[5] The FAO forecast for the Canadian economy is based on the average quarterly forecasts of two independent, model-based forecasters – the Conference Board of Canada (CBOC) and the Policy and Economic Analysis Program (PEAP) at the University of Toronto.

Based on the continuing recovery of the U.S. economy, and in particular the strength of U.S. labour markets, the U.S. Federal Reserve raised its key policy interest rate in March 2017.[6] In contrast, the Bank of Canada has remained more cautious about the underlying strength of the Canadian economy and as a result appears unlikely to raise its key policy interest rate before 2018.[7]

The FAO is projecting Canadian short-term interest rates will remain near current levels through 2017 and then begin rising modestly in 2018. Beyond 2018, interest rates are expected to gradually normalize with the 3-month Treasury Bill rate increasing to 2.6 per cent and the 10-year Government of Canada bond yield rising to 3.9 per cent by 2021.

Canadian Interest Rates to Rise over the Forecast

Source: Statistics Canada and FAO

The Canadian dollar is expected to gradually appreciate over the next five years, rising from an average of about 75 cents U.S. in 2016 to about 81 cents U.S. by 2021, supported by the steady increase in short-term interest rates and a gradual rise in oil prices.

[6] The Federal Reserve raised its key policy rate, or the Federal Funds Rate, to 1.0 per cent on March 15, 2017.
[7] In its most recent monetary policy report, the Bank of Canada (BOC) indicated that it expects the output gap to close in early 2018. At the same time, the BOC noted that "there is still considerable uncertainty about the outlook," suggesting caution with regard to future changes in its policy interest rate. Bank of Canada Monetary Policy Report, April, 2017

Ontario Economic Outlook

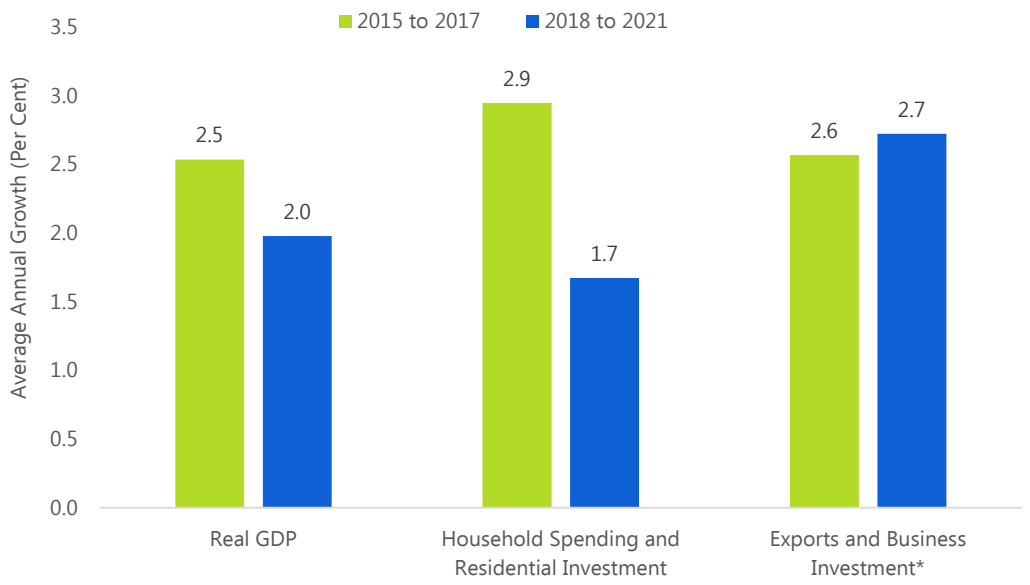
Solid Real GDP Growth Expected in 2017

Based on the Ontario Ministry of Finance's estimates,[8] Ontario real GDP rose by a strong 2.7 per cent in 2016, following equally strong gains of 2.5 per cent and 2.7 per cent in 2015 and 2014, respectively. Household spending, residential investment and exports were key contributors to overall economic growth last year. Business investment in plant and equipment disappointed expectations, declining by 4.0 per cent.

The performance of a number of economic indicators, including employment, retail sales and home sales remained solid in the first quarter of 2017. However, Ontario's merchandise export performance has been uneven so far in 2017.

Uncertainty over the future direction of U.S. trade and industrial policy could hamper business investment growth in the near term, which would negatively impact Ontario's competitiveness. Without stronger business sector investment to expand production capacity, the growth potential of several key Ontario industries will be limited.[9] As a result, despite the projection for steady growth in the U.S. and a competitively valued Canadian dollar, Ontario's net exports[10] are projected to grow at a relatively moderate pace over the outlook.

The FAO is forecasting real GDP growth of 2.4 per cent in 2017, supported by strong household spending and residential investment.[11] The pace of Ontario's overall economic growth will moderate to 2.1 per cent in 2018 and to an average of 2.0 per cent over the last three years of the outlook.



Moderate declines in residential investment in 2018 and 2019 – reflecting elevated household debt and a moderation in housing prices – is expected to contribute to the slower pace of overall economic activity.

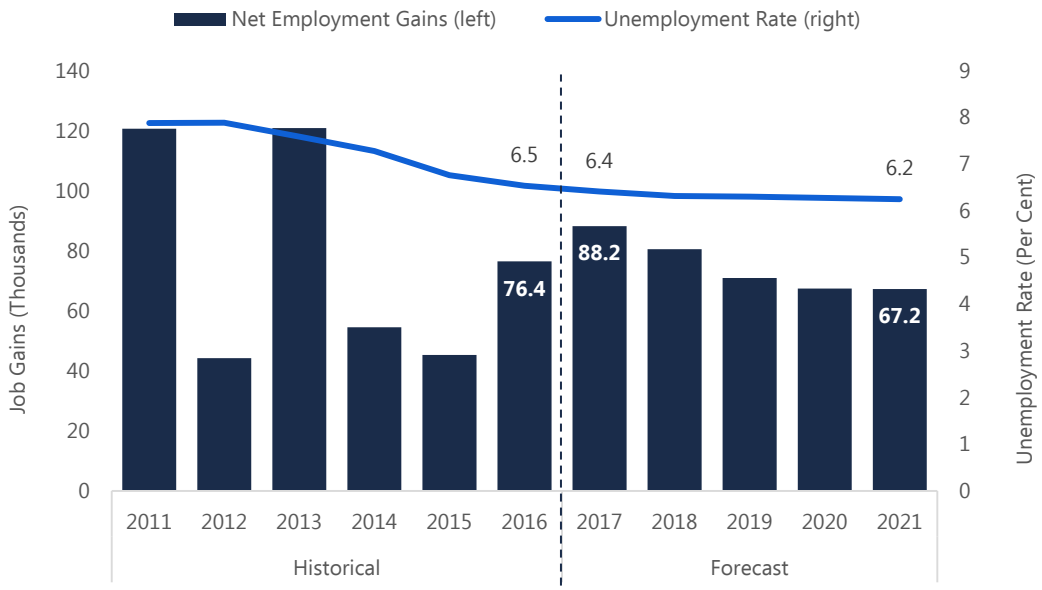
The FAO forecast is broadly consistent with the consensus view among economists that exports and business investment will lead Ontario growth over the next several years, while household spending and residential investment will

[8] Ontario Economic Accounts, Fourth Quarter 2016, released April 13, 2017.
[9] As noted in a recent Conference Board of Canada report, nearly half of Ontario businesses are operating near or above capacity, hampering the ability of Ontario businesses to increase production to meet foreign demand. Conference Board of Canada Outlook, Winter 2017.
[10] Net exports are exports less imports of goods and services.
[11] The FAO forecast of the Ontario economy is based on the FAO's short-term quarterly model of the Ontario economy. For a description of the model, please refer to the textbox at the end of the Economic Outlook chapter.

grow at a more moderate pace, as households reduce borrowing to address high debt loads.

Exports and Business Investment Expected to Drive Economic Growth

* Business Investment includes both Non-Residential Investment and Machinery & Equipment Investment
Source: Ontario Economic Accounts and FAO



Steady Job Gains Over Outlook

Ontario experienced relatively strong employment growth of 1.1 per cent in 2016 (+76,400 net new jobs), the majority of which were full-time, private sector jobs. There was robust job growth in both goods and service producing industries. The construction industry in particular, posted the highest job growth (+3.4 per cent), followed by healthcare (+3.2 per cent).[12]

The strength in Ontario's labour market continued into 2017 with an increase of 99,600 jobs on a year-over-year basis during the first quarter. For the year, the FAO is projecting a 1.3 per cent gain in employment in 2017. On average, the FAO is forecasting average annual job gains of 1.0 per cent over the next four years, consistent with the outlook for solid economic growth.

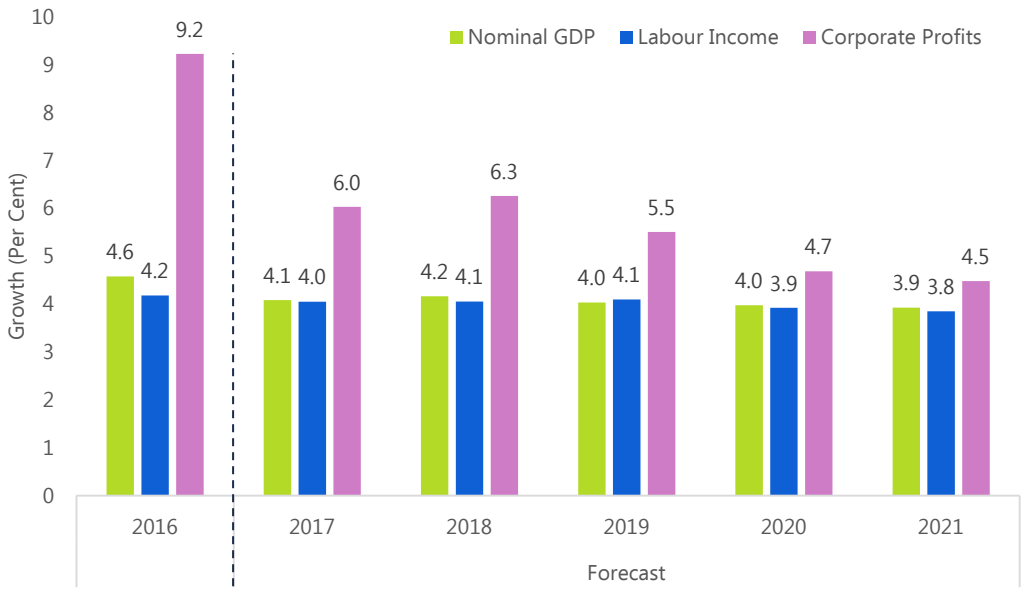
[12] For a more detailed discussion on Ontario's labour market, see the FAO's Commentary: "Ontario Posts Solid 2016 Job Gain as the Labour Market Continues to Evolve."

Steady Employment Gains as Unemployment Rate Slowly Trends Lower

Source: Statistics Canada and FAO

Sustained economic growth over the outlook is expected to attract more workers into the labour force, which is forecast to rise at a slightly higher rate than over the last five years. Faster labour force growth from 2017 to 2021, will partially offset relatively strong employment gains, leading to a more moderate decline in the unemployment rate over the outlook.

Strong Gains Expected for Labour Income and Corporate Profits



Labour income grew by a robust 4.2 per cent in 2016, above the average annual increase of 3.7 per cent from 2011 to 2015, and a reflection of the strong employment growth last year. The net operating surplus of corporations (largely corporate profits) also increased by a robust 9.2 per cent in 2016 following an equally strong gain of 9.1 per cent in 2015.

As a result of the gains in labour income and corporate profits (which together account for about two-thirds of nominal GDP), nominal GDP grew by a strong 4.6 per cent in 2016.[13]

[13] The robust 2016 increase in nominal GDP was much stronger than the 3.4 per cent increase projected in both the FAO's Economic and Fiscal Outlook, Fall 2016 Update and the government's 2016 Economic Outlook and Fiscal Review. The sharp upward shift in 2016 nominal GDP growth reflects large historical revisions to 2015 and 2016 nominal GDP growth in the Ontario Economic Accounts, consistent with new data from Statistics Canada. In particular, the net operating surplus of corporations is now estimated to have increased by 9.2 per cent in 2016 compared to an original projection of 0.3 per cent last fall.

For 2017, the FAO is projecting a 4.1 per cent rise in nominal GDP, supported by strong gains in labour income (+4.0 per cent) and corporate profits (+6.0 per cent). On average, the FAO is projecting nominal GDP growth of 4.0 per cent over the 2018 to 2021 outlook.

Labour Income and Corporate Profits Support Nominal GDP Growth

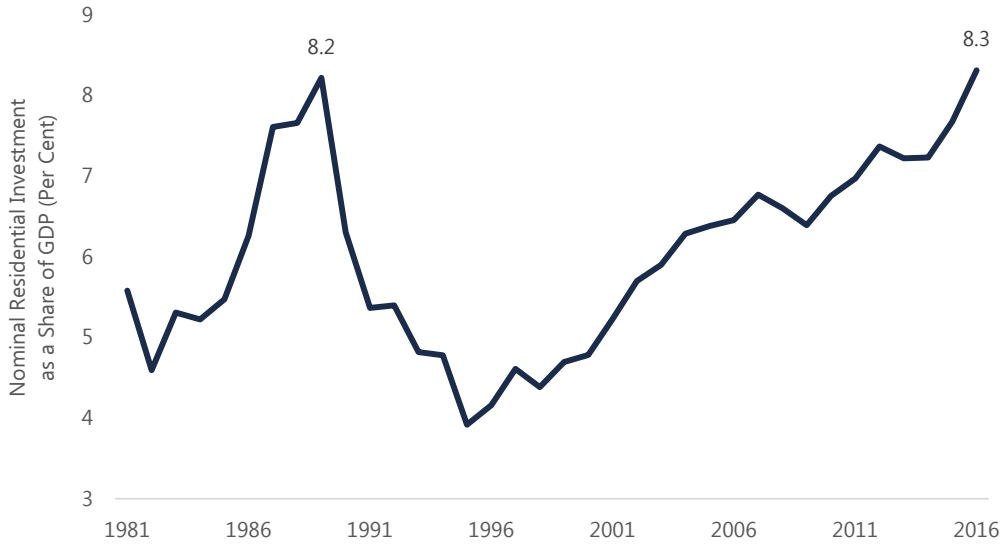
Key Risks for Ontario's Economic Outlook

The FAO's current economic forecast represents a reasonable outlook for the Ontario economy and an appropriate foundation for fiscal projections. However, several key risks could materialize leading to weaker than expected economic growth for the province.



In particular, there are significant risks with respect to the proposed renegotiation of the North American Free Trade Agreement (NAFTA) and the adoption of protectionist trade measures in the United States. As well, other proposed changes to U.S. fiscal and industrial policies, such as lower corporate tax rates and 'Buy America' executive orders, could harm Ontario's relative competitiveness, further discouraging business investment and limiting the contribution of exports to overall growth.

Domestically, the housing market continues to pose a significant risk to the overall economy. The sharp rise in Ontario housing prices – particularly in the

Greater Toronto Area – has contributed to record consumer debt loads and stretched levels of affordability.

At the same time, the relative importance of residential housing investment to the overall economy has increased substantially in recent years, posing a significant risk to the Ontario economy, in the event of a sharp housing market correction. In 2016, investment in residential housing accounted for a record high 8.3 per cent of Ontario's nominal GDP, up from 6.4 per cent in 2009.[14]

Residential Investment Spending Accounts for a Record Share of GDP

Source: Ontario Economic Accounts and FAO

The last time investment in residential housing accounted for a similar proportion of the economy was 1989, just prior to the 1990-1995 housing market correction.

A sharp correction in housing prices, exacerbated by the elevated levels of household debt, would negatively affect household spending and residential investment, and could lead to broader economy-wide impacts on growth and employment.

The Province recently announced a package of measures intended to respond to the underlying factors contributing to the unsustainable rise in housing prices

[14] Almost one-quarter (22 per cent) of the growth in nominal GDP in 2016 was directly attributable to the increase in residential investment spending.

and the rapid growth in housing market activity. However, it is too early to assess whether these measures will adequately address the imbalance between demand and supply pressures in the market.

The FAO's Quarterly Short-term Model of the Ontario Economy

The FAO has developed a short-term forecasting model to produce quarterly five-year projections of the Ontario economy. The model is based on dynamic equations for major sub-categories of real and nominal GDP. The model also includes key labour market components, financial variables and the Canada-U.S. dollar exchange rate. The model is structured around a number of important external or exogenous concepts such as Canada-wide economic growth, U.S. economic growth, U.S. prices, U.S. interest rates and energy prices.

The model is an important tool for the FAO's bi-annual Economic and Fiscal Outlook (EFO), ensuring internal consistency of each projection as well as consistency between EFO forecasts. It also provides the majority of the inputs required by the FAO's Fiscal Outlook Model which provides the FAO's projection of the government's fiscal position.

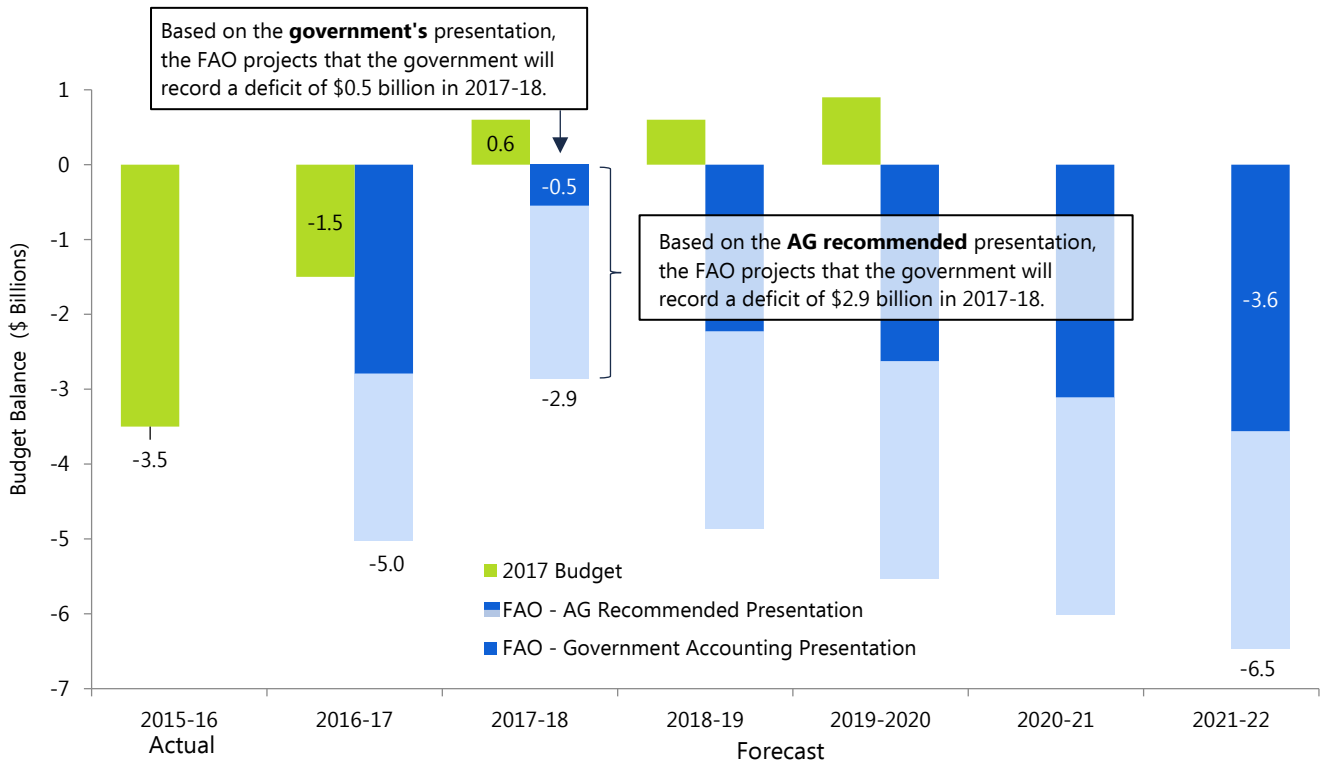
1. Fiscal Outlook

Overview



Continued Budget Deficits Projected

Based on the FAO's current economic forecast and updated fiscal information, the FAO is projecting continued Ontario budget deficits over the outlook. In the near term, the deficit improves due to strong tax revenue growth and a temporary boost to non-tax revenue. However, beginning in 2018-19, the deficit is expected to increase as a result of moderating revenue growth combined with higher expenses.

The government and the Auditor General (AG) disagree on the application of public sector accounting standards with respect to jointly-sponsored pension plans. Based on the Auditor General's recommended accounting presentation, the FAO is projecting a budget deficit of $2.9 billion for 2017-18, rising to $6.5 billion by 2021-22. (Please refer to the discussion on page 8 for additional background and context on this issue.)

Based on the government's accounting presentation in the 2017 Budget, the FAO is projecting a budget deficit of $0.5 billion in 2017-18, growing to $3.6 billion by 2021-22.[1] By comparison, the government is projecting a budget surplus (before the reserve) of $0.6 billion in 2017-18, followed by continued small surpluses over the next two years.

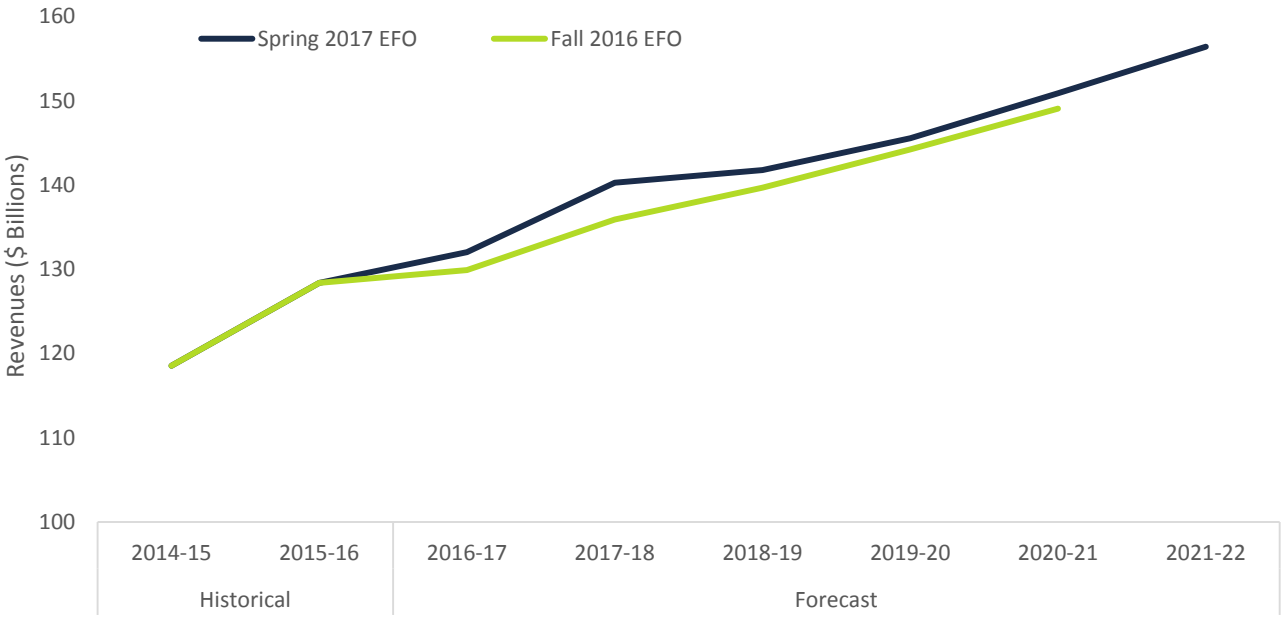
Ontario's Budget Balance*

* Budget balance excluding reserve.

Source: 2015-16 Public Accounts, 2017 Budget and FAO

[1] The Auditor General would be expected to provide a qualified opinion on Ontario's 2016-17 Public Accounts if the government continues to report the net pension assets of jointly sponsored pension plans in its financial statements.

On the government's accounting basis, the FAO projects that a balanced budget is within the government's reach in 2017-18. However, the budget deficit is expected to increase after 2017-18, due to moderate revenue growth, the absence of one-time non-tax revenues, and higher program expenses. Staying in balance after 2017-18 will likely require additional fiscal policy measures.



Under the Auditor General's accounting presentation, the FAO is projecting significant budget deficits over the entire outlook. On this basis, it is unlikely that the government will balance the budget in 2017-18 without significant additional fiscal policy measures (that is, higher revenues or lower expense). Beyond 2017-18, significant fiscal adjustments will likely be required to maintain budget balance through the outlook.

Revenue Outlook

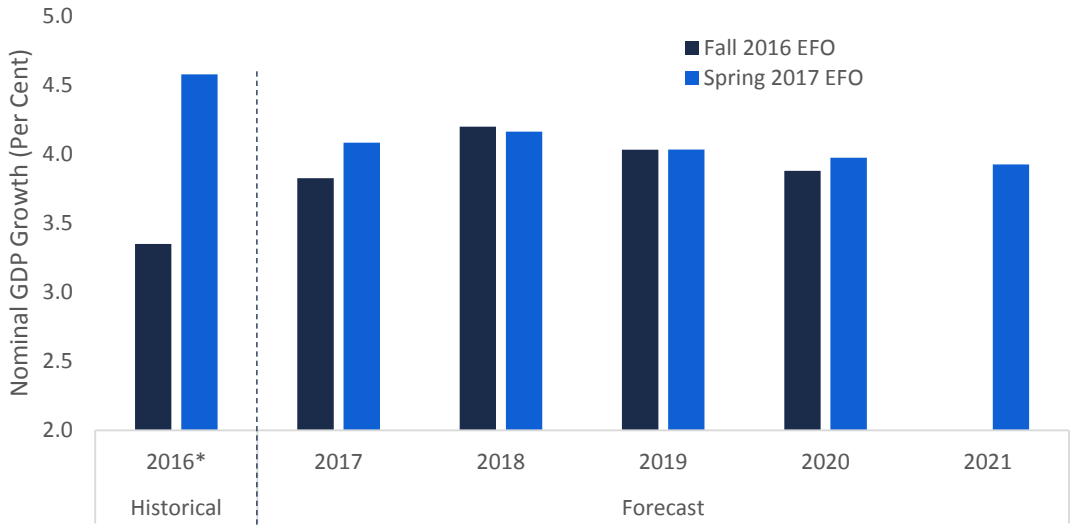
The FAO is projecting average annual revenue growth of 3.3 per cent per year from 2016-17 to 2021-22, in-line with the forecast from the FAO's fall outlook.

However, in the near-term, revenue growth is stronger than expected due to robust economic performance in 2016 and 2017, and a boost from one-time revenues in 2017-18. Beyond 2017-18, growth in tax revenues moderates and the benefit of one-time non-tax revenues ends.

Revenues Stronger Than Expected in Near Term

Source: FAO and Public Accounts

FAO Revenue Assumptions and Forecast



Revenue Source	Assumption	Forecast
Taxation Revenue	Grows with key economic drivers including labour income, corporate profits and household consumption.	Averages 3.9 per cent growth per year from 2016-17 to 2021-22
Federal Transfers	Based on legislated growth rates and economic performance	Federal transfers are expected to grow by 1.9 per cent per year from 2016-17 to 2021-22
Government Business Enterprises	Based on government projections	Income from GBEs are projected to rise moderately from $5.3 billion in 2016-17 to $6.5 billion in 2021-22
Other Revenue	Based on government projections, includes asset sales, and cap and trade	These revenues are projected to increase from $8.5 billion in 2016-17 to $11.0 billion in 2017-18, declining to $8.5 billion by 2021-22

Stronger Economic Growth Expected to Boost Tax Revenue

Consistent with the FAO's economic forecast, the FAO is currently projecting tax revenues to rise at an average of 3.9 per cent from 2016-17 to 2021-22, much stronger than the 3.0 per cent forecast in the FAO's fall outlook.

Since the FAO's fall report, nominal GDP – the broadest measure of the tax base – was revised significantly higher in 2016, improving the forecast for 2017.[2] However, beyond 2017, the outlook for nominal GDP growth is relatively unchanged from the fall forecast.

Nominal GDP up Significantly in the Near-Term Since the Fall

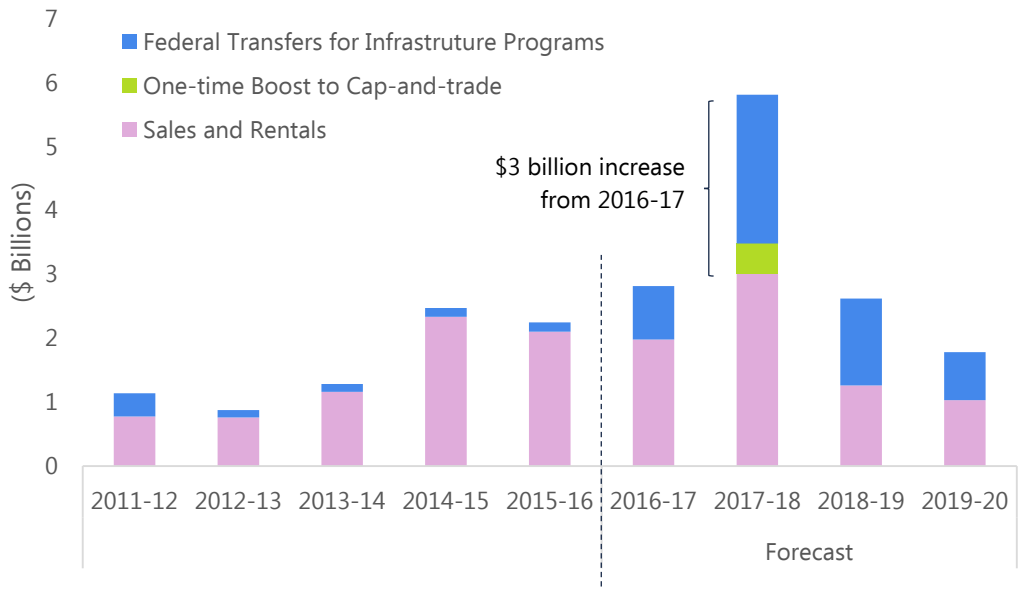
* 2016 value for Fall 2016 EFO was the FAO's forecast at the time of the report's release.
Source: Ontario Economic Accounts and FAO

[2] See economic section, and the footnote on page 11.

Improving economic prospects in 2017 are expected to lift the Province's tax revenue by approximately $2.3 billion in 2016-17 and $4.1 billion in 2017-18, compared to the FAO's fall estimates.

- Personal income tax revenue is forecast to grow stronger than expected in the fall due to the improved forecast for labour income.[3]
- Corporations tax revenue is projected to benefit from the stronger outlook for corporate profits.
- Sales tax and land transfer tax revenues are expected to improve in 2016-17 and 2017-18 due to the on-going strength in Ontario's housing market.

Equalization Entitlement Declines



Given Ontario's recent economic strength relative to the rest of Canada, the Province's Equalization entitlement declined $0.8 billion to $1.4 billion in 2017-18, and is projected to drop further to $0.6 billion in 2018-19. Beyond 2018-19, the FAO is projecting that Ontario will no longer be entitled to Equalization payments — a reflection of the continued relative strength of the Ontario economy.

2017-18 Revenues to Benefit from One-time Increases

Based on the 2017 Budget and incorporated into the FAO's projections, Ontario revenues will be boosted by $3.0 billion in one-time increases in 2017-18, including:

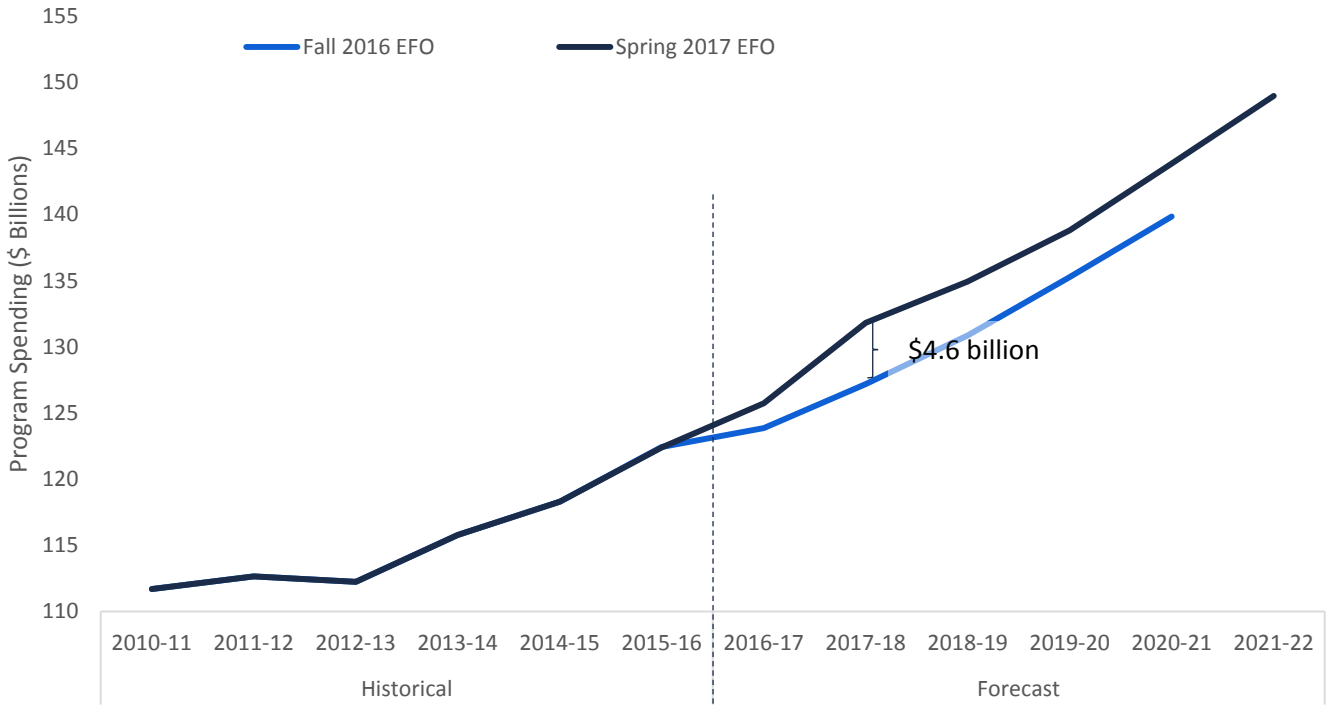
- $1.5 billion in higher revenue from federal transfers for infrastructure;
- $1.0 billion increase in sales and rentals revenue, suggesting significant additional asset sales; and
- $0.5 billion in additional cap and trade proceeds from March 2017, which will be recognized in 2016-17.[4]

2017-18 Non-tax Revenue Boost

Source: Ontario Budgets, Ministry of Finance and FAO

[3] However, near-term revenue growth will be somewhat dampened as some high-income earners have shifted earnings into the 2015 tax year to avoid the new higher 33 per cent tax rate introduced by the federal government in 2016 (http://www.fin.gc.ca/afr-rfa/2016/report-rapport-eng.asp#_Toc463249478). The FAO continues to adopt the federal government's estimate of this income shifting, and has adjusted the personal income tax forecast accordingly.

[4] The government indicated that the cap and trade revenues will be recognized in 2017-18 because the allowances were certified and delivered on April 2, 2017.



Expense Outlook

Program Expense to Increase Significantly over the Outlook

The FAO projects program spending growth of 3.3 per cent per year over the 2016-17 to 2021-22 period.

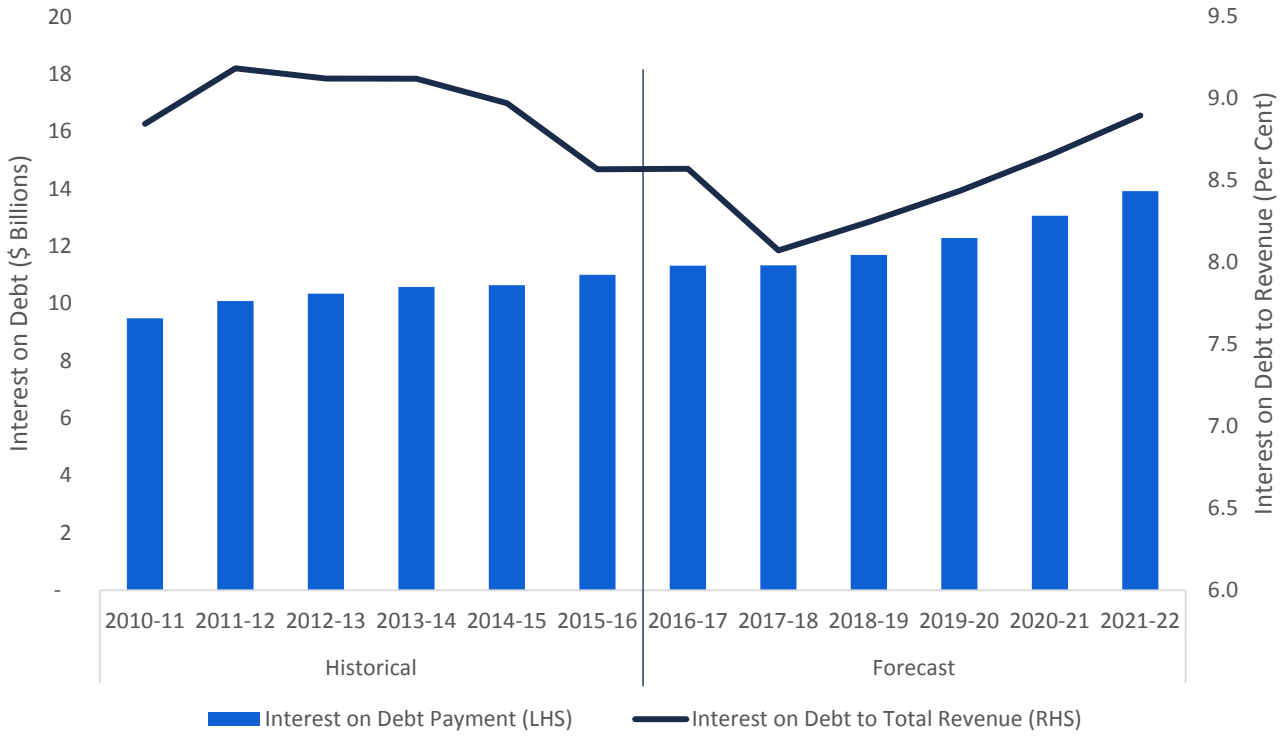
Over the 2016-17 to 2019-20 period, the FAO adopts the government's 2017 Budget projections for program spending[5], adjusted to reflect the Auditor General's recommended accounting treatment for jointly sponsored pension plans.[6] The expense outlook includes significant new spending across all sectors, including a new children and youth Pharmacare program, higher operating funding for hospitals, 24,000 new child care spaces[7], and the government's new 'Fair Hydro Plan'. As a result, spending is now forecast to be significantly higher by 2017-18 than assumed in the FAO's fall outlook.

Program Expense Higher than Projected in the Fall

Note: Program spending based on AG recommended presentation.
Source: Ontario Public Accounts and FAO

With these new expenses, program spending is expected to grow 3.3 per cent per year on average over the next five years. This growth rate is in-line with underlying growth in cost - and demographic-related pressures of 3.5 per cent on average.

Beyond 2019-20, the FAO projects program spending to increase by 3.6 per cent annually, consistent with underlying factors including population growth, aging, and price inflation.



[5] Given the government's discretion over spending, the FAO adopts the government's announced spending plans from fiscal documents and incorporates policy announcements as appropriate.
[6] The adjustment reflects the inclusion of a valuation allowance to offset the value of net pension assets in jointly sponsored pension plans. This adjustment increases 'other program' expense by $2.2 billion in 2016-17, rising to $2.9 billion by 2020-21.
[7] Ministry of Finance officials indicated that the 24,000 in new child care spaces announced in the 2017 Budget is part of the government's September 2017 Throne Speech commitment to create 100,000 spaces. The remaining funding has yet to be included in the fiscal plan.

Interest on Debt

The FAO projects interest on debt (IOD) payments will increase at an average annual rate of 4.0 per cent from $11.0 billion in 2015-16 to $13.9 billion by 2021-22, reflecting higher debt and rising interest rates over the outlook. Interest on debt has become the Province's third largest spending category and will significantly outpace the growth in program expense over the outlook.

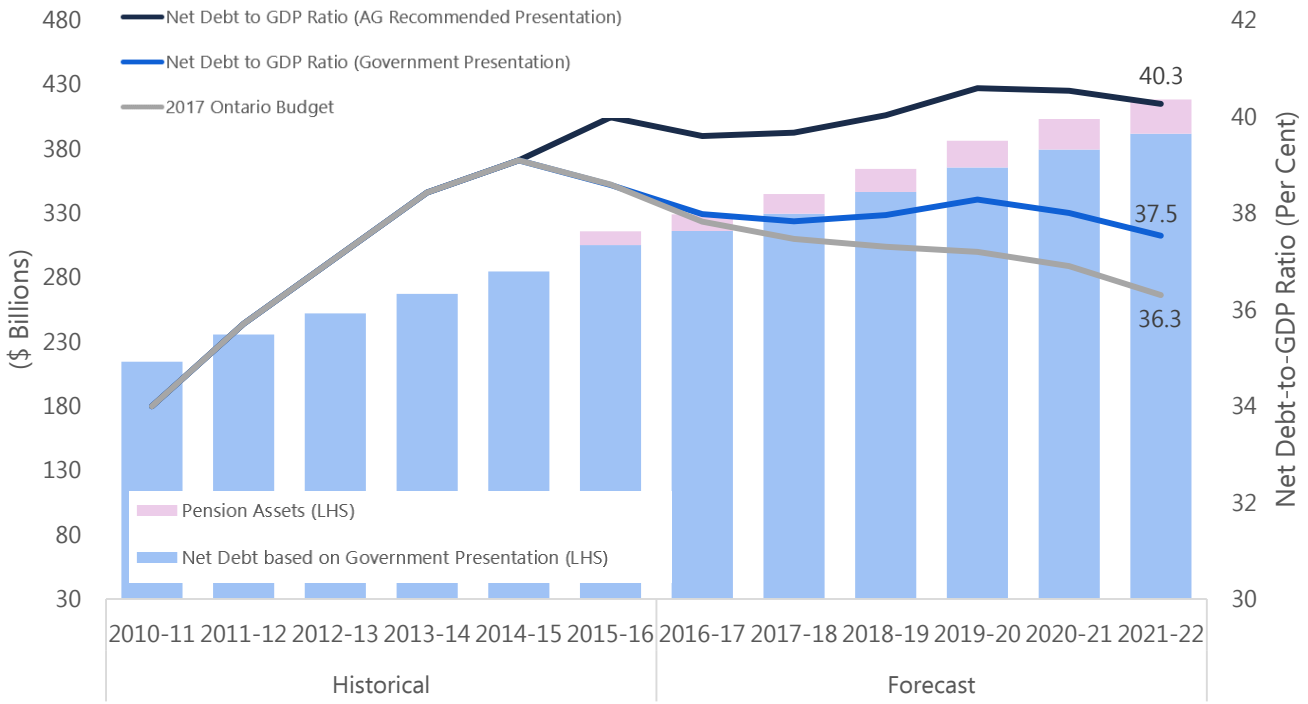
As a share of revenues, IOD is projected to increase from 8.1 per cent in 2017-18 to 8.9 per cent by 2021-22, as the rise in interest payments outpaces growth in revenues. Over the past five years, IOD as a share of revenues declined steadily, benefitting from declining interest rates. With interest rates projected to increase significantly over the next five years, the ratio is expected to rise sharply.

Interest on Debt to Rise Sharply as a Share of Revenues

Source: Ontario Public Accounts and FAO

Ontario Debt Outlook

Ontario Net Debt-to-GDP To Remain Elevated



Ontario's total borrowing requirements are expected to remain high over the outlook. To finance the cost of projected capital spending, finance on-going deficits (as projected by the FAO) and refinance maturing debt issues, provincial borrowing is expected to average $37 billion per year over the next five years.

As a result, the FAO projects Ontario's net debt to increase by $87 billion over the next five years to more than $392 billion by 2021-22 based on the AG's recommended accounting presentation. By comparison, using the accounting treatment adopted by the government in the 2017 Budget, the FAO projects Ontario's net debt will rise by $71 billion to $365 billion by 2021-22.

Based on the AG's recommended accounting presentation, the FAO expects Ontario's net debt-to-GDP ratio will edge higher over the outlook, rising to 40.3 per cent by 2021-22, reflecting the projected increase in net debt and the FAO's forecast for nominal GDP growth. In contrast, based on the accounting treatment adopted by the government in the 2017 Budget, net debt-to-GDP is projected to fall slightly from 38.6 per cent in 2015-16 to 37.5 per cent by 2021-22.

