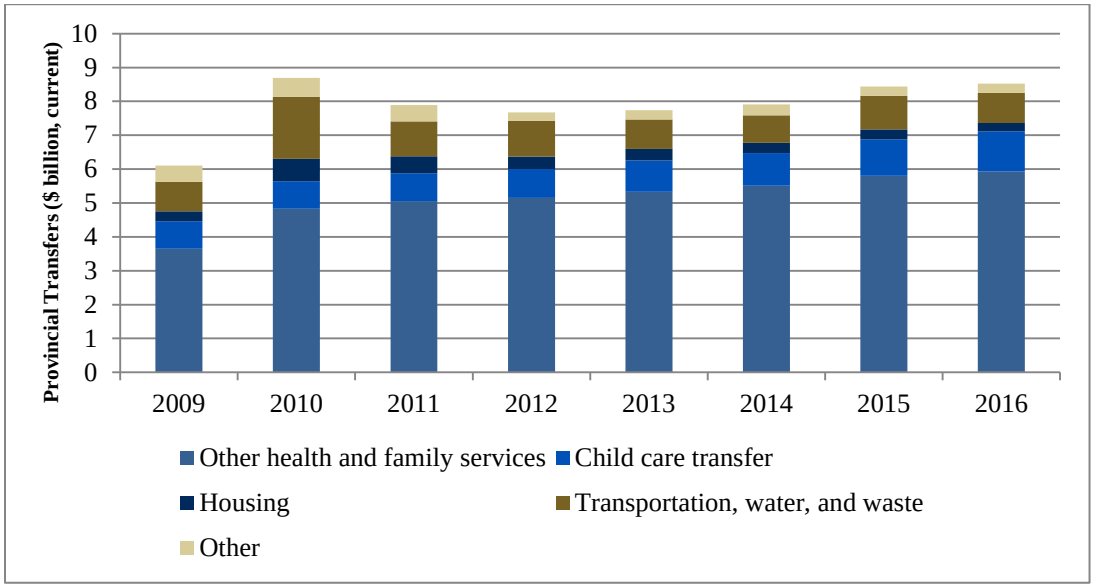
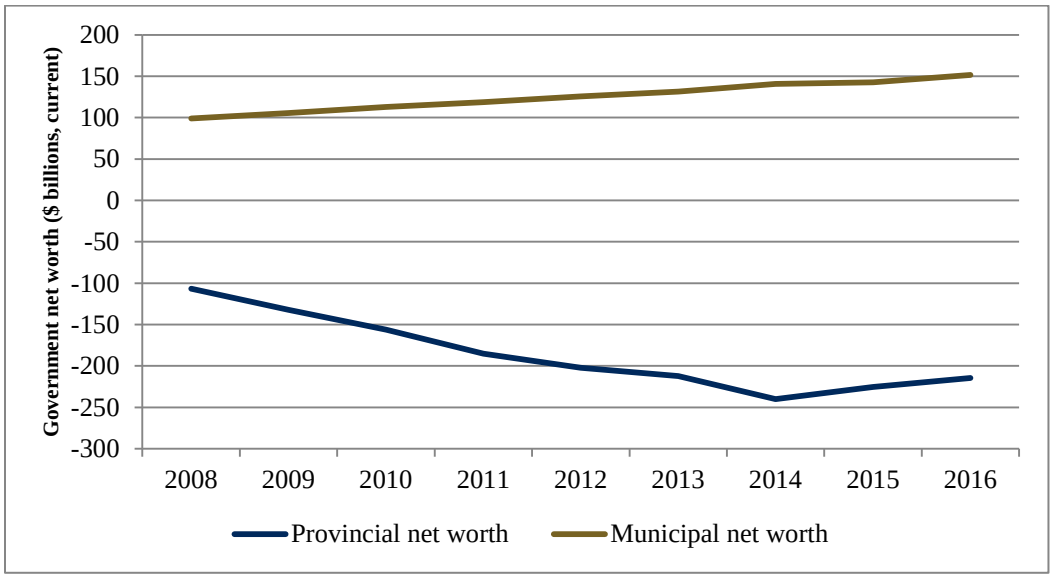
Developers pay development charges to compensate municipalities for the cost of building municipal infrastructure that services homes and commercial properties in a newly developed area. The largest single component of these charges is for water and wastewater construction (Dachis forthcoming). This Shadow Budget would require that cities replace development charges for water and wastewater infrastructure with volumetric uses fees that reflect capital costs. Such a move would reflect a change to a utility-based model and encourage conservation of water.



Finally, housing developers in GTA cities are facing a shortage of land available for new housing development (Clayton 2015). The primary cause is not because of the Greenbelt, a policy that forbids development on certain agricultural and parkland. Dachis and Thivierge (forthcoming) find that the main land-supply driven cause of higher house prices is not the Greenbelt, but the Growth Plan for the Greater Golden Horseshoe, a policy that requires cities in the GTA to approve a certain share of their homes within existing urban development boundaries and at a certain density. This Shadow Budget would relax the density and intensity targets that may not be appropriate across all cities subject to the Growth Plan while preserving the Greenbelt.

Rethinking Relative Municipal and Provincial Fiscal Health

One of the province's largest expenditures is on grants to municipalities. Transfers to municipalities have increased since 2009, including a large spike in 2010 to support infrastructure stimulus projects. Transfers to municipal governments from the province are now over $7 billion (Figure 6). Indeed, this trend is set to accelerate. In January of 2017, the province committed to double the amount of the fuel tax it transfers to municipal governments for transportation investment (Jones 2017). Ontario transferred $335 million in provincial gas tax revenue to municipal governments in 2017, and made a commitment to double the funding to bring the total transfer to $642 million by 2021-22.



The largest share of transfers is for health services – such as public health – and for childcare benefits. The latter, in particular, are dispersed to municipalities under a complex set of qualification criteria. These programs are ripe for review and evaluation, as their impact on workforce participation and the ability for single-parent and underrepresented families to engage in the labour force are critical. The child care transfer has increased by nearly 50 percent since 2008 reaching $1.2 billion in 2016, suggesting that a review of the program is in order

Figure 6: Ontario Provincial Transfers to Municipalities, 2009-2016

Source: Authors' calculations from Ontario Financial Information Return. Note: Some small cities have not yet submitted their 2016 financial information.

Figure 7: Ontario Provincial and Municipal Net Worth, 2008-2016

Source: Authors' calculations from Cansim Tables 385-0034 and 385-0037.

Does it make sense for the province to send such grants to municipal governments? Ontario's municipalities are, on average, in better fiscal shape than the provincial government. They are major investors in capital assets, but unlike the province, whose chronic deficits have resulted in financial liabilities that vastly exceeds its financial and non-financial assets, Ontario municipalities have positive net worth. They have borrowed to finance some capital assets, but the value of their assets exceeds their debt by a substantial margin. In the nine years from 2008 to 2016, Ontario municipal governments have increased their net worth by more than 50 percent, registering an increase of over $50 billion (Figure 7). In contrast, provincial net indebtedness has approximately doubled over that time, even after a slight improvement in net asset values over the last two years.

The Important Difference between Municipal and Provincial Accounting

How did such a fiscal health imbalance come about? Transfers are often the result of cities claiming they are struggling to meet their service or infrastructure demands and then calling on the province for support. However, the way that cities present their budgets, especially relative to the way the province reports its finances, makes municipal finances appear more precarious than they actually are. Ontario municipalities typically use cash accounting in their budget.[1] However, the province – as well as municipal end-of-year financial statements – uses the accrual accounting standard. Accrual-based budgets appropriately do not record the entire cost of capital items as expenses in the year of the cash outlay, but apply annual amortization over their useful live. Figure 7 presents municipal and provincial finances on the equivalent accrual financial basis.

Presenting councillors with budgets that show outlays on such assets as in-year expenses (as cash budgeting does), rather than amortizing them as they deliver their services (as accrual accounting does),

[1] A common practice is to show expected cash outlays in a "capital" budget alongside an "operating" budget for items to be consumed and expensed during the year.

likely leads municipalities to delay or reject some capital projects they would otherwise approve. It also likely leads them to finance the projects they do approve by raising revenues up front, rather than by borrowing and servicing the debt over the period the project yields its benefits. The result is that today's taxpayers – whether through property taxes, grants to cities, or development charges on houses – are paying disproportionately more than they are receiving in municipal services.

Reframing the Municipal-Provincial Financial Relationship

This Shadow Budget would cancel the proposed doubling of the amount of provincial fuel taxes that the province transfers to municipal governments. In fact, it would go further to limit transfers to cities. As above, this Shadow Budget would begin a long-term commitment to reducing property taxes levied by the province. Every dollar of provincial property tax reduction creates tax room that municipalities can decide to take up. Cities would have the freedom to choose how best to finance local services or whether to increase or reduces taxes and services.

The province's commitment to double gasoline tax transfers to municipalities emerged as a response to the City of Toronto's request for the province to enact an enabling regulation permitting it to introduce a toll on municipally owned highways. The province forbade Toronto from the move, offering all cities the gasoline tax transfer instead. This Shadow Budget would allow cities the ability to introduce road pricing without requiring a provincial regulation, as long as the intention and design of the toll is to reduce congestion, not as a purely revenue-raising option.

In addition, instead of allowing cities to have parcel-by-parcel zoning amendments, as discussed above, this Shadow Budget would expand the ability of cities to put in place a tax-increment financing plan for major infrastructure. This would allow cities to capture some of the increase in property values that result from a new transportation or other municipal investment that increases the value of nearby properties (Found 2016).

Finally, this Shadow Budget would require municipal governments to produce their beginning-of-year budgets on an accrual basis. Importantly, it would not require that cities produce a balanced budget every calendar year and would instead enact a review of the appropriate fiscal and economic benchmarks that cities should adhere to under an accrual accounting system. A revised budget process would allow cities the flexibility they need to finance long-term infrastructure without relying on provincial grants or upfront revenues.

Transit Governance

Originally created in 2007, Metrolinx started with the intent of creating a regional transit plan for the Greater Toronto and Hamilton area with a board made up of local government officials. Two years later, Metrolinx expanded to become the GO Transit operator. The province then removed the local government officials from the Metrolinx board, which is now made up of people appointed by the province.

How can the region overcome local opposition to changes while finding a way to act in the regional interest? Right now, it's easy for local politicians to pass blame around, especially to an unelected transit board. One proposal is to create a single, amalgamated transit operator for the whole Greater Toronto Area

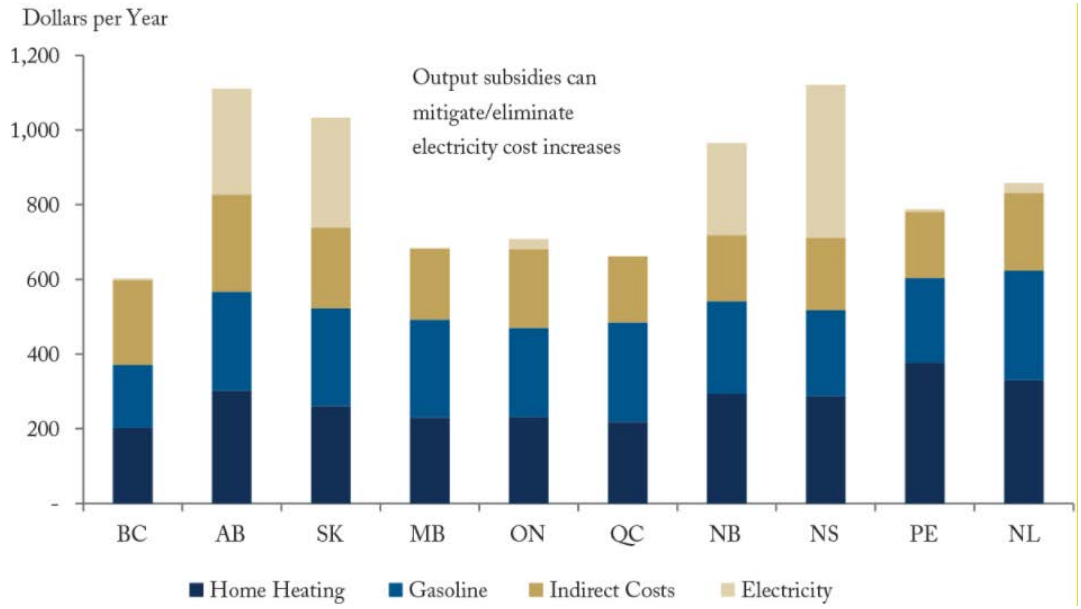
(Gill, Kelcey, Parker, 2017). But rather than amalgamation, which has shown to not result in significant savings (Bish, 2001, Found 2012), another approach is to restore the role of municipal governments on the board of Metrolinx.

Toronto should follow the Vancouver model, in which provincial legislation tasks a Mayor's Council made up of representatives from each of the region's 21 municipalities to appoint a board of Translink, the regional transit coordinating body. Translink has many subsidiary companies that operate transit services under contract (Translink 2017). The regional transit body is the regional coordinator, less than it is a regional authority and another new layer of government (Spicer and Found 2016). The reformed Metrolinx can contract with subsidiary transit operators, private contractors, or municipal governments that can supplement Metrolinx-supported routes.

Greenhouse Gas and Energy Policy

Greenhouse Gas Policy

This Shadow Budget would continue to increase the price on greenhouse gas emissions. This Shadow Budget does not take a position of the merits of a cap-and-trade program as opposed to a carbon tax. A carbon tax would be simpler to administer than a cap-and-trade program and would also generate more revenue for the province of Ontario. On the other hand, a cap-and-trade program that allows Ontario to link with the emissions permit market in California and Quebec allows for a lower cost on emissions to meet the same reduction target. Trading emissions permits across borders and between markets allows emissions reductions to occur wherever it is cheapest to do so, reducing the overall cost (Thivierge 2017).



If prices on emissions rise to $50 per tonne, which they are set to with federal government policy, the upfront cost to the average Ontario household would be around $700 per year (Figure 8). However, the final cost to consumers will depend on how governments recycle that revenue back to households. It is on how the government plans to use the revenues from a carbon price that this Shadow Budget proposes a change of direction for the province of Ontario.

Eliminate Energy Efficiency Programs and Consumer Subsidies

The current plan for the government of Ontario is to spend between $6 and $8.3 billion over five years on projects intended to further emissions reductions beyond that planned to occur using the existing cap-and-trade policy (Ontario 2016). The government plans to finance the subsidies with revenues from an auction for permits that greenhouse-gas-emitting companies must buy. Many of the proposed spending programs are exceptionally costly. For example, subsidies to retrofit apartments will cost as much as $900 million over five years. They will cost taxpayers $425 per tonne of GHG emissions reduced, much higher than any reasonable estimate of future carbon prices. Another example of a wasteful subsidy is the Electric Vehicle Incentive Program, which provides incentives of up to $14,000 per electric vehicle.[2] These kinds of subsidies are regressive and economically costly ways to further reduce emissions (Rivers and Shiell 2015). Other announced programs will not have a direct cost to taxpayers, but will be costly to drivers, homeowners and businesses. The government is planning to boost the amount of renewable content in gasoline and natural gas. Renewable-fuel mandates push the cost onto consumers and are an economically expensive way to reduce emissions (Auld 2008).

[2] See http://www.mto.gov.on.ca/english/vehicles/electric/electric-vehicle-incentive-program.shtml

Figure 8: Cost of a $50/tonne of CO_2 price on typical household

Source: Dachis and Tombe (2017) from Jennifer Winter.

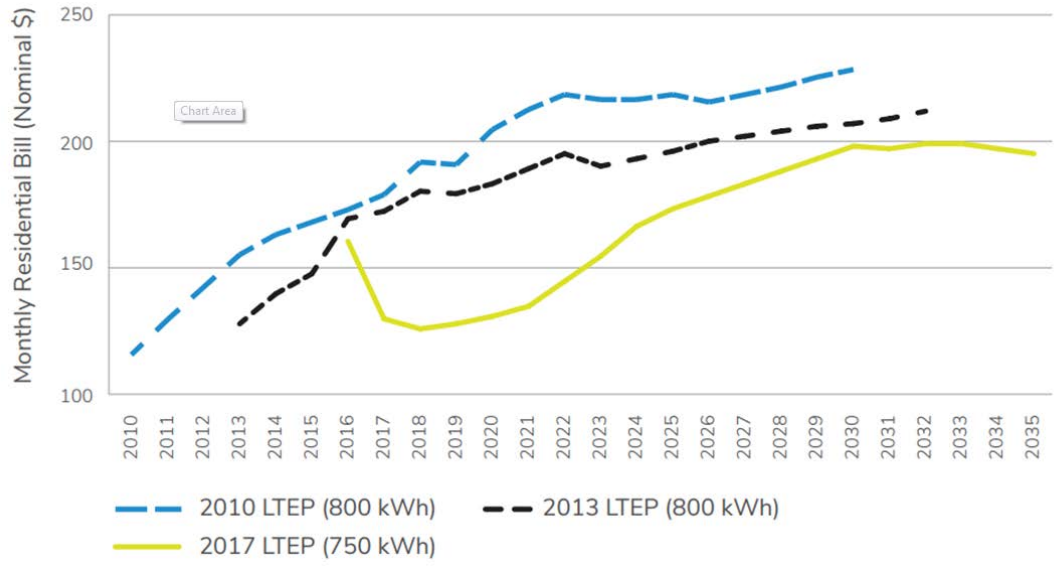
This Shadow Budget would eliminate nearly all of these existing subsidies and mandates and instead use the revenue to reduce taxation on households and businesses. The exact design of the tax cuts is outside of the scope of this Shadow Budget, but such a tax cut should promote two principles. First, it should reduce the average cost to businesses of emissions pricing while still providing a marginal incentive for them to reduce emissions. Second, households should receive tax cuts broadly in proportion to the cost of emissions pricing as a share of their income. This would mean tax cuts and enriching renewable tax credits geared to low-income families, for whom energy costs are a large share of total income.

To ensure industrial competitiveness, this Shadow Budget would adopt one of two paths. This Shadow Budget would prefer to adopt Alberta's emissions pricing policy, which is similar to the federal system. Producers in Alberta face little competitive disadvantage under this model. Although emitters pay the full cost of their own emissions, they receive a credit per unit of output, with the amount of the credit based on a provincial average emissions benchmark. Companies still have a strong incentive to reduce their emissions while having a minimal net impact on the competitiveness of industrial emitters. Indeed, companies with below-average emissions are better off in this system. This Shadow Budget would adopt a similar system if the cap-and-trade program is no longer the most effective means of putting a price on emissions. If, on balance, removing the apparatus of a cap-and-trade program for industrial emitters is too costly, it would preserve the system of allocating some permits for free to industrial producers.

Promote Long-term Energy Research

As research from Popp (2016) shows, a carbon price will drive 95 percent of the lowest-cost emissions reductions to meet reduction targets. Subsidies for energy adoption, as has been common in Ontario with electricity polices, encourages firms to use technology that is closest to market. Subsidies for adoption don't solve a market failure and don't encourage innovation. However, there is a market failure for longer-term energy research. The benefits of such research are broad, but the returns to firms of doing such research are relatively smaller, uncertain, and if they materialize at all will be far in the future. On their

own, research subsidies would achieve about 10 percent of economically efficient emissions reductions (Popp 2016). As such, this Shadow Budget would devote around 10 percent of revenues from an emissions price to long-term research.



Electricity Policy

Few topics have generated as much controversy in Ontario as electricity policy, with a number of previous policies resulting in a dramatic increase in electricity prices (Trebilcock 2017). The government has taken a series of measures that will immediately reduce electricity prices for residential customers. However, within five years, prices are forecast to increase dramatically as the current policy does not address the actual cost of generating and delivering electricity, and relies on taxpayers and future ratepayers to subsidize electricity use today (Figure 9). Further, many industrial consumers are receiving no reduction to their bills. This Shadow Budget would take actions now that will begin to reduce system cost and reduce prices for businesses and consumers in the future.

Market Design and Regulation

The Independent Electricity System Operator (IESO), which manages the electricity market for Ontario, is undertaking a major market reform. The IESO projects that the market reform will reduce the cost of purchasing electricity by billions of dollars, eventually resulting in savings for consumers. The single-largest cost savings for consumers is set to come from the IESO adopting what is called a capacity market. A capacity market provides electricity generators with a revenue stream for being available to produce electricity, in addition to their revenues from selling electricity. Such a market is a major improvement to the government's previous approach of signing 20-year contracts with generators that effectively covers both. The government's plan is a sensible one that has been shown to be effective in a number of other jurisdictions, and this Shadow Budget would continue to proceed with it (see Goulding 2013 and Wyman 2014).

Figure 9: Electricity Price Outlook – Residential Consumers

Source: Ontario (2017b).

This Shadow Budget would propose the government look to take the market reform one step further by reforming the purchasing role of the IESO. The current proposal for the capacity market is to make the IESO the only buyer of generation contracts. The downside of that plan is that it does not create competition among potential electricity buyers. This Shadow Budget would delegate the purchasing power in the capacity market to local buying groups across the province. These local buying groups, known as load-serving entities, would have the ability to purchase electricity that suits local needs. Large business, currently limited to buying electricity from the IESO and paying a share of the Global Adjustment, which pays for capacity investments, could form their own load-serving entities and contract directly with generators. Further, these local buying groups would encourage consolidation of local distribution companies, to which we will return to below.

However, as Goulding (2013) argues, to be effective, the government must pair a capacity market with changes to improve the independence of Ontario's electricity regulatory bodies. Ontario governments of all political stripes haved directed various government agencies to take specific action in the electricity sector while circumventing regulators (Vegh 2016). This Shadow Budget would end the cycle of government price interventions, specific directives, and decisions on procurement by requiring the Ontario Energy Board to review all major decisions in the energy market with a mandate to approve actions only if they increase economic efficiency (see Church 2017 for a discussion of economic efficiency in regulatory hearings).

Economic efficiency means having an electricity market that has decisions determined by prices, and not arbitrary government rules. One of the most intrusive arbitrary government electricity market rules is the Industrial Conservation Initiative. In this program, eligible industrial consumers save money if they slash electricity use during the five highest Ontario-wide demand hours of the year. It's an arbitrary and expensive way to cut electricity costs for some (Sen 2015). Small businesses and residents pay higher bills because of the policy. Instead, this Shadow Budget would eliminate this program and let large consumers pay only for what they buy in a capacity market and the hourly electricity market.

Similarly, a portion of the electricity bills of Ontario households support subsidies for residential consumers to purchase smart thermostats and other energy-efficiency devices. These programs cost ratepayers $600 million in 2016 (Auditor General 2017b). As with direct government spending on such programs these programs often do not pass a cost-benefit test for the use of government fund. Many households would make such investments if energy prices were sufficiently high and they were sufficiently informed. This Shadow Budget would remove any directives requiring such energy efficiency measures, and grant the Ontario Energy Board the authority to approve or reject energy efficiency programs, such as the Industrial Conservation Initiative, based solely on whether they improve economic efficiency.

Encouraging Private Investment in the Ontario Energy Sector

As of 2017, municipal governments in the province owned local electricity distribution companies that had a value of $11 to $15 billion (Robins 2017a). Cities could sell these companies to finance infrastructure investment. Sales would have no negative effect on ratepayers, since the Ontario Energy Board keeps a close regulatory eye on all price changes regardless of who owns the companies. Furthermore, private investors are usually best placed to make the decisions about the appropriate boundaries of companies, geographically and across distribution, transmission and even generation investment. Private investors would bear the consequences of poor choices, but reap some of the rewards of good mergers (Fyfe, Garner,

and Vegh 2013). The incentives for these private-sector companies to keep costs down are often better aligned with ratepayers than those facing publicly owned electricity companies.

However, cities have not been able to take advantage of the value of these assets because of provincial taxes on such sales.[3] The province would collect $1.8 to $2.5 billion in such taxes (Robins 2017a). These overly high taxes pose a significant barrier to any sale. This year will be the last year of a three-year partial tax holiday on provincial transfer taxes in Ontario on the sales of municipally owned local electricity distribution companies. The intent of this tax change was to encourage mergers using private investors, rather than only encouraging merger with other government-owned companies. However, there have been few sales so far, partly because the tax holiday was limited largely to sales of very small companies. Private investor showed little appetite for such assets. This Shadow Budget would exempt municipalities entirely from all taxes on sales, as long as the proceeds of a sale are reinvested in qualifying infrastructure projects.

Private investment in provincially owned electricity assets has been a controversial topic, but a wise policy move. As Robins (2017b) argues, it is not necessary for the province to continue to own its minority share in Hydro One, the transmission utility, or Ontario Power Generation (OPG), a major power generator, if its policy objective is to keep electricity prices down. As with municipal companies, a strong Ontario Energy Board can protect consumers no matter the owner. A sale of the remaining government stake in Hydro One would net the province somewhere in the order of $7 billion and a sale of OPG could also generate substantial revenue.

The upfront revenue is not necessarily the best reason for the province to sell electricity assets. The main reason to sell is reduced risks. The sale would reduce dividends in the future, such as the $250 million from Hydro One. However, using such a sale to eliminate debt could result in cost-savings and reduced fiscal risks if interest rates increase. Second, the electricity sector is undergoing fundamental change. OPG and Hydro One deliver electricity in a traditional long-distance network. However, the electricity system of the future may look very different, with the emergence of small-scale renewable electricity generation. The result could be a decline in value of, and therefore dividends flowing to the treasury from, Hydro One and OPG. The best way for the province to mitigate that risk is to continue selling stakes in Hydro One and begin to include private investors in OPG.

Conclusion

A fiscally sustainable Ontario will mean higher standards of living for Canadians through better government services and faster economic growth. The province should take action to correct a fiscal course that is unsustainable. The government must act to bring the long-term cost of government in line with the revenue-raising capacity of the province. This Shadow Budget shows that there are a number of policy directions the government can and intends to take in areas as diverse as electricity, greenhouse gas, municipal, health, social and tax policy that can balance increases in spending with generating new revenues and cost-savings measures, and generally enhancing the well-being of Ontarians.

[3] See Fyfe, Garner, and Vegh (2013) for more details on the complex system of transfer and departure taxes in the Ontario local electricity distribution sector.

2016-17 Public Accounts

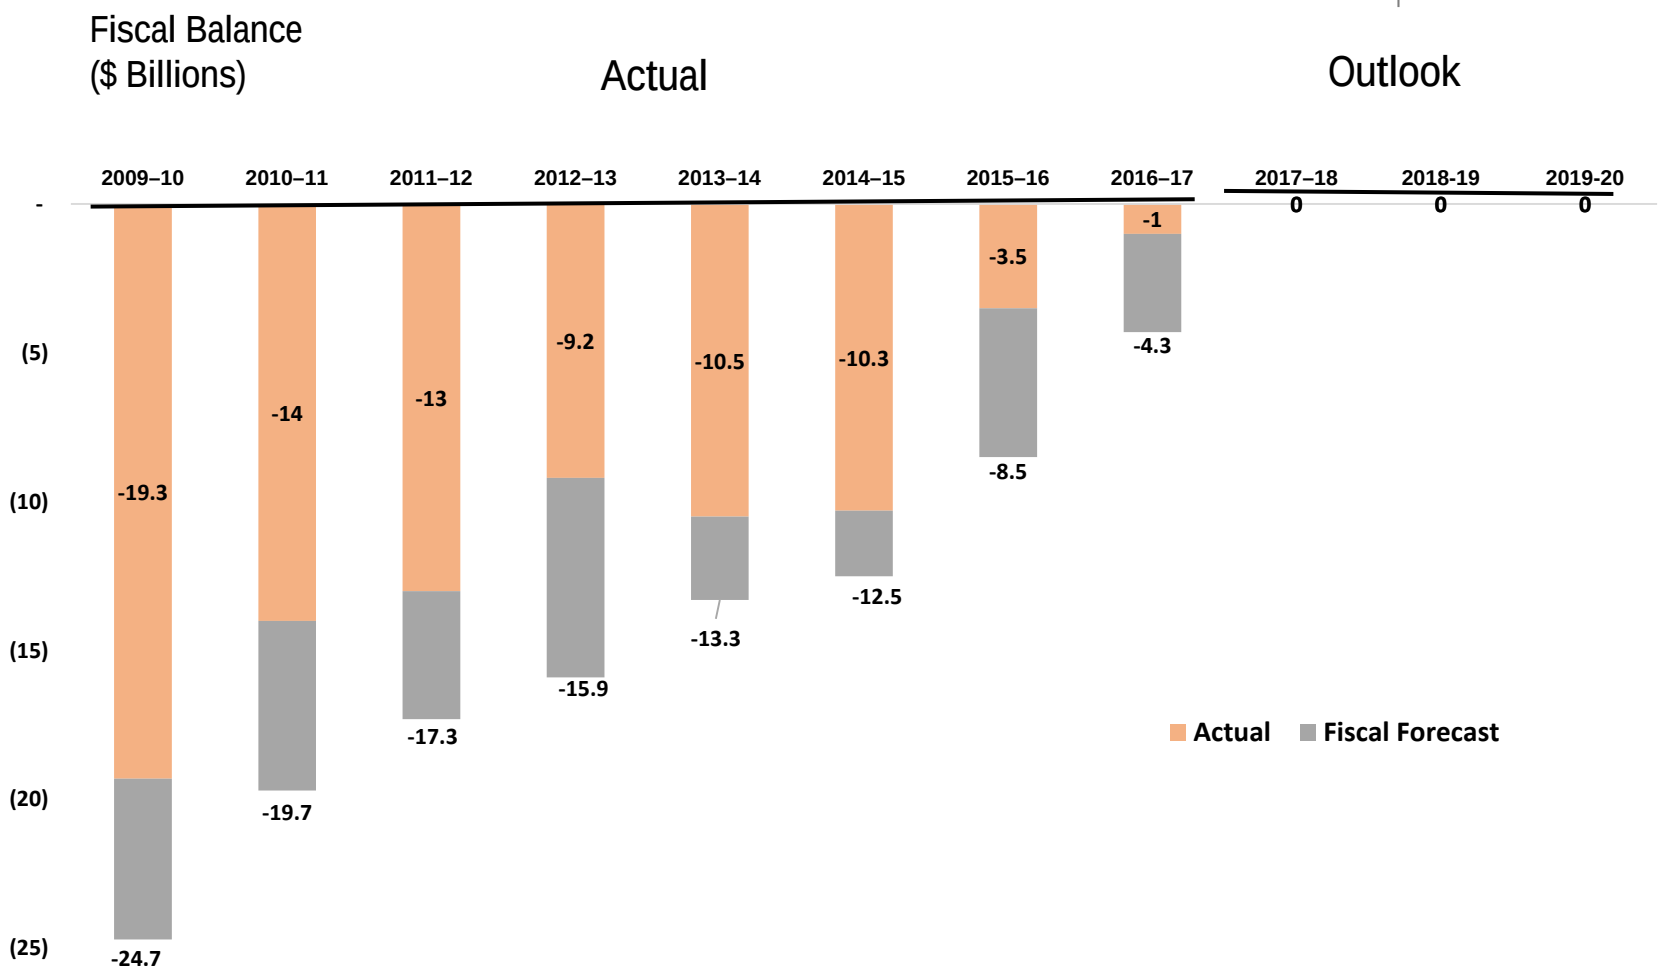
Highlights Deck

September 7, 2017

Confidential – For Internal Discussion Purposes

2016-17 Financial Highlights

- **2016-17 deficit is $1.0 billion**
  - $3.3 billion lower than the projected $4.3 billion deficit in the 2016 Budget.
  - $0.5 billion lower than the $1.5 billion interim forecast presented in the 2017 Budget.
  - $2.5 billion lower than 2015-16 deficit of $3.5 billion*.
- **Revenues are $140.7 billion****
  - $2.2 billion, or 1.6%, higher than the projected $138.5 billion in the 2016 Budget.
  - $0.6 billion, or 0.4%, lower than the projected $141.3 billion interim forecast in the 2017 Budget.
- **Expenses are $141.7 billion****
  - $0.1 billion, or 0.1%, lower than the projected $141.8 billion in the 2016 Budget.
  - $1.1 billion, or 0.8%, lower than the $142.8 billion interim forecast presented in the 2017 Budget.
- **Net debt is $301.6 billion, an increase of $6.2 billion in 2016-17. This increase is due to:**
  - Additional borrowing to finance the operating deficit and investments in infrastructure.
- **The Auditor General has issued a qualified Audit Opinion for the 2016-17 Public Accounts, based on a different interpretation of accounting methods for net pension assets and recognition of Independent Electricity System Operator market accounts.**



* 2015-16 deficit restated for removal of impact of regulated pension accounting

** Revenues for 2016-17 include third party revenues of hospitals, school boards and colleges. In previous years, these third party revenues were netted against the respective sector expenses. This change in presentation increased revenue and expenses by approximately $8 billion in 2016-17 and $7.5 billion in 2015-16. This change has no impact on the annual deficit. The prior year financial information and the 2016 Budget have been reclassified to reflect this change.

Auditor General Opinion

- Two qualifications in the audit opinion
  - Pension assets ($12.4 billion increase to net debt and accumulated deficit; $1.4 billion increase to deficit →$2.4 billion deficit per AG)
    - Pension Panel identified as a “non-authoritative” source on application of Public Sector Accounting Standards (PSAS)
  - Independent Electricity Systems Operator (IESO) changed its accounting policy to recognize $1.6 billion market accounts assets and the same amount in liabilities (market accounts track mainly buy and sell transactions between electricity power generators and distributors)
    - No impact to annual deficit, net debt or accumulated deficit
  - Other matters paragraphs in opinion
    - Rate-regulated accounting used by IESO in year not permitted under PSAS (used by IESO in year, but impact not material)
    - Future potential material misstatement resulting from “legislated accounting” in Fair Hydro Plan legislation and related regulations;
    - FSD&A does not reflect pension accounting or market accounts appropriately

Ontario's Plan to Eliminate Deficit

[1] Represents the 2017 Budget outlook for 2017–18 to 2019–20. For 2009–10 to 2016–17, actual results are presented. The 2015–16 actuals have been restated to reflect recognizing jointly sponsored net pension assets for the Ontario Public Service Employees' Union Pension Plan and the Ontario Teachers' Pension Plan on the Province's financial statements, consistent with the 2016 Budget and as described in the 2016–17 Third Quarter Finances.

[2] Forecast for 2009–10 is based on the 2009 Ontario Economic Outlook and Fiscal Review, 2010–11 to 2013–14 is based on the 2010 Budget; 2014–15 is based on the 2014 Budget; 2015–16 is based on the 2015 Budget.

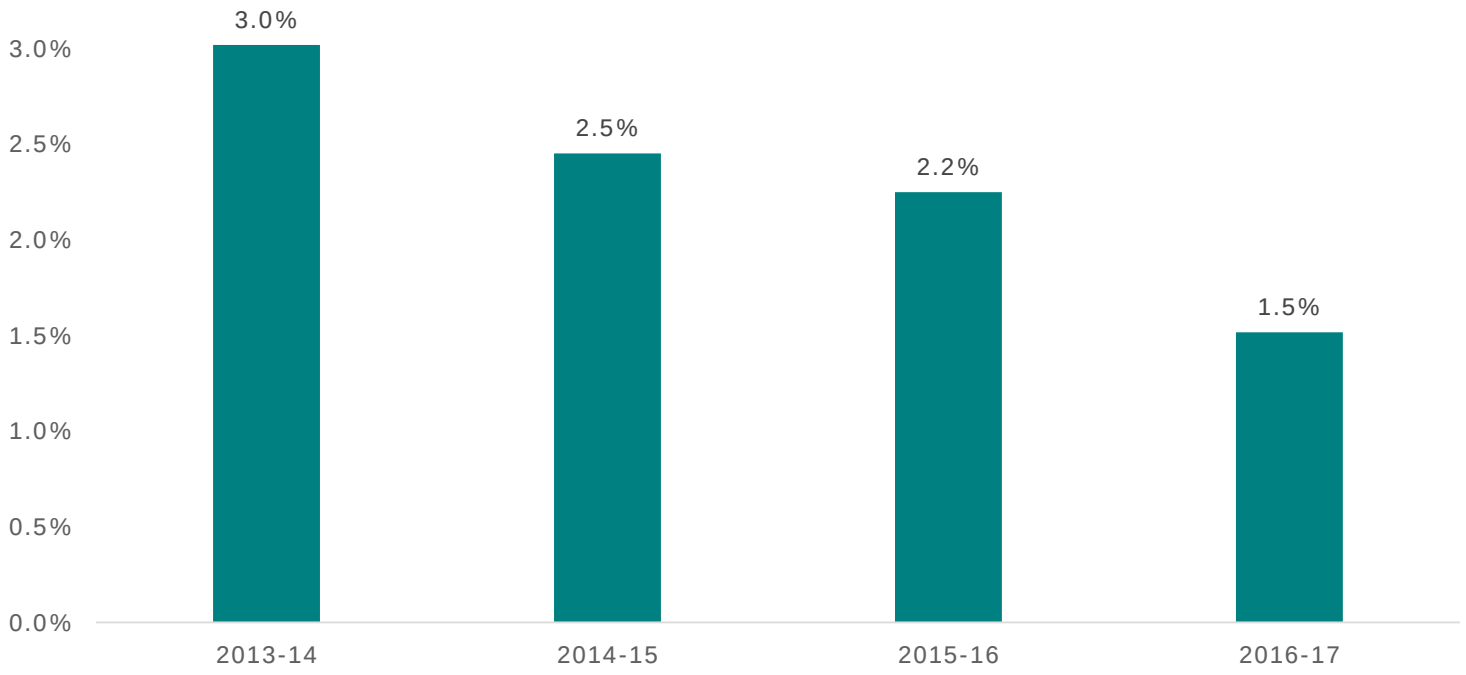
Highlights: Financial Results

2016-17 Results (as of August 25)								
$ Billions	**Budget**	**Interim**	**2016-17 Results**	**2015-16 Actual**	**Change from Budget**	**%**	**Change from Interim**	**%**
Revenues	138.5	141.3	**140.7**	136.1	2.2	1.6%	(0.6)	-0.4%
Expenses								
Programs	129.4	130.9	**130.0**	128.1	0.6	0.5%	(0.9)	-0.7%
Interest on Debt	12.4	11.9	**11.7**	11.6	(0.7)	-5.6%	(0.2)	-1.7%
Total Expenses	141.8	142.8	**141.7**	139.7	(0.1)	-0.1%	(1.1)	-0.8%
Reserve	1.0	-	**-**	-	(1.0)		-	
Deficit Before Outstanding Items	(4.3)	(1.5)	**(1.0)**	(3.5)	3.3	-76.7%	0.5	-33.3%

Notes:



(1) For discussion purposes only. Subject to change pending public release.

(2) Budget and Interim numbers are re-stated for BPS line by line reporting (no fiscal impact). 2015-16 Actual have been restated for the reversal of regulated accounting for pensions (published 2015-16 deficit was $5.0 billion).

(3) Budget/Interim numbers may not add due to rounding.

CONFIDENTIAL - For Internal Discussion Purposes Only

Annual Program Expense Growth Rate: 2013-14 to 2016-17

Note: 2013-14 to 2016-17 program expenses have been restated for BPS line-by-line consolidation.

Communications

Narrative

- The Public Accounts for Ontario show Ontario's **deficit for 2016-17 is $991 million**. This result is **$3.3 billion lower** than the $4.3 billion projected in the 2016 Budget. It is **$0.5 billion lower** than the interim projection in the 2017 Budget of $1.5 billion.
- Ontario has beaten its deficit target eight years in a row.
- Ontario's plan is working. By responsibly managing the Province's finances, Ontario balanced the budget in 2017-18, and will maintain a balanced budget for the future.
- To help Ontarians better understand their government's finances, new digital tools have been developed that present the Public Accounts data in innovative, visual formats. This is part of Ontario's commitment to Open Government.
- The government will continue to build on its track record of responsible fiscal management.

Strategy

- **High profile, proactive, short term** communications approach via traditional, digital and social media.
- Remain **neutral** and **factual**, balancing need for gov't to clearly state its position, while demonstrating respect for all parties involved.
- **Promote** strong financial management, and transparency and accountability.
- **Leverage open data** and other digital components to **profile achievement of 2016 budget commitments.**
- Mitigate potential issues with strong issues management plan.

Communications cont'd

Rollout

- Public release on **September 7** via joint TBS and MOF Ministers' **press conference** and **province-wide news release** with backgrounder.
  - **Technical briefing for media** in advance to present accounting changes, including Ontario's position on accounting for pension assets and IESO in a factual, neutral manner.
- Tactics and messaging will be **reassessed**, as needed, to respond to **AG's position.**

Considerations

- Public Accounts specific:
  - AG's qualified audit opinion (pension asset accounting, IESO accounting treatment of market accounts)
  - AG's criticisms regarding the use of rate-regulated accounting by IESO
  - BPS presentation change
- Other:
  - Questioning balanced budget narrative
  - Growing debt burden
  - Relationship with AG and her criticism of the Fair Hydro Plan

APPENDIX

Ontario Public Accounts
Sept. 7, 2017
Q&As

Key Messages:

- The Ontario economy remains strong and has continued to grow and create jobs in an uncertain global environment.

- This year's Public Accounts show that Ontario's deficit for last year was $991 million — $0.5 billion lower than the interim projection in the 2017 Budget.

- Balancing the budget means the government can invest more in the programs and services that people rely on.

Q&As:

What is Ontario's fiscal outlook? Has it changed since you released the 2017 Budget?

In 2010 we made a commitment to restore balance in 2017–18 and we delivered on that commitment. We are also projecting continued balance in both 2018–19 and 2019–20.

This year's Public Accounts show that Ontario's deficit for last year was $991 million — $3.3 billion lower than projected in the 2016 Budget and $0.5 billion lower than the interim projection in the 2017 Budget.

Balancing the budget means the government can invest more in the programs and services that people rely on.

What is the current outlook for the Ontario economy?

Ontario's economy remains strong and has continued to grow and create jobs in an uncertain global environment.

Since 2014, Ontario has been an economic growth leader in Canada and private-sector economists expect Ontario to remain one of the fastest growing provinces over the next two years.

Ontario's economic growth exceeded that of all G7 countries over the 2014 to 2016 period.

How does the Bank of Canada interest rate increase affect economic growth in Ontario?

The increase in the Bank of Canada's policy rate reflects the growing strength of the Canadian and Ontario economy.

An increase in the Bank of Canada's overnight interest rate does not automatically translate into an increase in the Province's borrowing cost. That cost is also impacted by other factors, including revisions to the U.S. Federal Funds Rate.

Ontario's economy remains strong and has continued to grow and create jobs in an uncertain global environment.

Didn't the FAO say that the Province's economic growth and revenue projections are too optimistic?

Over the last several years, the government's investments to strengthen economic growth have paid off. Ontario is a leader in economic growth, with our real GDP growth outpacing all the G7 countries over the last three years.

Since the FAO released their post-Budget analysis most private-sector economists have revised up their forecast for Ontario real GDP growth, reflecting the strength of the Ontario economy.

According to the average of private-sector forecasts, Ontario real GDP growth in 2017 has risen to 2.8% from 2.4% at the time of the Budget. As well, over the next four years Ontario real GDP growth is expected to average 2.3% annually, up from 2.1% annually at the time of the Budget. The outlook for nominal GDP growth has seen a larger improvement.

The government stands by the revenue forecast presented in the 2017 Budget. As recently presented in the 2017-18 First Quarter Finances, revenues are on track and the government is continuing to project a balanced budget in 2017-18.

Taxation revenue growth projected in the 2017 Budget aligns with growth actually experienced in recent years.

Minister Sousa's Speaking Notes

Media Avail Sept. 7, 2017

Public Accounts of Ontario 2016-17

- The release of the 2016-17Public Accounts is an important time for the Government of Ontario.

- The accounts demonstrate how we are improving the everyday lives of the people of Ontario.

- Our plan is working.

- Ontario is projected to balance the budget in 2017-18.

- We are restoring balance through targeted, measured and fiscally responsible decisions — managing growth in program spending and fostering job creation and economic growth.

- Managing spending has been a priority for us, and we are proud to say today Ontario has the lowest per-capita program spending among all Canadian provinces.

- And we are making investments in key services such as health care and education, while at the same time lowering costs for necessities like electricity and child care.

- With a balanced budget we can continue to make investments in these key areas while also responding better to unexpected economic or demographic changes.

- Balancing the budget is not just about the bottom line — it's about helping families and businesses by providing the supports they need to succeed.

- In addition to balancing the budget, we’re also tackling debt. Our continued focus on capital investment is contributing to economic growth — and that means the GDP is growing more quickly than debt.

- Since 2010, Ontario’s economic performance has remained strong.

- This growth will help us lower Ontario’s net debt-to-GDP ratio to the pre-recession level of 27 per cent, currently projected to be achieved by 2029–30.

- Ontario’s recovery from the global recession was driven by sticking to key economic principles and supported by long-term job recovery through our large-scale infrastructure investments.

- We will continue to move forward on our path to balance while building a stronger and more vibrant Ontario we can all be proud of.

- Thank you.

PUBLIC ACCOUNTS 2016-17

Top Media Qs & As

September 6, 2017

1. **The Auditor General has issued a qualified opinion for the second year in a row. Is this a sign of fiscal mismanagement?**

   We continue to move forward and present the Province's finances fairly and accurately and in accordance with Canadian Public Sector Accounting Board standards. Ontario has a strong track record of producing high-quality financial reports on a timely basis. The Auditor General's qualified opinion is based on a different interpretation of Public Sector Accounting Board standards for net pension assets and recognition of market accounts.

   Last year there was a disagreement among the Province's professional accounting staff and the Auditor General's Office on the appropriate application of Public Sector Accounting Board standards regarding pension accounting. As a result, the Pension Asset Expert Advisory Panel was established to deliver independent advice and recommendations on the issue to the Province.

   The independent panel members concluded the Province's share of the net pension assets of both the Ontario Teachers' Pension Plan and the Ontario Public Service Employees' Union Pension Plan should be recognized in Ontario's financial statements.

   After significant deliberation, including consideration of the recommendations of the panel, Ontario confirmed that the accounting for these plans prior to 2015-16 was appropriate, and are prepared in accordance with public sector accounting standards for pension asset accounting. Further, EY provided additional analysis and concluded that no valuation allowance was required for either plan as of March 31, 2017. The 2016-17 financial statements include these pension assets, and we continue to apply the accounting treatment of pension assets that the Province has used consistently since 2001. In addition, the 2015-16 financial statements were restated to include these assets.

   This year the Independent Electricity System Operator (IESO) began recognizing its market accounts' assets (amounts due from power distributors) and liabilities (amounts due to power producers) in their financial results. IESO has chosen to recognize these markets accounts on its books for transparency reasons, as it better reflects the financial position of the IESO-administered markets at year-end. This change was supported by the IESO's audit committee, its independent external auditor, and finally by the Office of the Provincial Controller. This change

also has no impact to the province's annual deficit, net debt or accumulated deficit.

This accounting is consistent with the presentation used previously by the Ontario Power Authority (which was merged with the IESO on January 1, 2015) in its financial statements, which was not subject to qualification from the Office of the Auditor General at that time.

2. The Auditor General is critical of the IESO accounting changes. Are Ontario's accounting changes inappropriate?

No. The Independent Electricity System Operator (IESO) began recognizing its market accounts' assets (amounts due from power distributors) and liabilities (amounts due to power producers) in their financial results. IESO has chosen to recognize these markets accounts on its books for transparency reasons, as it better reflects its net financial position on behalf of the IESO-administered markets at year-end.

This accounting change was accepted by the IESO's independent external auditor, which issued an unqualified, or "clean," audit opinion. These accounting changes were highlighted in the IESO's annual report which was published online in March 2017.

Further, this accounting is consistent with the presentation used previously by the Ontario Power Authority (which was merged with the IESO on January 1, 2015) in its financial statements, which was not subject to qualification from the Office of the Auditor General at that time.

This change has no impact to the province's annual deficit, net debt or accumulated deficit.

This accounting change has been supported by the professional accounting staff of the Office of the Provincial Controller.

We will continue to work with the Auditor General to build on the government's track record of responsible fiscal management and high quality financial reporting.

If pressed on rate-regulated accounting:

The IESO made the decision to adopt rate-regulated accounting because it better reflects the economic substance of certain types of expenses that may not be directly recovered through the normal revenue requirement model.

DRAFT

The IESO, like Hydro One and Ontario Power Generation (OPG), is regulated by the Ontario Energy Board. The IESO adopted rate-regulated accounting for its year ended December 31, 2016. The impact on the financial statements of the Province is a decrease of $82 million in the 2016-17 opening accumulated deficit and an increase in the 2016-17 annual deficit by $24 million.

This accounting change was accepted by the IESO's independent external auditor, which issued an unqualified, or "clean," audit opinion. These accounting changes were highlighted in the IESO's annual report which was published online in March 2017.

3. Why are you still fighting with the Auditor General over pension accounting?

In preparing last year's Public Accounts, the Province's professional accounting staff and the Auditor General's Office engaged in discussions about the appropriate application of Public Sector Accounting Board standards regarding pension accounting for the Province's jointly sponsored pension plans.

As a result, the Pension Asset Expert Advisory Panel was established to deliver independent advice and recommendations to the Province on the issue. The independent panel members concluded the Province's share of the net pension assets of both the Ontario Teachers' Pension Plan and the Ontario Public Service Employees' Union Pension Plan should be recognized in Ontario's financial statements.

After significant deliberation, including consideration of the recommendations of the panel, Ontario confirmed that the accounting for these plans prior to 2015-16 was appropriate. Further, EY provided additional analysis and concluded that no valuation allowance was required for either plan. The 2016-17 financial statements include these pension assets, and we continue to apply the accounting treatment of pension assets that the Province has used consistently since 2001. In addition, the 2015-16 results were restated to include these assets.

We will continue to work with the Auditor General to build on the government's track record of responsible fiscal management and high quality financial reporting.

4. How were you able to beat your deficit target in 2016-17?

In 2016-17 we maintained our focus on responsible fiscal management and investing in the right priorities. We are making progress on our economic plan by making investments to spur growth, transforming government and responsibly managing spending.

DRAFT

Average annual growth of total government spending has been held to 2.3 per cent for the past five years. As a result of growth in revenue that exceeded growth in program expense, as well as lower than forecast interest on debt, the deficit is $3.3 billion lower than projected in the 2016 Budget. It is also $0.5 billion lower than the interim projection in the 2017 Budget.

This is the eighth year in a row the government has beaten its deficit target.

5. **The government is claiming the deficit has been reduced to $1B deficit for 2016-17 and that the budget will be balanced over the next three years. However, the AG is saying that the deficit for 2016-17 was more than $2B due to the treatment of pension assets, and the FAO has stated that the government's revenue forecast is more than $1B too "optimistic". Isn't the government really hiding a $3-4B deficit instead of a balanced budget?**

There is no hidden deficit. In the *2010 Budget*, the government committed to eliminating the deficit and returning to a balanced budget by 2017-18. Through targeted, measured and fiscally responsible decisions, Ontario has restored its fiscal and economic strength.

Today we are confirming that the 2016-17 deficit of $1 billion is $3.3 billion lower than projected in the 2016 Budget and $0.5 billion lower than the interim projection in the 2017 Ontario Budget. This marks the eighth year in a row that Ontario has beaten its deficit target.

The success in eliminating the deficit is supported by a strong track record in managing spending -- having held average growth in spending to 2.3 per cent over the past five years.

In addition, over the last several years, the government's investments to strengthen economic growth have paid off. Ontario is a leader in economic growth, with our real GDP growth having outpaced that of all the G7 countries over the last three years. The strengthened economy has resulted in increased revenue for the Province – in fact, over the past two fiscal years, revenue has come in higher than projected, supporting Ontario's return to a balanced budget.

It is also important to point out that private sector forecasters have revised upward their expectations for the Ontario economy since the 2017 Budget, reflecting the growing strength of the Ontario economy. In fact, the current average private sector forecast for this year and next is also above what the Financial Accountability Office of Ontario projected in their Budget commentary.

DRAFT

The government is also taking steps to improve tax fairness and address the underground economy in order to ensure the integrity of the Province's revenues.

Finally, Ontario's fiscal plan incorporates prudence in the form of a reserve to protect the fiscal outlook against unforeseen adverse changes in the Province's revenue and expense. The reserve has been set at $0.6 billion in 2017-18, $0.6 billion in 2018-19, and $0.9 billion in 2019-20.

Balancing the budget means that the government can invest more in the programs and services that people rely on.

6. **The FAO's commentary released on September 6, 2017 says that Ontario's debt reduction commitment is based on unrealistic assumptions. How do you respond?**

The government made a commitment in the 2010 Budget to balance and eliminate the deficit by 2017-18. Since then, the government has reduced the deficit from its peak in 2009-10 of $19.3 billion, to a projected $1.5 billion in 2016-17 and a projected balanced Budget in 2017. Furthermore, the government consistently overachieved on its deficit targets and forecasts for net debt-to-GDP. The government's track record therefore provides evidence of fiscal discipline and the likelihood of achieving on-going balanced budgets in the future.

With respect to capital spending, approximately 61 per cent of the increase in net debt from 2008–09 to 2016–17 was due to the deficit, with net investments in capital assets responsible for most of the balance. Infrastructure expenditures do not therefore have as large an impact on net debt as that of a balanced budget.

Moreover, additional capital investment in the latter half of the next decade will stimulate the economy. A recent report from the Centre for Spatial Economics confirms that over the long term, real GDP in Ontario increases by $6 for every dollar of public infrastructure spending. This stimulus in GDP may help to offset the effects of an aging population and slower growth in the labour force and maintain the 4% average GDP growth required to bring net debt to GDP down to 27% in 2029-30.

7. **Interest on debt is still massive and the Bank of Canada is expected to raise interest rates again this fall, and announced it is raising its target for the overnight rate on September 6, 2017. . How is the government preparing for this and will this affect your ability to maintain a balanced**

budget?

The increase in the Bank of Canada's policy rate reflects the growing strength of the Canadian and Ontario economy. Ontario's economy remains strong and has continued to grow and create jobs in an uncertain global environment.

Since 2014, Ontario has been an economic growth leader in Canada and private sector economists expect Ontario to remain one of the fastest growing provinces over the next two years.

Ontario's economic growth exceeded that of all G7 countries over the 2014 to 2016 period.

A quarter-point increase in the policy rate is not likely to have a material impact on the Ontario economic outlook. The 2017 Ontario Budget anticipated that interest rates would rise modestly.

An increase in the Bank of Canada's overnight interest rate does not automatically translate into an increase in the Province's borrowing cost which is also impacted by other factors including revisions to the US Federal Funds Rate.

As noted in the 2017 Budget, the Province's average cost of 10 year borrowing in 2017-18 is forecast to be 3 per cent. The impact of a 100 basis point increase in borrowing rates is forecast to be approximately $300 million. The interest rate forecast used in the Budget was prudent, and anticipated that long-term interest rates would rise as we progressed through the fiscal year.

8. You claim to have balanced the budget yet you keep piling on more debt. How do you plan to pay down the debt?

We maintain a target of reducing the net debt-to-GDP ratio to its pre-recession level of 27 per cent, with current projections showing that this will be achieved by 2029-30. In the balanced 2017 Budget, the government is setting an interim target to reduce the net debt-to-GDP ratio to 35 per cent by 2023–24.

In a balanced budget environment, debt would be incurred primarily to invest in capital assets. We are making progress on our economic plan by making investments to spur growth, transforming government and responsibly managing spending – including addressing the underground economy and maintaining tax fairness. Our strategic investments in infrastructure provide economic benefits: a recent study by the Centre for Spatial Economics (C4SE) finds that, over the long term, real GDP in Ontario will rise up to $6 on average per one dollar of public infrastructure spending.

DRAFT

These strategic investments are creating jobs and contributing to economic growth. Ontario's GDP grew one per cent in the first quarter of 2017, outperforming that of Canada, the U.S. and all other G7 countries.

9. Spending for hospitals, school boards and colleges seems to be much higher in Public Accounts than in the 2017 Budget. Why is this?

To increase transparency, this year we have made a simple change to how we are reporting third party revenues for broader public sector organizations.

For the first time, Public Accounts are presenting third party revenues for hospitals, school boards and colleges with provincial revenue. Third-party revenues earned by these organizations, such as tuition fees, patient fees, research grants and donations, are no longer netted against the respective sectors' expenses, as they were in prior years for Public Accounts and the 2017 Budget.

This is simply a presentation change for Public Accounts. It is fiscally neutral, i.e. there is no change to the annual deficit, net debt or accumulated deficit. To ensure consistency in year-to-year and to Budget comparisons, we are reclassifying all previous years and the 2016 Budget. The 2017 Fall Economic Statement and 2018 Budget will also reflect this presentation change.

The Auditor General supports the Province's decision to adopt this presentation change. It is consistent with the accounting principles for governments issued by the Public Sector Accounting Board, and the reporting practices of other senior Canadian governments.

10. The Public Accounts show a drawdown of $260 million from the Trillium Trust. What did you spend the money on?

The government began allocating proceeds from the Trillium Trust in 2016-17 to help support infrastructure initiatives such as GO Regional Express Rail (GO RER), the Hurontario Light Rail Transit (LRT) and the Ontario Community Infrastructure Fund (OCIF).

We expect the Trillium Trust to be drawn down by about $400 million in 2017–18.

Our strategic investments in infrastructure provide economic benefits: a recent study by the Centre for Spatial Economics (C4SE) finds that, over the long term, real GDP in Ontario will rise up to $6 on average per one dollar of public infrastructure spending.

11. Does a qualified opinion impact the Province's credit rating?

DRAFT

The Province's financial results show that the government has once again beaten its annual deficit targets. In April 2017, we delivered our first balanced budget since the global recession and we are on track to do so again next year and the year after.

The rating agencies will assess whether the underlying factors that lead to a qualified opinion directly affect the creditworthiness of the Province. However, there were no credit rating implications in 2016 when the Province received a qualified audit opinion on its 2015-16 Public Accounts. Qualified opinions by the Auditor Generals of British Columbia and Quebec have been made in their respective provinces in the past, with no negative impacts on their province's credit ratings.

12. The Auditor General has some serious concerns about how you're accounting for Ontario's Fair Hydro Plan. What do you say to this?

The accounting for Ontario's Fair Hydro Plan is a separate and distinct issue to the Public Accounts for 2016-17 that we're here to talk about today.

However, under Ontario's Fair Hydro Plan accounting structure, the Province's net debt and annual surplus/deficit won't be negatively impacted since all costs are to be recovered through future rates.

The Ministry of Energy, Finance and Treasury Board Secretariat continue to work closely with Ontario Power Generation (OPG), the Independent Electricity System Operator (IESO) and external advisors to address the outstanding accounting related considerations.

The Auditor General has also been briefed on the government's refinancing structure.

For further questions, I direct you to contact my colleague at the Ministry of Energy.

13. Program spending increased again this year. Why?

Program spending in 2016-17 was $141.7 billion, down $0.1 billion from the 2016 Budget. Average annual growth of total government spending has been held to 2.3 per cent for the past five years.

Healthcare represents the largest share of government program spending at $56 billion. Transformation efforts continue to make the sector more effective and sustainable while continuing to improve access for patients, especially the increased demands from an aging and growing population. The government has

DRAFT

invested in new drugs, technologies, community and home care, long term care homes, mental health, physicians' services and specialized cancer treatments.

Other areas of government investment include:

- $26.6 billion in education, mainly due to the introduction of full-day kindergarten;
- $16 billion in children's and social services, due to increased annual social assistance rates as well as investments in developmental services, autism and complex special needs programs, as well as the Ontario Child Benefit;
- $10.1 billion in post-secondary and training, due to enrolment growth in colleges and universities along with increased student financial assistance programs and increases in capital funding for post-secondary institutions;
- $4.6 billion in justice sector expenses due mainly to the upload of court security costs from municipalities, compensation for the Ontario Provincial Police and correctional services programs, as well as improved access to legal aid.

ACCOUNTING CHANGES

IESO - ACCOUNTING CHANGES

Q. What were the accounting changes made by IESO in its financial statements?

A. As of January 1, 2016, the IESO changed its accounting policy regarding the recognition of assets and liabilities subject to rate regulation. The change was made to better reflect the economic substance of certain types of expenses that may not be directly recovered through the normal revenue requirement model.

In addition, the IESO changed its accounting policy regarding the recognition of market accounts assets and liabilities on the statement of financial position. The change was made to better reflect the assets and liabilities and amounts due to and from market participants held by the IESO on behalf of the IESO administered market at year end.

Q. What is the impact of IESO's accounting changes to the Province's Consolidated Financial Statements?

A. Given the IESO prepared its financial statements using Public Sector Accounting Standards and its auditor issued an un-qualified audit report for 2016 financials, Province will consolidate IESO using similar accounting as adopted by the IESO and reflected in its 2016 financials. There would be no fiscal impact for market accounts; however, IESO's adoption of rate-regulated accounting resulted in a decrease of $82 million in the 2016–17 opening accumulated deficit, and an increase in the 2016–17 annual deficits by $24 million.

PENSION - ACCOUNTING CHANGES

Q. What were the pension accounting changes made by the Province in its Consolidated Financial Statements?

A. The 2016–17 Consolidated Financial Statements reflect a change in accounting for net pension assets of the Province's jointly sponsored pension plans, as compared to the 2015–16 Consolidated Financial Statements. The change affects the Province's accounting for both the Ontario Teachers' Pension Plan (OTPP) and the Ontario Public Service Employees' Union Pension Plan (OPSEUPP).

In the 2015–16 Consolidated Financial Statements, the Province legislated the accounting treatment for pension assets of OTPP and OPSEUPP in order to reflect the Auditor General of Ontario's view that a full valuation allowance was required based on the view that the government does not have a legally enforceable right to unilaterally access the assets of the jointly sponsored pension plans, or, in the absence of that right, an irrevocable agreement in place at year-end with the joint sponsors of the plans to reduce contributions. The legislation required that a full valuation allowance be recorded against the pension assets of OTPP and OPSEUPP, therefore writing down the value of the assets as at March 31, 2016, to nil.

After significant consultation, including consideration of the recommendations of the Pension Asset Expert Advisory Panel, the Province has confirmed that the accounting for its jointly sponsored pension plans prior to 2015–16 was appropriate and in accordance with Public Sector Accounting Standards. The 2016–17 Consolidated Financial Statements reflect the confirmed accounting treatment and record pension assets on the same basis as used by the Province in preparing its Consolidated Financial Statements prior to 2015–16.

HYDRO ONE/OPG CONSOLIDATION - ACCOUNTING CHANGES

Q. What were the accounting changes made by the Province to consolidate Hydro One and Ontario Power Generation in its Consolidated Financial Statements?

A. Commencing April 1, 2016, the Province is accounting for the results for Hydro One Limited and Ontario Power Generation using the modified equity basis and IFRS (including IFRS 14). Previously, the Province had used Generally Accepted Accounting Principles in the United States (US GAAP), the accounting standards used by these entities in preparing their stand-alone financial statements, in applying the modified equity basis. Historically, the difference between IFRS and US GAAP with respect to the annual deficit of the Province was not material.

This change has resulted in an adjustment to the opening accumulated deficit and net debt of $1.6B. The transitional adjustment is predominantly related to the difference in accounting for Asset Retirement Obligation and pension and other post-employment benefits.

PRESENTATION CHANGE TO BPS ORGANIZATIONS

Q. Why is the Province changing its accounting of its BPS organizations (i.e. hospitals, school boards and colleges)?

A. Province changed the presentation of hospitals, school boards and colleges to present third-party revenues of these organizations with revenues of the Province. Previously third-party revenues earned by these organizations, such as tuition fees, patient fees, research grants and donations, were netted against the respective sectors' expenses. The change was made to fully comply with Public Sector Accounting Standards. For comparability and consistency purposes, the prior years' results and the 2016 Budget have been reclassified to reflect this change in presentation.

Q. What are the impacts of the change on the deficit / debt of the Province and key financial indicators?

The presentation change increases the total revenues and expenses of the Province, but does not affect the annual deficit, net debt or accumulated deficit of the Province. Therefore, there is no change to key financial indicators related to annual deficit, net debt or accumulated deficit.

The Province's interest on debt expenses will increase marginally since the interest expense of BPS entities previously included in sector expenses will now be presented as part of the Province's interest on debt expense. However, since total revenues will be grossed up, the debt charge to total revenue and net debt to total revenue will be favorably impacted.

Total program spending per capita will be higher due to the gross up of program expense.

DEBT

Q. Why did net debt increase by $6.3 billion, from $295.4 billion as at March 31, 2016 to $301.6 billion as at March 31, 2017?

A. Net debt is the province's total debt and other liabilities, less its financial assets, including cash and investments. The increase of $6.3 billion in net debt is primarily due to the deficit and investments in capital assets.

Q. Why did net debt to GDP decrease from 38.7 percent as at March 31, 2016 to 37.8 percent as at March 31, 2017?

A. The decrease in net debt to GDP is mainly due to GDP growing at a faster rate than net debt. The government is committed to eliminating the deficit by 2017-18 and then reducing the net debt to GDP ratio to the pre-recession level of 27 per cent.

Q. How do you explain the $5.7 billion increase in total debt from $327.4 billion at March 31, 2016 to $333.1 billion at March 31, 2017?

A. The increase in $5.7 billion in total debt is due to borrowing for the deficit ($1.0 billion) and the net change in capital assets ($4.7 billion) for 2016-17.

Q. Why has total debt gone up by $5.7 billion while the accumulated deficit has gone up by only $1.5 billion?

A. Total debt represents all borrowing that is used to fund the deficit, as well as to invest in capital assets and cash reserves. Accumulated deficit is the sum of all deficits less surpluses since Confederation.

Total debt increased by $5.7 billion primarily in order to fund the deficit as well as the Province's investments in capital assets, which are not reflected in the deficit.

Q. What is the difference between total debt and net debt?

A. Total debt represents all borrowings without taking into consideration other liabilities and financial assets. Net debt is the province's total debt and other liabilities, less its financial assets. Net debt is the measurement of debt most commonly used by rating agencies and investors in the Province's bonds.

Q. Why has net debt increased by $0.27 billion from the interim estimate in the 2017 Budget, while total debt has increased by $0.7 billion from the interim estimate?

A. Net debt is the province's total debt and other liabilities, less its financial assets.

Net debt increased by $0.27 billion from the interim estimate primarily due to:

- $0.53 billion decrease from the interim deficit, offset by a $0.26 billion impact relating to various other adjustments as evidenced in the audited Consolidated Statement of Net Debt (Ontario Nuclear Funds, Tangible Capital Assets, IFRS transitional impact for OPG and Hydro 1, pension adjustments and other).

Total debt is all of the Province's borrowings. The total amount borrowed has increased by $0.7 billion from the interim estimate primarily due to the increase in short term borrowing.

Q. How will the 2016-17 Public Accounts affect the borrowing requirement for 2017-18?

A. As in past years, any changes in the borrowing requirement arising from Public Accounts will be determined as part of the 2017 Economic Outlook and Fiscal Review.

Q. How much debt was issued in 2016-17, and how much debt matured during the year under the Province's borrowing program?

A: The Province completed an annual borrowing program of $27.0 billion in 2016-17.

Long-term debt maturities per the 2017 Budget were $20.9 billion.

RISK MANAGEMENT

Q. What is your current policy on foreign currency exposure?

A. The Province limits itself to a maximum foreign exchange exposure of 5 per cent of Debt Issued for Provincial Purposes. The foreign currency exposure as at March 31, 2017 was 0.2 per cent.

Q. What is your current policy on controlling interest rate exposure?

A. The Province limits itself to a maximum net interest rate resetting exposure of 35 per cent of Debt Issued for Provincial Purposes. The interest rate exposure as at March 31, 2017 was 11.2 per cent.

INTEREST ON DEBT (IOD)

Q. Why is the Actual IOD for 2016-17 of $11,709 million lower by $703 million than the 2016 Budget (restated) forecast of $12,412 million?

A. IOD is $703 million lower than the forecast in the 2016 Budget primarily because of lower than forecast deficit, lower than forecast interest rates projected in the 2016 Budget and cost-effective debt management.

Note, the 2016 Budget forecast was restated to include the interest on debt of the broader public sector due to the change in accounting reporting policy this fiscal year.

Q. Why is IOD for 2016-17 of $11,709 million higher by $120 million than IOD for 2015-16 of $11,589 million?

A. IOD is higher by $120 million from last year, mainly due to increased borrowing to the fund of the deficit and investment in capital assets and partly offset by the impact of lower interest rates.

DEBT MANAGEMENT

Q. You talk about balancing the budget, but Ontario's debt continues to grow. How is the government paying down the debt?

A. Investors and rating agencies are focused on relative debt measures such as the net debt-to-GDP. Once the budget is balanced, debt will continue to rise by the difference between the annual cash investment in capital and the amortization of these investments. These investments will contribute to the debt rising at a slower rate than the increase in the Province's GDP, over time lowering the net debt-to-GDP ratio to the government's 27 per cent target.

Q. The Auditor General has recommended that the government work toward implementing a long-term debt reduction plan with the target of reducing its net-debt-to-GDP ratio to pre-recession levels of 27%. This year the ratio has risen again. What is the government doing to lower this ratio?

A: The first step in returning to the targeted 27 per cent net debt-to-GDP ratio is to balance the budget. Once the budget is balanced, debt will continue to rise by the difference between the annual cash investment in capital and the amortization of these investments. These investments will contribute to the debt rising at a slower rate than the increase in the Province's GDP, over time lowering the net debt-to-GDP ratio to the government's 27 per cent target.

Q. The FAO has warned that if Ontario's fiscal position deteriorates beyond 2017-18, the four international credit rating agencies could lower Ontario's credit rating, which could lead to higher borrowing costs and more challenging fiscal position. What is the government doing to manage the debt?

A: There is a strong demand for Ontario bonds. Such investor demand has allowed the Province to extend the term of its debt in recent years and lock in low interest rates for a longer period. This term extension reduces the Province's refinancing risks and helps offset the impact of expected higher interest rates on its IOD costs.

The 2010 Budget forecasted that, by 2017–18, the Province would have to spend 11.3 cents of every revenue dollar received on interest. The current forecast per the 2017 Budget is 3.1 cents lower, at 8.2 cents of interest costs for every dollar of revenue. This ratio is lower than it was in the 26 fiscal years from 1991–92 to 2016–17, and is projected to remain low over the forecast horizon to 2019–20.

Q. What if interest rates go up? What effect would higher interest rates have on interest-on-debt?

A: As indicated in Note 3 of the audited consolidated financial statements in the Annual Report, a one per cent increase in interest rates above our budget forecast would result in an increase in interest on debt of approximately $300 million.

Q. What's the difference between net debt and accumulated deficit?

A: Total debt represents all borrowing.

Net debt is all borrowing plus other liabilities, minus the Province's financial assets.

By analogy, think of a family's finances. A mortgage, car loans and lines of credit represent total debt. Total debt partially offset by money the family has in the bank, in RRSPs and in RESPs represents the family's net debt.

Accumulated deficit is the sum of all past Provincial surpluses and deficits, adjusted for changes in accounting rules.

Q. Did you use your reserve fund to pay your fiscal results and pay down the debt?

A The Reserve is an amount included in the fiscal plan to protect the plan against unforeseen adverse changes in the economic outlook as reflected through impacts to Provincial revenue and expenses, not typically balance sheet items like Public Debt.

Actual costs incurred by the government which pertain to the Reserve are recorded as expenses. Any portion of the reserve that remains unutilized at the end of the fiscal year is used to reduce the deficit.

Q. What is the government's annual borrowing program?

A: The amount of money the government borrows varies from year to year and is dependent on the deficit, proposed investments in capital and amount of debt that is maturing. Over the three years 2017-18 to 2019-20, average long term public borrowings are estimated to be $32 billion per annum.

REVENUE

2016-17 Actual Vs. 2016 Budget Plan

Q: Why are revenues $2.2 billion higher your 2016 Budget projection?

A: This is mostly because of stronger-than-expected taxation revenues and higher net incomes from Government Business Enterprises, partially offset by lower Government of Canada Transfers and Other non-tax revenues.

Q: What accounts for the $2.5 billion increase in Taxation revenues from your 2016 Budget projection?

A: Largely due to stronger Corporations Tax revenues resulting from higher-than-projected tax assessments and higher HST and LTT revenues arising from stronger economic growth, partially offset by weaker PIT revenues reflecting weaker-than-expected 2016 tax assessments.

Q: What accounts for the $0.6 billion decrease in Government of Canada Transfers?

A: This decrease mainly reflects lower-than-anticipated funding for infrastructure projects and other federal payments, including transfers to government agencies, hospitals, school boards, and colleges. This decline is partially offset by new funding for infrastructure projects under strategic investment fund for affordable housing and post-secondary education.

Q: What accounts for the $0.5 billion increase in net income of Government Business Enterprises?

A: This increase was mostly attributable to combined higher net income from the Liquor Board of Ontario (LCBO) and Ontario Lottery and Gaming Corporation (OLG).

Higher LCBO net income mainly reflects the sale of its head office lands and higher OLG net income is due mainly to higher-than-anticipated revenue from lottery and casinos businesses.

The increase in OLG and LCBO net income, however, was partially offset by lower net income from OPG reflecting the impact of provincial accounting consolidation adjustment (-$75M) using International Financial Reporting Standards (IFRS) rather than US GAAP, as required in Public Accounts under Public Sector Accounting Standards and lower Hydro One net income reflecting, primarily, impacts from broadening Hydro One provincial ownership from 84% to 70% through the secondary offering.

Q: What accounts for the $0.6 billion increase in fees, donations and other revenues from broader public sector organizations?

A: This increase mainly reflects higher-than-expected revenues from non-provincial sources for hospitals, and higher international fee and other revenues from colleges.

Q: What accounts for the $0.8 billion decrease in Other Non-Tax Revenues?

A: Other Non-tax revenue (NTR) comprises several categories; resulting in offsetting movements of different components of Other NTR compared to the budget forecast.

The overall decline of $0.8 billion in Other Non-Tax revenue is due largely to two main causes:

1. Carbon Allowance Proceeds from the first cap-and-trade program auction held in March 2017 to be recognized in 2017-18 instead of 2016-17 as budgeted; and
2. Lower sales and rentals revenue mainly reflecting gains from the sale of LCBO head office lands reported as income from GBEs in 2016-17 instead of sales and rentals revenue in 2016 Budget.

This decrease is partially offset by higher revenue from Power Supply Contract Recoveries.

Q: Budget 2016 reported revenue projections from carbon allowance proceeds and the first cap-and-trade program auction took place in March 2017. Can you explain why the government would not report the Carbon Allowance Proceeds in 2016-17 fiscal year?

A: The carbon allowance proceeds estimated at the time of the 2016 Budget was based on preliminary design of the cap and trade program and a preliminary forecast for emissions allowances.

In Budget 2017, no proceeds are reported for fiscal 2016-17. While Ontario held its first carbon allowance auction in March 2017 and received $472 million in proceeds, the proceeds from the first auction are being certified, settled and recorded in the 2017-18 fiscal year. Therefore, proceeds from the first auction will be reported in 2017-18 fiscal year instead of in 2016-17 as budgeted.

2016-17 Actual Vs. 2015-16 Actual

Q: What accounts for the $4.6 billion year-over-year increase in revenues?

A: The increase is largely due to higher taxation revenues, federal payments and net income of government enterprises, partially offset by lower Other non-tax revenues.

Q: What accounts for the $2.5 billion year-over-year increase in taxation revenues?

A: The increase in taxation revenue is largely due to stronger CT revenues, higher HST and Land Transfer Tax revenues, partially offset by weaker PIT revenues.

- Stronger CT revenue is mainly a result of higher-than-expected growth in 2016 Tax Assessments and stronger-than-expected harmonized tax assessments for tax years prior to 2015.
- Stronger HST revenue reflects higher Ontario share of the overall HST/ GST revenue pool as the provincial economy has performed better than the rest of Canada in 2015 and 2016.
- Stronger LTT revenues reflect a very strong Ontario housing market.
- PIT weakness is mainly due to weaker-than-expected 2016 tax assessments. Some of the PIT weakness is due to the extent to which tax payers may have shifted income from future years into 2015 to avoid increases in federal tax rate applied above $200,000 of taxable income starting from 2016.

Q: What accounts for the $1.4 billion increase in Government of Canada Transfers?

A: Higher transfers in 2016-17 from federal government mainly reflect higher funding for existing major federal funding programs such as Canada Health Transfer, Canada Social Transfer, and new funding for infrastructure projects under strategic investment fund for affordable housing and post-secondary education. Transfers under these programs are based on existing federal-provincial funding arrangements and funding formulas.

Q: What accounts for the $0.7 billion increase in net Income from Government Business Enterprises?

A: This increase manly reflects higher net income from Ontario Lottery and Gaming Corporation (OLG), and Hydro One Ltd (HOL), and Liquor Control Board of Ontario (LCBO), partially offset by lower net income from the Ontario Power Generation (OPG).

The increase in LCBO net income largely reflects a one-time gain related to the sale of its head office lands. OLG's net income increase was due to continued stronger-than-expected revenue from lottery business and casinos. Higher income from Hydro One mainly reflect lower 2015-16 due to a significant one-time PILs expenses of about $2.8B as a result of the IPO in November 2015 which led to lower consolidated net income. This impact on net income was partially offset by the impact of the Province's $2.4 billion proportionate share of Hydro One's recognition of a deferred tax benefit.

The decrease in OPG's net income is primarily due to relatively stronger 2015-16 results of the nuclear funds invested in financial market.

Q: What accounts for the $0.5 billion increase in fees, donations and other revenues from broader public sector organizations?

A: This increase largely reflects higher international tuition fee and other revenues reported by colleges and higher revenues from non-provincial sources reported by hospitals.

Q: What accounts for the $0.5 billion decrease in Other Non-Tax Revenues?

A: Other non-tax revenue comprises several categories; resulting in offsetting movements of different components of Other NTR compared to the prior year.

The overall decline of $0.5 billion in other NTR largely reflects lower revenue from electricity debt retirement charge (DRC) due to the elimination of DRC for residential consumers, effective January 1, 2016. Other NTR is also lower due to lower sales and rentals and miscellaneous revenue from consolidated government agencies.

2016-17 Actual Vs. 2017 Budget Interim

Q: Why did Taxation revenues decrease by $0.7 billion above your Interim estimate?

A: The decrease in Taxation revenues is largely due to a decline in PIT revenues which more than offset an increase in CT revenues. PIT weakness reflects weaker-than-expected 2016 tax assessments while stronger CT revenues is mainly due to stronger tax assessments for 2015 and prior years, as well as stronger performance of 2016 Tax assessments than assumed in the 2016 Budget.

Q: What accounts for the $0.3 billion decrease in government of Canada transfers?

A: This decrease mainly reflects the absence of funding in 20167-17 for Clean Water and Wastewater projects and lower federal transfers to government agencies, including hospitals, school boards and colleges.

Q: What accounts for the $0.3 billion increase in net Income from Government Business Enterprises?

A: The increase was mostly attributable to higher net incomes from the Ontario Lottery and Gaming Corporation (OLG), and slightly higher net income from the Liquor Board of Ontario (LCBO), and the Ontario Power Generation (OPG). This increase is partially offset by lower net income from Hydro One Ltd.

- OLG's net income increase was due to continued stronger-than-expected revenue from lottery business and casinos.

Q: What accounts for the $0.3billion increase in fees, donations and other revenues from broader public sector organizations?

A: The increase is largely due to higher international tuition fees and other revenues reported by colleges and higher revenues from school boards due to third party revenue being report as federal transfers at interim instead of fees, donations and other revenues as presented in public accounts.

Q: What accounts for the $0.1 billion decease in Other Non-Tax revenues?

A: Lower revenues from other Non-Tax revenue largely reflect lower recoveries of prior-year-expenditures and miscellaneous revenues from various government ministries and consolidated government agencies, partially offset by higher Power Supply Contract Recoveries. The latter is fiscally-neutral being offset by higher Power Supply Contract Costs.

EXPENSES BY SECTOR

HEALTH

Summary of 2016-17 Budget to Actual Variance Analysis

Q. Why is the Health Sector Expense in 2016-17 higher by $239 million than in the Budget Plan?

A. Health sector expense that was $239 million above plan, mainly due to higher than planned spending in hospital operations, physician services, complex malignant hematology and hematopoietic cell transplantation.

The higher expense for hospital operations is mainly due to higher-than-expected spending in cancer treatment, Ontario Drug Programs, specialty psychiatric hospital programs, operating costs and amortization expense.

Summary of Five Year Expense Actual Variance Analysis

Q. Why is the Health Sector Expense $4.8 billion higher in 2016-17 than 2012-13?

A. Health sector expense increased from $51.2 billion in 2012–13 to $56.0 billion in 2016–17, or on average by 2.3 per cent per year. These increases are due in part to increasing demands for health care services from an aging and growing population, along with other factors, such as new drugs and technologies. Increased spending included new investments in home and community care, long term care homes and mental health, and physician services; as well as specialized services such as cancer treatment.

EDUCATION

Summary of 2016-17 Budget to Actual Variance Analysis

Q. Why is the Education sector expense in 2016-17 higher by $36 million than in the Budget Plan?

A. Education sector expense that was $36 million higher-than-planned, mainly due to slightly higher than-projected enrolment.

Q. Why is the Post-secondary and training sector expense in 2016-17 lower by $67 million than in the Budget Plan?

A. Postsecondary and training sector expense that was $67 million lower than-expected, mainly due to lower-than-forecast demand for employment and training programs, offset in part by increased capital transfer payments to universities through additional federal postsecondary infrastructure funding.

Summary of Five Year Expense Actual Variance Analysis

Q. Why did Education sector expense increase from $22.6 billion to $26.6 billion from 2012-13 to 2016-17?

A. Education sector expense increased from $22.6 billion in 2012–13 to $26.6 billion in 2016–17, or on average by 4.1 per cent per year. Expense in 2012–13 included a one-time savings of $1.3 billion from reducing liabilities carried by school boards for sick-day banking and retirement gratuities. Excluding this one-time savings in the 2012–13 results, the education sector expense increased on average by 2.7 per cent per year between 2012–13 and 2016–17. The increase is mainly due to the introduction of full-day kindergarten, which has been made available to every four- and five-year-old in Ontario since September 2014; and other investments, including negotiated labour enhancements and increases in school renewal funding.

Q. Why have expenses in the Postsecondary and Training Sector increased from $9.3 billion in 2012-13 to $10.1 billion in 2016-17?

A. Postsecondary and training sector expense increased from $9.3 billion in 2012–13 to $10.1 billion in 2016–17, or on average by 2.2 per cent per year. The increase is mainly due to continued funding to support enrolment growth in postsecondary institutions, growth in student financial assistance programs and increases in postsecondary capital transfer payments.

CHILDREN'S & SOCIAL SERVICES

Summary of 2016-17 Budget to Actual Variance Analysis

Q. Why is the Children's and social services sector expense in 2016-17 higher by $190 million than in the Budget Plan?

A. Children's and social services sector expense that was $190 million higher than planned, mainly due to additional spending to address demand for the Ontario Disability Support Program and for young adults with complex special needs as well as expanding supports for children and youth with autism.

Summary of Five Year Expense Actual Variance Analysis

Q. Why did the Children's and Social Services sector actual expense grow by $2.3 billion from 2012-13 to 2016-17?

A. Children's and social services sector expense increased from $13.7 billion in 2012–13 to $16.0 billion in 2016–17, or on average by 3.9 per cent per year. The increase primarily reflects social assistance rate increases as well as investments in developmental services, autism and complex special needs programs and the Ontario Child Benefit.

JUSTICE

Summary of 2016-17 Budget to Actual Variance Analysis

Q. Why is the Justice sector expense in 2016-17 higher by $102 million than in the Budget Plan?

A. Justice sector expense was $102 million higher than planned, mainly due to settlements under the Proceedings Against the Crown Act and ensuring wage parity for First Nations police officers.

Summary of Five Year Expense Actual Variance Analysis

Q. Why has Justice Sector Expense increased by $652 million from 2012-13 to 2016-17?

A. Justice sector expense increased from $4.0 billion in 2012–13 to $4.6 billion in 2016–17, or on average by 3.9 per cent per year between 2012–13 and 2016–17. The increase is mainly due to the provincial upload of court security costs from municipalities, compensation in the Ontario Provincial Police and correctional services programs, and improved access to legal aid for low-income Ontarians.

OTHER PROGRAMS

Summary of 2016-17 Budget to Actual Variance Analysis

Q. Why is Other programs expense in 2016-17 higher by $140 million than in the Budget Plan?

A. Other programs expense that was $140 million higher than expected, mainly due to federal and provincial investments in social and affordable housing as well as the Ontario Rebate for Electricity Consumers. As well, there was lower-than-forecast spending due to revised timelines for Building Canada Fund projects and municipal transit projects.

Summary of Five Year Expense Actual Variance Analysis

Q. Why did the Other Programs Sector Actual Expense decrease by $1.2 billion from 2012-13 to 2016-17?

A. Other programs expense decreased by $1.2 billion from $17.9 billion in 2012–13 to $16.7 billion in 2016–17. This decrease is mainly due to the end of time-limited funding related to the Ontario Clean Energy Benefit program and the 2015 Pan/Parapan American Games, as well as the redesign of the Ontario Municipal Partnership Fund program.

ONTARIO TEACHERS' PENSION PLAN EXPENSE AND EMPLOYEE AND PENSIONER BENEFITS

($Millions)	2016-17 Budget	2016-17 Actual	2015-16 Restated Actual	Actual Versus Budget Variance	Year Over Year Variance
Ontario Teachers' Pension Plan	(452)	**(377)**	110	75	487

TEACHER'S PENSION PLAN

Q. Why has the 2016-17 Teachers' Pension Plan expense decreased from expense of $110M from 2015-16 to recovery of $377M in 2016-17?

A. The decrease in Teachers' Pension Plan pension expense is primarily due to increase recognition of investment gains in recent years.

Q. Why has the 2016-17 Teachers' Pension Plan recovery of $377M lower than what had been projected in prior year's Budget of $452M?

A. Actual 2016-17 Teachers' Pension Plan recovery of $377M is lower than recovery of $452M projected in 2016 Budget due lower than expected rate of growth in active members and due to additional adjustment was made this year to eliminate timing differences between provincial contributions and pension plan assets.

($ Millions)	2016-17 Budget	2016-17 Actual	2015-16 Restated Actual	Actual Versus Budget Variance	Year Over Year Variance
Employee and Pensioner Benefits	1,152	**1,002**	987	(150)	15

EMPLOYEE AND PENSIONER BENEFITS

Q. Why is the actual 2016-17 Employee and Pensioner Benefits Expense of $1,002M lower by $150M from what had been projected in prior year's Budget of $1,152M?

A. The 2016-17 actual Employee and Pensioner Benefits expense is $151M lower than originally budget is mainly due to lower WSIB expense than originally forecasted. WSIB had change their estimate of forecast claim administration rate in 2016, which resulted in reduction in expense in 2016-17.

Q. Why is the actual 2016-17 Employee and Pensioner Benefits Expense of $1,002M higher than 2015-16 Employee and Pensioner Benefit Expense of $987M?

A. The increase is due to changes made termination pay and long-term protection benefits to OPSEU members in 2015-16 that did not occur in 2016-17. This increase is partially offset by lower WSIB expense due to change in forecast claim administration rate in 2016 and due to lower pension expense as result of increase recognition of investment gains in recent years.

HEALTHCARE OF ONTARIO PENSION PLAN

Q. Why did the Healthcare of Ontario Pension Plan expense decrease by $155M from $747M in 2015-16 to $592M in 2016-17?

A. The Healthcare of Ontario Pension Plan expense decreased compared to prior year's actual mainly due to an increase in amortization of prior years' experience gains and higher interest earnings as a result of an increase in the plan asset base. Decreases in year over year expenses were partially offset by higher current service costs in 2016 as a result of an increase in active membership in 2015-16.

COLLEGES OF APPLIED ARTS AND TECHNOLOGY PENSION PLAN

Q. Why did the Colleges of Applied Arts and Technology Pension Plan expense increase by $3M from $190M in 2015-16 to $193M in 2016-17?

A. The Colleges of Applied Arts and Technology Pension Plan expense increased compared to prior year's actual, mainly due the $14M write-off of CAATPP net pension plan assets in 2016-17. The plan was not in an asset position as of year-end in 2015-16.

INFRASTRUCTURE

Infrastructure Expenditures Table

Q. Why is the 2016-17 total infrastructure expenditure $3.3 billion lower than planned in the 2016 Budget?

A. Infrastructure expenditure forecasts for each fiscal year are subject to change and reflect a continuum of information that begins with the Budget and ends with Public Accounts. The forecast in Budget 2016 was subject to change as new information became available throughout the year. Infrastructure spending of $12.9 billion, reported in the Public Accounts was $3.3 billion lower than the $16.2 billion set out in the 2016 Budget.

Underspending is mainly due to slower than expected construction progress in the transit sector ($2 billion) and health sector (about $0.5 billion).

Q. Why is the 2016-17 total infrastructure expenditure $1.4 billion lower than estimated in the interim forecast in the 2016 Budget?

A. Infrastructure expenditure forecasts for each fiscal year are subject to change and reflect a continuum of information that begins with the Budget and ends with Public Accounts. The interim forecast was subject to change as new information became available throughout the year. Infrastructure spending of $12.9 billion, including other partner funding, reported in the Public Accounts was $1.4 billion lower than the $14.3 billion set out in the interim forecast in the 2016 Budget due to slower than expected construction progress in the transit sector ($0.5B) and education sector ($0.4B).

Q. Actual infrastructure expenditures are $3.3 billion below the budgeted amounts. Doesn't this mean you should adjust your forecasting practices? Does this mean 2016-17 planned expenditures are overstated?

A. Infrastructure expenditures forecast for each fiscal year are subject to change and reflect a continuum of information that begins with the Budget and ends with the Public Accounts. As new information becomes available throughout the year, the forecasts will likely change (for example, due to updates in construction timelines). In this context it is important to note that infrastructure expenditure forecasts presented as part of Budget or other fiscal updates represents a point in time along this continuum and is based on the best available information at that time.

Given the uncertainties inherent in making projections, it is appropriate for the government to remain prudent and cautious in its forecasting.

The 2016-17 budgeted infrastructure expenditures are a reflection of prudent forecasting practices and the government's ongoing commitment to building and renewing the infrastructure the public relies on.

Q. In 2016-17, actual infrastructure expenditures are $3.3 billion below the budgeted amounts. Is the $3.3 billion earmarked for infrastructure in spite of the fact that it hasn't been spent yet, and will it be carried over to another fiscal to be spent on infrastructure? Or does the underspend mean that the $3.3 billion will be spent on other gov't priorities?

A. The $3.3 billion expenditure decrease is not earmarked for infrastructure investments or carried over to future years. Future year infrastructure investment decisions are made as part of the annual budgeting process.

The resulting fiscal savings associated with this expenditure decrease is allocated in the government's total program expense figures.

Q. Why has amortization cost gone up so significantly between 2012-13 and 2016-17?

A. Amortization recognizes consumption of Tangible Capital Assets. Amortization expense is primarily made up of amortization on existing assets. As these assets reach the end of their useful lives, the associated amortization disappears. This decline is offset by new amortization expense as new infrastructure projects come into service. Between 2012-13 and 2016-17, the province invested $53 billion in capital assets. As these assets have come into service, the corresponding consumption cost (amortization) has gone up. As the government continues to invest in infrastructure, amortization expense will continue to grow.

Q. If we invested $10 billion in publically owned infrastructure assets in 2016-17, why does TCA only go up by $4.8 billion?

A. The net book value of tangible capital assets is calculated as the book value (purchase price) less accumulated amortization. As long as assets are being amortized, growth in the stock of the Province's TCA on a yearly basis will always be less than the yearly investment. Estimated historical cost was used to record existing tangible capital assets if actual cost was unknown when the Province first implemented tangible capital assets accounting. Tangible capital assets, except land, are amortized over the estimated useful lives of the assets on a straight-line basis. Amortization expense of TCA in 2016-17 totalled $5.2 billion.

Q. What are some examples of investments made in between 2012-13 and 2016-17?

A. A few examples of the many infrastructure investments Ontario has made over the last five years include:

- The 407 East project will help relieve congestion and support the efficient movement of people and goods through the eastern Greater Toronto Area and beyond. Phase 1, from Brock Road in Pickering to Harmony Road in Oshawa and Highway 412, opened in Spring 2016.
- The Pan/Parapan American Games Athletes' Village, which was home to about 10,000 athletes and officials during the Games. The village will be transformed into a mixed-use neighbourhood with affordable housing, health services and a residence for George Brown College students.
- The Union Pearson (UP) Express, which began service in 2016, provides a dedicated rail link connecting Toronto Pearson International Airport with Union Station in downtown Toronto in 25 minutes.
- The Right Honourable Herb Gray Parkway in Windsor–Essex, provides an express route to the country's busiest land border crossing.
- The Humber College infrastructure project involved the construction of a new Learning Resource Commons and an academic support and student services facility.
- The Elgin County Courthouse brings together existing court facilities within one location in St. Thomas.
- The New Oakville-Trafalgar Memorial Hospital is a state-of-the-art facility accommodating a full range of hospital services including acute care, complex continuing care and rehabilitation.
- The new Humber River Hospital includes a new facility on a new site in north-western Toronto, one of the most culturally diverse and fastest-growing communities in Canada. The Humber River Hospital offers a comprehensive range of services to support inpatient and outpatient programs.

Q. What kind of infrastructure investments does the Province make which do not contribute to the net book value of tangible capital assets?

A. The Province makes transfers to its non-consolidated partners, such as municipalities and universities, for capital purposes. This spending is recorded in the Infrastructure expenditures table (Table 4) as 'Transfers and Other Infrastructure Expenditures.' 'Other Infrastructure Expenditures' includes expenses such as non-capitalized maintenance costs (e.g., window cleaning of provincially owned buildings). These expenses are included as part of overall infrastructure spending, but do not contribute to the net book value of the Province's tangible capital assets.

CORPORATE AND ELECTRICITY FINANCE DIVISION

Asset Optimization and the Trillium Trust

Q: If the Trillium Trust has been credited with $5.3 billion, why did the government only draw down $260 million in 2016-17?

A: Like most large infrastructure investments, initial spending on projects is focused on planning, design, property acquisition and other activities to get projects construction-ready.

As this preliminary work is completed and construction activity gets underway, further project requirements will be identified that will be funded from the Trillium Trust in subsequent years.

The government is committed to investing the full amount from the Trillium Trust to support transit, transportation and other priority infrastructure. The 2017 Budget included an additional $400 million to be drawn down in 2017-18.

Q: What projects are being funded through the Trillium Trust?

A: The Trillium Trust was drawn down by about $260 million in 2016–17 to help support transit, transportation and priority infrastructure across the Province under the Moving Ontario Forward initiative.

As communicated in the 2017 Budget, the Trillium Trust is supporting initiatives such as GO Regional Express Rail, the Hurontario Light Rail Transit, and the Ontario Community Infrastructure Fund.

Q: If the Province raised about $2 billion in the secondary offering of Hydro One shares in 2016, why was only $538 million credited to the Trillium Trust?

A: The *Trillium Trust Act, 2014*, provides for the dedication of net revenue gains to the Trillium Trust associated with the sale of designated assets to support investments in transit, transportation and priority infrastructure across the Province.

The net revenue gains credited to the Trillium Trust from the secondary offering of Hydro One shares are derived from the gross proceeds, less fees/expenses incurred and less the book value of the shares sold, not including the shares purchased by OPG.

The government will move forward with regulations to credit the Trillium Trust with the net revenue gains from the shares purchased by OPG in the future.

The Province also used the $1.3 billion in proceeds related to the book value of the Hydro One shares sold to pay down the Province's debt and other payables with the Ontario Electricity Financial Corporation (OEFC).

Through the broadening of Hydro One ownership, the Province is meeting its target to generate $4 billion in net revenue gains that, through the Trillium Trust, will be

reinvested in infrastructure under Moving Ontario Forward, and $5 billion to reduce debt.

Q: The Public Accounts show that the government credited the Trillium Trust with a non-cash deferred tax benefit resulting from the Hydro One IPO. How can the government use a non-cash amount to invest in infrastructure?

A: The Trillium Trust Act, 2014, provides for the dedication of net revenue gains to the Trillium Trust.

The deferred tax benefit provided an up-front revenue gain to the Province through consolidation of the Province's portion of Hydro One's net income in the Public Accounts. This also increases the book value of Hydro One's shares and reduces the accounting gains for subsequent sales for a given amount of gross sale proceeds. This does not affect the total cash the Province receives.

By dedicating to the Trillium Trust the net revenue gains to the Province from the deferred tax benefit, the government is ensuring that the full benefit of the value created from broadening Hydro One ownership is dedicated to the Trust to support investments in transit and infrastructure.

Q: Why hasn't the government credited the Trillium Trust with the net revenue gains associated with Hydro One shares purchased by OPG and Hydro One shares purchased by trusts of the Power Workers' Union (PWU) and Society of Energy Professionals (SEP) through Provincial loans?

A: The government has made a regulation that will credit the Trillium Trust with the net revenue gains from the sale of shares to the PWU / SEP trusts that were supported by Provincial loans.

The $48M total gain from the sale of these shares was recorded as deferred revenue in the 2015-16 Public Accounts. As payments of the loan are received, the gain on sale will be recognized annually as revenue in proportion to the payments made.

The annual gain will be reported in the Public Accounts, to clearly indicate the amount to be credited to the Trillium Trust. The first annual gain, as reported in Volume 1 of these 2016-17 Public Accounts is approximately $1.5 million.

The government will move forward with regulations to credit the Trillium Trust with the net revenue gains from the shares purchased by OPG in the future.

Q: If the sale of Hydro One Brampton is now complete and the gain is being reported in Public Accounts, why hasn't the Province credited the Trillium Trust from the sale?

A: The government is committed to dedicating the net proceeds from the sale to the Trillium Trust, and will move forward with a regulation under the Trillium Trust Act.

ELECTRICITY SECTOR

2016–17 vs 2016 Budget Plan [Actual vs Initial Forecast]

Q. Why did the combined net incomes of OPG and Hydro One decrease by $193 million compared to Plan? [Excludes Hydro One Brampton net income variance of $3 million]

A. The $193 million decrease in combined OPG and Hydro One net incomes in 2016-17 from Plan reflects:

- lower-than-projected OPG gross margins, and
- lower Hydro One Limited net income largely due to re-categorization of impacts of broadening Hydro One ownership (~84% ownership to ~70% ownership through the secondary offering) that were previously reflected under Sales and Rentals revenue. The re-categorization is fiscally-neutral.

Q. Why are Electricity payments-in-lieu of taxes $151 million lower than Plan?

A. The variance is primarily due to lower income tax PILs from OPG, partially offset by higher PILs from municipal electrical utilities.

Q. Why are Power Supply Contract Recoveries $195 million higher than projected??

A. The actual amount in 2016-17 is higher largely due to the dismissal of the Ontario Electricity Financial Corporation's (OEFC) appeal of a court decision with respect to the calculation of some escalation rates under legacy former Ontario Hydro power purchase contracts with non-utility generators (NUGs), and the subsequent decline of an application for leave to appeal to the Supreme Court of Canada. As a result of the decisions, OEFC recognized higher power supply contract expenses, fully offset by higher power supply contract recoveries.

2016–17 vs Interim 2016-17 [Actual vs Interim Forecast]

Q. Why did the combined net incomes of OPG and Hydro One increase by $14 million compared to the Interim forecast for 2016-17?

A. The variance is mainly due to stronger-than-projected results for OPG's nuclear funds contribution, partially offset by the lower Hydro One net income.

Q. Can you explain the $99 million variance in Power Supply Contract Recoveries between interim numbers in Budget 2017 and actuals [in Public Accounts]?

A. The variance is largely due to retroactive payments that the Ontario Electricity Financial Corporation (OEFC) made to certain non-utility-generators (NUGs) with legacy former Ontario Hydro power purchase agreement (PPA) contracts with OEFC.

OEFC was required to make these payments following the dismissal by the Supreme Court of Canada of OEFC's application for leave to appeal a judgment of the Court of Appeal of Ontario on a 2015 court decision.

- Ontario Hydro entered into these PPAs in the late 80s and early 90s with private sector generators.
- As the legal continuation of the former Ontario Hydro, OEFC is the counterparty to these contracts.
- Some of the PPAs had escalation clauses under which the global adjustment has an impact on the calculation of the contract rates.
- In 2015, a lower court decision found that OEFC had not properly calculated the price paid for electricity under 12 PPAs, following the enactment of Ontario Regulation 398/10, under which the allocation among electricity consumers of the Global Adjustment, one component of the all-in price of electricity, was changed.
- These 12 PPAs were held by entities that participated in the lawsuit, and they received retroactive payments in 2016, following the Ontario Court of Appeal decision to dismiss OEFC's appeal.
- Several PPA counterparties with similar price provisions that did not participate in the lawsuit entered into Standstill Agreements with OEFC in 2015, after the original court decision. After all avenues of appeal were exhausted, following the 2017 Supreme Court decision, OEFC was required to make retroactive payments to these entities.

2016–17 vs 2015-16 [Actual vs Previous Year]

Q. Why did Hydro One's net income to the Province increase by $263 million compared to the previous fiscal year?

A. Hydro One's net income remains relatively unchanged from 2015-16 to 2016-17. The $263 million increase in Hydro One net income to the Province, however, is largely due to the impacts of the November 2015 Hydro One IPO.

Hydro One 2015-16 net income to the Province, was lower due to IPO-related factors including a one-time PILs expense of about $2.8B, partially offset by the $2.4 billion proportionate impact on the Province's net income from Hydro One's recognition of a deferred tax benefit of about $2.8 billion.

[The impact of the 2015-16 IPO-related adjustments were partly offset by the impact of the secondary share offering in 2016-17 on the Province's share of Hydro One net income.]

Q. Why did OPG's net income decline by $121 million compared to the previous fiscal year?

A. The decrease is due largely to stronger 2015-16 earnings on the nuclear funds on a realized basis.

Q. Why did Electricity Debt Retirement Charge decrease by $238 million compared to the previous fiscal year?

A. The DRC trends downwards primarily due to the elimination of the DRC for residential consumers, effective January 1, 2016. The variance reflects the first full year of residential consumer exemption from the DRC in 2016-17.

Q. Why did Electricity payments-in-lieu of taxes decrease by $2.9 billion from last year?

A. The increase is primarily due to significant one-time PILs related to Hydro One's IPO, including $2.6 billion in departure tax under the PILs regime and about $0.2 billion in additional PILs, as Hydro One exited the PILs regime and started paying corporate income taxes following the IPO. Note that these one-time PIL payments did not have a net effect on the Province's annual deficit, as the additional revenue was offset by an equal reduction in Hydro One's net income, which is consolidated in the Province's financial statements.

Electricity Sector Stranded Debt

Q. What is the status of old Ontario Hydro's stranded debt? When is the Debt Retirement Charge (DRC) expected to end based on the latest available information?

A. The government dedicates the revenues it receives from the electricity sector to the Ontario Electricity Financial Corporation (OEFC). All OEFC revenues, including the Debt Retirement Charge (DRC) paid by electricity consumers, are used to service and retire its debt and other obligations, as provided for under the Electricity Act, 1998.

For the thirteenth consecutive year, the stranded debt has been reduced. The 2016–17 results for the OEFC show an excess of revenue over expense of $1.2 billion. The OEFC has paid down stranded debt by a total of about $18.5 billion from its peak in 2003-04, reducing stranded debt to $3.2 billion as at March 31, 2017.

As part of its commitment to reduce electricity cost pressures, the government has removed the Debt Retirement Charge (DRC) from residential electricity users' bills as of January 1, 2016.

This would save a typical residential user about $70 each year and would mean ending the DRC earlier for these users than otherwise provided for in the Electricity Act, 1998.

As a further step to mitigate electricity cost pressures for non-residential users, the government introduced legislation the Budget Measures Act, 2015, passed in December 2015, to end the DRC for all other users on April 1, 2018, nine months earlier than previously estimated.

Ending the DRC on a legislated fixed date provides certainty to commercial, industrial and other users, and helps them more effectively plan their investment decisions.

Even after the end of the DRC, there would still be stranded debt remaining, to be serviced and paid down by OEFC's other dedicated revenues, such as payments in lieu of taxes and the Gross Revenue Charge.

RESERVE FUND

Q. Why does the government maintain a reserve fund? Last year there were questions raised about the government dipping into its reserve fund to strengthen its results. Did you do that this year?

A. As required under the Fiscal Transparency and Accountability Act, 2004, a reserve is included in the projected surplus/deficit each year to guard against unforeseen revenue and expense changes that could have a negative impact on the Province's fiscal performance.

The 2016 Budget plan included a $1.0 billion reserve for 2016–17. Excluding this reserve, the 2016 Budget projected a deficit of $3.3 billion.

As the reserve is a forecast provision, and the fiscal results for 2016–17 are now finalized, a reserve is no longer included in the Province's financial statements.

The final deficit for the 2016–17 fiscal year is $1.0 billion, a $3.3 billion improvement compared with the 2016 Budget projection of $4.3 billion, which included the reserve.

Q. What is the difference between the contingency fund and the reserve?

A. The contingency fund is an amount of expense that is approved by the Legislative Assembly at the beginning of the year to cover higher spending due to unforeseen events (e.g. fighting forest fires). This approved spending limit is allocated during the year to ministries for their programs and activities.

The reserve is an amount included in the forecast each year to protect the fiscal outlook against unforeseen adverse changes in the Province's revenue and expense – for example, changes in Ontario's economic performance.

RESULTS VERSUS 1ST QUARTER REPORT

Q. Was the government being overly optimistic in its revenue forecast in the 2017-18 First Quarter Finances based on the Annual Report results for the 2016-17 fiscal year?

A. The 2017-18 First Quarter Finances was released before the 2016-17 Annual Report and does not take into account the revised 2016-17 revenue. The government will be updating its revenue outlook in the 2017 Ontario Economic Outlook and Fiscal Review in the fall, which will include the latest 2016-17 results as well as all additional information arriving after the Annual Report.

UNCOLLECTIBLE ACCOUNTS RECEIVABLE

Q. Why are we removing uncollectible accounts receivable owed to the province from the accounting records?

A. Removing uncollectible accounts receivable is required under Public Sector Accounting Standards. After ministries have taken progressive collection activity and determined that all the collection efforts have been exhausted, those accounts with little or no prospect of collectability are removed from current accounting records.

Q. How will the write-offs be shown in the Public Accounts?

A. The ministries' uncollectible accounts receivable are required to be published in a table called "Losses Deleted form the Accounts" in Volume 2 of the 2016/17 Public Accounts.

Q. Is removing uncollectible accounts receivable from the records the same as forgiving the debt?

A. No. If debt is forgiven, the province cannot pursue or collect on the debt in the future. However, having an account written-off does not eliminate the debtor's legal obligation to pay the liability. The province may attempt to collect the money owed if the debtor's circumstances change in the future. In 2016/17, $17.3M was collected on accounts previously written off.

Q. How do you determine when a debt is uncollectible?

A. In the vast majority of cases, a debt may become uncollectible when a corporation or individual debtor becomes insolvent or goes bankrupt; or when an individual debtor dies, is imprisoned for a long term or cannot be located for a considerable period of time.

It may take several years of progressive collection actions before an uncollectible account receivable is submitted for removal from the accounting records.

Q. How does this affect the province's bottom line?

A. There is no impact on the deficit/surplus in the year as a result of removing uncollectible accounts from the accounting records.

The fiscal impact incurred in the year when the account was initially identified as being doubtful. At that time, a bad debt expense was recorded.

Q. What is the amount of uncollectible accounts receivable this year?

A. The total uncollectible accounts receivable for 2016/17 is $267.2 million.

Q. What amount of unpaid taxes is included in the Ministry of Finance's total?

A. The total for tax-related amounts is $134.2 million, which represents 97% of MOF's submission of $138.8 million and is attributable to bankrupt or insolvent tax payers.

Q. How does the amount of uncollectible accounts receivable compare with total accounts receivable?

A. This year's uncollectible accounts receivable represent about 2.4% (4.0% in 2015/16) of the province's accounts receivable.

Q. What steps is the government taking to reduce future write-off of accounts receivable?

A. Common progressive collection tools include the use of private collection agencies and the Canada Revenue Agency (CRA) Refund Setoff Program, in addition to any specific legislated tools provided in the appropriate legislation (e.g., clawbacks, liens, director's liability). The centralization of collections within MOF helps ensure a standard, OPS-wide use of such tools.

Key Messages

- The 2016-17 Public Accounts of Ontario show that Ontario's deficit is $991 million.

- Ontario has beaten its deficit target eight years in a row.

- Ontario's plan is working. By responsibly managing the Province's finances, Ontario balanced the budget in 2017-18, and will maintain a balanced budget for the future. A balanced budget means more funding for the programs and services people and families rely on most.

- As promised in the 2016 Budget, Ontario grew its economy while transforming healthcare, building vital infrastructure and investing in people's talents and skills.

- To help Ontarians better understand their government's finances, new digital tools have been developed that present the Public Accounts data in innovative, visual formats. These tools make Ontario's finances easier to understand, access, and use.

- Presenting the Public Accounts data in innovative, visual formats is part of Ontario's commitment to Open Government.

- The government will continue to build on its track record of responsible fiscal management.

DRAFT

Top Media Qs&As

Top media Qs&As updated September 5, 2017

1. **The Auditor General has issued a qualified opinion for the second year in a row. Is this a sign of fiscal mismanagement?**

   We continue to move forward and present the Province's finances fairly and accurately and in accordance with Canadian Public Sector Accounting Board standards. Ontario has a strong track record of producing high-quality financial reports on a timely basis. The Auditor General's qualified opinion is based on a different interpretation of Public Sector Accounting Board standards for net pension assets and recognition of market accounts.

   Last year there was a disagreement among the Province's professional accounting staff and the Auditor General's Office on the appropriate application of Public Sector Accounting Board standards regarding pension accounting. As a result, the Pension Asset Expert Advisory Panel was established to deliver independent advice and recommendations on the issue to the Province.

   The independent panel members concluded the Province's share of the net pension assets of both the Ontario Teachers' Pension Plan and the Ontario Public Service Employees' Union Pension Plan should be recognized in Ontario's financial statements.

   After significant deliberation, including consideration of the recommendations of the panel, Ontario confirmed that the accounting for these plans prior to 2015-16 was appropriate, and are prepared in accordance with public sector accounting standards for pension asset accounting. Further, EY provided additional analysis and concluded that no valuation allowance was required for either plan as of March 31, 2017. The 2016-17 financial statements include these pension assets, and we continue to apply the accounting treatment of pension assets that the Province has used consistently since 2001. In addition, the 2015-16 financial statements were restated to include these assets.

   This year the Independent Electricity System Operator (IESO) began recognizing its market accounts' assets (amounts due from power distributors) and liabilities (amounts due to power producers) in their financial results. IESO has chosen to recognize these markets accounts on its books for transparency reasons, as it better reflects the financial position of the IESO-administered markets at year-end. This change was supported by the IESO's audit committee, its independent external auditor, and finally by the Office of the Provincial Controller. This change also has no impact to the province's annual deficit, net debt or accumulated deficit.

   This accounting is consistent with the presentation used previously by the Ontario Power Authority (which was merged with the IESO on January 1, 2015)

DRAFT

in its financial statements, which was not subject to qualification from the Office of the Auditor General at that time.

2. The Auditor General is critical of the IESO accounting changes. Are Ontario's accounting changes inappropriate?

No. The Independent Electricity System Operator (IESO) began recognizing its market accounts' assets (amounts due from power distributors) and liabilities (amounts due to power producers) in their financial results. IESO has chosen to recognize these markets accounts on its books for transparency reasons, as it better reflects its net financial position on behalf of the IESO-administered markets at year-end.

This accounting change was accepted by the IESO's independent external auditor, which issued an unqualified, or "clean," audit opinion. These accounting changes were highlighted in the IESO's annual report which was published online in March 2017.

Further, this accounting is consistent with the presentation used previously by the Ontario Power Authority (which was merged with the IESO on January 1, 2015) in its financial statements, which was not subject to qualification from the Office of the Auditor General at that time.

This change has no impact to the province's annual deficit, net debt or accumulated deficit.

This accounting change has been supported by the professional accounting staff of the Office of the Provincial Controller.

We will continue to work with the Auditor General to build on the government's track record of responsible fiscal management and high quality financial reporting.

If pressed on rate-regulated accounting:

The IESO made the decision to adopt rate-regulated accounting because it better reflects the economic substance of certain types of expenses that may not be directly recovered through the normal revenue requirement model.

The IESO, like Hydro One and Ontario Power Generation (OPG), is regulated by the Ontario Energy Board. The IESO adopted rate-regulated accounting for its year ended December 31, 2016. The impact on the financial statements of the Province is a decrease of $82 million in the 2016-17 opening accumulated deficit and an increase in the 2016-17 annual deficit by $24 million.

DRAFT

This accounting change was accepted by the IESO's independent external auditor, which issued an unqualified, or "clean," audit opinion. These accounting changes were highlighted in the IESO's annual report which was published online in March 2017.

3. Why are you still fighting with the Auditor General over pension accounting?

In preparing last year's Public Accounts, the Province's professional accounting staff and the Auditor General's Office engaged in discussions about the appropriate application of Public Sector Accounting Board standards regarding pension accounting for the Province's jointly sponsored pension plans.

As a result, the Pension Asset Expert Advisory Panel was established to deliver independent advice and recommendations to the Province on the issue. The independent panel members concluded the Province's share of the net pension assets of both the Ontario Teachers' Pension Plan and the Ontario Public Service Employees' Union Pension Plan should be recognized in Ontario's financial statements.

After significant deliberation, including consideration of the recommendations of the panel, Ontario confirmed that the accounting for these plans prior to 2015-16 was appropriate. Further, EY provided additional analysis and concluded that no valuation allowance was required for either plan. The 2016-17 financial statements include these pension assets, and we continue to apply the accounting treatment of pension assets that the Province has used consistently since 2001. In addition, the 2015-16 results were restated to include these assets.

We will continue to work with the Auditor General to build on the government's track record of responsible fiscal management and high quality financial reporting.

4. How were you able to beat your deficit target in 2016-17?

In 2016-17 we maintained our focus on responsible fiscal management and investing in the right priorities. We are making progress on our economic plan by making investments to spur growth, transforming government and responsibly managing spending.

Average annual growth of total government spending has been held to 2.3 per cent for the past five years. As a result of growth in revenue that exceeded growth in program expense, as well as lower than forecast interest on debt, the deficit is $3.3 billion lower than projected in the 2016 Budget. It is also $0.5 billion lower than the interim projection in the 2017 Budget.

DRAFT

This is the eighth year in a row the government has beaten its deficit target.

5. The government is claiming the deficit has been reduced to $1B deficit for 2016-17 and that the budget will be balanced over the next three years. However, the AG is saying that the deficit for 2016-17 was more than $2B due to the treatment of pension assets, and the FAO has stated that the government's revenue forecast is more than $1B too "optimistic". Isn't the government really hiding a $3-4B deficit instead of a balanced budget?

There is no hidden deficit. In the *2010 Budget*, the government committed to eliminating the deficit and returning to a balanced budget by 2017-18. Through targeted, measured and fiscally responsible decisions, Ontario has restored its fiscal and economic strength.

Today we are confirming that the 2016-17 deficit of $1 billion is $3.3 billion lower than projected in the 2016 Budget and $0.5 billion lower than the interim projection in the 2017 Ontario Budget. This marks the eighth year in a row that Ontario has beaten its deficit target.

The success in eliminating the deficit is supported by a strong track record in managing spending -- having held average growth in spending to 2.3 per cent over the past five years.

In addition, over the last several years, the government's investments to strengthen economic growth have paid off. Ontario is a leader in economic growth, with our real GDP growth having outpaced that of all the G7 countries over the last three years. The strengthened economy has resulted in increased revenue for the Province – in fact, over the past two fiscal years, revenue has come in higher than projected, supporting Ontario's return to a balanced budget.

It is also important to point out that private sector forecasters have revised upward their expectations for the Ontario economy since the 2017 Budget, reflecting the growing strength of the Ontario economy. In fact, the current average private sector forecast for this year and next is also above what the Financial Accountability Office of Ontario projected in their Budget commentary. The government is also taking steps to improve tax fairness and address the underground economy in order to ensure the integrity of the Province's revenues.

Finally, Ontario's fiscal plan incorporates prudence in the form of a reserve to protect the fiscal outlook against unforeseen adverse changes in the Province's revenue and expense. The reserve has been set at $0.6 billion in 2017-18, $0.6 billion in 2018-19, and $0.9 billion in 2019-20.

Balancing the budget means that the government can invest more in the programs and services that people rely on.

DRAFT

6. The FAO's commentary released on September 6, 2017 says that Ontario's debt reduction commitment is based on unrealistic assumptions. How do you respond?

The government made a commitment in the 2010 Budget to balance and eliminate the deficit by 2017-18. Since then, the government has reduced the deficit from its peak in 2009-10 of $19.3 billion, to a projected $1.5 billion in 2016-17 and a projected balanced Budget in 2017. Furthermore, the government consistently overachieved on its deficit targets and forecasts for net debt-to-GDP. The government's track record therefore provides evidence of fiscal discipline and the likelihood of achieving on-going balanced budgets in the future.

With respect to capital spending, approximately 61 per cent of the increase in net debt from 2008–09 to 2016–17 was due to the deficit, with net investments in capital assets responsible for most of the balance. Infrastructure expenditures do not therefore have as large an impact on net debt as that of a balanced budget.

Moreover, additional capital investment in the latter half of the next decade will stimulate the economy. A recent report from the Centre for Spatial Economics confirms that over the long term, real GDP in Ontario increases by $6 for every dollar of public infrastructure spending. This stimulus in GDP may help to offset the effects of an aging population and slower growth in the labour force and maintain the 4% average GDP growth required to bring net debt to GDP down to 27% in 2029-30.

7. Interest on debt is still massive and the Bank of Canada is expected to raise interest rates again this fall, and announced it is raising its target for the overnight rate on September 6, 2017. How is the government preparing for this and will this affect your ability to maintain a balanced budget?

The increase in the Bank of Canada's policy rate reflects the growing strength of the Canadian and Ontario economy. Ontario's economy remains strong and has continued to grow and create jobs in an uncertain global environment.

Since 2014, Ontario has been an economic growth leader in Canada and private-sector economists expect Ontario to remain one of the fastest growing provinces over the next two years.

Ontario's economic growth exceeded that of all G7 countries over the 2014 to 2016 period.

A quarter-point increase in the policy rate is not likely to have a material impact on the Ontario economic outlook. The 2017 Ontario Budget anticipated that interest rates would rise modestly.

DRAFT

An increase in the Bank of Canada's overnight interest rate does not automatically translate into an increase in the Province's borrowing cost which is also impacted by other factors including revisions to the US Federal Funds Rate.

As noted in the 2017 Budget, the Province's average cost of 10 year borrowing in 2017-18 is forecast to be 3 per cent. The impact of a 100 basis point increase in borrowing rates is forecast to be approximately $300 million. The interest rate forecast used in the Budget was prudent, and anticipated that long-term interest rates would rise as we progressed through the fiscal year.

8. You claim to have balanced the budget yet you keep piling on more debt. How do you plan to pay down the debt?

We maintain a target of reducing the net debt-to-GDP ratio to its pre-recession level of 27 per cent, with current projections showing that this will be achieved by 2029-30. In the balanced 2017 Budget, the government is setting an interim target to reduce the net debt-to-GDP ratio to 35 per cent by 2023–24.

In a balanced budget environment, debt would be incurred primarily to invest in capital assets. We are making progress on our economic plan by making investments to spur growth, transforming government and responsibly managing spending – including addressing the underground economy and maintaining tax fairness. Our strategic investments in infrastructure provide economic benefits: a recent study by the Centre for Spatial Economics (C4SE) finds that, over the long term, real GDP in Ontario will rise up to $6 on average per one dollar of public infrastructure spending.

These strategic investments are creating jobs and contributing to economic growth. Ontario's GDP grew one per cent in the first quarter of 2017, outperforming that of Canada, the U.S. and all other G7 countries.

9. Spending for hospitals, school boards and colleges seems to be much higher in Public Accounts than in the 2017 Budget. Why is this?

To increase transparency, this year we have made a simple change to how we are reporting third party revenues for broader public sector organizations.

For the first time, Public Accounts are presenting third party revenues for hospitals, school boards and colleges with provincial revenue. Third-party revenues earned by these organizations, such as tuition fees, patient fees, research grants and donations, are no longer netted against the respective sectors' expenses, as they were in prior years for Public Accounts and the 2017 Budget.

This is simply a presentation change for Public Accounts. It is fiscally neutral, i.e. there is no change to the annual deficit, net debt or accumulated deficit. To

ensure consistency in year-to-year and to Budget comparisons, we are reclassifying all previous years and the 2016 Budget. The 2017 Fall Economic Statement and 2018 Budget will also reflect this presentation change.

The Auditor General supports the Province's decision to adopt this presentation change. It is consistent with the accounting principles for governments issued by the Public Sector Accounting Board, and the reporting practices of other senior Canadian governments.

10. The Public Accounts show a drawdown of $260 million from the Trillium Trust. What did you spend the money on?

The government began allocating proceeds from the Trillium Trust in 2016-17 to help support infrastructure initiatives such as GO Regional Express Rail (GO RER), the Hurontario Light Rail Transit (LRT) and the Ontario Community Infrastructure Fund (OCIF).

We expect the Trillium Trust to be drawn down by about $400 million in 2017–18.

Our strategic investments in infrastructure provide economic benefits: a recent study by the Centre for Spatial Economics (C4SE) finds that, over the long term, real GDP in Ontario will rise up to $6 on average per one dollar of public infrastructure spending.

11. Does a qualified opinion impact the Province's credit rating?

The Province's financial results show that the government has once again beaten its annual deficit targets. In April 2017, we delivered our first balanced budget since the global recession and we are on track to do so again next year and the year after.

The rating agencies will assess whether the underlying factors that lead to a qualified opinion directly affect the creditworthiness of the Province. However, there were no credit rating implications in 2016 when the Province received a qualified audit opinion on its 2015-16 Public Accounts. Qualified opinions by the Auditor Generals of British Columbia and Quebec have been made in their respective provinces in the past, with no negative impacts on their province's credit ratings.

12. The Auditor General has some serious concerns about how you're accounting for Ontario's Fair Hydro Plan. What do you say to this?

The accounting for Ontario's Fair Hydro Plan is a separate and distinct issue to the Public Accounts for 2016-17 that we're here to talk about today.

DRAFT

However, under Ontario's Fair Hydro Plan accounting structure, the Province's net debt and annual surplus/deficit won't be negatively impacted since all costs are to be recovered through future rates.

The Ministry of Energy, Finance and Treasury Board Secretariat continue to work closely with Ontario Power Generation (OPG), the Independent Electricity System Operator (IESO) and external advisors to address the outstanding accounting related considerations.

The Auditor General has also been briefed on the government's refinancing structure.

For further questions, I direct you to contact my colleague at the Ministry of Energy.

13. Program spending increased again this year. Why?

Program spending in 2016-17 was $141.7 billion, down $0.1 billion from the 2016 Budget. Average annual growth of total government spending has been held to 2.3 per cent for the past five years.

Healthcare represents the largest share of government program spending at $56 billion. Transformation efforts continue to make the sector more effective and sustainable while continuing to improve access for patients, especially the increased demands from an aging and growing population. The government has invested in new drugs, technologies, community and home care, long term care homes, mental health, physicians' services and specialized cancer treatments.

Other areas of government investment include:

- $26.6 billion in education, mainly due to the introduction of full-day kindergarten;
- $16 billion in children's and social services, due to increased annual social assistance rates as well as investments in developmental services, autism and complex special needs programs, as well as the Ontario Child Benefit;
- $10.1 billion in post-secondary and training, due to enrolment growth in colleges and universities along with increased student financial assistance programs and increases in capital funding for post-secondary institutions;
- $4.6 billion in justice sector expenses due mainly to the upload of court security costs from municipalities, compensation for the Ontario Provincial Police and correctional services programs, as well as improved access to legal aid.

DRAFT

Media Qs&As – Comprehensive List

General Public Accounts Information

1. **What is Public Accounts?**

   The Public Accounts of Ontario is a key accountability and transparency document in the government's financial cycle. It's a look back that compares Ontario's actual performance to what was planned in the Budget.

   The Public Accounts present the financial statements of the Province, provide financial highlights of the past fiscal year, and report on performance in priority areas.

   Public Accounts is audited by the Auditor General and is typically released in the fall of the following fiscal year.

2. **Why can't I find some organizations' financial statements in the Public Accounts?**

   Volume 2 contains the individual financial statements of government organizations, business enterprises and other financial statements. At the time of print, some organizations may not have had time to provide their financial statements. When this happens, we post them to Ontario.ca/publicaccounts as soon as they're available. The omission has no impact on the financial results reported in Public Accounts.

Accounting Changes

3. **Why have you restated prior year's financial statements?**

   When preparing the 2016-17 Public Accounts, Ontario's professional accounting staff adopted accounting changes to further enhance accountability and transparency.

   These changes include:
   a. **Accounting for hospitals, school boards and colleges** - third-party revenues (i.e. tuition fees, patient fees, research grants and donations) are now reported together with provincial revenue. This change increases transparency and is supported by the Auditor General.
   b. **Accounting for energy sector government business enterprises** - the financial results of investments in Hydro One and Ontario Power Generation (OPG) now reflect International Financial Reporting Standards. Previously, these results were reported using U.S. Generally Accepted Accounting Principles. This change was made to meet Public Sector Accounting Board standards and is supported by the Auditor General.

DRAFT

c. **Accounting for the Independent Electricity System Operator (IESO)** - the IESO has adopted rate-regulated accounting, and is now recognizing its market accounts assets and liabilities in its financial results.
d. **Accounting for net pension assets of jointly sponsored pension plans** - the Province is reporting net pension assets for jointly sponsored pension plans. This is in line with Public Sector Accounting Board standards and the recommendations of the independent Pension Asset Expert Advisory Panel.

- ## Broader Public Sector Accounting Presentation Change

4. Spending for hospitals, school boards and colleges seems to be much higher in Public Accounts than in the 2017 Budget. Why is this?
(Top Media Question - updated September 5, 2017)

To increase transparency, this year we have made a simple change to how we are reporting third party revenues for broader public sector organizations.

For the first time, Public Accounts are presenting third party revenues for hospitals, school boards and colleges with provincial revenue. Third party revenues earned by these organizations, such as tuition fees, patient fees, research grants and donations, are no longer netted against the respective sectors' expenses, as they were in prior years for Public Accounts and the 2017 Budget.

This is simply a presentation change for Public Accounts. It is fiscally neutral, i.e. there is no change to the annual deficit, net debt or accumulated deficit. To ensure consistency in year-to-year and to Budget comparisons, we are reclassifying all previous years and the 2016 Budget. The 2017 Fall Economic Statement and 2018 Budget will also reflect this presentation change.

The Auditor General supports the Province's decision to adopt this presentation change. It is consistent with the accounting principles for governments issued by the Public Sector Accounting Board, and the reporting practices of other senior Canadian governments.

5. What is consolidated reporting?

This presentation change may also be referred to as line-by-line consolidated reporting. This type of reporting is a more transparent way of presenting the details in the Broader Public Sector (BPS).

This change means that both expenses and revenues will be shown as separate items (on a gross basis), as opposed to being reported together (on a net basis).This affects what you see in the reporting breakdown of figures for hospitals, school boards, colleges and universities. However this has no impact to the annual deficit, net debt or accumulated deficit.

DRAFT

Line-by-line consolidated reporting is in keeping with Public Sector Accounting Board standards and will mean that our presentation for Public Accounts is consistent with other governments across Canada. The Auditor General is supportive of this change.

- ## Ontario Power Generation and Hydro One Accounting Change

6. Why is there a change to the accounting for Ontario Power Generation (OPG) and Hydro One?

In the 2016-17 Public Accounts, the financial results of Ontario's investments in Hydro One and Ontario Power Generation (OPG) now reflect International Financial Reporting Standards. Previously, these results were reported using U.S. Generally Accepted Accounting Principles. This change was made to meet Public Sector Accounting Board requirements and is supported by the Auditor General.

7. What is the impact of this change to the Province's bottom line?

This change has resulted in an adjustment to the opening accumulated deficit and net debt of $1,163 million, of which $683 million relates to transition to IFRS. The impact of this change to the annual deficit is not material to the Province in 2016-17.

- ## Pension Asset Accounting

See section: Auditor General – Qualified Opinion for more information.

- ## Independent Electricity System Operator (IESO) Accounting Changes

8. What accounting changes were made by the Independent Electricity System Operator (IESO)? Why?

The Independent Electricity System Operator (IESO) began recognizing its market accounts' assets (amounts due from power distributors) and liabilities (amounts due to power producers) in their financial results. IESO has chosen to recognize these markets accounts on its books for transparency reasons, as it better reflects its net financial position on behalf of the IESO-administered markets at year-end.

The IESO also made the decision to adopt rate-regulated accounting because it better reflects the economic substance of certain types of expenses that may not be directly recovered through the normal revenue requirement model.

This accounting change was accepted by the IESO's independent external auditor, which issued an unqualified, or "clean," audit opinion. These accounting

DRAFT

changes were highlighted in the IESO's 2016 annual report which was published online in March 2017.

See section: Auditor General – Qualified Opinion for more information.

Auditor General – Qualified Opinion

9. The Auditor General has issued a qualified opinion for the second year in a row. Is this a sign of fiscal mismanagement?
(Top Media Question - updated September 5, 2017)

We continue to move forward and present the Province's finances fairly and accurately and in accordance with Canadian Public Sector Accounting Board standards. Ontario has a strong track record of producing high-quality financial reports on a timely basis. The Auditor General's qualified opinion is based on a different interpretation of Public Sector Accounting Board standards for net pension assets and recognition of market accounts.

Last year there was a disagreement among the Province's professional accounting staff and the Auditor General's Office on the appropriate application of Public Sector Accounting Board standards regarding pension accounting. As a result, the Pension Asset Expert Advisory Panel was established to deliver independent advice and recommendations on the issue to the Province.

The independent panel members concluded the Province's share of the net pension assets of both the Ontario Teachers' Pension Plan and the Ontario Public Service Employees' Union Pension Plan should be recognized in Ontario's financial statements.

After significant deliberation, including consideration of the recommendations of the panel, Ontario confirmed that the accounting for these plans prior to 2015-16 was appropriate, and are prepared in accordance with public sector accounting standards for pension asset accounting. Further, EY provided additional analysis and concluded that no valuation allowance was required for either plan as of March 31, 2017. The 2016-17 financial statements include these pension assets, and we continue to apply the accounting treatment of pension assets that the Province has used consistently since 2001. In addition, the 2015-16 financial statements were restated to include these assets.

This year the Independent Electricity System Operator (IESO) began recognizing its market accounts' assets (amounts due from power distributors) and liabilities (amounts due to power producers) in their financial results. IESO has chosen to recognize these markets accounts on its books for transparency reasons, as it better reflects the financial position of the IESO-administered markets at year-end. This change was supported by the IESO's audit committee, its independent external auditor, and finally by the Office of the Provincial Controller. This change

also has no impact to the province's annual deficit, net debt or accumulated deficit.

This accounting is consistent with the presentation used previously by the Ontario Power Authority (which was merged with the IESO on January 1, 2015) in its financial statements, which was not subject to qualification from the Office of the Auditor General at that time.

10. This year it's IESO accounting. Last year it was pension assets. Before that it was government advertising. Why are you still fighting with the Auditor General? This seems to be a pattern of behavior where you try and undermine her authority.

Our government has the utmost respect for all independent officers of the legislature, and we value the important perspective they bring.

• Pension Asset Accounting

11. Why are you still fighting with the Auditor General over pension accounting?
(Top Media Question - updated September 5, 2017)

In preparing last year's Public Accounts, the Province's professional accounting staff and the Auditor General's Office engaged in discussions about the appropriate application of Public Sector Accounting Board standards regarding pension accounting for the Province's jointly sponsored pension plans.

As a result, the Pension Asset Expert Advisory Panel was established to deliver independent advice and recommendations to the Province on the issue. The independent panel members concluded the Province's share of the net pension assets of both the Ontario Teachers' Pension Plan and the Ontario Public Service Employees' Union Pension Plan should be recognized in Ontario's financial statements.

After significant deliberation, including consideration of the recommendations of the panel, Ontario confirmed that the accounting for these plans prior to 2015-16 was appropriate. Further, EY provided additional analysis and concluded that no valuation allowance was required for either plan. The 2016-17 financial statements include these pension assets, and we continue to apply the accounting treatment of pension assets that the Province has used consistently since 2001. In addition, the 2015-16 results were restated to include these assets.

We will continue to work with the Auditor General to build on the government's track record of responsible fiscal management and high quality financial reporting.

DRAFT

12. What was the panel's rationale for its decision?

The Pension Asset Expert Advisory Panel recommended that the Province's share of the net pension assets of both the Ontario Teachers' Pension Plan (OTPP) and the Ontario Public Service Employees Union Pension Plan (OPSEUPP) should be recognized as an asset in Ontario's financial statements.

The panel said that:

- Recognizing the asset will provide a faithful representation of the Province's financial position.
- The accounting surplus in the plan has a future economic benefit.
- The government controls access to that accounting surplus.
- The accounting surplus exists as the result of past transactions and events.
- It would be misleading not to recognize the Province's share of the assets in Public Accounts.

In addition, the panel concluded that the government will be able to benefit from the full amount of each net pension asset, and as a result, no reduction in the value is necessary.

EY provided additional analysis and concluded that no valuation allowance was required for either plan, confirming the independent panel's recommendation.

13. The Auditor General was critical of the panel's authority and credibility. What's your response to this?

The panel members are all highly-qualified experts in their field. They were carefully chosen for their expertise in the areas of jointly sponsored pension plans, actuarial modelling for pension plans and public sector accounting standards:

- **Patricia O'Malley (panel chair)** is a Chartered Professional Accountant. She has been a member of the Canadian Accounting Standards Oversight Council since 2013, was Chair of the Canadian Accounting Standards Board and was a member of the International Accounting Standards Board from 2001 to 2007.
- **Murray Gold** is a leading legal practitioner and senior pension and benefits partner at Koskie Minsky LLP.

DRAFT

- **Uros Karadzic** is a senior actuary at Ernst and Young's People Advisory Services Reward practice, which includes pension, benefit and compensation consulting.
- **Paul Martin** is a Chartered Professional Accountant, Comptroller with the Government of New Brunswick and previously a partner with the national accounting firm of Grant Thornton LLP.

The panel was completely independent from government, and arrived at its advice based on its own analysis of this complex issue.

14. How much did you pay the panel members? Do you think that money was justified?

The total cost of the panel was $221,113. This included compensation and travel expenses for the four panelists, as well as procurement. These rates are consistent with the Agencies and Appointments Directive, which specified up to $2,000 per day for appointees with unique and specialized expertise, or urgent issues affecting government priorities and requiring intense time commitments over a short period of time.

The panel members have expertise in the areas of jointly sponsored pension plan governance, actuarial modelling for pension plans and public sector accounting standards, and provided independent advice on how to move forward with how Public Sector Accounting Board standards should be applied to current and potential future net pension assets.

• IESO Accounting

15. The Auditor General is critical of the IESO accounting changes. Are Ontario's accounting changes inappropriate?
(Top Media Question - updated September 5, 2017)

No. The Independent Electricity System Operator (IESO) began recognizing its market accounts' assets (amounts due from power distributors) and liabilities (amounts due to power producers) in their financial results. IESO has chosen to recognize these markets accounts on its books for transparency reasons, as it better reflects its net financial position on behalf of the IESO-administered markets at year-end.

This accounting change was accepted by the IESO's independent external auditor, which issued an unqualified, or "clean," audit opinion. These accounting

DRAFT

changes were highlighted in the IESO's annual report which was published online in March 2017.

Further, this accounting is consistent with the presentation used previously by the Ontario Power Authority (which was merged with the IESO on January 1, 2015) in its financial statements, which was not subject to qualification from the Office of the Auditor General at that time.

This change has no impact to the province's annual deficit, net debt or accumulated deficit.

This accounting change has been supported by the professional accounting staff of the Office of the Provincial Controller.

We will continue to work with the Auditor General to build on the government's track record of responsible fiscal management and high quality financial reporting.

If pressed on rate-regulated accounting:

The IESO made the decision to adopt rate-regulated accounting because it better reflects the economic substance of certain types of expenses that may not be directly recovered through the normal revenue requirement model.

The IESO, like Hydro One and Ontario Power Generation (OPG), is regulated by the Ontario Energy Board. The IESO adopted rate-regulated accounting for its year ended December 31, 2016. The impact on the financial statements of the Province is a decrease of $82 million in the 2016-17 opening accumulated deficit and an increase in the 2016-17 annual deficit by $24 million.

This accounting change was accepted by the IESO's independent external auditor, which issued an unqualified, or "clean," audit opinion. These accounting changes were highlighted in the IESO's annual report which was published online in March 2017.

16. What is the Auditor General's argument with these changes?

The Auditor General claims that the change to the IESO's accounting policy to recognize market account assets and liabilities is inappropriate, as these market accounts are not assets and liabilities of the Province.

However, the IESO has chosen to recognize these markets accounts on its books for transparency reasons, as it better reflects its net financial position on behalf of the IESO-administered markets at year-end.

DRAFT

This accounting change was accepted by the IESO's independent external auditor, which issued an unqualified, or "clean," audit opinion. These accounting changes were highlighted in the IESO's annual report which was published online in March 2017.

Further, this accounting is consistent with the presentation used previously by the Ontario Power Authority (which was merged with the IESO on January 1, 2015) in its financial statements, which was not subject to qualification from the Office of the Auditor General at that time.

This change has no impact to the province's annual deficit, net debt or accumulated deficit.

This accounting change has been supported by the professional accounting staff of the Office of the Provincial Controller.

We will continue to work with the Auditor General to build on the government's track record of responsible fiscal management and high quality financial reporting.

17. Between IESO and the pension issue from last year it seems like you just make up new rules when you don't like what you hear from the Auditor General. How do you respond to that?

We continue to move forward and present the Province's finances fairly and accurately and in accordance with Canadian Public Sector Accounting Board standards. Ontario has a strong track record of producing high-quality financial reports on a timely basis. The Auditor General's qualified opinion is based on a different interpretation of Public Sector Accounting Board standards for net pension assets and recognition of market accounts.

In many cases the application of accounting standards requires professional judgment. The Province's professionally accredited accounting staff are highly qualified practitioners, with a high degree of expertise in their field. A difference of opinion on the interpretation of accounting standards is not unique to this situation.

18. Will you strike an expert panel to study to IESO issue, like you did last year for pension accounting?

We have no plans to establish a panel at this time.

The changes made to the IESO accounting were accepted by the IESO's audit committee, board of directors, and their independent external auditor. These changes were outlined in the IESO's 2016 annual report, which was published in March 2017. The Office of the Provincial Controller supports these changes.

19. Your reasons for change are yet again at odds with the Auditor General. Why should we believe you, when she is an independent officer of the legislature?

The Auditor General's responsibility is to conduct an independent audit and provide her audit opinion based on her own professional judgment. A difference of opinion on the interpretation of accounting standards is not unique to this situation.

- **Ontario's Fair Hydro Plan Accounting (Other Matters)**

20. The Auditor General alleges the government withheld information from her on the accounting treatment for Ontario's Fair Hydro Plan. Why would she say that?

First, I would note that the accounting for Ontario's Fair Hydro Plan is separate and distinct from the Public Accounts we're here to talk about today.

Having said that, we respectfully disagree with the Auditor General's claim that the government withheld information from her or her office.

In March, the Ministry of Energy provided the Auditor General's Office with Cabinet documents from February and March related to Ontario's Fair Hydro Plan. These documents together provided a comprehensive overview of all elements of the plan that were known at that time, including accounting memos from both the Independent Electricity System Operator (IESO) and Ontario Power Generation (OPG).

On April 19, 2017, senior ministry officials from Treasury Board Secretariat, Finance and Energy met with the Auditor General and her staff to provide a briefing on Ontario's Fair Hydro Plan.

Since that April 19 briefing, ministry officials from Treasury Board Secretariat have met with the Auditor General several times.

21. The Auditor General has some serious concerns about how you're accounting for Ontario's Fair Hydro Plan. What do you say to this?
(Top Media Question - updated September 5, 2017)

The accounting for Ontario's Fair Hydro Plan is a separate and distinct issue to the Public Accounts for 2016-17 that we're here to talk about today.

However, under Ontario's Fair Hydro Plan accounting structure, the Province's net debt and annual surplus/deficit won't be negatively impacted since all costs are to be recovered through future rates.

DRAFT

The Ministry of Energy, Finance and Treasury Board Secretariat continue to work closely with Ontario Power Generation (OPG), the Independent Electricity System Operator (IESO) and external advisors to address the outstanding accounting related considerations.

The Auditor General has also been briefed on the government's refinancing structure.

For further questions, I direct you to contact my colleague at the Ministry of Energy.

22. Why did you set up Ontario's Fair Hydro Plan accounting in this way?

Again, I would note that the accounting for Ontario's Fair Hydro Plan is separate and distinct from the Public Accounts we're here to talk about today.

However, in order to meet the needs of users, including the legislature and the public, for accountability in government reporting and decision making, it is essential that public sector financial statements reflect the economic substance of the government's activities.

All of the agreements necessary for the Global Adjustment (GA) Refinancing are not yet complete. The final accounting for the GA Refinancing will be completed once all of the elements are complete.

In analyzing the appropriate accounting treatment for the GA refinancing component of Ontario's Fair Hydro Plan on the province's consolidated financial statements in 2017-18 and forward, the province considered authoritative guidance issued by the Public Sector Accounting Board, as well as the accounting assessments of the Independent Electricity System Operator (IESO) and Ontario Power Generation (OPG) management, including the accounting opinions of their external auditors.

The complexity and unique structure of the GA Refinancing structure requires the use of professional judgment to ensure that key financial reporting objectives of transparency and accountability are best served.

Any further questions about Ontario's Fair Hydro Plan should be directed to my colleague the Minister of Energy.

DRAFT

Ontario's Fiscal Position

- **Balanced Budget**

23. The government is claiming the deficit has been reduced to $1B deficit for 2016-17 and that the budget will be balanced over the next three years. However, the AG is saying that the deficit for 2016-17 was more than $2B due to the treatment of pension assets, and the FAO has stated that the government's revenue forecast is more than $1B too "optimistic". Isn't the government really hiding a $3-4B deficit instead of a balanced budget? *(Top Media Question - updated September 5, 2017)*

There is no hidden deficit. In the *2010 Budget*, the government committed to eliminating the deficit and returning to a balanced budget by 2017-18. Through targeted, measured and fiscally responsible decisions, Ontario has restored its fiscal and economic strength.

Today we are confirming that the 2016-17 deficit of $1 billion is $3.3 billion lower than projected in the 2016 Budget and $0.5 billion lower than the interim projection in the 2017 Ontario Budget. This marks the eighth year in a row that Ontario has beaten its deficit target.

The success in eliminating the deficit is supported by a strong track record in managing spending -- having held average growth in spending to 2.3 per cent over the past five years.

In addition, over the last several years, the government's investments to strengthen economic growth have paid off. Ontario is a leader in economic growth, with our real GDP growth having outpaced that of all the G7 countries over the last three years. The strengthened economy has resulted in increased revenue for the Province – in fact, over the past two fiscal years, revenue has come in higher than projected, supporting Ontario's return to a balanced budget.

It is also important to point out that private sector forecasters have revised upward their expectations for the Ontario economy since the 2017 Budget, reflecting the growing strength of the Ontario economy. In fact, the current average private sector forecast for this year and next is also above what the Financial Accountability Office of Ontario projected in their Budget commentary. The government is also taking steps to improve tax fairness and address the underground economy in order to ensure the integrity of the Province's revenues.

Finally, Ontario's fiscal plan incorporates prudence in the form of a reserve to protect the fiscal outlook against unforeseen adverse changes in the Province's revenue and expense. The reserve has been set at $0.6 billion in 2017-18, $0.6 billion in 2018-19, and $0.9 billion in 2019-20.

DRAFT

Balancing the budget means that the government can invest more in the programs and services that people rely on.

24. How were you able to beat your deficit target in 2016-17?
(Top Media Question - updated September 5, 2017)

In 2016-17 we maintained our focus on responsible fiscal management and investing in the right priorities. We are making progress on our economic plan by making investments to spur growth, transforming government and responsibly managing spending.

Average annual growth of total government spending has been held to 2.3 per cent for the past five years. As a result of growth in revenue that exceeded growth in program expense, as well as lower than forecast interest on debt, the deficit is $3.3 billion lower than projected in the 2016 Budget. It is also $0.5 billion lower than the interim projection in the 2017 Budget.

This is the eighth year in a row the government has beaten its deficit target.

25. You beat your deficit targets again. Aren't you just padding your estimates so you can beat them at the end of the day?

No. The government's fiscal projections are based on the best economic and fiscal information available at the time. They reflect a realistic and responsible plan to manage the Province's resources, while still protecting the vital services that Ontarians rely on.

Beating our deficit targets helps to keep interest on debt at a manageable level and protects future generations from rising interest costs, which could otherwise crowd out spending on government priorities.

The government recognizes that a fiscally sound approach to managing the Province's finances will provide the foundation for the long-term well-being and prosperity of Ontarians, and protect the public services that Ontarians rely on.

• Debt

26. You claim to have balanced the budget yet you keep piling on more debt. How do you plan to pay down the debt?
(Top Media Question - updated September 5, 2017)

We maintain a target of reducing the net debt-to-GDP ratio to its pre-recession level of 27 per cent, with current projections showing that this will be achieved by

2029-30. In the balanced 2017 Budget, the government is setting an interim target to reduce the net debt-to-GDP ratio to 35 per cent by 2023–24.

In a balanced budget environment, debt would be incurred primarily to invest in capital assets. We are making progress on our economic plan by making investments to spur growth, transforming government and responsibly managing spending – including addressing the underground economy and maintaining tax fairness. Our strategic investments in infrastructure provide economic benefits: a recent study by the Centre for Spatial Economics (C4SE) finds that, over the long term, real GDP in Ontario will rise up to $6 on average per one dollar of public infrastructure spending.

These strategic investments are creating jobs and contributing to economic growth. Ontario's GDP grew one per cent in the first quarter of 2017, outperforming that of Canada, the U.S. and all other G7 countries.

27. Interest on debt is still massive and the Bank of Canada is expected to raise interest rates again this fall, and announced it is raising its target for the overnight rate on September 6, 2017. How is the government preparing for this and will this affect your ability to maintain a balanced budget? *(Top Media Question - updated September 6, 2017)*

The increase in the Bank of Canada's policy rate reflects the growing strength of the Canadian and Ontario economy. Ontario's economy remains strong and has continued to grow and create jobs in an uncertain global environment.

Since 2014, Ontario has been an economic growth leader in Canada and private sector economists expect Ontario to remain one of the fastest growing provinces over the next two years.

Ontario's economic growth exceeded that of all G7 countries over the 2014 to 2016 period.

A quarter-point increase in the policy rate is not likely to have a material impact on the Ontario economic outlook. The 2017 Ontario Budget anticipated that interest rates would rise modestly.

An increase in the Bank of Canada's overnight interest rate does not automatically translate into an increase in the Province's borrowing cost which is also impacted by other factors including revisions to the US Federal Funds Rate.

DRAFT

As noted in the 2017 Budget, the Province's average cost of 10 year borrowing in 2017-18 is forecast to be 3 per cent. The impact of a 100 basis point increase in borrowing rates is forecast to be approximately $300 million. The interest rate forecast used in the Budget was prudent, and anticipated that long-term interest rates would rise as we progressed through the fiscal year.

28. The government is paying an enormous amount of money just paying the interest on its debt. How are you addressing this?

Interest on debt expense was $11.7 billion, which was $0.7 billion below the plan of $12.4 billion, due mainly to lower-than-forecast interest rates, lower-than-forecast deficit and cost-effective borrowing and debt management.

While interest costs have grown in absolute terms, they have steadily fallen as a percentage of Ontario's revenues since 2013-14. The interest on debt-to-revenue ratio is now at its lowest level from the peak of 15.5 per cent in 1999-2000.

Interest on debt-to-revenue is forecast to have been 8.4 per cent for 2016–17. This ratio is the lowest it has been in 25 years. It is forecast to decline to 8.2 per cent in 2017-18.

We incurred increases to Ontario's debt during the recession for two reasons: to finance deficits and invest in capital assets. However we are making progress on our economic plan by making investments to spur growth, and are managing spending responsibly.

These strategic investments are creating jobs and contributing to economic growth. Ontario's GDP grew one per cent in the first quarter of 2017, outperforming that of Canada, the U.S. and all other G7 countries.

Our fiscal plan is working. Ontario is on track to balance the budget this year while making investments in the programs and services people and families rely on most.

29. You are spending more on interest payments for the debt than what you spend on post-secondary education. In fact, the payments equal more than 20 per cent of the health budget. How can you justify this?

Our priority following the 2008-09 recession was to achieve balance. In the first

DRAFT

few years after the recession, the increase in net debt was primarily due to the deficit.

Approximately 61 per cent of the increase in net debt from 2008–09 to 2016–17 was due to the deficit, with net investments in capital assets responsible for the balance.

With balanced budgets, from 2017-18 onwards, the increase in net debt will be exclusively from investments in capital assets. In addition, the government is investing in public infrastructure which is vital to growing the economy and ensuring a high quality of life, whether people live in large, small, urban, northern or rural Ontario communities. Every $1 spent on public infrastructure can increase GDP by up to $6 in the long term.The balanced budget is giving the government the fiscal flexibility to do more to help people and spur economic growth.

- **Financial Accountability Office of Ontario**

30. The Financial Accountability Office (FAO) just released a commentary saying your balanced budget is in question because it's based on optimistic revenue forecasts. Will you decrease spending or increase taxes to make up for this potential shortfall?

The government stands by the revenue forecast presented in the 2017 Budget. As recently presented in the 2017-18 First Quarter Finances, revenues are on track and the government is continuing to project a balanced budget in 2017-Taxation revenue growth projected in the 2017 Budget aligns with growth actually experienced in recent years.

The government builds prudence into its economic forecast. Since the time of the 2017 Budget, private sector forecasters have revised up their economic growth projections for Ontario over the 2017-20 period, reflecting the strength in the Ontario economy.

31. The FAO's commentary released on September 6, 2017 says that Ontario's debt reduction commitment is based on unrealistic assumptions. How do you respond?
(Top Media Question - updated September 6, 2017)

The government made a commitment in the 2010 Budget to balance and eliminate the deficit by 2017-18. Since then, the government has reduced the deficit from its peak in 2009-10 of $19.3 billion, to a projected $1.5 billion in 2016-17 and a projected balanced Budget in 2017. Furthermore, the government consistently overachieved on its deficit targets and forecasts for net debt-to-GDP.

DRAFT

The government's track record therefore provides evidence of fiscal discipline and the likelihood of achieving on-going balanced budgets in the future.

With respect to capital spending, approximately 61 per cent of the increase in net debt from 2008–09 to 2016–17 was due to the deficit, with net investments in capital assets responsible for most of the balance. Infrastructure expenditures do not therefore have as large an impact on net debt as that of a balanced budget.

Moreover, additional capital investment in the latter half of the next decade will stimulate the economy. A recent report from the Centre for Spatial Economics confirms that over the long term, real GDP in Ontario increases by $6 for every dollar of public infrastructure spending. This stimulus in GDP may help to offset the effects of an aging population and slower growth in the labour force and maintain the 4% average GDP growth required to bring net debt to GDP down to 27% in 2029-30.

- **The Fraser Institute**

32. How do you respond to the August 3, 2017 Fraser Institute report that criticizes the Province's plan to reduce the debt burden as "wishful thinking"?

The rate of increase of the Province's net debt is anticipated to be below that of its GDP, due to a combination of balanced budgets and appropriate levels of capital investments. These investments also contribute to the Province's GDP growth as affirmed by the Centre for Spatial Economics which reported recently that, over the long term, real GDP in Ontario increases by $6 for every dollar of public infrastructure spending.

In later years, the rate of increase in net debt is expected to be lower than that of GDP due a combination of balanced budgets and investments in capital assets that will contribute to GDP growth, allowing the government to realize its net debt to GDP target of 27 per cent by 2029-30.

- **Most Indebted Subsovereign, Future Generations**

33. This government has a spending problem and Ontario is now the most indebted sub-sovereign borrower in the world. Why should we trust your plan?

With a growing economy and a balanced budget, this is the time to make investments in key services that matter most to people, like health care and education, while at the same time lowering costs for necessities like electricity and child care.

Ontario is on track to balance the budget this year while making investments in the programs and services people and families rely on most. This year and last,

Ontario's debt-to-GDP ratio has improved from 39.6 per cent in the 2016 budget, to a forecasted 37.8 per cent in 2016-17, and it continues to track downward.

Our plan is also helping to grow the economy, with the largest investment in public infrastructure in the Province's history — more than $190 billion over 13 years starting in 2014-15. New schools, hospitals and transit projects are improving quality of life and creating jobs in communities across Ontario.

Supporting ongoing economic growth is a top priority and we are encouraged by the influx of many innovative and dynamic businesses that are investing across the Province, bringing good jobs, higher wages and greater prosperity to our communities. We will continue to implement our balanced plan to build a healthy and sustainable economy for all of Ontario.

34. Some say you are unfairly placing the burden of debt on future generations through things like Ontario's Fair Hydro Plan and your failure to address the Province's growing debt. How do you respond?

With a growing economy and a balanced budget, this is the time to make investments in key services that matter most to people, like health care and education, while at the same time lowering costs for necessities like electricity and child care.

Over the last decade the government has rebuilt our electricity transmission and distribution grid, invested in clean generation, and closed the last coal-fired power plant. Prices have increased because our electricity system is being transformed – more than $50 billion has been invested to modernize the system.

We have heard from people across the Province that the price of electricity has risen too quickly, which is why our plan will ensure costs are shared more fairly over the years ahead.

As Ontario invested in renewing our electricity system, the government invested in many new generating facilities, most of which operate under 20-year contracts. Some of these generators are expected to provide value to the electricity system beyond their contract lives. There is an opportunity to recognize the long-term benefit of these assets to the electricity system and "bring forward" that benefit for ratepayers today by deferring some of the current costs.

To relieve the current burden on ratepayers and share costs more fairly, a portion of the Global Adjustment (GA) is being refinanced. Refinancing the GA is providing significant and immediate rate relief by spreading the cost of electricity investments over the expected lifecycle of the infrastructure that has been built.

DRAFT

In the early years, a portion of the costs covered by the GA is being refinanced to reduce pressure on today's electricity ratepayers. In later years, the cost of refinancing will be recovered from ratepayers.

With respect to debt, we remain committed to reducing the net debt-to-GDP ratio to its pre-recession level of 27 per cent, with current projections showing that this will be achieved by 2029-30. In the balanced 2017 Budget, the government is setting an interim target to reduce the net debt-to-GDP ratio to 35 per cent by 2023–24.

- **Revenue**

35. How much money did you bring in in 2016-17?

Provincial revenues increased by $4.6 billion, or 3.4 per cent over the previous year. This increase was due in part to nominal GDP growth of 4.6 per cent in 2016, which contributed to higher taxation revenues. There were also higher transfers from the federal government – including the Canada Health Transfer, Canada Social Transfer and funding for infrastructure projects.

Taxation revenues were $2.5 billion, or 2.8 per cent higher-than-projected in the 2016 budget. Corporate tax revenues were $2.8 billion higher. This was due to stronger-than-expected revenues from tax returns. Sales tax revenues were $0.8 billion higher, due to Ontario's larger share of the HST, and the strong housing market contributed $0.7 billion more in land transfer tax revenues.

Transfers from the Government of Canada were $0.6 billion lower than the 2016 Budget forecast. This was mainly due to lower-than-expected funding for infrastructure projects and other payments for government agencies, hospitals, school boards and colleges. This decline was partially offset by new transfers under the strategic investment fund for affordable housing and post-secondary education and training.

Fees, donations and other revenues from broader public sector organizations were $0.6 billion higher than the budget forecast, mainly due to higher-than-expected revenues from non-provincial sources for hospitals, and higher international tuition fees.

- **Asset Sales**

36. One-time asset sales are a way to bring in money, but isn't this burning the furniture to heat the house when it comes to a long-term revenue strategy?

DRAFT

We are committed to dedicate net revenue gains from the sale of designated assets to the Trillium Trust, which is helping to fund transit, transportation and other key infrastructure projects across Ontario.

The government has already credited the Trillium Trust with $1.35 billion from the sale of Ontario's shares in General Motors along with $3.96 billion from the sale of Hydro One shares and the sale of the LCBO head office lands. In addition, the sale of the government's interest in Hydro One Brampton Networks Inc. resulted in a gain on sale recognized in 2016-17 of $109 million. The government has committed to crediting the net proceeds from the sale of Hydro One Brampton to the Trillium Trust.

See section: Trillium Trust for more information.

- **Transfers from the Federal Government**

37. Transfers from the federal government were lower than expected. Aren't you banking on another entity to get your fiscal house in order?

The Government of Ontario, like all Provinces in Canada, receives funding from the federal government. These transfers are done on an ongoing basis to help provide programs and services.

Transfers from the Government of Canada were lower than the 2016 Budget forecast by $0.6 billion. This was mainly due to lower-than-expected funding for infrastructure projects and other federal payments including transfers to government agencies, hospitals, school boards and colleges. This decline was partially offset by new transfers under the strategic investment fund for affordable housing and post-secondary education and training.

- **Revenue from International Tuition Fees**

38. International tuition fees helped the Province's bottom line but isn't this on the backs of young people who want to learn here?

Ontario is focused on attracting top talent from around the world that will enhance student learning, increase economic viability, and support growth of a highly skilled workforce.

International education enriches the academic, social and cultural life of our colleges and universities, from classrooms to research laboratories, and creates stronger ties between Ontario and other global jurisdictions.

DRAFT

Ontario welcomes the talent and energy that international students bring to the province. Many international students are future Canadians, who choose to stay and build on their experiences and education here in Ontario.

Over the past five years, international student enrolment in Ontario grew by 87% overall, 70% in public universities and 118% in public colleges.

In 2016-17, there were 98,685 full-time international students from more than 175 countries studying at publicly-assisted institutions in Ontario. This represented a 16% growth over the last academic year.

The province is developing a comprehensive and sustainable international strategy that builds on the strengths of our postsecondary system, reinforces our reputation for quality, and makes Ontario a welcoming destination and partner of choice.

For further questions, I direct you to contact my colleague at the Ministry of Advanced Education and Skills Development.

- **Program Spending**

39. Program spending increased again this year. Why?
(Top Media Question - updated September 5, 2017)

Program spending in 2016-17 was $141.7 billion, down $0.1 billion from the 2016 Budget. Average annual growth of total government spending has been held to 2.3 per cent for the past five years.

Healthcare represents the largest share of government program spending at $56 billion. Transformation efforts continue to make the sector more effective and sustainable while continuing to improve access for patients, especially the increased demands from an aging and growing population. The government has invested in new drugs, technologies, community and home care, long term care homes, mental health, physicians' services and specialized cancer treatments.

Other areas of government investment include:

- $26.6 billion in education, mainly due to the introduction of full-day kindergarten;
- $16 billion in children's and social services, due to increased annual social assistance rates as well as investments in developmental services, autism and complex special needs programs, as well as the Ontario Child Benefit;

DRAFT

- $10.1 billion in post-secondary and training, due to enrolment growth in colleges and universities along with increased student financial assistance programs and increases in capital funding for post-secondary institutions;
- $4.6 billion in justice sector expenses due mainly to the upload of court security costs from municipalities, compensation for the Ontario Provincial Police and correctional services programs, as well as improved access to legal aid.

40. You finally balanced the budget and now you're spending more on expensive election promises like free pharmacare for children and youth 24 and younger. Why aren't you paying down debt instead?

With a growing economy and a balanced budget, this is the time to make investments in key services that matter most to people, like health care and education, while at the same time lowering costs for necessities like electricity and child care.

Providing more access to vital services isn't just an investment in our future. It's the right thing to do.

• Credit Rating

41. Does a qualified opinion impact the Province's credit rating?
(Top Media Question - updated September 5, 2017)

The Province's financial results show that the government has once again beaten its annual deficit targets. In April 2017, we delivered our first balanced budget since the global recession and we are on track to do so again next year and the year after.

The rating agencies will assess whether the underlying factors that lead to a qualified opinion directly affect the creditworthiness of the Province. However, there were no credit rating implications in 2016 when the Province received a qualified audit opinion on its 2015-16 Public Accounts. Qualified opinions by the Auditor Generals of British Columbia and Quebec have been made in their respective provinces in the past, with no negative impacts on their province's credit ratings.

42. What do you say to the credit rating agencies that have highlighted provincial debt as an area of credit weakness?

As recently presented in the 2017-18 First Quarter Finances, we continue to project a balanced budget in 2017-18, unchanged from the 2017 Budget.

DRAFT

With stronger-than-expected first quarter economic growth and the government's responsible approach to fiscal management, we can continue to invest in programs and services that help people across the Province.

Ontario's economy continues to grow at a steady pace despite an uncertain global environment. Most key economic indicators show that growth continues in the second quarter. Our plan is working.

We remain committed to reducing the net debt-to-GDP ratio to its pre-recession level of 27 per cent, with current projections showing that this will be achieved by 2029-30. In the balanced 2017 Budget, the government is setting an interim target to reduce the net debt-to-GDP ratio to 35 per cent by 2023–24.

43. What is your credit rating as it stands today?

Following the release of the 2017 Budget, all four rating agencies have confirmed Ontario's long-term credit ratings. This reflects rating agencies' confidence in our government's plan to grow Ontario's economy and create jobs for Ontarians.

If pressed:
Ontario's ratings are:

	Long-Term	Short-Term
Moody's:	Aa2	P-1
DBRS:	AA (low)	R-1 (mid)
Fitch:	AA-	F1+
Standard and Poor's:	A+	A-1

- **C.D. Howe Institute**

44. Why does the C.D. Howe Institute weigh in on the government's fiscal situation?

The C.D. Howe Institute is an independent not-for-profit research institute that supports economically sound public policies. It is widely considered to be Canada's most influential think tank and is a trusted source of essential policy intelligence, distinguished by research that is nonpartisan, evidence-based and subject to definitive expert review.

Each year the C.D. Howe Institute produces a report on its assessment of the fiscal planning and reporting practices of senior Canadian governments. The institute observes that financial reports are a vital tool for understanding

DRAFT

governments' plans and activities.

We consider reports like the C.D. Howe's Fiscal Accountability of Canada's Senior Governments important because they are written by independent experts. Studies such as this are essential for governments to continuously assess and improve their financial planning and reporting.

Trillium Trust

45. What is the Trillium Trust?

The Trillium Trust provides for the dedication of prescribed net revenue gains from the sale of designated assets to support key infrastructure priorities, such as roads, bridges and public transit.

The Trillium Trust Act, 2014 requires that all expenditures made under the act to support infrastructure investments are to be reflected in the Public Accounts.

Designated assets include the Province's shares of Hydro One and Hydro One Brampton, as well as the LCBO head office lands, the OPG head office building and the Lakeview lands.

The Trillium Trust was drawn down by about $260 million in 2016-17. We expect the Trillium Trust to be drawn down by about $400 million in 2017–18.

The Ministry of Finance shows spending out of the Trillium Trust, with amounts to ministries delivering projects that have received support from the trust reflected in this year's Public Accounts. These figures are included in Volume 1 of Public Accounts.

The funding will help support initiatives, such as GO Regional Express Rail (GO RER), the Hurontario Light Rail Transit (LRT) and the Ontario Community Infrastructure Fund (OCIF).

46. The Public Accounts show a drawdown of $260 million from the Trillium Trust. What did you spend the money on?
(Top Media Question - updated September 5, 2017)

The government began allocating proceeds from the Trillium Trust in 2016-17 to help support infrastructure initiatives such as GO Regional Express Rail (GO RER), the Hurontario Light Rail Transit (LRT) and the Ontario Community Infrastructure Fund (OCIF).

DRAFT

We expect the Trillium Trust to be drawn down by about $400 million in 2017–18.

Our strategic investments in infrastructure provide economic benefits: a recent study by the Centre for Spatial Economics (C4SE) finds that, over the long term, real GDP in Ontario will rise up to $6 on average per one dollar of public infrastructure spending.

47. How much is currently in the trust?

The balance of the Trillium Trust as of March 31, 2017, was $5.05 billion.

This reflects an opening balance of $1.35 billion; $3.96 billion credited to the Trillium Trust in 2016–17 from the sale of Hydro One Limited shares and the sale of the LCBO head office lands; and $0.26 billion in expenditures from the Trillium Trust in 2016–17 toward investments in infrastructure.

Like most large infrastructure investments, initial spending on projects is focused on planning, design, property acquisition and other activities to get projects construction-ready.

As this preliminary work is completed and construction activity gets underway, further project requirements will be identified that will be funded from the Trillium Trust in subsequent years.

The government is committed to investing the full amount from the Trillium Trust to support transit, transportation and other priority infrastructure.

48. If the Province raised about $2 billion in the secondary offering of Hydro One shares in 2016, why was only $538 million credited to the Trillium Trust?

The *Trillium Trust Act, 2014*, provides for the dedication of net revenue gains to the Trillium Trust associated with the sale of designated assets to support investments in transit, transportation and priority infrastructure across the Province.

The net revenue gains credited to the Trillium Trust from the secondary offering of Hydro One shares are derived from the gross proceeds, less fees/expenses incurred and less the book value of the shares sold, not including the shares purchased by OPG.

DRAFT

The government will move forward with regulations to credit the Trillium Trust with the net revenue gains from the shares purchased by OPG in the future.

The Province also used the $1.3 billion in proceeds related to the book value of the Hydro One shares sold to pay down the Province's debt and other payables with the Ontario Electricity Financial Corporation (OEFC).

Through the broadening of Hydro One ownership, the Province is meeting its target to generate $4 billion in net revenue gains that, through the Trillium Trust, will be reinvested in infrastructure under Moving Ontario Forward, and $5 billion to reduce debt.

Digital Tools/Open Government

49. What is the government doing to be transparent in regards to Public Accounts?

As part of our commitment to openness and transparency, we are using data visualization tools to help Ontarians better understand the Province's finances.

This year's tools are available at Ontario.ca/publicaccounts and include:

- Interactive data visualization tools that graphically present details on asset and expense information contained in Volume 1;
- Fully sortable data tables that summarize the financial statements from Volume 2, and the detailed scheduled payments from Volume 3; and
- Downloadable open data sets that provide the five-year trend for government revenue by source, revenue by sector, and statement of operations. This year's total number of open data downloads is 11, up from five last year.

These tools help make the Province's finances easier to understand, access and use, and are part of Ontario's commitment to creating a more open and transparent government.

50. How does this help the average Ontarian?

The more information we can provide to Ontarians about where their tax money is going, the better. That is why the government is providing new digital tools online to help Ontarians better understand their government's finances.

DRAFT

For example, our downloadable data sets provide a more accessible view of the information in Public Accounts. Volume 2 itself is three parts and over 1,200 pages. Instead of having to review those 1,200 pages, now that same information is available in one downloadable and sortable table.

Presenting the Public Accounts data in innovative, visual formats is part of Ontario's commitment to to creating a more open and transparent government.

51. What are Open Data sets?

The Ontario government is committed to leading the most open, transparent, and accountable government in the country. Public access to information and opening up government data supports this commitment. Ontario is the first province in Canada to adopt the International Open Data Charter.

The International Open Data Charter contains a set of six principles that will build on Ontario's open by default data policy to increase civic participation, openness and accountability.

NEWS

Treasury Board Secretariat

Ontario Releases 2016-17 Public Accounts

Province Balancing the Budget This Year, Helping Families Get Ahead

September 7, 2017

NEWS

Today the province released the Public Accounts of Ontario, showing that Ontario's deficit for last year was $991 million—$3.3 billion lower than projected in the 2016 Budget and $0.5 billion lower than the interim projection in the 2017 Budget.

This is a result of growth in revenue that exceeded growth in program expense, and lower than forecast interest on debt.

Ontario is on track to balance the budget this year, in 2017-18, while making investments in the programs and services people and families rely on most.

Other highlights from this year's Public Accounts include:

- Economic growth, with a 2.7 per cent increase in real gross domestic product (GDP), up from 2.2 per cent projected in the 2016 Budget
- Total revenue of $140.7 billion, up $2.2 billion from the 2016 Budget projection
- Total spending of $141.7 billion, down $0.1 billion from the 2016 Budget projection
- Interest on debt of $11.7 billion, down $0.7 billion from the 2016 Budget projection

Once again, the government is providing new digital tools online to help people better understand their government's finances. Presenting the Public Accounts data in innovative visual formats, and releasing more data through Ontario's Open Data Catalogue, is part of Ontario's commitment to Open Government.

Responsibly managing the province's finances is part of our plan to create jobs, grow our economy and help people in their everyday lives.

QUOTES

"For eight years in a row, we have beaten our annual deficit target. We will continue to build on our track record of responsible fiscal management by balancing the budget in 2017-18. At the end of the day, a balanced budget means more funding for the programs and services people and families rely on most."
— Liz Sandals, President of the Treasury Board

"Ontario is on track to balance the budget in 2017-18. We have once again exceeded our fiscal targets by reducing the deficit by $3.3 billion lower than originally projected in the 2016 Budget. Thanks to the hard work of the people of Ontario, we are leading Canada in economic growth while investing in programs like free tuition and free pharmacare for children and youth. With a balanced 2017 Budget, we will continue to build a stronger, healthier Ontario."
— Charles Sousa, Minister of Finance

… /2

QUICK FACTS

- Ontario’s annual deficit fell from a peak of $19.3 billion in 2009-10 to $991 million in 2016-17.
- Average annual growth of total government spending has been held to 2.3 per cent over the past five years.
- Over the last three years, Ontario’s GDP growth has outpaced that of all G7 countries.
- The 2016-17 Public Accounts compare Ontario’s actual financial performance to what was planned in the 2016 Budget.
- Treasury Board Secretariat prepares Public Accounts in accordance with independently established standards set out by the Public Sector Accounting Board. Ontario’s Auditor General reviews the Public Accounts against these standards and provides an opinion on the province’s adherence to them.
- The province's professional accounting staff and the Auditor General's Office use a different interpretation of public sector accounting standards for net pension assets and recognition of market accounts. The province continues to work with the Auditor General to build on the government’s track record of responsible fiscal management and high quality financial reporting.

Accounting Changes to Ontario's Financial Statements

September 7, 2017

Treasury Board Secretariat prepares the Public Accounts according to the accounting principles for governments issued by the Public Sector Accounting Board (PSAB). When preparing this year's Public Accounts, Ontario implemented accounting changes to further enhance accountability and transparency. To ensure consistency in year-to-year comparisons, financial statements from previous years have been restated, as needed, to reflect the following changes:

Accounting for net pension assets of jointly sponsored pension plans

In 2016-17, the province is reporting the net pension assets for two of its jointly sponsored pension plans, the Ontario Teachers' Pension Plan (OTPP) and the Ontario Public Service Employees' Union Pension Plan (OPSEUPP). Until the 2015-16 Public Accounts, Ontario had recognized pension assets in its financial statements since 2001.

In preparing the 2015-16 Public Accounts, the province's professional accounting staff and the Auditor General's office engaged in discussions on the appropriate application of PSAB pension accounting standards for the province's two jointly sponsored pension plans. An independent Pension Asset Expert Advisory Panel (PAEAP) was subsequently established to deliver advice and recommendations to the province.

After careful study, the independent panel members released their report. It concluded that the province's share of the net pension assets of both OTPP and OPSEUPP should be recognized in Ontario's financial statements.

After significant deliberation, including considering PAEAP's recommendations, Ontario confirmed that the accounting used for these pension plans prior to 2015-16 was appropriate, and in accordance with public sector accounting standards for pension asset accounting. Further, EY provided additional analysis and concluded that no valuation allowance was required for either plan as of March 31, 2017. The 2016-17 financial statements include these net pension assets and the 2015-16 financial statements have been restated to include them.

Accounting for the Independent Electricity System Operator

The Independent Electricity System Operator (IESO), like Hydro One and Ontario Power Generation (OPG), is regulated by the Ontario Energy Board. For the 2016-17 reporting year, the IESO began recognizing its market accounts' assets (amounts due from power distributors) and liabilities (amounts due to power producers) in their financial results. IESO has chosen to recognize these markets accounts on its books for transparency reasons, as it better reflects the financial position of the IESO-administered markets at year-end.

PSAB standards are silent on the use of market accounts. In such cases, the standards encourage preparers and auditors to consider guidance in other accounting frameworks when accounting for transactions not specifically addressed by the specific standards.

… /2

This accounting change was accepted by the IESO's independent external auditor, which issued an unqualified, or "clean," audit opinion. Further, before the Ontario Power Authority (OPA) merged with IESO in 2015, the OPA used the same accounting presentation in its financial statements, which was not subject to qualification from the Office of the Auditor General at that time.

IESO has also adopted rate-regulated accounting for its year ending December 31, 2016. This decision was made because using rate-regulated accounting better reflects the economic substance of certain types of expenses that may not be directly recovered through the normal revenue requirement model.

The IESO highlighted these changes in their recent annual report. These changes are supported by the IESO's independent external auditor, which issued an unqualified audit opinion.

Accounting for hospitals, school boards and colleges

To increase transparency, the 2016-17 Public Accounts are presenting third-party revenues for hospitals, school boards and colleges with provincial revenue. Third-party revenues earned by these organizations, such as tuition fees, patient fees, research grants and donations, were netted against the respective sectors' expenses in prior years. This change is fiscally neutral and does not impact the province's annual deficit, net debt, or accumulated deficit. This change is consistent with PSAB standards and the reporting practices of other senior Canadian governments.

Accounting for energy sector government business enterprises

In the 2016-17 Public Accounts, the financial results of Ontario's investments in Hydro One and OPG are reported using International Financial Reporting Standards. Previously, these results were reported using generally accepted accounting principles in the United States. This change was made to meet PSAB requirements. The change does not have a material impact on this year's financial statements.

MEDIA ADVISORY

Treasury Board Secretariat

President of the Treasury Board and Minister of Finance to Release Ontario's 2016-17 Public Accounts

September 6, 2017

Liz Sandals, President of the Treasury Board and Charles Sousa, Minister of Finance will make an announcement regarding Ontario's 2016-17 Public Accounts.

Prior to the announcement, a technical briefing will be held with officials from Treasury Board Secretariat and the Ministry of Finance. They will be joined by Uros Karadzic, former member of the province's Pension Asset Expert Advisory Panel.

Date: Thursday, September 7, 2017

Time: 1:00 p.m. Technical briefing
1:45 p.m. Ministers' media availability

Location: Huron Room
Macdonald Block
900 Bay St.
Toronto

2016-17 Public Accounts

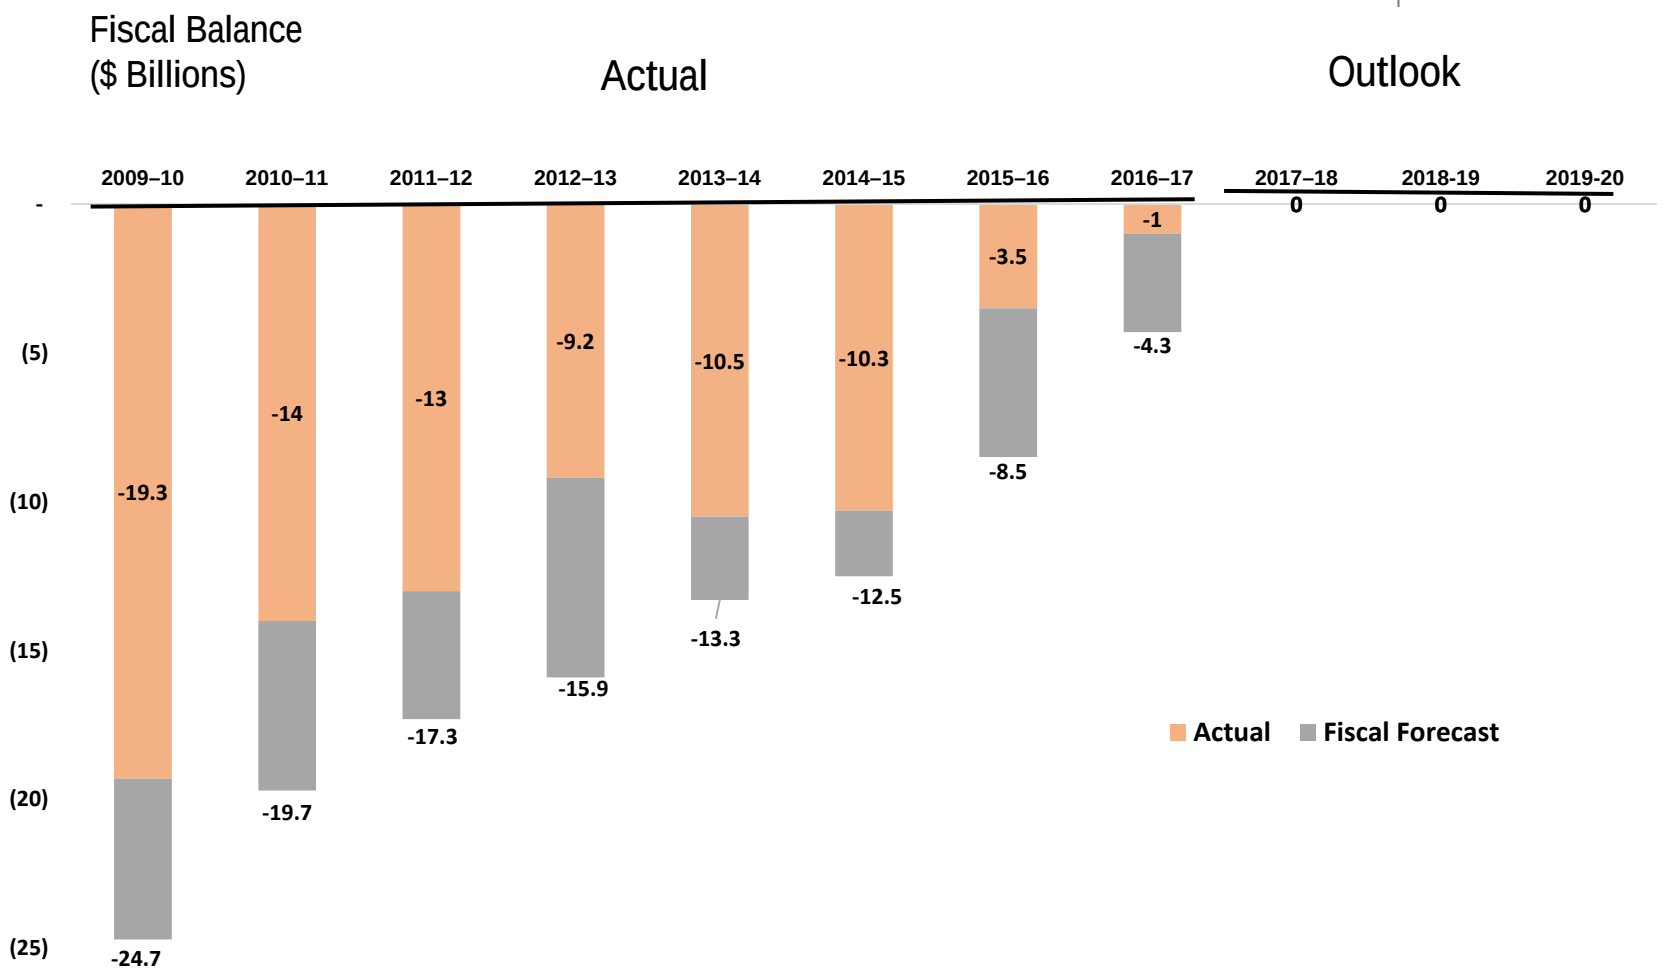
Highlights Deck

September 7, 2017

Confidential – For Internal Discussion Purposes

2016-17 Financial Highlights

- **2016-17 deficit is $1.0 billion**
  - $3.3 billion lower than the projected $4.3 billion deficit in the 2016 Budget.
  - $0.5 billion lower than the $1.5 billion interim forecast presented in the 2017 Budget.
  - $2.5 billion lower than 2015-16 deficit of $3.5 billion*.
- **Revenues are $140.7 billion****
  - $2.2 billion, or 1.6%, higher than the projected $138.5 billion in the 2016 Budget.
  - $0.6 billion, or 0.4%, lower than the projected $141.3 billion interim forecast in the 2017 Budget.
- **Expenses are $141.7 billion****
  - $0.1 billion, or 0.1%, lower than the projected $141.8 billion in the 2016 Budget.
  - $1.1 billion, or 0.8%, lower than the $142.8 billion interim forecast presented in the 2017 Budget.
- **Net debt is $301.6 billion, an increase of $6.2 billion in 2016-17. This increase is due to:**
  - Additional borrowing to finance the operating deficit and investments in infrastructure.
- **The Auditor General has issued a qualified Audit Opinion for the 2016-17 Public Accounts, based on a different interpretation of accounting methods for net pension assets and recognition of Independent Electricity System Operator market accounts.**



* 2015-16 deficit restated for removal of impact of regulated pension accounting

** Revenues for 2016-17 include third party revenues of hospitals, school boards and colleges. In previous years, these third party revenues were netted against the respective sector expenses. This change in presentation increased revenue and expenses by approximately $8 billion in 2016-17 and $7.5 billion in 2015-16. This change has no impact on the annual deficit. The prior year financial information and the 2016 Budget have been reclassified to reflect this change.

Auditor General Opinion

- Two qualifications in the audit opinion
  - Pension assets ($12.4 billion increase to net debt and accumulated deficit; $1.4 billion increase to deficit →$2.4 billion deficit per AG)
    - Pension Panel identified as a “non-authoritative” source on application of Public Sector Accounting Standards (PSAS)
  - Independent Electricity Systems Operator (IESO) changed its accounting policy to recognize $1.6 billion market accounts assets and the same amount in liabilities (market accounts track mainly buy and sell transactions between electricity power generators and distributors)
    - No impact to annual deficit, net debt or accumulated deficit
  - Other matters paragraphs in opinion
    - Rate-regulated accounting used by IESO in year not permitted under PSAS (used by IESO in year, but impact not material)
    - Future potential material misstatement resulting from “legislated accounting” in Fair Hydro Plan legislation and related regulations;
    - FSD&A does not reflect pension accounting or market accounts appropriately

Ontario's Plan to Eliminate Deficit

[1] Represents the 2017 Budget outlook for 2017–18 to 2019–20. For 2009–10 to 2016–17, actual results are presented. The 2015–16 actuals have been restated to reflect recognizing jointly sponsored net pension assets for the Ontario Public Service Employees' Union Pension Plan and the Ontario Teachers' Pension Plan on the Province's financial statements, consistent with the 2016 Budget and as described in the 2016–17 Third Quarter Finances.

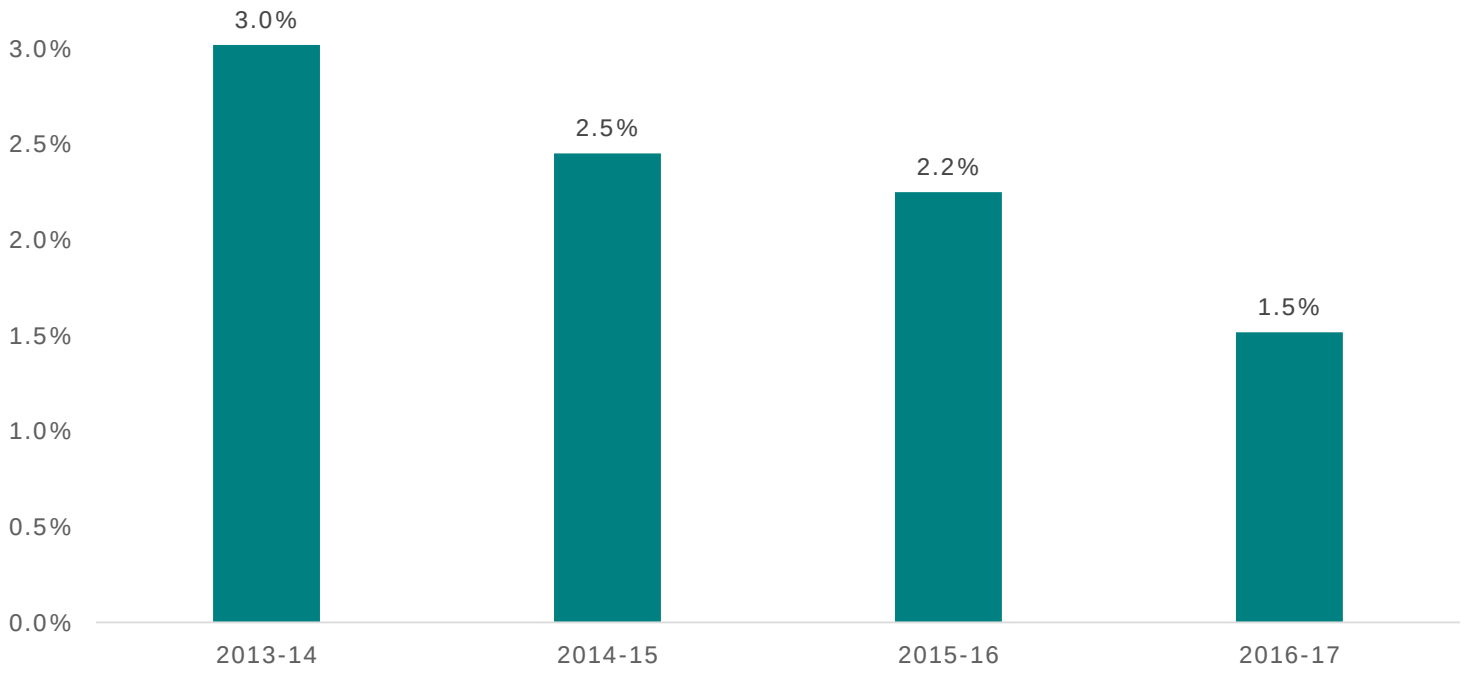
[2] Forecast for 2009–10 is based on the 2009 Ontario Economic Outlook and Fiscal Review, 2010–11 to 2013–14 is based on the 2010 Budget; 2014–15 is based on the 2014 Budget; 2015–16 is based on the 2015 Budget.

CONFIDENTIAL - For Internal Discussion Purposes Only

Highlights: Financial Results

2016-17 Results (as of August 25)								
$ Billions	**Budget**	**Interim**	**2016-17 Results**	**2015-16 Actual**	**Change from Budget**	**%**	**Change from Interim**	**%**
Revenues	138.5	141.3	**140.7**	136.1	2.2	1.6%	(0.6)	-0.4%
Expenses								
Programs	129.4	130.9	**130.0**	128.1	0.6	0.5%	(0.9)	-0.7%
Interest on Debt	12.4	11.9	**11.7**	11.6	(0.7)	-5.6%	(0.2)	-1.7%
Total Expenses	141.8	142.8	**141.7**	139.7	(0.1)	-0.1%	(1.1)	-0.8%
Reserve	1.0	-	**-**	-	(1.0)		-	
Deficit Before Outstanding Items	(4.3)	(1.5)	**(1.0)**	(3.5)	3.3	-76.7%	0.5	-33.3%

Notes:



(1) For discussion purposes only. Subject to change pending public release.

(2) Budget and Interim numbers are re-stated for BPS line by line reporting (no fiscal impact). 2015-16 Actual have been restated for the reversal of regulated accounting for pensions (published 2015-16 deficit was $5.0 billion).

(3) Budget/Interim numbers may not add due to rounding.

CONFIDENTIAL - For Internal Discussion Purposes Only

Annual Program Expense Growth Rate: 2013-14 to 2016-17

Note: 2013-14 to 2016-17 program expenses have been restated for BPS line-by-line consolidation.

Communications

Narrative

- The Public Accounts for Ontario show Ontario's **deficit for 2016-17 is $991 million**. This result is **$3.3 billion lower** than the $4.3 billion projected in the 2016 Budget. It is **$0.5 billion lower** than the interim projection in the 2017 Budget of $1.5 billion.
- Ontario has beaten its deficit target eight years in a row.
- Ontario's plan is working. By responsibly managing the Province's finances, Ontario balanced the budget in 2017-18, and will maintain a balanced budget for the future.
- To help Ontarians better understand their government's finances, new digital tools have been developed that present the Public Accounts data in innovative, visual formats. This is part of Ontario's commitment to Open Government.
- The government will continue to build on its track record of responsible fiscal management.

Strategy

- **High profile, proactive, short term** communications approach via traditional, digital and social media.
- Remain **neutral** and **factual**, balancing need for gov't to clearly state its position, while demonstrating respect for all parties involved.
- **Promote** strong financial management, and transparency and accountability.
- **Leverage open data** and other digital components to **profile achievement of 2016 budget commitments.**
- Mitigate potential issues with strong issues management plan.

Communications cont'd

Rollout

- Public release on **September 7** via joint TBS and MOF Ministers' **press conference** and **province-wide news release** with backgrounder.
  - **Technical briefing for media** in advance to present accounting changes, including Ontario's position on accounting for pension assets and IESO in a factual, neutral manner.
- Tactics and messaging will be **reassessed**, as needed, to respond to **AG's position.**

Considerations

- Public Accounts specific:
  - AG's qualified audit opinion (pension asset accounting, IESO accounting treatment of market accounts)
  - AG's criticisms regarding the use of rate-regulated accounting by IESO
  - BPS presentation change
- Other:
  - Questioning balanced budget narrative
  - Growing debt burden
  - Relationship with AG and her criticism of the Fair Hydro Plan

APPENDIX

Ontario Public Accounts
Sept. 7, 2017
Q&As

Key Messages:

- The Ontario economy remains strong and has continued to grow and create jobs in an uncertain global environment.

- This year's Public Accounts show that Ontario's deficit for last year was $991 million — $0.5 billion lower than the interim projection in the 2017 Budget.

- Balancing the budget means the government can invest more in the programs and services that people rely on.

Q&As:

What is Ontario's fiscal outlook? Has it changed since you released the 2017 Budget?

In 2010 we made a commitment to restore balance in 2017–18 and we delivered on that commitment. We are also projecting continued balance in both 2018–19 and 2019–20.

This year's Public Accounts show that Ontario's deficit for last year was $991 million — $3.3 billion lower than projected in the 2016 Budget and $0.5 billion lower than the interim projection in the 2017 Budget.

Balancing the budget means the government can invest more in the programs and services that people rely on.

What is the current outlook for the Ontario economy?

Ontario's economy remains strong and has continued to grow and create jobs in an uncertain global environment.

Since 2014, Ontario has been an economic growth leader in Canada and private-sector economists expect Ontario to remain one of the fastest growing provinces over the next two years.

Ontario's economic growth exceeded that of all G7 countries over the 2014 to 2016 period.

How does the Bank of Canada interest rate increase affect economic growth in Ontario?

The increase in the Bank of Canada's policy rate reflects the growing strength of the Canadian and Ontario economy.

An increase in the Bank of Canada's overnight interest rate does not automatically translate into an increase in the Province's borrowing cost. That cost is also impacted by other factors, including revisions to the U.S. Federal Funds Rate.

Ontario's economy remains strong and has continued to grow and create jobs in an uncertain global environment.

Didn't the FAO say that the Province's economic growth and revenue projections are too optimistic?

Over the last several years, the government's investments to strengthen economic growth have paid off. Ontario is a leader in economic growth, with our real GDP growth outpacing all the G7 countries over the last three years.

Since the FAO released their post-Budget analysis most private-sector economists have revised up their forecast for Ontario real GDP growth, reflecting the strength of the Ontario economy.

According to the average of private-sector forecasts, Ontario real GDP growth in 2017 has risen to 2.8% from 2.4% at the time of the Budget. As well, over the next four years Ontario real GDP growth is expected to average 2.3% annually, up from 2.1% annually at the time of the Budget. The outlook for nominal GDP growth has seen a larger improvement.

The government stands by the revenue forecast presented in the 2017 Budget. As recently presented in the 2017-18 First Quarter Finances, revenues are on track and the government is continuing to project a balanced budget in 2017-18.

Taxation revenue growth projected in the 2017 Budget aligns with growth actually experienced in recent years.

Minister Sousa's Speaking Notes

Media Avail Sept. 7, 2017

Public Accounts of Ontario 2016-17

- The release of the 2016-17Public Accounts is an important time for the Government of Ontario.

- The accounts demonstrate how we are improving the everyday lives of the people of Ontario.

- Our plan is working.

- Ontario is projected to balance the budget in 2017-18.

- We are restoring balance through targeted, measured and fiscally responsible decisions — managing growth in program spending and fostering job creation and economic growth.

- Managing spending has been a priority for us, and we are proud to say today Ontario has the lowest per-capita program spending among all Canadian provinces.

- And we are making investments in key services such as health care and education, while at the same time lowering costs for necessities like electricity and child care.

- With a balanced budget we can continue to make investments in these key areas while also responding better to unexpected economic or demographic changes.

- Balancing the budget is not just about the bottom line — it's about helping families and businesses by providing the supports they need to succeed.

- In addition to balancing the budget, we’re also tackling debt. Our continued focus on capital investment is contributing to economic growth — and that means the GDP is growing more quickly than debt.

- Since 2010, Ontario’s economic performance has remained strong.

- This growth will help us lower Ontario’s net debt-to-GDP ratio to the pre-recession level of 27 per cent, currently projected to be achieved by 2029–30.

- Ontario’s recovery from the global recession was driven by sticking to key economic principles and supported by long-term job recovery through our large-scale infrastructure investments.

- We will continue to move forward on our path to balance while building a stronger and more vibrant Ontario we can all be proud of.

- Thank you.

PUBLIC ACCOUNTS 2016-17

Top Media Qs & As

September 6, 2017

1. **The Auditor General has issued a qualified opinion for the second year in a row. Is this a sign of fiscal mismanagement?**

   We continue to move forward and present the Province's finances fairly and accurately and in accordance with Canadian Public Sector Accounting Board standards. Ontario has a strong track record of producing high-quality financial reports on a timely basis. The Auditor General's qualified opinion is based on a different interpretation of Public Sector Accounting Board standards for net pension assets and recognition of market accounts.

   Last year there was a disagreement among the Province's professional accounting staff and the Auditor General's Office on the appropriate application of Public Sector Accounting Board standards regarding pension accounting. As a result, the Pension Asset Expert Advisory Panel was established to deliver independent advice and recommendations on the issue to the Province.

   The independent panel members concluded the Province's share of the net pension assets of both the Ontario Teachers' Pension Plan and the Ontario Public Service Employees' Union Pension Plan should be recognized in Ontario's financial statements.

   After significant deliberation, including consideration of the recommendations of the panel, Ontario confirmed that the accounting for these plans prior to 2015-16 was appropriate, and are prepared in accordance with public sector accounting standards for pension asset accounting. Further, EY provided additional analysis and concluded that no valuation allowance was required for either plan as of March 31, 2017. The 2016-17 financial statements include these pension assets, and we continue to apply the accounting treatment of pension assets that the Province has used consistently since 2001. In addition, the 2015-16 financial statements were restated to include these assets.

   This year the Independent Electricity System Operator (IESO) began recognizing its market accounts' assets (amounts due from power distributors) and liabilities (amounts due to power producers) in their financial results. IESO has chosen to recognize these markets accounts on its books for transparency reasons, as it better reflects the financial position of the IESO-administered markets at year-end. This change was supported by the IESO's audit committee, its independent external auditor, and finally by the Office of the Provincial Controller. This change

also has no impact to the province's annual deficit, net debt or accumulated deficit.

This accounting is consistent with the presentation used previously by the Ontario Power Authority (which was merged with the IESO on January 1, 2015) in its financial statements, which was not subject to qualification from the Office of the Auditor General at that time.

2. The Auditor General is critical of the IESO accounting changes. Are Ontario's accounting changes inappropriate?

No. The Independent Electricity System Operator (IESO) began recognizing its market accounts' assets (amounts due from power distributors) and liabilities (amounts due to power producers) in their financial results. IESO has chosen to recognize these markets accounts on its books for transparency reasons, as it better reflects its net financial position on behalf of the IESO-administered markets at year-end.

This accounting change was accepted by the IESO's independent external auditor, which issued an unqualified, or "clean," audit opinion. These accounting changes were highlighted in the IESO's annual report which was published online in March 2017.

Further, this accounting is consistent with the presentation used previously by the Ontario Power Authority (which was merged with the IESO on January 1, 2015) in its financial statements, which was not subject to qualification from the Office of the Auditor General at that time.

This change has no impact to the province's annual deficit, net debt or accumulated deficit.

This accounting change has been supported by the professional accounting staff of the Office of the Provincial Controller.

We will continue to work with the Auditor General to build on the government's track record of responsible fiscal management and high quality financial reporting.

If pressed on rate-regulated accounting:

The IESO made the decision to adopt rate-regulated accounting because it better reflects the economic substance of certain types of expenses that may not be directly recovered through the normal revenue requirement model.

DRAFT

The IESO, like Hydro One and Ontario Power Generation (OPG), is regulated by the Ontario Energy Board. The IESO adopted rate-regulated accounting for its year ended December 31, 2016. The impact on the financial statements of the Province is a decrease of $82 million in the 2016-17 opening accumulated deficit and an increase in the 2016-17 annual deficit by $24 million.

This accounting change was accepted by the IESO's independent external auditor, which issued an unqualified, or "clean," audit opinion. These accounting changes were highlighted in the IESO's annual report which was published online in March 2017.

3. Why are you still fighting with the Auditor General over pension accounting?

In preparing last year's Public Accounts, the Province's professional accounting staff and the Auditor General's Office engaged in discussions about the appropriate application of Public Sector Accounting Board standards regarding pension accounting for the Province's jointly sponsored pension plans.

As a result, the Pension Asset Expert Advisory Panel was established to deliver independent advice and recommendations to the Province on the issue. The independent panel members concluded the Province's share of the net pension assets of both the Ontario Teachers' Pension Plan and the Ontario Public Service Employees' Union Pension Plan should be recognized in Ontario's financial statements.

After significant deliberation, including consideration of the recommendations of the panel, Ontario confirmed that the accounting for these plans prior to 2015-16 was appropriate. Further, EY provided additional analysis and concluded that no valuation allowance was required for either plan. The 2016-17 financial statements include these pension assets, and we continue to apply the accounting treatment of pension assets that the Province has used consistently since 2001. In addition, the 2015-16 results were restated to include these assets.

We will continue to work with the Auditor General to build on the government's track record of responsible fiscal management and high quality financial reporting.

