 | 1,078 | 860 | - | - |
| OREC | - | - | - | - | - | 300 | 1,100* |
| Ending DRC[2] | - | - | - | - | 85 | 330 | 330 |

| | | | | | | | |
|---|---|---|---|---|---|---|---|
| NIERP | 120 | 120 | 115 | 108 | 120 | 120 | 120 |
| NOEC | 23 | 24 | 25 | 24 | 26 | 25 | 25 |
| OEPTC[3] | 354 | 406 | 418 | 429 | 444 | 450 | 460 |
| TOTAL | 1,530 | 1,544 | 1,564 | 1,639 | 1,525 | 1,225 | 2,005 |

1. 2016-17, 2017-18 based on forecasted numbers
2. 2015-16 estimated for 3 months of reduced DRC revenue
3. OEPTC amounts in all years based on energy component of the rebate.

* Sourced from Energy PRRT submission

OCEB – Ontario Clean Energy Benefit
OREC – Ont. Rebate for Electricity Consumers
NIERP – Northern Industrial Electricity Rate program
NOEC – Northern Ontario Energy Credit
DRC – Debt etirement Charge
OEPTC – Ont. Energy & Property Tax Credit

**Energy's Broad Policy Themes / Rationales**

A key theme / rationale cited by Energy is to no longer use rate-base to pay for "social programs" by shifting cost of OESP, RRRP and proposed First Nation Rate to tax-base.

- Energy has typically in the past provided a constitutional law assessment on these programs, providing support for these programs to be ratepayer-supported programs as they provide electricity system benefits / are part of a comprehensive regulatory framework.
- Switching messaging may risk criticism and legal challenges on these and other remaining rate-base funded programs.

| Energy Theme / Rationale | Key Staff Comments |
|---|---|
| **Provide greater support for lower income Ontarians by enhancing the OESP or expanding eligibility** | • Significant fiscal exposure -- $0.4-0.45 bn at current levels, higher if enhanced. On-bill benefits.<br>• Could contemplate phase-in to manage fiscal impact.<br>• Could look at phasing out existing fiscal-funded programs also targeted to low income or identified groups (e.g., OEPTC, NOEC).<br>o Not on the bill, so less direct and visible electricity cost mitigation.<br>o Phase-out to reflect time to increase application based OESP reaching an increasing portion of eligible households. |
| **Fund conservation programs through the tax-base for the remaining term of the existing CDM framework and transition costs to the new "green bank entity" over time** | • Potentially significant fiscal impact – current program costs are about $0.45 bn<br>• Conservation programs do provide an electricity system benefits, but would now be fiscally-funded, so a cross-subsidisation from tax-base<br>• Accessing the cap&trade amount in the GGRA would crowd-out other GGRA programs, affecting overall GHG reductions and negatively affect the diccal plan |
| **Expand the scope of the "Trillium Trust" to make investments in energy infrastructure eligible for funding** | • Would require either squeezing out existing Moving Ontario Forward project funding from the Trillium Trust, requiring funding from another source; or additional funding from asset optimization, given that the government is committed to using the targeted $5.7 billion to fund across Moving Ontario Forward projects<br>• Would have little near-term impact, unless TT funding displaces near-term, non-incremental projects coming onto service<br>• Could lower utility value (share price) and impact fiscal contributions from the electricity sector (net income), including Hydro One, by removing projects, currently and prospectively, that they might have been able to add to their ratebase and earn a return |

| | |
|---|---|
| | • In the case of projects located in First Nation territories it could have an upfront fiscal impact if Province is not able to amortize those projects (TBC with OPCD).<br>• Energy has indicated that if these investments are provided from the OEB there would be a need to develop oversight mechanisms as is not the OEB's role to review cost prudence of tax-based mechanisms. |
| **Dedicate the Departure Tax** | • In connection with the 2015 IPO of Hydro One shares, Hydro One paid OEFC a $2.6 billion "departure tax".<br>• The departure tax was not a windfall. It was fiscally neutral, it represented revenue to OEFC and an expense to Hydro One.<br>• Repurposing the departure tax to provide rate mitigation would have a dollar-per dollar fiscal impact and could trigger an increase in OEFC's stranded debt.<br>• The Province would remain exposed to a negative fiscal impact (lower share price and lower net income) if the OEB decides to allocate all or part of the deffered tax benefit recognized by Hydro One to ratepayers. |
| **Empower Energy Agencies to Increase Cost Effectiveness and Improve Efficiency** | • IESO to modernize the electricity market through market renewal<br>• OEB to identify opportunities for future LDC efficiencies/rates<br>• OEB to work with OPG operational efficiencies and pass on to ratepayers |
| **Give consumers more choice by allowing to "opt into" alternate rate plan** | • Start with the option of flat electricity rate option<br>• OEB to develop more options over time<br>• Provide more details regarding th Global Adjustment (GA) |
| **End the Debt Retirement Charge (DRC) early for commercial and small industrial Class B electricity consumers** | • End of the DRC had previously been linked with a balance between rate mitigation and managing stranded debt<br>• Provides only temporary incremental mitigation, as DRC legislated to end April 1, 2018.<br>• End of the DRC had previously been linked to retirement of residual stranded debt<br>• Removing additional DRC revenue from the OEFC would call into question the position that the debt and liabilities of the old Ontario Hydro can continue to be supported |
| **Consider options to defer the pass-through to ratepayers of some generation supply costs by partially financing the cost of the global adjustment (GA)** | • Incurring debt to pay the generators their contracted or regulated payments<br>• Energy's deck analyzes the system cost and ratepayer impacts of the option, but does not address the fiscal impact/accounting treatment, or implementation<br>• Likely will lead to significant fiscal impact due to creation of large liability item (estimated to be up to $66Bn) either directly on the Province's books or upon consolidation<br>• Furthermore, likely entails significant legal / Constitutional Law risks. |

**Detail on Proposals**

**DRAFT: COMMERCIALLY SENSITIVE AND CONFIDENTIAL ADVICE TO MINISTERS**

Energy has outlined the following rate mitigation proposals with significant bearing on the fiscal plan:

OESP & RRRP (Total of about $0.4 to 0.45 Billion/year):

This would shift the cost of the current and proposed expanded Ontario Electricity Support Program (OESP), and the Rural or Remote Electricity Rate Program (RRRP), to the tax base. *Note: that the fiscal exposure would increase if the OESP take up rate is larger, and faster than assumed.*

- The fiscal impact from shifting OESP and RRRP to the tax base may also be larger if future changes are made to the programs. Energy notes that
  - The programs could provide greater support for lower income Ontarians by enhancing the OESP or expanding eligibility (e.g., by 50% in the table).
  - The RRRP regulation provides a funding mechanism for transmission infrastructure required to grid connect remote First Nation communities. Considerations for how that funding will be supported by the tax base will need to be determined. [The current deck links Trillium Trust for remote electrification.]

Fund Conservation Programs through the Tax-Base:

This would be for the remaining term of the existing Conservation and Demand Management framework. Over time, the costs would be transitioned to the new "green bank entity", to shift cost recovery from ratepayers to cap and trade revenues.

- Energy's rationale for the cost shift would be in recognition of the burden borne by ratepayers in phasing out coal generation.

Expanding the scope of the Trillium Trust to invest in energy infrastructure:

The Province is currently targeting $5.7 billion from asset optimization to dedicate to the Trillium Trust for investment in infrastructure under Moving Ontario Forward. The $5.7 billion target already includes all fiscal benefits expected from the sale of Hydro One common shares (this includes net gains from shares and the Provincial portion of the deferred tax benefit recognized by Hydro One in 2015).

- Expanding access to natural gas is already included under Moving Ontario Forward.
- Using the Trillium Trust for additional energy projects would require either
  - squeeze out existing Moving Ontario Forward project funding from the Trillium Trust, requiring funding from another source, or
  - additional funding from asset optimization, given that the government is committed to using the targeted $5.7 billion to fund across Moving Ontario Forward projects,
  - in effect, in both cases above, incremental investments for energy infrastructure from the Trillium Trust would have negative fiscal impacts once the assets are in-service and amortized.
  - Inclusion of investments in First Nation communities that are not in provincial lands would trigger an upfront fiscal impact as the Province may not be able to amortize these projects (TBC with OPCD).
- Investments through the Trillium Trust instead of through other electricity sector entities (Hydro One, OPG, LDCs) could have additional negative fiscal impacts as these entities could see reduced ratebase growth, lowering the revenues that the Province realizes from these entities (e.g., consolidated net income, payments-in-lieu of taxes, etc.).
  - May also negatively impact Hydro One share price if the measure is perceived by the market as reducing Hydro One's potential ratebase growth.

  - This could also question the government's policy rationale for selling Hydro One shares when it would be effectively investing back into the electricity sector through a different vehicle.
- Unless applied to existing projects, to displace ratepayer-supported costs, this measure would have little or no near-term rate impact.

Departure Tax:

As a result of the IPO, Hydro One paid a "departure tax" payment in lieu of tax (PIL) of $2.6 billion, as a final true-up of its PILs tax obligation. Energy lists using some or all of this departure tax for price mitigation.

- This was paid to the Ontario Electricity Financial Corporation (OEFC). The departure tax payment was fiscally neutral to the Province as the income (revenue) to the OEFC was fully offset by a reduction in ESDI resulting from reduced net income (expense) of Hydro One.
- The payment was also cash neutral, the $2.6 billion were funded from a capital contribution made by the Province into Hydro One and received back by the Province in OEFC as the departure tax payment was made in cash.
- Using some or all of it for price mitigation would require restating the net stranded debt paydown by OEFC related to the IPO. It would be the first time since 2004 that stranded debt would increase. [As the departure tax paid was fiscally neutral, OEFC's uplift was primarily the result of the related deferred tax benefit, as well as the s.50.3 benefit under the *Electricity Act, 1998*.]
- Having OEFC help implement this measure may require introducing changes to OEFC's objects as is legal mandate is to help reduce and pay down stranded debt.
- This would be a one-time measure, potentially spread out over a few years, and fiscal impact, as the departure tax amount was one-time.

Energy Agencies' Cost Effectiveness and Efficiencies:

By empowering energy agencies to continue to move forward with various programs, the initiative is expected to lead to cost effectiveness and efficiencies that could be passed through to the benefit of the rate payers. These initiatives, other than the tax incentives for consolidations, are generally not considered to have fiscal impacts. [Check.]

- IESO's Market Renewal Initiatives – the current "two-schedule price setting system", which is used to settle and dispatch resources in the IESO- administered market, is under review by the IESO.
  - This review is part of a series of consultations launched by the IESO to consider the efficiency and effectiveness of various aspects of the electricity market, and will focus on the energy market pricing system.
  - As part of this review, potential design alternatives will be compared against the status quo with an overall objective of providing "an efficient dispatch and pricing process that produces transparent prices."
  - Moving to "technology-agnostic" procurements will provide new opportunities for innovation and modernization and ensure ratepayers receive the best prices possible.
  - IESO estimates that the total implementation cost – including a 15% contingency and net of avoided costs – will be $150 million. The bulk of the costs (capital) would only be recovered once the project has been implemented and as the benefits are being realized.
- LDC Efficiencies and Rates – reducing osts and having LDCs become more efficient could result in a reduction of Distribution costs on electricity bills, now accounting for about 20% of the total bill.
  - The OEB has a mandate to regulate the electricity distribution sector in the public interest, ensuring the financial viability of the sector while promoting reliable service to customers at just and reasonable rates.

**Commented [JK1]:** Not sure what exactly the single schedule system means...stayed away from mentioning as a result.

**Commented [JK2]:** http://www.ieso.ca/Pages/Participate/Stakeholder-Engagement/SE-114.aspx

- Since 2012, the OEB has taken action – through the Renewed Regulatory Framework for Energy – to more closely link rate regulation with performance measures and outcomes.
- In 2012, the government asked the Ontario Distribution Sector Review Panel to review the distribution sector and make recommendations about how it could become more efficient. While the Panel concluded that a $1.2 billion net present value in savings could be achieved by consolidating LDCs into 8-12 regional entities, the government response was to pursue voluntary consolidation and put in place tax incentives for consolidation.

- OPG Operational Efficiencies – provide expectation that OPG meet more aggressive cost targets, improving efficiency by about $3/Megawatt hour (MWh).
  - The Province could provide instructions to OPG to focus on its stretch target as part of the Minister's Concurrence letter. This would be a public document that would likely be reviewed by OEB and, if adopted by OEB, would be incorporated as part of OPG's current rate application.
  - If OPG is unable to meet more aggressive cost targets, this could impact net income, and the Province's fiscal plan.

Debt Retirement Charge (Total of about $0.45 Billion in annualized rate to 2017-18):
Ending the DRC early for Class B customers (commercial, small industrial) would have an impact of about $0.45 billion in 2017-18.

- The end of the DRC had previously been linked with balancing mitigation and progress on stranded debt reductionthe end retirement of the residual stranded debt.
- Removing additional DRC revenue from the OEFC would call into question the position that the debt and liabilities of the old Ontario Hydro can continue to be supported.

Debt Financing of the Global Adjustment Proposal :
In a draft Energy deck shared with the Ministry of Finance, Energy considers a number of options to delay recovery of part of the Global Adjustment (GA) by debt financing and recovering over a 25 to 30 year period.

- Energy's deck analyzes the system cost and ratepayer impacts of the option, but does not address the fiscal impact/accounting treatment, or implementation. There are four options considered:
  - Option 1:
  - Option 2:
  - Option 3:
  - Option4:
- While the details of the proposal would need to be analyzed prior to a decision to proceed with further consideration of the proposal, the Office of the Provincial Controller Division's (OPCD) preliminary assessment is that this would lead to a negative fiscal impact, such as having to book a large deficit amount.

MINISTRY OF
ENERGY

# Proposed Initiatives to Transform Ontario's Electricity Sector – Update

## Working Draft

December 2016

CONFIDENTIAL DRAFT

# Context

- Electricity costs are increasing as the necessary investments are made to decarbonize and modernize the province's electricity infrastructure (i.e., $35 billion+ investment in cleaner generation and $15.5 billion investment in Hydro One transmission and distribution systems).

- Ontario has taken a number of actions to lower electricity cost for all consumers by:
  - Deferring investments in generation (e.g., new build nuclear), improving market efficiency (e.g., wind dispatch) and decreasing the cost of renewable procurements (e.g., GEIA renegotiation, decreasing FIT prices).
  - Increasing cost effectiveness and improving efficiency by adopting new electricity market approaches (e.g., competitive LRP, no new NUG contracting).

- Following the 2016 Throne Speech, actions were announced to further reduce electricity costs by:
  - Providing an 8% rebate ($11/month savings), updating RRRP ($45/month savings), expanding ICI (up to one-third savings for participants), suspending the LRP II and the EFWSOP (up to $3.8 billion in cost savings) and recycling proceeds to industrial/ commercial consumers.

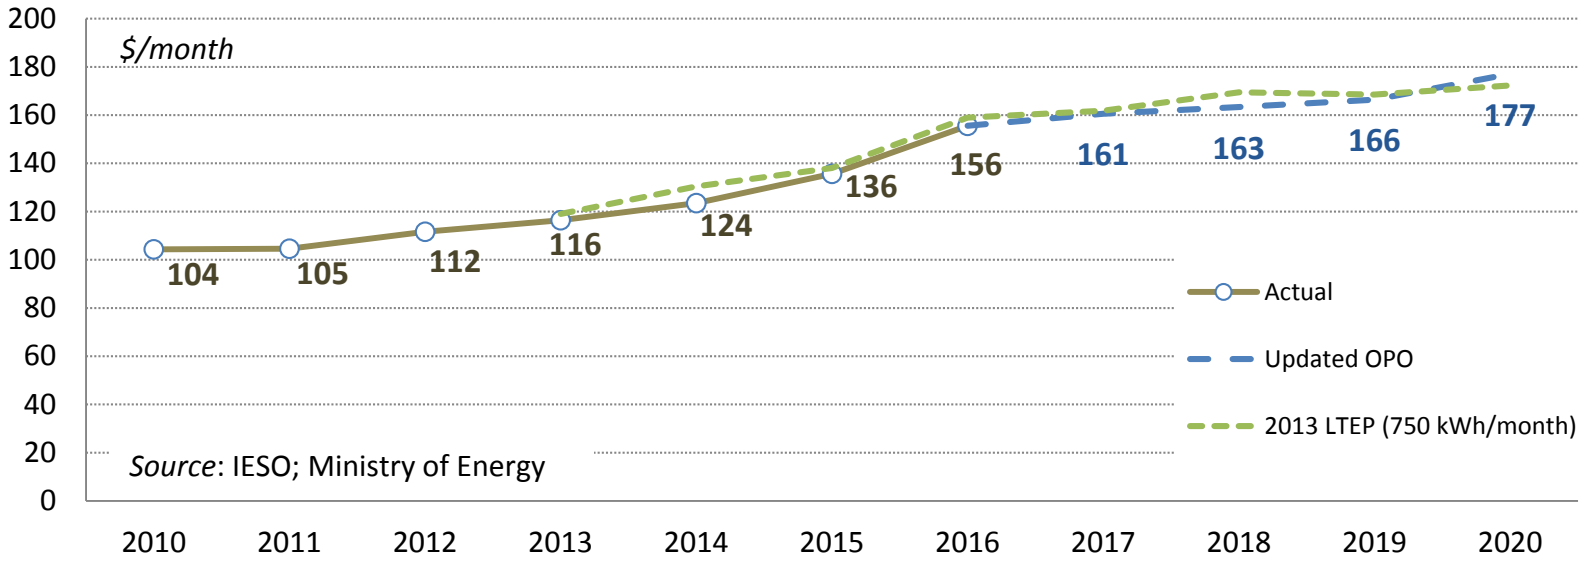
- On November 28, 2016, the Minister of Energy announced the need for changes in how electricity resources are procured, the need for wholesale market renewal and greater electricity consumer choice.

- The Ministry of Energy is currently updating its Long-Term Energy Plan (LTEP), which provides an opportunity to consider a range of policy changes to how the Ontario energy sector operates.

# Electricity Prices – Residential

- Residential consumers electricity prices continue to be a concern for many Ontarians, particularly those that rely on electric heat.
  - **Note:** The typical residential bill is currently below the 2013 Long-Term Energy Plan (2013 LTEP) forecast.

**Typical Residential Electricity Bills**
*Historical and Forecast*



**Note**: The 2013 LTEP forecast for residential bills was based on 800 kWh/month without RRRP or electric heating; the above has been rebased to 750 kWh/month for comparison purposes. Typical residential are based on Toronto Hydro. The updated OPO forecast above includes the 8% rebate to offset the provincial portion of HST, ICI expansion and RRRP expansion.

# Broad Policy Themes / Rationale

- Support the continued reduction in the differential across distribution rates (as charged by Local Distribution Companies) across the Province through the potential enhancement of Rural or Remote Electricity Rate Protection, (RRRP). In order to not increase regulatory costs to customers as a result, this program can be moved to the tax-base.
- Provide a greater focus and support on lower income Ontarians by funding the Ontario Electricity Support Program (OESP) through the tax-base, as well as enhancing the support available through the program.
- Amortize electricity conservation and demand management (DM) programs over 15-years to provide lower costs for electricity consumers.
  - Alternatively, pay for conservation/DM programs through the tax-base and transition costs to the new "green bank entity" over time. Costs would be shifted in recognition of the burden borne by ratepayers in phasing out coal generation.
- Expand the scope of the "Trillium Trust" to make investments in energy infrastructure eligible for funding, such as remote electrification, large transmission projects, new or expanded interties and expansion of natural gas to underserved areas (i.e., rural and remote communities), etc.
- Empower energy agencies to increase cost effectiveness and improve efficiency by having – IESO modernize Ontario's electricity market through electricity market renewal initiatives, the OEB identify opportunities for future LDC cost reductions/efficiencies and work with OPG to find further efficiencies in operations and pass on savings to ratepayers.
- Give consumers more choice by allowing households to "opt into" an alternative rate plan, based on a flat electricity rate, as an interim measure as the Ontario Energy Board (OEB) develops more pricing options over time. Also give consumer greater transparency with respect to electricity costs by providing more details regarding the Global Adjustment (GA).
- Help small business manage their electricity costs and provide relief for cap and trade until proceeds recycling is fully operational by ending the Debt Retirement Charge (DRC) early for commercial and small industrial Class B electricity consumers, a benefit of $7/MWh.

# Proposed Initiatives – Potential Savings for Typical Residential Electricity Consumers

| *$/750kWh* | 2017 | 2018 | 2019 | 2020 | 2021 | 2022 | Timing of Benefit |

**Source:** Ministry of Finance, Energy
**Note:** *Assumes RRRP enhancement to reduce distribution rates to $30 for LDCs and **Assumes increase OESP credit by 50%.
Not included in chart is additional $18M/year to fund potential First Nations rate program through the Tax-Base.

# Existing Rate Mitigation Programs – Overview

- There are a number of existing programs funded by electricity ratepayers that help mitigate electricity bills for some customers, each of which has a unique policy rationale.

- Programs such as the as the Rural or Remote Rate Protection (RRRP) program are targeted at all customers who face the highest delivery costs in the province, while others such as the Ontario Electricity Support Program (OESP), are income tested and targeted at the most vulnerable energy consumers.
  - These program are not mutually exclusive and a customer could receive both the RRRP and the OESP.
  - There are other programs that are still under development such as options for a First Nations Rate currently being developed by the OEB as per the request of the Minister of Energy. These options are aimed to alleviate high delivery costs for on-reserve indigenous consumers.

- There are opportunities to enhance each of these programs. However, if enhancements are funded through the electricity rate-base, while they would lower costs for eligible consumers, they would raise costs for all other ratepayers.

- Given that these programs focus on promoting equity between different areas of the province (RRRP) or on social equity (OESP), they could be funded by the tax-base rather than the rate-base. This would allow their goals to be achieved and enhanced without increasing electricity rates. The following slides explore options to enhance each program using the tax-base.
  - These enhancements would also work in conjunction with the Ontario Energy Board's focus on reducing LDC costs outlined in option 6b.

# 1. Rural or Remote Rate Protection (RRRP) Expansion

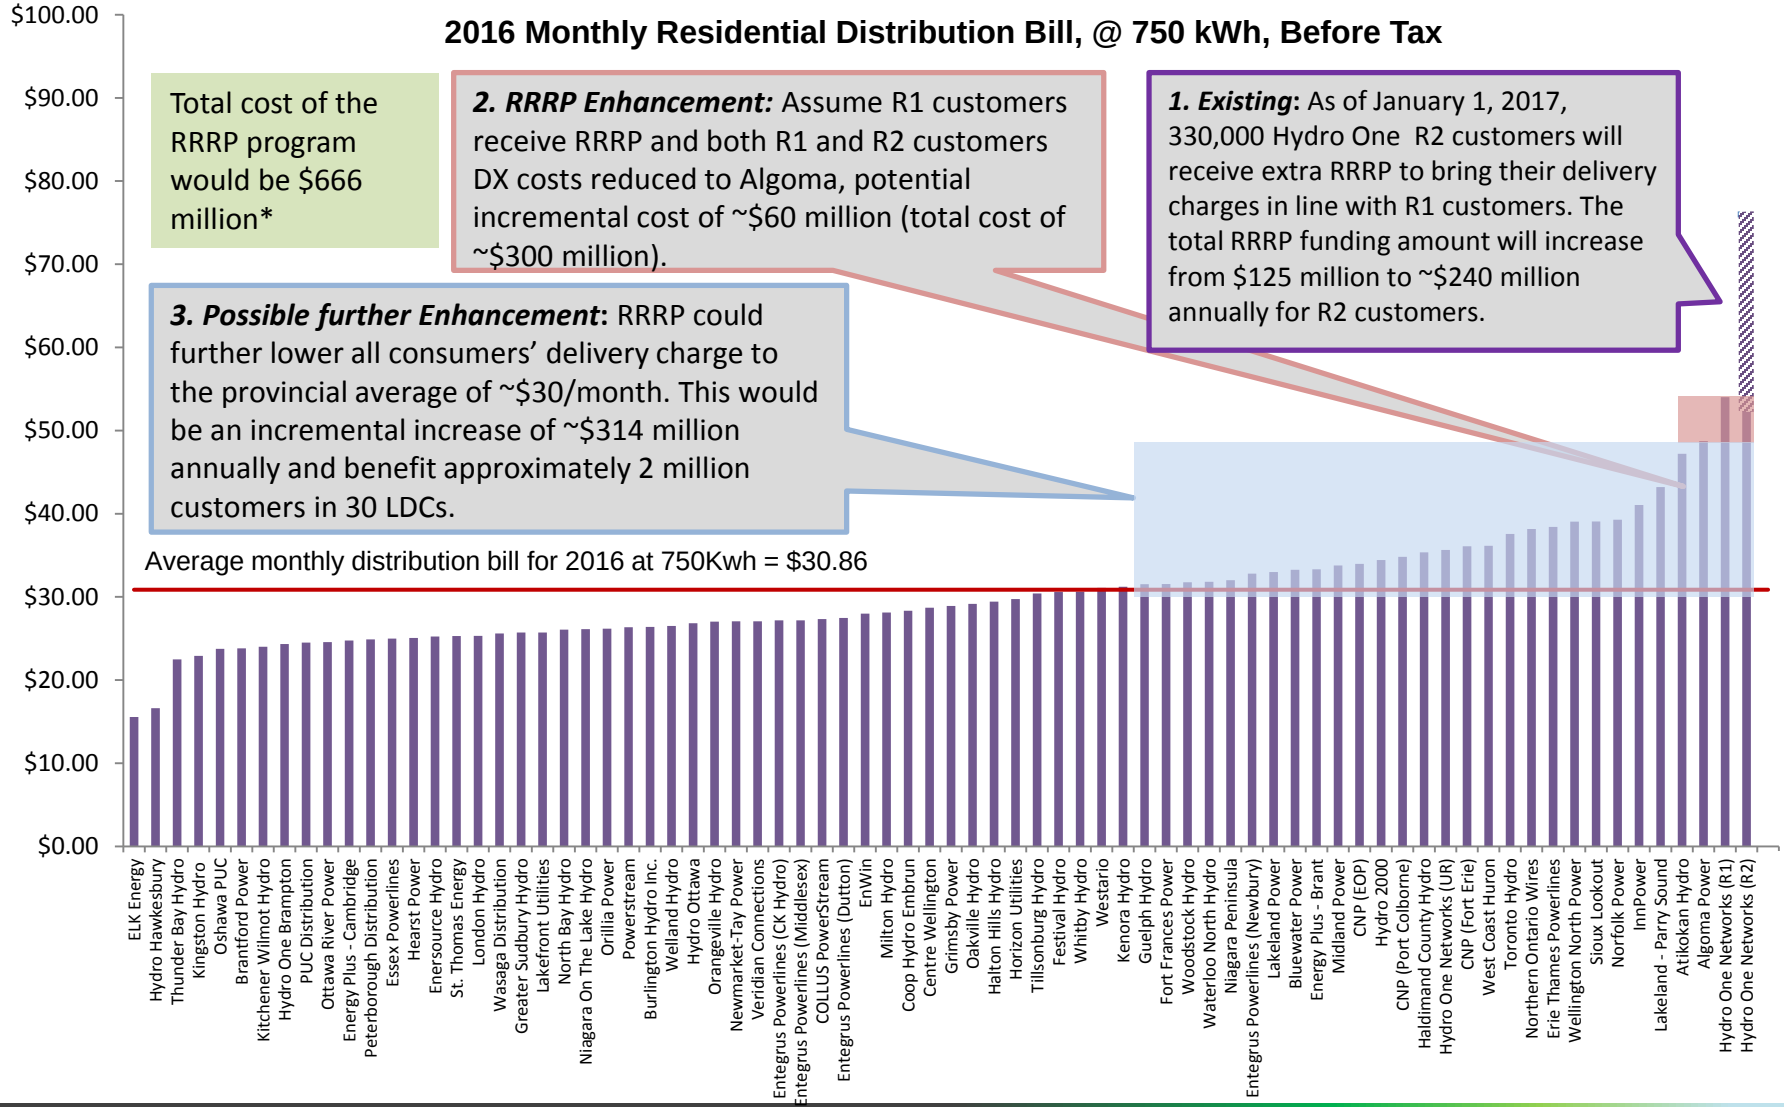
- The Rural or Remote Rate Protection (RRRP) program supports the most costly-to-serve distribution customers in Ontario. It is not income tested and most of the support goes to Hydro One's R2 (low density) rate class and remote communities.
  - Costs to these Hydro One customers are higher than average because of their relatively low density. The OEB mandates that they pay the full cost of service and in recent rate filings has asked Hydro One to ensure this through cost allocation studies.
  - To mitigate these costs, the RRRP was recently enhanced to help lower the bills of Hydro One's R2 customers to around those of its R1 (medium density) customers.
- Although other LDCs do not have medium- and high-density rates, there is a wide range of distribution costs between LDCs. The RRRP could be expanded to mitigate delivery costs for not only Hydro One customers but other high-cost LDCs.
  - Could be done on its own or as part of exploring an Ontario-wide uniform "postage stamp" delivery rate.

**Considerations**

- RRRP will be enhanced for R2 customers on January 1, 2017 to have their costs reduced to approximately R1 distribution costs levels. The RRRP could be further enhanced to include R1 customers, and have R2 and R1 customers reduce their costs down to Algoma (see next slide). This would cost $300 million in the first year (and would adjust year over year).
- If there was a desire to reduce costs for all LDCs, a simple average of distribution cost before tax, across all rate zones is $30.86 per month, for a residential customer consuming 750 kWh per month.** Bringing all delivery rates down to this average would cost approximately $500 million for the first year, with escalation in line with average distribution rate increases.
  - This assumes Hydro One R2 consume 1,200 kWh and H1 R1 customers consume 1,000 kWh per month.
- If all customers were brought down to the average costs (see the chart on the next slide for more detail):
  - It is assumed that residential customers with bills less than the provincial average see no change;
  - Majority of the enhanced benefit would go to Hydro One R1 and Toronto Hydro customers; and
  - Mechanism to ensure that LDCs continue to be motivated to achieve efficiencies would need to be designed (see section 4).
- Enhanced RRRP support may be best provided from the tax-base, because if funded from the rate-base, it would increase the costs for all customers who may argue that it is unfair that they are being asked to pay more to subsidize those in other LDCs.
- In conjunction with using the tax-base to reduce delivery charges to the provincial average, the OEB could be asked to explore moving to a province-wide "postage stamp" delivery rate that would be the same across the province to be implemented over time.
  - Could be "winners and losers" as delivery rates less than the average would go up in a postage stamp model;
  - A "postage stamp" model could help incent LDC consolidation.

**Note:** This is based on preliminary estimates and the amount will fluctuate on monthly consumption from customers and LDCs have different customer base with different consumption types.

# 1. Rural or Remote Rate Protection (RRRP) Expansion (cont'd)



*Note: this includes the ~$50M currently supporting Algoma Power and Hydro One Remotes.*

# 2a. Enhance Ontario Electricity Support Program (OESP) Benefit

- The OESP is an income-tested, application based program that lowers the electricity costs of the most vulnerable consumers by providing a rebate directly on their electricity bills. The OESP provides basic benefits to most consumers and enhanced benefits to Indigenous customers and customers with electric heat and medical devices and at launch, it was estimated ~560,000 families could be eligible and some 261,000 applications have been submitted.

- The OESP program benefits could be increased across the board by 50%, which would mean:
  - Single low income consumers would see an increase from $30 to $45/ month ($540/year); and
  - Families of four with electric heat could see an increase from $55 to $82.50/month ($990/year).

- The OESP program could also be further enhanced by working to ensure the program uptake is as close as possible to 100%:
  - Streamlining the application process to make it easier and quicker to get through;
  - Putting in place a more aggressive communications strategy to make sure people are aware of the program;
  - Increasing funding for key partner agencies to work directly with individuals who are applying; and
  - Exploring automatic OESP qualification for those who receive provincial programs (e.g., ODSP).

**Considerations**

- If the OESP was funded by the tax-base, it could also be explored whether the OESP could be better delivered as a provincial program via the tax system. This may help ensure that the program's participation rate is as high as possible.
  - At the time of program design, advice was given that a 40-50% participation rate would be high for an application-based program delivered through electricity bills.
  - The province would need to work with LDCs if the rebate was to appear on electricity bills rather than be delivered via the income tax system (e.g., through the Trillium Benefit).

# 1 & 2a. Fiscal Impacts of RRRP, OESP and First Nation Rate

- Table below shows estimates of program costs up to 2022:

| Year | OESP ($M) | OESP + 50%($M) | RRRP($M) | RRRP Enhancement ($M) | First Nations Delivery Rate($M) | TOTAL RANGE ($M) (from status quo to OESP and RRRP enhancements) |
|---|---|---|---|---|---|---|
| 2017 | $108 | $162 | $292 | $374 | $18 | $418 to $846 |
| 2018 | $150 | $226 | $300 | $384 | $18 | $468 to $928 |
| 2019 | $186 | $279 | $306 | $394 | $18 | $510 to $997 |
| 2020 | $215 | $322 | $315 | $404 | $18 | $548 to $1,059 |
| 2021 | $243 | $365 | $322 | $415 | $18 | $583 to $1,120 |
| 2022 | $272 | $408 | $329 | $426 | $18 | $619 to $1,181 |

1) Ontario Electricity Support Program (OESP)
   - After almost a year in market, close to 30% of potentially eligible customers are signed up.
   - The cost projections above assume the program grows to 100% of eligible consumers by 2022 and remains at that level.
   - The second column forecast also assumes the existing credit amounts increase by 50%.
     - Forecast assumes 10% administration costs
     - Forecast does not account for the approximately 142,000 low-income households that OEB estimated are not eligible because they do not directly receive an electricity bill.

2) Rural and Remote Rate Protection (RRRP)
   - Provides benefits to R2 Hydro One consumers, Algoma, and remote communities.
   - Includes the expanded coverage that will begin on January 1, 2017.
   - Expansion to cap distribution rates for other customers is based at $374M and assumes escalation of 2.6% (historical average dx rate increase). This is a conservative estimate, as Hydro One and Toronto Hydro increases could drive program costs beyond the average increase.

3) First Nation rate reduction (currently under development)
   - On November 14, 2016, OEB presented options to the Ministry on reducing costs for on-reserve First Nation customers.
   - OEB's recommended option to provide 100% delivery rate credit, which is estimated at $18.4 million per year.
     - Other options includes a seasonal fixed credit to account for demand changes over the year ($13 million) or a 50% total bill reduction ($23 million).

# 2b. Expand OESP Eligibility

**Expanded Coverage**

- When OESP was being created, the OEB estimated that are 713,000 low-income households, of which 20% do not receive electricity bills. Thus, only 571,000 would potentially be eligible for OESP.
- If moved to the tax base, the OESP could be broadened to include all potential low-income households, despite whether they directly pay for electricity.

**Eligibility Categories**

- OESP has two credits amounts:
    1) Basic credit of $30-50 per month, based on the level of income and the number of residents.
    2) Enhanced credit of $45-75 per month for those with unique electricity needs:
        a) Electric heating,
        b) Indigenous customers, and
        c) Certain electrically intensive medical devices.
- The enhanced credit can be expanded to include additional eligibility categories of customers. For example, a new “Low Density Consumer” category could be introduced that provides Hydro One R2 customers (highest distribution rates) eligible for OESP the enhanced credit.

**Considerations**

- Potential costs for expanded coverage and new eligibility categories depend on updated estimates and changes to program design and delivery.
- There would be value in keeping the OESP as an income-tested program to distinguish it from other initiatives (e.g. RRRP, which is designed to address disparity between rural and urban distribution costs).

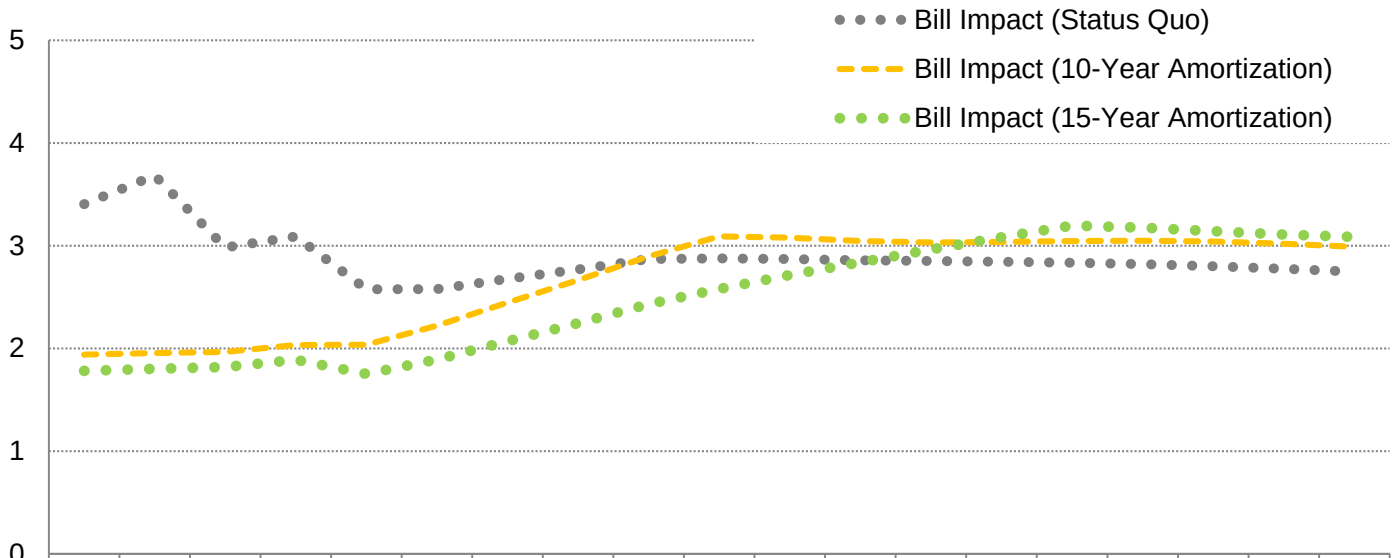
# 3a. Amortize Conservation Program Costs

- ~$3 billion from the electricity ratepayer base will be spent on conservation programs delivered under the Conservation First Framework (CFF) and the Industrial Accelerator Program (IAP) between 2015 and 2020.
- Currently, Conservation and Demand Management (CDM) program costs are recovered from the Global Adjustment (GA) mechanism about one month after expenses are incurred.
- As a potential rate mitigation measure, certain CDM costs could be amortized. This would involve IESO borrowing funds from the Ontario Financing Authority (OFA) on an annual basis to fund program incentives (non-administrative costs).
  - The time period over which costs could be amortized would be over the lifetime of funded CDM measures.
  - ENERGY is working with IESO to determine the appropriate lifetime period – the graph on the next slide, which illustrates residential bill impacts, presents two cases: **10-year and 15-year measure lifetimes**.
- In both cases, amortizing a portion of conservation spending would produce a benefit for electricity ratepayers in excess of $1/month from 2017 to 2020. Over time the benefit would decrease and turn into a cost (higher electricity rates than would otherwise occur), as interest charges begin to grow. Estimated interest charges are as follows (a 3% interest rate is assumed; increases in interest rates could result in higher overall interest charges):
  - $712 million ($2016) – Amortizing eligible 2017-2035 CDM costs for 10-year period; and
  - $1.3 billion ($2016) – Amortizing eligible 2017-2035 CDM costs for 15-year period .
- Legislative changes would be needed to allow recovery of interest payments from ratepayers, or these costs could be recovered from the Consolidated Revenue Fund (CRF, or taxes).
- An alternative that could be explored would be to pay for CDM costs, or for a portion of these, from the tax-base (*see Appendix for more detail on tax funding option*).

# 3a. Amortize Conservation Program Costs (cont'd)

## Conservation Residential Bill Impact – Status Quo, 10-Year and 15-Year Amortization

***CDM Bill Impact ($/month)***



| | 2017 | 2018 | 2019 | 2020 | 2021 | 2022 | 2023 | 2024 | 2025 | 2026 | 2027 | 2028 | 2029 | 2030 | 2031 | 2032 | 2033 | 2034 | 2035 |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| Bill Impact (Status Quo) | 3.40 | 3.68 | 2.98 | 3.09 | 2.58 | 2.58 | 2.68 | 2.77 | 2.87 | 2.88 | 2.87 | 2.86 | 2.85 | 2.84 | 2.83 | 2.82 | 2.80 | 2.78 | 2.75 |
| Bill Impact (10-Year Amortization) | 1.94 | 1.95 | 1.97 | 2.03 | 2.04 | 2.22 | 2.45 | 2.67 | 2.90 | 3.09 | 3.08 | 3.05 | 3.03 | 3.04 | 3.04 | 3.05 | 3.04 | 3.02 | 2.99 |
| Bill Impact (15-Year Amortization) | 1.78 | 1.80 | 1.82 | 1.89 | 1.75 | 1.89 | 2.07 | 2.25 | 2.43 | 2.58 | 2.71 | 2.84 | 2.96 | 3.08 | 3.20 | 3.18 | 3.14 | 3.11 | 3.09 |

Source: IESO; Ministry of Energy

**Note**: Chart assumes that conservation incentive costs are available for amortization while administration cost are not. Although there is variable from year to year, incentives represent about two-thirds of conservation spending in Ontario. Chart assumes conservation spending continues at a similar rate beyond 2020. Chart assumes a 10 of 15-year borrowing rate of 3.0%.

# 3a. Amortize Conservation Program Costs (cont'd)

**Considerations**

- Under **Public Sector Accounting Board (PSAB) accounting standards**, used by both the Province and IESO, only certain assets can be amortized: 1) pensions and 2) tangible capital assets. Under PSAB an asset must meet several criteria to be considered a capital asset, including:
  - A tangible capital asset must be tangible and substantive and the Ontario government must have title and operate the asset.
  - A tangible capital asset must bring a tangible benefit to the government or to Ontario.

- CDM costs, on their own, do not meet the criteria of a tangible capital asset because customers would have ownership and control of installed CDM measures, not the Province or IESO.

- **Rate-regulated accounting** was developed to recognize the unique nature of regulated entities (e.g., electricity generators, LDCs). Under rate-regulated accounting certain costs can be treated as amortizable assets that would not normally be considered assets under accounting principles.
  - Over the past several years, the Auditor General (AG) has expressed concerns about the appropriateness of recognizing rate-regulated assets in the Province's consolidated financial statements.
  - Rate-regulated accounting is currently under review by international accounting standard setting bodies and is currently permitted only on an interim basis, so its future is unclear at present.

# 3a. Amortize Conservation Program Costs (cont'd)

**Considerations**

- If some of Ontario's CDM costs could be amortized, analysis shows that ratepayer impacts would be reduced in the short-term but interest charges on the loan would result in increased overall ratepayer costs in the longer-term.
- Legislative amendments would be needed to allow recovery of loan interest charges from GA.
- ENERGY staff have developed a note to seek an opinion from IESO's external auditor and from the Ontario Provincial Controller (OPC) to determine whether CDM costs could be amortized according to rate-regulated accounting standards.
- ENERGY is working with IESO to seek an opinion on the proposal from IESO's external auditor.
- ENERGY would then send the IESO external auditor's opinion along with ENERGY's explanatory note to the Ontario Provincial Controller (OPC) to seek a formal opinion on whether CDM costs could be amortized according to rate-regulated accounting standards.
- Further legal analysis would also be required to confirm legal viability and possible approaches to implementation.

# 3b. Rate Smoothing of Conservation Program Costs

- "Rate smoothing" could achieve the same rate reduction effect as amortization.
- Instead of taking out a loan to amortize conservation costs, a regulatory amendment could allow IESO to establish a deferral account for conservation costs.
  - Each year, IESO would defer recovery of a portion of annual conservation costs. Financing would also be required, such as from the OFA, to pay the interest on the deferral account. Interest would accrue on the deferred amounts, likely at the same rates as for the amortization option.
- Deferred costs could be recovered over any time period. If a 10 or 15 year-period was chosen, the rate impacts would be the same as in the amortization option.

**Considerations**

- Option would **not** require approval of the Provincial Controller. However, choosing this option as an alternative to amortization may open the Ministry to criticism by the Controller and/or Auditor General since the rate impact is the same.
- The Ministry would have more control under this option to change deferred amounts each year, as opposed to the terms set by a loan agreement under the amortization example.
- There is precedence to this approach for nuclear investments, which otherwise would result in volatile increases and decreases for Ontario ratepayers over the investment period. In 2015, the Ministry amended a regulation that requires the Ontario Energy Board (OEB) to set "smoothed" nuclear rates for OPG's Darlington and Pickering nuclear stations over a 20-year period.
  - The regulation allows OPG to defer recovery in rates of a portion of its nuclear revenue during the Darlington refurbishment (expected to be complete in 2026) and recover these deferred costs over the remaining ten years.
  - OPG will establish a "deferral account" to record the deferred amounts each year up to 2026 plus accumulated interest on the balance to reflect OPG's financing costs as a result of rate smoothing. The deferral account is then drawn down on a straight-line basis between 2026 and 2036.
- At minimum, new regulation would be required. However, further analysis is needed to determine the relevant regulation or legislation, to be amended for IESO (e.g., OEB regulation of IESO costs and fees, GA regulation for how IESO recovers its conservation costs from ratepayers).

# 4. Expand the Scope of Trillium Trust to Make Investments in Energy Infrastructure

- Fund investments in specific energy infrastructure projects through the tax-base. **Note:** This could include the provincial portion of funding for the Remote First Nation Connection Project, a fund to support projects that improve adequacy and reliability in areas where new transmission would unlock economic growth and expansion of natural gas service to underserved communities.

**Considerations**

- Tax-base funding would allow for energy infrastructure to be built without impacting electricity and natural gas rates.
- Would require increasing the amount of funding committed to the Trillium Trust. All fiscal impacts from broadening Hydro One have been committed to the Trillium Trust $5.7 billion target and allocated to Moving Ontario Forward projects.
- There would be an ongoing fiscal impact from the amortization and funding of the investments. Where amortization is not possible there would be an upfront fiscal impact.

*Remote Connection Project:*

- Ontario ratepayers currently support costs of remote electricity service through RRRP on the order of $28 million/year
- Connecting 21 remote communities to the Ontario grid is supported by a positive business case due to diesel cost savings over time. If RRRP is funded through the tax base as proposed above, this project represents an opportunity to reduce impacts from RRRP.
- Direct investment in Ontario's portion of the capital costs of the project through a provincial fund (e.g., Trillium Trust) could also be considered along with mechanisms for cost recovery through transmission rates to refresh the fund as industry benefits from the transmission investment.
- The amount of investment and long-term savings depend on a federal contribution to the project and ENERGY is currently in discussions with Canada with the goal of concluding a cost-sharing agreement by spring 2017.
- A move to tax-based funding may have implications for cost oversight, since the OEB's mandate is to have oversight of ratepayer impacts. Alternative methods to review cost prudence of tax-based funding may be needed.

# 4. Expand the Scope of Trillium Trust to Make Investments in Energy Infrastructure (cont'd)

**Considerations (cont'd)**

*Transmission Projects to Enhance Economic Growth:*

- A tax-based fund could target investments in projects that have been identified in IESO regional plans and that would stimulate economic growth but are not proceeding due to cost barriers under the OEB's beneficiary pays principle. Investments could also target areas where the existing system poses challenges for delivering reliable service such as in parts of Northern Ontario with long single circuits.
- Potential opportunities for investment could include a transmission reinforcement in the **Greenstone area**, upgrades south of **Red Lake** and others TBD based on program design.
- This approach would allow a potion of project costs to be socialized to advance key projects without impacting rates or OEB's principles of cost allocation. Scope and scale of fund would be refined through program design.

*Natural Gas Expansion to Underserved Communities:*

- The Government has currently committed to expanding natural gas access to more communities in Ontario (i.e., $200 million Natural Gas Access Loan and $30 million Natural Gas Economic Development Grant).
  - Natural gas is an affordable heating source in Ontario. Its continues to be less expensive than alternative sources such as electric baseboards, heating oil and propane. For example, switching from oil to natural gas can save an average consumer an estimated $1,500 annually.
  - Increasing access to other energy sources such as natural gas, provides Ontarians with more options to meet their needs, reduce their energy costs and improve their quality of life.
  - Expansion of natural gas delivery infrastructure is widely supported in underserved communities (i.e., a recurring theme at ROMA) as a means to provide consumers and businesses in underserved communities with more affordable energy choices, attract new industry to Ontario and benefit agricultural producers.
- A grant program complements the Ontario Energy Board's recent decision enabling greater rate-based expansion to unserved areas, including rural and remote communities.
  - Applying Trillium Trust funding would make it possible to enhance the Grant Program and service more communities.

# 5. Dedicate Departure Tax

- In connection with the IPO, as a result of leaving the PILs regime and entering the corporate tax regime, Hydro One was deemed to dispose of its assets for proceeds equal to its fair market value, triggering a PILs liability of $2.6 billion (Departure Tax).
- This was paid to the Ontario Electricity Financial Corporation (OEFC), to be dedicated towards repayment of electricity sector stranded debt. The Province could explore repurposing some of those funds to the benefit of ratepayers.
- This may reduce the risk that the Ontario Energy Board (OEB) assigns to ratepayers the benefit from an associated tax asset, resulting in lower earnings and decreased share value for Hydro One. This decision is currently before the OEB, as part of Hydro One's Transmission rate application.
- If the Province were to transfer $2.6 billion in economic benefits to the rate base over 10 years suggest the following fiscal impacts (assuming 140TWh per year):
  - Residential Ratepayer Impact (if spread over 10 years): up to $1.39 per month on a typical bill; and
  - Industrial Ratepayer Impact (if spread over 10 years): up to $1.86 / MWh
- There would be no certainty that the OEB could still decide to allocate some or all of Hydro One's deferred tax benefit to ratepayers which would have fiscal impact (lower share price and lower net income over time).

**Considerations**

- Cost savings to ratepayers and associated fiscal impacts would depend on timing and which ratepayers (e.g., Hydro One customers, or all Ontario customers) will benefit from some or all of the $2.6 billion value.
- The departure tax was effectively a true-up for lower PILs payments from Hydro One in previous years – it was not a one-time windfall for the Province. In other words, it ensures that Hydro One paid all its tax obligations under the PILs regime before moving into the normal corporate tax regime.
- The related ~$2.4 billion fiscal benefit to the Province (from the deferred tax benefit) has already been credited to the Trillium Trust to be used to build infrastructure under Moving Ontario Forward.
- Repurposing funds paid to OEFC would ~~may~~ have an impact on the defeasance of electricity stranded debt and would cause the first increase in stranded debt since 2004.
- While this is a shift from messaging that value from the broadening of ownership of Hydro One is being used pay down debt and fund transit and transportation, the Province could link to electricity infrastructure investments (e.g., as an offset to ~~infrastructure investments already made in the sector, or to specific initiatives such as conservation~~).

# 6a. Empower Energy Agencies – IESO / Market Renewal

- Continue to move forward with IESO's Market Renewal initiatives:
  - Market Renewal encompasses projects such as a single-schedule system (from the current two-schedule system), more frequent intertie scheduling to better align with other jurisdictions and a day-ahead market. There will be up front capital costs to enable the initiative. IESO is currently assessing these costs.
  - Moving to "technology-agnostic" procurements will provide new opportunities for innovation and modernization and ensure ratepayers receive the best prices possible.

**Considerations**

- Changes related to IESO's Market Renewal initiatives, reflected in HOEP and uplifts, are estimated to save up to $300 million per year, starting in 2021, leading to a reduction of:
  - About $1/month or less than 1% at current retail prices for a typical residential bill; and
  - About $1.30/MWh at current all-in prices for industrial and SME electricity consumers.
- The IESO's Market Renewal is a broad initiative that will impact all aspects of Ontario's electricity market. Ontario has had a uniform price since market opening.
- Adopting a technology-agnostic stance will lower the overall cost of providing electricity service by selecting the most cost-effective resources to fulfill various system needs.
- IESO estimates that the total implementation cost – including a 15% contingency and net of avoided costs – will be $150 million. The bulk of the costs (capital) would only be recovered once the project has been implemented and as the benefits are being realized.

# 6b. LDC Efficiencies and Rates

- Reducing costs and having LDCs become more efficient could result in a reduction of Distribution costs on electricity bills.
  - Currently, LDCs recover costs through the Delivery line of the electricity bill, which is broken into Distribution and Transmission costs. LDCs are responsible for the Distribution costs of the electricity bill which account which account for about 20% of the total bill.
  - Distribution costs vary across the province as LDCs have different service territories and needs (e.g., geography, number of customers, density of customers, life/health of capital assets, etc). See next slide for more detail.
    - For example, comparing 2016 with 2006, distribution rates have increased by about 24.5% (or about 2.2% per year, compounded annually) across the Province, with significant variation between regions and LDCs (-17% to 148%). Overall consumer price inflation in Ontario for the same period increased by about 19% or 1.8% per year.

**Considerations**

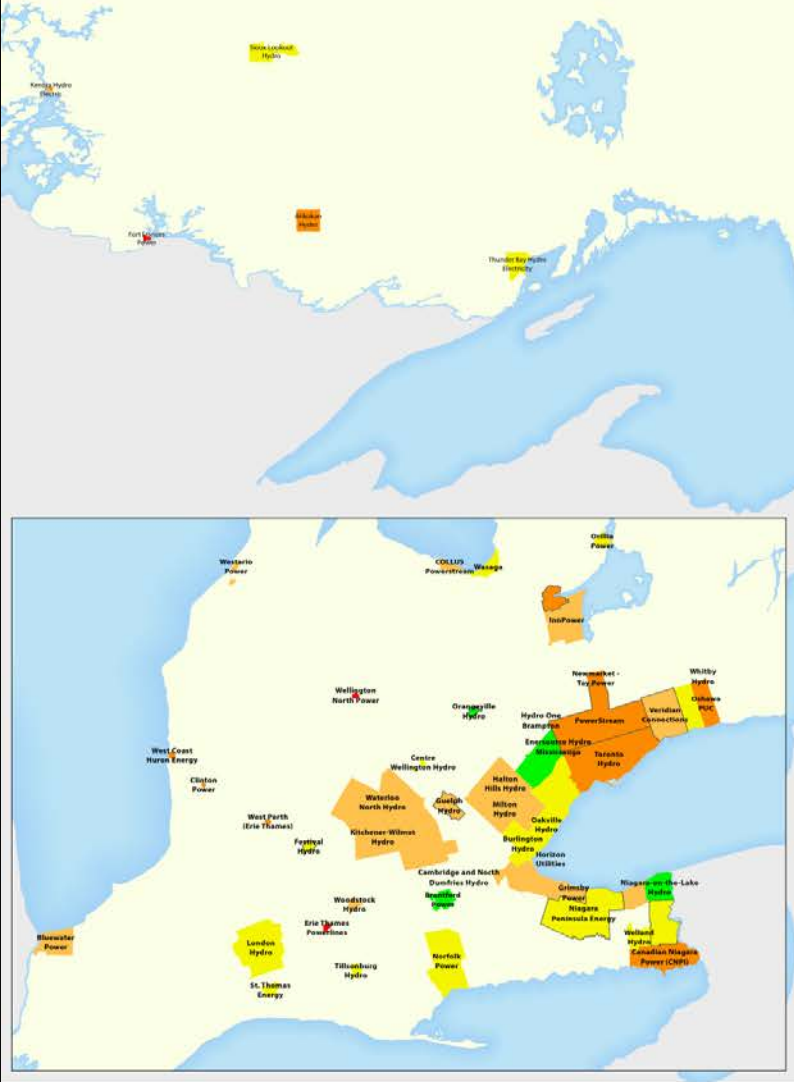
- The Ontario Energy Board (OEB) has a mandate to regulate the electricity distribution sector in the public interest, ensuring the financial viability of the sector while promoting reliable service to customers at just and reasonable rates. Since 2012, the OEB has taken action – through the Renewed Regulatory Framework for Energy – to more closely link rate regulation with performance measures and outcomes.

- There maybe opportunities to promote further cost reductions and performance improvements within the distribution sector as there is continued evolution of the regulatory framework in Ontario.
  - Tightening LDC requirements may also indirectly incent other desired policy outcomes, such as LDC consolidation and grid modernization to realize further cost reductions.
  - To further help address the costs associated with the Delivery line of the electricity bill, program such as the RRRP (previous slide) could be expanded to include other customers that may face higher costs.

- ENERGY could help promote or accelerate these efforts by asking the OEB through the LTEP Implementation Directive, s. 35 of the *Ontario Energy Board Act, 1998*, and the 2017 Mandate Letter and other agency business planning processes.

- In 2012, the government asked the Ontario Distribution Sector Review Panel to review the distribution sector and make recommendations about how it could become more efficient. The Panel concluded that a $1.2 billion net present value in savings could be achieved by consolidating LDCs into 8-12 regional entities. The panel recommended legislation to mandate consolidation.
  - Rather than mandating consolidation, the government response was to pursue voluntary consolidation and put in place tax incentives for consolidation. Further changes to the tax incentives and/or revisiting legislated consolidation could be considered.

# LDC Distribution Rate Changes (2006 vs 2016)



| Total Dx Rate | 2006 | 2016 | % Rate Change |
|---|---|---|---|
| Hydro One UR (High Density) | $29.13 | $35.65 | 22.4% |
| Hydro One R1 (Medium Density) | $37.73 | $54.02 | 43.2% |
| Hydro One R2 (Low Density) | $44.65 | $76.14 | 70.5% |

## Legend

**LDC Rate Comparison 2006 vs 2016**

**% Total Rate Change ( # of LDCs )**

- -17.3% to 0% ( 5 )
- 0.1% to 15% ( 25 )
- 15.1% to 30% ( 21 )
- 30.1% to 60% ( 16 )
- 60.1% to 89.3% ( 4 )

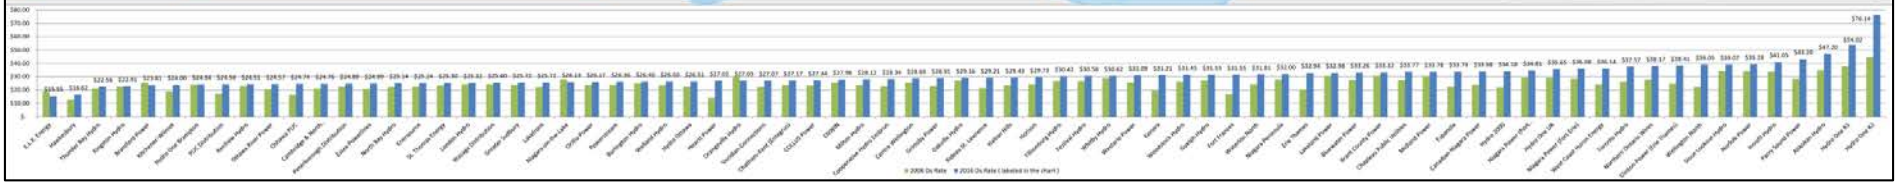
*Published December 2016*

## KEY FINDINGS

- In summary, distribution rates (including rate riders) have increased by about 24.5% across the Province, with significant variation between regions and LDCs (-17% to 148%).
- There is generally no correlation between LDC size or location and distribution rate increase in absolute or percentage terms.
- The current analysis shows no clear relationship between the percentage rate increase and the absolute rate level (that is, high rate increase LDCs may still have among the lowest rates, and low rate increases may have higher rates.
- No clear relationship between amalgamation and rates.
- The analysis does suggest that Hydro One has the highest rates, and some of their customers have seen higher than average rate increases.

## NOTES

- **Rate Calculation:** Monthly residential distribution bill rates, before taxes, are based on consumption of 750 kWh. Distribution charges account for approximately 23% of the average 2016 residential bill.
  All figures calculated by ENERGY staff without input from OEB.
- **Colours:** Colour coding of the map only depicts the change in LDC rate amounts (i.e. LDCs in red don't necessarily have the highest total rates).
- **Mergers:** Rates for customers in merged LDCs have experienced different levels of change. For merged entities, the largest LDC in 2006 was used. An accompanying map focuses on merged entities.
- **Points in Time:** Current analysis compares 2016 and 2006 only. Rates could have had an uneven trajectory, especially considering regulatory decisions such as time limited charges/rebates with temporary impacts.



# 6c. Empower Energy Agencies – OPG / Operational Efficiencies

- Provide expectation that OPG meet more aggressive cost targets, improving efficiency by ~$3/Megawatt hour (MWh).

**Considerations**

- OPG recently submitted its 2017-19 business plan to the Province for concurrence. That plan includes the following:
  - Enterprise total generating cost increasing from $48/MWh in 2016 to an average of $55/MWh over the plan period.
  - An average residential monthly bill increases of $1.05/month annually from 2017-2021.
- Much of this increase is due to the Darlington refurbishment project, which increases costs and reduces OPG's generation over the planning period.
- OPG has also shared its stretch targets for total cost of generation, which average $52/MWh over the 2017-19 plan, a ~$3/MWh reduction (5-6%) relative to its $55/MWh business plan targets.
- The Province could provide instructions to OPG to focus on its stretch target as part of the Minister's Concurrence letter. This is a public document that OEB would likely review and incorporate as part of OPG's current rate application.
- Consistent with regulations under the *Ontario Energy Board Act*, OPG is seeking smoothed rates for nuclear as part of its 2017-2021 rate application.
  - As a result, the benefit to ratepayers of reducing generation costs is uncertain.
  - Given that the application extends beyond the business plan period, and to ensure OPG does not delay costs beyond the planning horizon, the Province may want to provide additional direction for out year expenditures.
- If OPG is unable to meet more aggressive cost targets, this could impact net income, and the Province's fiscal plan.
  - The total cost of $3/MWh based on OPG's forecast production of 74 TWh/yr is about $240 million per year.
- The Province could work with OPG to craft language in the concurrence letter in order to avoid setting unintended precedents for future rate application processes.

# 7a. Give Consumers More Rate Choices and Greater Transparency – Interim Flat Rate

- OEB continues to move forward with its Regulated Price Plan (RPP) Roadmap:
  - The OEB is undertaking a comprehensive review of the RPP, including exploring the introduction of offering different pricing plan options for customers following the completion of pilot programs in 2018. The plan is expected to be implemented over a 3-5 year period.
- Until new pricing plans are available, the OEB could provide an "opt-in flat rate RPP" structure that could be made available to residential, farm and small business consumers on an interim basis (2-3 years) until a wider range of price plans are available, providing customers with pricing choice.
- Time-of-Use (TOU) pricing could also be introduced for non-RPP Class B consumers to reduce Global Adjustment (GA) volatility and reduce system costs.

| Current TOU | New Flat Rate |
|---|---|
| On: 18.0 ¢/kWh | 11.1 ¢/kWh |
| Mid: 13.2 ¢/kWh | |
| Off: 8.7 ¢/kWh | |

**Considerations**

- Would provide consumers with electricity pricing choice.
- The OEB has indicated that the option would lead to no overall change in system costs. Consumers with higher peak and mid-peak usage patterns would see a decrease in their electricity bills, while those with higher off-peak usage patterns would see an increase.
  - While the current strong supply conditions may allow for such an RPP structure (i.e., peak demand requirements can be easily met), administrative costs could be high (distributors would need to design/implement an opt-in process and associated billing system on an interim basis).

| | Current TOU | New Flat Rate |
|---|---|---|
| 1) Monthly electricity bill- higher peak and mid-peak usage patterns | $172 | $163 |
| 2) Monthly electricity bill- higher off-peak usage patterns | $152 | $163 |

***Note:** 1) assumes a consumer consumption pattern of 45%:30%:25% (Off-peak: Mid-peak: On-peak), while 2) assumes consumer consumption pattern of 80%:10%:10% (Off-peak: Mid-peak: On-peak). Estimates are based on OEB's online electricity bill calculator (for Toronto Hydro- November 2016 rates)

# 7a. Give Consumers More Rate Choices and Greater Transparency – Interim Flat Rate (cont'd)

**Considerations**

- The decision to undertake smart meter investments was partly justified on the basis of TOU pricing. If TOU pricing were to be made optional, some stakeholders could question the rationale for smart meter investments.
  - Rationale for offering a flat rate option could focus on providing customers with choice until new pricing plans are rolled out under the RPP roadmap.

- If a flat rate design is introduced, there could be significant consumer opposition to any return to a mandatory TOU.

- After the interim flat rate period, the OEB could offer a wider range of pricing plans to consumers.
  - As part of its RPP review, the OEB will be running pilots with LDCs to assess customer response to alternative time periods and pricing structures.
  - Learnings from these pilots will help inform potential changes to the RPP. Pilots are expected to be in market May 2017 and run for one year.

- Non-RPP Class B electricity consumers currently pay Global Adjustment (GA) on a volumetric basis. Moving them to TOU would provide an incentive to shift consumption to off-peak periods.
  - Consumers, including manufacturers, who are unwilling to shift would face higher costs and likely not be supportive of the changes.
  - The decision to pursue TOU pricing for non-RPP class B consumers will impact proceeds recycling as there is interplay between the two initiatives.

# 7b. Give Consumers More Rate Choices and Greater Transparency – Detailed Global Adjustment

- Provide electricity consumers greater transparency with respect to electricity generation costs by providing more details regarding the Global Adjustment (e.g., adding a line on hydro bills, quarterly energy reports, etc).

**Considerations**

- As electricity bills have increased, many consumers have complained about a lack of transparency on the drivers of electricity costs. In particular, consumers and legislative officers have singled out the GA.

- Providing consumers with additional information on the cost components and amounts recovered through the GA would help consumers understand how the different forms of electricity generation in Ontario contribute to consumers costs.

- Providing additional information to consumers on electricity commodity cost drivers without sufficient context or background could simply lead to increased complaints about particular generating technologies that make up large shares of costs (e.g., nuclear).

- Adding a breakout of the amount of GA on residential electricity bills could lead to further confusion due to the existing breakout of multiple time-of-use buckets.

- Alternatively, the existing quarterly Ontario Energy Report, which provides various energy sector data, could be leveraged to show a breakout of quarterly GA costs by fuel type. A link on electricity bills could point to this information.

# 8. Help Small Business Manage Their Electricity Cost – End DRC Early for Class B Electricity Consumers

- Propose to remove the $0.07/kWh Debt Retirement Charge (DRC) from the bills of commercial/small industrial Class B consumers beginning in 2017, instead of April 1, 2018.
  - **Note:** Class A consumers (e.g., large industrial) would continue to pay DRC until at least April 1, 2018.

**Considerations**

- For a Class B consumer currently paying about $152/MWh, removing the DRC would represent a savings of about 5%.
  - A 50% reduction in the DRC charge would represent a savings of about 2%.

- Alternatively, the reduction of the DRC could be to $0.035/kWh starting in 2017, to provide relief for cap and trade until proceeds recycling is fully operational.

- Residential consumers have had the DRC removed from bills since January 1, 2016. Taking DRC off commercial and small industrial bills would result in equal treatment for these groups of consumers.

- The savings for commercial and small industrial consumers associated with this proposal would drop to zero in April 2018, since this is the current planned date for removing the DRC from non-residential bills.

- Prior to moving forward with this proposal, additional analysis from Legal Services and the MOF would be needed.

# 9. Extend Length of Existing Wind / Solar Contracts

- Wind and solar developments are typically contracted through standard offer procurements on 20 year fixed terms at fixed pricing.
- Many of these projects have already reached commercial operation.
- The province could explore options for IESO to negotiate extensions to existing renewable energy contracts, for example, by 10 years, in return for the proponents agreeing to a lower price in the near term.

**Considerations**

- Projects in commercial operation offer potential for near-term rate reduction whereas projects that have yet to reach commercial operation provide potential to mitigate future rate increases only.
- The attractiveness of this option to contract holders would vary from project to project and would depend on project economics.
- Revised pricing would be subject to negotiation, and associated ratepayer savings would be difficult to forecast accurately.
- The duration of contract renegotiation is difficult to forecast and may not be achievable in the near term.
  - Proponents may have to renegotiate their project financing arrangements, ensure project investors are satisfied with any changes in ROI, and extend land leases.
- Project host communities and Indigenous communities whose traditional territory the projects are sited in may not be interested in these projects extending their operational period ; discussions/consultation may be required in advance of this potential option moving forward.

# 9. Extend Length of Existing Wind / Solar Contracts (cont'd)

**Considerations (cont'd)**

- Should Ontario be successful in negotiating lower prices in the near term, it should be noted that contract holders will be in a strong bargaining position (given their existing fixed-priced contracts), and will likely extract additional value from the negotiations.

- Since the Minister of Energy is not a party, IESO would be required to renegotiate the contracts, which would likely involve a direction or directive to IESO.

- Further analysis is required as to how ENERGY could express its policy intent to have IESO renegotiate the contracts for a reduced rate at a longer term, however it is unlikely that IESO could guarantee the outcome.

- Further analysis is required to ascertain whether there is scope within the existing contracts for IESO to renegotiate their terms in this manner.

- Extending contract terms would also reduce planned flexibility and increase the risk of overpayment as this existing capacity would now be contracted into the 2040s and not the 2030s.

- Extending contract terms may require investments in component replacement and additional operation and maintenance costs that developers would seek to recover under any renegotiated contract.

# 9. Extend Length of Existing Wind / Solar Contracts (cont'd)

**Considerations (cont'd)**

- Ontario has over 4,500 MW of wind in commercial operation, with the vast majority being large scale (>500kW) developments.
  - This includes over 2,700 MW of large FIT 1 and GEIA wind projects representing 47 contracts (average size ~58 MW) and over 1,000 MW of solar projects representing 103 contracts.

- Projects over 500 kW would offer the most savings potential as they represent the majority of installed renewables capacity and are spread across fewer contracts.

- Below are two potential approaches to reducing ratepayer costs in the near term by extending contract terms at reduced prices. An illustrative example of a typical large wind project is used.

- **Example:** 100 MW FIT 1 wind project achieving Commercial Operation in 2014 (i.e., 17 years remaining on initial 20 year contract), assuming a 10 year contract extension negotiated at the LRP I low weighted average wind price of $64.5/MWh;
  - (17 years @ $135/MWh + 10 years @ $64.5/MWh)
  - **Potential Approach 1:** Provide a single new contract price that is the average of the lower extension price and the FIT contract price over the new contract term. The new price would be lower over a longer term.
  - **Illustrative Example:** New contract for 27 years at $129/MWh.
  - New contract price set to allow 10% rate of return over 27 year contract per FIT pricing approach.

| 100 MW Wind Project | Status Quo | 27 Year Contract (remaining term extended for 10 additional years) |
|---|---|---|
| Contract Cost (NPV 2017) | $550 million | $582 million |
| Average Monthly Ratepayer Impact Over First 5 Years | $0.03 savings | |
| Average Monthly Ratepayer Impact Over Remaining 22 Years | $0.02 increase | |
| Average Monthly Ratepayer Impact Over Entire 27 Year Contract | $0.01 increase | |

# 9. Extend Length of Existing Wind / Solar Contracts (cont'd)

**Considerations (cont'd)**

- **Potential Approach 2:** Offer facilities a revised contract that extends terms and is structured to offer lower pricing in the initial contract years and higher pricing in the later years of the contract.
  - For example, the New contract is $85.9/MWh over the first 5 years and $169/MWh over the remaining 22 years.
    - Price over first 5 years is LRP I weighted average wind price.
    - Price over remaining 22 years is set to allow 10% rate of return over entire 27 year contract per FIT pricing approach.

| 100 MW Wind Project | Status Quo | 27 Year Contract | |
|---|---|---|---|
| | | Initial 5 Years | Last 22 Years |
| Contract Cost (NPV 2017) | $550 million | $632 million | |
| Monthly Average Ratepayer Impact Over First 5 Years | $0.09 savings | | |
| Monthly Average Ratepayer Impact Over Remaining 22 Years | $0.07 increase | | |
| Monthly Average Ratepayer Impact Over Entire 27 Year Contract | $0.04 increase | | |

# 10. Tax Relief for Solar and Wind Contracts

- In 2010 and 2011 Ontario procured large scale projects (>500 kW) through the FIT program at standard offer pricing.

- The FIT program was the centerpiece of the GEA which established the economic and social goals of growing the green economy, including establishing a local renewable energy manufacturing base, supporting the development of green energy jobs, and providing incentives for Indigenous participation.

- To help achieve these economic and social goals, the FIT program offered pricing at above competitive procurement rates, and provided Indigenous and Community participation adders, which resulted in economic benefits to all Ontarians, but resulted in additional costs borne by Ontario's electricity ratepayers.

- Ontario could fund the added cost of some or all of these economic and social incentives by shifting their costs from the rate-base to the tax-base.
    1. The tax-base could fund the portion of FIT pricing that is above the cost of wind and solar generation procured through a competitive process.
    2. The tax base could absorb the cost of the incentives paid to encourage Indigenous and Community participation in FIT.

**Considerations**

- If applied to projects in commercial operation the benefit to the ratepayer would be immediate.
- Comparing FIT pricing to competitive procurement pricing could provide a reasonable representation of energy procurement without the added cost of economic and social incentives.

# 10. Tax Relief for Solar and Wind Contracts (cont'd)

1. The tax-base could fund the portion of FIT pricing that is above the cost of wind and solar generation procured through a competitive process.
   - For example, from 2017 onward, the estimated value of the more than 1,800 MW of large wind projects in commercial operation under the FIT 1 program at a price of $135/MWh is approximately $9.4 billion (NPV 2017).
   - The weighted average price for large wind projects over the RES I, II and III competitive procurements was $95.1/MWh.
   - If the competitive RES wind pricing were applied to the 1,800 MW of FIT 1 large wind projects, total program value would be estimated at $6.1 billion (NPV 2017).
   - The $3.3 billion difference could be considered the value of above competitive procurement pricing and could be shifted from the rate-base to the tax-base.
   - This represents estimated average ratepayer savings of $1.50/ month relative to OPO forecasts.
   - The same approach could be considered for solar projects however, prior to LRP I in 2016, Ontario had not procured solar capacity competitively and international cost comparisons are challenging given differences in regional development costs.
   - This example does not include the value of participation price adders available for community and indigenous participation.

# 10. Tax Relief for Solar and Wind Contracts (cont'd)

2. The tax-base could absorb the cost of the incentives paid to encourage Indigenous and Community participation in FIT 1 solar and wind projects.

   - For example, 17 large FIT 1 wind and solar projects have Indigenous and/or Community participation making them eligible for a price adder in addition to their base contract price.

   - The estimated value of these price adders is approximately $17.1 million (NPV 2017) over the expected remaining term of their contracts.

   - This represents estimated ratepayer savings of approximately $0.01/month relative to OPO forecasts.

| 46 | GEIA | 148.6 | Dec-14 |
| 47 | GEIA | 270 | May-15 |

# Key Outcomes / Next Steps

- The proposed initiatives provide the following opportunities to:
  - Provide a greater focus on vulnerable consumers by funding electricity support programs through the tax-base.
    - Enhance existing and new support programs targeted at the most vulnerable consumers (i.e., OESP and RRRP); and
    - Better harmonize delivery rates across the province.
  - Re-set how energy infrastructure is funded by shifting costs to the tax-base from the rate-base.
  - Provide electricity consumers with greater choices and transparency (e.g., alternative rate plan based on a flat electricity rate, unpacking the Global Adjustment costs, etc);
  - Provide system benefits (e.g., market renewal);
  - Increase cost effectiveness and improve efficiency; and
  - Lower the cost of electricity for all consumers.

- The timing of the impact of these rate mitigation initiatives varies.
  - Immediate and near-term impacts can be achieved by shifting costs to the tax-base or changing how certain costs are recovered from consumers or eliminating certain programs.
  - Over the longer term, changes to the electricity supply mix and achieving efficiencies in the electricity market could yield system savings.

- Pursuing the initiatives would require legislative and/or regulatory amendments and working with the electricity sector agencies, LDCs and other stakeholders to implement the initiatives.

# Appendix

A. Rural or Remote Rate Protection (RRRP) – Overview and Enhancements
B. Fund Conservation Programs Through the Tax-Base
C. Eliminate the Industrial Conservation Initiative (ICI)
D. Cancel Large Renewable Procurement I (LRP I)

# A. RRRP Overview and Enhancements

- The Delivery line of the electricity bill is composed of Distribution and Transmission Costs. While transmission costs are uniform across the province, LDC costs vary by distributor and account for about 20% of the total bill for the electricity customers.
  - See slide X for a map of delivery rate increases between 2006 and 2016.
- The Rural or Remote Rate Protection (RRRP) framework was put in place in 2001 to help offset the higher costs to distribute electricity to Ontario residents who live in rural or remote locations.
- RRRP is available to: residential Hydro One R2 customers (~350,000 customers), Algoma Power customers (~11,600 customers); H1 remote customers (~3,500 customers).
  - To date, R2 customers receive a fixed amount of $125 million a year distributed amongst the customers. Algoma and Remote customers have RRRP calculated by the OEB each year that fluctuates based on average provincial distribution increases.
- Because the amount had been fixed for over a decade, the Province recently increased funding of the RRRP program for Hydro One R2 customers from $125 million to $240 million. This will be effective as of January 1, 2017, and will bring their delivery charges in line with the next highest charges from Hydro One's R1 customer class.

# B. Fund Conservation Programs Through the Tax-Base

- Propose to fund 2017-2020 electricity conservation and demand management program costs* using tax dollars instead of ratepayer dollars.
  - Funds received through the Hydro One Departure Tax could potentially be repurposed towards this.
- Total remaining 2017-2020 electricity conservation program costs are expected to be ~$2.1 billion.
- Post 2020, this option could evolve to funding conservation programs through the Greenhouse Gas Reduction Account.

**Considerations**

- Electricity conservation programs provide a number of benefits to society, however, Ontario's ratepayers have been covering these costs:
  - Avoiding/deferring future energy infrastructure investments, reducing disruption in communities (e.g., avoiding the need to build new natural gas generation);
  - Environmental benefits (e.g., reduced natural gas peaking generation and GHG emissions); and
  - Social and economic benefits (e.g., job creation and assistance managing electricity bills).
- There is precedence for using tax dollars to fund conservation programs.
  - Between 2007 and 2011, Ontario funded the Home Energy Savings retrofit program using tax dollars.
- Funding conservation programs though the tax-base is expected to result in a benefit of $3.40/month for residential electricity consumers in 2017. This could provide immediate short term relief to consumers while other rate mitigation initiatives are developed (e.g., market renewal, LDC efficiencies).

*** Note:** This includes costs towards the Conservation First Framework, Industrial Accelerator Program, Demand Response and the Conservation Fund)

# C. Eliminate the Industrial Conservation Initiative (ICI)

- The cost shift from the Industrial Conservation Initiative (ICI) could be removed from electricity bills by eliminating ICI.
  - The ICI allows large electricity consumers to lower their electricity costs by reducing their demand during peak hours.

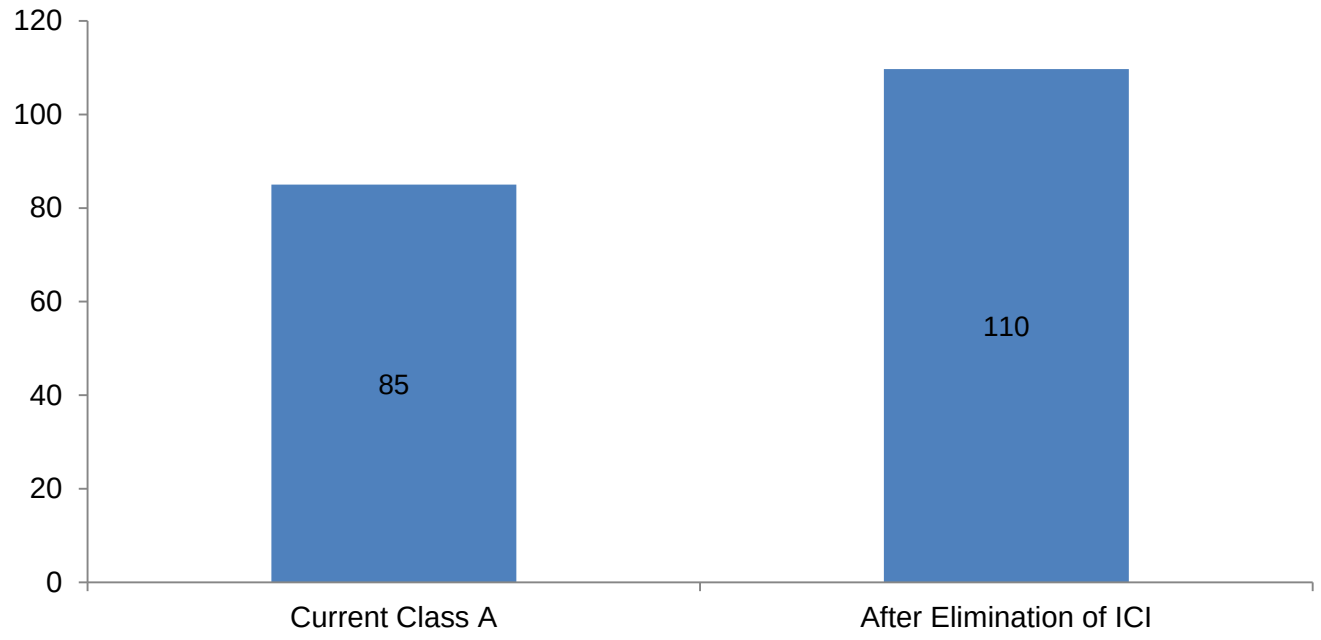
**Considerations**

- Eliminating ICI would result in a benefit of more than $4/month for residential electricity consumers in 2017.
  - However, unless government took action to mitigate the associated cost shift back to industrial consumers, typical industrial prices would increase by about one-third. Such a price increase would pose significant challenges for energy-intensive consumers.
- Industrial stakeholders have indicated that ICI as an integral factor in maintaining competitiveness and retaining industry in the province.
  - Eliminating ICI would limit the “cost shift” onto residential consumers, but it would also lead to a reduction in industrial demand. The large industrial contribution to the fixed costs of running the electricity system would then need to be covered by remaining consumers.
- If ICI is retained, current IESO projections indicate that the cost shift will decrease each year going forward as Global Adjustment (GA) decreases (due to an expected increase in HOEP).
- Alternatively, ICI could be funded through the tax-base at a cost of $900 million annually. There is precedent to use the tax-base for industrial support programs, including the Northern Industrial Electricity Rate Program (NIERP) and the Jobs and Prosperity Fund.

# C. Eliminate the Industrial Conservation Initiative (cont'd)

- ICI currently provides a benefit of about $25/MWh to Class A electricity consumers.

**All-In Electricity Price**
*in $/MWh*



**Note**: Based on year-to-date (YTD) September 2016 prices. Class A reflects a transmission-connected consumer.

# D. Cancel/Adjust Renewable Energy Procurements

- The Ministry could consider the following actions to further mitigate future impacts to electricity bills:

| Unallocated/Terminated Capacity | Announced Procurements | Executed Contracts |
|---|---|---|
| A. Do not procure unallocated or terminated capacity | B. Revise FIT 5 target | D. Cancel LRP I contracts |
| | C. Cancel FIT 6 | |

**Overarching Considerations**

- Cost savings associated with reducing or cancelling renewable energy procurements and programs will not reduce current electricity bills, but would result in future cost reductions relative to Ontario Planning Outlook forecasts.
- The IESO estimates implementing options A to C will reduce system costs by approximately $592 million ($2016) between 2019 and 2028, resulting in an average of approximately $0.50/month in savings to a typical residential electricity bill over the same period.
- The microFIT program is winding down end of 2017. Annual microFIT procurement targets have been undersubscribed.
- With a few exceptions (e.g. rollover of unallocated microFIT capacity; addition of terminated microFIT and small FIT capacity to FIT 5), plans for unallocated or terminated capacity are not defined in announcements or existing directions.

*Cancel/Adjust Announced Procurements:*

- Amendments to existing directions to IESO would be required to reduce FIT 5 and cancel FIT 6.
- The FIT 5 procurement is underway with a base target of 150 MW and inclusion of any capacity available from contract terminations under prior small FIT and microFIT procurements. The application window closed on November 25, 2016.

# D. Cancel/Adjust Renewable Energy Procurements – Existing Contracts

*Cancel Existing LRP I Contracts:*

- 16 LRP I contracts (approx. 455 MW) have been executed and projects are under development.
- None have met Key Development Milestones. Total value of LRP I estimated at approx. $1 billion (NPV to 2016).

**Considerations**

- To help inform a decision, IESO or OEB could be asked to evaluate and provide guidance to the Ministry on the system need for LRP I projects and potential ratepayer impacts/benefits.
- 13 of 16 LRP I contracts have Indigenous participation. Cancelling LRP I contracts would remove this economic development opportunity and likely damage relationships between Indigenous communities and the government.
- LRP I Contract includes an “Optional Termination” provision allowing IESO to terminate any contract prior to the “Commercial Operation Date” with 6 months written notice.
- The IESO obligations under the Optional Termination provision depend on whether the project has met all “Key Development Milestones”.
  - As no projects have met their Key Development Milestones, the estimated total cost payable to contract holders is about $8 million.

# D. Cancel/Adjust Renewable Energy Procurements – Existing Contracts (cont'd)

**Legal Analysis**

- Any new directive to cancel LRP I contracts would need to be approved by Cabinet, either as part of an LTEP implementation directive to IESO, or pursuant to the overall power to direct IESO with respect to procurements.
  - An amendment to an existing direction would not require Cabinet approval, however, further analysis is required to determine if direction to cancel LRP I contracts could be considered as amending existing direction.
- ENERGY has previously received advice that there is a high risk that a court would conclude that the Minister has no authority under the *Electricity Act , 1998* to issue a direction requiring IESO to terminate microFIT Conditional Offers and FIT Offer Notices that have already been issued to applicants, because these offers create vested contractual rights. This reasoning would likely apply equally to any direction to IESO to cancel LRP I contracts. Previous advice has also flagged a risk that the Province could be liable for damages in tort for inducing a breach of contract (or other claims).
- The risk and costs associated with potential law suits resulting from the cancellation of contracts requires further analysis. LSB recommends ENERGY seek an opinion from Crown Law Office Civil before proceeding.

**Subject:** RE: rate mitigation

Hi Scott,

The quick thought I had was then on a question on what the roles of each OEFC and IESO would be.

I had thought what was being contemplated was that IESO would be held whole, and OEFC would "pay" -- borrowing money to do so], instead of IESO having ratepayers pay through the GA. In this scenario, OEFC has an expense to IESO, financed through debt as OEFC has no associated revenue (at least at the outset until the relative GA size is reversed over time. As a sub-option, if the contracts could be assigned to OEFC, then OEFC's NUG regulation could potentially be listed and have OEFC recover the costs over time, not in the year-of – but that would have a fiscal impact since expense in the early years would exceed recoveries through the GA.

Your alternative seems to be where IESO simply borrows from OEFC, so for OEFC all of this is happening on the balance sheet, where OEFC borrows from the Province and then lends to IESO, so no net income statement or stranded debt impact on OEFC. However, in this case, IESO is short. It has cash from the OEFC financing, but it doesn't have the annual revenue to cover its contractual obligations. Wouldn't that likely affect the IESO and how it accounts for the contracts?

In either case, I'd think that implementation and accounting questions would need to be addressed, (e.g., objects of the corps, legislation / regulations).

Ron

**To:** Ronald Kwan <Ronald.Kwan@ofina.on.ca>
**Subject:** rate mitigation

Hi Ron,

Thinking more about our conversation yesterday around financing of a portion of “out-of-market” generation costs. If IESO entered into a financing arrangement with OEFC and agreed to repay these costs + interest over a set time period, could OEFC record a receivable to offset / avoid the in-year expense?

I ask this in part because one of the other options on the table is to renegotiate wind contracts to reduce current costs by offering to extend the length of the contracts. That will rely on private proponents’ cost of capital. We could do the same thing using the Province’s costs of funds by financing a portion of the current cost through the OEFC and then agreeing to have ratepayers repay in years 20-30, once contracts have expired, but the facilities potentially still have remaining operating life.

Just a thought – happy to chat.
Scott

**Subject:** RE: Benefit Implementation

Hi John,

In response to your question we have updated the language in the MOU Section 3. b) to be more clear. Please see the below language that we plan to include in this MOU.

> "The OFA will keep and maintain all records related to the OREC for a period of seven (7) years, and will provide the Ministry with electronic copies (or paper copies, if requested by the Ministry) of such of those records as the Ministry may request from time to time."

Does this language provide the level of clarity that you are looking for? If not, please let me know and we can discuss.

Thank you,

-Robert

Hi John,

In regards to records that the OFA must maintain related to the OREC, we do not need to have direct database access to your records, but records should be available upon request of the Ministry. Most likely we would ask for documents to be shared electronically via email if necessary, unless directed otherwise.

Regards,

-Robert

**Subject:** Cab Sub edits & Major Projects

Hi Keley and Hillary

Attached are suggested edits for the Electricity Price Mitigation CabSub

See slides 4, 34 and 35
Pls also note that the draft Minute on slide 26 may contain direction that was not reflected in the last draft of the Bill we received from Energy. For example, prescribing a date prior to January 1, 2017 as the effective date and prescribing a cap.

If you have questions pls let us know
Hopefully they can be considered for the next draft of the deck

Also – could you pls confirm if this version will be presented to Major Projects on Thursday
And that ENE will be leading the briefing

Cheers
Bernice Lau

- for Jenarra DeSouza

# Electricity Price Mitigation

## Ministry of Energy

## WORKING DRAFT

## Date: September 14, 2016

Minister

Deputy Minister

# Context

- Electricity costs are increasing as the necessary investments are made to decarbonize and modernize the province's electricity infrastructure.

- Ontario has taken action to replace coal-fired generation with cleaner sources of energy. Since 2003, the Province has invested more than $35 billion in over 16,000 megawatts (MW) of new and refurbished clean generation, including nuclear, natural gas and renewables.
  - This investment represents about 40% of our current supply and has helped decrease electricity sector emissions by approximately 80%.

- Over the same period, Hydro One has invested $15.5 billion to enhance and renew its transmission and distribution systems.

- Since 2010, electricity prices have risen considerably, particularly for households and small businesses. Prices are forecast to continue to increase as additional generation comes online.

- The Ministry of Energy and Ministry of Finance were asked to develop a proposal to provide rate relief to Ontario electricity consumers.

Note: Throughout the deck, language will stay “Class B (Commercial)” and “Class A (Industrial) for clarity.

Ontario

# Electricity Consumer Classes

- There are three classes of electricity consumers:

| | Regulated Price Plan | Class B | Class A |
|---|---|---|---|
| **Consumer Types** | • Residential<br>• Small Business<br>• Farms | • Commercial<br>• Institutional<br>• Small industrial | • Large commercial<br>• Large industrial |
| **Load Size** | Below 0.05 MW | Between 0.05 MW and 3 MW | Above 3 MW* |
| **Total Consumption** | 58 TWh | 57 TWh | 26 TWh |
| **Share of Consumption** | 41.1% | 40.4% | 18.4% |

- The following slide provide further information on the prices paid by different classes of electricity consumers.

**** Note:** Consumers with peak demand between 3-5 MW in the manufacturing, mining, refrigerated warehousing, greenhouses and data-processing industries are currently eligible for Class A. All other 3-5MW consumers are Class B.

Keep this slide as introduces ICI, RRRP, OESP

# Current Rate Base Cost Shift Programs

- Ontario has implemented several programs to help electricity consumers
  - The Ontario Electricity Support Program (OESP) provides ongoing assistance directly on the bills of eligible low-income electricity consumers
  - The Industrial Conservation Initiative (ICI) Encourages Ontario's largest consumers to reduce consumption during peak periods to save on average 25% on their electricity bills.
  - The Rural or Remote Rate Protection (RRRP) program is provided to rural and remote residential and farm customers because the cost of distributing power to remote areas is much higher than for urban areas.
- These programs have shifted costs amongst electricity consumer classes (i.e., residential, commercial and industrial) as shown in the table below.

| Cost Shift Impact | 2011 | 2012 | 2013 | 2014 | 2015 | 2016 |
|---|---|---|---|---|---|---|
| Residential Bill ($/month for 750 kWh) | 3.55 | 4.07 | 3.85 | 4.46 | 5.68 | 6.55 |
| Commercial – Class B ($/MWh) | 4.74 | 5.43 | 5.14 | 5.94 | 7.57 | 8.73 |
| Industrial – Class A ($/MWh) | -20.97 | -25.26 | -22.38 | -24.68 | -32.56 | -31.55 |

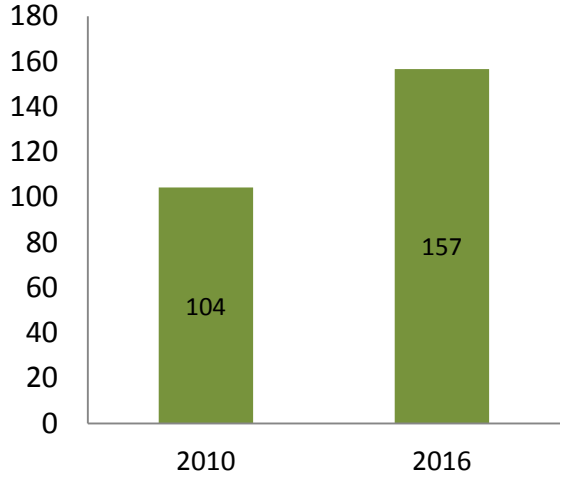
**Note:** Negative values indicate a benefit; positive values denote an incremental charge.

# Prices by Electricity Consumer Class

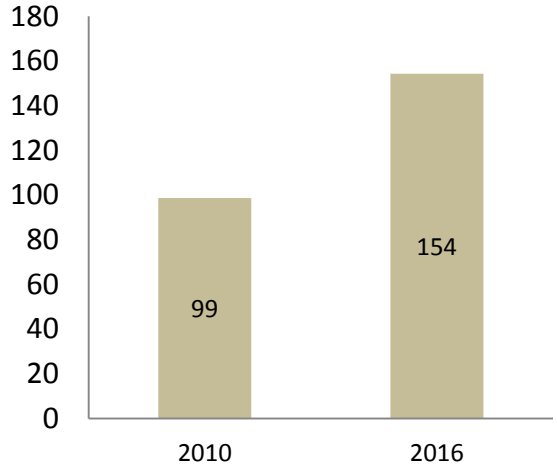
- Since 2010, average bills for residential consumers (i.e., using 750 kWh/month) have increased by over 50% and rates paid by commercial have increased by 56%.

- Industrial electricity rates have remained relatively flat over the same time period, due primarily to the Industrial Conservation Initiative (ICI). ICI represents a cost shift of about $5/month for residential electricity consumers.

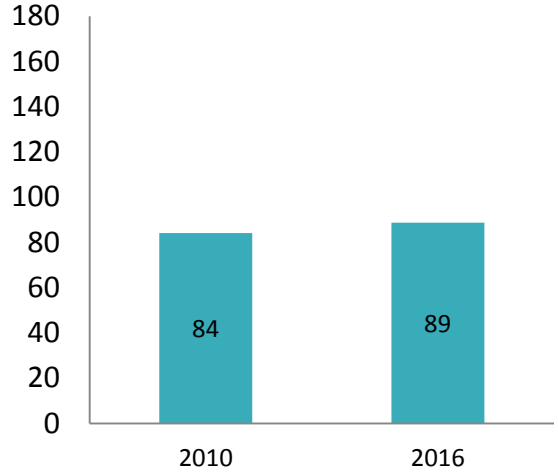
**Typical Residential Bill (750/kWh per month)**



**Typical Commercial Price (Class B) ($/MWh)**



**Typical Industrial Price (Class A) ($/MWh)**



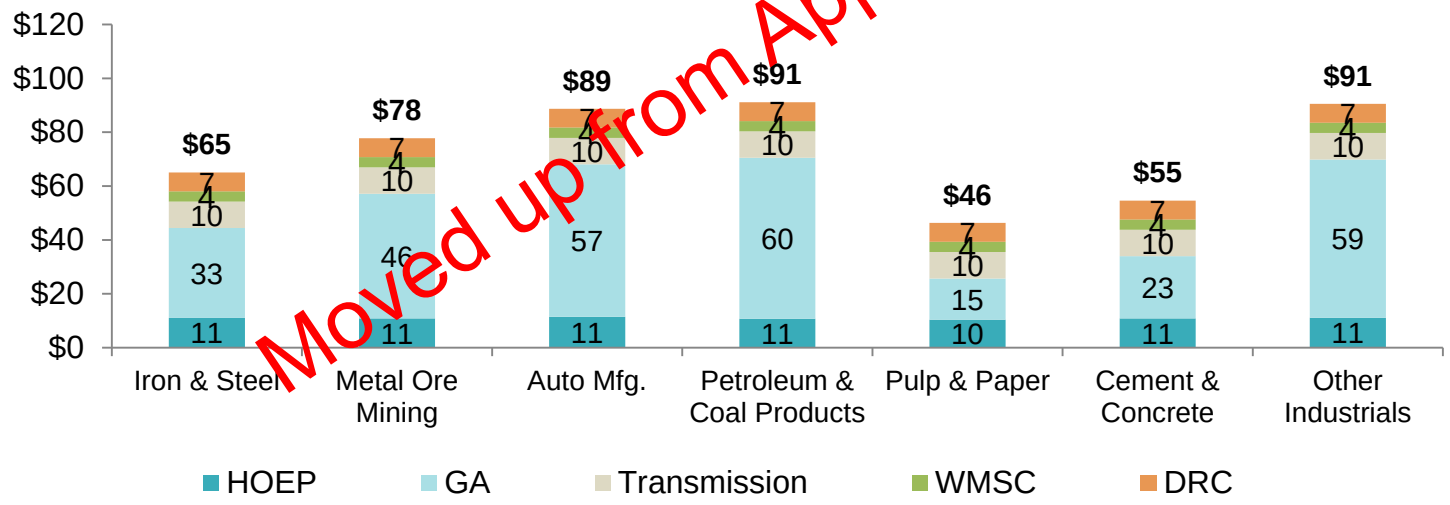
**Note:** 2016 represents May 2016 for residential and YTD June 2016 for commercial and industrial.

# Industrial Electricity Prices Vary by Sector

- While Class A (industrial consumers) benefit from participation in the ICI program, there is a significant amount of variability in the ability to shift away from peak periods across customer classes, impacting the savings achieved.

- The below chart shows the prices paid in 2015 across a number of industrial sectors. Consumers in the north that receive rebates under the Northern Industrial Electricity Rate Program (NIERP) achieve rates that are $20/MWh lower than the below.

**Average all-in Class A, Transmission-connected Electricity Prices by Industrial Sector (estimated $/MWh), Year-to-Date June 2016**



Moved up from Appendix

**Note:** HOEP = Hourly Ontario Energy Price, GA = Global Adjustment, WMSC = Wholesale Market Service Charges, DRC = Debt Retirement Charge

# Existing Rate Mitigation

- Ontario currently provides rate mitigation to various electricity consumer classes through a combination of tax-based and rate-based programs.
  - For example, Northern Ontario residential electricity consumers receive tax credits in recognition of higher electricity costs in the north and rural consumers receive a subsidy funded through the rate-base due to the higher cost of delivering power to rural areas.

- As of 2016, the government removed the Debt Retirement Charge (DRC) ~~from~~ for certain residential electricity consumption ~~bills~~. While this saves a typical residential electricity ratepayer about $60 per year, it is less than the benefit previously provided through the Ontario Clean Energy Benefit (OCEB).
  - OCEB provided a tax-base rebate of 10% rebate on the total cost of electricity charges related to electricity consumption on eligible bills between 2011 and 2015.

MOVED to APPENDIX

- Because electricity costs must be fully recovered from electricity consumers, rate mitigation funded through the rate-base often represents a shifting of costs from one consumer group to another (i.e., industrial to residential and commercial consumers).
  - Rate-based initiatives are generally associated with incenting changes in behaviour that provide electricity system benefits (i.e., shifting electricity consumption from on-peak to off-peak periods).

- The following slides provide an overview of the programs currently available to different electricity consumer classes along with the cost shift associated with several of the programs.

# Existing Rate Mitigation (cont'd)

| Program | Consumer Type | Rate/Tax -based | Description |
|---|---|---|---|
| Northern Ontario Energy Credit | **Residential** | Tax | Delivered as part of the Ontario Trillium Benefit, provides individuals living in northern Ontario with a credit of up to $146 per year for the 2016 benefit year. |
| Ontario Energy and Property Tax Credit | | Tax | Also delivered as part of the Ontario Trillium Benefit, provides up to $1,008 per year for low-to moderate-income individuals and families. |
| Ontario Electricity Support Program | | Rate | Provides ongoing assistance directly on the bills of eligible low-income electricity consumers. |
| Rural or Remote Rate Protection | | Rate | Provided to rural and remote residential and farm customers because the cost of distributing power to remote areas is much higher than for urban areas. |
| saveONenergy Conservation Programs (including Home Assistance Program for low income customers) | | Rate | Delivered by LDCs which provide financial incentives for electricity-saving measures like LEDs, ENERGY STAR certified ceiling fans, baseboard programmable thermostats, clotheslines, and advanced powerbars. |
| saveONenergy Conservation Programs (including Retrofit Program for Buildings and other programs) | **Commercial** | Rate | saveONenergy suite of electricity conservation programs for commercial customers offered by local distribution companies (LDCs) help businesses save energy to better manage their electricity consumption and reduce their annual electricity costs. See Appendix for more information. |
| Industrial Conservation Initiative | **Industrial** | Rate | Encourages Ontario's largest consumers to reduce consumption during peak periods to save on average 25% on their electricity bills. |
| Industrial Accelerator Program | | Rate | Provides financial incentives of up to $10 million to transmission-connected electricity consumers, to invest in energy-efficiency or self-generation which would reduce the amount of electricity withdrawn from the provincial grid. |
| Industrial Electricity Incentive | | Rate | Provides reduced electricity rates for companies starting or expanding operations in Ontario. |
| Northern Industrial Electricity Rate Program | | Tax | Provides $20 megawatt per hour (MWh) rebate for qualifying large northern industrial consumers. |
| Demand Response | | Rate | Provides payments to businesses and industry to shift consumption at times when the electricity system is stressed. DR currently provides ~500 MW of capacity to the system. |

MOVED to APPENDIX

Keep this slide as introduces important context

Ontario

# Actions to Bend the Cost Curve

- A number of actions have and are being taken to reduce overall electricity system costs:
  - Renegotiating the Green Energy Investment Agreement, reducing contract costs by $3.7 billion;
  - Deferring the construction of two new nuclear reactors at Ontario Power Generation's Darlington facility, avoiding an estimated $15 billion in new construction costs;
  - Approving Ontario Power Generation's plans to enable the ongoing operation of Pickering up to 2024, which is expected to save ratepayers as much as $600 million.
  - Reducing Feed-In-Tariff (FIT) prices through annual price reviews, saving ratepayers at least $1.9 billion relative to the 2013 Long-Term Energy Plan (2013 LTEP) forecast; and
  - Removing an expected $3.3 billion in Large Renewable Procurement (LRP) costs relative to the 2013 Long-Term Energy Plan (2013 LTEP) forecast, based on the results of the first phase of the LRP.
- Despite these actions to reduce system costs, electricity rates continue to increase for consumers.

# 2016 Budget Committed to Recycling CCAP Proceeds

- The 2016 Budget committed to offset the impact of cap and trade in Ontario for commercial and industrial electricity consumers, while also providing a benefit of up to $2 per month for residential electricity consumers.

- To meet the 2016 Budget commitment, the Climate Change Action Plan (CCAP) committed $1.3 billion from the Greenhouse Gas Reduction Account (GGRA) over the first compliance period (2017-2020).

- The $1.3 billion was estimated to go to different electricity consumer classes as follows:
  - $120 million for residential consumers;
  - $170 million for commercial consumers; and
  - $40 million for industrial consumers.

# ~~Context –~~ Rate Mitigation Levers

- To provide further rate relief to Ontario electricity consumers, the government can use one or more of the levers outlined below:

  - **Tax-based Lever:**
    - Provide an on-bill rebate funded from the tax-base to all consumers or specific classes of consumers (i.e., the Ontario Clean Energy Benefit (OCEB) provided a rebate for eligible electricity consumers).

  - **Rate-based Lever:**
    - Shifts costs within the rate-base from one customer group to another to achieve electricity system benefits and/or policy goals.

  - **Cap and Trade Proceeds Lever:**
    - Use cap and trade proceeds to offset the cost of existing initiatives that help reduce greenhouse gas (GHG) emissions (i.e., the CCAP committed to offset the impact of cap and trade and to keep electricity rates affordable).

# Rate Mitigation Proposal

- The Ministry of Energy is proposing to implement the following electricity price mitigation initiatives. The approach identified below would provide relief across all electricity consumer classes:

  1) Offset an amount equal to the provincial portion of HST ~~Provide an 8% rebate~~ to consumers eligible for the Regulated Price Plan* (i.e., residential, small business and farms~~), equivalent to the provincial portion of HST~~ by providing a 8% rebate and update the Rural and Remote Rate Protection (RRRP) program, to provide relief to rural customers

  1) Expand ICI eligibility by lowering the threshold to 1 MW, to provide support to Class B electricity consumers (i.e., commercial, institutional and small industrial) and recycle cap and trade proceeds to commercial and industrial electricity consumers to provide a modest reduction in rates.

- The following slides provide additional information on the above initiatives.

***Notes:**
Eligibility for the 8% rebate would be similar to OCEB and include some customers not on the Regulated Price Plan (RPP), such as Independent Power Authority consumers and consumers that have opted-out of RPP.
See Appendix for discussion on HST considerations.

Note: Shows after-tax for RPP consumers.

# Rate Mitigation Proposal – Illustrative* Impacts

| | Average Annual Fiscal Impact | Average Annual Greenhouse Gas Reduction Account (GGRA) Proceeds Impact | Regulated Price Plan (Residential) Impact** | | Class B (Commercial) Impact | Class A (Industrial) Impact | |
|---|---|---|---|---|---|---|---|
| | | | *Average (750 kWh/ month)* | *Rural*** (1000 kWh/ month)* | | *Existing* | *New* |
| • 8% rebate to Regulated Price Plan eligible consumers<br>• ICI Expansion<br>• RRRP Update<br>• Proceeds Recycling | $1.0 billion annually | $0.27 billion annually<br><br>(Reduction of $0.06 billion annually or $0.24 billion total from the CCAP commitment) | -$10/ month<br><br>(-6%) | -$46/ month<br><br>(-18%) | -$1/MWh<br><br>(-1%) | -$1/ MWh<br><br>(-1%) | Up to -$52/MWh<br><br>(-34%) |

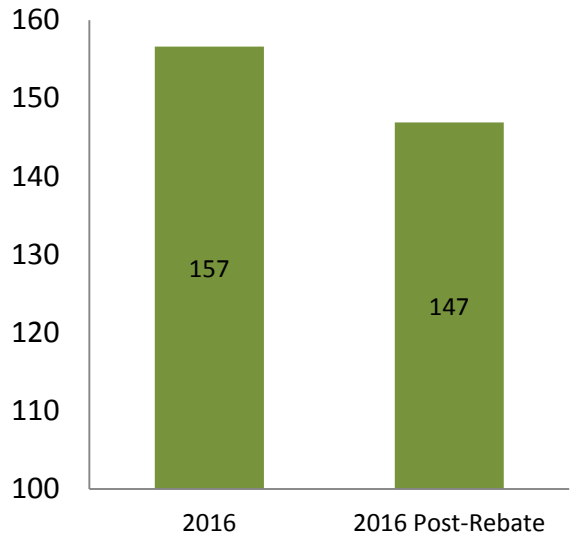
***Note:** The impact of cap and trade would not be added to electricity bills until 2017 and the impact of ICI would not be added to bills until 2018 due to the time required to implement the expansion and for billing changes. However, both the impact of cap and trade and ICI have been included above for illustrative purposes.