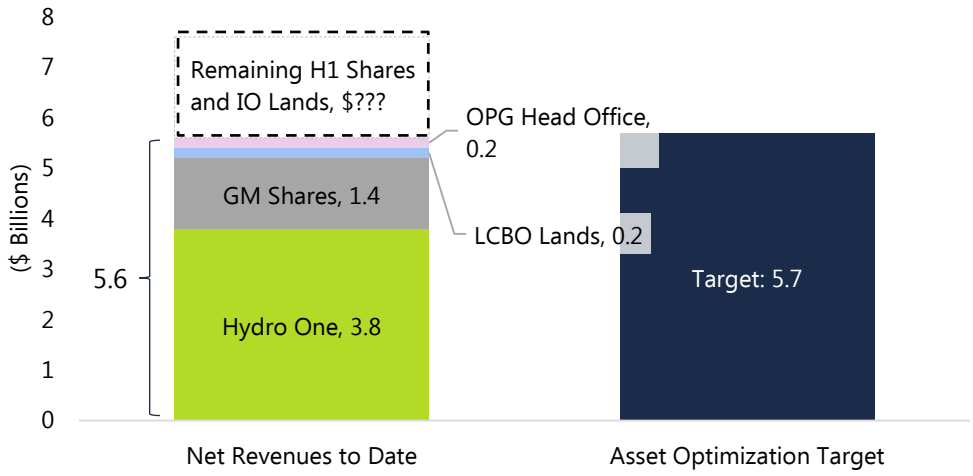
In the 2017 Budget, the Province set an interim net debt-to-GDP target of 35 per cent by 2023-24 and committed to achieving 27 per cent by 2029-30. The FAO's net debt-to-GDP projections under both accounting presentations, suggest that additional fiscal measures would be required for the government to achieve its interim target of 35 per cent by 2023-24.

Ontario's Net Debt to GDP Ratio

Source: Ontario Economic Accounts, 2017 Ontario Budget, and FAO

Risks to the Fiscal Plan and Policy Options

There are material risks that could impact Ontario's fiscal position.



- A sharp correction in the housing market could present a significant risk for both the broader economy and for the Province's fiscal plan. As discussed in the FAO housing commentary[8], a decline in house prices and housing market activity would directly reduce Land Transfer Tax and HST revenues. In addition, the broader economic impacts would impact personal and corporate income tax revenues.
- In the 2017 Budget, the government has significantly reduced the prudence built into its program spending projection compared to the previous budget, leaving less fiscal flexibility for the government to respond to unexpected events.[9] In addition, interest on debt payments as a share of both program spending and revenue are expected to increase significantly, exposing the government to increased fiscal risk should interest rates rise faster than expected.

On the other hand, the government has increased spending growth to a rate in line with underlying spending pressures, which diminishes the expense risk identified in earlier FAO reports.

Additionally, the government has a broad range of policy options that could improve its fiscal position, including the sale of additional public assets beyond announced targets. To date, the government has generated $5.6 billion in revenues from asset sales, close to its target of $5.7 billion over 10 years.

Given that the government has indicated that it still intends to sell an additional 30 per cent of Hydro One, as well as Infrastructure Ontario real estate holdings, it may significantly overachieve its asset sales target.

Asset Optimization Revenues and Target

Source: FAO and Ontario Budgets

[8] Financial Accountability Officer of Ontario, The Impact of a Housing Market Correction on Ontario's Fiscal Position, 2017

[9] In the 2017 Budget, contingency funds total $0.6 billion for the coming fiscal year, half the size built into the 2016 Budget fiscal plan. Similarly, the government's target for year-end savings has increased to $1.2 billion for the coming year, compared to $0.8 billion in Budget 2016.

The Accounting Treatment of Jointly Sponsored Pension Plans

Background

Ontario's 2015-16 Public Accounts noted a disagreement between the Office of the Auditor General and the Province on the appropriate accounting treatment for net pension assets of jointly sponsored pension plans. Specifically, the Province is a joint sponsor of two pension plans, the Ontario Teachers' Pension Plan (OTPP) and the Ontario Public Service Employees Union Pension Plan (OPSEUPP).

The government's position is that these pension assets have been appropriately and consistently reflected on the Province's financial statements since 2001. The Office of the Auditor General, based on a review of these pension assets, determined that a change in the accounting treatment was required. The Auditor General concluded that under current Canadian public sector accounting standards, the government could not unilaterally recognize a pension asset on its financial statements without evidence - in the form of a written agreement - permitting it to realize the asset through reduced contributions.[10]

In response, the Province appointed its own advisory panel to review and provide a recommended interpretation of public sector accounting standards with respect to the assets of jointly sponsored pension plans. The panel's report[11], released in February 2017, concluded that the Province's share of net assets in jointly sponsored pension plans could be fully recognized in the Province's financial statements — contrary to the opinion of the Office of the Auditor General.

In the 2017 Budget, the government adopted the advisory panel's interpretation of public sector accounting standards and recognized the net pension assets of the jointly sponsored pension plans. The 2017 Budget also indicated that the Province's 2016–17 Public Accounts will report the net pension assets for the two jointly sponsored pension plans.

The Central Issue

The government and the Auditor General have put forward different interpretations of the application of public sector accounting standards for jointly sponsored pension plans.[12]

The different interpretations centre on the question of the control of assets in jointly sponsored pension plans. In particular, the issue is focused on whether there needs to be an explicit written agreement between the co-sponsors (the government and the unions representing the employees) on how the sponsors plan to use the pension assets, for example by lowering contributions or increasing benefits to pensioners.

As indicated by the Auditor General, the issue can be resolved if the government presents an agreement with the Ontario Teacher's Federation (OTF) allowing the government to access the OTPP pension assets through reduced contributions.[13] The extent and duration of the reduced contributions would determine the size of the pension asset that the government could recognize in its financial statements

The government, based on the advice of the advisory panel, maintains that the existing agreements governing the pension plans already recognize the sponsors' rights to access assets in the plans and also provide the mechanism to potentially realize a benefit through lower future contribution rates.

[10] The government's 2016 Budget reported a negative expense for the OTPP which led, in part, to the Auditor General conducting an in-depth review of the related pension assets.

[11] https://news.ontario.ca/tbs/en/2017/02/pension-asset-expert-advisory-panel-submits-report.html

[12] In 2015, PSAB created an Employment Benefits Task Force to review the existing accounting standard for post-employment benefits. The work of this task force will include reviewing the appropriate accounting treatment for shared-risk and multi-employer pension plans. However, the work of this task force is not expected to be completed in the near future.

[13] Of the government's two jointly sponsored pension plans, only the OTPP is currently in a net asset position.

In the absence of an agreement, and given the government's decision in the 2017 Budget to accept the advisory panel's recommended approach to accounting for jointly sponsored pension plan assets, the Auditor General would be expected to provide a qualified opinion[14] on Ontario's 2016-17 Public Accounts.

Roles and Responsibilities of the Province and the Auditor General

The Province (through the Treasury Board Secretariat) is responsible for the preparation of Ontario's Public Accounts in accordance with legislation, and based on the standards set out by the Public Sector Accounting Board (PSAB).[15] The PSAB accounting standards serve the public interest by providing an independent, high-quality accounting framework for public sector entities.

The Auditor General reviews the Province's annual Public Accounts and provides an audit opinion to the Legislature on whether the Consolidated Financial Statements for the Province of Ontario present fairly, in all material respects, the Province's financial position, in accordance with the PSAB accounting standards.

The FAO's Presentation of Ontario's Fiscal Outlook

The Financial Accountability Officer supports the Legislative Assembly by providing independent economic and financial analysis intended to improve the transparency of the government's fiscal plan. The Officer also looks to the Auditor General as the provincial authority on the appropriate interpretation and application of accounting standards for the Province.

The FAO has presented two fiscal projections, including and excluding the impact of the net pension assets of jointly sponsored pension plans to help members of the Legislative Assembly better understand the implications of these different interpretations of accounting standards on the Province's fiscal position.

- The projection based on the Auditor General's recommended accounting treatment assumes a valuation allowance that offsets the net pension assets.
- The projection based on the government's fiscal presentation in the 2017 Budget recognizes the net pension assets over the budget outlook.
    - In the absence of an agreement between the co-sponsors, this presentation of Ontario's fiscal position would be expected to receive a qualified opinion from the Auditor General when published in the Province's future Public Accounts.

Based on the Auditor General's recommended accounting treatment for the net assets of jointly sponsored pension plans, the FAO is projecting budget deficits of $2.9 billion in 2017-18, rising to $6.5 billion by 2021-22. Alternatively, based on the pension accounting treatment presented by the Province in the 2017 Budget, the FAO's projection for the budget deficit decreases to $0.5 billion in 2017-18 and $3.6 billion in 2021-22.

[14] An auditor may provide a qualified opinion when financial statements do not conform in a material way to the applicable accounting standards.
[15] https://www.ontario.ca/page/public-accounts-101-guide#section-6

2. Appendix

Developments since the FAO's Fall 2016 Economic and Fiscal Outlook

The FAO's current projection of the Ontario budget balance has generally deteriorated relative to the FAO's fall 2016 projection.

- Stronger than expected economic performance is expected to boost taxation revenues over the forecast, partially offset by lower Equalization revenue.
- Based on new government spending plans, program expense has increased significantly.

Developments since 2016 Fall EFO (AG Recommended Presentation)

	2016-17	2017-18	2018-19	2019-20	2020-21

FAO's 2017 Spring Budget Balance Forecast	-5.0	-2.9	-4.9	-5.5	-6.0

Notes:

1. Change in federal transfers forecast mainly due the reduction in Ontario's Equalization payment.

2. Other revenue changes include the $0.5 billion re-profiling of cap-and-trade proceeds from 2016-17 to 2017-18, and an increase in sales and rentals for 2017-18.

3. In the 2016 Fall EFO, the FAO included $1 billion in expenses from the HST rebate on electricity bills beginning 2017-18, which is now part of the Fair Hydro Plan. As a result, the FAO estimates that the incremental impact of the Fair Hydro Plan is $0.8 billion, compared to the Fall.

4. In the 2016 Fall EFO, the FAO assumed $1.5 billion in adjustments for net pension assets of jointly sponsored pension plans. The government has revised its estimate of the impact to $2.2 billion in 2017-18, increasing to $2.9 billion by 2020-21.

Subject: RE: FAO's Upcoming EFO Report

David (and other FAO colleagues);

Please find attached our consolidated feedback to the Economic Outlook and Fiscal Outlook draft reports. We have focussed on the factual components of this, and have tried to keep an eye on the cabinet confidentiality issue as well. With that in mind, here are a few high-level points to help guide your review of our comments:

-- As in past reports, it is really important for us that you clearly distinguish what is an FAO projection vs. what is a Budget or government projection. This is applied somewhat inconsistently in the draft report. As such, we've provided some advice on where we think that distinction is important to have clearly articulated.

-- Since the Budget forecast horizon only is provided out to 19-20, we think it is important that you make it more clear that you have provided two additional years beyond what is provided for in the Budget documents.

-- With respect to Cabinet Confidentiality, we think that, overall it has been well-respected -- with two exceptions.

1. In a footnote about the child care spaces, you note that "ministry of finance officials indicated that its not fully funded in the fiscal plan" -- a point that is protected under Cabinet Confidence and cannot be disclosed as such. We've provided the deletion in the comment and some alternative wording.

2. The pension adjustment numbers (ie, the impact of the AG's pension accounting treatment) is not something used for the purposes of building the fiscal plan in the Budget -- and as such, cannot be considered a government projection (even though the government did disclose the potential impact of the pension adjustment in the 2016 FES, it did not do so as part of the 2017 Budget). As such, the underlying multi-year pension numbers provided to you by OPCD should be considered advice to Cabinet and protected. We think that perhaps a further conversation is required on this to make sure we are respecting Cabinet Confidentiality -- but in the interest of giving you feedback today, we thought it was important to provide a potential alternative for consideration. If you consider making it clear that those projections of the pension adjustment are FAO projections -- and not a government projection -- then perhaps we may be able to avoid a breach of Cabinet Confidentiality. We understand from OPCD that they did provide you with the underlying data, and instructions on how to calculate -- but the pension adjustment itself, as presented in the tables, is an FAO estimate of the pension accounting impact and not the government's. As such, you should clearly label it as such and be held accountable for explaining and owning the calculation as well, if asked. If you feel these need additional conversation with us, please let us know....happy to have a follow-up discussion. Hope that makes sense.

Thanks to everyone across MOF/TBS world who worked hard and collaboratively to make sure we could get you something by eod today. We appreciate the opportunity to review and provide feedback. We are happy to have more conversations in the lead-up to the provision of the report to Ministers. If you could also let us know when you expect the release date to be, that would help us plan as well.

Thanks again

Subject: RE: FAO's Upcoming EFO Report

Good Morning,

Please find attached drafts of the Economic Outlook and Fiscal Outlook chapters from the FAO's upcoming 'Economic and Fiscal Outlook' report.
The chapters are password protected using the same password as in the past.

The FAO's fiscal forecast incorporates the tax revenue adjustments that we received on Friday afternoon -- and which brings our short-term forecast much closer the Budget 2017 forecast.

Unfortunately, we are on a very tight schedule to enable us to release this report at the end of the May.

So, we are asking for your comments/concerns including any potential cabinet confidentiality issues by end of day tomorrow (Tuesday, May 9)

Thanks again for your support and assistance.

David West
Chief Economist

Hello,

Thanks again for our meeting on Tuesday. We appreciate the information you have provided as well as the responses to our questions at the meeting.

On Monday morning (as early as possible) we plan to provide you with draft copies of the Economic Outlook and Fiscal Outlook chapters (including Forecast Tables) from the FAO's upcoming EFO report.

We would hope you would be able to provide us with any comments or concerns on these chapters by Tuesday (May 9), end of day.

As in the past, the FAO will provide a final copy of the report 48 hours prior to release to both Ministers. I would email you a copy at the same time.

Thanks,

David West

Thanks David,

We're working on pulling together the various information pieces and people for a meeting Tuesday between 1pm and 2pm, so will be in touch to confirm.

As in past approaches, we won't be able to have everything for you on Tuesday but will be able to provide a downpayment for sure.

Have a great weekend
Tim

Subject: Follow-Up on the 2017 Budget

Good Morning!

Congratulations on delivering yesterday's big, black budget!

I wanted to follow-up on the FAO's requests for some additional information.

First, as we have discussed, we have three requests for specific data/tables:

1. We would like to obtain the detailed revenue and expense tables (Tables 6.14 and 6.15) extended to 2019-20.

- Are these detailed tables available to 2020-21? If so, then please include (:))

2. As staff have been discussing, we would like to obtain more detailed information on the one-time adjustments to taxation revenues beginning in 2015-16 and extending over the forecast. This is basically additional information to that provided in tables 6.7, 6.8 and 6.9.

3. As detailed in the letter and background documents sent to Deputies Thompson and Angus on April 3, we are requesting pension expense and employer contribution details for the OTPP and OPSEUPP.

We would also appreciate a meeting early next week (preferably Tuesday afternoon) to allow you to respond to a number of questions that we have with regard to the 2017 Budget.

We'll provide a list of specific questions later this afternoon, but these questions will cover a number of areas, including:

- Clarification on where the Fair Hydro Plan appears in the expenses
- Additional details/clarification on new health spending, including the new pharmacare plan
- Clarification on future assumptions for asset sales and any details behind the 'Sales and Rentals' line in the detailed Revenue table.
- Clarification on the assumptions behind new federal funding announced in the 2017 federal budget (e.g. affordable housing, child care, home care)
- Some background on the decision to reduce the estimate of 'Carbon Allowance Proceeds' and assumptions on associated expense
- Additional details/clarification on new infrastructure spending
- Assumptions behind the plan to reduce net debt-to-GDP to 35% and eventually to 27%.

We'll provide a list later this afternoon that expands somewhat on these question topics.

Happy to discuss any of these requests.

Thanks again for your support,
David

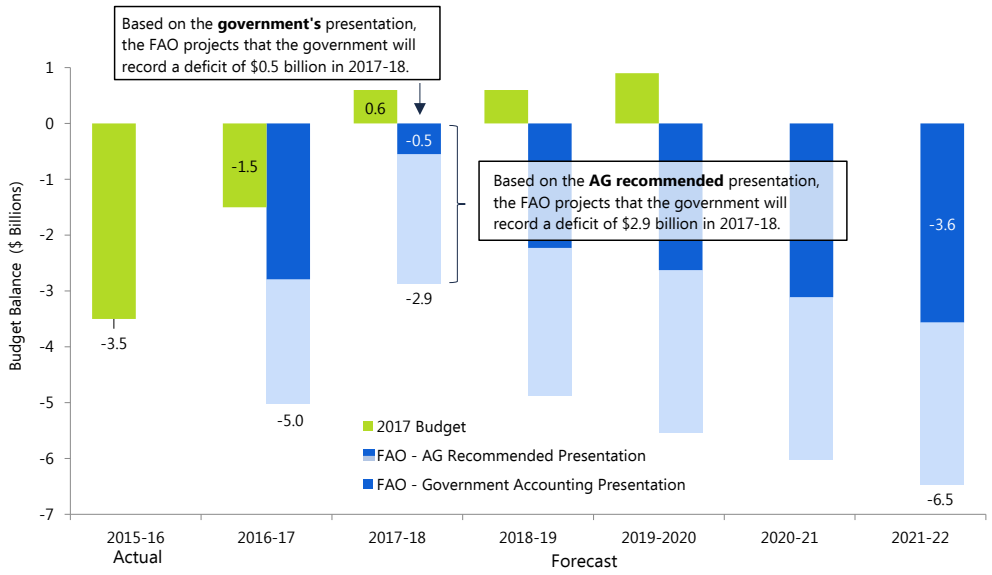
1. Fiscal Outlook

Overview



Continued Budget Deficits Projected

Based on the FAO's current economic forecast and updated fiscal information, the FAO is projecting continued Ontario budget deficits over the outlook. In the near term, the deficit improves due to strong tax revenue growth and a temporary boost to non-tax revenue. However, beginning in 2018-19, the deficit is expected to increase as a result of moderating revenue growth combined with higher expenses.

The government and the Auditor General (AG) disagree on the application of public sector accounting standards with respect to jointly-sponsored pension plans. Based on the FAO's projection of the impact of the Auditor General's recommended accounting presentation of pension assets, the FAO is projecting a budget deficit of $2.9 billion for 2017-18, rising to $6.5 billion by 2021-22. (Please refer to the discussion on page 8 for additional background and context on this issue.)

Based on the government's accounting presentation in the 2017 Budget, the FAO is projecting a budget deficit of $0.5 billion in 2017-18, growing to $3.6 billion by 2021-22.[1] By comparison, the government is projecting a budget surplus ~~(before the reserve)~~ of $0.6 billion in 2017-18, followed by continued small surpluses over the next two years (before the reserve).

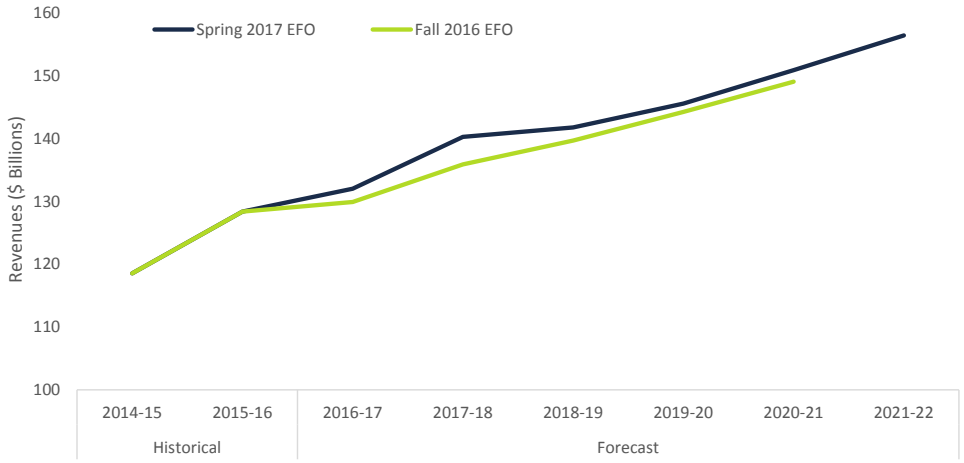
Ontario's Budget Balance*

* Budget balance ~~excluding~~ ~~before~~ reserve. AG Recommended Presentation includes FAO projection of the ~~pension adjustment.~~AG's recommended presentation of pension assets.

[1] The Auditor General would be expected to provide a qualified opinion on Ontario's 2016-17 Public Accounts if the government continues to report the net pension assets of jointly sponsored pension plans in its financial statements.

Source: 2015-16 Public Accounts, 2017 Budget and FAO

On the government's accounting basis, the FAO projects that a balanced budget is within the government's reach in 2017-18. However, the budget deficit is expected to increase after 2017-18, due to moderate revenue growth, the absence of one-time non-tax revenues, and higher program expenses. Staying in balance after 2017-18 will likely require additional fiscal policy measures.



Under the Auditor General's accounting presentation, the FAO is projecting significant budget deficits over the entire outlook. On this basis, it is unlikely that the government will balance the budget in 2017-18 without significant additional fiscal policy measures (that is, higher revenues or lower expense). Beyond 2017-18, significant fiscal adjustments will likely be required to maintain budget balance through the outlook.

Revenue Outlook

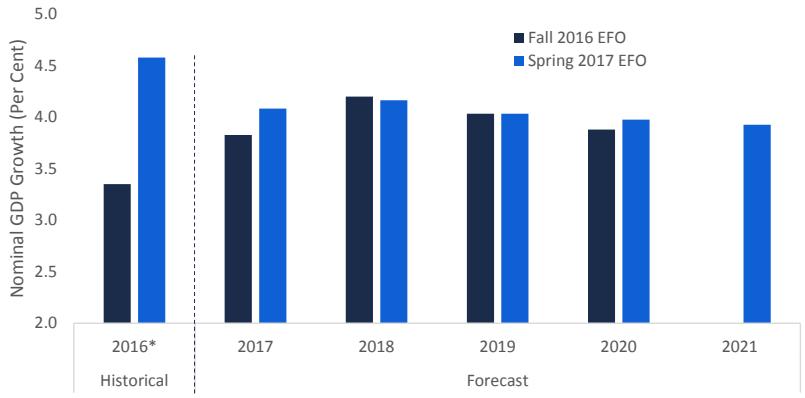
The FAO is projecting average annual revenue growth of 3.3 per cent per year from 2016-17 to 2021-22, in-line with the forecast from the FAO's fall outlook.

However, in the near-term, revenue growth is stronger than expected due to robust economic performance in 2016 and 2017, and a boost from one-time revenues in 2017-18. Beyond 2017-18, growth in tax revenues moderates and the benefit of one-time non-tax revenues ends.

Revenues Stronger Than Expected in Near Term

Source: FAO and Public Accounts

FAO Revenue Assumptions and Forecast



Revenue Source	Assumption	Forecast
Taxation Revenue	Grows with key economic drivers including labour income, corporate profits and household consumption.	Averages 3.9 per cent growth per year from 2016-17 to 2021-22
Federal Transfers	Based on legislated growth rates and economic performance	Federal transfers are expected to grow by 1.9 per cent per year from 2016-17 to 2021-22
Government Business Enterprises	Based on government projections	Income from GBEs are projected to rise moderately from $5.3 billion in 2016-17 to $6.5 billion in 2021-22
Other Revenue	Based on government projections, includes asset sales, and cap and trade	These revenues are projected to increase from $8.5 billion in 2016-17 to $11.0 billion in 2017-18, declining to $8.5 billion by 2021-22

Stronger Economic Growth Expected to Boost Tax Revenue

Consistent with the FAO's economic forecast, the FAO is currently projecting tax revenues to rise at an average of 3.9 per cent from 2016-17 to 2021-22, much stronger than the 3.0 per cent forecast in the FAO's fall outlook.

Since the FAO's fall report, nominal GDP – the broadest measure of the tax base – was revised significantly higher in 2016, improving the forecast for 2017.[2] However, beyond 2017, the outlook for nominal GDP growth is relatively unchanged from the fall forecast.

Nominal GDP up Significantly in the Near-Term Since the Fall

* 2016 value for Fall 2016 EFO was the FAO's forecast at the time of the report's release.
Source: Ontario Economic Accounts and FAO

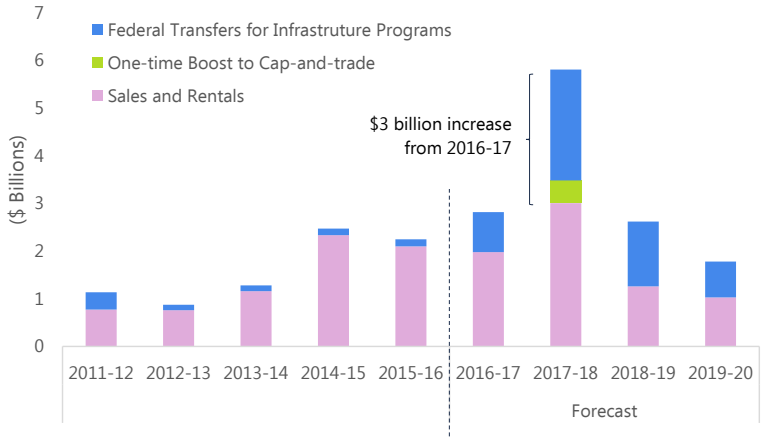
[2] See economic section, and the footnote on page 11.

Improving economic prospects in 2017 are expected to lift the Province's tax revenue by approximately $2.3 billion in 2016-17 and $4.1 billion in 2017-18, compared to the FAO's fall estimates.

- Personal income tax revenue is forecast to grow stronger than expected in the fall due to the improved forecast for labour income.[3]
- Corporations tax revenue is projected to benefit from the stronger outlook for corporate profits.
- Sales tax and land transfer tax revenues are expected to improve in 2016-17 and 2017-18 due to the on-going strength in Ontario's housing market.

Commented [GE(1]: [OEP comment]
The Public Accounts of Canada reference only provides the overall growth in federal PIT revenue, and that it reflects PIT planning by high-income individuals. It would be helpful if the report note also included the impact to Ontario PIT revenue specifically assumed by the FAO.

Equalization Entitlement Declines



Given Ontario's recent economic strength relative to the rest of Canada, the Province's Equalization entitlement declined $0.8 billion to $1.4 billion in 2017-18, and the FAO projected this to drop further to $0.6 billion in 2018-19. Beyond 2018-19, the FAO is projecting that Ontario will no longer be entitled to Equalization payments — a reflection of the continued relative strength of the Ontario economy.

2017-18 Revenues to Benefit from One-time Increases

Based on the 2017 Budget and incorporated into the FAO's projections, Ontario revenues will be boosted by $3.0 billion in one-time increases in 2017-18, including:

- $1.5 billion in higher revenue from federal transfers for infrastructure;
- $1.0 billion increase in sales and rentals revenue, suggesting significant additional asset sales; and
- $0.5 billion in additional cap and trade proceeds from March 2017, which will be recognized in 2016-172017-18.[4]

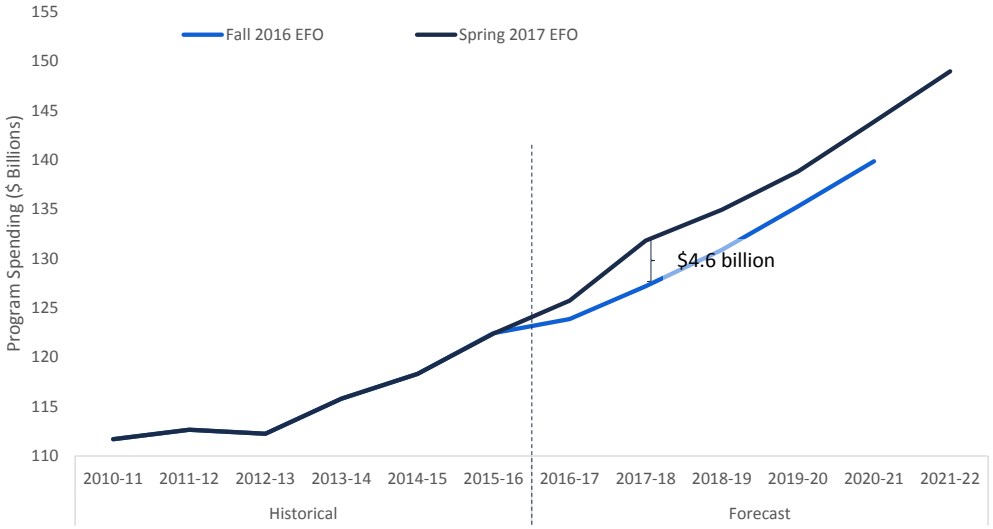
2017-18 Non-tax Revenue Boost

Source: Ontario Budgets, Ministry of Finance and FAO

[3] However, near-term revenue growth will be somewhat dampened as some high-income earners have shifted earnings into the 2015 tax year to avoid the new higher 33 per cent tax rate introduced by the federal government in 2016 (http://www.fin.gc.ca/afr-rfa/2016/report-rapport-eng.asp#_Toc463249478). The FAO continues to adopt the federal government's estimate of this income shifting, and has adjusted the personal income tax forecast accordingly.

[4] The government indicated that the cap and trade revenues will be recognized in 2017-18 because the allowances were certified and delivered on April 2, 2017.

Expense Outlook



Program Expense to Increase Significantly over the Outlook

The FAO projects program spending growth of 3.3 per cent per year over the 2016-17 to 2021-22 period.

Commented [ST(2]: Might be worth noting that this is two more years worth of forecast horizon than the Budget presents.

Over the 2016-17 to 2019-20 period, the FAO adopts the government's 2017 Budget projections for program spending[5], adjusted to reflect the Auditor General's recommended accounting treatment for jointly sponsored pension plans.[6] The expense outlook includes significant new spending across all sectors, including a new children and youth Pharmacare program, higher operating funding for hospitals, 24,000 new child care spaces[7], and the government's new 'Fair Hydro Plan'. As a result, spending is now forecast to be significantly higher by 2017-18 than assumed in the FAO's fall outlook.

Program Expense Higher than Projected in the Fall

Note: Program spending based on FAO's projection of AG recommended accounting treatment of net assets for jointly sponsored pension plans~~presentation~~.

Source: Ontario Public Accounts and FAO

With these new expenses, program spending is expected to grow 3.3 per cent per year on average over the next five years. This growth rate is in-line with underlying growth in cost - and demographic-related pressures of 3.5 per cent on average.

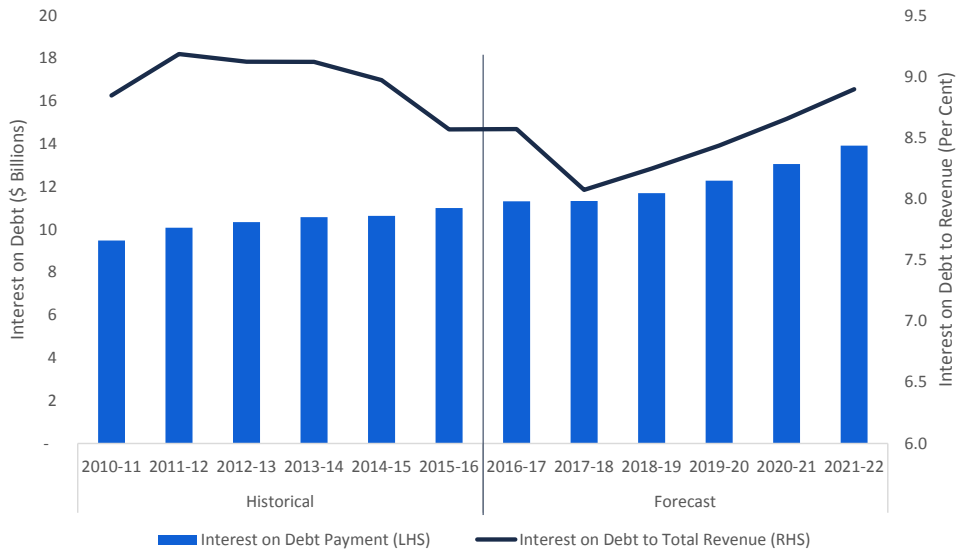
Beyond 2019-20, the FAO projects program spending to increase by 3.6 per cent annually, consistent with underlying factors including population growth, aging, and price inflation.

[5] Given the government's discretion over spending, the FAO adopts the government's announced spending plans from fiscal documents and incorporates policy announcements as appropriate.

[6] The adjustment reflects the inclusion of a valuation allowance to offset the value of net pension assets in jointly sponsored pension plans. This adjustment increases 'other program' expense by $2.2 billion in 2016-17, rising to $2.9 billion by 2020-21. based on the FAO's projection of the pension adjustment.

[7] The 2017 Budget announced 24,000 new child care spaces for 2017–18, as part of the government's September 2016 Throne Speech commitment to create 100,000 new child care spaces by 2022.~~Ministry of Finance officials indicated that the 24,000 in new child care spaces announced in the 2017 Budget is part of the government's September 2017 Throne Speech commitment to create 100,000 spaces. The remaining funding has yet to be included in the fiscal plan.~~ [Reference to inclusion in the fiscal plan (i.e., highlighted sentence) is Cabinet confidential and should be removed. It should not be disclosed publicly]

Interest on Debt



The FAO projects interest on debt (IOD) payments will increase at an average annual rate of 4.0 per cent from $11.0 billion in 2015-16 to $13.9 billion by 2021-22, reflecting higher debt and rising interest rates over the outlook. Interest on debt has become the Province's third largest spending category and will significantly outpace the growth in program expense over the outlook.

As a share of revenues, IOD is projected by the FAO to increase from 8.1 per cent in 2017-18 to 8.9 per cent by 2021-22, as the rise in interest payments outpaces growth in revenues. Over the past five years, IOD as a share of revenues declined steadily, benefitting from declining interest rates. With interest rates projected to increase significantly over the next five years, the ratio is expected to rise sharply.

Commented [GE(3]: [OB comment]
Referring to total expense for 17-18, as published in the 2017 Budget, IOD is the fifth largest spending category.

Commented [GE(4]: [OFA comment}
The basis of the FAO's IOD projections are not provided so we cannot provide any commentary.

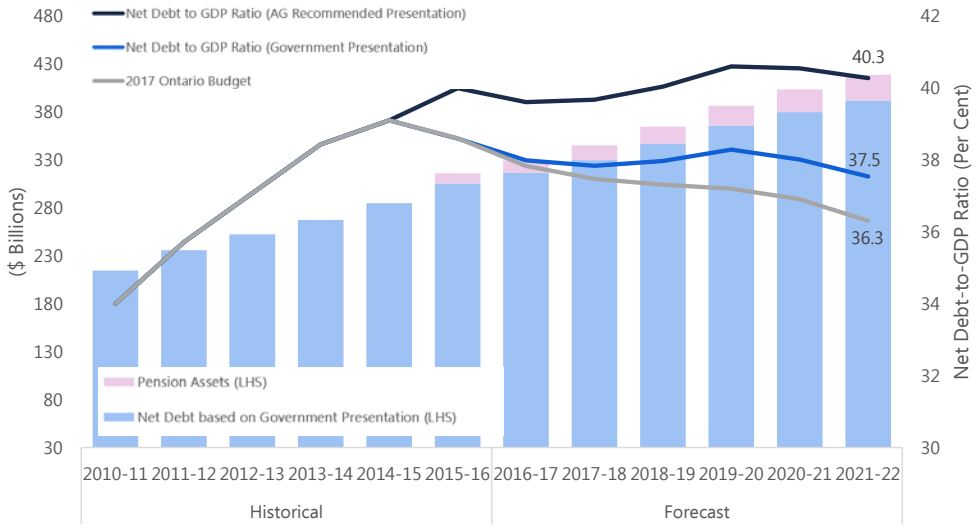
Interest on Debt to Rise Sharply as a Share of Revenues

Source: Ontario Public Accounts and FAO

Ontario Debt Outlook

Ontario Net Debt-to-GDP To Remain Elevated

Ontario's total borrowing requirements are expected to remain high over the outlook. To finance the cost of projected capital spending, finance on-going deficits (as projected by the FAO) and refinance maturing debt issues, provincial borrowing is expected to average $37 billion per year over the next five years.



As a result, the FAO projects Ontario's net debt to increase by $87 billion over the next five years to ~~more than~~ $392 billion by 2021-22 based on the AG's recommended accounting presentation. By comparison, using the accounting treatment adopted by the government in the 2017 Budget, the FAO projects Ontario's net debt will rise by $71 billion to $365 billion by 2021-22.

Commented [GE(5]: [OB comment]
Suggest double checking the number of years and the calculations. Based on Table 4a it is $76B over five years; based on Table 4b, $62B over five years.

Based on the FAO's projection of the impact of the AG's recommended accounting presentation, the FAO expects Ontario's net debt-to-GDP ratio will edge higher over the outlook, rising to 40.3 per cent by 2021-22, reflecting the projected increase in net debt and the FAO's forecast for nominal GDP growth. In contrast, based on the accounting treatment adopted by the government in the 2017 Budget, the FAO projects that net debt-to-GDP ~~is projected to~~will fall slightly from 38.6 per cent in 2015-16 to 37.5 per cent by 2021-22.

In the 2017 Budget, the Province set an interim net debt-to-GDP target of 35 per cent by 2023-24 and committed to achieving 27 per cent by 2029-30. The FAO's net debt-to-GDP projections under both accounting presentations, suggest that additional fiscal measures would be required for the government to achieve its interim target of 35 per cent by 2023-24.

Ontario's Net Debt to GDP Ratio

Source: Ontario Economic Accounts, 2017 Ontario Budget, and FAO

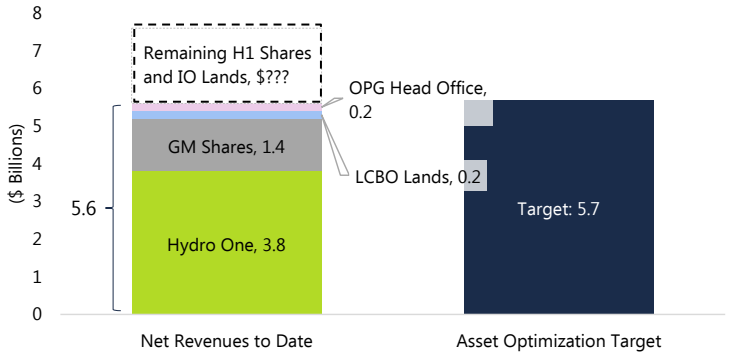
Commented [GE(6]: [OB comment]
As per Balanced Budget chart on page 1, Suggested changes to the chart labels as follows:

In the top legend it should read:
- •FAO projection – Net Debt to GDP Ratio (AG Recommended Presentation)
- •FAO projection – Net Debt to GDP Ratio (Government Presentation)
- •Net Debt to GDP Ratio as Published in the 2017 Ontario Budget.

In the bottom legend "Pension Assets (LHS) should be replaced with:
- •FAO projection: Net Debt Based on AG Recommended Presentation.

Risks to the Fiscal Plan and Policy Options

There are material risks that could impact Ontario's fiscal position.



- A sharp correction in the housing market could present a significant risk for both the broader economy and for the Province's fiscal plan. As discussed in the FAO housing commentary[8], a decline in house prices and housing market activity would directly reduce Land Transfer Tax and HST revenues. In addition, the broader economic impacts would impact personal and corporate income tax revenues.
- In the 2017 Budget, the government has significantly reduced the prudence built into its program spending projection compared to the previous budget, leaving less fiscal flexibility for the government to respond to unexpected events.[9] In addition, the FAO projects interest on debt payments as a share of both program spending and revenue ~~are expected~~ to increase significantly, exposing the government to increased fiscal risk should interest rates rise faster than expected.

On the other hand, the government has increased spending growth to a rate in line with underlying spending pressures, which diminishes the expense risk identified in earlier FAO reports.

Additionally, the government has a broad range of policy options that could improve its fiscal position, including the sale of ~~additional~~ non-core public assets beyond announced ~~targets~~initiatives. To date, the government has generated $5.6 billion in net revenues from asset sales, close to its target of $5.7 billion over 10 years.

Given that the government has indicated that it still intends to sell an additional 30 per cent of Hydro One, as well as ~~Infrastructure Ontario~~surplus real estate holdings, it may significantly overachieve its asset sales target.

Asset Optimization Revenues and Target

[8] Financial Accountability Officer of Ontario, The Impact of a Housing Market Correction on Ontario's Fiscal Position, 2017

[9] In the 2017 Budget, contingency funds total $0.6 billion for the plan year, half the size of what was built into the plan year for the 2016 Budget~~coming fiscal year, half the size built into the 2016 Budget fiscal plan~~. Similarly, the government's target for year-end savings has increased to $1.2 billion for the ~~coming~~ plan year, compared to $0.8 billion ~~in~~ for the plan year in the 2016 Budget ~~2016~~.

The Accounting Treatment of Jointly Sponsored Pension Plans

Background

Ontario's 2015-16 Public Accounts noted a disagreement between the Office of the Auditor General and the Province on the appropriate accounting treatment for net pension assets of jointly sponsored pension plans. Specifically, the Province is a joint sponsor of two pension plans, the Ontario Teachers' Pension Plan (OTPP) and the Ontario Public Service Employees Union Pension Plan (OPSEUPP).

The government's position is that these pension assets have been appropriately and consistently reflected on the Province's financial statements since 2001. The Office of the Auditor General, based on a review of these pension assets, determined that a change in the accounting treatment was required. The Auditor General concluded that under current Canadian public sector accounting standards, the government could not unilaterally recognize a pension asset on its financial statements without evidence - in the form of a written agreement - permitting it to realize the asset through reduced contributions.[10]

In response, the Province adopted regulated accounting for 2015/16 to reflect the results according to the Auditor General's interpretation of public sector accounting standards and subsequently appointed ~~its own~~an expert advisory panel to review and provide a recommended interpretation of public sector accounting standards with respect to the assets of jointly sponsored pension plans. The panel's report[11], released in February 2017, concluded that the Province's share of net assets in jointly sponsored pension plans ~~could~~ should be fully recognized in the Province's financial statements — contrary to the opinion of the Office of the Auditor General.

In the 2017 Budget, the government adopted the expert advisory panel's interpretation of public sector accounting standards and recognized the net pension assets of the jointly sponsored pension plans. The 2017 Budget also indicated that the Province's 2016–17 Public Accounts will report the net pension assets for the two jointly sponsored pension plans.

The Central Issue

The government and the Auditor General have put forward different interpretations of the application of public sector accounting standards for jointly sponsored pension plans.[12]

The different interpretations centre on the question of ~~the~~unilateral control of pension surplus assets in jointly sponsored pension plans. In particular, the issue is focused on whether there needs to be an explicit written agreement between the co-sponsors (the government and the unions representing the employees) on how the sponsors plan to use the pension assets~~, for example by~~ to lower~~ing~~ future contributions ~~or increasing benefits to pensioners~~.

Commented [GE(7]: [OPCD comment]
This latter reference is not relevant to reporting an asset under the AG's interpretation of PSAS.

~~As indicated by~~According to the Auditor General, the issue can be resolved if the government presents an agreement with the Ontario Teacher's Federation (OTF) allowing the government to access the OTPP pension assets through reduced contributions.[13] The extent and duration of the reduced contributions would determine the size of the pension asset that the government could recognize in its financial statements

The government position, ~~based on~~ confirmed by the advice of the expert advisory panel, ~~maintains~~ is that the existing agreements governing the pension plans and past history clearly reflect ~~already recognize~~ the sponsors' rights and intent to benefit from ~~access~~ surplus assets in the plans ~~and also provide the~~through mechanisms reflected in the agreements to potentially realize a benefit through lower future contribution rates.

---

[10] The government's 2016 Budget reported a negative expense for the OTPP for 2016-17 which led, in part, to the Auditor General conducting an in-depth review of the related pension assets [suggest including a reference to the AG's Annual report instead].

[11] https://news.ontario.ca/tbs/en/2017/02/pension-asset-expert-advisory-panel-submits-report.html

[12] In 2015, PSAB created an Employment Benefits Task Force to review the existing accounting standard for post-employment benefits. The work of this task force will include reviewing the appropriate accounting treatment for shared-risk and multi-employer pension plans. However, the work of this task force is not expected to be completed in the near future [suggest deleting this reference. Not relevant].

[13] Of the government's two jointly sponsored pension plans, only the OTPP is currently in a net asset position (This statement is inaccurate: OTPP, OPSEUPP and CAATPPP were all in surplus positions.