4. How were you able to beat your deficit target in 2016-17?

In 2016-17 we maintained our focus on responsible fiscal management and investing in the right priorities. We are making progress on our economic plan by making investments to spur growth, transforming government and responsibly managing spending.

DRAFT

Average annual growth of total government spending has been held to 2.3 per cent for the past five years. As a result of growth in revenue that exceeded growth in program expense, as well as lower than forecast interest on debt, the deficit is $3.3 billion lower than projected in the 2016 Budget. It is also $0.5 billion lower than the interim projection in the 2017 Budget.

This is the eighth year in a row the government has beaten its deficit target.

5. **The government is claiming the deficit has been reduced to $1B deficit for 2016-17 and that the budget will be balanced over the next three years. However, the AG is saying that the deficit for 2016-17 was more than $2B due to the treatment of pension assets, and the FAO has stated that the government's revenue forecast is more than $1B too "optimistic". Isn't the government really hiding a $3-4B deficit instead of a balanced budget?**

There is no hidden deficit. In the *2010 Budget*, the government committed to eliminating the deficit and returning to a balanced budget by 2017-18. Through targeted, measured and fiscally responsible decisions, Ontario has restored its fiscal and economic strength.

Today we are confirming that the 2016-17 deficit of $1 billion is $3.3 billion lower than projected in the 2016 Budget and $0.5 billion lower than the interim projection in the 2017 Ontario Budget. This marks the eighth year in a row that Ontario has beaten its deficit target.

The success in eliminating the deficit is supported by a strong track record in managing spending -- having held average growth in spending to 2.3 per cent over the past five years.

In addition, over the last several years, the government's investments to strengthen economic growth have paid off. Ontario is a leader in economic growth, with our real GDP growth having outpaced that of all the G7 countries over the last three years. The strengthened economy has resulted in increased revenue for the Province – in fact, over the past two fiscal years, revenue has come in higher than projected, supporting Ontario's return to a balanced budget.

It is also important to point out that private sector forecasters have revised upward their expectations for the Ontario economy since the 2017 Budget, reflecting the growing strength of the Ontario economy. In fact, the current average private sector forecast for this year and next is also above what the Financial Accountability Office of Ontario projected in their Budget commentary.

DRAFT

The government is also taking steps to improve tax fairness and address the underground economy in order to ensure the integrity of the Province's revenues.

Finally, Ontario's fiscal plan incorporates prudence in the form of a reserve to protect the fiscal outlook against unforeseen adverse changes in the Province's revenue and expense. The reserve has been set at $0.6 billion in 2017-18, $0.6 billion in 2018-19, and $0.9 billion in 2019-20.

Balancing the budget means that the government can invest more in the programs and services that people rely on.

6. **The FAO's commentary released on September 6, 2017 says that Ontario's debt reduction commitment is based on unrealistic assumptions. How do you respond?**

The government made a commitment in the 2010 Budget to balance and eliminate the deficit by 2017-18. Since then, the government has reduced the deficit from its peak in 2009-10 of $19.3 billion, to a projected $1.5 billion in 2016-17 and a projected balanced Budget in 2017. Furthermore, the government consistently overachieved on its deficit targets and forecasts for net debt-to-GDP. The government's track record therefore provides evidence of fiscal discipline and the likelihood of achieving on-going balanced budgets in the future.

With respect to capital spending, approximately 61 per cent of the increase in net debt from 2008–09 to 2016–17 was due to the deficit, with net investments in capital assets responsible for most of the balance. Infrastructure expenditures do not therefore have as large an impact on net debt as that of a balanced budget.

Moreover, additional capital investment in the latter half of the next decade will stimulate the economy. A recent report from the Centre for Spatial Economics confirms that over the long term, real GDP in Ontario increases by $6 for every dollar of public infrastructure spending. This stimulus in GDP may help to offset the effects of an aging population and slower growth in the labour force and maintain the 4% average GDP growth required to bring net debt to GDP down to 27% in 2029-30.

7. **Interest on debt is still massive and the Bank of Canada is expected to raise interest rates again this fall, and announced it is raising its target for the overnight rate on September 6, 2017. . How is the government preparing for this and will this affect your ability to maintain a balanced**

budget?

The increase in the Bank of Canada's policy rate reflects the growing strength of the Canadian and Ontario economy. Ontario's economy remains strong and has continued to grow and create jobs in an uncertain global environment.

Since 2014, Ontario has been an economic growth leader in Canada and private sector economists expect Ontario to remain one of the fastest growing provinces over the next two years.

Ontario's economic growth exceeded that of all G7 countries over the 2014 to 2016 period.

A quarter-point increase in the policy rate is not likely to have a material impact on the Ontario economic outlook. The 2017 Ontario Budget anticipated that interest rates would rise modestly.

An increase in the Bank of Canada's overnight interest rate does not automatically translate into an increase in the Province's borrowing cost which is also impacted by other factors including revisions to the US Federal Funds Rate.

As noted in the 2017 Budget, the Province's average cost of 10 year borrowing in 2017-18 is forecast to be 3 per cent. The impact of a 100 basis point increase in borrowing rates is forecast to be approximately $300 million. The interest rate forecast used in the Budget was prudent, and anticipated that long-term interest rates would rise as we progressed through the fiscal year.

8. You claim to have balanced the budget yet you keep piling on more debt. How do you plan to pay down the debt?

We maintain a target of reducing the net debt-to-GDP ratio to its pre-recession level of 27 per cent, with current projections showing that this will be achieved by 2029-30. In the balanced 2017 Budget, the government is setting an interim target to reduce the net debt-to-GDP ratio to 35 per cent by 2023–24.

In a balanced budget environment, debt would be incurred primarily to invest in capital assets. We are making progress on our economic plan by making investments to spur growth, transforming government and responsibly managing spending – including addressing the underground economy and maintaining tax fairness. Our strategic investments in infrastructure provide economic benefits: a recent study by the Centre for Spatial Economics (C4SE) finds that, over the long term, real GDP in Ontario will rise up to $6 on average per one dollar of public infrastructure spending.

DRAFT

These strategic investments are creating jobs and contributing to economic growth. Ontario's GDP grew one per cent in the first quarter of 2017, outperforming that of Canada, the U.S. and all other G7 countries.

9. Spending for hospitals, school boards and colleges seems to be much higher in Public Accounts than in the 2017 Budget. Why is this?

To increase transparency, this year we have made a simple change to how we are reporting third party revenues for broader public sector organizations.

For the first time, Public Accounts are presenting third party revenues for hospitals, school boards and colleges with provincial revenue. Third-party revenues earned by these organizations, such as tuition fees, patient fees, research grants and donations, are no longer netted against the respective sectors' expenses, as they were in prior years for Public Accounts and the 2017 Budget.

This is simply a presentation change for Public Accounts. It is fiscally neutral, i.e. there is no change to the annual deficit, net debt or accumulated deficit. To ensure consistency in year-to-year and to Budget comparisons, we are reclassifying all previous years and the 2016 Budget. The 2017 Fall Economic Statement and 2018 Budget will also reflect this presentation change.

The Auditor General supports the Province's decision to adopt this presentation change. It is consistent with the accounting principles for governments issued by the Public Sector Accounting Board, and the reporting practices of other senior Canadian governments.

10. The Public Accounts show a drawdown of $260 million from the Trillium Trust. What did you spend the money on?

The government began allocating proceeds from the Trillium Trust in 2016-17 to help support infrastructure initiatives such as GO Regional Express Rail (GO RER), the Hurontario Light Rail Transit (LRT) and the Ontario Community Infrastructure Fund (OCIF).

We expect the Trillium Trust to be drawn down by about $400 million in 2017–18.

Our strategic investments in infrastructure provide economic benefits: a recent study by the Centre for Spatial Economics (C4SE) finds that, over the long term, real GDP in Ontario will rise up to $6 on average per one dollar of public infrastructure spending.

11. Does a qualified opinion impact the Province's credit rating?

DRAFT

The Province's financial results show that the government has once again beaten its annual deficit targets. In April 2017, we delivered our first balanced budget since the global recession and we are on track to do so again next year and the year after.

The rating agencies will assess whether the underlying factors that lead to a qualified opinion directly affect the creditworthiness of the Province. However, there were no credit rating implications in 2016 when the Province received a qualified audit opinion on its 2015-16 Public Accounts. Qualified opinions by the Auditor Generals of British Columbia and Quebec have been made in their respective provinces in the past, with no negative impacts on their province's credit ratings.

12. The Auditor General has some serious concerns about how you're accounting for Ontario's Fair Hydro Plan. What do you say to this?

The accounting for Ontario's Fair Hydro Plan is a separate and distinct issue to the Public Accounts for 2016-17 that we're here to talk about today.

However, under Ontario's Fair Hydro Plan accounting structure, the Province's net debt and annual surplus/deficit won't be negatively impacted since all costs are to be recovered through future rates.

The Ministry of Energy, Finance and Treasury Board Secretariat continue to work closely with Ontario Power Generation (OPG), the Independent Electricity System Operator (IESO) and external advisors to address the outstanding accounting related considerations.

The Auditor General has also been briefed on the government's refinancing structure.

For further questions, I direct you to contact my colleague at the Ministry of Energy.

13. Program spending increased again this year. Why?

Program spending in 2016-17 was $141.7 billion, down $0.1 billion from the 2016 Budget. Average annual growth of total government spending has been held to 2.3 per cent for the past five years.

Healthcare represents the largest share of government program spending at $56 billion. Transformation efforts continue to make the sector more effective and sustainable while continuing to improve access for patients, especially the increased demands from an aging and growing population. The government has

DRAFT

invested in new drugs, technologies, community and home care, long term care homes, mental health, physicians' services and specialized cancer treatments.

Other areas of government investment include:

- $26.6 billion in education, mainly due to the introduction of full-day kindergarten;
- $16 billion in children's and social services, due to increased annual social assistance rates as well as investments in developmental services, autism and complex special needs programs, as well as the Ontario Child Benefit;
- $10.1 billion in post-secondary and training, due to enrolment growth in colleges and universities along with increased student financial assistance programs and increases in capital funding for post-secondary institutions;
- $4.6 billion in justice sector expenses due mainly to the upload of court security costs from municipalities, compensation for the Ontario Provincial Police and correctional services programs, as well as improved access to legal aid.

ACCOUNTING CHANGES

IESO - ACCOUNTING CHANGES

Q. What were the accounting changes made by IESO in its financial statements?

A. As of January 1, 2016, the IESO changed its accounting policy regarding the recognition of assets and liabilities subject to rate regulation. The change was made to better reflect the economic substance of certain types of expenses that may not be directly recovered through the normal revenue requirement model.

In addition, the IESO changed its accounting policy regarding the recognition of market accounts assets and liabilities on the statement of financial position. The change was made to better reflect the assets and liabilities and amounts due to and from market participants held by the IESO on behalf of the IESO administered market at year end.

Q. What is the impact of IESO's accounting changes to the Province's Consolidated Financial Statements?

A. Given the IESO prepared its financial statements using Public Sector Accounting Standards and its auditor issued an un-qualified audit report for 2016 financials, Province will consolidate IESO using similar accounting as adopted by the IESO and reflected in its 2016 financials. There would be no fiscal impact for market accounts; however, IESO's adoption of rate-regulated accounting resulted in a decrease of $82 million in the 2016–17 opening accumulated deficit, and an increase in the 2016–17 annual deficits by $24 million.

PENSION - ACCOUNTING CHANGES

Q. What were the pension accounting changes made by the Province in its Consolidated Financial Statements?

A. The 2016–17 Consolidated Financial Statements reflect a change in accounting for net pension assets of the Province's jointly sponsored pension plans, as compared to the 2015–16 Consolidated Financial Statements. The change affects the Province's accounting for both the Ontario Teachers' Pension Plan (OTPP) and the Ontario Public Service Employees' Union Pension Plan (OPSEUPP).

In the 2015–16 Consolidated Financial Statements, the Province legislated the accounting treatment for pension assets of OTPP and OPSEUPP in order to reflect the Auditor General of Ontario's view that a full valuation allowance was required based on the view that the government does not have a legally enforceable right to unilaterally access the assets of the jointly sponsored pension plans, or, in the absence of that right, an irrevocable agreement in place at year-end with the joint sponsors of the plans to reduce contributions. The legislation required that a full valuation allowance be recorded against the pension assets of OTPP and OPSEUPP, therefore writing down the value of the assets as at March 31, 2016, to nil.

After significant consultation, including consideration of the recommendations of the Pension Asset Expert Advisory Panel, the Province has confirmed that the accounting for its jointly sponsored pension plans prior to 2015–16 was appropriate and in accordance with Public Sector Accounting Standards. The 2016–17 Consolidated Financial Statements reflect the confirmed accounting treatment and record pension assets on the same basis as used by the Province in preparing its Consolidated Financial Statements prior to 2015–16.

HYDRO ONE/OPG CONSOLIDATION - ACCOUNTING CHANGES

Q. What were the accounting changes made by the Province to consolidate Hydro One and Ontario Power Generation in its Consolidated Financial Statements?

A. Commencing April 1, 2016, the Province is accounting for the results for Hydro One Limited and Ontario Power Generation using the modified equity basis and IFRS (including IFRS 14). Previously, the Province had used Generally Accepted Accounting Principles in the United States (US GAAP), the accounting standards used by these entities in preparing their stand-alone financial statements, in applying the modified equity basis. Historically, the difference between IFRS and US GAAP with respect to the annual deficit of the Province was not material.

This change has resulted in an adjustment to the opening accumulated deficit and net debt of $1.6B. The transitional adjustment is predominantly related to the difference in accounting for Asset Retirement Obligation and pension and other post-employment benefits.

PRESENTATION CHANGE TO BPS ORGANIZATIONS

Q. Why is the Province changing its accounting of its BPS organizations (i.e. hospitals, school boards and colleges)?

A. Province changed the presentation of hospitals, school boards and colleges to present third-party revenues of these organizations with revenues of the Province. Previously third-party revenues earned by these organizations, such as tuition fees, patient fees, research grants and donations, were netted against the respective sectors' expenses. The change was made to fully comply with Public Sector Accounting Standards. For comparability and consistency purposes, the prior years' results and the 2016 Budget have been reclassified to reflect this change in presentation.

Q. What are the impacts of the change on the deficit / debt of the Province and key financial indicators?

The presentation change increases the total revenues and expenses of the Province, but does not affect the annual deficit, net debt or accumulated deficit of the Province. Therefore, there is no change to key financial indicators related to annual deficit, net debt or accumulated deficit.

The Province's interest on debt expenses will increase marginally since the interest expense of BPS entities previously included in sector expenses will now be presented as part of the Province's interest on debt expense. However, since total revenues will be grossed up, the debt charge to total revenue and net debt to total revenue will be favorably impacted.

Total program spending per capita will be higher due to the gross up of program expense.

DEBT

Q. Why did net debt increase by $6.3 billion, from $295.4 billion as at March 31, 2016 to $301.6 billion as at March 31, 2017?

A. Net debt is the province's total debt and other liabilities, less its financial assets, including cash and investments. The increase of $6.3 billion in net debt is primarily due to the deficit and investments in capital assets.

Q. Why did net debt to GDP decrease from 38.7 percent as at March 31, 2016 to 37.8 percent as at March 31, 2017?

A. The decrease in net debt to GDP is mainly due to GDP growing at a faster rate than net debt. The government is committed to eliminating the deficit by 2017-18 and then reducing the net debt to GDP ratio to the pre-recession level of 27 per cent.

Q. How do you explain the $5.7 billion increase in total debt from $327.4 billion at March 31, 2016 to $333.1 billion at March 31, 2017?

A. The increase in $5.7 billion in total debt is due to borrowing for the deficit ($1.0 billion) and the net change in capital assets ($4.7 billion) for 2016-17.

Q. Why has total debt gone up by $5.7 billion while the accumulated deficit has gone up by only $1.5 billion?

A. Total debt represents all borrowing that is used to fund the deficit, as well as to invest in capital assets and cash reserves. Accumulated deficit is the sum of all deficits less surpluses since Confederation.

Total debt increased by $5.7 billion primarily in order to fund the deficit as well as the Province's investments in capital assets, which are not reflected in the deficit.

Q. What is the difference between total debt and net debt?

A. Total debt represents all borrowings without taking into consideration other liabilities and financial assets. Net debt is the province's total debt and other liabilities, less its financial assets. Net debt is the measurement of debt most commonly used by rating agencies and investors in the Province's bonds.

Q. Why has net debt increased by $0.27 billion from the interim estimate in the 2017 Budget, while total debt has increased by $0.7 billion from the interim estimate?

A. Net debt is the province's total debt and other liabilities, less its financial assets.

Net debt increased by $0.27 billion from the interim estimate primarily due to:

- $0.53 billion decrease from the interim deficit, offset by a $0.26 billion impact relating to various other adjustments as evidenced in the audited Consolidated Statement of Net Debt (Ontario Nuclear Funds, Tangible Capital Assets, IFRS transitional impact for OPG and Hydro 1, pension adjustments and other).

Total debt is all of the Province's borrowings. The total amount borrowed has increased by $0.7 billion from the interim estimate primarily due to the increase in short term borrowing.

Q. How will the 2016-17 Public Accounts affect the borrowing requirement for 2017-18?

A. As in past years, any changes in the borrowing requirement arising from Public Accounts will be determined as part of the 2017 Economic Outlook and Fiscal Review.

Q. How much debt was issued in 2016-17, and how much debt matured during the year under the Province's borrowing program?

A: The Province completed an annual borrowing program of $27.0 billion in 2016-17.

Long-term debt maturities per the 2017 Budget were $20.9 billion.

RISK MANAGEMENT

Q. What is your current policy on foreign currency exposure?

A. The Province limits itself to a maximum foreign exchange exposure of 5 per cent of Debt Issued for Provincial Purposes. The foreign currency exposure as at March 31, 2017 was 0.2 per cent.

Q. What is your current policy on controlling interest rate exposure?

A. The Province limits itself to a maximum net interest rate resetting exposure of 35 per cent of Debt Issued for Provincial Purposes. The interest rate exposure as at March 31, 2017 was 11.2 per cent.

INTEREST ON DEBT (IOD)

Q. Why is the Actual IOD for 2016-17 of $11,709 million lower by $703 million than the 2016 Budget (restated) forecast of $12,412 million?

A. IOD is $703 million lower than the forecast in the 2016 Budget primarily because of lower than forecast deficit, lower than forecast interest rates projected in the 2016 Budget and cost-effective debt management.

Note, the 2016 Budget forecast was restated to include the interest on debt of the broader public sector due to the change in accounting reporting policy this fiscal year.

Q. Why is IOD for 2016-17 of $11,709 million higher by $120 million than IOD for 2015-16 of $11,589 million?

A. IOD is higher by $120 million from last year, mainly due to increased borrowing to the fund of the deficit and investment in capital assets and partly offset by the impact of lower interest rates.

DEBT MANAGEMENT

Q. You talk about balancing the budget, but Ontario's debt continues to grow. How is the government paying down the debt?

A. Investors and rating agencies are focused on relative debt measures such as the net debt-to-GDP. Once the budget is balanced, debt will continue to rise by the difference between the annual cash investment in capital and the amortization of these investments. These investments will contribute to the debt rising at a slower rate than the increase in the Province's GDP, over time lowering the net debt-to-GDP ratio to the government's 27 per cent target.

Q. The Auditor General has recommended that the government work toward implementing a long-term debt reduction plan with the target of reducing its net-debt-to-GDP ratio to pre-recession levels of 27%. This year the ratio has risen again. What is the government doing to lower this ratio?

A: The first step in returning to the targeted 27 per cent net debt-to-GDP ratio is to balance the budget. Once the budget is balanced, debt will continue to rise by the difference between the annual cash investment in capital and the amortization of these investments. These investments will contribute to the debt rising at a slower rate than the increase in the Province's GDP, over time lowering the net debt-to-GDP ratio to the government's 27 per cent target.

Q. The FAO has warned that if Ontario's fiscal position deteriorates beyond 2017-18, the four international credit rating agencies could lower Ontario's credit rating, which could lead to higher borrowing costs and more challenging fiscal position. What is the government doing to manage the debt?

A: There is a strong demand for Ontario bonds. Such investor demand has allowed the Province to extend the term of its debt in recent years and lock in low interest rates for a longer period. This term extension reduces the Province's refinancing risks and helps offset the impact of expected higher interest rates on its IOD costs.

The 2010 Budget forecasted that, by 2017–18, the Province would have to spend 11.3 cents of every revenue dollar received on interest. The current forecast per the 2017 Budget is 3.1 cents lower, at 8.2 cents of interest costs for every dollar of revenue. This ratio is lower than it was in the 26 fiscal years from 1991–92 to 2016–17, and is projected to remain low over the forecast horizon to 2019–20.

Q. What if interest rates go up? What effect would higher interest rates have on interest-on-debt?

A: As indicated in Note 3 of the audited consolidated financial statements in the Annual Report, a one per cent increase in interest rates above our budget forecast would result in an increase in interest on debt of approximately $300 million.

Q. What's the difference between net debt and accumulated deficit?

A: Total debt represents all borrowing.

Net debt is all borrowing plus other liabilities, minus the Province's financial assets.

By analogy, think of a family's finances. A mortgage, car loans and lines of credit represent total debt. Total debt partially offset by money the family has in the bank, in RRSPs and in RESPs represents the family's net debt.

Accumulated deficit is the sum of all past Provincial surpluses and deficits, adjusted for changes in accounting rules.

Q. Did you use your reserve fund to pay your fiscal results and pay down the debt?

A The Reserve is an amount included in the fiscal plan to protect the plan against unforeseen adverse changes in the economic outlook as reflected through impacts to Provincial revenue and expenses, not typically balance sheet items like Public Debt.

Actual costs incurred by the government which pertain to the Reserve are recorded as expenses. Any portion of the reserve that remains unutilized at the end of the fiscal year is used to reduce the deficit.

Q. What is the government's annual borrowing program?

A: The amount of money the government borrows varies from year to year and is dependent on the deficit, proposed investments in capital and amount of debt that is maturing. Over the three years 2017-18 to 2019-20, average long term public borrowings are estimated to be $32 billion per annum.

REVENUE

2016-17 Actual Vs. 2016 Budget Plan

Q: Why are revenues $2.2 billion higher your 2016 Budget projection?

A: This is mostly because of stronger-than-expected taxation revenues and higher net incomes from Government Business Enterprises, partially offset by lower Government of Canada Transfers and Other non-tax revenues.

Q: What accounts for the $2.5 billion increase in Taxation revenues from your 2016 Budget projection?

A: Largely due to stronger Corporations Tax revenues resulting from higher-than-projected tax assessments and higher HST and LTT revenues arising from stronger economic growth, partially offset by weaker PIT revenues reflecting weaker-than-expected 2016 tax assessments.

Q: What accounts for the $0.6 billion decrease in Government of Canada Transfers?

A: This decrease mainly reflects lower-than-anticipated funding for infrastructure projects and other federal payments, including transfers to government agencies, hospitals, school boards, and colleges. This decline is partially offset by new funding for infrastructure projects under strategic investment fund for affordable housing and post-secondary education.

Q: What accounts for the $0.5 billion increase in net income of Government Business Enterprises?

A: This increase was mostly attributable to combined higher net income from the Liquor Board of Ontario (LCBO) and Ontario Lottery and Gaming Corporation (OLG).

Higher LCBO net income mainly reflects the sale of its head office lands and higher OLG net income is due mainly to higher-than-anticipated revenue from lottery and casinos businesses.

The increase in OLG and LCBO net income, however, was partially offset by lower net income from OPG reflecting the impact of provincial accounting consolidation adjustment (-$75M) using International Financial Reporting Standards (IFRS) rather than US GAAP, as required in Public Accounts under Public Sector Accounting Standards and lower Hydro One net income reflecting, primarily, impacts from broadening Hydro One provincial ownership from 84% to 70% through the secondary offering.

Q: What accounts for the $0.6 billion increase in fees, donations and other revenues from broader public sector organizations?

A: This increase mainly reflects higher-than-expected revenues from non-provincial sources for hospitals, and higher international fee and other revenues from colleges.

Q: What accounts for the $0.8 billion decrease in Other Non-Tax Revenues?

A: Other Non-tax revenue (NTR) comprises several categories; resulting in offsetting movements of different components of Other NTR compared to the budget forecast.

The overall decline of $0.8 billion in Other Non-Tax revenue is due largely to two main causes:

1. Carbon Allowance Proceeds from the first cap-and-trade program auction held in March 2017 to be recognized in 2017-18 instead of 2016-17 as budgeted; and
2. Lower sales and rentals revenue mainly reflecting gains from the sale of LCBO head office lands reported as income from GBEs in 2016-17 instead of sales and rentals revenue in 2016 Budget.

This decrease is partially offset by higher revenue from Power Supply Contract Recoveries.

Q: Budget 2016 reported revenue projections from carbon allowance proceeds and the first cap-and-trade program auction took place in March 2017. Can you explain why the government would not report the Carbon Allowance Proceeds in 2016-17 fiscal year?

A: The carbon allowance proceeds estimated at the time of the 2016 Budget was based on preliminary design of the cap and trade program and a preliminary forecast for emissions allowances.

In Budget 2017, no proceeds are reported for fiscal 2016-17. While Ontario held its first carbon allowance auction in March 2017 and received $472 million in proceeds, the proceeds from the first auction are being certified, settled and recorded in the 2017-18 fiscal year. Therefore, proceeds from the first auction will be reported in 2017-18 fiscal year instead of in 2016-17 as budgeted.

2016-17 Actual Vs. 2015-16 Actual

Q: What accounts for the $4.6 billion year-over-year increase in revenues?

A: The increase is largely due to higher taxation revenues, federal payments and net income of government enterprises, partially offset by lower Other non-tax revenues.

Q: What accounts for the $2.5 billion year-over-year increase in taxation revenues?

A: The increase in taxation revenue is largely due to stronger CT revenues, higher HST and Land Transfer Tax revenues, partially offset by weaker PIT revenues.

- Stronger CT revenue is mainly a result of higher-than-expected growth in 2016 Tax Assessments and stronger-than-expected harmonized tax assessments for tax years prior to 2015.
- Stronger HST revenue reflects higher Ontario share of the overall HST/ GST revenue pool as the provincial economy has performed better than the rest of Canada in 2015 and 2016.
- Stronger LTT revenues reflect a very strong Ontario housing market.
- PIT weakness is mainly due to weaker-than-expected 2016 tax assessments. Some of the PIT weakness is due to the extent to which tax payers may have shifted income from future years into 2015 to avoid increases in federal tax rate applied above $200,000 of taxable income starting from 2016.

Q: What accounts for the $1.4 billion increase in Government of Canada Transfers?

A: Higher transfers in 2016-17 from federal government mainly reflect higher funding for existing major federal funding programs such as Canada Health Transfer, Canada Social Transfer, and new funding for infrastructure projects under strategic investment fund for affordable housing and post-secondary education. Transfers under these programs are based on existing federal-provincial funding arrangements and funding formulas.

Q: What accounts for the $0.7 billion increase in net Income from Government Business Enterprises?

A: This increase manly reflects higher net income from Ontario Lottery and Gaming Corporation (OLG), and Hydro One Ltd (HOL), and Liquor Control Board of Ontario (LCBO), partially offset by lower net income from the Ontario Power Generation (OPG).

The increase in LCBO net income largely reflects a one-time gain related to the sale of its head office lands. OLG's net income increase was due to continued stronger-than-expected revenue from lottery business and casinos. Higher income from Hydro One mainly reflect lower 2015-16 due to a significant one-time PILs expenses of about $2.8B as a result of the IPO in November 2015 which led to lower consolidated net income. This impact on net income was partially offset by the impact of the Province's $2.4 billion proportionate share of Hydro One's recognition of a deferred tax benefit.

The decrease in OPG's net income is primarily due to relatively stronger 2015-16 results of the nuclear funds invested in financial market.

Q: What accounts for the $0.5 billion increase in fees, donations and other revenues from broader public sector organizations?

A: This increase largely reflects higher international tuition fee and other revenues reported by colleges and higher revenues from non-provincial sources reported by hospitals.

Q: What accounts for the $0.5 billion decrease in Other Non-Tax Revenues?

A: Other non-tax revenue comprises several categories; resulting in offsetting movements of different components of Other NTR compared to the prior year.

The overall decline of $0.5 billion in other NTR largely reflects lower revenue from electricity debt retirement charge (DRC) due to the elimination of DRC for residential consumers, effective January 1, 2016. Other NTR is also lower due to lower sales and rentals and miscellaneous revenue from consolidated government agencies.

2016-17 Actual Vs. 2017 Budget Interim

Q: Why did Taxation revenues decrease by $0.7 billion above your Interim estimate?

A: The decrease in Taxation revenues is largely due to a decline in PIT revenues which more than offset an increase in CT revenues. PIT weakness reflects weaker-than-expected 2016 tax assessments while stronger CT revenues is mainly due to stronger tax assessments for 2015 and prior years, as well as stronger performance of 2016 Tax assessments than assumed in the 2016 Budget.

Q: What accounts for the $0.3 billion decrease in government of Canada transfers?

A: This decrease mainly reflects the absence of funding in 20167-17 for Clean Water and Wastewater projects and lower federal transfers to government agencies, including hospitals, school boards and colleges.

Q: What accounts for the $0.3 billion increase in net Income from Government Business Enterprises?

A: The increase was mostly attributable to higher net incomes from the Ontario Lottery and Gaming Corporation (OLG), and slightly higher net income from the Liquor Board of Ontario (LCBO), and the Ontario Power Generation (OPG). This increase is partially offset by lower net income from Hydro One Ltd.

- OLG's net income increase was due to continued stronger-than-expected revenue from lottery business and casinos.

Q: What accounts for the $0.3billion increase in fees, donations and other revenues from broader public sector organizations?

A: The increase is largely due to higher international tuition fees and other revenues reported by colleges and higher revenues from school boards due to third party revenue being report as federal transfers at interim instead of fees, donations and other revenues as presented in public accounts.

Q: What accounts for the $0.1 billion decease in Other Non-Tax revenues?

A: Lower revenues from other Non-Tax revenue largely reflect lower recoveries of prior-year-expenditures and miscellaneous revenues from various government ministries and consolidated government agencies, partially offset by higher Power Supply Contract Recoveries. The latter is fiscally-neutral being offset by higher Power Supply Contract Costs.

EXPENSES BY SECTOR

HEALTH

Summary of 2016-17 Budget to Actual Variance Analysis

Q. Why is the Health Sector Expense in 2016-17 higher by $239 million than in the Budget Plan?

A. Health sector expense that was $239 million above plan, mainly due to higher than planned spending in hospital operations, physician services, complex malignant hematology and hematopoietic cell transplantation.

The higher expense for hospital operations is mainly due to higher-than-expected spending in cancer treatment, Ontario Drug Programs, specialty psychiatric hospital programs, operating costs and amortization expense.

Summary of Five Year Expense Actual Variance Analysis

Q. Why is the Health Sector Expense $4.8 billion higher in 2016-17 than 2012-13?

A. Health sector expense increased from $51.2 billion in 2012–13 to $56.0 billion in 2016–17, or on average by 2.3 per cent per year. These increases are due in part to increasing demands for health care services from an aging and growing population, along with other factors, such as new drugs and technologies. Increased spending included new investments in home and community care, long term care homes and mental health, and physician services; as well as specialized services such as cancer treatment.

EDUCATION

Summary of 2016-17 Budget to Actual Variance Analysis

Q. Why is the Education sector expense in 2016-17 higher by $36 million than in the Budget Plan?

A. Education sector expense that was $36 million higher-than-planned, mainly due to slightly higher than-projected enrolment.

Q. Why is the Post-secondary and training sector expense in 2016-17 lower by $67 million than in the Budget Plan?

A. Postsecondary and training sector expense that was $67 million lower than-expected, mainly due to lower-than-forecast demand for employment and training programs, offset in part by increased capital transfer payments to universities through additional federal postsecondary infrastructure funding.

Summary of Five Year Expense Actual Variance Analysis

Q. Why did Education sector expense increase from $22.6 billion to $26.6 billion from 2012-13 to 2016-17?

A. Education sector expense increased from $22.6 billion in 2012–13 to $26.6 billion in 2016–17, or on average by 4.1 per cent per year. Expense in 2012–13 included a one-time savings of $1.3 billion from reducing liabilities carried by school boards for sick-day banking and retirement gratuities. Excluding this one-time savings in the 2012–13 results, the education sector expense increased on average by 2.7 per cent per year between 2012–13 and 2016–17. The increase is mainly due to the introduction of full-day kindergarten, which has been made available to every four- and five-year-old in Ontario since September 2014; and other investments, including negotiated labour enhancements and increases in school renewal funding.

Q. Why have expenses in the Postsecondary and Training Sector increased from $9.3 billion in 2012-13 to $10.1 billion in 2016-17?

A. Postsecondary and training sector expense increased from $9.3 billion in 2012–13 to $10.1 billion in 2016–17, or on average by 2.2 per cent per year. The increase is mainly due to continued funding to support enrolment growth in postsecondary institutions, growth in student financial assistance programs and increases in postsecondary capital transfer payments.

CHILDREN'S & SOCIAL SERVICES

Summary of 2016-17 Budget to Actual Variance Analysis

Q. Why is the Children's and social services sector expense in 2016-17 higher by $190 million than in the Budget Plan?

A. Children's and social services sector expense that was $190 million higher than planned, mainly due to additional spending to address demand for the Ontario Disability Support Program and for young adults with complex special needs as well as expanding supports for children and youth with autism.

Summary of Five Year Expense Actual Variance Analysis

Q. Why did the Children's and Social Services sector actual expense grow by $2.3 billion from 2012-13 to 2016-17?

A. Children's and social services sector expense increased from $13.7 billion in 2012–13 to $16.0 billion in 2016–17, or on average by 3.9 per cent per year. The increase primarily reflects social assistance rate increases as well as investments in developmental services, autism and complex special needs programs and the Ontario Child Benefit.

JUSTICE

Summary of 2016-17 Budget to Actual Variance Analysis

Q. Why is the Justice sector expense in 2016-17 higher by $102 million than in the Budget Plan?

A. Justice sector expense was $102 million higher than planned, mainly due to settlements under the Proceedings Against the Crown Act and ensuring wage parity for First Nations police officers.

Summary of Five Year Expense Actual Variance Analysis

Q. Why has Justice Sector Expense increased by $652 million from 2012-13 to 2016-17?

A. Justice sector expense increased from $4.0 billion in 2012–13 to $4.6 billion in 2016–17, or on average by 3.9 per cent per year between 2012–13 and 2016–17. The increase is mainly due to the provincial upload of court security costs from municipalities, compensation in the Ontario Provincial Police and correctional services programs, and improved access to legal aid for low-income Ontarians.

OTHER PROGRAMS

Summary of 2016-17 Budget to Actual Variance Analysis

Q. Why is Other programs expense in 2016-17 higher by $140 million than in the Budget Plan?

A. Other programs expense that was $140 million higher than expected, mainly due to federal and provincial investments in social and affordable housing as well as the Ontario Rebate for Electricity Consumers. As well, there was lower-than-forecast spending due to revised timelines for Building Canada Fund projects and municipal transit projects.

Summary of Five Year Expense Actual Variance Analysis

Q. Why did the Other Programs Sector Actual Expense decrease by $1.2 billion from 2012-13 to 2016-17?

A. Other programs expense decreased by $1.2 billion from $17.9 billion in 2012–13 to $16.7 billion in 2016–17. This decrease is mainly due to the end of time-limited funding related to the Ontario Clean Energy Benefit program and the 2015 Pan/Parapan American Games, as well as the redesign of the Ontario Municipal Partnership Fund program.

ONTARIO TEACHERS' PENSION PLAN EXPENSE AND EMPLOYEE AND PENSIONER BENEFITS

($Millions)	2016-17 Budget	2016-17 Actual	2015-16 Restated Actual	Actual Versus Budget Variance	Year Over Year Variance
Ontario Teachers' Pension Plan	(452)	**(377)**	110	75	487

TEACHER'S PENSION PLAN

Q. Why has the 2016-17 Teachers' Pension Plan expense decreased from expense of $110M from 2015-16 to recovery of $377M in 2016-17?

A. The decrease in Teachers' Pension Plan pension expense is primarily due to increase recognition of investment gains in recent years.

Q. Why has the 2016-17 Teachers' Pension Plan recovery of $377M lower than what had been projected in prior year's Budget of $452M?

A. Actual 2016-17 Teachers' Pension Plan recovery of $377M is lower than recovery of $452M projected in 2016 Budget due lower than expected rate of growth in active members and due to additional adjustment was made this year to eliminate timing differences between provincial contributions and pension plan assets.

($ Millions)	2016-17 Budget	2016-17 Actual	2015-16 Restated Actual	Actual Versus Budget Variance	Year Over Year Variance
Employee and Pensioner Benefits	1,152	**1,002**	987	(150)	15

EMPLOYEE AND PENSIONER BENEFITS

Q. Why is the actual 2016-17 Employee and Pensioner Benefits Expense of $1,002M lower by $150M from what had been projected in prior year's Budget of $1,152M?

A. The 2016-17 actual Employee and Pensioner Benefits expense is $151M lower than originally budget is mainly due to lower WSIB expense than originally forecasted. WSIB had change their estimate of forecast claim administration rate in 2016, which resulted in reduction in expense in 2016-17.

Q. Why is the actual 2016-17 Employee and Pensioner Benefits Expense of $1,002M higher than 2015-16 Employee and Pensioner Benefit Expense of $987M?

A. The increase is due to changes made termination pay and long-term protection benefits to OPSEU members in 2015-16 that did not occur in 2016-17. This increase is partially offset by lower WSIB expense due to change in forecast claim administration rate in 2016 and due to lower pension expense as result of increase recognition of investment gains in recent years.

HEALTHCARE OF ONTARIO PENSION PLAN

Q. Why did the Healthcare of Ontario Pension Plan expense decrease by $155M from $747M in 2015-16 to $592M in 2016-17?

A. The Healthcare of Ontario Pension Plan expense decreased compared to prior year's actual mainly due to an increase in amortization of prior years' experience gains and higher interest earnings as a result of an increase in the plan asset base. Decreases in year over year expenses were partially offset by higher current service costs in 2016 as a result of an increase in active membership in 2015-16.

COLLEGES OF APPLIED ARTS AND TECHNOLOGY PENSION PLAN

Q. Why did the Colleges of Applied Arts and Technology Pension Plan expense increase by $3M from $190M in 2015-16 to $193M in 2016-17?

A. The Colleges of Applied Arts and Technology Pension Plan expense increased compared to prior year's actual, mainly due the $14M write-off of CAATPP net pension plan assets in 2016-17. The plan was not in an asset position as of year-end in 2015-16.

INFRASTRUCTURE

Infrastructure Expenditures Table

Q. Why is the 2016-17 total infrastructure expenditure $3.3 billion lower than planned in the 2016 Budget?

A. Infrastructure expenditure forecasts for each fiscal year are subject to change and reflect a continuum of information that begins with the Budget and ends with Public Accounts. The forecast in Budget 2016 was subject to change as new information became available throughout the year. Infrastructure spending of $12.9 billion, reported in the Public Accounts was $3.3 billion lower than the $16.2 billion set out in the 2016 Budget.

Underspending is mainly due to slower than expected construction progress in the transit sector ($2 billion) and health sector (about $0.5 billion).

Q. Why is the 2016-17 total infrastructure expenditure $1.4 billion lower than estimated in the interim forecast in the 2016 Budget?

A. Infrastructure expenditure forecasts for each fiscal year are subject to change and reflect a continuum of information that begins with the Budget and ends with Public Accounts. The interim forecast was subject to change as new information became available throughout the year. Infrastructure spending of $12.9 billion, including other partner funding, reported in the Public Accounts was $1.4 billion lower than the $14.3 billion set out in the interim forecast in the 2016 Budget due to slower than expected construction progress in the transit sector ($0.5B) and education sector ($0.4B).

Q. Actual infrastructure expenditures are $3.3 billion below the budgeted amounts. Doesn't this mean you should adjust your forecasting practices? Does this mean 2016-17 planned expenditures are overstated?

A. Infrastructure expenditures forecast for each fiscal year are subject to change and reflect a continuum of information that begins with the Budget and ends with the Public Accounts. As new information becomes available throughout the year, the forecasts will likely change (for example, due to updates in construction timelines). In this context it is important to note that infrastructure expenditure forecasts presented as part of Budget or other fiscal updates represents a point in time along this continuum and is based on the best available information at that time.

Given the uncertainties inherent in making projections, it is appropriate for the government to remain prudent and cautious in its forecasting.

The 2016-17 budgeted infrastructure expenditures are a reflection of prudent forecasting practices and the government's ongoing commitment to building and renewing the infrastructure the public relies on.

Q. In 2016-17, actual infrastructure expenditures are $3.3 billion below the budgeted amounts. Is the $3.3 billion earmarked for infrastructure in spite of the fact that it hasn't been spent yet, and will it be carried over to another fiscal to be spent on infrastructure? Or does the underspend mean that the $3.3 billion will be spent on other gov't priorities?

A. The $3.3 billion expenditure decrease is not earmarked for infrastructure investments or carried over to future years. Future year infrastructure investment decisions are made as part of the annual budgeting process.

The resulting fiscal savings associated with this expenditure decrease is allocated in the government's total program expense figures.

Q. Why has amortization cost gone up so significantly between 2012-13 and 2016-17?

A. Amortization recognizes consumption of Tangible Capital Assets. Amortization expense is primarily made up of amortization on existing assets. As these assets reach the end of their useful lives, the associated amortization disappears. This decline is offset by new amortization expense as new infrastructure projects come into service. Between 2012-13 and 2016-17, the province invested $53 billion in capital assets. As these assets have come into service, the corresponding consumption cost (amortization) has gone up. As the government continues to invest in infrastructure, amortization expense will continue to grow.

Q. If we invested $10 billion in publically owned infrastructure assets in 2016-17, why does TCA only go up by $4.8 billion?

A. The net book value of tangible capital assets is calculated as the book value (purchase price) less accumulated amortization. As long as assets are being amortized, growth in the stock of the Province's TCA on a yearly basis will always be less than the yearly investment. Estimated historical cost was used to record existing tangible capital assets if actual cost was unknown when the Province first implemented tangible capital assets accounting. Tangible capital assets, except land, are amortized over the estimated useful lives of the assets on a straight-line basis. Amortization expense of TCA in 2016-17 totalled $5.2 billion.

Q. What are some examples of investments made in between 2012-13 and 2016-17?

A. A few examples of the many infrastructure investments Ontario has made over the last five years include:

- The 407 East project will help relieve congestion and support the efficient movement of people and goods through the eastern Greater Toronto Area and beyond. Phase 1, from Brock Road in Pickering to Harmony Road in Oshawa and Highway 412, opened in Spring 2016.
- The Pan/Parapan American Games Athletes' Village, which was home to about 10,000 athletes and officials during the Games. The village will be transformed into a mixed-use neighbourhood with affordable housing, health services and a residence for George Brown College students.
- The Union Pearson (UP) Express, which began service in 2016, provides a dedicated rail link connecting Toronto Pearson International Airport with Union Station in downtown Toronto in 25 minutes.
- The Right Honourable Herb Gray Parkway in Windsor–Essex, provides an express route to the country's busiest land border crossing.
- The Humber College infrastructure project involved the construction of a new Learning Resource Commons and an academic support and student services facility.
- The Elgin County Courthouse brings together existing court facilities within one location in St. Thomas.
- The New Oakville-Trafalgar Memorial Hospital is a state-of-the-art facility accommodating a full range of hospital services including acute care, complex continuing care and rehabilitation.
- The new Humber River Hospital includes a new facility on a new site in north-western Toronto, one of the most culturally diverse and fastest-growing communities in Canada. The Humber River Hospital offers a comprehensive range of services to support inpatient and outpatient programs.

Q. What kind of infrastructure investments does the Province make which do not contribute to the net book value of tangible capital assets?

A. The Province makes transfers to its non-consolidated partners, such as municipalities and universities, for capital purposes. This spending is recorded in the Infrastructure expenditures table (Table 4) as 'Transfers and Other Infrastructure Expenditures.' 'Other Infrastructure Expenditures' includes expenses such as non-capitalized maintenance costs (e.g., window cleaning of provincially owned buildings). These expenses are included as part of overall infrastructure spending, but do not contribute to the net book value of the Province's tangible capital assets.

CORPORATE AND ELECTRICITY FINANCE DIVISION

Asset Optimization and the Trillium Trust

Q: If the Trillium Trust has been credited with $5.3 billion, why did the government only draw down $260 million in 2016-17?

A: Like most large infrastructure investments, initial spending on projects is focused on planning, design, property acquisition and other activities to get projects construction-ready.

As this preliminary work is completed and construction activity gets underway, further project requirements will be identified that will be funded from the Trillium Trust in subsequent years.

The government is committed to investing the full amount from the Trillium Trust to support transit, transportation and other priority infrastructure. The 2017 Budget included an additional $400 million to be drawn down in 2017-18.

Q: What projects are being funded through the Trillium Trust?

A: The Trillium Trust was drawn down by about $260 million in 2016–17 to help support transit, transportation and priority infrastructure across the Province under the Moving Ontario Forward initiative.

As communicated in the 2017 Budget, the Trillium Trust is supporting initiatives such as GO Regional Express Rail, the Hurontario Light Rail Transit, and the Ontario Community Infrastructure Fund.

Q: If the Province raised about $2 billion in the secondary offering of Hydro One shares in 2016, why was only $538 million credited to the Trillium Trust?

A: The *Trillium Trust Act, 2014*, provides for the dedication of net revenue gains to the Trillium Trust associated with the sale of designated assets to support investments in transit, transportation and priority infrastructure across the Province.

The net revenue gains credited to the Trillium Trust from the secondary offering of Hydro One shares are derived from the gross proceeds, less fees/expenses incurred and less the book value of the shares sold, not including the shares purchased by OPG.

The government will move forward with regulations to credit the Trillium Trust with the net revenue gains from the shares purchased by OPG in the future.

The Province also used the $1.3 billion in proceeds related to the book value of the Hydro One shares sold to pay down the Province's debt and other payables with the Ontario Electricity Financial Corporation (OEFC).

Through the broadening of Hydro One ownership, the Province is meeting its target to generate $4 billion in net revenue gains that, through the Trillium Trust, will be

reinvested in infrastructure under Moving Ontario Forward, and $5 billion to reduce debt.

Q: The Public Accounts show that the government credited the Trillium Trust with a non-cash deferred tax benefit resulting from the Hydro One IPO. How can the government use a non-cash amount to invest in infrastructure?

A: The Trillium Trust Act, 2014, provides for the dedication of net revenue gains to the Trillium Trust.

The deferred tax benefit provided an up-front revenue gain to the Province through consolidation of the Province's portion of Hydro One's net income in the Public Accounts. This also increases the book value of Hydro One's shares and reduces the accounting gains for subsequent sales for a given amount of gross sale proceeds. This does not affect the total cash the Province receives.

By dedicating to the Trillium Trust the net revenue gains to the Province from the deferred tax benefit, the government is ensuring that the full benefit of the value created from broadening Hydro One ownership is dedicated to the Trust to support investments in transit and infrastructure.

Q: Why hasn't the government credited the Trillium Trust with the net revenue gains associated with Hydro One shares purchased by OPG and Hydro One shares purchased by trusts of the Power Workers' Union (PWU) and Society of Energy Professionals (SEP) through Provincial loans?

A: The government has made a regulation that will credit the Trillium Trust with the net revenue gains from the sale of shares to the PWU / SEP trusts that were supported by Provincial loans.

The $48M total gain from the sale of these shares was recorded as deferred revenue in the 2015-16 Public Accounts. As payments of the loan are received, the gain on sale will be recognized annually as revenue in proportion to the payments made.

The annual gain will be reported in the Public Accounts, to clearly indicate the amount to be credited to the Trillium Trust. The first annual gain, as reported in Volume 1 of these 2016-17 Public Accounts is approximately $1.5 million.

The government will move forward with regulations to credit the Trillium Trust with the net revenue gains from the shares purchased by OPG in the future.

Q: If the sale of Hydro One Brampton is now complete and the gain is being reported in Public Accounts, why hasn't the Province credited the Trillium Trust from the sale?

A: The government is committed to dedicating the net proceeds from the sale to the Trillium Trust, and will move forward with a regulation under the Trillium Trust Act.

ELECTRICITY SECTOR

2016–17 vs 2016 Budget Plan [Actual vs Initial Forecast]

Q. Why did the combined net incomes of OPG and Hydro One decrease by $193 million compared to Plan? [Excludes Hydro One Brampton net income variance of $3 million]

A. The $193 million decrease in combined OPG and Hydro One net incomes in 2016-17 from Plan reflects:

- lower-than-projected OPG gross margins, and
- lower Hydro One Limited net income largely due to re-categorization of impacts of broadening Hydro One ownership (~84% ownership to ~70% ownership through the secondary offering) that were previously reflected under Sales and Rentals revenue. The re-categorization is fiscally-neutral.

Q. Why are Electricity payments-in-lieu of taxes $151 million lower than Plan?

A. The variance is primarily due to lower income tax PILs from OPG, partially offset by higher PILs from municipal electrical utilities.

Q. Why are Power Supply Contract Recoveries $195 million higher than projected??

A. The actual amount in 2016-17 is higher largely due to the dismissal of the Ontario Electricity Financial Corporation's (OEFC) appeal of a court decision with respect to the calculation of some escalation rates under legacy former Ontario Hydro power purchase contracts with non-utility generators (NUGs), and the subsequent decline of an application for leave to appeal to the Supreme Court of Canada. As a result of the decisions, OEFC recognized higher power supply contract expenses, fully offset by higher power supply contract recoveries.

2016–17 vs Interim 2016-17 [Actual vs Interim Forecast]

Q. Why did the combined net incomes of OPG and Hydro One increase by $14 million compared to the Interim forecast for 2016-17?

A. The variance is mainly due to stronger-than-projected results for OPG's nuclear funds contribution, partially offset by the lower Hydro One net income.

Q. Can you explain the $99 million variance in Power Supply Contract Recoveries between interim numbers in Budget 2017 and actuals [in Public Accounts]?

A. The variance is largely due to retroactive payments that the Ontario Electricity Financial Corporation (OEFC) made to certain non-utility-generators (NUGs) with legacy former Ontario Hydro power purchase agreement (PPA) contracts with OEFC.

OEFC was required to make these payments following the dismissal by the Supreme Court of Canada of OEFC's application for leave to appeal a judgment of the Court of Appeal of Ontario on a 2015 court decision.

- Ontario Hydro entered into these PPAs in the late 80s and early 90s with private sector generators.
- As the legal continuation of the former Ontario Hydro, OEFC is the counterparty to these contracts.
- Some of the PPAs had escalation clauses under which the global adjustment has an impact on the calculation of the contract rates.
- In 2015, a lower court decision found that OEFC had not properly calculated the price paid for electricity under 12 PPAs, following the enactment of Ontario Regulation 398/10, under which the allocation among electricity consumers of the Global Adjustment, one component of the all-in price of electricity, was changed.
- These 12 PPAs were held by entities that participated in the lawsuit, and they received retroactive payments in 2016, following the Ontario Court of Appeal decision to dismiss OEFC's appeal.
- Several PPA counterparties with similar price provisions that did not participate in the lawsuit entered into Standstill Agreements with OEFC in 2015, after the original court decision. After all avenues of appeal were exhausted, following the 2017 Supreme Court decision, OEFC was required to make retroactive payments to these entities.

2016–17 vs 2015-16 [Actual vs Previous Year]

Q. Why did Hydro One's net income to the Province increase by $263 million compared to the previous fiscal year?

A. Hydro One's net income remains relatively unchanged from 2015-16 to 2016-17. The $263 million increase in Hydro One net income to the Province, however, is largely due to the impacts of the November 2015 Hydro One IPO.

Hydro One 2015-16 net income to the Province, was lower due to IPO-related factors including a one-time PILs expense of about $2.8B, partially offset by the $2.4 billion proportionate impact on the Province's net income from Hydro One's recognition of a deferred tax benefit of about $2.8 billion.

[The impact of the 2015-16 IPO-related adjustments were partly offset by the impact of the secondary share offering in 2016-17 on the Province's share of Hydro One net income.]

Q. Why did OPG's net income decline by $121 million compared to the previous fiscal year?

A. The decrease is due largely to stronger 2015-16 earnings on the nuclear funds on a realized basis.

Q. Why did Electricity Debt Retirement Charge decrease by $238 million compared to the previous fiscal year?

A. The DRC trends downwards primarily due to the elimination of the DRC for residential consumers, effective January 1, 2016. The variance reflects the first full year of residential consumer exemption from the DRC in 2016-17.

Q. Why did Electricity payments-in-lieu of taxes decrease by $2.9 billion from last year?

A. The increase is primarily due to significant one-time PILs related to Hydro One's IPO, including $2.6 billion in departure tax under the PILs regime and about $0.2 billion in additional PILs, as Hydro One exited the PILs regime and started paying corporate income taxes following the IPO. Note that these one-time PIL payments did not have a net effect on the Province's annual deficit, as the additional revenue was offset by an equal reduction in Hydro One's net income, which is consolidated in the Province's financial statements.

Electricity Sector Stranded Debt

Q. What is the status of old Ontario Hydro's stranded debt? When is the Debt Retirement Charge (DRC) expected to end based on the latest available information?

A. The government dedicates the revenues it receives from the electricity sector to the Ontario Electricity Financial Corporation (OEFC). All OEFC revenues, including the Debt Retirement Charge (DRC) paid by electricity consumers, are used to service and retire its debt and other obligations, as provided for under the Electricity Act, 1998.

For the thirteenth consecutive year, the stranded debt has been reduced. The 2016–17 results for the OEFC show an excess of revenue over expense of $1.2 billion. The OEFC has paid down stranded debt by a total of about $18.5 billion from its peak in 2003-04, reducing stranded debt to $3.2 billion as at March 31, 2017.

As part of its commitment to reduce electricity cost pressures, the government has removed the Debt Retirement Charge (DRC) from residential electricity users' bills as of January 1, 2016.

This would save a typical residential user about $70 each year and would mean ending the DRC earlier for these users than otherwise provided for in the Electricity Act, 1998.

As a further step to mitigate electricity cost pressures for non-residential users, the government introduced legislation the Budget Measures Act, 2015, passed in December 2015, to end the DRC for all other users on April 1, 2018, nine months earlier than previously estimated.

Ending the DRC on a legislated fixed date provides certainty to commercial, industrial and other users, and helps them more effectively plan their investment decisions.

Even after the end of the DRC, there would still be stranded debt remaining, to be serviced and paid down by OEFC's other dedicated revenues, such as payments in lieu of taxes and the Gross Revenue Charge.

RESERVE FUND

Q. Why does the government maintain a reserve fund? Last year there were questions raised about the government dipping into its reserve fund to strengthen its results. Did you do that this year?

A. As required under the Fiscal Transparency and Accountability Act, 2004, a reserve is included in the projected surplus/deficit each year to guard against unforeseen revenue and expense changes that could have a negative impact on the Province's fiscal performance.

The 2016 Budget plan included a $1.0 billion reserve for 2016–17. Excluding this reserve, the 2016 Budget projected a deficit of $3.3 billion.

As the reserve is a forecast provision, and the fiscal results for 2016–17 are now finalized, a reserve is no longer included in the Province's financial statements.

The final deficit for the 2016–17 fiscal year is $1.0 billion, a $3.3 billion improvement compared with the 2016 Budget projection of $4.3 billion, which included the reserve.

Q. What is the difference between the contingency fund and the reserve?

A. The contingency fund is an amount of expense that is approved by the Legislative Assembly at the beginning of the year to cover higher spending due to unforeseen events (e.g. fighting forest fires). This approved spending limit is allocated during the year to ministries for their programs and activities.

The reserve is an amount included in the forecast each year to protect the fiscal outlook against unforeseen adverse changes in the Province's revenue and expense – for example, changes in Ontario's economic performance.

RESULTS VERSUS 1ST QUARTER REPORT

Q. Was the government being overly optimistic in its revenue forecast in the 2017-18 First Quarter Finances based on the Annual Report results for the 2016-17 fiscal year?

A. The 2017-18 First Quarter Finances was released before the 2016-17 Annual Report and does not take into account the revised 2016-17 revenue. The government will be updating its revenue outlook in the 2017 Ontario Economic Outlook and Fiscal Review in the fall, which will include the latest 2016-17 results as well as all additional information arriving after the Annual Report.

UNCOLLECTIBLE ACCOUNTS RECEIVABLE

Q. Why are we removing uncollectible accounts receivable owed to the province from the accounting records?

A. Removing uncollectible accounts receivable is required under Public Sector Accounting Standards. After ministries have taken progressive collection activity and determined that all the collection efforts have been exhausted, those accounts with little or no prospect of collectability are removed from current accounting records.

Q. How will the write-offs be shown in the Public Accounts?

A. The ministries' uncollectible accounts receivable are required to be published in a table called "Losses Deleted form the Accounts" in Volume 2 of the 2016/17 Public Accounts.

Q. Is removing uncollectible accounts receivable from the records the same as forgiving the debt?

A. No. If debt is forgiven, the province cannot pursue or collect on the debt in the future. However, having an account written-off does not eliminate the debtor's legal obligation to pay the liability. The province may attempt to collect the money owed if the debtor's circumstances change in the future. In 2016/17, $17.3M was collected on accounts previously written off.

Q. How do you determine when a debt is uncollectible?

A. In the vast majority of cases, a debt may become uncollectible when a corporation or individual debtor becomes insolvent or goes bankrupt; or when an individual debtor dies, is imprisoned for a long term or cannot be located for a considerable period of time.

It may take several years of progressive collection actions before an uncollectible account receivable is submitted for removal from the accounting records.

Q. How does this affect the province's bottom line?

A. There is no impact on the deficit/surplus in the year as a result of removing uncollectible accounts from the accounting records.

The fiscal impact incurred in the year when the account was initially identified as being doubtful. At that time, a bad debt expense was recorded.

Q. What is the amount of uncollectible accounts receivable this year?

A. The total uncollectible accounts receivable for 2016/17 is $267.2 million.

Q. What amount of unpaid taxes is included in the Ministry of Finance's total?

A. The total for tax-related amounts is $134.2 million, which represents 97% of MOF's submission of $138.8 million and is attributable to bankrupt or insolvent tax payers.

Q. How does the amount of uncollectible accounts receivable compare with total accounts receivable?

A. This year's uncollectible accounts receivable represent about 2.4% (4.0% in 2015/16) of the province's accounts receivable.

Q. What steps is the government taking to reduce future write-off of accounts receivable?

A. Common progressive collection tools include the use of private collection agencies and the Canada Revenue Agency (CRA) Refund Setoff Program, in addition to any specific legislated tools provided in the appropriate legislation (e.g., clawbacks, liens, director's liability). The centralization of collections within MOF helps ensure a standard, OPS-wide use of such tools.

Key Messages

- The 2016-17 Public Accounts of Ontario show that Ontario's deficit is $991 million.

- Ontario has beaten its deficit target eight years in a row.

- Ontario's plan is working. By responsibly managing the Province's finances, Ontario balanced the budget in 2017-18, and will maintain a balanced budget for the future. A balanced budget means more funding for the programs and services people and families rely on most.

- As promised in the 2016 Budget, Ontario grew its economy while transforming healthcare, building vital infrastructure and investing in people's talents and skills.

- To help Ontarians better understand their government's finances, new digital tools have been developed that present the Public Accounts data in innovative, visual formats. These tools make Ontario's finances easier to understand, access, and use.

- Presenting the Public Accounts data in innovative, visual formats is part of Ontario's commitment to Open Government.

- The government will continue to build on its track record of responsible fiscal management.

Top Media Qs&As

Top media Qs&As updated September 5, 2017

1. **The Auditor General has issued a qualified opinion for the second year in a row. Is this a sign of fiscal mismanagement?**

   We continue to move forward and present the Province's finances fairly and accurately and in accordance with Canadian Public Sector Accounting Board standards. Ontario has a strong track record of producing high-quality financial reports on a timely basis. The Auditor General's qualified opinion is based on a different interpretation of Public Sector Accounting Board standards for net pension assets and recognition of market accounts.

   Last year there was a disagreement among the Province's professional accounting staff and the Auditor General's Office on the appropriate application of Public Sector Accounting Board standards regarding pension accounting. As a result, the Pension Asset Expert Advisory Panel was established to deliver independent advice and recommendations on the issue to the Province.

   The independent panel members concluded the Province's share of the net pension assets of both the Ontario Teachers' Pension Plan and the Ontario Public Service Employees' Union Pension Plan should be recognized in Ontario's financial statements.

   After significant deliberation, including consideration of the recommendations of the panel, Ontario confirmed that the accounting for these plans prior to 2015-16 was appropriate, and are prepared in accordance with public sector accounting standards for pension asset accounting. Further, EY provided additional analysis and concluded that no valuation allowance was required for either plan as of March 31, 2017. The 2016-17 financial statements include these pension assets, and we continue to apply the accounting treatment of pension assets that the Province has used consistently since 2001. In addition, the 2015-16 financial statements were restated to include these assets.

   This year the Independent Electricity System Operator (IESO) began recognizing its market accounts' assets (amounts due from power distributors) and liabilities (amounts due to power producers) in their financial results. IESO has chosen to recognize these markets accounts on its books for transparency reasons, as it better reflects the financial position of the IESO-administered markets at year-end. This change was supported by the IESO's audit committee, its independent external auditor, and finally by the Office of the Provincial Controller. This change also has no impact to the province's annual deficit, net debt or accumulated deficit.

   This accounting is consistent with the presentation used previously by the Ontario Power Authority (which was merged with the IESO on January 1, 2015)

DRAFT

in its financial statements, which was not subject to qualification from the Office of the Auditor General at that time.

2. The Auditor General is critical of the IESO accounting changes. Are Ontario's accounting changes inappropriate?

No. The Independent Electricity System Operator (IESO) began recognizing its market accounts' assets (amounts due from power distributors) and liabilities (amounts due to power producers) in their financial results. IESO has chosen to recognize these markets accounts on its books for transparency reasons, as it better reflects its net financial position on behalf of the IESO-administered markets at year-end.

This accounting change was accepted by the IESO's independent external auditor, which issued an unqualified, or "clean," audit opinion. These accounting changes were highlighted in the IESO's annual report which was published online in March 2017.

Further, this accounting is consistent with the presentation used previously by the Ontario Power Authority (which was merged with the IESO on January 1, 2015) in its financial statements, which was not subject to qualification from the Office of the Auditor General at that time.

This change has no impact to the province's annual deficit, net debt or accumulated deficit.

This accounting change has been supported by the professional accounting staff of the Office of the Provincial Controller.

We will continue to work with the Auditor General to build on the government's track record of responsible fiscal management and high quality financial reporting.

If pressed on rate-regulated accounting:

The IESO made the decision to adopt rate-regulated accounting because it better reflects the economic substance of certain types of expenses that may not be directly recovered through the normal revenue requirement model.

The IESO, like Hydro One and Ontario Power Generation (OPG), is regulated by the Ontario Energy Board. The IESO adopted rate-regulated accounting for its year ended December 31, 2016. The impact on the financial statements of the Province is a decrease of $82 million in the 2016-17 opening accumulated deficit and an increase in the 2016-17 annual deficit by $24 million.

DRAFT

This accounting change was accepted by the IESO's independent external auditor, which issued an unqualified, or "clean," audit opinion. These accounting changes were highlighted in the IESO's annual report which was published online in March 2017.

3. Why are you still fighting with the Auditor General over pension accounting?

In preparing last year's Public Accounts, the Province's professional accounting staff and the Auditor General's Office engaged in discussions about the appropriate application of Public Sector Accounting Board standards regarding pension accounting for the Province's jointly sponsored pension plans.

As a result, the Pension Asset Expert Advisory Panel was established to deliver independent advice and recommendations to the Province on the issue. The independent panel members concluded the Province's share of the net pension assets of both the Ontario Teachers' Pension Plan and the Ontario Public Service Employees' Union Pension Plan should be recognized in Ontario's financial statements.

After significant deliberation, including consideration of the recommendations of the panel, Ontario confirmed that the accounting for these plans prior to 2015-16 was appropriate. Further, EY provided additional analysis and concluded that no valuation allowance was required for either plan. The 2016-17 financial statements include these pension assets, and we continue to apply the accounting treatment of pension assets that the Province has used consistently since 2001. In addition, the 2015-16 results were restated to include these assets.

We will continue to work with the Auditor General to build on the government's track record of responsible fiscal management and high quality financial reporting.

4. How were you able to beat your deficit target in 2016-17?

In 2016-17 we maintained our focus on responsible fiscal management and investing in the right priorities. We are making progress on our economic plan by making investments to spur growth, transforming government and responsibly managing spending.

Average annual growth of total government spending has been held to 2.3 per cent for the past five years. As a result of growth in revenue that exceeded growth in program expense, as well as lower than forecast interest on debt, the deficit is $3.3 billion lower than projected in the 2016 Budget. It is also $0.5 billion lower than the interim projection in the 2017 Budget.

DRAFT

This is the eighth year in a row the government has beaten its deficit target.

5. The government is claiming the deficit has been reduced to $1B deficit for 2016-17 and that the budget will be balanced over the next three years. However, the AG is saying that the deficit for 2016-17 was more than $2B due to the treatment of pension assets, and the FAO has stated that the government's revenue forecast is more than $1B too "optimistic". Isn't the government really hiding a $3-4B deficit instead of a balanced budget?

There is no hidden deficit. In the *2010 Budget*, the government committed to eliminating the deficit and returning to a balanced budget by 2017-18. Through targeted, measured and fiscally responsible decisions, Ontario has restored its fiscal and economic strength.

Today we are confirming that the 2016-17 deficit of $1 billion is $3.3 billion lower than projected in the 2016 Budget and $0.5 billion lower than the interim projection in the 2017 Ontario Budget. This marks the eighth year in a row that Ontario has beaten its deficit target.

The success in eliminating the deficit is supported by a strong track record in managing spending -- having held average growth in spending to 2.3 per cent over the past five years.

In addition, over the last several years, the government's investments to strengthen economic growth have paid off. Ontario is a leader in economic growth, with our real GDP growth having outpaced that of all the G7 countries over the last three years. The strengthened economy has resulted in increased revenue for the Province – in fact, over the past two fiscal years, revenue has come in higher than projected, supporting Ontario's return to a balanced budget.

It is also important to point out that private sector forecasters have revised upward their expectations for the Ontario economy since the 2017 Budget, reflecting the growing strength of the Ontario economy. In fact, the current average private sector forecast for this year and next is also above what the Financial Accountability Office of Ontario projected in their Budget commentary. The government is also taking steps to improve tax fairness and address the underground economy in order to ensure the integrity of the Province's revenues.

Finally, Ontario's fiscal plan incorporates prudence in the form of a reserve to protect the fiscal outlook against unforeseen adverse changes in the Province's revenue and expense. The reserve has been set at $0.6 billion in 2017-18, $0.6 billion in 2018-19, and $0.9 billion in 2019-20.

Balancing the budget means that the government can invest more in the programs and services that people rely on.

DRAFT

6. The FAO's commentary released on September 6, 2017 says that Ontario's debt reduction commitment is based on unrealistic assumptions. How do you respond?

The government made a commitment in the 2010 Budget to balance and eliminate the deficit by 2017-18. Since then, the government has reduced the deficit from its peak in 2009-10 of $19.3 billion, to a projected $1.5 billion in 2016-17 and a projected balanced Budget in 2017. Furthermore, the government consistently overachieved on its deficit targets and forecasts for net debt-to-GDP. The government's track record therefore provides evidence of fiscal discipline and the likelihood of achieving on-going balanced budgets in the future.

With respect to capital spending, approximately 61 per cent of the increase in net debt from 2008–09 to 2016–17 was due to the deficit, with net investments in capital assets responsible for most of the balance. Infrastructure expenditures do not therefore have as large an impact on net debt as that of a balanced budget.

Moreover, additional capital investment in the latter half of the next decade will stimulate the economy. A recent report from the Centre for Spatial Economics confirms that over the long term, real GDP in Ontario increases by $6 for every dollar of public infrastructure spending. This stimulus in GDP may help to offset the effects of an aging population and slower growth in the labour force and maintain the 4% average GDP growth required to bring net debt to GDP down to 27% in 2029-30.

7. Interest on debt is still massive and the Bank of Canada is expected to raise interest rates again this fall, and announced it is raising its target for the overnight rate on September 6, 2017. How is the government preparing for this and will this affect your ability to maintain a balanced budget?

The increase in the Bank of Canada's policy rate reflects the growing strength of the Canadian and Ontario economy. Ontario's economy remains strong and has continued to grow and create jobs in an uncertain global environment.

Since 2014, Ontario has been an economic growth leader in Canada and private-sector economists expect Ontario to remain one of the fastest growing provinces over the next two years.

Ontario's economic growth exceeded that of all G7 countries over the 2014 to 2016 period.

A quarter-point increase in the policy rate is not likely to have a material impact on the Ontario economic outlook. The 2017 Ontario Budget anticipated that interest rates would rise modestly.

DRAFT

An increase in the Bank of Canada's overnight interest rate does not automatically translate into an increase in the Province's borrowing cost which is also impacted by other factors including revisions to the US Federal Funds Rate.

As noted in the 2017 Budget, the Province's average cost of 10 year borrowing in 2017-18 is forecast to be 3 per cent. The impact of a 100 basis point increase in borrowing rates is forecast to be approximately $300 million. The interest rate forecast used in the Budget was prudent, and anticipated that long-term interest rates would rise as we progressed through the fiscal year.

8. You claim to have balanced the budget yet you keep piling on more debt. How do you plan to pay down the debt?

We maintain a target of reducing the net debt-to-GDP ratio to its pre-recession level of 27 per cent, with current projections showing that this will be achieved by 2029-30. In the balanced 2017 Budget, the government is setting an interim target to reduce the net debt-to-GDP ratio to 35 per cent by 2023–24.

In a balanced budget environment, debt would be incurred primarily to invest in capital assets. We are making progress on our economic plan by making investments to spur growth, transforming government and responsibly managing spending – including addressing the underground economy and maintaining tax fairness. Our strategic investments in infrastructure provide economic benefits: a recent study by the Centre for Spatial Economics (C4SE) finds that, over the long term, real GDP in Ontario will rise up to $6 on average per one dollar of public infrastructure spending.

These strategic investments are creating jobs and contributing to economic growth. Ontario's GDP grew one per cent in the first quarter of 2017, outperforming that of Canada, the U.S. and all other G7 countries.

9. Spending for hospitals, school boards and colleges seems to be much higher in Public Accounts than in the 2017 Budget. Why is this?

To increase transparency, this year we have made a simple change to how we are reporting third party revenues for broader public sector organizations.

For the first time, Public Accounts are presenting third party revenues for hospitals, school boards and colleges with provincial revenue. Third-party revenues earned by these organizations, such as tuition fees, patient fees, research grants and donations, are no longer netted against the respective sectors' expenses, as they were in prior years for Public Accounts and the 2017 Budget.

This is simply a presentation change for Public Accounts. It is fiscally neutral, i.e. there is no change to the annual deficit, net debt or accumulated deficit. To

ensure consistency in year-to-year and to Budget comparisons, we are reclassifying all previous years and the 2016 Budget. The 2017 Fall Economic Statement and 2018 Budget will also reflect this presentation change.

The Auditor General supports the Province's decision to adopt this presentation change. It is consistent with the accounting principles for governments issued by the Public Sector Accounting Board, and the reporting practices of other senior Canadian governments.

10. The Public Accounts show a drawdown of $260 million from the Trillium Trust. What did you spend the money on?

The government began allocating proceeds from the Trillium Trust in 2016-17 to help support infrastructure initiatives such as GO Regional Express Rail (GO RER), the Hurontario Light Rail Transit (LRT) and the Ontario Community Infrastructure Fund (OCIF).

We expect the Trillium Trust to be drawn down by about $400 million in 2017–18.

Our strategic investments in infrastructure provide economic benefits: a recent study by the Centre for Spatial Economics (C4SE) finds that, over the long term, real GDP in Ontario will rise up to $6 on average per one dollar of public infrastructure spending.

11. Does a qualified opinion impact the Province's credit rating?

The Province's financial results show that the government has once again beaten its annual deficit targets. In April 2017, we delivered our first balanced budget since the global recession and we are on track to do so again next year and the year after.

The rating agencies will assess whether the underlying factors that lead to a qualified opinion directly affect the creditworthiness of the Province. However, there were no credit rating implications in 2016 when the Province received a qualified audit opinion on its 2015-16 Public Accounts. Qualified opinions by the Auditor Generals of British Columbia and Quebec have been made in their respective provinces in the past, with no negative impacts on their province's credit ratings.

12. The Auditor General has some serious concerns about how you're accounting for Ontario's Fair Hydro Plan. What do you say to this?

The accounting for Ontario's Fair Hydro Plan is a separate and distinct issue to the Public Accounts for 2016-17 that we're here to talk about today.

DRAFT

However, under Ontario's Fair Hydro Plan accounting structure, the Province's net debt and annual surplus/deficit won't be negatively impacted since all costs are to be recovered through future rates.

The Ministry of Energy, Finance and Treasury Board Secretariat continue to work closely with Ontario Power Generation (OPG), the Independent Electricity System Operator (IESO) and external advisors to address the outstanding accounting related considerations.

The Auditor General has also been briefed on the government's refinancing structure.

For further questions, I direct you to contact my colleague at the Ministry of Energy.

13. Program spending increased again this year. Why?

Program spending in 2016-17 was $141.7 billion, down $0.1 billion from the 2016 Budget. Average annual growth of total government spending has been held to 2.3 per cent for the past five years.

Healthcare represents the largest share of government program spending at $56 billion. Transformation efforts continue to make the sector more effective and sustainable while continuing to improve access for patients, especially the increased demands from an aging and growing population. The government has invested in new drugs, technologies, community and home care, long term care homes, mental health, physicians' services and specialized cancer treatments.

Other areas of government investment include:

- $26.6 billion in education, mainly due to the introduction of full-day kindergarten;
- $16 billion in children's and social services, due to increased annual social assistance rates as well as investments in developmental services, autism and complex special needs programs, as well as the Ontario Child Benefit;
- $10.1 billion in post-secondary and training, due to enrolment growth in colleges and universities along with increased student financial assistance programs and increases in capital funding for post-secondary institutions;
- $4.6 billion in justice sector expenses due mainly to the upload of court security costs from municipalities, compensation for the Ontario Provincial Police and correctional services programs, as well as improved access to legal aid.

DRAFT

Media Qs&As – Comprehensive List

General Public Accounts Information

1. **What is Public Accounts?**

   The Public Accounts of Ontario is a key accountability and transparency document in the government's financial cycle. It's a look back that compares Ontario's actual performance to what was planned in the Budget.

   The Public Accounts present the financial statements of the Province, provide financial highlights of the past fiscal year, and report on performance in priority areas.

   Public Accounts is audited by the Auditor General and is typically released in the fall of the following fiscal year.

2. **Why can't I find some organizations' financial statements in the Public Accounts?**

   Volume 2 contains the individual financial statements of government organizations, business enterprises and other financial statements. At the time of print, some organizations may not have had time to provide their financial statements. When this happens, we post them to Ontario.ca/publicaccounts as soon as they're available. The omission has no impact on the financial results reported in Public Accounts.

Accounting Changes

3. **Why have you restated prior year's financial statements?**

   When preparing the 2016-17 Public Accounts, Ontario's professional accounting staff adopted accounting changes to further enhance accountability and transparency.

   These changes include:
   a. **Accounting for hospitals, school boards and colleges** - third-party revenues (i.e. tuition fees, patient fees, research grants and donations) are now reported together with provincial revenue. This change increases transparency and is supported by the Auditor General.
   b. **Accounting for energy sector government business enterprises** - the financial results of investments in Hydro One and Ontario Power Generation (OPG) now reflect International Financial Reporting Standards. Previously, these results were reported using U.S. Generally Accepted Accounting Principles. This change was made to meet Public Sector Accounting Board standards and is supported by the Auditor General.

DRAFT

c. **Accounting for the Independent Electricity System Operator (IESO)** - the IESO has adopted rate-regulated accounting, and is now recognizing its market accounts assets and liabilities in its financial results.
d. **Accounting for net pension assets of jointly sponsored pension plans** - the Province is reporting net pension assets for jointly sponsored pension plans. This is in line with Public Sector Accounting Board standards and the recommendations of the independent Pension Asset Expert Advisory Panel.

- ## Broader Public Sector Accounting Presentation Change

4. Spending for hospitals, school boards and colleges seems to be much higher in Public Accounts than in the 2017 Budget. Why is this?
(Top Media Question - updated September 5, 2017)

To increase transparency, this year we have made a simple change to how we are reporting third party revenues for broader public sector organizations.

For the first time, Public Accounts are presenting third party revenues for hospitals, school boards and colleges with provincial revenue. Third party revenues earned by these organizations, such as tuition fees, patient fees, research grants and donations, are no longer netted against the respective sectors' expenses, as they were in prior years for Public Accounts and the 2017 Budget.

This is simply a presentation change for Public Accounts. It is fiscally neutral, i.e. there is no change to the annual deficit, net debt or accumulated deficit. To ensure consistency in year-to-year and to Budget comparisons, we are reclassifying all previous years and the 2016 Budget. The 2017 Fall Economic Statement and 2018 Budget will also reflect this presentation change.

The Auditor General supports the Province's decision to adopt this presentation change. It is consistent with the accounting principles for governments issued by the Public Sector Accounting Board, and the reporting practices of other senior Canadian governments.

5. What is consolidated reporting?

This presentation change may also be referred to as line-by-line consolidated reporting. This type of reporting is a more transparent way of presenting the details in the Broader Public Sector (BPS).

This change means that both expenses and revenues will be shown as separate items (on a gross basis), as opposed to being reported together (on a net basis).This affects what you see in the reporting breakdown of figures for hospitals, school boards, colleges and universities. However this has no impact to the annual deficit, net debt or accumulated deficit.

DRAFT

Line-by-line consolidated reporting is in keeping with Public Sector Accounting Board standards and will mean that our presentation for Public Accounts is consistent with other governments across Canada. The Auditor General is supportive of this change.

- ## Ontario Power Generation and Hydro One Accounting Change

6. Why is there a change to the accounting for Ontario Power Generation (OPG) and Hydro One?

In the 2016-17 Public Accounts, the financial results of Ontario's investments in Hydro One and Ontario Power Generation (OPG) now reflect International Financial Reporting Standards. Previously, these results were reported using U.S. Generally Accepted Accounting Principles. This change was made to meet Public Sector Accounting Board requirements and is supported by the Auditor General.

7. What is the impact of this change to the Province's bottom line?

This change has resulted in an adjustment to the opening accumulated deficit and net debt of $1,163 million, of which $683 million relates to transition to IFRS. The impact of this change to the annual deficit is not material to the Province in 2016-17.

- ## Pension Asset Accounting

See section: Auditor General – Qualified Opinion for more information.

- ## Independent Electricity System Operator (IESO) Accounting Changes

8. What accounting changes were made by the Independent Electricity System Operator (IESO)? Why?

The Independent Electricity System Operator (IESO) began recognizing its market accounts' assets (amounts due from power distributors) and liabilities (amounts due to power producers) in their financial results. IESO has chosen to recognize these markets accounts on its books for transparency reasons, as it better reflects its net financial position on behalf of the IESO-administered markets at year-end.

The IESO also made the decision to adopt rate-regulated accounting because it better reflects the economic substance of certain types of expenses that may not be directly recovered through the normal revenue requirement model.

This accounting change was accepted by the IESO's independent external auditor, which issued an unqualified, or "clean," audit opinion. These accounting

DRAFT

changes were highlighted in the IESO's 2016 annual report which was published online in March 2017.

See section: Auditor General – Qualified Opinion for more information.

Auditor General – Qualified Opinion

9. The Auditor General has issued a qualified opinion for the second year in a row. Is this a sign of fiscal mismanagement?
(Top Media Question - updated September 5, 2017)

We continue to move forward and present the Province's finances fairly and accurately and in accordance with Canadian Public Sector Accounting Board standards. Ontario has a strong track record of producing high-quality financial reports on a timely basis. The Auditor General's qualified opinion is based on a different interpretation of Public Sector Accounting Board standards for net pension assets and recognition of market accounts.

Last year there was a disagreement among the Province's professional accounting staff and the Auditor General's Office on the appropriate application of Public Sector Accounting Board standards regarding pension accounting. As a result, the Pension Asset Expert Advisory Panel was established to deliver independent advice and recommendations on the issue to the Province.

The independent panel members concluded the Province's share of the net pension assets of both the Ontario Teachers' Pension Plan and the Ontario Public Service Employees' Union Pension Plan should be recognized in Ontario's financial statements.

After significant deliberation, including consideration of the recommendations of the panel, Ontario confirmed that the accounting for these plans prior to 2015-16 was appropriate, and are prepared in accordance with public sector accounting standards for pension asset accounting. Further, EY provided additional analysis and concluded that no valuation allowance was required for either plan as of March 31, 2017. The 2016-17 financial statements include these pension assets, and we continue to apply the accounting treatment of pension assets that the Province has used consistently since 2001. In addition, the 2015-16 financial statements were restated to include these assets.

This year the Independent Electricity System Operator (IESO) began recognizing its market accounts' assets (amounts due from power distributors) and liabilities (amounts due to power producers) in their financial results. IESO has chosen to recognize these markets accounts on its books for transparency reasons, as it better reflects the financial position of the IESO-administered markets at year-end. This change was supported by the IESO's audit committee, its independent external auditor, and finally by the Office of the Provincial Controller. This change

also has no impact to the province's annual deficit, net debt or accumulated deficit.

This accounting is consistent with the presentation used previously by the Ontario Power Authority (which was merged with the IESO on January 1, 2015) in its financial statements, which was not subject to qualification from the Office of the Auditor General at that time.

10. This year it's IESO accounting. Last year it was pension assets. Before that it was government advertising. Why are you still fighting with the Auditor General? This seems to be a pattern of behavior where you try and undermine her authority.

Our government has the utmost respect for all independent officers of the legislature, and we value the important perspective they bring.

• Pension Asset Accounting

11. Why are you still fighting with the Auditor General over pension accounting?
(Top Media Question - updated September 5, 2017)

In preparing last year's Public Accounts, the Province's professional accounting staff and the Auditor General's Office engaged in discussions about the appropriate application of Public Sector Accounting Board standards regarding pension accounting for the Province's jointly sponsored pension plans.

As a result, the Pension Asset Expert Advisory Panel was established to deliver independent advice and recommendations to the Province on the issue. The independent panel members concluded the Province's share of the net pension assets of both the Ontario Teachers' Pension Plan and the Ontario Public Service Employees' Union Pension Plan should be recognized in Ontario's financial statements.

After significant deliberation, including consideration of the recommendations of the panel, Ontario confirmed that the accounting for these plans prior to 2015-16 was appropriate. Further, EY provided additional analysis and concluded that no valuation allowance was required for either plan. The 2016-17 financial statements include these pension assets, and we continue to apply the accounting treatment of pension assets that the Province has used consistently since 2001. In addition, the 2015-16 results were restated to include these assets.

We will continue to work with the Auditor General to build on the government's track record of responsible fiscal management and high quality financial reporting.

DRAFT

12. What was the panel's rationale for its decision?

The Pension Asset Expert Advisory Panel recommended that the Province's share of the net pension assets of both the Ontario Teachers' Pension Plan (OTPP) and the Ontario Public Service Employees Union Pension Plan (OPSEUPP) should be recognized as an asset in Ontario's financial statements.

The panel said that:

- Recognizing the asset will provide a faithful representation of the Province's financial position.
- The accounting surplus in the plan has a future economic benefit.
- The government controls access to that accounting surplus.
- The accounting surplus exists as the result of past transactions and events.
- It would be misleading not to recognize the Province's share of the assets in Public Accounts.

In addition, the panel concluded that the government will be able to benefit from the full amount of each net pension asset, and as a result, no reduction in the value is necessary.

EY provided additional analysis and concluded that no valuation allowance was required for either plan, confirming the independent panel's recommendation.

13. The Auditor General was critical of the panel's authority and credibility. What's your response to this?

The panel members are all highly-qualified experts in their field. They were carefully chosen for their expertise in the areas of jointly sponsored pension plans, actuarial modelling for pension plans and public sector accounting standards:

- **Patricia O'Malley (panel chair)** is a Chartered Professional Accountant. She has been a member of the Canadian Accounting Standards Oversight Council since 2013, was Chair of the Canadian Accounting Standards Board and was a member of the International Accounting Standards Board from 2001 to 2007.
- **Murray Gold** is a leading legal practitioner and senior pension and benefits partner at Koskie Minsky LLP.

DRAFT

- **Uros Karadzic** is a senior actuary at Ernst and Young's People Advisory Services Reward practice, which includes pension, benefit and compensation consulting.
- **Paul Martin** is a Chartered Professional Accountant, Comptroller with the Government of New Brunswick and previously a partner with the national accounting firm of Grant Thornton LLP.

The panel was completely independent from government, and arrived at its advice based on its own analysis of this complex issue.

14. How much did you pay the panel members? Do you think that money was justified?

The total cost of the panel was $221,113. This included compensation and travel expenses for the four panelists, as well as procurement. These rates are consistent with the Agencies and Appointments Directive, which specified up to $2,000 per day for appointees with unique and specialized expertise, or urgent issues affecting government priorities and requiring intense time commitments over a short period of time.

The panel members have expertise in the areas of jointly sponsored pension plan governance, actuarial modelling for pension plans and public sector accounting standards, and provided independent advice on how to move forward with how Public Sector Accounting Board standards should be applied to current and potential future net pension assets.

• IESO Accounting

15. The Auditor General is critical of the IESO accounting changes. Are Ontario's accounting changes inappropriate?
(Top Media Question - updated September 5, 2017)

No. The Independent Electricity System Operator (IESO) began recognizing its market accounts' assets (amounts due from power distributors) and liabilities (amounts due to power producers) in their financial results. IESO has chosen to recognize these markets accounts on its books for transparency reasons, as it better reflects its net financial position on behalf of the IESO-administered markets at year-end.

This accounting change was accepted by the IESO's independent external auditor, which issued an unqualified, or "clean," audit opinion. These accounting

DRAFT

changes were highlighted in the IESO's annual report which was published online in March 2017.

Further, this accounting is consistent with the presentation used previously by the Ontario Power Authority (which was merged with the IESO on January 1, 2015) in its financial statements, which was not subject to qualification from the Office of the Auditor General at that time.

This change has no impact to the province's annual deficit, net debt or accumulated deficit.

This accounting change has been supported by the professional accounting staff of the Office of the Provincial Controller.

We will continue to work with the Auditor General to build on the government's track record of responsible fiscal management and high quality financial reporting.

If pressed on rate-regulated accounting:

The IESO made the decision to adopt rate-regulated accounting because it better reflects the economic substance of certain types of expenses that may not be directly recovered through the normal revenue requirement model.

The IESO, like Hydro One and Ontario Power Generation (OPG), is regulated by the Ontario Energy Board. The IESO adopted rate-regulated accounting for its year ended December 31, 2016. The impact on the financial statements of the Province is a decrease of $82 million in the 2016-17 opening accumulated deficit and an increase in the 2016-17 annual deficit by $24 million.

This accounting change was accepted by the IESO's independent external auditor, which issued an unqualified, or "clean," audit opinion. These accounting changes were highlighted in the IESO's annual report which was published online in March 2017.

16. What is the Auditor General's argument with these changes?

The Auditor General claims that the change to the IESO's accounting policy to recognize market account assets and liabilities is inappropriate, as these market accounts are not assets and liabilities of the Province.

However, the IESO has chosen to recognize these markets accounts on its books for transparency reasons, as it better reflects its net financial position on behalf of the IESO-administered markets at year-end.

DRAFT

This accounting change was accepted by the IESO's independent external auditor, which issued an unqualified, or "clean," audit opinion. These accounting changes were highlighted in the IESO's annual report which was published online in March 2017.

Further, this accounting is consistent with the presentation used previously by the Ontario Power Authority (which was merged with the IESO on January 1, 2015) in its financial statements, which was not subject to qualification from the Office of the Auditor General at that time.

This change has no impact to the province's annual deficit, net debt or accumulated deficit.

This accounting change has been supported by the professional accounting staff of the Office of the Provincial Controller.

We will continue to work with the Auditor General to build on the government's track record of responsible fiscal management and high quality financial reporting.

17. Between IESO and the pension issue from last year it seems like you just make up new rules when you don't like what you hear from the Auditor General. How do you respond to that?

We continue to move forward and present the Province's finances fairly and accurately and in accordance with Canadian Public Sector Accounting Board standards. Ontario has a strong track record of producing high-quality financial reports on a timely basis. The Auditor General's qualified opinion is based on a different interpretation of Public Sector Accounting Board standards for net pension assets and recognition of market accounts.

In many cases the application of accounting standards requires professional judgment. The Province's professionally accredited accounting staff are highly qualified practitioners, with a high degree of expertise in their field. A difference of opinion on the interpretation of accounting standards is not unique to this situation.

18. Will you strike an expert panel to study to IESO issue, like you did last year for pension accounting?

We have no plans to establish a panel at this time.

The changes made to the IESO accounting were accepted by the IESO's audit committee, board of directors, and their independent external auditor. These changes were outlined in the IESO's 2016 annual report, which was published in March 2017. The Office of the Provincial Controller supports these changes.

19. Your reasons for change are yet again at odds with the Auditor General. Why should we believe you, when she is an independent officer of the legislature?

The Auditor General's responsibility is to conduct an independent audit and provide her audit opinion based on her own professional judgment. A difference of opinion on the interpretation of accounting standards is not unique to this situation.

- **Ontario's Fair Hydro Plan Accounting (Other Matters)**

20. The Auditor General alleges the government withheld information from her on the accounting treatment for Ontario's Fair Hydro Plan. Why would she say that?

First, I would note that the accounting for Ontario's Fair Hydro Plan is separate and distinct from the Public Accounts we're here to talk about today.

Having said that, we respectfully disagree with the Auditor General's claim that the government withheld information from her or her office.

In March, the Ministry of Energy provided the Auditor General's Office with Cabinet documents from February and March related to Ontario's Fair Hydro Plan. These documents together provided a comprehensive overview of all elements of the plan that were known at that time, including accounting memos from both the Independent Electricity System Operator (IESO) and Ontario Power Generation (OPG).

On April 19, 2017, senior ministry officials from Treasury Board Secretariat, Finance and Energy met with the Auditor General and her staff to provide a briefing on Ontario's Fair Hydro Plan.

Since that April 19 briefing, ministry officials from Treasury Board Secretariat have met with the Auditor General several times.

21. The Auditor General has some serious concerns about how you're accounting for Ontario's Fair Hydro Plan. What do you say to this?
(Top Media Question - updated September 5, 2017)

The accounting for Ontario's Fair Hydro Plan is a separate and distinct issue to the Public Accounts for 2016-17 that we're here to talk about today.

However, under Ontario's Fair Hydro Plan accounting structure, the Province's net debt and annual surplus/deficit won't be negatively impacted since all costs are to be recovered through future rates.

DRAFT

The Ministry of Energy, Finance and Treasury Board Secretariat continue to work closely with Ontario Power Generation (OPG), the Independent Electricity System Operator (IESO) and external advisors to address the outstanding accounting related considerations.

The Auditor General has also been briefed on the government's refinancing structure.

For further questions, I direct you to contact my colleague at the Ministry of Energy.

22. Why did you set up Ontario's Fair Hydro Plan accounting in this way?

Again, I would note that the accounting for Ontario's Fair Hydro Plan is separate and distinct from the Public Accounts we're here to talk about today.

However, in order to meet the needs of users, including the legislature and the public, for accountability in government reporting and decision making, it is essential that public sector financial statements reflect the economic substance of the government's activities.

All of the agreements necessary for the Global Adjustment (GA) Refinancing are not yet complete. The final accounting for the GA Refinancing will be completed once all of the elements are complete.

In analyzing the appropriate accounting treatment for the GA refinancing component of Ontario's Fair Hydro Plan on the province's consolidated financial statements in 2017-18 and forward, the province considered authoritative guidance issued by the Public Sector Accounting Board, as well as the accounting assessments of the Independent Electricity System Operator (IESO) and Ontario Power Generation (OPG) management, including the accounting opinions of their external auditors.

The complexity and unique structure of the GA Refinancing structure requires the use of professional judgment to ensure that key financial reporting objectives of transparency and accountability are best served.

Any further questions about Ontario's Fair Hydro Plan should be directed to my colleague the Minister of Energy.

DRAFT

Ontario's Fiscal Position

- **Balanced Budget**

23. The government is claiming the deficit has been reduced to $1B deficit for 2016-17 and that the budget will be balanced over the next three years. However, the AG is saying that the deficit for 2016-17 was more than $2B due to the treatment of pension assets, and the FAO has stated that the government's revenue forecast is more than $1B too "optimistic". Isn't the government really hiding a $3-4B deficit instead of a balanced budget? *(Top Media Question - updated September 5, 2017)*

There is no hidden deficit. In the *2010 Budget*, the government committed to eliminating the deficit and returning to a balanced budget by 2017-18. Through targeted, measured and fiscally responsible decisions, Ontario has restored its fiscal and economic strength.

Today we are confirming that the 2016-17 deficit of $1 billion is $3.3 billion lower than projected in the 2016 Budget and $0.5 billion lower than the interim projection in the 2017 Ontario Budget. This marks the eighth year in a row that Ontario has beaten its deficit target.

The success in eliminating the deficit is supported by a strong track record in managing spending -- having held average growth in spending to 2.3 per cent over the past five years.

In addition, over the last several years, the government's investments to strengthen economic growth have paid off. Ontario is a leader in economic growth, with our real GDP growth having outpaced that of all the G7 countries over the last three years. The strengthened economy has resulted in increased revenue for the Province – in fact, over the past two fiscal years, revenue has come in higher than projected, supporting Ontario's return to a balanced budget.

It is also important to point out that private sector forecasters have revised upward their expectations for the Ontario economy since the 2017 Budget, reflecting the growing strength of the Ontario economy. In fact, the current average private sector forecast for this year and next is also above what the Financial Accountability Office of Ontario projected in their Budget commentary. The government is also taking steps to improve tax fairness and address the underground economy in order to ensure the integrity of the Province's revenues.

Finally, Ontario's fiscal plan incorporates prudence in the form of a reserve to protect the fiscal outlook against unforeseen adverse changes in the Province's revenue and expense. The reserve has been set at $0.6 billion in 2017-18, $0.6 billion in 2018-19, and $0.9 billion in 2019-20.

DRAFT

Balancing the budget means that the government can invest more in the programs and services that people rely on.

24. How were you able to beat your deficit target in 2016-17?
(Top Media Question - updated September 5, 2017)

In 2016-17 we maintained our focus on responsible fiscal management and investing in the right priorities. We are making progress on our economic plan by making investments to spur growth, transforming government and responsibly managing spending.

Average annual growth of total government spending has been held to 2.3 per cent for the past five years. As a result of growth in revenue that exceeded growth in program expense, as well as lower than forecast interest on debt, the deficit is $3.3 billion lower than projected in the 2016 Budget. It is also $0.5 billion lower than the interim projection in the 2017 Budget.

This is the eighth year in a row the government has beaten its deficit target.

25. You beat your deficit targets again. Aren't you just padding your estimates so you can beat them at the end of the day?

No. The government's fiscal projections are based on the best economic and fiscal information available at the time. They reflect a realistic and responsible plan to manage the Province's resources, while still protecting the vital services that Ontarians rely on.

Beating our deficit targets helps to keep interest on debt at a manageable level and protects future generations from rising interest costs, which could otherwise crowd out spending on government priorities.

The government recognizes that a fiscally sound approach to managing the Province's finances will provide the foundation for the long-term well-being and prosperity of Ontarians, and protect the public services that Ontarians rely on.

• Debt

26. You claim to have balanced the budget yet you keep piling on more debt. How do you plan to pay down the debt?
(Top Media Question - updated September 5, 2017)

We maintain a target of reducing the net debt-to-GDP ratio to its pre-recession level of 27 per cent, with current projections showing that this will be achieved by

2029-30. In the balanced 2017 Budget, the government is setting an interim target to reduce the net debt-to-GDP ratio to 35 per cent by 2023–24.

In a balanced budget environment, debt would be incurred primarily to invest in capital assets. We are making progress on our economic plan by making investments to spur growth, transforming government and responsibly managing spending – including addressing the underground economy and maintaining tax fairness. Our strategic investments in infrastructure provide economic benefits: a recent study by the Centre for Spatial Economics (C4SE) finds that, over the long term, real GDP in Ontario will rise up to $6 on average per one dollar of public infrastructure spending.

These strategic investments are creating jobs and contributing to economic growth. Ontario's GDP grew one per cent in the first quarter of 2017, outperforming that of Canada, the U.S. and all other G7 countries.

27. Interest on debt is still massive and the Bank of Canada is expected to raise interest rates again this fall, and announced it is raising its target for the overnight rate on September 6, 2017. How is the government preparing for this and will this affect your ability to maintain a balanced budget? *(Top Media Question - updated September 6, 2017)*

The increase in the Bank of Canada's policy rate reflects the growing strength of the Canadian and Ontario economy. Ontario's economy remains strong and has continued to grow and create jobs in an uncertain global environment.

Since 2014, Ontario has been an economic growth leader in Canada and private sector economists expect Ontario to remain one of the fastest growing provinces over the next two years.

Ontario's economic growth exceeded that of all G7 countries over the 2014 to 2016 period.

A quarter-point increase in the policy rate is not likely to have a material impact on the Ontario economic outlook. The 2017 Ontario Budget anticipated that interest rates would rise modestly.

An increase in the Bank of Canada's overnight interest rate does not automatically translate into an increase in the Province's borrowing cost which is also impacted by other factors including revisions to the US Federal Funds Rate.

DRAFT

As noted in the 2017 Budget, the Province's average cost of 10 year borrowing in 2017-18 is forecast to be 3 per cent. The impact of a 100 basis point increase in borrowing rates is forecast to be approximately $300 million. The interest rate forecast used in the Budget was prudent, and anticipated that long-term interest rates would rise as we progressed through the fiscal year.

28. The government is paying an enormous amount of money just paying the interest on its debt. How are you addressing this?

Interest on debt expense was $11.7 billion, which was $0.7 billion below the plan of $12.4 billion, due mainly to lower-than-forecast interest rates, lower-than-forecast deficit and cost-effective borrowing and debt management.

While interest costs have grown in absolute terms, they have steadily fallen as a percentage of Ontario's revenues since 2013-14. The interest on debt-to-revenue ratio is now at its lowest level from the peak of 15.5 per cent in 1999-2000.

Interest on debt-to-revenue is forecast to have been 8.4 per cent for 2016–17. This ratio is the lowest it has been in 25 years. It is forecast to decline to 8.2 per cent in 2017-18.

We incurred increases to Ontario's debt during the recession for two reasons: to finance deficits and invest in capital assets. However we are making progress on our economic plan by making investments to spur growth, and are managing spending responsibly.

These strategic investments are creating jobs and contributing to economic growth. Ontario's GDP grew one per cent in the first quarter of 2017, outperforming that of Canada, the U.S. and all other G7 countries.

Our fiscal plan is working. Ontario is on track to balance the budget this year while making investments in the programs and services people and families rely on most.

29. You are spending more on interest payments for the debt than what you spend on post-secondary education. In fact, the payments equal more than 20 per cent of the health budget. How can you justify this?

Our priority following the 2008-09 recession was to achieve balance. In the first

DRAFT

few years after the recession, the increase in net debt was primarily due to the deficit.

Approximately 61 per cent of the increase in net debt from 2008–09 to 2016–17 was due to the deficit, with net investments in capital assets responsible for the balance.

With balanced budgets, from 2017-18 onwards, the increase in net debt will be exclusively from investments in capital assets. In addition, the government is investing in public infrastructure which is vital to growing the economy and ensuring a high quality of life, whether people live in large, small, urban, northern or rural Ontario communities. Every $1 spent on public infrastructure can increase GDP by up to $6 in the long term.The balanced budget is giving the government the fiscal flexibility to do more to help people and spur economic growth.

- **Financial Accountability Office of Ontario**

30. The Financial Accountability Office (FAO) just released a commentary saying your balanced budget is in question because it's based on optimistic revenue forecasts. Will you decrease spending or increase taxes to make up for this potential shortfall?

The government stands by the revenue forecast presented in the 2017 Budget. As recently presented in the 2017-18 First Quarter Finances, revenues are on track and the government is continuing to project a balanced budget in 2017-Taxation revenue growth projected in the 2017 Budget aligns with growth actually experienced in recent years.

The government builds prudence into its economic forecast. Since the time of the 2017 Budget, private sector forecasters have revised up their economic growth projections for Ontario over the 2017-20 period, reflecting the strength in the Ontario economy.

31. The FAO's commentary released on September 6, 2017 says that Ontario's debt reduction commitment is based on unrealistic assumptions. How do you respond?
(Top Media Question - updated September 6, 2017)

The government made a commitment in the 2010 Budget to balance and eliminate the deficit by 2017-18. Since then, the government has reduced the deficit from its peak in 2009-10 of $19.3 billion, to a projected $1.5 billion in 2016-17 and a projected balanced Budget in 2017. Furthermore, the government consistently overachieved on its deficit targets and forecasts for net debt-to-GDP.

DRAFT

The government's track record therefore provides evidence of fiscal discipline and the likelihood of achieving on-going balanced budgets in the future.

With respect to capital spending, approximately 61 per cent of the increase in net debt from 2008–09 to 2016–17 was due to the deficit, with net investments in capital assets responsible for most of the balance. Infrastructure expenditures do not therefore have as large an impact on net debt as that of a balanced budget.

Moreover, additional capital investment in the latter half of the next decade will stimulate the economy. A recent report from the Centre for Spatial Economics confirms that over the long term, real GDP in Ontario increases by $6 for every dollar of public infrastructure spending. This stimulus in GDP may help to offset the effects of an aging population and slower growth in the labour force and maintain the 4% average GDP growth required to bring net debt to GDP down to 27% in 2029-30.

- **The Fraser Institute**

32. How do you respond to the August 3, 2017 Fraser Institute report that criticizes the Province's plan to reduce the debt burden as "wishful thinking"?

The rate of increase of the Province's net debt is anticipated to be below that of its GDP, due to a combination of balanced budgets and appropriate levels of capital investments. These investments also contribute to the Province's GDP growth as affirmed by the Centre for Spatial Economics which reported recently that, over the long term, real GDP in Ontario increases by $6 for every dollar of public infrastructure spending.

In later years, the rate of increase in net debt is expected to be lower than that of GDP due a combination of balanced budgets and investments in capital assets that will contribute to GDP growth, allowing the government to realize its net debt to GDP target of 27 per cent by 2029-30.

- **Most Indebted Subsovereign, Future Generations**

33. This government has a spending problem and Ontario is now the most indebted sub-sovereign borrower in the world. Why should we trust your plan?

With a growing economy and a balanced budget, this is the time to make investments in key services that matter most to people, like health care and education, while at the same time lowering costs for necessities like electricity and child care.

Ontario is on track to balance the budget this year while making investments in the programs and services people and families rely on most. This year and last,

Ontario's debt-to-GDP ratio has improved from 39.6 per cent in the 2016 budget, to a forecasted 37.8 per cent in 2016-17, and it continues to track downward.

Our plan is also helping to grow the economy, with the largest investment in public infrastructure in the Province's history — more than $190 billion over 13 years starting in 2014-15. New schools, hospitals and transit projects are improving quality of life and creating jobs in communities across Ontario.

Supporting ongoing economic growth is a top priority and we are encouraged by the influx of many innovative and dynamic businesses that are investing across the Province, bringing good jobs, higher wages and greater prosperity to our communities. We will continue to implement our balanced plan to build a healthy and sustainable economy for all of Ontario.

34. Some say you are unfairly placing the burden of debt on future generations through things like Ontario's Fair Hydro Plan and your failure to address the Province's growing debt. How do you respond?

With a growing economy and a balanced budget, this is the time to make investments in key services that matter most to people, like health care and education, while at the same time lowering costs for necessities like electricity and child care.

Over the last decade the government has rebuilt our electricity transmission and distribution grid, invested in clean generation, and closed the last coal-fired power plant. Prices have increased because our electricity system is being transformed – more than $50 billion has been invested to modernize the system.

We have heard from people across the Province that the price of electricity has risen too quickly, which is why our plan will ensure costs are shared more fairly over the years ahead.

As Ontario invested in renewing our electricity system, the government invested in many new generating facilities, most of which operate under 20-year contracts. Some of these generators are expected to provide value to the electricity system beyond their contract lives. There is an opportunity to recognize the long-term benefit of these assets to the electricity system and "bring forward" that benefit for ratepayers today by deferring some of the current costs.

To relieve the current burden on ratepayers and share costs more fairly, a portion of the Global Adjustment (GA) is being refinanced. Refinancing the GA is providing significant and immediate rate relief by spreading the cost of electricity investments over the expected lifecycle of the infrastructure that has been built.

DRAFT

In the early years, a portion of the costs covered by the GA is being refinanced to reduce pressure on today's electricity ratepayers. In later years, the cost of refinancing will be recovered from ratepayers.

With respect to debt, we remain committed to reducing the net debt-to-GDP ratio to its pre-recession level of 27 per cent, with current projections showing that this will be achieved by 2029-30. In the balanced 2017 Budget, the government is setting an interim target to reduce the net debt-to-GDP ratio to 35 per cent by 2023–24.

- **Revenue**

35. How much money did you bring in in 2016-17?

Provincial revenues increased by $4.6 billion, or 3.4 per cent over the previous year. This increase was due in part to nominal GDP growth of 4.6 per cent in 2016, which contributed to higher taxation revenues. There were also higher transfers from the federal government – including the Canada Health Transfer, Canada Social Transfer and funding for infrastructure projects.

Taxation revenues were $2.5 billion, or 2.8 per cent higher-than-projected in the 2016 budget. Corporate tax revenues were $2.8 billion higher. This was due to stronger-than-expected revenues from tax returns. Sales tax revenues were $0.8 billion higher, due to Ontario's larger share of the HST, and the strong housing market contributed $0.7 billion more in land transfer tax revenues.

Transfers from the Government of Canada were $0.6 billion lower than the 2016 Budget forecast. This was mainly due to lower-than-expected funding for infrastructure projects and other payments for government agencies, hospitals, school boards and colleges. This decline was partially offset by new transfers under the strategic investment fund for affordable housing and post-secondary education and training.

Fees, donations and other revenues from broader public sector organizations were $0.6 billion higher than the budget forecast, mainly due to higher-than-expected revenues from non-provincial sources for hospitals, and higher international tuition fees.

- **Asset Sales**

36. One-time asset sales are a way to bring in money, but isn't this burning the furniture to heat the house when it comes to a long-term revenue strategy?

DRAFT

We are committed to dedicate net revenue gains from the sale of designated assets to the Trillium Trust, which is helping to fund transit, transportation and other key infrastructure projects across Ontario.

The government has already credited the Trillium Trust with $1.35 billion from the sale of Ontario's shares in General Motors along with $3.96 billion from the sale of Hydro One shares and the sale of the LCBO head office lands. In addition, the sale of the government's interest in Hydro One Brampton Networks Inc. resulted in a gain on sale recognized in 2016-17 of $109 million. The government has committed to crediting the net proceeds from the sale of Hydro One Brampton to the Trillium Trust.

See section: Trillium Trust for more information.

- **Transfers from the Federal Government**

37. Transfers from the federal government were lower than expected. Aren't you banking on another entity to get your fiscal house in order?

The Government of Ontario, like all Provinces in Canada, receives funding from the federal government. These transfers are done on an ongoing basis to help provide programs and services.

Transfers from the Government of Canada were lower than the 2016 Budget forecast by $0.6 billion. This was mainly due to lower-than-expected funding for infrastructure projects and other federal payments including transfers to government agencies, hospitals, school boards and colleges. This decline was partially offset by new transfers under the strategic investment fund for affordable housing and post-secondary education and training.

- **Revenue from International Tuition Fees**

38. International tuition fees helped the Province's bottom line but isn't this on the backs of young people who want to learn here?

Ontario is focused on attracting top talent from around the world that will enhance student learning, increase economic viability, and support growth of a highly skilled workforce.

International education enriches the academic, social and cultural life of our colleges and universities, from classrooms to research laboratories, and creates stronger ties between Ontario and other global jurisdictions.

DRAFT

Ontario welcomes the talent and energy that international students bring to the province. Many international students are future Canadians, who choose to stay and build on their experiences and education here in Ontario.

Over the past five years, international student enrolment in Ontario grew by 87% overall, 70% in public universities and 118% in public colleges.

In 2016-17, there were 98,685 full-time international students from more than 175 countries studying at publicly-assisted institutions in Ontario. This represented a 16% growth over the last academic year.

The province is developing a comprehensive and sustainable international strategy that builds on the strengths of our postsecondary system, reinforces our reputation for quality, and makes Ontario a welcoming destination and partner of choice.

For further questions, I direct you to contact my colleague at the Ministry of Advanced Education and Skills Development.

- **Program Spending**

39. Program spending increased again this year. Why?
(Top Media Question - updated September 5, 2017)

Program spending in 2016-17 was $141.7 billion, down $0.1 billion from the 2016 Budget. Average annual growth of total government spending has been held to 2.3 per cent for the past five years.

Healthcare represents the largest share of government program spending at $56 billion. Transformation efforts continue to make the sector more effective and sustainable while continuing to improve access for patients, especially the increased demands from an aging and growing population. The government has invested in new drugs, technologies, community and home care, long term care homes, mental health, physicians' services and specialized cancer treatments.

Other areas of government investment include:

- $26.6 billion in education, mainly due to the introduction of full-day kindergarten;
- $16 billion in children's and social services, due to increased annual social assistance rates as well as investments in developmental services, autism and complex special needs programs, as well as the Ontario Child Benefit;

DRAFT

- $10.1 billion in post-secondary and training, due to enrolment growth in colleges and universities along with increased student financial assistance programs and increases in capital funding for post-secondary institutions;
- $4.6 billion in justice sector expenses due mainly to the upload of court security costs from municipalities, compensation for the Ontario Provincial Police and correctional services programs, as well as improved access to legal aid.

40. You finally balanced the budget and now you're spending more on expensive election promises like free pharmacare for children and youth 24 and younger. Why aren't you paying down debt instead?

With a growing economy and a balanced budget, this is the time to make investments in key services that matter most to people, like health care and education, while at the same time lowering costs for necessities like electricity and child care.

Providing more access to vital services isn't just an investment in our future. It's the right thing to do.

• Credit Rating

41. Does a qualified opinion impact the Province's credit rating?
(Top Media Question - updated September 5, 2017)

The Province's financial results show that the government has once again beaten its annual deficit targets. In April 2017, we delivered our first balanced budget since the global recession and we are on track to do so again next year and the year after.

The rating agencies will assess whether the underlying factors that lead to a qualified opinion directly affect the creditworthiness of the Province. However, there were no credit rating implications in 2016 when the Province received a qualified audit opinion on its 2015-16 Public Accounts. Qualified opinions by the Auditor Generals of British Columbia and Quebec have been made in their respective provinces in the past, with no negative impacts on their province's credit ratings.

42. What do you say to the credit rating agencies that have highlighted provincial debt as an area of credit weakness?

As recently presented in the 2017-18 First Quarter Finances, we continue to project a balanced budget in 2017-18, unchanged from the 2017 Budget.

DRAFT

With stronger-than-expected first quarter economic growth and the government's responsible approach to fiscal management, we can continue to invest in programs and services that help people across the Province.

Ontario's economy continues to grow at a steady pace despite an uncertain global environment. Most key economic indicators show that growth continues in the second quarter. Our plan is working.

We remain committed to reducing the net debt-to-GDP ratio to its pre-recession level of 27 per cent, with current projections showing that this will be achieved by 2029-30. In the balanced 2017 Budget, the government is setting an interim target to reduce the net debt-to-GDP ratio to 35 per cent by 2023–24.

43. What is your credit rating as it stands today?

Following the release of the 2017 Budget, all four rating agencies have confirmed Ontario's long-term credit ratings. This reflects rating agencies' confidence in our government's plan to grow Ontario's economy and create jobs for Ontarians.

If pressed:
Ontario's ratings are:

	Long-Term	Short-Term
Moody's:	Aa2	P-1
DBRS:	AA (low)	R-1 (mid)
Fitch:	AA-	F1+
Standard and Poor's:	A+	A-1

- **C.D. Howe Institute**

44. Why does the C.D. Howe Institute weigh in on the government's fiscal situation?

The C.D. Howe Institute is an independent not-for-profit research institute that supports economically sound public policies. It is widely considered to be Canada's most influential think tank and is a trusted source of essential policy intelligence, distinguished by research that is nonpartisan, evidence-based and subject to definitive expert review.

Each year the C.D. Howe Institute produces a report on its assessment of the fiscal planning and reporting practices of senior Canadian governments. The institute observes that financial reports are a vital tool for understanding

DRAFT

governments' plans and activities.

We consider reports like the C.D. Howe's Fiscal Accountability of Canada's Senior Governments important because they are written by independent experts. Studies such as this are essential for governments to continuously assess and improve their financial planning and reporting.

Trillium Trust

45. What is the Trillium Trust?

The Trillium Trust provides for the dedication of prescribed net revenue gains from the sale of designated assets to support key infrastructure priorities, such as roads, bridges and public transit.

The Trillium Trust Act, 2014 requires that all expenditures made under the act to support infrastructure investments are to be reflected in the Public Accounts.

Designated assets include the Province's shares of Hydro One and Hydro One Brampton, as well as the LCBO head office lands, the OPG head office building and the Lakeview lands.

The Trillium Trust was drawn down by about $260 million in 2016-17. We expect the Trillium Trust to be drawn down by about $400 million in 2017–18.

The Ministry of Finance shows spending out of the Trillium Trust, with amounts to ministries delivering projects that have received support from the trust reflected in this year's Public Accounts. These figures are included in Volume 1 of Public Accounts.

The funding will help support initiatives, such as GO Regional Express Rail (GO RER), the Hurontario Light Rail Transit (LRT) and the Ontario Community Infrastructure Fund (OCIF).

46. The Public Accounts show a drawdown of $260 million from the Trillium Trust. What did you spend the money on?
(Top Media Question - updated September 5, 2017)

The government began allocating proceeds from the Trillium Trust in 2016-17 to help support infrastructure initiatives such as GO Regional Express Rail (GO RER), the Hurontario Light Rail Transit (LRT) and the Ontario Community Infrastructure Fund (OCIF).

DRAFT

We expect the Trillium Trust to be drawn down by about $400 million in 2017–18.

Our strategic investments in infrastructure provide economic benefits: a recent study by the Centre for Spatial Economics (C4SE) finds that, over the long term, real GDP in Ontario will rise up to $6 on average per one dollar of public infrastructure spending.

47. How much is currently in the trust?

The balance of the Trillium Trust as of March 31, 2017, was $5.05 billion.

This reflects an opening balance of $1.35 billion; $3.96 billion credited to the Trillium Trust in 2016–17 from the sale of Hydro One Limited shares and the sale of the LCBO head office lands; and $0.26 billion in expenditures from the Trillium Trust in 2016–17 toward investments in infrastructure.

Like most large infrastructure investments, initial spending on projects is focused on planning, design, property acquisition and other activities to get projects construction-ready.

As this preliminary work is completed and construction activity gets underway, further project requirements will be identified that will be funded from the Trillium Trust in subsequent years.

The government is committed to investing the full amount from the Trillium Trust to support transit, transportation and other priority infrastructure.

48. If the Province raised about $2 billion in the secondary offering of Hydro One shares in 2016, why was only $538 million credited to the Trillium Trust?

The *Trillium Trust Act, 2014*, provides for the dedication of net revenue gains to the Trillium Trust associated with the sale of designated assets to support investments in transit, transportation and priority infrastructure across the Province.

The net revenue gains credited to the Trillium Trust from the secondary offering of Hydro One shares are derived from the gross proceeds, less fees/expenses incurred and less the book value of the shares sold, not including the shares purchased by OPG.

DRAFT

The government will move forward with regulations to credit the Trillium Trust with the net revenue gains from the shares purchased by OPG in the future.

The Province also used the $1.3 billion in proceeds related to the book value of the Hydro One shares sold to pay down the Province's debt and other payables with the Ontario Electricity Financial Corporation (OEFC).

Through the broadening of Hydro One ownership, the Province is meeting its target to generate $4 billion in net revenue gains that, through the Trillium Trust, will be reinvested in infrastructure under Moving Ontario Forward, and $5 billion to reduce debt.

Digital Tools/Open Government

49. What is the government doing to be transparent in regards to Public Accounts?

As part of our commitment to openness and transparency, we are using data visualization tools to help Ontarians better understand the Province's finances.

This year's tools are available at Ontario.ca/publicaccounts and include:

- Interactive data visualization tools that graphically present details on asset and expense information contained in Volume 1;
- Fully sortable data tables that summarize the financial statements from Volume 2, and the detailed scheduled payments from Volume 3; and
- Downloadable open data sets that provide the five-year trend for government revenue by source, revenue by sector, and statement of operations. This year's total number of open data downloads is 11, up from five last year.

These tools help make the Province's finances easier to understand, access and use, and are part of Ontario's commitment to creating a more open and transparent government.

50. How does this help the average Ontarian?

The more information we can provide to Ontarians about where their tax money is going, the better. That is why the government is providing new digital tools online to help Ontarians better understand their government's finances.

DRAFT

For example, our downloadable data sets provide a more accessible view of the information in Public Accounts. Volume 2 itself is three parts and over 1,200 pages. Instead of having to review those 1,200 pages, now that same information is available in one downloadable and sortable table.

Presenting the Public Accounts data in innovative, visual formats is part of Ontario's commitment to to creating a more open and transparent government.

51. What are Open Data sets?

The Ontario government is committed to leading the most open, transparent, and accountable government in the country. Public access to information and opening up government data supports this commitment. Ontario is the first province in Canada to adopt the International Open Data Charter.

The International Open Data Charter contains a set of six principles that will build on Ontario's open by default data policy to increase civic participation, openness and accountability.

DRAFT

Ontario

NEWS

Treasury Board Secretariat

Ontario Releases 2016-17 Public Accounts

Province Balancing the Budget This Year, Helping Families Get Ahead

September 7, 2017

NEWS

Today the province released the Public Accounts of Ontario, showing that Ontario's deficit for last year was $991 million—$3.3 billion lower than projected in the 2016 Budget and $0.5 billion lower than the interim projection in the 2017 Budget.

This is a result of growth in revenue that exceeded growth in program expense, and lower than forecast interest on debt.

Ontario is on track to balance the budget this year, in 2017-18, while making investments in the programs and services people and families rely on most.

Other highlights from this year's Public Accounts include:

- Economic growth, with a 2.7 per cent increase in real gross domestic product (GDP), up from 2.2 per cent projected in the 2016 Budget
- Total revenue of $140.7 billion, up $2.2 billion from the 2016 Budget projection
- Total spending of $141.7 billion, down $0.1 billion from the 2016 Budget projection
- Interest on debt of $11.7 billion, down $0.7 billion from the 2016 Budget projection

Once again, the government is providing new digital tools online to help people better understand their government's finances. Presenting the Public Accounts data in innovative visual formats, and releasing more data through Ontario's Open Data Catalogue, is part of Ontario's commitment to Open Government.

Responsibly managing the province's finances is part of our plan to create jobs, grow our economy and help people in their everyday lives.

QUOTES

"For eight years in a row, we have beaten our annual deficit target. We will continue to build on our track record of responsible fiscal management by balancing the budget in 2017-18. At the end of the day, a balanced budget means more funding for the programs and services people and families rely on most."
— Liz Sandals, President of the Treasury Board

"Ontario is on track to balance the budget in 2017-18. We have once again exceeded our fiscal targets by reducing the deficit by $3.3 billion lower than originally projected in the 2016 Budget. Thanks to the hard work of the people of Ontario, we are leading Canada in economic growth while investing in programs like free tuition and free pharmacare for children and youth. With a balanced 2017 Budget, we will continue to build a stronger, healthier Ontario."
— Charles Sousa, Minister of Finance

… /2

QUICK FACTS

- Ontario’s annual deficit fell from a peak of $19.3 billion in 2009-10 to $991 million in 2016-17.
- Average annual growth of total government spending has been held to 2.3 per cent over the past five years.
- Over the last three years, Ontario’s GDP growth has outpaced that of all G7 countries.
- The 2016-17 Public Accounts compare Ontario’s actual financial performance to what was planned in the 2016 Budget.
- Treasury Board Secretariat prepares Public Accounts in accordance with independently established standards set out by the Public Sector Accounting Board. Ontario’s Auditor General reviews the Public Accounts against these standards and provides an opinion on the province’s adherence to them.
- The province's professional accounting staff and the Auditor General's Office use a different interpretation of public sector accounting standards for net pension assets and recognition of market accounts. The province continues to work with the Auditor General to build on the government’s track record of responsible fiscal management and high quality financial reporting.

Treasury Board Secretariat

Accounting Changes to Ontario's Financial Statements

September 7, 2017

Treasury Board Secretariat prepares the Public Accounts according to the accounting principles for governments issued by the Public Sector Accounting Board (PSAB). When preparing this year's Public Accounts, Ontario implemented accounting changes to further enhance accountability and transparency. To ensure consistency in year-to-year comparisons, financial statements from previous years have been restated, as needed, to reflect the following changes:

Accounting for net pension assets of jointly sponsored pension plans

In 2016-17, the province is reporting the net pension assets for two of its jointly sponsored pension plans, the Ontario Teachers' Pension Plan (OTPP) and the Ontario Public Service Employees' Union Pension Plan (OPSEUPP). Until the 2015-16 Public Accounts, Ontario had recognized pension assets in its financial statements since 2001.

In preparing the 2015-16 Public Accounts, the province's professional accounting staff and the Auditor General's office engaged in discussions on the appropriate application of PSAB pension accounting standards for the province's two jointly sponsored pension plans. An independent Pension Asset Expert Advisory Panel (PAEAP) was subsequently established to deliver advice and recommendations to the province.

After careful study, the independent panel members released their report. It concluded that the province's share of the net pension assets of both OTPP and OPSEUPP should be recognized in Ontario's financial statements.

After significant deliberation, including considering PAEAP's recommendations, Ontario confirmed that the accounting used for these pension plans prior to 2015-16 was appropriate, and in accordance with public sector accounting standards for pension asset accounting. Further, EY provided additional analysis and concluded that no valuation allowance was required for either plan as of March 31, 2017. The 2016-17 financial statements include these net pension assets and the 2015-16 financial statements have been restated to include them.

Accounting for the Independent Electricity System Operator

The Independent Electricity System Operator (IESO), like Hydro One and Ontario Power Generation (OPG), is regulated by the Ontario Energy Board. For the 2016-17 reporting year, the IESO began recognizing its market accounts' assets (amounts due from power distributors) and liabilities (amounts due to power producers) in their financial results. IESO has chosen to recognize these markets accounts on its books for transparency reasons, as it better reflects the financial position of the IESO-administered markets at year-end.

PSAB standards are silent on the use of market accounts. In such cases, the standards encourage preparers and auditors to consider guidance in other accounting frameworks when accounting for transactions not specifically addressed by the specific standards.

… /2

This accounting change was accepted by the IESO's independent external auditor, which issued an unqualified, or "clean," audit opinion. Further, before the Ontario Power Authority (OPA) merged with IESO in 2015, the OPA used the same accounting presentation in its financial statements, which was not subject to qualification from the Office of the Auditor General at that time.

IESO has also adopted rate-regulated accounting for its year ending December 31, 2016. This decision was made because using rate-regulated accounting better reflects the economic substance of certain types of expenses that may not be directly recovered through the normal revenue requirement model.

The IESO highlighted these changes in their recent annual report. These changes are supported by the IESO's independent external auditor, which issued an unqualified audit opinion.

Accounting for hospitals, school boards and colleges

To increase transparency, the 2016-17 Public Accounts are presenting third-party revenues for hospitals, school boards and colleges with provincial revenue. Third-party revenues earned by these organizations, such as tuition fees, patient fees, research grants and donations, were netted against the respective sectors' expenses in prior years. This change is fiscally neutral and does not impact the province's annual deficit, net debt, or accumulated deficit. This change is consistent with PSAB standards and the reporting practices of other senior Canadian governments.

Accounting for energy sector government business enterprises

In the 2016-17 Public Accounts, the financial results of Ontario's investments in Hydro One and OPG are reported using International Financial Reporting Standards. Previously, these results were reported using generally accepted accounting principles in the United States. This change was made to meet PSAB requirements. The change does not have a material impact on this year's financial statements.

MEDIA ADVISORY

Treasury Board Secretariat

President of the Treasury Board and Minister of Finance to Release Ontario's 2016-17 Public Accounts

September 6, 2017

Liz Sandals, President of the Treasury Board and Charles Sousa, Minister of Finance will make an announcement regarding Ontario's 2016-17 Public Accounts.

Prior to the announcement, a technical briefing will be held with officials from Treasury Board Secretariat and the Ministry of Finance. They will be joined by Uros Karadzic, former member of the province's Pension Asset Expert Advisory Panel.

Date: Thursday, September 7, 2017

Time: 1:00 p.m. Technical briefing
1:45 p.m. Ministers' media availability

Location: Huron Room
Macdonald Block
900 Bay St.
Toronto

Dear Mr. Koch,

I am writing in response to your letter dated December 20, 2017, regarding the review of Chapter 2 – Public Accounts of the Province (Volume 1 of the 2017 Annual Report of the Office of the Auditor General of Ontario) by the Standing Committee on Public Accounts.

The following individuals will be accompanying me to the hearings scheduled on Wednesday,

February 28, 2018, from 12:30 p.m. to 3:00 p.m.:

Cabinet Office
- Steve Orsini, Secretary of the Cabinet

Treasury Board Secretariat
- Karen Hughes, Associate Deputy Minister, Treasury Board Secretariat
- Cindy Veinot, Assistant Deputy Minister and Provincial Controller, Treasury Board Secretariat
- Mark Donaldson, Director, Office of the Provincial Controller, Treasury Board Secretariat

Ministry of Finance
- Scott Thompson, Deputy Minister, Ministry of Finance
- Tim Schuurman, Assistant Deputy Minister, Ministry of Finance
- Gadi Mayman, Chief Executive Officer, Ontario Financing Authority, Ministry of Finance
- Ken Kandeepan, Chief Financial and Risk Officer, Ontario Financing Authority, Ministry of Finance

Ministry of Energy
- Serge Imbrogno, Deputy Minister, Ministry of Energy
- Steen Hume, Assistant Deputy Minister, Ministry of Energy
- Ken Hartwick, Chief Financial Officer and Senior Vice President Finance, Ontario Power Generation
- John Mauti, Vice President, Chief Controller and Accounting Officer, Ontario Power Generation
- Peter Gregg, President and Chief Executive Officer, Independent Electricity System Operator
- Kimberly Marshall, Vice President, Corporate Services and Chief Financial Officer, Independent Electricity System Operator

In addition, please find enclosed a copy of the summary status table in response to Chapter 2 – 2017 Annual Report of the Office of the Auditor General.

Please feel free to contact me or Vivienne Skoberne, Director of Operations at 416-325-9084 or Vivienne.Skoberne@ontario.ca if you require further information.

Sincerely,

Summary Status Table in Response to the Report of the Auditor General of Ontario

Chapter 2 2017 Annual Report of the Auditor General
Treasury Board Secretariat, Ministry of Finance, Ministry of Energy

Auditor's Recommendation	Completed Undertaking	Outstanding Undertaking (including timeline)
AG Recommendation #1 *We recommend the government record valuation allowances to offset the net pension assets it has recorded from the Ontario Teachers' Pension Plan and the Ontario Public Sector Employees' Union Pension Plan until such time as it obtains formal written authorization from their pension plan co-sponsors that they are able to lower minimum contributions or withdraw surpluses from the pension funds within the next 12 months.*	The Office of the Auditor General communicated its interpretation of Public Sector Accounting Standards (PSAS) requiring a full valuation allowance on the Province's two jointly sponsored pension plans in September 2016. At that time, the government passed a time-limited regulation on the accounting treatment for its joint defined benefit plans to align with the Auditor General's interpretation of PSAS, which enabled officials from Treasury Board Secretariat and the Ministry of Finance to sign the Statement of Responsibility for the 2015-16 Public Accounts. During the 2016-17 year, the professional staff conducted further research and analysis, and determined that PSAS does not require a valuation allowance on either of the jointly sponsored pension plans. This conclusion is supported by: • The conclusions reached by an independent Pension Asset Expert Advisory Panel (the 'Panel'), established by the government to provide advice on the interpretation of PSAS with respect to the reporting of net pension assets of these two joint defined benefit plans. The Panel, comprised of accredited accounting, actuarial and legal professionals with extensive background in pension accounting and plan governance, released its report in February 2017 which supported the government's position that a valuation is not required for these two plans under PSAS. Two key findings of the Panel were: 1) there is no requirement under PSAS that any formal agreement exist between the joint sponsors regarding the timing or amount of a reduction in contributions to record an asset, as the existing agreements in place between the parties support the recognition of an expected benefit, and 2) unilateral control is not	The government will evaluate the need for a valuation allowance annually taking into consideration (a) changes, if any, in the governance structures of the plans, (b), decisions, if any, of the joint sponsors that impact the need for a valuation allowance, and (c) changes, if any, in Public Sector Accounting Standards. The government is open to continue to discuss the matter in the hopes of resolving this matter.

	required for asset recognition; joint control with each party having the ability to deny the actions of the other sponsor, provides evidence of shared control, supporting recognition of an asset. • An opinion from Deloitte LLP on aspects of the Province's accounting as at March 31, 2016 for the Ontario Teachers' Pension Plan. The opinion, which was dated October 2, 2016, concluded that it was permissible to recognize a pension asset under Canadian Public Sector Accounting Standards, even though the Province did not have under a unilateral right to reduce contributions. The opinion did not address the value at which the asset should be recorded. • Analysis completed by EY as to whether any valuation allowance is required to be recorded for OTPP or OPSEUPP as of March 31, 2017. EY confirmed no valuation allowance was required for either plan. PSAS neither requires unilateral control to record an asset, nor does it include a requirement to obtain a letter from the co-sponsor of the plan agreeing to reduce future contributions within 12 months.	

Summary Status Table in Response to the
Report of the Auditor General of Ontario
Chapter 2 2017 Annual Report of the Auditor General
Treasury Board Secretariat, Ministry of Finance, Ministry of Energy

AG Recommendation #2 *We recommend that the government remove the Independent Electricity System Operator's Market Accounts from the Province's consolidated financial statements.*	The Province consolidates the entities it controls, in accordance with Public Sector Accounting Standards (PSAS) and its internal reporting policies. Each consolidated entity produces its own stand-alone financial statements and is subject to its own financial statement audit. In 2016, the Independent Electricity System Operator (IESO) changed the accounting for the market accounts and recognized these balances on its financial statements. The financial statements of the IESO for the year-ended December 31, 2016 were subject to an external audit and received an unqualified (or clean) opinion. The government supports this enhanced reporting and greater transparency for the economic activities of the IESO. Additional comments with respect to IESO's accounting for the Market Accounts are included in the response to Recommendation #5 of this report.	The government supports the enhanced reporting and greater transparency for the economic activities of IESO resulting from the recognition of the market accounts. The government is open to continue to discuss the issue in the hopes of resolving this matter.
AG Recommendation #3 *We recommend the government follow the accounting standards established by the Public Sector Accounting Board and the Province's historical accounting precedent, and implement the recommendations in the Special Report issued*	The government prepares its financial statements in accordance with PSAS. The proposed accounting for the Ontario Fair Hydro Plan reflects the economic substance of the transaction by differentiating costs borne by taxpayers versus those borne by ratepayers. PSAS is silent on the recognition, measurement, presentation and disclosure of rate-regulated activities. In absence of a clear position on an issue, standard accounting practice dictates that an entity should consult other accounting standards. This guidance for PSAS is included in PS1150.07. Regarding the Office of the Auditor General's (OAG's) recommendation that the financing for Ontario's Fair Hydro Plan (OFHP) be pursued at the lowest cost to Ontarians, the government reiterates its concerns with this characterization, which were previously provided in the October 4, 2017 government response to the OAG's special report on OFHP (see	The government intends to continue to prepare its financial statements in accordance with Public Sector Accounting Standards (PSAS). The Fair Hydro Trust will raise financing through a combination of 3rd party senior debt and subordinated debt funded by OPG for which the cost will be primarily driven by the credit ratings assigned by Moody's and DBRS. The ultimate cost of this program will be dependent on the quantity of Global Adjustment that will be financed, prevailing market interest rates over the next 30 years, the availability of capital to invest in this type of structured debt and the

by our Office and tabled in the legislature on October 17, 2017, titled The Fair Hydro Plan: Concerns About Fiscal Transparency, Accountability and Value for Money, as follows: • *Record the true financial impact of the Fair Hydro Plan's electricity rate reduction on the Province's budgets and consolidated financial statements; and* • *Use a financing structure to fund the rate reduction that is least costly for Ontarians.*	Government Response to OAG Report on the Fair Hydro Plan in Appendix 5 of the Auditor General's Special Report). With respect to the Global Adjustment Refinancing (GA Refinancing) component of the OFHP, the policy objective is to more fairly allocate the cost to ratepayers over the useful life, not the contractual term, of the electricity generating assets. Therefore, it was a primary policy objective to ensure that the costs are borne by the beneficiaries of the electricity system – the ratepayers – and not the tax-base. The government believes it is appropriate for ratepayers to pay for the financing of electricity assets. The rate-base has a different risk profile than the tax-base, which would be reflected in different interest costs. The various entities that operate in the electricity industry have different financing costs that are specific to their risk profiles. The industry does not operate and is not financed through the Province. Ontario Power Generation (OPG) was identified as the Financial Services Manager responsible for the financing plans and the financing entity (i.e., Fair Hydro Trust) that will manage the debt obligations. OPG has the necessary financing and commercial expertise to assist with refinancing the Global Adjustment (GA) and will ensure that it is done in an efficient and cost-effective manner. OPG has a demonstrated track record in the financial markets with its Corporate Debt platform, private placement of insurance linked bonds, participation in securitization program and highly successful project debt issuances tied to new hydroelectric developments. OPG is beginning the process of raising funds to finance the deferred costs, and while total borrowing costs will not be known until the program is complete, accumulated interest is projected to be less than the estimates in the May 2017 report of the Financial Accountability Office (FAO). The figures referenced in the FAO's report was based on initial Ministry of Energy estimates from March 2017. Subsequent analysis conducted by the Ministry of Energy refined a number of variables,	credit stability of the OFHP program which would be reflected in credit ratings assigned to this debt over time. Each of these factors will need to be managed and monitored closely. The government is open to continue to discuss the issue in the hopes of resolving this matter.

	including the cost of borrowing and the quantity of GA to be refinanced. A number of variables, including interest rates, electricity demand and electricity costs, will change over the thirty-year life of OFHP. Government will continue to revise cost estimates to reflect these variable conditions. In addition, as outlined in the 2017 Long-Term Energy Plan, the government will continue to identify and implement initiatives to take costs out of the electricity system, which would reduce the cost of GA refinancing.	
AG Recommendation #4 *The Office of the Auditor General is the appointed under the Auditor General Act as the auditor for the consolidated financial statements of the Province of Ontario. We recommend that the Treasury Board Secretariat:* • *Proactively supply copies to the Auditor General of all contracts it enters into for accounting advice and opinions in order to ensure that*	Governments have the legal authority to engage external professionals on the wide range of legal, policy and financial issues that fall within their executive authority. It is also widely recognized that a government is entitled to a zone of confidentiality in which to consider this advice before any final decision is made. This is with the full understanding that ultimately the government will be accountable to the public and the Legislature for its decisions. Part of that accountability includes a commitment to full cooperation with any Officer of the Assembly legally authorized to review and comment on the government's actions, including the disclosure of any documents the officer is entitled to receive as part of his or her work. Treasury Board Secretariat's use of external expertise for accounting and financial reporting matters supplements its own resources on complex or emerging accounting and reporting matters. External advisors are generally engaged to provide advice and guidance to supplement internal analysis. Treasury Board is committed to working with the Office of the Auditor General to discuss issues, once the professional staff has completed its	Treasury Board Secretariat will continue to take a proactive approach to raising issues with the Office of the Auditor General. Where required by the CPA Ontario Code of Professional Conduct, the Auditor General will continue to be advised of external advisor involvement.

our Office is aware of the work the advisers are performing, can assess significant issues in a timely manner, and can determine the impact on the Province's consolidated financial statements and our annual audit; and • *Build into its contracts with external advisers the requirement that the advisers engaged to provide accounting advice and opinions that affect the consolidated financial statements notify our Office of*	analysis of the issue. In addition, Treasury Board believes frequent communication with the Office of the Auditor General is important and to that end, requested additional meetings with both the staff and the Auditor General during the 2016-17 audit. Where required by the CPA Ontario Code of Professional Conduct, the Auditor General has been, and will continue to be, advised of external advisor involvement.	

their engagement as required under the Code of Professional Conduct of the Chartered Professional Accountants of Ontario.		
AG Recommendation #5 *We recommend that the Independent Electricity System Operator (IESO), an "other government organization," use the Canadian Public Sector Accounting Standards (PSAS) in the preparation of its financial statements. Specifically, it should:* • *Remove market*	The Independent Electricity System Operator (IESO) prepares its financial statements in accordance with Public Sector Accounting Standards (PSAS) and the financial statements are audited by a firm of independent external auditors whose responsibility is to express an opinion on whether the financial statements are fairly presented in accordance with PSAS. On its 2016 financial statements, IESO received an unqualified (clean) audit opinion. In its role as market administrator, IESO operates and settles approximately $17 billion through the electricity market. The change to include market account assets and liabilities in the financial statements provides increased transparency with respect to the value of transactions that flow through Ontario's electricity market, that otherwise would go	The IESO intends to continue to prepare its financial statements in accordance with Public Sector Accounting Standards, and will report on the results of its accounting firm's audit in its 2017 financial statements, to be published March 30, 2018. The IESO will continue to regularly review its accounting policies to ensure they are best suited to the reporting requirements of its business and the users of its financial statements. This includes providing transparency into the value of transactions that flow through Ontario's $17 billion electricity market and reflecting the economic substance of certain types of expenses that may not be directly recovered through normal revenue requirement

accounts recorded on its financial statements; and • *Discontinue the inappropriate use of rate-regulated accounting in the preparation of its financial statements.* *To ensure that the members of the Legislative Assembly receive financial information on the operations of the IESO prepared in accordance with Canadian PSAS, the Office of the Auditor General will conduct an attest audit of the December 31, 2017, financial statements of the IESO as permitted under the Electricity Act, Subsection 25.2(2), which states: "The Auditor*	unreported in IESO's financial statements. These changes were extensively discussed with IESO's external auditors, its Audit Committee and its Board of Directors. The decision was supported by the Office of the Provincial Controller and IESO's external audit firm. Rate-regulated accounting better reflects the economic substance of certain types of IESO expenses (like those related to the Smart Metering Entity) that may not be directly recovered through normal revenue requirement models, and instead are recovered through rate regulation. This change is in line with accounting practices followed by six out of eight other independent system operators in North America and provides IESO financial statement users greater transparency into the substance of the variance accounts it holds and its right to collect an amount in the future.	models, and instead are recovered through rate regulation. The IESO recognizes the Auditor General's statutory role and authority to perform an audit of the IESO. The IESO is cooperating with the Office of the Auditor General to provide information, including the 2017 financial statements prepared by management, and for access to management for assistance in understanding such information. The IESO has likewise instructed its audit partner to cooperate with the Auditor General's audit.

General may audit the accounts and transactions of the IESO. 2014, c. 7, Sched. 7, s. 3 (1)."		
AG Recommendation #6 *We recommend the government follow the accounting standards established by the Public Sector Accounting Board, rather than using legislation and regulations to prescribe accounting treatments.*	The Province is committed to provide high-quality financial reports that support transparency and accountability in reporting to the public, the legislature and other users. For the 2015-16 Public Accounts, the government passed a time-limited regulation prescribing the accounting treatment for net pension assets in order to allow Treasury Board Secretariat and Ministry of Finance officials to sign off on Public Accounts consistent with the fiscal impact of the Auditor General's interpretation of Public Sector Accounting Standards (PSAS). This regulation is the only example of where the accounting treatment was legislated, and the legislation did not align with the requirements of PSAS. With respect to the Ontario Fair Hydro Plan Act and its regulations, there are no provisions in that legislation that prescribe the accounting treatment required to be followed by the Province. It is important to distinguish legislating the accounting from legislating the right of the government to recover amounts from specified ratepayers in the future, which in the absence of the legislation, would have been collected from	The government intends to continue to prepare its financial statements in accordance with Public Sector Accounting Standards.

	specified ratepayers as the costs were incurred. The accounting for the transactions resulting from the Fair Hydro Plan will be recorded in accordance with PSAS.	
AG Recommendation #7 *We recommend that in order to address the Province's growing total debt burden, the government work towards the development of a long-term total-debt reduction plan linked to its target of reducing the net debt-to-GDP ratio to its pre-recession level of 27% as measured using proper accounting for net pension assets and the projected costs of the Fair Hydro Plan. The government should also discuss publicly how it plans to pay down the debt.*	The 2017 Budget and the 2017 Fall Economic Statement stated that the government continues to maintain a target of reducing the net debt-to-GDP ratio to its pre-recession level of 27%. The government is making strategic investments in programs and services that will generate economic growth, while minimizing interest on debt costs. These investments are intended to grow the economy at a faster rate than net debt, allowing the government to manage Ontario's net debt-to-GDP ratio. The forecast balanced budget in 2017–18 will limit the increase in net debt to net investments in capital assets. The government's long-term infrastructure plan to invest about $190 billion over 13 years, starting in 2014-15, will contribute to the growth of the economy. The Centre for Spatial Economics found that for every $1 spent on public infrastructure, GDP increases by $6, on average, in the long term. Therefore, while overall debt will rise to fund these infrastructure investments, measurements of relative debt such as the net debt-to-GDP ratio, a recommended practice by the Public Sector Accounting Board, will gradually diminish due to the Province's GDP increasing at a faster rate than net debt. This will allow the Government to continue to move towards its 27% net debt-to-GDP target. The ratio has already commenced declining from its 2014-15 peak of 39.3%.	Continue to monitor progress.

	As discussed more thoroughly in responses to other recommendations in this report, the government prepares its financial statements in accordance with Public Sector Accounting Standards, including the net pension assets for its jointly sponsored pension plans and the transactions resulting from the Ontario Fair Hydro Plan.	
AG Recommendation #8 *We recommend that the Office of the Provincial Controller undertake thorough planning involving all stakeholders, including Treasury Board Secretariat, ministries and provincial government agencies, to identify the barriers and key areas to be addressed to achieve earlier finalization of the Province's consolidated financial statements, including the estimation risks associated with corporations tax and personal income tax*	Treasury Board Secretariat and the Ministry of Finance are supportive of the timely delivery of the Public Accounts. The Office of the Provincial Controller works closely with the Office of the Auditor General to identify audit issues early and to ensure that stakeholders are engaged in discussions regarding risks and resolution. The Office of the Provincial Controller will continue to collaborate with the Office of the Auditor General to support the timely delivery of the Public Accounts. The Province will work with the Canada Revenue Agency on this recommendation, as reporting Personal and Corporate taxation revenues is highly dependent on information they provide.	Planning discussions for the 2017-18 Public Accounts have begun between the Office of the Provincial Controller and the Office of the Auditor General. As well, the Office of Economic Policy has been engaged in discussions on risk considerations related to economic models used to estimate personal and corporate tax revenues.

revenues.		
AG Recommendation #9 *We recommend that the government avoid establishing arm's length trusts in order to record an expense in its consolidated financial statements before it is necessary, given that it loses the ability to ensure that funds are ultimately provided to the appropriate beneficiaries.*	The government works with its transfer payment recipients to ensure it receives good value for the money it provides in the form of grants. Government policy on the structured approach to program delivery takes a risk-based approach with respect to transfer payment oversight. Grants are provided to thousands of organizations annually that the government deals with at arms-length and is able to demonstrate proper oversight. A Trust structure was selected to implement the Affordability Fund in order to provide an effective solution to distributing funds to electricity distributors. With approximately 70 distributors across Ontario, it was not feasible for the Province to enter into agreements with each distributor. The Trust structure establishes an independent entity with expertise from the electricity distributor and community sectors. While the Affordability Fund was established at arm's length to the government, there are report-back requirements on the use of funds transferred as well as the ability for the government to conduct an audit to gain assurance that the funds have been used for the purposes intended.	The government will continue to assess the most appropriate vehicle for meeting its policy objectives, which include appropriate oversight of how transfer payments are spent.
AG Recommendation #10 *We recommend that the government determine when it will issue a*	Under the *Fiscal Transparency and Accountability Act*, 2004, in such circumstances as may be prescribed by regulation, the government shall release a Pre-Election Report on Ontario's Finances and shall do so before the deadline established by regulation. Should the government file such a regulation, the Auditor General would be required to promptly review the Pre-Election Report to determine	The government remains committed to meeting the legislative requirements of the Act and working constructively with the Office of the Auditor General.

regulation as outlined under subsection 11(1) of the Fiscal Transparency and Accountability Act, 2004 confirming the source of reference for the Pre-Election Report and the timeline for issuance of the report that will be subject to our review under the Act.	whether it is reasonable and issue a Statement describing the results of the review. Staff of Treasury Board Secretariat and the Ministry of Finance have begun working with their colleagues in the Office of the Auditor General of Ontario to engage in planning and preparatory work for the development and review of a Pre-Election report, should a regulation be filed.

Office of the Provincial Controller Division

Public Accounts Steering Committee
Briefing #1

June 13, 2017

Briefing Outline

- Key Public Accounts deliverables
- Consideration of other financial reporting products
- Impact of BPS line-by-line presentation
- Current accounting issues
- Key dates and considerations
- Planning timelines

Public Accounts Deliverables

1. **2016-17 Annual Financial Report, including**
   - Financial Statement Discussion and Analysis (FSD&A)
     - Discusses the Province's actual results against Budget, prior year and earlier years' actuals
     - Discusses indicators of financial condition and other information
   - Audited consolidated financial statements (CFS)
   - Management's Statement of Responsibility
     - Province's acknowledgement of responsibility for effectiveness of internal controls and the objectivity and integrity of the CFS and related notes
   - Auditor General's Audit Opinion
     - The AG's opinion that the financial statements are fairly stated
     - Expect qualified opinion for recognition of OTTP/OPSEU pension assets and inclusion of IESO regulatory assets/liabilities in the Province's financial statements
2. **Supplementary Volumes 1, 2, 3**
   - **Appendix 1** provides further details
3. **Various Communication Products**
   - News release, Q and As, briefing binders (limited distribution)

Financial Statement Discussion & Analysis

- **Purpose** – To enhance the users' understanding of the government's actual results compared to the approved Budget and prior years' results
- **Process –**
  - Identification of potential themes consistent with other public documents
  - Drafting content of FSD&A with input from stakeholders
  - To circulate drafts/extracts of FSD&A for feedback and suggestions
  - Oversight of the Public Accounts process (compilation, production, audit issues and communications) by the Public Accounts Steering Committee
  - TBS and MOF Ministers approval obtained on final version (shared with PO)
  - Streamlined distribution and sign-off process

Consideration of Other Financial Reporting Products

- Consistency of messaging and results between the Public Accounts and other financial reporting products is important, including:
  - **1st Quarter Economic Accounts (released by July 15)**
    - First public update on economy following Budget release
    - Previews messaging of 1st Quarter Finances (in-year outlook)
  - **1st Quarter Finances (released by August 15th)**
    - Signals governments performance against Budget plan
  - **Other**
    - 2017 Budget
    - Pre-Election Report

Impact of BPS Line-by-Line Presentation

- Presentation change only, which has no fiscal impact, i.e. no impact to annual deficit, net debt or accumulated deficit
- The revenues and expenses will be grossed up by the same amount of BPS third-party revenues
  - BPS direct receipt of federal transfers will be reported as revenue from Government of Canada
  - BPS fees, donations and other revenues will be reported as provincial revenue
  - Program spending of MOHLTC, EDU and MAESD will increase
  - Interest on debt (IOD) expense will increase by reflecting net interest expense on BPS debt

Impact of BPS Line-by-Line Presentation (cont'd)

- Impact to key financial indicators
  - No change to indicators related to the annual deficit, net debt or accumulated deficit
  - Favorable impact to debt charge to total revenue and net debt to total revenue
  - Program spending per capita will increase, but is expected to remain the lowest based on the restated interim results
- 2016 Budget and historical results have been restated reflecting line-by-line consolidation of BPS sectors.
- OPCD is stakeholdering with sector ministries and central agencies on the line-by-line variance analysis
  - See Appendix 2 additional details on line-by-line presentation

Current Accounting Issues

- **Pension:**
  - OPCD currently reviewing and refining adjustments related to pension plans (to impact annual deficit, opening balance sheet and net debt)
  - Awaiting feedback from OAG on pension assumptions.
  - AG has not accepted Province's position on net pension assets for OTPP and OPSEUPP and has advised that she will qualify her audit opinion for 2016-17 Public Accounts
- **Hydro Sector IFRS:**
  - OPG and H1 to be reported on an IFRS basis effective April 1/16 (AG supports)
  - Change from US GAAP to IFRS will have an estimated transitionary impact of $1.1B on the Province's opening accumulated deficit, impacting net debt
  - Change will also impact annual surplus/deficit in current and future years

Current Accounting Issues

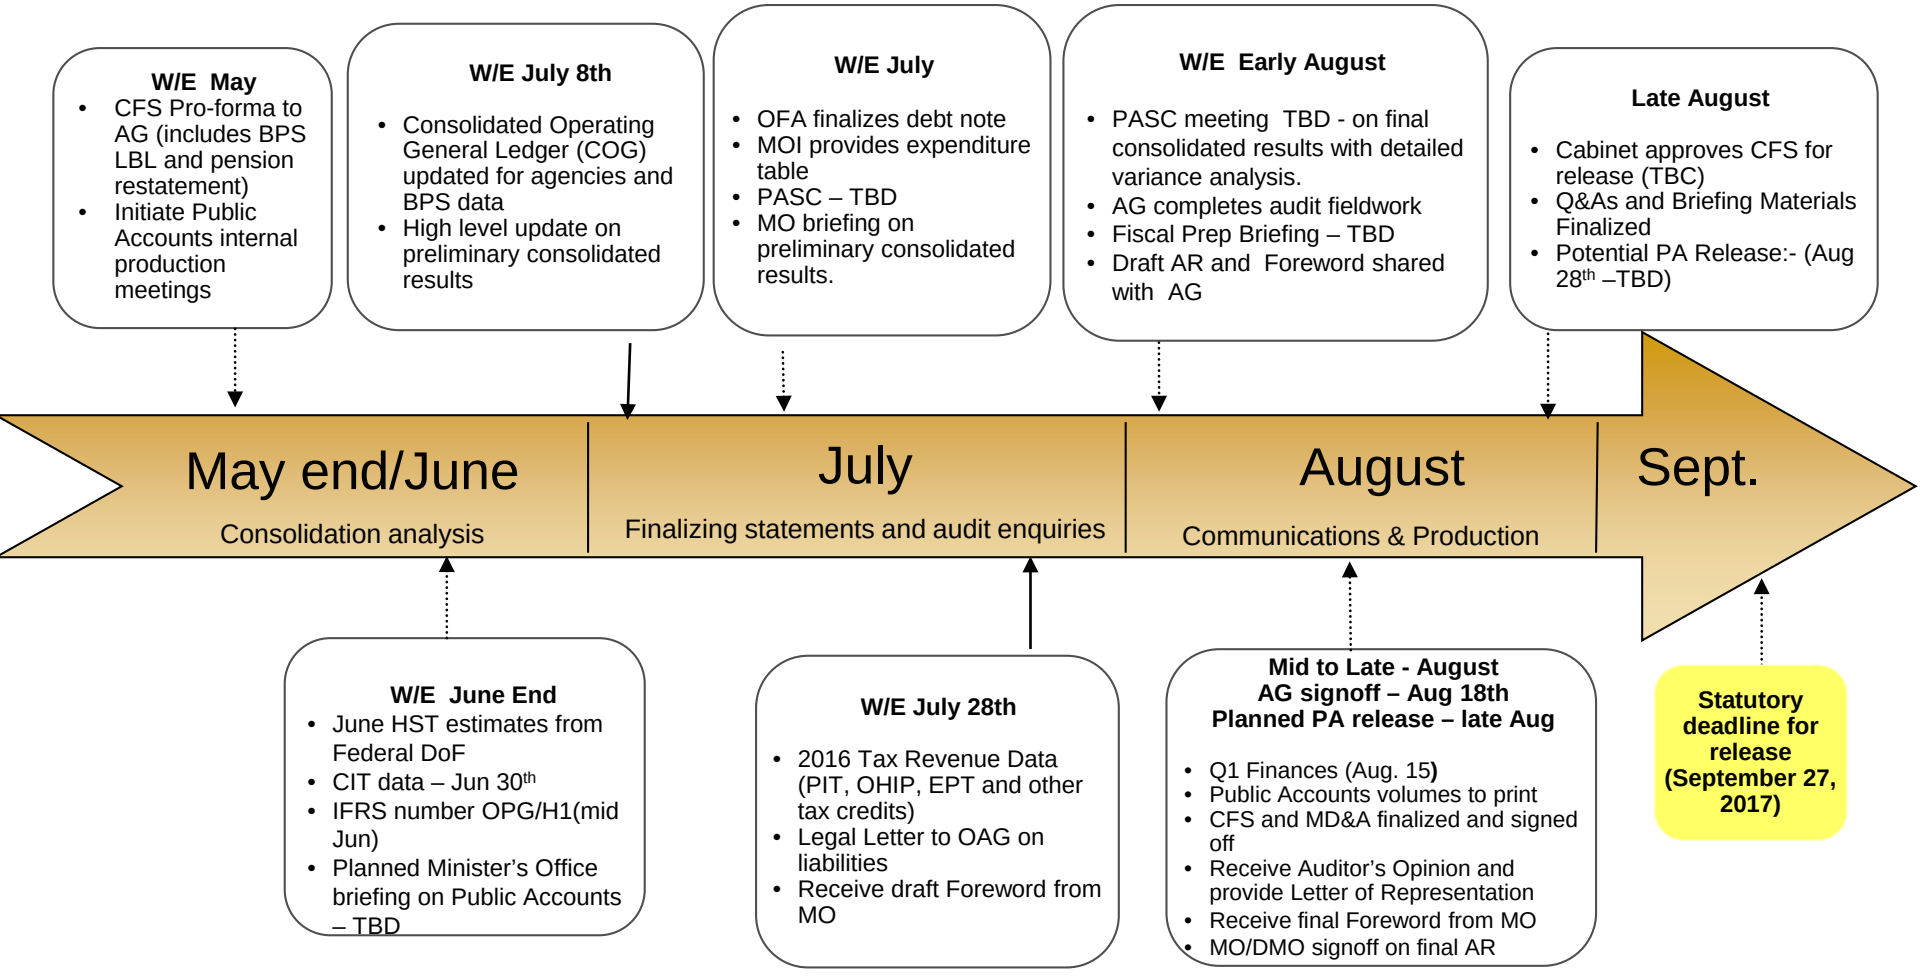
- **Remedy:**
  - EDU update for AG planned for early June on status of negotiations
  - OPCD/EDU will monitor and track the status as potential subsequent event item
- **OMA Negotiations:**
  - MOHLTC will submit Arbitration Framework for TB approval indicating that there will be no retroactive adjustment/payout for services prior to April 1, 2017
  - OMA ratification of Arbitration Framework scheduled for mid-June 2017
  - Impact on 2016/17 Public Accounts unlikely – will continue to monitor
- **Contaminated Sites:**
  - AG VFM follow-up audit on-going
  - Grassy Narrows analysis from MOECC outstanding (AG briefing has occurred)

Key Dates & Considerations

- **Public Accounts Planning Meeting**
  - Meeting occurred between AG and Deputy Ministers of TBS and MOF to discuss audit plan and select issues (Mar. 24)
  - Updated Audit Planning Report received May 16

- **Ministers' Offices Briefings on Public Accounts** – Early June
  - To provide overview of Public Accounts process and timelines

- **Public Accounts Steering Committee Meetings** – (Jun-Aug)
  - Kickoff meeting June 13th
  - Results meetings throughout July and early August
  - Refer to Appendix 2 for composition and role of the PAS Committee



Key Dates & Considerations (cont.)

- **Fiscal Prep Committee Briefing** – mid to late August (TBD)
  - Focus on consolidated results, including variance analysis

- **Expected audit opinion date** – August 18, 2017
  - Management Representation Letter (to be signed by DM)
  - Meeting between AG and Deputy Ministers to discuss audit findings and the AG's error summary (Summary of Unadjusted Differences) after which the signed audit opinion letter will be provided

- **Release date** - Late August
  - FAA legislated release within 180 days after the fiscal year-end (September 27, 2017)
  - 2015/16 release date (Audited version of PA- Oct 6, 2016)
  - 2016/17 - tentative date for planning purposes August 28, 2017

Draft Timeline

Updates on Financial Results

- **Two update points**
  - **Mid July** – Update on preliminary consolidated results, including:
    - Consolidated actuals and preliminary deficit range
    - Actual expense by ministry with placeholders for outstanding or unresolved matters
    - Revenue by source with placeholders for outstanding tax accruals
    - Ranges of variance identified to measure risk of changes in results, including potential impacts from unresolved reporting items
  - **Late July / Early August** – Update on preliminary consolidated results, including:
    - Final 2016-17 fiscal results and associated debt, net debt and accumulated deficit
    - Tax revenue numbers (PIT data Jul 28th)
    - Detailed analysis for significant variances
    - Final error summary (SUDS) for confirmation with OAG

Appendix 1: Supplementary Volumes to the Public Accounts

- **Volume 1:**

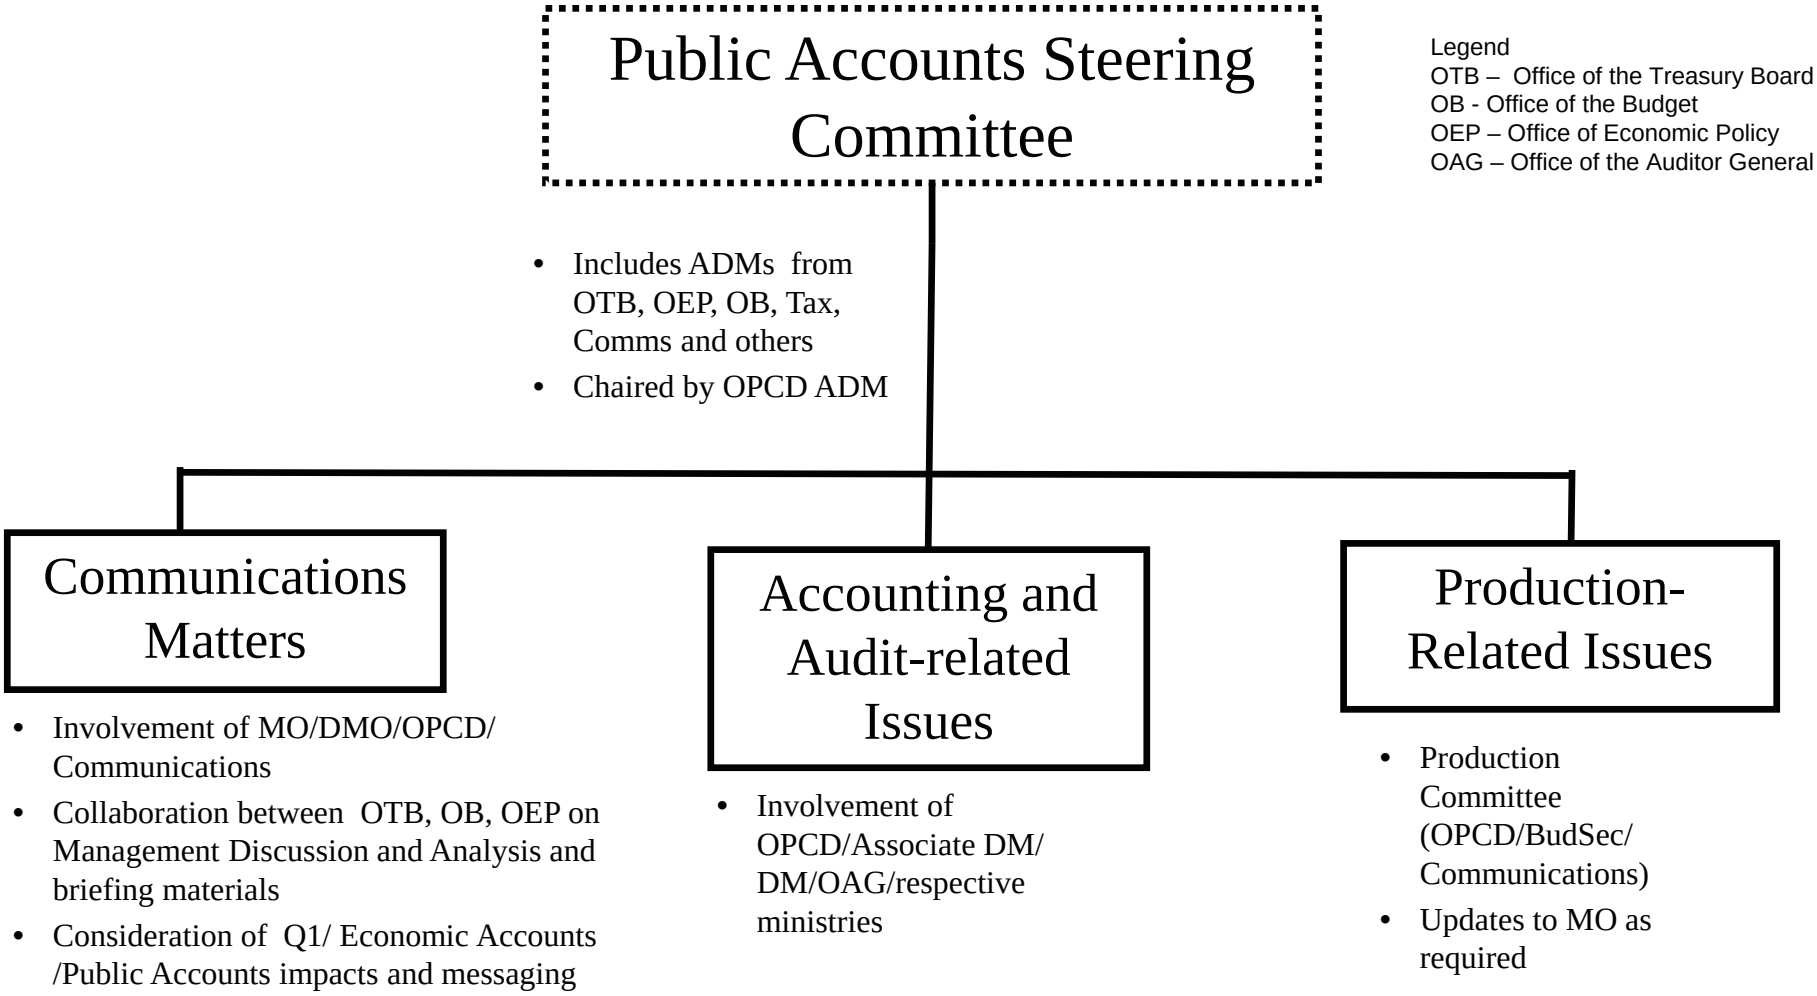
  Consolidated Revenue Fund (CRF) schedules and ministry statements on an accrual basis

- **Volume 2:**

  Financial statements of selected Crown Corporations, Boards, Commissions, and other miscellaneous statements

- **Volume 3:**

  Details of transfer payments and vendor payments by ministry (including salary and benefit payments to non-government entities), statutory salaries of Ministers and Parliamentary Assistants, and travel expenses of Ministers, Deputy Ministers as well as specific individual ministry staff where expenses exceed threshold



Appendix 2: BPS Line-by-Line Impact

We're adding a point on updating 15_16 to the deck, so good catch.

On the other details, we plan on going back next week on the rest of the details and fiscal picture we would print - so we can definitely save that for next week but foreshadowing it this week works too.

Subject: RE: Q3 Deck for FPC

Thanks Tim.

A question… would we update our 15-16 numbers to reflect the pension accounting, or wait until public accounts? Is that a decision point?

A comment… I think I inserted a box for a decision on whether we would report other tax revenue changes beyond HST. These net to zero, but we know about them now, and there won't be any new information on them before the Doc, so it is a bit awkward to not report them now and pick them up in the Doc. So I see that as a decision point.

Glad to discuss.

Brian

Subject: Q3 Deck for FPC

Please find attached a deck we're tracking into FPC tomorrow. This will travel together with a piece TBS is preparing on the Pension Panel.

Walked Scott through it a few minutes ago, and he's continuing to review but gave it an initial thumbs up. We'll probably walk this in to FPC tomorrow.

Wanted you all to have a look – this is based on input from many of your areas already, so staff have provided input, let me know if you have any edits or comments.

n Gadi, we'll need to touch on the net debt to gdp piece. You'll see we've included something in the appendix. Folks are working with Ken to see if there are other nuances we should add, but this is an important consideration as part of Q3.

n Cindy – we'll be discussing the pension piece at 4pm, but any suggested edits on this and IFRS are welcome.

n Andrea/Artur – think your folks are pulling together the list of in-year approvals we'd report. Hopefully we can get that list in the next day or so to help populate the details.

n Brian – this should reflect your input as well.

Importance: High

Hi All,

I just wanted to send a reminder that we're seeking initial input from your areas regarding the Q3 Document template **by tomorrow morning (ideally, before noon).** Again, there may be significant outstanding pieces that you're unable to update for Friday. These outstanding pieces can flagged as "to be updated" and addressed as decisions on the fiscal outlook are made over the coming week.

I'm attaching the First Quarter Finances as a general reference.

Thanks,
Ryan

Subject: Q3 FPC Deck and Q3 Document Template / Request for Input
Importance: High

Hi All,

OB is in the process of preparing a draft Q3 deck that will track to FPC this Wednesday. The deck lays out the key 2016-17 building blocks that could be updated as part of the Q3 publication. In addition, we're updating a draft Q3 document template. We'll need input from your areas on both these products this week. I'm including additional information below.

For the **FPC Q3 deck**, it would be appreciated if we could get the following information from TBS by **noon/early afternoon tomorrow (apologies for the tight timelines)**:

- **16-17 post-FES Expense Update (TBS):** We have included placeholder for an expense slide. The intention is for the slide to provide an updated list of initiatives that were not included in the FES expense outlook.
- **Recommended Expense Update/Signature Initiatives (TBS):** We may build in options for what the outlook could look like – it would helpful if you could provide a recommendation for the expense changes that should be taken on/profiled.
- **16-17 C-Fund Update (PEMD):** We have included a c-fund slide that was used in the Q1 finances briefing materials (attached with current PW). We would like to include an updated version of this slide in the appendix of the FPC deck. It would help to have this out to 19-20.
- **Pension Narrative (OPCD):** High level bullets on the pension adjustment.

For the **Q3 Document Template** (attached), we're looking for input from **PEMD, OPCD, OEP and OFA** by **10am on Friday, January 27**:

- Attached is a draft of Q3 finances template that is based heavily off of the 2016 First Quarter Finances. **We've highlighted the sections that we would like your respective areas to update in the enclosed.**
- Note, there will be some highlighted content that is *not possible* to update for Friday, however there will be a formal distribution process where additional information can be incorporated.

Please feel free to send input directly to Liane and Emma (in copy).

Many thanks,
Ryan

Introduction

The Ontario Quarterly Finances contains updated information about Ontario's 2016–17 fiscal outlook, including updated information about the major components of revenue and expense as set out in the *2016 Budget*.

Section A: 2016–17 Fiscal Outlook (OEP, TBS, OFA, Framework)

The government is projecting a deficit of $[X.X] billion in 2016–17, [an improvement of $X.X billion] compared to the 2016 Budget.

As outlined in the *2016 Budget,* the government is [on track to balance the budget by 2017–18 and is projecting to remain balanced in 2018–19. The government's path to a balanced budget is being achieved through responsible fiscal management, which involves managing growth in program spending and maintaining the integrity of Provincial revenues. The strengthening of the Ontario economy, together with the government's approach to fiscal management, is supporting strategic investments in new child care spaces, hospitals and electricity cost relief for consumers.]

Introduction

The Ontario Quarterly Finances contains updated information about Ontario's 2016–17 fiscal outlook, including updated information about the major components of revenue and expense as set out in the *2016 Budget*.

Section A: 2016–17 Fiscal Outlook

The government is projecting a deficit of $4.3 billion in 2016–17, unchanged from the 2016 Budget forecast.

As outlined in the *2016 Budget,* the government is on track to balance the budget by 2017–18 and is projecting to remain balanced in 2018–19. The government's path to a balanced budget is being achieved through responsible fiscal management, which involves managing growth in program spending and maintaining the integrity of Provincial revenues. At the same time, the government continues to make investments in the economy, its people, and a healthy, clean and prosperous low-carbon future.

Relatively strong economic growth recorded in Ontario over the second half of 2015 and early 2016 has helped increase private-sector forecasts for real GDP growth in 2016. The Ontario economy is benefiting from steady economic growth in the United States, low oil prices and a more competitive Canadian dollar.

However, weaker-than-expected global growth and low commodity prices have led to increased volatility in global financial and currency markets, and weakened confidence in the overall Canadian economy. Uncertainty in the global economy has increased, reflecting the United Kingdom's recent vote to leave the European Union. As a result, global growth expectations will likely be revised lower over the near term, which would adversely affect Ontario's economic outlook. However, Ontario's diversified economy means the Province is well positioned to respond to changing global economic conditions.

Given the high degree of uncertainty regarding the economic growth outlook and forthcoming revenue information, the government is maintaining the 2016 Budget revenue forecast.

2016–17 In-Year Fiscal Performance

($ Millions)	2016–17		
	Budget Plan	Current Outlook	In-Year Change
Revenue	**130,589**	**130,590**	**1**
Expense			
Programs	122,139	122,140	1
Interest on Debt	11,756	11,756	–
Total Expense	**133,895**	**133,896**	**1**
Surplus/(Deficit) Before Reserve	**(3,306)**	**(3,306)**	**–**
Reserve	1,000	1,000	–
Surplus/(Deficit)	**(4,306)**	**(4,306)**	**–**

Note: Numbers may not add due to rounding.

Total revenue is projected to be $130.6 billion, essentially unchanged from the 2016 Budget plan.

The outlook for Provincial program expense, at $122.1 billion, is unchanged from the 2016 Budget plan — reflecting the government's commitment to manage growth in spending.

The Province's interest on debt expense forecast, at $11.8 billion, is unchanged from the 2016 Budget forecast.

The 2016–17 outlook also maintains a $1.0 billion reserve to protect the fiscal outlook against unforeseen adverse changes in the Province's revenue and expense, including those resulting from changes in Ontario's economic performance or the impact of natural disasters.

As outlined in the *2016 Budget*, Ontario's net debt-to-GDP ratio is expected to peak at 39.6 per cent in 2015–16, remain level in 2016–17 and begin to decline in 2017–18.

Further details on the Province's fiscal plan, including final results for 2015–16, will be provided in future fiscal updates.

Section B: Details of In-Year Changes

Revenue

The 2016–17 revenue outlook, at $130.6 billion, remains essentially unchanged from the 2016 Budget forecast. Since the *2016 Budget,* there is one change to the revenue outlook for 2016–17:

- An increase of $0.9 million in federal revenue through the **National Disaster Mitigation Program**, to offset the expense increase to support flood mitigation measures across Ontario.

Risks to the 2016–17 revenue outlook are anticipated to be positive, reflecting a moderate improvement in 2016 economic growth. However, economic and revenue information still to be received over the coming months could significantly affect the revenue outlook. This includes personal and corporate income tax assessments for past years, Harmonized Sales Tax entitlements, Ontario-administered tax receipts in 2016–17 and ongoing economic developments. The government will continue to monitor economic and revenue developments and will provide further details in future fiscal updates.

Expense

The 2016–17 total expense outlook, at $133.9 billion, is on track with the projection in the *2016 Budget*. The government continues to manage spending within the fiscal plan. Since the *2016 Budget*, the following expense changes have occurred and have been accommodated within the fiscal plan.

Key changes to expense projections with offsets from the contingency funds include:

- An increase of $91.3 million for more **supports for children and youth with autism**, including an accelerated implementation of the new Ontario Autism Program.
- An increase of $40.4 million to **address urgent health care needs and improve access to care for First Nations peoples** primarily focused in the North.
- An increase of $3.1 million to support the Ontario Cattle Feeders' Association's three-year strategic marketing initiative to **promote Ontario Corn-Fed Beef** to help increase its domestic market share, and grow global exports.
- An increase of $2.9 million to enable the **Anti-Racism Directorate** to deliver on its core mandate and priorities.
- An increase of $2.7 million to build on the government's commitment to support vulnerable families by fully exempting **child support payments** as income received by social assistance clients.

- An increase of $1.8 million to support **Ontario's Indigenous communities**, including funding to the Ontario Native Women's Association.
- An increase of $1.0 million to support disaster relief efforts for both the **Fort McMurray, Alberta wildfires** and the **Ecuador earthquake**. The government also provided emergency management personnel to support local firefighting efforts in Fort McMurray.
- An operating increase of $0.4 million and the transfer of land associated with the **Chapleau Cree First Nation Treaty Land Entitlement Claim Settlement Agreement**.

Other key changes to expense projections include:

- A transfer of $116.4 million in capital funding from the Ministry of Economic Development, Employment and Infrastructure to the Ministry of Agriculture, Food, and Rural Affairs for the delivery of **municipal infrastructure projects** under the 2014 Building Canada Fund.
- A transfer totaling $26.8 million from the Ministry of Citizenship, Immigration and International Trade to the Ministry of Tourism, Culture and Sport, the Ministry of Children and Youth Services, and Treasury Board Secretariat to revitalize communities and celebrate **Ontario's 150th birthday**.
- An increase of $0.9 million, fully offset by increased federal revenue through the **National Disaster Mitigation Program**, to support flood mitigation measures across Ontario.

The outlook for interest on debt expense is unchanged from the 2016 Budget plan. The projected cost of borrowing is consistent with the *2016 Budget*, as interest rates remain in line with the Budget forecast.

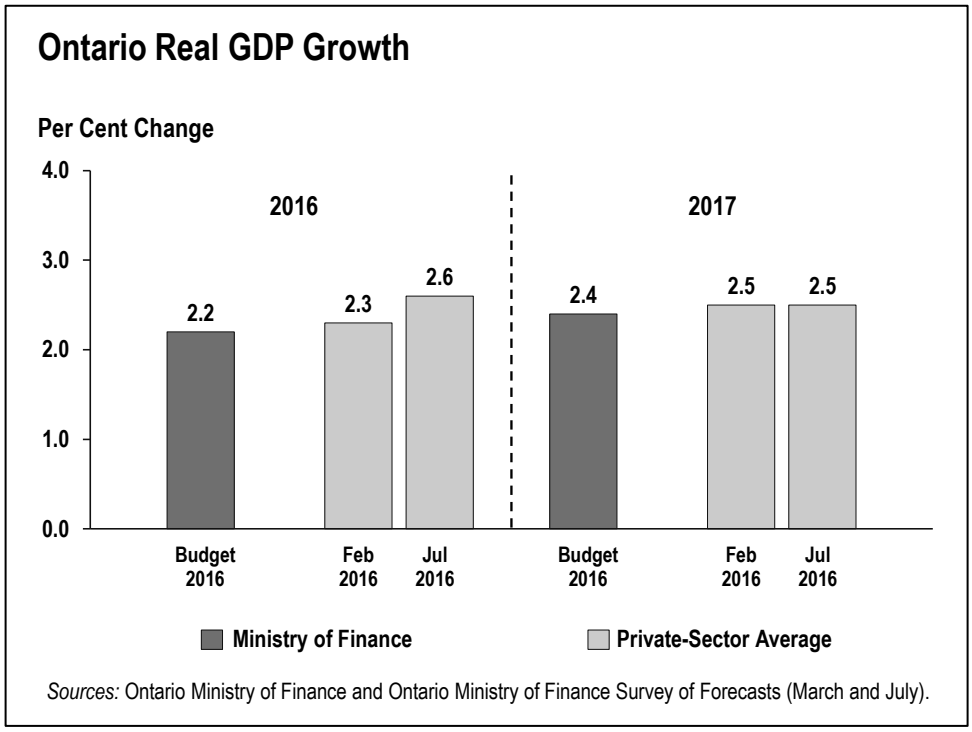
Asset Optimization

The Province is making progress on its asset optimization strategy.

Since the release of the *2016 Budget,* the government completed a secondary offering of 14 per cent of Hydro One common shares in April 2016 and closed the sale of the LCBO head office lands in June 2016.

The government remains on track to generate $5.7 billion in net revenue gains over time from its asset optimization initiative. All net revenue gains from the sale of qualifying assets will be dedicated to the Trillium Trust to help fund investments in transit, transportation and other priority infrastructure under Moving Ontario Forward.

This asset optimization target will help support the single largest infrastructure investment program in the province's history.



Fiscal Prudence

The *2016 Budget* included a $1.0 billion reserve in 2016–17 to protect the fiscal outlook against unforeseen adverse changes in the Province's revenue and expense, including those resulting from changes in Ontario's economic performance or the impact of natural disasters. The current fiscal outlook maintains the full reserve.

The current outlook also maintains contingency funds to help mitigate expense risks — particularly in cases where health and safety may be compromised or services to the most vulnerable are jeopardized — that may otherwise adversely affect Ontario's fiscal performance.

Section C: Ontario's Economic Outlook

As of July 5, 2016, private-sector forecasters, on average, project Ontario real GDP to increase by 2.6 per cent in 2016, up from the 2.3 per cent increase expected at the time of the *2016 Budget*. Growth in 2017 is unchanged at 2.5 per cent.

Sources: Ontario Ministry of Finance and Ontario Ministry of Finance Survey of Forecasts (March and July).

Expectations for global economic growth in 2016 have been lowered since the *2016 Budget*. The International Monetary Fund lowered their 2016 global growth forecast from 3.4 per cent at the time of the Budget to 3.1 per cent in July due to weakness in advanced and emerging economies, and the potential impact of United Kingdom's recent vote to leave the European Union. The average forecast for 2016 real GDP growth in the United States, Ontario's largest trading partner, has declined from 2.1 per cent at the time of the *2016 Budget* to 1.9 per cent in July.

Section D: Economic Performance

The Ontario economy continues to grow in a challenging global environment, with real GDP rising by a solid 0.8 per cent (3.0 per cent at annual rates) in the first quarter of 2016. This follows a similar increase in the fourth quarter of 2015. Ontario posted higher real GDP growth in the first quarter than Canada, the U.S. and all other G7 countries.

The strength in Ontario's economy has supported steady employment gains. Ontario's employment increased by 85,100 jobs over the first six months of 2016, compared to the same period in 2015. As of June 2016, employment increased by 625,100 net jobs, or 9.8 per cent, above the recessionary low of June 2009, and the unemployment rate declined to 6.4 per cent, below the national average and the lowest rate since September 2008.

Major economic indicators of business-sector activity have advanced strongly during the first half of 2016. On a year-to-date basis, Ontario's international merchandise exports increased 12.6 per cent, compared to the first five months of 2015. During the same period, manufacturing sales advanced 7.6 per cent, led by the auto sector. Similarly, consumers have recorded strong year-to-date gains in retail sales, home resale activity and housing starts.

(Seasonally adjusted per cent change from previous period, unless indicated otherwise)

	Monthly 2016			Quarterly		Annual

Importance: High

Hi All,

OB is in the process of preparing a draft Q3 deck that will track to FPC this Wednesday. The deck lays out the key 2016-17 building blocks that could be updated as part of the Q3 publication. In addition, we're updating a draft Q3 document template. We'll need input from your areas on both these products this week. I'm including additional information below.

For the **FPC Q3 deck**, it would be appreciated if we could get the following information from TBS by **noon/early afternoon tomorrow (apologies for the tight timelines)**:

- **16-17 post-FES Expense Update (TBS):** We have included placeholder for an expense slide. The intention is for the slide to provide an updated list of initiatives that were not included in the FES expense outlook.
- **Recommended Expense Update/Signature Initiatives (TBS):** We may build in options for what the outlook could look like – it would helpful if you could provide a recommendation for the expense changes that should be taken on/profiled.
- **16-17 C-Fund Update (PEMD):** We have included a c-fund slide that was used in the Q1 finances briefing materials (attached with current PW). We would like to include an updated version of this slide in the appendix of the FPC deck. It would help to have this out to 19-20.
- **Pension Narrative (OPCD):** High level bullets on the pension adjustment.

For the **Q3 Document Template** (attached), we're looking for input from **PEMD, OPCD, OEP and OFA** by **10am on Friday, January 27**:

- Attached is a draft of Q3 finances template that is based heavily off of the 2016 First Quarter Finances. **We've highlighted the sections that we would like your respective areas to update in the enclosed.**
- Note, there will be some highlighted content that is *not possible* to update for Friday, however there will be a formal distribution process where additional information can be incorporated.

Please feel free to send input directly to Liane and Emma (in copy).

Many thanks,
Ryan

Contingency Fund Outlook and Expense Risks

Contingency Fund Outlook

Less: Compensation Risks set-aside	-	-	0.4	0.9	1.6
Less: Moving Ontario Forward set-aside	-	-	-	0.0	0.4
Contingency fund balance incl. set-asides			**0.5**	**0.3**	**0.9**

Includes Drug Program changes, Child Welfare, Northern Health Action Plan, Action Plan for Reconciliation, School Renewal Funding

Accommodates approximately 1.4% increases in next round of bargaining

[1] For 2014-15 and 2015-16, approvals through Q3 are shown.

- Of the remaining 2016-17 contingency fund, $0.6 billion is encumbered for education capital appropriation, leaving $0.3 billion to cover any contingencies.
- The 2016 Budget included a larger contingency fund, primarily due to funds set aside for future compensation increases and outside the GTHA Moving Ontario Forward projects.
- There have been more draws from the contingency fund in the current fiscal cycle, compared to recent years.
- The remaining contingency fund balance would be used to offset risks.

Expense Risks: Items to be managed

$ Billions	2016-17	2017-18	2018-19
Identified high-likelihood risks	0.4	0.7	1.0

Introduction

The Ontario Quarterly Finances contains updated information about Ontario's 2016–17 fiscal outlook, including updated information about the major components of revenue and expense as set out in the *2016 Budget*.

Section A: 2016–17 Fiscal Outlook (OEP, TBS, OFA, Framework)

The government is projecting a deficit of $[X.X] billion in 2016–17, [an improvement of $X.X billion] compared to the 2016 Budget.

As outlined in the *2016 Budget,* the government is [on track to balance the budget by 2017–18 and is projecting to remain balanced in 2018–19. The government's path to a balanced budget is being achieved through responsible fiscal management, which involves managing growth in program spending and maintaining the integrity of Provincial revenues. The strengthening of the Ontario economy, together with the government's approach to fiscal management, is supporting strategic investments in new child care spaces, hospitals and electricity cost relief for consumers.]

Total revenue is projected to be $[X.X] billion, [an improvement/deterioration of $X.X billion compared to the 2016 Budget.] — [placeholder for high-level revenue change explanation]

The outlook for Provincial program expense, at $[X.X] billion, is [an improvement/deterioration of $X.X billion compared to the 2016 Budget.] — reflecting [placeholder for high-level program expense change explanation]

The Province's interest on debt expense forecast, at $X.X billion, is [an improvement/deterioration of $X.X billion compared to the 2016 Budget forecast.]

The 2016–17 outlook also maintains a $[X.X] billion reserve to protect the fiscal outlook against unforeseen adverse changes in the Province's revenue and expense, including those resulting from changes in Ontario's economic performance or the impact of natural disasters.

Further details on the Province's fiscal plan, will be provided in the upcoming 2017 Budget.

Section B: Details of In-Year Changes (OEP, PEMD, OFA, Framework)

Revenue (OEP)

The 2016–17 revenue outlook, at $[X.X] billion, is [an improvement/deterioration of $X.X billion compared to the 2016 Budget]. Since the *2016 Budget,* the following changes have been made to the revenue outlook for 2016–17:

- [Placholder for revenue changes]

Subject: FW: Q3 update

Hi All

Pls note preferred option and the proposed Q3 date. Once Gadi confirms today that FPC has indeed approved both we can proceed towards finalizing the Financing Table. Note that option 4 which is the preferred option, projects a deficit that is lower than simply removing the pension adjustment. If I remember correctly the maturities are also lower by $282M.

My preference is to offset the lower maturities through cash and reduce the long term borrowing by the reduction in the deficit that is over and above the removal of the pension adjustment. Having said that, the latter is relatively small so Gadi may choose maintain the long term borrowing at FES levels and adjust this as well through cash. Once I hear back from him we can target say Friday or Monday to present a first cut of the FT and the revised net debt to GDP ratios.

Kevin if you have not yet done so, pls revise the non-cash by the amount of the pension adjustment.

Thanks and happy to discuss.

Ken k

Subject: RE: Q3 update

Hi Everyone – I'm attaching for you, the materials for tomorrow's FPC discussion, including:

- Q3 Finances background (updated for new proposed release date, recommended option highlighted, and additional information on letter to Clerk)
- Q3 Finances option placemat (also updated to highlight recommended option)
- One-pager highlighted key dates for various deliverables and confirmation of timing (LTR, Q3, Pensions Panel, letter to clerk, new electricity relief, tentative Document track)
- One-pager with proposed agenda for Feb 9th MMP.

Thanks for your own going support and cooperation.

Subject: RE: Q3 update

Hi Everyone – just wanted to share with you the latest on the strategy for Q3. We are headed back to FPC next week with a further 2 scenarios on the deficit target that could be published. In addition to the ones we took earlier this week – two new options are proposed – one is to reverse the pensions only (option 1 in the materials), and the second is to take on a certain amount of ministry pressures we think will materialize (option 4 in the materials).

In terms of the materials – there is both a deck and a placemat that we are proposing to take forward. The placemat illustrates the 4 options and includes how the revenue/expense change table would appear relative to Budget and some proposed narrative for each scenario.

The deck is very similar to what we took forward last week but has a couple of new slides. Tim has also just circulated to your ADMs

Can I ask that you specifically take a look at slide 8 to ensure you are comfortable with the wording

as well as the **narrative on the placemat** that would be helpful. But happy to hear any comments on the rest of it as well. We are looking for any comments back by 3:30pm today so we can finalize and send up to our DM/MO today.

And – we are continuing to track for a release on Feb 13 and we will be in touch to request your assistance.

Happy to discuss.

Thanks.

Subject: RE: Q3 update
Importance: High

Hi All,

Following up on my email from last week, we received relatively recent direction regarding the release of Ontario's Third Quarter Finances – the tentative plan is to publish Q3 finances ahead of the February 15 deadline. We are tentatively tracking a release date of Monday February 13.

As you can imagine, timelines are very compressed, and includes a possible trip to FPC this week. In order to meet this week's deadlines, while also preparing for the release of the actual publication, we're asking for input from you in stages:

EOD Today:
We have prepared the draft of a deck, which we are working towards tabling at this Wednesday's FPC (TBC). The deck lays out the key 2016-17 building blocks that could be updated as part of the Q3 publication. It would help if we could get the

following from you folks by the end of today:
16-17 post-FES expense update: We have included placeholder for an expense slide. The intention is for the slide to provide an updated list of initiatives that were not included in the FES expense outlook.
Recommended expense update/signature initiatives: We may build in options for what the outlook could look like – it would help if you could provide a recommendation for the expense changes that should be taken on/profiled.
16-17 c-fund update: We have included a c-fund slide that was used in the Q1 finances briefing materials (current PW). We would like to include an updated version of this slide in the FPC deck (appendix). It would help to have this out to 19-20.
Pension Narrative: Nadine – I'll connect on the pension adjustment and some high level bullets that we could use.

Noon Friday January 27:
Template: I've attached a draft of 3q finances that is based heavily off of the 2016 First Quarter Finances. We've highlighted in green the sections that we would like you to update. While I'm not 100% certain this structure will be exactly what the Q3 document will look like, I think it's safe to say that the substantive content we'll have to cover is captured here. There will be some highlighted content that is *not possible* to update for Friday, however there will be a formal distribution process where additional information can be incorporated.

Thanks everyone, and please feel free to send your input directly to Liane and Emma. Im hoping to be able to share a draft deck with you late this evening.

Subject: Q3 heads up

Hi Everyone – Wanted to send a quick message that we are hearing there is a desire to proceed with the release of a Q3 update around the time we are expecting the Pension Panel panel to release their report. We are going to assume mid feb prior to the house coming back for our planning purposes.

My team is going to work together to put together a list of things we need to start working on/think about along with a calendar to determine and get direction on an approach to coincide with this timeframe.

More details to follow tomorrow.

Thanks.

Ontario's Third Quarter Finances: Fiscal Strategy

Office of the Budget
MINISTRY of FINANCE

Presentation to FPC on February 1, 2017

Preliminary Draft

Draft – January 31, 2017 5:00 PM

Context

Under the *Fiscal Transparency and Accountability Act, 2004* (FTAA), the Third Quarter Finances is required to:

- Be released on or before February 15th (publication can be delayed if a letter is sent to the Clerk).
- Include updated information about the major components of revenue and expense **for the current fiscal year only.**

It also provides an **opportunity for the government to reiterate key fiscal messages** from the Budget or pre-condition for future updates.

A Third Quarter Finances has only been published once in the last eight years (in 2012-13).

Key stakeholders like the Financial Accountability Officer, the Auditor General and rating agencies will assess the fiscal outlook and narrative.

Both have acknowledged that balance is within reach in 2017-18, but have also highlighted key risks to the 2016 Budget fiscal plan.

Purpose and Key Decisions

Currently working towards **a release date of February 21, 2017** – need to **confirm the approach to publishing Ontario's Third Quarter Finances**, including:

- The core updates to **the fiscal outlook and supporting revenue and expense details** to be published, as well as the **fiscal narrative and messaging**.
- Positioning the content and the rollout of Third Quarter Finances relative to the release of the **Pension Panel's Report and recommendations**, and other publicly available information.

Publishing after the February 15th deadline will require that a **letter be sent to the Clerk of the Legislature** advising of the delayed release.

- Letter could be sent on **February 13th** to coincide with the release of the Pension Panel's Report.

Evolution of the 2016-17 Outlook

- The Third Quarter Finances will present a fiscal update relative to the 2016 Budget and address changes since FES in narrative only.
- The 2016 FES highlighted Ontario's stronger economy and the government's approach to fiscal management, which supported strategic investments in new child care spaces, hospitals and electricity cost relief for consumers.
- To support these investments while accommodating the Pension Adjustment, the government took on a number of fiscal tools in order to meet its targets.

2016 Budget Fiscal Plan $ Billions	2016-17	Change to FES 2016-17	FES Outlook 2016-17
Revenue	130.6	*2.1*	132.7
Expense			
Programs	122.1	*3.1*	125.3
Interest on Debt	11.8	*(0.4)*	11.4
Total Expense	133.9	*2.7*	136.6
Surplus/(Deficit) Before Reserve	(3.3)	*(0.6)*	(3.9)
Reserve	1.0	*(0.6)*	0.4
Surplus/(Deficit)	(4.3)	*(0.0)*	(4.3)

Total revenue changes of $2.1 billion, consisting of:

- Base Forecast Change $1.0 billion
- Reversal of Homecare $(0.2) billion
- Federal Agreements $0.4 billion
- Higher assumed revenue to accommodate pensions $0.9 billion

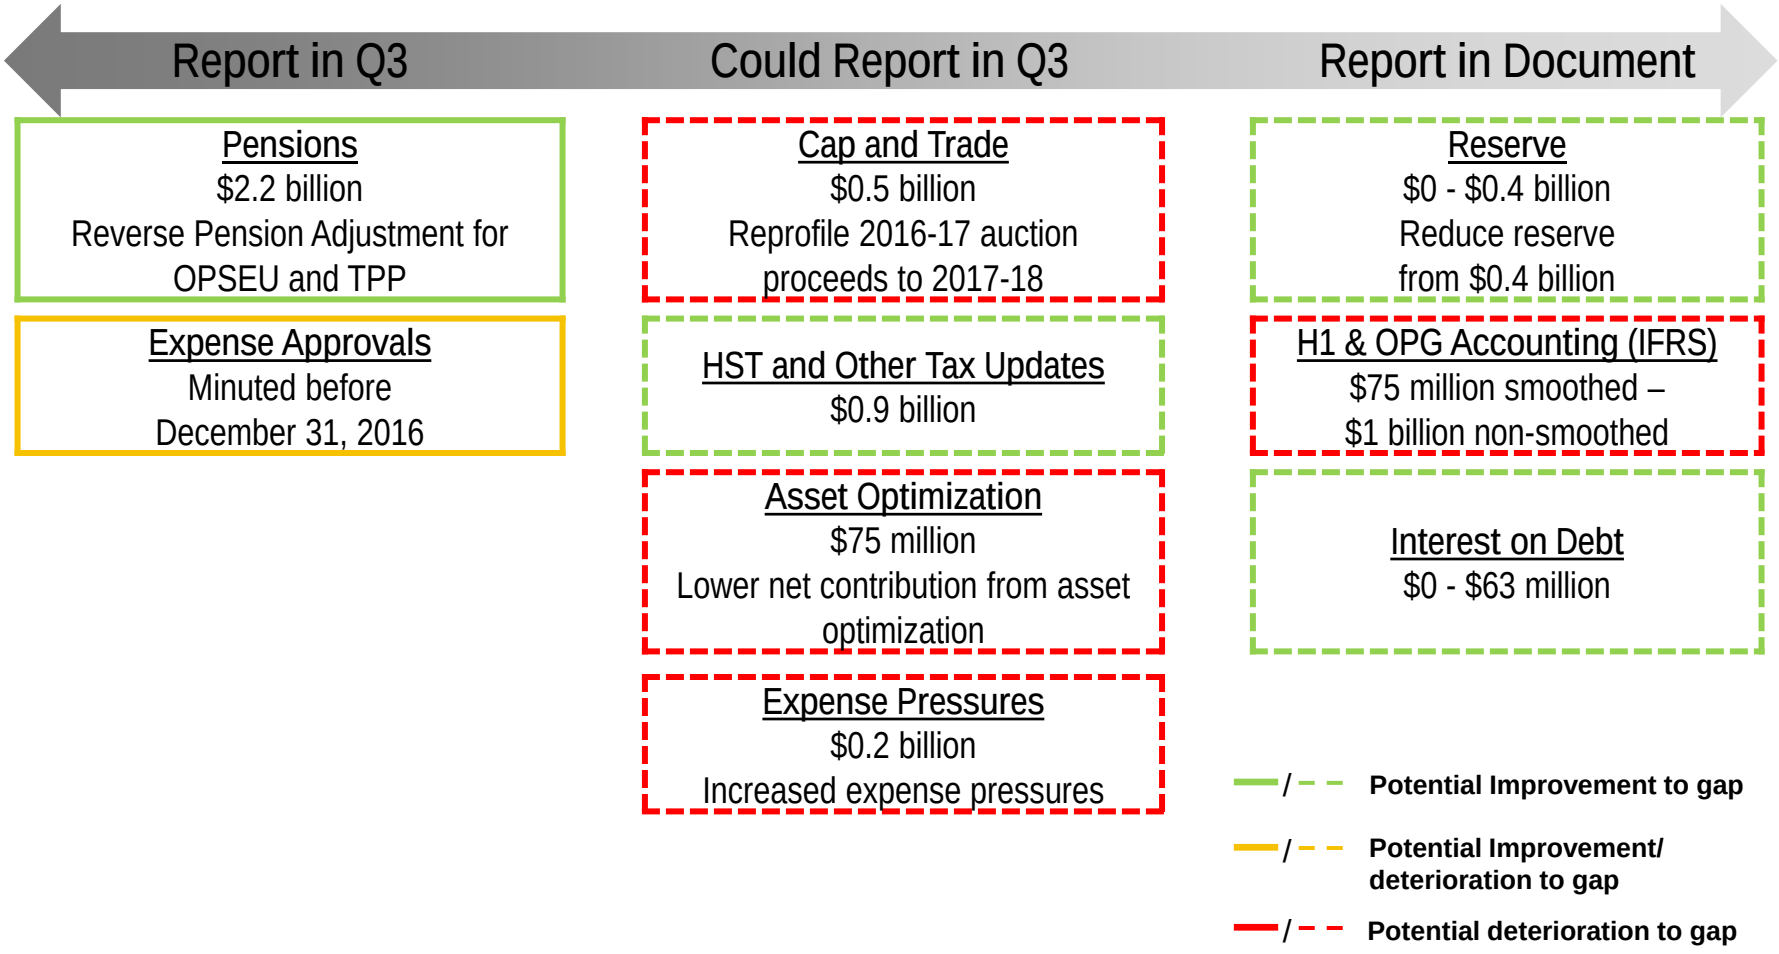
Total expense changes of $2.7 billion, consisting of:

- In-Year Approvals $0.2 billion
- Pension Adjustment of $2.2 billion
- Electricity Cost Relief $0.3 billion
- Support for Hospitals $0.1 billion
- Green Investment Fund $0.3 billion
- New Federal Agreements $0.4 billion
- Contingency Fund Offsets $(0.5) billion
- Interest on Debt Savings $(0.4) billion

Change to the Reserve $(0.6) billion

Treatment of Pension Adjustment

Panel Recommendation



- The Pension Asset Expert Advisory Panel will be releasing its findings in the coming weeks.
  - The report is expected to include advice that the net assets of government jointly sponsored pension plans should be recognized in the Province's financial statements.
  - If taken on, this would result in a positive fiscal impact to the government's outlook in all plan years.

Treatment of Pension Adjustment

- The Third Quarter Finances provides the government with an immediate opportunity to align its fiscal strategy with recommendations of the Panel, and frame the pension narrative in advance of the 2017 Document.
- While the reversal of the pension adjustment to the Ontario Public Service Employees Union Pension Plan (OPSEUPP) and the Ontario Teachers' Pension Plan (OTPP) will result in an improved 2016-17 deficit, expectations may need to be tempered about how much fiscal room is created in the out-years.
- For consistency and comparability, an adjustment to the 2015-16 actuals will be made to reflect the government's decision to adopt the Panel's recommendations. The adjustment to historical results impacts the previously reported net debt and deficit results as well as the net debt to GDP ratio.

Key Building Blocks

- In addition to the reversal of the Pension Adjustment, other key building blocks will either need to be reported in the Third Quarter Finances or be considered for the 2017 Document.