** Regulated Price Plan Impact represents an after-tax value of the rate mitigation proposal.

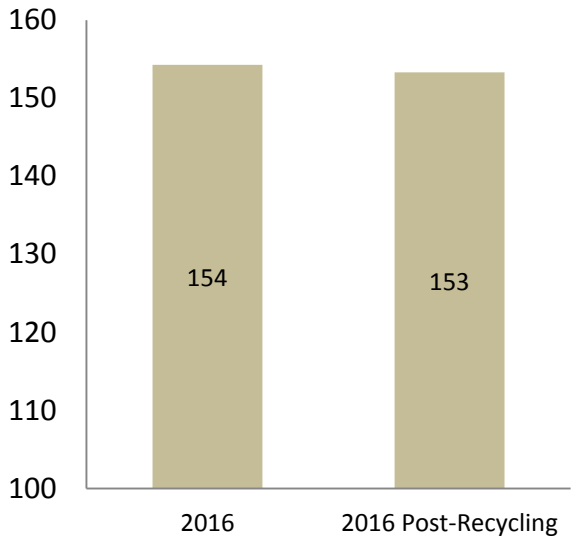
*****Note**: Rural customers refers to customers of Hydro One eligible to receive RRRP (R2 rate class customers)

# Rate Mitigation Proposal – Illustrative Bill Impacts by Electricity Consumer Class

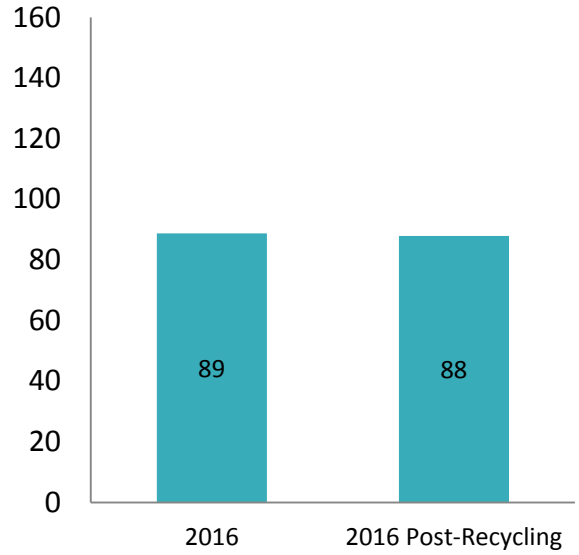
**Typical Residential Bill**
**750/kWh per month**



**Typical Commercial Price ($/MWh)**
**ADD NEW CLASS A TO THIS CHART**



**Typical Industrial Price ($/MWh)**



**Residential:** The net impact of the ~~8% rebate~~ rate mitigation initiatives is a 6% reduction.

**Commercial:** The net impact of ~~proceeds recycling~~ the rate mitigation initiatives is a 1% reduction.

**Industrial:** The net impact of ~~proceeds recycling~~ the rate mitigation initiatives is a 1% reduction.

**Note:** Residential bills reflect electricity rates as per the Regulated Rate Plan (RRP) which came into effect on May 1, 2016. Commercial and industrial electricity prices reflect YTD June 2016. The impact of cap and trade would not be added to electricity bills until 2017 and the impact of ICI would not be added to bills until 2018 due to the time required to implement the expansion and for billing changes. However, both the impact of cap and trade and ICI have been included above for illustrative purposes.

# 1) Regulated Price Plan Eligible Consumers and Rural or Remote Rate Protection Update

# 8% Rebate to Regulated Price Plan Eligible Consumers

- ENERGY is proposing to introduce legislation/regulation by X [placeholder for date] to provide a rebate of 8% to consumers eligible for the Regulated Price Plan. The below table indicates which consumers would or would not receive the benefit.
  - This would be equivalent to the provincial portion of the HST*.

| **Eligible for the 8% rebate**<br>(< 50 kW or < 250,000 kWh/year) | **Not eligible for the 8% rebate**<br>(> 50 kW or > 250,000 kWh/year) |
|---|---|
| • Residential Regulated Price Plan consumers<br>• Residential retail consumers<br>• Multi-unit residential buildings and other facilities used as residential rental units<br>• Long-term care homes and school residences<br>• Regulated Price Plan eligible farms<br>• Small businesses<br>  − Coffee / snack retailer<br>  − Convenience store<br>  − Apparel store<br>  − Hair salon<br>  − Small insurance office | • Class A consumers<br>  − Manufacturer<br>  − Large grocery store<br>  − Mines<br>  − Auto assembly plants<br>• Class B consumers (except farms that have opted out of the Regulated Price Plan)<br>  − Commercial offices (low rise)<br>  − Hotel<br>  − General warehousing |

- Those ineligible to receive the 8% rebate will benefit from one or more of the other initiatives under this proposal (e.g., ICI expansion, proceeds recycling, etc).

***Note:** An HST exemption would require federal approval. Engaging in discussions with the federal government would take time and would likely result in not meeting the targeted implementation date.

# Illustrative Bill Impacts

| | Current Bill (after tax) | Current Rate mitigation initiatives* | Cost of new initiatives (RRRP and ICI) | New Rate Mitigation initiatives | Net impact | New Bill (after tax) |
|---|---|---|---|---|---|---|
| Average Residential (Toronto – 750 kWh/month) | $157 /month | N/A | $1.31/month | 8% pre-tax rebate: - $11 | -$10 (-6%) | $147 /month |
| Rural Residential (Hydro One R2 – 1000 kWh/month) | $259 /month | RRRP – $32 | $1.74/month | 8% pre-tax rebate: - $16<br>Updated RRRP: - $28 | -$46 (-18%) | $212 /month |
| Low-income Residential ** (Toronto – 750 kWh/month) | $119 /month | OESP - $38 | $1.31/month | 8% pre-tax rebate: - $10 | -$8 (-6%) | $126 /month |
| Small Business (Toronto - $/MWh) | $ / MWh | N/A | $1.74/MWh | 8% pre-tax rebate: x/MWh | | |
| Farm ( xxxx - $/MWh) | $ / MWh | N/A | $1.74/MWh | 8% pre-tax rebate: x/MWh | | |

Placeholder - Pending Update

*Note: some residential consumers can also receive tax credits based on income, age and geography (Northern Ontario Energy Credit and Ontario Energy and Property Tax Credit). These credits are delivered through the Trillium Tax Credit and can be as high as xx per year.

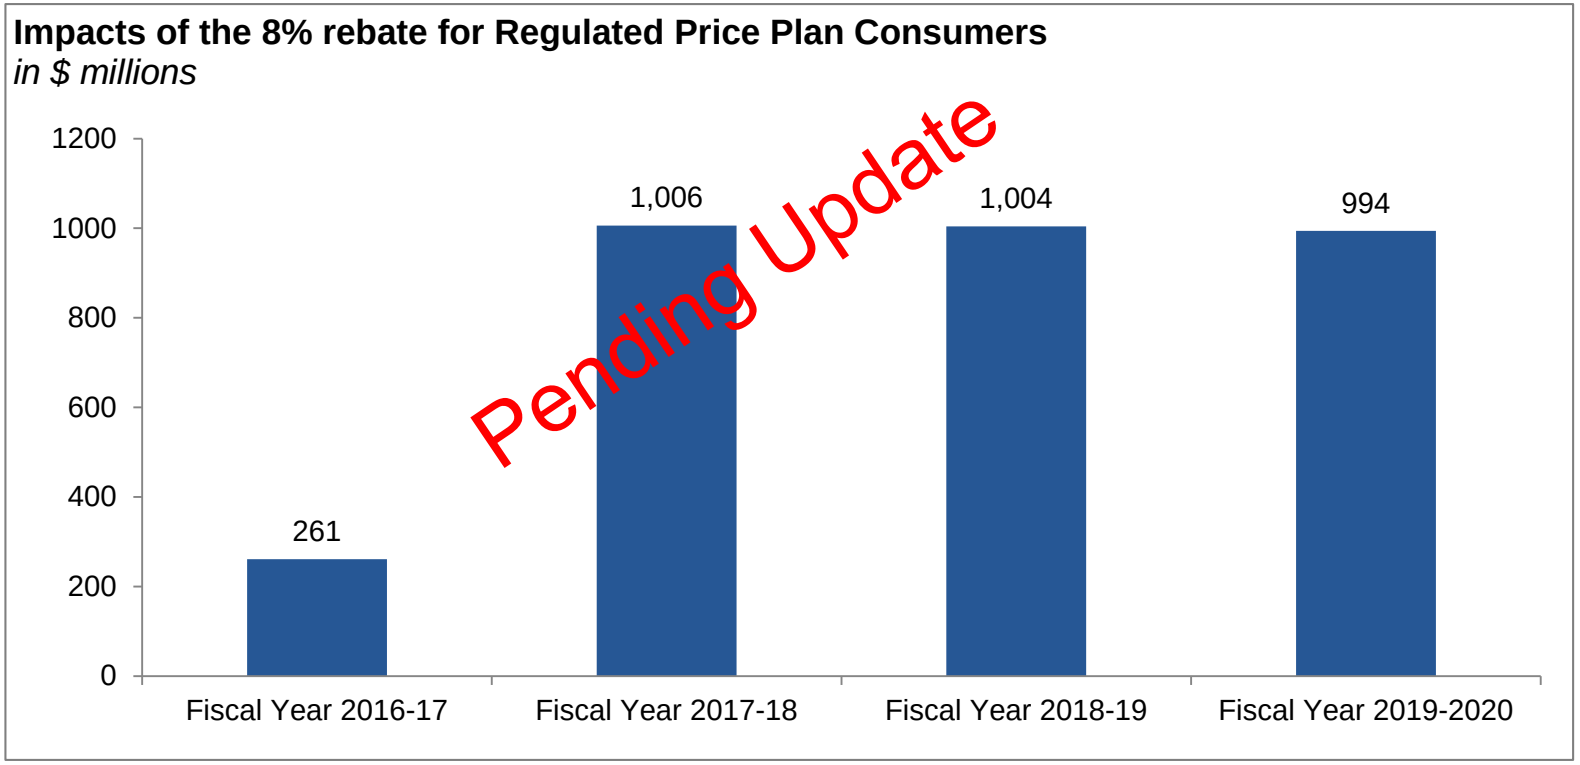
** income of less than $28,000, family of 4.

Totals may not add due to rounding. The impact of cap and trade would not be added to electricity bills until 2017 and the impact of ICI would not be added to bills until 2018 due to the time required to implement the expansion and for billing changes. However, both the impact of cap and trade and ICI have been included above for illustrative purposes.

Note: Kept slide in as CO/PO requested this slide.

# 8% Rebate to Regulated Price Plan Eligible Consumers – Projected Impact

- ENERGY estimates that the average annual cost of an 8% rebate to consumers eligible for Regulated Price Plan consumers would be approximately $1.0 billion between 2017 and 2020.



# Placeholder – Electricity Bill Mock-Up

Moved up from Appendix

# Rural or Remote Rate Protection (RRRP) Update

- ENERGY is proposing to amend O.Reg 442/01 to provide an additional $110 million in rate protection to eligible rural or remote electricity consumers, and consider options to periodically adjust the amount of rate protection available to these consumers going forward.

- RRRP is a rate-based funded subsidy program that helps offset the higher costs to distribute electricity to Ontario residents who live in rural or remote locations all across the Province.
  - Today, RRRP is a $175-million program. For an average residential customer, the cost of supporting RRRP is roughly $1 per month. For other customers, the cost can range from $65 for a greenhouse to $8,000 for a medium industrial.
  - The majority of the program funding ($125.5 million) provides a subsidy to Hydro One's lowest-density customers – classified as R2 customers. There are approximately 329,000 R2 customers. The current program provides a monthly subsidy for R2 customers of $31.50.
  - RRRP funding supporting R2 customers has been capped at the current level since 2004. As a result, the impact of its assistance has diluted over time as electricity costs have risen.

- An additional $110 million in program funding would see an increased subsidy of ~$28 /month. This would bring R2 bills in line with Hydro One R1 (medium density) bills at 1000kWh.
  - This would increase the R2 portion of the RRRP to $235 million with a monthly impact on an average residential consumer of ~$0.60.
  - The RRRP could be indexed at inflation or "trued up" on a regular basis to ensure the subsidy remains constant.

Note: Recommend moving this slide to the appendix.

# Rural or Remote Rate Protection (RRRP) Update

| Bill Comparisons @ 1000kWh/month (Pre-HST) | | |
|---|---|---|
| | **Total Current Delivery**** Charge** | **Total Current Bill** |
| **Hydro One R2** (Current RRRP Subsidy Levels) | ~$111 | ~$229 |
| **Hydro One R2** (With Proposed RRRP Expansion) | ~$83 | ~$201 |
| **Hydro One R1** | ~$82.50 | ~$201 |
| **Algoma Power** (Receives RRRP) | ~$79.50 | ~$197 |
| **Provincial Average*** | ~$51 | ~$169 |
| **Lowest Cost Total Bill LDC**** | ~$48 | ~$149* |
| **Lowest Cost Delivery Charge LDC***** | ~$36 | ~$154 |

**Average Bill of Ontario municipal LDCs and non-municipal Algoma Power, CNPI, and Hydro One Urban. Excludes Hydro One Remote, Hydro One R1 and Cornwall Electric.*

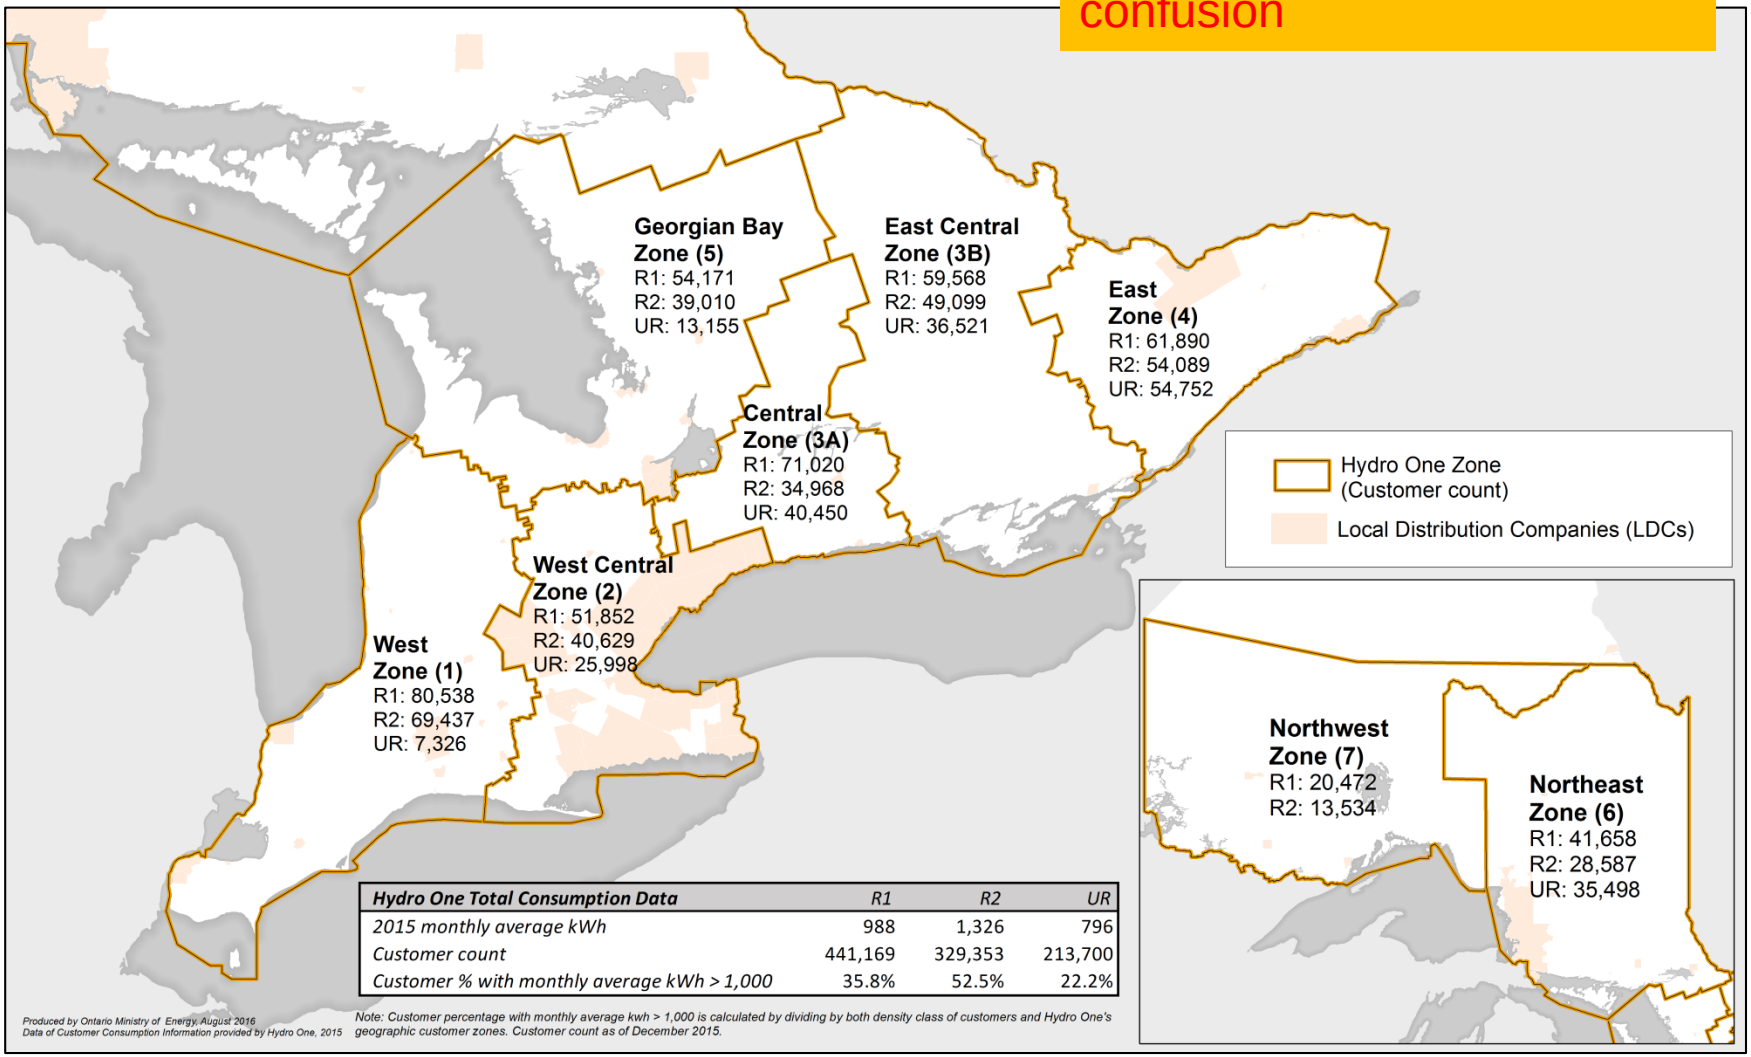
***The LDC with the lowest total bill is Fort Frances Power Corporation (FFPC). However, FFPC does not have the lowest delivery costs in the province. FFPC customers who are not enrolled with a retailer receive a $0.0125/kwh discount on power due to a historic (1905) mill agreement. In order to maintain the discount, FFPC maintains its ROE at 0%.*

****Hydro Hawkesbury has the lowest delivery rates at ~$36 per month*

*****Delivery charges include distribution rates (fixed and variable), transmission, and line loss.*

# 2) Rural or Remote Rate Protection (RRR Consumers by Customer Class

Slide to be updated to only include numbers related to R2 customers to avoid confusion

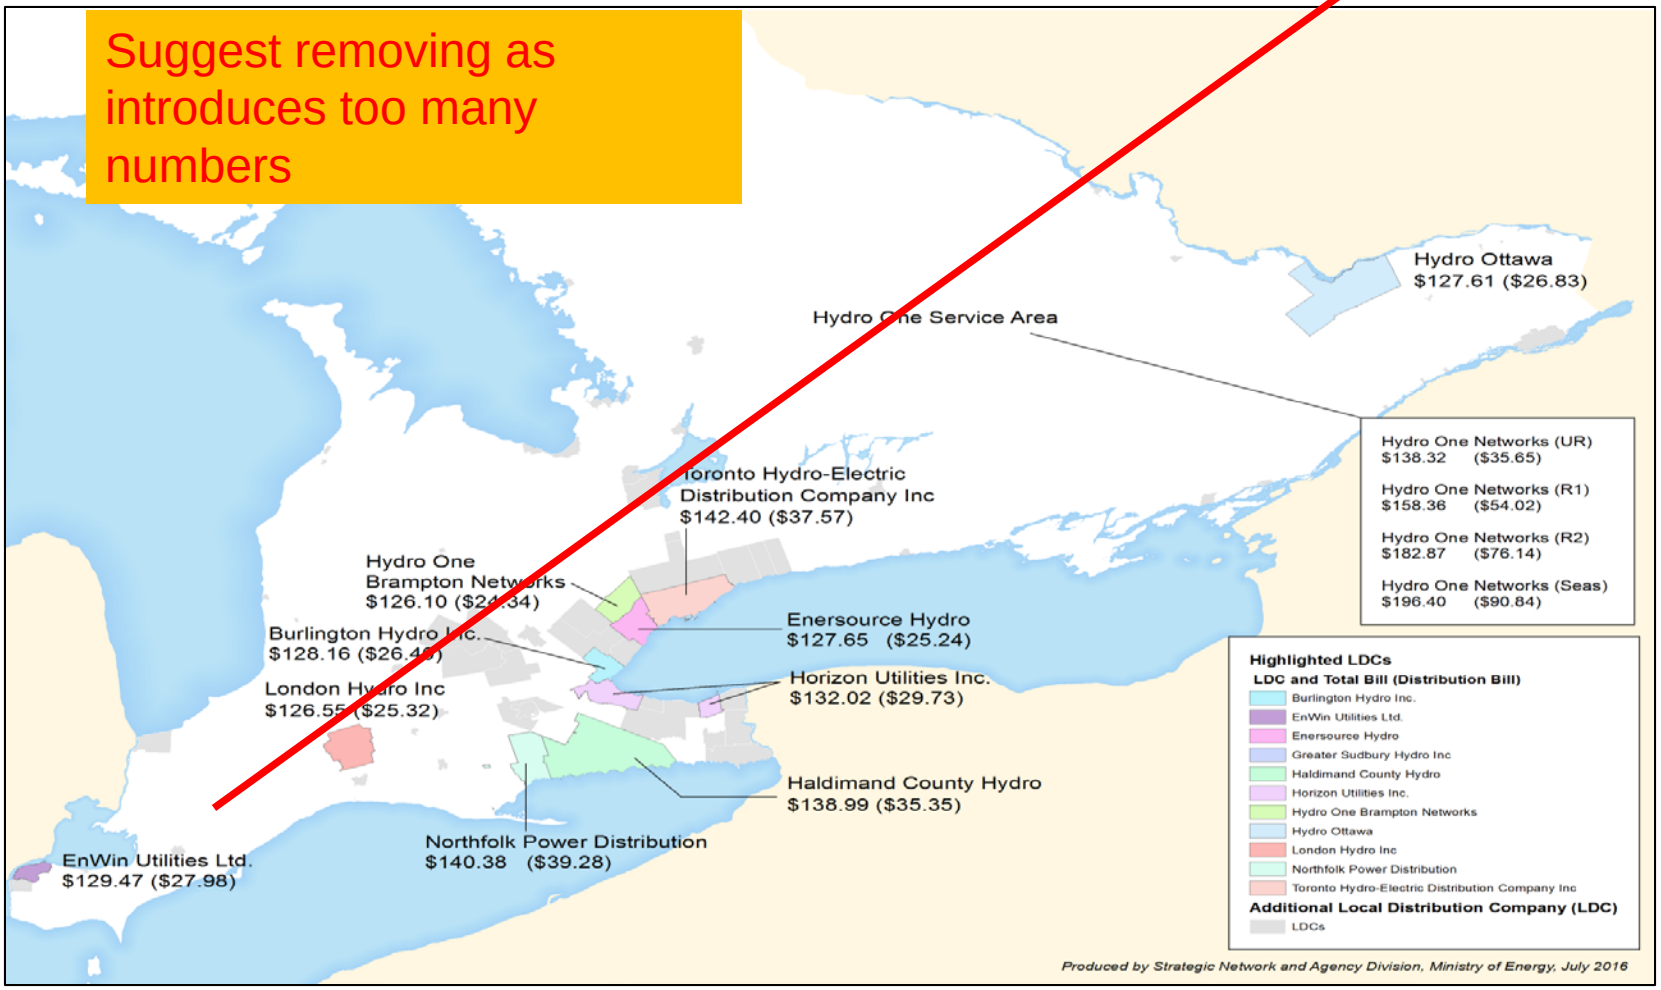


| Hydro One Total Consumption Data | R1 | R2 | UR |
|---|---|---|---|
| 2015 monthly average kWh | 988 | 1,326 | 796 |
| Customer count | 441,169 | 329,353 | 213,700 |
| Customer % with monthly average kWh > 1,000 | 35.8% | 52.5% | 22.2% |

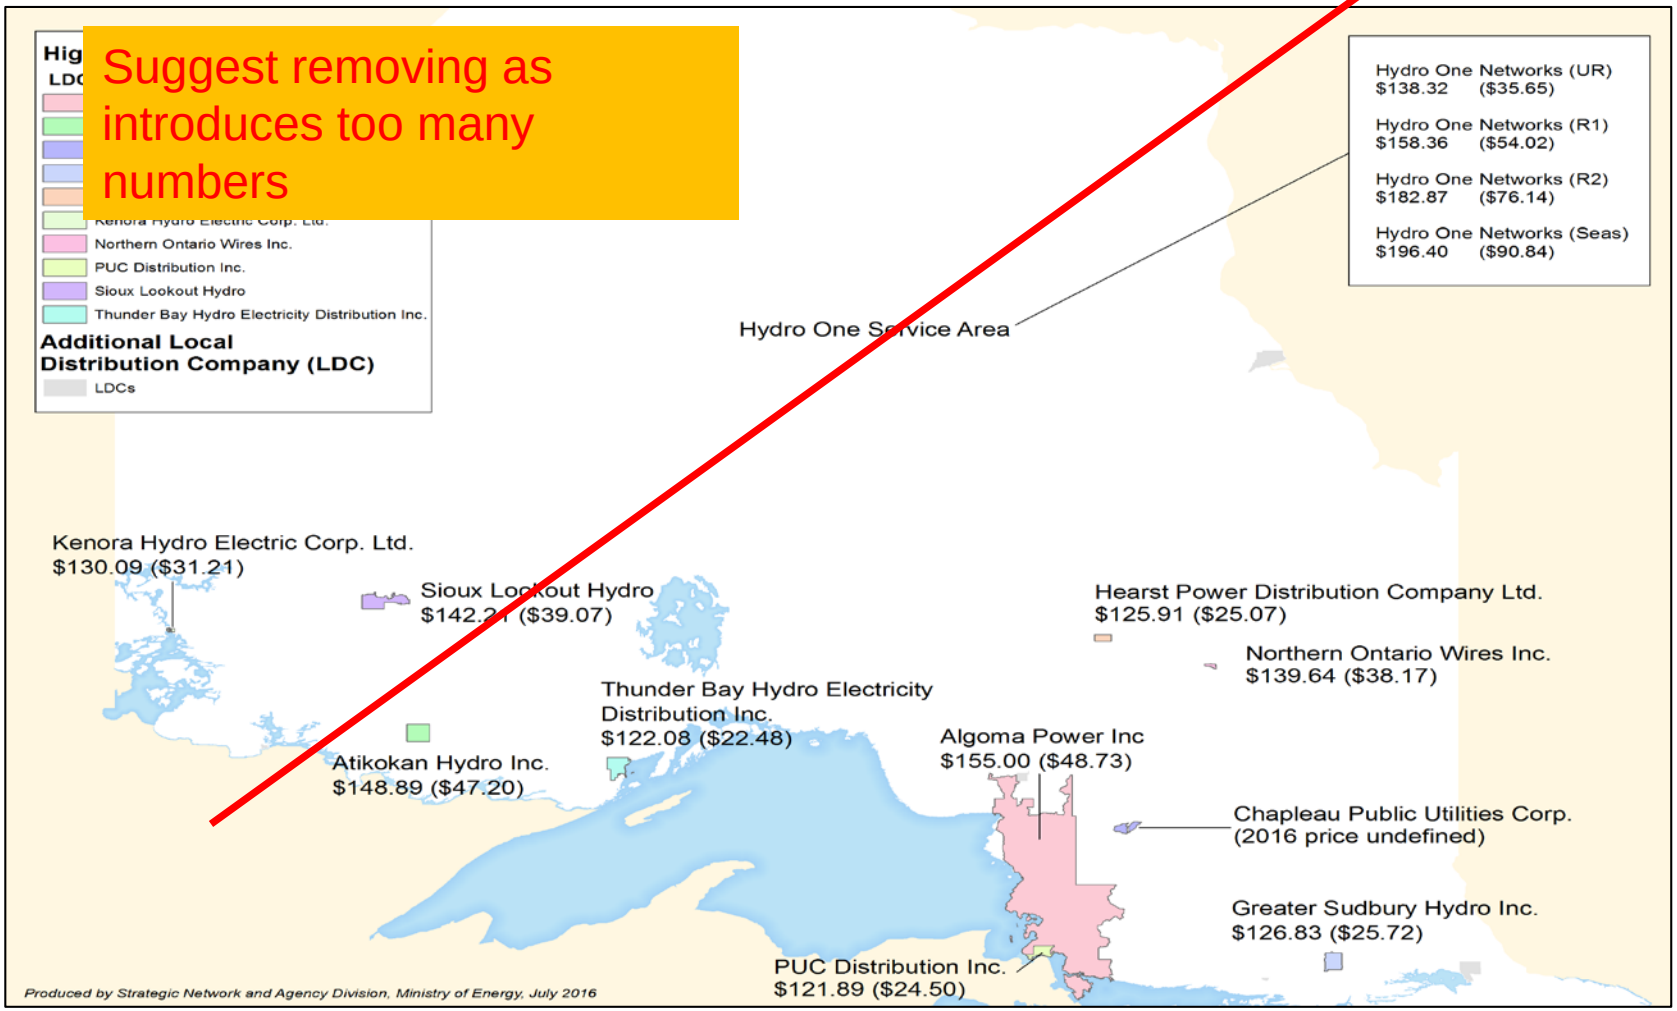
Produced by Ontario Ministry of Energy, August 2016
Data of Customer Consumption Information provided by Hydro One, 2015

Note: Customer percentage with monthly average kwh > 1,000 is calculated by dividing by both density class of customers and Hydro One's geographic customer zones. Customer count as of December 2015.

# Rural or Remote Rate Protection (RRRP) Update – Selected Rate Comparison – Total Bill and Distribution Rate



# Rural or Remote Rate Protection (RRRP) Update – Selected Rate Comparison – Total Bill and Distribution Rate



# 2) Expand Industrial Conservation Initiative and Recycle Cap and Trade Proceeds

# Industrial Conservation Initiative (ICI) Expansion

- ENERGY is proposing to amend O. Reg. 429/04 to expand ICI eligibility effective [X placeholder date].

- Currently, electricity consumers over 5 MW and consumers from 3-5 MW in certain energy intensive sectors are eligible for ICI (i.e., approximately 300 Class A consumers).
  - Consumers participating in ICI include the following sectors: pulp and paper, auto, manufacturing, chemicals and mines.

- ICI would be expanded so that all consumers over 1 MW are eligible for the program, which would:
  - Reduce electricity peak demand by incenting more consumers to lower their electricity demand during peak periods;
  - Reduce electricity bills for new ICI participants who are able to reduce their electricity demand during peak demand periods; and
  - Increase the electricity bills for non-ICI participants to ensure full cost recovery in the electricity system.

# ICI Expansion – Projected Impact

| | Benefit to New ICI Participants | System Benefit | Financial Impact | Residential Bill Impact |
|---|---|---|---|---|
| | Bill Savings | Peak Demand Reduction (MW) | GA shifted to Class B ($M) | |
| **Short-term** | Up to 21% | 80 | 47 | Increase of $0.42/month |
| **Long-term** | Up to 34% | 165 | 82 | Increase of $0.74/month |

- The different impacts refer to the amount of time it takes for new Class A consumers to respond to the expanded ICI eligibility
  - Short-term refers to the expected impact once ICI billing begins for new Class A consumers (one year after expanded eligibility takes place).
  - Long-term is the expected impact once new Class A consumers have had time to significantly change their behaviour and investment decisions in response to the ICI.

- The bill impacts assume a 25% uptake, which would increase Class A consumption by roughly 3 TWh, leaving an estimated 54 TWh in Class B that are either between 0.05-1 MW or choose not to opt in to ICI. This would represent an estimated 300 additional consumers in ICI, though they would represent a much smaller share of the consumption than the 300 consumers currently participating.

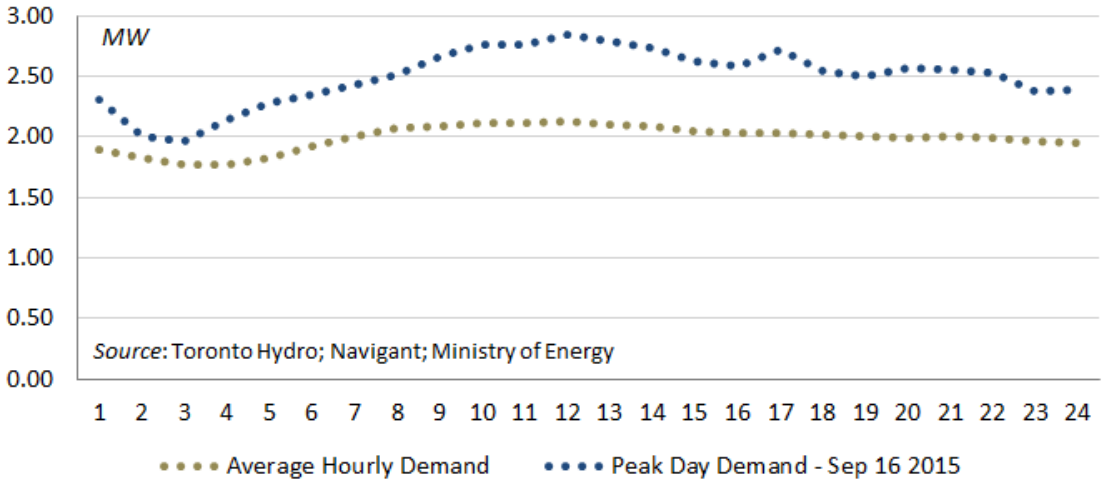
- Newly eligible consumers in the program would mostly fall into the small industrial, institutional and commercial category, including: automotive supply chain companies, office tower, large shopping mall, greenhouses and others.
  - A few examples of companies that would become eligible under such an expansion would be Kellogg, Canlan Ice Sports, Cambridge Towel, SLACAN and Casino Rama.

# ICI Expansion – Illustrative Example of Newly Eligible Consumer

- Plastics manufacturers, such as Poly Five Plastics in Toronto, are among the consumers that would become eligible if the threshold was lowered.
- Such manufacturers fall under NAICS* code 32 and have relatively flat load profiles, reflecting around the clock production. This means they would be beneficiaries of ICI even with no change in consumption behaviour.
- Companies like Poly Five Plastics could expect to see greater savings if they are willing and able to respond to the higher prices during high demand hours.

**Typical Demand Profile, 2-3 MW Consumer**

*Manufacturer, NAICS Code 32 - Nov 2014 to Oct 2015*



**Illustrative Bill Savings, 2-3 MW Consumer**

| | *Status Quo* | *No Price Response* | *Short Term Response* | *Long Term Response* |
|---|---|---|---|---|
| | **Class B** | **Class A** | **Class A** | **Class A** |
| GA | 75.26 | 58.06 | 43.55 | 32.03 |
| Total bill | **126.28** | **109.09** | **94.58** | **83.06** |
| *Savings* | | *-14%* | *-25%* | *-34%* |

Source: Navigant; Ministry of Energy

*** Note:** North American Industry Classification System (NAICS) is the standard used by statistical agencies in classifying business establishments.

# Illustrative Bill Impacts

| | Current Bill | Current Rate mitigation initiatives* | Cost of new initiatives (RRRP and ICI) | New Rate Mitigation initiatives | Net impact | New bill |
|---|---|---|---|---|---|---|
| Large Institutional (Toronto – 10 MW, $/MWh) | | | | | | |
| Large Industrial (Timmins – 10 MW, $/MWh) | | | | | | |
| Small Industrial – opt-in (Toronto – 2 MW, $/MWh) | | | | | | |
| Small Institutional (Toronto – 500 kw, $/MWh) | | | | | | |
| Large Commercial – no opt-in (Toronto – 2 MW, $/MWh) | | | | | | |

Placeholder - Pending Update

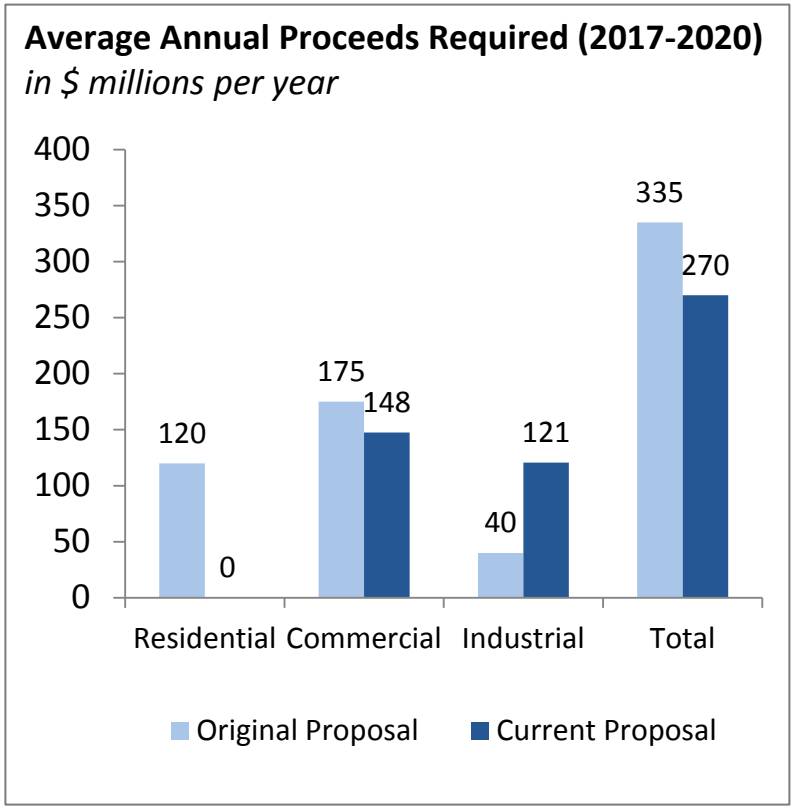
Note: There is the potential for a consumer eligible for the Regulated Price Plan to opt-out of the Regulated Price Plan to opt-in to Class A and receive all three benefits (i.e., Regulated Price Plan, ICI, proceeds recycling).

# Redirect Cap and Trade Proceeds Recycling

- The 2016 Budget committed to offset the impact of cap and trade for commercial and industrial consumers, while also providing a benefit of up to $2 per month for residential consumers.
  - To meet the 2016 Budget commitment, the Climate Change Action Plan (CCAP), committed $1.3 billion from the GGRA over the first compliance period (2017-2020).

- However, providing a 8% rebate to Regulated Price Plan consumers would allow for GGRA proceeds previously committed to residential consumers to be redirected to other consumers classes and/or GHG reduction initiatives in the fiscal plan.

- The current proposal would provide additional recycling to commercial and industrial consumers, while requiring an estimated $60 million less per year (i.e., a reduction of $0.24 billion over the first compliance period).



**Note:** The original proposal was to offset the impact of cap and trade via GA to the average industrial, and would provide a benefit to commercial and residential consumers. Current proposal would recycle proceeds volumetrically to industrial and commercial consumers.

# Redirect Cap and Trade Proceeds Recycling

- Recycling cap and trade auction proceeds to lower the cost of electricity would offset consumers' contributions to non-emitting generation.

- Recycling helps pay for committed investments/initiatives which reduce GHGs (e.g., non-emitting generation and conservation programs).
  - Due to the long-term nature (typically 20 years) of electricity generation contracts and conservation programs, the associated costs are ongoing and are expected to be about $7 billion dollars annually during the first cap and trade compliance period. These costs will continue well beyond the timelines described in the CCAP.

- Recycling cap and trade auction proceeds volumetrically to Class B (commercial) and Class A (industrial) consumers maintains the incentive to shift consumption from on-peak to off-peak hours.

- Using cap and trade auction proceeds to lower the cost of electricity would make it more competitive with traditionally cheaper fossil fuels.

- By using the proceeds to lower the cost of electricity, there is potential to incent fuel-switching away from fossil fuels toward much cleaner grid-connected electricity and support CCAP goals of electrification.

# Illustrative Bill Impacts

Placeholder

# Considerations

# Considerations – Implementation

- New legislation would be required to enable the 8% rebate proposal. Legislation would closely mirror the Ontario Clean Energy Benefit Act, 2010.
  - If passed, the legislation would require a general regulation.
  - Amendments would also be required to various regulations to expand ICI and RRRP.

- On-bill rebate delivery would likely require adjustments to LDC billing systems, which could impact delivery costs and timelines. ENERGY (possibly through Ontario Energy Board) will consult with LDCs to accurately assess these impacts once the program has been announced.
  - In the past, LDCs have asked for at least six months' notice when implementing billing system changes.
  - Timing concerns may be alleviated by allowing LDCs to provide retroactive rebates if their systems cannot be updated in time for January 1, 2017. This was done with the OCEB.

- Detailed messaging on bills (for "low-volume" consumer bills ) could be implemented by amending O. Reg. 275/04 (made under the Ontario Energy Board Act, 1998). ~~See appendix for bill mock-up.~~
  - The rebate would not be directly linked to HST.
  - With electricity invoices containing multiple line items and LDC bill presentment varying widely, direction on rebate presentment will need to be flexible to allow LDCs to incorporate easily while ensuring government-preferred branding and messaging is conveyed.

- ENERGY will need to continue to consult with the Independent Electricity System Operator (IESO), Ontario Energy Board (OEB) and LDCs regarding implementation of proceeds recycling.

# Considerations – Fiscal

- The Climate Change Action Plan (CCAP) committed about $1.3 billion over four years for electricity mitigation for industrial, commercial and residential consumers from GGRA proceeds.
  - The current rate mitigation proposal requires approximately 20% less in proceeds, saving approximately $240 million relative to the CCAP commitment over the first compliance period (2017-2020).
- The 8% rebate is expected to cost about $1 billion per year (i.e., $4 billion from 2017-2020), representing an additional pressure on the fiscal plan.
  - Consideration could be given to allocating the $240 million in reduced proceeds required towards other existing initiatives in the fiscal plan that also reduce greenhouse gas (GHG) emissions, thereby providing an overall fiscal plan offset.
- In the absence of any offset strategies, the full cost of the rate mitigation approach would add to the pressures and risks that need to be managed in order for the government to balance the budget in 2017-18 and stay balanced in 2018-19 and beyond.

# Considerations – Legal

- In order to avoid characterization as an unconstitutional tax, a non-tax levy must have a sufficient nexus between those who pay and the regulatory scheme in the sense that those who pay have caused the need for or benefit from the regulatory scheme. Although the case law is not developed on the extent to which some regulated actors can be required to subsidize others, risk is reduced to the extent that any cross-subsidization serves true regulatory goals rather than revenue re-distribution goals.

- HST Rebate (shift costs from rate-base to tax base by providing a rebate equal to the provincial portion of HST):
  - Providing the contemplated rebate under the proposed Bill does not, in and of itself, give rise to legal issues. As policy direction is given on the specifics of supporting regulations, any associated legal risks can be identified.

- ICI Expansion (shift costs within rate-base by expanding eligibility for the ICI program to consumers of >1 MW):
  - Shifting costs to some consumers to lower rates for others without more carries the risk that the charge would be characterized as an unconstitutional tax. To establish that the charge is legitimate, it must be established that the purpose and effect of the charge is to facilitate the maintenance of a financially viable electricity system by way of load management or some other feature under which those who are subsidized provide an overall system benefit enjoyed by those who subsidize them.

- RRRP Update (shift costs within the rate-base by increasing the RRRP benefit paid to rural and remote customers):
  - Increasing the amount of revenue devoted to the RRRP or expanding the scope of consumers eligible for the program does not raise new legal risk. There is a good argument that the RRRP is a regulatory charge, as it socializes some of the costs of distributing electricity to rural consumers. Overall the risk that the RRRP would be characterized as a tax is assessed as moderate (meaning equally good arguments on both sides).

- Cap and Trade Proceeds Recycling (reduce impact on rate base and tax base by directing cap and trade auction proceeds to industrial consumers):
  - To be characterized as regulatory charges under the cap and trade program, auction revenues should be spent on programs that reduce GHGs.

# Communications

- Public high-profile communications would coincide with introduction of legislation (September 2016).
  - Stakeholder outreach/technical briefings with LDCs, Ontario Chamber of Commerce, AMPCO, OEB low-income table, AMO, etc.
  - Echo public announcements in southwest and north; proactive provincial/local media.

- **Positioning:**
  - A fiscally prudent plan to benefit all ratepayers in a lasting, meaningful way.
  - Rural customers will receive the largest single rate relief ever.
  - Businesses across Ontario will have even more opportunity to be competitive and manage their energy costs.

- **Issues Considerations:**
  - Significant benefit for rural and remote residential customers; net gain for all residential customers.
  - More complex to communicate, but can be presented as a full plan that includes reforms and improvements to the system.
  - Consistent with cap-and-trade commitment that no business sector will be left worse off, though small businesses outside ICI will benefit the least.

# Communications – Key Messages

- [Placeholder]

# Proposed Cabinet Minute

CABINET AGREED THAT:

1. THE MINISTRY OF ENERGY (ENERGY), WITH SUPPORT FROM THE MINISTRY OF FINANCE (MOF), SHALL PREPARE LEGISLATION THAT WOULD PROVIDE AN EIGHT PERCENT (8%) REBATE ON THE PRE-TAX COST OF ELECTRICITY FOR THE FOLLOWING CLASSES OF CONSUMERS:
   A. ALL CONSUMERS ELIGIBLE TO BE BILLED UNDER THE ONTARIO ENERGY BOARD'S REGULATED PRICE PLAN; AND
   B. ANY OTHER CONSUMERS WHO WERE ELIGIBLE FOR FINANCIAL ASSISTANCE UNDER THE *ONTARIO CLEAN ENERGY BENEFIT ACT, 2010* (OCEBA) DURING THE PERIOD THAT PROGRAM WAS IN PLACE.

2. THE LEGISLATION SHALL BE GENERALLY MODELLED UPON THE OCEBA, AND WOULD INCLUDE THE FOLLOWING ELEMENTS:
   A. THE REBATE WOULD BE AVAILABLE STARTING JANUARY 1, 2017 AND BEFORE SUCH DATE AS MAY BE PRESCRIBED;
   B. THE REBATE WOULD NOT BE SUBJECT TO A CAP UNLESS A CAP IS PRESCRIBED;
   C. THE LEGISLATION WOULD SPECIFY THE TYPES OF COSTS TO WHICH THE REBATE WOULD OR WOULD NOT BE APPLIED, WITH AUTHORITY TO MAKE CHANGES BY REGULATION;
   D. THE LEGISLATION WOULD ADDRESS INVOICING REQUIREMENTS, INCLUDING AUTHORITY TO PRESCRIBE HOW THE REBATE IS TO APPEAR ON CONSUMER ELECTRICITY BILLS;
   E. THE LEGISLATION WOULD INCLUDE AUTHORITY TO PRESCRIBE THE WAY IN WHICH THE REBATE IS TO BE FLOWED THROUGH TO CONSUMERS, AND THE WAY IN WHICH ELECTRICITY VENDORS PROVIDING THE REBATE ARE TO BE REIMBURSED;
   F. THE LEGISLATION WOULD INCLUDE RECORD-KEEPING REQUIREMENTS FOR ELECTRICITY VENDORS AND ANY OTHER PRESCRIBED PERSONS; AND
   G. THE LEGISLATION WOULD INCLUDE INSPECTION POWERS FOR INSPECTORS APPOINTED BY THE MINISTER OF FINANCE, INCLUDING POWERS RELATED TO RECOVERY OF OVERPAYMENTS.

Pending Update

# Proposed Cabinet Minute (cont'd)

3. ENERGY AMEND O. REG. 429/04 (ADJUSTMENTS UNDER SECTION 25.33 OF THE ACT) MADE UNDER THE *ELECTRICITY ACT, 1998* TO EXPAND ELIGIBILITY FOR CLASS A CONSUMERS AND CLASS A MARKET PARTICIPANTS UNDER THE INDUSTRIAL CONSERVATION INITIATIVE (ICI) TO ALL ELECTRICITY CONSUMERS AND MARKET PARTICIPANTS WITH A PEAK DEMAND ABOVE AN AVERAGE OF ONE MEGAWATT (1MW) WITH NO SECTORAL RESTRICTIONS ON PARTICIPATION.

4. ENERGY AMEND O. REG 442/01 (RURAL OR REMOTE ELECTRICITY RATE PROTECTION) MADE UNDER THE *ONTARIO ENERGY BOARD ACT, 1998* TO INCREASE THE TOTAL AMOUNT OF RATE PROTECTION AVAILABLE TO LOW DENSITY HYDRO ONE INC. CONSUMERS UNDER THE RURAL OR REMOTE RATE PROTECTION PROGRAM BY $110 MILLION, EFFECTIVE JANUARY 1, 2017.

5. ENERGY CONSIDER AND, IF APPROPRIATE, UTILIZE A MECHANISM TO PERIODICALLY ADJUST THE TOTAL ANNUAL AMOUNT OF RATE PROTECTION AVAILABLE TO HYDRO ONE INC. CONSUMERS UNDER THE RURAL OR REMOTE ELECTRICITY RATE PROTECTION REGULATION / PROGRAM, EFFECTIVE JANUARY 1, 2018.

Pending Update

6. ENERGY TO RECYCLE UP TO AN AVERAGE OF $270 MILLION OF CAP AND TRADE AUCTION PROCEEDS FROM THE *GREENHOUSE GAS REDUCTION ACCOUNT* PER YEAR OVER THE FIRST COMPLIANCE PERIOD (2017-2020) TO COMMERCIAL AND INDUSTRIAL ELECTRICITY CONSUMERS.

7. ENERGY AND MOF TO WORK WITH CABINET OFFICE (CO) AND PREMIER'S OFFICE (PO) ON COMMUNICATIONS PLAN.

# Appendix

# Glossary of Terms

- **Class A:** A category of electricity consumer/market participant established via the Industrial Conservation Initiative (ICI) that pays Global Adjustment (GA) based on their electricity consumption during the five highest peak demand hours during the year. To be eligible for Class A status a consumer/market participant must have an average hourly peak demand of greater than 5MW or greater than 3 MW and less than or equal to 5MW for certain industrial sectors.

- **Class B:** A category of electricity consumer/market participant that pays GA as a flat rate applied to electricity consumption. Class B electricity consumers/market participants have a peak demand over 50 kilowatts and are not eligible for – or choose not to become – Class A status.

- **Cost Shift Impact:** In the context of electricity rate mitigation programs, the impact of electricity rate mitigation programs in terms of assigning fixed costs of the electricity system to the different electricity consumer classes (e.g. Class A, Class B, RPP).

- **Demand Response (DR):** Programs designed to reduce the amount of electricity drawn from the grid during peak demand periods. Customers could be responding to changes in the price of electricity during the day, incentive payments and/or other mechanisms.

- **Distribution:** A distribution system carries electricity from the transmission system and delivers it to consumers. Typically, the network would include medium-voltage power lines, substations and pole-mounted transformers, low-voltage distribution wiring and electricity meters.

- **Feed-in Tariff (FIT):** A guaranteed rate that provides stable prices through long-term contracts for energy generated using renewable resources.

# Glossary of Terms (con't)

- **Global Adjustment (GA)**: The GA is the difference between the total payments made to certain contracted or regulated generators and demand management projects, and market revenues. The GA serves a number of functions in Ontario's electricity system; it provides more stable electricity prices for Ontario's consumers and generators; it maintains a reliable energy supply; and, it recovers costs associated with conservation initiatives that benefit all Ontarians.
  - The GA is calculated each month by taking into account the following components: Generation contracts administered by the Ontario Electricity Financial Corporation; OPG's nuclear and baseload hydroelectric generation; and OPA contracts with generators and suppliers of conservation services. Consumers on the regulated price-plan (RPP) pay a fixed price set every six months by the Ontario Energy Board which includes the GA, while customers who have a retail contract pay the contract price for their electricity plus the Global Adjustment.

- **Greenhouse Gas Reduction Account (GGRA)**: An account established in the Public Accounts under Bill 172 ("Climate Change Mitigation and Low-carbon Economy Act, 2016") to record proceeds from the distribution of Ontario emission allowances, amounts payable to the Crown, administrative penalties, all expenditures of public money incurred under cap and trade.

- **Kilowatt (kW)**: A standard unit of power that is equal to 1,000 watts (W). Ten 100-watt light bulbs operated together require one kW of power.

- **Kilowatt-hour (kWh)**: A measure of energy production or consumption over time. Ten 100-watt light bulbs, operated together for one hour, consume one kWh of energy

- **Load Size**: The amount of electricity - in standard units of power (i.e., kW/MW) – that a facility/building is able to consume at any one time from the transmission or distribution system.

# Glossary of Terms (con't)

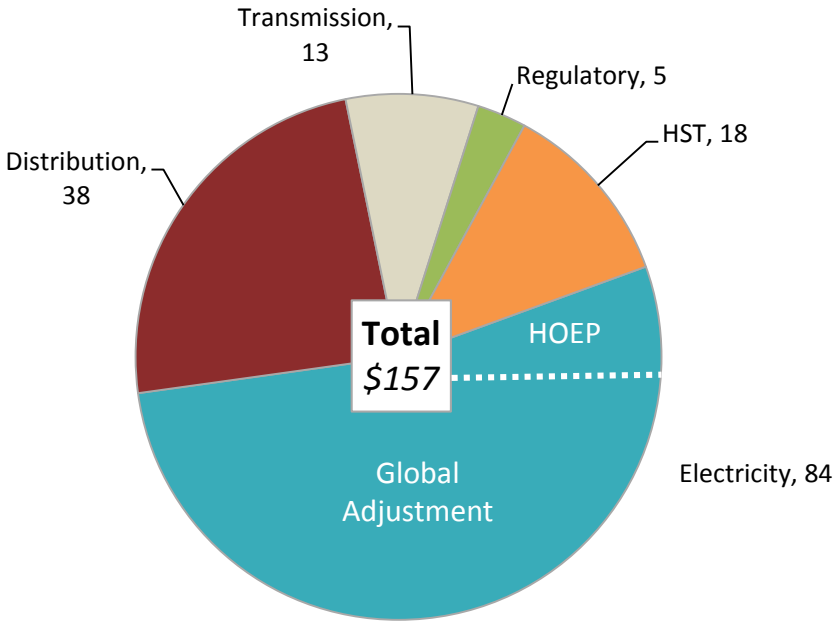
- **Local Distribution Company (LDC)**: A utility that owns and/or operates a distribution system for the local delivery of energy (gas or electricity) to consumers.
- **Megawatt (MW)**: A unit of power equal to 1,000 kilowatts (kW) or 1 million watts (W).
- **Megawatt-hour (MWh)**: A unit of power equal to 1,000 kilowatt-hours (kWh).
- **Peak Demand**: Peak demand, peak load or on peak are terms describing a period in which demand for electricity is highest.
- **Proceeds Recycling (Cap and Trade)**: Applying revenue associated with the functioning of the Ontario cap and trade program to electricity bills in recognition of the significant emissions reduction achieved since 2003.
- **Regulated Price Plan (RPP)**: An Ontario Energy Board developed electricity price plan that provides stable and predictable electricity pricing, encourages conservation and ensures the price consumers pay for electricity better reflects the price paid to generators. The plan has been in place since 2005.
- **Terawatt-hour (TWh)**: A unit of power equal to 1 billion kilowatt-hours.
- **Transmission**: The movement of electricity, usually over long distance, from generation sites to consumers and local distribution systems. Transmission of electricity is done at high voltages. Transmission also applies to the long distance transportation of natural gas and oil.
- **Supply Mix**: The different types of resources that are used to meet electricity demand requirements in a particular jurisdiction. Normally the mix is expressed in terms of the proportion of each type within the overall amount of energy produced.

# Residential Electricity Prices

- There are approximately 5 million residential consumers in Ontario.
- The Regulated Price Plan includes nearly all residential consumers, as well as small businesses. Regulated Price Plan consumers pay a blended commodity rate regulated by the OEB, which is set every six months.
- For households, the Debt Retirement Charge (DRC) was removed from residential electricity bills as of January 1, 2016.
- In addition, the Ontario Electricity Support Program (OESP) provides an ongoing rate reduction directly on the bills of low-income electricity consumers who have applied and meet the eligibility requirements. The program is funded through the rate base.
- Rural customers, in particular those with electrical heating, pay higher monthly bills.

**Typical Residential Monthly Bills ($)**

*As of May 1, 2016 (750 kWh/month)*



*Source*: OEB, Toronto Hydro

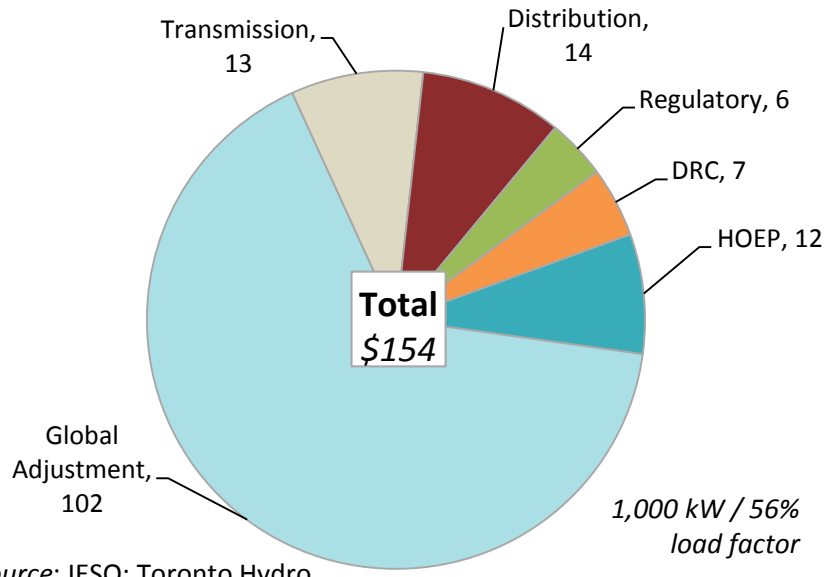
# Commercial Electricity Prices

- There are approximately 400,000 commercial and institutional consumers in the province. These consumers are Class B consumers, and have separate line items on the electricity bill for HOEP and GA.

- There is a high degree of differentiation amongst consumers within the commercial sector in terms of size and consumption patterns. For example, an elementary school has a much different hourly load profile compared to a full service restaurant. This is an important consideration when looking at the bill impacts of policy options.

**Typical Commercial Price ($/MWh)**

*YTD June 2016 (Non-RPP Class B)*



*Source*: IESO; Toronto Hydro

- Consumers in the commercial sector do not pay time-of-use prices and have little incentive to shift demand away from high demand hours.

- Targeted pricing programs are currently not available for Class B consumers.

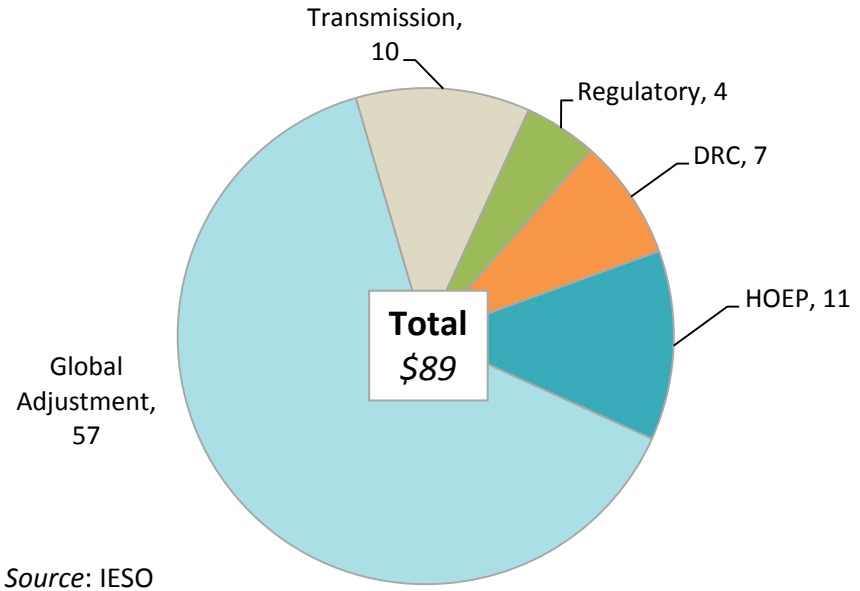
*** Note**: Most commercial consumers receive input tax credits for their HST.

# Industrial Electricity Prices

- There are about 300 large industrial consumers in Ontario.
- Measures in place to mitigate industrial electricity prices include ICI and NIERP.
- ICI lowers costs for eligible large electricity consumers (i.e., those with monthly peak demand exceeding 3 MW) that reduce consumption during peak periods.
  - ICI consumers reduce their electricity rates by 25% on average.

**Typical Large Industrial Price ($/MWh)**

*YTD June 2016*



*Source*: IESO

- Participants in NIERP receive a rebate of $20/MWh. On average, industrial electricity prices are reduced by about 20% through the program, reducing all-in prices to $64/MWh for these consumers. The program is funded through the tax base.

*** Note:** Industrial consumers receive input tax credits for their HST.

# Electricity System Cost Reduction Initiatives

- A number of actions have and are being taken to reduce overall electricity system costs:
  - Renegotiating the Green Energy Investment Agreement, reducing contract costs by $3.7 billion;
  - Deferring the construction of two new nuclear reactors at Ontario Power Generation's Darlington facility, avoiding an estimated $15 billion in new construction costs;
  - Approving Ontario Power Generation's plans to enable the ongoing operation of Pickering up to 2024, which is expected to save ratepayers as much as $600 million.
  - Reducing Feed-in-Tariff (FIT) prices through annual price reviews, saving ratepayers at least $1.9 billion relative to the 2013 Long-Term Energy Plan (2013 LTEP) forecast; and
  - Removing an expected $3.3 billion in Large Renewable Procurement (LRP) costs relative to the 2013 Long-Term Energy Plan (2013 LTEP) forecast, based on the results of the first phase of the LRP.
- Despite these actions to reduce system costs, electricity rates continue to increase for consumers.

MOVED to APPENDIX

# Existing Rate Mitigation

- Ontario currently provides rate mitigation to various electricity consumer classes through a combination of tax-based and rate-based programs.
  - For example, Northern Ontario residential electricity consumers receive tax credits in recognition of higher electricity costs in the north and rural consumers receive a subsidy funded through the rate-base due to the higher cost of delivering power to rural areas.

- As of 2016, the government removed the Debt Retirement Charge (DRC) from residential electricity bills. While this saves a typical residential electricity ratepayer about $60 per year, it is less than the benefit previously provided through the Ontario Clean Energy Benefit (OCEB).
  - OCEB provided a tax-base rebate of 10% rebate on the total cost of electricity charges related to electricity consumption on eligible bills between 2011 and 2015.

- Because electricity costs must be fully recovered from electricity consumers, rate mitigation funded through the rate-base often represents a shifting of costs from one consumer group to another (i.e., industrial to residential and commercial consumers).
  - Rate-based initiatives are generally associated with incenting changes in behaviour that provide electricity system benefits (i.e., shifting electricity consumption from on-peak to off-peak periods).

- The following slides provide an overview of the programs currently available to different electricity consumer classes along with the cost shift associated with several of the programs.

# Existing Rate Mitigation (cont'd)

| Program | Consumer Type | Rate/Tax -based | Description |
|---|---|---|---|
| Northern Ontario Energy Credit | **Residential** | Tax | Delivered as part of the Ontario Trillium Benefit, provides individuals living in northern Ontario with a credit of up to $146 per year for the 2016 benefit year. |
| Ontario Energy and Property Tax Credit | | Tax | Also delivered as part of the Ontario Trillium Benefit, provides up to $1,008 per year for low-to moderate-income individuals and families. |
| Ontario Electricity Support Program | | Rate | Provides ongoing assistance directly on the bills of eligible low-income electricity consumers. |
| Rural or Remote Rate Protection | | Rate | Provided to rural and remote residential and farm customers because the cost of distributing power to remote areas is much higher than for urban areas. |
| saveONenergy Conservation Programs (including Home Assistance Program for low income customers) | | Rate | Delivered by LDCs which provide financial incentives for electricity-saving measures like LEDs, ENERGYSTAR certified ceiling fans, baseboard programmable thermostats, clotheslines, and advanced powerbars. |
| saveONenergy Conservation Programs (including Retrofit Program for Buildings and other programs) | **Commercial** | Rate | saveONenergy suite of electricity conservation programs for commercial customers offered by local distribution companies (LDCs) help businesses save energy to better manage their electricity consumption and reduce their annual electricity costs. See Appendix for more information. |
| Industrial Conservation Initiative | **Industrial** | Rate | Encourages Ontario's largest consumers to reduce consumption during peak periods to save on average 25% on their electricity bills. |
| Industrial Accelerator Program | | Rate | Provides financial incentives of up to $10 million to transmission-connected electricity consumers, to invest in energy-efficiency or self-generation which would reduce the amount of electricity withdrawn from the provincial grid. |
| Industrial Electricity Incentive | | Rate | Provides reduced electricity rates for companies starting or expanding operations in Ontario. |
| Northern Industrial Electricity Rate Program | | Tax | Provides $20 megawatt per hour (MWh) rebate for qualifying large northern industrial consumers. |
| Demand Response | | Rate | Provides payments to businesses and industry to shift consumption at times when the electricity system is stressed. DR currently provides ~500 MW of capacity to the system. |

Note: MO requested that this slide be removed; staff recommend keeping it in the appendix.

# saveONenergy Conservation

| Program | Consumer Type | Description |
|---|---|---|
| **Heating and Cooling Initiative** | **Residential** | Provides rebates to help offset the cost of purchasing and installing new heating and cooling equipment in the home. |
| **Coupons** | | Available in-store for one month in the spring and fall and can be downloaded year-round to use at participating retailers to help Ontarians save on a wide range of energy-efficient products including LED bulbs, power bars with integrated timers and more. |
| **Audit Funding** | **Business** | Up to 50% of the cost of an energy audit to identify opportunities for energy efficiency upgrades and eligible incentives. |
| **Retrofit Program** | | Provides various incentives for as much as 50 per cent of project costs, and advanced funding for assisted and social housing buildings, for updating old or inefficient equipment, including lighting, motors, unitary AC or packaged rooftop units. |
| **Small Business Lighting** | | Provides incentives for new energy efficient lighting. |
| **New Home Construction** | | Designed to encourage home builders and renovators to construct energy-efficient homes, and includes incentives for installation of energy-efficient measures. |
| **Training and Support** | | Helps provide access to the most up-to-date training, such as in building commissioning, certified measurement and verification, and how to be an energy manager. |
| **Process and Systems** | | Provides up to $50,000 for engineering studies and up to 70% of capital costs for energy efficiency upgrades. |
| **Industrial Accelerator Program** | | Assists eligible transmission-connected companies to fast track capital investment in major energy conservation projects. |

Note: MO requested that this slide be removed; staff recommend keeping it in the appendix.

# HST – Overview

- The HST is a value-added tax. Unlike a sales tax, under a value-added tax most businesses effectively do not pay tax on their inputs because they are able to claim input tax credits (ITCs).
  - Through ITCs, the HST removes embedded sales taxes paid by businesses.
  - Only HST registrants that have taxable sales can claim ITCs. Businesses selling HST-exempt goods or services (such as financial services) are not eligible to claim input tax credits.

- Unlike businesses engaged in commercial activities, Public Service Bodies (PSBs) are generally not eligible to claim input tax credits. Instead, they can recover a portion of the HST paid by applying for PSB rebates from the Canada Revenue Agency.
  - PSBs consist of municipalities, universities, public colleges, school authorities, hospital authorities and charities and qualifying non-profit organizations.
  - See ~~Appendix for additional information~~ Additional Information – Public Service Bodies.

- To help low- to moderate-income individuals and families with the sales tax they pay on home energy costs (including electricity), Ontario provides tax relief through the energy component of the Ontario Energy and Property Tax Credit (OEPTC).
  - For the 2016 benefit year, eligible families and single people could get up to $224 to help with these costs, totalling about $445 million in tax relief.

- Ontario also provides tax relief through the Ontario Sales Tax Credit (OSTC), which was enhanced in 2010 to help low- to moderate- income individuals and families with the overall sales taxes they pay.
  - For the 2016 benefit year, eligible individuals can get up to $291 plus additional amounts of up to $291 for their spouse and each of their dependant children under age 19.
  - The 2016 OSTC is estimated to provide about $1.3 billion in tax relief.

# Sales Tax Treatment in Other Jurisdictions

| Jurisdiction | Tax | Tax Paid by Business Customers? | Tax Paid by Residential Customers? | Comment |
|---|---|---|---|---|
| **British Columbia** | PST | Yes – 7% | No | • PST does not apply to residential energy, including electricity, acquired solely for residential use in a residential dwelling<br>• BC's carbon tax does not apply to electricity bills. |
| **Alberta** | None | N/A | N/A | • Alberta does not have a provincial sales tax. |
| **Saskatchewan** | PST | Yes – 5%<br>Except for electricity purchased to heat a building. | No | • PST does not apply to electricity purchased for use in a residential dwelling.<br>• PST does not apply to electricity purchased for use in heating a building that is heated solely by the electricity. |
| **Manitoba** | PST | Yes – 8%<br>Reduced rate of 1.6% applies to electricity used by a qualifying business to operate machinery | Yes – 8%<br>Electricity purchased for mixed use, 80% of which is home heating, has a reduced rate of 1.4%. Electricity solely to heat the purchaser's home is exempt. | • Winnipeg also applies a tax of 2.5% on residential and 5% on commercial. |
| **Ontario** | HST | Yes (less ITC (input tax credits)) | Yes – 8% | |
| **Quebec** | QST | Yes (less ITCs) | Yes – 9.975% | |
| **Nova Scotia** | HST | Yes (less ITCs) | Yes – 10% less provincially administered rebate. | • Rebate is equal to the provincial portion of the HST, and is administered similar to OCEB, but applies to many energy sources. |
| **New Brunswick** | HST | Yes (less ITCs) | Yes – 10% | |
| **Prince Edward Island** | HST | Yes (less ITCs) | Yes – 9% (10% beginning Oct 1, 2016) | |
| **Newfoundland and Labrador** | HST | Yes (less ITCs) | Yes – 10% | • Had a provincially administered Home Heating Rebate program until July 2015. |
| **Federal** | GST | Yes (less ITCs) | Yes – 5% | |

Note: MO requested that this slide be removed; staff recommend keeping it in the appendix.

# HST – Considerations

- An across-the-board 8% rebate could be criticized as providing HST relief to those who effectively do not pay HST (businesses) as well as to those who receive HST relief through Public Service Body rebates or income tax relief.

- Providing a rebate equivalent to the 8% provincial portion of the HST on electricity, could lead to pressure to provide similar relief for other fuels and energy sources.
  - Ontarians who heat their homes with electricity will benefit from the provincial rebate, while Ontarians who heat their homes with natural gas, heating oil, propane, etc. would continue to pay the full 13% HST on those other energy sources.
  - The costs of natural gas, heating oil, propane, etc. are expected to increase as a result of Ontario's forthcoming cap and trade program.

- The provincial rebate would be an amount equal to the 8% provincial portion of the HST on electricity. OCEB, in contrast, was 10% of the bill including HST.

- The Province may also need to change the reporting for the cost of the energy component of the Ontario Energy and Property Tax Credit, which provides relief for HST on home energy. The energy component is reported as an offset of HST revenue.
  - Ministry program expenses could increase by as much as $445 million (TBC).

- The greater degree of complexity in the design of the program, the more difficult it will be to draft, implement and administer.

- To improve the province's ability to track impacts and program outcomes, subsequent legislative amendments to enable exchanges of data with LDCs could be considered.

# Additional Information – Public Service Bodies

- Unlike businesses engaged in commercial activities, Public Service Bodies (PSBs) are generally not eligible to claim input tax credits. Instead, they can recover a portion of the HST paid by applying for PSB rebates from the Canada Revenue Agency.

- Ontario's rebate rates are intended to keep these sectors fiscally neutral relative to the Retail Sales Tax they paid on their inputs under the former RST system.

| REBATE RATES FOR PSBs | | |
|---|---|---|
| **PSB Type** | **Ontario (8%)** | **Federal (5%)** |
| Municipalities | 78% | 100% |
| Universities & Public Colleges | 78% | 67% |
| School Authorities | 93% | 68% |
| Hospital Authorities | 87% | 83% |
| Charities and Qualifying Non-Profit Organizations* | 82% | 50% |

**A qualifying non-profit organization receives at least 40% of its funding from government.*

# Industrial Conservation Initiative (ICI) – Overview

- In January 2011, Ontario amended O.Reg. 429/04 to implement the Industrial Conservation Initiative (ICI). This initiative established two classes of consumers:
  - "Class A" consumers are those with monthly peak demand exceeding 5 MW. They are charged global adjustment (GA) on the basis of their contribution to system peak demand during the highest 5 system demand hours of the year.
  - "Class B" consumers are all other consumers. They continue to be charged GA as a flat rate applied to their consumption.
- In May 2014, O.Reg. 429/04 was further amended to admit all consumers with monthly peak demand between 3 and 5 MW within certain energy-intensive industrial sectors into the ICI.
- This change has been successful in:
  - Incenting large consumers to significantly reduce their peak demand during the highest demand hours of the year, and
  - Providing large industrials with the ability to manage their electricity costs and remain competitive with competing jurisdictions.

# Expected Numbers of Newly Eligible ICI Consumers

- As part of its ICI survey, Navigant collected data on the number of consumers in the 1-2 MW, 2-3 MW and 3-5 MW categories. Navigant's response rate for the survey was approximately 76%. Approximately 300 consumers are currently participating in ICI.

- The table below sets out the number of consumers in each tranche from the survey along with an "adjusted number" which estimates the actual total number of customers in each tranche in the province (i.e., it accounts for the response rate).

- As expected, there are a greater number of consumers in the 1 -2 MW category than in the 2 – 3 MW category.

| | **1-2 MW** | **2-3 MW** | **3-5 MW*** |
|---|---|---|---|
| # of customers – ICI survey | 649 | 197 | 171 |
| # of customers – Adjusted for response rate | 854 | 259 | 225 |

*Source:* Navigant; Ministry of Energy

* Includes consumers that are already eligible for and participating in ICI. ENERGY estimates that approximately 75 of 225 estimated consumers in the 3-5 MW category are participating in ICI.

# Alignment With Climate Change Action Plan

- Ontario's Climate Change Action Plan (CCAP) commits $6.0 – 8.3 billion over 4 years to greenhouse gas (GHG) reduction initiatives, funded by Cap and Trade auction proceeds.

- The CCAP includes up to $1.32 billion over 4 years to help keep electricity rates affordable for residential and industrial consumers. This initiative is estimated to reduce up to 3,000,000 tonnes of greenhouse gas (GHG) emmissions by 2020.

| ***$ Billions*** | **2017-18** | **2018-19** | **2019-20** | **2020-21** | **Total** |
|---|---|---|---|---|---|
| Total Committed in CCAP | **$1.5 – 2.1** | **$1.5 – 2.1** | **$1.5 – 2.1** | **$1.5 – 2.1** | **$6.0 – 8.3** |
| *Electricity Price Mitigation* | *Up to 0.3* | *Up to 0.3* | *Up to 0.3* | *Up to 0.3* | *Up to 1.3* |

- Ontario's *Climate Change Mitigation and Low-carbon Economy Act, 2016* requires that all proceeds generated from Cap and Trade be used to help reduce greenhouse gas emissions.

- Should a portion of CCAP funding currently allocated to Electricity Price Mitigation be used to offset rate increases for certain industrial consumers, the remaining CCAP funding could provide a fiscal plan offset to the overall initiative by funding other existing initiatives that help reduce greenhouse gas emissions – for example:
  - Regional Express Rail;
  - Hamilton LRT;
  - Hurontario LRT; and
  - Energy efficiency in schools.

Hi Keley

For your consideration - attached are comments for the Electricity Price Mitigation CabSub

Pls see slides 10, 13, 14, 24, 26, 29 and Appendix slide 34
The wording of the Cabinet Minute in this Cab Sub is preferred over the stand-alone wording in the excerpt

If you have any questions pls let us know

Cheers
Bernice Lau

Hi,
Attached is the latest iteration of the Cabinet submission, including an updated minute. This is with our MO for review but wanted to keep you updated so you can continue to revise your TB / CAB notes. Note that some of the numbers have changed to remain consistent with methodology throughout the submission.

Hi Boafoa,

Wondering if it’s possible for the electricity item to be last on the agenda tomorrow. We have a Minister’s briefing which conflicts with Major Projects, involving the same staff and it would be very helpful if we could be on at 11am.

Thanks,
Keley

Subject: Major Projects this week

Hi Keley/David

We will be adding the Electricity Pricing Mitigation item to Major Projects this Thursday. This will be an opportunity to ensure everyone is on the same page in advance of the TB trip next week. Major Projects is scheduled from 10:30 to 11:30 on Thursday. This item will be the first–10:30 to 11:00. Please let me know if this time doesn't work or if there are any concerns.

Thanks
Boafoa

Ontario

# Electricity Price Mitigation

## Ministry of Energy

**Date: September 12, 2016**

Minister

Deputy Minister

# Context

- Electricity costs are increasing as the necessary investments are made to decarbonize and modernize the province's electricity infrastructure.

- Ontario has taken action to replace coal-fired generation with cleaner sources of energy. Since 2003, the Province has invested more than $35 billion in over 16,000 megawatts (MW) of new and refurbished clean generation, including nuclear, natural gas and renewables.
  - This investment represents about 40% of our current supply and has helped decrease electricity sector emissions by approximately 80%.

- Over the same period, Hydro One has invested $15.5 billion to enhance and renew its transmission and distribution systems.

- Since 2010, electricity prices have risen considerably, particularly for households and small businesses. Prices are forecast to continue to increase as additional generation comes online.

- The Ministry of Energy and Ministry of Finance were asked to develop a proposal to provide rate relief to Ontario electricity consumers.

# Electricity Consumer Classes

- There are three classes of electricity consumers:

| | Regulated Price Plan | Class B | Class A |
|---|---|---|---|
| **Consumer Types** | • Residential<br>• Small Business<br>• Farms | • Commercial<br>• Institutional<br>• Small industrial | • Large commercial<br>• Large industrial |
| **Load Size** | Below 0.05 MW | Between 0.05 MW and 3 MW | Above 3 MW* |
| **Total Consumption** | 58 TWh | 57 TWh | 26 TWh |
| **Share of Consumption** | 41.1% | 40.4% | 18.4% |

**** Note:** Consumers with peak demand between 3-5 MW in the manufacturing, mining, refrigerated warehousing, greenhouses and data-processing industries are currently eligible for Class A. All other 3-5MW consumers are Class B.

# Current Rate Base Mitigation Programs

- Ontario has implemented several programs to help electricity consumers:
  - The Ontario Electricity Support Program (OESP) provides ongoing assistance directly on the bills of eligible low-income electricity consumers;
  - The Industrial Conservation Initiative (ICI) encourages Ontario's largest consumers to reduce consumption during peak periods while reducing system costs; and
  - The Rural or Remote Rate Protection (RRRP) program is provided to rural and remote residential and farm customers because the cost of distributing power to remote areas is much higher than for urban areas.

- These programs have shifted costs amongst electricity consumer classes (i.e., residential, commercial and industrial) as shown in the table below:

| Cost Shift Impact | 2011 | 2012 | 2013 | 2014 | 2015 | 2016 |
|---|---|---|---|---|---|---|
| Residential Bill ($/month for 750 kWh) | 3.55 | 4.07 | 3.85 | 4.46 | 5.68 | 6.55 |
| Commercial – Class B ($/MWh) | 4.74 | 5.43 | 5.14 | 5.94 | 7.57 | 8.73 |
| Industrial – Class A ($/MWh) | -20.97 | -25.26 | -22.38 | -24.68 | -32.56 | -31.55 |

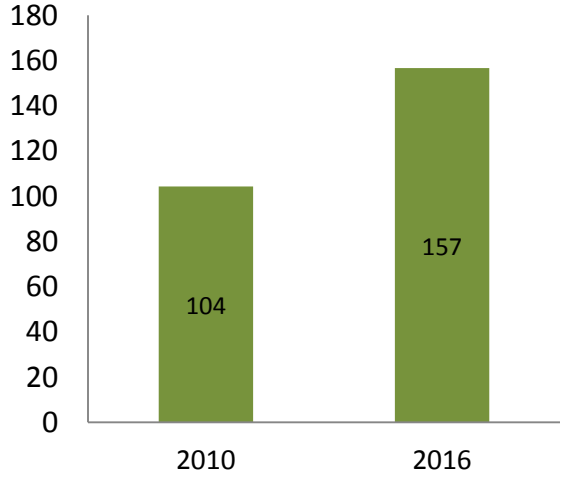
**Note:** Negative values indicate a benefit; positive values denote an incremental charge.

# Prices by Electricity Consumer Class

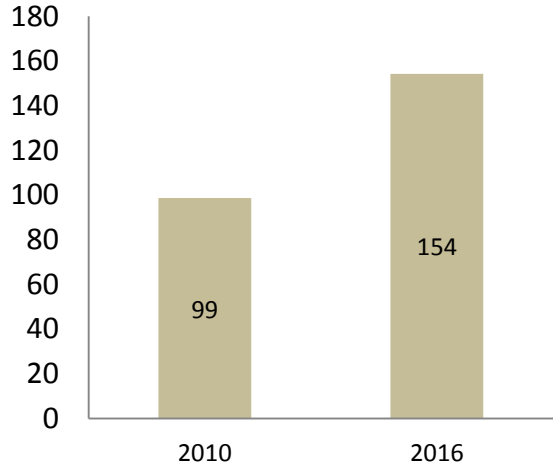
- Since 2010, average bills for residential consumers (i.e., using 750 kWh/month) have increased by over 50% and rates paid by commercial have increased by 56%.

- Industrial electricity rates have remained relatively flat over the same time period, due primarily to the Industrial Conservation Initiative (ICI). ICI represents a cost shift of about $5/month for residential electricity consumers.

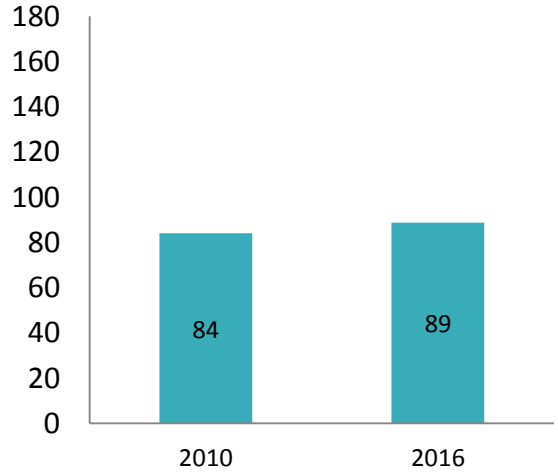
**Typical Residential Bill (750/kWh per month)**



**Typical Class B (Commercial) Price ($/MWh)**



**Typical Class A (Industrial) Price ($/MWh)**



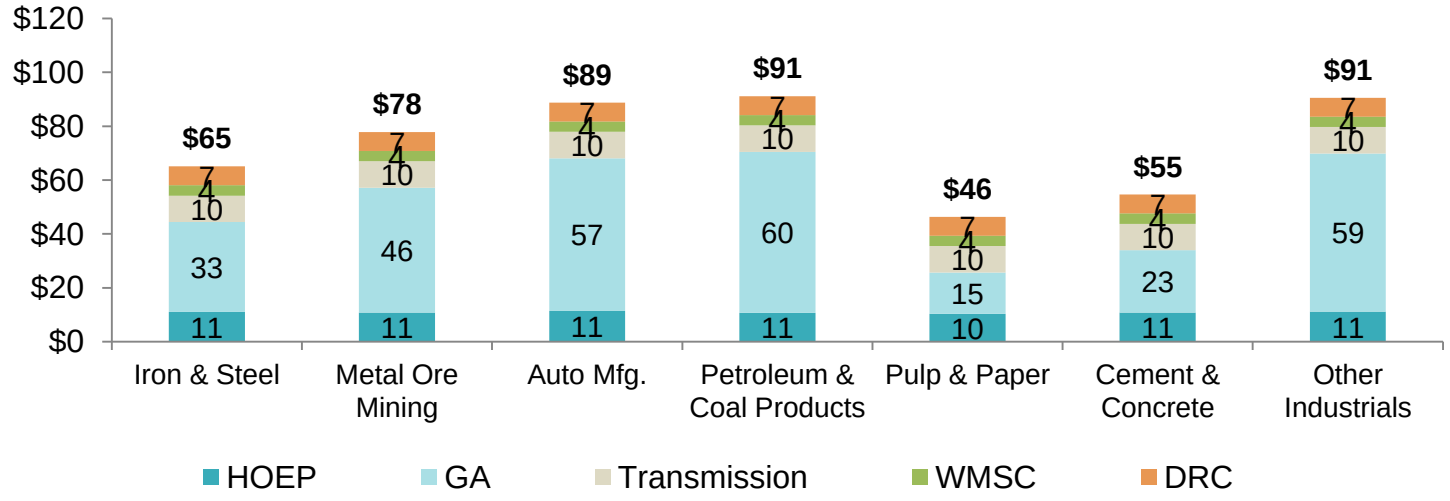
**Note:** 2016 represents May 2016 for residential after-tax and YTD June 2016 for commercial and industrial.

# Industrial Electricity Prices Vary by Sector

- While Class A (industrial consumers) benefit from participation in the ICI program, there is a significant amount of variability in the ability to shift away from peak periods across customer classes, impacting the savings achieved.

- The below chart shows the prices paid in 2015 across a number of industrial sectors. Consumers in the north that receive rebates under the Northern Industrial Electricity Rate Program (NIERP) achieve rates that are $20/MWh lower than the below.

**Average all-in Class A, Transmission-connected Electricity Prices by Industrial Sector (estimated $/MWh), Year-to-Date June 2016**



**Note:** HOEP = Hourly Ontario Energy Price, GA = Global Adjustment, WMSC = Wholesale Market Service Charges, DRC = Debt Retirement Charge

# Recent Actions to Bend the Cost Curve

- Since 2013, a number of actions have been taken to reduce overall electricity system costs:
  - Renegotiating the Green Energy Investment Agreement, reducing contract costs by $3.7 billion;
  - Deferring the construction of two new nuclear reactors at Ontario Power Generation's Darlington facility, avoiding an estimated $15 billion in new construction costs;
  - Approving Ontario Power Generation's plans to enable the ongoing operation of Pickering up to 2024, which is expected to save ratepayers as much as $600 million;
  - Reducing Feed-In-Tariff (FIT) prices through annual price reviews, saving ratepayers at least $1.9 billion relative to the 2013 Long-Term Energy Plan (2013 LTEP) forecast; and
  - Removing an expected $3.3 billion in Large Renewable Procurement (LRP) costs relative to the 2013 Long-Term Energy Plan (2013 LTEP) forecast, based on the results of the first phase of the LRP.
- Despite these actions to reduce system costs, electricity rates continue to increase for consumers.

# Rate Mitigation

- The 2016 Budget committed to offset the impact of cap and trade in Ontario for commercial and industrial electricity consumers, while also providing a benefit of up to $2 per month for residential electricity consumers. The Climate Change Action Plan (CCAP) committed $1.3 billion from the Greenhouse Gas Reduction Account (GGRA) over the first compliance period (2017-2020).

- To provide further rate relief to Ontario electricity consumers, the government can use one or more of the levers outlined below:

  - **Tax-based Lever:**
    - Provide an on-bill rebate funded from the tax-base to all consumers or specific classes of consumers (i.e., the Ontario Clean Energy Benefit (OCEB) provided a rebate for eligible electricity consumers).

  - **Rate-based Lever:**
    - Shifts costs within the rate-base from one customer group to another to achieve electricity system benefits and/or policy goals.

  - **Cap and Trade Proceeds Lever:**
    - Redirect cap and trade proceeds to offset the cost of existing initiatives that help reduce greenhouse gas (GHG) emissions (i.e., the CCAP committed to offset the impact of cap and trade and to keep electricity rates affordable).

# Rate Mitigation Proposal

- The Ministry of Energy is proposing to implement the following electricity price mitigation initiatives. The approach identified below would provide relief across all electricity consumer classes:

  1) Provide an 8% rebate equal to the provincial portion of HST to consumers eligible for the Regulated Price Plan* (i.e., residential, small business and farms) and update the Rural or Remote Rate Protection (RRRP) program, to provide relief to rural customers; and

  2) Expand ICI eligibility by lowering the threshold to 1 MW, to provide support to Class B electricity consumers (i.e., commercial, institutional and small industrial) and redirect cap and trade proceeds to commercial and industrial electricity consumers to provide a modest reduction in rates.

- The following slides provide additional information on the above initiatives.

***Note:** Eligibility for the 8% rebate would be similar to OCEB and include some customers not on the Regulated Price Plan (RPP), such as Independent Power Authority consumers and consumers that have opted-out of RPP.

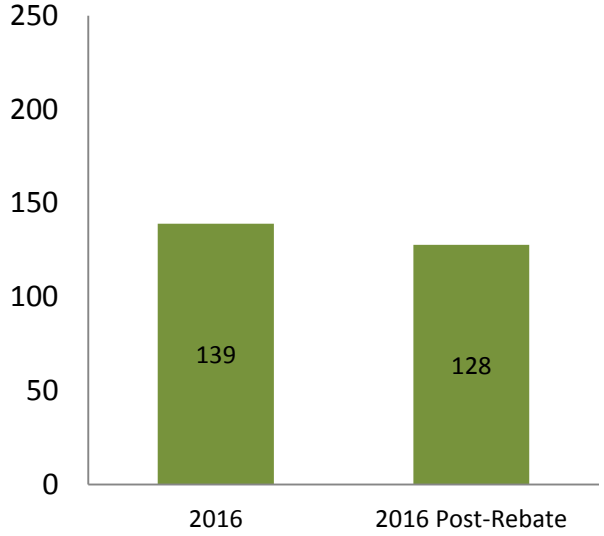
# Rate Mitigation Proposal – Illustrative Benefits*

| | Average Annual Fiscal Impact | Average Annual Greenhouse Gas Reduction Account (GGRA) Proceeds Impact | Regulated Price Plan (Residential) Benefit | | Class B (Commercial) Benefit | Class A (Industrial) Benefit | |
|---|---|---|---|---|---|---|---|
| | | | *Average (750 kWh/ month)* | *Rural (1000 kWh/ month)* | | *Existing* | *New* |
| • 8% rebate to Regulated Price Plan eligible consumers<br>• ICI Expansion<br>• RRRP Update<br>• Proceeds Recycling | $1.0 billion annually | $0.27 billion annually<br><br>(Reduction of $0.06 billion annually or $0.24 billion total from the CCAP commitment) | -$11/ month<br><br>(-8%) | -$45/ month<br><br>(-20%) | -$3/MWh<br><br>(-2%) | -$3/ MWh<br><br>(-3%) | Up to -$52/MWh<br><br>(-34%) |

*** Notes:** The above benefits do not include the cost of ICI expansion and the RRRP update (total impact of $1.74/MWh). Proceeds recycling is net of the cost of carbon and represents an estimated average of the proceeds required over the first compliance period (2017-2020).

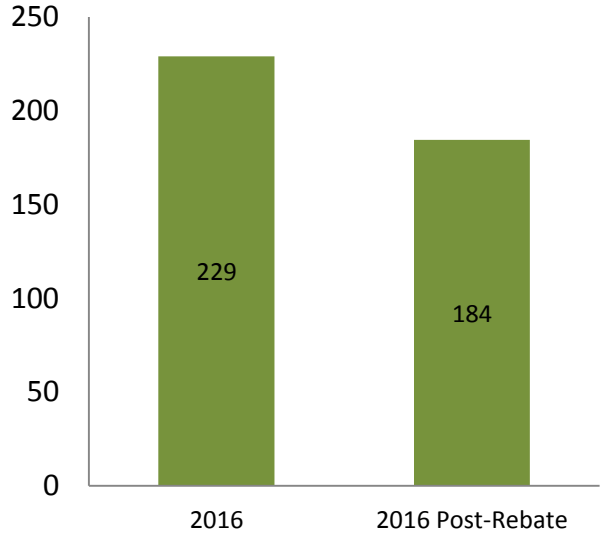
# Rate Mitigation Proposal – Illustrative Bill Impacts by Electricity Consumer Class

**Typical Residential Bill**
**750kWh per month, 8% only**



The benefit is a 8% reduction.

**Rural (R2) Residential Bill**
**1,000kWh per month, 8% and RRRP Update**

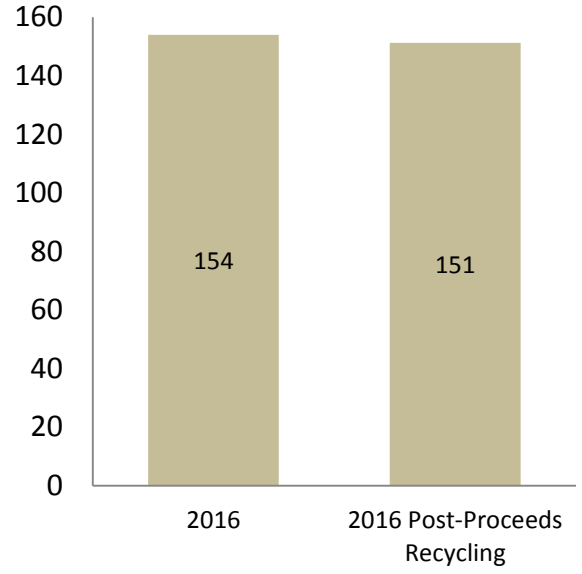


The benefit is a 20% reduction.

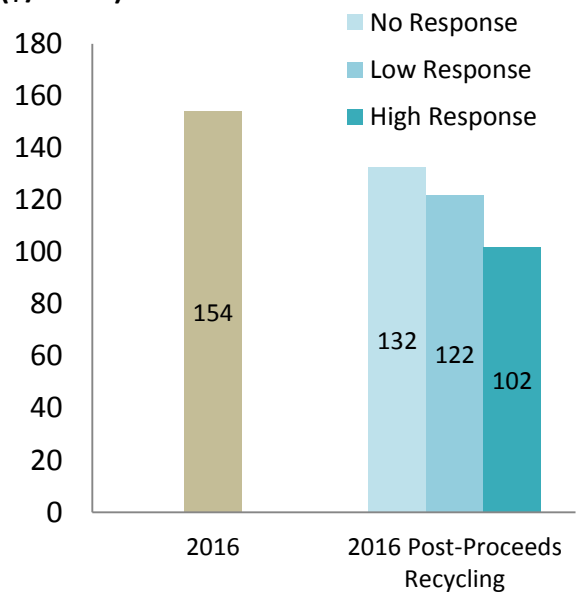
**Note:** The above benefits do not include the cost of ICI expansion and the RRRP update (total impact of $1.74/MWh).

# Rate Mitigation Proposal – Illustrative Bill Impacts by Electricity Consumer Class (cont'd)

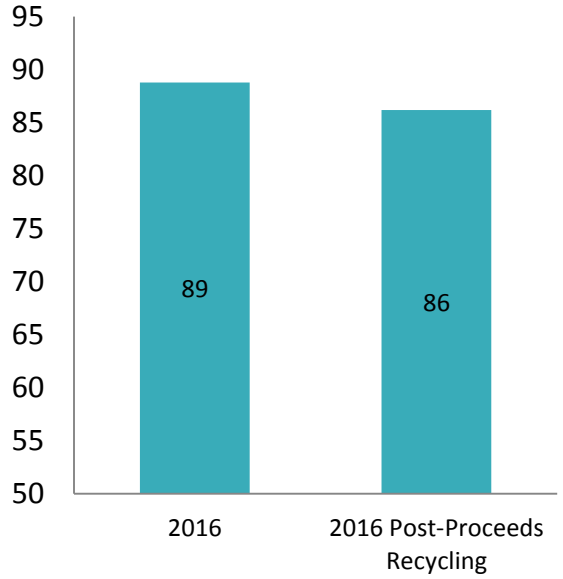
**Typical Class B (Commercial) Price ($/MWh)**



**Typical New Class A Price ($/MWh)**



**Typical Class A (Industrial) Price ($/MWh)**



**Class B:** The benefit is a 2% reduction.

**New Class A:** The benefit is a reduction of 14% to 34%.

**Existing Class A:** The benefit is a 3% reduction.

**Notes:** The above benefits do not include the cost of ICI expansion and the RRRP update (total impact of $1.74/MWh). Proceeds recycling is net of the cost of carbon and represents an estimated average of the proceeds required over the first compliance period (2017-2020).

# 1) Regulated Price Plan Eligible Consumers and Rural or Remote Rate Protection Update

# 8% Rebate to Regulated Price Plan Eligible Consumers

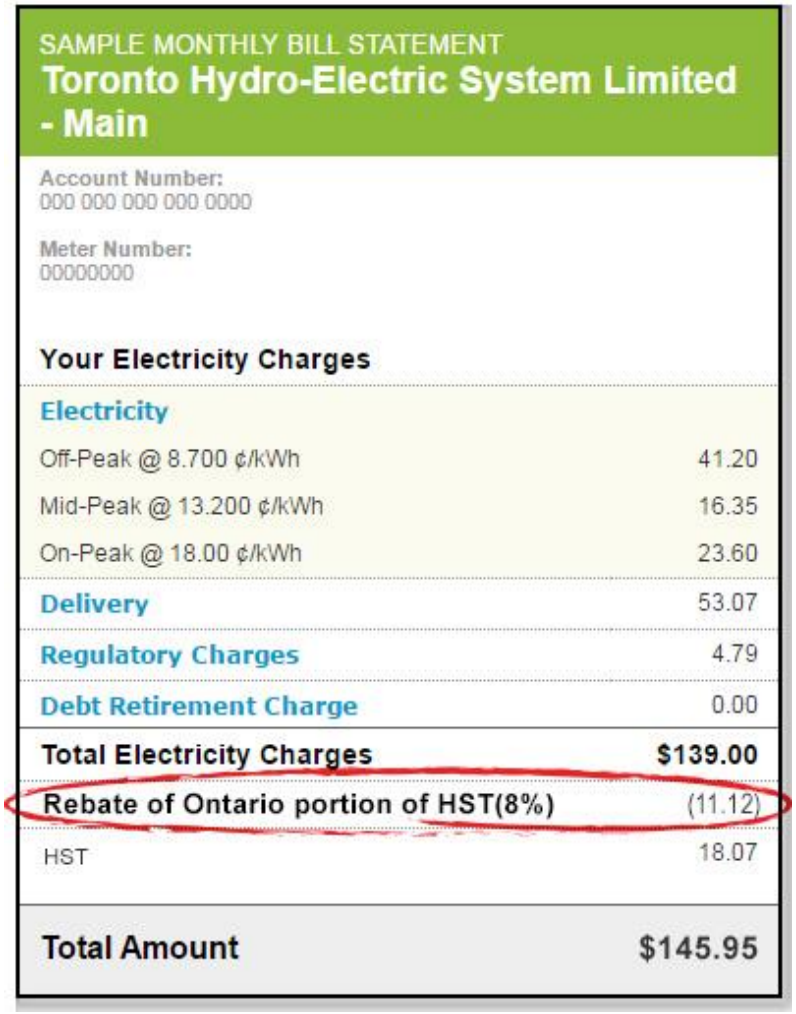
- Legislation/regulation will be introduced to provide a rebate of 8% to consumers eligible for the Regulated Price Plan. The below table indicates which consumers would or would not receive the benefit.
  - This would be equivalent to the provincial portion of the HST*.

| **Eligible for the 8% rebate**<br>(< 50 kW or < 250,000 kWh/year) | **Not eligible for the 8% rebate**<br>(> 50 kW or > 250,000 kWh/year) |
|---|---|
| • Residential Regulated Price Plan consumers<br>• Residential retail consumers<br>• Multi-unit residential buildings and other facilities used as residential rental units<br>• Long-term care homes and school residences<br>• Regulated Price Plan eligible farms<br>• Small businesses<br>  – Coffee / snack retailer<br>  – Convenience store<br>  – Apparel store<br>  – Hair salon<br>  – Small insurance office | • Class A consumers<br>  – Manufacturer<br>  – Large grocery store<br>  – Mines<br>  – Auto assembly plants<br>• Class B consumers (except farms that have opted out of the Regulated Price Plan)<br>  – Commercial offices (low rise)<br>  – Hotel<br>  – General warehousing |

- Those ineligible to receive the 8% rebate will benefit from one or more of the other initiatives under this proposal (e.g., ICI expansion, proceeds recycling, etc).

***Note:** An HST exemption would require federal approval. Engaging in discussions with the federal government would take time and would likely result in not meeting the targeted implementation date.

# Illustrative Electricity Bill Mock-Up



SAMPLE MONTHLY BILL STATEMENT

**Toronto Hydro-Electric System Limited - Main**

Account Number:
000 000 000 000 0000

Meter Number:
00000000

**Your Electricity Charges**

| | |
|---|---|
| **Electricity** | |
| Off-Peak @ 8.700 ¢/kWh | 41.20 |
| Mid-Peak @ 13.200 ¢/kWh | 16.35 |
| On-Peak @ 18.00 ¢/kWh | 23.60 |
| **Delivery** | 53.07 |
| **Regulatory Charges** | 4.79 |
| **Debt Retirement Charge** | 0.00 |
| **Total Electricity Charges** | **$139.00** |
| **Rebate of Ontario portion of HST(8%)** | (11.12) |
| HST | 18.07 |
| **Total Amount** | **$145.95** |

**Note:** Final bill presentment pending submission to LRC.

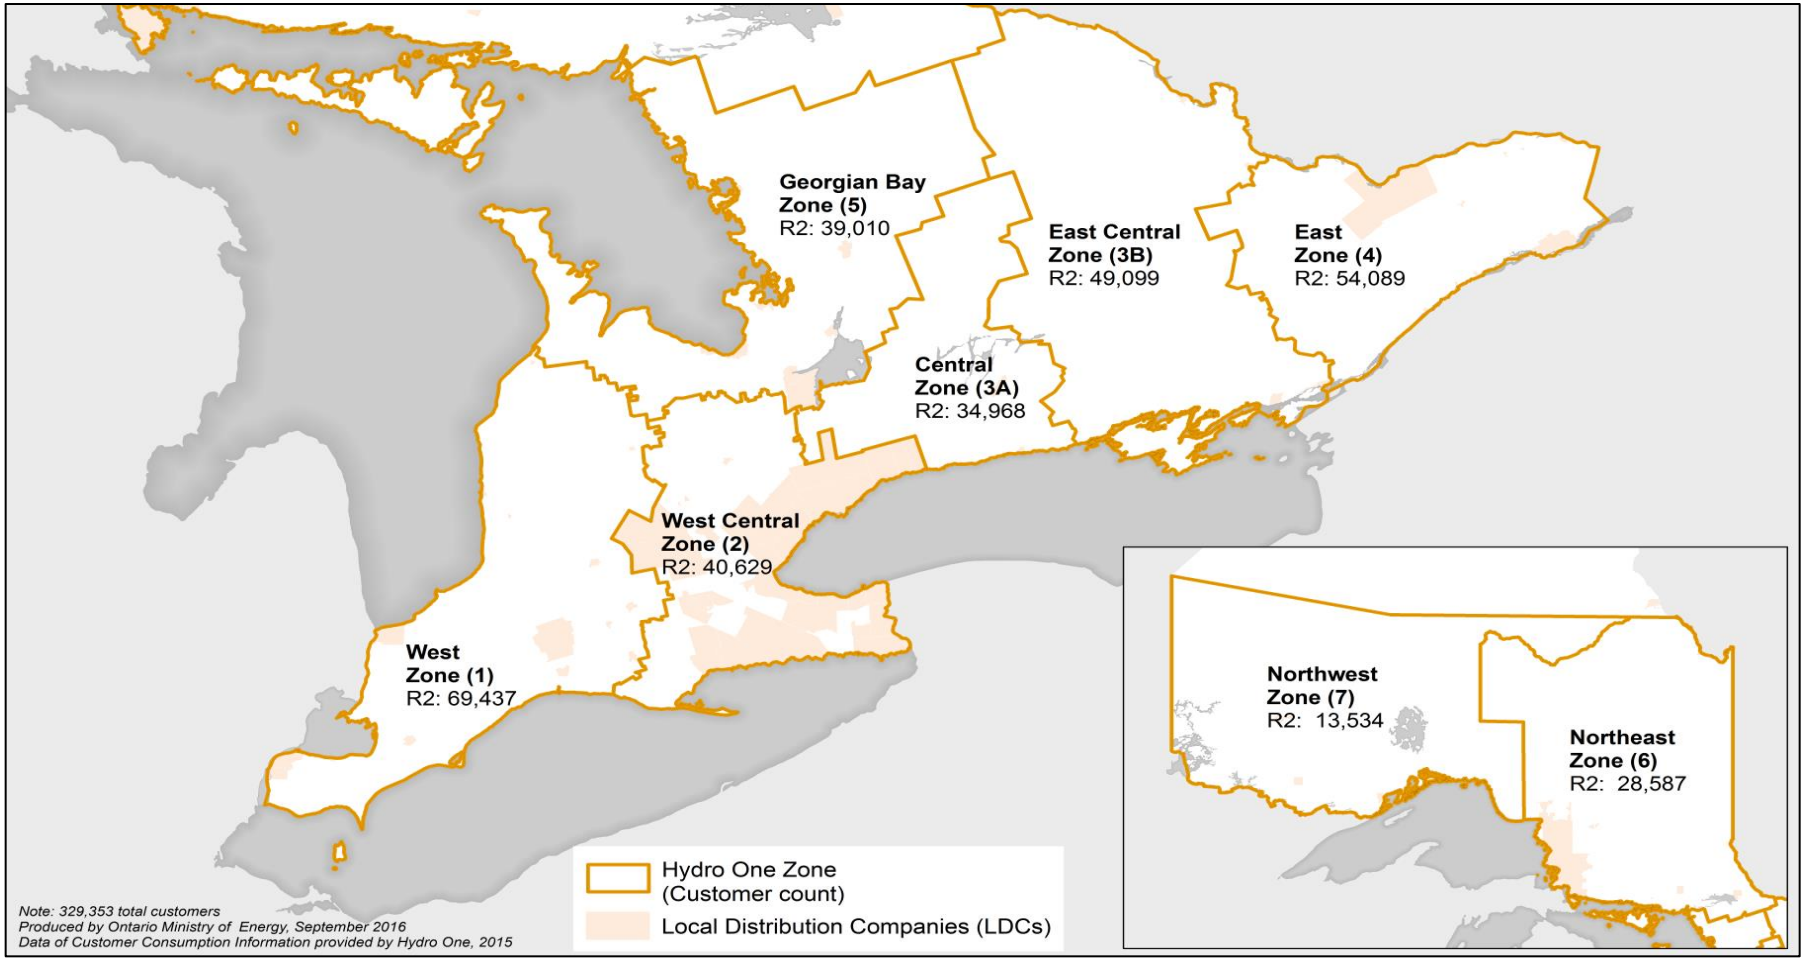
# Rural or Remote Rate Protection (RRRP) Update

- ENERGY is proposing to amend O.Reg 442/01 to provide an additional $110 million in rate protection to eligible rural or remote electricity consumers, and consider options to periodically adjust the amount of rate protection available to these consumers going forward.

- RRRP is a rate-based funded program that helps offset the higher costs to distribute electricity to Ontario residents who live in rural or remote locations all across the Province.
  - Today, RRRP is a $175-million program. For an average residential customer, the cost of supporting RRRP is roughly $1 per month. For other customers, the cost can range from $65 for a greenhouse to $8,000 for a medium industrial.
  - The majority of the program funding ($125.5 million) is provided to Hydro One's lowest-density customers – classified as R2 customers. There are approximately 329,000 R2 customers. The current program provides a rebate of $31.50. The proposed update to the program would increase the benefit to $60/month.
  - RRRP funding supporting R2 customers has been capped at the current level since 2004. As a result, the impact of its assistance has diluted over time as electricity costs have risen.

- An additional $110 million in program funding would see an increased benefit for eligible rural customers, including the 8% rebate, of $45/month. This would help bring R2 bills in line with Hydro One R1 (medium density) bills at 1000kWh.
  - This would increase the R2 portion of the RRRP to $235 million with a monthly impact on an average residential consumer of ~$0.60.
  - The RRRP could be indexed at inflation or "trued up" on a regular basis to ensure the benefit remains constant.

# Rural or Remote Rate Protection (RRRP) Update – R2 Customers by Region



## 2) Expand Industrial Conservation Initiative and Redirect Cap and Trade Proceeds

# Industrial Conservation Initiative (ICI) Expansion

- ENERGY is proposing to amend O. Reg. 429/04 to expand ICI eligibility. The base setting period for the expanded program would begin in 2017, with the benefit seen by consumers starting in 2018.

- Currently, electricity consumers over 5 MW and consumers from 3-5 MW in certain energy intensive sectors are eligible for ICI (i.e., approximately 300 Class A consumers).
  - Consumers participating in ICI include the following sectors: pulp and paper, auto, manufacturing, chemicals and mines.