In the absence of an agreement, and given the government's decision in the ~~2017 Budget~~Q3 Finances to accept the expert advisory panel's recommended approach to accounting for jointly sponsored pension plan assets, the Auditor General would be expected to provide a qualified opinion[14] on Ontario's 2016-17 Public Accounts.

Roles and Responsibilities of the Province and the Auditor General

The Province (through the Treasury Board Secretariat) is responsible for the preparation of Ontario's Public Accounts in accordance with legislation, and based on the standards set out by the Public Sector Accounting Board (PSAB).[15] The PSAB accounting standards serve the public interest by providing an independent, high-quality accounting framework for public sector entities. Government is responsible to ensure that the financial reports fairly reflect the activities and financial position of the Province.

The Auditor General reviews the Province's annual Public Accounts and provides an audit opinion to the Legislature on whether the Consolidated Financial Statements for the Province of Ontario present fairly, in all material respects, the Province's financial position, in accordance with the PSAB accounting standards.

The FAO's Presentation of Ontario's Fiscal Outlook

The Financial Accountability Officer supports the Legislative Assembly by providing independent economic and financial analysis intended to improve the transparency of the government's fiscal plan. The Officer also looks to the Auditor General as the provincial authority on the appropriate interpretation and application of accounting standards for the Province.

Commented [GE(8]: [OPCD comment]
FAO could choose to take an alternative position which acknowledges the government as having a different interpretation, supported by an external accounting opinion and an publicly available report issued by the Expert Advisory Panel on Pensions.

The FAO has presented two fiscal projections, including and excluding the impact of the net pension assets of jointly sponsored pension plans to help members of the Legislative Assembly better understand the implications of these different interpretations of accounting standards on the Province's fiscal position.

- The projection based on the Auditor General's recommended accounting treatment assumes a valuation allowance that offsets the net pension assets.
- The projection based on the government's fiscal presentation in the 2017 Budget recognizes the net pension assets based on the FAO's projection over the budget outlook.
    - In the absence of an agreement between the co-sponsors, this presentation of Ontario's fiscal position would be expected to receive a qualified opinion from the Auditor General when published in the Province's future Public Accounts.

Based on the Auditor General's recommended accounting treatment for the net assets of jointly sponsored pension plans and the FAO's projection of the pension adjustment, the FAO is projecting budget deficits of $2.9 billion in 2017-18, rising to $6.5 billion by 2021-22. Alternatively, based on the pension accounting treatment presented by the Province in the 2017 Budget, the FAO's projection for the budget deficit decreases to $0.5 billion in 2017-18 and $3.6 billion in 2021-22.

[14] An auditor may provide a qualified opinion when financial statements do not conform in a material way to the applicable accounting standards.

2. Appendix

Developments since the FAO's Fall 2016 Economic and Fiscal Outlook

The FAO's current projection of the Ontario budget balance has generally deteriorated relative to the FAO's fall 2016 projection.

- Stronger than expected economic performance is expected to boost taxation revenues over the forecast, partially offset by lower Equalization revenue.
- Based on new government spending plans, program expense has increased significantly.

Developments since 2016 Fall EFO (AG Recommended Presentation)

	2016-17	2017-18	2018-19	2019-20	2020-21
FAO's Fall 2016 Budget Balance Forecast	-5.2	-2.6	-2.8	-3.3	-3.7
Developments Since Fall 2016					
Revenue					
Stronger Economic Outlook	2.3	4.1	3.9	4.4	4.7
Lower Federal Transfers[1]	-0.3	0.2	-1.3	-2.4	-2.2
Other Revenue Changes	0.1	0.1	-0.5	-0.6	-0.6
Total	2.1	4.4	2.1	1.3	1.8
Expense					
Children and Youth Pharmacare, and Fair Hydro Plan[3]	0.5	1.3	1.3	1.3	1.3
Revised Pension Asset[4]	0.7	0.8	1.1	1.4	1.4
Other Expense Increases	0.7	2.5	1.7	0.9	1.4
Total	2.0	4.6	4.1	3.6	4.1
Total Developments	0.2	-0.3	-2.1	-2.3	-2.3
FAO's 2017 Spring Budget Balance Forecast	-5.0	-2.9	-4.9	-5.5	-6.0

Notes:

1. Change in federal transfers forecast mainly due the reduction in Ontario's Equalization payment.

2. Other revenue changes include the $0.5 billion re-profiling of cap-and-trade proceeds from 2016-17 to 2017-18, and an increase in sales and rentals for 2017-18.

3. In the 2016 Fall EFO, the FAO included $1 billion in expenses from the HST rebate on electricity bills beginning 2017-18, which is now part of the Fair Hydro Plan. As a result, the FAO estimates that the incremental impact of the Fair Hydro Plan is $0.8 billion, compared to the Fall.

4. In the 2016 Fall EFO, the FAO assumed $1.5 billion in adjustments for net pension assets of jointly sponsored pension plans. ~~The government has revised its estimate of the impact to $2.2 billion in 2017-18, increasing to $2.9 billion by 2020-21.~~ This adjustment increases to $2.2 billion in 2016-17, rising to $2.9 billion by 2020-21, based on the FAO's revised projection of the pension adjustment.

Source: Bank of Canada, Congressional Budget Office, Statistics Canada, FAO Consensus and FAO

Commented [GE(12]: [OEP comment]
The FAO forecast is for significantly faster Bank of Canada rate increases than financial markets and private-sector economists expect. The current private-sector average has the three-month T-bill rate at 0.9% in 2018, 1.6% in 2019 and 2.0% in 2020.

Commented [GE(13]: [OEP comment]
Interest rates in 2020 are significantly higher than the 2017 Budget forecast and private-sector consensus. This is likely because some forecasters with low rates are not captured in the FAO consensus view. The current private-sector average is 3.3% in 2020.

Source: Statistics Canada, Public Accounts of Ontario, Annual Report of Ontario and FAO

Commented [ST(14]: This year is being presented inconsistently with the rest of the years. If you are taking on the AG presentation, then you need to add $1.5B here, and then this ripples through to generate higher program spending, higher total expense, and a deficit of $5.0B at the bottom. Alternative is to change footnote to say "For fiscal years after 15-16, based on….."

Table 4a: FAO Debt Outlook (Auditor General Recommended Presentation)

$ Billions	2015-16a	2016-17f	2017-18f	2018-19f	2019-20f	2020-21f	2021-22f

Source: 2017 Ontario Budget and FAO

Commented [ST(15]: This excludes the pension adjustment of $1.5B, which would be inconsistent with the remainder of the fiscal years. Not clear whats going on with the accumulated deficit number.....at $10B higher, not clear why that would be the case.

Economic and Fiscal Outlook

2017

Draft Report

Confidential Document

May 2017

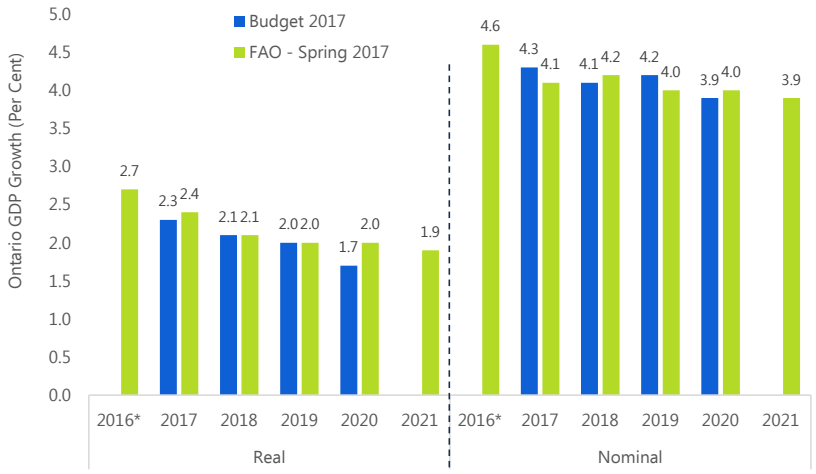
Economic Outlook

Overview

Ontario Economy Expected to Remain Strong in 2017

The Ontario economy finished 2016 with a strong 2.7 per cent increase in real GDP, reflecting solid growth in the second half of the year. Real GDP growth last year was significantly above the 2.1 per cent average gain seen from 2011 to 2015. Strong household spending, residential investment and exports contributed to the increase in real GDP in 2016.

Supported by the strong economic momentum in 2016 and continued improvement in economic indicators in the first quarter of 2017, the FAO is projecting real GDP to rise by 2.4 per cent in 2017 and 2.1 per cent in 2018.



Nominal GDP – the broadest measure of the tax base – increased by a robust 4.6 per cent in 2016. The FAO is projecting nominal GDP to increase by 4.1 per cent in 2017 and 4.2 per cent in 2018, reflecting solid gains in labour income and corporate profits.

Commented [GE(1]: [OEP comment] Consistent with the provincial economic accounts, suggest changing 'household spending' references to 'household consumption'.

Commented [GE(2]: [OEP comment] Consistent with the provincial economic accounts, suggest changing 'labour income' references to 'compensation of employees'.

Commented [GE(3]: Consistent with the provincial economic accounts, suggest changing 'corporate profits' references to 'net operating surplus - corporations'.

Solid Economic Performance Expected Over Outlook

* 2016 are actuals

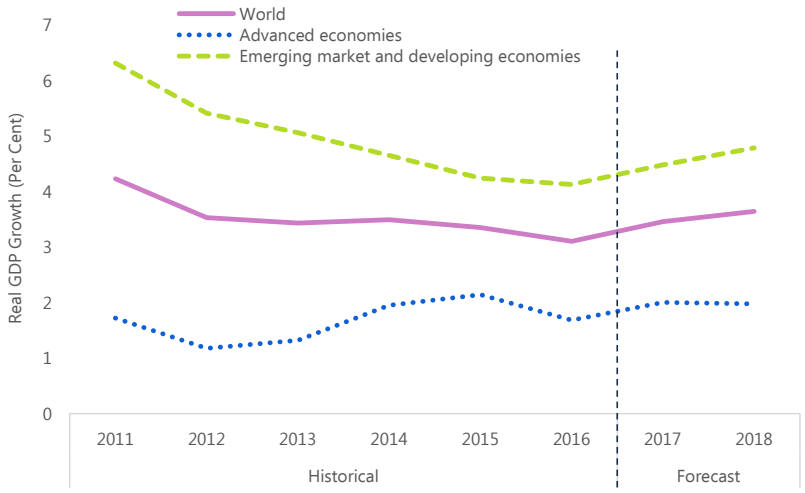
Global Economy Gaining Momentum

In its latest World Economic Outlook,[1] the International Monetary Fund (IMF) is forecasting global economic growth to strengthen from 3.1 per cent in 2016 to 3.5 per cent in 2017 and 3.6 per cent in 2018. The IMF revised the outlook slightly higher for 2017, but left it unchanged for 2018, compared to its October 2016 outlook.[2]



For advanced economies, the IMF's forecast for 2017 and 2018 has improved slightly from its October projection with growth of 2.0 per cent in 2017 and 2018.

Growth prospects for emerging market and developing economies are much more varied, but overall have weakened slightly from the IMF's October outlook, due to weaker economic conditions in key export markets. On average, the IMF has lowered its growth forecast for emerging markets and developing countries to 4.5 per cent in 2017, with 2018's forecast remaining unchanged at 4.8 per cent.

The IMF expects China – the world's second largest economy – to grow by 6.6 per cent in 2017 and 6.2 per cent in 2018, reflecting continued support from government policy. In the medium term, China's economic growth is expected to gradually moderate as its economy rebalances from investment and manufacturing-led growth to a more service-intensive economy.

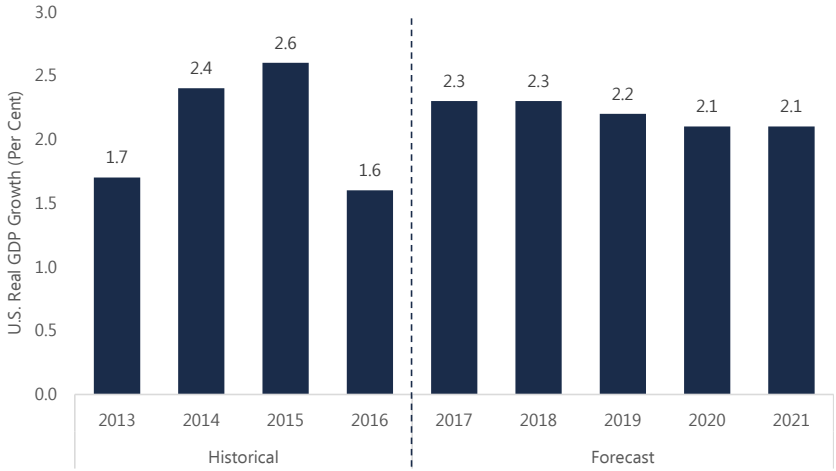
Global Growth to Improve in 2017

Source: "World Economic Outlook, Gaining Momentum?", April 2017, International Monetary Fund

U.S. Economic Growth to Strengthen in 2017



U.S. real GDP advanced by a relatively moderate 1.6 per cent in 2016, the weakest increase in three years. For 2017 and 2018, the FAO projects U.S. growth to improve to 2.3 per cent, with household spending, business investment and residential construction being key contributors to overall growth.[3]

However, the lack of specific details on the new U.S. administration's proposed policies has raised the risks associated with the current U.S. outlook. Many forecasters are cautiously optimistic that some of the proposed fiscal policies, such as expected cuts to corporate tax rates, could boost U.S. economic growth in the short-term.[4] But this optimism is tempered by the potential for large future increases in the U.S. budget deficit, which could weigh on economic growth over the medium-term.

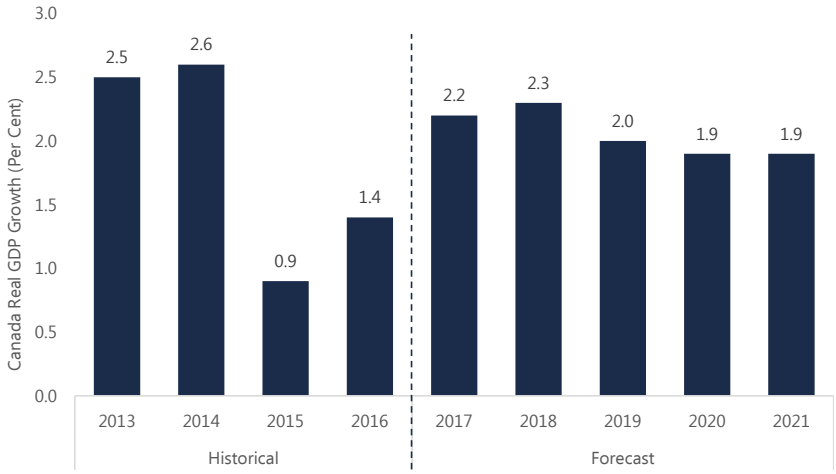
From 2019 to 2021, U.S. real GDP growth is projected to average 2.1 per cent annually, which is in-line with the average rate seen from 2012 to 2016.

U.S. Economic Growth Moderates Beyond 2017

[3] The FAO forecast for the U.S. economy in 2017 is based on the U.S. Congressional Budget Office's (CBO) latest forecast. For 2018 to 2021, the U.S. forecast is based on the average of the CBO outlook and the forecasts of three independent model-based forecasters – the Conference Board of Canada (CBOC), the Centre for Spatial Economics (C4SE) and the Policy and Economic Analysis Program (PEAP) at the University of Toronto.
[4] These forecasters include the IMF, CBO, TD Bank, RBC, BMO Capital Markets and National Bank Economics.

Source: Federal Reserve Bank of St. Louis, Congressional Budget Office and FAO Consensus

Canadian Economic Growth Expected to Rebound



The outlook for the Canadian economy has improved following strong growth over the second half of 2016.

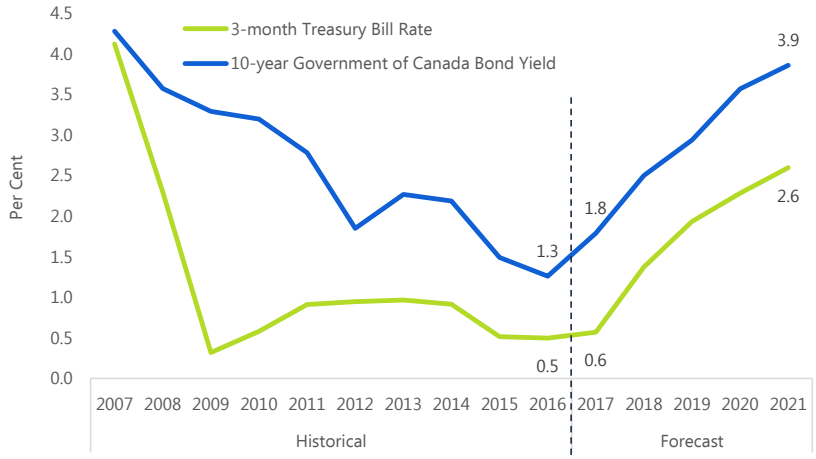
Continued momentum in recent economic indicators point to a solid start for 2017. Canadian real GDP is currently projected to grow by 2.2 per cent in 2017 and 2.3 per cent in 2018, recovering from more moderate growth in 2015 and 2016.[5] Strength in household spending and non-energy exports are expected to contribute to overall growth in 2017 and 2018.

Beyond 2018, Canadian real GDP is projected to increase at an average annual rate of 2.0 per cent, as the economy continues to adjust to slower growth in the energy sector.

Canada GDP Growth Expected to Improve in 2017

[5] The FAO forecast for the Canadian economy is based on the average quarterly forecasts of two independent, model-based forecasters – the Conference Board of Canada (CBOC) and the Policy and Economic Analysis Program (PEAP) at the University of Toronto.

Source: Statistics Canada and FAO Consensus



Based on the continuing recovery of the U.S. economy, and in particular the strength of U.S. labour markets, the U.S. Federal Reserve raised its key policy interest rate in March 2017.[6] In contrast, the Bank of Canada has remained more cautious about the underlying strength of the Canadian economy and as a result appears unlikely to raise its key policy interest rate before 2018.[7]

The FAO is projecting Canadian short-term interest rates will remain near current levels through 2017 and then begin rising modestly in 2018. Beyond 2018, interest rates are expected to gradually normalize with the 3-month Treasury Bill rate increasing to 2.6 per cent and the 10-year Government of Canada bond yield rising to 3.9 per cent by 2021.

Commented [GE(4]: [OEP comment]
Interest rates in 2020 are significantly higher than 2017 Budget forecast and private-sector consensus. This is likely because some forecasters with low rates are not captured in the FAO consensus view.

Canadian Interest Rates to Rise over the Forecast

[6] The Federal Reserve raised its key policy rate, or the Federal Funds Rate, to 1.0 per cent on March 15, 2017.
[7] In its most recent monetary policy report, the Bank of Canada (BOC) indicated that it expects the output gap to close in early 2018. At the same time, the BOC noted that "there is still considerable uncertainty about the outlook," suggesting caution with regard to future changes in its policy interest rate. Bank of Canada Monetary Policy Report, April, 2017

Source: Statistics Canada and FAO

The Canadian dollar is expected to gradually appreciate over the next five years, rising from an average of about 75 cents U.S. in 2016 to about 81 cents U.S. by 2021, supported by the steady increase in short-term interest rates and a gradual rise in oil prices.

Ontario Economic Outlook

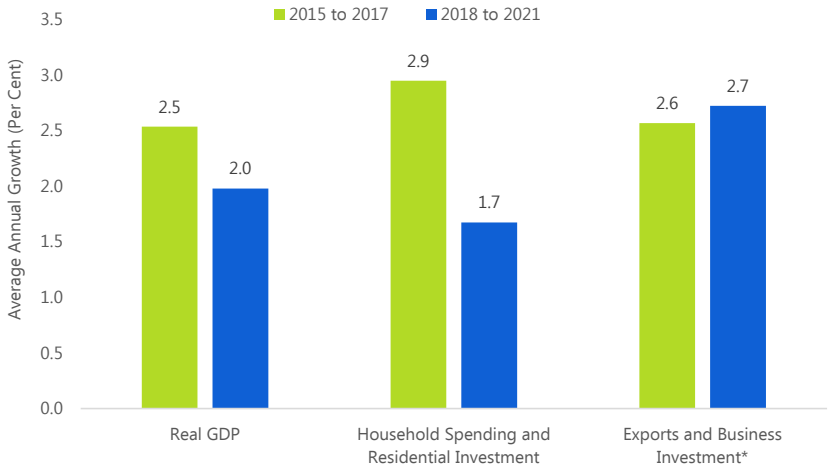
Solid Real GDP Growth Expected in 2017

Based on the Ontario Ministry of Finance's estimates,[8] Ontario real GDP rose by a strong 2.7 per cent in 2016, following equally strong gains of 2.5 per cent and 2.7 per cent in 2015 and 2014, respectively. Household spending, residential investment and exports were key contributors to overall economic growth last year. Business investment in plant and equipment disappointed expectations, declining by 4.0 per cent.

The performance of a number of economic indicators, including employment, retail sales and home sales remained solid in the first quarter of 2017. However, Ontario's merchandise export performance has been uneven so far in 2017.

[8] Ontario Economic Accounts, Fourth Quarter 2016, released April 13, 2017.

Uncertainty over the future direction of U.S. trade and industrial policy could hamper business investment growth in the near term, which would negatively impact Ontario's competitiveness. Without stronger business sector investment to expand production capacity, the growth potential of several key Ontario industries will be limited.[9] As a result, despite the projection for steady growth in the U.S. and a competitively valued Canadian dollar, Ontario's net exports[10] are projected to grow at a relatively moderate pace over the outlook.



The FAO is forecasting real GDP growth of 2.4 per cent in 2017, supported by strong household spending and residential investment.[11] The pace of Ontario's overall economic growth will moderate to 2.1 per cent in 2018 and to an average of 2.0 per cent over the last three years of the outlook.

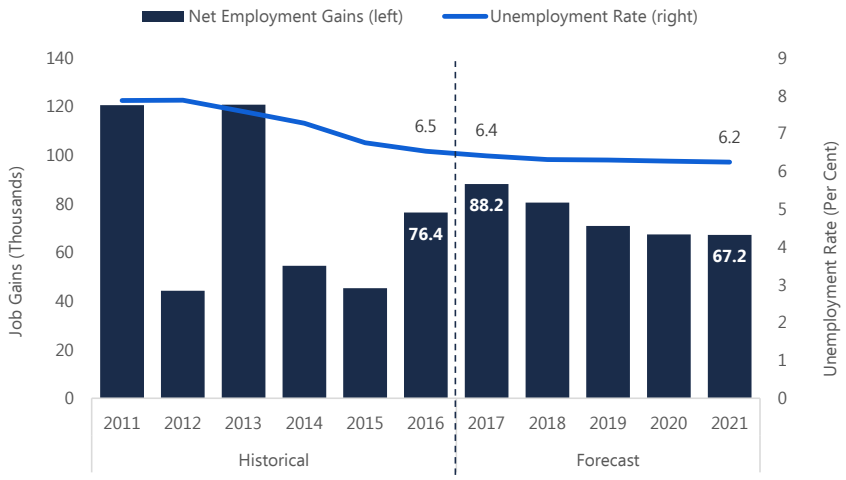
Moderate declines in residential investment in 2018 and 2019 – reflecting elevated household debt and a moderation in housing prices – is expected to contribute to the slower pace of overall economic activity.

The FAO forecast is broadly consistent with the consensus view among economists that exports and business investment will lead Ontario growth over the next several years, while household spending and residential investment will grow at a more moderate pace, as households reduce borrowing to address high debt loads.

Exports and Business Investment Expected to Drive Economic Growth

[9] As noted in a recent Conference Board of Canada report, nearly half of Ontario businesses are operating near or above capacity, hampering the ability of Ontario businesses to increase production to meet foreign demand. Conference Board of Canada Outlook, Winter 2017.
[10] Net exports are exports less imports of goods and services.
[11] The FAO forecast of the Ontario economy is based on the FAO's short-term quarterly model of the Ontario economy. For a description of the model, please refer to the textbox at the end of the Economic Outlook chapter.

* Business Investment includes both Non-Residential Investment and Machinery & Equipment Investment
Source: Ontario Economic Accounts and FAO



Steady Job Gains Over Outlook

Ontario experienced relatively strong employment growth of 1.1 per cent in 2016 (+76,400 net new jobs), the majority of which were full-time, private sector jobs. There was robust job growth in both goods and service producing industries. The construction industry in particular, posted the highest job growth (+3.4 per cent), followed by healthcare (+3.2 per cent).[12]

The strength in Ontario's labour market continued into 2017 with an increase of 99,600 jobs on a year-over-year basis during the first quarter. For the year, the FAO is projecting a 1.3 per cent gain in employment in 2017. On average, the FAO is forecasting average annual job gains of 1.0 per cent over the next four years, consistent with the outlook for solid economic growth.

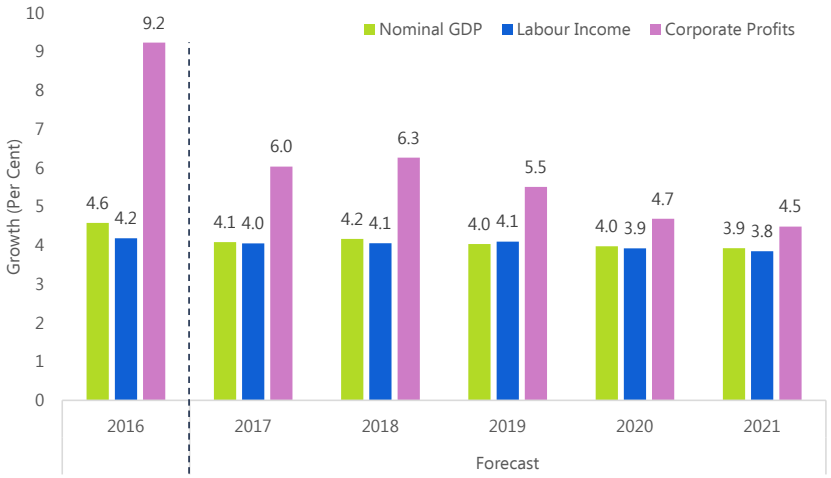
Steady Employment Gains as Unemployment Rate Slowly Trends Lower

[12] For a more detailed discussion on Ontario's labour market, see the FAO's Commentary: "Ontario Posts Solid 2016 Job Gain as the Labour Market Continues to Evolve."

Source: Statistics Canada and FAO

Sustained economic growth over the outlook is expected to attract more workers into the labour force, which is forecast to rise at a slightly higher rate than over the last five years. Faster labour force growth from 2017 to 2021, will partially offset relatively strong employment gains, leading to a more moderate decline in the unemployment rate over the outlook.

Strong Gains Expected for Labour Income and Corporate Profits



Labour income grew by a robust 4.2 per cent in 2016, above the average annual increase of 3.7 per cent from 2011 to 2015, and a reflection of the strong employment growth last year. The net operating surplus of corporations (largely corporate profits) also increased by a robust 9.2 per cent in 2016 following an equally strong gain of 9.1 per cent in 2015.

As a result of the gains in labour income and corporate profits (which together account for about two-thirds of nominal GDP), nominal GDP grew by a strong 4.6 per cent in 2016.[13]

[13] The robust 2016 increase in nominal GDP was much stronger than the 3.4 per cent increase projected in both the FAO's Economic and Fiscal Outlook, Fall 2016 Update and the government's 2016 Economic Outlook and Fiscal Review. The sharp upward shift in 2016 nominal GDP growth reflects large historical revisions to 2015 and 2016 nominal GDP growth in the Ontario Economic Accounts, consistent with new data from Statistics Canada. In particular, the net operating surplus of corporations is now estimated to have increased by 9.2 per cent in 2016 compared to an original projection of 0.3 per cent last fall.

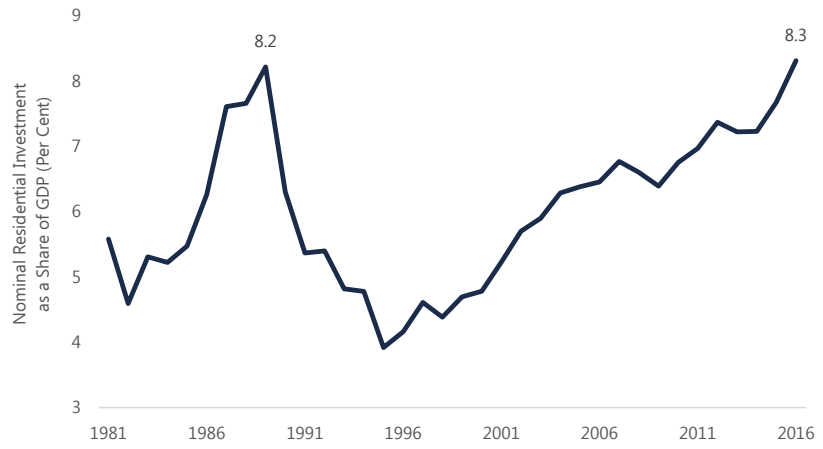
For 2017, the FAO is projecting a 4.1 per cent rise in nominal GDP, supported by strong gains in labour income (+4.0 per cent) and corporate profits (+6.0 per cent). On average, the FAO is projecting nominal GDP growth of 4.0 per cent over the 2018 to 2021 outlook.

Labour Income and Corporate Profits Support Nominal GDP Growth

Source: Ontario Economic Accounts and FAO

Key Risks for Ontario's Economic Outlook

The FAO's current economic forecast represents a reasonable outlook for the Ontario economy and an appropriate foundation for fiscal projections. However, several key risks could materialize leading to weaker than expected economic growth for the province.



In particular, there are significant risks with respect to the proposed renegotiation of the North American Free Trade Agreement (NAFTA) and the adoption of protectionist trade measures in the United States. As well, other proposed changes to U.S. fiscal and industrial policies, such as lower corporate tax rates and 'Buy America' executive orders, could harm Ontario's relative competitiveness, further discouraging business investment and limiting the contribution of exports to overall growth.

Domestically, the housing market continues to pose a significant risk to the overall economy. The sharp rise in Ontario housing prices – particularly in the

Greater Toronto Area – has contributed to record consumer debt loads and stretched levels of affordability.

At the same time, the relative importance of residential housing investment to the overall economy has increased substantially in recent years, posing a significant risk to the Ontario economy, in the event of a sharp housing market correction. In 2016, investment in residential housing accounted for a record high 8.3 per cent of Ontario's nominal GDP, up from 6.4 per cent in 2009.[14]

Residential Investment Spending Accounts for a Record Share of GDP

Source: Ontario Economic Accounts and FAO

The last time investment in residential housing accounted for a similar proportion of the economy was 1989, just prior to the 1990-1995 housing market correction.

A sharp correction in housing prices, exacerbated by the elevated levels of household debt, would negatively affect household spending and residential investment, and could lead to broader economy-wide impacts on growth and employment.

[14] Almost one-quarter (22 per cent) of the growth in nominal GDP in 2016 was directly attributable to the increase in residential investment spending.

The Province recently announced a package of measures intended to respond to the underlying factors contributing to the unsustainable rise in housing prices and the rapid growth in housing market activity. However, it is too early to assess whether these measures will adequately address the imbalance between demand and supply pressures in the market.

The FAO's Quarterly Short-term Model of the Ontario Economy

The FAO has developed a short-term forecasting model to produce quarterly five-year projections of the Ontario economy. The model is based on dynamic equations for major sub-categories of real and nominal GDP. The model also includes key labour market components, financial variables and the Canada-U.S. dollar exchange rate. The model is structured around a number of important external or exogenous concepts such as Canada-wide economic growth, U.S. economic growth, U.S. prices, U.S. interest rates and energy prices.

The model is an important tool for the FAO's bi-annual Economic and Fiscal Outlook (EFO), ensuring internal consistency of each projection as well as consistency between EFO forecasts. It also provides the majority of the inputs required by the FAO's Fiscal Outlook Model which provides the FAO's projection of the government's fiscal position.

Subject: RE: FAO's Upcoming EFO Report

Good Morning,

Please find attached drafts of the Economic Outlook and Fiscal Outlook chapters from the FAO's upcoming 'Economic and Fiscal Outlook' report.
The chapters are password protected using the same password as in the past.

The FAO's fiscal forecast incorporates the tax revenue adjustments that we received on Friday afternoon -- and which brings our short-term forecast much closer the Budget 2017 forecast.

Unfortunately, we are on a very tight schedule to enable us to release this report at the end of the May.

So, we are asking for your comments/concerns including any potential cabinet confidentiality issues by end of day tomorrow (Tuesday, May 9)

Thanks again for your support and assistance.

David West

Hello,

Thanks again for our meeting on Tuesday. We appreciate the information you have provided as well as the responses to our questions at the meeting.

On Monday morning (as early as possible) we plan to provide you with draft copies of the Economic Outlook and Fiscal Outlook chapters (including Forecast Tables) from the FAO's upcoming EFO report.

We would hope you would be able to provide us with any comments or concerns on these chapters by Tuesday (May 9), end of day.

As in the past, the FAO will provide a final copy of the report 48 hours prior to release to both Ministers. I would email you a copy at the same time.

Thanks,

David West

Subject: Follow-Up on the 2017 Budget

Good Morning!

Congratulations on delivering yesterday's big, black budget!

I wanted to follow-up on the FAO's requests for some additional information.

First, as we have discussed, we have three requests for specific data/tables:

1. We would like to obtain the detailed revenue and expense tables (Tables 6.14 and 6.15) extended to 2019-20.

- Are these detailed tables available to 2020-21? If so, then please include (:))

2. As staff have been discussing, we would like to obtain more detailed information on the one-time adjustments to taxation revenues beginning in 2015-16 and extending over the forecast. This is basically additional information to that provided in tables 6.7, 6.8 and 6.9.

3. As detailed in the letter and background documents sent to Deputies Thompson and Angus on April 3, we are requesting pension expense and employer contribution details for the OTPP and OPSEUPP.

We would also appreciate a meeting early next week (preferably Tuesday afternoon) to allow you to respond to a number of questions that we have with regard to the 2017 Budget.

We'll provide a list of specific questions later this afternoon, but these questions will cover a number of areas, including:

- Clarification on where the Fair Hydro Plan appears in the expenses

- Additional details/clarification on new health spending, including the new pharmacare plan

- Clarification on future assumptions for asset sales and any details behind the 'Sales and Rentals' line in the detailed Revenue table.

- Clarification on the assumptions behind new federal funding announced in the 2017 federal budget (e.g. affordable housing, child care, home care)

- Some background on the decision to reduce the estimate of 'Carbon Allowance Proceeds' and assumptions on associated expense

- Additional details/clarification on new infrastructure spending

- Assumptions behind the plan to reduce net debt-to-GDP to 35% and eventually to 27%.

We'll provide a list later this afternoon that expands somewhat on these question topics.

Happy to discuss any of these requests.

Thanks again for your support,
David

Economic and Fiscal Outlook

2017

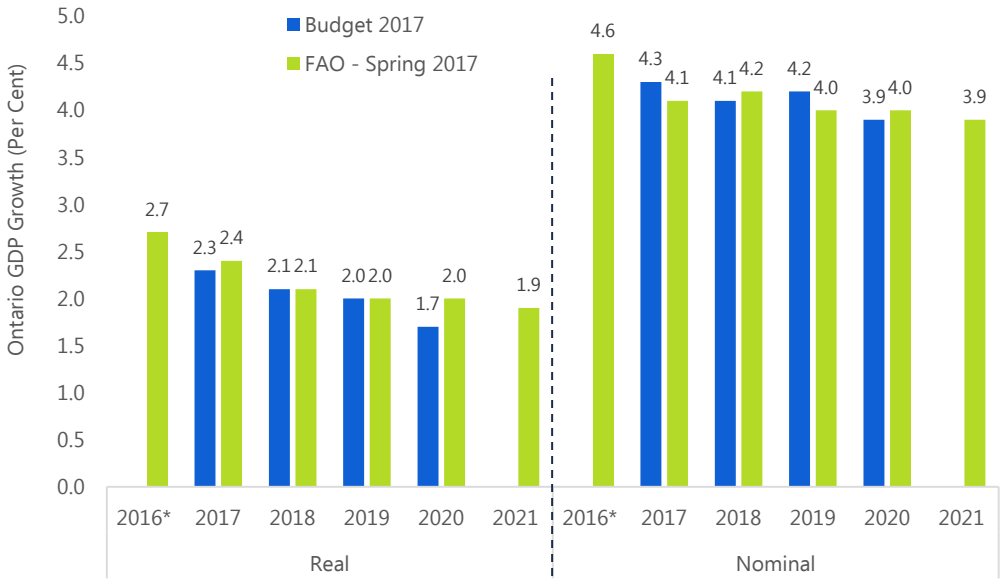
Draft Report

Confidential Document

May 2017

Economic Outlook

Overview



Ontario Economy Expected to Remain Strong in 2017

The Ontario economy finished 2016 with a strong 2.7 per cent increase in real GDP, reflecting solid growth in the second half of the year. Real GDP growth last year was significantly above the 2.1 per cent average gain seen from 2011 to 2015. Strong household spending, residential investment and exports contributed to the increase in real GDP in 2016.

Supported by the strong economic momentum in 2016 and continued improvement in economic indicators in the first quarter of 2017, the FAO is projecting real GDP to rise by 2.4 per cent in 2017 and 2.1 per cent in 2018.

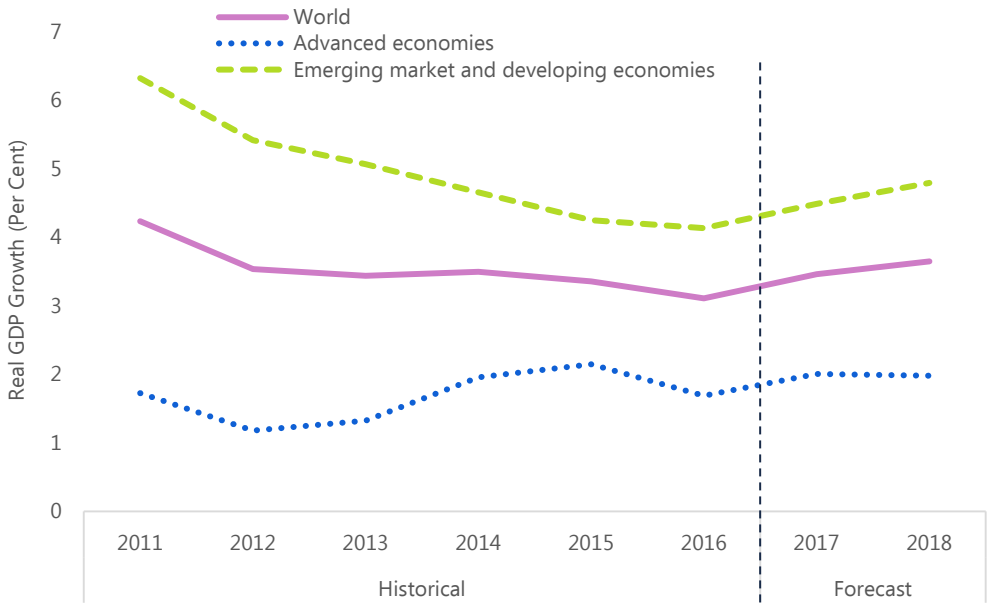
Nominal GDP – the broadest measure of the tax base – increased by a robust 4.6 per cent in 2016. The FAO is projecting nominal GDP to increase by 4.1 per cent in 2017 and 4.2 per cent in 2018, reflecting solid gains in labour income and corporate profits.

Solid Economic Performance Expected Over Outlook

* 2016 are actuals
Source: Ontario Economic Accounts, Budget 2017 and FAO

Global Economy Gaining Momentum

In its latest World Economic Outlook,[1] the International Monetary Fund (IMF) is forecasting global economic growth to strengthen from 3.1 per cent in 2016 to 3.5 per cent in 2017 and 3.6 per cent in 2018. The IMF revised the outlook slightly higher for 2017, but left it unchanged for 2018, compared to its October 2016 outlook.[2]



For advanced economies, the IMF's forecast for 2017 and 2018 has improved slightly from its October projection with growth of 2.0 per cent in 2017 and 2018.

Growth prospects for emerging market and developing economies are much more varied, but overall have weakened slightly from the IMF's October outlook, due to weaker economic conditions in key export markets. On average, the IMF has lowered its growth forecast for emerging markets and developing countries to 4.5 per cent in 2017, with 2018's forecast remaining unchanged at 4.8 per cent.

The IMF expects China – the world's second largest economy – to grow by 6.6 per cent in 2017 and 6.2 per cent in 2018, reflecting continued support from government policy. In the medium term, China's economic growth is expected to gradually moderate as its economy rebalances from investment and manufacturing-led growth to a more service-intensive economy.

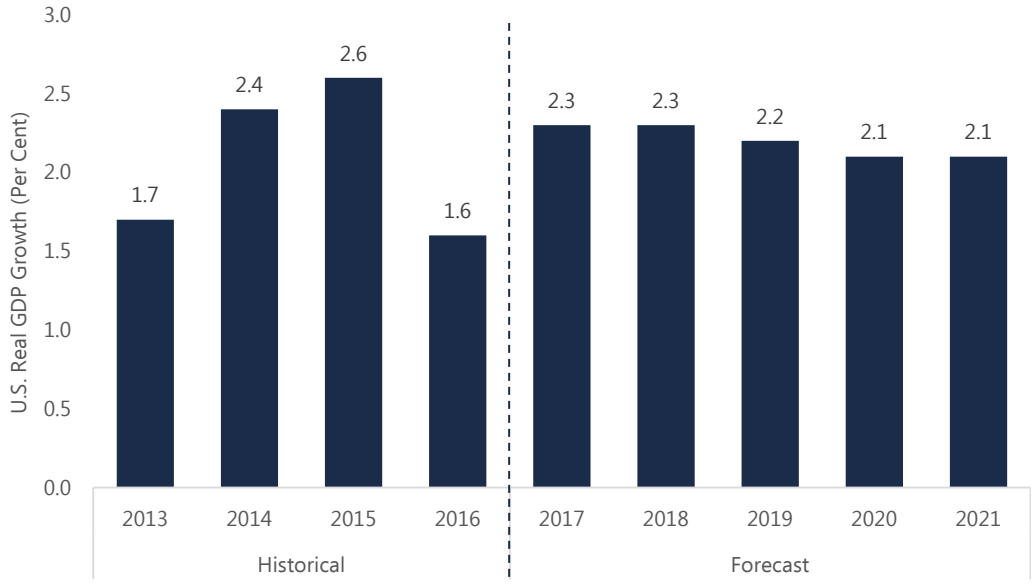
Global Growth to Improve in 2017

Source: "World Economic Outlook, Gaining Momentum?", April 2017, International Monetary Fund



U.S. Economic Growth to Strengthen in 2017

U.S. real GDP advanced by a relatively moderate 1.6 per cent in 2016, the weakest increase in three years. For 2017 and 2018, the FAO projects U.S. growth to improve to 2.3 per cent, with household spending, business investment and residential construction being key contributors to overall growth.[3]

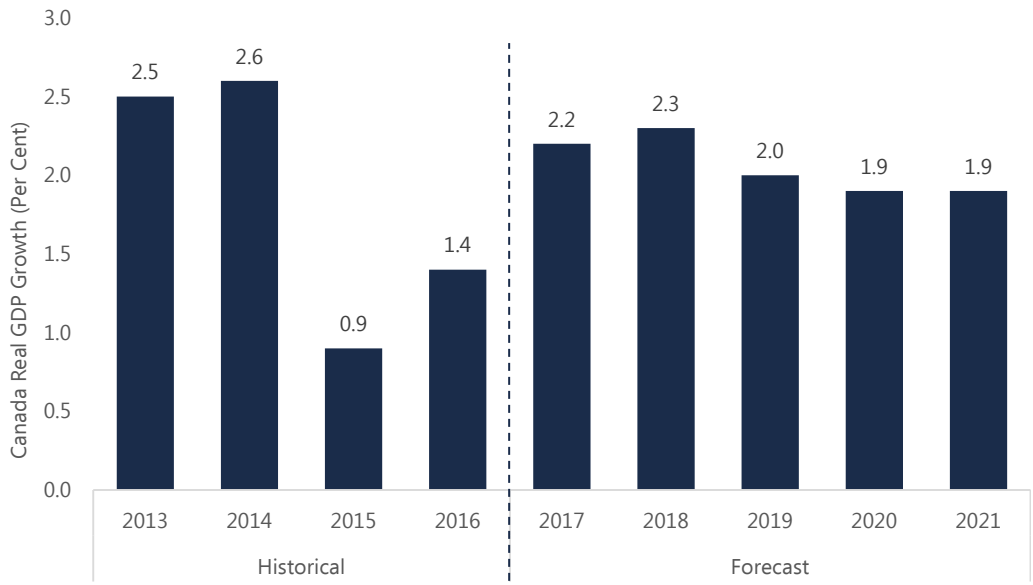
However, the lack of specific details on the new U.S. administration's proposed policies has raised the risks associated with the current U.S. outlook. Many forecasters are cautiously optimistic that some of the proposed fiscal policies, such as expected cuts to corporate tax rates, could boost U.S. economic growth in the short-term.[4] But this optimism is tempered by the potential for large future increases in the U.S. budget deficit, which could weigh on economic growth over the medium-term.