Building Block Considerations

There are a number of considerations for whether key building blocks should be taken on in the Third Quarter Finances or deferred to the 2017 Document.

Could Report in Third Quarter Finances

Cap and Trade

- The Cap and Trade auction notice that was released on January 20 stating that certification will occur on April 3, 2017, and settlement shortly thereafter.
- Stakeholders (e.g. FAO and Auditor General) may question why the government has not updated its fiscal plan to reflect this change.

HST and Other Tax Updates

- HST updates have been received since the FES, and no further significant updates are expected in advance of the 2017 Document. Other tax information is not as certain and could require additional updates in the 2017 Document.
- Stakeholders are aware of the timing of these information flows and may question if updates are not taken on in Third Quarter Finances.

Asset Optimization

- Updating for revised estimated net contribution from Asset Optimization would build some deterioration into the outlook.
- There are changes / uncertainty on the expected potential gains and/or timing for the H1 Brampton (which has not yet closed), and Seaton Lands sales (still pending), and uncertainty on the final accounting net gains reported for H1 shares purchased by OPG, potentially necessitating additional updates in the 2017 Document.

Expense Pressures

- Ministry risks represent potential pressures in the fiscal plan, and are not typically included in Quarterly updates.
- However, it may be prudent to address expense pressures which may materialize before the 2017 Document.

Report in Document

Reserve

It is recommended that the reserve be maintained at its current level of $0.4 billion, in order to mitigate any pressures that may arise before year-end.

H1 & OPG Accounting (IFRS)

Updated information on the potential fiscal impact of the move from U.S. GAAP to IFRS for Hydro One and OPG, is expected at the end of February.

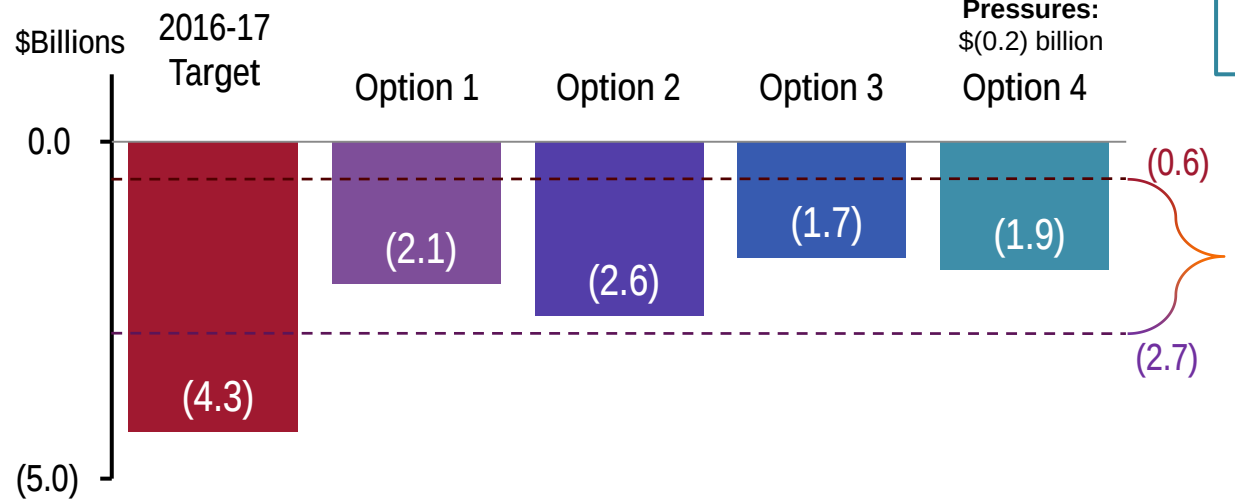
Interest on Debt

Deferring improvements in the interest on debt forecast allows for upside potential in the 2016-17 interim results of the 2017 Document.

Outstanding Information

- **Outstanding Information** could materially impact the **2016-17 outlook** in advance of the 2017 Document.

Revenue
Revisions to economic outlook
Ongoing provincially-administered tax receipts
Non-tax revenue updates from Ministry PRRT submissions
Net income updates from government business enterprises
Revisions to IFRS - US GAAP impacts for OPG and Hydro One

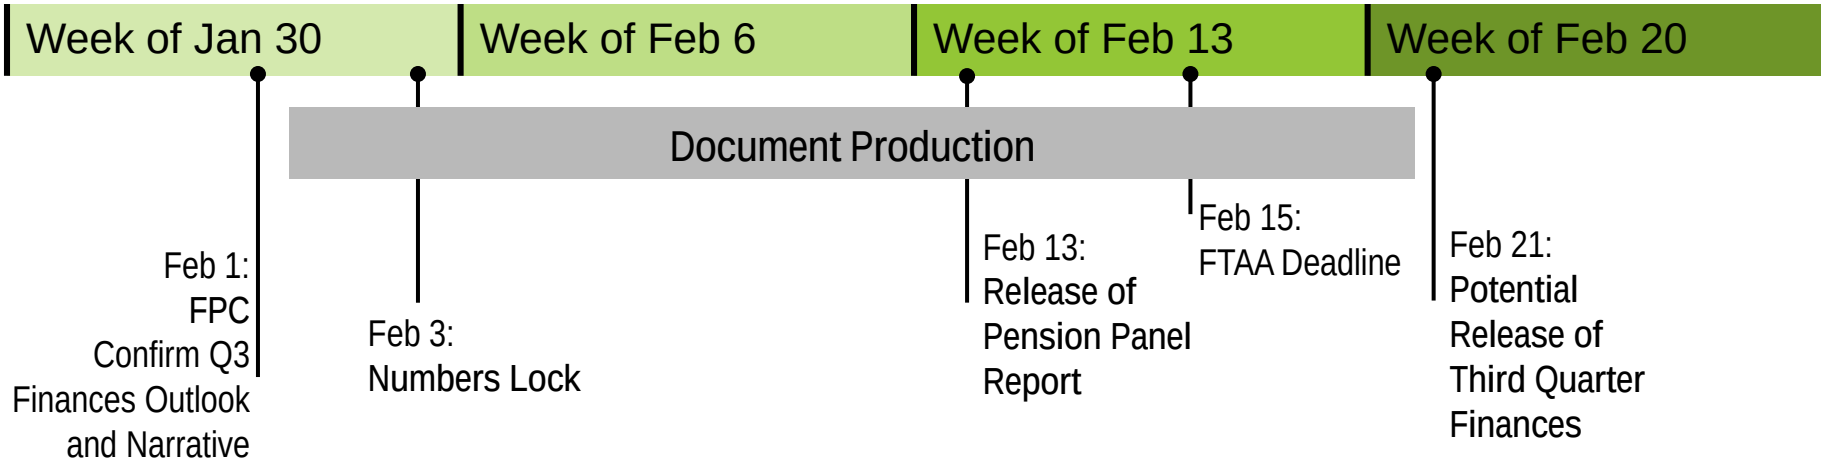


Expense
Ministry Q3/interim submissions
Consolidations and other technical adjustments
Interest on debt forecast updates
Contaminated sites liabilities
Updated pension expense forecast

- Potential improvement to gap
- Potential improvement or deterioration to gap
- Potential deterioration to gap

2016-17 Third Quarter Finances: Deficit Range

Options 1 through 4 build on each other. All options assume the pension reversal and progressively take on additional changes relative to FES .



Option 1	Option 2	Option 3	Recommended Option 4
Pensions: $2.2 billion	**Pensions**: $2.2 billion	**Pensions**: $2.2 billion	**Pensions**: $2.2 billion
	Cap and Trade: $(0.5) billion	**Cap and Trade:** $(0.5) billion	**Cap and Trade:** $(0.5) billion
		Asset Optimization: $(0.1) billion	**Asset Optimization:** $(0.1) billion
		HST & Other Taxes: $0.9 billion	**HST & Other Taxes:** $0.9 billion
			Expense Pressures: $(0.2) billion

Range reflects an early-read of the 2016-17 end of year projection.

- Based on an early-read of end of year projections, the government may want to report an outlook that protects against risks or other changes between now and the Budget.
- Based on current information and taking into account key building blocks, there are a number of options for presenting the Q3 deficit, ranging from $2.6 billion to $1.7 billion. These are on the medium-to-low end of what is being tracked for the interim outlook for the 2017 Document.

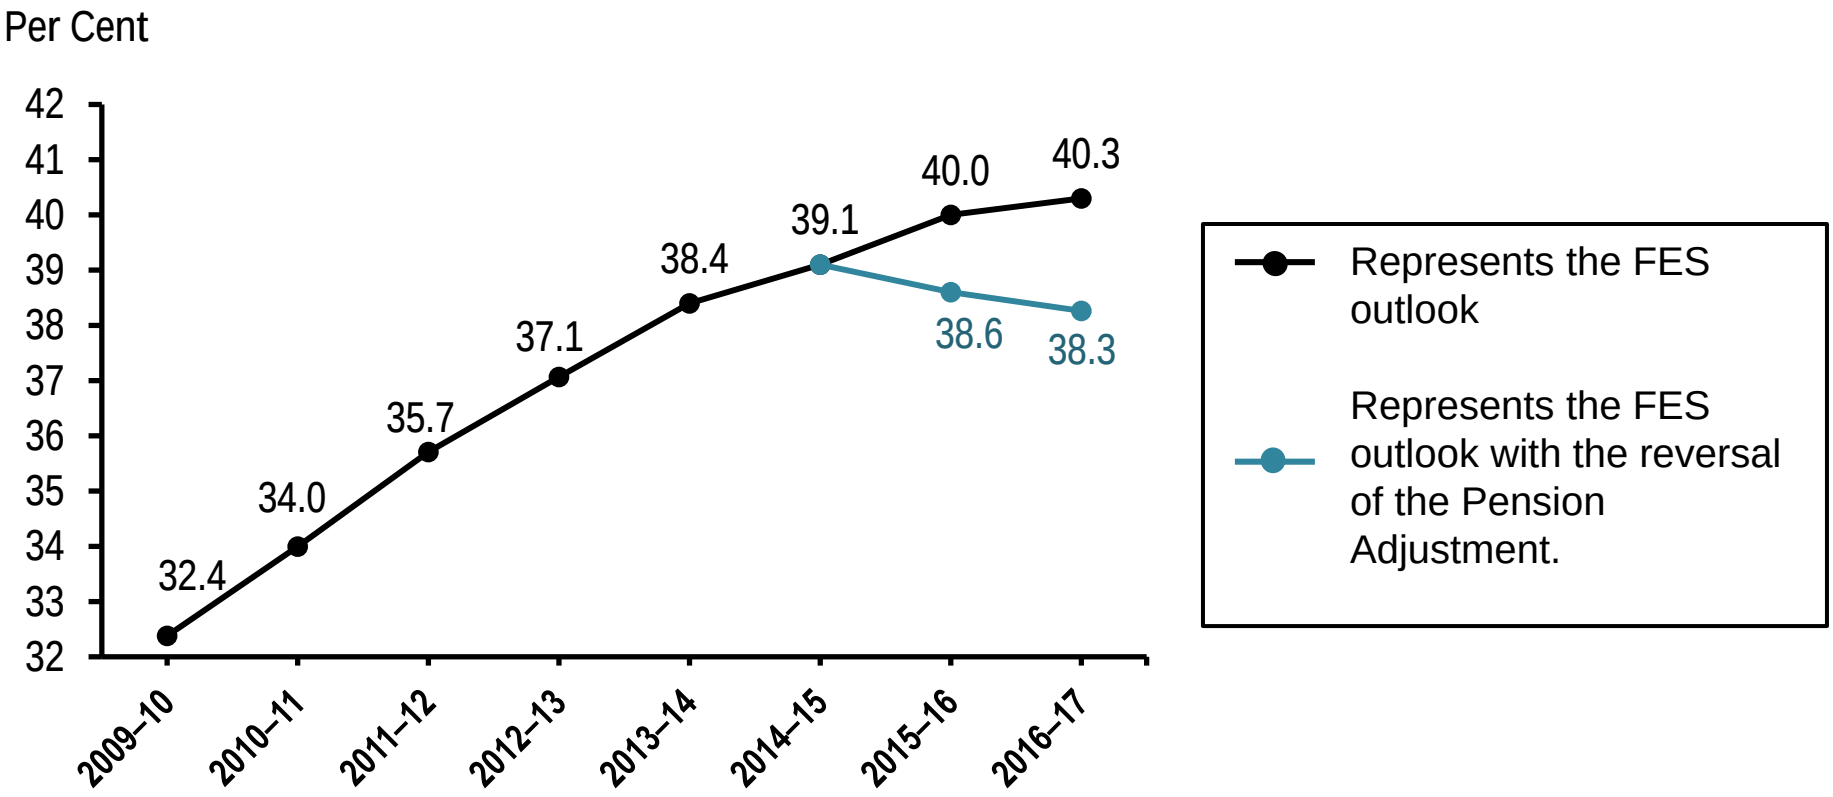
Appendix

End of Year Projection for 2016-17

- An early-read indicates that end of year projections for the 2016-17 deficit could range from $0.6 billion (if there is a significant improvement to the outlook) to $2.7 billion (if there is a moderate improvement to the outlook).

Significant Year-end Improvement

2016 Budget (4.3) billion
+ Pension Adjustment and Tools
2016 FES (4.3) billion
+ Higher Revenue ***1.7 billion***
– Re-profiling Cap and Trade Proceeds ***0.5 billion***
– Lower Net Contribution from Asset Optimization ***75 million***
– Accounting Adjustments: Accounting Framework (IFRS) ***75 million*** Unchanged Contaminated Sites
Unchanged Program Expense
+ Reverse Pension Adjustment ***2.2 billion***
+ Lower Interest on Debt ***0.1 billion***
+ Reduce Reserve ***0.4 billion***
Early-Read (0.6) billion

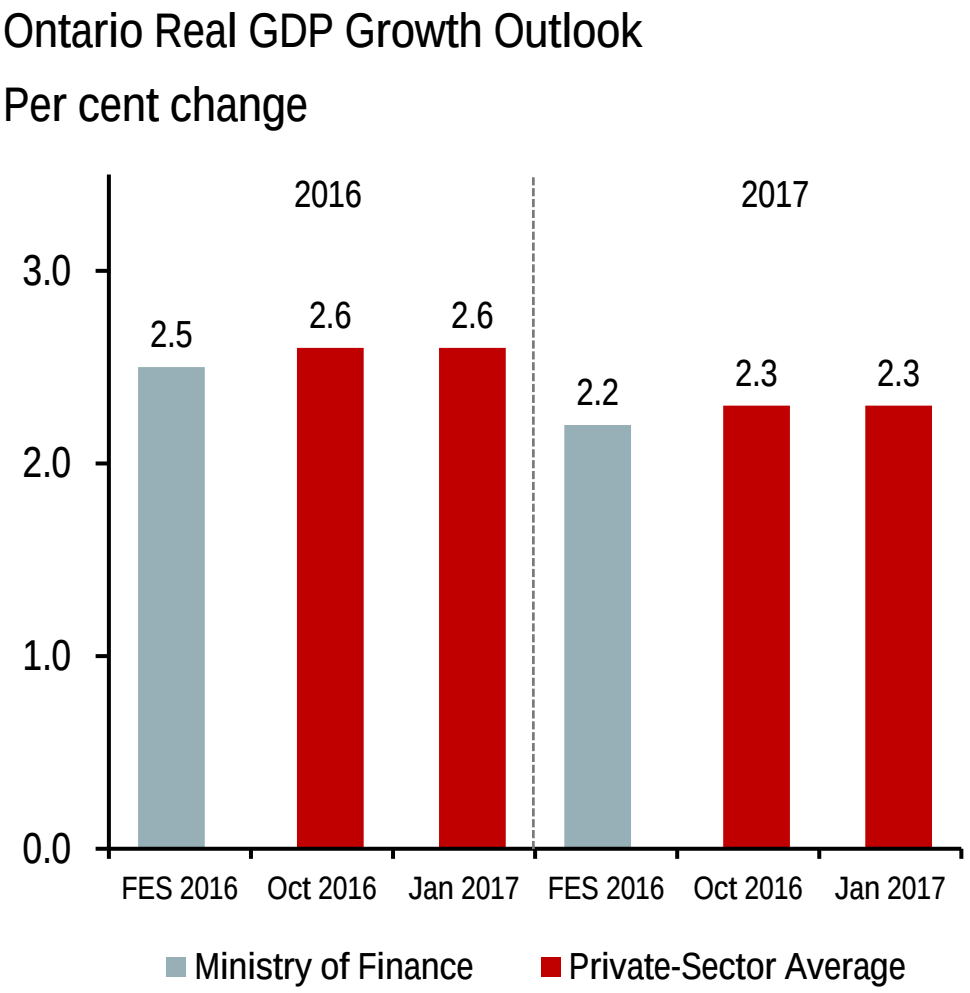


Moderate Year-end Improvement

2016 Budget (4.3) billion
+ Pension Adjustment and Tools
2016 FES (4.3) billion
+ Higher Revenue ***0.7 billion***
– Re-profiling Cap and Trade Proceeds ***0.5 billion***
– Lower Net Contribution from Asset Optimization ***75 million***
– Accounting Adjustments: Accounting Framework (IFRS) ***75 million*** Contaminated Sites ***50 million***
– Higher Program Expense ***1.0 billion***
+ Reverse Pension Adjustment ***2.2 billion***
Unchanged Interest on Debt
+ Reduce Reserve ***0.4 billion***
Early-Read (2.7) billion

Net Debt-to-GDP With Pension Reversal (Option 1)

Narrative: *The impact of the reversal will change the net debt projection for 2016-17 by $12.8 billion. As a result, the government is projecting a net debt-to-GDP ratio of 38.3 per cent, an improvement compared to the 2016 FES projection of 40.3 per cent*



- Reflects the reversal of the Teachers Pension Plan and OPSEU Pension Plan adjustments, including reversal of the $10.7 billion debt adjustment made in the 2015-16 Public Accounts

Recent Economic Developments and Outlook

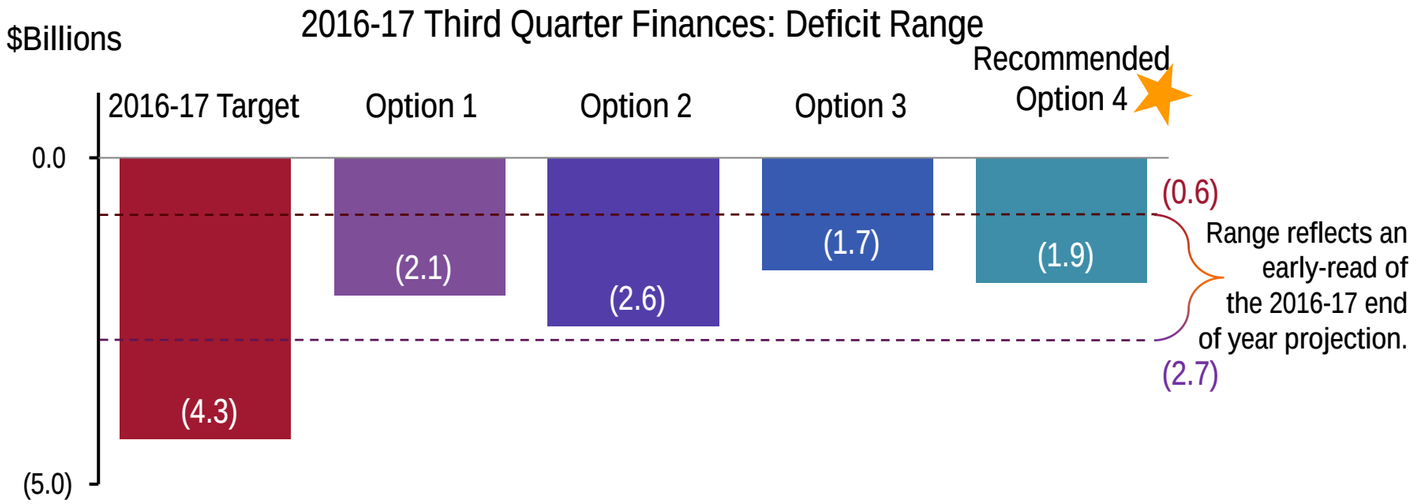
Economic Update

- Real GDP increased by 0.7% in the third quarter (July to September) of 2016, after rising 0.2% in the second quarter.
  - Higher exports and continued growth in household spending were the primary drivers of growth
- Information available so far for the fourth quarter (October to December) of 2016 suggest growth at a more modest pace.
- Ontario's economic growth outlook remains consistent with the 2016 FES forecast

Other Accounting Issues

Other Accounting Issues

- The move from U.S. GAAP to IFRS for the consolidation of Hydro One and OPG results in a fiscal impact starting in 2016-17, of either:



Basis of Consolidation of OPG and H1 (US GAAP vs. IFRS)	Fiscal Impact Relative to FES				
	2016-17	2017-18	2018-19	2019-20	2020-21
Preferred Approach (smoothed IFRS impact)**	**$75M**	**$425M**	**$525M**	**$675M**	**$675M**
High Impact (non-smoothed IFRS impact)**	$1B	$375M	$400M	$400M	$400M

*** OPG's estimate of cumulative impact for 2015-2020 is $2.5B under the preferred approach, and $2.6B under the high impact approach. Note: Amounts are based on estimates currently available, and are subject to updates by OPG. Revised estimates are expected by March 1, 2017.*

Program Expense Changes to Highlight

$ Millions	2016-17	
Program Expense Changes since the 2016 FES		
MOHLTC Pausing planned increases to drug cost contributions*	106.0	*(pressure with no offset)*
MOHLTC Stem Cells and other priorities	95.4	*(pressure with no offset)*
MCYS: First Nations Prevention Services support	5.8	*(federal flow-through)*
MAG/MCSCS: Corrections Reform	10.4	*(offset from contingency fund)*
MCSCS: First Nations Policing Wage Parity	6.5	*(offset from contingency fund)*
Cabinet Office: International Disaster Relief Program – Haiti	0.3	*(offset from contingency fund)*
Contingency fund	(17.2)	
Program Expense Changes since the 2016	**207.2**	

* Alternatively, Social Assistance pressures of similar magnitude could be reported

Options 1 through 4 build on each other. All options assume the pension reversal and progressively take on additional changes.

Option 1	Option 2	Option 3	Recommended Option 4
Pensions: $2.2 billion	**Pensions**: $2.2 billion	**Pensions**: $2.2 billion	**Pensions**: $2.2 billion
	Cap and Trade: $(0.5) billion	**Cap and Trade:** $(0.5) billion	**Cap and Trade:** $(0.5) billion
		HST & Other Taxes: $0.9 billion	**HST & Other Taxes:** $0.9 billion
		Asset Optimization: $(0.1) billion	**Asset Optimization:** $(0.1) billion
			Expense Pressures: $(0.2) billion

Overall Narrative: *The strength of the Ontario economy, together with the government's approach to fiscal management, is supporting strategic investments, while allowing the government to continue to beat its fiscal targets.*

Option 1 — Reversal of Pensions

$ Billions	Budget 2016-17	Change	Outlook 2016-17
Revenue	130.6	*2.1*	132.7
Expense			
Programs	122.1	*0.9*	123.1
Interest on Debt	11.8	*(0.4)*	11.4
Total Expense	133.9	*0.5*	134.4
Surplus/(Deficit) Before Reserve	(3.3)	*1.6*	(1.7)
Reserve	1.0	*(0.6)*	0.4
Surplus/(Deficit)	(4.3)	*2.2*	(2.1)
Net Debt-to-GDP (Per Cent)	39.6	*(1.3)*	38.3

- *The government is projecting a **deficit of $2.1 billion in 2016-17**, an improvement of $2.2 billion since the 2016 Budget.*
- *The Pension Asset Expert Advisory Panel recently released its report on the treatment of pension assets, including a recommendation that jointly-sponsored net pension asset be recognized in the Province's financial statements. The government is adopting this recommendation, which aligns with the treatment originally included in the 2016 Budget plan.*
- *With this reversal, together with stronger revenue and lower interest on debt, the government is projected to beat its fiscal target.*

Option 2 — Option 1 + Cap and Trade

$ Billions	Budget 2016-17	Change	Outlook 2016-17
Revenue	130.6	*1.7*	132.2
Expense			
Programs	122.1	*0.9*	123.1
Interest on Debt	11.8	*(0.4)*	11.4
Total Expense	133.9	*0.5*	134.4
Surplus/(Deficit) Before Reserve	(3.3)	*1.1*	(2.2)
Reserve	1.0	*(0.6)*	0.4
Surplus/(Deficit)	(4.3)	*1.7*	(2.6)
Net Debt-to-GDP (Per Cent)	39.6	*(1.3)*	38.3

- *The government is projecting a **deficit of $2.6 billion in 2016-17**, an improvement of $1.7 billion since the 2016 Budget.*
- *Cap and Trade is a cornerstone of the Province's fight against climate change. Ontario's first Cap and Trade auction is scheduled for March 22, 2017, and establishes Ontario's partnership in the largest carbon market in North America.*
- *Revenues from Ontario's first auction will be certified and settled at the beginning of the 2017-18 fiscal year. As such, the Third Quarter Finances reflect the re-profiling of auction proceeds from 2016-17 to 2017-18.*

Option 3 — Option 2 + HST & Other Taxes + Assets

$ Billions	Budget 2016-17	Change	Outlook 2016-17
Revenue	130.6	*2.5*	133.1
Expense			
Programs	122.1	*0.9*	123.1
Interest on Debt	11.8	*(0.4)*	11.4
Total Expense	133.9	*0.5*	134.4
Surplus/(Deficit) Before Reserve	(3.3)	*2.0*	(1.3)
Reserve	1.0	*(0.6)*	0.4
Surplus/(Deficit)	(4.3)	*2.6*	(1.7)
Net Debt-to-GDP (Per Cent)	39.6	*(1.4)*	38.2

- *The government is projecting a **deficit of $1.7 billion in 2016-17**, an improvement of $2.6 billion since the 2016 Budget.*
- *Ontario's economy continues to grow in an uncertain global environment. Stronger 2015 income tax assessment results and the continued strength of Ontario's economy and housing market resulted in higher than forecasted taxation revenues.*

Option 4 — Option 3 + Expense Pressures

$ Billions	Budget 2016-17	Change	Outlook 2016-17
Revenue	130.6	*2.5*	133.1
Expense			
Programs	122.1	*1.1*	123.3
Interest on Debt	11.8	*(0.4)*	11.4
Total Expense	133.9	*0.7*	134.6
Surplus/(Deficit) Before Reserve	(3.3)	*1.8*	(1.5)
Reserve	1.0	*(0.6)*	0.4
Surplus/(Deficit)	(4.3)	*2.4*	(1.9)
Net Debt-to-GDP (Per Cent)	39.6	*(1.3)*	38.3

- *The government is projecting a **deficit of $1.9 billion in 2016-17**, an improvement of $2.4 billion since the 2016 Budget.*
- *The government's fiscally sound approach to managing the Province's finances will help grow the economy, create jobs and ensure the sustainability of programs and services that help Ontarians in their everyday lives.*
- *This includes supporting strategic investments, such as funding for healthcare.*

KEY PUBLIC REPORTING AND PLANNING DATES

The following provides an outline of upcoming planning and publication dates:

- **February 8**: Long-Term Report Release
- **February 13**: Pension Panel Report Release
- **February 13**: Letter to the Clerk for Q3 Finances
- **February 15**: Electricity Relief Announcement (TBD)
- **February 21**: Q3 Finances Release
- **April 11**: Tentative Document Release

MINISTERS & PREMIER MEETING

Date: February 9, 2017 | Time: 3:30PM – 5:00PM
Location: Room 275, Cabinet Room, Main Legislative Building

Proposed Agenda

1. Proposed Agenda for Cabinet Retreat (5 mins)

2. Update on Fiscal Plan for Budget 2017 (20 mins)
    - Challenges
    - Fiscal Anchors
    - Tools/levers

3. Budget Themes/Storyboard and Proposed Investments and Sector Spending (45 mins)

4. Update on Pension Accounting (10 mins)

5. Update on 2016-17 Fiscal Position including Q3 Finances (5 mins)

6. Next Steps in Preparation for Cabinet Retreat (5 mins)

Subject: RE: Q3 update
Importance: High

Hi All,

Following up on my email from last week, we received relatively recent direction regarding the release of Ontario's Third Quarter Finances – the tentative plan is to publish Q3 finances ahead of the February 15 deadline. We are tentatively tracking a release date of Monday February 13.

As you can imagine, timelines are very compressed, and includes a possible trip to FPC this week. In order to meet this week's deadlines, while also preparing for the release of the actual publication, we're asking for input from you in stages:

EOD Today:
We have prepared the draft of a deck, which we are working towards tabling at this Wednesday's FPC (TBC). The deck lays out the key 2016-17 building blocks that could be updated as part of the Q3 publication. It would help if we could get the following from you folks by the end of today:
16-17 post-FES expense update: We have included placeholder for an expense slide. The intention is for the slide to provide an updated list of initiatives that were not included in the FES expense outlook.
Recommended expense update/signature initiatives: We may build in options for what the outlook could look like – it would help if you could provide a recommendation

for the expense changes that should be taken on/profiled.
16-17 c-fund update: We have included a c-fund slide that was used in the Q1 finances briefing materials (current PW). We would like to include an updated version of this slide in the FPC deck (appendix). It would help to have this out to 19-20.
Pension Narrative: Nadine – I'll connect on the pension adjustment and some high level bullets that we could use.

Noon Friday January 27:
Template: I've attached a draft of 3q finances that is based heavily off of the 2016 First Quarter Finances. We've highlighted in green the sections that we would like you to update. While I'm not 100% certain this structure will be exactly what the Q3 document will look like, I think it's safe to say that the substantive content we'll have to cover is captured here. There will be some highlighted content that is *not possible* to update for Friday, however there will be a formal distribution process where additional information can be incorporated.

Thanks everyone, and please feel free to send your input directly to Liane and Emma. Im hoping to be able to share a draft deck with you late this evening.

Cc: Lindquist, Emma (MOF); Inglis, Liane (MOF)
Subject: Q3 heads up

Hi Everyone – Wanted to send a quick message that we are hearing there is a desire to proceed with the release of a Q3 update around the time we are expecting the Pension Panel panel to release their report. We are going to assume mid feb prior to the house coming back for our planning purposes.

My team is going to work together to put together a list of things we need to start working on/think about along with a calendar to determine and get direction on an approach to coincide with this timeframe.

More details to follow tomorrow.

Thanks.

Contingency Fund Outlook and Expense Risks

Contingency Fund Outlook

$ Billions	2014-15	2015-16	2016-17	2017-18	2018-19
Opening contingency fund balance	**0.5**	**0.7**	**1.2**	**1.7**	**3.5**
Less: Approvals to date[1]	0.0	0.0	0.3	0.5	0.6
Current contingency fund balance	**0.5**	**0.6**	**0.9**	**1.2**	**2.9**
Less: Compensation Risks set-aside	-	-	0.4	0.9	1.6
Less: Moving Ontario Forward set-aside	-	-	-	0.0	0.4
Contingency fund balance incl. set-asides			**0.5**	**0.3**	**0.9**

Includes Drug Program changes, Child Welfare, Northern Health Action Plan, Action Plan for Reconciliation, School Renewal Funding

Accommodates approximately 1.4% increases in next round of bargaining

[1] For 2014-15 and 2015-16, approvals through Q3 are shown.

- Of the remaining 2016-17 contingency fund, $0.6 billion is encumbered for education capital appropriation, leaving $0.3 billion to cover any contingencies.
- The 2016 Budget included a larger contingency fund, primarily due to funds set aside for future compensation increases and outside the GTHA Moving Ontario Forward projects.
- There have been more draws from the contingency fund in the current fiscal cycle, compared to recent years.
- The remaining contingency fund balance would be used to offset risks.

Expense Risks: Items to be managed

$ Billions	2016-17	2017-18	2018-19
Identified high-likelihood risks	0.4	0.7	1.0
PRRT boulder risks	0.1	0.3	0.3
Cap and trade not applied against in-plan items as assumed	-	0.0	0.6
Other likely funding requests	0.6	0.7	0.7
Total items to be managed*	**1.0**	**1.7**	**2.6**

Pressures such as: Health, Social Assistance caseloads, emergencies, Complex Special needs

Risks include: Business Supports, Benefits Transformation and NTR/full cost recovery

Health, MTO (including UP Express), Business Growth Initiative request, Drive Clean.

* Does not include a remedy for the Bill 115 court decision

$ Billions	2014-15	2015-16	2016-17	2017-18	2018-19
Year-end Savings Target	**1.1**	**1.0**	**0.8**	**1.0**	**1.0**
Total Risks to be managed			**1.8**	**2.7**	**3.6**

- In past years, unspent contingency funds have been used to meet the year-end savings target.
- An initiatives envelope for the 2017 or 2018 Budgets has not yet been incorporated into the fiscal plan.

Note: Numbers may not add due to rounding

MINISTRY OF FINANCE

2016–17 Third Quarter Finances
[Draft – January 23, 11:00 am]

[February 2017]

Contents

A. 2016–17 Fiscal Outlook X

B. Details of In-Year Changes X

C. Ontario's Economic Outlook X

D. Economic Performance X

E. Details of Ontario's Finances X

F. Ontario's 2016–17 Financing Program X

Introduction

The Ontario Quarterly Finances contains updated information about Ontario's 2016–17 fiscal outlook, including updated information about the major components of revenue and expense as set out in the *2016 Budget*.

Section A: 2016–17 Fiscal Outlook (OEP, TBS, OFA, Framework)

The government is projecting a deficit of $[X.X] billion in 2016–17, [an improvement of $X.X billion] compared to the 2016 Budget.

As outlined in the *2016 Budget,* the government is [on track to balance the budget by 2017–18 and is projecting to remain balanced in 2018–19. The government's path to a balanced budget is being achieved through responsible fiscal management, which involves managing growth in program spending and maintaining the integrity of Provincial revenues. The strengthening of the Ontario economy, together with the government's approach to fiscal management, is supporting strategic investments in new child care spaces, hospitals and electricity cost relief for consumers.]

[Placholder for Pension Narrative (OPCD)]

[Placholder for Economic Update (OEP)]

2016–17 In-Year Fiscal Performance

($ Millions)	2016–17		
	Budget Plan	Current Outlook	In-Year Change

Reserve	1,000	[X.X]	–
Surplus/(Deficit)	**(4,306)**	**[X.X]**	**–**

Note: Numbers may not add due to rounding.

Total revenue is projected to be $[X.X] billion, [an improvement/deterioration of $X.X billion compared to the 2016 Budget.] — [placeholder for high-level revenue change explanation]

The outlook for Provincial program expense, at $[X.X] billion, is [an improvement/deterioration of $X.X billion compared to the 2016 Budget.] — reflecting [placeholder for high-level program expense change explanation]

The Province's interest on debt expense forecast, at $X.X billion, is [an improvement/deterioration of $X.X billion compared to the 2016 Budget forecast.]

The 2016–17 outlook also maintains a $[X.X] billion reserve to protect the fiscal outlook against unforeseen adverse changes in the Province's revenue and expense, including those resulting from changes in Ontario's economic performance or the impact of natural disasters.

Further details on the Province's fiscal plan, will be provided in the upcoming 2017 Budget.

Section B: Details of In-Year Changes (OEP, PEMD, OFA, Framework)

Revenue (OEP)

The 2016–17 revenue outlook, at $[X.X] billion, is [an improvement/deterioration of $X.X billion compared to the 2016 Budget]. Since the *2016 Budget,* the following changes have been made to the revenue outlook for 2016–17:

Attachments:	FPC_Q3Finances_Deck v6.pptx FPC_Q3_FiscalStrategyPlacemat_v6.pptx Key Planning and Public Reporting Dates_Feb1.docx MMP Meeting - Agenda - Feb9.docx

Hi All

Pls note preferred option and the proposed Q3 date. Once Gadi confirms today that FPC has indeed approved both we can proceed towards finalizing the Financing Table. Note that option 4 which is the preferred option, projects a deficit that is lower than simply removing the pension adjustment. If I remember correctly the maturities are also lower by $282M.

My preference is to offset the lower maturities through cash and reduce the long term borrowing by the reduction in the deficit that is over and above the removal of the pension adjustment. Having said that, the latter is relatively small so Gadi may choose maintain the long term borrowing at FES levels and adjust this as well through cash. Once I hear back from him we can target say Friday or Monday to present a first cut of the FT and the revised net debt to GDP ratios.

Kevin if you have not yet done so, pls revise the non-cash by the amount of the pension adjustment.

Thanks and happy to discuss.

Ken k

Subject: RE: Q3 update

Hi Everyone – just wanted to share with you the latest on the strategy for Q3. We are headed back to FPC next week with a further 2 scenarios on the deficit target that could be published. In addition to the ones we took earlier this week – two new options are proposed – one is to reverse the pensions only (option 1 in the materials), and the second is to take on a certain amount of ministry pressures we think will materialize (option 4 in the materials).

In terms of the materials – there is both a deck and a placemat that we are proposing to take forward. The placemat illustrates the 4 options and includes how the revenue/expense change table would appear relative to Budget and some proposed narrative for each scenario.

The deck is very similar to what we took forward last week but has a couple of new slides. Tim has also just circulated to your ADMs

Can I ask that you specifically take a look at slide 8 to ensure you are comfortable with the wording as well as the **narrative on the placemat** that would be helpful. But happy to hear any comments on the rest of it as well. We are looking for any comments back by 3:30pm today so we can finalize and send up to our DM/MO today.

And – we are continuing to track for a release on Feb 13 and we will be in touch to request your assistance.

Happy to discuss.

Thanks.

Subject: RE: Q3 update
Importance: High

Hi All,

Following up on my email from last week, we received relatively recent direction regarding the release of Ontario's Third Quarter Finances – the tentative plan is to publish Q3 finances ahead of the February 15 deadline. We are tentatively tracking a release date of Monday February 13.

As you can imagine, timelines are very compressed, and includes a possible trip to FPC this week. In order to meet this week's deadlines, while also preparing for the release of the actual publication, we're asking for input from you in stages:

EOD Today:
We have prepared the draft of a deck, which we are working towards tabling at this Wednesday's FPC (TBC). The deck lays out the key 2016-17 building blocks that could be updated as part of the Q3 publication. It would help if we could get the following from you folks by the end of today:
16-17 post-FES expense update: We have included placeholder for an expense slide. The intention is for the slide to provide an updated list of initiatives that were not included in the FES expense outlook.
Recommended expense update/signature initiatives: We may build in options for what the outlook could look like – it would help if you could provide a recommendation for the expense changes that should be taken on/profiled.
16-17 c-fund update: We have included a c-fund slide that was used in the Q1 finances briefing materials (current PW). We would like to include an updated version

of this slide in the FPC deck (appendix). It would help to have this out to 19-20.
Pension Narrative: Nadine – I'll connect on the pension adjustment and some high level bullets that we could use.

Noon Friday January 27:
Template: I've attached a draft of 3q finances that is based heavily off of the 2016 First Quarter Finances. We've highlighted in green the sections that we would like you to update. While I'm not 100% certain this structure will be exactly what the Q3 document will look like, I think it's safe to say that the substantive content we'll have to cover is captured here. There will be some highlighted content that is *not possible* to update for Friday, however there will be a formal distribution process where additional information can be incorporated.

Thanks everyone, and please feel free to send your input directly to Liane and Emma. Im hoping to be able to share a draft deck with you late this evening.

Subject: Q3 heads up

Hi Everyone – Wanted to send a quick message that we are hearing there is a desire to proceed with the release of a Q3 update around the time we are expecting the Pension Panel panel to release their report. We are going to assume mid feb prior to the house coming back for our planning purposes.

My team is going to work together to put together a list of things we need to start working on/think about along with a calendar to determine and get direction on an approach to coincide with this timeframe.

More details to follow tomorrow.

Thanks.

Ontario's Third Quarter Finances: Fiscal Strategy

Office of the Budget
MINISTRY of FINANCE

Presentation to FPC on February 1, 2017

Preliminary Draft

Draft – January 31, 2017 5:00 PM

Context

Under the *Fiscal Transparency and Accountability Act, 2004* (FTAA), the Third Quarter Finances is required to:

- Be released on or before February 15th (publication can be delayed if a letter is sent to the Clerk).
- Include updated information about the major components of revenue and expense **for the current fiscal year only.**

It also provides an **opportunity for the government to reiterate key fiscal messages** from the Budget or pre-condition for future updates.

A Third Quarter Finances has only been published once in the last eight years (in 2012-13).

Key stakeholders like the Financial Accountability Officer, the Auditor General and rating agencies will assess the fiscal outlook and narrative.

Both have acknowledged that balance is within reach in 2017-18, but have also highlighted key risks to the 2016 Budget fiscal plan.

Purpose and Key Decisions

Currently working towards **a release date of February 21, 2017** – need to **confirm the approach to publishing Ontario's Third Quarter Finances**, including:

- The core updates to **the fiscal outlook and supporting revenue and expense details** to be published, as well as the **fiscal narrative and messaging**.
- Positioning the content and the rollout of Third Quarter Finances relative to the release of the **Pension Panel's Report and recommendations**, and other publicly available information.

Publishing after the February 15th deadline will require that a **letter be sent to the Clerk of the Legislature** advising of the delayed release.

- Letter could be sent on **February 13th** to coincide with the release of the Pension Panel's Report.

Evolution of the 2016-17 Outlook

- The Third Quarter Finances will present a fiscal update relative to the 2016 Budget and address changes since FES in narrative only.
- The 2016 FES highlighted Ontario's stronger economy and the government's approach to fiscal management, which supported strategic investments in new child care spaces, hospitals and electricity cost relief for consumers.
- To support these investments while accommodating the Pension Adjustment, the government took on a number of fiscal tools in order to meet its targets.

2016 Budget Fiscal Plan $ Billions	2016-17	Change to FES 2016-17	FES Outlook 2016-17
Revenue	130.6	*2.1*	132.7
Expense			
Programs	122.1	*3.1*	125.3
Interest on Debt	11.8	*(0.4)*	11.4
Total Expense	133.9	*2.7*	136.6
Surplus/(Deficit) Before Reserve	(3.3)	*(0.6)*	(3.9)
Reserve	1.0	*(0.6)*	0.4
Surplus/(Deficit)	(4.3)	*(0.0)*	(4.3)

Total revenue changes of $2.1 billion, consisting of:

- Base Forecast Change $1.0 billion
- Reversal of Homecare $(0.2) billion
- Federal Agreements $0.4 billion
- Higher assumed revenue to accommodate pensions $0.9 billion

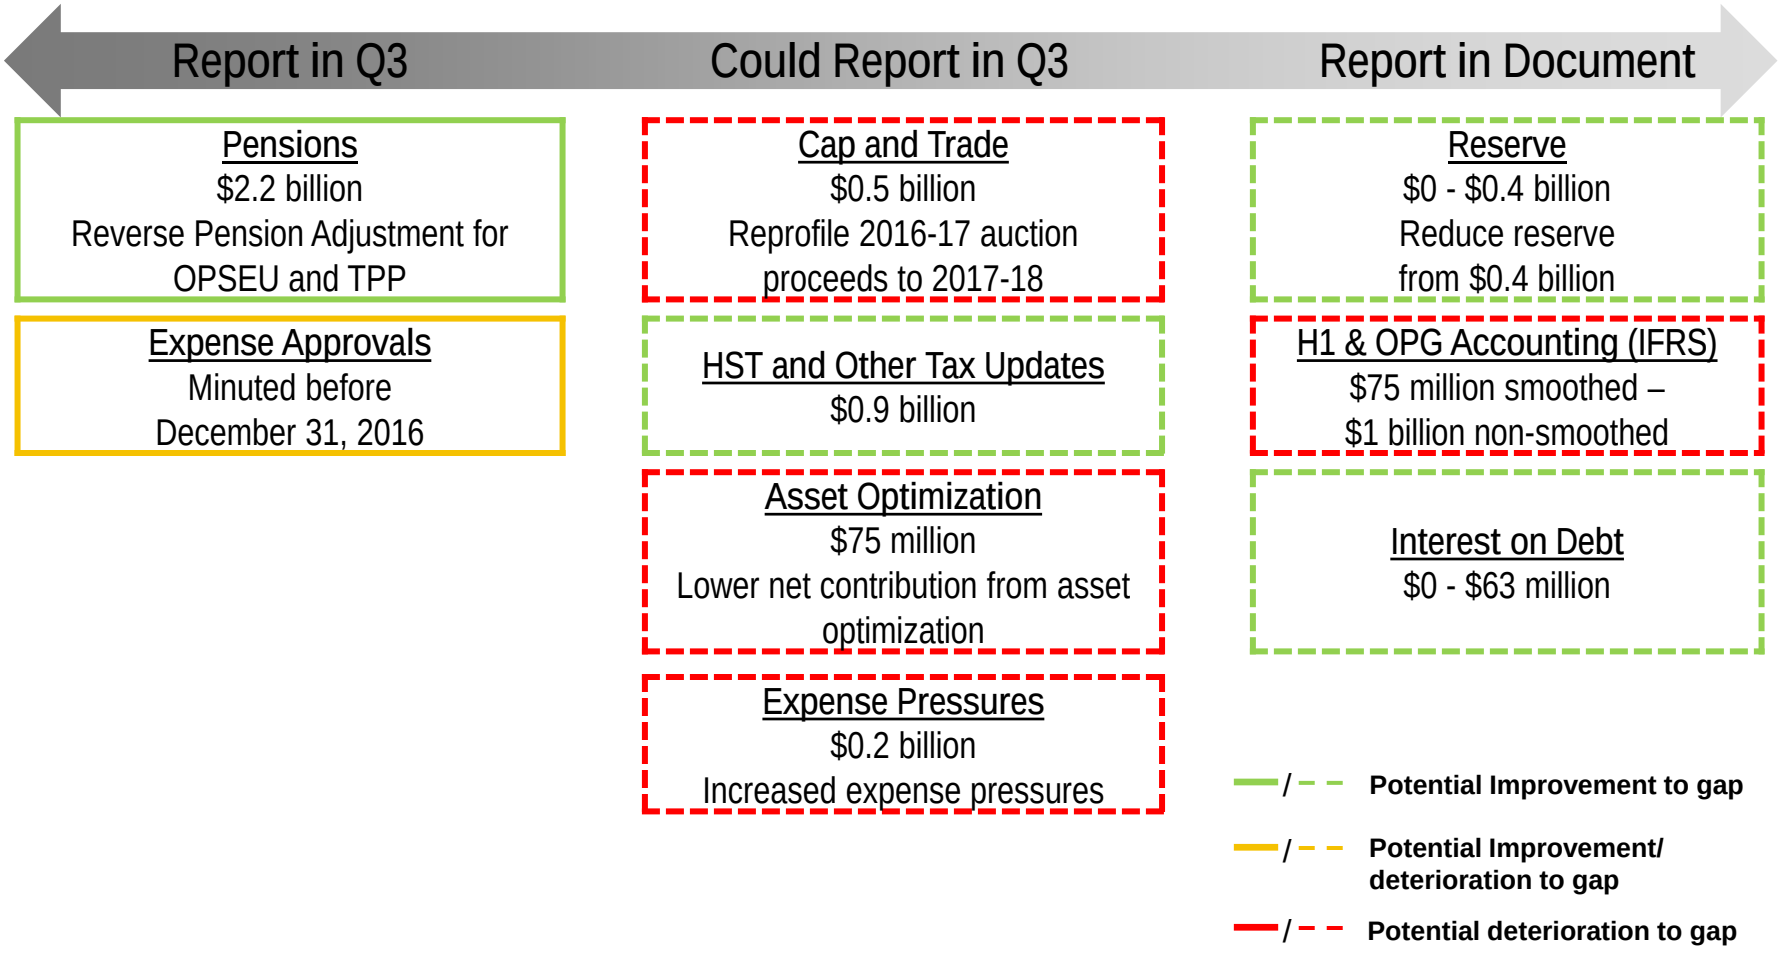
Total expense changes of $2.7 billion, consisting of:

- In-Year Approvals $0.2 billion
- Pension Adjustment of $2.2 billion
- Electricity Cost Relief $0.3 billion
- Support for Hospitals $0.1 billion
- Green Investment Fund $0.3 billion
- New Federal Agreements $0.4 billion
- Contingency Fund Offsets $(0.5) billion
- Interest on Debt Savings $(0.4) billion

Change to the Reserve $(0.6) billion

Treatment of Pension Adjustment

Panel Recommendation



- The Pension Asset Expert Advisory Panel will be releasing its findings in the coming weeks.
  - The report is expected to include advice that the net assets of government jointly sponsored pension plans should be recognized in the Province's financial statements.
  - If taken on, this would result in a positive fiscal impact to the government's outlook in all plan years.

Treatment of Pension Adjustment

- The Third Quarter Finances provides the government with an immediate opportunity to align its fiscal strategy with recommendations of the Panel, and frame the pension narrative in advance of the 2017 Document.
- While the reversal of the pension adjustment to the Ontario Public Service Employees Union Pension Plan (OPSEUPP) and the Ontario Teachers' Pension Plan (OTPP) will result in an improved 2016-17 deficit, expectations may need to be tempered about how much fiscal room is created in the out-years.
- For consistency and comparability, an adjustment to the 2015-16 actuals will be made to reflect the government's decision to adopt the Panel's recommendations. The adjustment to historical results impacts the previously reported net debt and deficit results as well as the net debt to GDP ratio.

Key Building Blocks

- In addition to the reversal of the Pension Adjustment, other key building blocks will either need to be reported in the Third Quarter Finances or be considered for the 2017 Document.

Building Block Considerations

There are a number of considerations for whether key building blocks should be taken on in the Third Quarter Finances or deferred to the 2017 Document.

Could Report in Third Quarter Finances

Cap and Trade

- The Cap and Trade auction notice that was released on January 20 stating that certification will occur on April 3, 2017, and settlement shortly thereafter.
- Stakeholders (e.g. FAO and Auditor General) may question why the government has not updated its fiscal plan to reflect this change.

HST and Other Tax Updates

- HST updates have been received since the FES, and no further significant updates are expected in advance of the 2017 Document. Other tax information is not as certain and could require additional updates in the 2017 Document.
- Stakeholders are aware of the timing of these information flows and may question if updates are not taken on in Third Quarter Finances.

Asset Optimization

- Updating for revised estimated net contribution from Asset Optimization would build some deterioration into the outlook.
- There are changes / uncertainty on the expected potential gains and/or timing for the H1 Brampton (which has not yet closed), and Seaton Lands sales (still pending), and uncertainty on the final accounting net gains reported for H1 shares purchased by OPG, potentially necessitating additional updates in the 2017 Document.

Expense Pressures

- Ministry risks represent potential pressures in the fiscal plan, and are not typically included in Quarterly updates.
- However, it may be prudent to address expense pressures which may materialize before the 2017 Document.

Report in Document

Reserve

It is recommended that the reserve be maintained at its current level of $0.4 billion, in order to mitigate any pressures that may arise before year-end.

H1 & OPG Accounting (IFRS)

Updated information on the potential fiscal impact of the move from U.S. GAAP to IFRS for Hydro One and OPG, is expected at the end of February.

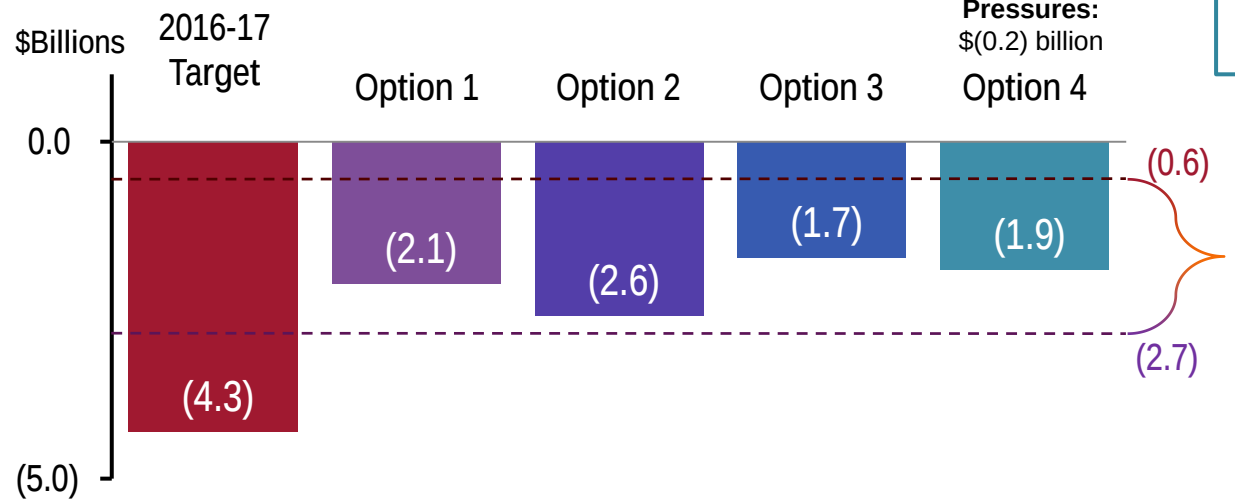
Interest on Debt

Deferring improvements in the interest on debt forecast allows for upside potential in the 2016-17 interim results of the 2017 Document.

Outstanding Information

- **Outstanding Information** could materially impact the **2016-17 outlook** in advance of the 2017 Document.

Revenue
Revisions to economic outlook
Ongoing provincially-administered tax receipts
Non-tax revenue updates from Ministry PRRT submissions
Net income updates from government business enterprises
Revisions to IFRS - US GAAP impacts for OPG and Hydro One

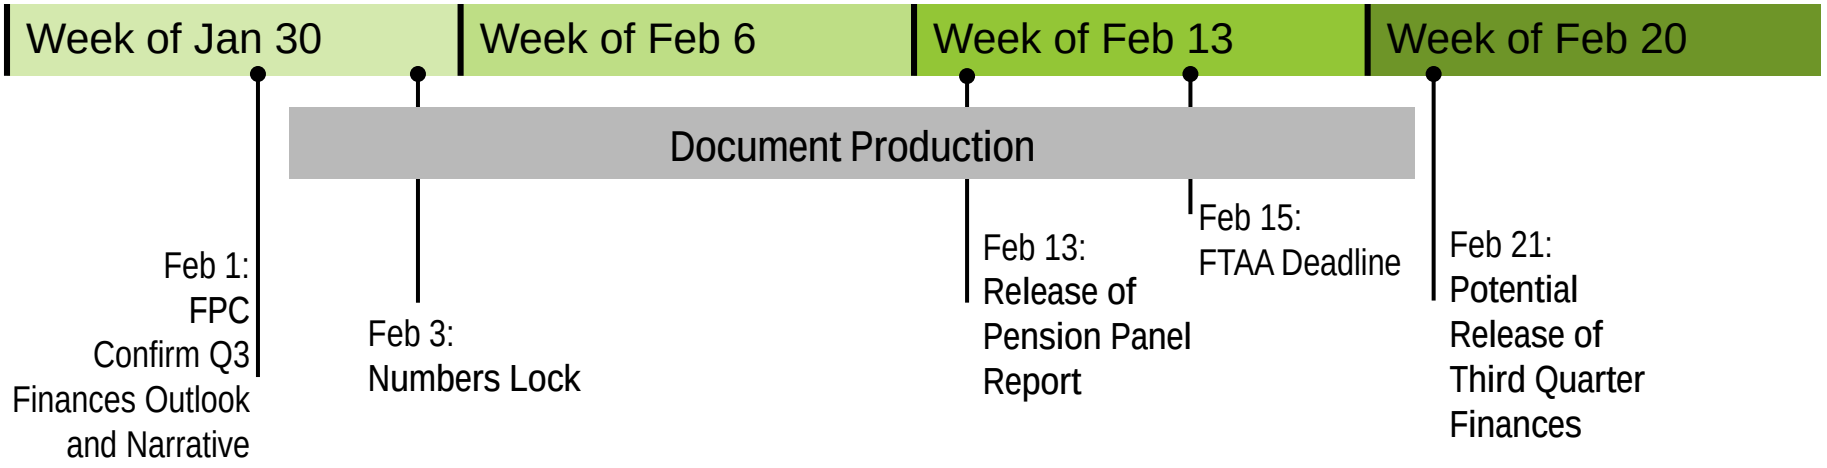


Expense
Ministry Q3/interim submissions
Consolidations and other technical adjustments
Interest on debt forecast updates
Contaminated sites liabilities
Updated pension expense forecast

- Potential improvement to gap
- Potential improvement or deterioration to gap
- Potential deterioration to gap

2016-17 Third Quarter Finances: Deficit Range

Options 1 through 4 build on each other. All options assume the pension reversal and progressively take on additional changes relative to FES .



Option 1	Option 2	Option 3	Recommended Option 4
Pensions: $2.2 billion	**Pensions**: $2.2 billion	**Pensions**: $2.2 billion	**Pensions**: $2.2 billion
	Cap and Trade: $(0.5) billion	**Cap and Trade:** $(0.5) billion	**Cap and Trade:** $(0.5) billion
		Asset Optimization: $(0.1) billion	**Asset Optimization:** $(0.1) billion
		HST & Other Taxes: $0.9 billion	**HST & Other Taxes:** $0.9 billion
			Expense Pressures: $(0.2) billion

Range reflects an early-read of the 2016-17 end of year projection.

- Based on an early-read of end of year projections, the government may want to report an outlook that protects against risks or other changes between now and the Budget.
- Based on current information and taking into account key building blocks, there are a number of options for presenting the Q3 deficit, ranging from $2.6 billion to $1.7 billion. These are on the medium-to-low end of what is being tracked for the interim outlook for the 2017 Document.

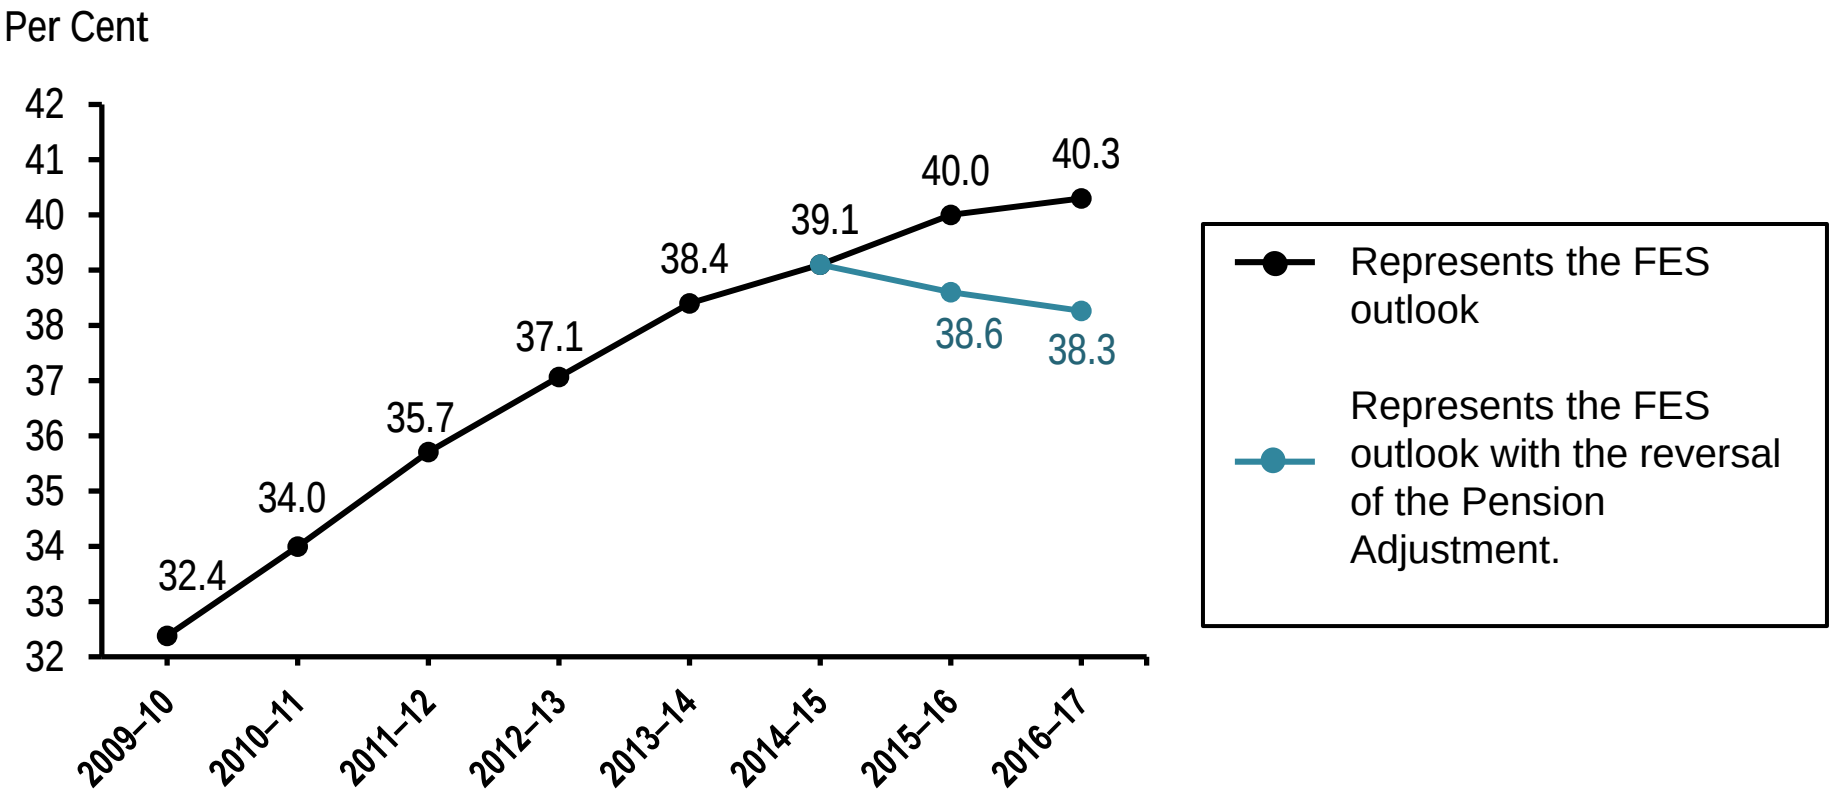
Appendix

End of Year Projection for 2016-17

- An early-read indicates that end of year projections for the 2016-17 deficit could range from $0.6 billion (if there is a significant improvement to the outlook) to $2.7 billion (if there is a moderate improvement to the outlook).

Significant Year-end Improvement

2016 Budget (4.3) billion
+ Pension Adjustment and Tools
2016 FES (4.3) billion
+ Higher Revenue ***1.7 billion***
– Re-profiling Cap and Trade Proceeds ***0.5 billion***
– Lower Net Contribution from Asset Optimization ***75 million***
– Accounting Adjustments: Accounting Framework (IFRS) ***75 million*** Unchanged Contaminated Sites
Unchanged Program Expense
+ Reverse Pension Adjustment ***2.2 billion***
+ Lower Interest on Debt ***0.1 billion***
+ Reduce Reserve ***0.4 billion***
Early-Read (0.6) billion

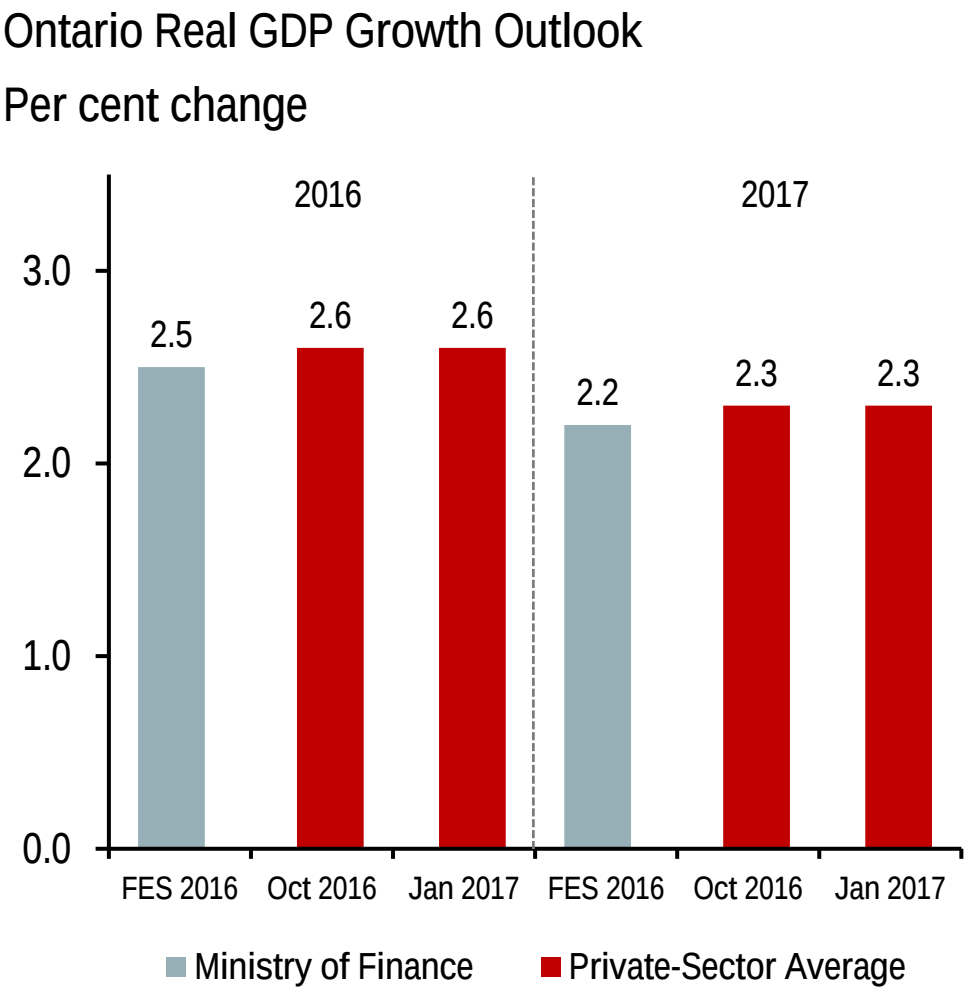


Moderate Year-end Improvement

2016 Budget (4.3) billion
+ Pension Adjustment and Tools
2016 FES (4.3) billion
+ Higher Revenue ***0.7 billion***
– Re-profiling Cap and Trade Proceeds ***0.5 billion***
– Lower Net Contribution from Asset Optimization ***75 million***
– Accounting Adjustments: Accounting Framework (IFRS) ***75 million*** Contaminated Sites ***50 million***
– Higher Program Expense ***1.0 billion***
+ Reverse Pension Adjustment ***2.2 billion***
Unchanged Interest on Debt
+ Reduce Reserve ***0.4 billion***
Early-Read (2.7) billion

Net Debt-to-GDP With Pension Reversal (Option 1)

Narrative: *The impact of the reversal will change the net debt projection for 2016-17 by $12.8 billion. As a result, the government is projecting a net debt-to-GDP ratio of 38.3 per cent, an improvement compared to the 2016 FES projection of 40.3 per cent*



- Reflects the reversal of the Teachers Pension Plan and OPSEU Pension Plan adjustments, including reversal of the $10.7 billion debt adjustment made in the 2015-16 Public Accounts

Recent Economic Developments and Outlook

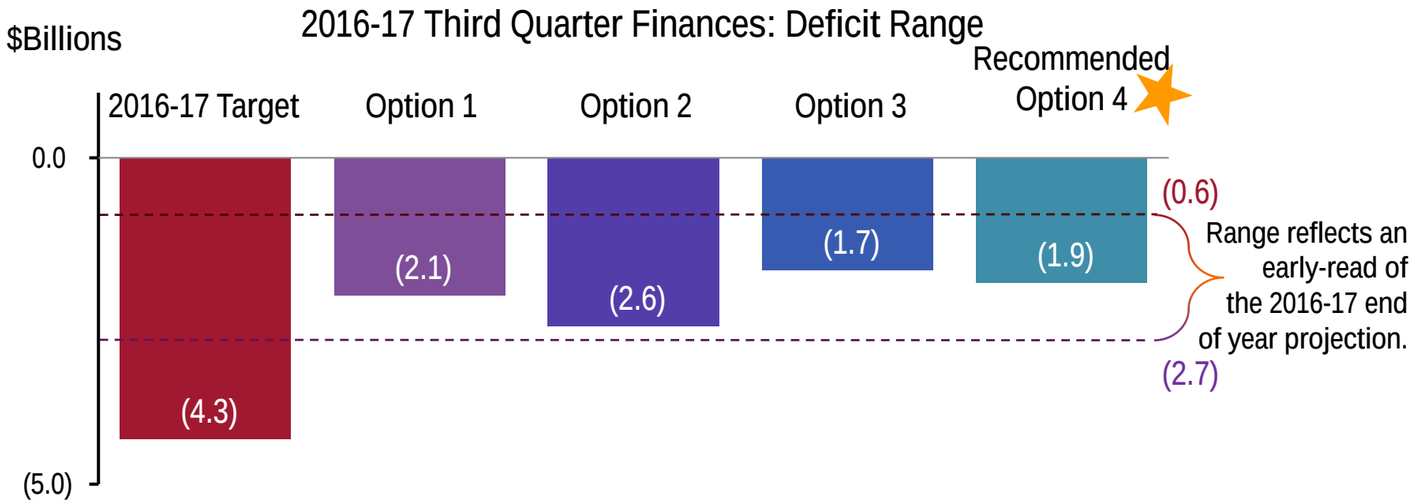
Economic Update

- Real GDP increased by 0.7% in the third quarter (July to September) of 2016, after rising 0.2% in the second quarter.
  - Higher exports and continued growth in household spending were the primary drivers of growth
- Information available so far for the fourth quarter (October to December) of 2016 suggest growth at a more modest pace.
- Ontario's economic growth outlook remains consistent with the 2016 FES forecast

Other Accounting Issues

Other Accounting Issues

- The move from U.S. GAAP to IFRS for the consolidation of Hydro One and OPG results in a fiscal impact starting in 2016-17, of either:



Basis of Consolidation of OPG and H1 (US GAAP vs. IFRS)	Fiscal Impact Relative to FES				
	2016-17	2017-18	2018-19	2019-20	2020-21
Preferred Approach (smoothed IFRS impact)**	**$75M**	**$425M**	**$525M**	**$675M**	**$675M**
High Impact (non-smoothed IFRS impact)**	$1B	$375M	$400M	$400M	$400M

*** OPG's estimate of cumulative impact for 2015-2020 is $2.5B under the preferred approach, and $2.6B under the high impact approach. Note: Amounts are based on estimates currently available, and are subject to updates by OPG. Revised estimates are expected by March 1, 2017.*

Program Expense Changes to Highlight

$ Millions	2016-17	
Program Expense Changes since the 2016 FES		
MOHLTC Pausing planned increases to drug cost contributions*	106.0	*(pressure with no offset)*
MOHLTC Stem Cells and other priorities	95.4	*(pressure with no offset)*
MCYS: First Nations Prevention Services support	5.8	*(federal flow-through)*
MAG/MCSCS: Corrections Reform	10.4	*(offset from contingency fund)*
MCSCS: First Nations Policing Wage Parity	6.5	*(offset from contingency fund)*
Cabinet Office: International Disaster Relief Program – Haiti	0.3	*(offset from contingency fund)*
Contingency fund	(17.2)	
Program Expense Changes since the 2016	**207.2**	

* Alternatively, Social Assistance pressures of similar magnitude could be reported

Options 1 through 4 build on each other. All options assume the pension reversal and progressively take on additional changes.

Option 1	Option 2	Option 3	Recommended Option 4
Pensions: $2.2 billion	**Pensions**: $2.2 billion	**Pensions**: $2.2 billion	**Pensions**: $2.2 billion
	Cap and Trade: $(0.5) billion	**Cap and Trade:** $(0.5) billion	**Cap and Trade:** $(0.5) billion
		HST & Other Taxes: $0.9 billion	**HST & Other Taxes:** $0.9 billion
		Asset Optimization: $(0.1) billion	**Asset Optimization:** $(0.1) billion
			Expense Pressures: $(0.2) billion

Overall Narrative: *The strength of the Ontario economy, together with the government's approach to fiscal management, is supporting strategic investments, while allowing the government to continue to beat its fiscal targets.*

Option 1 — Reversal of Pensions

$ Billions	Budget 2016-17	Change	Outlook 2016-17
Revenue	130.6	*2.1*	132.7
Expense			
Programs	122.1	*0.9*	123.1
Interest on Debt	11.8	*(0.4)*	11.4
Total Expense	133.9	*0.5*	134.4
Surplus/(Deficit) Before Reserve	(3.3)	*1.6*	(1.7)
Reserve	1.0	*(0.6)*	0.4
Surplus/(Deficit)	(4.3)	*2.2*	(2.1)
Net Debt-to-GDP (Per Cent)	39.6	*(1.3)*	38.3

- *The government is projecting a **deficit of $2.1 billion in 2016-17**, an improvement of $2.2 billion since the 2016 Budget.*
- *The Pension Asset Expert Advisory Panel recently released its report on the treatment of pension assets, including a recommendation that jointly-sponsored net pension asset be recognized in the Province's financial statements. The government is adopting this recommendation, which aligns with the treatment originally included in the 2016 Budget plan.*
- *With this reversal, together with stronger revenue and lower interest on debt, the government is projected to beat its fiscal target.*

Option 2 — Option 1 + Cap and Trade

$ Billions	Budget 2016-17	Change	Outlook 2016-17
Revenue	130.6	*1.7*	132.2
Expense			
Programs	122.1	*0.9*	123.1
Interest on Debt	11.8	*(0.4)*	11.4
Total Expense	133.9	*0.5*	134.4
Surplus/(Deficit) Before Reserve	(3.3)	*1.1*	(2.2)
Reserve	1.0	*(0.6)*	0.4
Surplus/(Deficit)	(4.3)	*1.7*	(2.6)
Net Debt-to-GDP (Per Cent)	39.6	*(1.3)*	38.3

- *The government is projecting a **deficit of $2.6 billion in 2016-17**, an improvement of $1.7 billion since the 2016 Budget.*
- *Cap and Trade is a cornerstone of the Province's fight against climate change. Ontario's first Cap and Trade auction is scheduled for March 22, 2017, and establishes Ontario's partnership in the largest carbon market in North America.*
- *Revenues from Ontario's first auction will be certified and settled at the beginning of the 2017-18 fiscal year. As such, the Third Quarter Finances reflect the re-profiling of auction proceeds from 2016-17 to 2017-18.*

Option 3 — Option 2 + HST & Other Taxes + Assets

$ Billions	Budget 2016-17	Change	Outlook 2016-17
Revenue	130.6	*2.5*	133.1
Expense			
Programs	122.1	*0.9*	123.1
Interest on Debt	11.8	*(0.4)*	11.4
Total Expense	133.9	*0.5*	134.4
Surplus/(Deficit) Before Reserve	(3.3)	*2.0*	(1.3)
Reserve	1.0	*(0.6)*	0.4
Surplus/(Deficit)	(4.3)	*2.6*	(1.7)
Net Debt-to-GDP (Per Cent)	39.6	*(1.4)*	38.2

- *The government is projecting a **deficit of $1.7 billion in 2016-17**, an improvement of $2.6 billion since the 2016 Budget.*
- *Ontario's economy continues to grow in an uncertain global environment. Stronger 2015 income tax assessment results and the continued strength of Ontario's economy and housing market resulted in higher than forecasted taxation revenues.*

Option 4 — Option 3 + Expense Pressures

$ Billions	Budget 2016-17	Change	Outlook 2016-17
Revenue	130.6	*2.5*	133.1
Expense			
Programs	122.1	*1.1*	123.3
Interest on Debt	11.8	*(0.4)*	11.4
Total Expense	133.9	*0.7*	134.6
Surplus/(Deficit) Before Reserve	(3.3)	*1.8*	(1.5)
Reserve	1.0	*(0.6)*	0.4
Surplus/(Deficit)	(4.3)	*2.4*	(1.9)
Net Debt-to-GDP (Per Cent)	39.6	*(1.3)*	38.3

- *The government is projecting a **deficit of $1.9 billion in 2016-17**, an improvement of $2.4 billion since the 2016 Budget.*
- *The government's fiscally sound approach to managing the Province's finances will help grow the economy, create jobs and ensure the sustainability of programs and services that help Ontarians in their everyday lives.*
- *This includes supporting strategic investments, such as funding for healthcare.*

KEY PUBLIC REPORTING AND PLANNING DATES

The following provides an outline of upcoming planning and publication dates:

- **February 8**: Long-Term Report Release
- **February 13**: Pension Panel Report Release
- **February 13**: Letter to the Clerk for Q3 Finances
- **February 15**: Electricity Relief Announcement (TBD)
- **February 21**: Q3 Finances Release
- **April 11**: Tentative Document Release

MINISTERS & PREMIER MEETING

Date: February 9, 2017 | Time: 3:30PM – 5:00PM
Location: Room 275, Cabinet Room, Main Legislative Building

Proposed Agenda

1. Proposed Agenda for Cabinet Retreat (5 mins)

2. Update on Fiscal Plan for Budget 2017 (20 mins)
    - Challenges
    - Fiscal Anchors
    - Tools/levers

3. Budget Themes/Storyboard and Proposed Investments and Sector Spending (45 mins)

4. Update on Pension Accounting (10 mins)

5. Update on 2016-17 Fiscal Position including Q3 Finances (5 mins)

6. Next Steps in Preparation for Cabinet Retreat (5 mins)

From: Ken Kandeepan

Subject: RE: Q3 update

Hi Everyone – just wanted to share with you the latest on the strategy for Q3. We are headed back to FPC next week with a further 2 scenarios on the deficit target that could be published. In addition to the ones we took earlier this week – two new options are proposed – one is to reverse the pensions only (option 1 in the materials), and the second is to take on a certain amount of ministry pressures we think will materialize (option 4 in the materials).

In terms of the materials – there is both a deck and a placemat that we are proposing to take forward. The placemat illustrates the 4 options and includes how the revenue/expense change table would appear relative to Budget and some proposed narrative for each scenario.

The deck is very similar to what we took forward last week but has a couple of new slides. Tim has also just circulated to your ADMs

Can I ask that you specifically take a look at slide 8 to ensure you are comfortable with the wording as well as the **narrative on the placemat** that would be helpful. But happy to hear any comments on the rest of it as well. We are looking for any comments back by 3:30pm today so we can finalize and send up to our DM/MO today.

And – we are continuing to track for a release on Feb 13 and we will be in touch to request your

assistance.

Happy to discuss.

Thanks.

Hi Everyone – sending along the most current draft of the deck we are planning to take forward to FPC tomorrow.

Comments welcome – if you could let me know asap if you have them. Heads up that timing of release of the Q3 may be even sooner as noted in this deck

Subject: RE: Q3 update
Importance: High

Hi All,

Following up on my email from last week, we received relatively recent direction regarding the release of Ontario's Third Quarter Finances – the tentative plan is to publish Q3 finances ahead of the February 15 deadline. We are tentatively tracking a release date of Monday February 13.

As you can imagine, timelines are very compressed, and includes a possible trip to FPC this week. In order to meet this week's deadlines, while also preparing for the release of the actual publication, we're asking for input from you in stages:

EOD Today:
We have prepared the draft of a deck, which we are working towards tabling at this Wednesday's FPC (TBC). The deck lays out the key 2016-17 building blocks that could be updated as part of the Q3 publication. It would help if we could get the following from you folks by the end of today:
16-17 post-FES expense update: We have included placeholder for an expense slide. The intention is for the slide to provide an updated list of initiatives that were not included in the FES expense outlook.
Recommended expense update/signature initiatives: We may build in options for what the outlook could look like – it would help if you could provide a recommendation

for the expense changes that should be taken on/profiled.
16-17 c-fund update: We have included a c-fund slide that was used in the Q1 finances briefing materials (current PW). We would like to include an updated version of this slide in the FPC deck (appendix). It would help to have this out to 19-20.
Pension Narrative: Nadine – I'll connect on the pension adjustment and some high level bullets that we could use.

Noon Friday January 27:
Template: I've attached a draft of 3q finances that is based heavily off of the 2016 First Quarter Finances. We've highlighted in green the sections that we would like you to update. While I'm not 100% certain this structure will be exactly what the Q3 document will look like, I think it's safe to say that the substantive content we'll have to cover is captured here. There will be some highlighted content that is *not possible* to update for Friday, however there will be a formal distribution process where additional information can be incorporated.

Thanks everyone, and please feel free to send your input directly to Liane and Emma. Im hoping to be able to share a draft deck with you late this evening.

Subject: Q3 heads up

Hi Everyone – Wanted to send a quick message that we are hearing there is a desire to proceed with the release of a Q3 update around the time we are expecting the Pension Panel panel to release their report. We are going to assume mid feb prior to the house coming back for our planning purposes.

My team is going to work together to put together a list of things we need to start working on/think about along with a calendar to determine and get direction on an approach to coincide with this timeframe.

More details to follow tomorrow.

Thanks.

Ontario's Third Quarter Finances: Fiscal Strategy

Office of the Budget
MINISTRY of FINANCE

Presentation to FPC on February 1, 2017

Preliminary Draft

Draft – January 27, 2017 9:30 AM

Context

Under the *Fiscal Transparency and Accountability Act, 2004* (FTAA), the Third Quarter Finances is required to:

- Be released on or before February 15th (publication can be delayed if a letter is sent to the Clerk).
- Include updated information about the major components of revenue and expense **for the current fiscal year only.**

It also provides an **opportunity for the government to reiterate key fiscal messages** from the Budget or pre-condition for future updates.

A Third Quarter Finances has only been published once in the last eight years (in 2012-13).

Key stakeholders like the Financial Accountability Officer and rating agencies will assess the fiscal outlook and narrative.

- Both have acknowledged that balance is within reach in 2017-18, but have also highlighted key risks to the 2016 Budget fiscal plan.

Purpose and Key Decisions

Currently working towards **a release date of February 13, 2017** – need to **confirm the approach to publishing Ontario's Third Quarter Finances**, including:

- The core updates to **the fiscal outlook and supporting revenue and expense details** to be published, as well as the **fiscal narrative and messaging**.
- Positioning the content and the rollout of Third Quarter Finances relative to the release of the Pension Panel's Report and recommendations, and other publicly available information.

Evolution of the 2016-17 Outlook

- The Third Quarter Finances will present a fiscal update relative to the 2016 Budget and address changes since FES in narrative only.
- The 2016 FES highlighted Ontario's stronger economy and the government's approach to fiscal management, which supported strategic investments in new child care spaces, hospitals and electricity cost relief for consumers.
- To support these investments while accommodating the Pension Adjustment, the government took on a number of fiscal tools in order to meet its targets.

2016 Budget Fiscal Plan $ Billions	2016-17	Change to FES 2016-17	FES Outlook 2016-17
Revenue	130.6	*2.1*	132.7
Expense			
Programs	122.1	*3.1*	125.3
Interest on Debt	11.8	*(0.4)*	11.4
Total Expense	133.9	*2.7*	136.6
Surplus/(Deficit) Before Reserve	(3.3)	*(0.6)*	(3.9)
Reserve	1.0	*(0.6)*	0.4
Surplus/(Deficit)	(4.3)	*(0.0)*	(4.3)

Total revenue changes of $2.1 billion, consisting of:

- Base Forecast Change $1.0 billion
- Reversal of Homecare $(0.2) billion
- Federal Agreements $0.4 billion
- Higher assumed revenue to accommodate pensions $0.9 billion

Total expense changes of $2.7 billion, consisting of:

- In-Year Approvals $0.2 billion
- Pension Adjustment of $2.2 billion
- Electricity Cost Relief $0.3 billion
- Support for Hospitals $0.1 billion
- Green Investment Fund $0.3 billion
- New Federal Agreements $0.4 billion
- Contingency Fund Offsets $(0.5) billion
- Interest on Debt Savings $(0.4) billion

Change to the Reserve $(0.6) billion

End of Year Projection for 2016-17

- An early-read indicates that end of year projections for the 2016-17 deficit could range from $0.6 billion (if there is a significant improvement to the outlook) to $2.7 billion (if there is a moderate improvement to the outlook).

Significant Year-end Improvement

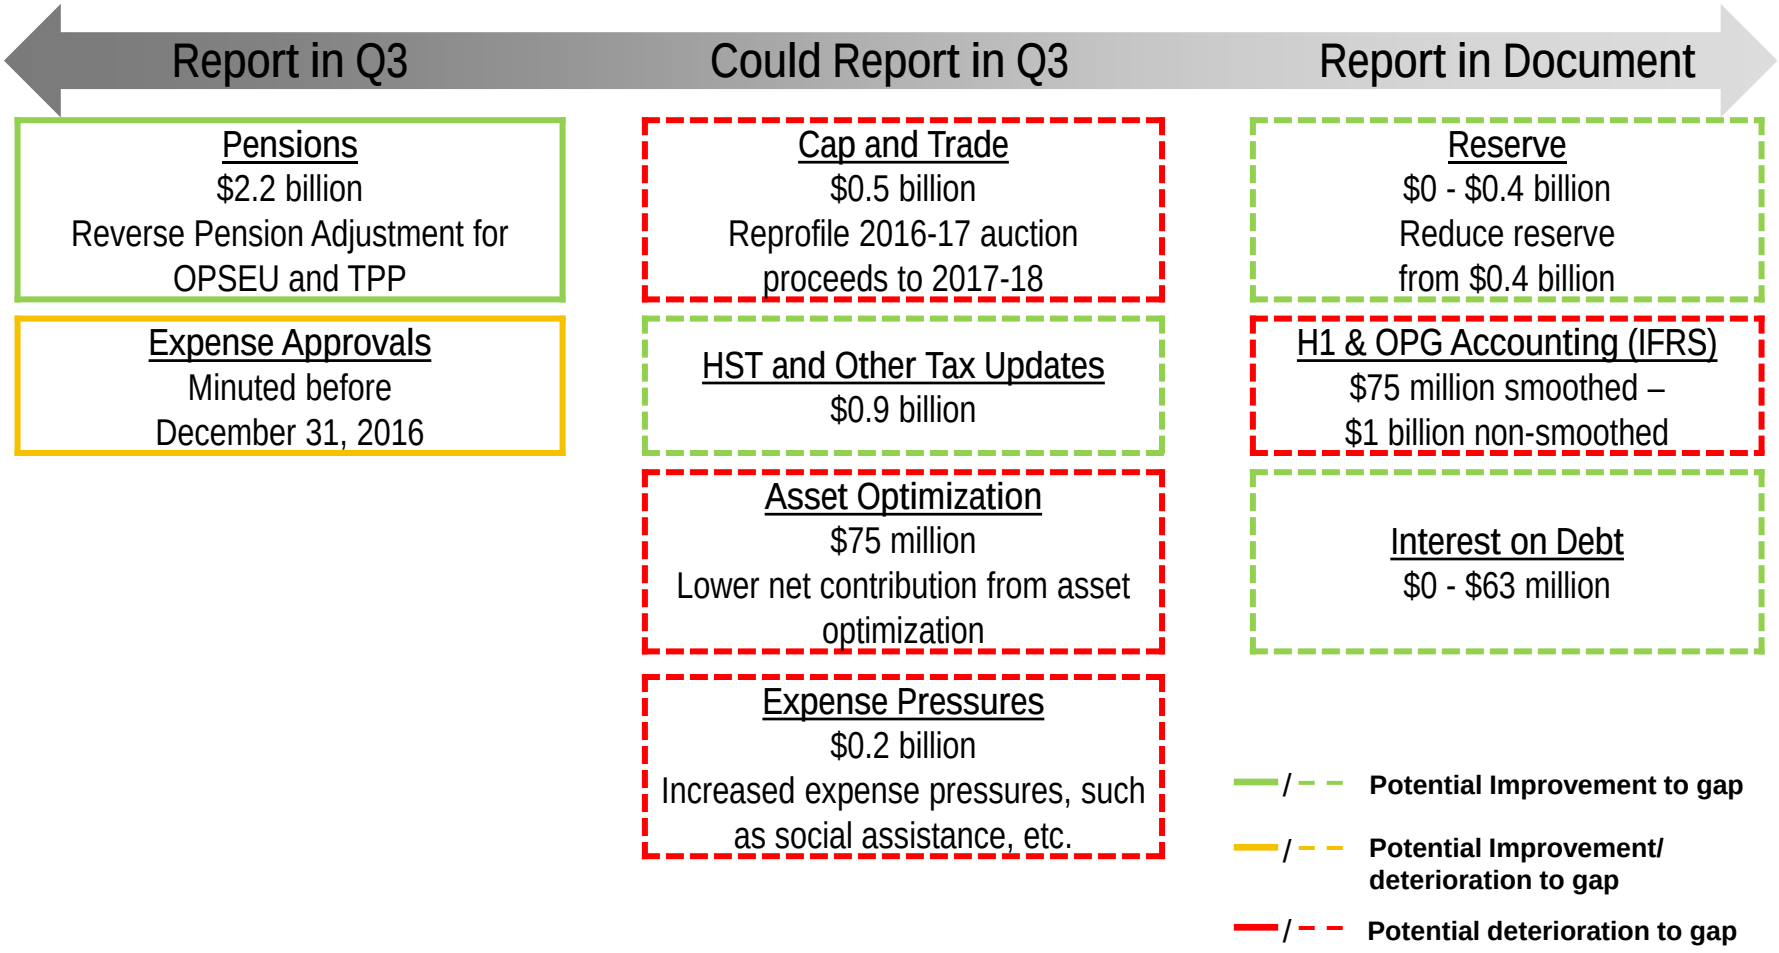
2016 Budget (4.3) billion
+ Pension Adjustment and Tools
2016 FES (4.3) billion
+ Higher Revenue ***1.7 billion***
− Re-profiling Cap and Trade Proceeds ***0.5 billion***
− Lower Net Contribution from Assets Optimization ***75 million***
− Accounting Adjustments: Accounting Framework (IFRS) ***75 million*** Unchanged Contaminated Sites
Unchanged Program Expense
+ Reverse Pension Adjustment ***2.2 billion***
+ Lower Interest on Debt ***0.1 billion***
+ Reduce Reserve ***0.4 billion***
Early-Read (0.6) billion

Moderate Year-end Improvement

2016 Budget (4.3) billion
+ Pension Adjustment and Tools
2016 FES (4.3) billion
+ Higher Revenue ***0.7 billion***
− Re-profiling Cap and Trade Proceeds ***0.5 billion***
− Lower Net Contribution from Assets Optimization ***75 million***
− Accounting Adjustments: Accounting Framework (IFRS) ***75 million*** Contaminated Sites ***50 million***
− Higher Program Expense ***1.0 billion***
+ Reverse Pension Adjustment ***2.2 billion***
Unchanged Interest on Debt
+ Reduce Reserve ***0.4 billion***
Early-Read (2.7) billion

Treatment of Pension Adjustment

Panel Recommendation



- The Pension Asset Expert Advisory Panel will be releasing its findings in the coming weeks.
  - The report is expected to include advice that government jointly sponsored pension plans be recognized in the Province's financial statements.
  - If taken on, this would result in a positive fiscal impact to the government's outlook in all years.

Treatment of Pension Adjustment

- The Third Quarter Finances provides the government with an immediate opportunity to align its fiscal strategy with recommendations of the panel, and frame the pension narrative in advance of the 2017 Document.
- While the reversal of the pension adjustment to the Ontario Public Service Employees Union Pension Plan (OPSEUPP) and the Ontario Teachers' Pension Plan (OTPP) will result in an improved 2016-17 deficit, expectations may need to be tempered about how much fiscal room is created in the out-years.
- For consistency and comparability, an adjustment to the 2015-16 actuals may be required to reflect the government's decision to adopt the Panel's recommendations. The adjustment to historical results would impact the previously reported net debt and deficit results.

Key Building Blocks

- In addition to the reversal of the Pension Adjustment, other key building blocks will either need to be reported in the Third Quarter Finances or be considered for the 2017 Document.

Building Block Considerations

There are a number of considerations for whether key building blocks should be taken on in the Third Quarter Finances or deferred to the 2017 Document.

Could Report in Third Quarter Finances

Cap and Trade

- The Cap and Trade auction notice that was released on January 20 stating that certification will occur on April 3, 2017.
- Stakeholders (e.g. FAO and Auditor General) may question why the government has not updated its fiscal plan to reflect this change.

HST and Other Tax Updates

- HST and other tax information has been received since the FES, and no further significant updates are expected in advance of the 2017 Document.
- Stakeholders are aware of the timing of these information flows and may question if updates are not taken on in Third Quarter Finances.

Asset Optimization

- Updating for revised estimated net contribution from Asset Optimization would build some deterioration into the outlook.
- There is uncertainty on the timing and potential gains for the H1 Brampton and Seaton Lands sales, and uncertainty on the final net gains reported H1 shares sold to OPG, potentially necessitating additional updates in the 2017 Document.

Expense Pressures

- Ministry risks represent potential pressures in the fiscal plan, and are not typically included in Quarterly updates.
- However, it may be prudent to address risks which may materialize before the 2017 Document, such as increased expense pressures associated with social assistance etc.

Report in Document

Reserve

It is recommended that the reserve be maintained at its current level of $0.4 billion, in order to mitigate any pressures that may arise before year-end.

H1 & OPG Accounting (IFRS)

Updated information on the potential fiscal impact of the move from U.S. GAAP to IFRS for Hydro One and OPG, is expected in mid-February.

Interest on Debt

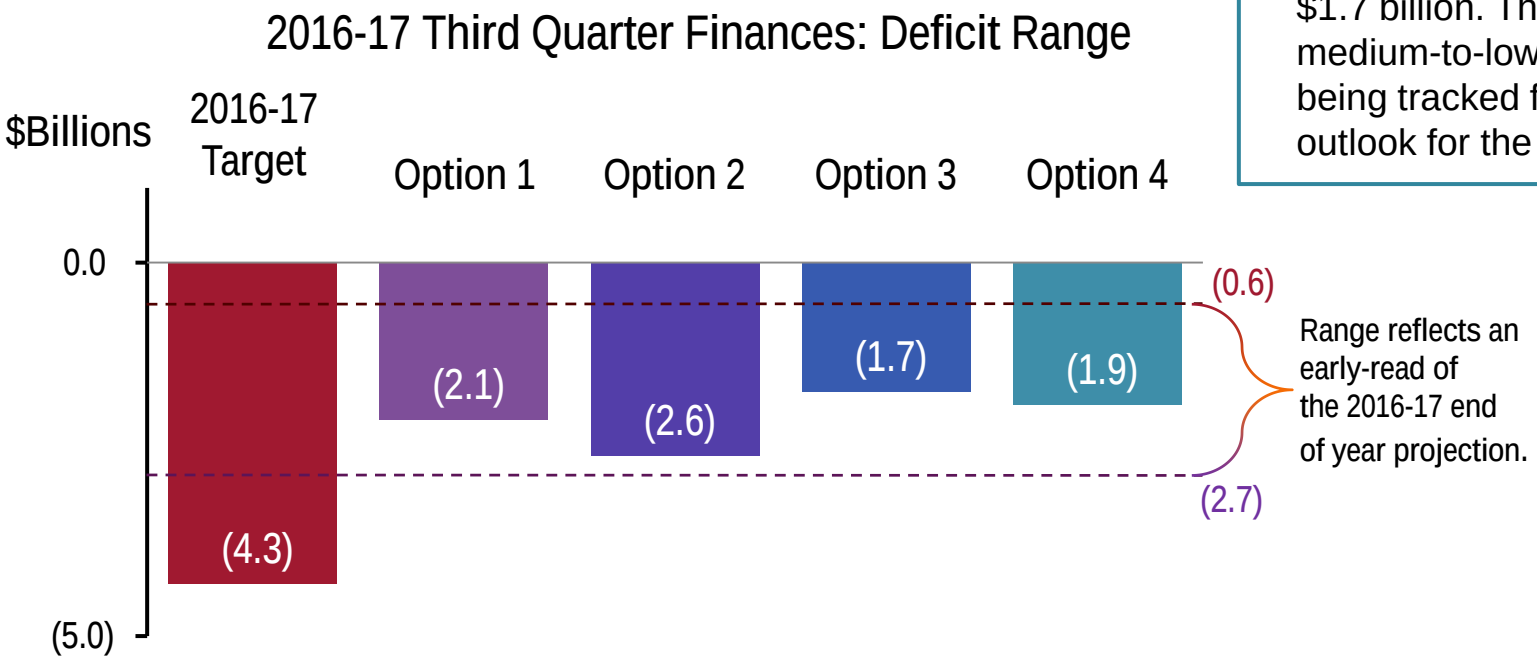
Deferring improvements in the interest on debt forecast allows for upside potential in the 2017 Document.

Outstanding Information

- **Outstanding Information** could materially impact the **2016-17 outlook** in advance of the 2017 Document.

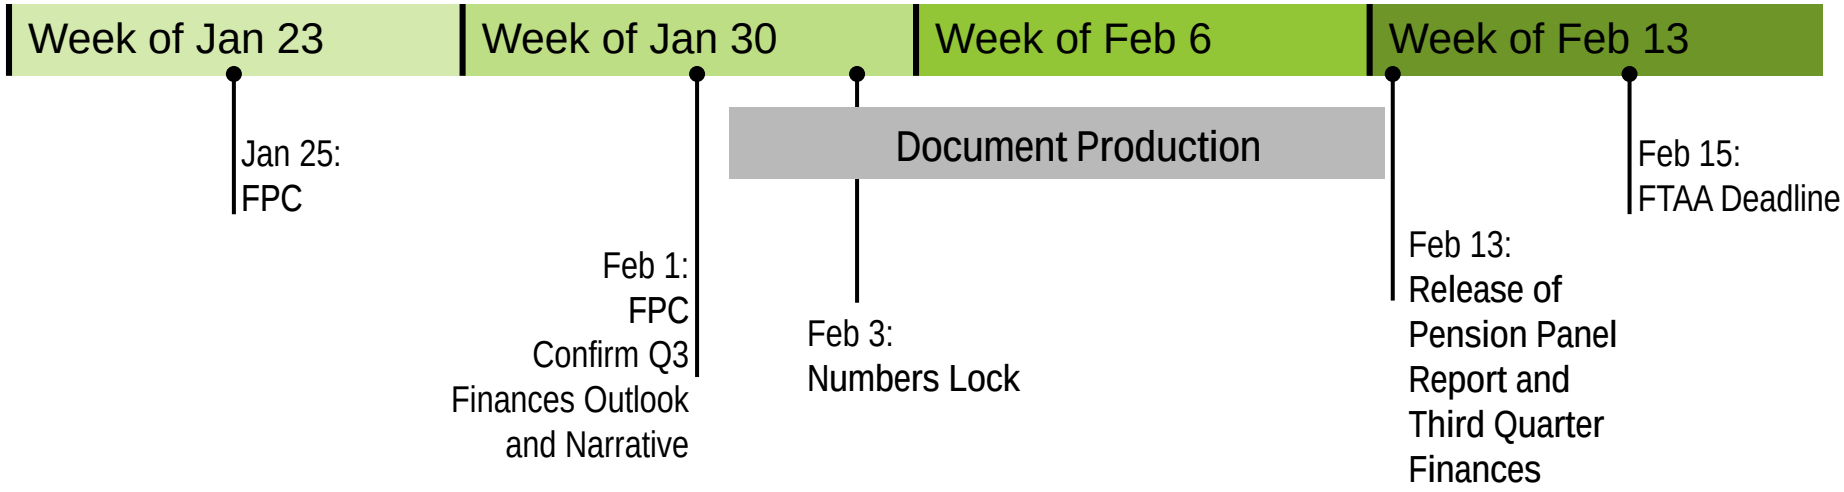
Revenue
Revisions to economic outlook
Ongoing provincially-administered tax receipts
Non-tax revenue updates from Ministry PRRT submissions
Net income updates from government business enterprises

Expense
Ministry Q3/interim submissions
Consolidations and other technical adjustments
Interest on debt forecast updates
Contaminated sites liabilities
Updated pension expense forecast



- Potential improvement to gap
- Potential improvement or deterioration to gap
- Potential deterioration to gap

Principles for the 2016-17 Outlook



Options 1 through 4 build on each other. All options assume the pension reversal and progressively take on additional changes relative to FES .

Option 1	Option 2	Option 3	Option 4
Pensions: $2.2 billion	**Pensions**: $2.2 billion	**Pensions**: $2.2 billion	**Pensions**: $2.2 billion
	Cap and Trade: $(0.5) billion	**Cap and Trade:** $(0.5) billion	**Cap and Trade:** $(0.5) billion
		Asset Optimization: $(0.1) billion	**Asset Optimization:** $(0.1) billion
		HST & Other Taxes: $0.9 billion	**HST & Other Taxes:** $0.9 billion
			Expense Pressures: $(0.2) billion

- Based on an early-read of end of year projections, the government may want to report an outlook that protects against risks or other changes between now and the Budget.
- Based on current information and taking into account key building blocks, there are a number of options for presenting the Q3 deficit, ranging from $2.6 billion to $1.7 billion. These are on the medium-to-low end of what is being tracked for the interim outlook for the 2017 Document.

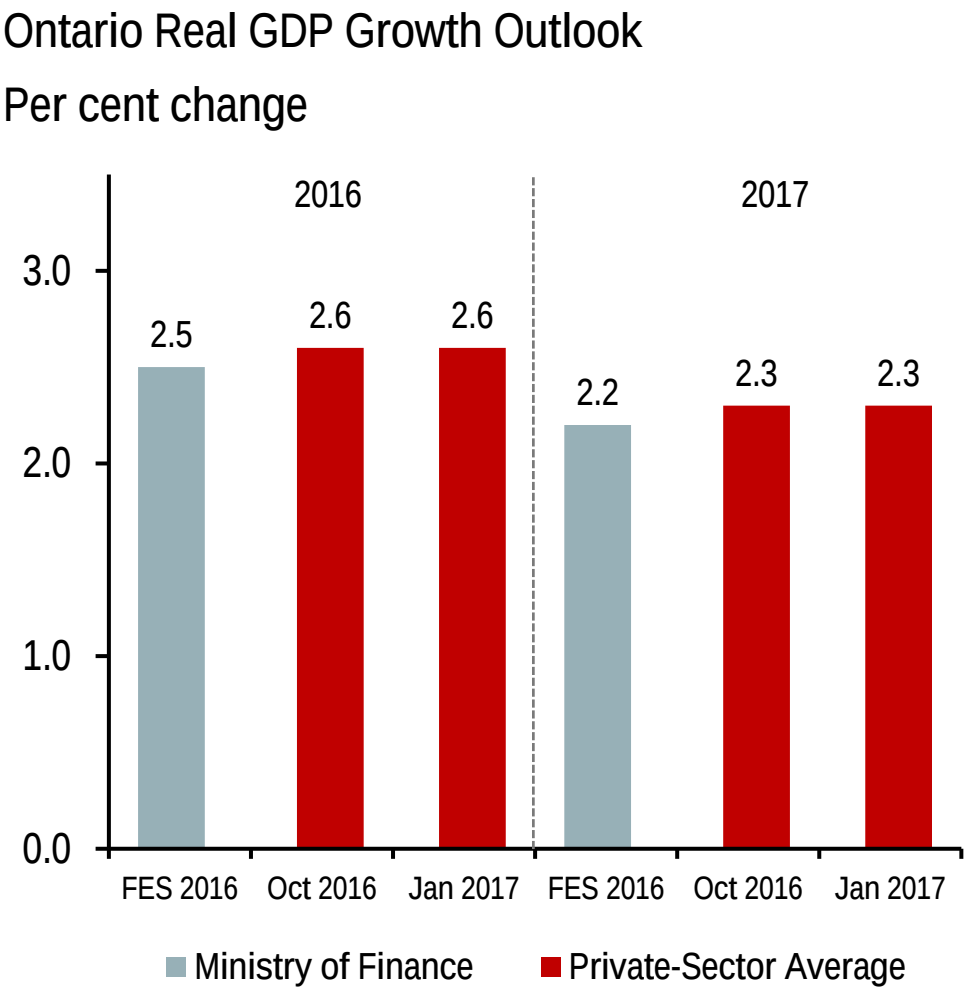
Appendix

Net Debt-to-GDP With Pension Reversal

Narrative: *The impact of the reversal will change the net debt projection for 2016-17 by $X.X billion. As a result, the government is projecting a net debt-to-GDP ratio of X.X per cent, an improvement compared to the 2016 FES projection of 40.3 per cent*

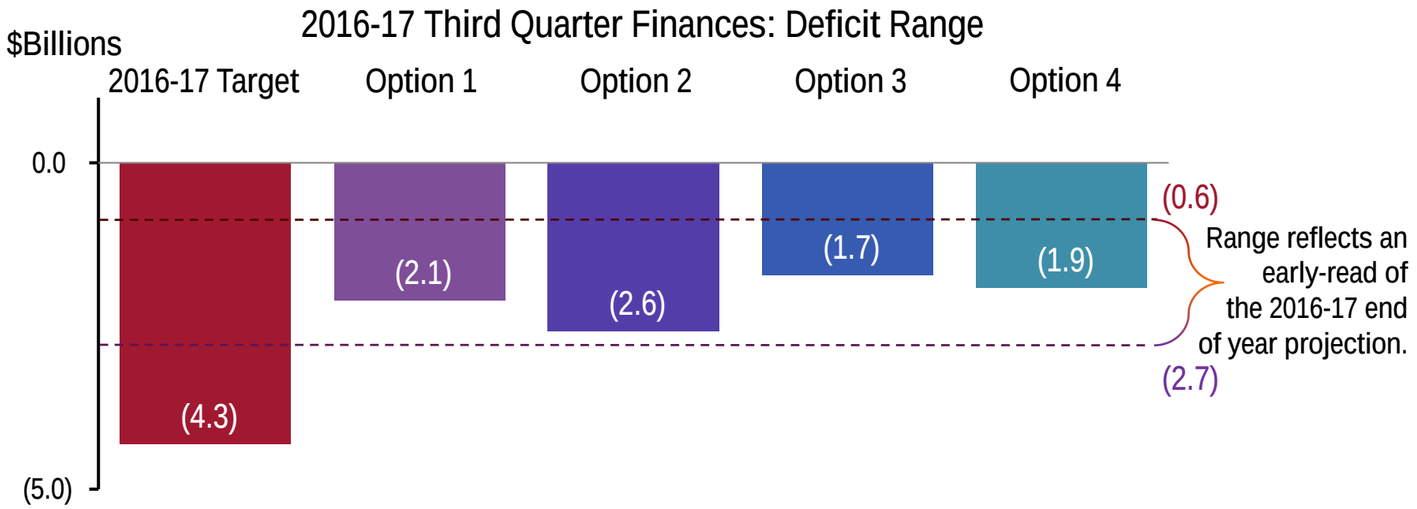


- Reflects the reversal of the Teachers Pension Plan and OPSEU Pension Plan adjustments, including reversal of the $10.7 billion debt adjustment made in the 2015-16 Public Accounts

Potential Third Quarter Economic Outlook

Economic Update

- Real GDP increased by 0.7% in the third quarter (July to September) of 2016, after rising 0.2% in the second quarter.
  - Higher exports and continued growth in household spending were the primary drivers of growth
- Information available so far for the fourth quarter (October to December) of 2016 suggest growth at a more modest pace.
- Ontario's economic growth outlook remains consistent with the 2016 FES forecast



Other Accounting Issues

Other Accounting Issues

- The move from U.S. GAAP to IFRS for the consolidation of Hydro One and OPG results in a fiscal impact starting in 2016-17, of either:

Basis of Consolidation of OPG and H1 (US GAAP vs. IFRS)	Fiscal Impact Relative to FES				
	2016-17	2017-18	2018-19	2019-20	2020-21
Preferred Approach (smoothed IFRS impact)**	**$75M**	**$425M**	**$525M**	**$675M**	**$675M**
High Impact (non-smoothed IFRS impact)**	$1B	$375M	$400M	$400M	$400M

*** OPG's estimate of cumulative impact for 2015-2020 is $2.5B under the preferred approach, and $2.6B under the high impact approach. Note: Amounts are based on estimates currently available, and are subject to updates by OPG. Revised estimates are expected by March 1, 2017.*

Options 1 through 4 build on each other. All options assume the pension reversal and progressively take on additional changes.

Option 1	Option 2	Option 3	Option 4
Pensions: $2.2 billion	**Pensions**: $2.2 billion	**Pensions**: $2.2 billion	**Pensions**: $2.2 billion
	Cap and Trade: $(0.5) billion	**Cap and Trade:** $(0.5) billion	**Cap and Trade:** $(0.5) billion
		Asset Optimization: $(0.1) billion	**Asset Optimization:** $(0.1) billion
		HST & Other Taxes: $0.9 billion	**HST & Other Taxes:** $0.9 billion
			Expense Pressures: $(0.2) billion

Overall Narrative: *The strength of the Ontario economy, together with the government's approach to fiscal management, is supporting strategic investments, while allowing the government to continue to beat its fiscal targets.*

Option 1
Reversal of Pensions

$ Billions	Budget 2016-17	Change	Outlook 2016-17
Revenue	130.6	*2.1*	132.7
Expense			
Programs	122.1	*0.9*	123.1
Interest on Debt	11.8	*(0.4)*	11.4
Total Expense	133.9	*0.5*	134.4
Surplus/(Deficit) Before Reserve	(3.3)	*1.6*	(1.7)
Reserve	1.0	*(0.6)*	0.4
Surplus/(Deficit)	(4.3)	*2.2*	(2.1)

- *The government is projecting a **deficit of $2.1 billion in 2016-17**, an improvement of $2.2 billion since the 2016 Budget.*
- *The Pension Asset Expert Advisory Panel recently released its report on the treatment of pension assets, including a recommendation that jointly-sponsored net pension asset be recognized in the Province's financial statements. The government is adopting this recommendation, which aligns with the treatment originally included in the 2016 Budget plan.*
- *With this reversal, together with stronger revenue and lower interest on debt, the government is on track to beat its fiscal target.*

Option 2
Option 1 + Cap and Trade

$ Billions	Budget 2016-17	Change	Outlook 2016-17
Revenue	130.6	*1.7*	132.2
Expense			
Programs	122.1	*0.9*	123.1
Interest on Debt	11.8	*(0.4)*	11.4
Total Expense	133.9	*0.5*	134.4
Surplus/(Deficit) Before Reserve	(3.3)	*1.1*	(2.2)
Reserve	1.0	*(0.6)*	0.4
Surplus/(Deficit)	(4.3)	*1.7*	(2.6)

- *The government is projecting a **deficit of $2.6 billion in 2016-17**, an improvement of $1.7 billion since the 2016 Budget.*
- *Cap and Trade is a cornerstone of the Province's fight against climate change. Ontario's first Cap and Trade auction is scheduled for March 22, 2017, and establishes Ontario's partnership in the largest carbon market in North America.*
- *Proceeds from Ontario's first auction will be certified at the beginning of the 2017-18 fiscal year. As such, the Third Quarter Finances reflect the re-profiling of auction proceeds from 2016-17 to 2017-18.*

Option 3
Option 2 + Assets + HST & Other Taxes

$ Billions	Budget 2016-17	Change	Outlook 2016-17
Revenue	130.6	*2.5*	133.1
Expense			
Programs	122.1	*0.9*	123.1
Interest on Debt	11.8	*(0.4)*	11.4
Total Expense	133.9	*0.5*	134.4
Surplus/(Deficit) Before Reserve	(3.3)	*2.0*	(1.3)
Reserve	1.0	*(0.6)*	0.4
Surplus/(Deficit)	(4.3)	*2.6*	(1.7)

- *The government is projecting a **deficit of $1.7 billion in 2016-17**, an improvement of $2.6 billion since the 2016 Budget.*
- *Ontario's economy continues to grow in an uncertain global environment. Stronger 2015 income tax assessment results and the continued strength of Ontario's economy and housing market resulted in higher than forecasted taxation revenues.*
- [Suggest not addressing AO downward estimate in narrative.]

Option 4
Option 3 + Expense Pressures

$ Billions	Budget 2016-17	Change	Outlook 2016-17
Revenue	130.6	*2.5*	133.1
Expense			
Programs	122.1	*1.1*	123.3
Interest on Debt	11.8	*(0.4)*	11.4
Total Expense	133.9	*0.7*	134.6
Surplus/(Deficit) Before Reserve	(3.3)	*1.8*	(1.5)
Reserve	1.0	*(0.6)*	0.4
Surplus/(Deficit)	(4.3)	*2.4*	(1.9)

- *The government is projecting a **deficit of $1.9 billion in 2016-17**, an improvement of $2.4 billion since the 2016 Budget.*
- *The government's fiscally sound approach to managing the Province's finances will help grow the economy, create jobs and ensure the sustainability of programs and services that help Ontarians in their everyday lives.*
- *[This includes supporting strategic investments, such as funding for social assistance, and increased enrolment in schools.]*

Hi Ken,

When you have a moment may I drop by to briefly discuss the non-cash as requested by Alex below?

Thanks,
kevin

Hello Kevin;

How will the pension adjustment affect the cash timing adjustments for the FT?

Thank you

Alex

Ken - Im attaching the current version of the Q3 deck -if you could take a look through. In particular - can you have a look at slide 13 and provide a few bullets on the impact of the reversal of the pensions on net debt to GDP?

Happy to discuss. Let me know if you have any other comments as well - happy to take those too. If you could get back to me as soon as possible, that would be much appreciated. Thanks.

Deck has new document psswrd.

Hi Selena

The reversal of the pension adjustment does not impact IOD since it's a non-cash adjustment, i.e., it decreases expenses on a PSAB basis not on a cash basis hence the total borrowing does not change which means that IOD also remains unchanged.

Thanks

Ken K

Hi Selena

Couple of quick question, the 16-17 IOD forecast was revised downwards from the FES number and provided to Tim. Do you want us to use this revised version or stick with the FES forecast with the revision being presented in the Interim section of the 2017 Budget.

Let me know, and in order to complete the Financing Table we need to know the 16-17 deficit that you will be projecting in the Q3, will be the same as the FES?

Thanks

Subject: RE: Q3 update
Importance: High

Hi All,

Following up on my email from last week, we received relatively recent direction regarding the release of Ontario's Third Quarter Finances – the tentative plan is to publish Q3 finances ahead of the February 15 deadline. We are tentatively tracking a release date of Monday February 13.

As you can imagine, timelines are very compressed, and includes a possible trip to FPC this week. In order to meet this week's deadlines, while also preparing for the release of the actual publication, we're asking for input from you in stages:

EOD Today:
We have prepared the draft of a deck, which we are working towards tabling at this Wednesday's FPC (TBC). The deck lays out the key 2016-17 building blocks that could be updated as part of the Q3 publication. It would help if we could get the following from you folks by the end of today:
16-17 post-FES expense update: We have included placeholder for an expense slide. The intention is for the slide to provide an updated list of initiatives that were not included in the FES expense outlook.
Recommended expense update/signature initiatives: We may build in options for what the outlook could look like – it would help if you could provide a recommendation for the expense changes that should be taken on/profiled.
16-17 c-fund update: We have included a c-fund slide that was used in the Q1 finances briefing materials (current PW). We would like to include an updated version of this slide in the FPC deck (appendix). It would help to have this out to 19-20.
Pension Narrative: Nadine – I'll connect on the pension adjustment and some high level bullets that we could use.

Noon Friday January 27:
Template: I've attached a draft of 3q finances that is based heavily off of the 2016 First Quarter Finances. We've highlighted in green the sections that we would like you to update. While I'm not 100% certain this structure will be exactly what the Q3 document will look like, I think it's safe to say that the substantive content we'll have to cover is captured here. There will be some highlighted content that is not possible to update for Friday, however there will be a formal distribution process where additional information can be incorporated.

Thanks everyone, and please feel free to send your input directly to Liane and Emma. Im hoping to be able to share a draft deck with you late this evening.

Subject: Q3 heads up

Hi Everyone – Wanted to send a quick message that we are hearing there is a desire to proceed with the release of a Q3 update around the time we are expecting the Pension Panel panel to release their report. We are going to assume mid feb prior to the house coming back for our planning purposes.

My team is going to work together to put together a list of things we need to start working on/think about along with a calendar to determine and get direction on an approach to coincide with this timeframe.

More details to follow tomorrow.

Thanks.

Fiscal Strategy:
Ontario's Third Quarter Finances

Office of the Budget
MINISTRY of FINANCE

Presentation to FPC on January 25, 2017

Preliminary Draft

Draft – January 24, 2017 12:00 PM

Context

Under the *Fiscal Transparency and Accountability Act, 2004* (FTAA), the Third Quarter Finances is required to:

- Be released on or before February 15th (publication can be delayed if a letter is sent to the Clerk).
- Include updated information about the major components of revenue and expense **for the current fiscal year only.**

It also provides an **opportunity for the government to reiterate key fiscal messages** from the Budget or pre-condition for future updates.

A Third Quarter Finances has only been published once in the last eight years (in 2012-13).

- The infrequent publication provides the government with some flexibility on how to present its fiscal update (i.e., update could be presented relative to the 2016 Budget, 2016 FES or both, as was done in 2012-13).

Key stakeholders like the Financial Accountability Officer and rating agencies will assess the fiscal outlook and narrative.

- Both have acknowledged that balance is within reach in 2017-18, but have also highlighted key risks to the 2016 Budget fiscal plan.

Purpose and Key Decisions

To **confirm the approach to publishing Ontario's Third Quarter Finances, including:**

- The core updates to **the fiscal outlook and supporting revenue and expense details** to be published, as well as the **fiscal narrative and messaging**.
- Positioning the content and the rollout of Third Quarter Finances relative to the release of the Pension Panel's Report and recommendations.
- **Confirm release date** and determine if a letter to the Clerk is required.

Evolution of the 2016-17 Outlook

- The Third Quarter Finances could present a fiscal update relative to the 2016 Budget or FES.
- The 2016 FES highlighted Ontario's stronger economy and the government's approach to fiscal management, which supported strategic investments in new child care spaces, hospitals and electricity cost relief for consumers.
- To support these investments while accommodating the Pension Adjustment, the government took on a number of fiscal tools in order to meet its targets.

2016 Budget Fiscal Plan $ Billions	2016-17	Change to FES 2016-17	FES Outlook 2016-17
Revenue	130.6	*2.1*	132.7
Expense			
Programs	122.1	*3.1*	125.3
Interest on Debt	11.8	*(0.4)*	11.4
Total Expense	133.9	*2.7*	136.6
Surplus/(Deficit) Before Reserve	(3.3)	*(0.6)*	(3.9)
Reserve	1.0	*(0.6)*	0.4
Surplus/(Deficit)	(4.3)	*(0.0)*	(4.3)

Total revenue changes of $2.1 billion, consisting of:

- Base Forecast Change $1.0 billion
- Reversal of Homecare $(0.2) billion
- Federal Agreements $0.4 billion
- Higher assumed revenue to accommodate pensions $0.9 billion

Total expense changes of $2.7 billion, consisting of:

- In-Year Approvals $0.2 billion
- Pension Adjustment of $2.2 billion
- Electricity Cost Relief $0.3 billion
- Support for Hospitals $0.1 billion
- Green Investment Fund $0.3 billion
- New Federal Agreements $0.4 billion
- Contingency Fund Offsets $(0.5) billion
- Interest on Debt Savings $(0.4) billion

Change to the Reserve $(0.6) billion

End of Year Projection for 2016-17

- An early-read indicates that end of year projections for the 2016-17 deficit could range from $0.6 billion (if there is a significant improvement to the outlook) to $2.7 billion (if there is a moderate improvement to the outlook) by year end.

Significant Year-end Improvement

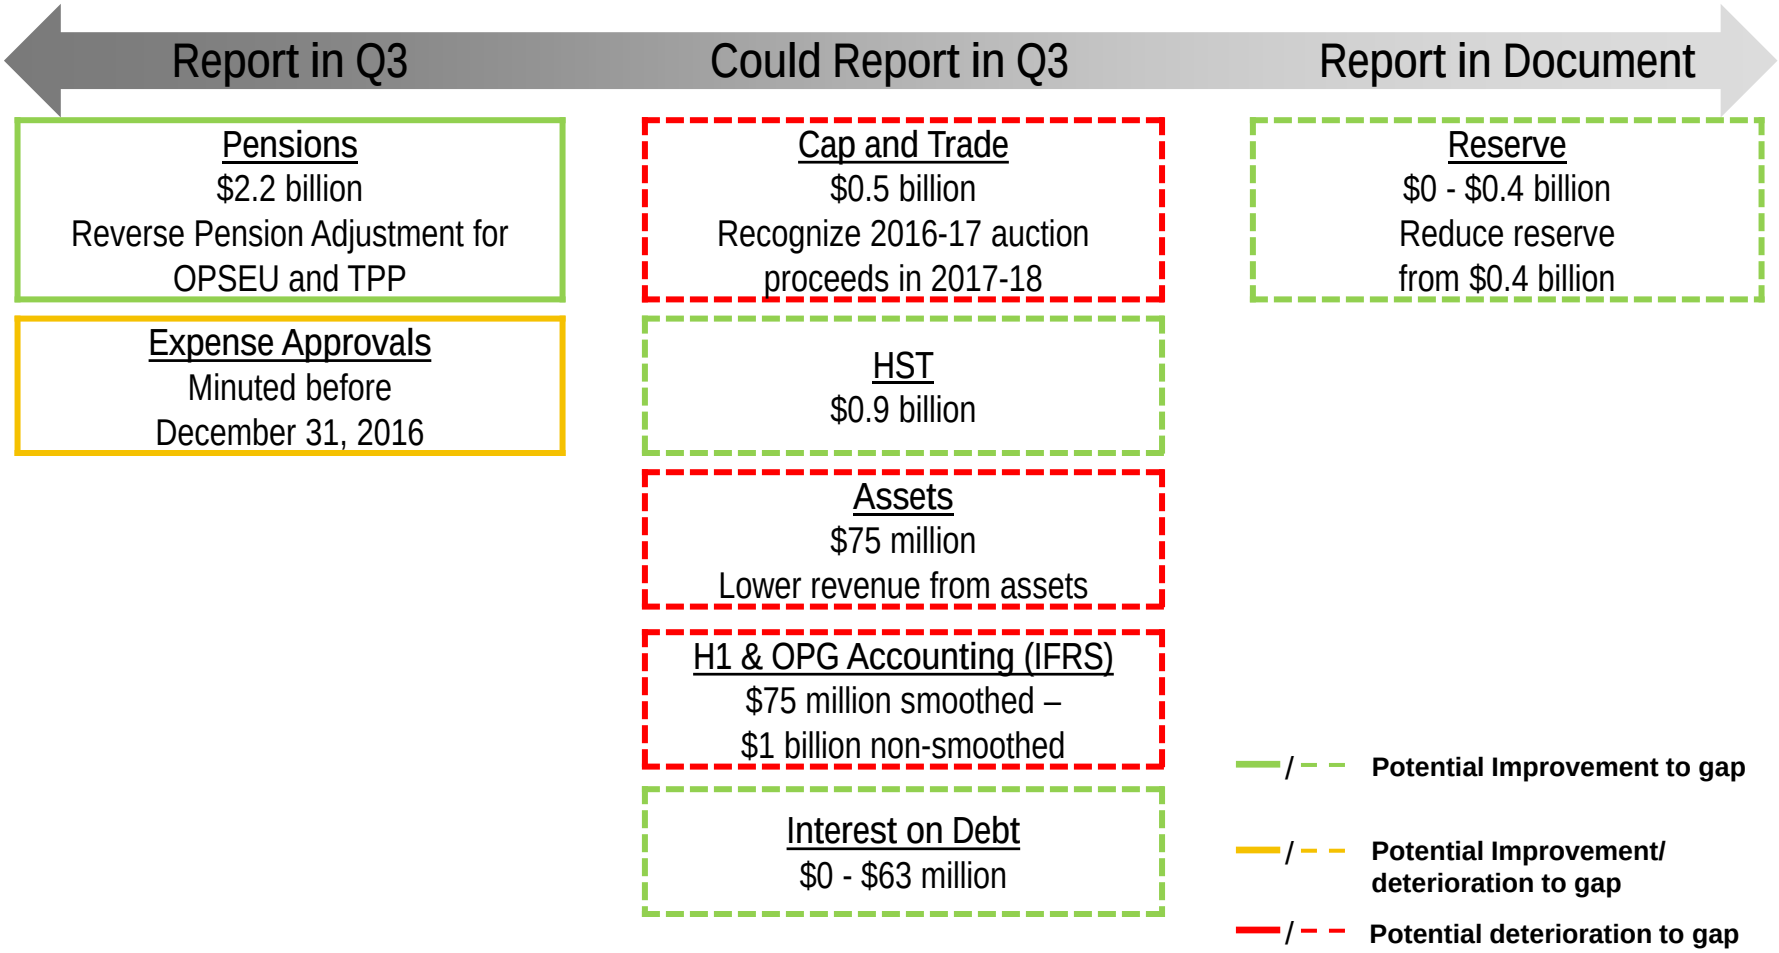
2016 Budget (4.3) billion
+ Pension Adjustment and Tools
2016 FES (4.3) billion
+ Higher Revenue ***1.7 billion***
– Re-profiling Cap and Trade Proceeds ***0.5 billion***
– Lower Revenue from Assets ***75 million***
– Accounting Adjustments: Accounting Framework (IFRS) ***75 million*** Unchanged Contaminated Sites
Unchanged Program Expense
+ Reverse Pension Adjustment ***2.2 billion***
+ Lower Interest on Debt ***0.1 billion***
+ Reduce Reserve ***0.4 billion***
Early-Read (0.6) billion

Moderate Year-end Improvement

2016 Budget (4.3) billion
+ Pension Adjustment and Tools
2016 FES (4.3) billion
+ Higher Revenue ***0.7 billion***
– Re-profiling Cap and Trade Proceeds ***0.5 billion***
– Lower Revenue from Assets ***75 million***
– Accounting Adjustments: Accounting Framework (IFRS) ***75 million*** Contaminated Sites ***50 million***
Higher Program Expense ***1.0 billion***
+ Reverse Pension Adjustment ***2.2 billion***
+ Unchanged Interest on Debt
+ Reduce Reserve ***0.4 billion***
Early-Read (2.7) billion

Treatment of Pension Adjustment

Panel Recommendation



- The Pension Asset Expert Advisory Panel will be releasing its findings in the coming weeks.
  - The report is expected to include advice that the net pension asset be recognized in the Province's financial statements.
  - If taken on, would result in a positive fiscal impact in all years.

Treatment of Pension Adjustment

- The Third Quarter Finances provides the government with an immediate opportunity to align its fiscal strategy with recommendations of the panel, and frame the pension narrative in advance of the 2017 Document.
- While the reversal will result in an improved 2016-17 deficit, expectations may need to be tempered about how much fiscal room is created in the out-years due to growing pressures.

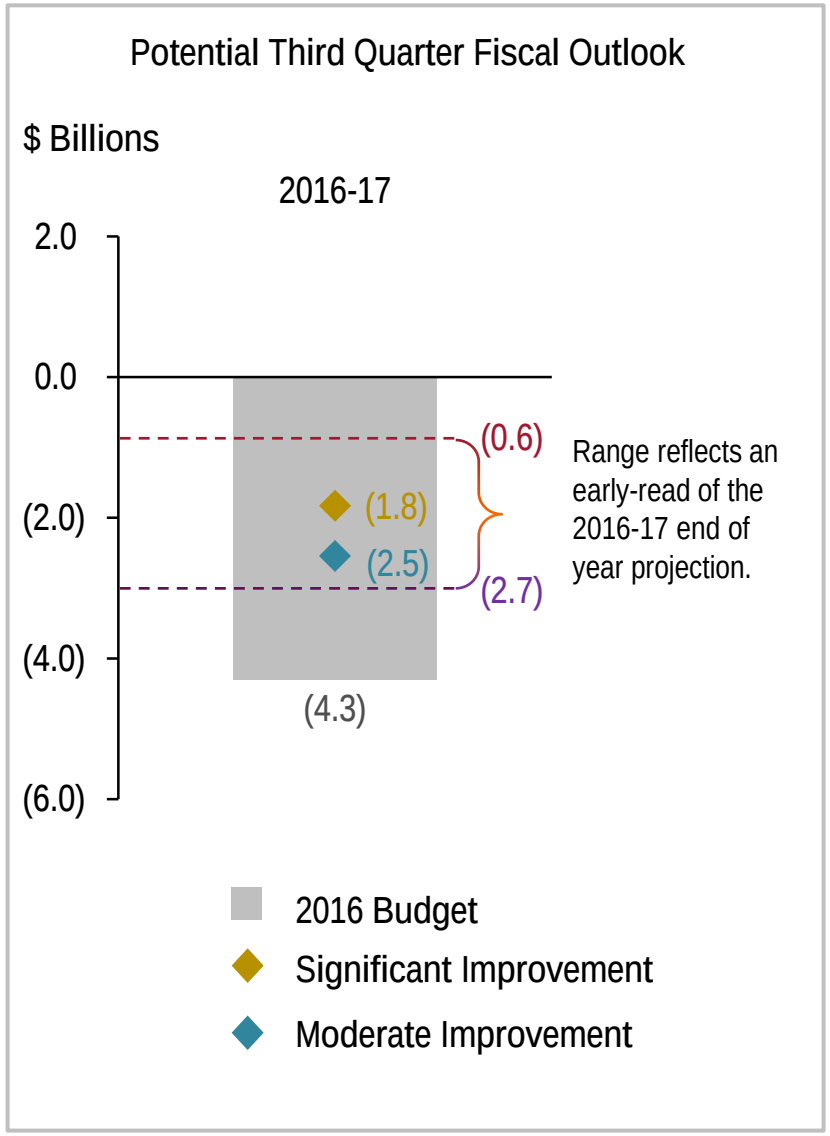
Key Building Blocks

- In addition to the reversal of the Pension Adjustment, other key building blocks will either need to be reported in the Third Quarter Finances or be considered for the 2017 Document.

Outstanding Information

- **Outstanding Information** could materially impact the **2016-17 outlook** in advance of the 2017 Document.

Revenue
Revisions to economic outlook
Ongoing provincially-administered tax receipts
Non-tax revenue updates from Ministry PRRT submissions
Net income updates from government business enterprises



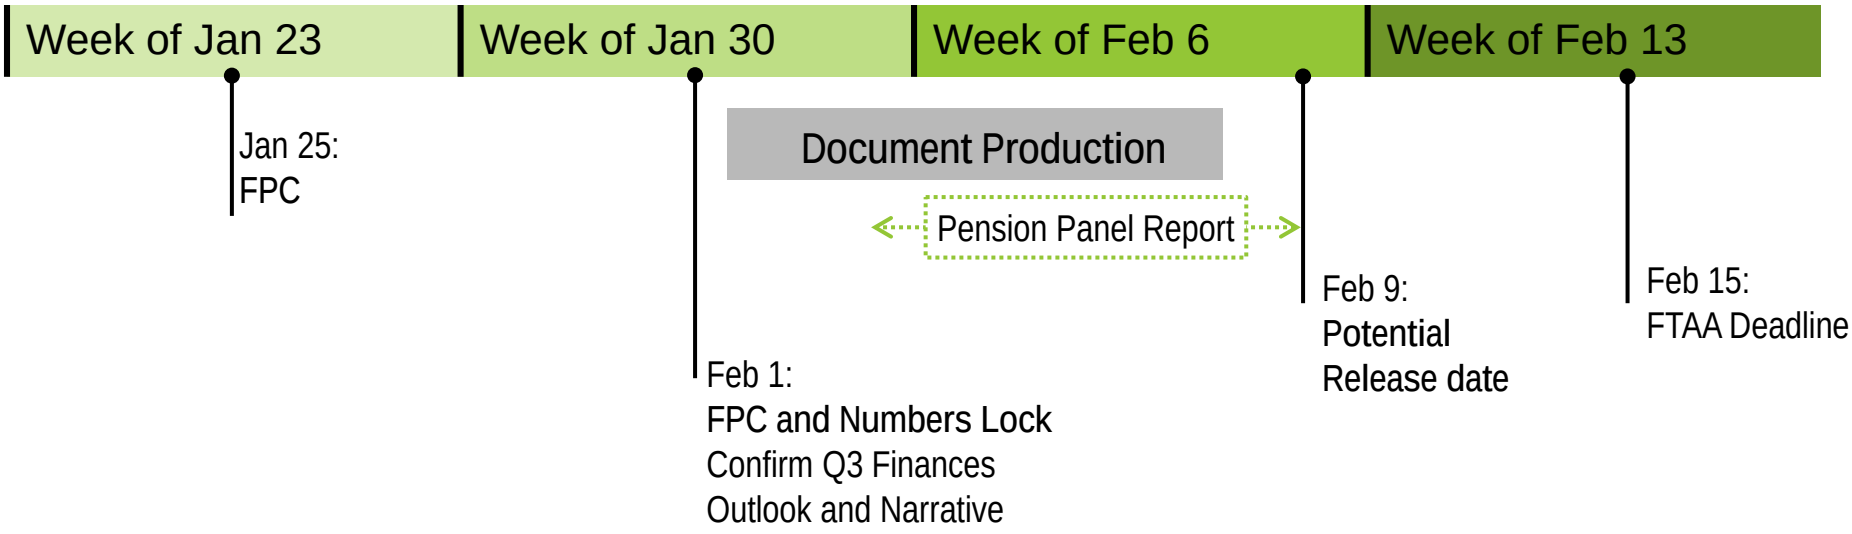
Expense
Ministry Q3/interim submissions
Consolidations and other technical adjustments
Interest on debt forecast updates
Contaminated sites liabilities
Update pension expense forecast

- Potential improvement to gap
- Potential improvement or deterioration to gap
- Potential deterioration to gap

Principles for the 2016-17 Outlook

- Based on an early-read of end of year projections, the government may want to report an outlook that protects against risks or other changes that could adversely impact the Province's fiscal performance between now and the Budget, and ultimately, Public Accounts.
- For example, based on current information and taking into account key building blocks, Q3 could present a deficit ranging from $2.5 billion (moderate improvement) to $1.8 billion (significant improvement).

Moderate Improvement	Significant Improvement
Takes on the following key building blocks: • **Pensions** $2.2 billion • **Cap and Trade** $(0.5) billion	Takes on the following key building blocks: • **Pensions** $2.2 billion • **Cap and Trade** $(0.5) billion • **Interest on Debt** $0.1 billion • **HST** $0.9 billion • **Assets** $(0.1) billion • **H1 & OPG Accounting (IFRS)** $(0.1) billion

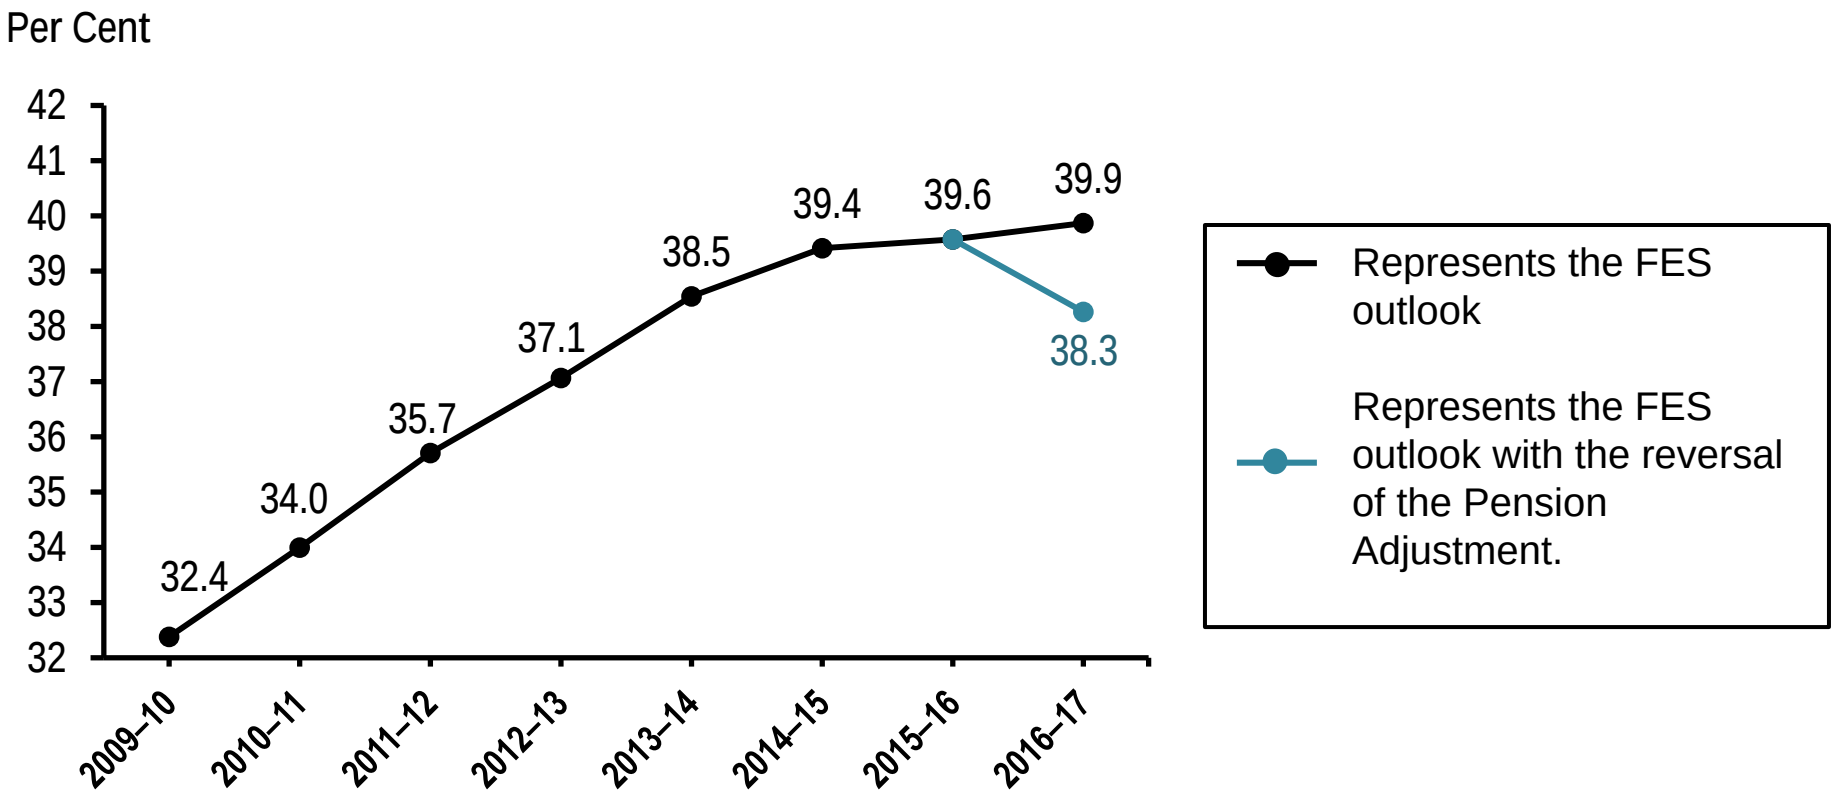


Fiscal Narrative to Support Pension Reversal

The narrative could build on the 2016 FES, focusing on the investments the government is making in priority areas while remaining committed to balance the budget in 2017-18. This narrative would be further supported by highlighting the reversal of the pension adjustment, and could make room for announcements leading up to the release of the 2017 Document.

- *The government is projecting a **deficit of $X.X billion in 2016-17**, an improvement of $X.X billion since the 2016 Ontario Economic Outlook and Fiscal Review forecast.*
- *The Pension Asset Expert Advisory Panel recently released its report on the treatment of pension assets, including a recommendation that the net pension asset be recognized in the Province's financial statements.*
- ***The government is adopting the Panel's recommendation** by reversing the Pension Adjustment included in the 2016 Ontario Economic Outlook and Fiscal Review outlook. The reversal of the Pension Adjustment will result in a significant improvement in the 2016-17 outlook and could support additional investments in 2017-18 and beyond.*
- *The government is projected to beat its deficit target for the **eighth year in a row**.*

Next Steps



Decision on Third Quarter Finances fiscal strategy:

1. Seeking decision on the fiscal outlook and narrative to publish in the Third Quarter Finances.
2. Confirm **release date** (currently tracking to February 9th) and determine if a letter to the Clerk is required.
3. Communication and rollout approach with regards to the timing of the release of the Pension Panel's report and recommendations.

Appendix

Net Debt-to-GDP With Pension Reversal

- Reflects the reversal of the Teachers Pension Plan and OPSEU Pension Plan adjustments, including reversal of the $10.5 billion debt adjustment made in the 2015-16 Public Accounts

Other Accounting Issues

Other Accounting Issues

- The move from U.S. GAAP to IFRS for the consolidation of Hydro One and OPG results in a fiscal impact starting in 2016-17, of either:

Basis of Consolidation of OPG and H1 (US GAAP vs. IFRS)	Fiscal Impact Relative to FES				
	2016-17	2017-18	2018-19	2019-20	2020-21
Preferred Approach (smoothed IFRS impact)**	**$75M**	**$425M**	**$525M**	**$675M**	**$675M**
High Impact (non-smoothed IFRS impact)**	$1B	$375M	$400M	$400M	$400M

*** OPG's estimate of cumulative impact for 2015-2020 is $2.5B under the preferred approach, and $2.6B under the high impact approach.*

Subject: RE: Q3 update

Hi Selena

The reversal of the pension adjustment does not impact IOD since it's a non-cash adjustment, i.e., it decreases expenses on a PSAB basis not on a cash basis hence the total borrowing does not change which means that IOD also remains unchanged.

Thanks

Ken K

Hey ken - one thing to consider is if the pension adjustment is being reversed there may be a desire to show progress on IOD - assuming it impacts that. Thoughts?

Thanks agreed, keeping the FES forecast makes sense since we don't want material changes before the interim in the Document, but pls do confirm.

Ken k

Hi ken - thanks. Not sure yet on whether we will keep the fes forecast or update for the latest but I'll speak to tim about it. Tim mentioned earlier that we shld retain the fes forecast but I just want to confirm with him.

Thanks again.

Hi Selena

Couple of quick question, the 16-17 IOD forecast was revised downwards from the FES number and provided to Tim. Do you want us to use this revised version or stick with the FES forecast with the revision being presented in the Interim section of the 2017 Budget.

Let me know, and in order to complete the Financing Table we need to know the 16-17 deficit that you will be projecting in the Q3, will be the same as the FES?

Thanks

Ken k

Subject: RE: Q3 update
Importance: High

Hi All,

Following up on my email from last week, we received relatively recent direction regarding the release of Ontario's Third Quarter Finances – the tentative plan is to publish Q3 finances ahead of the February 15 deadline. We are tentatively tracking a release date of Monday February 13.

As you can imagine, timelines are very compressed, and includes a possible trip to FPC this week. In order to meet this week's deadlines, while also preparing for the release of the actual publication, we're asking for input from you in stages:

EOD Today:

We have prepared the draft of a deck, which we are working towards tabling at this Wednesday's FPC (TBC). The deck lays out the key 2016-17 building blocks that could be updated as part of the Q3 publication. It would help if we could get the following from you folks by the end of today:
16-17 post-FES expense update: We have included placeholder for an expense slide. The intention is for the slide to provide an updated list of initiatives that were not included in the FES expense outlook.
Recommended expense update/signature initiatives: We may build in options for what the outlook could look like – it would help if you could provide a recommendation for the expense changes that should be taken on/profiled.
16-17 c-fund update: We have included a c-fund slide that was used in the Q1 finances briefing materials (current PW). We would like to include an updated version of this slide in the FPC deck (appendix). It would help to have this out to 19-20.
Pension Narrative: Nadine – I'll connect on the pension adjustment and some high level bullets that we could use.

Noon Friday January 27:
Template: I've attached a draft of 3q finances that is based heavily off of the 2016 First Quarter Finances. We've highlighted in green the sections that we would like you to update. While I'm not 100% certain this structure will be exactly what the Q3 document will look like, I think it's safe to say that the substantive content we'll have to cover is captured here. There will be some highlighted content that is not possible to update for Friday, however there will be a formal distribution process where additional information can be incorporated.

Thanks everyone, and please feel free to send your input directly to Liane and Emma. Im hoping to be able to share a draft deck with you late this evening.

Subject: Q3 heads up

Hi Everyone – Wanted to send a quick message that we are hearing there is a desire to proceed with the release of a Q3 update around the time we are expecting the Pension Panel panel to release their report. We are going to assume mid feb prior to the house coming back for our planning purposes.

My team is going to work together to put together a list of things we need to start working on/think about along with a calendar to determine and get direction on an approach to coincide with this timeframe.

More details to follow tomorrow.

Thanks.

Contingency Fund Outlook and Expense Risks

Contingency Fund Outlook

$ Billions	2014-15	2015-16	2016-17	2017-18	2018-19
Opening contingency fund balance	**0.5**	**0.7**	**1.2**	**1.7**	**3.5**
Less: Approvals to date[1]	0.0	0.0	0.3	0.5	0.6
Current contingency fund balance	**0.5**	**0.6**	**0.9**	**1.2**	**2.9**
Less: Compensation Risks set-aside	-	-	0.4	0.9	1.6
Less: Moving Ontario Forward set-aside	-	-	-	0.0	0.4
Contingency fund balance incl. set-asides			**0.5**	**0.3**	**0.9**

Includes Drug Program changes, Child Welfare, Northern Health Action Plan, Action Plan for Reconciliation, School Renewal Funding

Accommodates approximately 1.4% increases in next round of bargaining

[1] For 2014-15 and 2015-16, approvals through Q3 are shown.

- Of the remaining 2016-17 contingency fund, $0.6 billion is encumbered for education capital appropriation, leaving $0.3 billion to cover any contingencies.
- The 2016 Budget included a larger contingency fund, primarily due to funds set aside for future compensation increases and outside the GTHA Moving Ontario Forward projects.
- There have been more draws from the contingency fund in the current fiscal cycle, compared to recent years.
- The remaining contingency fund balance would be used to offset risks.

Expense Risks: Items to be managed

$ Billions	2016-17	2017-18	2018-19
Identified high-likelihood risks	0.4	0.7	1.0
PRRT boulder risks	0.1	0.3	0.3
Cap and trade not applied against in-plan items as assumed	-	0.0	0.6
Other likely funding requests	0.6	0.7	0.7
Total items to be managed*	**1.0**	**1.7**	**2.6**

Pressures such as: Health, Social Assistance caseloads, emergencies, Complex Special needs

Risks include: Business Supports, Benefits Transformation and NTR/full cost recovery

Health, MTO (including UP Express), Business Growth Initiative request, Drive Clean.

* Does not include a remedy for the Bill 115 court decision

$ Billions	2014-15	2015-16	2016-17	2017-18	2018-19
Year-end Savings Target	**1.1**	**1.0**	**0.8**	**1.0**	**1.0**
Total Risks to be managed			**1.8**	**2.7**	**3.6**

- In past years, unspent contingency funds have been used to meet the year-end savings target.
- An initiatives envelope for the 2017 or 2018 Budgets has not yet been incorporated into the fiscal plan.

Note: Numbers may not add due to rounding

MINISTRY OF FINANCE

2016–17 Third Quarter Finances
[Draft – January 23, 11:00 am]

[February 2017]

Contents

A. 2016–17 Fiscal Outlook X

B. Details of In-Year Changes X

C. Ontario's Economic Outlook X

D. Economic Performance X

E. Details of Ontario's Finances X

F. Ontario's 2016–17 Financing Program X

Introduction

The Ontario Quarterly Finances contains updated information about Ontario's 2016–17 fiscal outlook, including updated information about the major components of revenue and expense as set out in the *2016 Budget*.

Section A: 2016–17 Fiscal Outlook (OEP, TBS, OFA, Framework)

The government is projecting a deficit of $[X.X] billion in 2016–17, [an improvement of $X.X billion] compared to the 2016 Budget.

As outlined in the *2016 Budget,* the government is [on track to balance the budget by 2017–18 and is projecting to remain balanced in 2018–19. The government's path to a balanced budget is being achieved through responsible fiscal management, which involves managing growth in program spending and maintaining the integrity of Provincial revenues. The strengthening of the Ontario economy, together with the government's approach to fiscal management, is supporting strategic investments in new child care spaces, hospitals and electricity cost relief for consumers.]

[Placholder for Pension Narrative (OPCD)]

[Placholder for Economic Update (OEP)]

2016–17 In-Year Fiscal Performance

($ Millions)	2016–17		
	Budget Plan	Current Outlook	In-Year Change
Revenue	**130,589**	**[X.X]**	**–**
Expense			
Programs	122,139	[X.X]	–
Interest on Debt	11,756	[X.X]	–
Total Expense	**133,895**	**[X.X]**	**–**
Surplus/(Deficit) Before Reserve	**(3,306)**	**[X.X]**	**–**

Importance:	High

Suggested note.

As of February 10, 2017 the Province has completed over 99% of the 2016-17 borrowing program. Over the balance of the fiscal year the Province will continue to leverage favourable market conditions and continued demand for its debt issues by engaging in pre-borrowing for 2017-18.

Subject: RE: Q3 update
Importance: High

Hi All,

Following up on my email from last week, we received relatively recent direction regarding the release of Ontario's Third Quarter Finances – the tentative plan is to publish Q3 finances ahead of the February 15 deadline. We are tentatively tracking a release date of Monday February 13.

As you can imagine, timelines are very compressed, and includes a possible trip to FPC this week. In order to meet this week's deadlines, while also preparing for the release of the actual publication, we're asking for input from you in stages:

EOD Today:
We have prepared the draft of a deck, which we are working towards tabling at this Wednesday's FPC (TBC). The deck lays out the key 2016-17 building blocks that could be updated as part of the Q3 publication. It would help if we could get the following from you folks by the end of today:
16-17 post-FES expense update: We have included placeholder for an expense slide. The intention is for the slide to provide an updated list of initiatives that were not included in the FES expense outlook.
Recommended expense update/signature initiatives: We may build in options for what the outlook could look like – it would help if you could provide a recommendation

for the expense changes that should be taken on/profiled.
16-17 c-fund update: We have included a c-fund slide that was used in the Q1 finances briefing materials (current PW). We would like to include an updated version of this slide in the FPC deck (appendix). It would help to have this out to 19-20.
Pension Narrative: Nadine – I'll connect on the pension adjustment and some high level bullets that we could use.

Noon Friday January 27:
Template: I've attached a draft of 3q finances that is based heavily off of the 2016 First Quarter Finances. We've highlighted in green the sections that we would like you to update. While I'm not 100% certain this structure will be exactly what the Q3 document will look like, I think it's safe to say that the substantive content we'll have to cover is captured here. There will be some highlighted content that is *not possible* to update for Friday, however there will be a formal distribution process where additional information can be incorporated.

Thanks everyone, and please feel free to send your input directly to Liane and Emma. Im hoping to be able to share a draft deck with you late this evening.

From: Esmail, Selena (MOF)
Sent: January-19-17 2:57 PM

Cc: Lindquist, Emma (MOF); Inglis, Liane (MOF)
Subject: Q3 heads up

Hi Everyone – Wanted to send a quick message that we are hearing there is a desire to proceed with the release of a Q3 update around the time we are expecting the Pension Panel panel to release their report. We are going to assume mid feb prior to the house coming back for our planning purposes.

My team is going to work together to put together a list of things we need to start working on/think about along with a calendar to determine and get direction on an approach to coincide with this timeframe.

More details to follow tomorrow.

Thanks.

Contingency Fund Outlook and Expense Risks

Contingency Fund Outlook

$ Billions	2014-15	2015-16	2016-17	2017-18	2018-19
Opening contingency fund balance	**0.5**	**0.7**	**1.2**	**1.7**	**3.5**
Less: Approvals to date[1]	0.0	0.0	0.3	0.5	0.6
Current contingency fund balance	**0.5**	**0.6**	**0.9**	**1.2**	**2.9**
Less: Compensation Risks set-aside	-	-	0.4	0.9	1.6
Less: Moving Ontario Forward set-aside	-	-	-	0.0	0.4
Contingency fund balance incl. set-asides			**0.5**	**0.3**	**0.9**

Includes Drug Program changes, Child Welfare, Northern Health Action Plan, Action Plan for Reconciliation, School Renewal Funding

Accommodates approximately 1.4% increases in next round of bargaining

[1] For 2014-15 and 2015-16, approvals through Q3 are shown.

- Of the remaining 2016-17 contingency fund, $0.6 billion is encumbered for education capital appropriation, leaving $0.3 billion to cover any contingencies.
- The 2016 Budget included a larger contingency fund, primarily due to funds set aside for future compensation increases and outside the GTHA Moving Ontario Forward projects.
- There have been more draws from the contingency fund in the current fiscal cycle, compared to recent years.
- The remaining contingency fund balance would be used to offset risks.

Expense Risks: Items to be managed

$ Billions	2016-17	2017-18	2018-19
Identified high-likelihood risks	0.4	0.7	1.0
PRRT boulder risks	0.1	0.3	0.3
Cap and trade not applied against in-plan items as assumed	-	0.0	0.6
Other likely funding requests	0.6	0.7	0.7
Total items to be managed*	**1.0**	**1.7**	**2.6**

Pressures such as: Health, Social Assistance caseloads, emergencies, Complex Special needs

Risks include: Business Supports, Benefits Transformation and NTR/full cost recovery

Health, MTO (including UP Express), Business Growth Initiative request, Drive Clean.

* Does not include a remedy for the Bill 115 court decision

$ Billions	2014-15	2015-16	2016-17	2017-18	2018-19
Year-end Savings Target	**1.1**	**1.0**	**0.8**	**1.0**	**1.0**
Total Risks to be managed			**1.8**	**2.7**	**3.6**

- In past years, unspent contingency funds have been used to meet the year-end savings target.
- An initiatives envelope for the 2017 or 2018 Budgets has not yet been incorporated into the fiscal plan.

Note: Numbers may not add due to rounding

MINISTRY OF FINANCE

2016–17 Third Quarter Finances

F. Ontario's 2016–17 Financing Program X

Introduction

The Ontario Quarterly Finances contains updated information about Ontario's 2016–17 fiscal outlook, including updated information about the major components of revenue and expense as set out in the *2016 Budget*.

Section A: 2016–17 Fiscal Outlook (OEP, TBS, OFA, Framework)

The government is projecting a deficit of $[X.X] billion in 2016–17, [an improvement of $X.X billion] compared to the 2016 Budget.

As outlined in the *2016 Budget,* the government is [on track to balance the budget by 2017–18 and is projecting to remain balanced in 2018–19. The government's path to a balanced budget is being achieved through responsible fiscal management, which involves managing growth in program spending and maintaining the integrity of Provincial revenues. The strengthening of the Ontario economy, together with the government's approach to fiscal management, is supporting strategic investments in new child care spaces, hospitals and electricity cost relief for consumers.]

The outlook for Provincial program expense, at $[X.X] billion, is [an improvement/deterioration of $X.X billion compared to the 2016 Budget.] — reflecting [placeholder for high-level program expense change explanation]

The Province's interest on debt expense forecast, at $X.X billion, is [an improvement/deterioration of $X.X billion compared to the 2016 Budget forecast.]

The 2016–17 outlook also maintains a $[X.X] billion reserve to protect the fiscal outlook against unforeseen adverse changes in the Province's revenue and expense, including those resulting from changes in Ontario's economic performance or the impact of natural disasters.

Further details on the Province's fiscal plan, will be provided in the upcoming 2017 Budget.

Section B: Details of In-Year Changes (OEP, PEMD, OFA, Framework)

Revenue (OEP)

The 2016–17 revenue outlook, at $[X.X] billion, is [an improvement/deterioration of $X.X billion compared to the 2016 Budget]. Since the *2016 Budget,* the following changes have been made to the revenue outlook for 2016–17:

- [Placholder for revenue changes]

Subject: RE: RUSH MO Question: IESO Accounting Standards

Hi Sarah,

Here is my response below:

During the 2015-16 Public Accounts audit, the Auditor General (AG) raised issues regarding the Province's accounting treatment for pension assets related to jointly sponsored pension plans which challenged the accounting treatment followed by the Province for the past 14 years. The current AG's view is that the government does not have a legally enforceable right to unilaterally access the assets of the pension plans which are jointly sponsored. Given the differences in interpretation of accounting standards, the Province filed a time-limited regulation which changed the accounting treatment for pension assets of OTPP and OPSEUPP for the 2015-16 Public Accounts.

The one-time regulation only applies to provincially jointly sponsored plans, and does not apply to the pension liabilities reported by Independent Electricity System Operator.

Regards,

Pauline

Subject: FW: RUSH MO Question: IESO Accounting Standards
Importance: High

Hi Pauline,

Rush MO Question on a change in accounting standards on the calculation of pension liabilities.. Can we provide in basic terms what the change was, and why it would affect the IESO?

Energy will also be providing a response, so ours can focus on the accounting practices piece.

Happy to discuss

Thanks
Sarah

Subject: RUSH MO Question: IESO Accounting Standards
Importance: High

Hi Sarah and Patrick,

We have a rush question from the Minister's Office this morning. There is has been some media and opposition attention on the IESO's reported loss of $80M due to a change in accounting standards. The story below and attached detail the story.

> **>Ontario<**'s energy minister says an $80 million actuarial loss reported by the Independent Electricity System Operator was due to a change in accounting practices on the calculation of pension liabilities.
>
> The IESO, which oversees **>Ontario<**'s electricity market, says the accounting changes were implemented in 2011, and it recovers the loss by increasing fees for its accumulated **>deficit<** by up to $5 million a year.

The Minister is asking for very basic lines to talk about the accounting in the instance she needs to answer a supplementary in Question Period today. We have also reached out to Energy as well for messaging. I apologize for the rush on this.

Many thanks,
Emilie

IESO reports $80M loss from accounting change (Canadian Press)

- **Section**: News/Ontario

- **Ad Value**: $35
- **Tone**: **Neutral**

TORONTO - Ontario’s efforts to ease the upward pressure on electricity rates has been dealt a setback by a change in accounting practices.

In the government’s public accounts for 2015-16, the Independent Electricity System Operator reported a “previously unrecognized actuarial loss and past service costs” of just over $80 million.

The provincial agency which oversees Ontario’s electricity market says it will raise fees it charges the power industry to recover the losses as part of its accumulated deficit charge.

Progressive Conservative researchers discovered the $80 million loss in the public accounts and the Opposition plans to raise the issue in the legislature today.

The Tories point out the loss more than offsets the $70 million the Liberals said would be saved over seven years under Ontario’s new deal to purchase two terawatt hours of electricity annually from Quebec.

The Liberals are also removing the eight per cent provincial portion of the HST from electricity bills, and scrapping plans for more wind and solar power projects, to reduce system costs and ease upward pressure on rates.

The IESO, which combined operations with the now-defunct Ontario Power Authority in January 2015, had an accumulated deficit of $74 million and a net debt of $184 million, with revenues of $187 million.

FIPPA Section 13 Guide November 2016 - Client.pdf

Hi Ken,

Office of the Budget would like us to review the attached CIN and Report Summary that will be released in response to an FOI request for notes prepared for the DM and Minister of Finance on the FAO's 2017 Budget report. There's not a lot here for us, but several mentions of debt and IOD forecasts (see Expense Assumptions, Debt Outlook, and Risks). Let me know if there's any concerns, if anything needs to be redacted in accordance with FIPPA.

Note deadline of 3pm today.

Thanks, Anna

Subject: Response to FOI Request A-17-136 - FAO Projections

Hi Ghufran and Anna,

The FOI Office sent Office of the Budget an information request related to analysis on FAO projections. The clarified request follows:

> **"…all analysis (Briefing notes and Slide decks) prepared for the Minister of Finance or the Deputy Minister of Finance regarding the Financial Accountability Officer's report on 2017 Ontario Budget".**

To respond to this request, we're planning to share the attached Briefing Note and CIN that our divisions prepared for the Minister and Deputy Minister after the release of the FAO's Spring Economic and Fiscal Outlook back in late May. We chose to **redact *only* sections** of these notes that include any **analysis based on non-public documents & information** (2017 Budget, the Spring 2017 and Fall 2016 FAO reports) as per section 13 exemption under the FIPPA.

Could you please review the attached an advise if you have any concerns with the sections currently marked for redaction or if you suggest including any additional redactions **by 3pm today (if possible)**?

Let me know if you have any questions.

Thanks,
Ryan

May 31, 2017

FAO's Spring 2017 Economic and Fiscal Outlook

On May 31, 2017, the FAO released its spring 2017 assessment of Ontario's medium-term economic and fiscal outlook. The FAO is projecting budget deficits in all years between 2016–17 and 2021–22. The report states that while balance is within reach in 2017–18, significant fiscal adjustments will likely be required to maintain budget balance through the outlook.

TOP MESSAGES

- I would like to thank the Financial Accountability Officer (FAO) for releasing his spring economic and fiscal outlook for Ontario. We value the FAO's independent assessment and projections of the province's fiscal plan.
- As outlined in the 2017 Budget, the government is projecting a balanced budget for 2017–18 and to remain balanced in 2018–19 and 2019–20.
- The government has a strong track record of beating its fiscal targets. In fact, for the 2016–17 fiscal year, the government is forecasting a deficit of $1.5 billion, beating our annual deficit target again, for the eighth year in a row.
- This Budget builds on the government's track record of fiscal management that has resulted in $29 billion in accumulated deficits being avoided over the past seven years, relative to the 2010 Budget forecast.
- We are also targeting a net debt-to-GDP ratio of 35 per cent by 2023–24 and reducing Ontario's net debt-to-GDP ratio to its pre-recession level of 27 per cent, with current projections showing that this will be achieved by 2029–30.
- Ontario has recorded stronger economic growth than Canada and all other G7 countries over the 2014 to 2016 period, with real GDP rising 2.6 per cent a year.
- Private-sector forecasters expect Ontario will remain one of the fastest growing provinces over the next two years. It should be noted that the FAO's real GDP projections are modestly stronger than the 2017 Budget outlook over the 2017 to 2020 period.
- For prudent fiscal planning, the Province's real GDP growth projections are slightly below the average of private-sector forecasts. In fact, three economic experts also reviewed these economic assumptions and found them to be reasonable.
- This shows that our plan to make strategic investments in Ontario to grow the economy is working.
- It is also important to note that the FAO affirmed key aspects of the Budget plan, including projecting that a balanced budget is within reach for Ontario in 2017–18 and that the net debt-to-GDP ratio is on a downward trend.

- A balanced budget is providing the Province the fiscal flexibility to invest more in health care, education and other public services that matter most to Ontario families. It also adds stability to Ontario's finances and positions the government to better respond to demographic challenges and unexpected global economic shocks that the province will face over the next decade.

ADDITIONAL MESSAGES

Program Review

- The government is building on the success of recent initiatives to support the Province's fiscal objectives by expanding the review of current programs to identify opportunities for modernization and to ensure that expense growth is managed within the plan laid out in the Budget. Ontario has the lowest program spending per capita of all provinces and territories.

Pensions

- To help inform the future accounting treatment of pension plans the government appointed the Pension Asset Expert Advisory Panel last November. This Panel included experts from the accounting, legal and actuarial professions.
- The panel recommended that the province's share of the net pension assets of both the Ontario Teachers' Pension Plan and the Ontario Public Service Employees' Union Pension Plan be recognized as an asset in Ontario's financial statements, and is consistent with how accounting standards have been applied to these plans since 2001.
- This accounting treatment was used to inform the fiscal outlook presented in the 2017 Budget.

Debt

- A DBRS report on the 2017 Budget stated that "The Province will continue borrowing to fund its capital needs, but the debt burden as a share of the economy is projected to track lower over the medium term with economic growth outpacing debt growth."

KEY QUOTES FROM FAO REPORT

Economic Outlook

"The FAO's economic outlook expects the recent strength of the Ontario economy to continue into 2017 … The FAO's economic forecast is broadly in-line with that presented in the government's 2017 Budget." (p. 2)

"Domestically, Ontario's surging housing market continues to be the largest risk for the economy." (p.2)

"Uncertainty over the future direction of U.S. trade and industrial policy could hamper business investment growth in the near term, which would negatively impact Ontario's competitiveness. Without stronger business sector investment to expand production capacity, the growth potential of several key Ontario industries will be limited." (p.10)

Fiscal Outlook

"Beyond 2017-18, the deficit is projected to deteriorate steadily due to rising expenses and moderate revenue growth. On this basis, staying in balance after 2017-18 will likely require additional fiscal policy measures." (p.2)

"The FAO's net debt-to-GDP projections under both accounting presentations, suggest that additional fiscal measures would be required for the government to achieve its interim target of 35 per cent by 2023-24." (p.22)

"In the 2017 Budget, the government significantly reduced the prudence built into its program spending projection compared to the 2016 Budget, leaving less fiscal flexibility for the government to respond to unexpected events." (p.23)

Ontario's Debt Outlook

"Based on the FAO's application of the Auditor General's recommended accounting for these pension assets, the FAO is projecting a budget deficit of $2.9 billion for 2017-18, rising to $6.5 billion by 2021-22 … Under the government's accounting presentation, the FAO is projecting a budget deficit of $0.5 billion in 2017-18, growing to $3.6 billion by 2021-22." (p.15)

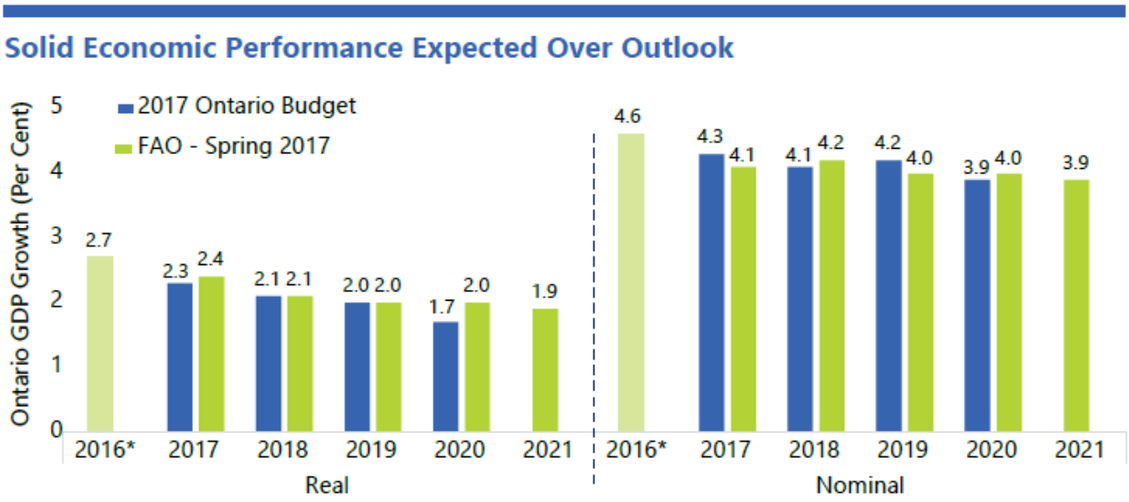
"Ontario's total borrowing requirements are expected to remain high over the outlook. To finance the cost of projected capital spending, on-going deficits and maturing debt issues the FAO estimates that provincial borrowing will average $37 billion per year over the next five years." (p.21)

CURRENT STATUS

The Financial Accountability Officer (FAO) released a report on Wednesday, May 31, 2017, that assesses Ontario's medium-term economic and fiscal outlook. The FAO plans to release these medium-term outlook reports each spring and fall.

In compliance with the *Financial Accountability Officer Act, 2013*, the FAO provided a copy of the final report to the Ministers of Finance and Treasury Board prior to the release.

REPORT SUMMARY



The report is divided into two main chapters:

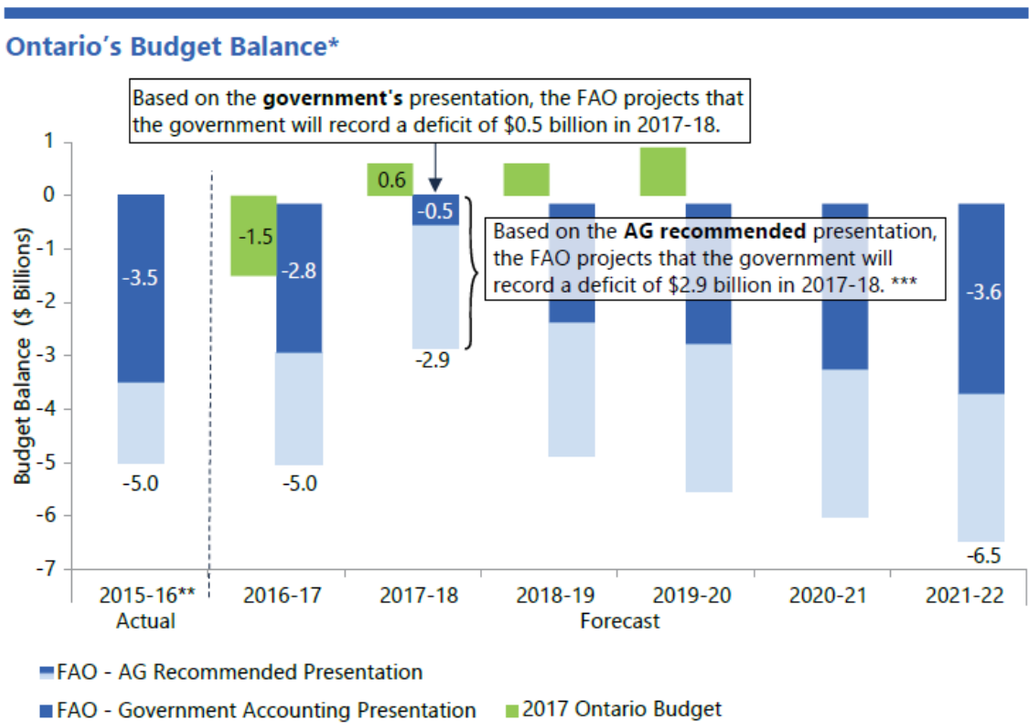
1) The **Economic Outlook** chapter presents the FAO forecast for Ontario's economy out to 2021, and includes a discussion of potential risks.

2) The **Fiscal Outlook** chapter presents the FAO forecast for revenue, expense and the surplus/deficit between 2016-17 and 2021-22.

Economic Outlook

- The FAO has left its forecast for Ontario real GDP growth little changed, on average, over the 2017 to 2020 period relative to its fall forecast, though it included a modest downward revision in 2017 and upward revision in 2019.
- The FAO forecast is broadly consistent with the private sector economists' view that stronger international exports and business investment will be key drivers of Ontario's overall economic growth over the next several years.
- The FAO forecast for real GDP growth is 0.1 percentage points stronger annually, on average, than the 2017 Budget forecast between 2017 and 2020.
- The FAO believes the balance of the risks to the economic outlook is tilted to the downside, particularly risks associated with a correction in Ontario's housing market. (p. 13).

* 2016 are actuals.



Source: Ontario Economic Accounts, 2017 Ontario Budget and FAO.

Fiscal Outlook

- The FAO's current projection of the outlook for budget balance has generally deteriorated relative to the FAO's fall 2016 projection and continues to present a gap against the government's balanced budget projections.
- **Using the government's accounting treatment of net pension assets** the FAO is projecting budget deficits of $2.8 billion in 2016–17, $0.5 billion in 2017–18, $2.2 billion in 2018–19, and $2.6 billion by 2019–20 (excluding the reserve). This represents an improvement in the deficit for 2016–17 and 2017–18, but deterioration over the outlook compared to the FAO's fall report.
    - By comparison, the 2017 Budget projects a $1.5 billion deficit in 2016–17 and surpluses of $0.6 billion in 2017–18 and 2018–19, and a $0.9 billion surplus in 2019–20, excluding the reserve. The FAO also makes projections out to 2021–22 with increasing deficits forecast for those years as well.
    - The FAO suggests that a balanced budget is "within the government's reach in 2017–18" when using the government's accounting method, however "staying in balance after 2017-18 will likely require additional fiscal policy measures"(p.1).

- The FAO notes that under this accounting presentation, Ontario's Public Accounts would be expected to receive a qualified opinion from the Auditor General.

- The FAO's forecast, **based on the Auditor General's recommended accounting treatment of jointly-sponsored pension plans**, projects deficits of $5.0 billion in 2016–17, $2.9 billion in 2017–18, $4.9 billion in 2018–19, and $5.5 billion by 2019–20 (excluding the reserve). Compared to the FAO's fall report, this represents a slight improvement in the deficit for 2016–17 but deterioration in 2017–18 and over the outlook.
    - The FAO notes that "on this basis, it is unlikely that the government will balance the budget without significant fiscal policy adjustments to raise revenue or lower expense" (p. 1).
- For 2016–17 the FAO is forecasting a deficit of $2.8 billion (or $5.0 billion with the pension adjustment) compared with the government's $1.5 billion interim projection.
- The FAO's asserts that its projection for an improved deficit in 2017–18 is due to robust economic performance and strong tax revenue growth in 2016 and 2017, compared to the FAO's fall estimates, and a one-time revenue increase in 2017–18 from increased federal transfers for infrastructure, additional revenue from asset sales and cap and trade proceeds. (p. 1 &19).
- Beginning in 2018-19, the FAO projects that the deficit will gradually deteriorate due to moderate revenue growth, the absence of one-time non-tax measures, and higher program expenses. (p. 16).

* Budget balance before reserve.

** Ontario's 2015-16 Public Accounts reported a deficit of $5.0 billion. Without the pension adjustment, the deficit would have been $3.5 billion.

*** This includes the FAO's estimate of the pension adjustment.

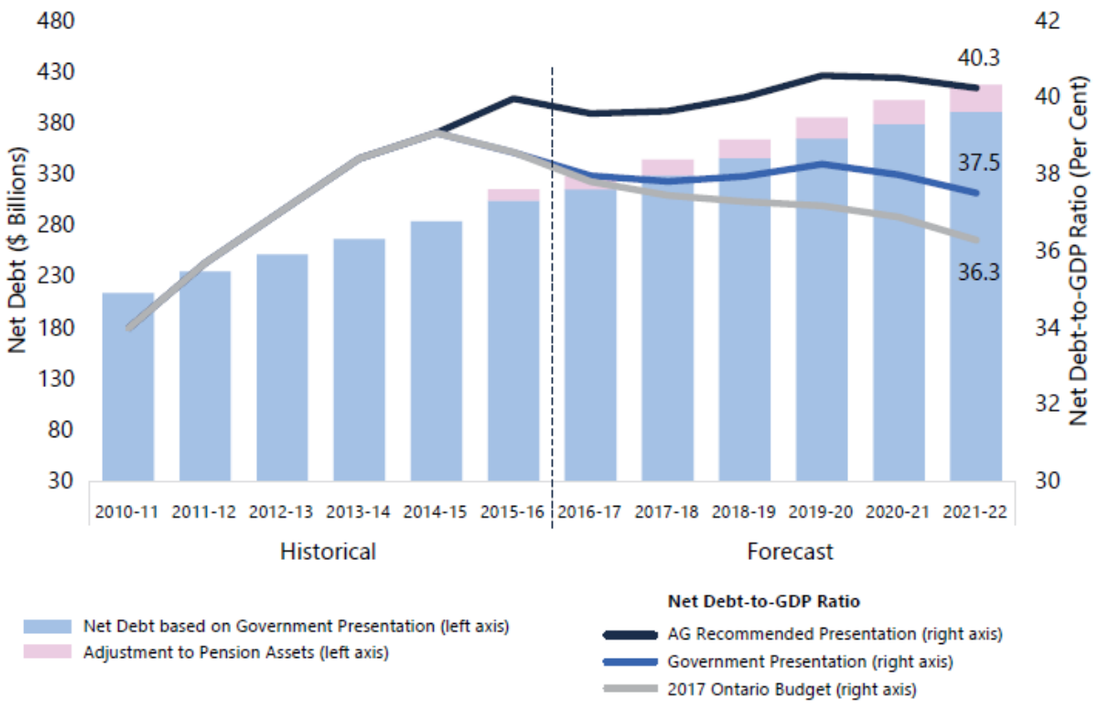
Source: 2015-16 Public Accounts, 2017 Ontario Budget and FAO.

Revenue Assumptions

- Compared to the 2017 Budget, the FAO's projected total revenue is lower mostly because of taxation revenue and, to a lesser extent, Federal Transfers.

FAO less Ontario 2017 Budget Outlook ($ Billions)					
	2016-17	2017-18	2018-19	2019-20	Average
Taxation Revenue	-1.2	-1.4	-2.3	-3.0	-2.0
Government of Canada Transfers	-0.1	0.0	-0.8	-0.8	-0.4
Government Business Enterprises	0.0	0.0	0.0	0.0	0.0
Other Non-Tax Revenue	0.0	0.0	0.0	0.0	0.0
Total Revenue	**-1.2**	**-1.4**	**-3.1**	**-3.7**	**-2.4**

    - FAO's projection for the composition of nominal GDP such as compensation of employees, net operating surplus and household consumption, are all lower than the 2017 Budget projection.
    - The 2017 Budget assumed higher yields from CIT and HST compared to recent projections, reflecting recent tax revenue performance. These yields also exceed those assumed by the FAO.
    - The FAO projection for PIT is consistently lower than the 2017 Budget, partly due to their assumptions regarding tax planning that may have occurred in 2015 by high-income earners. Whereas the 2017 Budget only included an allowance for PIT planning in 2016-17, the FAO estimates that roughly $600 million of Ontario's 2015 PIT revenue was due to income shifting, which lowers taxable income in 2016-17 and 2017-18.
- The FAO's federal transfer outlook is lower than assumed in the 2017 Ontario Budget, probably due to FAO's assumption that Ontario will no longer receive Equalization payments starting in 2019-20 as Ontario's fiscal capacity improves relative to other provinces.
- The FAO's government business enterprise net income outlook and other non-tax revenue is the same as reported in the 2017 Budget.



Expense Assumptions

- The FAO assumes the same program expense outlook as the 2017 Budget up to 2019–20, adjusted to reflect the Auditor General's recommended accounting treatment for jointly sponsored pension plans.(p. 20).
- The FAO's expense outlook includes new spending commitments announced in the 2017 Budget including the new children and youth Pharmacare program, increased funding for hospitals, new child care spaces, and electricity cost relief under the Fair Hydro Plan. This results in average annual growth in program expense of 3.3 per cent between 2016–17 and 2021–22 – slightly below the growth in underlying cost and demographic pressure, which is estimated to be 3.6 per cent on average.
- The FAO projects that Ontario's interest on debt (IOD) payments will grow at an average annual rate of 4.0 per cent from $11.0 billion in 2015–16 to $13.9 billion by 2021–22, reflecting higher debt and rising interest rates over the outlook. The FAO forecasts that IOD will outpace the growth in program expense over the outlook. (p. 21).
- The FAO's projection for IOD expense is lower than the 2017 Budget projections.
- According to the FAO, interest on debt is expected to increase from 8.1per cent of revenues in 2017–18 to 8.9 per cent by 2021–22. Over the past five years IOD as a share of revenues declined steadily, benefitting from declining interest rates. The FAO argues that this ratio is expected to rise sharply due to projected interest rate increases. (p. 21 – Fiscal Chapter).

Debt Outlook

- Using the government's accounting method, the FAO expects net debt to increase by $62 billion over the next five years to $365 billion by 2021–22 or 37.5 per cent of GDP, above the 2017 Budget projection of 36.3 per cent.
- Under the Auditor General's recommended accounting treatment of jointly-sponsored pension plans, the FAO expects Ontario's net debt to rise by $76 billion to $392 billion by 2021–22 or 40.3 per cent of GDP, this represents a slightly lower net debt-to-GDP ratio over the plan and outlook period when compared to the FAO's fall forecast.
- The FAO's net debt-to-GDP projections under both accounting presentations, suggests that additional fiscal measures would be required for the government to achieve its interim target of 35 per cent by 2023-24. (p. 22).

Ontario's Net Debt-to-GDP Ratio

Source: FAO, Ontario Economic Accounts, and 2017 Ontario Budget.
Note: AG recommended presentation is based on FAO estimates of the pension adjustment.

Accounting Treatment

- The FAO's spring outlook includes a detailed section on the different accounting interpretations for net pension assets of jointly sponsored pension plans (Ontario Teachers' Pension Plan and the Ontario Public Service Employees Union Pension Plan) used by the government and the Auditor General.
- While the FAO presents analysis based on both interpretations of the accounting treatment, the report states that "the Officer looks to the Auditor General as the provincial authority on the appropriate interpretation and application of accounting standards for the Province" (p.27).
- Furthermore, the FAO states that in the absence of a written agreement between the co-sponsors of the pension plans, the Auditor General would be expected to provide a qualified opinion on Ontario's 2016-17 Public Accounts.

Risks and Policy Options

- The FAO notes the following risks to Ontario's fiscal plan (p. 23):
    - A housing market correction could pose a significant risk for both the broader economy and the fiscal plan through lower taxation revenues
    - Reduced prudence built into program spending in the 2017 Budget compared to the previous budget – reducing flexibility for the government to respond to unexpected events
    - Interest on debt payments are expected to increase, exposing the government to fiscal risk should interest rates rise faster than expected
- Although the FAO projects deficits, the report notes that the government has a broad range of policy options that could improve the Province's fiscal position, including selling additional public assets beyond announced targets.

APPENDIX A – Detailed Comparison of Outlooks

Key factors driving change since the 2016 FAO fall report:

- Increases in Provincial tax revenue of $2.8 billion in 2016–17 and $4.2 billion in 2017–18 (stronger than expected PIT revenue) due to improving economic growth in 2017
- Declines in Ontario's equalization entitlement. Beyond 2018–19, the FAO is projecting that Ontario will no longer be entitled to Equalization payments – a reflection of the continued strength of the Ontario economy
- Significant new spending across all sectors, including a new children and youth Pharmacare program, increased funding for hospitals, new child care spaces, and electricity cost relief under the Fair Hydro Plan
- Revised estimates for net pension asset expense of jointly sponsored pension plans

Developments since Fall 2016 EFO (AG Recommended Presentation)

	2016-17	2017-18	2018-19	2019-20	2020-21
FAO's Fall 2016 Budget Balance Forecast	**-5.2**	**-2.6**	**-2.8**	**-3.3**	**-3.7**
Developments Since Fall 2016					
Revenue					
Stronger Economic Outlook	2.3	4.1	3.9	4.4	4.7
Lower Federal Transfers[1]	-0.3	0.2	-1.3	-2.4	-2.2
Other Revenue Changes[2]	0.1	0.1	-0.5	-0.6	-0.6
Total	2.1	4.4	2.1	1.3	1.8
Expense					
Higher Spending, including Children and Youth Pharmacare, and Fair Hydro Plan	1.2	3.8	3.0	2.2	2.7
Revised Adjustment for Pension Asset[3]	0.7	0.8	1.1	1.4	1.4
Total	2.0	4.6	4.1	3.6	4.1
Total Developments	**0.2**	**-0.3**	**-2.1**	**-2.3**	**-2.3**
FAO's Spring 2017 Budget Balance Forecast	**-5.0**	**-2.9**	**-4.9**	**-5.5**	**-6.0**

Notes:

1. Change in federal transfers forecast mainly due the reduction in Ontario's Equalization payment.
2. Other revenue changes include the $0.5 billion re-profiling of cap-and-trade proceeds from 2016-17 to 2017-18, and an increase in sales and rentals for 2017-18.
3. In the Fall 2016 EFO, the FAO assumed an annual adjustment of $1.5 billion for the net pension assets of jointly sponsored pension plans. The current projection incorporates the FAO's updated estimates for the pension adjustment of $2.2 billion in 2016-17, increasing to $2.9 billion by 2020-21.

Source: FAO.

Revenue Assumptions:

- Compared to the FAO's fall forecast, from 2016-17 to 2019-20, on average, total revenue is projected to be $2.5 billion higher annually mostly because of higher taxation revenue, partially offset by lower Federal Transfers and other Non-Tax revenues.

FAO Revenue Difference (Spring 2017 less Fall 2016)					
$ Billions	2016-17	2017-18f	2018-19f	2019-20f	Annual Average
Taxation Revenue	**2.8**	**4.2**	**4.4**	**4.9**	**4.1**
Government of Canada Transfers	-0.4	0.2	-1.3	-2.4	-1.0
Government Business Enterprises	0.3	-0.4	0.0	0.1	0.0
Other Non-Tax Revenue	-0.6	0.4	-1.1	-1.3	-0.7
Total Non-Tax Revenue	**-0.7**	**0.2**	**-2.4**	**-3.6**	**-1.6**
Total Revenue	**2.1**	**4.4**	**2.1**	**1.4**	**2.5**

- Taxation revenues are projected to be, on average, $4.1 billion higher annually due to stronger economic growth as nominal GDP growth is, on average, projected to be 0.4 percentage points higher annually.
- More specifically, corporate profits are projected to be 3.3 percentage points higher annually, boosting Corporations Tax revenue. Higher labour income is expected to raise Personal Income Tax revenue while Ontario's strong housing market boosts Sales Tax and Land Transfer Tax revenues.
- Lower Federal Transfers reflects mostly the FAO's projection that Ontario will no longer be entitled to Equalization payments beyond 2018-19.
- Non-Tax revenues are lower, mainly because of the revisions to the multi-year asset optimization target to reflect the progress made so far and revised projections for Carbon allowance proceeds.

Financial Accountability Officer Report: Spring Economic and Fiscal Outlook

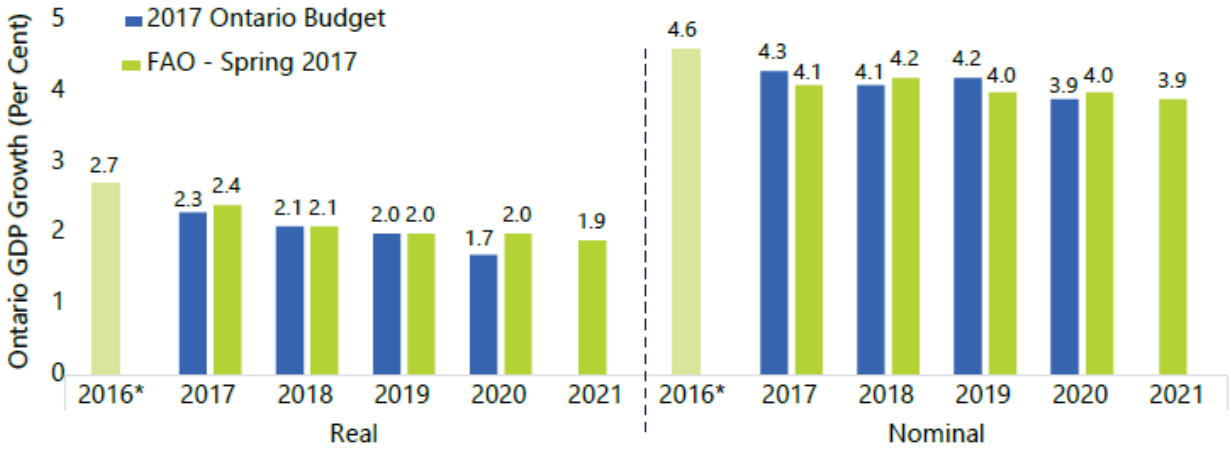
Draft – May 30, 2017 6:00 PM

ISSUE

- The Financial Accountability Officer (FAO) will be releasing a report on May 31, which assesses Ontario's medium-term economic and fiscal outlook.
- This represents the spring update to the FAO's planned release of semi-annual medium-term outlook reports.
- The spring report incorporates economic and fiscal information released since the FAO's fall 2016 report (released November 3, 2016). This includes:
    - New economic data that impacts their revenue and interest on debt outlooks; and
    - New spending commitments from the 2017 Budget.
- The FAO has presented two fiscal projections in its spring report:
    1. A projection that includes the impact of the net pension assets of jointly sponsored pension plans, based on the Auditor General's recommended accounting treatment, and
    2. A projection that excludes this impact based on the government's fiscal presentation in the 2017 Budget, as recommended by the Pension Asset Expert Advisory Panel.
- Both presentations used by the FAO project deficits in each year over the outlook period (2016–17 to 2021–22).
    - Using the government's fiscal presentation of net pension assets, the FAO has stated that balance is within reach in 2017–18 and that beyond this, staying in balance will likely require additional fiscal policy measures.
    - Similarly, using this presentation, the FAO projects that net debt-to-GDP will decline over the outlook but additional fiscal measures would be required for the government to achieve its interim net debt-to-GDP target of 35 per cent by 2023–24 and 27 per cent by 2029–30.
    - The FAO excludes the reserve from its fiscal outlook.

TOP MESSAGES

- I would like to thank the Financial Accountability Officer (FAO) for releasing his spring economic and fiscal outlook for Ontario. We value the FAO's independent assessment and projections of the province's fiscal plan.
- As outlined in the 2017 Budget, the government is projecting a balanced budget for 2017–18 and to remain balanced in 2018–19 and 2019–20.
- The government has a strong track record of beating its fiscal targets. In fact, for the 2016–17 fiscal year, the government is forecasting a deficit of $1.5 billion, beating our annual deficit target again, for the eighth year in a row.
- This Budget builds on the government's track record of fiscal management that has resulted in $29 billion in accumulated deficits being avoided over the past seven years, relative to the 2010 Budget forecast.
- We are also targeting a net debt-to-GDP ratio of 35 per cent by 2023–24 and reducing Ontario's net debt-to-GDP ratio to its pre-recession level of 27 per cent, with current projections showing that this will be achieved by 2029–30.
- Ontario has recorded stronger economic growth than Canada and all other G7 countries over the 2014 to 2016 period, with real GDP rising 2.6 per cent a year.
- Private-sector forecasters expect Ontario will remain one of the fastest growing provinces over the next two years. It should be noted that the FAO's real GDP projections are modestly stronger than the 2017 Budget outlook over the 2017 to 2020 period.
- For prudent fiscal planning, the Province's real GDP growth projections are slightly below the average of private-sector forecasts. In fact, three economic experts also reviewed these economic assumptions and found them to be reasonable.
- This shows that our plan to make strategic investments in Ontario to grow the economy is working.
- It is also important to note that the FAO affirmed key aspects of the Budget plan, including projecting that a balanced budget is within reach for Ontario in 2017–18 and that the net debt-to-GDP ratio is on a downward trend.
- A balanced budget is providing the Province the fiscal flexibility to invest more in health care, education and other public services that matter most to Ontario families. It also adds stability to Ontario's finances and positions the government to better respond to demographic challenges and unexpected global economic shocks that the province will face over the next decade.



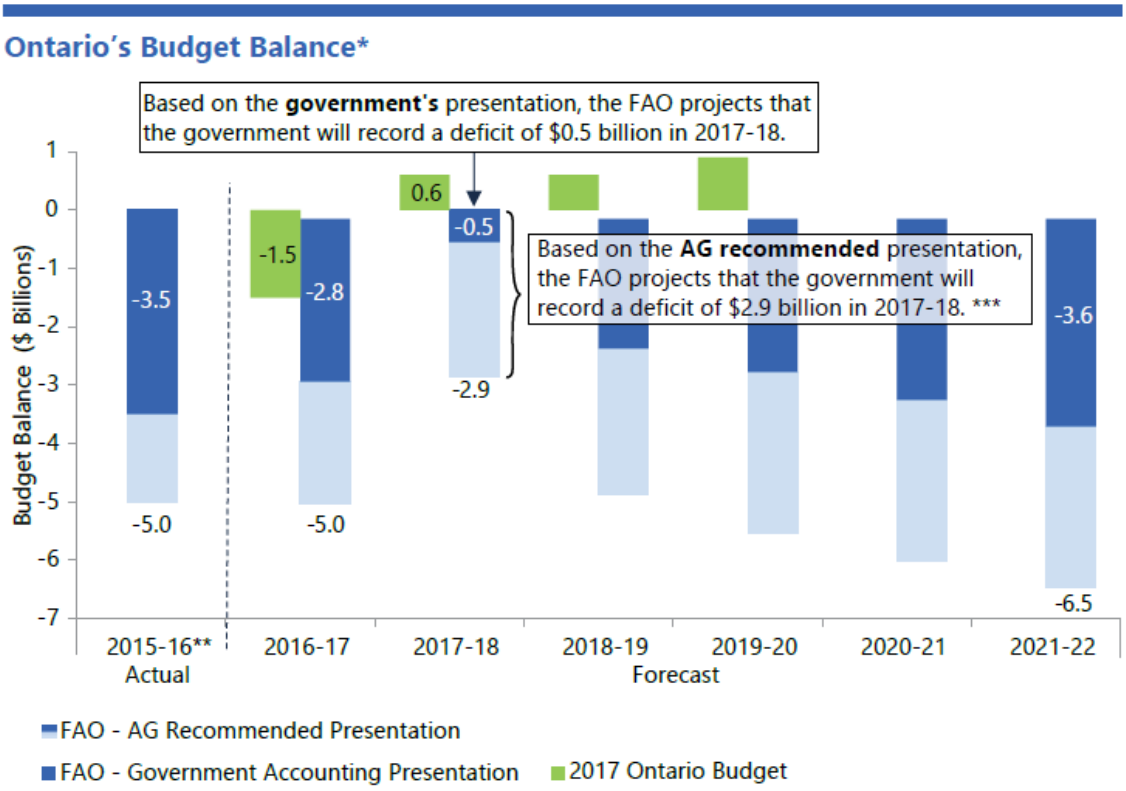
KEY FINDINGS

- The report is divided into two main chapters:
    1) The **Economic Outlook** chapter presents the FAO forecast for Ontario's economy out to 2021, and includes a discussion of potential risks.
    2) The **Fiscal Outlook** chapter presents the FAO forecast for revenue, expense and the surplus/deficit between 2016-17 and 2021-22.

<u>Economic Outlook</u>

- The FAO has left its forecast for Ontario real GDP growth little changed, on average, over the 2017 to 2020 period relative to its fall forecast, though it included a modest downward revision in 2017 and upward revision in 2019.
- The FAO forecast is broadly consistent with the private sector economists' view that stronger international exports and business investment will be key drivers of Ontario's overall economic growth over the next several years.
- The FAO forecast for real GDP growth is 0.1 percentage points stronger annually, on average, than the 2017 Budget forecast between 2017 and 2020.
- The FAO believes the balance of the risks to the economic outlook is tilted to the downside, particularly risks associated with a correction in Ontario's housing market. (p. 13).

Solid Economic Performance Expected Over Outlook



* 2016 are actuals.

Source: Ontario Economic Accounts, 2017 Ontario Budget and FAO.

Fiscal Outlook

- The FAO's current projection of the outlook for budget balance has generally deteriorated relative to the FAO's fall 2016 projection and continues to present a gap against the government's balanced budget projections.
- **Using the government's accounting treatment of net pension assets** the FAO is projecting budget deficits of $2.8 billion in 2016–17, $0.5 billion in 2017–18, $2.2 billion in 2018–19, and $2.6 billion by 2019–20 (excluding the reserve). This represents an improvement in the deficit for 2016–17 and 2017–18, but deterioration over the outlook compared to the FAO's fall report.
    - By comparison, the 2017 Budget projects a $1.5 billion deficit in 2016–17 and surpluses of $0.6 billion in 2017–18 and 2018–19, and a $0.9 billion surplus in 2019–20, excluding the reserve. The FAO also makes projections out to 2021–22 with increasing deficits forecast for those years as well.
    - The FAO suggests that a balanced budget is "within the government's reach in 2017–18" when using the government's accounting method, however "staying in balance after 2017-18 will likely require additional fiscal policy measures"(p.1).
    - The FAO notes that under this accounting presentation, Ontario's Public Accounts would be expected to receive a qualified opinion from the Auditor General.
- The FAO's forecast, **based on the Auditor General's recommended accounting treatment of jointly-sponsored pension plans**, projects deficits of $5.0 billion in 2016–17, $2.9 billion in 2017–18, $4.9 billion in 2018–19, and $5.5 billion by 2019–20 (excluding the reserve). Compared to the FAO's fall report, this represents a slight improvement in the deficit for 2016–17 but deterioration in 2017–18 and over the outlook.
    - The FAO notes that "on this basis, it is unlikely that the government will balance the budget without significant fiscal policy adjustments to raise revenue or lower expense" (p. 1).
- For 2016–17 the FAO is forecasting a deficit of $2.8 billion (or $5.0 billion with the pension adjustment) compared with the government's $1.5 billion interim projection.
- The FAO's asserts that its projection for an improved deficit in 2017–18 is due to robust economic performance and strong tax revenue growth in 2016 and 2017, compared to the FAO's fall estimates, and a one-time revenue increase in 2017–18 from increased federal transfers for infrastructure, additional revenue from asset sales and cap and trade proceeds. (p. 1 &19).

- Beginning in 2018-19, the FAO projects that the deficit will gradually deteriorate due to moderate revenue growth, the absence of one-time non-tax measures, and higher program expenses. (p. 16).

* Budget balance before reserve.

** Ontario's 2015-16 Public Accounts reported a deficit of $5.0 billion. Without the pension adjustment, the deficit would have been $3.5 billion.

*** This includes the FAO's estimate of the pension adjustment.

Source: 2015-16 Public Accounts, 2017 Ontario Budget and FAO.

Revenue Assumptions

- Compared to the 2017 Budget, the FAO's projected total revenue is lower mostly because of taxation revenue and, to a lesser extent, Federal Transfers.