- ICI would be expanded so that all consumers over 1 MW are eligible for the program, which would:
  - Reduce electricity peak demand and electricity system costs by incenting more consumers to lower their electricity demand during peak periods;
  - Reduce electricity bills for new ICI participants who are able to reduce their electricity demand during peak demand periods; and
  - Increase the electricity bills for non-ICI participants to ensure full cost recovery in the electricity system.

# ICI Expansion – Projected Impact

| | Benefit to New ICI Participants | System Benefit | Financial Impact | Residential Bill Impact |
|---|---|---|---|---|
| | Bill Savings | Peak Demand Reduction (MW) | GA shifted to Class B ($M) | |
| **Short-term** | Up to 21% | 80 | 47 | Increase of $0.42/month |
| **Long-term** | Up to 34% | 165 | 82 | Increase of $0.74/month |

- The different impacts refer to the amount of time it takes for new Class A consumers to respond to the expanded ICI eligibility
  - Short-term refers to the expected impact once ICI billing begins for new Class A consumers (one year after expanded eligibility takes place).
  - Long-term is the expected impact once new Class A consumers have had time to significantly change their behaviour and investment decisions in response to the ICI.

- The bill impacts assume a 25% uptake, which would increase Class A consumption by roughly 3 TWh, leaving an estimated 54 TWh in Class B that are either between 0.05-1 MW or choose not to opt in to ICI. This would represent an estimated 300 additional consumers in ICI, though they would represent a much smaller share of the consumption than the 300 consumers currently participating.

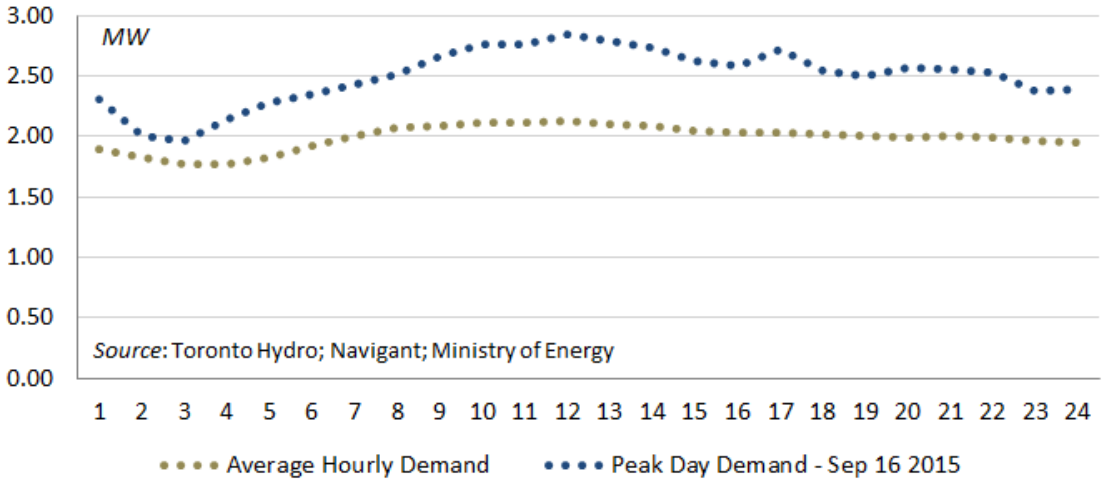
- Newly eligible consumers in the program would mostly fall into the small industrial, institutional and commercial category, including: automotive supply chain companies, office tower, large shopping mall, greenhouses and others.
  - A few examples of companies that would become eligible under such an expansion would be Kellogg, Canlan Ice Sports, Cambridge Towel, SLACAN and Casino Rama.

# ICI Expansion – Illustrative Example of Newly Eligible Consumer

- Plastics manufacturers, such as Poly Five Plastics in Toronto, are among the consumers that would become eligible if the threshold was lowered.
- Such manufacturers fall under NAICS* code 32 and have relatively flat load profiles, reflecting around the clock production. This means they would be beneficiaries of ICI even with no change in consumption behaviour.
- Companies like Poly Five Plastics could expect to see greater savings if they are willing and able to respond to the higher prices during high demand hours.

**Typical Demand Profile, 2-3 MW Consumer**

*Manufacturer, NAICS Code 32 - Nov 2014 to Oct 2015*



**Illustrative Bill Savings, 2-3 MW Consumer**

| | *Status Quo* | *No Price Response* | *Short Term Response* | *Long Term Response* |
|---|---|---|---|---|
| | **Class B** | **Class A** | **Class A** | **Class A** |
| GA | 75.26 | 58.06 | 43.55 | 32.03 |
| Total bill | **126.28** | **109.09** | **94.58** | **83.06** |
| *Savings* | | *-14%* | *-25%* | *-34%* |

Source: Navigant; Ministry of Energy

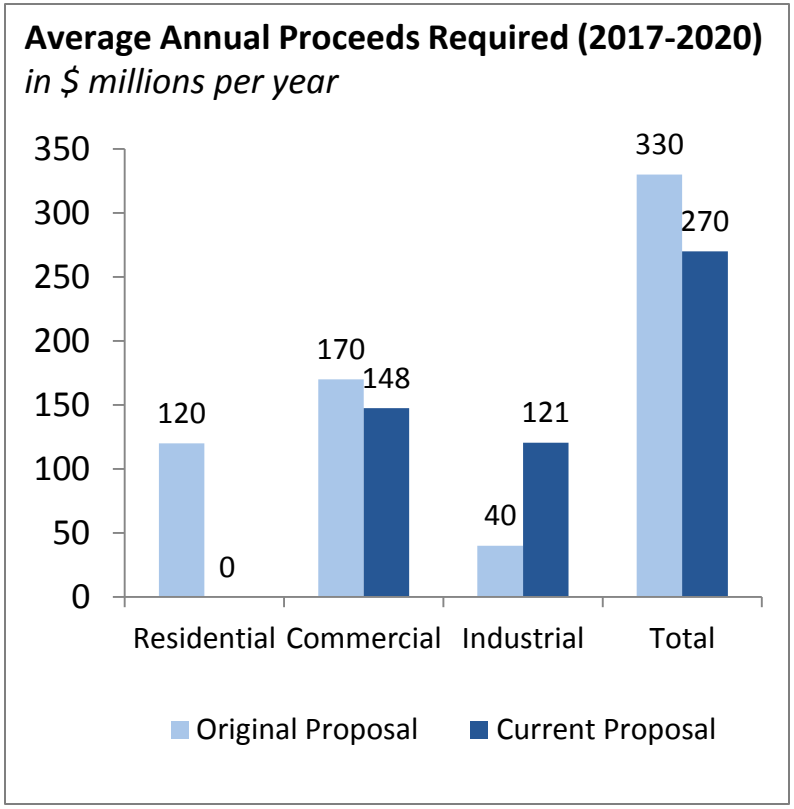
*** Note:** North American Industry Classification System (NAICS) is the standard used by statistical agencies in classifying business establishments.

# Redirect Cap and Trade Proceeds Recycling

- The 2016 Budget committed to offset the impact of cap and trade for commercial and industrial consumers, while also providing a benefit of up to $2 per month for residential consumers.
  - To meet the 2016 Budget commitment, the Climate Change Action Plan (CCAP), committed $1.3 billion from the GGRA over the first compliance period (2017-2020).

- However, providing a 8% rebate to Regulated Price Plan consumers would allow for GGRA proceeds previously committed to residential consumers to be redirected to other consumers classes and/or GHG reduction initiatives in the fiscal plan.

- The current proposal would provide additional recycling to commercial and industrial consumers, while requiring an estimated $60 million less per year (i.e., a reduction of $0.24 billion over the first compliance period).



**Note:** The original proposal was to offset the impact of cap and trade via GA to the average industrial, and would provide a benefit to commercial and residential consumers. Current proposal would recycle proceeds volumetrically to industrial and commercial consumers.

# Redirect Cap and Trade Proceeds Recycling

- Redirecting cap and trade auction proceeds to lower the cost of electricity would offset consumers' contributions to non-emitting generation.

- Redirecting helps pay for committed investments/initiatives which reduce GHGs (e.g., non-emitting generation and conservation programs).
  - Due to the long-term nature (typically 20 years) of electricity generation contracts and conservation programs, the associated costs are ongoing and are expected to be about $7 billion dollars annually during the first cap and trade compliance period. These costs will continue well beyond the timelines described in the CCAP.

- Redirecting cap and trade auction proceeds volumetrically to Class B (commercial) and Class A (industrial) consumers maintains the incentive to shift consumption from on-peak to off-peak hours.

- Using cap and trade auction proceeds to lower the cost of electricity would make it more competitive with traditionally cheaper fossil fuels.

- By using the proceeds to lower the cost of electricity, there is potential to incent fuel-switching away from fossil fuels toward much cleaner grid-connected electricity and support CCAP goals of electrification.

# Considerations

# Implementation

- On September 15, 2016, ENERGY is proposing to introduce the *Ontario Rebate for Electricity Consumers Act, 2016*.
  - If passed, the legislation would require a general regulation.
  - Amendments would also be required to various regulations to expand ICI and RRRP.

- On-bill rebate delivery would likely require adjustments to LDC billing systems, which could impact delivery costs and timelines. ENERGY (possibly through Ontario Energy Board) will consult with LDCs to accurately assess these impacts once the program has been announced.
  - In the past, LDCs have asked for at least six months' notice when implementing billing system changes.
  - Timing concerns may be alleviated by allowing LDCs to provide retroactive rebates if their systems cannot be updated in time for January 1, 2017. This was done with the OCEB.

- Detailed messaging on bills (for "low-volume" consumer bills ) could be implemented by amending O. Reg. 275/04 (made under the Ontario Energy Board Act, 1998).
  - The rebate would not be directly linked to HST.
  - With electricity invoices containing multiple line items and LDC bill presentment varying widely, direction on rebate presentment will need to be flexible to allow LDCs to incorporate easily while ensuring government-preferred branding and messaging is conveyed.

- While the impact of cap and trade would be added to electricity bills as of January 2017, the offsetting effect of proceeds recycling may not occur immediately depending on implementation and potential alignment with the first auction expected in March 2017.
  - Should there be low demand for carbon allowances, auction proceeds would be less than the amount projected in the CCAP. This could mean a short-fall for proceeds recycling as proposed. However, natural gas utilities are expected to purchase allowances quarterly equal to their emissions.

- ENERGY will need to continue to consult with the Independent Electricity System Operator (IESO), Ontario Energy Board (OEB) and LDCs regarding implementation of proceeds recycling.

# Fiscal

- The Climate Change Action Plan (CCAP) committed about $1.3 billion over four years for electricity mitigation for industrial, commercial and residential consumers from GGRA proceeds.
  - The current rate mitigation proposal requires approximately 20% less in proceeds, saving approximately $0.24 billion relative to the CCAP commitment over the first compliance period (2017-2020).

- The 8% rebate is expected to cost about $1 billion per year (i.e., $4 billion from 2017-2020), representing an additional pressure on the fiscal plan.
  - Consideration could be given to allocating the $0.24 billion in reduced proceeds required towards other existing initiatives in the fiscal plan that also reduce greenhouse gas (GHG) emissions, thereby providing an overall fiscal plan offset.
  - If cap and trade auctions are under-subscribed, the $0.24 billion may not be available for reallocation to the fiscal plan.

- In the absence of any offset strategies, the full cost of the rate mitigation approach would add to the pressures and risks that need to be managed in order for the government to balance the budget in 2017-18 and stay balanced in 2018-19 and beyond.

# Legal

- In order to avoid characterization as an unconstitutional tax, a non-tax levy must have a sufficient nexus between those who pay and the regulatory scheme in the sense that those who pay have caused the need for or benefit from the regulatory scheme. Although the case law is not developed on the extent to which some regulated actors can be required to subsidize others, risk is reduced to the extent that any cross-subsidization serves true regulatory goals rather than revenue re-distribution goals.

- 8% Rebate (shift costs from rate-base to tax base by providing a rebate equal to the provincial portion of HST):
  - Providing the contemplated rebate under the proposed Bill does not, in and of itself, give rise to legal issues. As policy direction is given on the specifics of supporting regulations, any associated legal risks can be identified.

- ICI Expansion (shift costs within rate-base by expanding eligibility for the ICI program to consumers of >1 MW):
  - Shifting costs to some consumers to lower rates for others without more carries the risk that the charge would be characterized as an unconstitutional tax. To establish that the charge is legitimate, it must be established that the purpose and effect of the charge is to facilitate the maintenance of a financially viable electricity system by way of load management or some other feature under which those who are subsidized provide an overall system benefit enjoyed by those who subsidize them.

- RRRP Update (shift costs within the rate-base by increasing the RRRP benefit paid to rural and remote customers):
  - Increasing the amount of revenue devoted to the RRRP or expanding the scope of consumers eligible for the program does not raise new legal risk. There is a good argument that the RRRP is a regulatory charge, as it socializes some of the costs of distributing electricity to rural consumers. Overall the risk that the RRRP would be characterized as a tax is assessed as moderate (meaning equally good arguments on both sides).

- Cap and Trade Proceeds Recycling (reduce impact on rate base and tax base by directing cap and trade auction proceeds to industrial consumers):
  - To be characterized as regulatory charges under the cap and trade program, auction revenues should be spent on programs that reduce GHGs.

# Communications

- A series of high-profile announcements around introduction of legislation (September 2016).
  - Keynote speech and two public events pre-introduction
  - News release at introduction
  - Full media availability province-wide
  - Regional echo events post-introduction
  - Early engagement of EDA, CEOs of LDCs
  - Stakeholder outreach/technical briefings with Ontario Chamber of Commerce, AMPCO, OEB low-income table, AMO, etc.
- **Positioning:**
  - An unprecedented plan to benefit all ratepayers in a lasting, meaningful way.
  - Rural customers will receive the largest single rate relief ever.
  - Businesses across Ontario will have even more opportunity to be competitive and manage their energy costs.
- **Issues Considerations:**
  - Significant benefit for rural and remote residential customers; net gain for all residential customers.
  - Consistent with cap-and-trade commitment that no business sector will be left worse off.

# Key Messages

- We are taking unprecedented action to help people in their everyday lives.
- Residential ratepayers and other RPP eligible ratepayers will receive an eight per cent rebate on their electricity bill, equivalent to the provincial portion of the HST.
- Modernizing the RRRP will benefit 330,000 families in rural Ontario with significant reductions to their electricity bills ($45 a month).
- Over a thousand more Ontario businesses will be eligible to benefit from the ICI program, helping them stay competitive and grow.
- These actions will assist over five million families, farms and small businesses across Ontario.
- These actions today join our many existing initiatives too help keep electricity in Ontario clean, reliable and affordable.

# Proposed Cabinet Minute

Cabinet agreed that:

1. ENERGY implement electricity price mitigation for residential, commercial and industrial consumers through the following:

    i. Provide a rebate of 8% on the pre-tax cost of electricity for all electricity consumers eligible to be billed under the Ontario Energy Board's Regulated Price Plan (RPP); and any other consumers who would be eligible for RPP if their electricity account was with a licensed distributor.

    ii. Increase the total amount of rate protection available to R2 low density electricity consumers under the Rural or Remote Rate Protection Program (RRRP) by increasing the subsidy by $110 million from its current level of $127 million which has been capped since 2003.

    iii. Implement a mechanism to periodically adjust the total annual amount of rate protection available to R2 low density electricity consumers under the RRRP, effective on or after January 1, 2018.

    iv. Expand eligibility for participation in the Industrial Conservation Initiative (ICI) to smaller industrial, institutional and commercial customers by lowering the eligibility threshold to 1 MW and removing restrictions on eligible sectors.

# Proposed Cabinet Minute (cont'd)

2. ENERGY seek necessary TB/MBC approvals.

3. ENERGY seek approvals for the proposed *Ontario Rebate for Electricity Consumers Act, 2016* which would, subject to the Legislature's approval of the Act, include the following elements:
   i. The rebate would be available starting January 1, 2017;
   ii. The legislation would specify the types of costs to which the rebate would or would not be applied, with authority to make changes by regulation;
   iii. The legislation would address invoicing requirements, including authority to prescribe how the rebate is to appear on consumers' electricity bills;
   iv. The legislation would include authority to prescribe the way in which the rebate is to be flowed through to consumers, and the way in which electricity vendors providing the rebate are to be reimbursed;
   v. The legislation would include record-keeping requirements for electricity vendors and other prescribed persons;
   vi. The legislation would include inspection powers for inspectors appointed by the minister of Finance, including powers related to the recovery of overpayments; and
   vii. The legislation would include consequential amendments to the *Ontario Energy Board Act, 1998* and the *Ontario Clean Energy Benefit Act, 2010*; and
   viii. The legislation would provide for regulation-making authority to establish a limitation period for ceasing payments and reimbursement based on past entitlement. Similar amendments would be provided for the *Ontario Clean Energy Benefit Act, 2010* but would allow the ceasing of all payments and reimbursements after a prescribed date

# Proposed Cabinet Minute (cont'd)

4. ENERGY to report back to LRC and Cabinet for approval of any supporting regulations under the proposed *Ontario Rebate for Electricity Consumers Act, 2016*, and with other complementary regulatory amendments.

5. ENERGY notes the following amendments:

   i. Amendments to Ontario Regulation 429/04 (Adjustments Under Section 25.33 of the Act) made under the Electricity Act, 1998 to lower the Industrial Conservation Initiative (ICI) threshold to 1 megawatt and require electricity consumers and market participants between 1 MW and 5 MW to opt in.

   ii. Amendments to Ontario Regulation 442/01 (Rural or Remote Electricity Rate Protection) made under the Ontario Energy Board Act, 1998, to increase support through the Rural and Remote Rate Protection Plan to R2 low density electricity customers and provide for a periodic adjustment mechanism.

6. ENERGY work with MOECC to recycle an estimated annual average of $270 million of Cap and Trade auction proceeds from the Greenhouse Gas Reduction Account for non-RPP commercial and industrial electricity consumers over the first compliance period (2017-2020) through a volumetric rebate mechanism.

7. ENERGY and MOF work with Cabinet Office, Premier's office to develop a communications plan

# Proposed Cabinet Minute (cont'd)

Cabinet approved version of the proposed *Ontario Rebate for Electricity Consumers Act, 2016* for introduction, subject to the following:

1. The Office of Legislative Counsel is authorized to prepare a French version and to make minor adjustments to the English version, for the purpose of ensuring consistency between the two versions and making other improvements or correcting mistakes discovered in the translation process.

# Appendix

# Illustrative Benefits

| | Current Bill ( before tax) | Current Rate mitigation initiatives* | New Rate Mitigation initiatives | New Bill (before tax) |
|---|---|---|---|---|
| Average Residential (Toronto – 750 kWh/month) | $139 /month | N/A | 8% pre-tax rebate: - $11 | $128 /month |
| Rural Residential (Hydro One R2 – 1000 kWh/month) | $229 /month | RRRP: –$32 | 8% pre-tax rebate + Updated RRRP: - $45 | $184 /month |
| Low-income Residential ** (Toronto – 750 kWh/month) | $101 /month | OESP: -$38 | 8% pre-tax rebate: - $8 | $93 /month |
| Small Business (Toronto – 403,200 kWh/month) | $149 /MWh | N/A | 8% pre-tax rebate: - $12/MWh | $137 /MWh |
| Small Farm (Hydro One R1 – 4,000 kWh/month) | $203 /MWh | N/A | 8% pre-tax rebate: - $16/MWh | $187 /MWh |

**Notes:**

***** Some residential consumers can also receive tax credits based on income, age and geography (Northern Ontario Energy Credit and Ontario Energy and Property Tax Credit). These credits are delivered through the Trillium Tax Credit and can be as high as $1,332 per year for a family.

** income of less than $28,000, family of 4.

The above benefits do not include the cost of ICI expansion and the RRRP update (total impact of $1.74/MWh). Totals may not add due to rounding.

# Illustrative Benefits (cont'd)

| | Current Rate | Current Rate mitigation initiatives* | New Rate Mitigation initiatives | New Rate |
|---|---|---|---|---|
| Large Institutional (Toronto – distribution-connected, 10 MW) | $108 /MWh | ICI: -$49/MWh | Proceeds Recycling: -$2.60/MWh (2017-2020 average) | $105 /MWh |
| Large Industrial (Timmins – transmission-connected, 10 MW) | $69 /MWh | ICI + NIERP: -$69/MWh | Proceeds Recycling: -$2.60/MWh | $66 /MWh |
| Small Industrial – opt-in to ICI (Toronto – 2 MW) | $152 /MWh | N/A | Proceeds Recycling + ICI: Up to -$52/MWh | $100 /MWh |
| Large Commercial – does not opt-in to ICI (Toronto – 2 MW) | $152 /MWh | N/A | Proceeds Recycling: -$2.60/MWh | $149 /MWh |
| Small Institutional (Toronto – 500 kw) | $154 /MWh | N/A | Proceeds Recycling: -$2.60/MWh | $151 /MWh |

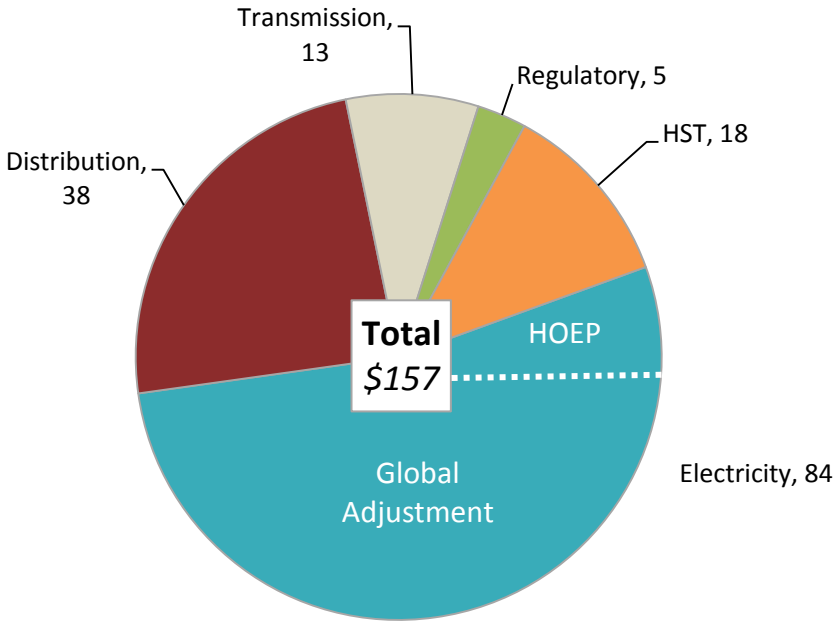
**Notes:**
The above benefits do not include the cost of ICI expansion and the RRRP update (total impact of $1.74/MWh). Proceeds recycling is net of the cost of carbon and represents an estimated average of the proceeds required over the first compliance period (2017-2020).

# Residential Electricity Prices

- There are approximately 4.5 million residential consumers in Ontario.
- The Regulated Price Plan includes nearly all residential consumers, as well as small businesses. Regulated Price Plan consumers pay a blended commodity rate regulated by the OEB, which is set every six months.
- For households, the Debt Retirement Charge (DRC) was removed from residential electricity bills as of January 1, 2016.
- In addition, the Ontario Electricity Support Program (OESP) provides an ongoing rate reduction directly on the bills of low-income electricity consumers who have applied and meet the eligibility requirements. The program is funded through the rate base.
- Rural customers, in particular those with electrical heating, pay higher monthly bills.

**Typical Residential Monthly Bills ($)**

*As of May 1, 2016 (750 kWh/month)*



*Source*: OEB, Toronto Hydro

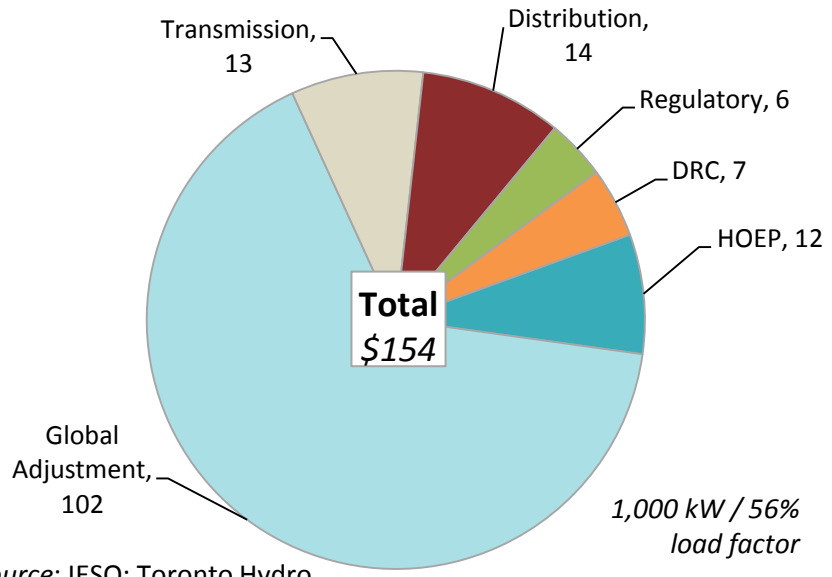
# Commercial Electricity Prices

- There are approximately 55,000 commercial and institutional consumers in the province. These consumers are Class B consumers, and have separate line items on the electricity bill for HOEP and GA.

- There is a high degree of differentiation amongst consumers within the commercial sector in terms of size and consumption patterns. For example, an elementary school has a much different hourly load profile compared to a full service restaurant. This is an important consideration when looking at the bill impacts of policy options.

**Typical Commercial Price ($/MWh)**

*YTD June 2016 (Non-RPP Class B)*



*Source*: IESO; Toronto Hydro

- Consumers in the commercial sector do not pay time-of-use prices and have little incentive to shift demand away from high demand hours.

- Targeted pricing programs are currently not available for Class B consumers.

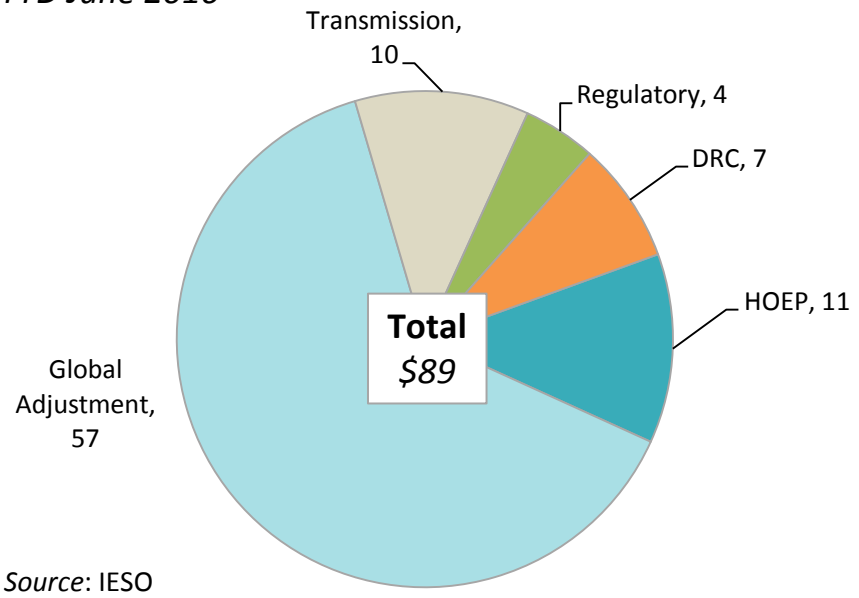
*** Note**: Most commercial consumers receive input tax credits for their HST.

# Industrial Electricity Prices

- There are about 300 large industrial consumers in Ontario.
- Measures in place to mitigate industrial electricity prices include ICI and NIERP.
- ICI lowers costs for eligible large electricity consumers (i.e., those with monthly peak demand exceeding 3 MW) that reduce consumption during peak periods.
  - ICI consumers reduce their electricity rates by 25% on average.

**Typical Large Industrial Price ($/MWh)**

*YTD June 2016*



*Source*: IESO

- Participants in NIERP receive a rebate of $20/MWh. On average, industrial electricity prices are reduced by about 20% through the program, reducing all-in prices to $69/MWh for these consumers. The program is funded through the tax base.

*** Note:** Industrial consumers receive input tax credits for their HST.

# Sales Tax Treatment in Other Jurisdictions

| Jurisdiction | Tax | Tax Paid by Business Consumers | Tax Paid by Residential Consumers | Comment |
|---|---|---|---|---|
| **British Columbia** | PST | Yes – 7% | No | • PST does not apply to residential energy, including electricity, acquired solely for residential use in a residential dwelling<br>• BC's carbon tax does not apply to electricity bills. |
| **Alberta** | None | N/A | N/A | • Alberta does not have a provincial sales tax. |
| **Saskatchewan** | PST | Yes – 5%<br>Except for electricity purchased to heat a building. | No | • PST does not apply to electricity purchased for use in a residential dwelling.<br>• PST does not apply to electricity purchased for use in heating a building that is heated solely by the electricity. |
| **Manitoba** | PST | Yes – 8%<br>Reduced rate of 1.6% applies to electricity used by a qualifying business to operate machinery | Yes – 8%<br>Electricity purchased for mixed use, 80% of which is home heating, has a reduced rate of 1.4%. Electricity solely to heat the purchaser's home is exempt. | • Winnipeg also applies a tax of 2.5% on residential and 5% on commercial. |
| **Ontario** | HST | Yes (less ITC (input tax credits)) | Yes – 8% | |
| **Quebec** | QST | Yes (less ITCs) | Yes – 9.975% | |
| **Nova Scotia** | HST | Yes (less ITCs) | Yes – 10% less provincially administered rebate. | • Rebate is equal to the provincial portion of the HST, and is administered similar to OCEB, but applies to many energy sources. |
| **New Brunswick** | HST | Yes (less ITCs) | Yes – 10% | |
| **Prince Edward Island** | HST | Yes (less ITCs) | Yes – 9% (10% beginning Oct 1, 2016) | |
| **Newfoundland and Labrador** | HST | Yes (less ITCs) | Yes – 10% | • Had a provincially administered Home Heating Rebate program until July 2015. |
| **Federal** | GST | Yes (less ITCs) | Yes – 5% | |

fyi. I'm good with your edits.....we need to redo the tables, as evident in Emily's edits.

On delayed GA, where did the $2bn impact on the GA proposal come from?

**Subject:** RE: OPG as part of commodity cost

Hi John,

I made revisions to the note (attached). Gavin said he would be updating the GA section, so I didn't add to that at this time. I have also passed the attached version of the note on to Gavin.

By commodity cost of OPG generation I assume you mean the HOEP amount. In that case, I don't think IESO provides that data. You could estimate it by multiplying average HOEP by OPG generation for a particular time period.

IESO does provide how much GA is associated with OPG on this page: http://www.ieso.ca/Pages/Ontario%27s-Power-System/Electricity-Pricing-in-Ontario/Global-Adjustment.aspx

Emily

**Subject:** OPG as part of commodity cost

Hi Emily,

Question for you. I'm not very good at navigating IESO site.....would you know how much of the total commodity cost OPG's generation accounts for? I was able to find other data but couldn't find this one....

John.

**DRAFT: COMMERCIALLY SENSITIVE AND CONFIDENTIAL ADVICE TO MINISTERS**

# Comments on Ministry of Energy's Draft "Proposed Initiatives to Transform Ontario's Electricity Sector"

The Ministry of Energy (Energy) is providing an update on progress related to transforming the province's electricity sector by elaborating on potential price mitigation initiatives, as outlined in its decks.

**CONTEXT**

- As outlined in Energy's update, electricity costs have been increasing following investments to transform towards cleaner generation (i.e., meeting goals to decarbonize) and modernize the electricity infrastructure (e.g., more than $35 billion in cleaner generation and $15.5 billion investment by Hydro One alone in transmission and distribution systems).

- The government has taken action to lower electricity cost pressures to all consumers by taking actions, including deferring investments in generation (e.g., new build nuclear), improving market efficiency and decreasing costs related to renewable procurement (e.g. GEIA renegotiation, decreasing FIT prices, etc).

- The government introduced the Ontario Rebate for Electricity Consumers (OREC) which will provide a rebate equal to the 8% provincial portion of the Harmonized Sales Tax, saving $11 per month starting January 1, 2017 for eligible small businesses, farms and residential consumers and has taken steps to expand the Rural or Remote Electricity Rate Protection program, expected to save eligible RRRP customers about $45 per month, when combined with OREC.

- On November 28, 2016, the Minister of Energy announced the need for changes in how electricity resources are procured, the need for wholesale market renewal and greater electricity consumer choice.

- The Ministry of Energy is currently updating its Long-Term Energy Plan (LTEP), which provides an opportunity to consider a range of policy changes to how the Ontario energy sector operates.

**COMMENTS**

A significant number of Energy's proposals ~~generally~~ involve shifting costs from the rate base to the tax base. While the subset of costed proposals may have a fairly limited residential rate payer impact (e.g. about $5-6/month for residential, less than 5% of the average monthly bill), those proposals would come at a material incremental fiscal cost ($1 billion to $1.3 billion). Note these impacts are lower than those presented in an earlier deck ($1.3 billion to $1.9 billion). Energy also presents other proposals where costs and impacts are "TBD".

In addition, Energy is also presenting a preliminary proposal to defer the pass-through to ratepayers of some generation supply costs by partially financing the cost of the global adjustment (GA). While details of this proposal have not been developed, there is a risk of significant fiscal impacts of up to over $2 billion annually during the period that GA costs are deferred.

Over the past five years, the existing fiscally funded electricity price mitigation efforts have averaged about $1.5 billion and is already expected to increase to about $2 billion with the introduction of OREC. The existing program costs are summarized in the table below:

| ($M) | 2011-12 | 2012-13 | 2013-14 | 2014-15 | 2015-16 | 2016-17[1] | 2017-18[1] |
|---|---|---|---|---|---|---|---|
| OCEB | 1,033 | 994 | 1,006 | 1,078 | 860 | - | - |
| OREC | - | - | - | - | - | 300 | 1,100* |
| Ending DRC[2] | - | - | - | - | 85 | 330 | 330 |
| NIERP | 120 | 120 | 115 | 108 | 120 | 120 | 120 |
| NOEC | 23 | 24 | 25 | 24 | 26 | 25 | 25 |
| OEPTC[3] | 354 | 406 | 418 | 429 | 444 | 450 | 460 |
| TOTAL | 1,530 | 1,544 | 1,564 | 1,639 | 1,525 | 1,225 | 2,005 |

1. 2016-17, 2017-18 based on forecasted numbers
2. 2015-16 estimated for 3 months of reduced DRC revenue
3. OEPTC amounts in all years based on energy component of the rebate.

* Sourced from Energy PRRT submission

OCEB – Ontario Clean Energy Benefit
OREC – Ont. Rebate for Electricity Consumers
NIERP – Northern Industrial Electricity Rate program
NOEC – Northern Ontario Energy Credit
DRC – Debt etirement Charge
OEPTC – Ont. Energy & Property Tax Credit

**Energy's Broad Policy Themes / Rationales**

A key theme / rationale cited by Energy is to no longer use rate-base to pay for "social programs" by shifting cost of OESP, RRRP and proposed First Nation Rate to tax-base.

- Energy has typically in the past provided a constitutional law assessment on these programs, providing support for these programs to be ratepayer-supported programs as they provide electricity system benefits / are part of a comprehensive regulatory framework.
- Switching messaging may risk criticism and legal challenges on these and other remaining rate-base funded programs.

| Energy Theme / Rationale | Key Staff Comments |
|---|---|
| **Provide greater support for lower income Ontarians by enhancing the OESP or expanding eligibility, and provide further support for rural consumers by expanding the Rural or Remote Rate Protection (RRRP) program.** | • Significant fiscal exposure -- $0.42-0.845 bn in 2017 to $0.62-1.18 bn in 2022, ~~at current levels,~~ higher if OESP is enhanced. On-bill benefits.<br>• Funding programs through tax base estimated to reduce average monthly residential bill by approximately $2 in 2017, increasing to approximately $3 in 2022.<br>• Could contemplate phase-in to manage fiscal impact.<br>• Could look at phasing out existing fiscal-funded programs also targeted to low income or identified groups (e.g., OEPTC, NOEC).<br>o Not on the bill, so less direct and visible electricity cost mitigation.<br>o Phase-out to reflect time to increase application based OESP reaching an increasing portion of eligible households. |
| Amortize ~~Fund~~ **conservation program costs to smooth recovery of costs from ratepayer. Alternatively, rate smooth conservation costs through an IESO deferral account. ~~programs through the tax base for the remaining term of the existing CDM framework and transition costs to the new "green bank entity" over time~~** | • It is unclear whether consevation costs could be amortized according to accounting standards. If this option was pursued without establishing Provincial Controller agreement on accounting, there could be a fiscal risk. Energy states total remaining 2017-2020 electricity conservation program costs are expected to be approximately $2.1 billion.<br>• Energy notes that an alternative to amortizing conservation costs would be to fund these costs through tax base. ~~Potentially significant fiscal impact – current program costs are about $0.45 bn~~<br>o Conservation programs do provide an electricity system benefits, but ~~would now be~~ fiscal~~ly~~-funding~~ed, so~~ would result in a cross-subsidisation from tax-base |

**Commented [EK1]:** Updated based on slide 12 in Energy's updated deck.

**Formatted:** Indent: Left: 0.03", Hanging: 0.25"

| | |
|---|---|
| | ○ Accessing the cap & trade amount in the GGRA would crowd-out other GGRA programs, affecting overall GHG reductions and negatively affect the diccal plan |
| **Expand the scope of the "Trillium Trust" to make investments in energy infrastructure eligible for funding** | • Would require either squeezing out existing Moving Ontario Forward project funding from the Trillium Trust, requiring funding from another source; or additional funding from asset optimization, given that the government is committed to using the targeted $5.7 billion to fund across Moving Ontario Forward projects<br>• Would have little near-term impact, unless TT funding displaces near-term, non-incremental projects coming onto service<br>• Could lower utility value (share price) and impact fiscal contributions from the electricity sector (net income), including Hydro One, by removing projects, currently and prospectively, that they might have been able to add to their ratebase and earn a return<br>• In the case of projects located in First Nation territories it could have an upfront fiscal impact if Province is not able to amortize those projects (TBC with OPCD).<br>• Energy has indicated that if these investments are provided from the OEB there would be a need to develop oversight mechanisms as is not the OEB's role to review cost prudence of tax-based mechanisms. |
| **Dedicate the Departure Tax** | • In connection with the 2015 IPO of Hydro One shares, Hydro One paid OEFC a $2.6 billion "departure tax".<br>• The departure tax was not a windfall. It was fiscally neutral, it represented revenue to OEFC and an expense to Hydro One.<br>• Repurposing the departure tax to provide rate mitigation would have a dollar-per dollar fiscal impact and could trigger an increase in OEFC's stranded debt.<br>• The Province would remain exposed to a negative fiscal impact (lower share price and lower net income) if the OEB decides to allocate all or part of the deffered tax benefit recognized by Hydro One to ratepayers. |
| **Empower Energy Agencies to Increase Cost Effectiveness and Improve Efficiency** | • IESO to modernize the electricity market through market renewal<br>• OEB to identify opportunities for future LDC efficiencies/rates<br>• OEB to work with OPG operational efficiencies and pass on to ratepayers |
| **Give consumers more choice by allowing to "opt into" alternate rate plan** | • Start with the option of flat electricity rate option<br>• OEB to develop more options over time<br>• Provide more details regarding th Global Adjustment (GA) |
| **End the Debt Retirement Charge (DRC) early for commercial and small industrial Class B electricity consumers** | • End of the DRC had previously been linked with a balance between rate mitigation and managing stranded debt<br>• Provides only temporary incremental mitigation, as DRC legislated to end April 1, 2018.<br>• End of the DRC had previously been linked to retirement of residual stranded debt<br>• Removing additional DRC revenue from the OEFC would call into question the position that the debt and liabilities of the old Ontario Hydro can continue to be supported |
| **Consider options to defer the pass-through to ratepayers of some** | • Incurring debt to pay the generators their contracted or regulated payments |

Formatted: Indent: Left: -0.04"

| | |
|---|---|
| **generation supply costs by partially financing the cost of the global adjustment (GA)** | • Energy's deck analyzes the system cost and ratepayer impacts of the option, but does not address the fiscal impact/accounting treatment, or implementation<br>• Likely will lead to significant fiscal impact due to creation of large liability item (estimated to be up to $66Bn) either directly on the Province's books or upon consolidation<br>• Furthermore, likely entails significant legal / Constitutional Law risks. |

**Detail on Proposals**

Energy has outlined the following rate mitigation proposals with significant bearing on the fiscal plan:

OESP & RRRP ($0.42-0.85 bn in 2017 to $0.62-1.18 bn in 2022~~Total of about $0.4 to 0.45 Billion/year~~):

~~This w~~Would shift the cost of the current and proposed expanded Ontario Electricity Support Program (OESP), ~~-~~and ~~the~~ Rural or Remote Electricity Rate Program (RRRP), to the tax base. Lower range of fiscal impat estimate is based on current programs. *Note: that the fiscal exposure would increase if the OESP take up rate is larger, and faster than assumed.*

- The fiscal impact from shifting OESP and RRRP to the tax base may also be larger if future changes are made to the programs. Upper range of fiscal impact estimate includes the following changes to the programs. ~~Energy notes that~~
  - Current RRRP mostly supports Hydro One rural consumers. RRRP could be expanded to mitigate delivery costs for not only Hydro One customers but other high-cost LDCs.
  - OESP program benefits could be increased across the board by 50 per cent, which would mean:
    - Single low income consumers would see an increase from $30 to $45/ month ($540/year); and
    - Families of four with electric heat could see an increase from $55 to $82.50/month ($990/year).
  - ~~The programs could provide greater support for lower income Ontarians by enhancing the OESP or expanding eligibility (e.g., by 50% in the table).~~
- Energy also notest that if moved to the tax base, OESP could be broadened to include all potential low-income households, despite whether they directly pay for electricity. Broadening OESP in this way could result in a further fiscal impact.
- ~~o~~ The RRRP regulation provides a funding mechanism for transmission infrastructure required to grid connect remote First Nation communities. Considerations for how that funding will be supported by the tax base will need to be determined. [The current deck links Trillium Trust for remote electrification.]

~~Fund~~ Amortize Conservation Program~~s~~ Costs ~~through the Tax Base~~:

Certain conservation costs are proposed to be amortized over the lifetime of the benefits resulting from the funded conservation measures. Energy proposes that this would involve IESO borrowing funds from the Ontario Financing Authority (OFA) on an annual basis to fund program incentives (non-administrative costs). Energy estimates this would produce a benefit for electricity ratepayers in excess of $1/month from 2017 to 2020.

**Formatted:** Indent: Left: 0.25"

**Formatted:** Indent: Left: 0"

- Energy would seek an opinion from IESO's external auditor and from the Ontario Provincial Controller (OPC) to determine whether conservation costs could be amortized according to rate-regulated accounting standards.
  - Under Public Sector Accounting Board (PSAB) accounting standards, used by both the Province and IESO, only certain assets can be amortized. Conservation costs would not meet this criteria. Rate-regulated accounting was developed to recognize the unique nature of regulated entities (e.g., electricity generators, LDCs). Under rate-regulated accounting certain costs can be treated as amortizable assets that would not normally be considered assets under accounting principles.
  - Over the past several years, the Auditor General (AG) has expressed concerns about the appropriateness of recognizing rate-regulated assets in the Province's consolidated financial statements.
  - Rate-regulated accounting is currently under review by international accounting standard setting bodies and is currently permitted only on an interim basis, so its future is unclear at present.

- If amortization of conservation costs was not permitted, a fiscal impact could result from this proposal. Energy also notes directly funding conservation costs from the tax base as an alternative option.

- Alternatively, Energy proposes that a regulatory amendment could allow IESO to establish a deferral account for conservation costs.
  - Energy notes that this option would not require approval of the Provincial Controller. However, choosing this option as an alternative to amortization may open Energy to criticism by the Controller and/or Auditor General since the rate impact is the same.

~~This would be for the remaining term of the existing Conservation and Demand Management framework. Over time, the costs would be transitioned to the new "green bank entity", to shift cost recovery from ratepayers to cap and trade revenues.~~

- ~~Energy's rationale for the cost shift would be in recognition of the burden borne by ratepayers in phasing out coal generation.~~

Expanding the scope of the Trillium Trust to invest in energy infrastructure:

The Province is currently targeting $5.7 billion from asset optimization to dedicate to the Trillium Trust for investment in infrastructure under Moving Ontario Forward. The $5.7 billion target already includes all fiscal benefits expected from the sale of Hydro One common shares (this includes net gains from shares and the Provincial portion of the deferred tax benefit recognized by Hydro One in 2015).

- Expanding access to natural gas is already included under Moving Ontario Forward.
- Using the Trillium Trust for additional energy projects would require either
  - squeeze out existing Moving Ontario Forward project funding from the Trillium Trust, requiring funding from another source, or
  - additional funding from asset optimization, given that the government is committed to using the targeted $5.7 billion to fund across Moving Ontario Forward projects,
  - in effect, in both cases above, incremental investments for energy infrastructure from the Trillium Trust would have negative fiscal impacts once the assets are in-service and amortized.
  - Inclusion of investments in First Nation communities that are not in provincial lands would trigger an upfront fiscal impact as the Province may not be able to amortize these projects (TBC with OPCD).
- Investments through the Trillium Trust instead of through other electricity sector entities (Hydro One, OPG, LDCs) could have additional negative fiscal impacts as these entities could see reduced ratebase

growth, lowering the revenues that the Province realizes from these entities (e.g., consolidated net income, payments-in-lieu of taxes, etc.).
  - May also negatively impact Hydro One share price if the measure is perceived by the market as reducing Hydro One's potential ratebase growth.
  - This could also question the government's policy rationale for selling Hydro One shares when it would be effectively investing back into the electricity sector through a different vehicle.
- Unless applied to existing projects, to displace ratepayer-supported costs, this measure would have little or no near-term rate impact.

Departure Tax:

As a result of the IPO, Hydro One paid a "departure tax" payment in lieu of tax (PIL) of $2.6 billion, as a final true-up of its PILs tax obligation. Energy lists using some or all of this departure tax for price mitigation.

- This was paid to the Ontario Electricity Financial Corporation (OEFC). The departure tax payment was fiscally neutral to the Province as the income (revenue) to the OEFC was fully offset by a reduction in ESDI resulting from reduced net income (expense) of Hydro One.
- The payment was also cash neutral, the $2.6 billion were funded from a capital contribution made by the Province into Hydro One and received back by the Province in OEFC as the departure tax payment was made in cash.
- Using some or all of it for price mitigation would require restating the net stranded debt paydown by OEFC related to the IPO. It would be the first time since 2004 that stranded debt would increase. [As the departure tax paid was fiscally neutral, OEFC's uplift was primarily the result of the related deferred tax benefit, as well as the s.50.3 benefit under the *Electricity Act, 1998*.]
- Having OEFC help implement this measure may require introducing changes to OEFC's objects as is legal mandate is to help reduce and pay down stranded debt.
- This would be a one-time measure, potentially spread out over a few years, and fiscal impact, as the departure tax amount was one-time.

Energy Agencies' Cost Effectiveness and Efficiencies:

By empowering energy agencies to continue to move forward with various programs, the initiative is expected to lead to cost effectiveness and efficiencies that could be passed through to the benefit of the rate payers. These initiatives, other than the tax incentives for consolidations, are generally not considered to have fiscal impacts. [Check.]

- IESO's Market Renewal Initiatives – the current "two-schedule price setting system", which is used to settle and dispatch resources in the IESO- administered market, is under review by the IESO.
  - This review is part of a series of consultations launched by the IESO to consider the efficiency and effectiveness of various aspects of the electricity market, and will focus on the energy market pricing system.
  - As part of this review, potential design alternatives will be compared against the status quo with an overall objective of providing "an efficient dispatch and pricing process that produces transparent prices."
  - Moving to "technology-agnostic" procurements will provide new opportunities for innovation and modernization and ensure ratepayers receive the best prices possible.
  - IESO estimates that the total implementation cost – including a 15% contingency and net of avoided costs – will be $150 million. The bulk of the costs (capital) would only be recovered once the project has been implemented and as the benefits are being realized.

**Commented [JK2]:** Not sure what exactly the single schedule system means...stayed away from mentioning as a result.

**Commented [JK3]:** http://www.ieso.ca/Pages/Participate/Stakeholder-Engagement/SE-114.aspx

- LDC Efficiencies and Rates – reducing osts and having LDCs become more efficient could result in a reduction of Distribution costs on electricity bills, now accounting for about 20% of the total bill.
    - The OEB has a mandate to regulate the electricity distribution sector in the public interest, ensuring the financial viability of the sector while promoting reliable service to customers at just and reasonable rates.
    - Since 2012, the OEB has taken action – through the Renewed Regulatory Framework for Energy – to more closely link rate regulation with performance measures and outcomes.
    - In 2012, the government asked the Ontario Distribution Sector Review Panel to review the distribution sector and make recommendations about how it could become more efficient. While the Panel concluded that a $1.2 billion net present value in savings could be achieved by consolidating LDCs into 8-12 regional entities, the government response was to pursue voluntary consolidation and put in place tax incentives for consolidation.
- OPG Operational Efficiencies – provide expectation that OPG meet more aggressive cost targets, improving efficiency by about $3/Megawatt hour (MWh).
    - The Province could provide instructions to OPG to focus on its stretch target as part of the Minister's Concurrence letter. This would be a public document that would likely be reviewed by OEB and, if adopted by OEB, would be incorporated as part of OPG's current rate application.
    - If OPG is unable to meet more aggressive cost targets, this could impact net income, and the Province's fiscal plan.

Debt Retirement Charge (Total of about $0.45 Billion in annualized rate to 2017-18):
Ending the DRC early for Class B customers (commercial, small industrial) would have an impact of about $0.45 billion in 2017-18.

- The end of the DRC had previously been linked with balancing mitigation and progress on stranded debt reductionthe end retirement of the residual stranded debt.
- Removing additional DRC revenue from the OEFC would call into question the position that the debt and liabilities of the old Ontario Hydro can continue to be supported.

Debt Financing of the Global Adjustment Proposal :
In a draft Energy deck shared with the Ministry of Finance, Energy considers a number of options to delay recovery of part of the Global Adjustment (GA) by debt financing and recovering over a 25 to 30 year period.

- Energy's deck analyzes the system cost and ratepayer impacts of the option, but does not address the fiscal impact/accounting treatment, or implementation. There are four options considered:
    - Option 1:
    - Option 2:
    - Option 3:
    - Option4:
- While the details of the proposal would need to be analyzed prior to a decision to proceed with further consideration of the proposal, the Office of the Provincial Controller Division's (OPCD) preliminary assessment is that this would lead to a negative fiscal impact, such as having to book a large deficit amount.

---

Hi,

Something we will need to react quickly to. Remember also that we did a few slides a couple of weeks ago?

Thanks,

John.

Hi,

Lets meet in the morning to discuss.

We'll need a product for EOD. Could be an annotated slide deck, as well as a markup. Suggestion on any other formats?

Ron

Ron - can CEFD take the lead on assessing Energy's rate mitigation deck? Per energy this is apparently tracking to MPC on Thursday, though that's news to us here. Will share with MO shortly.

From: Katona, Keley (ENERGY)

Hi,

See attached and below. We are aiming to turn around a new version of the deck, incorporating any comments your ministries might have before major projects on Thursday. As such, could you please pass along your comments by end of day tomorrow?

If there are questions, I'm happy to discuss.

Thanks,
Keley

Subject: Potential Rate Mitigation

Hi,

Attached is a draft of the rate mitigation deck. This is tracking to major projects on Thursday for a preliminary discussion. As you can see there are a number of initiatives that have fiscal implications so your input and comments would be appreciated. Keley can coordinate with your EAs. I understand that Andrew T. plans to share with PO/your MOs.

Serge

MINISTRY OF
ENERGY

# Proposed Initiatives to Transform Ontario's Electricity Sector

## Working Draft

December 5, 2016

CONFIDENTIAL DRAFT

# Context

- Electricity costs are increasing as the necessary investments are made to decarbonize and modernize the province's electricity infrastructure.
  - Since 2003, the Province has invested more than $35 billion in over 16,000 megawatts (MW) of new and refurbished cleaner generation, including nuclear, natural gas and renewables.
  - Over the same period, Hydro One has invested $15.5 billion to enhance and renew its transmission and distribution systems.
  - As additional electricity generation comes online, nuclear units are refurbished and distribution and transmission investments are made, prices are forecast to continue to increase.

- Actions have been taken to drive down electricity costs, including deferring investments in generation (e.g., new build nuclear), improving market efficiency (e.g., introduction of wind dispatch) and decreasing the cost of renewable procurements (e.g., GEIA renegotiation, decreasing FIT prices).

- Additional steps have been taken to increase cost effectiveness and improve efficiency by adopting new electricity market approaches, such as:
  - Enhancing competition between developers of large renewable projects through the Large Renewable Procurement (LRP) process to drive down price and secure clean, reliable generation for the province;
  - Directing IESO to end the process of negotiating new NUG contracts pending the development of a Capacity Auction (i.e., Market Renewal); and
  - Launching the first IESO Demand Response Auction (i.e., a competitive process through which demand-side resources are selected to be available to reduce their electricity consumption as needed).

# Context (Cont'd)

- Following the 2016 Throne Speech, a number of actions were announced to further reduce electricity costs, such as:
  - Providing an 8 per cent rebate, equivalent to the provincial portion of HST, for approximately 5 million eligible electricity consumers including residences, small businesses and farms;
  - Increasing the amount of rate protection available to approximately 330,000 eligible rural customers living in low-density areas by updating the Rural or Remote Rate Protection (RRRP) program;
  - Lowering the Industrial Conservation Initiative (ICI) threshold to 1 MW and removing sector restrictions so that more consumers can benefit;
  - Suspending the second round of the Large Renewable Procurement (LRP II); and
  - Recycling a portion of cap and trade auction proceeds to keep rates affordable for industrial and commercial electricity consumers.

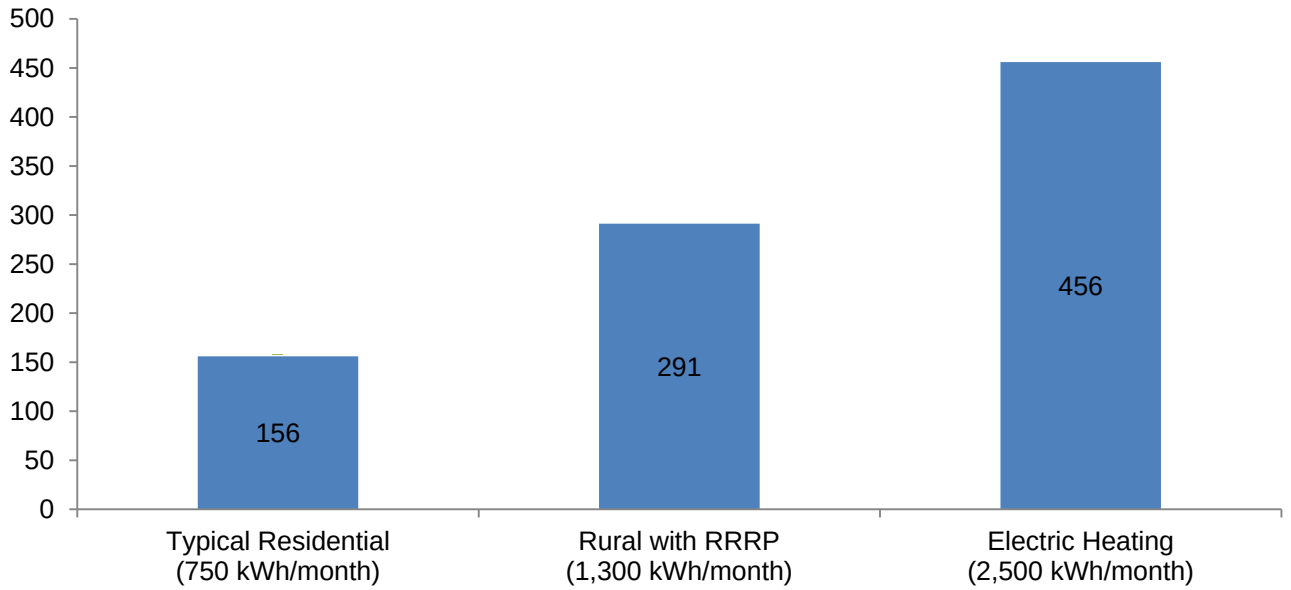
- On November 28, 2016, the Minister of Energy announced the need for changes in how electricity resources are procured and the need for wholesale market renewal.

- The Ministry of Energy is currently updating its Long-Term Energy Plan (LTEP), which provides an opportunity to consider a range of policy changes to how the Ontario energy sector operates.

# Current Electricity Prices – Residential

- Residential consumers electricity prices continue to be a concern for many Ontarians, particularly those that rely on electric heat.
  - **Note:** The typical residential bills are currently below the 2013 Long-Term Energy Plan (2013 LTEP) forecasts ($159 / 750kWh)

**Residential Electricity Bills**
*in $/month*

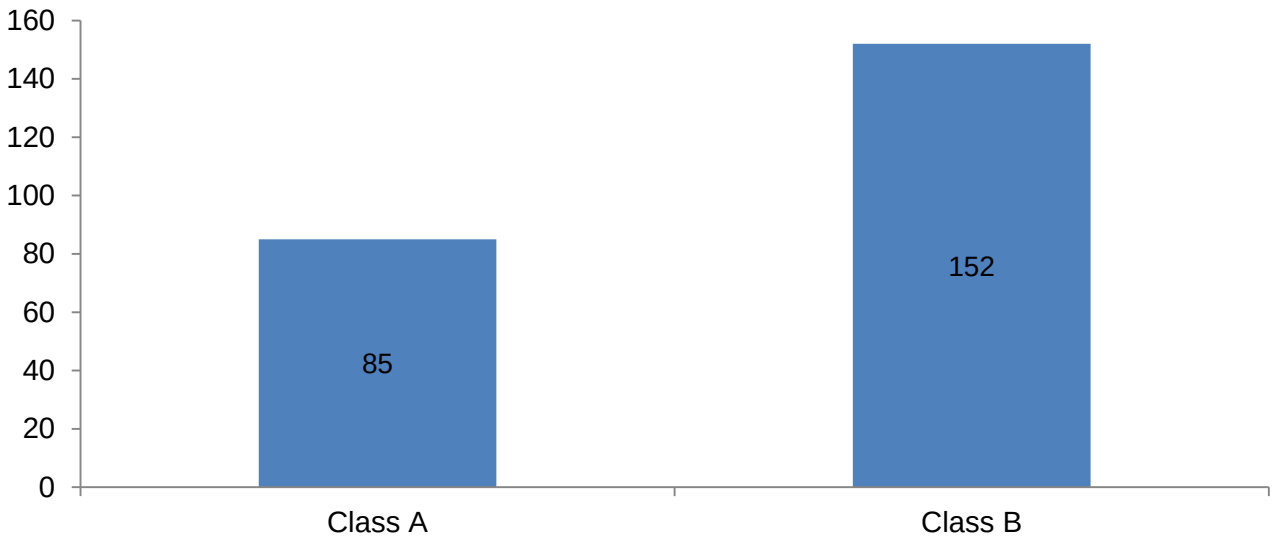


**Note**: Typical residential and electric heating shown above are based on Toronto Hydro; rural is based on connection to Hydro One as a R2 customer eligible to receive the Rural or Remote Rate Protection (RRRP) credit of $31.50.

# Current Electricity Prices – Industrial and Commercial

- While large industrial electricity consumers (i.e., Class A) rates are competitive with other jurisdictions, rates for commercial/small industrial consumers (i.e., Class B) are higher by comparison.
  - **Note:** Current industrial and commercial prices are below 2013 LTEP forecasts ($96 / MWh)

**Current All-In electricity Price**
*in $/MWh*



**Note**: Based on year-to-date (YTD) September 2016 prices. Class A reflects a transmission-connected consumer. Class B reflects a 1 MW load operating at 56% load factor and connected to Toronto Hydro.

# Proposed Initiatives – Overview

- The suite of proposed initiatives are intended to:
  - Transform how the electricity market operates in Ontario;
  - Re-set how government programs are funded (i.e., rate-base vs tax-base);
  - Provide system benefits (e.g., industrial load retention);
  - Lower the cost of electricity for residential and industrial consumers; and
  - Increase cost effectiveness and improve efficiency.

- The proposed initiatives include:
  1. Implement Market Renewal Initiatives
  2. Fund Electricity Support Programs Through The Tax-base
  3. Eliminate the Industrial Conservation Initiative (ICI)
  4. Amortize Conservation Program Costs
  5. LDC Efficiencies
  6. Rate Design Initiatives
  7. Reduced Cost of OPG Borrowing
  8. End Debt Retirement Charge (DRC) Early for Commercial/Small Industrial Class B Electricity Consumers
  9. Dedicate Departure Tax
  10. Cancel/Adjust Renewable Energy Procurements

- The proposed initiatives provide opportunities to reduce electricity costs for residential and industrial consumers while at the same time transforming the province's electricity market and yielding benefits for the electricity system.

# Proposed Initiatives – Impacts

- Each of the proposed initiatives under consideration target different government programs and different parts of the electricity bill. The proposals impact different classes of electricity consumers to varying degrees.

| Proposal | Program / Initiative | Line on Bills | Who Benefits |
|---|---|---|---|
| 1. Implement Market Renewal Initiatives | Market Renewal | Electricity, Global Adjustment, Regulatory | Market Renewal: All electricity consumers |
| 2. Fund Electricity Support Programs Through The Tax-base | OESP, RRRP | Regulatory | All electricity consumers evenly |
| 3. Eliminate the Industrial Conservation Initiative (ICI) | ICI | Electricity, Global Adjustment | Only Class B electricity consumers (i.e., residential) **Note:** Will have a negative impact on Industrial consumers. |
| 4. Amortize Conservation Program Costs | Amortization | Electricity, Global Adjustment | Class B electricity consumers and to a lesser extent Class A consumers |
| 5. LDC Efficiencies | Distribution efficiencies | Delivery | All embedded consumers |
| 6. Rate Design Initiatives | Rate structures | Electricity, Global Adjustment | Rate Design Initiatives: Participating electricity consumers |
| 7. Reduced Cost of OPG Borrowing | n/a | Electricity, Global Adjustment | Class B electricity consumers and to a lesser extent Class A consumers |
| 8. End DRC Early for Commercial/Small Industrial Class B Electricity Consumers | Debt Retirement Charge (DRC) | DRC | Class B consumers (i.e., small business and commercial consumers, etc) |
| 9. Dedicate Departure Tax | Departure Tax | TBD | TBD |
| 10. Cancel/Adjust Renewable Energy Procurements | FIT, LRP | Electricity, Global Adjustment | Class B electricity consumers and to a lesser extent Class A consumers |

# Proposed Initiatives – Potential Savings for Typical Residential Electricity Consumers

| *$/750kWh* | 2017 | 2018 | 2019 | 2020 | 2021 | 2022 | Timing of Benefit |
|---|---|---|---|---|---|---|---|
| 1. Implement Market Renewal Initiatives | - | - | - | 1.58 | 1.59 | 1.60 | Longer-Term |
| 2. Fund Electricity Support Programs through the Tax-base | 2.18 | 2.30 | 2.31 | 2.45 | 2.48 | 2.51 | Immediate |
| 3. Eliminate the Industrial Conservation Initiative (ICI) | 4.40 | 4.24 | 4.10 | 4.24 | 3.73 | 3.58 | Immediate |
| 4. Amortize Conservation Program Costs | 1.67 | 1.56 | 1.21 | 0.81 | 0.54 | 0.3 | Immediate |
| 5. LDC Efficiencies | TBD | TBD | TBD | TBD | TBD | TBD | Near-Term |
| 6. Rate Design Initiatives* | - | - | - | - | - | - | Immediate |
| 7. Reduced Cost of OPG Borrowing | 0.13 | 0.13 | 0.13 | 0.18 | 0.18 | 0.18 | Immediate |
| 8. End DRC Early for Class B Electricity Consumers** | - | - | - | - | - | - | n/a |
| 9. Dedicate Departure Tax | TBD | TBD | TBD | TBD | TBD | TBD | Immediate |
| 10. Cancel / Adjust Renewable Energy Procurements | - | - | TBD | TBD | TBD | TBD | Longer-Term |
| **Total** | | | | | | | |

**Note:** The above initiatives will provide similar benefits for non-RPP Class B electricity consumers. Proposal 2 assumes OESP participation of 50% and 5-year maturity. *Savings estimates do not include changes related to rate design. ** Class B includes small-medium enterprises (SMEs).

# Proposed Initiatives – Potential Savings for Average Industrial Electricity Consumers

| *$/MWh* | 2017 | 2018 | 2019 | 2020 | 2021 | 2022 | Timing of Benefit |
|---|---|---|---|---|---|---|---|
| 1. Implement Market Renewal Initiatives | - | - | - | 2.11 | 2.12 | 2.13 | Longer-Term |
| 2. Fund Electricity Support Programs through the Tax-base | 2.91 | 3.06 | 3.17 | 3.27 | 3.33 | 3.38 | Immediate |
| 3. Eliminate the Industrial Conservation Initiative (ICI) | (24.12) | (23.21) | (22.45) | (23.23) | (20.42) | (19.61) | Immediate |
| 4. Amortize Conservation Program Costs | 1.15 | 1.08 | 0.84 | 0.56 | 0.37 | 0.25 | Immediate |
| 5. LDC Efficiencies | n/a | n/a | n/a | n/a | n/a | n/a | Near-Term |
| 6. Rate Design Initiatives* | - | - | - | - | - | - | Immediate |
| 7. Reduced Cost of OPG Borrowing | 0.10 | 0.10 | 0.10 | 0.15 | 0.15 | 0.15 | Immediate |
| 8. End DRC Early for Class B Electricity Consumers** | - | - | - | - | - | - | n/a |
| 9. Dedicate Departure Tax | TBD | TBD | TBD | TBD | TBD | TBD | Immediate |
| 10. Cancel / Adjust Renewable Energy Procurements | - | - | TBD | TBD | TBD | TBD | Longer-Term |
| **Total** | | | | | | | |

**Note:** Proposal 2 assumes OESP participation of 50% and 5-year maturity. Proposal 3 reflects the elimination of ICI, as opposed to moving ICI cost shift to the taxbase. The $1.75/MWh savings associated with Proposal 7 in 2018 accounts for the fact that under the status quo, DRC will be removed from bills in April 2018. *Savings estimates do not include changes related to rate design. ** Class B includes small-medium enterprises (SMEs).

# Fiscal Considerations

- Funding electricity support programs (i.e., OESP, RRRP, First Nations Delivery Rate) from the tax-base represents approximately $440 million on average annually.

- Ending the Debt Retirement Charge (DRC) for commercial and small industrial electricity consumers (i.e., Class B) early would represent an additional fiscal pressure of $xx [placeholder for OFA] on the province.

- If the Industrial Conservation Initiative were funded though the tax-base instead of being eliminated, this would represent a $900 million annual cost to the fiscal plan.

- Reducing OPG borrowing costs to the Province's cost of funds is expected to result in a $20 to $35 million annual fiscal pressure to the province [TBC by OPG / OFA].

- Fiscal impacts of allocating a portion of the departure tax to ratepayers will depend on the size of the allocation, as well as timing for the flow of value. The maximum, direct one-time impact is $2.6 billion, with potential ancillary impacts on residual stranded debt defeasance.

# 1. Electricity Market Renewal Initiatives

- Continue to move forward with IESO's Market Renewal initiatives:
  - Market Renewal encompasses projects such as a single-schedule system (from the current two-schedule system), more frequent intertie scheduling to better align with other jurisdictions and a day-ahead market. There will be up front capital costs to enable the initiative. IESO is currently assessing these costs.
  - Moving to "technology-agnostic" procurements will provide new opportunities for innovation and modernization and ensure ratepayers receive the best prices possible.

**Considerations**

- Changes related to IESO's Market Renewal initiatives, reflected in HOEP and uplifts, are estimated to save up to $300 million per year, starting in 2020, leading to a reduction of:
  - About $1.60/month or about 1% at current retail prices for a typical residential bill; and
  - About $2/MWh or more than 2% at current all-in prices for industrial and SME electricity consumers.
- The IESO's Market Renewal is a broad initiative that will impact all aspects of Ontario's electricity market. Ontario has had a uniform price since market opening.
- Adopting a technology-agnostic stance will lower the overall cost of providing electricity service by selecting the most cost-effective resources to fulfill various system needs.

# 2. Fund Electricity Support Programs Through the Tax-Base

- Propose to fund electricity support programs, including Ontario Electricity Support Program (OESB) and Rural or Remote Electricity Rate Protection (RRRP), through the tax-base instead of a regulated charge. This would allow the OESP and the RRRP charges to be removed from the Regulatory line on electricity bills.

**Considerations**

*Consumer Impacts and implementation*

- Transitioning OESP and RRRP to the tax-base would reduce a typical residential bill by about $2.35/month by 2020, and delivering the First Nation rate reduction through tax base would avoid about $0.10/month for a potential total savings of $2.45/month by 2020). As all programs provide strong social benefits, there is precedent for funding these programs through the tax-base.
- To address concerns from low income electricity consumers improvements to OESP could be implemented by increasing credits (could be up to double the current credits)
  - Single low income consumer would see a change from $30 to $45/ month ($540/year):
  - Family of four with electric heat could see a credit of $82.50/month ($990/year); and
  - Would mean no impact on consumer bills and no change to current OESP charge.
- RRRP and OESP are included in the “Regulatory” line on bills. If RRRP and OESP were eliminated from bills, the Regulatory line would decrease; however, as the Regulatory line is the smallest line item component of invoices, there is risk the decrease may not be perceived by customers.
- The RRRP regulation provides a funding mechanism for transmission infrastructure required to grid connect remote First Nation communities. Considerations for how that funding will be supported by the tax base will need to be determined.
- The non-rate mechanism to remove delivery charges from on-reserve First Nation customer monthly bills needs to be further explored.Funding RRRP and/or OESP with tax revenue would require amendments to existing legislation and regulations.

# 2. Fund Electricity Support Programs Through the Tax-Base (cont'd)

- Table below shows estimates of program costs up to 2020:

| Year | OESP | RRRP | First Nations Delivery Rate | TOTAL |
|---|---|---|---|---|
| 2017 | $106M | $292M | $18M | **$416M** |
| 2018 | $119M | $300M | $18M | **$437M** |
| 2019 | $127M | $306M | $18M | **$451M** |
| 2020 | $132M | $315M | $18M | **$465M** |

1) Ontario Electricity Support Program (OESP)
   - After almost a year in market, close to 30% of potentially eligible customers are signed up.
   - The cost projections below assume the program grows to 50% of eligible consumers by 2020 (also assumes 10% administration costs).

2) Rural and Remote Rate Protection (RRRP)
   - Provides benefits to R2 Hydro One consumers, Algoma, and remote communities.
   - Includes the expanded coverage that will begin on January 1, 2017.

3) First Nation rate reduction (currently under development)
   - On November 14, 2016, OEB presented options to the Ministry on reducing costs for on-reserve First Nation customers.
   - OEB's recommended option to provide 100% delivery rate credit, which is estimated at $18.4 million per year.
     - Other options includes a seasonal fixed credit to account for demand changes over the year ($13 million) or a 50% total bill reduction ($23 million).

# 3. Eliminate the Industrial Conservation Initiative (ICI)

- The cost shift from the Industrial Conservation Initiative (ICI) could be removed from electricity bills by eliminating ICI.
  - The ICI allows large electricity consumers to lower their electricity costs by reducing their demand during peak hours.

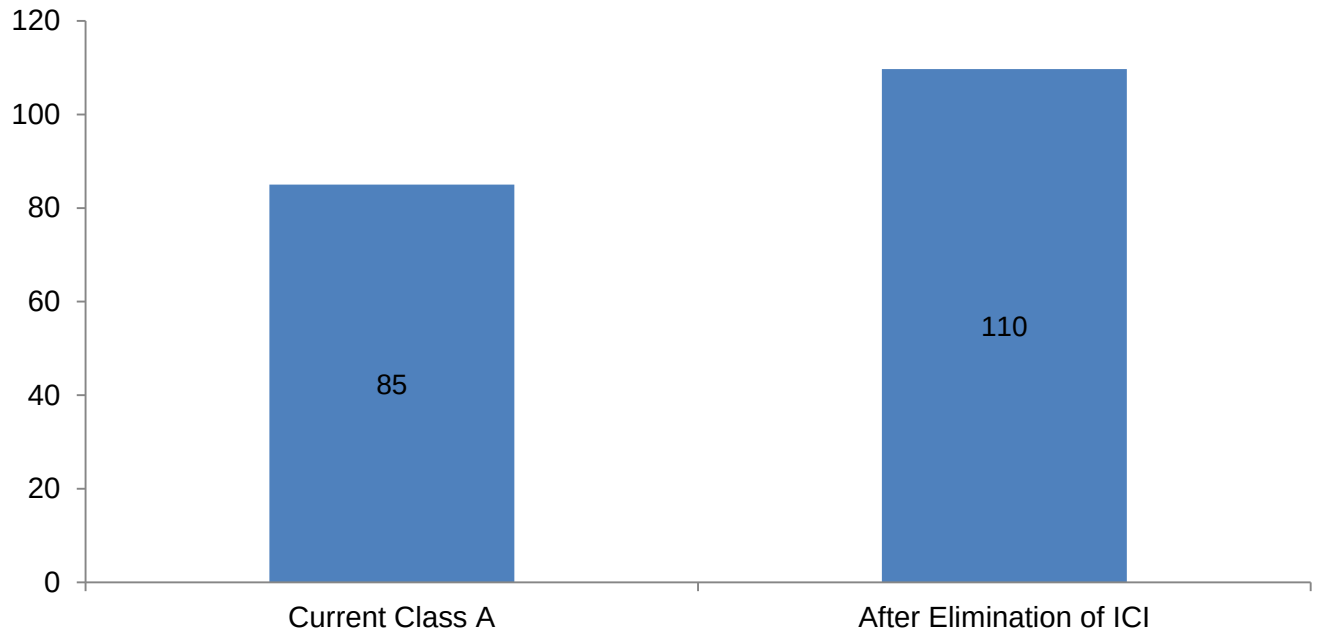
**Considerations**

- Eliminating ICI would result in a benefit of more than $4/month for residential electricity consumers in 2017.
  - However, unless government took action to mitigate the associated cost shift back to industrial consumers, typical industrial prices would increase by about one-third. Such a price increase would pose significant challenges for energy-intensive consumers.
- Industrial stakeholders have indicated that ICI as an integral factor in maintaining competitiveness and retaining industry in the province.
  - Eliminating ICI would limit the “cost shift” onto residential consumers, but it would also lead to a reduction in industrial demand. The large industrial contribution to the fixed costs of running the electricity system would then need to be covered by remaining consumers.
- If ICI is retained, current IESO projections indicate that the cost shift will decrease each year going forward as Global Adjustment (GA) decreases (due to an expected increase in HOEP).
- Alternatively, ICI could be funded through the tax-base at a cost of $900 million annually. There is precedent to use the tax-base for industrial support programs, including the Northern Industrial Electricity Rate Program (NIERP) and the Jobs and Prosperity Fund.

# 3. Eliminate the Industrial Conservation Initiative (cont'd)

- ICI currently provides a benefit of about $25/MWh to Class A electricity consumers.

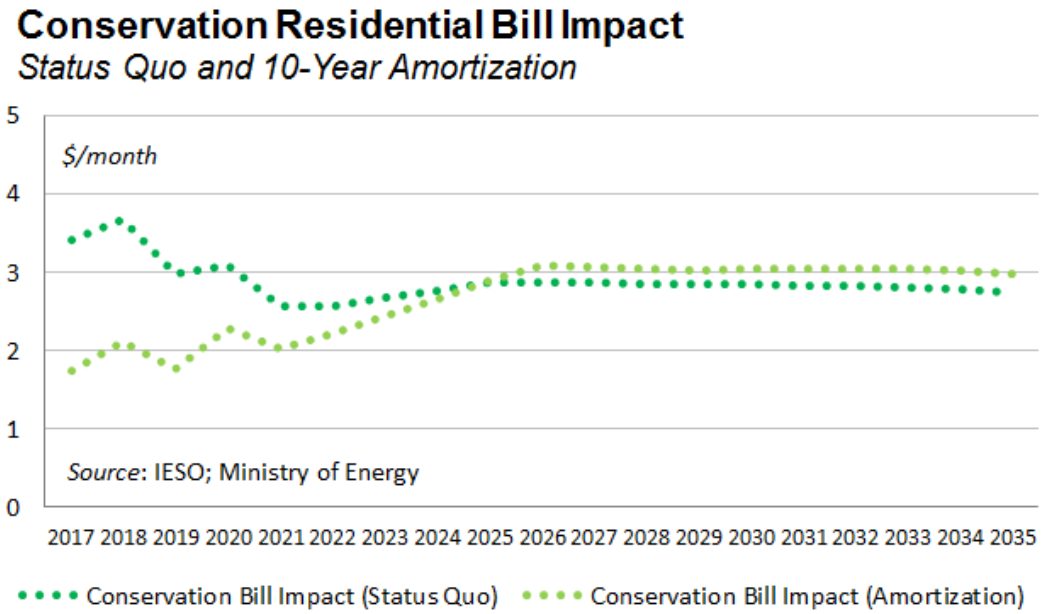
**All-In Electricity Price**
*in $/MWh*



**Note**: Based on year-to-date (YTD) September 2016 prices. Class A reflects a transmission-connected consumer.

# 4. Amortize Conservation Program Costs

- ~$3 billion from the electricity ratepayer base will be spent on conservation programs delivered under the Conservation First Framework and the Industrial Accelerator Program (IAP) between 2015 and 2020.
- Currently, Conservation and Demand Management (CDM) program costs are recovered from the Global Adjustment (GA) mechanism about one month after expenses are incurred.
- As a potential rate mitigation measure, certain CDM costs could be amortized.
- Amortizing a portion of conservation spending would produce a benefit for electricity ratepayers in excess of $1/month at the outset. Over time, the benefit would decrease and turn into a cost, as interest charges begin to grow.



**Note**: Chart assumes that conservation incentive costs are available for amortization while administration cost are not. Although there is variable from year to year, incentives represent about two-thirds of conservation spending in Ontario. Chart assumes conservation spending continues at a similar rate beyond 2020. Chart assumes a 10-year borrowing rate of 3.0%.

# 4. Amortize Conservation Program Costs (cont'd)

## Considerations

- Under **Public Sector Accounting Board (PSAB) accounting standards**, used by both the Province and IESO, only certain assets can be amortized: 1) pensions and 2) tangible capital assets. Under PSAB an asset must meet several criteria to be considered a capital asset, including:
  - A tangible capital asset must be tangible and substantive and the Ontario government must have title and operate the asset.
  - A tangible capital asset must bring a tangible benefit to the government or to Ontario.

- CDM costs, on their own, do not meet the criteria of a tangible capital asset because customers would have ownership and control of installed CDM measures, not the Province or IESO.

- **Rate-regulated accounting** was developed to recognize the unique nature of regulated entities (e.g., electricity generators, LDCs). Under rate-regulated accounting certain costs can be treated as amortizable assets that would not normally be considered assets under accounting principles.
  - Over the past several years, the Auditor General (AG) has expressed concerns about the appropriateness of recognizing rate-regulated assets in the Province's consolidated financial statements.
  - Rate-regulated accounting is currently under review by international accounting standard setting bodies and is currently permitted only on an interim basis, so its future is unclear at present.

# 4. Amortize Conservation Program Costs (cont'd)

**Considerations**

- If some of Ontario's CDM costs could be amortized, analysis shows that ratepayer impacts would be reduced in the short-term but interest charges on the loan would result in increased overall ratepayer costs in the longer-term.

- Legislative amendments would be needed to allow recovery of loan interest charges from GA.

- If there is a desire to proceed:
  - Formal accounting advice will need to be sought from IESO's external auditor as well as the Ontario Provincial Controller (OPC) to determine whether CDM costs could be amortized according to rate-regulated accounting standards.
  - Further legal analysis would also be required to confirm legal viability and possible approaches to implementation.

# 5. LDC Efficiencies

- Consider opportunities for future LDC cost reductions and efficiencies through the regulatory framework.

**Considerations**

- The Ontario Energy Board has a mandate to regulate the electricity distribution sector in the public interest, ensuring the financial viability of the sector while promoting reliable service to customers at just and reasonable rates.
- Since 2012, the OEB has taken action – through the Renewed Regulatory Framework for Energy – to more closely link rate regulation with performance measures and outcomes.
- There maybe opportunities to promote further cost reductions and performance improvements within the distribution sector as there is continued evolution of the regulatory framework in Ontario.
  - Tightening LDC requirements may also indirectly incent other desired policy outcomes, such as LDC consolidation and grid modernization to realize further cost reductions.
- ENERGY could help promote or accelerate these efforts by asking the OEB through the LTEP Implementation Directive, s. 35 of the *Ontario Energy Board Act, 1998*, and the 2017 Mandate Letter and other agency business planning processes.
- In addition, further changes to the departure and transfer tax regimes could be considered to provide a further incentive for LDC mergers and acquisitions.

# 6. Rate Design Initiatives

- OEB continues to move forward with its Regulated Price Plan (RPP) Roadmap:
  - The OEB is undertaking a comprehensive review of the RPP, including exploring the introduction of offering different pricing plan options for customers following the completion of pilot programs in 2018. The plan is expected to be implemented over a 3-5 year period.

- Until new pricing plans are available, the OEB could provide an "opt-in flat rate RPP" structure that could be made available to residential, farm and small business consumers on an interim basis (2-3 years) until a wider range of price plans are available.
- Time-of-Use (TOU) pricing could also be introduced for non-RPP Class B consumers to reduce Global Adjustment (GA) volatility and reduce system costs.

| Current TOU | New Flat Rate |
|---|---|
| On: 18.0 ¢/kWh | 11.1 ¢/kWh |
| Mid: 13.2 ¢/kWh | |
| Off: 8.7 ¢/kWh | |

**Considerations**

- The OEB has indicated that the option would lead to no overall change in system costs. Consumers with higher peak and mid-peak usage patterns would see a decrease in their electricity bills, while those with higher off-peak usage patterns would see an increase.
  - While the current strong supply conditions may allow for such an RPP structure (i.e., peak demand requirements can be easily met), administrative costs could be high (distributors would need to design/implement an opt-in process and associated billing system on an interim basis).

| | Current TOU | New Flat Rate |
|---|---|---|
| 1) Monthly electricity bill- higher peak and mid-peak usage patterns | $172 | $163 |
| 2) Monthly electricity bill- higher off-peak usage patterns | $152 | $163 |

***Note:** 1) assumes a consumer consumption pattern of 45%:30%:25% (Off-peak: Mid-peak: On-peak), while 2) assumes consumer consumption pattern of 80%:10%:10% (Off-peak: Mid-peak: On-peak). Estimates are based on OEB's online electricity bill calculator (for Toronto Hydro-November 2016 rates)

# 6. Rate Design Initiatives (cont'd)

**Considerations**

- The decision to undertake smart meter investments was partly justified on the basis of TOU pricing. If TOU pricing were to be made optional, some stakeholders could question the rationale for smart meter investments.
  - Rationale for offering a flat rate option could focus on providing customers with choice until new pricing plans are rolled out under the RPP roadmap.

- If a flat rate design is introduced, there could be significant consumer opposition to any return to a mandatory TOU.

- After the interim flat rate period, the OEB could offer a wider range of pricing plans to consumers.
  - As part of its RPP review, the OEB will be running pilots with LDCs to assess customer response to alternative time periods and pricing structures.
  - Learnings from these pilots will help inform potential changes to the RPP. Pilots are expected to be in market May 2017 and run for one year.

- Non-RPP Class B electricity consumers currently pay Global Adjustment (GA) on a volumetric basis. Moving them to TOU would provide an incentive to shift consumption to off-peak periods.
  - Consumers, including manufacturers, who are unwilling to shift would face higher costs and likely not be supportive of the changes.
  - The decision to pursue TOU pricing for non-RPP class B consumers will impact proceeds recycling as there is interplay between the two initiatives.

# 7. Reduced Cost of OPG Borrowing

- OPG currently borrows for corporate purposes from the OEFC
- Seek to reduce OPG's borrowing costs and pass on savings to ratepayers by:
  - Reducing or removing the spread that OEFC applies to OPG for any new corporate debt; or
  - Allowing OPG to refinance its existing debt at longer maturities through the OEFC in order to take advantage of the current, favourable interest rate environment.
- Assuming the full spread is removed from all OEFC debt, OPG borrowing costs could be reduced by 50-100 basis points, representing annual savings of about $20-$25 million, increasing to $30-$35 million, as OPG's outstanding OEFC debt rises from ~$3.3 billion in 2016 to ~$4.7 billion in 2020.
- OPG could apply to the OEB as part of its current rate application to flow this benefit to ratepayers.

**Considerations**

- Further work is required to determine potential OPG savings from these initiatives.
- Allowing OPG to refinance would have a negative fiscal impact on the Province.
- Spreads are expected to decline, reducing the relative impact of this change, given lower overall interest rates and reduced volatility.
- Providing OPG with greater access to longer term (20-30 year) debt may also reduce costs:
  - OPG's average term to maturity for OEFC debt is 5.7 years, as compared to 22.2 years for privately financed project debt. This contrasts with most corporations and government which have been working to extend average debt terms in order to take advantage of the low interest rate environment.
  - Longer terms would also better match to the life of OPG's assets.
  - Recently, OEFC has allowed OPG to apply for 50% of its financing requirements in the form of longer term (25-30 year debt). Moving closer to 100% would accelerate this transition.

# 8. End DRC Early for Commercial/Small Industrial Class B Electricity Consumers

- Propose to remove the $0.07/kWh Debt Retirement Charge (DRC) from the bills of commercial/small industrial Class B consumers beginning in 2017, instead of April 1, 2018.
  - **Note:** Class A consumers (e.g., large industrial) would continue to pay DRC until at least April 1, 2018.

**Considerations**

- For a Class B consumer currently paying about $152/MWh, removing the DRC would represent a savings of about 5%.
  - A 50% reduction in the DRC charge would represent a savings of about 2%.

- Alternatively, the reduction of the DRC could be to $0.035/kWh starting in 2017, to provide relief for cap and trade until proceeds recycling is fully operational.

- Residential consumers have had the DRC removed from bills since January 1, 2016. Taking DRC off commercial and small industrial bills would result in equal treatment for these groups of consumers.

- The savings for commercial and small industrial consumers associated with this proposal would drop to zero in April 2018, since this is the current planned date for removing the DRC from non-residential bills.

- Prior to moving forward with this proposal, additional analysis from Legal Services and the MOF would be needed.

# 9. Dedicate Departure Tax

- In connection with the IPO, as a result of leaving the PILs regime and entering the corporate tax regime, Hydro One was deemed to dispose of its assets for proceeds equal to its fair market value, triggering a PILs liability of $2.6 billion (Departure Tax).
- This was paid to the Ontario Electricity Financial Corporation (OEFC), to be dedicated towards repayment of electricity sector stranded debt.
- The Province could explore repurposing some of those funds to the benefit of ratepayers.
- This may reduce the risk that the Ontario Energy Board (OEB) assigns to ratepayers the benefit from an associated tax asset, resulting in lower earnings and decreased share value for Hydro One. This decision is currently before the OEB, as part of Hydro One's Transmission rate application.

**Considerations**

- Cost savings to ratepayers would depend on timing and which ratepayers (e.g., Hydro One customers, or all Ontario customers) will benefit from some or all of the $2.6 billion value.
- While this is a shift from messaging that value from the broadening of ownership of Hydro One is being used pay down debt and fund transit and transportation, the Province could link to electricity infrastructure investments (e.g., as an offset to infrastructure investments already made in the sector, or to specific initiatives such as conservation).
- These funds were paid to the Ontario Electricity Financial Corporation (OEFC), to be dedicated towards repayment of electricity sector stranded debt. Repurposing may have an impact on the defeasance of this debt.

# 10. Cancel/Adjust Renewable Energy Procurements

- The Ministry could consider the following actions to further mitigate future impacts to electricity bills:

| Unallocated/Terminated Capacity | Announced Procurements | Executed Contracts |
|---|---|---|
| A. Do not procure unallocated or terminated capacity | B. Revise FIT 5 target | D. Cancel LRP I contracts |
| | C. Cancel FIT 6 | |

**Overarching Considerations**

- Cost savings associated with reducing or cancelling renewable energy procurements and programs will not reduce current electricity bills, but would result in future cost reductions relative to Ontario Planning Outlook forecasts.
- The IESO estimates implementing options A to C will reduce system costs by approximately $592 million ($2016) between 2019 and 2028, resulting in an average of approximately $0.50/month in savings to a typical residential electricity bill over the same period. [cost reductions from LRP I contract cancellations TBC]
- The microFIT program is winding down end of 2017. Annual microFIT procurement targets have been undersubscribed.
- With a few exceptions (e.g., rollover of unallocated microFIT capacity; addition of terminated microFIT and small FIT capacity to FIT 5), plans for unallocated or terminated capacity are not defined in announcements or existing directions.

**Cancel/Adjust Announced Procurements**

- Amendments to existing directions to the IESO would be required to reduce FIT 5 and cancel FIT 6.
- The FIT 5 procurement is underway with a base target of 150 MW and inclusion of any capacity available from contract terminations under prior small FIT and microFIT procurements. The application window closed on November 25, 2016.

# 10. Cancel/Adjust Renewable Energy Procurements – Existing Contracts

**Cancel Existing LRP I Contracts**

- 16 LRP I contracts (approx. 455 MW) have been executed and projects are under development.
- None have met Key Development Milestones. Total value of LRP I estimated at approx. $1 billion (NPV to 2016).

[Placeholder for IESO: Cost calculation relative to OPO and associated bill impact]

**Considerations**

- To help inform a decision, IESO or OEB could be asked to evaluate and provide guidance to the Ministry on the system need for LRP I projects and potential ratepayer impacts/benefits.
- 13 of 16 LRP I contracts have Indigenous participation. Cancelling LRP I contracts would remove this economic development opportunity and likely damage relationships between Indigenous communities and the government.
- LRP I Contract includes an “Optional Termination” provision allowing IESO to terminate any contract prior to the “Commercial Operation Date” with 6 months written notice.
- The IESO obligations under the Optional Termination provision depend on whether the project has met all “Key Development Milestones”.
  - As no projects have met their Key Development Milestones, the estimated total cost payable to contract holders is about $8 million.

# 10. Cancel/Adjust Renewable Energy Procurements – Existing Contracts (cont'd)

## Legal Analysis

- Under the *Electricity Act, 1998*, the Minister has the authority to amend previous directions without approval from Cabinet. Although an amendment to an existing direction would not require Cabinet approval, it is unlikely that a direction to cancel LRP I contracts could be considered as amending an existing direction. The previous LRP directions set out the broad policy framework that was reflected in the procurement, but the contracts themselves, once executed, are stand alone documents which the IESO had legal authority to execute. Revoking previous LRP directions does not affect that authority or have the effect of cancelling the procurement.
- As a result, any new directive to cancel LRP I contracts would need to be approved by Cabinet, either as part of an LTEP implementation directive to IESO, or pursuant to the overall power to direct IESO with respect to procurements outside the LTEP process. However, there is a risk that such a directive could be subject to challenge.
- ENERGY has previously received advice that there is a high risk that a court would conclude that the Minister has no authority under the *Electricity Act , 1998* to issue a direction requiring IESO to terminate microFIT Conditional Offers and FIT Offer Notices that have already been issued to applicants, because these offers create vested contractual rights and the Minister would require clear legislative authority to interfere with those rights. This reasoning would likely apply equally to any direction or directive to IESO to cancel LRP I contracts.
- Previous advice has also flagged a moderately high risk that the Province could be liable for damages in tort for inducing a breach of contract if it issues a direction to IESO that interferes with vested contractual rights without clear statutory authority to do so. LRP I contract holders could also assert other claims, such as misfeasance in public office.
- The risk and costs associated with potential law suits resulting from the cancellation of contracts requires further analysis, including analysis of whether any statutory amendments would be required to provide clear authority to cancel the contracts. LSB recommends ENERGY seek an opinion from Crown Law Office Civil before proceeding.

# Summary

- Reductions in electricity rates could be achieved by eliminating existing, planned or directed initiatives from the rate-base or shifting these costs to the tax-base.

- The timing of the impact of these rate mitigation initiatives varies.
  - Immediate and near-term impacts can be achieved by shifting costs to the tax-base or changing how certain costs are recovered from consumers or eliminating certain programs.
  - Over the longer term, changes to the electricity supply mix and achieving efficiencies in the electricity market could yield system savings.

- Pursuing the initiatives would require regulatory amendments and working with the electricity sector agencies, LDCs and other stakeholders to implement the initiatives.

# Appendix

# Electricity Consumer Classes

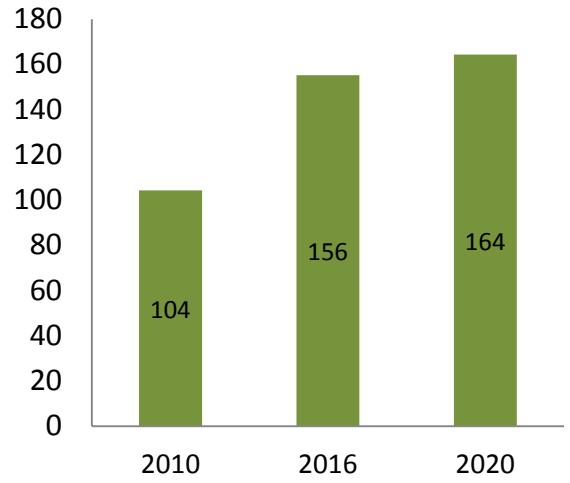
- In Ontario, there are three classes of electricity consumers:

| | Regulated Price Plan | Class B | Class A |
|---|---|---|---|
| **Consumer Types** | • Residential<br>• Small Business<br>• Farms | • Commercial<br>• Institutional<br>• Small industrial | • Large commercial<br>• Large industrial |
| **Load Size** | Below 0.05 MW | Between 0.05 MW and 1 MW | Above 1 MW |
| **Total Consumption** | 58 TWh | 57 TWh | 26 TWh |
| **Share of Consumption** | 41.1% | 40.4% | 18.4% |

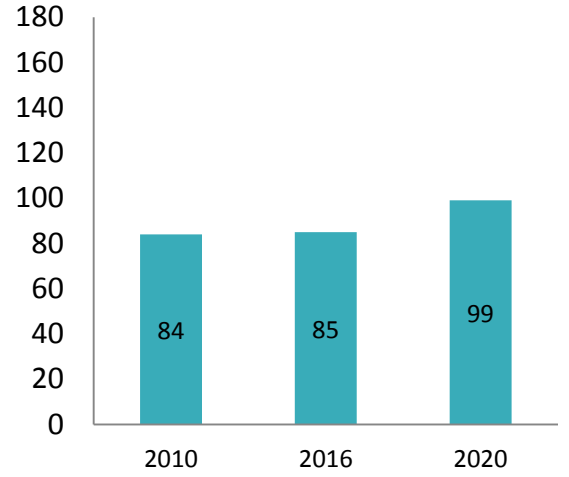
# Prices by Electricity Consumer Class

- Since 2010, average bills for residential consumers (i.e., using 750 kWh/month) have increased by over 50%. Rates are forecast to continue to increase, with residential consumers paying an estimated 6% by 2020.
- Industrial electricity rates have remained relatively flat over the same time period, due primarily to the Industrial Conservation Initiative (ICI). ICI represents a cost shift of about $5/month for residential electricity consumers. Industrial electricity consumers are forecast to see an increase of 16% by and 2020.

**Typical Residential Bill (750/kWh per month)**



**Typical Class A (Industrial) Price ($/MWh)**



**Note:** 2016 represents year-to-date September 2016 for industrial. Cap and trade proceeds recycling is included for the industrial consumer for 2020.

# Rate Mitigation Levers

- To provide further rate relief to Ontario electricity consumers, the government can use one or more of the levers outlined below:
  - **Tax-based Lever:**
    - Provide rebates funded from the tax-base or transfer items currently paid through the rate-base to the tax-base.
  - **Rate-based Lever:**
    - Shifts costs within the rate-base from one customer group to another to achieve electricity system benefits and/or policy goals.
  - **Cap and Trade Proceeds Lever:**
    - Use cap and trade proceeds on initiatives that help reduce greenhouse gas (GHG) emissions from the electricity sector (e.g., recycling proceeds during off-peak periods) while providing benefits to some or all electricity consumers.

# Traditional Rate Mitigation Programs

- Ontario has implemented a number of rate-based programs to help residential and industrial electricity consumers:
  - The Ontario Electricity Support Program (OESP) provides ongoing assistance directly on the bills of eligible low-income electricity consumers
  - The Rural or Remote Rate Protection (RRRP) program is provided to rural and remote residential and farm customers because the cost of distributing power to remote areas is much higher than for urban areas.
  - The Industrial Conservation Initiative (ICI) encourages Ontario's largest consumers to reduce consumption during peak periods while reducing system costs.
- There are also tax-base programs to help manage electricity prices:
  - Rebate the provincial portion of the HST from the electricity bills of residential, small business and farms as of January 1, 2017.
  - Northern Industrial Electricity Rate Program (NIERP), in which participants receive a rebate of two cents per kilowatt hour. On average, industrial electricity prices can be reduced by up to 20%.
- While rate-based programs provide relief to certain electricity consumers, they shift other costs to remaining ratepayers (See Appendix for additional details).

# Driving Down Prices for Consumers

- Since 2013, a number of actions have been taken to drive down prices for consumers wherever possible:
  - Renegotiating the Green Energy Investment Agreement, reducing contract costs by $3.7 billion;
  - Deferring the construction of two new nuclear reactors at Ontario Power Generation's Darlington facility, avoiding an estimated $15 billion in new construction costs;
  - Approving Ontario Power Generation's plans to enable the ongoing operation of Pickering up to 2024, which is expected to save ratepayers as much as $600 million;
  - Reducing Feed-In-Tariff (FIT) prices through annual price reviews, saving ratepayers at least $1.9 billion relative to the 2013 Long-Term Energy Plan (2013 LTEP) forecast; and
  - Suspending the second round of the Large Renewable Procurement (LRP II) process and the Energy-from-Waste Standard Offer Program to save up to $3.8 billion in electricity system costs relative to 2013 LTEP.

# Cost Shifts in the Electricity Sector – Current Programs

- Several programs in the electricity sector “shift costs” from one group of electricity consumers to another:
  - **Rural or Remote Rate Protect** (**RRRP)** is a longstanding program that reduces the delivery charge for rural electricity consumers and is paid for by all consumers in Ontario through a regulatory charge on bills.
  - **Ontario Electricity Support Program (OESP)** is funded via a regulatory charge on consumer bills and provides support for qualifying low income electricity consumers.
  - **Industrial Conservation Initiative (ICI)** empowers large consumers to lower their costs by reducing their demand during peak hours. In the process, ICI shifts costs from large electricity consumers to all other consumers in Ontario.
  - **Industrial Electricity Incentive** (**IEI**) program, offers reduced electricity prices for companies starting or expanding operations in Ontario. All electricity consumers in Ontario pay for the price reduction that IEI participants receive.

# Cost Shifts in the Electricity Sector (Cont'd)

- The tables on the right show the estimated cost shifts that result from existing government programs.
- ICI has had the largest cost shift of all the programs, due to the large size of Global Adjustment (GA) and the way that it is recovered from consumer classes.
- RRRP and OESP impact the regulatory line on consumer bills, while ICI, IEI and conservation affect GA (i.e., Electricity line on bills of Regulated Price Plan consumers).

**Cost Shift Impacts - Residential Bill**

*Typical 750 kWh/month Toronto Hydro consumer*

| *$/month* | 2011 | 2012 | 2013 | 2014 | 2015 | 2016 |
|---|---|---|---|---|---|---|
| ICI | 2.65 | 3.25 | 3.88 | 3.53 | 4.75 | 4.77 |
| RRRP | 0.90 | 0.82 | 0.84 | 0.92 | 0.93 | 0.94 |
| OESP | - | - | - | - | - | 0.84 |
| Conservation | 1.85 | 1.92 | 2.00 | 1.58 | 2.43 | 2.45 |
| IEI | - | - | 0.08 | 0.09 | 0.11 | 0.12 |
| **Total** | **5.41** | **5.99** | **6.81** | **6.13** | **8.21** | **9.12** |

**Cost Shift Impacts - Industrial Bill**

*Typical Class A consumer*

| *$/MWh* | 2011 | 2012 | 2013 | 2014 | 2015 | 2016 |
|---|---|---|---|---|---|---|
| ICI | -22.17 | -26.36 | -30.29 | -25.91 | -33.79 | -33.92 |
| RRRP | 1.20 | 1.10 | 1.12 | 1.23 | 1.24 | 1.25 |
| OESP | - | - | - | - | - | 1.13 |
| Conservation | 1.53 | 1.59 | 1.66 | 1.31 | 2.01 | 2.02 |
| IEI | - | - | 0.07 | 0.08 | 0.09 | 0.10 |
| **Total** | **-19.43** | **-23.67** | **-27.44** | **-23.29** | **-30.45** | **-29.43** |

**Note:** OESP did not come into effect until 2016. The 2016 values represent forecasts and are subject to change.

# Cost Shifts in the Electricity Sector (Cont'd)

- The table on the right shows the total cost for various government electricity programs. These programs are currently funded through the electricity system ratebase.

- Funding of these programs through the fiscal plan would remove these costs from the electricity system (i.e., Placing these costs on the taxbase).

**Cost of Programs**

*By government program*

| *$M* | 2011 | 2012 | 2013 | 2014 | 2015 | 2016 |
|---|---|---|---|---|---|---|
| ICI | 506 | 615 | 736 | 670 | 890 | 893 |
| RRRP | 172 | 156 | 159 | 176 | 174 | 176 |
| OESP | - | - | - | - | - | 158 |
| Conservation | 329 | 339 | 354 | 280 | 425 | 428 |
| IEI | - | - | 15 | 16 | 18 | 19 |

- For example, removing the roughly $900 million of program cost from the Industrial Conservation Initiative (ICI) program would save the typical residential electricity consumer $4.77 per month in 2016.

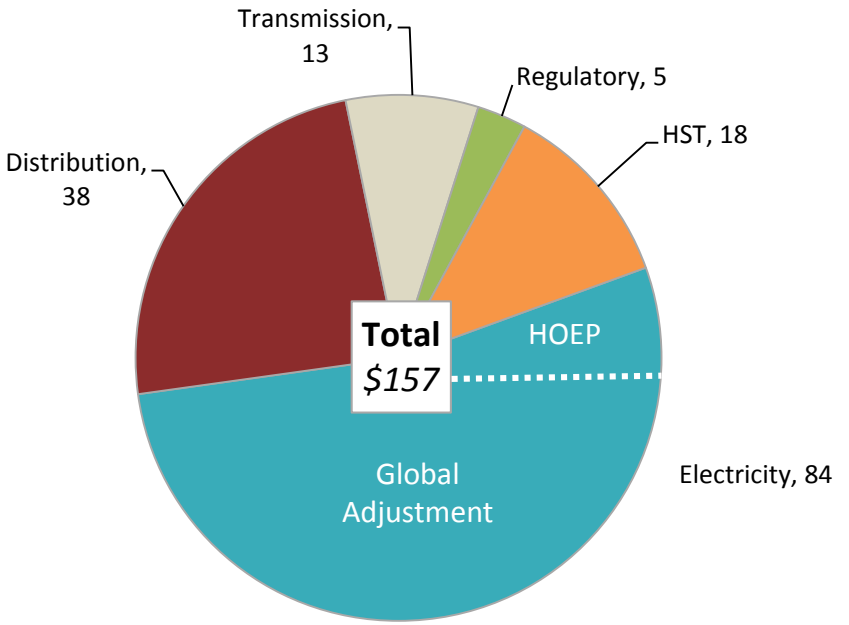
**Note:** OESP did not come into effect until 2016. The 2016 values represent forecasts and are subject to change.

# Residential Electricity Prices

- There are approximately 4.5 million residential consumers in Ontario.
- The Regulated Price Plan includes nearly all residential consumers, as well as small businesses. Regulated Price Plan consumers pay a blended commodity rate regulated by the OEB, which is set every six months.
- For households, the Debt Retirement Charge (DRC) was removed from residential electricity bills as of January 1, 2016.
- In addition, the Ontario Electricity Support Program (OESP) provides an ongoing rate reduction directly on the bills of low-income electricity consumers who have applied and meet the eligibility requirements. The program is funded through the rate base.
- Rural customers, in particular those with electrical heating, pay higher monthly bills.

**Typical Residential Monthly Bills ($)**

*As of November 1, 2016 (750 kWh/month)*



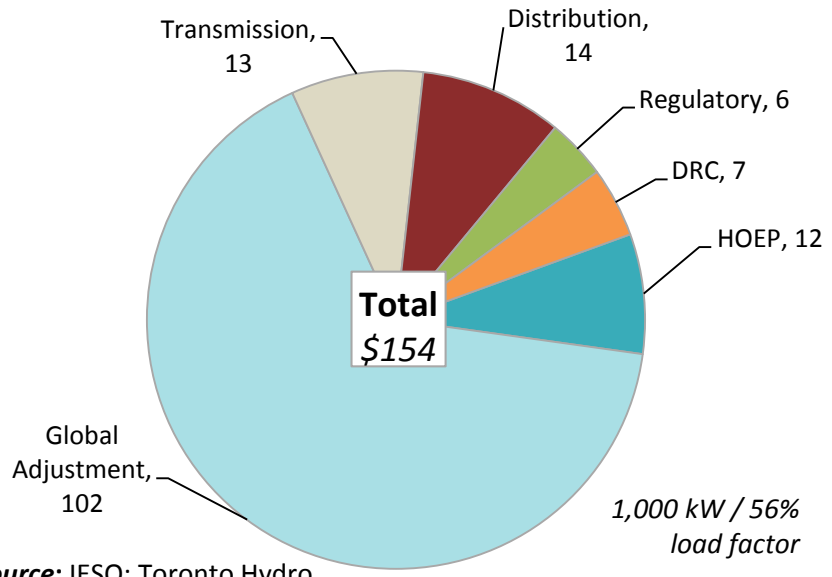
***Source*:** OEB, Toronto Hydro

# Commercial Electricity Prices

- There are approximately 55,000 commercial and institutional consumers in the province. These consumers are Class B consumers, and have separate line items on the electricity bill for HOEP and GA.
- There is a high degree of differentiation amongst consumers within the commercial sector in terms of size and consumption patterns. For example, an elementary school has a much different hourly load profile compared to a full service restaurant. This is an important consideration when looking at the bill impacts of policy options.

**Typical Commercial Price ($/MWh)**

*YTD June 2016 (Non-RPP Class B)*



***Source*:** IESO; Toronto Hydro

- Consumers in the commercial sector do not pay time-of-use prices and have little incentive to shift demand away from high demand hours.
- Targeted pricing programs are currently not available for Class B consumers.

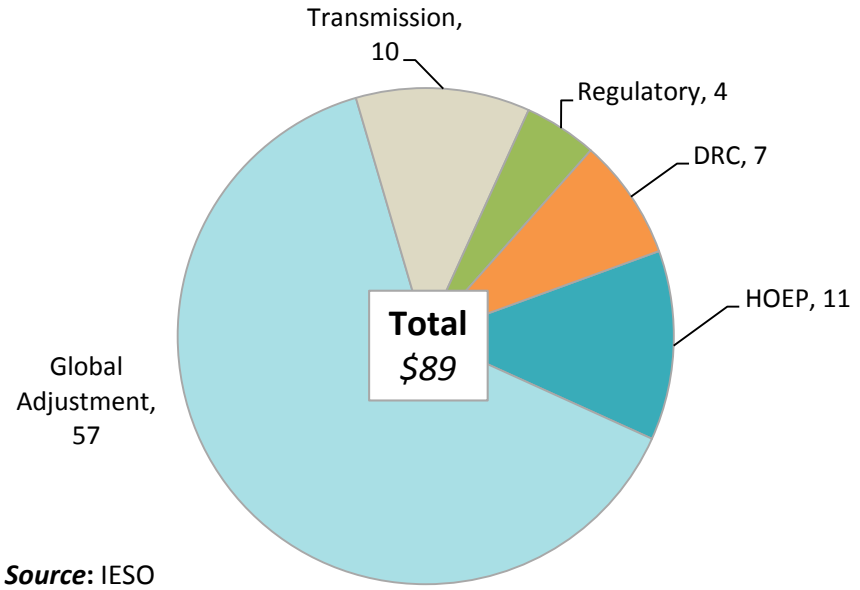
*** Note**: Most commercial consumers receive input tax credits for their HST.

# Industrial Electricity Prices

- There are about 300 large industrial consumers in Ontario.
- Measures in place to mitigate industrial electricity prices include ICI and NIERP.
- ICI lowers costs for eligible large electricity consumers (i.e., those with monthly peak demand exceeding 3 MW) that reduce consumption during peak periods.
  - ICI consumers reduce their electricity rates by 25% on average.