From 2019 to 2021, U.S. real GDP growth is projected to average 2.1 per cent annually, which is in-line with the average rate seen from 2012 to 2016.

U.S. Economic Growth Moderates Beyond 2017

[3] The FAO forecast for the U.S. economy in 2017 is based on the U.S. Congressional Budget Office's (CBO) latest forecast. For 2018 to 2021, the U.S. forecast is based on the average of the CBO outlook and the forecasts of three independent model-based forecasters – the Conference Board of Canada (CBOC), the Centre for Spatial Economics (C4SE) and the Policy and Economic Analysis Program (PEAP) at the University of Toronto.
[4] These forecasters include the IMF, CBO, TD Bank, RBC, BMO Capital Markets and National Bank Economics.

Source: Federal Reserve Bank of St. Louis, Congressional Budget Office and FAO Consensus



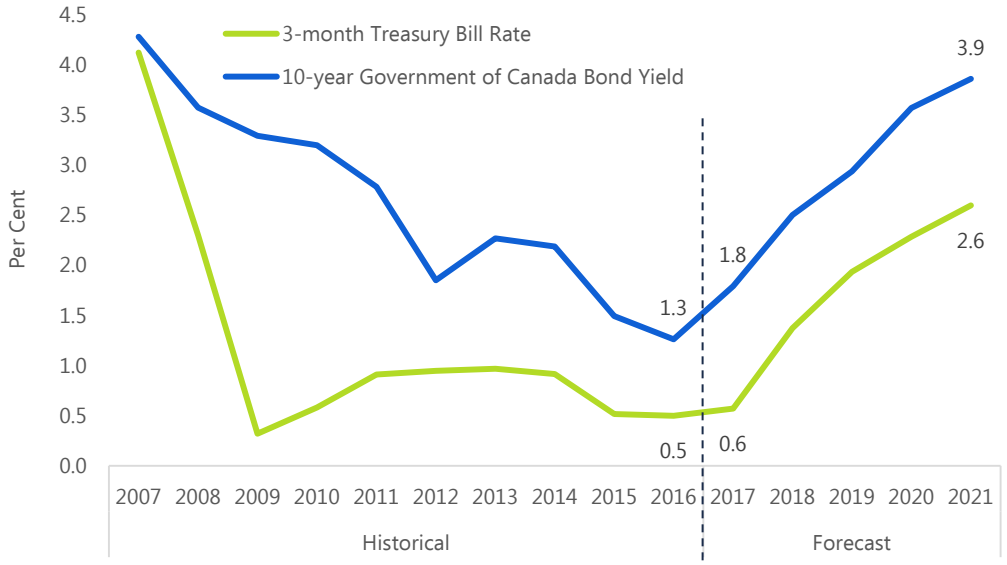
Canadian Economic Growth Expected to Rebound

The outlook for the Canadian economy has improved following strong growth over the second half of 2016.

Continued momentum in recent economic indicators point to a solid start for 2017. Canadian real GDP is currently projected to grow by 2.2 per cent in 2017 and 2.3 per cent in 2018, recovering from more moderate growth in 2015 and 2016.[5] Strength in household spending and non-energy exports are expected to contribute to overall growth in 2017 and 2018.

Beyond 2018, Canadian real GDP is projected to increase at an average annual rate of 2.0 per cent, as the economy continues to adjust to slower growth in the energy sector.

Canada GDP Growth Expected to Improve in 2017



Source: Statistics Canada and FAO Consensus

[5] The FAO forecast for the Canadian economy is based on the average quarterly forecasts of two independent, model-based forecasters – the Conference Board of Canada (CBOC) and the Policy and Economic Analysis Program (PEAP) at the University of Toronto.

Based on the continuing recovery of the U.S. economy, and in particular the strength of U.S. labour markets, the U.S. Federal Reserve raised its key policy interest rate in March 2017.[6] In contrast, the Bank of Canada has remained more cautious about the underlying strength of the Canadian economy and as a result appears unlikely to raise its key policy interest rate before 2018.[7]

The FAO is projecting Canadian short-term interest rates will remain near current levels through 2017 and then begin rising modestly in 2018. Beyond 2018, interest rates are expected to gradually normalize with the 3-month Treasury Bill rate increasing to 2.6 per cent and the 10-year Government of Canada bond yield rising to 3.9 per cent by 2021.

Canadian Interest Rates to Rise over the Forecast

Source: Statistics Canada and FAO

The Canadian dollar is expected to gradually appreciate over the next five years, rising from an average of about 75 cents U.S. in 2016 to about 81 cents U.S. by 2021, supported by the steady increase in short-term interest rates and a gradual rise in oil prices.

[6] The Federal Reserve raised its key policy rate, or the Federal Funds Rate, to 1.0 per cent on March 15, 2017.
[7] In its most recent monetary policy report, the Bank of Canada (BOC) indicated that it expects the output gap to close in early 2018. At the same time, the BOC noted that "there is still considerable uncertainty about the outlook," suggesting caution with regard to future changes in its policy interest rate. Bank of Canada Monetary Policy Report, April, 2017

Ontario Economic Outlook

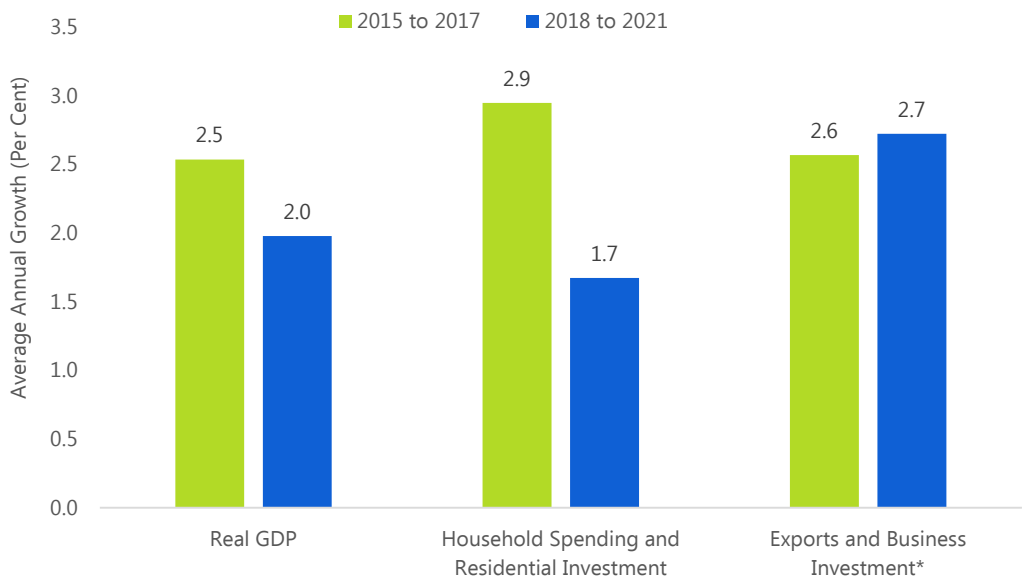
Solid Real GDP Growth Expected in 2017

Based on the Ontario Ministry of Finance's estimates,[8] Ontario real GDP rose by a strong 2.7 per cent in 2016, following equally strong gains of 2.5 per cent and 2.7 per cent in 2015 and 2014, respectively. Household spending, residential investment and exports were key contributors to overall economic growth last year. Business investment in plant and equipment disappointed expectations, declining by 4.0 per cent.

The performance of a number of economic indicators, including employment, retail sales and home sales remained solid in the first quarter of 2017. However, Ontario's merchandise export performance has been uneven so far in 2017.

Uncertainty over the future direction of U.S. trade and industrial policy could hamper business investment growth in the near term, which would negatively impact Ontario's competitiveness. Without stronger business sector investment to expand production capacity, the growth potential of several key Ontario industries will be limited.[9] As a result, despite the projection for steady growth in the U.S. and a competitively valued Canadian dollar, Ontario's net exports[10] are projected to grow at a relatively moderate pace over the outlook.

The FAO is forecasting real GDP growth of 2.4 per cent in 2017, supported by strong household spending and residential investment.[11] The pace of Ontario's overall economic growth will moderate to 2.1 per cent in 2018 and to an average of 2.0 per cent over the last three years of the outlook.



Moderate declines in residential investment in 2018 and 2019 – reflecting elevated household debt and a moderation in housing prices – is expected to contribute to the slower pace of overall economic activity.

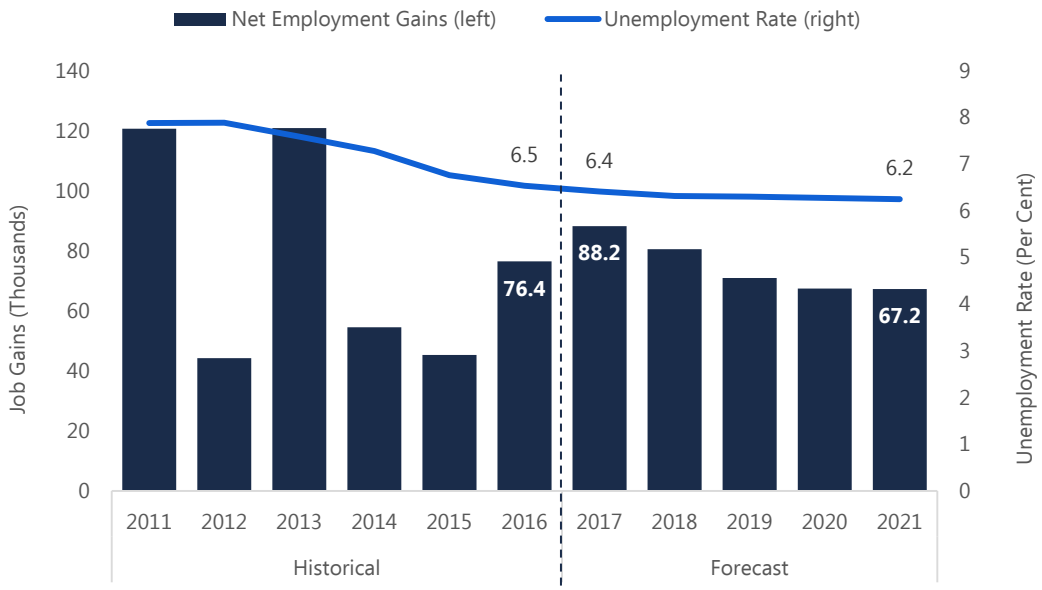
The FAO forecast is broadly consistent with the consensus view among economists that exports and business investment will lead Ontario growth over the next several years, while household spending and residential investment will

[8] Ontario Economic Accounts, Fourth Quarter 2016, released April 13, 2017.
[9] As noted in a recent Conference Board of Canada report, nearly half of Ontario businesses are operating near or above capacity, hampering the ability of Ontario businesses to increase production to meet foreign demand. Conference Board of Canada Outlook, Winter 2017.
[10] Net exports are exports less imports of goods and services.
[11] The FAO forecast of the Ontario economy is based on the FAO's short-term quarterly model of the Ontario economy. For a description of the model, please refer to the textbox at the end of the Economic Outlook chapter.

grow at a more moderate pace, as households reduce borrowing to address high debt loads.

Exports and Business Investment Expected to Drive Economic Growth

* Business Investment includes both Non-Residential Investment and Machinery & Equipment Investment
Source: Ontario Economic Accounts and FAO



Steady Job Gains Over Outlook

Ontario experienced relatively strong employment growth of 1.1 per cent in 2016 (+76,400 net new jobs), the majority of which were full-time, private sector jobs. There was robust job growth in both goods and service producing industries. The construction industry in particular, posted the highest job growth (+3.4 per cent), followed by healthcare (+3.2 per cent).[12]

The strength in Ontario's labour market continued into 2017 with an increase of 99,600 jobs on a year-over-year basis during the first quarter. For the year, the FAO is projecting a 1.3 per cent gain in employment in 2017. On average, the FAO is forecasting average annual job gains of 1.0 per cent over the next four years, consistent with the outlook for solid economic growth.

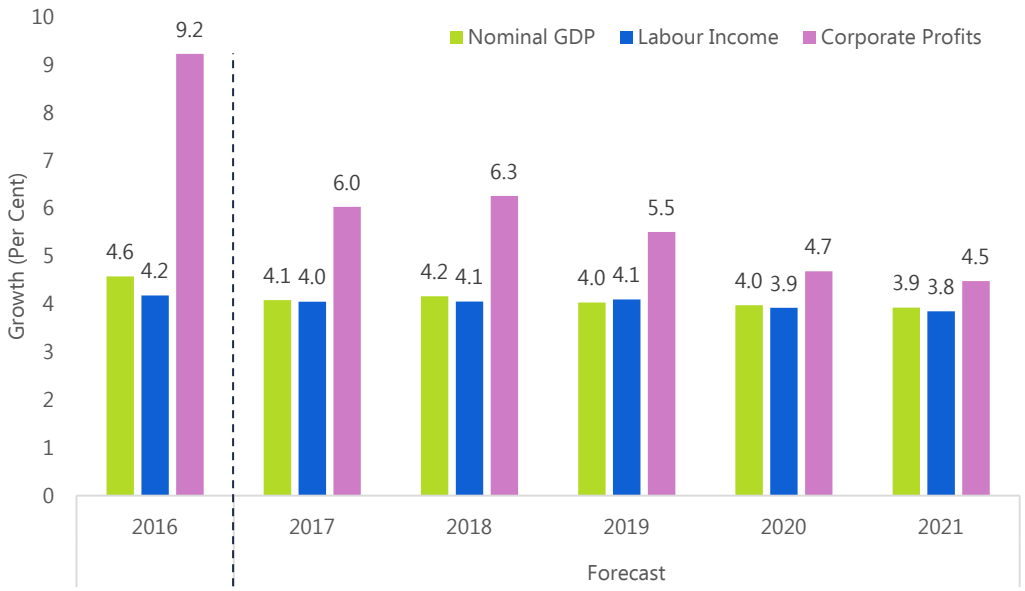
[12] For a more detailed discussion on Ontario's labour market, see the FAO's Commentary: "Ontario Posts Solid 2016 Job Gain as the Labour Market Continues to Evolve."

Steady Employment Gains as Unemployment Rate Slowly Trends Lower

Source: Statistics Canada and FAO

Sustained economic growth over the outlook is expected to attract more workers into the labour force, which is forecast to rise at a slightly higher rate than over the last five years. Faster labour force growth from 2017 to 2021, will partially offset relatively strong employment gains, leading to a more moderate decline in the unemployment rate over the outlook.

Strong Gains Expected for Labour Income and Corporate Profits



Labour income grew by a robust 4.2 per cent in 2016, above the average annual increase of 3.7 per cent from 2011 to 2015, and a reflection of the strong employment growth last year. The net operating surplus of corporations (largely corporate profits) also increased by a robust 9.2 per cent in 2016 following an equally strong gain of 9.1 per cent in 2015.

As a result of the gains in labour income and corporate profits (which together account for about two-thirds of nominal GDP), nominal GDP grew by a strong 4.6 per cent in 2016.[13]

[13] The robust 2016 increase in nominal GDP was much stronger than the 3.4 per cent increase projected in both the FAO's Economic and Fiscal Outlook, Fall 2016 Update and the government's 2016 Economic Outlook and Fiscal Review. The sharp upward shift in 2016 nominal GDP growth reflects large historical revisions to 2015 and 2016 nominal GDP growth in the Ontario Economic Accounts, consistent with new data from Statistics Canada. In particular, the net operating surplus of corporations is now estimated to have increased by 9.2 per cent in 2016 compared to an original projection of 0.3 per cent last fall.

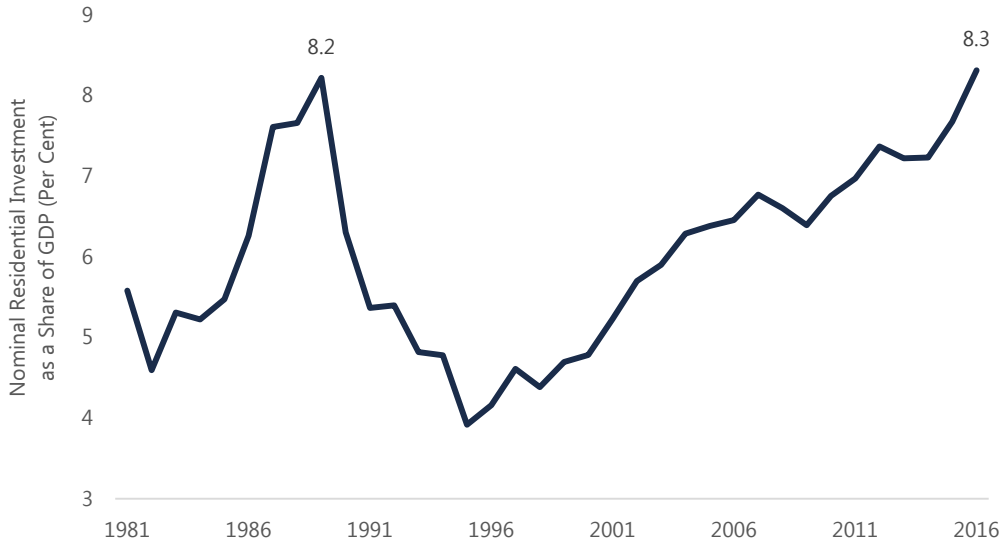
For 2017, the FAO is projecting a 4.1 per cent rise in nominal GDP, supported by strong gains in labour income (+4.0 per cent) and corporate profits (+6.0 per cent). On average, the FAO is projecting nominal GDP growth of 4.0 per cent over the 2018 to 2021 outlook.

Labour Income and Corporate Profits Support Nominal GDP Growth

Source: Ontario Economic Accounts and FAO

Key Risks for Ontario's Economic Outlook

The FAO's current economic forecast represents a reasonable outlook for the Ontario economy and an appropriate foundation for fiscal projections. However, several key risks could materialize leading to weaker than expected economic growth for the province.



In particular, there are significant risks with respect to the proposed renegotiation of the North American Free Trade Agreement (NAFTA) and the adoption of protectionist trade measures in the United States. As well, other proposed changes to U.S. fiscal and industrial policies, such as lower corporate tax rates and 'Buy America' executive orders, could harm Ontario's relative competitiveness, further discouraging business investment and limiting the contribution of exports to overall growth.

Domestically, the housing market continues to pose a significant risk to the overall economy. The sharp rise in Ontario housing prices – particularly in the

Greater Toronto Area – has contributed to record consumer debt loads and stretched levels of affordability.

At the same time, the relative importance of residential housing investment to the overall economy has increased substantially in recent years, posing a significant risk to the Ontario economy, in the event of a sharp housing market correction. In 2016, investment in residential housing accounted for a record high 8.3 per cent of Ontario's nominal GDP, up from 6.4 per cent in 2009.[14]

Residential Investment Spending Accounts for a Record Share of GDP

Source: Ontario Economic Accounts and FAO

The last time investment in residential housing accounted for a similar proportion of the economy was 1989, just prior to the 1990-1995 housing market correction.

A sharp correction in housing prices, exacerbated by the elevated levels of household debt, would negatively affect household spending and residential investment, and could lead to broader economy-wide impacts on growth and employment.

The Province recently announced a package of measures intended to respond to the underlying factors contributing to the unsustainable rise in housing prices

[14] Almost one-quarter (22 per cent) of the growth in nominal GDP in 2016 was directly attributable to the increase in residential investment spending.

and the rapid growth in housing market activity. However, it is too early to assess whether these measures will adequately address the imbalance between demand and supply pressures in the market.

The FAO's Quarterly Short-term Model of the Ontario Economy

The FAO has developed a short-term forecasting model to produce quarterly five-year projections of the Ontario economy. The model is based on dynamic equations for major sub-categories of real and nominal GDP. The model also includes key labour market components, financial variables and the Canada-U.S. dollar exchange rate. The model is structured around a number of important external or exogenous concepts such as Canada-wide economic growth, U.S. economic growth, U.S. prices, U.S. interest rates and energy prices.

The model is an important tool for the FAO's bi-annual Economic and Fiscal Outlook (EFO), ensuring internal consistency of each projection as well as consistency between EFO forecasts. It also provides the majority of the inputs required by the FAO's Fiscal Outlook Model which provides the FAO's projection of the government's fiscal position.

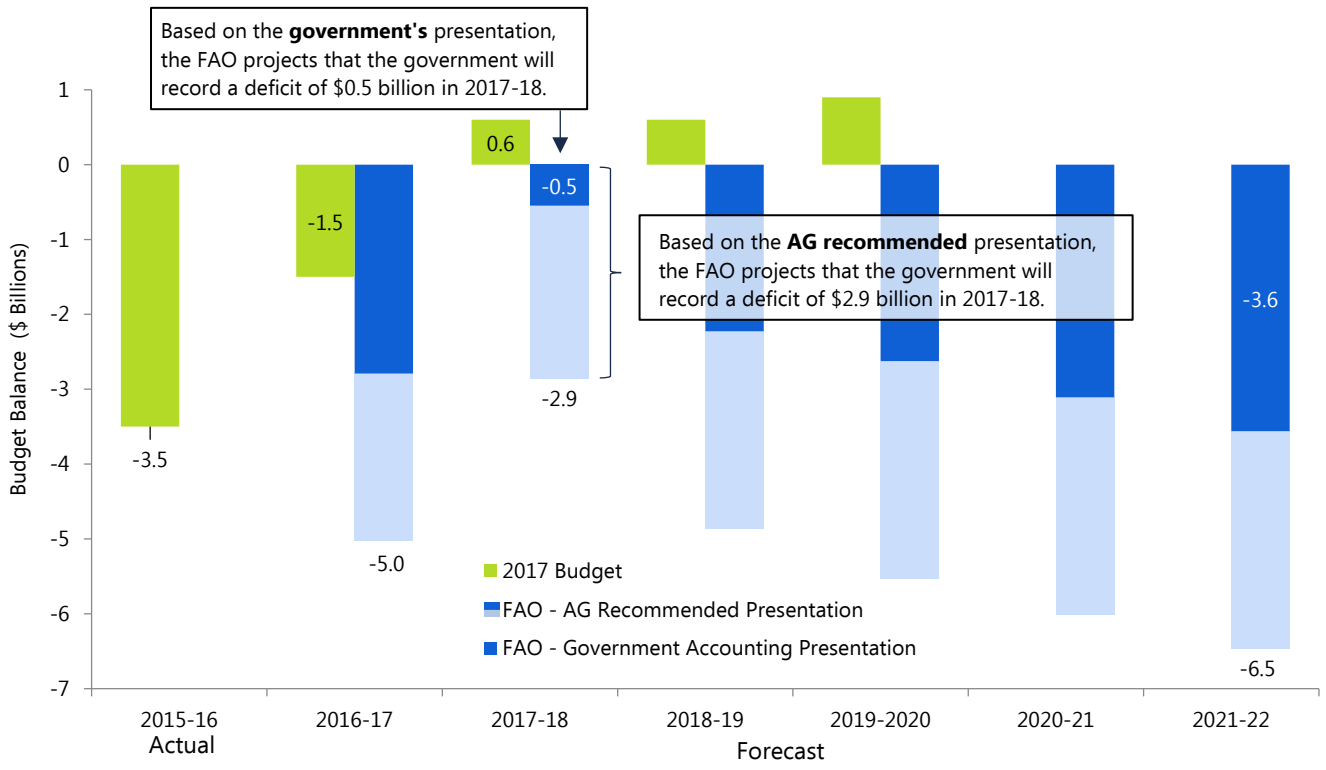
1. Fiscal Outlook

Overview



Continued Budget Deficits Projected

Based on the FAO's current economic forecast and updated fiscal information, the FAO is projecting continued Ontario budget deficits over the outlook. In the near term, the deficit improves due to strong tax revenue growth and a temporary boost to non-tax revenue. However, beginning in 2018-19, the deficit is expected to increase as a result of moderating revenue growth combined with higher expenses.

The government and the Auditor General (AG) disagree on the application of public sector accounting standards with respect to jointly-sponsored pension plans. Based on the Auditor General's recommended accounting presentation, the FAO is projecting a budget deficit of $2.9 billion for 2017-18, rising to $6.5 billion by 2021-22. (Please refer to the discussion on page 8 for additional background and context on this issue.)

Based on the government's accounting presentation in the 2017 Budget, the FAO is projecting a budget deficit of $0.5 billion in 2017-18, growing to $3.6 billion by 2021-22.[1] By comparison, the government is projecting a budget surplus (before the reserve) of $0.6 billion in 2017-18, followed by continued small surpluses over the next two years.

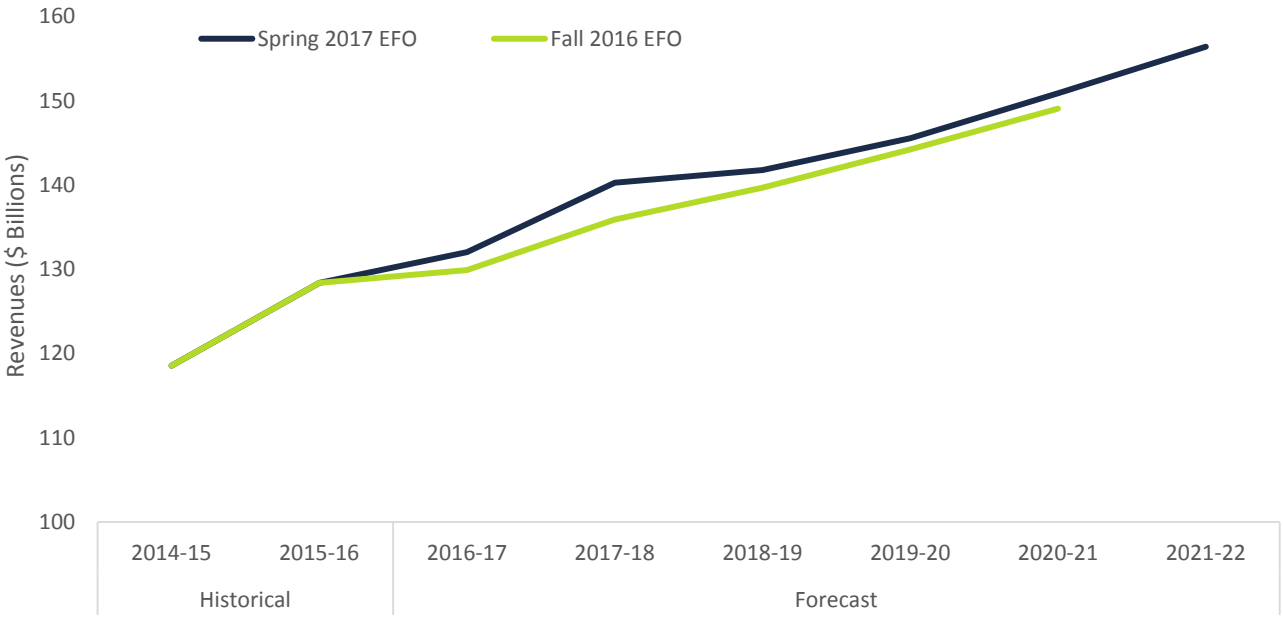
Ontario's Budget Balance*

* Budget balance excluding reserve.

Source: 2015-16 Public Accounts, 2017 Budget and FAO

[1] The Auditor General would be expected to provide a qualified opinion on Ontario's 2016-17 Public Accounts if the government continues to report the net pension assets of jointly sponsored pension plans in its financial statements.

On the government's accounting basis, the FAO projects that a balanced budget is within the government's reach in 2017-18. However, the budget deficit is expected to increase after 2017-18, due to moderate revenue growth, the absence of one-time non-tax revenues, and higher program expenses. Staying in balance after 2017-18 will likely require additional fiscal policy measures.



Under the Auditor General's accounting presentation, the FAO is projecting significant budget deficits over the entire outlook. On this basis, it is unlikely that the government will balance the budget in 2017-18 without significant additional fiscal policy measures (that is, higher revenues or lower expense). Beyond 2017-18, significant fiscal adjustments will likely be required to maintain budget balance through the outlook.

Revenue Outlook

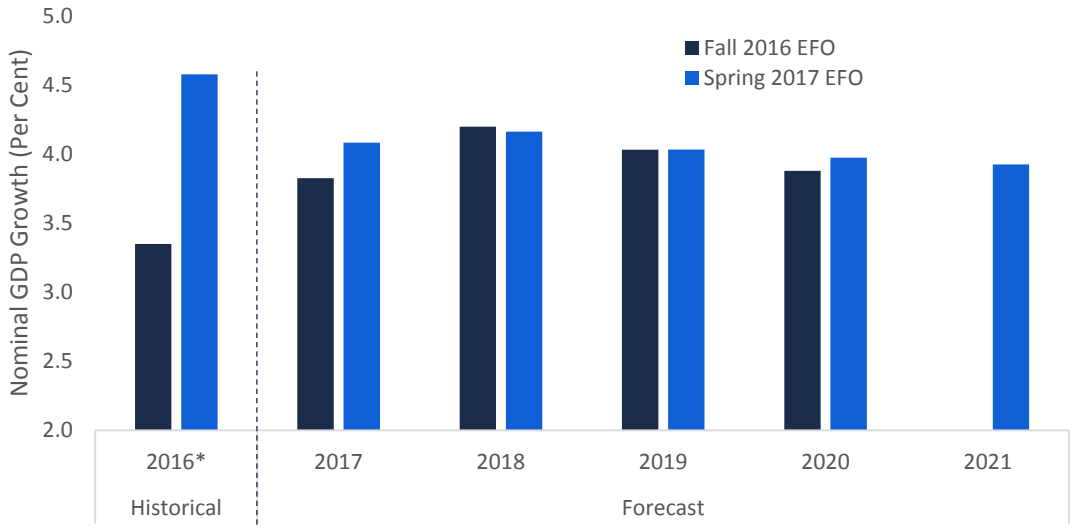
The FAO is projecting average annual revenue growth of 3.3 per cent per year from 2016-17 to 2021-22, in-line with the forecast from the FAO's fall outlook.

However, in the near-term, revenue growth is stronger than expected due to robust economic performance in 2016 and 2017, and a boost from one-time revenues in 2017-18. Beyond 2017-18, growth in tax revenues moderates and the benefit of one-time non-tax revenues ends.

Revenues Stronger Than Expected in Near Term

Source: FAO and Public Accounts

FAO Revenue Assumptions and Forecast



Revenue Source	Assumption	Forecast
Taxation Revenue	Grows with key economic drivers including labour income, corporate profits and household consumption.	Averages 3.9 per cent growth per year from 2016-17 to 2021-22
Federal Transfers	Based on legislated growth rates and economic performance	Federal transfers are expected to grow by 1.9 per cent per year from 2016-17 to 2021-22
Government Business Enterprises	Based on government projections	Income from GBEs are projected to rise moderately from $5.3 billion in 2016-17 to $6.5 billion in 2021-22
Other Revenue	Based on government projections, includes asset sales, and cap and trade	These revenues are projected to increase from $8.5 billion in 2016-17 to $11.0 billion in 2017-18, declining to $8.5 billion by 2021-22

Stronger Economic Growth Expected to Boost Tax Revenue

Consistent with the FAO's economic forecast, the FAO is currently projecting tax revenues to rise at an average of 3.9 per cent from 2016-17 to 2021-22, much stronger than the 3.0 per cent forecast in the FAO's fall outlook.

Since the FAO's fall report, nominal GDP – the broadest measure of the tax base – was revised significantly higher in 2016, improving the forecast for 2017.[2] However, beyond 2017, the outlook for nominal GDP growth is relatively unchanged from the fall forecast.

Nominal GDP up Significantly in the Near-Term Since the Fall

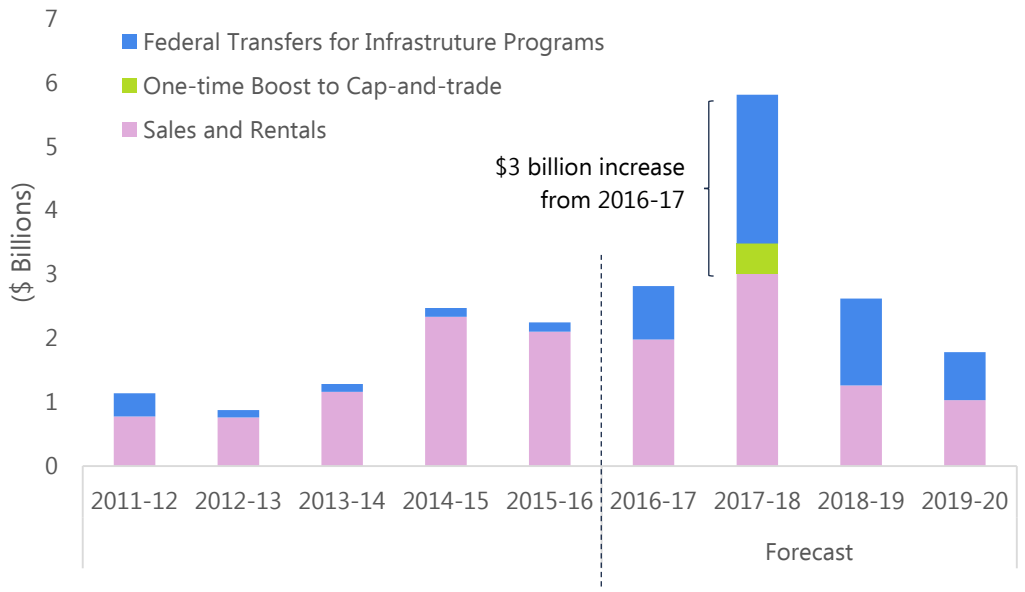
* 2016 value for Fall 2016 EFO was the FAO's forecast at the time of the report's release.
Source: Ontario Economic Accounts and FAO

[2] See economic section, and the footnote on page 11.

Improving economic prospects in 2017 are expected to lift the Province's tax revenue by approximately $2.3 billion in 2016-17 and $4.1 billion in 2017-18, compared to the FAO's fall estimates.

- Personal income tax revenue is forecast to grow stronger than expected in the fall due to the improved forecast for labour income.[3]
- Corporations tax revenue is projected to benefit from the stronger outlook for corporate profits.
- Sales tax and land transfer tax revenues are expected to improve in 2016-17 and 2017-18 due to the on-going strength in Ontario's housing market.

Equalization Entitlement Declines



Given Ontario's recent economic strength relative to the rest of Canada, the Province's Equalization entitlement declined $0.8 billion to $1.4 billion in 2017-18, and is projected to drop further to $0.6 billion in 2018-19. Beyond 2018-19, the FAO is projecting that Ontario will no longer be entitled to Equalization payments — a reflection of the continued relative strength of the Ontario economy.

2017-18 Revenues to Benefit from One-time Increases

Based on the 2017 Budget and incorporated into the FAO's projections, Ontario revenues will be boosted by $3.0 billion in one-time increases in 2017-18, including:

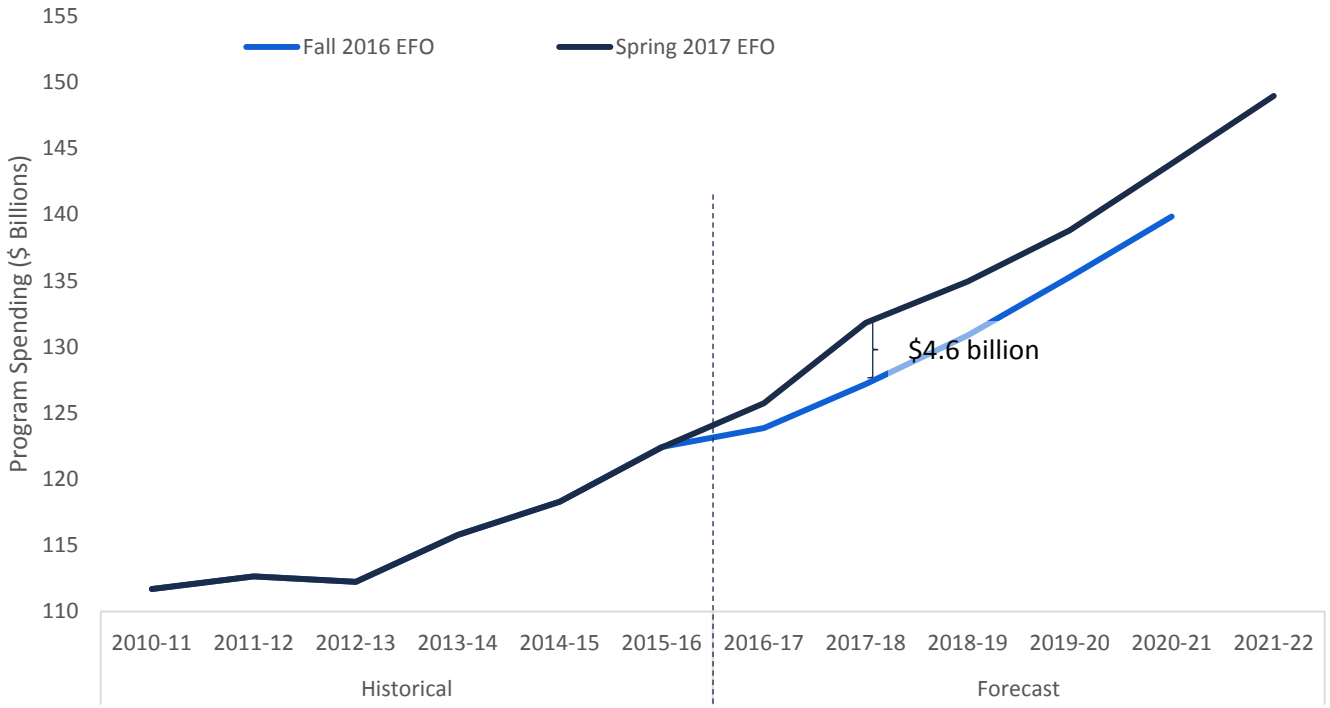
- $1.5 billion in higher revenue from federal transfers for infrastructure;
- $1.0 billion increase in sales and rentals revenue, suggesting significant additional asset sales; and
- $0.5 billion in additional cap and trade proceeds from March 2017, which will be recognized in 2016-17.[4]

2017-18 Non-tax Revenue Boost

Source: Ontario Budgets, Ministry of Finance and FAO

[3] However, near-term revenue growth will be somewhat dampened as some high-income earners have shifted earnings into the 2015 tax year to avoid the new higher 33 per cent tax rate introduced by the federal government in 2016 (http://www.fin.gc.ca/afr-rfa/2016/report-rapport-eng.asp#_Toc463249478). The FAO continues to adopt the federal government's estimate of this income shifting, and has adjusted the personal income tax forecast accordingly.

[4] The government indicated that the cap and trade revenues will be recognized in 2017-18 because the allowances were certified and delivered on April 2, 2017.



Expense Outlook

Program Expense to Increase Significantly over the Outlook

The FAO projects program spending growth of 3.3 per cent per year over the 2016-17 to 2021-22 period.

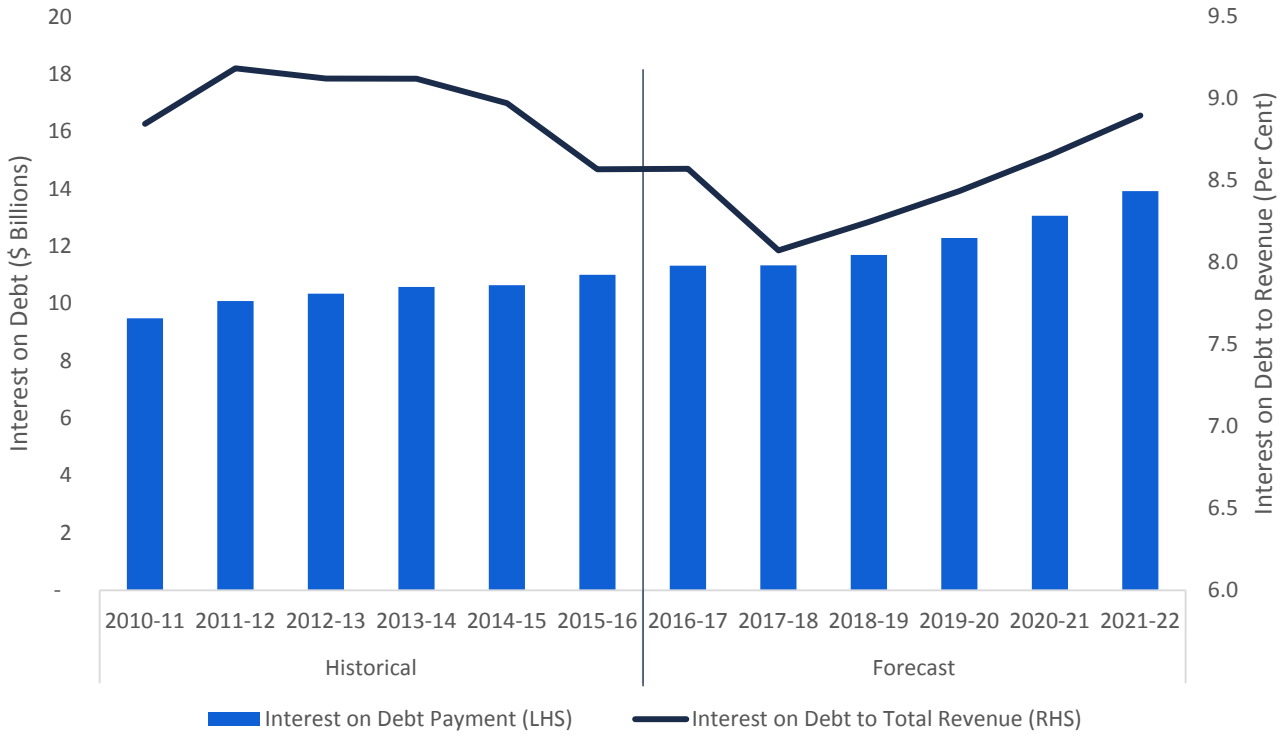
Over the 2016-17 to 2019-20 period, the FAO adopts the government's 2017 Budget projections for program spending[5], adjusted to reflect the Auditor General's recommended accounting treatment for jointly sponsored pension plans.[6] The expense outlook includes significant new spending across all sectors, including a new children and youth Pharmacare program, higher operating funding for hospitals, 24,000 new child care spaces[7], and the government's new 'Fair Hydro Plan'. As a result, spending is now forecast to be significantly higher by 2017-18 than assumed in the FAO's fall outlook.

Program Expense Higher than Projected in the Fall

Note: Program spending based on AG recommended presentation.
Source: Ontario Public Accounts and FAO

With these new expenses, program spending is expected to grow 3.3 per cent per year on average over the next five years. This growth rate is in-line with underlying growth in cost - and demographic-related pressures of 3.5 per cent on average.

Beyond 2019-20, the FAO projects program spending to increase by 3.6 per cent annually, consistent with underlying factors including population growth, aging, and price inflation.



[5] Given the government's discretion over spending, the FAO adopts the government's announced spending plans from fiscal documents and incorporates policy announcements as appropriate.
[6] The adjustment reflects the inclusion of a valuation allowance to offset the value of net pension assets in jointly sponsored pension plans. This adjustment increases 'other program' expense by $2.2 billion in 2016-17, rising to $2.9 billion by 2020-21.
[7] Ministry of Finance officials indicated that the 24,000 in new child care spaces announced in the 2017 Budget is part of the government's September 2017 Throne Speech commitment to create 100,000 spaces. The remaining funding has yet to be included in the fiscal plan.

Interest on Debt

The FAO projects interest on debt (IOD) payments will increase at an average annual rate of 4.0 per cent from $11.0 billion in 2015-16 to $13.9 billion by 2021-22, reflecting higher debt and rising interest rates over the outlook. Interest on debt has become the Province's third largest spending category and will significantly outpace the growth in program expense over the outlook.