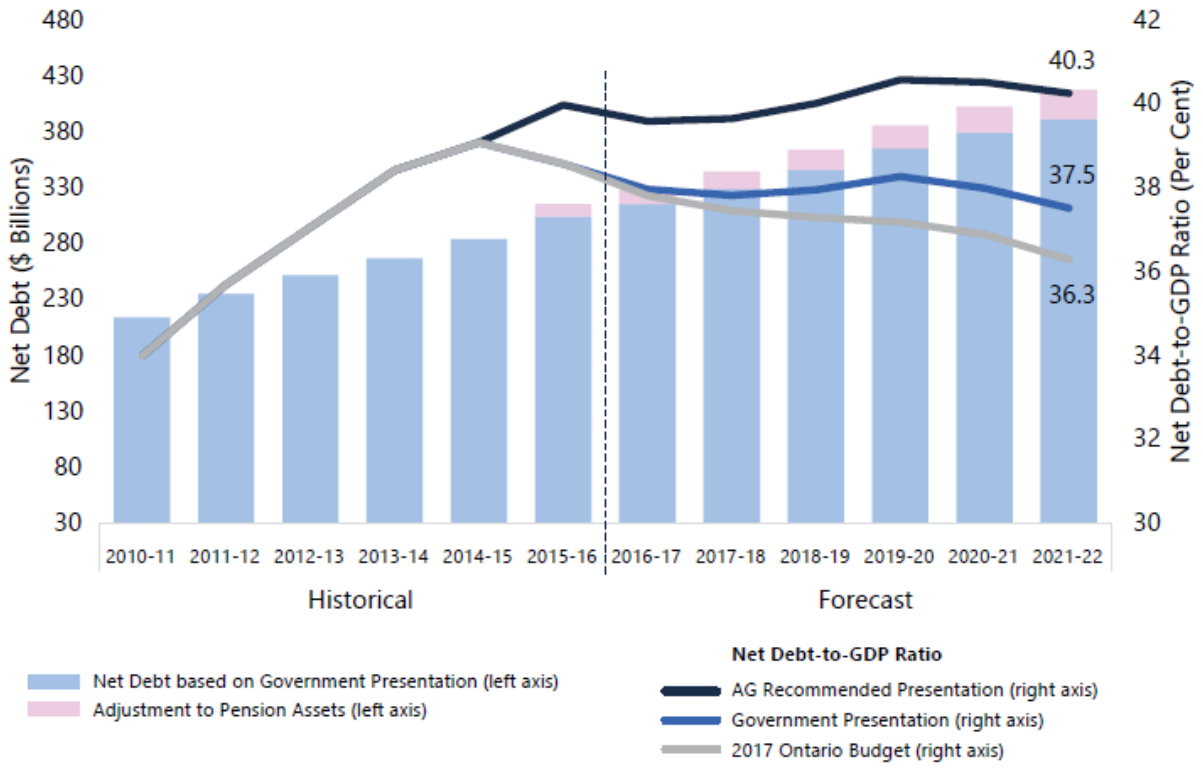
FAO less Ontario 2017 Budget Outlook ($ Billions)

	2016-17	2017-18	2018-19	2019-20	Average
Taxation Revenue	-1.2	-1.4	-2.3	-3.0	-2.0
Government of Canada Transfers	-0.1	0.0	-0.8	-0.8	-0.4
Government Business Enterprises	0.0	0.0	0.0	0.0	0.0
Other Non-Tax Revenue	0.0	0.0	0.0	0.0	0.0
Total Revenue	**-1.2**	**-1.4**	**-3.1**	**-3.7**	**-2.4**

- FAO's projection for the composition of nominal GDP such as compensation of employees, net operating surplus and household consumption, are all lower than the 2017 Budget projection.
- The 2017 Budget assumed higher yields from CIT and HST compared to recent projections, reflecting recent tax revenue performance. These yields also exceed those assumed by the FAO.
- The FAO projection for PIT is consistently lower than the 2017 Budget, partly due to their assumptions regarding tax planning that may have occurred in 2015 by high-income earners. Whereas the 2017 Budget only included an allowance for PIT planning in 2016-17, the FAO estimates that roughly $600 million of Ontario's 2015 PIT revenue was due to income shifting, which lowers taxable income in 2016-17 and 2017-18.

- The FAO's federal transfer outlook is lower than assumed in the 2017 Ontario Budget, probably due to FAO's assumption that Ontario will no longer receive Equalization payments starting in 2019-20 as Ontario's fiscal capacity improves relative to other provinces.
- The FAO's government business enterprise net income outlook and other non-tax revenue is the same as reported in the 2017 Budget.

Expense Assumptions



- The FAO assumes the same program expense outlook as the 2017 Budget up to 2019–20, adjusted to reflect the Auditor General's recommended accounting treatment for jointly sponsored pension plans.(p. 20).
- The FAO's expense outlook includes new spending commitments announced in the 2017 Budget including the new children and youth Pharmacare program, increased funding for hospitals, new child care spaces, and electricity cost relief under the Fair Hydro Plan. This results in average annual growth in program expense of 3.3 per cent between 2016–17 and 2021–22 – slightly below the growth in underlying cost and demographic pressure, which is estimated to be 3.6 per cent on average.
- The FAO projects that Ontario's interest on debt (IOD) payments will grow at an average annual rate of 4.0 per cent from $11.0 billion in 2015–16 to $13.9 billion by 2021–22, reflecting higher debt and rising interest rates over the outlook. The FAO forecasts that IOD will outpace the growth in program expense over the outlook. (p. 21).
- The FAO's projection for IOD expense is lower than the 2017 Budget projections.
- According to the FAO, interest on debt is expected to increase from 8.1per cent of revenues in 2017–18 to 8.9 per cent by 2021–22. Over the past five years IOD as a share of revenues declined steadily, benefitting from declining interest rates. The

FAO argues that this ratio is expected to rise sharply due to projected interest rate increases. (p. 21 – Fiscal Chapter).

Debt Outlook

- Using the government's accounting method, the FAO expects net debt to increase by $62 billion over the next five years to $365 billion by 2021–22 or 37.5 per cent of GDP, above the 2017 Budget projection of 36.3 per cent.
- Under the Auditor General's recommended accounting treatment of jointly-sponsored pension plans, the FAO expects Ontario's net debt to rise by $76 billion to $392 billion by 2021–22 or 40.3 per cent of GDP, this represents a slightly lower net debt-to-GDP ratio over the plan and outlook period when compared to the FAO's fall forecast.
- The FAO's net debt-to-GDP projections under both accounting presentations, suggests that additional fiscal measures would be required for the government to achieve its interim target of 35 per cent by 2023-24. (p. 22).

Ontario's Net Debt-to-GDP Ratio

Source: FAO, Ontario Economic Accounts, and 2017 Ontario Budget.
Note: AG recommended presentation is based on FAO estimates of the pension adjustment.

Accounting Treatment

- The FAO's spring outlook includes a detailed section on the different accounting interpretations for net pension assets of jointly sponsored pension plans (Ontario Teachers' Pension Plan and the Ontario Public Service Employees Union Pension Plan) used by the government and the Auditor General.
- While the FAO presents analysis based on both interpretations of the accounting treatment, the report states that "the Officer looks to the Auditor General as the provincial authority on the appropriate interpretation and application of accounting standards for the Province" (p.27).
- Furthermore, the FAO states that in the absence of a written agreement between the co-sponsors of the pension plans, the Auditor General would be expected to provide a qualified opinion on Ontario's 2016-17 Public Accounts.

Risks and Policy Options

- The FAO notes the following risks to Ontario's fiscal plan (p. 23):
    - A housing market correction could pose a significant risk for both the broader economy and the fiscal plan through lower taxation revenues
    - Reduced prudence built into program spending in the 2017 Budget compared to the previous budget – reducing flexibility for the government to respond to unexpected events
    - Interest on debt payments are expected to increase, exposing the government to fiscal risk should interest rates rise faster than expected
- Although the FAO projects deficits, the report notes that the government has a broad range of policy options that could improve the Province's fiscal position, including selling additional public assets beyond announced targets.

APPENDIX A – Detailed Comparison of Outlooks

Key factors driving change since the 2016 FAO fall report:

- Increases in Provincial tax revenue of $2.8 billion in 2016–17 and $4.2 billion in 2017–18 (stronger than expected PIT revenue) due to improving economic growth in 2017
- Declines in Ontario's equalization entitlement. Beyond 2018–19, the FAO is projecting that Ontario will no longer be entitled to Equalization payments – a reflection of the continued strength of the Ontario economy
- Significant new spending across all sectors, including a new children and youth Pharmacare program, increased funding for hospitals, new child care spaces, and electricity cost relief under the Fair Hydro Plan
- Revised estimates for net pension asset expense of jointly sponsored pension plans

Developments since Fall 2016 EFO (AG Recommended Presentation)

	2016-17	2017-18	2018-19	2019-20	2020-21
FAO's Fall 2016 Budget Balance Forecast	**-5.2**	**-2.6**	**-2.8**	**-3.3**	**-3.7**
Developments Since Fall 2016					
Revenue					
Stronger Economic Outlook	2.3	4.1	3.9	4.4	4.7
Lower Federal Transfers[1]	-0.3	0.2	-1.3	-2.4	-2.2
Other Revenue Changes[2]	0.1	0.1	-0.5	-0.6	-0.6
Total	2.1	4.4	2.1	1.3	1.8
Expense					
Higher Spending, including Children and Youth Pharmacare, and Fair Hydro Plan	1.2	3.8	3.0	2.2	2.7
Revised Adjustment for Pension Asset[3]	0.7	0.8	1.1	1.4	1.4
Total	2.0	4.6	4.1	3.6	4.1
Total Developments	**0.2**	**-0.3**	**-2.1**	**-2.3**	**-2.3**
FAO's Spring 2017 Budget Balance Forecast	**-5.0**	**-2.9**	**-4.9**	**-5.5**	**-6.0**

Notes:

1. Change in federal transfers forecast mainly due the reduction in Ontario's Equalization payment.
2. Other revenue changes include the $0.5 billion re-profiling of cap-and-trade proceeds from 2016-17 to 2017-18, and an increase in sales and rentals for 2017-18.
3. In the Fall 2016 EFO, the FAO assumed an annual adjustment of $1.5 billion for the net pension assets of jointly sponsored pension plans. The current projection incorporates the FAO's updated estimates for the pension adjustment of $2.2 billion in 2016-17, increasing to $2.9 billion by 2020-21.

Source: FAO.

Revenue Assumptions:

- Compared to the FAO's fall forecast, from 2016-17 to 2019-20, on average, total revenue is projected to be $2.5 billion higher annually mostly because of higher taxation revenue, partially offset by lower Federal Transfers and other Non-Tax revenues.

FAO Revenue Difference (Spring 2017 less Fall 2016)

$ Billions	2016-17	2017-18f	2018-19f	2019-20f	Annual Average
Taxation Revenue	**2.8**	**4.2**	**4.4**	**4.9**	**4.1**
Government of Canada Transfers	-0.4	0.2	-1.3	-2.4	-1.0
Government Business Enterprises	0.3	-0.4	0.0	0.1	0.0
Other Non-Tax Revenue	-0.6	0.4	-1.1	-1.3	-0.7
Total Non-Tax Revenue	**-0.7**	**0.2**	**-2.4**	**-3.6**	**-1.6**
Total Revenue	**2.1**	**4.4**	**2.1**	**1.4**	**2.5**

  - Taxation revenues are projected to be, on average, $4.1 billion higher annually due to stronger economic growth as nominal GDP growth is, on average, projected to be 0.4 percentage points higher annually.
  - More specifically, corporate profits are projected to be 3.3 percentage points higher annually, boosting Corporations Tax revenue. Higher labour income is expected to raise Personal Income Tax revenue while Ontario's strong housing market boosts Sales Tax and Land Transfer Tax revenues.
  - Lower Federal Transfers reflects mostly the FAO's projection that Ontario will no longer be entitled to Equalization payments beyond 2018-19.
  - Non-Tax revenues are lower, mainly because of the revisions to the multi-year asset optimization target to reflect the progress made so far and revised projections for Carbon allowance proceeds.

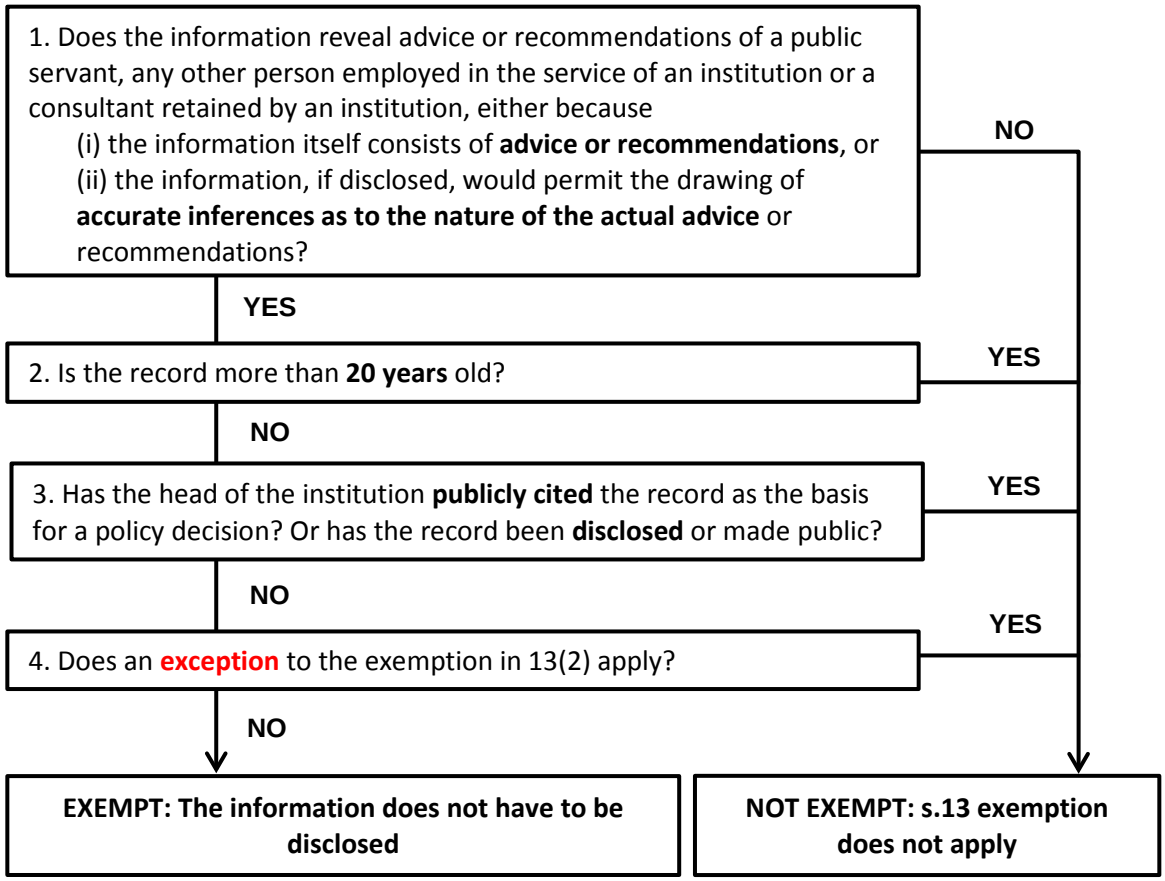
Guide to Section 13 of FIPPA



Summary

Subsection 13(1) of FIPPA provides for a **discretionary exemption** permitting an "institution" (i.e. the Ministry of Finance) to refuse to disclose information that "would reveal **advice or recommendations** of a public servant, any other person employed in the service of an institution or a consultant retained by an institution". However, if the information falls into one of the categories listed in subsections (2) or (3), it cannot be withheld under subsection 13(1).

Importantly, if only a portion of the record is exempt from disclosure under section 13, the record may be disclosed with that information be severed and redacted.

This guide applies to the application of the section 13 exemption, not to other possible exemptions in FIPPA.

To determine whether the section 13 exemption applies to a record or part of a record, consider the following flowchart. See the following pages for further details.

This guide is intended for informative purposes only; it is not legal advice. Not to be distributed externally.

1. Does the record reveal <u>advice or recommendations</u> of a <u>public servant, any other person employed in the service of an institution or a consultant retained by an institution</u>, either because

(i) the information itself consists of advice or recommendations, or

(ii) the information, if disclosed, would permit the drawing of accurate inferences as to the nature of the actual advice or recommendations?

"**Recommendations**" refers to material that relates to a suggested course of action that will ultimately be accepted or rejected by the person being advised, and can be express or inferred.

"**Advice**"

- Has a broader meaning than "recommendations".
- Includes "**policy options**", i.e. lists of alternative courses of action relating to a decision to be made even if they do not include a specific recommendation on which option to take.
- An evaluation or analysis of information.
- May include:
  - Advantages/disadvantages of each option;
  - List of all alternatives provided by person awaiting further instructions from the decision maker for which options should be considered in depth; or
  - Advantages/disadvantages perceived as being obvious or have already been canvassed already or in a prior draft, where options may appear without any additional explanation.
- The advice did not have to be communicated to a decision-maker – it only must have been ascertainable at the time the advice/recommendations were prepared that it was in fact advice/recommendations.
- Must be proximate to the decision-maker, for the benefit of the institution, and not for the benefit of third parties.

Notes:

- Drafts/earlier versions can qualify for the section 13 exemption, if the criteria in the flowchart above are satisfied.
- The following information likely does <u>not</u> qualify under section 13: information prepared for public dissemination, factual/background information (see below)

"**Public servant**", "**Person employed in the service of an institution**", or "**Consultant retained by an institution**":

- Includes:
  - Employees of an institution subject to FIPPA, and employees of other Canadian governments and institutions that fall under the umbrella of "the Crown".
- Does <u>not</u> include:
  - Third parties outside government who are not consultants.
  - Third parties in a contractual relationship with an institution not in the nature of a consultant relationship.
  - Consultants with no formal engagement with the institution for professional services (though formal engagement does not require a payment of a fee).

This guide is intended for informative purposes only; it is not legal advice. Not to be distributed externally.

2. Is the record more than 20 years old?

- If the record is over 20 years old, the section 13 exemption no longer applies.

3. Has the head of the institution cited the record as the basis for a policy decision? Or has the record been disclosed or made public?

- Exemption only applies where the institution, not a third party, claims its reliance on the record. Exemption cannot apply if the advice or recommendations have been publicly disclosed.

4. Does an exception to the exemption in 13(2) apply?

Factual material does not qualify for the section 13 exemption

- Factual material is a coherent body of facts separate and distinct from the advice and recommendations contained in the record.
- However, if the facts are so interwoven with the advice/recommendation that it cannot reasonably be considered a separate and distinct body of fact and cannot reasonably be severed, then it does not have to be disclosed.

A record or part of a record does not qualify for the section 13 exemption if it is:

- a **statistical survey**,
- a **formal valuator report** (i.e. a formal statement or account of the results of the collation and consideration of information, and generally would not include mere observations or recordings of fact),
- an **environmental impact statement** or similar record,
- a **product test report** for government equipment testing or consumer test,
- a **performance or efficiency report** or study of an institution,
- a government policy or **project feasibility** or other technical study (incl. a cost estimate),
- a **results report of field research** undertaken before the formulation of a policy proposal,
- a **final plan or proposal to change a program** or establish a new program (incl. a budgetary estimate), whether or not it is subject to approval, unless it is to be submitted to the Executive Council or its committees,
- a report of an interdepartmental committee task force or similar body, or of a committee or task force within an institution, which has been established for the purpose of preparing a **report on a particular topic**, unless the report is to be submitted to the Executive Council or its committees,
- a **report of a committee**, council or other body attached to an institution, which has been established for the purpose of undertaking inquiries and making reports/recommendations to the institution,
- the **reasons for a final decision of the institution** made during/at the end of the exercise of discretionary power conferred by/under an enactment/scheme administered by the institution, whether or not the enactment/scheme allows an appeal to be taken against the decision, whether or not the reasons (i) are contained in an internal memo of the institution or in a letter addressed to a named person, or (ii) were given by the decision-maker or were incorporated by reference into the decision.

Hi Ken,

Office of the Budget would like us to review the attached CIN and Report Summary that will be released in response to an FOI request for notes prepared for the DM and Minister of Finance on the FAO's 2017 Budget report. There's not a lot here for us, but several mentions of debt and IOD forecasts (see Expense Assumptions, Debt Outlook, and Risks). Let me know if there's any concerns, if anything needs to be redacted in accordance with FIPPA.

Note deadline of 3pm today.

Thanks, Anna

Subject: Response to FOI Request A-17-136 - FAO Projections

Hi Ghufran and Anna,

The FOI Office sent Office of the Budget an information request related to analysis on FAO projections. The clarified request follows:

> **"…all analysis (Briefing notes and Slide decks) prepared for the Minister of Finance or the Deputy Minister of Finance regarding the Financial Accountability Officer's report on 2017 Ontario Budget".**

To respond to this request, we're planning to share the attached Briefing Note and CIN that our divisions prepared for the Minister and Deputy Minister after the release of the FAO's Spring Economic and Fiscal Outlook back in late May. We chose to **redact *only* sections** of these notes that include any **analysis based on non-public documents & information** (2017 Budget, the Spring 2017 and Fall 2016 FAO reports) as per section 13 exemption under the FIPPA.

Could you please review the attached an advise if you have any concerns with the sections currently marked for redaction or if you suggest including any additional redactions **by 3pm today (if possible)**?

Let me know if you have any questions.

Thanks,
Ryan

Subject: RE: A-17-136 - FAO Projections

Hi Ryan,

Our office has received clarification for the request.

Clarified Request: Please provide all analysis (Briefing notes and Slide decks) prepared for the Minister of Finance or the Deputy Minister of Finance regarding the Financial Accountability Officer's report on 2017 Ontario Budget.

CLARIFICATION
If further clarification is required from the requester, **please contact our office as soon as possible to discuss**

Request received: August 21, 2017

Clarification received: September 14, 2017

Final recommendation due: **September 29, 2017**

If you have any questions, please feel free to contact me.

Best,

Ritvik

May 31, 2017

FAO's Spring 2017 Economic and Fiscal Outlook

On May 31, 2017, the FAO released its spring 2017 assessment of Ontario's medium-term economic and fiscal outlook. The FAO is projecting budget deficits in all years between 2016–17 and 2021–22. The report states that while balance is within reach in 2017–18, significant fiscal adjustments will likely be required to maintain budget balance through the outlook.

TOP MESSAGES

- I would like to thank the Financial Accountability Officer (FAO) for releasing his spring economic and fiscal outlook for Ontario. We value the FAO's independent assessment and projections of the province's fiscal plan.
- As outlined in the 2017 Budget, the government is projecting a balanced budget for 2017–18 and to remain balanced in 2018–19 and 2019–20.
- The government has a strong track record of beating its fiscal targets. In fact, for the 2016–17 fiscal year, the government is forecasting a deficit of $1.5 billion, beating our annual deficit target again, for the eighth year in a row.
- This Budget builds on the government's track record of fiscal management that has resulted in $29 billion in accumulated deficits being avoided over the past seven years, relative to the 2010 Budget forecast.
- We are also targeting a net debt-to-GDP ratio of 35 per cent by 2023–24 and reducing Ontario's net debt-to-GDP ratio to its pre-recession level of 27 per cent, with current projections showing that this will be achieved by 2029–30.
- Ontario has recorded stronger economic growth than Canada and all other G7 countries over the 2014 to 2016 period, with real GDP rising 2.6 per cent a year.
- Private-sector forecasters expect Ontario will remain one of the fastest growing provinces over the next two years. It should be noted that the FAO's real GDP projections are modestly stronger than the 2017 Budget outlook over the 2017 to 2020 period.
- For prudent fiscal planning, the Province's real GDP growth projections are slightly below the average of private-sector forecasts. In fact, three economic experts also reviewed these economic assumptions and found them to be reasonable.
- This shows that our plan to make strategic investments in Ontario to grow the economy is working.
- It is also important to note that the FAO affirmed key aspects of the Budget plan, including projecting that a balanced budget is within reach for Ontario in 2017–18 and that the net debt-to-GDP ratio is on a downward trend.

- A balanced budget is providing the Province the fiscal flexibility to invest more in health care, education and other public services that matter most to Ontario families. It also adds stability to Ontario's finances and positions the government to better respond to demographic challenges and unexpected global economic shocks that the province will face over the next decade.

ADDITIONAL MESSAGES

Program Review

- The government is building on the success of recent initiatives to support the Province's fiscal objectives by expanding the review of current programs to identify opportunities for modernization and to ensure that expense growth is managed within the plan laid out in the Budget. Ontario has the lowest program spending per capita of all provinces and territories.

Pensions

- To help inform the future accounting treatment of pension plans the government appointed the Pension Asset Expert Advisory Panel last November. This Panel included experts from the accounting, legal and actuarial professions.
- The panel recommended that the province's share of the net pension assets of both the Ontario Teachers' Pension Plan and the Ontario Public Service Employees' Union Pension Plan be recognized as an asset in Ontario's financial statements, and is consistent with how accounting standards have been applied to these plans since 2001.
- This accounting treatment was used to inform the fiscal outlook presented in the 2017 Budget.

Debt

- A DBRS report on the 2017 Budget stated that "The Province will continue borrowing to fund its capital needs, but the debt burden as a share of the economy is projected to track lower over the medium term with economic growth outpacing debt growth."

KEY QUOTES FROM FAO REPORT

Economic Outlook

"The FAO's economic outlook expects the recent strength of the Ontario economy to continue into 2017 … The FAO's economic forecast is broadly in-line with that presented in the government's 2017 Budget." (p. 2)

"Domestically, Ontario's surging housing market continues to be the largest risk for the economy." (p.2)

"Uncertainty over the future direction of U.S. trade and industrial policy could hamper business investment growth in the near term, which would negatively impact Ontario's competitiveness. Without stronger business sector investment to expand production capacity, the growth potential of several key Ontario industries will be limited." (p.10)

Fiscal Outlook

"Beyond 2017-18, the deficit is projected to deteriorate steadily due to rising expenses and moderate revenue growth. On this basis, staying in balance after 2017-18 will likely require additional fiscal policy measures." (p.2)

"The FAO's net debt-to-GDP projections under both accounting presentations, suggest that additional fiscal measures would be required for the government to achieve its interim target of 35 per cent by 2023-24." (p.22)

"In the 2017 Budget, the government significantly reduced the prudence built into its program spending projection compared to the 2016 Budget, leaving less fiscal flexibility for the government to respond to unexpected events." (p.23)

Ontario's Debt Outlook

"Based on the FAO's application of the Auditor General's recommended accounting for these pension assets, the FAO is projecting a budget deficit of $2.9 billion for 2017-18, rising to $6.5 billion by 2021-22 … Under the government's accounting presentation, the FAO is projecting a budget deficit of $0.5 billion in 2017-18, growing to $3.6 billion by 2021-22." (p.15)

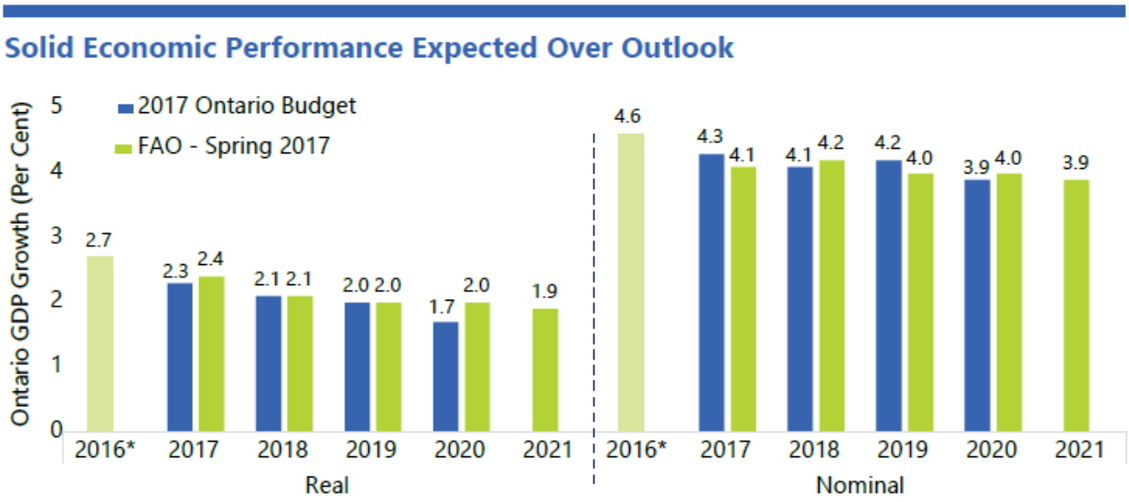
"Ontario's total borrowing requirements are expected to remain high over the outlook. To finance the cost of projected capital spending, on-going deficits and maturing debt issues the FAO estimates that provincial borrowing will average $37 billion per year over the next five years." (p.21)

CURRENT STATUS

The Financial Accountability Officer (FAO) released a report on Wednesday, May 31, 2017, that assesses Ontario's medium-term economic and fiscal outlook. The FAO plans to release these medium-term outlook reports each spring and fall.

In compliance with the *Financial Accountability Officer Act, 2013*, the FAO provided a copy of the final report to the Ministers of Finance and Treasury Board prior to the release.

REPORT SUMMARY



The report is divided into two main chapters:

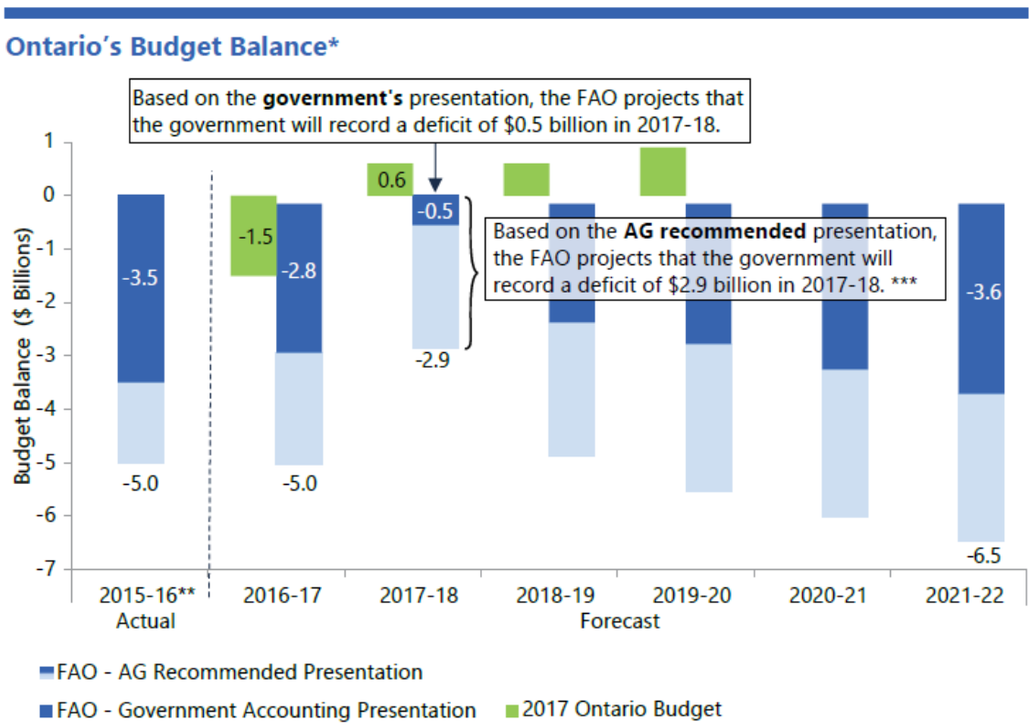
1) The **Economic Outlook** chapter presents the FAO forecast for Ontario's economy out to 2021, and includes a discussion of potential risks.

2) The **Fiscal Outlook** chapter presents the FAO forecast for revenue, expense and the surplus/deficit between 2016-17 and 2021-22.

Economic Outlook

- The FAO has left its forecast for Ontario real GDP growth little changed, on average, over the 2017 to 2020 period relative to its fall forecast, though it included a modest downward revision in 2017 and upward revision in 2019.
- The FAO forecast is broadly consistent with the private sector economists' view that stronger international exports and business investment will be key drivers of Ontario's overall economic growth over the next several years.
- The FAO forecast for real GDP growth is 0.1 percentage points stronger annually, on average, than the 2017 Budget forecast between 2017 and 2020.
- The FAO believes the balance of the risks to the economic outlook is tilted to the downside, particularly risks associated with a correction in Ontario's housing market. (p. 13).

* 2016 are actuals.



Source: Ontario Economic Accounts, 2017 Ontario Budget and FAO.

Fiscal Outlook

- The FAO's current projection of the outlook for budget balance has generally deteriorated relative to the FAO's fall 2016 projection and continues to present a gap against the government's balanced budget projections.
- **Using the government's accounting treatment of net pension assets** the FAO is projecting budget deficits of $2.8 billion in 2016–17, $0.5 billion in 2017–18, $2.2 billion in 2018–19, and $2.6 billion by 2019–20 (excluding the reserve). This represents an improvement in the deficit for 2016–17 and 2017–18, but deterioration over the outlook compared to the FAO's fall report.
    - By comparison, the 2017 Budget projects a $1.5 billion deficit in 2016–17 and surpluses of $0.6 billion in 2017–18 and 2018–19, and a $0.9 billion surplus in 2019–20, excluding the reserve. The FAO also makes projections out to 2021–22 with increasing deficits forecast for those years as well.
    - The FAO suggests that a balanced budget is "within the government's reach in 2017–18" when using the government's accounting method, however "staying in balance after 2017-18 will likely require additional fiscal policy measures"(p.1).

- The FAO notes that under this accounting presentation, Ontario's Public Accounts would be expected to receive a qualified opinion from the Auditor General.

- The FAO's forecast, **based on the Auditor General's recommended accounting treatment of jointly-sponsored pension plans**, projects deficits of $5.0 billion in 2016–17, $2.9 billion in 2017–18, $4.9 billion in 2018–19, and $5.5 billion by 2019–20 (excluding the reserve). Compared to the FAO's fall report, this represents a slight improvement in the deficit for 2016–17 but deterioration in 2017–18 and over the outlook.
    - The FAO notes that "on this basis, it is unlikely that the government will balance the budget without significant fiscal policy adjustments to raise revenue or lower expense" (p. 1).
- For 2016–17 the FAO is forecasting a deficit of $2.8 billion (or $5.0 billion with the pension adjustment) compared with the government's $1.5 billion interim projection.
- The FAO's asserts that its projection for an improved deficit in 2017–18 is due to robust economic performance and strong tax revenue growth in 2016 and 2017, compared to the FAO's fall estimates, and a one-time revenue increase in 2017–18 from increased federal transfers for infrastructure, additional revenue from asset sales and cap and trade proceeds. (p. 1 &19).
- Beginning in 2018-19, the FAO projects that the deficit will gradually deteriorate due to moderate revenue growth, the absence of one-time non-tax measures, and higher program expenses. (p. 16).

* Budget balance before reserve.

** Ontario's 2015-16 Public Accounts reported a deficit of $5.0 billion. Without the pension adjustment, the deficit would have been $3.5 billion.

*** This includes the FAO's estimate of the pension adjustment.

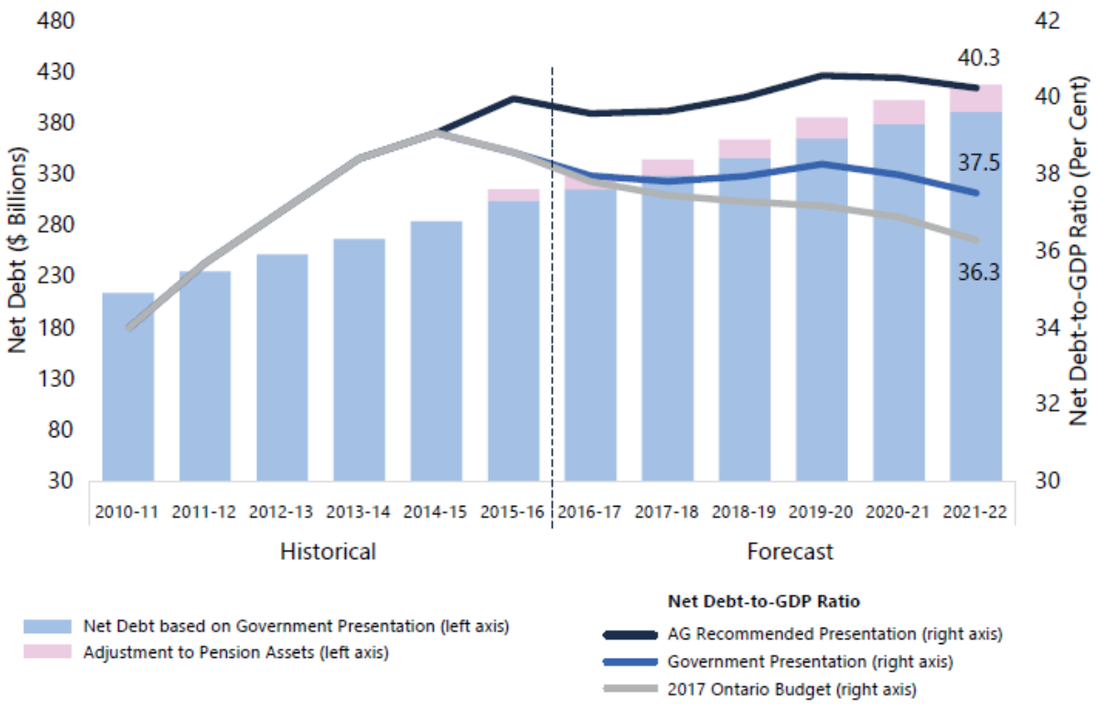
Source: 2015-16 Public Accounts, 2017 Ontario Budget and FAO.

Revenue Assumptions

- Compared to the 2017 Budget, the FAO's projected total revenue is lower mostly because of taxation revenue and, to a lesser extent, Federal Transfers.

FAO less Ontario 2017 Budget Outlook ($ Billions)					
	2016-17	2017-18	2018-19	2019-20	Average
Taxation Revenue	-1.2	-1.4	-2.3	-3.0	-2.0
Government of Canada Transfers	-0.1	0.0	-0.8	-0.8	-0.4
Government Business Enterprises	0.0	0.0	0.0	0.0	0.0
Other Non-Tax Revenue	0.0	0.0	0.0	0.0	0.0
Total Revenue	**-1.2**	**-1.4**	**-3.1**	**-3.7**	**-2.4**

    - FAO's projection for the composition of nominal GDP such as compensation of employees, net operating surplus and household consumption, are all lower than the 2017 Budget projection.
    - The 2017 Budget assumed higher yields from CIT and HST compared to recent projections, reflecting recent tax revenue performance. These yields also exceed those assumed by the FAO.
    - The FAO projection for PIT is consistently lower than the 2017 Budget, partly due to their assumptions regarding tax planning that may have occurred in 2015 by high-income earners. Whereas the 2017 Budget only included an allowance for PIT planning in 2016-17, the FAO estimates that roughly $600 million of Ontario's 2015 PIT revenue was due to income shifting, which lowers taxable income in 2016-17 and 2017-18.
- The FAO's federal transfer outlook is lower than assumed in the 2017 Ontario Budget, probably due to FAO's assumption that Ontario will no longer receive Equalization payments starting in 2019-20 as Ontario's fiscal capacity improves relative to other provinces.
- The FAO's government business enterprise net income outlook and other non-tax revenue is the same as reported in the 2017 Budget.



Expense Assumptions

- The FAO assumes the same program expense outlook as the 2017 Budget up to 2019–20, adjusted to reflect the Auditor General's recommended accounting treatment for jointly sponsored pension plans.(p. 20).
- The FAO's expense outlook includes new spending commitments announced in the 2017 Budget including the new children and youth Pharmacare program, increased funding for hospitals, new child care spaces, and electricity cost relief under the Fair Hydro Plan. This results in average annual growth in program expense of 3.3 per cent between 2016–17 and 2021–22 – slightly below the growth in underlying cost and demographic pressure, which is estimated to be 3.6 per cent on average.
- The FAO projects that Ontario's interest on debt (IOD) payments will grow at an average annual rate of 4.0 per cent from $11.0 billion in 2015–16 to $13.9 billion by 2021–22, reflecting higher debt and rising interest rates over the outlook. The FAO forecasts that IOD will outpace the growth in program expense over the outlook. (p. 21).
- The FAO's projection for IOD expense is lower than the 2017 Budget projections.
- According to the FAO, interest on debt is expected to increase from 8.1per cent of revenues in 2017–18 to 8.9 per cent by 2021–22. Over the past five years IOD as a share of revenues declined steadily, benefitting from declining interest rates. The FAO argues that this ratio is expected to rise sharply due to projected interest rate increases. (p. 21 – Fiscal Chapter).

Debt Outlook

- Using the government's accounting method, the FAO expects net debt to increase by $62 billion over the next five years to $365 billion by 2021–22 or 37.5 per cent of GDP, above the 2017 Budget projection of 36.3 per cent.
- Under the Auditor General's recommended accounting treatment of jointly-sponsored pension plans, the FAO expects Ontario's net debt to rise by $76 billion to $392 billion by 2021–22 or 40.3 per cent of GDP, this represents a slightly lower net debt-to-GDP ratio over the plan and outlook period when compared to the FAO's fall forecast.
- The FAO's net debt-to-GDP projections under both accounting presentations, suggests that additional fiscal measures would be required for the government to achieve its interim target of 35 per cent by 2023-24. (p. 22).

Ontario's Net Debt-to-GDP Ratio

Source: FAO, Ontario Economic Accounts, and 2017 Ontario Budget.
Note: AG recommended presentation is based on FAO estimates of the pension adjustment.

Accounting Treatment

- The FAO's spring outlook includes a detailed section on the different accounting interpretations for net pension assets of jointly sponsored pension plans (Ontario Teachers' Pension Plan and the Ontario Public Service Employees Union Pension Plan) used by the government and the Auditor General.
- While the FAO presents analysis based on both interpretations of the accounting treatment, the report states that "the Officer looks to the Auditor General as the provincial authority on the appropriate interpretation and application of accounting standards for the Province" (p.27).
- Furthermore, the FAO states that in the absence of a written agreement between the co-sponsors of the pension plans, the Auditor General would be expected to provide a qualified opinion on Ontario's 2016-17 Public Accounts.

Risks and Policy Options

- The FAO notes the following risks to Ontario's fiscal plan (p. 23):
    - A housing market correction could pose a significant risk for both the broader economy and the fiscal plan through lower taxation revenues
    - Reduced prudence built into program spending in the 2017 Budget compared to the previous budget – reducing flexibility for the government to respond to unexpected events
    - Interest on debt payments are expected to increase, exposing the government to fiscal risk should interest rates rise faster than expected
- Although the FAO projects deficits, the report notes that the government has a broad range of policy options that could improve the Province's fiscal position, including selling additional public assets beyond announced targets.

APPENDIX A – Detailed Comparison of Outlooks

Key factors driving change since the 2016 FAO fall report:

- Increases in Provincial tax revenue of $2.8 billion in 2016–17 and $4.2 billion in 2017–18 (stronger than expected PIT revenue) due to improving economic growth in 2017
- Declines in Ontario's equalization entitlement. Beyond 2018–19, the FAO is projecting that Ontario will no longer be entitled to Equalization payments – a reflection of the continued strength of the Ontario economy
- Significant new spending across all sectors, including a new children and youth Pharmacare program, increased funding for hospitals, new child care spaces, and electricity cost relief under the Fair Hydro Plan
- Revised estimates for net pension asset expense of jointly sponsored pension plans

Developments since Fall 2016 EFO (AG Recommended Presentation)

	2016-17	2017-18	2018-19	2019-20	2020-21
FAO's Fall 2016 Budget Balance Forecast	**-5.2**	**-2.6**	**-2.8**	**-3.3**	**-3.7**
Developments Since Fall 2016					
Revenue					
Stronger Economic Outlook	2.3	4.1	3.9	4.4	4.7
Lower Federal Transfers[1]	-0.3	0.2	-1.3	-2.4	-2.2
Other Revenue Changes[2]	0.1	0.1	-0.5	-0.6	-0.6
Total	2.1	4.4	2.1	1.3	1.8
Expense					
Higher Spending, including Children and Youth Pharmacare, and Fair Hydro Plan	1.2	3.8	3.0	2.2	2.7
Revised Adjustment for Pension Asset[3]	0.7	0.8	1.1	1.4	1.4
Total	2.0	4.6	4.1	3.6	4.1
Total Developments	**0.2**	**-0.3**	**-2.1**	**-2.3**	**-2.3**
FAO's Spring 2017 Budget Balance Forecast	**-5.0**	**-2.9**	**-4.9**	**-5.5**	**-6.0**

Notes:

1. Change in federal transfers forecast mainly due the reduction in Ontario's Equalization payment.
2. Other revenue changes include the $0.5 billion re-profiling of cap-and-trade proceeds from 2016-17 to 2017-18, and an increase in sales and rentals for 2017-18.
3. In the Fall 2016 EFO, the FAO assumed an annual adjustment of $1.5 billion for the net pension assets of jointly sponsored pension plans. The current projection incorporates the FAO's updated estimates for the pension adjustment of $2.2 billion in 2016-17, increasing to $2.9 billion by 2020-21.

Source: FAO.

Revenue Assumptions:

- Compared to the FAO's fall forecast, from 2016-17 to 2019-20, on average, total revenue is projected to be $2.5 billion higher annually mostly because of higher taxation revenue, partially offset by lower Federal Transfers and other Non-Tax revenues.

FAO Revenue Difference (Spring 2017 less Fall 2016)					
$ Billions	2016-17	2017-18f	2018-19f	2019-20f	Annual Average
Taxation Revenue	**2.8**	**4.2**	**4.4**	**4.9**	**4.1**
Government of Canada Transfers	-0.4	0.2	-1.3	-2.4	-1.0
Government Business Enterprises	0.3	-0.4	0.0	0.1	0.0
Other Non-Tax Revenue	-0.6	0.4	-1.1	-1.3	-0.7
Total Non-Tax Revenue	**-0.7**	**0.2**	**-2.4**	**-3.6**	**-1.6**
Total Revenue	**2.1**	**4.4**	**2.1**	**1.4**	**2.5**

- Taxation revenues are projected to be, on average, $4.1 billion higher annually due to stronger economic growth as nominal GDP growth is, on average, projected to be 0.4 percentage points higher annually.
- More specifically, corporate profits are projected to be 3.3 percentage points higher annually, boosting Corporations Tax revenue. Higher labour income is expected to raise Personal Income Tax revenue while Ontario's strong housing market boosts Sales Tax and Land Transfer Tax revenues.
- Lower Federal Transfers reflects mostly the FAO's projection that Ontario will no longer be entitled to Equalization payments beyond 2018-19.
- Non-Tax revenues are lower, mainly because of the revisions to the multi-year asset optimization target to reflect the progress made so far and revised projections for Carbon allowance proceeds.

Financial Accountability Officer Report: Spring Economic and Fiscal Outlook

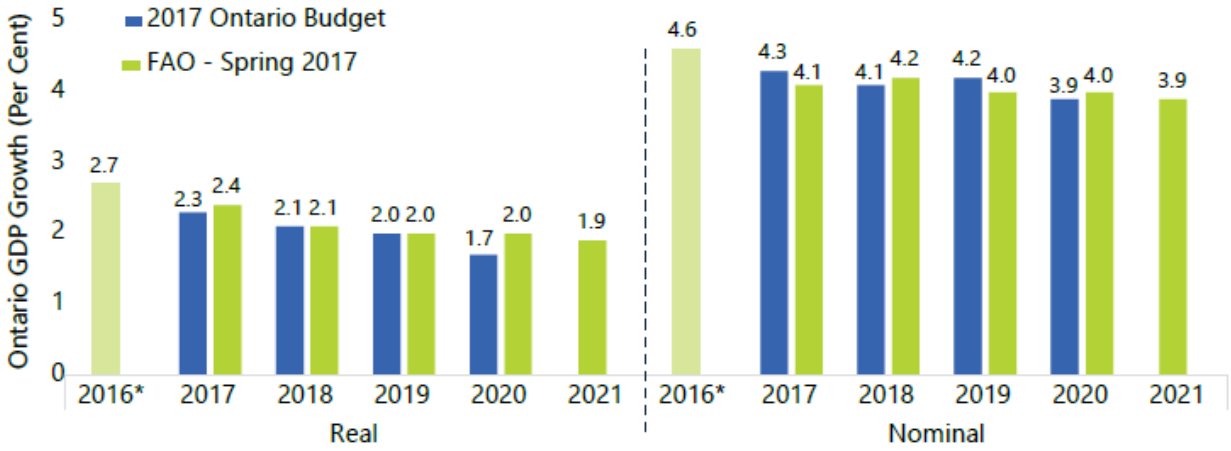
Draft – May 30, 2017 6:00 PM

ISSUE

- The Financial Accountability Officer (FAO) will be releasing a report on May 31, which assesses Ontario's medium-term economic and fiscal outlook.
- This represents the spring update to the FAO's planned release of semi-annual medium-term outlook reports.
- The spring report incorporates economic and fiscal information released since the FAO's fall 2016 report (released November 3, 2016). This includes:
    - New economic data that impacts their revenue and interest on debt outlooks; and
    - New spending commitments from the 2017 Budget.
- The FAO has presented two fiscal projections in its spring report:
    1. A projection that includes the impact of the net pension assets of jointly sponsored pension plans, based on the Auditor General's recommended accounting treatment, and
    2. A projection that excludes this impact based on the government's fiscal presentation in the 2017 Budget, as recommended by the Pension Asset Expert Advisory Panel.
- Both presentations used by the FAO project deficits in each year over the outlook period (2016–17 to 2021–22).
    - Using the government's fiscal presentation of net pension assets, the FAO has stated that balance is within reach in 2017–18 and that beyond this, staying in balance will likely require additional fiscal policy measures.
    - Similarly, using this presentation, the FAO projects that net debt-to-GDP will decline over the outlook but additional fiscal measures would be required for the government to achieve its interim net debt-to-GDP target of 35 per cent by 2023–24 and 27 per cent by 2029–30.
    - The FAO excludes the reserve from its fiscal outlook.

TOP MESSAGES

- I would like to thank the Financial Accountability Officer (FAO) for releasing his spring economic and fiscal outlook for Ontario. We value the FAO's independent assessment and projections of the province's fiscal plan.
- As outlined in the 2017 Budget, the government is projecting a balanced budget for 2017–18 and to remain balanced in 2018–19 and 2019–20.
- The government has a strong track record of beating its fiscal targets. In fact, for the 2016–17 fiscal year, the government is forecasting a deficit of $1.5 billion, beating our annual deficit target again, for the eighth year in a row.
- This Budget builds on the government's track record of fiscal management that has resulted in $29 billion in accumulated deficits being avoided over the past seven years, relative to the 2010 Budget forecast.
- We are also targeting a net debt-to-GDP ratio of 35 per cent by 2023–24 and reducing Ontario's net debt-to-GDP ratio to its pre-recession level of 27 per cent, with current projections showing that this will be achieved by 2029–30.
- Ontario has recorded stronger economic growth than Canada and all other G7 countries over the 2014 to 2016 period, with real GDP rising 2.6 per cent a year.
- Private-sector forecasters expect Ontario will remain one of the fastest growing provinces over the next two years. It should be noted that the FAO's real GDP projections are modestly stronger than the 2017 Budget outlook over the 2017 to 2020 period.
- For prudent fiscal planning, the Province's real GDP growth projections are slightly below the average of private-sector forecasts. In fact, three economic experts also reviewed these economic assumptions and found them to be reasonable.
- This shows that our plan to make strategic investments in Ontario to grow the economy is working.
- It is also important to note that the FAO affirmed key aspects of the Budget plan, including projecting that a balanced budget is within reach for Ontario in 2017–18 and that the net debt-to-GDP ratio is on a downward trend.
- A balanced budget is providing the Province the fiscal flexibility to invest more in health care, education and other public services that matter most to Ontario families. It also adds stability to Ontario's finances and positions the government to better respond to demographic challenges and unexpected global economic shocks that the province will face over the next decade.



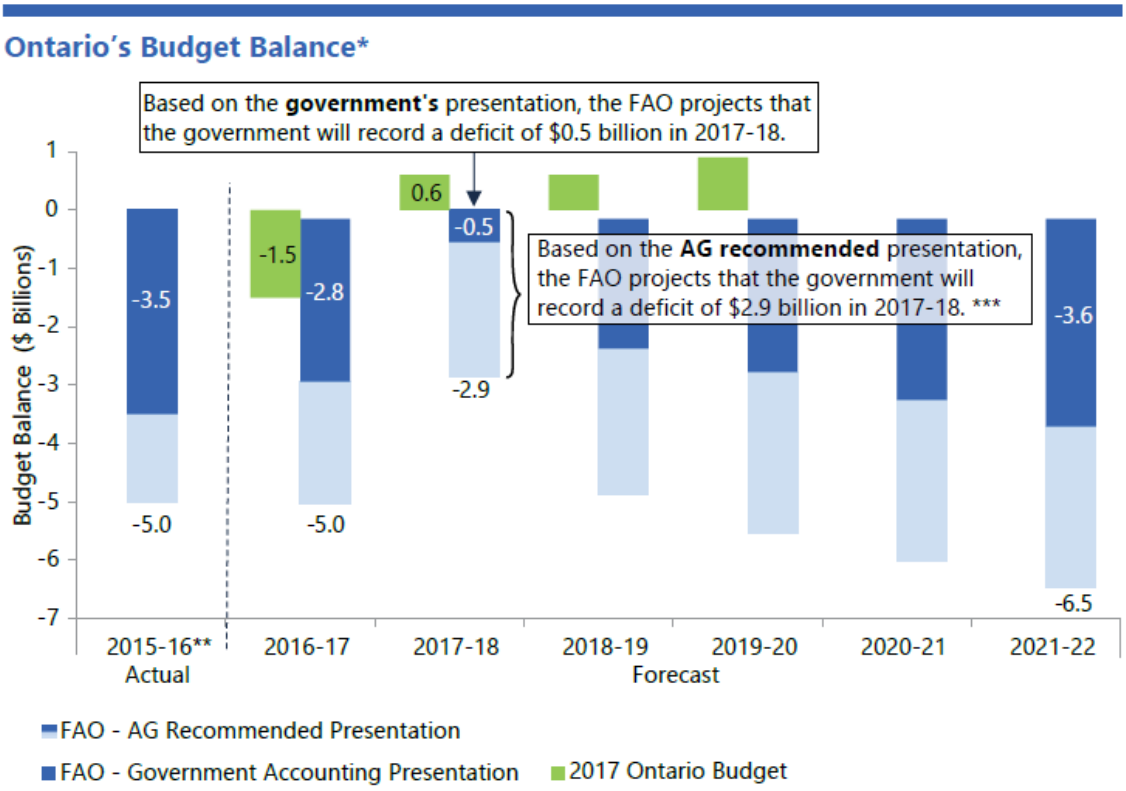
KEY FINDINGS

- The report is divided into two main chapters:
    1) The **Economic Outlook** chapter presents the FAO forecast for Ontario's economy out to 2021, and includes a discussion of potential risks.
    2) The **Fiscal Outlook** chapter presents the FAO forecast for revenue, expense and the surplus/deficit between 2016-17 and 2021-22.

<u>Economic Outlook</u>

- The FAO has left its forecast for Ontario real GDP growth little changed, on average, over the 2017 to 2020 period relative to its fall forecast, though it included a modest downward revision in 2017 and upward revision in 2019.
- The FAO forecast is broadly consistent with the private sector economists' view that stronger international exports and business investment will be key drivers of Ontario's overall economic growth over the next several years.
- The FAO forecast for real GDP growth is 0.1 percentage points stronger annually, on average, than the 2017 Budget forecast between 2017 and 2020.
- The FAO believes the balance of the risks to the economic outlook is tilted to the downside, particularly risks associated with a correction in Ontario's housing market. (p. 13).

Solid Economic Performance Expected Over Outlook



* 2016 are actuals.

Source: Ontario Economic Accounts, 2017 Ontario Budget and FAO.

Fiscal Outlook

- The FAO's current projection of the outlook for budget balance has generally deteriorated relative to the FAO's fall 2016 projection and continues to present a gap against the government's balanced budget projections.
- **Using the government's accounting treatment of net pension assets** the FAO is projecting budget deficits of $2.8 billion in 2016–17, $0.5 billion in 2017–18, $2.2 billion in 2018–19, and $2.6 billion by 2019–20 (excluding the reserve). This represents an improvement in the deficit for 2016–17 and 2017–18, but deterioration over the outlook compared to the FAO's fall report.
    - By comparison, the 2017 Budget projects a $1.5 billion deficit in 2016–17 and surpluses of $0.6 billion in 2017–18 and 2018–19, and a $0.9 billion surplus in 2019–20, excluding the reserve. The FAO also makes projections out to 2021–22 with increasing deficits forecast for those years as well.
    - The FAO suggests that a balanced budget is "within the government's reach in 2017–18" when using the government's accounting method, however "staying in balance after 2017-18 will likely require additional fiscal policy measures"(p.1).
    - The FAO notes that under this accounting presentation, Ontario's Public Accounts would be expected to receive a qualified opinion from the Auditor General.
- The FAO's forecast, **based on the Auditor General's recommended accounting treatment of jointly-sponsored pension plans**, projects deficits of $5.0 billion in 2016–17, $2.9 billion in 2017–18, $4.9 billion in 2018–19, and $5.5 billion by 2019–20 (excluding the reserve). Compared to the FAO's fall report, this represents a slight improvement in the deficit for 2016–17 but deterioration in 2017–18 and over the outlook.
    - The FAO notes that "on this basis, it is unlikely that the government will balance the budget without significant fiscal policy adjustments to raise revenue or lower expense" (p. 1).
- For 2016–17 the FAO is forecasting a deficit of $2.8 billion (or $5.0 billion with the pension adjustment) compared with the government's $1.5 billion interim projection.
- The FAO's asserts that its projection for an improved deficit in 2017–18 is due to robust economic performance and strong tax revenue growth in 2016 and 2017, compared to the FAO's fall estimates, and a one-time revenue increase in 2017–18 from increased federal transfers for infrastructure, additional revenue from asset sales and cap and trade proceeds. (p. 1 &19).

- Beginning in 2018-19, the FAO projects that the deficit will gradually deteriorate due to moderate revenue growth, the absence of one-time non-tax measures, and higher program expenses. (p. 16).

* Budget balance before reserve.

** Ontario's 2015-16 Public Accounts reported a deficit of $5.0 billion. Without the pension adjustment, the deficit would have been $3.5 billion.

*** This includes the FAO's estimate of the pension adjustment.

Source: 2015-16 Public Accounts, 2017 Ontario Budget and FAO.

Revenue Assumptions

- Compared to the 2017 Budget, the FAO's projected total revenue is lower mostly because of taxation revenue and, to a lesser extent, Federal Transfers.

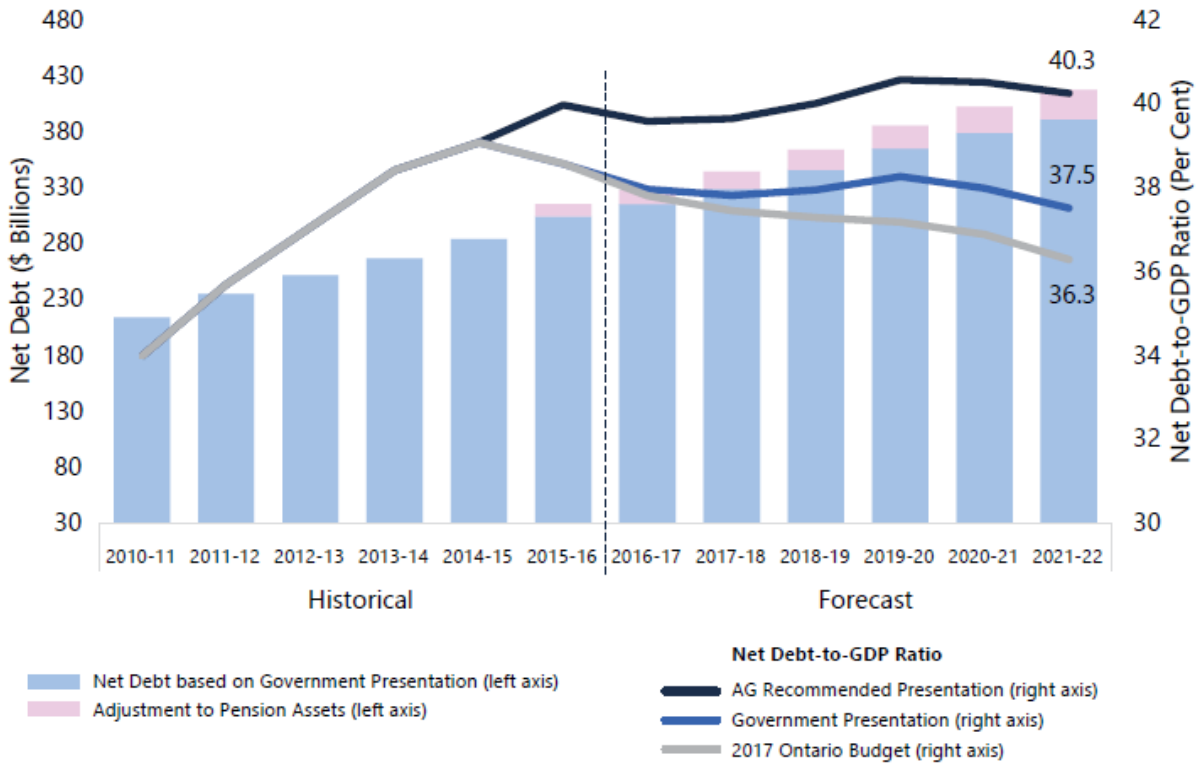
FAO less Ontario 2017 Budget Outlook ($ Billions)

	2016-17	2017-18	2018-19	2019-20	Average
Taxation Revenue	-1.2	-1.4	-2.3	-3.0	-2.0
Government of Canada Transfers	-0.1	0.0	-0.8	-0.8	-0.4
Government Business Enterprises	0.0	0.0	0.0	0.0	0.0
Other Non-Tax Revenue	0.0	0.0	0.0	0.0	0.0
Total Revenue	**-1.2**	**-1.4**	**-3.1**	**-3.7**	**-2.4**

- FAO's projection for the composition of nominal GDP such as compensation of employees, net operating surplus and household consumption, are all lower than the 2017 Budget projection.
- The 2017 Budget assumed higher yields from CIT and HST compared to recent projections, reflecting recent tax revenue performance. These yields also exceed those assumed by the FAO.
- The FAO projection for PIT is consistently lower than the 2017 Budget, partly due to their assumptions regarding tax planning that may have occurred in 2015 by high-income earners. Whereas the 2017 Budget only included an allowance for PIT planning in 2016-17, the FAO estimates that roughly $600 million of Ontario's 2015 PIT revenue was due to income shifting, which lowers taxable income in 2016-17 and 2017-18.

- The FAO's federal transfer outlook is lower than assumed in the 2017 Ontario Budget, probably due to FAO's assumption that Ontario will no longer receive Equalization payments starting in 2019-20 as Ontario's fiscal capacity improves relative to other provinces.
- The FAO's government business enterprise net income outlook and other non-tax revenue is the same as reported in the 2017 Budget.

Expense Assumptions



- The FAO assumes the same program expense outlook as the 2017 Budget up to 2019–20, adjusted to reflect the Auditor General's recommended accounting treatment for jointly sponsored pension plans.(p. 20).
- The FAO's expense outlook includes new spending commitments announced in the 2017 Budget including the new children and youth Pharmacare program, increased funding for hospitals, new child care spaces, and electricity cost relief under the Fair Hydro Plan. This results in average annual growth in program expense of 3.3 per cent between 2016–17 and 2021–22 – slightly below the growth in underlying cost and demographic pressure, which is estimated to be 3.6 per cent on average.
- The FAO projects that Ontario's interest on debt (IOD) payments will grow at an average annual rate of 4.0 per cent from $11.0 billion in 2015–16 to $13.9 billion by 2021–22, reflecting higher debt and rising interest rates over the outlook. The FAO forecasts that IOD will outpace the growth in program expense over the outlook. (p. 21).
- The FAO's projection for IOD expense is lower than the 2017 Budget projections.
- According to the FAO, interest on debt is expected to increase from 8.1per cent of revenues in 2017–18 to 8.9 per cent by 2021–22. Over the past five years IOD as a share of revenues declined steadily, benefitting from declining interest rates. The

FAO argues that this ratio is expected to rise sharply due to projected interest rate increases. (p. 21 – Fiscal Chapter).

Debt Outlook

- Using the government's accounting method, the FAO expects net debt to increase by $62 billion over the next five years to $365 billion by 2021–22 or 37.5 per cent of GDP, above the 2017 Budget projection of 36.3 per cent.
- Under the Auditor General's recommended accounting treatment of jointly-sponsored pension plans, the FAO expects Ontario's net debt to rise by $76 billion to $392 billion by 2021–22 or 40.3 per cent of GDP, this represents a slightly lower net debt-to-GDP ratio over the plan and outlook period when compared to the FAO's fall forecast.
- The FAO's net debt-to-GDP projections under both accounting presentations, suggests that additional fiscal measures would be required for the government to achieve its interim target of 35 per cent by 2023-24. (p. 22).

Ontario's Net Debt-to-GDP Ratio

Source: FAO, Ontario Economic Accounts, and 2017 Ontario Budget.
Note: AG recommended presentation is based on FAO estimates of the pension adjustment.

Accounting Treatment

- The FAO's spring outlook includes a detailed section on the different accounting interpretations for net pension assets of jointly sponsored pension plans (Ontario Teachers' Pension Plan and the Ontario Public Service Employees Union Pension Plan) used by the government and the Auditor General.
- While the FAO presents analysis based on both interpretations of the accounting treatment, the report states that "the Officer looks to the Auditor General as the provincial authority on the appropriate interpretation and application of accounting standards for the Province" (p.27).
- Furthermore, the FAO states that in the absence of a written agreement between the co-sponsors of the pension plans, the Auditor General would be expected to provide a qualified opinion on Ontario's 2016-17 Public Accounts.

Risks and Policy Options

- The FAO notes the following risks to Ontario's fiscal plan (p. 23):
    - A housing market correction could pose a significant risk for both the broader economy and the fiscal plan through lower taxation revenues
    - Reduced prudence built into program spending in the 2017 Budget compared to the previous budget – reducing flexibility for the government to respond to unexpected events
    - Interest on debt payments are expected to increase, exposing the government to fiscal risk should interest rates rise faster than expected
- Although the FAO projects deficits, the report notes that the government has a broad range of policy options that could improve the Province's fiscal position, including selling additional public assets beyond announced targets.

APPENDIX A – Detailed Comparison of Outlooks

Key factors driving change since the 2016 FAO fall report:

- Increases in Provincial tax revenue of $2.8 billion in 2016–17 and $4.2 billion in 2017–18 (stronger than expected PIT revenue) due to improving economic growth in 2017
- Declines in Ontario's equalization entitlement. Beyond 2018–19, the FAO is projecting that Ontario will no longer be entitled to Equalization payments – a reflection of the continued strength of the Ontario economy
- Significant new spending across all sectors, including a new children and youth Pharmacare program, increased funding for hospitals, new child care spaces, and electricity cost relief under the Fair Hydro Plan
- Revised estimates for net pension asset expense of jointly sponsored pension plans

Developments since Fall 2016 EFO (AG Recommended Presentation)

	2016-17	2017-18	2018-19	2019-20	2020-21
FAO's Fall 2016 Budget Balance Forecast	**-5.2**	**-2.6**	**-2.8**	**-3.3**	**-3.7**
Developments Since Fall 2016					
Revenue					
Stronger Economic Outlook	2.3	4.1	3.9	4.4	4.7
Lower Federal Transfers[1]	-0.3	0.2	-1.3	-2.4	-2.2
Other Revenue Changes[2]	0.1	0.1	-0.5	-0.6	-0.6
Total	2.1	4.4	2.1	1.3	1.8
Expense					
Higher Spending, including Children and Youth Pharmacare, and Fair Hydro Plan	1.2	3.8	3.0	2.2	2.7
Revised Adjustment for Pension Asset[3]	0.7	0.8	1.1	1.4	1.4
Total	2.0	4.6	4.1	3.6	4.1
Total Developments	**0.2**	**-0.3**	**-2.1**	**-2.3**	**-2.3**
FAO's Spring 2017 Budget Balance Forecast	**-5.0**	**-2.9**	**-4.9**	**-5.5**	**-6.0**

Notes:

1. Change in federal transfers forecast mainly due the reduction in Ontario's Equalization payment.
2. Other revenue changes include the $0.5 billion re-profiling of cap-and-trade proceeds from 2016-17 to 2017-18, and an increase in sales and rentals for 2017-18.
3. In the Fall 2016 EFO, the FAO assumed an annual adjustment of $1.5 billion for the net pension assets of jointly sponsored pension plans. The current projection incorporates the FAO's updated estimates for the pension adjustment of $2.2 billion in 2016-17, increasing to $2.9 billion by 2020-21.

Source: FAO.

Revenue Assumptions:

- Compared to the FAO's fall forecast, from 2016-17 to 2019-20, on average, total revenue is projected to be $2.5 billion higher annually mostly because of higher taxation revenue, partially offset by lower Federal Transfers and other Non-Tax revenues.

FAO Revenue Difference (Spring 2017 less Fall 2016)

$ Billions	2016-17	2017-18f	2018-19f	2019-20f	Annual Average
Taxation Revenue	**2.8**	**4.2**	**4.4**	**4.9**	**4.1**
Government of Canada Transfers	-0.4	0.2	-1.3	-2.4	-1.0
Government Business Enterprises	0.3	-0.4	0.0	0.1	0.0
Other Non-Tax Revenue	-0.6	0.4	-1.1	-1.3	-0.7
Total Non-Tax Revenue	**-0.7**	**0.2**	**-2.4**	**-3.6**	**-1.6**
Total Revenue	**2.1**	**4.4**	**2.1**	**1.4**	**2.5**

  - Taxation revenues are projected to be, on average, $4.1 billion higher annually due to stronger economic growth as nominal GDP growth is, on average, projected to be 0.4 percentage points higher annually.
  - More specifically, corporate profits are projected to be 3.3 percentage points higher annually, boosting Corporations Tax revenue. Higher labour income is expected to raise Personal Income Tax revenue while Ontario's strong housing market boosts Sales Tax and Land Transfer Tax revenues.
  - Lower Federal Transfers reflects mostly the FAO's projection that Ontario will no longer be entitled to Equalization payments beyond 2018-19.
  - Non-Tax revenues are lower, mainly because of the revisions to the multi-year asset optimization target to reflect the progress made so far and revised projections for Carbon allowance proceeds.

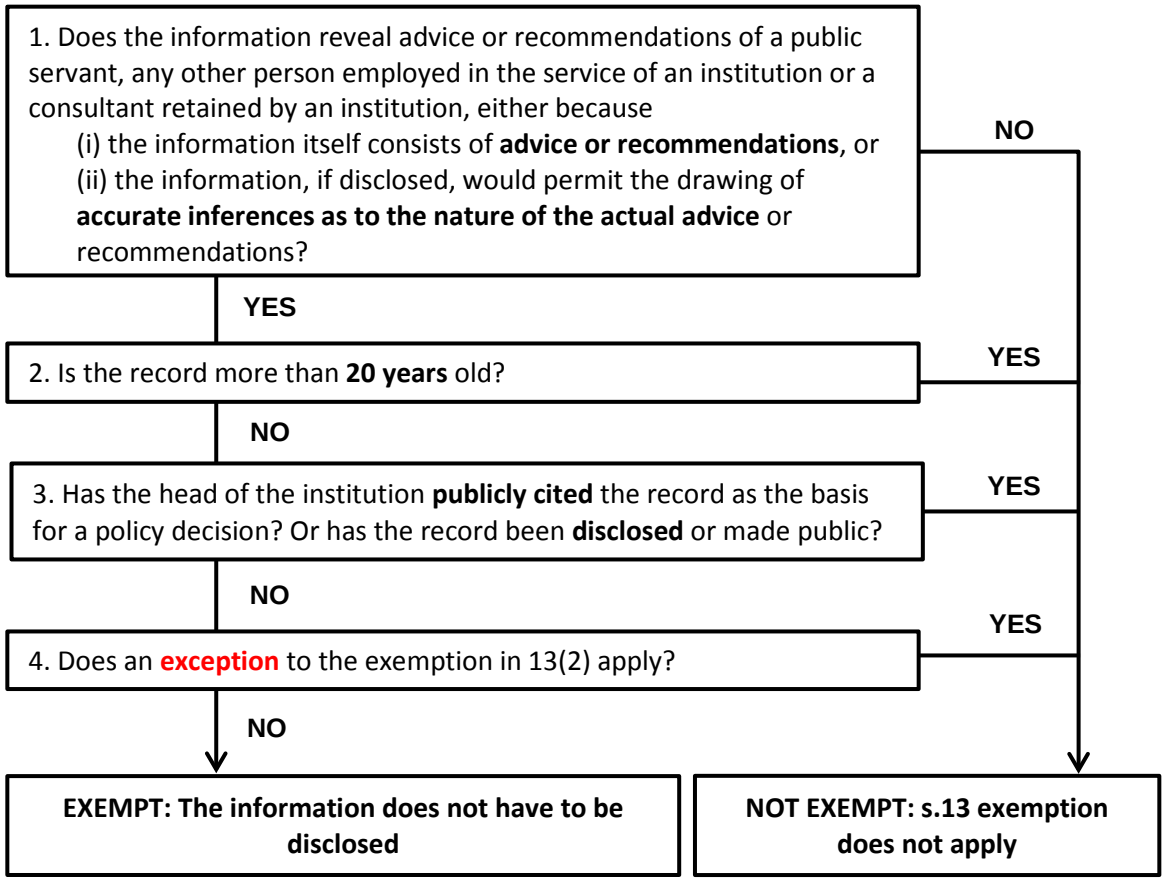
Guide to Section 13 of FIPPA



Summary

Subsection 13(1) of FIPPA provides for a **discretionary exemption** permitting an "institution" (i.e. the Ministry of Finance) to refuse to disclose information that "would reveal **advice or recommendations** of a public servant, any other person employed in the service of an institution or a consultant retained by an institution". However, if the information falls into one of the categories listed in subsections (2) or (3), it cannot be withheld under subsection 13(1).

Importantly, if only a portion of the record is exempt from disclosure under section 13, the record may be disclosed with that information be severed and redacted.

This guide applies to the application of the section 13 exemption, not to other possible exemptions in FIPPA.

To determine whether the section 13 exemption applies to a record or part of a record, consider the following flowchart. See the following pages for further details.

This guide is intended for informative purposes only; it is not legal advice. Not to be distributed externally.

1. Does the record reveal <u>advice or recommendations</u> of a <u>public servant, any other person employed in the service of an institution or a consultant retained by an institution</u>, either because

(i) the information itself consists of advice or recommendations, or

(ii) the information, if disclosed, would permit the drawing of accurate inferences as to the nature of the actual advice or recommendations?

"**Recommendations**" refers to material that relates to a suggested course of action that will ultimately be accepted or rejected by the person being advised, and can be express or inferred.

"**Advice**"

- Has a broader meaning than "recommendations".
- Includes "**policy options**", i.e. lists of alternative courses of action relating to a decision to be made even if they do not include a specific recommendation on which option to take.
- An evaluation or analysis of information.
- May include:
  - Advantages/disadvantages of each option;
  - List of all alternatives provided by person awaiting further instructions from the decision maker for which options should be considered in depth; or
  - Advantages/disadvantages perceived as being obvious or have already been canvassed already or in a prior draft, where options may appear without any additional explanation.
- The advice did not have to be communicated to a decision-maker – it only must have been ascertainable at the time the advice/recommendations were prepared that it was in fact advice/recommendations.
- Must be proximate to the decision-maker, for the benefit of the institution, and not for the benefit of third parties.

Notes:

- Drafts/earlier versions can qualify for the section 13 exemption, if the criteria in the flowchart above are satisfied.
- The following information likely does <u>not</u> qualify under section 13: information prepared for public dissemination, factual/background information (see below)

"**Public servant**", "**Person employed in the service of an institution**", or "**Consultant retained by an institution**":

- Includes:
  - Employees of an institution subject to FIPPA, and employees of other Canadian governments and institutions that fall under the umbrella of "the Crown".
- Does <u>not</u> include:
  - Third parties outside government who are not consultants.
  - Third parties in a contractual relationship with an institution not in the nature of a consultant relationship.
  - Consultants with no formal engagement with the institution for professional services (though formal engagement does not require a payment of a fee).

This guide is intended for informative purposes only; it is not legal advice. Not to be distributed externally.

2. Is the record more than 20 years old?

- If the record is over 20 years old, the section 13 exemption no longer applies.

3. Has the head of the institution cited the record as the basis for a policy decision? Or has the record been disclosed or made public?

- Exemption only applies where the institution, not a third party, claims its reliance on the record. Exemption cannot apply if the advice or recommendations have been publicly disclosed.

4. Does an exception to the exemption in 13(2) apply?

Factual material does not qualify for the section 13 exemption

- Factual material is a coherent body of facts separate and distinct from the advice and recommendations contained in the record.
- However, if the facts are so interwoven with the advice/recommendation that it cannot reasonably be considered a separate and distinct body of fact and cannot reasonably be severed, then it does not have to be disclosed.

A record or part of a record does not qualify for the section 13 exemption if it is:

- a **statistical survey**,
- a **formal valuator report** (i.e. a formal statement or account of the results of the collation and consideration of information, and generally would not include mere observations or recordings of fact),
- an **environmental impact statement** or similar record,
- a **product test report** for government equipment testing or consumer test,
- a **performance or efficiency report** or study of an institution,
- a government policy or **project feasibility** or other technical study (incl. a cost estimate),
- a **results report of field research** undertaken before the formulation of a policy proposal,
- a **final plan or proposal to change a program** or establish a new program (incl. a budgetary estimate), whether or not it is subject to approval, unless it is to be submitted to the Executive Council or its committees,
- a report of an interdepartmental committee task force or similar body, or of a committee or task force within an institution, which has been established for the purpose of preparing a **report on a particular topic**, unless the report is to be submitted to the Executive Council or its committees,
- a **report of a committee**, council or other body attached to an institution, which has been established for the purpose of undertaking inquiries and making reports/recommendations to the institution,
- the **reasons for a final decision of the institution** made during/at the end of the exercise of discretionary power conferred by/under an enactment/scheme administered by the institution, whether or not the enactment/scheme allows an appeal to be taken against the decision, whether or not the reasons (i) are contained in an internal memo of the institution or in a letter addressed to a named person, or (ii) were given by the decision-maker or were incorporated by reference into the decision.

Ken,

We can update parts of it with PA information, but have less than an hour to do so, and it may not be clear where to substitute PA information anyway. It can be argued that the CIN is focused on countering the FAO's assertions on the Budget, with our own Budget projections. Adding historical PA numbers to counter the FAO's Budget report projections –Issued in May- may be confusing.

We could simply remind the Office of the Budget that PA information is now available. Please let me know.

Thanks.

John

Hi Ann

Nothing from me other than to point out that starting from Bullet 3 on page 1, the CIN presents all through the note the deficit for 2016-17 as projected in the 2017 Budget. That has now been superseded by the 2016-17 PA and the CIN should be updated accordingly.

I am cc'ing John, in case I have missed anything.

Thanks

Ken k

Hi Ken,

Office of the Budget would like us to review the attached CIN and Report Summary that will be released in response to an FOI request for notes prepared for the DM and Minister of Finance on the FAO's 2017 Budget report. There's not a lot here for us, but several mentions of debt and IOD forecasts (see Expense Assumptions, Debt Outlook, and Risks). Let me know if there's any concerns, if anything needs to be redacted in accordance with FIPPA.

Note deadline of 3pm today.

Thanks, Anna

Subject: Response to FOI Request A-17-136 - FAO Projections

Hi Ghufran and Anna,

The FOI Office sent Office of the Budget an information request related to analysis on FAO projections. The clarified request follows:

> **"…all analysis (Briefing notes and Slide decks) prepared for the Minister of Finance or the Deputy Minister of Finance regarding the Financial Accountability Officer's report on 2017 Ontario Budget".**

To respond to this request, we're planning to share the attached Briefing Note and CIN that our divisions prepared for the Minister and Deputy Minister after the release of the FAO's Spring Economic and Fiscal Outlook back in late May. We chose to **redact *only* sections** of these notes that include any **analysis based on non-public documents & information** (2017 Budget, the Spring 2017 and Fall 2016 FAO reports) as per section 13 exemption under the FIPPA.

Could you please review the attached an advise if you have any concerns with the sections currently marked for redaction or if you suggest including any additional redactions **by 3pm today (if possible)**?

Let me know if you have any questions.

Thanks,
Ryan

Hi Ryan,

Our office has received clarification for the request.

Clarified Request: Please provide all analysis (Briefing notes and Slide decks) prepared for the Minister of Finance or the Deputy Minister of Finance regarding the Financial Accountability Officer's report on 2017 Ontario Budget.

CLARIFICATION
If further clarification is required from the requester, **please contact our office as soon as possible to discuss**

Request received: August 21, 2017

Clarification received: September 14, 2017

Final recommendation due: **September 29, 2017**

If you have any questions, please feel free to contact me.

Best,

Ritvik

May 31, 2017

FAO's Spring 2017 Economic and Fiscal Outlook

On May 31, 2017, the FAO released its spring 2017 assessment of Ontario's medium-term economic and fiscal outlook. The FAO is projecting budget deficits in all years between 2016–17 and 2021–22. The report states that while balance is within reach in 2017–18, significant fiscal adjustments will likely be required to maintain budget balance through the outlook.

TOP MESSAGES

- I would like to thank the Financial Accountability Officer (FAO) for releasing his spring economic and fiscal outlook for Ontario. We value the FAO's independent assessment and projections of the province's fiscal plan.
- As outlined in the 2017 Budget, the government is projecting a balanced budget for 2017–18 and to remain balanced in 2018–19 and 2019–20.
- The government has a strong track record of beating its fiscal targets. In fact, for the 2016–17 fiscal year, the government is forecasting a deficit of $1.5 billion, beating our annual deficit target again, for the eighth year in a row.
- This Budget builds on the government's track record of fiscal management that has resulted in $29 billion in accumulated deficits being avoided over the past seven years, relative to the 2010 Budget forecast.
- We are also targeting a net debt-to-GDP ratio of 35 per cent by 2023–24 and reducing Ontario's net debt-to-GDP ratio to its pre-recession level of 27 per cent, with current projections showing that this will be achieved by 2029–30.
- Ontario has recorded stronger economic growth than Canada and all other G7 countries over the 2014 to 2016 period, with real GDP rising 2.6 per cent a year.
- Private-sector forecasters expect Ontario will remain one of the fastest growing provinces over the next two years. It should be noted that the FAO's real GDP projections are modestly stronger than the 2017 Budget outlook over the 2017 to 2020 period.
- For prudent fiscal planning, the Province's real GDP growth projections are slightly below the average of private-sector forecasts. In fact, three economic experts also reviewed these economic assumptions and found them to be reasonable.
- This shows that our plan to make strategic investments in Ontario to grow the economy is working.
- It is also important to note that the FAO affirmed key aspects of the Budget plan, including projecting that a balanced budget is within reach for Ontario in 2017–18 and that the net debt-to-GDP ratio is on a downward trend.

- A balanced budget is providing the Province the fiscal flexibility to invest more in health care, education and other public services that matter most to Ontario families. It also adds stability to Ontario's finances and positions the government to better respond to demographic challenges and unexpected global economic shocks that the province will face over the next decade.

ADDITIONAL MESSAGES

Program Review

- The government is building on the success of recent initiatives to support the Province's fiscal objectives by expanding the review of current programs to identify opportunities for modernization and to ensure that expense growth is managed within the plan laid out in the Budget. Ontario has the lowest program spending per capita of all provinces and territories.

Pensions

- To help inform the future accounting treatment of pension plans the government appointed the Pension Asset Expert Advisory Panel last November. This Panel included experts from the accounting, legal and actuarial professions.
- The panel recommended that the province's share of the net pension assets of both the Ontario Teachers' Pension Plan and the Ontario Public Service Employees' Union Pension Plan be recognized as an asset in Ontario's financial statements, and is consistent with how accounting standards have been applied to these plans since 2001.
- This accounting treatment was used to inform the fiscal outlook presented in the 2017 Budget.

Debt

- A DBRS report on the 2017 Budget stated that "The Province will continue borrowing to fund its capital needs, but the debt burden as a share of the economy is projected to track lower over the medium term with economic growth outpacing debt growth."

KEY QUOTES FROM FAO REPORT

Economic Outlook

"The FAO's economic outlook expects the recent strength of the Ontario economy to continue into 2017 … The FAO's economic forecast is broadly in-line with that presented in the government's 2017 Budget." (p. 2)

"Domestically, Ontario's surging housing market continues to be the largest risk for the economy." (p.2)

"Uncertainty over the future direction of U.S. trade and industrial policy could hamper business investment growth in the near term, which would negatively impact Ontario's competitiveness. Without stronger business sector investment to expand production capacity, the growth potential of several key Ontario industries will be limited." (p.10)

Fiscal Outlook

"Beyond 2017-18, the deficit is projected to deteriorate steadily due to rising expenses and moderate revenue growth. On this basis, staying in balance after 2017-18 will likely require additional fiscal policy measures." (p.2)

"The FAO's net debt-to-GDP projections under both accounting presentations, suggest that additional fiscal measures would be required for the government to achieve its interim target of 35 per cent by 2023-24." (p.22)

"In the 2017 Budget, the government significantly reduced the prudence built into its program spending projection compared to the 2016 Budget, leaving less fiscal flexibility for the government to respond to unexpected events." (p.23)

Ontario's Debt Outlook

"Based on the FAO's application of the Auditor General's recommended accounting for these pension assets, the FAO is projecting a budget deficit of $2.9 billion for 2017-18, rising to $6.5 billion by 2021-22 … Under the government's accounting presentation, the FAO is projecting a budget deficit of $0.5 billion in 2017-18, growing to $3.6 billion by 2021-22." (p.15)

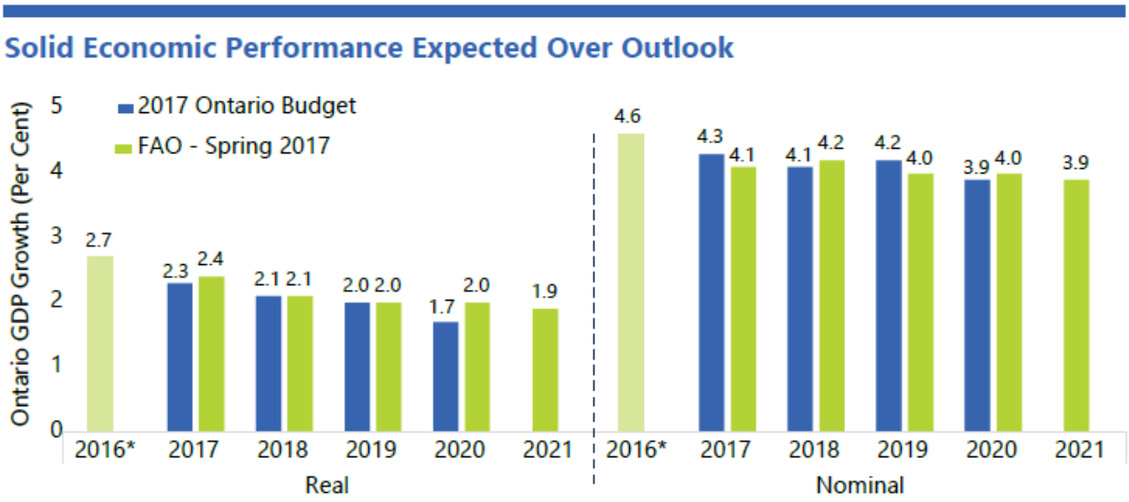
"Ontario's total borrowing requirements are expected to remain high over the outlook. To finance the cost of projected capital spending, on-going deficits and maturing debt issues the FAO estimates that provincial borrowing will average $37 billion per year over the next five years." (p.21)

CURRENT STATUS

The Financial Accountability Officer (FAO) released a report on Wednesday, May 31, 2017, that assesses Ontario's medium-term economic and fiscal outlook. The FAO plans to release these medium-term outlook reports each spring and fall.

In compliance with the *Financial Accountability Officer Act, 2013*, the FAO provided a copy of the final report to the Ministers of Finance and Treasury Board prior to the release.

REPORT SUMMARY



The report is divided into two main chapters:

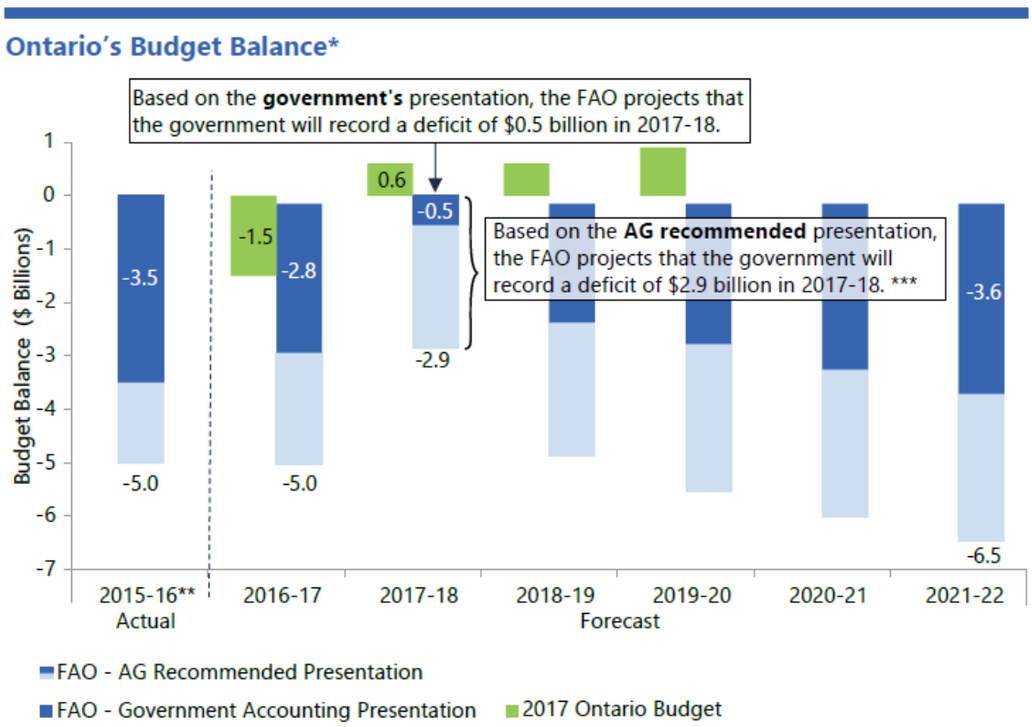
1) The **Economic Outlook** chapter presents the FAO forecast for Ontario's economy out to 2021, and includes a discussion of potential risks.

2) The **Fiscal Outlook** chapter presents the FAO forecast for revenue, expense and the surplus/deficit between 2016-17 and 2021-22.

Economic Outlook

- The FAO has left its forecast for Ontario real GDP growth little changed, on average, over the 2017 to 2020 period relative to its fall forecast, though it included a modest downward revision in 2017 and upward revision in 2019.
- The FAO forecast is broadly consistent with the private sector economists' view that stronger international exports and business investment will be key drivers of Ontario's overall economic growth over the next several years.
- The FAO forecast for real GDP growth is 0.1 percentage points stronger annually, on average, than the 2017 Budget forecast between 2017 and 2020.
- The FAO believes the balance of the risks to the economic outlook is tilted to the downside, particularly risks associated with a correction in Ontario's housing market. (p. 13).

* 2016 are actuals.



Source: Ontario Economic Accounts, 2017 Ontario Budget and FAO.

Fiscal Outlook

- The FAO's current projection of the outlook for budget balance has generally deteriorated relative to the FAO's fall 2016 projection and continues to present a gap against the government's balanced budget projections.
- **Using the government's accounting treatment of net pension assets** the FAO is projecting budget deficits of $2.8 billion in 2016–17, $0.5 billion in 2017–18, $2.2 billion in 2018–19, and $2.6 billion by 2019–20 (excluding the reserve). This represents an improvement in the deficit for 2016–17 and 2017–18, but deterioration over the outlook compared to the FAO's fall report.
    - By comparison, the 2017 Budget projects a $1.5 billion deficit in 2016–17 and surpluses of $0.6 billion in 2017–18 and 2018–19, and a $0.9 billion surplus in 2019–20, excluding the reserve. The FAO also makes projections out to 2021–22 with increasing deficits forecast for those years as well.
    - The FAO suggests that a balanced budget is "within the government's reach in 2017–18" when using the government's accounting method, however "staying in balance after 2017-18 will likely require additional fiscal policy measures"(p.1).

- The FAO notes that under this accounting presentation, Ontario's Public Accounts would be expected to receive a qualified opinion from the Auditor General.

- The FAO's forecast, **based on the Auditor General's recommended accounting treatment of jointly-sponsored pension plans**, projects deficits of $5.0 billion in 2016–17, $2.9 billion in 2017–18, $4.9 billion in 2018–19, and $5.5 billion by 2019–20 (excluding the reserve). Compared to the FAO's fall report, this represents a slight improvement in the deficit for 2016–17 but deterioration in 2017–18 and over the outlook.
    - The FAO notes that "on this basis, it is unlikely that the government will balance the budget without significant fiscal policy adjustments to raise revenue or lower expense" (p. 1).
- For 2016–17 the FAO is forecasting a deficit of $2.8 billion (or $5.0 billion with the pension adjustment) compared with the government's $1.5 billion interim projection.
- The FAO's asserts that its projection for an improved deficit in 2017–18 is due to robust economic performance and strong tax revenue growth in 2016 and 2017, compared to the FAO's fall estimates, and a one-time revenue increase in 2017–18 from increased federal transfers for infrastructure, additional revenue from asset sales and cap and trade proceeds. (p. 1 &19).
- Beginning in 2018-19, the FAO projects that the deficit will gradually deteriorate due to moderate revenue growth, the absence of one-time non-tax measures, and higher program expenses. (p. 16).

* Budget balance before reserve.

** Ontario's 2015-16 Public Accounts reported a deficit of $5.0 billion. Without the pension adjustment, the deficit would have been $3.5 billion.

*** This includes the FAO's estimate of the pension adjustment.

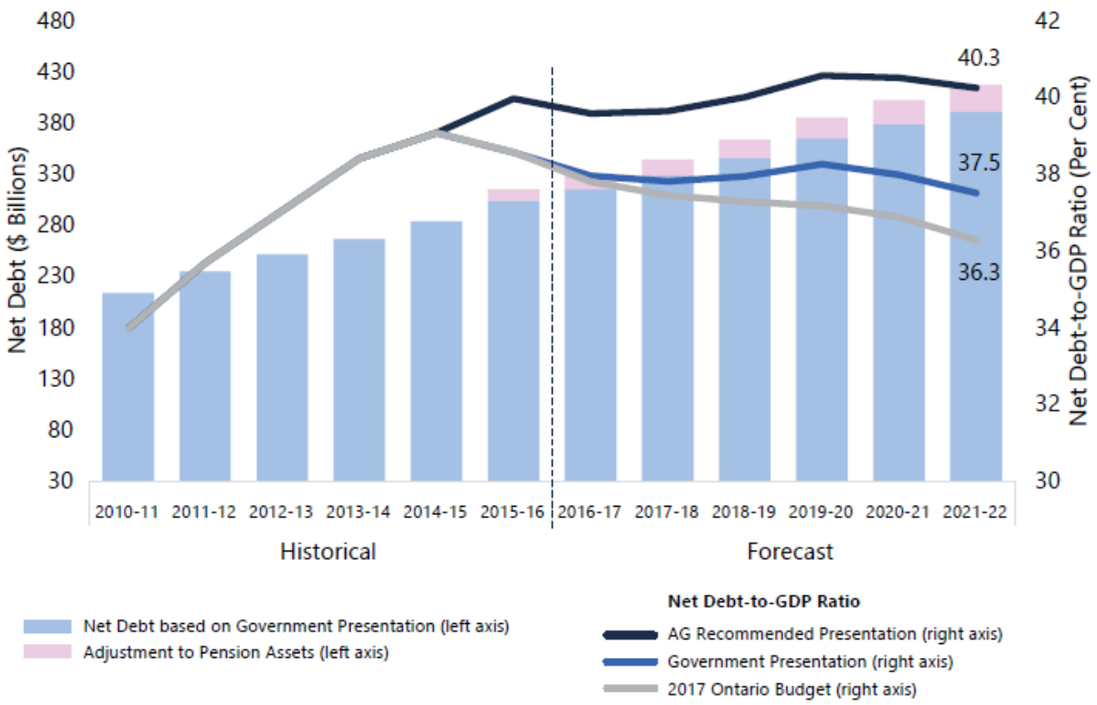
Source: 2015-16 Public Accounts, 2017 Ontario Budget and FAO.

Revenue Assumptions

- Compared to the 2017 Budget, the FAO's projected total revenue is lower mostly because of taxation revenue and, to a lesser extent, Federal Transfers.

FAO less Ontario 2017 Budget Outlook ($ Billions)					
	2016-17	2017-18	2018-19	2019-20	Average
Taxation Revenue	-1.2	-1.4	-2.3	-3.0	-2.0
Government of Canada Transfers	-0.1	0.0	-0.8	-0.8	-0.4
Government Business Enterprises	0.0	0.0	0.0	0.0	0.0
Other Non-Tax Revenue	0.0	0.0	0.0	0.0	0.0
Total Revenue	**-1.2**	**-1.4**	**-3.1**	**-3.7**	**-2.4**

    - FAO's projection for the composition of nominal GDP such as compensation of employees, net operating surplus and household consumption, are all lower than the 2017 Budget projection.
    - The 2017 Budget assumed higher yields from CIT and HST compared to recent projections, reflecting recent tax revenue performance. These yields also exceed those assumed by the FAO.
    - The FAO projection for PIT is consistently lower than the 2017 Budget, partly due to their assumptions regarding tax planning that may have occurred in 2015 by high-income earners. Whereas the 2017 Budget only included an allowance for PIT planning in 2016-17, the FAO estimates that roughly $600 million of Ontario's 2015 PIT revenue was due to income shifting, which lowers taxable income in 2016-17 and 2017-18.
- The FAO's federal transfer outlook is lower than assumed in the 2017 Ontario Budget, probably due to FAO's assumption that Ontario will no longer receive Equalization payments starting in 2019-20 as Ontario's fiscal capacity improves relative to other provinces.
- The FAO's government business enterprise net income outlook and other non-tax revenue is the same as reported in the 2017 Budget.



Expense Assumptions

- The FAO assumes the same program expense outlook as the 2017 Budget up to 2019–20, adjusted to reflect the Auditor General's recommended accounting treatment for jointly sponsored pension plans.(p. 20).
- The FAO's expense outlook includes new spending commitments announced in the 2017 Budget including the new children and youth Pharmacare program, increased funding for hospitals, new child care spaces, and electricity cost relief under the Fair Hydro Plan. This results in average annual growth in program expense of 3.3 per cent between 2016–17 and 2021–22 – slightly below the growth in underlying cost and demographic pressure, which is estimated to be 3.6 per cent on average.
- The FAO projects that Ontario's interest on debt (IOD) payments will grow at an average annual rate of 4.0 per cent from $11.0 billion in 2015–16 to $13.9 billion by 2021–22, reflecting higher debt and rising interest rates over the outlook. The FAO forecasts that IOD will outpace the growth in program expense over the outlook. (p. 21).
- The FAO's projection for IOD expense is lower than the 2017 Budget projections.
- According to the FAO, interest on debt is expected to increase from 8.1per cent of revenues in 2017–18 to 8.9 per cent by 2021–22. Over the past five years IOD as a share of revenues declined steadily, benefitting from declining interest rates. The FAO argues that this ratio is expected to rise sharply due to projected interest rate increases. (p. 21 – Fiscal Chapter).

Debt Outlook

- Using the government's accounting method, the FAO expects net debt to increase by $62 billion over the next five years to $365 billion by 2021–22 or 37.5 per cent of GDP, above the 2017 Budget projection of 36.3 per cent.
- Under the Auditor General's recommended accounting treatment of jointly-sponsored pension plans, the FAO expects Ontario's net debt to rise by $76 billion to $392 billion by 2021–22 or 40.3 per cent of GDP, this represents a slightly lower net debt-to-GDP ratio over the plan and outlook period when compared to the FAO's fall forecast.
- The FAO's net debt-to-GDP projections under both accounting presentations, suggests that additional fiscal measures would be required for the government to achieve its interim target of 35 per cent by 2023-24. (p. 22).

Ontario's Net Debt-to-GDP Ratio

Source: FAO, Ontario Economic Accounts, and 2017 Ontario Budget.
Note: AG recommended presentation is based on FAO estimates of the pension adjustment.

Accounting Treatment

- The FAO's spring outlook includes a detailed section on the different accounting interpretations for net pension assets of jointly sponsored pension plans (Ontario Teachers' Pension Plan and the Ontario Public Service Employees Union Pension Plan) used by the government and the Auditor General.
- While the FAO presents analysis based on both interpretations of the accounting treatment, the report states that "the Officer looks to the Auditor General as the provincial authority on the appropriate interpretation and application of accounting standards for the Province" (p.27).
- Furthermore, the FAO states that in the absence of a written agreement between the co-sponsors of the pension plans, the Auditor General would be expected to provide a qualified opinion on Ontario's 2016-17 Public Accounts.

Risks and Policy Options

- The FAO notes the following risks to Ontario's fiscal plan (p. 23):
    - A housing market correction could pose a significant risk for both the broader economy and the fiscal plan through lower taxation revenues
    - Reduced prudence built into program spending in the 2017 Budget compared to the previous budget – reducing flexibility for the government to respond to unexpected events
    - Interest on debt payments are expected to increase, exposing the government to fiscal risk should interest rates rise faster than expected
- Although the FAO projects deficits, the report notes that the government has a broad range of policy options that could improve the Province's fiscal position, including selling additional public assets beyond announced targets.

APPENDIX A – Detailed Comparison of Outlooks

Key factors driving change since the 2016 FAO fall report:

- Increases in Provincial tax revenue of $2.8 billion in 2016–17 and $4.2 billion in 2017–18 (stronger than expected PIT revenue) due to improving economic growth in 2017
- Declines in Ontario's equalization entitlement. Beyond 2018–19, the FAO is projecting that Ontario will no longer be entitled to Equalization payments – a reflection of the continued strength of the Ontario economy
- Significant new spending across all sectors, including a new children and youth Pharmacare program, increased funding for hospitals, new child care spaces, and electricity cost relief under the Fair Hydro Plan
- Revised estimates for net pension asset expense of jointly sponsored pension plans

Developments since Fall 2016 EFO (AG Recommended Presentation)

	2016-17	2017-18	2018-19	2019-20	2020-21

FAO's Spring 2017 Budget Balance Forecast	**-5.0**	**-2.9**	**-4.9**	**-5.5**	**-6.0**

Notes:

1. Change in federal transfers forecast mainly due the reduction in Ontario's Equalization payment.
2. Other revenue changes include the $0.5 billion re-profiling of cap-and-trade proceeds from 2016-17 to 2017-18, and an increase in sales and rentals for 2017-18.
3. In the Fall 2016 EFO, the FAO assumed an annual adjustment of $1.5 billion for the net pension assets of jointly sponsored pension plans. The current projection incorporates the FAO's updated estimates for the pension adjustment of $2.2 billion in 2016-17, increasing to $2.9 billion by 2020-21.

Source: FAO.

Revenue Assumptions:

- Compared to the FAO's fall forecast, from 2016-17 to 2019-20, on average, total revenue is projected to be $2.5 billion higher annually mostly because of higher taxation revenue, partially offset by lower Federal Transfers and other Non-Tax revenues.

FAO Revenue Difference (Spring 2017 less Fall 2016)					
$ Billions	2016-17	2017-18f	2018-19f	2019-20f	Annual Average
Taxation Revenue	**2.8**	**4.2**	**4.4**	**4.9**	**4.1**
Government of Canada Transfers	-0.4	0.2	-1.3	-2.4	-1.0
Government Business Enterprises	0.3	-0.4	0.0	0.1	0.0
Other Non-Tax Revenue	-0.6	0.4	-1.1	-1.3	-0.7
Total Non-Tax Revenue	**-0.7**	**0.2**	**-2.4**	**-3.6**	**-1.6**
Total Revenue	**2.1**	**4.4**	**2.1**	**1.4**	**2.5**

- Taxation revenues are projected to be, on average, $4.1 billion higher annually due to stronger economic growth as nominal GDP growth is, on average, projected to be 0.4 percentage points higher annually.
- More specifically, corporate profits are projected to be 3.3 percentage points higher annually, boosting Corporations Tax revenue. Higher labour income is expected to raise Personal Income Tax revenue while Ontario's strong housing market boosts Sales Tax and Land Transfer Tax revenues.
- Lower Federal Transfers reflects mostly the FAO's projection that Ontario will no longer be entitled to Equalization payments beyond 2018-19.
- Non-Tax revenues are lower, mainly because of the revisions to the multi-year asset optimization target to reflect the progress made so far and revised projections for Carbon allowance proceeds.

Financial Accountability Officer Report: Spring Economic and Fiscal Outlook

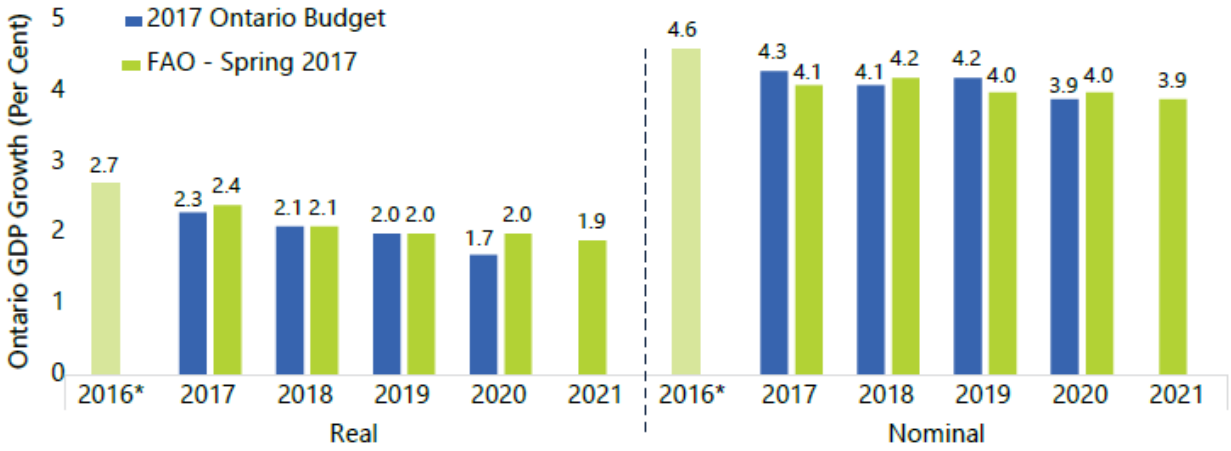
Draft – May 30, 2017 6:00 PM

ISSUE

- The Financial Accountability Officer (FAO) will be releasing a report on May 31, which assesses Ontario's medium-term economic and fiscal outlook.
- This represents the spring update to the FAO's planned release of semi-annual medium-term outlook reports.
- The spring report incorporates economic and fiscal information released since the FAO's fall 2016 report (released November 3, 2016). This includes:
    - New economic data that impacts their revenue and interest on debt outlooks; and
    - New spending commitments from the 2017 Budget.
- The FAO has presented two fiscal projections in its spring report:
    1. A projection that includes the impact of the net pension assets of jointly sponsored pension plans, based on the Auditor General's recommended accounting treatment, and
    2. A projection that excludes this impact based on the government's fiscal presentation in the 2017 Budget, as recommended by the Pension Asset Expert Advisory Panel.
- Both presentations used by the FAO project deficits in each year over the outlook period (2016–17 to 2021–22).
    - Using the government's fiscal presentation of net pension assets, the FAO has stated that balance is within reach in 2017–18 and that beyond this, staying in balance will likely require additional fiscal policy measures.
    - Similarly, using this presentation, the FAO projects that net debt-to-GDP will decline over the outlook but additional fiscal measures would be required for the government to achieve its interim net debt-to-GDP target of 35 per cent by 2023–24 and 27 per cent by 2029–30.
    - The FAO excludes the reserve from its fiscal outlook.

TOP MESSAGES

- I would like to thank the Financial Accountability Officer (FAO) for releasing his spring economic and fiscal outlook for Ontario. We value the FAO's independent assessment and projections of the province's fiscal plan.
- As outlined in the 2017 Budget, the government is projecting a balanced budget for 2017–18 and to remain balanced in 2018–19 and 2019–20.
- The government has a strong track record of beating its fiscal targets. In fact, for the 2016–17 fiscal year, the government is forecasting a deficit of $1.5 billion, beating our annual deficit target again, for the eighth year in a row.
- This Budget builds on the government's track record of fiscal management that has resulted in $29 billion in accumulated deficits being avoided over the past seven years, relative to the 2010 Budget forecast.
- We are also targeting a net debt-to-GDP ratio of 35 per cent by 2023–24 and reducing Ontario's net debt-to-GDP ratio to its pre-recession level of 27 per cent, with current projections showing that this will be achieved by 2029–30.
- Ontario has recorded stronger economic growth than Canada and all other G7 countries over the 2014 to 2016 period, with real GDP rising 2.6 per cent a year.
- Private-sector forecasters expect Ontario will remain one of the fastest growing provinces over the next two years. It should be noted that the FAO's real GDP projections are modestly stronger than the 2017 Budget outlook over the 2017 to 2020 period.
- For prudent fiscal planning, the Province's real GDP growth projections are slightly below the average of private-sector forecasts. In fact, three economic experts also reviewed these economic assumptions and found them to be reasonable.
- This shows that our plan to make strategic investments in Ontario to grow the economy is working.
- It is also important to note that the FAO affirmed key aspects of the Budget plan, including projecting that a balanced budget is within reach for Ontario in 2017–18 and that the net debt-to-GDP ratio is on a downward trend.
- A balanced budget is providing the Province the fiscal flexibility to invest more in health care, education and other public services that matter most to Ontario families. It also adds stability to Ontario's finances and positions the government to better respond to demographic challenges and unexpected global economic shocks that the province will face over the next decade.



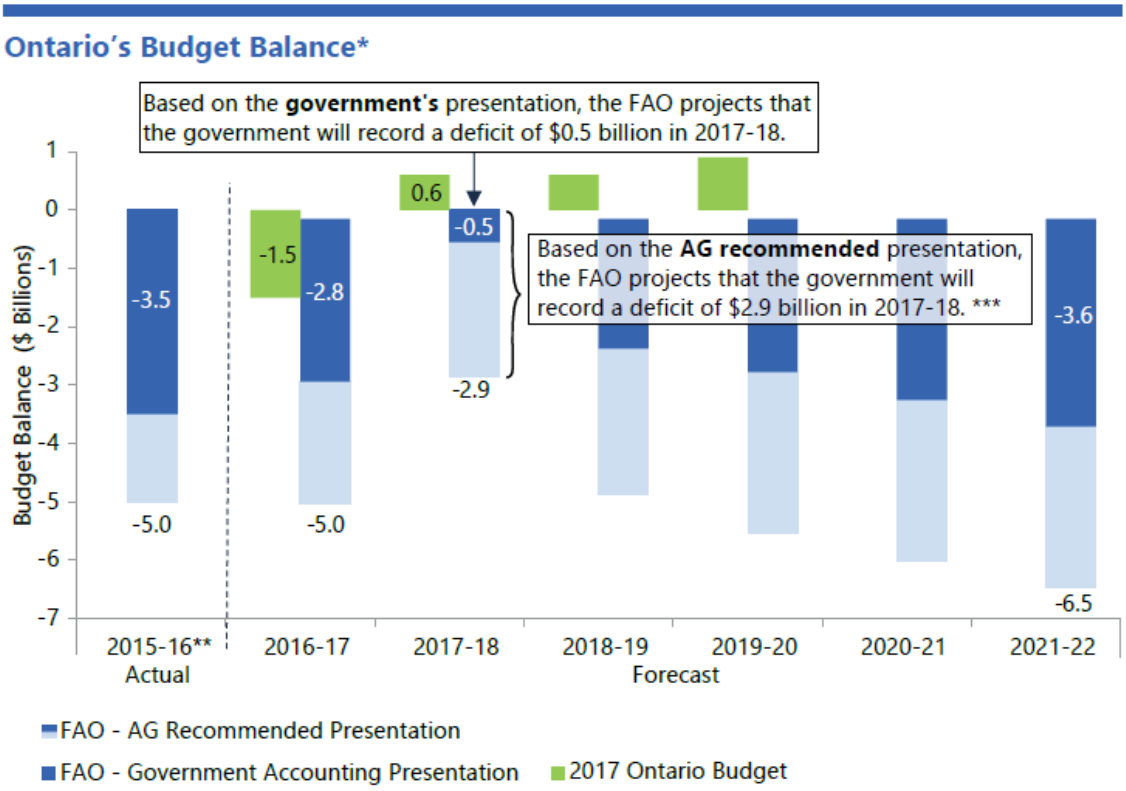
KEY FINDINGS

- The report is divided into two main chapters:
    1) The **Economic Outlook** chapter presents the FAO forecast for Ontario's economy out to 2021, and includes a discussion of potential risks.
    2) The **Fiscal Outlook** chapter presents the FAO forecast for revenue, expense and the surplus/deficit between 2016-17 and 2021-22.

<u>Economic Outlook</u>

- The FAO has left its forecast for Ontario real GDP growth little changed, on average, over the 2017 to 2020 period relative to its fall forecast, though it included a modest downward revision in 2017 and upward revision in 2019.
- The FAO forecast is broadly consistent with the private sector economists' view that stronger international exports and business investment will be key drivers of Ontario's overall economic growth over the next several years.
- The FAO forecast for real GDP growth is 0.1 percentage points stronger annually, on average, than the 2017 Budget forecast between 2017 and 2020.
- The FAO believes the balance of the risks to the economic outlook is tilted to the downside, particularly risks associated with a correction in Ontario's housing market. (p. 13).

Solid Economic Performance Expected Over Outlook



* 2016 are actuals.

Source: Ontario Economic Accounts, 2017 Ontario Budget and FAO.

Fiscal Outlook

- The FAO's current projection of the outlook for budget balance has generally deteriorated relative to the FAO's fall 2016 projection and continues to present a gap against the government's balanced budget projections.
- **Using the government's accounting treatment of net pension assets** the FAO is projecting budget deficits of $2.8 billion in 2016–17, $0.5 billion in 2017–18, $2.2 billion in 2018–19, and $2.6 billion by 2019–20 (excluding the reserve). This represents an improvement in the deficit for 2016–17 and 2017–18, but deterioration over the outlook compared to the FAO's fall report.
    - By comparison, the 2017 Budget projects a $1.5 billion deficit in 2016–17 and surpluses of $0.6 billion in 2017–18 and 2018–19, and a $0.9 billion surplus in 2019–20, excluding the reserve. The FAO also makes projections out to 2021–22 with increasing deficits forecast for those years as well.
    - The FAO suggests that a balanced budget is "within the government's reach in 2017–18" when using the government's accounting method, however "staying in balance after 2017-18 will likely require additional fiscal policy measures"(p.1).
    - The FAO notes that under this accounting presentation, Ontario's Public Accounts would be expected to receive a qualified opinion from the Auditor General.
- The FAO's forecast, **based on the Auditor General's recommended accounting treatment of jointly-sponsored pension plans**, projects deficits of $5.0 billion in 2016–17, $2.9 billion in 2017–18, $4.9 billion in 2018–19, and $5.5 billion by 2019–20 (excluding the reserve). Compared to the FAO's fall report, this represents a slight improvement in the deficit for 2016–17 but deterioration in 2017–18 and over the outlook.
    - The FAO notes that "on this basis, it is unlikely that the government will balance the budget without significant fiscal policy adjustments to raise revenue or lower expense" (p. 1).
- For 2016–17 the FAO is forecasting a deficit of $2.8 billion (or $5.0 billion with the pension adjustment) compared with the government's $1.5 billion interim projection.
- The FAO's asserts that its projection for an improved deficit in 2017–18 is due to robust economic performance and strong tax revenue growth in 2016 and 2017, compared to the FAO's fall estimates, and a one-time revenue increase in 2017–18 from increased federal transfers for infrastructure, additional revenue from asset sales and cap and trade proceeds. (p. 1 &19).

- Beginning in 2018-19, the FAO projects that the deficit will gradually deteriorate due to moderate revenue growth, the absence of one-time non-tax measures, and higher program expenses. (p. 16).

* Budget balance before reserve.

** Ontario's 2015-16 Public Accounts reported a deficit of $5.0 billion. Without the pension adjustment, the deficit would have been $3.5 billion.

*** This includes the FAO's estimate of the pension adjustment.

Source: 2015-16 Public Accounts, 2017 Ontario Budget and FAO.

Revenue Assumptions

- Compared to the 2017 Budget, the FAO's projected total revenue is lower mostly because of taxation revenue and, to a lesser extent, Federal Transfers.

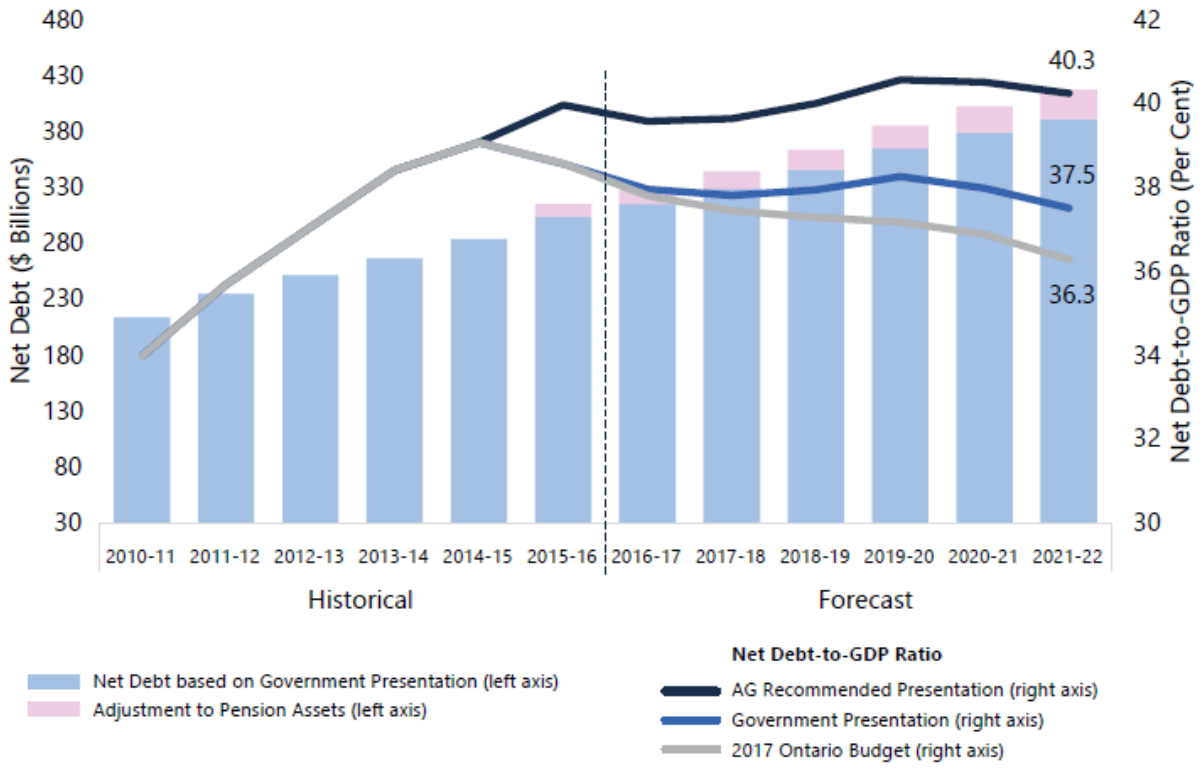
FAO less Ontario 2017 Budget Outlook ($ Billions)

	2016-17	2017-18	2018-19	2019-20	Average
Taxation Revenue	-1.2	-1.4	-2.3	-3.0	-2.0
Government of Canada Transfers	-0.1	0.0	-0.8	-0.8	-0.4
Government Business Enterprises	0.0	0.0	0.0	0.0	0.0
Other Non-Tax Revenue	0.0	0.0	0.0	0.0	0.0
Total Revenue	**-1.2**	**-1.4**	**-3.1**	**-3.7**	**-2.4**

- FAO's projection for the composition of nominal GDP such as compensation of employees, net operating surplus and household consumption, are all lower than the 2017 Budget projection.
- The 2017 Budget assumed higher yields from CIT and HST compared to recent projections, reflecting recent tax revenue performance. These yields also exceed those assumed by the FAO.
- The FAO projection for PIT is consistently lower than the 2017 Budget, partly due to their assumptions regarding tax planning that may have occurred in 2015 by high-income earners. Whereas the 2017 Budget only included an allowance for PIT planning in 2016-17, the FAO estimates that roughly $600 million of Ontario's 2015 PIT revenue was due to income shifting, which lowers taxable income in 2016-17 and 2017-18.

- The FAO's federal transfer outlook is lower than assumed in the 2017 Ontario Budget, probably due to FAO's assumption that Ontario will no longer receive Equalization payments starting in 2019-20 as Ontario's fiscal capacity improves relative to other provinces.
- The FAO's government business enterprise net income outlook and other non-tax revenue is the same as reported in the 2017 Budget.

Expense Assumptions



- The FAO assumes the same program expense outlook as the 2017 Budget up to 2019–20, adjusted to reflect the Auditor General's recommended accounting treatment for jointly sponsored pension plans.(p. 20).
- The FAO's expense outlook includes new spending commitments announced in the 2017 Budget including the new children and youth Pharmacare program, increased funding for hospitals, new child care spaces, and electricity cost relief under the Fair Hydro Plan. This results in average annual growth in program expense of 3.3 per cent between 2016–17 and 2021–22 – slightly below the growth in underlying cost and demographic pressure, which is estimated to be 3.6 per cent on average.
- The FAO projects that Ontario's interest on debt (IOD) payments will grow at an average annual rate of 4.0 per cent from $11.0 billion in 2015–16 to $13.9 billion by 2021–22, reflecting higher debt and rising interest rates over the outlook. The FAO forecasts that IOD will outpace the growth in program expense over the outlook. (p. 21).
- The FAO's projection for IOD expense is lower than the 2017 Budget projections.
- According to the FAO, interest on debt is expected to increase from 8.1per cent of revenues in 2017–18 to 8.9 per cent by 2021–22. Over the past five years IOD as a share of revenues declined steadily, benefitting from declining interest rates. The

FAO argues that this ratio is expected to rise sharply due to projected interest rate increases. (p. 21 – Fiscal Chapter).

Debt Outlook

- Using the government's accounting method, the FAO expects net debt to increase by $62 billion over the next five years to $365 billion by 2021–22 or 37.5 per cent of GDP, above the 2017 Budget projection of 36.3 per cent.
- Under the Auditor General's recommended accounting treatment of jointly-sponsored pension plans, the FAO expects Ontario's net debt to rise by $76 billion to $392 billion by 2021–22 or 40.3 per cent of GDP, this represents a slightly lower net debt-to-GDP ratio over the plan and outlook period when compared to the FAO's fall forecast.
- The FAO's net debt-to-GDP projections under both accounting presentations, suggests that additional fiscal measures would be required for the government to achieve its interim target of 35 per cent by 2023-24. (p. 22).

Ontario's Net Debt-to-GDP Ratio

Source: FAO, Ontario Economic Accounts, and 2017 Ontario Budget.
Note: AG recommended presentation is based on FAO estimates of the pension adjustment.

Accounting Treatment

- The FAO's spring outlook includes a detailed section on the different accounting interpretations for net pension assets of jointly sponsored pension plans (Ontario Teachers' Pension Plan and the Ontario Public Service Employees Union Pension Plan) used by the government and the Auditor General.
- While the FAO presents analysis based on both interpretations of the accounting treatment, the report states that "the Officer looks to the Auditor General as the provincial authority on the appropriate interpretation and application of accounting standards for the Province" (p.27).
- Furthermore, the FAO states that in the absence of a written agreement between the co-sponsors of the pension plans, the Auditor General would be expected to provide a qualified opinion on Ontario's 2016-17 Public Accounts.

Risks and Policy Options

- The FAO notes the following risks to Ontario's fiscal plan (p. 23):
    - A housing market correction could pose a significant risk for both the broader economy and the fiscal plan through lower taxation revenues
    - Reduced prudence built into program spending in the 2017 Budget compared to the previous budget – reducing flexibility for the government to respond to unexpected events
    - Interest on debt payments are expected to increase, exposing the government to fiscal risk should interest rates rise faster than expected
- Although the FAO projects deficits, the report notes that the government has a broad range of policy options that could improve the Province's fiscal position, including selling additional public assets beyond announced targets.

APPENDIX A – Detailed Comparison of Outlooks

Key factors driving change since the 2016 FAO fall report:

- Increases in Provincial tax revenue of $2.8 billion in 2016–17 and $4.2 billion in 2017–18 (stronger than expected PIT revenue) due to improving economic growth in 2017
- Declines in Ontario's equalization entitlement. Beyond 2018–19, the FAO is projecting that Ontario will no longer be entitled to Equalization payments – a reflection of the continued strength of the Ontario economy
- Significant new spending across all sectors, including a new children and youth Pharmacare program, increased funding for hospitals, new child care spaces, and electricity cost relief under the Fair Hydro Plan
- Revised estimates for net pension asset expense of jointly sponsored pension plans

Revised Adjustment for Pension Asset[3]	0.7	0.8	1.1	1.4	1.4
Total	2.0	4.6	4.1	3.6	4.1
Total Developments	**0.2**	**-0.3**	**-2.1**	**-2.3**	**-2.3**
FAO's Spring 2017 Budget Balance Forecast	**-5.0**	**-2.9**	**-4.9**	**-5.5**	**-6.0**

Notes:

1. Change in federal transfers forecast mainly due the reduction in Ontario's Equalization payment.
2. Other revenue changes include the $0.5 billion re-profiling of cap-and-trade proceeds from 2016-17 to 2017-18, and an increase in sales and rentals for 2017-18.
3. In the Fall 2016 EFO, the FAO assumed an annual adjustment of $1.5 billion for the net pension assets of jointly sponsored pension plans. The current projection incorporates the FAO's updated estimates for the pension adjustment of $2.2 billion in 2016-17, increasing to $2.9 billion by 2020-21.

Source: FAO.

Revenue Assumptions:

- Compared to the FAO's fall forecast, from 2016-17 to 2019-20, on average, total revenue is projected to be $2.5 billion higher annually mostly because of higher taxation revenue, partially offset by lower Federal Transfers and other Non-Tax revenues.

FAO Revenue Difference (Spring 2017 less Fall 2016)

$ Billions	2016-17	2017-18f	2018-19f	2019-20f	Annual Average
Taxation Revenue	**2.8**	**4.2**	**4.4**	**4.9**	**4.1**
Government of Canada Transfers	-0.4	0.2	-1.3	-2.4	-1.0
Government Business Enterprises	0.3	-0.4	0.0	0.1	0.0
Other Non-Tax Revenue	-0.6	0.4	-1.1	-1.3	-0.7
Total Non-Tax Revenue	**-0.7**	**0.2**	**-2.4**	**-3.6**	**-1.6**
Total Revenue	**2.1**	**4.4**	**2.1**	**1.4**	**2.5**

  - Taxation revenues are projected to be, on average, $4.1 billion higher annually due to stronger economic growth as nominal GDP growth is, on average, projected to be 0.4 percentage points higher annually.
  - More specifically, corporate profits are projected to be 3.3 percentage points higher annually, boosting Corporations Tax revenue. Higher labour income is expected to raise Personal Income Tax revenue while Ontario's strong housing market boosts Sales Tax and Land Transfer Tax revenues.
  - Lower Federal Transfers reflects mostly the FAO's projection that Ontario will no longer be entitled to Equalization payments beyond 2018-19.
  - Non-Tax revenues are lower, mainly because of the revisions to the multi-year asset optimization target to reflect the progress made so far and revised projections for Carbon allowance proceeds.

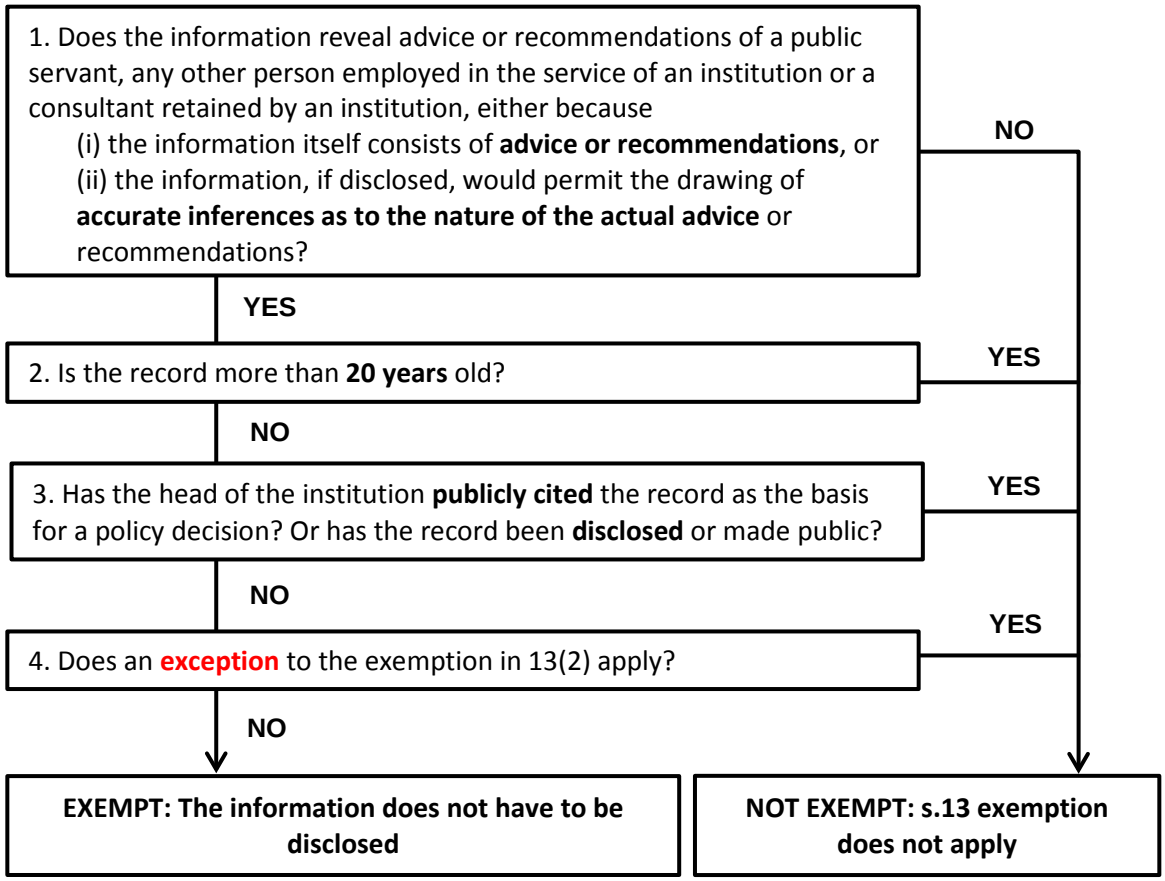
Guide to Section 13 of FIPPA



Summary

Subsection 13(1) of FIPPA provides for a **discretionary exemption** permitting an "institution" (i.e. the Ministry of Finance) to refuse to disclose information that "would reveal **advice or recommendations** of a public servant, any other person employed in the service of an institution or a consultant retained by an institution". However, if the information falls into one of the categories listed in subsections (2) or (3), it cannot be withheld under subsection 13(1).

Importantly, if only a portion of the record is exempt from disclosure under section 13, the record may be disclosed with that information be severed and redacted.

This guide applies to the application of the section 13 exemption, not to other possible exemptions in FIPPA.

To determine whether the section 13 exemption applies to a record or part of a record, consider the following flowchart. See the following pages for further details.

This guide is intended for informative purposes only; it is not legal advice. Not to be distributed externally.

1. Does the record reveal <u>advice or recommendations</u> of a <u>public servant, any other person employed in the service of an institution or a consultant retained by an institution</u>, either because

(i) the information itself consists of advice or recommendations, or

(ii) the information, if disclosed, would permit the drawing of accurate inferences as to the nature of the actual advice or recommendations?

"**Recommendations**" refers to material that relates to a suggested course of action that will ultimately be accepted or rejected by the person being advised, and can be express or inferred.

"**Advice**"

- Has a broader meaning than "recommendations".
- Includes "**policy options**", i.e. lists of alternative courses of action relating to a decision to be made even if they do not include a specific recommendation on which option to take.
- An evaluation or analysis of information.
- May include:
  - Advantages/disadvantages of each option;
  - List of all alternatives provided by person awaiting further instructions from the decision maker for which options should be considered in depth; or
  - Advantages/disadvantages perceived as being obvious or have already been canvassed already or in a prior draft, where options may appear without any additional explanation.
- The advice did not have to be communicated to a decision-maker – it only must have been ascertainable at the time the advice/recommendations were prepared that it was in fact advice/recommendations.
- Must be proximate to the decision-maker, for the benefit of the institution, and not for the benefit of third parties.

Notes:

- Drafts/earlier versions can qualify for the section 13 exemption, if the criteria in the flowchart above are satisfied.
- The following information likely does <u>not</u> qualify under section 13: information prepared for public dissemination, factual/background information (see below)

"**Public servant**", "**Person employed in the service of an institution**", or "**Consultant retained by an institution**":

- Includes:
  - Employees of an institution subject to FIPPA, and employees of other Canadian governments and institutions that fall under the umbrella of "the Crown".
- Does <u>not</u> include:
  - Third parties outside government who are not consultants.
  - Third parties in a contractual relationship with an institution not in the nature of a consultant relationship.
  - Consultants with no formal engagement with the institution for professional services (though formal engagement does not require a payment of a fee).

This guide is intended for informative purposes only; it is not legal advice. Not to be distributed externally.

2. Is the record more than 20 years old?

- If the record is over 20 years old, the section 13 exemption no longer applies.

3. Has the head of the institution cited the record as the basis for a policy decision? Or has the record been disclosed or made public?

- Exemption only applies where the institution, not a third party, claims its reliance on the record. Exemption cannot apply if the advice or recommendations have been publicly disclosed.

4. Does an exception to the exemption in 13(2) apply?

Factual material does not qualify for the section 13 exemption

- Factual material is a coherent body of facts separate and distinct from the advice and recommendations contained in the record.
- However, if the facts are so interwoven with the advice/recommendation that it cannot reasonably be considered a separate and distinct body of fact and cannot reasonably be severed, then it does not have to be disclosed.

A record or part of a record does not qualify for the section 13 exemption if it is:

- a **statistical survey**,
- a **formal valuator report** (i.e. a formal statement or account of the results of the collation and consideration of information, and generally would not include mere observations or recordings of fact),
- an **environmental impact statement** or similar record,
- a **product test report** for government equipment testing or consumer test,
- a **performance or efficiency report** or study of an institution,
- a government policy or **project feasibility** or other technical study (incl. a cost estimate),
- a **results report of field research** undertaken before the formulation of a policy proposal,
- a **final plan or proposal to change a program** or establish a new program (incl. a budgetary estimate), whether or not it is subject to approval, unless it is to be submitted to the Executive Council or its committees,
- a report of an interdepartmental committee task force or similar body, or of a committee or task force within an institution, which has been established for the purpose of preparing a **report on a particular topic**, unless the report is to be submitted to the Executive Council or its committees,
- a **report of a committee**, council or other body attached to an institution, which has been established for the purpose of undertaking inquiries and making reports/recommendations to the institution,
- the **reasons for a final decision of the institution** made during/at the end of the exercise of discretionary power conferred by/under an enactment/scheme administered by the institution, whether or not the enactment/scheme allows an appeal to be taken against the decision, whether or not the reasons (i) are contained in an internal memo of the institution or in a letter addressed to a named person, or (ii) were given by the decision-maker or were incorporated by reference into the decision.

Attachments:	Chapter 2 Public Accounts AG Recommendations Nov 15 2017_FINAL.DOCX Status Table form for response to Auditor General Report.doc
Importance:	High

Hi Ken,

One of the requirements for our appearance at SCOPA is that we complete the attached status table for the recommendations included in the AG Annual Report Ch. 2. The OFA is the lead on the debt recommendation (#7). I don't think our response will change much (if at all) from the management response provided in November (attached). I've taken the liberty of populating the status table with our November response, as well as a note about ongoing monitoring and expected implementation in 2029-30. Please feel free to add/edit amend before I share with Gadi for his approval.

Thanks, Anna

Subject: SCOPA - CH 2 of AG Annual Report - Status Table
Importance: High

Hi everyone,

As you are likely aware, TBS, MOF, OFA, Energy, IESO and OPG were called to appear at SCOPA regarding the AG Annual Report Ch 2 on February 28th. Part of the requirements is that we submit the attached status table for the recommendations ahead of the meeting by February 14th.

Most of the responses can be based on our original management responses submitted in November (second attachment), adding any updates since that time.

I believe that TBS DMO will be setting up a meeting with everyone the week of January 22nd to go over the proposed approach for the SCOPA meeting. Ideally we would be able to provide a draft of the status table for that meeting (recognizing some responses may change based on the outcome of that meeting). Therefore let's aim to have the **first draft completed by end of day next Friday January 19th** (let me know if not feasible).

I've outlined below who took the lead in November for each of the recommendations so unless any

concerns, we will follow the same approach for these.

Hilary – please let me know if you want me to reach out to IESO directly, or if you will give them the heads up.

Recommendation #	Lead
1	OPCD
2	OPCD with Energy and IESO
3	OPCD with Energy, IESO, OFA
4	OPCD
5	IESO with Energy and OPCD
6	OPCD
7	OFA
8	OPCD with OEP
9	OPCD
10	OTB and OB

Happy to discuss any of the above

Thanks
Sarah

AG Recommendation	Management Response
AG Recommendation #1 *We recommend the government record valuation allowances to offset the net pension assets it has recorded from the Ontario Teachers' Pension Plan and the Ontario Public Sector Employees' Union Pension Plan until such time as it obtains formal written authorization from their pension plan co-sponsors that they are able to lower minimum contributions or withdraw surpluses from the pension funds within the next 12 months.*	The Office of the Auditor General communicated its interpretation of Public Sector Accounting Standards (PSAS) requiring a full valuation allowance on the Province's two jointly sponsored pension plans in September 2016. At that time, the government passed a time-limited regulation on the accounting treatment for its joint defined benefit plans to align with the Auditor General's interpretation of PSAS, which enabled officials from Treasury Board Secretariat and the Ministry of Finance to sign the Statement of Responsibility for the 2015-16 Public Accounts. During the 2016-17 year, the professional staff conducted further research and analysis, and determined that PSAS does not require a valuation allowance on either of the jointly sponsored pension plans. This conclusion is supported by: ▪ The conclusions reached by an independent Pension Asset Expert Advisory Panel (the 'Panel'), established by the government to provide advice on the interpretation of PSAS with respect to the reporting of net pension assets of these two joint defined benefit plans. The Panel, comprised of accredited accounting, actuarial and legal professionals with extensive background in pension accounting and plan governance, released its report in February 2017 which supported the government's position that a valuation is not required for these two plans under PSAS. Two key findings of the Panel were: 1) there is no requirement under PSAS that any formal agreement exist between the joint sponsors regarding the timing or amount of a reduction in contributions to record an asset, as the existing agreements in place between the parties support the recognition of an expected benefit, and 2) unilateral control is not required for asset recognition; joint control with each party having the ability to deny the actions of the other sponsor, provides evidence of shared control, supporting recognition of an asset. ▪ An opinion from Deloitte LLP on aspects of the Province's accounting as at March 31, 2016 for the Ontario Teachers' Pension Plan. The opinion, which was dated October 2, 2016, concluded that it was permissible to recognize a pension asset under Canadian Public Sector Accounting Standards, even though the Province did not have under a unilateral right to reduce contributions. The opinion did not address the value at which the asset should be recorded.

	▪ Analysis completed by EY as to whether any valuation allowance is required to be recorded for OTPP or OPSEUPP as of March 31, 2017. EY confirmed no valuation allowance was required for either plan. The government respectfully disagrees with the Auditor General's interpretation of the accounting standards on this issue as PSAS neither requires unilateral control to record an asset, nor does it include a requirement to obtain a letter from the co-sponsor of the plan agreeing to reduce future contributions within 12 months. The government is open to continue to discuss the matter in the hopes of resolving this matter.
AG Recommendation #2 *We recommend that the government remove the Independent Electricity System Operator's Market Accounts from the Province's consolidated financial statements.*	The Province consolidates the entities it controls, in accordance with Public Sector Accounting Standards (PSAS) and its internal reporting policies. Each consolidated entity produces its own stand-alone financial statements and is subject to its own financial statement audit. In 2016, the Independent Electricity System Operator (IESO) changed the accounting for the market accounts and recognized these balances on its financial statements. The financial statements of the IESO for the year-ended December 31, 2016 were subject to an external audit and received an unqualified (or clean) opinion. The government supports this enhanced reporting and greater transparency for the economic activities of the IESO. Additional comments with respect to IESO's accounting for the Market Accounts are included in the response to Recommendation #5 of this report.
AG Recommendation #3 *We recommend the government follow the accounting standards established by the Public Sector Accounting Board and the Province's historical accounting precedent, and implement the recommendations in the Special Report issued by our Office and tabled in the legislature on October 17, 2017, titled The Fair Hydro Plan: Concerns*	The government prepares its financial statements in accordance with Public Sector Accounting Standards (PSAS). The proposed accounting for the Ontario Fair Hydro Plan reflects the economic substance of the transaction by differentiating costs borne by taxpayers versus those borne by ratepayers. PSAS is silent on the recognition, measurement, presentation or disclosure of rate-regulated activities. In absence of a clear position on an issue, standard accounting practice dictates that an entity should consult other accounting standards. This guidance for PSAS is included in PS1150.07. Regarding the OAG's recommendation that the financing for Ontario's Fair Hydro Plan (OFHP) be pursued at the lowest cost to Ontarians, the government reiterates its concerns with this characterization, which were previously provided in the October 4, 2017 government response to the OAG's special report on OFHP (see Government Response to OAG Report on the Fair Hydro Plan in Appendix 5 of the Auditor

About Fiscal Transparency, Accountability and Value for Money, as follows: • *Record the true financial impact of the Fair Hydro Plan's electricity rate reduction on the Province's budgets and consolidated financial statements; and* • *Use a financing structure to fund the rate reduction that is least costly for Ontarians.*	General's Special Report). With respect to the Global Adjustment Refinancing (GA Refinancing) component of the OFHP, the policy objective is to more fairly allocate the cost to ratepayers over the useful life, not the contractual term, of the electricity generating assets. Therefore, it was a primary policy objective to ensure that the costs are borne by the beneficiaries of the electricity system – the ratepayers – and not the tax-base. The government believes it is appropriate for ratepayers to pay for the financing of electricity assets. The rate-base has a different risk profile than the tax-base, which would be reflected in different interest costs. The various entities that operate in the electricity industry have different financing costs that are specific to their risk profiles. The industry does not operate and is not financed through the Province. Ontario Power Generation (OPG) was identified as the Financial Services Manager responsible for the financing plans and the financing entity (i.e., Fair Hydro Plan Trust) that will manage the debt obligations. OPG has the necessary financing and commercial expertise to assist with refinancing the Global Adjustment (GA) and will ensure that it is done in an efficient and cost-effective manner. OPG has a demonstrated track record in the financial markets with its Corporate Debt platform, private placement of insurance linked bonds, participation in securitization program and highly successful project debt issuances tied to new hydroelectric developments. OPG is beginning the process of raising funds to finance the deferred costs, and while total borrowing costs will not be known until the program is complete, accumulated interest is projected to be considerably less than the estimates in the May 2017 report of the Financial Accountability Office (FAO). The figures referenced in the FAO's report was based on initial Ministry of Energy estimates from March 2017. Subsequent analysis conducted by the Ministry of Energy refined a number of variables, including the cost of borrowing and the quantity of GA to be refinanced. A number of variables, including interest rates, electricity demand and electricity costs, will change over the thirty-year life of OFHP. Government will continue to revise cost estimates to reflect these variable conditions. In addition, as outlined in the 2017 Long-Term Energy Plan, the government will continue to identify and implement initiatives to take costs out of the electricity system, which would reduce the cost of GA refinancing.
AG Recommendation #4 *The Office of the Auditor General is the appointed under the Auditor General Act as the auditor for the*	Treasury Board Secretariat's use of external expertise for accounting and financial reporting matters supplements its own resources on complex or emerging accounting and reporting matters. External advisors are generally engaged to provide advice and guidance to supplement internal analysis.

consolidated financial statements of the Province of Ontario. We recommend that the Treasury Board Secretariat: • *Proactively supply copies to the Auditor General of all contracts it enters into for accounting advice and opinions in order to ensure that our Office is aware of the work the advisers are performing, can assess significant issues in a timely manner, and can determine the impact on the Province's consolidated financial statements and our annual audit; and* • *Build into its contracts with external advisers the requirement that the advisers engaged to provide accounting advice and opinions that affect the consolidated financial statements notify our Office of their engagement as required under the Code of Professional Conduct of the Chartered Professional Accountants of Ontario.*	Treasury Board is committed to working with the Office of the Auditor General to discuss issues, once the professional staff has completed its analysis of the issue. In addition, Treasury Board believes frequent communication with the Office of the Auditor General is important and to that end, requested additional meetings with both the staff and the Auditor General during the 2016-17 audit. Where required by the CPA Ontario Code of Professional Conduct, the Auditor General has been, and will continue to be, advised of external advisor involvement.
AG Recommendation #5 *We recommend that the Independent Electricity System Operator (IESO), an "other government organization," use the Canadian Public Sector Accounting Standards (PSAS) in the preparation of its financial statements. Specifically, it should:*	The Independent Electricity System Operator (IESO) prepares its financial statements in accordance with Public Sector Accounting Standards (PSAS) and the financial statements are audited by a firm of independent external auditors whose responsibility is to express an opinion on whether the financial statements are fairly presented in accordance with PSAS. On its 2016 financial statements, IESO received an unqualified (clean) audit opinion. In its role as market administrator, IESO operates and settles approximately $17 billion through the electricity market. The change to include market account assets and liabilities in the financial statements

• *Remove market accounts recorded on its financial statements; and* • *Discontinue the inappropriate use of rate-regulated accounting in the preparation of its financial statements.* *To ensure that the members of the Legislative Assembly receive financial information on the operations of the IESO prepared in accordance with Canadian PSAS, the Office of the Auditor General will conduct an attest audit of the December 31, 2017, financial statements of the IESO as permitted under the Electricity Act, Subsection 25.2(2), which states: "The Auditor General may audit the accounts and transactions of the IESO. 2014, c. 7, Sched. 7, s. 3 (1)."*	provides increased transparency with respect to the value of transactions that flow through Ontario's electricity market, that otherwise would go unreported in IESO's financial statements. These changes were extensively discussed with IESO's external auditors, its Audit Committee and its Board of Directors. The decision was supported by the Office of the Provincial Controller and IESO's external audit firm. Rate-regulated accounting better reflects the economic substance of certain types of IESO expenses (like those related to the Smart Metering Entity) that may not be directly recovered through normal revenue requirement models, and instead are recovered through rate regulation. This change is in line with accounting practices followed by six out of eight other independent system operators in North America and provides IESO financial statement users greater transparency into the substance of the variance accounts it holds and its right to collect an amount in the future.
AG Recommendation #6 *We recommend the government follow the accounting standards established by the Public Sector Accounting Board, rather than using legislation and regulations to prescribe accounting treatments.*	The Province is committed to provide high-quality financial reports that support transparency and accountability in reporting to the public, the legislature and other users. For the 2015-16 Public Accounts, the government passed a time-limited regulation prescribing the accounting treatment for net pension assets in order to allow Treasury Board Secretariat and Ministry of Finance officials to sign off on Public Accounts consistent with the fiscal impact of the Auditor General's interpretation of Public Sector Accounting Standards (PSAS). This regulation is the only example of where the accounting treatment was legislated, and the legislation did not align with the requirements of PSAS. With respect to the Ontario Fair Hydro Plan Act and its regulations, there are no provisions in that legislation that prescribe the accounting treatment required to be followed by the Province. It is important to distinguish legislating the accounting from legislating the right of the government to recover amounts from specified ratepayers in the future, which in the absence of the legislation, would have been collected

	from specified ratepayers as the costs were incurred. The accounting for the transactions resulting from the Fair Hydro Plan will be recorded in accordance with PSAS.
AG Recommendation #7 *We recommend that in order to address the Province's growing total debt burden, the government work towards the development of a long-term total-debt reduction plan linked to its target of reducing the net debt-to-GDP ratio to its pre-recession level of 27% as measured using proper accounting for net pension assets and the projected costs of the Fair Hydro Plan. The government should also discuss publicly how it plans to pay down the debt.*	The 2017 Budget and the 2017 Fall Economic Statement stated that the government continues to maintain a target of reducing the net debt-to-GDP ratio to its pre-recession level of 27%, currently projected for 2029-30, together with an interim target of 35% by 2023-24. From 2017-18 onwards, the balanced budget environment will limit increases in debt to the difference between annual investments in infrastructure improvements and the amortization of such investments. The government's long-term infrastructure plan to invest about $190 billion over 13 years, starting in 2014-15, will contribute to the growth of the economy. The Centre for Spatial Economics found that for every $1 spent on public infrastructure, GDP increases by $6, on average, in the long term. Therefore, while overall debt will rise to fund these infrastructure investments, measurements of relative debt such as the net debt-to-GDP ratio, a recommended practice by the Public Sector Accounting Board, will gradually diminish due to the Province's GDP increasing at a faster rate than net debt. This will allow the Government to continue to move towards its 27% net debt-to-GDP target. The ratio has already commenced declining, falling to 37.3% in 2017-18 from its 2014-15 peak of 39.3%. As discussed more thoroughly in responses to other recommendations in this report, the government prepares its financial statements in accordance with Public Sector Accounting Standards, including the net pension assets for its jointly sponsored pension plans and the transactions resulting from the Ontario Fair Hydro Plan.
AG Recommendation #8 *We recommend that the Office of the Provincial Controller undertake thorough planning involving all stakeholders, including Treasury Board Secretariat, ministries and provincial government agencies, to identify the barriers and key areas to be addressed*	Treasury Board Secretariat and the Ministry of Finance are supportive of the timely delivery of the Public Accounts. The Office of the Provincial Controller works closely with the Office of the Auditor General to identify audit issues early and to ensure that stakeholders are engaged in discussions regarding risks and

to achieve earlier finalization of the Province's consolidated financial statements, including the estimation risks associated with corporations tax and personal income tax revenues.	resolution. The Office of the Provincial Controller will continue to collaborate with the Office of the Auditor General to support the timely delivery of the Public Accounts. The Province will work with the Canada Revenue Agency on this recommendation, as reporting Personal and Corporate taxation revenues is highly dependent on information they provide.
AG Recommendation #9 *We recommend that the government avoid establishing arm's length trusts in order to record an expense in its consolidated financial statements before it is necessary, given that it loses the ability to ensure that funds are ultimately provided to the appropriate beneficiaries.*	The government works with its transfer payment recipients to ensure it receives good value for the money it provides in the form of grants. Government policy on the structured approach to program delivery takes a risk-based approach with respect to transfer payment oversight. Grants are provided to thousands of organizations annually that the government deals with at arms-length and is able to demonstrate proper oversight. A Trust structure was selected to implement the Affordability Fund in order to provide an effective solution to distributing funds to electricity distributors. With approximately 70 distributors across Ontario, it was not feasible for the Province to enter into agreements with each distributor. The Trust structure establishes an independent entity with expertise from the electricity distributor and community sectors. While the Affordability Fund was established at arm's length to the government, there are report-back requirements on the use of funds transferred as well as the ability for the government to conduct an audit to gain assurance that the funds have been used for the purposes intended.
AG Recommendation #10 *We recommend that the government determine when it will issue a regulation as outlined under subsection 11(1) of the Fiscal Transparency and Accountability Act, 2004 confirming the source of reference for the Pre-Election Report and the*	Under the *Fiscal Transparency and Accountability Act*, 2004, the government may file a regulation that would require it to release a Pre-Election Report on Ontario's Finances. Should the government file such a regulation, the Auditor General would be required to issue a Statement based on a prompt review following the release of such a Pre-Election Report. The government remains committed to meeting the legislative requirements of the Act and working constructively with the Office of the Auditor General.

Importance:	High

Hi Ken,

One of the requirements for our appearance at SCOPA is that we complete the attached status table for the recommendations included in the AG Annual Report Ch. 2. The OFA is the lead on the debt recommendation (#7). I don't think our response will change much (if at all) from the management response provided in November (attached). I've taken the liberty of populating the status table with our November response, as well as a note about ongoing monitoring and expected implementation in 2029-30. Please feel free to add/edit amend before I share with Gadi for his approval.

Thanks, Anna

Subject: SCOPA - CH 2 of AG Annual Report - Status Table
Importance: High

Hi everyone,

As you are likely aware, TBS, MOF, OFA, Energy, IESO and OPG were called to appear at SCOPA regarding the AG Annual Report Ch 2 on February 28th. Part of the requirements is that we submit the attached status table for the recommendations ahead of the meeting by February 14th.

Most of the responses can be based on our original management responses submitted in November (second attachment), adding any updates since that time.

I believe that TBS DMO will be setting up a meeting with everyone the week of January 22nd to go over the proposed approach for the SCOPA meeting. Ideally we would be able to provide a draft of the status table for that meeting (recognizing some responses may change based on the outcome of that meeting). Therefore let's aim to have the **first draft completed by end of day next Friday January 19th** (let me know if not feasible).

I've outlined below who took the lead in November for each of the recommendations so unless any

concerns, we will follow the same approach for these.

Hilary – please let me know if you want me to reach out to IESO directly, or if you will give them the heads up.

Recommendation #	Lead
1	OPCD
2	OPCD with Energy and IESO
3	OPCD with Energy, IESO, OFA
4	OPCD
5	IESO with Energy and OPCD
6	OPCD
7	OFA
8	OPCD with OEP
9	OPCD
10	OTB and OB

Happy to discuss any of the above

Thanks
Sarah

AG Recommendation	Management Response
AG Recommendation #1 *We recommend the government record valuation allowances to offset the net pension assets it has recorded from the Ontario Teachers' Pension Plan and the Ontario Public Sector Employees' Union Pension Plan until such time as it obtains formal written authorization from their pension plan co-sponsors that they are able to lower minimum contributions or withdraw surpluses from the pension funds within the next 12 months.*	The Office of the Auditor General communicated its interpretation of Public Sector Accounting Standards (PSAS) requiring a full valuation allowance on the Province's two jointly sponsored pension plans in September 2016. At that time, the government passed a time-limited regulation on the accounting treatment for its joint defined benefit plans to align with the Auditor General's interpretation of PSAS, which enabled officials from Treasury Board Secretariat and the Ministry of Finance to sign the Statement of Responsibility for the 2015-16 Public Accounts. During the 2016-17 year, the professional staff conducted further research and analysis, and determined that PSAS does not require a valuation allowance on either of the jointly sponsored pension plans. This conclusion is supported by: ▪ The conclusions reached by an independent Pension Asset Expert Advisory Panel (the 'Panel'), established by the government to provide advice on the interpretation of PSAS with respect to the reporting of net pension assets of these two joint defined benefit plans. The Panel, comprised of accredited accounting, actuarial and legal professionals with extensive background in pension accounting and plan governance, released its report in February 2017 which supported the government's position that a valuation is not required for these two plans under PSAS. Two key findings of the Panel were: 1) there is no requirement under PSAS that any formal agreement exist between the joint sponsors regarding the timing or amount of a reduction in contributions to record an asset, as the existing agreements in place between the parties support the recognition of an expected benefit, and 2) unilateral control is not required for asset recognition; joint control with each party having the ability to deny the actions of the other sponsor, provides evidence of shared control, supporting recognition of an asset. ▪ An opinion from Deloitte LLP on aspects of the Province's accounting as at March 31, 2016 for the Ontario Teachers' Pension Plan. The opinion, which was dated October 2, 2016, concluded that it was permissible to recognize a pension asset under Canadian Public Sector Accounting Standards, even though the Province did not have under a unilateral right to reduce contributions. The opinion did not address the value at which the asset should be recorded.

	▪ Analysis completed by EY as to whether any valuation allowance is required to be recorded for OTPP or OPSEUPP as of March 31, 2017. EY confirmed no valuation allowance was required for either plan. The government respectfully disagrees with the Auditor General's interpretation of the accounting standards on this issue as PSAS neither requires unilateral control to record an asset, nor does it include a requirement to obtain a letter from the co-sponsor of the plan agreeing to reduce future contributions within 12 months. The government is open to continue to discuss the matter in the hopes of resolving this matter.
AG Recommendation #2 *We recommend that the government remove the Independent Electricity System Operator's Market Accounts from the Province's consolidated financial statements.*	The Province consolidates the entities it controls, in accordance with Public Sector Accounting Standards (PSAS) and its internal reporting policies. Each consolidated entity produces its own stand-alone financial statements and is subject to its own financial statement audit. In 2016, the Independent Electricity System Operator (IESO) changed the accounting for the market accounts and recognized these balances on its financial statements. The financial statements of the IESO for the year-ended December 31, 2016 were subject to an external audit and received an unqualified (or clean) opinion. The government supports this enhanced reporting and greater transparency for the economic activities of the IESO. Additional comments with respect to IESO's accounting for the Market Accounts are included in the response to Recommendation #5 of this report.
AG Recommendation #3 *We recommend the government follow the accounting standards established by the Public Sector Accounting Board and the Province's historical accounting precedent, and implement the recommendations in the Special Report issued by our Office and tabled in the legislature on October 17, 2017, titled The Fair Hydro Plan: Concerns*	The government prepares its financial statements in accordance with Public Sector Accounting Standards (PSAS). The proposed accounting for the Ontario Fair Hydro Plan reflects the economic substance of the transaction by differentiating costs borne by taxpayers versus those borne by ratepayers. PSAS is silent on the recognition, measurement, presentation or disclosure of rate-regulated activities. In absence of a clear position on an issue, standard accounting practice dictates that an entity should consult other accounting standards. This guidance for PSAS is included in PS1150.07. Regarding the OAG's recommendation that the financing for Ontario's Fair Hydro Plan (OFHP) be pursued at the lowest cost to Ontarians, the government reiterates its concerns with this characterization, which were previously provided in the October 4, 2017 government response to the OAG's special report on OFHP (see Government Response to OAG Report on the Fair Hydro Plan in Appendix 5 of the Auditor

About Fiscal Transparency, Accountability and Value for Money, as follows: • *Record the true financial impact of the Fair Hydro Plan's electricity rate reduction on the Province's budgets and consolidated financial statements; and* • *Use a financing structure to fund the rate reduction that is least costly for Ontarians.*	General's Special Report). With respect to the Global Adjustment Refinancing (GA Refinancing) component of the OFHP, the policy objective is to more fairly allocate the cost to ratepayers over the useful life, not the contractual term, of the electricity generating assets. Therefore, it was a primary policy objective to ensure that the costs are borne by the beneficiaries of the electricity system – the ratepayers – and not the tax-base. The government believes it is appropriate for ratepayers to pay for the financing of electricity assets. The rate-base has a different risk profile than the tax-base, which would be reflected in different interest costs. The various entities that operate in the electricity industry have different financing costs that are specific to their risk profiles. The industry does not operate and is not financed through the Province. Ontario Power Generation (OPG) was identified as the Financial Services Manager responsible for the financing plans and the financing entity (i.e., Fair Hydro Plan Trust) that will manage the debt obligations. OPG has the necessary financing and commercial expertise to assist with refinancing the Global Adjustment (GA) and will ensure that it is done in an efficient and cost-effective manner. OPG has a demonstrated track record in the financial markets with its Corporate Debt platform, private placement of insurance linked bonds, participation in securitization program and highly successful project debt issuances tied to new hydroelectric developments. OPG is beginning the process of raising funds to finance the deferred costs, and while total borrowing costs will not be known until the program is complete, accumulated interest is projected to be considerably less than the estimates in the May 2017 report of the Financial Accountability Office (FAO). The figures referenced in the FAO's report was based on initial Ministry of Energy estimates from March 2017. Subsequent analysis conducted by the Ministry of Energy refined a number of variables, including the cost of borrowing and the quantity of GA to be refinanced. A number of variables, including interest rates, electricity demand and electricity costs, will change over the thirty-year life of OFHP. Government will continue to revise cost estimates to reflect these variable conditions. In addition, as outlined in the 2017 Long-Term Energy Plan, the government will continue to identify and implement initiatives to take costs out of the electricity system, which would reduce the cost of GA refinancing.
AG Recommendation #4 *The Office of the Auditor General is the appointed under the Auditor General Act as the auditor for the*	Treasury Board Secretariat's use of external expertise for accounting and financial reporting matters supplements its own resources on complex or emerging accounting and reporting matters. External advisors are generally engaged to provide advice and guidance to supplement internal analysis.

consolidated financial statements of the Province of Ontario. We recommend that the Treasury Board Secretariat: • *Proactively supply copies to the Auditor General of all contracts it enters into for accounting advice and opinions in order to ensure that our Office is aware of the work the advisers are performing, can assess significant issues in a timely manner, and can determine the impact on the Province's consolidated financial statements and our annual audit; and* • *Build into its contracts with external advisers the requirement that the advisers engaged to provide accounting advice and opinions that affect the consolidated financial statements notify our Office of their engagement as required under the Code of Professional Conduct of the Chartered Professional Accountants of Ontario.*	Treasury Board is committed to working with the Office of the Auditor General to discuss issues, once the professional staff has completed its analysis of the issue. In addition, Treasury Board believes frequent communication with the Office of the Auditor General is important and to that end, requested additional meetings with both the staff and the Auditor General during the 2016-17 audit. Where required by the CPA Ontario Code of Professional Conduct, the Auditor General has been, and will continue to be, advised of external advisor involvement.
AG Recommendation #5 *We recommend that the Independent Electricity System Operator (IESO), an "other government organization," use the Canadian Public Sector Accounting Standards (PSAS) in the preparation of its financial statements. Specifically, it should:*	The Independent Electricity System Operator (IESO) prepares its financial statements in accordance with Public Sector Accounting Standards (PSAS) and the financial statements are audited by a firm of independent external auditors whose responsibility is to express an opinion on whether the financial statements are fairly presented in accordance with PSAS. On its 2016 financial statements, IESO received an unqualified (clean) audit opinion. In its role as market administrator, IESO operates and settles approximately $17 billion through the electricity market. The change to include market account assets and liabilities in the financial statements

• *Remove market accounts recorded on its financial statements; and* • *Discontinue the inappropriate use of rate-regulated accounting in the preparation of its financial statements.* *To ensure that the members of the Legislative Assembly receive financial information on the operations of the IESO prepared in accordance with Canadian PSAS, the Office of the Auditor General will conduct an attest audit of the December 31, 2017, financial statements of the IESO as permitted under the Electricity Act, Subsection 25.2(2), which states: "The Auditor General may audit the accounts and transactions of the IESO. 2014, c. 7, Sched. 7, s. 3 (1)."*	provides increased transparency with respect to the value of transactions that flow through Ontario's electricity market, that otherwise would go unreported in IESO's financial statements. These changes were extensively discussed with IESO's external auditors, its Audit Committee and its Board of Directors. The decision was supported by the Office of the Provincial Controller and IESO's external audit firm. Rate-regulated accounting better reflects the economic substance of certain types of IESO expenses (like those related to the Smart Metering Entity) that may not be directly recovered through normal revenue requirement models, and instead are recovered through rate regulation. This change is in line with accounting practices followed by six out of eight other independent system operators in North America and provides IESO financial statement users greater transparency into the substance of the variance accounts it holds and its right to collect an amount in the future.
AG Recommendation #6 *We recommend the government follow the accounting standards established by the Public Sector Accounting Board, rather than using legislation and regulations to prescribe accounting treatments.*	The Province is committed to provide high-quality financial reports that support transparency and accountability in reporting to the public, the legislature and other users. For the 2015-16 Public Accounts, the government passed a time-limited regulation prescribing the accounting treatment for net pension assets in order to allow Treasury Board Secretariat and Ministry of Finance officials to sign off on Public Accounts consistent with the fiscal impact of the Auditor General's interpretation of Public Sector Accounting Standards (PSAS). This regulation is the only example of where the accounting treatment was legislated, and the legislation did not align with the requirements of PSAS. With respect to the Ontario Fair Hydro Plan Act and its regulations, there are no provisions in that legislation that prescribe the accounting treatment required to be followed by the Province. It is important to distinguish legislating the accounting from legislating the right of the government to recover amounts from specified ratepayers in the future, which in the absence of the legislation, would have been collected

	from specified ratepayers as the costs were incurred. The accounting for the transactions resulting from the Fair Hydro Plan will be recorded in accordance with PSAS.
AG Recommendation #7 *We recommend that in order to address the Province's growing total debt burden, the government work towards the development of a long-term total-debt reduction plan linked to its target of reducing the net debt-to-GDP ratio to its pre-recession level of 27% as measured using proper accounting for net pension assets and the projected costs of the Fair Hydro Plan. The government should also discuss publicly how it plans to pay down the debt.*	The 2017 Budget and the 2017 Fall Economic Statement stated that the government continues to maintain a target of reducing the net debt-to-GDP ratio to its pre-recession level of 27%, currently projected for 2029-30, together with an interim target of 35% by 2023-24. From 2017-18 onwards, the balanced budget environment will limit increases in debt to the difference between annual investments in infrastructure improvements and the amortization of such investments. The government's long-term infrastructure plan to invest about $190 billion over 13 years, starting in 2014-15, will contribute to the growth of the economy. The Centre for Spatial Economics found that for every $1 spent on public infrastructure, GDP increases by $6, on average, in the long term. Therefore, while overall debt will rise to fund these infrastructure investments, measurements of relative debt such as the net debt-to-GDP ratio, a recommended practice by the Public Sector Accounting Board, will gradually diminish due to the Province's GDP increasing at a faster rate than net debt. This will allow the Government to continue to move towards its 27% net debt-to-GDP target. The ratio has already commenced declining, falling to 37.3% in 2017-18 from its 2014-15 peak of 39.3%. As discussed more thoroughly in responses to other recommendations in this report, the government prepares its financial statements in accordance with Public Sector Accounting Standards, including the net pension assets for its jointly sponsored pension plans and the transactions resulting from the Ontario Fair Hydro Plan.
AG Recommendation #8 *We recommend that the Office of the Provincial Controller undertake thorough planning involving all stakeholders, including Treasury Board Secretariat, ministries and provincial government agencies, to identify the barriers and key areas to be addressed*	Treasury Board Secretariat and the Ministry of Finance are supportive of the timely delivery of the Public Accounts. The Office of the Provincial Controller works closely with the Office of the Auditor General to identify audit issues early and to ensure that stakeholders are engaged in discussions regarding risks and

to achieve earlier finalization of the Province's consolidated financial statements, including the estimation risks associated with corporations tax and personal income tax revenues.	resolution. The Office of the Provincial Controller will continue to collaborate with the Office of the Auditor General to support the timely delivery of the Public Accounts. The Province will work with the Canada Revenue Agency on this recommendation, as reporting Personal and Corporate taxation revenues is highly dependent on information they provide.
AG Recommendation #9 *We recommend that the government avoid establishing arm's length trusts in order to record an expense in its consolidated financial statements before it is necessary, given that it loses the ability to ensure that funds are ultimately provided to the appropriate beneficiaries.*	The government works with its transfer payment recipients to ensure it receives good value for the money it provides in the form of grants. Government policy on the structured approach to program delivery takes a risk-based approach with respect to transfer payment oversight. Attachments: Status Table_Ch 2 of AG AR_SCOPA_2 3 and 5.docx

Hi Ken,

OPCD has shared their response to SCOPA recommendation #3 (re: FHP and cost-effective borrowing) so that we may review and provide any comments. The response looked fine to me and consistent with our management response from November. Let me know if you have any comments or edits before I show this to Gadi.

You can disregard recommendations #2 and #5 as those are meant for Energy to weigh in on.

Thanks, Anna

Subject: RE: SCOPA - CH 2 of AG Annual Report - Status Table

Hi Anna and Hilary,

I've attached draft responses to Recommendation 2, 3 and 5 for your areas' review and edits.

Hilary – let me know whether you will send to your agencies after you have reviewed or if you want me to reach out directly to OPG and IESO.

If you could please send back any edits by Thursday, I will roll up for the briefing on Friday.

Thanks
Sarah

Subject: RE: SCOPA - CH 2 of AG Annual Report - Status Table

Hi everyone

Update on this request - there is a joint deputy SCOPA pre-briefing next Friday now. If possible it

would be good to provide a draft status table at that point. Therefore let's please aim to have draft responses completed **by next Thursday instead of Friday.**

Happy to discuss

Thanks
Sarah

Subject: SCOPA - CH 2 of AG Annual Report - Status Table
Importance: High

Hi everyone,

As you are likely aware, TBS, MOF, OFA, Energy, IESO and OPG were called to appear at SCOPA regarding the AG Annual Report Ch 2 on February 28th. Part of the requirements is that we submit the attached status table for the recommendations ahead of the meeting by February 14th.

Most of the responses can be based on our original management responses submitted in November (second attachment), adding any updates since that time.

I believe that TBS DMO will be setting up a meeting with everyone the week of January 22nd to go over the proposed approach for the SCOPA meeting. Ideally we would be able to provide a draft of the status table for that meeting (recognizing some responses may change based on the outcome of that meeting). Therefore let's aim to have the **first draft completed by end of day next Friday January 19th** (let me know if not feasible).

I've outlined below who took the lead in November for each of the recommendations so unless any concerns, we will follow the same approach for these.

Hilary – please let me know if you want me to reach out to IESO directly, or if you will give them the heads up.

Recommendation #	Lead
1	OPCD
2	OPCD with Energy and IESO
3	OPCD with Energy, IESO, OFA
4	OPCD
5	IESO with Energy and OPCD
6	OPCD

7	OFA
8	OPCD with OEP
9	OPCD
10	OTB and OB

Happy to discuss any of the above

Thanks
Sarah

Treasury Board Secretariat, Ministry of Finance, Ministry of Energy

Auditor's Recommendation	Completed Undertaking	Outstanding Undertaking (including timeline)
AG Recommendation #2 *We recommend that the government remove the Independent Electricity System Operator's Market Accounts from the Province's consolidated financial statements.* *OPCD with Energy and IESO*	The Province consolidates the entities it controls, in accordance with Public Sector Accounting Standards (PSAS) and its internal reporting policies. Each consolidated entity produces its own stand-alone financial statements and is subject to its own financial statement audit. In 2016, the Independent Electricity System Operator (IESO) changed the accounting for the market accounts and recognized these balances on its financial statements. The financial statements of the IESO for the year-ended December 31, 2016 were subject to an external audit and received an unqualified (or clean) opinion. The government supports this enhanced reporting and greater transparency for the economic activities of the IESO. Additional comments with respect to IESO's accounting for the Market Accounts are included in the response to Recommendation #5 of this report.	The government supports the enhanced reporting and greater transparency for the economic activities of IESO resulting from the recognition of the market accounts. The government is open to continue to discuss the issue in the hopes of resolving this matter.
AG Recommendation #3 *We recommend the government follow the accounting standards established by the Public Sector Accounting Board and the Province's historical accounting precedent, and implement the recommendations in the Special*	The government prepares its financial statements in accordance with Public Sector Accounting Standards (PSAS). The proposed accounting for the Ontario Fair Hydro Plan reflects the economic substance of the transaction by differentiating costs borne by taxpayers versus those borne by ratepayers. PSAS is silent on the recognition, measurement, presentation and disclosure of rate-regulated activities. In absence of a clear position on an issue, standard accounting practice dictates that an entity should	The government intends to continue to prepare its financial statements in accordance with Public Sector Accounting Standards (PSAS). [OPG comment re: interest cost] The government is open to continue to discuss the issue in the hopes of resolving this matter.

Report issued by our Office and tabled in the legislature on October 17, 2017, titled The Fair Hydro Plan: Concerns About Fiscal Transparency, Accountability and Value for Money, as follows: • *Record the true financial impact of the Fair Hydro Plan's electricity rate reduction on the Province's budgets and consolidated financial statements; and* • *Use a financing structure to fund the rate reduction that is least costly for Ontarians.* *Opcd with Energy, IESO, OFA*	consult other accounting standards. This guidance for PSAS is included in PS1150.07. Regarding the Office of the Auditor General's (OAG's) recommendation that the financing for Ontario's Fair Hydro Plan (OFHP) be pursued at the lowest cost to Ontarians, the government reiterates its concerns with this characterization, which were previously provided in the October 4, 2017 government response to the OAG's special report on OFHP (see Government Response to OAG Report on the Fair Hydro Plan in Appendix 5 of the Auditor General's Special Report). With respect to the Global Adjustment Refinancing (GA Refinancing) component of the OFHP, the policy objective is to more fairly allocate the cost to ratepayers over the useful life, not the contractual term, of the electricity generating assets. Therefore, it was a primary policy objective to ensure that the costs are borne by the beneficiaries of the electricity system – the ratepayers – and not the tax-base. The government believes it is appropriate for ratepayers to pay for the financing of electricity assets. The rate-base has a different risk profile than the tax-base, which would be reflected in different interest costs. The various entities that operate in the electricity industry have different financing costs that are specific to their risk profiles. The industry does not operate and is not financed through the Province. Ontario Power Generation (OPG) was identified as the Financial Services Manager responsible for the financing plans and the financing entity (i.e., Fair Hydro Plan Trust) that will manage the debt obligations. OPG has the necessary financing and commercial expertise to assist with refinancing the Global Adjustment (GA) and will ensure that it is done in an efficient and	

	cost-effective manner. OPG has a demonstrated track record in the financial markets with its Corporate Debt platform, private placement of insurance linked bonds, participation in securitization program and highly successful project debt issuances tied to new hydroelectric developments. OPG is beginning the process of raising funds to finance the deferred costs, and while total borrowing costs will not be known until the program is complete, accumulated interest is projected to be considerably less than the estimates in the May 2017 report of the Financial Accountability Office (FAO). The figures referenced in the FAO's report was based on initial Ministry of Energy estimates from March 2017. Subsequent analysis conducted by the Ministry of Energy refined a number of variables, including the cost of borrowing and the quantity of GA to be refinanced. A number of variables, including interest rates, electricity demand and electricity costs, will change over the thirty-year life of OFHP. Government will continue to revise cost estimates to reflect these variable conditions. In addition, as outlined in the 2017 Long-Term Energy Plan, the government will continue to identify and implement initiatives to take costs out of the electricity system, which would reduce the cost of GA refinancing.	
AG Recommendation #5 *We recommend that the Independent Electricity System Operator (IESO), an "other government organization," use the*	The Independent Electricity System Operator (IESO) prepares its financial statements in accordance with Public Sector Accounting Standards (PSAS) and the financial statements are audited by a firm of independent external auditors whose responsibility is to express an opinion on whether the financial statements are fairly	The IESO intends to continue to prepare its financial statements in accordance with Public Sector Accounting Standards.

Canadian Public Sector Accounting Standards (PSAS) in the preparation of its financial statements. Specifically, it should: • *Remove market accounts recorded on its financial statements; and* • *Discontinue the inappropriate use of rate-regulated accounting in the preparation of its financial statements.* *To ensure that the members of the Legislative Assembly receive financial information on the operations of the IESO prepared in accordance with Canadian PSAS, the Office of the Auditor General will conduct an attest audit of the December 31, 2017, financial statements of the IESO as permitted under the Electricity Act, Subsection 25.2(2), which states: "The Auditor General may audit the accounts and transactions of the IESO. 2014, c. 7, Sched. 7, s. 3 (1)."*	presented in accordance with PSAS. On its 2016 financial statements, IESO received an unqualified (clean) audit opinion. In its role as market administrator, IESO operates and settles approximately $17 billion through the electricity market. The change to include market account assets and liabilities in the financial statements provides increased transparency with respect to the value of transactions that flow through Ontario's electricity market, that otherwise would go unreported in IESO's financial statements. These changes were extensively discussed with IESO's external auditors, its Audit Committee and its Board of Directors. The decision was supported by the Office of the Provincial Controller and IESO's external audit firm. Rate-regulated accounting better reflects the economic substance of certain types of IESO expenses (like those related to the Smart Metering Entity) that may not be directly recovered through normal revenue requirement models, and instead are recovered through rate regulation. This change is in line with accounting practices followed by six out of eight other independent system operators in North America and provides IESO financial statement users greater transparency into the substance of the variance accounts it holds and its right to collect an amount in the future.

Standing Committee on Public Accounts

Review of Auditor General's 2015 Annual Report, Chapter 2

October 5, 2016

Deputy Minister Orencsak Opening Remarks

Good afternoon Chair and fellow members of the Public Accounts Committee.

On behalf of myself and my colleagues from the Ministry of Finance and the Ontario Financing Authority, we are pleased to be here today to address the committee on Chapter 2 of the Auditor General's 2015 Annual Report.

This includes discussion on the province's debt as well as a discussion of the Province's 2014-15 Annual Report and the accompanying Financial Statement Discussion and Analysis. These documents are integral to transparency and accountability in public sector financial reporting.

As members of the Committee will know, we also had the pleasure of joining this Committee last year to discuss Chapter 2 of the Auditor General's 2014 Annual Report.

We look forward to having these discussions with this Committee and to maintaining the positive and collaborative relationship with the Auditor General and her office.

I would like to begin today by acknowledging the observations and recommendations made by the Auditor General in Chapter 2 of her Annual Report last year. During our presentation we will

DRAFT

update the Committee on the progress we have made in addressing those recommendations.

We agree with the Auditor General's observation that standard-setters, governments and auditors must continue to work together to resolve important reporting issues that are unique to governments and public-sector entities.

We all agree on the importance of producing high-quality financial reports, which serve the transparency and accountability needs of the public and the legislature.

When we appeared before the Committee last fall, the focus of the hearing was on the province's debt management program, as well as the recommendations made by the Auditor General in her 2014 Annual Report.

Deputy Thompson and I welcome the opportunity to speak with you again this year about the province's debt program. We will also discuss the changes we have made to significantly enhance the user experience and understanding of the province's financial results.

I would also like to welcome Mr. Thomas Teahan, President and CEO of the Workplace Safety and Insurance Board, who you have invited to appear before the Committee today.

Although the financial results of the WSIB are not reflected on the province's books, I'm sure that Mr. Teahan would be pleased to update you on the board's progress in meeting its sufficiency ratio which has been an interest of the Auditor General over the past several years.

DRAFT

As I noted last fall, public sector accounting standards are relevant not only in terms of reporting the province's consolidated financial results, but also in relation to the government's fiscal planning process.

Since Public Sector Accounting Board standards were first adopted by Ontario in 1993, they have had a profound effect on how the government reports its financials to the public, and on how fiscal policy decisions are made by legislators.

I would like to talk for a moment about government financial reporting, and what the primary users of this information expect from their governments.

I am sure we all agree that the principles of transparency and accountability for governments reflect a fundamental element of a democratic society. They are the base upon which the Public Sector Accounting Board's accounting standards are set.

In Ontario, public reporting of the government's fiscal plan and financial results are prescribed by the *Fiscal Transparency and Accountability Act* and the *Financial Administration Act.*

These two pieces of legislation work together to ensure a principled financial management framework for Ontario. In particular, with the passing of the *Fiscal Transparency and Accountability Act* in 2004, the Ontario government made a commitment to responsibility, flexibility, equity and transparency.

Based on this real-life experience, the province's view is that it is crucial that the basis of planning and reporting key financial results be consistent.

DRAFT

At last year's hearing we reported that Ontario had received an 'A' from a 2015 C.D. Howe report, ranking it among the best in the overall quality of its reporting of financial results.

This year, although Ontario's financial reporting continues to be ranked highly among senior government peers, due to the introduction and weighting given to the timing of release, our ranking has fallen to an "A-". In other words, it remains very good.

In line with C.D. Howe's position, we agree that applying a consistent basis for preparing budgets and reporting actual results best meets objectives for transparency and accountability to the public.

In Ontario, we also use the same basis for spending estimates, which is something that other governments, including the federal government, look to as a best practice.

We will continue to work with the Auditor General and the Public Sector Accounting Board to support public sector reporting which best serves the transparency and accountability needs of the public and the public interest. The value of this approach to ensure clear financial reporting has been demonstrated many times, including with the recent implementation of PSAB's standard for Liability for Contaminated Sites, noted in the Auditor General's Report as a challenge that was successfully navigated.

Staff at the Treasury Board Secretariat have taken steps to enhance the transparency and accountability in the report, and to make the information contained in it more accessible and understandable for the average person.

DRAFT

Building upon the successful use of data visualization initiatives last year, this year we have supplemented the information with additional online tools and graphics. This allows the average person to better understand the trends in balance sheet and operating activities over the past five years, and to more easily search through the data.

Another area where we have made improvements stems from a recommendation by the Auditor General to improve the Financial Statement Discussion and Analysis section of the government's Annual Report.

Our staff worked to change the format and layout of this section to ensure it presented the province's key financial facts in a non-partisan manner in order to heighten transparency and accountability to the public.

Expanding beyond the Auditor General's recommendations to review PSAB's Statements of Recommended Practice, our staff also reviewed the reports of other senior Canadian governments to identify best practices.

Ontario's Annual Report addresses each of the specific areas identified by the Auditor General. It will also include a discussion of non-financial performance, responsible fiscal management, and transparency and accountability in public reporting.

As Deputy Minister of Treasury Board Secretariat, I am proud of the achievements and progress made by staff this year to strengthen the accountability and transparency of the Public Accounts.

DRAFT

In closing, I would like to thank the Auditor General and her staff for their important contributions to serving the public interest. I am confident that we will continue to work together in supporting high quality public sector reporting for the people of Ontario.

At this point I would like to turn things over to Deputy Thompson to discuss debt management and financial accounting in greater detail.

(turn over to MOF)

DRAFT

Remarks by Gadi Mayman
CEO
Ontario Financing Authority

to the Standing Committee
on Public Accounts

Toronto, Ontario
October 5, 2016

Word count: 690

Check against Delivery

Thank you, Deputy Minister Thompson and Deputy Minister Orencsak.

Good afternoon.

My name is Gadi Mayman, and I am the Chief Executive Officer of the Ontario Financing Authority.

In this role, I am responsible for overseeing Ontario's:

- borrowing and debt management strategy;
- corporate and electricity finance projects and;
- banking relationships.

I also manage the province's relationships with credit rating agencies, bond underwriters and investors.

Before I continue, I would like to thank the committee for the opportunity to discuss what we have been doing to address the points raised by the Auditor General regarding Ontario's debt.

[Net debt]

The government is committed to reducing the net debt-to-GDP ratio to its pre-recession level.

A government's net debt increases primarily for two reasons: to finance its deficits and invest in capital assets.

In the first few years after the global recession in 2008–09, the increase in the province's net debt was primarily due to Ontario's deficit. Over this period the Government continued investing in much needed improvements to the Province's capital infrastructure.

The government plans to invest more than $137-billion in capital over 10 years, and $160 billion over the 12-year period starting in 2014-15.

Investments in capital, supplement GDP growth and the net debt-to-GDP ratio will come down more quickly than it would without these investments. Once a balanced budget is achieved, the increase in net debt will be limited

to difference between the cash investment to build the assets and the amortization, which is a non-cash amount.

This means that achieving balance will put net debt-to-GDP on a declining track.

Moody's notes that Ontario's debt burden and debt service costs will remain manageable thanks to low interest rates, as well as the province's improving fiscal position and conservative debt management policy.

The report also states, "The policy decision to borrow for infrastructure spending at a time of historically low interest rates, combined with the prudent debt management practices outlined above, has helped to support the province's Aa2 rating."

[Borrowing Program]

Ontario conducts a robust and responsible borrowing program that protects the public interest.

Through prudent and cost-effective debt management, Ontario has consistently kept interest on debt costs below budget projections.

Employing term extensions has allowed the Province to lock in low interest rates for longer periods, which has reduced Ontario's refinancing risks.

It also helps offset the impact of expected higher interest rates on the interest-on-debt costs.

In fact, since 2010 Ontario has issued $59.1 billion of bonds longer than 30 years' duration to lock in low rates.

As a result, we have extended Ontario's weighted-average term to maturity of long-term provincial debt significantly.

In 2009-10 it was 8.1 years; last year it was 14.2 years.

The 2010 Ontario Budget forecast that, by 2016–17, the Province would have to spend 11.7 cents of every revenue dollar on interest.

Currently, the Province spends 8.5 cents of every revenue dollar on interest, 3.5 cents lower than what was forecast in 2010.

This ratio is the lowest it has been since 1990, and is forecast to remain low through the outlook period in 2018–19.

The Province takes a very prudent approach to managing the risks associated with its borrowing program.

Ontario limits itself to a maximum net interest rate resetting exposure level of 35 per cent of debt issued for provincial purposes.

It also limits itself to a maximum foreign exchange exposure level of five per cent of debt issued for provincial purposes.

Currently, the actual values for Ontario's net interest rate resetting exposure and foreign exchange exposure were 10.6 per cent and 0.33 per cent, respectively.

As you can see, this is well below the policy limit levels.

The Province will remain flexible in its borrowing approach.

The approach includes monitoring all major markets and seeking the most cost-effective means, over the long term, to finance Ontario's borrowing program.

It also includes reaching out to investors and investment banks, domestically and globally, to ensure that Ontario bond issues remain highly attractive, liquid and sought after, as they have been since Ontario began accessing public markets almost 25 years ago.

I am happy to answer any questions you may have.

Standing Committee on Public Accounts
Speaking Notes for Tom Teahen
October 5, 2016

Thank you. Good day everyone. I'm Tom Teahen, President and CEO of the WSIB. With me is Pamela Steer, our Chief Financial Officer.

I would like to thank the members of the Standing Committee on Public Accounts for giving me the opportunity to provide an update on the WSIB's progress since the 2015 Auditor General's annual report.

In her report, the Auditor General supported the continued classification of the WSIB as a Trust Agency.

I am pleased to report to the Committee that our strong progress continues, supporting in my submission, the continued Trust status of the WSIB.

Let me say at the outset that the WSIB exists first and foremost to serve workers.

Our legislated mandate is to promote health and safety, to facilitate the return to work and recovery of workers and to provide compensation in a financially responsible and accountable manner.

Accountability ultimately rests in our ability to meet existing and future financial commitments to Ontario's workers and at the same time maintain stable and predictable premium rates.

The 2009 Auditor General report expressed concern that the growth and magnitude of our Unfunded Liability, or UFL, posed significant risk to our ability to meet this commitment.

Today, our situation is very different. I refer the Committee to our 2016 Economic Statement, released on September 14th. It serves as an update on our progress toward retiring our Unfunded Liability, but also highlights our strong progress in improving outcomes for the injured workers we serve.

I will briefly highlight some of our successes in both those areas. Our Unfunded Liability now stands at $5.6 billion, down from $14.2 billion in 2011. Current projections place us on a trajectory to eliminate it by 2021.

Our Sufficiency Ratio is forecasted to reach 85% by the end of this year.

We have determined, after working with key regulatory and financial thought leaders that we should aspire to a funding level between 115 and 125 per cent as our benchmark for being fully funded.

We currently project that we will reach a funding level of approximately 116 per cent by 2025.

In terms of how we compare to other provincial workplace compensation systems, our funding target is in line with most other jurisdictions.

The reason we have set this funding target is because of the injured workers and employers we serve.

It is our responsibility to ensure that a sustainable workplace compensation system exists for generations to come. Simply achieving 100 per cent funding is not enough to ensure workers' benefits are protected and employer premiums are stable and predictable.

A stable system ensures that workers' benefits and employer premiums are shielded from adverse economic conditions and market volatility.

Let me assure you that when the UFL is gone, we will continue to operate in a manner that is financially sustainable – so we can ensure secure benefits and stable premiums.

With respect to improved outcomes for injured workers, we have made significant progress to support safe recovery and return to work.

Currently, 92 per cent of injured workers are safely back on the job within a year of injury with no wage loss.

Our investments in Specialty Clinics and Programs of Care have also led to better outcomes for injured workers by providing faster access to specialized medical care.

In April of this year, we began providing benefits for workers under presumptive Post Traumatic Stress Disorder, or PTSD, legislation. As of September 9th, we had received 468 claims. Going forward, we expect to receive approximately 1,000 per year.

We are currently building a roster of psychiatrists and psychologists across the province to ensure that all of Ontario's workers have access to the support they need.

Our goal is to make Ontario a national leader in the prevention of workplace mental stress issues, including PTSD.

Those are just some of the highlights, both financial and operational, outlined in our 2016 Economic Statement.

In conclusion, I want to emphasize that as President, my message both internally and externally has been clear from the start: It is vital that our organization be seen by one and all – by workers and employers, by government and by the public – as being dedicated to, and defined by, Integrity and Excellence.

Those ideas – those principles – form the very core of our vision and our values.

The goals established in our 2016-2018 Strategic Plan and the priorities which support achieving the plan all align with our commitment to Integrity and Excellence.

These priorities will help us deliver on our duty to provide secure benefits for workers; stable and predictable premiums for employers; and in turn, deliver an essential benefit to the Ontario economy.

Thank you for this opportunity to appear. We would be happy to answer your questions.

Summary Status Table in Response to the Report of the Auditor General of Ontario

Chapter 2 Recommendations, 2015 Annual Report of the Auditor General
Treasury Board Secretariat

Auditor's Recommendation	Completed undertaking	Outstanding undertaking (including timeline)
In order to address the province's growing total debt burden, the government should work toward the development of a long-term total debt reduction plan that is linked to its target of reducing its net debt-to-GDP ratio to its prerecession level of 27%.	The first very important step in returning to a 27% net debt-to-GDP ratio is to balance the budget. Debt is incurred primarily for two reasons: to finance deficits and to make investments in capital assets. The government has a plan to invest more than $130-billion in capital over 10 years, and $160 billion over the 12-year period starting in 2014-15. These capital investments are amortized over a period of time corresponding to the useful life of these assets. Once a balanced budget is achieved, the difference between the cash investment to build the assets and the amortization (which is a non-cash amount) will continue to increase the debt. One of the objectives of investment in capital is to improve the economic growth of the province. As that investment increases growth, it supplements GDP growth and the net debt-to-GDP ratio will come down more quickly than it would without these investments in capital assets. A report[i] issued in 2015 found that on average, investing $1 in public infrastructure in Canada raises GDP by $1.43 in the short term and up to $3.83 in the long term. The government's plan therefore hinges on first balancing the budget, and then making investments in capital assets, which will add to economic growth, resulting in GDP growing more quickly than debt, and thereby lowering the net debt-to-GDP ratio to the government's 27% target. The Province is on target to balance its budget in 2017-18. As a result, net debt to GDP is forecast to peak in 2015-16 at 39.6%, remain unchanged in 2016-17 and begin to decline to 38.9% in 2017-18. The Province's track record of beating its deficit targets 7 years in a row has contributed to net debt to GDP ratios that are consistently lower than forecast. For example, the 2014-15 Public Accounts forecasted peak net debt to GDP of 39.9% in 2015-16 declining to 39.3% in 2017-18.	The government remains committed to achieving its target of reducing the net debt-to-GDP ratio to its pre-recession level of 27% after eliminating its annual deficit in 2017-18.

Summary Status Table in Response to the Report of the Auditor General of Ontario

Chapter 2 Recommendations, 2015 Annual Report of the Auditor General
Treasury Board Secretariat

Auditor's Recommendation	Completed undertaking	Outstanding undertaking (including timeline)
We recommend the government consider the guidance outlined in the Public Sector Accounting Board's (PSAB) Statements of Recommended Practice in preparing its Financial Statement Discussion and Analysis for its Annual Report.	The province continues to strive to provide high-quality financial reports that support transparency and accountability in reporting to the public, the legislature and other users. In preparing the Annual Report for the 2015-16 fiscal reporting period, the government reviewed reporting practices of other senior Canadian governments and also referenced recommended practices issued by the Public Sector Accounting Board.	The 2015-16 Public Accounts will be released later this month (i.e. 180 days after fiscal year end) in accordance with legislated timelines under the *Financial Administration Act*. A number of enhancements to both the Annual Report and the province's accompanying data visualization will improve the transparency and accountability in the government's financial reports, including: • An expanded comparison of the current year's results to those of the prior year, including analysis of the trends over a five year period as related to several financial items, including an expanded discussion on balance sheet items. • A description of the Province's capital assets, reflecting their importance in service delivery and their impact on the Province's financial condition. • A description of risks and uncertainties which impact the government's financial results and details on how the government manages those risks. • Supplementary data visualization on the Ontario.ca website which will graphically present more details on the financial information contained in the Annual Report and supporting volumes.

TBS

Briefing Note

Communications Branch

Logistics for Standing Committee on Public Accounts

Issue:

- Government officials will appear before the Standing Committee on Public Accounts (SCOPA) regarding Chapter 2 of the 2015 Annual Report of the Office of the Auditor General of Ontario.
- Participating officials include:
    - Deputy Minister, Treasury Board Secretariat
    - Deputy Minister, Ministry of Finance
    - Chief Executive Officer, Ontario Financing Authority
    - Assistant Deputy Minister & Provincial Controller (Acting), Office of the Provincial Controller Division
    - President & CEO, WSIB

Agenda Information:

- SCOPA will begin meeting at 9 am in Committee Room 151 (See Appendix A) in the Legislature.
- The Auditor General will brief the Committee in a closed door session at 9 am
- TBS/MOF DM's and other witnesses are expected to appear before SCOPA at 12:30 pm for approximately 2.5 hours.
- The schedule for the afternoon portion will be as follows:
    - **12:30–12:50 pm** – Opening remarks (20 minutes total to be split between three government representatives):
        - DM TBS – 10-12 mins approx
        - DM MOF – 7 mins approx
        - CEO OFA – 5 mins approx

      *WSIB will not provide opening remarks

    - **12:50–1:50 pm** – First round of questions: each of the three political parties get 20 minutes of questions (60 mins total).
    - **1:50–2:45 pm** – Second round of questions: the remaining time until 2:45 pm is split between the three political parties (approximately 15-17 mins for each party totalling 45-50 mins).
    - **2:45–3:00 pm** – Closed session (committee members plus the Clerk only, no audience or presenters). Committee will discuss the outcome of the meeting and if they wish to prepare a report. There are no closing statements from the three gov't representatives.

Room Setup:

- SCOPA will take place in the Amethyst Room, Committee Room 151 (see appendix A).
- Room is equipped with cameras and the meeting will be available on TV's within the Legislature and streamed online.
- The setup of the room will be a square table with additional rows of seating at the front end of the room, closest to the door.
- The Committee Chair and Clerk will sit at the head of the table with the government and opposition parties on opposite sides. (See Appendix A for list of committee members)
- The TBS/MOF DM's and other witnesses will sit opposite the Committee Chair and Clerk.
- For TBS Karen Hughes (TBC), Artur Arruda (TBC), Nadine Petsche, Sofie DiMuzio and Jason Wesley will be present to support TBS DM if needed.

Tone of SCOPA/Media Access:

- A review of past SCOPA Committee Hansard transcripts shows that the vast majority of questions have focused on the audits themselves, the legislative landscape, the policy impact on real people, various processes and costs/cost controls.
- Media are allowed to sit in on the meeting as long as they do not interrupt the proceedings. They cannot ask questions in the committee room, but if they wish they can scrum participants in the hallway as they leave.
- Media can also watch SCOPA proceedings on the TV's in the Legislature or online.

Other Information:

- Committee members may substitute members of their party without advance notice.
- If there are any materials that the TBS/MOF DM's or OFA CEO want to distribute to the Committee members, they are asked to bring 25 copies.
- Committee members can request copies of any documents brought into the room. However in reviewing Hansard, TBS Communications did not find any questions/requests to table briefing binders/notes.

Next Steps:

- Finalize briefing binders for October 5 appearance.

APPENDIX A:

STANDING COMMITTEE ON PUBLIC ACCOUNTS

Wednesday, October 5, 2016

Committee Room 151

AGENDA

Public Accounts of the Province
(Chapter 2, 2015 Annual Report of the Office of the Auditor General of Ontario)

9:00 a.m. **Closed Session**
Briefing by the Auditor General

10:00 a.m. Briefing by the Research Officer

10:15 a.m. **RECESS**

12:30 p.m. **Treasury Board Secretariat**
Greg Orencsak, Deputy Minister
Cindy Veinot, Assistant Deputy Minister and Provincial Controller

Ministry of Finance
Scott Thompson, Deputy Minister

Ontario Financing Authority
Gadi Mayman, Chief Executive Officer

Workplace Safety and Insurance Board
Thomas Teahen, President and Chief Executive Officer
Pamela Steer, Chief Financial Officer

Committee discussion on report writing

- SUBJECT TO CHANGE -

About the Standing Committee on Public Accounts

Terms of Reference

As per Standing Order 108(h), the Standing Committee on Public Accounts is empowered to review and report to the House its observations, opinions and recommendations on the Report of the Auditor General and the Public Accounts, which documents shall be deemed to have been permanently referred to the Committee as they become available.

Committee Members

- Chair
  Ernie Hardeman
  PC / Oxford

- Vice-Chair
  Lisa MacLeod
  PC / Nepean--Carleton

- Members:
  - Chris Ballard

PROGRAM, REVIEW, RENEWAL AND TRANSFORMATION 12

GOVERNMENT ADVERTISING ACT 15

HYDRO ONE SALE

Q1. How are you managing the value of government assets?

A1. With the *2014 Budget*, the government began unlocking the economic value of the Province's assets, including setting up the Premier's Advisory Council on Government Assets, chaired by Ed Clark, former Group President and Chief Executive Officer of TD Bank Group.

In the Ontario Economic Outlook and Fiscal Review in the fall of 2014, the Province shared the council's initial findings, which it supported. The council delivered recommendations on the electricity sector to the Province in advance of the 2015 Budget, including broadening the ownership of Hydro One. This would involve an initial public offering of about 15 per cent of the voting securities in Hydro One, with additional share sales in subsequent years. Over time, share offerings would total up to 60 per cent of the voting securities in Hydro One.

The government's actions are unlocking the value of key government assets to generate better returns and revenues for Ontarians. The benefits include helping to expand the economy, boost productivity, improve competitiveness and create jobs for Ontarians.

Q2. Does Ontario have a structural deficit, and are you only able to balance the books by selling off Ontario's assets lock, stock and barrel?

A2. Ontario does not have a structural deficit. Much of the government's expenditures are discretionary. The government's plan for asset optimization is to dedicate any net proceeds, dollar for dollar, from designated asset sales to the Trillium Trust to ensure this money is not funding operational spending at the detriment of our public infrastructure. Over the life of the plan, the government will spend the Trust on new roads, highways, transit and other infrastructure as part of its Moving Ontario Forward plan. This builds on the over $100 billion in infrastructure investments made by the Province since 2003, which have supported an average of 100,000 jobs each year and maintains the government's commitment in maintain the Province's public infrastructure.

BARGAINING AND COMPENSATION

Q3. How are you managing the costs of public sector compensation?

A3. Managing compensation costs is critical to balancing the budget, as more than half of government spending goes to salaries and benefits, including those of both the Ontario Public Service (OPS) and broader public sector (BPS). All public-sector partners must continue to work together to control current and future compensation costs.

Between July 2012 and September 2016, the average annual negotiated wage increase across Ontario's provincial public sector has been 0.6 per cent. This is lower than:

- Ontario's municipal public sector (1.7 per cent)
- the federal public sector in Ontario (1.7 per cent) and
- Ontario's private sector (1.9 per cent).

The government has also taken steps to ensure executives at BPS organizations, which include hospitals, school boards, colleges and universities, receive fair but reasonable compensation. The new *Broader Public Sector Executive Compensation Act, 2014*, allows the Province to set sector-specific compensation frameworks. These frameworks will consider all aspects of compensation, including benefits and hard caps on salaries, and will reflect consultation and extensive research.