**Typical Large Industrial Price ($/MWh)**

*YTD June 2016*



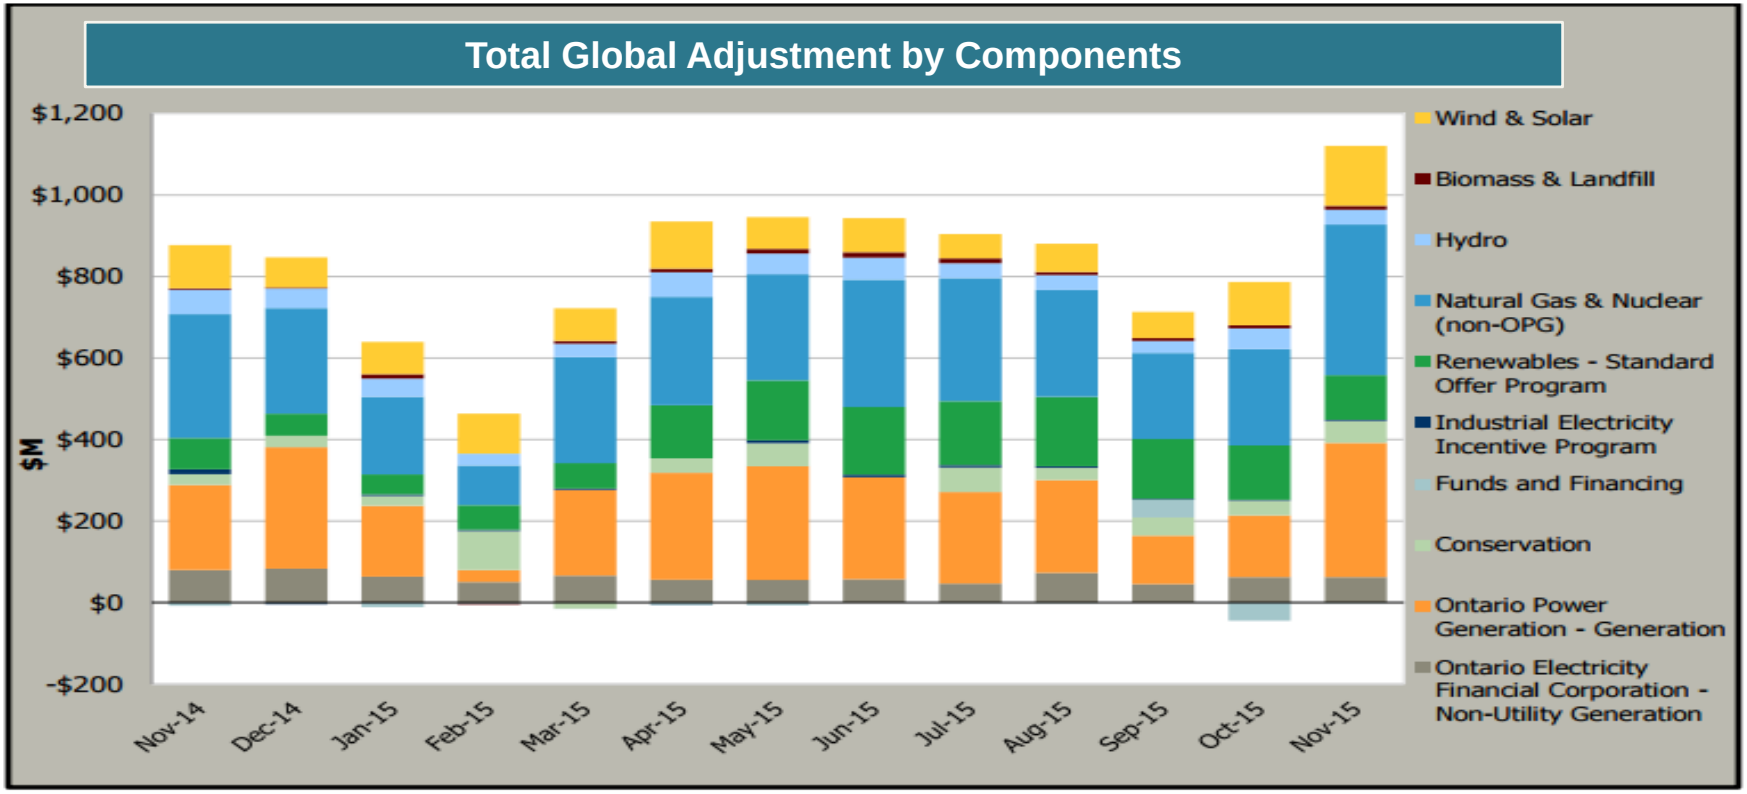
***Source*: IESO**

- Participants in NIERP receive a rebate of $20/MWh. On average, industrial electricity prices are reduced by about 20% through the program, reducing all-in prices to $69/MWh for these consumers. The program is funded through the tax base.

*** Note:** Industrial consumers receive input tax credits for their HST.

# Total Components of Global Adjustment

- Global Adjustment (GA) is a market mechanism that recovers costs from electricity consumers, including the cost of almost all conservation programs in the province (i.e., approximately half a billion dollars in 2016).



**Source:** IESO Monthly Market Report (November 2015)

# Cancel/Adjust Renewable Energy Procurements

# LRP I Pre-Construction Liability Limits

- All 16 successful LRP I developers accepted Optional Termination Provisions when the LRP I Contracts were executed in April 2016.
- If IESO chooses to enact the Optional Termination provision before a project has met all Key Development Milestones, IESO is required to pay pre-construction development costs up to the Pre Construction Liability Limit.
- Pre-construction development costs include costs incurred for feasibility studies, obtaining site access rights, work towards environmental approvals, business development plans, negotiation of contracts for design, equipment, construction and financing, reasonable overhead expenses, and other reasonable costs incurred.
- The Pre Construction Liability Limits are:
  - Non-Rooftop Solar: $250,000 plus $10.00/kW of Contract Capacity
  - Waterpower: $500,000 plus $20.00/kW of Contract Capacity
  - On-Shore Wind: $400,000 plus $2.00/kW of Contract Capacity
- According to the LRP I Optional Termination provision, the developer has a duty to take reasonable steps to mitigate losses, liabilities, costs and damages incurred as a result of the Optional Termination.
  - The IESO will not provide compensation for amounts which are attributable to a developer's failure to take reasonable steps to mitigate.

Hi Karen,
Please find attached the final Cabinet submission. We'll bring copies for 8am Monday morning.
Keley

Ontario

# Electricity Price Mitigation

## Ministry of Energy

**Date: September 12, 2016**

Minister

Deputy Minister

# Context

- Electricity costs are increasing as the necessary investments are made to decarbonize and modernize the province's electricity infrastructure.

- Ontario has taken action to replace coal-fired generation with cleaner sources of energy. Since 2003, the Province has invested more than $35 billion in over 16,000 megawatts (MW) of new and refurbished clean generation, including nuclear, natural gas and renewables.
  - This investment represents about 40% of our current supply and has helped decrease electricity sector emissions by approximately 80%.

- Over the same period, Hydro One has invested $15.5 billion to enhance and renew its transmission and distribution systems.

- Since 2010, electricity prices have risen considerably, particularly for households and small businesses. Prices are forecast to continue to increase as additional generation comes online.

- The Ministry of Energy and Ministry of Finance were asked to develop a proposal to provide rate relief to Ontario electricity consumers.

# Electricity Consumer Classes

- There are three classes of electricity consumers:

| | Regulated Price Plan | Class B | Class A |
|---|---|---|---|
| **Consumer Types** | • Residential<br>• Small Business<br>• Farms | • Commercial<br>• Institutional<br>• Small industrial | • Large commercial<br>• Large industrial |
| **Load Size** | Below 0.05 MW | Between 0.05 MW and 3 MW | Above 3 MW* |
| **Total Consumption** | 58 TWh | 57 TWh | 26 TWh |
| **Share of Consumption** | 41.1% | 40.4% | 18.4% |

**** Note:** Consumers with peak demand between 3-5 MW in the manufacturing, mining, refrigerated warehousing, greenhouses and data-processing industries are currently eligible for Class A. All other 3-5MW consumers are Class B.

# Current Rate Base Mitigation Programs

- Ontario has implemented several programs to help electricity consumers:
  - The Ontario Electricity Support Program (OESP) provides ongoing assistance directly on the bills of eligible low-income electricity consumers;
  - The Industrial Conservation Initiative (ICI) encourages Ontario's largest consumers to reduce consumption during peak periods while reducing system costs; and
  - The Rural or Remote Rate Protection (RRRP) program is provided to rural and remote residential and farm customers because the cost of distributing power to remote areas is much higher than for urban areas.

- These programs have shifted costs amongst electricity consumer classes (i.e., residential, commercial and industrial) as shown in the table below:

| Cost Shift Impact | 2011 | 2012 | 2013 | 2014 | 2015 | 2016 |
|---|---|---|---|---|---|---|
| Residential Bill ($/month for 750 kWh) | 3.55 | 4.07 | 3.85 | 4.46 | 5.68 | 6.55 |
| Commercial – Class B ($/MWh) | 4.74 | 5.43 | 5.14 | 5.94 | 7.57 | 8.73 |
| Industrial – Class A ($/MWh) | -20.97 | -25.26 | -22.38 | -24.68 | -32.56 | -31.55 |

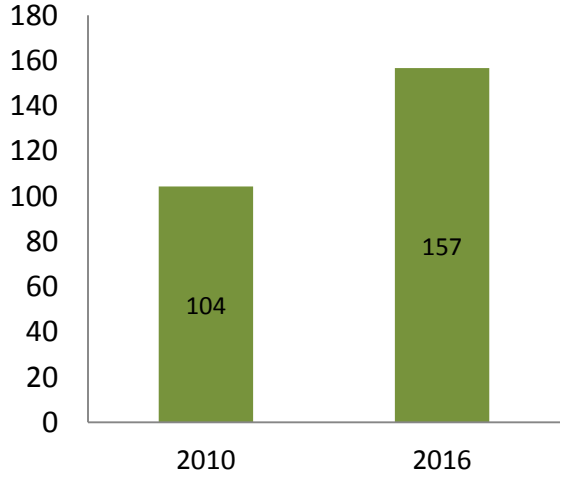
**Note:** Negative values indicate a benefit; positive values denote an incremental charge.

# Prices by Electricity Consumer Class

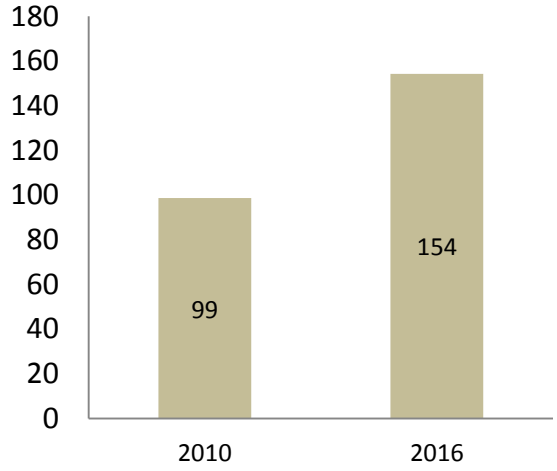
- Since 2010, average bills for residential consumers (i.e., using 750 kWh/month) have increased by over 50% and rates paid by commercial have increased by 56%.

- Industrial electricity rates have remained relatively flat over the same time period, due primarily to the Industrial Conservation Initiative (ICI). ICI represents a cost shift of about $5/month for residential electricity consumers.

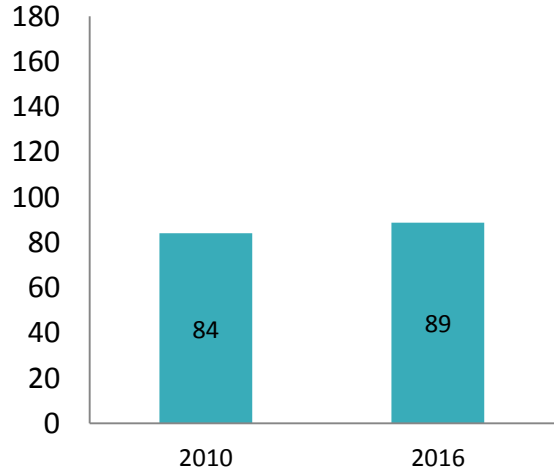
**Typical Residential Bill (750/kWh per month)**



**Typical Class B (Commercial) Price ($/MWh)**



**Typical Class A (Industrial) Price ($/MWh)**



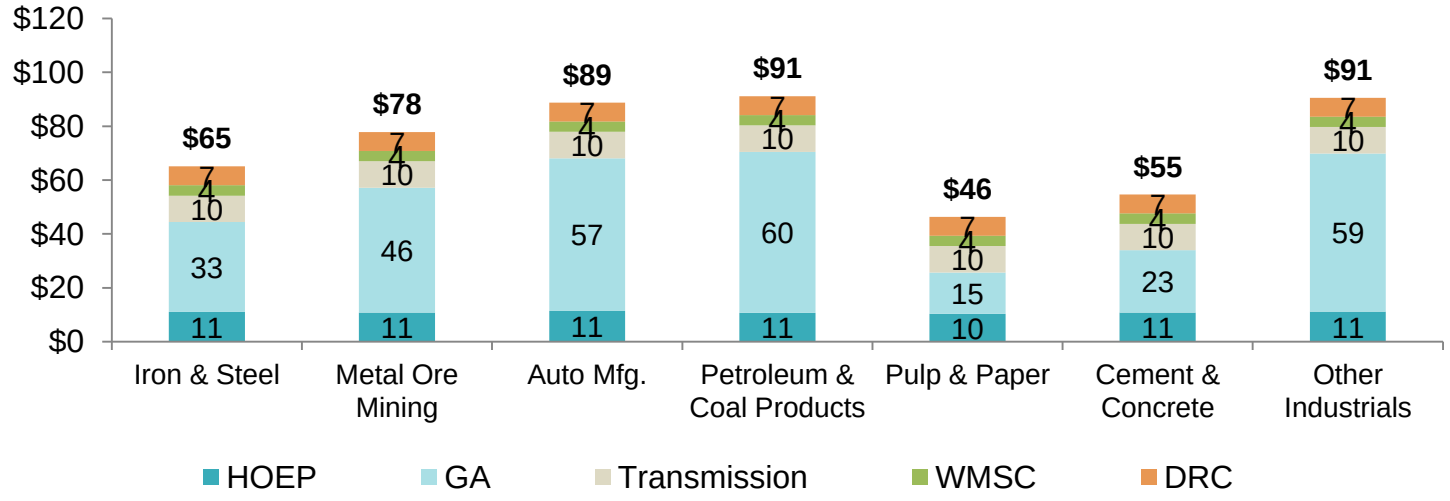
**Note:** 2016 represents May 2016 for residential after-tax and YTD June 2016 for commercial and industrial.

# Industrial Electricity Prices Vary by Sector

- While Class A (industrial consumers) benefit from participation in the ICI program, there is a significant amount of variability in the ability to shift away from peak periods across customer classes, impacting the savings achieved.

- The below chart shows the prices paid in 2015 across a number of industrial sectors. Consumers in the north that receive rebates under the Northern Industrial Electricity Rate Program (NIERP) achieve rates that are $20/MWh lower than the below.

**Average all-in Class A, Transmission-connected Electricity Prices by Industrial Sector (estimated $/MWh), Year-to-Date June 2016**



**Note:** HOEP = Hourly Ontario Energy Price, GA = Global Adjustment, WMSC = Wholesale Market Service Charges, DRC = Debt Retirement Charge

# Recent Actions to Bend the Cost Curve

- Since 2013, a number of actions have been taken to reduce overall electricity system costs:
  - Renegotiating the Green Energy Investment Agreement, reducing contract costs by $3.7 billion;
  - Deferring the construction of two new nuclear reactors at Ontario Power Generation's Darlington facility, avoiding an estimated $15 billion in new construction costs;
  - Approving Ontario Power Generation's plans to enable the ongoing operation of Pickering up to 2024, which is expected to save ratepayers as much as $600 million;
  - Reducing Feed-In-Tariff (FIT) prices through annual price reviews, saving ratepayers at least $1.9 billion relative to the 2013 Long-Term Energy Plan (2013 LTEP) forecast; and
  - Removing an expected $3.3 billion in Large Renewable Procurement (LRP) costs relative to the 2013 Long-Term Energy Plan (2013 LTEP) forecast, based on the results of the first phase of the LRP.
- Despite these actions to reduce system costs, electricity rates continue to increase for consumers.

# Rate Mitigation

- The 2016 Budget committed to offset the impact of cap and trade in Ontario for commercial and industrial electricity consumers, while also providing a benefit of up to $2 per month for residential electricity consumers. The Climate Change Action Plan (CCAP) committed $1.3 billion from the Greenhouse Gas Reduction Account (GGRA) over the first compliance period (2017-2020).

- To provide further rate relief to Ontario electricity consumers, the government can use one or more of the levers outlined below:

  - **Tax-based Lever:**
    - Provide an on-bill rebate funded from the tax-base to all consumers or specific classes of consumers (i.e., the Ontario Clean Energy Benefit (OCEB) provided a rebate for eligible electricity consumers).

  - **Rate-based Lever:**
    - Shifts costs within the rate-base from one customer group to another to achieve electricity system benefits and/or policy goals.

  - **Cap and Trade Proceeds Lever:**
    - Redirect cap and trade proceeds to offset the cost of existing initiatives that help reduce greenhouse gas (GHG) emissions (i.e., the CCAP committed to offset the impact of cap and trade and to keep electricity rates affordable).

# Rate Mitigation Proposal

- The Ministry of Energy is proposing to implement the following electricity price mitigation initiatives. The approach identified below would provide relief across all electricity consumer classes:

  1) Provide an 8% rebate equal to the provincial portion of HST to consumers eligible for the Regulated Price Plan* (i.e., residential, small business and farms) and update the Rural or Remote Rate Protection (RRRP) program, to provide relief to rural customers; and

  2) Expand ICI eligibility by lowering the threshold to 1 MW, to provide support to Class B electricity consumers (i.e., commercial, institutional and small industrial) and redirect cap and trade proceeds to commercial and industrial electricity consumers to provide a modest reduction in rates.

- The following slides provide additional information on the above initiatives.

***Note:** Eligibility for the 8% rebate would be similar to OCEB and include some customers not on the Regulated Price Plan (RPP), such as Independent Power Authority consumers and consumers that have opted-out of RPP.

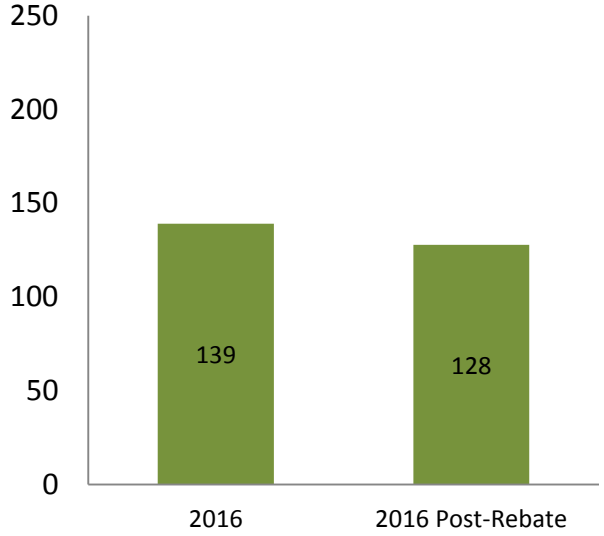
# Rate Mitigation Proposal – Illustrative Benefits*

| | Average Annual Fiscal Impact | Average Annual Greenhouse Gas Reduction Account (GGRA) Proceeds Impact | Regulated Price Plan (Residential) Benefit | | Class B (Commercial) Benefit | Class A (Industrial) Benefit | |
|---|---|---|---|---|---|---|---|
| | | | *Average (750 kWh/ month)* | *Rural (1000 kWh/ month)* | | *Existing* | *New* |
| • 8% rebate to Regulated Price Plan eligible consumers<br>• ICI Expansion<br>• RRRP Update<br>• Proceeds Recycling | $1.0 billion annually | $0.27 billion annually<br><br>(Reduction of $0.06 billion annually or $0.24 billion total from the CCAP commitment) | -$11/ month<br><br>(-8%) | -$45/ month<br><br>(-20%) | -$3/MWh<br><br>(-2%) | -$3/ MWh<br><br>(-3%) | Up to -$52/MWh<br><br>(-34%) |

*** Notes:** The above benefits do not include the cost of ICI expansion and the RRRP update (total impact of $1.74/MWh). Proceeds recycling is net of the cost of carbon and represents an estimated average of the proceeds required over the first compliance period (2017-2020).

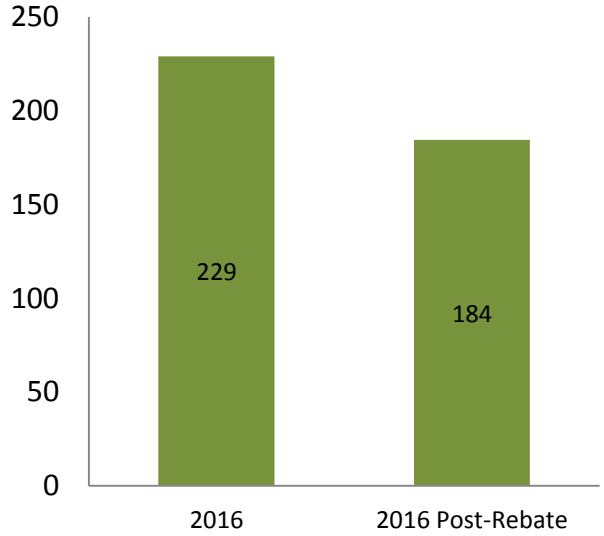
# Rate Mitigation Proposal – Illustrative Bill Impacts by Electricity Consumer Class

**Typical Residential Bill**
**750kWh per month, 8% only**



The benefit is a 8% reduction.

**Rural (R2) Residential Bill**
**1,000kWh per month, 8% and RRRP Update**

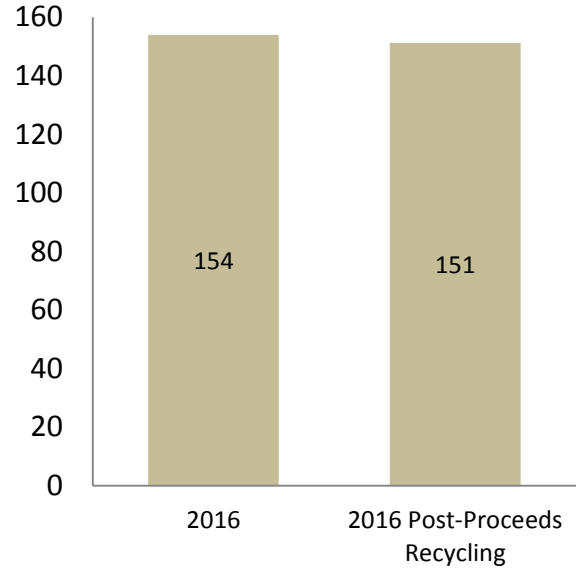


The benefit is a 20% reduction.

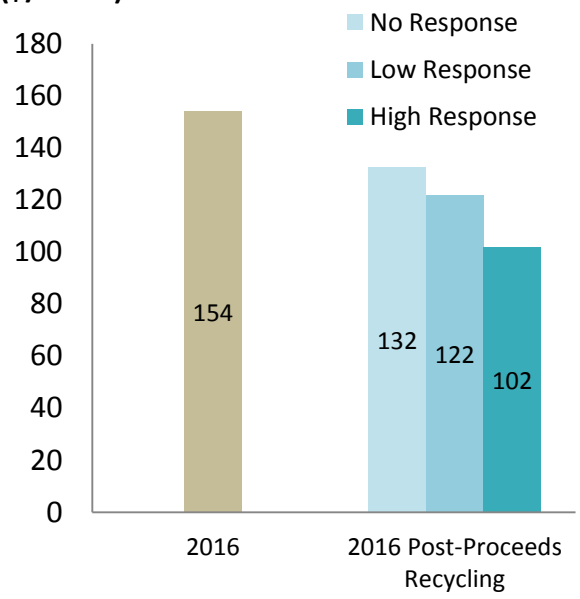
**Note:** The above benefits do not include the cost of ICI expansion and the RRRP update (total impact of $1.74/MWh).

# Rate Mitigation Proposal – Illustrative Bill Impacts by Electricity Consumer Class (cont'd)

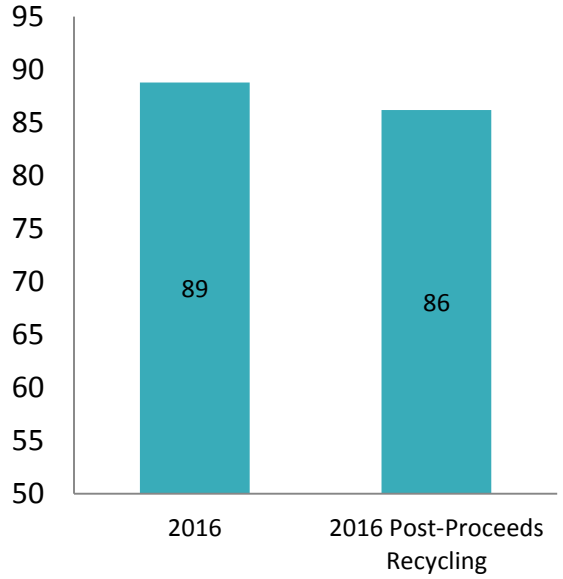
**Typical Class B (Commercial) Price ($/MWh)**



**Typical New Class A Price ($/MWh)**



**Typical Class A (Industrial) Price ($/MWh)**



**Class B:** The benefit is a 2% reduction.

**New Class A:** The benefit is a reduction of 14% to 34%.

**Existing Class A:** The benefit is a 3% reduction.

**Notes:** The above benefits do not include the cost of ICI expansion and the RRRP update (total impact of $1.74/MWh). Proceeds recycling is net of the cost of carbon and represents an estimated average of the proceeds required over the first compliance period (2017-2020).

# 1) Regulated Price Plan Eligible Consumers and Rural or Remote Rate Protection Update

# 8% Rebate to Regulated Price Plan Eligible Consumers

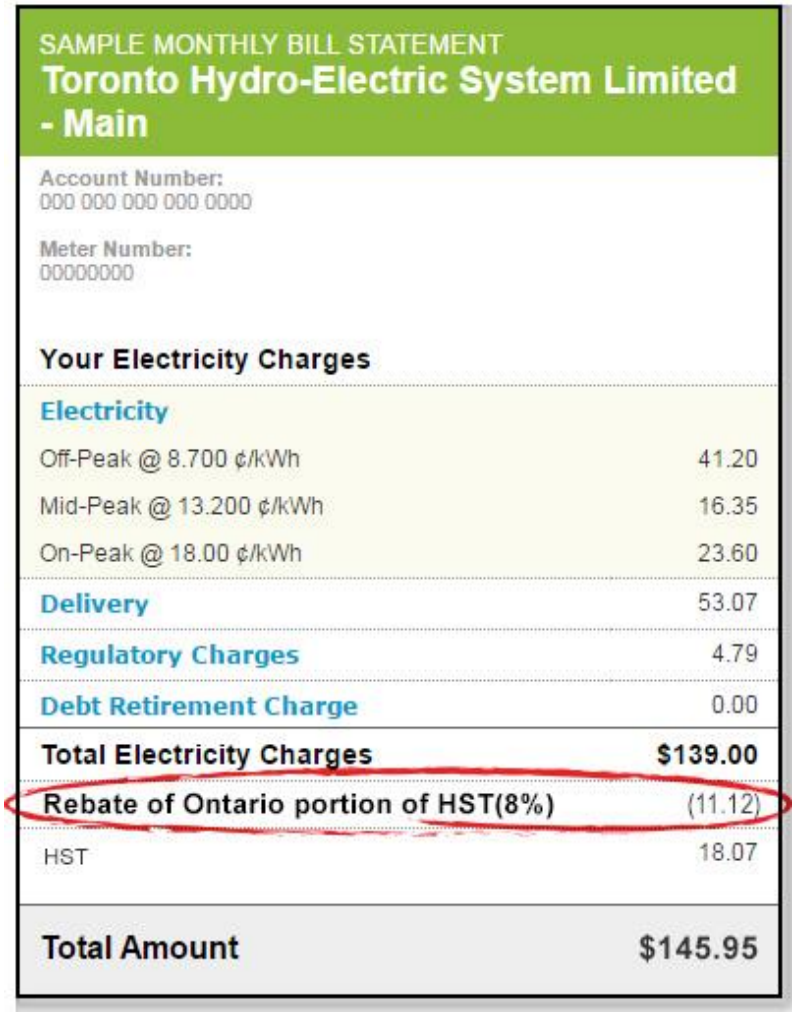
- Legislation/regulation will be introduced to provide a rebate of 8% to consumers eligible for the Regulated Price Plan. The below table indicates which consumers would or would not receive the benefit.
  - This would be equivalent to the provincial portion of the HST*.

| **Eligible for the 8% rebate**<br>(< 50 kW or < 250,000 kWh/year) | **Not eligible for the 8% rebate**<br>(> 50 kW or > 250,000 kWh/year) |
|---|---|
| • Residential Regulated Price Plan consumers<br>• Residential retail consumers<br>• Multi-unit residential buildings and other facilities used as residential rental units<br>• Long-term care homes and school residences<br>• Regulated Price Plan eligible farms<br>• Small businesses<br>  – Coffee / snack retailer<br>  – Convenience store<br>  – Apparel store<br>  – Hair salon<br>  – Small insurance office | • Class A consumers<br>  – Manufacturer<br>  – Large grocery store<br>  – Mines<br>  – Auto assembly plants<br>• Class B consumers (except farms that have opted out of the Regulated Price Plan)<br>  – Commercial offices (low rise)<br>  – Hotel<br>  – General warehousing |

- Those ineligible to receive the 8% rebate will benefit from one or more of the other initiatives under this proposal (e.g., ICI expansion, proceeds recycling, etc).

***Note:** An HST exemption would require federal approval. Engaging in discussions with the federal government would take time and would likely result in not meeting the targeted implementation date.

# Illustrative Electricity Bill Mock-Up



SAMPLE MONTHLY BILL STATEMENT

**Toronto Hydro-Electric System Limited - Main**

Account Number:
000 000 000 000 0000

Meter Number:
00000000

**Your Electricity Charges**

| | |
|---|---|
| **Electricity** | |
| Off-Peak @ 8.700 ¢/kWh | 41.20 |
| Mid-Peak @ 13.200 ¢/kWh | 16.35 |
| On-Peak @ 18.00 ¢/kWh | 23.60 |
| **Delivery** | 53.07 |
| **Regulatory Charges** | 4.79 |
| **Debt Retirement Charge** | 0.00 |
| **Total Electricity Charges** | **$139.00** |
| **Rebate of Ontario portion of HST(8%)** | (11.12) |
| HST | 18.07 |
| **Total Amount** | **$145.95** |

**Note:** Final bill presentment pending submission to LRC.

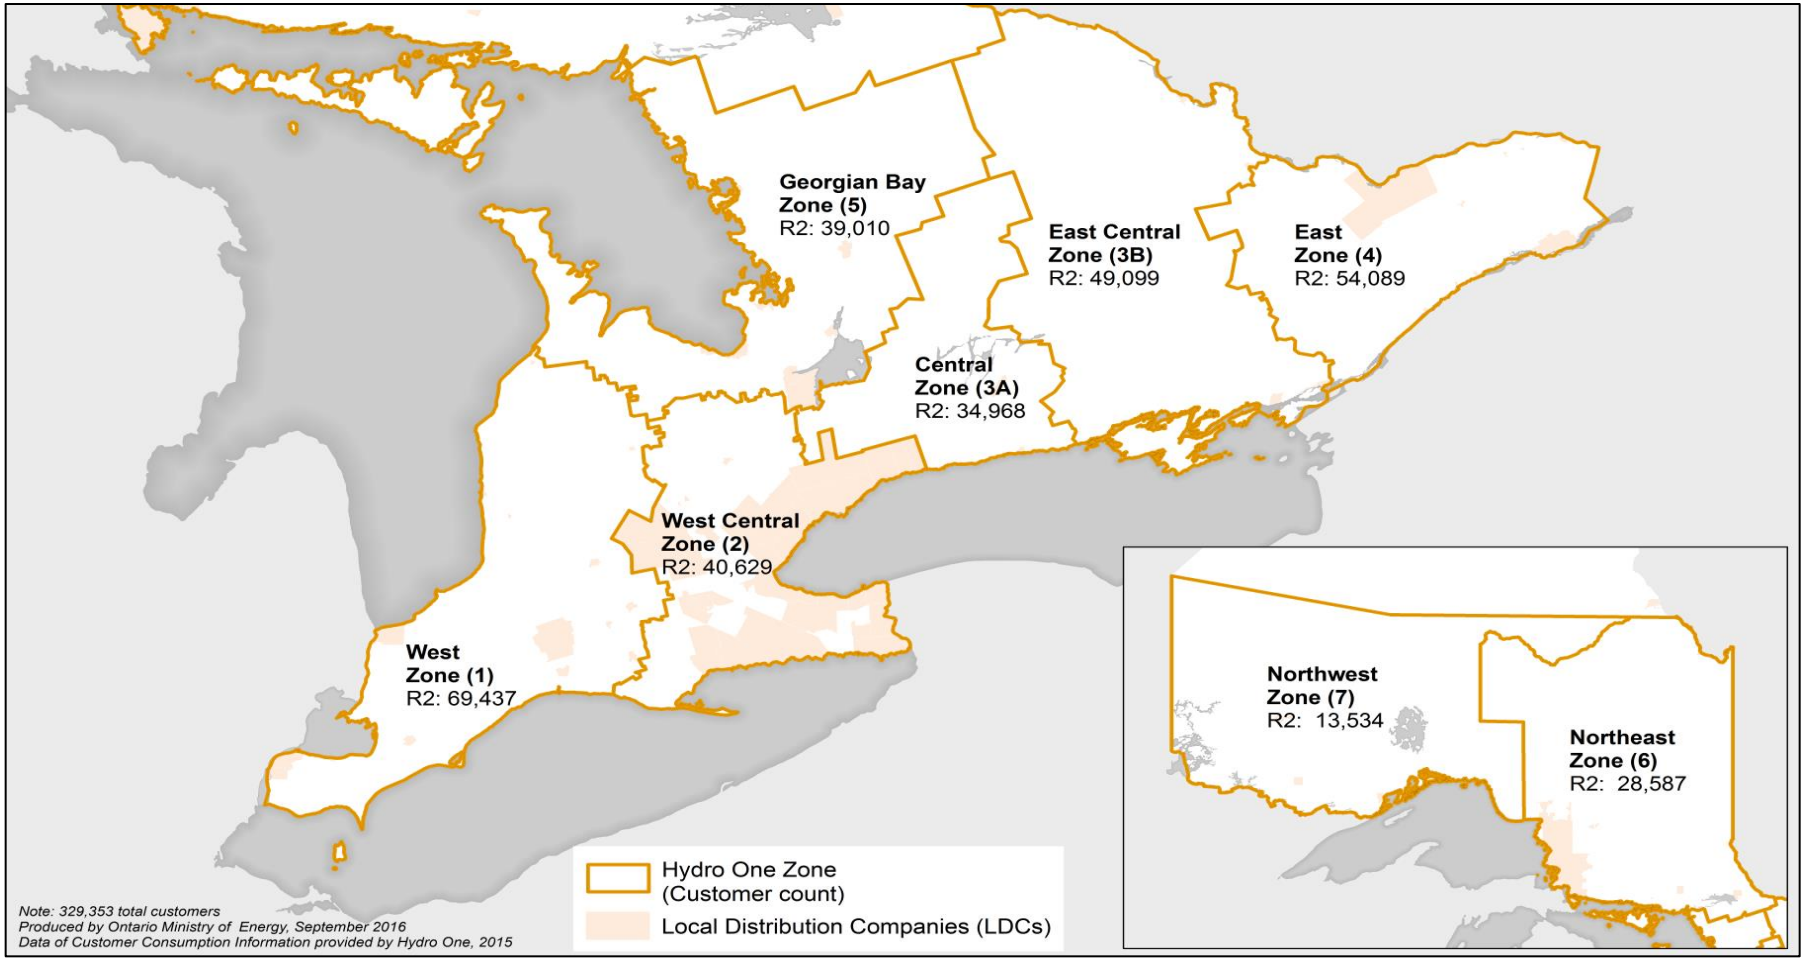
# Rural or Remote Rate Protection (RRRP) Update

- ENERGY is proposing to amend O.Reg 442/01 to provide an additional $110 million in rate protection to eligible rural or remote electricity consumers, and consider options to periodically adjust the amount of rate protection available to these consumers going forward.

- RRRP is a rate-based funded program that helps offset the higher costs to distribute electricity to Ontario residents who live in rural or remote locations all across the Province.
  - Today, RRRP is a $175-million program. For an average residential customer, the cost of supporting RRRP is roughly $1 per month. For other customers, the cost can range from $65 for a greenhouse to $8,000 for a medium industrial.
  - The majority of the program funding ($125.5 million) is provided to Hydro One's lowest-density customers – classified as R2 customers. There are approximately 329,000 R2 customers. The current program provides a rebate of $31.50. The proposed update to the program would increase the benefit to $60/month.
  - RRRP funding supporting R2 customers has been capped at the current level since 2004. As a result, the impact of its assistance has diluted over time as electricity costs have risen.

- An additional $110 million in program funding would see an increased benefit for eligible rural customers, including the 8% rebate, of $45/month. This would help bring R2 bills in line with Hydro One R1 (medium density) bills at 1000kWh.
  - This would increase the R2 portion of the RRRP to $235 million with a monthly impact on an average residential consumer of ~$0.60.
  - The RRRP could be indexed at inflation or "trued up" on a regular basis to ensure the benefit remains constant.

# Rural or Remote Rate Protection (RRRP) Update – R2 Customers by Region



## 2) Expand Industrial Conservation Initiative and Redirect Cap and Trade Proceeds

# Industrial Conservation Initiative (ICI) Expansion

- ENERGY is proposing to amend O. Reg. 429/04 to expand ICI eligibility. The base setting period for the expanded program would begin in 2017, with the benefit seen by consumers starting in 2018.

- Currently, electricity consumers over 5 MW and consumers from 3-5 MW in certain energy intensive sectors are eligible for ICI (i.e., approximately 300 Class A consumers).
  - Consumers participating in ICI include the following sectors: pulp and paper, auto, manufacturing, chemicals and mines.

- ICI would be expanded so that all consumers over 1 MW are eligible for the program, which would:
  - Reduce electricity peak demand and electricity system costs by incenting more consumers to lower their electricity demand during peak periods;
  - Reduce electricity bills for new ICI participants who are able to reduce their electricity demand during peak demand periods; and
  - Increase the electricity bills for non-ICI participants to ensure full cost recovery in the electricity system.

# ICI Expansion – Projected Impact

| | Benefit to New ICI Participants | System Benefit | Financial Impact | Residential Bill Impact |
|---|---|---|---|---|
| | Bill Savings | Peak Demand Reduction (MW) | GA shifted to Class B ($M) | |
| **Short-term** | Up to 21% | 80 | 47 | Increase of $0.42/month |
| **Long-term** | Up to 34% | 165 | 82 | Increase of $0.74/month |

- The different impacts refer to the amount of time it takes for new Class A consumers to respond to the expanded ICI eligibility
  - Short-term refers to the expected impact once ICI billing begins for new Class A consumers (one year after expanded eligibility takes place).
  - Long-term is the expected impact once new Class A consumers have had time to significantly change their behaviour and investment decisions in response to the ICI.

- The bill impacts assume a 25% uptake, which would increase Class A consumption by roughly 3 TWh, leaving an estimated 54 TWh in Class B that are either between 0.05-1 MW or choose not to opt in to ICI. This would represent an estimated 300 additional consumers in ICI, though they would represent a much smaller share of the consumption than the 300 consumers currently participating.

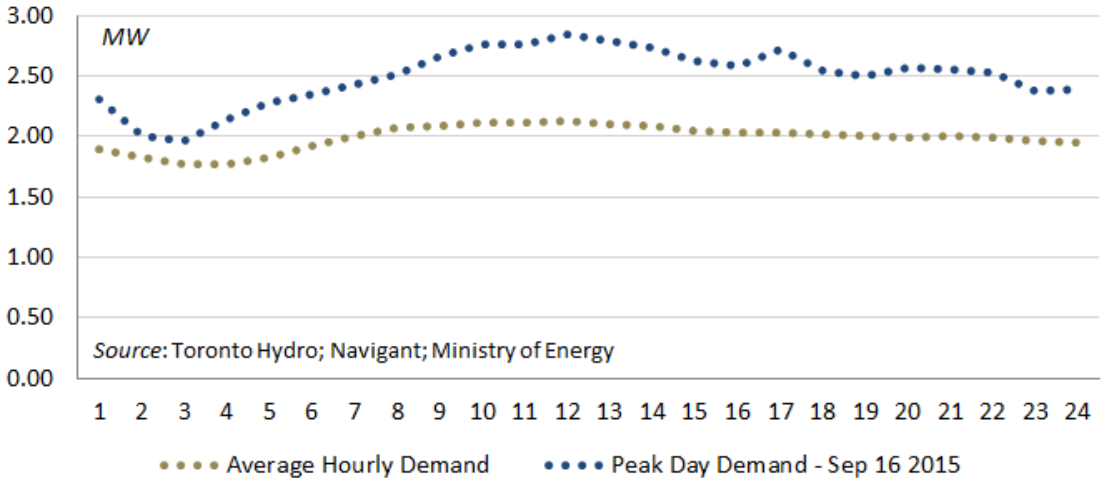
- Newly eligible consumers in the program would mostly fall into the small industrial, institutional and commercial category, including: automotive supply chain companies, office tower, large shopping mall, greenhouses and others.
  - A few examples of companies that would become eligible under such an expansion would be Kellogg, Canlan Ice Sports, Cambridge Towel, SLACAN and Casino Rama.

# ICI Expansion – Illustrative Example of Newly Eligible Consumer

- Plastics manufacturers, such as Poly Five Plastics in Toronto, are among the consumers that would become eligible if the threshold was lowered.
- Such manufacturers fall under NAICS* code 32 and have relatively flat load profiles, reflecting around the clock production. This means they would be beneficiaries of ICI even with no change in consumption behaviour.
- Companies like Poly Five Plastics could expect to see greater savings if they are willing and able to respond to the higher prices during high demand hours.

**Typical Demand Profile, 2-3 MW Consumer**

*Manufacturer, NAICS Code 32 - Nov 2014 to Oct 2015*



**Illustrative Bill Savings, 2-3 MW Consumer**

| | *Status Quo* | *No Price Response* | *Short Term Response* | *Long Term Response* |
|---|---|---|---|---|
| | **Class B** | **Class A** | **Class A** | **Class A** |
| GA | 75.26 | 58.06 | 43.55 | 32.03 |
| Total bill | **126.28** | **109.09** | **94.58** | **83.06** |
| *Savings* | | *-14%* | *-25%* | *-34%* |

Source: Navigant; Ministry of Energy

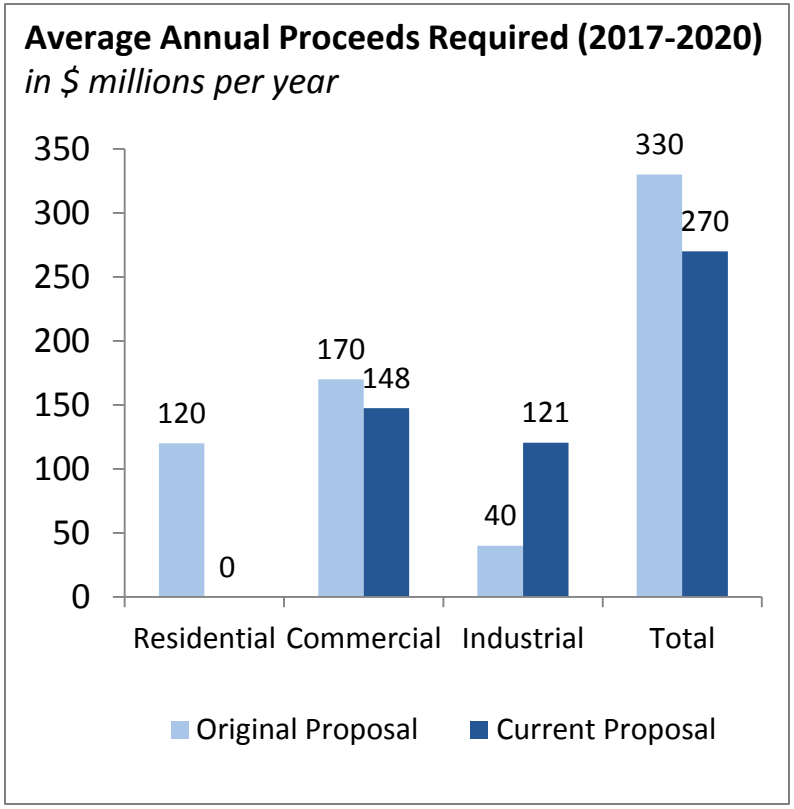
*** Note:** North American Industry Classification System (NAICS) is the standard used by statistical agencies in classifying business establishments.

# Redirect Cap and Trade Proceeds Recycling

- The 2016 Budget committed to offset the impact of cap and trade for commercial and industrial consumers, while also providing a benefit of up to $2 per month for residential consumers.
  - To meet the 2016 Budget commitment, the Climate Change Action Plan (CCAP), committed $1.3 billion from the GGRA over the first compliance period (2017-2020).

- However, providing a 8% rebate to Regulated Price Plan consumers would allow for GGRA proceeds previously committed to residential consumers to be redirected to other consumers classes and/or GHG reduction initiatives in the fiscal plan.

- The current proposal would provide additional recycling to commercial and industrial consumers, while requiring an estimated $60 million less per year (i.e., a reduction of $0.24 billion over the first compliance period).



**Note:** The original proposal was to offset the impact of cap and trade via GA to the average industrial, and would provide a benefit to commercial and residential consumers. Current proposal would recycle proceeds volumetrically to industrial and commercial consumers.

# Redirect Cap and Trade Proceeds Recycling

- Redirecting cap and trade auction proceeds to lower the cost of electricity would offset consumers' contributions to non-emitting generation.

- Redirecting helps pay for committed investments/initiatives which reduce GHGs (e.g., non-emitting generation and conservation programs).
  - Due to the long-term nature (typically 20 years) of electricity generation contracts and conservation programs, the associated costs are ongoing and are expected to be about $7 billion dollars annually during the first cap and trade compliance period. These costs will continue well beyond the timelines described in the CCAP.

- Redirecting cap and trade auction proceeds volumetrically to Class B (commercial) and Class A (industrial) consumers maintains the incentive to shift consumption from on-peak to off-peak hours.

- Using cap and trade auction proceeds to lower the cost of electricity would make it more competitive with traditionally cheaper fossil fuels.

- By using the proceeds to lower the cost of electricity, there is potential to incent fuel-switching away from fossil fuels toward much cleaner grid-connected electricity and support CCAP goals of electrification.

# Considerations

# Implementation

- On September 15, 2016, ENERGY is proposing to introduce the *Ontario Rebate for Electricity Consumers Act, 2016*.
  - If passed, the legislation would require a general regulation.
  - Amendments would also be required to various regulations to expand ICI and RRRP.

- On-bill rebate delivery would likely require adjustments to LDC billing systems, which could impact delivery costs and timelines. ENERGY (possibly through Ontario Energy Board) will consult with LDCs to accurately assess these impacts once the program has been announced.
  - In the past, LDCs have asked for at least six months' notice when implementing billing system changes.
  - Timing concerns may be alleviated by allowing LDCs to provide retroactive rebates if their systems cannot be updated in time for January 1, 2017. This was done with the OCEB.

- Detailed messaging on bills (for "low-volume" consumer bills ) could be implemented by amending O. Reg. 275/04 (made under the Ontario Energy Board Act, 1998).
  - The rebate would not be directly linked to HST.
  - With electricity invoices containing multiple line items and LDC bill presentment varying widely, direction on rebate presentment will need to be flexible to allow LDCs to incorporate easily while ensuring government-preferred branding and messaging is conveyed.

- While the impact of cap and trade would be added to electricity bills as of January 2017, the offsetting effect of proceeds recycling may not occur immediately depending on implementation and potential alignment with the first auction expected in March 2017.
  - Should there be low demand for carbon allowances, auction proceeds would be less than the amount projected in the CCAP. This could mean a short-fall for proceeds recycling as proposed. However, natural gas utilities are expected to purchase allowances quarterly equal to their emissions.

- ENERGY will need to continue to consult with the Independent Electricity System Operator (IESO), Ontario Energy Board (OEB) and LDCs regarding implementation of proceeds recycling.

# Fiscal

- The Climate Change Action Plan (CCAP) committed about $1.3 billion over four years for electricity mitigation for industrial, commercial and residential consumers from GGRA proceeds.
  - The current rate mitigation proposal requires approximately 20% less in proceeds, saving approximately $0.24 billion relative to the CCAP commitment over the first compliance period (2017-2020).

- The 8% rebate is expected to cost about $1 billion per year (i.e., $4 billion from 2017-2020), representing an additional pressure on the fiscal plan.
  - Consideration could be given to allocating the $0.24 billion in reduced proceeds required towards other existing initiatives in the fiscal plan that also reduce greenhouse gas (GHG) emissions, thereby providing an overall fiscal plan offset.
  - If cap and trade auctions are under-subscribed, the $0.24 billion may not be available for reallocation to the fiscal plan.

- In the absence of any offset strategies, the full cost of the rate mitigation approach would add to the pressures and risks that need to be managed in order for the government to balance the budget in 2017-18 and stay balanced in 2018-19 and beyond.

# Legal

- In order to avoid characterization as an unconstitutional tax, a non-tax levy must have a sufficient nexus between those who pay and the regulatory scheme in the sense that those who pay have caused the need for or benefit from the regulatory scheme. Although the case law is not developed on the extent to which some regulated actors can be required to subsidize others, risk is reduced to the extent that any cross-subsidization serves true regulatory goals rather than revenue re-distribution goals.

- 8% Rebate (shift costs from rate-base to tax base by providing a rebate equal to the provincial portion of HST):
  - Providing the contemplated rebate under the proposed Bill does not, in and of itself, give rise to legal issues. As policy direction is given on the specifics of supporting regulations, any associated legal risks can be identified.

- ICI Expansion (shift costs within rate-base by expanding eligibility for the ICI program to consumers of >1 MW):
  - Shifting costs to some consumers to lower rates for others without more carries the risk that the charge would be characterized as an unconstitutional tax. To establish that the charge is legitimate, it must be established that the purpose and effect of the charge is to facilitate the maintenance of a financially viable electricity system by way of load management or some other feature under which those who are subsidized provide an overall system benefit enjoyed by those who subsidize them.

- RRRP Update (shift costs within the rate-base by increasing the RRRP benefit paid to rural and remote customers):
  - Increasing the amount of revenue devoted to the RRRP or expanding the scope of consumers eligible for the program does not raise new legal risk. There is a good argument that the RRRP is a regulatory charge, as it socializes some of the costs of distributing electricity to rural consumers. Overall the risk that the RRRP would be characterized as a tax is assessed as moderate (meaning equally good arguments on both sides).

- Cap and Trade Proceeds Recycling (reduce impact on rate base and tax base by directing cap and trade auction proceeds to industrial consumers):
  - To be characterized as regulatory charges under the cap and trade program, auction revenues should be spent on programs that reduce GHGs.

# Communications

- A series of high-profile announcements around introduction of legislation (September 2016).
  - Keynote speech and two public events pre-introduction
  - News release at introduction
  - Full media availability province-wide
  - Regional echo events post-introduction
  - Early engagement of EDA, CEOs of LDCs
  - Stakeholder outreach/technical briefings with Ontario Chamber of Commerce, AMPCO, OEB low-income table, AMO, etc.
- **Positioning:**
  - An unprecedented plan to benefit all ratepayers in a lasting, meaningful way.
  - Rural customers will receive the largest single rate relief ever.
  - Businesses across Ontario will have even more opportunity to be competitive and manage their energy costs.
- **Issues Considerations:**
  - Significant benefit for rural and remote residential customers; net gain for all residential customers.
  - Consistent with cap-and-trade commitment that no business sector will be left worse off.

# Key Messages

- We are taking unprecedented action to help people in their everyday lives.
- Residential ratepayers and other RPP eligible ratepayers will receive an eight per cent rebate on their electricity bill, equivalent to the provincial portion of the HST.
- Modernizing the RRRP will benefit 330,000 families in rural Ontario with significant reductions to their electricity bills ($45 a month).
- Over a thousand more Ontario businesses will be eligible to benefit from the ICI program, helping them stay competitive and grow.
- These actions will assist over five million families, farms and small businesses across Ontario.
- These actions today join our many existing initiatives too help keep electricity in Ontario clean, reliable and affordable.

# Proposed Cabinet Minute

Cabinet agreed that:

1. ENERGY implement electricity price mitigation for residential, commercial and industrial consumers through the following:

    i. Provide a rebate of 8% on the pre-tax cost of electricity for all electricity consumers eligible to be billed under the Ontario Energy Board's Regulated Price Plan (RPP); and any other consumers who would be eligible for RPP if their electricity account was with a licensed distributor.

    ii. Increase the total amount of rate protection available to R2 low density electricity consumers under the Rural or Remote Rate Protection Program (RRRP) by increasing the subsidy by $110 million from its current level of $127 million which has been capped since 2003.

    iii. Implement a mechanism to periodically adjust the total annual amount of rate protection available to R2 low density electricity consumers under the RRRP, effective on or after January 1, 2018.

    iv. Expand eligibility for participation in the Industrial Conservation Initiative (ICI) to smaller industrial, institutional and commercial customers by lowering the eligibility threshold to 1 MW and removing restrictions on eligible sectors.

# Proposed Cabinet Minute (cont'd)

2. ENERGY seek necessary TB/MBC approvals.

3. ENERGY seek approvals for the proposed *Ontario Rebate for Electricity Consumers Act, 2016* which would, subject to the Legislature's approval of the Act, include the following elements:
   i. The rebate would be available starting January 1, 2017;
   ii. The legislation would specify the types of costs to which the rebate would or would not be applied, with authority to make changes by regulation;
   iii. The legislation would address invoicing requirements, including authority to prescribe how the rebate is to appear on consumers' electricity bills;
   iv. The legislation would include authority to prescribe the way in which the rebate is to be flowed through to consumers, and the way in which electricity vendors providing the rebate are to be reimbursed;
   v. The legislation would include record-keeping requirements for electricity vendors and other prescribed persons;
   vi. The legislation would include inspection powers for inspectors appointed by the minister of Finance, including powers related to the recovery of overpayments; and
   vii. The legislation would include consequential amendments to the *Ontario Energy Board Act, 1998* and the *Ontario Clean Energy Benefit Act, 2010*; and
   viii. The legislation would provide for regulation-making authority to establish a limitation period for ceasing payments and reimbursement based on past entitlement. Similar amendments would be provided for the *Ontario Clean Energy Benefit Act, 2010* but would allow the ceasing of all payments and reimbursements after a prescribed date

# Proposed Cabinet Minute (cont'd)

4. ENERGY to report back to LRC and Cabinet for approval of any supporting regulations under the proposed *Ontario Rebate for Electricity Consumers Act, 2016*, and with other complementary regulatory amendments.

5. ENERGY notes the following amendments:

   i. Amendments to Ontario Regulation 429/04 (Adjustments Under Section 25.33 of the Act) made under the Electricity Act, 1998 to lower the Industrial Conservation Initiative (ICI) threshold to 1 megawatt and require electricity consumers and market participants between 1 MW and 5 MW to opt in.

   ii. Amendments to Ontario Regulation 442/01 (Rural or Remote Electricity Rate Protection) made under the Ontario Energy Board Act, 1998, to increase support through the Rural and Remote Rate Protection Plan to R2 low density electricity customers and provide for a periodic adjustment mechanism.

6. ENERGY work with MOECC to recycle an estimated annual average of $270 million of Cap and Trade auction proceeds from the Greenhouse Gas Reduction Account for non-RPP commercial and industrial electricity consumers over the first compliance period (2017-2020) through a volumetric rebate mechanism.

7. ENERGY and MOF work with Cabinet Office, Premier's office to develop a communications plan

# Proposed Cabinet Minute (cont'd)

Cabinet approved version of the proposed *Ontario Rebate for Electricity Consumers Act, 2016* for introduction, subject to the following:

1. The Office of Legislative Counsel is authorized to prepare a French version and to make minor adjustments to the English version, for the purpose of ensuring consistency between the two versions and making other improvements or correcting mistakes discovered in the translation process.

# Appendix

# Illustrative Benefits

| | Current Bill ( before tax) | Current Rate mitigation initiatives* | New Rate Mitigation initiatives | New Bill (before tax) |
|---|---|---|---|---|
| Average Residential (Toronto – 750 kWh/month) | $139 /month | N/A | 8% pre-tax rebate: - $11 | $128 /month |
| Rural Residential (Hydro One R2 – 1000 kWh/month) | $229 /month | RRRP: –$32 | 8% pre-tax rebate + Updated RRRP: - $45 | $184 /month |
| Low-income Residential ** (Toronto – 750 kWh/month) | $101 /month | OESP: -$38 | 8% pre-tax rebate: - $8 | $93 /month |
| Small Business (Toronto – 403,200 kWh/month) | $149 /MWh | N/A | 8% pre-tax rebate: - $12/MWh | $137 /MWh |
| Small Farm (Hydro One R1 – 4,000 kWh/month) | $203 /MWh | N/A | 8% pre-tax rebate: - $16/MWh | $187 /MWh |

**Notes:**

***** Some residential consumers can also receive tax credits based on income, age and geography (Northern Ontario Energy Credit and Ontario Energy and Property Tax Credit). These credits are delivered through the Trillium Tax Credit and can be as high as $1,332 per year for a family.

** income of less than $28,000, family of 4.

The above benefits do not include the cost of ICI expansion and the RRRP update (total impact of $1.74/MWh). Totals may not add due to rounding.

# Illustrative Benefits (cont'd)

| | Current Rate | Current Rate mitigation initiatives* | New Rate Mitigation initiatives | New Rate |
|---|---|---|---|---|
| Large Institutional (Toronto – distribution-connected, 10 MW) | $108 /MWh | ICI: -$49/MWh | Proceeds Recycling: -$2.60/MWh (2017-2020 average) | $105 /MWh |
| Large Industrial (Timmins – transmission-connected, 10 MW) | $69 /MWh | ICI + NIERP: -$69/MWh | Proceeds Recycling: -$2.60/MWh | $66 /MWh |
| Small Industrial – opt-in to ICI (Toronto – 2 MW) | $152 /MWh | N/A | Proceeds Recycling + ICI: Up to -$52/MWh | $100 /MWh |
| Large Commercial – does not opt-in to ICI (Toronto – 2 MW) | $152 /MWh | N/A | Proceeds Recycling: -$2.60/MWh | $149 /MWh |
| Small Institutional (Toronto – 500 kw) | $154 /MWh | N/A | Proceeds Recycling: -$2.60/MWh | $151 /MWh |

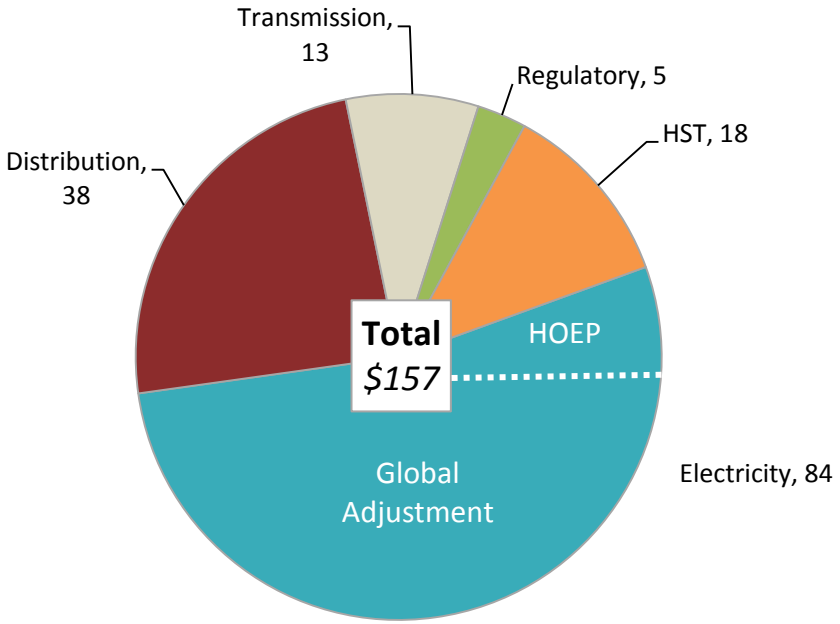
**Notes:**
The above benefits do not include the cost of ICI expansion and the RRRP update (total impact of $1.74/MWh). Proceeds recycling is net of the cost of carbon and represents an estimated average of the proceeds required over the first compliance period (2017-2020).

# Residential Electricity Prices

- There are approximately 4.5 million residential consumers in Ontario.
- The Regulated Price Plan includes nearly all residential consumers, as well as small businesses. Regulated Price Plan consumers pay a blended commodity rate regulated by the OEB, which is set every six months.
- For households, the Debt Retirement Charge (DRC) was removed from residential electricity bills as of January 1, 2016.
- In addition, the Ontario Electricity Support Program (OESP) provides an ongoing rate reduction directly on the bills of low-income electricity consumers who have applied and meet the eligibility requirements. The program is funded through the rate base.
- Rural customers, in particular those with electrical heating, pay higher monthly bills.

**Typical Residential Monthly Bills ($)**

*As of May 1, 2016 (750 kWh/month)*



*Source*: OEB, Toronto Hydro

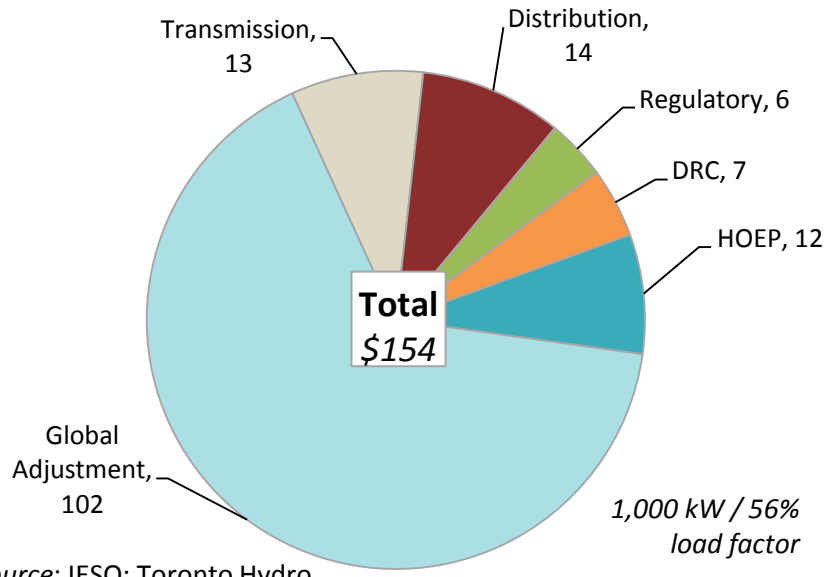
# Commercial Electricity Prices

- There are approximately 55,000 commercial and institutional consumers in the province. These consumers are Class B consumers, and have separate line items on the electricity bill for HOEP and GA.

- There is a high degree of differentiation amongst consumers within the commercial sector in terms of size and consumption patterns. For example, an elementary school has a much different hourly load profile compared to a full service restaurant. This is an important consideration when looking at the bill impacts of policy options.

**Typical Commercial Price ($/MWh)**

*YTD June 2016 (Non-RPP Class B)*



*Source*: IESO; Toronto Hydro

- Consumers in the commercial sector do not pay time-of-use prices and have little incentive to shift demand away from high demand hours.

- Targeted pricing programs are currently not available for Class B consumers.

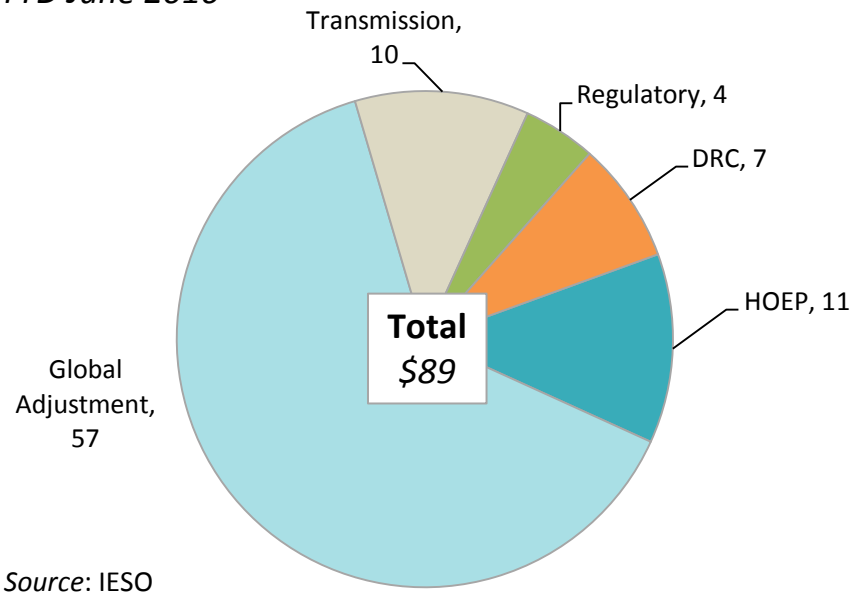
*** Note**: Most commercial consumers receive input tax credits for their HST.

# Industrial Electricity Prices

- There are about 300 large industrial consumers in Ontario.
- Measures in place to mitigate industrial electricity prices include ICI and NIERP.
- ICI lowers costs for eligible large electricity consumers (i.e., those with monthly peak demand exceeding 3 MW) that reduce consumption during peak periods.
  - ICI consumers reduce their electricity rates by 25% on average.

**Typical Large Industrial Price ($/MWh)**

*YTD June 2016*



*Source*: IESO

- Participants in NIERP receive a rebate of $20/MWh. On average, industrial electricity prices are reduced by about 20% through the program, reducing all-in prices to $69/MWh for these consumers. The program is funded through the tax base.

*** Note:** Industrial consumers receive input tax credits for their HST.

# Sales Tax Treatment in Other Jurisdictions

| Jurisdiction | Tax | Tax Paid by Business Consumers | Tax Paid by Residential Consumers | Comment |
|---|---|---|---|---|
| **British Columbia** | PST | Yes – 7% | No | • PST does not apply to residential energy, including electricity, acquired solely for residential use in a residential dwelling<br>• BC's carbon tax does not apply to electricity bills. |
| **Alberta** | None | N/A | N/A | • Alberta does not have a provincial sales tax. |
| **Saskatchewan** | PST | Yes – 5%<br>Except for electricity purchased to heat a building. | No | • PST does not apply to electricity purchased for use in a residential dwelling.<br>• PST does not apply to electricity purchased for use in heating a building that is heated solely by the electricity. |
| **Manitoba** | PST | Yes – 8%<br>Reduced rate of 1.6% applies to electricity used by a qualifying business to operate machinery | Yes – 8%<br>Electricity purchased for mixed use, 80% of which is home heating, has a reduced rate of 1.4%. Electricity solely to heat the purchaser's home is exempt. | • Winnipeg also applies a tax of 2.5% on residential and 5% on commercial. |
| **Ontario** | HST | Yes (less ITC (input tax credits)) | Yes – 8% | |
| **Quebec** | QST | Yes (less ITCs) | Yes – 9.975% | |
| **Nova Scotia** | HST | Yes (less ITCs) | Yes – 10% less provincially administered rebate. | • Rebate is equal to the provincial portion of the HST, and is administered similar to OCEB, but applies to many energy sources. |
| **New Brunswick** | HST | Yes (less ITCs) | Yes – 10% | |
| **Prince Edward Island** | HST | Yes (less ITCs) | Yes – 9% (10% beginning Oct 1, 2016) | |
| **Newfoundland and Labrador** | HST | Yes (less ITCs) | Yes – 10% | • Had a provincially administered Home Heating Rebate program until July 2015. |
| **Federal** | GST | Yes (less ITCs) | Yes – 5% | |

Hi John,

Is this the deck you were referring to? This was related to the DTB for Hydro One.

Let me know if you were referring to something else.

Regards,
Gavin He

Hi Ron,

A few comments and edits. I must say we are a bit fussed with the tone of the slide (our deck was way more neutral), in particular with respect to option 3 as it assumes a lot.

Thanks,

Francisco

**Subject:** Rate Mitigation - H1 Options

Hi Nancy, Ron,

The attached responds to a request from the SoC for options dealing with the Hydro One deferred tax benefit. This doesn't include a lot by way of pre-amble, as I think we have spent a fair bit of time discussing the issue. Ron, we attempted to take the key elements from your presentation, as well as the note that ENE prepared before the holidays. Please let me know if you have any edits / comments. Apologies for short notice, but I have been asked to share a draft with ENE DMO by EOD.

Thanks,

Scott

# Rate Mitigation Options
# Hydro One-Related Options

# Purpose

- The following presentation considers the following three options in the context of electricity rate mitigation, and the Ontario Energy Board's upcoming transmission rate decision that will include treatment of Hydro One's Deferred Tax Benefit:

    1. Dedicate the Departure Tax to ratepayers
    2. Allocate Trillium Trust Funds to Energy Projects
    3. Await OEB Decision (Status Quo)

# Context: Tax Benefit and the Ontario Energy Board Review

- Hydro One paid a one time Departure Tax of $2.6 B to the Ontario Electricity Financial Corporation (OEFC) towards stranded debt ~~Province~~ prior to exiting the payments-in-lieu of tax regime and then recorded a Deferred Tax Benefit (DTB) of ~$2.8 B, as it entered the income tax regime, post-IPO
  - The Province recorded increased revenues of ~$2.4B due to the DTB, which it has allocated to the Trillium Trust
- The Ontario Energy Board (OEB) is currently reviewing Hydro One's 2017-18 transmission rate application to determine whether the DTB should be allocated to the benefit of ratepayers rather than shareholders
  - There is no clear precedent, has been ~~as it is~~ rare; however, could arise in future in the case of transactions of municipally-owned electricity utilities
    - The OEB may consider the impact of a precedent that could also negatively affect LDC consolidation by reducing value and transaction prices~~for the seller to benefit from tax collections~~
  - Hydro One believes it has a strong argument to keep the DTB, as Hydro One paid the departure tax, investors purchased shares on the basis that the value of the tax shield would flow to their benefit, and ratepayers are no worse off as a result of the transaction
    - This argument is complicated by the Province's equity injection of $2.6 B to Hydro One pre-IPO, which was done to mitigate the negative financial consequences arising from the Departure Tax payment. A shareholder equity injection is consistent with the departure tax being funded by equity holders, not ratepayers, so that an associated DTB should be for the benefit of shareholders as well.
  - Hydro One and the IPO lead bookrunners reached out to regulatory experts in 2015 for an assessment and although outlined as a risk in the prospectus, this was viewed as an unlikely outcome at the time of the IPO
- In the event the OEB requires the benefit from the DTB to flow to ratepayers, the lead bookrunners calculated an earnings impact of ~$1 B on a present value basis (~$1.85 per share). Further impacts to share value could arise depending on whether analysts and investors reconsider regulatory risk
- OEB's transmission rate decision is expected in late winter / early spring 2017, and a similar decision on distribution rates is expected at the end of 2017

# Option 1: Dedicate Departure Tax to Ratepayers

- Dedicate the $2.6B Departure Tax to ratepayers over 5-10 years

- Prior to the OEB's decision on the Hydro One transmission rate application, the Province could commit to providing value equivalent to the tax payment to ratepayers
- This may ~~would~~ reduce the likelihood that OEB would require providing the DTB to ratepayers

| | |
|---|---|
| **Ratepayer Impact** | • Typical Residential ratepayers would save $2.79/month if allocated over 5 years or $1.39/month if allocated over 10 years<br>• Relief would be temporary and could result in a spike in electricity bills following the conclusion of the mitigation initiative<br>• This benefit could apply to all Ontario ratepayers, or be conveyed as targeted relief |
| **Fiscal Impact** | • The tax payment did not result in a net fiscal benefit to the Province as it was offset upon consolidation by the tax expense on Hydro One's financial statements<br>• Dedicating the departure tax to ratepayers would have a negative fiscal impact on a dollar per dollar basis as the Province would record an annual expense of $520M (5yrs) or $260M (10yrs)<br>• Reallocating the departure tax from OEFC to ratepayers would also cause an equivalent increase to the unfunded liability of OEFC (or "stranded debt") |
| **Other** | • Discussions with OEB would be required to ensure this tradeoff is acceptable. Otherwise, there may be an additional fiscal impact ~~risk~~ pending an OEB decision on the treatment of the DTB<br>• This decision may lead to pressure for the Province to adopt a similar policy for future departure tax payments (e.g. municipal utility transactions)<br>• Implementation mechanisms require further consideration, including legal considerations with respect to any involvement from OEFC as its main objective is to reduce stranded debt. |

# Option 2: Allocate Trillium Trust Funds to Energy Projects

- Allocate a portion of the Trillium Trust to investments in electricity sector projects

- In advance of OEB's decision on Hydro One's rate application, the Province could expand the Trillium Trust project types ~~by allocating a portion of the benefit that the Province received from the broadening of ownership of Hydro One,~~ to also include electricity infrastructure projects. However, this would crowd-out Moving Ontario Forward projects already internally identified as Trillium Trust recipients.
- While it is not certain that this would ~~In addition to~~ mitigat~~eing~~ the risk of an adverse regulatory decision, this would help defray the ratepayers' cost of investments that are made to modernize the province's electricity infrastructure, shifting the cost to the tax base. (Potential projects could include transmission connection to remote communities and natural gas expansion)

| | |
|---|---|
| **Ratepayer Impact** | • The ratepayer impact may be small and/or deferred until projects are in-service<br>• Benefits may accrue to a select group of ratepayers depending on the location and type of projects that are funded |
| **Fiscal Impact** | • If invested in Provincially-owned assets, the fiscal cost would be spread over the life of the asset but would be incremental to the amounts included in the current infrastructure plan. If spent on non-provincially-owned assets, the fiscal impact would be upfront as funds are transferred [accounting TBC].<br>• Incremental interest costs associated with funding incremental electricity projects, assuming Moving Ontario Forward projects continue to be funded/financed from another source (debt)<br>• There would be indirect fiscal impacts as there would be fewer infrastructure projects available for electricity sector companies where the Province has a stake and earns a rate of return (OPG, Hydro One).<br>• This could also decrease the value of Hydro One shares if investors consider such measure affects the long-term prospects of Hydro One (i.e., as it would have fewer areas/projects where it could invest). |
| **Other** | • Discussions with OEB would be required to ensure this trade-off is acceptable. Otherwise, there would ~~may~~ be additional fiscal risk pending an OEB decision on the treatment of the DTB<br>• This represents a policy shift, as the asset optimisation amounts have been fully allocated to go to Moving Ontario Forward projects<br>• Depending on structuring, the Province would ~~may~~ have expenses (upfront or over time) associated with electricity infrastructure spending without a mechanism for cost recovery (if the Province owned the rate-regulated or contracted electricity infrastructure with rate recovery, while there may be no fiscal impact, there would be no (or little) ratepayer rate reduction – could raise questions on one rationale for selling Hydro One shares)<br>• Implementation mechanisms require further consideration |

# Option 3: Await OEB Decision (Status Quo)

- Take no action and let the OEB decide, as part of Hydro One's rate filing, whether the DTB should benefit ratepayers or shareholders

- The following table highlights considerations assuming the OEB rules in favour of ratepayers. However, this is not to suggest that there is evidence that this would be the most likely outcome and with respect to some or all of the amount of the DTB.

| | |
|---|---|
| **Ratepayer Impact** | • Residential customers could benefit from a small reduction in rates (~8 cents/month for transmission customers), potentially continuing over several years<br>• Assuming a similar decision is applied to the distribution application, typical medium density Hydro One customers would experience a reduction of ~78 cents/month. However, this benefit would flow only to Hydro One customers and only if the OEB allocates the full amount. |
| **Fiscal and Shareholder Impact** | • Share price could decline by ~$1.85 per share, due in part to the reduction in expected future earnings, and also because this surprise decision would affect perceived regulatory risk<br>• Hydro One may also write down the DTB, which could trigger a negative fiscal impact from a write down of the Province's $2.4B portion of this benefit that has already credited to the Trillium Trust and recognized in the 2015-16 Public Accounts.<br>• As a result of both the decline in share price, and write down of the tax benefit, the Province may have difficulty in achieving its asset optimization target. ~~reaching its objective of $4B in net gains from the broadening of ownership of Hydro One to be dedicated to the Trillium Trust~~ |
| **Other** | • This option would allow for targeted benefits to flow to Hydro One customers, but the Province would not control the size or timing of those benefits<br>• The Province would not be credited for any rate mitigation resulting from this outcome, although the Province could emphasize the OEB's role in protecting consumers<br>• Some of the downside would be absorbed by private investors<br>• If the OEB allows Hydro One to keep the DTB, as is expected by Hydro One, the Province would still be able to introduce rate mitigation measures. |

> Helen Graham and Cindy Veinot gave me a call. Helen called first and then asked me to a call with Cindy.

So DM of Energy appears to have engaged DM of TBS which is how OPCD received the deck. Energy asked for comments from an accounting perspective which is how OPCD seemed to have gotten engaged.

They wanted mostly clarification on Global Adjustment and what it covers. Cindy's comments were to the point that she would not see how this will not lead to a fiscal hit. That you cannot create a receivable/asset , unless there is a counterparty or unless it is a rate regulated entity.

I'm running out of steam so will be heading out shortly but will try to provide you with a note this weekend.

Thanks,

John.

Hey John,

Not sure what timing Ron's expecting for this and what you're thinking.

Could this wait til Monday to regroup and action on, otherwise I might be free tomorrow evening if it's needed first thing in the AM.

Shajee

> Hi,
>
> While they list some tax-based programs that are not cost shifts, they do not list NIER nor the recent 8% rebate, and they only show to 2016, prior to the latter and the expansion of RRRP. I would have thought it would be helpful to show those.

On slide 5, it would be helpful to show, for context, the cost of electricity programs already on the tax base, such as historically OCEB and the 8% going-forward, as well as NIER, OEPTC, NOEC, and ending the DRC early too.

Ron

Hi Steve,
The attached shows costs shifts within the electricity sector which are the result of rate mitigation programs which benefit some consumers. It also shows the total cost of these programs. This was produced in response to a request from Ed.

ENERGY

# Cost Shifts in Ontario's Electricity Sector

## Working Draft

November 2016

CONFIDENTIAL DRAFT

# Context

- Necessary investments in Ontario's electricity system have led to increased prices, prompting government to introduced a number of price mitigation programs for all consumer types.
  - In addition to existing rate mitigation programs, the 2016 Throne Speech announced a package of rate mitigation initiatives to address electricity prices for residential, commercial and industrial consumers.

- Ontario has a number of programs in place to manage residential electricity prices, including:
  - Ontario Electricity Support Program (OESP);
  - Rural or Remote Rate Protect (RRRP);
  - Northern Ontario Energy Credit (NOEC); and
  - Ontario Energy and Property Tax Credit (OEPTC).

- Ontario also has a number of programs in place to manage industrial electricity prices, including:
  - Industrial Conservation Initiative (ICI);
  - Industrial Electricity Incentive (IEI);
  - Industrial Accelerator Program (IAP);
  - saveONenergy for Business Program; and
  - Demand Response.

# Context (cont'd)

- Several programs in the electricity sector “shift costs” from one group of electricity consumers to another:
  - **Rural or Remote Rate Protect** (**RRRP)** is a longstanding program that reduces the delivery charge for rural electricity consumers and is paid for by all consumers in Ontario through a regulatory charge on bills.
  - **Ontario Electricity Support Program (OESP)** is funded via a regulatory charge on consumer bills and provides support for qualifying low income electricity consumers.
  - **Industrial Conservation Initiative (ICI)** empowers large consumers to lower their costs by reducing their demand during peak hours. In the process, ICI shifts costs from large electricity consumers to all other consumers in Ontario.
  - **Industrial Electricity Incentive** (**IEI**) program, offers reduced electricity prices for companies starting or expanding operations in Ontario. All electricity consumers in Ontario pay for the price reduction that IEI participants receive.

# Cost Shifts in Ontario's Electricity Sector

- The tables on the right show the estimated cost shifts that result from existing government programs.
- ICI has had the largest cost shift of all the programs, due to the large size of Global Adjustment (GA) and the way that it is recovered from consumer classes.
- RRRP and OESP impact the regulatory line on consumer bills, while ICI, IEI and conservation affect GA (i.e., Electricity line on bills of Regulated Price Plan consumers).

**Cost Shift Impacts - Residential Bill**

*Typical 750 kWh/month Toronto Hydro consumer*

| *$/month* | 2011 | 2012 | 2013 | 2014 | 2015 | 2016 |
|---|---|---|---|---|---|---|
| ICI | 2.65 | 3.25 | 3.88 | 3.53 | 4.75 | 4.77 |
| RRRP | 0.90 | 0.82 | 0.84 | 0.92 | 0.93 | 0.94 |
| OESP | - | - | - | - | - | 0.84 |
| Conservation | 1.85 | 1.92 | 2.00 | 1.58 | 2.43 | 2.45 |
| IEI | - | - | 0.08 | 0.09 | 0.11 | 0.12 |
| **Total** | **5.41** | **5.99** | **6.81** | **6.13** | **8.21** | **9.12** |

**Cost Shift Impacts - Industrial Bill**

*Typical Class A consumer*

| *$/MWh* | 2011 | 2012 | 2013 | 2014 | 2015 | 2016 |
|---|---|---|---|---|---|---|
| ICI | -22.17 | -26.36 | -30.29 | -25.91 | -33.79 | -33.92 |
| RRRP | 1.20 | 1.10 | 1.12 | 1.23 | 1.24 | 1.25 |
| OESP | - | - | - | - | - | 1.13 |
| Conservation | 1.53 | 1.59 | 1.66 | 1.31 | 2.01 | 2.02 |
| IEI | - | - | 0.07 | 0.08 | 0.09 | 0.10 |
| **Total** | **-19.43** | **-23.67** | **-27.44** | **-23.29** | **-30.45** | **-29.43** |

**Note:** OESP did not come into effect until 2016. The 2016 values represent forecasts and are subject to change.

# Cost Shifts in Ontario's Electricity Sector (cont'd)

- The table on the right shows the total cost for various government electricity programs. These programs are currently funded through the electricity system ratebase.

- Funding of these programs through the fiscal plan would remove these costs from the electricity system (i.e., Placing these costs on the taxbase).

**Cost of Programs**

*By government program*

| *$M* | 2011 | 2012 | 2013 | 2014 | 2015 | 2016 |
|---|---|---|---|---|---|---|
| ICI | 506 | 615 | 736 | 670 | 890 | 893 |
| RRRP | 172 | 156 | 159 | 176 | 174 | 176 |
| OESP | - | - | - | - | - | 158 |
| Conservation | 329 | 339 | 354 | 280 | 425 | 428 |
| IEI | - | - | 15 | 16 | 18 | 19 |

- For example, removing the roughly $900 million of program cost from the Industrial Conservation Initiative (ICI) program would save the typical residential electricity consumer $4.77 per month in 2016.

**Note:** OESP did not come into effect until 2016. The 2016 values represent forecasts and are subject to change.

# Total Components of Global Adjustment

- Global Adjustment (GA) is a market mechanism that recovers costs from electricity consumers, including the cost of almost all conservation programs in the province (i.e., approximately half a billion dollars in 2016).

**TREASURY BOARD / MANAGEMENT BOARD OF CABINET**
**REQUEST ASSESSMENT NOTE**

| | | |
|---|---|---|
| **Ministry:** | Energy | |
| **Meeting Date:** | September 12, 2016 | |
| **Agenda Class:** | Major | |
| **Last reviewed by:** N/A | | **Tracking to:** Cabinet - September 12, 2016 |

| **SUBMISSION TITLE:** | Electricity Price Mitigation |
|---|---|

## I. DECISION BEFORE THE BOARD

The Ministry of Energy is requesting approval of a suite of initiatives providing relief to various electricity consumer classes.

## II. RECOMMENDATIONS:

| | |
|---|---|
| • Approve a suite of initiatives to provide relief to various electricity consumer classes (pending Cabinet policy approval):<br>– Providing an 8% rebate to Regulated Price Plan consumers;<br>– Expanding the Industrial Conservation Initiative;<br>– Updating the Rural or Remote Rate Protection program; and,<br>– Using $270M in cap and trade proceeds to ensure industrial and commercial consumers are not negatively impacted by cap and trade by providing a modest reduction in rates. Balance of proceeds intended for electricity relief through the Climate Change Action Plan ($60M), could provide some fiscal offsets.<br>• Approve $300M in Supplementary Estimates for electricity price mitigation.<br>• Direct the Ministry to report back to TB/MBC through the annual planning process with updated future year impacts, and obtain any required TB/MBC approvals to implement the initiatives<br>• Recommend proceeding to Cabinet with the proposed legislation amendments to existing regulations to implement the initiatives. | *Board Judgment* |

## III. FINANCIAL SUMMARY

| **$ Millions** | **2016-17** | **2017-18** | **2018-19** |
|---|---|---|---|
| Initiative cost requested | 300.0 | 1100.0 | 1100.0 |
| Initiative cost recommended | 300.0 | 1100.0 | 1100.0 |
| Recommended program base | 300.0 | 1100.0 | 1100.0 |
| Offset Recommended – Applies if cap and trade proceeds diverted to in-plan initiatives | 0.0 | (60.0) | (60.0) |
| Total Fiscal Impact | 300.0 | 1040.0 | 1040.0 |

## IV. KEY COMMENTS AND CONSIDERATIONS

Context

Electricity costs have increased as the province has made investments in clean energy generation and modernized electricity infrastructure. Electricity bills are expected to continue to increase as more renewable energy projects come online. Since 2010, average bills for residential consumers (i.e., using 750 kWh/month) have increased by over 50%. Rates paid by commercial and industrial electricity consumers have increased by 56% and 6% respectively over the same period. Appendix C provides supporting background information.

As part of the 2016 Budget, the government committed to offset the impact of cap and trade in Ontario for commercial and industrial electricity consumers, while also providing a benefit of up to $2 per month for residential electricity consumers. The Climate Change Action Plan (CCAP) included up to $1.32B over 4 years to help keep electricity rates affordable.

The Ontario Clean Energy Benefit (OCEB) expired December 31, 2015, as part of the originally planned, five-year legislated program put in place as a broad-based, transitional measure to a cleaner electricity system. OCEB was also put in place following the implementation of the Harmonised Sales Tax (HST). Unlike the previous provincial Retail Sales Tax (RST), the HST (and GST) included electricity in the taxable base. With the end of OCEB, the government ended the electricity Debt Retirement Charge (DRC) on residential users earlier than planned, as of January 1, 2016, and also put in place the low-income targeted Ontario Electricity Support Program (OESP).

In order to achieve the Budget commitment and additional price mitigation, while delivering on the Province's climate change objectives, the Ministry of Energy has developed price mitigation initiatives that consider tax-based levers, cap and trade proceeds, and shifting costs within the rate-base.

Proposal

The Ministry is proposing the following to mitigate electricity prices for consumers (Appendix D provides more information on each item below):

- Provide an 8% rebate on the pre-tax cost of electricity to consumers eligible for the Regulated Price Plan (i.e., residential, small business and farms), equivalent to the provincial portion of HST.
- Expand Industrial Conservation Initiative (ICI) eligibility by lowering the threshold to 1 MW, to provide support to Class B eligible electricity consumers (i.e., commercial, institutional and small industrial).
- Update the Rural or Remote Rate Protection (RRRP) program, to provide relief to rural customers.
- Use cap and trade proceeds to provide a modest rate reduction for commercial and industrial electricity consumers.

Public high-profile communications would coincide with introduction of legislation (September 2016). Currently, the 8% rebate would be available starting January 1, 2017, along with updating the RRRP. Expanding ICI won't be added to bills until 2018 due to the time required to implement the expansion and for billing changes. The impact of cap and trade would not be added to electricity bills until 2017.

The following tables provide an overview of the four initiatives, recipients, projected financial impact, grouping them based on whether taxpayers or ratepayers cover the costs:

| | Measure | Annual Impact | Targeted Recipients |
|---|---|---|---|
| **Taxpayers cover the costs (Potential to impact the Province's Fiscal Plan)** | | | |
| **1.** | 8% Rebate to Regulated Price Plan | Fiscal $1100M | Residential, small business and small farms, and other small users |
| **2a.** | Use cap and trade proceeds to provide a modest reduction in rates for commercial and industrial electricity consumers. (Implementation details under development). | ($270M) in cap and trade proceeds to offset $270M in costs for reducing rates<br><br>No Fiscal Impact | The CCAP allocated up to $330M/year in cap and trade proceeds for electricity price mitigation.<br><br>See item 2b. regarding the residual amount of cap and trade proceeds ($330M - $270M = $60M) |
| **2b.** | While CCAP anticipated $330M/year was required to keep electricity affordable, the residential portion of this commitment is met by the 8% rebate. As such, some of the CCAP allocated proceeds can be redirected to other GHG reduction initiatives already in the fiscal plan. | Fiscal ($60M) | Provides fiscal plan flexibility of $60M/year if these proceeds are diverted to offset costs of other existing in-plan initiatives that reduce GHG emissions. |
| | **Total Fiscal Impact** | $1040M | Matches Financial Summary on page 1 for 2017-18 |

| | Measure | Annual Impact | Targeted Recipients |
|---|---|---|---|
| **Ratepayers cover the costs (No impact to the Province's Fiscal Plan)** | | | |
| **3** | Expanding ICI eligibility to customers above 1MW in all sectors | Rate base ($47M/$82M)** | Intermediate and large-sized industrial, commercial and institutional consumers above 1MW in all sectors |
| **4.** | Updating Rural or Remote Rate Protection | Rate base ($110M) | Residents in rural or remote locations: Hydro One's lowest-density R2 customers. |

** Short-term/Long-term rate base impact, where short term is one year after expanded eligibility takes place and long-term is expected impact once new customers have time to change behavior.

Due to the nature of the ICI Global Adjustment mechanism and cost recovery of RRRP, the rate base proposals (#3 and #4) above benefit the targeted recipients, but come at a cost to all other electricity rate payers in Ontario.

The following table from the Ministry highlights the benefits by electricity consumer class.

| | Average Annual Fiscal Impact | Average Annual Greenhouse Gas Reduction Account (GGRA) Proceeds Impact | Regulated Price Plan (Residential) Benefit | | Class B (Commercial) Benefit | Class A (Industrial) Benefit | |
|---|---|---|---|---|---|---|---|
| | | | *Average (750 kWh/ month)* | *Rural (1000 kWh/ month)* | | *Existing* | *New* |
| • 8% rebate to Regulated Price Plan eligible consumers<br>• ICI Expansion<br>• RRRP Update<br>• Proceeds Recycling | $1.0 billion annually | $0.27 billion annually<br>(Reduction of $0.06 billion annually or $0.24 billion total from the CCAP commitment) | -$11/ month<br>(-8%) | -$45/ month<br>(-20%) | -$3/MWh<br>(-2%) | -$3/ MWh<br>(-3%) | Up to -$52/MWh<br>(-34%) |

**Notes:** * The above benefits do not include the cost of ICI expansion and the RRRP update (total impact of $1.74/MWh). Proceeds recycling is net of the cost of carbon and represents an estimated average of the proceeds required over the first compliance period (2017-2020).

See Appendix E for more illustrative bill impacts. See Appendix F for an electricity bill mock-up.

Fiscal Impact

The Ministry estimates proceeding with an 8% Regulated Price Plan (RPP) rebate without a cap would cost an estimated $1.1 billion per year. The Ministry's estimate of $300M needed for 2016-17 (to cover the first three months of 2017 when the 8% rebate applies) will be addressed through Supplementary Estimates. The Ministry will use the annual planning process to update future year impacts.

The Ministry also indicates the current proposal would use cap and trade proceeds to eliminate carbon price impacts/ grid emission reductions to ratepayers, as was established through the CCAP. This proposal does not require the full $330M/year notionally allocated through the CCAP, which could provide fiscal plan flexibility of about $60M per year to commit to other GHG reduction initiatives in the fiscal plan.

Cap and Trade Proceeds

The 2016 Budget committed to offset the impact of cap and trade for commercial and industrial consumers, while also providing a benefit of up to $2 per month for residential consumers (on average). While residential and other consumers would benefit from the 8% pre-tax rebate, this does not apply to non-Regulated Price Plan eligible consumers (larger industrial, commercial, and other consumers). As such, the Ministry is proposing to direct a portion of cap and trade auction proceeds to industrial and commercial consumers not in the RPP to provide a modest rate reduction. This proposal fulfills the policy objective established in the Climate Change Action Plan to eliminate carbon price impacts/ grid emission reductions to electricity ratepayers.

To be characterized as a regulatory charge under the cap and trade program, auction proceeds need to be spent on programs that are reasonably likely to reduce or support the reduction of greenhouse gases. The Ministry has indicated that their proposal would use proceeds to offset

the costs of committed investments that reduce greenhouse gases (e.g., non-emitting generation and conservation programs) and could incent fuel-switching away from fossil fuels.

Considerations – Implementation

At this point, the Ministry has presented a high level overview of major implementation pieces:

- New legislation would be required to enable the 8% rebate proposal. Legislation would closely mirror the Ontario Clean Energy Benefit Act, 2010. If passed, the legislation would require a general regulation. Amendments would also be required to various regulations to expand ICI and RRRP.
- On-bill rebate delivery would likely require adjustments to LDC billing systems, which could impact delivery costs and timelines. The Ministry indicates it will consult with LDCs (possibly through the Ontario Energy Board) to accurately assess these impacts once the program has been announced. In the past, LDCs have asked for at least six months' notice when implementing billing system changes. Timing concerns may be alleviated by allowing LDCs to provide retroactive payments rebates if their systems cannot be updated in time for January 1, 2017. This was done with the OCEB.
- Detailed messaging on bills could be implemented. The rebate would not be directly linked to HST. With electricity invoices containing multiple line items and LDC bill presentment varying widely, direction on rebate presentment will need to be flexible to allow LDCs to incorporate easily while ensuring government-preferred branding and messaging is conveyed.
- The Ministry will need to continue to consult with the Independent Electricity System Operator (IESO), Ontario Energy Board (OEB) and LDCs regarding implementation of proceeds recycling.

Legal Considerations

8% Rebate (shift costs from rate-base to tax base by providing a rebate equal to the provincial portion of HST):

- Providing the contemplated rebate under the proposed Bill does not, in and of itself, give rise to legal issues. As policy direction is given on the specifics of supporting regulations, any associated legal risks can be identified.

ICI Expansion (shift costs within rate-base by expanding eligibility for the ICI program to consumers of >1 MW):

- To establish that the charge is legitimate, it must be established that the purpose and effect of the charge is to facilitate the maintenance of a financially viable electricity system by way of load management or some other feature under which those who are subsidized provide an overall system benefit enjoyed by those who subsidize them.

RRRP Update (shift costs within the rate-base by increasing the RRRP benefit paid to rural and remote customers):

- Increasing the amount of revenue devoted to the RRRP or expanding the scope of consumers eligible for the program does not raise new legal risk. There is a good argument that the RRRP is a regulatory charge, as it socializes some of the costs of distributing electricity to rural consumers. Overall the risk that the RRRP would be characterized as a tax is assessed as moderate (meaning equally good arguments on

both sides).

Cap and Trade Proceeds Recycling (reduce impact on rate base and tax base by directing cap and trade auction proceeds to industrial consumers):

- To be characterized as regulatory charges under the cap and trade program, auction revenues should be spent on programs that reduce GHGs.

Other Considerations

- This request does not align with the 2016 Budget fiscal plan and there are no proposed offsets for the 8% rebate.
- The 8% rebate would provide a typical residential consumer about an $11 per month benefit on average, exceeding the Budget 2016 $2 per month on average cap and trade commitment. The proposal to offer a modest rate reduction for industrial and commercial consumers also exceeds the Budget commitment to simply offset the impact of cap and trade on these consumers.
- Reduction in electricity prices that do not consider consumption amounts (e.g., without the cap in the previous OCEB program) does not promote electricity conservation and may be seen as unaligned with climate change objectives.
- Other price mitigation measures introduced following the implementation of the HST, as well as the end of OCEB, would continue.
  - Both the energy portion of the Ontario Energy and Property Tax Credit (OEPTC) and NOEC were introduced/ enhanced following the introduction of the HST and have a significant annual fiscal cost (totalling about $500 million annually).
  - The DRC on residential consumers was ended early, as of January 1, 2016 (about a $340 million impact in 2016-17).
  - OESP is a low-income targeted program funded by electricity consumers through the electricity rate base.

## APPENDIX A: PROPOSED MINUTE

Approve electricity price mitigation for residential, commercial and industrial consumers.

In this regard:

i) Approve a suite of initiatives to provide relief to various electricity consumer classes:

   a) Provide a rebate of 8% on the pre-tax cost of electricity for all electricity consumers eligible to be billed under the Ontario Energy Board's Regulated Price Plan (RPP); and any other consumers who would be eligible for RPP if their electricity account was with a licensed distributor, starting January 1, 2017.

   b) Increase the total amount of rate protection available to R2 low density electricity consumers under the Rural or Remote Rate Protection Program (RRRP) by increasing the subsidy by $110 million from its current level of $127 million which has been capped since 2003.

   c) Implement a mechanism to periodically adjust the total annual amount of rate protection available to R2 low density electricity consumers under the RRRP, effective on or after January 1, 2018.

   d) Expand eligibility for participation in the Industrial Conservation Initiative (ICI) to smaller industrial, institutional and commercial customers by lowering the eligibility threshold to 1 MW and removing restrictions on eligible sectors.

   e) Provide a modest rate reduction to commercial and industrial electricity consumers using cap and trade auction proceeds to offset the cost.

ii) Recommend to Cabinet the proposed Ontario Rebate for Electricity Consumers Act, 2016 and that the Ministry proceed to Legislation and Regulations Committee before the end of 2016 with supporting regulations under the proposed Ontario Rebate for Electricity Consumers Act, 2016.

iii) Approve the implementation details associated with the suite of initiatives:

   a) Approve:

      1. The creation of a new item entitled "Ontario Rebate for Electricity Consumers" in the Electricity Price Mitigation Program (Vote/Item 2905-3).

      2. The creation of a new Transfer Payment entitled "Ontario Rebate for Electricity Consumers" in Rebate for Electricity Consumers (Vote/Item 2905-3).

      3. An expenditure increase in the amount of $300,000,000 in 2016-17 in the Transfer Payment entitled "Rebate for Electricity Consumers[1]" in Rebate for Electricity Consumers (Vote/Item 2905-3). Direct the Ministry to return any under-spending to the Treasury Board Contingency Fund.

[1] Pending approval of the proposed Ontario Rebate for Electricity Consumers Act, 2016

b) Note:

1. Funding for 2016-17 will be implemented through Supplementary Estimates in the Fall of 2016.

2. Future year impacts of $1,100,000,000 in 2017-18 and $1,100,000,000 in 2018-19, and $1,200,000,000 in 2019-20 and ongoing.

c) Direct the Ministry to report back to Treasury Board/Management Board of Cabinet in the 2017-18 Program Review, Renewal, and Transformation process on updated future year impacts, and a potential offset strategy for resource requirements to support program implementation

iv) Note the reallocation of cap and trade auction proceeds from the up to $1,320,000,000 that was previously allocated through the Climate Change Action Plan for electricity price mitigation, as follows:

a) The Ministry of Energy to work with the Ministry of the Environment and Climate Change to invest an estimated amount of up to $1,080,000,000, from 2017-18 to 2020-21, of cap and trade auction proceeds for non- Regulated Price Plan commercial and industrial electricity consumers over the first compliance period (2017-2020) through a volumetric rebate mechanism.

b) The remaining up to $240,000,000, from 2017-18 to 2020-21, which was previously allocated in the Climate Change Action Plan to eliminate carbon price impacts/ grid emission reductions to ratepayers, to be used for other existing initiatives within the fiscal plan that reduce greenhouse gas emissions.

In this regard:

1) Direct the Ministry of the Environment and Climate Change to work with Treasury Board Secretariat and Ministry of Finance to identify other existing initiatives within the fiscal plan that reduce greenhouse gas emissions that can be funded with the remaining up to $240,000,000, from 2017-18 to 2020-21, which was allocated in the Climate Change Action Plan to eliminate carbon price impacts/ grid emission reductions to ratepayers.

v) To support implementation of electricity price mitigation, the Ministry is proceeding with the following amendments to existing regulations:

a) Amendments to Ontario Regulation 429/04 (Adjustments Under Section 25.33 of the Act) made under the Electricity Act, 1998 to lower the Industrial Conservation Initiative (ICI) threshold to 1 megawatt and require electricity consumers and market participants between 1 MW and 5 MW to opt in.

b) Amendments to Ontario Regulation 442/01 (Rural or Remote Electricity Rate Protection) made under the Ontario Energy Board Act, 1998, to increase support through the Rural or Remote Rate Protection Plan to R2 low density electricity customers and provide for a periodic adjustment mechanism.

vi) Direct the Ministry to work with the Premier's Office and Cabinet Office on the development and implementation of an integrated communications strategy.

# APPENDIX B: FINANCIAL TABLES

| FINANCIAL IMPACTS: CHANGES TO EXPENSE AND REVENUE | | | | | TABLE B1 |
|---|---|---|---|---|---|
| | | *Fiscal Plan Basis* | | | *Appropriations Basis* |
| **$ Millions** | | **2016-17** | **2017-18** | **2018-19** | **2016-17** |
| Initiative cost recommended | | 0.0000 | 0.0000 | 0.0000 | |
| *Expense changes:* | | | | | |

| | | | | | |
| | | | | | |
| *Revenue changes:* | | | | | |
| Revenue Increase/ Offset - Applies if cap and trade proceeds diverted to in-plan initiatives | | 0.0000 | (60.0000) | (60.0000) | |
| Revenue decrease | | 0.0000 | 0.0000 | 0.0000 | |
| **Total Fiscal Impact (draw from c-funds)** | | **300.0000** | **1040.0000** | **1040.0000** | **0.0000** |

## APPENDIX C: ELECTRICITY SECTOR BACKGROUND

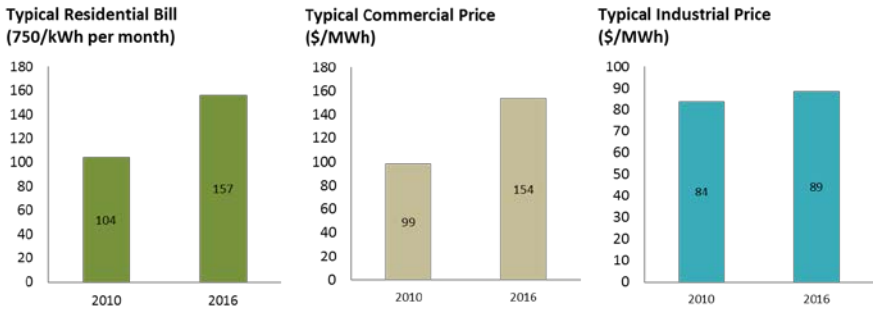
The Ministry has provided the following information to provide electricity sector context this item.

There are three classes of electricity consumers:

| | Regulated Price Plan | Class B | Class A |
|---|---|---|---|
| **Consumer Types** | • Residential<br>• Small Business<br>• Farms | • Commercial<br>• Institutional<br>• Small industrial | • Large commercial<br>• Large industrial |
| **Load Size** | Below 0.05 MW | Between 0.05 MW and 3 MW | Above 3 MW* |
| **Total Consumption** | 58 TWh | 57 TWh | 26 TWh |
| **Share of Consumption** | 41.1% | 40.4% | 18.4% |

*** Note:** Consumers with peak demand between 3-5 MW in the manufacturing, mining, refrigerated warehousing, greenhouses and data-processing industries are currently eligible for Class A. All other 3-5MW consumers are Class B.

Since 2010, average bills for residential consumers (i.e., using 750 kWh/month) have increased by over 50%. Rates paid by commercial and industrial electricity consumers have increased by 56% and 6% respectively over the same period.



**Note:** 2016 represents May 2016 for residential and YTD June 2016 for commercial and industrial.

Existing Rate Mitigation efforts are on-going:

- Ontario currently provides rate mitigation to various electricity consumer classes through a combination of tax-based and rate-based programs.
  - For example, Northern Ontario residential electricity consumers receive tax credits in recognition of higher electricity costs in the north and rural consumers receive a subsidy funded through the rate-base due to the higher cost of delivering power to rural areas.
  - As of 2016, the government removed the Debt Retirement Charge (DRC) from residential electricity bills. While this saves a typical residential electricity ratepayer about $60 per year, it is less than the benefit previously provided through the Ontario Clean Energy Benefit (OCEB).
  - The Ontario Electricity Support Program (OESP) provides ongoing assistance directly on the bills of eligible low-income electricity consumers.

  - The Industrial Conservation Initiative (ICI) encourages Ontario's largest consumers to reduce consumption during peak periods while reducing system costs.
  - The Rural or Remote Rate Protection (RRRP) program is provided to rural and remote residential and farm customers because the cost of distributing power to remote areas is much higher than for urban areas.

- Because electricity costs must be fully recovered from electricity consumers, rate mitigation funded through the rate-base often represents a shifting of costs from one consumer group to another (i.e., industrial to residential and commercial consumers).
  - Rate-based initiatives are generally associated with incenting changes in behaviour that provide electricity system benefits (i.e., shifting electricity consumption from on-peak to off-peak periods).

The table below shows the estimated cost shifts in the province's electricity system that result from three existing government programs (i.e., ICI, RRRP and OESP):

| Cost Shift Impact | 2011 | 2012 | 2013 | 2014 | 2015 | 2016 |
|---|---|---|---|---|---|---|
| Residential Bill ($/month for 750 kWh) | 3.55 | 4.07 | 3.85 | 4.46 | 5.68 | 6.55 |
| Commercial – Class B ($/MWh) | 4.74 | 5.43 | 5.14 | 5.94 | 7.57 | 8.73 |
| Industrial – Class A ($/MWh) | -20.97 | -25.26 | -22.38 | -24.68 | -32.56 | -31.55 |

**Note:** Negative values indicate a benefit; positive values denote an incremental charge.

Since 2013, a number of actions have and are being taken to reduce overall electricity system costs. Despite these actions to reduce system costs, electricity rates continue to increase for consumers:

- Renegotiating the Green Energy Investment Agreement, reducing contract costs by $3.7 billion;
- Deferring the construction of two new nuclear reactors at Ontario Power Generation's Darlington facility, avoiding an estimated $15 billion in new construction costs;
- Approving Ontario Power Generation's plans to enable the ongoing operation of Pickering up to 2024, which is expected to save ratepayers as much as $600 million.
- Reducing Feed-In-Tariff (FIT) prices through annual price reviews, saving ratepayers at least $1.9 billion relative to the 2013 Long-Term Energy Plan (2013 LTEP) forecast; and
- Removing an expected $3.3 billion in Large Renewable Procurement (LRP) costs relative to the 2013 Long-Term Energy Plan (2013 LTEP) forecast, based on the results of the first phase of the LRP.

## APPENDIX D: FURTHER INFORMATION SUPPORTING PROPOSED INITIATIVES

The following information has been provided by the Ministry.

**1. Provide an 8% rebate to consumers eligible for the Regulated Price Plan* (i.e., residential, small business and farms), equivalent to the provincial portion of HST**

The Ministry is proposing to introduce legislation/regulation to provide a rebate of 8% to consumers eligible for the Regulated Price Plan. The below table indicates which consumers would or would not receive the benefit. This would be equivalent to the provincial portion of the HST.

- Those ineligible to receive the 8% rebate will benefit from one or more of the other initiatives under this proposal (e.g., ICI expansion, proceeds recycling, etc).
- An HST exemption would require federal approval. Engaging in discussions with the federal government would take time and would likely result in not meeting the targeted implementation date.

| **Eligible for the 8% rebate** (< 50 kW or < 250,000 kWh/year) | **Not eligible for the 8% rebate** (> 50 kW or > 250,000 kWh/year) |
|---|---|
| • Residential Regulated Price Plan consumers<br>• Residential retail consumers<br>• Multi-unit residential buildings and other facilities used as residential rental units<br>• Long-term care homes and school residences<br>• Farms eligible for Regulated Price Plan (Including Class B farms that opted out of the Regulated Price Plan)<br>• Small businesses<br>  – Coffee / snack retailer<br>  – Convenience store<br>  – Apparel store<br>  – Hair salon<br>  – Small insurance office | • Class A consumers<br>  – Manufacturer<br>  – Large grocery store<br>  – Mines<br>  – Auto assembly plants<br>• Class B consumers<br>  – Commercial offices (low rise)<br>  – Hotel<br>  – General warehousing |

**2. Expand ICI eligibility by lowering the threshold to 1 MW, to provide support to Class B electricity consumers (i.e., commercial, institutional and small industrial)**

Currently, electricity consumers over 5 MW and consumers from 3-5 MW in certain energy intensive sectors are eligible for ICI (i.e., approximately 300 Class A consumers). Consumers participating in ICI include the following sectors: pulp and paper, auto, manufacturing, chemicals and mines.