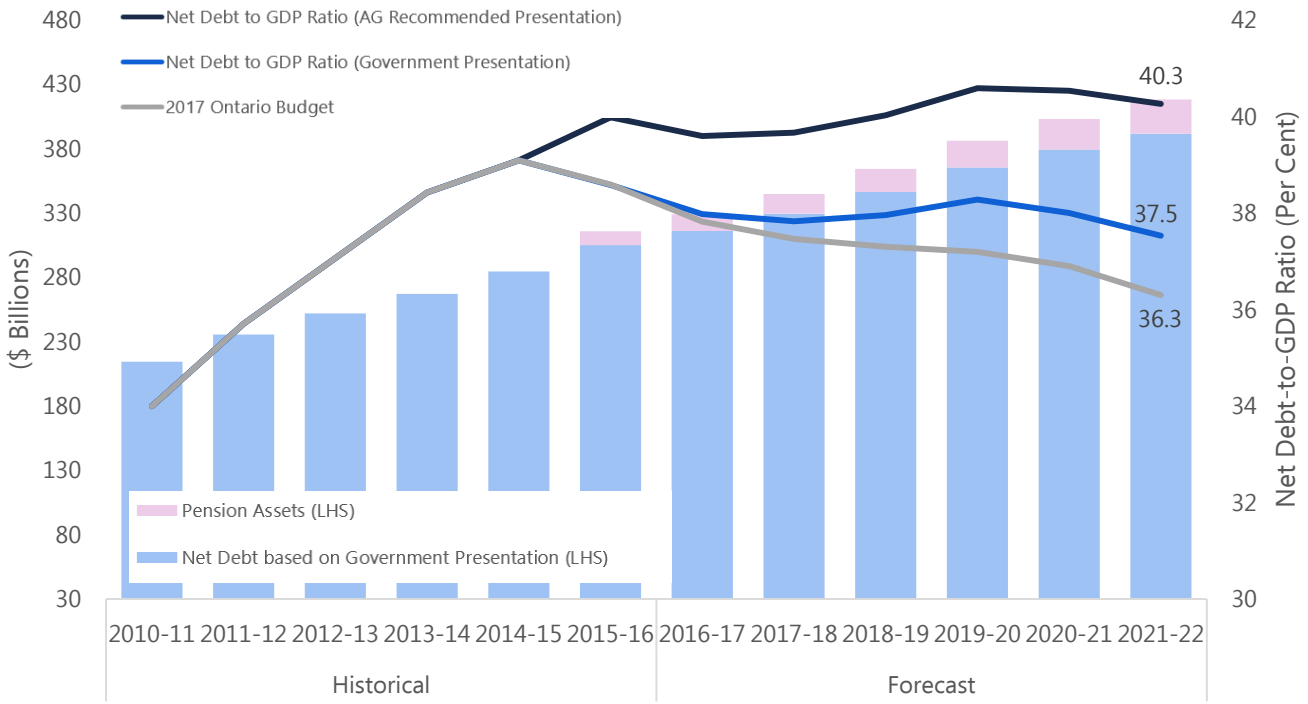
As a share of revenues, IOD is projected to increase from 8.1 per cent in 2017-18 to 8.9 per cent by 2021-22, as the rise in interest payments outpaces growth in revenues. Over the past five years, IOD as a share of revenues declined steadily, benefitting from declining interest rates. With interest rates projected to increase significantly over the next five years, the ratio is expected to rise sharply.

Interest on Debt to Rise Sharply as a Share of Revenues

Source: Ontario Public Accounts and FAO

Ontario Debt Outlook

Ontario Net Debt-to-GDP To Remain Elevated



Ontario's total borrowing requirements are expected to remain high over the outlook. To finance the cost of projected capital spending, finance on-going deficits (as projected by the FAO) and refinance maturing debt issues, provincial borrowing is expected to average $37 billion per year over the next five years.

As a result, the FAO projects Ontario's net debt to increase by $87 billion over the next five years to more than $392 billion by 2021-22 based on the AG's recommended accounting presentation. By comparison, using the accounting treatment adopted by the government in the 2017 Budget, the FAO projects Ontario's net debt will rise by $71 billion to $365 billion by 2021-22.

Based on the AG's recommended accounting presentation, the FAO expects Ontario's net debt-to-GDP ratio will edge higher over the outlook, rising to 40.3 per cent by 2021-22, reflecting the projected increase in net debt and the FAO's forecast for nominal GDP growth. In contrast, based on the accounting treatment adopted by the government in the 2017 Budget, net debt-to-GDP is projected to fall slightly from 38.6 per cent in 2015-16 to 37.5 per cent by 2021-22.

In the 2017 Budget, the Province set an interim net debt-to-GDP target of 35 per cent by 2023-24 and committed to achieving 27 per cent by 2029-30. The FAO's net debt-to-GDP projections under both accounting presentations, suggest that additional fiscal measures would be required for the government to achieve its interim target of 35 per cent by 2023-24.

Ontario's Net Debt to GDP Ratio

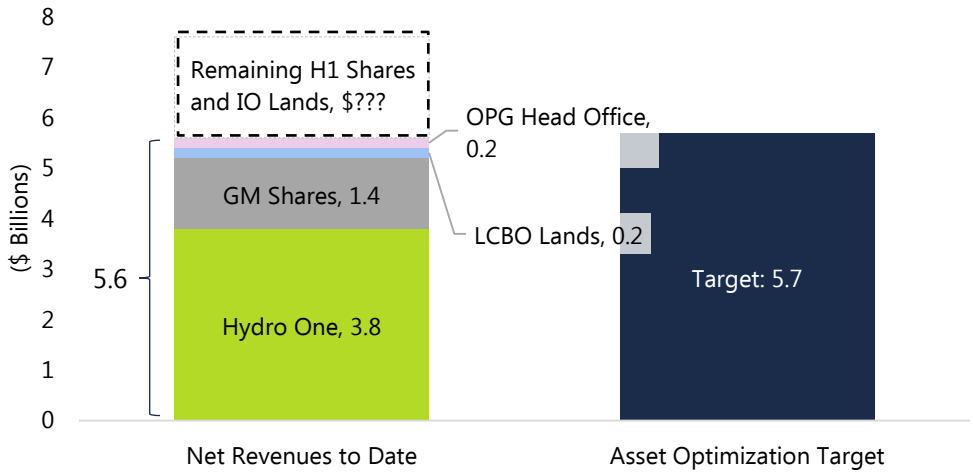
Risks to the Fiscal Plan and Policy Options

There are material risks that could impact Ontario's fiscal position.



- A sharp correction in the housing market could present a significant risk for both the broader economy and for the Province's fiscal plan. As discussed in the FAO housing commentary[8], a decline in house prices and housing market activity would directly reduce Land Transfer Tax and HST revenues. In addition, the broader economic impacts would impact personal and corporate income tax revenues.
- In the 2017 Budget, the government has significantly reduced the prudence built into its program spending projection compared to the previous budget, leaving less fiscal flexibility for the government to respond to unexpected events.[9] In addition, interest on debt payments as a share of both program spending and revenue are expected to increase significantly, exposing the government to increased fiscal risk should interest rates rise faster than expected.

On the other hand, the government has increased spending growth to a rate in line with underlying spending pressures, which diminishes the expense risk identified in earlier FAO reports.

Additionally, the government has a broad range of policy options that could improve its fiscal position, including the sale of additional public assets beyond announced targets. To date, the government has generated $5.6 billion in revenues from asset sales, close to its target of $5.7 billion over 10 years.

Given that the government has indicated that it still intends to sell an additional 30 per cent of Hydro One, as well as Infrastructure Ontario real estate holdings, it may significantly overachieve its asset sales target.

Asset Optimization Revenues and Target

Source: FAO and Ontario Budgets

[8] Financial Accountability Officer of Ontario, The Impact of a Housing Market Correction on Ontario's Fiscal Position, 2017

[9] In the 2017 Budget, contingency funds total $0.6 billion for the coming fiscal year, half the size built into the 2016 Budget fiscal plan. Similarly, the government's target for year-end savings has increased to $1.2 billion for the coming year, compared to $0.8 billion in Budget 2016.

The Accounting Treatment of Jointly Sponsored Pension Plans

Background

Ontario's 2015-16 Public Accounts noted a disagreement between the Office of the Auditor General and the Province on the appropriate accounting treatment for net pension assets of jointly sponsored pension plans. Specifically, the Province is a joint sponsor of two pension plans, the Ontario Teachers' Pension Plan (OTPP) and the Ontario Public Service Employees Union Pension Plan (OPSEUPP).

The government's position is that these pension assets have been appropriately and consistently reflected on the Province's financial statements since 2001. The Office of the Auditor General, based on a review of these pension assets, determined that a change in the accounting treatment was required. The Auditor General concluded that under current Canadian public sector accounting standards, the government could not unilaterally recognize a pension asset on its financial statements without evidence - in the form of a written agreement - permitting it to realize the asset through reduced contributions.[10]

In response, the Province appointed its own advisory panel to review and provide a recommended interpretation of public sector accounting standards with respect to the assets of jointly sponsored pension plans. The panel's report[11], released in February 2017, concluded that the Province's share of net assets in jointly sponsored pension plans could be fully recognized in the Province's financial statements — contrary to the opinion of the Office of the Auditor General.

In the 2017 Budget, the government adopted the advisory panel's interpretation of public sector accounting standards and recognized the net pension assets of the jointly sponsored pension plans. The 2017 Budget also indicated that the Province's 2016–17 Public Accounts will report the net pension assets for the two jointly sponsored pension plans.

The Central Issue

The government and the Auditor General have put forward different interpretations of the application of public sector accounting standards for jointly sponsored pension plans.[12]

The different interpretations centre on the question of the control of assets in jointly sponsored pension plans. In particular, the issue is focused on whether there needs to be an explicit written agreement between the co-sponsors (the government and the unions representing the employees) on how the sponsors plan to use the pension assets, for example by lowering contributions or increasing benefits to pensioners.

As indicated by the Auditor General, the issue can be resolved if the government presents an agreement with the Ontario Teacher's Federation (OTF) allowing the government to access the OTPP pension assets through reduced contributions.[13] The extent and duration of the reduced contributions would determine the size of the pension asset that the government could recognize in its financial statements

The government, based on the advice of the advisory panel, maintains that the existing agreements governing the pension plans already recognize the sponsors' rights to access assets in the plans and also provide the mechanism to potentially realize a benefit through lower future contribution rates.

[10] The government's 2016 Budget reported a negative expense for the OTPP which led, in part, to the Auditor General conducting an in-depth review of the related pension assets.

[11] https://news.ontario.ca/tbs/en/2017/02/pension-asset-expert-advisory-panel-submits-report.html

[12] In 2015, PSAB created an Employment Benefits Task Force to review the existing accounting standard for post-employment benefits. The work of this task force will include reviewing the appropriate accounting treatment for shared-risk and multi-employer pension plans. However, the work of this task force is not expected to be completed in the near future.

[13] Of the government's two jointly sponsored pension plans, only the OTPP is currently in a net asset position.

In the absence of an agreement, and given the government's decision in the 2017 Budget to accept the advisory panel's recommended approach to accounting for jointly sponsored pension plan assets, the Auditor General would be expected to provide a qualified opinion[14] on Ontario's 2016-17 Public Accounts.

Roles and Responsibilities of the Province and the Auditor General

The Province (through the Treasury Board Secretariat) is responsible for the preparation of Ontario's Public Accounts in accordance with legislation, and based on the standards set out by the Public Sector Accounting Board (PSAB).[15] The PSAB accounting standards serve the public interest by providing an independent, high-quality accounting framework for public sector entities.

The Auditor General reviews the Province's annual Public Accounts and provides an audit opinion to the Legislature on whether the Consolidated Financial Statements for the Province of Ontario present fairly, in all material respects, the Province's financial position, in accordance with the PSAB accounting standards.

The FAO's Presentation of Ontario's Fiscal Outlook

The Financial Accountability Officer supports the Legislative Assembly by providing independent economic and financial analysis intended to improve the transparency of the government's fiscal plan. The Officer also looks to the Auditor General as the provincial authority on the appropriate interpretation and application of accounting standards for the Province.

The FAO has presented two fiscal projections, including and excluding the impact of the net pension assets of jointly sponsored pension plans to help members of the Legislative Assembly better understand the implications of these different interpretations of accounting standards on the Province's fiscal position.

- The projection based on the Auditor General's recommended accounting treatment assumes a valuation allowance that offsets the net pension assets.
- The projection based on the government's fiscal presentation in the 2017 Budget recognizes the net pension assets over the budget outlook.
    - In the absence of an agreement between the co-sponsors, this presentation of Ontario's fiscal position would be expected to receive a qualified opinion from the Auditor General when published in the Province's future Public Accounts.

Based on the Auditor General's recommended accounting treatment for the net assets of jointly sponsored pension plans, the FAO is projecting budget deficits of $2.9 billion in 2017-18, rising to $6.5 billion by 2021-22. Alternatively, based on the pension accounting treatment presented by the Province in the 2017 Budget, the FAO's projection for the budget deficit decreases to $0.5 billion in 2017-18 and $3.6 billion in 2021-22.

[14] An auditor may provide a qualified opinion when financial statements do not conform in a material way to the applicable accounting standards.

2. Appendix

Developments since the FAO's Fall 2016 Economic and Fiscal Outlook

The FAO's current projection of the Ontario budget balance has generally deteriorated relative to the FAO's fall 2016 projection.

- Stronger than expected economic performance is expected to boost taxation revenues over the forecast, partially offset by lower Equalization revenue.
- Based on new government spending plans, program expense has increased significantly.

Developments since 2016 Fall EFO (AG Recommended Presentation)

	2016-17	2017-18	2018-19	2019-20	2020-21
FAO's Fall 2016 Budget Balance Forecast	-5.2	-2.6	-2.8	-3.3	-3.7
Developments Since Fall 2016					
Revenue					
Stronger Economic Outlook	2.3	4.1	3.9	4.4	4.7
Lower Federal Transfers[1]	-0.3	0.2	-1.3	-2.4	-2.2
Other Revenue Changes	0.1	0.1	-0.5	-0.6	-0.6
Total	2.1	4.4	2.1	1.3	1.8
Expense					
Children and Youth Pharmacare, and Fair Hydro Plan[3]	0.5	1.3	1.3	1.3	1.3
Revised Pension Asset[4]	0.7	0.8	1.1	1.4	1.4
Other Expense Increases	0.7	2.5	1.7	0.9	1.4
Total	2.0	4.6	4.1	3.6	4.1
Total Developments	0.2	-0.3	-2.1	-2.3	-2.3
FAO's 2017 Spring Budget Balance Forecast	-5.0	-2.9	-4.9	-5.5	-6.0

Notes:

1. Change in federal transfers forecast mainly due the reduction in Ontario's Equalization payment.

2. Other revenue changes include the $0.5 billion re-profiling of cap-and-trade proceeds from 2016-17 to 2017-18, and an increase in sales and rentals for 2017-18.

3. In the 2016 Fall EFO, the FAO included $1 billion in expenses from the HST rebate on electricity bills beginning 2017-18, which is now part of the Fair Hydro Plan. As a result, the FAO estimates that the incremental impact of the Fair Hydro Plan is $0.8 billion, compared to the Fall.

4. In the 2016 Fall EFO, the FAO assumed $1.5 billion in adjustments for net pension assets of jointly sponsored pension plans. The government has revised its estimate of the impact to $2.2 billion in 2017-18, increasing to $2.9 billion by 2020-21.

Subject: RE: FAO's Upcoming EFO Report

Good Morning,

Please find attached drafts of the Economic Outlook and Fiscal Outlook chapters from the FAO's upcoming 'Economic and Fiscal Outlook' report.

The chapters are password protected using the same password as in the past.

The FAO's fiscal forecast incorporates the tax revenue adjustments that we received on Friday afternoon -- and which brings our short-term forecast much closer the Budget 2017 forecast.

Unfortunately, we are on a very tight schedule to enable us to release this report at the end of the May.

So, we are asking for your comments/concerns including any potential cabinet confidentiality issues by end of day tomorrow (Tuesday, May 9)

Thanks again for your support and assistance.

David West

Hello,

Thanks again for our meeting on Tuesday. We appreciate the information you have provided as well as the responses to our questions at the meeting.

On Monday morning (as early as possible) we plan to provide you with draft copies of the Economic Outlook and Fiscal Outlook chapters (including Forecast Tables) from the FAO's upcoming EFO report.

We would hope you would be able to provide us with any comments or concerns on these chapters by Tuesday (May 9), end of day.

As in the past, the FAO will provide a final copy of the report 48 hours prior to release to both Ministers. I would email you a copy at the same time.

Thanks,

David West

Subject: Re: Follow-Up on the 2017 Budget

Thanks David,

We're working on pulling together the various information pieces and people for a meeting Tuesday between 1pm and 2pm, so will be in touch to confirm.

As in past approaches, we won't be able to have everything for you on Tuesday but will be able to provide a downpayment for sure.

Have a great weekend
Tim

Subject: Follow-Up on the 2017 Budget

Good Morning!

Congratulations on delivering yesterday's big, black budget!

I wanted to follow-up on the FAO's requests for some additional information.

First, as we have discussed, we have three requests for specific data/tables:

1. We would like to obtain the detailed revenue and expense tables (Tables 6.14 and 6.15) extended to 2019-20.

- Are these detailed tables available to 2020-21? If so, then please include (:))

2. As staff have been discussing, we would like to obtain more detailed information on the one-time adjustments to taxation revenues beginning in 2015-16 and extending over the forecast. This is basically additional information to that provided in tables 6.7, 6.8 and 6.9.

3. As detailed in the letter and background documents sent to Deputies Thompson and Angus on April 3, we are requesting pension expense and employer contribution details for the OTPP and OPSEUPP.

We would also appreciate a meeting early next week (preferably Tuesday afternoon) to allow you to respond to a number of questions that we have with regard to the 2017 Budget.

We'll provide a list of specific questions later this afternoon, but these questions will cover a number of areas, including:

- Clarification on where the Fair Hydro Plan appears in the expenses

- Additional details/clarification on new health spending, including the new pharmacare plan

- Clarification on future assumptions for asset sales and any details behind the 'Sales and Rentals' line in the detailed Revenue table.

- Clarification on the assumptions behind new federal funding announced in the 2017 federal budget (e.g. affordable housing, child care, home care)

- Some background on the decision to reduce the estimate of 'Carbon Allowance Proceeds' and assumptions on associated expense

- Additional details/clarification on new infrastructure spending

- Assumptions behind the plan to reduce net debt-to-GDP to 35% and eventually to 27%.

We'll provide a list later this afternoon that expands somewhat on these question topics.

Happy to discuss any of these requests.

Thanks again for your support,
David

Economic and Fiscal Outlook

2017

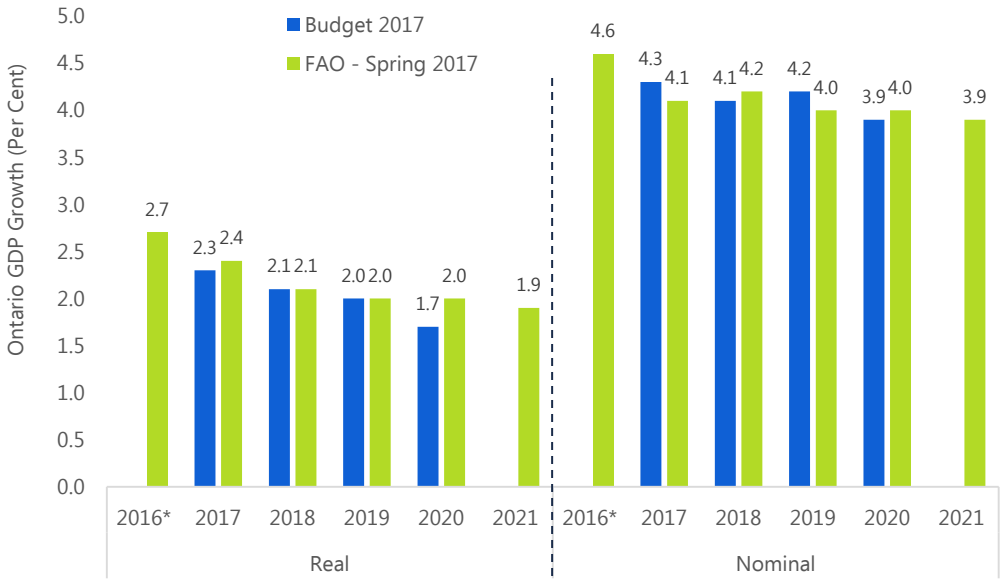
Draft Report

Confidential Document

May 2017

Economic Outlook

Overview



Ontario Economy Expected to Remain Strong in 2017

The Ontario economy finished 2016 with a strong 2.7 per cent increase in real GDP, reflecting solid growth in the second half of the year. Real GDP growth last year was significantly above the 2.1 per cent average gain seen from 2011 to 2015. Strong household spending, residential investment and exports contributed to the increase in real GDP in 2016.

Supported by the strong economic momentum in 2016 and continued improvement in economic indicators in the first quarter of 2017, the FAO is projecting real GDP to rise by 2.4 per cent in 2017 and 2.1 per cent in 2018.

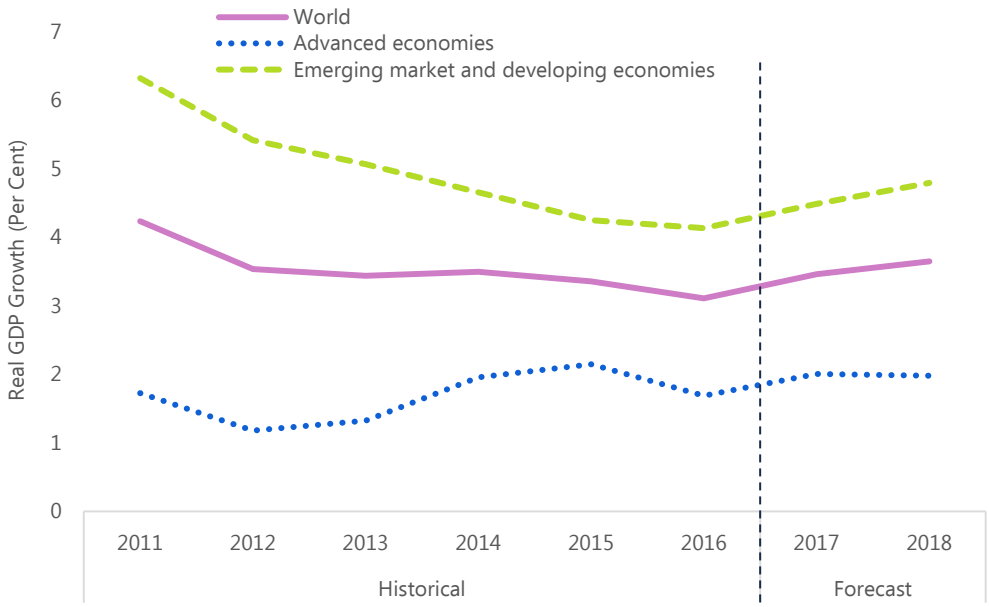
Nominal GDP – the broadest measure of the tax base – increased by a robust 4.6 per cent in 2016. The FAO is projecting nominal GDP to increase by 4.1 per cent in 2017 and 4.2 per cent in 2018, reflecting solid gains in labour income and corporate profits.

Solid Economic Performance Expected Over Outlook

* 2016 are actuals
Source: Ontario Economic Accounts, Budget 2017 and FAO

Global Economy Gaining Momentum

In its latest World Economic Outlook,[1] the International Monetary Fund (IMF) is forecasting global economic growth to strengthen from 3.1 per cent in 2016 to 3.5 per cent in 2017 and 3.6 per cent in 2018. The IMF revised the outlook slightly higher for 2017, but left it unchanged for 2018, compared to its October 2016 outlook.[2]



For advanced economies, the IMF's forecast for 2017 and 2018 has improved slightly from its October projection with growth of 2.0 per cent in 2017 and 2018.

Growth prospects for emerging market and developing economies are much more varied, but overall have weakened slightly from the IMF's October outlook, due to weaker economic conditions in key export markets. On average, the IMF has lowered its growth forecast for emerging markets and developing countries to 4.5 per cent in 2017, with 2018's forecast remaining unchanged at 4.8 per cent.

The IMF expects China – the world's second largest economy – to grow by 6.6 per cent in 2017 and 6.2 per cent in 2018, reflecting continued support from government policy. In the medium term, China's economic growth is expected to gradually moderate as its economy rebalances from investment and manufacturing-led growth to a more service-intensive economy.

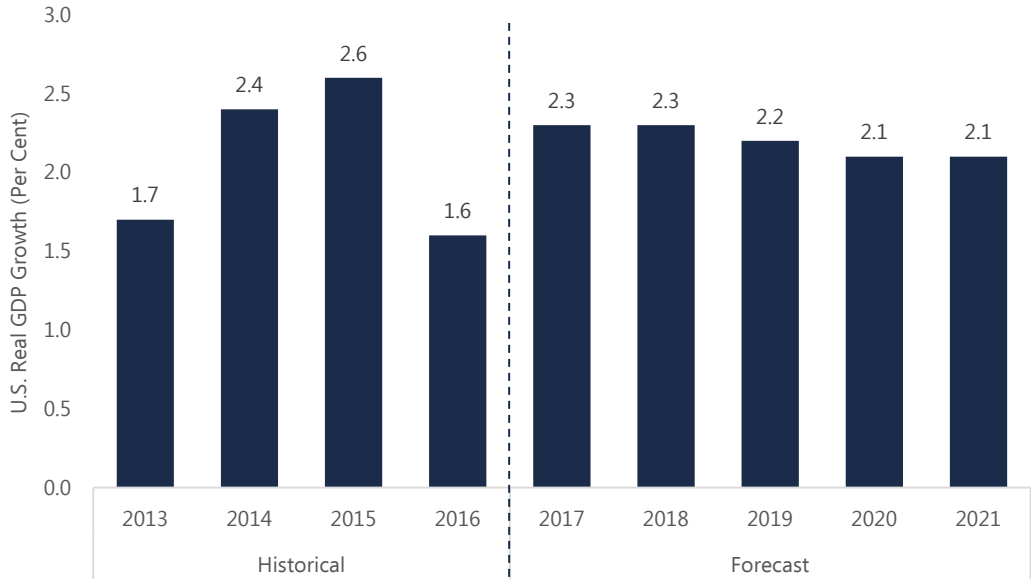
Global Growth to Improve in 2017

Source: "World Economic Outlook, Gaining Momentum?", April 2017, International Monetary Fund



U.S. Economic Growth to Strengthen in 2017

U.S. real GDP advanced by a relatively moderate 1.6 per cent in 2016, the weakest increase in three years. For 2017 and 2018, the FAO projects U.S. growth to improve to 2.3 per cent, with household spending, business investment and residential construction being key contributors to overall growth.[3]

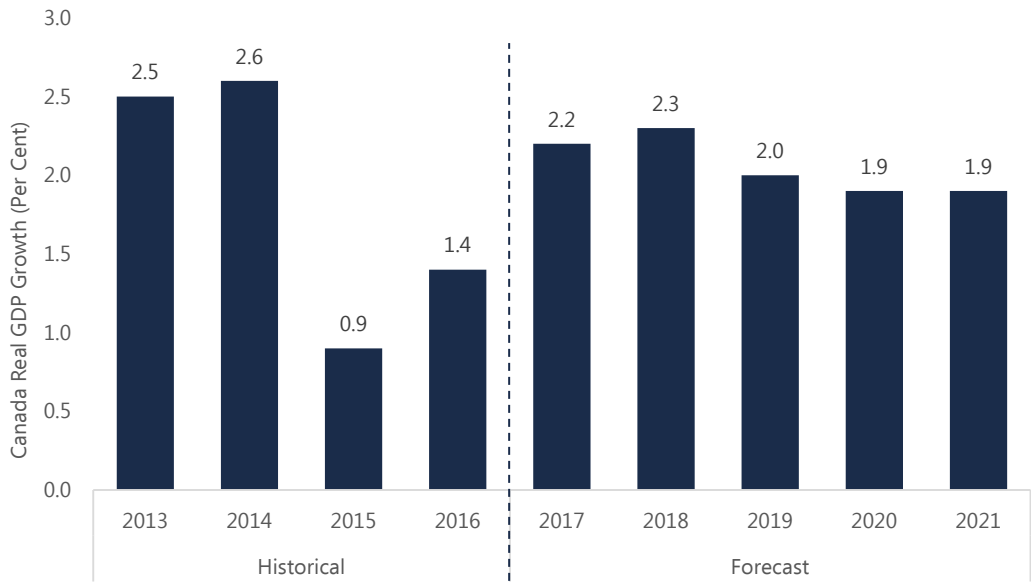
However, the lack of specific details on the new U.S. administration's proposed policies has raised the risks associated with the current U.S. outlook. Many forecasters are cautiously optimistic that some of the proposed fiscal policies, such as expected cuts to corporate tax rates, could boost U.S. economic growth in the short-term.[4] But this optimism is tempered by the potential for large future increases in the U.S. budget deficit, which could weigh on economic growth over the medium-term.

From 2019 to 2021, U.S. real GDP growth is projected to average 2.1 per cent annually, which is in-line with the average rate seen from 2012 to 2016.

U.S. Economic Growth Moderates Beyond 2017

[3] The FAO forecast for the U.S. economy in 2017 is based on the U.S. Congressional Budget Office's (CBO) latest forecast. For 2018 to 2021, the U.S. forecast is based on the average of the CBO outlook and the forecasts of three independent model-based forecasters – the Conference Board of Canada (CBOC), the Centre for Spatial Economics (C4SE) and the Policy and Economic Analysis Program (PEAP) at the University of Toronto.
[4] These forecasters include the IMF, CBO, TD Bank, RBC, BMO Capital Markets and National Bank Economics.

Source: Federal Reserve Bank of St. Louis, Congressional Budget Office and FAO Consensus



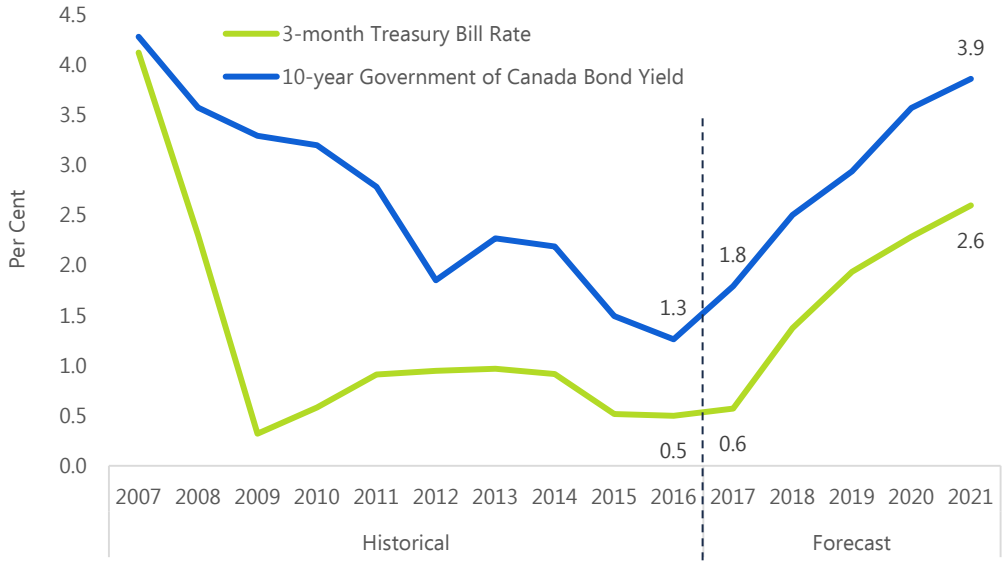
Canadian Economic Growth Expected to Rebound

The outlook for the Canadian economy has improved following strong growth over the second half of 2016.

Continued momentum in recent economic indicators point to a solid start for 2017. Canadian real GDP is currently projected to grow by 2.2 per cent in 2017 and 2.3 per cent in 2018, recovering from more moderate growth in 2015 and 2016.[5] Strength in household spending and non-energy exports are expected to contribute to overall growth in 2017 and 2018.

Beyond 2018, Canadian real GDP is projected to increase at an average annual rate of 2.0 per cent, as the economy continues to adjust to slower growth in the energy sector.

Canada GDP Growth Expected to Improve in 2017



Source: Statistics Canada and FAO Consensus

[5] The FAO forecast for the Canadian economy is based on the average quarterly forecasts of two independent, model-based forecasters – the Conference Board of Canada (CBOC) and the Policy and Economic Analysis Program (PEAP) at the University of Toronto.

Based on the continuing recovery of the U.S. economy, and in particular the strength of U.S. labour markets, the U.S. Federal Reserve raised its key policy interest rate in March 2017.[6] In contrast, the Bank of Canada has remained more cautious about the underlying strength of the Canadian economy and as a result appears unlikely to raise its key policy interest rate before 2018.[7]

The FAO is projecting Canadian short-term interest rates will remain near current levels through 2017 and then begin rising modestly in 2018. Beyond 2018, interest rates are expected to gradually normalize with the 3-month Treasury Bill rate increasing to 2.6 per cent and the 10-year Government of Canada bond yield rising to 3.9 per cent by 2021.

Canadian Interest Rates to Rise over the Forecast

Source: Statistics Canada and FAO

The Canadian dollar is expected to gradually appreciate over the next five years, rising from an average of about 75 cents U.S. in 2016 to about 81 cents U.S. by 2021, supported by the steady increase in short-term interest rates and a gradual rise in oil prices.

[6] The Federal Reserve raised its key policy rate, or the Federal Funds Rate, to 1.0 per cent on March 15, 2017.
[7] In its most recent monetary policy report, the Bank of Canada (BOC) indicated that it expects the output gap to close in early 2018. At the same time, the BOC noted that "there is still considerable uncertainty about the outlook," suggesting caution with regard to future changes in its policy interest rate. Bank of Canada Monetary Policy Report, April, 2017

Ontario Economic Outlook

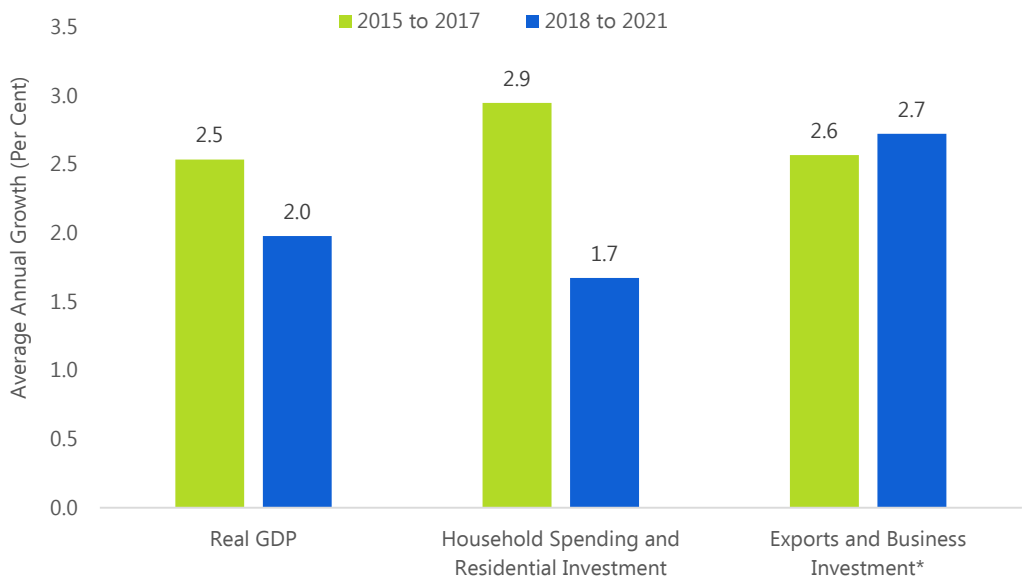
Solid Real GDP Growth Expected in 2017

Based on the Ontario Ministry of Finance's estimates,[8] Ontario real GDP rose by a strong 2.7 per cent in 2016, following equally strong gains of 2.5 per cent and 2.7 per cent in 2015 and 2014, respectively. Household spending, residential investment and exports were key contributors to overall economic growth last year. Business investment in plant and equipment disappointed expectations, declining by 4.0 per cent.

The performance of a number of economic indicators, including employment, retail sales and home sales remained solid in the first quarter of 2017. However, Ontario's merchandise export performance has been uneven so far in 2017.

Uncertainty over the future direction of U.S. trade and industrial policy could hamper business investment growth in the near term, which would negatively impact Ontario's competitiveness. Without stronger business sector investment to expand production capacity, the growth potential of several key Ontario industries will be limited.[9] As a result, despite the projection for steady growth in the U.S. and a competitively valued Canadian dollar, Ontario's net exports[10] are projected to grow at a relatively moderate pace over the outlook.

The FAO is forecasting real GDP growth of 2.4 per cent in 2017, supported by strong household spending and residential investment.[11] The pace of Ontario's overall economic growth will moderate to 2.1 per cent in 2018 and to an average of 2.0 per cent over the last three years of the outlook.



Moderate declines in residential investment in 2018 and 2019 – reflecting elevated household debt and a moderation in housing prices – is expected to contribute to the slower pace of overall economic activity.

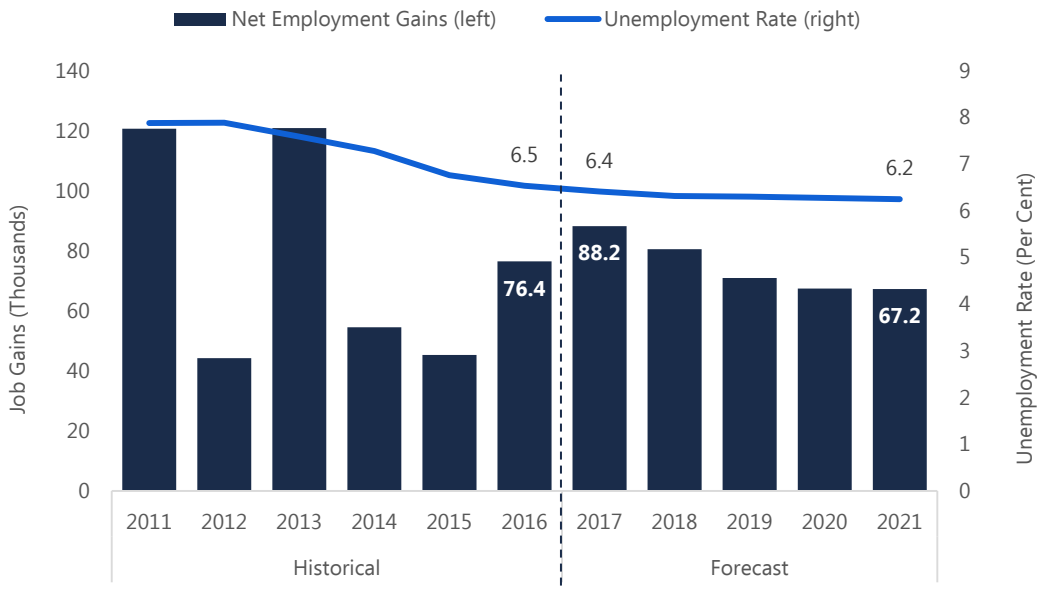
The FAO forecast is broadly consistent with the consensus view among economists that exports and business investment will lead Ontario growth over the next several years, while household spending and residential investment will

[8] Ontario Economic Accounts, Fourth Quarter 2016, released April 13, 2017.
[9] As noted in a recent Conference Board of Canada report, nearly half of Ontario businesses are operating near or above capacity, hampering the ability of Ontario businesses to increase production to meet foreign demand. Conference Board of Canada Outlook, Winter 2017.
[10] Net exports are exports less imports of goods and services.
[11] The FAO forecast of the Ontario economy is based on the FAO's short-term quarterly model of the Ontario economy. For a description of the model, please refer to the textbox at the end of the Economic Outlook chapter.

grow at a more moderate pace, as households reduce borrowing to address high debt loads.

Exports and Business Investment Expected to Drive Economic Growth

* Business Investment includes both Non-Residential Investment and Machinery & Equipment Investment
Source: Ontario Economic Accounts and FAO



Steady Job Gains Over Outlook

Ontario experienced relatively strong employment growth of 1.1 per cent in 2016 (+76,400 net new jobs), the majority of which were full-time, private sector jobs. There was robust job growth in both goods and service producing industries. The construction industry in particular, posted the highest job growth (+3.4 per cent), followed by healthcare (+3.2 per cent).[12]

The strength in Ontario's labour market continued into 2017 with an increase of 99,600 jobs on a year-over-year basis during the first quarter. For the year, the FAO is projecting a 1.3 per cent gain in employment in 2017. On average, the FAO is forecasting average annual job gains of 1.0 per cent over the next four years, consistent with the outlook for solid economic growth.

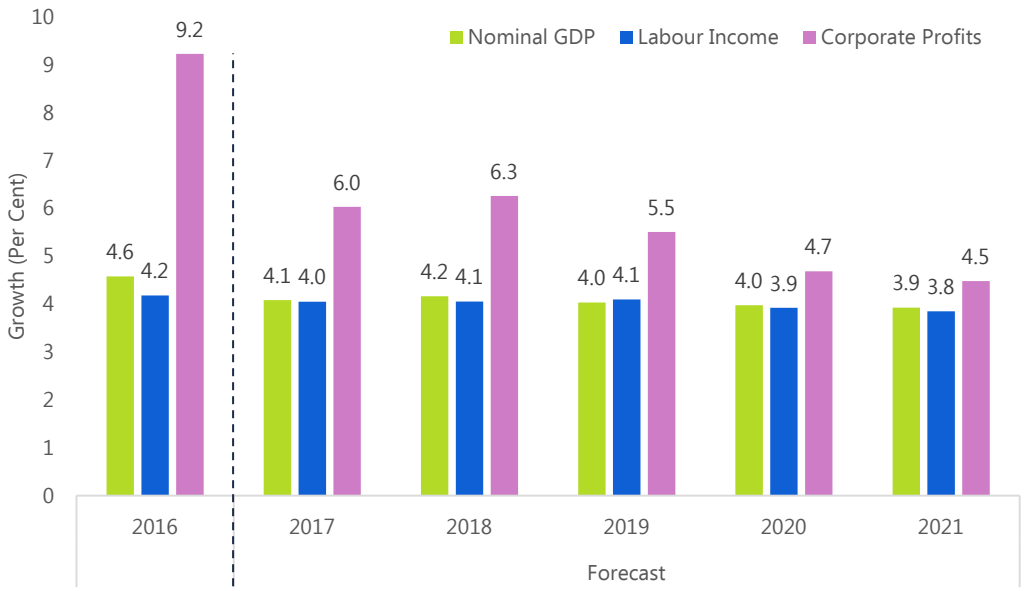
[12] For a more detailed discussion on Ontario's labour market, see the FAO's Commentary: "Ontario Posts Solid 2016 Job Gain as the Labour Market Continues to Evolve."

Steady Employment Gains as Unemployment Rate Slowly Trends Lower

Source: Statistics Canada and FAO

Sustained economic growth over the outlook is expected to attract more workers into the labour force, which is forecast to rise at a slightly higher rate than over the last five years. Faster labour force growth from 2017 to 2021, will partially offset relatively strong employment gains, leading to a more moderate decline in the unemployment rate over the outlook.

Strong Gains Expected for Labour Income and Corporate Profits



Labour income grew by a robust 4.2 per cent in 2016, above the average annual increase of 3.7 per cent from 2011 to 2015, and a reflection of the strong employment growth last year. The net operating surplus of corporations (largely corporate profits) also increased by a robust 9.2 per cent in 2016 following an equally strong gain of 9.1 per cent in 2015.

As a result of the gains in labour income and corporate profits (which together account for about two-thirds of nominal GDP), nominal GDP grew by a strong 4.6 per cent in 2016.[13]

[13] The robust 2016 increase in nominal GDP was much stronger than the 3.4 per cent increase projected in both the FAO's Economic and Fiscal Outlook, Fall 2016 Update and the government's 2016 Economic Outlook and Fiscal Review. The sharp upward shift in 2016 nominal GDP growth reflects large historical revisions to 2015 and 2016 nominal GDP growth in the Ontario Economic Accounts, consistent with new data from Statistics Canada. In particular, the net operating surplus of corporations is now estimated to have increased by 9.2 per cent in 2016 compared to an original projection of 0.3 per cent last fall.