With significant compliance and enforcement measures, these new frameworks will help achieve better value for money while ensuring BPS organizations can attract and retain talented individuals.

Q4. The government was working in a net-zero bargaining environment but then why was there increases in public sector compensation, such as Teachers, AMAPCEO, Hydro? Is that why the government is now backing away from net-zero?

A4. The government has been clear, in multiple fiscal plans, including in the 2014, 2015 and 2016 Budgets, that compensation costs must be addressed within Ontario's existing fiscal framework. Recent agreements reached with Teachers, AMAPCEO and Hydro One unions are examples of the net zero approach to managing compensation, where modest wage increases were offset through a variety of trade-offs.

Q5. This was the sixth year in a row that you have reported a deficit lower than forecast. It's obvious you are overestimating the deficits. Will you balance the Budget before 2017-18?

A5. The government beat its deficit target for the sixth year in a row. Last fiscal year's deficit is $10.3 billion, down $2.2 billion from the $12.5 billion projected in last year's budget.

The government projected a deficit of $8.5 billion in 2015-16 and reported a deficit of $5.0B, $3.5B ahead of target despite taking a large valuation allowance on pension plan assets of $1.5B. We are confident that our projections of $4.8 billion in 2016-17 and a return to a balanced budget in 2017-18 can be achieved.

The improvement over plan was due in large part to the Ontario government's strong focus on managing growth in spending.

Q6. Does the fact that your deficit was $2.2 billion lower than projected mean you had more money to bring to the table in labour negotiations?

A6. Ontario's $10.3 billion deficit is in line with the $10.9 billion deficit projected in the 2015 Budget so fiscal projections have not fundamentally changed.

It is also important to point out that through the Public Accounts process, the government is reporting on past performance whereas labour negotiations impact future fiscal pressures.

The government is committed to balancing the budget by 2017-18. While there are difficult choices ahead, the government will continue to take a fair and balanced approach, one that protects and improves the services that matter to Ontarians.

Managing compensation costs is critical to balancing the budget, as over half of government spending goes to salaries and benefits in the Ontario Public Service (OPS) and the broader public sector (BPS).

Moving forward, the government is committed to working with public sector bargaining agents in negotiating collective agreements in a manner that considers all relevant factors, including recent macroeconomic and labour market trends.

While continuing to work to achieve fiscal balance by 2017–18, the government is achieving significant results in priority areas for Ontarians.

TRILLIUM TRUST

Q7. Have the net proceeds from the sale of the GM holdings been dedicated to the Trillium Trust, and how was that being reported in Public Accounts?

A7. The $1.1 billion gain from the sale of the Province's common and preferred GM shares has been dedicated to the Trillium Trust to invest in Moving Ontario Forward. In addition, the Province also directed to the Trillium Trust the $249 million net proceeds from the September 2013 sale of the Province's interest in 10 million GM shares. As a result, the Trillium Trust now has $1.35 billion available for investment in roads, highways, transit and other infrastructure throughout Ontario.

In September 2016, amounts related to disposition of Hydro One Shares of $3.2B have been credited to the Trust bringing the balance to $4.5B available for the investment in public infrastructure.

The revenues allocated to the Trillium Trust are reported as a schedule to Volume 1 in the 2014-15 Public Accounts. The transactions are also disclosed in the Ministry of Finance statements located in Volume 1 of the Public Accounts.

Q8. How did you spend the $1.35 billion dedicated to the Trillium Trust?

A8. The revenues allocated to the Trillium Trust will be used to support building transit, transportation and other priority infrastructure as part of the Moving Ontario Forward plan.

The government plans to begin drawing down on the balance in the Trillium Trust in 2016-17 to support the largest investment in public infrastructure in Ontario's history.

INFRASTRUCTURE – MOVING ONTARIO FORWARD

Q9. In the 2015 Budget, the government stated that $3.5 billion would be dedicated to the Moving Ontario Forward plan. So far, only $1.35 billion has been dedicated to the Trillium Trust. How do you propose to supply the $2.2 billion difference?

A9. Moving Ontario Forward dedicated funds would be largely supported by:

- Dedicated proceeds from 7.5 cents of the existing provincial gasoline tax to public transit and transportation infrastructure priorities. This would be over and above the existing gas tax funding to municipalities, with no increase to the current tax rate.
- Repurposing revenues from the existing Harmonized Sales Tax charged on the current provincial taxes on gasoline and road diesel.
- Dedicated proceeds from targeted revenue measures.
- Working with the federal government to secure federal funding through the Building Canada Plan.

Q10. How much did the government spend on Moving Ontario Forward in 2014-15?

A10. Moving Ontario Forward is part of the government's commitment to invest more than $137 billion in public infrastructure over the next 10 years. Investments are underway, including initial spending focused on planning, design, property acquisition and other activities to get projects construction-ready but no infrastructure spending has been applied against the Trillium Trust to date. Initial investments include the first intake of the Ontario Community Infrastructure Fund, funding for the Ontario Northland Transportation Commission and investments in provincial highways. Over the 10-year Moving Ontario Forward period, all of the dedicated funds are expected to be spent on priority infrastructure projects.

Q11. Why weren't the additional $2.2 billion in revenues dedicated to the Moving Ontario Forward plan reported in the Public Accounts?

A11. In the 2015 Budget, the government committed to dedicate $31.5B over 10 years to support infrastructure projects under the Moving Ontario Forward plan, which included $5.7B from its asset optimization strategy. In 2014-15, this amounts to about $3.5B in dedicated funds including $1.3B from asset optimization. The remaining $2.2B in 2014-15 would be largely supported by:

- Dedicated proceeds from 7.5 cents of the existing provincial gasoline tax to public transit and transportation infrastructure priorities. This would be over and above the existing gas tax funding to municipalities, with no increase to the current tax rate.
- Repurposing revenues from the existing Harmonized Sales Tax charged on the current provincial taxes on gasoline and road diesel.
- Dedicated proceeds from targeted revenue measures.
- Working with the federal government to secure federal funding through the Building Canada Plan.

These additional amounts are largely taxation revenues and are reflected in the total revenue figures in the 2014-15 Public Accounts.

Q12. How does investing in public infrastructure impact the economy?

A12. A large and growing body of independent research shows that infrastructure investments support jobs, augment personal incomes and produce real growth in the economy. For example, a September 2015 report by the Broadbent Institute and the Centre for Spatial Economics showed that, on average, investing a dollar in public infrastructure in Canada raises gross domestic product (GDP) by $1.43 in the short term and up to $3.83 in the long term.

ONTARIO'S FINANCIAL POSITION

Q13. Is the government on track to balance the budget by 2017-18?
A13. The government remains firmly committed to balancing the budget by 2017-18 in a way that is both fiscally responsible and fair.

The plan to balance set out in the 2015 Budget projected a deficit of $8.5 billion for 2015-16, followed by a $4.8 billion deficit in 2016-17 and a return to balance the following year.

The government will balance the budget through:

- Program Review, Renewal and Transformation;
- continuing to manage compensation costs;
- maintaining tax fairness and a level playing field for business; and
- strengthening government transparency, financial management and fiscal accountability

The Province's plan to balance the budget builds on past success: in each fiscal year between 2010-11 and 2014-15, the government beat its annual deficit target.

The government plans to balance the budget while continuing to make the investments that create jobs, expand opportunities and enhance prosperity for all Ontarians, which were outlined in the most recent budget.

That includes investing in people's talents and skills, building new public infrastructure like roads and transit, creating a dynamic, innovative environment where business thrives, and building a secure retirement savings plan.

Q14. Did you use your reserve to pad your fiscal results?

A14. For planning purposes, a reserve is included in the budgeted surplus/deficit each year to guard against unforeseen revenue and expense pressures that could have a negative impact on the Province's fiscal performance. The 2014 Budget plan included a $1.0 billion reserve. The reserve does not affect the actual deficit result of $10.3 billion and is only a budgeted amount for variability in results.

Q15. Ontario is still expected to be the last Canadian jurisdiction to return to balance. What are we doing wrong?

A15. Ontario has the lowest per-capita program spending among provinces. Ontario also has the lowest total government revenue per person among all Canadian provinces, including funding from federal transfers.

The government remains firmly committed to balancing the budget by 2017–18.
The deficit for 2014-15 is $10.3 billion, a $2.2 billion improvement compared with the 2014 Budget forecast. This marks the sixth year in a row Ontario has beaten its annual deficit target making the province one of the few governments in Canada to achieve this level of success.

As a result, Ontario's accumulated deficit is more than $25 billion lower than it otherwise would have been.

Given ongoing challenges in the broader economic environment, the government recognizes that now is the time to be making investments in people, modern infrastructure and a dynamic

and innovative business climate — investments that will help to spur economic growth and create the new jobs necessary to support eliminating the deficit.

Alongside these strategic investments, the government is also taking deliberate actions to ensure it can continue to manage spending and improve outcomes for Ontarians. Together, these investments and deliberate actions will help ensure that the priority programs and services that people rely on are maintained and enhanced while the deficit is eliminated.

Q16. Standard & Poor's downgraded the Province's credit rating from double-A-negative to A-plus because of a combination of "very high debt burden" and "very weak budgetary performance". What is the government doing to manage the debt?

A16. The government remains firmly committed to balancing the budget by 2017–18.

The deficit for 2014-15 is $10.3 billion, a $2.2 billion improvement compared to the 2014 Budget. This marks the sixth year in a row that Ontario has beaten its annual deficit target, reflecting the government's responsible and balanced approach to fiscal management. As a result, Ontario's accumulated deficit is more than $25 billion lower than it otherwise would have been.

Given ongoing challenges in the broader economic environment, the government recognizes that now is the time to be making investments in people, modern infrastructure and a dynamic and innovative business climate — investments that will help to spur economic growth and create the new jobs necessary to support eliminating the deficit.

Alongside these strategic investments, the government is also taking deliberate actions to ensure it can continue to manage spending and improve outcomes for Ontarians. Together, these investments and deliberate actions will help ensure that the priority programs and services that people rely on are maintained and enhanced while the deficit is eliminated.

Q17. Some have said your government has a spending problem, not a revenue problem. What do you say to that?

A17. The government beat its deficit target for the sixth year in a row. Last fiscal year's deficit is $10.3 billion, down $2.2 billion from the $12.5 billion projected in last year's budget.

The government is projecting a deficit of $8.5 billion in 2015-16, $4.8 billion in 2016-17 and a return to a balanced budget in 2017-18.

The improvement over plan was due in large part to the Ontario government's strong focus on managing growth in spending. Ontario consistently has the lowest per capita program spending among all Canadian provinces.

Over the past four years the Province has held the average annual growth in program spending to 1.4 per cent, less than the rate of inflation, while investing in services that people rely on.

Key elements of the government's plan to eliminate the deficit are:

- Program Review, Renewal and Transformation;
- managing compensation costs;
- maintaining tax fairness and a level playing field for business; and
- strengthening government transparency, financial management and fiscal accountability.

Q18. How much did government spend in 2014-15?

A18. Total spending for 2014-15 was $128.8 billion, against a planned $130.4 billion. This reflected savings across ministries and their agencies, as well as a lower-than-projected interest expense.

Over the past four years the Province has held average annual growth in program spending to 1.4 per cent, less than the rate of inflation, while continuing to invest in priorities like infrastructure and services like health care and education.

Q19. What are you going to do if Ontario's economy does not perform as strongly as you forecast?

A19. The Province has included prudence as part of the fiscal plan to help ensure it meets future fiscal targets as it moves towards a balanced budget in 2017–18.

As required by the Fiscal Transparency and Accountability Act, 2004 (FTAA), the fiscal plan continues to incorporate prudence in the form of a reserve to protect the fiscal outlook against adverse changes in the Province's revenue and expense, including those resulting from changes in Ontario's economic performance. The reserve has been set at $1.0 billion in 2015–16, and has been set at $1.2 billion in each of 2016–17 and 2017–18.

The fiscal plan also includes contingency funds to help mitigate expense risks that may otherwise negatively impact Ontario's fiscal performance.

In keeping with sound fiscal practices, the Province's revenue outlook is based on prudent economic assumptions. The Ontario Economic Forecast Council, established under the FTAA, reviewed the Ministry of Finance's economic assumptions in February 2015. All council members found the assumptions to be reasonable.

BUDGET SURPLUS and REVENUE INCREASE

Q20. Can you explain the $29 million increase in revenue since your 2015 Budget?

A20. The modest $29 million improvement in revenues is largely due to higher net income of government enterprises like the OPG as well as revenues from other non-tax revenues such as sales, rentals and royalties

These higher revenues were largely offset by lower Taxation Revenues and Federal Payments.

Q21. How did net income from government business enterprises increase by $589 million from your 2014 Budget projection?

A21. This increase was mostly due to OPG's lower operating costs and better market performance of its nuclear funds.

CONTINGECY FUND / RESERVE

Q22. What is the difference between the contingency fund and the reserve?

A22. The contingency fund is an amount of expense that is approved by the Legislative Assembly at the beginning of the year to cover expenses due to unforeseen events or program pressures (e.g. fighting forest fires). This approved spending limit is allocated during the year to ministries for their programs and activities.

The reserve is an amount included in the forecast each year to protect the plan against unforeseen revenue and expense pressures that could have a negative impact on the Province's fiscal performance.

BUDGET PROJECTIONS vs PUBLIC ACCOUNTS REPORTING

Q23. What accounts for the $1.1 billion decrease in taxation revenues from your 2014 Budget projection?

A23. Taxation revenues were $1.1 billion lower due largely to lower corporations' tax revenue ($0.7 billion) and lower sales tax revenue (-$0.2 billion).

Lower 2013 corporate income tax assessments resulted in a higher repayment to the Canada Revenue Agency for amounts already paid to the Province for the 2013 tax year and, refunds to corporations for tax years prior to 2009 were also higher.

Sales tax revenue was lower due to revisions to harmonized sales tax entitlement estimates for 2013 and prior tax years.

Q24. Why did Ontario's net debt increase by $17.4 billion in 2014-15?

A24. Net debt is the province's total debt and other liabilities, minus its financial assets, including cash and investments. The increase in net debt is primarily due to the deficit, and significant investments in infrastructure. Ontario's net debt-to-GDP is levelling off and the government continues to maintain a target of reducing the ratio to its pre-recession level of 27 per cent. Upon achieving balance in 2017-18, increases in net debt will be limited to borrowing for investments in capital infrastructure.

Q25. How do you explain the $19.2 billion increase in total debt in 2014-15?

A25. The increase in total debt is primarily due to the deficit and significant investments in infrastructure in 2014-15.

Background: Total debt represents all borrowings without taking into consideration other liabilities and financial assets. Net debt is the province's total debt and other liabilities, less its financial assets, such as Ontario's cash reserves and investments, loans receivables, and investments in Government Business Enterprises (e.g. LCBO, OLGC). Net debt is the measurement of debt most commonly used by rating agencies and investors in the Province's bonds.

Q26. Why was the interest on debt for 2014-15 $375 million lower than forecast in the 2014 Budget?

A26. Interest on debt is lower primarily because of:

- lower than forecast interest rates
- cost-effective debt management
- a one-time gain from the sale of asset-backed commercial paper that was written down in prior fiscal years.

Q27. Why was interest on debt for 2014-15 $63 million higher than in 2013-14?

A27. The Province pays interest on its total debt. Total debt increased in 2014-15 by $19.2 billion as a result of the deficit and investments in infrastructure causing interest on debt to also increase by $63 million when compared to the previous fiscal year.

Q28. You spent $1.6 billion less than you budgeted for programs. With all the problems facing the Province, aren't you just denying badly needed services to Ontarians?

A28. Ontario's path to a balanced budget is focused on improving the quality of life of all Ontarians. As always, the government must manage its limited resources in a way that is efficient and effective. This means doing some things differently. For example, since launching Ontario's Action Plan for Health Care in January 2012, the government has moved forward in transforming health care in the province from a fragmented system with rising costs, to a system focused on better access, quality and value for all Ontarians. The government has reduced growth in health care spending to about two per cent annually from about six to seven per cent per year, significantly bending the health care cost curve while continuing to improve.

An efficient and effective health care system must be forward looking and anticipate rather than react —based on evidence —so that health care interventions are smart, targeted and effective. Putting the needs of people and patients first will help improve patient outcomes and make the best use of every dollar spent.

Managing growth in spending underpins the government's commitment to achieving a balanced budget by 2017-18. Achieving balance requires a relentless focus on finding smarter, better ways to deliver the best possible value for every dollar we spend.
For example, in the education sector, the School Board Efficiencies and Modernization strategy is helping school boards reduce the costs of managing underutilized school space by consolidating schools, sharing space with other boards and fostering community partnerships.

From an across-government perspective, ministries are working together to better deliver services to people. At the same time, the Province is making tough choices to transform or wind down programs that are not performing, do not link to government priorities or no longer clearly serve the public interest.

While the government continues to invest in priority areas and implement its plan to support economic growth and prosperity, it is also committed to managing program expense growth over the medium term to support a balanced and thoughtful approach to eliminating the deficit.

PROGRAM, REVIEW, RENEWAL AND TRANSFORMATION

Q29. How are you reviewing and transforming government programs?

A29. The Ontario Economic Outlook and Fiscal Review in fall 2014 announced Program Review, Renewal and Transformation (PRRT) as a key element of the government's plan to achieve a balanced budget.

PRRT is a fundamentally new approach to multi-year planning and budgeting, and is designed around four key principles:

- Examining how every government dollar is spent;
- Using evidence to inform better choices and improve outcomes;
- Looking across government to find the best way to deliver services; and
- Taking a multi-year approach to find opportunities to transform programs and achieve savings.

PRRT is focused on improving outcomes for government programs and services to ensure they are effective, efficient and sustainable.

This may mean redesigning policies to support greater cooperation within government, modernizing program delivery, and changing or ending programs that do not meet people's needs. [2016 Budget, p. 181].

Q30. Has PRRT achieved any tangible results/savings?

A30. The 2014 Budget announced that the government was implementing an annual program review savings target, and set the target at $250 million for 2014-15. The target was met through a number of initiatives that identified efficiencies, lowered costs or reduced administrative overhead without impacting front-line services. [2015 Budget, p. 232]

An additional year-end savings target of $1.1 billion built into the plan was also achieved.

The government met its program review savings target through initiatives such as:

- Negotiating lower prices for goods and services;
- Finding internal efficiencies in information technology data centre, desktop and service management operations;
- Modernizing the delivery of natural resources management programs;
- Restraining compensation growth in line with the government's "net zero" policy;
- Finding operational and administrative efficiencies across government, including reducing the government's office footprint and prudent management of discretionary costs, such as supplies and travel.

In the 2015 Budget, the government announced a number of opportunities identified through PRRT to improve outcomes while supporting fiscal objectives. They included:

- Changing business tax credits;
- Modernizing programs delivered through ServiceOntario;
- Reducing the government's office footprint;
- Getting better value for money invested in health care programs and services.

Examples of Successful Transformation Initiatives [from the 2015 Budget, p. 204]

The government has a strong track record of successfully transforming public services by improving outcomes and managing costs. Examples include:

- Moving from a provider-based to a patient-based health care funding model, which includes updating and rebalancing some OHIP fees to reflect advances in technology and applying the best medical evidence on patient outcomes. Government reform of the Provincial drug program has resulted in savings of $500 million per year.
- Transforming the youth justice system by diverting lower-risk youth in conflict with the law to community-based programs. Expanding rehabilitation programs for approximately 11,000 youth per year has both reduced the risk of reoffending and allowed the government to shut down or repurpose many youth detention centres. Key achievements between 2003 and 2013 include a drop in the number of youth in secure custody from over 1,000 to fewer than 400, and a 43 per cent decrease in the youth crime rate.
- Working with municipalities to allow for localized administration of programs for the homeless so that programs respond better to the needs of the families and individuals involved. This is being done through the Community Homelessness Prevention Initiative, which combines funding from five formerly separate housing and homelessness programs into a single, flexible and locally coordinated program. For further information, see Chapter I, Section F: *A Fair Society*.

In addition, the government is moving forward with opportunities that improve efficiency, reduce overlap across government programs, and ensure that government works better for Ontarians, including:

- Reducing the costs associated with managing under-utilized school space by encouraging school boards to consolidate schools, share space with other boards and foster community partnerships.
- Better targeting funding through business support programs, such as the Ontario Interactive Digital Media Tax Credit. Changes proposed in the 2015 Budget include realigning funding from an open-ended tax credit to a grant program, which will improve effectiveness.

Q31. What do you have to say to those public sector workers who have lost their jobs or are at risk of losing their jobs because of PRRT?

A31. The government is committed to protecting the public services that matter the most to Ontarians. This is why it is not making across the board cuts. Instead, the government is using PRRT to balance the budget by carefully and thoughtfully examining how every government dollar is spent while taking outcomes into account.

Q32. Why was the 2014-15 program review savings target of $250 million so much smaller than the $1.1 billion year-end savings target?

A32. The 2014 Budget included a year-end savings target of $1.1 billion for 2014-15. As in past years, the year-end saving provision reflects anticipated underspending that has historically arisen at year-end due to factors such as program efficiencies, and changes in project start-ups and implementation plans.

The 2014 Budget also included a program review savings target of $250 million in 2014-15. The target was established with a focus on maintaining or enhancing the delivery of public services while reducing costs that are not essential to delivering services.

The $250 million target was met through a number of initiatives that identified efficiencies, lowered costs or reduced administrative overhead without impacting front-line services. [2015 Budget, p. 232]

For example, the Ministry of Health and Long Term Care negotiated lower prices for goods and services, achieving savings of approximately $40 million through lower contract costs for vaccines and telehealth services. [See Q.30 for other examples.]

GOVERNMENT ADVERTISING ACT

Q33.What are you doing to ban partisan advertising before an election (Bill 201)?

A33. Although the Government Advertising Act already requires that all government advertising be non-partisan as defined in the Act, it is important to avoid even a perception that the government's advertising might be able to influence an election campaign.

The government brought forward amendments to Bill 201 to extend the time period during which government advertising would be restricted with limited exceptions.

These amendments would, if passed, extend the existing restrictions on government advertising in the Government Advertising Act for a period of 60 days prior to the drop of the writ for a scheduled general election.

Governments have ongoing obligations to communicate with citizens on a range of issues including public health warnings, emergency preparedness, access to identification documents (i.e., health cards, birth certificates, etc.) and public education on civic responsibilities (i.e., submitting taxes, etc.)

If asked about proposed changes to the Election Finances Act:

The Ontario government has also committed to enhance the fairness and integrity of the election system as part of its plan to build a fairer and more inclusive Ontario.

Proposed amendments to the Election Finances Act were introduced by Minister Naqvi, the Government House Leader, on May 17, 2016. Bill 201 was considered in committee and has been reported to the Legislature for Second Reading.

The government's goal is to have reforms in place by January 1, 2017.

Flagship elements include:

- Banning union and corporate donations;
- Reducing individual contribution limits;
- Regulation of pre-writ advertising spending by third parties and political parties; and,
- Spending limits on third-party advertising during election campaigns.

Further questions should be directed to the Government House Leader.

Q 34. The Auditor General has said the Government Advertising Act is not living up to its intended purpose. How do you respond?

A 34. Ontario is still the first and only jurisdiction in Canada to have legislation that bans government-paid partisan advertising in newspapers, magazines, billboards, radio, and television.

As part of the 2015 Budget, the government modernized the *Government Advertising Act* and broadened the Auditor General's mandate to cover digital advertising as well as transit ads and movie theatre ads.

The Office of the Auditor General continues to have oversight of government advertising, to ensure that an independent third party confirms that the standards of the Act have been met.

Friendly Questions (MOF)

1. Why was the deficit lower than projected? Where does the government stand when it comes to reaching a balanced budget?

A. Since the last time the Office of the Auditor General reviewed these statistics in its 2013 Annual Report, the province's net debt-to GDP ratio has improved from 39.1 per cent to 38.5 per cent for 2013-14 and remained relatively unchanged for 2014-15 at 39.4 per cent. This improvement is a direct result of better than forecast deficits.

With regard to debt management, the government's support for and commitment to economic growth will maintain debt at sustainable levels and achieve its target of reducing the net debt-to GDP ratio to the pre-recession level of 27 per cent.

The province has consistently beaten its annual deficit targets over the last seven years. A major contributor toward beating annual deficit targets has been the focus on annual expenditure management limiting the growth in program spending to an average of 1.2 percent from 2010-11 to 2013-14. The government has also addressed Ontario's infrastructure needs through targeted capital investments.

2. Chapter 2 of the Auditor General's 2015 annual report speaks to the increased vulnerability of Ontario with respect to interest rates. She points to the possible rise in rates related to borrowing.

However, I am also aware that the Province has consistently kept interest on debt costs below budget projections.

What steps has the government taken to reduce borrowing and keep interest on debt costs low?

A. Through prudent and cost-effective debt management, the Province has consistently kept interest on debt costs below budget projections. The 2010 Budget forecasted that, by 2016-17, the Province would have to spend 11.7 cents on interest for every revenue dollar received. The current forecast is 27 per cent lower, at 8.5 cents of interest costs for every dollar of revenue. This ratio is the lowest it has been in 25 fiscal years or since 1990-91, and is forecast to remain low through the period to balance in 2017–18.

Extending the term of the debt that the Province issues has locked in low interest rates for a longer period, which reduces refinancing risks and helps offset the impact of expected higher interest rates on the Province's interest on debt costs.

Going back to the beginning of fiscal 2010–11, Ontario has issued $59.1 billion of bonds that do not mature for at least 30 years to lock in low rates. As a result, the

weighted-average term to maturity of long-term provincial debt issued has been extended significantly, from 8.6 years in 2008-09 to 15.3 years as of September 30.

3. The stranded debt arose under the *Energy Competition Act of 1998*, and its schedule, the *Electricity Act, 1998*. The *Electricity Act, 1998*, also enabled the implementation of the Debt Retirement Charge (DRC) on electricity ratepayers.

Since May 2002, residential and other electricity users have been paying the DRC of 0.7 cents per kilowatt hour (kWh) on their electricity bills. The DRC is paid to the Ontario Electricity Financial Corporation (OEFC) to help service and pay down the stranded debt that arose because of the restructuring of Ontario's electricity sector under the *Energy Competition Act, 1998*.

However, I know that the government eliminated the DRC from residential bills as of January 1, 2016.

This legacy charge from the Harris government was eliminated from residential bills about 2 years earlier than previously estimated – saving the average residential user about $70/year.

Can you please inform the committee of the commitment that the government has to eliminating the debt retirement charge cost for commercial, industrial and all other electricity users by 2018?

A. Thank you for the question.

As part of its commitment to reduce electricity cost pressures, the government has removed the Debt Retirement Charge (DRC) from residential electricity users' bills as of January 1, 2016.

This is saving a typical residential user about $70 each year and meant ending the DRC earlier for these users than otherwise provided for in the *Electricity Act, 1998*, as originally enacted. As a further step to mitigate electricity cost pressures for commercial, industrial and all other users, the government introduced legislation, passed on December 10, 2015, the *Budget Measures Act, 2015* to end the DRC on April 1, 2018, nine months earlier than previously estimated.

- A large industrial using 3,000 megawatt-hours (MWh) per month could save $21,000 per month, or about seven per cent off its electricity bills;
- For a large northern industrial in the Northern Industrial Electricity Rate program, this could be more than an eight per cent savings; and
- A small business using 20,000 kilowatt-hours (kWh) per month could save $140 per month, or about four per cent.

Ending the DRC on a legislated fixed date provides certainty to commercial, industrial and other users, and helps them more effectively plan their investment decisions.

I would note the following context. The government's electricity sector reforms in the Electricity Restructuring Act, 2004, and others, have put the stranded debt recovery plan back on track. Based on interim numbers in Budget 2016, 2015-16 is projected to be the twelfth consecutive year that the stranded debt has been reduced, to under $5 billion as at March 31, 2016, from $20.6 billion as at March 31, 2004. This allowed the government to follow through on its commitment to reduce electricity cost pressures.

4. Moody's just released a report noting that Ontario's debt burden and debt service costs will remain manageable thanks to low interest rates, as well as the province's improving fiscal position and conservative debt management policy. Can you explain how your conservative debt management policies are keeping debt service costs manageable?

A: According to Moody's, "low interest rates will keep interest costs in line with current levels." Moody's also states that "Ontario's strategy of issuing debt across a variety of maturities and markets helps ensure good access to funding and low financing costs. To protect against unfavorable market conditions, Ontario has in recent years increased its liquidity reserves. The province has also extended its weighted average debt maturity to take greater advantage of low interest rates."

This term extension reduces the Province's refinancing risks and helps offset the impact of expected higher interest rates on its IOD costs.

The 2010 Budget forecasted that, by 2016-17, the Province would have to spend 11.7 cents of every revenue dollar received on interest. The current forecast is 23 per cent lower, at 9.0 cents of interest costs for every dollar of revenue.

This ratio is the lowest it has been since 1990-91, and is forecast to remain low through the outlook period in 2018–19.

5. Moody's just released a report noting that Ontario's policy decision to borrow for infrastructure spending at a time of historically low interest rates, combined with the prudent debt management practices has helped to support the province's Aa2 rating. Can you explain how borrowing for infrastructure helps support the province's credit rating?

A: According to Moody's although Ontario's debt will continue to increase over the medium term as it funds its 10-year infrastructure plan "any negative impact on the province's credit strength will be counterbalanced by rising revenues and a return to budgetary balance."

The government plans to invest more than $137-billion in capital over 10 years, and $160 billion over the 12-year period starting in 2014-15.

Investments in capital, supplement GDP growth and the net debt-to-GDP ratio will come down more quickly than it would without these investments. Once a balanced budget is achieved, the increase in net debt will be limited to difference between the cash investment to build the assets and the amortization, which is a non-cash amount.

Friendly Questions (TBS)

6. Deputy Minister Orencsak, you mentioned that the C.D. Howe Institute has given positive feedback about the government's reporting practices. Why is that significant?

A. Ontario has consistently scored top marks in the C.D. Howe Institute's evaluation of senior government financial reporting transparency and fiscal accountability. For the past several years, Ontario has earned an "A" on overall measures. The Institute's latest report included some new measures, which caused Ontario's rank to fall to "A-." The results differ from those in previous iterations of the report because of modifications in the Institute's grading system as well as changes in the financial reports themselves.

The Institute noted that Ontario's presentation of its consolidated financial statements was a key strength when compared to other jurisdictions. Further, the Institute ranked Ontario first overall regarding the accuracy of its budgeted spending forecasts.

Ontario and several other provinces were praised for having their budgets prepared on the same accounting basis as their end-of-year public accounts. In having budget and public accounts on the same basis, Ontario and the other such provinces have increased transparency and comparability to their citizens.

7. How does the Financial Statement Discussion and Analysis meet the best practices recommended by Public Sector Accounting Board?

A.: In Ontario, public reporting of the government's fiscal plan and financial results are prescribed by the *Fiscal Transparency and Accountability Act* and the *Financial Administration Act.* The two pieces of legislation work together to ensure a principled financial management framework for Ontario.

In addition, the government has taken steps to enhance transparency and accountability and to make the information more accessible and understandable for the average person. We've used data visualization in the past, and this year we are supplementing the information with more online tools and graphics. This means the average person is better able to understand the trends in balance sheet and operating activities in the last five years. It also means a person can more search through the data more easily.

We've also made improvements after a recommendation by the Auditor General about the Financial Statement Discussion and Analysis section of the government's Annual Report.

We've changed the format and layout of this section to ensure it's presenting the province's key financial facts in a non-partisan manner.

Expanding beyond the Auditor General's recommendations, our staff also reviewed the reports of other senior Canadian governments to identify best practices.

8. Everyone has been doing more with less, and that includes the government. For example there are 6% fewer full time employees in the civil service now, compared to 2008. What else is the government doing to ensure its bringing costs down? What results have been achieved so far?

A. The Ontario Economic Outlook and Fiscal Review in fall 2014 announced Program Review, Renewal and Transformation (PRRT) as a key element of the government's plan to achieve a balanced budget.

PRRT is a fundamentally new approach to multi-year planning and budgeting, and is designed around four key principles:

- Examining how every government dollar is spent
- Using evidence to inform better choices and improve outcomes
- Looking across government to find the best way to deliver services, and
- Taking a multi-year approach to find opportunities to transform programs and achieve savings.

At the same time, the government is making tough choices to end programs that are not performing, do not link to key priorities or no longer serve a clear public interest.

The 2014 Budget announced that the government was implementing an annual program review savings target, and set the target at $250 million for 2014-15. The target was met through a number of initiatives that achieved the reductions while continuing to support front-line services.

An additional year-end savings target of $1.1 billion built into the plan was also achieved.

The government met its program review savings target through initiatives such as:

- Negotiating lower prices for goods and services
- Finding internal efficiencies in information technology data centre, desktop and service management operations
- Modernizing the delivery of natural resources management programs
- Restraining compensation growth in line with the government's "net zero" policy
- Finding operational and administrative efficiencies across government, including reducing the government's office footprint and prudent management of discretionary costs, such as supplies and travel.

In the 2015 Budget, the government announced a number of opportunities identified through PRRT to improve outcomes while supporting fiscal objectives. They included:

- Changing business tax credits
- Modernizing programs delivered through ServiceOntario
- Reducing the government's office footprint
- Getting better value for money invested in health care programs and services.

9. Why is it important that the government has consistently beaten its deficit reduction targets in terms of the province's finances?

A. The government is dedicated to a fiscally sound approach to managing the Province's finances, which will provide the foundation for the long-term well-being and prosperity of Ontarians.

The government remains on track to eliminate the deficit by 2017-18.

By continuing to beat our fiscal targets, and through prudent and cost-effective debt management, the Province has also consistently kept interest on debt costs below budget projections.

Term extension has allowed the Province to lock in low interest rates for a longer period, which reduces refinancing risks and helps offset the impact of expected higher interest rates on the Province's interest on debt costs.

In addition, we have maintained a rigorous approach to control program spending to reduce Ontario's net debt-to-GDP ratio to its pre-recession level.

Our path to a balanced budget is being achieved through responsible fiscal management, which involves:

- Managing growth in program spending, and
- Maintaining the integrity of Provincial revenues.

Our plan is to first balance the budget while continuing to make strategic investments in capital assets. These infrastructure investments will stimulate economic growth, resulting in GDP growing more quickly than debt, and thereby lowering the net debt-to-GDP ratio.

10. There's been concern about Ontario's net debt-to-GDP being significant; however the government is making large-scale infrastructure investments. How are these investments helping the people of Ontario?

A. The government's position is that the renewal and expansion of public infrastructure supports Ontario's industries, creates jobs and provides long-term benefits and improves the lives of Ontarians.

Large investments have been announced and made for improvements in the province's infrastructure. The province is making public infrastructure investments of more than $137 billion over the next 10 years. This builds on the 2014 Budget commitment to invest in infrastructure – resulting in about $160 billion of investment over 12 years, starting in 2014-15.

The revenues allocated to the Trillium Trust will be used to support building transit, transportation and other priority infrastructure as part of the Moving Ontario Forward plan.

A September 2015 report by the Broadbent Institute and the Centre for Spatial Economics showed that, on average, investing a dollar in public infrastructure in Canada raises gross domestic product (GDP) by $1.43 in the short term and up to $3.83 in the long term.

Ontario's planned investments in public infrastructure are expected to support over 110,000 jobs per year on average.

Building and revitalizing public infrastructure are essential to strengthening Ontario's economy.

11. Given that compensation accounts for half of government spending, what has the government done to help alleviate the strain on finances as it works toward balancing its budget?

A. The government remains committed to balancing the budget by 2017-18 and managing compensation costs has been a key element of achieving this goal.

The 2016 Budget emphasized that all public-sector partners must continue to work together to control current and future compensation costs.

Since then, collective agreements have been reached in a number of key sectors, including the education sector, Ontario Public Service and provincial energy corporations that are consistent with the government's fiscal plan.

From July 2012 to September 2016, the provincial public sector annual wage increases have averaged 0.6%, compared to the municipal sector at 1.7%, the private sector at 1.9% and the federal public sector in Ontario at 1.7%.

The Government has achieved a number of net-zero deals, including:

In August 2014, the Government reached a new net-zero four-year agreement with AMAPCEO, which produced savings of approximately $45 million. The agreement included zero across-the-board increases in the first two years and modest increases in the third and fourth years that were offset by savings elsewhere in the collective agreement.

On Oct. 30, 2015, the Government ratified a new net-zero three-year agreement with the Unified Bargaining Unit in OPSEU.

The Unified agreement includes no wage increases in 2015 and 2016. In 2016 there will be a modest 1.4 per cent one-time lump sum payment that does not form part of employees' base salaries, and in 2017 there is a 1.4 per cent pay increase.

The agreement is consistent with the fiscal plan. The lump-sum payment in 2016 and pay increase in 2017 are offset through changes to employee benefits and entitlements over the three-year term of the contract, including a freeze on salary progression in 2016 and 2017 and capping of termination payments.

In May of 2016, the government was able to achieve a net-zero negotiations and arbitration settlement outcome with OPSEU Corrections.

The government has a reached a tentative agreement with the Provincial Engineers Government of Ontario (PEGO) that still needs ratification by members. As such we cannot comment on the details of this deal.

12. There are changes ahead for retiree benefits, how will they help the government's bottom line and how do they compare with what is happening in the private sector? How important are these kinds of changes to our plan to balance the budget?

A. Currently, persons in receipt of a pension from the Public Service Pension Plan (PSPP) or OPSEU Pension plan who have a minimum 10 years of pension credit are entitled to post-retirement group health, dental and life insurance coverage. The Ontario government pays 100% of monthly premium costs.

On Feb. 18, 2014, the government announced that the post-retirement benefits eligibility criteria and cost-sharing terms would be changing in 2017.

PSPP and OPSEU Pension Plan member employees who do not have 10 years of pension credit as of Jan. 1, 2017 would be required to have at least 20 years of pension credit to retire to an immediate unreduced pension in order to be eligible for post-retirement benefits.

Also, eligible persons who have not commenced receiving a pension before Jan. 1, 2017, would be required to pay 50% of the life, health, dental and vision and hearing aid premiums.

Employees who commenced receiving a pension before Jan. 1, 2017 will not be affected by these changes.

Announcement of the changes led to a reduction of the retiree benefit program liability by over $1 billion and brings Ontario Public Service retiree benefits more in line with other public sector organizations.

Some other public sector workers pay 100% of their benefits premiums.

Eligible retirees include former employees of the OPS, as well as former employees of other employers which participate in the OPS pension plans.

Retired judges, justices of the peace and Ontario Provincial Police Association (OPPA) members have independent retiree benefit terms.

By transitioning to a new cost-sharing model for retiree benefits, the government is moving in line with the private sector and other public sector organizations.

Friendly Questions (WSIB)

13. The Auditor General has discussed the WSIB in her report for a couple of years, suggesting that the government reconsider the exclusion of the WSIB's financial results from the Province's consolidated financial statements. Her suggestion is based on the risk that the province might

have to provide funding to ensure the WSIB remains viable. Why hasn't the government consolidated the WSIB on its books?

A. Under public sector accounting standards the province only consolidates those organizations which are assessed as controlled. Where the province has the power to govern the financial and operating policies of an entity with expected benefits of risk or loss, it is consolidated on our books. This is not the case with the WSIB, and furthermore the Province doesn't have any legal liability for the debts of the WSIB.

In fact, the WSIB is really a non-controlled trust in nature, and such trusts are not consolidated on the basis that it would distort the Province's books if the trust's assets, liabilities, revenues and expenses were shown on our books. Since the government does not have any legal responsibility for the unfunded liability, and does not control the entity, we feel that it should remain non-consolidated.

The current exclusion of the entity from our books best serves transparency and accountability. Otherwise, the public and legislature would assume that the WSIB debt is taxpayer debt and that any net operating income/loss of the WSIB would somehow impact the taxpayer.

Following the 2009 report of the Auditor General, the government took steps to amend the *WSIA* to confirm the independence of the WSIB and reinforce its Trust status.

14. What progress has the WSIB made on its target to be fully funded by 2027?

A. Over the past five years, the WSIB has achieved meaningful progress in improving its financial position. Our Sufficiency Ratio is forecasted to reach 85% by the end of the year, compared with 54.2% (funding ratio) in 2009.

The UFL is being reduced ahead of schedule - from a peak of $14.2 billion in 2011, the UFL has now been brought down to $5.6 billion (sufficiency basis) in 2016 (Q2).

We have updated our funding trajectory as part of our 2016 economic statement and we expect to reach 100% sufficiency by 2021, six years ahead of the legislated requirement.

Our pursuit of financial sustainability is not an end unto itself. It is a way of ensuring the delivery of benefits to workers for generations to come – and the freedom to focus on other priorities in the service of both workers and employers.

The significant financial improvements achieved by the WSIB since 2009 can be attributed to four main factors.

Increased premium revenue from employers that was collected specifically to decrease the UFL.

Higher investment returns than long-term targets.

Fewer claims. Claim volumes have been declining for more than two decades and continue to do so today.

Improved recovery and return-to-work results – achieved through the WSIB's health care and return-to-work initiatives, along with more efficiency in the claims management process.

15. Can you please give us an update on the status of the WSIB review of its long term financial viability?

A. Long-term viability is about getting to a funding level which will ensure the sustainability of benefits for the injured workers who need them while providing premium rate stability for employers.

In order to moderate the risk of any future UFL in the event of economic shocks, the WSIB plans to target a Sufficiency Ratio in the range of 115 to 125 per cent as constituting full funding. This target was determined by examining the Office of the Superintendent of Financial Institutions (OSFI) guidelines and funding levels maintained by other workplace compensation boards.

The WSIB's current estimated trajectory shows us reaching full funding (115%) by 2025 while offering premium rate reductions of 5% in each of 2017, 2018 and 2019. Projections also include potential rate reductions of 15-20% between 2023 and 2027.

The WSIB's projections for the future continue to look bright. We believe we will eliminate the UFL by 2021 even as we implement legislated benefit increases (e.g., presumptive Post Traumatic Stress Disorder (PTSD) legislation, indexation of partial benefits), invest in our systems to improve service, and lower premium rates.

2015-16 ANNUAL REPORT AND CONSOLIDATED FINANCIAL STATEMENTS 2
KEY MESSAGES.....2
TOP QUESTIONS 3

2015-16 ANNUAL REPORT AND CONSOLIDATED FINANCIAL STATEMENTS

KEY MESSAGES

- The government has released its 2015-16 Annual Report and unaudited Consolidated Financial Statements to ensure transparency with respect to the province's financial position.

- To align with the Auditor General, a regulation has been filed to prescribe the accounting treatment for pension assets for the 2015-16 financial statements.

- The regulation resolves the outstanding accounting issue for this year in a manner that is consistent with the fiscal outcome proposed by the Auditor General.

- This marks the seventh year in a row that Ontario has beaten its deficit target.

- Ontario remains committed to balancing the budget in 2017-18, while continuing to invest in the priorities that matter to the people of Ontario, such as healthcare, education and infrastructure.

If pressed about why a regulation was needed:

- Based on their professional judgement, the Province's professional accounting staff could not agree with the Auditor General's interpretation of Public Sector Accounting Standards as it relates to jointly-sponsored pension plans.

- A regulation was required to allow the public service to sign-off on the impact of the Auditor General's view on accounting for pension assets in Ontario's 2015-16 financial statements.

- The Province has applied consistent accounting treatment for these plans for the past 14 years, and has consistently received unqualified, or clean audit opinions from the Auditor General, without exception.

- To remain clear and transparent, we have reflected the Auditor General's view of the issue for this year. In order to do so, the government regulated the treatment of the pension assets for 2015-16.

- This is an accounting issue. However the government remains optimistic that by studying the issue further and gathering third-party professional opinions, we will be able to reach an agreement on the treatment with the Auditor General in the coming months.

TOP QUESTIONS

Q1. It sounds to me like the government is yet again fighting with the Auditor General. What do you say to this?

A1. This is not true from the government's perspective. And let me explain why: The government respects the oversight and recommendations provided by all independent officers of the Legislative Assembly of Ontario, including the Auditor General. And in this case for this set of final accounts, while one specific issue is being sorted through, we actually are agreeing with the Auditor General's numbers.

Given these differences of opinion, the Province filed a time-limited regulation, which legislates the accounting for pension assets of jointly-sponsored pension plans for the 2015-16 Public Accounts. The government believes this is consistent with the fiscal outcome proposed by the Auditor General.

The government believes that this accounting matter would benefit from additional discussions, information and consideration.

The Public Sector Accounting Board has set up a task force to review the current accounting standards for retirement benefits. The government will ensure that the task force is made aware of this area of difference in interpretation.

In addition, the government will also be engaging an expert panel to support a full understanding of the basis and nature of the differences. The government will consult individuals with a range of backgrounds and experience, including preparers, joint sponsors and auditors of public sector financial reports.

Q2. Why did the government release its financial statements without the Auditor approving them?

A2. This year, the Auditor General presented the province with a new interpretation of public sector accounting standards as it relates to an accounting issue – the treatment of pension assets.

Ontario has followed the same pension accounting treatment for the past 14 years. This had been accepted by the current Auditor General for the last two years, resulting in unqualified – or clean audit opinions. It has also been accepted by three previous Auditors General. There has been no change to the relevant accounting standards over the past 14 years.

In preparing the Annual Report and Consolidated Financial Statements, the Province's professional accounting staff and the Auditor General have engaged in discussions regarding the treatment of pension assets – which is subject to a range of interpretations.

Despite best efforts to try to resolve concerns, the Province's professional accounting staff and the Auditor General continue to have difference interpretations.

To remain clear and transparent, the government exercised its statutory authority to regulate the treatment of this particular issue for 2015-16. The government regulated the treatment of pension assets in a manner that is consistent with the fiscal outcome proposed by the Auditor General.

The government released its financial statements to ensure transparency with respect to province's financial position.

The Public Sector Accounting Board has set up a task force to review the current accounting standards for retirement benefits. The Province will ensure that the task force is made aware of this area of difference in interpretation.

In addition, Ontario will also be engaging an expert panel to support a full understanding of the basis and nature of the differences. The Province will consult individuals with a range of backgrounds and experience, including preparers, joint sponsors and auditors of public sector financial reports.

Q3. If the Public Sector Accounting Board is studying this issue, are other Canadian jurisdictions dealing with this as well?

A3. No other province has similar governance frameworks for their jointly-sponsored pension plans that are in a surplus position.

British Columbia

Pension assets for BC's jointly sponsored pension plans are not reported on British Columbia's consolidated financial statements. The governance framework in BC is different than Ontario's and would appear to justify different accounting treatment under PSAB standards.

Specifically, the Boards of Trustees of the BC Plans, unlike their Ontario counterparts, are permitted to use ongoing surpluses through the amendment of the Plan rules governing contributions and benefits, so long as the amendment of the Plan rules:

- Does not result in an increased contribution rate for employees or employers
- Does not create or increase an unfunded liability in the Plan, and
- Is otherwise compliant with applicable legislation and the Trustees' fiduciary obligations.

In contrast, the governance arrangements with respect to the Ontario Teachers' Pension (OTPP) provide that the Partners that sponsor that arrangement, being the Minister of Education and the OTF, may use ongoing surpluses as they believe appropriate, subject only to the Ontario *Pension Benefits Act.* The Board of Directors of the OTPP, being the OTPP administrator for purposes of the PBA, has no authority with respect to the use of Plan surpluses.

The OPTrust governing documents also stipulate that it is the Sponsors of the OPTrust, being the Province of Ontario and OPSEU, who have the authority to utilize ongoing Plan surpluses. OPTrust's Board of Trustees, being the OPTrust administrator for purposes of the Ontario PBA, has no authority to utilize ongoing Plan surpluses.

New Brunswick

As we understand it, New Brunswick converted four of its pension plans into what it refers to as target plans.

In the prior year, New Brunswick accounted for these plans as defined contribution plans, meaning it expensed the contributions to the plan and did not reflect its share of the net asset or net liability of the plan in its financial statements. The Auditor General of New Brunswick issued a qualified opinion on those financial statements.

In the 2015-16 fiscal year, New Brunswick changed its accounting for those plans to account for them as defined benefit plans and the Auditor General of New Brunswick issued a clean opinion.

Ontario has always accounted for its share of its jointly sponsored plans as defined benefit plans.

Q4. What is the professional judgment that exists out there to interpreting jointly-sponsored pensions?

A4. A key consideration in exercising professional judgment is if the resulting financial information is both relevant and reliable and gives a fair presentation of the transaction.

This area of pension accounting is particularly complex, and it is important to consider the specific facts and circumstances when assessing the appropriate accounting treatment.

In this regard, the government has assessed the appropriate accounting treatments based on the governance frameworks applicable to Ontario's jointly-sponsored pension plans. It would be inappropriate to assume that the governance frameworks of plans in other jurisdictions would necessarily result in the same accounting treatment.

Q5. Is the Auditor General misinterpreting Public Sector Accounting Board standards?

A5. The Auditor General's responsibility is to conduct an independent audit and provide her audit opinion based on her own professional judgment. A difference of opinion on the interpretation of accounting standards is not unique to this situation. Other jurisdictions have also experienced differences of opinion between preparers and auditors on complex accounting matters.

Over the coming months the government will undertake activities to further assess the application of PSAB standards to Ontario's accounting for jointly-sponsored pension plans. In the meantime, it remains the professional judgment of the professional staff that the accounting treatment in place since 2001 continues to be appropriate.

Q6. If the Auditor General had agreed with you, what would the differences have been in the deficit or net debt?

A6. According to the Province's interpretation of PSAB, the annual deficit would be $1.5 billion lower (at $3.5 billion), and net debt would be $10.7 billion lower.

Q7. The province has been treating pensions the same way since 2001. When did the Auditor General tell you about this new accounting treatment?

A7. The government only learned that the Auditor General was challenging the accounting treatment of the past 14 years very late in the audit. On September 13th the Auditor General communicated her position that the Province should write off the entire pension asset amount of $10.7 billion from the balance sheet.

Q8. If the government things its right, why would the government change the numbers?

A8. To clarify, the 2015-16 results are based on legislation and PSAB. Although they reflect the same fiscal results which would be presented according to the Auditor General's proposed interpretation of the standards, the results as presented do not represent our professional staff's interpretation of PSAB standards for jointly sponsored pension plans.

By adopting the Auditor General's interpretation, the financial statements could be finalized and signed off in order to complete the financial reporting process and enable Public Accounts to be completed. Unfortunately, the Auditor General's audit opinion remains outstanding at this time so the Public Accounts have yet to be finalized.

Q9. Was there something wrong with the accounting rules that the government was using before?

A9. No.

Prior to this change, Ontario had followed the same pension accounting treatment for the past 14 years. This had been accepted by the current Auditor General for the last two years. It has also been accepted by three previous Auditors General. There has been no change to the relevant accounting standards over the past 14 years.

That said, the Province believes that this complex accounting area would benefit from additional discussion and analysis. Over the coming months, efforts will be made to engage experts to assist with further analysis of the application of PSAB to accounting for jointly-sponsored pension plans on the Province's books.

Q10. Why hasn't the Auditor General raised this with you in the past two years?

A10. I cannot speak for the Auditor General. Please refer your questions to the Auditor General's Office.

Q11. So what happens next? When will you table the actual Public Accounts?

A11. The government will continue to work with the Auditor General to complete tabling of the 2015-16 Public Accounts.

The Public Sector Accounting Board has set up a task force to review the current accounting standards for retirement benefits. The Province will ensure that the task force is made aware of this area of difference in interpretation.

In addition, Ontario will also be engaging an expert panel to support a full understanding of the basis and nature of the differences. The Province will consult individuals with a range of backgrounds and experience, including preparers, joint sponsors and auditors of public sector financial reports.

Q12. Does the change in accounting regarding the assets of the Teachers' or OPSEU pensions plans mean those plans might be financially threatened?

A12. Absolutely not. This issue relates solely to the Province's reported financial results and the Province's historical practices of reporting pension assets.

The two pension plans in the Ontario Public Service – which are of the defined benefit type – are healthy and well-funded.

The OPSEU Pension Plan is fully funded with a small reserve of surplus assets standing to the credit of the joint-sponsors, while the Ontario Teachers' Pension Plan has a funding surplus of $13.2 billion.

Questions from Committee Members on AG's 2014 Annual Report

Progressive Conservative Party Questions/Comments/Issues

Based on the Financial Accountability Officer's report:

- The government claims that it will be in balance in 2017-18, but the FAO claimed that the government will still be in deficit of up to $3.5 billion
- Hydro sale will come with an initial income boost, but government will lose income over the longer term
- How will the government get to balance if the economy is slowing and a credit rating decrease will increase the cost of borrowing?
- How will the government get to balance – will it be raising revenues by increasing taxes; getting more money from the federal government; cutbacks and/or layoffs? or asset sales?

In terms of debt reduction (the net debt to GDP target) – how close is the government to achieving this and what is the plan?

If growth is slower, leading to reduced revenues – does the government rejig projections? How does the government make up for lost revenue – by increasing the land transfer tax or implementing a carbon tax?

What is the contribution to the economy of investing in capital assets?

When the government funds capital assets at the municipal level, the municipality still needs to pay for operating costs for the asset. How does that figure into the overall growing of the economy?

What is the impact of selling capital assets on the economy?

**There was a question on the loss of revenue from ORPP contributions and one on split pensions, but a government member suggested that they were not in order because they were not covered in Public Accounts.

New Democratic Party Questions/Comments/Issues

What is the impact of the hydro sell-off on net-debt-to-total-annual-revenue ratio?

$900 million in revenue came from Ontario Hydro and Ontario Power Generation. How much came from each company?

Has Hydro One traditionally brought in more revenue than forecasted?

Why has the stranded debt not been paid off when it was originally $7.8 billion and the government has collected $11.5 billion?

The stranded debt charge that business pay is supposed to end in 2018. Will it continue to drop so that business does not have to pay after 2018?

Will there be forecasted targets for the debt retirement charge to drop in 2016, 2017 and 2018?

How will the sale of Hydro One and the loss of its revenues ($500 million/year) affect the net-debt-to-total-annual-revenue ratio?

With the increase in the federal debt, will investors still want to buy Ontario debt? What happens if the demand for Ontario debt shrinks?

Program expenses are less – what was cut to achieve this?

Liberal Party Questions/Comments/Issues

What is the forecasted net-debt-to-GDP? Why is this important? What is the effect on the commitment to balance in 2017-18?

What is the material impact of the S&P downgrade on the province's finances?

The government is lucky that interest rates are low. Discuss the prudent measures taken by the government to manage the debt and to mitigate the risk of increased interest rates.

Discuss the uncertainties about the transfers from the federal government.

Provide an update on the Pension Benefit Guarantee Fund.

What is the impact of the infrastructure investments on the economy?

Why is it important that the government beats its deficit reduction target?

Can you talk more about how the government is controlling spending and reviewing spending through the program renewal, review and transformation?

August 30, 2016

ONTARIO'S CREDIT RATINGS

What is the status of Ontario's credit ratings?

SUGGESTED RESPONSE

- **The Financial Accountability Office (FAO) has released a commentary "Credit Rating Agencies Satisfied with Ontario's Progress to Fiscal Balance."**
    - **According to the FAO "the credit agencies' affirmation of Ontario's credit rating following the 2016 budget indicates that they believe the Province has taken adequate steps on both revenues and expenditures to achieve its plan to restore fiscal balance by 2017-18. In addition, while each agency's rating methodology differs slightly, they all believe that Ontario's debt burden (both as a percent of GDP and revenues) has likely peaked and would be expected to decline modestly over the next three fiscal years.**
- **Ontario has always valued the input of third-party analysis as an important checkpoint in ensuring that our fiscal plan is credible, reliable and transparent.**
- **Ontario's credit ratings are:**
    - **Moody's: Aa2**
    - **DBRS: AA (low)**
    - **Fitch: AA-**
    - **Standard and Poor's: A+**
- **As outlined in the 2016 Budget, the government is committed to eliminating the deficit by 2017-18 and remaining balanced in 2018-19. In 2015-16, Ontario is once again projected to beat its deficit target for the seventh year in a row. By continuing to beat our fiscal targets, Ontario's accumulated deficit is $30 billion lower than it otherwise would have been.**
- **We will continue to reduce the deficit through a fair and balanced approach. The 2016 budget is focused on strategic investments that stimulate economic growth and job creation including investing over $160 billion in infrastructure projects across the province over the next 12 years. Even with these investments, our government has the lowest program spending per capita of any province in Canada.**

- **Furthermore, between 2010-11 and 2014-15, our government has held program expense growth to an average annual rate of 1.4 per cent, while still supporting the vital public services that Ontarians rely on, like health care, education and social services. We have achieved this by finding new and more efficient ways to deliver the best value for Ontarians.**

BACKGROUND

FAO Commentary on Credit Rating Agencies

On August 30, 2016, the Financial Accountability Officer released a commentary titled “Credit Rating Agencies Satisfied with Ontario’s Progress to Fiscal Balance”.

According to the FAO, the credit agencies’ affirmation of Ontario’s credit rating following the 2016 budget indicates that they believe the Province has taken adequate steps on both revenues and expenditures to achieve its plan to restore fiscal balance by 2017-18. In addition, while each agency’s rating methodology differs slightly, they all believe that Ontario’s debt burden (both as a percent of GDP and revenues) has likely peaked and would be expected to decline modestly over the next three fiscal years.

This consensus view of the rating agencies is consistent with the FAO’s own analysis, which concluded that the Province should be able to achieve fiscal balance in 2017-18 and that Ontario’s debt-to-GDP ratio would decline modestly over the next five years.

According to the FAO, the rating agencies generally assume that the Province will maintain fiscal balance , beyond 2017-18 based on its ability to restrain expenditure growth and increase revenues as required. However, the FAO notes that the agencies all expect that the Province will be “challenged” to maintain expenditure restraint indefinitely, given mounting spending pressures.

The FAO notes that the agencies continue to emphasize that the Province’s relatively high debt burden compared to other provinces and international peers, remains a key weakness for Ontario’s credit outlook. Indeed, Ontario’s relatively high debt burden was an important determinant behind both Fitch and S&P’s decision to downgrade the Province’s credit rating in December 2014 and July 2015.

According to the FAO, if Ontario’s fiscal balance were to return to deficit beyond 2017-18, either through an easing of expenditure management restraint or through unexpected weakness in revenues (as a result of slower than expected economic growth), the agencies would be expected to revise Ontario’s credit outlook to negative followed by a potential credit rating downgrade. A credit rating downgrade could lead to higher borrowing costs for Ontario and a more difficult fiscal position.

Fitch

The tabled budget for fiscal 2017 follows the province’s plan to eliminate its annual budget deficits by fiscal 2018. Despite an uptick in the annual deficit in fiscal 2014, the province has recorded two successive years of declines since then and Fitch believes it remains on track to achieve its target assuming continued economic growth.

The province has demonstrated the ability to exert considerable expenditure restraint while instituting revenue changes as necessary to achieve its deficit reduction objectives.

Ontario's 'AA-' rating is supported by its wealthy, diversified economy and generally sound financial management.

S&P

The stable outlook reflects expectations that the province's liquidity will continue to be average in the next two years, real GDP growth will be above 2% and operating revenue growth will lead to operating surpluses beginning in fiscal 2017.

The ratings reflect the province's very strong and diversified economy, strong financial management, very predictable and well-balanced institutional framework, and low contingent liabilities. The ratings also reflect S&P's view of the province's weak budgetary performances and very high debt burden.

According to S&P, the debt burden should continue to decline, reaching below 240% of projected consolidated operating revenues by fiscal 2019.

Near-balanced after-capital results and continuing declines in Ontario's tax-supported debt burden could result in a positive outlook or upgrade.

DBRS

The trend remains Stable, supported by the Province's continued progress towards restoring fiscal balance and a large, well-diversified economy with an improving, growth outlook.

A positive rating action, appears highly unlikely over the medium term, as it would require improvements in fiscal performance on a sustained basis to reduce debt to a level more commensurate with the AA-range rating.

Alternatively, although not anticipated by DBRS in the current environment, a negative rating action could result from a relaxation in fiscal discipline, or an unforeseen economic shock that leads to deteriorating fiscal performance and rising debt.

Moody's

The stable outlook reflects Moody's view that the province's debt burden will continue to modestly improve as the province moves towards balanced budgets and therefore reduces its annual financing requirements.

With the return to balanced budgets on the horizon, aided by continued expenditure control and increasing revenues, the debt burden is expected to show slight improvements over the medium-term as annual financing requirements decrease.

Although the province forecasts only thin surpluses in the years immediately following the planned return to balance in 2017/18,Ontario has included some contingencies to help ensure it achieves its fiscal targets and therefore reduce the likelihood of incurring further deficits.

The current low interest rate environment has enabled the province to extend the maturity of its debt profile and issue long-term debt bearing historically low coupons which has also kept debt service low and manageable.

The province's large and diversified economy and growing population provides access to a broad and productive tax base and, as such, remains a source of credit strength.

Ontario's Current Long-term and Short-term Ratings

Agency	Long-Term Rating	Short-Term Rating	Most Recent Review
Moody's	Aa2	P-1	Negative Outlook removed on April 26, 2016
DBRS	AA (low)	R-1 (mid)	Confirmed, May 20, 2016
Fitch	AA-	F1+	Confirmed June 22, 2016
S&P	A+	A-1+	Confirmed June 1, 2016

BORROWING AND DEBT

What is the status of Ontario's borrowing and debt management plan?

SUGGESTED RESPONSE

Debt-to-GDP

- **Net debt-to-GDP is expected to peak at 39.6 per cent in 2015–16, remain unchanged in 2016–17, and begin to decline in 2017–18.**

- **We will maintain a rigorous approach to control program spending to reduce Ontario's net debt-to-GDP ratio to its pre-recession level.**

- **The first very important step in returning the net debt-to-GDP ratio to its pre-recessionary levels is to balance the budget in 2017-18.**

    - **Debt is incurred primarily for two reasons: to finance deficits and invest in capital assets.**
        - **As outlined in the 2016 Budget, the government is committed to eliminating the deficit by 2017-18 and remaining balanced in 2018-19.**
        - **We are making the biggest investment in public infrastructure in Ontario's history. We have a plan to invest more than $137 billion over the next 10 years, or about $160 billion over 12 years, starting in 2014–15. This is a strategic investment will grow the economy and create jobs.**
    - **Our plan is to first balance the budget while continuing to make strategic investments in capital assets. These infrastructure investments will stimulate economic growth, resulting in GDP growing more quickly than debt, and thereby lowering the net debt-to-GDP ratio.**

    - **With capital investments, the net debt-to-GDP ratio will come down more quickly than it would have without these investments in capital assets.**

    - **Capital investments are amortized over the useful life of the assets. Once a balanced budget is achieved, the increase in debt will be limited to the difference between the cash investment to build assets, and the amortization, which is a non-cash amount.**

Borrowing Program

- **Long-term borrowing for 2016–17 is forecast to be $24.4 billion when factoring in $2.0 billion pre-borrowed in 2015–16. This will be the Province's smallest borrowing program since 2007–08. As of August 31, 2016, the Province had borrowed $12.5 billion for the fiscal year.**

- **Through prudent and cost-effective debt management, we have consistently kept interest on debt costs below budget projections.**

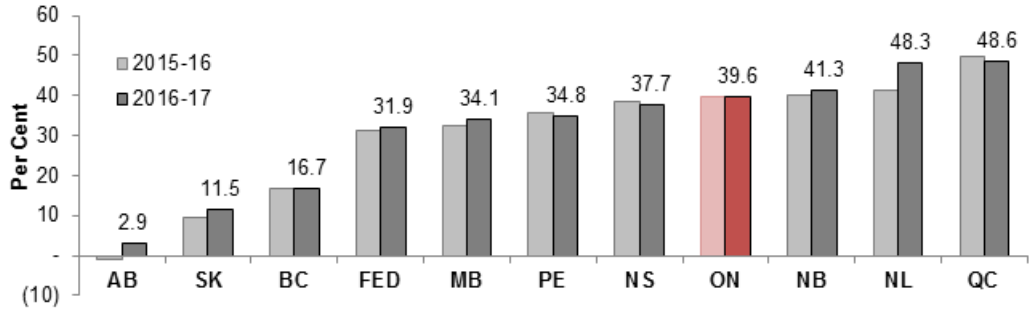
- **Canada and Ontario 10-year interest rates have fallen to record lows recently. As well, Ontario interest rate spreads relative to Canada have fallen since the 2016 Ontario Budget.**

- **Term extension has allowed us to take advantage of and lock in low interest rates for a longer period, which reduces refinancing risks and helps offset the impact of expected higher interest rates on interest on debt costs. As of August 31, 2016, the average term for new borrowing in 2016–17 was 15.6 years compared to 8.1 years in 2009-10.**

- **Going back to the beginning of fiscal 2010–11, we have issued $59.1 billion of bonds longer than 30 years to lock in low rates. We are consistently making strategic and prudent decisions that will benefit the Ontario economy and ensure fiscal security.**

CURRENT STATUS

FAO Commentary on Ontario's Provincial Debt



On July 19th, the Financial Accountability Officer released a commentary on Ontario's Provincial Debt, the commentary's key messages were as follows:

- The Government of Ontario's debt burden is one of the highest among provincial governments in Canada

    - Response: The FAO's commentary is based on data from 2014-15. Using more recent information, Ontario's net debt-to-GDP ratio ranks 4th after Quebec, Newfoundland & Labrador and New Brunswick in 2015-16.

    - Ontario's net debt as a share of GDP is projected to remain at 39.6 per cent through 2015-16 and into 2016-17.

Projected Net Debt-to-GDP Ratio by Jurisdiction, 2015-16 and 2016-17

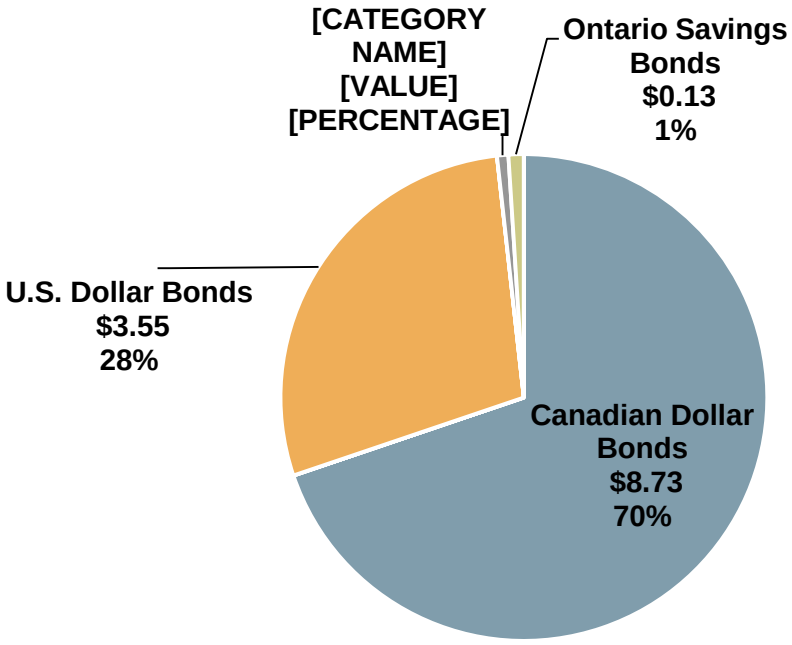
Source: Budgets. Updates and 2014-15 Public Accounts; Conference Board of Canada (May 2016 GDP figures)
Note: For all Figures, accounting standards vary between jurisdictions and within jurisdictions across years. Values may not be directly comparable due to accounting differences across provinces. Federal net debt reflects accumulated debt to match federal public reporting. Data labels correspond to the net debt to GDP ratio for the 2016-17 fiscal year.

- The Province's market debt consists of publicly held bonds, treasury bills, and US commercial paper issued in Canadian dollars and foreign currencies. The effective interest rate on the publicly held debt is 3.6 per cent.

    - Response: Going back to the beginning of fiscal 2010–11,the Province has issued $59.1 billion of bonds longer than 30 years to lock in low rates. Term extension has allowed us to take advantage of and lock in low interest rates for a longer period, which reduces refinancing risks and helps offset the impact of expected higher interest rates on interest on debt costs. As of August 31, 2016, the average term for new borrowing in 2016–17 was 15.6 years compared to 8.1 years in 2009–10.

- There is uncertainty surrounding the future level of interest rates due to market fluctuations and Ontario's credit risk. All else equal, an increase in interest rates would lead to higher interest payments, which would reduce the Province's fiscal flexibility.

- Response: Through prudent and cost-effective debt management, the Province has consistently kept interest on debt costs below budget projections.
- Canada and Ontario 10-year interest rates have fallen to record lows recently. As well, Ontario interest rate spreads relative to Canada have fallen since the 2016 Ontario Budget.



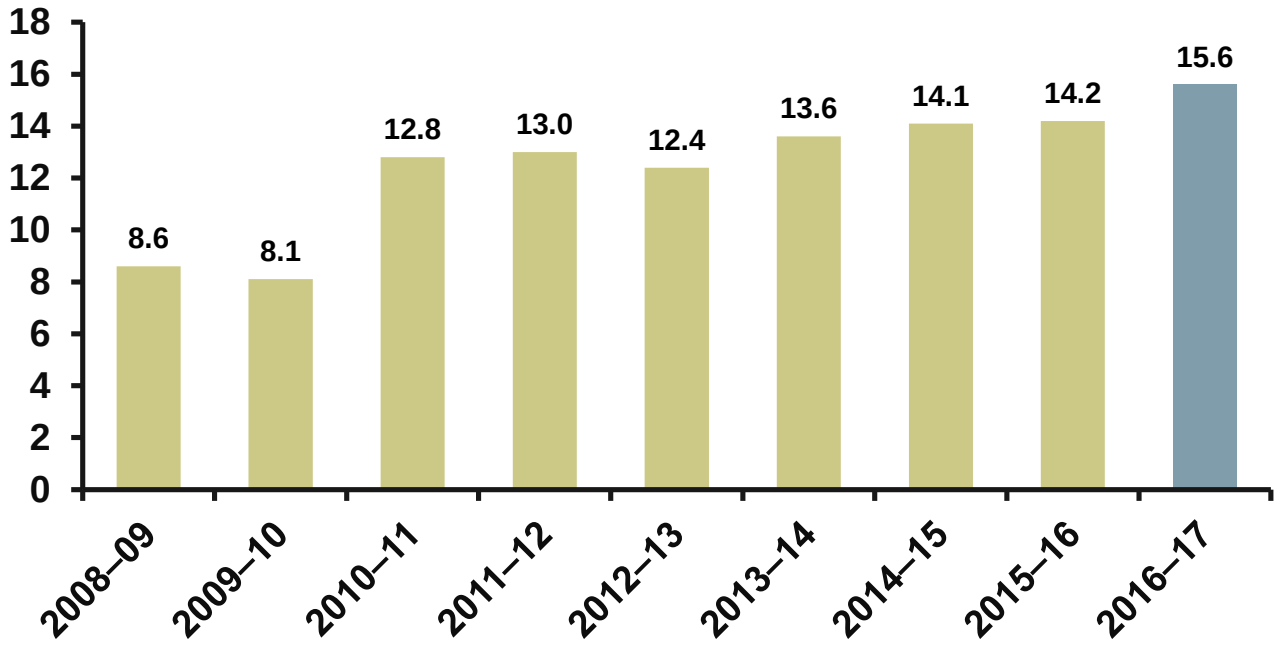
Borrowing Program

Long-term borrowing for 2016–17 is forecast to be $24.4 billion when factoring in $2.0 billion pre-borrowed in 2015–16. This will be the Province's smallest borrowing program since 2007–08.

As of August 31, 2016, the Province had borrowed $12.5 billion for the fiscal year. Approximately 71 per cent of this year's borrowing-to-date has been completed in Canadian dollars. The remainder of the Province's borrowing-to-date has been completed in international currencies through U.S. dollar global bonds, and Australian dollar Kangaroo bonds.

Canada and Ontario 10-year interest rates have fallen to record lows recently. As well, Ontario spreads relative to Canada have fallen since the 2016 Ontario Budget.

2016–17 Borrowing Completed: $12.5 billion

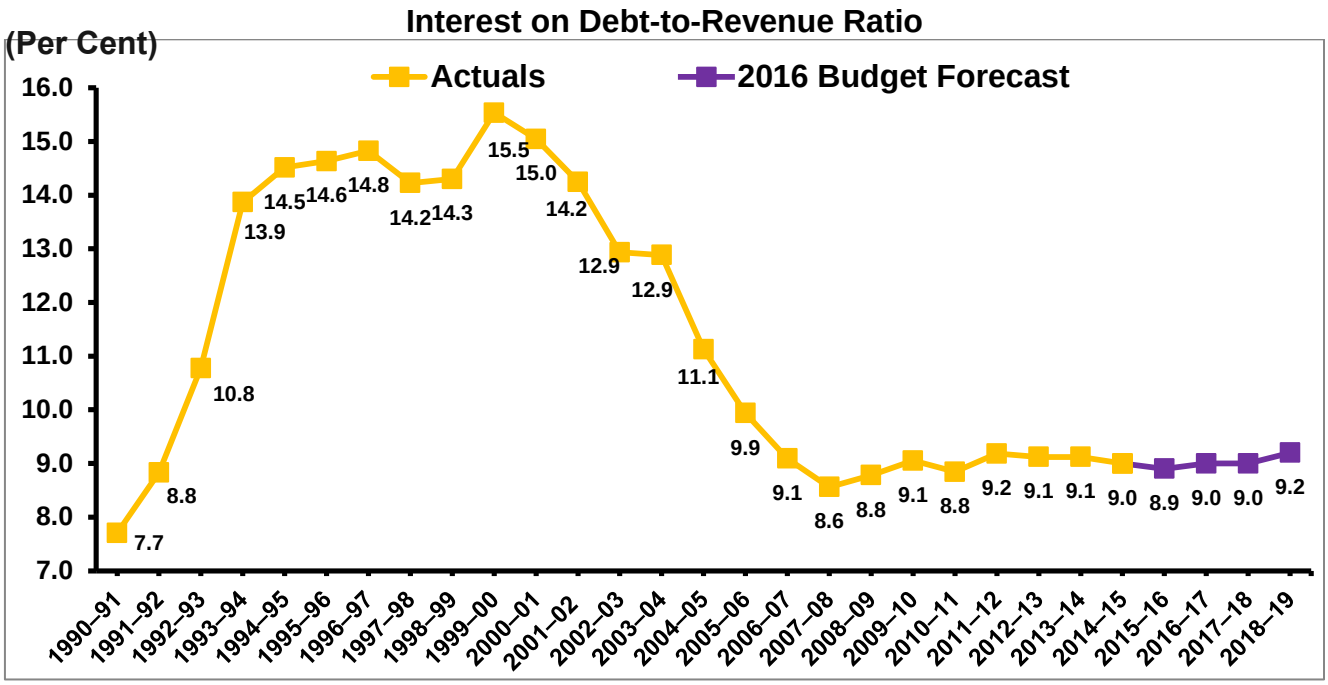


Note: Numbers may not add due to rounding

The Province may revise its Canadian dollar borrowing target of 75 per cent published in the 2016 Budget if international demand for Ontario bonds outpaces domestic demand.

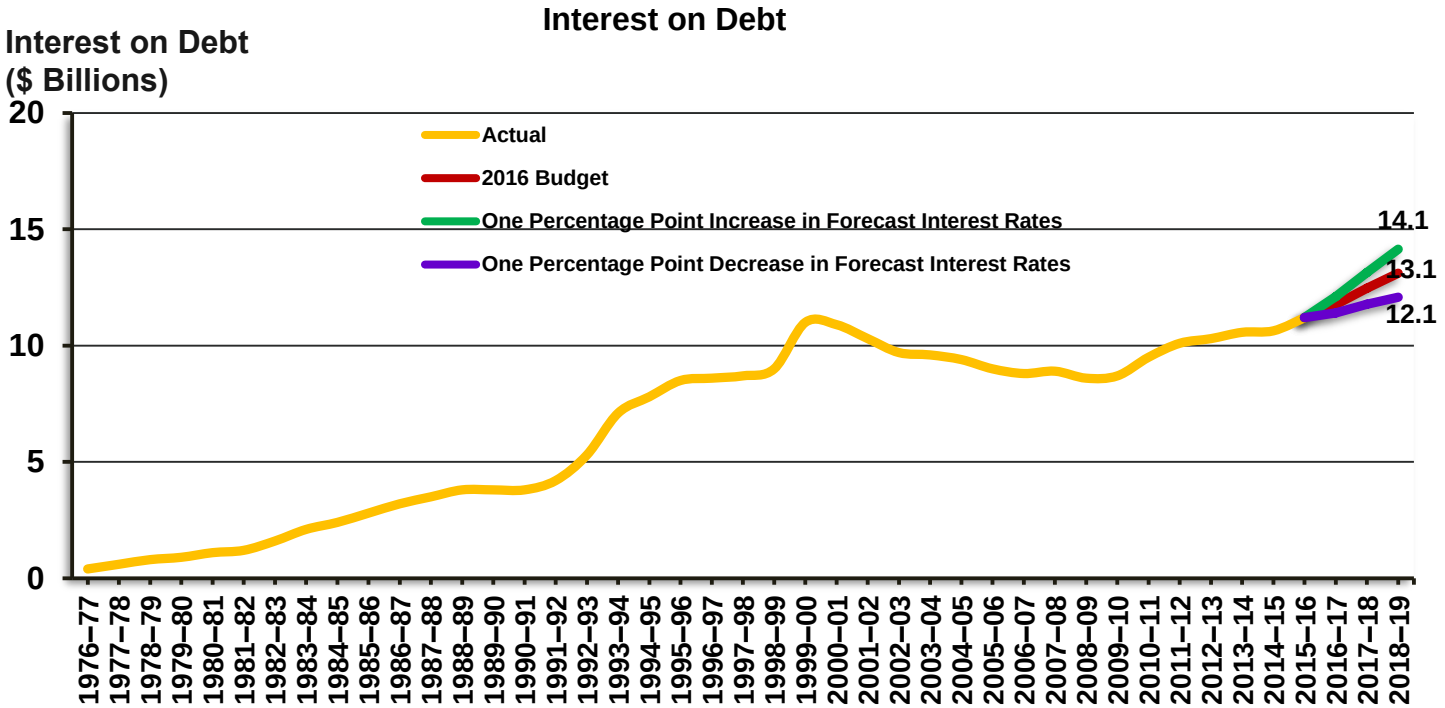
Going back to the beginning of fiscal 2010–11, we have issued $59.1 billion of bonds longer than 30 years to lock in low rates. Term extension has allowed us to lock in low interest rates for a longer period, which reduces refinancing risks and helps offset the impact of expected higher interest rates on interest on debt costs. As of August 31, 2016, the average term for new borrowing in 2016–17 was 15.6 years.

Average Term (years)



Interest on Debt

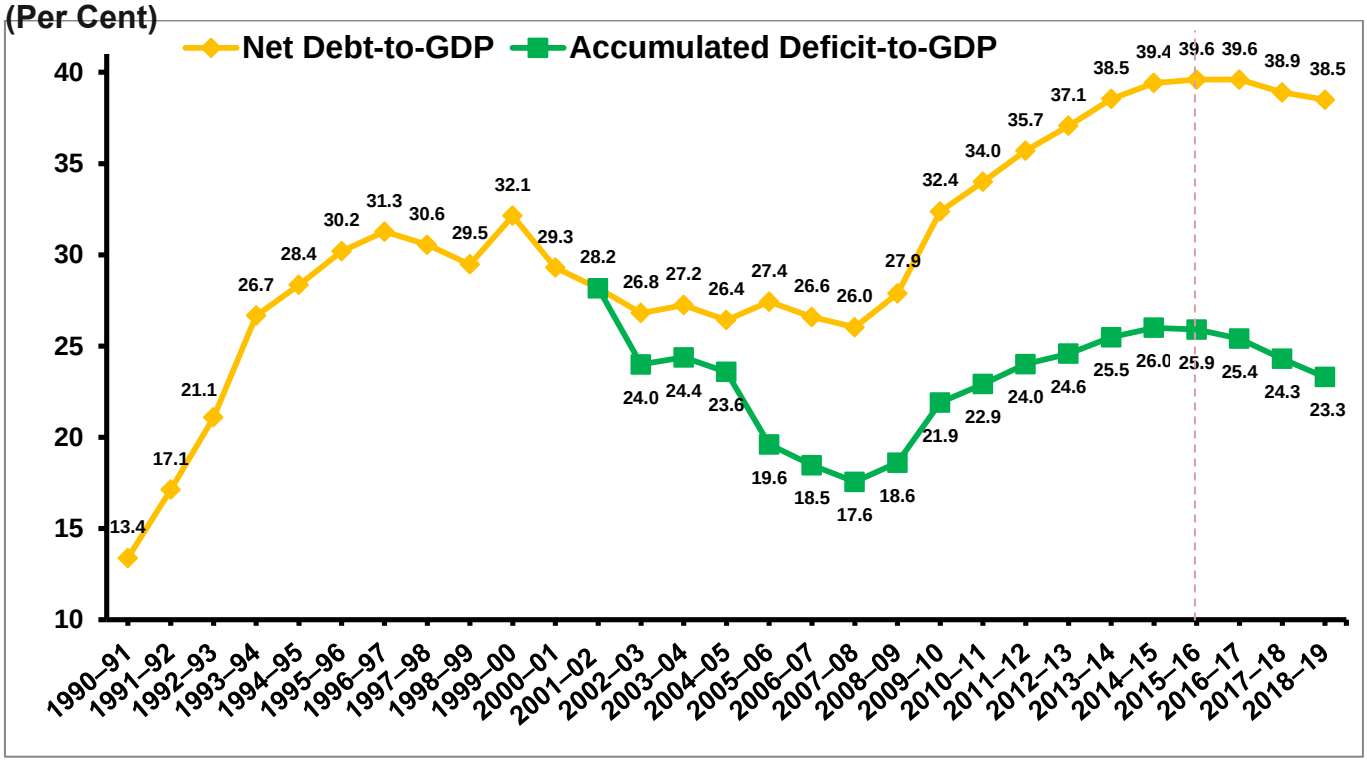
Ontario's interest on debt (IOD) is projected to remain at $11.8 billion for 2016-17, rising to $12.5 billion and $13.1 billion for 2017-18 and 2018-19, respectively.



Although IOD increases from 2014–15 to 2017–18, it remains relatively constant as a percentage of government revenue. IOD-to-revenue falls to 8.9% in 2015–16 and is projected to remain at 9.0% over 2016–17 and 2017–18. As such, the increase in IOD has no impact on the Province's path to balance since its proportionate share of revenue is relatively constant. This ratio remains well below the peak reached in the mid-1990s because of the low interest rate environment over the past decade. IOD as a percentage of revenue is lower today than it was 10 years ago, in spite of more than a $143 billion increase in net debt over that period.

The *2010 Budget* forecasted that, by 2016–17, the Province would have to spend 11.7 cents of every revenue dollar received on interest. The current forecast is 2.7 cents lower, at 9.0

cents of interest costs for every dollar of revenue. This ratio is lower than it was in the 1990s and 2000s, and is forecast to remain lower through the outlook period in 2018–19.



The Province's IOD is sensitive to interest rate fluctuations. A one percentage point change in interest rates would result in a change in Interest on Debt (IOD) of approximately $350 million in 2016–17, rising to $1.03 billion in 2018–19 alone. Rising IOD costs could crowd out spending on government priorities.

Net Debt-to-GDP

The government's strategy of enhancing GDP growth by investing in capital infrastructure has contributed approximately $90 billion to the increase in net debt over the last 13 years. Over the medium-term, net investments in capital assets will contribute over $26 billion to the total increase in net debt of close to $31 billion.

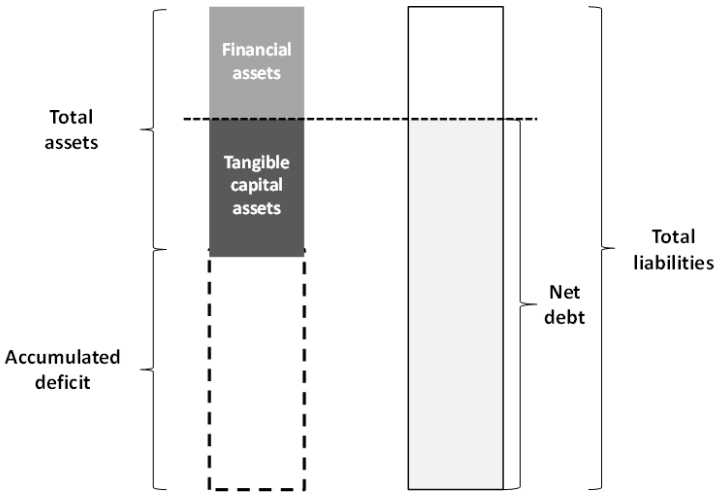
Net Debt-to-GDP and Accumulated Deficit-to-GDP

Debt Management

The Ontario Financing Authority uses a number of financial instruments, including options and swaps, to prudently manage risk. These financial instruments, or derivatives, are used primarily for hedging purposes and do not create net leverage. They are used to transform the cost of borrowing into Canadian dollars and foreign currency exposure from bond issues not denominated in Canadian dollars.

BACKGROUND

The three commonly used indicators of a government's financial and debt position are net debt, total debt, and accumulated deficit. Credit rating agencies and investors place the greatest emphasis on net debt.



Net debt is the difference between the Province's total liabilities and financial assets. Ontario's net debt is projected to increase from $296.1 billion as at March 31, 2016 to $308.3 billion as at March 31, 2017, and $316.9 billion as at March 31, 2018 and $326.8 billion as at March 31, 2019. The increase in net debt primarily reflects the projected deficit, plus the increase in tangible capital assets of the Province. Financial markets use Net Debt as their primary measure because it represents the Province's future revenue requirements to pay for past transactions and events.

Total debt is the sum of the Province's total borrowings including Ontario Electricity Financial Corporation and agencies. Total debt is projected to increase from $315.0 billion as at March 31, 2015 to $325.3 billion as at March 31, 2016. This increase will be used mainly to fund the projected deficits and the government's capital investments. Canadian dollar denominated debt represents 81 per cent of the total debt projected as at March 31, 2016.

Accumulated deficit represents the sum of all deficits and surpluses. The accumulated deficit is projected to increase from $193.4 billion as at March 31, 2016 to $197.8 billion as at March 31, 2017. Accumulated deficit is projected to be $197.7 billion as at March 31, 2018 and remain unchanged as at March 31, 2019.

Accumulated deficit is not widely used in the financial markets, as it excludes debt raised for capital expenditures.

Net debt, Accumulated Deficit and Tangible Capital Assets

NET DEBT AND INTEREST ON DEBT: 1993-2018

	Net Debt ($ billions)	Net Debt (% of GDP) [5]	Interest on Debt ($ billions)	Interest on Debt (% of Revenue)[1]
1993-94	80.6	26.7	7.1	13.9
1994-95	90.7	28.4	7.8	14.5
1995-96	101.9	30.2	8.5	14.6
1996-97	108.8	31.3	8.6	14.8

GREEN BONDS

What is the status of Ontario's green bond program?

SUGGESTED RESPONSE

- **On January 22, 2016 the Province of Ontario successfully priced its second Global Canadian Dollar (CAD) Green Bond for $750 million.**

- **There was strong demand for Ontario's second Green Bond issue, with 52 investors participating in the trade.**

- **The Province's second green bond was issued through its current domestic dealer group to Canadian and international institutional investors to continue to help to establish a Canadian-dollar green bond market and attract new investors.**

- **Retail investors were able to buy Ontario's green bonds through a Canadian financial institution.**

- **As the first Canadian province to issue Green Bonds, Ontario continues to lead the way in establishing and developing a Canadian dollar Green Bond market with investor participation from around the world.**

- **Eight projects were selected as eligible and are expected to receive funding from the second Green Bond, with an emphasis on clean transportation and energy efficiency and conservation. Projects include:**

    - **Eglinton Crosstown Light Rail Transit ($402 million)**
    - **vivaNext Bus Rapid Transit ($100 million)**
    - **Regional Express Rail ($200 million)**
    - **Sheridan College ($68 million)**
    - **St Joseph's Hamilton Healthcare – West 5th ($14 million)**
    - **St Joseph's Health Care–London & St Thomas ($5 million)**
    - **Waypoint Centre for Mental Health ($2 million)**
    - **CAMH – Phase 1B ($2 million)**

- **All proceeds raised through green bonds will be used to fund green infrastructure. Funding amounts for each project are estimates based on total eligible costs. Final amounts provided to each project will be confirmed in the coming year.**

- **To date, total Green Bond financing amounts to $1.25 billion, with up to $1.2 billion allocated to Metrolinx for clean transportation projects.**

- **Ontario's Green Bond Framework sets out the types of projects that may be eligible for green bonds, including:**

    1. **Clean transportation**
    2. **Energy efficiency and conservation**
    3. **Clean energy and technology**
    4. **Forestry, agriculture and land management**
    5. **Climate adaptation and resilience**

- **The size of future green bond issues will be determined by market demand and Ontario's availability of suitable green projects in any given fiscal year.**

CURRENT STATUS

Green Bond Issuance

On January 22, 2016 the Province of Ontario successfully priced its second Global Canadian Dollar (CAD) Green Bond. It matures on January 27, 2023 and has a coupon of 1.95 per cent.

There was strong demand for Ontario's second Green Bond issue. Investors with green mandates in Canada as well as in the United States and Europe participated in the deal. Global offering format was used to leverage and facilitate international investor interest with strong trading liquidity supported by Ontario's current domestic dealer syndicate.

52 accounts participated in the transaction with 70 per cent of the deal allocated to investors with Green mandates and/or signatories to the UN Principles for Responsible Investment (PRI) initiative. Interest was driven by Asset Managers (54%), Insurance Companies (19%) and Banks (15%). Ontario added three new investors and expanded its Canadian dollar investor base by seven names.

These bonds capitalize on the Province's ability to raise funds at low interest rates, and serve as a tool for the government to address critical infrastructure needs.

Eight projects have been selected as eligible and are expected to receive funding from this Green Bond, with an emphasis on clean transportation and energy efficiency and conservation:

Clean Transportation Category	**Forecasted Funding ($ Millions)**
Eglinton Crosstown Light Rail Transit	402
vivaNext Bus Rapid Transit	100
Regional Express Rail	200
Energy Efficiency & Conservation Category	
Sheridan College	68
St Joseph's HH –West 5th	14
St Joseph's HC –London and St. Thomas	5

Waypoint Centre for Mental Health	2
CAMH –Phase 1B	2

All proceeds raised through green bonds will be used to fund green infrastructure. Funding amounts for each project are estimates based on total eligible costs. Final amounts provided to each project will be confirmed in the coming year.

The Eglinton Crosstown LRT was selected as the first project to receive Green Bond funding for $500 million in 2014. To date, total Green Bond financing amounts to $1.25 billion, with up to $1.2 billion allocated to Metrolinx for clean transportation projects.

Green Bond Program

Ontario's first and second green bonds were issued at yields similar to conventional Ontario bonds of comparable term and size.

The size of each green bond issue will be determined by market demand and Ontario's availability of suitable green projects in any given fiscal year. Assuming adequate demand, Ontario's green project pipeline is expected to easily support a green bond borrowing program and serve as a source of funding well into the future.

Ontario's green bonds are direct unsecured obligations of the Province of Ontario and investors do not assume any specific risk related to the funded projects.

Retail Investors

Retail investors have been able to participate (through Canadian financial institutions) in both of the Province's Green Bond issues, accounting for approximately one per cent of total sales, in line with to slightly greater than the demand experienced with Ontario's regular domestic issues.

It is unknown to what extent Ontario retail investors would be motivated to buy green bonds if they are offered in a format similar to OSBs. Other international issuers who have attempted a direct retail approach for green bonds have struggled to raise funds.

Green Bond Framework

Ontario has developed a robust green bond framework that aligns with Ontario's environmental policies and climate objectives.

Ontario's Green Bond Framework sets out the types of projects that may be eligible for funding from green bonds. Without limitation, eligible projects may include projects in the following five categories identified in the Province of Ontario's Green Bond Framework, excluding fossil fuel and nuclear energy projects:

1. Clean transportation
2. Energy efficiency and conservation
3. Clean energy and technology
4. Forestry, agriculture and land management
5. Climate adaptation and resilience

Ontario's Green Bond Framework has been developed in consultation with the Centre for International Climate and Environmental Research – Oslo (CICERO).

Ontario's Green Bond program also aligns with the Green Bond Principles maintained by the International Capital Markets Association.

Project Selection

The selection of eligible green projects is done on behalf of the Province by the Ontario Financing Authority (OFA) staff with advice from the Province's Green Bond Advisory Panel (GBAP):

- Only fully approved projects are eligible for consideration. Spending authority for eligible green projects comes through approved ministry and agency spending in accordance with the Province's usual government appropriation and spending processes.

- OFA staff screen projects for all applicable approvals and against eligibility criteria prior to advancing projects to the GBAP for assessment.

- The GBAP, which includes staff from various ministries and agencies, including the Ministry of the Environment and Climate Change and the OFA, evaluates and recommends projects for inclusion in Ontario's Green Bond program.

Projects considered for green bonds will be consistent with Ontario's robust environmental policies and standards and limited to the categories in the Province's Green Bond Framework.

Use of Proceeds

Green Bond proceeds are paid into the Consolidated Revenue Fund of Ontario and are not held in a segregated account. An amount equal to the net proceeds of the bonds is recorded in a designated account in the Province of Ontario's financial records. This designated account is used to track the use of and allocation of funds to eligible projects. So long as the bonds are outstanding and the designated account has a positive balance, amounts are deducted from this account as funds are allocated to eligible projects.

Green projects will have funding requirements that occur within a twelve month period following and six month period prior to the issue of the green bond.

Updates on the selected green projects and allocation of funds to these projects will be reported to investors in an annual newsletter on the website of the Ontario Financing Authority. The first newsletter was published in late 2015.

An assurance audit will also be provided by the Auditor General of Ontario to verify amounts used for selected projects and the balance of proceeds remaining. This assurance audit is expected annually until all green bond proceeds have been allocated to selected projects.

August 8, 2016

OLD ONTARIO HYDRO'S STRANDED DEBT

What is the status of the old Ontario Hydro's "stranded debt", managed by Ontario Electricity Financial Corporation (OEFC)?

SUGGESTED RESPONSE

- **Based on interim numbers in Budget 2016, this is the twelfth consecutive year that the stranded debt has been reduced, to under $5 billion as at March 31, 2016, from $20.6 billion as at March 31, 2004.**

- **The electricity sector reforms in the Electricity Restructuring Act, 2004, and others, have put the stranded debt recovery plan back on track. This allowed the government to follow through on its commitment to reduce electricity cost pressures.**

Ending the Debt Retirement Charge

- **As part of its commitment to reduce electricity cost pressures, the government has removed the Debt Retirement Charge (DRC) from residential electricity users' bills as of January 1, 2016.**
  - **This would save a typical residential user about $70 each year and mean ending the DRC earlier for these users than otherwise provided for in the Electricity Act, 1998.**

- **As a further step to mitigate electricity cost pressures for commercial, industrial and all other users, the government introduced legislation, passed on December 10, 2015, the *Budget Measures Act*, *2015* to end the DRC on April 1, 2018, nine months earlier than previously estimated.**
  - **A large industrial using 3,000 megawatt-hours (MWh) per month could save $21,000 per month, or about seven per cent off its electricity bills;**
  - **For a large northern industrial in the Northern Industrial Electricity Rate program, this could be more than an eight per cent savings; and**
  - **A small business using 20,000 kilowatt-hours (kWh) per month could save $140 per month, or about four per cent.**

Ending the DRC on a legislated fixed date provides certainty to commercial, industrial and other users, and helps them more effectively plan their investment decisions.

- **In Budget 2015, it had been estimated that the residual stranded debt would be retired by the end of 2018. However, the estimated residual stranded debt could have extended beyond 2018, to the end of 2019 or later.**

  Prior to the Budget Measures Act 2015 amendments of the Electricity Act, the DRC would have been charged to consumers until the Minister of Finance determined that the residual stranded debt had been retired.

- **This was subject to uncertainty as it depended on the future financial performance of Ontario Power Generation, Hydro One and municipal electricity utilities; the broadening of ownership of Hydro One; and other factors such as interest rates and electricity consumption.**

- **Residual stranded debt was defined under the Act as the stranded debt minus the estimated present value of future payments in lieu of taxes (PILs), Gross Revenue Charge (GRC) and electricity sector dedicated income to be paid to OEFC.**

- **As published in the 2015 Ontario Economic Outlook and Fiscal Review, the residual stranded debt was estimated at $2.2 billion as at March 31, 2015, an estimated reduction of $9.7 billion from an estimated peak of $11.9 billion as at March 31, 2004.**

- **The amendments to the *Electricity Act, 1998* in the *Budget Measures Act, 2015* has removed legislative references to the stranded debt and residual stranded debt (RSD), as a fixed DRC end date would mean that they no longer serve a legal purpose.**

- **OEFC will continue to prepare and submit an annual report, including an update on its unfunded liability (often called "stranded debt") in its annual financial statements, as required under the Electricity Act.**

<u>Prudent Management Of Electricity Sector Debt</u>

- **Under the *Electricity Act, 1998*, the Ontario Electricity Financial Corporation (OEFC) will continue to receive DRC revenues up to April 1, 2018, thus achieving a balance between making progress in paying down the electricity sector stranded debt and mitigating cost pressures for and providing certainty to commercial, industrial, and all other electricity users.**

- **Even after the end of the DRC, there would still be stranded debt remaining, to be serviced and paid down by OEFC's other dedicated revenues, such as payments in lieu of taxes and the Gross Revenue Charge.**

- **As announced in Budget 2016, the interim results of OEFC for 2015-16 show a reduction in stranded debt of more than $3 billion, to below $5 billion as at March 31, 2016. This would be the twelfth consecutive year that the stranded debt has been reduced, by a cumulative reduction of more than $15 billion between March 31, 2004 and March 31, 2016, based on the interim numbers.**

  - **Projected 2016-17 OEFC results are an excess of revenue over expense of about $0.6 billion.**

- **The government dedicates the revenues it receives from the electricity sector to OEFC. All OEFC revenues, including the DRC paid by electricity consumers, are used to service and retire its debt and other obligations, as provided for under the *Electricity Act, 1998*.**

- **This includes payment of interest costs. OEFC's interest expense is currently about $1.4 billion per year and has totalled about $30.6 billion between April 1, 1999 and March 31, 2015.**

- **The Auditor General audits OEFC's annual financial statements and has provided an unqualified opinion every year since the initial 1999-2000 financial statements.**

- **Stranded debt increased from April 1, 1999, to March 31, 2004 by over $1 billion.**
  - **The increase in stranded debt was primarily a result of the 4.3 ¢/kWh electricity price freeze, which cost about $900 million from May 1, 2002, to March 31, 2004.**

BACKGROUND

OEFC

OEFC is one of five entities established by the *Electricity Act, 1998*, as part of the restructuring of the former Ontario Hydro (OPG, Hydro One, IESO, Electrical Safety Authority, and OEFC). OEFC's mandate includes servicing and retiring the debt and other liabilities of the former Ontario Hydro.

OEFC inherited $38.1 billion in total debt and other liabilities from the former Ontario Hydro when the Ontario electricity sector was restructured on April 1, 1999. A portion of the $38.1 billion was supported by the value of the assets of Ontario Hydro successor companies, leaving $20.9 billion of stranded debt not supported by those assets.

Unfunded Liability / Stranded Debt

The following table shows the unfunded liability (or "stranded debt") of OEFC since the opening amount of $19.4 billion on April 1, 1999. OEFC's initial unfunded liability of $19.4 billion as at April 1, 1999, was the stranded debt adjusted for $1.5 billion of additional assets, including primarily an accounting asset for deferred debt charges.

At March 31 ($M unless noted)	April 1, 1999	2000	2001	2002	2003	2004	2005	2006	2007
Unfunded Liability	$19,433	$20,034	$20,016	$20,085	$20,183	$20,550	$20,363	$19,293	$18,289
Increase / (Decrease)		$601	($18)	$69	$98	$367	($187)	($1,070)	($1,004)
At March 31 ($M unless noted)	**2008**	**2009**	**2010**	**2011**	**2012**	**2013**	**2014**	**2015**	
Unfunded Liability	$17,225	$16,182	$14,810	$13,448	$12,321	$11,257	$9,781	$8,185	
Increase / (Decrease)	($1,064)	($1,043)	($1,372)	($1,362)	($1,127)	($1,064)	($1,476)	($1,596)	

Ending the DRC

The *Electricity Act, 1998*, previously allowed for the DRC to be paid by consumers until the Minister of Finance determines that the residual stranded debt is retired.

As part of its commitment to reduce electricity cost pressures, the government removed the DRC cost from residential electricity users' bills as of January 1, 2016.

This would save a typical residential user about $70 each year and would mean ending the DRC earlier for these users than otherwise had been provided for in the *Electricity Act, 1998*.

As a further step to mitigate electricity cost pressures for non-residential users, the government introduced legislation Bill 144, the *Budget Measures Act, 2015*, passed in December 2015, to end the DRC for all other users on April 1, 2018, nine months earlier than previously estimated.

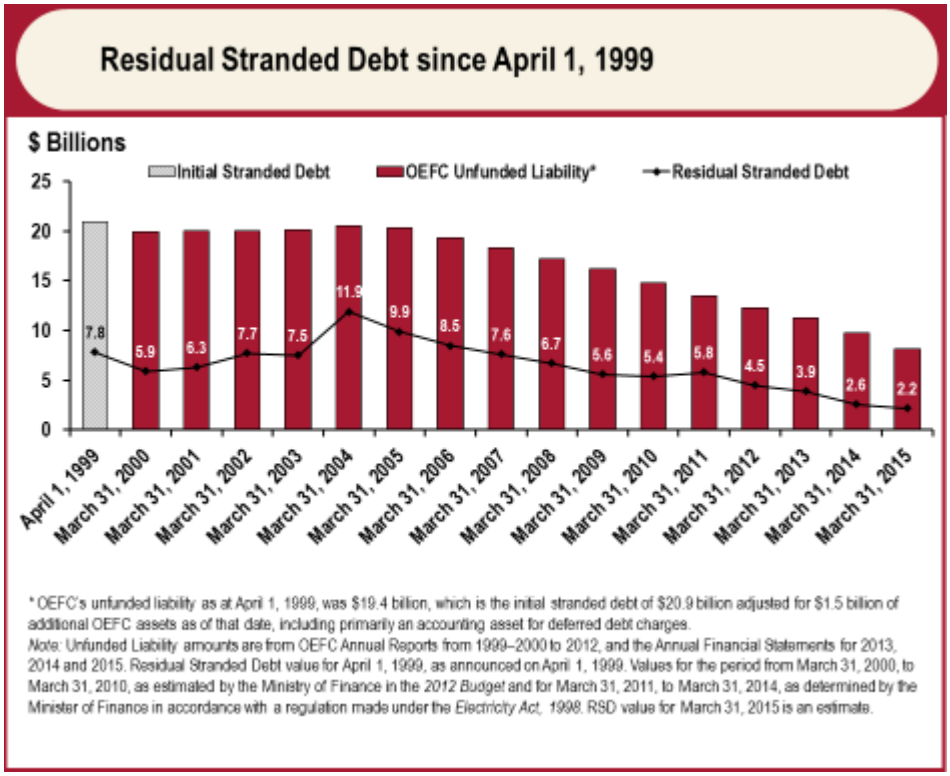
Ending the DRC on a legislated fixed date provides certainty to commercial, industrial and other users, and helps them more effectively plan their investment decisions.

Even after the end of the DRC, there would still be stranded debt remaining, to be serviced and paid down by OEFC's other dedicated revenues, such as payments in lieu of taxes and the Gross Revenue Charge.

Under the *Electricity Act*, the ability for OEFC to be wound up is tied to when substantially all the debts and other liabilities of OEFC have been retired or defeased.

Prudent Management of Electricity Sector Debt

Prior to amendments in the *Budget Measures Act, 2015* under the *Electricity Act*, *1998* the residual stranded debt was defined as the stranded debt minus the present value of projected future payments in-lieu of taxes (PILs), Gross Revenue Charge (GRC) and electricity sector dedicated income to be paid to OEFC.



On May 15, 2012, the government filed Ontario Regulation 89/12, as provided for at that time under the *Electricity Act, 1998*, on the determination of the residual stranded debt, consistent with the recommendations of the Auditor General in his 2011 Annual Report that the residual stranded debt be determined in the near future.
The *Electricity Act, 1998* was amended by the *Budget Measures Act, 2015* (Bill 144) and, effective December 10, 2015, all reference to the "stranded debt" and "residual stranded debt", including the regulation-making authority of Ontario Regulation 89/12, were repealed. This included the removal of the requirement to determine the residual stranded debt from time-to-time and the regulation-making authority for O. Reg. 89/12 – rendering the regulation obsolete. On February 11, 2016, the government filed Ontario Regulation 20/16 revoking Ontario Regulation 89/12.

In the *2015 Ontario Economic Outlook and Fiscal Review*, the residual stranded debt was estimated to be $2.2 billion as at March 31, 2015. This was a decrease of $0.4 billion compared to residual stranded debt of $2.6 billion as at March 31, 2014, and was a total estimated decrease of $9.7 billion from an estimated peak of residual stranded debt of $11.9 billion as at March 31, 2004. Residual stranded debt was initially estimated as $7.8 billion as at April 1, 1999.

Residual stranded debt is estimated to have increased to a peak of $11.9 billion as at March 31, 2004, primarily due to the electricity price freeze, the downward revision in 2004 of the

previous overestimation of future financial performance of Ontario Power Generation (OPG) which lowered the estimated future dedicated revenues to OEFC from the sector, and lower tax rates, resulting in lower projected future PILs to OEFC. OPG had significantly underperformed compared to its plans over the previous period of 1999 to 2004.

The following chart illustrates the path of residual stranded debt from April 1, 1999, to March 31, 2015.

<u>OEFC Dedicated Revenues</u>

OEFC is the legal continuation of the former Ontario Hydro with a mandate to service and retire the former Ontario Hydro's debt and certain other liabilities. The government has a long-term plan in place to retire OEFC's obligation from sources within the electricity sector, including the following:

Notes Receivable: OEFC receives principal and interest payments on notes from OPG, the Independent Electricity System Operator (IESO), and the Province. (Hydro One no longer owes any notes to OEFC.)

Payments-in-lieu (PILs) of Taxes: OEFC receives PILs from OPG, Hydro One, and MEUs.

On December 10, 2015, Bill 144, the *Budget Measures Act, 2015*, was passed, directing to OEFC Hydro One Inc.'s provincial corporate income taxes under the *Taxation Act, 2007*.

Gross Revenue Charge (GRC): OEFC receives a portion of the GRC that replaced property tax PILs on hydroelectric generating stations that are or were owned by OPG or MEUs. The GRC replaced existing property tax PILs for these facilities effective January 1, 2001.

Debt Retirement Charge (DRC): OEFC receives revenue from the DRC of 0.7 ¢/kWh levied on the consumption of electricity.

Electricity Sector Dedicated Income: The Province has committed to direct the income it earns from OPG and Hydro One, on a total cumulative basis, in excess of the interest cost of its investment in those companies (approximately $520 million annually, prior to the Hydro One IPO) to managing and retiring OEFC's debt and other liabilities.

OEFC's results are fully consolidated on a line-by-line basis into the Province's accounts.

Trillium Trust Act, 2014

What is the current status of the Trillium Trust?

SUGGESTED RESPONSE

- **The Trillium Trust Act, 2014, provides for the dedication of net revenue gains associated with the sale of designated assets to the Trust to support the Province's key infrastructure priorities, such as roads, bridges and public transit.**

- **Designated assets under the Act include the Province's shares in Hydro One and Hydro One Brampton, as well as the LCBO head office lands, the OPG head office building and the Lakeview lands.**

- **The Act also provides for regulations to designate additional assets, such as the Seaton lands.**

- **On August 30, 2016, the Province announced the dedication of $3.2 billion from the sale of Hydro One shares in 2015 to the Trillium Trust.**

    - **The $3.2 billion is made up of about $0.8 billion in gains on sale and the net benefit to the Province of about $2.4 billion from Hydro One's recognition of a deferred tax benefit.**

- **The Province previously credited $1.35 billion in net proceeds from the sale of the province's shares in General Motors, bringing the total balance of the Trillium Trust to over $4.5 billion.**

- **Additional net revenue gains will be credited to the Trust from the sale of the LCBO head office lands, as well as the secondary offering of Hydro One shares in April 2016.**

- **The government plans to begin drawing down on the balance in the Trillium Trust in 2016-17 to support Moving Ontario Forward initiatives such as Regional Express Rail (RER), Hurontario Light Rail Transit (LRT), and Ontario Community Infrastructure Fund.**

BACKGROUND

Trillium Trust Act, 2014: Introduction in 2014 Budget

The 2014 Budget introduced the Trillium Trust Act, 2014, which established the Trillium Trust to provide for the dedication of net proceeds from the sale of qualifying assets to support the Province's key infrastructure priorities, such as roads, bridges and public transit.

The Trillium Trust Act, 2014, was also established to require the Minister of Finance to maintain in the Public Accounts an account to track the receipt and disbursement of net proceeds obtained from the disposition of "qualifying assets".

Trillium Trust Act, 2014: Amendments in Budget Measures Act, 2015

The Act was amended in 2015, with a number of changes including:

1. Designation of certain named qualifying assets
    - Shares in Hydro One Limited
    - Shares in Hydro One Brampton Networks Inc.
    - LCBO head office lands
    - OPG headquarters building and attached property
    - OPG Lakeview lands and attached properties.

- The Act retains the authority of Treasury Board to designate further assets by regulation in future.
- The Seaton lands have not been named in legislation as the lands are made up of many parcels and are more complex and lengthy to describe. The Seaton lands can be named through regulations once the exact structure of a transaction or multiple transactions are known.

2. Allowing for non-cash revenue gains to be dedicated to the Trust

- The amendments provide for prescribing the amount of non-cash benefits recognized by the Crown in connection with the sale of a qualifying asset, to be credited to the Trillium Trust.
    - This allowed for the government to credit the Trust with the Province's fiscal benefit from the deferred tax benefit recognized by Hydro One.

3. Specifying the calculation of designated proceeds

- Designated proceeds are the gross revenues recognized by a ministry or public entity in connection with a sale, less book value, less any prescribed costs incurred, and/or

the value of any prescribed obligations assumed by a Ministry or public entity in disposing of the asset.

- The Act requires regulations to prescribe any costs and/or other obligations other than the book value of the qualifying asset, if necessary.

4. Changes to the nature of the spending authority in the Act

    - Previously, the amounts credited to the Trillium Trust were deemed as money received for the special purpose of infrastructure spending, under Section 7.(1) of the Financial Administration Act.

    - The amendments specify that amounts not exceeding the balance in the Trillium Trust may be paid out of the Consolidated Revenue Fund for the purposes of funding infrastructure.

5. Timing for designating assets as qualifying assets

    - To be eligible, an asset would need to be designated as a qualifying asset before the books of the Government of Ontario are closed for the fiscal year in which the asset is disposed.

6. Timing for reimbursement of expenditures

    - A reimbursement for infrastructure expenditures incurred by the Crown using the Trillium Trust must be made before the books of the Government of Ontario are closed for the fiscal year in which the expenditures are incurred.

<u>Trillium Trust Reporting</u>

The Public Accounts of Ontario 2014-2015, published in September 2015, show that $1.35 billion has been dedicated to the Trillium Trust. The $1.35 billion reflects the net proceeds from the sale of the Province's General Motors common shares the redemption of preferred shares.

- The Province generated $249 million net proceeds from the September 2013 sale of the Province's interest in 10 million shares of GM.

- On February 4, 2015, the Province completed the sale of its remaining 36.7 million GM common shares, resulting in a fiscal gain of $1.08 billion.

- General Motors redeemed the Province's preferred shares on December 31, 2014, producing a gain of $0.02 billion.

On August 26, 2016, the government filed regulations under the Act to prescribe net revenue gains from the Hydro One IPO and certain related share sales in November 2015, including the non-cash benefits from the deferred tax benefit recorded by Hydro One. The total amount dedicated to the Trust was $3.2 billion.

- The designated proceeds of disposition totalled about $0.8 billion.
    - This is based on gross proceeds, less the book value of these shares, less transaction costs incurred in disposing of the shares.
    - Transaction costs reflect underwriting fees of approximately $33M and other transaction related costs incurred by the Ministry of Energy of about $10M. The Ministry of Energy incurred costs for legal advisors, as well as certain other IPO costs, such as preparing and issuing the prospectus for the IPO.
- The gain to the Province from Hydro One's deferred tax benefit was about $2.4 billion.
    - Hydro One's 2015 Annual Financial Statements included a deferred tax benefit of $2.81 billion, which affected Hydro One's net income.
    - The Province records its share of net income from government business enterprises, including Hydro One, for which the Province owned about 84% of the common equity following the IPO.
- The $3.2 billion credited to the Trust does not include amounts associated with shares purchased by the Power Workers' Union (PWU) and the Society of Energy Professionals (SEP) trusts using loans provided by the Province.
    - In connection with the IPO, the Province sold $116 million worth of Hydro One shares to trusts of the PWU and SEP. Of the shares sold to the Trusts, about $108 million was purchased using loans provided by the Province.
    - The gains from the share sales financed through a provincial loan will be credited to the Trillium Trust over time as the loans are repaid.

An update on the status of the Trillium Trust will be included in the 2015-16 Ontario Public Accounts.

Disbursements from the Trillium Trust towards Infrastructure

As announced in the 2016 Budget, the government plans to begin drawing down on the balance in the Trillium Trust in 2016–17. Based on planned expenditures, in 2016–17 the Trillium Trust would support Moving Ontario Forward initiatives, such as Regional Express Rail (RER), Hurontario Light Rail Transit (LRT), and Ontario Community Infrastructure Fund.

Initial spending on Moving Ontario Forward projects is focused on planning, design, property acquisition and other activities to get projects construction-ready. It is expected that spending will ramp up significantly once this preliminary work is completed and construction activity is underway. This will allow for identification for cash flow timing requirements from the Trillium Trust during 2016-17 and subsequent years.

Broadening Ownership of Hydro One

How is the Province progressing in broadening ownership of Hydro One?

SUGGESTED RESPONSE

- **The Province continues to move forward with broadening ownership in Hydro One, to unlock value to reinvest in infrastructure through the Trillium Trust.**

- **The first phase, for about 16 per cent of the common shares in Hydro One, was completed in November 2015, with strong retail and institutional demand. The price in the initial public offering (IPO) was $20.50 per share.**

- **The Province received about $1.83 billion in gross proceeds from the IPO, before expenses and fees, and about $116 million from related share sales.**

- **On April 5, 2016, the Province announced that it had agreed to sell up to approximately 14 per cent of the common shares through a secondary offering (about 83.30 million shares) at a price of $23.65 per share.**

    - **The secondary offering raised approximately $2 billlion in gross proceeds, through a base offering that closed April 14th and an over-allotment option that closed on April 29th.**

- **Through broadening Hydro One ownership, the Province is on track to meet its target to generate:**

    - **$4 billion in net revenue gains over time that, through the Trillium Trust, will be reinvested in infrastructure under Moving Ontario Forward; and**
    - **$5 billion to reduce debt.**

- **On July 12, 2016, the Province announced an agreement in principle to sell to First Nations (FNs) in Ontario up to 2.5% of the total current common shares outstanding of Hydro One Limited (approximately 15 million shares) at a price of $18 per share.**

    - **All 133 FNs in Ontario are invited to participate in the transaction and the number of shares sold will be proportional to the level of participation, with a minimum 80% participation required by closing (Dec. 2017).**

    - **The purchase would be financed with a 25 year loan from the Province of up to approximately $268 million, depending on the level of First Nations participation.**

- **The Province would also provide seed capital to a new First Nation investment fund of up to $45 million in cash, depending on the level of First Nation participation, over the initial three years.**

- **By law, the Province is restricted from being able to sell down its interest to holding less than 40 per cent of the voting securities in Hydro One, following the IPO and subsequent share sales.**

    - **The rest of the shares in Hydro One would be broadly held, with no other shareholder or group of shareholders acting jointly together allowed to hold more than 10 per cent of the common shares.**

- **The ability to set Hydro One's transmission and distribution rates will continue to be at arm's length from Hydro One management, with rates set by the independent regulator, the Ontario Energy Board (OEB).**

    - **The government has also passed legislation that strengthens the OEB to further enhance its ability to protect electricity ratepayers with respect to cost, consumer protection and service reliability.**

<u>IF ASKED ABOUT ASSET OPTIMIZATION / TRILLIUM TRUST:</u>

- **On August 30, 2016, the Province announced the dedication of $3.2 billion from the sale of Hydro One shares in 2015 to the Trillium Trust.**

    - **The $3.2 billion is made up of about $0.8 billion in gains on sale and the net benefit to the Province of about $2.4 billion from Hydro One's recognition of a deferred tax benefit.**

- **The Province previously credited $1.35 billion in net proceeds from the sale of the province's shares in General Motors, bringing the total balance of the Trillium Trust to over $4.5 billion.**

- **Additional net revenue gains will be credited to the Trust from the secondary offering of Hydro One shares in April 2016.**

- **The government plans to begin drawing down on the balance in the Trillium Trust in 2016-17. Based on planned expenditures in 2016-17, the Trillium Trust would support Moving Ontario Forward initiatives, such as**

    - **Regional Express Rail (RER),**
    - **Hurontario light rail transit (LRT), and**
    - **Ontario Community Infrastructure Fund.**

IF ASKED ABOUT USING PROCEEDS TO PAY DOWN DEBT:

- **The government is committed to using proceeds related to the book value of shares sold from broadening ownership in Hydro One to pay down electricity sector debt.**

- **These proceeds, along with a pre-IPO special dividend of $800 million which has been paid by the Province to the Ontario Electricity Financial Corporation (OEFC), will allow the Province to pay down its debt and other payables to OEFC.**

- **These amounts, and an additional one-time PILs payment of about $200 million to OEFC, will allow OEFC to reduce its overall debt, and contribute towards the Province's targeted $5 billion debt pay-down.**

IF ASKED ABOUT THE 2015 IPO DEFERRED TAX ASSET/BENEFIT:

- **The gain to the Province from Hydro One's deferred tax benefit was about $2.4 billion.**
    - **Hydro One's 2015 Annual Financial Statements included a deferred tax benefit of $2.81 billion, which affected Hydro One's net income.**

    - **The Province records its share of net income from government business enterprises, including Hydro One, for which the Province owned about 84% of the common equity following the IPO.**

BACKGROUND

Fiscal Impacts

- Qualitatively, the key fiscal impacts on the Province from an IPO are composed of the following components:
    - The gain on sale of the portion of shares sold – that is the gross proceeds less expenses/fees and less the book value of the shares sold.
    - Any one-time impact of a deferred tax asset benefit to Hydro One's net income that would be consolidated into Public Accounts based on the Province's ownership level in Hydro One.
    - A reduction in electricity payments-in-lieu of taxes, as Hydro One, following the IPO, has exited the PILs system and become taxable under the federal Income Tax Act and the Provincial Taxation Act.
    - Following the IPO, the Province is continuing to consolidate the net income of Hydro One into its revenues in Public Accounts, based on its proportionate share of ownership.

- The fiscal impacts on the Province from a gain on sale of the shares in a secondary offering, or other sales, are similar to the impacts from the IPO. However, there is no one-time impact of a deferred tax asset benefit or incremental reduction in electricity payments-in-lieu of taxes.

- The impact of broadening the ownership of Hydro One is expected to result in a more efficiently run and better performing company. Under new management, a group of diverse and accomplished leaders, there will be a renewed focus on customer service excellence, finding efficiencies and improved reliability. The Province expects to receive financial benefits from a strong and growing company.

IPO Proceeds / Net Revenue Gains

- The Province received $1.83 billion in gross proceeds as a result of the IPO.
    - This is before deducting any expenses or fees from the offering.

- In addition to the gross proceeds amount from the IPO, the Province also sold about $116 million in shares to seperate trusts established by the Power Workers Union (PWU) and the Society of Energy Professionals (SEP).

- On August 26, 2016, the government filed regulations under the Act to prescribe net revenue gains from the Hydro One IPO and certain related share sales in November 2015, including the non-cash benefits from the deferred tax benefit recorded by Hydro One. The total amount dedicated to the Trust was $3.2 billion.
    - The designated proceeds of disposition totalled about $0.8 billion.
        - This is based on gross proceeds, less the book value of these shares, less transaction costs incurred in disposing of the shares.

        - Transaction costs reflect underwriting fees of approximately $33M and other transaction related costs incurred by the Ministry of Energy of about $10M. The Ministry of Energy incurred costs for legal advisors, as well as certain other IPO costs, such as preparing and issuing the prospectus for the IPO.

    - The gain to the Province from Hydro One's deferred tax benefit was about $2.4 billion.
        - Hydro One's 2015 Annual Financial Statements included a deferred tax benefit of $2.81 billion, which affected Hydro One's net income.
        - The Province records its share of net income from government business enterprises, including Hydro One, for which the Province owned about 84% of the common equity following the IPO.

    - The $3.2 billion credited to the Trust does not include amounts associated with shares purchased by the Power Workers' Union (PWU) and the Society of Energy Professionals (SEP) trusts using loans provided by the Province.
        - Of the shares sold to the Trusts, about $108 million was purchased using loans provided by the Province.
        - The gains from those share sales will be credited to the Trillium Trust over time as the loans are repaid.

- The Province has also committed to using the cash amount of the proceeds related to the book value of the Hydro One shares sold to pay down the Province's electricity sector debt and other payables, helping to reduce the debt of the OEFC.

    - While this would reduce OEFC's gross debt, it would not reduce stranded debt, as the Province's payables to OEFC that would be reduced are currently assets on OEFC's books. Both OEFC assets and debt would be reduced by the same amount.

- As part of this IPO process, the Province has received approximately $1 billion in special payments from Hydro One, including $800 million in a special dividend paid prior to the IPO, which has now been paid by the Province to OEFC, and about $200 million in additional payments in lieu of taxes to OEFC.

    - Since the Province reflects in revenue its net income from government business enterprises, dividends paid by the Province's electricity government business enterprises are not recorded as revenue and do not provide a direct fiscal gain to the Province.

<u>Secondary Offering</u>

- The secondary offering was a "firm commitment offering", where the underwriters committed to buy the entire offering from the Province at an agreed price before the underwriters undertake any public sales or marketing of the offered shares.

- A "firm commitment offering" eliminates marketing risk to the Province and transfers it completely to the underwriters as the underwriters buy the entire offering from the Province at a predetermined price.

- Once the transaction closes, the underwriters would be in a position to then sell to retail and institutional investors.

- RBC and Scotiabank were the co-lead underwriters for the secondary offering.

    - These two firms were chosen to lead the IPO underwriting through a competitive and transparent process, overseen by Denis Desautels, the former Auditor General of Canada.

- The secondary raised approximately $2 billion in total gross proceeds, with approximately $1.7 billion coming from the initial base offering and $0.3 billion from the over-allotment option.
    - As part of the secondary offering, OPG purchased 9 million shares in connection with annual share award obligations for its employees in collective agreements reached with the PWU and SEP.
    - OPG independently made the decision to purchase Hydro One common shares in the offering and does not have any agreement, arrangement or understanding with the Province with respect to Hydro One common shares or the voting of those shares.

- Underwriting fees for this offering were 1% for institutional investors and 3% for retail investors, subject to an overall cap of 2%, totalling approximately $39.4 million with the over-allotment option exercised in full.
    - On a net basis (after fees), the Province raised approximately $1.93 billion.

- The price discount offered by the underwriters represented an approximate 2% discount compared to the closing trading price of Hydro One shares on April 5th, 2016 ($23.65 vs $24.16).

<u>Hydro One Dividend Policy</u>

- Hydro One's IPO Prospectus noted that Hydro One anticipated an annual dividend amount of approximately $500 million in the aggregate initially, based on a target payout ratio of 70 percent to 80 percent of net income

- In its 2015 Annual Financial Statements, Hydro One declared a dividend of 34 cents per common share, comprised of 13 cents for the post IPO fourth quarter period of November 5 through December 31 2015, plus 21 cents for the full first quarter ending March 31, 2016.

    - The dividend was paid on March 31, 2016. For the Province, that would be about $170M.

- On May 5, 2016, Hydro One's Board of Directors declared a quarterly cash dividend to common shareholders of $0.21 per share to be paid on June 30, 2016 (to shareholders of record on June 14, 2016).

Departure Tax/Capital Contribution

- In connection with the IPO, Hydro One's exemption from tax under the federal Income Tax Act and the Taxation Act (Ontario) ceased to apply and Hydro One was deemed to have disposed of its assets immediately before it lost its tax exempt status for proceeds equal to the estimated fair market value of those assets at that time.

- As a result of this deemed disposition, Hydro One was liable to make a "departure tax" payment in lieu of tax under the Electricity Act in respect of the income and capital gains.

- Before the IPO, the Province, as shareholder, made a capital contribution into Hydro One and received new common shares of Hydro One Limited for a total of $2.6 billion. This provided Hydro One with funds that it used to pay the "departure tax" to OEFC.

- This capital contribution has no fiscal impact for the Province, since the capital contribution also increased the Province's investment in Hydro One.

- On November 4, 2015, Hydro One paid OEFC the $2.6 billion "departure tax".

    - This transaction is fiscally neutral as the Province consolidates both OEFC's revenue and Hydro One's net income on its books.

    - OEFC (and the Province upon consolidation) will record a higher payment in lieu of tax revenue due to the departure tax, but this amount will be offset by the reduction in Hydro One's net income as a result of the payment.

Initiatives to Support Broadening Hydro One Ownership

- As part of the IPO process, and to support Hydro One's transition to being broadly held, the government agreed with the recommendations of the Council that the company should operate, to the extent possible, in the same legislative and regulatory environment as other publicly traded, rate-regulated entities.

- To achieve this, the Province has passed several legislative amendments, including legislation that requires that Hydro One retain the company's headquarters and grid control centre in Ontario.

    - In addition, the legislation provides for substantially all of Hydro One's senior executives with strategic decision-making authority to be located and carry out those functions in the province.

- The government has also put in place a governance agreement and registration rights agreement with Hydro One to serve both the public interest and investors' interests. The agreements clarify the Province's role as investor, including the process in which the Province nominates 40 per cent of the Board of Directors and the Province's rights related to future share sales by the Province or Hydro One.

- The Province appointed a new Board of Directors for Hydro One on July 17, 2015, (with the exception of Mayo Schmidt, who replaced Carmine Marcello) which includes:

    - David Denison (returning Director and Chair), former President and CEO of the Canada Pension Plan Investment Board;
    - Ian Bourne, Chair of Ballard Power Systems Inc.;
    - Charles Brindamour, CEO of Intact Financial Corporation;
    - Marc Caira, Vice Chairman of the Board of Directors of Restaurant Brands International Inc.;
    - Christie Clark, former CEO and Senior Partner of PricewaterhouseCoopers LLP;
    - George Cooke, (returning Director), Chair of the Board of Directors of the OMERS Administration Corporation;
    - M. Marianne Harris, former Managing Director at Bank of America Merrill Lynch Canada;
    - Jim Hinds, former Chair of the Independent Electricity System Operator (IESO) Board;
    - Kathryn Jackson, Senior Vice President and Chief Technology Officer of RTI International Metals, Inc.;
    - Roberta Jamieson, President and CEO of Indspire, former Board Member of Ontario Power Generation, and former Ombudsman of Ontario;
    - Frances Lankin, a member of the Board of Directors with the Ontario Lottery and Gaming Corporation; former President and CEO of United Way Toronto; and former member of the Premier 's Advisory Council on Government Assets;
    - Mayo Schmidt, President and CEO of Hydro One Limited.;
    - Philip Orsino, former President and CEO of JELD-WEN Inc.
    - Jane Peverett, former President and CEO of British Columbia Transmission Corporation; and
    - Gale Rubenstein, (returning Director), Partner at the law firm Goodmans LLP.

- On June 23, 2015, Michael Vels was hired as the new Chief Financial Officer and on August 20, 2015, Mayo Schmitt was hired as the new Chief Executive Officer.

- On February 3, 2016, Hydro One announced the first senior executive change since the IPO as Sandy Struthers, Chief Operating Officer and Executive Vice President left the company.

- On Aug. 22, 2016, Hydro One announced the appointment of Greg Kiraly to the role of Chief Operating Officer, effective September 12, 2016.

<u>Loans to PWU/SEP Trusts</u>

- The Asset Council’s Phase 1 report highlighted the need for a dialogue with management and labour unions to address cost implications of labour and pension agreements at Hydro One.

- In the Council’s Phase 2 report the Council recommended that the Province, Hydro One management, and unions finalize agreements on pensions and labour costs in advance of the Hydro One IPO to address issues raised by the Leech Report and the Ontario Energy Board with respect to pensions and compensation.

- The Power Workers Union (PWU) and the Society of Energy Professionals (SEP) collective agreements provide for net zero increases and substantial movement in pension sustainability, aligning with the recommendations contained in the Leech report.

- The government extended a $75 million loan to a trust established for the benefit of the Power Workers Union (PWU) and $36 million in loans to a trust established for the benefit of the Society of Energy Professionals (SEP) to purchase shares in Hydro One.

- The loans are to the seperate trusts, not to individual employees. These arrangements allow the unions to invest in high quality jobs for Ontarians, which the Province believes is consistent with the purpose of the IPO and will better align the interests of the union members with those of investors in Hydro One.

- The unions were also permitted to purchase some additional common shares from the Province with their own resources ($5 million in shares to PWU and $3 million in shares to SEP).

Executive Compensation

- For comparable companies, the pay for Hydro One senior management will actually be set at the medium-to-low range. And a large part of that compensation will be 'at risk' if they fail to perform.

- This pay is in line with similar privately-held energy companies in Canada. The CEO of Fortis Inc. received $5M in compensation, and the CEO of ATCO Ltd. received a salary similar to that of Hydro One's new CEO.

First Nations

- The government has committed to a formal Political Accord with First Nations (FNs), and is dedicated to working collaboratively on a host of issues, including energy.

- On July 12, 2016 the Province announced an agreement in principle to sell to the FNs in Ontario, up to approximately 15 million shares of Hydro One Limited (2.5% of the total current common shares outstanding).

- All 133 FNs in Ontario are invited to participated in the transaction and a minimum 80% threshold of FN participation by the end of 2017 is required for the transaction to close. Each First Nation will have up to two years from signing of binding agreements to decide whether to participate in this arrangement.

- If the agreement is ratified, the Province of Ontario would sell shares of Hydro One to an investment vehicle owned by the FNs at a price of $18 per share (which is above the Province's book value for the shares).

- This purchase would be financed with a 25-year loan from the Province of up to approximately $268 million, depending on the level of FN participation. The interest rate for the loan would be at the Province's relevant borrowing rate, plus 15 basis points.

- Moreoever, the Province would also provide seed capital to a new FN investment fund of up to $45 million in cash over the initial three years, depending on the level of FN participation in the transaction.

Remarks by Scott Thompson

Deputy Minister
Ministry of Finance

to the Standing Committee
on Public Accounts

Toronto, Ontario
October 5, 2016

Word count: 800

Check against delivery

Thank you, Greg.

Good afternoon everyone.

I'm Scott Thompson, Deputy Minister for the Ministry of Finance.

I'm pleased to be here today, speaking to the Standing Committee on Public Accounts.

[Introduction]

I welcome the opportunity to discuss how the Province manages its debt through the Ontario Financing Authority.

And to discuss how the government presents its financial information and reports.

The provincial debt and Ontario's financial statements and analysis were two salient points in the Auditor General of Ontario's 2015 annual review of the 2014-15 Public Accounts of Ontario.

Like TBS' deputy minister, I also am in agreement with the Auditor General's recommendations from the 2015 report relating to the importance of producing high-quality financial reports that meet the needs of the public and legislature.

Accurate and accessible information is crucial to accountability and transparency–two priorities for the government and public service.

The Ministry of Finance is proud of its work in these areas, and we will continue to refine and improve our efforts by using best practices.

[Deficit Reduction]

I'd like to take a moment to discuss the province's deficit, which plays a role in how Ontario manages the province's debt.

The government continues to confirm its commitment to eliminate the deficit by 2017–18.

This includes the most recent provincial Budget.

It should be noted that this commitment builds on past success. Successive budgets and public accounts have continually demonstrated that the province has beaten its annual deficit targets year after year

~~Ontario's accumulated deficit is more than $25 billion lower than it would have been without the strong fiscal management applied to exceed these targets~~

The government is achieving and beating these targets by managing program spending growth and by making strategically important financial decisions.

TRecently, , the credit rating agency Moody's affirmed its outlook for Ontario's debt and revised the outlook on the ratings to stable from negative.

Moody's said, and I quote:

"The stable outlook on the Province of Ontario's ratings reflects our opinion that the province has presented a budget plan with little risk that the debt burden will exceed recent levels."

End quote.

Moody's outlook on the Province was further confirmed in a later report. It said I quote:

"Ontario's debt burden and debt service cost will remain manageable thanks to low interest rates as well as the province's improving fiscal position and conservative debt management policy."

End quote.

The report also speaks positively to the importance of the Province's infrastructure spending at this time of low interest rates, as have a number of other external observers.

To be sure, while the news from Moody's is positive, it is just one assessment among many third-party analyses.

Indeed, private-sector economists across the board are forecasting Ontario's economy to be among the top two growth leaders in Canada.

[Unlocking Provincial Assets]

The government is using another tool to support growth and create the jobs province wide that strengthen our economy.

That tool is our asset optimization plan—unlocking the value of certain provincial assets.

As you know, in February 2015, the Province sold its remaining shares in General Motors, and in the 2015 Budget, the Province committed to unlocking the value from other assets in order to contribute approximately $5.7 billion for infrastructure projects.

.

The net revenue gains from these major transactions have been, or will be, credited to the Trillium Trust and will be invested in transit, transportation and other priority infrastructure projects that are part of the largest investment in public infrastructure in the province's history.

The government has already filed regulations crediting the Trillium Trust with net proceeds from the initial stages of its asset optimization plan

These investments will directly create jobs and positive economic spinoffs that further help improve the province's fiscal position.

The ministry is working to be as open and clear as possible when it comes to its management of the public purse.

The government's public communications on the Trillium Trust regulation, its asset sales, , our Q1 Finances and Ontario Economic Accounts are all concrete examples of these efforts.

[Conclusion]

Of course, we can do more. And we will.

We will continue to work with the Auditor General and the Public Sector Accounting Board to support public sector reporting that best serves the needs of the public interest.

Before closing, I would like to also take the opportunity to thank the staff from the Ministry of Finance who have helped prepare for this session today, many of whom are in attendance behind me.

I will now turn it over to Gadi Mayman, the CEO of the Ontario Financing Authority, to discuss the management of the province's debt.

Thank you….Gadi….

Subject: SCOPA material

Hi Martin and Dave

For tomorrow's SCOPA briefing, the e-binder is attached. Please share this with folks that will be attending the meeting. I understand that our communications team has been working with their counterparts in your ministries. Feel free to invite them – I'll leave that up to you.

Let me know if you have any questions.

Thanks!
Allison

AGENDA

STANDING COMMITTEE ON PUBLIC ACCOUNTS

Consideration of Chapter 2, Public Accounts of the Province
February 2018

PRE-BRIEFING DISCUSSION

Date: Friday, January 19, 2018
Time: 4:00 p.m. – 5:00 p.m.
Location: TBS DMO Board Room 5th Floor Whitney Block
Attendees: TBS, MOF, MOE

Topic	Lead	Time
Introduction	TBS Deputy Minister	5 minutes
Overview • Schedule and format • Attendees • Strategic approach • Roles and responsibilities • DM Angus opening remarks outline • Questions and answers overview • Draft binder table of contents • Overview of additional materials	TBS Communications	25 minutes
Summary Status Table • Overview of draft table	Office of the Provincial Controller	15 minutes
Questions	All	15 minutes

LOGISTICS & FORMAT OVERVIEW

Overview

- SCOPA meetings are open to the public with the exception of those dealing with the setting of the Committee's agenda and the preparation of committee reports. All public committee proceedings are recorded in Hansard.
- The Chair will advise members to consider questions that are relevant to the content of the Auditor General's Annual Report, but in practice members do sometimes ask questions outside of the report's focus. As a general rule, expect that any question related to the Province's financial statements would be ruled within scope by the committee chair.
- The Committee members may ask that ministries provide details after the session if more research or gathering of information is needed to respond to a question.

Agenda

Wednesday, February 28, 2018
Committee Room 151 (Amethyst Room), Main Legislative Building

Time	*Topic*
9:00 a.m.	Closed Session: Briefing by the Auditor General
10:00 a.m.	Briefing by the Research Officer
10:15 a.m.	RECESS
12:30 p.m.	Treasury Board Secretariat and other representatives • *Invited senior officials appear and respond to questions.* • *The Auditor General attends, and the Committee members can seek clarification from the AG on points from her report if needed during the session.*

12:30 – 3:00 p.m.

- **Opening remarks** (20 minutes)
- **First round of questions** (60 minutes)
    - Each of the three political parties get 20 minutes of questions
- **Second round of questions** (50 minutes, approximately)
    - The remaining time until 2:45 p.m. is split between the three political parties; approximately 15-17 minutes per party

- **Closed session** (15 minutes)
    - Committee members plus the Clerk, only; no audience or presenters
    - The Committee will discuss the outcome of the meeting and if they want to do a report
    - There are no closing statements from ministry officials

Room Setup

- Committee Room 151 (Amethyst Room) is equipped with cameras and the meeting will be available on TVs within the Legislature and streamed online.
- The room has a square table with rows of extra seating at the front the room.
- The Committee Chair, Auditor General and Clerk will sit at the head of the table with the government and opposition parties on opposite sides.
- The invitees sit opposite the Committee Chair and Clerk, either at the table or in the first row of chairs.

Media Access

- Media are allowed to sit in on the meeting as long as they do not interrupt the proceedings. They cannot ask questions in the committee room, but if they wish they can scrum participants in the hallway as they leave.
- Media can also watch SCOPA proceedings on the TVs in the Legislature or online.

TIPS FOR PRESENTING AT SCOPA

Tips for Addressing Committee Members:

Note: Tips are applicable for addressing both Committee Members and media.

- When speaking be mindful of what you say – the proceedings are recorded and there's no such thing as "off the record."

- Adhere to the scripted remarks and prepared Q&As. Do not embellish and ***when in doubt, leave it out.***

    - Be sure you understand the question being asked (it's ok to ask for clarification) and Do NOT answer something you're not 100% sure of.

- If you do not have the response, you may advise Committee Members that the matter needs to be redirected to another ministry, or that you will get the requested information by saying, "I'll look into what is possible to provide."

- Be mindful of only addressing questions/issues that relate directly to the TBS.

- It is acceptable to decline to answer an unrelated question by noting that you are not clear of its relevance to TBS, and that you are prepared to address matters related to the ministry.

- If caught off guard, breathe, listen, work to understand the question, or ask for clarification.

    - Ask the questioner 'Excuse me' or 'I beg your pardon?'
    - Ask the questioner 'Can you kindly help me understand the context of the question/or what you just said?'

- If possible, use a bridging statement to get to your key message/prepared response. (See Appendix A).

- Do not offer personal opinions. Stick to the facts:

    - Leave off qualifiers like "I think" "I feel," and "I believe" which represents an opinion. To sound confident and assured, be mindful not to use qualifiers.
    - Do not use 'I assure you."

- Offer examples of success whenever possible.

Body Language, Tone:

- Be aware of how you come across. There is no benefit to being seen as defensive, argumentative, or unresponsive.

- Project an image of openness, honesty, and empathy.

- Remember to breathe deeply and speak slowly.

    - Controlling your breathing helps deal with the stress.
    - Take several deep breaths as you sit down and get organized.
    - Ahead of appearance take a few minutes in a quiet spot to breathe slowly and deeply.
    - "Super Hero Pose" – stand with your legs shoulder width apart, hands on hips, shoulders back. Do this for two minutes. It helps mentally prepare you ahead of having to speak.

- Use your hands while talking to look natural and help release anxiety. (Note palms up is a subconscious message to those looking at you that you are open and have nothing to hide)

- Avoid body language leakage—those involuntary movements that indicate you're nervous or stressed - e.g. head nodding, swallowing, and pursing your lips.

- Do not touch your face with your hands.

- Avoid repeating negative words that members use in questions. Doing so indicates you accept the negative premise.

- If you feel overwhelmed while speaking in front of an audience, recalibrate by breathing and pausing.

What-Ifs:

1. What if you don't want to answer the question, but you have to say something?

    - Offer a credible reason why you are unwilling to answer the question and identify what you prefer to discuss.

2. What if you're asked for hard numbers, and you don't have the answer?

    - Explain, "I want to be absolutely precise and specific, so I will need to get back to you with the exact number"

- Words like “precise,” “specific,” and “exact” convey that the question has been taken seriously.

3. What if you don’t know the answer, but a colleague who is with you may know it?

    - If you need help from the other ADMs, open your response with ‘In a moment I’m going to call on my colleague to get into more detail about this…’ This gives the other TBS representative time to know they’ll be called upon.

    - Briefly discuss a related subject, then pass the question.

4. What if you need to pause?

    - If you have said absolutely everything you need to say, then let there be a pause.

    - Remember it’s not up to you to keep the proceedings going. That’s the Chair’s job. They may intentionally leave dead air in the hopes that you’ll jump in to fill it by saying something you hadn’t intended to.

5. What if the answer is confidential?

    - Explain that confidentiality rules must be respected, so you cannot directly address the issue at hand. (e.g.: that matter is before the courts).

6. What if it’s a question about a rumour?

    - When asked to respond to a rumour, it is best to not respond at all. Instead, state that your focus is always on fact, not rumour.

7. What if the answer is HR related?

    - Say as little as possible. Commenting on someone’s employment record in a negative context can potentially put you in legal jeopardy.

8. What if you don’t like what you’re saying?

    - Don’t feel obligated to complete a sentence or thought. Simply begin the response again.

9. What if it’s a “yes or no” question?

    - Unless the question relates to a sensitive issue, skip “yes” or “no” and go right to the message that would follow.

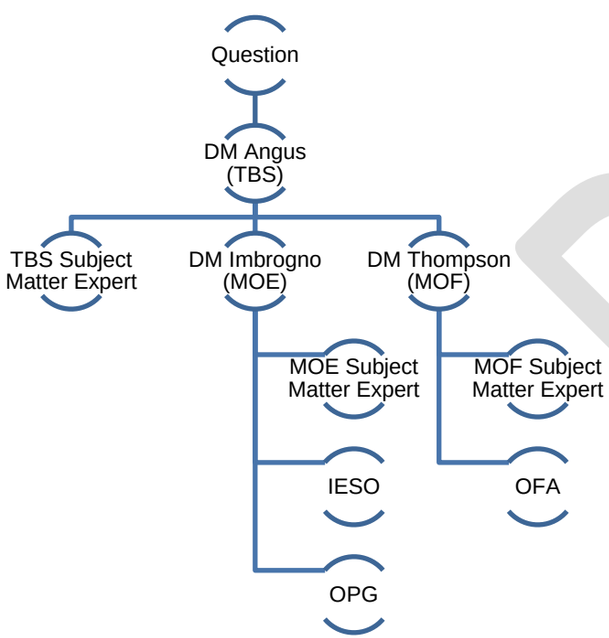
10. What if it's an "is it possible" question?

    - Avoid speculating and tell the committee – "I'm not able to comment on something that may or may not happen."

11. What if you're interrupted mid-answer?

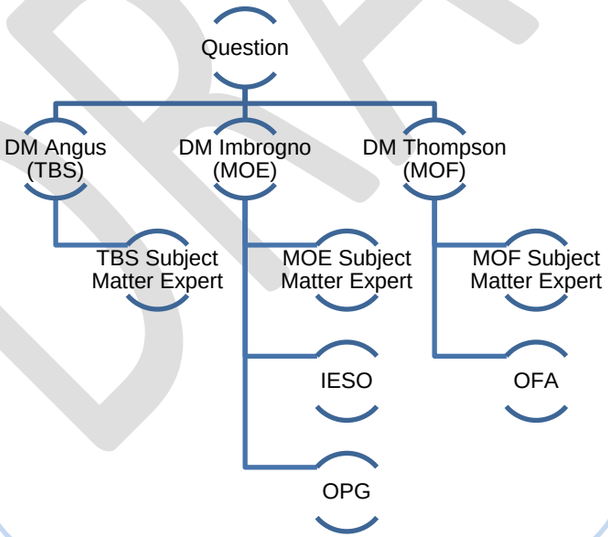
    - The first time, let it go. The second time, ask the Chair to be allowed to finish your thought.

APPENDIX



A. Sample Bridging Statements

1. "We find the more important issue is…"
2. "I think it would be more accurate (or correct) to say…"
3. "Let me emphasize again…"
4. "What matters most in this situation is…"
5. "While _____ is important, it's also important to remember that…"
6. "It all boils down to this…"
7. "And that reminds me…"
8. "Before we leave this subject, I need to add…"



STRATEGIC APPROACH

- Provide evidence and facts as the basis of decision-making wherever appropriate (e.g. other jurisdictions, external advisors).
- Provide responses that are relevant and in scope of the consideration of chapter two of the Office of the Auditor General's report.
- Avoid any speculation on political decision-making or rationales; provide objective, factual responses in role as non-partisan public servant.
- Provide context wherever possible. Deputy Ministers to provide initial messaging then pass to the subject matter experts where appropriate.
- Emphasize the role of a public servant is to provide factual, non-partisan information to the Committee based on due diligence and the application of professional judgment.
- Reaffirm the government's commitment to working with the Office of the Auditor General.
- Emphasize that the province will continue to follow Public Sector Accounting Standards (PSAS), as always, and will seek appropriate expert guidance where PSAS is silent.
- Use the Committee appearance as an opportunity to communicate the facts and rationale for the decision to adopt/continue accounting practices in response to the Office of the Auditor General's recommendations.
- Highlight due diligence in decision making (Ontario Fair Hydro Plan accounting, pension asset accounting, Independent Electricity System Operator [IESO] market accounts, IESO rate-regulated accounting).

INTRODUCTORY REMARKS - OUTLINE

Secretary Orsini – Introduction (Optional)

- Good afternoon and thank you to members of the Committee
- The Standing Committee on Public Accounts plays an important role in providing legislative oversight and guidance.
- Role of the public servant: non-partisan nature of public service; duty to provide our best advice; accountability and transparency

Deputy Angus – Introduction

- Good afternoon and thank you
- I'd like to take a moment to introduce my colleagues who are sitting with me here today:
    - Scott Thompson, Deputy Minister of Finance
    - Serge Imrogno, Deputy Minister of Energy
    - Cindy Veinot, Assistant Deputy Minister and Provincial Controller
    - And, as many of you know, I am Helen Angus, Deputy Minister of the Treasury Board Secretariat.
- We also have representatives here from the Ontario Financing Authority, Ontario Power Generation, the Independent Electricity System Operator, and other ministry officials, who are here to answer questions and would be pleased to join us at the table as needed.
- We welcome this opportunity to provide information and answer your questions regarding the Committee's consideration of the Chapter 2 of the Auditor General's 2017 Annual Report on the Public Accounts of the Province.

Overview of Public Accounts

- Public Accounts presents the government's financial statements and gives a picture of how finances were managed over the last fiscal year.
- Producing the Public Accounts of Ontario requires the teamwork and collaboration of many stakeholders across Ontario's public sector.
- The Office of the Auditor General plays a critical role in auditing and reporting on the province's financial statements.
- The province's financial statements are prepared in accordance with Canadian Public Sector Accounting Standards (PSAS).
- PSAS is set by an independent standard-setting body in Canada focused specifically on the public sector, and is used by all senior governments in Canada.
- PSAS is principle based – the standards are not a set of specific prescriptive rules. Applying them requires the application of professional judgment.

DRAFT

Overview of Accounting Changes

- When preparing the 2016-17 Public Accounts, Ontario's professional accounting staff adopted accounting changes to further enhance accountability and transparency
- These changes include:
    - Accounting for hospitals, school boards and colleges.
    - Accounting for energy sector government business enterprises.
    - Accounting for the Independent Electricity System Operator (IESO) - the IESO has adopted rate-regulated accounting, and is now recognizing its market accounts assets and liabilities in its financial results.
    - Accounting for net pension assets of jointly sponsored pension plans - the Province is reporting net pension assets for jointly sponsored pension plans. This is in line with Public Sector Accounting Board standards and the recommendations of the independent Pension Asset Expert Advisory Panel.

Auditor General's 2017 Annual Report

- The government thanks the Office of the Auditor General for its recommendations.
- As I mentioned earlier, the Office of the Auditor General plays a critical role in auditing and reporting on the province's financial statements.
- However, there are times when we disagree, and it is our role as public servants to continue our due diligence, act with impartiality, and provide our best advice.
- Our professional staff exercises judgment in applying accounting standards and, as necessary, consults with external experts and advisors.
- They provide the Office of the Auditor General with their written analysis on all significant issues that impact the financial statements for the year being audited, and they discuss the issues with the Office of the Auditor General.
- All Chartered Professional Accountants (CPAs), including those employed by the Ontario Public Service (OPS), are required to comply with the Code of Professional Conduct for CPAs. One of those rules is that they not be associated with false or misleading information.
- That means that if the professional accountants in the OPS do not agree with the judgment of the Ontario Auditor General, it is not as simple as just agreeing to accept the interpretation of the Office of the Auditor General if they believe that interpretation would result in false or misleading financial statements.
- While we expect professional accountants to agree on the vast majority of issues, we acknowledge that they may not agree on everything and when that occurs, and the difference is material to the financial statements, the Office of the Auditor General can choose to issue a qualified audit opinion.

DRAFT

Management Response to the Auditor General's Recommendations

- The Auditor General's annual reports provide for an opportunity for conversation, and in response to the Auditor General's recommendations, the government provided a detailed response to each of the 10 recommendations.
- As requested by the Committee, we have provided a response to each recommendation in the Summary Status Table, which you now have in front of you.
- This table includes more detail than you may have previously seen in chapter two of the Annual Report.
- Each response, on which we would be pleased to provide further detail, outlines the process and rationale as to why the government chose to either continue or adopt changes to accounting treatments.

Updates on Progress – From the Summary Status Table

- *To be added – any key updates/highlights on progress from the Summary Status Table*

Conclusion

- I would like to emphasize that, in our role as public servants, it is our job to exercise due diligence and professional judgment, consult external advisors when needed, carefully consider options, and provide our best advice.
- It is for this reason that accounting changes were adopted in the 2016-17 Public Accounts, and it for this reason that Deputy Thompson, Provincial Controller Veinot, and myself as the Deputy of the Treasury Board Secretariat signed a statement of responsibility, reaffirming our responsibility for the objectivity and integrity of the Public Accounts of the Province.
- As always, we welcome the opportunity to provide the Committee with information and to answer any questions.
- Thank you.

DRAFT

QUESTIONS & ANSWERS OVERVIEW

Based on the Auditor General's 2017 Annual Report, media analysis, Hansard analysis, and the invitee list for the SCOPA session on February 28, 2018, it is anticipated that the focus of the Committee will be the following:

- Ontario Fair Hydro Plan (OFHP) Accounting
- Independent Electricity System Operator (IESO) Accounting (market accounts; rate-regulated accounting; other – IESO/OPG "inappropriate expenses"; OPG compensation)
- Pension asset accounting
- Pre-Election Report
- Province's debt burden

Long-Form Member Questions

1. Why did the government choose to recognize pension assets from the Ontario Teacher's Pension Plan and the Ontario Public Sector Employee's Union Pension Plan? What evidence and processes were used to support this decision?

2. Why did the Treasury Board Secretariat accept the IESO's recognition of market accounts on the province's consolidated financial statements? Is there any precedent for this?

3. Can you explain when and how the Treasury Board Secretariat looks to other accounting methods to support the preparation of Public Accounts?

4. What are the plans to keep Ontario's credit rating in good standing?

5. What is Ontario's debt repayment plan?

6. How is Ontario planning to keep a balanced budget?

7. *MOE to add*

8. *MOE to add*

9. *MOE to add*

DRAFT

Top Questions

1. How do you respond to the Auditor General's recommendation that the government should record valuation allowances to offset the net pension assets recorded from the Ontario Teacher's Pension Plan and the Ontario Public Sector Employee's Union Pension Plan until you receive formal written authorization from their pension plan co-sponsors?

2. How do you respond to the Auditor General's recommendation that the government remove the Independent Electricity System Operator's (IESO) market accounts from the province's consolidated financial statements?

3. The government has received a second qualified audit opinion on its Public Accounts – this time based on two separate issues. Why do you continue to disagree with the Auditor General?

4. The Auditor General says that you anticipated the government would receive a qualified audit opinion – and accepted this risk. In the private sector this would be unacceptable. How do you figure you can get away with this?

5. Will the government implement the recommendations in the Auditor General's Special Report on the Fair Hydro Plan?

6. The Auditor General says that she has consulted with all of the Auditor Generals in Canada – and they agree with her assessments. How are we supposed to believe this government when all legislative auditors in the country say you are wrong?

7. Why does the government use external advisors/consultants? It seems convenient that whenever you disagree with the Auditor General, you turn to consultants to justify your accounting methods.

8. The Auditor General says that the IESO's use of rate-regulated accounting is inappropriate. Why has the government allowed the IESO to adopt this accounting method that she says is not in accordance with PSAS?

9. Why has the government legislated accounting for things like Ontario's Fair Hydro Plan? Aren't you just changing the rules to suit your needs?

10. Will the government issue a regulation confirming the source of reference for the Pre-Election Report and the timeline for issuance of the report that will be subject to the Auditor General's review?

**See appendix A for a full list of QAs, which are organized on the basis of Auditor General recommendation number.*

DRAFT

AG RECOMMENDATION #2: INDEPENDENT ELECTRICITY SYSTEM OPERATOR (IESO) MARKET ACCOUNTS

Deputy Minister High-level Response

- Thank you for your question.
- The Province consolidates the entities it controls, in accordance with Public Sector Accounting Standards (PSAS) and its internal reporting policies.
- Each consolidated entity produces its own stand-alone financial statements and is subject to its own financial statement audit.
- In 2016, the Independent Electricity System Operator (IESO) changed the accounting for the market accounts and recognized these balances on its financial statements.
- The financial statements of the IESO for the year-ended December 31, 2016 were subject to an external audit and received an unqualified (or clean) opinion.
- The government supports this enhanced reporting and greater transparency for the economic activities of the IESO.
- I will now pass it over to:
    - Cindy Veinot, Provincial Controller
    - Deputy Imrogno

  to provide more details.

Questions & Answers

1. **How do you respond to the Auditor General's recommendation that the government remove the Independent Electricity System Operator's (IESO) market accounts from the province's consolidated financial statements?**

   In 2016, the Independent Electricity System Operator (IESO) began recognizing its market accounts' assets (amounts due from power distributors) and liabilities (amounts due to power producers) in its financial results. IESO has chosen to recognize these markets accounts on its books for transparency reasons, as it better reflects the financial position of the IESO-administered markets at year-end. This change was supported by the IESO's audit committee, its independent external auditor, and by the Office of the Provincial Controller. This change also has no impact to the province's annual deficit, net debt or accumulated deficit.

   The financial statements of the IESO for the year-ended December 31, 2016 were subject to an external audit and received an unqualified (or clean) opinion.

DRAFT

This accounting is consistent with the presentation used previously by the Ontario Power Authority (which was merged with the IESO on January 1, 2015) in its financial statements, which was not subject to qualification from the Office of the Auditor General at that time.

2. The government has received a second qualified audit opinion on its Public Accounts – this time based on two separate issues. Why do you continue to disagree with the Auditor General?

The government continues to move forward and present the province's finances fairly and accurately and in accordance with Canadian Public Sector Accounting Standards (PSAS). Ontario has a strong track record of producing high-quality financial reports on a timely basis. The Auditor General's qualified opinion is based on a different interpretation of PSAS for net pension assets and recognition of market accounts.

Last year there was a disagreement among the province's professional accounting staff and the Auditor General's Office on the appropriate application of PSAS regarding pension accounting. As a result, the Pension Asset Expert Advisory Panel was established to deliver independent advice and recommendations on the issue to the province.

The independent panel members concluded the province's share of the net pension assets of both the Ontario Teachers' Pension Plan and the Ontario Public Service Employees' Union Pension Plan should be recognized in Ontario's financial statements.

After significant deliberation, including consideration of the recommendations of the panel, Ontario confirmed that the accounting for these plans prior to 2015-16 was appropriate, and are prepared in accordance with public sector accounting standards for pension asset accounting. The 2016-17 financial statements include these pension assets, and we continue to apply the accounting treatment of pension assets that the province has used consistently since 2001. In addition, the 2015-16 financial statements were restated to include these assets.

This year the Independent Electricity System Operator (IESO) began recognizing its market accounts' assets (amounts due from power distributors) and liabilities (amounts due to power producers) in its financial results. IESO has chosen to recognize these markets accounts on its books for transparency reasons, as it better reflects the financial position of the IESO-administered markets at year-end. This change was supported by the IESO's audit committee, its independent external auditor, and finally by the Office of the Provincial Controller. This change also has no impact to the province's annual deficit, net debt or accumulated deficit.

This accounting is consistent with the presentation used previously by the Ontario Power Authority (which was merged with the IESO on January 1, 2015) in its financial statements, which was not subject to qualification from the Office of the Auditor General at that time.

3. The Auditor General says that you anticipated the government would receive a qualified audit opinion – and accepted this risk. In the private sector this would be unacceptable. How do you figure you can get away with this?

The province's financial statements are prepared in accordance with Canadian Public Sector Accounting Standards (PSAS).

PSAS is set by an independent standard-setting body in Canada focused specifically on the public sector, and is used by all senior governments in Canada.

PSAS is principle based – the standards are not a set of specific prescriptive rules. Applying them requires the application of professional judgment.

Our professional staff exercises judgment in applying the standards and as necessary consults with external experts and advisors. They provide the Office of the Auditor General with their written analysis on all significant issues that impact the financial statements for the year being audited, and they discuss the issues with the Office of the Auditor General.

All Chartered Professional Accountants (CPAs), including those employed by the Ontario Public Service (OPS), are required to comply with the Code of Professional Conduct for CPAs. One of those rules is that they not be associated with false or misleading information.

That means that if the professional accountants in the OPS do not agree with the judgment of the Ontario Auditor General, it is not as simple as just agreeing to accept the interpretation of the Office of the Auditor General if they believe that interpretation would result in false or misleading financial statements. While we expect professional accountants to agree on the vast majority of issues, we acknowledge that they may not agree on everything and when that occurs, and the difference is material to the financial statements, the Office of the Auditor General can choose to issue a qualified audit opinion.

Environmental Scan

Based on the Auditor General's 2017 Annual Report, media analysis, Hansard analysis, and the invitee list for the SCOPA session on February 28, 2018, it is anticipated that the focus of the Committee will be the following:

- **Pension asset accounting**
- **Ontario Fair Hydro Plan (OFHP) Accounting**
- **Independent Electricity System Operator (IESO) Accounting (market accounts; rate-regulated accounting; other – IESO/OPG "inappropriate expenses"; OPG compensation)**
- **Pre-Election Report**
- **Province's debt burden**

Following the release of the Auditor General's Annual Report on December 6, 2017, TBS-related issues were referenced in 41 per cent of articles, including specifically the "accounting disputes" between the Auditor General and the government, spending on government advertising, and the Auditor General's commitment to audit the IESO's consolidated financial statements. In the House, there were eight questions related to TBS issues: 50 per cent were related to the IESO/OPG "inappropriate expenses"; 25 per cent were related to government advertising; and the remaining two questions focused on the balanced budget narrative and the Pre-Election Report.

Overall, the focus on Public Accounts specifically has been limited in the media and the House alike: between September and December 2017, there were 12 mentions of Public Accounts. 50 per cent of mentions referenced "accounting rules" or the alleged existence of "multiple sets of books". Following the tabling of Public Accounts 2016-17, media coverage was limited and 80 per cent of coverage was neutral in tone.

Media Scan

Auditor General 2017 Annual Report

- **Media Events – December 6, 2017**
  - **Auditor General**
    - Overall, TBS-related issues represented 28% of the Auditor General's remarks.
    - Media questions on TBS-related issues represented 28% of all questions asked (7 out of 25)– **including on the planned audit of IESO's financial statements, government numbers vs. AG numbers being used for the PC's platform, and concerns regarding pre-election reports.**
  - **Government Response**
    - Overall, TBS-related issues represented approximately 20% of the discussion.

        - Media questions on TBS-related issues represented 20.8% of all questions asked (5 out of 24) – questions focused on government advertising and **on comments made by the Auditor General to "address significant issues without fear of push-back and reprisal."**

    - **PC Response**
        - Introductory remarks focused generally on waste and mismanagement.
        - Media questions on TBS-related issues represented 17% of all questions asked (2 out of 12) – **questions focused on the PC's use of the government's numbers in their "People's Guarantee" platform**

    - **NDP Response**
        - TBS-related issues related to 8% of the third party leader's remarks, particularly on government advertising
        - No direct mention of TBS-led chapters, **however 38% of questions (3 out of 8) focused on IESO expenditures**

- **Initial Media Coverage**
    - There were approximately 17 stories focusing on the Auditor Generals' 2017 Annual Report
    - 41% of articles referenced TBS-related issues
    - Key themes related to TBS issues include: **"accounting disputes" between the AG and the government** – and the effect it has on the balanced budget narrative, spending on government advertising, and **the AG's statement that she will audit the IESO's financial statements.**

- **Recent Media Coverage** (December 2017 – January 2018) has focused on the following key themes:
    - **The government's relationship with the Auditor General**
    - **Pre-election report**
    - **Distrust of government numbers/"two sets of books"**

Public Accounts

- **Media Coverage**
    - Media coverage was short-term (24-hours), with **80% of media coverage neutral in tone** (compared to 26% in 2016)
    - Government key messages were picked up 100% of the time
    - Balanced budget key messages were picked up in 60% of the coverage

- **Key Themes**
    - Disagreement between the government and auditor general

- Ontario's fiscal position: government debt and deficit
- The government's alleged continued dismissal of watchdogs

Hansard Scan

Auditor General 2017 Annual Report

Following the release of the Auditor General's 2017 Annual Report, there were eight questions in the House relating to TBS issues:

- 50% (4/8) were related to **OPG/IESO "inappropriate expenses"**
- 25% referenced the FAO - one on balanced budget, one on the **pre-election report**

Public Accounts

Public Accounts were mentioned in the House at least 12 times between September and December 2017:

- 50% mention some form of "accounting rules" / two sets of books
- 42% (5/12) related to infrastructure spending
- 25% (3/12) mention FAO and AG together
- 25% regarding Fair Hydro Plan accounting
- One reference to pre-election finance report

FOIs/OPQs

There is one FOI and one OPQ currently in progress with TBS related to Ontario Fair Hydro Plan accounting.

Overview	Key Issues	Key Dates	Next Steps
FOI Request TBS 2017-033 (Government) 1.All emails, memos and/or briefing materials responsive to the requests(s) made by the Auditor – General of Ontario and/or her office, in connection to her special report on the government's Fair Hydro Plan and *that were released* to the Auditor-General; and 2. All emails, memos and/or briefing materials responsive to the request(s) made by the A.G. of Ontario and/or her office, in connection to her special report on	**Ontario Fair Hydro Plan Accounting** **Relationship with the Auditor General** **Use of external advisors**	January 19, 2018 (awaiting deposit)	This is a common request received by Cabinet Office, Energy, Finance and TBS. A common approach is being coordinated by IPA. Interim decision and fee estimate sent on December 20, 2017. Request is on hold until 50% deposit of estimate is received ($2,427.50). **Next Steps:** Await payment of deposit **(due**

the government's Fair Hydro Plan and *that have not been* released to the Auditor – General. 3. A summary of outside consultant and/or legal fees paid and/or payable by the government in relation to the preparation and/or rollout of the government's Fair Hydro Plan.			**January 19, 2018)**
OPQ #700 **MPP Vic Fedeli** Would the President of the Treasury Board state whether the government is in possession of an opinion from KPMG or E&Y on how the Fair Hydro Plan transaction should be recorded in the government's Consolidated Financial Statements, and further state precisely where they disagree with the Auditor General	**Ontario Fair Hydro Plan Accounting** **Relationship with the Auditor General** **Use of external advisors**	OPQ will be formally filed on February 20, 2018	In progress – **Products:** Response to OPQ. **Notes:** Draft will be sent first week of January 2018 to OPCD to draft response. OPQ will be formally filed on February 20, 2018 TBS is the only ministry to have received this OPQ. **Next Steps:** Develop and approve response

Other Considerations

- Executive compensation (OPG, OEB, IESO)
- "Inappropriate expenses" (OPG, IESO)
- Hydro bill redesign ("$15 million")

Key Issues

Issue/Consideration	Strategy	Key Messages	Evidence
Pension Asset Accounting: Auditor General's qualified opinion	Confirm that the province will continue to follow PSAS, as always, and seek appropriate expert guidance where PSAS is silent. Highlight supporting perspectives from external consultants.	The government continues to move forward and present the province's finances fairly and accurately and in accordance with Canadian Public Sector Accounting Standards (PSAS). The government respectfully disagrees	• Pension Asset Expert Advisory Panel • Opinion from Deloitte LLP • Analysis Completed by EY

		with the Auditor General's interpretation of the accounting standards, as PSAS neither requires unilateral control to record an asset, nor does it include a requirement to obtain a letter from the co-sponsor of the plan agreeing to reduce further contributions within 12 months. The government is open to continue to discuss the matter in hopes of resolving this matter.	
IESO Accounting: **1) Market Asset Accounts** **2) Rate-Regulated Accounting** **3) AG to audit IESO's 2017 statements** 4) OPG/IESO "inappropriate expenses" 5) Peripheral: OPG Executive Compensation	Confirm that the province will continue to follow PSAS, as always, and seek appropriate expert guidance where PSAS is silent. Re-iterate government's appreciation of the Auditor General's independent review and the IESO's recent unqualified audit record.	The government welcomes the Auditor General's independent review and remains committed to assisting her office in providing its views to the Legislative Assembly. IESO's recent accounting changes are supported by the IESO's audit committee, board of directors, its independent external auditor, and by the Office of the Provincial Controller. The IESO prepares its financial statements in accordance with PSAS, and received an unqualified, or clean, audit opinion on its 2016 financial statements.	Opinion supported by: • IESO audit committee • Independent external auditor (unqualified opinion) • OPCD • Same method used by Ontario Power Authority previously

Fair Hydro Plan Accounting: "convenient/inappropriate accounting"	Highlight due diligence included in OFHP decision making, and that the accounting structure is still being finalized. Refuse to speculate about AG's potential future audit opinion. Emphasize that the province will continue to follow PSAS, as always, and seek appropriate expert guidance where PSAS is silent.	The province will continue to prepare its consolidated financial statements in accordance with Public Sector Accounting Standards (PSAS). The proposed accounting for the Ontario Fair Hydro Plan (OFHP) reflects the economic substance of the transaction by differentiating costs borne by taxpayers versus those borne by ratepayers. PSAS is silent on a key accounting issue regarding the OFHP – the standards neither explicitly permit, nor prohibit, the recognition, measurement, presentation, or disclosure of rate-regulated activities. In the absence of a clear position on an issue, standard accounting practice dictates that an entity should consult other accounting standards. The professional staff has appropriately applied this guidance in assessing the accounting for the Ontario Fair Hydro Plan.	• PSAS Guidance • CPA professional code of conduct • External advisors • Other jurisdictions
Pre-Election Report: "government should publicly communicate if and when"	Re-iterate the government's commitment to working with the Office of the Auditor General. Confirm that the	Under the *Fiscal Transparency and Accountability Act, 2004*, the government may file a regulation that would require it to release a Pre-Election	• Highlight how the government has been working with the Office of the Auditor General (stated by Minister Sandals in a Dec 16,

	government will, as always, continue to follow the relevant legislation.	Report on Ontario's Finances. Should the government file such a regulation, the Auditor General would be required to issue a statement based on a prompt review following the release of such a Pre-Election Report. The government remains committed to meeting the legislative requirements of the Act, and working constructively with the Auditor General.	2017 Toronto Sun article)
Debt Reduction Plan: "Ontario has the highest sub-sovereign debt in the world"	Re-iterate government's track record of responsible fiscal management and provide high-level overview of debt reduction plan.	The government's long-term infrastructure plan to invest about $190 billion over 13 years, starting in 2014-15, will contribute to the growth of the economy. The Centre for Spatial Economics found that for every $1 spent on public infrastructure, GDP increases by up to $6, on average, in the long term.	• C4SE study • MOF
"Legislated Accounting"	Emphasize that the province will continue to follow PSAS, as always, and seek appropriate expert guidance where PSAS is silent. Provide example of the only time legislated accounting was used; explain how OFHP does not legislate accounting.	The *Ontario Fair Hydro Plan Act, 2017* and its related regulations do not create accounting rules or legislate the accounting. It is important to distinguish legislating the accounting from legislating the right of the government to recover amounts from specified ratepayers in the future, which in the absence of legislation, would have been collected from specified ratepayers as the costs	• Example of single use of legislated accounting (Public Accounts 15-16)

		were incurred. The province, as always, will prepare its consolidated financial statements in accordance with PSAS, including the transactions resulting from Ontario's Fair Hydro Plan.	
Use of External Advisors: Perception that the government looks to external advisors to circumvent the Auditor General	Confirm that the province seeks external expertise when appropriate as a normal course of business.	The government's use of external expertise for accounting and financial reporting matters supplements its own resources on complex or emerging accounting and reporting matters. External advisors are generally engaged to provide advice and guidance to supplement internal analysis, and in the normal course of business.	• CPA professional code of conduct
FOI/OPQ/Records Disclosure			

Questions & Answers

Top Questions*

1. How do you respond to the Auditor General's recommendation that the government should record valuation allowances to offset the net pension assets recorded from the Ontario Teacher's Pension Plan and the Ontario Public Sector Employee's Union Pension Plan until you receive formal written authorization from their pension plan co-sponsors?

2. How do you respond to the Auditor General's recommendation that the government remove the Independent Electricity System Operator's (IESO) market accounts from the province's consolidated financial statements?

3. The government has received a second qualified audit opinion on its Public Accounts – this time based on two separate issues. Why do you continue to disagree with the Auditor General?

4. The Auditor General says that you anticipated the government would receive a qualified audit opinion – and accepted this risk. In the private sector this would be unacceptable. How do you figure you can get away with this?

5. Will the government implement the recommendations in the Auditor General's Special Report on the Fair Hydro Plan?

6. The Auditor General says that she has consulted with all of the Auditor Generals in Canada – and they agree with her assessments. How are we supposed to believe this government when all legislative auditors in the country say you are wrong?

7. Why does the government use external advisors/consultants? It seems convenient that whenever you disagree with the Auditor General, you turn to consultants to justify your accounting methods.

8. The Auditor General says that the IESO's use of rate-regulated accounting is inappropriate. Why has the government allowed the IESO to adopt this accounting method that she says is not in accordance with PSAS?

9. Are you concerned that the Auditor General will issue an adverse opinion on the province's next Public Accounts due to Ontario's Fair Hydro Plan accounting? What would be the impact on the province's credit rating?

10. Why has the government legislated accounting for things like Ontario's Fair Hydro Plan? Aren't you just changing the rules to suit your needs?

11. When will the government issue a regulation confirming the source of reference for the Pre-Election Report and the timeline for issuance of the report that will be subject to the Auditor General's review?

**See appendix A for a full list of QAs.*

Long-Form Answers

1. **Why did the government choose to recognize pension assets from the Ontario Teacher's Pension Plan and the Ontario Public Sector Employee's Union Pension Plan? What evidence and processes were used to support this decision?**

2. **Why did the Treasury Board Secretariat accept the IESO's recognition of market accounts on the province's consolidated financial statements? Is there any precedent for this?**

3. **Can you explain when and how the Treasury Board Secretariat looks to other accounting methods to support the preparation of Public Accounts?**

Hi Martin and Dave

For tomorrow's SCOPA briefing, the e-binder is attached. Please share this with folks that will be attending the meeting. I understand that our communications team has been working with their counterparts in your ministries. Feel free to invite them – I'll leave that up to you.

Let me know if you have any questions.

Thanks!
Allison

Questions	All	15 minutes

LOGISTICS & FORMAT OVERVIEW

Overview

- SCOPA meetings are open to the public with the exception of those dealing with the setting of the Committee's agenda and the preparation of committee reports. All public committee proceedings are recorded in Hansard.
- The Chair will advise members to consider questions that are relevant to the content of the Auditor General's Annual Report, but in practice members do sometimes ask questions outside of the report's focus. As a general rule, expect that any question related to the Province's financial statements would be ruled within scope by the committee chair.
- The Committee members may ask that ministries provide details after the session if more research or gathering of information is needed to respond to a question.

Agenda

Wednesday, February 28, 2018
Committee Room 151 (Amethyst Room), Main Legislative Building

Time	*Topic*
9:00 a.m.	Closed Session: Briefing by the Auditor General
10:00 a.m.	Briefing by the Research Officer
10:15 a.m.	RECESS
12:30 p.m.	Treasury Board Secretariat and other representatives • *Invited senior officials appear and respond to questions.* • *The Auditor General attends, and the Committee members can seek clarification from the AG on points from her report if needed during the session.*

12:30 – 3:00 p.m.

- **Opening remarks** (20 minutes)
- **First round of questions** (60 minutes)
    - Each of the three political parties get 20 minutes of questions
- **Second round of questions** (50 minutes, approximately)
    - The remaining time until 2:45 p.m. is split between the three political parties; approximately 15-17 minutes per party

- **Closed session** (15 minutes)
    - Committee members plus the Clerk, only; no audience or presenters
    - The Committee will discuss the outcome of the meeting and if they want to do a report
    - There are no closing statements from ministry officials

Room Setup

- Committee Room 151 (Amethyst Room) is equipped with cameras and the meeting will be available on TVs within the Legislature and streamed online.
- The room has a square table with rows of extra seating at the front the room.
- The Committee Chair, Auditor General and Clerk will sit at the head of the table with the government and opposition parties on opposite sides.
- The invitees sit opposite the Committee Chair and Clerk, either at the table or in the first row of chairs.

Media Access

- Media are allowed to sit in on the meeting as long as they do not interrupt the proceedings. They cannot ask questions in the committee room, but if they wish they can scrum participants in the hallway as they leave.
- Media can also watch SCOPA proceedings on the TVs in the Legislature or online.

TIPS FOR PRESENTING AT SCOPA

Tips for Addressing Committee Members:

Note: Tips are applicable for addressing both Committee Members and media.

- When speaking be mindful of what you say – the proceedings are recorded and there's no such thing as "off the record."

- Adhere to the scripted remarks and prepared Q&As. Do not embellish and ***when in doubt, leave it out.***

    - Be sure you understand the question being asked (it's ok to ask for clarification) and Do NOT answer something you're not 100% sure of.

- If you do not have the response, you may advise Committee Members that the matter needs to be redirected to another ministry, or that you will get the requested information by saying, "I'll look into what is possible to provide."

- Be mindful of only addressing questions/issues that relate directly to the TBS.

- It is acceptable to decline to answer an unrelated question by noting that you are not clear of its relevance to TBS, and that you are prepared to address matters related to the ministry.

- If caught off guard, breathe, listen, work to understand the question, or ask for clarification.

    - Ask the questioner 'Excuse me' or 'I beg your pardon?'
    - Ask the questioner 'Can you kindly help me understand the context of the question/or what you just said?'

- If possible, use a bridging statement to get to your key message/prepared response. (See Appendix A).

- Do not offer personal opinions. Stick to the facts:

    - Leave off qualifiers like "I think" "I feel," and "I believe" which represents an opinion. To sound confident and assured, be mindful not to use qualifiers.
    - Do not use 'I assure you."

- Offer examples of success whenever possible.

Body Language, Tone:

- Be aware of how you come across. There is no benefit to being seen as defensive, argumentative, or unresponsive.

- Project an image of openness, honesty, and empathy.

- Remember to breathe deeply and speak slowly.

    - Controlling your breathing helps deal with the stress.
    - Take several deep breaths as you sit down and get organized.
    - Ahead of appearance take a few minutes in a quiet spot to breathe slowly and deeply.
    - "Super Hero Pose" – stand with your legs shoulder width apart, hands on hips, shoulders back. Do this for two minutes. It helps mentally prepare you ahead of having to speak.

- Use your hands while talking to look natural and help release anxiety. (Note palms up is a subconscious message to those looking at you that you are open and have nothing to hide)

- Avoid body language leakage—those involuntary movements that indicate you're nervous or stressed - e.g. head nodding, swallowing, and pursing your lips.

- Do not touch your face with your hands.

- Avoid repeating negative words that members use in questions. Doing so indicates you accept the negative premise.

- If you feel overwhelmed while speaking in front of an audience, recalibrate by breathing and pausing.

What-Ifs:

1. What if you don't want to answer the question, but you have to say something?

    - Offer a credible reason why you are unwilling to answer the question and identify what you prefer to discuss.

2. What if you're asked for hard numbers, and you don't have the answer?

    - Explain, "I want to be absolutely precise and specific, so I will need to get back to you with the exact number"

- Words like “precise,” “specific,” and “exact” convey that the question has been taken seriously.

3. What if you don’t know the answer, but a colleague who is with you may know it?

    - If you need help from the other ADMs, open your response with ‘In a moment I’m going to call on my colleague to get into more detail about this…’ This gives the other TBS representative time to know they’ll be called upon.

    - Briefly discuss a related subject, then pass the question.

4. What if you need to pause?

    - If you have said absolutely everything you need to say, then let there be a pause.

    - Remember it’s not up to you to keep the proceedings going. That’s the Chair’s job. They may intentionally leave dead air in the hopes that you’ll jump in to fill it by saying something you hadn’t intended to.

5. What if the answer is confidential?

    - Explain that confidentiality rules must be respected, so you cannot directly address the issue at hand. (e.g.: that matter is before the courts).

6. What if it’s a question about a rumour?

    - When asked to respond to a rumour, it is best to not respond at all. Instead, state that your focus is always on fact, not rumour.

7. What if the answer is HR related?

    - Say as little as possible. Commenting on someone’s employment record in a negative context can potentially put you in legal jeopardy.

8. What if you don’t like what you’re saying?

    - Don’t feel obligated to complete a sentence or thought. Simply begin the response again.

9. What if it’s a “yes or no” question?

    - Unless the question relates to a sensitive issue, skip “yes” or “no” and go right to the message that would follow.

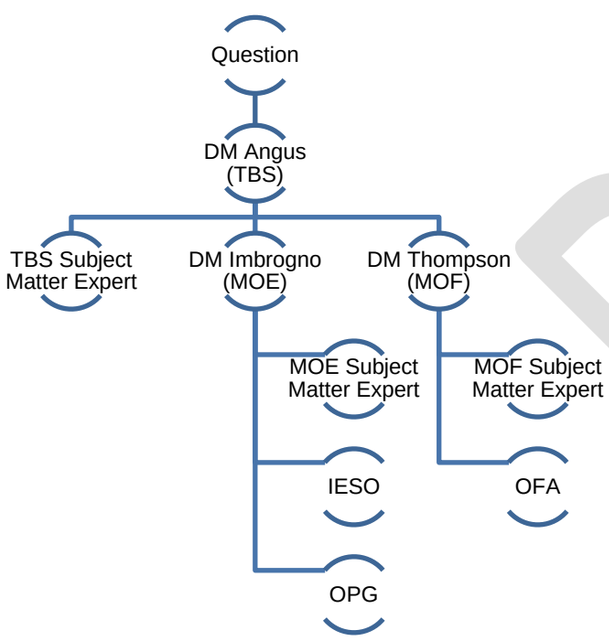
10. What if it's an "is it possible" question?

    - Avoid speculating and tell the committee – "I'm not able to comment on something that may or may not happen."

11. What if you're interrupted mid-answer?

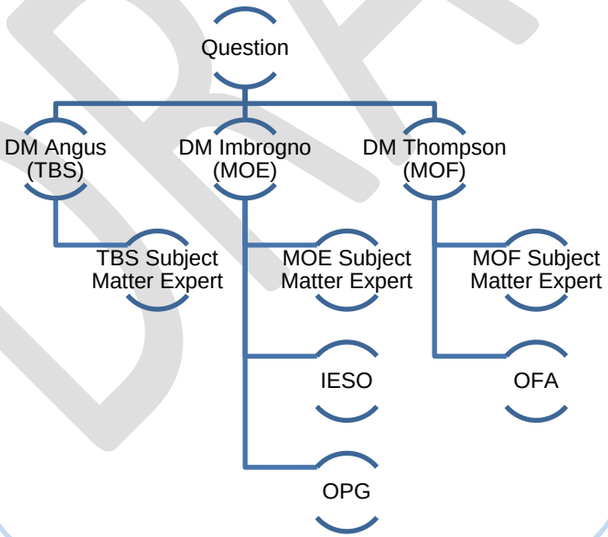
    - The first time, let it go. The second time, ask the Chair to be allowed to finish your thought.

APPENDIX



A. Sample Bridging Statements

1. "We find the more important issue is…"
2. "I think it would be more accurate (or correct) to say…"
3. "Let me emphasize again…"
4. "What matters most in this situation is…"
5. "While _____ is important, it's also important to remember that…"
6. "It all boils down to this…"
7. "And that reminds me…"
8. "Before we leave this subject, I need to add…"



STRATEGIC APPROACH

- Provide evidence and facts as the basis of decision-making wherever appropriate (e.g. other jurisdictions, external advisors).
- Provide responses that are relevant and in scope of the consideration of chapter two of the Office of the Auditor General's report.
- Avoid any speculation on political decision-making or rationales; provide objective, factual responses in role as non-partisan public servant.
- Provide context wherever possible. Deputy Ministers to provide initial messaging then pass to the subject matter experts where appropriate.
- Emphasize the role of a public servant is to provide factual, non-partisan information to the Committee based on due diligence and the application of professional judgment.
- Reaffirm the government's commitment to working with the Office of the Auditor General.
- Emphasize that the province will continue to follow Public Sector Accounting Standards (PSAS), as always, and will seek appropriate expert guidance where PSAS is silent.
- Use the Committee appearance as an opportunity to communicate the facts and rationale for the decision to adopt/continue accounting practices in response to the Office of the Auditor General's recommendations.
- Highlight due diligence in decision making (Ontario Fair Hydro Plan accounting, pension asset accounting, Independent Electricity System Operator [IESO] market accounts, IESO rate-regulated accounting).

INTRODUCTORY REMARKS - OUTLINE

Secretary Orsini – Introduction (Optional)

- Good afternoon and thank you to members of the Committee
- The Standing Committee on Public Accounts plays an important role in providing legislative oversight and guidance.
- Role of the public servant: non-partisan nature of public service; duty to provide our best advice; accountability and transparency

Deputy Angus – Introduction

- Good afternoon and thank you
- I'd like to take a moment to introduce my colleagues who are sitting with me here today:
    - Scott Thompson, Deputy Minister of Finance
    - Serge Imrogno, Deputy Minister of Energy
    - Cindy Veinot, Assistant Deputy Minister and Provincial Controller
    - And, as many of you know, I am Helen Angus, Deputy Minister of the Treasury Board Secretariat.
- We also have representatives here from the Ontario Financing Authority, Ontario Power Generation, the Independent Electricity System Operator, and other ministry officials, who are here to answer questions and would be pleased to join us at the table as needed.
- We welcome this opportunity to provide information and answer your questions regarding the Committee's consideration of the Chapter 2 of the Auditor General's 2017 Annual Report on the Public Accounts of the Province.

Overview of Public Accounts

- Public Accounts presents the government's financial statements and gives a picture of how finances were managed over the last fiscal year.
- Producing the Public Accounts of Ontario requires the teamwork and collaboration of many stakeholders across Ontario's public sector.
- The Office of the Auditor General plays a critical role in auditing and reporting on the province's financial statements.
- The province's financial statements are prepared in accordance with Canadian Public Sector Accounting Standards (PSAS).
- PSAS is set by an independent standard-setting body in Canada focused specifically on the public sector, and is used by all senior governments in Canada.
- PSAS is principle based – the standards are not a set of specific prescriptive rules. Applying them requires the application of professional judgment.

DRAFT

Overview of Accounting Changes

- When preparing the 2016-17 Public Accounts, Ontario's professional accounting staff adopted accounting changes to further enhance accountability and transparency
- These changes include:
    - Accounting for hospitals, school boards and colleges.
    - Accounting for energy sector government business enterprises.
    - Accounting for the Independent Electricity System Operator (IESO) - the IESO has adopted rate-regulated accounting, and is now recognizing its market accounts assets and liabilities in its financial results.
    - Accounting for net pension assets of jointly sponsored pension plans - the Province is reporting net pension assets for jointly sponsored pension plans. This is in line with Public Sector Accounting Board standards and the recommendations of the independent Pension Asset Expert Advisory Panel.

Auditor General's 2017 Annual Report

- The government thanks the Office of the Auditor General for its recommendations.
- As I mentioned earlier, the Office of the Auditor General plays a critical role in auditing and reporting on the province's financial statements.
- However, there are times when we disagree, and it is our role as public servants to continue our due diligence, act with impartiality, and provide our best advice.
- Our professional staff exercises judgment in applying accounting standards and, as necessary, consults with external experts and advisors.
- They provide the Office of the Auditor General with their written analysis on all significant issues that impact the financial statements for the year being audited, and they discuss the issues with the Office of the Auditor General.
- All Chartered Professional Accountants (CPAs), including those employed by the Ontario Public Service (OPS), are required to comply with the Code of Professional Conduct for CPAs. One of those rules is that they not be associated with false or misleading information.
- That means that if the professional accountants in the OPS do not agree with the judgment of the Ontario Auditor General, it is not as simple as just agreeing to accept the interpretation of the Office of the Auditor General if they believe that interpretation would result in false or misleading financial statements.
- While we expect professional accountants to agree on the vast majority of issues, we acknowledge that they may not agree on everything and when that occurs, and the difference is material to the financial statements, the Office of the Auditor General can choose to issue a qualified audit opinion.

DRAFT

Management Response to the Auditor General's Recommendations

- The Auditor General's annual reports provide for an opportunity for conversation, and in response to the Auditor General's recommendations, the government provided a detailed response to each of the 10 recommendations.
- As requested by the Committee, we have provided a response to each recommendation in the Summary Status Table, which you now have in front of you.
- This table includes more detail than you may have previously seen in chapter two of the Annual Report.
- Each response, on which we would be pleased to provide further detail, outlines the process and rationale as to why the government chose to either continue or adopt changes to accounting treatments.

Updates on Progress – From the Summary Status Table

- *To be added – any key updates/highlights on progress from the Summary Status Table*

Conclusion

- I would like to emphasize that, in our role as public servants, it is our job to exercise due diligence and professional judgment, consult external advisors when needed, carefully consider options, and provide our best advice.
- It is for this reason that accounting changes were adopted in the 2016-17 Public Accounts, and it for this reason that Deputy Thompson, Provincial Controller Veinot, and myself as the Deputy of the Treasury Board Secretariat signed a statement of responsibility, reaffirming our responsibility for the objectivity and integrity of the Public Accounts of the Province.
- As always, we welcome the opportunity to provide the Committee with information and to answer any questions.
- Thank you.

DRAFT

QUESTIONS & ANSWERS OVERVIEW

Based on the Auditor General's 2017 Annual Report, media analysis, Hansard analysis, and the invitee list for the SCOPA session on February 28, 2018, it is anticipated that the focus of the Committee will be the following:

- Ontario Fair Hydro Plan (OFHP) Accounting
- Independent Electricity System Operator (IESO) Accounting (market accounts; rate-regulated accounting; other – IESO/OPG "inappropriate expenses"; OPG compensation)
- Pension asset accounting
- Pre-Election Report
- Province's debt burden

Long-Form Member Questions

1. Why did the government choose to recognize pension assets from the Ontario Teacher's Pension Plan and the Ontario Public Sector Employee's Union Pension Plan? What evidence and processes were used to support this decision?

2. Why did the Treasury Board Secretariat accept the IESO's recognition of market accounts on the province's consolidated financial statements? Is there any precedent for this?

3. Can you explain when and how the Treasury Board Secretariat looks to other accounting methods to support the preparation of Public Accounts?

4. What are the plans to keep Ontario's credit rating in good standing?

5. What is Ontario's debt repayment plan?

6. How is Ontario planning to keep a balanced budget?

7. *MOE to add*

8. *MOE to add*

9. *MOE to add*

DRAFT

Top Questions

1. How do you respond to the Auditor General's recommendation that the government should record valuation allowances to offset the net pension assets recorded from the Ontario Teacher's Pension Plan and the Ontario Public Sector Employee's Union Pension Plan until you receive formal written authorization from their pension plan co-sponsors?

2. How do you respond to the Auditor General's recommendation that the government remove the Independent Electricity System Operator's (IESO) market accounts from the province's consolidated financial statements?

3. The government has received a second qualified audit opinion on its Public Accounts – this time based on two separate issues. Why do you continue to disagree with the Auditor General?

4. The Auditor General says that you anticipated the government would receive a qualified audit opinion – and accepted this risk. In the private sector this would be unacceptable. How do you figure you can get away with this?

5. Will the government implement the recommendations in the Auditor General's Special Report on the Fair Hydro Plan?

6. The Auditor General says that she has consulted with all of the Auditor Generals in Canada – and they agree with her assessments. How are we supposed to believe this government when all legislative auditors in the country say you are wrong?

7. Why does the government use external advisors/consultants? It seems convenient that whenever you disagree with the Auditor General, you turn to consultants to justify your accounting methods.

8. The Auditor General says that the IESO's use of rate-regulated accounting is inappropriate. Why has the government allowed the IESO to adopt this accounting method that she says is not in accordance with PSAS?

9. Why has the government legislated accounting for things like Ontario's Fair Hydro Plan? Aren't you just changing the rules to suit your needs?

10. Will the government issue a regulation confirming the source of reference for the Pre-Election Report and the timeline for issuance of the report that will be subject to the Auditor General's review?

**See appendix A for a full list of QAs, which are organized on the basis of Auditor General recommendation number.*

DRAFT

AG RECOMMENDATION #2: INDEPENDENT ELECTRICITY SYSTEM OPERATOR (IESO) MARKET ACCOUNTS

Deputy Minister High-level Response

- Thank you for your question.
- The Province consolidates the entities it controls, in accordance with Public Sector Accounting Standards (PSAS) and its internal reporting policies.
- Each consolidated entity produces its own stand-alone financial statements and is subject to its own financial statement audit.
- In 2016, the Independent Electricity System Operator (IESO) changed the accounting for the market accounts and recognized these balances on its financial statements.
- The financial statements of the IESO for the year-ended December 31, 2016 were subject to an external audit and received an unqualified (or clean) opinion.
- The government supports this enhanced reporting and greater transparency for the economic activities of the IESO.
- I will now pass it over to:
    - Cindy Veinot, Provincial Controller
    - Deputy Imrogno

  to provide more details.

Questions & Answers

1. **How do you respond to the Auditor General's recommendation that the government remove the Independent Electricity System Operator's (IESO) market accounts from the province's consolidated financial statements?**

   In 2016, the Independent Electricity System Operator (IESO) began recognizing its market accounts' assets (amounts due from power distributors) and liabilities (amounts due to power producers) in its financial results. IESO has chosen to recognize these markets accounts on its books for transparency reasons, as it better reflects the financial position of the IESO-administered markets at year-end. This change was supported by the IESO's audit committee, its independent external auditor, and by the Office of the Provincial Controller. This change also has no impact to the province's annual deficit, net debt or accumulated deficit.

   The financial statements of the IESO for the year-ended December 31, 2016 were subject to an external audit and received an unqualified (or clean) opinion.

DRAFT

This accounting is consistent with the presentation used previously by the Ontario Power Authority (which was merged with the IESO on January 1, 2015) in its financial statements, which was not subject to qualification from the Office of the Auditor General at that time.

2. The government has received a second qualified audit opinion on its Public Accounts – this time based on two separate issues. Why do you continue to disagree with the Auditor General?

The government continues to move forward and present the province's finances fairly and accurately and in accordance with Canadian Public Sector Accounting Standards (PSAS). Ontario has a strong track record of producing high-quality financial reports on a timely basis. The Auditor General's qualified opinion is based on a different interpretation of PSAS for net pension assets and recognition of market accounts.

Last year there was a disagreement among the province's professional accounting staff and the Auditor General's Office on the appropriate application of PSAS regarding pension accounting. As a result, the Pension Asset Expert Advisory Panel was established to deliver independent advice and recommendations on the issue to the province.

The independent panel members concluded the province's share of the net pension assets of both the Ontario Teachers' Pension Plan and the Ontario Public Service Employees' Union Pension Plan should be recognized in Ontario's financial statements.

After significant deliberation, including consideration of the recommendations of the panel, Ontario confirmed that the accounting for these plans prior to 2015-16 was appropriate, and are prepared in accordance with public sector accounting standards for pension asset accounting. The 2016-17 financial statements include these pension assets, and we continue to apply the accounting treatment of pension assets that the province has used consistently since 2001. In addition, the 2015-16 financial statements were restated to include these assets.

This year the Independent Electricity System Operator (IESO) began recognizing its market accounts' assets (amounts due from power distributors) and liabilities (amounts due to power producers) in its financial results. IESO has chosen to recognize these markets accounts on its books for transparency reasons, as it better reflects the financial position of the IESO-administered markets at year-end. This change was supported by the IESO's audit committee, its independent external auditor, and finally by the Office of the Provincial Controller. This change also has no impact to the province's annual deficit, net debt or accumulated deficit.

This accounting is consistent with the presentation used previously by the Ontario Power Authority (which was merged with the IESO on January 1, 2015) in its financial statements, which was not subject to qualification from the Office of the Auditor General at that time.

3. The Auditor General says that you anticipated the government would receive a qualified audit opinion – and accepted this risk. In the private sector this would be unacceptable. How do you figure you can get away with this?

The province's financial statements are prepared in accordance with Canadian Public Sector Accounting Standards (PSAS).

PSAS is set by an independent standard-setting body in Canada focused specifically on the public sector, and is used by all senior governments in Canada.

PSAS is principle based – the standards are not a set of specific prescriptive rules. Applying them requires the application of professional judgment.

Our professional staff exercises judgment in applying the standards and as necessary consults with external experts and advisors. They provide the Office of the Auditor General with their written analysis on all significant issues that impact the financial statements for the year being audited, and they discuss the issues with the Office of the Auditor General.

All Chartered Professional Accountants (CPAs), including those employed by the Ontario Public Service (OPS), are required to comply with the Code of Professional Conduct for CPAs. One of those rules is that they not be associated with false or misleading information.

That means that if the professional accountants in the OPS do not agree with the judgment of the Ontario Auditor General, it is not as simple as just agreeing to accept the interpretation of the Office of the Auditor General if they believe that interpretation would result in false or misleading financial statements. While we expect professional accountants to agree on the vast majority of issues, we acknowledge that they may not agree on everything and when that occurs, and the difference is material to the financial statements, the Office of the Auditor General can choose to issue a qualified audit opinion.

Environmental Scan

Based on the Auditor General's 2017 Annual Report, media analysis, Hansard analysis, and the invitee list for the SCOPA session on February 28, 2018, it is anticipated that the focus of the Committee will be the following:

- **Pension asset accounting**
- **Ontario Fair Hydro Plan (OFHP) Accounting**
- **Independent Electricity System Operator (IESO) Accounting (market accounts; rate-regulated accounting; other – IESO/OPG "inappropriate expenses"; OPG compensation)**
- **Pre-Election Report**
- **Province's debt burden**

Following the release of the Auditor General's Annual Report on December 6, 2017, TBS-related issues were referenced in 41 per cent of articles, including specifically the "accounting disputes" between the Auditor General and the government, spending on government advertising, and the Auditor General's commitment to audit the IESO's consolidated financial statements. In the House, there were eight questions related to TBS issues: 50 per cent were related to the IESO/OPG "inappropriate expenses"; 25 per cent were related to government advertising; and the remaining two questions focused on the balanced budget narrative and the Pre-Election Report.

Overall, the focus on Public Accounts specifically has been limited in the media and the House alike: between September and December 2017, there were 12 mentions of Public Accounts. 50 per cent of mentions referenced "accounting rules" or the alleged existence of "multiple sets of books". Following the tabling of Public Accounts 2016-17, media coverage was limited and 80 per cent of coverage was neutral in tone.

Media Scan

Auditor General 2017 Annual Report

- **Media Events – December 6, 2017**
  - **Auditor General**
    - Overall, TBS-related issues represented 28% of the Auditor General's remarks.
    - Media questions on TBS-related issues represented 28% of all questions asked (7 out of 25)– **including on the planned audit of IESO's financial statements, government numbers vs. AG numbers being used for the PC's platform, and concerns regarding pre-election reports.**
  - **Government Response**
    - Overall, TBS-related issues represented approximately 20% of the discussion.

        - Media questions on TBS-related issues represented 20.8% of all questions asked (5 out of 24) – questions focused on government advertising and **on comments made by the Auditor General to "address significant issues without fear of push-back and reprisal."**

    - **PC Response**
        - Introductory remarks focused generally on waste and mismanagement.
        - Media questions on TBS-related issues represented 17% of all questions asked (2 out of 12) – **questions focused on the PC's use of the government's numbers in their "People's Guarantee" platform**

    - **NDP Response**
        - TBS-related issues related to 8% of the third party leader's remarks, particularly on government advertising
        - No direct mention of TBS-led chapters, **however 38% of questions (3 out of 8) focused on IESO expenditures**

- **Initial Media Coverage**
    - There were approximately 17 stories focusing on the Auditor Generals' 2017 Annual Report
    - 41% of articles referenced TBS-related issues
    - Key themes related to TBS issues include: **"accounting disputes" between the AG and the government** – and the effect it has on the balanced budget narrative, spending on government advertising, and **the AG's statement that she will audit the IESO's financial statements.**

- **Recent Media Coverage** (December 2017 – January 2018) has focused on the following key themes:
    - **The government's relationship with the Auditor General**
    - **Pre-election report**
    - **Distrust of government numbers/"two sets of books"**

Public Accounts

- **Media Coverage**
    - Media coverage was short-term (24-hours), with **80% of media coverage neutral in tone** (compared to 26% in 2016)
    - Government key messages were picked up 100% of the time
    - Balanced budget key messages were picked up in 60% of the coverage

- **Key Themes**
    - Disagreement between the government and auditor general

- Ontario's fiscal position: government debt and deficit
- The government's alleged continued dismissal of watchdogs

Hansard Scan

Auditor General 2017 Annual Report

Following the release of the Auditor General's 2017 Annual Report, there were eight questions in the House relating to TBS issues:

- 50% (4/8) were related to **OPG/IESO "inappropriate expenses"**
- 25% referenced the FAO - one on balanced budget, one on the **pre-election report**

Public Accounts

Public Accounts were mentioned in the House at least 12 times between September and December 2017:

- 50% mention some form of "accounting rules" / two sets of books
- 42% (5/12) related to infrastructure spending
- 25% (3/12) mention FAO and AG together
- 25% regarding Fair Hydro Plan accounting
- One reference to pre-election finance report

FOIs/OPQs

There is one FOI and one OPQ currently in progress with TBS related to Ontario Fair Hydro Plan accounting.