ICI would be expanded so that all consumers over 1 MW are eligible for the program, which would (the benefit would be seen by consumers starting in 2018):

- Reduce electricity peak demand and electricity system costs by incenting more consumers to lower their electricity demand during peak periods;
- Reduce electricity bills for new ICI participants who are able to reduce their electricity demand during peak demand periods; and
- Increase the electricity bills for non-ICI participants to ensure full cost recovery in the electricity system.

| | Benefit to New ICI Participants | System Benefit | Financial Impact | Residential Bill Impact |
|---|---|---|---|---|
| | Bill Savings | Peak Demand Reduction (MW) | GA shifted to Class B ($M) | |
| Short-term | Up to 21% | 80 | 47 | Increase of $0.42/month |
| Long-term | Up to 34% | 165 | 82 | Increase of $0.74/month |

The different impacts refer to the amount of time it takes for new Class A consumers to respond to the expanded ICI eligibility. The bill impacts assume a 25% uptake, which would increase Class A consumption by roughly 3 TWh, leaving an estimated 54 TWh in Class B that are either between 0.05-1 MW or choose not to opt in to ICI. This would represent an estimated 300 additional consumers in ICI, though they would represent a much smaller share of the consumption than the 300 consumers currently participating. Newly eligible consumers in the program would mostly fall into the small industrial, institutional and commercial category, including: automotive supply chain companies, office tower, large shopping mall, greenhouses and others.

## 3. Update the Rural and Remote Rate Protection (RRRP) program, to provide relief to rural customers

The Ministry is proposing to provide an additional $110M in rate protection to eligible rural or remote electricity consumers, and consider options to periodically adjust the amount of rate protection available to these consumers going forward.

RRRP is a rate-based funded program that helps offset the higher costs to distribute electricity to Ontario residents who live in rural or remote locations all across the Province.

- Today, RRRP is a $175M program. For an average residential customer, the cost of supporting RRRP is roughly $1 per month. For other customers, the cost can range from $65 for a greenhouse to $8,000 for a medium industrial.
- The majority of the program funding ($127M) provided to Hydro One's lowest-density customers – classified as R2 customers. There are approximately 329,000 R2 customers. The current program provides a rebate of $31.50. The proposed update to the program would increase the benefit to $60/month
- RRRP funding supporting R2 customers has been capped at the current level since 2003. As a result, the impact of its assistance has diluted over time as electricity costs have risen.

An additional $110M in program funding would see an increased benefit of ~$28 /month. This would bring R2 bills in line with Hydro One R1 (medium density) bills at 1000kWh.

- This would increase the R2 portion of the RRRP to $237 million with a monthly impact on an average residential consumer of ~$0.60.
- The RRRP could be indexed at inflation or "trued up" on a regular basis to ensure the benefit remains constant.

## 4. Recycle cap and trade proceeds to commercial and industrial electricity consumers to provide a modest reduction in rates

The 2016 Budget committed to offset the impact of cap and trade for commercial and industrial consumers, while also providing a benefit of up to $2 per month for residential consumers.

- To meet the 2016 Budget commitment, the Climate Change Action Plan (CCAP), committed $1.3 billion from the GGRA over the first compliance period (2017-2020).
- However, providing an 8% rebate to Regulated Price Plan consumers would allow for GGRA proceeds previously committed to residential consumers to be redirected to other GHG reduction initiatives in the fiscal plan.

The rate reduction proposal would provide additional benefit to commercial and industrial consumers, while requiring an estimated $60 million less per year (i.e., a reduction of $240M over the first four year compliance period).

# APPENDIX F: ILLUSTRATIVE BILL IMPACTS

The Ministry has provided the following illustrative bill impacts:

| | Current Bill ( before tax) | Current Rate mitigation initiatives* | New Rate Mitigation initiatives | New Bill (before tax) |
|---|---|---|---|---|
| Average Residential (Toronto – 750 kWh/month) | $139 /month | N/A | 8% pre-tax rebate: - $11 | $128 /month |
| Rural Residential (Hydro One R2 – 1000 kWh/month) | $229 /month | RRRP: –$32 | 8% pre-tax rebate + Updated RRRP: - $45 | $184 /month |
| Low-income Residential ** (Toronto – 750 kWh/month) | $101 /month | OESP: -$38 | 8% pre-tax rebate: - $8 | $93 /month |
| Small Business (Toronto – 403,200 kWh/month) | $149 /MWh | N/A | 8% pre-tax rebate: - $12/MWh | $137 /MWh |
| Small Farm (Hydro One R1 – 4,000 kWh/month) | $203 /MWh | N/A | 8% pre-tax rebate: - $16/MWh | $187 /MWh |

**Notes:**

***** Some residential consumers can also receive tax credits based on income, age and geography (Northern Ontario Energy Credit and Ontario Energy and Property Tax Credit). These credits are delivered through the Trillium Tax Credit and can be as high as $1,332 per year for a family.

** Income of less than $28,000, family of 4.

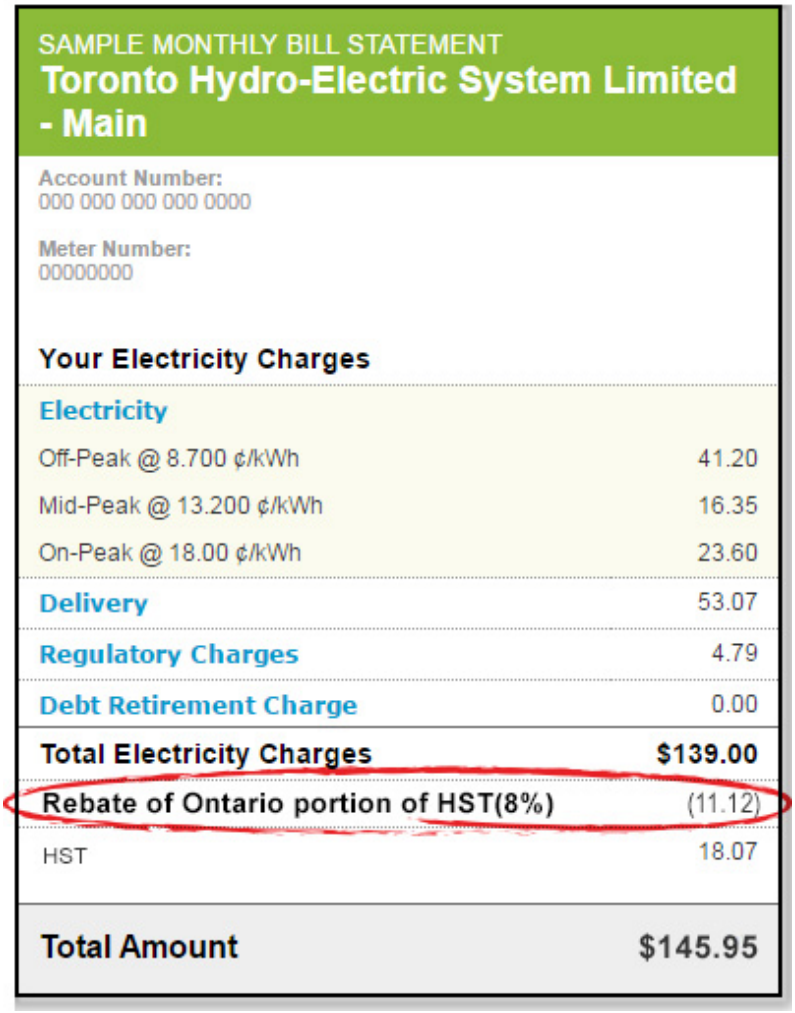
The above benefits do not include the cost of ICI expansion and the RRRP update (total impact of $1.74/MWh). Totals may not add due to rounding.

| | Current Rate | Current Rate mitigation initiatives* | New Rate Mitigation initiatives | New Rate |
|---|---|---|---|---|
| Large Institutional (Toronto – distribution-connected, 10 MW) | $108 /MWh | ICI: -$49/MWh | Proceeds Recycling: -$2.60/MWh (2017-2020 average) | $105 /MWh |
| Large Industrial (Timmins – transmission-connected, 10 MW) | $69 /MWh | ICI + NIERP: -$69/MWh | Proceeds Recycling: -$2.60/MWh | $66 /MWh |
| Small Industrial – opt-in to ICI (Toronto – 2 MW) | $152 /MWh | N/A | Proceeds Recycling + ICI: Up to -$52/MWh | $100 /MWh |
| Large Commercial – does not opt-in to ICI (Toronto – 2 MW) | $152 /MWh | N/A | Proceeds Recycling: -$2.60/MWh | $149 /MWh |
| Small Institutional (Toronto – 500 kw) | $154 /MWh | N/A | Proceeds Recycling: -$2.60/MWh | $151 /MWh |

**Notes:**

The above benefits do not include the cost of ICI expansion and the RRRP update (total impact of $1.74/MWh). Proceeds recycling is net of the cost of carbon and represents an estimated average of the proceeds required over the first compliance period (2017-2020).

## APPENDIX E: ILLUSTRATIVE BILL MOCK-UP



SAMPLE MONTHLY BILL STATEMENT

**Toronto Hydro-Electric System Limited - Main**

Account Number:
000 000 000 000 0000

# Ministry of Energy Overview

Deputy Minister (signature)

NOV 23, 2016
Date

Minister (signature)

NOV 23, 2016
Date

**Confidential Advice to Cabinet**

# About the Ministry

- The Ministry of Energy is a policy development and implementation ministry. It delivers the government's top energy priority – providing Ontarians with a clean, reliable and affordable supply of energy through the implementation of the Long-Term Energy Plan (LTEP).

- With just over 200 FTEs, the Ministry oversees a complex energy portfolio with a $20 billion Electricity Sector, and a Natural Gas sector with about 3.5 million residential, commercial and industrial natural gas consumers.

- The Ministry delivers the majority of its energy policies and initiatives through its ratepayer funded agencies and entities.

**Confidential Advice to Cabinet**

# Ministry Objectives and Activities

- The Ministry's commitment to the development of a diverse supply mix, including more renewable energy sources, and putting energy conservation first are cornerstones of Ontario's balanced plan to provide clean and reliable energy system for all Ontarians.

- The Ministry develops and advises on all aspects of energy policy for Ontario, including:
  - the development and implementation of the Long Term Energy Plan;
  - rate mitigation measures for residential electricity consumers, such as the Ontario Electricity Support Program and the Ontario Rebate for Electricity Consumers;
  - helping to support a dynamic and competitive business climate through industrial electricity rate mitigation programs and initiatives;
  - investing in conservation and energy efficiency before building new generation, transmission and distribution infrastructure, where cost-effective;
  - helping to develop a strong renewable energy sector, including over 30 solar and wind manufacturers;
  - modernizing the province's transmission and distribution grids;
  - upgrading and refurbishing existing nuclear generation assets;
  - working with other provinces to explore potential opportunities that meet Ontario system needs and provide ratepayer value;
  - supporting the expansion of natural gas infrastructure to service more communities;
  - engaging Indigenous communities to play an active role in the energy sector; and
  - facilitating future tranches of Hydro One shares.

- The Ministry also oversees the Ontario Energy Board (OEB) and the Independent Electricity System Operator (IESO), and represents the shareholder, the provincial government, in dealings with Hydro One and Ontario Power Generation (OPG).

**Confidential Advice to Cabinet**

# Ministry of Energy Revenue Contributions

The Ministry has also achieved significant revenue generation to contribute to the fiscal plan:

- In November 2015, the Province completed the Hydro One Ltd. IPO and raised approximately $1.83 billion in gross proceeds and approximately $116 million from related share sales.

- The secondary share offering of Hydro One was completed in April 2016, generating approximately $1.97 billion in gross proceeds.

- Net revenue gains from the offerings in April 2016 is credited to the Trillium Trust for infrastructure projects in the future. To date, the Trillium Trust has been credited with approximately $3.2 billion from transactions in 2015.

- Ontario remains on track to generate approximately $9 billion in gross proceeds and other revenue benefits. This includes $4 billion in net revenue gains that will be invested in infrastructure and $5 billion to reduce debt.

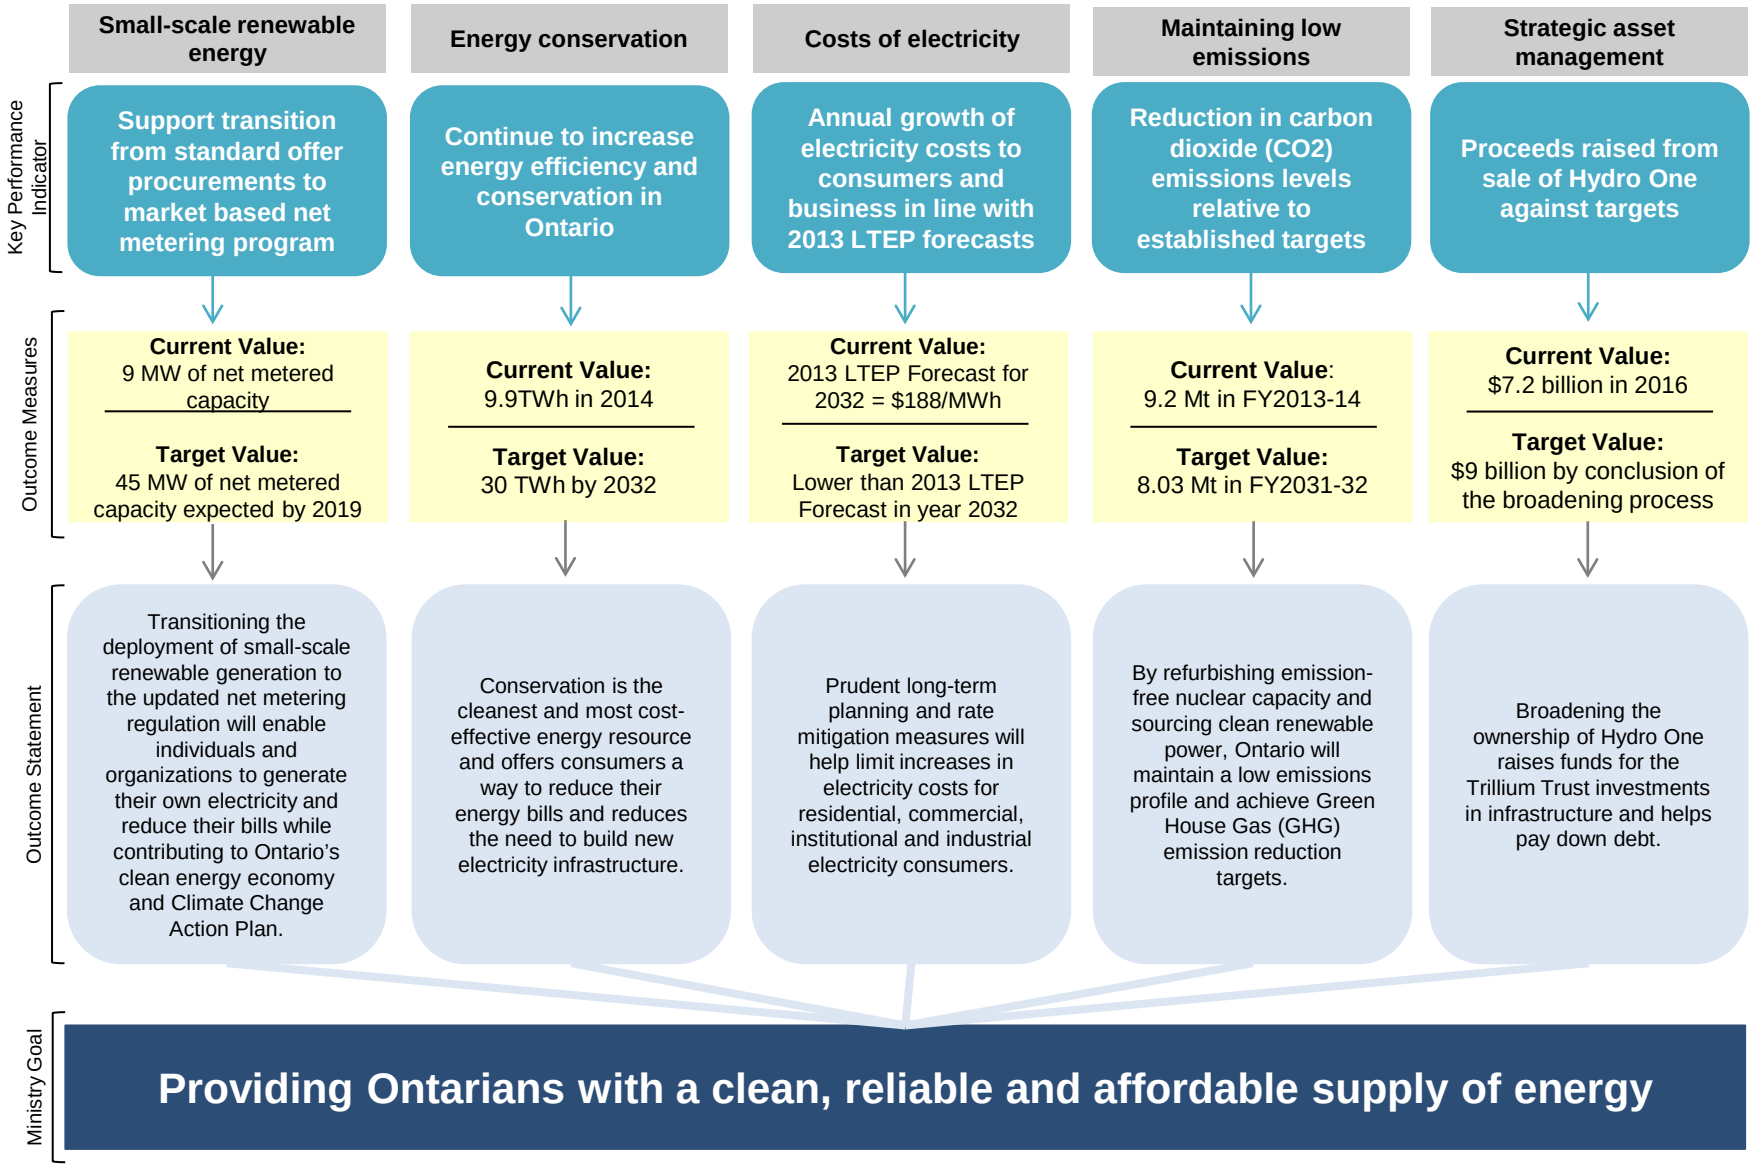
- $236 million of net income generated from Hydro One attributed to the Province in 2015-16*.

- $463 million of net income generated from OPG attributed to the Province in 2015-16.

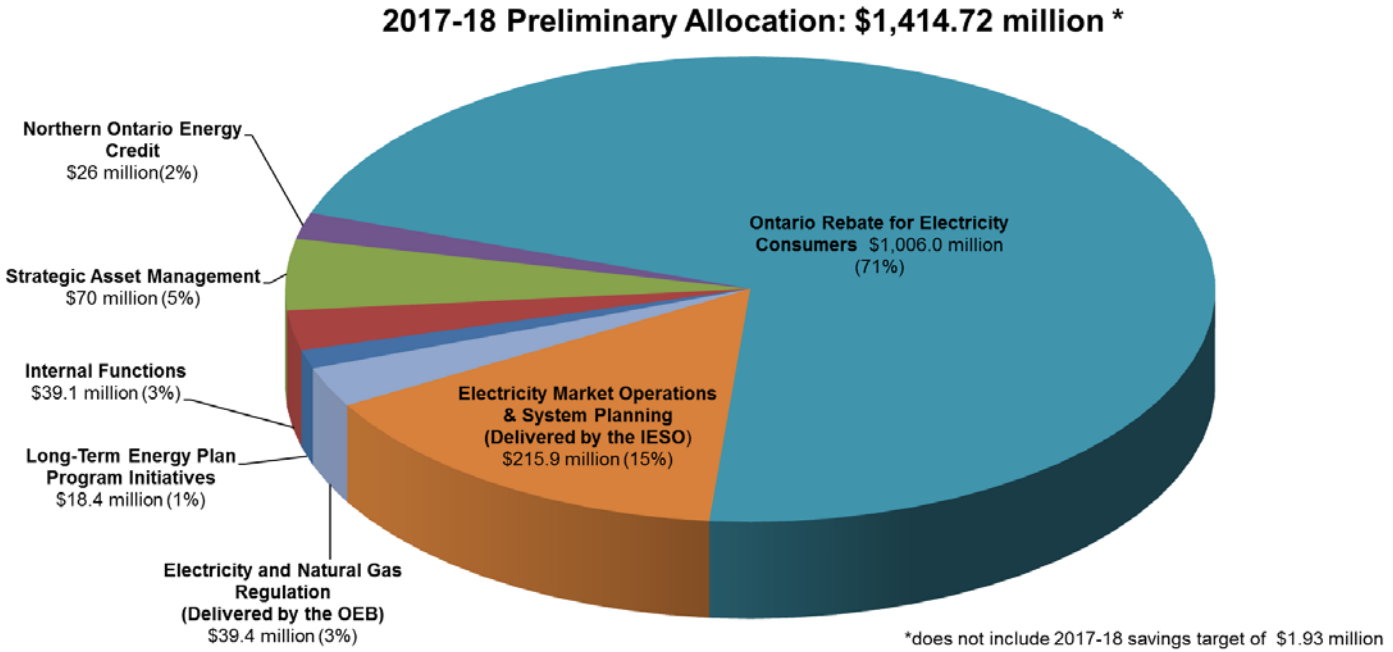
* Includes other elements including Provincial benefit from Deferred Tax Asset, payment of departure tax, etc.

**Confidential Advice to Cabinet**

# Ministry-Level Key Performance Indicators



# Current State of Ministry Preliminary Allocation (2017-18)



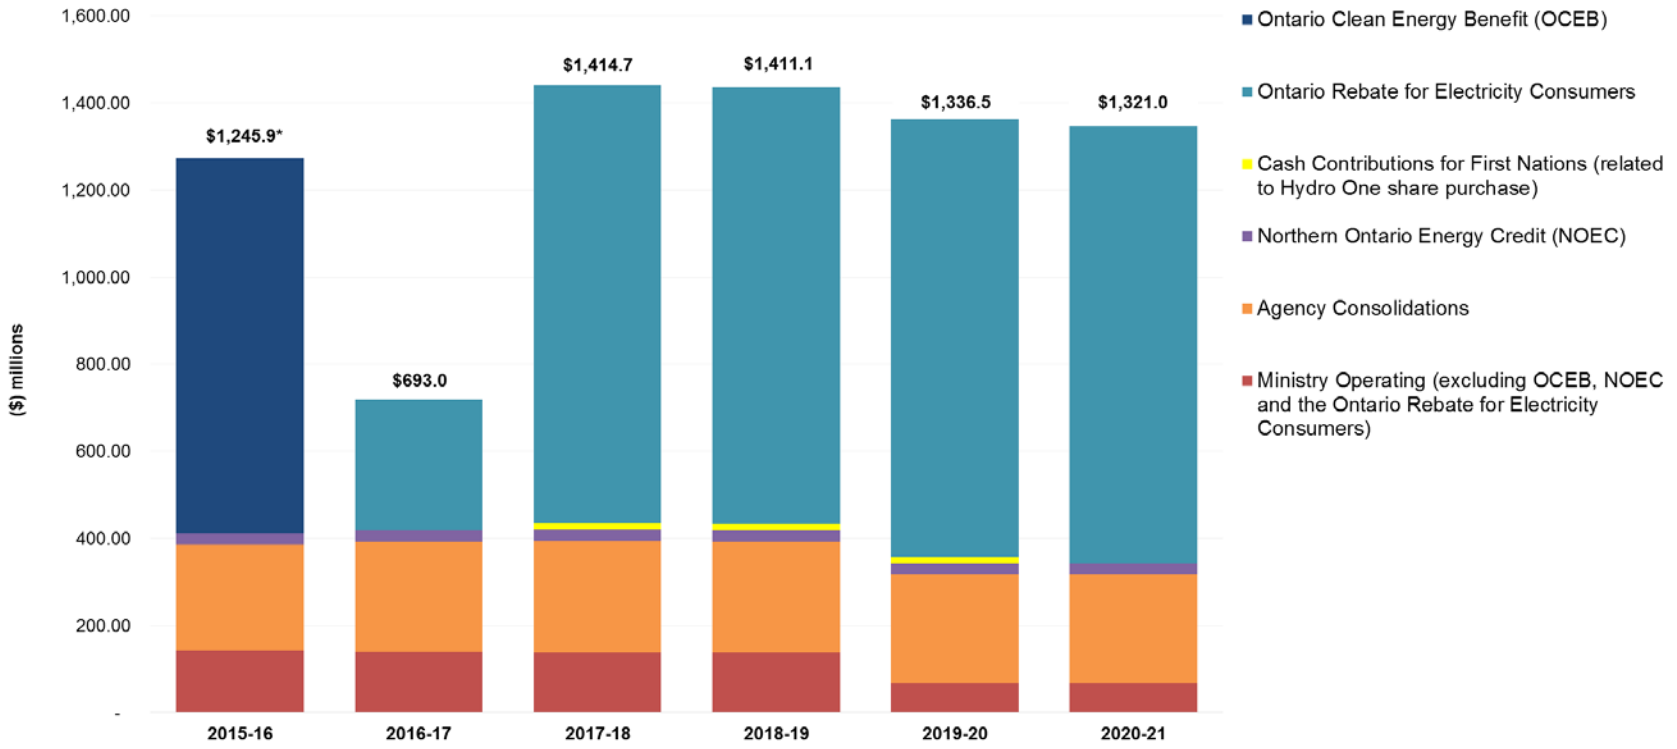
- Only 9% of the allocation is for the Ministry's own spending to deliver on its mandate and commitments. The Ministry is highly effective at running its activities on a small budget and with just over 200 FTEs.

- The largest component of the Ministry's allocation is its rate mitigation initiative for residential, farms and small business consumers – the Ontario Rebate for Electricity Consumers and Northern Ontario Energy Credit account for 73% of the Ministry's allocation. These programs are demand-driven entitlement programs and spending is non-discretionary; the Ministry does not have control over this allocation.

- The consolidation of fiscally neutral agencies – the Independent Electricity System Operator (IESO) and the Ontario Energy Board (OEB) – account for 18% of the Ministry's allocation. Realizing operating savings on these entities would have no impact on the government's fiscal plan since expenses are fully cost recovered from the rate base.

**Confidential Advice to Cabinet**

# Preliminary Multi-Year Allocation (2015-16 to 2020-21)



* The Ministry's 2015-16 allocation also included a $2.6 billion expense for a capital contribution to Hydro One Limited that is not shown here.

- The Ministry already received the following as part of its preliminary allocation:
  - Increase of $1,006 million for the implementation of the Ontario Rebate for Electricity Consumers; and
  - Increase of $45 million over three years to First Nations, as a cash contribution, related to Hydro One share purchase.
- These expenses are under executive control and as such, cannot be re-allocated to deliver Ministry spending to deliver its other mandates and commitments.

**Confidential Advice to Cabinet**

# Achieving 2017-18 Savings Target

- The preliminary allocation for 2017-18 requires the Ministry to achieve a saving of $1.9 million.

- To meet the $1.9 million saving target, the Ministry will seek to achieve internal efficiencies within its allocation in Vote 2902, Energy Development and Management, through:

  – Prioritizing project delivery and implementation of certain Ministry initiatives;
  – Evaluating the delivery model on policy implementation; and
  – Reducing operating expenses by re-aligning Ministry resources.

- Historically, the Ministry has strategically managed underspending to:
  – offset additional pressures related to government priorities (e.g., the Ministry was directed to manage from within its existing allocation in 2015-16 for resources related to Hydro One);
  – fund pressures that are unforeseen and unavoidable (e.g., energy legal challenges including, NAFTA and Windstream); and
  – Reallocate to high priority program spending (e.g., the Ministry was able to fund Smart Grid Fund Round 3 using underspending in 2015-16).

**Confidential Advice to Cabinet**

# Key Decision: Ontario Rebate for Electricity Consumers

**Request: (1) Additional funding, based on updated forecast, for the Ontario Rebate for Electricity Consumers*;**
**(2) 4 permanent FTEs to support program administration; and**
**(3) Funding to support program delivery.**

- In October 2016, legislation passed that would provide an 8% rebate, the provincial portion of the HST, from electricity bills as of January 1, 2017. This will result in an average savings of about $130 annually or $11 each month, for about five million residential consumers, farms and small businesses.

- The Ministry requires additional funding in 2017-18 to effectively deliver the Ontario Rebate for Electricity Consumers

- An increase of $94 million in operating expense for program delivery based on updated forecast; this will bring the total expenditure in 2017-18 to $1.1 billion for the program.

  – The initial forecast was subsequently revised based on updated methodology and improved data inputs, leading to an increase in the estimated cost of administering the program in all years.

| Millions ($) | 2017-18 | 2018-19 | 2019-20 | 2020-21 |
|---|---|---|---|---|
| Preliminary Allocation | 1,006 | 1,004 | 1,004 | 1,004 |
| Updated Forecast | 1,100 | 1,100 | 1,200 | 1,200 |

* The Ministry was directed to report back during the 2017-18 PRRT process on updated future year impacts.

**Confidential Advice to Cabinet**

# Key Decision: Ontario Rebate for Electricity Consumers (con't)

- An increase of $3.11 million in operating expense for permanent staffing resources and operational costs, including $0.41 million in salary and wages and $2.5 million in program delivery costs in 2017-18 and onwards.
  - The Ministry is requesting 4 permanent FTEs that will cover a variety of positions critical to program delivery development of the Ontario Rebate for Electricity Consumers, including:
    - Policy and program development, providing direction to 72 local distribution companies (LDCs) and 10 Independent Power Authorities to develop specific payment and billing mechanisms, in addition to managing the relationships with service providers to ensure that any identified issues are addressed and resolved.
    - Financial support to track and monitor up to 400 data elements each month in order to know how much funding has been provided and to what entities, and tracking LDC payments and settlement statements based on information received from the IESO.
    - Communications support to handle internal and external program stakeholders.
- The Ontario Rebate for Electricity Rebate program does not have an end date and requires permanent resources (funding and staffing) in out-years.

**Confidential Advice to Cabinet**

# Key Decision: Hydro One Report Back

**Request: (1) Additional funding to support future share sales of Hydro One;**
**(2) Permanency of the 5 FTEs the Ministry received during the 2016-17 PRRT process to support the Investment and Governance Secretariat;**
**(3) Increase funding to provide full cash contributions to First Nations in 2017-18;**
**(4) Appropriation increase to book the conferred benefit amount to First Nations.**

- In 2016, the Ministry successfully continued the broadening of Hydro One through a careful, staged approached, generating $1.83 billion in revenue for the government and increasing publically held shares to approximately 30%.

- The Ministry requires additional out-year funding to continue delivering on the Province's assets management and transformation strategy related to Hydro One, including;

| Item | Request |
|---|---|
| Secondary offering costs (including underwriting costs, consulting costs and other services) | $70 million increase (the Ministry has an existing allocation of $70 million for 2017-18, this request brings the total allocation to $140 million for 2017-18) |
| Staffing and operational costs | Permanency of 5 FTES and associated costs of $0.93 million |
| Cash contributions for First Nations Note: Ministry will decrease its allocation for the cash contributions to First Nations in 2018-19 and 2019-20 by $15 million each year | $30 million increase in 2017-18 |
| Conferred benefit to First Nations | $135 million increase in 2017-18 |

**Confidential Advice to Cabinet**

# Key Decision: Hydro One Report Back (con't)

- $70 million expenditure increase in 2017-18 is required to provide the Ministry with flexibility related to its share sale strategy. This will bring the allocation in 2017-18 to $140 million for this program.
  - The government may be in a position to complete the broadening of Hydro One in 2017-18 and will require the appropriate allocation to support this effort, in the event of a larger sale.
  - Expenses related to the Ministry's share sale strategy is fiscally neutral and will be offset from the proceeds of future offerings of Hydro One.

- Permanency of the 5 FTEs the Ministry received during the 2016-17 PRRT process for 2017-18 and onwards to support the government's asset strategy.
  - The Secretariat was created in order to support the Minister on both financial and governance matters. While some of that role relates to temporary initiatives, such as facilitating the share sale strategy, the Secretariat is required to provide ongoing advice and support related to:
    - Exercising shareholder rights including participating in shareholder meetings, election of directors etc., ensuring the Province operates in accordance with its rights and obligations under the Governance Agreement;
    - Effective management of holdings; ensuring the Province operates in accordance with the Registration Rights Agreement;
    - Ongoing administration of any agreements relating to the broadening of ownership of Hydro One such as potential agreements with Chiefs of Ontario and/or Metis Nations of Ontario; and
    - The Province's role and responsibilities as the shareholder of OPG, including analysis of OPG's business plans, and conducting due diligence and analysis on new OPG initiatives (e.g., borrowing platform).
  - The Secretariat requires technical skill sets with specialized knowledge in areas such as capital markets, corporate finance and financial analysis. The Ministry requires permanent FTEs to be able to compete for talent.
  - The Ministry received funding for these FTEs until 2018-19, permanent funding of $0.93 million in operating expense for staffing and operational costs for the Investment and Governance Secretariat is being requested from 2019-20 and onwards.

**Confidential Advice to Cabinet**

# Key Decision: Hydro One Report Back (con't)

- $30 million in operating expense in order to accelerate the full cash contribution of up to $45 million to First Nations in 2017-18.
  - As part of its 2017-18 preliminary allocation, the Ministry received a $45 million transfer payment over three years to First Nations, as a cash contribution. Timing of payments was recently renegotiated and the revised timing contemplates a one-time contribution of up to $45 million.

- $135 million in operating expense for conferred benefit amounts to First Nations.
  - The difference between the purchase price for First Nations ($18 per share) and the market value of shares at the time of closing. Treasury Board Secretariat is in the process of obtaining a regulation prescribing a new class of non-cash expense, intended to best serve public interest for transparency and accountability.

- The Ministry is creating new Transfer Payment lines to support these transactions.

**Confidential Advice to Cabinet**

# Key Decision: Greenhouse Gas Reduction Account (GGRA)

**Request: (1) Funding for the Cap and Trade Proceeds Recycling to Keep Electricity Prices Affordable Initiative; and**
**(2) Funding for the Electric Vehicle Overnight Charging Rebate Program.**

- In September 2016, the Ministry completed, and submitted to MOECC, the GGRA Intake Form and Scorecard for its initiatives.

- These initiatives were included in Tranche 1 for approval by MOECC.

- The Ministry requires out-year funding, offset from GGRA, to deliver these initiatives:

  - **Cap and Trade Proceeds Recycling to Keep Electricity Prices Affordable Initiative**
    - Total CCAP funding requirement: $1,107 million (between 2017-18 to 2020-21)
    - Funding estimate for 2017-18: $249 million

  - **Electric Vehicle Overnight Charging Rebate Program**
    - Total CCAP funding requirement: $15 million (between 2017-18 to 2021-22)
    - Funding estimate for 2017-18: $2.15 million

- The Ministry will be creating Transfer Payment lines to support the above initiatives.

**Confidential Advice to Cabinet**

# Key Decision: Other Housekeeping Items

**Natural Gas Access Loans**

- The Ministry of Energy requires the creation of the following Operating Asset and Operating Expense items, with $1,000 placeholders, for the establishment of the Natural Gas Loan program:
  - An Operating Asset items for Natural Gas Loan disbursements; and
  - An Operating Expense, and a new Transfer Payment line, for Natural Gas Loan interest incentives.
- The Ministry has an existing Bad Debt Expense item in Vote 2902, Energy Development and Management.
- Cost incurred by the Ministry of Energy for the Natural Gas Loan program will be offset by the Ministry of Infrastructure or the Contingency Fund.

**Temporary FTE transfer to MAG**

- The Ministry of Energy will continue with the temporary transfer of 1 FTE in 2017-18 to the Ministry of the Attorney General to provide legal services support.
- The FTE will return to the Ministry of Energy on April 1, 2018.

**Temporary FTE transfer to MGCS**

- The Ministry of Energy will temporarily transfer 2 FTEs to the Ministry of Government and Consumer Services to support the Energy and Water Reporting and Benchmarking Project.
- The FTEs will return to the Ministry of Energy on April 1, 2018.

**IT-Rationalization Initiative transfer to MGCS**

- The Ministry of Energy will transfer $9,700 in 2017-18 and ongoing to the Ministry of Government and Consumer Services for the IT-Rationalization Initiative.
- As a consumptive service, the IT-Rationalization Initiative recovers base budget from clients/partners to ensure cost reductions remain net neutral to all parties.

**Confidential Advice to Cabinet**

# Stakeholder Management / Engagement Plans

| Key Stakeholder Groups | Issues / Considerations | Stakeholder Engagement / Communications Strategy |
|---|---|---|
| **Residential, Farms and Small Businesses Consumers** | • Necessary investments in modernizing our electricity system have lead to increases in the cost of electricity service for residential, farm and small business electricity consumers.<br>• Concerns about cost and safety of nuclear generation projects compared to other supply alternatives. | • Extensive province-wide consultations for the updated Long-Term Energy Plan.<br>• Ensure engagement of stakeholders and communication regarding existing and new conservation initiatives as they are developed and implemented.<br>• Communication about the implementation of new electricity price mitigation initiatives for all consumers; the new 8% rebate and expansion of existing programs will provide some relief. |
| **Commercial and Industrial Consumers** | • Necessary investments in modernizing our electricity system have lead to increases in the cost of electricity service for commercial and industrial electricity consumers. | • Extensive province-wide consultations for the updated Long-Term Energy Plan.<br>• Existing programs provide some relief to large industrials. Recently announced ICI program expansion will extend relief to some smaller consumers.<br>• One-off meetings with industry associations and large consumers. |
| **General Public** | • Conferred benefit amounts to First Nations, being able to purchase shares at a reduced price compared to market value.<br>• Accelerating cash contributions to First Nations from up to three annual payments to one full payment. | • Conferred benefit amounts are disclosed to best serve public interest for transparency and accountability.<br>• Purchase price is above the Province's book value for the shares as a result this has no fiscal impact.<br>• Does not impact the Province's expectation to raise up to $9 billion to support infrastructure investment and pay down debt.<br>• No changes to amounts have been contemplated, only timing of payments. |
| **Shareholders / Investors** | • Increases in costs associated with potentially accelerating share sales. | • The Ministry requires flexibility to maximize value. |

Confidential Advice to Cabinet

# TPAM BOULDER – MINISTRY IMPACTS

## A. Request:

As part of the Transfer Payment Administrative Modernization (TPAM) Boulder, ministries are contributing towards the 2017-18 savings target of $25M. In addition, ministries are contributing base funding for the Grants Ontario system and the Transfer Payment Common Registration System which support the TPAM initiative.

| Docket #D0042340 | **2017-18** | **2018-19** | **2019-20** | **2020-21** |
|---|---|---|---|---|
| Total operating expense impact - TPAM Savings: Vote/Item 2902-01, ENERGY ($M) | 0.516 | 0.516 | 0.516 | 0.516 |
| Total operating expense impact: Grants Ontario Funding – Vote/Item 2902-01, ENERGY ($M) | (0.500) | (0.500) | (0.500) | (0.500) |
| Total financial impact: Vote/Item 2902-01, ENERGY ($M) | 0.016 | 0.016 | 0.016 | 0.016 |
| **Total financial impact ($M):** | 0.016 | 0.016 | 0.016 | 0.016 |

## B. Background:

The TPAM initiative has been assigned total savings targets of $25,000,000 in 2017-18, $50,000,000 in 2018-19, $75,000,000 in 2019-20 and $100,000,000 in 2020-21. Through 2016-17 PRRT, $25M in savings for 2017-18 was minuted, with each ministry absorbing a share of the savings target based on what was known about their transfer payment administration costs at the time. However, a third party review of ministry administrative costs undertaken by KPMG found that total administrative costs are less than had been assumed during the 2016-17 PRRT process, and that those costs are distributed proportionately differently across ministries than had been assumed. Therefore the 2017-18 savings targets have been adjusted in accordance with the findings. Ministries are required to increase or decrease their portion of the savings target as determined based on the review findings.

Also, as part of the TPAM initiative, the Grants Ontario system and the Transfer Payment Common Registration System have been developed for enterprise wide use. In order to provide ongoing sustainment funding for these technology solutions, funding will be transferred from ministries to Ministry of Government and Consumer Services (MGCS). MGCS will be the business owner these systems effective April 1, 2017.

## C. Financial Analysis / Request

The Ministry of Energy 2017-18 savings target for TPAM was originally minuted at $51,600. The revised savings target for the Ministry of Energy for 2017-18 is $0.

The Ministry of Energy will contribute $50,000 in 2017-18 and ongoing to support Grants Ontario and the Transfer Payment Common Registration system.

## D. Human Resource Implications

N/A

## E. Proposed Minute

As part of the Transfer Payment Administrative Modernization Boulder, approve the increase of the Grants Ontario business line from Treasury Board Secretariat to Ministry of Government and Consumer Services to better align enterprise service responsibilities:

In this regard, the Board:

i) Approve decrease in savings of $51,600 for 2017-18 and ongoing.

ii) Approve a decrease of $50,000 in 2017-18 and ongoing in the Ministry of Energy's Vote/Item 2902-01, Energy Development and Management, to provide permanent base funding for Grants Ontario.

**Ministry INTERNAL Working Template***

**This is a template to assist ministries in collecting the KPI and program-level performance measures information to be submitted in ORBIT. It is intended to be an INTERNAL working document for ministries and will not be accepted as an attachment in ORBIT. The template has been designed to match the data specifications and requirements of the ORBIT submission, and facilitate internal information sharing and/or review. Ministries may choose not to use this template.**

***ALL INFORMATION MUST BE ENTERED INTO ORBIT, IN ACCORDANCE WITH THE SUBMISSION GUIDELINES AND PRRT DUE DATES. THIS TEMPLATE WILL NOT BE ACCEPTED IN ORBIT.**

**MINISTRY OF ENERGY**
**External Programs**

| Ministry Acronym | Program Name | Issue/Need | Program Description | Major Program | Government Multi-Year Priority Outcome | Strategy | Ministry Linkages | Program Type | Delivery Mode (1st selection) | Delivery Mode (2nd selection) |
|---|---|---|---|---|---|---|---|---|---|---|
| ENERGY | **Long-Term Energy Plan Program Initiatives (TP)** | The successful implementation of the Long-Term Energy Plan requires the participation and engagement of a diverse group of energy stakeholders (e.g. energy consumers, Aboriginal communities, municipalities and other broader public sector organizations, businesses, industry associations, Broader Public Sector, etc.). Providing support and fostering innovation among the stakeholders is crucial for the advancement of Ontario's energy sector. | The group of Long-Term Energy Plan programs represent a small portion of the ministry's allocation but directly engages and impacts important ministry stakeholders. It is an important delivery mechanism to deliver on the Government's energy priorities, including:<br>- Assisting community-based conservation planning and outreach, along with the delivery of conservation education initiatives to effect change in consumer behaviour.<br>- Support and encourage Aboriginal community participation in the development of energy and conservation projects.<br>- Engaging energy industry stakeholders and groups in knowledge sharing, helping the broader public sector develop and implement conservation plans, and supporting the development of energy efficiency standards to be adopted by regulation.<br>- Support the grid connection of remote Northwestern Ontario First Nation communities or explore other options to reduce diesel use where connection isn't economical. | Long-Term Energy Plan Implementation | Leader on Environmental Sustainability & Climate Change Mitigation | N/A | N/A | Supporting | Direct-OPS | |
| ENERGY | **Ontario Clean Energy Benefit Program (TP) (Sunsets 2015-16)** | Residential electricity bills are forecasted to rise in future years at an annual average of 6.9% per year between 2014 and 2018, and 2.4% until 2032. Helping consumers manage their electricity cost is one of the key government priorities outlined in the 2014 Ontario Budget. | The program provides a benefit equal to 10% of the total cost of electricity on eligible consumers' bills, including tax, limited to the first 3,000 kWh of electricity consumed each month. The benefit helps over 4 million residential consumers and over 400,000 farms and small businesses with their electricity costs. The program is scheduled to end on December 31, 2015. | | Reduced Poverty, Inequality and Exclusion | N/A | N/A | Supporting | For-profit business | |
| ENERGY | **Ontario Rebate for Electricity Consumers (TP) (Starts Jan. 1, 2017)** | Electricity costs are increasing as the necessary investments are made to decarbonize and modernize the province's electricity infrastructure. Since 2010, electricity prices have risen considerably, particularly for households and small businesses. Prices are forecasted to continue to increase as additional generation comes online. Ontario has taken action to replace coal-fired generation with cleaner sources of energy. Since 2003, the Province has invested more than $35 billion in over 16,000 megawatts (MW) of new and refurbished clean generation, including nuclear, natural gas and renewables. This investment represents about 40% of our current supply and has helped decrease electricity sector emissions by approximately 80%. Over the same period, Hydro One has invested $15.5 billion to enhance and renew its transmission and distribution systems | This program provides a rebate of 8% to consumers eligible for the Regulated Price Plan. Those ineligible to receive the 8% rebate will benefit from one or more of the other initiatives under this proposal (e.g., ICI expansion, proceeds recycling, etc). | | Reduced Poverty, Inequality and Exclusion | N/A | N/A | Supporting | For-profit business | |
| ENERGY | **Northern Ontario Energy Credit Program (TP)** | Residential electricity bills are forecasted to rise in future years at an annual average of 6.9% per year between 2014 and 2018, and 2.4% until 2032. Helping consumers manage their electricity cost is one of key government priorities outlined in the 2014 Ontario Budget. Helping northern Ontarians with their home energy cost is especially important, as the costs are often higher in the North due to more severe winters. | Helps low-to-moderate income individuals and families living in northern Ontario with their home energy costs, which are often higher in the North due to more severe winters. For the 2014-15 benefit year, qualifying individuals can receive up to $141 and qualifying families (including single parents) can receive up to $216. | | Reduced Poverty, Inequality and Exclusion | N/A | MOF | Assisting | Other level of government | |
| ENERGY | **Electricity and Natural Gas Sector Regulation (Delivered by the OEB)** | Protection of energy consumers and ensuring that reliable and affordable energy is delivered in the gas and electricity section requires the Province to oversee prices and regulate the conduct of energy utilities. | The Ontario Energy Board oversees the Province's electricity and natural gas sectors through effective, fair and transparent regulation and in accordance with the objectives set out in the governing statutory framework. Its mission is to promote a viable, sustainable and efficient energy sector that serves the public interest and assists consumers to obtain reliable energy services at reasonable cost.<br><br>Key functions:<br>• Setting gas and electricity rates and prices<br>• Monitoring the financial and operating performance of natural gas and electrical utilities<br>• Providing consumers with the information they need to better understand energy matters<br>• Protecting energy consumers' interests<br>• Developing regulatory policy to meet emerging energy trends and challenges | | Modernized Infrastructure and Transportation Networks | N/A | N/A | Regulating | Classified Agency | |
| ENERGY | **Electricity Market Operations & System Planning (Delivered by the IESO)** | Ontarians demand that sufficient electricity is available whenever and wherever it's needed. Ensuring there is enough energy to meet the demand is an ongoing and highly complex process, requiring the close coordination of all parts of the electricity system.<br><br>Ontario is transforming its electricity system to ensure a reliable, modern and sustainable power supply for the people of Ontario now and well into the future. Doing so requires significant, prudently managed investment in Ontario's electricity system. Electricity system planning requires Ontario's energy agencies, transmitters, local distribution companies and stakeholders to work together in this transformation by advising the government on electricity integrated regional resource plans (IRPPs), helping Ontarians to conserve energy and contracting for the various sources of supply. | The IESO balances the supply and demand for electricity in Ontario and then directs its flow across the province's transmission lines. Every five minutes, the IESO forecasts electricity demand throughout the province and directs generators to provide the required amount of electricity to meet that demand. It can also reduce demand by calling on large volume users to cut back on consumption. This process of balancing supply and demand repeats itself 24 hours a day, seven days a week. The IESO maintains reliability in real time and into the future, while supporting Ontario's green energy policies for the integration of renewable sources of energy. The IESO works at the heart of Ontario's power system, connecting all participants –generators that produce electricity, transmitters that send it across the province, retailers that buy and sell it, industries and business it that use it in large quantities, and local distribution companies that deliver it to people's homes.<br><br>The IESO also is the agency that plans the power system and makes sure Ontario has enough electricity over the long term. It also coordinates conservation efforts across the province. The IESO is responsible for procuring new electricity resources, both generation and conservation. The IESO also provides advice to the government on province-wide electricity system plans, and works with transmitters and local distributors and other electricity agencies and stakeholders to develop integrated regional resource plans (IRRPs). The IESO signs contracts with power generators to ensure that long-term investments are made in generation facilities that otherwise would not get built. These contracts guarantee set prices to generators, enabling investors to finance and build these new projects in order to achieve government policy objectives. Coordinating province-wide conservation efforts is another key role of the IESO, including working with local distribution companies to help consumers manage their electricity use and costs | | Leader on Environmental Sustainability & Climate Change Mitigation | N/A | N/A | Public Good | Other non-profit organization | |
| ENERGY | **Strategic Asset Management and Transformation** | In order to help support unprecedented investments in transit, transportation and other priority infrastructure projects, Ontario is broadening ownership of Hydro One, so that taxpayers would realize net proceeds. This approach could generate an estimated net gain of approximately $4 billion (gain amount will be subject to market conditions). | The Province is moving forward with the Premier's Advisory Council on Government Assets recommendations to broaden the ownership of Hydro One through an initial public offering (IPO) and the sale of Hydro One Brampton to a merged entity of three other large utilities – PowerStream, Enersource and Horizon.<br><br>This approach could generate an estimated net gain of approximately $4 billion (gain amount will be subject to market conditions). Any net proceeds from the sale of shares in Hydro One would be set aside in the Trillium Trust to help fund the government's $31.5 billion Moving Ontario Forward plan to invest in infrastructure, transportation and transit across the province.<br><br>The Ministry of Energy received approval in August 2015 from TB/MBC for a new program called Strategic Asset Management & Transformation. This program is required to facilitate the ministry and government objectives regarding its assets management and transformation strategy related to Hydro One. | | Modernized Infrastructure and Transportation Networks | N/A | Finance | Public Good | For Profit Business | |

# PROGRAM BACKGROUND

**Program:** Ontario Rebate for Electricity Consumers

## Issue / Need

Since 2010, electricity prices have risen considerably, particularly for households and small businesses. Prices are forecast to continue to increase as additional generation comes online. Since 2010, average bills for residential consumers (i.e., using 750 kWh/month) have increased by over 50% and rates paid by commercial have increased by 56%.

Electricity costs have increased as the necessary investments are made to decarbonize and modernize the province's electricity infrastructure.

Ontario has taken action to replace coal-fired generation with cleaner sources of energy. Since 2003, the Province has invested more than $35 billion in over 16,000 megawatts (MW) of new and refurbished clean generation, including nuclear, natural gas and renewables. This investment represents about 40% of our current supply and has helped decrease electricity sector emissions by approximately 80%. Over the same period, Hydro One has invested $15.5 billion to enhance and renew its transmission and distribution systems.

## Program Description

To mitigate electricity prices, the Ministry of Energy has implemented an 8% rebate, equal to the provincial portion of HST to consumers eligible for the Regulated Price Plan - this includes about five million residential consumers, small businesses and farms.

The Rebate is automatically be added to every eligible consumer's bill beginning January 1, 2017.

**In the box below, provide sufficient details to support the ratings assigned. Make sure the following considerations have also been addressed:**

- **Which government multi-year priority outcome does the program support and why?**
- **How do we know there is 'need'? Who are the end-beneficiaries? How has the need been identified, verified and measured?**
- **What are the consequences of not addressing the need?**
- **What are the program's objectives/desired outcome(s) and how they have evolved in recent years?**
- **Is it necessary for any government, and in particular Ontario government, to fund this program and why?**

The ministry's deliverables are outlined in the 2013 Long-Term Energy Plan (LTEP), which includes: ensuring a clean, reliable and affordable electricity system; building a culture of conservation in Ontario; and building Ontario's clean energy economy. The Ministry's 2016 mandate letter from the Premier also tasks the Minister with taking further action to mitigate the impact of electricity prices on consumers and businesses.

In 2016, the Ministry introduced the Ontario Rebate for Electricity Consumers which provides an 8% rebate, equal to the provincial portion of HST, to eligible residential, small businesses and farms electricity bills. The Rebate is automatically be added to every eligible consumer's bill beginning January 1, 2017.

Since 2010, electricity prices have risen considerably, particularly for households and small businesses as the government has rebuilt and cleaned up Ontario's electricity system. Prices are forecast to continue to increase as additional generation comes online. Since 2010, average bills for residential consumers (i.e., using 750 kWh/month) have increased by over 50% and rates paid by commercial have increased by 56%.

Unlike the Ontario Electricity Support Program (OESP), which assists low-income residential

consumers, the Ontario Rebate for Electricity Consumers applies to all RPP-eligible consumers (residential, small businesses and farms) regardless of income, status or location.

The Ontario Rebate for Electricity Consumers is a legislative entitlement program.

**In the box below, provide sufficient details to support the ratings assigned. Make sure the following considerations have also been addressed:**

- **What long-term outcome measures have been established for the program?**
- **What short-term and intermediate outcome measures have been established for the program and how they lead to the long-term outcome measures?**
- **What accountability systems are in place to monitor performance?**
- **Has the program undergone independent third party evaluations? What were the findings/recommendations and how they have been implemented?**
- **What evidence is available that demonstrates progress towards long-term outcomes?**
- **How is the program benchmarked against comparable programs? (What are comparable programs; what do the comparisons show?)**

The Ontario Rebate for Electricity Consumers is a legislated entitlement program. It was developed as a way to provide financial relief to Ontario families, small businesses and farms on their electricity bills.

The Ontario Rebate for Electricity Consumers applies to all RPP-eligible consumers (residential, small businesses and farms) regardless of income, status or location and will provide an 8% rebate, equal to the provincial portion of HST.

Electricity utilities provide eligible consumers with a rebate directly on their bills, making the payment timely, i.e., paid at the same time the expense is incurred.

Eligible electricity consumers receive the 8% benefit directly on their bill from their electricity vendor, making the payment timely (i.e., paid at the same time the expense is incurred).

Ontario currently provides rate mitigation to various electricity consumer classes through a combination of tax-based and rate-based programs, including the Northern Ontario Energy Credit and the Ontario Electricity Support Program. With the program set to begin January 1, 2017, the Ontario Rebate for Electricity Consumers complements existing programs to provide additional rate mitigation measures for all consumers.

The Ontario Rebate for Electricity Consumers is a $1 billion program expected to be effective in mitigating the impact of rising electricity prices for families, small businesses, and farms.

**In the box below, provide sufficient details to support the ratings assigned. Make sure the following considerations have also been addressed:**

- **What efficiency measures are in place for the program? What other programs, organizations, industry standards are identified for benchmarking?**
- **How is efficiency being evaluated/assessed/monitored? How regularly?**
- **What efficiencies/savings/service improvements have been achieved in recent years?**
- **Is this program unique or are there similar programs (i.e., addressing the same need and focusing on the same target group) delivered by the Ontario government, other levels of government, not-for-profit or private sector organizations?**
- **What are those programs, their target groups and ministries/agencies/ other organizations involved?**
- **What efforts have been undertaken to integrate similar programs, reduce duplication and increase efficiencies and outcomes? What has been achieved?**

Eligible electricity consumers receive the 8% benefit directly on their bill from their electricity vendor, making the payment timely.

The Ministry designed the flow of the Ontario Rebate for Electricity Consumers funds in an efficient manner.

- With a goal of providing an 8% credit per month for eligible consumers, the delivery of the Ontario Rebate for Electricity Consumers via customer bills is efficient and does not lag consumption and the incurrence of the electricity expense.
- Electricity utilities are reimbursed by submitting and receiving claims which are netted against their other monthly transactions from the IESO, and the IESO submits and receives one monthly amount from the Ontario Financing Authority on behalf of the Ministry of Energy – this process is streamlined and leverages an already existing reimbursement process, thereby minimizing costs.

The Ministry of Finance will audit the Ontario Rebate for Electricity Consumers as part of its other regularly scheduled audits. Any administration costs local distribution companies (LDC) incur related to adding the Ontario Rebate for Electricity Consumers to consumer bills would be recovered through the rate base. Any LDC administrative costs incurred as a result of the

Ontario Rebate for Electricity Consumers by the rate base are also subject to the review by the OEB, which is an open and public format.

The Ontario Rebate for Electricity Consumers is unique as it assists a large number of customers (this includes about five million residential consumers, small businesses and farms), and provides the benefit directly on the electricity bill. There are other programs that provide more targeted assistance, such as the Ontario Energy and Property Tax Credit, and the Northern Ontario Energy Credit, although they are delivered through the tax system, and eligibility for these programs is not associated directly with electricity consumption and the incurrence of electricity expenses.

As part of the 2017-18 PRRT process, Treasury Board Secretariat provided the Ministry of Energy with preliminary funding to deliver the Ontario Rebate for Electricity Consumers as legislated in 2016. Based on updated forecasts, the Ministry will be requesting additional out-year funding for this program.

## Sustainability

| | 0 | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 | N/A |

**In the box below, provide sufficient details to support the ratings assigned. Make sure the following considerations have also been addressed:**

- **What are key cost drivers for the program and what is the relevant indicator (e.g. CPI)? Have the program's costs been growing faster or slower than the indicator?**
- **Is this a demand-driven/entitlement program? Which components of the program costs can be controlled?**
- **What are current/future trends that can impact the cost curve for the program?**
- **Is the program currently fully cost-recovered? If not, can full cost-recovery be achieved?**

This is a legislated entitlement program and spending is not discretionary. The program provides an 8% rebate, equal to the provincial portion of HST to consumers eligible for the Regulated Price Plan - this includes about five million residential consumers, small businesses and farms

The Ontario Rebate for Electricity Consumers program was created through the *Ontario Rebate for Electricity Consumers Act, 2016*. The key cost drivers for the program are electricity demand and price. The cost curve of this program will be determined by these two factors. Consumption can alter from estimates based on different causes, including weather (e.g., a cold winter or hot summer would increase consumption), economic factors, and population.

The program is funded by the tax base and is not cost recoverable. The program is scheduled to begin January 1, 2017, an complements existing tax-based and rate-based programs,

As part of the 2017-18 PRRT process, Treasury Board Secretariat provided the Ministry of Energy with preliminary funding to deliver the Ontario Rebate for Electricity Consumers as legislated in 2016. Based on updated forecasts, the Ministry will be requesting additional out-year funding for this program.

# Section 2: PROGRAM SPECIFIC OPPORTUNITIES

| **Overview / Context** | |
|---|---|
| **In the space below, outline and describe in general the types of improvement opportunities which can be considered and that you have identified through the program assessment, as well as the overlaying context (e.g. transformation currently underway that is impacting this program, historical transformation, etc.).** | |
| This is a new program. The Ministry revisit program opportunities once the program is underway. | |
| **Relevance** | This is a new program. The Ministry revisit program opportunities once the program is underway. |
| **Effectiveness** | This is a new program. The Ministry revisit program opportunities once the program is underway. |
| **Efficiency** | This is a new program. The Ministry revisit program opportunities once the program is underway. |
| **Sustainability** | This is a new program. The Ministry revisit program opportunities once the program is underway. |

| Opportunity Questions | Y/N | Opportunity #(s) |
|---|---|---|
| **Relevance** | | |
| Is there an opportunity to discontinue the program (if no longer relevant)? | **N** | |
| Is there an opportunity to redesign the program to better achieve government priorities and program objectives? | **N/A** | |
| Is there an opportunity to transfer responsibility (funding) of the program in whole or in part to another level of government or non-government entity? | **N** | |
| Other… | **N** | |
| **Effectiveness** | | |
| Are there opportunities to improve the effectiveness of the program for better outcomes? | **N** | |
| Is there additional data to be captured and/or analyzed to help assess the programs' effectiveness in achieving outcomes? | **N** | |
| Does further work need to be done to confirm desired outcomes, and to establish baselines, targets and performance measures? | **N** | |
| Other… | **N** | |
| **Efficiency** | | |
| Are there efficiency opportunities to reduce costs or improve services (e.g., new technologies or digitization, procurement, etc.)? | **N** | |
| Are there opportunities to realign resources with other programs the government delivers to improve outcomes for Ontarians? | **N** | |
| Are there opportunities to generate efficiencies through partnerships (e.g., intergovernmental integration, public/private partnerships)? | **N** | |
| Are there opportunities to reduce overlap or duplication by increasing the coordination or integration of delivery with other Ontario ministries or agencies (e.g., horizontal opportunities)? | **N** | |

| | | |
|---|---|---|
| Does the provincial government need to deliver the program and can it be provided more efficiently by alternative means? | **N** | |
| Other… | **N** | |
| **Sustainability** | | |
| Are there any opportunities to add and/or increase revenues, for example, full cost recovery; user fees; loan recuperation; and income generation? | **N** | |
| Could this program be income tested to both increase equity and improve sustainability? | **N** | |
| Can program eligibility be redefined to provide more targeted benefits / shared costs? | **N** | |
| Other… | **N** | |

# Section 3: PROGRAM PERFORMANCE MEASURES

## Available Data

The Ontario Rebate for Electricity Consumers is a legislated entitlement program that is delivered through customer bills.

On an annual basis, it provides about $1 billion dollars to residential consumers, small businesses, and farms in the form of an 8% rebate, equal to the provincial portion of HST.

The Ministry collects data from the IESO each month on the amount delivery agents, such as electricity utilities claim.

As with other Ministry tax-based programs, the Ministry of Finance will conduct audits of local distribution companies to ensure they are administering the Ontario Rebate for Electricity Consumers correctly and on a timely basis.

## Efficiency Measures

| **Efficiency Measure #1:** Transaction time (in days) to process claims and reimburse local distribution companies (LDC) and sub-metering providers. | Baseline | Target | Current |
|---|---|---|---|
| | 0 | 5 business days per claim | 0 |

**Describe the measure**

The IESO submits monthly reports to the Ministry which reflect total claims from LDCs and sub-metering providers of benefits that have been distributed to qualified electricity consumers. These reports are processed within 2 business days by the Ontario Financing Authority on behalf of the Ministry, and the IESO in turn reimburses the LDCs and sub-metering providers within the subsequent 2 business days.

**Describe the data that is being collected to support this specific measure, how frequently it is collected, and opportunities to collect / use additional data in supporting the measure.**

N/A

**Describe the rationale for choosing this measure (i.e., how it is relevant), what it is capturing and how the measurement is conducted, when the measure/baseline was established and provide other applicable considerations.**

The empirical measure chosen for this program ensure the entitlements reach the total number of eligible residential, farms and small business consumers in Ontario.

| |
|---|
| Processing claim application and providing re-imbursement within 5 business days minimizes interruptions to daily business for service providers. |
| **Describe existing use of benchmarks and potential opportunities where benchmarking could be improved**<br>N/A |

## Short-Term Outcome Measures

| **Short-Term Outcome Measure #1:** Number of Rebates applied to eligible electricity consumers including household, small business, and farms | Baseline | Target | Current |
|---|---|---|---|
| | 0 | 5 Million | 0 |
| **Describe the measure**<br>The empirical measure chosen for this program ensure the entitlements reach the total number of eligible residential, farms and small business consumers in Ontario.<br><br>The total number of customers may fluctuate as it is possible that the final eligible customer number could be over/under the 5 million target through no fault of the program. The aim is to ensure all eligible customers in Ontario receive their respective entitlement. | | | |
| **Describe the data that is being collected to support this specific measure, how frequently it is collected, and opportunities to collect / use additional data in supporting the measure.**<br>Monthly claims reflect the total number of consumers who are eligible for this Rebate. | | | |
| **Describe the rationale for choosing this measure (i.e., how it is relevant), what it is capturing and how the measurement is conducted, when the measure/baseline was established and provide other applicable considerations.**<br>The outcome measures is the total number of residential, farms and small business consumers who will benefit from this Rebate, against estimated targets, if the program is delivered effectively by the Province, the IESO, LDCs and sub-metering providers. | | | |
| **Describe existing use of benchmarks and potential opportunities where benchmarking could be improved**<br>N/A | | | |

## Intermediate-Term Outcome Measures

| **Intermediate-Term Outcome Measure #1:** Average reduction to electricity bills to residential consumers, farms and small businesses | Baseline | Target | Current |
|---|---|---|---|
| | 0% rebate | Min 8% savings | 0% rebate |

**Describe the measure**

The intermediate outcome measure for the Ontario Rebate for Electricity Consumers is the amount saved by eligible recipients each year. This amount will be an 8% rebate, equal to the provincial portion of HST, applied to consumers eligible for the Regulated Price Plan – this includes approximately five million residential consumers, small businesses and farms. The 8% rebate target applies to same year bill-to-rebate savings only.

**Describe the data that is being collected to support this specific measure, how frequently it is collected, and opportunities to collect / use additional data in supporting the measure.**

This data is collected monthly from the IESO.

**Describe the rationale for choosing this measure (i.e., how it is relevant), what it is capturing and how the measurement is conducted, when the measure/baseline was established and provide other applicable considerations.**

This outcome was chosen because it reflects that all eligible customers have received their entitlement from the Ontario Rebate for Electricity Consumers. This Rebate will help ensure consumers are able to manage electricity costs that have risen as Ontario transitioned to a cleaner, modern electricity system.

**Describe existing use of benchmarks and potential opportunities where benchmarking could be improved**

N/A

The OCEB is an entitlement program with a purpose of improving affordability of electricity for Ontarians January 2017.

## Long-term Outcome Measures

| **Long-Term Outcome Measure #1:** Successful program delivery limits increases in electricity costs to consumers relative prior years | Baseline | Target | Current |
|---|---|---|---|
| | $143.48/MWh in 2015 (average unit cost of delivered electricity) | Increases below the rate of inflation over the long-term | $143.48/MWh in 2015 (average unit cost of delivered electricity) |

**Describe the measure**

The measure chosen is an index of the annual growth of electricity costs to all residential and industrial consumers Ontario.

**Describe the data that is being collected to support this specific measure, how frequently it is collected, and opportunities to collect / use additional data in supporting the measure.**

Data collected by the IESO for growth rate for average energy costs to residential and industrial consumers by region / demographic.

**Describe the rationale for choosing this measure (i.e., how it is relevant), what it is capturing and how the measurement is conducted, when the measure/baseline was established and provide other applicable considerations.**

The long-term outcome measures the impact of the Ontario Rebate for Electricity Consumers program on the cost of electricity in Ontario. Based on the current annual average cost growth, the program is expected to assist in reducing average growth in cost of electricity post 2016-17 levels, when no Rebate existed.

**Describe existing use of benchmarks and potential opportunities where benchmarking could be improved**

N/A

## Opportunities in Performance Measurement

| Measures |
| --- |
| **Understanding the current gaps in measurement (e.g., measures are not available, or measures which are currently in use not providing objective/quantifiable evidence of the performance of the program, etc.), outline what opportunities exist and what steps the ministry will take (with timelines) to improve the measures.**<br><br>**Address each type of measure (output, short-term outcome, intermediate outcome, long-term outcome).**<br><br>**Identify new/additional measures where known.**<br><br>N/A |
| **Data** |
| **Identify opportunities to collect and use additional data sources to measure program effectiveness and efficiency.**<br>N/A |

## Reduced Poverty, Inequality and Exclusion

# Ontario Rebate for Electricity Consumers – ENERGY

**Issue/Need:**

- Since 2010, electricity prices have risen considerably, particularly for households and small businesses. Since 2010, average bills for residential consumers (i.e., using 750 kWh/month) have increased by over 50% and rates paid by commercial have increased by 56%.
- Electricity costs have increased as the necessary investments are made to decarbonize and modernize the province's electricity infrastructure.

**Program Description:**

- To mitigate electricity prices, the Ministry of Energy has implemented an 8% rebate equal to the provincial portion of HST to consumers eligible for the Regulated Price Plan - this includes about five million residential consumers, small businesses and farms.
- The rebate is automatically be added to every eligible consumer's bill beginning January 1, 2017.

This would be the difference between the purchase price for First Nations ($18 per share, above book value for the Province) and current market value. | | PCD | New - One Time | 290604 | 100% | H | 135.0000 | 135.0000 | | | | | | | The Ministry has obligations under a negotiation agreement and opens itself up to risks if not funded. | Ministry is request funding during 2017-18 PRRT. |

## Non-Financial Risks

Non-financial risks encompass a variety of risks, e.g. risks to the reputation of the government, ability to retain, sustain or develop an expert workforce, the level of employee engagement or quality of information.

| Risk Name | Description | Mitigating Strategies |
|---|---|---|
| Provide a short name for the risk | Describe your risk in detail, including implications and/or impacts to areas such as government operations, services, strategic policy, stakeholders if the risk should materialize | Describe the strategy to reduce the impact of the identified risk. |
| **First Nation Concerns** | Risk that First Nations (FN) will not agree with subsequent share offerings. | Plan to mitigate by engaging with FN communities and working to facilitate FN ownership in Hydro One. |
| **Métis Concerns** | Risk that Métis will not agree with subsequent share offerings. | Plan to mitigate by engaging with Métis communities and working to facilitate Métis ownership in Hydro One. |
| **Market Conditions** | The Ministry's ability to meet financial targets, as set out by Treasury Board and/or the Ministry of Finance, will be largely impacted by the state of the market. | The Ministry will seek to develop share sale plans and maintain on-going relationships with key investors to maximize returns and minimize costs. |
| **Public Concerns** | There have been many public requests to stop the privatization of Hydro One. The Ministry will likely feel similar pressure with each subsequent share sale. | The Ministry will seek to ensure the public is aware of the protections in place (e.g., Ownership restrictions, OEB rate setting process, Hydro One Ombudsman, etc.). |
| **Investor Concerns** | Investors will want certainty that the Province will not interfere or attempt to manage Hydro One in any way. | The Ministry has put a Governance Agreement in place to ensure all parties are aware of their rights and to set out the Province's role as an investor rather than a manager.<br><br>The Ministry will need to ensure that its messaging balances the need to ensure the public knows that protections are in place with ensuring investors don't perceive government interference as this would result in downward pressure on price and ultimately reduce value for the Province. |

## Risk Types (for completing Column E)

| Category | Definition | Code |
|---|---|---|
| Strategic/Policy/Performance Risk | Risks related to implementing (or not implementing) new policies or changes to existing policies (e.g. delays in passing legislation). The risk that strategies and policies fail to achieve required/targeted results. The risk of not providing value for money or cost-effectiveness. – Discretionary Risk Note: in exceptional circumstances it could be an External Risk. | **SPD** |
| Political Commitment | Risk of not meeting publicly announced commitments made to meet/further the government's objectives. Could include platform and mandate letter commitments – Discretionary Risk. Note: In exceptional circumstances it could be an External Risk. | **PCD** |
| Governance/ Accountability/ Organizational | Risk that the organization structure, accountabilities, or responsibilities are not defined, designed, communicated or implemented to meet the organization's objectives, and/or that culture and management commitment do not support the formal structures. – Discretionary Risk. | **GAOD** |
| Legal/Contractual Compliance | Risk that a government initiative, or action, will contravene a statute, regulation, contract, and/or MOU – Discretionary Risk | **LCD** |
| | Risk related to potential cost of complying with a legal or contractual agreement or of litigation against government – External Risk | **LCE** |
| Controllership/Accounting | Any risks related to the reliability of reporting or a change in accounting (e.g. a change in definition of the threshold for capital accrual, amortization expenses related to Minor Tangible Capital Assets)– External Risk | **CA** |
| Program Caseload / Utilization | Increased claims/caseload that can be deferred, (e.g., increased caseload) – Discretionary Risk | **UWD** |
| | Change in demand for services or entitlements. (e.g., Higher utilization for drug program or increase in Social Assistance) Assumes no policy or legislative changes – External Risk | **UWE** |
| Service/ Operational Risk | The risk that products or services will not get completed or delivered to quality standards or in a timely manner, as expected for reasons not related to caseload. Includes business continuity risk. | **SO** |
| OPS Compensation/Pensions | Cost recognized from OPS anticipated settlements or future contracts – Discretionary Risk | **OCPD** |
| | Risk related to OPS binding wage settlement, existing contracts or minimum negotiation mandate – External Risk | **OCPE** |
| OPS Workforce/ Skill Shortage | Costs associated with changes in FTEs. Risk related to skill shortage – Discretionary Risk | **OCWD** |
| | Risk related to skill shortage; specialized staff skills not available – External | **OCWE** |
| BPS Compensation | BPS anticipated negotiation - Discretionary | **BCPD** |
| | Risk related to BPS binding wage settlements – External Risk | **BCPE** |
| BPS Workforce | Costs associated with changes in FTEs – Discretionary Risk | **BWD** |
| | Risk related to staff not available to complete tasks (e.g. skills shortage or inability to hire in a timely way) – External Risk | **BWE** |
| Information and Information Technology | The risk that information produced or used (e.g., performance data) is incomplete, out-of-date, inaccurate, irrelevant or inappropriate to disclose. Risk that information or other technology (e.g., architecture, hardware, software) does not support busine | **IT** |
| Capital Project Delays | Risk relating to new projects – Discretionary Risks | **CAPD** |
| | Risk relating to changes in construction costs and/or project delays – External Risks | **CAPE** |
| Other | Risk that does not fit any of the above categories but will only materialize with a discrete decision – Discretionary Risk | **OD** |
| | Risk that does not fit any of the above categories - External Risk | **OE** |

# 2017-18 PROGRAM REVIEW, RENEWAL & TRANSFORMATION

## OGO CONSOLIDATION FORMS

### 1) FORM A - PROFORMA INCOME STATEMENT

Report on this form all revenue and expense amounts for each relevant line for each year

### 2) FORM A(i) - DETAILS OF EMPLOYEE BENEFITS EXPENSE

Report a detailed breakdown of employee benefits expense for the periods presented.

### 3) FORM B - PROFORMA BALANCE SHEET

Report on this form all assets and liabilities amounts for each relevant line for the periods presented.

### 4) FORM C - TANGIBLE CAPITAL ASSETS

For each category of TCA, report the continuity details for the asset class and related accumulated amortization for the periods presented.

### 5) FORM D - REVENUE FROM A MINISTRY OR OTHER GOVERNMENT REPORTING ENTITY

Based on the amounts reported in the proforma income statement (Form A), report **by ministry or other government reporting entity (including hospitals, school boards and colleges by sector)** any revenues from related organizations (GRE); one table for each ministry or government organization; there is no materiality with respect to reporting these amounts

### 6) FORM E - EXPENSES INCURRED WITH OR ON BEHALF OF A MINISTRY OR OTHER GOVERNMENT REPORTING ENTITY

Based on the amounts reported in the proforma income statement (Form A), report by ministry or other government reporting entity (including hospitals, school boards and colleges by sector) any expenses incurred with related organizations (GRE); one table for each ministry or government organization; there is no materiality with respect to reporting these amounts

### 7) FORM F - INTER-ORGANIZATION BALANCES WITH A MINISTRY OR OTHER GOVERNMENT REPORTING ENTITY

Based on the amounts reported in the proforma balance sheet (Form B), report by ministry or other government reporting entity (including hospitals, school boards and colleges by sector) any year-end balances with related organizations (GRE); one table for each ministry or government organization; there is no materiality with respect to reporting these amounts

### 8) FORM G - DEFERRED BALANCE CONTINUITY

For amounts reported as DEFERRED REVENUE and DEFERRED CAPITAL CONTRIBUTIONS from related parties (GRE) in Form B, report a continuity of activity in the year **by ministry or other government entity (including hospitals, colleges and school boards by sector)**; one table for each ministry or government organization; there is no materiality with respect to reporting these amounts

### 9) FORM H - STATEMENT OF CHANGE IN ACCUMULATED SURPLUS/(DEFICIT)

To report the statement of change in accumulated surplus/(deficit) capturing unrealized remeasurement gains or losses.

### 10) FORM I - NEW LOANS RECEIVABLE

Report in Table 1 any NEW loans receivable that the other government organization (OGO) has entered into or is planning to enter during the current fiscal year and the planned fiscal years.
Report in Table 2 any inter-governmental new loans receivable listed in Table 1.

### 11) FORM J - NEW INVESTMENTS RECEIVABLE

Report in Table 1 any NEW investments that the OGO has entered into or is planning to enter during the current fiscal year and the planned fiscal years.
Report in Table 2 any inter-governmental NEW investments listed in Table 1.

### NOTES

- ALL amounts should be reported in millions of dollars **to the nearest 4 decimals** (e.g. $2,734,588 reported as $2.7346)
- Interim to March 31 should reflect a **FULL YEAR** forecast
- **GRE** means Government Reporting Entity which comprises the Ministries and the organizations controlled by the government and consolidated in the Province's financial statements. Inter-organizational (GRE) balances will need to be reported in various forms. Please refer to schedule 8 in the 2015-16 Consolidated Financial Statements for a list of consolidated organizations.
- Please contact your respective OPCD Analysts if the forms need to be customized to meet your agency's requirements.

### LEGEND

- Yellow cells require input by users.
- Light blue cells contain links to related forms, no input is required.

| less: Provision for Doubtful Accounts (enter as negative values) | | |
| Due from the Government of Canada | | |
| Loans Receivable: | | |
| - from External Sources | | |
| - from a Ministry or other GRE **(see Form F)** | - | - |
| Other Assets[3]: | | |
| - from External Sources | 3.9250 | 3.9350 |
| - from a Ministry or other GRE **(see Form F)** | - | - |
| Tangible Capital Assets *(net of Accumulated Amortization)* **(See Form C)** | 3.7468 | 3.2360 |
| **TOTAL ASSETS** | **20.5049** | **20.0065** |
| | | |
| Accounts Payable & Accrued Liabilities: | | |
| Accrued Transfer Payments: | | |
| -from External Sources | | |
| -from a Ministry or other GRE **(see Form F)** | - | - |
| Accrued Interest on Debt: | | |
| -from External Sources | | |
| -from a Ministry or other GRE **(see Form F)** | - | - |
| Accrued Salaries Wages and Benefits | 3.6000 | 3.7000 |
| Accrued Materials, Supplies and Other | 3.4000 | 3.4000 |
| Accounts Payable: | | |
| -to External Sources | | |
| -to a Ministry or other GRE **(see Form F)** | - | - |
| Debt | | |
| - from External Sources | | |
| - from a Ministry or other GRE **(see Form F)** | - | - |
| Obligations under Alternative Financing and Procurement | | |
| - from External Sources | | |
| - from a Ministry or other GRE **(see Form F)** | - | - |
| Deferred Revenue | | |
| - from External Sources | | |
| - from a Ministry or other GRE **(see Form F)** | - | - |
| Deferred Capital Contribution (DCC) [4] | | |
| - DCC from External Sources [5] | 3.0264 | 2.7776 |
| - from a Ministry or other GRE **(see Form F)** | - | - |
| Liability for remediation of contaminated sites[6] | | |
| - from External Sources | | |
| - from a Ministry or other GRE **(see Form F)** | - | - |
| Other Liabilities[7] : | | |
| - from External Sources | 8.0502 | 7.6856 |
| - from a Ministry or other GRE **(see Form F)** | - | - |
| **TOTAL LIABILITIES** | **18.0766** | **17.5632** |
| | | |
| **NET ASSETS** | **2.4283** | **2.4433** |

**Notes:**

[1] Cash comprises of cash on hand, demand deposits and bank indebtness. Cash equivalents are short-term, highly liquid investments that are readily convertible to known amounts of cash and which are subject to an insignificant risk of changes in value. An investment normally qualifies as a cash equivalent only when it has a short maturity of, for example, three months or less from the date of acquisition.

[2] Temporary investments include treasury bills or investments certificates, and are generally capable of reasonable prompt liquidation (i.e. within one year). If the maturity of the investment is three months or less, the investment normally qualifies as a cash and cash equivalent (refer to (1) above). Investments longer than one year to liquidation should be classified as long-term investments.
Investments include mark-to-market adjustments on financial instruments where appropriate **(See Form H)**.

[3] Include Non-TP prepaid expenses and inventory for consumption under other assets.

# 2017-18 PROGRAM REVIEW, RENEWAL & TRANSFORMATION

## FORM B - OTHER GOVERNMENT ORGANIZATION - PROFORMA BALANCE SHEET

**GOVERNMENT ORGANIZATION NAME:** **220-Ontario Energy Board**

(4) Deferred capital contributions (DCC) represents unamortized portion of tangible capital assets or liabilities to construct or acquire tangible capital assets from specific-purpose funding. Deferred capital contributions are recorded in revenue over the estimated useful life of the underlying tangible capital asset once constructed or acquired.

(5) External sources represent the funding received from Government of Canada, municipalities or third parties.

(6) A new accounting standard PS 3260 liability for contaminated sites became effective April 1, 2014. Additional liabilities identified subsequent to April 1, 2014 need to be reported in the year in which they are identified with an offsetting journal entry to expense for remediation of contaminated site.

(7) Other liabilities include mark-to-market adjustments on financial instruments reported as liabilities **(See Form H)**.

***SUMMARY INFORMATION***

| | | | | | |
|---|---|---|---|---|---|
| Gross Additions (excluding Construction in Progress) | | 0.9750 | 0.6850 | 0.6850 | 0.6850 |
| Gross Additions - Construction in Progress | - | - | - | - | - |
| **TOTAL GROSS ADDITIONS** | **-** | **0.9750** | **0.6850** | **0.6850** | **0.6850** |
| Disposals and Other adjustments / Write-offs (net) | (0.2620) | (0.2620) | (0.2620) | (0.2620) | (0.2620) |
| **TOTAL ADDITIONS (NET OF DISPOSAL AND OTHER ADJUSTMENTS / WR** | (0.2620) | 0.7130 | 0.4230 | 0.4230 | 0.4230 |
| **TOTAL AMORTIZATION EXPENSE** | 0.7806 | 1.2238 | 1.3215 | 1.2861 | 0.7625 |

**Notes:**

(1) Land includes land acquired for transportation infrastructure, parks, buildings, and other program use and land improvements. Land excludes Crown lands acquired by right.

(2) Includes those acquired through capital leases and Construction in Progress.

(3) Transportation infrastructure includes highways, railway and track improvements, bridges and related structures and facilities, but excludes land and buildings.

(4) Other tangible capital assets include those capital assets not reported under Land, Buildings and Transportation Infrastructure. Examples include railway equipment, computer equipment, vehicles, aircrafts, furniture, and administrative & service equipment owned by government organizations.

(5) Assets Transferred from Construction-in-Progress (CIP) - This row tracks the cost of assets where construction has been completed during the current fiscal year and the related asset has been placed into service and therefore transferred into the appropriate asset category.

# 2017-18 PROGRAM REVIEW, RENEWAL & TRANSFORMATION

## FORM H - STATEMENT OF CHANGE IN ACCUMULATED SURPLUS/(DEFICIT)

**(To Be Completed by the Government Organization)**

**GOVERNMENT ORGANIZATION NAME:** **220-Ontario Energy Board**

**Please complete yellow cells only, as blue cells contain formulae. Enter losses as negative values.**

| Fiscal year ended March 31 (report in millions) | Reference | March 31 2017 | |
|---|---|---|---|
| **Accumulated surplus (deficit) is comprised of:** | | | |
| **A**. Accumulated operating surplus (deficit) | Table 1 A | 2.4283 | |
| **B**. Accumulated remeasurement gains (losses) | Table 1 B | - | |
| **Accumulated surplus (deficit) at Year End** | | 2.4283 | |
| | | | **Check** |
| **Net Assets as at March 31, 2017** | Note 1, Note 4, Form B | 2.4283 | **OK** |

**Table 1: Please provide information required below**

| A. Accumulated operating surplus (deficit) | Reference | March 31 2017 |
|---|---|---|
| Accumulated Operating Surplus/(Deficit) per final OGO forms as at March 31, 2016 (submitted for the 2015-16 Public Accounts) | | 2.3283 |
| Add/(Less): Surplus/(Deficit) | Form A | 0.1000 |
| Other – please specify: | Note 2 | |
| **Accumulated Operating Surplus/(Deficit) at End of Year** | | **2.4283** |
| **B. Accumulated remeasurement gains (losses)** [3] | **Note 3** | |
| Accumulated remeasurement gains / (losses) Per Audited Financial Statements as at March 31, 2016 | | |
| Unrealized gains (losses) attributable to: | | |
| Foreign exchange | | |
| Derivatives | | |
| Portfolio Investments | | |
| Less: Amounts reclassified to the statement of operations | Form A | - |
| **Accumulated remeasurement gains and losses at End of Year** | | **-** |

# 2017-18 PROGRAM REVIEW, RENEWAL & TRANSFORMATION

## FORM H - STATEMENT OF CHANGE IN ACCUMULATED SURPLUS/(DEFICIT)

**(To Be Completed by the Government Organization)**

**Notes**

(1) Must agree to "Total Assets" in Form B less "Total Liabilities" in Form B.

(2) Please describe the nature of "other adjustments",

(i) ----------.
(ii) ----------.
(iii) ----------.
(iv) ----------.

(3) Remeasurement gains and losses - this statement is used to distinguish remeasurement gains and losses from the operating revenue and expenses. Remeasurement gains and losses include unrealized changes in fair value of instruments measured at fair value and unrealized foreign exchange gains and losses. Remeasurement gains and losses will be accumulated in the statement of remeasurement gains and losses until the financial instrument they are associated with is derecognized. Upon derecognition of the instrument, the remeasurement gains and losses are reclassified to the statement of operations.

(4) On the statement of financial position net assets will have to be reconciled to the accumulated operating surplus/deficit and the accumulated remeasurement gains and losses.

(5) Accumulated Operating Surplus/(Deficit) - equals to opening accumulated surplus/deficit less opening unrealized gains or losses attributable to foreign exchange, derivatives and portfolio investments.

| Total Additions | 7.3228 | 7.1400 | (0.1828) | |
| Other Partner Funding | 7.3228 | 7.1400 | (0.1828) | |
| Provincial-Funded Expenditure | | - | - | |
| Provincial Capital Grants | - | - | - | |
| Amortization Expense | 8.4272 | 9.1689 | 0.7417 | |

[1] For periods up to 21-22, this balance can be taken directly from the "Additions" row in Form C of the OGO Reporting Templates

[2] Provincial funding used for acquiring capital in the current year. including any funding that was flowed to an agency in a prior period but used in the current period to acquire capital.

[3] Amounts funded (or to be funded) from non-provincial sources such as donations and grants from other levels of government, as well as the use of own resources such as own-source debt and reinvestment of internally generated surplus or reserves.

[4] Represents the voted ministry capital transfer payment to the agency for the fiscal year. May not equal the balance shown in the "Provincial Share" column above if the "Provincial Share" includes funds that were transferred to an agency in prior periods or funds that were appropriated for operating purposes, but used for capital. Otherwise the amounts should agree.

[5] For periods up to 21-22, this balance can be taken directly from the "Amortization" expense row in Form A of the OGO Reporting Templates

[6] Please provide variance explanations if the 10 year change is greater than $100M

# 2017-18 PROGRAM REVIEW, RENEWAL & TRANSFORMATION

## OGO CONSOLIDATION FORMS

### 1) FORM A - PROFORMA INCOME STATEMENT

Report on this form all revenue and expense amounts for each relevant line for each year

### 2) FORM A(i) - DETAILS OF EMPLOYEE BENEFITS EXPENSE

Report a detailed breakdown of employee benefits expense for the periods presented.

### 3) FORM B - PROFORMA BALANCE SHEET

Report on this form all assets and liabilities amounts for each relevant line for the periods presented.

### 4) FORM C - TANGIBLE CAPITAL ASSETS

For each category of TCA, report the continuity details for the asset class and related accumulated amortization for the periods presented.

### 5) FORM D - REVENUE FROM A MINISTRY OR OTHER GOVERNMENT REPORTING ENTITY

Based on the amounts reported in the proforma income statement (Form A), report **by ministry or other government reporting entity (including hospitals, school boards and colleges by sector)** any revenues from related organizations (GRE); one table for each ministry or government organization; there is no materiality with respect to reporting these amounts

### 6) FORM E - EXPENSES INCURRED WITH OR ON BEHALF OF A MINISTRY OR OTHER GOVERNMENT REPORTING ENTITY

Based on the amounts reported in the proforma income statement (Form A), report by ministry or other government reporting entity (including hospitals, school boards and colleges by sector) any expenses incurred with related organizations (GRE); one table for each ministry or government organization; there is no materiality with respect to reporting these amounts

### 7) FORM F - INTER-ORGANIZATION BALANCES WITH A MINISTRY OR OTHER GOVERNMENT REPORTING ENTITY

Based on the amounts reported in the proforma balance sheet (Form B), report by ministry or other government reporting entity (including hospitals, school boards and colleges by sector) any year-end balances with related organizations (GRE); one table for each ministry or government organization; there is no materiality with respect to reporting these amounts

### 8) FORM G - DEFERRED BALANCE CONTINUITY

For amounts reported as DEFERRED REVENUE and DEFERRED CAPITAL CONTRIBUTIONS from related parties (GRE) in Form B, report a continuity of activity in the year **by ministry or other government entity (including hospitals, colleges and school boards by sector)**; one table for each ministry or government organization; there is no materiality with respect to reporting these amounts

### 9) FORM H - STATEMENT OF CHANGE IN ACCUMULATED SURPLUS/(DEFICIT)

To report the statement of change in accumulated surplus/(deficit) capturing unrealized remeasurement gains or losses.

### 10) FORM I - NEW LOANS RECEIVABLE

Report in Table 1 any NEW loans receivable that the other government organization (OGO) has entered into or is planning to enter during the current fiscal year and the planned fiscal years.
Report in Table 2 any inter-governmental new loans receivable listed in Table 1.

### 11) FORM J - NEW INVESTMENTS RECEIVABLE

Report in Table 1 any NEW investments that the OGO has entered into or is planning to enter during the current fiscal year and the planned fiscal years.
Report in Table 2 any inter-governmental NEW investments listed in Table 1.

### NOTES

- ALL amounts should be reported in millions of dollars **to the nearest 4 decimals** (e.g. $2,734,588 reported as $2.7346)
- Interim to March 31 should reflect a **FULL YEAR** forecast
- **GRE** means Government Reporting Entity which comprises the Ministries and the organizations controlled by the government and consolidated in the Province's financial statements. Inter-organizational (GRE) balances will need to be reported in various forms. Please refer to schedule 8 in the 2015-16 Consolidated Financial Statements for a list of consolidated organizations.
- Please contact your respective OPCD Analysts if the forms need to be customized to meet your agency's requirements.

### LEGEND

- Yellow cells require input by users.
- Light blue cells contain links to related forms, no input is required.

| | | |
| **NET ASSETS** | **(36.5841)** | **(28.0650)** |

**Notes:**

[1] Cash comprises of cash on hand, demand deposits and bank indebtness. Cash equivalents are short-term, highly liquid investments that are readily convertible to known amounts of cash and which are subject to an insignificant risk of changes in value. An investment normally qualifies as a cash equivalent only when it has a short maturity of, for example, three months or less from the date of acquisition.

[2] Temporary investments include treasury bills or investments certificates, and are generally capable of reasonable prompt liquidation (i.e. within one year). If the maturity of the investment is three months or less, the investment normally qualifies as a cash and cash equivalent (refer to (1) above). Investments longer than one year to liquidation should be classified as long-term investments.
Investments include mark-to-market adjustments on financial instruments where appropriate **(See Form H)**.

[3] Include Non-TP prepaid expenses and inventory for consumption under other assets.

## FORM B - OTHER GOVERNMENT ORGANIZATION - PROFORMA BALANCE SHEET

**GOVERNMENT ORGANIZATION NAME:** **219-Independent Electricity System Operator**

(4) Deferred capital contributions (DCC) represents unamortized portion of tangible capital assets or liabilities to construct or acquire tangible capital assets from specific-purpose funding. Deferred capital contributions are recorded in revenue over the estimated useful life of the underlying tangible capital asset once constructed or acquired.

(5) External sources represent the funding received from Government of Canada, municipalities or third parties.

(6) A new accounting standard PS 3260 liability for contaminated sites became effective April 1, 2014. Additional liabilities identified subsequent to April 1, 2014 need to be reported in the year in which they are identified with an offsetting journal entry to expense for remediation of contaminated site.

(7) Other liabilities include mark-to-market adjustments on financial instruments reported as liabilities **(See Form H)**.

| | | | | | |
|---|---|---|---|---|---|
| Gross Additions (excluding Construction in Progress) | | - | - | - | - |
| Gross Additions - Construction in Progress | 29.1429 | 26.8225 | 23.0000 | 23.0000 | 23.0000 |
| **TOTAL GROSS ADDITIONS** | **29.1429** | **26.8225** | **23.0000** | **23.0000** | **23.0000** |
| Disposals and Other adjustments / Write-offs (net) | - | - | - | - | - |
| **TOTAL ADDITIONS (NET OF DISPOSAL AND OTHER ADJUSTMENTS / WR** | 29.1429 | 26.8225 | 23.0000 | 23.0000 | 23.0000 |
| **TOTAL AMORTIZATION EXPENSE** | 22.4723 | 22.0139 | 22.9235 | 23.3268 | 23.3268 |

**Notes:**

(1) Land includes land acquired for transportation infrastructure, parks, buildings, and other program use and land improvements. Land excludes Crown lands acquired by right.

(2) Includes those acquired through capital leases and Construction in Progress.

(3) Transportation infrastructure includes highways, railway and track improvements, bridges and related structures and facilities, but excludes land and buildings.

(4) Other tangible capital assets include those capital assets not reported under Land, Buildings and Transportation Infrastructure. Examples include railway equipment, computer equipment, vehicles, aircrafts, furniture, and administrative & service equipment owned by government organizations.

(5) Assets Transferred from Construction-in-Progress (CIP) - This row tracks the cost of assets where construction has been completed during the current fiscal year and the related asset has been placed into service and therefore transferred into the appropriate asset category.

# 2017-18 PROGRAM REVIEW, RENEWAL & TRANSFORMATION

## FORM H - STATEMENT OF CHANGE IN ACCUMULATED SURPLUS/(DEFICIT)

**(To Be Completed by the Government Organization)**

**GOVERNMENT ORGANIZATION NAME:** **219-Independent Electricity System Operator**

**Please complete yellow cells only, as blue cells contain formulae. Enter losses as negative values.**

| Fiscal year ended March 31 (report in millions) | Reference | March 31 2017 | |
|---|---|---|---|
| **Accumulated surplus (deficit) is comprised of:** | | | |
| **A**. Accumulated operating surplus (deficit) | Table 1 A | - 46.0866 | |
| **B**. Accumulated remeasurement gains (losses) | Table 1 B | 9.5025 | |
| **Accumulated surplus (deficit) at Year End** | | - 36.5841 | |
| | | | **Check** |
| **Net Assets as at March 31, 2017** | Note 1, Note 4, Form B | - 36.5841 | **OK** |

**Table 1: Please provide information required below**

| A. Accumulated operating surplus (deficit) | Reference | March 31 2017 |
|---|---|---|
| Accumulated Operating Surplus/(Deficit) per final OGO forms as at March 31, 2016 (submitted for the 2015-16 Public Accounts) | | - 71.8550 |
| Add/(Less): Surplus/(Deficit) | Form A | 25.7684 |
| Other – please specify: | Note 2 | |
| **Accumulated Operating Surplus/(Deficit) at End of Year** | | **- 46.0866** |
| **B. Accumulated remeasurement gains (losses)** [3] | **Note 3** | |
| Accumulated remeasurement gains / (losses) Per Audited Financial Statements as at March 31, 2016 | | 6.9380 |
| Unrealized gains (losses) attributable to: | | |
| Foreign exchange | | - 0.0030 |
| Derivatives | | |
| Portfolio Investments | | 2.4330 |
| Less: Amounts reclassified to the statement of operations | Form A | - 0.1345 |
| **Accumulated remeasurement gains and losses at End of Year** | | **9.5025** |

# 2017-18 PROGRAM REVIEW, RENEWAL & TRANSFORMATION

## FORM H - STATEMENT OF CHANGE IN ACCUMULATED SURPLUS/(DEFICIT)

**(To Be Completed by the Government Organization)**

**Notes**

(1) Must agree to "Total Assets" in Form B less "Total Liabilities" in Form B.

(2) Please describe the nature of "other adjustments",

(i) ----------.
(ii) ----------.
(iii) ----------.
(iv) ----------.

(3) Remeasurement gains and losses - this statement is used to distinguish remeasurement gains and losses from the operating revenue and expenses. Remeasurement gains and losses include unrealized changes in fair value of instruments measured at fair value and unrealized foreign exchange gains and losses. Remeasurement gains and losses will be accumulated in the statement of remeasurement gains and losses until the financial instrument they are associated with is derecognized. Upon derecognition of the instrument, the remeasurement gains and losses are reclassified to the statement of operations.

(4) On the statement of financial position net assets will have to be reconciled to the accumulated operating surplus/deficit and the accumulated remeasurement gains and losses.

(5) Accumulated Operating Surplus/(Deficit) - equals to opening accumulated surplus/deficit less opening unrealized gains or losses attributable to foreign exchange, derivatives and portfolio investments.

| Provincial Capital Grants | - | - | - | |
| Amortization Expense | 175.4806 | 231.5516 | 56.0710 | |

[1] For periods up to 21-22, this balance can be taken directly from the "Additions" row in Form C of the OGO Reporting Templates

[2] Provincial funding used for acquiring capital in the current year. including any funding that was flowed to an agency in a prior period but used in the current period to acquire capital.

[3] Amounts funded (or to be funded) from non-provincial sources such as donations and grants from other levels of government, as well as the use of own resources such as own-source debt and reinvestment of internally generated surplus or reserves.

[4] Represents the voted ministry capital transfer payment to the agency for the fiscal year. May not equal the balance shown in the "Provincial Share" column above if the "Provincial Share" includes funds that were transferred to an agency in prior periods or funds that were appropriated for operating purposes, but used for capital. Otherwise the amounts should agree.

[5] For periods up to 21-22, this balance can be taken directly from the "Amortization" expense row in Form A of the OGO Reporting Templates

[6] Please provide variance explanations if the 10 year change is greater than $100M

## 2017-18 PROGRAM REVIEW, RENEWAL & TRANSFORMATION (PRRT)
## INSTRUCTIONS FOR COMPLETING THE CONSOLIDATION SUMMARY FORM

1) **THIS FORM IS TO BE COMPLETED BY THE MINISTRY.**

2) **ONLY INPUT DATA IN THE "YELLOW" SHADED CELLS OF THE FORM.**

3) **NUMBERS ARE INPUT "IN MILLIONS" WITH UP TO FOUR DECIMAL PLACES.**

4) **UNDER THE "DATA INPUT NOTES" SECTION OF THIS FORM, PLEASE ENSURE THAT THE DATA BEING INPUT IS TAKEN FROM THE SOURCE AS INSTRUCTED IN "GREEN" WITHIN EACH SECTION.**

5) **SUBMIT COMPLETED FORM TO OPCD FOR REVIEW.**

6) **UPON OPCD'S REVIEW AND APPROVAL, THE MINISTRY MUST USE THE COMPLETED FORM AS THE BASIS FOR POPULATING AGENCY CONSOLIDATION ADJUSTMENTS IN ORBIT.**

7) **MINISTRY MUST ATTACH THE COMPLETED FORM TO THE RELATED ORBIT DOCKET AS SUPPORT FOR CONSOLIDATION ADJUSTMENTS.**

# Ministry of ENERGY

## I. BOULDERS

**Transfer Payment Administrative Modernization (TPAM) Boulder [D0042340]**

As part of the Transfer Payment Administrative Modernization Boulder, approve the increase of the Grants Ontario business line from Treasury Board Secretariat to Ministry of Government and Consumer Services to better align enterprise service responsibilities:

In this regard, the Board:

i) Approve decrease in savings target of $51,600 for 2017-18 and ongoing.

ii) Approve a decrease of $50,000 in 2017-18 and ongoing in the Ministry of Energy's Vote/Item 2902-01, Energy Development and Management, to provide permanent base funding for Grants Ontario.

## II. PROGRAM DECISIONS

### i. Programs / Functions Requiring a Program Note

**Program A – Cap and Trade Proceeds Recycling to Keep Electricity Rates Affordable [D0042330]**

| Proposed Minute |
|---|
| APPROVE the creation of a new Operating Expense item entitled "Cap and Trade Proceeds Recycling to Keep Electricity Rates Affordable" under Vote/Item 2905-04, Electricity Price Mitigation. |
| APPROVE the creation of a new transfer payment line entitled "Cap and Trade Proceeds Recycling to Keep Electricity Rates Affordable Initiative" under Vote/Item 2905-04, Electricity Price Mitigation. |
| APPROVE an expenditure increase of $249,000,000 in 2017-18, $263,000,000 in 2018-19, $276,000,000 in 2019-20, $319,000,000 in 2020-21 in the transfer payment line entitled "Cap and Trade Proceeds Recycling to Keep Electricity Rates Affordable Initiative" under Vote/Item 2905-04, Electricity Price Mitigation. |

# LIST OF TB/MBC DECISIONS
# Ministry of ENERGY

Treasury Board/Management Board of Cabinet approve the following multi-year resources for the program:

| Financial Decisions $M | 2017-18 | 2018-19 | 2019-20 | 2020-21 |
|---|---|---|---|---|
| **Operating Expense** | **249.0000** | **263.0000** | **276.0000** | **319.0000** |
| **Capital Expense** | | | | |
| **Total Expense** | **249.0000** | **263.0000** | **276.0000** | **319.0000** |

| Total Expense* | | | | | **249** | **263** | **276** | **319** |
| Operating Assets | | | | | | | | |
| Capital Assets | | | | | | | | |

Notes:
1. Table should be presented on a fully consolidated basis. Capital assets include acquisitions of consolidated entities. Consolidation information should be consistent with information in ORBIT and information submitted to the Office of the Provincial Controller Division (OPCD).
2. See ORBIT for current allocation.
*Reflects sum of all financial impacts related to Key Operating, Capital, Climate Change and Technical Decisions.

- Ontario's cap and trade program will result in an increase in electricity prices. Recycling cap and trade auction proceeds to lower the cost of electricity would offset electricity consumers' contributions to investments/initiatives which reduce greenhouse gas (GHG) emissions (e.g., non-emitting generation, conservation programs, etc.).

- Using cap and trade auction proceeds to lower the cost of electricity would make electricity more competitive with traditionally cheaper fossil fuels. By using the proceeds to lower the cost of electricity, consumers will be incented to fuel-switch away from fossil fuels toward much cleaner grid-connected electricity.

- Lowering the cost of electricity would have the desired effect of fuel switching in building and home heating, electric vehicles and the electrification of transit, and industrial processes.

- As recognized by Ontario's Climate Change Action Plan (CCAP), "technologies that are readily available

and being used today can significantly reduce energy demands and GHG emissions."

- Due to the long-term nature (i.e., typically 20 years) of electricity generation contracts and conservation programs, the associated costs are ongoing and are expected to be about $7 billion dollars annually during the first cap and trade compliance period (2017-2020). These costs will continue well beyond the timelines described in the CCAP. Auction proceeds recycling would help reduce electricity sector emissions by, directly and / or indirectly, offsetting the cost of non-emitting generation and conservation programs.

- The Ministry of Energy estimates approximately 3,300,000 tonnes of GHG emissions reductions by 2020 associated with "planned/committed" electricity sector initiatives that were developed following the 2013 Long-Term Energy Plan (LTEP). The forecast amount of GHG emissions savings is based on planned/committed electricity projects that have not yet been funded by electricity ratepayers. By using the proceeds to lower the cost of electricity, there is potential to support CCAP goals of fuel-switching and electrification.

- Fuel-switching to clean electricity supports the following CCAP goals:
    - Production or installation of renewable, low-carbon, carbon-free and net zero alternative energy;
    - Distributed renewable generation and energy management technologies to support load-shifting, energy storage, net metering and other measures to eliminate the need for grid-based electricity during natural gas peaking periods; and
    - Reduction of GHGs from land use and buildings including the adoption and use of zero emission and plug-in hybrid vehicles, and low-carbon alternative fuels.

# PROGRAM NOTE

# ENERGY – Cap and Trade Proceeds Recycling to Keep Electricity Rates Affordable

## II. Proposed Program Changes

- Ontario's cap and trade program will result in an increase in electricity prices. Recycling cap and trade auction proceeds to lower the cost of electricity would offset electricity consumers' contributions to investments/initiatives which reduce greenhouse gas (GHG) emissions (e.g., non-emitting generation, conservation programs, etc.).

- As recognized by Ontario's Climate Change Action Plan (CCAP), "technologies that are readily available and being used today can significantly reduce energy demands and GHG emissions."

- Cap and trade auction proceeds recycling would help reduce electricity sector GHG emissions by, directly and / or indirectly, offsetting the cost of non-emitting generation and conservation programs. Due to the long-term nature (i.e., typically 20 years) of electricity generation contracts and conservation programs, the associated costs are ongoing and are expected to be about $7 billion dollars annually during the first cap and trade compliance period (2017-2020). These costs will continue well beyond the timelines described in the CCAP.

- By using the proceeds to lower the cost of electricity, CCAP goals of fuel-switching and electrification will also be supported. The Ministry of Energy estimates approximately 3,300,000 tonnes of GHG emissions reductions by 2020 associated with "planned/committed" electricity sector initiatives that were developed following the 2013 Long-Term Energy Plan (LTEP). The forecast amount of GHG emissions savings is based on planned/committed electricity projects that have not yet been funded by electricity ratepayers.

- On September 12, 2016, Cabinet directed the Ministry of Energy, working with MOECC, to report back to Cabinet on an approach to recycle cap and trade proceeds to industrial and commercial electricity consumers over the first compliance period (2017-2020).

- On September 12, 2016, Ontario announced a number of initiatives to reduce electricity bills for consumers across the province, including the intention to use a portion of the cap and trade auction proceeds to help keep electricity prices affordable for industrial and commercial electricity consumers.

- For FY 2017-18, the Ministry of Energy is requesting $249 million.

- Implementation and delivery:

    - The Ministry is refining the program design, including approach and mechanism, and is expected to report back to Cabinet in November 2016.

    - Depending on the final approach, legislation, regulation or Lieutenant Governor in Council (LGIC) regulation may be required to allow the Independent Electricity System Operator (IESO) and Local Distribution Companies (LDCs) to recycle proceeds to consumers. The program dates are subject to change.

    - ENERGY Legal Services Branch is analyzing the required changes to ENERGY's statutes (e.g., Electricity Act, 1998) and regulations.

# PROGRAM NOTE

# ENERGY – Cap and Trade Proceeds Recycling to Keep Electricity Rates Affordable

- ENERGY LSB has identified some key areas where legislative and/or regulatory amendments are likely necessary depending on which mechanism to recycling proceeds is chosen.

- Such amendments could include, clarifying that the IESO can receive amounts from the GGRA and ensuring that Ontario Energy Board (OEB) and IESO have the necessary authority to address electricity pricing matters as contemplated.

- Furthermore, IESO and electricity distribution companies would need to update billing systems to reflect the recycled proceeds on bills for consumers.

## III. Decisions

## 1) Operating Decisions

### Key Decisions

### Greenhouse Gas Reduction Account Decisions

**A.** APPROVE an expenditure increase of $249,000,000 in 2017-18, $263,000,000 in 2018-19, $276,000,000 in 2019-20, $319,000,000 in 2020-21 in the transfer payment line entitled “Cap and Trade Proceeds Recycling to Keep Electricity Rates Affordable Initiative” under Vote/Item 2905-04, Electricity Price Mitigation.

- The funding for this GGRA item will be flowed out through a new TP line. This funding is for the first compliance period (2017-2020).

### Non-Financial Decisions

**Docket #** D0042330

- APPROVE the creation of a new Operating Expense item entitled “Cap and Trade Proceeds Recycling to Keep Electricity Rates Affordable” under Vote/Item 2905-04, Electricity Price Mitigation.

- APPROVE the creation of a new transfer payment line entitled “Cap and Trade Proceeds Recycling to Keep Electricity Rates Affordable Initiative” under Vote/Item 2905-04, Electricity Price Mitigation.