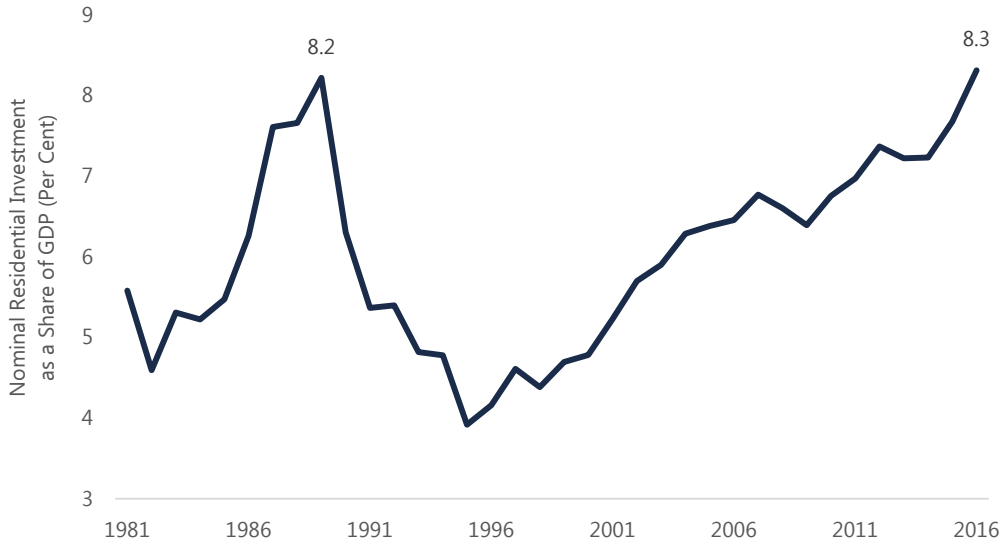
For 2017, the FAO is projecting a 4.1 per cent rise in nominal GDP, supported by strong gains in labour income (+4.0 per cent) and corporate profits (+6.0 per cent). On average, the FAO is projecting nominal GDP growth of 4.0 per cent over the 2018 to 2021 outlook.

Labour Income and Corporate Profits Support Nominal GDP Growth

Source: Ontario Economic Accounts and FAO

Key Risks for Ontario's Economic Outlook

The FAO's current economic forecast represents a reasonable outlook for the Ontario economy and an appropriate foundation for fiscal projections. However, several key risks could materialize leading to weaker than expected economic growth for the province.



In particular, there are significant risks with respect to the proposed renegotiation of the North American Free Trade Agreement (NAFTA) and the adoption of protectionist trade measures in the United States. As well, other proposed changes to U.S. fiscal and industrial policies, such as lower corporate tax rates and 'Buy America' executive orders, could harm Ontario's relative competitiveness, further discouraging business investment and limiting the contribution of exports to overall growth.

Domestically, the housing market continues to pose a significant risk to the overall economy. The sharp rise in Ontario housing prices – particularly in the

Greater Toronto Area – has contributed to record consumer debt loads and stretched levels of affordability.

At the same time, the relative importance of residential housing investment to the overall economy has increased substantially in recent years, posing a significant risk to the Ontario economy, in the event of a sharp housing market correction. In 2016, investment in residential housing accounted for a record high 8.3 per cent of Ontario's nominal GDP, up from 6.4 per cent in 2009.[14]

Residential Investment Spending Accounts for a Record Share of GDP

Source: Ontario Economic Accounts and FAO

The last time investment in residential housing accounted for a similar proportion of the economy was 1989, just prior to the 1990-1995 housing market correction.

A sharp correction in housing prices, exacerbated by the elevated levels of household debt, would negatively affect household spending and residential investment, and could lead to broader economy-wide impacts on growth and employment.

The Province recently announced a package of measures intended to respond to the underlying factors contributing to the unsustainable rise in housing prices

[14] Almost one-quarter (22 per cent) of the growth in nominal GDP in 2016 was directly attributable to the increase in residential investment spending.

and the rapid growth in housing market activity. However, it is too early to assess whether these measures will adequately address the imbalance between demand and supply pressures in the market.

The FAO's Quarterly Short-term Model of the Ontario Economy

The FAO has developed a short-term forecasting model to produce quarterly five-year projections of the Ontario economy. The model is based on dynamic equations for major sub-categories of real and nominal GDP. The model also includes key labour market components, financial variables and the Canada-U.S. dollar exchange rate. The model is structured around a number of important external or exogenous concepts such as Canada-wide economic growth, U.S. economic growth, U.S. prices, U.S. interest rates and energy prices.

The model is an important tool for the FAO's bi-annual Economic and Fiscal Outlook (EFO), ensuring internal consistency of each projection as well as consistency between EFO forecasts. It also provides the majority of the inputs required by the FAO's Fiscal Outlook Model which provides the FAO's projection of the government's fiscal position.

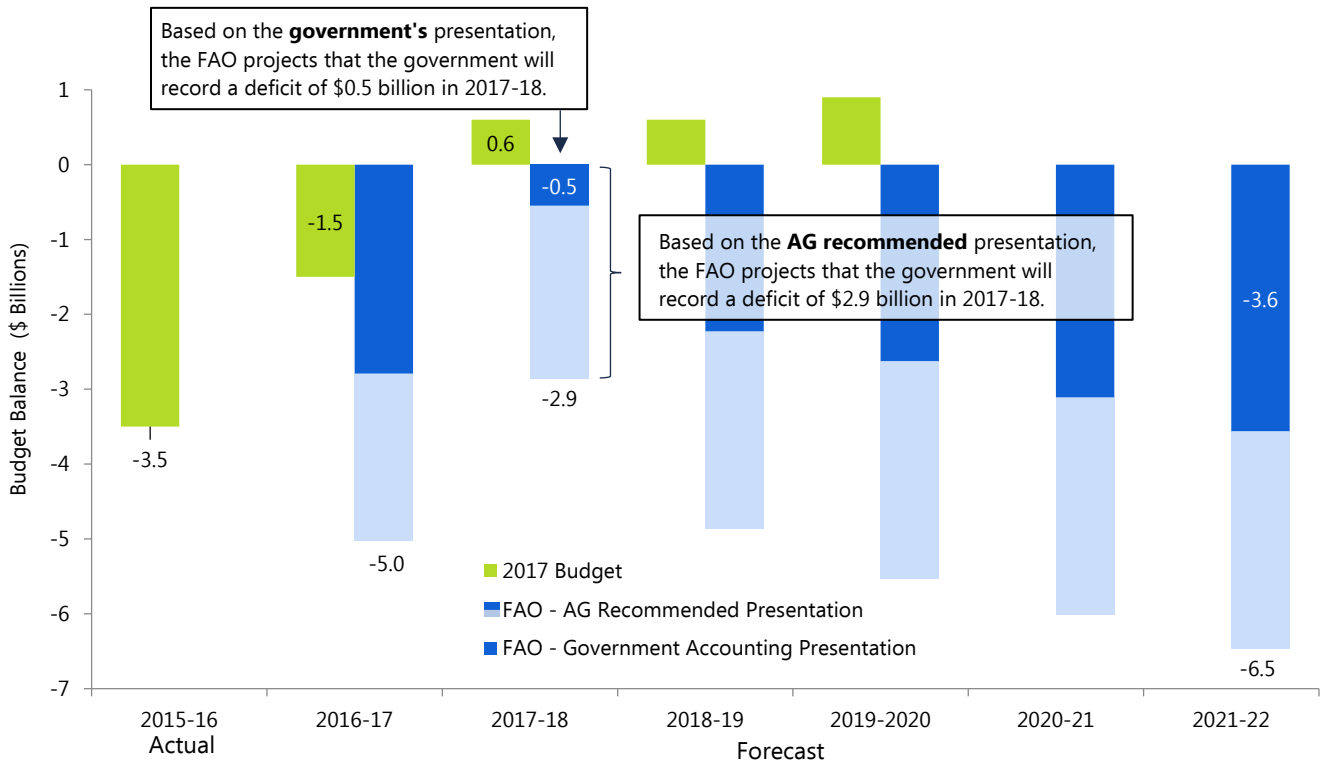
1. Fiscal Outlook

Overview



Continued Budget Deficits Projected

Based on the FAO's current economic forecast and updated fiscal information, the FAO is projecting continued Ontario budget deficits over the outlook. In the near term, the deficit improves due to strong tax revenue growth and a temporary boost to non-tax revenue. However, beginning in 2018-19, the deficit is expected to increase as a result of moderating revenue growth combined with higher expenses.

The government and the Auditor General (AG) disagree on the application of public sector accounting standards with respect to jointly-sponsored pension plans. Based on the Auditor General's recommended accounting presentation, the FAO is projecting a budget deficit of $2.9 billion for 2017-18, rising to $6.5 billion by 2021-22. (Please refer to the discussion on page 8 for additional background and context on this issue.)

Based on the government's accounting presentation in the 2017 Budget, the FAO is projecting a budget deficit of $0.5 billion in 2017-18, growing to $3.6 billion by 2021-22.[1] By comparison, the government is projecting a budget surplus (before the reserve) of $0.6 billion in 2017-18, followed by continued small surpluses over the next two years.

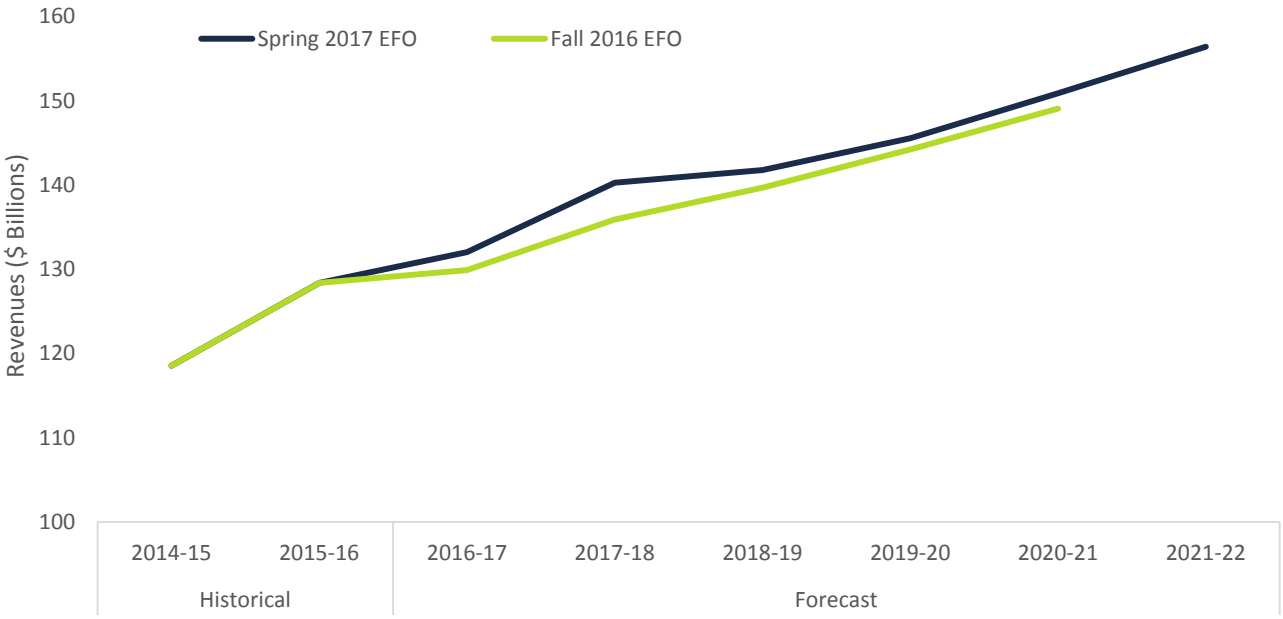
Ontario's Budget Balance*

* Budget balance excluding reserve.

Source: 2015-16 Public Accounts, 2017 Budget and FAO

[1] The Auditor General would be expected to provide a qualified opinion on Ontario's 2016-17 Public Accounts if the government continues to report the net pension assets of jointly sponsored pension plans in its financial statements.

On the government's accounting basis, the FAO projects that a balanced budget is within the government's reach in 2017-18. However, the budget deficit is expected to increase after 2017-18, due to moderate revenue growth, the absence of one-time non-tax revenues, and higher program expenses. Staying in balance after 2017-18 will likely require additional fiscal policy measures.



Under the Auditor General's accounting presentation, the FAO is projecting significant budget deficits over the entire outlook. On this basis, it is unlikely that the government will balance the budget in 2017-18 without significant additional fiscal policy measures (that is, higher revenues or lower expense). Beyond 2017-18, significant fiscal adjustments will likely be required to maintain budget balance through the outlook.

Revenue Outlook

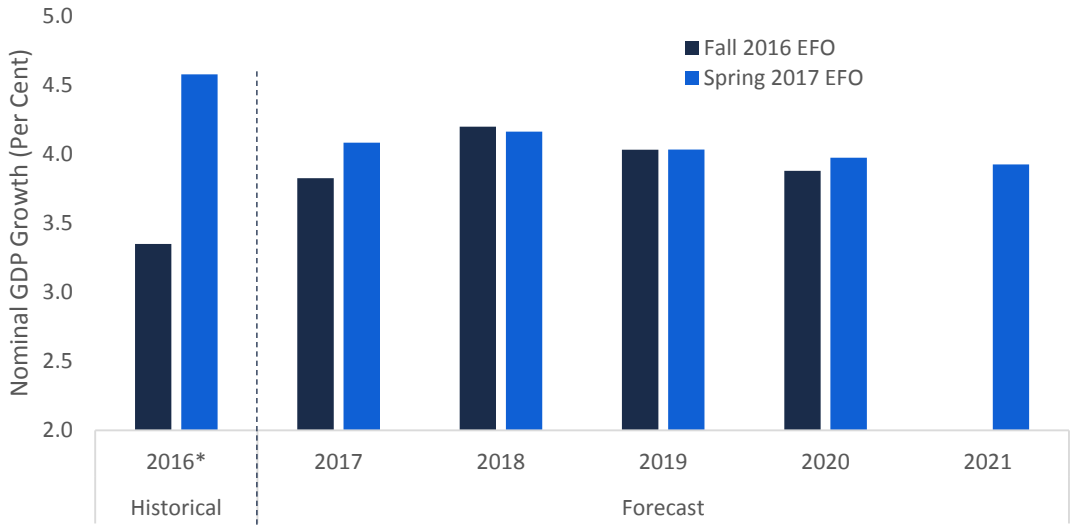
The FAO is projecting average annual revenue growth of 3.3 per cent per year from 2016-17 to 2021-22, in-line with the forecast from the FAO's fall outlook.

However, in the near-term, revenue growth is stronger than expected due to robust economic performance in 2016 and 2017, and a boost from one-time revenues in 2017-18. Beyond 2017-18, growth in tax revenues moderates and the benefit of one-time non-tax revenues ends.

Revenues Stronger Than Expected in Near Term

Source: FAO and Public Accounts

FAO Revenue Assumptions and Forecast



Revenue Source	Assumption	Forecast
Taxation Revenue	Grows with key economic drivers including labour income, corporate profits and household consumption.	Averages 3.9 per cent growth per year from 2016-17 to 2021-22
Federal Transfers	Based on legislated growth rates and economic performance	Federal transfers are expected to grow by 1.9 per cent per year from 2016-17 to 2021-22
Government Business Enterprises	Based on government projections	Income from GBEs are projected to rise moderately from $5.3 billion in 2016-17 to $6.5 billion in 2021-22
Other Revenue	Based on government projections, includes asset sales, and cap and trade	These revenues are projected to increase from $8.5 billion in 2016-17 to $11.0 billion in 2017-18, declining to $8.5 billion by 2021-22

Stronger Economic Growth Expected to Boost Tax Revenue

Consistent with the FAO's economic forecast, the FAO is currently projecting tax revenues to rise at an average of 3.9 per cent from 2016-17 to 2021-22, much stronger than the 3.0 per cent forecast in the FAO's fall outlook.

Since the FAO's fall report, nominal GDP – the broadest measure of the tax base – was revised significantly higher in 2016, improving the forecast for 2017.[2] However, beyond 2017, the outlook for nominal GDP growth is relatively unchanged from the fall forecast.

Nominal GDP up Significantly in the Near-Term Since the Fall

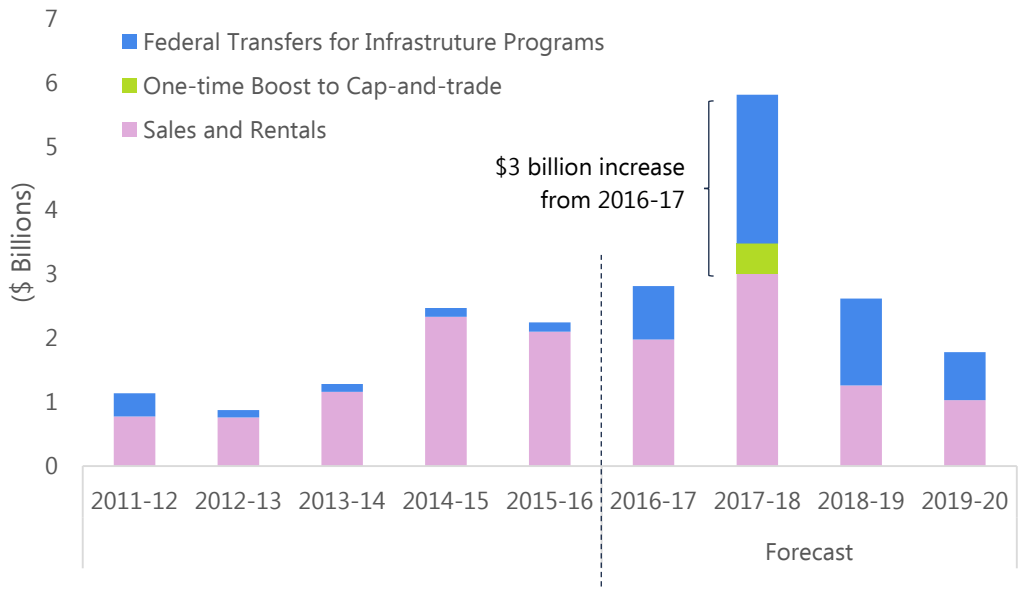
* 2016 value for Fall 2016 EFO was the FAO's forecast at the time of the report's release.
Source: Ontario Economic Accounts and FAO

[2] See economic section, and the footnote on page 11.

Improving economic prospects in 2017 are expected to lift the Province's tax revenue by approximately $2.3 billion in 2016-17 and $4.1 billion in 2017-18, compared to the FAO's fall estimates.

- Personal income tax revenue is forecast to grow stronger than expected in the fall due to the improved forecast for labour income.[3]
- Corporations tax revenue is projected to benefit from the stronger outlook for corporate profits.
- Sales tax and land transfer tax revenues are expected to improve in 2016-17 and 2017-18 due to the on-going strength in Ontario's housing market.

Equalization Entitlement Declines



Given Ontario's recent economic strength relative to the rest of Canada, the Province's Equalization entitlement declined $0.8 billion to $1.4 billion in 2017-18, and is projected to drop further to $0.6 billion in 2018-19. Beyond 2018-19, the FAO is projecting that Ontario will no longer be entitled to Equalization payments — a reflection of the continued relative strength of the Ontario economy.

2017-18 Revenues to Benefit from One-time Increases

Based on the 2017 Budget and incorporated into the FAO's projections, Ontario revenues will be boosted by $3.0 billion in one-time increases in 2017-18, including:

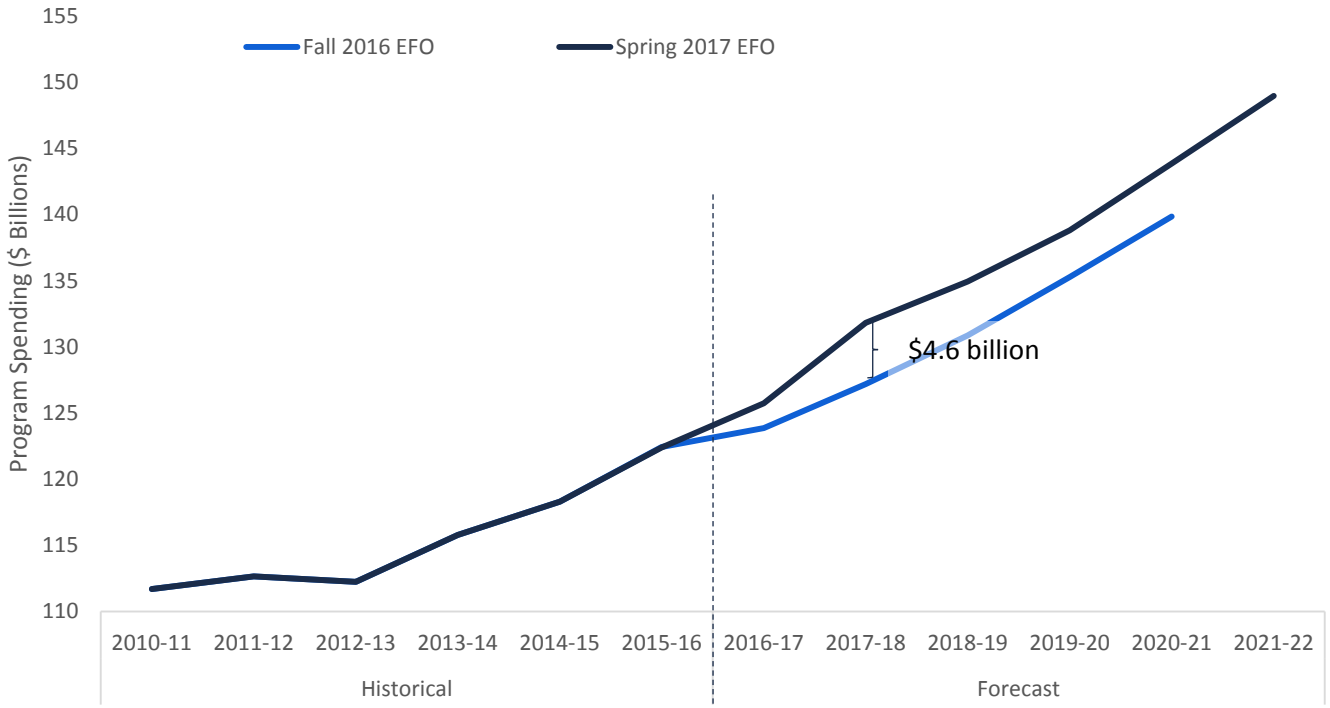
- $1.5 billion in higher revenue from federal transfers for infrastructure;
- $1.0 billion increase in sales and rentals revenue, suggesting significant additional asset sales; and
- $0.5 billion in additional cap and trade proceeds from March 2017, which will be recognized in 2016-17.[4]

2017-18 Non-tax Revenue Boost

Source: Ontario Budgets, Ministry of Finance and FAO

[3] However, near-term revenue growth will be somewhat dampened as some high-income earners have shifted earnings into the 2015 tax year to avoid the new higher 33 per cent tax rate introduced by the federal government in 2016 (http://www.fin.gc.ca/afr-rfa/2016/report-rapport-eng.asp#_Toc463249478). The FAO continues to adopt the federal government's estimate of this income shifting, and has adjusted the personal income tax forecast accordingly.

[4] The government indicated that the cap and trade revenues will be recognized in 2017-18 because the allowances were certified and delivered on April 2, 2017.



Expense Outlook

Program Expense to Increase Significantly over the Outlook

The FAO projects program spending growth of 3.3 per cent per year over the 2016-17 to 2021-22 period.

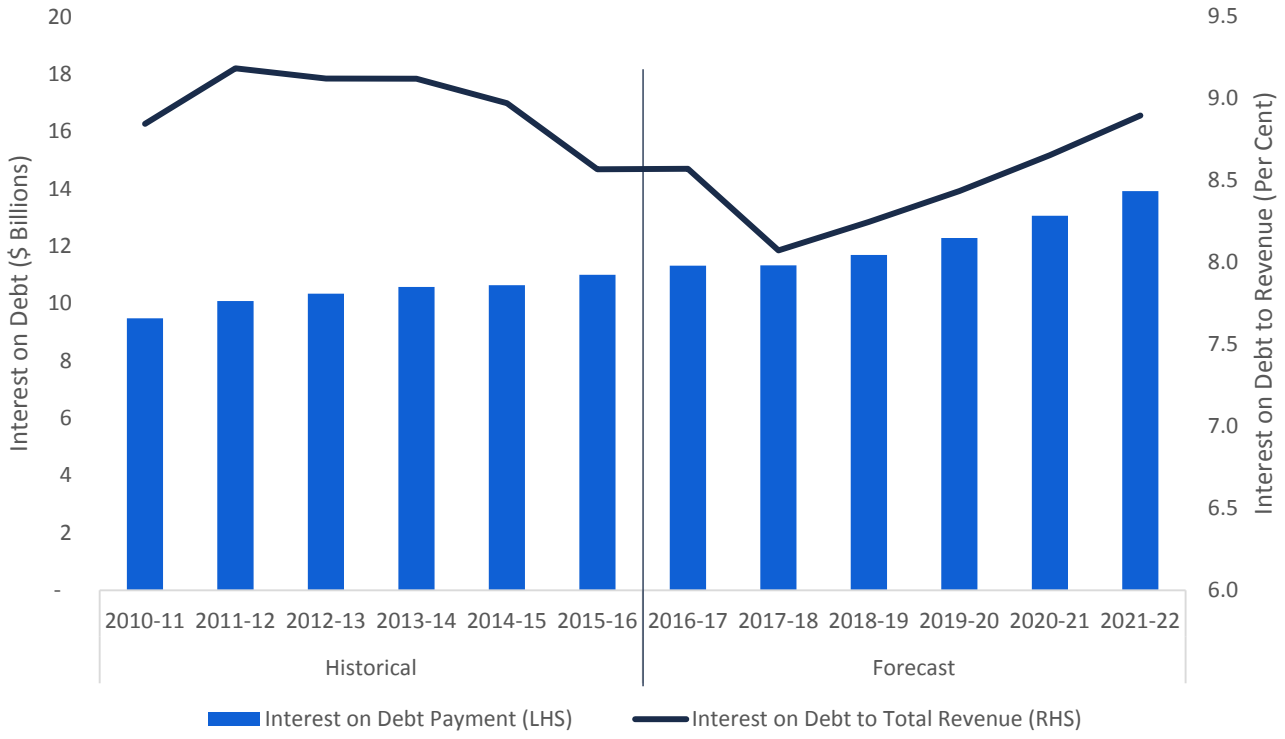
Over the 2016-17 to 2019-20 period, the FAO adopts the government's 2017 Budget projections for program spending[5], adjusted to reflect the Auditor General's recommended accounting treatment for jointly sponsored pension plans.[6] The expense outlook includes significant new spending across all sectors, including a new children and youth Pharmacare program, higher operating funding for hospitals, 24,000 new child care spaces[7], and the government's new 'Fair Hydro Plan'. As a result, spending is now forecast to be significantly higher by 2017-18 than assumed in the FAO's fall outlook.

Program Expense Higher than Projected in the Fall

Note: Program spending based on AG recommended presentation.
Source: Ontario Public Accounts and FAO

With these new expenses, program spending is expected to grow 3.3 per cent per year on average over the next five years. This growth rate is in-line with underlying growth in cost - and demographic-related pressures of 3.5 per cent on average.

Beyond 2019-20, the FAO projects program spending to increase by 3.6 per cent annually, consistent with underlying factors including population growth, aging, and price inflation.



[5] Given the government's discretion over spending, the FAO adopts the government's announced spending plans from fiscal documents and incorporates policy announcements as appropriate.
[6] The adjustment reflects the inclusion of a valuation allowance to offset the value of net pension assets in jointly sponsored pension plans. This adjustment increases 'other program' expense by $2.2 billion in 2016-17, rising to $2.9 billion by 2020-21.
[7] Ministry of Finance officials indicated that the 24,000 in new child care spaces announced in the 2017 Budget is part of the government's September 2017 Throne Speech commitment to create 100,000 spaces. The remaining funding has yet to be included in the fiscal plan.

Interest on Debt

The FAO projects interest on debt (IOD) payments will increase at an average annual rate of 4.0 per cent from $11.0 billion in 2015-16 to $13.9 billion by 2021-22, reflecting higher debt and rising interest rates over the outlook. Interest on debt has become the Province's third largest spending category and will significantly outpace the growth in program expense over the outlook.

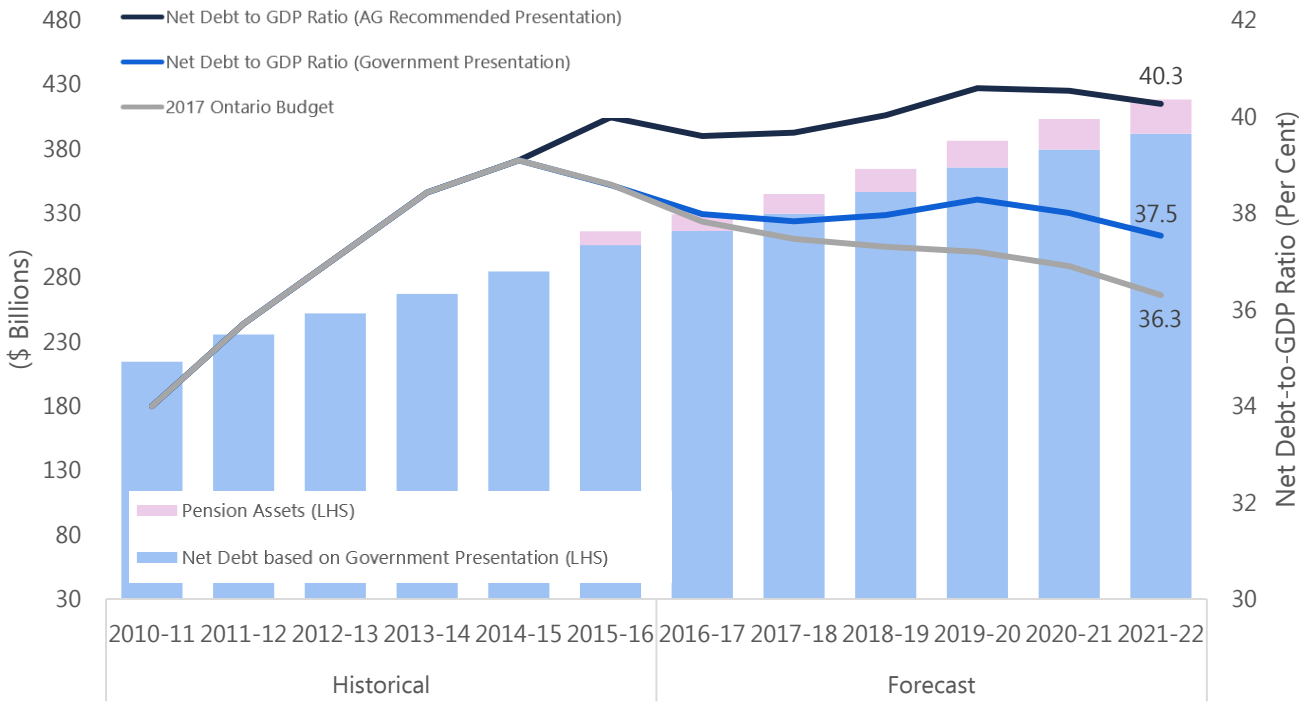
As a share of revenues, IOD is projected to increase from 8.1 per cent in 2017-18 to 8.9 per cent by 2021-22, as the rise in interest payments outpaces growth in revenues. Over the past five years, IOD as a share of revenues declined steadily, benefitting from declining interest rates. With interest rates projected to increase significantly over the next five years, the ratio is expected to rise sharply.

Interest on Debt to Rise Sharply as a Share of Revenues

Source: Ontario Public Accounts and FAO

Ontario Debt Outlook

Ontario Net Debt-to-GDP To Remain Elevated



Ontario's total borrowing requirements are expected to remain high over the outlook. To finance the cost of projected capital spending, finance on-going deficits (as projected by the FAO) and refinance maturing debt issues, provincial borrowing is expected to average $37 billion per year over the next five years.

As a result, the FAO projects Ontario's net debt to increase by $87 billion over the next five years to more than $392 billion by 2021-22 based on the AG's recommended accounting presentation. By comparison, using the accounting treatment adopted by the government in the 2017 Budget, the FAO projects Ontario's net debt will rise by $71 billion to $365 billion by 2021-22.

Based on the AG's recommended accounting presentation, the FAO expects Ontario's net debt-to-GDP ratio will edge higher over the outlook, rising to 40.3 per cent by 2021-22, reflecting the projected increase in net debt and the FAO's forecast for nominal GDP growth. In contrast, based on the accounting treatment adopted by the government in the 2017 Budget, net debt-to-GDP is projected to fall slightly from 38.6 per cent in 2015-16 to 37.5 per cent by 2021-22.

In the 2017 Budget, the Province set an interim net debt-to-GDP target of 35 per cent by 2023-24 and committed to achieving 27 per cent by 2029-30. The FAO's net debt-to-GDP projections under both accounting presentations, suggest that additional fiscal measures would be required for the government to achieve its interim target of 35 per cent by 2023-24.

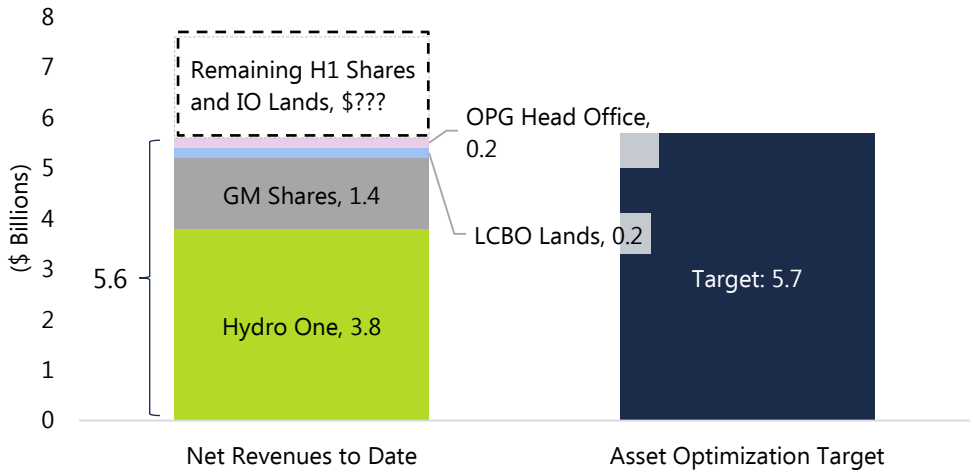
Risks to the Fiscal Plan and Policy Options

There are material risks that could impact Ontario's fiscal position.



- A sharp correction in the housing market could present a significant risk for both the broader economy and for the Province's fiscal plan. As discussed in the FAO housing commentary[8], a decline in house prices and housing market activity would directly reduce Land Transfer Tax and HST revenues. In addition, the broader economic impacts would impact personal and corporate income tax revenues.
- In the 2017 Budget, the government has significantly reduced the prudence built into its program spending projection compared to the previous budget, leaving less fiscal flexibility for the government to respond to unexpected events.[9] In addition, interest on debt payments as a share of both program spending and revenue are expected to increase significantly, exposing the government to increased fiscal risk should interest rates rise faster than expected.

On the other hand, the government has increased spending growth to a rate in line with underlying spending pressures, which diminishes the expense risk identified in earlier FAO reports.

Additionally, the government has a broad range of policy options that could improve its fiscal position, including the sale of additional public assets beyond announced targets. To date, the government has generated $5.6 billion in revenues from asset sales, close to its target of $5.7 billion over 10 years.

Given that the government has indicated that it still intends to sell an additional 30 per cent of Hydro One, as well as Infrastructure Ontario real estate holdings, it may significantly overachieve its asset sales target.

Asset Optimization Revenues and Target

Source: FAO and Ontario Budgets

[8] Financial Accountability Officer of Ontario, The Impact of a Housing Market Correction on Ontario's Fiscal Position, 2017

[9] In the 2017 Budget, contingency funds total $0.6 billion for the coming fiscal year, half the size built into the 2016 Budget fiscal plan. Similarly, the government's target for year-end savings has increased to $1.2 billion for the coming year, compared to $0.8 billion in Budget 2016.

The Accounting Treatment of Jointly Sponsored Pension Plans

Background

Ontario's 2015-16 Public Accounts noted a disagreement between the Office of the Auditor General and the Province on the appropriate accounting treatment for net pension assets of jointly sponsored pension plans. Specifically, the Province is a joint sponsor of two pension plans, the Ontario Teachers' Pension Plan (OTPP) and the Ontario Public Service Employees Union Pension Plan (OPSEUPP).

The government's position is that these pension assets have been appropriately and consistently reflected on the Province's financial statements since 2001. The Office of the Auditor General, based on a review of these pension assets, determined that a change in the accounting treatment was required. The Auditor General concluded that under current Canadian public sector accounting standards, the government could not unilaterally recognize a pension asset on its financial statements without evidence - in the form of a written agreement - permitting it to realize the asset through reduced contributions.[10]

In response, the Province appointed its own advisory panel to review and provide a recommended interpretation of public sector accounting standards with respect to the assets of jointly sponsored pension plans. The panel's report[11], released in February 2017, concluded that the Province's share of net assets in jointly sponsored pension plans could be fully recognized in the Province's financial statements — contrary to the opinion of the Office of the Auditor General.

In the 2017 Budget, the government adopted the advisory panel's interpretation of public sector accounting standards and recognized the net pension assets of the jointly sponsored pension plans. The 2017 Budget also indicated that the Province's 2016–17 Public Accounts will report the net pension assets for the two jointly sponsored pension plans.

The Central Issue

The government and the Auditor General have put forward different interpretations of the application of public sector accounting standards for jointly sponsored pension plans.[12]

The different interpretations centre on the question of the control of assets in jointly sponsored pension plans. In particular, the issue is focused on whether there needs to be an explicit written agreement between the co-sponsors (the government and the unions representing the employees) on how the sponsors plan to use the pension assets, for example by lowering contributions or increasing benefits to pensioners.

As indicated by the Auditor General, the issue can be resolved if the government presents an agreement with the Ontario Teacher's Federation (OTF) allowing the government to access the OTPP pension assets through reduced contributions.[13] The extent and duration of the reduced contributions would determine the size of the pension asset that the government could recognize in its financial statements

The government, based on the advice of the advisory panel, maintains that the existing agreements governing the pension plans already recognize the sponsors' rights to access assets in the plans and also provide the mechanism to potentially realize a benefit through lower future contribution rates.

[10] The government's 2016 Budget reported a negative expense for the OTPP which led, in part, to the Auditor General conducting an in-depth review of the related pension assets.

[11] https://news.ontario.ca/tbs/en/2017/02/pension-asset-expert-advisory-panel-submits-report.html

[12] In 2015, PSAB created an Employment Benefits Task Force to review the existing accounting standard for post-employment benefits. The work of this task force will include reviewing the appropriate accounting treatment for shared-risk and multi-employer pension plans. However, the work of this task force is not expected to be completed in the near future.

[13] Of the government's two jointly sponsored pension plans, only the OTPP is currently in a net asset position.

In the absence of an agreement, and given the government's decision in the 2017 Budget to accept the advisory panel's recommended approach to accounting for jointly sponsored pension plan assets, the Auditor General would be expected to provide a qualified opinion[14] on Ontario's 2016-17 Public Accounts.

Roles and Responsibilities of the Province and the Auditor General

The Province (through the Treasury Board Secretariat) is responsible for the preparation of Ontario's Public Accounts in accordance with legislation, and based on the standards set out by the Public Sector Accounting Board (PSAB).[15] The PSAB accounting standards serve the public interest by providing an independent, high-quality accounting framework for public sector entities.

The Auditor General reviews the Province's annual Public Accounts and provides an audit opinion to the Legislature on whether the Consolidated Financial Statements for the Province of Ontario present fairly, in all material respects, the Province's financial position, in accordance with the PSAB accounting standards.

The FAO's Presentation of Ontario's Fiscal Outlook

The Financial Accountability Officer supports the Legislative Assembly by providing independent economic and financial analysis intended to improve the transparency of the government's fiscal plan. The Officer also looks to the Auditor General as the provincial authority on the appropriate interpretation and application of accounting standards for the Province.

The FAO has presented two fiscal projections, including and excluding the impact of the net pension assets of jointly sponsored pension plans to help members of the Legislative Assembly better understand the implications of these different interpretations of accounting standards on the Province's fiscal position.

- The projection based on the Auditor General's recommended accounting treatment assumes a valuation allowance that offsets the net pension assets.
- The projection based on the government's fiscal presentation in the 2017 Budget recognizes the net pension assets over the budget outlook.
    - In the absence of an agreement between the co-sponsors, this presentation of Ontario's fiscal position would be expected to receive a qualified opinion from the Auditor General when published in the Province's future Public Accounts.

Based on the Auditor General's recommended accounting treatment for the net assets of jointly sponsored pension plans, the FAO is projecting budget deficits of $2.9 billion in 2017-18, rising to $6.5 billion by 2021-22. Alternatively, based on the pension accounting treatment presented by the Province in the 2017 Budget, the FAO's projection for the budget deficit decreases to $0.5 billion in 2017-18 and $3.6 billion in 2021-22.

[14] An auditor may provide a qualified opinion when financial statements do not conform in a material way to the applicable accounting standards.

2. Appendix

Developments since the FAO's Fall 2016 Economic and Fiscal Outlook

The FAO's current projection of the Ontario budget balance has generally deteriorated relative to the FAO's fall 2016 projection.

- Stronger than expected economic performance is expected to boost taxation revenues over the forecast, partially offset by lower Equalization revenue.
- Based on new government spending plans, program expense has increased significantly.

Developments since 2016 Fall EFO (AG Recommended Presentation)

	2016-17	2017-18	2018-19	2019-20	2020-21
FAO's Fall 2016 Budget Balance Forecast	-5.2	-2.6	-2.8	-3.3	-3.7
Developments Since Fall 2016					
Revenue					
Stronger Economic Outlook	2.3	4.1	3.9	4.4	4.7
Lower Federal Transfers[1]	-0.3	0.2	-1.3	-2.4	-2.2
Other Revenue Changes	0.1	0.1	-0.5	-0.6	-0.6
Total	2.1	4.4	2.1	1.3	1.8
Expense					
Children and Youth Pharmacare, and Fair Hydro Plan[3]	0.5	1.3	1.3	1.3	1.3
Revised Pension Asset[4]	0.7	0.8	1.1	1.4	1.4
Other Expense Increases	0.7	2.5	1.7	0.9	1.4
Total	2.0	4.6	4.1	3.6	4.1
Total Developments	0.2	-0.3	-2.1	-2.3	-2.3
FAO's 2017 Spring Budget Balance Forecast	-5.0	-2.9	-4.9	-5.5	-6.0

Notes:

1. Change in federal transfers forecast mainly due the reduction in Ontario's Equalization payment.

2. Other revenue changes include the $0.5 billion re-profiling of cap-and-trade proceeds from 2016-17 to 2017-18, and an increase in sales and rentals for 2017-18.

3. In the 2016 Fall EFO, the FAO included $1 billion in expenses from the HST rebate on electricity bills beginning 2017-18, which is now part of the Fair Hydro Plan. As a result, the FAO estimates that the incremental impact of the Fair Hydro Plan is $0.8 billion, compared to the Fall.

4. In the 2016 Fall EFO, the FAO assumed $1.5 billion in adjustments for net pension assets of jointly sponsored pension plans. The government has revised its estimate of the impact to $2.2 billion in 2017-18, increasing to $2.9 billion by 2020-21.

Subject: RE: FAO's Upcoming EFO Report

Good Morning,

Please find attached drafts of the Economic Outlook and Fiscal Outlook chapters from the FAO's upcoming 'Economic and Fiscal Outlook' report.
The chapters are password protected using the same password as in the past.

The FAO's fiscal forecast incorporates the tax revenue adjustments that we received on Friday afternoon -- and which brings our short-term forecast much closer the Budget 2017 forecast.

Unfortunately, we are on a very tight schedule to enable us to release this report at the end of the May.

So, we are asking for your comments/concerns including any potential cabinet confidentiality issues by end of day tomorrow (Tuesday, May 9)

Thanks again for your support and assistance.

David West

Subject: FAO's Upcoming EFO Report

Hello,

Thanks again for our meeting on Tuesday. We appreciate the information you have provided as well as the responses to our questions at the meeting.

On Monday morning (as early as possible) we plan to provide you with draft copies of the Economic Outlook and Fiscal Outlook chapters (including Forecast Tables) from the FAO's upcoming EFO report.

We would hope you would be able to provide us with any comments or concerns on these chapters by Tuesday (May 9), end of day.

As in the past, the FAO will provide a final copy of the report 48 hours prior to release to both Ministers. I would email you a copy at the same time.

Thanks,

David West

Thanks David,

We're working on pulling together the various information pieces and people for a meeting Tuesday between 1pm and 2pm, so will be in touch to confirm.

As in past approaches, we won't be able to have everything for you on Tuesday but will be able to provide a downpayment for sure.