Overview	Key Issues	Key Dates	Next Steps
FOI Request TBS 2017-033 (Government) 1.All emails, memos and/or briefing materials responsive to the requests(s) made by the Auditor – General of Ontario and/or her office, in connection to her special report on the government's Fair Hydro Plan and *that were released* to the Auditor-General; and 2. All emails, memos and/or briefing materials responsive to the request(s) made by the A.G. of Ontario and/or her office, in connection to her special report on	**Ontario Fair Hydro Plan Accounting** **Relationship with the Auditor General** **Use of external advisors**	January 19, 2018 (awaiting deposit)	This is a common request received by Cabinet Office, Energy, Finance and TBS. A common approach is being coordinated by IPA. Interim decision and fee estimate sent on December 20, 2017. Request is on hold until 50% deposit of estimate is received ($2,427.50). **Next Steps:** Await payment of deposit **(due**

the government's Fair Hydro Plan and *that have not been* released to the Auditor – General. 3. A summary of outside consultant and/or legal fees paid and/or payable by the government in relation to the preparation and/or rollout of the government's Fair Hydro Plan.			**January 19, 2018)**
OPQ #700 **MPP Vic Fedeli** Would the President of the Treasury Board state whether the government is in possession of an opinion from KPMG or E&Y on how the Fair Hydro Plan transaction should be recorded in the government's Consolidated Financial Statements, and further state precisely where they disagree with the Auditor General	**Ontario Fair Hydro Plan Accounting** **Relationship with the Auditor General** **Use of external advisors**	OPQ will be formally filed on February 20, 2018	In progress – **Products:** Response to OPQ. **Notes:** Draft will be sent first week of January 2018 to OPCD to draft response. OPQ will be formally filed on February 20, 2018 TBS is the only ministry to have received this OPQ. **Next Steps:** Develop and approve response

Other Considerations

- Executive compensation (OPG, OEB, IESO)
- "Inappropriate expenses" (OPG, IESO)
- Hydro bill redesign ("$15 million")

Key Issues

Issue/Consideration	Strategy	Key Messages	Evidence
Pension Asset Accounting: Auditor General's qualified opinion	Confirm that the province will continue to follow PSAS, as always, and seek appropriate expert guidance where PSAS is silent. Highlight supporting perspectives from external consultants.	The government continues to move forward and present the province's finances fairly and accurately and in accordance with Canadian Public Sector Accounting Standards (PSAS). The government respectfully disagrees	• Pension Asset Expert Advisory Panel • Opinion from Deloitte LLP • Analysis Completed by EY

		with the Auditor General's interpretation of the accounting standards, as PSAS neither requires unilateral control to record an asset, nor does it include a requirement to obtain a letter from the co-sponsor of the plan agreeing to reduce further contributions within 12 months. The government is open to continue to discuss the matter in hopes of resolving this matter.	
IESO Accounting: **1) Market Asset Accounts** **2) Rate-Regulated Accounting** **3) AG to audit IESO's 2017 statements** 4) OPG/IESO "inappropriate expenses" 5) Peripheral: OPG Executive Compensation	Confirm that the province will continue to follow PSAS, as always, and seek appropriate expert guidance where PSAS is silent. Re-iterate government's appreciation of the Auditor General's independent review and the IESO's recent unqualified audit record.	The government welcomes the Auditor General's independent review and remains committed to assisting her office in providing its views to the Legislative Assembly. IESO's recent accounting changes are supported by the IESO's audit committee, board of directors, its independent external auditor, and by the Office of the Provincial Controller. The IESO prepares its financial statements in accordance with PSAS, and received an unqualified, or clean, audit opinion on its 2016 financial statements.	Opinion supported by: • IESO audit committee • Independent external auditor (unqualified opinion) • OPCD • Same method used by Ontario Power Authority previously

Fair Hydro Plan Accounting: "convenient/inappropriate accounting"	Highlight due diligence included in OFHP decision making, and that the accounting structure is still being finalized. Refuse to speculate about AG's potential future audit opinion. Emphasize that the province will continue to follow PSAS, as always, and seek appropriate expert guidance where PSAS is silent.	The province will continue to prepare its consolidated financial statements in accordance with Public Sector Accounting Standards (PSAS). The proposed accounting for the Ontario Fair Hydro Plan (OFHP) reflects the economic substance of the transaction by differentiating costs borne by taxpayers versus those borne by ratepayers. PSAS is silent on a key accounting issue regarding the OFHP – the standards neither explicitly permit, nor prohibit, the recognition, measurement, presentation, or disclosure of rate-regulated activities. In the absence of a clear position on an issue, standard accounting practice dictates that an entity should consult other accounting standards. The professional staff has appropriately applied this guidance in assessing the accounting for the Ontario Fair Hydro Plan.	• PSAS Guidance • CPA professional code of conduct • External advisors • Other jurisdictions
Pre-Election Report: "government should publicly communicate if and when"	Re-iterate the government's commitment to working with the Office of the Auditor General. Confirm that the	Under the *Fiscal Transparency and Accountability Act, 2004*, the government may file a regulation that would require it to release a Pre-Election	• Highlight how the government has been working with the Office of the Auditor General (stated by Minister Sandals in a Dec 16,

	government will, as always, continue to follow the relevant legislation.	Report on Ontario's Finances. Should the government file such a regulation, the Auditor General would be required to issue a statement based on a prompt review following the release of such a Pre-Election Report. The government remains committed to meeting the legislative requirements of the Act, and working constructively with the Auditor General.	2017 Toronto Sun article)
Debt Reduction Plan: "Ontario has the highest sub-sovereign debt in the world"	Re-iterate government's track record of responsible fiscal management and provide high-level overview of debt reduction plan.	The government's long-term infrastructure plan to invest about $190 billion over 13 years, starting in 2014-15, will contribute to the growth of the economy. The Centre for Spatial Economics found that for every $1 spent on public infrastructure, GDP increases by up to $6, on average, in the long term.	• C4SE study • MOF
"Legislated Accounting"	Emphasize that the province will continue to follow PSAS, as always, and seek appropriate expert guidance where PSAS is silent. Provide example of the only time legislated accounting was used; explain how OFHP does not legislate accounting.	The *Ontario Fair Hydro Plan Act, 2017* and its related regulations do not create accounting rules or legislate the accounting. It is important to distinguish legislating the accounting from legislating the right of the government to recover amounts from specified ratepayers in the future, which in the absence of legislation, would have been collected from specified ratepayers as the costs	• Example of single use of legislated accounting (Public Accounts 15-16)

		were incurred. The province, as always, will prepare its consolidated financial statements in accordance with PSAS, including the transactions resulting from Ontario's Fair Hydro Plan.	
Use of External Advisors: Perception that the government looks to external advisors to circumvent the Auditor General	Confirm that the province seeks external expertise when appropriate as a normal course of business.	The government's use of external expertise for accounting and financial reporting matters supplements its own resources on complex or emerging accounting and reporting matters. External advisors are generally engaged to provide advice and guidance to supplement internal analysis, and in the normal course of business.	• CPA professional code of conduct

Questions & Answers

Top Questions*

1. How do you respond to the Auditor General's recommendation that the government should record valuation allowances to offset the net pension assets recorded from the Ontario Teacher's Pension Plan and the Ontario Public Sector Employee's Union Pension Plan until you receive formal written authorization from their pension plan co-sponsors?

2. How do you respond to the Auditor General's recommendation that the government remove the Independent Electricity System Operator's (IESO) market accounts from the province's consolidated financial statements?

3. The government has received a second qualified audit opinion on its Public Accounts – this time based on two separate issues. Why do you continue to disagree with the Auditor General?

4. The Auditor General says that you anticipated the government would receive a qualified audit opinion – and accepted this risk. In the private sector this would be unacceptable. How do you figure you can get away with this?

5. Will the government implement the recommendations in the Auditor General's Special Report on the Fair Hydro Plan?

6. The Auditor General says that she has consulted with all of the Auditor Generals in Canada – and they agree with her assessments. How are we supposed to believe this government when all legislative auditors in the country say you are wrong?

7. Why does the government use external advisors/consultants? It seems convenient that whenever you disagree with the Auditor General, you turn to consultants to justify your accounting methods.

8. The Auditor General says that the IESO's use of rate-regulated accounting is inappropriate. Why has the government allowed the IESO to adopt this accounting method that she says is not in accordance with PSAS?

9. Are you concerned that the Auditor General will issue an adverse opinion on the province's next Public Accounts due to Ontario's Fair Hydro Plan accounting? What would be the impact on the province's credit rating?

10. Why has the government legislated accounting for things like Ontario's Fair Hydro Plan? Aren't you just changing the rules to suit your needs?

11. When will the government issue a regulation confirming the source of reference for the Pre-Election Report and the timeline for issuance of the report that will be subject to the Auditor General's review?

**See appendix A for a full list of QAs.*

Long-Form Answers

1. **Why did the government choose to recognize pension assets from the Ontario Teacher's Pension Plan and the Ontario Public Sector Employee's Union Pension Plan? What evidence and processes were used to support this decision?**

2. **Why did the Treasury Board Secretariat accept the IESO's recognition of market accounts on the province's consolidated financial statements? Is there any precedent for this?**

3. **Can you explain when and how the Treasury Board Secretariat looks to other accounting methods to support the preparation of Public Accounts?**

Hi Anna,

Sorry for the delay. See the DM's edits attached. He would like to keep the first line about the Budget and FES language on the 27%. Other than that, just some minor wording changes.

Thanks
Dave

Hi Dave,

As discussed in our 12:00pm meeting with the Secretary of Cabinet, we've revised the wording in the attached Status Table for SCOPA that pertains to recommendation #7 (debt). I've included our edits in track changes (p. 10-11).

If the Deputy is comfortable with this version, I'll send it along to OPCD to incorporate our changes.

Thanks, Anna

Summary Status Table in Response to the
Report of the Auditor General of Ontario

Chapter 2 2017 Annual Report of the Auditor General
Treasury Board Secretariat, Ministry of Finance, Ministry of Energy

Auditor's Recommendation	Completed Undertaking	Outstanding Undertaking (including timeline)
AG Recommendation #1 *We recommend the government record valuation allowances to offset the net pension assets it has recorded from the Ontario Teachers' Pension Plan and the Ontario Public Sector Employees' Union Pension Plan until such time as it obtains formal written authorization from their pension plan co-sponsors that they are able to lower minimum contributions or withdraw surpluses from the pension funds within the next 12 months.*	The Office of the Auditor General communicated its interpretation of Public Sector Accounting Standards (PSAS) requiring a full valuation allowance on the Province's two jointly sponsored pension plans in September 2016. At that time, the government passed a time-limited regulation on the accounting treatment for its joint defined benefit plans to align with the Auditor General's interpretation of PSAS, which enabled officials from Treasury Board Secretariat and the Ministry of Finance to sign the Statement of Responsibility for the 2015-16 Public Accounts. During the 2016-17 year, the professional staff conducted further research and analysis, and determined that PSAS does not require a valuation allowance on either of the jointly sponsored pension plans. This conclusion is supported by: • The conclusions reached by an independent Pension Asset Expert Advisory Panel (the 'Panel'), established by the government to provide advice on the interpretation of PSAS with respect to the reporting of net pension assets of these two joint defined benefit plans. The Panel, comprised of accredited accounting, actuarial and legal professionals with extensive background in pension accounting and plan governance, released its report in February 2017 which supported the government's position that a valuation is not required for these two plans under PSAS. Two key findings of the Panel were: 1) there is no requirement under PSAS that any formal agreement exist between the joint sponsors regarding the timing or amount of a reduction in contributions to record an asset, as the existing agreements in place between the parties support the recognition of an expected benefit, and 2) unilateral control is not	The government will evaluate the need for a valuation allowance annually taking into consideration (a) changes, if any, in the governance structures of the plans, (b), decisions, if any, of the joint sponsors that impact the need for a valuation allowance, and b) changes, if any, in Public Sector Accounting Standards. The government is open to continue to discuss the matter in the hopes of resolving this matter.

DRAFT

	required for asset recognition; joint control with each party having the ability to deny the actions of the other sponsor, provides evidence of shared control, supporting recognition of an asset. • An opinion from Deloitte LLP on aspects of the Province's accounting as at March 31, 2016 for the Ontario Teachers' Pension Plan. The opinion, which was dated October 2, 2016, concluded that it was permissible to recognize a pension asset under Canadian Public Sector Accounting Standards, even though the Province did not have under a unilateral right to reduce contributions. The opinion did not address the value at which the asset should be recorded. • Analysis completed by EY as to whether any valuation allowance is required to be recorded for OTPP or OPSEUPP as of March 31, 2017. EY confirmed no valuation allowance was required for either plan. The government respectfully disagrees with the Auditor General's interpretation of the accounting standards on this issue as PSAS neither requires unilateral control to record an asset, nor does it include a requirement to obtain a letter from the co-sponsor of the plan agreeing to reduce future contributions within 12 months.	

DRAFT

Summary Status Table in Response to the

Chapter 2 2017 Annual Report of the Auditor General
Treasury Board Secretariat, Ministry of Finance, Ministry of Energy

AG Recommendation #2 *We recommend that the government remove the Independent Electricity System Operator's Market Accounts from the Province's consolidated financial statements.*	The Province consolidates the entities it controls, in accordance with Public Sector Accounting Standards (PSAS) and its internal reporting policies. Each consolidated entity produces its own stand-alone financial statements and is subject to its own financial statement audit. In 2016, the Independent Electricity System Operator (IESO) changed the accounting for the market accounts and recognized these balances on its financial statements. The financial statements of the IESO for the year-ended December 31, 2016 were subject to an external audit and received an unqualified (or clean) opinion. The government supports this enhanced reporting and greater transparency for the economic activities of the IESO. Additional comments with respect to IESO's accounting for the Market Accounts are included in the response to Recommendation #5 of this report.	The government supports the enhanced reporting and greater transparency for the economic activities of IESO resulting from the recognition of the market accounts. The government is open to continue to discuss the issue in the hopes of resolving this matter.
AG Recommendation #3 *We recommend the government follow the accounting standards established by the Public Sector Accounting Board and the Province's historical accounting precedent, and implement the recommendations in the Special Report issued*	The government prepares its financial statements in accordance with PSAS. The proposed accounting for the Ontario Fair Hydro Plan reflects the economic substance of the transaction by differentiating costs borne by taxpayers versus those borne by ratepayers. PSAS is silent on the recognition, measurement, presentation and disclosure of rate-regulated activities. In absence of a clear position on an issue, standard accounting practice dictates that an entity should consult other accounting standards. This guidance for PSAS is included in PS1150.07. Regarding the Office of the Auditor General's (OAG's) recommendation that the financing for Ontario's Fair Hydro Plan (OFHP) be pursued at the lowest cost to Ontarians, the government reiterates its concerns with this characterization, which were previously provided in the October 4, 2017 government response to the OAG's special report on OFHP (see	The government intends to continue to prepare its financial statements in accordance with Public Sector Accounting Standards (PSAS). The Fair Hydro Trust will raise financing through a combination of 3rd party senior debt and subordinated debt funded by OPG for which the cost will be primarily driven by the credit ratings assigned by Moody's and DBRS. The ultimate cost of this program will be dependent on the quantity of Global Adjustment that will be financed, prevailing market interest rates over the next 30 years, the availability of capital to invest in this type of structured debt and the

DRAFT

by our Office and tabled in the legislature on October 17, 2017, titled The Fair Hydro Plan: Concerns About Fiscal Transparency, Accountability and Value for Money, as follows: • *Record the true financial impact of the Fair Hydro Plan's electricity rate reduction on the Province's budgets and consolidated financial statements; and* • *Use a financing structure to fund the rate reduction that is least costly for Ontarians.*	Government Response to OAG Report on the Fair Hydro Plan in Appendix 5 of the Auditor General's Special Report). With respect to the Global Adjustment Refinancing (GA Refinancing) component of the OFHP, the policy objective is to more fairly allocate the cost to ratepayers over the useful life, not the contractual term, of the electricity generating assets. Therefore, it was a primary policy objective to ensure that the costs are borne by the beneficiaries of the electricity system – the ratepayers – and not the tax-base. The government believes it is appropriate for ratepayers to pay for the financing of electricity assets. The rate-base has a different risk profile than the tax-base, which would be reflected in different interest costs. The various entities that operate in the electricity industry have different financing costs that are specific to their risk profiles. The industry does not operate and is not financed through the Province. Ontario Power Generation (OPG) was identified as the Financial Services Manager responsible for the financing plans and the financing entity (i.e., Fair Hydro Trust) that will manage the debt obligations. OPG has the necessary financing and commercial expertise to assist with refinancing the Global Adjustment (GA) and will ensure that it is done in an efficient and cost-effective manner. OPG has a demonstrated track record in the financial markets with its Corporate Debt platform, private placement of insurance linked bonds, participation in securitization program and highly successful project debt issuances tied to new hydroelectric developments. OPG is beginning the process of raising funds to finance the deferred costs, and while total borrowing costs will not be known until the program is complete, accumulated interest is projected to be less than the estimates in the May 2017 report of the Financial Accountability Office (FAO). The figures referenced in the FAO's report was based on initial Ministry of Energy estimates from March 2017. Subsequent analysis	credit stability of the OFHP program which would be reflected in credit ratings assigned to this debt over time. Each of these factors will need to be managed and monitored closely. The government is open to continue to discuss the issue in the hopes of resolving this matter.

DRAFT

	conducted by the Ministry of Energy refined a number of variables, including the cost of borrowing and the quantity of GA to be refinanced. A number of variables, including interest rates, electricity demand and electricity costs, will change over the thirty-year life of OFHP. Government will continue to revise cost estimates to reflect these variable conditions. In addition, as outlined in the 2017 Long-Term Energy Plan, the government will continue to identify and implement initiatives to take costs out of the electricity system, which would reduce the cost of GA refinancing.	
AG Recommendation #4 *The Office of the Auditor General is the appointed under the Auditor General Act as the auditor for the consolidated financial statements of the Province of Ontario. We recommend that the Treasury Board Secretariat:* • *Proactively supply copies to the Auditor General of all contracts it enters into for accounting advice and opinions in order to ensure that*	Treasury Board Secretariat's use of external expertise for accounting and financial reporting matters supplements its own resources on complex or emerging accounting and reporting matters. External advisors are generally engaged to provide advice and guidance to supplement internal analysis. Treasury Board is committed to working with the Office of the Auditor General to discuss issues, once the professional staff has completed its analysis of the issue. In addition, Treasury Board believes frequent communication with the Office of the Auditor General is important and to that end, requested additional meetings with both the staff and the Auditor General during the 2016-17 audit. Where required by the CPA Ontario Code of Professional Conduct, the Auditor General has been, and will continue to be, advised of external advisor involvement.	Treasury Board Secretariat will continue to take a proactive approach to raising issues with the Office of the Auditor General. Where required by the CPA Ontario Code of Professional Conduct, the Auditor General will continue to be advised of external advisor involvement.

DRAFT

our Office is aware of the work the advisers are performing, can assess significant issues in a timely manner, and can determine the impact on the Province's consolidated financial statements and our annual audit; and • *Build into its contracts with external advisers the requirement that the advisers engaged to provide accounting advice and opinions that affect the consolidated financial statements notify our Office of*		

DRAFT

their engagement as required under the Code of Professional Conduct of the Chartered Professional Accountants of Ontario.

Specifically, it should:*	The Independent Electricity System Operator (IESO) prepares its financial statements in accordance with Public Sector Accounting Standards (PSAS) and the financial statements are audited by a firm of independent external auditors whose responsibility is to express an opinion on whether the financial statements are fairly presented in accordance with PSAS. On its 2016 financial statements, IESO received an unqualified (clean) audit opinion. In its role as market administrator, IESO operates and settles approximately $17 billion through the electricity market. The change to include market account assets and liabilities in the financial statements provides increased transparency with respect to the value of transactions that flow through Ontario's electricity market, that otherwise would go	The IESO intends to continue to prepare its financial statements in accordance with Public Sector Accounting Standards, and will report on the results of its accounting firm's audit in its 2017 financial statements, to be published March 30, 2018. The IESO will continue to regularly review its accounting policies to ensure they are best suited to the reporting requirements of its business and the users of its financial statements. This includes providing transparency into the value of transactions that flow through Ontario's $17 billion electricity market and reflecting the economic substance of certain types of expenses that may not be directly recovered through normal revenue requirement

DRAFT

• *Remove market accounts recorded on its financial statements; and* • *Discontinue the inappropriate use of rate-regulated accounting in the preparation of its financial statements.* *To ensure that the members of the Legislative Assembly receive financial information on the operations of the IESO prepared in accordance with Canadian PSAS, the Office of the Auditor General will conduct an attest audit of the December 31, 2017, financial statements of the IESO as permitted under the Electricity Act, Subsection 25.2(2), which*	unreported in IESO's financial statements. These changes were extensively discussed with IESO's external auditors, its Audit Committee and its Board of Directors. The decision was supported by the Office of the Provincial Controller and IESO's external audit firm. Rate-regulated accounting better reflects the economic substance of certain types of IESO expenses (like those related to the Smart Metering Entity) that may not be directly recovered through normal revenue requirement models, and instead are recovered through rate regulation. This change is in line with accounting practices followed by six out of eight other independent system operators in North America and provides IESO financial statement users greater transparency into the substance of the variance accounts it holds and its right to collect an amount in the future.	models, and instead are recovered through rate regulation. The IESO recognizes the Auditor General's statutory role and authority to perform an audit of the IESO. The IESO is cooperating with the Office of the Auditor General to provide information, including the 2017 financial statements prepared by management, and for access to management for assistance in understanding such information. The IESO has likewise instructed its audit partner to cooperate with the Auditor General's audit.

DRAFT

states: "The Auditor General may audit the accounts and transactions of the IESO. 2014, c. 7, Sched. 7, s. 3 (1)."		
AG Recommendation #6 *We recommend the government follow the accounting standards established by the Public Sector Accounting Board, rather than using legislation and regulations to prescribe accounting treatments.*	The Province is committed to provide high-quality financial reports that support transparency and accountability in reporting to the public, the legislature and other users. For the 2015-16 Public Accounts, the government passed a time-limited regulation prescribing the accounting treatment for net pension assets in order to allow Treasury Board Secretariat and Ministry of Finance officials to sign off on Public Accounts consistent with the fiscal impact of the Auditor General's interpretation of Public Sector Accounting Standards (PSAS). This regulation is the only example of where the accounting treatment was legislated, and the legislation did not align with the requirements of PSAS. With respect to the Ontario Fair Hydro Plan Act and its regulations, there are no provisions in that legislation that prescribe the accounting treatment required to be followed by the Province. It is important to distinguish legislating the accounting from legislating the right of the government to recover amounts from specified ratepayers in the future,	The government intends to continue to prepare its financial statements in accordance with Public Sector Accounting Standards.

DRAFT

	which in the absence of the legislation, would have been collected from specified ratepayers as the costs were incurred. The accounting for the transactions resulting from the Fair Hydro Plan will be recorded in accordance with PSAS.	
AG Recommendation #7 *We recommend that in order to address the Province's growing total debt burden, the government work towards the development of a long-term total-debt reduction plan linked to its target of reducing the net debt-to-GDP ratio to its pre-recession level of 27% as measured using proper accounting for net pension assets and the projected costs of the Fair Hydro Plan. The government should also discuss publicly how it plans to pay down the debt.*	The 2017 Budget and the 2017 Fall Economic Statement stated that the government continues to maintain a target of reducing the net debt-to-GDP ratio to its pre-recession level of 27%~~,~~ ~~currently projected for 2029-30, together with an interim target of 35% by 2023-24. From 2017-18 onwards, the balanced budget environment will limit increases in debt to the difference between annual investments in infrastructure improvements and the amortization of such investments.~~ The government is making strategic investments in programs and services that will generate economic growth, while minimizing interest on debt costs. ~~The forecast balanced budget in 2017–18 will limit the increase in net debt to net investments in capital assets.~~ These investments ~~will~~are intended to grow ~~contribute to~~ the economy ~~growing~~ at a faster rate than net debt, allowing the government to manage Ontario's net debt-to-GDP ratio. The forecast balanced budget in 2017–18 will limit the increase in net debt to net investments in capital assets. The government's long-term infrastructure plan to invest about $190 billion over 13 years, starting in 2014-15, will contribute to the growth of the economy. The Centre for Spatial Economics found that for every $1 spent on public infrastructure, GDP increases by $6, on average, in the long term.	Continue to monitor progress. ~~Estimated implementation by FY 2029-30.~~

DRAFT

Summary Status Table in Response to the Report of the Auditor General of Ontario

Chapter 2 2017 Annual Report of the Auditor General

Treasury Board Secretariat, Ministry of Finance, Ministry of Energy

	Therefore, while overall debt will rise to fund these infrastructure investments, measurements of relative debt such as the net debt-to-GDP ratio, a recommended practice by the Public Sector Accounting Board, will gradually diminish due to the Province's GDP increasing at a faster rate than net debt. This will allow the Government to continue to move towards its 27% net debt-to-GDP target. The ratio has already commenced declining~~, falling to 37.3% in 2017-18~~ from its 2014-15 peak of 39.3%. As discussed more thoroughly in responses to other recommendations in this report, the government prepares its financial statements in accordance with Public Sector Accounting Standards, including the net pension assets for its jointly sponsored pension plans and the transactions resulting from the Ontario Fair Hydro Plan.	
AG Recommendation #8 *We recommend that the Office of the Provincial Controller undertake thorough planning involving all stakeholders, including Treasury Board Secretariat, ministries and provincial government agencies, to identify the*	Treasury Board Secretariat and the Ministry of Finance are supportive of the timely delivery of the Public Accounts. The Office of the Provincial Controller works closely with the Office of the Auditor General to identify audit issues early and to ensure that stakeholders are engaged in discussions regarding risks and resolution. The Office of the Provincial Controller will continue to collaborate with the Office of the Auditor General to support the timely delivery of the Public Accounts.	Planning discussions for the 2017-18 Public Accounts have begun between the Office of the Provincial Controller and the Office of the Auditor General. As well, the Office of Economic Policy has been engaged in discussions on risk considerations related to economic models used to estimate personal and corporate tax revenues.

DRAFT

Formatted: Normal

barriers and key areas to be addressed to achieve earlier finalization of the Province's consolidated financial statements, including the estimation risks associated with corporations tax and personal income tax revenues.	The Province will work with the Canada Revenue Agency on this recommendation, as reporting Personal and Corporate taxation revenues is highly dependent on information they provide.	
AG Recommendation #9 *We recommend that the government avoid establishing arm's length trusts in order to record an expense in its consolidated financial statements before it is necessary, given that it loses the ability to ensure that funds are ultimately provided to the appropriate beneficiaries.*	The government works with its transfer payment recipients to ensure it receives good value for the money it provides in the form of grants. Government policy on the structured approach to program delivery takes a risk-based approach with respect to transfer payment oversight. Grants are provided to thousands of organizations annually that the government deals with at arms-length and is able to demonstrate proper oversight. A Trust structure was selected to implement the Affordability Fund in order to provide an effective solution to distributing funds to electricity distributors. With approximately 70 distributors across Ontario, it was not feasible for the Province to enter into agreements with each distributor. The Trust structure establishes an independent entity with expertise from the electricity distributor and community sectors.	The government will continue to assess the most appropriate vehicle for meeting its policy objectives, which include appropriate oversight of how transfer payments are spent.

DRAFT

	While the Affordability Fund was established at arm's length to the government, there are report-back requirements on the use of funds transferred as well as the ability for the government to conduct an audit to gain assurance that the funds have been used for the purposes intended.	
AG Recommendation #10 *We recommend that the government determine when it will issue a regulation as outlined under subsection 11(1) of the Fiscal Transparency and Accountability Act, 2004 confirming the source of reference for the Pre-Election Report and the timeline for issuance of the report that will be subject to our review under the Act.*	Under the *Fiscal Transparency and Accountability Act*, 2004, the government may file a regulation that would require it to release a Pre-Election Report on Ontario's Finances. Should the government file such a regulation, the Auditor General would be required to issue a Statement based on a prompt review following the release of such a Pre-Election Report.	The government remains committed to meeting the legislative requirements of the Act and working constructively with the Office of the Auditor General.

Hi Dave,

As discussed in our 12:00pm meeting with the Secretary of Cabinet, we've revised the wording in the attached Status Table for SCOPA that pertains to recommendation #7 (debt). I've included our edits in track changes (p. 10-11).

If the Deputy is comfortable with this version, I'll send it along to OPCD to incorporate our changes.

Thanks, Anna

Summary Status Table in Response to the
Report of the Auditor General of Ontario

Chapter 2 2017 Annual Report of the Auditor General
Treasury Board Secretariat, Ministry of Finance, Ministry of Energy

Auditor's Recommendation	Completed Undertaking	Outstanding Undertaking (including timeline)
AG Recommendation #1 *We recommend the government record valuation allowances to offset the net pension assets it has recorded from the Ontario Teachers' Pension Plan and the Ontario Public Sector Employees' Union Pension Plan until such time as it obtains formal written authorization from their pension plan co-sponsors that they are able to lower minimum contributions or withdraw surpluses from the pension funds within the next 12 months.*	The Office of the Auditor General communicated its interpretation of Public Sector Accounting Standards (PSAS) requiring a full valuation allowance on the Province's two jointly sponsored pension plans in September 2016. At that time, the government passed a time-limited regulation on the accounting treatment for its joint defined benefit plans to align with the Auditor General's interpretation of PSAS, which enabled officials from Treasury Board Secretariat and the Ministry of Finance to sign the Statement of Responsibility for the 2015-16 Public Accounts. During the 2016-17 year, the professional staff conducted further research and analysis, and determined that PSAS does not require a valuation allowance on either of the jointly sponsored pension plans. This conclusion is supported by: • The conclusions reached by an independent Pension Asset Expert Advisory Panel (the 'Panel'), established by the government to provide advice on the interpretation of PSAS with respect to the reporting of net pension assets of these two joint defined benefit plans. The Panel, comprised of accredited accounting, actuarial and legal professionals with extensive background in pension accounting and plan governance, released its report in February 2017 which supported the government's position that a valuation is not required for these two plans under PSAS. Two key findings of the Panel were: 1) there is no requirement under PSAS that any formal agreement exist between the joint sponsors regarding the timing or amount of a reduction in contributions to record an asset, as the existing agreements in place between the parties support the recognition of an expected benefit, and 2) unilateral control is not	The government will evaluate the need for a valuation allowance annually taking into consideration (a) changes, if any, in the governance structures of the plans, (b), decisions, if any, of the joint sponsors that impact the need for a valuation allowance, and b) changes, if any, in Public Sector Accounting Standards. The government is open to continue to discuss the matter in the hopes of resolving this matter.

DRAFT

	required for asset recognition; joint control with each party having the ability to deny the actions of the other sponsor, provides evidence of shared control, supporting recognition of an asset. • An opinion from Deloitte LLP on aspects of the Province's accounting as at March 31, 2016 for the Ontario Teachers' Pension Plan. The opinion, which was dated October 2, 2016, concluded that it was permissible to recognize a pension asset under Canadian Public Sector Accounting Standards, even though the Province did not have under a unilateral right to reduce contributions. The opinion did not address the value at which the asset should be recorded. • Analysis completed by EY as to whether any valuation allowance is required to be recorded for OTPP or OPSEUPP as of March 31, 2017. EY confirmed no valuation allowance was required for either plan. The government respectfully disagrees with the Auditor General's interpretation of the accounting standards on this issue as PSAS neither requires unilateral control to record an asset, nor does it include a requirement to obtain a letter from the co-sponsor of the plan agreeing to reduce future contributions within 12 months.	

DRAFT

Summary Status Table in Response to the
Report of the Auditor General of Ontario
Chapter 2 2017 Annual Report of the Auditor General
Treasury Board Secretariat, Ministry of Finance, Ministry of Energy

AG Recommendation #2 *We recommend that the government remove the Independent Electricity System Operator's Market Accounts from the Province's consolidated financial statements.*	The Province consolidates the entities it controls, in accordance with Public Sector Accounting Standards (PSAS) and its internal reporting policies. Each consolidated entity produces its own stand-alone financial statements and is subject to its own financial statement audit. In 2016, the Independent Electricity System Operator (IESO) changed the accounting for the market accounts and recognized these balances on its financial statements. The financial statements of the IESO for the year-ended December 31, 2016 were subject to an external audit and received an unqualified (or clean) opinion. The government supports this enhanced reporting and greater transparency for the economic activities of the IESO. Additional comments with respect to IESO's accounting for the Market Accounts are included in the response to Recommendation #5 of this report.	The government supports the enhanced reporting and greater transparency for the economic activities of IESO resulting from the recognition of the market accounts. The government is open to continue to discuss the issue in the hopes of resolving this matter.
AG Recommendation #3 *We recommend the government follow the accounting standards established by the Public Sector Accounting Board and the Province's historical accounting precedent, and implement the recommendations in the Special Report issued*	The government prepares its financial statements in accordance with PSAS. The proposed accounting for the Ontario Fair Hydro Plan reflects the economic substance of the transaction by differentiating costs borne by taxpayers versus those borne by ratepayers. PSAS is silent on the recognition, measurement, presentation and disclosure of rate-regulated activities. In absence of a clear position on an issue, standard accounting practice dictates that an entity should consult other accounting standards. This guidance for PSAS is included in PS1150.07. Regarding the Office of the Auditor General's (OAG's) recommendation that the financing for Ontario's Fair Hydro Plan (OFHP) be pursued at the lowest cost to Ontarians, the government reiterates its concerns with this characterization, which were previously provided in the October 4, 2017 government response to the OAG's special report on OFHP (see	The government intends to continue to prepare its financial statements in accordance with Public Sector Accounting Standards (PSAS). The Fair Hydro Trust will raise financing through a combination of 3rd party senior debt and subordinated debt funded by OPG for which the cost will be primarily driven by the credit ratings assigned by Moody's and DBRS. The ultimate cost of this program will be dependent on the quantity of Global Adjustment that will be financed, prevailing market interest rates over the next 30 years, the availability of capital to invest in this type of structured debt and the

DRAFT

by our Office and tabled in the legislature on October 17, 2017, titled The Fair Hydro Plan: Concerns About Fiscal Transparency, Accountability and Value for Money, as follows: • *Record the true financial impact of the Fair Hydro Plan's electricity rate reduction on the Province's budgets and consolidated financial statements; and* • *Use a financing structure to fund the rate reduction that is least costly for Ontarians.*	Government Response to OAG Report on the Fair Hydro Plan in Appendix 5 of the Auditor General's Special Report). With respect to the Global Adjustment Refinancing (GA Refinancing) component of the OFHP, the policy objective is to more fairly allocate the cost to ratepayers over the useful life, not the contractual term, of the electricity generating assets. Therefore, it was a primary policy objective to ensure that the costs are borne by the beneficiaries of the electricity system – the ratepayers – and not the tax-base. The government believes it is appropriate for ratepayers to pay for the financing of electricity assets. The rate-base has a different risk profile than the tax-base, which would be reflected in different interest costs. The various entities that operate in the electricity industry have different financing costs that are specific to their risk profiles. The industry does not operate and is not financed through the Province. Ontario Power Generation (OPG) was identified as the Financial Services Manager responsible for the financing plans and the financing entity (i.e., Fair Hydro Trust) that will manage the debt obligations. OPG has the necessary financing and commercial expertise to assist with refinancing the Global Adjustment (GA) and will ensure that it is done in an efficient and cost-effective manner. OPG has a demonstrated track record in the financial markets with its Corporate Debt platform, private placement of insurance linked bonds, participation in securitization program and highly successful project debt issuances tied to new hydroelectric developments. OPG is beginning the process of raising funds to finance the deferred costs, and while total borrowing costs will not be known until the program is complete, accumulated interest is projected to be less than the estimates in the May 2017 report of the Financial Accountability Office (FAO). The figures referenced in the FAO's report was based on initial Ministry of Energy estimates from March 2017. Subsequent analysis	credit stability of the OFHP program which would be reflected in credit ratings assigned to this debt over time. Each of these factors will need to be managed and monitored closely. The government is open to continue to discuss the issue in the hopes of resolving this matter.

DRAFT

	conducted by the Ministry of Energy refined a number of variables, including the cost of borrowing and the quantity of GA to be refinanced. A number of variables, including interest rates, electricity demand and electricity costs, will change over the thirty-year life of OFHP. Government will continue to revise cost estimates to reflect these variable conditions. In addition, as outlined in the 2017 Long-Term Energy Plan, the government will continue to identify and implement initiatives to take costs out of the electricity system, which would reduce the cost of GA refinancing.	
AG Recommendation #4 *The Office of the Auditor General is the appointed under the Auditor General Act as the auditor for the consolidated financial statements of the Province of Ontario. We recommend that the Treasury Board Secretariat:* • *Proactively supply copies to the Auditor General of all contracts it enters into for accounting advice and opinions in order to ensure that*	Treasury Board Secretariat's use of external expertise for accounting and financial reporting matters supplements its own resources on complex or emerging accounting and reporting matters. External advisors are generally engaged to provide advice and guidance to supplement internal analysis. Treasury Board is committed to working with the Office of the Auditor General to discuss issues, once the professional staff has completed its analysis of the issue. In addition, Treasury Board believes frequent communication with the Office of the Auditor General is important and to that end, requested additional meetings with both the staff and the Auditor General during the 2016-17 audit. Where required by the CPA Ontario Code of Professional Conduct, the Auditor General has been, and will continue to be, advised of external advisor involvement.	Treasury Board Secretariat will continue to take a proactive approach to raising issues with the Office of the Auditor General. Where required by the CPA Ontario Code of Professional Conduct, the Auditor General will continue to be advised of external advisor involvement.

DRAFT

our Office is aware of the work the advisers are performing, can assess significant issues in a timely manner, and can determine the impact on the Province's consolidated financial statements and our annual audit; and • *Build into its contracts with external advisers the requirement that the advisers engaged to provide accounting advice and opinions that affect the consolidated financial statements notify our Office of*		

DRAFT

their engagement as required under the Code of Professional Conduct of the Chartered Professional Accountants of Ontario.		
AG Recommendation #5 *We recommend that the Independent Electricity System Operator (IESO), an "other government organization," use the Canadian Public Sector Accounting Standards (PSAS) in the preparation of its financial statements. Specifically, it should:*	The Independent Electricity System Operator (IESO) prepares its financial statements in accordance with Public Sector Accounting Standards (PSAS) and the financial statements are audited by a firm of independent external auditors whose responsibility is to express an opinion on whether the financial statements are fairly presented in accordance with PSAS. On its 2016 financial statements, IESO received an unqualified (clean) audit opinion. In its role as market administrator, IESO operates and settles approximately $17 billion through the electricity market. The change to include market account assets and liabilities in the financial statements provides increased transparency with respect to the value of transactions that flow through Ontario's electricity market, that otherwise would go	The IESO intends to continue to prepare its financial statements in accordance with Public Sector Accounting Standards, and will report on the results of its accounting firm's audit in its 2017 financial statements, to be published March 30, 2018. The IESO will continue to regularly review its accounting policies to ensure they are best suited to the reporting requirements of its business and the users of its financial statements. This includes providing transparency into the value of transactions that flow through Ontario's $17 billion electricity market and reflecting the economic substance of certain types of expenses that may not be directly recovered through normal revenue requirement

DRAFT

• *Remove market accounts recorded on its financial statements; and* • *Discontinue the inappropriate use of rate-regulated accounting in the preparation of its financial statements.* *To ensure that the members of the Legislative Assembly receive financial information on the operations of the IESO prepared in accordance with Canadian PSAS, the Office of the Auditor General will conduct an attest audit of the December 31, 2017, financial statements of the IESO as permitted under the Electricity Act, Subsection 25.2(2), which*	unreported in IESO's financial statements. These changes were extensively discussed with IESO's external auditors, its Audit Committee and its Board of Directors. The decision was supported by the Office of the Provincial Controller and IESO's external audit firm. Rate-regulated accounting better reflects the economic substance of certain types of IESO expenses (like those related to the Smart Metering Entity) that may not be directly recovered through normal revenue requirement models, and instead are recovered through rate regulation. This change is in line with accounting practices followed by six out of eight other independent system operators in North America and provides IESO financial statement users greater transparency into the substance of the variance accounts it holds and its right to collect an amount in the future.	models, and instead are recovered through rate regulation. The IESO recognizes the Auditor General's statutory role and authority to perform an audit of the IESO. The IESO is cooperating with the Office of the Auditor General to provide information, including the 2017 financial statements prepared by management, and for access to management for assistance in understanding such information. The IESO has likewise instructed its audit partner to cooperate with the Auditor General's audit.

DRAFT

states: "The Auditor General may audit the accounts and transactions of the IESO. 2014, c. 7, Sched. 7, s. 3 (1)."		
AG Recommendation #6 *We recommend the government follow the accounting standards established by the Public Sector Accounting Board, rather than using legislation and regulations to prescribe accounting treatments.*	The Province is committed to provide high-quality financial reports that support transparency and accountability in reporting to the public, the legislature and other users. For the 2015-16 Public Accounts, the government passed a time-limited regulation prescribing the accounting treatment for net pension assets in order to allow Treasury Board Secretariat and Ministry of Finance officials to sign off on Public Accounts consistent with the fiscal impact of the Auditor General's interpretation of Public Sector Accounting Standards (PSAS). This regulation is the only example of where the accounting treatment was legislated, and the legislation did not align with the requirements of PSAS. With respect to the Ontario Fair Hydro Plan Act and its regulations, there are no provisions in that legislation that prescribe the accounting treatment required to be followed by the Province. It is important to distinguish legislating the accounting from legislating the right of the government to recover amounts from specified ratepayers in the future,	The government intends to continue to prepare its financial statements in accordance with Public Sector Accounting Standards.

DRAFT

	which in the absence of the legislation, would have been collected from specified ratepayers as the costs were incurred. The accounting for the transactions resulting from the Fair Hydro Plan will be recorded in accordance with PSAS.	
AG Recommendation #7 *We recommend that in order to address the Province's growing total debt burden, the government work towards the development of a long-term total-debt reduction plan linked to its target of reducing the net debt-to-GDP ratio to its pre-recession level of 27% as measured using proper accounting for net pension assets and the projected costs of the Fair Hydro Plan. The government should also discuss publicly how it plans to pay down the debt.*	The 2017 Budget and the 2017 Fall Economic Statement stated that the government continues to maintain a target of reducing the net debt-to-GDP ratio to its pre-recession level of 27%~~,~~ ~~currently projected for 2029-30, together with an interim target of 35% by 2023-24. From 2017-18 onwards, the balanced budget environment will limit increases in debt to the difference between annual investments in infrastructure improvements and the amortization of such investments.~~ The government is making strategic investments in programs and services that will generate economic growth, while minimizing interest on debt costs. ~~The forecast balanced budget in 2017–18 will limit the increase in net debt to net investments in capital assets.~~ These investments ~~will~~are intended to grow ~~contribute to~~ the economy ~~growing~~ at a faster rate than net debt, allowing the government to manage Ontario's net debt-to-GDP ratio. The forecast balanced budget in 2017–18 will limit the increase in net debt to net investments in capital assets. The government's long-term infrastructure plan to invest about $190 billion over 13 years, starting in 2014-15, will contribute to the growth of the economy. The Centre for Spatial Economics found that for every $1 spent on public infrastructure, GDP increases by $6, on average, in the long term.	Continue to monitor progress. ~~Estimated implementation by FY 2029-30.~~

DRAFT

Summary Status Table in Response to the Report of the Auditor General of Ontario

Chapter 2 2017 Annual Report of the Auditor General

Treasury Board Secretariat, Ministry of Finance, Ministry of Energy

	Therefore, while overall debt will rise to fund these infrastructure investments, measurements of relative debt such as the net debt-to-GDP ratio, a recommended practice by the Public Sector Accounting Board, will gradually diminish due to the Province's GDP increasing at a faster rate than net debt. This will allow the Government to continue to move towards its 27% net debt-to-GDP target. The ratio has already commenced declining~~, falling to 37.3% in 2017-18~~ from its 2014-15 peak of 39.3%. As discussed more thoroughly in responses to other recommendations in this report, the government prepares its financial statements in accordance with Public Sector Accounting Standards, including the net pension assets for its jointly sponsored pension plans and the transactions resulting from the Ontario Fair Hydro Plan.	
AG Recommendation #8 *We recommend that the Office of the Provincial Controller undertake thorough planning involving all stakeholders, including Treasury Board Secretariat, ministries and provincial government agencies, to identify the*	Treasury Board Secretariat and the Ministry of Finance are supportive of the timely delivery of the Public Accounts. The Office of the Provincial Controller works closely with the Office of the Auditor General to identify audit issues early and to ensure that stakeholders are engaged in discussions regarding risks and resolution. The Office of the Provincial Controller will continue to collaborate with the Office of the Auditor General to support the timely delivery of the Public Accounts.	Planning discussions for the 2017-18 Public Accounts have begun between the Office of the Provincial Controller and the Office of the Auditor General. As well, the Office of Economic Policy has been engaged in discussions on risk considerations related to economic models used to estimate personal and corporate tax revenues.

DRAFT

Formatted: Normal

barriers and key areas to be addressed to achieve earlier finalization of the Province's consolidated financial statements, including the estimation risks associated with corporations tax and personal income tax revenues.	The Province will work with the Canada Revenue Agency on this recommendation, as reporting Personal and Corporate taxation revenues is highly dependent on information they provide.	
AG Recommendation #9 *We recommend that the government avoid establishing arm's length trusts in order to record an expense in its consolidated financial statements before it is necessary, given that it loses the ability to ensure that funds are ultimately provided to the appropriate beneficiaries.*	The government works with its transfer payment recipients to ensure it receives good value for the money it provides in the form of grants. Government policy on the structured approach to program delivery takes a risk-based approach with respect to transfer payment oversight. Grants are provided to thousands of organizations annually that the government deals with at arms-length and is able to demonstrate proper oversight. A Trust structure was selected to implement the Affordability Fund in order to provide an effective solution to distributing funds to electricity distributors. With approximately 70 distributors across Ontario, it was not feasible for the Province to enter into agreements with each distributor. The Trust structure establishes an independent entity with expertise from the electricity distributor and community sectors.	The government will continue to assess the most appropriate vehicle for meeting its policy objectives, which include appropriate oversight of how transfer payments are spent.

DRAFT

	While the Affordability Fund was established at arm's length to the government, there are report-back requirements on the use of funds transferred as well as the ability for the government to conduct an audit to gain assurance that the funds have been used for the purposes intended.	
AG Recommendation #10 *We recommend that the government determine when it will issue a regulation as outlined under subsection 11(1) of the Fiscal Transparency and Accountability Act, 2004 confirming the source of reference for the Pre-Election Report and the timeline for issuance of the report that will be subject to our review under the Act.*	Under the *Fiscal Transparency and Accountability Act*, 2004, the government may file a regulation that would require it to release a Pre-Election Report on Ontario's Finances. Should the government file such a regulation, the Auditor General would be required to issue a Statement based on a prompt review following the release of such a Pre-Election Report.	The government remains committed to meeting the legislative requirements of the Act and working constructively with the Office of the Auditor General.

OPG has the necessary financing and commercial expertise to assist with refinancing the Global Adjustment (GA) and will ensure that it is done in an efficient and cost-effective manner. OPG has a demonstrated track record in the financial markets with its Corporate Debt platform, private placement of insurance linked bonds, participation in securitization program and highly successful project debt issuances tied to new hydroelectric developments. OPG is beginning the process of raising funds to finance the deferred costs, and while total borrowing costs will not be known until the program is complete, accumulated interest is projected to be less than the estimates in the May 2017 report of the Financial Accountability Office (FAO). The figures referenced in the FAO's report was based on initial Ministry of Energy estimates from March 2017. Subsequent analysis	credit stability of the OFHP program which would be reflected in credit ratings assigned to this debt over time. Each of these factors will need to be managed and monitored closely. The government is open to continue to discuss the issue in the hopes of resolving this matter.

DRAFT

	conducted by the Ministry of Energy refined a number of variables, including the cost of borrowing and the quantity of GA to be refinanced. A number of variables, including interest rates, electricity demand and electricity costs, will change over the thirty-year life of OFHP. Government will continue to revise cost estimates to reflect these variable conditions. In addition, as outlined in the 2017 Long-Term Energy Plan, the government will continue to identify and implement initiatives to take costs out of the electricity system, which would reduce the cost of GA refinancing.	
AG Recommendation #4 *The Office of the Auditor General is the appointed under the Auditor General Act as the auditor for the consolidated financial statements of the Province of Ontario. We recommend that the Treasury Board Secretariat:* • *Proactively supply copies to the Auditor General of all contracts it enters into for accounting advice and opinions in order to ensure that*	Treasury Board Secretariat's use of external expertise for accounting and financial reporting matters supplements its own resources on complex or emerging accounting and reporting matters. External advisors are generally engaged to provide advice and guidance to supplement internal analysis. Treasury Board is committed to working with the Office of the Auditor General to discuss issues, once the professional staff has completed its analysis of the issue. In addition, Treasury Board believes frequent communication with the Office of the Auditor General is important and to that end, requested additional meetings with both the staff and the Auditor General during the 2016-17 audit. Where required by the CPA Ontario Code of Professional Conduct, the Auditor General has been, and will continue to be, advised of external advisor involvement.	Treasury Board Secretariat will continue to take a proactive approach to raising issues with the Office of the Auditor General. Where required by the CPA Ontario Code of Professional Conduct, the Auditor General will continue to be advised of external advisor involvement.

their engagement as required under the Code of Professional Conduct of the Chartered Professional Accountants of Ontario.		
AG Recommendation #5 *We recommend that the Independent Electricity System Operator (IESO), an "other government organization," use the Canadian Public Sector Accounting Standards (PSAS) in the preparation of its financial statements. Specifically, it should:*	The Independent Electricity System Operator (IESO) prepares its financial statements in accordance with Public Sector Accounting Standards (PSAS) and the financial statements are audited by a firm of independent external auditors whose responsibility is to express an opinion on whether the financial statements are fairly presented in accordance with PSAS. On its 2016 financial statements, IESO received an unqualified (clean) audit opinion. In its role as market administrator, IESO operates and settles approximately $17 billion through the electricity market. The change to include market account assets and liabilities in the financial statements provides increased transparency with respect to the value of transactions that flow through Ontario's electricity market, that otherwise would go	The IESO intends to continue to prepare its financial statements in accordance with Public Sector Accounting Standards, and will report on the results of its accounting firm's audit in its 2017 financial statements, to be published March 30, 2018. The IESO will continue to regularly review its accounting policies to ensure they are best suited to the reporting requirements of its business and the users of its financial statements. This includes providing transparency into the value of transactions that flow through Ontario's $17 billion electricity market and reflecting the economic substance of certain types of expenses that may not be directly recovered through normal revenue requirement

DRAFT

• *Remove market accounts recorded on its financial statements; and* • *Discontinue the inappropriate use of rate-regulated accounting in the preparation of its financial statements.* *To ensure that the members of the Legislative Assembly receive financial information on the operations of the IESO prepared in accordance with Canadian PSAS, the Office of the Auditor General will conduct an attest audit of the December 31, 2017, financial statements of the IESO as permitted under the Electricity Act, Subsection 25.2(2), which*	unreported in IESO's financial statements. These changes were extensively discussed with IESO's external auditors, its Audit Committee and its Board of Directors. The decision was supported by the Office of the Provincial Controller and IESO's external audit firm. Rate-regulated accounting better reflects the economic substance of certain types of IESO expenses (like those related to the Smart Metering Entity) that may not be directly recovered through normal revenue requirement models, and instead are recovered through rate regulation. This change is in line with accounting practices followed by six out of eight other independent system operators in North America and provides IESO financial statement users greater transparency into the substance of the variance accounts it holds and its right to collect an amount in the future.	models, and instead are recovered through rate regulation. The IESO recognizes the Auditor General's statutory role and authority to perform an audit of the IESO. The IESO is cooperating with the Office of the Auditor General to provide information, including the 2017 financial statements prepared by management, and for access to management for assistance in understanding such information. The IESO has likewise instructed its audit partner to cooperate with the Auditor General's audit.

DRAFT

states: "The Auditor General may audit the accounts and transactions of the IESO. 2014, c. 7, Sched. 7, s. 3 (1)."		
AG Recommendation #6 *We recommend the government follow the accounting standards established by the Public Sector Accounting Board, rather than using legislation and regulations to prescribe accounting treatments.*	The Province is committed to provide high-quality financial reports that support transparency and accountability in reporting to the public, the legislature and other users. For the 2015-16 Public Accounts, the government passed a time-limited regulation prescribing the accounting treatment for net pension assets in order to allow Treasury Board Secretariat and Ministry of Finance officials to sign off on Public Accounts consistent with the fiscal impact of the Auditor General's interpretation of Public Sector Accounting Standards (PSAS). This regulation is the only example of where the accounting treatment was legislated, and the legislation did not align with the requirements of PSAS. With respect to the Ontario Fair Hydro Plan Act and its regulations, there are no provisions in that legislation that prescribe the accounting treatment required to be followed by the Province. It is important to distinguish legislating the accounting from legislating the right of the government to recover amounts from specified ratepayers in the future,	The government intends to continue to prepare its financial statements in accordance with Public Sector Accounting Standards.

DRAFT

	which in the absence of the legislation, would have been collected from specified ratepayers as the costs were incurred. The accounting for the transactions resulting from the Fair Hydro Plan will be recorded in accordance with PSAS.	
AG Recommendation #7 *We recommend that in order to address the Province's growing total debt burden, the government work towards the development of a long-term total-debt reduction plan linked to its target of reducing the net debt-to-GDP ratio to its pre-recession level of 27% as measured using proper accounting for net pension assets and the projected costs of the Fair Hydro Plan. The government should also discuss publicly how it plans to pay down the debt.*	The 2017 Budget and the 2017 Fall Economic Statement stated that the government continues to maintain a target of reducing the net debt-to-GDP ratio to its pre-recession level of 27%~~,~~ ~~currently projected for 2029-30, together with an interim target of 35% by 2023-24. From 2017-18 onwards, the balanced budget environment will limit increases in debt to the difference between annual investments in infrastructure improvements and the amortization of such investments.~~ The government is making strategic investments in programs and services that will generate economic growth, while minimizing interest on debt costs. ~~The forecast balanced budget in 2017–18 will limit the increase in net debt to net investments in capital assets.~~ These investments ~~will~~are intended to grow ~~contribute to~~ the economy ~~growing~~ at a faster rate than net debt, allowing the government to manage Ontario's net debt-to-GDP ratio. The forecast balanced budget in 2017–18 will limit the increase in net debt to net investments in capital assets. The government's long-term infrastructure plan to invest about $190 billion over 13 years, starting in 2014-15, will contribute to the growth of the economy. The Centre for Spatial Economics found that for every $1 spent on public infrastructure, GDP increases by $6, on average, in the long term.	Continue to monitor progress. ~~Estimated implementation by FY 2029-30.~~

DRAFT

Summary Status Table in Response to the Report of the Auditor General of Ontario

Chapter 2 2017 Annual Report of the Auditor General

Treasury Board Secretariat, Ministry of Finance, Ministry of Energy

	Therefore, while overall debt will rise to fund these infrastructure investments, measurements of relative debt such as the net debt-to-GDP ratio, a recommended practice by the Public Sector Accounting Board, will gradually diminish due to the Province's GDP increasing at a faster rate than net debt. This will allow the Government to continue to move towards its 27% net debt-to-GDP target. The ratio has already commenced declining~~, falling to 37.3% in 2017-18~~ from its 2014-15 peak of 39.3%. As discussed more thoroughly in responses to other recommendations in this report, the government prepares its financial statements in accordance with Public Sector Accounting Standards, including the net pension assets for its jointly sponsored pension plans and the transactions resulting from the Ontario Fair Hydro Plan.	
AG Recommendation #8 *We recommend that the Office of the Provincial Controller undertake thorough planning involving all stakeholders, including Treasury Board Secretariat, ministries and provincial government agencies, to identify the*	Treasury Board Secretariat and the Ministry of Finance are supportive of the timely delivery of the Public Accounts. The Office of the Provincial Controller works closely with the Office of the Auditor General to identify audit issues early and to ensure that stakeholders are engaged in discussions regarding risks and resolution. The Office of the Provincial Controller will continue to collaborate with the Office of the Auditor General to support the timely delivery of the Public Accounts.	Planning discussions for the 2017-18 Public Accounts have begun between the Office of the Provincial Controller and the Office of the Auditor General. As well, the Office of Economic Policy has been engaged in discussions on risk considerations related to economic models used to estimate personal and corporate tax revenues.

barriers and key areas to be addressed to achieve earlier finalization of the Province's consolidated financial statements, including the estimation risks associated with corporations tax and personal income tax revenues.	The Province will work with the Canada Revenue Agency on this recommendation, as reporting Personal and Corporate taxation revenues is highly dependent on information they provide.	
AG Recommendation #9 *We recommend that the government avoid establishing arm's length trusts in order to record an expense in its consolidated financial statements before it is necessary, given that it loses the ability to ensure that funds are ultimately provided to the appropriate beneficiaries.*	The government works with its transfer payment recipients to ensure it receives good value for the money it provides in the form of grants. Government policy on the structured approach to program delivery takes a risk-based approach with respect to transfer payment oversight. Grants are provided to thousands of organizations annually that the government deals with at arms-length and is able to demonstrate proper oversight. A Trust structure was selected to implement the Affordability Fund in order to provide an effective solution to distributing funds to electricity distributors. With approximately 70 distributors across Ontario, it was not feasible for the Province to enter into agreements with each distributor. The Trust structure establishes an independent entity with expertise from the electricity distributor and community sectors.	The government will continue to assess the most appropriate vehicle for meeting its policy objectives, which include appropriate oversight of how transfer payments are spent.

DRAFT

	While the Affordability Fund was established at arm's length to the government, there are report-back requirements on the use of funds transferred as well as the ability for the government to conduct an audit to gain assurance that the funds have been used for the purposes intended.	
AG Recommendation #10 *We recommend that the government determine when it will issue a regulation as outlined under subsection 11(1) of the Fiscal Transparency and Accountability Act, 2004 confirming the source of reference for the Pre-Election Report and the timeline for issuance of the report that will be subject to our review under the Act.*	Under the *Fiscal Transparency and Accountability Act*, 2004, the government may file a regulation that would require it to release a Pre-Election Report on Ontario's Finances. Should the government file such a regulation, the Auditor General would be required to issue a Statement based on a prompt review following the release of such a Pre-Election Report.	The government remains committed to meeting the legislative requirements of the Act and working constructively with the Office of the Auditor General.

Hi Dave,

As discussed in our 12:00pm meeting with the Secretary of Cabinet, we've revised the wording in the attached Status Table for SCOPA that pertains to recommendation #7 (debt). I've included our edits in track changes (p. 10-11).

If the Deputy is comfortable with this version, I'll send it along to OPCD to incorporate our changes.

Thanks, Anna

Summary Status Table in Response to the
Report of the Auditor General of Ontario

Chapter 2 2017 Annual Report of the Auditor General
Treasury Board Secretariat, Ministry of Finance, Ministry of Energy

Auditor's Recommendation	Completed Undertaking	Outstanding Undertaking (including timeline)
AG Recommendation #1 *We recommend the government record valuation allowances to offset the net pension assets it has recorded from the Ontario Teachers' Pension Plan and the Ontario Public Sector Employees' Union Pension Plan until such time as it obtains formal written authorization from their pension plan co-sponsors that they are able to lower minimum contributions or withdraw surpluses from the pension funds within the next 12 months.*	The Office of the Auditor General communicated its interpretation of Public Sector Accounting Standards (PSAS) requiring a full valuation allowance on the Province's two jointly sponsored pension plans in September 2016. At that time, the government passed a time-limited regulation on the accounting treatment for its joint defined benefit plans to align with the Auditor General's interpretation of PSAS, which enabled officials from Treasury Board Secretariat and the Ministry of Finance to sign the Statement of Responsibility for the 2015-16 Public Accounts. During the 2016-17 year, the professional staff conducted further research and analysis, and determined that PSAS does not require a valuation allowance on either of the jointly sponsored pension plans. This conclusion is supported by: • The conclusions reached by an independent Pension Asset Expert Advisory Panel (the 'Panel'), established by the government to provide advice on the interpretation of PSAS with respect to the reporting of net pension assets of these two joint defined benefit plans. The Panel, comprised of accredited accounting, actuarial and legal professionals with extensive background in pension accounting and plan governance, released its report in February 2017 which supported the government's position that a valuation is not required for these two plans under PSAS. Two key findings of the Panel were: 1) there is no requirement under PSAS that any formal agreement exist between the joint sponsors regarding the timing or amount of a reduction in contributions to record an asset, as the existing agreements in place between the parties support the recognition of an expected benefit, and 2) unilateral control is not	The government will evaluate the need for a valuation allowance annually taking into consideration (a) changes, if any, in the governance structures of the plans, (b), decisions, if any, of the joint sponsors that impact the need for a valuation allowance, and b) changes, if any, in Public Sector Accounting Standards. The government is open to continue to discuss the matter in the hopes of resolving this matter.

DRAFT

	required for asset recognition; joint control with each party having the ability to deny the actions of the other sponsor, provides evidence of shared control, supporting recognition of an asset. • An opinion from Deloitte LLP on aspects of the Province's accounting as at March 31, 2016 for the Ontario Teachers' Pension Plan. The opinion, which was dated October 2, 2016, concluded that it was permissible to recognize a pension asset under Canadian Public Sector Accounting Standards, even though the Province did not have under a unilateral right to reduce contributions. The opinion did not address the value at which the asset should be recorded. • Analysis completed by EY as to whether any valuation allowance is required to be recorded for OTPP or OPSEUPP as of March 31, 2017. EY confirmed no valuation allowance was required for either plan. The government respectfully disagrees with the Auditor General's interpretation of the accounting standards on this issue as PSAS neither requires unilateral control to record an asset, nor does it include a requirement to obtain a letter from the co-sponsor of the plan agreeing to reduce future contributions within 12 months.

Treasury Board Secretariat, Ministry of Finance, Ministry of Energy

AG Recommendation #2 *We recommend that the government remove the Independent Electricity System Operator's Market Accounts from the Province's consolidated financial statements.*	The Province consolidates the entities it controls, in accordance with Public Sector Accounting Standards (PSAS) and its internal reporting policies. Each consolidated entity produces its own stand-alone financial statements and is subject to its own financial statement audit. In 2016, the Independent Electricity System Operator (IESO) changed the accounting for the market accounts and recognized these balances on its financial statements. The financial statements of the IESO for the year-ended December 31, 2016 were subject to an external audit and received an unqualified (or clean) opinion. The government supports this enhanced reporting and greater transparency for the economic activities of the IESO. Additional comments with respect to IESO's accounting for the Market Accounts are included in the response to Recommendation #5 of this report.	The government supports the enhanced reporting and greater transparency for the economic activities of IESO resulting from the recognition of the market accounts. The government is open to continue to discuss the issue in the hopes of resolving this matter.
AG Recommendation #3 *We recommend the government follow the accounting standards established by the Public Sector Accounting Board and the Province's historical accounting precedent, and implement the recommendations in the Special Report issued*	The government prepares its financial statements in accordance with PSAS. The proposed accounting for the Ontario Fair Hydro Plan reflects the economic substance of the transaction by differentiating costs borne by taxpayers versus those borne by ratepayers. PSAS is silent on the recognition, measurement, presentation and disclosure of rate-regulated activities. In absence of a clear position on an issue, standard accounting practice dictates that an entity should consult other accounting standards. This guidance for PSAS is included in PS1150.07. Regarding the Office of the Auditor General's (OAG's) recommendation that the financing for Ontario's Fair Hydro Plan (OFHP) be pursued at the lowest cost to Ontarians, the government reiterates its concerns with this characterization, which were previously provided in the October 4, 2017 government response to the OAG's special report on OFHP (see	The government intends to continue to prepare its financial statements in accordance with Public Sector Accounting Standards (PSAS). The Fair Hydro Trust will raise financing through a combination of 3rd party senior debt and subordinated debt funded by OPG for which the cost will be primarily driven by the credit ratings assigned by Moody's and DBRS. The ultimate cost of this program will be dependent on the quantity of Global Adjustment that will be financed, prevailing market interest rates over the next 30 years, the availability of capital to invest in this type of structured debt and the

DRAFT

by our Office and tabled in the legislature on October 17, 2017, titled The Fair Hydro Plan: Concerns About Fiscal Transparency, Accountability and Value for Money, as follows: • *Record the true financial impact of the Fair Hydro Plan's electricity rate reduction on the Province's budgets and consolidated financial statements; and* • *Use a financing structure to fund the rate reduction that is least costly for Ontarians.*	Government Response to OAG Report on the Fair Hydro Plan in Appendix 5 of the Auditor General's Special Report). With respect to the Global Adjustment Refinancing (GA Refinancing) component of the OFHP, the policy objective is to more fairly allocate the cost to ratepayers over the useful life, not the contractual term, of the electricity generating assets. Therefore, it was a primary policy objective to ensure that the costs are borne by the beneficiaries of the electricity system – the ratepayers – and not the tax-base. The government believes it is appropriate for ratepayers to pay for the financing of electricity assets. The rate-base has a different risk profile than the tax-base, which would be reflected in different interest costs. The various entities that operate in the electricity industry have different financing costs that are specific to their risk profiles. The industry does not operate and is not financed through the Province. Ontario Power Generation (OPG) was identified as the Financial Services Manager responsible for the financing plans and the financing entity (i.e., Fair Hydro Trust) that will manage the debt obligations. OPG has the necessary financing and commercial expertise to assist with refinancing the Global Adjustment (GA) and will ensure that it is done in an efficient and cost-effective manner. OPG has a demonstrated track record in the financial markets with its Corporate Debt platform, private placement of insurance linked bonds, participation in securitization program and highly successful project debt issuances tied to new hydroelectric developments. OPG is beginning the process of raising funds to finance the deferred costs, and while total borrowing costs will not be known until the program is complete, accumulated interest is projected to be less than the estimates in the May 2017 report of the Financial Accountability Office (FAO). The figures referenced in the FAO's report was based on initial Ministry of Energy estimates from March 2017. Government policy on the structured approach to program delivery takes a risk-based approach with respect to transfer payment oversight. Grants are provided to thousands of organizations annually that the government deals with at arms-length and is able to demonstrate proper oversight. A Trust structure was selected to implement the Affordability Fund in order to provide an effective solution to distributing funds to electricity distributors. With approximately 70 distributors across Ontario, it was not feasible for the Province to enter into agreements with each distributor. The Trust structure establishes an independent entity with expertise from the electricity distributor and community sectors. While the Affordability Fund was established at arm's length to the government, there are report-back requirements on the use of funds	The government will continue to assess the most appropriate vehicle for meeting its policy objectives, which include appropriate oversight of how transfer payments are spent.

DRAFT

	transferred as well as the ability for the government to conduct an audit to gain assurance that the funds have been used for the purposes intended.	
AG Recommendation #10 *We recommend that the government determine when it will issue a regulation as outlined under subsection 11(1) of the Fiscal Transparency and Accountability Act, 2004 confirming the source of reference for the Pre-Election Report and the timeline for issuance of the report that will be subject to our review under the Act.*	Under the *Fiscal Transparency and Accountability Act*, 2004, the government may file a regulation that would require it to release a Pre-Election Report on Ontario's Finances. Should the government file such a regulation, the Auditor General would be required to issue a Statement based on a prompt review following the release of such a Pre-Election Report.	The government remains committed to meeting the legislative requirements of the Act and working constructively with the Office of the Auditor General.

Hi Sarah,

Please find attached, DM-approved edits to our response to recommendation #7 in the attached status table (edits in track changes p.10-11).

Happy to discuss should you have any questions.

Thanks, Anna

Hi Anna,

Sorry for the delay. See the DM's edits attached. He would like to keep the first line about the Budget and FES language on the 27%. Other than that, just some minor wording changes.

Thanks
Dave

Hi Dave,

As discussed in our 12:00pm meeting with the Secretary of Cabinet, we've revised the wording in the attached Status Table for SCOPA that pertains to recommendation #7 (debt). I've included our edits in track changes (p. 10-11).

If the Deputy is comfortable with this version, I'll send it along to OPCD to incorporate our changes.

Thanks, Anna

Summary Status Table in Response to the
Report of the Auditor General of Ontario

Chapter 2 2017 Annual Report of the Auditor General
Treasury Board Secretariat, Ministry of Finance, Ministry of Energy

Auditor's Recommendation	Completed Undertaking	Outstanding Undertaking (including timeline)
AG Recommendation #1 *We recommend the government record valuation allowances to offset the net pension assets it has recorded from the Ontario Teachers' Pension Plan and the Ontario Public Sector Employees' Union Pension Plan until such time as it obtains formal written authorization from their pension plan co-sponsors that they are able to lower minimum contributions or withdraw surpluses from the pension funds within the next 12 months.*	The Office of the Auditor General communicated its interpretation of Public Sector Accounting Standards (PSAS) requiring a full valuation allowance on the Province's two jointly sponsored pension plans in September 2016. At that time, the government passed a time-limited regulation on the accounting treatment for its joint defined benefit plans to align with the Auditor General's interpretation of PSAS, which enabled officials from Treasury Board Secretariat and the Ministry of Finance to sign the Statement of Responsibility for the 2015-16 Public Accounts. During the 2016-17 year, the professional staff conducted further research and analysis, and determined that PSAS does not require a valuation allowance on either of the jointly sponsored pension plans. This conclusion is supported by: • The conclusions reached by an independent Pension Asset Expert Advisory Panel (the 'Panel'), established by the government to provide advice on the interpretation of PSAS with respect to the reporting of net pension assets of these two joint defined benefit plans. The Panel, comprised of accredited accounting, actuarial and legal professionals with extensive background in pension accounting and plan governance, released its report in February 2017 which supported the government's position that a valuation is not required for these two plans under PSAS. Two key findings of the Panel were: 1) there is no requirement under PSAS that any formal agreement exist between the joint sponsors regarding the timing or amount of a reduction in contributions to record an asset, as the existing agreements in place between the parties support the recognition of an expected benefit, and 2) unilateral control is not	The government will evaluate the need for a valuation allowance annually taking into consideration (a) changes, if any, in the governance structures of the plans, (b), decisions, if any, of the joint sponsors that impact the need for a valuation allowance, and b) changes, if any, in Public Sector Accounting Standards. The government is open to continue to discuss the matter in the hopes of resolving this matter.

DRAFT

	required for asset recognition; joint control with each party having the ability to deny the actions of the other sponsor, provides evidence of shared control, supporting recognition of an asset. • An opinion from Deloitte LLP on aspects of the Province's accounting as at March 31, 2016 for the Ontario Teachers' Pension Plan. The opinion, which was dated October 2, 2016, concluded that it was permissible to recognize a pension asset under Canadian Public Sector Accounting Standards, even though the Province did not have under a unilateral right to reduce contributions. The opinion did not address the value at which the asset should be recorded. • Analysis completed by EY as to whether any valuation allowance is required to be recorded for OTPP or OPSEUPP as of March 31, 2017. EY confirmed no valuation allowance was required for either plan. The government respectfully disagrees with the Auditor General's interpretation of the accounting standards on this issue as PSAS neither requires unilateral control to record an asset, nor does it include a requirement to obtain a letter from the co-sponsor of the plan agreeing to reduce future contributions within 12 months.

Chapter 2 2017 Annual Report of the Auditor General
Treasury Board Secretariat, Ministry of Finance, Ministry of Energy

AG Recommendation #2 *We recommend that the government remove the Independent Electricity System Operator's Market Accounts from the Province's consolidated financial statements.*	The Province consolidates the entities it controls, in accordance with Public Sector Accounting Standards (PSAS) and its internal reporting policies. Each consolidated entity produces its own stand-alone financial statements and is subject to its own financial statement audit. In 2016, the Independent Electricity System Operator (IESO) changed the accounting for the market accounts and recognized these balances on its financial statements. The financial statements of the IESO for the year-ended December 31, 2016 were subject to an external audit and received an unqualified (or clean) opinion. The government supports this enhanced reporting and greater transparency for the economic activities of the IESO. Additional comments with respect to IESO's accounting for the Market Accounts are included in the response to Recommendation #5 of this report.	The government supports the enhanced reporting and greater transparency for the economic activities of IESO resulting from the recognition of the market accounts. The government is open to continue to discuss the issue in the hopes of resolving this matter.
AG Recommendation #3 *We recommend the government follow the accounting standards established by the Public Sector Accounting Board and the Province's historical accounting precedent, and implement the recommendations in the Special Report issued*	The government prepares its financial statements in accordance with PSAS. The proposed accounting for the Ontario Fair Hydro Plan reflects the economic substance of the transaction by differentiating costs borne by taxpayers versus those borne by ratepayers. PSAS is silent on the recognition, measurement, presentation and disclosure of rate-regulated activities. In absence of a clear position on an issue, standard accounting practice dictates that an entity should consult other accounting standards. This guidance for PSAS is included in PS1150.07. Regarding the Office of the Auditor General's (OAG's) recommendation that the financing for Ontario's Fair Hydro Plan (OFHP) be pursued at the lowest cost to Ontarians, the government reiterates its concerns with this characterization, which were previously provided in the October 4, 2017 government response to the OAG's special report on OFHP (see	The government intends to continue to prepare its financial statements in accordance with Public Sector Accounting Standards (PSAS). The Fair Hydro Trust will raise financing through a combination of 3rd party senior debt and subordinated debt funded by OPG for which the cost will be primarily driven by the credit ratings assigned by Moody's and DBRS. The ultimate cost of this program will be dependent on the quantity of Global Adjustment that will be financed, prevailing market interest rates over the next 30 years, the availability of capital to invest in this type of structured debt and the

DRAFT

by our Office and tabled in the legislature on October 17, 2017, titled The Fair Hydro Plan: Concerns About Fiscal Transparency, Accountability and Value for Money, as follows: • *Record the true financial impact of the Fair Hydro Plan's electricity rate reduction on the Province's budgets and consolidated financial statements; and* • *Use a financing structure to fund the rate reduction that is least costly for Ontarians.*	Government Response to OAG Report on the Fair Hydro Plan in Appendix 5 of the Auditor General's Special Report). With respect to the Global Adjustment Refinancing (GA Refinancing) component of the OFHP, the policy objective is to more fairly allocate the cost to ratepayers over the useful life, not the contractual term, of the electricity generating assets. Therefore, it was a primary policy objective to ensure that the costs are borne by the beneficiaries of the electricity system – the ratepayers – and not the tax-base. The government believes it is appropriate for ratepayers to pay for the financing of electricity assets. The rate-base has a different risk profile than the tax-base, which would be reflected in different interest costs. The various entities that operate in the electricity industry have different financing costs that are specific to their risk profiles. The industry does not operate and is not financed through the Province. Ontario Power Generation (OPG) was identified as the Financial Services Manager responsible for the financing plans and the financing entity (i.e., Fair Hydro Trust) that will manage the debt obligations. OPG has the necessary financing and commercial expertise to assist with refinancing the Global Adjustment (GA) and will ensure that it is done in an efficient and cost-effective manner. OPG has a demonstrated track record in the financial markets with its Corporate Debt platform, private placement of insurance linked bonds, participation in securitization program and highly successful project debt issuances tied to new hydroelectric developments. OPG is beginning the process of raising funds to finance the deferred costs, and while total borrowing costs will not be known until the program is complete, accumulated interest is projected to be less than the estimates in the May 2017 report of the Financial Accountability Office (FAO). The figures referenced in the FAO's report was based on initial Ministry of Energy estimates from March 2017. Subsequent analysis	credit stability of the OFHP program which would be reflected in credit ratings assigned to this debt over time. Each of these factors will need to be managed and monitored closely. The government is open to continue to discuss the issue in the hopes of resolving this matter.

DRAFT

	conducted by the Ministry of Energy refined a number of variables, including the cost of borrowing and the quantity of GA to be refinanced. A number of variables, including interest rates, electricity demand and electricity costs, will change over the thirty-year life of OFHP. Government will continue to revise cost estimates to reflect these variable conditions. In addition, as outlined in the 2017 Long-Term Energy Plan, the government will continue to identify and implement initiatives to take costs out of the electricity system, which would reduce the cost of GA refinancing.	
AG Recommendation #4 *The Office of the Auditor General is the appointed under the Auditor General Act as the auditor for the consolidated financial statements of the Province of Ontario. We recommend that the Treasury Board Secretariat:* • *Proactively supply copies to the Auditor General of all contracts it enters into for accounting advice and opinions in order to ensure that*	Treasury Board Secretariat's use of external expertise for accounting and financial reporting matters supplements its own resources on complex or emerging accounting and reporting matters. External advisors are generally engaged to provide advice and guidance to supplement internal analysis. Treasury Board is committed to working with the Office of the Auditor General to discuss issues, once the professional staff has completed its analysis of the issue. In addition, Treasury Board believes frequent communication with the Office of the Auditor General is important and to that end, requested additional meetings with both the staff and the Auditor General during the 2016-17 audit. Where required by the CPA Ontario Code of Professional Conduct, the Auditor General has been, and will continue to be, advised of external advisor involvement.	Treasury Board Secretariat will continue to take a proactive approach to raising issues with the Office of the Auditor General. Where required by the CPA Ontario Code of Professional Conduct, the Auditor General will continue to be advised of external advisor involvement.

DRAFT

our Office is aware of the work the advisers are performing, can assess significant issues in a timely manner, and can determine the impact on the Province's consolidated financial statements and our annual audit; and • *Build into its contracts with external advisers the requirement that the advisers engaged to provide accounting advice and opinions that affect the consolidated financial statements notify our Office of*		

DRAFT

their engagement as required under the Code of Professional Conduct of the Chartered Professional Accountants of Ontario.		
AG Recommendation #5 *We recommend that the Independent Electricity System Operator (IESO), an "other government organization," use the Canadian Public Sector Accounting Standards (PSAS) in the preparation of its financial statements. Specifically, it should:*	The Independent Electricity System Operator (IESO) prepares its financial statements in accordance with Public Sector Accounting Standards (PSAS) and the financial statements are audited by a firm of independent external auditors whose responsibility is to express an opinion on whether the financial statements are fairly presented in accordance with PSAS. On its 2016 financial statements, IESO received an unqualified (clean) audit opinion. In its role as market administrator, IESO operates and settles approximately $17 billion through the electricity market. The change to include market account assets and liabilities in the financial statements provides increased transparency with respect to the value of transactions that flow through Ontario's electricity market, that otherwise would go	The IESO intends to continue to prepare its financial statements in accordance with Public Sector Accounting Standards, and will report on the results of its accounting firm's audit in its 2017 financial statements, to be published March 30, 2018. The IESO will continue to regularly review its accounting policies to ensure they are best suited to the reporting requirements of its business and the users of its financial statements. This includes providing transparency into the value of transactions that flow through Ontario's $17 billion electricity market and reflecting the economic substance of certain types of expenses that may not be directly recovered through normal revenue requirement

DRAFT

• *Remove market accounts recorded on its financial statements; and* • *Discontinue the inappropriate use of rate-regulated accounting in the preparation of its financial statements.* *To ensure that the members of the Legislative Assembly receive financial information on the operations of the IESO prepared in accordance with Canadian PSAS, the Office of the Auditor General will conduct an attest audit of the December 31, 2017, financial statements of the IESO as permitted under the Electricity Act, Subsection 25.2(2), which*	unreported in IESO's financial statements. These changes were extensively discussed with IESO's external auditors, its Audit Committee and its Board of Directors. The decision was supported by the Office of the Provincial Controller and IESO's external audit firm. Rate-regulated accounting better reflects the economic substance of certain types of IESO expenses (like those related to the Smart Metering Entity) that may not be directly recovered through normal revenue requirement models, and instead are recovered through rate regulation. This change is in line with accounting practices followed by six out of eight other independent system operators in North America and provides IESO financial statement users greater transparency into the substance of the variance accounts it holds and its right to collect an amount in the future.	models, and instead are recovered through rate regulation. The IESO recognizes the Auditor General's statutory role and authority to perform an audit of the IESO. The IESO is cooperating with the Office of the Auditor General to provide information, including the 2017 financial statements prepared by management, and for access to management for assistance in understanding such information. The IESO has likewise instructed its audit partner to cooperate with the Auditor General's audit.

DRAFT

states: "The Auditor General may audit the accounts and transactions of the IESO. 2014, c. 7, Sched. 7, s. 3 (1)."		
AG Recommendation #6 *We recommend the government follow the accounting standards established by the Public Sector Accounting Board, rather than using legislation and regulations to prescribe accounting treatments.*	The Province is committed to provide high-quality financial reports that support transparency and accountability in reporting to the public, the legislature and other users. For the 2015-16 Public Accounts, the government passed a time-limited regulation prescribing the accounting treatment for net pension assets in order to allow Treasury Board Secretariat and Ministry of Finance officials to sign off on Public Accounts consistent with the fiscal impact of the Auditor General's interpretation of Public Sector Accounting Standards (PSAS). This regulation is the only example of where the accounting treatment was legislated, and the legislation did not align with the requirements of PSAS. With respect to the Ontario Fair Hydro Plan Act and its regulations, there are no provisions in that legislation that prescribe the accounting treatment required to be followed by the Province. It is important to distinguish legislating the accounting from legislating the right of the government to recover amounts from specified ratepayers in the future,	The government intends to continue to prepare its financial statements in accordance with Public Sector Accounting Standards.

DRAFT

	which in the absence of the legislation, would have been collected from specified ratepayers as the costs were incurred. The accounting for the transactions resulting from the Fair Hydro Plan will be recorded in accordance with PSAS.	
AG Recommendation #7 *We recommend that in order to address the Province's growing total debt burden, the government work towards the development of a long-term total-debt reduction plan linked to its target of reducing the net debt-to-GDP ratio to its pre-recession level of 27% as measured using proper accounting for net pension assets and the projected costs of the Fair Hydro Plan. The government should also discuss publicly how it plans to pay down the debt.*	The 2017 Budget and the 2017 Fall Economic Statement stated that the government continues to maintain a target of reducing the net debt-to-GDP ratio to its pre-recession level of 27%~~,~~ ~~currently projected for 2029-30, together with an interim target of 35% by 2023-24. From 2017-18 onwards, the balanced budget environment will limit increases in debt to the difference between annual investments in infrastructure improvements and the amortization of such investments.~~ The government is making strategic investments in programs and services that will generate economic growth, while minimizing interest on debt costs. ~~The forecast balanced budget in 2017–18 will limit the increase in net debt to net investments in capital assets.~~ These investments ~~will~~are intended to grow ~~contribute to~~ the economy ~~growing~~ at a faster rate than net debt, allowing the government to manage Ontario's net debt-to-GDP ratio. The forecast balanced budget in 2017–18 will limit the increase in net debt to net investments in capital assets. The government's long-term infrastructure plan to invest about $190 billion over 13 years, starting in 2014-15, will contribute to the growth of the economy. The Centre for Spatial Economics found that for every $1 spent on public infrastructure, GDP increases by $6, on average, in the long term.	Continue to monitor progress. ~~Estimated implementation by FY 2029-30.~~

DRAFT

Summary Status Table in Response to the Report of the Auditor General of Ontario

Chapter 2 2017 Annual Report of the Auditor General

Treasury Board Secretariat, Ministry of Finance, Ministry of Energy

	Therefore, while overall debt will rise to fund these infrastructure investments, measurements of relative debt such as the net debt-to-GDP ratio, a recommended practice by the Public Sector Accounting Board, will gradually diminish due to the Province's GDP increasing at a faster rate than net debt. This will allow the Government to continue to move towards its 27% net debt-to-GDP target. The ratio has already commenced declining~~, falling to 37.3% in 2017-18~~ from its 2014-15 peak of 39.3%. As discussed more thoroughly in responses to other recommendations in this report, the government prepares its financial statements in accordance with Public Sector Accounting Standards, including the net pension assets for its jointly sponsored pension plans and the transactions resulting from the Ontario Fair Hydro Plan.	
AG Recommendation #8 *We recommend that the Office of the Provincial Controller undertake thorough planning involving all stakeholders, including Treasury Board Secretariat, ministries and provincial government agencies, to identify the*	Treasury Board Secretariat and the Ministry of Finance are supportive of the timely delivery of the Public Accounts. The Office of the Provincial Controller works closely with the Office of the Auditor General to identify audit issues early and to ensure that stakeholders are engaged in discussions regarding risks and resolution. The Office of the Provincial Controller will continue to collaborate with the Office of the Auditor General to support the timely delivery of the Public Accounts.	Planning discussions for the 2017-18 Public Accounts have begun between the Office of the Provincial Controller and the Office of the Auditor General. As well, the Office of Economic Policy has been engaged in discussions on risk considerations related to economic models used to estimate personal and corporate tax revenues.

DRAFT

Formatted: Normal

barriers and key areas to be addressed to achieve earlier finalization of the Province's consolidated financial statements, including the estimation risks associated with corporations tax and personal income tax revenues.	The Province will work with the Canada Revenue Agency on this recommendation, as reporting Personal and Corporate taxation revenues is highly dependent on information they provide.	
AG Recommendation #9 *We recommend that the government avoid establishing arm's length trusts in order to record an expense in its consolidated financial statements before it is necessary, given that it loses the ability to ensure that funds are ultimately provided to the appropriate beneficiaries.*	The government works with its transfer payment recipients to ensure it receives good value for the money it provides in the form of grants. Government policy on the structured approach to program delivery takes a risk-based approach with respect to transfer payment oversight. Grants are provided to thousands of organizations annually that the government deals with at arms-length and is able to demonstrate proper oversight. A Trust structure was selected to implement the Affordability Fund in order to provide an effective solution to distributing funds to electricity distributors. With approximately 70 distributors across Ontario, it was not feasible for the Province to enter into agreements with each distributor. The Trust structure establishes an independent entity with expertise from the electricity distributor and community sectors.	The government will continue to assess the most appropriate vehicle for meeting its policy objectives, which include appropriate oversight of how transfer payments are spent.

DRAFT

	While the Affordability Fund was established at arm's length to the government, there are report-back requirements on the use of funds transferred as well as the ability for the government to conduct an audit to gain assurance that the funds have been used for the purposes intended.	
AG Recommendation #10 *We recommend that the government determine when it will issue a regulation as outlined under subsection 11(1) of the Fiscal Transparency and Accountability Act, 2004 confirming the source of reference for the Pre-Election Report and the timeline for issuance of the report that will be subject to our review under the Act.*	Under the *Fiscal Transparency and Accountability Act*, 2004, the government may file a regulation that would require it to release a Pre-Election Report on Ontario's Finances. Should the government file such a regulation, the Auditor General would be required to issue a Statement based on a prompt review following the release of such a Pre-Election Report.	The government remains committed to meeting the legislative requirements of the Act and working constructively with the Office of the Auditor General.

Pension Asset Expert Advisory Panel Submits Final Report

Government Accepts Independent Panel's Recommendations on Accounting for Pension Plans

NEWS February XX, 2017

The Pension Asset Expert Advisory Panel has released its independent advice and recommendations on the application of public sector accounting standards to two of Ontario's jointly sponsored pension plans. The government is accepting the panel's recommendations, which will inform the preparation of the Province's financial statements.

The panel's report concluded that the province's share of the net pension assets of both the Ontario Teachers' Pension Plan (OTPP) and the Ontario Public Sector Employees' Union Pension Plan (OPSEUPP) should be recognized in Ontario's financial statements.

In preparing the 2015-16 Public Accounts of Ontario, the Province's professional accounting staff and the Auditor General's Office could not reach an agreement on the appropriate application of the Public Sector Accounting Board (PSAB) standards regarding pension accounting for the Province's jointly-sponsored pension plans.

The government formed the Pension Asset Expert Advisory Panel to provide independent advice on how public sector accounting standards are interpreted as they apply to net pension assets. The panel members have expertise in the areas of jointly-sponsored pension plans governance, actuarial modelling for pension plans and Public Sector Accounting Standards.

The Province remains committed to achieving a balanced budget by 2017-18, and remaining balanced in 2018-19.

Responsible financial management is part of the government's plan to create jobs, grow the economy and help people in their everyday lives.

QUOTES

"I would like to thank the expert advisory panel for their thorough analysis and recommendations on this complex accounting issue. We accept the advice of the panel and will use it in preparing the province's financial statements."
— Liz Sandals, President of the Treasury Board

"With the help of the unique professional skillsets and perspectives of the independent advisory panel, we now have additional advice on how to account for current jointly-sponsored pension assets. This advice will help us continue to present the province's finances fairly and accurately, as we work toward balancing the budget in 2017-18."
— Charles Sousa, Minister of Finance (TBC MOF)

QUICK FACTS

DRAFT

- By applying the panel's advice, the province would see a reduction in debt to now $10.7 billion.
- For 2015-16, this means the province's deficit has been lowered by $1.5 billion.
- For 2016-17, the province's fiscal position will improve by $2.2 billion.
- In its report, the panel supports the accounting treatment that Ontario has used consistently since 2001.
- In the coming weeks, the panel will issue a supplemental report that will provide advice and recommendations on how to account for potential future net pension assets related to the Healthcare of Ontario Pension Plan (HOOPP) and the Colleges of Applied Arts and Technology Pension Plan (CAATPP).

Subject: RE: The FAO's FES Commentary

David

Thanks again for sharing this, its greatly appreciated.

Another small suggestion....its just a footnote, but just so we're on the same page:

In the footnote on page 3, it states:

"In the 2015-16 Public Accounts, the Province legislated a change in the accounting treatment of jointly sponsored pension plans, which increased net debt by $9.2 billion and the deficit by $1.5 billion in 2015-16. The FAO will adopt the government’s estimates of the accounting change’s impact in future reports."

The total impact on the change on net debt is actually $10.7 billion (= $9.2 billion + in-year of $1.5 billion) both in the press release and FES the government referred to the $10.7 billion. Press release excerpt is below.

“The impact of the change resulted in an additional $10.7 billion being added to the net debt and accumulated deficit and an increase in the annual deficit of $1.5 billion.”

Hope that helps

Tim

Subject: RE: The FAO's FES Commentary

Thanks for sharing.

Might be worth noting that upward revisions to past nominal GDP released after your report account of much of the difference in the debt/gdp ratio between the government and FAO projections.

A more subtle point, but you might want to consider describing the government forecast as “more optimistic” than yours rather than “optimistic”, as it is possible revenues will come in higher than the government’s forecast (as they did last year), or lower than yours.

Subject: The FAO's FES Commentary

Hello All,

As I promised at our meeting last week, please find attached a draft (embargoed) copy of the Commentary that I mentioned last week.

We plan to release this Commentary on our website on Monday. As always, please treat the document as confidential until its release.

Although we are not formally requesting any feedback on the note, please feel free to let us know if you find anything particularly egregious.

Thanks again for your on-going assistance.

Best regards,

David West
Chief Economist

Thanks David and team!

Looking forward to our conversation tomorrow. As some of these questions are for detailed background data, we may need to provide those post-tomorrow's meeting so we can gather it up in a way that works best to answer the question. But we'll come prepared with as many A's as possible and together we can map out a plan to get you the details you need following the meeting as well. We'll do our best to have all the right people in the room tomorrow.

Hope that works.

Tim

Hello David and Peter,

I wanted to reconfirm tomorrow's FES/FAO meeting. It will be taking place between 2:30pm-3:30pm in the Aquarium Boardroom (4th floor of the Frost South Building). I'll be forward the invitation shortly.

Please let me know if additional FAO staff will be in attendance. I'll make sure they're also registered with security.

Let me know if you have any questions.

Thanks,

Ryan

Hey guys

Thanks for the update on what would best suit your needs. We're happy to accommodate your request for a meeting….guess I'd suggest maybe late Wednesday so that folks have time to follow-up on the questions we'd get from you guys Tuesday afternoon. Also Wednesday mornings are filled with regular check-in meetings folks need to be at, so maybe we can find time Wednesday afternoon.

Something around 230pm work for you guys?

Hi Tim,

So, change of plans! The release of FES at 1pm on Monday, which is earlier than we expected, reduces the benefits of coming over to Frost to get a preview of the document, prior to release.

As a result, while we thank you for the offer, we'll decline your invite to come over to Frost on Monday. (Although we'll miss seeing your smiling face!)

However, instead, we would like to request a potential meeting on Wednesday (possibly late morning?) to discuss any FES-related questions. We would plan to send you our questions by Tuesday afternoon to allow you to try to assemble appropriate staff for the Wednesday meeting.

Would this work for you?

Thanks

David

Thanks David, Peter.

• Right now the plan is for the Minister to rise and present the FES at 1pm on Monday. So I'm wondering if it is ok for you guys to come at 11am. We would expect you to stay in the boardroom we assign to you until the Minister stands up to deliver the speech – like a lock-up of sorts. Please let me know if you have any issues with that.

• I'm working hard to get you guys bound copies for your secure reading, but it may be a challenge as they are under OPP guard until the Minister stands (and we have no official lock up so I need to pull a few favours). If not, we'll print out copies on paper for you.

• Can you send me the list of names that would come? I'll need to know in advance.

• As far as answering questions, we'll try and have a few people around but it's a crazy day around here for us and we'll probably be scrambling. If its ok, I prefer to not make it a merry-go-round of people going in and out of the boardroom where you are. If possible, can we agree that you guys will spend the first hour or so going through all the documents, compiling your questions into a list, and then we'll ask people to come around for a chat? That way it's abit more organized, and I can tell people to make themselves available around noon for q's rather than stay on stand-by for 2 hours not knowing. Let me know what you think. If we can't get someone in the time you're here, of course we'll arrange for any follow-up.

Let me know what you think.

Subject: RE: Fall statement

Thanks Tim,

As Peter indicated, we would like to take you up on this offer.

I think there will be 4 or 5 of us who would be interested in a preview of the document, and the opportunity to ask some questions in person.

Do you expect that the Minister will deliver a statement in the Legislature at approximately 4pm? So, if we arrived at perhaps 2pm we could have a couple of hours with the document before the release?

We (the FAO) would not plan to make any public statements on the FES right away. But, we may decide to release a short 'Commentary' document on the FAO's website several days after the FES release (likely the following week) that compares the FAO's projections (from our recent EFO) with the FES projections and outlines some of the main differences in assumptions.

Please confirm what time you recommend we arrive at Frost South on Monday and that we can (potentially) bring several staff with us.

Regards,

David West

Peter, David

Hope this email finds you both well. As you may have heard, today our Minister announced that the Fall Statement would be released on Monday, November 14th.

Last year we had you guys in here, on a confidential basis, to review the documents and read them ahead of when it was tabled. We'd like to extend that offer to you again, if you think it would help you in your efforts to respond to the document.

I believe we hosted you here last year and that you spent an hour or so with the documents.

Please let me know if this is something you think you'd benefit from again this year, and I'll work to make the necessary arrangements.

Thanks in advance;

Subject: The FAO's Fall Economic and Fiscal Outlook Report

Good morning,

As you know, the FAO will be releasing a fall economic and fiscal outlook (EFO) report on Thursday, November 3, 2016 at 9:00 am. There will be separate technical briefings for media and MPPs at 9:00 and a statement by the Temporary FAO, Commissioner Wake (with my assistance) for media at 12:00 noon. (The Media Studio wasn't available at 10:00.) Please find attached the final version of the report for your reference.

The report (along with the attached letters) is being delivered to Ministers Sousa and Sandals this

morning.

Please treat this document as embargoed until its release on Thursday at 9:00 am.

As always, we greatly appreciate your assistance and support for the work of the FAO.

Best regards,
David

Economic and Fiscal Outlook

Assessing Ontario's Medium-term Prospects

Fall 2016 Update

About this Document

Established by the *Financial Accountability Officer Act, 2013*, the Financial Accountability Office (FAO) provides independent analysis on the state of the Province's finances, trends in the provincial economy and related matters important to the Legislative Assembly of Ontario. The FAO's Economic and Fiscal Outlook is released each spring and fall, providing an assessment of the province's medium-term economic performance and fiscal position.

This report was prepared by Nicolas Rhodes, Luan Ngo, Edward Crummey, and Mario Angastiniotis under the direction of David West. External reviewers were provided with earlier drafts of this report for their comments. However, the input of external reviewers implies no responsibility for this final report, which rests solely with the FAO.

This report is based on information available to October 7, 2016. Background data used in this report are available upon request.

FAO's Fiscal Projections

The FAO forecasts provincial finances based on projections of existing and announced revenue and spending policies. The forecast represents the FAO's view of the most likely fiscal outcomes given existing policies, without anticipating any new government policy decisions. The FAO's tax revenue projections are based on an assessment of the outlook for the provincial economy and current tax policies. Given the government's discretion over spending, the FAO adopts the government's announced spending plans from fiscal documents and incorporates policy announcements as appropriate. Beyond the government's published spending projections, the FAO forecasts spending based on the outlook for underlying cost drivers including demographics and price inflation.

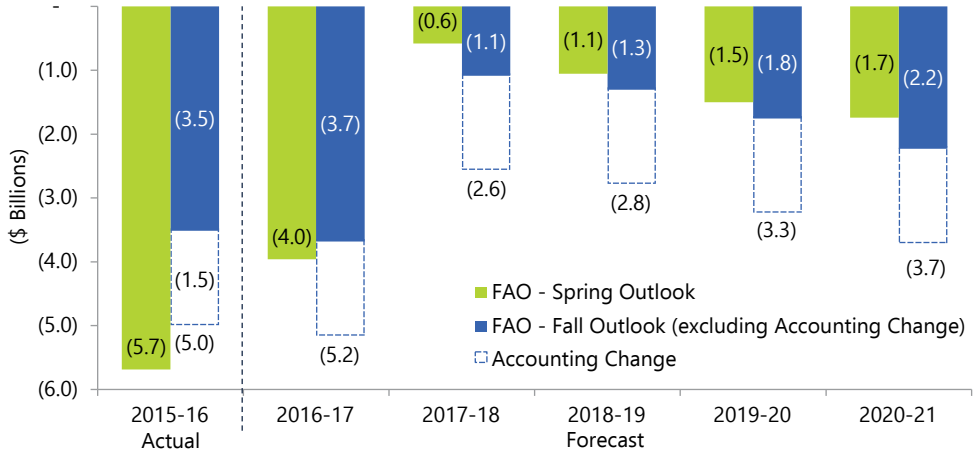
1 EXECUTIVE SUMMARY

This report provides an updated Economic and Fiscal Outlook for Ontario based on developments since the release of the FAO's spring outlook[1] on May 18, 2016.

Major developments since the FAO's spring report include:

- the release of Ontario's Public Accounts, which reported higher than expected tax revenues in 2015-16, suggesting higher revenues over the outlook;
- proposed new spending commitments, announced in the government's Throne Speech, to provide an HST rebate on electricity bills and expand child care spaces; and
- a more moderate outlook for economic growth, reflecting weaker economic conditions in Canada and globally, which leads to lower tax revenues but also lower interest on debt expense.



In addition, the government legislated a change in the accounting treatment for jointly sponsored pension plans, which increased program expense by $1.5 billion in 2015-16.[2]

1 'Economic and Fiscal Outlook, Assessing Ontario's Medium Term Prospects, Spring 2016', Financial Accountability Office of Ontario.

2 In the 2015-16 Public Accounts, the Province legislated a change in the accounting treatment of jointly sponsored pension plans, which increased net debt by $9.2 billion and the deficit by $1.5 billion in 2015-16. It is not clear how this accounting change for 2015-16 will impact the Province's finances in the future. For this report, the FAO assumed that program spending is $1.5 billion higher over the outlook, and provided Ontario's fiscal position both excluding and including the accounting change.

Excluding the accounting change, these developments were largely offsetting, resulting in a moderately higher budget deficit over the outlook compared to the FAO's spring report.

Ontario's Budget Balance*

Source: Ontario Public Accounts and FAO

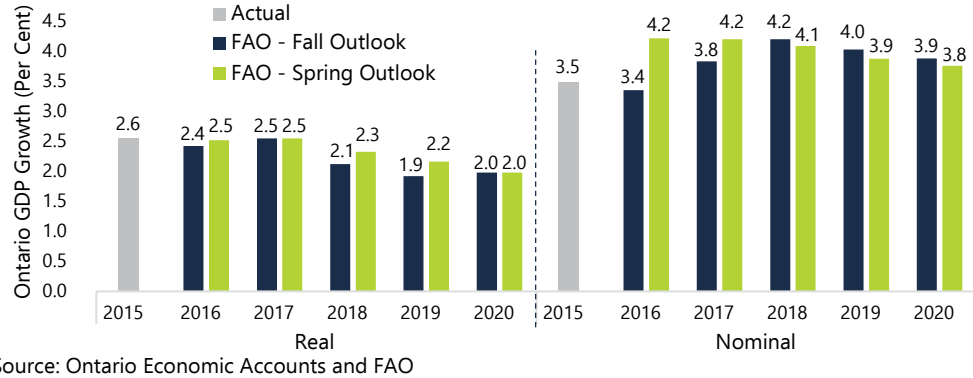
* Budget balance excluding reserve.

Including the accounting change, the FAO is projecting Ontario budget deficits of $5.2 billion in 2016-17 and $2.6 billion in 2017-18.[3] Beginning in 2018-19, the deficit is forecast to steadily deteriorate to $3.7 billion by 2020-21, as growth in revenue is outpaced by increases in program expense and interest on debt.

Ontario's net debt is expected to rise by $64 billion over the next five years to $370 billion by 2020-21, about $20 billion higher than forecast in the FAO's spring outlook. This increase in net debt is the result of cumulative deficits, capital spending and the accounting change. Ontario's net debt-to-GDP ratio is now expected to plateau at about 41 per cent, significantly above the 39.6 per cent peak projected in the FAO's spring report.

The government has reaffirmed its commitment to achieve budget balance in 2017-18 and maintain balance going forward. However, based on the FAO's analysis of the economic outlook and the government's current fiscal position, Ontario's budget would be expected to remain in deficit over the next five years. Achieving and maintaining budget balance will likely require additional measures to raise revenue or reduce expense.

3 In this report, the budget deficit is presented excluding any 'reserve'. In government budget documents, the reported budget deficit typically includes a 'reserve' as a measure of prudence against unexpected outcomes. For example, in the 2016 Budget, the budget deficit for 2016-17 included a $1.0 billion reserve.



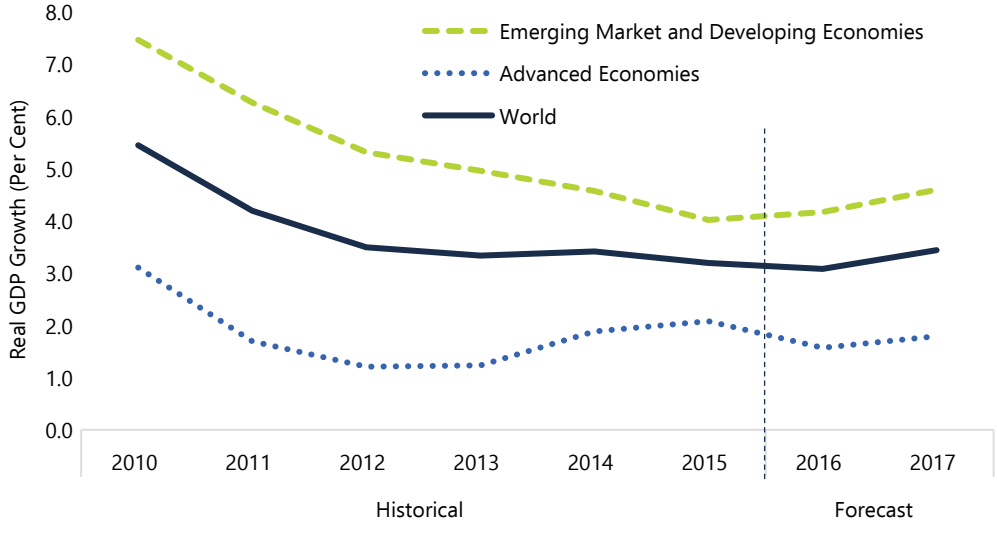
2 ECONOMIC OUTLOOK

Overview

Ontario Growth Expected to be Lower in 2016 and 2017[1]

Following a solid gain in the first quarter of 2016, economic indicators suggest that the pace of economic activity in Ontario moderated noticeably through the second quarter, reflecting a decline in merchandise exports and slower growth in retail sales. Based on Ontario's economic performance over the first half of 2016, the FAO has revised down its projection for Ontario real and nominal GDP growth compared to the outlook presented in the FAO's spring outlook report.[2] In particular, nominal GDP – the broadest measure of the tax base – is now projected to increase by 3.4 per cent in 2016 and 3.8 per cent in 2017, below the 4.2 per cent projected in the spring.

The FAO's Revised Economic Outlook



Source: Ontario Economic Accounts and FAO

1 See Appendix for detailed forecast tables.
2 'Economic and Fiscal Outlook, Assessing Ontario's Medium Term Prospects, Spring 2016', Financial Accountability Office of Ontario.

Global Economic Growth Revised Modestly Lower

Global economic growth remains tentative with current forecasts much weaker than expected a few years ago and well below the pace of growth before the 2008-2009 recession. According to the latest forecast from the International Monetary Fund (IMF)[3], the global outlook for 2016 and 2017 has weakened since the FAO's spring report, largely due to the United Kingdom's decision to withdraw from the European Union (commonly referred to as *Brexit)*. The deterioration in the global outlook largely reflects greater political uncertainty across a wide range of institutional and economic arrangements which is negatively affecting business confidence and investment.

Global Growth Remains Weak

Source: International Monetary Fund, World Economic Outlook, October 2016

The IMF is projecting global growth of 3.1 per cent in 2016 and 3.4 per cent in 2017, slightly lower than its outlook last spring. The downward revisions to the IMF's global outlook are concentrated in European economies, with minor changes to the forecasts for the United States and China. The IMF has lowered its forecast for Canadian real GDP growth to 1.2 per cent in 2016 and 1.9 per cent in 2017. Most advanced economies continue to experience weak business investment and poor labour market results, which are contributing to a muted inflation outlook. On average, advanced economies are expected to record growth of just 1.6 per cent in 2016 and 1.8 per cent in 2017.

3 International Monetary Fund, World Economic Outlook, October 2016

In China, economic growth is expected to gradually moderate as the economy continues to rebalance from investment and manufacturing-led growth to a more service-intensive economy. China's real GDP growth is expected to be 6.6 per cent in 2016 and 6.2 per cent in 2017, down substantially from growth rates of over nine per cent following the global recession. The short-term outlook for China has improved modestly compared to the spring outlook, largely as a result of stimulus from both monetary and fiscal policy.

There were only modest changes in the IMF's outlook for the other large emerging market economies since the spring. On average, the IMF is projecting real GDP growth for emerging and developing market economies of 4.2 per cent in 2016, strengthening to 4.6 per cent in 2017.

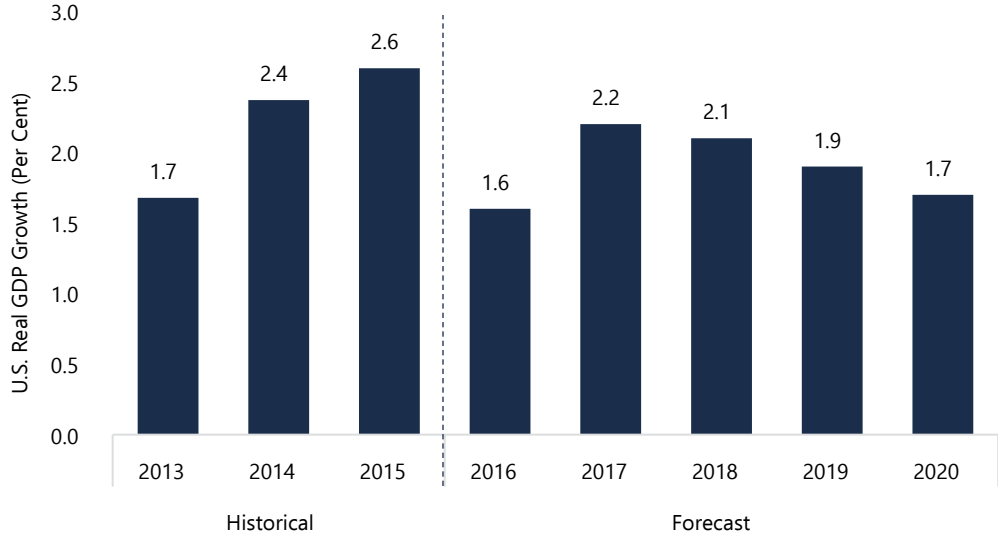
Significant Risks Remain for the Global Outlook

Economic and political uncertainty remains elevated with a number of significant risks continuing to weigh on global growth prospects.

In Europe, concerns over the stability of a number of major banks raises the risk of a renewed financial crisis which would impact the already weak pace of European growth. As well, the sharp rise in corporate and household debt in China over the past several years has been identified by the IMF as a key risk for the global economy.

Other political developments, including military conflict in the Middle East and the growing popularity of nationalism and protectionist trade policies in developed nations could also impact global economic growth.

U.S. Economic Growth Weaker than Expected in 2016



In the United States, economic growth over the first half of 2016 was weaker than expected, contributing to downward revisions of recent economic forecasts. Over the first two quarters of 2016, U.S. real GDP increased by just 1.4 per cent on a year-over-year basis, well below projections last spring for growth of over two per cent.

U.S. employment growth has also moderated in 2016, with average monthly gains of about 180,000 jobs, down from average monthly increases of almost 230,000 jobs in 2015 and 250,000 in 2014.

Despite the weaker than projected growth for 2016, economic forecasters continue to expect the U.S. economy will strengthen over the remainder of 2016 and beyond. In particular, household spending and residential construction are expected to contribute to overall economic growth, supported by continued job creation and rising wages. Forecasters also remain confident that business investment, which has generally disappointed expectations over the past several years, will eventually rebound and help spur overall economic growth.

Based on the latest IMF forecast, U.S. real GDP is expected to grow by 1.6 per cent in 2016 and strengthen to over two per cent growth in 2017 and 2018. Beyond 2018, growth is expected to moderate, remaining close to the pace of growth of potential output.[4] This moderate but steady growth in the U.S. economy should lead to a gradual rise in interest rates.

U.S. Economic Growth Disappoints in 2016

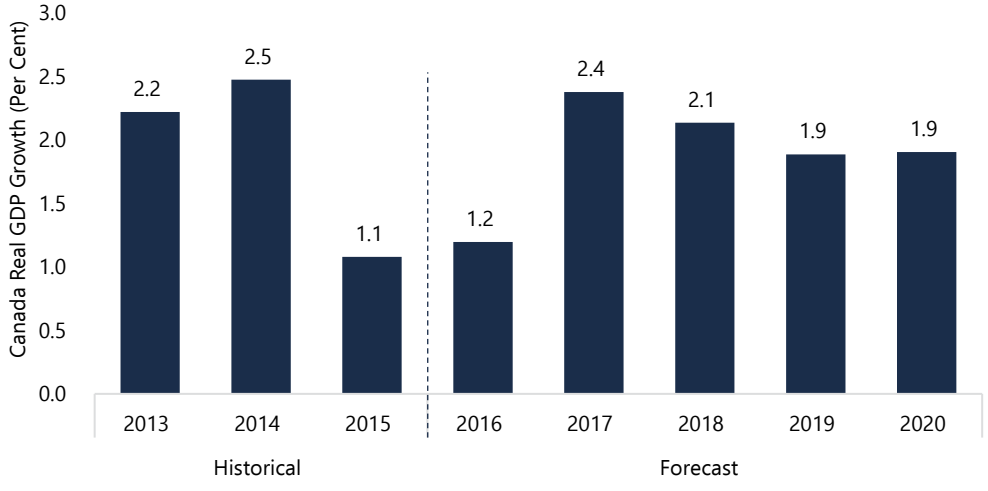
Source: International Monetary Fund, World Economic Outlook, October 2016

4 The maximum sustainable level of output where the economy's resources such as labour are fully utilized.

Canadian Economic Growth Revised Lower

The outlook for the Canadian economy has deteriorated over the past six months. Canadian real GDP is currently projected to grow by 1.2 per cent in 2016, down from a forecast of 1.7 per cent growth at the time of the FAO's spring outlook.[5] The downward revision to the Canadian outlook reflects the impact of the Alberta wildfires, but also weaker than expected non-energy exports and business investment.

After a promising start to 2016, with solid first quarter growth, Canadian real GDP declined at an annualized rate of 1.6 per cent in the second quarter, the weakest quarterly result since the 2008-2009 recession. While the Alberta wildfires were a major contributor to the disappointing outcome, there were also declines in household durable goods spending and business investment. Temporary disruptions in Ontario's auto sector[6] led to a drop in automotive exports, which contributed to an overall decrease in goods exports in the first half of 2016.

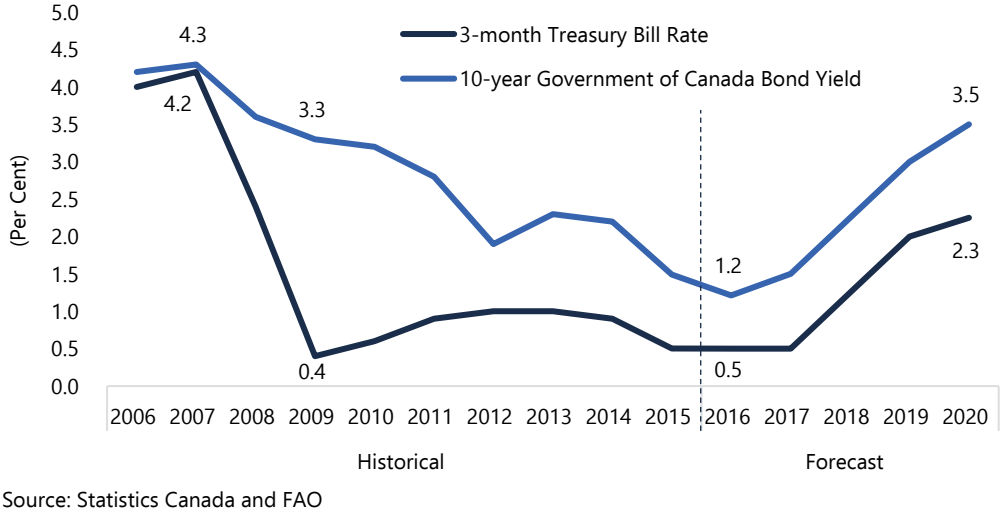


The resumption in oil production in Alberta and the end of production slowdowns in the auto sector should contribute to a rebound in Canada's goods exports in the third quarter. This, along with an expected boost to consumer spending from the federal child benefit in the third quarter, will contribute to stronger real GDP growth in the second half of 2016. Further, the rebuilding effort in Alberta should bolster Canadian real GDP growth in 2017.

Beyond the temporary factors which buffeted the economy in 2016, the Canadian economy continues to adjust to the longer-term structural impact of lower energy prices. While weakness in the energy sector continues, growth in the rest of the Canadian economy has not significantly improved, leading to slower growth overall than previously expected. In 2015 and 2016, Canadian real GDP is expected to grow by just over one per cent on average, well below the 2.5 per cent average rate recorded from 2010 to 2014.

However, forecasters generally expect the Canadian economy to strengthen in 2017, recording growth of 2.4 per cent, as steady gains in non-energy exports, and a rebound in business investment help offset continued slow growth in the oil and gas sector.

5 Based on the FAO consensus forecast which includes the Centre for Spatial Economics, the University of Toronto and the Conference Board of Canada.
6 General Motors shut four of its North American assembly plants, including the Oshawa plant for 2 weeks in April 2016. This was due to a parts shortage, caused by the earthquakes that struck Japan. 'GM's Oshawa plant halts production for two weeks', The Toronto Star, April 22, 2016.



Canada GDP Growth Expected to Rebound in 2017

Source: Statistics Canada and FAO Consensus

Given the relatively slow growth of the Canadian economy, the Bank of Canada appears unlikely to raise its key policy interest rate before 2018. As a result, the FAO has revised down its interest rate outlook from its spring forecast. The current outlook assumes short-term rates remain near current levels until 2018. Beyond 2018, interest rates are expected to gradually normalize with the 10-year Government of Canada bond yield rising to 3.5 per cent by 2020 – a full percentage point below the FAO's spring projection of 4.5 per cent in 2020.

Canadian Interest Rates to Rise Gradually

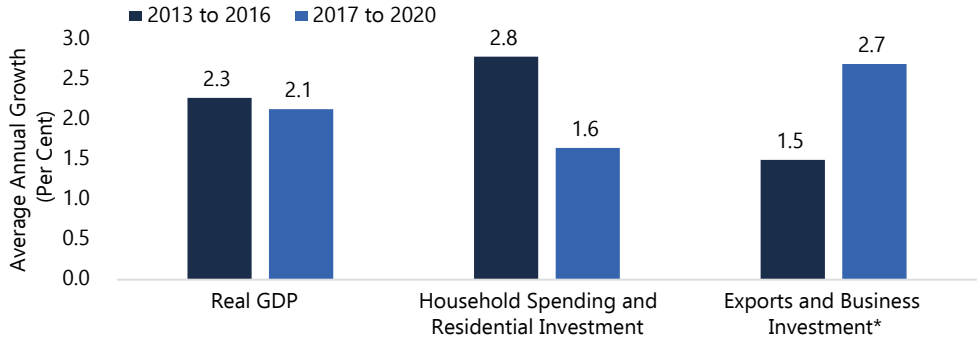
Source: Statistics Canada and FAO

The Canadian dollar is expected to gradually appreciate over the next five years, rising from an average of about 76 cents U.S. in 2016 to about 84 cents U.S. by 2020, supported by steady economic growth and a gradual increase in oil prices.

Ontario Economic Outlook

Outlook for Real GDP Growth Remains Solid

The Ontario economy posted strong real GDP growth over the second half of 2015 and into the first quarter of 2016. However, merchandise exports, retail trade and employment growth slowed noticeably in the second quarter of 2016, contributing to a slowdown in overall economic growth.



The slower pace of growth in the second quarter was partly the result of the temporary shutdown of some auto production facilities in the province. However, the return to normal production levels should boost third quarter growth. In addition, the introduction of the new federal child benefit in the third quarter is expected to provide a lift to household spending over the second half of 2016. In 2017, new spending initiatives announced in the Ontario government's September Throne Speech should also provide some additional support to household and government spending.[7]

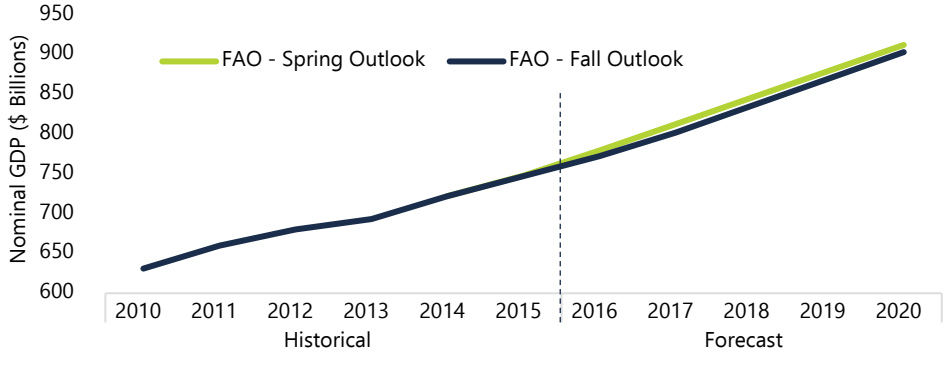
On an annual basis, the FAO is forecasting real GDP growth of 2.4 per cent in 2016 and 2.5 per cent in 2017, slightly below the projection last spring. Beginning in 2018, real GDP growth is expected to gradually moderate, with average annual gains of 2.0 per cent.

The FAO forecast is broadly consistent with the consensus view among economists that stronger international exports and business investment will be key drivers of Ontario's overall growth over the next several years. At the same time, household spending and residential investment are expected to grow more modestly as households begin to reduce borrowing and residential construction activity slows.

7 This includes the announced expansion of child care spaces in Ontario and the rebate of the provincial portion of the HST on electricity bills.

Exports and Business Investment Expected to Drive Growth

* Business Investment includes both Non-Residential Investment and Machinery & Equipment Investment
Source: Ontario Economic Accounts, Statistics Canada and FAO



Weaker Profit Gains Contribute to Lower Nominal GDP Growth in 2016

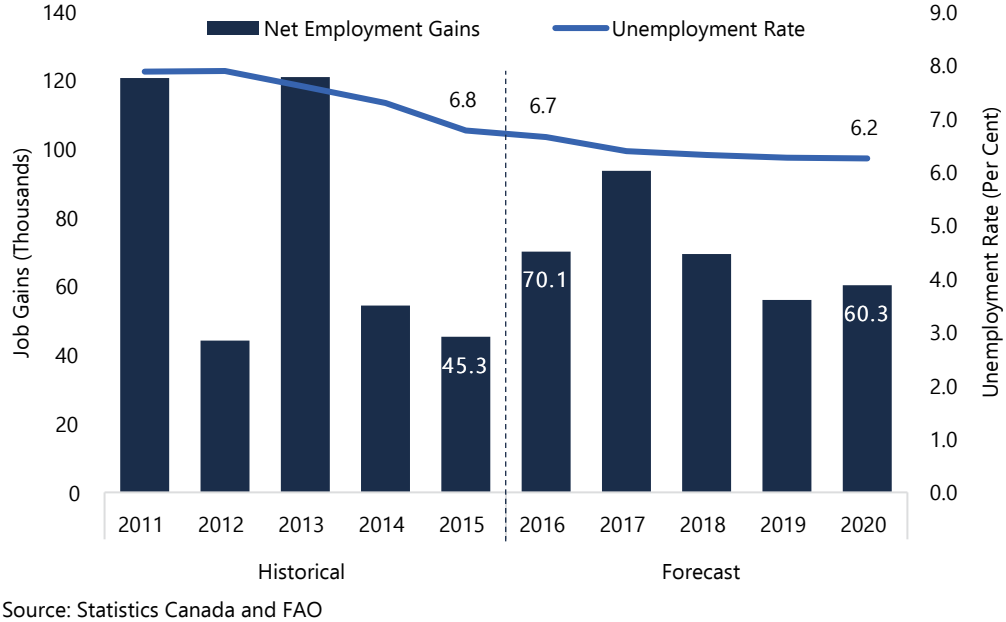
The FAO forecast for nominal GDP over the short-term is largely based on its projections for labour income and net operating surplus of corporations (corporate profits), which together account for about 66 per cent of total GDP.

Labour income growth remained relatively robust over the first half of 2016, rising by 3.9 per cent compared to the same period in 2015. However, overall corporate profits declined in the first half of 2016, on a year-over-year basis, reflecting lower profits in the manufacturing and the banking sectors.[8]

Based on the FAO's updated outlook, Ontario nominal GDP is expected to be about 1.0 per cent lower by 2020 than originally projected in the spring forecast. The lower level of nominal GDP over the outlook is largely due to the downward revisions to growth for 2016 and 2017.

Ontario Nominal GDP Below FAO's Spring Forecast

Source: Ontario Economic Accounts and FAO



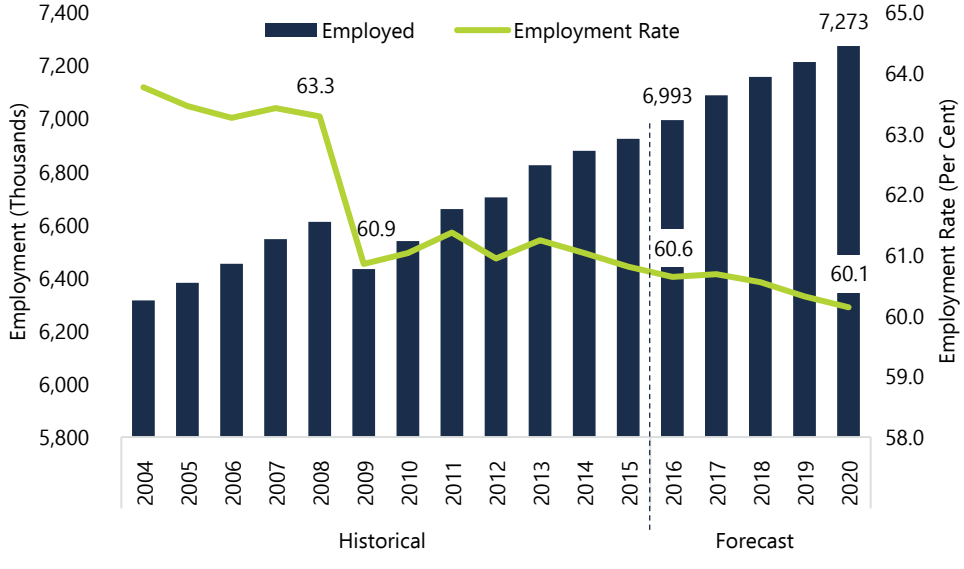
8 'Quarterly Financial Statistics for Enterprises', Second Quarter 2016, Statistics Canada.

Steady Employment Gains Result in Gradual Decline in Unemployment Rate

Ontario employment is expected to grow moderately over the outlook, reflecting the outlook for steady economic growth. The FAO is projecting solid job growth of 1.0 per cent (+70,000 net job gains) in 2016, following a more modest gain of 0.7 per cent (+45,000 net jobs) in 2015. The majority of the net new jobs are projected to be in full-time, private sector employment. Furthermore, manufacturing sector employment is expected to post a moderate gain in 2016, the first annual increase in four years.

Over the five-year forecast, the FAO is projecting Ontario employment growth to average 1.0 per cent per year, down from an average pace of 1.2 per cent over the past five years. Even so, the steady projected gains in employment, combined with more moderate labour force growth, will result in a gradual decline in Ontario's unemployment rate from 6.8 per cent in 2015 to 6.2 per cent by 2020.

Steady Employment Gains and Gradual Decline in Unemployment Rate



Source: Statistics Canada and FAO

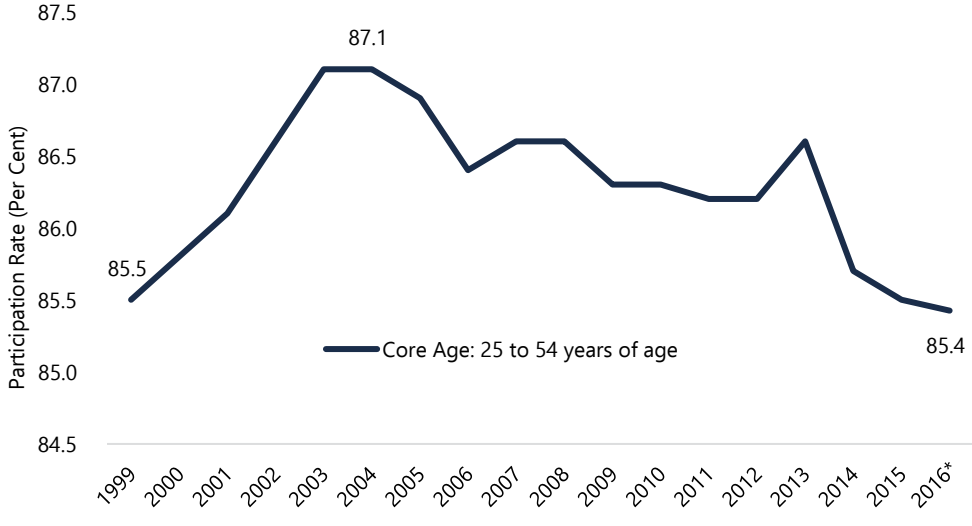
Change Continues for Ontario's Labour Market

While steady job gains and a gradual improvement in the unemployment rate are expected to continue, significant structural changes are also occurring in Ontario's labour market.

Ontario's employment rate – the share of the working age population with a job – currently remains well below the pre-recession rate of over 63 per cent. The employment rate improved somewhat in the years following the recession, but has resumed its downward trend in the past three years. Over the next five years, the FAO projects a continued decline in the employment rate to about 60 per cent by 2020, as the rate of growth in employment continues to be lower than overall population growth.

Employment Rate to Trend Lower

Source: Statistics Canada and FAO



The nature of unemployment in Ontario has also changed since the 2008-2009 recession. Both the long-term unemployment rate (the share of those unemployed for longer than six months) and the average duration of unemployment (the length of time it takes to find a new job) continue to be worse than pre-recession levels.[9] The slow pace of improvement in these other measures of unemployment suggests

9 The long-term unemployment rate – the percentage of those unemployed who have been without a job for longer than six months – increased from 13 per cent in 2007 to 25 per cent in 2010. Since 2010, the long-term unemployment rate has improved moderately, decreasing to 20 per cent in 2015. The average duration of unemployment increased from around 15 weeks in 2007 to almost 22 weeks in 2010. Since 2010 the average time spent unemployed has decreased to 20 weeks in 2015, but remains well above pre-recession levels.

that despite overall job growth, many workers continue to face a challenging labour market.

Another indicator pointing to a structural shift in Ontario's labour market is the decline in the proportion of adults, aged 25 to 54, who are currently employed or looking for work – the 'core age participation rate'. Since 2004, the core participation rate decreased from about 87 per cent to just over 85 per cent in 2016 (the lowest rate since the late 1990s).

Core Age Participation Rate at Lowest Level Since 1999

Source: Statistics Canada and FAO

* 2016 is August year-to-date value.

As Ontario's population ages, the overall labour force participation rate (for all Ontarians) will decline since people work less as they move into their senior years. This will lead to slower growth in Ontario's workforce and contribute to a slower pace of economic growth. However, the declining participation rate for adult-aged workers is a key concern, since it exacerbates the effects of an aging workforce on economic growth.

An increase in the core age participation rate back to 87 per cent would represent about 90 thousand additional workers for Ontario's labour force.

Key Risks for Ontario's Economic Outlook

The FAO's current economic projection represents a prudent outlook for the Ontario economy and an appropriate foundation for fiscal planning. However, a number of key risks could lead to weaker than expected economic growth for Ontario.

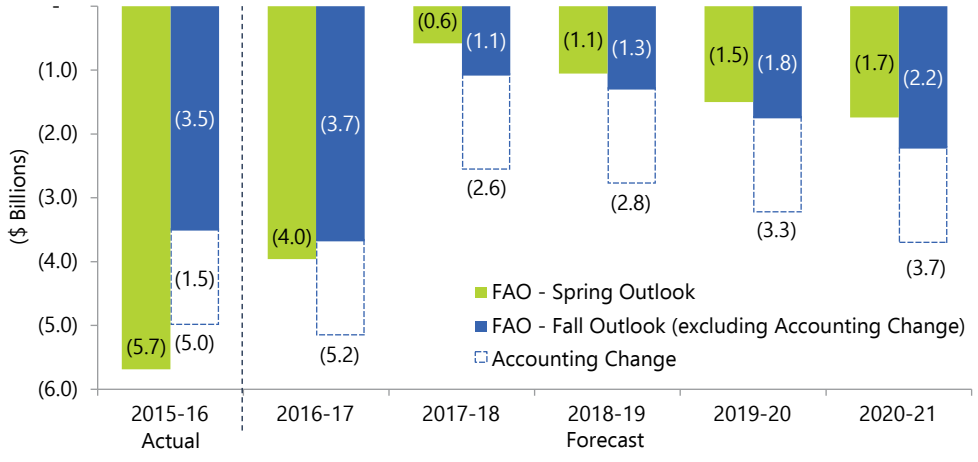
The sharp rise in housing prices, particularly in the Greater Toronto Area, continues to represent a key risk for the overall economy. A significant correction in housing prices, exacerbated by elevated levels of household debt, would negatively affect household spending and residential construction activity and could lead to broader, economy-wide impacts on growth and employment.

Ontario's export sector is expected to be a key driver of economic growth over the next five years, as Ontario increases sales to the key U.S. market. A necessary ingredient of Ontario's export led growth will be a rebound in business investment to allow for the expansion in export volumes. However, growth in business investment has been disappointing over the past four years. If business investment continues to underperform, export gains would be more limited than expected, holding back overall economic growth.

3 FISCAL OUTLOOK

Overview

Outlook for Budget Deficit Has Deteriorated Moderately



Based on the revised economic outlook and new fiscal developments, the FAO is projecting Ontario budget deficits of $5.2 billion in 2016-17 and $2.6 billion in 2017-18.[1] Beginning in 2018-19, the deficit is expected to gradually increase as growth in revenue is outpaced by increases in program spending and interest on debt expense.

This fiscal projection reflects the legislated change in the accounting treatment of jointly sponsored pension plans in 2015-16, which the FAO assumes will remain in place over the outlook.[2] Excluding this accounting change, the deficit would be $3.7 billion in 2016-17 and $1.1 billion in 2017-18. This represents a slight improvement in the deficit in 2016-17, but a moderate deterioration over the last four years of the outlook, compared to FAO's spring report.

1 Budget balance projections are presented without the reserve.

2 In the 2015-16 Public Accounts, the Province legislated a change in the accounting treatment of jointly sponsored pension plans for 2015-16, based on the position of the Auditor General of Ontario. This accounting change increased net debt by $9.2 billion and the deficit by $1.5 billion in 2015-16. However, it is unclear how this accounting change for 2015-16 will impact the Province's finances going forward. The government has announced it will form an independent expert panel to provide recommendations on the appropriate accounting treatment of Ontario's pension assets. This report provides Ontario's fiscal position both excluding the accounting change (to allow for comparisons to the FAO's spring outlook) and including the accounting change which the FAO assumes will result in a $1.5 billion increase in program spending over the outlook.

Ontario's Budget Balance*

Source: Ontario Public Accounts and FAO

* Budget balance excluding reserve.

The outlook for the budget balance (excluding the accounting change) has deteriorated moderately since the FAO's spring report due to a number of factors that had significant but partially offsetting impacts on Ontario's fiscal position. These include:

- higher than expected tax revenues in 2015-16, as reported in the Public Accounts, which partially carry forward over the outlook;
- proposed new spending commitments, announced in the September 12, 2016 Speech from the Throne, to expand child care spaces and provide a rebate equal to the provincial portion of the HST paid on the electricity bills of households, farms and small businesses;
- lower economic growth in 2016 and 2017 which moderately dampens the expected growth in tax revenues; and
- lower interest on debt expense, reflecting a more gradual expected increase in interest rates over the outlook.

Change in the Budget Balance since the FAO's Spring Outlook

($ Billions)	2016-17	2017-18	2018-19	2019-20	2020-21
2016 Spring Outlook Budget Balance	**-4.0**	**-0.6**	**-1.1**	**-1.5**	**-1.7**

Updated economic and demographic data	-0.4	-0.8	-0.6	-0.6	-0.8
Interest on Debt[2]	0.4	0.8	0.9	0.9	0.9
Other[3]	0.2	0.3	0.4	0.5	0.5
Total	**0.3**	**-0.5**	**-0.2**	**-0.3**	**-0.5**
Updated Budget Balance	**-3.7**	**-1.1**	**-1.3**	**-1.8**	**-2.2**
Accounting Change	-1.5	-1.5	-1.5	-1.5	-1.5
Updated Budget Balance with Accounting Change	**-5.2**	**-2.6**	**-2.8**	**-3.3**	**-3.7**

1 Excludes $1.5 billion impact of the change in the accounting treatment of jointly sponsored pension plans.
2 Captures impact of lower interest rates as well as changes in borrowing.
3. Reflects a change in the forecasting methodology for income from government business enterprises, which is now based on the 2016 Budget projection to 2018-19.

Note: Positive values indicate improvement in budget balance (i.e. lower deficit). Numbers may not add due to rounding.
Source: FAO

Revenue Outlook

From 2015-16 to 2020-21, the FAO projects total revenues to increase at an average annual rate of 3.0 per cent, slightly below the 3.3 per cent forecast in the FAO's spring outlook. This incorporates the proceeds from the government's planned asset sales, new revenues from cap and trade, and new federal transfers as assumed in the 2016 Ontario Budget.

Tax Revenue

Consistent with the FAO's current economic projection, tax revenue is expected to rise by 3.0 per cent over the outlook, slightly weaker than the 3.2 per cent forecast in the spring.

There were two significant changes to the tax revenue outlook since the spring.

- The 2015-16 Public Accounts reported higher than expected tax revenues. This raised the starting point for the projection, pushing up tax revenues over the outlook.

- At the same time, a somewhat weaker economic forecast, particularly for corporate profits, slowed the growth of tax revenues over the outlook.

2015-16 Public Accounts

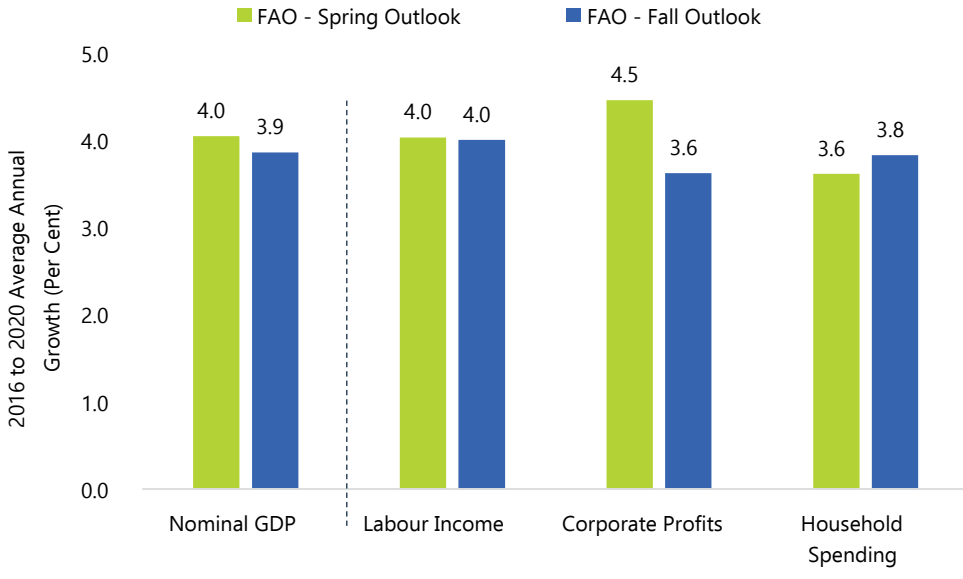
The incorporation of the 2015-16 Public Accounts led to somewhat higher tax revenues over the forecast, compared to the spring outlook. Specifically, the Public Accounts reported a strong 11.6 per cent increase in 2015-16 tax revenues. Excluding the impact of the sale of Hydro One shares, tax revenues grew by 8.3 per cent, much stronger than the growth in economic drivers would suggest.

In particular, personal income tax (PIT) revenue grew by 6.2 per cent in 2015-16, well above the 3.9 per cent growth in labour income.[3] This unusually large increase in PIT revenues was not anticipated in the 2016 Budget projections nor by the FAO in the spring outlook, and reflects stronger than expected tax assessments from personal income tax returns for 2015.

The strong increase in PIT revenues is partly due to the federal government's introduction of a 33 per cent tax rate on taxable income over $200,000 in 2016, which led some high income earners to shift earnings from the future into the 2015 tax year to avoid the tax increase.[4] The FAO has adjusted the PIT forecast to account for the effect of income-shifting[5].

Impact of Revised Economic Outlook on Tax Revenues

A moderately weaker economic forecast dampened the tax revenue outlook, partially offsetting some of the positive impact of the 2015-16 Public Accounts.



While the FAO outlook for labour income and household spending remains fairly strong, the forecast for nominal GDP has declined since the spring outlook, largely due to weaker corporate profits growth.

3 Household disposable income, which includes net property income and net government transfers increased by 3.8 per cent in 2015.

4 The federal government's 2015-16 Annual Financial Report indicated that stronger 2015 federal PIT returns partly reflect "…tax planning by high-income individuals to recognize income in the 2015 tax year before the new 33 per cent tax rate came into effect in 2016" (see: http://www.fin.gc.ca/afr-rfa/2016/report-rapport-eng.asp#_Toc463249478). Finance Canada estimates that this increased 2015 Federal PIT by $3.3 billion.

5 The FAO estimates that roughly $600 million of Ontario's 2015 PIT revenue was due to taxpayers shifting income to 2015 from future tax years.

Growth in Key Tax Drivers, 2016 – 2020*

* "Labour income", "corporate profits" and "household spending" are defined by Statistics Canada as "compensation of employees", "net operating surplus: corporations", and "household consumption" respectively.
Source: Ontario Economic Accounts and FAO

The forecast for corporate profits was revised lower, largely reflecting weak growth over the first half of 2016. As a result, corporate tax revenue is currently projected to average $0.5 billion lower over the outlook than was anticipated in the spring report.

Non-Tax Revenue

Revenues from federal transfers are expected to rise from $22.9 billion in 2015-16 to $27.0 billion by 2020-21. This includes the Province's anticipated $1.3 billion in new federal transfers by 2017-18 as outlined in the 2016 Budget. The current outlook for federal transfers has been revised down modestly from the FAO's spring outlook, reflecting $0.3 billion in lower Equalization receipts by 2020-21 due to a relatively weaker economic outlook for the rest of Canada.

In April 2016, non-tax revenues were boosted by the Province's sale of a further 14 per cent of Hydro One, generating approximately $0.6 billion in one-time revenue gains. Consequently, the Province's net income from Hydro One is reduced by a further 14 per cent (roughly $100 million) beginning in 2016-17.

The 2015-16 Public Accounts reported that revenue from government business enterprises (GBEs) was $560 million higher in 2015-16 than forecast in the 2016 Budget, largely reflecting higher net income from the electricity sector.

The FAO forecast adopts the 2016 Budget forecast for GBE income, and projects 2019-20 and 2020-21 based on economic growth.

The FAO revenue outlook continues to assume that the Province will collect $1.9 billion in proceeds from the cap and trade program, as reported in the 2016 Budget. However, it remains unclear the extent to which this revenue will be spent on new initiatives to reduce greenhouse gas emissions, or on programs already included in the government's fiscal plan.[6]

Spending Outlook

Program Spending

From 2015-16 to 2018-19, the FAO projects program spending to grow at an average annual rate of 2.2 per cent. Beyond the government's published fiscal projections to 2018-19, program spending is expected to increase by an average of 3.4 per cent in 2019-20 and 2020-21, in-line with population growth, aging and inflation.

The FAO's program spending projections adopt the 2016 Budget forecast with adjustments to incorporate the new spending commitments announced in the September 12, 2016 Speech from the Throne.

According to the Throne Speech, the government proposes to:

- Provide a rebate equal to the provincial portion of the HST on the electricity bills of residential homes, farms and small businesses, beginning January 1, 2017.[7] This measure is expected to result in new government spending of $1 billion annually.[8]

- Create 100,000 new child care spaces over five years starting in 2017. This program is expected to result in new capital spending between $1 billion and $3 billion over five years, and between $600 million and $750 million in new annual operating costs, when fully implemented.[9]

Given the limited details, the FAO has incorporated reasonable assumptions about the total cost and roll-out of both measures into its program spending projections. These measures are assumed to be new expenditures on top of the program spending projections published in the 2016 Budget.

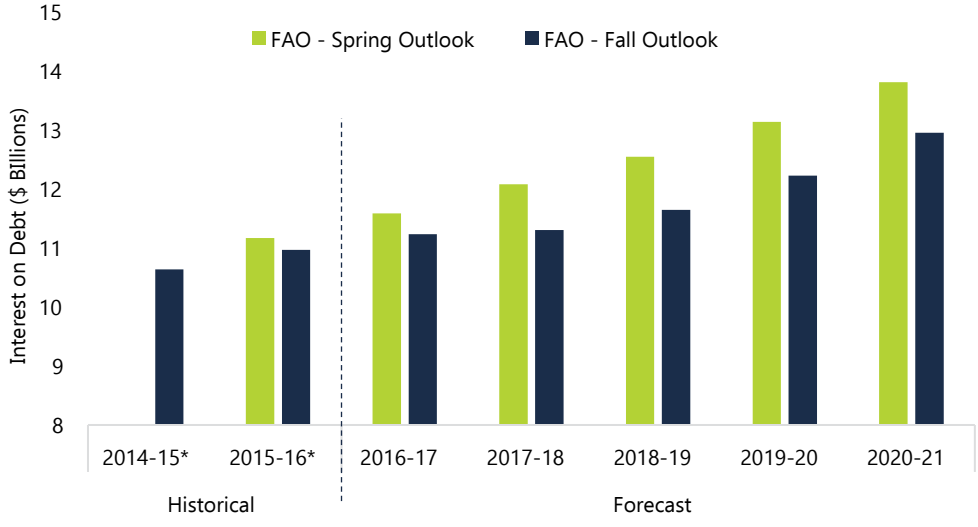
6 Funding existing initiatives would improve its budget balance, while funding new initiatives would not impact the budget balance.
7 Government of Ontario News Release, Ontario Introducing Measures to Reduce Electricity Costs, September 15, 2016
8 QP Briefing, Throne Speech 2016: Premier Wynne pledges hydro bill relief, more child care spaces, September 12, 2016
9 QP Briefing, Throne Speech 2016: 100,000 new licensed child care spaces to cost up to $3.75B, September 12, 2016

FAO's Assumptions for Newly Announced Programs

($ Millions)	2016-17	2017-18	2018-19	2019-20	2020-21
Total Operating	**250**	**1,375**	**1,750**	**1,750**	**1,750**
Child Care Spaces Expansion		375	750	750	750
HST Rebate on Electricity Bills	250	1,000	1,000	1,000	1,000
Total Capital	**-**	**800**	**600**	**300**	**300**
Child Care Spaces Expansion	-	800	600	300	300

Note: Since the rebate is effective January 1, 2017, the HST rebate expense is assumed to be one quarter of the annual cost for 2016-17. Given the need to design and implement the new program, spending on the expansion of child care spaces is assumed to be one-half the estimated total cost in 2017-18. Capital spending for the day care expansion is assumed to be $2 billion (the mid-point of the announced range), front-loaded in the first two years, and conducted by the government rather than transferred to outside agencies.
Source: FAO

In addition, the Province legislated a change to the accounting treatment of jointly sponsored pension plans as reported in the 2015-16 Public Accounts. This resulted in an increase of $1.5 billion in program spending for 2015-16, which the FAO assumes will extend over the outlook.



Interest on Debt

The 2015-16 Public Accounts reported that interest on debt expense (IOD) grew 3.1 per cent in 2015-16 to $11.0 billion, $0.2 billion below the FAO's spring outlook projection.

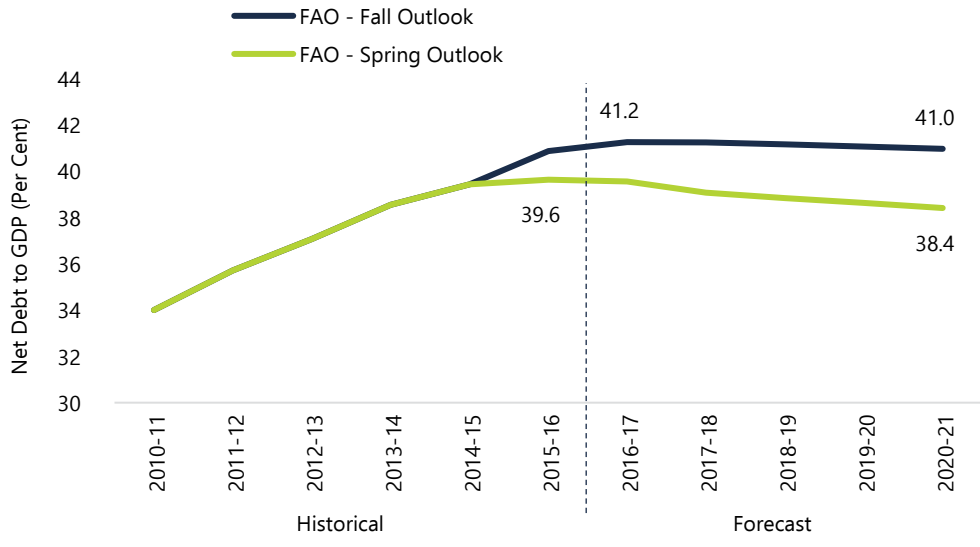
From 2015-16 to 2018-19, the FAO projects IOD will increase at an average rate of 2.0 per cent, reaching $11.6 billion by 2018-19. Over the final two years of the projection, IOD will increase more sharply rising 5.5 per cent per year on average.

The current IOD projection is $0.8 billion lower each year on average, compared to the FAO's spring outlook, primarily due to a lower forecast for interest rates over the outlook.

Interest on Debt Outlook

* 2014-15 and 2015-16 FAO – Fall Outlook values are actuals.
Source: Ontario Public Accounts and FAO

Debt Outlook



The Public Accounts reported that Ontario's net debt[10] rose 7.3 per cent to $305.2 billion in 2015-16, $8.9 billion higher than projected in the FAO's spring outlook. The increase in net debt in 2015-16 includes a one-time increase of $10.7 billion as a result of the legislated change in the accounting treatment of jointly sponsored pension plans.[11]

The FAO projects Ontario's net debt to rise by $64 billion over the next five years to $370 billion by 2020-21. This reflects cumulative deficits, capital spending for infrastructure and the accounting change.

The increase in net debt, coupled with slightly lower growth in nominal GDP, results in a significantly higher net debt-to-GDP ratio relative to the FAO's spring outlook. Ontario's net debt-to-GDP ratio is now expected to plateau at about 41 per cent, significantly above the 39.6 per cent peak projected in the FAO's spring report.

10 Net debt is defined as gross debt and other liabilities less financial assets.
11 2015-16 Public Accounts of Ontario, page 10.

Ontario's Net Debt to GDP Ratio

Source: Ontario Public Accounts and FAO

The Province's borrowing requirement is expected to edge down slightly to $29.3 billion in 2016-17 from $32.1 billion in 2015-16, and average $29 billion per year over the outlook, largely unchanged from the FAO's spring outlook. The change in the accounting treatment of jointly sponsored pension plans does not affect the Province's borrowing requirement or gross debt.

Risks to the Fiscal Plan and Policy Options

There are material risks that could impact Ontario's fiscal position.

- Actual growth in the economy could be weaker than projected, lowering tax revenues. Growth in nominal GDP over the first half of 2016 is currently tracking below forecasts published earlier in 2016. If actual growth continues to underperform forecasts, tax revenues would be lower.

- The FAO forecast adopts the government's outlook for program spending, adjusted for new fiscal developments. This assumes that program spending can be restrained below the growth in demographic factors and inflation. If program spending grows faster than projected, the fiscal balance would deteriorate. Notably, the government has increased planned spending for 2017-18 in each of the last three budgets.

At the same time, the government has a broad range of policy options that could improve the fiscal position, including the sale of additional public assets beyond announced targets, or applying new revenues (from cap and trade or new federal transfers) to existing program spending commitments.

November 1, 2016

Honourable Liz Sandals
President of Treasury Board
Treasury Board Secretariat
Room 4320, 4th Floor, Whitney Block
99 Wellesley Street West
Toronto, Ontario M7A 1W3

Dear Minister Sandals,

Subject: Economic and Fiscal Outlook – Assessing Ontario's Medium-Term Prospects: Fall 2016 Update

Under paragraph 10(1)(a) of the *Financial Accountability Officer Act, 2013* (the Act), the FAO is mandated to undertake a series of regular analyses of the state of the province's finances and trends in the provincial economy.

Section 15 of the Act requires that I deliver copies of any reports I publish to the relevant ministers ahead of publication. Accordingly, please find attached a copy of my report, which presents my office's assessment of the province's medium-term economic and fiscal outlook.

As arranged with the Clerk of the Legislative Assembly, the report will be **tabled at 9:00 a.m. on Thursday, November 3.** Until that time, please treat this report as confidential.

I will be briefing MPPs at 9:00 a.m. in Committee Room 1. Members of the Standing Committee on Finance and Economic Affairs, as well as two members per caucus are welcome to attend. A media conference will be held at 12:00 p.m. in the Media Studio.

Let me take this opportunity to thank you once more for the assistance that your ministry provided to my staff during the preparation of this report.

As always, please feel free to contact my office if we can be of assistance.

Sincerely,

The Honourable J. David Wake
Temporary Financial Accountability Officer

Importance:	High

Hi Everyone,

Attached is the FAO report that is to be released on Wednesday. I've also reattached the summary note (word document) that we are preparing that would be used to form the basis of a briefing of Minister Sousa (possibly joint with Minister Sandals) but we are still working on setting that up. – this is the same version I shared with your earlier.

In the meantime, could you kindly update the note with your input and pass along any Key Messages that could be used for the Minister(s) to respond to the report. We are looking for your feedback by noon tomorrow (apologies for the short turn).

Thanks and happy to take any questions you have.

Subject: FW: The FAO's Spring 2017 Economic and Fiscal Report

FAO has provided an advanced copy of their final EFO, which will be released on Wed morning at 9am. We're working with staff to review the final version to see whats changed and to update the briefing material. Will look to set up time with the Minister Sousa and his office as well (Maria let us know if Minister Sandals also needs to be briefed on it). Ministers and their offices should have received copies already.

Subject: The FAO's Spring 2017 Economic and Fiscal Report

Good afternoon,

The FAO will be releasing a spring 2017 Economic and Fiscal Outlook (EFO) report on Wednesday May 31st at 9:00 am. There will be separate technical briefings for media and MPPs on Wednesday at 1:30 pm. The report, along with the Officer's statement will be posted on the FAO's website. Please note that while the statement will be posted on our website, the Officer will not be reading the statement to the media for this release.

The report along with the attached letters are being delivered to Ministers Sousa and Sandals this afternoon – and are attached for your reference.

Please treat this document as embargoed until its release on Wednesday at 9:00 am.

As always, we greatly appreciate your assistance and support for the work of the FAO.

Best regards,
David

Economic and Fiscal Outlook

Assessing Ontario's Medium-term Prospects

Spring 2017

About this Document

Established by the *Financial Accountability Officer Act, 2013*, the Financial Accountability Office (FAO) provides independent analysis on the state of the Province's finances, trends in the provincial economy and related matters important to the Legislative Assembly of Ontario. The FAO's Economic and Fiscal Outlook is released each spring and fall, providing an assessment of the province's medium-term economic performance and fiscal position.

This report was prepared by Edward Crummey, Luan Ngo, Nicolas Rhodes and Mario Angastiniotis under the direction of David West. External reviewers were provided with earlier drafts of this report for their comments. However, the input of external reviewers implies no responsibility for this final report, which rests solely with the FAO.

This report is based on information available to May 2, 2017. Background data used in this report are available upon request.

FAO's Fiscal Projections

The FAO forecasts provincial finances based on projections of existing and announced revenue and spending policies. The forecast represents the FAO's view of the most likely fiscal outcomes given existing policies, without anticipating any new government policy decisions. The FAO's tax revenue projections are based on an assessment of the outlook for the provincial economy and current tax policies. Given the government's discretion over spending, the FAO adopts the government's announced spending plans from fiscal documents and incorporates policy announcements as appropriate. Beyond the government's published spending projections, the FAO forecasts spending based on the outlook for underlying cost drivers including demographics and price inflation.

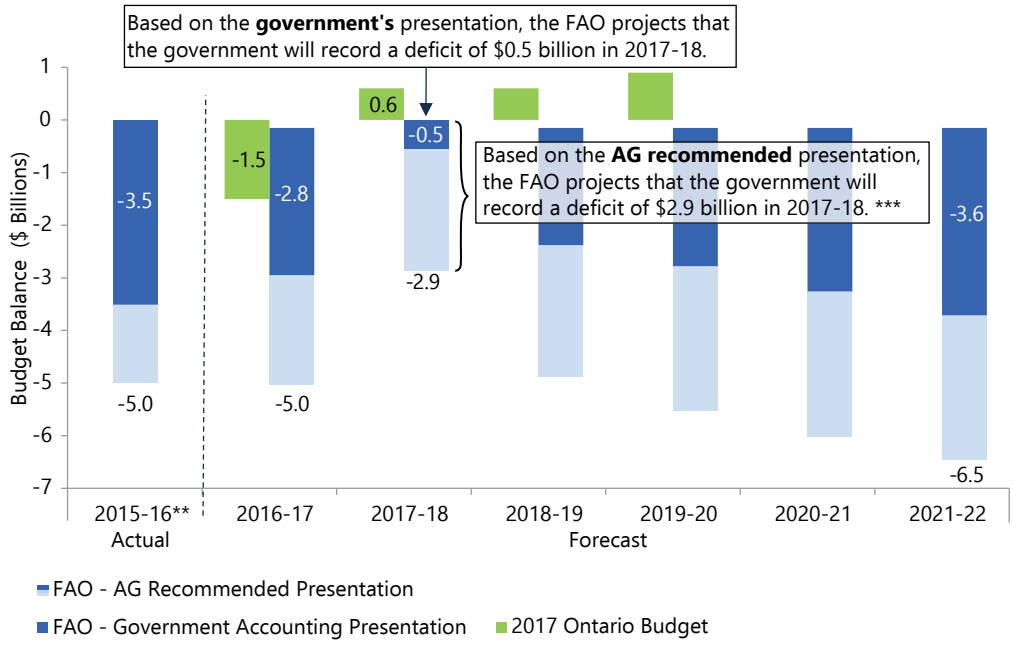
1 EXECUTIVE SUMMARY



The FAO is projecting continued Ontario budget deficits over the next five years. For 2017-18, the FAO's projection includes an improvement in the deficit, the result of a $3.0 billion one-time boost to non-tax revenue and strong tax revenue growth. However, beginning in 2018-19, the FAO is projecting a steady deterioration in the budget deficit due to moderating revenue growth combined with higher expenses.

The government and the Auditor General continue to disagree on the application of public sector accounting standards for jointly-sponsored pension plans.[1] Based on the FAO's application of the Auditor General's recommended accounting treatment for these pension assets, the FAO is projecting significant budget deficits over the entire outlook. On this basis, it is unlikely that the government will balance the budget without significant fiscal policy adjustments to raise revenue or lower expense.

Under the government's accounting presentation, the FAO projects that a balanced budget is within the government's reach in 2017-18. Beyond 2017-18, the deficit is projected to deteriorate steadily due to rising expenses and moderate revenue growth. On this basis, staying in balance after 2017-18 will likely require additional fiscal policy measures. This presentation of Ontario's fiscal position would be expected to receive a qualified opinion from the Auditor General when published in the Province's 2016-17 Public Accounts.

1 See the discussion on page 25 of the Fiscal Outlook chapter for background and context.

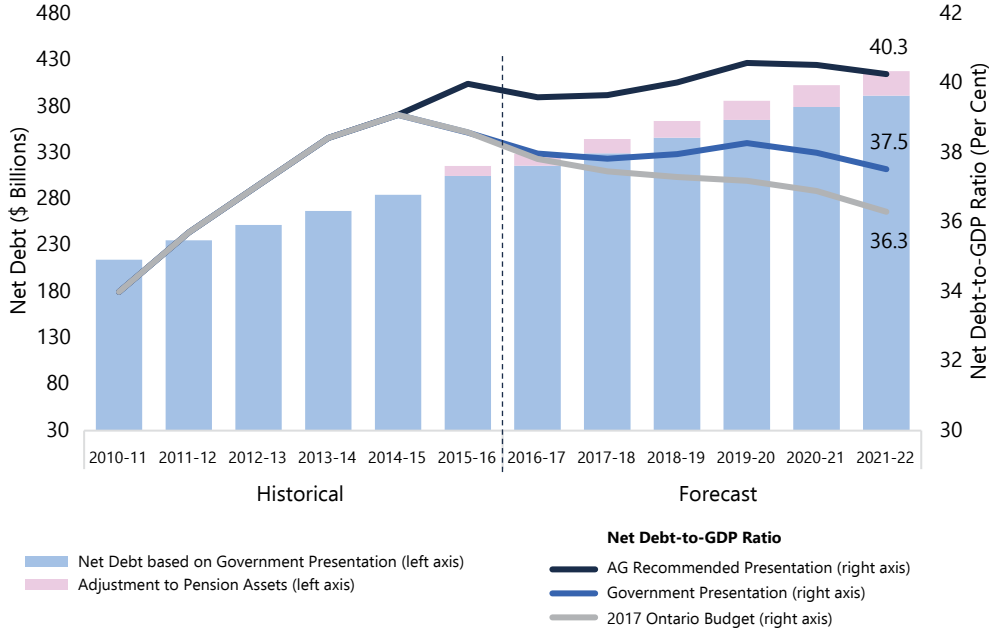
Ontario's Budget Balance*

* Budget balance before reserve.

** Ontario's 2015-16 Public Accounts reported a deficit of $5.0 billion. Without the pension adjustment, the deficit would have been $3.5 billion.

*** This includes the FAO's estimate of the pension adjustment.

Source: 2015-16 Public Accounts, 2017 Ontario Budget and FAO.



The FAO's economic outlook expects the recent strength of the Ontario economy to continue into 2017. The FAO is forecasting solid growth in real GDP of 2.4 per cent in 2017, moderating to an average annual pace of 2.0 per cent over the following four years. The FAO's economic forecast is broadly in-line with that presented in the government's 2017 Budget.

However, there are significant risks that could result in weaker than expected economic growth for Ontario. In particular, the policy direction of the new U.S. administration remains uncertain. This could hamper business investment and Ontario's economic prospects. Domestically, Ontario's surging housing market continues to be the largest risk for the economy. A sharp correction in housing prices could reverberate beyond the housing market and lead to broader, economy-wide impacts.

Consistent with the economic outlook, the FAO is projecting total revenues will rise by 3.3 per cent per year on average over the outlook. This reflects the FAO's forecast for solid growth in tax revenues combined with a significant one-time increase in non-tax revenues in 2017-18, including the sale of public sector assets. The FAO projects annual program spending growth to average 3.3 per cent per year over the outlook, a rate slightly below underlying spending pressures.

Given on-going deficits and projected capital spending, the FAO is forecasting Ontario's net debt will increase by $76 billion over the next five years, under the Auditor General's recommended accounting presentation. On this basis, Ontario's net debt-to-GDP ratio will edge higher to 40.3 per cent by 2021-22. In contrast, based on the government's accounting presentation, the FAO projects that net debt-to-GDP will fall slightly to 37.5 per cent by 2021-22.

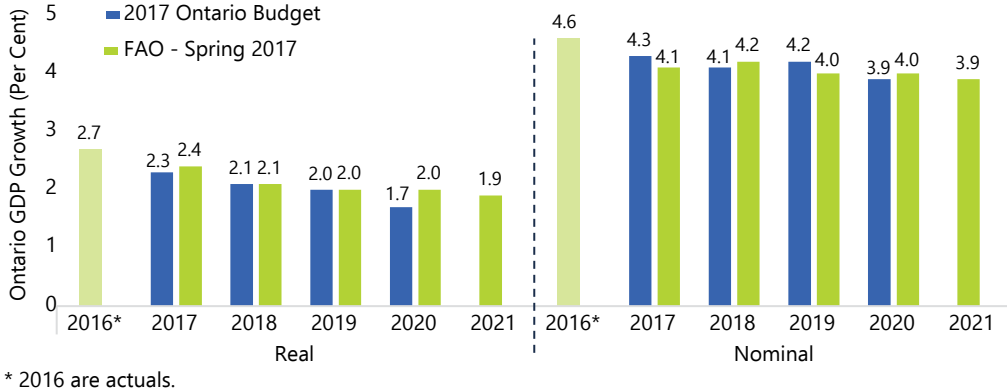
Ontario's Net Debt-to-GDP Ratio

Note: AG recommended presentation based on FAO estimates of the pension adjustment.
Source: Ontario Economic Accounts, 2017 Ontario Budget, and FAO.

In the 2017 Budget, the government set an interim net debt-to-GDP target of 35 per cent by 2023-24 and committed to achieving 27 per cent by 2029-30. Given the FAO's projection of rising deficits and the government's planned capital investments over the outlook, achieving these debt targets will likely require significant additional fiscal measures under either accounting presentation.

2 ECONOMIC OUTLOOK

Overview



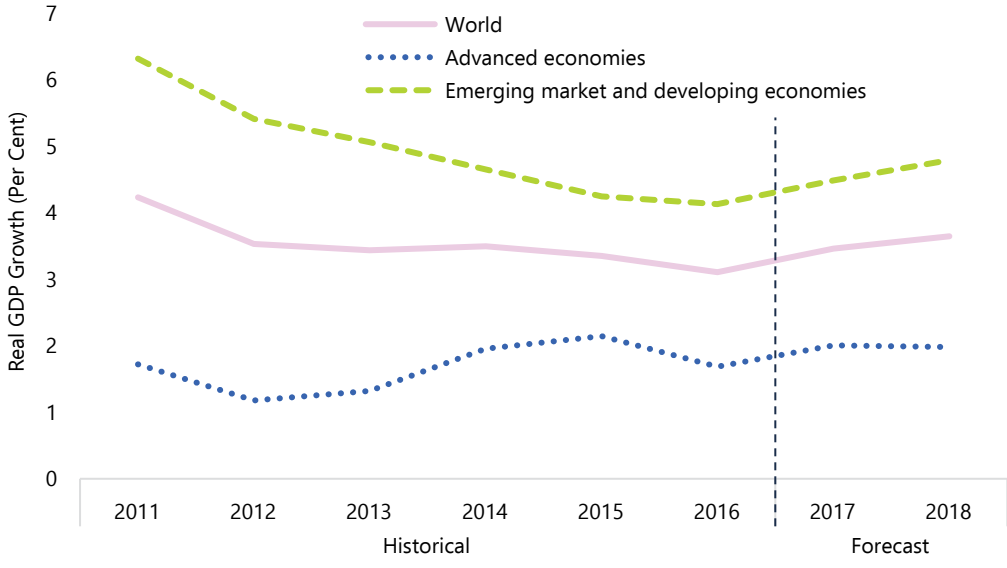
Ontario Economy Expected to Remain Strong in 2017

The Ontario economy finished 2016 with a strong 2.7 per cent increase in real GDP, reflecting solid growth in the second half of the year. Real GDP growth last year was significantly above the 2.1 per cent average gain seen from 2011 to 2015. Strong household spending, residential investment and exports contributed to the increase in real GDP in 2016.

Supported by the strong economic momentum in 2016 and continued improvement in economic indicators in the first quarter of 2017, the FAO is projecting real GDP to rise by 2.4 per cent in 2017 and 2.1 per cent in 2018.

Nominal GDP – the broadest measure of the tax base – increased by a robust 4.6 per cent in 2016. The FAO is projecting nominal GDP to increase by 4.1 per cent in 2017 and 4.2 per cent in 2018, reflecting solid gains in labour income and corporate profits.

Solid Economic Performance Expected Over Outlook



* 2016 are actuals.

Source: Ontario Economic Accounts, 2017 Ontario Budget and FAO.

Global Economy Gaining Momentum

In its latest World Economic Outlook,[1] the International Monetary Fund (IMF) is forecasting global economic growth to strengthen from 3.1 per cent in 2016 to 3.5 per cent in 2017 and 3.6 per cent in 2018. The IMF revised the outlook slightly higher for 2017, but left it unchanged for 2018, compared to its October 2016 outlook.[2]

Global Growth to Improve in 2017

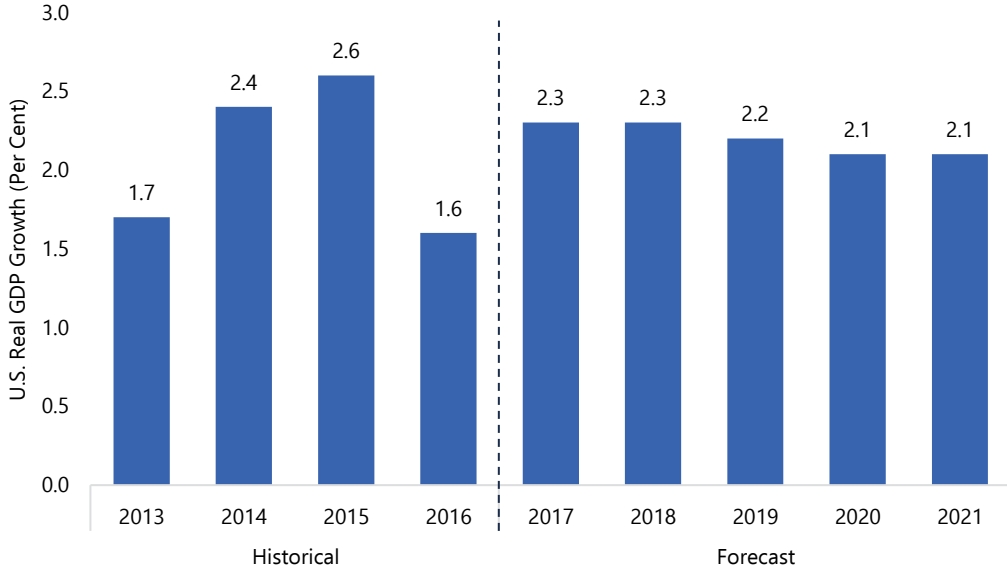
Source: "World Economic Outlook, Gaining Momentum?", April 2017, International Monetary Fund.

For advanced economies, the IMF's forecast for 2017 and 2018 has improved slightly from its October projection with growth of 2.0 per cent in 2017 and 2018.

Growth prospects for emerging market and developing economies are much more varied, but overall have weakened slightly from the IMF's October outlook, due to weaker economic conditions in key export markets. On average, the IMF has lowered its growth forecast for emerging markets and developing countries to 4.5 per cent in 2017, with 2018's forecast remaining unchanged at 4.8 per cent.

The IMF expects China – the world's second largest economy – to grow by 6.6 per cent in 2017 and 6.2 per cent in 2018, reflecting continued support from government policy. In the medium term, China's economic growth is expected to gradually moderate as its economy rebalances from investment and manufacturing-led growth to a more service-intensive economy.

1 "World Economic Outlook, Gaining Momentum?", April 2017, International Monetary Fund.
2 "World Economic Outlook, October 2016: Subdued Demand: Symptoms and Remedies", October 2016, International Monetary Fund.



U.S. Economic Growth to Strengthen in 2017

U.S. real GDP advanced by a relatively moderate 1.6 per cent in 2016, the weakest increase in three years. For 2017 and 2018, the FAO projects U.S. growth to improve to 2.3 per cent, with household spending, business investment and residential construction being key contributors to overall growth.[3]

However, the lack of specific details on the new U.S. administration's proposed policies has raised the risks associated with the current U.S. outlook. Many forecasters are cautiously optimistic that some of the proposed fiscal policies, such as expected cuts to corporate tax rates, could boost U.S. economic growth in the short-term.[4] But this optimism is tempered by the potential for large future increases in the U.S. budget deficit, which could weigh on economic growth over the medium-term.

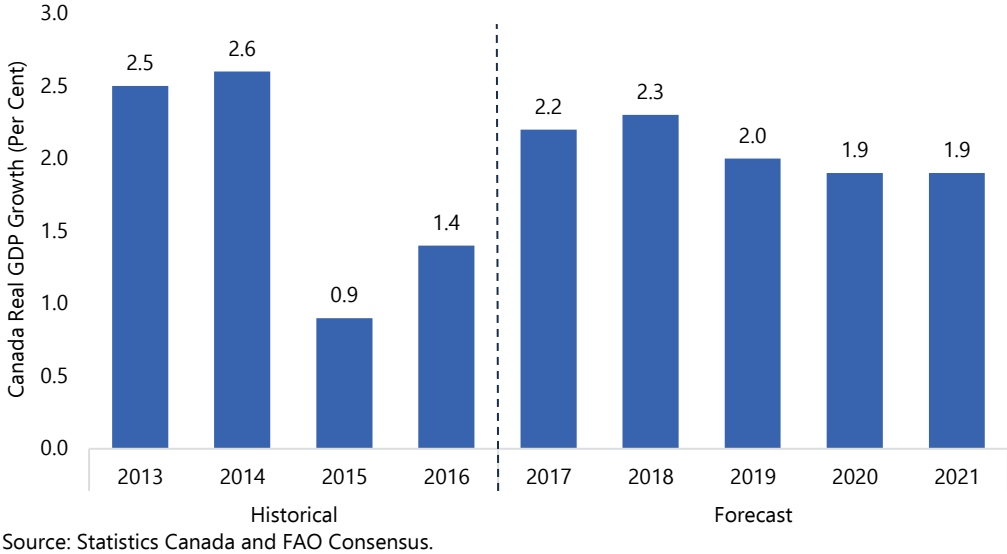
From 2019 to 2021, U.S. real GDP growth is projected to average 2.1 per cent annually, which is in-line with the average rate seen from 2012 to 2016.

U.S. Economic Growth Moderates Beyond 2017

Source: Federal Reserve Bank of St. Louis, Congressional Budget Office and FAO Consensus.

3 The FAO forecast for the U.S. economy in 2017 is based on the U.S. Congressional Budget Office's (CBO) latest forecast. For 2018 to 2021, the U.S. forecast is based on the average of the CBO outlook and the forecasts of three independent model-based forecasters – the Conference Board of Canada, the Centre for Spatial Economics and the Policy and Economic Analysis Program at the University of Toronto.

4 These forecasters include the IMF, CBO, TD Bank, RBC, BMO Capital Markets and National Bank Economics.



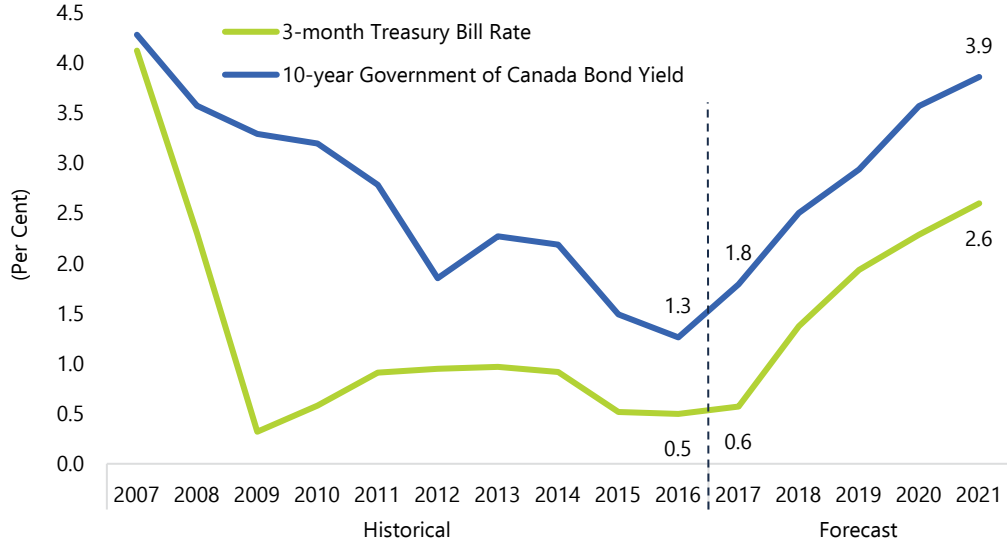
Canadian Economic Growth Expected to Rebound

The outlook for the Canadian economy has improved following strong growth over the second half of 2016.

Continued momentum in recent economic indicators point to a solid start for 2017. Canadian real GDP is currently projected to grow by 2.2 per cent in 2017 and 2.3 per cent in 2018, recovering from more moderate growth in 2015 and 2016.[5] Strength in household spending and non-energy exports are expected to contribute to overall growth in 2017 and 2018.

Beyond 2018, Canadian real GDP is projected to increase at an average annual rate of 2.0 per cent, as the economy continues to adjust to slower growth in the energy sector.

Canada GDP Growth Expected to Improve in 2017



Source: Statistics Canada and FAO Consensus.

Based on the continuing recovery of the U.S. economy, and in particular the strength of U.S. labour markets, the U.S. Federal Reserve raised its key policy interest rate in March 2017.[6] In contrast, the Bank of Canada has remained more cautious about the underlying strength of the Canadian economy and as a result appears unlikely to raise its key policy interest rate before 2018.[7]

5 The FAO forecast for the Canadian economy is based on the average quarterly forecasts of two independent, model-based forecasters – the Conference Board of Canada and the Policy and Economic Analysis Program (PEAP) at the University of Toronto.
6 The Federal Reserve raised its key policy rate, or the Federal Funds Rate, to 1.0 per cent on March 15, 2017.
7 In its most recent monetary policy report, the Bank of Canada indicated that it expects the output gap to close in early 2018. At the same time, the BOC noted that "there is still considerable uncertainty about the outlook," suggesting caution with regard to future changes in its policy interest rate. Bank of Canada Monetary Policy Report, April, 2017.

The FAO is projecting Canadian short-term interest rates will remain near current levels through 2017 and then begin rising modestly in 2018. Beyond 2018, interest rates are expected to gradually normalize with the 3-month Treasury Bill rate increasing to 2.6 per cent and the 10-year Government of Canada bond yield rising to 3.9 per cent by 2021.

Canadian Interest Rates to Rise over the Forecast

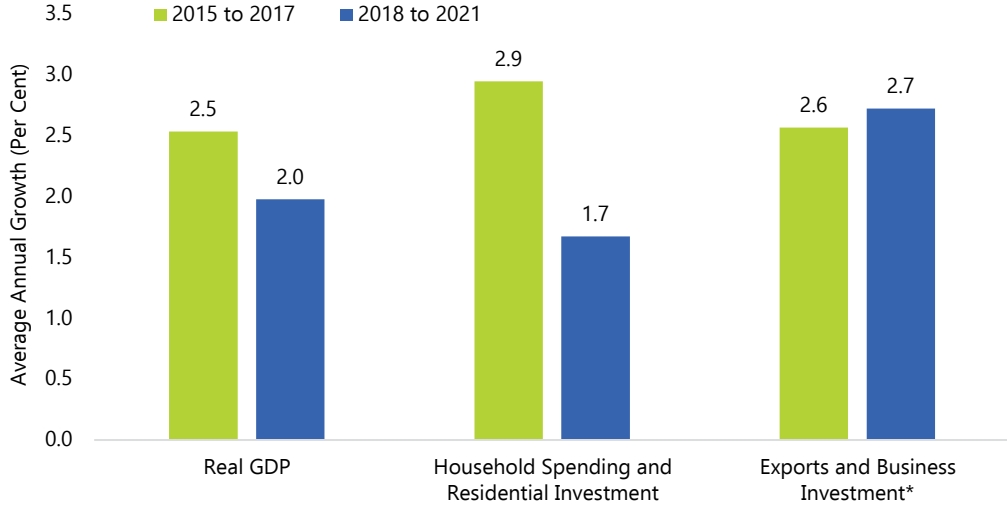
Source: Statistics Canada and FAO.

The Canadian dollar is expected to gradually appreciate over the next five years, rising from an average of about 75 cents U.S. in 2016 to about 81 cents U.S. by 2021, supported by the steady increase in short-term interest rates and a gradual rise in oil prices.

Ontario Economic Outlook

Solid Real GDP Growth Expected in 2017

Based on the Ontario Ministry of Finance's estimates,[8] Ontario real GDP rose by a strong 2.7 per cent in 2016, following equally strong gains of 2.5 per cent and 2.7 per cent in 2015 and 2014, respectively. Household spending, residential investment and exports were key contributors to overall economic growth last year. Business investment in plant and equipment disappointed expectations, declining by 4.0 per cent.



8 Ontario Economic Accounts, Fourth Quarter 2016, released April 13, 2017.

The performance of a number of economic indicators, including employment, retail sales and home sales remained solid in the first quarter of 2017. However, Ontario's merchandise export performance has been uneven so far in 2017.

Uncertainty over the future direction of U.S. trade and industrial policy could hamper business investment growth in the near term, which would negatively impact Ontario's competitiveness. Without stronger business sector investment to expand production capacity, the growth potential of several key Ontario industries will be limited.[9] As a result, despite the projection for steady growth in the U.S. and a competitively valued Canadian dollar, Ontario's net exports[10] are projected to grow at a relatively moderate pace over the outlook.

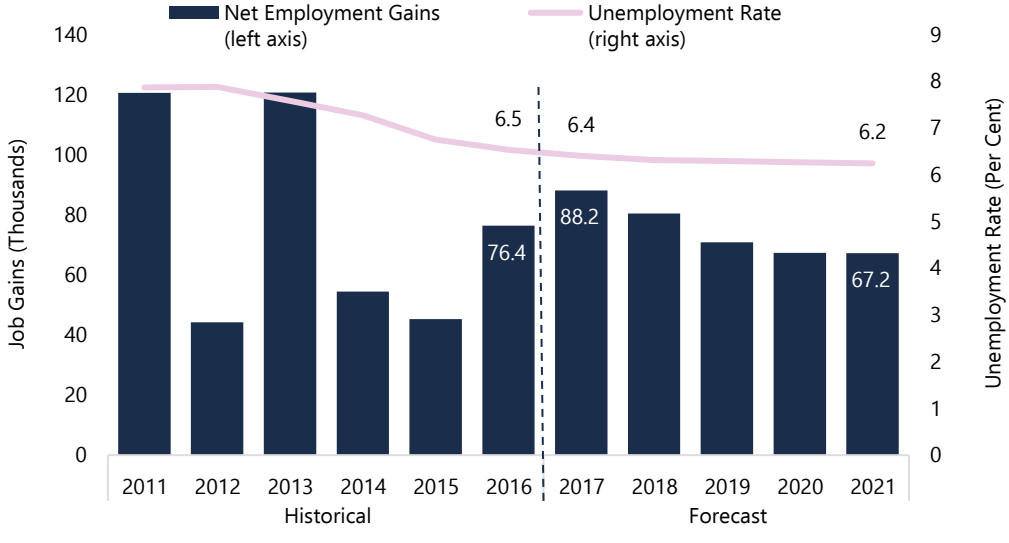
The FAO is forecasting real GDP growth of 2.4 per cent in 2017, supported by strong household spending and residential investment.[11] The pace of Ontario's overall economic growth will moderate to 2.1 per cent in 2018 and to an average of 2.0 per cent over the last three years of the outlook.

Exports and Business Investment Expected to Drive Economic Growth

* Business Investment includes both Non-Residential Investment and Machinery & Equipment Investment.
Source: Ontario Economic Accounts and FAO.

Moderate declines in residential investment in 2018 and 2019 – reflecting elevated household debt and a moderation in housing prices – is expected to contribute to the slower pace of overall economic activity.

9 As noted in a recent Conference Board of Canada report, nearly half of Ontario businesses are operating near or above capacity, hampering the ability of Ontario businesses to increase production to meet foreign demand. Conference Board of Canada Outlook, Winter 2017.
10 Net exports are exports less imports of goods and services.
11 The FAO forecast of the Ontario economy is based on the FAO's short-term quarterly model of the Ontario economy. For a description of the model, please refer to the end of the Economic Outlook chapter.



The FAO forecast is broadly consistent with the consensus view among economists that exports and business investment will lead Ontario growth over the next several years, while household spending and residential investment will grow at a more moderate pace, as households reduce borrowing to address high debt loads.

Steady Job Gains Over Outlook

Ontario experienced relatively strong employment growth of 1.1 per cent in 2016 (+76,400 net new jobs), the majority of which were full-time, private sector jobs. There was robust job growth in both goods and service producing industries. The construction industry in particular, posted the highest job growth (+3.4 per cent), followed by healthcare (+3.2 per cent).[12]

The strength in Ontario's labour market continued into 2017 with an increase of 99,600 jobs on a year-over-year basis during the first quarter. For the year, the FAO is projecting a 1.3 per cent gain in employment in 2017. On average, the FAO is forecasting average annual job gains of 1.0 per cent over the next four years, consistent with the outlook for solid economic growth.

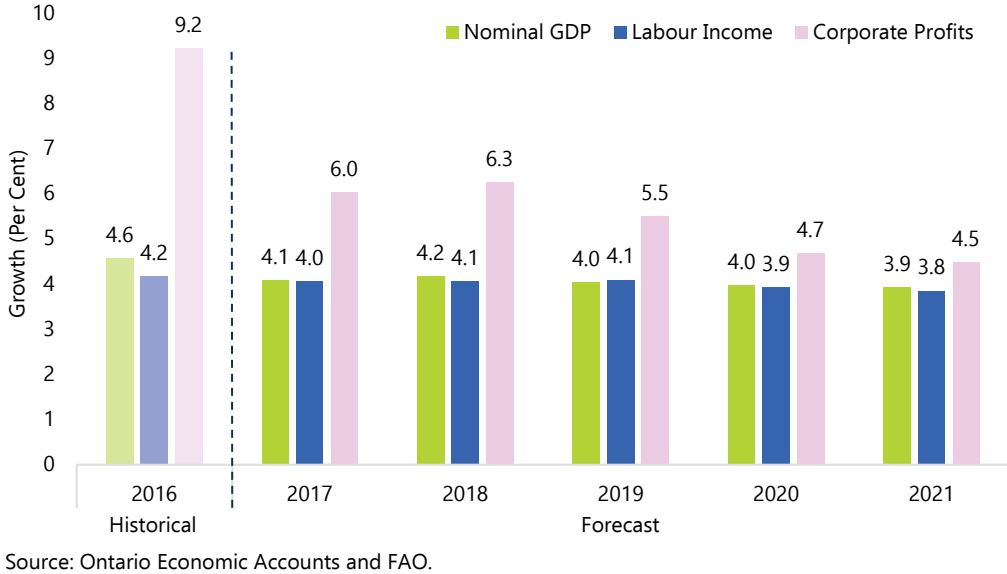
Steady Employment Gains as Unemployment Rate Slowly Trends Lower

Source: Statistics Canada and FAO.

Sustained economic growth over the outlook is expected to attract more workers into the labour force, which is forecast to rise at a slightly higher rate than over the last five years. Faster labour force growth from 2017 to 2021, will partially offset relatively

12 For a more detailed discussion on Ontario's labour market, see the FAO's Commentary: "Ontario Posts Solid 2016 Job Gain as the Labour Market Continues to Evolve".

strong employment gains, leading to a more moderate decline in the unemployment rate over the outlook.



Strong Gains Expected for Labour Income and Corporate Profits

Labour income grew by a robust 4.2 per cent in 2016, above the average annual increase of 3.7 per cent from 2011 to 2015, and a reflection of the strong employment growth last year. The net operating surplus of corporations (largely corporate profits) also increased by a robust 9.2 per cent in 2016 following an equally strong gain of 9.1 per cent in 2015.

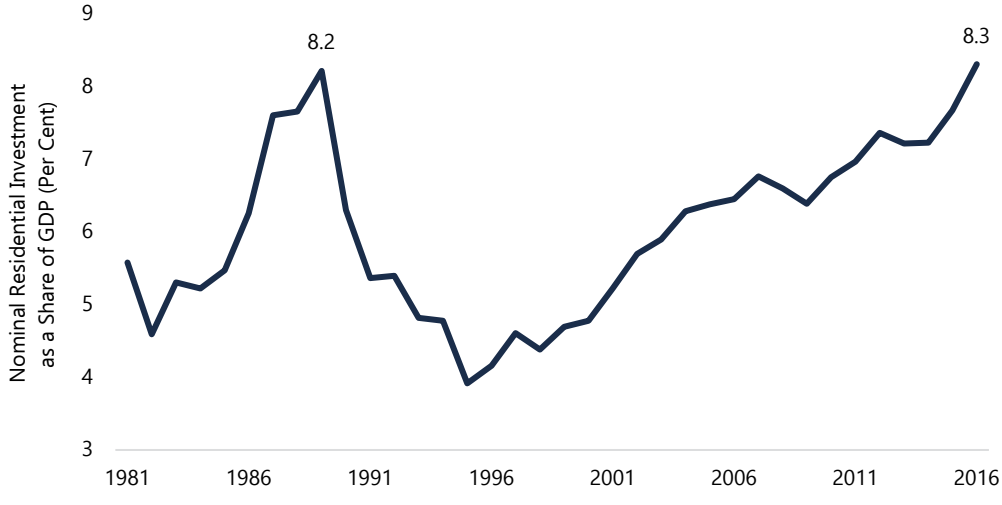
As a result of the gains in labour income and corporate profits (which together account for about two-thirds of nominal GDP), nominal GDP grew by a strong 4.6 per cent in 2016.[13]

For 2017, the FAO is projecting a 4.1 per cent rise in nominal GDP, supported by strong gains in labour income (+4.0 per cent) and corporate profits (+6.0 per cent). On average, the FAO is projecting nominal GDP growth of 4.0 per cent over the 2018 to 2021 outlook.

Labour Income and Corporate Profits Support Nominal GDP Growth

Source: Ontario Economic Accounts and FAO.

13 The robust 2016 increase in nominal GDP was much stronger than the 3.4 per cent increase projected in both the FAO's Economic and Fiscal Outlook, Fall 2016 Update and the government's 2016 Economic Outlook and Fiscal Review. The sharp upward shift in 2016 nominal GDP growth reflects large historical revisions to 2015 and 2016 nominal GDP growth in the Ontario Economic Accounts, consistent with new data from Statistics Canada. In particular, the net operating surplus of corporations is now estimated to have increased by 9.2 per cent in 2016 compared to an original projection of 0.3 per cent last fall.



Key Risks for Ontario's Economic Outlook

The FAO's current economic forecast represents a reasonable outlook for the Ontario economy and an appropriate foundation for fiscal projections. However, several key risks could materialize leading to weaker than expected economic growth for the province.

In particular, there are significant risks with respect to the proposed renegotiation of the North American Free Trade Agreement (NAFTA) and the adoption of protectionist trade measures in the United States. As well, other proposed changes to U.S. fiscal and industrial policies, such as lower corporate tax rates and 'Buy America' executive orders, could harm Ontario's relative competitiveness, further discouraging business investment and limiting the contribution of exports to overall growth.

Domestically, the housing market continues to pose a significant risk to the overall economy. The sharp rise in Ontario housing prices – particularly in the Greater Toronto Area – has contributed to record consumer debt loads and stretched levels of affordability.

Residential Investment Spending Accounts for a Record Share of GDP

Source: Ontario Economic Accounts and FAO.

At the same time, the relative importance of residential housing investment to the overall economy has increased substantially in recent years, posing a significant risk to the Ontario economy, in the event of a sharp housing market correction. In 2016, investment in residential housing accounted for a record high 8.3 per cent of Ontario's nominal GDP, up from 6.4 per cent in 2009.[14]

14 Almost one-quarter (22 per cent) of the growth in nominal GDP in 2016 was directly attributable to the increase in residential investment spending.

The last time investment in residential housing accounted for a similar proportion of the economy was 1989, just prior to the 1990-1995 housing market correction.

A sharp correction in housing prices, exacerbated by the elevated levels of household debt, would negatively affect household spending and residential investment, and could lead to broader economy-wide impacts on growth and employment.

The Province recently announced a package of measures intended to respond to the underlying factors contributing to the unsustainable rise in housing prices and the rapid growth in housing market activity. However, it is too early to assess whether these measures will adequately address the imbalance between demand and supply pressures in the market.

The FAO's Quarterly Short-term Model of the Ontario Economy

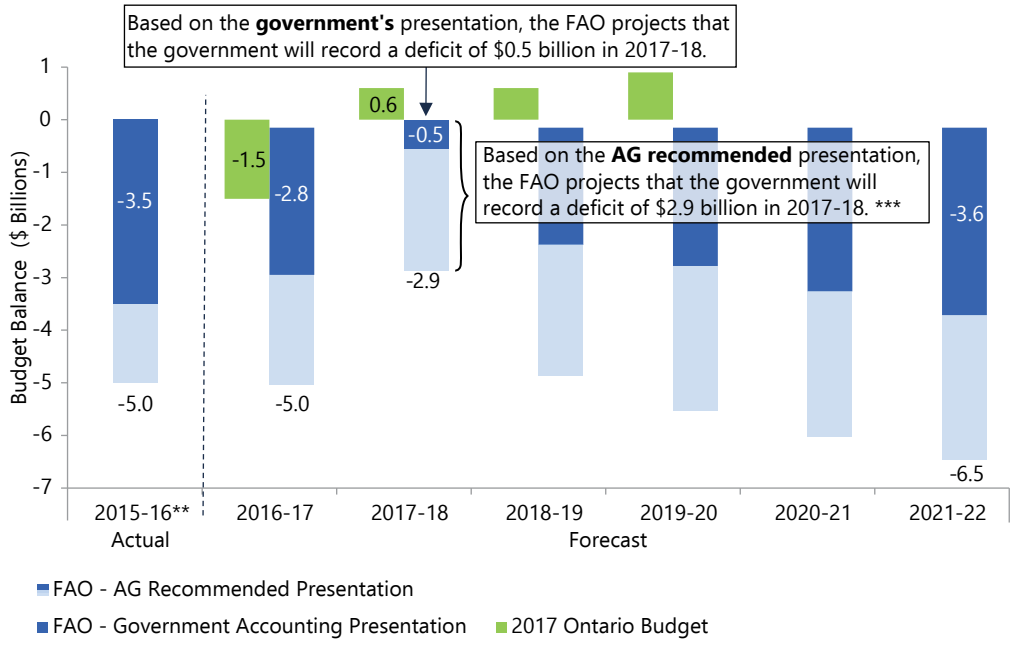
The FAO has developed a short-term forecasting model to produce quarterly five-year projections of the Ontario economy. The model is based on dynamic equations for major sub-categories of real and nominal GDP. The model also includes key labour market components, financial variables and the Canada-U.S. dollar exchange rate. The model is structured around a number of important external or exogenous concepts such as Canada-wide economic growth, U.S. economic growth, U.S. prices, U.S. interest rates and energy prices.

The model is an important tool for the FAO's bi-annual Economic and Fiscal Outlook (EFO), ensuring internal consistency of each projection as well as consistency between EFO forecasts. It also provides the majority of the inputs required by the FAO's Fiscal Outlook Model which provides the FAO's projection of the government's fiscal position.

3 FISCAL OUTLOOK

Continued Budget Deficits Projected

Based on the FAO's current economic forecast and updated fiscal information, the FAO is projecting continued Ontario budget deficits over the outlook. In the near term, the deficit improves due to strong tax revenue growth and a temporary boost to non-tax revenue. However, beginning in 2018-19, the deficit is expected to increase as a result of moderating revenue growth combined with higher expenses.



Since the release of the 2015-16 Public Accounts of Ontario, the government and the Auditor General (AG) have disagreed on the application of public sector accounting standards with respect to jointly-sponsored pension plans. (Please refer to the discussion on page 25 for additional background and context on this issue.) Based on the FAO's application of the Auditor General's recommended accounting for these pension assets, the FAO is projecting a budget deficit of $2.9 billion for 2017-18, rising to $6.5 billion by 2021-22.[1]

Under the government's accounting presentation, the FAO is projecting a budget deficit of $0.5 billion in 2017-18, growing to $3.6 billion by 2021-22.[2] By comparison, in the 2017 Budget, the government is projecting a budget surplus of $0.6 billion in 2017-18, followed by small surpluses over the next two years (before the reserve).

1 The FAO projection based on the Auditor General's recommended accounting presentation assumes a valuation allowance that effectively writes off the value of any net pension assets – referred to as the 'pension adjustment' in this report. The valuation allowance increases 'other program' expense, resulting in higher deficits under the AG's recommended accounting presentation.

2 Under the government's accounting presentation, Ontario's public accounts would be expected to receive a qualified opinion from the Auditor General.

Ontario's Budget Balance*

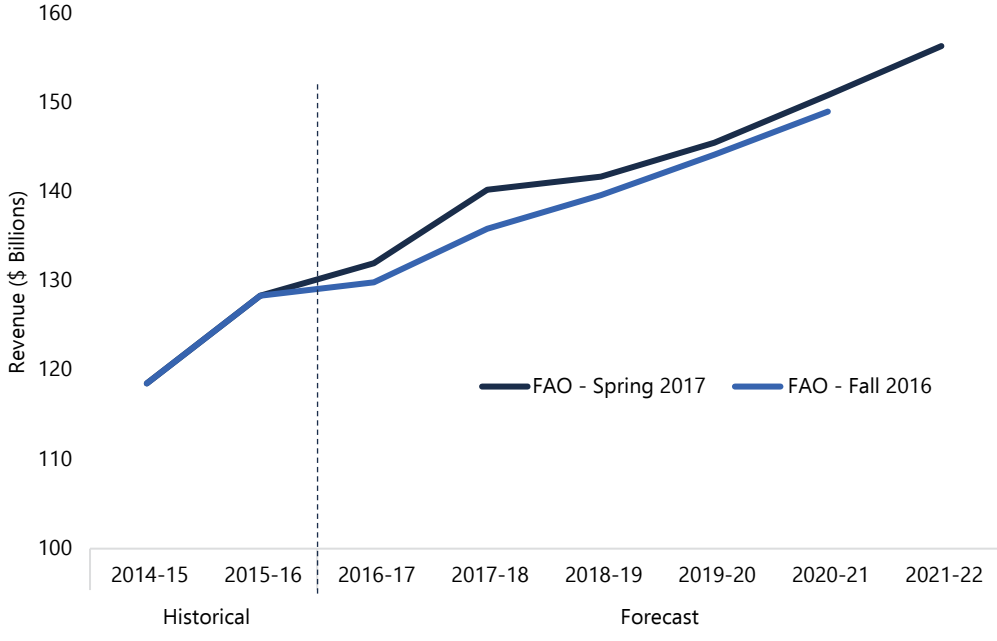
* Budget balance before reserve.

** Ontario's 2015-16 Public Accounts reported a deficit of $5.0 billion. Without the pension adjustment, the deficit would have been $3.5 billion.

*** This includes the FAO's estimate of the pension adjustment.

Source: 2015-16 Public Accounts, 2017 Ontario Budget and FAO.

On the government's accounting presentation, the FAO projects that a balanced budget is within the government's reach in 2017-18. However, the budget deficit is expected to increase after 2017-18, due to moderate revenue growth, the absence of one-time non-tax revenues, and higher program expenses. Staying in balance after 2017-18 will likely require additional fiscal policy measures.



Under the Auditor General's recommended accounting presentation, the FAO is projecting significant budget deficits over the entire outlook. On this basis, it is unlikely that the government will balance the budget without additional fiscal policy adjustments to raise revenue or lower expense.