# PROGRAM NOTE

# ENERGY – Cap and Trade Proceeds Recycling to Keep Electricity Rates Affordable

## IV. Outcome Measures

| Outcome Measures | Docket # | N/A |
|---|---|---|

**Desired Outcomes/Outputs**

| Measure | Outcome |
|---|---|
| Proceeds from Cap and Trade / Greenhouse Gas Reduction Account | • $ million per year |
| Electricity Commodity Price ($/MWh) | • Estimated cost-savings to consumers relative to what they otherwise would have paid |

- Keep electricity prices affordable for industrial and commercial electricity consumers to incent fuel-switching away from more GHG intensive fossil fuels to clean electricity.

- Electricity prices have increased over time when electricity sector emissions have decreased. Since 2003, Ontario has invested more than $30 billion in over 11,000 megawatts (MW) of new and refurbished clean generation, including nuclear, hydro, wind and solar – this represents about 30% of our current supply. Ontario eliminated coal-fired electricity generation, replacing it with cleaner sources of energy, which has decreased electricity sector emissions by approximately 80% since 2003.

- The costs associated with ongoing investments in the electricity sector to ensure a clean, low-GHG-emitting system are significant and continue to be borne by electricity consumers. Due to the long-term nature (i.e., typically 20 years) of electricity generation contracts and conservation programs, the associated costs are ongoing and are expected to be about $7 billion dollars annually during the first cap and trade compliance period (2017-2020). These costs will continue well beyond the timelines described in Ontario's Climate Change Action Plan (CCAP). Auction proceeds recycling would help reduce electricity sector greenhouse gas (GHG) emissions by, directly and/or indirectly, offsetting the cost of non-emitting generation and conservation programs.

- Using cap and trade auction proceeds to lower the cost of electricity would make it more competitive with traditionally cheaper fossil fuels, providing an incentive to fuel switch from fossil fuels to electricity. Ontario's electricity sector is now approximately 90% emissions-free. Ontario's grid electricity currently has an emission factor which is far lower than the carbon content of natural gas or diesel.

- During off-peak periods, Ontario's current mix of electricity resources typically emits low levels of emissions. This puts Ontario's electricity sector in a strong position to support fuel switching as a GHG-reducing activity. Recycling proceeds to consumers by lowering electricity prices would help to maintain the emission reductions achieved thus far and encourage further reductions in the future.

- By using the auction proceeds to lower the cost of electricity, consumers will be incented to fuel-switch away from fossil fuels toward much cleaner grid-connected electricity. Lowering the cost of electricity would have the desired effect of fuel switching in building and home heating, electric vehicles and the

electrification of transit, and industrial processes. Fuel-switching to clean electricity supports the following CCAP goals:

  - Production or installation of renewable, low-carbon, carbon-free and net zero alternative energy;
  - Distributed renewable generation and energy management technologies to support load-shifting, energy storage, net metering and other measures to eliminate the need for grid-based electricity during natural gas peaking periods; and
  - Reduction of GHGs from land use and buildings including the adoption and use of zero emission and plug-in hybrid vehicles, and low-carbon alternative fuels.

- On September 12, 2016, Cabinet directed the Ministry of Energy, working with MOECC, to report back to Cabinet on an approach to recycle cap and trade proceeds to industrial and commercial electricity consumers over the first compliance period (2017-2020).

- On September 12, 2016, Ontario announced a number of initiatives to reduce electricity bills for consumers across the province, including the intention to use a portion of the cap and trade auction proceeds to help keep electricity prices affordable for industrial and commercial electricity consumers.

**Approach:**

- A decision has not been made on the mechanism to enable proceeds recycling to industrial and commercial electricity consumers. As directed by Cabinet on September 12, 2016, the Ministry of Energy is to report back to Cabinet (and Treasury Board) on the approach to recycle proceeds.

## V. Additional Considerations

### Implementation

- See above for the rationale.

- A decision has not been made on the mechanism to enable proceeds recycling to industrial and commercial electricity consumers. As directed by Cabinet on September 12, 2016, the Ministry of Energy is to report back to Cabinet (and Treasury Board) on the approach to recycle proceeds. Cabinet report back is expected in November 2016 (TBC).

- Depending on the final approach, legislation, regulation or LGIC may be required to allow the IESO and LDCs to recycle auction proceeds to consumers. Dates are subject to change. ENERGY Legal Services Branch (LSB) is analyzing the required changes to ENERGY's statutes (e.g., Electricity Act, 1998) and regulations.

# PROGRAM NOTE

# ENERGY – Cap and Trade Proceeds Recycling to Keep Electricity Rates Affordable

- ENERGY LSB has identified some key areas where legislative and/or regulatory amendments are likely necessary depending on which mechanism to recycling proceeds is chosen.

- Such amendments could include, clarifying that the IESO can receive amounts from the GGRA and ensuring that OEB and IESO have the necessary authority to address electricity pricing matters as contemplated.

- Furthermore, IESO and electricity distribution companies would need to update billing systems to reflect the recycled proceeds on bills for consumers.

## Communications/Stakeholder Engagement Plans

- Stakeholders include all non-residential electricity consumers and LDCs (i.e., billing system changes to facilitate proceeds recycling).

- Work with ENERGY Communications to develop communication plan and key messaging.

- Key Messages could include:
    - Ontario has been taking strong climate-positive actions for years, such as successfully eliminating coal as a source of electricity generation and developing a long-term energy plan that focuses on a safe, clean, reliable and affordable energy future.

    - Since 2003, Ontario has invested more than $30 billion in over 11,000 megawatts (MW) of new and refurbished clean generation, including nuclear, hydro, wind and solar – this represents about 30% of our current supply. Ontario eliminated coal-fired electricity generation, replacing it with cleaner sources of energy, which has decreased electricity sector emissions by approximately 80% since 2003.

    - The Climate Change Action Plan (CCAP) indicated a desire of using cap and trade proceeds to keep electricity rates.

    - Ontario intends to use cap and trade proceeds to keep electricity rates affordable for commercial and industrial electricity consumers.

    - Keeping electricity prices affordable for industrial and commercial electricity consumers to incent fuel-switching away from more greenhouse gas (GHG) intensive fossil fuels to clean electricity.

# PROGRAM NOTE

## VI. Proposed Minute

**Proposed Minute**

- APPROVE the creation of a new Operating Expense item entitled “Cap and Trade Proceeds Recycling to Keep Electricity Rates Affordable” under Vote/Item 2905-04, Electricity Price Mitigation.
- APPROVE the creation of a new transfer payment line entitled “Cap and Trade Proceeds Recycling to Keep Electricity Rates Affordable Initiative” under Vote/Item 2905-04, Electricity Price Mitigation.
- APPROVE an expenditure increase of $249,000,000 in 2017-18, $263,000,000 in 2018-19, $276,000,000 in 2019-20, $319,000,000 in 2020-21 in the transfer payment line entitled “Cap and Trade Proceeds Recycling to Keep Electricity Rates Affordable Initiative” under Vote/Item 2905-04, Electricity Price Mitigation.

Approve the following multi-year resources for the program:

| Financial Decisions $M | 2017-18 | 2018-19 | 2019-20 | 2020-21 |
|---|---|---|---|---|
| **Operating Expense** | **249** | **263** | **276** | **319** |
| **Capital Expense** | | | | |
| **Total Expense** | **249** | **263** | **276** | **319** |
| **Operating Assets** | | | | |
| **Capital Assets** | | | | |

In this regard:

- APPROVE the creation of a new Operating Expense item entitled “Cap and Trade Proceeds Recycling to Keep Electricity Rates Affordable” under Vote/Item 2905-04, Electricity Price Mitigation.
- APPROVE the creation of a new transfer payment line entitled “Cap and Trade Proceeds Recycling to Keep Electricity Rates Affordable Initiative” under Vote/Item 2905-04, Electricity Price Mitigation.
- APPROVE an expenditure increase of $249,000,000 in 2017-18, $263,000,000 in 2018-19, $276,000,000 in 2019-20, $319,000,000 in 2020-21 in the transfer payment line entitled “Cap and Trade Proceeds Recycling to Keep Electricity Rates Affordable Initiative” under Vote/Item 2905-04, Electricity Price Mitigation.

## I. Program Overview

| | Current Allocation | | | | | PROPOSED ALLOCATION | | | |
|---|---|---|---|---|---|---|---|---|---|
| **$M** | 17-18 | 18-19 | 19-20 | 20-21 | | **17-18** | **18-19** | **19-20** | **20-21** |
| Operating Expense | | | | | | **2.15** | **2.7** | **3.7** | **5.0** |
| Capital Expense | | | | | | | | | |
| Total Expense* | | | | | | **2.15** | **2.7** | **3.7** | **5.0** |
| Operating Assets | | | | | | | | | |
| Capital Assets | | | | | | | | | |

Notes:
1. Table should be presented on a fully consolidated basis. Capital assets include acquisitions of consolidated entities. Consolidation information should be consistent with information in ORBIT and information submitted to the Office of the Provincial Controller Division (OPCD).
2. See ORBIT for current allocation.
*Reflects sum of all financial impacts related to Key Operating, Capital, Climate Change and Technical Decisions.

This initiative is directed by Cabinet Minutes of 11 May 2016. Minute 10: "ENERGY work with MOECC and MTO to establish a 4 year time-limited free overnight charging program for residential and affected multi-unit residential customers/building and report back to Cabinet in 2016."

The Ontario government wishes to increase the number and use of electric vehicles in Ontario. Free overnight charging provides an incentive to acquire and make use of an electric vehicle by reducing the running costs of electric vehicles.

This initiative is expected to reduce GHGs from automobiles by encouraging greater acquisition and use of EVs, and encouraging EV owners to shift to charging during off-peak hours, reducing peaking demand (which is typically when natural gas electricity generation plants are used to meet power demand).

# PROGRAM NOTE

# ENERGY – Electric Vehicle Overnight Charging Rebate Program

While the Minute states the program is to provide “free overnight charging”, based upon average daily EV charging rates and anticipated EV adoption, the $15 million in funding announced in CCAP would be insufficient.

## II. Proposed Program Changes

- This is a new program announced in the Climate Change Action Plan (CCAP), which was released on June 8, 2016 by the Ministry of Environment and Climate Change (MOECC).
- Using the MOECC CCAP EV uptake forecast, which targets 5% of annual sales to be EVs by 2020 (14,000 EVs), the Ministry estimates there would be about 2,400 vehicles added each year, resulting in almost 52,000 EV on the road by the end of 2020.

| | 2015 | 2016 | 2017 | 2018 | 2019 | 2020 | 2021 |
|---|---|---|---|---|---|---|---|
| EV Sales | 1,900 | 4,300 | 6,700 | 9,200 | 11,600 | 14,000 | 16,400 |
| EVs at Year End | 5,900 | 10,200 | 16,900 | 26,100 | 37,700 | 51,700 | 68,100 |

- Based on the assumption that owners drive their car 50 kilometers a day (18,250 kms/ year), EVs would require about 8 kilowatt hours (kWh) of charging each day. Using the current time-of-use (TOU) off-peak rate and variable delivery charges, this works out to $1.04 a day, or $380 a year.
    - This forecast assumes a 90% participation rate and a 90% rate of qualification for the rebate (see Measuring Behavior).These assumptions are based on the expectation that majority of customers will be incented to participate to receive the rebate.
- The Ministry estimates that a 4-year program capped at $15 million with comprehensive coverage of EV owners across Ontario would enable an annual rebate of $105.
    - Since specific program design has not been determined yet, the Ministry estimates administration costs of about 10% of total program costs, or about $1.5 million, bringing total program costs to $15 million. Administration costs are assumed to be front-loaded, with annual processing costs of about $200,000.
- To provide the equivalent of free EV charging during overnight / off-peaks times, additional funding would be required to deliver a four-year program.

# PROGRAM NOTE

# ENERGY – Electric Vehicle Overnight Charging Rebate Program

| Fiscal Year Funding Requirements (July 1, 2017 Start Date) | 2017-18 | 2018-19 | 2019-20 | 2020-21 | 2021-22 | 4 Year Total |
|---|---|---|---|---|---|---|
| Annual Rebate Cost: $105/ customer ($s) | 1,300,000 | 2,500,000 | 3,500,000 | 4,800,000 | 1,400,000 | 13,500,000 |
| Administrative Cost | 850,000 | 200,000 | 200,000 | 200,000 | 50,000 | 1,500,000 |
| **Total Cost ($)** | **2,150,000** | **2,700,000** | **3,700,000** | **5,000,000** | **1,450,000** | **15,000,000** |

Other Program Approvals

- The Ministry plans to seek approval of program details from Cabinet at a future date.
- If the program design requires a government ministry to administer the program, a request to TB/MBC may be made for FTEs.

## III.Decisions

## 1) Operating Decisions

### Key Decisions

### Greenhouse Gas Reduction Account Decisions

**A.** APPROVE an expenditure increase of $2,150,000 in 2017-18, $2,700,000 in 2018-19, $3,700,000 in 2019-20, and $5,000,000 2020-21 in the transfer payment line entitled "Electric Vehicle Overnight Charging Rebate Program" under Vote/Item 2902-01, Energy Development and Management.

**B.** Note a funding requirement of $1,450,000 in 2021-22.

GGRA#: 10

|---|---|---|
| • APPROVE the creation of a new transfer payment line entitled “Electric Vehicle Overnight Charging Rebate Program” under Vote/Item 2902-01, Energy Development and Management. | | |

## IV. Outcome Measures

| Outcome Measures | Docket # | N/A |
|---|---|---|

**Desired Outcomes/Outputs**

As articulated in the CCAP, the desired outcome of this program is increased EV purchases as a proportion of overall vehicle sales, and EV charging during off-peak hours. Data collection would be a corollary output.

The Ministry is engaging with other ministries responsible for EV-related programs under the CCAP to ensure information sharing. This will enable the collection of data to measure program outcomes.

Information derived from this data could lead to the development of future programs that encourage and support low-emission transportation in Ontario. In terms of the efficient operation of the electricity grid, program data could also be used to mitigate any potential negative impact of growth in EV ownership (e.g. causing stress on low-voltage transformer stations if too many EVs are charging at the same time).

The Ministry is also responsible for developing a Vehicle-to-Grid Roadmap as per the CCAP Treasury Board Minute. Data derived from this and other EV programs, and from projects supported by the Ontario Smart Grid Fund, could instruct the design of the Roadmap (Vehicle-to-Grid is a concept whereby EVs are used as “distributed energy resources” that can both consume and supply power in a way that optimizes electricity grid assets).

**Approach**

Program options are under development. Existing EV program delivery frameworks are being taken under consideration for program design. The Ministry is also undertaking thorough consultations with key stakeholders to identify other key considerations for program design (e.g. utilities, energy agencies, other ministries, non-government agencies, industry).

# PROGRAM NOTE

# ENERGY – Electric Vehicle Overnight Charging Rebate Program

## V. Additional Considerations

### Implementation

- Implementation of the program is tentatively planned for Q2 2017, pending approval / direction from Cabinet and TB/MBC.

### Communications/Stakeholder Engagement Plans

- The Ministry has held multiple formal working group meetings with key stakeholders (LDCs, IESO, OEB) as well as other stakeholders (industry associations, not-for-profits, private sector companies, unit sub-meter providers, multi-unit residential sector experts) to solicit feedback on how the program could best achieve the desired objectives. The key themes from these discussions include:
    - Simplicity: The program should minimize administrative and processing costs. To do this program should be kept as simple as possible.
    - Behavioral Change: Incentivizing charging behavior (overnight and not during peak times) is as important as incentivizing adoption of EV ownership.
    - Scope: The program should aim to be province wide and apply to all EV owners (existing and future).
    - Tie to Hydro accounts: Rebate should be tied to customers' hydro accounts – no intention to refund costs of charging away from home.
    - Additional Data: Although there are benefits to capturing additional valuable data – this should be balanced against the costs of hardware to capture the data.
    - Auditability: Program should be robust against post event audits/reviews and able to demonstrate that funding has been disbursed appropriately.
    - Multi-Residential: Charging program for multi-residential customers will require more detailed analysis. It may be necessary to restrict to customers where charging is metered with a personal hydro account.
- Depending on the final project design, the program could have a financial and / or staff impact on some of these stakeholders, and the Ministry has concentrated on minimizing these potential impacts.
- The Ministry of Energy would participate in media / advertising undertaken to support public awareness of CCAP initiatives, including those focused on encouraging greater uptake of EVs.

# PROGRAM NOTE

# ENERGY – Electric Vehicle Overnight Charging Rebate Program

| Risks | Docket # | N/A |
|---|---|---|

Financial Risks

- While MOECC targeted EV sales of 14,000 in 2020, it is possible that uptake could be higher, resulting in a higher program cost. Mitigation measures could either be requesting an increase in funding, or making a change in the program to ensure overspending does not occur.
- It is also possible that the estimated program participation (90%), and rebate qualification (90%) are too low, resulting in higher program cost. Mitigation measures could either be requesting an increase in funding, or making a change in the program to ensure overspending does not occur.
- Funding for the program is expected to come from Greenhouse Gas Reduction Account (GGRA), which will be funded by proceeds from Ontario's cap and trade program. It is possible that forecasts for cap and trade proceeds are too high. Mitigation measures could either be requesting an increase in funding from a different source, or making a change in the program to ensure overspending does not occur.

Participation and Behavioural Change Risk

- As articulated in the CCAP, the key program outcomes are increased EV uptake as proportion of personal vehicles in Ontario, and EV charging overnight instead of during mid- and on-peak hours. These outcomes are behavioural.
- Program options are currently under development. These behavioural outcomes will be taken under consideration for program design. The funding level or other program design options (e.g. a requirement to make the program available for current and future EV owners across Ontario within the $15 million notional allocation) may constrain the ability to achieve these outcomes and ensure a high program participation rate.

| Human Resources (HR) Implications | Docket # | N/A |
|---|---|---|

- The Ministry does not yet know whether the program will require any additional FTEs. Once program details are finalized, the Ministry will make an FTE request (if one is required).

# PROGRAM NOTE

# ENERGY – Electric Vehicle Overnight Charging Rebate Program

## VI. Proposed Minute

2. See ORBIT for current allocation.
*Reflects sum of all financial impacts related to Key Operating, Capital, Climate Change and Technical Decisions.

### 1. GOVERNMENT'S ASSET STRATEGY - FUTURE SHARE SALES

In November 2015, the Province completed the first phase of its plan to broaden Hydro One ownership. It sold approximately 16% of the Province's outstanding Hydro One common shares at a price of $20.50 per share through an IPO and through related share sales to electricity sector union trusts. The Province sold an additional 14% of the Province's outstanding Hydro One common shares at a price of $23.65 through a

secondary share offering completed in April 2016. As a result, the Province currently owns about 70% of the outstanding common shares of Hydro One.

The government may be in a position to complete the broadening of Hydro One in 2017-18 and will require the appropriate allocation to support this effort. An expenditure increase of $70 million would cover the increase in underwriting fees, legal expertise and consulting costs, in the event of a larger sale in 2017-18.

**2. PERMANENT HUMAN RESOURCES SUPPORT FOR GOVERNMENT'S ASSET STRATEGY**

The Ministry continues to require dedicated resources and expertise to support the Province's asset strategy. In October 2015, the Ministry received approval to create an Expert Investment Advisory Committee and an Investment and Governance Secretariat. The Expert Investment Advisory Committee has a mandate of up to three years and consists of five members including a Chair.

The Ministry received temporary funding for 5 FTEs during 2016-17 PRRT for the Secretariat, including an executive director, a manager, two senior advisors and an administrative coordinator. The funding for these FTEs expires in 2018-19.

The Investment and Governance Secretariat was initially created as a temporary office, but the Ministry will require permanent resources in order to support both investment and governance decisions related to the Province's asset strategy on an ongoing basis.

The Ministry is requesting that the 5 temporary FTE positions be made permanent for the Secretariat – an executive director, a manager, two senior advisors and an administrative coordinator. Note, the level of FTEs would not change.

**3. CASH CONTRIBUTIONS ACCELERATION FOR FIRST NATIONS AGREEMENT-IN-PRINCIPLE**

In July 2016, the Province and First Nations in Ontario announced an agreement-in-principle for the Province to sell to First Nations for their collective benefit, shares of Hydro One Limited. The Province would sell up to approximately 15 million shares (2.5% of total current outstanding Hydro One common shares), depending on the level of First Nation participation, to a new collective investment vehicle owned by First Nations.

In addition to the benefit of investing collectively in Hydro One, the Province would also provide seed capital of up to $45 million in cash to the First Nation investment vehicle, depending on the level of First Nation participation. A minimum approval threshold of at least 80% of First Nation participation must be achieved by the end of 2017.

The Ministry received a preliminary allocation for the cash contribution during the 2017-18 PRRT for $45 million over a three year period (2017-18 to 2019-20). The timing for the cash contribution has been revised to a single contribution of up to $45 million in upon closing of the transaction.

**4. CONFERRED BENEFIT AMOUNTS TO FIRST NATIONS**

As part of the Province's agreement-in-principle with First Nations, the Province agreed to sell to First Nations up to approximately 15 million Hydro One shares, representing 2.5% of total Hydro One common shares outstanding, depending on the level of First Nations participation. The purchase price for the shares is $18 per share, which is above the Province's book value but below the current market value.

# PROGRAM NOTE

# ENERGY – Strategic Asset Management

In September 2016, the Ministry was directed to report back through the 2017-18 PRRT process with estimates of the conferred benefit amounts, methodology used to project future market values, and estimates of other financial implications over the agreement timeline and proposed disclosure.

The Ministry is requesting an allocation of $135M in order to book the conferred benefit amount with methodology provided below.

## II. Proposed Program Changes

### 1. GOVERNMENT'S ASSET STRATEGY - FUTURE SHARE SALES

The Ministry may be in a position to complete broadening the ownership of Hydro One by the end of 2017-18. In order to accomplish this, the Ministry requires an expenditure increase of $70 million in 2017-18 to ensure the Province has the flexibility to maximize value depending on market conditions.

**Financial Implications:**

| Item | Forecast 2017-18<br><br>Millions ($) | Description |
|---|---|---|
| Secondary Offering | 132.5 | • These are costs associated with further share sales of Hydro One<br>• Underwriting fees are a fixed portion of revenues (gross proceeds of offering) and comprise the vast majority of the budget under this cost category<br>• Other costs include legal / administrative costs for government and Hydro One (to be reimbursed to the company) |
| Consulting, Services and Other Costs | 7.5 | • Legal costs for advice related to Hydro One Brampton and First Nations and Métis discussions<br>• Transfer Payment Agreements include capacity funding to First Nations and Métis for their respective legal / financial / other advisors<br>• Other procurements for consultants and advisors related to investment and governance decisions to support the Province's ongoing asset management strategy related to Hydro One and OPG |
| **Total** | **140.0** | • The Ministry may be in a position to complete broadening the ownership of Hydro One in 2017-18 and requires this allocation to ensure it has the flexibility to maximize value depending on market conditions. |

Most of the forecasted budget above is recoverable through the proceeds from future offerings.

Ongoing consulting, advisory services and other costs for the Investment and Governance Secretariat are estimated to be approximately $5 million per year starting in 2019-20. This relates to investment and governance decisions to support the Province's ongoing asset management strategy as it relates to both the Province's investment in Hydro One and OPG.

# PROGRAM NOTE
# ENERGY – Strategic Asset Management

**2. PERMANENT HUMAN RESOURCES SUPPORT FOR GOVERNMENT'S ASSET STRATEGY**

Following the Hydro One Initial Public Offering (IPO), the Ministry of Energy created a separate structure that included:

- An Expert Investment Advisory Committee to advise on both investment and governance responsibilities, to support the Minister of Energy in his role as a shareholder; and
- An Investment and Governance Secretariat to support the Expert Investment Advisory Committee.

For these structures, the Ministry received approval during the 2016-17 PRRT process for 5 new FTEs from 2016-17 to 2018-19 to support the Investment and Governance Secretariat in overseeing investment and governance decisions related to the Province's asset strategy. The Ministry received $930,000, including $580,000 in salary and wages, for an Executive Director, a Manager, two Senior Advisors and an Administrative Assistant.

Through the Expert Investment Advisory Committee and the Investment and Governance Secretariat, the Ministry successfully executed part of the Province's asset strategy, including:

- A secondary offering which reduced the Province's share of Hydro One to approximately 70% and increased revenues by $1.97 billion in April 2016;
- An agreement-in-principle with First Nations to sell up to 2.5% of shares of Hydro One was announced July 2016; and
- The Province is poised to continue with its share sales of Hydro One in a staged and prudent manner.

The Secretariat was created in order to support the Minister on both financial and governance matters. While some of that role relates to temporary initiatives such as facilitating the share sale strategy, the Secretariat also provides ongoing advice and support related to, but not limited to:

| Scope | Responsibilities |
|---|---|
| General | • Providing ongoing advice on all financial and governance related matters<br>• Staying informed of industry and market developments through ongoing research, analysis and dialogue with the business community<br>• Tracking the quarterly and annual financial performance to monitor the Province's investments<br>• Being informed about the manner in which assets are consolidated on the Province's financials<br>• Interfacing with the Expert Investment Advisory Committee |
| Specific to Hydro One | • Periodically validating Hydro One is meeting its legal requirements to maintain its grid control, head office and substantially all of its strategic decision making functions in Ontario<br>• Exercising shareholder rights including participating in shareholder meetings, election of directors etc., ensuring the Province operates in accordance with its rights and obligations under the Governance Agreement<br>• Maintaining an up-to-date understanding of the Province's rights and responsibilities as the Province's ownership in Hydro One changes<br>• Effective management of holdings; ensuring the Province operates in accordance with the Registration Rights Agreement<br>• Provide advice on maintaining the Province's ownership objective, including exercising the Province's pre-emptive right to purchase shares up to 45% of any new issuance |

| | |
|---|---|
| | • Facilitating the submission of documents to the Ontario Securities Commission to disclose the amount of shares held (may be required as the Province is a shareholder owning more than 20% of a TSX-listed company) |
| Specific to OPG | • The Province's role and responsibilities as the shareholder of OPG, including analysis of OPG's business plans, and conducting due diligence and analysis on new OPG initiatives<br>• Providing advice and support to ensure OPG's compensation framework aligns with the Province's current legislation and regulations |

The nature of the work requires highly technical skill sets with specialized knowledge in areas such as capital markets, corporate finance and financial analysis.

In order to attract and retain qualified individuals, the Ministry needs to be able to advertise permanent positions to be competitive.

Given Energy's ever-expanding mandate, the ministry is managing on-going staffing pressures and doing its best to manage these staffing requirements internally. The absence of permanent positions or a reduction of FTEs would severely impact the Ministry's ability to deliver its ever-increasing mandate.

**Financial Implications:**

The Ministry is requesting a total of 5 permanent FTEs starting in 2017-18 and onwards. During the 2016-17 PRRT, the Ministry received funding for these FTEs until 2018-19, permanent funding is being requested from 2019-20 and onwards.

The table below shows the financial requirements and classification levels for the requested FTEs for the Investment and Governance Secretariat.

| Vote | Standard Accounts | FTEs | Existing Allocation | | Request | |
|---|---|---|---|---|---|---|
| | | | 2017-18 ($M) | 2018-19 ($M) | 2019-20 ($M) | 2020-21 ($M) |
| 2902-01 | Salary and Wages | 5 | 0.580 | 0.580 | 0.580 | 0.580 |
| | Benefits | | 0.075 | 0.075 | 0.075 | 0.075 |
| | Services – Office operations | | 0.175 | 0.175 | 0.175 | 0.175 |
| | Services – Remuneration for EIAC | | 0.100 | 0.100 | 0.100 | 0.100 |
| | **Subtotal** | | **0.930** | **0.930** | **0.930** | **0.930** |

| Classification | # of FTE |
|---|---|
| XSMC3 | 1 |
| XSMC1 | 1 |
| 7A007 | 2 |
| 5A007 | 1 |

Note: the Ministry received funding the 2016-17 PRRT for remuneration for the Expert Investment Advisory Committee. The table below shows funding for 2017-18 and 2018-19 which include remuneration for each member, with the exception of the Chair, who will not be remunerated. The ministry will report back in-year for formal Order-in-Council to extend the mandate of the Expert Investment Advisory Committee.

### 3. CASH CONTRIBUTIONS ACCELERATION FOR FIRST NATIONS AGREEMENT-IN-PRINCIPLE

As part of the Province's agreement-in-principle with First Nations, the Province agreed to provide a cash contribution of up to $45 million to First Nations over three years, depending on level of First Nations participation.

In September 2016, the Ministry was minuted the following:

- Note the Ministry of Energy will formally request an annual expenditure increase of up to $15,000,000 in each of 2017-18, 2018-19, and 2019-20 under vote/item 2902-01 for a cash contribution to the Purchaser. Underspending will be returned to the Treasury Board Contingency Fund.

Timing of payments was recently renegotiated with First Nations. The original timing contemplated the Province contributing three annual payments of up to $15 million following initial close of the share purchase. Revised timing contemplates a one-time contribution of up to $45 million.

Terms which encompass participation thresholds have not changed. The Province will contribute $45 million if 100% of First Nations participate or $30 million and prorated if less than 100% of First Nations participate.

**Financial Implications:**

In order to meet the new negotiated timeline, the Ministry will require the full $45 million cash contribution in 2017-18. Transfer payments in 2018-19 and 2019-20 will decrease by $15 million each year, and transfer payments in 2017-18 will increase by $30 million. The table below shows what the Ministry received during its preliminary allocation and the proposed new estimate / appropriation requirements for the out-years.

| Millions ($) | 2017-18 | 2018-19 | 2019-20 |
|---|---|---|---|
| Preliminary Allocation | 15.0 | 15.0 | 15.0 |
| Updated Forecast | 45.0 | - | - |

While we expect the transaction to close in the 2017-18 fiscal year, the agreement includes an extension provision which could allow closing to be postponed to the 2018-2019 fiscal year, if needed. It is unclear at this time when closing will occur and the Ministry does not expect to have a definitive timing on closing until late 2017 and thus, the Ministry will return during the 2018-19 PRRT process to request an appropriation to cover the risk that closing occurs during the 2018-2019 fiscal year, if needed.

### 4. CONFERRED BENEFIT AMOUNTS TO FIRST NATIONS

As part of the Province's agreement-in-principle with First Nations, the Province agreed to sell to First Nations up to approximately 15 million Hydro One shares, representing approximately 2.5% of total current Hydro One common shares outstanding, depending on the level of First Nations participation. The purchase price for the shares is $18 per share, which is above the Province's book value but below current market value.

# PROGRAM NOTE

# ENERGY – Strategic Asset Management

In September 2016, the Ministry was minuted the following:

- Direct the Ministry to work with Ministry of Finance / Ontario Financing Authority and Treasury Board Secretariat to report back either through Quarterly Reporting or the 2017-18 Program Review, Renewal and Transformation process with estimates of the conferred benefit amounts, methodology used to project future market values, and estimates of other financial implications over the agreement timeline and proposed disclosure.

TBS is in the process of obtaining a regulation under the *Financial Administration Act* prescribing a new class of non-cash expense for imputed subsidies arising out of dispositions of financial assets below fair market value. This is intended to best serve public interest for transparency and accountability.

**Financial Implications:**

A preliminary estimate of the conferred benefit amount to First Nations is up to approximately $135 million. The methodology is shown in the table below. These estimates are highly variable and will be based market conditions at the time of transaction close. The entire amount is expected to be incurred in 2017-18.

While we expect the transaction to close in the 2017-18 fiscal year, the agreement includes an extension provision which could allow closing to be postponed to the 2018-2019 fiscal year, if needed. It is unclear at this time when closing will occur and the Ministry does not expect to have a definitive timing on closing until late 2017 and thus, the Ministry will return during the 2018-19 PRRT process to request an appropriation to cover the risk that closing occurs during the 2018-2019 fiscal year, if needed.

| **Estimate of Difference between Market Value and Purchase Price** | |
|---|---|
| A. Assumed Market Price of Shares in 2017-18 (based on average of analyst price targets[1]) | $27.00 |
| B. Purchase Price for First Nations (per Agreement-in-Principle) | $18.00 |
| **C. Estimated Value Conveyed per Share (A - B)** | **$9.00** |
| D. Maximum Number of Shares being Purchased by First Nations | 14.875 million<br>(2.5% of current Hydro One common shares outstanding) |
| **E. Conferred Benefit Amounts (C x D)** | **$133.875 million**<br>**or approximately $135 million** |
| 1. Analyst share price valuations are generally based on analysis of estimated future earnings, dividends and/or cash flows. | |

# PROGRAM NOTE

# ENERGY – Strategic Asset Management

## III.Decisions

## 1) Operating Decisions

### Key Decisions

**A.** APPROVE an expenditure increase of $70,000,000 in 2017-18 and $5,000,000 in 2019-20 and onwards under Vote/Item 2906-01, Strategic Asset Management and Transformation.

| $M | 2017-18 | 2018-19 | 2019-20 | 2020-21 | Docket # |
|---|---|---|---|---|---|
| **Operating Expense** | **70.0000** | **-** | **5.0000** | **5.0000** | D0042437 |
| **Operating Assets** | | | | | |

- These expenses are intended to cover fees for services the Ministry requires to support various aspects of the Province's asset transformation strategy. These services include underwriting fees, external legal and financial advisors.
- Most of the forecasted budget above is recoverable through the proceeds from future offerings.
- Ongoing consulting, advisory services and other costs for the Investment and Governance Secretariat are estimated to be approximately $5 million per year.
- This relates to investment and governance decisions to support the Province's ongoing asset management strategy as it relates to both the Province's investment in Hydro One and OPG. The Ministry has sufficient existing funding in 2018-19 to support the government's asset strategy.

**B.** APPROVE an expenditure increase in the amount of $930,000, including $580,000 in salary and wages to support the Investment and Governance Secretariat in 2019-20 and onwards under Vote/Item 2902-01, Energy Development and Management.

| $M | 2017-18 | 2018-19 | 2019-20 | 2020-21 | Docket # |
|---|---|---|---|---|---|
| **Operating Expense** | | | **0.9300** | **0.9300** | D0042454 |
| **Operating Assets** | | | | | |

- The Ministry requires dedicated, permanent resources to manage and oversee the government's asset strategy; this includes funding for salary & wages (5 FTEs) as well as office operation service costs for the Investment and Governance Secretariat.
- During the 2016-17 PRRT, the Ministry received funding for these FTEs until 2018-19, permanent funding is being requested from 2019-20 and onwards.

# PROGRAM NOTE

# ENERGY – Strategic Asset Management

**C.** APPROVE an expenditure decrease of $15,000,000 in 2017-18 to 2019-20 under Vote/Item 2902-01, Energy Development and Management and an expenditure increase of $45,000,000 in 2017-18 in the transfer payment line entitled “Cash Contribution for First Nations” under Vote/Item 2906-01, Strategic Asset Management and Transformation.

| $M | 2017-18 | 2018-19 | 2019-20 | 2020-21 | Docket # |
|---|---|---|---|---|---|
| **Operating Expense: Vote/Item 2902-01** | **(15.0000)** | **(15.0000)** | **(15.0000)** | | D0042460 |
| **Operating Expense: Vote/Item 2906-01** | **45.0000** | | | | |
| **Operating Assets** | | | | | |

- The Ministry received the cash contribution for First Nations in its preliminary allocation in Vote/Item 2902-01 Energy Development and Management. The Ministry will manage this cash contribution from Vote/Item 2906-01 Strategic Asset Management to better track all expense related to the government’s asset strategy.
- As part of its 2017-18 preliminary allocation, the Ministry received a $45 million transfer payment over three years to First Nations, as a cash contribution.
- First Nations have renegotiated the terms of the agreement and full cash contribution to First Nations may be issued upon closing of the transaction depending on the level of First Nation participation.

**D.** APPROVE an expenditure increase of $135,000,000 in 2017-18 in the Transfer Payment line entitled “Conferred Benefit Amount” under Vote/Item 2906-01, Strategic Asset Management and Transformation.

| $M | 2017-18 | 2018-19 | 2019-20 | 2020-21 | Docket # |
|---|---|---|---|---|---|
| **Operating Expense** | **135.0000** | | | | D0042465 |
| **Operating Assets** | | | | | |

- The Ministry will incur this expense to account for the conferred benefit amount to First Nations, which is the difference between the purchase price for the shares and the market price.
- This is a one-time transaction.

## Non-Financial Decisions

| Docket # | D0042434 |
|---|---|

- APPROVE 5 FTEs the Ministry of Energy received during the 2016-17 PRRT for the establishment of the Investment and Governance Secretariat on a permanent basis.
- APPROVE the creation of a new transfer payment line entitled “Cash Contribution for First Nations” under Vote/Item 2906-01, Strategic Asset Management and Transformation.
- APPROVE the creation of a new transfer payment line entitled “Conferred Benefit Amount” under Vote/Item 2906-01, Strategic Asset Management and Transformation.

# PROGRAM NOTE

# ENERGY – Strategic Asset Management

## IV. Outcome Measures

| Outcome Measures | Docket # | N/A |
|---|---|---|

**Desired Outcomes/Outputs**

| Measure | Desired Outcome |
|---|---|
| **Investment contribution** | • Broadening the ownership of Hydro One will raise approximately $9 billion in funding for both the Trillium Trust to support priority infrastructure investments and pay down debt. |
| **Ownership** | • The Province is expected to sell down to 40% ownership in a careful, staged, and prudent manner |

## V. Additional Considerations

**Implementation**

- The government may be in a position to complete the broadening of Hydro One in 2017-18.
- Share sale plans will be developed by the Investment and Governance Secretariat and the Expert Investment Advisory Committee.
- The Ministry will seek approval from TB/MBC in early 2017 of a proposed share sale strategy.

# PROGRAM NOTE

# ENERGY – Strategic Asset Management

## Communications/Stakeholder Engagement Plans

| Stakeholder Group | Potential Issue | Stakeholder Engagement / Communications Strategy |
|---|---|---|
| **General Public (1)** | • First Nations being able to purchase shares at a reduced price compared to market value, as shown in conferred benefit amounts, may raise issues of fairness | • No proactive engagement required<br>• Conferred benefit amounts are disclosed to best serve public interest for transparency and accountability<br>• Purchase price is above the Province's book value for the shares and there is no impact to the Province's expectation to raise up to $9 billion to support infrastructure investment and pay down debt |
| **General Public (2)** | • Accelerating cash contributions to First Nations from up to three annual payments to one full payment increases costs for next year | • No proactive engagement required<br>• Continue to reinforce to stakeholders that no changes to overall amounts have been contemplated<br>• Timing of payments are fluid and remain subject to negotiation |
| **Shareholders / Investors** | • Increases in costs associated with potentially accelerating share sales | • No proactive engagement required<br>• Justification is that the Ministry requires flexibility to maximize value for the Province depending on market conditions |

## Risks

**Docket #** See Risks Dockets

**Market Conditions (High Risk)**

The Ministry's ability to meet financial targets will be largely impacted by the state of the market. The Ministry will seek to develop share sale plans and maintain on-going relationships with key investors to maximize returns and minimize costs.

**First Nations and Métis (Low Risk)**

Risk that First Nations or Métis may interfere with future share offerings. Plan to mitigate by engaging with First Nation and Métis communities and working to facilitate participation in broadening the ownership of Hydro One.

**Staffing Resources (Medium Risk)**
Once the government has completed the sale of Hydro One, there remains a need to manage and oversee the government's investments in the organization. The nature of the work requires highly technical skill sets with specialized knowledge that are in high demand.

In order to attract and retain qualified individuals, the Ministry needs to be able to advertise permanent positions to be competitive. Lack of qualified individual could hinder the ministry's ability to manage the shares in the future.

# PROGRAM NOTE
# ENERGY – Strategic Asset Management

| Human Resources (HR) Implications | Docket # | D0042454 |
|---|---|---|

Successful implementation and development of the government's asset strategy requires staff resources in the Investment and Governance Secretariat in the Ministry. The Secretariat is a separate division of the Ministry, formally reporting to the Deputy Minister of Energy.

The Ministry requires permanent 5 FTEs to support the Investment and Governance Secretariat.

See Section II Proposed Changes – Human Resource Implications for more details.

| Previously Requested Report Backs | Docket # | N/A |
|---|---|---|

- **Hydro One Brampton (April 2015):** TB requested Ministry of Energy to report back to TB/MBC with details on the final Brampton transaction results. At the August 25, 2015 meeting, the ministry provided an update and was directed to report back with details on the final Brampton transaction results.

- **First Nations (September 2016):** Direct the Ministry to work with Ministry of Finance/Ontario Financing Authority and Treasury Board Secretariat to report back either through Quarterly Reporting or the 2017-18 Program Review, Renewal and Transformation process with the recommended treatment of the conferred benefit being given to First Nations including estimates of the conferred benefit amounts over the agreement timeline and the methodology used to project future market values.

- **Métis (September 2016):** Direct the Ministry to report back to Treasury Board/Management Board of Cabinet for approval prior to finalization of the term sheet.

## VI. Proposed Minute

**Proposed Minute**

- APPROVE an expenditure increase of $70,000,000 in 2017-18 and $5,000,000 in 2019-20 and onwards under Vote/Item 2906-01, Strategic Asset Management and Transformation.

- APPROVE 5 FTEs the Ministry of Energy received during the 2016-17 PRRT for the establishment of the Investment and Governance Secretariat on a permanent basis.

- APPROVE an expenditure increase in the amount of $930,000, including $580,000 in salary and wages to support the Investment and Governance Secretariat in 2019-20 and onwards under Vote/Item 2902-01, Energy Development and Management.

- APPROVE the creation of a new transfer payment line entitled "Cash Contribution for First Nations" under Vote/Item 2906-01, Strategic Asset Management and Transformation.

# PROGRAM NOTE

## ENERGY – Strategic Asset Management

- APPROVE an expenditure decrease of $15,000,000 in 2017-18 to 2019-20 under Vote/Item 2902-01, Energy Development and Management and an expenditure increase of $45,000,000 in 2017-18 in the transfer payment line entitled “Cash Contribution for First Nations” under Vote/Item 2906-01, Strategic Asset Management and Transformation.

- APPROVE the creation of a new transfer payment line entitled “Conferred Benefit Amount” under Vote/Item 2906-01, Strategic Asset Management and Transformation.

- APPROVE an expenditure increase of $135,000,000 in 2017-18 in the Transfer Payment line entitled “Conferred Benefit Amount” under Vote/Item 2906-01, Strategic Asset Management and Transformation.

Approve the following multi-year resources for the program:

| Financial Decisions $M | 2017-18 | 2018-19 | 2019-20 | 2020-21 |
|---|---|---|---|---|
| **Operating Expense – Vote 2902-01** | (15.0000) | (15.0000) | (15.0000) | |
| **Operating Expense – Vote 2906-01** | 250.0000* | | 5.9300 | 5.9300 |
| **Capital Expense** | | | | |
| **Total Expense** | **235.0000** | **(15.0000)** | **(9.0700)** | **5.9300** |
| **Operating Assets** | | | | |
| **Capital Assets** | | | | |

* Operating expense requests for 2906-01 is the aggregate total of additional funding for Strategic Asset Management and Transformation ($70 million), Cash Contribution for First Nations ($45 million) and Conferred Benefit Amount ($135 million).

In this regard:

- APPROVE an expenditure increase of $70,000,000 in 2017-18 and $5,000,000 in 2019-20 and onwards under Vote/Item 2906-01, Strategic Asset Management and Transformation.

- APPROVE 5 FTEs the Ministry of Energy received during the 2016-17 PRRT for the establishment of the Investment and Governance Secretariat on a permanent basis.

- APPROVE an expenditure increase in the amount of $930,000, including $580,000 in salary and wages to support the Investment and Governance Secretariat in 2019-20 and onwards under Vote/Item 2902-01, Energy Development and Management.

2. See ORBIT for current allocation.
*Reflects sum of all financial impacts related to Key Operating, Capital, Climate Change and Technical Decisions.

Ontario is taking action to reduce electricity bills for families, farms, and businesses.

Electricity costs have increased as the necessary investments are made to decarbonize and modernize the province's electricity infrastructure.

Ontario has taken action to replace coal-fired generation with cleaner sources of energy. Since 2003, the Province has invested more than $35 billion in over 16,000 megawatts (MW) of new and refurbished clean generation, including nuclear, natural gas and renewables. This investment represents about 40% of our current supply and has helped decrease electricity sector emissions by approximately 80%. Over the same period, Hydro One has invested $15.5 billion to enhance and renew its transmission and distribution systems.

Since 2010, electricity prices have risen considerably, particularly for households and small businesses. Prices are forecast to continue to increase as additional generation comes online. Since 2010, average bills for residential consumers (i.e., using 750 kWh/month) have increased by over 50% and rates paid by commercial have increased by 56%.

To mitigate electricity prices, the Ministry of Energy has implemented an 8% rebate equal to the provincial portion of HST to consumers eligible for the Regulated Price Plan and other eligible consumers as defined by legislation – this includes about five million residential consumers, small businesses and farms.

# PROGRAM NOTE

# ENERGY – Ontario Rebate for Electricity Consumers

The rebate will be automatically added to every eligible consumer's bill beginning January 1, 2017.

The 8% rebate is part of a broader package of rate mitigation measures, that will help all electricity rate payers, announced in the 2016 Speech from the Throne, including:

- Enhancement of existing Rural or Remote Rate Protection to provide additional support to approximately 330,000 eligible rural consumers; and
- Expanding participation in the Industrial Conservation Initiative to allow more businesses to participate.

## II. Proposed Program Changes

In September 2016, the Ministry received Treasury Board/Management Board of Cabinet (TB/MBC) approval for the implementation of the Ontario Rebate for Electricity Consumers Program, an 8% rebate equal to the provincial portion of HST to consumers eligible for the Regulated Price Plan and other eligible consumers as defined by legislation – this includes about five million residential consumers, small businesses and farms.

The 8% rebate is part of a broader package of rate mitigation measures, that will help all electricity rate payers, announced in the 2016 Speech from the Throne, including:

- Enhancement of existing Rural or Remote Rate Protection to provide additional support to approximately 330,000 eligible rural consumers; and
- Expanding participation in the Industrial Conservation Initiative to allow more businesses to participate.

As part of approving the program, the Ministry is required to report back on updated future year impacts and a potential offset strategy for resource requirements to support program implementation.

The program design and implementation for the new Ontario Rebate for Electricity Consumers will follow procedures established through the previous administration of the Ontario Clean Energy Benefit, including a parallel process to provide support to Independent Power Authorities serving remote Indigenous communities.

Electricity consumers will receive the 8% benefit directly on their bill from their electricity vendor. The distributors and sub-meterers then submit claims for the month through the IESO. A total monthly invoice is issued to the Ministry of Energy by the IESO, which is then paid by the Ontario Financing Authority (OFA), on behalf of the Ministry for Energy. Once the OFA makes the payment, the IESO reimburses distributors and sub-meterers. The Ministry of Energy will enter into Memorandums of Understanding (MOU) with the IESO and OFA to clearly define each organizations respective role in the delivery of the Rebate.

Local distribution companies (LDCs) require time and investment to prepare billing systems to provide the rebate directly to consumers. The LDC community has indicated it intends to have such implementation work ready to begin providing rebates as of January 1, 2017. In the event that an LDC is not prepared for January 1, the legislation allows LDCs until July 1, 2017 for rebates to begin appearing on bills, with consumers entitled to a lump sum payment of rate assistance from the period between January 1 and the time the rebate begins appearing on their bills.

**FINANCIAL IMPLICATION:**

Electricity price is a key input variable in calculating the total costs associated with the Ontario Rebate for Electricity Consumers since expenditure is a direct function of the size of the bill. The ministry is providing a revised price forecast that reflects the Ministry's best estimate of all current and future price pressures and weather projections. The initial forecast was subsequently revised based on updated methodology and improved data inputs, leading to an increase in the estimated cost of administering the program in all years. The table below shows what the Ministry received during its preliminary allocation and the proposed new

estimate/appropriation requirements for the out-years. The Ontario Rebate for Electricity Rebate program does not have an end date.

| Millions ($) | 2017-18 | 2018-19 | 2019-20 | 2020-21 |
|---|---|---|---|---|
| Preliminary Allocation | 1,006.00 | 1,004.00 | 1,004.00 | 1,004.00 |
| Updated Forecast | 1,100.00 | 1,100.00 | 1,200.00 | 1,200.00 |

**HUMAN RESOURCES IMPLICATIONS:**

Successful implementation of the Ontario Rebate for Electricity Consumers, a permanent program, will require additional permanent staff resources in the Ministry of Energy to support new government policy and operational responsibilities.

The ministry's partners in this initiative – the IESO, OFA and the Ministry of Finance – are not providing program administration support. Rather, the IESO and OFA are only making payments on behalf of the Ministry of Energy, and the Ministry of Finance is tasked with auditing entities post payment.

Successful implementation of the Ontario Rebate for Electricity Consumers will require additional permanent staff resources in the Ministry of Energy to support new government policy and operational responsibilities. The implementation of an initiative of this magnitude and importance cannot be met within existing resources.

Rising electricity price in Ontario has been a continued to grow as a media focus over last few months. This has created significant communication challenges that the ministry needs to address on a regular basis. The ministry cannot falter in the implementation of the program, especially in the light public perception that the government is not doing enough to reduce the price of electricity for consumers. Negative stakeholder reactions would raise concerns about the government's energy price mitigation commitments.

The Ministry is requesting a total of 4 new permanent FTEs starting in 2017-18 and onwards. The FTEs requested will cover a variety of responsibilities critical to the success of the Ontario Rebate for Electricity Consumers, including:

- Policy and program development, providing direction to 72 local distribution companies (LDCs) and 10 Independent Power Authorities to develop specific payment and billing mechanisms, in addition to managing the relationships with service providers to ensure that any identified issues are addressed and resolved.
- Financial support to track and monitor up to 400 data elements each month in order to know how much funding has been provided and to what entities, and tracking LDC payments and settlement statements based on information received from the IESO.
- Communications and marketing support to handle internal and external program stakeholders.

The table below shows the financial requirements and classification levels for the requested permanent FTEs for the Ontario Rebate for Electricity Consumers.

| Vote | Standard Accounts | FTEs | 2017-18 ($M) | 2018-19 ($M) | 2019-20 ($M) | 2020-21 ($M) |
|---|---|---|---|---|---|---|
| 2902-01 | Salary and Wages | 4 | 0.41 | 0.41 | 0.41 | 0.41 |
| | Benefits | | 0.06 | 0.06 | 0.06 | 0.06 |
| | Services – Office operations | | 0.14 | 0.14 | 0.14 | 0.14 |
| | **Subtotal** | | **0.61** | **0.61** | **0.61** | **0.61** |

# PROGRAM NOTE

# ENERGY – Ontario Rebate for Electricity Consumers

| Classification | # of FTE |
|---|---|
| 7A007 | 1 |
| 6A007 | 2 |
| 5A007 | 1 |

In addition, the Ministry requires $2.5 million to cover program implementation and delivery of the Ontario Rebate for Electricity Consumers, this includes:

**Program Development and Management**

- Overall program management and oversight
- Develop policies as they relate to the implementation and ongoing management of the benefit
- Manage the relationships with service providers (IESO/OFA/Finance/OEB) to ensure that any identified issues are addressed and resolved
- Develop the program design for the Independent Power Authorities including payment mechanisms, audit and monitoring
- Field ongoing LDC, sub-meterer, and retailer program questions
- Assess other information from IESO and LDCs
- Develop and implement tools, standards, definitions, service expectations and monitoring systems which will result in an accountable, well managed disbursement of funds
- Develop performance measures and standards for delivery in order to take corrective action if standards are not being met
- Develop agreements relative to the administration of the Ontario Rebate for Electricity Consumers

**Financial and Administrative Oversight**

- Manage the appropriation and provide information to Treasury Board for quarterly reporting
- Develop controllership framework to ensure the financial integrity in the use of public funds is maintained for audit purposes, and that appropriate accountability mechanisms are in place
- Manage appropriation variances, and compute accruals
- Prepare reports and central agency request for spending authority and/or in-year funding adjustments as part of the annual PRRT process based on information and forecasted data
- Monthly tracking of LDC payments and settlement statements based on information received from the IESO. There will be a need to track and monitor up to 400 data elements in each month in order to know how much funding has been provided and to what entities
- Internal due diligence checks of payments
- Develop contract management tools to ensure that service partners are meeting contractual requirements and compliance of Transfer Payment directives are being met
- Monitor monthly payments
- Provide updates in quarterly management reports on expenditures to date and beneficiaries.
- Obtain actual annual costs of the Ontario Rebate for Electricity Consumers and the number of beneficiaries from the LDCs
- Liaise with IESO, OEB and LDCs to come up with accurate fiscal/allocation forecasting

**Communications Support**

- Lead overall communications around the Rebate, both internal and external
- Development of communications and marketing materials to explain the Rebate (e.g., web content, print materials if needed, etc.)
- Ongoing media relations and issues management support

# PROGRAM NOTE

# ENERGY – Ontario Rebate for Electricity Consumers

**Program Delivery for Independent Power Authorities (IPAs)**

- IPAs are not connected to the IESO-controlled grid; not part of the provincial electricity system; and outside of Ontario's regulatory framework. IPAs set their own electricity rates and are not subject to the OEB's ratemaking or licensing authority.
- Payments to the IPAs expected to be highly resource intensive: complexity of running auditable programs in remote entities.
- Program requirements include:
  - determining eligibility of customers;
  - defining the "base invoice amount" to apply the 8% credit;
  - developing accurate projections and forecasts;
  - determining program delivery process – how the rebate will be delivered and received; and
  - setting accountability mechanisms to maintain financial integrity of public funds

The table below shows the total financial request for the Ontario Rebate for Electricity Consumers. The Ontario Rebate for Electricity Rebate program does not have an end date.

| Millions ($) | 2017-18 | 2018-19 | 2019-20 | 2020-21 |
|---|---|---|---|---|
| Salary and Wages | 0.41 | 0.41 | 0.41 | 0.41 |
| Benefits | 0.06 | 0.06 | 0.06 | 0.06 |
| Services – Office Operations | 0.14 | 0.14 | 0.14 | 0.14 |
| Services – Program Delivery | 2.50 | 2.50 | 2.50 | 2.50 |
| Transfer Payment | 1,100.00 | 1,100.00 | 1,200.00 | 1,200.00 |
| **Subtotal** | **1,103.11** | **1,103.11** | **1,203.11** | **1,203.11** |

## III. Decisions

## 1) Operating Decisions

### Key Decisions

**A.** APPROVE an expenditure increase of $94,000,000 in 2017-18, $96,000,000 in 2018-19, $196,000,000 in 2019-20, and $196,000,000 in 2020-21, under Vote/Item 2905-03 Ontario Rebate for Electricity Consumers.

| $M | 2017-18 | 2018-19 | 2019-20 | 2020-21 | Docket # |
|---|---|---|---|---|---|
| **Operating Expense** | **94.0000** | **96.0000** | **196.0000** | **196.0000** | D0042468 |
| **Operating Assets** | | | | | |

- The initial forecast was subsequently revised based on updated methodology and improved data inputs, leading to an increase in the estimated cost of administering the program in all years.
- Note: The Ontario Rebate for Electricity Rebate program does not have an end date.

# PROGRAM NOTE

# ENERGY – Ontario Rebate for Electricity Consumers

**B.** APPROVE an expenditure increase of $610,000, including $410,000 in salary and wages in 2017-18 and onwards under Vote/Item 2902-01, Energy Development and Management.

| $M | 2017-18 | 2018-19 | 2019-20 | 2020-21 | Docket # |
|---|---|---|---|---|---|
| **Operating Expense** | **0.6100** | **0.6100** | **0.6100** | **0.6100** | D0042470 |
| **Operating Assets** | | | | | |

- The Ministry will require dedicated resources and expertise to support the implementation of the Ontario Rebate for Electricity Consumers, in particular:
  - Funding for salary & wages (4 FTEs) as well as office operation service costs.

**C.** APPROVE an expenditure increase of $2,500,000 for program delivery in 2017-18 and onwards under Vote/Item 2902-01, Energy Development and Management.

| $M | 2017-18 | 2018-19 | 2019-20 | 2020-21 | Docket # |
|---|---|---|---|---|---|
| **Operating Expense** | **2.5000** | **2.5000** | **2.5000** | **2.5000** | D0042470 |
| **Operating Assets** | | | | | |

- The Ministry requires funding for program implementation and delivery to manage the Ontario Rebate for Electricity Consumers. This includes program development and management, financial administration and oversight, communications and program delivery for IPAs.

## Non-Financial Decisions

| Docket # | D0042470 |
|---|---|

- APPROVE 4 new permanent FTEs starting in 2017-18 and onwards to support policy and operational responsibilities related to the Ontario Rebate for Electricity Consumers.

# PROGRAM NOTE

# ENERGY – Ontario Rebate for Electricity Consumers

## IV. Outcome Measures

| Outcome Measures | Docket # | N/A |
|---|---|---|

**Desired Outcomes/Outputs**

| Measure | Desired Outcome |
|---|---|
| **Investment** | • Number of rebates provided to eligible residential consumers, farms and small businesses<br>• Number of Ontario electricity consumers benefiting from the Ontario Rebate for Electricity Consumers |
| **Rate Mitigation** | • Total amount saved in each sector – residential and small business – expressed both in dollar amount and percentage savings<br>• Contribution to reduction in annual growth of electricity cost<br>• Estimated cost-savings to consumers |

## V. Additional Considerations

### Implementation

LDCs require time and investment to prepare billing systems to provide the rebate directly to consumers. The LDC community has indicated it intends to have such implementation work ready to begin providing rebates as of January 1, 2017. In the event that an LDC is not prepared for January 1, the legislation allows LDCs until July 1, 2017 for rebates to begin appearing on bills, with consumers entitled to a lump sum payment of rate assistance from the period between January 1 and the time the rebate begins appearing on their bills.

**Role of Ministry's partners in this initiative:**

Electricity consumers receive the 8% benefit directly on their bill from their electricity vendor. The distributors and sub-meterers then submit claims for the month through the IESO. A total monthly invoice is issued to the Ministry of Energy by the IESO, which is then paid by the Ontario Financing Authority (OFA), on behalf of the Ministry for Energy. Once the OFA makes the payment, the IESO reimburses distributors and sub-meterers.

The Ministry of Energy will enter into Memorandums of Understanding (MOU) with the IESO and OFA to clearly define each organizations respective role in the delivery of the Rebate.

# PROGRAM NOTE

# ENERGY – Ontario Rebate for Electricity Consumers

## Communications/Stakeholder Engagement Plans

A series of high-profile announcements occurred around the introduction of legislation in September 2016:

- Keynote speech and two public events pre-introduction
- News release at introduction
- Full media availability province-wide
- Regional echo events post-introduction
- Early engagement of EDA, CEOs of LDCs
- Stakeholder outreach/technical briefings with Ontario Chamber of Commerce, AMPCO, OEB low-income table, AMO, etc.

The target audience is all electricity consumers in Ontario.

The Ministry has/is positioning the Ontario Rebate for Electricity Consumers as:

- An unprecedented plan to benefit all ratepayers in a lasting, meaningful way.
- Rural customers will receive the largest single rate relief ever.
- Businesses across Ontario will have even more opportunity to be competitive and manage their energy costs.

## Risks

**Docket #** N/A

**Legal (Low Risk)**

The government introduced legislation that would authorize financial assistance for certain Ontario electricity consumers in respect of electricity costs.

The proposed *Ontario Rebate for Electricity Consumers Act, 2016* would authorize the making of regulations to reimburse electricity vendors for amounts credited to consumers' accounts under the Act. The Act authorizes the making of various other regulations, including setting out other ways for consumers to receive financial assistance, to alter the default rules in the Act for how to calculate the financial assistance and to limit or alter who is entitled to financial assistance. The Act amends the *Ontario Clean Energy Benefit Act, 2010* to authorize the making of regulations under that Act in respect of cut-off dates for financial assistance under that Act.

**Pressure on the Fiscal Plan (Low Risk)**

The 8% rebate is expected to cost about $1 billion per year (i.e., $4 billion from 2017-2020), representing an additional pressure on the fiscal plan. Consideration could be given to allocating the $0.24 billion in reduced proceeds required towards other existing initiatives in the fiscal plan that also reduce greenhouse gas (GHG) emissions, thereby providing an overall fiscal plan offset. If cap and trade auctions are under-subscribed, the $0.24 billion may not be available for reallocation to the fiscal plan.

In the absence of any offset strategies, the full cost of the rate mitigation approach would add to the pressures and risks that need to be managed in order for the government to balance the budget in 2017-18 and stay balanced in 2018-19 and beyond.

**Fiscal Estimates (Low Risk)**

The estimated cost of the Ontario Rebate for Electricity Consumers is based on projected electricity prices, applied to estimated consumption each year by residential, farm, and small businesses. There is a fiscal risk exposure, as actual fiscal cost will depend on actual prices, including existing and new retailer contract prices

and numbers, and actual consumption by eligible consumers, which will certainly be variable.

This may lead to insufficient funds nearing year-end. A mitigation strategy will require a flexible and quick method for obtaining additional funds, or otherwise risk late payment to the IESO, LDCs and sub-metering providers, which could delay the availability of the rebate to customers or cause significant working capital issues for these entities.

**Independent Power Authorities (IPA) (Low Risk)**

There are inherent risks in the program delivery especially with the IPAs as they have varying degrees of sophistication, some are well-managed with administration functions contracted out, while others are very resource constrained. The billing of customers across IPAs is not necessarily consistent (it may be that not all customers are billed regularly) and some IPAs may not be able to apply the rebate directly to customer's electricity bills. This may require the rebate to be applied retroactively on a quarterly basis, possibly as a mailed cheque through the IPA. The Ministry will use parallel process to support to Independent Power Authorities serving remote Indigenous communities that was used during the delivery of the Ontario Clean Energy Benefit.

| Human Resources (HR) Implications | Docket # | D0042470 |
|---|---|---|

Successful implementation of the Ontario Rebate for Electricity Consumers will require additional staff resources in the Ministry of Energy to support new government policy and operational responsibilities.

The Ministry is requesting a total of 4 new FTEs starting in 2017-18 and onwards.

See Section II Proposed Changes – Human Resource Implications for more details.

## VI. Proposed Minute

**Proposed Minute**

- APPROVE an expenditure increase of $94,000,000 in 2017-18, $96,000,000 in 2018-19, $196,000,000 in 2019-20, and $196,000,000 in 2020-21, under Vote/Item 2905-03 Ontario Rebate for Electricity Consumers.
- APPROVE 4 new permanent FTEs starting in 2017-18 and onwards to support policy and operational responsibilities related to the Ontario Rebate for Electricity Consumers.
- APPROVE an expenditure increase of $610,000, including $410,000 in salary and wages in 2017-18 and onwards under Vote/Item 2902-01, Energy Development and Management.
- APPROVE an expenditure increase of $2,500,000 for program delivery in 2017-18 and onwards under Vote/Item 2902-01, Energy Development and Management.

# PROGRAM NOTE

## ENERGY – Ontario Rebate for Electricity Consumers

Approve the following multi-year resources for the program:

| Financial Decisions $M | 2017-18 | 2018-19 | 2019-20 | 2020-21 |
|---|---|---|---|---|
| **Operating Expense** | **97.1100** | **99.1100** | **199.1100** | **199.1100** |
| **Capital Expense** | | | | |
| **Total Expense** | **97.1100** | **99.1100** | **199.1100** | **199.1100** |
| **Operating Assets** | | | | |
| **Capital Assets** | | | | |

In this regard:

- APPROVE an expenditure increase of $94,000,000 in 2017-18, $96,000,000 in 2018-19, $196,000,000 in 2019-20, and $196,000,000 in 2020-21, under Vote/Item 2905-03 Ontario Rebate for Electricity Consumers.

- APPROVE 4 new permanent FTEs starting in 2017-18 and onwards to support policy and operational responsibilities related to the Ontario Rebate for Electricity Consumers.

- APPROVE an expenditure increase of $610,000, including $410,000 in salary and wages in 2017-18 and onwards under Vote/Item 2902-01, Energy Development and Management.

- APPROVE an expenditure increase of $2,500,000 for program delivery in 2017-18 and onwards under Vote/Item 2902-01, Energy Development and Management.

| Capital Assets | | | | | | | | |

Notes:
1. Table should be presented on a fully consolidated basis. Capital assets include acquisitions of consolidated entities. Consolidation information should be consistent with information in ORBIT and information submitted to the Office of the Provincial Controller Division (OPCD).
2. See ORBIT for current allocation.
*Reflects sum of all financial impacts related to Key Operating, Capital, Climate Change and Technical Decisions.

**Request for New Allocation and Operating Asset in 2017-18**

- MOI is requesting a new allocation of $5.6 million in 2017-18 to support program expenses (interest expense and program administration costs) associated with the Natural Gas Access Loan program approved by Treasury Board on September 13, 2016.
- This is to ensure that loans can be advanced starting in 2017-18 and until 2019-20.
- MOI is requesting the creation of a new Operating Asset (for disbursement of Natural Gas Loans) and an Operating Expense in the form of a Transfer Payment for the Natural Gas Interest Incentive in the Ministry of Infrastructure starting in 2017-18, Vote-Item 4003-05.
- MOI is also noting a risk of $10.8M to the 2017-18 Natural Gas Interest Incentive Transfer Payment line representing the province's cost of borrowing to make interest-free loans. Additional risks of $2.9M in 2017-18 and $1.6M in 2018-19 are noted, reflecting market fluctuations in the interest rate applicable to the province's cost of borrowing. Actual applicable interest rates and borrowing costs will be determined at the time that loans are made.
- MOI is also requesting the creation of a new Operating Asset line under Loans and Investments for disbursement of Natural Gas loans.
- ENERGY is requesting the creation of a new Operating Asset (for disbursement of Natural Gas Loans) and an Operating Expense in the form of a Transfer Payment for the Natural Gas Interest Incentives starting in 2017-18, Vote/Item 2902-06.

**New Expense profile for 2018-19 to 2020-21, fully offset**

- $40.7 million in program expenses from 2018-19 to 2020-21 are fully offset from MOI's Municipal Infrastructure Investment Initiative, Natural Gas Access Program, and reduced request under the Strategic Community Infrastructure Fund notional capital expense allocations.
- MOI is requesting the creation of a new Bad Debt Operating Statutory Appropriation for the Natural Gas Access Loan Program in the Ministry of Infrastructure Vote-Item 4003-19 with a $1,000 placeholder in 2017-18, 2018-19, 2019-20, and 2020-21.
- Note, in 2022-23, MOI is requesting a $30.0 million Bad Debt Expense allocation that will be offset by a reduced request under the Strategic Community Infrastructure Fund. The Bad Debt Operating Statutory Appropriation will require a $1,000 placeholder allocation from 2023-24 until 2036-37 (i.e., over the remaining duration of the 20-year loan program).

**Loan Loss Provision Policy**

# PROGRAM NOTE
# Ministry of Infrastructure – Natural Gas Access Loan and Economic Development Grant Programs

- This program note also provides an update to the loan loss provision policy in support of the Natural Gas Access Loan Program, in consultation with the Ontario Financing Authority.

## II. Proposed Program Changes

Budget 2016 committed to introducing the Natural Gas Access Loan program to support access to natural gas in 2016. This commitment was further supported by Minister of Infrastructure's 2016 mandate letter, which includes direction to implement the Natural Gas Access Loan and Natural Gas Economic Development Grant programs.

***Loan Program***

In September 2016, the Ministries of Infrastructure (MOI), Energy (ENERGY) and Agriculture, Food and Rural Affairs (OMAFRA) received Treasury Board/Management Board of Cabinet (TB/MBC) approval for the Loan program, including program design, fiscal impacts and launch in Fall of 2016.

As part of approving the Loan program, TB/MBC noted the ministries have identified offsets to partially address the fiscal impact of the Loan program, and instructed the ministries to report back through PRRT to:

a. Create expense lines, operating asset(s), and bad debt allocations.
b. Confirm offsets and provide updates to future-year implications.
c. Provide an update on the loan provision policy, in consultation with the Ontario Financing Authority, that includes a risk assessment to determine if any changes are required to the loan loss provision

MOI is projecting the estimated fiscal impact of the Loan program at $89 million, including $87 million in program expenses over the next six years and $2 million in program administration over the next 20 years. It should be noted that the actual fiscal impact will depend on the types of loans that are approved (e.g., risk level of borrower, loan repayment schedule, etc.).

The following table summarizes the fiscal profile for the Loan program, including the identified offsets and the outstanding net pressure of $10.8 million in 2017-18.

# PROGRAM NOTE
# Ministry of Infrastructure – Natural Gas Access Loan and Economic Development Grant Programs

MOI is noting a risk of $10.8M to the 2017-18 Natural Gas Interest Incentive Transfer Payment which represents the province's cost of borrowing to make interest-free loans (for a total interest cost of $16.2M). This is based on the following assumptions (please see Appendix for details):

- Loans will be disbursed on a milestone basis as follows: $60 million in 2017-18, $80 million in 2018-19 and $60 million in 2019-20.
- An interest rate of 2.72% is used to estimate the cost of borrowing to the province. This represents the serial amortizer rate that was applicable at the time of the Treasury Board submission in September 2015.
- Loan recipients would being repaying years 5-7 of the loan term (maximum of 20 years).

The actual interest cost to the province is contingent upon a number of factors that will be known at the time that loans are made, including:

- The amount and term of approved loans
- The repayment profile of approved loans
- Applicable market interest rates to the province's cost of borrowing, based on consultation with the OFA

MOI is also seeking approval to create:

- An Operating Asset for the Natural Gas loan in the Ministry of Infrastructure starting in 2017-18;
- An Operating Transfer Payment line for the Natural Gas Interest Incentive in the Ministry of Infrastructure starting in 2017-18 to reflect the total cost borrowing to Ontario for providing interest-free loans; and,
- A Bad Debt Operating Statutory Appropriation for the Natural Gas loan program in the Ministry of Infrastructure with a $1,000 placeholder starting in 2017-18.

<u>Loan Loss Provision</u>

As part of TB/MBC approval to launch the Loan program, the ministries were also instructed to develop a loan loss provision to outline the fiscal impact of an event where a lender defaults on their loan.

**Loan Loss Policy:**

For planning purposes, MOI is requesting an allocation of $30 million in 2022-23 for bad debt expense. This is to create an "Allowance for Doubtful Accounts (ADA) to cover loan losses that may occur 2022-23 is the first year that repayments are currently scheduled to occur under the loan program.

# PROGRAM NOTE
# Ministry of Infrastructure – Natural Gas Access Loan and Economic Development Grant Programs

To minimize the risk of loan loss, the Ministry and Infrastructure Ontario will assess the collectability of the loan principal at the time of application and on an annual basis. A minimum debt-service coverage ratio of 1.0x will be required; preference will be given to projects with a ratio of 1.25x or greater. The assessment will be informed by Infrastructure Ontario's extensive experience lending to municipalities and utilities and may include the use of sector-specific financial metrics, including debt-equity ratio, liquidity, etc.

Evidence to be collected in estimating a provision (%) include:

a) sources of revenues for loan repayment;
b) recent collection experience for the loan (principal);
c) recent financial performance/condition of the borrower;
d) security held for the loan (if any);
e) factors known at the time of reporting that are likely to affect the borrower's ability to repay the loan in the future;
f) economic conditions in the region in which the borrower operates; and,
g) conditions in the industry in which the borrower operates.

The methodology for estimating the amount of loan loss provision will be reviewed by management based on actual experience and as new information comes to light. Infrastructure Ontario will be responsible for monitoring/administering the loans with borrowers and providing advice to MOI.

Loan agreements signed with successful applicants will include rights and remedies available to the Province in case of default, including the ability to withhold provincial transfers and exercise security, where available.

<u>Consultation with the Ontario Financing Authority</u>

*Fiscal Profile*

The OFA has advised that interest expense for the Loan Program is subject to prevailing borrowing rates in the market at the time that loans are made. This means the interest incentive transfer payment line is subject to fluctuations depending on when loans are made and repaid.

To reflect this additional risk, MOI modelled an additional scenario, using a higher interest rate (3.072% from Q2 in 2016), leading to an additional $2.9M risk to the 2017-18 and $1.6M to the 2018-19 Natural Gas Interest Incentive Transfer Payment line.

As loans are approved under the program and actual loan disbursement schedules are developed, MOI will work with the OFA to refine applicable interest rates and report back through subsequent in-year submissions and PRRT.

# PROGRAM NOTE
# Ministry of Infrastructure – Natural Gas Access Loan and Economic Development Grant Programs

*Loan Loss Policy*

The Loan Loss Policy has been updated to reflect OFA's feedback, including the addition of a minimum debt-service coverage ratio (1.0x), use of sector-specific financial metrics (e.g., liquidity) as well as consideration of available security for the loan.

***Grant Program***

The 2014 mandate letter to the Minister of the former Ministry of Economic Development, Employment and Infrastructure noted the importance of creating a Natural Gas Economic Development Grant to accelerate projects with clear economic development potential.

It is expected that uptake for the Grant program will be high, since the Grant program will provide non-repayable project funding, particularly in comparison to the Loan program. The Ministry will attempt to target Grant program funding by using focused metrics, including economic benefit, proponent contribution, number of natural gas connections established, and impact on greenhouse gas emissions.

Preparation for the Grant program, including program design, are under development and will likely be launched sometime in Spring-Summer 2017.

***Background***

The Natural Gas Loan and Grant Programs are part of *Moving Ontario Forward*, the Province's plan to invest $31.5 billion in public transit, transportation and other priority infrastructure projects over ten years. This includes $16.5 billion for transit and transportation inside the Greater Toronto and Hamilton Area (GTHA), and $15 billion for transit, transportation and other infrastructure priorities outside the GTHA, including the Natural Gas Loan and Grant Programs.

As part of *Moving Ontario Forward*, MOI reached out to communities and interested stakeholders to seek input on the design of the natural gas programs from May – September 2015. Consultation feedback highlighted competing expectations regarding the design of the programs:

- Small communities and businesses are concerned about energy fairness, i.e., they want all communities to have an opportunity to share in affordable supplies of natural gas.
- Established utilities would like to prioritize projects for government funding based on economic feasibility (i.e., the ones closest to being economic would proceed first).
- New natural gas distributors are seeking subsidization of consumer conversion costs to help them attract new customers, and support for different modes of delivery such as liquefied natural gas.

The Loan program has been approved for launch in fall 2016, with the following program parameters:

# PROGRAM NOTE
# Ministry of Infrastructure – Natural Gas Access Loan and Economic Development Grant Programs

| Parameter | Program Overview |
|---|---|
| **What types of projects are eligible?** | • Capital projects to build new natural gas pipelines, compressors and other related infrastructure.<br>• Capital projects to fund liquefied or compressed natural gas infrastructure, including pipelines, liquefaction facilities, regasification facilities, storage facilities and other related infrastructure.<br>• Local programs to subsidize customer conversion costs or individual customer contributions in aid of construction. In such cases, the entities receiving loans are restricted to Municipalities and Indigenous communities, not private corporations.<br><br>All projects must be for net new connections / volume. |
| **Who is eligible to apply?** | • Municipalities*<br>• Indigenous Communities*<br>• Private sector entities providing liquefied natural gas (LNG) and compressed natural gas (CNG) for the MOI-funded portions only.<br><br>**Municipalities or Indigenous communities would use the loan to make a capital contribution-in-aid-of-construction to the utility to build natural gas infrastructure.*<br><br>*They could also use the funds to launch a local program to subsidize customer conversion costs (e.g., converting a furnace to natural gas) or customer contributions in aid of construction to the utility (e.g., the cost to a customer of bringing pipe across a large property, such as a farm, over and above the distance that a utility would normally fund).*<br><br>*The municipality or Indigenous community would be the borrower, however, the natural gas infrastructure would be owned by the utility.* |
| **What are key assessment criteria?** | • Credit-worthiness (i.e. the ability to pay back the loan)<br>• Additional criteria related to cost per connection, net new connections, savings and greenhouse gas emissions impact. |
| **Funding Terms** | • There is no cap on the amount of funding that can be requested within the overall $200 million funding envelope.<br>• Loans would be repayable over a term of up to 20 years. |
| **Timing** | • Application intake and assessment would occur on an ongoing basis over two years. |

## III.Decisions

# PROGRAM NOTE
# Ministry of Infrastructure – Natural Gas Access Loan and Economic Development Grant Programs

## 1) Operating Decisions

### Key Decisions – MOI

**A.** Creation of Natural Gas Loan Interest Incentive transfer payment lines (Vote/Item 4003-05) to report borrowing cost to the province for providing an interest free loan.
**B.** Operating Asset line and appropriation required for initial Natural Gas Loan disbursement in 2017-18 (Vote/Item 4003-05)

| $M | 2017-18 | 2018-19 | 2019-20 | 2020-21 | Docket # |
|---|---|---|---|---|---|
| **Operating Expense** | **5.5540** | **22.8483** | **17.7524** | **0.0925** | X |
| **Operating Assets** | **60.0000** | **80.0000** | **60.0000** | | |

### Key Decisions – Energy

**A.** Approve the creation of an Operating Asset entitled “Natural Gas Loans” under Vote/Item 2902-06, Energy Development and Management with a $1,000 placeholder for Natural Gas Loan disbursements.
**B.** Approve the creation of a new Operating Expense item entitled “Natural Gas Loan Interest” under Vote/Item 2902-07, Energy Development and Management.
**C.** Approve the creation of Transfer Payment line entitled “Natural Gas Loan Interest Incentive” in Vote/Item 2902-07, Energy Development and Management with a $1,000 placeholder to record borrowing cost to the province for providing an interest free loan. Note that expense impact will be offset from the Ministry of Infrastructure’s Natural Gas Loan Interest Incentives transfer payment line (Vote/Item 4003-05).
**D.** Note that bad debt expense incurred by ENERGY will be offset from the Ministry of Infrastructure’s bad debt expense allocation established for the Natural Gas Access Loan Program.

| $M | 2017-18 | 2018-19 | 2019-20 | 2020-21 | Docket # |
|---|---|---|---|---|---|
| **Operating Expense** | **0.0010** | **0.0010** | **0.0010** | **0.0010** | X |
| **Operating Assets** | **0.0010** | **0.0010** | **0.0010** | **0.0010** | |

### Technical Decisions

**A.** The Ministry of Infrastructure notes an Operating Expense appropriation requirement with an increase to Statutory Appropriations for Bad Debt Expense, in Vote 4003, with a $1,000 placeholder in 2017-18, 2018-19, 2019-20, and 2020-21. Note, in 2022-23, MOI is requesting an allocation of $30.0M Bad Debt Expense

that will be offset by a reduced request under the Strategic Community Infrastructure Fund.

| $M | 2017-18 | 2018-19 | 2019-20 | 2020-21 | Docket # |
|---|---|---|---|---|---|
| **Operating Expense** | **0.0010** | **0.0010** | **0.0010** | **0.0010** | X |
| **Section 15** | **X.X** | | | | |

### Non-Financial Decisions

| | Docket # | X |
|---|---|---|
| o | N/A | |

## 2) Capital Decisions

### Key Decisions

**A.** Decrease appropriation under the Municipal Infrastructure Investment Initiative and Natural Gas Access Program Transfer Payment lines (Vote/Item 4003-05) for the purposes of establishing Loan program offsets.

| $M | 17-18 | 18-19 | 19-20 | 20-21 | 21-22 | 22-23 | 23-24 | 24-25 | 25-26 | 26-27 | Docket # |
|---|---|---|---|---|---|---|---|---|---|---|---|
| **Municipal Infrastructure Investment Initiative – Capital Expense** | **-4.0540** | **-4.0540** | **-4.0540** | **X.X** | **X.X** | **-4.0540** | **X.X** | **X.X** | **X.X** | **X.X** | X |
| **Natural Gas Access Program – Capital Expense** | **-1.5000** | **-1.5000** | **-1.5000** | **-0.0925** | **-0.0925** | **-1.5000** | **-0.0925** | **-0.0925** | **-0.0925** | **-0.0925** | |

Note:
Table should be presented on a fully consolidated basis. Capital assets include acquisitions of consolidated entities. Consolidation information should be consistent with information in ORBIT and information submitted to the Office of the Provincial Controller Division (OPCD) in their consolidation worksheets.

- Decrease in funding for the Municipal Infrastructure Investment Initiative is requested as an offset to support increased Loan program funding. This offset is requested to partially address an identified increase in the fiscal impact of the Loan program resulting from additional interest incentive (Appendix A).
- This will help ensure the Loan program has the fiscal capacity to maintain the current proposal of providing loans starting in 2017-18.

**B.** Reduced funding request under the Strategic Community Infrastructure Fund for the purposes of establishing Loan Program Offsets, with reductions of $17.4M in 2018-19, $12.3M in 2019-20 and $24.5M in 2022-23.

| $M | 17-18 | 18-19 | 19-20 | 20-21 | 21-22 | 22-23 | 23-24 | 24-25 | 25-26 | 26-27 | Docket # |
|---|---|---|---|---|---|---|---|---|---|---|---|
| **Reduced** | **X.X** | **-17.2943** | **-12.1984** | **X.X** | **X.X** | **-24.5385** | **X.X** | **X.X** | **X.X** | **X.X** | X |

# PROGRAM NOTE
# Ministry of Infrastructure – Natural Gas Access Loan and Economic Development Grant Programs

| | | | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|
| **Strategic Critical Infrastructure Fund Request** | | | | | | | | | | | |
| **Capital Asset** | **X.X** | **X.X** | **X.X** | **X.X** | **X.X** | **X.X** | **X.X** | **X.X** | **X.X** | **X.X** | |

Note:
Table should be presented on a fully consolidated basis. Capital assets include acquisitions of consolidated entities. Consolidation information should be consistent with information in ORBIT and information submitted to the Office of the Provincial Controller Division (OPCD) in their consolidation worksheets.

- This decrease in notional funding is requested as an offset to support increased Loan program funding. This offset is requested to partially address an identified increase in the fiscal impact of the Loan program resulting from additional interest incentive and adjusted timing for the recognition of bad debt expenses (Appendix A).
- This will help ensure the Loan program has the fiscal capacity to maintain the current proposal of providing loans starting in 2017-18.

## Technical Decisions

**C.** N/A

| $M | 17-18 | 18-19 | 19-20 | 20-21 | 21-22 | 22-23 | 23-24 | 24-25 | 25-26 | 26-27 | Docket # |

# IV. Outcome Measures

| Outcome Measures | Docket # |
|---|---|
| | X |

# PROGRAM NOTE
# Ministry of Infrastructure – Natural Gas Access Loan and Economic Development Grant Programs

| Measure | Outcome |
|---|---|
| **Investment** | • Ratio of $ provincial loan amount to municipal/private sector investment<br>• Number of communities served though the investment |
| **Connections** | • Number of net new connections to natural gas – residential, business and industrial<br>• Volume increase in natural gas through new connections |
| **Adoption** | • Rate of adoption/conversion among individuals and businesses |
| **Previous Energy Source** | • % of conversions from oil, propane, electricity, etc.<br>• Estimated cost-savings to consumers |

Additional Considerations

## Implementation

- Funding under the Loan Program would be conditional on the project receiving approval for a leave-to-construct application from the Ontario Energy Board (OEB).
    - Natural gas projects, depending on their size, require approval for a leave-to-construct application from the OEB to proceed.
    - The OEB assesses projects for, among other things, economic feasibility, i.e., the expected project costs and revenues and anticipated impact on rates (more details in Section 4.0).
    - LNG/CNG applicants for loans or utilities potentially receiving an aid in contribution payment from a municipality or First Nation will have the flexibility to seek approval from the Board after making an application or in the case of an utility after an application is made by a municipality or First Nation to the Loan Program in order to allow them to bring forward a more complete application for the Board's review.
- Projects must be submitted to the OEB within **three** months of receiving approval under the Loan Program to ensure the credit-assessment stays current.
- Project financials submitted to the OEB must be the same as those submitted under the Loan Program for review. In instances where there is a material change in relevant financial details, the project may be re-assessed under the Loan Program.
- The delivery of loans under the Loan program is partially affected by a regulatory review process currently being undertaken by the OEB.

# PROGRAM NOTE
# Ministry of Infrastructure – Natural Gas Access Loan and Economic Development Grant Programs

- Loan program guidelines will encourage applicants to ensure proposals include full use of the rate-base, including through "stand alone" rates for new expansion communities, which are now allowed as a result of the OEB's generic review of regulatory flexibility.
- The timing for the launch of the Loan program is proposed as follows:

| Milestone | Estimated Timeline |
|---|---|
| **Program Launch** | Fall 2016 |
| **Application Submissions** | Starting Fall 2016 |
| **Applications evaluated by IO. Shared with MOI and ENERGY Ministers for approval** | Winter 2017 (Approximately 3-4 months process, at the earliest) |
| **Begin Notifying Successful Applicants** | Spring 2017 |
| **OEB Review Process Complete and Funding Begins to Flow**<br><br>**OEB's review process typically takes an estimated 4 to 7 months** | Summer – Fall 2017 |
| **Close of the rolling application intake** | Summer/Fall 2018 |

- It is also important to consider the impact of the ongoing work in preparation of the launch of the Grant program.
- Since the launch of the Grant program will occur after the launch of the Loan program, it is anticipated that some applicants may wait to apply for Grant funding first.

## Communications/Stakeholder Engagement Plans

- MOI consulted with stakeholders, including municipalities, natural gas distributors and special interest groups (e.g., Ontario Federation of Agriculture, Canadian Propane Association, etc.) on the design of the natural gas programs as part of the *Moving Ontario Forward* consultations last summer. The Province released a discussion guide to gather feedback on infrastructure initiatives outside the GTHA, including the Loan and Grant programs.

- A number of additional stakeholders also reached out to MOI, ENERGY and OMAFRA to provide input on the natural gas programs, as follows:

# PROGRAM NOTE
# Ministry of Infrastructure – Natural Gas Access Loan and Economic Development Grant Programs

| STAKEHOLDER | FEEDBACK SUMMARY |
|---|---|
| **MUNICIPALITIES AND INDIGENOUS COMMUNITIES** | • Concerned about energy fairness and want the opportunity to share in affordable supplies of natural gas and support economic development.<br>• Primarily looking for grant funding to help offset the upfront costs of expansion, as well as consumer conversion costs. |
| **UNION and ENBRIDGE GAS**<br><br>*Established utility seeking to maximize connections by leveraging regulatory flexibility* | • Provide funding to marginally (un)economic projects with a minimum of 50 existing homes/businesses. These are projects that are unable to meet the economic feasibility test put in place for the Ontario Energy Board for expansion projects and would require additional revenues to proceed.<br>• Projects must leverage flexibility (i.e., customer surcharge, increases in rates for existing customers and municipal property tax equivalent contributions)<br>• Provincial funding should not support establishment of new utilities<br>• Customers should be responsible for conversion costs (e.g., furnace, baseboards, etc.,) |
| **EPCOR**<br><br>*New entrant trying to incent new customers to attach and build a rate base* | • Provincial funding be used to subsidize consumer conversion costs—50% from provincial grant, 25% from loan and the remaining would be covered by Epcor<br>• Additional funding to potentially provide a capital contribution in aid of construction to the communities |
| **NORTHEAST MIDSTREAM**<br><br>*New entrant developing a greenfield LNG distribution system* | • Natural gas programs should be open to private-sector proponents.<br>• Eligible costs should include:<br>  o Capital expenditures associated with the creation of LNG distribution systems<br>  o 50% of consumer conversion costs<br>  o Acquisition of LNG supply capacity<br>• The Natural Gas Access Loan should be structured with a customized repayment schedule. |

# PROGRAM NOTE
# Ministry of Infrastructure – Natural Gas Access Loan and Economic Development Grant Programs

| | |
|---|---|
| **ONTARIO FEDERATION OF AGRICULTURE**<br><br>*Seeking to maximize access for individual farm owners* | • In partnership with the Western Ontario Wardens' Caucus and the Eastern Ontario Wardens' Caucus asked that provincial government work with gas companies to install 1,000Km of new pipe each year for the next 20 years, at an approximate cost of $75 million a year.<br>• Indicated gas expansion would provide an estimated 1 billion savings in energy costs for rural residents and farmers.<br>• Provincial funding should be directly accessible to farm owners and support contributions-in-aid-of-construction by individual property owners (i.e., the cost of bringing the pipe to the property boundary).<br>• Farm owners pay for cost of traversing the property setback and equipment conversion costs. |

## Phase 2 of Federal Infrastructure Funding

o N/A

## Risks

**Docket #** X

| Risk | Mitigation |
|---|---|
| **No or Low Program Uptake** | There has been no uptake of the existing Infrastructure Ontario Loan Program for natural gas expansion. A similar risk exists for the new Loan Program as several stakeholders expressed a preference for grant funding rather than a loan.<br><br>The Loan Program has been structured as a broad and flexible program to provide additional incentive for communities to expand by offering loans at zero-interest. |

# PROGRAM NOTE
# Ministry of Infrastructure – Natural Gas Access Loan and Economic Development Grant Programs

| | |
|---|---|
| **Low rate of application success** | A number of communities currently without natural gas are small and northern communities with low fiscal capacity, and may not meet the credit assessment criteria. In addition, LNG distribution companies with no established credit history or assets may have challenges demonstrating credit-worthiness.<br><br>MOI and ENERGY will work with IO through the loan approval process to balance considerations related to credit-worthiness with supporting expansion projects. |
| **Projects may not leverage regulatory flexibility** | Program guidelines will encourage applicants to ensure proposals include full use of the rate-base, including through "stand alone" rates for new expansion communities, which are now allowed as a result of the OEB's generic review of regulatory flexibility.<br><br>Since the loans are repayable, failure to make full use of the rate-base would increase their debt obligation. This means that there is a built-in incentive for projects to leverage regulatory flexibility to minimize the loan amount being requested. |
| **Climate Change Mitigation** | Residents applying to the Loan Program would be switching from a mix of fuels – electricity, propane and fuel oil. As such, it is not possible to know the exact greenhouse gas (GHG) emissions impact of the program in advance. Residents switching from propane and fuel oil would reduce their carbon emissions, while residents switching from electricity would increase their emissions under the current electricity supply mix.<br><br>Overall, given the profile of heating systems in Ontario, it is expected that emissions will increase by about 70% or 35 kt CO2e per year for the converted customers as a whole. While this represents less than 0.01% of the Province's GHG reduction targets for 2020, 2030 and 2050, there is a risk that the Loan Program will be seen as inconsistent with the Province's efforts to reduce reliance on fossil fuels.<br><br>The Ministries will develop a responsive communications strategy that focuses on affordability and complementarity with other provincial efforts.<br><br>The key message is that expanding access to natural gas is about energy affordability and providing consumers in underserved areas with more energy choices and lowering energy costs. These savings could be used to finance other GHG reducing initiatives such as building envelope improvements or the purchase of electric vehicles. |

# PROGRAM NOTE
# Ministry of Infrastructure – Natural Gas Access Loan and Economic Development Grant Programs

| | |
|---|---|
| **Loan Defaults** | IO will perform financial due diligence to ensure the credit worthiness of the applicants prior to final funding decisions. Loans will be secured using security agreements, where possible. IO will be responsible for annual monitoring and tracking loan payments in order to flag any potential concerns for MOI and ENERGY associated with the borrower and the loan.<br><br>If the borrower is demonstrating signs of financial duress and/or a loan goes into default, as a first step, IO on behalf of MOI and ENERGY will work with the borrower to determine the underlying reasons associated with their current situation. If it is determined the borrower is experiencing a short term issue, IO would provide advice on restructuring the repayment schedule or developing other solutions. Final decisions with rest with the MOI or ENERGY Minister. |

| **Human Resources (HR) Implications** | **Docket #** | X |
|---|---|---|

- No FTE impacts have been identified
- Infrastructure Ontario would administer the Natural Gas Access Loan program using the existing loan program framework.

| **Previously Requested Report Backs** | **Docket #** | X |
|---|---|---|

- As part of the 2016-17 PRRT process, TB/MBC directed the former MEDEI, ENERGY and OMAFRA to report back on details of the proposed Loan program by summer 2016 and prior to program launch.
- MOI, ENERGY and OMAFRA reported back to TB/MBC as requested, in September 2016 and received approval to launch the Loan program in Fall 2016.
- At the September 2016 TB/MBC Report Back, MOI, ENERGY and OMAFRA were directed to report back in the 2017-18 PRRT process to:

  a) Create expense lines, operating asset(s), and bad debt allocations.

  b) Confirm offsets and provide updates to future-year implications.

  c) Provide an update on the loan loss provision policy, in consultation with the Ontario Financing Authority, that includes a risk assessment to determine if any changes are required to the loan loss provision.

- As part of the September 2016 TB/MBC Report Back, MOI, ENERGY and OMAFRA were also

directed to report back through the quarterly reporting process on the status of implementation, spending to date, and any additional fiscal impacts.

## V. Proposed Minute

**Proposed Minute**

- Receive a Report Back on the fiscal profile for the Natural Gas Access Loan and Natural Gas Economic Development Grant Programs, including an update on the loan loss provision policy under the Natural Gas Access Loan Program in consultation with the Ontario Financing Authority.
- In this regard:

MOI:

- Approve the creation of an Operating Asset line entitled “Natural Gas Access Loans” under Loans and Investments (Vote-Item 4003-05).
  - Approve an increase of $60,000,000 in 2017-18, $80,000,000 in 2018-19, and $60,000,000 in 2019-20 under Natural Gas Access Loans.
- Approve the Operating Expense appropriation of $5.6M 2017-18, $22.9M in 2018-19 and $17.9M in 2019-20 (Vote/Item 4003-01)
  - Approve the creation of the operating transfer payment line entitled “Natural Gas Loan Interest Incentive” (Vote/Item 4003-01) to report the province’s cost of borrowing to support the interest-free loan program.
  - Approve expenditure increases of $5,554,000 in 2017-18, $22,848,300 in 2018-19 and $17,752,400 in 2019-20 in the Natural Gas Loan Interest Incentive Transfer Payment.
  - Approve increases in program administration costs of $92,500 in 2017-18 and ongoing under Services in Infrastructure Policy and Planning, Vote/Item, 4003-01.
- Approve a Capital Expense offset from the existing Natural Gas Loan Program Transfer Payment, Vote-Item 4003-02, with $1.5000 million in 2017-18, 2018-19, 2019-20 and $0.0925 million in 2020-21.
  - Note that decreases of $0.0925 million in 2021-22, decreases of $1.5000 million in 2022-23, decreases of $0.0925 million in 2023-24, 2024-25, 2025-26, and 2026-27 will be offset from the Natural Gas Access Loan Program.
- Approve the creation of a new Bad Debt Operating Statutory Appropriation under Vote 4003.
- Approve an increase of $1,000 placeholder in 2017-18, 2018-19, 2019-20, and 2020-21 under Bad Debt Expense, the Financial Administration Act under Vote 4003.
- Note an increase of $30,000,000 in Bad Debt expense that will be offset by a reduced request under the Strategic Community Infrastructure Fund.

# PROGRAM NOTE
# Ministry of Infrastructure – Natural Gas Access Loan and Economic Development Grant Programs

- Note an increase of $1,000 from 2023-24 and ongoing for Bad Debt Expense.
- Note a reduction in funding to be requested under the Strategic Community Infrastructure Fund for the purposes of establishing Loan Program Offsets, with reductions of $17,294,300 in 2018-19, $12,198,400 in 2019-20 and $24,538,500 in 2022-23.
- Approve an expenditure decrease under the Municipal Infrastructure Investment Initiative transfer payment line (Vote/Item 4003-02), for the purposes of establishing Loan program offsets, with reductions of $4,054,000 in 2017-18, $4,054,000 in 2018-19, $4,054,000 in 2019-20, and $4,054,000 in 2022-23 in Vote-Item 4003-02.

Energy:

- Approve the creation of a new Operating Asset item entitled “Natural Gas Loans” under Vote/Item 2902-06, Energy Development and Management with a $1,000 placeholder for Natural Gas Loan disbursements.
- Approve the creation of a new Operating Expense item entitled “Natural Gas Loan Interest Incentive” under Vote/Item 2902-07, Energy Development and Management.
- Approve the creation of a new Transfer Payment line entitled “Natural Gas Loan Interest Incentives” under Vote/Item 2902-07, Energy Development and Management with a $1,000 placeholder to record borrowing cost to the province for providing an interest free loan. Note that expense impact will be offset from the Ministry of Infrastructure’s Natural Gas Loan Interest Incentives transfer payment line (Vote/Item 4003-01).
- Note that bad debt expenses incurred by ENERGY will be offset from the Ministry of Infrastructure’s bad debt expense allocation established for the Natural Gas Access Loan Program.

Approve the following multi-year resources for the program:

| Financial Decisions $M | 2017-18 | 2018-19 | 2019-20 | 2020-21 |

# PROGRAM NOTE
# Ministry of Infrastructure – Natural Gas Access Loan and Economic Development Grant Programs

**APPENDIX A: Loan Program Expense Breakdown**

**What is the Ministry proposing to expense and when?**

Estimated expense requirements for the natural gas loan program are approximately $87 million over 6 years, based on the following assumptions:

1. $200 million dollars will be advanced to recipients on a project milestones-basis – i.e., as certain stages of construction are completed. The fiscal profile below assumes that loans are advanced as follows: $60 million in 2017-18; $80 million in 2018-19; $60 million in 2019-20.
2. An interest rate of 2.72% is assumed and is expensed in the year the loan is advanced. The Interest Subsidy is the difference between the value of the loan advanced and the Net Present Value of loan and repayment stream.
3. The bad debt placeholder represents 15% of the loan portfolio ($30 million) and occurs in the first year that re-payment would take place. The placeholder would be reviewed annually and adjusted to reflect the latest information on the status of loans.
4. A total of $2 million over 20 years for program administration costs would also be expensed ($150,000 in the launch year and $90,000 per year after that) resulting in a total program cost of $89 million over 20 years.

| | 2016-17 | 2017-18 | 2018-19 | 2019-20 | 2020-21 | 2021-22 | 2022-23 | 2023-24 | 2024-25 | 2025-26 | 2026-27 | 2027-28 | 2028-29 | 2029-30 | 2030-31 | 2031-32 | 2032-33 | 2033-34 | 2034-35 | 2035-36 | 2036-37 |

# PROGRAM NOTE
# Ministry of Infrastructure – Natural Gas Access Loan and Economic Development Grant Programs

**APPENDIX B: Available Offsets**

Existing Allocation

MOI has an existing allocation of $1.5M per year for 20 years for the Loan program (total $30 million):

| $M | 2017-18 | 2018-19 | 2019-20 | 2020-21 | 2021-22 | 2022-23 | Total |
|---|---|---|---|---|---|---|---|
| **Capital Expense** | 1.5 | 1.5 | 1.5 | 1.5 | 1.5 | 1.5 | 9 |

Municipal Infrastructure Funding

MOI has $24.6M available over 6 years from its Municipal Infrastructure Investment Transfer Payment:

| $M | 2017-18 | 2018-19 | 2019-20 | 2020-21 | 2021-22 | 2022-23 | Total |
|---|---|---|---|---|---|---|---|
| **Capital Expense** | 4.1 | 4.1 | 4.1 | 4.1 | 4.1 | 4.1 | 24.6 |

Proposed Strategic Community Infrastructure Fund (SCIF)

MOI is developing a proposal for a $2.6 billion application-based funding program for infrastructure development outside the Greater Toronto and Hamilton Area. The program would be part of the Moving Ontario Forward initiative, and would support critical infrastructure projects identified through municipal asset management plans as well as larger strategic projects of economic importance. Funding has not yet been approved by Treasury Board. The profile includes $2.42 billion over 6 years.

| $M | 2017-18 | 2018-19 | 2019-20 | 2020-21 | 2021-22 | 2022-23 | Total |
|---|---|---|---|---|---|---|---|
| **Capital Expense** | 0 | 160 | 420 | 690 | 700 | 450 | 2,420.0 |

# MINISTRY OF THE ENVIRONMENT AND CLIMATE CHANGE – REPORT BACKS

## GREEN INVESTMENT FUND (GIF)

### SUMMARY

| Report Back Requirements | Provided? | Comment |
|---|---|---|
| Requirement 1 - Provide details on the outcomes achieved and status | Yes | All programs are on track, with one exception. |
| Requirement 2 - Provide an estimate of the reduction in Greenhouse Gas (GHG) emissions and actual GHG emissions reductions to date | Yes | Estimates reported for all applicable programs, with one exception.<br>Actual GHG reductions and verification will be reported at a later date, when information is available, which will vary by ministry/program. |

**Executive Summary**

Ontario's Green Investment Fund (GIF) was announced in the 2015 Fall Economic Statement. GIF is a down payment on the province's cap and trade program that commits $325 million to programs that will fight climate change, grown the economy and create jobs. GIF programs will: help homeowners use less energy; support more electric vehicle charging stations across Ontario; retrofit social housing developments; help businesses reduce emissions; help fund local environmental organizations; and help provide Indigenous communities with training, tools and infrastructure to address climate change.

Nine programs from seven ministries were approved for funding through the GIF. Ministries participating in GIF include: Energy; Housing; Transportation; Research, Innovation and Science; Economic Development and Growth; Indigenous Relations and Reconciliation; and Environment and Climate Change.

The GIF programs are as follows:

1. Supporting businesses to make energy efficiency investments (Sustainability CoLab)
2. Audits and energy efficiency retrofits for single family homes (Home Retrofits)
3. Development of microgrid and energy storage to reduce diesel fuel use in First Nation communities (Smart Grid Fund)
4. Social Housing Electricity Efficiency Program (SHEEP)
5. Social Housing Apartment Retrofit Program (SHARP)
6. Energy efficiency projects for small and medium sized businesses and industry (SMART Green)
7. Technology innovation initiatives for large industrial emitters (TargetGHG)

8. Improve capacity for First Nations to inform development of and participate in economic opportunities associated with GHG mitigation and adaptation (First Nation Capacity Building)
9. Electrical Vehicles Chargers Ontario (EVCO)

The smart grid program is off track. Additional details can be found later in the report back.

The total estimated GHG emission reduction potential to date is 4,637 kt. The estimates are expected to change since MOECC is currently reviewing and providing feedback to ministries on the estimates calculations. Actual GHG reductions will be available when projects are implemented, the timing of which will vary with each program. One program has yet to provide the GHG estimated emission reduction potential (SHEEP). An estimate will be available in Q3. Additional details can be found later in the report back.

## 1. Ministry of the Environment and Climate Change (MOECC) – Sustainability CoLab

### Overview

- The Sustainability CoLab program will help small businesses launch and grow target-based sustainability programs that will reduce their environmental impact, increase profitability and stimulate the low-carbon economy.

- The Sustainability CoLab supports a network of non-profit members that assist businesses in becoming more environmentally sustainable.

- Network members include: Durham Sustain Ability, Niagara Sustainability Initiative, Sustainable Waterloo Region, Enviro Centre, reThink Green, Sustainable Kingston, Sustainable Hamilton-Burlington, and the Windfall Ecology Centre.

- Network members support the following geographical areas: Region of Durham, Niagara Region, Waterloo Region, City of Ottawa, Greater Sudbury, City of Kingston, Hamilton-Burlington, and York Region.

### Status/Achievements/Challenges

- The Transfer Payment Agreement (TPA) has been signed with Sustainability CoLab.

- Progress to date includes:
    - Seven of the 8 Network Members have signed sub-funding agreements with CoLab and the remaining agreement will be finalized shortly.

    - Three peer learning events have been held by CoLab for Network Members on GHG accounting methodologies.

  - Funds have been disbursed to 7 of the 8 Network Members, based on achievement of certain milestones in Q1.
  - Performance data has been collected and analyzed to provide funding based on the achievements of Network Members for Q2.
  - Coaching of Network Members has taken place to encourage increased action.

- The end date of the program is August, 2018.

**Performance Measures**

- Program participation: 48 businesses/ organizations have participated in the program to date (Q1 and Q2).
  - The annual target for participation is X businesses/organizations.

- This program will not be reporting on GHG reductions, cost-per-tonne or verification of actual GHG emissions as it is an enabling initiative (does not result in direct GHG reductions).

- Performance measures such as capacity building will be reported on at a later date due to the early stage of program implementation.

**Co-Benefits**

- The anticipated co-benefits are related to: employment; economic development opportunities in vulnerable regions/ communities; infrastructure and energy; environment; and, social issues.

- Results for co-benefits cannot be reported on at this time due to the early stage of program implementation.

**Value for Money**

- The program is designed to help participating businesses with setting and achieving targets to reduce their GHG emissions cost-effectively.

- The program provides coaching, resources, tools, networking and learning opportunities to help participants build a business case to make investments and take measures to reduce emissions.

- The program is designed so that Network Members will become self-sustaining, social enterprises over time through fees paid by participating organizations.

## 2. Ministry of Energy – Home Retrofits

**Overview**

- This program expands on the existing home audit and retrofit programs offered by Enbridge Gas Distribution (Enbridge) and Union Gas (Union).
- Enbridge and Union are regulated utilities that have been delivering conservation programs in Ontario for over 20 years.
- This program is province-wide, and targets homes that use natural gas, oil, propane or wood for primary heating.
- The program will help approximately 37,000 additional homes become more energy efficient by providing rebates for home energy audits and retrofits.

**Status/Achievements/Challenges**

- TPAs have been signed with Enbridge and Union.
- The program launched in October 2016 and is on track.
- In July 2016, funding was flowed by ENERGY to Enbridge and Union and the programs are available to homeowners until the funds are exhausted.

**Performance Measures**

- Cost-per-tonne for GHGs (see Table 2).
    - Note that cost-per-tonne (for all programs) represents the GIF funding divided by the estimated GHG reduction potential, e.g., For example, for the energy home retrofits program: $100.000M/ 1,600,000 tonnes = $62.50.
    - When actual GHG reductions become known, this value may be recalculated based on actuals.
    - This value should be evaluated alongside estimated or actual GHG reductions, and other performance measures in order to evaluate the effectiveness of the program.
- The following performance measures will be reported on at a later date due to the early stage of program implementation:
    - Program participation
    - Cost effectiveness
    - Annual incremental cubic metre of gas saving (including the related GHG impact) (propane, oil and wood savings will also be measured)
    - Cumulative lifetime GHG savings (including the related GHG impact)

**Co-Benefits**

- The anticipated co-benefits are related to: new jobs; Ontario's economy; training; the environment (clean air); and, health.

- Results of co-benefits cannot be reported on at this time due to the early stage of program implementation.

**Value for Money**

- $100 million from the GIF has been allocated to Ontario's two primary natural gas utilities, Enbridge and Union Gas, to expand their existing audit and energy-efficiency programs for single family homes. Historically, every dollar invested in natural gas efficiency has resulted in $1.5 to $4 in savings for natural gas ratepayers (largely through savings on natural gas costs).

- Enbridge and Union have been delivering natural gas energy efficiency programs across the province to the industrial, commercial, institutional and residential sectors for over 20 years under the Demand Side Management (DSM) Framework which is overseen by the Ontario Energy Board (OEB).

- Home energy retrofits reduce greenhouse gas emissions and help residential consumers manage energy bills as Ontario transitions to a low-carbon economy. Based on past performance of residential natural gas energy efficiency programs, it is estimated that an incremental $100 million investment in these initiatives would result in 850 million cubic metres of cumulative natural gas savings (propane, oil and wood savings will also be measured), which translates to a 1,600,000 tonne reduction in greenhouse gas emissions.

## 3. Ministry of Energy – Smart Grid Fund

**Overview**

- Smart Grid projects are designed to demonstrate and deploy microgrid and energy storage technology and infrastructure, with a focus on reducing diesel use in remote First Nations communities.

- The transfer payment recipients are Canadian Solar (2 projects) and Ontario Power Generation (1 project). Canadian Solar is a leading manufacturer of solar photovoltaic modules and provider of solar energy solutions.

    - The three projects are located in Keewaywin First Nation, Weenusk First Nation, and Gull Bay First Nation (GBFN).

- Note that a fourth project was planned with Strathcona Solar and the Shawanaga First Nation. The project proposal for this project was revised significantly by the proposed recipient. As a result, this project was terminated.

**Status/Achievements/Challenges**

- The Keewaywin and Weenusk First Nation projects are on hold, awaiting final agreements between the proponent and the host community. However, letters of commitment have been signed, allowing funds to accrue.

  - The project challenges are primarily associated with drafting the agreements needed between the applicant and the respective First Nation communities regarding future ownership of the new energy assets.

  - To mitigate project risk, the Ministry is requiring that any agreement with the First Nation communities is reviewed by a third party that can provide independent advice to the community about the draft agreement. This would ensure full community support of the project before funds are delivered.

  - The applicant is working diligently with to the First Nations, the federal government, and other collaborators to reach an agreement.

- The Gull Bay project is also experiencing a delay.

  - GBFN is involved in the development of agreements between Ontario Power Generation and all collaborators.

  - GBFN is having an election and has requested that no further work take place until the election has concluded and the new leadership is in place (mid to late November).

- The Ministry of Energy's Smart Grid spending did not take place by June 30, 2016 (2015/16 fiscal year).

  - The Ministry plans to accrue $6M and anticipates spending in 2017/18 and 2018/19).

  - Funding will flow in future years in accordance with Smart Grid Fund rules, which is to disburse funds upon the successful completion of project milestones throughout the life of the project.