Have a great weekend
Tim

Subject: Follow-Up on the 2017 Budget

Good Morning!

Congratulations on delivering yesterday's big, black budget!

I wanted to follow-up on the FAO's requests for some additional information.

First, as we have discussed, we have three requests for specific data/tables:

1. We would like to obtain the detailed revenue and expense tables (Tables 6.14 and 6.15) extended to 2019-20.

- Are these detailed tables available to 2020-21? If so, then please include (:))

2. As staff have been discussing, we would like to obtain more detailed information on the one-time adjustments to taxation revenues beginning in 2015-16 and extending over the forecast. This is basically additional information to that provided in tables 6.7, 6.8 and 6.9.

3. As detailed in the letter and background documents sent to Deputies Thompson and Angus on April 3, we are requesting pension expense and employer contribution details for the OTPP and OPSEUPP.

We would also appreciate a meeting early next week (preferably Tuesday afternoon) to allow you to respond to a number of questions that we have with regard to the 2017 Budget.

We'll provide a list of specific questions later this afternoon, but these questions will cover a number of areas,

including:

- Clarification on where the Fair Hydro Plan appears in the expenses

- Additional details/clarification on new health spending, including the new pharmacare plan

- Clarification on future assumptions for asset sales and any details behind the 'Sales and Rentals' line in the detailed Revenue table.

- Clarification on the assumptions behind new federal funding announced in the 2017 federal budget (e.g. affordable housing, child care, home care)

- Some background on the decision to reduce the estimate of 'Carbon Allowance Proceeds' and assumptions on associated expense

- Additional details/clarification on new infrastructure spending

- Assumptions behind the plan to reduce net debt-to-GDP to 35% and eventually to 27%.

We'll provide a list later this afternoon that expands somewhat on these question topics.

Happy to discuss any of these requests.

Thanks again for your support,
David

Economic and Fiscal Outlook

2017

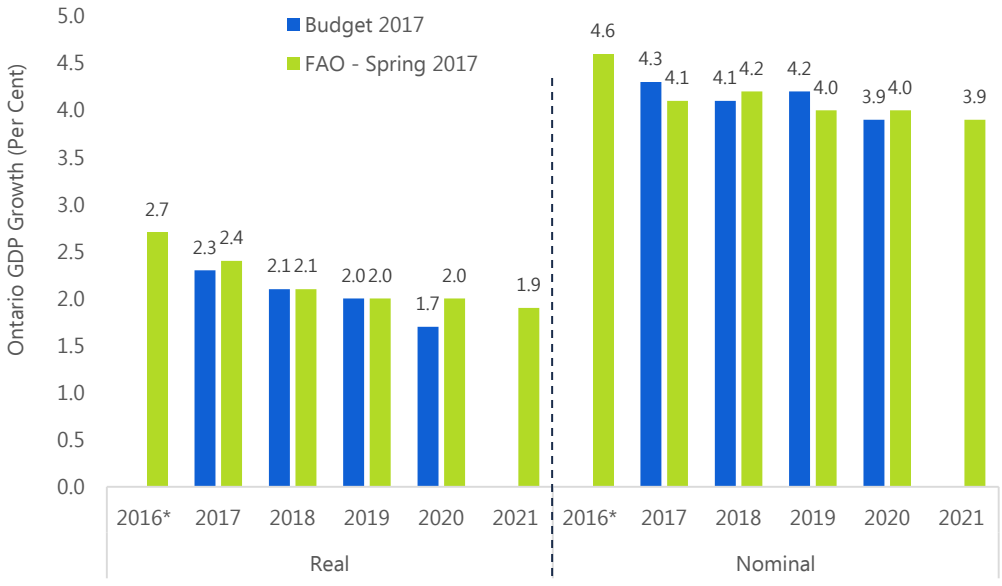
Draft Report

Confidential Document

May 2017

Economic Outlook

Overview



Ontario Economy Expected to Remain Strong in 2017

The Ontario economy finished 2016 with a strong 2.7 per cent increase in real GDP, reflecting solid growth in the second half of the year. Real GDP growth last year was significantly above the 2.1 per cent average gain seen from 2011 to 2015. Strong household spending, residential investment and exports contributed to the increase in real GDP in 2016.

Supported by the strong economic momentum in 2016 and continued improvement in economic indicators in the first quarter of 2017, the FAO is projecting real GDP to rise by 2.4 per cent in 2017 and 2.1 per cent in 2018.

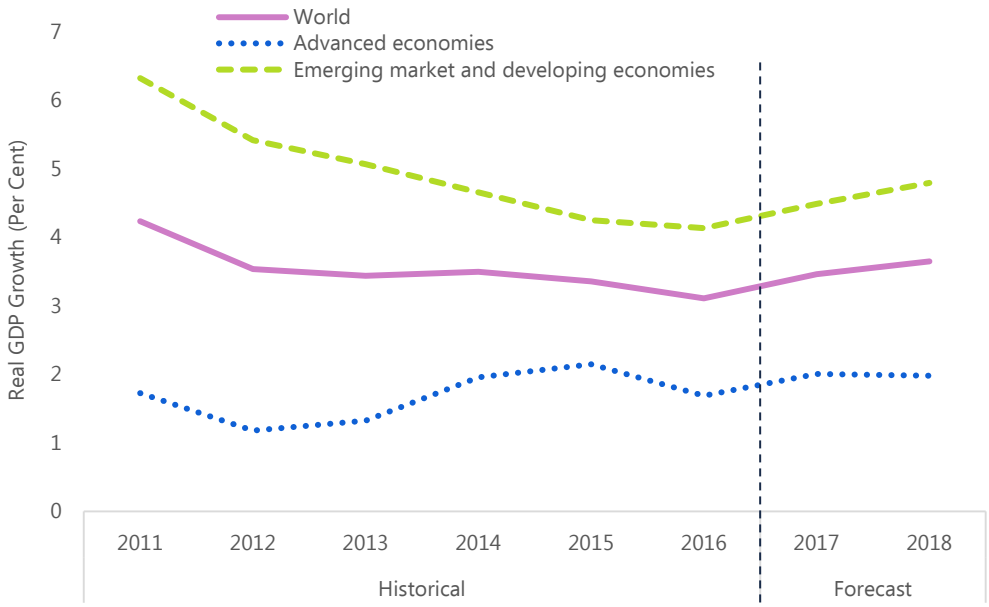
Nominal GDP – the broadest measure of the tax base – increased by a robust 4.6 per cent in 2016. The FAO is projecting nominal GDP to increase by 4.1 per cent in 2017 and 4.2 per cent in 2018, reflecting solid gains in labour income and corporate profits.

Solid Economic Performance Expected Over Outlook

* 2016 are actuals
Source: Ontario Economic Accounts, Budget 2017 and FAO

Global Economy Gaining Momentum

In its latest World Economic Outlook,[1] the International Monetary Fund (IMF) is forecasting global economic growth to strengthen from 3.1 per cent in 2016 to 3.5 per cent in 2017 and 3.6 per cent in 2018. The IMF revised the outlook slightly higher for 2017, but left it unchanged for 2018, compared to its October 2016 outlook.[2]



For advanced economies, the IMF's forecast for 2017 and 2018 has improved slightly from its October projection with growth of 2.0 per cent in 2017 and 2018.

Growth prospects for emerging market and developing economies are much more varied, but overall have weakened slightly from the IMF's October outlook, due to weaker economic conditions in key export markets. On average, the IMF has lowered its growth forecast for emerging markets and developing countries to 4.5 per cent in 2017, with 2018's forecast remaining unchanged at 4.8 per cent.

The IMF expects China – the world's second largest economy – to grow by 6.6 per cent in 2017 and 6.2 per cent in 2018, reflecting continued support from government policy. In the medium term, China's economic growth is expected to gradually moderate as its economy rebalances from investment and manufacturing-led growth to a more service-intensive economy.

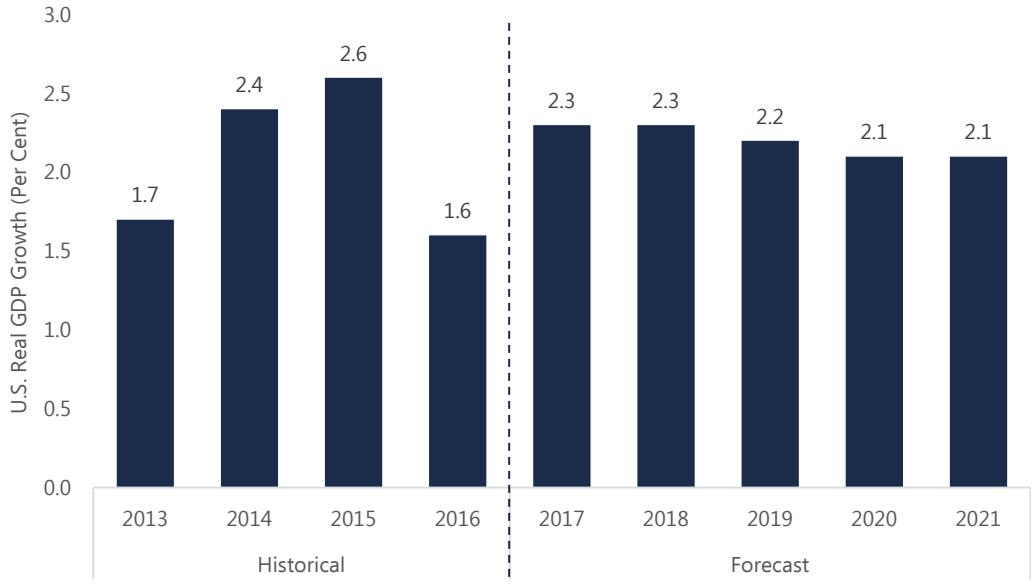
Global Growth to Improve in 2017

Source: "World Economic Outlook, Gaining Momentum?", April 2017, International Monetary Fund



U.S. Economic Growth to Strengthen in 2017

U.S. real GDP advanced by a relatively moderate 1.6 per cent in 2016, the weakest increase in three years. For 2017 and 2018, the FAO projects U.S. growth to improve to 2.3 per cent, with household spending, business investment and residential construction being key contributors to overall growth.[3]

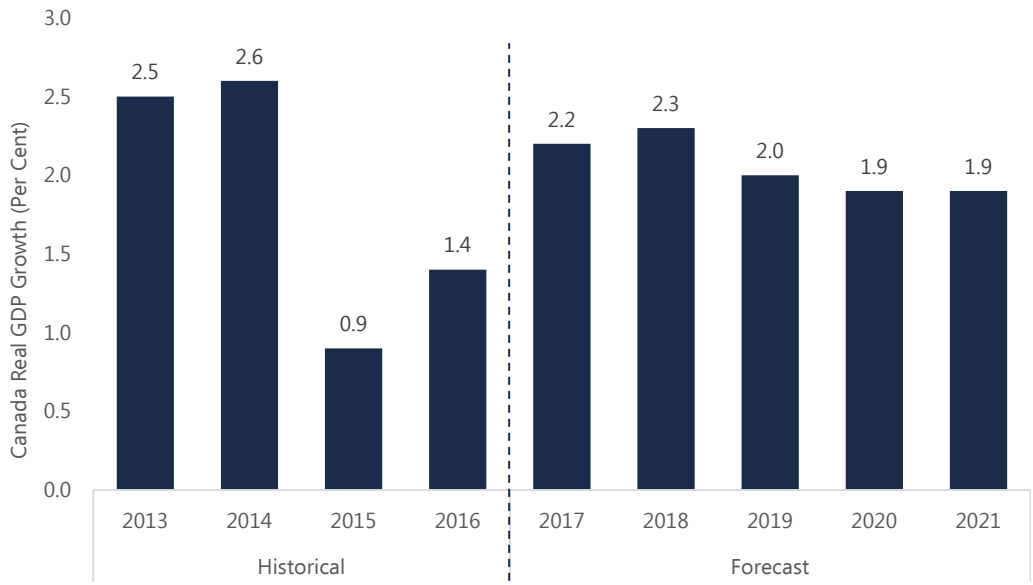
However, the lack of specific details on the new U.S. administration's proposed policies has raised the risks associated with the current U.S. outlook. Many forecasters are cautiously optimistic that some of the proposed fiscal policies, such as expected cuts to corporate tax rates, could boost U.S. economic growth in the short-term.[4] But this optimism is tempered by the potential for large future increases in the U.S. budget deficit, which could weigh on economic growth over the medium-term.

From 2019 to 2021, U.S. real GDP growth is projected to average 2.1 per cent annually, which is in-line with the average rate seen from 2012 to 2016.

U.S. Economic Growth Moderates Beyond 2017

[3] The FAO forecast for the U.S. economy in 2017 is based on the U.S. Congressional Budget Office's (CBO) latest forecast. For 2018 to 2021, the U.S. forecast is based on the average of the CBO outlook and the forecasts of three independent model-based forecasters – the Conference Board of Canada (CBOC), the Centre for Spatial Economics (C4SE) and the Policy and Economic Analysis Program (PEAP) at the University of Toronto.
[4] These forecasters include the IMF, CBO, TD Bank, RBC, BMO Capital Markets and National Bank Economics.

Source: Federal Reserve Bank of St. Louis, Congressional Budget Office and FAO Consensus



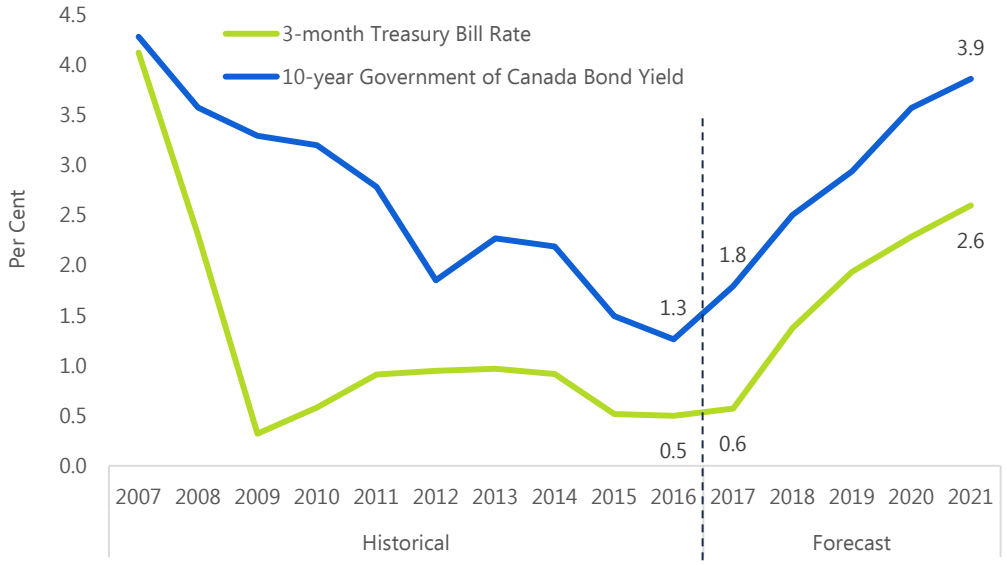
Canadian Economic Growth Expected to Rebound

The outlook for the Canadian economy has improved following strong growth over the second half of 2016.

Continued momentum in recent economic indicators point to a solid start for 2017. Canadian real GDP is currently projected to grow by 2.2 per cent in 2017 and 2.3 per cent in 2018, recovering from more moderate growth in 2015 and 2016.[5] Strength in household spending and non-energy exports are expected to contribute to overall growth in 2017 and 2018.

Beyond 2018, Canadian real GDP is projected to increase at an average annual rate of 2.0 per cent, as the economy continues to adjust to slower growth in the energy sector.

Canada GDP Growth Expected to Improve in 2017



Source: Statistics Canada and FAO Consensus

[5] The FAO forecast for the Canadian economy is based on the average quarterly forecasts of two independent, model-based forecasters – the Conference Board of Canada (CBOC) and the Policy and Economic Analysis Program (PEAP) at the University of Toronto.

Based on the continuing recovery of the U.S. economy, and in particular the strength of U.S. labour markets, the U.S. Federal Reserve raised its key policy interest rate in March 2017.[6] In contrast, the Bank of Canada has remained more cautious about the underlying strength of the Canadian economy and as a result appears unlikely to raise its key policy interest rate before 2018.[7]

The FAO is projecting Canadian short-term interest rates will remain near current levels through 2017 and then begin rising modestly in 2018. Beyond 2018, interest rates are expected to gradually normalize with the 3-month Treasury Bill rate increasing to 2.6 per cent and the 10-year Government of Canada bond yield rising to 3.9 per cent by 2021.

Canadian Interest Rates to Rise over the Forecast

Source: Statistics Canada and FAO

The Canadian dollar is expected to gradually appreciate over the next five years, rising from an average of about 75 cents U.S. in 2016 to about 81 cents U.S. by 2021, supported by the steady increase in short-term interest rates and a gradual rise in oil prices.

[6] The Federal Reserve raised its key policy rate, or the Federal Funds Rate, to 1.0 per cent on March 15, 2017.
[7] In its most recent monetary policy report, the Bank of Canada (BOC) indicated that it expects the output gap to close in early 2018. At the same time, the BOC noted that "there is still considerable uncertainty about the outlook," suggesting caution with regard to future changes in its policy interest rate. Bank of Canada Monetary Policy Report, April, 2017

Ontario Economic Outlook

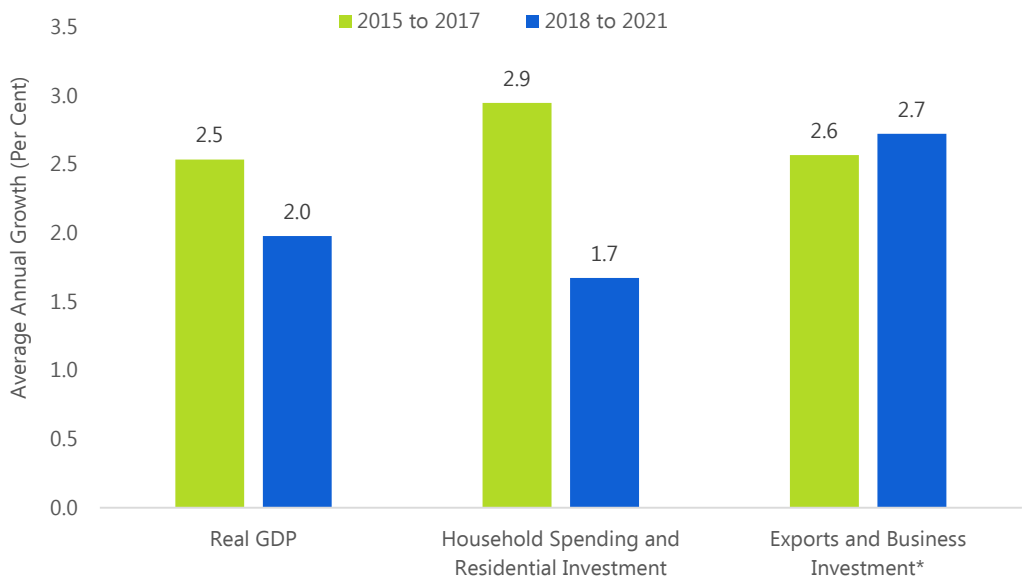
Solid Real GDP Growth Expected in 2017

Based on the Ontario Ministry of Finance's estimates,[8] Ontario real GDP rose by a strong 2.7 per cent in 2016, following equally strong gains of 2.5 per cent and 2.7 per cent in 2015 and 2014, respectively. Household spending, residential investment and exports were key contributors to overall economic growth last year. Business investment in plant and equipment disappointed expectations, declining by 4.0 per cent.

The performance of a number of economic indicators, including employment, retail sales and home sales remained solid in the first quarter of 2017. However, Ontario's merchandise export performance has been uneven so far in 2017.

Uncertainty over the future direction of U.S. trade and industrial policy could hamper business investment growth in the near term, which would negatively impact Ontario's competitiveness. Without stronger business sector investment to expand production capacity, the growth potential of several key Ontario industries will be limited.[9] As a result, despite the projection for steady growth in the U.S. and a competitively valued Canadian dollar, Ontario's net exports[10] are projected to grow at a relatively moderate pace over the outlook.

The FAO is forecasting real GDP growth of 2.4 per cent in 2017, supported by strong household spending and residential investment.[11] The pace of Ontario's overall economic growth will moderate to 2.1 per cent in 2018 and to an average of 2.0 per cent over the last three years of the outlook.



Moderate declines in residential investment in 2018 and 2019 – reflecting elevated household debt and a moderation in housing prices – is expected to contribute to the slower pace of overall economic activity.

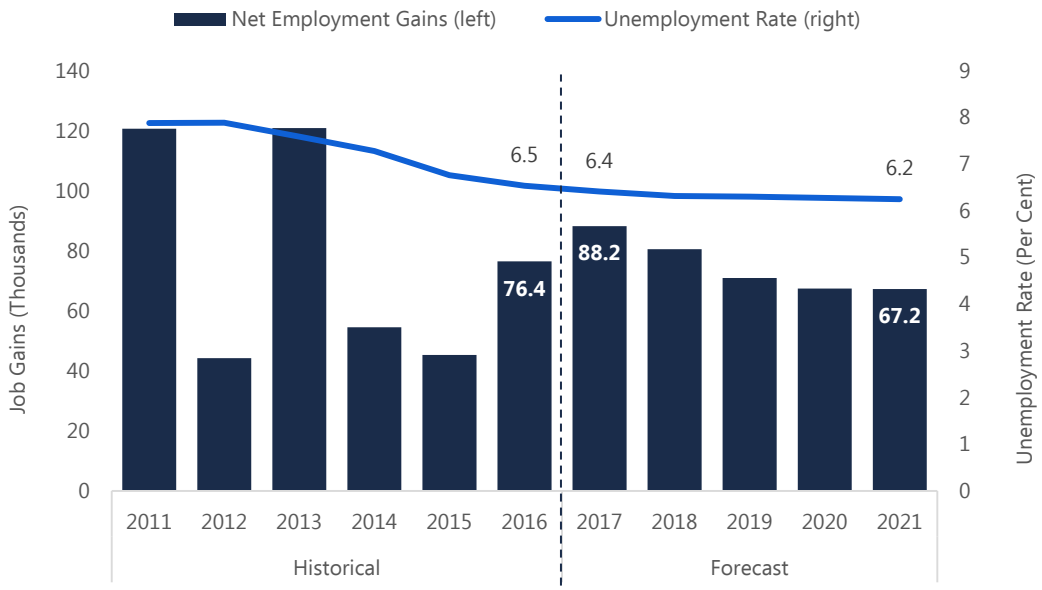
The FAO forecast is broadly consistent with the consensus view among economists that exports and business investment will lead Ontario growth over the next several years, while household spending and residential investment will

[8] Ontario Economic Accounts, Fourth Quarter 2016, released April 13, 2017.
[9] As noted in a recent Conference Board of Canada report, nearly half of Ontario businesses are operating near or above capacity, hampering the ability of Ontario businesses to increase production to meet foreign demand. Conference Board of Canada Outlook, Winter 2017.
[10] Net exports are exports less imports of goods and services.
[11] The FAO forecast of the Ontario economy is based on the FAO's short-term quarterly model of the Ontario economy. For a description of the model, please refer to the textbox at the end of the Economic Outlook chapter.

grow at a more moderate pace, as households reduce borrowing to address high debt loads.

Exports and Business Investment Expected to Drive Economic Growth

* Business Investment includes both Non-Residential Investment and Machinery & Equipment Investment
Source: Ontario Economic Accounts and FAO



Steady Job Gains Over Outlook

Ontario experienced relatively strong employment growth of 1.1 per cent in 2016 (+76,400 net new jobs), the majority of which were full-time, private sector jobs. There was robust job growth in both goods and service producing industries. The construction industry in particular, posted the highest job growth (+3.4 per cent), followed by healthcare (+3.2 per cent).[12]

The strength in Ontario's labour market continued into 2017 with an increase of 99,600 jobs on a year-over-year basis during the first quarter. For the year, the FAO is projecting a 1.3 per cent gain in employment in 2017. On average, the FAO is forecasting average annual job gains of 1.0 per cent over the next four years, consistent with the outlook for solid economic growth.

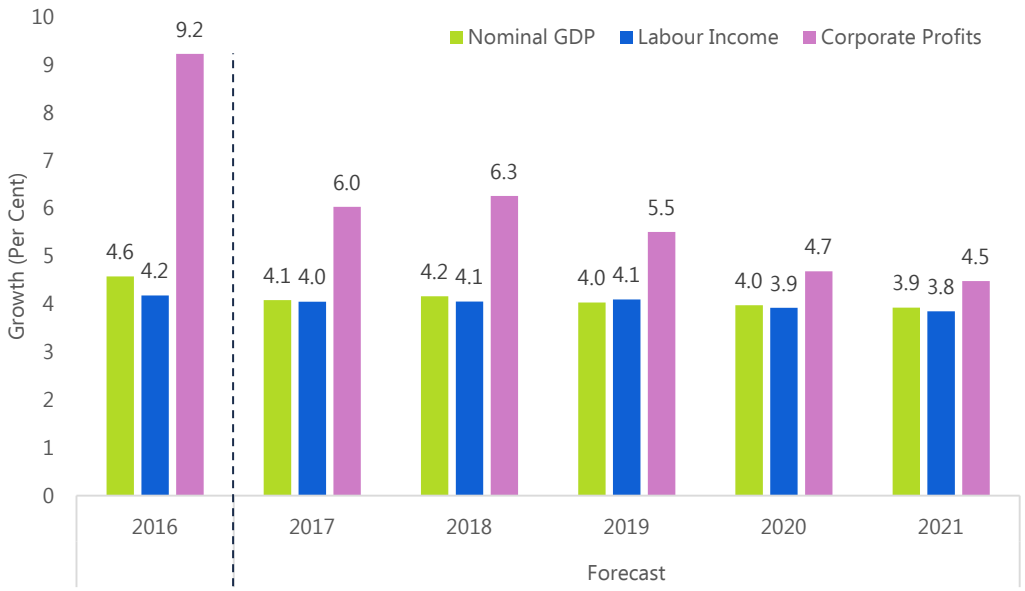
[12] For a more detailed discussion on Ontario's labour market, see the FAO's Commentary: "Ontario Posts Solid 2016 Job Gain as the Labour Market Continues to Evolve."

Steady Employment Gains as Unemployment Rate Slowly Trends Lower

Source: Statistics Canada and FAO

Sustained economic growth over the outlook is expected to attract more workers into the labour force, which is forecast to rise at a slightly higher rate than over the last five years. Faster labour force growth from 2017 to 2021, will partially offset relatively strong employment gains, leading to a more moderate decline in the unemployment rate over the outlook.

Strong Gains Expected for Labour Income and Corporate Profits



Labour income grew by a robust 4.2 per cent in 2016, above the average annual increase of 3.7 per cent from 2011 to 2015, and a reflection of the strong employment growth last year. The net operating surplus of corporations (largely corporate profits) also increased by a robust 9.2 per cent in 2016 following an equally strong gain of 9.1 per cent in 2015.

As a result of the gains in labour income and corporate profits (which together account for about two-thirds of nominal GDP), nominal GDP grew by a strong 4.6 per cent in 2016.[13]

[13] The robust 2016 increase in nominal GDP was much stronger than the 3.4 per cent increase projected in both the FAO's Economic and Fiscal Outlook, Fall 2016 Update and the government's 2016 Economic Outlook and Fiscal Review. The sharp upward shift in 2016 nominal GDP growth reflects large historical revisions to 2015 and 2016 nominal GDP growth in the Ontario Economic Accounts, consistent with new data from Statistics Canada. In particular, the net operating surplus of corporations is now estimated to have increased by 9.2 per cent in 2016 compared to an original projection of 0.3 per cent last fall.

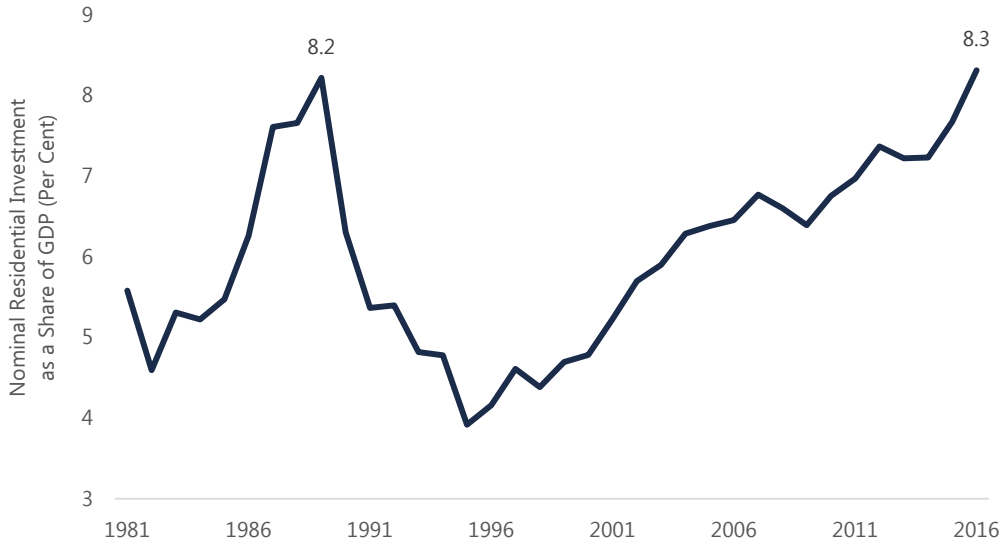
For 2017, the FAO is projecting a 4.1 per cent rise in nominal GDP, supported by strong gains in labour income (+4.0 per cent) and corporate profits (+6.0 per cent). On average, the FAO is projecting nominal GDP growth of 4.0 per cent over the 2018 to 2021 outlook.

Labour Income and Corporate Profits Support Nominal GDP Growth

Source: Ontario Economic Accounts and FAO

Key Risks for Ontario's Economic Outlook

The FAO's current economic forecast represents a reasonable outlook for the Ontario economy and an appropriate foundation for fiscal projections. However, several key risks could materialize leading to weaker than expected economic growth for the province.



In particular, there are significant risks with respect to the proposed renegotiation of the North American Free Trade Agreement (NAFTA) and the adoption of protectionist trade measures in the United States. As well, other proposed changes to U.S. fiscal and industrial policies, such as lower corporate tax rates and 'Buy America' executive orders, could harm Ontario's relative competitiveness, further discouraging business investment and limiting the contribution of exports to overall growth.

Domestically, the housing market continues to pose a significant risk to the overall economy. The sharp rise in Ontario housing prices – particularly in the

Greater Toronto Area – has contributed to record consumer debt loads and stretched levels of affordability.

At the same time, the relative importance of residential housing investment to the overall economy has increased substantially in recent years, posing a significant risk to the Ontario economy, in the event of a sharp housing market correction. In 2016, investment in residential housing accounted for a record high 8.3 per cent of Ontario's nominal GDP, up from 6.4 per cent in 2009.[14]

Residential Investment Spending Accounts for a Record Share of GDP

Source: Ontario Economic Accounts and FAO

The last time investment in residential housing accounted for a similar proportion of the economy was 1989, just prior to the 1990-1995 housing market correction.

A sharp correction in housing prices, exacerbated by the elevated levels of household debt, would negatively affect household spending and residential investment, and could lead to broader economy-wide impacts on growth and employment.

The Province recently announced a package of measures intended to respond to the underlying factors contributing to the unsustainable rise in housing prices

[14] Almost one-quarter (22 per cent) of the growth in nominal GDP in 2016 was directly attributable to the increase in residential investment spending.

and the rapid growth in housing market activity. However, it is too early to assess whether these measures will adequately address the imbalance between demand and supply pressures in the market.

The FAO's Quarterly Short-term Model of the Ontario Economy

The FAO has developed a short-term forecasting model to produce quarterly five-year projections of the Ontario economy. The model is based on dynamic equations for major sub-categories of real and nominal GDP. The model also includes key labour market components, financial variables and the Canada-U.S. dollar exchange rate. The model is structured around a number of important external or exogenous concepts such as Canada-wide economic growth, U.S. economic growth, U.S. prices, U.S. interest rates and energy prices.

The model is an important tool for the FAO's bi-annual Economic and Fiscal Outlook (EFO), ensuring internal consistency of each projection as well as consistency between EFO forecasts. It also provides the majority of the inputs required by the FAO's Fiscal Outlook Model which provides the FAO's projection of the government's fiscal position.

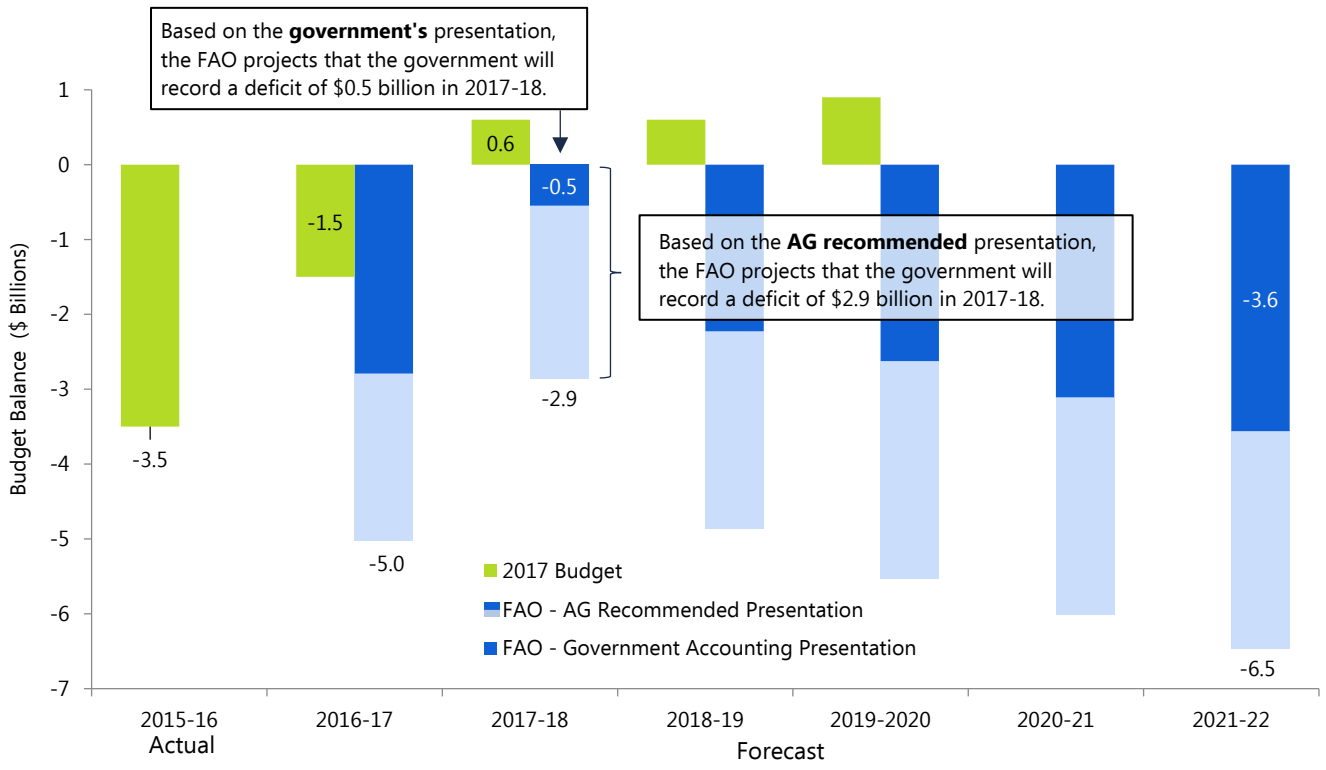
1. Fiscal Outlook

Overview



Continued Budget Deficits Projected

Based on the FAO's current economic forecast and updated fiscal information, the FAO is projecting continued Ontario budget deficits over the outlook. In the near term, the deficit improves due to strong tax revenue growth and a temporary boost to non-tax revenue. However, beginning in 2018-19, the deficit is expected to increase as a result of moderating revenue growth combined with higher expenses.

The government and the Auditor General (AG) disagree on the application of public sector accounting standards with respect to jointly-sponsored pension plans. Based on the Auditor General's recommended accounting presentation, the FAO is projecting a budget deficit of $2.9 billion for 2017-18, rising to $6.5 billion by 2021-22. (Please refer to the discussion on page 8 for additional background and context on this issue.)

Based on the government's accounting presentation in the 2017 Budget, the FAO is projecting a budget deficit of $0.5 billion in 2017-18, growing to $3.6 billion by 2021-22.[1] By comparison, the government is projecting a budget surplus (before the reserve) of $0.6 billion in 2017-18, followed by continued small surpluses over the next two years.

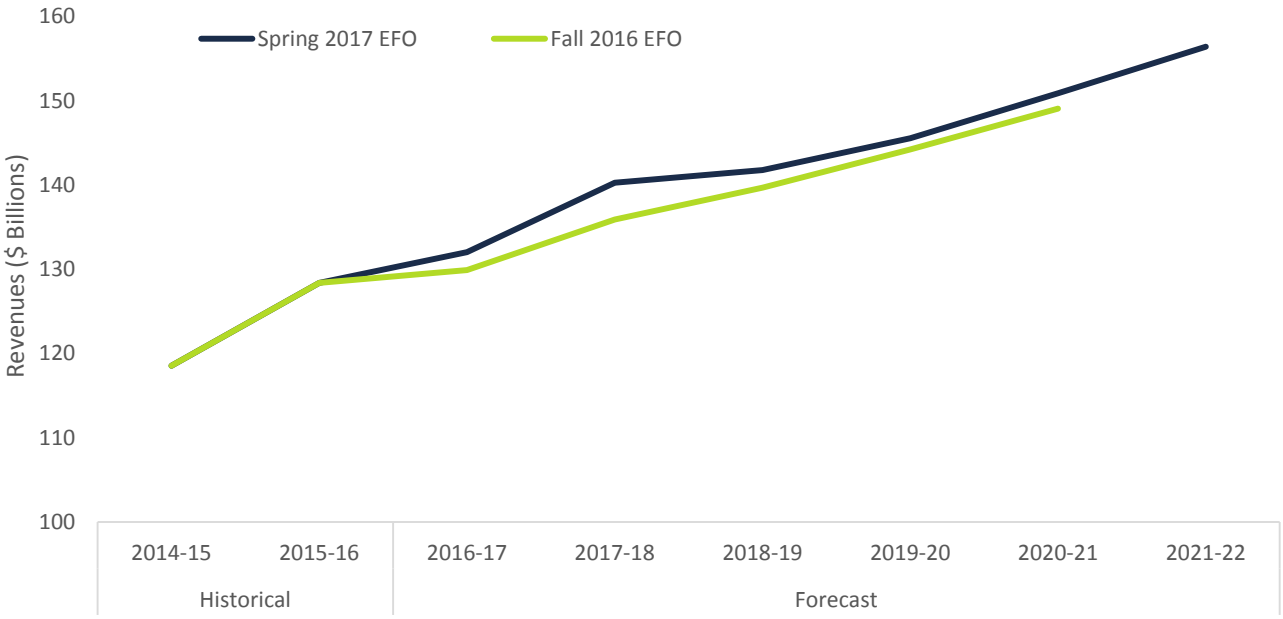
Ontario's Budget Balance*

* Budget balance excluding reserve.

Source: 2015-16 Public Accounts, 2017 Budget and FAO

[1] The Auditor General would be expected to provide a qualified opinion on Ontario's 2016-17 Public Accounts if the government continues to report the net pension assets of jointly sponsored pension plans in its financial statements.

On the government's accounting basis, the FAO projects that a balanced budget is within the government's reach in 2017-18. However, the budget deficit is expected to increase after 2017-18, due to moderate revenue growth, the absence of one-time non-tax revenues, and higher program expenses. Staying in balance after 2017-18 will likely require additional fiscal policy measures.



Under the Auditor General's accounting presentation, the FAO is projecting significant budget deficits over the entire outlook. On this basis, it is unlikely that the government will balance the budget in 2017-18 without significant additional fiscal policy measures (that is, higher revenues or lower expense). Beyond 2017-18, significant fiscal adjustments will likely be required to maintain budget balance through the outlook.

Revenue Outlook

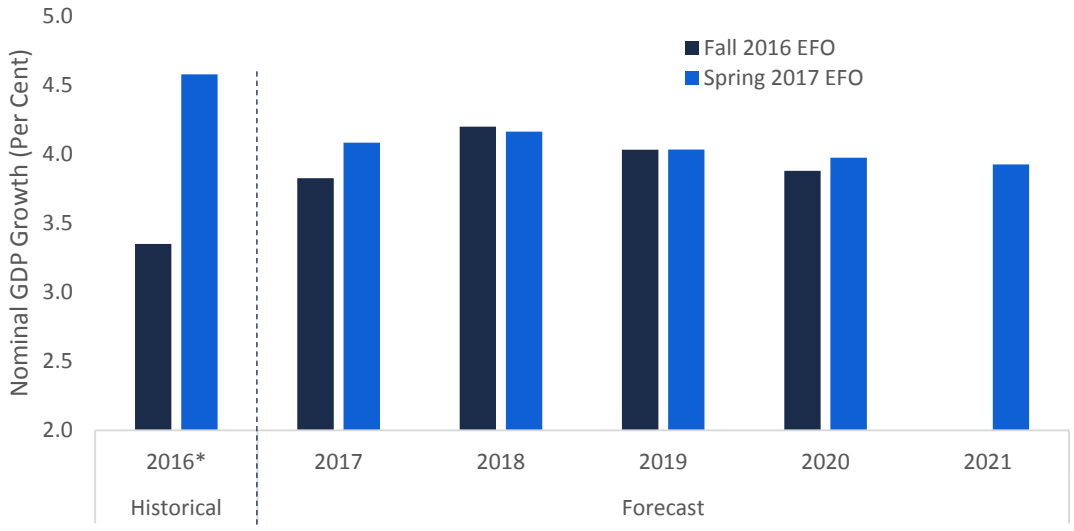
The FAO is projecting average annual revenue growth of 3.3 per cent per year from 2016-17 to 2021-22, in-line with the forecast from the FAO's fall outlook.

However, in the near-term, revenue growth is stronger than expected due to robust economic performance in 2016 and 2017, and a boost from one-time revenues in 2017-18. Beyond 2017-18, growth in tax revenues moderates and the benefit of one-time non-tax revenues ends.

Revenues Stronger Than Expected in Near Term

Source: FAO and Public Accounts

FAO Revenue Assumptions and Forecast



Revenue Source	Assumption	Forecast
Taxation Revenue	Grows with key economic drivers including labour income, corporate profits and household consumption.	Averages 3.9 per cent growth per year from 2016-17 to 2021-22
Federal Transfers	Based on legislated growth rates and economic performance	Federal transfers are expected to grow by 1.9 per cent per year from 2016-17 to 2021-22
Government Business Enterprises	Based on government projections	Income from GBEs are projected to rise moderately from $5.3 billion in 2016-17 to $6.5 billion in 2021-22
Other Revenue	Based on government projections, includes asset sales, and cap and trade	These revenues are projected to increase from $8.5 billion in 2016-17 to $11.0 billion in 2017-18, declining to $8.5 billion by 2021-22

Stronger Economic Growth Expected to Boost Tax Revenue

Consistent with the FAO's economic forecast, the FAO is currently projecting tax revenues to rise at an average of 3.9 per cent from 2016-17 to 2021-22, much stronger than the 3.0 per cent forecast in the FAO's fall outlook.

Since the FAO's fall report, nominal GDP – the broadest measure of the tax base – was revised significantly higher in 2016, improving the forecast for 2017.[2] However, beyond 2017, the outlook for nominal GDP growth is relatively unchanged from the fall forecast.