Revenue Outlook

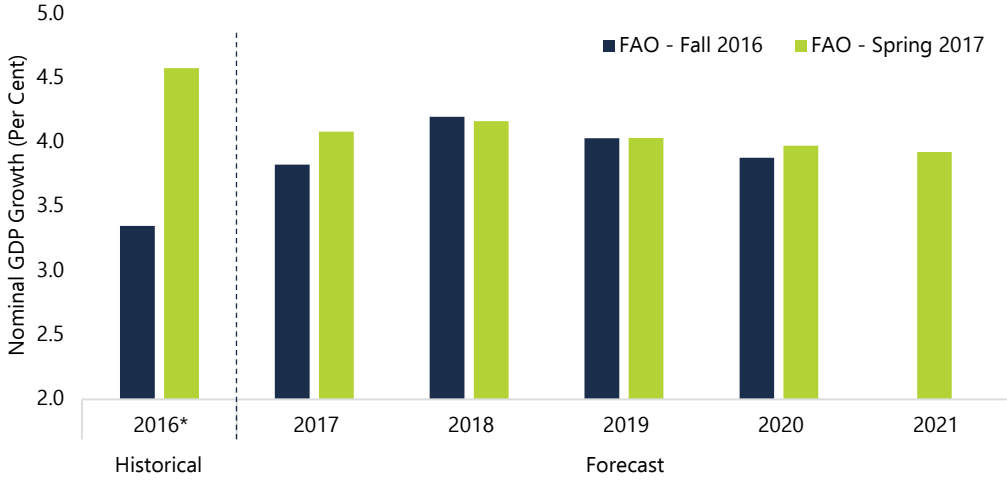
The FAO is projecting average annual revenue growth of 3.3 per cent per year over the outlook, slightly higher than forecast in the FAO's fall report.

In the near-term, revenue growth is driven by robust economic performance in 2016 and 2017, and a boost from one-time revenue in 2017-18. Beyond 2017-18, growth in tax revenue moderates and the benefit of one-time non-tax revenue ends.

Revenue Stronger Than Expected in Near Term

Source: FAO and Public Accounts.

FAO Revenue Assumptions and Forecast



Revenue Source	Assumption	Forecast
Taxation Revenue	Grows with key economic drivers including labour income, corporate profits and household spending	Averages 3.9 per cent growth per year from 2016-17 to 2021-22
Federal Transfers	Based on legislated growth rates and economic performance	Federal transfers are expected to grow by 1.9 per cent per year from 2016-17 to 2021-22
Government Business Enterprises (GBE)	Based on government projections	Income from GBEs are projected to rise moderately from $5.3 billion in 2016-17 to $6.5 billion in 2021-22
Other Revenue	Based on government projections, and includes asset sales, and proceeds from cap and trade allowances	These revenues are projected to increase from $8.5 billion in 2016-17 to $11.0 billion in 2017-18, before declining to $8.5 billion by 2021-22

Stronger Economic Growth Expected to Boost Tax Revenue

Consistent with the FAO's economic forecast, the FAO is currently projecting tax revenues to rise at an average of 3.9 per cent from 2016-17 to 2021-22, much stronger than the 3.0 per cent forecast in the FAO's fall outlook.

Since the FAO's fall report, nominal GDP – the broadest measure of the tax base – was revised significantly higher in 2016, improving the forecast for 2017.[3] However, beyond 2017, the outlook for nominal GDP growth is relatively unchanged from the fall forecast.

Nominal GDP up Significantly in the Near-Term Since the Fall

* 2016 value for the Fall 2016 EFO was the FAO's forecast at the time of the report's release.

Source: Ontario Economic Accounts and FAO.

Improved economic prospects are expected to lift the Province's tax revenue by approximately $2.8 billion in 2016-17 and $4.2 billion in 2017-18, compared to the FAO's fall estimates.

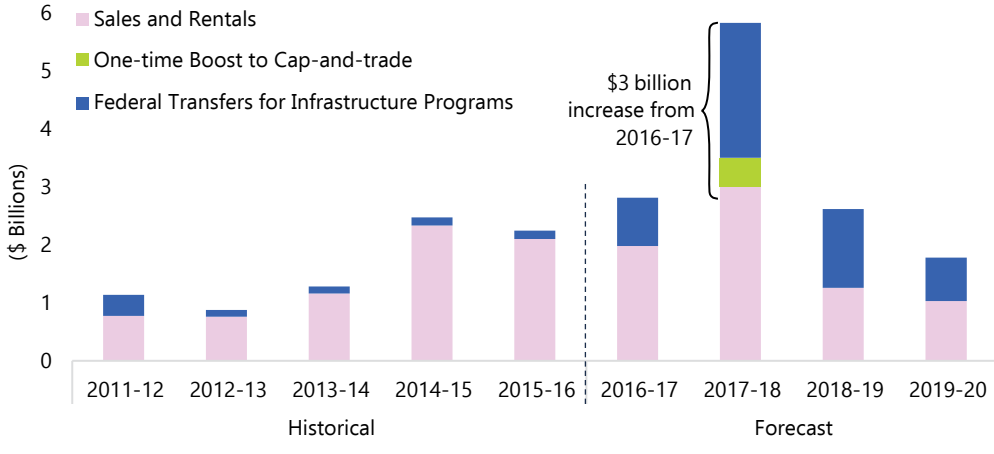
- Personal income tax revenue is forecast to grow stronger than expected in the fall due to the stronger forecast for labour income.[4]
- Corporations tax revenue is projected to benefit from the stronger outlook for corporate profits.

3 See economic section, and the footnote on page 12.

4 However, near-term revenue growth will be somewhat dampened as some high-income earners shifted earnings into the 2015 tax year to avoid the new higher 33 per cent tax rate introduced by the federal government in 2016 (http://www.fin.gc.ca/afr-rfa/2016/report-rapport-eng.asp#_Toc463249478). Using Finance Canada estimates, the FAO estimates that roughly $600 million of Ontario's 2015 PIT revenue was due to income shifting, which lowers taxable income in 2016-17 and 2017-18.

- Sales tax and land transfer tax revenues are forecast to grow stronger than expected in the fall due to the on-going strength in Ontario's housing market.

Equalization Entitlement Declines



Given Ontario's recent economic strength relative to the rest of Canada, the Province's Equalization entitlement declined $0.8 billion to $1.4 billion in 2017-18. The FAO is projecting a further drop to $0.6 billion in 2018-19. Beyond 2018-19, the FAO is projecting that Ontario will no longer be entitled to Equalization payments — a reflection of the continued relative strength of the Ontario economy.

2017-18 Revenue to Benefit from One-time Increases

Based on the 2017 Budget, Ontario's 2017-18 revenues will benefit from a one-time $3.0 billion boost,[5] that includes:

- $1.5 billion in higher revenue from federal transfers for infrastructure;
- $1.0 billion in increased sales and rentals revenue, reflecting additional asset sales[6]; and
- $0.5 billion in additional cap and trade proceeds from March 2017, which will be recognized in 2017-18.[7]

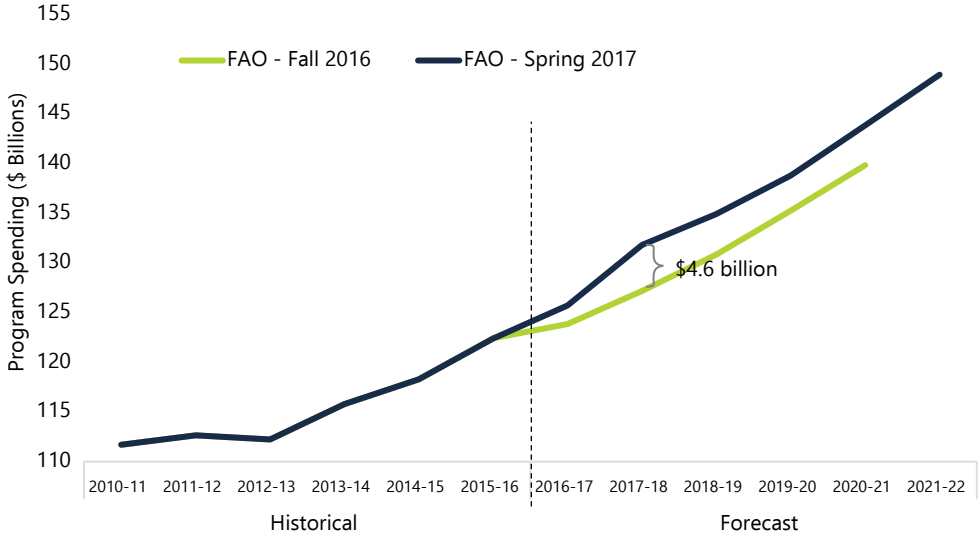
2017-18 Temporary Revenue Boost

Source: Ontario Budgets, Ministry of Finance and FAO.

5 This one-time benefit is incorporated into the FAO's revenue projection.

6 A portion of this increase reflects the Province's sale of 22 per cent of Hydro One equity in 2017-18, compared to a 15 per cent sale in 2016-17. The FAO estimates that this sale would generate about $0.8 billion in revenue gains in 2017-18, compared to a gain of $0.5 billion in 2016-17.

7 The government indicated that the cap and trade revenues from the March 2017 auction will be reported in fiscal year 2017-18, because the allowances were certified and delivered on April 2, 2017.



Expense Outlook

Program Expense to Increase Significantly over the Outlook

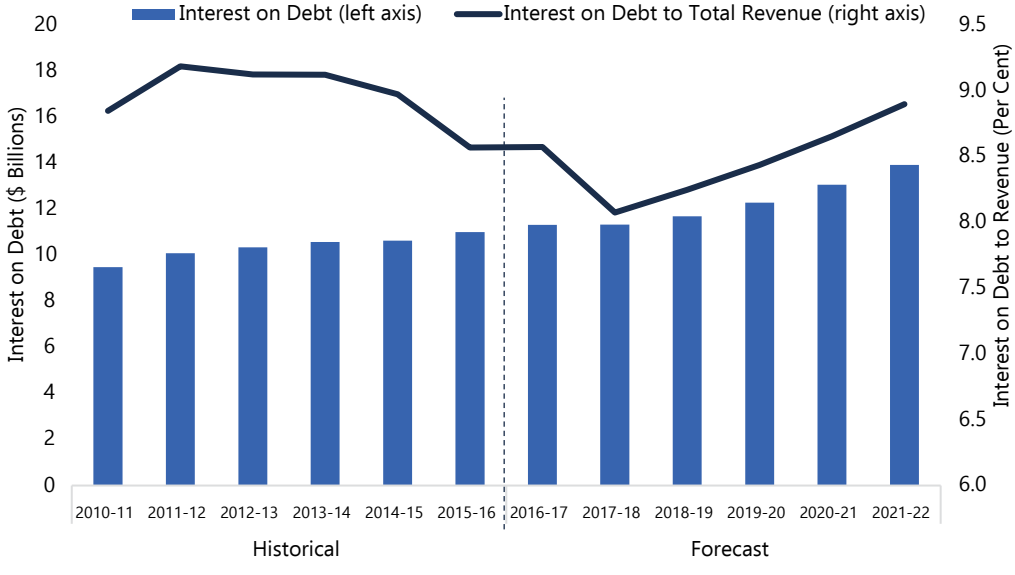
The FAO projects program spending growth of 3.3 per cent per year over the 2016-17 to 2021-22 period.[8]

Over the 2016-17 to 2019-20 period, the FAO adopts the government's 2017 Budget projections for program spending[9], adjusted to reflect the Auditor General's recommended accounting presentation.[10] The expense outlook includes significant new spending across all sectors, including a new children and youth Pharmacare program, higher operating funding for hospitals, 24,000 new child care spaces[11], and the government's new 'Fair Hydro Plan'. As a result, spending is now forecast to be significantly higher than projected in the FAO's fall outlook.

Program Expense Higher than Projected in the Fall

Note: Program spending includes the FAO's estimate of the pension adjustment.
Source: Ontario Public Accounts, 2017 Ontario Budget and FAO.

With these new expenses, program spending is expected to grow 3.3 per cent per year on average over the next five years. This higher program spending growth is still slightly below the growth in underlying cost and demographic pressures, which is estimated to be 3.6 per cent on average.



8 The FAO's projection extends to 2021-22, two years beyond the 2017 Ontario Budget forecast.
9 Given the government's discretion over spending, the FAO adopts the government's announced spending plans and incorporates policy announcements as appropriate.
10 The FAO's estimates the pension adjustment will increase 'other program' expense by $2.2 billion in 2016-17, rising to $2.9 billion by 2021-22.
11 The 2017 Budget announced 24,000 new child care spaces for 2017–18, as part of the government's September 2016 Throne Speech commitment to create 100,000 new child care spaces by 2022.

Interest on Debt

The FAO projects interest on debt (IOD) payments will increase at an average annual rate of 4.0 per cent from $11.0 billion in 2015-16 to $13.9 billion by 2021-22, reflecting higher debt and rising interest rates over the outlook. This is faster than the average rate of program spending growth over the outlook.

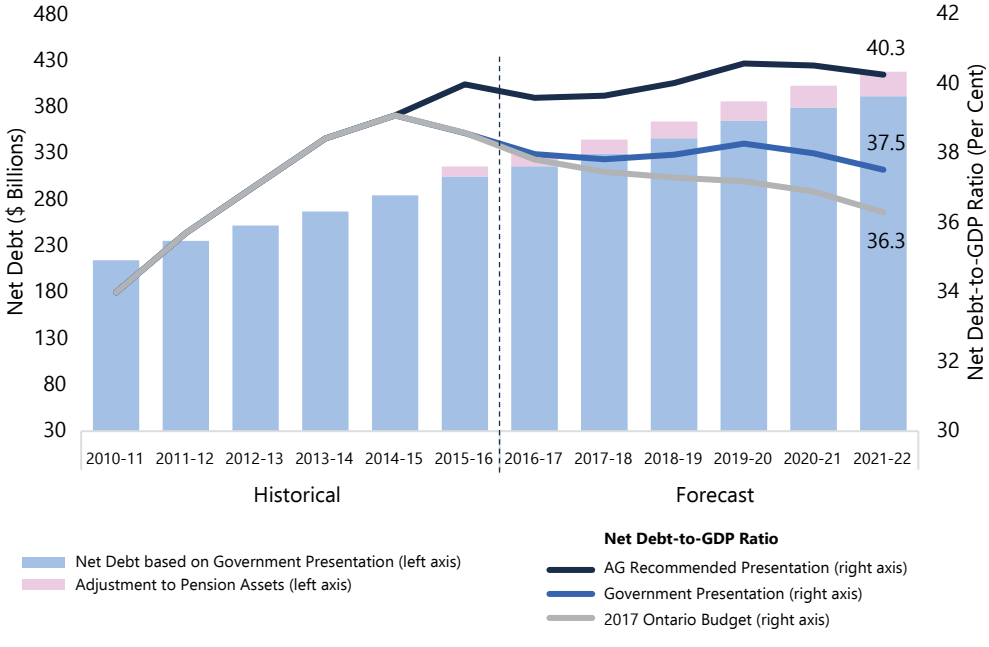
Over the past five years, IOD as a share of revenue declined steadily, benefitting from falling interest rates. However, given the projected rise in interest rates over the outlook, the FAO forecasts that IOD as a share of revenue will increase from 8.1 per cent in 2017-18 to 8.9 per cent by 2021-22.

Interest on Debt to Rise Sharply as a Share of Revenues

Source: Ontario Public Accounts and FAO.

Ontario Debt Outlook

Ontario Net Debt-to-GDP Ratio Will Remain Elevated



Ontario's total borrowing requirements are expected to remain high over the outlook. To finance the cost of projected capital spending, on-going deficits and maturing debt issues the FAO estimates that provincial borrowing will average $37 billion per year over the next five years.

As a result, the FAO projects Ontario's net debt to increase by $76 billion over the next five years to approximately $392 billion by 2021-22 based on the FAO's application of the AG's recommended accounting presentation. By comparison, using

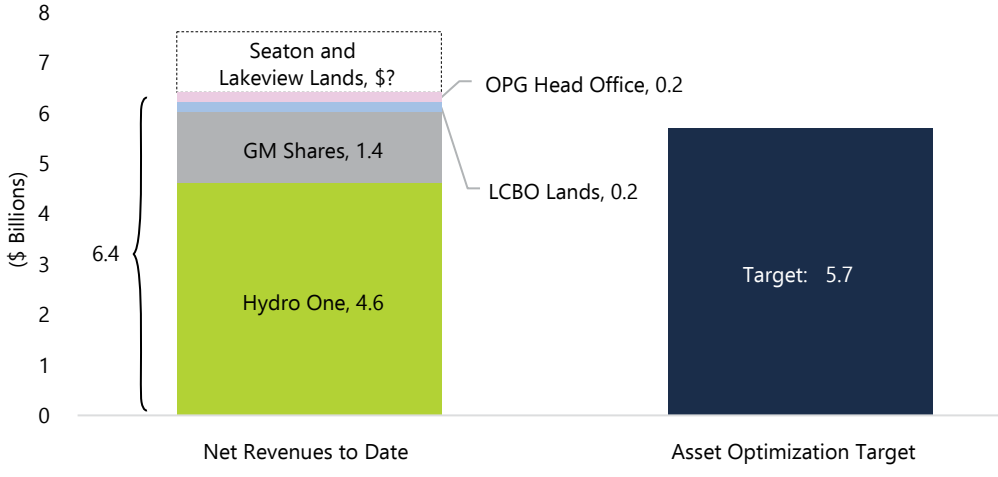
the government's accounting presentation, the FAO projects Ontario's net debt will rise by $62 billion to roughly $365 billion by 2021-22.

Based on the AG's recommended accounting presentation, the FAO expects Ontario's net debt-to-GDP ratio will edge higher to 40.3 per cent by 2021-22, reflecting the projected increase in net debt and the FAO's forecast for nominal GDP growth. In contrast, based on the accounting presentation adopted by the government, the FAO projects that net debt-to-GDP will fall slightly from 38.6 per cent in 2015-16 to 37.5 per cent by 2021-22.

Ontario's Net Debt-to-GDP Ratio

Source: FAO, Ontario Economic Accounts, and 2017 Ontario Budget.
Note: AG recommended presentation is based on FAO estimates of the pension adjustment.

In the 2017 Budget, the Province set an interim net debt-to-GDP target of 35 per cent by 2023-24 and committed to lowering the ratio to 27 per cent by 2029-30. The FAO's net debt-to-GDP projections under both accounting presentations, suggest that additional fiscal measures would be required for the government to achieve its interim target of 35 per cent by 2023-24.



Risks to the Fiscal Plan and Policy Options

There are material risks that could impact Ontario's fiscal position.

- A sharp correction in the housing market could present a significant risk for both the broader economy and for the Province's fiscal plan. As discussed in an FAO commentary[12], a decline in house prices and housing market activity would directly reduce Land Transfer Tax and HST revenues. In addition, the broader economic impacts would lower personal and corporate income tax revenues.

- In the 2017 Budget, the government significantly reduced the prudence built into its program spending projection compared to the 2016 Budget, leaving less fiscal flexibility for the government to respond to unexpected events.[13] In addition, the FAO projects that interest on debt payments as a share of both program spending and revenue will increase significantly, exposing the government to added fiscal risk should interest rates rise faster than expected.

Asset Optimization Revenues and Target

Source: FAO and Ontario Budgets.

Note: As of the 2017 Budget, the government had generated $3.8 billion in net proceeds from its sale of Hydro One equity. On May 8, 2017, the government announced the sale of an additional 22 per cent of Hydro One equity, which the FAO estimates will generate $0.8 billion in net proceeds.

On the other hand, the government has increased spending growth to a rate closer to underlying spending pressures, diminishing the expense risk identified in earlier FAO reports.

12 "The Impact of a Housing Market Correction on Ontario's Fiscal Position", Financial Accountability Office of Ontario, February 15, 2017. http://fao-on.org/en/Blog/Publications/Housing_Market16821

13 In the 2017 Budget, contingency funds total $0.6 billion for the coming fiscal year, half the size built into the 2016 Budget fiscal plan. Similarly, the government's target for year-end savings has increased to $1.2 billion for the coming year, compared to $0.8 billion in Budget 2016.

Additionally, the government has a broad range of policy options that could improve its fiscal position, including the sale of additional public assets beyond announced targets. To date, the FAO estimates that the government has generated $6.4 billion in revenues from net asset sales, exceeding its target of $5.7 billion over 10 years. Given the government's intention to sell Seaton and Lakeview lands[14], it would further overachieve its asset sales target.

14 2017 Ontario Budget, page 161.

The Accounting Treatment of Jointly Sponsored Pension Plans

Background

Ontario's 2015-16 Public Accounts noted a disagreement between the Office of the Auditor General and the Province on the appropriate accounting treatment for net pension assets of jointly sponsored pension plans. Specifically, the Province is a joint sponsor of two pension plans, the Ontario Teachers' Pension Plan (OTPP) and the Ontario Public Service Employees Union Pension Plan (OPSEUPP).

The government's position is that these pension assets have been appropriately and consistently reflected on the Province's financial statements since 2001. The Office of the Auditor General, based on a review of these pension assets, determined that a change in the accounting treatment was required. The Auditor General concluded that under current Canadian public sector accounting standards, the government could not unilaterally recognize a pension asset on its financial statements without evidence - in the form of a written agreement - permitting it to realize the asset through reduced contributions.[15]

In response, the Province adopted regulated accounting for 2015-16 to reflect the fiscal results according to the Auditor General's interpretation of public sector accounting standards, and subsequently appointed a panel, the 'Pension Asset Expert Advisory Panel', to review and provide their recommended interpretation. The panel's report,[16] released in February 2017, concluded that the Province's share of net assets in jointly sponsored pension plans should be fully recognized in the Province's financial statements — contrary to the opinion of the Office of the Auditor General.

In the 2017 Budget, the government adopted the advisory panel's interpretation of public sector accounting standards and recognized the net pension assets of the jointly sponsored pension plans. The 2017 Budget also indicated that the Province's 2016–17 Public Accounts will report the net pension assets for the two jointly sponsored pension plans.

15 The Auditor General indicated that her office began reviewing the treatment of pension assets after these assets started to materially affect the government's fiscal position (Auditor General's Statement on Pension Assets, February 16, 2017).

16 https://news.ontario.ca/tbs/en/2017/02/pension-asset-expert-advisory-panel-submits-report.html.

The Central Issue

The government and the Auditor General have put forward different interpretations of the application of public sector accounting standards for jointly sponsored pension plans.

The different interpretations centre on the question of whether the government has unilateral control of pension surplus assets in jointly sponsored pension plans. In particular, the issue is focused on whether an explicit written agreement between the co-sponsors (the government and the unions representing the employees) to lower future contributions is required for the government to recognize the value of the pension surplus assets.

According to the Auditor General, the issue can be resolved if the government presents an agreement with the Ontario Teacher's Federation (OTF) allowing the government to access the OTPP pension assets through reduced contributions. The extent and duration of the reduced contributions would determine the size of the pension asset that the government could recognize in its financial statements.

The government's position, based on the advice of the advisory panel, is that the existing agreements governing the pension plans, and past history, reflect the sponsors' rights and intent to benefit from surplus assets in the plans through mechanisms reflected in the agreements to potentially realize a benefit through lower future contribution rates.

In the absence of an agreement, and given the government's decision to accept the advisory panel's recommended approach to accounting for jointly sponsored pension plan assets, the Auditor General would be expected to provide a qualified opinion[17] on Ontario's 2016-17 Public Accounts.

Roles and Responsibilities of the Province and the Auditor General

The Province (through the Treasury Board Secretariat) is responsible for the preparation of Ontario's Public Accounts in accordance with legislation, and based on the standards set out by the Public Sector Accounting Board (PSAB).[18]

The PSAB accounting standards serve the public interest by providing an independent, high-quality accounting framework for public sector entities. The

17 An auditor may provide a qualified opinion when financial statements do not conform in a material way to the applicable accounting standards.
18 https://www.ontario.ca/page/public-accounts-101-guide#section-6].

government is responsible to ensure that the financial reports fairly reflect the activities and financial position of the Province.

The Auditor General reviews the Province's annual Public Accounts and provides an audit opinion to the Legislature on whether the Consolidated Financial Statements for the Province of Ontario present fairly, in all material respects, the Province's financial position, in accordance with the PSAB accounting standards.

The FAO's Presentation of Ontario's Fiscal Outlook

The Financial Accountability Officer supports the Legislative Assembly by providing independent economic and financial analysis intended to improve the transparency of the government's fiscal plan. The Officer looks to the Auditor General as the provincial authority on the appropriate interpretation and application of accounting standards for the Province.

The FAO has presented two fiscal projections, including and excluding the impact of the net pension assets of jointly sponsored pension plans, to help members of the Legislative Assembly better understand the implications of these different accounting interpretations on the Province's fiscal position.

- The FAO projection based on the Auditor General's recommended accounting presentation assumes a valuation allowance that offsets the net pension assets.
- The FAO projection based on the government's accounting presentation recognizes the net pension assets.

  In the absence of an agreement between the pension plan co-sponsors, this presentation of Ontario's fiscal position would be expected to receive a qualified opinion from the Auditor General when published in the Province's future Public Accounts.

Based on the Auditor General's recommended accounting presentation for the net assets of jointly sponsored pension plans, and the FAO's estimate of the pension adjustment, the FAO is projecting budget deficits of $2.9 billion in 2017-18, rising to $6.5 billion by 2021-22. Alternatively, based on the pension accounting presentation adopted by the government, the FAO is projecting budget deficits of $0.5 billion in 2017-18 rising to $3.6 billion in 2021-22.

4 APPENDICES

Developments since the FAO's Fall 2016 Economic and Fiscal Outlook

The FAO's current projection of the Ontario budget balance has generally deteriorated relative to the FAO's fall 2016 projection.

- Stronger than expected economic performance is expected to boost taxation revenues over the forecast, partially offset by lower Equalization revenue.
- Based on new government spending plans, program expense has increased significantly.

Developments since Fall 2016 EFO (AG Recommended Presentation)

	2016-17	2017-18	2018-19	2019-20	2020-21

FAO's Spring 2017 Budget Balance Forecast	**-5.0**	**-2.9**	**-4.9**	**-5.5**	**-6.0**

Notes:

1. Change in federal transfers forecast mainly due the reduction in Ontario's Equalization payment.
2. Other revenue changes include the $0.5 billion re-profiling of cap-and-trade proceeds from 2016-17 to 2017-18, and an increase in sales and rentals for 2017-18.
3. In the Fall 2016 EFO, the FAO assumed an annual adjustment of $1.5 billion for the net pension assets of jointly sponsored pension plans. The current projection incorporates the FAO's updated estimates for the pension adjustment of $2.2 billion in 2016-17, increasing to $2.9 billion by 2020-21.

May 29, 2017

The Honourable Liz Sandals
President of Treasury Board
Treasury Board Secretariat
Room 4320, 4th Floor, Whitney Block
99 Wellesley Street West
Toronto, Ontario M7A 1W3

Dear Minister Sandals:

Subject: Economic and Fiscal Outlook – Assessing Ontario's Medium-Term Prospects: Spring 2017

Under paragraph 10(1)(a) of the *Financial Accountability Officer Act, 2013* (the Act), the FAO is mandated to undertake regular analyses of the state of the province's finances and trends in the provincial economy.

Section 15 of the Act requires that I deliver copies of any reports I publish to the relevant ministers ahead of publication. Accordingly, please find attached a copy of my report, which presents my office's assessment of the province's medium-term economic and fiscal outlook.

As arranged with the Clerk of the Legislative Assembly, this report will be tabled on **Wednesday May 31 at 9:00 a.m.** Please treat this report as confidential until that time.

An MPP Briefing will be held in Committee Room 1 at 1:30 p.m. Members of the Standing Committee on Finance and Economic Affairs, as well as two members per caucus, are welcome to attend.

Let me take this opportunity to thank you once more for the assistance that your ministry provided to my staff during the preparation of this report.

As always, please feel free to contact my office if we can be of assistance.

Sincerely,

Stephen LeClair
Financial Accountability Officer

Encl.

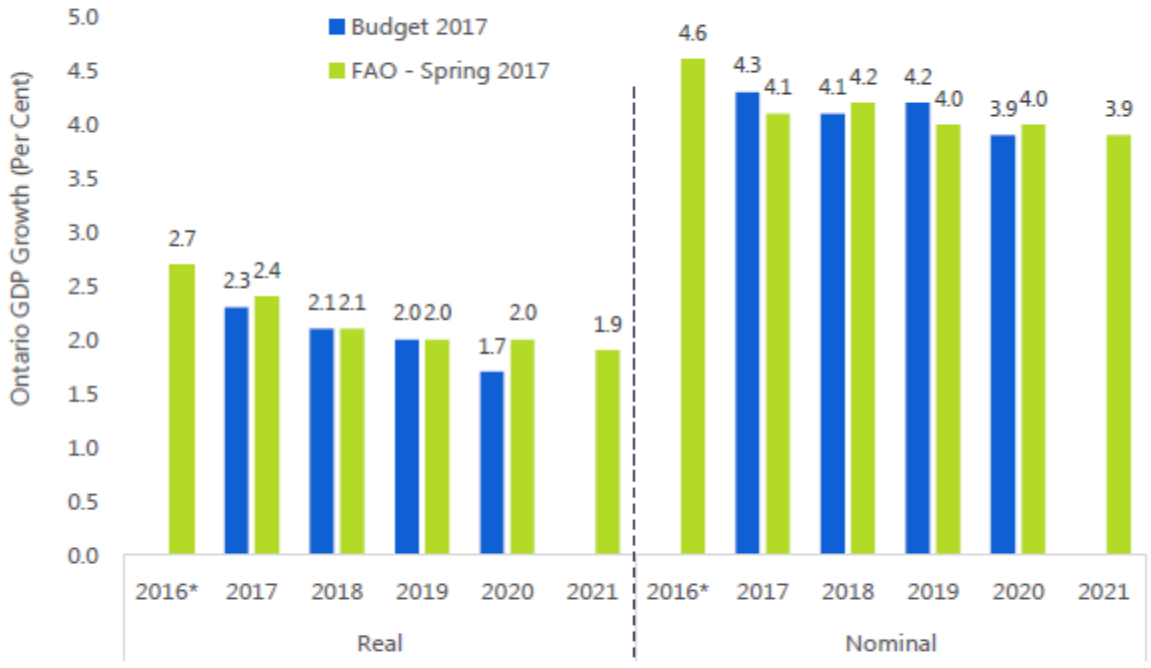
Financial Accountability Officer Report:
Spring Economic and Fiscal Outlook

Draft – May 18, 2017 12:20 PM

ISSUE

- The Financial Accountability Officer (FAO) will be releasing a report on May XX, which assesses Ontario's medium-term economic and fiscal outlook.
- This represents the spring update to the FAO's planned release of semi-annual medium-term outlook reports.
- The spring report incorporates economic and fiscal information released since the FAO's fall 2016 report (released November 3, 2016). This includes:
    - New economic data that impacts their revenue and interest on debt outlooks; and
    - New spending commitments from the 2017 Budget.
- The FAO has presented two fiscal projections in its spring report:
    1. A projection that includes the impact of the net pension assets of jointly sponsored pension plans, based on the Auditor General's recommended accounting treatment, and
    2. A projection that excludes this impact based on the government's fiscal presentation in the 2017 Budget as recommended by the Pension Asset Expert Advisory Panel.
- Both presentations used by the FAO project deficits in each year over the outlook period (2016–17 to 2021–22).
- In the spring report, between 2017 and 2020 the FAO left their real GDP growth projection little changed, on average, compared to the outlook presented in its fall report. The FAO modestly raised its projection for Ontario nominal GDP by 0.1 percentage points annually, on average.



KEY FINDINGS

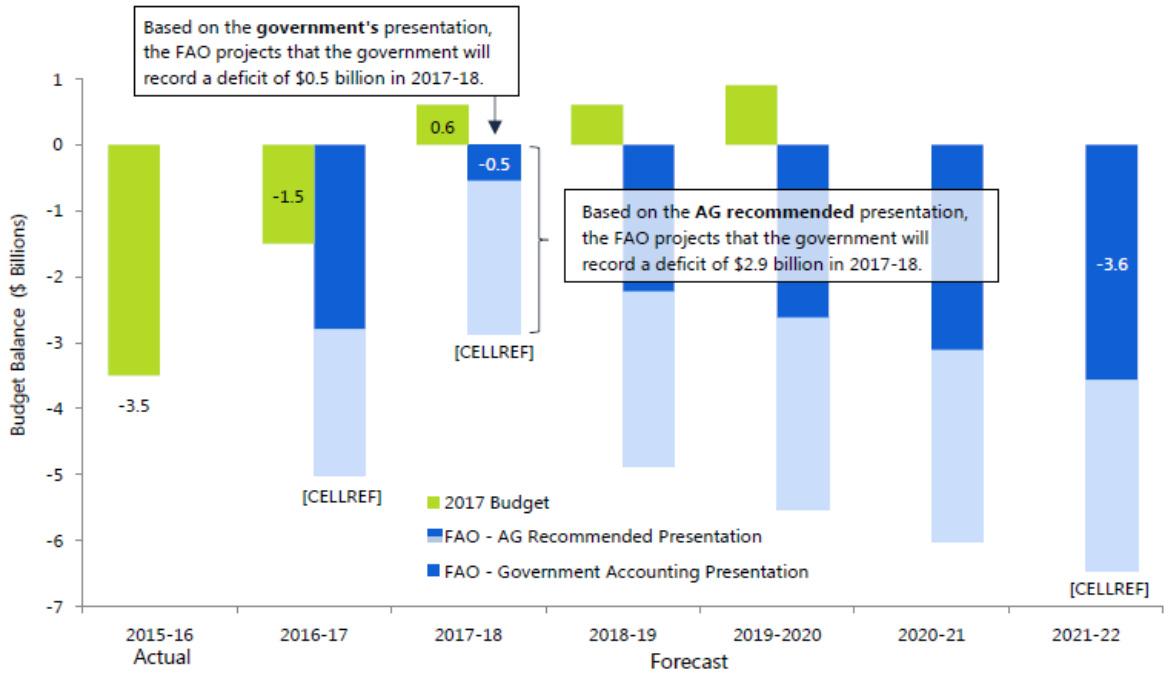
- The report is divided into two main chapters:
    1) The **Economic Outlook** chapter presents the FAO forecast for Ontario's economy out to 2021, and includes a discussion of potential risks.
    2) The **Fiscal Outlook** chapter presents the FAO forecast for revenue, expense and the surplus/deficit between 2016-17 and 2021-22.

Economic Outlook

- The FAO has left its forecast for Ontario real GDP growth little changed, on average, over the 2017 to 2020 period relative to its fall forecast, though it included a modest downward revision in 2017 and upward revision in 2019.
- The FAO forecast is broadly consistent with the private sector economists' view that stronger international exports and business investment will be key drivers of Ontario's overall economic growth over the next several years.
- The FAO forecast for real GDP growth is 0.1 percentage points stronger annually, on average, than the 2017 Budget forecast between 2017 and 2020.
- The FAO believes the balance of the risks to the economic outlook is tilted to the downside, particularly risks associated with a correction in Ontario's housing market. (p. 12 – Economic Chapter).

Solid Economic Performance Expected Over Outlook

* 2016 are actuals



Source: Ontario Economic Accounts, Budget 2017 and FAO

Fiscal Outlook

- The FAO's current projection of the outlook for budget balance has generally deteriorated relative to the FAO's fall 2016 projection.

- The FAO's forecast, based on the Auditor General's recommended accounting treatment of jointly-sponsored pension plans, projects deficits of $5.0 billion in 2016–17, $2.9 billion in 2017–18, $4.9 billion in 2018–19, and $5.5 billion by 2019–20 (excluding the reserve). This represents a slight improvement in the deficit for 2016–17 but deterioration in 2017–18 and over the outlook compared to the FAO's fall report.
- The FAO also projects that a balanced budget is "within the government's reach in 2017–18" when using the government's accounting method.
- Using the government's accounting treatment of net pension assets the FAO is projecting budget deficits of $2.8 billion in 2016–17, $0.5 billion in 2017–18, $2.2 billion in 2018–19, and $2.6 billion by 2019–20 (excluding the reserve). This represents an improvement in the deficit for 2016–17 and 2017–18, but deterioration over the outlook compared to the FAO's fall report. By comparison, the 2017 Budget projects a $1.5 billion deficit in 2016–17 and surpluses of $0.6 billion in 2017–18 and 2018–19, and a $0.9 billion surplus in 2019–20, excluding the reserve. The FAO also makes projections out to 2021–22 with increasing deficits forecast for those years as well.
- The FAO's projection for an improved deficit in 2017–18 is due to robust economic performance in 2016 and 2017, compared to the FAO's fall estimates, and a one-time revenue increase in 2017–18 from increased federal transfers for infrastructure, additional revenue from asset sales and cap and trade proceeds. (p. 3 – Fiscal Chapter).
- Beginning in 2018-19, the FAO projects that the deficit will gradually deteriorate due to moderate revenue growth, the absence of one-time non-tax measures, and higher program expenses. (p. 1 – Fiscal Chapter).
- That FAO believes that "staying in balance after 2017–18 will likely require additional fiscal policy measures." (p. 1 – Fiscal Chapter).

Ontario's Budget Balance*

* Budget balance excluding reserve.

Source: 2015-16 Public Accounts, 2017 Budget and FAO

Key factors driving change since the 2016 FAO fall report:

- Increases in Provincial tax revenue of $2.3 billion in 2016–17 and $4.1 billion in 2017–18 (stronger than expected PIT revenue) due to improving economic growth in 2017
- Declines in Ontario's equalization entitlement. Beyond 2018–19, the FAO is projecting that Ontario will no longer be entitled to Equalization payments – a reflection of the continued strength of the Ontario economy
- Significant new spending across all sectors, including a new children and youth Pharmacare program, increased funding for hospitals, new child care spaces, and electricity cost relief under the Fair Hydro Plan
- Revised estimates for net pension asset expense of jointly sponsored pension plans

Developments since 2016 Fall EFO (AG Recommended Presentation)

	2016-17	2017-18	2018-19	2019-20	2020-21
FAO's Fall 2016 Budget Balance Forecast	-5.2	-2.6	-2.8	-3.3	-3.7
Developments Since Fall 2016					
Revenue					
Stronger Economic Outlook	2.3	4.1	3.9	4.4	4.7
Lower Federal Transfers[1]	-0.3	0.2	-1.3	-2.4	-2.2
Other Revenue Changes	0.1	0.1	-0.5	-0.6	-0.6
Total	2.1	4.4	2.1	1.3	1.8
Expense					
Children and Youth Pharmacare, and Fair Hydro Plan[3]	0.5	1.3	1.3	1.3	1.3
Revised Pension Asset[4]	0.7	0.8	1.1	1.4	1.4
Other Expense Increases	0.7	2.5	1.7	0.9	1.4
Total	2.0	4.6	4.1	3.6	4.1
Total Developments	0.2	-0.3	-2.1	-2.3	-2.3
FAO's 2017 Spring Budget Balance Forecast	-5.0	-2.9	-4.9	-5.5	-6.0

Notes:

1. Change in federal transfers forecast mainly due the reduction in Ontario's Equalization payment.
2. Other revenue changes include the $0.5 billion re-profiling of cap-and-trade proceeds from 2016-17 to 2017-18, and an increase in sales and rentals for 2017-18.
3. In the 2016 Fall EFO, the FAO included $1 billion in expenses from the HST rebate on electricity bills beginning 2017-18, which is now part of the Fair Hydro Plan. As a result, the FAO estimates that the incremental impact of the Fair Hydro Plan is $0.8 billion, compared to the Fall.
4. In the 2016 Fall EFO, the FAO assumed $1.5 billion in adjustments for net pension assets of jointly sponsored pension plans. The government has revised its estimate of the impact to $2.2 billion in 2017-18, increasing to $2.9 billion by 2020-21.

Source: FAO

Revenue Assumptions

- Compared to the FAO's fall forecast, from 2016-17 to 2019-20, on average, total revenue is projected to be $2.5 billion higher annually mostly because of higher taxation revenue, partially offset by lower Federal Transfers and other Non-Tax revenues.

FAO Revenue Difference (Spring 2017 less Fall 2016)

$ Billions	2016-17	2017-18f	2018-19f	2019-20f	Annual Average
Taxation Revenue	**2.8**	**4.2**	**4.4**	**4.9**	**4.1**
Government of Canada Transfers	-0.4	0.2	-1.3	-2.4	-1.0
Government Business Enterprises	0.3	-0.4	0.0	0.1	0.0
Other Non-Tax Revenue	-0.6	0.4	-1.1	-1.3	-0.7
Total Non-Tax Revenue	**-0.7**	**0.2**	**-2.4**	**-3.6**	**-1.6**
Total Revenue	**2.1**	**4.4**	**2.1**	**1.4**	**2.5**

  - Taxation revenues are projected to be, on average, $4.1 billion higher annually due to stronger economic growth as nominal GDP growth is, on average, projected to be 0.4 percentage points higher annually.

- More specifically, corporate profits are projected to be 3.3 percentage points higher annually, boosting Corporations Tax revenue. Higher labour income is expected to raise Personal Income Tax revenue while Ontario's strong housing market boosts Sales Tax and Land Transfer Tax revenues.
- Lower Federal Transfers reflects mostly the FAO's projection that Ontario will no longer be entitled to Equalization payments beyond 2018-19.
- Non-Tax revenues are lower, mainly because of the revisions to the multi-year asset optimization target to reflect the progress made so far and revised projections for Carbon allowance proceeds.

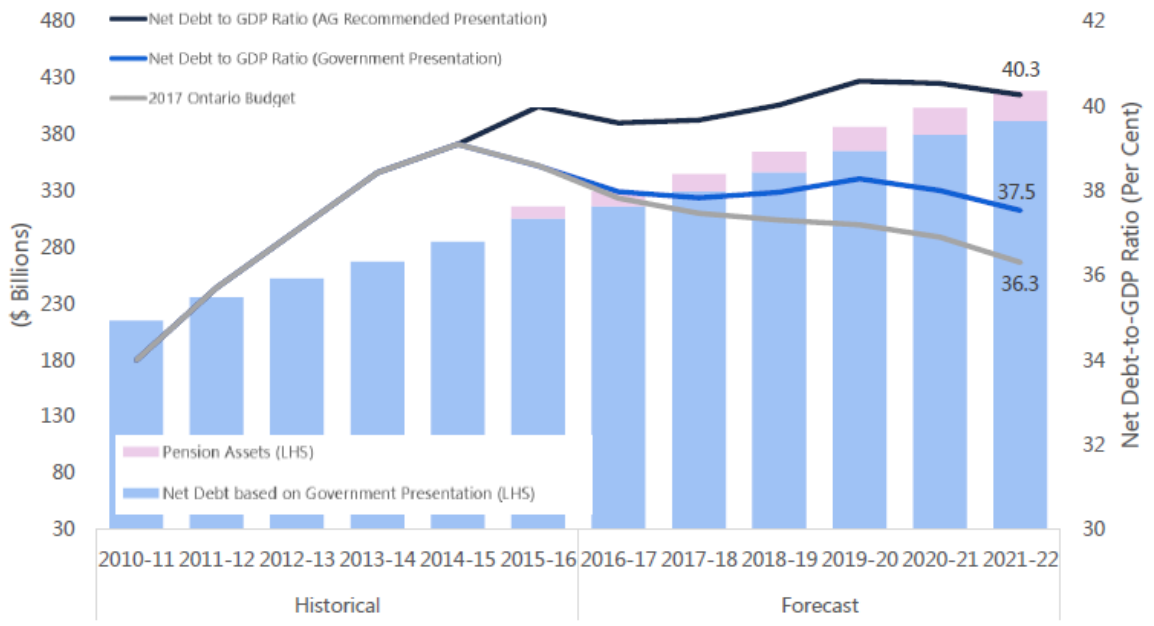
- Compared to the 2017 Budget, the FAO total revenue is lower mostly because of taxation revenue and, to a lesser extent, Federal Transfers.

FAO less Ontario 2017 Budget Outlook ($ Billions)

	2016-17	2017-18	2018-19	2019-20	Average
Taxation Revenue	-1.2	-1.4	-2.3	-3.0	-2.0
Government of Canada Transfers	-0.1	0.0	-0.8	-0.8	-0.4
Government Business Enterprises	0.0	0.0	0.0	0.0	0.0
Other Non-Tax Revenue	0.0	0.0	0.0	0.0	0.0
Total Revenue	**-1.2**	**-1.3**	**-3.1**	**-3.7**	**-2.4**

- FAO's projection for the composition of nominal GDP such as compensation of employees, net operating surplus and household consumption, are all lower than the 2017 Budget projection.
- The 2017 Budget assumed higher yields from CIT and HST compared to recent projections, reflecting recent tax revenue performance. These yields also exceed those assumed by the FAO.
- The FAO projection for PIT is consistently lower than the 2017 Budget. This is likely due to a downward adjustment in each year reflecting tax planning that may have occurred in 2015 by high-income earners -- no details were provided by the FAO. The 2017 Budget only included an allowance for PIT planning in 2016-17.

- FAO's federal transfer outlook is lower than assumed in the 2017 Ontario Budget, probably due to FAO's assumption that Ontario will no longer receive Equalization payments starting in 2019-20 as Ontario's fiscal capacity improves relative to other provinces.
- The FAO's government business enterprise net income outlook and other non-tax revenue is the same as reported in the 2017 Budget.



Expense Assumptions [to be confirmed by TBS]

- The FAO assumes the same program expense outlook as the 2017 Budget up to 2019–20, adjusted to reflect the Auditor General's recommended accounting treatment for jointly sponsored pension plans.(p. 4 – Fiscal Chapter).
- The FAO's expense outlook includes new spending commitments announced in the 2017 Budget including a new children and youth Pharmacare program, increased funding for hospitals, new child care spaces, and electricity cost relief under the Fair Hydro Plan. This results in average annual growth in program expense of 3.3% between 2016–17 and 2021–22.
- The FAO also projects that program spending will increase by an average of 3.6% each year beyond 2019–20. The FAO argues that this increase is in line with population growth, aging and price inflation, consistent with its 2016 spring and fall reports.
- The FAO projects that Ontario's interest on debt (IOD) payments will grow at an average annual rate of 4.0% from $11.0 billion in 2015–16 to $13.9 billion by 2021–22, reflecting higher debt and rising interest rates over the outlook. The FAO forecasts that IOD will significantly outpace the growth in program expense over the outlook. (p. 5 – Fiscal Chapter).
- According to the FAO, interest on debt is expected to increase from 8.1% of revenues in 2017–18 to 8.9% by 2021–22. Over the past five years IOD as a share of revenues declined steadily, benefitting from declining interest rates. The FAO argues that this ratio is expected to rise sharply due to projected interest rate increases. (p. 5 – Fiscal Chapter).

Debt Outlook [to be confirmed by OFA]

- Under the Auditor General's recommended accounting treatment of jointly-sponsored pension plans, the FAO expects Ontario's net debt to rise by $76 billion to $392 billion by 2021–22 or 40.3 per cent of GDP, this represents a slightly lower net debt-to-GDP ratio over the plan and outlook period when compared to the FAO's fall forecast. Using the government's accounting method, the FAO expects net debt to increase by $62 billion over the next five years to $365 billion by 2021–22 or 37.5 per cent of GDP, above the 2017 Budget projection of 36.3 per cent.
- The FAO's net debt-to-GDP projections under both accounting presentations, suggests that additional fiscal measures would be required for the government to achieve its interim target of 35 per cent by 2023-24. (p. 6 – Fiscal Chapter).

Ontario's Net Debt to GDP Ratio

Source: Ontario Economic Accounts, 2017 Ontario Budget, and FAO

Accounting Treatment

- The FAO's spring outlook includes a detailed section on the different accounting treatment for net pension assets of jointly sponsored pension plans (Ontario Teachers' Pension Plan and the Ontario Public Service Employees Union Pension Plan) used by the government and the Auditor General.
- The FAO states that in the absence of a written agreement between the co-sponsors of the pension plans, the Auditor General would be expected to provide a qualified opinion on Ontario's 2016-17 Public Accounts.

Risks and Policy Options

- The FAO notes the following risks to Ontario's fiscal plan (p. 7 – Fiscal Chapter):
    - A housing market correction could pose a significant risk for both the broader economy and the fiscal plan through lower taxation revenues
    - Reduced prudence built into program spending in the 2017 Budget compared to the previous budget – reducing flexibility for the government to respond to unexpected events
    - Interest on debt payments are expected to increase, exposing the government to fiscal risk should interest rates rise faster than expected

- Although the FAO projects deficits, the report notes that the government has a broad range of policy options that could improve the Province’s fiscal position, including selling additional public assets beyond announced targets.

APPENDIX A – Detailed Comparison of Outlooks

Comparison: 2017 Budget Fiscal Outlook and the 2017 Spring FAO Outlook

FAO has provided an advanced copy of their final EFO, which will be released on Wed morning at 9am. We're working with staff to review the final version to see whats changed and to update the briefing material. Will look to set up time with the Minister Sousa and his office as well (Maria let us know if Minister Sandals also needs to be briefed on it). Ministers and their offices should have received copies already.

Subject: The FAO's Spring 2017 Economic and Fiscal Report

Good afternoon,

The FAO will be releasing a spring 2017 Economic and Fiscal Outlook (EFO) report on Wednesday May 31st at 9:00 am. There will be separate technical briefings for media and MPPs on Wednesday at 1:30 pm. The report, along with the Officer's statement will be posted on the FAO's website.

Please note that while the statement will be posted on our website, the Officer will not be reading the statement to the media for this release.

The report along with the attached letters are being delivered to Ministers Sousa and Sandals this afternoon – and are attached for your reference.

Please treat this document as embargoed until its release on Wednesday at 9:00 am.

As always, we greatly appreciate your assistance and support for the work of the FAO.

Best regards,
David

Economic and Fiscal Outlook

Assessing Ontario's Medium-term Prospects

Spring 2017

About this Document

Established by the *Financial Accountability Officer Act, 2013*, the Financial Accountability Office (FAO) provides independent analysis on the state of the Province's finances, trends in the provincial economy and related matters important to the Legislative Assembly of Ontario. The FAO's Economic and Fiscal Outlook is released each spring and fall, providing an assessment of the province's medium-term economic performance and fiscal position.

This report was prepared by Edward Crummey, Luan Ngo, Nicolas Rhodes and Mario Angastiniotis under the direction of David West. External reviewers were provided with earlier drafts of this report for their comments. However, the input of external reviewers implies no responsibility for this final report, which rests solely with the FAO.

This report is based on information available to May 2, 2017. Background data used in this report are available upon request.

FAO's Fiscal Projections

The FAO forecasts provincial finances based on projections of existing and announced revenue and spending policies. The forecast represents the FAO's view of the most likely fiscal outcomes given existing policies, without anticipating any new government policy decisions. The FAO's tax revenue projections are based on an assessment of the outlook for the provincial economy and current tax policies. Given the government's discretion over spending, the FAO adopts the government's announced spending plans from fiscal documents and incorporates policy announcements as appropriate. Beyond the government's published spending projections, the FAO forecasts spending based on the outlook for underlying cost drivers including demographics and price inflation.

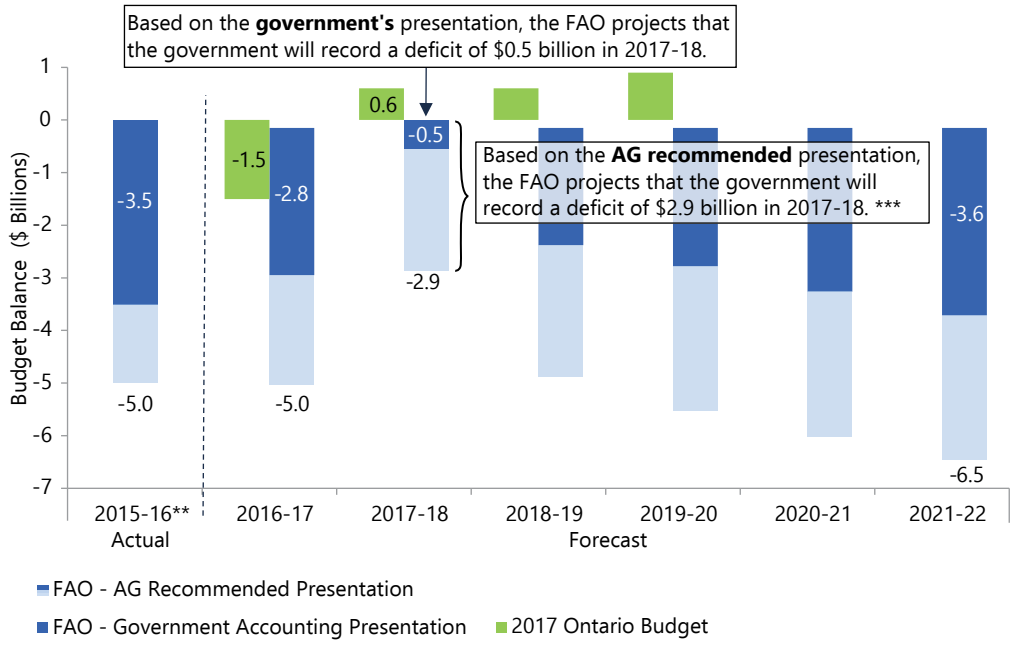
1 EXECUTIVE SUMMARY



The FAO is projecting continued Ontario budget deficits over the next five years. For 2017-18, the FAO's projection includes an improvement in the deficit, the result of a $3.0 billion one-time boost to non-tax revenue and strong tax revenue growth. However, beginning in 2018-19, the FAO is projecting a steady deterioration in the budget deficit due to moderating revenue growth combined with higher expenses.

The government and the Auditor General continue to disagree on the application of public sector accounting standards for jointly-sponsored pension plans.[1] Based on the FAO's application of the Auditor General's recommended accounting treatment for these pension assets, the FAO is projecting significant budget deficits over the entire outlook. On this basis, it is unlikely that the government will balance the budget without significant fiscal policy adjustments to raise revenue or lower expense.

Under the government's accounting presentation, the FAO projects that a balanced budget is within the government's reach in 2017-18. Beyond 2017-18, the deficit is projected to deteriorate steadily due to rising expenses and moderate revenue growth. On this basis, staying in balance after 2017-18 will likely require additional fiscal policy measures. This presentation of Ontario's fiscal position would be expected to receive a qualified opinion from the Auditor General when published in the Province's 2016-17 Public Accounts.

1 See the discussion on page 25 of the Fiscal Outlook chapter for background and context.

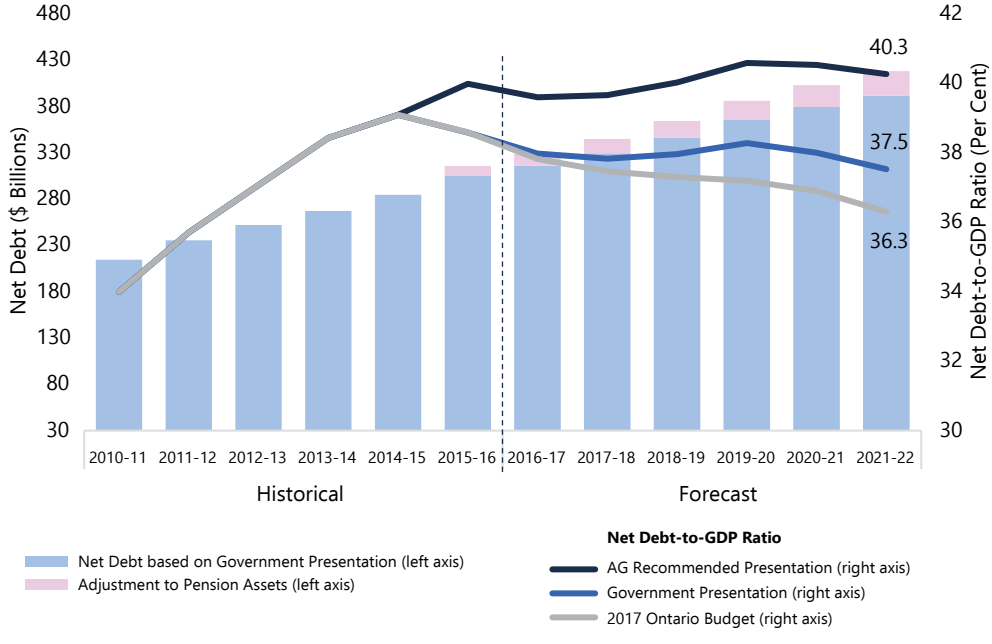
Ontario's Budget Balance*

* Budget balance before reserve.

** Ontario's 2015-16 Public Accounts reported a deficit of $5.0 billion. Without the pension adjustment, the deficit would have been $3.5 billion.

*** This includes the FAO's estimate of the pension adjustment.

Source: 2015-16 Public Accounts, 2017 Ontario Budget and FAO.



The FAO's economic outlook expects the recent strength of the Ontario economy to continue into 2017. The FAO is forecasting solid growth in real GDP of 2.4 per cent in 2017, moderating to an average annual pace of 2.0 per cent over the following four years. The FAO's economic forecast is broadly in-line with that presented in the government's 2017 Budget.

However, there are significant risks that could result in weaker than expected economic growth for Ontario. In particular, the policy direction of the new U.S. administration remains uncertain. This could hamper business investment and Ontario's economic prospects. Domestically, Ontario's surging housing market continues to be the largest risk for the economy. A sharp correction in housing prices could reverberate beyond the housing market and lead to broader, economy-wide impacts.

Consistent with the economic outlook, the FAO is projecting total revenues will rise by 3.3 per cent per year on average over the outlook. This reflects the FAO's forecast for solid growth in tax revenues combined with a significant one-time increase in non-tax revenues in 2017-18, including the sale of public sector assets. The FAO projects annual program spending growth to average 3.3 per cent per year over the outlook, a rate slightly below underlying spending pressures.

Given on-going deficits and projected capital spending, the FAO is forecasting Ontario's net debt will increase by $76 billion over the next five years, under the Auditor General's recommended accounting presentation. On this basis, Ontario's net debt-to-GDP ratio will edge higher to 40.3 per cent by 2021-22. In contrast, based on the government's accounting presentation, the FAO projects that net debt-to-GDP will fall slightly to 37.5 per cent by 2021-22.

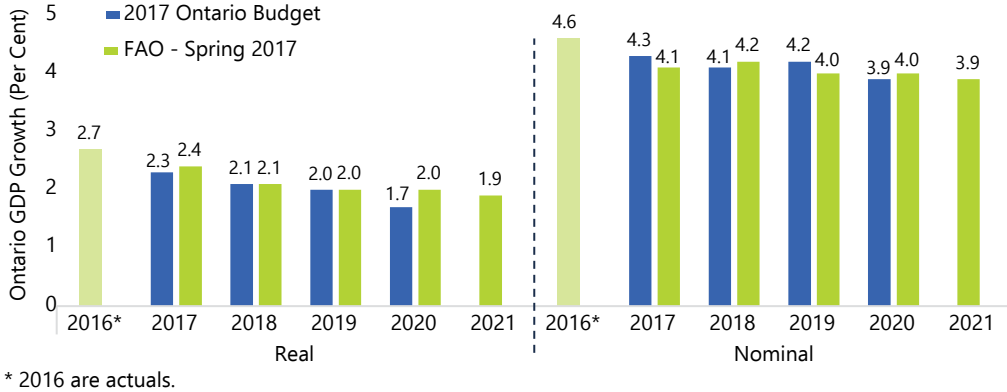
Ontario's Net Debt-to-GDP Ratio

Note: AG recommended presentation based on FAO estimates of the pension adjustment.
Source: Ontario Economic Accounts, 2017 Ontario Budget, and FAO.

In the 2017 Budget, the government set an interim net debt-to-GDP target of 35 per cent by 2023-24 and committed to achieving 27 per cent by 2029-30. Given the FAO's projection of rising deficits and the government's planned capital investments over the outlook, achieving these debt targets will likely require significant additional fiscal measures under either accounting presentation.

2 ECONOMIC OUTLOOK

Overview



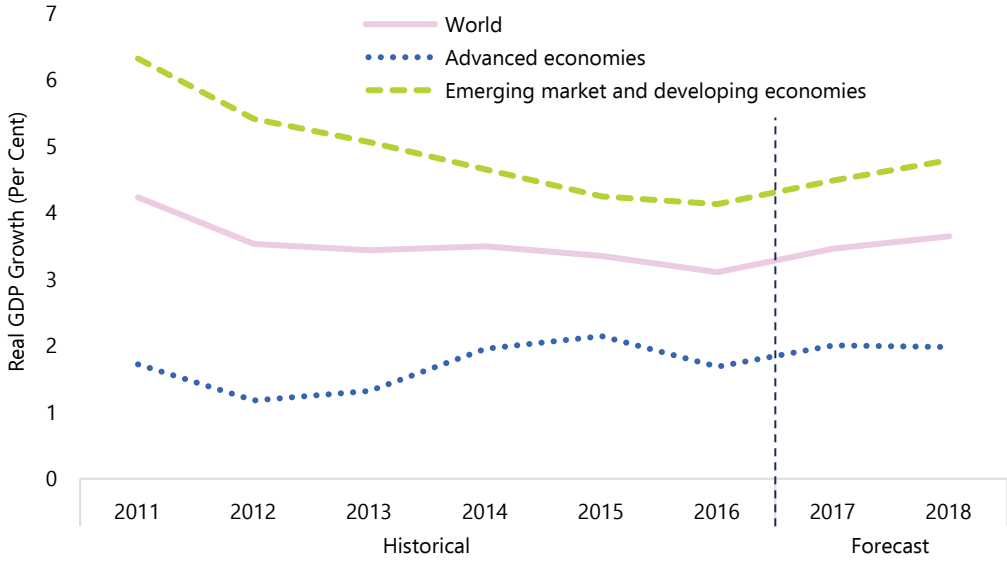
Ontario Economy Expected to Remain Strong in 2017

The Ontario economy finished 2016 with a strong 2.7 per cent increase in real GDP, reflecting solid growth in the second half of the year. Real GDP growth last year was significantly above the 2.1 per cent average gain seen from 2011 to 2015. Strong household spending, residential investment and exports contributed to the increase in real GDP in 2016.

Supported by the strong economic momentum in 2016 and continued improvement in economic indicators in the first quarter of 2017, the FAO is projecting real GDP to rise by 2.4 per cent in 2017 and 2.1 per cent in 2018.

Nominal GDP – the broadest measure of the tax base – increased by a robust 4.6 per cent in 2016. The FAO is projecting nominal GDP to increase by 4.1 per cent in 2017 and 4.2 per cent in 2018, reflecting solid gains in labour income and corporate profits.

Solid Economic Performance Expected Over Outlook



* 2016 are actuals.

Source: Ontario Economic Accounts, 2017 Ontario Budget and FAO.

Global Economy Gaining Momentum

In its latest World Economic Outlook,[1] the International Monetary Fund (IMF) is forecasting global economic growth to strengthen from 3.1 per cent in 2016 to 3.5 per cent in 2017 and 3.6 per cent in 2018. The IMF revised the outlook slightly higher for 2017, but left it unchanged for 2018, compared to its October 2016 outlook.[2]

Global Growth to Improve in 2017

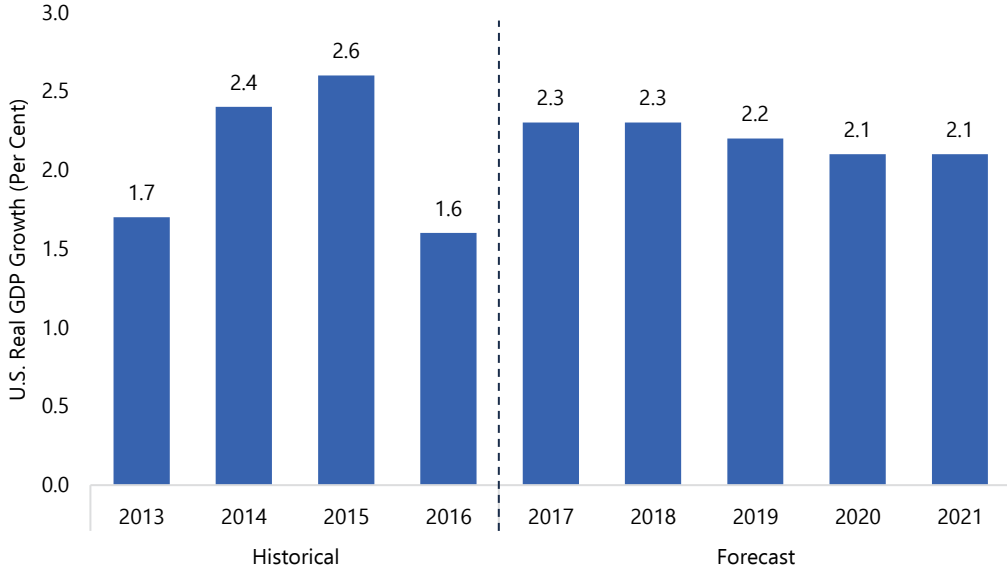
Source: "World Economic Outlook, Gaining Momentum?", April 2017, International Monetary Fund.

For advanced economies, the IMF's forecast for 2017 and 2018 has improved slightly from its October projection with growth of 2.0 per cent in 2017 and 2018.

Growth prospects for emerging market and developing economies are much more varied, but overall have weakened slightly from the IMF's October outlook, due to weaker economic conditions in key export markets. On average, the IMF has lowered its growth forecast for emerging markets and developing countries to 4.5 per cent in 2017, with 2018's forecast remaining unchanged at 4.8 per cent.

The IMF expects China – the world's second largest economy – to grow by 6.6 per cent in 2017 and 6.2 per cent in 2018, reflecting continued support from government policy. In the medium term, China's economic growth is expected to gradually moderate as its economy rebalances from investment and manufacturing-led growth to a more service-intensive economy.

1 "World Economic Outlook, Gaining Momentum?", April 2017, International Monetary Fund.
2 "World Economic Outlook, October 2016: Subdued Demand: Symptoms and Remedies", October 2016, International Monetary Fund.



U.S. Economic Growth to Strengthen in 2017

U.S. real GDP advanced by a relatively moderate 1.6 per cent in 2016, the weakest increase in three years. For 2017 and 2018, the FAO projects U.S. growth to improve to 2.3 per cent, with household spending, business investment and residential construction being key contributors to overall growth.[3]

However, the lack of specific details on the new U.S. administration's proposed policies has raised the risks associated with the current U.S. outlook. Many forecasters are cautiously optimistic that some of the proposed fiscal policies, such as expected cuts to corporate tax rates, could boost U.S. economic growth in the short-term.[4] But this optimism is tempered by the potential for large future increases in the U.S. budget deficit, which could weigh on economic growth over the medium-term.

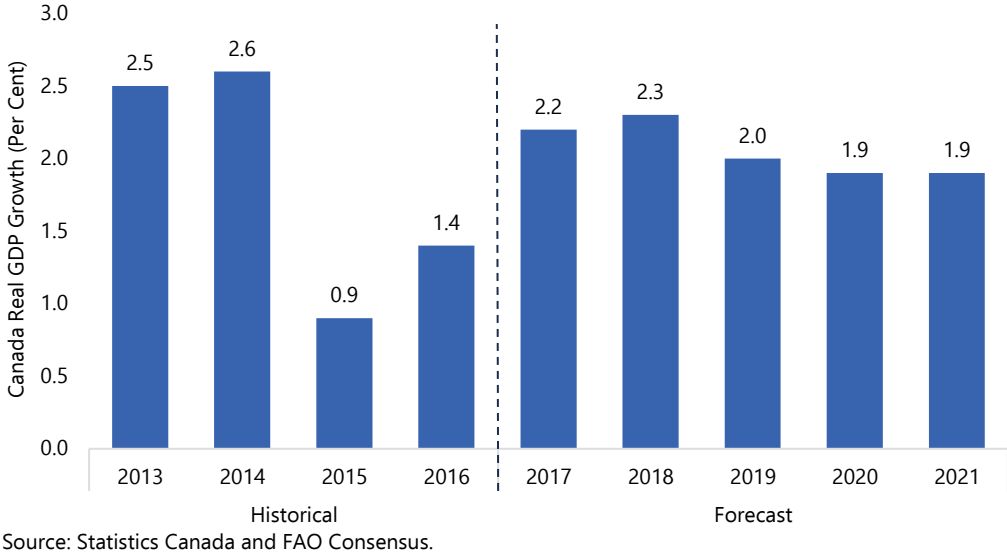
From 2019 to 2021, U.S. real GDP growth is projected to average 2.1 per cent annually, which is in-line with the average rate seen from 2012 to 2016.

U.S. Economic Growth Moderates Beyond 2017

Source: Federal Reserve Bank of St. Louis, Congressional Budget Office and FAO Consensus.

3 The FAO forecast for the U.S. economy in 2017 is based on the U.S. Congressional Budget Office's (CBO) latest forecast. For 2018 to 2021, the U.S. forecast is based on the average of the CBO outlook and the forecasts of three independent model-based forecasters – the Conference Board of Canada, the Centre for Spatial Economics and the Policy and Economic Analysis Program at the University of Toronto.

4 These forecasters include the IMF, CBO, TD Bank, RBC, BMO Capital Markets and National Bank Economics.



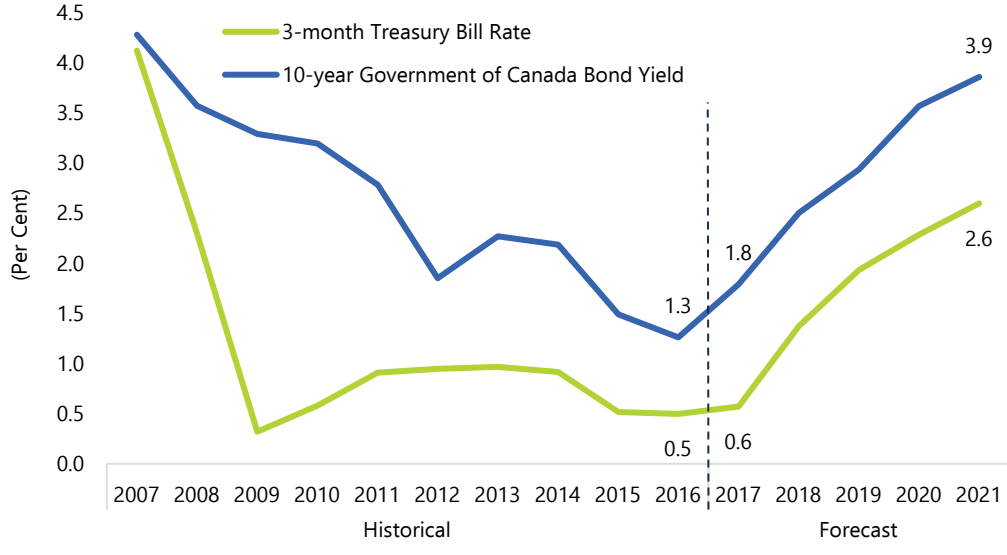
Canadian Economic Growth Expected to Rebound

The outlook for the Canadian economy has improved following strong growth over the second half of 2016.

Continued momentum in recent economic indicators point to a solid start for 2017. Canadian real GDP is currently projected to grow by 2.2 per cent in 2017 and 2.3 per cent in 2018, recovering from more moderate growth in 2015 and 2016.[5] Strength in household spending and non-energy exports are expected to contribute to overall growth in 2017 and 2018.

Beyond 2018, Canadian real GDP is projected to increase at an average annual rate of 2.0 per cent, as the economy continues to adjust to slower growth in the energy sector.

Canada GDP Growth Expected to Improve in 2017



Source: Statistics Canada and FAO Consensus.

Based on the continuing recovery of the U.S. economy, and in particular the strength of U.S. labour markets, the U.S. Federal Reserve raised its key policy interest rate in March 2017.[6] In contrast, the Bank of Canada has remained more cautious about the underlying strength of the Canadian economy and as a result appears unlikely to raise its key policy interest rate before 2018.[7]

5 The FAO forecast for the Canadian economy is based on the average quarterly forecasts of two independent, model-based forecasters – the Conference Board of Canada and the Policy and Economic Analysis Program (PEAP) at the University of Toronto.
6 The Federal Reserve raised its key policy rate, or the Federal Funds Rate, to 1.0 per cent on March 15, 2017.
7 In its most recent monetary policy report, the Bank of Canada indicated that it expects the output gap to close in early 2018. At the same time, the BOC noted that "there is still considerable uncertainty about the outlook," suggesting caution with regard to future changes in its policy interest rate. Bank of Canada Monetary Policy Report, April, 2017.

The FAO is projecting Canadian short-term interest rates will remain near current levels through 2017 and then begin rising modestly in 2018. Beyond 2018, interest rates are expected to gradually normalize with the 3-month Treasury Bill rate increasing to 2.6 per cent and the 10-year Government of Canada bond yield rising to 3.9 per cent by 2021.

Canadian Interest Rates to Rise over the Forecast

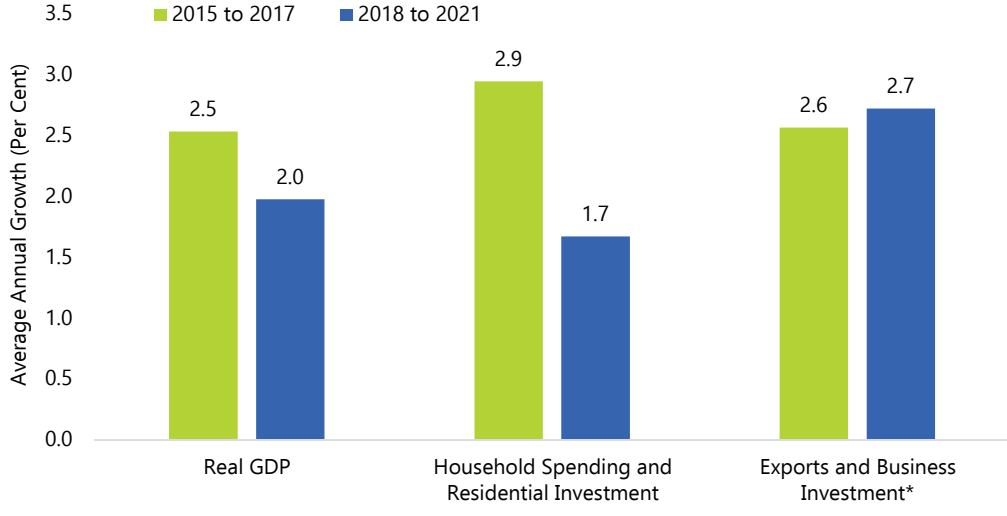
Source: Statistics Canada and FAO.

The Canadian dollar is expected to gradually appreciate over the next five years, rising from an average of about 75 cents U.S. in 2016 to about 81 cents U.S. by 2021, supported by the steady increase in short-term interest rates and a gradual rise in oil prices.

Ontario Economic Outlook

Solid Real GDP Growth Expected in 2017

Based on the Ontario Ministry of Finance's estimates,[8] Ontario real GDP rose by a strong 2.7 per cent in 2016, following equally strong gains of 2.5 per cent and 2.7 per cent in 2015 and 2014, respectively. Household spending, residential investment and exports were key contributors to overall economic growth last year. Business investment in plant and equipment disappointed expectations, declining by 4.0 per cent.



8 Ontario Economic Accounts, Fourth Quarter 2016, released April 13, 2017.

The performance of a number of economic indicators, including employment, retail sales and home sales remained solid in the first quarter of 2017. However, Ontario's merchandise export performance has been uneven so far in 2017.

Uncertainty over the future direction of U.S. trade and industrial policy could hamper business investment growth in the near term, which would negatively impact Ontario's competitiveness. Without stronger business sector investment to expand production capacity, the growth potential of several key Ontario industries will be limited.[9] As a result, despite the projection for steady growth in the U.S. and a competitively valued Canadian dollar, Ontario's net exports[10] are projected to grow at a relatively moderate pace over the outlook.

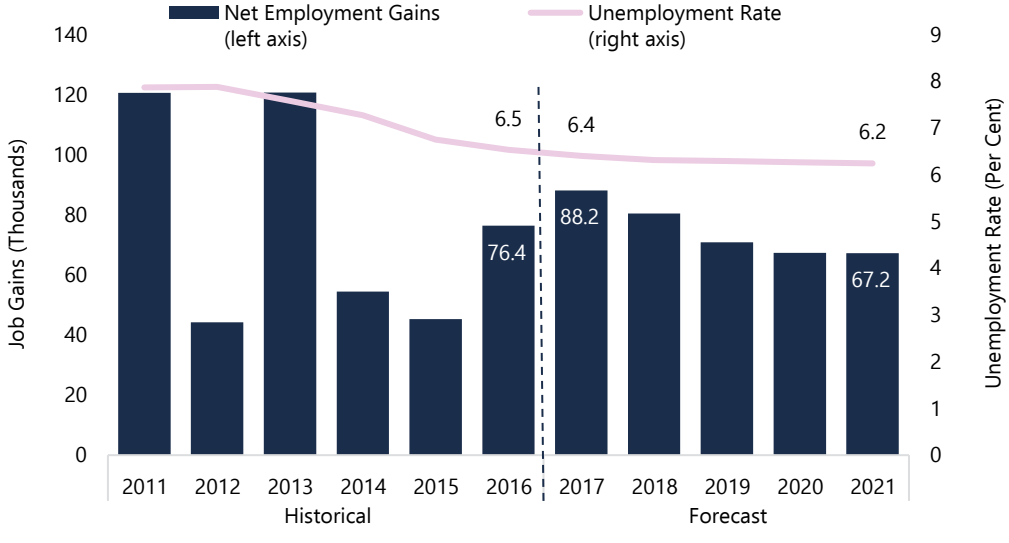
The FAO is forecasting real GDP growth of 2.4 per cent in 2017, supported by strong household spending and residential investment.[11] The pace of Ontario's overall economic growth will moderate to 2.1 per cent in 2018 and to an average of 2.0 per cent over the last three years of the outlook.

Exports and Business Investment Expected to Drive Economic Growth

* Business Investment includes both Non-Residential Investment and Machinery & Equipment Investment.
Source: Ontario Economic Accounts and FAO.

Moderate declines in residential investment in 2018 and 2019 – reflecting elevated household debt and a moderation in housing prices – is expected to contribute to the slower pace of overall economic activity.

9 As noted in a recent Conference Board of Canada report, nearly half of Ontario businesses are operating near or above capacity, hampering the ability of Ontario businesses to increase production to meet foreign demand. Conference Board of Canada Outlook, Winter 2017.
10 Net exports are exports less imports of goods and services.
11 The FAO forecast of the Ontario economy is based on the FAO's short-term quarterly model of the Ontario economy. For a description of the model, please refer to the end of the Economic Outlook chapter.



The FAO forecast is broadly consistent with the consensus view among economists that exports and business investment will lead Ontario growth over the next several years, while household spending and residential investment will grow at a more moderate pace, as households reduce borrowing to address high debt loads.

Steady Job Gains Over Outlook

Ontario experienced relatively strong employment growth of 1.1 per cent in 2016 (+76,400 net new jobs), the majority of which were full-time, private sector jobs. There was robust job growth in both goods and service producing industries. The construction industry in particular, posted the highest job growth (+3.4 per cent), followed by healthcare (+3.2 per cent).[12]

The strength in Ontario's labour market continued into 2017 with an increase of 99,600 jobs on a year-over-year basis during the first quarter. For the year, the FAO is projecting a 1.3 per cent gain in employment in 2017. On average, the FAO is forecasting average annual job gains of 1.0 per cent over the next four years, consistent with the outlook for solid economic growth.

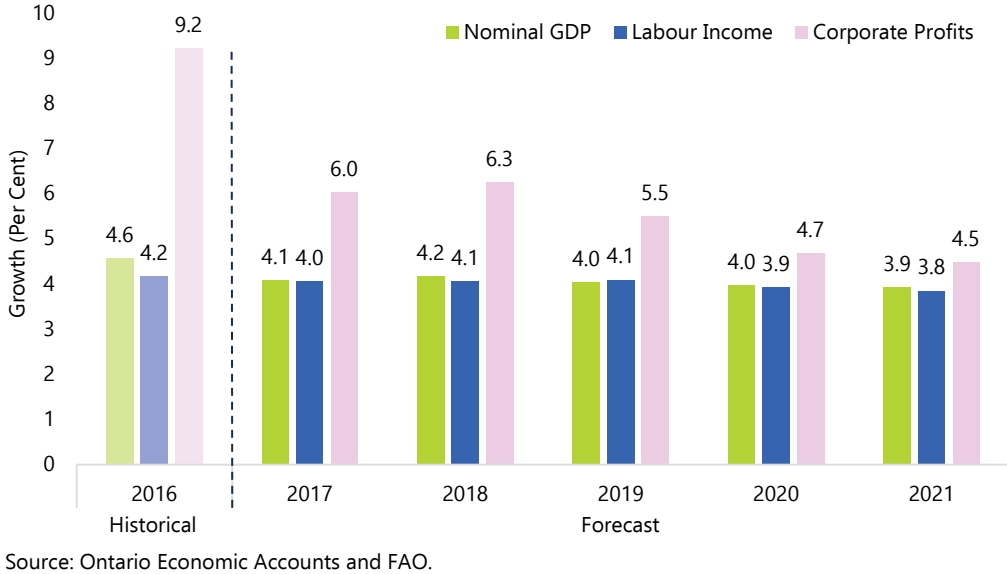
Steady Employment Gains as Unemployment Rate Slowly Trends Lower

Source: Statistics Canada and FAO.

Sustained economic growth over the outlook is expected to attract more workers into the labour force, which is forecast to rise at a slightly higher rate than over the last five years. Faster labour force growth from 2017 to 2021, will partially offset relatively

12 For a more detailed discussion on Ontario's labour market, see the FAO's Commentary: "Ontario Posts Solid 2016 Job Gain as the Labour Market Continues to Evolve".

strong employment gains, leading to a more moderate decline in the unemployment rate over the outlook.



Strong Gains Expected for Labour Income and Corporate Profits

Labour income grew by a robust 4.2 per cent in 2016, above the average annual increase of 3.7 per cent from 2011 to 2015, and a reflection of the strong employment growth last year. The net operating surplus of corporations (largely corporate profits) also increased by a robust 9.2 per cent in 2016 following an equally strong gain of 9.1 per cent in 2015.

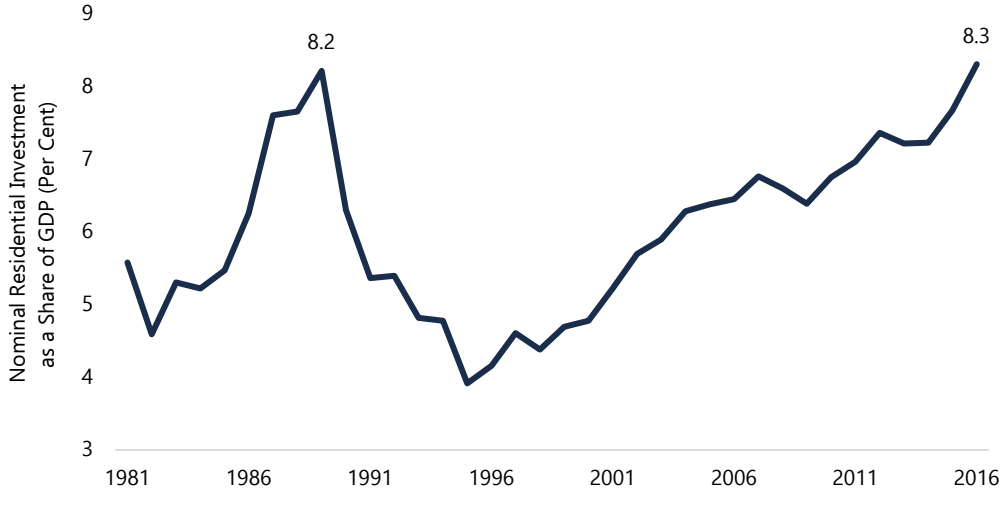
As a result of the gains in labour income and corporate profits (which together account for about two-thirds of nominal GDP), nominal GDP grew by a strong 4.6 per cent in 2016.[13]

For 2017, the FAO is projecting a 4.1 per cent rise in nominal GDP, supported by strong gains in labour income (+4.0 per cent) and corporate profits (+6.0 per cent). On average, the FAO is projecting nominal GDP growth of 4.0 per cent over the 2018 to 2021 outlook.

Labour Income and Corporate Profits Support Nominal GDP Growth

Source: Ontario Economic Accounts and FAO.

13 The robust 2016 increase in nominal GDP was much stronger than the 3.4 per cent increase projected in both the FAO's Economic and Fiscal Outlook, Fall 2016 Update and the government's 2016 Economic Outlook and Fiscal Review. The sharp upward shift in 2016 nominal GDP growth reflects large historical revisions to 2015 and 2016 nominal GDP growth in the Ontario Economic Accounts, consistent with new data from Statistics Canada. In particular, the net operating surplus of corporations is now estimated to have increased by 9.2 per cent in 2016 compared to an original projection of 0.3 per cent last fall.



Key Risks for Ontario's Economic Outlook

The FAO's current economic forecast represents a reasonable outlook for the Ontario economy and an appropriate foundation for fiscal projections. However, several key risks could materialize leading to weaker than expected economic growth for the province.

In particular, there are significant risks with respect to the proposed renegotiation of the North American Free Trade Agreement (NAFTA) and the adoption of protectionist trade measures in the United States. As well, other proposed changes to U.S. fiscal and industrial policies, such as lower corporate tax rates and 'Buy America' executive orders, could harm Ontario's relative competitiveness, further discouraging business investment and limiting the contribution of exports to overall growth.

Domestically, the housing market continues to pose a significant risk to the overall economy. The sharp rise in Ontario housing prices – particularly in the Greater Toronto Area – has contributed to record consumer debt loads and stretched levels of affordability.

Residential Investment Spending Accounts for a Record Share of GDP

Source: Ontario Economic Accounts and FAO.

At the same time, the relative importance of residential housing investment to the overall economy has increased substantially in recent years, posing a significant risk to the Ontario economy, in the event of a sharp housing market correction. In 2016, investment in residential housing accounted for a record high 8.3 per cent of Ontario's nominal GDP, up from 6.4 per cent in 2009.[14]

14 Almost one-quarter (22 per cent) of the growth in nominal GDP in 2016 was directly attributable to the increase in residential investment spending.

The last time investment in residential housing accounted for a similar proportion of the economy was 1989, just prior to the 1990-1995 housing market correction.

A sharp correction in housing prices, exacerbated by the elevated levels of household debt, would negatively affect household spending and residential investment, and could lead to broader economy-wide impacts on growth and employment.

The Province recently announced a package of measures intended to respond to the underlying factors contributing to the unsustainable rise in housing prices and the rapid growth in housing market activity. However, it is too early to assess whether these measures will adequately address the imbalance between demand and supply pressures in the market.

The FAO's Quarterly Short-term Model of the Ontario Economy

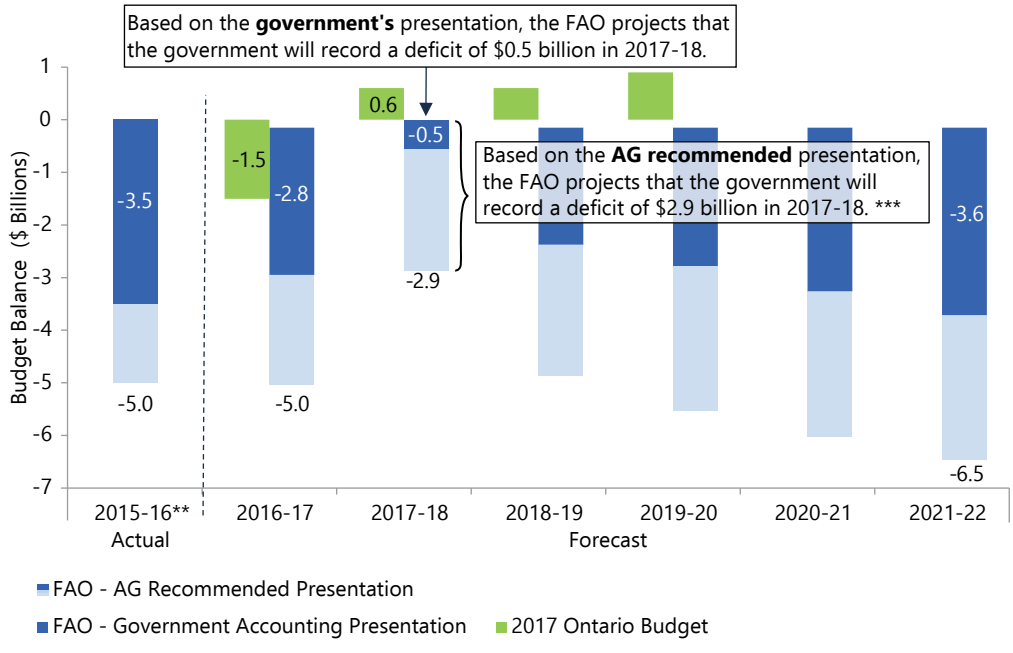
The FAO has developed a short-term forecasting model to produce quarterly five-year projections of the Ontario economy. The model is based on dynamic equations for major sub-categories of real and nominal GDP. The model also includes key labour market components, financial variables and the Canada-U.S. dollar exchange rate. The model is structured around a number of important external or exogenous concepts such as Canada-wide economic growth, U.S. economic growth, U.S. prices, U.S. interest rates and energy prices.

The model is an important tool for the FAO's bi-annual Economic and Fiscal Outlook (EFO), ensuring internal consistency of each projection as well as consistency between EFO forecasts. It also provides the majority of the inputs required by the FAO's Fiscal Outlook Model which provides the FAO's projection of the government's fiscal position.

3 FISCAL OUTLOOK

Continued Budget Deficits Projected

Based on the FAO's current economic forecast and updated fiscal information, the FAO is projecting continued Ontario budget deficits over the outlook. In the near term, the deficit improves due to strong tax revenue growth and a temporary boost to non-tax revenue. However, beginning in 2018-19, the deficit is expected to increase as a result of moderating revenue growth combined with higher expenses.



Since the release of the 2015-16 Public Accounts of Ontario, the government and the Auditor General (AG) have disagreed on the application of public sector accounting standards with respect to jointly-sponsored pension plans. (Please refer to the discussion on page 25 for additional background and context on this issue.) Based on the FAO's application of the Auditor General's recommended accounting for these pension assets, the FAO is projecting a budget deficit of $2.9 billion for 2017-18, rising to $6.5 billion by 2021-22.[1]

Under the government's accounting presentation, the FAO is projecting a budget deficit of $0.5 billion in 2017-18, growing to $3.6 billion by 2021-22.[2] By comparison, in the 2017 Budget, the government is projecting a budget surplus of $0.6 billion in 2017-18, followed by small surpluses over the next two years (before the reserve).

1 The FAO projection based on the Auditor General's recommended accounting presentation assumes a valuation allowance that effectively writes off the value of any net pension assets – referred to as the 'pension adjustment' in this report. The valuation allowance increases 'other program' expense, resulting in higher deficits under the AG's recommended accounting presentation.

2 Under the government's accounting presentation, Ontario's public accounts would be expected to receive a qualified opinion from the Auditor General.

Ontario's Budget Balance*

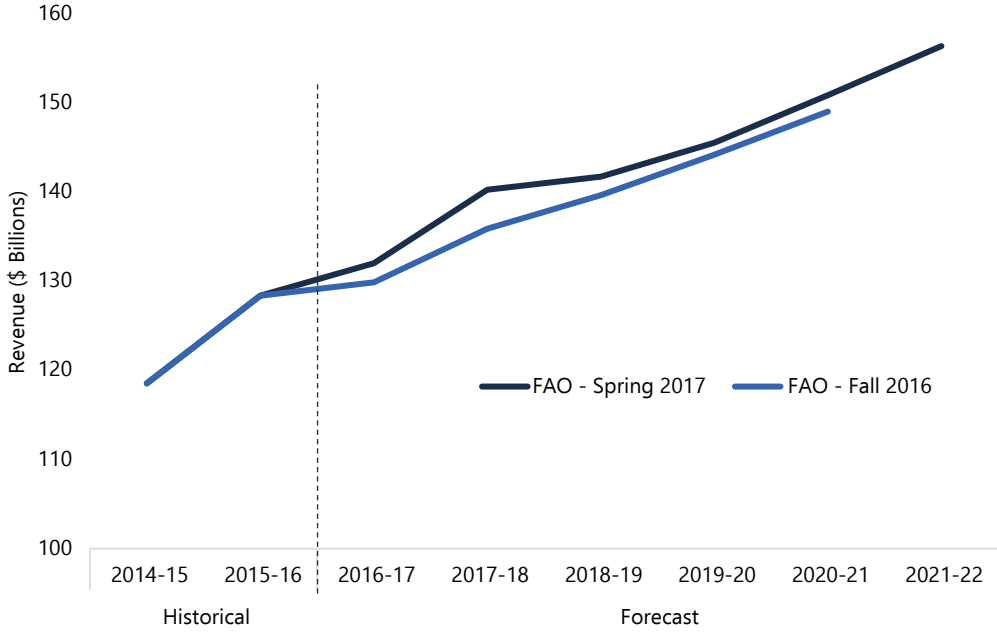
* Budget balance before reserve.

** Ontario's 2015-16 Public Accounts reported a deficit of $5.0 billion. Without the pension adjustment, the deficit would have been $3.5 billion.

*** This includes the FAO's estimate of the pension adjustment.

Source: 2015-16 Public Accounts, 2017 Ontario Budget and FAO.

On the government's accounting presentation, the FAO projects that a balanced budget is within the government's reach in 2017-18. However, the budget deficit is expected to increase after 2017-18, due to moderate revenue growth, the absence of one-time non-tax revenues, and higher program expenses. Staying in balance after 2017-18 will likely require additional fiscal policy measures.



Under the Auditor General's recommended accounting presentation, the FAO is projecting significant budget deficits over the entire outlook. On this basis, it is unlikely that the government will balance the budget without additional fiscal policy adjustments to raise revenue or lower expense.

Revenue Outlook

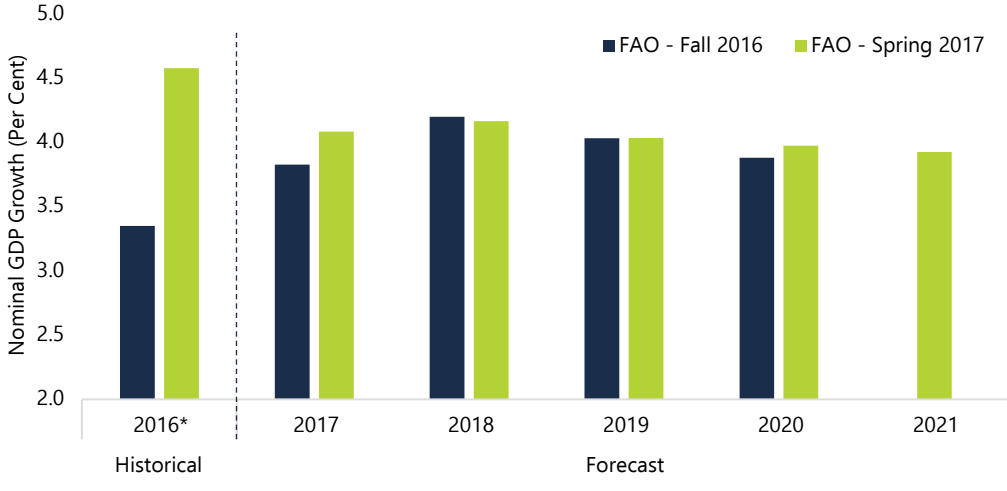
The FAO is projecting average annual revenue growth of 3.3 per cent per year over the outlook, slightly higher than forecast in the FAO's fall report.

In the near-term, revenue growth is driven by robust economic performance in 2016 and 2017, and a boost from one-time revenue in 2017-18. Beyond 2017-18, growth in tax revenue moderates and the benefit of one-time non-tax revenue ends.

Revenue Stronger Than Expected in Near Term

Source: FAO and Public Accounts.

FAO Revenue Assumptions and Forecast



Revenue Source	Assumption	Forecast
Taxation Revenue	Grows with key economic drivers including labour income, corporate profits and household spending	Averages 3.9 per cent growth per year from 2016-17 to 2021-22
Federal Transfers	Based on legislated growth rates and economic performance	Federal transfers are expected to grow by 1.9 per cent per year from 2016-17 to 2021-22
Government Business Enterprises (GBE)	Based on government projections	Income from GBEs are projected to rise moderately from $5.3 billion in 2016-17 to $6.5 billion in 2021-22
Other Revenue	Based on government projections, and includes asset sales, and proceeds from cap and trade allowances	These revenues are projected to increase from $8.5 billion in 2016-17 to $11.0 billion in 2017-18, before declining to $8.5 billion by 2021-22

Stronger Economic Growth Expected to Boost Tax Revenue

Consistent with the FAO's economic forecast, the FAO is currently projecting tax revenues to rise at an average of 3.9 per cent from 2016-17 to 2021-22, much stronger than the 3.0 per cent forecast in the FAO's fall outlook.

Since the FAO's fall report, nominal GDP – the broadest measure of the tax base – was revised significantly higher in 2016, improving the forecast for 2017.[3] However, beyond 2017, the outlook for nominal GDP growth is relatively unchanged from the fall forecast.

Nominal GDP up Significantly in the Near-Term Since the Fall

* 2016 value for the Fall 2016 EFO was the FAO's forecast at the time of the report's release.

Source: Ontario Economic Accounts and FAO.

Improved economic prospects are expected to lift the Province's tax revenue by approximately $2.8 billion in 2016-17 and $4.2 billion in 2017-18, compared to the FAO's fall estimates.

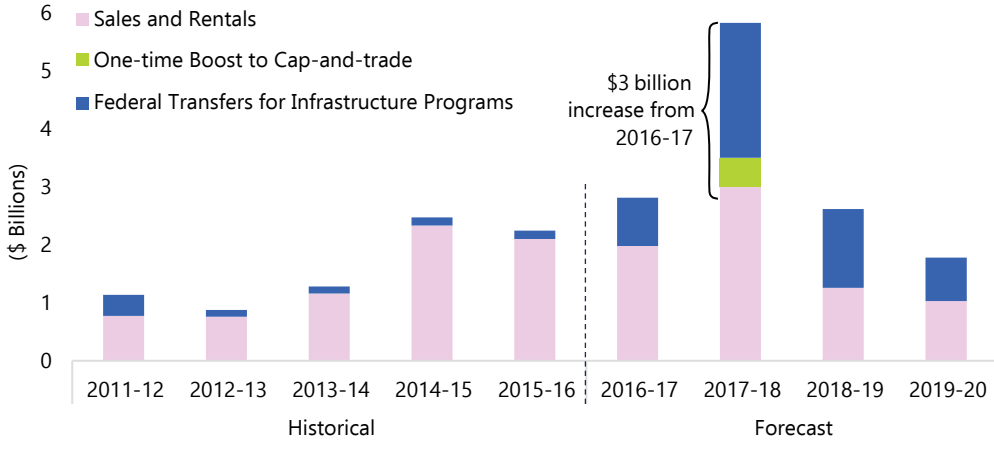
- Personal income tax revenue is forecast to grow stronger than expected in the fall due to the stronger forecast for labour income.[4]
- Corporations tax revenue is projected to benefit from the stronger outlook for corporate profits.

3 See economic section, and the footnote on page 12.

4 However, near-term revenue growth will be somewhat dampened as some high-income earners shifted earnings into the 2015 tax year to avoid the new higher 33 per cent tax rate introduced by the federal government in 2016 (http://www.fin.gc.ca/afr-rfa/2016/report-rapport-eng.asp#_Toc463249478). Using Finance Canada estimates, the FAO estimates that roughly $600 million of Ontario's 2015 PIT revenue was due to income shifting, which lowers taxable income in 2016-17 and 2017-18.

- Sales tax and land transfer tax revenues are forecast to grow stronger than expected in the fall due to the on-going strength in Ontario's housing market.

Equalization Entitlement Declines



Given Ontario's recent economic strength relative to the rest of Canada, the Province's Equalization entitlement declined $0.8 billion to $1.4 billion in 2017-18. The FAO is projecting a further drop to $0.6 billion in 2018-19. Beyond 2018-19, the FAO is projecting that Ontario will no longer be entitled to Equalization payments — a reflection of the continued relative strength of the Ontario economy.

2017-18 Revenue to Benefit from One-time Increases

Based on the 2017 Budget, Ontario's 2017-18 revenues will benefit from a one-time $3.0 billion boost,[5] that includes:

- $1.5 billion in higher revenue from federal transfers for infrastructure;
- $1.0 billion in increased sales and rentals revenue, reflecting additional asset sales[6]; and
- $0.5 billion in additional cap and trade proceeds from March 2017, which will be recognized in 2017-18.[7]

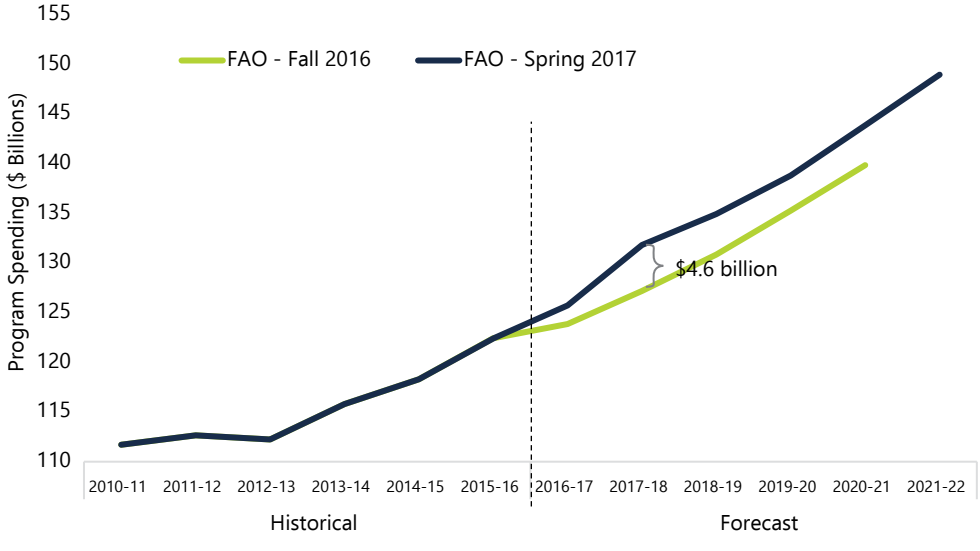
2017-18 Temporary Revenue Boost

Source: Ontario Budgets, Ministry of Finance and FAO.

5 This one-time benefit is incorporated into the FAO's revenue projection.

6 A portion of this increase reflects the Province's sale of 22 per cent of Hydro One equity in 2017-18, compared to a 15 per cent sale in 2016-17. The FAO estimates that this sale would generate about $0.8 billion in revenue gains in 2017-18, compared to a gain of $0.5 billion in 2016-17.

7 The government indicated that the cap and trade revenues from the March 2017 auction will be reported in fiscal year 2017-18, because the allowances were certified and delivered on April 2, 2017.



Expense Outlook

Program Expense to Increase Significantly over the Outlook

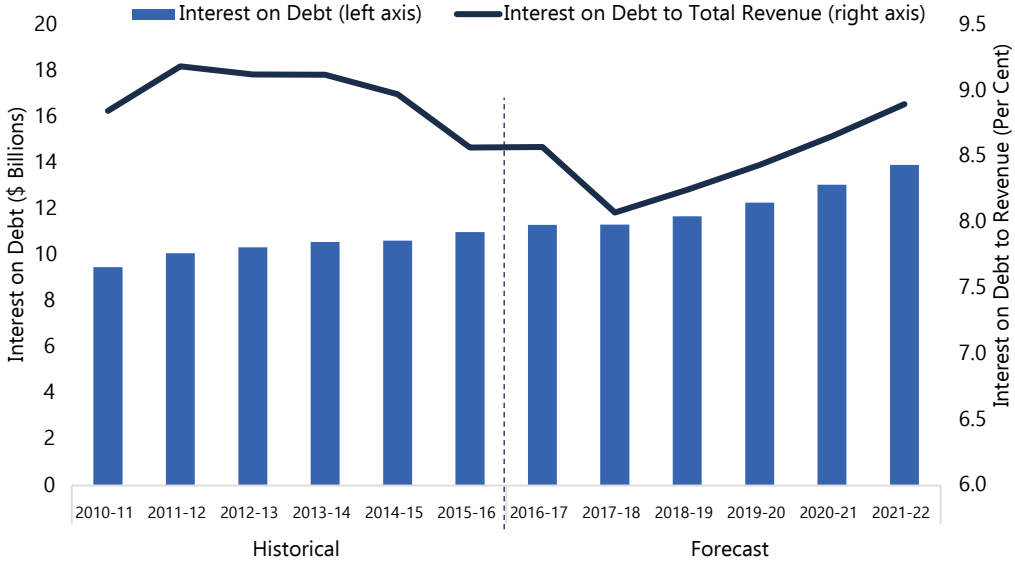
The FAO projects program spending growth of 3.3 per cent per year over the 2016-17 to 2021-22 period.[8]

Over the 2016-17 to 2019-20 period, the FAO adopts the government's 2017 Budget projections for program spending[9], adjusted to reflect the Auditor General's recommended accounting presentation.[10] The expense outlook includes significant new spending across all sectors, including a new children and youth Pharmacare program, higher operating funding for hospitals, 24,000 new child care spaces[11], and the government's new 'Fair Hydro Plan'. As a result, spending is now forecast to be significantly higher than projected in the FAO's fall outlook.

Program Expense Higher than Projected in the Fall

Note: Program spending includes the FAO's estimate of the pension adjustment.
Source: Ontario Public Accounts, 2017 Ontario Budget and FAO.

With these new expenses, program spending is expected to grow 3.3 per cent per year on average over the next five years. This higher program spending growth is still slightly below the growth in underlying cost and demographic pressures, which is estimated to be 3.6 per cent on average.



8 The FAO's projection extends to 2021-22, two years beyond the 2017 Ontario Budget forecast.
9 Given the government's discretion over spending, the FAO adopts the government's announced spending plans and incorporates policy announcements as appropriate.
10 The FAO's estimates the pension adjustment will increase 'other program' expense by $2.2 billion in 2016-17, rising to $2.9 billion by 2021-22.
11 The 2017 Budget announced 24,000 new child care spaces for 2017–18, as part of the government's September 2016 Throne Speech commitment to create 100,000 new child care spaces by 2022.

Interest on Debt

The FAO projects interest on debt (IOD) payments will increase at an average annual rate of 4.0 per cent from $11.0 billion in 2015-16 to $13.9 billion by 2021-22, reflecting higher debt and rising interest rates over the outlook. This is faster than the average rate of program spending growth over the outlook.

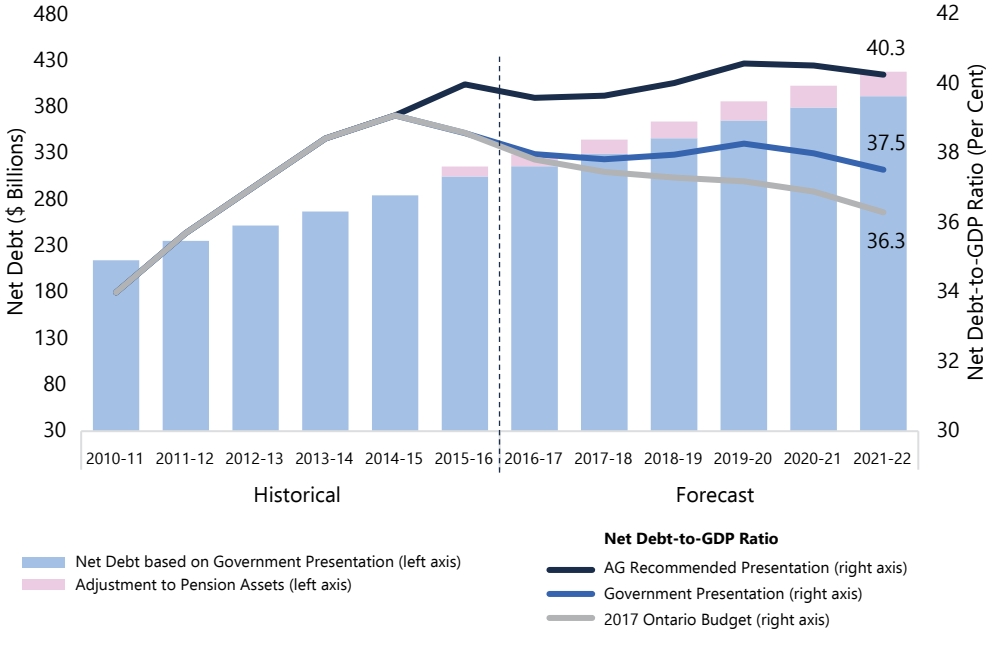
Over the past five years, IOD as a share of revenue declined steadily, benefitting from falling interest rates. However, given the projected rise in interest rates over the outlook, the FAO forecasts that IOD as a share of revenue will increase from 8.1 per cent in 2017-18 to 8.9 per cent by 2021-22.

Interest on Debt to Rise Sharply as a Share of Revenues

Source: Ontario Public Accounts and FAO.

Ontario Debt Outlook

Ontario Net Debt-to-GDP Ratio Will Remain Elevated



Ontario's total borrowing requirements are expected to remain high over the outlook. To finance the cost of projected capital spending, on-going deficits and maturing debt issues the FAO estimates that provincial borrowing will average $37 billion per year over the next five years.

As a result, the FAO projects Ontario's net debt to increase by $76 billion over the next five years to approximately $392 billion by 2021-22 based on the FAO's application of the AG's recommended accounting presentation. By comparison, using

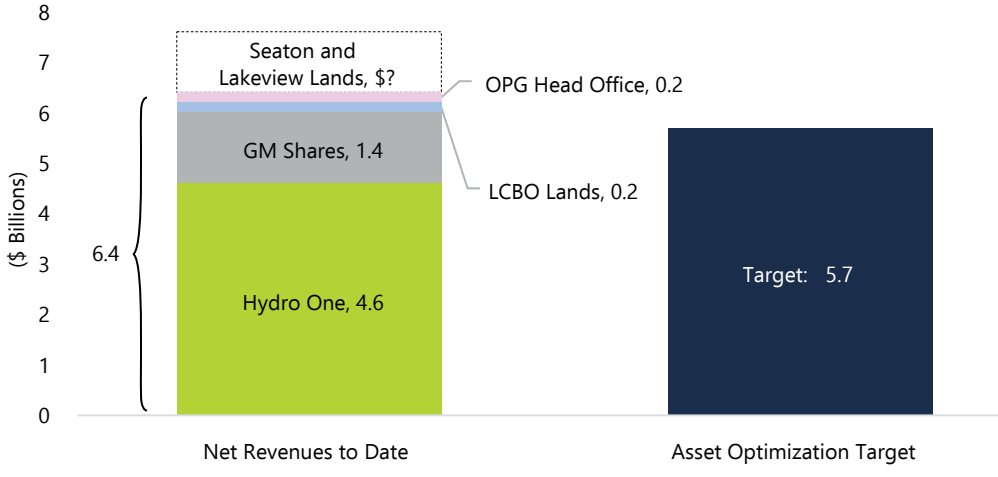
the government's accounting presentation, the FAO projects Ontario's net debt will rise by $62 billion to roughly $365 billion by 2021-22.

Based on the AG's recommended accounting presentation, the FAO expects Ontario's net debt-to-GDP ratio will edge higher to 40.3 per cent by 2021-22, reflecting the projected increase in net debt and the FAO's forecast for nominal GDP growth. In contrast, based on the accounting presentation adopted by the government, the FAO projects that net debt-to-GDP will fall slightly from 38.6 per cent in 2015-16 to 37.5 per cent by 2021-22.

Ontario's Net Debt-to-GDP Ratio

Source: FAO, Ontario Economic Accounts, and 2017 Ontario Budget.
Note: AG recommended presentation is based on FAO estimates of the pension adjustment.

In the 2017 Budget, the Province set an interim net debt-to-GDP target of 35 per cent by 2023-24 and committed to lowering the ratio to 27 per cent by 2029-30. The FAO's net debt-to-GDP projections under both accounting presentations, suggest that additional fiscal measures would be required for the government to achieve its interim target of 35 per cent by 2023-24.



Risks to the Fiscal Plan and Policy Options

There are material risks that could impact Ontario's fiscal position.

- A sharp correction in the housing market could present a significant risk for both the broader economy and for the Province's fiscal plan. As discussed in an FAO commentary[12], a decline in house prices and housing market activity would directly reduce Land Transfer Tax and HST revenues. In addition, the broader economic impacts would lower personal and corporate income tax revenues.

- In the 2017 Budget, the government significantly reduced the prudence built into its program spending projection compared to the 2016 Budget, leaving less fiscal flexibility for the government to respond to unexpected events.[13] In addition, the FAO projects that interest on debt payments as a share of both program spending and revenue will increase significantly, exposing the government to added fiscal risk should interest rates rise faster than expected.

Asset Optimization Revenues and Target

Source: FAO and Ontario Budgets.

Note: As of the 2017 Budget, the government had generated $3.8 billion in net proceeds from its sale of Hydro One equity. On May 8, 2017, the government announced the sale of an additional 22 per cent of Hydro One equity, which the FAO estimates will generate $0.8 billion in net proceeds.

On the other hand, the government has increased spending growth to a rate closer to underlying spending pressures, diminishing the expense risk identified in earlier FAO reports.

12 "The Impact of a Housing Market Correction on Ontario's Fiscal Position", Financial Accountability Office of Ontario, February 15, 2017. http://fao-on.org/en/Blog/Publications/Housing_Market16821

13 In the 2017 Budget, contingency funds total $0.6 billion for the coming fiscal year, half the size built into the 2016 Budget fiscal plan. Similarly, the government's target for year-end savings has increased to $1.2 billion for the coming year, compared to $0.8 billion in Budget 2016.

Additionally, the government has a broad range of policy options that could improve its fiscal position, including the sale of additional public assets beyond announced targets. To date, the FAO estimates that the government has generated $6.4 billion in revenues from net asset sales, exceeding its target of $5.7 billion over 10 years. Given the government's intention to sell Seaton and Lakeview lands[14], it would further overachieve its asset sales target.

14 2017 Ontario Budget, page 161.

The Accounting Treatment of Jointly Sponsored Pension Plans

Background

Ontario's 2015-16 Public Accounts noted a disagreement between the Office of the Auditor General and the Province on the appropriate accounting treatment for net pension assets of jointly sponsored pension plans. Specifically, the Province is a joint sponsor of two pension plans, the Ontario Teachers' Pension Plan (OTPP) and the Ontario Public Service Employees Union Pension Plan (OPSEUPP).

The government's position is that these pension assets have been appropriately and consistently reflected on the Province's financial statements since 2001. The Office of the Auditor General, based on a review of these pension assets, determined that a change in the accounting treatment was required. The Auditor General concluded that under current Canadian public sector accounting standards, the government could not unilaterally recognize a pension asset on its financial statements without evidence - in the form of a written agreement - permitting it to realize the asset through reduced contributions.[15]

In response, the Province adopted regulated accounting for 2015-16 to reflect the fiscal results according to the Auditor General's interpretation of public sector accounting standards, and subsequently appointed a panel, the 'Pension Asset Expert Advisory Panel', to review and provide their recommended interpretation. The panel's report,[16] released in February 2017, concluded that the Province's share of net assets in jointly sponsored pension plans should be fully recognized in the Province's financial statements — contrary to the opinion of the Office of the Auditor General.

In the 2017 Budget, the government adopted the advisory panel's interpretation of public sector accounting standards and recognized the net pension assets of the jointly sponsored pension plans. The 2017 Budget also indicated that the Province's 2016–17 Public Accounts will report the net pension assets for the two jointly sponsored pension plans.

15 The Auditor General indicated that her office began reviewing the treatment of pension assets after these assets started to materially affect the government's fiscal position (Auditor General's Statement on Pension Assets, February 16, 2017).

16 https://news.ontario.ca/tbs/en/2017/02/pension-asset-expert-advisory-panel-submits-report.html.

The Central Issue

The government and the Auditor General have put forward different interpretations of the application of public sector accounting standards for jointly sponsored pension plans.

The different interpretations centre on the question of whether the government has unilateral control of pension surplus assets in jointly sponsored pension plans. In particular, the issue is focused on whether an explicit written agreement between the co-sponsors (the government and the unions representing the employees) to lower future contributions is required for the government to recognize the value of the pension surplus assets.

According to the Auditor General, the issue can be resolved if the government presents an agreement with the Ontario Teacher's Federation (OTF) allowing the government to access the OTPP pension assets through reduced contributions. The extent and duration of the reduced contributions would determine the size of the pension asset that the government could recognize in its financial statements.

The government's position, based on the advice of the advisory panel, is that the existing agreements governing the pension plans, and past history, reflect the sponsors' rights and intent to benefit from surplus assets in the plans through mechanisms reflected in the agreements to potentially realize a benefit through lower future contribution rates.

In the absence of an agreement, and given the government's decision to accept the advisory panel's recommended approach to accounting for jointly sponsored pension plan assets, the Auditor General would be expected to provide a qualified opinion[17] on Ontario's 2016-17 Public Accounts.

Roles and Responsibilities of the Province and the Auditor General

The Province (through the Treasury Board Secretariat) is responsible for the preparation of Ontario's Public Accounts in accordance with legislation, and based on the standards set out by the Public Sector Accounting Board (PSAB).[18]

The PSAB accounting standards serve the public interest by providing an independent, high-quality accounting framework for public sector entities. The

17 An auditor may provide a qualified opinion when financial statements do not conform in a material way to the applicable accounting standards.
18 https://www.ontario.ca/page/public-accounts-101-guide#section-6].

government is responsible to ensure that the financial reports fairly reflect the activities and financial position of the Province.

The Auditor General reviews the Province's annual Public Accounts and provides an audit opinion to the Legislature on whether the Consolidated Financial Statements for the Province of Ontario present fairly, in all material respects, the Province's financial position, in accordance with the PSAB accounting standards.

The FAO's Presentation of Ontario's Fiscal Outlook

The Financial Accountability Officer supports the Legislative Assembly by providing independent economic and financial analysis intended to improve the transparency of the government's fiscal plan. The Officer looks to the Auditor General as the provincial authority on the appropriate interpretation and application of accounting standards for the Province.

The FAO has presented two fiscal projections, including and excluding the impact of the net pension assets of jointly sponsored pension plans, to help members of the Legislative Assembly better understand the implications of these different accounting interpretations on the Province's fiscal position.

- The FAO projection based on the Auditor General's recommended accounting presentation assumes a valuation allowance that offsets the net pension assets.
- The FAO projection based on the government's accounting presentation recognizes the net pension assets.

  In the absence of an agreement between the pension plan co-sponsors, this presentation of Ontario's fiscal position would be expected to receive a qualified opinion from the Auditor General when published in the Province's future Public Accounts.

Based on the Auditor General's recommended accounting presentation for the net assets of jointly sponsored pension plans, and the FAO's estimate of the pension adjustment, the FAO is projecting budget deficits of $2.9 billion in 2017-18, rising to $6.5 billion by 2021-22. Alternatively, based on the pension accounting presentation adopted by the government, the FAO is projecting budget deficits of $0.5 billion in 2017-18 rising to $3.6 billion in 2021-22.

4 APPENDICES

Developments since the FAO's Fall 2016 Economic and Fiscal Outlook

The FAO's current projection of the Ontario budget balance has generally deteriorated relative to the FAO's fall 2016 projection.

- Stronger than expected economic performance is expected to boost taxation revenues over the forecast, partially offset by lower Equalization revenue.
- Based on new government spending plans, program expense has increased significantly.

Developments since Fall 2016 EFO (AG Recommended Presentation)

	2016-17	2017-18	2018-19	2019-20	2020-21
FAO's Fall 2016 Budget Balance Forecast	**-5.2**	**-2.6**	**-2.8**	**-3.3**	**-3.7**
Developments Since Fall 2016					
Revenue					
Stronger Economic Outlook	2.3	4.1	3.9	4.4	4.7
Lower Federal Transfers[1]	-0.3	0.2	-1.3	-2.4	-2.2
Other Revenue Changes[2]	0.1	0.1	-0.5	-0.6	-0.6
Total	2.1	4.4	2.1	1.3	1.8
Expense					
Higher Spending, including Children and Youth Pharmacare, and Fair Hydro Plan	1.2	3.8	3.0	2.2	2.7
Revised Adjustment for Pension Asset[3]	0.7	0.8	1.1	1.4	1.4
Total	2.0	4.6	4.1	3.6	4.1
Total Developments	**0.2**	**-0.3**	**-2.1**	**-2.3**	**-2.3**
FAO's Spring 2017 Budget Balance Forecast	**-5.0**	**-2.9**	**-4.9**	**-5.5**	**-6.0**

Notes:

1. Change in federal transfers forecast mainly due the reduction in Ontario's Equalization payment.
2. Other revenue changes include the $0.5 billion re-profiling of cap-and-trade proceeds from 2016-17 to 2017-18, and an increase in sales and rentals for 2017-18.
3. In the Fall 2016 EFO, the FAO assumed an annual adjustment of $1.5 billion for the net pension assets of jointly sponsored pension plans. The current projection incorporates the FAO's updated estimates for the pension adjustment of $2.2 billion in 2016-17, increasing to $2.9 billion by 2020-21.

May 29, 2017

The Honourable Liz Sandals
President of Treasury Board
Treasury Board Secretariat
Room 4320, 4th Floor, Whitney Block
99 Wellesley Street West
Toronto, Ontario M7A 1W3

Dear Minister Sandals:

Subject: Economic and Fiscal Outlook – Assessing Ontario's Medium-Term Prospects: Spring 2017

Under paragraph 10(1)(a) of the *Financial Accountability Officer Act, 2013* (the Act), the FAO is mandated to undertake regular analyses of the state of the province's finances and trends in the provincial economy.

Section 15 of the Act requires that I deliver copies of any reports I publish to the relevant ministers ahead of publication. Accordingly, please find attached a copy of my report, which presents my office's assessment of the province's medium-term economic and fiscal outlook.

As arranged with the Clerk of the Legislative Assembly, this report will be tabled on **Wednesday May 31 at 9:00 a.m.** Please treat this report as confidential until that time.

An MPP Briefing will be held in Committee Room 1 at 1:30 p.m. Members of the Standing Committee on Finance and Economic Affairs, as well as two members per caucus, are welcome to attend.

Let me take this opportunity to thank you once more for the assistance that your ministry provided to my staff during the preparation of this report.

As always, please feel free to contact my office if we can be of assistance.

Sincerely,

Stephen LeClair
Financial Accountability Officer

Encl.

Importance:	High

Hi Everyone,

Attached is the FAO report that is to be released on Wednesday. I've also reattached the summary note (word document) that we are preparing that would be used to form the basis of a briefing of Minister Sousa (possibly joint with Minister Sandals) but we are still working on setting that up. – this is the same version I shared with your earlier.

In the meantime, could you kindly update the note with your input and pass along any Key Messages that could be used for the Minister(s) to respond to the report. We are looking for your feedback by noon tomorrow (apologies for the short turn).

Thanks and happy to take any questions you have.

From: Schuurman, Tim (MOF)

To: Thompson, Scott (MOF); Mayman, Gadi (OFA); Kwan, Ronald (OFA); Duran-Schneider, Maria (TBS); Veinot, Cindy (TBS); Lewis, Brian (MOF)
Cc: McLean, David (MOF); Strathy, Anna (OFA); Birks, Ryan (MOF); Esmail, Selena (MOF); Laughton, Patrick (TBS)
Subject: FW: The FAO's Spring 2017 Economic and Fiscal Report

FAO has provided an advanced copy of their final EFO, which will be released on Wed morning at 9am. We're working with staff to review the final version to see whats changed and to update the briefing material. Will look to set up time with the Minister Sousa and his office as well (Maria let us know if Minister Sandals also needs to be briefed on it). Ministers and their offices should have received copies already.

Subject: The FAO's Spring 2017 Economic and Fiscal Report

Good afternoon,

The FAO will be releasing a spring 2017 Economic and Fiscal Outlook (EFO) report on Wednesday May 31st at 9:00 am. There will be separate technical briefings for media and MPPs on Wednesday at 1:30 pm. The report, along with the Officer's statement will be posted on the FAO's website. Please note that while the statement will be posted on our website, the Officer will not be reading the statement to the media for this release.

The report along with the attached letters are being delivered to Ministers Sousa and Sandals this afternoon – and are attached for your reference.

Please treat this document as embargoed until its release on Wednesday at 9:00 am.

As always, we greatly appreciate your assistance and support for the work of the FAO.

Best regards,
David

Economic and Fiscal Outlook

Assessing Ontario's Medium-term Prospects

Spring 2017

About this Document

Established by the *Financial Accountability Officer Act, 2013*, the Financial Accountability Office (FAO) provides independent analysis on the state of the Province's finances, trends in the provincial economy and related matters important to the Legislative Assembly of Ontario. The FAO's Economic and Fiscal Outlook is released each spring and fall, providing an assessment of the province's medium-term economic performance and fiscal position.

This report was prepared by Edward Crummey, Luan Ngo, Nicolas Rhodes and Mario Angastiniotis under the direction of David West. External reviewers were provided with earlier drafts of this report for their comments. However, the input of external reviewers implies no responsibility for this final report, which rests solely with the FAO.

This report is based on information available to May 2, 2017. Background data used in this report are available upon request.

FAO's Fiscal Projections

The FAO forecasts provincial finances based on projections of existing and announced revenue and spending policies. The forecast represents the FAO's view of the most likely fiscal outcomes given existing policies, without anticipating any new government policy decisions. The FAO's tax revenue projections are based on an assessment of the outlook for the provincial economy and current tax policies. Given the government's discretion over spending, the FAO adopts the government's announced spending plans from fiscal documents and incorporates policy announcements as appropriate. Beyond the government's published spending projections, the FAO forecasts spending based on the outlook for underlying cost drivers including demographics and price inflation.

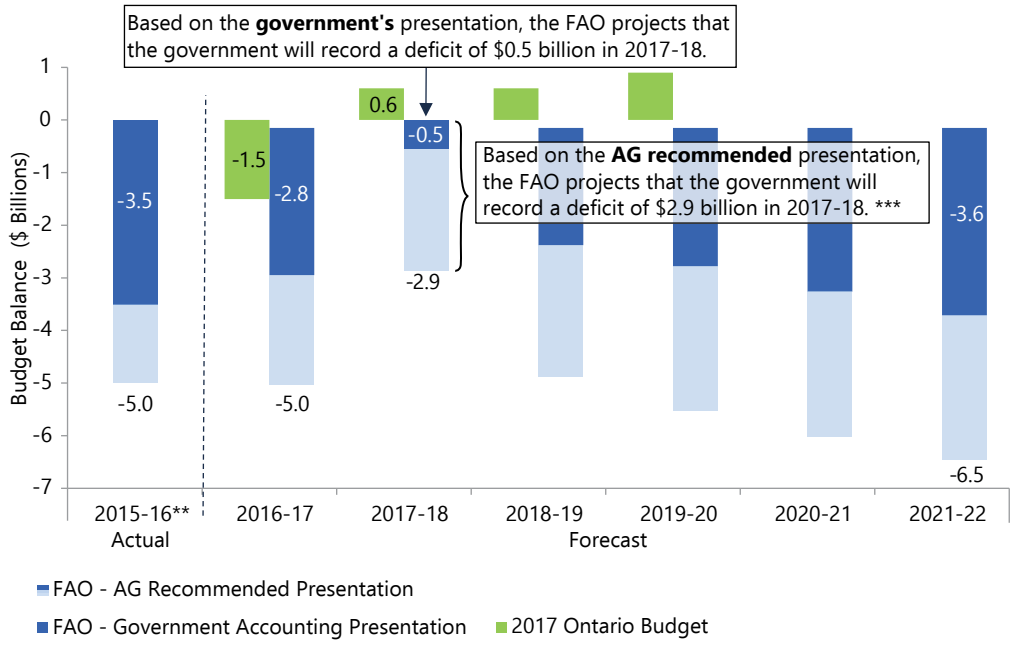
1 EXECUTIVE SUMMARY



The FAO is projecting continued Ontario budget deficits over the next five years. For 2017-18, the FAO's projection includes an improvement in the deficit, the result of a $3.0 billion one-time boost to non-tax revenue and strong tax revenue growth. However, beginning in 2018-19, the FAO is projecting a steady deterioration in the budget deficit due to moderating revenue growth combined with higher expenses.

The government and the Auditor General continue to disagree on the application of public sector accounting standards for jointly-sponsored pension plans.[1] Based on the FAO's application of the Auditor General's recommended accounting treatment for these pension assets, the FAO is projecting significant budget deficits over the entire outlook. On this basis, it is unlikely that the government will balance the budget without significant fiscal policy adjustments to raise revenue or lower expense.

Under the government's accounting presentation, the FAO projects that a balanced budget is within the government's reach in 2017-18. Beyond 2017-18, the deficit is projected to deteriorate steadily due to rising expenses and moderate revenue growth. On this basis, staying in balance after 2017-18 will likely require additional fiscal policy measures. This presentation of Ontario's fiscal position would be expected to receive a qualified opinion from the Auditor General when published in the Province's 2016-17 Public Accounts.

1 See the discussion on page 25 of the Fiscal Outlook chapter for background and context.

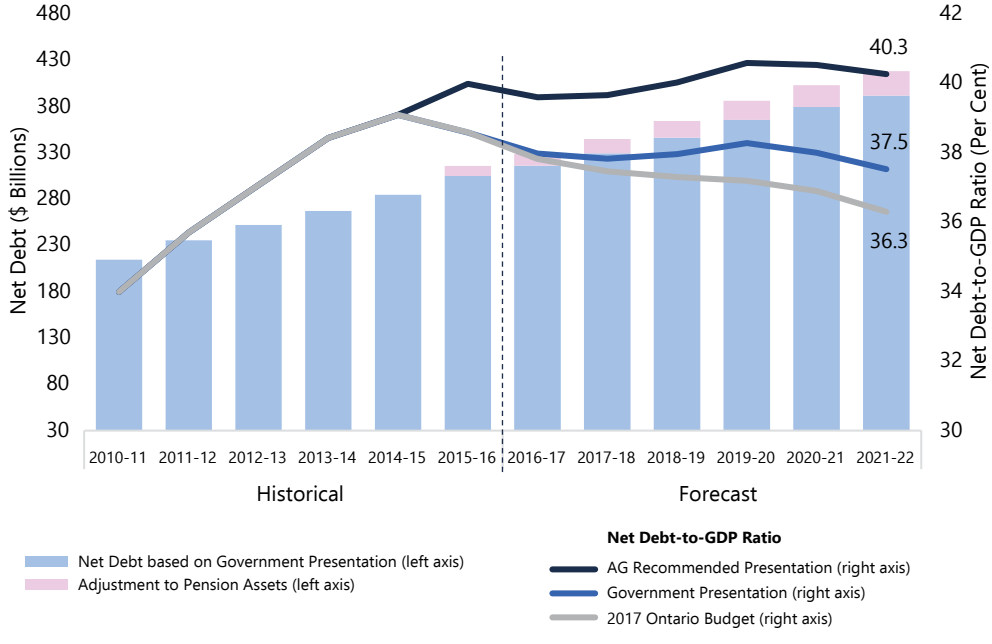
Ontario's Budget Balance*

* Budget balance before reserve.

** Ontario's 2015-16 Public Accounts reported a deficit of $5.0 billion. Without the pension adjustment, the deficit would have been $3.5 billion.

*** This includes the FAO's estimate of the pension adjustment.

Source: 2015-16 Public Accounts, 2017 Ontario Budget and FAO.



The FAO's economic outlook expects the recent strength of the Ontario economy to continue into 2017. The FAO is forecasting solid growth in real GDP of 2.4 per cent in 2017, moderating to an average annual pace of 2.0 per cent over the following four years. The FAO's economic forecast is broadly in-line with that presented in the government's 2017 Budget.

However, there are significant risks that could result in weaker than expected economic growth for Ontario. In particular, the policy direction of the new U.S. administration remains uncertain. This could hamper business investment and Ontario's economic prospects. Domestically, Ontario's surging housing market continues to be the largest risk for the economy. A sharp correction in housing prices could reverberate beyond the housing market and lead to broader, economy-wide impacts.

Consistent with the economic outlook, the FAO is projecting total revenues will rise by 3.3 per cent per year on average over the outlook. This reflects the FAO's forecast for solid growth in tax revenues combined with a significant one-time increase in non-tax revenues in 2017-18, including the sale of public sector assets. The FAO projects annual program spending growth to average 3.3 per cent per year over the outlook, a rate slightly below underlying spending pressures.

Given on-going deficits and projected capital spending, the FAO is forecasting Ontario's net debt will increase by $76 billion over the next five years, under the Auditor General's recommended accounting presentation. On this basis, Ontario's net debt-to-GDP ratio will edge higher to 40.3 per cent by 2021-22. In contrast, based on the government's accounting presentation, the FAO projects that net debt-to-GDP will fall slightly to 37.5 per cent by 2021-22.

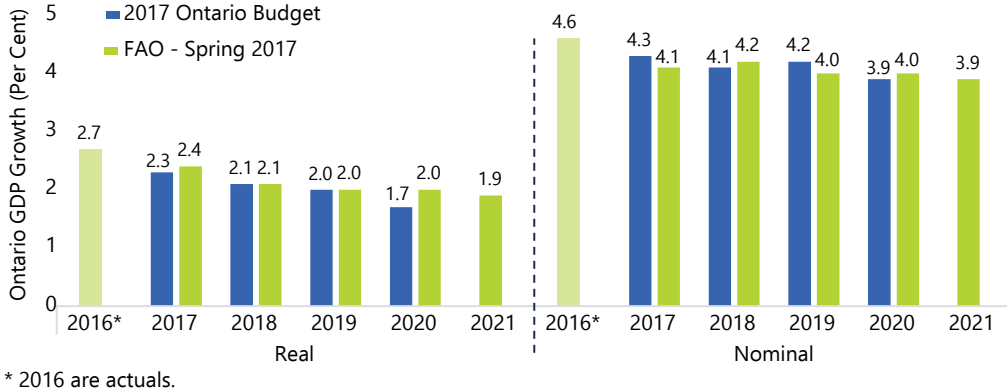
Ontario's Net Debt-to-GDP Ratio

Note: AG recommended presentation based on FAO estimates of the pension adjustment.
Source: Ontario Economic Accounts, 2017 Ontario Budget, and FAO.

In the 2017 Budget, the government set an interim net debt-to-GDP target of 35 per cent by 2023-24 and committed to achieving 27 per cent by 2029-30. Given the FAO's projection of rising deficits and the government's planned capital investments over the outlook, achieving these debt targets will likely require significant additional fiscal measures under either accounting presentation.

2 ECONOMIC OUTLOOK

Overview



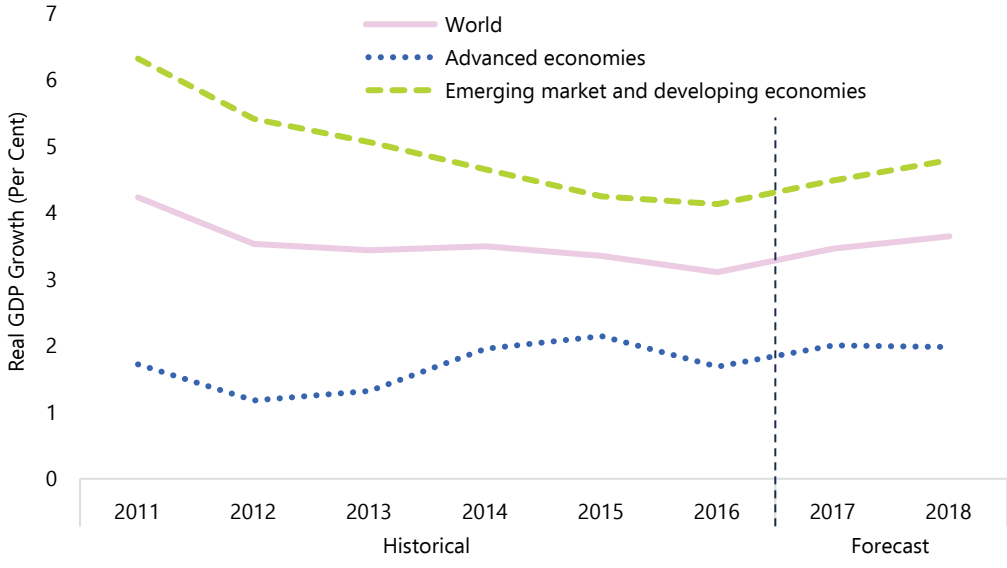
Ontario Economy Expected to Remain Strong in 2017

The Ontario economy finished 2016 with a strong 2.7 per cent increase in real GDP, reflecting solid growth in the second half of the year. Real GDP growth last year was significantly above the 2.1 per cent average gain seen from 2011 to 2015. Strong household spending, residential investment and exports contributed to the increase in real GDP in 2016.

Supported by the strong economic momentum in 2016 and continued improvement in economic indicators in the first quarter of 2017, the FAO is projecting real GDP to rise by 2.4 per cent in 2017 and 2.1 per cent in 2018.

Nominal GDP – the broadest measure of the tax base – increased by a robust 4.6 per cent in 2016. The FAO is projecting nominal GDP to increase by 4.1 per cent in 2017 and 4.2 per cent in 2018, reflecting solid gains in labour income and corporate profits.

Solid Economic Performance Expected Over Outlook



* 2016 are actuals.

Source: Ontario Economic Accounts, 2017 Ontario Budget and FAO.

Global Economy Gaining Momentum

In its latest World Economic Outlook,[1] the International Monetary Fund (IMF) is forecasting global economic growth to strengthen from 3.1 per cent in 2016 to 3.5 per cent in 2017 and 3.6 per cent in 2018. The IMF revised the outlook slightly higher for 2017, but left it unchanged for 2018, compared to its October 2016 outlook.[2]

Global Growth to Improve in 2017

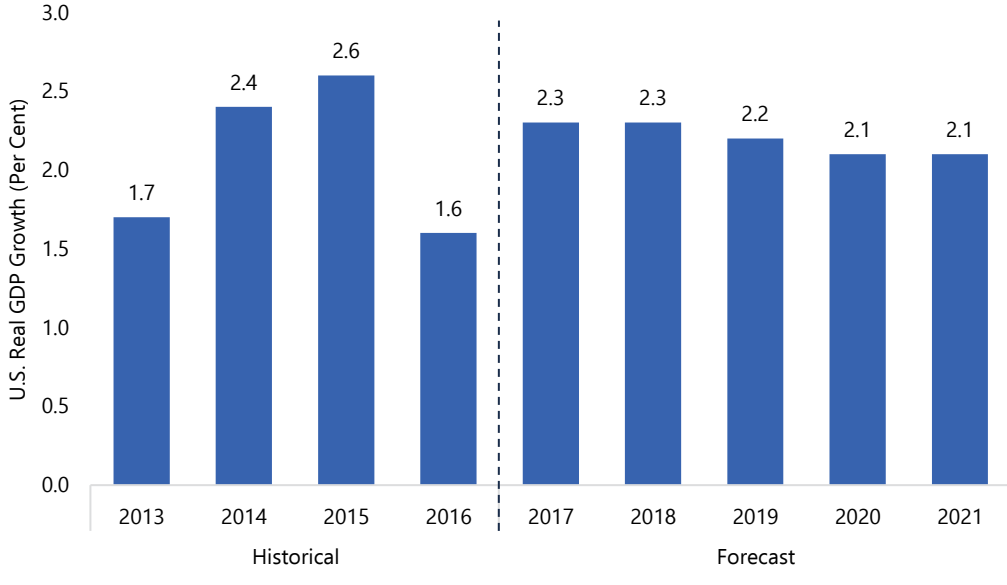
Source: "World Economic Outlook, Gaining Momentum?", April 2017, International Monetary Fund.

For advanced economies, the IMF's forecast for 2017 and 2018 has improved slightly from its October projection with growth of 2.0 per cent in 2017 and 2018.

Growth prospects for emerging market and developing economies are much more varied, but overall have weakened slightly from the IMF's October outlook, due to weaker economic conditions in key export markets. On average, the IMF has lowered its growth forecast for emerging markets and developing countries to 4.5 per cent in 2017, with 2018's forecast remaining unchanged at 4.8 per cent.

The IMF expects China – the world's second largest economy – to grow by 6.6 per cent in 2017 and 6.2 per cent in 2018, reflecting continued support from government policy. In the medium term, China's economic growth is expected to gradually moderate as its economy rebalances from investment and manufacturing-led growth to a more service-intensive economy.

1 "World Economic Outlook, Gaining Momentum?", April 2017, International Monetary Fund.
2 "World Economic Outlook, October 2016: Subdued Demand: Symptoms and Remedies", October 2016, International Monetary Fund.



U.S. Economic Growth to Strengthen in 2017

U.S. real GDP advanced by a relatively moderate 1.6 per cent in 2016, the weakest increase in three years. For 2017 and 2018, the FAO projects U.S. growth to improve to 2.3 per cent, with household spending, business investment and residential construction being key contributors to overall growth.[3]

However, the lack of specific details on the new U.S. administration's proposed policies has raised the risks associated with the current U.S. outlook. Many forecasters are cautiously optimistic that some of the proposed fiscal policies, such as expected cuts to corporate tax rates, could boost U.S. economic growth in the short-term.[4] But this optimism is tempered by the potential for large future increases in the U.S. budget deficit, which could weigh on economic growth over the medium-term.

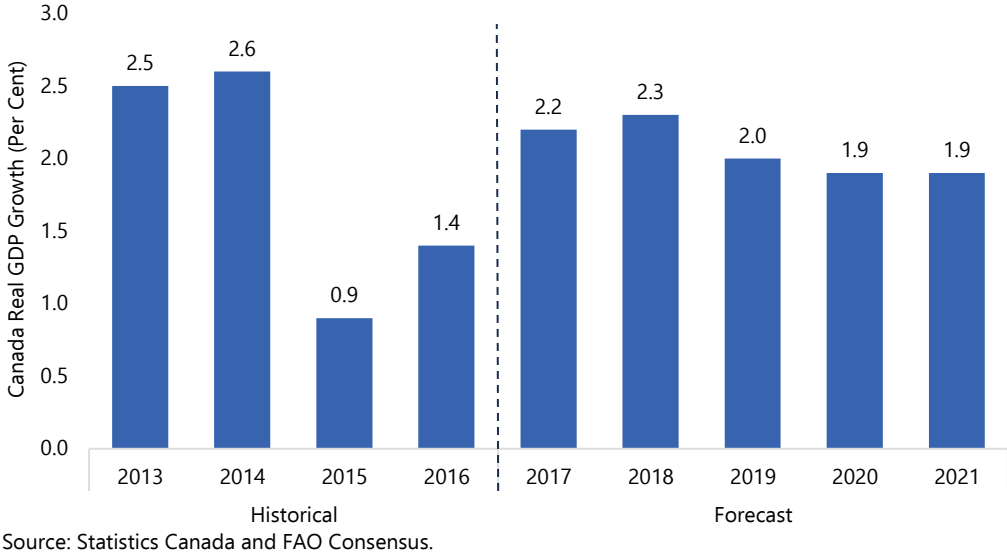
From 2019 to 2021, U.S. real GDP growth is projected to average 2.1 per cent annually, which is in-line with the average rate seen from 2012 to 2016.

U.S. Economic Growth Moderates Beyond 2017

Source: Federal Reserve Bank of St. Louis, Congressional Budget Office and FAO Consensus.

3 The FAO forecast for the U.S. economy in 2017 is based on the U.S. Congressional Budget Office's (CBO) latest forecast. For 2018 to 2021, the U.S. forecast is based on the average of the CBO outlook and the forecasts of three independent model-based forecasters – the Conference Board of Canada, the Centre for Spatial Economics and the Policy and Economic Analysis Program at the University of Toronto.

4 These forecasters include the IMF, CBO, TD Bank, RBC, BMO Capital Markets and National Bank Economics.



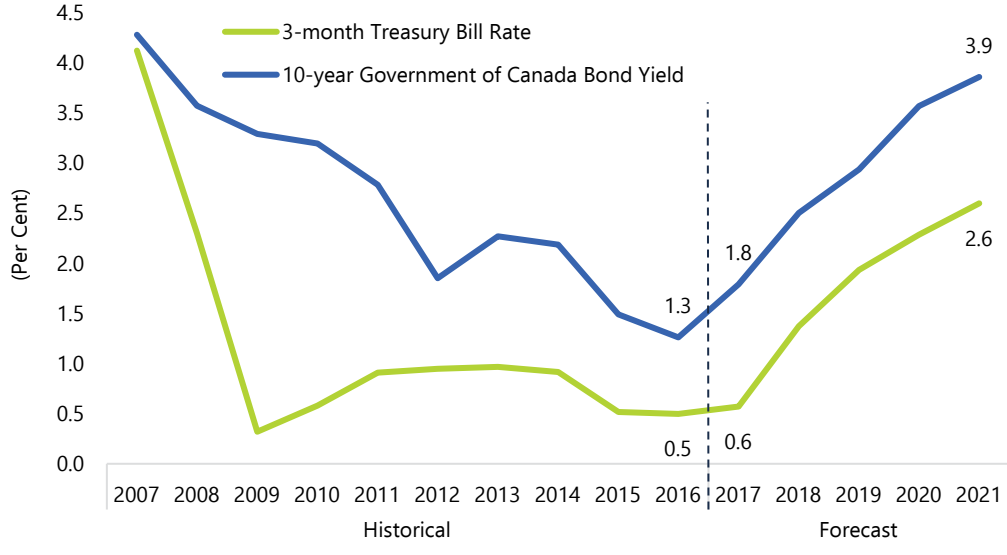
Canadian Economic Growth Expected to Rebound

The outlook for the Canadian economy has improved following strong growth over the second half of 2016.

Continued momentum in recent economic indicators point to a solid start for 2017. Canadian real GDP is currently projected to grow by 2.2 per cent in 2017 and 2.3 per cent in 2018, recovering from more moderate growth in 2015 and 2016.[5] Strength in household spending and non-energy exports are expected to contribute to overall growth in 2017 and 2018.

Beyond 2018, Canadian real GDP is projected to increase at an average annual rate of 2.0 per cent, as the economy continues to adjust to slower growth in the energy sector.

Canada GDP Growth Expected to Improve in 2017



Source: Statistics Canada and FAO Consensus.

Based on the continuing recovery of the U.S. economy, and in particular the strength of U.S. labour markets, the U.S. Federal Reserve raised its key policy interest rate in March 2017.[6] In contrast, the Bank of Canada has remained more cautious about the underlying strength of the Canadian economy and as a result appears unlikely to raise its key policy interest rate before 2018.[7]

5 The FAO forecast for the Canadian economy is based on the average quarterly forecasts of two independent, model-based forecasters – the Conference Board of Canada and the Policy and Economic Analysis Program (PEAP) at the University of Toronto.
6 The Federal Reserve raised its key policy rate, or the Federal Funds Rate, to 1.0 per cent on March 15, 2017.
7 In its most recent monetary policy report, the Bank of Canada indicated that it expects the output gap to close in early 2018. At the same time, the BOC noted that "there is still considerable uncertainty about the outlook," suggesting caution with regard to future changes in its policy interest rate. Bank of Canada Monetary Policy Report, April, 2017.

The FAO is projecting Canadian short-term interest rates will remain near current levels through 2017 and then begin rising modestly in 2018. Beyond 2018, interest rates are expected to gradually normalize with the 3-month Treasury Bill rate increasing to 2.6 per cent and the 10-year Government of Canada bond yield rising to 3.9 per cent by 2021.

Canadian Interest Rates to Rise over the Forecast

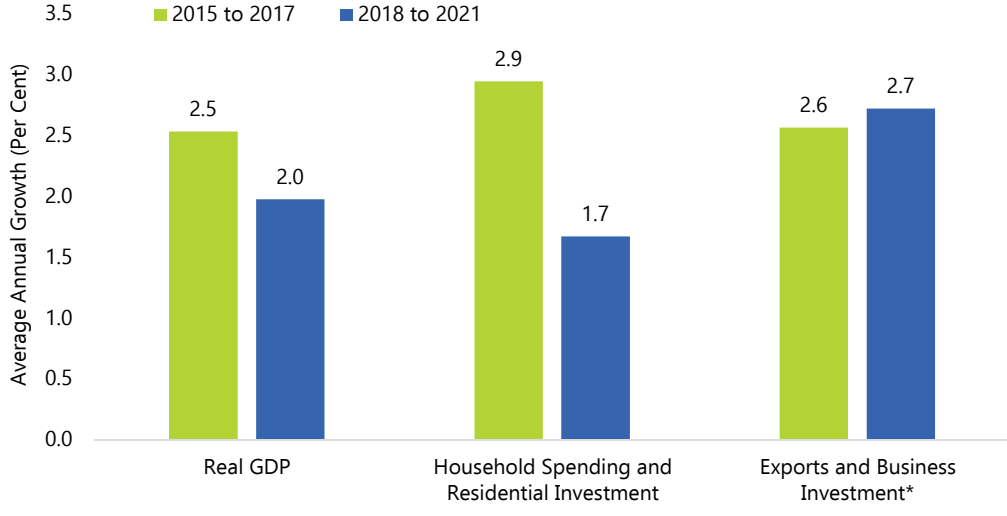
Source: Statistics Canada and FAO.

The Canadian dollar is expected to gradually appreciate over the next five years, rising from an average of about 75 cents U.S. in 2016 to about 81 cents U.S. by 2021, supported by the steady increase in short-term interest rates and a gradual rise in oil prices.

Ontario Economic Outlook

Solid Real GDP Growth Expected in 2017

Based on the Ontario Ministry of Finance's estimates,[8] Ontario real GDP rose by a strong 2.7 per cent in 2016, following equally strong gains of 2.5 per cent and 2.7 per cent in 2015 and 2014, respectively. Household spending, residential investment and exports were key contributors to overall economic growth last year. Business investment in plant and equipment disappointed expectations, declining by 4.0 per cent.



8 Ontario Economic Accounts, Fourth Quarter 2016, released April 13, 2017.

The performance of a number of economic indicators, including employment, retail sales and home sales remained solid in the first quarter of 2017. However, Ontario's merchandise export performance has been uneven so far in 2017.

Uncertainty over the future direction of U.S. trade and industrial policy could hamper business investment growth in the near term, which would negatively impact Ontario's competitiveness. Without stronger business sector investment to expand production capacity, the growth potential of several key Ontario industries will be limited.[9] As a result, despite the projection for steady growth in the U.S. and a competitively valued Canadian dollar, Ontario's net exports[10] are projected to grow at a relatively moderate pace over the outlook.

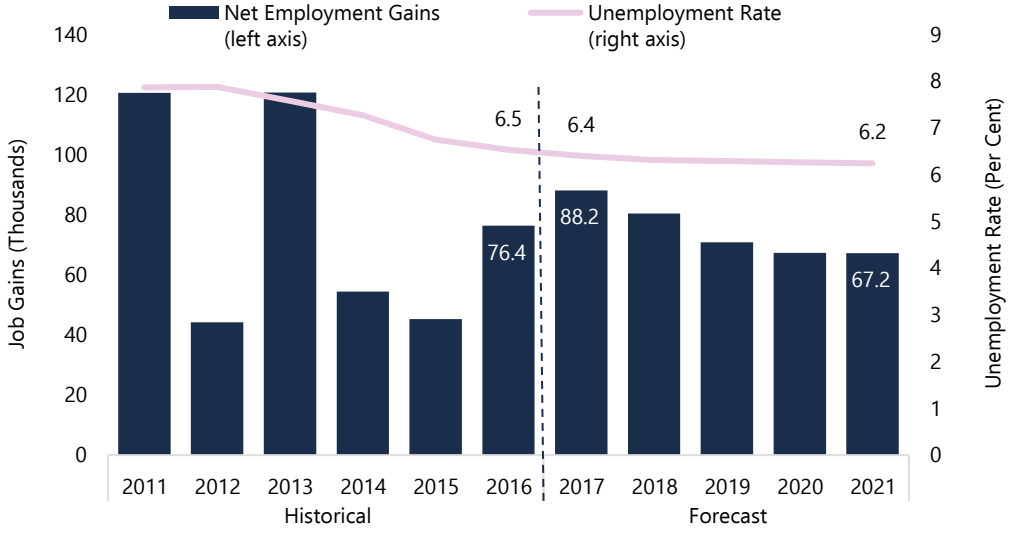
The FAO is forecasting real GDP growth of 2.4 per cent in 2017, supported by strong household spending and residential investment.[11] The pace of Ontario's overall economic growth will moderate to 2.1 per cent in 2018 and to an average of 2.0 per cent over the last three years of the outlook.

Exports and Business Investment Expected to Drive Economic Growth

* Business Investment includes both Non-Residential Investment and Machinery & Equipment Investment.
Source: Ontario Economic Accounts and FAO.

Moderate declines in residential investment in 2018 and 2019 – reflecting elevated household debt and a moderation in housing prices – is expected to contribute to the slower pace of overall economic activity.

9 As noted in a recent Conference Board of Canada report, nearly half of Ontario businesses are operating near or above capacity, hampering the ability of Ontario businesses to increase production to meet foreign demand. Conference Board of Canada Outlook, Winter 2017.
10 Net exports are exports less imports of goods and services.
11 The FAO forecast of the Ontario economy is based on the FAO's short-term quarterly model of the Ontario economy. For a description of the model, please refer to the end of the Economic Outlook chapter.



The FAO forecast is broadly consistent with the consensus view among economists that exports and business investment will lead Ontario growth over the next several years, while household spending and residential investment will grow at a more moderate pace, as households reduce borrowing to address high debt loads.

Steady Job Gains Over Outlook

Ontario experienced relatively strong employment growth of 1.1 per cent in 2016 (+76,400 net new jobs), the majority of which were full-time, private sector jobs. There was robust job growth in both goods and service producing industries. The construction industry in particular, posted the highest job growth (+3.4 per cent), followed by healthcare (+3.2 per cent).[12]

The strength in Ontario's labour market continued into 2017 with an increase of 99,600 jobs on a year-over-year basis during the first quarter. For the year, the FAO is projecting a 1.3 per cent gain in employment in 2017. On average, the FAO is forecasting average annual job gains of 1.0 per cent over the next four years, consistent with the outlook for solid economic growth.

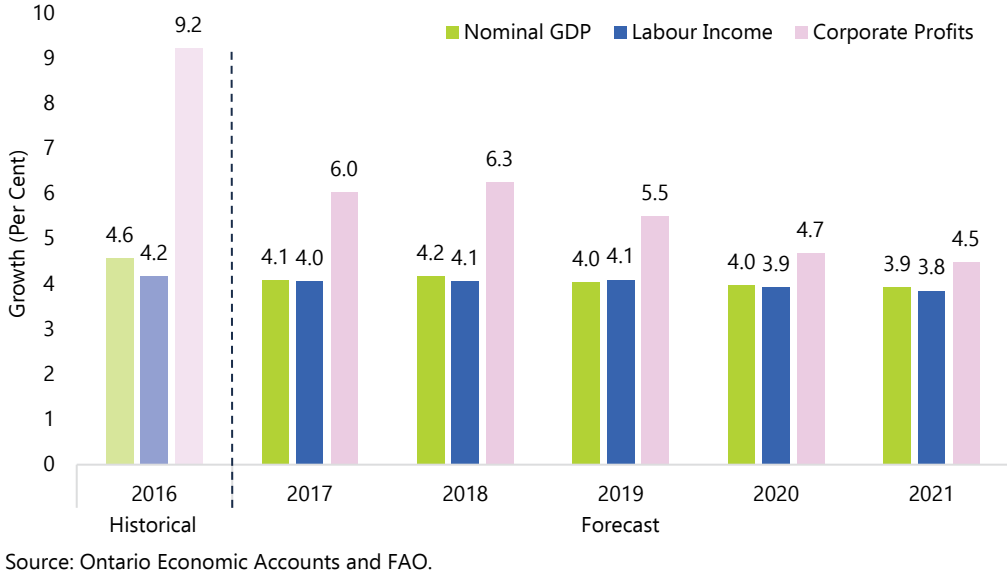
Steady Employment Gains as Unemployment Rate Slowly Trends Lower

Source: Statistics Canada and FAO.

Sustained economic growth over the outlook is expected to attract more workers into the labour force, which is forecast to rise at a slightly higher rate than over the last five years. Faster labour force growth from 2017 to 2021, will partially offset relatively

12 For a more detailed discussion on Ontario's labour market, see the FAO's Commentary: "Ontario Posts Solid 2016 Job Gain as the Labour Market Continues to Evolve".

strong employment gains, leading to a more moderate decline in the unemployment rate over the outlook.



Strong Gains Expected for Labour Income and Corporate Profits

Labour income grew by a robust 4.2 per cent in 2016, above the average annual increase of 3.7 per cent from 2011 to 2015, and a reflection of the strong employment growth last year. The net operating surplus of corporations (largely corporate profits) also increased by a robust 9.2 per cent in 2016 following an equally strong gain of 9.1 per cent in 2015.

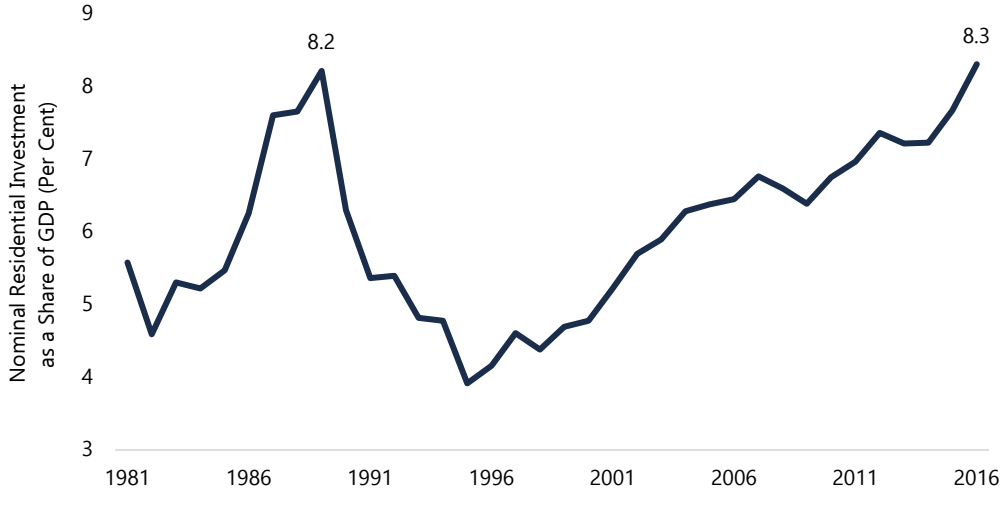
As a result of the gains in labour income and corporate profits (which together account for about two-thirds of nominal GDP), nominal GDP grew by a strong 4.6 per cent in 2016.[13]

For 2017, the FAO is projecting a 4.1 per cent rise in nominal GDP, supported by strong gains in labour income (+4.0 per cent) and corporate profits (+6.0 per cent). On average, the FAO is projecting nominal GDP growth of 4.0 per cent over the 2018 to 2021 outlook.

Labour Income and Corporate Profits Support Nominal GDP Growth

Source: Ontario Economic Accounts and FAO.

13 The robust 2016 increase in nominal GDP was much stronger than the 3.4 per cent increase projected in both the FAO's Economic and Fiscal Outlook, Fall 2016 Update and the government's 2016 Economic Outlook and Fiscal Review. The sharp upward shift in 2016 nominal GDP growth reflects large historical revisions to 2015 and 2016 nominal GDP growth in the Ontario Economic Accounts, consistent with new data from Statistics Canada. In particular, the net operating surplus of corporations is now estimated to have increased by 9.2 per cent in 2016 compared to an original projection of 0.3 per cent last fall.



Key Risks for Ontario's Economic Outlook

The FAO's current economic forecast represents a reasonable outlook for the Ontario economy and an appropriate foundation for fiscal projections. However, several key risks could materialize leading to weaker than expected economic growth for the province.

In particular, there are significant risks with respect to the proposed renegotiation of the North American Free Trade Agreement (NAFTA) and the adoption of protectionist trade measures in the United States. As well, other proposed changes to U.S. fiscal and industrial policies, such as lower corporate tax rates and 'Buy America' executive orders, could harm Ontario's relative competitiveness, further discouraging business investment and limiting the contribution of exports to overall growth.

Domestically, the housing market continues to pose a significant risk to the overall economy. The sharp rise in Ontario housing prices – particularly in the Greater Toronto Area – has contributed to record consumer debt loads and stretched levels of affordability.

Residential Investment Spending Accounts for a Record Share of GDP

Source: Ontario Economic Accounts and FAO.

At the same time, the relative importance of residential housing investment to the overall economy has increased substantially in recent years, posing a significant risk to the Ontario economy, in the event of a sharp housing market correction. In 2016, investment in residential housing accounted for a record high 8.3 per cent of Ontario's nominal GDP, up from 6.4 per cent in 2009.[14]

14 Almost one-quarter (22 per cent) of the growth in nominal GDP in 2016 was directly attributable to the increase in residential investment spending.

The last time investment in residential housing accounted for a similar proportion of the economy was 1989, just prior to the 1990-1995 housing market correction.

A sharp correction in housing prices, exacerbated by the elevated levels of household debt, would negatively affect household spending and residential investment, and could lead to broader economy-wide impacts on growth and employment.

The Province recently announced a package of measures intended to respond to the underlying factors contributing to the unsustainable rise in housing prices and the rapid growth in housing market activity. However, it is too early to assess whether these measures will adequately address the imbalance between demand and supply pressures in the market.

The FAO's Quarterly Short-term Model of the Ontario Economy

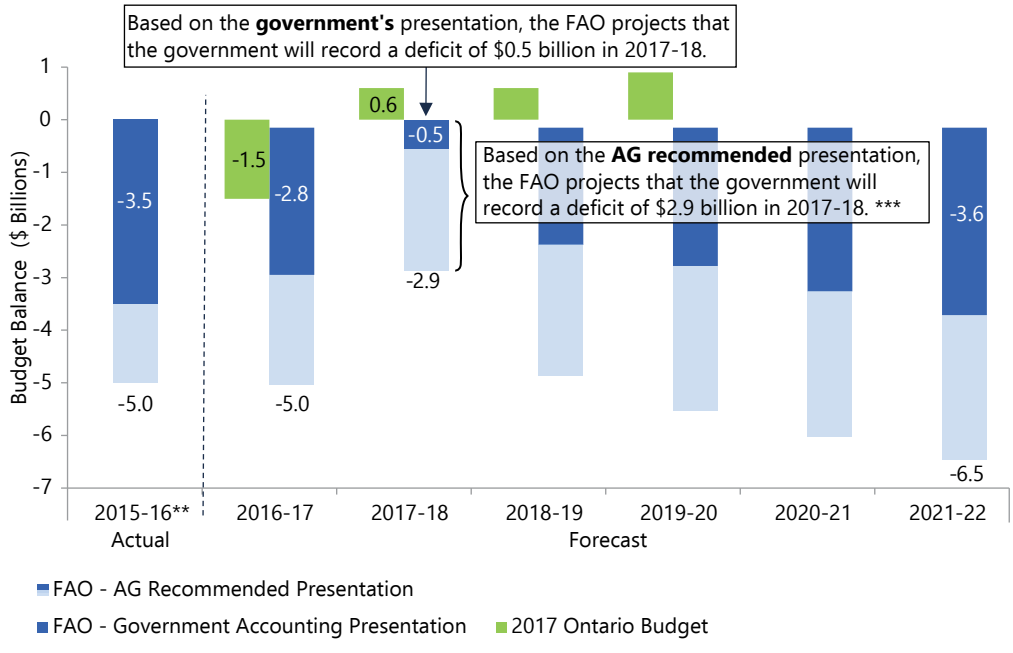
The FAO has developed a short-term forecasting model to produce quarterly five-year projections of the Ontario economy. The model is based on dynamic equations for major sub-categories of real and nominal GDP. The model also includes key labour market components, financial variables and the Canada-U.S. dollar exchange rate. The model is structured around a number of important external or exogenous concepts such as Canada-wide economic growth, U.S. economic growth, U.S. prices, U.S. interest rates and energy prices.

The model is an important tool for the FAO's bi-annual Economic and Fiscal Outlook (EFO), ensuring internal consistency of each projection as well as consistency between EFO forecasts. It also provides the majority of the inputs required by the FAO's Fiscal Outlook Model which provides the FAO's projection of the government's fiscal position.

3 FISCAL OUTLOOK

Continued Budget Deficits Projected

Based on the FAO's current economic forecast and updated fiscal information, the FAO is projecting continued Ontario budget deficits over the outlook. In the near term, the deficit improves due to strong tax revenue growth and a temporary boost to non-tax revenue. However, beginning in 2018-19, the deficit is expected to increase as a result of moderating revenue growth combined with higher expenses.



Since the release of the 2015-16 Public Accounts of Ontario, the government and the Auditor General (AG) have disagreed on the application of public sector accounting standards with respect to jointly-sponsored pension plans. (Please refer to the discussion on page 25 for additional background and context on this issue.) Based on the FAO's application of the Auditor General's recommended accounting for these pension assets, the FAO is projecting a budget deficit of $2.9 billion for 2017-18, rising to $6.5 billion by 2021-22.[1]

Under the government's accounting presentation, the FAO is projecting a budget deficit of $0.5 billion in 2017-18, growing to $3.6 billion by 2021-22.[2] By comparison, in the 2017 Budget, the government is projecting a budget surplus of $0.6 billion in 2017-18, followed by small surpluses over the next two years (before the reserve).

1 The FAO projection based on the Auditor General's recommended accounting presentation assumes a valuation allowance that effectively writes off the value of any net pension assets – referred to as the 'pension adjustment' in this report. The valuation allowance increases 'other program' expense, resulting in higher deficits under the AG's recommended accounting presentation.

2 Under the government's accounting presentation, Ontario's public accounts would be expected to receive a qualified opinion from the Auditor General.

Ontario's Budget Balance*

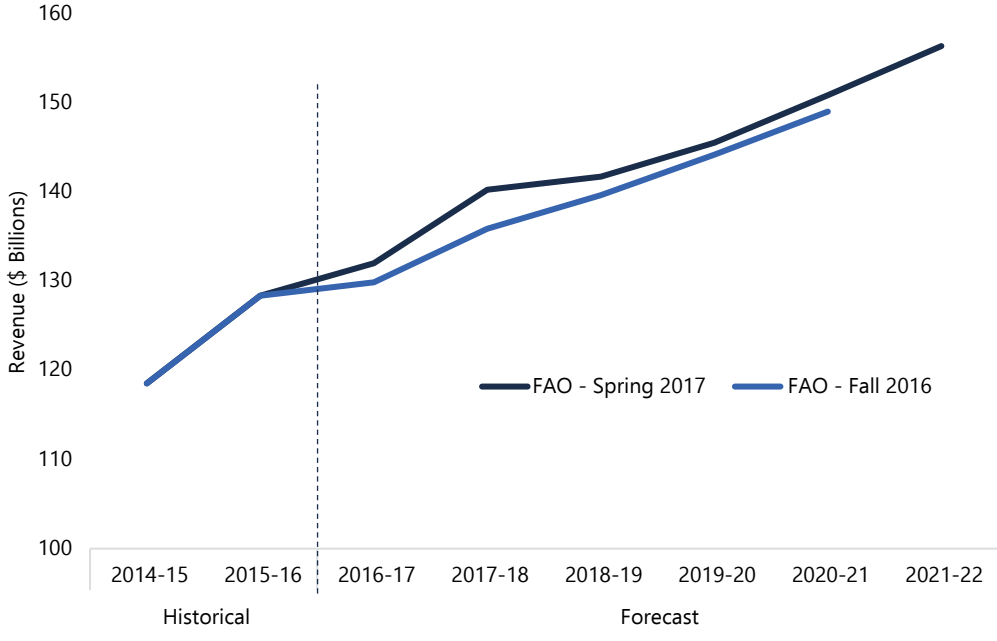
* Budget balance before reserve.

** Ontario's 2015-16 Public Accounts reported a deficit of $5.0 billion. Without the pension adjustment, the deficit would have been $3.5 billion.

*** This includes the FAO's estimate of the pension adjustment.

Source: 2015-16 Public Accounts, 2017 Ontario Budget and FAO.

On the government's accounting presentation, the FAO projects that a balanced budget is within the government's reach in 2017-18. However, the budget deficit is expected to increase after 2017-18, due to moderate revenue growth, the absence of one-time non-tax revenues, and higher program expenses. Staying in balance after 2017-18 will likely require additional fiscal policy measures.



Under the Auditor General's recommended accounting presentation, the FAO is projecting significant budget deficits over the entire outlook. On this basis, it is unlikely that the government will balance the budget without additional fiscal policy adjustments to raise revenue or lower expense.

Revenue Outlook

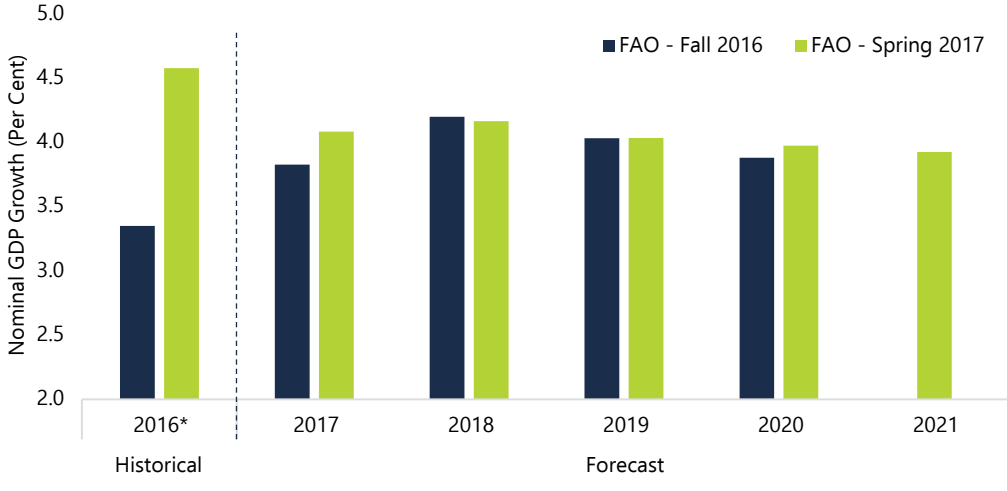
The FAO is projecting average annual revenue growth of 3.3 per cent per year over the outlook, slightly higher than forecast in the FAO's fall report.

In the near-term, revenue growth is driven by robust economic performance in 2016 and 2017, and a boost from one-time revenue in 2017-18. Beyond 2017-18, growth in tax revenue moderates and the benefit of one-time non-tax revenue ends.

Revenue Stronger Than Expected in Near Term

Source: FAO and Public Accounts.

FAO Revenue Assumptions and Forecast



Revenue Source	Assumption	Forecast
Taxation Revenue	Grows with key economic drivers including labour income, corporate profits and household spending	Averages 3.9 per cent growth per year from 2016-17 to 2021-22
Federal Transfers	Based on legislated growth rates and economic performance	Federal transfers are expected to grow by 1.9 per cent per year from 2016-17 to 2021-22
Government Business Enterprises (GBE)	Based on government projections	Income from GBEs are projected to rise moderately from $5.3 billion in 2016-17 to $6.5 billion in 2021-22
Other Revenue	Based on government projections, and includes asset sales, and proceeds from cap and trade allowances	These revenues are projected to increase from $8.5 billion in 2016-17 to $11.0 billion in 2017-18, before declining to $8.5 billion by 2021-22

Stronger Economic Growth Expected to Boost Tax Revenue

Consistent with the FAO's economic forecast, the FAO is currently projecting tax revenues to rise at an average of 3.9 per cent from 2016-17 to 2021-22, much stronger than the 3.0 per cent forecast in the FAO's fall outlook.

Since the FAO's fall report, nominal GDP – the broadest measure of the tax base – was revised significantly higher in 2016, improving the forecast for 2017.[3] However, beyond 2017, the outlook for nominal GDP growth is relatively unchanged from the fall forecast.

Nominal GDP up Significantly in the Near-Term Since the Fall

* 2016 value for the Fall 2016 EFO was the FAO's forecast at the time of the report's release.

Source: Ontario Economic Accounts and FAO.

Improved economic prospects are expected to lift the Province's tax revenue by approximately $2.8 billion in 2016-17 and $4.2 billion in 2017-18, compared to the FAO's fall estimates.

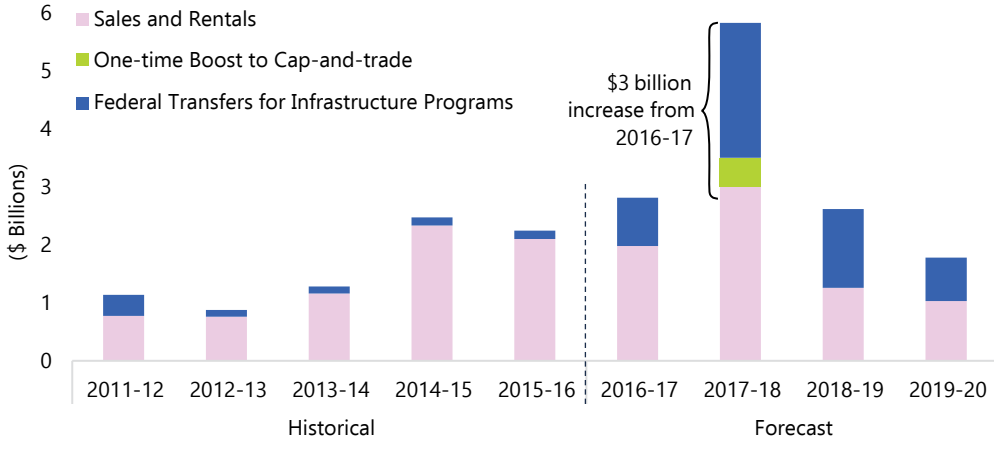
- Personal income tax revenue is forecast to grow stronger than expected in the fall due to the stronger forecast for labour income.[4]
- Corporations tax revenue is projected to benefit from the stronger outlook for corporate profits.

3 See economic section, and the footnote on page 12.

4 However, near-term revenue growth will be somewhat dampened as some high-income earners shifted earnings into the 2015 tax year to avoid the new higher 33 per cent tax rate introduced by the federal government in 2016 (http://www.fin.gc.ca/afr-rfa/2016/report-rapport-eng.asp#_Toc463249478). Using Finance Canada estimates, the FAO estimates that roughly $600 million of Ontario's 2015 PIT revenue was due to income shifting, which lowers taxable income in 2016-17 and 2017-18.

- Sales tax and land transfer tax revenues are forecast to grow stronger than expected in the fall due to the on-going strength in Ontario's housing market.

Equalization Entitlement Declines



Given Ontario's recent economic strength relative to the rest of Canada, the Province's Equalization entitlement declined $0.8 billion to $1.4 billion in 2017-18. The FAO is projecting a further drop to $0.6 billion in 2018-19. Beyond 2018-19, the FAO is projecting that Ontario will no longer be entitled to Equalization payments — a reflection of the continued relative strength of the Ontario economy.

2017-18 Revenue to Benefit from One-time Increases

Based on the 2017 Budget, Ontario's 2017-18 revenues will benefit from a one-time $3.0 billion boost,[5] that includes:

- $1.5 billion in higher revenue from federal transfers for infrastructure;
- $1.0 billion in increased sales and rentals revenue, reflecting additional asset sales[6]; and
- $0.5 billion in additional cap and trade proceeds from March 2017, which will be recognized in 2017-18.[7]

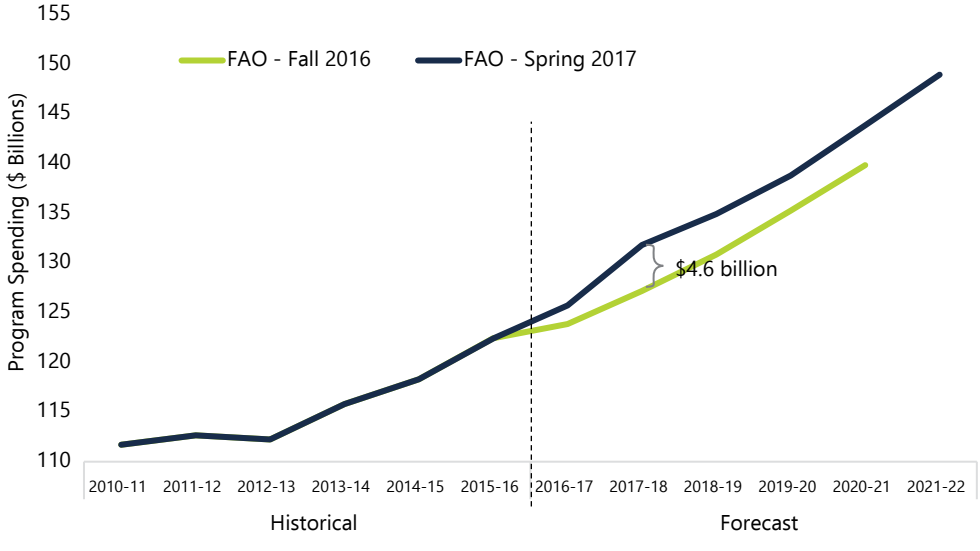
2017-18 Temporary Revenue Boost

Source: Ontario Budgets, Ministry of Finance and FAO.

5 This one-time benefit is incorporated into the FAO's revenue projection.

6 A portion of this increase reflects the Province's sale of 22 per cent of Hydro One equity in 2017-18, compared to a 15 per cent sale in 2016-17. The FAO estimates that this sale would generate about $0.8 billion in revenue gains in 2017-18, compared to a gain of $0.5 billion in 2016-17.

7 The government indicated that the cap and trade revenues from the March 2017 auction will be reported in fiscal year 2017-18, because the allowances were certified and delivered on April 2, 2017.



Expense Outlook

Program Expense to Increase Significantly over the Outlook

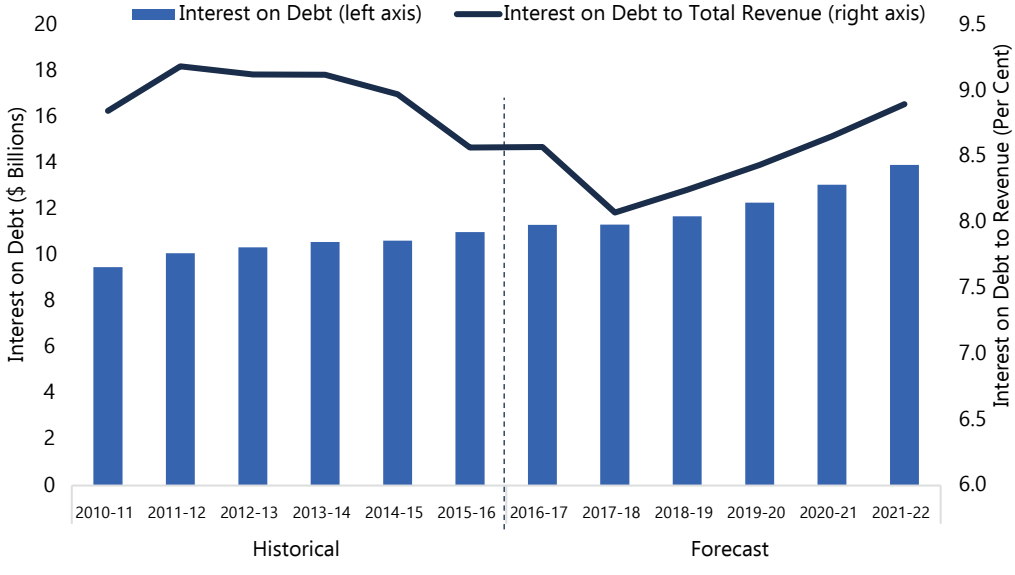
The FAO projects program spending growth of 3.3 per cent per year over the 2016-17 to 2021-22 period.[8]

Over the 2016-17 to 2019-20 period, the FAO adopts the government's 2017 Budget projections for program spending[9], adjusted to reflect the Auditor General's recommended accounting presentation.[10] The expense outlook includes significant new spending across all sectors, including a new children and youth Pharmacare program, higher operating funding for hospitals, 24,000 new child care spaces[11], and the government's new 'Fair Hydro Plan'. As a result, spending is now forecast to be significantly higher than projected in the FAO's fall outlook.

Program Expense Higher than Projected in the Fall

Note: Program spending includes the FAO's estimate of the pension adjustment.
Source: Ontario Public Accounts, 2017 Ontario Budget and FAO.

With these new expenses, program spending is expected to grow 3.3 per cent per year on average over the next five years. This higher program spending growth is still slightly below the growth in underlying cost and demographic pressures, which is estimated to be 3.6 per cent on average.



8 The FAO's projection extends to 2021-22, two years beyond the 2017 Ontario Budget forecast.
9 Given the government's discretion over spending, the FAO adopts the government's announced spending plans and incorporates policy announcements as appropriate.
10 The FAO's estimates the pension adjustment will increase 'other program' expense by $2.2 billion in 2016-17, rising to $2.9 billion by 2021-22.
11 The 2017 Budget announced 24,000 new child care spaces for 2017–18, as part of the government's September 2016 Throne Speech commitment to create 100,000 new child care spaces by 2022.

Interest on Debt

The FAO projects interest on debt (IOD) payments will increase at an average annual rate of 4.0 per cent from $11.0 billion in 2015-16 to $13.9 billion by 2021-22, reflecting higher debt and rising interest rates over the outlook. This is faster than the average rate of program spending growth over the outlook.

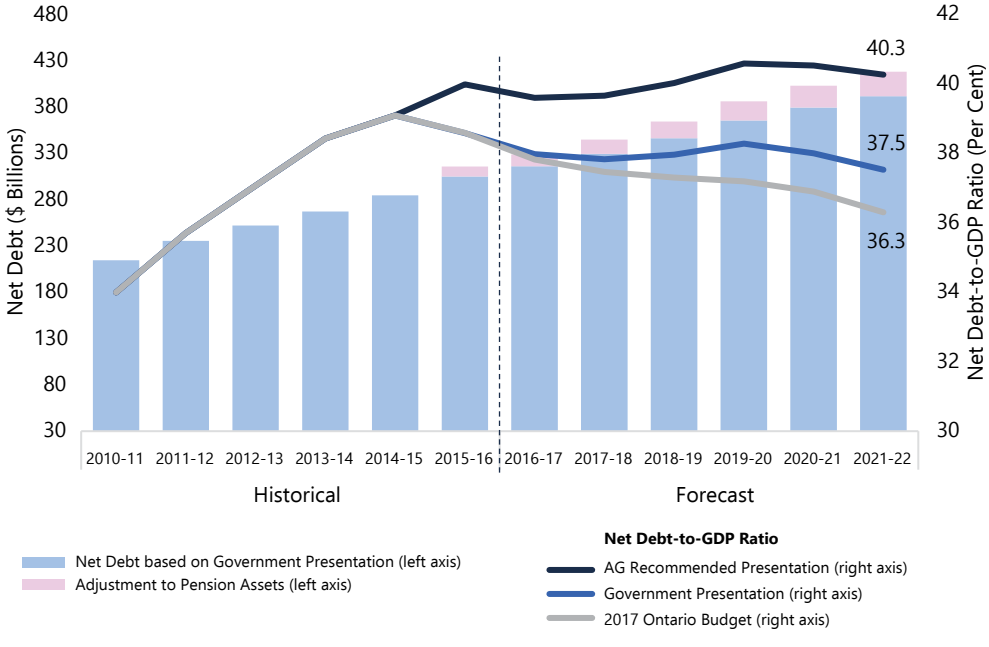
Over the past five years, IOD as a share of revenue declined steadily, benefitting from falling interest rates. However, given the projected rise in interest rates over the outlook, the FAO forecasts that IOD as a share of revenue will increase from 8.1 per cent in 2017-18 to 8.9 per cent by 2021-22.

Interest on Debt to Rise Sharply as a Share of Revenues

Source: Ontario Public Accounts and FAO.

Ontario Debt Outlook

Ontario Net Debt-to-GDP Ratio Will Remain Elevated



Ontario's total borrowing requirements are expected to remain high over the outlook. To finance the cost of projected capital spending, on-going deficits and maturing debt issues the FAO estimates that provincial borrowing will average $37 billion per year over the next five years.

As a result, the FAO projects Ontario's net debt to increase by $76 billion over the next five years to approximately $392 billion by 2021-22 based on the FAO's application of the AG's recommended accounting presentation. By comparison, using

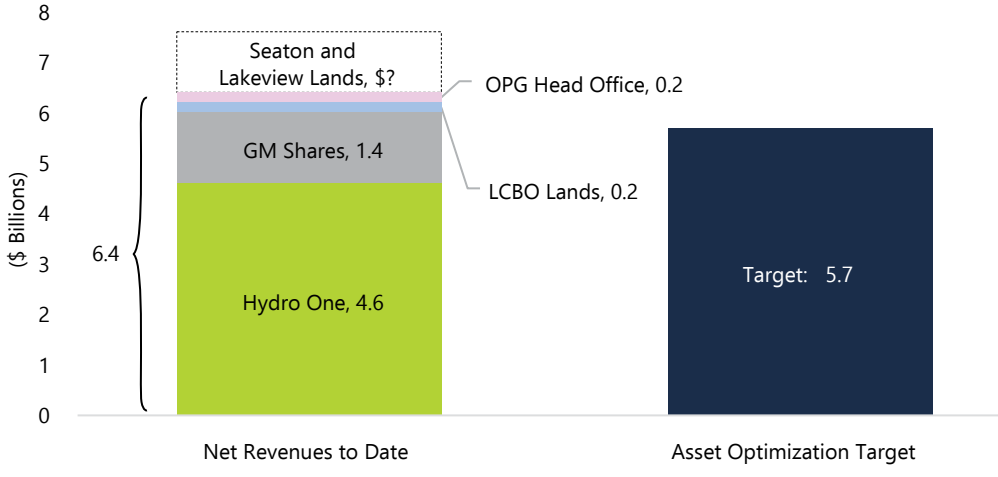
the government's accounting presentation, the FAO projects Ontario's net debt will rise by $62 billion to roughly $365 billion by 2021-22.

Based on the AG's recommended accounting presentation, the FAO expects Ontario's net debt-to-GDP ratio will edge higher to 40.3 per cent by 2021-22, reflecting the projected increase in net debt and the FAO's forecast for nominal GDP growth. In contrast, based on the accounting presentation adopted by the government, the FAO projects that net debt-to-GDP will fall slightly from 38.6 per cent in 2015-16 to 37.5 per cent by 2021-22.

Ontario's Net Debt-to-GDP Ratio

Source: FAO, Ontario Economic Accounts, and 2017 Ontario Budget.
Note: AG recommended presentation is based on FAO estimates of the pension adjustment.

In the 2017 Budget, the Province set an interim net debt-to-GDP target of 35 per cent by 2023-24 and committed to lowering the ratio to 27 per cent by 2029-30. The FAO's net debt-to-GDP projections under both accounting presentations, suggest that additional fiscal measures would be required for the government to achieve its interim target of 35 per cent by 2023-24.



Risks to the Fiscal Plan and Policy Options

There are material risks that could impact Ontario's fiscal position.

- A sharp correction in the housing market could present a significant risk for both the broader economy and for the Province's fiscal plan. As discussed in an FAO commentary[12], a decline in house prices and housing market activity would directly reduce Land Transfer Tax and HST revenues. In addition, the broader economic impacts would lower personal and corporate income tax revenues.

- In the 2017 Budget, the government significantly reduced the prudence built into its program spending projection compared to the 2016 Budget, leaving less fiscal flexibility for the government to respond to unexpected events.[13] In addition, the FAO projects that interest on debt payments as a share of both program spending and revenue will increase significantly, exposing the government to added fiscal risk should interest rates rise faster than expected.

Asset Optimization Revenues and Target

Source: FAO and Ontario Budgets.

Note: As of the 2017 Budget, the government had generated $3.8 billion in net proceeds from its sale of Hydro One equity. On May 8, 2017, the government announced the sale of an additional 22 per cent of Hydro One equity, which the FAO estimates will generate $0.8 billion in net proceeds.

On the other hand, the government has increased spending growth to a rate closer to underlying spending pressures, diminishing the expense risk identified in earlier FAO reports.

12 "The Impact of a Housing Market Correction on Ontario's Fiscal Position", Financial Accountability Office of Ontario, February 15, 2017. http://fao-on.org/en/Blog/Publications/Housing_Market16821

13 In the 2017 Budget, contingency funds total $0.6 billion for the coming fiscal year, half the size built into the 2016 Budget fiscal plan. Similarly, the government's target for year-end savings has increased to $1.2 billion for the coming year, compared to $0.8 billion in Budget 2016.

Additionally, the government has a broad range of policy options that could improve its fiscal position, including the sale of additional public assets beyond announced targets. To date, the FAO estimates that the government has generated $6.4 billion in revenues from net asset sales, exceeding its target of $5.7 billion over 10 years. Given the government's intention to sell Seaton and Lakeview lands[14], it would further overachieve its asset sales target.

The Accounting Treatment of Jointly Sponsored Pension Plans

Background

Ontario's 2015-16 Public Accounts noted a disagreement between the Office of the Auditor General and the Province on the appropriate accounting treatment for net pension assets of jointly sponsored pension plans. Specifically, the Province is a joint sponsor of two pension plans, the Ontario Teachers' Pension Plan (OTPP) and the Ontario Public Service Employees Union Pension Plan (OPSEUPP).

The government's position is that these pension assets have been appropriately and consistently reflected on the Province's financial statements since 2001. The Office of the Auditor General, based on a review of these pension assets, determined that a change in the accounting treatment was required. The Auditor General concluded that under current Canadian public sector accounting standards, the government could not unilaterally recognize a pension asset on its financial statements without evidence - in the form of a written agreement - permitting it to realize the asset through reduced contributions.[15]

In response, the Province adopted regulated accounting for 2015-16 to reflect the fiscal results according to the Auditor General's interpretation of public sector accounting standards, and subsequently appointed a panel, the 'Pension Asset Expert Advisory Panel', to review and provide their recommended interpretation. The panel's report,[16] released in February 2017, concluded that the Province's share of net assets in jointly sponsored pension plans should be fully recognized in the Province's financial statements — contrary to the opinion of the Office of the Auditor General.

In the 2017 Budget, the government adopted the advisory panel's interpretation of public sector accounting standards and recognized the net pension assets of the jointly sponsored pension plans. The 2017 Budget also indicated that the Province's 2016–17 Public Accounts will report the net pension assets for the two jointly sponsored pension plans.

15 The Auditor General indicated that her office began reviewing the treatment of pension assets after these assets started to materially affect the government's fiscal position (Auditor General's Statement on Pension Assets, February 16, 2017).

16 https://news.ontario.ca/tbs/en/2017/02/pension-asset-expert-advisory-panel-submits-report.html.

The Central Issue

The government and the Auditor General have put forward different interpretations of the application of public sector accounting standards for jointly sponsored pension plans.

The different interpretations centre on the question of whether the government has unilateral control of pension surplus assets in jointly sponsored pension plans. In particular, the issue is focused on whether an explicit written agreement between the co-sponsors (the government and the unions representing the employees) to lower future contributions is required for the government to recognize the value of the pension surplus assets.

According to the Auditor General, the issue can be resolved if the government presents an agreement with the Ontario Teacher's Federation (OTF) allowing the government to access the OTPP pension assets through reduced contributions. The extent and duration of the reduced contributions would determine the size of the pension asset that the government could recognize in its financial statements.

The government's position, based on the advice of the advisory panel, is that the existing agreements governing the pension plans, and past history, reflect the sponsors' rights and intent to benefit from surplus assets in the plans through mechanisms reflected in the agreements to potentially realize a benefit through lower future contribution rates.

In the absence of an agreement, and given the government's decision to accept the advisory panel's recommended approach to accounting for jointly sponsored pension plan assets, the Auditor General would be expected to provide a qualified opinion[17] on Ontario's 2016-17 Public Accounts.

Roles and Responsibilities of the Province and the Auditor General

The Province (through the Treasury Board Secretariat) is responsible for the preparation of Ontario's Public Accounts in accordance with legislation, and based on the standards set out by the Public Sector Accounting Board (PSAB).[18]

The PSAB accounting standards serve the public interest by providing an independent, high-quality accounting framework for public sector entities. The

17 An auditor may provide a qualified opinion when financial statements do not conform in a material way to the applicable accounting standards.
18 https://www.ontario.ca/page/public-accounts-101-guide#section-6].

government is responsible to ensure that the financial reports fairly reflect the activities and financial position of the Province.

The Auditor General reviews the Province's annual Public Accounts and provides an audit opinion to the Legislature on whether the Consolidated Financial Statements for the Province of Ontario present fairly, in all material respects, the Province's financial position, in accordance with the PSAB accounting standards.

The FAO's Presentation of Ontario's Fiscal Outlook

The Financial Accountability Officer supports the Legislative Assembly by providing independent economic and financial analysis intended to improve the transparency of the government's fiscal plan. The Officer looks to the Auditor General as the provincial authority on the appropriate interpretation and application of accounting standards for the Province.

The FAO has presented two fiscal projections, including and excluding the impact of the net pension assets of jointly sponsored pension plans, to help members of the Legislative Assembly better understand the implications of these different accounting interpretations on the Province's fiscal position.

- The FAO projection based on the Auditor General's recommended accounting presentation assumes a valuation allowance that offsets the net pension assets.
- The FAO projection based on the government's accounting presentation recognizes the net pension assets.

  In the absence of an agreement between the pension plan co-sponsors, this presentation of Ontario's fiscal position would be expected to receive a qualified opinion from the Auditor General when published in the Province's future Public Accounts.

Based on the Auditor General's recommended accounting presentation for the net assets of jointly sponsored pension plans, and the FAO's estimate of the pension adjustment, the FAO is projecting budget deficits of $2.9 billion in 2017-18, rising to $6.5 billion by 2021-22. Alternatively, based on the pension accounting presentation adopted by the government, the FAO is projecting budget deficits of $0.5 billion in 2017-18 rising to $3.6 billion in 2021-22.

4 APPENDICES

Developments since the FAO's Fall 2016 Economic and Fiscal Outlook

The FAO's current projection of the Ontario budget balance has generally deteriorated relative to the FAO's fall 2016 projection.

- Stronger than expected economic performance is expected to boost taxation revenues over the forecast, partially offset by lower Equalization revenue.
- Based on new government spending plans, program expense has increased significantly.

Developments since Fall 2016 EFO (AG Recommended Presentation)

	2016-17	2017-18	2018-19	2019-20	2020-21
FAO's Fall 2016 Budget Balance Forecast	**-5.2**	**-2.6**	**-2.8**	**-3.3**	**-3.7**

Total Developments	**0.2**	**-0.3**	**-2.1**	**-2.3**	**-2.3**
FAO's Spring 2017 Budget Balance Forecast	**-5.0**	**-2.9**	**-4.9**	**-5.5**	**-6.0**

Notes:

1. Change in federal transfers forecast mainly due the reduction in Ontario's Equalization payment.
2. Other revenue changes include the $0.5 billion re-profiling of cap-and-trade proceeds from 2016-17 to 2017-18, and an increase in sales and rentals for 2017-18.
3. In the Fall 2016 EFO, the FAO assumed an annual adjustment of $1.5 billion for the net pension assets of jointly sponsored pension plans. The current projection incorporates the FAO's updated estimates for the pension adjustment of $2.2 billion in 2016-17, increasing to $2.9 billion by 2020-21.

May 29, 2017

The Honourable Liz Sandals
President of Treasury Board
Treasury Board Secretariat
Room 4320, 4th Floor, Whitney Block
99 Wellesley Street West
Toronto, Ontario M7A 1W3

Dear Minister Sandals:

Subject: Economic and Fiscal Outlook – Assessing Ontario's Medium-Term Prospects: Spring 2017

Under paragraph 10(1)(a) of the *Financial Accountability Officer Act, 2013* (the Act), the FAO is mandated to undertake regular analyses of the state of the province's finances and trends in the provincial economy.

Section 15 of the Act requires that I deliver copies of any reports I publish to the relevant ministers ahead of publication. Accordingly, please find attached a copy of my report, which presents my office's assessment of the province's medium-term economic and fiscal outlook.

As arranged with the Clerk of the Legislative Assembly, this report will be tabled on **Wednesday May 31 at 9:00 a.m.** Please treat this report as confidential until that time.

An MPP Briefing will be held in Committee Room 1 at 1:30 p.m. Members of the Standing Committee on Finance and Economic Affairs, as well as two members per caucus, are welcome to attend.

Let me take this opportunity to thank you once more for the assistance that your ministry provided to my staff during the preparation of this report.

As always, please feel free to contact my office if we can be of assistance.

Sincerely,

Stephen LeClair
Financial Accountability Officer

Encl.

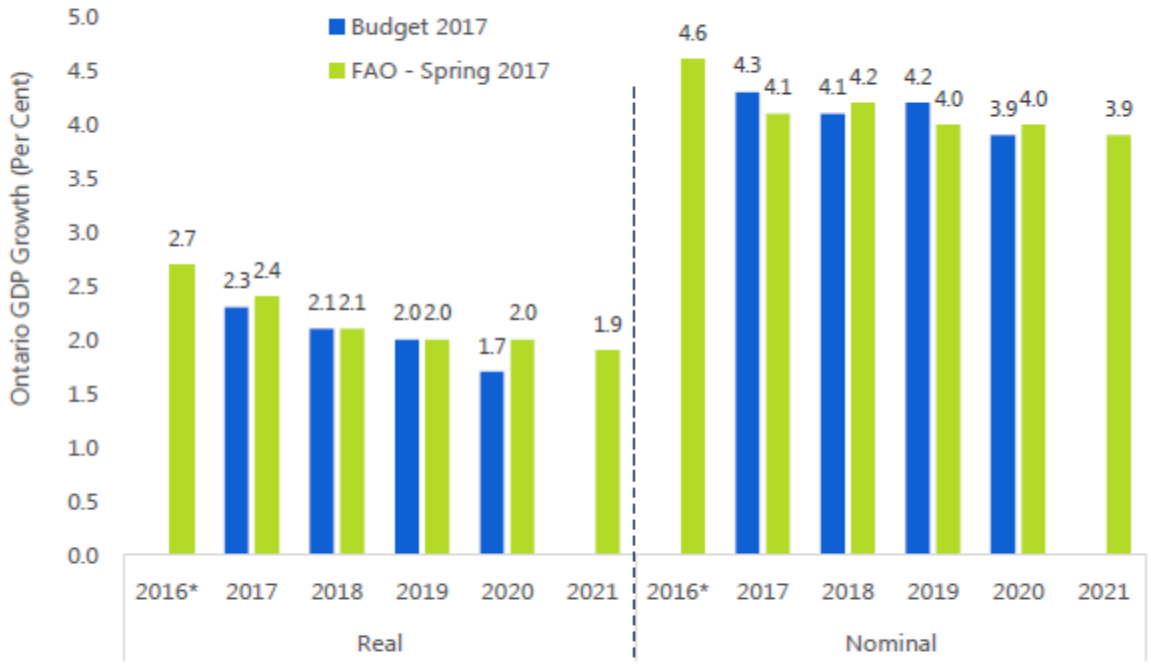
MINISTRY of FINANCE

Financial Accountability Officer Report:
Spring Economic and Fiscal Outlook

Draft – May 18, 2017 12:20 PM

ISSUE

- The Financial Accountability Officer (FAO) will be releasing a report on May XX, which assesses Ontario's medium-term economic and fiscal outlook.
- This represents the spring update to the FAO's planned release of semi-annual medium-term outlook reports.
- The spring report incorporates economic and fiscal information released since the FAO's fall 2016 report (released November 3, 2016). This includes:
    - New economic data that impacts their revenue and interest on debt outlooks; and
    - New spending commitments from the 2017 Budget.
- The FAO has presented two fiscal projections in its spring report:
    1. A projection that includes the impact of the net pension assets of jointly sponsored pension plans, based on the Auditor General's recommended accounting treatment, and
    2. A projection that excludes this impact based on the government's fiscal presentation in the 2017 Budget as recommended by the Pension Asset Expert Advisory Panel.
- Both presentations used by the FAO project deficits in each year over the outlook period (2016–17 to 2021–22).
- In the spring report, between 2017 and 2020 the FAO left their real GDP growth projection little changed, on average, compared to the outlook presented in its fall report. The FAO modestly raised its projection for Ontario nominal GDP by 0.1 percentage points annually, on average.