**Performance Measures**

- Cost effectiveness: See value for money below.

- Cost-per-tonne for GHGs (see Table 2).

- Diesel savings: the solar installations are estimated to offset approximately 546,000 litres of diesel use for Keewaywin/Weenusk and 127,000 litres for Gull Bay.

- The following performance measure will be reported on at a later date due to the early stage of program implementation:
  - Annual incremental diesel savings (including the related incremental GHG reductions)

- Cumulative incremental lifetime GHG savings
- Innovation/ productivity improvements associated with GHG savings
- Near-term increases in jobs and investment in Ontario's Smart Grid sector
- Proactive investment by utilities in Smart Grid solutions where Smart Grid Fund projects have demonstrated benefits
- Increased commercialization of products in Ontario, with a focus on intellectual property
- Program participation
- Leveraged funding and economic development opportunities

**Co-Benefits**

- The anticipated co-benefits are related to: First Nations and Metis communities; new jobs; training; environmental (clean air); and, health.

- Results for co-benefits cannot be reported on at this time due to the early stage of program implementation.

**Value for Money**

- This remote First Nation community has relied on diesel generation for electricity, exposing them to unreliable generators, high service costs and long outages, high fuel prices, diesel's inherent transportation costs and the associated environmental risks. Once completed, this project is anticipated to offset significant diesel spending in the community and allow for greater control of the energy resources within the community.

- The 2 Canadian Solar projects are expecting the system to offset approximately $0.8000M in diesel spending annually for the life of the asset.

## 4. Ministry of Housing (MHO) – Social Housing Electricity Program (SHEEP)

**Overview**

- SHEEP will assist social-housing single family homes become more energy efficient.

- This program will take place in various municipalities in Ontario.

- MHO is encouraging all recipients to participate in any and all gas and electricity incentive programs that may be available to them through their local distribution company or gas utility. Incentive levels may vary across programs; however, the incentives are not being quantified or reported on by ministries.

**Status/Achievements/Challenges**

- TPAs have been signed with 21 Service Managers (includes Consolidated Municipal Service Managers and District Social Service Administration Boards) and the Ontario Aboriginal Housing Services (OAHS).

- MHO received approval to flow 85% of the funds to recipients by June 30, 2016; the remaining 15% will be flowed based on completed reports.

- Recipients have selected, or are finalizing the selection of social housing providers that will receive funding for retrofit work under the program.

- The end date of this program is March, 2018.

**Performance Measures**

- Cost-per-tonne information is not yet available as GHG reduction estimates will not be reported until Q3.

- The following performance measure will be reported on at a later date due to the early stage of program implementation:
    - Program participation
    - Cost effectiveness
    - Annual incremental electricity usage savings
    - Innovation/ productivity improvements associated with electricity usage savings
    - Financial savings incurred by families in social housing single homes

**Co-Benefits**

- The anticipated co-benefits are related to: First Nations and Metis communities; new jobs; collaboration and capacity building; training; health; financial; quality of living conditions; and, energy security.

- Results for co-benefits cannot be reported on at this time due to the early stage of program implementation.

**Value for Money**

- The program will provide good value for money through the funded retrofits, as these will not only assist in measurably reducing GHG emissions in Ontario, but also assist housing providers in securing the long-term viability and sustainability of the social housing stock.

### 5. Ministry of Housing – Social Housing Apartment Retrofit Program (SHARP)

**Overview**

- SHARP will allow for energy efficiency retrofits in high-rise apartment buildings owned by social housing providers.

- This program will take place in various municipalities in Ontario.

- MHO is encouraging all recipients to participate in any and all gas and electricity incentive programs that may be available to them through their local distribution company or gas utility. Incentive levels may vary across programs; however, the incentives are not being quantified or reported on by ministries.

**Status/Achievements/Challenges**

- TPAs have been signed with ten Service Managers (includes Consolidated Municipal Service Managers and District Social Service Administration Boards).

- MHO received approval to flow 85% of the funds to recipients by June 30, 2016; the remaining 15% will be flowed based on completed reports.

- Recipients have selected, or are finalizing the selection of social housing providers that will receive funding for retrofit work under the program.

- The end date of this program is March, 2018.

**Performance Measures**

- Cost-per-tonne for GHGs (see Table 2).

- The following performance measure will be reported on at a later date due to the early stage of program implementation:
  - Program participation
  - Cost effectiveness
  - Annual incremental cubic metre of gas savings (including the related incremental GHG reductions)
  - Cumulative incremental lifetime GHG savings
  - Innovation/ productivity improvements associated with GHG savings

**Co-Benefits**

- The anticipated co-benefits are related to: vulnerable communities; low-income households; social issues; new jobs; Ontario's economy; innovation, science and technology; collaboration and capacity building; the environment (clean air); and, health.

- Results for co-benefits cannot be reported on at this time due to the early stage of program implementation.

**Value for Money**

- The program will provide good value for money through the funded retrofits, as these will not only assist in measurably reducing GHG emissions in Ontario, but also assist housing providers in securing the long-term viability and sustainability of the social housing stock.

## 6. Ministry of Economic Development and Growth (MEDG) – SMART Green

# MINISTRY OF THE ENVIRONMENT AND CLIMATE CHANGE – REPORT BACKS

**Overview**

- SMART Green is a province-wide program, which will help small and medium-sized manufacturers and industry to reduce their GHG emissions and become more energy efficient through upgrades to their production/process equipment.

**Status/Achievements/Challenges**

- A TPA has been signed with the Canadian Manufacturers and Exporters (CME).
- Program is on track and launched in October, 2016.
- CME will be distributing the funding on an application, matching-funding basis.
- The end date of this program is March, 2019.

**Performance Measures**

- Cost-per-tonne for GHGs (see Table 2).
- The following performance measure will be reported on at a later date due to the early stage of program implementation:
    - Program participation
    - Cost effectiveness
    - Annual incremental energy reductions based on production output levels (e.g., energy savings in cubic metres of gas, kilowatt-hours of electricity or litres of fuel), including the related incremental GHG reductions
    - Cumulative incremental lifetime GHG savings
    - Innovation/ productivity improvements associated with per production unit GHG savings
    - Match a specified percentage of grant investment (exact amount TBD, but expected to be 1:1)

**Co-Benefits**

- The anticipated co-benefits are related to: Ontario's economy, productivity, the environment (clean air), and, health.
- Results for co-benefits cannot be reported on at this time due to the early stage of program implementation.

**Value for Money**

- ...

## 7. Ministry of Research Innovation and Science (MRIS) – TargetGHG

**Overview**

- The TargetGHG Program has three streams: Industrial Innovation Demonstration; Technology Development; and, Solutions for 2030.

- This program brings together large industry, cleantech small and medium-sized enterprises (SMEs), and research consortiums.

- The objectives of the program are to:
    - Establish Ontario as a leader in reducing GHG emissions;
    - Build a marketplace that brings together technology development with technology adoption, where Ontario's innovators and entrepreneurs can work together with the industry/customers/supply chains to develop, demonstrate and adopt new and innovative solutions to significantly reduce GHG emissions; and,
    - Catalyze private sector investments in GHG reduction strategies, and drive adoption.

**Status/Achievements/Challenges**

- A TPA has been signed with the Ontario Centres of Excellence (OCE), who is managing the application-based grant program to fund various projects.

- Round-table industry consultations were held in May, 2016 and included 104 participants.

- Partnering forums occurred in October, 2016.

- MOUs have been signed with Emissions Reductions Alberta; Natural Sciences and Engineering Research Council (NSERC); and, Sustainable Development Technology Canada (SDTC).

- Projects are expected to begin...

- The end date of this program is March, 2022.

**Performance Measures**

- Cost-per-tonne for GHGs (see Table 2).

- Matching funding:
    - For NSERC projects, OCE will provide $0.8M with a matching contribution from NSERC.

- The following performance measure will be reported on at a later date due to the early stage of program implementation:
    - Program participation (industry partners and SMEs)
    - Cost effectiveness

- Annual incremental energy reductions based on production output levels (e.g., energy savings in cubic metres of gas, kilowatt-hours of electricity or litres of fuel), including the related incremental GHG reductions
- Cumulative incremental lifetime GHG savings
- Innovation/ productivity improvements associated with per production unit GHG savings
- Match a specified percentage of grant investment (exact amount TBD, but expected to be 1:1)
- Additional economic development indicators

**Co-Benefits**

- The anticipated co-benefits relate to: First Nations and Metis communities; new jobs; vulnerable communities; productivity; training; the environment (clean air, water, and soil); and, health.

- Results for co-benefits cannot be reported on at this time due to the early stage of program implementation.

**Value for Money**

- ...

## 8. Ministry of Indigenous Relations and Reconciliation (MIRR) – First Nation Capacity Building

**Overview**

- This program provides support to First Nation communities to build capacity to participate in economic opportunities related to cap and trade, to prepare for the effects of climate change (e.g., training, tools, infrastructure), and fund a Northern Climate Change Impact Study.

- The Transfer Payment recipient is the Ontario Centre for Climate Impacts and Adaptation Resources (OCCIAR), who will partner with the Ontario First Nations Technical Services Corporation to develop a program to distribute the funding.

- The program is taking place in four regions of the province: northern, eastern, south western and west central Ontario. It involves First Nations in 10 Northern and 4 Southern communities.

**Status/Achievements/Challenges**

- TPA has been signed with OCCIAR.

- This program has been launched, events are being held, and is on track. The following outlines the progress to date:

  - Participation in the Climate Change Impact Study has been confirmed (20 communities); the Climate change field work has begun and the frog range study is underway in two locations (Fort Severn, Eabametoong).

  - Two youth engagement sessions have been held.

  - The participation of additional First Nations has been confirmed for adaptation and energy planning.

- The anticipated end date of this program is March, 2018.

**Performance Measures**

- Program participation rate: Energy Plans - 150%; Adaptation Plans - 150%; and, Climate Change Impacts for the North - 200%.

- This program will not be reporting on GHG reductions, cost-per-tonne or verification of actual GHG emissions as it is an enabling initiative (does not result in direct GHG reductions).

- The following performance measure will be reported on at a later date due to the early stage of program implementation:
  - Number of adaptation and mitigation plans created
  - Number of First Nations communities represented in the governance structure
  - Number of adaptation and mitigation measures created
  - Number of adaptation and mitigation projects identified

**Co-Benefits**

- The anticipated co-benefits relate to: First Nations and Metis communities; new jobs; collaboration and capacity building; training; health; financial issues; quality of living conditions; and, energy security.

- Results for co-benefits cannot be reported on at this time due to the early stage of program implementation.

**Value for Money**

- The program will build capacity in Indigenous communities to develop and implement climate change adaptation and energy plans.

  - Plans created in pilot communities will be made available to all Indigenous communities across the province.

  - The Climate Change Impact Study for the North (CI Study) will assess potential climate change impacts by working with Indigenous community members to collect traditional ecological knowledge and scientific data related to climate change markers.

## 9. Ministry of Transportation (MTO) – Electric Vehicle Chargers Ontario (EVCO)

### Overview

- Through the EVCO grant program, the province is working with 24 public and private sector partners to create a network of electric vehicle stations in cities, along highways and at workplaces and public places across Ontario.

### Status/Achievements/Challenges

- Some projects have been completed already and others are underway.

- The Ministry of Transportation was approved to spend $20M on EVCO; however only $19.8451M will be spent (variance of $0.1549M).

- The end date of this program is June 2022.

### Performance Measures

- This program will not be reporting on GHG reductions, cost-per-tonne or verification of actual GHG emissions as it is an enabling initiative (does not result in direct GHG reductions).

- The following performance measure will be reported on at a later date due to the early stage of program implementation:
    - …

### Co-Benefits

- The anticipated co-benefits relate to: First Nations and Metis communities; new jobs; the environment (clean air); collaboration and capacity building; Ontario's economy; financial issues; health; innovation, science and technology; productivity; social issues; and, vulnerable communities.

- Results for co-benefits cannot be reported on at this time due to the early stage of program implementation.

### Value for Money

- EVCO is an application-based program. All EVCO submissions were evaluated on their optimal connectivity, site or corridor selection, innovativeness, cost efficiency and effectiveness, and reasonableness. Successful applicants delivered the best value for money and customer experience.

- With a focus on value for money at the application, location and broader network-level, the province selected 24 partners to install close to 500 charging stations with a $20M investment.

## Financial Status

- Approved funds for GIF were $325M; $303.0451M has been spent to date.
- Leveraged, in-kind, and matching funding total $69.4364M to date.

### Table 1: Financial Summary ($M)

| | MOECC - Sustainability Co-Lab | Energy - Home Retrofits | Energy - Smart Grid Fund | MHO - SHEEP (Homes) | MHO - SHARP (Buildings) | MEDG - SMART Green | MRIS - TargetGHG | MIRR - FN Capacity Building | MTO - EVCO | Total |

## GHG Reduction Estimates

- Total GHG reductions estimates for all programs are 4,637 kt.
- MOECC is currently reviewing and providing feedback to ministries on the estimates calculations. The estimate total is anticipated to change as a result.

**Table 2: Greenhouse Gas Reduction Estimates Summary**

| | Total Estimated GHG Reductions (kt)[1] | Cost-per-tonne based on GHG Reduction Potential ($/tonne)[2] | Comments |
|---|---|---|---|
| **MOECC Sustainability CoLab** | N/A | N/A | Enabling initiative, no direct GHG reductions |
| **Energy Home Retrofits** | 1,600 | $62.50 | GHG reduction estimate up to 2031/32 |
| **Energy Smart Grid Fund** | 26 | $208.99-$285.03 | GHG reduction estimate up to 2050. Range provided for three projects. |
| **MHO SHEEP (Homes)** | Not reported | Not reported | GHG reduction estimate to be reported in Q3. MOECC is assisting MHO in calculating these estimates. |
| **MHO SHARP (Buildings)** | 208 | $395.18 | GHG reduction estimate up to 2050 |
| **MEDG SMART Green** | 1,174 | $21.29 | GHG reduction estimate up to 2050 |
| **MRIS TargetGHG** | 1,630 | $29.70 - $54.48 | GHG reduction estimate up to 2030 |
| **MIRR FN Capacity Building** | N/A | N/A | Enabling initiative, no direct GHG reductions |
| **MTO EVCO** | N/A | N/A | Enabling initiative, no direct GHG reductions |
| **Total** | 4,637 | | |

1. Rounded to the nearest kt
2. Cost-per-tonne values are based on values provided by ministries or calculated by dividing the GI funding allocation by GHG estimates provided.

# MINISTRY OF THE ENVIRONMENT AND CLIMATE CHANGE – REPORT BACKS

## PROPOSED MINUTE

- Received the reportback providing the outcomes achieved, including an estimate of the reduction in GHG emissions.

## APPENDIX 1: REPORT BACK MINUTE

- Directed MOECC, MAA, MMAH, MTO, ENE, MEDEI and MRI to report back in the 2017-18 PRRT process with details on the outcomes achieved, including an estimate of the reduction in GHG emissions.

| | | |
|---|---|---|

# BUSINESS CASE - FTE TRANSFER
# FROM: MINISTRY OF ENERGY
# TO: GSIC

## A. Request:

This note requests the transfer of 2 temporary FTEs for 2017-18 only from the Ministry of Energy to GSIC to undertake project work for the Energy and Water Reporting and Benchmarking (EWRB) Project.

| Docket # D0041897 | **2016-17** | **2017-18** | **2018-19** | **2019-20** |
|---|---|---|---|---|
| Total operating ($M) | - | - | - | - |
| Total capital ($M) | - | - | - | - |
| Total financial impact ($M) | 0 | 0 | 0 | 0 |
| Net FTE impact | | 0 | 0 | 0 |
| FTE impact - GSIC | | 2 | 0 | 0 |
| FTE impact – Ministry Of Energy | | (2) | 0 | 0 |

## B. Key Considerations:

The 2 FTEs are required for work on the EWRB Project which will continue into the 2017-18. No funding is being transferred as the project work and ongoing sustainment work will be recoverable from the Ministry of Energy.

**Policy Linkages:**
N/A

## C. Business Case Rationale:

The Ministry of Energy FTEs will support the development and implementation of the EWRB Project which is continuing into 2017-18.

At this time GSIC does not have the flexibility to manage from within the allocation due to a number of multi-year initiatives to meet Budget commitments and the Ministry's mandate. Accordingly, GSIC seeks approval to receive two FTEs from Ministry of Energy to meet its business needs

## D. Additional Background:

*N/A*

## E. Linkages to Government Priorities:

| Government Priority Areas | Description of Alignment |
|---|---|
| Investing in people | N/A |
| Investing in modern infrastructure | N/A |
| Supporting a dynamic and innovative business climate | N/A |

## F. Cross Cutting Linkages:

N/A

## G. Alignment with the Commission on the Reform of Ontario Public Services (CROPS) Recommendations:

N/A

## H. Risk Analysis and Mitigation Strategy:

N/A

## I. Human Resource Implications:

GSIC is seeking the transfer of 2 temporary FTE for 2017-18 only from the Ministry of Energy to GSIC to work on the EWRB Project.

## J. Performance Measures:

N/A

## K. Communications and Stakeholder Engagement:

N/A

## L. Proposed Minute

Treasury Board/Management Board of Cabinet decision requested:

- Approve a temporary transfer of 2 FTEs from ENERGY (Vote/Item 2902-01 Energy Development and Management) to MGCS (Vote/Item 1817-01), to support the Energy and Water Reporting and Benchmarking Project for 2017-18 only.

Hi John,

See Kens comment in the attached. He has a good point in the sense as to what sort of "are in agreement" looks like, especially since we seen that Energys PRRT didn't really mention the OFA as playing a role in the forecasting.

Salman

> Hi Caroline/Ken,
>
> We have received a marked up version of the MOU between the OFA and MoE related to the OREC regulation. I did a quick blackline and there were actually other changes that were not highlighted and was advisable to check with you whether you see any issues/comments. The changes seem to revolve around the definitions of the program etc.

V3_clean = what we had last sent over
DAP Nov 25 = the latest markup we received
Track changes to v3_clean - quick blackline to show additional changes not shown in the markup received.

Hoping you can take a quick look.

Thank you,
Salman

**Memorandum of Understanding**
**Relating to the**
**Ontario Rebate for Electricity Consumers**

**Dated:** **, 2016**

Commented [RH1]: TBD

**Between:**

**Her Majesty the Queen in right of Ontario**
as represented by the Minister of Energy ("**Ministry**")

**And:**

**Ontario Financing Authority**
an agency of the Province of Ontario (the "**OFA**")

**Whereas:**

1. Pursuant to the [*Ontario Rebate for Electricity Consumers Act, 2016*] – NTD, pending the legislature considering the Bill], including and the regulations thereunder (the "Act"), certain consumers will be entitled to receive a credit, known as the financial assistance, in this Memorandum of Understanding ("MOU") called the "Ontario Rebate for Electricity Consumers (" or "OREC"), against", in respect of the cost of electricity consumed by them during the period commencing January 1, 2017;

2. Funds in respect of the Reimbursement for OREC provided to consumers and persons receiving invoices from unit sub-meter providers ("Reimbursement") will flow to mostspecified electricity distributors, retailers and unit sub-metering providers ("Payment Recipients") through the Independent Electricity System Operator ("IESO") in accordance with the Act, its regulations and the Market Rules;

3. Under the Act, the Ministry will be required to pay amounts to the IESO on account of the ORECReimbursement (the "Payments") out of amounts appropriated by the Legislature for that purpose ("Appropriated Amount");

4. The Ministry considers it advisable for the OFA to make the Payments on behalf of the Ministry and the OFA has agreed to make the Payments on behalf of the Ministry;

5. The Ministry and the OFA have also agreed to work together on OREC cost forecasting;

6. The Ministry and the OFA wish to enter into this MOU pursuant to clause 7 (3)(f)of the *Ministry of Energy Act* and subsection 30 (1) of the *Capital Investment Plan Act, 1993* to confirm their agreement regarding the terms on which the OFA will make the Payments and on which the Ministry and the OFA will work together on OREC cost forecasting.

**Therefore:**

The Ministry and the OFA agree as follows:

1. **Payment Authorization**

   (i) The Ministry authorizes the OFA to make the Payments on behalf of the Ministry and the OFA agrees to make the Payments on behalf of the Ministry.

   (ii) The Ministy shall ensure that the certificate under section 11.4 of the *Financial Administration Act* required for each of the Payments is obtained.

   (iii) It is agreed by the Ministry and the OFA that the OFA is acting as agent, on behalf of the Ministry, for the purposes of

      i. Transacting with the Ontario Shared Services "IFIS" system in order to access funds appropriated for the Ministry in respect of the Act, and

      ii. Making the required Payments on behalf of the Ministry as further described in this MOU.

2. **Payment Process**

   ~~a) The Ministry is registered with the IESO as an IESO Program Participant.~~

   a) The Ministry has an account with the IESO under which the IESO will issue invoices to the Ministry for the Payments. The IESO will provide the Ministry with access to these invoices by giving the Ministry access to a secure IESO portal containing these invoices ("IESO Portal").

   ~~c)~~b) The Ministry will take all necessary steps to provide the OFA with access to the ~~Ministry's~~ IESO ~~account and will arrange for~~Portal so that the OFA ~~to~~will have access to each IESO invoice to the Ministry, at the same time the IESO issues the invoice to the Ministry.

   ~~d)~~c) The OFA will make the Payments on behalf of the Ministry, in the amount of the IESO invoices.

   ~~e)~~d) The Payments will be made in accordance with the IESO Market Rules and IESO Manuals for settlements and billing of market participants, as amended from time to time.

   ~~f)~~e) The Payments will be made from the Consolidated Revenue Fund and the amount of each Payment will be entered by the OFA into the Province's IFIS system under a pre-defined Ministry account immediately upon the completion of the Payment or shortly thereafter.

3. **Reporting Requirements and Records**

a) The OFA will deliver a notice by e-mail to the Ministry's contact person to confirm the completion of each Payment in the amount of the IESO invoice.

b) The OFA will keep and maintain all records related to the OREC for a period of seven (7) years, and will ensure that the Ministry has full access to such records.

c) The requirements under this section shall survive any termination of the MOU.

d) The Public Accounts, Volume 3 reporting related to the Payments will be performed by the Ministry.

e)

**Commented [SQ22]:** What would this access look like? Are they expecting us to set up up an external site with all of our files/modeling as well?

Just need to clarify expectations.

**Commented [KR3]:** I would not expect this ti be anything other than physical access. You may wish to clarify this point.

## 4. OREC Cost Forecasting

a) The Ministry and the OFA will work together to prepare and review cost forecasts, estimates, and analysis related to the OREC.

b) The Ministry will provide to the Corporate and Electricity Finance Division of the OFA all IESO invoices and settlement statements relating to the OREC, and any reports by OREC transfer payment recipients (e.g. Local Distribution Companies and unit sub-metering providers) to the IESO, that are received by the Ministry. This includes providing electronic portal access to ~~complete and accurate~~ data and reports by OREC transfer payment recipients expected to be provided through an electronic portal reporting process .

c) The OFA and the Ministry will collaborate to prepare fiscal year cost estimates and monthly cashflow estimates for OREC.

d) The Ministry and the OFA acknowledge and agree that the actual costs of OREC may not be the same as the forecasted costs, and the OFA bears no liability for any differences between the forecast and actual costs of OREC, nor does the OFA have any responsibility for any application to Treasury Board for a change in the appropriated amount for OREC.

e) The OFA and the Ministry will ensure senior management in their respective organizations are briefed and updated on the OREC forecasting on a regular basis to ensure there is mutual understanding and agreement ~~of~~on the forecasts.

**Formatted:** Font: Not Bold

**Formatted:** Indent: Left: 0.25", Hanging: 0.25"

**Commented [SQ24]:** The only change outlined in the latest version.

**Commented [KR5]:** Does the OFA agree that there should be a provision contemplating agreement on the forecasts? Would it be sufficient to simply reqire tht senior management be briefed?

## 5. Limited Role of the OFA

The OFA will only be responsible for making the Payments in accordance with section 2 and assisting in OREC cost forecasting in accordance with section 4. For greater clarity, the OFA will not be responsible for auditing or otherwise verifying the correctness of the IESO invoices, monitoring the IESO's application of the Payments, monitoring the balance from time to time of the Appropriated Amount, or ensuring the Appropriated Amount is sufficient.

## 6. Review and Termination

a) The Ministry and the OFA will review this MOU annually.

b) This MOU may be terminated by either party at any time, on 90 days notice.

c) Upon termination of this MOU, the OFA will cease to make any Payments.

d) The parties will cooperate to help to ensure a smooth transition of the payment function upon termination.

**7. No Service Charges**

The OFA will not charge the Ministry for the OFA's services or for its disbursements or other expenses incurred under this MOU.

**8. Contacts**

a) Each party shall designate a member of its staff to be a contact person for the purposes of administering this MOU.

b) As of the date of this MOU the OFA's contact person is:

Tel:
email:

Formatted: Highlight

c) As of the date of this MOU the Ministry's contact person is:

Tel:
email:

Formatted: Highlight

d) Either party may designate a different member of its staff as its contact person by providing notice to the other party in accordance with section 9.

**9. Notice**

a) Any notice under this MOU shall be in writing and shall be deemed given when delivered by hand or email, and addressed to the party's contact person.

b) In the case of the OFA, the addresses for notice are:
Hand Delivery:
Ontario Financing Authority
Suite 1400
1 Dundas St. W.
Attention:
email:

Formatted: Highlight

c) In the case of the Ministry, the addresses for notice are:
Hand Delivery:
Ministry of Energy
880 Bay Street, 5th Floor

> Thanks for looking into how the two OEFC facilities with IESO are recorded, and agreed that it's important to have IESO explain how it what it records in its operating statements and in its market books.
>
> Did you see where IESO recorded the credit facility from the OFA? A main area of interest discussed at the meeting today was on how the IESO records the Regulated Price Plan amounts, and it's the RPP balances that the OFA credit facility is in place for the IESO to be able to access for financing if it needs to.

Thanks – is this loan recorded on the accounting books (vs. the market books?)

Cindy

Subject: OFA-IESO loan

Cindy, the IESO currently has a monthly payable to the OFA. Right now it is in the 100million range support the rpp program. Not sure how that is currently treated by the OFA. thanks

Hi,

Lets meet in the morning to discuss.

We'll need a product for EOD. Could be an annotated slide deck, as well as a markup. Suggestion on any other formats?

Ron

Subject: Potential Rate Mitigation

Hi,

Attached is a draft of the rate mitigation deck. This is tracking to major projects on Thursday for a preliminary discussion. As you can see there are a number of initiatives that have fiscal implications so your input and comments would be appreciated. Keley can coordinate with your EAs. I understand that Andrew T. plans to share with PO/your MOs.

Serge

MINISTRY OF
ENERGY

# Proposed Initiatives to Transform Ontario's Electricity Sector

## Working Draft

December 5, 2016

CONFIDENTIAL DRAFT

# Context

- Electricity costs are increasing as the necessary investments are made to decarbonize and modernize the province's electricity infrastructure.
  - Since 2003, the Province has invested more than $35 billion in over 16,000 megawatts (MW) of new and refurbished cleaner generation, including nuclear, natural gas and renewables.
  - Over the same period, Hydro One has invested $15.5 billion to enhance and renew its transmission and distribution systems.
  - As additional electricity generation comes online, nuclear units are refurbished and distribution and transmission investments are made, prices are forecast to continue to increase.

- Actions have been taken to drive down electricity costs, including deferring investments in generation (e.g., new build nuclear), improving market efficiency (e.g., introduction of wind dispatch) and decreasing the cost of renewable procurements (e.g., GEIA renegotiation, decreasing FIT prices).

- Additional steps have been taken to increase cost effectiveness and improve efficiency by adopting new electricity market approaches, such as:
  - Enhancing competition between developers of large renewable projects through the Large Renewable Procurement (LRP) process to drive down price and secure clean, reliable generation for the province;
  - Directing IESO to end the process of negotiating new NUG contracts pending the development of a Capacity Auction (i.e., Market Renewal); and
  - Launching the first IESO Demand Response Auction (i.e., a competitive process through which demand-side resources are selected to be available to reduce their electricity consumption as needed).

# Context (Cont'd)

- Following the 2016 Throne Speech, a number of actions were announced to further reduce electricity costs, such as:
  - Providing an 8 per cent rebate, equivalent to the provincial portion of HST, for approximately 5 million eligible electricity consumers including residences, small businesses and farms;
  - Increasing the amount of rate protection available to approximately 330,000 eligible rural customers living in low-density areas by updating the Rural or Remote Rate Protection (RRRP) program;
  - Lowering the Industrial Conservation Initiative (ICI) threshold to 1 MW and removing sector restrictions so that more consumers can benefit;
  - Suspending the second round of the Large Renewable Procurement (LRP II); and
  - Recycling a portion of cap and trade auction proceeds to keep rates affordable for industrial and commercial electricity consumers.

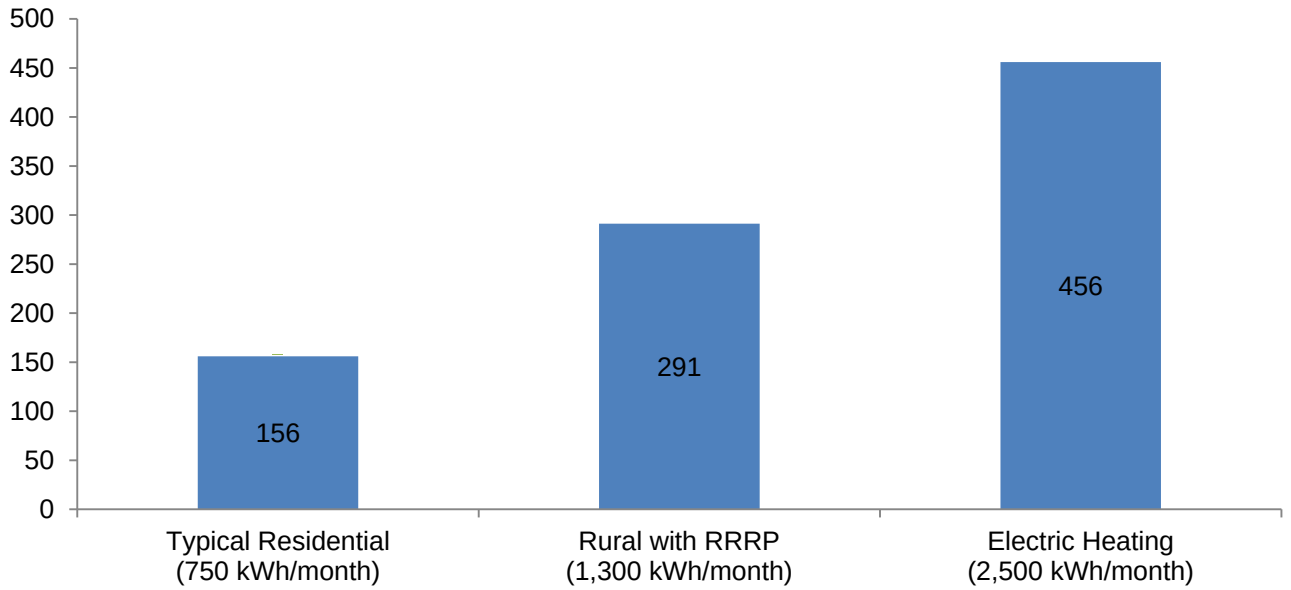
- On November 28, 2016, the Minister of Energy announced the need for changes in how electricity resources are procured and the need for wholesale market renewal.

- The Ministry of Energy is currently updating its Long-Term Energy Plan (LTEP), which provides an opportunity to consider a range of policy changes to how the Ontario energy sector operates.

# Current Electricity Prices – Residential

- Residential consumers electricity prices continue to be a concern for many Ontarians, particularly those that rely on electric heat.
  - **Note:** The typical residential bills are currently below the 2013 Long-Term Energy Plan (2013 LTEP) forecasts ($159 / 750kWh)

**Residential Electricity Bills**
*in $/month*

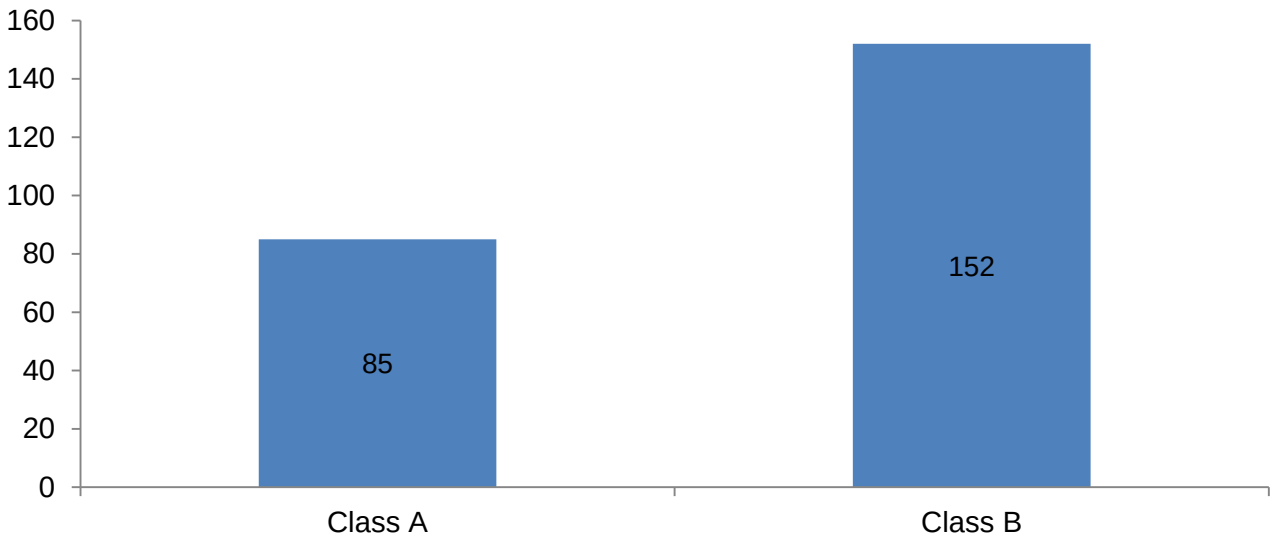


**Note**: Typical residential and electric heating shown above are based on Toronto Hydro; rural is based on connection to Hydro One as a R2 customer eligible to receive the Rural or Remote Rate Protection (RRRP) credit of $31.50.

# Current Electricity Prices – Industrial and Commercial

- While large industrial electricity consumers (i.e., Class A) rates are competitive with other jurisdictions, rates for commercial/small industrial consumers (i.e., Class B) are higher by comparison.
  - **Note:** Current industrial and commercial prices are below 2013 LTEP forecasts ($96 / MWh)

**Current All-In electricity Price**
*in $/MWh*



**Note**: Based on year-to-date (YTD) September 2016 prices. Class A reflects a transmission-connected consumer. Class B reflects a 1 MW load operating at 56% load factor and connected to Toronto Hydro.

# Proposed Initiatives – Overview

- The suite of proposed initiatives are intended to:
  - Transform how the electricity market operates in Ontario;
  - Re-set how government programs are funded (i.e., rate-base vs tax-base);
  - Provide system benefits (e.g., industrial load retention);
  - Lower the cost of electricity for residential and industrial consumers; and
  - Increase cost effectiveness and improve efficiency.

- The proposed initiatives include:
  1. Implement Market Renewal Initiatives
  2. Fund Electricity Support Programs Through The Tax-base
  3. Eliminate the Industrial Conservation Initiative (ICI)
  4. Amortize Conservation Program Costs
  5. LDC Efficiencies
  6. Rate Design Initiatives
  7. Reduced Cost of OPG Borrowing
  8. End Debt Retirement Charge (DRC) Early for Commercial/Small Industrial Class B Electricity Consumers
  9. Dedicate Departure Tax
  10. Cancel/Adjust Renewable Energy Procurements

- The proposed initiatives provide opportunities to reduce electricity costs for residential and industrial consumers while at the same time transforming the province's electricity market and yielding benefits for the electricity system.

# Proposed Initiatives – Impacts

- Each of the proposed initiatives under consideration target different government programs and different parts of the electricity bill. The proposals impact different classes of electricity consumers to varying degrees.

| Proposal | Program / Initiative | Line on Bills | Who Benefits |
|---|---|---|---|
| 1. Implement Market Renewal Initiatives | Market Renewal | Electricity, Global Adjustment, Regulatory | Market Renewal: All electricity consumers |
| 2. Fund Electricity Support Programs Through The Tax-base | OESP, RRRP | Regulatory | All electricity consumers evenly |
| 3. Eliminate the Industrial Conservation Initiative (ICI) | ICI | Electricity, Global Adjustment | Only Class B electricity consumers (i.e., residential) **Note:** Will have a negative impact on Industrial consumers. |
| 4. Amortize Conservation Program Costs | Amortization | Electricity, Global Adjustment | Class B electricity consumers and to a lesser extent Class A consumers |
| 5. LDC Efficiencies | Distribution efficiencies | Delivery | All embedded consumers |
| 6. Rate Design Initiatives | Rate structures | Electricity, Global Adjustment | Rate Design Initiatives: Participating electricity consumers |
| 7. Reduced Cost of OPG Borrowing | n/a | Electricity, Global Adjustment | Class B electricity consumers and to a lesser extent Class A consumers |
| 8. End DRC Early for Commercial/Small Industrial Class B Electricity Consumers | Debt Retirement Charge (DRC) | DRC | Class B consumers (i.e., small business and commercial consumers, etc) |
| 9. Dedicate Departure Tax | Departure Tax | TBD | TBD |
| 10. Cancel/Adjust Renewable Energy Procurements | FIT, LRP | Electricity, Global Adjustment | Class B electricity consumers and to a lesser extent Class A consumers |

# Proposed Initiatives – Potential Savings for Typical Residential Electricity Consumers

| *$/750kWh* | 2017 | 2018 | 2019 | 2020 | 2021 | 2022 | Timing of Benefit |
|---|---|---|---|---|---|---|---|
| 1. Implement Market Renewal Initiatives | - | - | - | 1.58 | 1.59 | 1.60 | Longer-Term |
| 2. Fund Electricity Support Programs through the Tax-base | 2.18 | 2.30 | 2.31 | 2.45 | 2.48 | 2.51 | Immediate |
| 3. Eliminate the Industrial Conservation Initiative (ICI) | 4.40 | 4.24 | 4.10 | 4.24 | 3.73 | 3.58 | Immediate |
| 4. Amortize Conservation Program Costs | 1.67 | 1.56 | 1.21 | 0.81 | 0.54 | 0.3 | Immediate |
| 5. LDC Efficiencies | TBD | TBD | TBD | TBD | TBD | TBD | Near-Term |
| 6. Rate Design Initiatives* | - | - | - | - | - | - | Immediate |
| 7. Reduced Cost of OPG Borrowing | 0.13 | 0.13 | 0.13 | 0.18 | 0.18 | 0.18 | Immediate |
| 8. End DRC Early for Class B Electricity Consumers** | - | - | - | - | - | - | n/a |
| 9. Dedicate Departure Tax | TBD | TBD | TBD | TBD | TBD | TBD | Immediate |
| 10. Cancel / Adjust Renewable Energy Procurements | - | - | TBD | TBD | TBD | TBD | Longer-Term |
| **Total** | | | | | | | |

**Note:** The above initiatives will provide similar benefits for non-RPP Class B electricity consumers. Proposal 2 assumes OESP participation of 50% and 5-year maturity. *Savings estimates do not include changes related to rate design. ** Class B includes small-medium enterprises (SMEs).

# Proposed Initiatives – Potential Savings for Average Industrial Electricity Consumers

| *$/MWh* | 2017 | 2018 | 2019 | 2020 | 2021 | 2022 | Timing of Benefit |
|---|---|---|---|---|---|---|---|
| 1. Implement Market Renewal Initiatives | - | - | - | 2.11 | 2.12 | 2.13 | Longer-Term |
| 2. Fund Electricity Support Programs through the Tax-base | 2.91 | 3.06 | 3.17 | 3.27 | 3.33 | 3.38 | Immediate |
| 3. Eliminate the Industrial Conservation Initiative (ICI) | (24.12) | (23.21) | (22.45) | (23.23) | (20.42) | (19.61) | Immediate |
| 4. Amortize Conservation Program Costs | 1.15 | 1.08 | 0.84 | 0.56 | 0.37 | 0.25 | Immediate |
| 5. LDC Efficiencies | n/a | n/a | n/a | n/a | n/a | n/a | Near-Term |
| 6. Rate Design Initiatives* | - | - | - | - | - | - | Immediate |
| 7. Reduced Cost of OPG Borrowing | 0.10 | 0.10 | 0.10 | 0.15 | 0.15 | 0.15 | Immediate |
| 8. End DRC Early for Class B Electricity Consumers** | - | - | - | - | - | - | n/a |
| 9. Dedicate Departure Tax | TBD | TBD | TBD | TBD | TBD | TBD | Immediate |
| 10. Cancel / Adjust Renewable Energy Procurements | - | - | TBD | TBD | TBD | TBD | Longer-Term |
| **Total** | | | | | | | |

**Note:** Proposal 2 assumes OESP participation of 50% and 5-year maturity. Proposal 3 reflects the elimination of ICI, as opposed to moving ICI cost shift to the taxbase. The $1.75/MWh savings associated with Proposal 7 in 2018 accounts for the fact that under the status quo, DRC will be removed from bills in April 2018. *Savings estimates do not include changes related to rate design. ** Class B includes small-medium enterprises (SMEs).

# Fiscal Considerations

- Funding electricity support programs (i.e., OESP, RRRP, First Nations Delivery Rate) from the tax-base represents approximately $440 million on average annually.

- Ending the Debt Retirement Charge (DRC) for commercial and small industrial electricity consumers (i.e., Class B) early would represent an additional fiscal pressure of $xx [placeholder for OFA] on the province.

- If the Industrial Conservation Initiative were funded though the tax-base instead of being eliminated, this would represent a $900 million annual cost to the fiscal plan.

- Reducing OPG borrowing costs to the Province's cost of funds is expected to result in a $20 to $35 million annual fiscal pressure to the province [TBC by OPG / OFA].

- Fiscal impacts of allocating a portion of the departure tax to ratepayers will depend on the size of the allocation, as well as timing for the flow of value. The maximum, direct one-time impact is $2.6 billion, with potential ancillary impacts on residual stranded debt defeasance.

# 1. Electricity Market Renewal Initiatives

- Continue to move forward with IESO's Market Renewal initiatives:
  - Market Renewal encompasses projects such as a single-schedule system (from the current two-schedule system), more frequent intertie scheduling to better align with other jurisdictions and a day-ahead market. There will be up front capital costs to enable the initiative. IESO is currently assessing these costs.
  - Moving to "technology-agnostic" procurements will provide new opportunities for innovation and modernization and ensure ratepayers receive the best prices possible.

**Considerations**

- Changes related to IESO's Market Renewal initiatives, reflected in HOEP and uplifts, are estimated to save up to $300 million per year, starting in 2020, leading to a reduction of:
  - About $1.60/month or about 1% at current retail prices for a typical residential bill; and
  - About $2/MWh or more than 2% at current all-in prices for industrial and SME electricity consumers.
- The IESO's Market Renewal is a broad initiative that will impact all aspects of Ontario's electricity market. Ontario has had a uniform price since market opening.
- Adopting a technology-agnostic stance will lower the overall cost of providing electricity service by selecting the most cost-effective resources to fulfill various system needs.

# 2. Fund Electricity Support Programs Through the Tax-Base

- Propose to fund electricity support programs, including Ontario Electricity Support Program (OESB) and Rural or Remote Electricity Rate Protection (RRRP), through the tax-base instead of a regulated charge. This would allow the OESP and the RRRP charges to be removed from the Regulatory line on electricity bills.

**Considerations**

*Consumer Impacts and implementation*

- Transitioning OESP and RRRP to the tax-base would reduce a typical residential bill by about $2.35/month by 2020, and delivering the First Nation rate reduction through tax base would avoid about $0.10/month for a potential total savings of $2.45/month by 2020). As all programs provide strong social benefits, there is precedent for funding these programs through the tax-base.
- To address concerns from low income electricity consumers improvements to OESP could be implemented by increasing credits (could be up to double the current credits)
  - Single low income consumer would see a change from $30 to $45/ month ($540/year):
  - Family of four with electric heat could see a credit of $82.50/month ($990/year); and
  - Would mean no impact on consumer bills and no change to current OESP charge.
- RRRP and OESP are included in the “Regulatory” line on bills. If RRRP and OESP were eliminated from bills, the Regulatory line would decrease; however, as the Regulatory line is the smallest line item component of invoices, there is risk the decrease may not be perceived by customers.
- The RRRP regulation provides a funding mechanism for transmission infrastructure required to grid connect remote First Nation communities. Considerations for how that funding will be supported by the tax base will need to be determined.
- The non-rate mechanism to remove delivery charges from on-reserve First Nation customer monthly bills needs to be further explored.Funding RRRP and/or OESP with tax revenue would require amendments to existing legislation and regulations.

# 2. Fund Electricity Support Programs Through the Tax-Base (cont'd)

- Table below shows estimates of program costs up to 2020:

| Year | OESP | RRRP | First Nations Delivery Rate | TOTAL |
|---|---|---|---|---|
| 2017 | $106M | $292M | $18M | **$416M** |
| 2018 | $119M | $300M | $18M | **$437M** |
| 2019 | $127M | $306M | $18M | **$451M** |
| 2020 | $132M | $315M | $18M | **$465M** |

1) Ontario Electricity Support Program (OESP)
   - After almost a year in market, close to 30% of potentially eligible customers are signed up.
   - The cost projections below assume the program grows to 50% of eligible consumers by 2020 (also assumes 10% administration costs).

2) Rural and Remote Rate Protection (RRRP)
   - Provides benefits to R2 Hydro One consumers, Algoma, and remote communities.
   - Includes the expanded coverage that will begin on January 1, 2017.

3) First Nation rate reduction (currently under development)
   - On November 14, 2016, OEB presented options to the Ministry on reducing costs for on-reserve First Nation customers.
   - OEB's recommended option to provide 100% delivery rate credit, which is estimated at $18.4 million per year.
     - Other options includes a seasonal fixed credit to account for demand changes over the year ($13 million) or a 50% total bill reduction ($23 million).

# 3. Eliminate the Industrial Conservation Initiative (ICI)

- The cost shift from the Industrial Conservation Initiative (ICI) could be removed from electricity bills by eliminating ICI.
  - The ICI allows large electricity consumers to lower their electricity costs by reducing their demand during peak hours.

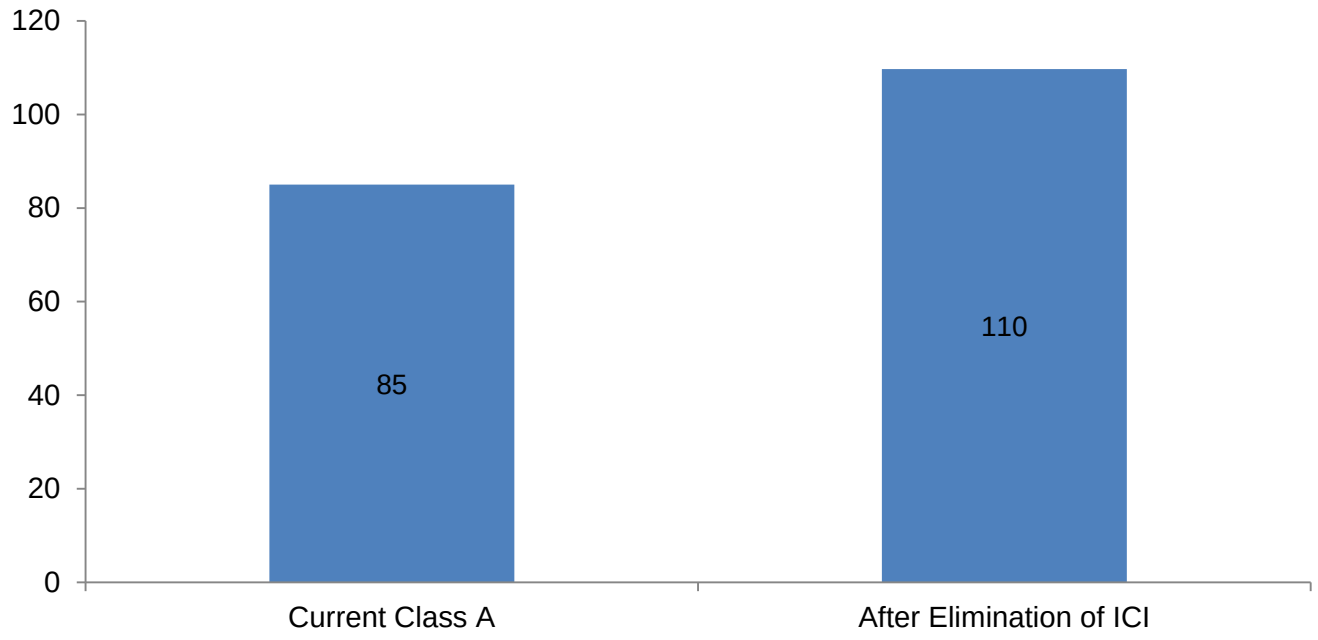
**Considerations**

- Eliminating ICI would result in a benefit of more than $4/month for residential electricity consumers in 2017.
  - However, unless government took action to mitigate the associated cost shift back to industrial consumers, typical industrial prices would increase by about one-third. Such a price increase would pose significant challenges for energy-intensive consumers.
- Industrial stakeholders have indicated that ICI as an integral factor in maintaining competitiveness and retaining industry in the province.
  - Eliminating ICI would limit the “cost shift” onto residential consumers, but it would also lead to a reduction in industrial demand. The large industrial contribution to the fixed costs of running the electricity system would then need to be covered by remaining consumers.
- If ICI is retained, current IESO projections indicate that the cost shift will decrease each year going forward as Global Adjustment (GA) decreases (due to an expected increase in HOEP).
- Alternatively, ICI could be funded through the tax-base at a cost of $900 million annually. There is precedent to use the tax-base for industrial support programs, including the Northern Industrial Electricity Rate Program (NIERP) and the Jobs and Prosperity Fund.

# 3. Eliminate the Industrial Conservation Initiative (cont'd)

- ICI currently provides a benefit of about $25/MWh to Class A electricity consumers.

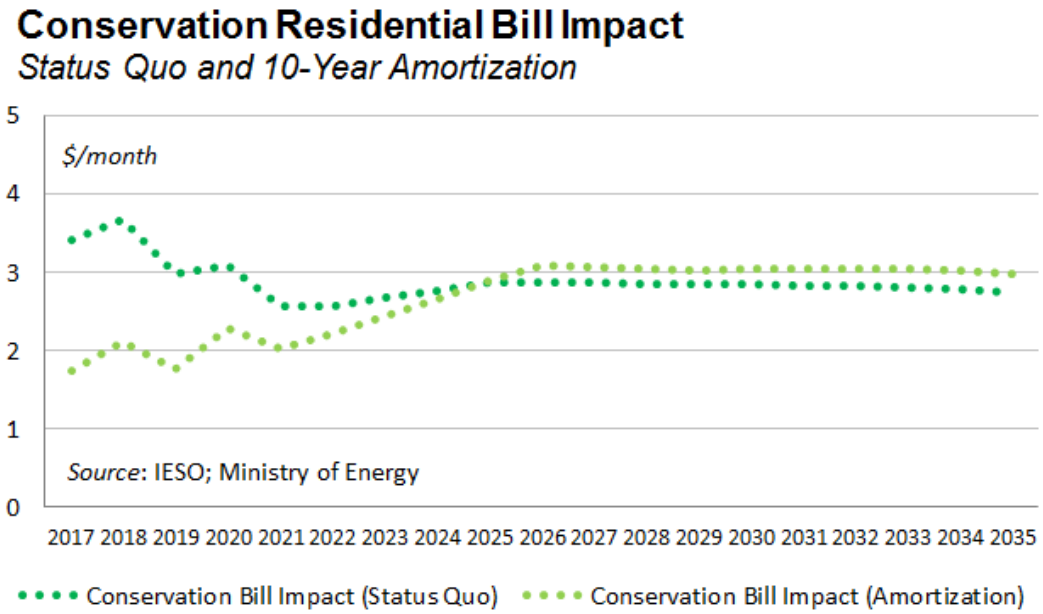
**All-In Electricity Price**
*in $/MWh*



**Note**: Based on year-to-date (YTD) September 2016 prices. Class A reflects a transmission-connected consumer.

# 4. Amortize Conservation Program Costs

- ~$3 billion from the electricity ratepayer base will be spent on conservation programs delivered under the Conservation First Framework and the Industrial Accelerator Program (IAP) between 2015 and 2020.
- Currently, Conservation and Demand Management (CDM) program costs are recovered from the Global Adjustment (GA) mechanism about one month after expenses are incurred.
- As a potential rate mitigation measure, certain CDM costs could be amortized.
- Amortizing a portion of conservation spending would produce a benefit for electricity ratepayers in excess of $1/month at the outset. Over time, the benefit would decrease and turn into a cost, as interest charges begin to grow.



**Note**: Chart assumes that conservation incentive costs are available for amortization while administration cost are not. Although there is variable from year to year, incentives represent about two-thirds of conservation spending in Ontario. Chart assumes conservation spending continues at a similar rate beyond 2020. Chart assumes a 10-year borrowing rate of 3.0%.

# 4. Amortize Conservation Program Costs (cont'd)

## Considerations

- Under **Public Sector Accounting Board (PSAB) accounting standards**, used by both the Province and IESO, only certain assets can be amortized: 1) pensions and 2) tangible capital assets. Under PSAB an asset must meet several criteria to be considered a capital asset, including:
  - A tangible capital asset must be tangible and substantive and the Ontario government must have title and operate the asset.
  - A tangible capital asset must bring a tangible benefit to the government or to Ontario.

- CDM costs, on their own, do not meet the criteria of a tangible capital asset because customers would have ownership and control of installed CDM measures, not the Province or IESO.

- **Rate-regulated accounting** was developed to recognize the unique nature of regulated entities (e.g., electricity generators, LDCs). Under rate-regulated accounting certain costs can be treated as amortizable assets that would not normally be considered assets under accounting principles.
  - Over the past several years, the Auditor General (AG) has expressed concerns about the appropriateness of recognizing rate-regulated assets in the Province's consolidated financial statements.
  - Rate-regulated accounting is currently under review by international accounting standard setting bodies and is currently permitted only on an interim basis, so its future is unclear at present.

# 4. Amortize Conservation Program Costs (cont'd)

**Considerations**

- If some of Ontario's CDM costs could be amortized, analysis shows that ratepayer impacts would be reduced in the short-term but interest charges on the loan would result in increased overall ratepayer costs in the longer-term.

- Legislative amendments would be needed to allow recovery of loan interest charges from GA.

- If there is a desire to proceed:
  - Formal accounting advice will need to be sought from IESO's external auditor as well as the Ontario Provincial Controller (OPC) to determine whether CDM costs could be amortized according to rate-regulated accounting standards.
  - Further legal analysis would also be required to confirm legal viability and possible approaches to implementation.

# 5. LDC Efficiencies

- Consider opportunities for future LDC cost reductions and efficiencies through the regulatory framework.

**Considerations**

- The Ontario Energy Board has a mandate to regulate the electricity distribution sector in the public interest, ensuring the financial viability of the sector while promoting reliable service to customers at just and reasonable rates.
- Since 2012, the OEB has taken action – through the Renewed Regulatory Framework for Energy – to more closely link rate regulation with performance measures and outcomes.
- There maybe opportunities to promote further cost reductions and performance improvements within the distribution sector as there is continued evolution of the regulatory framework in Ontario.
  - Tightening LDC requirements may also indirectly incent other desired policy outcomes, such as LDC consolidation and grid modernization to realize further cost reductions.
- ENERGY could help promote or accelerate these efforts by asking the OEB through the LTEP Implementation Directive, s. 35 of the *Ontario Energy Board Act, 1998*, and the 2017 Mandate Letter and other agency business planning processes.
- In addition, further changes to the departure and transfer tax regimes could be considered to provide a further incentive for LDC mergers and acquisitions.

# 6. Rate Design Initiatives

- OEB continues to move forward with its Regulated Price Plan (RPP) Roadmap:
  - The OEB is undertaking a comprehensive review of the RPP, including exploring the introduction of offering different pricing plan options for customers following the completion of pilot programs in 2018. The plan is expected to be implemented over a 3-5 year period.

- Until new pricing plans are available, the OEB could provide an "opt-in flat rate RPP" structure that could be made available to residential, farm and small business consumers on an interim basis (2-3 years) until a wider range of price plans are available.
- Time-of-Use (TOU) pricing could also be introduced for non-RPP Class B consumers to reduce Global Adjustment (GA) volatility and reduce system costs.

| Current TOU | New Flat Rate |
|---|---|
| On: 18.0 ¢/kWh | 11.1 ¢/kWh |
| Mid: 13.2 ¢/kWh | |
| Off: 8.7 ¢/kWh | |

**Considerations**

- The OEB has indicated that the option would lead to no overall change in system costs. Consumers with higher peak and mid-peak usage patterns would see a decrease in their electricity bills, while those with higher off-peak usage patterns would see an increase.
  - While the current strong supply conditions may allow for such an RPP structure (i.e., peak demand requirements can be easily met), administrative costs could be high (distributors would need to design/implement an opt-in process and associated billing system on an interim basis).

| | Current TOU | New Flat Rate |
|---|---|---|
| 1) Monthly electricity bill- higher peak and mid-peak usage patterns | $172 | $163 |
| 2) Monthly electricity bill- higher off-peak usage patterns | $152 | $163 |

***Note:** 1) assumes a consumer consumption pattern of 45%:30%:25% (Off-peak: Mid-peak: On-peak), while 2) assumes consumer consumption pattern of 80%:10%:10% (Off-peak: Mid-peak: On-peak). Estimates are based on OEB's online electricity bill calculator (for Toronto Hydro-November 2016 rates)

# 6. Rate Design Initiatives (cont'd)

**Considerations**

- The decision to undertake smart meter investments was partly justified on the basis of TOU pricing. If TOU pricing were to be made optional, some stakeholders could question the rationale for smart meter investments.
  - Rationale for offering a flat rate option could focus on providing customers with choice until new pricing plans are rolled out under the RPP roadmap.

- If a flat rate design is introduced, there could be significant consumer opposition to any return to a mandatory TOU.

- After the interim flat rate period, the OEB could offer a wider range of pricing plans to consumers.
  - As part of its RPP review, the OEB will be running pilots with LDCs to assess customer response to alternative time periods and pricing structures.
  - Learnings from these pilots will help inform potential changes to the RPP. Pilots are expected to be in market May 2017 and run for one year.

- Non-RPP Class B electricity consumers currently pay Global Adjustment (GA) on a volumetric basis. Moving them to TOU would provide an incentive to shift consumption to off-peak periods.
  - Consumers, including manufacturers, who are unwilling to shift would face higher costs and likely not be supportive of the changes.
  - The decision to pursue TOU pricing for non-RPP class B consumers will impact proceeds recycling as there is interplay between the two initiatives.

# 7. Reduced Cost of OPG Borrowing

- OPG currently borrows for corporate purposes from the OEFC
- Seek to reduce OPG's borrowing costs and pass on savings to ratepayers by:
  - Reducing or removing the spread that OEFC applies to OPG for any new corporate debt; or
  - Allowing OPG to refinance its existing debt at longer maturities through the OEFC in order to take advantage of the current, favourable interest rate environment.
- Assuming the full spread is removed from all OEFC debt, OPG borrowing costs could be reduced by 50-100 basis points, representing annual savings of about $20-$25 million, increasing to $30-$35 million, as OPG's outstanding OEFC debt rises from ~$3.3 billion in 2016 to ~$4.7 billion in 2020.
- OPG could apply to the OEB as part of its current rate application to flow this benefit to ratepayers.

**Considerations**

- Further work is required to determine potential OPG savings from these initiatives.
- Allowing OPG to refinance would have a negative fiscal impact on the Province.
- Spreads are expected to decline, reducing the relative impact of this change, given lower overall interest rates and reduced volatility.
- Providing OPG with greater access to longer term (20-30 year) debt may also reduce costs:
  - OPG's average term to maturity for OEFC debt is 5.7 years, as compared to 22.2 years for privately financed project debt. This contrasts with most corporations and government which have been working to extend average debt terms in order to take advantage of the low interest rate environment.
  - Longer terms would also better match to the life of OPG's assets.
  - Recently, OEFC has allowed OPG to apply for 50% of its financing requirements in the form of longer term (25-30 year debt). Moving closer to 100% would accelerate this transition.

# 8. End DRC Early for Commercial/Small Industrial Class B Electricity Consumers

- Propose to remove the $0.07/kWh Debt Retirement Charge (DRC) from the bills of commercial/small industrial Class B consumers beginning in 2017, instead of April 1, 2018.
  - **Note:** Class A consumers (e.g., large industrial) would continue to pay DRC until at least April 1, 2018.

**Considerations**

- For a Class B consumer currently paying about $152/MWh, removing the DRC would represent a savings of about 5%.
  - A 50% reduction in the DRC charge would represent a savings of about 2%.

- Alternatively, the reduction of the DRC could be to $0.035/kWh starting in 2017, to provide relief for cap and trade until proceeds recycling is fully operational.

- Residential consumers have had the DRC removed from bills since January 1, 2016. Taking DRC off commercial and small industrial bills would result in equal treatment for these groups of consumers.

- The savings for commercial and small industrial consumers associated with this proposal would drop to zero in April 2018, since this is the current planned date for removing the DRC from non-residential bills.

- Prior to moving forward with this proposal, additional analysis from Legal Services and the MOF would be needed.

# 9. Dedicate Departure Tax

- In connection with the IPO, as a result of leaving the PILs regime and entering the corporate tax regime, Hydro One was deemed to dispose of its assets for proceeds equal to its fair market value, triggering a PILs liability of $2.6 billion (Departure Tax).
- This was paid to the Ontario Electricity Financial Corporation (OEFC), to be dedicated towards repayment of electricity sector stranded debt.
- The Province could explore repurposing some of those funds to the benefit of ratepayers.
- This may reduce the risk that the Ontario Energy Board (OEB) assigns to ratepayers the benefit from an associated tax asset, resulting in lower earnings and decreased share value for Hydro One. This decision is currently before the OEB, as part of Hydro One's Transmission rate application.

**Considerations**

- Cost savings to ratepayers would depend on timing and which ratepayers (e.g., Hydro One customers, or all Ontario customers) will benefit from some or all of the $2.6 billion value.
- While this is a shift from messaging that value from the broadening of ownership of Hydro One is being used pay down debt and fund transit and transportation, the Province could link to electricity infrastructure investments (e.g., as an offset to infrastructure investments already made in the sector, or to specific initiatives such as conservation).
- These funds were paid to the Ontario Electricity Financial Corporation (OEFC), to be dedicated towards repayment of electricity sector stranded debt. Repurposing may have an impact on the defeasance of this debt.

# 10. Cancel/Adjust Renewable Energy Procurements

- The Ministry could consider the following actions to further mitigate future impacts to electricity bills:

| Unallocated/Terminated Capacity | Announced Procurements | Executed Contracts |
|---|---|---|
| A. Do not procure unallocated or terminated capacity | B. Revise FIT 5 target | D. Cancel LRP I contracts |
| | C. Cancel FIT 6 | |

**Overarching Considerations**

- Cost savings associated with reducing or cancelling renewable energy procurements and programs will not reduce current electricity bills, but would result in future cost reductions relative to Ontario Planning Outlook forecasts.
- The IESO estimates implementing options A to C will reduce system costs by approximately $592 million ($2016) between 2019 and 2028, resulting in an average of approximately $0.50/month in savings to a typical residential electricity bill over the same period. [cost reductions from LRP I contract cancellations TBC]
- The microFIT program is winding down end of 2017. Annual microFIT procurement targets have been undersubscribed.
- With a few exceptions (e.g., rollover of unallocated microFIT capacity; addition of terminated microFIT and small FIT capacity to FIT 5), plans for unallocated or terminated capacity are not defined in announcements or existing directions.

**Cancel/Adjust Announced Procurements**

- Amendments to existing directions to the IESO would be required to reduce FIT 5 and cancel FIT 6.
- The FIT 5 procurement is underway with a base target of 150 MW and inclusion of any capacity available from contract terminations under prior small FIT and microFIT procurements. The application window closed on November 25, 2016.

# 10. Cancel/Adjust Renewable Energy Procurements – Existing Contracts

**Cancel Existing LRP I Contracts**

- 16 LRP I contracts (approx. 455 MW) have been executed and projects are under development.
- None have met Key Development Milestones. Total value of LRP I estimated at approx. $1 billion (NPV to 2016).

[Placeholder for IESO: Cost calculation relative to OPO and associated bill impact]

**Considerations**

- To help inform a decision, IESO or OEB could be asked to evaluate and provide guidance to the Ministry on the system need for LRP I projects and potential ratepayer impacts/benefits.
- 13 of 16 LRP I contracts have Indigenous participation. Cancelling LRP I contracts would remove this economic development opportunity and likely damage relationships between Indigenous communities and the government.
- LRP I Contract includes an “Optional Termination” provision allowing IESO to terminate any contract prior to the “Commercial Operation Date” with 6 months written notice.
- The IESO obligations under the Optional Termination provision depend on whether the project has met all “Key Development Milestones”.
  - As no projects have met their Key Development Milestones, the estimated total cost payable to contract holders is about $8 million.

# 10. Cancel/Adjust Renewable Energy Procurements – Existing Contracts (cont'd)

## Legal Analysis

- Under the *Electricity Act, 1998*, the Minister has the authority to amend previous directions without approval from Cabinet. Although an amendment to an existing direction would not require Cabinet approval, it is unlikely that a direction to cancel LRP I contracts could be considered as amending an existing direction. The previous LRP directions set out the broad policy framework that was reflected in the procurement, but the contracts themselves, once executed, are stand alone documents which the IESO had legal authority to execute. Revoking previous LRP directions does not affect that authority or have the effect of cancelling the procurement.
- As a result, any new directive to cancel LRP I contracts would need to be approved by Cabinet, either as part of an LTEP implementation directive to IESO, or pursuant to the overall power to direct IESO with respect to procurements outside the LTEP process. However, there is a risk that such a directive could be subject to challenge.
- ENERGY has previously received advice that there is a high risk that a court would conclude that the Minister has no authority under the *Electricity Act , 1998* to issue a direction requiring IESO to terminate microFIT Conditional Offers and FIT Offer Notices that have already been issued to applicants, because these offers create vested contractual rights and the Minister would require clear legislative authority to interfere with those rights. This reasoning would likely apply equally to any direction or directive to IESO to cancel LRP I contracts.
- Previous advice has also flagged a moderately high risk that the Province could be liable for damages in tort for inducing a breach of contract if it issues a direction to IESO that interferes with vested contractual rights without clear statutory authority to do so. LRP I contract holders could also assert other claims, such as misfeasance in public office.
- The risk and costs associated with potential law suits resulting from the cancellation of contracts requires further analysis, including analysis of whether any statutory amendments would be required to provide clear authority to cancel the contracts. LSB recommends ENERGY seek an opinion from Crown Law Office Civil before proceeding.

# Summary

- Reductions in electricity rates could be achieved by eliminating existing, planned or directed initiatives from the rate-base or shifting these costs to the tax-base.

- The timing of the impact of these rate mitigation initiatives varies.
  - Immediate and near-term impacts can be achieved by shifting costs to the tax-base or changing how certain costs are recovered from consumers or eliminating certain programs.
  - Over the longer term, changes to the electricity supply mix and achieving efficiencies in the electricity market could yield system savings.

- Pursuing the initiatives would require regulatory amendments and working with the electricity sector agencies, LDCs and other stakeholders to implement the initiatives.

# Appendix

# Electricity Consumer Classes

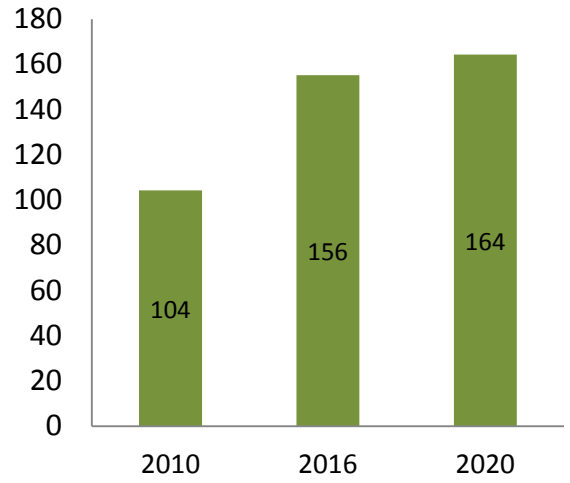
- In Ontario, there are three classes of electricity consumers:

| | Regulated Price Plan | Class B | Class A |
|---|---|---|---|
| **Consumer Types** | • Residential<br>• Small Business<br>• Farms | • Commercial<br>• Institutional<br>• Small industrial | • Large commercial<br>• Large industrial |
| **Load Size** | Below 0.05 MW | Between 0.05 MW and 1 MW | Above 1 MW |
| **Total Consumption** | 58 TWh | 57 TWh | 26 TWh |
| **Share of Consumption** | 41.1% | 40.4% | 18.4% |

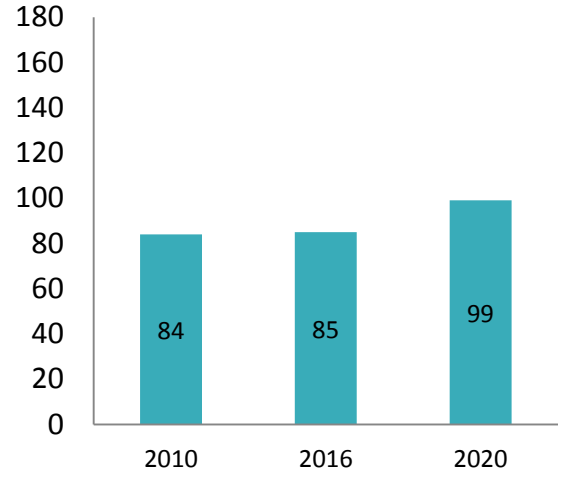
# Prices by Electricity Consumer Class

- Since 2010, average bills for residential consumers (i.e., using 750 kWh/month) have increased by over 50%. Rates are forecast to continue to increase, with residential consumers paying an estimated 6% by 2020.
- Industrial electricity rates have remained relatively flat over the same time period, due primarily to the Industrial Conservation Initiative (ICI). ICI represents a cost shift of about $5/month for residential electricity consumers. Industrial electricity consumers are forecast to see an increase of 16% by and 2020.

**Typical Residential Bill (750/kWh per month)**



**Typical Class A (Industrial) Price ($/MWh)**



**Note:** 2016 represents year-to-date September 2016 for industrial. Cap and trade proceeds recycling is included for the industrial consumer for 2020.

# Rate Mitigation Levers

- To provide further rate relief to Ontario electricity consumers, the government can use one or more of the levers outlined below:
  - **Tax-based Lever:**
    - Provide rebates funded from the tax-base or transfer items currently paid through the rate-base to the tax-base.
  - **Rate-based Lever:**
    - Shifts costs within the rate-base from one customer group to another to achieve electricity system benefits and/or policy goals.
  - **Cap and Trade Proceeds Lever:**
    - Use cap and trade proceeds on initiatives that help reduce greenhouse gas (GHG) emissions from the electricity sector (e.g., recycling proceeds during off-peak periods) while providing benefits to some or all electricity consumers.

# Traditional Rate Mitigation Programs

- Ontario has implemented a number of rate-based programs to help residential and industrial electricity consumers:
  - The Ontario Electricity Support Program (OESP) provides ongoing assistance directly on the bills of eligible low-income electricity consumers
  - The Rural or Remote Rate Protection (RRRP) program is provided to rural and remote residential and farm customers because the cost of distributing power to remote areas is much higher than for urban areas.
  - The Industrial Conservation Initiative (ICI) encourages Ontario's largest consumers to reduce consumption during peak periods while reducing system costs.
- There are also tax-base programs to help manage electricity prices:
  - Rebate the provincial portion of the HST from the electricity bills of residential, small business and farms as of January 1, 2017.
  - Northern Industrial Electricity Rate Program (NIERP), in which participants receive a rebate of two cents per kilowatt hour. On average, industrial electricity prices can be reduced by up to 20%.
- While rate-based programs provide relief to certain electricity consumers, they shift other costs to remaining ratepayers (See Appendix for additional details).

# Driving Down Prices for Consumers

- Since 2013, a number of actions have been taken to drive down prices for consumers wherever possible:
  - Renegotiating the Green Energy Investment Agreement, reducing contract costs by $3.7 billion;
  - Deferring the construction of two new nuclear reactors at Ontario Power Generation's Darlington facility, avoiding an estimated $15 billion in new construction costs;
  - Approving Ontario Power Generation's plans to enable the ongoing operation of Pickering up to 2024, which is expected to save ratepayers as much as $600 million;
  - Reducing Feed-In-Tariff (FIT) prices through annual price reviews, saving ratepayers at least $1.9 billion relative to the 2013 Long-Term Energy Plan (2013 LTEP) forecast; and
  - Suspending the second round of the Large Renewable Procurement (LRP II) process and the Energy-from-Waste Standard Offer Program to save up to $3.8 billion in electricity system costs relative to 2013 LTEP.

# Cost Shifts in the Electricity Sector – Current Programs

- Several programs in the electricity sector “shift costs” from one group of electricity consumers to another:
  - **Rural or Remote Rate Protect** (**RRRP)** is a longstanding program that reduces the delivery charge for rural electricity consumers and is paid for by all consumers in Ontario through a regulatory charge on bills.
  - **Ontario Electricity Support Program (OESP)** is funded via a regulatory charge on consumer bills and provides support for qualifying low income electricity consumers.
  - **Industrial Conservation Initiative (ICI)** empowers large consumers to lower their costs by reducing their demand during peak hours. In the process, ICI shifts costs from large electricity consumers to all other consumers in Ontario.
  - **Industrial Electricity Incentive** (**IEI**) program, offers reduced electricity prices for companies starting or expanding operations in Ontario. All electricity consumers in Ontario pay for the price reduction that IEI participants receive.

# Cost Shifts in the Electricity Sector (Cont'd)

- The tables on the right show the estimated cost shifts that result from existing government programs.
- ICI has had the largest cost shift of all the programs, due to the large size of Global Adjustment (GA) and the way that it is recovered from consumer classes.
- RRRP and OESP impact the regulatory line on consumer bills, while ICI, IEI and conservation affect GA (i.e., Electricity line on bills of Regulated Price Plan consumers).

**Cost Shift Impacts - Residential Bill**

*Typical 750 kWh/month Toronto Hydro consumer*

| *$/month* | 2011 | 2012 | 2013 | 2014 | 2015 | 2016 |
|---|---|---|---|---|---|---|
| ICI | 2.65 | 3.25 | 3.88 | 3.53 | 4.75 | 4.77 |
| RRRP | 0.90 | 0.82 | 0.84 | 0.92 | 0.93 | 0.94 |
| OESP | - | - | - | - | - | 0.84 |
| Conservation | 1.85 | 1.92 | 2.00 | 1.58 | 2.43 | 2.45 |
| IEI | - | - | 0.08 | 0.09 | 0.11 | 0.12 |
| **Total** | **5.41** | **5.99** | **6.81** | **6.13** | **8.21** | **9.12** |

**Cost Shift Impacts - Industrial Bill**

*Typical Class A consumer*

| *$/MWh* | 2011 | 2012 | 2013 | 2014 | 2015 | 2016 |
|---|---|---|---|---|---|---|
| ICI | -22.17 | -26.36 | -30.29 | -25.91 | -33.79 | -33.92 |
| RRRP | 1.20 | 1.10 | 1.12 | 1.23 | 1.24 | 1.25 |
| OESP | - | - | - | - | - | 1.13 |
| Conservation | 1.53 | 1.59 | 1.66 | 1.31 | 2.01 | 2.02 |
| IEI | - | - | 0.07 | 0.08 | 0.09 | 0.10 |
| **Total** | **-19.43** | **-23.67** | **-27.44** | **-23.29** | **-30.45** | **-29.43** |

**Note:** OESP did not come into effect until 2016. The 2016 values represent forecasts and are subject to change.

# Cost Shifts in the Electricity Sector (Cont'd)

- The table on the right shows the total cost for various government electricity programs. These programs are currently funded through the electricity system ratebase.

- Funding of these programs through the fiscal plan would remove these costs from the electricity system (i.e., Placing these costs on the taxbase).

**Cost of Programs**

*By government program*

| *$M* | 2011 | 2012 | 2013 | 2014 | 2015 | 2016 |
|---|---|---|---|---|---|---|
| ICI | 506 | 615 | 736 | 670 | 890 | 893 |
| RRRP | 172 | 156 | 159 | 176 | 174 | 176 |
| OESP | - | - | - | - | - | 158 |
| Conservation | 329 | 339 | 354 | 280 | 425 | 428 |
| IEI | - | - | 15 | 16 | 18 | 19 |

- For example, removing the roughly $900 million of program cost from the Industrial Conservation Initiative (ICI) program would save the typical residential electricity consumer $4.77 per month in 2016.

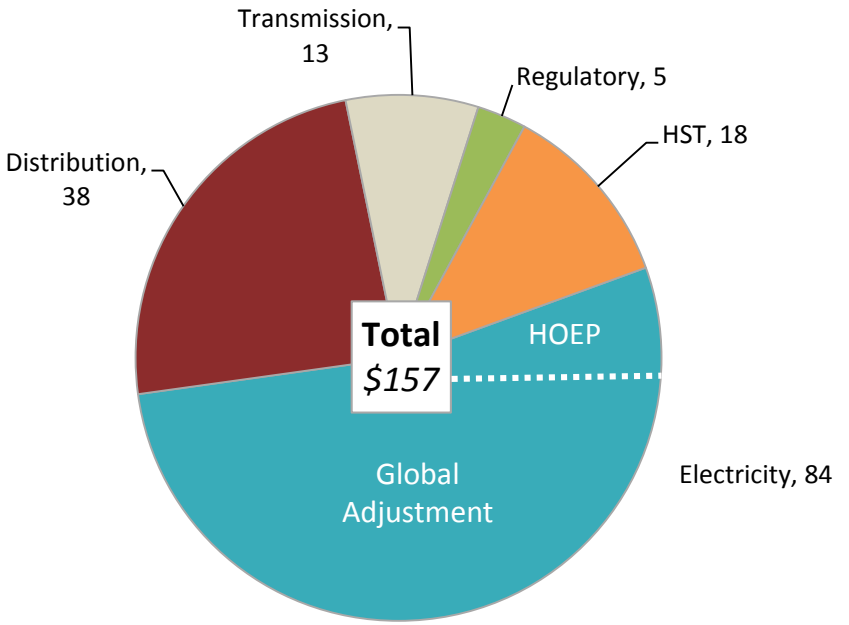
**Note:** OESP did not come into effect until 2016. The 2016 values represent forecasts and are subject to change.

# Residential Electricity Prices

- There are approximately 4.5 million residential consumers in Ontario.
- The Regulated Price Plan includes nearly all residential consumers, as well as small businesses. Regulated Price Plan consumers pay a blended commodity rate regulated by the OEB, which is set every six months.
- For households, the Debt Retirement Charge (DRC) was removed from residential electricity bills as of January 1, 2016.
- In addition, the Ontario Electricity Support Program (OESP) provides an ongoing rate reduction directly on the bills of low-income electricity consumers who have applied and meet the eligibility requirements. The program is funded through the rate base.
- Rural customers, in particular those with electrical heating, pay higher monthly bills.

**Typical Residential Monthly Bills ($)**

*As of November 1, 2016 (750 kWh/month)*



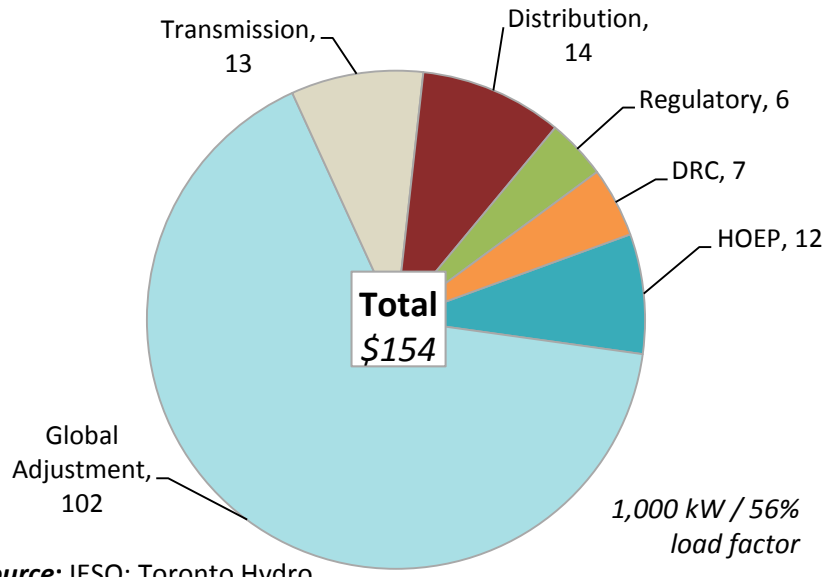
***Source*:** OEB, Toronto Hydro

# Commercial Electricity Prices

- There are approximately 55,000 commercial and institutional consumers in the province. These consumers are Class B consumers, and have separate line items on the electricity bill for HOEP and GA.
- There is a high degree of differentiation amongst consumers within the commercial sector in terms of size and consumption patterns. For example, an elementary school has a much different hourly load profile compared to a full service restaurant. This is an important consideration when looking at the bill impacts of policy options.

**Typical Commercial Price ($/MWh)**

*YTD June 2016 (Non-RPP Class B)*



***Source*:** IESO; Toronto Hydro

- Consumers in the commercial sector do not pay time-of-use prices and have little incentive to shift demand away from high demand hours.
- Targeted pricing programs are currently not available for Class B consumers.

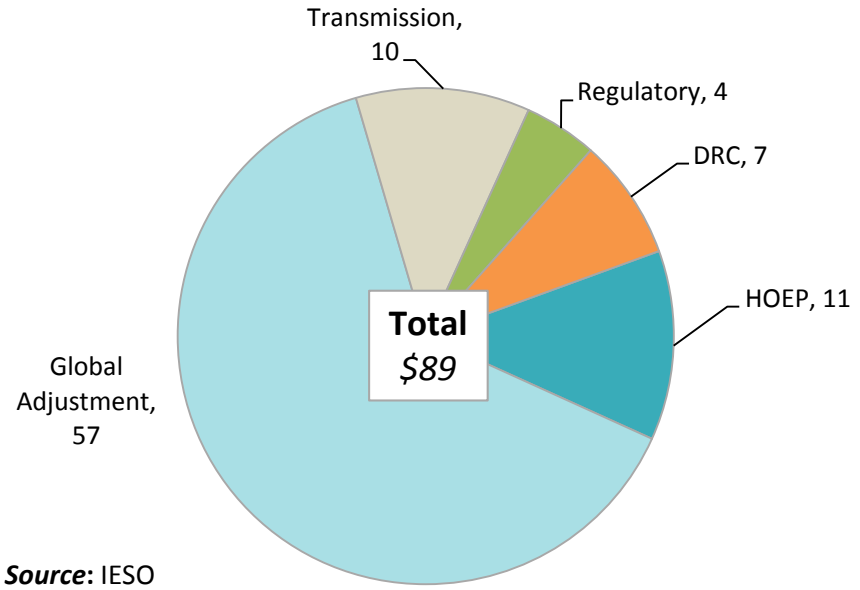
*** Note**: Most commercial consumers receive input tax credits for their HST.

# Industrial Electricity Prices

- There are about 300 large industrial consumers in Ontario.
- Measures in place to mitigate industrial electricity prices include ICI and NIERP.
- ICI lowers costs for eligible large electricity consumers (i.e., those with monthly peak demand exceeding 3 MW) that reduce consumption during peak periods.
  - ICI consumers reduce their electricity rates by 25% on average.

**Typical Large Industrial Price ($/MWh)**

*YTD June 2016*



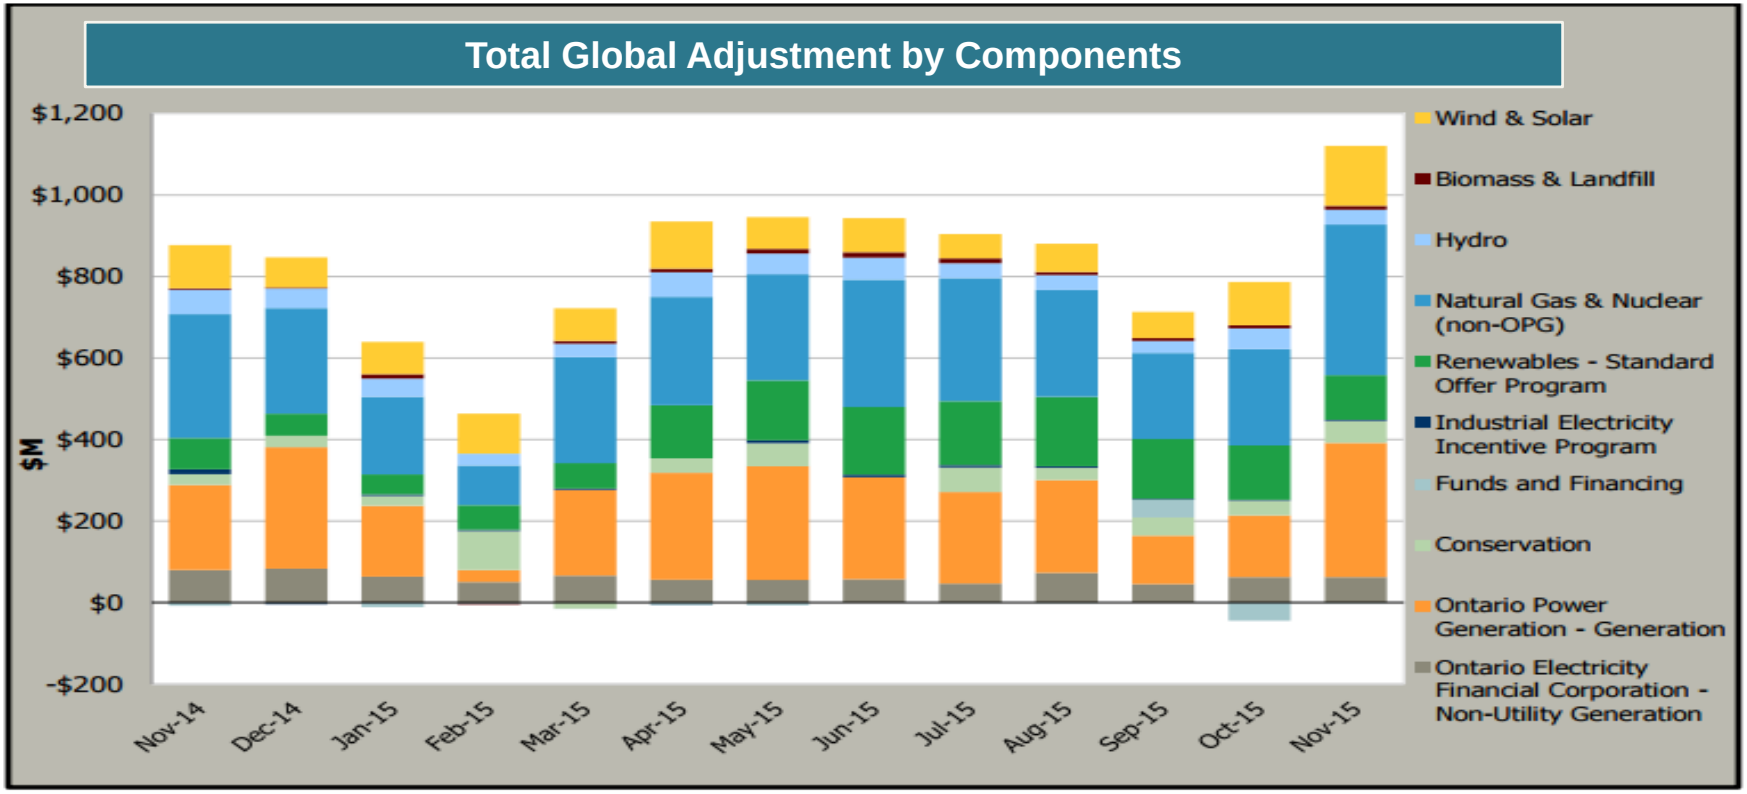
***Source*: IESO**

- Participants in NIERP receive a rebate of $20/MWh. On average, industrial electricity prices are reduced by about 20% through the program, reducing all-in prices to $69/MWh for these consumers. The program is funded through the tax base.

*** Note:** Industrial consumers receive input tax credits for their HST.

# Total Components of Global Adjustment

- Global Adjustment (GA) is a market mechanism that recovers costs from electricity consumers, including the cost of almost all conservation programs in the province (i.e., approximately half a billion dollars in 2016).



**Source:** IESO Monthly Market Report (November 2015)

# Cancel/Adjust Renewable Energy Procurements

# LRP I Pre-Construction Liability Limits

- All 16 successful LRP I developers accepted Optional Termination Provisions when the LRP I Contracts were executed in April 2016.
- If IESO chooses to enact the Optional Termination provision before a project has met all Key Development Milestones, IESO is required to pay pre-construction development costs up to the Pre Construction Liability Limit.
- Pre-construction development costs include costs incurred for feasibility studies, obtaining site access rights, work towards environmental approvals, business development plans, negotiation of contracts for design, equipment, construction and financing, reasonable overhead expenses, and other reasonable costs incurred.
- The Pre Construction Liability Limits are:
  - Non-Rooftop Solar: $250,000 plus $10.00/kW of Contract Capacity
  - Waterpower: $500,000 plus $20.00/kW of Contract Capacity
  - On-Shore Wind: $400,000 plus $2.00/kW of Contract Capacity
- According to the LRP I Optional Termination provision, the developer has a duty to take reasonable steps to mitigate losses, liabilities, costs and damages incurred as a result of the Optional Termination.
  - The IESO will not provide compensation for amounts which are attributable to a developer's failure to take reasonable steps to mitigate.

---

Hi John/Emily,

Please see attached the Potential Rate Mitigation deck prepared by Energy. Any feedback/comments are due back to them by EOD tomorrow.

Regards,
Gavin He

Subject: Potential Rate Mitigation

Hi,

Attached is a draft of the rate mitigation deck. This is tracking to major projects on Thursday for a preliminary discussion. As you can see there are a number of initiatives that have fiscal implications so your input and comments would be appreciated. Keley can coordinate with your EAs. I understand that Andrew T. plans to share with PO/your MOs.

Serge

MINISTRY OF
ENERGY

# Proposed Initiatives to Transform Ontario's Electricity Sector

## Working Draft

December 5, 2016

CONFIDENTIAL DRAFT

# Context

- Electricity costs are increasing as the necessary investments are made to decarbonize and modernize the province's electricity infrastructure.
  - Since 2003, the Province has invested more than $35 billion in over 16,000 megawatts (MW) of new and refurbished cleaner generation, including nuclear, natural gas and renewables.
  - Over the same period, Hydro One has invested $15.5 billion to enhance and renew its transmission and distribution systems.
  - As additional electricity generation comes online, nuclear units are refurbished and distribution and transmission investments are made, prices are forecast to continue to increase.

- Actions have been taken to drive down electricity costs, including deferring investments in generation (e.g., new build nuclear), improving market efficiency (e.g., introduction of wind dispatch) and decreasing the cost of renewable procurements (e.g., GEIA renegotiation, decreasing FIT prices).

- Additional steps have been taken to increase cost effectiveness and improve efficiency by adopting new electricity market approaches, such as:
  - Enhancing competition between developers of large renewable projects through the Large Renewable Procurement (LRP) process to drive down price and secure clean, reliable generation for the province;
  - Directing IESO to end the process of negotiating new NUG contracts pending the development of a Capacity Auction (i.e., Market Renewal); and
  - Launching the first IESO Demand Response Auction (i.e., a competitive process through which demand-side resources are selected to be available to reduce their electricity consumption as needed).

# Context (Cont'd)

- Following the 2016 Throne Speech, a number of actions were announced to further reduce electricity costs, such as:
  - Providing an 8 per cent rebate, equivalent to the provincial portion of HST, for approximately 5 million eligible electricity consumers including residences, small businesses and farms;
  - Increasing the amount of rate protection available to approximately 330,000 eligible rural customers living in low-density areas by updating the Rural or Remote Rate Protection (RRRP) program;
  - Lowering the Industrial Conservation Initiative (ICI) threshold to 1 MW and removing sector restrictions so that more consumers can benefit;
  - Suspending the second round of the Large Renewable Procurement (LRP II); and
  - Recycling a portion of cap and trade auction proceeds to keep rates affordable for industrial and commercial electricity consumers.

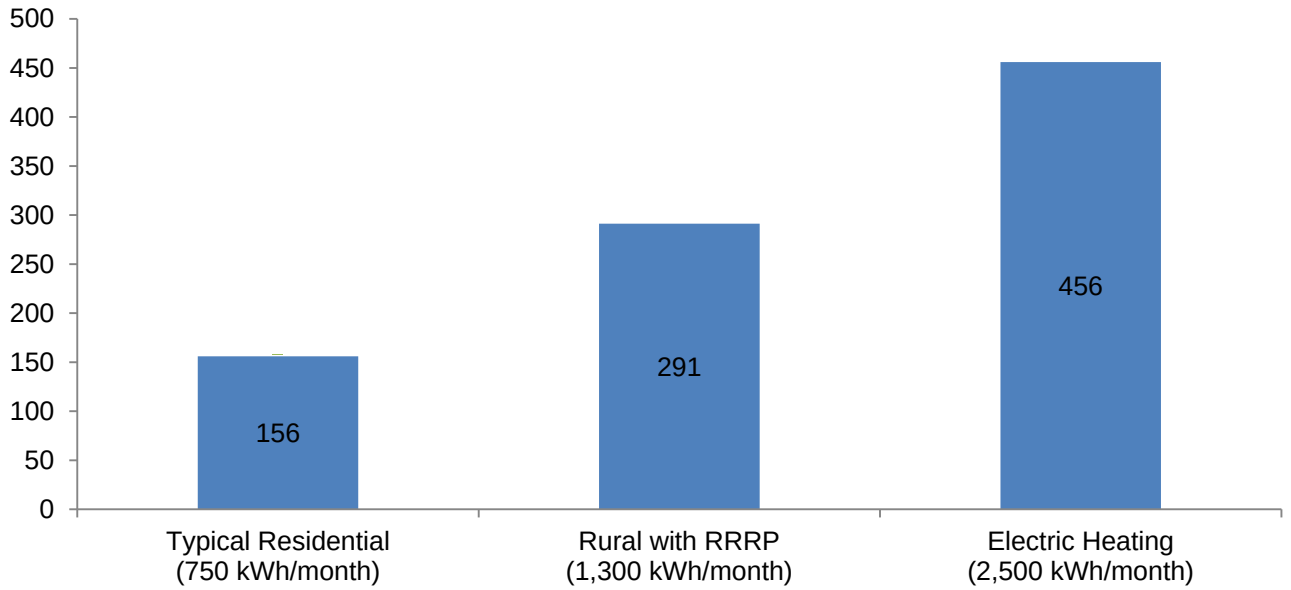
- On November 28, 2016, the Minister of Energy announced the need for changes in how electricity resources are procured and the need for wholesale market renewal.

- The Ministry of Energy is currently updating its Long-Term Energy Plan (LTEP), which provides an opportunity to consider a range of policy changes to how the Ontario energy sector operates.

# Current Electricity Prices – Residential

- Residential consumers electricity prices continue to be a concern for many Ontarians, particularly those that rely on electric heat.
  - **Note:** The typical residential bills are currently below the 2013 Long-Term Energy Plan (2013 LTEP) forecasts ($159 / 750kWh)

**Residential Electricity Bills**
*in $/month*

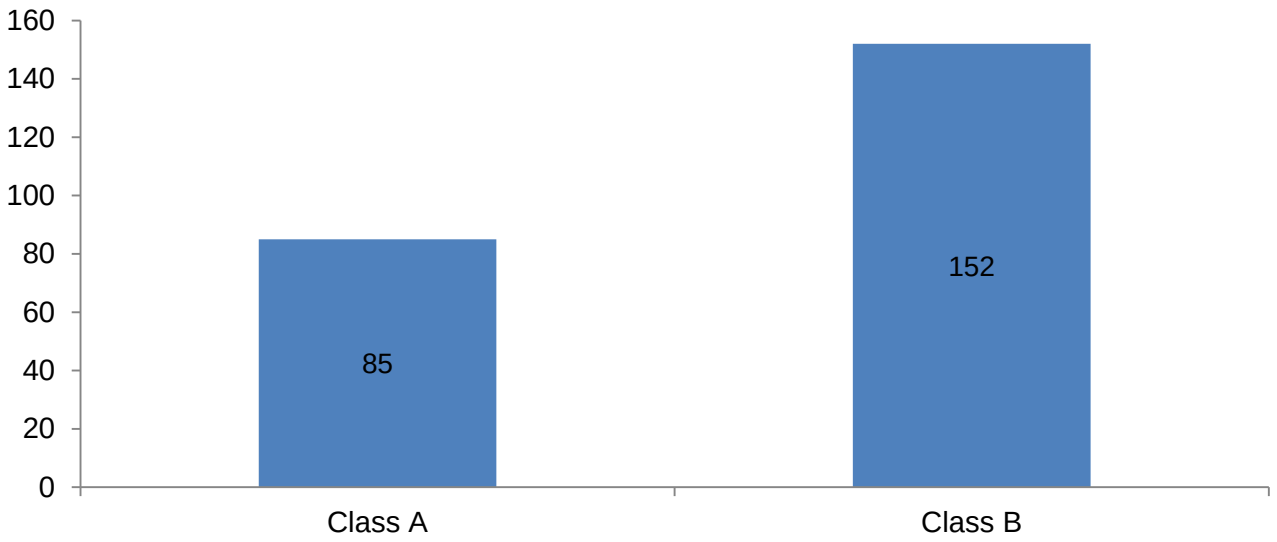


**Note**: Typical residential and electric heating shown above are based on Toronto Hydro; rural is based on connection to Hydro One as a R2 customer eligible to receive the Rural or Remote Rate Protection (RRRP) credit of $31.50.

# Current Electricity Prices – Industrial and Commercial

- While large industrial electricity consumers (i.e., Class A) rates are competitive with other jurisdictions, rates for commercial/small industrial consumers (i.e., Class B) are higher by comparison.
  - **Note:** Current industrial and commercial prices are below 2013 LTEP forecasts ($96 / MWh)

**Current All-In electricity Price**
*in $/MWh*



**Note**: Based on year-to-date (YTD) September 2016 prices. Class A reflects a transmission-connected consumer. Class B reflects a 1 MW load operating at 56% load factor and connected to Toronto Hydro.

# Proposed Initiatives – Overview

- The suite of proposed initiatives are intended to:
  - Transform how the electricity market operates in Ontario;
  - Re-set how government programs are funded (i.e., rate-base vs tax-base);
  - Provide system benefits (e.g., industrial load retention);
  - Lower the cost of electricity for residential and industrial consumers; and
  - Increase cost effectiveness and improve efficiency.

- The proposed initiatives include:
  1. Implement Market Renewal Initiatives
  2. Fund Electricity Support Programs Through The Tax-base
  3. Eliminate the Industrial Conservation Initiative (ICI)
  4. Amortize Conservation Program Costs
  5. LDC Efficiencies
  6. Rate Design Initiatives
  7. Reduced Cost of OPG Borrowing
  8. End Debt Retirement Charge (DRC) Early for Commercial/Small Industrial Class B Electricity Consumers
  9. Dedicate Departure Tax
  10. Cancel/Adjust Renewable Energy Procurements

- The proposed initiatives provide opportunities to reduce electricity costs for residential and industrial consumers while at the same time transforming the province's electricity market and yielding benefits for the electricity system.

# Proposed Initiatives – Impacts

- Each of the proposed initiatives under consideration target different government programs and different parts of the electricity bill. The proposals impact different classes of electricity consumers to varying degrees.

| Proposal | Program / Initiative | Line on Bills | Who Benefits |
|---|---|---|---|
| 1. Implement Market Renewal Initiatives | Market Renewal | Electricity, Global Adjustment, Regulatory | Market Renewal: All electricity consumers |
| 2. Fund Electricity Support Programs Through The Tax-base | OESP, RRRP | Regulatory | All electricity consumers evenly |
| 3. Eliminate the Industrial Conservation Initiative (ICI) | ICI | Electricity, Global Adjustment | Only Class B electricity consumers (i.e., residential) **Note:** Will have a negative impact on Industrial consumers. |
| 4. Amortize Conservation Program Costs | Amortization | Electricity, Global Adjustment | Class B electricity consumers and to a lesser extent Class A consumers |
| 5. LDC Efficiencies | Distribution efficiencies | Delivery | All embedded consumers |
| 6. Rate Design Initiatives | Rate structures | Electricity, Global Adjustment | Rate Design Initiatives: Participating electricity consumers |
| 7. Reduced Cost of OPG Borrowing | n/a | Electricity, Global Adjustment | Class B electricity consumers and to a lesser extent Class A consumers |
| 8. End DRC Early for Commercial/Small Industrial Class B Electricity Consumers | Debt Retirement Charge (DRC) | DRC | Class B consumers (i.e., small business and commercial consumers, etc) |
| 9. Dedicate Departure Tax | Departure Tax | TBD | TBD |
| 10. Cancel/Adjust Renewable Energy Procurements | FIT, LRP | Electricity, Global Adjustment | Class B electricity consumers and to a lesser extent Class A consumers |

# Proposed Initiatives – Potential Savings for Typical Residential Electricity Consumers

| *$/750kWh* | 2017 | 2018 | 2019 | 2020 | 2021 | 2022 | Timing of Benefit |
|---|---|---|---|---|---|---|---|
| 1. Implement Market Renewal Initiatives | - | - | - | 1.58 | 1.59 | 1.60 | Longer-Term |
| 2. Fund Electricity Support Programs through the Tax-base | 2.18 | 2.30 | 2.31 | 2.45 | 2.48 | 2.51 | Immediate |
| 3. Eliminate the Industrial Conservation Initiative (ICI) | 4.40 | 4.24 | 4.10 | 4.24 | 3.73 | 3.58 | Immediate |
| 4. Amortize Conservation Program Costs | 1.67 | 1.56 | 1.21 | 0.81 | 0.54 | 0.3 | Immediate |
| 5. LDC Efficiencies | TBD | TBD | TBD | TBD | TBD | TBD | Near-Term |
| 6. Rate Design Initiatives* | - | - | - | - | - | - | Immediate |
| 7. Reduced Cost of OPG Borrowing | 0.13 | 0.13 | 0.13 | 0.18 | 0.18 | 0.18 | Immediate |
| 8. End DRC Early for Class B Electricity Consumers** | - | - | - | - | - | - | n/a |
| 9. Dedicate Departure Tax | TBD | TBD | TBD | TBD | TBD | TBD | Immediate |
| 10. Cancel / Adjust Renewable Energy Procurements | - | - | TBD | TBD | TBD | TBD | Longer-Term |
| **Total** | | | | | | | |

**Note:** The above initiatives will provide similar benefits for non-RPP Class B electricity consumers. Proposal 2 assumes OESP participation of 50% and 5-year maturity. *Savings estimates do not include changes related to rate design. ** Class B includes small-medium enterprises (SMEs).

# Proposed Initiatives – Potential Savings for Average Industrial Electricity Consumers

| *$/MWh* | 2017 | 2018 | 2019 | 2020 | 2021 | 2022 | Timing of Benefit |
|---|---|---|---|---|---|---|---|
| 1. Implement Market Renewal Initiatives | - | - | - | 2.11 | 2.12 | 2.13 | Longer-Term |
| 2. Fund Electricity Support Programs through the Tax-base | 2.91 | 3.06 | 3.17 | 3.27 | 3.33 | 3.38 | Immediate |
| 3. Eliminate the Industrial Conservation Initiative (ICI) | (24.12) | (23.21) | (22.45) | (23.23) | (20.42) | (19.61) | Immediate |
| 4. Amortize Conservation Program Costs | 1.15 | 1.08 | 0.84 | 0.56 | 0.37 | 0.25 | Immediate |
| 5. LDC Efficiencies | n/a | n/a | n/a | n/a | n/a | n/a | Near-Term |
| 6. Rate Design Initiatives* | - | - | - | - | - | - | Immediate |
| 7. Reduced Cost of OPG Borrowing | 0.10 | 0.10 | 0.10 | 0.15 | 0.15 | 0.15 | Immediate |
| 8. End DRC Early for Class B Electricity Consumers** | - | - | - | - | - | - | n/a |
| 9. Dedicate Departure Tax | TBD | TBD | TBD | TBD | TBD | TBD | Immediate |
| 10. Cancel / Adjust Renewable Energy Procurements | - | - | TBD | TBD | TBD | TBD | Longer-Term |
| **Total** | | | | | | | |

**Note:** Proposal 2 assumes OESP participation of 50% and 5-year maturity. Proposal 3 reflects the elimination of ICI, as opposed to moving ICI cost shift to the taxbase. The $1.75/MWh savings associated with Proposal 7 in 2018 accounts for the fact that under the status quo, DRC will be removed from bills in April 2018. *Savings estimates do not include changes related to rate design. ** Class B includes small-medium enterprises (SMEs).

# Fiscal Considerations

- Funding electricity support programs (i.e., OESP, RRRP, First Nations Delivery Rate) from the tax-base represents approximately $440 million on average annually.

- Ending the Debt Retirement Charge (DRC) for commercial and small industrial electricity consumers (i.e., Class B) early would represent an additional fiscal pressure of $xx [placeholder for OFA] on the province.

- If the Industrial Conservation Initiative were funded though the tax-base instead of being eliminated, this would represent a $900 million annual cost to the fiscal plan.

- Reducing OPG borrowing costs to the Province's cost of funds is expected to result in a $20 to $35 million annual fiscal pressure to the province [TBC by OPG / OFA].

- Fiscal impacts of allocating a portion of the departure tax to ratepayers will depend on the size of the allocation, as well as timing for the flow of value. The maximum, direct one-time impact is $2.6 billion, with potential ancillary impacts on residual stranded debt defeasance.

# 1. Electricity Market Renewal Initiatives

- Continue to move forward with IESO's Market Renewal initiatives:
  - Market Renewal encompasses projects such as a single-schedule system (from the current two-schedule system), more frequent intertie scheduling to better align with other jurisdictions and a day-ahead market. There will be up front capital costs to enable the initiative. IESO is currently assessing these costs.
  - Moving to "technology-agnostic" procurements will provide new opportunities for innovation and modernization and ensure ratepayers receive the best prices possible.

**Considerations**

- Changes related to IESO's Market Renewal initiatives, reflected in HOEP and uplifts, are estimated to save up to $300 million per year, starting in 2020, leading to a reduction of:
  - About $1.60/month or about 1% at current retail prices for a typical residential bill; and
  - About $2/MWh or more than 2% at current all-in prices for industrial and SME electricity consumers.
- The IESO's Market Renewal is a broad initiative that will impact all aspects of Ontario's electricity market. Ontario has had a uniform price since market opening.
- Adopting a technology-agnostic stance will lower the overall cost of providing electricity service by selecting the most cost-effective resources to fulfill various system needs.

# 2. Fund Electricity Support Programs Through the Tax-Base

- Propose to fund electricity support programs, including Ontario Electricity Support Program (OESB) and Rural or Remote Electricity Rate Protection (RRRP), through the tax-base instead of a regulated charge. This would allow the OESP and the RRRP charges to be removed from the Regulatory line on electricity bills.

**Considerations**

*Consumer Impacts and implementation*

- Transitioning OESP and RRRP to the tax-base would reduce a typical residential bill by about $2.35/month by 2020, and delivering the First Nation rate reduction through tax base would avoid about $0.10/month for a potential total savings of $2.45/month by 2020). As all programs provide strong social benefits, there is precedent for funding these programs through the tax-base.
- To address concerns from low income electricity consumers improvements to OESP could be implemented by increasing credits (could be up to double the current credits)
  - Single low income consumer would see a change from $30 to $45/ month ($540/year):
  - Family of four with electric heat could see a credit of $82.50/month ($990/year); and
  - Would mean no impact on consumer bills and no change to current OESP charge.
- RRRP and OESP are included in the “Regulatory” line on bills. If RRRP and OESP were eliminated from bills, the Regulatory line would decrease; however, as the Regulatory line is the smallest line item component of invoices, there is risk the decrease may not be perceived by customers.
- The RRRP regulation provides a funding mechanism for transmission infrastructure required to grid connect remote First Nation communities. Considerations for how that funding will be supported by the tax base will need to be determined.
- The non-rate mechanism to remove delivery charges from on-reserve First Nation customer monthly bills needs to be further explored.Funding RRRP and/or OESP with tax revenue would require amendments to existing legislation and regulations.

# 2. Fund Electricity Support Programs Through the Tax-Base (cont'd)

- Table below shows estimates of program costs up to 2020:

| Year | OESP | RRRP | First Nations Delivery Rate | TOTAL |
|---|---|---|---|---|
| 2017 | $106M | $292M | $18M | **$416M** |
| 2018 | $119M | $300M | $18M | **$437M** |
| 2019 | $127M | $306M | $18M | **$451M** |
| 2020 | $132M | $315M | $18M | **$465M** |

1) Ontario Electricity Support Program (OESP)
   - After almost a year in market, close to 30% of potentially eligible customers are signed up.
   - The cost projections below assume the program grows to 50% of eligible consumers by 2020 (also assumes 10% administration costs).

2) Rural and Remote Rate Protection (RRRP)
   - Provides benefits to R2 Hydro One consumers, Algoma, and remote communities.
   - Includes the expanded coverage that will begin on January 1, 2017.

3) First Nation rate reduction (currently under development)
   - On November 14, 2016, OEB presented options to the Ministry on reducing costs for on-reserve First Nation customers.
   - OEB's recommended option to provide 100% delivery rate credit, which is estimated at $18.4 million per year.
     - Other options includes a seasonal fixed credit to account for demand changes over the year ($13 million) or a 50% total bill reduction ($23 million).

# 3. Eliminate the Industrial Conservation Initiative (ICI)

- The cost shift from the Industrial Conservation Initiative (ICI) could be removed from electricity bills by eliminating ICI.
  - The ICI allows large electricity consumers to lower their electricity costs by reducing their demand during peak hours.

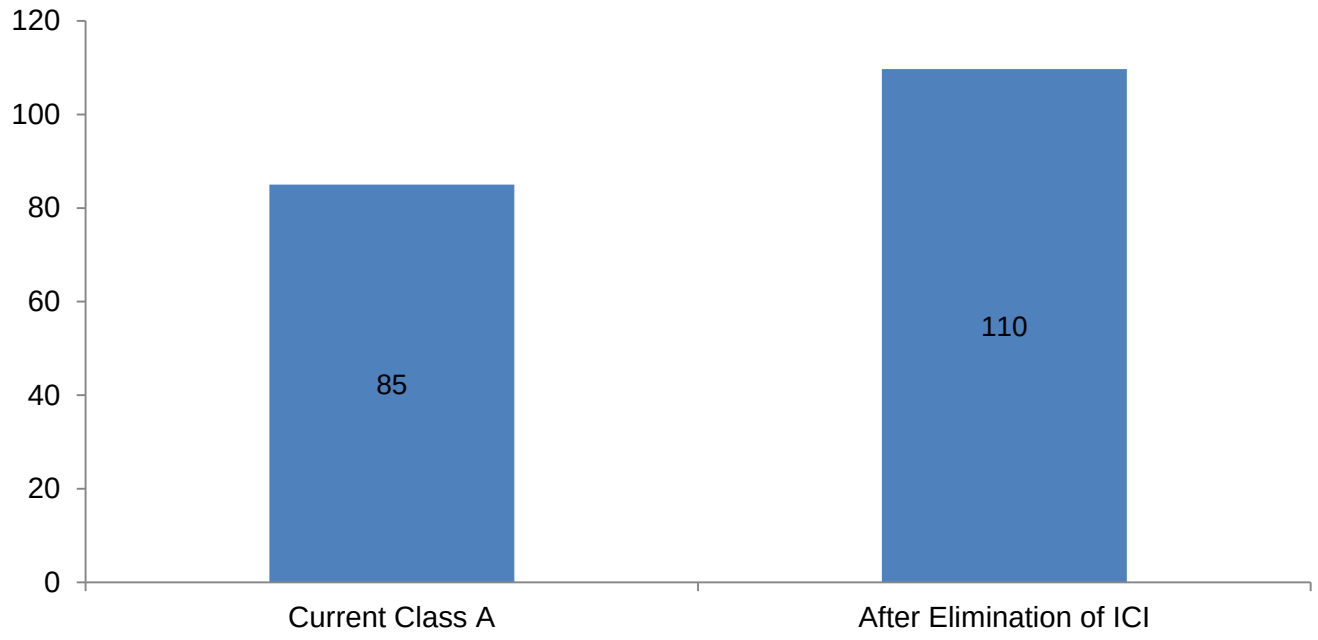
**Considerations**

- Eliminating ICI would result in a benefit of more than $4/month for residential electricity consumers in 2017.
  - However, unless government took action to mitigate the associated cost shift back to industrial consumers, typical industrial prices would increase by about one-third. Such a price increase would pose significant challenges for energy-intensive consumers.
- Industrial stakeholders have indicated that ICI as an integral factor in maintaining competitiveness and retaining industry in the province.
  - Eliminating ICI would limit the “cost shift” onto residential consumers, but it would also lead to a reduction in industrial demand. The large industrial contribution to the fixed costs of running the electricity system would then need to be covered by remaining consumers.
- If ICI is retained, current IESO projections indicate that the cost shift will decrease each year going forward as Global Adjustment (GA) decreases (due to an expected increase in HOEP).
- Alternatively, ICI could be funded through the tax-base at a cost of $900 million annually. There is precedent to use the tax-base for industrial support programs, including the Northern Industrial Electricity Rate Program (NIERP) and the Jobs and Prosperity Fund.

# 3. Eliminate the Industrial Conservation Initiative (cont'd)

- ICI currently provides a benefit of about $25/MWh to Class A electricity consumers.

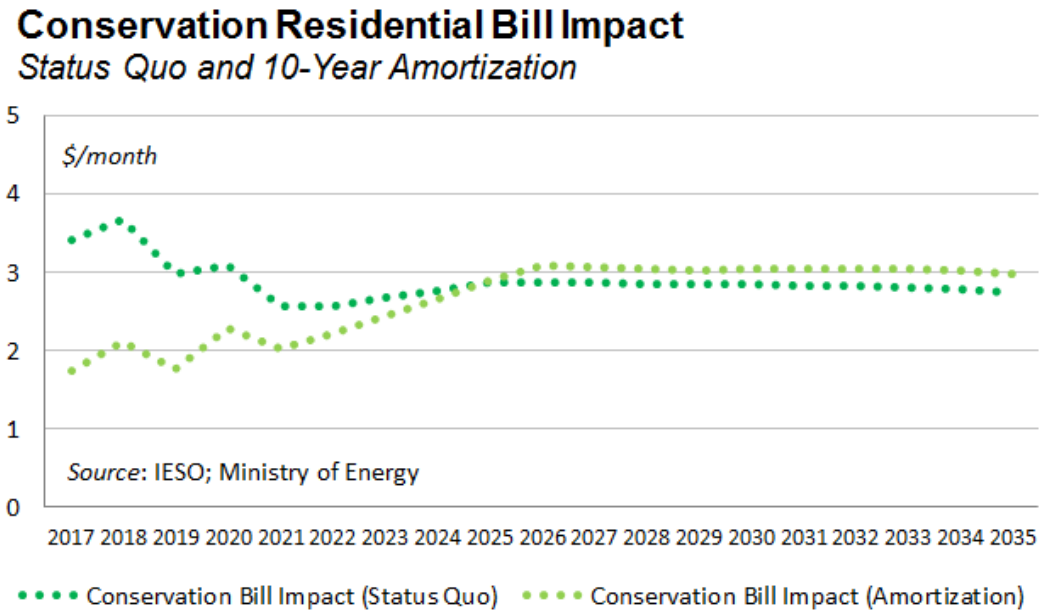
**All-In Electricity Price**
*in $/MWh*



**Note**: Based on year-to-date (YTD) September 2016 prices. Class A reflects a transmission-connected consumer.

# 4. Amortize Conservation Program Costs

- ~$3 billion from the electricity ratepayer base will be spent on conservation programs delivered under the Conservation First Framework and the Industrial Accelerator Program (IAP) between 2015 and 2020.
- Currently, Conservation and Demand Management (CDM) program costs are recovered from the Global Adjustment (GA) mechanism about one month after expenses are incurred.
- As a potential rate mitigation measure, certain CDM costs could be amortized.
- Amortizing a portion of conservation spending would produce a benefit for electricity ratepayers in excess of $1/month at the outset. Over time, the benefit would decrease and turn into a cost, as interest charges begin to grow.



**Note**: Chart assumes that conservation incentive costs are available for amortization while administration cost are not. Although there is variable from year to year, incentives represent about two-thirds of conservation spending in Ontario. Chart assumes conservation spending continues at a similar rate beyond 2020. Chart assumes a 10-year borrowing rate of 3.0%.

# 4. Amortize Conservation Program Costs (cont'd)

## Considerations

- Under **Public Sector Accounting Board (PSAB) accounting standards**, used by both the Province and IESO, only certain assets can be amortized: 1) pensions and 2) tangible capital assets. Under PSAB an asset must meet several criteria to be considered a capital asset, including:
  - A tangible capital asset must be tangible and substantive and the Ontario government must have title and operate the asset.
  - A tangible capital asset must bring a tangible benefit to the government or to Ontario.

- CDM costs, on their own, do not meet the criteria of a tangible capital asset because customers would have ownership and control of installed CDM measures, not the Province or IESO.

- **Rate-regulated accounting** was developed to recognize the unique nature of regulated entities (e.g., electricity generators, LDCs). Under rate-regulated accounting certain costs can be treated as amortizable assets that would not normally be considered assets under accounting principles.
  - Over the past several years, the Auditor General (AG) has expressed concerns about the appropriateness of recognizing rate-regulated assets in the Province's consolidated financial statements.
  - Rate-regulated accounting is currently under review by international accounting standard setting bodies and is currently permitted only on an interim basis, so its future is unclear at present.

# 4. Amortize Conservation Program Costs (cont'd)

**Considerations**

- If some of Ontario's CDM costs could be amortized, analysis shows that ratepayer impacts would be reduced in the short-term but interest charges on the loan would result in increased overall ratepayer costs in the longer-term.

- Legislative amendments would be needed to allow recovery of loan interest charges from GA.

- If there is a desire to proceed:
  - Formal accounting advice will need to be sought from IESO's external auditor as well as the Ontario Provincial Controller (OPC) to determine whether CDM costs could be amortized according to rate-regulated accounting standards.
  - Further legal analysis would also be required to confirm legal viability and possible approaches to implementation.

# 5. LDC Efficiencies

- Consider opportunities for future LDC cost reductions and efficiencies through the regulatory framework.

**Considerations**

- The Ontario Energy Board has a mandate to regulate the electricity distribution sector in the public interest, ensuring the financial viability of the sector while promoting reliable service to customers at just and reasonable rates.
- Since 2012, the OEB has taken action – through the Renewed Regulatory Framework for Energy – to more closely link rate regulation with performance measures and outcomes.
- There maybe opportunities to promote further cost reductions and performance improvements within the distribution sector as there is continued evolution of the regulatory framework in Ontario.
  - Tightening LDC requirements may also indirectly incent other desired policy outcomes, such as LDC consolidation and grid modernization to realize further cost reductions.
- ENERGY could help promote or accelerate these efforts by asking the OEB through the LTEP Implementation Directive, s. 35 of the *Ontario Energy Board Act, 1998*, and the 2017 Mandate Letter and other agency business planning processes.
- In addition, further changes to the departure and transfer tax regimes could be considered to provide a further incentive for LDC mergers and acquisitions.

# 6. Rate Design Initiatives

- OEB continues to move forward with its Regulated Price Plan (RPP) Roadmap:
  - The OEB is undertaking a comprehensive review of the RPP, including exploring the introduction of offering different pricing plan options for customers following the completion of pilot programs in 2018. The plan is expected to be implemented over a 3-5 year period.

- Until new pricing plans are available, the OEB could provide an "opt-in flat rate RPP" structure that could be made available to residential, farm and small business consumers on an interim basis (2-3 years) until a wider range of price plans are available.
- Time-of-Use (TOU) pricing could also be introduced for non-RPP Class B consumers to reduce Global Adjustment (GA) volatility and reduce system costs.

| Current TOU | New Flat Rate |
|---|---|
| On: 18.0 ¢/kWh | 11.1 ¢/kWh |
| Mid: 13.2 ¢/kWh | |
| Off: 8.7 ¢/kWh | |

**Considerations**

- The OEB has indicated that the option would lead to no overall change in system costs. Consumers with higher peak and mid-peak usage patterns would see a decrease in their electricity bills, while those with higher off-peak usage patterns would see an increase.
  - While the current strong supply conditions may allow for such an RPP structure (i.e., peak demand requirements can be easily met), administrative costs could be high (distributors would need to design/implement an opt-in process and associated billing system on an interim basis).

| | Current TOU | New Flat Rate |
|---|---|---|
| 1) Monthly electricity bill- higher peak and mid-peak usage patterns | $172 | $163 |
| 2) Monthly electricity bill- higher off-peak usage patterns | $152 | $163 |

***Note:** 1) assumes a consumer consumption pattern of 45%:30%:25% (Off-peak: Mid-peak: On-peak), while 2) assumes consumer consumption pattern of 80%:10%:10% (Off-peak: Mid-peak: On-peak). Estimates are based on OEB's online electricity bill calculator (for Toronto Hydro-November 2016 rates)

# 6. Rate Design Initiatives (cont'd)

**Considerations**

- The decision to undertake smart meter investments was partly justified on the basis of TOU pricing. If TOU pricing were to be made optional, some stakeholders could question the rationale for smart meter investments.
  - Rationale for offering a flat rate option could focus on providing customers with choice until new pricing plans are rolled out under the RPP roadmap.

- If a flat rate design is introduced, there could be significant consumer opposition to any return to a mandatory TOU.

- After the interim flat rate period, the OEB could offer a wider range of pricing plans to consumers.
  - As part of its RPP review, the OEB will be running pilots with LDCs to assess customer response to alternative time periods and pricing structures.
  - Learnings from these pilots will help inform potential changes to the RPP. Pilots are expected to be in market May 2017 and run for one year.

- Non-RPP Class B electricity consumers currently pay Global Adjustment (GA) on a volumetric basis. Moving them to TOU would provide an incentive to shift consumption to off-peak periods.
  - Consumers, including manufacturers, who are unwilling to shift would face higher costs and likely not be supportive of the changes.
  - The decision to pursue TOU pricing for non-RPP class B consumers will impact proceeds recycling as there is interplay between the two initiatives.

# 7. Reduced Cost of OPG Borrowing

- OPG currently borrows for corporate purposes from the OEFC
- Seek to reduce OPG's borrowing costs and pass on savings to ratepayers by:
  - Reducing or removing the spread that OEFC applies to OPG for any new corporate debt; or
  - Allowing OPG to refinance its existing debt at longer maturities through the OEFC in order to take advantage of the current, favourable interest rate environment.
- Assuming the full spread is removed from all OEFC debt, OPG borrowing costs could be reduced by 50-100 basis points, representing annual savings of about $20-$25 million, increasing to $30-$35 million, as OPG's outstanding OEFC debt rises from ~$3.3 billion in 2016 to ~$4.7 billion in 2020.
- OPG could apply to the OEB as part of its current rate application to flow this benefit to ratepayers.

**Considerations**

- Further work is required to determine potential OPG savings from these initiatives.
- Allowing OPG to refinance would have a negative fiscal impact on the Province.
- Spreads are expected to decline, reducing the relative impact of this change, given lower overall interest rates and reduced volatility.
- Providing OPG with greater access to longer term (20-30 year) debt may also reduce costs:
  - OPG's average term to maturity for OEFC debt is 5.7 years, as compared to 22.2 years for privately financed project debt. This contrasts with most corporations and government which have been working to extend average debt terms in order to take advantage of the low interest rate environment.
  - Longer terms would also better match to the life of OPG's assets.
  - Recently, OEFC has allowed OPG to apply for 50% of its financing requirements in the form of longer term (25-30 year debt). Moving closer to 100% would accelerate this transition.

# 8. End DRC Early for Commercial/Small Industrial Class B Electricity Consumers

- Propose to remove the $0.07/kWh Debt Retirement Charge (DRC) from the bills of commercial/small industrial Class B consumers beginning in 2017, instead of April 1, 2018.
  - **Note:** Class A consumers (e.g., large industrial) would continue to pay DRC until at least April 1, 2018.

**Considerations**

- For a Class B consumer currently paying about $152/MWh, removing the DRC would represent a savings of about 5%.
  - A 50% reduction in the DRC charge would represent a savings of about 2%.

- Alternatively, the reduction of the DRC could be to $0.035/kWh starting in 2017, to provide relief for cap and trade until proceeds recycling is fully operational.

- Residential consumers have had the DRC removed from bills since January 1, 2016. Taking DRC off commercial and small industrial bills would result in equal treatment for these groups of consumers.

- The savings for commercial and small industrial consumers associated with this proposal would drop to zero in April 2018, since this is the current planned date for removing the DRC from non-residential bills.

- Prior to moving forward with this proposal, additional analysis from Legal Services and the MOF would be needed.

# 9. Dedicate Departure Tax

- In connection with the IPO, as a result of leaving the PILs regime and entering the corporate tax regime, Hydro One was deemed to dispose of its assets for proceeds equal to its fair market value, triggering a PILs liability of $2.6 billion (Departure Tax).
- This was paid to the Ontario Electricity Financial Corporation (OEFC), to be dedicated towards repayment of electricity sector stranded debt.
- The Province could explore repurposing some of those funds to the benefit of ratepayers.
- This may reduce the risk that the Ontario Energy Board (OEB) assigns to ratepayers the benefit from an associated tax asset, resulting in lower earnings and decreased share value for Hydro One. This decision is currently before the OEB, as part of Hydro One's Transmission rate application.

**Considerations**

- Cost savings to ratepayers would depend on timing and which ratepayers (e.g., Hydro One customers, or all Ontario customers) will benefit from some or all of the $2.6 billion value.
- While this is a shift from messaging that value from the broadening of ownership of Hydro One is being used pay down debt and fund transit and transportation, the Province could link to electricity infrastructure investments (e.g., as an offset to infrastructure investments already made in the sector, or to specific initiatives such as conservation).
- These funds were paid to the Ontario Electricity Financial Corporation (OEFC), to be dedicated towards repayment of electricity sector stranded debt. Repurposing may have an impact on the defeasance of this debt.

# 10. Cancel/Adjust Renewable Energy Procurements

- The Ministry could consider the following actions to further mitigate future impacts to electricity bills:

| Unallocated/Terminated Capacity | Announced Procurements | Executed Contracts |
|---|---|---|
| A. Do not procure unallocated or terminated capacity | B. Revise FIT 5 target | D. Cancel LRP I contracts |
| | C. Cancel FIT 6 | |

**Overarching Considerations**

- Cost savings associated with reducing or cancelling renewable energy procurements and programs will not reduce current electricity bills, but would result in future cost reductions relative to Ontario Planning Outlook forecasts.
- The IESO estimates implementing options A to C will reduce system costs by approximately $592 million ($2016) between 2019 and 2028, resulting in an average of approximately $0.50/month in savings to a typical residential electricity bill over the same period. [cost reductions from LRP I contract cancellations TBC]
- The microFIT program is winding down end of 2017. Annual microFIT procurement targets have been undersubscribed.
- With a few exceptions (e.g., rollover of unallocated microFIT capacity; addition of terminated microFIT and small FIT capacity to FIT 5), plans for unallocated or terminated capacity are not defined in announcements or existing directions.

**Cancel/Adjust Announced Procurements**

- Amendments to existing directions to the IESO would be required to reduce FIT 5 and cancel FIT 6.
- The FIT 5 procurement is underway with a base target of 150 MW and inclusion of any capacity available from contract terminations under prior small FIT and microFIT procurements. The application window closed on November 25, 2016.

# 10. Cancel/Adjust Renewable Energy Procurements – Existing Contracts

**Cancel Existing LRP I Contracts**

- 16 LRP I contracts (approx. 455 MW) have been executed and projects are under development.
- None have met Key Development Milestones. Total value of LRP I estimated at approx. $1 billion (NPV to 2016).

[Placeholder for IESO: Cost calculation relative to OPO and associated bill impact]

**Considerations**

- To help inform a decision, IESO or OEB could be asked to evaluate and provide guidance to the Ministry on the system need for LRP I projects and potential ratepayer impacts/benefits.
- 13 of 16 LRP I contracts have Indigenous participation. Cancelling LRP I contracts would remove this economic development opportunity and likely damage relationships between Indigenous communities and the government.
- LRP I Contract includes an “Optional Termination” provision allowing IESO to terminate any contract prior to the “Commercial Operation Date” with 6 months written notice.
- The IESO obligations under the Optional Termination provision depend on whether the project has met all “Key Development Milestones”.
  - As no projects have met their Key Development Milestones, the estimated total cost payable to contract holders is about $8 million.

# 10. Cancel/Adjust Renewable Energy Procurements – Existing Contracts (cont'd)

## Legal Analysis

- Under the *Electricity Act, 1998*, the Minister has the authority to amend previous directions without approval from Cabinet. Although an amendment to an existing direction would not require Cabinet approval, it is unlikely that a direction to cancel LRP I contracts could be considered as amending an existing direction. The previous LRP directions set out the broad policy framework that was reflected in the procurement, but the contracts themselves, once executed, are stand alone documents which the IESO had legal authority to execute. Revoking previous LRP directions does not affect that authority or have the effect of cancelling the procurement.
- As a result, any new directive to cancel LRP I contracts would need to be approved by Cabinet, either as part of an LTEP implementation directive to IESO, or pursuant to the overall power to direct IESO with respect to procurements outside the LTEP process. However, there is a risk that such a directive could be subject to challenge.
- ENERGY has previously received advice that there is a high risk that a court would conclude that the Minister has no authority under the *Electricity Act , 1998* to issue a direction requiring IESO to terminate microFIT Conditional Offers and FIT Offer Notices that have already been issued to applicants, because these offers create vested contractual rights and the Minister would require clear legislative authority to interfere with those rights. This reasoning would likely apply equally to any direction or directive to IESO to cancel LRP I contracts.
- Previous advice has also flagged a moderately high risk that the Province could be liable for damages in tort for inducing a breach of contract if it issues a direction to IESO that interferes with vested contractual rights without clear statutory authority to do so. LRP I contract holders could also assert other claims, such as misfeasance in public office.
- The risk and costs associated with potential law suits resulting from the cancellation of contracts requires further analysis, including analysis of whether any statutory amendments would be required to provide clear authority to cancel the contracts. LSB recommends ENERGY seek an opinion from Crown Law Office Civil before proceeding.

# Summary

- Reductions in electricity rates could be achieved by eliminating existing, planned or directed initiatives from the rate-base or shifting these costs to the tax-base.

- The timing of the impact of these rate mitigation initiatives varies.
  - Immediate and near-term impacts can be achieved by shifting costs to the tax-base or changing how certain costs are recovered from consumers or eliminating certain programs.
  - Over the longer term, changes to the electricity supply mix and achieving efficiencies in the electricity market could yield system savings.

- Pursuing the initiatives would require regulatory amendments and working with the electricity sector agencies, LDCs and other stakeholders to implement the initiatives.

# Appendix

# Electricity Consumer Classes

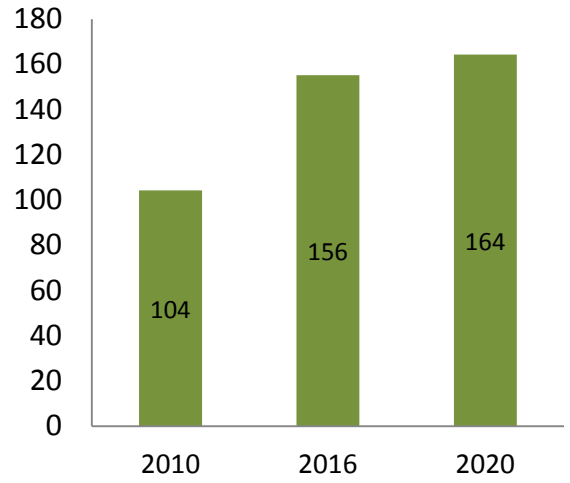
- In Ontario, there are three classes of electricity consumers:

| | Regulated Price Plan | Class B | Class A |
|---|---|---|---|
| **Consumer Types** | • Residential<br>• Small Business<br>• Farms | • Commercial<br>• Institutional<br>• Small industrial | • Large commercial<br>• Large industrial |
| **Load Size** | Below 0.05 MW | Between 0.05 MW and 1 MW | Above 1 MW |
| **Total Consumption** | 58 TWh | 57 TWh | 26 TWh |
| **Share of Consumption** | 41.1% | 40.4% | 18.4% |

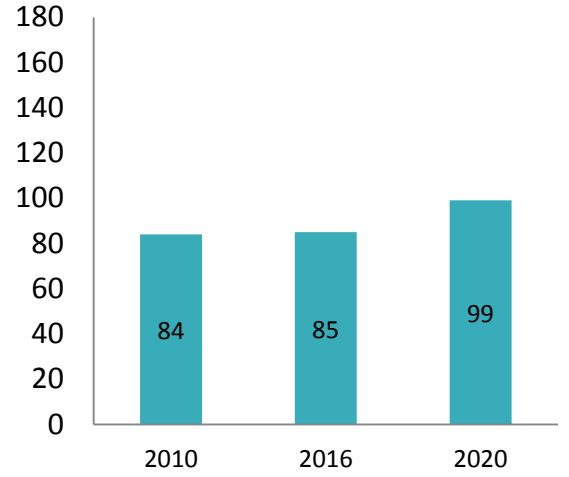
# Prices by Electricity Consumer Class

- Since 2010, average bills for residential consumers (i.e., using 750 kWh/month) have increased by over 50%. Rates are forecast to continue to increase, with residential consumers paying an estimated 6% by 2020.
- Industrial electricity rates have remained relatively flat over the same time period, due primarily to the Industrial Conservation Initiative (ICI). ICI represents a cost shift of about $5/month for residential electricity consumers. Industrial electricity consumers are forecast to see an increase of 16% by and 2020.

**Typical Residential Bill (750/kWh per month)**



**Typical Class A (Industrial) Price ($/MWh)**



**Note:** 2016 represents year-to-date September 2016 for industrial. Cap and trade proceeds recycling is included for the industrial consumer for 2020.

# Rate Mitigation Levers

- To provide further rate relief to Ontario electricity consumers, the government can use one or more of the levers outlined below:
  - **Tax-based Lever:**
    - Provide rebates funded from the tax-base or transfer items currently paid through the rate-base to the tax-base.
  - **Rate-based Lever:**
    - Shifts costs within the rate-base from one customer group to another to achieve electricity system benefits and/or policy goals.
  - **Cap and Trade Proceeds Lever:**
    - Use cap and trade proceeds on initiatives that help reduce greenhouse gas (GHG) emissions from the electricity sector (e.g., recycling proceeds during off-peak periods) while providing benefits to some or all electricity consumers.

# Traditional Rate Mitigation Programs

- Ontario has implemented a number of rate-based programs to help residential and industrial electricity consumers:
  - The Ontario Electricity Support Program (OESP) provides ongoing assistance directly on the bills of eligible low-income electricity consumers
  - The Rural or Remote Rate Protection (RRRP) program is provided to rural and remote residential and farm customers because the cost of distributing power to remote areas is much higher than for urban areas.
  - The Industrial Conservation Initiative (ICI) encourages Ontario's largest consumers to reduce consumption during peak periods while reducing system costs.
- There are also tax-base programs to help manage electricity prices:
  - Rebate the provincial portion of the HST from the electricity bills of residential, small business and farms as of January 1, 2017.
  - Northern Industrial Electricity Rate Program (NIERP), in which participants receive a rebate of two cents per kilowatt hour. On average, industrial electricity prices can be reduced by up to 20%.
- While rate-based programs provide relief to certain electricity consumers, they shift other costs to remaining ratepayers (See Appendix for additional details).

# Driving Down Prices for Consumers

- Since 2013, a number of actions have been taken to drive down prices for consumers wherever possible:
  - Renegotiating the Green Energy Investment Agreement, reducing contract costs by $3.7 billion;
  - Deferring the construction of two new nuclear reactors at Ontario Power Generation's Darlington facility, avoiding an estimated $15 billion in new construction costs;
  - Approving Ontario Power Generation's plans to enable the ongoing operation of Pickering up to 2024, which is expected to save ratepayers as much as $600 million;
  - Reducing Feed-In-Tariff (FIT) prices through annual price reviews, saving ratepayers at least $1.9 billion relative to the 2013 Long-Term Energy Plan (2013 LTEP) forecast; and
  - Suspending the second round of the Large Renewable Procurement (LRP II) process and the Energy-from-Waste Standard Offer Program to save up to $3.8 billion in electricity system costs relative to 2013 LTEP.

# Cost Shifts in the Electricity Sector – Current Programs

- Several programs in the electricity sector “shift costs” from one group of electricity consumers to another:
  - **Rural or Remote Rate Protect** (**RRRP)** is a longstanding program that reduces the delivery charge for rural electricity consumers and is paid for by all consumers in Ontario through a regulatory charge on bills.
  - **Ontario Electricity Support Program (OESP)** is funded via a regulatory charge on consumer bills and provides support for qualifying low income electricity consumers.
  - **Industrial Conservation Initiative (ICI)** empowers large consumers to lower their costs by reducing their demand during peak hours. In the process, ICI shifts costs from large electricity consumers to all other consumers in Ontario.
  - **Industrial Electricity Incentive** (**IEI**) program, offers reduced electricity prices for companies starting or expanding operations in Ontario. All electricity consumers in Ontario pay for the price reduction that IEI participants receive.

# Cost Shifts in the Electricity Sector (Cont'd)

- The tables on the right show the estimated cost shifts that result from existing government programs.
- ICI has had the largest cost shift of all the programs, due to the large size of Global Adjustment (GA) and the way that it is recovered from consumer classes.
- RRRP and OESP impact the regulatory line on consumer bills, while ICI, IEI and conservation affect GA (i.e., Electricity line on bills of Regulated Price Plan consumers).

**Cost Shift Impacts - Residential Bill**

*Typical 750 kWh/month Toronto Hydro consumer*

| *$/month* | 2011 | 2012 | 2013 | 2014 | 2015 | 2016 |
|---|---|---|---|---|---|---|
| ICI | 2.65 | 3.25 | 3.88 | 3.53 | 4.75 | 4.77 |
| RRRP | 0.90 | 0.82 | 0.84 | 0.92 | 0.93 | 0.94 |
| OESP | - | - | - | - | - | 0.84 |
| Conservation | 1.85 | 1.92 | 2.00 | 1.58 | 2.43 | 2.45 |
| IEI | - | - | 0.08 | 0.09 | 0.11 | 0.12 |
| **Total** | **5.41** | **5.99** | **6.81** | **6.13** | **8.21** | **9.12** |

**Cost Shift Impacts - Industrial Bill**

*Typical Class A consumer*

| *$/MWh* | 2011 | 2012 | 2013 | 2014 | 2015 | 2016 |
|---|---|---|---|---|---|---|
| ICI | -22.17 | -26.36 | -30.29 | -25.91 | -33.79 | -33.92 |
| RRRP | 1.20 | 1.10 | 1.12 | 1.23 | 1.24 | 1.25 |
| OESP | - | - | - | - | - | 1.13 |
| Conservation | 1.53 | 1.59 | 1.66 | 1.31 | 2.01 | 2.02 |
| IEI | - | - | 0.07 | 0.08 | 0.09 | 0.10 |
| **Total** | **-19.43** | **-23.67** | **-27.44** | **-23.29** | **-30.45** | **-29.43** |

**Note:** OESP did not come into effect until 2016. The 2016 values represent forecasts and are subject to change.

# Cost Shifts in the Electricity Sector (Cont'd)

- The table on the right shows the total cost for various government electricity programs. These programs are currently funded through the electricity system ratebase.

- Funding of these programs through the fiscal plan would remove these costs from the electricity system (i.e., Placing these costs on the taxbase).

**Cost of Programs**

*By government program*

| *$M* | 2011 | 2012 | 2013 | 2014 | 2015 | 2016 |
|---|---|---|---|---|---|---|
| ICI | 506 | 615 | 736 | 670 | 890 | 893 |
| RRRP | 172 | 156 | 159 | 176 | 174 | 176 |
| OESP | - | - | - | - | - | 158 |
| Conservation | 329 | 339 | 354 | 280 | 425 | 428 |
| IEI | - | - | 15 | 16 | 18 | 19 |

- For example, removing the roughly $900 million of program cost from the Industrial Conservation Initiative (ICI) program would save the typical residential electricity consumer $4.77 per month in 2016.

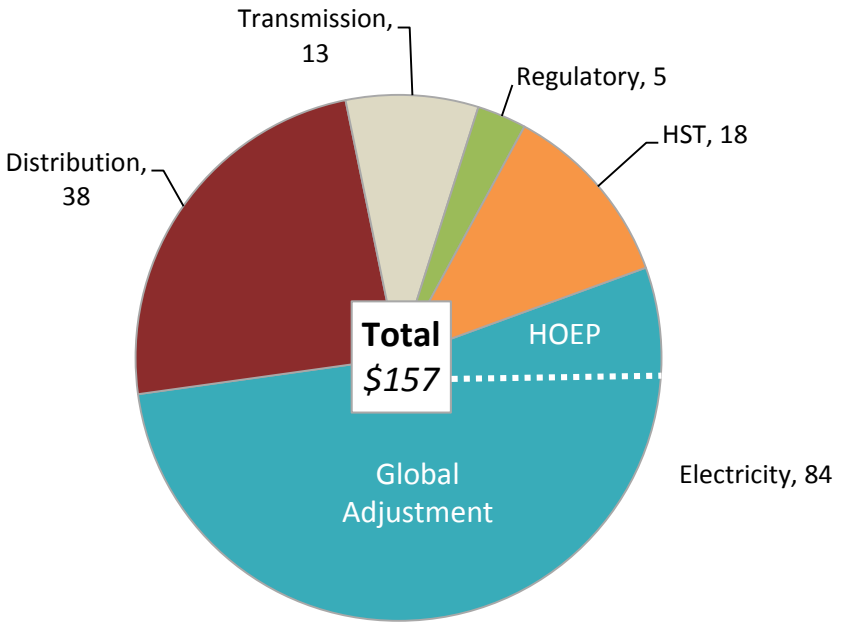
**Note:** OESP did not come into effect until 2016. The 2016 values represent forecasts and are subject to change.

# Residential Electricity Prices

- There are approximately 4.5 million residential consumers in Ontario.
- The Regulated Price Plan includes nearly all residential consumers, as well as small businesses. Regulated Price Plan consumers pay a blended commodity rate regulated by the OEB, which is set every six months.
- For households, the Debt Retirement Charge (DRC) was removed from residential electricity bills as of January 1, 2016.
- In addition, the Ontario Electricity Support Program (OESP) provides an ongoing rate reduction directly on the bills of low-income electricity consumers who have applied and meet the eligibility requirements. The program is funded through the rate base.
- Rural customers, in particular those with electrical heating, pay higher monthly bills.

**Typical Residential Monthly Bills ($)**

*As of November 1, 2016 (750 kWh/month)*



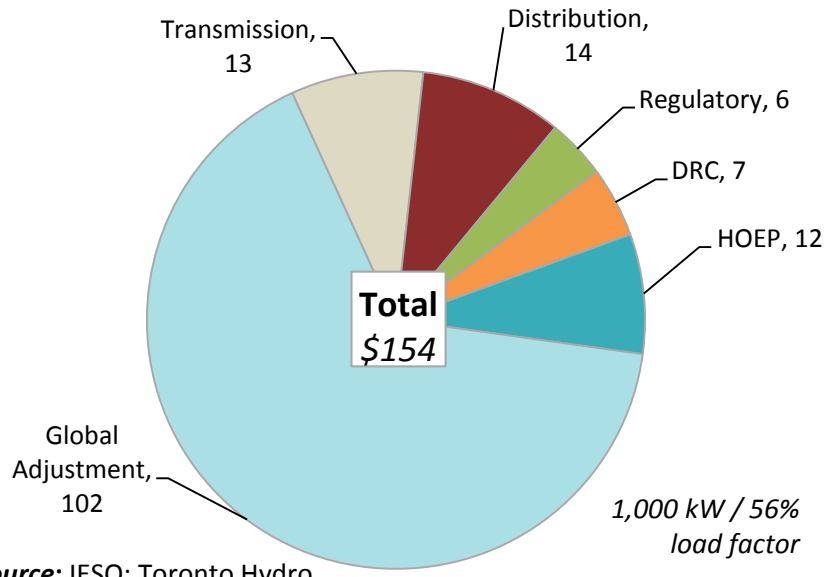
***Source*:** OEB, Toronto Hydro

# Commercial Electricity Prices

- There are approximately 55,000 commercial and institutional consumers in the province. These consumers are Class B consumers, and have separate line items on the electricity bill for HOEP and GA.
- There is a high degree of differentiation amongst consumers within the commercial sector in terms of size and consumption patterns. For example, an elementary school has a much different hourly load profile compared to a full service restaurant. This is an important consideration when looking at the bill impacts of policy options.

**Typical Commercial Price ($/MWh)**

*YTD June 2016 (Non-RPP Class B)*



***Source*:** IESO; Toronto Hydro

- Consumers in the commercial sector do not pay time-of-use prices and have little incentive to shift demand away from high demand hours.
- Targeted pricing programs are currently not available for Class B consumers.

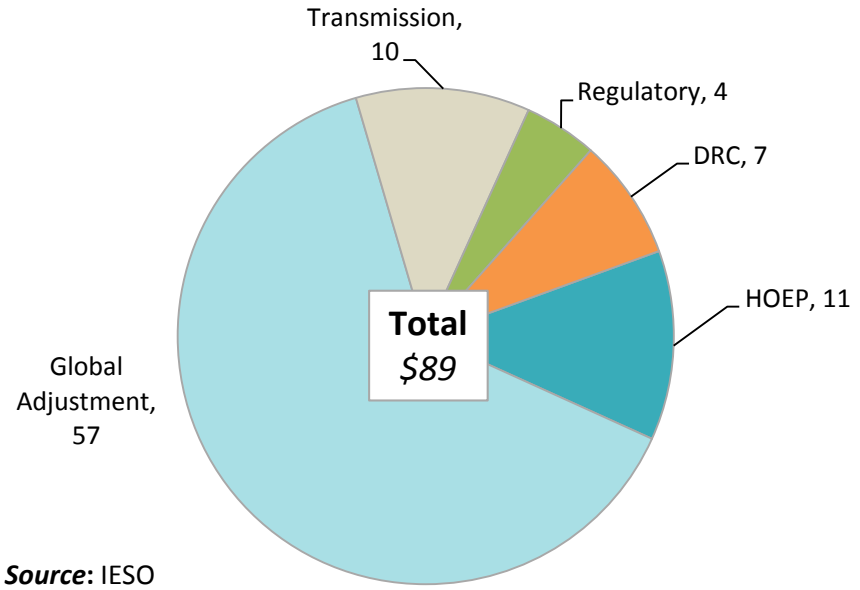
*** Note**: Most commercial consumers receive input tax credits for their HST.

# Industrial Electricity Prices

- There are about 300 large industrial consumers in Ontario.
- Measures in place to mitigate industrial electricity prices include ICI and NIERP.
- ICI lowers costs for eligible large electricity consumers (i.e., those with monthly peak demand exceeding 3 MW) that reduce consumption during peak periods.
  - ICI consumers reduce their electricity rates by 25% on average.

**Typical Large Industrial Price ($/MWh)**

*YTD June 2016*



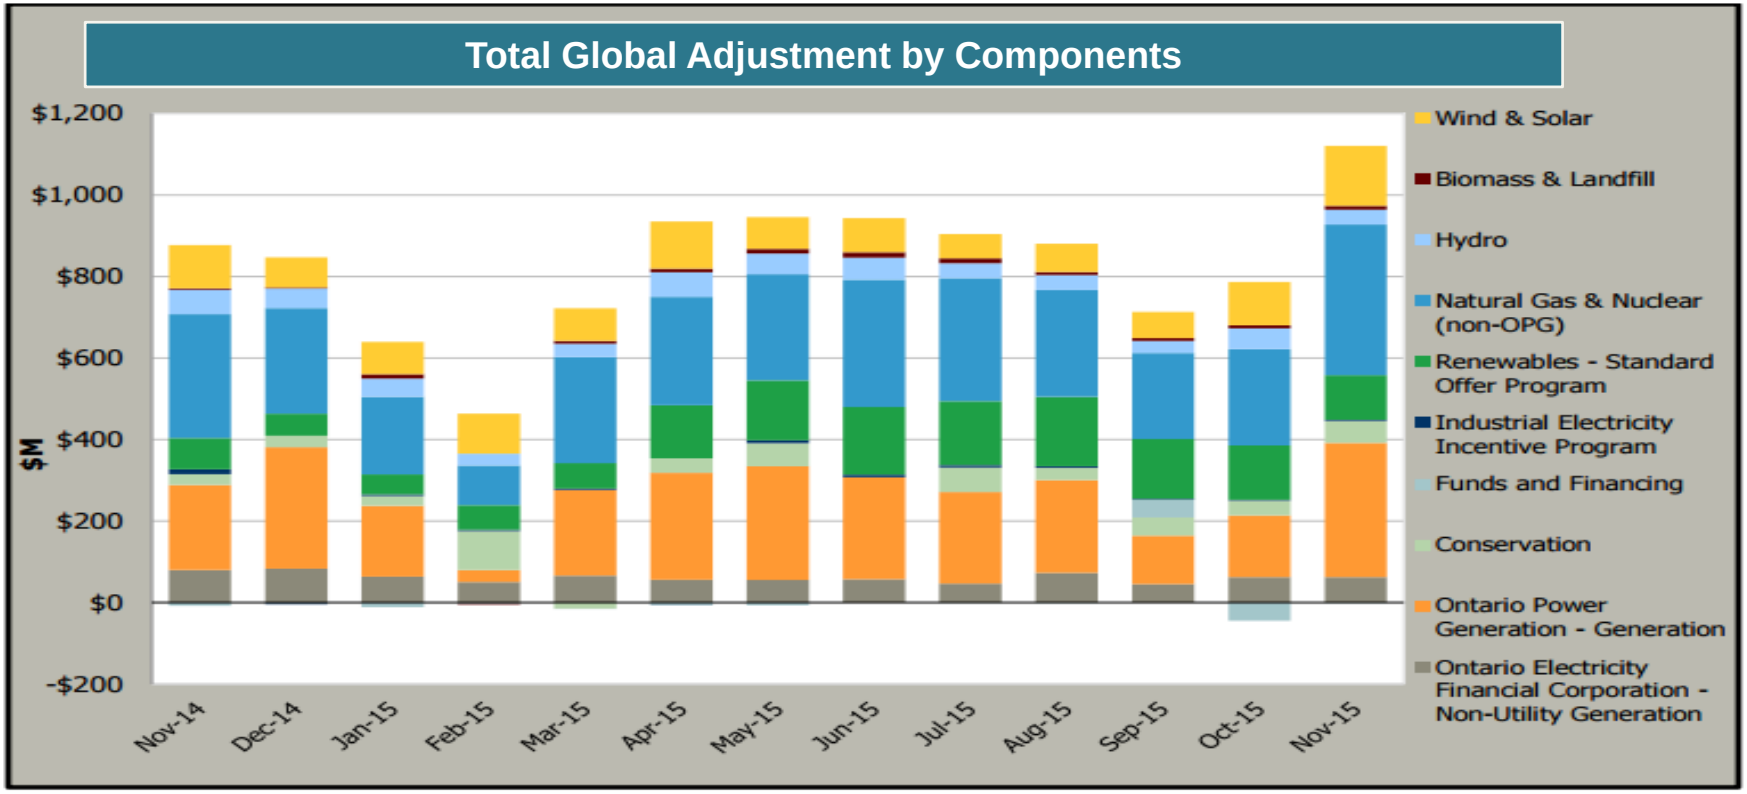
***Source*: IESO**

- Participants in NIERP receive a rebate of $20/MWh. On average, industrial electricity prices are reduced by about 20% through the program, reducing all-in prices to $69/MWh for these consumers. The program is funded through the tax base.

*** Note:** Industrial consumers receive input tax credits for their HST.

# Total Components of Global Adjustment

- Global Adjustment (GA) is a market mechanism that recovers costs from electricity consumers, including the cost of almost all conservation programs in the province (i.e., approximately half a billion dollars in 2016).



**Source:** IESO Monthly Market Report (November 2015)

# Cancel/Adjust Renewable Energy Procurements

# LRP I Pre-Construction Liability Limits

- All 16 successful LRP I developers accepted Optional Termination Provisions when the LRP I Contracts were executed in April 2016.
- If IESO chooses to enact the Optional Termination provision before a project has met all Key Development Milestones, IESO is required to pay pre-construction development costs up to the Pre Construction Liability Limit.
- Pre-construction development costs include costs incurred for feasibility studies, obtaining site access rights, work towards environmental approvals, business development plans, negotiation of contracts for design, equipment, construction and financing, reasonable overhead expenses, and other reasonable costs incurred.
- The Pre Construction Liability Limits are:
  - Non-Rooftop Solar: $250,000 plus $10.00/kW of Contract Capacity
  - Waterpower: $500,000 plus $20.00/kW of Contract Capacity
  - On-Shore Wind: $400,000 plus $2.00/kW of Contract Capacity
- According to the LRP I Optional Termination provision, the developer has a duty to take reasonable steps to mitigate losses, liabilities, costs and damages incurred as a result of the Optional Termination.
  - The IESO will not provide compensation for amounts which are attributable to a developer's failure to take reasonable steps to mitigate.

And, as for the GGRA, I think one of the challenges is it was supposed to be for incremental measures to reduce GHGs (not replacing funding for existing measures. But, that said, that was notion I noodled on too, but it would require at least a change in positioning, convincing the Minister of MOECC, as the arbiter of such and/or change the legislation.

Would any of the fiscal plan hits be eligible as offsets for our Cap and Trade revenues? I suppose because so little of our electricity production is carbon producing, probably not, but if ICI moves consumption off-peak does it reduce the need for gas plants to operate?

And at least the idea of offsetting the federal portion of the HST is gone

Hi,

See attached and below. We are aiming to turn around a new version of the deck, incorporating any comments your ministries might have before major projects on Thursday. As such, could you please pass along your comments by end of day tomorrow?

If there are questions, I'm happy to discuss.

Thanks,

Keley

Subject: Potential Rate Mitigation

Hi,

Attached is a draft of the rate mitigation deck. This is tracking to major projects on Thursday for a preliminary discussion. As you can see there are a number of initiatives

that have fiscal implications so your input and comments would be appreciated. Keley can coordinate with your EAs. I understand that Andrew T. plans to share with PO/your MOs.

I can't imagine that there's a perfect solution to this challenge, but if we aren't able to come up with something that, blemishes and all, gets the 25% reduction they're looking for, we're going to end up swallowing all of it in the fiscal plan. Maybe something complex but reasonably viable allows an announcement to be made soon with implementation later in the year - summer might be a good time when bills peak - to allow time to work out the wrinkles.

A few quick comments:

There are non-LDC direct connects, so the policy would have to deal with those. Presumably they are not to be debt-financing. Could be carved out and the cost variance for their load still done through the Province, but without the rate-regulated accounting. It would limit the fiscal impact.

For LDCs there are municipally-owned and private sector ones. So they may respond differently.

And we may need to not just finance this but also their capex (IO has a program for municipally-owned ones) depending on how public capital markets view the balance sheets with the preferred equity.

LDCs (as should the Province) would also be concerned about people going off grid and never paying in the future "their share" of the accumulated debt. They may argue for exit fees that other jurisdictions have had for their "stranded debt". But I think the government would be sensitive to visibility of a debt amount accruing by customer and a view of forced borrowing by the customer (as compared to debt-financed by the government).

Not sure if Steen had discussed the external advisors' views on the LDC option yet.

The Province has the balance sheet space, arguably, but not the appropriate accounting ability, which, I assume, is because of the way OEFC or the IESO are consolidated on the Province's books and because neither of us can use rate regulated accounting. As a solution, what if the IESO bills the LDCs, but instead of the LDCs taking on debt to pay the IESO, we have OEFC borrow the money and invest in an equal amount of equity of the LDC (could be common, but maybe preferred is better so it doesn't mess up the other shareholders in privately, or partially privately, held LDCs like Hydro One). As we get later in the process many years from now and the repayment begins, we'd begin unwinding the equity and paying down OEFC debt.
>
> Sounds crazy, but maybe this, or something like it, puts the debt where it's affordable, gives the accounting treatment we need to not have this impact the fiscal plan, and achieves the policy goal of spreading the GA costs over the actual life, rather then the contractual life, of the contracts.

Is it worth suggesting this to Energy and the internal and external accountants?

Subject: Price Mitigation & Accounting Meeting

Hi Scott, Gadi, Nancy,

Steen organised a meeting this afternoon with OPCD, IESO and KPMG, as well as various government / OPS staff.

Steen had asked me to talk about the OEFC and DRC, as he had said that some folks were under the impression that OEFC and the DRC could be a model that could be useful for a structure for the GA option.

I explained at the meeting that OEFC was not a rate regulated entity and does not have regulatory assets, and that it's consolidated into Public Accounts such that its shortfalls in revenues vs expense negatively affect the Province's bottom line. I noted that was the case when OEFC did not recover its full NUG contract costs and when it funded the 2002 price freeze. I noted that even with the current structure with legislative cost recovery of NUG costs since 2005, OEFC still records the NUG contract-related expenses and revenues, and if they were ever different there would be a bottomline impact.

Steen was aware of that, but just wanted to have that recounted and move on in the meeting to look at another potential structure/option.

There was also a brief mention of the LDC option; however, it seemed to have been discussed earlier with KPMG and Pelino (who was there as an external consultant supporting KPMG it seemed) and the view was it was not a viable option, as it would destroy LDC balance sheets by adding too much debt to them relative to their balance sheets. It was also viewed as an option that would take too long to put in place, though there was a feeling that the desired accounting would work in this structure.

Most of the discussion was on how the IESO records the regulated price plan (RPP) variances. Note that in any given period the inflows from RPP customers for electricity does vary from the outflows to pay for the power -- since RPP prices are set every six months to recover costs on a forecast basis, and actuals differ from forecasts, there's a variance. The IESO has a credit facility from the OFA that it can access to cover balances, though the variances are small and short-term compared to the amounts under discussion in the GA

option.

The meeting ran long. There was going to be further discussions amongst the accountants from OPCD, IESO and KPMG on how the IESO records the RPP. It wasn't clear if the RPP case would work in the case of the GA option such that there would not be a bottomline impact.

There was also a brief aside from KPMG and Pelino on how the accounting would work if a third party financial institution got in the middle of this, which was thought to be feasible from a procurement perspective, but way more costly than a government financing of the deferral. As such, folks dismissed this option at the meeting , but I wanted to mention it should it be brought up again. I would think Gadi might have some views on such an option.

I'm not sure if Energy will hold another multi-party meeting or if it will meet just with the various accountants as it prepares to report in to FPC next week.

If I do hear more in the interim, I'll provide an update.

Ron

So let's get creative here. The LDCs would give us the accounting treatment we need, but lack the balance sheet. The Province has the balance sheet space, arguably, but not the appropriate accounting ability, which, I assume, is because of the way OEFC or the IESO are consolidated on the Province's books and because neither of us can use rate regulated accounting. As a solution, what if the IESO bills the LDCs, but instead of the LDCs taking on debt to pay the IESO, we have OEFC borrow the money and invest in an equal amount of equity of the LDC (could be common, but maybe preferred is better so it doesn't mess up the other shareholders in privately, or partially privately, held LDCs like Hydro One). As we get later in the process many years from now and the repayment begins, we'd begin unwinding the equity and paying down OEFC debt.

Sounds crazy, but maybe this, or something like it, puts the debt where it's affordable, gives the accounting treatment we need to not have this impact the fiscal plan, and achieves the policy goal of spreading the GA costs over the actual life, rather then the contractual life, of the contracts.

Is it worth suggesting this to Energy and the internal and external accountants?

Note that in any given period the inflows from RPP customers for electricity does vary from the outflows to pay for the power -- since RPP prices are set every six months to recover costs on a forecast basis, and actuals differ from forecasts, there's a variance. The IESO has a credit facility from the OFA that it can access to cover balances, though the variances are small and short-term compared to the amounts under discussion in the GA option.

The meeting ran long. There was going to be further discussions amongst the accountants from OPCD, IESO and KPMG on how the IESO records the RPP. It wasn't clear if the RPP case would work in the case of the GA option such that there would not be a bottomline impact.

There was also a brief aside from KPMG and Pelino on how the accounting would work if a third party financial institution got in the middle of this, which was thought to be feasible from a procurement perspective, but way more costly than a government financing of the deferral. As such, folks dismissed this option at the meeting , but I wanted to mention it should it be brought up again. I would think Gadi might have some views on such an option.

I'm not sure if Energy will hold another multi-party meeting or if it will meet just with the various accountants as it prepares to report in to FPC next week.

If I do hear more in the interim, I'll provide an update.

Ron

Hi Steve,

Here's an early draft of a rate mitigation package that provides a policy rationale for the proposed measures. It's still an early draft and we need to firm up on the rate relief numbers and fiscal impact. My MO is still reviewing but I wanted you to have an early look.

Serge

>
> The table in your presentation also goes back to 2011-12, so assume that the all-in fiscal impact of the electricity sector might have been very different. Might be interesting to show the evolution from a net positive to net drain, as you describe below. Your comment around DRC is a good one. I wondered in the table whether it might be helpful to show DRC revenues (rather than "ending DRC"). That will show the decline, but that it is still a positive to the Province even out to 2017-18.

Thanks.

On your comment as you may recall, we used to do that roll-up (initially when Serge was ADM), but that would also include all the OEFC expenses too. And not all the GRC is OEFC related, but helps with MNR and its costs, so not completely straightforward.

Post-DRC, and post much lower Hydro One net income to the Province and lost PILs, as Nancy may recall from some OEFC board presentations (Serge likely missed those Board presentations), OEFC may be close to flat.

Hi Ron,

I have not seen a draft since last week. Likely same version you last saw Ron. I did have a chance to speak with folks who are more in the know on this and I can confirm that none of the OPG options are likely to show up in the next iteration.

One suggestion on the note, Ron: if you are going to show all the existing fiscal pressures, it may be helpful to also show the fiscal benefits from the electricity system (OPG/H1 revenues, PILs, GRC etc.).

Thanks,
Scott

Hi Nancy, Scott,

As discussed yesterday, I have not seen any iterations of an Energy deck or other materials on price mitigation options since early last week, when the DMO shared a "bootleg" copy. We sent back some comments on that deck to the Deputy, as attached.

Also attached, for your information, are some comments and a deck we did for the Deputy the previous week, in advance of the Major Projects Committee meeting

that week. I had understood that the Deputy shared back the comments with Energy DMO at that time.

As discussed yesterday, CEFD is looking forward to being able to input into the contemplation of potential initiatives. Having said that, staff availability over the next couple weeks will be very limited.

Ron

Hi Scott,

We revised and updated the note to reflect the two decks that Energy circulated on Saturday.  The basic messages in the Energy decks are the same on the proposals, and the basic comments are the same as well -- significant fiscal exposure with limited price mitigation, aside from the Global Adjustment proposal, which has an even larger fiscal exposure, depending on the scenario.

I understand Energy reached out late last week to TBS/OPCD for an accounting review, but I have not seen OPCD's BN. I understood that it would be hard to see the GA proposal as not having a fiscal impact -- but TBC.

Scott N. has not reviewed this version of the BN yet.

Hi,

There's a meeting on Monday on Energy's rate mitigation decks.

Would you be able to review over the weekend -- perhaps updating the materials from December, as applicable -- so comments can get to the DMO Sunday night?

Apologies on the timing.

Thanks,

Ron

# Comments on Ministry of Energy's Draft "Proposed Initiatives to Transform Ontario's Electricity Sector"

The Ministry of Energy (Energy) is providing an update on progress related to transforming the province's electricity sector by elaborating on potential price mitigation initiatives, as outlined in its deck.

## CONTEXT

- As outlined in Energy's update, electricity costs have been increasing following investments to transform towards cleaner generation (i.e., meeting goals to decarbonize) and modernize the electricity infrastructure (e.g., more than $35 billion in cleaner generation and $15.5 billion investment by Hydro One alone in transmission and distribution systems).

- The government has taken action to lower electricity cost pressures to all consumers by taking actions, including deferring investments in generation (e.g., new build nuclear), improving market efficiency and decreasing costs related to renewable procurement (e.g. GEIA renegotiation, decreasing FIT prices, etc).

- The government introduced the Ontario Rebate for Electricity Consumers (OREC) which will provide a rebate equal to the 8% provincial portion of the Harmonized Sales Tax, saving $11 per month starting January 1, 2017 for eligible small businesses, farms and residential consumers and has taken steps to expand the Rural or Remote Electricity Rate Protection program, expected to save eligible RRRP customers about $45 per month, when combined with OREC.

## COMMENTS

Energy's proposals generally involve shifting costs from the rate base to the tax base. While the subset of costed proposals may have a fairly limited residential rate payer impact (e.g. about $5-6/month for residential, less than 5% of the average monthly bill), those proposals would come at a material incremental fiscal cost ($1 billion to $1.3 billion). Note these impacts are lower than those presented in an earlier deck ($1.3 billion to $1.9 billion). Energy also presents other proposals where costs and impacts are "TBD".

Over the past five years, the existing fiscally funded electricity price mitigation efforts have averaged about $1.5 billion and is already expected to increase to about $2 billion with the introduction of OREC. The existing program costs are summarized in the table below:

| ($M) | 2011-12 | 2012-13 | 2013-14 | 2014-15 | 2015-16 | 2016-17[1] | 2017-18[1] |
|---|---|---|---|---|---|---|---|
| OCEB | 1,033 | 994 | 1,006 | 1,078 | 860 | - | - |
| OREC | - | - | - | - | - | 300 | 1,100* |
| Ending DRC[2] | - | - | - | - | 85 | 330 | 330 |
| NIERP | 120 | 120 | 115 | 108 | 120 | 120 | 120 |
| NOEC | 23 | 24 | 25 | 24 | 26 | 25 | 25 |
| OEPTC[3] | 354 | 406 | 418 | 429 | 444 | 450 | 460 |
| TOTAL | 1,530 | 1,544 | 1,564 | 1,639 | 1,525 | 1,225 | 2,005 |

1. 2016-17, 2017-18 based on forecasted numbers
2. 2015-16 estimated for 3 months of reduced DRC revenue
3. OEPTC amounts in all years based on energy component of the rebate.

* Sourced from Energy PRRT submission

OCEB – Ontario Clean Energy Benefit
OREC – Ont. Rebate for Electricity Consumers
NIERP – Northern Industrial Electricity Rate program
NOEC – Northern Ontario Energy Credit
DRC – Debt etirement Charge
OEPTC – Ont. Energy & Property Tax Credit

**Energy's Broad Policy Themes / Rationales**

A key theme / rationale cited by Energy is to no longer use rate-base to pay for "social programs" by shifting cost of OESP, RRRP and proposed First Nation Rate to tax-base.

- Energy has typically in the past provided a constitutional law assessment on these programs, providing support for these programs to be ratepayer-supported programs as they provide electricity system benefits / are part of a comprehensive regulatory framework.
- Switching messaging may risk criticism and legal challenges on these and other remaining rate-base funded programs.

| Energy Theme / Rationale | Key Staff Comments |
|---|---|
| Provide greater support for lower income Ontarians by enhancing the OESP or expanding eligibility | • Significant fiscal exposure -- $0.4-0.45 bn at current levels, higher if enhanced. On-bill benefits.<br>• Could contemplate phase-in to manage fiscal impact.<br>• Could look at phasing out existing fiscal-funded programs also targeted to low income or identified groups (e.g., OEPTC, NOEC).<br>o Not on the bill, so less direct and visible electricity cost mitigation.<br>o Phase-out to reflect time to increase application based OESP reaching an increasing portion of eligible households. |
| Fund conservation programs through the tax-base for the remaining term of the existing CDM framework and transition costs to the new "green bank entity" over time | • Potentially significant fiscal impact – current program costs are about $0.45 bn<br>• Conservation programs do provide an electricity system benefits, but would now be fiscally-funded, so a cross-subsidisation from tax-base<br>• Accessing the cap&trade amount in the GGRA would crowd-out other GGRA programs, affecting overall GHG reductions and negatively affect the diccal plan |
| Expand the scope of the "Trillium Trust" to make investments in energy infrastructure eligible for funding | • Would require either squeezing out existing Moving Ontario Forward project funding from the Trillium Trust, requiring funding from another source; or additional funding from asset optimization, given that the government is committed to using the targeted $5.7 billion to fund across Moving Ontario Forward projects<br>• Would have little near-term impact, unless TT funding displaces near-term, non-incremental projects coming onto service<br>• Could lower utility value, including Hydro One, by removing projects, currently and prospectively, that they might have been able to add to their ratebase and earn a return |
| **E**nd the Debt Retirement Charge (DRC) early for commercial and small industrial Class B electricity consumers | • End of the DRC had previously been linked with a balance between rate mitigation and managing stranded debt<br>• Provides only temporary incremental mitigation, as DRC legislated to end April 1, 2018.<br>• End of the DRC had previously been linked to retirement of residual stranded debt<br>• Removing additional DRC revenue from the OEFC would call into question the position that the debt and liabilities of the old Ontario Hydro can continue to be supported |

**Detail on Proposals**

Energy has outlined the following rate mitigation proposals with significant bearing on the fiscal plan:

<u>OESP & RRRP (Total of about $0.4 to 0.45 Billion/year</u>):

This would shift the cost of the current and proposed expanded Ontario Electricity Support Program (OESP), and the Rural or Remote Electricity Rate Program (RRRP), to the tax base. *Note: that the fiscal exposure would increase if the OESP take up rate is larger, and faster than assumed.*

- The fiscal impact from shifting OESP and RRRP to the tax base may also be larger if future changes are made to the programs. Energy notes that
  - The programs could provide greater support for lower income Ontarians by enhancing the OESP or expanding eligibility (e.g., by 50% in the table).
  - The RRRP regulation provides a funding mechanism for transmission infrastructure required to grid connect remote First Nation communities. Considerations for how that funding will be supported by the tax base will need to be determined. [The current deck links Trillium Trust for remote electrification.]

<u>Fund Conservation Programs through the Tax-Base</u>:

This would be for the remaining term of the existing Conservation and Demand Management framework. Over time, the costs would be transitioned to the new "green bank entity", to shift cost recovery from ratepayers to cap and trade revenues.

- Energy's rationale for the cost shift would be in recognition of the burden borne by ratepayers in phasing out coal generation.

<u>Expanding the scope of the Trillium Trust to invest in energy infrastructure:</u>

The Province is currently targeting $5.7 billion from asset optimization to dedicate to the Trillium Trust for investment in infrastructure under Moving Ontario Forward.

- Expanding access to natural gas is already included under Moving Ontario Forward.
- Using the Trillium Trust for additional energy projects would require either
  - squeeze out existing Moving Ontario Forward project funding from the Trillium Trust, requiring funding from another source, or
  - additional funding from asset optimization, given that the government is committed to using the targeted $5.7 billion to fund across Moving Ontario Forward projects,
  - in effect, in both cases above, incremental investments for energy infrastructure from the Trillium Trust would have negative fiscal impacts once the assets are in-service and amortized.
- Investments through the Trillium Trust instead of through other electricity sector entities (Hydro One, OPG, LDCs) could have additional negative fiscal impacts as these entities could see reduced ratebase growth, lowering the revenues that the Province realizes from these entities (e.g., consolidated net income, payments-in-lieu of taxes, etc.).
  - May also negatively impact Hydro One share price if the measure is perceived by the market as reducing Hydro One's potential ratebase growth.
- Unless applied to existing projects, to displace ratepayer-supported costs, this measure would have little or no near-term rate impact.

Departure Tax:

As a result of the IPO, Hydro One paid a "departure tax" payment in lieu of tax (PIL) of $2.6 billion, as a final true-up of its PILs tax obligation. Energy lists using some or all of this departure tax for price mitigation.

- This was paid to the Ontario Electricity Financial Corporation (OEFC). The departure tax payment was fiscally neutral to the Province as the income to the OEFC was fully offset by a reduction in ESDI resulting from reduced net income of Hydro One.
- Using some or all of it for price mitigation would require restating the net stranded debt paydown by OEFC related to the IPO. [As the departure tax paid was fiscally neutral, OEFC's uplift was primarily the result of the related deferred tax benefit, as well as the s.50.3 benefit under the *Electricity Act, 1998*.]
- This would be a one-time measure, potentially spread out over a few years, and fiscal impact, as the departure tax amount was one-time.

Debt Retirement Charge (Total of about $0.45 Billion in annualized rate to 2017-18):
Ending the DRC early for Class B customers (commercial, small industrial) would have an impact of about $0.45 billion in 2017-18.

- The end of the DRC had previously been linked with balancing mitigation and progress on stranded debt reductionthe end retirement of the residual stranded debt.
- Removing additional DRC revenue from the OEFC would call into question the position that the debt and liabilities of the old Ontario Hydro can continue to be supported.

| ($M) | 2016-17[1] | 2017-18[1] | 2018-19[1] | 2019-20[1] | 2020-21[1] |

# Proposed Initiatives to Transform Ontario's Electricity Sector – Update

## Working Draft

December 2016

CONFIDENTIAL DRAFT

# Context

- Electricity costs are increasing as the necessary investments are made to decarbonize and modernize the province's electricity infrastructure (i.e., $35 billion+ investment in cleaner generation and $15.5 billion investment in Hydro One transmission and distribution systems).

- Ontario has taken a number of actions to lower electricity cost for all consumers by:
  - Deferring investments in generation (e.g., new build nuclear), improving market efficiency (e.g., wind dispatch) and decreasing the cost of renewable procurements (e.g., GEIA renegotiation, decreasing FIT prices).
  - Increasing cost effectiveness and improving efficiency by adopting new electricity market approaches (e.g., competitive LRP, no new NUG contracting).

- Following the 2016 Throne Speech, actions were announced to further reduce electricity costs by:
  - Providing an 8%  per cent rebate ($11/month savings), updating RRRP ($45/month savings, combined with the 8% rebate), expanding ICI (up to one-third savings for participants), suspending the LRP II and the EFWSOP (up to $3.8 billion in cost savings) and recycling proceeds to industrial/ commercial consumers.

- On November 28, 2016, the Minister of Energy announced the need for changes in how electricity resources are procured,  the need for wholesale market renewal and greater electricity consumer choice.

- The Ministry of Energy is currently updating its Long-Term Energy Plan (LTEP),  which provides an opportunity to consider a range of policy changes to  how the Ontario energy sector operates.

# Broad Policy Themes / Rationale

- No longer use rate-base to pay for social programs [despite the system benefit rationale] by shifting cost of OESP, RRRP and proposed First Nation Rate to tax-base.
- Provide greater support for lower income Ontarians by enhancing the OESP or expanding eligibility.
- Fund conservation programs through the tax-base for the remaining term of the existing CDM framework and transition costs to the new "green bank entity" over time. Costs would be shifted in recognition of the burden borne by ratepayers in phasing out coal generation.
- Expand the scope of the "Trillium Trust" beyond the Moving Ontario Forward initiative to make certain investments in energy infrastructure eligible for funding, such as remote electrification, large transmission projects, new or expanded interties ~~and expansion of natural gas to rural areas~~, etc. (note that expanding access to natural gas is already included under Moving Ontario Forward.)
- Empower energy agencies to increase cost effectiveness and improve efficiency by having – IESO modernize Ontario's electricity market through electricity market renewal initiatives, the OEB identify opportunities for future LDC cost reductions/efficiencies and work with OPG to find further efficiencies in operations and pass on savings to ratepayers.
- Give consumers more choice by allowing households to "opt into" a single rate plan as an interim measure as the Ontario Energy Board (OEB) develops more pricing options over time.
- Help small business manage their electricity costs and provide relief for cap and trade until proceeds recycling is fully operational by ending the Debt Retirement Charge (DRC) early for commercial and small industrial Class B electricity consumers.

# Proposed Initiatives – Potential Savings for Typical Residential Electricity Consumers

| *$/750kWh* | 2017 | 2018 | 2019 | 2020 | 2021 | 2022 | Timing of Benefit |
|---|---|---|---|---|---|---|---|

| 2. Cancel LRP I | - | - | - | - | - |

**Source:** Ministry of Finance, Energy

# Considerations / Outcomes

- The proposed initiatives provide the following opportunities to:
  - Lower the cost of electricity for all consumers;
  - Re-set how electricity programs and energy infrastructure is funded (i.e., shifting costs to the tax-base from rate-base);
  - Provide electricity consumers with greater choices (i.e., signal rate plan);
  - Provide system benefits (e.g., market renewal); and
  - Increase cost effectiveness and improve efficiency.

- The timing of the impact of these rate mitigation initiatives varies.
  - Immediate and near-term impacts can be achieved by shifting costs to the tax-base or changing how certain costs are recovered from consumers or eliminating certain programs.
  - Over the longer term, changes to the electricity supply mix and achieving efficiencies in the electricity market could yield system savings.

- Pursuing the initiatives would require regulatory amendments and working with the electricity sector agencies, LDCs and other stakeholders to implement the initiatives.

Subject: Rate Mitigation

Hi Steve,

Attached are two decks on rate mitigation. We can use the decks as the basis for discussion at our meeting on Monday. I'll ask Keley to share with the other participants.

# Financing the Global Adjustment

January 13, 2017

*Working Draft for Discussion Purposes Only*

# Purpose

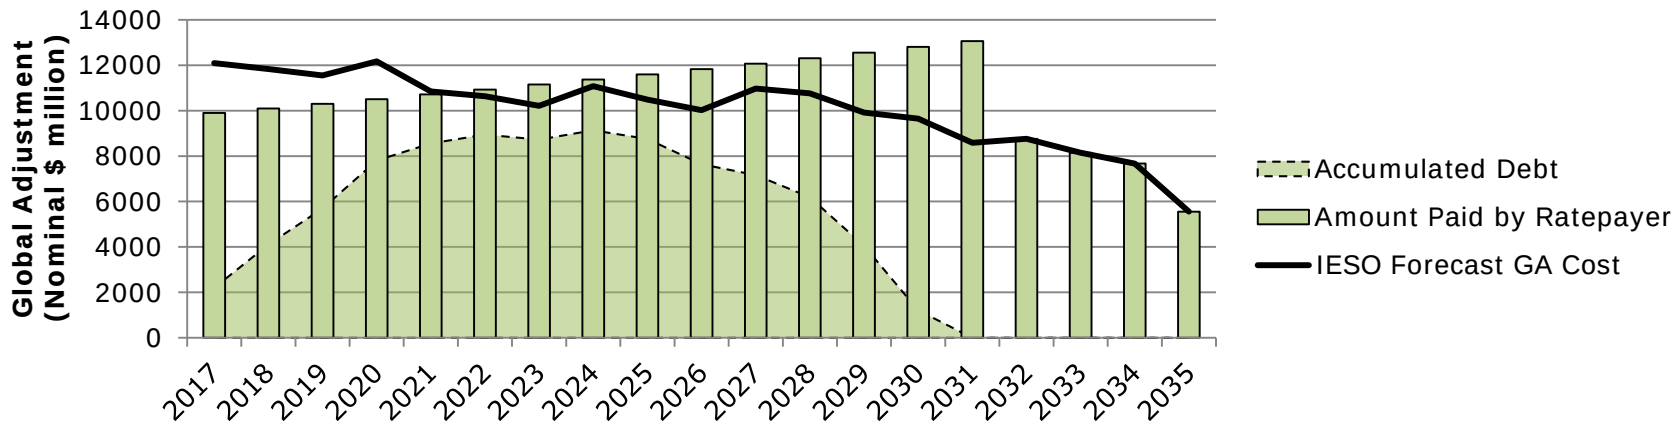
- To analyze the impact of partially financing the cost of the global adjustment (GA) to defer some of the cost to later years.
- The economic, legal and fiscal risks to ratepayers, stakeholders and government are qualitatively discussed.
- The remainder of the presentation quantitatively examines several different scenarios for financing the GA, showing:
  - The impact on residential bills; and
  - The amount of debt incurred.

# Rationale for Financing the GA

- The GA is comprised of costs for regulated and contracted generation, as well as conservation.
- Some contracted generation assets are expected to have a useful life that extends beyond the term of their current financial contracts (typically 20-years).
- Similarly, conservation costs are recovered through the GA on an annual basis while conservation initiatives provide benefits to the electricity system over the course of many years.
- Since the GA only includes costs related to the contractual life of these assets, there may be an opportunity to recognize the longer-term benefit of these assets to the electricity system and “bring forward” that benefit for ratepayers today, while deferring some of the current costs.
- An indicative GA financing proposal is presented that lowers ratepayers costs over the short term by borrowing money but increases costs over the long term when GA costs are forecast to be lower.
- Note that not all generating assets will continue operations at the end of their contract term. Regulatory constraints (i.e., nuclear licences) or low demand conditions (i.e., as experienced with current expiring NUGs) would mean that some generators will shutdown at the expiry of their contract. Future ratepayers would be paying for these assets that are no longer producing power.

# Indicative Proposal to Finance the Global Adjustment

- For the purpose of discussion, it is proposed that the amount of GA paid by ratepayers in each year over the forecast period is set at a fixed amount until the total amount of money borrowed has been completely paid back.
- All scenarios are assumed to begin January 1, 2017, setting the 2017 amount of GA paid by ratepayers at a value lower than the true cost of GA and increasing that amount year-over-year at inflation (assumed to be 2%) until the debt has been paid off.
- In this way, GA costs will be "smoothed" over time by lowering costs in the short term and increasing costs in the long term.
- In some scenarios, the amount of GA paid by ratepayers *above* the expected true cost of GA is capped so as to limit large increases in the cost of electricity in any given year.
- All analysis is based on forecasts from Independent Electricity System Operator's (IESO) Ontario Planning Outlook and assumes a 5% borrowing interest rate.



**Sample financing**: Ratepayers pay less than the cost of GA in early years, borrowing up to $9 billion that is fully paid off in 2031 by charging ratepayers more than the cost of GA in later years.

# Considerations and Risks – Ratepayer

Ratepayer:

- Borrowing money to finance the GA, while lowering costs in the short term, results in a more rapid rise in electricity prices beyond the rate of increase already expected.

- The GA financing proposal involves borrowing large amounts of money over a long period of time (16-30 years, depending on the scenario) to reduce electricity rates. This debt would be highly sensitive to interest rates which could extend repayment timelines or put significant pressure on electricity rates. A long-term interest rate of 5% is assumed for this analysis.

- GA and HOEP provide a natural hedge against each other – when one goes up, the other goes down – keeping total electricity costs relatively stable and predictable. Smoothing only the GA would lead to greater price volatility for consumers.

    - For example, if HOEP is higher than expected (due to higher gas or carbon prices, for example), all-in rates will rise significantly as the natural decrease in GA would not occur given the prescribed GA rate described in the indicative proposal.

- Should Ontario electricity demand be lower than forecasted, the cost of paying off the debt will be spread over a smaller pool of consumption, further increasing future costs for individual ratepayers.

# Considerations and Risks – Fiscal and Stakeholder

Fiscal / Accounting:

- Further analysis is required on whether such changes to the financing of the GA would affect the Province's current accounting treatment for the GA and represent a potential fiscal risk. As such, early engagement with Legal Services Branch and Treasury Board Secretariat is advised.
    - It is unclear whether legislation could determine the manner in which this initiative is accounted for. Further work is required.
- Historically electricity sector financing has been conducted by the Ontario Financing Authority, e.g., managing OEFC's stranded debt and borrowing on behalf of IESO. Further consultation with the OFA will be required to determine the appropriate vehicle for additional borrowing.
- The significant amount of additional Provincial borrowing needed to finance the GA, and associated risks (e.g., interest rates, repayment timelines), could put pressure on the Province's credit rating and overall borrowing capacity. Further analysis is required and would suggest early engagement with the OFA through which money will be borrowed.

Stakeholder:

- The significant deferral of electricity system costs over a long time-horizon and associated interest costs may draw criticism from some stakeholders as creating a new "stranded debt" in the sector. Note: the Debt Retirement Charge was removed from residential bills in 2016 and will be removed for remaining customers in 2018.

# Considerations and Risks – Legal

Legal:

- Legislation would be required to authorize the financing proposal.
  - Amendments to the *Electricity Act, 1998* (EA) could authorize the financing of certain costs within or part of the GA. However, whether any other legislation requires amendment is not known at this time.
  - The GA regime currently provides that “true costs” represent the true costs of making payments to generators or counter parties to contracts, not the incurring of discretionary financing or interest costs.
  - Considerations such as the need to analyze legal risks or the need to address costs retroactively (if the proposal requires a January 1, 2017 start) could add to the legal and drafting complexity;

- Introduction of a bill in the week of February 20th is an aggressive timeline that could require diversion of resources from other initiatives.

# GA Debt Financing Scenarios

1. Status Quo

   - Ratepayers continue paying the full cost of the GA in each year without incurring any debt.

2. Moderate short-term cost reductions with limits

   - The amount of GA paid by ratepayers in 2017 is lowered by $2.5 billion below the true cost of GA and increases at inflation (assumed to be 2%) in each subsequent year until the total amount of money borrowed is paid off.
   - Future GA over-payments above the true cost of GA are capped at $2 billion to limit electricity cost increases in any given year.

3. Maximized short-term cost reductions with limits

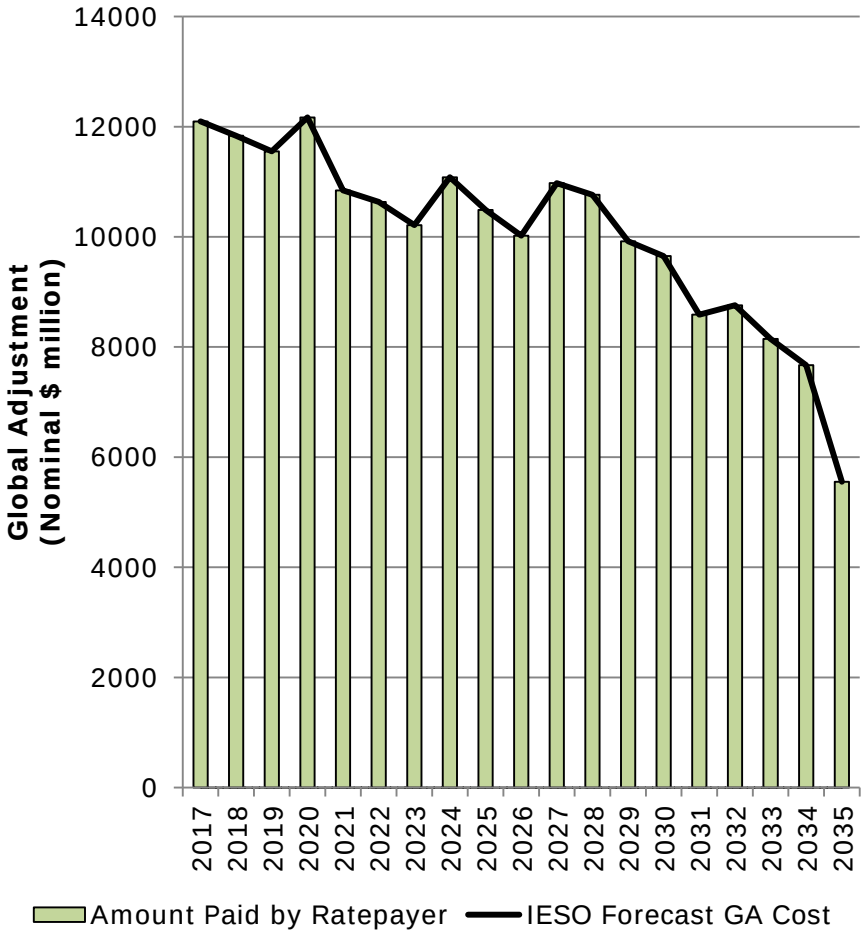
   - This scenario considers the maximum amount by which ratepayer GA costs in 2017 can be reduced such that the total amount of money borrowed is paid off over a 25-30 year financing period.
   - Future GA over-payments above the true cost of GA are capped at $2 billion to limit electricity cost increases in any given year.

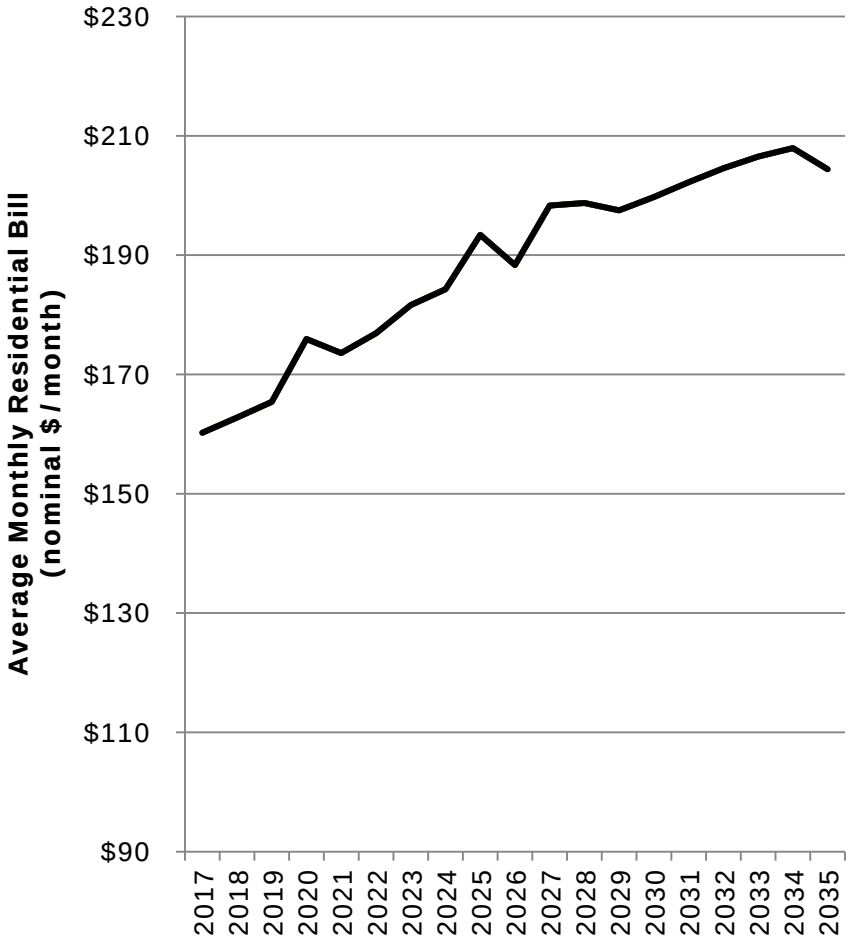
4. Maximized short-term cost reductions, no limits

   - This scenario considers the maximum amount by which ratepayer GA costs in 2017 can be reduced such that the total amount of money borrowed is paid off over a 25-30 year financing period.
   - No limit is placed on the amount charged to ratepayers above the true cost of GA.

# 1. Status Quo – Global and Residential Impacts

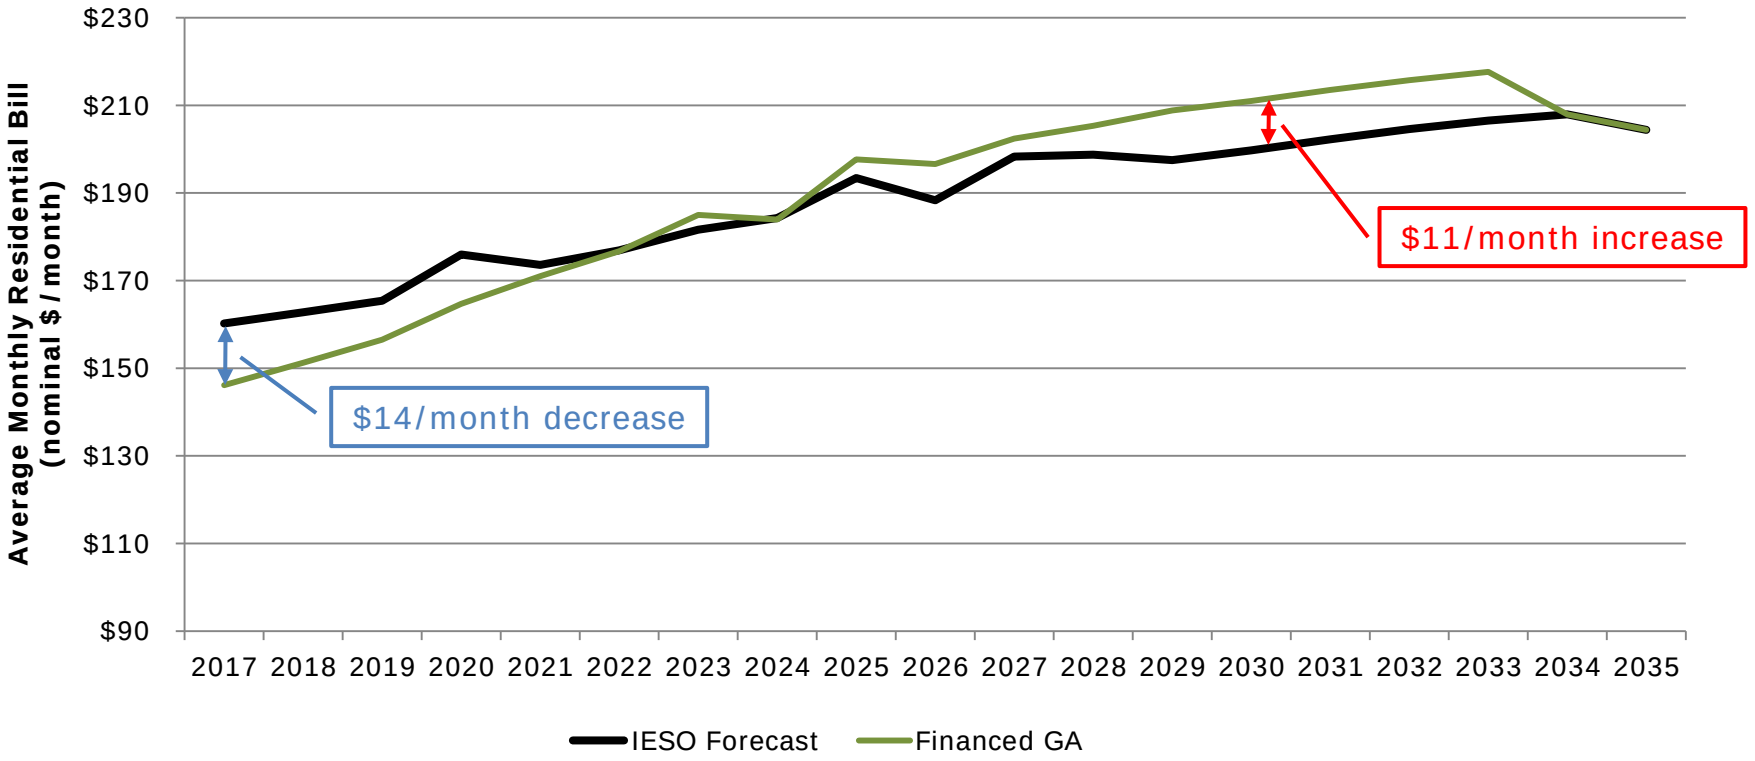
- Ratepayers continue paying the true cost of GA.





# 2. Moderate Short-term Cost Reduction with limits – Residential Impacts

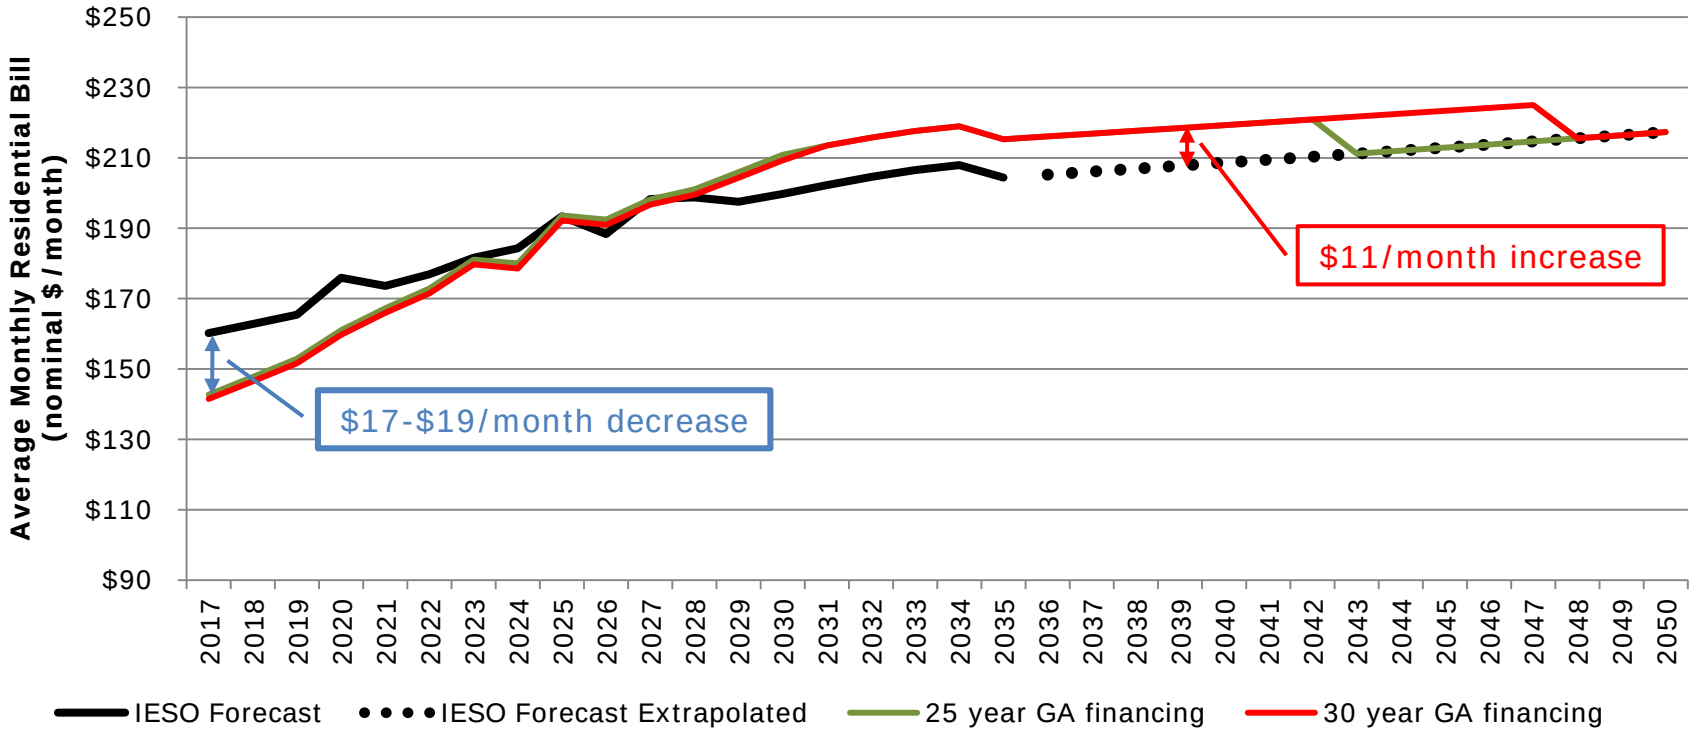
- In this scenario, the starting GA payment from all ratepayers in 2017 is lowered by $2.5 billion below the true cost of GA and is increased at inflation in subsequent years – subject to a cap of no more than $2 billion above the true cost of GA in any given year – until the borrowed money is repaid.



- By **borrowing up to $10.7 billion**, this scenario results in **a short-term residential electricity cost reduction of up to $14/month** at the cost of **a long-term increase over 12 years of up to $11/month** above the true cost of electricity production.

# 3. Maximized Short-term Cost Reduction with limits – Residential Impacts

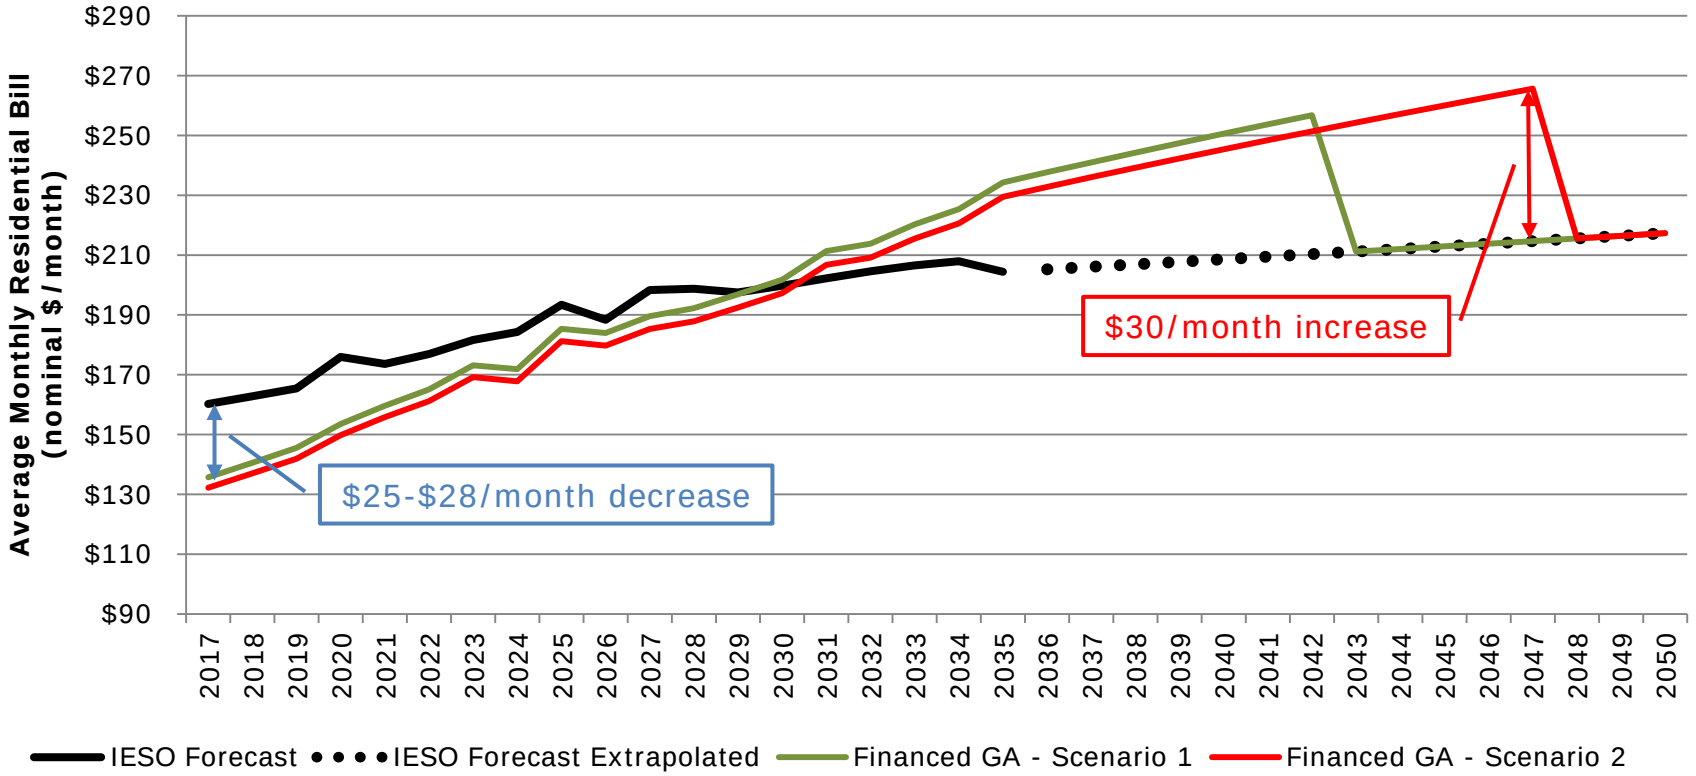
- In this scenario, the starting GA payment from all ratepayers in 2017 is lowered as much as possible and is increased at inflation in subsequent years – subject to a cap of no more than $2 billion above the true cost of GA in any given year – such that the borrowed money is paid back in 25 years (green line) and 30 years (red line) respectively.



- By **borrowing up to $23 billion**, this scenario results in **a short-term residential electricity cost reduction of up to $17-$19/month** at the cost of **a long-term increase over 17-22 years of up to $11/month** above the true cost of electricity production.

# 4. Maximized Short-term Cost Reduction, no limits – Residential Impacts

- In this scenario, the starting GA payment from all ratepayers in 2017 is lowered as much as possible and is increased at inflation in subsequent years such that the borrowed money is paid back in 25 years (green line) and 30 years (red line) respectively. No limit is placed on the ratepayer GA over-payments in later years.



- By **borrowing up to $66 billion**, this scenario results in **a short-term residential electricity cost reduction of up to $25-$28/month** at the cost of **a long-term increase over 12-17 years of up to $25-$30/month** above the true cost of electricity production.

# Proposed Initiatives to Transform Ontario's Electricity Sector – Update

## Working Draft

December 2016

CONFIDENTIAL DRAFT

# Context

- Electricity costs are increasing as the necessary investments are made to decarbonize and modernize the province's electricity infrastructure (i.e., $35 billion+ investment in cleaner generation and $15.5 billion investment in Hydro One transmission and distribution systems).

- Ontario has taken a number of actions to lower electricity cost for all consumers by:
  - Deferring investments in generation (e.g., new build nuclear), improving market efficiency (e.g., wind dispatch) and decreasing the cost of renewable procurements (e.g., GEIA renegotiation, decreasing FIT prices).
  - Increasing cost effectiveness and improving efficiency by adopting new electricity market approaches (e.g., competitive LRP, no new NUG contracting).

- Following the 2016 Throne Speech, actions were announced to further reduce electricity costs by:
  - Providing an 8% rebate ($11/month savings), updating RRRP ($45/month savings), expanding ICI (up to one-third savings for participants), suspending the LRP II and the EFWSOP (up to $3.8 billion in cost savings) and recycling proceeds to industrial/ commercial consumers.

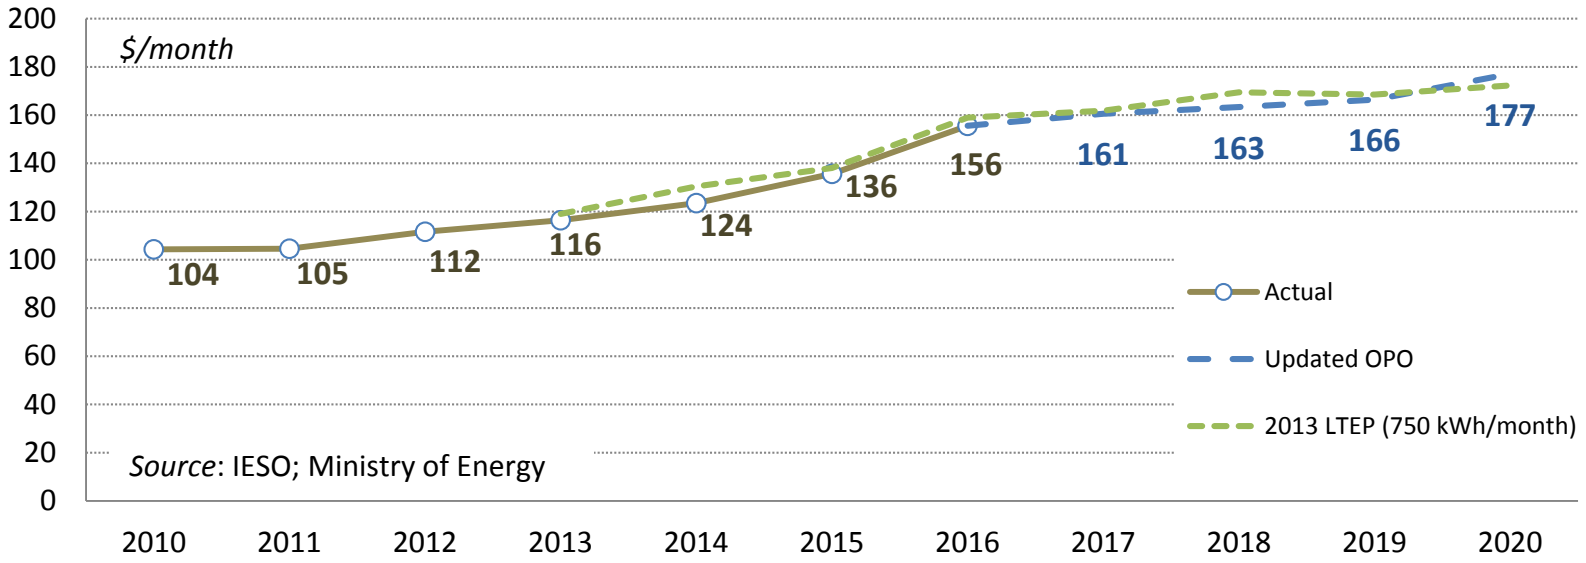
- On November 28, 2016, the Minister of Energy announced the need for changes in how electricity resources are procured, the need for wholesale market renewal and greater electricity consumer choice.

- The Ministry of Energy is currently updating its Long-Term Energy Plan (LTEP), which provides an opportunity to consider a range of policy changes to how the Ontario energy sector operates.

# Electricity Prices – Residential

- Residential consumers electricity prices continue to be a concern for many Ontarians, particularly those that rely on electric heat.
  - **Note:** The typical residential bill is currently below the 2013 Long-Term Energy Plan (2013 LTEP) forecast.

**Typical Residential Electricity Bills**
*Historical and Forecast*



**Note**: The 2013 LTEP forecast for residential bills was based on 800 kWh/month without RRRP or electric heating; the above has been rebased to 750 kWh/month for comparison purposes. Typical residential are based on Toronto Hydro. The updated OPO forecast above includes the 8% rebate to offset the provincial portion of HST, ICI expansion and RRRP expansion.

# Broad Policy Themes / Rationale

- Support the continued reduction in the differential across distribution rates (as charged by Local Distribution Companies) across the Province through the potential enhancement of Rural or Remote Electricity Rate Protection, (RRRP). In order to not increase regulatory costs to customers as a result, this program can be moved to the tax-base.
- Provide a greater focus and support on lower income Ontarians by funding the Ontario Electricity Support Program (OESP) through the tax-base, as well as enhancing the support available through the program.
- Amortize electricity conservation and demand management (DM) programs over 15-years to provide lower costs for electricity consumers.
  - Alternatively, pay for conservation/DM programs through the tax-base and transition costs to the new "green bank entity" over time. Costs would be shifted in recognition of the burden borne by ratepayers in phasing out coal generation.
- Expand the scope of the "Trillium Trust" to make investments in energy infrastructure eligible for funding, such as remote electrification, large transmission projects, new or expanded interties and expansion of natural gas to underserved areas (i.e., rural and remote communities), etc.
- Empower energy agencies to increase cost effectiveness and improve efficiency by having – IESO modernize Ontario's electricity market through electricity market renewal initiatives, the OEB identify opportunities for future LDC cost reductions/efficiencies and work with OPG to find further efficiencies in operations and pass on savings to ratepayers.
- Give consumers more choice by allowing households to "opt into" an alternative rate plan, based on a flat electricity rate, as an interim measure as the Ontario Energy Board (OEB) develops more pricing options over time. Also give consumer greater transparency with respect to electricity costs by providing more details regarding the Global Adjustment (GA).
- Help small business manage their electricity costs and provide relief for cap and trade until proceeds recycling is fully operational by ending the Debt Retirement Charge (DRC) early for commercial and small industrial Class B electricity consumers, a benefit of $7/MWh.

# Proposed Initiatives – Potential Savings for Typical Residential Electricity Consumers

| *$/750kWh* | 2017 | 2018 | 2019 | 2020 | 2021 | 2022 | Timing of Benefit |
|---|---|---|---|---|---|---|---|
| **Recommended Initiatives** | | | | | | | |
| 1. Fund RRRP through the Tax-Base *** | 1.53 | 1.58 | 1.61 | 1.66 | 1.70 | 1.74 | Immediate |
| 2. Fund OESP through the Tax-Base*** | 0.57 | 0.79 | 0.98 | 1.13 | 1.29 | 1.44 | Immediate |
| a. Enhance OESP Benefit | - | - | - | - | - | - | n/a |
| b. Expand OESP Eligibility | - | - | - | - | - | - | n/a |
| 3. Conservation Funding Options | | | | | | | |
| a. Amortize Conservation Program Costs (15-Year Amortization)<br>b. Rate Smoothing of Conservation Program Costs (same impact as amortization) | 1.62 | 1.88 | 1.16 | 1.20 | 0.82 | 0.69 | Immediate |
| 4. Expand the Scope of Trillium Trust to Make Investments in Energy Infrastructure (e.g., Transmission upgrade, natural gas expansion, etc.) | - | - | - | 2.16 | 2.16 | 2.17 | Medium to Long-Term |
| 5. Dedicate Departure Tax | 1.39 | 1.39 | 1.39 | 1.39 | 1.39 | 1.39 | Immediate |
| 6. Empower Energy Agencies to Increase Cost Effectiveness and Improve Efficiency | | | | | | | |
| a. IESO – Market Renewal | - | - | - | - | 1.00 | 1.03 | Long-Term |
| b. OEB – LDC Efficiencies/Rates* | TBD | TBD | TBD | TBD | TBD | TBD | Medium-Term |
| c. OPG – Operational Efficiencies | 0.71 | 0.89 | 1.08 | 1.22 | 1.35 | 1.24 | Immediate |
| 7. Give Residential Consumers More Rate Choices and Greater Transparency | - | - | - | - | - | - | n/a |
| 8. Help Small Business Manage Their Electricity Costs (i.e., End DRC early for Class B electricity consumers)** | - | - | - | - | - | - | n/a |
| 9. Extend Length of Existing Wind /Solar Contracts at Lower Prices | TBD | TBD | TBD | TBD | TBD | TBD | TBD |
| 10. v Tax Relief for Solar and Wind Contracts | TBD | TBD | TBD | TBD | TBD | TBD | TBD |
| **Considered but not Recommended** | | | | | | | |
| Fund Conservation Programs Through The Tax-Base | 3.47 | 3.83 | 3.17 | 3.35 | 2.84 | 2.90 | Immediate |
| Eliminate the Industrial Conservation Initiative (ICI) | 4.40 | 4.24 | 4.10 | 4.24 | 3.73 | 3.58 | Immediate |

**Note:** The above initiatives will provide similar benefits for non-RPP Class B electricity consumers. Proposal 2 assumes OESP participation of 50% and 5-year maturity. *Assessing the range of ratepayer impacts will be done through the LTEP development and implementation process in conjunction with the OEB. **Class B includes small-medium enterprises (SMEs). ***RRRP and OESP numbers are assumed to be at status quo.

# Proposed Initiatives – Potential Savings for Average Industrial Electricity Consumers

**Source:** Ministry of Finance, Energy
**Note:** *Assumes RRRP enhancement to reduce distribution rates to $30 for LDCs and **Assumes increase OESP credit by 50%.
Not included in chart is additional $18M/year to fund potential First Nations rate program through the Tax-Base.

# Existing Rate Mitigation Programs – Overview

- There are a number of existing programs funded by electricity ratepayers that help mitigate electricity bills for some customers, each of which has a unique policy rationale.

- Programs such as the as the Rural or Remote Rate Protection (RRRP) program are targeted at all customers who face the highest delivery costs in the province, while others such as the Ontario Electricity Support Program (OESP), are income tested and targeted at the most vulnerable energy consumers.
  - These program are not mutually exclusive and a customer could receive both the RRRP and the OESP.
  - There are other programs that are still under development such as options for a First Nations Rate currently being developed by the OEB as per the request of the Minister of Energy. These options are aimed to alleviate high delivery costs for on-reserve indigenous consumers.

- There are opportunities to enhance each of these programs. However, if enhancements are funded through the electricity rate-base, while they would lower costs for eligible consumers, they would raise costs for all other ratepayers.

- Given that these programs focus on promoting equity between different areas of the province (RRRP) or on social equity (OESP), they could be funded by the tax-base rather than the rate-base. This would allow their goals to be achieved and enhanced without increasing electricity rates. The following slides explore options to enhance each program using the tax-base.
  - These enhancements would also work in conjunction with the Ontario Energy Board's focus on reducing LDC costs outlined in option 6b.

# 1. Rural or Remote Rate Protection (RRRP) Expansion

- The Rural or Remote Rate Protection (RRRP) program supports the most costly-to-serve distribution customers in Ontario. It is not income tested and most of the support goes to Hydro One's R2 (low density) rate class and remote communities.
  - Costs to these Hydro One customers are higher than average because of their relatively low density. The OEB mandates that they pay the full cost of service and in recent rate filings has asked Hydro One to ensure this through cost allocation studies.
  - To mitigate these costs, the RRRP was recently enhanced to help lower the bills of Hydro One's R2 customers to around those of its R1 (medium density) customers.