KEY FINDINGS

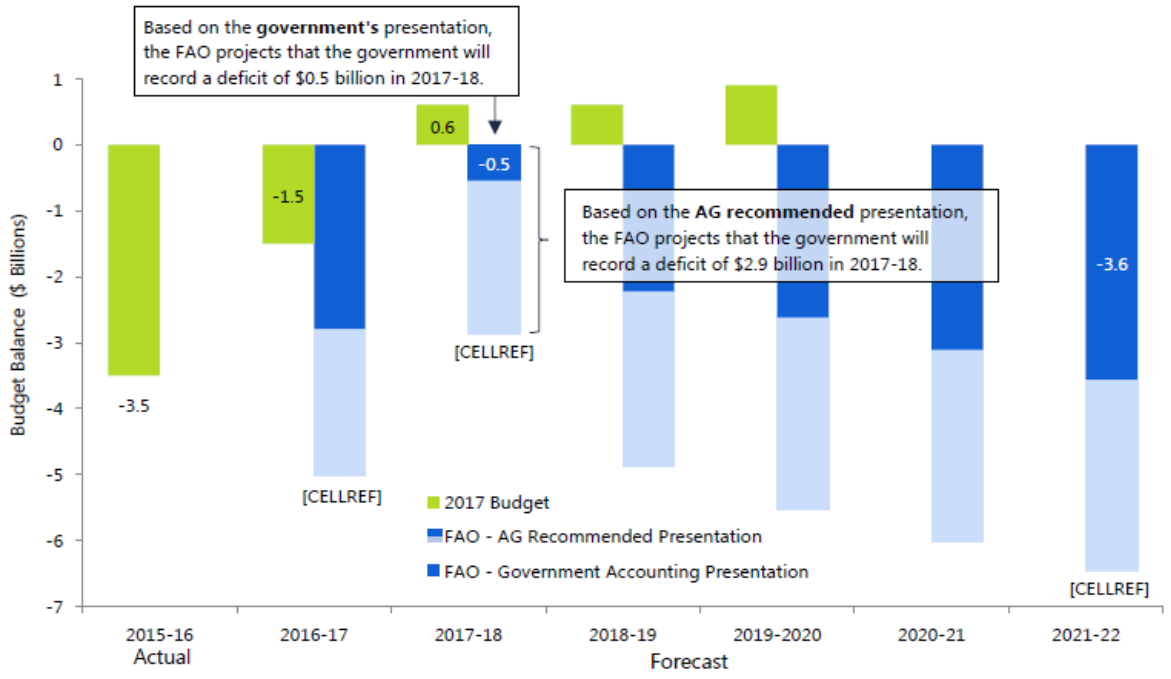
- The report is divided into two main chapters:
    1) The **Economic Outlook** chapter presents the FAO forecast for Ontario's economy out to 2021, and includes a discussion of potential risks.
    2) The **Fiscal Outlook** chapter presents the FAO forecast for revenue, expense and the surplus/deficit between 2016-17 and 2021-22.

Economic Outlook

- The FAO has left its forecast for Ontario real GDP growth little changed, on average, over the 2017 to 2020 period relative to its fall forecast, though it included a modest downward revision in 2017 and upward revision in 2019.
- The FAO forecast is broadly consistent with the private sector economists' view that stronger international exports and business investment will be key drivers of Ontario's overall economic growth over the next several years.
- The FAO forecast for real GDP growth is 0.1 percentage points stronger annually, on average, than the 2017 Budget forecast between 2017 and 2020.
- The FAO believes the balance of the risks to the economic outlook is tilted to the downside, particularly risks associated with a correction in Ontario's housing market. (p. 12 – Economic Chapter).

Solid Economic Performance Expected Over Outlook

* 2016 are actuals



Source: Ontario Economic Accounts, Budget 2017 and FAO

Fiscal Outlook

- The FAO's current projection of the outlook for budget balance has generally deteriorated relative to the FAO's fall 2016 projection.

- The FAO's forecast, based on the Auditor General's recommended accounting treatment of jointly-sponsored pension plans, projects deficits of $5.0 billion in 2016–17, $2.9 billion in 2017–18, $4.9 billion in 2018–19, and $5.5 billion by 2019–20 (excluding the reserve). This represents a slight improvement in the deficit for 2016–17 but deterioration in 2017–18 and over the outlook compared to the FAO's fall report.
- The FAO also projects that a balanced budget is "within the government's reach in 2017–18" when using the government's accounting method.
- Using the government's accounting treatment of net pension assets the FAO is projecting budget deficits of $2.8 billion in 2016–17, $0.5 billion in 2017–18, $2.2 billion in 2018–19, and $2.6 billion by 2019–20 (excluding the reserve). This represents an improvement in the deficit for 2016–17 and 2017–18, but deterioration over the outlook compared to the FAO's fall report. By comparison, the 2017 Budget projects a $1.5 billion deficit in 2016–17 and surpluses of $0.6 billion in 2017–18 and 2018–19, and a $0.9 billion surplus in 2019–20, excluding the reserve. The FAO also makes projections out to 2021–22 with increasing deficits forecast for those years as well.
- The FAO's projection for an improved deficit in 2017–18 is due to robust economic performance in 2016 and 2017, compared to the FAO's fall estimates, and a one-time revenue increase in 2017–18 from increased federal transfers for infrastructure, additional revenue from asset sales and cap and trade proceeds. (p. 3 – Fiscal Chapter).
- Beginning in 2018-19, the FAO projects that the deficit will gradually deteriorate due to moderate revenue growth, the absence of one-time non-tax measures, and higher program expenses. (p. 1 – Fiscal Chapter).
- That FAO believes that "staying in balance after 2017–18 will likely require additional fiscal policy measures." (p. 1 – Fiscal Chapter).

Ontario's Budget Balance*

* Budget balance excluding reserve.

Source: 2015-16 Public Accounts, 2017 Budget and FAO

Key factors driving change since the 2016 FAO fall report:

- Increases in Provincial tax revenue of $2.3 billion in 2016–17 and $4.1 billion in 2017–18 (stronger than expected PIT revenue) due to improving economic growth in 2017
- Declines in Ontario's equalization entitlement. Beyond 2018–19, the FAO is projecting that Ontario will no longer be entitled to Equalization payments – a reflection of the continued strength of the Ontario economy
- Significant new spending across all sectors, including a new children and youth Pharmacare program, increased funding for hospitals, new child care spaces, and electricity cost relief under the Fair Hydro Plan
- Revised estimates for net pension asset expense of jointly sponsored pension plans

Developments since 2016 Fall EFO (AG Recommended Presentation)

	2016-17	2017-18	2018-19	2019-20	2020-21
FAO's Fall 2016 Budget Balance Forecast	-5.2	-2.6	-2.8	-3.3	-3.7
Developments Since Fall 2016					
Revenue					
Stronger Economic Outlook	2.3	4.1	3.9	4.4	4.7
Lower Federal Transfers[1]	-0.3	0.2	-1.3	-2.4	-2.2
Other Revenue Changes	0.1	0.1	-0.5	-0.6	-0.6
Total	2.1	4.4	2.1	1.3	1.8
Expense					
Children and Youth Pharmacare, and Fair Hydro Plan[3]	0.5	1.3	1.3	1.3	1.3
Revised Pension Asset[4]	0.7	0.8	1.1	1.4	1.4
Other Expense Increases	0.7	2.5	1.7	0.9	1.4
Total	2.0	4.6	4.1	3.6	4.1
Total Developments	0.2	-0.3	-2.1	-2.3	-2.3
FAO's 2017 Spring Budget Balance Forecast	-5.0	-2.9	-4.9	-5.5	-6.0

Notes:

1. Change in federal transfers forecast mainly due the reduction in Ontario's Equalization payment.
2. Other revenue changes include the $0.5 billion re-profiling of cap-and-trade proceeds from 2016-17 to 2017-18, and an increase in sales and rentals for 2017-18.
3. In the 2016 Fall EFO, the FAO included $1 billion in expenses from the HST rebate on electricity bills beginning 2017-18, which is now part of the Fair Hydro Plan. As a result, the FAO estimates that the incremental impact of the Fair Hydro Plan is $0.8 billion, compared to the Fall.
4. In the 2016 Fall EFO, the FAO assumed $1.5 billion in adjustments for net pension assets of jointly sponsored pension plans. The government has revised its estimate of the impact to $2.2 billion in 2017-18, increasing to $2.9 billion by 2020-21.

Source: FAO

Revenue Assumptions

- Compared to the FAO's fall forecast, from 2016-17 to 2019-20, on average, total revenue is projected to be $2.5 billion higher annually mostly because of higher taxation revenue, partially offset by lower Federal Transfers and other Non-Tax revenues.

FAO Revenue Difference (Spring 2017 less Fall 2016)

$ Billions	2016-17	2017-18f	2018-19f	2019-20f	Annual Average
Taxation Revenue	**2.8**	**4.2**	**4.4**	**4.9**	**4.1**
Government of Canada Transfers	-0.4	0.2	-1.3	-2.4	-1.0
Government Business Enterprises	0.3	-0.4	0.0	0.1	0.0
Other Non-Tax Revenue	-0.6	0.4	-1.1	-1.3	-0.7
Total Non-Tax Revenue	**-0.7**	**0.2**	**-2.4**	**-3.6**	**-1.6**
Total Revenue	**2.1**	**4.4**	**2.1**	**1.4**	**2.5**

  - Taxation revenues are projected to be, on average, $4.1 billion higher annually due to stronger economic growth as nominal GDP growth is, on average, projected to be 0.4 percentage points higher annually.

- More specifically, corporate profits are projected to be 3.3 percentage points higher annually, boosting Corporations Tax revenue. Higher labour income is expected to raise Personal Income Tax revenue while Ontario's strong housing market boosts Sales Tax and Land Transfer Tax revenues.
- Lower Federal Transfers reflects mostly the FAO's projection that Ontario will no longer be entitled to Equalization payments beyond 2018-19.
- Non-Tax revenues are lower, mainly because of the revisions to the multi-year asset optimization target to reflect the progress made so far and revised projections for Carbon allowance proceeds.

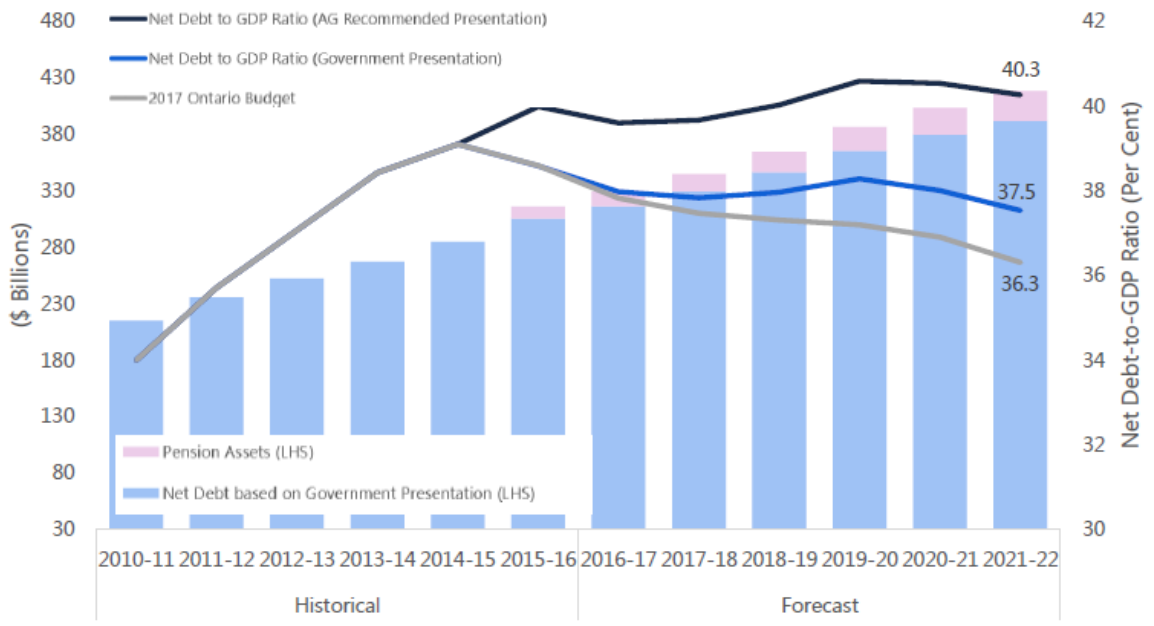
- Compared to the 2017 Budget, the FAO total revenue is lower mostly because of taxation revenue and, to a lesser extent, Federal Transfers.

FAO less Ontario 2017 Budget Outlook ($ Billions)

	2016-17	2017-18	2018-19	2019-20	Average
Taxation Revenue	-1.2	-1.4	-2.3	-3.0	-2.0
Government of Canada Transfers	-0.1	0.0	-0.8	-0.8	-0.4
Government Business Enterprises	0.0	0.0	0.0	0.0	0.0
Other Non-Tax Revenue	0.0	0.0	0.0	0.0	0.0
Total Revenue	**-1.2**	**-1.3**	**-3.1**	**-3.7**	**-2.4**

- FAO's projection for the composition of nominal GDP such as compensation of employees, net operating surplus and household consumption, are all lower than the 2017 Budget projection.
- The 2017 Budget assumed higher yields from CIT and HST compared to recent projections, reflecting recent tax revenue performance. These yields also exceed those assumed by the FAO.
- The FAO projection for PIT is consistently lower than the 2017 Budget. This is likely due to a downward adjustment in each year reflecting tax planning that may have occurred in 2015 by high-income earners -- no details were provided by the FAO. The 2017 Budget only included an allowance for PIT planning in 2016-17.

- FAO's federal transfer outlook is lower than assumed in the 2017 Ontario Budget, probably due to FAO's assumption that Ontario will no longer receive Equalization payments starting in 2019-20 as Ontario's fiscal capacity improves relative to other provinces.
- The FAO's government business enterprise net income outlook and other non-tax revenue is the same as reported in the 2017 Budget.



Expense Assumptions [to be confirmed by TBS]

- The FAO assumes the same program expense outlook as the 2017 Budget up to 2019–20, adjusted to reflect the Auditor General's recommended accounting treatment for jointly sponsored pension plans.(p. 4 – Fiscal Chapter).
- The FAO's expense outlook includes new spending commitments announced in the 2017 Budget including a new children and youth Pharmacare program, increased funding for hospitals, new child care spaces, and electricity cost relief under the Fair Hydro Plan. This results in average annual growth in program expense of 3.3% between 2016–17 and 2021–22.
- The FAO also projects that program spending will increase by an average of 3.6% each year beyond 2019–20. The FAO argues that this increase is in line with population growth, aging and price inflation, consistent with its 2016 spring and fall reports.
- The FAO projects that Ontario's interest on debt (IOD) payments will grow at an average annual rate of 4.0% from $11.0 billion in 2015–16 to $13.9 billion by 2021–22, reflecting higher debt and rising interest rates over the outlook. The FAO forecasts that IOD will significantly outpace the growth in program expense over the outlook. (p. 5 – Fiscal Chapter).
- According to the FAO, interest on debt is expected to increase from 8.1% of revenues in 2017–18 to 8.9% by 2021–22. Over the past five years IOD as a share of revenues declined steadily, benefitting from declining interest rates. The FAO argues that this ratio is expected to rise sharply due to projected interest rate increases. (p. 5 – Fiscal Chapter).

Debt Outlook [to be confirmed by OFA]

- Under the Auditor General's recommended accounting treatment of jointly-sponsored pension plans, the FAO expects Ontario's net debt to rise by $76 billion to $392 billion by 2021–22 or 40.3 per cent of GDP, this represents a slightly lower net debt-to-GDP ratio over the plan and outlook period when compared to the FAO's fall forecast. Using the government's accounting method, the FAO expects net debt to increase by $62 billion over the next five years to $365 billion by 2021–22 or 37.5 per cent of GDP, above the 2017 Budget projection of 36.3 per cent.
- The FAO's net debt-to-GDP projections under both accounting presentations, suggests that additional fiscal measures would be required for the government to achieve its interim target of 35 per cent by 2023-24. (p. 6 – Fiscal Chapter).

Ontario's Net Debt to GDP Ratio

Source: Ontario Economic Accounts, 2017 Ontario Budget, and FAO

Accounting Treatment

- The FAO's spring outlook includes a detailed section on the different accounting treatment for net pension assets of jointly sponsored pension plans (Ontario Teachers' Pension Plan and the Ontario Public Service Employees Union Pension Plan) used by the government and the Auditor General.
- The FAO states that in the absence of a written agreement between the co-sponsors of the pension plans, the Auditor General would be expected to provide a qualified opinion on Ontario's 2016-17 Public Accounts.

Risks and Policy Options

- The FAO notes the following risks to Ontario's fiscal plan (p. 7 – Fiscal Chapter):
    - A housing market correction could pose a significant risk for both the broader economy and the fiscal plan through lower taxation revenues
    - Reduced prudence built into program spending in the 2017 Budget compared to the previous budget – reducing flexibility for the government to respond to unexpected events
    - Interest on debt payments are expected to increase, exposing the government to fiscal risk should interest rates rise faster than expected

- Although the FAO projects deficits, the report notes that the government has a broad range of policy options that could improve the Province’s fiscal position, including selling additional public assets beyond announced targets.

APPENDIX A – Detailed Comparison of Outlooks

Comparison: 2017 Budget Fiscal Outlook and the 2017 Spring FAO Outlook

Subject: FW: The FAO's Spring 2018 Economic and Budget Outlook Report

Attached is the FAO Economic and Fiscal Outlook Report that will be delivered to Ministers by noon today.

We'll do a more detailed look at the numbers but it looks like the only significant change relative to the last version we saw was the addition of a new "scenario" over the recovery plan where the FAO shows what would happen if the government restrained spending – and it shows the Province would return to balance. They do talk abit about what that would entail, and do piggy back on historical experience to show that it has been done in the past.

My division will coordinate a rolled up note and speaking notes – we'll need to figure out when and if a briefing would be required.

Subject: The FAO's Spring 2018 Economic and Budget Outlook Report

Good morning

The FAO will be releasing its spring 2018 Economic and Budget Outlook (EBO) report on Wednesday May 2nd at 10:00 am. There will be separate technical briefings for media and MPPs on Wednesday at 9:00 am. The Temporary Financial Accountability Officer, David Wake, and myself will be making a media statement and responding to questions at 10:00 am.

The report along with the attached letters are being delivered to Ministers Sousa and McMahon later this morning – and are attached for your reference.

Please treat this document as embargoed until its release on Wednesday at 10:00 am.

As always, your assistance and support for the work of the FAO are greatly appreciated.

Best regards,
David

ECONOMIC AND BUDGET OUTLOOK

Assessing Ontario's Medium-term Budget Plan

Spring 2018

About this Document

Established by the *Financial Accountability Officer Act, 2013*, the Financial Accountability Office (FAO) provides independent analysis on the state of the Province's finances, trends in the provincial economy and related matters important to the Legislative Assembly of Ontario.

The FAO's Economic and Budget Outlook (EBO) reports are released each spring and fall, providing an assessment of the province's medium-term economic performance and fiscal position. This report also provides the FAO's assessment of the reasonableness and risks associated with the government's fiscal recovery plan presented in the 2018 Budget.

This report was prepared by Nicolas Rhodes, Luan Ngo and Edward Crummey, with contributions from Matt Gurnham and Andy Tran, under the direction of David West. External reviewers were provided with earlier drafts of this report for their comments. However, the input of external reviewers implies no responsibility for this final report, which rests solely with the FAO.

The content is based on information available to April 6, 2018. Background data used in this report are available upon request.

In keeping with the FAO's mandate to provide the Legislative Assembly of Ontario with independent economic and financial analysis, this report makes no policy recommendations.

FAO's Fiscal Projections

The FAO forecasts provincial finances based on projections of existing and announced revenue and spending policies. The forecast represents the FAO's view of the most likely fiscal outcomes given existing policies, without anticipating any new government policy decisions. The FAO's tax revenue projections are based on an assessment of the outlook for the provincial economy and current tax policies. Given the government's discretion over spending, the FAO adopts the government's announced spending plans from fiscal documents and incorporates policy announcements as appropriate. Beyond the government's published spending projections, the FAO forecasts spending based on the outlook for underlying cost drivers including demographics and price inflation.

1 | Summary

FAO Projects Sharp Increase in Budget Deficit

In 2017-18, the FAO estimates that Ontario will record a budget deficit of $3.6 billion, consistent with the Auditor General's recommended accounting treatment for net pension assets and the Fair Hydro Plan.

For 2018-19, the FAO projects that Ontario's budget deficit will increase sharply to $11.8 billion, the result of higher spending from the 2018 Budget combined with only a weak gain in revenue. Going forward, the FAO projects a continued deterioration in Ontario's budget, with the deficit reaching $12.7 billion by 2020-21.

Ontario budget balance deteriorates significantly

Note: The budget balance excludes the reserve and is presented on the Auditor General's recommended accounting basis.

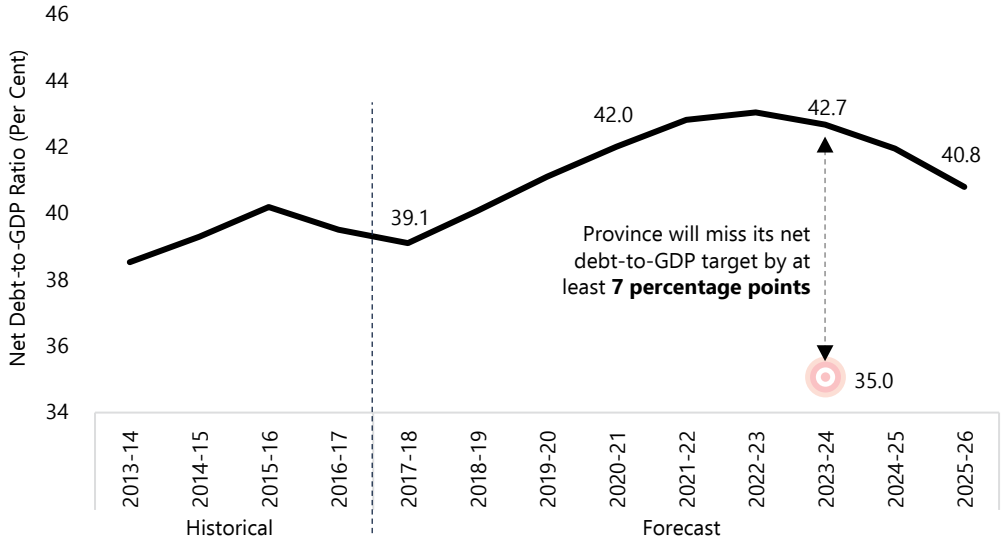
Source: Ontario Public Accounts, 2018 Ontario Budget and FAO.

Over the past four years, the Ontario economy has shown significant strength, primarily due to strong gains in household spending and residential investment. Most economic forecasters, including the FAO, expect this robust pace of growth will moderate somewhat over the next few years as rising interest rates, combined with high levels of household debt, slow the growth of household spending. The slower

pace of economic growth results in more modest growth in Ontario's revenues, which in turn, contributes to Ontario's worsening budget deficit.

Importantly, the FAO estimates that Ontario was facing an $8.1 billion deficit in 2018-19 prior to the introduction of the 2018 Budget.

In this context, the government introduced the 2018 Budget which included a broad range of new public spending initiatives. While many of these new programs would provide significant social and economic benefits for Ontarians, the government has not raised adequate revenue to pay for them, adding to continued deficits over the outlook.



Large, on-going deficits will contribute to a steady increase in Ontario's debt over the next three years. The FAO projects that Ontario's net debt will increase by almost $70 billion, reaching $394 billion in 2020-21, pushing the net debt-to-GDP ratio to 42 per cent, well above today's ratio of 39 per cent.

To address the budget deficit, the government introduced a 'fiscal recovery plan' which projects a balanced budget by 2024-25, based on restricting the growth in program spending. The fiscal recovery plan provides few policy specifics, but assumes that the government will dramatically cut spending growth from an average of 4.2 per cent over the next three years, to just 2.1 per cent from 2020-21 to 2025-26.

Based on the FAO's analysis, severely restraining the growth in program spending, below the pace of population growth and price inflation, could lead to a balanced budget by 2025-26. However, this plan implies that the Province would have to lower spending by approximately $15 billion, or eight per cent, by 2025-26.

Even with the significant spending restraint planned by the government in the 2020s, Ontario's debt burden would remain elevated, and the Province would miss its 2023-24 net debt-to-GDP target by a wide margin.

The Province will not meet its 2023-24 net debt-to-GDP target

Note: Projection incorporates the Auditor General's recommended accounting treatment of the Fair Hydro Plan and net pension assets.

Source: 2018 Ontario Budget, Ontario Public Accounts and FAO.

The 2018 Budget postpones deficit recovery, leading to the accumulation of additional debt into the 2020s when demographic pressures on the budget will intensify. This additional debt will increase the challenge of stabilizing Ontario's public finances, shift the burden from the baby boom generation to younger Ontarians, and would leave future governments with less flexibility to respond to future crises, including recessions.

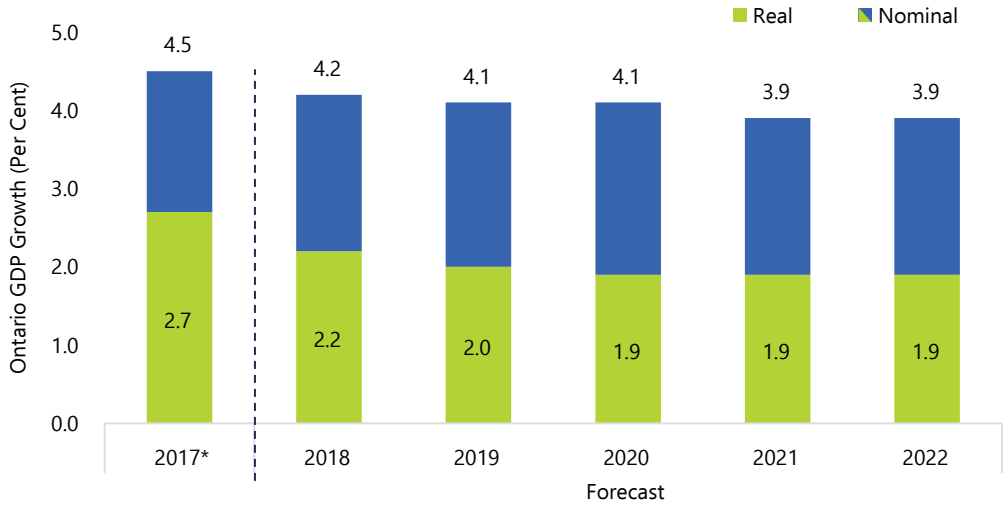
Alternate fiscal plans that address the deficit would also involve difficult trade-offs. Raising revenue leaves less money for households to spend and businesses to invest, and would contribute to the already moderating pace of economic growth.

However, achieving continued spending restraint may be more difficult in the coming years. The government has been limiting spending growth since 2010, and many public services are currently facing budget pressures.

2 | Economic Outlook

Overview

Over the past four years[1], the Ontario economy recorded the strongest pace of growth since the early 2000s, with real GDP increasing by an average of 2.7 per cent per year. Over this period, strong gains in household spending and residential investment were the primary drivers of economic growth.



Consistent with the strong economy, Ontario job growth surged last year, with 128,400 net new jobs (+1.8 per cent), the largest annual employment increase since 2003. The strong job gain helped lower Ontario's unemployment rate to 6.0 per cent in 2017, the lowest annual rate since 2000.

Most economic forecasters, including the FAO, expect this robust pace of growth to moderate somewhat over the next few years. The FAO is forecasting average real GDP growth of 1.9 per cent per year from 2017 to 2022, as rising interest rates, combined with high levels of household debt, slow the growth of household spending. The FAO's current economic outlook for Ontario is also broadly consistent with the FAO's fall forecast.

Nominal GDP – the broadest measure of the tax base – increased 4.5 per cent in 2017, driven by a strong gain in corporate profits. The FAO expects overall nominal GDP growth to return to a more moderate 4.2 per cent pace in 2018 and average 4.0 per cent over the remainder of the economic outlook.

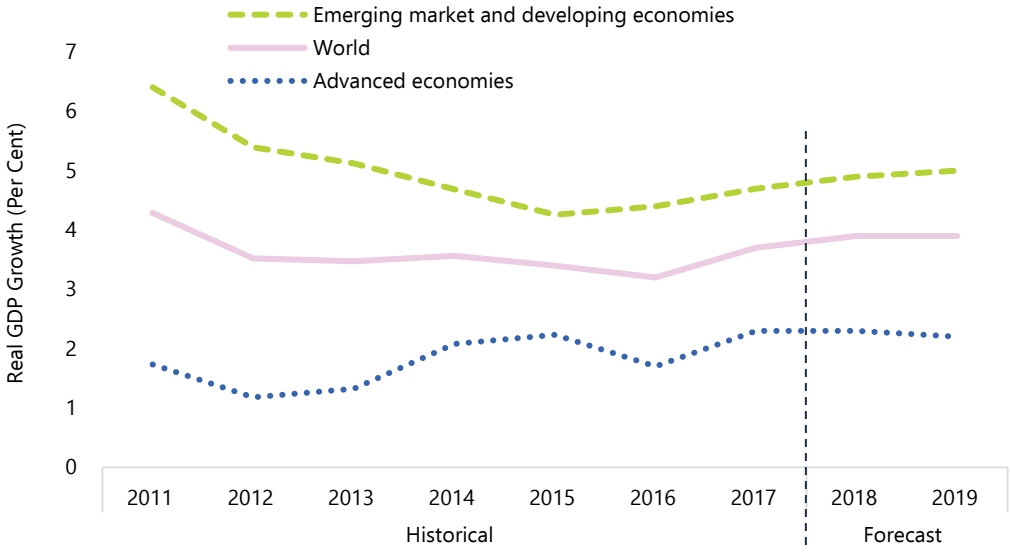
1 From 2013 to 2017.

Economic growth to moderate after four years of strong growth

* 2017 are estimates.
Source: Statistics Canada, Ontario Economic Accounts and FAO.

As was the case for the FAO's fall report[2], the key risks to Ontario's economic outlook continue to include weaker than expected exports and business investment given the rise in protectionist trade policies in the US, as well as a more pronounced slowing in consumer spending and residential construction, reflecting the elevated level of household debt (see 'Key Risks' section).

Global Economic Growth Improves



The global economy posted solid, broad-based growth of 3.7 per cent in 2017, up from 3.2 per cent in 2016.[3] The International Monetary Fund (IMF) expects the current economic momentum to carry forward into 2018 and 2019, with global growth of 3.9 per cent projected for both years.

The IMF estimates that advanced economies grew by a solid 2.3 per cent in 2017. In its latest report, the IMF revised up the outlook for most advanced economies, based on the expectation that favourable conditions will continue to support stronger business investment.[4]

Growth in emerging market and developing economies is also expected to accelerate slightly over the next two years. While the IMF expects Chinese economic growth to moderate, the forecast for the Indian economy has improved.

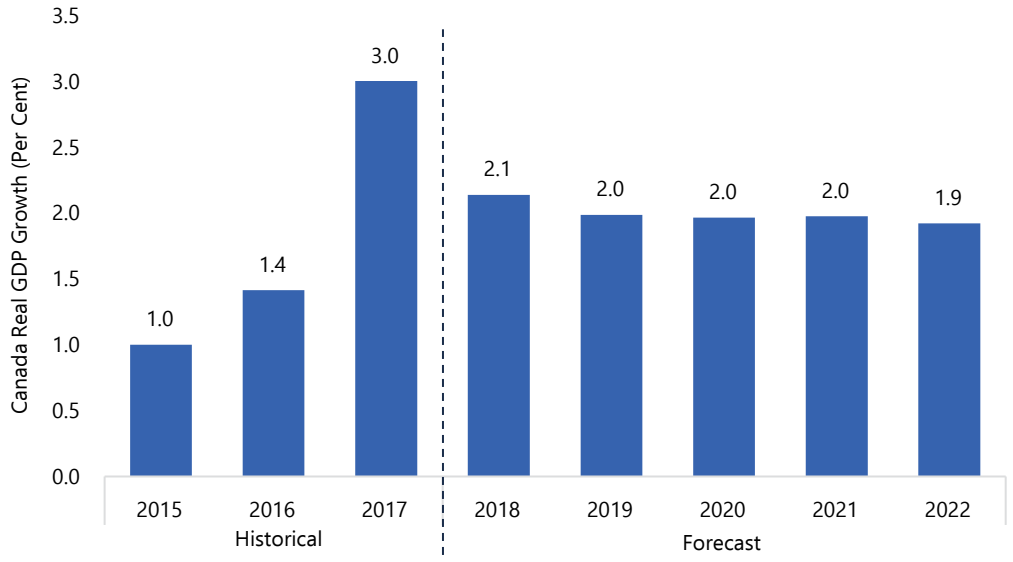
U.S. Economy Expected to Strengthen in 2018

The United States posted real GDP growth of 2.3 per cent in 2017, driven by solid household consumption, business investment and exports.

US to grow strongly in the next two years

Source: US Bureau of Economic Analysis, Conference Board of Canada, Bank of Canada and FAO.

Significant changes to the US tax system, coupled with Congress's recent $1.3 trillion spending plan[5] should provide strong support for US domestic demand in the short-term. This fiscal policy stimulus combined with the upswing in the global economy will result in a temporary boost to US growth, with real GDP projected to increase by 2.6 per cent and 2.3 per cent, over the next two years.



Beyond 2019, the boost from fiscal stimulus will fade, while US interest rates are expected to continue rising, slowing economic growth over the outlook.

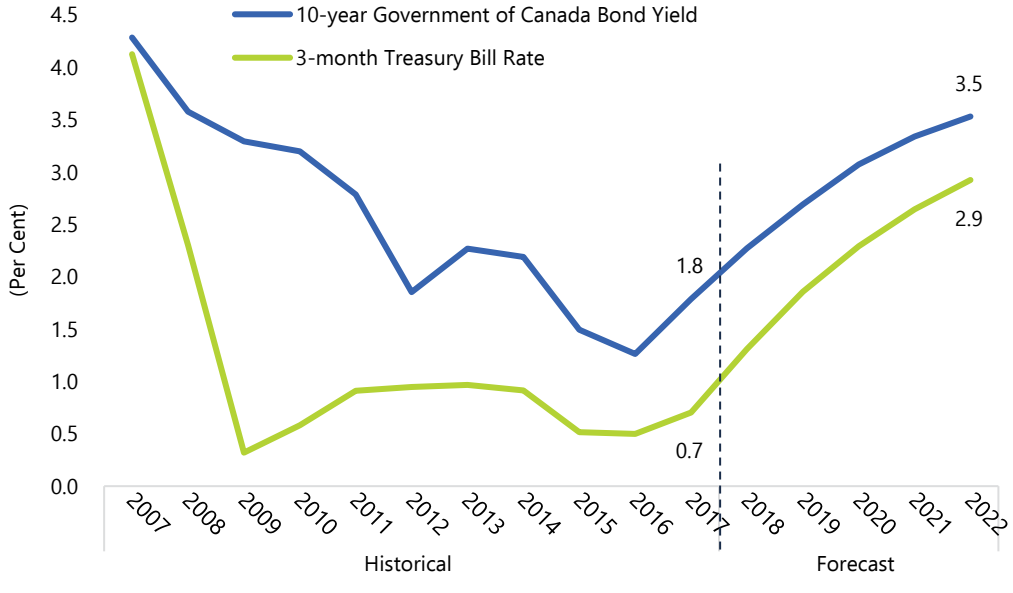
Canadian Economic Growth to Moderate

The Canadian economy grew by 3.0 per cent in 2017, the strongest annual gain since 2011. Growth was driven by household spending, particularly durable goods, and residential investment. Despite the strong overall growth, Canada's export performance disappointed.

Over the outlook, real GDP growth is expected to moderate, averaging 2.0 per cent, as the Bank of Canada gradually raises its policy interest rate, contributing to slower growth in household consumption and residential investment. However, strong global demand is expected to boost Canadian business investment and exports, assuming that current trade tensions are resolved positively (see the 'Key Risks' section for more details).

Canada growth expected to moderate following surge in 2017

Source: Statistics Canada and FAO.



5 Rules Committee Print 115-66, the Consolidated Appropriations Act, 2018, Congressional Budget Office.

In recent public statements[6], the Bank of Canada noted that strong economic growth in 2017 pushed the Canadian economy close to its production capacity, putting upward pressure on wages and prices.

As a result, the Bank increased its policy interest rate twice in 2017 and once so far in 2018. Going forward, the Bank has indicated that it will continue to gradually and cautiously increase interest rates, depending on the strength of new economic data.[7]

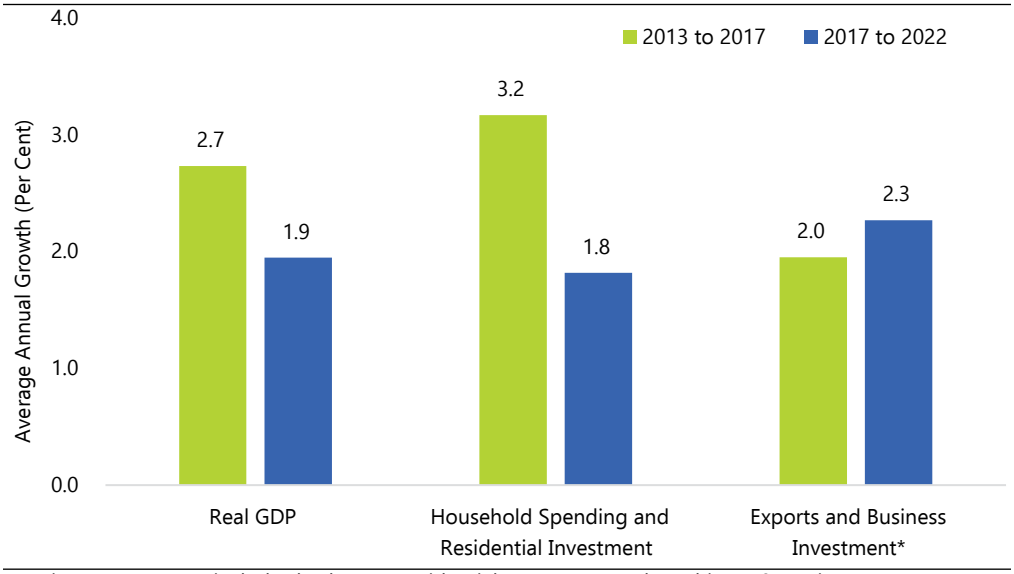
Given the Bank's cautious approach to rate setting, and the current economic and inflation outlook for Canada, the FAO continues to expect a gradual but steady rise in interest rates over the outlook.

Interest rates to increase gradually over outlook

Source: Statistics Canada and FAO.

The Canadian dollar exchange rate averaged 77 cents (US) in 2017. Over the outlook, the FAO projects that the dollar will remain relatively steady, reaching 78 cents (US) by 2022.

6 Remarks by Timothy Lane, Deputy Governor of the Bank of Canada, March 8, 2018.
7 Bank of Canada Press Release, March 7, 2018.



Ontario Economic Outlook

Growth Expected to Ease

Ontario real GDP grew by a strong 2.7 per cent in 2017, driven primarily by household spending and residential investment. While household spending and residential investment have been the primary sources of overall economic growth since 2012, both lost momentum in the second half of 2017.[8]

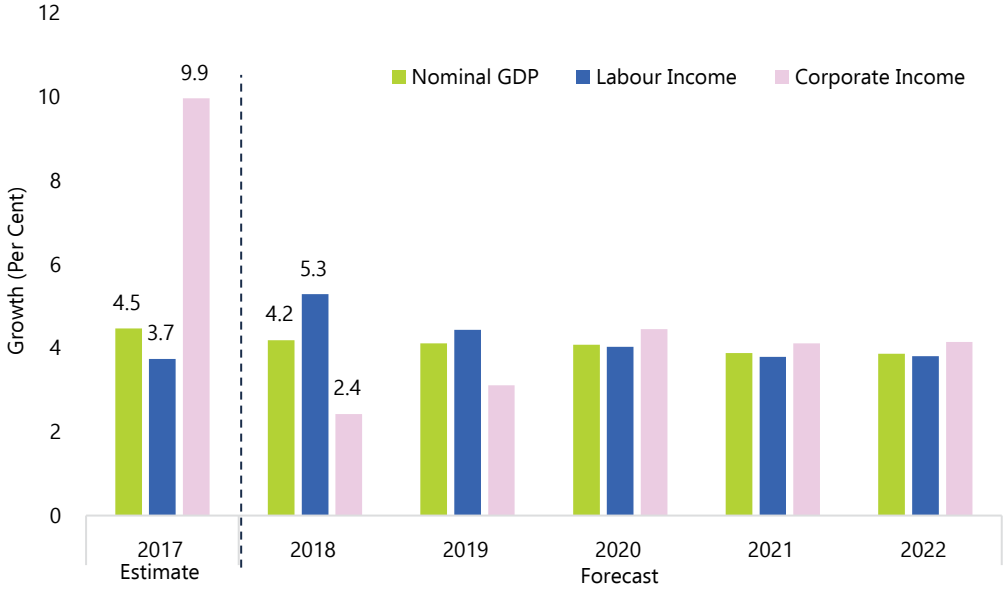
Rising debt service payments – a reflection of high debt loads and interest rate increases - will lead to slower growth in household spending and residential investment over the outlook.[9] At the same time, exports and business investment are expected to pick-up given the strong US economy, new trade agreements,[10] and the need for Ontario businesses to expand production capacity to meet higher demand. Overall, the FAO projects real GDP growth to slow to 2.2 per cent in 2018 and average 1.9 per cent over the remainder of the economic outlook.

Economic growth expected to become more balanced over outlook

* Business Investment includes both Non-Residential Investment and Machinery & Equipment Investment.

Source: Statistics Canada, Ontario Economic Accounts and FAO.

The FAO's forecast is broadly consistent with the outlook of most economic forecasters and largely in-line with the FAO's fall economic outlook.



8 Consumption and residential investment have accounted for over 50 per cent of real economic growth since 2012.
9 The strong growth of Ontario's housing sector was more subdued following the introduction of the Fair Housing Plan in April of 2017. As well, stricter mortgage qualification rules introduced by the Office of the Superintendent of Financial Institutions (OSFI) at the start of 2018 are expected to further reduce housing demand.
10 Foreign exporters are expected to benefit from the introduction of the Comprehensive Economic and Trade Agreement (CETA) and the Comprehensive and Progressive Agreement for Trans-Pacific Partnership (CPTPP).

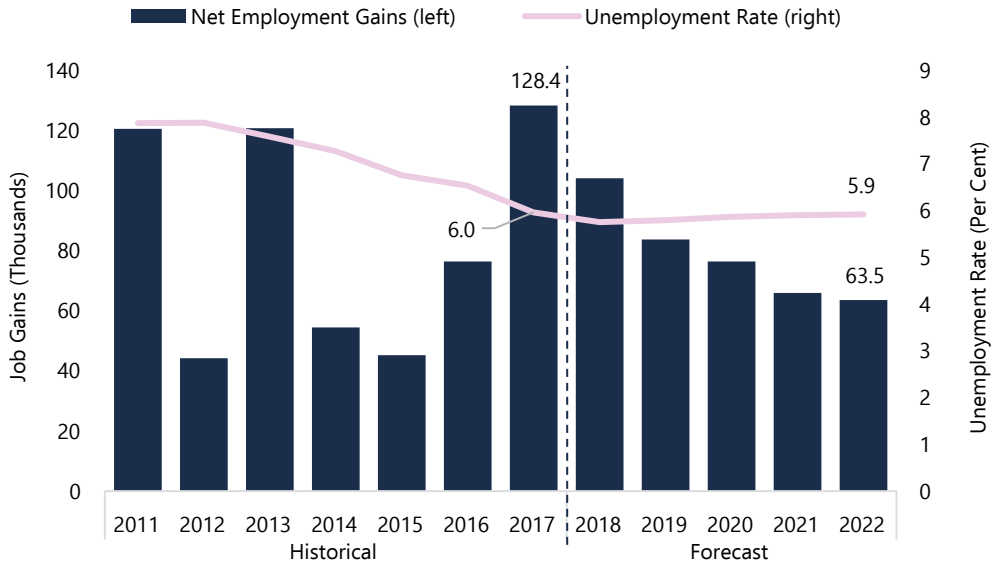
Income Growth Also Expected to Moderate

Total economy-wide income (as measured by nominal GDP) grew by 4.5 per cent in 2017, driven by a significant increase in corporate profits. Labour income posted a more moderate gain of 3.7 per cent in 2017. The increase in the minimum wage in 2018 and the planned increase for 2019 are expected to strengthen labour income growth in these years. Beyond 2019, labour income growth is expected to moderate, partially reflecting a gradual slowing in the growth of Ontario's labour force.

From 2018 to 2022, nominal GDP growth is projected to average 4.0 per cent per year.

Labour income to lead nominal GDP growth in 2018

Note: Labour and corporate income comprise roughly 65 per cent of nominal GDP. The other categories include mixed income (from proprietorships) and net taxes.



Source: Statistics Canada, Ontario Economic Accounts and FAO.

Steady Job Gains in Ontario's Labour Markets

The Ontario economy created 128,400 net new jobs in 2017, the largest annual job gain since 2003, while the annual unemployment rate dropped to 6.0 per cent, the lowest rate since 2000. The majority of the job gains last year were full-time, private sector positions. The service sector added 114,000 positions, while the goods sector (led by solid employment gains in manufacturing industries) added 14,500 new jobs.

Employment growth eased in the first quarter of 2018, with 110,300 jobs created on a year-over-year basis. Over the forecast, the FAO is projecting average annual job growth of 1.1 per cent, consistent with the outlook for continued but more modest economic growth.

Steady employment gains over outlook

Source: Statistics Canada and FAO.

Sustained economic growth over the outlook, combined with recent increases to the minimum wage are expected to support labour force growth. The projections for the labour force and employment are expected to keep the unemployment rate roughly stable over the outlook.

An Extended Outlook for Ontario

The FAO's economic outlook covers the five-year period from 2018 to 2022. However, to assess the government's 'fiscal recovery plan' which projects a balanced budget by fiscal year 2024-25, the economic outlook was extended by an additional three years to 2025, based on the FAO's latest long-term economic projection.[11]

11 'Long-term Budget Outlook, Fiscal Implications of the Coming Demographic and Economic Changes in Ontario', Fall 2017, Financial Accountability Office of Ontario.

Summary of the FAO's economic outlook

(Per Cent Growth)	Historical 2013-2017	Forecast 2017-2022	Extended Forecast 2022-2025
Nominal GDP	4.5	4.0	3.9
Real GDP	2.7	1.9	2.0
Labour Force	0.7	1.1	0.8
Employment	1.1	1.1	0.8
Unemployment Rate*	6.8	5.9	5.9
Population	1.1	1.2	1.1
CPI Inflation	1.7	2.1	2.0

* Unemployment Rate is presented as the average rate for the period.

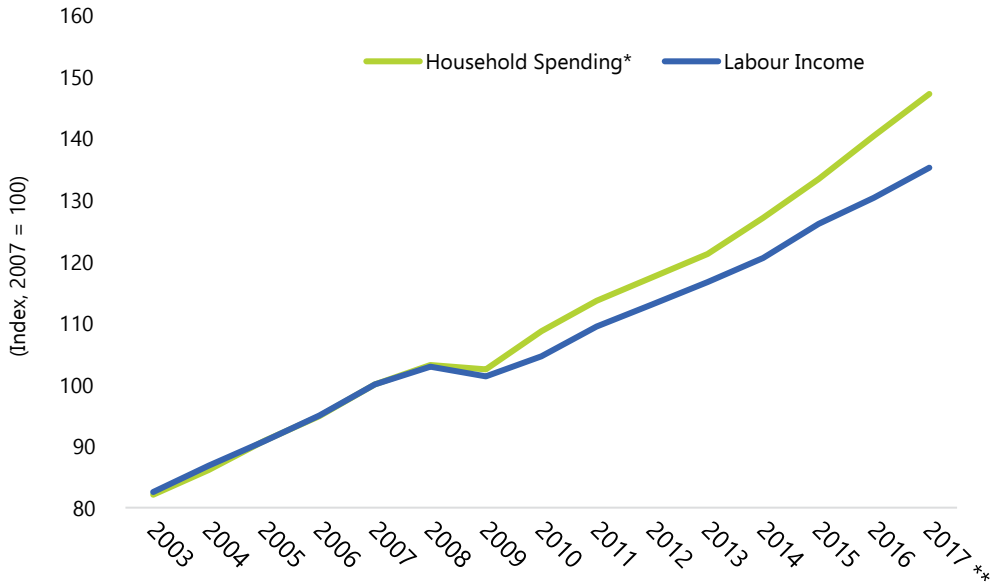
Source: Statistics Canada and FAO.

Key Risks to the Ontario Outlook

The FAO's current economic forecast is a reasonable outlook for the Ontario economy and an appropriate foundation for fiscal projections. However, several key risks could materialize, with implications for the outlook.

Protectionist Trade Policies in the United States

Most economic forecasters continue to assume that existing global trade arrangements will remain in place over the outlook. However, the US administration's recent decision to impose tariffs on a broad cross-section of Chinese imports combined with the Chinese government's retaliatory response, present a serious risk for the global economy. In addition, the current renegotiation of the North American Free Trade Agreement (NAFTA) also poses a direct risk for Ontario exporters.



It is likely that the uncertainty surrounding NAFTA, and global trade more generally, has already resulted in businesses scaling-back or postponing planned investments. If the renegotiation of NAFTA or other protectionist trade policies adversely impact the US economy or places Ontario businesses at a competitive disadvantage, there could be significant negative implications for the Ontario economy, and export-dependent industries in particular.

Household Spending and Debt

From the 1980s to the 2008-2009 financial crisis, growth in labour income generally kept pace with the growth in household consumption and residential investment. However, since the financial crisis, slower income growth combined with record low

interest rates encouraged households to boost spending through higher borrowing. This resulted in spending on consumption and housing outpacing income growth.

Household spending growth outpaces growth in incomes

* Household spending is household consumption and residential investment.

** 2017 values are estimated.

Source: Statistics Canada and FAO.

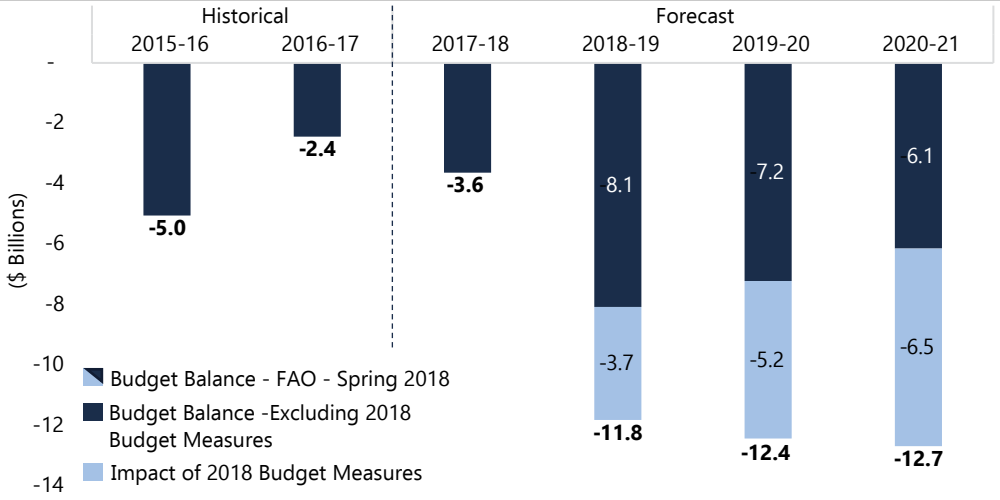
Ontario household debt reached record levels in 2016, at 171 per cent of disposable income.[12] To service this debt, Ontarians spent an average of 14 per cent of their disposable income on debt payments – a share that is expected to increase as interest rates rise over the outlook.

If economic developments lead the Bank of Canada to raise interest rates more quickly (or higher) than currently anticipated, households would have to further increase debt payments, forcing them to scale back other spending. This could have negative implications for the broader economy.

Stronger US Growth

While the FAO expects the US to perform well in the coming years, growth could turn out to be stronger than anticipated, lifting demand for Ontario's exports, raising employment and leading to stronger wage and profit growth for the province.

12 For more details on Ontario household debt, see the FAO's January 2018 Commentary: Assessing Ontario Households' Debt Burden and Financial Vulnerability



3 | Medium-term Budget Outlook

FAO Projects Budget Deficit to Increase Sharply

In 2017-18, the FAO estimates that Ontario will record a budget deficit of $3.6 billion, based on the Auditor General's recommended accounting treatment for the Fair Hydro Plan and net pension assets.

For 2018-19, the FAO projects that Ontario's budget deficit will increase sharply to $11.8 billion, the result of significant increases in program spending from the 2018 Budget combined with only a weak gain in revenue. Going forward, the FAO is projecting that the budget deficit will increase to $12.7 billion by 2020-21.

Ontario budget balance deteriorates significantly

Note: The budget balance excludes the reserve and is based on the Auditor General's recommended accounting treatment for the Fair Hydro Plan and net pension assets.

Source: Ontario Public Accounts, 2018 Ontario Budget and FAO.

The 2018 Budget introduced a broad range of new spending initiatives. While many of these new spending programs would provide significant social and economic benefits for Ontario, the government has not raised adequate new revenue to pay for them. Based on the FAO's analysis, the 2018 Ontario Budget measures will add $3.7 billion to the deficit in 2018-19, increasing to $6.5 billion by 2020-21.

Importantly, even before the introduction of the 2018 Budget, the FAO projects that the Province would have already been in deficit over the next three years. In 2018-19, the FAO estimates that Ontario would have recorded a deficit of $8.1 billion, before the impact of the 2018 Budget measures.

The FAO's projection for persistent budget deficits, despite strong economic growth and low unemployment, suggests that the Province is facing a fundamental imbalance between revenues and spending, resulting in a structural deficit.[13] As a result, Ontario's current deficit cannot be eliminated by economic growth alone, but would instead require fiscal policy changes to raise revenue or reduce spending.

The FAO's fiscal projections are based on the Auditor General of Ontario's recommended accounting treatment for the Fair Hydro Plan and net pension assets.*

The Auditor General and the government continue to disagree over the appropriate accounting treatment of the refinancing portion of the Fair Hydro Plan (FHP) and the net pension assets of the government's jointly sponsored pension plans.

In the 2018 Ontario Budget, the government did not adopt the Auditor General's recommended accounting framework, reducing the clarity and reliability of Ontario's fiscal projections. The Auditor General has indicated that the government's financial statements may continue to receive a qualified opinion.

See the Appendix for the FAO's budget projections consistent with the government's accounting treatment.

* The FAO looks to the Auditor General as the provincial authority on the appropriate interpretation and application of accounting standards for the Province.

Revenue Outlook

In 2017-18, the FAO estimates that revenue grew by 6.7 per cent, reflecting strong gains from both tax and non-tax sources. Over the medium-term, the FAO is projecting that revenue growth will slow significantly to 2.7 per cent per year on average from 2017-18 to 2020-21. This slower growth reflects several factors.

- Tax revenues are projected to increase more slowly, in-line with moderating economic growth, following several years of stronger than average economic growth.

13 The OECD defines a "structural" deficit as a fundamental mismatch between revenue and expense, after adjusting for temporary factors such as economic cycles and one-time budget measures. See OECD's 'Government at a Glance 2015' report, pg. 56.

- Increases in federal transfers are expected to slow, reflecting current federal-provincial agreements.

- Time-limited revenues totaling $2.1 billion will end in 2018-19.

In addition, the 2018 Budget introduced several modest new revenue measures, which result in a net increase in government revenue of about $0.6 billion in 2018-19, growing to $0.8 billion by 2020-21. These measures include:

- the elimination of the personal income tax (PIT) surtax along with adjustments to tax rates and income brackets;

- enhancements to the Ontario Research and Development Tax Credit and the Ontario Innovation Tax Credit[14]; and

- changes to the Employer Health Tax exemption for small employers.

The budget also included new revenues from the federal cannabis excise duty as well as several measures to parallel federal tax changes.

FAO medium-term revenue assumptions

Revenue Source	Assumption	Forecast
Taxation Revenue	Grows with key economic drivers including labour income, corporate income and household spending	Projected to average 3.9 per cent growth per year from 2017-18 to 2020-21
Federal Transfers	Based on legislated growth rates and economic forecasts for Ontario and Canada	Federal transfers are projected to grow by 1.8 per cent per year from 2017-18 to 2020-21
Government Business Enterprises (GBE)	Based on government projections	Income from GBEs are projected to grow at 2.4 per cent on average from 2017-18 to 2020-21*
Other Revenue	Based on government projections, and includes asset sales, and proceeds from the sale of cap and trade allowances	These revenues are projected to decrease from $19.3 billion in 2017-18 to $18.0 billion by 2020-21

* The FAO reduces Hydro One net income by about $400 million in 2018-19 to reflect the decision by the Ontario Energy Board (OEB) to allocate a portion of the company's tax gain to ratepayers. Hydro One is appealing the OEB decision and if successful, this adjustment could be reversed. (See the FAO's report Hydro One: Updated Financial Analysis of the Partial Sale of Hydro One for more details).

Tax Revenue Growth Expected to Moderate

Nominal GDP, the broadest measure of the tax base, grew by 4.5 per cent in 2017, supporting a 5.3 per cent increase in tax revenues in 2017-18. From 2017 to 2020, the FAO is projecting annual GDP growth to ease to an average of 4.1 per cent, while tax

14 The enhancement to the Ontario Innovation Tax Credit represents an increase in government expenditures.

revenue is projected to increase by 3.9 per cent on average over the same period.

The slower pace of tax revenue growth relative to economic growth is in part a reflection of the minimum wage increases in 2018 and 2019. While the higher minimum wage will boost the growth in labour income over the next two years, minimum wage workers typically pay below average rates of personal income tax. To reflect this, the FAO made a moderate downward adjustment to the projection for PIT revenues for 2018-19 and 2019-20. However, even after this adjustment, the FAO projects PIT revenues will increase by a strong 8.7 per cent in 2018-19 and by 5.0 per cent in 2019-20.

Federal Transfer Growth Slows

Since 2010-11, federal transfers grew much faster than the economy. This reflected federal stimulus spending (in response to the 2008-2009 recession), the federal-provincial agreement to grow the Canada Health Transfer by six per cent per year, as well as Ontario's receipt of Equalization payments following the recession.

Consistent with current federal-provincial agreements, federal transfers are projected to grow slower than the economy over the outlook, reflecting:

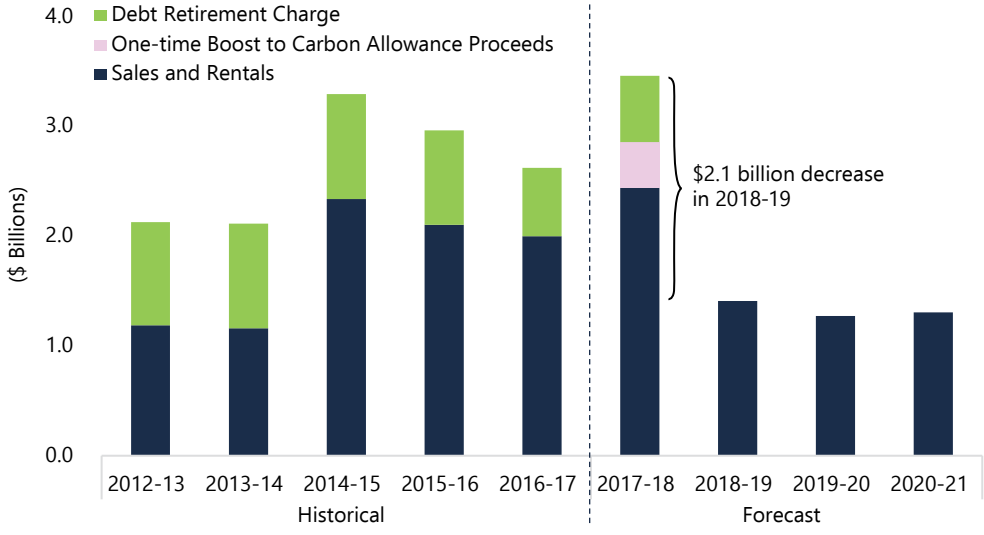
- three per cent annual increases in the Canada Social Transfer;
- the Canada Health Transfer growing in-line with Canadian nominal GDP; and
- the expectation that Ontario will no longer qualify for Equalization payments after 2018-19, based on FAO estimates.

Time-Limited Revenues Expire

In 2017-18, Ontario's revenue included several one-time or time-limited sources of revenue that are set to expire.[15] These include:

- a temporary increase to sales and rentals revenue, reflecting additional asset sales[16];
- the final year of the debt retirement charge[17]; and

15 Some of these temporary revenues - notably proceeds from the sale of carbon allowances - are tied to corresponding spending commitments, which would partially offset the reductions in these revenue sources.



16 Asset sales include the Province's 20 per cent sale of Hydro One equity in a secondary offering in 2017-18, which the FAO estimates generated about $0.7 billion in revenue.

17 The debt retirement charge (DRC) is a charge payable on electricity consumed in Ontario and replaces a portion of debt servicing costs previously included as part of electricity bills before the restructuring of the former Ontario Hydro. The government ended the DRC on residential bills as of January 1, 2016. The DRC remained on non-residential electricity users' bills until March 31, 2018.

- additional one-time proceeds from Ontario's cap and trade program in 2017-18.[18]

In total, the FAO projects that $2.1 billion in time-limited revenues will expire in 2018-19.

Time-limited revenues decline after 2017-18

Source: Ontario Budgets, Ministry of Finance and FAO.

Spending Outlook

The FAO projects total spending to grow by 4.5 per cent from 2017-18 to 2020-21. The strong growth in spending is driven by the new spending initiatives announced in the 2018 Budget combined with rising interest on debt payments.

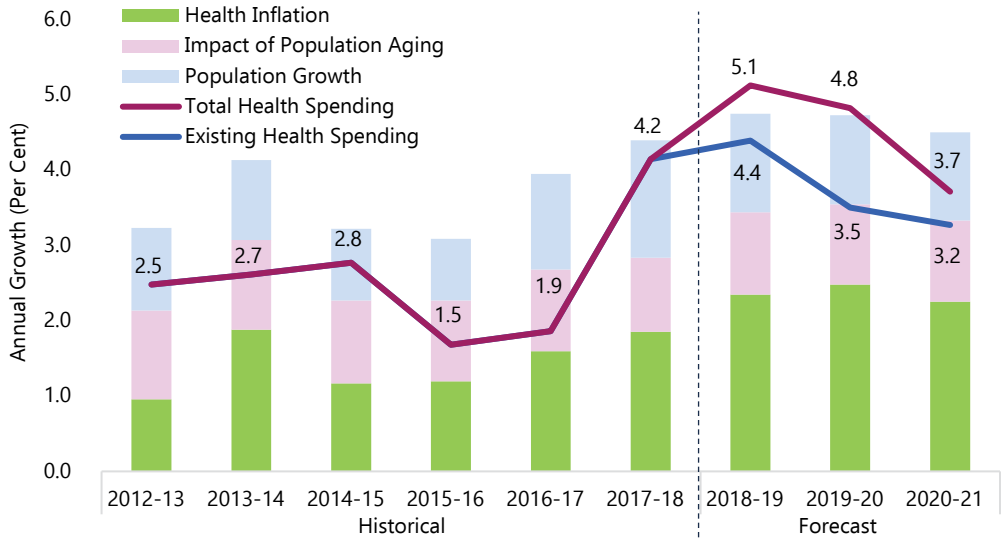
Program Spending

Program spending is projected to grow at an average annual pace of 4.5 per cent over the outlook.

In the 2018 Budget, the government increased spending by $5.5 billion in 2018-19, growing to $8.1 billion in 2020-21, compared to the 2017 Fall Economic Statement.[19] This new spending covers initiatives such as publicly funded pre-school child care, an expansion of the government's pharma-care plan, an increase in public coverage for dental care, more resources for mental health care services, and income security reform.[20]

18 In the 2017-18 fiscal year, Ontario held five carbon market auctions. Going forward, the Province expects to hold four auctions each year.
19 This increase excludes new spending for the Early Learning and Child Care agreement, which was already announced in the 2017 Fall Economic Statement. See Table 3.23 of the 2018 Budget.
20 The new spending also includes other adjustments related to government expenditure management.

Health



The 2018 Budget increased health sector spending by a total of $5.0 billion from 2018-19 to 2020-21, compared to the 2017 Fall Economic Statement. Approximately $1.8 billion of this new spending is to support two new health care programs.

- The Province is expanding the OHIP+ program to make eligible prescription drugs free for all people aged 65 and over. This is an extension of the Ontario Drug Benefit Program that removes the deductible and co-payment, and is estimated to save the average senior $240 annually. The program will be introduced August 1, 2019 with an estimated cumulative cost of $1.0 billion over fiscal years 2019-20 and 2020-21.[21]

- The Province is introducing a new drug and dental insurance plan to cover Ontarians without an extended health plan. The program covers up to $700 of drug and dental costs per year for an eligible family of four, and will be introduced in the summer of 2019. The estimated cumulative cost of the program is $0.8 billion over the fiscal years 2019-20 and 2020-21.[22]

The majority of the remaining $3.2 billion of new health spending is to increase funding for existing programs such as improving access to mental health services, more long-term care staff, increasing access to home and community care and increases in hospital funding.

Health spending and core cost drivers

Source: 2018 Ontario Budget and FAO analysis of data from the Ontario Ministry of Health and Long-term Care and Treasury Board Secretariat.

21 2018 Ontario Budget.
22 Ibid.

Overall, the 2018 Budget increased health spending by $0.8 billion in 2018-19 rising to $2.4 billion in 2020-21 compared to the 2017 Fall Economic Statement. This raised the planned average annual growth of health sector spending from 3.5 per cent to 4.6 per cent from 2017-18 to 2020-21. The pace of health spending growth is now projected to approximately match the growth of core cost pressures, including population growth and aging, and price inflation.[23]

However, if the spending on new health care programs is excluded,[24] the FAO projects that spending on existing health care services will grow by an annual average of 3.7 per cent, which is below the rate of population growth, aging, and price inflation.[25] This indicates that budget pressures in existing health services may not be fully relieved by this additional spending.

Education

In the 2018 Budget, the government projected education sector spending to grow by 4.7 per cent per year from 2017-18 to 2020-21. This is partially driven by additional spending for new child care initiatives, such as reducing child care fees and adding more subsidized child care spaces for infants and toddlers. In addition, beginning in September 2020, the 2018 Budget proposes to implement publicly-funded preschool for children aged 2½ until kindergarten.

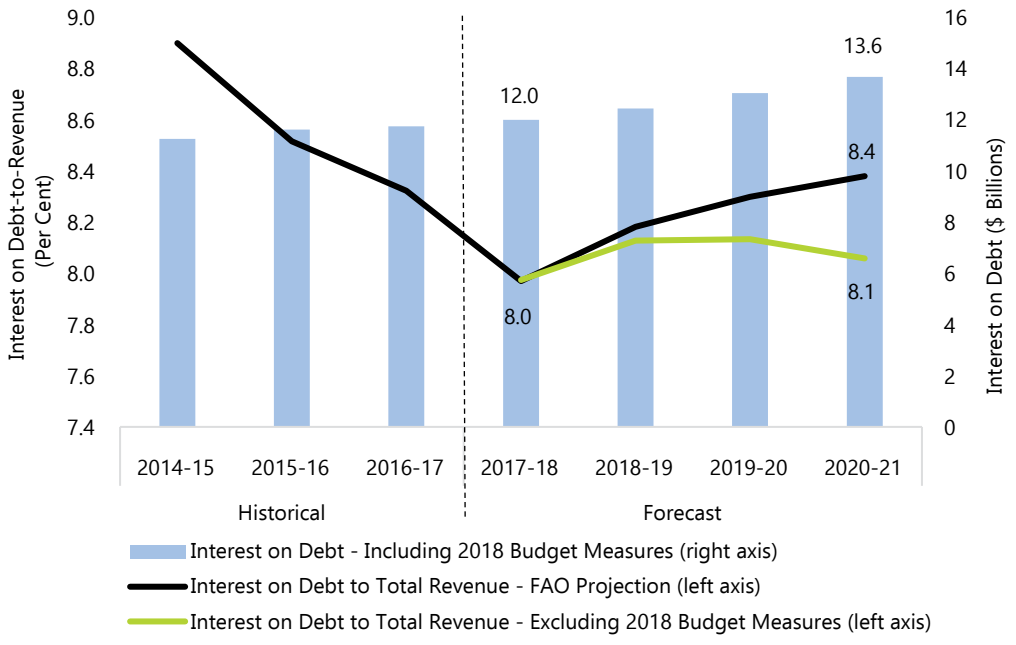
Aside from absorbing the financial burden of child care from young Ontario families, studies have shown that expanding early childhood education and care would yield significant economic and social benefits, including improvements in children's academic outcomes, reducing income inequality and boosting women's labour force participation.[26]

Social Services

In the 2018 Budget, the government projected spending in the children and social services sector to grow by 5.6 per cent per year from 2017-18 to 2020-21. This strong growth is partly due to the government's proposed reforms to income security, which is expected to cost $1.3 billion by 2020-21.

23 There are other factors that influence health care costs, including: the introduction of new health care services (or the removal of old ones), the adoption of new technologies and medications, efficiency measures, rising incomes, government policies, and the underlying health of the population.
24 Excluded programs are: OHIP+, extended health benefits including dental, and other minor new initiatives announced in the 2018 Budget.
25 These are the "core" cost drivers of health spending. See the FAO's "Ontario Health Sector - An Updated Assessment of Ontario Health Spending".
26 See The Conference Board of Canada's report: "Ready for Life: A Socio-Economic Analysis of Early Childhood Education and Care."

These reforms include increasing Ontario Works and Ontario Disability Support Program rates by 3 per cent annually – a rate exceeding inflation – and increasing the threshold that a recipient can earn income before reducing their benefits. Overall, these reforms would be expected to provide social benefits, including boosting disposable income for low-income households.



Interest on Debt Payments to Increase

The FAO projects interest on debt (IOD) payments to increase by an average of 4.4 per cent per year from 2017-18 to 2020-21, reflecting rising interest rates and growing deficits.

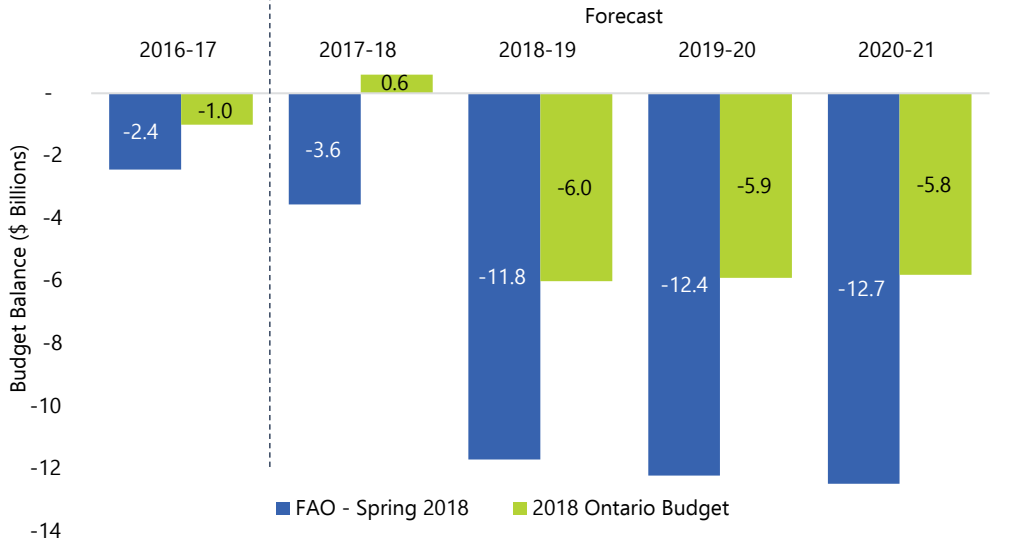
The 2018 Budget measures will result in increased borrowing, contributing to higher IOD payments. The FAO estimates that budget measures will increase IOD payments by $0.5 billion in 2020-21, and by increasing amounts over the outlook.

Rising interest on debt payments will increase the ratio of IOD to revenue – a key measure of the government's ability to finance its debt. Over the next three years, IOD payments are projected to increase by $1.7 billion, reaching $13.6 billion in 2020-21 and accounting for 8.4 per cent of total revenues.

Interest on debt to rise

Source: Ontario Public Accounts, 2018 Ontario Budget and FAO.

Budget Balance



The FAO estimates that Ontario will record a budget deficit of $3.6 billion in 2017-18, in-line with the FAO's fall projection.

In 2018-19, tax revenue growth moderates, time-limited revenues end, and government business income temporarily drops. These factors, combined with significant new spending measures announced in the 2018 Budget, result in a sharply higher deficit of $11.8 billion in 2018-19.

The FAO projects the deficit will continue to increase, reaching $12.7 billion by 2020-21.

In contrast, in the 2018 Ontario Budget, the government projected a small budget surplus in 2017-18, followed by deficits of approximately $6 billion from 2018-19 to 2020-21.[27] The difference between the deficit projections of the FAO and the government reflects the FAO's moderately lower revenue projection combined with the FAO's adoption of the AG's recommended accounting treatment for the Fair Hydro Plan and net pension assets.

Ontario budget balance

Note: Budget Balance before reserve. The government's projection does not incorporate the Auditor General's recommended accounting treatment for the Fair Hydro Plan and net pension assets.

27 Excluding reserve.

Ontario Deficit Outlook Excluding 2018 Budget Measures

The FAO developed a 'baseline' budget projection that excludes the new measures introduced in the 2018 Budget and includes the AG's recommended accounting treatment for the Fair Hydro Plan and net pension assets.

Based on the FAO's baseline projection, the Ontario budget was in deficit prior to the introduction of the 2018 Budget. Specifically, excluding 2018 Budget measures, the FAO projects budget deficits of $3.6 billion in 2017-18 and $8.1 billion in 2018-19. The baseline deficit improves to $6.1 billion by 2020-21 due to strengthening non-tax revenues.

Baseline budget balance, excluding 2018 budget measures

	2017-18	2018–19	2019–20	2020-21
Baseline Budget Balance	**-3.6**	**-8.1**	**-7.2**	**-6.1**
2018 Budget Measures				
Revenue Measures*	0.1	0.3	0.3	0.3
Spending Measures**		-3.9	-5.2	-6.3
Interest on Debt Impact		-0.1	-0.3	-0.5
Net Changes	0.1	-3.7	-5.2	-6.5
Budget Balance with 2018 Budget Measures	**-3.6**	**-11.8**	**-12.4**	**-12.7**

Note: May not add due to rounding.

* Revenue measures exclude automatic policy changes such as the paralleling of recent federal tax measures and new cannabis excise duty revenues.

** Spending measures represent the FAO's estimate of additional spending for programs and services in the 2018 Budget, but excludes other adjustments related to government expenditure management.

Source: 2018 Ontario Budget and FAO.

This baseline deficit averages $6.0 billion from 2021-22 to 2025-26*, despite steady ongoing economic growth. This permanent imbalance between Ontario's revenues and expenditures suggests a structural deficit existed prior to the introduction of the 2018 Budget.

4 | Extended Budget Outlook

Assessing the 2018 Budget's Fiscal Recovery Plan

Ontario's annual budget is governed by the Fiscal Transparency and Accountability Act (FTAA).[28] FTAA directs Ontario governments to 'plan for a balanced budget' each year. In 'extraordinary circumstances', FTAA permits short-term deficits, but requires the government to specify how and when a return to budget balance will be achieved.[29]

The government's fiscal recovery plan will be challenging

Note: The 2018 Ontario Budget projection excludes the reserve and does not incorporate the Auditor General's recommended treatment of the Fair Hydro Plan and net pension assets.

Source: Ontario Public Accounts, 2018 Ontario Budget and FAO.

Consistent with FTAA, the government presented a fiscal recovery plan in the 2018 Budget, which included an extended five-year projection for revenues, spending and

28 Fiscal Accountability and Transparency Act, 2004, S.O. 2004, c. 27.

29 FTAA does not provide guidance on what conditions might be viewed as extraordinary. A reasonable interpretation might be that FTAA requires balanced budgets each year, except during economic downturns or other short-term crises. However, over the past four years the Ontario economy recorded the strongest period of growth since the early 2000s, while the unemployment rate fell to its lowest level in almost two decades. Going forward, all economic forecasters are projecting steady, moderate growth combined with continued gains in employment. As a result, it is not apparent how the government views the current environment to be extraordinary.

the budget balance from 2021-22 to 2025-26[30]. The government's recovery plan projects a balanced budget by 2024-25, based largely on restricting the growth in program spending. The government's plan provides few policy specifics on how it intends to limit spending growth, but assumes the government will dramatically cut the growth in program spending from an average of 4.2 per cent per year over the next three years, to an average of just 2.1 per cent beginning in 2021-22.

The FAO's Extended Budget Projections

The FAO extended its fiscal projections from 2020-21 to 2025-26 to assess the reasonableness and risks associated with the government's fiscal recovery plan to eliminate the budget deficit.

The FAO's extended outlook includes a detailed revenue projection to 2025-26, incorporates the 2018 Budget's projection for program spending to 2020-21 and continues to adopt the AG's recommended accounting treatment for the Fair Hydro Plan and net pension assets. However, due to the critical importance of the assumption for program spending growth over the extended outlook, the FAO developed two projections.

- The FAO's 'spending restraint' projection is based on the government's plan to limit the growth in program spending to 2.1 per cent per year from 2020-21 to 2025-26.

- The FAO also developed a 'status quo' projection which assumes program spending will grow by approximately 3.5 per cent per year from 2020-21 to 2025-26. This projection implies that the quality of public services would be maintained, as program spending increases to accommodate population growth and aging as well as price inflation, core cost drivers which contribute to the rising cost of providing public services.

The FAO's 'spending restraint' projection shows that Ontario could achieve a balanced budget by 2025-26, roughly consistent with the government's own fiscal recovery plan, which anticipates a balanced budget a year earlier. This projection relies on a dramatic slow-down in spending growth beginning in 2021-22, compared with the government's planned spending over the next three years.

30 See 2018 Ontario Budget, page 171.

In contrast, under the FAO's 'status quo' projection, which assumes program spending matches the growth in core cost drivers, Ontario's budget deficit would continue to deteriorate steadily over the extended outlook.

Revenue Outlook

From 2020-21 to 2025-26, the economic projections of both the FAO and the government are roughly similar, with nominal GDP growth averaging approximately 4.0 per cent (see the Economic Outlook chapter for more details on the FAO's extended economic outlook).

Despite a similar projection for economic growth, the government forecasts revenue growth will average 3.3 per cent annually over this period, lower than the FAO's forecast of 3.7 per cent and well below the expected growth rate of nominal GDP.

The government's projection for slower revenue growth reflects slower growth in taxes and other revenue (e.g. service fees, and sales and rentals). As a result, the FAO projects total revenue will be $2.1 billion higher than the government forecast by 2025-26.

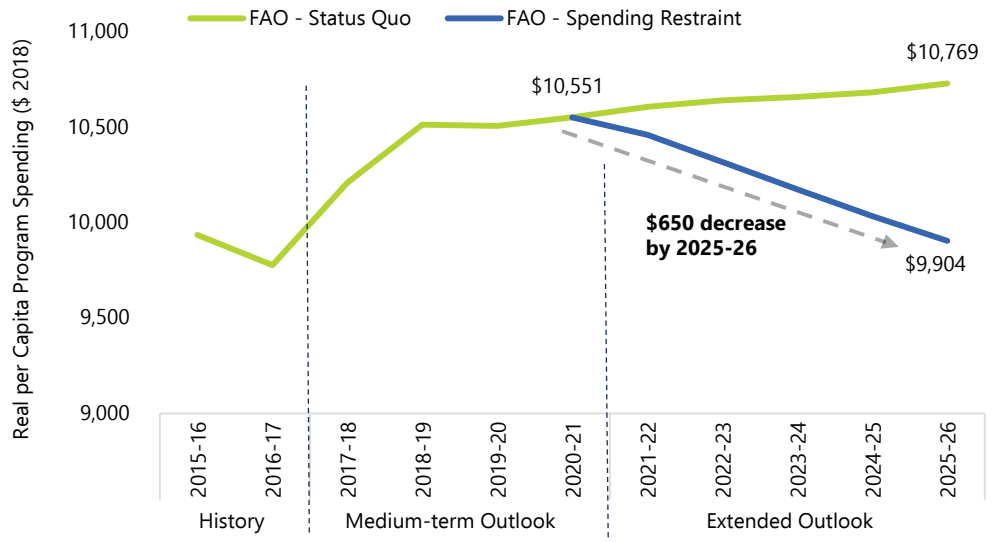
Revenue projection assumptions, 2020-21 to 2025-26

Revenue Source	FAO Growth Assumptions	FAO Spring	Extended Forecast 2023-2025
Taxation Revenue	Grows with key economic drivers including labour income, corporate income and household spending	3.8	3.6
Federal Transfers	Based on legislated growth rates and economic forecasts for Ontario and Canada	3.1	2.9
Government Business Enterprises (GBE)	Based on nominal GDP growth	3.9	4.3
Other Revenue	Based on nominal GDP growth and the FAO projection of revenue from cap and trade allowances	3.6	2.0
Total Revenue		**3.7**	**3.3**

Source: FAO and Ontario Ministry of Finance.

The slow pace of revenue growth over the government's recovery plan implies that Ontario revenues would decline as a share of the economy, falling from 17.5 per cent of GDP in 2020-21 to 17.0 per cent by 2025-26. This declining trend is unlikely to be sustained over the longer term.

Spending Outlook



The demand for public services generally increases as the population grows and ages, while the cost of providing services increases with price inflation. To maintain the quality of public services, program spending would typically need to grow at the rate of these core cost drivers.

Based on these core cost drivers, the FAO's status quo outlook assumes program spending growth of 3.5 per cent per year from 2020-21 to 2025-26, to maintain the existing quantity and quality of public services.

In contrast, the government's fiscal recovery plan relies on limiting the annual growth in spending to an average of 2.1 per cent per year over five years, well below the pace of population growth and inflation. The FAO's 'spending restraint' projection assumes program spending growth consistent with the government's recovery plan.

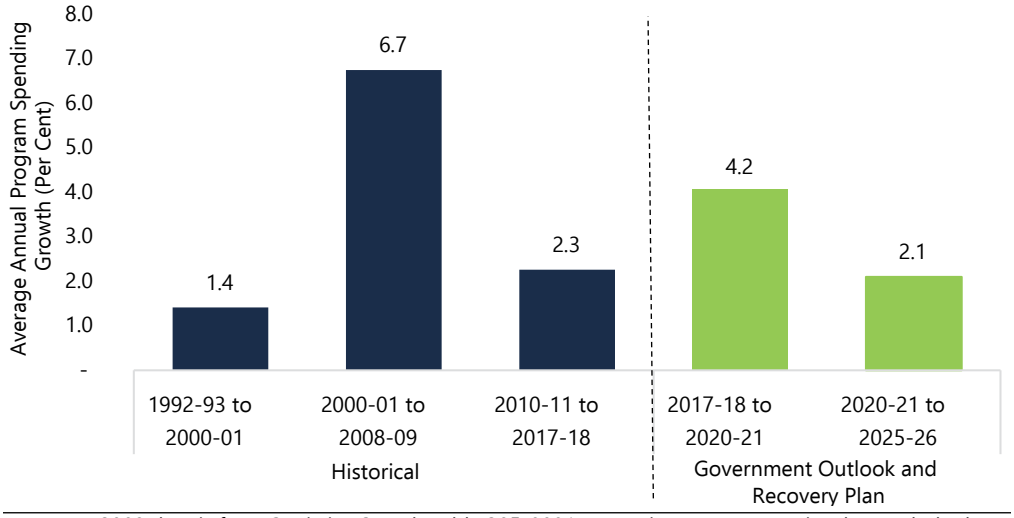
By limiting the growth in spending, the 2018 Budget's fiscal recovery plan implies that government spending on goods and services would be reduced by $650 per person by 2025-26, after adjusting for inflation.

Fiscal recovery plan assumes $650 reduction in program spending per person, after adjusting for inflation

Note: Both projections incorporate the Auditor General's recommended treatment of the Fair Hydro Plan and net pension assets.

Source: 2018 Ontario Budget and FAO.

Implications of Program Spending Restraint



There are three broad strategies jurisdictions can use to manage and reduce the pace of program spending growth:

- adopt transformational changes to public services that improve the efficiency of program delivery;
- temporarily reduce planned spending (such as wage restraint or postponing maintenance), and
- reduce the quantity or quality of existing services.

Transformational changes to public services that lead to permanent efficiency gains have generally been difficult to achieve.[31] But the simple elimination of government programs is also difficult to implement, because of the concerns of current stakeholders.

As a result, governments have often relied on temporary measures to manage and reduce public spending. However, temporary measures can result in a 'catch-up' period where additional spending is used to address built-up budget pressure.

Periods of slow program spending are followed by 'catch-up' periods

Note: Pre-2009 data is from Statistics Canada table 385-0001. Recession years are omitted to exclude the effect of stimulus spending. Government outlook and recovery plan does not incorporate the Auditor General's recommended treatment of the Fair Hydro Plan and net pension assets.

Source: Statistics Canada, Ontario Budgets and FAO.

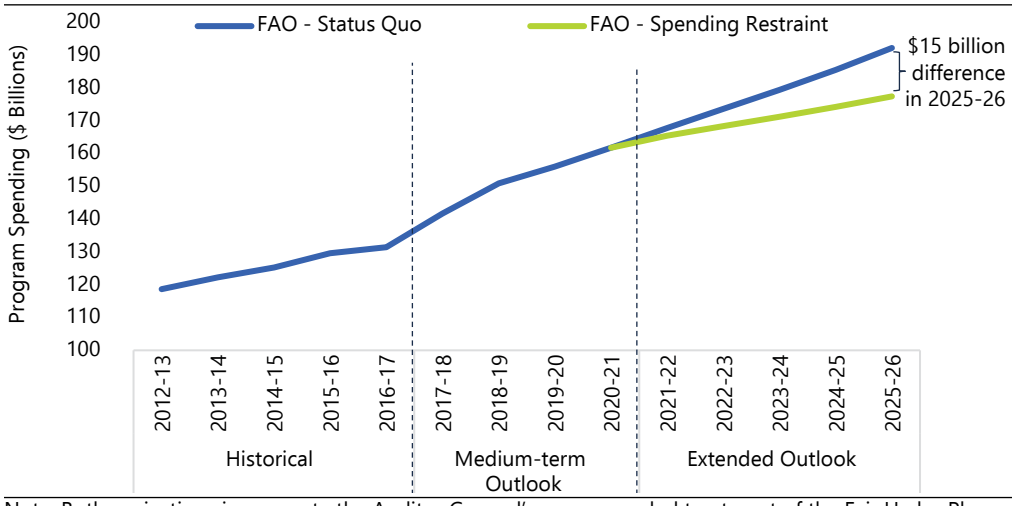
31 While there are examples of successful initiatives (see: "Estonia, The Digital Republic" in the New Yorker's December 18 & 25, 2017 Issue), there have also been notable failures (see the Auditor General of Canada's report: Phoenix Pay Problems).

Since 1991, there have been two periods of prolonged spending restraint in Ontario similar to that being proposed in the government's fiscal recovery plan. After the onset of the early-1990s recession, successive governments used a combination of strategies to limit the growth in program spending to 1.4 per cent annually from 1992-93 to 2000-01.

The spending restraint of the 1990s was followed by a 'catch-up' period during the 2000s, when program spending grew by 6.7 per cent annually. This period of strong growth reflected the introduction of new public services, but was also a response to relieve the "temporary" cost pressures (including infrastructure backlogs and public-sector wage restraint) that had built-up during the 1990s.

After the 2008-2009 recession, limiting spending growth was a critical part of the Province's plan to balance the budget in 2017-18. This was achieved through a combination of strategies, including delivering public services more efficiently,[32] restraining public-sector wage growth, and deferring maintenance for schools and hospitals.[33] This reduced program spending to an average of 2.3 per cent per year over the 2011-12 to 2017-18 period.

As in the 1990s, the spending restraint in the years following the 2008-2009 recession created future budget risks, as additional funding would be required if the Province chooses to address the built-up cost pressures.[34]



Over the next three years (2018-19 to 2020-21), the 2018 Budget provides a substantial boost to program spending, lifting the average annual growth rate to 4.2 per cent. However, much of this spending is allocated to new initiatives, which may not fully relieve the budget pressure in existing public services.

Beginning in 2021-22, the government plans to grow program spending by an average of just 2.1 per cent per year, below the 2.3 per cent growth of the 2011 to 2017 period, and well below the 3.5 per cent that is necessary to meet the cost pressures of population growth, aging and inflation.

Spending restraint of this magnitude implies that the government would have to find $15 billion in permanent savings to achieve a balanced budget by 2025-26, compared to the FAO's status quo projection.

32 One example is the increasing efficiency of Ontario's hospitals, see FAO's 2018 Health Sector report.
33 While capital renewal funding has been increasing, the Auditor General indicated that "significant infrastructure investments are needed to maintain Ontario's existing schools and hospitals, which current funding levels cannot meet." See the Auditor General's 2015 Annual Report, page 289.
34 For example, after years of wage restraint for Ontario's doctors, the Province is currently negotiating with the Ontario Medical Association (OMA) on a new physician services agreement. As of March 2018, the Ontario Medical Association is entering binding arbitration with the Province, and the OMA's key priority is redressing the 2015 fee cuts.

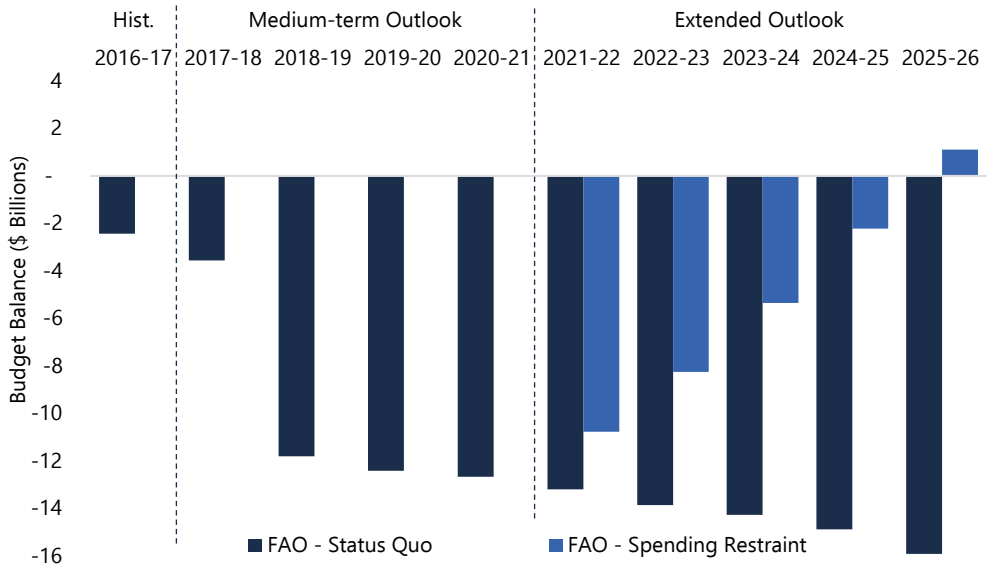
FAO program spending projections

Note: Both projections incorporate the Auditor General's recommended treatment of the Fair Hydro Plan and net pension assets.

Source: Ontario Public Accounts, 2017 and 2018 Ontario Budgets and FAO.

To address Ontario's significant deficit exclusively through spending restraint would require permanent solutions, such as transformational changes in service delivery, reductions in the quality of public services, or simply eliminating services.

Given that the government's plan provides few specifics on how it intends to limit spending growth, and the difficulty of cutting or transforming public services, there is a risk that the government will be unable to achieve the planned restraint in program spending.



Budget Balance

By 2020-21, the FAO projects that Ontario's deficit will be $12.7 billion. To reduce the deficit and achieve a balanced budget over the next five years, the government's recovery plan involves a significant shift in fiscal policy that focuses on dramatically cutting spending growth.

Under the FAO's 'spending restraint' projection (consistent with the government's recovery plan), Ontario's budget deficit would improve rapidly, reaching a small surplus by 2025-26. But the balanced budget would be achieved by severely restricting the growth in government spending over a five-year period.

In contrast, based on the FAO's 'status quo' projection, public services would be maintained, but Ontario's budget deficit would steadily deteriorate over the extended outlook. By 2025-26, the FAO projects that the deficit would reach $16.6 billion, or 1.5 per cent of GDP.

FAO budget balance outlook

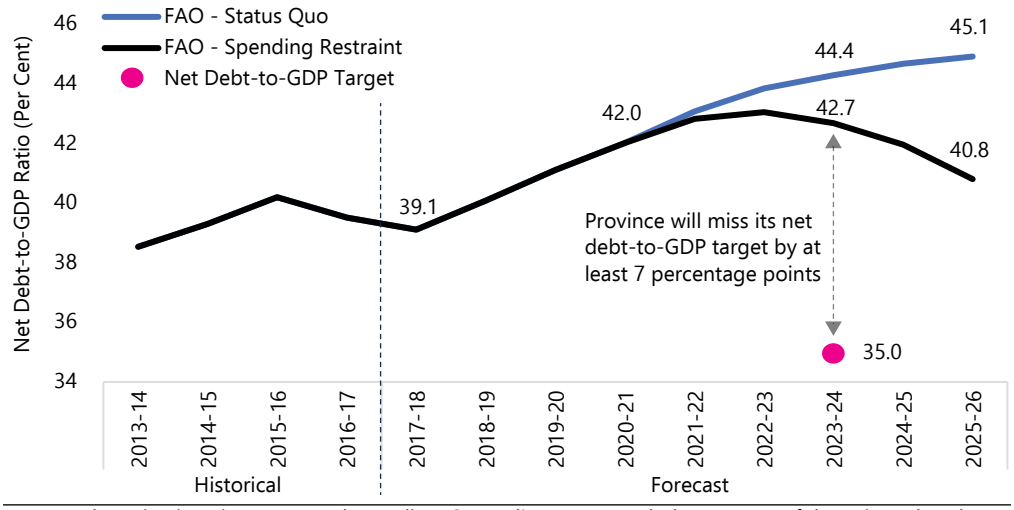
Note: Both projections incorporate the Auditor General's recommended treatment of the Fair Hydro Plan and net pension assets.

Source: Ontario Public Accounts, 2018 Ontario Budget and FAO.

The Implications of Ontario's Elevated Debt Burden

Over the next three years, the FAO projects that Ontario's net debt will increase by almost $70 billion, reaching $394 billion by 2020-21,[35] pushing the net debt-to-GDP ratio to 42 per cent. Over the extended outlook (from 2020-21 to 2025-26), Ontario's debt would continue to rise under both of the FAO's spending projections.

Under the FAO's 'spending restraint' projection, Ontario's net debt-to-GDP ratio would peak at 43 per cent in 2022-23 before beginning to gradually decline. But even with this improvement, Ontario's net debt-to-GDP ratio in 2025-26 would remain above today's level of 39 per cent.



Under the FAO's status quo projection, Ontario's net debt-to-GDP ratio would increase to over 45 per cent by 2025-26.

In the 2017 Budget, the government set a target of reducing the net debt-to-GDP ratio to 35 per cent by 2023-24, on the path to achieving a 27 per cent ratio by 2029-30. In the 2018 Budget, the government did not acknowledge these previous targets for reducing Ontario's debt burden.

35 The FAO's net debt projections include the fiscal impact of the accounting treatment for the Fair Hydro Plan and net pension assets as recommended by the Auditor General.

Under both of the FAO's projections, Ontario's net debt-to-GDP ratio would be well above the Province's net debt-to-GDP target of 35 per cent in 2023-24. Even with the significant program spending restraint assumed in the government's fiscal recovery plan, the FAO projects that the Province would miss its net debt-to-GDP target by 7 percentage points in 2023-24.[36]

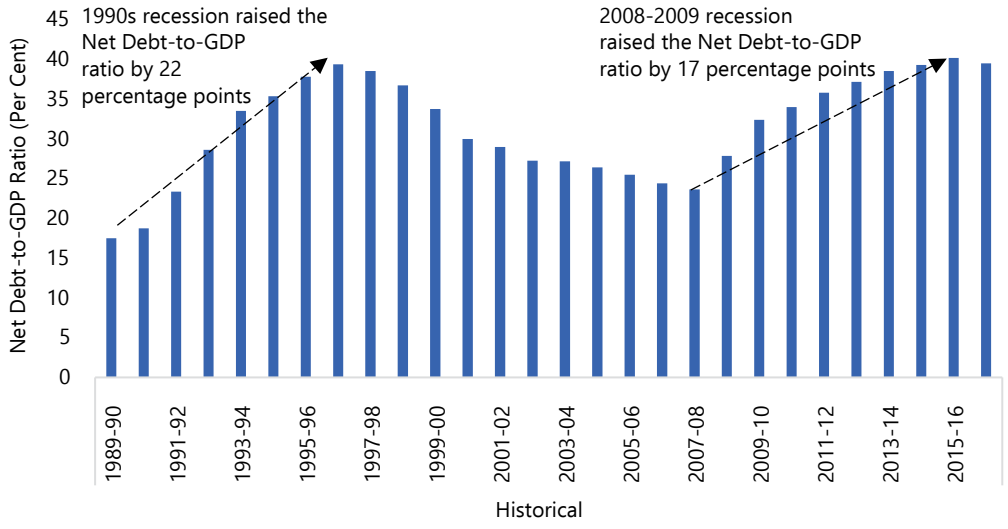
The province not expected to meet its net debt target

Note: Both projections incorporate the Auditor General's recommended treatment of the Fair Hydro Plan and net pension assets.

Source: 2017 Ontario Budget, Ontario Public Accounts and FAO.

The Fiscal Transparency and Accountability Act directs Ontario governments to "maintain a prudent ratio of provincial debt to Ontario's gross domestic product".[37] However, the government's 2018 Budget will significantly increase Ontario's debt burden into the 2020s.

High and rising public debt could have significant adverse consequences for Ontario. Growing levels of debt lead to larger debt interest payments, leaving the Province less fiscal flexibility to fund future public services or respond to unforeseen events, including recessions, through deficit spending.



Future Economic Downturns

Economic recessions can have severe negative impacts on the lives of Ontarians as well as the finances of the Province. The early 1990s recession increased Ontario's net debt-to-GDP ratio by 22 percentage points, while the more recent 2008-2009 global financial crisis increased Ontario's debt burden by 17 percentage points.

36 The government's fiscal recovery plan does not achieve the goal of lowering the net debt-to-GDP ratio to 35 per cent by 2023-24.

37 Fiscal Accountability and Transparency Act, 2004, S.O. 2004, c. 27.

Ontario's net debt-to-GDP ratio increased sharply after recessions

Source: Public Accounts of Ontario, Statistics Canada and FAO.

While the future is uncertain, Ontario's strong recent economic performance is unlikely to last indefinitely. When the next economic downturn occurs, it will push Ontario's net debt-to-GDP ratio higher. A more cautious fiscal plan that lowers Ontario's current net debt-to-GDP ratio would provide the Province greater budget flexibility to maintain public services in the event of a future economic downturn.

Fiscal Pressures from Ontario's Aging Population

Over the next 35 years, Ontario will undergo a significant demographic transition, as the population becomes older and grows more slowly than in the past. The baby boom generation, accounting for over one-quarter of Ontario's population, will be between 55 and 75 years old by 2020 and in the process of gradually transitioning out of the labour force. This transition is expected to lead to slower growth in employment and overall income in the 2020s and beyond.

As the baby boomers continue to age, they will require more resources from Ontario's health care system, increasing pressure on government spending. These demographic changes will combine to lower tax revenue growth and raise spending, leading to large and rising budget deficits under current fiscal policy trends.[38]

The 2018 Budget postpones deficit recovery, resulting in the accumulation of additional debt into the 2020s, when demographic pressures on the budget will intensify. This additional debt will increase the challenge of stabilizing Ontario's public finances, and shifts the burden away from the baby boom generation and on to younger Ontarians.

38 For more information see the FAO's Long Term Budget Outlook.

Budget Sensitivities

Changes in Ontario's current revenue or expense policies, as well as external factors can have a significant impact on Ontario's budget balance by 2025-26. To gauge the sensitivity of Ontario's finances to changes in key variables, the FAO estimated the impact of changes in four key areas to Ontario's budget balance in 2025-26. These areas include: tax policy, federal transfers, spending and interest rates.

For example, if the government permanently raised personal income tax (PIT) rates in 2018-19 to generate 10 per cent more PIT revenue (roughly an additional $510 per taxpayer on average in that year), Ontario's deficit would fall by $6.5 billion by 2025-26.

For the HST, if the government permanently raised the rate from 8.0 per cent to 9.0 per cent beginning in 2018-19, it would raise about $3.4 billion in the first year. Over time, this amount would grow, while interest on debt payments would be somewhat lower. The combined effect would lower Ontario's deficit in 2025-26 by $6.0 billion.

For spending, if the government was able to reduce the growth rate of health care spending by 1 per cent in each year of the projection, Ontario's deficit would improve by $7.5 billion by 2025-26.

Sensitivity of Ontario's budget balance to select factors

Change Beginning in 2018-19	Deficit Reduction in:	
	2018-19	2025-26
Taxation		
A sustained 10 per cent increase in Personal Income Tax revenues ($510 per tax filer in 2018-19) over the projection	$3.6 billion	$6.5 billion
A sustained 1 percentage point increase in the general Corporations Tax rate over the projection	$1.2 billion	$2.1 billion
A sustained 1 percentage point increase in the HST rate over the projection	$3.4 billion	$6.0 billion
Federal Transfers		
A sustained 1 percentage point increase in the annual growth of the Canada Health Transfer over the projection	$0.1 billion	$1.9 billion
A sustained 1 percentage point increase in the annual growth of the Canada Social Transfer over the projection	$0.1 billion	$0.7 billion
Health Care Spending		
A sustained 1 percentage point decrease in the growth rate of health care spending over the projection	$0.6 billion	$7.5 billion
Interest Rates		
A sustained 1 percentage point decrease in Ontario's effective borrowing rate over the projection	$0.4 billion	$3.1 billion

Note: These estimates include the associated impact to interest on debt, but do not incorporate any economic feedback effects.

April 30, 2018

The Honourable Eleanor McMahon
President, Treasury Board
Room 4320
99 Wellesley St W
Toronto, ON M7A 1W3

Dear Minister McMahon:

Subject: Economic and Budget Outlook - Spring 2018

Under paragraph 10(1)(a) of the *Financial Accountability Officer Act, 2013* (the Act), the FAO is mandated to undertake regular analyses of the state of the province's finances and trends in the provincial economy.

Section 15 of the Act requires that I deliver copies of any reports I publish to the relevant ministers ahead of publication. Accordingly, please find attached a copy of my report, ***Economic and Budget Outlook – Spring 2018.***

As arranged with the Clerk of the Legislative Assembly, this report will be tabled on **Wednesday May 2, 2018 at 10:00 a.m**. Please treat this report as confidential until that time**.**

An MPP Technical Briefing will be held in Committee Room 230 at 9:00 a.m. Members of the Standing Committee on Finance and Economic Affairs, as well as two members per caucus, are welcome to attend. A media conference will be held at 10:00 a.m. in the Media Studio.

- **LIVE** webcasting of the press conference will be available at 10:00 a.m. here

Let me take this opportunity to thank you once more for the assistance that your ministry provided to my staff during the preparation of this report.

As always, please feel free to contact my office if we can be of assistance.

Sincerely,

The Honourable J. David Wake
Temporary Financial Accountability Officer

Encl.

April 30, 2018

Summary of Draft FAO Spring Economic and Fiscal Outlook_v7a.docx

---

I would say this in yellow is wrong.. the peak was in 2014-15

- The FAO is also projecting that net debt-to-GDP ratio will continue to increase over the medium-term and beyond 2020-21 reaching 44.4 per cent by 2023-24. The 2018 Budget projects that the net debt-to-GDP ratio to peak in 2021-22 before beginning a downward trend.

Attached is the FAO Economic and Fiscal Outlook Report that will be delivered to Ministers by noon today.

We'll do a more detailed look at the numbers but it looks like the only significant change relative to the last version we saw was the addition of a new "scenario" over the recovery plan where the FAO shows what would happen if the government restrained spending – and it shows the Province would return to balance. They do talk abit about what that would entail, and do piggy back on historical experience to show that it has been done in the past.

My division will coordinate a rolled up note and speaking notes – we'll need to figure out when and if a briefing would be required.

Subject: The FAO's Spring 2018 Economic and Budget Outlook Report

Good morning

The FAO will be releasing its spring 2018 Economic and Budget Outlook (EBO) report on Wednesday May 2nd at 10:00 am. There will be separate technical briefings for media and MPPs on Wednesday at 9:00 am. The Temporary Financial Accountability Officer, David Wake, and myself will be making a media statement and responding to questions at 10:00 am.

The report along with the attached letters are being delivered to Ministers Sousa and McMahon later this morning – and are attached for your reference.

Please treat this document as embargoed until its release on Wednesday at 10:00 am.

As always, your assistance and support for the work of the FAO are greatly appreciated.

Best regards,
David

FAO's 2018 Spring Economic and Fiscal Outlook

ISSUE

On May 2, 2018 the Financial Accountability Office will release its '2018 Spring Economic and Fiscal Outlook' report. The report adopts the AG's accounting treatment of both the Fair Hydro Plan and Pension Assets and indicates that the government is facing persistent budget deficits over the medium-term that will continue to grow well into the government's deficit recovery phase, unless spending growth slows dramatically beginning in 2021-22. It also suggests that the deficit cannot be eliminate by economic growth alone, but will require fiscal policy changes to raise revenue or reduce spending.

KEY MESSAGES

- I would like to thank the Financial Accountability Officer (FAO) for releasing his spring economic and fiscal outlook for Ontario. We value the FAO's independent assessment of the province's fiscal plan.
- The government is committed to a responsible fiscal plan that provides the conditions for all Ontarians to thrive.
- The FAO's deficit projections include the Auditor General's interpretation of how the government should be accounting for net pension assets and the Fair Hydro Plan. The disagreement in accounting is the main driver of the difference between the FAO's projections and the 2018 Budget.
- It is important to note that with the exception of the two accounting disagreements, the Auditor General has determined that the majority of the province's estimates regarding revenue, program expenses and interest on debt are based on cautious assumptions, as required by the Fiscal Transparency and Accountability Act.
- And while there is uncertainty in any future-oriented forecast, what we do know is that this government has a strong track record of beating its fiscal targets. As outlined in the *2018 Budget*, the government is projecting a surplus of $600 million for 2017–18, beating its fiscal target for the ninth year in a row.
- Ontario's fiscal policy is based on cautious assumptions and recognizes the need for flexibility to respond to changing circumstances. During this period of rapid economic change, the fiscal plan considers the impact of today's choices on different groups within the province and on future generations.
- While Ontario's economy has been growing steadily, the government knows that more must be done to ensure that the benefits of a solid economy are being shared equally by all Ontarians.
- The government believes that the best way to deliver prosperity to more people is by continuing to invest in the economy, and in public services that promote greater fairness and opportunity across the province.

- As a result, the province is projecting modest deficits over the medium term of $6.7 billion in 2018–19, $6.6 billion in 2019–20 and $6.5 billion in 2020–21, or 0.8 per cent of GDP in 2018–19, declining to 0.7 per cent by 2020–21.

BACKGROUND

Economic Outlook

- The FAO forecast for real GDP growth to average 2.0 percent annually between 2018 and 2021 is 0.1 percentage points faster than the *2018 Budget* forecast of 1.9 percent.
- The FAO forecast is consistent with the private sector economists' view that housing and consumer spending will slow over the next four years while exports and business investment will grow at a faster pace.
- The FAO recognizes similar economic risks identified in the *2018 Budget*. The possibility of stronger U.S. growth could boost Ontario's economy. However, protectionist trade policies in the U.S., and associated business uncertainty, could place Ontario at a competitive disadvantage. As well, high levels of household debt have left Ontario households vulnerable to rising interest rates.
- Over the extended period 2021 to 2025, FAO's long-term economic outlook is similar to the unpublished Ontario Ministry of Finance projection. In particular, the FAO projects Ontario nominal GDP growth of 3.9 percent annually, on average, between 2021 and 2025, 0.1 percentage points lower than the *2018 Budget* recovery plan projection of 4.0 percent.

Fiscal Outlook

- The FAO is projecting a deficit of $3.6B in 2017-18, rising to $12.7B by 2020-21. The FAO projects the deficit to further deteriorate over the government's recovery plan period, reaching $16.6B by 2025-26 under a 'status quo' scenario of 3.5 per cent program expense growth. However, the report suggests balanced budget is possible by 2025-26 if the government constrains program spending to 2.1 per cent beginning in 2021-22.
- Unlike its Fall report, the FAO is now only presenting projections that include the impact of the Auditor General's (AG) recommended accounting treatment for both the Fair Hydro Plan and the net pension assets of jointly sponsored pensions plans.
    - Taken together, the adjustment for these two accounting differences add between $4B and $6B to the deficit in each year.

Interim and Medium-Term (2017-18 to 2020-21)

- The FAO is projecting a deficit of $3.6B in 2017-18 and deficits of between $11B and $13B over the medium term.

- The FAO's **revenue forecast** is approximately $1B lower than the government's in each year of the medium-term outlook, mainly due to a lower outlook for personal income tax revenue.
- Similar to past reports, the FAO adopts the *2018 Budget* **program expense outlook** (other than the accounting treatment differences).
- Similar to past reports, the FAO also continues to project **interest on debt expense** that is slightly below the government's projection over the medium-term – by between $0.1B and $0.2B per year.

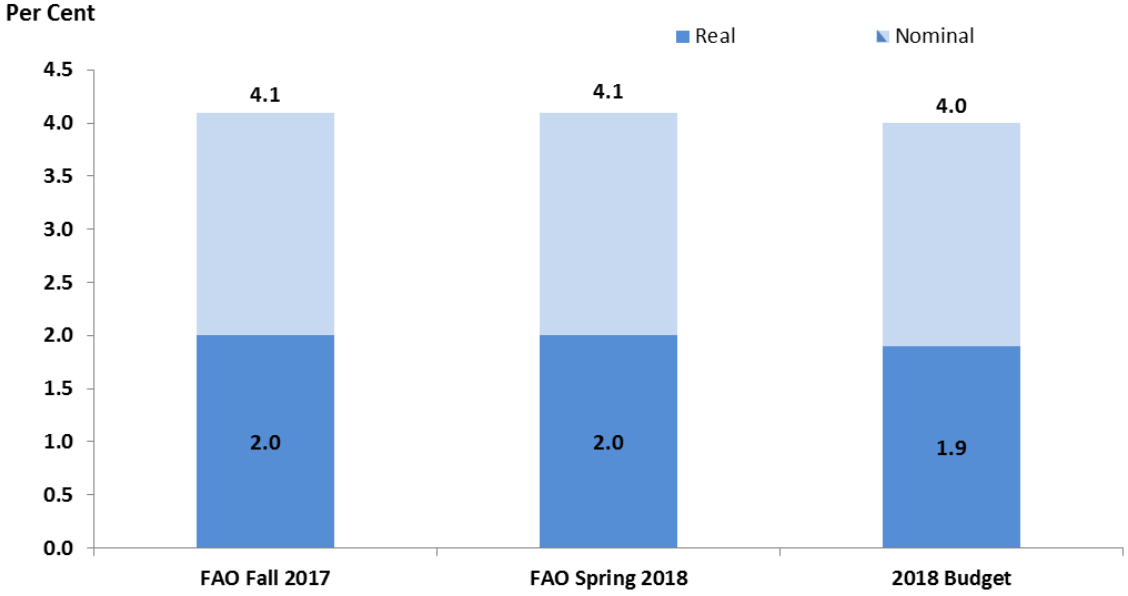
Overall, the difference between the FAO's and government's medium-term fiscal outlook is largely driven by the impact of the AG's recommended accounting treatment for both the Fair Hydro Plan and the net pension assets of jointly sponsored pensions plans .

Differences Between the FAO's Fiscal Outlook and the *2018 Budget* ($ Billions)	2017-18	2018-19	2019-20	2020-21
2018 Budget Projected Deficits (Excl Reserve)	0.6	(6.0)	(5.9)	(5.8)
FAO Projected Deficits (Excl Reserve)	(3.6)	(11.8)	(12.4)	(12.7)
Difference between FAO and 2018 Budget	*(4.2)*	*(5.8)*	*(6.5)*	*(6.9)*
Difference Due to Accounting	*(4.2)*	*(5.0)*	*(5.6)*	*(6.0)*
Difference Due to Other (Lower revenue offset by lower IOD)	*-*	*(0.8)*	*(0.9)*	*(0.8)*

- In addition to its assessment of the government's current fiscal plan, the FAO developed a "baseline" budget projection that excludes the new revenue and spending measures announced in the 2018 Budget. This baseline scenario projects budget deficits of $8.1B in 2018-19, $7.2B in 2019-20, and $6.1B in 2021-21.

Recovery Plan (2021-22 to 2025-26)

- The 2018 Budget projects a return to balance by 2024-25 and a small surplus in 2025-26. This is premised on:
  - Projected average annual growth in revenue of 3.3% over the recovery plan period and managing program expense to an average annual growth rate of 2%.
- In contrast, the FAO's "status quo" projection assumes program spending will grow by about 3.5 percent per year from 2020-21 to 2025-26 resulting in deficits that reach $16.6 billion by 2025-26. Compared with the 2018 Budget projections:
  - The revenue outlook is higher due to a higher outlook for taxes and other revenue.
  - Given an aging and growing population and price inflation, the FAO projects program spending would need to grow at the rate of these core cost drivers, 3.5%



annually over the outlook, so that “the quality of public services would be maintained”.

- The IOD outlook grows faster due to the FAO’s forecast of higher projected net debt leading to larger debt interest payments.
- The FAO is also projecting that net debt-to-GDP ratio will continue to increase over the medium-term and beyond 2020-21 reaching 44.4 per cent by 2023-24. The 2018 Budget projects that the net debt-to-GDP ratio to peak in 2021-22 before beginning a downward trend.

The FAO also included a “spending restraint” scenario that holds program expense growth to 2.1 per cent beyond 2021-22, consistent with the 2018 Budget projection. Using this method the FAO projects Ontario’s budget deficit would improve rapidly, reaching a small surplus by 2025-26, however they caution that this projection relies on a dramatic slow-down in spending growth and implies that the government would have to find $15 billion in permanent savings by 2025-26.

Note: All surplus/deficits exclude the reserve. Numbers may not add due to rounding.

MEDIUM-TERM REVENUE:

- The FAO projects Personal Income Tax to be significantly lower than the 2018 Budget projections ($0.4 billion in 2018-19, $0.7 billion in 2019-20, and $0.9 billion in 2020-21).
- FAO estimates that Ontario will no longer qualify for Equalization payments after 2018-19, where as the 2018 Budget assumes Equalization ends in 2020-21.
- The FAO reduces H1 net income by $0.4 billion in 2018-19 to reflect the recent decision by the OEB to allocate a portion of tax gain to rate payers.

RECOVERY PLAN REVENUE:

- Over the recovery plan, the FAO projects significantly stronger growth (3.6%) in other non-tax revenues, compared to the 2018 Budget (2.0%).

RECOVERY PLAN PROGRAM EXPENSE:

The FAO assumes program expense to grow at 3.5% over the recovery plan (closer to population and inflation), versus the 2018 Budget projection of 2.0%.

INTEREST ON DEBT EXPENSE:

- Despite projecting larger deficits and potentially larger borrowings, the FAO's IOD grows on average by 4.7% over the medium-term, in contrast to 5.1% in the 2018 Budget.

Sareena,

I see that our net debt template was used for a myriad of variable presentations of net debt, such as with the fair hydro, with pension adjustments etc, along with new fiscal deficit numbers since yesterday.

We got the accumulated deficit impact of the pension adjustment this morning from OPCD and put it into the opening net debt number for 2016-17 in the attached. Our opening 2016-17 net debt number now matches what the AG has indicated it should be if following this accounting interpretation. You may have to redo the net debt calculations based on this adjustment as well as the new fiscal impacts.

As you can see, there is a significant impact to the ratio by adding over $12.4 Billion of the pension adjustment to accumulated deficit.

Thanks.

John

Subject: RE: Transition Deck: Base Case & Alternative Fiscal Scenarios

Good morning:

Per the email thread below, we're touching base to provide you with the outlooks for the three scenarios (base, 1, and 2) as they currently stand, including with the IOD forecast that you provided yesterday at 4:30pm. Please note that the only change that has not been incorporated into the attached IOD outlook is a $5M revenue decrease in 2019-20 and 2020-21 that was made this morning. Revenue has been updated in the attached document, but IOD has

not since we didn't think it would make a significant difference.

In addition, we have attached a draft version of the deck that will be used to brief the SOC this afternoon at 3pm, however, we are still working through some wording edits. The net debt-to-GDP numbers that we calculated for each scenario can be found in the deck on slides 10,13,14 and 15. Also attached is a copy of the net debt-to-gdp calculator that we used.

Could you please confirm that both the IOD forecast in each scenario as well as the net debt-to-GDP numbers in the deck are correct?

Many thanks!
Sareena

Ok great - thanks Ken.

Coming out of the meeting there were no further changes to the base case or alternative fiscal outlooks, save one small revenue adjustment that is less than $5M per year.

We'll touch base in the morning.

Tara

Hi Tara

With regard to IOD, your characterization of the two versions is accurate. However since our runs were done to meet deadlines we will review the results once more tomorrow morning and confirm.

With regard to the net debt to GDP ratio, as John has pointed out, the version that includes the AG's adjustments should also incorporate the cumulative impact of reversing the pension adjustment and that should not be limited to 16-17 onwards.

We have requested the cumulative impact from OPCD and should be able to provide revised ratios tomorrow.

Thanks

Ken k

Assumptions /Notes

1 - deleted for this scenario -

2 GDP - per latest information rec'd (see GDP tab)

3 TCA - per info rec'd May 29, 2018 from M Reghabi

After 2027-28 TCA increases are equal to annual amortization

4 Net Debt adjusted for prepaids starting 2014-15. From 2017-18 and onwards - same amount as prior month assumed.

5 Balanced budget continues through to 2035-36

6 GDP annual growth is 4% from 2031-32 to 2035-36

7 Revenue restated to include BPS (Hospitals, colleges, school boards) from 2012-13

8 Revenue from 2017-18 to 2019-20 has been restated for BPS

9 Revenue for 2016-17 was revised down by approx $1 million from $140,735m to $140,734.

10 Accumulated deficit for 2016-17 now incorporates the pension valuation adjustment of approx $12.4b

Assumptions /Notes

1	- deleted for this scenario -
2	GDP - per latest information rec'd (see GDP tab)
3	TCA - per info rec'd May 29, 2018 from M Reghabi
	After 2027-28 TCA increases are equal to annual amortization
4	Net Debt adjusted for prepaids starting 2014-15. From 2017-18 and onwards - same amount as prior month assumed.
5	Balanced budget continues through to 2035-36
6	GDP annual growth is 4% from 2031-32 to 2035-36
7	Revenue restated to include BPS (Hospitals, colleges, school boards) from 2012-13
8	Revenue from 2017-18 to 2019-20 has been restated for BPS
9	Revenue for 2016-17 was revised down by approx $1 million from $140,735m to $140,734.
10	Accumulated deficit for 2016-17 now incorporates the pension valuation adjustment of approx $12.4b

Francisco,

We have updated our part but will be happy to coordinate with your group and send back a combined response by Monday's deadline.

Thanks.

John

Subject: Estimates Defence Document Submissions

Good afternoon –

Program areas are asked to please submit Top Facts (formerly called Q&As) and update Accomplishments no later than September 11th to Pauline Padmore and cc Nicole Yanqui. Attached for your reference is the table of contents from last years' Estimates Briefing Binder, Accomplishments and Top Facts.

Here is the Minister's Office recommended list of top facts & top issues **by order of importance**:

Tab 3: Top Facts

- Office of the Budget
- Ontario Financing Authority
- Office of Economic Policy
- Corporate Electricity Finance Division
- Taxation Policy Division
- Tax and Benefits Administration
- Provincial Local Division
- Cannabis Retail Implementation Project
- Government Business Enterprise Division
- ORPP Implementation Secretariat / Admin Corporation
- Income Security & Pension Policy Division
- Financial Services Policy Division

Tab 4: Top Issues

- Fiscal Plan (in relation to questions that might come up about balancing)
- Debt (Interest on Debt costs)
- Public Accounts (emphasis on AG Accounting)
- Fair Hydro Plan
- Housing Market
- Cannabis
- Cap & Trade
- Trillium Trust
- OLG Modernization
- LBCO
- ORPP – if needed

In addition to the corporate preparations, program areas should prepare their ADM/Program Head in the event we do appear before the Estimates Committee – for those questions that are of a technical or operational nature. This also includes preparations for your ADM/Program Head to explain any financial variances from the Estimates Briefing Book, should those questions arise at the proceedings. This work should currently be underway.

Please let me know if you have any questions about this process.

Thank you.

ACCOMPLISHMENTS/ KEY MESSAGES

Income Security and Pension Policy Division 1
Revenue Agencies Oversight Division 1
Office of Economic Policy 1
Financial Services Policy Division 1
Provincial Local Finance Division 1
Office of the Budget 2
Taxation Policy Division 2
Tax and Benefits Administration 2
ORPP Implementation Secretariat 2
Ontario Financing Authority 3
Corporate Electricity Finance Division 3

Income Security and Pension Policy Division

Continued to provide the government with policy advice on income security matters, from childhood through to retirement, including: the indexing of the Ontario Child Benefit; policy work for key sections of the 2016 Budget (such as announcements on the Basic Income Pilot and social assistance rate increase); and worked collaboratively and intensively with the federal government and provinces to make progress on enhancing the CPP. The Divisions also provided policy and legislative advice on pension policy issues such as the successful passage of the *Pooled Registered Pension Plans Act, 2015*, initiated a review of solvency funding rules for defined benefit pension plans, proclaimed legislation and passed regulations governing the conversion or merger of single employer defined benefit pension plans to jointly sponsored pension plans, and enacted legislation (to be proclaimed into force by the LGIC) that creates a pooled asset management entity for pension plans in the broader public service.

Revenue Agencies Oversight Division

Moving forward the large scale modernization and transformation of the gaming and alcohol sectors in Ontario that will improve consumer experience and support increased revenues for important public services.

Office of Economic Policy

Supported effective, economic, fiscal and financial management consistent with the government's priorities, and supported various initiatives which continue to make Ontario an attractive environment for business investment.

Financial Services Policy Division

Supported the growth of the financial services sector by advancing a modern and flexible approach to regulation, strengthening consumer and investor protection by implementing regulatory changes to help ensure auto insurance is affordable for Ontario drivers; exploring how Ontario's regulatory framework for auto insurance can fit new insurance products for ride-sharing services; reviewing the legislative framework for Ontario's credit unions to protect consumers and their deposits; supporting an independent review of the mandates of key financial services agencies. Additionally, the Financial Services Policy Division continues to support the independent Expert Committee to Consider Financial Advisory and Financial Planning Policy Alternatives, which released its preliminary policy recommendations in April 2016; and is working with participating jurisdictions to achieve important milestones toward the establishment of the Cooperative Capital Markets Regulatory System (CCMR).

Provincial Local Finance Division

The Ministry is delivering improvements to the property tax and municipal funding system that contributes so much to communities and public services across Ontario. During 2015-16, the government implemented changes to Ontario's property assessment and property tax systems, including implementing recommendations coming out of the Assessment Review in time for the 2016 reassessment of all Ontario properties. These measures improve the transparency, accuracy and predictability of property assessments. The Ministry also worked in close consultation with municipalities to redesign the Ontario Municipal Partnership Fund (OMPF) so that it better targets funding to municipalities with the greatest needs. While the program has been phased down, the government's commitment to the provincial uploads means that overall support to municipalities will continue to increase. Together, these measures have helped ensure that municipalities are on a financially sustainable footing and in a position to invest in local priorities like roads, transit and economic development.

Office of the Budget

Provided strategic fiscal advice and coordinating key government publications including the annual Budget, the Economic Outlook and Fiscal Review and the Quarterly Finances

Taxation Policy Division

The 2016 Student Financial Assistance Budget announcement that Ontario's tuition and education tax credits would end beginning September 2017. Additional revenue from ending the credits is proposed to be redirected to the new Ontario Student Grant or other postsecondary, education, training and youth jobs programs, which fulfills a CROPS recommendation.

Tax and Benefits Administration

Established a Contraband Tobacco Enforcement Team within the OPP to focus on the organized crime linkages

ORPP Implementation Secretariat

The government passed two pieces of ORPP legislation that outlined the framework of the plan and established an arm's length entity, the ORPP Administration Corporation, including appointing the initial Board of Directors and hiring a Chief Executive Officer.

Ontario Financing Authority

Completed the ~~2015-16~~2016-17 borrowing requirement and pre-borrowed $~~2~~ 3.2 billion for ~~2016-17~~2017-18 for total borrowing of $~~32.1~~27.0 billion.~~,~~ ~~while continuing~~Continued to extend the term in order to lock in low interest rates, with an average term of borrowing for the year of ~~14.2~~13.9 years. Since 2010, the OFA borrowed more than $~~54~~ 63 billion in terms of 30 years or longer.

Corporate Electricity Finance Division

Provided strong support to the Province's asset optimisation initiative, including the Hydro One IPO, real estate assets and the Trillium Trust to dedicate funds to infrastructure investments; and has moved forward with a legislated, fixed end date of April 1, 2018, to the Debt Retirement Charge (DRC) for commercial, industrial and all other users of electricity. The DRC for residential users ended as of January 1, 2016.

TOP FACTS

INCOME SECURITY AND PENSION POLICY DIVISON 1

Q: When and where will the Basic Income pilot be implemented? How much will the Basic Income pilot cost? Your Estimates show $5 million in 2016-17 for the pilot. 1

Q: If there is an agreement on CPP enhancement within the year, will Ontario still implement the ORPP? 1

Q: If there is agreement on a CPP enhancement that does not meet Ontario's objectives, what is Ontario's position? 1

REVENUE AGENCIES OVERSIGHT DIVISION 2

Alcohol 2

Q: Why is this so complicated? There will be universal authorizations, existing winery stores operating inside grocery, controls on who sells what, some will be matched with beer but some won't. Why not just open it up? 2

Q: Why is the Council recommending only introducing wine into 150 grocery stores? There will be beer in 450 grocery stores. 2

Q: Why will grocery stores only be able to sell wine that costs $10.95 or more? 2

Gaming 3

Q: What is the future of the HRPFP? 3

Q: Why is OLG net profit to the province (NPP) expected to decline slightly from 2015-16 to 2016-17? 3

Q: Why is net profit to the province higher in 2015-16 compared with projections in Budget 2015?. 3

Q: Is funding to hospitals being reduced by $107M in 2016-17 as a result of OLG's projected lower net profit to the province? 3

OFFICE OF ECONOMIC POLICY 4

Q: Will the 30% Off Ontario Tuition grant still be available or has it been eliminated? 4

Q: What evidence do you have that Ontario's economy is performing better than Canada's? 4

Q: Over the last 18-months there has been a significant shift in the global economic environment. Why do you remain positive about Ontario's economic prospects? 4

FINANCIAL SERVICES POLICY DIVISON 6

Q: What is the government's reaction to the preliminary policy recommendations released by the Expert Committee to Consider Financial Advisory and Financial Planning Policy Alternatives? 6

Q: Both the City of Ottawa and City of Toronto staff reports on vehicles for hire recommend minimum insurance requirements for drivers involved in ride-sharing. What are you doing to make sure that insurance is in place? 6

PROVINCIAL LOCAL FINANCE DIVISION 8

Q: What is the government doing to support municipalities? 8

Q: Will the Ontario Municipal Partnership Fund (OMPF) be further reduced beyond 2016? 9

Q: In the 2014 Budget, the Province announced that payments to municipalities under the Power Dam Special Payment Program would be reduced. What is the status of this phase-down? 9

OFFICE OF THE BUDGET 10

Q: The Ontario budget states that new federal funding has been included in the fiscal outlook based on 'prudent assumptions' about new transfers, but the federal government has not said how much Ontario will receive. What are these prudent assumptions and how much new federal money is counted in this budget? 10

Q: Will cap-and-trade impact the Province's bottom line? 11

Q: Is the Government using Asset Optimization Revenues to balance the Budget? 12

Q: Is the government restricting the ability of the FAO to access Cabinet Confidential documents? 12

Q: What is the government's plan to hold average annual growth in program expense to 1.9% going forward? Given that this is below inflation, what programs are being cut? 12

Q: Compared to the 2015 Budget, program spending is higher in each year. How is the government going to balance when spending is up? 13

Q: The government is reporting overachievement on its annual deficit target for the 7th year in a row. How is this possible? Is the government purposely setting easy targets? 14

TAXATION POLICY DIVISION 16

Q: How many students will be affected when the tuition and education tax credits end? 16

Q: Will everyone who loses their tax credits get back the money through the new student grant? . 16

Q: Why are you cutting R&D Tax Credits (i.e. OITC and ORDTC) when you say you want to support innovation? 16

TAX AND BENEFITS ADMINISTRATION 17

Q: Why are Bad Debt Expenses increasing from approximately $46.7Million (2014-2015 Actuals) to $90Million (2015-2016 interim actuals)? 17

Q: Why is the Ministry of Finance seeking an increase of $13.2Million in its Bad Debt Expense allocation in 2016-17 (from $32Million to $45.2Million)? 17

Q: How is Ontario supporting the sharing economy? 17

Q: Why has the government introduced more red tape for estate representatives? 18

Q: Has the government seen an increase in the Estate Administration Tax collected since January 1, 2015? 18

Q: What is the government doing to address Aggressive International Tax Planning? 18

Q: What is Ontario doing to address the underground economy? 19

ORPP ADMINISTRATION CORPORATION 20

Q: Why is the government providing the ORPP AC with a loan? 20

Q: How much money is being loaned? 20

Q: In the 2016/17 estimates, it shows a loan amount of up to $240M. How is that money going to be used? 21

ORPP IMPLEMENTATION SECRETARIAT 22

Q: How much has been spent on the ORPP Implementation Secretariat (ORPPIS) to date? 22

Q: Why does the Ministry's direct spending for ORPP decrease by $12.5M in 2016-17? 22

Q: Why is the government providing the ORPP AC with a $240M loan in 2016-2017? 22

Q: In total, how much is the government loaning the ORPP AC for set-up expenses? 23

Q: In addition to the current costs and the loan to ORPP AC, how much money will it cost to implement the ORPP? Are we talking billions? 23

Q: Isn't the federal government helping to administer the ORPP? 23

Q: Who pays for the ORPP start-up costs if the CPP is enhanced and the plan is never implemented? 24

Q: How much money is being loaned? 24

Q: In the 2016/17 estimates, it shows a loan amount of up to $240M. How is that money going to be used? 25

Q: How much of the loan has been drawn down to date? What has that money been used for? 25

Q: Is this money being spent on high salaries? What is the compensation framework for the ORPP AC? 25

Q: Does the government expect to be repaid? 25

Q: What would be the cost to government if the ORPP is cancelled after it launches? 25

Q: How is the repayment schedule structured? Will it be charged interest? 26

Q: Why doesn't the ORPP AC get a traditional bank loan? 26

Q: Will there be any public reporting or accountability to how the loan is spent? 26

Q: What types of costs will the loan be used to pay? 26

Q: How much money has the ORPP AC spent on the services of consultants? 27

Q: How does the loan relate to administration costs of the ORPP? 27

Q: What is the ORPP Administration Corporation? 27

Q: What are the accountability mechanisms of the ORPP Administration Corporation? To whom does it report? 27

Q: Why is the ORPP IS still in place now that the ORPP AC has been established? 28

Q: Why did the government spend an additional $6 million than was estimated last year? Is this another example of the government overspending on consultants? 29

Q: On one hand you say you are launching the ORPP in 2017, but then indicate that the collection of contributions won't start until 2018…which is it 29

Q: Is the federal government committing to administer your plan if CPP talks fail? 30

Q: Would Ontario support a CPP enhancement that is a universal program to all employers and employees? 30

Q: If the government is going to proceed with measures such as introducing legislation on ORPP plan design, are you even serious about discussing the CPP? 31

Q: What progress has the government made on the ORPP to date? 31

Q: Why introduce legislation now? Didn't you commit to ongoing national discussions on a CPP enhancement? 31

[Legislation tracking to be introduced April 14, 2016] 32

Q: What will be included in upcoming legislation? 32

Q: What is the Ontario Retirement Pension Plan (ORPP)? 33

Q: Why is the ORPP needed? 33

Q: What are the anticipated impacts of the ORPP on Ontario's economy? 33

Q: Why is the Government advertising the Ontario Retirement Pension Plan? 34

Q: In 2015-16, how much did the ministry spend on the ORPP campaign (including advertising, marketing and market research)? 34

ONTARIO FINANCING AUTHORITY 35

Q: How does the Province plan to reduce its net debt-to-GDP ratio to its pre-recession level of 27 per cent? 35

Q: Ontario's debt has more than doubled since Premier McGuinty was first elected. When interest rates begin to rise, won't interest costs displace spending on the Government's priorities? 35

Q: How will the credit rating agencies respond to the 2016 Budget? 36

CORPORATE ELECTRICITY FINANCE DIVISION 37

Q: What's the current status of the funds in the Trillium Trust? 37

Q: Since the Hydro One IPO was completed several months ago and now the government has announced a secondary share offering, why haven't you made any regulations to dedicate the fiscal benefits of the Hydro One IPO to the Trillium Trust? When will you make these regulations and when will we see these amounts in the Trillium Trust? 37

Q: Why have no amounts been spent from the Trillium Trust yet, not even from the GM share gain amounts from 2014-15? And why are there only $1,000 in placeholder expenditure numbers for the Trillium Trust lines in Estimates? 38

Q: When will the government actually be able to start using funds from the Trillium Trust to pay for transit and infrastructure? 38

Q: How much was raised from the Hydro One IPO? 38

Q: What amount of proceeds will the Province receive from the secondary offering? 39

Q: What was the process involved in selecting the underwriters involved for the secondary offering 40

Q: Why is the interim Electricity Sector Dedicated Income (ESDI) $0 in 2015-16, and why is the forecast so low for ESDI in the 2016-17 Printed Estimates? Is this because of the Hydro One IPO reducing the Province's future revenues from Hydro One and reducing the amounts to pay for stranded debt? 40

INCOME SECURITY AND PENSION POLICY DIVISON

Q: When and where will the Basic Income pilot be implemented? How much will the Basic Income pilot cost? Your Estimates show $5 million in 2016-17 for the pilot.

A: The pilot in still in the inception stage. A start date and criteria for determining a location for the Basic Income pilot have not yet been determined. The government will be gathering expert advice on the design of the Basic Income pilot over the course of 2016. Once this work has been completed, the government will finalize the costs for the pilot.

Q: If there is an agreement on CPP enhancement within the year, will Ontario still implement the ORPP?

A: While Ontario is pleased that the federal government understands the importance of enhancing retirement security, the process to enhance the CPP is not simple and could take a very long time.

Ontario will continue to be an advocate of the need for enhanced retirement security and will work intensively with its federal, provincial and territorial counterparts to address the needs of future retirees.

To provide more time for discussion among provinces and the federal government, Ontario is phasing-in the launch of the ORPP by starting enrollment one year later than the original start date, and by starting the first phase of contributions in January, 2018.

Q: If there is agreement on a CPP enhancement that does not meet Ontario's objectives, what is Ontario's position?

A: The Province's extensive consultations in developing the ORPP have helped to inform Ontario's view that any CPP enhancement must be timely and provide a level of adequacy and targeted coverage that is consistent with the ORPP.

The government looks forward to collaboration on a CPP enhancement and other innovative approaches at the Federal-Provincial-Territorial Finance Ministers meeting in June 2016.

Ontario's main objective is to look at ways to meet the goals of the ORPP in an enhanced CPP framework, while preserving the ability to implement the ORPP, should that not be possible.

REVENUE AGENCIES OVERSIGHT DIVISION

Alcohol

Q: Why is this so complicated? There will be universal authorizations, existing winery stores operating inside grocery, controls on who sells what, some will be matched with beer but some won't. Why not just open it up?

A: The Council did not start from scratch in making its recommendations. It recognized the benefits of the existing retail channels for wine, including the LCBO and winery retail stores, and how we could build on and improve them for consumers and all producers.

There will be differences in the consumer experience. Just like beer, and just like grocery stores in general.

The bottom line is that we're getting what consumers want done — wine will be sold alongside beer in grocery stores.

Q: Why is the Council recommending only introducing wine into 150 grocery stores? There will be beer in 450 grocery stores.

A: We are expanding access responsibly. The number of new licences in the proposed new model is based on the total number of beer in grocery licences that were established under the beer framework – 450. There are currently 292 "off site" winery retail stores, so we added 150 new authorizations to bring it to about the same as beer.

The exact number of grocery stores selling wine through their own checkouts will depend on the number of WRS outlets that ultimately move inside the check-out at grocery stores. Of the 292 existing WRS outlets, the Council is recommending that up to 150 that are currently located in grocery and outside the grocery store checkout be enabled to operate inside grocery with a shared checkout.

In total, wine could be available in up to 300 grocery stores – including up to 70 locations authorized to sell by this fall.

Q: Why will grocery stores only be able to sell wine that costs $10.95 or more?

A: We believe that, where access is expanded, social responsibility standards should be strengthened. This price restriction is supported by social responsibility groups, including MADD.

This price restriction also supports the competitiveness of Ontario VQA wines in the grocery channel, and promotes the objectives of Ontario's Wine and Grape Strategy.

Gaming

Q: What is the future of the HRPFP?

A: The two year program extension will give confidence to the industry to make investments and business decisions for the coming years.

Beyond this time, the intention would be for OLG to establish a future, longer-term funding arrangement with the industry. The arrangement would be subject to government approvals, and further integrate gaming with horse racing and support industry sustainability.

Q: Why is OLG net profit to the province (NPP) expected to decline slightly from 2015-16 to 2016-17?

A: OLG continues to provide approximately $2 billion to the province, which helps to fund key public services like health care and education.

Delays in the procurement processes for private sector service providers for gaming and lottery have impacted the timelines for increased NPP from modernization.

2015-16 was an exceptional year for OLG NPP with projections of over $150M more than Budget 2015, mainly due to increased sales revenue from national lottery tickets (Lottomax, Lotto 6/49). NPP in 2016-17 is expected to decrease slightly in comparison, as lottery sales and resulting revenues return to more normal levels.

Q: Why is net profit to the province higher in 2015-16 compared with projections in Budget 2015?

A: Revenue from national lotteries (Lottomax and Lotto 6/49) is higher than was projected in Budget 2015, primarily due to a higher number of large jackpots. More large jackpots led to higher sales revenues.

Q: Is funding to hospitals being reduced by $107M in 2016-17 as a result of OLG's projected lower net profit to the province?

A: Revenue generated by OLG is paid into the province's Consolidated Revenue Fund (CRF). Allocations to the Ministry of Health and Long-Term Care (MOHLTC) are made from the CRF. OLG revenues targeted for health care only amount to 3% of MOHLTC's $52B budget.

Fluctuations in OLG's revenues do not impact health care funding levels or projections.

OFFICE OF ECONOMIC POLICY

Q: Will the 30% Off Ontario Tuition grant still be available or has it been eliminated?

A: The government will create a single major upfront grant — the Ontario Student Grant (OSG) starting in the 2017–18 school year by redirecting 100 per cent of the funding from the 30% Off Ontario Tuition grant and other grants offered by OSAP. This will make the student financial assistance system more progressive, effective and transparent for students and their families. The changes will provide students who have the greatest need for financial assistance with better access to grants upfront, when they need them.

The additional revenue from the proposed discontinuation of the tuition and education tax credits would be reinvested to support the OSG or other postsecondary, education, training and youth job programs.

Q: What evidence do you have that Ontario's economy is performing better than Canada's?

A: Ontario became one of the fastest growing provinces in 2014 and 2015, and private-sector economists expect this will continue until at least 2017.

On an annual basis, Ontario's real GDP increased by 2.7 per cent in 2014, strengthening from growth of 1.3 per cent in 2013 and outpacing the national average for the first time since 2002.

After a slow start to 2015 when the economy was affected by a number of temporary factors including unusually harsh winter weather, closure at auto plants for retooling, and a west coast port strike affecting exports, Ontario's economic growth gained pace in the second and third quarters of 2015, with real GDP advancing 0.4 per cent and 0.9 per cent, respectively. Ontario's economy outpaced the Canadian economy in all three quarters in 2015.

Q: Over the last 18-months there has been a significant shift in the global economic environment. Why do you remain positive about Ontario's economic prospects?

A: There have been significant shifts in the external economic environment over the past year and a half. Growth has slowed in emerging economies, commodity prices have fallen dramatically, and the Canadian dollar has weakened. This has shaken business confidence and left Ontario households unsure about the ultimate impact on their budgets and spending plans.

Yet, overall, Ontario is expected to benefit from the shifting global economic environment. Growth in the U.S., our largest trading partner, is expected to remain solid. As well, the more competitive Canadian dollar provides additional lift to our

exporters. Finally, Ontario is an oil-importing province which means consumers and businesses are benefitting from low oil prices. These factors provide an increasingly compelling case for increased business investment and will help support continued solid economic growth in coming years.

FINANCIAL SERVICES POLICY DIVISON

Q: What is the government's reaction to the preliminary policy recommendations released by the Expert Committee to Consider Financial Advisory and Financial Planning Policy Alternatives?

A: It would be premature for the government to comment at this time on the preliminary policy recommendations.

The independent Expert Committee to Consider Financial Advisory and Financial Planning Policy Alternatives released their preliminary policy recommendations in April 2016 as a means of facilitating further input from stakeholders and the public. The expert committee is seeking feedback through written submissions and an across-the-province public consultation process.

The Government expects the expert committee's final report in fall 2016 and will consider their recommendations at that time.

Q: Both the City of Ottawa and City of Toronto staff reports on vehicles for hire recommend minimum insurance requirements for drivers involved in ride-sharing. What are you doing to make sure that insurance is in place?

A: The sharing economy is changing the way transportation services are provided in Ontario. The government is committed to ensuring that Ontario's auto insurance system can help provide peace of mind to those offering and using these new types of transportation services.

Ontario's competitive market for auto insurance is already responding and adapting. FSCO has received filings from different companies proposing new auto insurance products tailored to the sharing economy, and in January FSCO approved one product allowing individual drivers to purchase coverage.

Other proposals are currently being reviewed by FSCO. While this work is proceeding, the reality is that there continues to be a significant insurance coverage gap.

The government is committed to protecting Ontario drivers and consumers by addressing that gap, and FSCO is aware of the importance to the government of achieving this objective as quickly as possible.

Towards that end, the government and FSCO are exploring how Ontario's flexible insurance regulatory system can quickly approve new insurance products. Using such flexible responses would allow new products to be introduced in the market while the government, working with the regulator and the insurance industry, develops the legislative and regulatory changes necessary to fully integrate the sharing economy into Ontario's auto insurance system.

Q: Some media reports have been sceptical about the public timelines for launching the Cooperative Capital Markets Regulatory System (CCMR). When is the CCMR expected to be established and operational?

A: The participating jurisdictions have agreed to target the enactment of legislation by June 30, 2016 and the Capital Markets Regulatory Authority becoming operational in the fall of 2016.

These timelines will be challenging given the need for the enactment of legislation by multiple legislatures. The participating jurisdictions are committed to moving forward with this initiative and market participants should take comfort that we will take the time necessary to ensure a successful launch of the Cooperative System. We will work to ensure a smooth transition to the new system for market participants and their businesses.

PROVINCIAL LOCAL FINANCE DIVISION

Q: What is the government doing to support municipalities?

A: Our government has a strong record of supporting and working with municipalities.

In 2016 alone, municipalities will benefit from over $3.8 billion in ongoing support through the Ontario Municipal Partnership Fund (OMPF), provincial uploads and other provincial initiatives – an increase of $2.7 billion above the support provided in 2003.

The government will continue to fulfill its commitment to upload social assistance benefit programs as well as court security and prisoner transportation costs off the property tax base. This will ensure that municipalities have more property tax dollars to invest in local priorities like roads, transit and economic development.

In partnership with communities, Ontario is making significant investments to revitalize infrastructure and grow the economy. The Province's infrastructure commitments include:

- Transit, transportation and other priority infrastructure through *Moving Ontario Forward* that is supported by $31.5 billion in dedicated funds, with about $16 billion available within the Greater Toronto and Hamilton Area (GTHA) and about $15 billion available outside the GTHA.
    - As part of *Moving Ontario Forward*, the Ontario Community Infrastructure Fund is being expanded to $300 million per year by 2018–19, which will provide ongoing support for critical local infrastructure priorities.
- Introducing a new Connecting Links program that will provide $20 million in 2016-17, up from $15 million announced in the *2015 Budget,* to help municipalities pay for construction and repair costs for municipal roads that connect two ends of a provincial highway through a community or to a border crossing. Funding for this program will increase to $30 million per year by 2018-19.

In addition to implementing the provincial uploads, the Province has worked in partnership with municipalities to introduce measures that support communities. These include:

- Sharing provincial gas tax revenues;
- Unconditional funding through the Ontario Municipal Partnership Fund;
- Long-term funding through the Ontario Community Infrastructure Fund;

- Connecting Links program;
- Developing a fair and equitable Ontario Provincial Police billing model;
- Working with municipalities to enhance the fairness, effectiveness and predictability of the Ontario's property tax and assessment system;
- Consulting with municipal partners through the Memorandum of Understanding with the Association of Municipalities of Ontario, as well as other forums;
- Undertaking an integrated review of the Municipal Act, the City of Toronto Act and the Municipal Conflict of Interest Act.

Q: Will the Ontario Municipal Partnership Fund (OMPF) be further reduced beyond 2016?

A. During our consultations, municipalities have been clear that the OMPF is an important unconditional funding program for many municipalities.

The Ontario Municipal Partnership Fund (OMPF) will continue to provide unconditional support to municipalities in 2016 and beyond. In 2016, the phase-down of the OMPF is complete, and the design of the core grants now reflects the long-term objectives of the program.

At this time, there is no plan to further reduce the OMPF.

It is also important to note that as announced in the *2015 Ontario Budget*, the OMPF has been increased by an additional $5 million in 2016, bringing the total OMPF envelope to $505 million rather than the $500 million previously planned for 2016. This additional funding is being provided through the Northern Communities Grant of the program to further recognize the challenges of northern municipalities.

Q: In the 2014 Budget, the Province announced that payments to municipalities under the Power Dam Special Payment Program would be reduced. What is the status of this phase-down?

A: The 2014 Budget announced a plan to phase down the program over three years, ensuring that more than 75% of the current funding level is maintained.

However, the phase-down reductions for 2015 and 2016 were deferred in light of consultations and analysis that were underway to consider alternative options to the phase-down, including the re-introduction of property taxation for power dams.

As announced in the 2016 Budget, following extensive review and consultations on this program, the Province has confirmed that stable funding to municipalities with respect to currently-eligible hydroelectric generating stations will remain in place for 2017 and future years.

OFFICE OF THE BUDGET

Q: The Ontario budget states that new federal funding has been included in the fiscal outlook based on 'prudent assumptions' about new transfers, but the federal government has not said how much Ontario will receive. What are these prudent assumptions and how much new federal money is counted in this budget?

A: The 2016 budget continues the government's plan to build Ontario up and deliver on its priority of growing the economy and supporting job creation. Ontario's plan includes investing in people's talents and skills, as well as making the largest investment in public infrastructure in the province's history.

Ontario and the federal government share common goals, common values and have the same priorities. The federal government has recognized that coordinated and collaborative action is needed to address the issues facing Ontarians and Canadians. And the Province is ready to work with a federal partner to build on Ontario's investments and welcomes federal support for Ontario's plans in areas that matter to Ontarians and Canadians.

The 2016 Ontario budget included some prudent assumptions about what new revenue Ontario could expect from the federal government based on what was in the federal government's election platform. Even the Financial Accountability Officer (FAO) indicated these assumptions were prudent.

For instance, the federal government has committed to $60 billion in new infrastructure funding over 10 years. The Province welcomes this new commitment to build on existing programs and provide both immediate infrastructure investments and longer-term funding to support shared infrastructure priorities, and is working with the federal government to secure its per capita share.

More information will become available in the coming months as the federal government rolls out the details of its various plans around infrastructure, climate change and skills training.

While in some cases, federal measures have already been included in Ontario's fiscal plan, the full extent of the impact of these measures must be analyzed when more details of federal proposals are released.

This is particularly true of infrastructure, where both levels of government are making significant fiscal commitments.

Q: Will cap-and-trade impact the Province's bottom line?

A: The government is committed to dedicating all proceeds from the auctioning of allowances under the cap and trade program to fund GHG-emissions reduction initiatives – which would help Ontario meet its 2020 and 2030 emissions reduction targets.

The fiscal plan included in the 2016 Budget reflects this commitment.

The medium-term revenue outlook includes projected cap-and-trade proceeds from the auctioning of carbon allowanced beginning in 2017. The current estimate for proceeds is:

$478 million in 2016-17; and

Between $1.8 billion and $1.9 billion annually starting in 2017-18.

The government has already taken an important step towards investing cap-and-trade proceeds with the investment of $325 million in 2015-16 through a new Green Investment Fund.

For spending of cap and trade proceeds in 2016-17 and beyond, the government is still working out the details which is subject to the enabling legislative framework that's currently under review by the Legislature – any changes to the legislation could impact the potential areas of investment that are eligible for funding from cap and trade proceeds.

Moving forward, Ontario's approach to the investment of cap-and-trade proceeds will be both balanced and strategic, focusing on initiatives where the opportunity for emissions reduction and sustainable economic growth is greatest.

The fiscal plan reflects the most recent information available at the time of the Budget, including the impact of new initiatives announced as part of the Budget. The government recognizes that different factors could affect the Province's outlook for revenue and expense. That is why the fiscal plan incorporates prudence – to protect the fiscal outlook against these potential adverse changes.

The fiscal plan incorporates a reserve, set at $1.0 billion in 2016-17, $1.1 billion in 2017-18 and $1.2 billion in 2018-19.

It also includes contingency funds to help mitigate expense risks that may otherwise adversely affect Ontario's fiscal performance.

Q: Is the Government using Asset Optimization Revenues to balance the Budget?

A: The government's plan to eliminate the deficit does not depend on the revenues from asset sales. Maximizing the value of these assets is part of the government's economic plan for Ontario.

In fact, the government is taking deliberate and responsible steps to achieve its goal of balancing the budget in 2017-18. Ontario's plan to eliminate the deficit is centred on transforming government and managing costs, and ensuring revenue integrity and addressing the underground economy.

Under the *Trillium Trust Act*, *2014,* all net revenue gains from the sale of designated assets are to be credited to the Trillium Trust to help fund further investments in public transit, transportation and other priority infrastructure as part of the Moving Ontario Forward initiatives.

The asset optimization target will help support the largest infrastructure investment in the province's history.

Q: Is the government restricting the ability of the FAO to access Cabinet Confidential documents?

A: No, the government is acting in accordance with the governing legislation that was approved by all three parties.

As per Section 12(2) of the *Financial Accountability Officer Act* (FAOA), a ministry or public entity is prohibited from disclosing to the Financial Accountability Officer (FAO) a record "described in subsection 12(1) of *the Freedom of Information and Protection of Privacy Act*" (FIPPA). Section 12(1) of FIPPA prohibits the release of any record that would reveal the substance of deliberations of the Executive Council or its committees.

In the end, the primary purpose of subsection 12(1) of FIPPA is to protect the deliberations or future deliberations of Cabinet. As a result, the section prohibits the disclosure of both existing records as well as any newly created records that would reveal those deliberations.

Q: What is the government's plan to hold average annual growth in program expense to 1.9% going forward? Given that this is below inflation, what programs are being cut?

A: Program expense is projected to grow at an average annual rate of 1.9 per cent between 2014-15 and 2018-19. This reflects the government's commitment to invest in priority areas to enhance public services, support economic growth and a low-carbon economy, and create jobs. [Ch. 3B, Pg. 29]

A key pillar of Ontario's plan to eliminate the deficit is transforming government and responsibly managing spending. [~Ch. 2A, Pg. 3] The government is achieving this through Program Review, Renewal and Transformation (PRRT) – a new approach to fiscal planning and expenditure management this is designed around four key principles:

- Examining how every government dollar is spent;
- Using evidence to inform better choices and improve outcomes;
- Looking across government to find the best way to deliver services; and
- Taking a multi-year approach to find opportunities to transform programs and achieve savings. [~Ch. 2B, Pg. 3]

PRRT is about more than saving money – it is a continuous planning approach focused on improving outcomes for government programs and services to ensure they are effective, efficient and sustainable. [Ch. 2B, Pg. 3]

Through cross-ministry horizontal collaboration, the government is taking focused action on major transformation and efficiency initiatives that will improve outcomes for Ontarians while helping to free up resources to invest in key priorities, such as health care and education. [Ch. 2B, Pg. 7]

The *2016 Budget* outlines progress on and expected outcomes of these major transformation and efficiency initiatives.

Q: Compared to the 2015 Budget, program spending is higher in each year. How is the government going to balance when spending is up?

A: Compared with the *2015 Budget*, program expense is projected to be $1.6 billion higher in 2016-17 and $4.2 billion higher in 2017-18. [Ch. 3B, Pg. 32]

These changes primarily reflect:

- Projected emissions reduction initiatives offset by cap-and-trade revenue;
- Small changes to Moving Ontario Forward projects;
- Adjustments for changes in demand and demographics across many programs; and
- Other investments in infrastructure. [Ch. 3B, Pg. 32]

These investments will help enhance the public services that Ontarians rely on, as well as stimulate economic growth to generate revenues on the path to balance. [~Ch. 2A, Pg. 3]

The government remains dedicated to a fiscally sound approach to managing the Province's finances, and to balancing the budget by 2017-18. The government is taking deliberate and responsible steps to achieve that goal. [~Ch. 2A, Pg. 3]

The government is projecting deficits of $5.7 billion in 2015-16 and $4.3 billion in 2016-17 – improvements of $2.8 billion and $0.5 billion compared with the 2015 Budget forecasts. [~Ch. 2A, Pg. 4, 5]

With the economy expected to continue to growth, and the Province's ongoing commitment to transform government programs and services, Ontario is projecting to return to balance in 2017-18 and remain balanced in 2018-19. Achieving balance will put net debt-to-GDP on a declining track. [~Ch. 2A, Pg. 5]

Ontario's plan to eliminate the deficit includes: [2A, Pg. 3]

- Transforming government and responsibly managing spending; and
- Ensuring revenue integrity and addressing the underground economy.

Q: The government is reporting overachievement on its annual deficit target for the 7th year in a row. How is this possible? Is the government purposely setting easy targets?

A: The government is projecting a deficit of $5.7 billion in 2015-16, an improvement of $2.8 billion compared with the *2015 Budget* forecast. It is also a $4.6 billion improvement compared with the 2014-15 deficit of $10.3 billion. This represents the Province's largest year-over-year reduction in the deficit in the last five years. [Ch. 2A, Pg. 4]

The overachievement in 2015-16 is mainly due to total revenue projected to be $2.2 billion above the *2015 Budget* plan, due to higher revenue from asset optimization in 2015-16, higher taxation revenues and stronger overall performance from Government Business Enterprises (GBEs). [~Ch. 3B, Pg. 4]

It is also the result of $0.2 billion in lower interest on debt expense, from lower-than-forecast interest rates, the lower forecast deficit and cost-effective debt management. [~Ch. 3B, Pg. 4]

Ontario's program expense is projected to be $0.4 billion higher than outlined in the *2015 Budget*, but consistent with the forecast laid out in the *2015 Ontario Economic Outlook and Fiscal Review*. This is primarily due to the $325 million down payment through the Green Investment Fund. [~Ch. 3B, Pg. 4]

The *2015 Budget* included a $1.0 billion reserve for 2015-16. In the *2016 Document*, the 2015-16 interim outlook maintains a $150 million reserve to protect the fiscal plan against any potential adverse changes that may occur before year-end. [~Ch. 3B. Pg. 5]

The government's fiscal targets are based on the best available economic and fiscal information at the time. They reflect a realistic and responsible plan to manage the Province's resources, while still protecting the vital services that Ontarians rely on. [Framework]

TAXATION POLICY DIVISION

Q: How many students will be affected when the tuition and education tax credits end?

A: About 1 million students are expected to report that they attended studies in 2015 that qualified them for tuition and education tax credits. About 800,000 attended full time studies, and about 200,000 attended part-time studies.

Q: Will everyone who loses their tax credits get back the money through the new student grant?

A: Currently, tax credits go to a larger group of students than those eligible for OSAP. The grant design has not been finalised. The government will announce details of the new program later this year.

Q: Why are you cutting R&D Tax Credits (i.e. OITC and ORDTC) when you say you want to support innovation?

A: Research and Development remains a key priority for the government. That is why the government is reinvesting savings from the proposed R&D tax credit changes into new targeted investments across key sectors of Ontario's economy.

The government is investing $35 million over five years towards establishing the Advanced Manufacturing Consortium; $20 million over three years to partner with Colleges to tackle industry challenges through innovation projects; and $50 million over five years in world-leading research at the Perimeter Institute.

Through the province's Business Growth Initiative, the government will continue to examine ways to encourage R&D investment in Ontario, increase the commercialization of research and better support export activity.

TAX AND BENEFITS ADMINISTRATION

Q: Why are Bad Debt Expenses increasing from approximately $46.7Million (2014-2015 Actuals) to $90Million (2015-2016 interim actuals)?

A: In recent years, the Ministry of Finance has uncovered several large scale tax evasion schemes while conducting tobacco tax audits. As a result of these audits, there have been a number of large tobacco assessments which have proven to be problematic from a collectability standpoint. The increase of $58M above the 2015-16 Printed Estimates was primarily a result of these large tobacco tax assessments.

Q: Why is the Ministry of Finance seeking an increase of $13.2Million in its Bad Debt Expense allocation in 2016-17 (from $32Million to $45.2Million)?

A: The Ministry of Finance has uncovered several large scale tax evasion schemes while conducting tobacco tax audits. As a result of these audits, there have been a number of large tobacco assessments which have proven to be problematic from a collectability standpoint. It is anticipated that these assessments will continue in the 2016-17 year. These assessments will be uncollectible and as a result the ministry has requested a $13.2M internal ministry re-allocation to increase the Bad Debt Expense allocation in the 2016-17 estimates.

Q: How is Ontario supporting the sharing economy?

A: The government has taken action to begin supporting the development of a robust sharing economy, including announcing the creation of the Sharing Economy Advisory Committee, with representation from key ministries, to oversee the development and coordination of Ontario's approach to the sharing economy.

Further, in the 2016 Budget, the government announced a series of new measures, including:

- Working to ensure the province's auto insurance system can help provide peace of mind to those offering and using new types of transportation services through the sharing economy;
- Commencing consultation with industry and communities in spring 2016 on options to facilitate new and innovative choices for intercity passenger travel. The government will consult on a new regulatory regime to ensure safe and sustainable intercity passenger travel services;
- Piloting a program with Airbnb, a key sharing economy platform, to inform Ontarians who engage in home sharing about their consumer rights and responsibilities, and raise awareness of tax obligations; and

- Committing to consultations led by the Sharing Economy Advisory Committee, and focussed on the sharing economy, to help determine the best approach for Ontario moving forward.

Q: Why has the government introduced more red tape for estate representatives?

A: Following a 2011 Budget commitment to enhance EAT compliance, the Ministry of Finance (MOF) is collecting information needed to perform audits and verify that correct amounts of the tax have been paid. Effective January 1, 2015, estate representatives are required to submit an Estate Information Return with MOF to substantiate the total estate value provided to the courts. This new requirement does not alter the amount of tax payable or how the tax is calculated. An Estate Information Return is only required where an Estate Certificate has been applied for and issued by the courts.

Q: Has the government seen an increase in the Estate Administration Tax collected since January 1, 2015?

A: Tackling tax avoidance remains a key strategy as part of a robust and transparent administration process. The requirement to file an Estate Information Return (EIR) came into effect on January 1, 2015, for all applications made for an Estate Certificate on or after this date. Therefore, the first EIRs did not become due until the spring of 2015. In addition to verifying and auditing selected files, MOF continues to respond to written enquiries, telephone calls, and provide outreach activities to estate representatives and the legal profession to raise their awareness and understanding in meeting their obligations with respect to the Estate Administration Tax Act.

Q: What is the government doing to address Aggressive International Tax Planning?

A: All corporations should pay their fair share of taxes. That is why Ontario, in conjunction with the federal government, has taken substantive actions to help better address aggressive corporate tax avoidance. For example, under a fee-for-service agreement with the Canada Revenue Agency, Ontario invests in audit activities targeting aggressive international tax planning and the underground economy.

With Ontario's significant investment the Canada Revenue Agency was able to increase overall audit coverage rates, further reinforcing the integrity of the tax system. The government's agreement with the federal government to address non-compliance with federally administered provincial taxes through ongoing enhanced compliance-focused measures, including those that address the underground economy and aggressive tax planning has generated over $630M since 2013-14.

Q: What is Ontario doing to address the underground economy?

A: The government has made progress in fighting underground economic activities through:

Ongoing enhanced compliance-focused measures, including those that address the underground economy and aggressive tax planning, the Province has generated over $930 million to date - a $330 million increase over what was reported in the 2015 Budget;

Consultations with high-risk sectors, with a view to partnering with industry and gaining insight into how best to tackle the underground economy;

Requiring corporations to demonstrate federal and provincial tax compliance before receiving government contracts. Since February 2014, the government has verified compliance with tax obligations for more than 2,200 contracts; and

Amending the Taxation Act, 2007, to make the sale, use or distribution of electronic sales suppression devices an offence.

Taking specific actions in response to Parliamentary Assistant Laura Albanese's consultation with the residential construction industry, including:

Extending the residential roofing pilot project for an additional two years and examining opportunities to expand its scope beyond roofing to other areas of residential construction;

Launching a public awareness campaign to educate the public on the risks and potential liabilities associated with participation in the underground economy;

Dispatching specialized audit teams to focus on sectors that are at high risk of underground economy activity, in partnership with the Canada Revenue Agency;

Proposing legislation that would enhance information sharing, enable greater enforcement, and introduce additional penalties for participation in the underground economy; and

Helping home owners hire legitimate contractors when taking advantage of government-funded rebates for enhancing the energy efficiency of their homes.

ORPP ADMINISTRATION CORPORATION

Q: Why is the government providing the ORPP AC with a loan?

A: The ORPP AC is the independent, arms-length organization that will set-up and administer the ORPP.

The government is providing the ORPP AC with a repayable loan for essential work required to develop administrative systems, recruit a skilled team and launch the employer verification and enrolment process in 2017 and begin collection of contributions on January 1, 2018.

Ongoing costs to administer the ORPP would come from the plan, not from government revenues.

The ORPP AC is expected to repay the loan, with interest, from plan assets within a 10-year period.

Q: How much money is being loaned?

A: The government is providing flexibility for the ORPP AC to draw down based on operational requirements, up to $400M over three fiscal years. Costs would cover set-up expenses, including organizational start-up, development of tools/systems required for the verification and enrolment process, and the build/launch of administrative systems.

The government will monitor spending of the ORPP AC, while giving the Corporation the independence and flexibility it requires to administer the ORPP.

Accountability is at the core of the ORPP. Through a strong accountability and transparency framework, the independent Board of Directors and ORPP executives will be fully accountable to the plan's members. This framework has been benchmarked against the best practices of other leading independent pension plans.

Accountability measures include:

- An annual report tabled in the Legislature;
- Annual meetings for members;
- A publicly available Memorandum of Understanding; and,
- External auditing and strong financial controls.

Q: In the 2016/17 estimates, it shows a loan amount of up to $240M. How is that money going to be used?

A: This year (2016) is a critical period for the ORPP AC, with the launch of the employer verification/enrolment process and the building of systems needed to begin collecting contributions on January 1, 2018.

If pressed for more information: Further questions regarding ORPP AC expenditures can be directed towards the Administration Corporation.

ORPP IMPLEMENTATION SECRETARIAT

TOP 5 QAs

Q: How much has been spent on the ORPP Implementation Secretariat (ORPPIS) to date?

A: The Ministry is currently in the process of closing its books. The final expenditures for the ORPP IS will be included in the government's Public Accounts for 2015-16. The current $20M projection addresses costs associated with staffing and other related costs for the ORPP IS.

With regards to Other Direct Operating Expenditures (ODOE), the majority of expenses incurred by ORPP IS relate to the costs of services provided by third party vendors in areas where expertise external to government were required, such as actuarial analysis, legal advice and expert technical advice for the pension administration.

Approximately $5.5 million will be recovered from the Administration Corporation for expenditures directly related to the administration of the plan.

Q: Why does the Ministry's direct spending for ORPP decrease by $12.5M in 2016-17?

A: The Ministry, through the ORPP IS, continues to lead the implementation of the ORPP. Now that the ORPP Administration Corporation has been established, operational work has transferred to the Corporation, thus decreasing funding requirements for the Secretariat.

Funding for the ORPP IS in 2016-17 will support the development of regulations for the ORPP Act, 2016, as well as legislation to create the Office of the Chief Actuary and oversight responsibilities related to the ORPP Administration Corporation.

Q: Why is the government providing the ORPP AC with a $240M loan in 2016-2017?

A: The ORPP AC is the independent, arms-length organization that will set-up and administer the ORPP.

The government is providing the ORPP AC with a repayable loan for essential work required to develop administrative systems, recruit a skilled team and launch the employer verification and enrolment process in 2017 and begin collection of contributions on January 1, 2018.

Ongoing costs to administer the ORPP would come from the plan, not from government revenues.

The ORPP AC is expected to repay the loan, with interest, from plan assets beginning in 2019. The loan will be repaid by 2027.

If pressed about the terms of the loan:

The loan to the ORPP AC has been made on commercial terms. This includes the government's cost of borrowing plus a small margin of additional interest (25 bps).

Q: In total, how much is the government loaning the ORPP AC for set-up expenses?

A: The government is providing flexibility for the ORPP AC to draw down the loan based on operational requirements, up to $400M over three fiscal years. Costs would cover set-up expenses, including organizational start-up, the development of tools/systems required for the verification and enrolment process, and the build/launch of administrative systems.

The government will monitor the ORPP AC's spending, while giving the Corporation the independence and flexibility it requires to administer the ORPP.

Future administrative costs associated with the ORPP would be funded from member contributions and investment returns.

Q: In addition to the current costs and the loan to ORPP AC, how much money will it cost to implement the ORPP? Are we talking billions?

A: From the outset the government has said that it is committed to cost-effective and efficient administration of the ORPP that leverages existing expertise in Ontario's pension and financial services sector.

The ORPP AC will benchmark its administration costs to Canada's leading pension organization.

It would be premature to estimate the cost of implementing all components of the ORPP.

Q: Isn't the federal government helping to administer the ORPP?

A: The government is continuing to have discussions with federal government departments on the possibility of cooperation in administering the plan. This is in addition to the exploring and assessing different options, including leveraging infrastructure that exists within the Government of Ontario and exploring third-party private sector delivery through a procurement that is currently underway.

Running a modern pension plan is not simple and so the government continues to explore multiple options. In fact, it may make sense to work with several partners to support effective administration of the plan.

Q: Who pays for the ORPP start-up costs if the CPP is enhanced and the plan is never implemented?

A: The government's intention is that eligible start-up costs it incurs would be recovered from the plan.

If those circumstances arise, however, it means that there is an agreement on a CPP enhancement that will address the retirement security challenges facing Ontarians. That has always been the government's objective.

By continuing with preparations for the ORPP, the government is ensuring that, if no consensus on CPP enhancement is reached, retirement security can be strengthened in Ontario through the ORPP.

Loan Agreement with the ORPP Administration Corporation

Q: How much money is being loaned?

A: The government is providing flexibility for the ORPP AC to draw down based on operational requirements, up to $400M over three fiscal years. Costs would cover set-up expenses, including organizational start-up, development of tools/systems required for the verification and enrolment process, and the build/launch of administrative systems.

The government will monitor spending of the ORPP AC, while giving the Corporation the independence and flexibility it requires to administer the ORPP.

Accountability is at the core of the ORPP. Through a strong accountability and transparency framework, the independent Board of Directors and ORPP executives will be fully accountable to the plan's members. This framework has been benchmarked against the best practices of other leading independent pension plans.

Accountability measures include:

- An annual report tabled in the Legislature;
- Annual meetings for members;
- A publicly available Memorandum of Understanding; and,
- External auditing and strong financial controls.

Q: In the 2016/17 estimates, it shows a loan amount of up to $240M. How is that money going to be used?

A: This year (2016) is a critical period for the ORPP AC, with the launch of the employer verification/enrolment process and the building of systems needed to begin collecting contributions on January 1, 2018.

Q: How much of the loan has been drawn down to date? What has that money been used for?

A: $26 million has been drawn down to date.

The money has been used to fund essential start-up requirements for the ORPP AC. This includes contracts for expert services required to administer and operationalize the ORPP (e.g. organizational start-up, legal services, technical experts) and initial recruitment of staff.

Q: Is this money being spent on high salaries? What is the compensation framework for the ORPP AC?

A: The independent initial board of directors of the ORPP AC is responsible for establishing the Corporation's compensation framework.

Salaries would be benchmarked to other leading pension plans in Ontario to ensure that the ORPP AC is able to recruit essential talent.

The compensation of the top five executives, including the CEO, will be reported on an annual basis in the ORPP AC's Annual Report. This is in line with the best practices of Ontario's leading pension plans.

If pressed for more information: The ORPP AC has hired external advisors to assist with the compensation framework.

Q: Does the government expect to be repaid?

A: Yes, the repayable loan is structured on commercial terms. This means that it includes repayment obligations, with interest, over an established period of time.

Q: What would be the cost to government if the ORPP is cancelled after it launches?

A: The government is providing flexibility for the ORPP AC to draw down the loan based on operational requirements, up to $400M over three fiscal years. Costs would cover set-up expenses, including organizational start-up, development of tools/systems required for the verification and enrolment process, and the build/launch of administrative systems. Future ORPP administration costs would be funded from member contributions and investment returns.

The government's intention is that all eligible start-up costs it incurs would be recovered from the plan. The level of contributions collected, benefits owed and investment returns at the time of cancellation will determine the net cost of the cancellation.

Q: How is the repayment schedule structured? Will it be charged interest?

A: The ORPP AC has an obligation to repay the loan, principal and interest, within ten years.

This repayment period will help ensure that payments do not negatively impact plan sustainability. It is intended that the ORPP AC repay the loan from investment returns to make sure that contributions and benefits are reserved in trust for members.

Q: Why doesn't the ORPP AC get a traditional bank loan?

A: The repayable loan is structured on commercial terms. This was the appropriate vehicle given the ORPP AC would not have assets until contributions begin in 2018.

Q: Will there be any public reporting or accountability to how the loan is spent?

A: The loan to the ORPP AC is structured on commercial terms and will be repaid with interest. Actual expenditures from the loan will be reported through public accounts.

In addition, the ORPP AC is required to develop and publicly release an annual report, which would include financial statements of the Corporation. The report will also include compensation for the top five executive positions.

Accountability is at the core of the ORPP. Through a strong accountability and transparency framework, the independent Board of Directors and ORPP executives will be fully accountable to the plan's members and to government. This framework has been benchmarked against the best practices of other leading independent pension plans.

Q: What types of costs will the loan be used to pay?

A: The repayable loan will be used to fund set-up expenses, including organizational start-up, development of tools/systems required for the verification and enrolment process (e.g. software licencing, hardware and technical writing), and the build and initial operation of administrative systems.

The loan will not be used to fund ongoing plan operations or investments.

Q: How much money has the ORPP AC spent on the services of consultants?

A: The ORPP AC has obtained expert services required to administer and operationalize the ORPP (e.g. organizational start-up, legal services, technical experts).

The government and the ORPP AC are committed to leveraging the expertise and experience of the industry and the financial sector to deliver a simple, reliable and cost-effective plan.

If pressed for more specifics: The ORPP AC procures goods and services based on a policy that was benchmarked against government and other leading pension plans.

Q: How does the loan relate to administration costs of the ORPP?

A: The ORPP will be one of the largest pension plans in the Canada. At maturity, the ORPP is expected to have over 4 million members, involve nearly 450,000 employers and collect more than $6 billion annually.

The government is committed to a simple, reliable and cost effective administration. This includes leveraging the strong, existing capabilities found in Ontario's pension and financial services sector and benchmarking ORPP administration costs against Canada's leading pension organizations.

We are continuing to have discussions with federal government departments on the possibility of cooperation in registration and administering the plan. This is in addition to the exploring and assessing different options, including leveraging infrastructure that exists within the Government of Ontario and exploring third-party private sector delivery.

Q: What is the ORPP Administration Corporation?

A: The ORPP Administration Corporation is the independent, arm's length organization that will administer the ORPP. Its responsibilities include:

- Enrolling eligible employers and employees;
- Collecting, investing and holding contributions in trust for members;
- Administering benefits; and
- Communicating with employers, members and other beneficiaries.

Q: What are the accountability mechanisms of the ORPP Administration Corporation? To whom does it report?

A: Accountability is at the core of the governance structure of the ORPP Administration Corporation. Through a strong accountability and transparency framework, the independent board of directors and ORPP executives will be fully

accountable to the plan's members. This framework mirrors the best practices of other leading independent pension plans.

Accountability measures include:

- A Memorandum of Understanding being developed between the ORPP Administration Corporation and the Minister of Finance
- An annual report;
- An annual meeting for beneficiaries;
- External auditing and strong financial controls; and
- A review of the governance framework established by legislation within 10 years.

ORPP Implementation Secretariat

Q: Why is the ORPP IS still in place now that the ORPP AC has been established?

A: The Ontario Retirement Pension Plan Implementation Secretariat leads the policy, governance and legislative functions to establish the ORPP and supports the set-up of the ORPP AC.

Specific responsibilities include:

- Finalizing the plan design for the ORPP, including conducting analysis, developing policy options, preparing the plan text, developing a funding policy, conducting actuarial analysis, and drafting legislation.
- Leading discussions between governments with respect to ORPP implementation, including registration of the plan, data sharing agreement, and exploration of options for administration cooperation.
- Establishing and supporting the ORPP AC to ensure successful launch and implementation.
- Providing strategic communications and stakeholder engagement advice and services to support ORPP development and implementation.
- Developing an oversight function related to the ORPP, including monitoring progress of deliverables and achievements.

Q: Why did the government spend an additional $6 million than was estimated last year? Is this another example of the government overspending on consultants?

A: Implementing the ORPP is one of the government's top priorities and involves very aggressive timelines. The government continues to drive forward plan implementation to ensure this priority is delivered in timely manner. Implementation activities include acquiring third party vendors to deliver expert services in the areas of actuarial analysis, legal advice and expert technical advice for the pension administration.

Timely and thoughtful procurement of these services is critical to ensure all milestones are met and registration of employers can begin in 2017. The costs associated with operational procurements will be reimbursed by the ORPP AC.

Approximately $5.5 million will be recovered from the Administration Corporation for expenditures directly related to the administration of the plan.

Federal Collaboration

Q: On one hand you say you are launching the ORPP in 2017, but then indicate that the collection of contributions won't start until 2018…which is it?

A: The ORPP implementation timeline has being modified. Employer verification will begin later in 2016 with enrollment of employers beginning in January 2017. This process will support a seamless transition to the collection of contributions starting on January 1, 2018 for large and medium size employers.

All other implementation dates remain the same. Contribution rates for employers without a registered pension plan will still be phased in as previously announced.

Many employer groups have called on the government to delay the launch of the plan to ensure a successful and smooth implementation, and allow a window to discuss a national solution. The government has modified the ORPP timelines to reflect this advice.

The government is on track to ensure that all eligible Ontario workers are enrolled in a comparable workplace plan or the ORPP by 2020.

ORPP Phase-In and Contribution Schedule (rates reflect contributions to be made by each employer and employee) Employer registration in the ORPP would begin on January 1, 2017.				
Type of Employer	Jan 1, 2018	Jan 1, 2019	Jan 1, 2020	Jan 1, 2021
Wave 1: large employers without registered workplace pension plans	**0.8%**	**1.6%**	**1.9%**	**1.9%**
Wave 2: medium employers without registered workplace pension plans	**0.8%**	**1.6%**	**1.9%**	**1.9%**
Wave 3: small employers without registered workplace pension plans	**0%**	**0.8%**	**1.6%**	**1.9%**
Wave 4: employers with registered pension plans that either do not meet the comparability test or do not cover all classes of employees	**0%**	**0%**	**1.9%**	**1.9%**

Q: Is the federal government committing to administer your plan if CPP talks fail?

A: Ontario is pleased with the cooperation and partnership it has received from the new federal government. They have agreed to facilitate ORPP plan registration and to enter into a data sharing agreement to support implementation. The federal government has also committed to working with Ontario to ensure effective plan administration.

Ontario has always stated that it is committed to a simple, reliable and cost effective administration of the ORPP. Partnering with the federal government on plan registration, data sharing, and exploring models of plan administration supports this objective.

However, running a modern pension plan is not simple and so other options for administration are being explored including within the broader public sector and in partnership with private sector vendors. In fact, it may make sense to work with several partners to support effective administration of the plan.

Q: Would Ontario support a CPP enhancement that is a universal program to all employers and employees?

A: In designing the ORPP it was clear that, even though two thirds of Ontarians are not members of a workplace pension plan, many employers do provide generous workplace pension plans.

With this in mind, the government developed the framework of a comparable plan – so that employers that provide a generous workplace pension plan would not be

required to contribute to the ORPP. This is a central part of the ORPP and reflects the objective of introducing the ORPP in a manner that doesn't adversely impact generous workplace pension plan arrangements that are already working well for employees and employers.

The Province's extensive consultations in developing the ORPP have helped to inform its view that a CPP enhancement must be timely and provide a level of adequacy and targeted coverage that is consistent with the ORPP. Ontario is bringing this insight to the national discussion.

The province is also listening to the federal government and the other provinces and territories, and reflecting on their perspective on a CPP enhancement.

Q: If the government is going to proceed with measures such as introducing legislation on ORPP plan design, are you even serious about discussing the CPP?

A: The government has always said a national solution to enhancing retirement security is the best way forward. It has also said that it is imperative to address the challenge of retirement security ***now***. It is a critical issue for the future well-being of Ontarians and the economy that cannot be delayed.

Minister Morneau has outlined an aggressive timeline to enhance the CPP, including achieving a consensus to move forward by June and a national agreement by the end of 2016. The province looks forward to these discussions.

Legislation

Q: What progress has the government made on the ORPP to date?

A: The government is on track to meet its objective that, by 2020, all eligible Ontario workers are covered by a comparable workplace plan or the ORPP.

The ORPP Administration Corporation is now established and the process to register the plan with the Canada Revenue Agency is well underway. Final elements of plan design will be enshrined in legislation this spring. 6.

Employer verification will begin later in 2016 with enrollment of employers beginning in January 2017. This process will support a seamless transition to the collection of contributions starting on January 1, 2018 for large and medium size employers. The additional time is also enabling national discussion on a CPP enhancement to proceed.

Q: Why introduce legislation now? Didn't you commit to ongoing national discussions on a CPP enhancement?

[Legislation tracking to be introduced April 14, 2016]

A: The government has been clear that about the need to enhance retirement security today. The problem cannot be left to some ambiguous future date. It is critical for the well-being of Ontarians and the economy that we take action now.

Ontario moved to create the ORPP after the previous federal government refused to discuss enhancing the CPP. Today, the circumstances have changed and Ontario is playing a leading role in discussing a national solution.

However, to successfully launch the ORPP plan preparations must continue alongside federal discussions to ensure that, no matter the outcome, Ontario will retire with enhanced security.

Moving forward with legislation will ensure that employers have the time they need to prepare for the ORPP.

Q: What will be included in upcoming legislation?

A: The government intends to introduce further legislation on the ORPP in the spring of 2016. The legislation will set out the comprehensive requirements of the ORPP, plan sustainability and the compliance and enforcement regime.

Further legislation in 2016 would establish an Office of the Chief Actuary to provide independent actuarial advice and valuations of the ORPP to government and the ORPP Administration Corporation.

Plan Sustainability

Q: What accountability mechanisms exist to ensure that plan members' benefits will be there for them when they retire?

A: Through extensive actuarial modelling, the government has designed the plan to be sustainable over the long term. To ensure continued plan sustainability, a formal funding policy would be established that provides for appropriate adjustments to be made to plan benefits and/or contributions.

Background

Q: What is the Ontario Retirement Pension Plan (ORPP)?

A: The ORPP is a mandatory provincial pension plan that is scheduled to launch on January 1, 2017, with employer and employee collections beginning in 2018.

The ORPP would:

- Include eligible employees who are employed in Ontario and not participating in a comparable workplace pension plan;
- Aim to replace 15 per cent of an individual's pre-retirement earnings up to maximum earnings threshold of $90,000 (in proposed 2017 dollars);
- Require eligible employers and employees each to contribute up to 1.9% of employee earnings
- Require benefits to be earned as contributions are made; and
- Be managed by the ORPP Administration Corporation – an independent, arm's length entity, which will be responsible and fully accountable for administration and investment in the best interest of plan members.

Q: Why is the ORPP needed?

A: Experts generally recommend that individuals aim to replace 50-70% of their pre-retirement income to maintain their standard of living in retirement. However, studies show that a significant number of Ontarians are concerned they will not have sufficient income in retirement.

Two-thirds of Ontario's workers do not participate in a workplace pension plan. Moreover, three-quarters of younger workers – aged 25 to 34 – do not participate in a workplace pension plan.

Q: What are the anticipated impacts of the ORPP on Ontario's economy?

A: The government commissioned the Conference Board of Canada to conduct a cost-benefit analysis on the economic impact of the ORPP that was tabled in the legislature in December. The report's conclusion is clear – accounting for all factors and opportunity costs, both consumers and the economy are better off under the ORPP. This is good news for Ontarians.

The report reiterates that in the long-term, the ORPP is expected to add over $39 billion to Ontario's economy by ensuring that future retirees have adequate retirement savings. It also notes the ORPP is a more cost-effective means of helping individuals save than traditional retirement savings vehicles.

The report does acknowledge a small, short-term impact to the economy. However, this impact is partially mitigated by reductions in employment insurance and WSIB premiums. As well, the government remains committed to taking measures today to strengthen the economy.

ORPP Advertising and Market Research Costs

Q: Why is the Government advertising the Ontario Retirement Pension Plan?

A: The ORPP is intended to provide a predictable source of retirement income for life, for millions of Ontarians. By 2020, every employee in Ontario will be part of either the ORPP or a comparable workplace pension plan.

The ORPP is a key pillar of the government's economic plan. It is important that Ontarians know where to get the most up-to-date information on the plan.

There is a lot of work that needs to happen between then and now. To build awareness of the ORPP ahead of its launch in January 2017, we have recently released ads about the ORPP on TV radio and digital platforms.

The government has a responsibility to raise awareness and communicate information about its programs and services.

These ads are meant to increase Ontarian's awareness of the ORPP, drive them to http://www.ontario.ca/orpp for more information and answer questions about the design and implementation of the plan.

Q: In 2015-16, how much did the ministry spend on the ORPP campaign (including advertising, marketing and market research)?

A: In total, $6,614,987 was spent on the ORPP advertising campaign. Of this figure, $1,770,067 was spent on agency fees.

Media buying costs totalled $4,689,080. This amount will be recouped through the Bulk Media Buy. In total, $155,840 was spent on market research to provide benchmarking and tracking data, as well as creative feedback and insights for advertising and marketing purposes.

ONTARIO FINANCING AUTHORITY

Q: How does the Province plan to reduce its net debt-to-GDP ratio to its pre-recession level of 27 per cent?

A: Debt is incurred primarily for two reasons: to finance deficits and invest in capital assets. Ontario ~~is making~~has a plan to make public infrastructure investments of ~~more than~~about $~~137~~ 190 billion over ~~the next 10~~13 years~~, or about $160 billion over 12 years,~~ starting in 2014–15.

One of the objectives of investment in capital is to improve the economic growth of the Province, supplementing GDP growth. As a result, the net debt-to-GDP ratio will come down more quickly than it would have without these investments in capital assets.

The government's plan therefore hinges on first balancing the budget, and continuing to make investments in capital assets which will add to economic growth, resulting in GDP growing more quickly than debt, and lowering the net debt-to-GDP ratio to our 27 per cent target.

Q: Ontario's debt has more than doubled since Premier McGuinty was first elected. When interest rates begin to rise, won't interest costs displace spending on the Government's priorities?

A: Ontario has a realistic plan to balance its budget while investments are made in the priorities of Ontario families – health care, education, the environment and infrastructure.

Investor demand has allowed the Province to extend the term of its debt in recent years and lock in low interest rates for a longer period. This term extension reduces the Province's refinancing risks and helps offset the impact of expected higher interest rates on its IOD costs. Since ~~2010~~ the beginning of fiscal year 2010-11, Ontario has issued approximately $63.0 billion in bonds with terms of 30 years or longer to lock in low rates. ~~the province has borrowed $53.5 billion in the 30-year term.~~

~~The 2010 Budget forecasted that, by 2016–17, the Province would have to spend 11.7 cents of every revenue dollar received on interest. The current forecast is 2.7 cents lower, at 9.0 cents of interest costs for every dollar of revenue. This ratio is lower than it was in the 1990s, and is forecast to remain lower through the outlook period in 2018–19.~~

As a result of locking in these historically low interest rates for the long term, the Province's interest cost per every dollar of revenue is forecast at 8.2 cents in 2017-18. This is 3.1 cents lower than the 11.3 cents forecast for 2017-18 in the 2010 Budget and the lowest since 1991-92. Over the medium term outlook until 2019-20, this ratio is forecast to remain significantly below the average since 1991-92.

Q: How will the credit rating agencies respond to the 2016 Budget?

A: Ontario currently maintains a double-A rating with three of its four credit rating agencies and all of the ratings were confirmed following the 2017 Budget. Ontario continues to outperform its deficit projections and is on track to a balanced budget by 2017–18. Moreover, Ontario's net debt-to-GDP ratio is expected to continue its downward trend from its peak in 2014-15 at 39.2% and is forecasted to be 37.2% in 2019-20.~~peak in 2015–16 at 39.6 per cent, remain unchanged in 2016–17, decline to 38.9 per cent in 2017–18 and 38.5 per cent in the 2018–19.~~

~~We met with the rating agencies following the 2016 Budget and expect to hear back from them over the next few months.~~

CORPORATE ELECTRICITY FINANCE DIVISION

Trillium Trust

Q: What's the current status of the funds in the Trillium Trust?

A: The Public Accounts of Ontario 2014-2015, published in September 2015, show that $1.35 billion has been dedicated to the Trillium Trust.

These are the net proceeds from the sale of the Province's remaining General Motors common shares in early 2015, combined with net proceeds from a September 2013 GM share sale and the redemption of preferred shares in late 2014.

Under the Trillium Trust Act, Hydro One shares have been designated as assets for which the net revenue gains from a sale are dedicated to the Trillium Trust. Once the Province has received all of the final financial inputs to fully assess and account for the net revenue gains associated with the Hydro One IPO, it will introduce a regulation to designate the net gain amount from the Hydro One IPO to be dedicated to the Trust and prescribe the other net revenue benefits resulting from Hydro One's recognition of a deferred tax benefit, to be dedicated to the trust.

Q: Since the Hydro One IPO was completed several months ago and now the government has announced a secondary share offering, why haven't you made any regulations to dedicate the fiscal benefits of the Hydro One IPO to the Trillium Trust? When will you make these regulations and when will we see these amounts in the Trillium Trust?

A: Under the Trillium Trust Act, Hydro One shares have been designated as assets for which the net revenue gains from a sale are dedicated to the Trillium Trust.

The determination of the net revenue gains related to the Hydro One IPO depends in part on Hydro One's audited, year-end financial statements. Hydro One released its 2015 Annual Financial Statements on February 12, 2016. Once the Province has received the financial information to fully assess and account for the net revenue gains, including the determination of a deferred tax benefit impact on the Province's net revenues, it will introduce regulations to designate the amounts to be dedicated to the trust.

Q: Why have no amounts been spent from the Trillium Trust yet, not even from the GM share gain amounts from 2014-15? And why are there only $1,000 in placeholder expenditure numbers for the Trillium Trust lines in Estimates?

A: The Province is on track to generate $5.7 billion in net revenue benefit from asset optimization to be dedicated to the Trillium Trust to help support investments in transit, transportation and other priority infrastructure projects under the $31.5 billion Moving Ontario Forward initiative over 10 years to create jobs, boost productivity and revitalize communities.

Like most large infrastructure investments, initial spending on Moving Ontario Forward projects such as GO Regional Express Rail is focused on planning, design, property acquisition and other activities to get projects construction-ready. The government plans to begin drawing down on the balance in the Trillium Trust starting in 2016-17, as it is expected that spending will ramp up significantly once this preliminary work is completed and construction activity is underway. This will allow for identification for cash flow timing requirements from the Trillium Trust during 2016-17 and subsequent years.

Q: When will the government actually be able to start using funds from the Trillium Trust to pay for transit and infrastructure?

A: The government plans to begin drawing down on the balance in the Trillium Trust in 2016-17 to support the largest investment in public infrastructure in Ontario's history. As the Moving Ontario Forward initiative was announced prior to Budget 2014, with incremental transit, transportation and other priority infrastructure projects, the expected timeframe for expenditures for these projects and drawdowns from the Trillium Trust are expected to happen over time, starting in 2016-17.

Based on planned expenditures, in 2016-17 the Trillium Trust would support Moving Ontario Forward initiatives, such as

- Regional Express Rail (RER);
- Hurontario Light Rail Transit (LRT); and
- Ontario Community Infrastructure Fund.
- *Asset Optimization*

Q: How much was raised from the Hydro One IPO?

A: From the November 2015 IPO and related share sales, the Province raised about $1.9 billion in gross proceeds before expenses and fees.

- In the November 2015 IPO, the Province sold 89,250,000 common shares at the IPO price of $20.50 per share for total gross proceeds to the Province of approximately $1.83 billion.

- Including other related share sales at the IPO price, the gross proceeds were $1.9 billion, including approximately $116 million in gross proceeds from shares sold to separate trusts established respectively by the Power Workers' Union (PWU) and the Society of Energy Professionals (SEP).

The determination of the net revenue gains from the gross proceeds depends on the finalisation of the book value of the shares sold at the time of the IPO and expenses and fees related to the IPO. The net gain from the November 2015 share sales is currently estimated at about $0.8 billion.

There are other associated benefits, aside from the sale of shares.

- An expected revenue benefit to the Province due to the revaluation of its fixed assets as a result of the IPO, resulting in Hydro One recognizing a deferred tax benefit. Based on the Prospectus, the Province communicated that it expected to realize a benefit of about $2.2 billion, which is subject to update and finalisation in Public Accounts.

- The Province also received cash (non-revenue benefits) of $1 billion in special payments from Hydro One, including $800 million in a special dividend paid prior to the IPO, and about $200 million in additional payments in lieu of taxes to the Ontario Electricity Financial Corporation (OEFC).

Q: What amount of proceeds will the Province receive from the secondary offering?

A: In this secondary offering, the Province has offered about 72.4 million common shares, or about 12 per cent of the common shares, at $23.65 per share, for total gross proceeds of approximately $1.7 billion

The Province has granted an option to the underwriters to purchase up to an additional approximately 10.86 million common shares, or just under 2 per cent of the common shares, which if exercised in full, would result in total gross proceeds of approximately $2 billion.

If the overallotment option is exercised in full, the Province will have sold 14% of its shares outstanding in this offering.

The government is committed to dedicating the net revenue gains from the secondary offering to the Trillium Trust. The *Trillium Trust Act, 2014* ensures that all net revenue gains from the sale of Hydro One shares will be credited to the Trillium Trust for investments in priority infrastructure projects.

[Net proceeds are currently estimated at about $0.5 billion based on the about 12% of shares offered in the base amount. If the over-allotment is fully exercised, the net proceeds are estimated at about $0.6 billion.]

Q: What was the process involved in selecting the underwriters involved for the secondary offering

A: RBC and Scotiabank were chosen as the co-lead underwriters for the secondary offering. These same two firms were chosen to lead the IPO underwriting through a competitive and transparent process, overseen by Denis Desautels, the former Auditor General of Canada.

The price discount offered by the underwriters to purchase shares from the Province through the "firm commitment offering" was also very competitive, representing an approximate 2% discount compared to the closing trading price of Hydro One shares on April 5th. Underwriting fees of 1% for institutional investors and 3% for retail investors is significantly lower than what underwriters have typically earned on firm commitment offerings and consistent with the fees earned in the Initial Public Offering.

- Impact on Electricity Sector Dedicated Income

Q: Why is the interim Electricity Sector Dedicated Income (ESDI) $0 in 2015-16, and why is the forecast so low for ESDI in the 2016-17 Printed Estimates? Is this because of the Hydro One IPO reducing the Province's future revenues from Hydro One and reducing the amounts to pay for stranded debt?

A: The Hydro One IPO resulted in a significant upfront reduction in the stranded debt of the electricity sector.

For the year ended March 31, 2016, the IPO resulted in very large upfront payments to the Ontario Electricity Financial Corporation (OEFC) towards stranded debt. This included a total of $2.8 billion in departure tax and additional payments-in-lieu of taxes (PILs) paid by Hydro One to OEFC.

As these large amounts were expenses to Hydro One, they had a dollar-for-dollar impact on reducing Hydro One's estimated net income for 2015-16, partially offset by the deferred tax benefit impact on the Province's net income from Hydro One.

Because of these large payments to OEFC, this resulted in an estimated zero Electricity Sector Dedicated Income transfer to OEFC, as the combined net income of OPG and Hydro One to the Province was estimated to fall short of the about $520 million in annual interest expense.

Under the Electricity Sector Dedicated Income, the Province has been dedicating the cumulative combined net income of OPG and Hydro One in excess of the Province's interest cost of its investment in these companies (about $520 million annually, prior to the Hydro One IPO) to OEFC.

As the ESDI commitment is calculated on a cumulative basis over time, the estimated shortfall in the combined net incomes of OPG and Hydro One in 2015-16 compared to the about $520 million in the Province's financing costs, reduces

the estimated Electricity Sector Dedicated Income in 2016-17 [and potentially in future years], until the past shortfall is offset by the combined net incomes going forward from 2015-16.

The actual ESDI amounts for 2015-16 and 2016-17 is subject to finalisation, including the actual financial performances of OPG and Hydro One in 2015-16 and 2016-17, and will be reported in OEFC's annual financial statements and Public Accounts.

[Note: For the 2015-16 Printed Estimates, the ESDI was positive, as the projected ESDI did not build in the potential impact of the broadening of Hydro One ownership due to the commercial and market sensitivity of the estimated impacts on Hydro One of the expected departure tax. The potential impact of the broadening of Hydro One ownership was built into the asset optimization component of the Sales and Rental revenue line.]

Francisco, Alex, Bonnie,

There are more questions to answer it seems. Please see last year's, which Shemin just got from Pauline. Like before, we would be happy to coordinate it along with the rest for Monday.

Thanks.

John

Subject: Estimates Defence Document Submissions

Good afternoon –

Program areas are asked to please submit Top Facts (formerly called Q&As) and update

Accomplishments no later than September 11th to Pauline Padmore and cc Nicole Yanqui. Attached for your reference is the table of contents from last years' Estimates Briefing Binder, Accomplishments and Top Facts.

Here is the Minister's Office recommended list of top facts & top issues **by order of importance**:

Tab 3: Top Facts

- Office of the Budget
- Ontario Financing Authority
- Office of Economic Policy
- Corporate Electricity Finance Division
- Taxation Policy Division
- Tax and Benefits Administration
- Provincial Local Division
- Cannabis Retail Implementation Project
- Government Business Enterprise Division
- ORPP Implementation Secretariat / Admin Corporation
- Income Security & Pension Policy Division
- Financial Services Policy Division

Tab 4: Top Issues

- Fiscal Plan (in relation to questions that might come up about balancing)
- Debt (Interest on Debt costs)
- Public Accounts (emphasis on AG Accounting)
- Fair Hydro Plan
- Housing Market
- Cannabis
- Cap & Trade
- Trillium Trust
- OLG Modernization
- LBCO
- ORPP – if needed

In addition to the corporate preparations, program areas should prepare their ADM/Program Head in the event we do appear before the Estimates Committee – for those questions that are of a technical or operational nature. This also includes preparations for your ADM/Program Head to explain any financial variances from the Estimates Briefing Book, should those questions arise at the proceedings. This work should currently be underway.

Please let me know if you have any questions about this process.

Thank you.