Nominal GDP up Significantly in the Near-Term Since the Fall

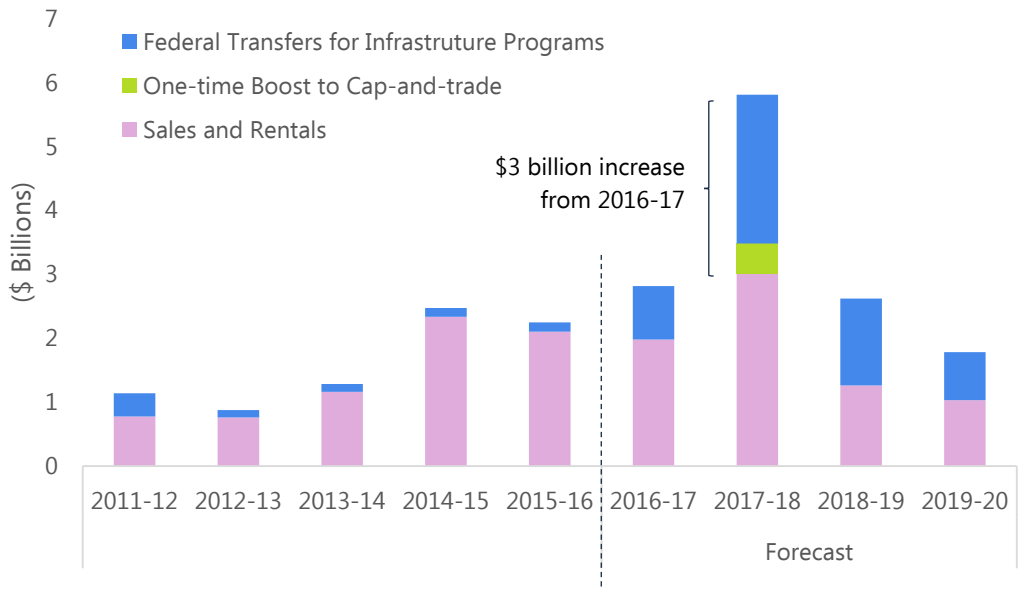
* 2016 value for Fall 2016 EFO was the FAO's forecast at the time of the report's release.
Source: Ontario Economic Accounts and FAO

[2] See economic section, and the footnote on page 11.

Improving economic prospects in 2017 are expected to lift the Province's tax revenue by approximately $2.3 billion in 2016-17 and $4.1 billion in 2017-18, compared to the FAO's fall estimates.

- Personal income tax revenue is forecast to grow stronger than expected in the fall due to the improved forecast for labour income.[3]
- Corporations tax revenue is projected to benefit from the stronger outlook for corporate profits.
- Sales tax and land transfer tax revenues are expected to improve in 2016-17 and 2017-18 due to the on-going strength in Ontario's housing market.

Equalization Entitlement Declines



Given Ontario's recent economic strength relative to the rest of Canada, the Province's Equalization entitlement declined $0.8 billion to $1.4 billion in 2017-18, and is projected to drop further to $0.6 billion in 2018-19. Beyond 2018-19, the FAO is projecting that Ontario will no longer be entitled to Equalization payments — a reflection of the continued relative strength of the Ontario economy.

2017-18 Revenues to Benefit from One-time Increases

Based on the 2017 Budget and incorporated into the FAO's projections, Ontario revenues will be boosted by $3.0 billion in one-time increases in 2017-18, including:

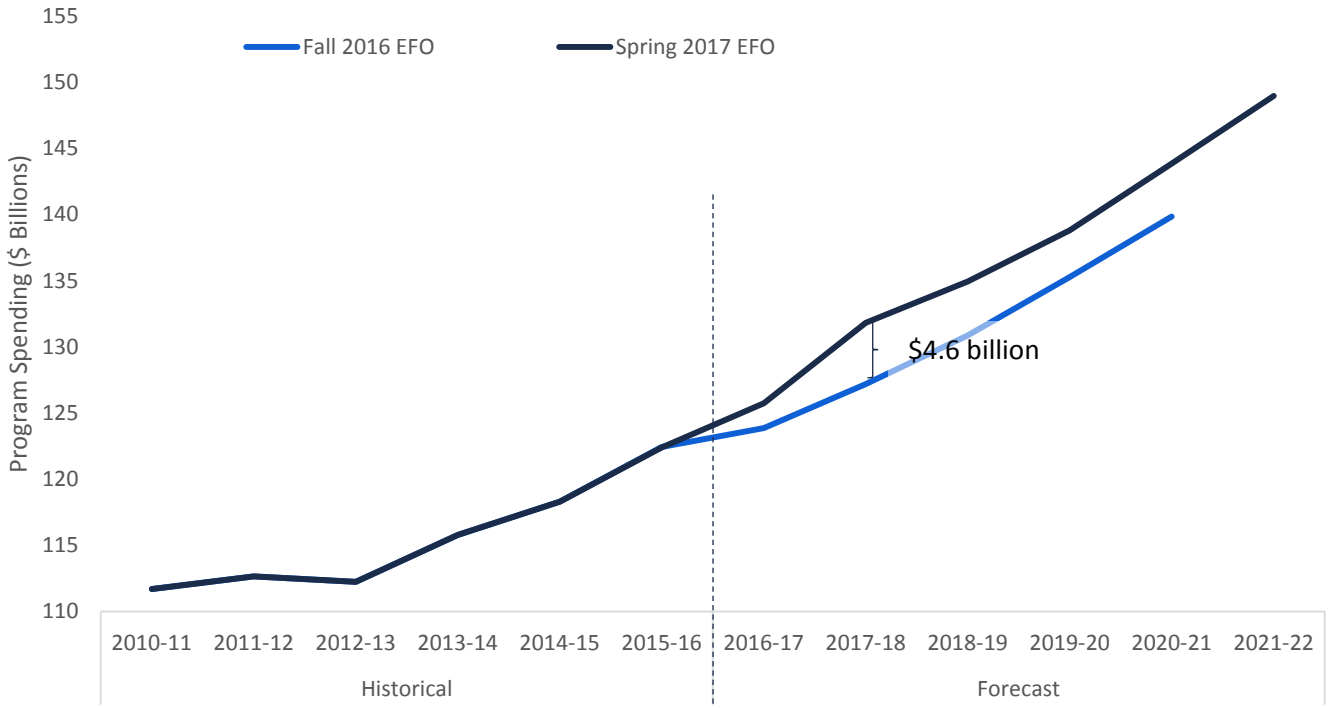
- $1.5 billion in higher revenue from federal transfers for infrastructure;
- $1.0 billion increase in sales and rentals revenue, suggesting significant additional asset sales; and
- $0.5 billion in additional cap and trade proceeds from March 2017, which will be recognized in 2016-17.[4]

2017-18 Non-tax Revenue Boost

Source: Ontario Budgets, Ministry of Finance and FAO

[3] However, near-term revenue growth will be somewhat dampened as some high-income earners have shifted earnings into the 2015 tax year to avoid the new higher 33 per cent tax rate introduced by the federal government in 2016 (http://www.fin.gc.ca/afr-rfa/2016/report-rapport-eng.asp#_Toc463249478). The FAO continues to adopt the federal government's estimate of this income shifting, and has adjusted the personal income tax forecast accordingly.

[4] The government indicated that the cap and trade revenues will be recognized in 2017-18 because the allowances were certified and delivered on April 2, 2017.



Expense Outlook

Program Expense to Increase Significantly over the Outlook

The FAO projects program spending growth of 3.3 per cent per year over the 2016-17 to 2021-22 period.

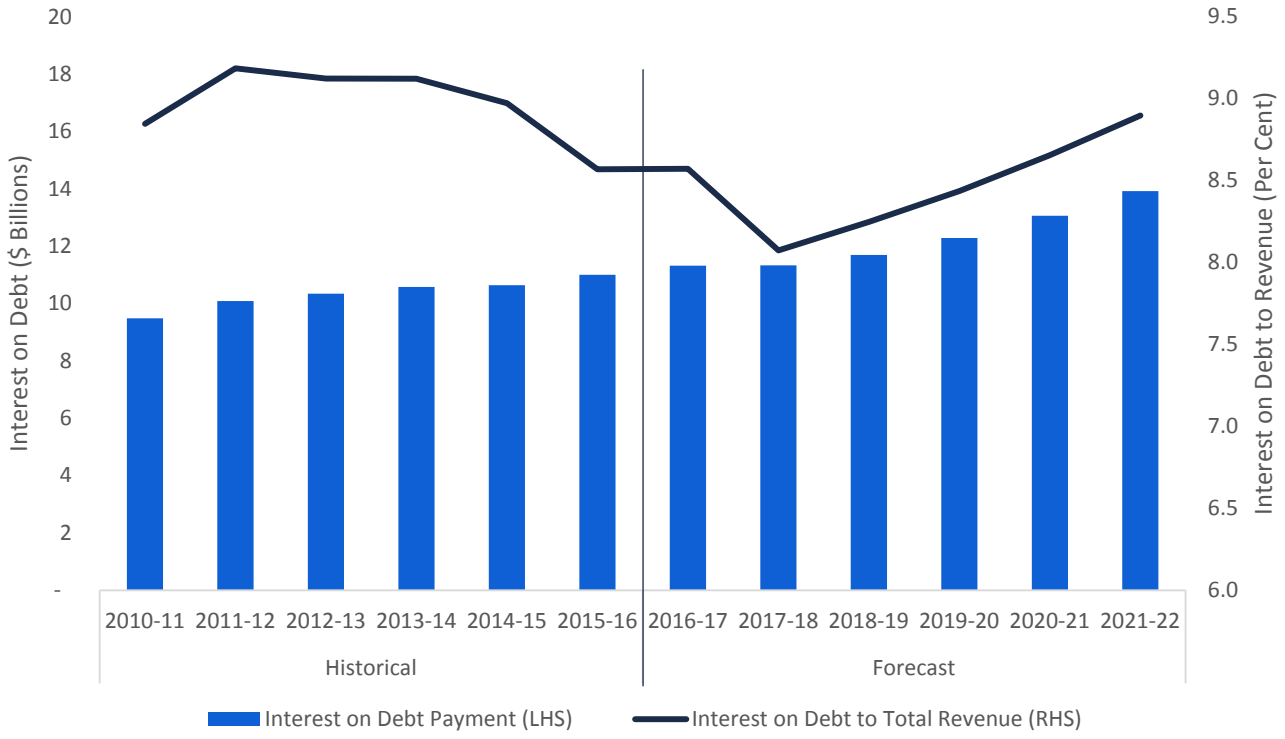
Over the 2016-17 to 2019-20 period, the FAO adopts the government's 2017 Budget projections for program spending[5], adjusted to reflect the Auditor General's recommended accounting treatment for jointly sponsored pension plans.[6] The expense outlook includes significant new spending across all sectors, including a new children and youth Pharmacare program, higher operating funding for hospitals, 24,000 new child care spaces[7], and the government's new 'Fair Hydro Plan'. As a result, spending is now forecast to be significantly higher by 2017-18 than assumed in the FAO's fall outlook.

Program Expense Higher than Projected in the Fall

Note: Program spending based on AG recommended presentation.
Source: Ontario Public Accounts and FAO

With these new expenses, program spending is expected to grow 3.3 per cent per year on average over the next five years. This growth rate is in-line with underlying growth in cost - and demographic-related pressures of 3.5 per cent on average.

Beyond 2019-20, the FAO projects program spending to increase by 3.6 per cent annually, consistent with underlying factors including population growth, aging, and price inflation.



[5] Given the government's discretion over spending, the FAO adopts the government's announced spending plans from fiscal documents and incorporates policy announcements as appropriate.
[6] The adjustment reflects the inclusion of a valuation allowance to offset the value of net pension assets in jointly sponsored pension plans. This adjustment increases 'other program' expense by $2.2 billion in 2016-17, rising to $2.9 billion by 2020-21.
[7] Ministry of Finance officials indicated that the 24,000 in new child care spaces announced in the 2017 Budget is part of the government's September 2017 Throne Speech commitment to create 100,000 spaces. The remaining funding has yet to be included in the fiscal plan.

Interest on Debt

The FAO projects interest on debt (IOD) payments will increase at an average annual rate of 4.0 per cent from $11.0 billion in 2015-16 to $13.9 billion by 2021-22, reflecting higher debt and rising interest rates over the outlook. Interest on debt has become the Province's third largest spending category and will significantly outpace the growth in program expense over the outlook.

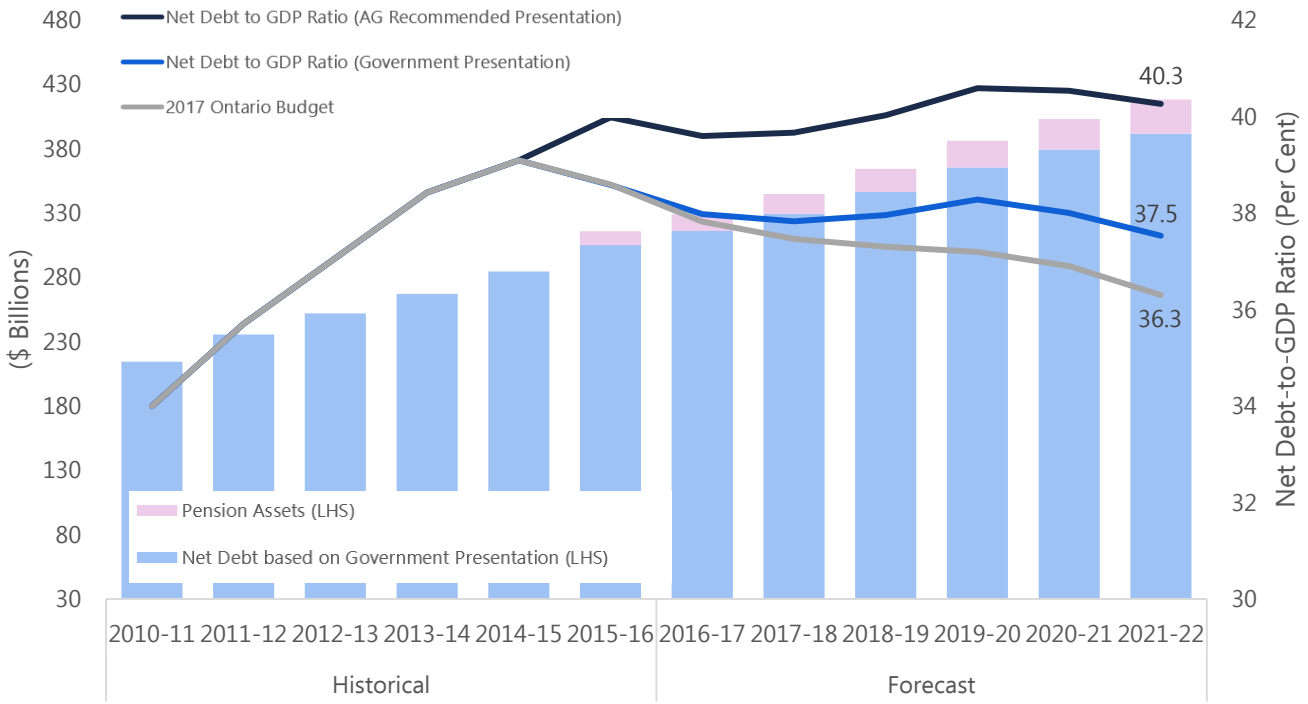
As a share of revenues, IOD is projected to increase from 8.1 per cent in 2017-18 to 8.9 per cent by 2021-22, as the rise in interest payments outpaces growth in revenues. Over the past five years, IOD as a share of revenues declined steadily, benefitting from declining interest rates. With interest rates projected to increase significantly over the next five years, the ratio is expected to rise sharply.

Interest on Debt to Rise Sharply as a Share of Revenues

Source: Ontario Public Accounts and FAO

Ontario Debt Outlook

Ontario Net Debt-to-GDP To Remain Elevated



Ontario's total borrowing requirements are expected to remain high over the outlook. To finance the cost of projected capital spending, finance on-going deficits (as projected by the FAO) and refinance maturing debt issues, provincial borrowing is expected to average $37 billion per year over the next five years.

As a result, the FAO projects Ontario's net debt to increase by $87 billion over the next five years to more than $392 billion by 2021-22 based on the AG's recommended accounting presentation. By comparison, using the accounting treatment adopted by the government in the 2017 Budget, the FAO projects Ontario's net debt will rise by $71 billion to $365 billion by 2021-22.

Based on the AG's recommended accounting presentation, the FAO expects Ontario's net debt-to-GDP ratio will edge higher over the outlook, rising to 40.3 per cent by 2021-22, reflecting the projected increase in net debt and the FAO's forecast for nominal GDP growth. In contrast, based on the accounting treatment adopted by the government in the 2017 Budget, net debt-to-GDP is projected to fall slightly from 38.6 per cent in 2015-16 to 37.5 per cent by 2021-22.

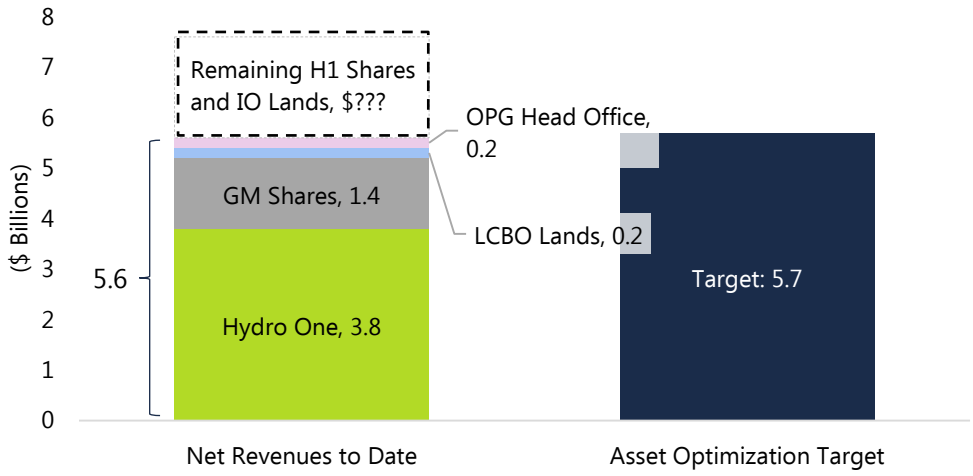
In the 2017 Budget, the Province set an interim net debt-to-GDP target of 35 per cent by 2023-24 and committed to achieving 27 per cent by 2029-30. The FAO's net debt-to-GDP projections under both accounting presentations, suggest that additional fiscal measures would be required for the government to achieve its interim target of 35 per cent by 2023-24.

Ontario's Net Debt to GDP Ratio

Source: Ontario Economic Accounts, 2017 Ontario Budget, and FAO

Risks to the Fiscal Plan and Policy Options

There are material risks that could impact Ontario's fiscal position.



- A sharp correction in the housing market could present a significant risk for both the broader economy and for the Province's fiscal plan. As discussed in the FAO housing commentary[8], a decline in house prices and housing market activity would directly reduce Land Transfer Tax and HST revenues. In addition, the broader economic impacts would impact personal and corporate income tax revenues.
- In the 2017 Budget, the government has significantly reduced the prudence built into its program spending projection compared to the previous budget, leaving less fiscal flexibility for the government to respond to unexpected events.[9] In addition, interest on debt payments as a share of both program spending and revenue are expected to increase significantly, exposing the government to increased fiscal risk should interest rates rise faster than expected.

On the other hand, the government has increased spending growth to a rate in line with underlying spending pressures, which diminishes the expense risk identified in earlier FAO reports.

Additionally, the government has a broad range of policy options that could improve its fiscal position, including the sale of additional public assets beyond announced targets. To date, the government has generated $5.6 billion in revenues from asset sales, close to its target of $5.7 billion over 10 years.

Given that the government has indicated that it still intends to sell an additional 30 per cent of Hydro One, as well as Infrastructure Ontario real estate holdings, it may significantly overachieve its asset sales target.

Asset Optimization Revenues and Target

Source: FAO and Ontario Budgets

[8] Financial Accountability Officer of Ontario, The Impact of a Housing Market Correction on Ontario's Fiscal Position, 2017

[9] In the 2017 Budget, contingency funds total $0.6 billion for the coming fiscal year, half the size built into the 2016 Budget fiscal plan. Similarly, the government's target for year-end savings has increased to $1.2 billion for the coming year, compared to $0.8 billion in Budget 2016.

The Accounting Treatment of Jointly Sponsored Pension Plans

Background

Ontario's 2015-16 Public Accounts noted a disagreement between the Office of the Auditor General and the Province on the appropriate accounting treatment for net pension assets of jointly sponsored pension plans. Specifically, the Province is a joint sponsor of two pension plans, the Ontario Teachers' Pension Plan (OTPP) and the Ontario Public Service Employees Union Pension Plan (OPSEUPP).

The government's position is that these pension assets have been appropriately and consistently reflected on the Province's financial statements since 2001. The Office of the Auditor General, based on a review of these pension assets, determined that a change in the accounting treatment was required. The Auditor General concluded that under current Canadian public sector accounting standards, the government could not unilaterally recognize a pension asset on its financial statements without evidence - in the form of a written agreement - permitting it to realize the asset through reduced contributions.[10]

In response, the Province appointed its own advisory panel to review and provide a recommended interpretation of public sector accounting standards with respect to the assets of jointly sponsored pension plans. The panel's report[11], released in February 2017, concluded that the Province's share of net assets in jointly sponsored pension plans could be fully recognized in the Province's financial statements — contrary to the opinion of the Office of the Auditor General.

In the 2017 Budget, the government adopted the advisory panel's interpretation of public sector accounting standards and recognized the net pension assets of the jointly sponsored pension plans. The 2017 Budget also indicated that the Province's 2016–17 Public Accounts will report the net pension assets for the two jointly sponsored pension plans.

The Central Issue

The government and the Auditor General have put forward different interpretations of the application of public sector accounting standards for jointly sponsored pension plans.[12]

The different interpretations centre on the question of the control of assets in jointly sponsored pension plans. In particular, the issue is focused on whether there needs to be an explicit written agreement between the co-sponsors (the government and the unions representing the employees) on how the sponsors plan to use the pension assets, for example by lowering contributions or increasing benefits to pensioners.

As indicated by the Auditor General, the issue can be resolved if the government presents an agreement with the Ontario Teacher's Federation (OTF) allowing the government to access the OTPP pension assets through reduced contributions.[13] The extent and duration of the reduced contributions would determine the size of the pension asset that the government could recognize in its financial statements

The government, based on the advice of the advisory panel, maintains that the existing agreements governing the pension plans already recognize the sponsors' rights to access assets in the plans and also provide the mechanism to potentially realize a benefit through lower future contribution rates.

[10] The government's 2016 Budget reported a negative expense for the OTPP which led, in part, to the Auditor General conducting an in-depth review of the related pension assets.

[11] https://news.ontario.ca/tbs/en/2017/02/pension-asset-expert-advisory-panel-submits-report.html

[12] In 2015, PSAB created an Employment Benefits Task Force to review the existing accounting standard for post-employment benefits. The work of this task force will include reviewing the appropriate accounting treatment for shared-risk and multi-employer pension plans. However, the work of this task force is not expected to be completed in the near future.

[13] Of the government's two jointly sponsored pension plans, only the OTPP is currently in a net asset position.

In the absence of an agreement, and given the government's decision in the 2017 Budget to accept the advisory panel's recommended approach to accounting for jointly sponsored pension plan assets, the Auditor General would be expected to provide a qualified opinion[14] on Ontario's 2016-17 Public Accounts.

Roles and Responsibilities of the Province and the Auditor General

The Province (through the Treasury Board Secretariat) is responsible for the preparation of Ontario's Public Accounts in accordance with legislation, and based on the standards set out by the Public Sector Accounting Board (PSAB).[15] The PSAB accounting standards serve the public interest by providing an independent, high-quality accounting framework for public sector entities.

The Auditor General reviews the Province's annual Public Accounts and provides an audit opinion to the Legislature on whether the Consolidated Financial Statements for the Province of Ontario present fairly, in all material respects, the Province's financial position, in accordance with the PSAB accounting standards.

The FAO's Presentation of Ontario's Fiscal Outlook

The Financial Accountability Officer supports the Legislative Assembly by providing independent economic and financial analysis intended to improve the transparency of the government's fiscal plan. The Officer also looks to the Auditor General as the provincial authority on the appropriate interpretation and application of accounting standards for the Province.

The FAO has presented two fiscal projections, including and excluding the impact of the net pension assets of jointly sponsored pension plans to help members of the Legislative Assembly better understand the implications of these different interpretations of accounting standards on the Province's fiscal position.

- The projection based on the Auditor General's recommended accounting treatment assumes a valuation allowance that offsets the net pension assets.
- The projection based on the government's fiscal presentation in the 2017 Budget recognizes the net pension assets over the budget outlook.
    - In the absence of an agreement between the co-sponsors, this presentation of Ontario's fiscal position would be expected to receive a qualified opinion from the Auditor General when published in the Province's future Public Accounts.

Based on the Auditor General's recommended accounting treatment for the net assets of jointly sponsored pension plans, the FAO is projecting budget deficits of $2.9 billion in 2017-18, rising to $6.5 billion by 2021-22. Alternatively, based on the pension accounting treatment presented by the Province in the 2017 Budget, the FAO's projection for the budget deficit decreases to $0.5 billion in 2017-18 and $3.6 billion in 2021-22.

[14] An auditor may provide a qualified opinion when financial statements do not conform in a material way to the applicable accounting standards.

2. Appendix

Developments since the FAO's Fall 2016 Economic and Fiscal Outlook

The FAO's current projection of the Ontario budget balance has generally deteriorated relative to the FAO's fall 2016 projection.

- Stronger than expected economic performance is expected to boost taxation revenues over the forecast, partially offset by lower Equalization revenue.
- Based on new government spending plans, program expense has increased significantly.

Developments since 2016 Fall EFO (AG Recommended Presentation)

	2016-17	2017-18	2018-19	2019-20	2020-21
FAO's Fall 2016 Budget Balance Forecast	-5.2	-2.6	-2.8	-3.3	-3.7
Developments Since Fall 2016					
Revenue					
Stronger Economic Outlook	2.3	4.1	3.9	4.4	4.7
Lower Federal Transfers[1]	-0.3	0.2	-1.3	-2.4	-2.2
Other Revenue Changes	0.1	0.1	-0.5	-0.6	-0.6
Total	2.1	4.4	2.1	1.3	1.8
Expense					
Children and Youth Pharmacare, and Fair Hydro Plan[3]	0.5	1.3	1.3	1.3	1.3
Revised Pension Asset[4]	0.7	0.8	1.1	1.4	1.4
Other Expense Increases	0.7	2.5	1.7	0.9	1.4
Total	2.0	4.6	4.1	3.6	4.1
Total Developments	0.2	-0.3	-2.1	-2.3	-2.3
FAO's 2017 Spring Budget Balance Forecast	-5.0	-2.9	-4.9	-5.5	-6.0

Notes:

1. Change in federal transfers forecast mainly due the reduction in Ontario's Equalization payment.

2. Other revenue changes include the $0.5 billion re-profiling of cap-and-trade proceeds from 2016-17 to 2017-18, and an increase in sales and rentals for 2017-18.

3. In the 2016 Fall EFO, the FAO included $1 billion in expenses from the HST rebate on electricity bills beginning 2017-18, which is now part of the Fair Hydro Plan. As a result, the FAO estimates that the incremental impact of the Fair Hydro Plan is $0.8 billion, compared to the Fall.

4. In the 2016 Fall EFO, the FAO assumed $1.5 billion in adjustments for net pension assets of jointly sponsored pension plans. The government has revised its estimate of the impact to $2.2 billion in 2017-18, increasing to $2.9 billion by 2020-21.

Hello,

Thanks again for our meeting on Tuesday. We appreciate the information you have provided as well as the responses to our questions at the meeting.

On Monday morning (as early as possible) we plan to provide you with draft copies of the Economic Outlook and Fiscal Outlook chapters (including Forecast Tables) from the FAO's upcoming EFO report.

We would hope you would be able to provide us with any comments or concerns on these chapters by Tuesday (May 9), end of day.

As in the past, the FAO will provide a final copy of the report 48 hours prior to release to both Ministers. I would email you a copy at the same time.

Thanks,

David West

Thanks David,

We're working on pulling together the various information pieces and people for a meeting Tuesday between 1pm and 2pm, so will be in touch to confirm.

As in past approaches, we won't be able to have everything for you on Tuesday but will be able to provide a downpayment for sure.

Have a great weekend
Tim

Subject: Follow-Up on the 2017 Budget

Good Morning!

Congratulations on delivering yesterday's big, black budget!

I wanted to follow-up on the FAO's requests for some additional information.

First, as we have discussed, we have three requests for specific data/tables:

1. We would like to obtain the detailed revenue and expense tables (Tables 6.14 and 6.15) extended to 2019-20.

- Are these detailed tables available to 2020-21? If so, then please include (:))

2. As staff have been discussing, we would like to obtain more detailed information on the one-time adjustments to taxation revenues beginning in 2015-16 and extending over the forecast. This is basically additional information to that provided in tables 6.7, 6.8 and 6.9.

3. As detailed in the letter and background documents sent to Deputies Thompson and Angus on April 3, we are requesting pension expense and employer contribution details for the OTPP and OPSEUPP.

We would also appreciate a meeting early next week (preferably Tuesday afternoon) to allow you to respond to a number of questions that we have with regard to the 2017 Budget.

We'll provide a list of specific questions later this afternoon, but these questions will cover a number of areas, including:

- Clarification on where the Fair Hydro Plan appears in the expenses

- Additional details/clarification on new health spending, including the new pharmacare plan

- Clarification on future assumptions for asset sales and any details behind the 'Sales and Rentals' line in the detailed Revenue table.

- Clarification on the assumptions behind new federal funding announced in the 2017 federal budget (e.g. affordable housing, child care, home care)

- Some background on the decision to reduce the estimate of 'Carbon Allowance Proceeds' and assumptions on associated expense

- Additional details/clarification on new infrastructure spending

- Assumptions behind the plan to reduce net debt-to-GDP to 35% and eventually to 27%.

We'll provide a list later this afternoon that expands somewhat on these question topics.

Happy to discuss any of these requests.

Thanks again for your support,
David

Hi Everyone - this is a heads up that we expect to receive drafts of the economic and fiscal sections of the FAO's report Monday. I will send it around to folks soon after and the game plan for consolidating comments to meet their Tuesday deadline.

Thanks and have a great weekend everyone!

Hello,

Thanks again for our meeting on Tuesday. We appreciate the information you have provided as well as the responses to our questions at the meeting.

On Monday morning (as early as possible) we plan to provide you with draft copies of the Economic Outlook and Fiscal Outlook chapters (including Forecast Tables) from the FAO's upcoming EFO report.

We would hope you would be able to provide us with any comments or concerns on these chapters by Tuesday (May 9), end of day.

As in the past, the FAO will provide a final copy of the report 48 hours prior to release to both Ministers. I would email you a copy at the same time.

Thanks,

David West

Subject: RE: FAO's Upcoming EFO Report

David (and other FAO colleagues);

Please find attached our consolidated feedback to the Economic Outlook and Fiscal Outlook draft reports. We have focussed on the factual components of this, and have tried to keep an eye on the cabinet confidentiality issue as well. With that in mind, here are a few high-level points to help guide your review of our comments:

-- As in past reports, it is really important for us that you clearly distinguish what is an FAO projection vs. what is a Budget or government projection. This is applied somewhat inconsistently in the draft report. As such, we've provided some advice on where we think that distinction is important to have clearly articulated.

-- Since the Budget forecast horizon only is provided out to 19-20, we think it is important that you make it more clear that you have provided two additional years beyond what is provided for in the Budget documents.

-- With respect to Cabinet Confidentiality, we think that, overall it has been well-respected -- with two exceptions.

1. In a footnote about the child care spaces, you note that "ministry of finance officials indicated that its not fully funded in the fiscal plan" -- a point that is protected under Cabinet Confidence and cannot be disclosed as such. We've provided the deletion in the comment and some alternative wording.

2. The pension adjustment numbers (ie, the impact of the AG's pension accounting treatment) is not something used for the purposes of building the fiscal plan in the Budget -- and as such, cannot be considered a government projection (even though the government did disclose the potential impact of the pension adjustment in the 2016 FES, it did not do so as part of the 2017 Budget). As such, the underlying multi-year pension numbers provided to you by OPCD should be considered advice to Cabinet and protected. We think that perhaps a further conversation is required on this to make sure we are respecting Cabinet Confidentiality -- but in the interest of giving you feedback today, we thought it was important to provide a potential alternative for consideration. If you consider making it clear that those projections of the pension adjustment are FAO projections -- and not a government projection -- then perhaps we may be able to avoid a breach of Cabinet Confidentiality. We understand from OPCD that they did provide you with the underlying data, and instructions on how to calculate -- but the pension adjustment itself, as presented in the tables, is an FAO estimate of the pension accounting impact and not the government's. As such, you should clearly label it as such and be held accountable for explaining and owning the calculation as well, if asked. If you feel these need additional conversation with us, please let us know....happy to have a follow-up discussion. Hope that makes sense.

Thanks to everyone across MOF/TBS world who worked hard and collaboratively to make sure we could get you something by eod today. We appreciate the opportunity to review and provide feedback. We are happy to have more conversations in the lead-up to the provision of the report to Ministers. If you could also let us know when you expect the release date to be, that would help us plan as well.

Thanks again

Subject: RE: FAO's Upcoming EFO Report

Good Morning,

Please find attached drafts of the Economic Outlook and Fiscal Outlook chapters from the FAO's upcoming 'Economic and Fiscal Outlook' report.
The chapters are password protected using the same password as in the past.

The FAO's fiscal forecast incorporates the tax revenue adjustments that we received on Friday afternoon -- and which brings our short-term forecast much closer the Budget 2017 forecast.

Unfortunately, we are on a very tight schedule to enable us to release this report at the end of the May.

So, we are asking for your comments/concerns including any potential cabinet confidentiality issues by end of day tomorrow (Tuesday, May 9)

Thanks again for your support and assistance.

Subject: Follow-Up on the 2017 Budget

Good Morning!

Congratulations on delivering yesterday's big, black budget!

I wanted to follow-up on the FAO's requests for some additional information.

First, as we have discussed, we have three requests for specific data/tables:

1. We would like to obtain the detailed revenue and expense tables (Tables 6.14 and 6.15) extended to 2019-20.

- Are these detailed tables available to 2020-21? If so, then please include (:))

2. As staff have been discussing, we would like to obtain more detailed information on the one-time adjustments to taxation revenues beginning in 2015-16 and extending over the forecast. This is basically additional information to that provided in tables 6.7, 6.8 and 6.9.

3. As detailed in the letter and background documents sent to Deputies Thompson and Angus on April 3, we are requesting pension expense and employer contribution details for the OTPP and OPSEUPP.

We would also appreciate a meeting early next week (preferably Tuesday afternoon) to allow you to respond to a number of questions that we have with regard to the 2017 Budget.

We'll provide a list of specific questions later this afternoon, but these questions will cover a number of areas, including:

- Clarification on where the Fair Hydro Plan appears in the expenses
- Additional details/clarification on new health spending, including the new pharmacare plan
- Clarification on future assumptions for asset sales and any details behind the 'Sales and Rentals' line in the detailed Revenue table.
- Clarification on the assumptions behind new federal funding announced in the 2017 federal budget (e.g. affordable housing, child care, home care)
- Some background on the decision to reduce the estimate of 'Carbon Allowance Proceeds' and assumptions on associated expense
- Additional details/clarification on new infrastructure spending
- Assumptions behind the plan to reduce net debt-to-GDP to 35% and eventually to 27%.

We'll provide a list later this afternoon that expands somewhat on these question topics.

Happy to discuss any of these requests.

Thanks again for your support,
David

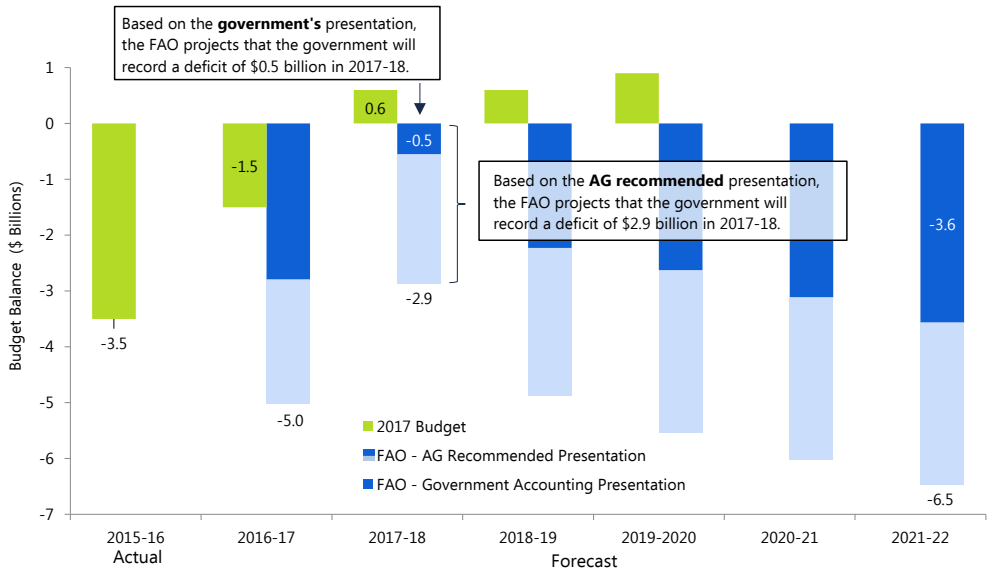
1. Fiscal Outlook

Overview



Continued Budget Deficits Projected

Based on the FAO's current economic forecast and updated fiscal information, the FAO is projecting continued Ontario budget deficits over the outlook. In the near term, the deficit improves due to strong tax revenue growth and a temporary boost to non-tax revenue. However, beginning in 2018-19, the deficit is expected to increase as a result of moderating revenue growth combined with higher expenses.

The government and the Auditor General (AG) disagree on the application of public sector accounting standards with respect to jointly-sponsored pension plans. Based on the FAO's projection of the impact of the Auditor General's recommended accounting presentation of pension assets, the FAO is projecting a budget deficit of $2.9 billion for 2017-18, rising to $6.5 billion by 2021-22. (Please refer to the discussion on page 8 for additional background and context on this issue.)

Based on the government's accounting presentation in the 2017 Budget, the FAO is projecting a budget deficit of $0.5 billion in 2017-18, growing to $3.6 billion by 2021-22.[1] By comparison, the government is projecting a budget surplus ~~(before the reserve)~~ of $0.6 billion in 2017-18, followed by continued small surpluses over the next two years (before the reserve).

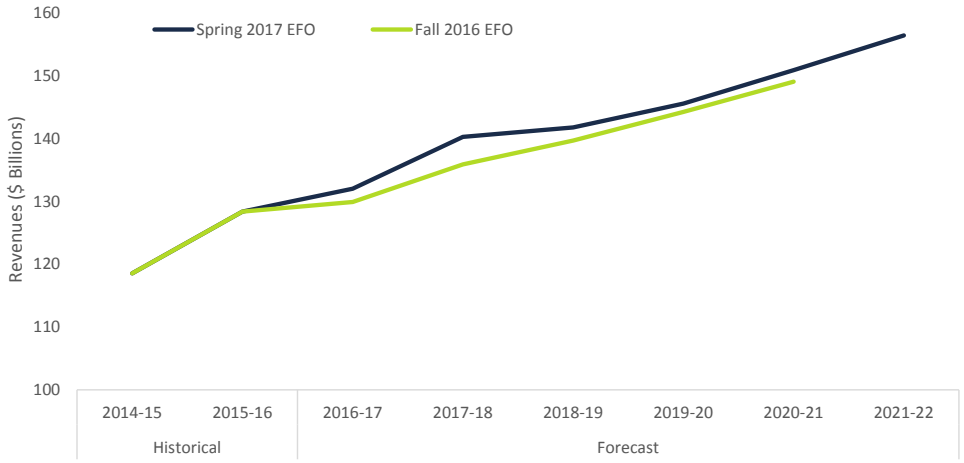
Ontario's Budget Balance*

* Budget balance ~~excluding~~ ~~before~~ reserve. AG Recommended Presentation includes FAO projection of the ~~pension adjustment.~~AG's recommended presentation of pension assets.

[1] The Auditor General would be expected to provide a qualified opinion on Ontario's 2016-17 Public Accounts if the government continues to report the net pension assets of jointly sponsored pension plans in its financial statements.

Source: 2015-16 Public Accounts, 2017 Budget and FAO

On the government's accounting basis, the FAO projects that a balanced budget is within the government's reach in 2017-18. However, the budget deficit is expected to increase after 2017-18, due to moderate revenue growth, the absence of one-time non-tax revenues, and higher program expenses. Staying in balance after 2017-18 will likely require additional fiscal policy measures.



Under the Auditor General's accounting presentation, the FAO is projecting significant budget deficits over the entire outlook. On this basis, it is unlikely that the government will balance the budget in 2017-18 without significant additional fiscal policy measures (that is, higher revenues or lower expense). Beyond 2017-18, significant fiscal adjustments will likely be required to maintain budget balance through the outlook.

Revenue Outlook

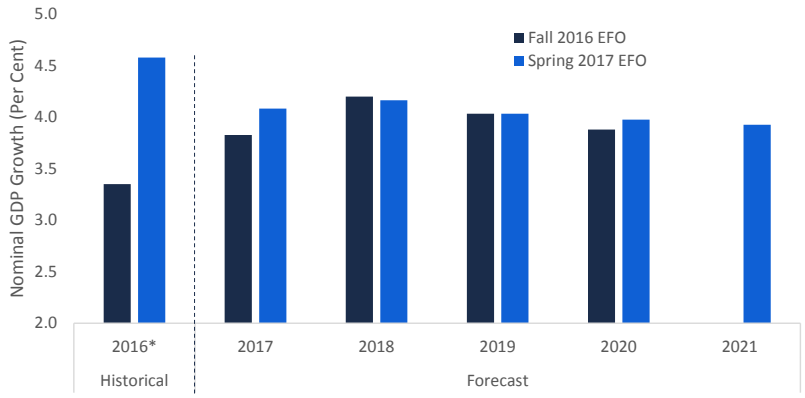
The FAO is projecting average annual revenue growth of 3.3 per cent per year from 2016-17 to 2021-22, in-line with the forecast from the FAO's fall outlook.

However, in the near-term, revenue growth is stronger than expected due to robust economic performance in 2016 and 2017, and a boost from one-time revenues in 2017-18. Beyond 2017-18, growth in tax revenues moderates and the benefit of one-time non-tax revenues ends.

Revenues Stronger Than Expected in Near Term

Source: FAO and Public Accounts

FAO Revenue Assumptions and Forecast



Revenue Source	Assumption	Forecast
Taxation Revenue	Grows with key economic drivers including labour income, corporate profits and household consumption.	Averages 3.9 per cent growth per year from 2016-17 to 2021-22
Federal Transfers	Based on legislated growth rates and economic performance	Federal transfers are expected to grow by 1.9 per cent per year from 2016-17 to 2021-22
Government Business Enterprises	Based on government projections	Income from GBEs are projected to rise moderately from $5.3 billion in 2016-17 to $6.5 billion in 2021-22
Other Revenue	Based on government projections, includes asset sales, and cap and trade	These revenues are projected to increase from $8.5 billion in 2016-17 to $11.0 billion in 2017-18, declining to $8.5 billion by 2021-22

Stronger Economic Growth Expected to Boost Tax Revenue

Consistent with the FAO's economic forecast, the FAO is currently projecting tax revenues to rise at an average of 3.9 per cent from 2016-17 to 2021-22, much stronger than the 3.0 per cent forecast in the FAO's fall outlook.

Since the FAO's fall report, nominal GDP – the broadest measure of the tax base – was revised significantly higher in 2016, improving the forecast for 2017.[2] However, beyond 2017, the outlook for nominal GDP growth is relatively unchanged from the fall forecast.

Nominal GDP up Significantly in the Near-Term Since the Fall

* 2016 value for Fall 2016 EFO was the FAO's forecast at the time of the report's release.
Source: Ontario Economic Accounts and FAO

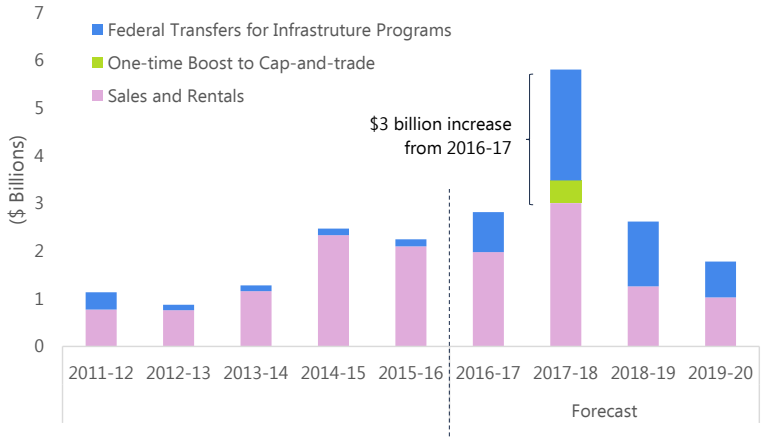
[2] See economic section, and the footnote on page 11.

Improving economic prospects in 2017 are expected to lift the Province's tax revenue by approximately $2.3 billion in 2016-17 and $4.1 billion in 2017-18, compared to the FAO's fall estimates.

- Personal income tax revenue is forecast to grow stronger than expected in the fall due to the improved forecast for labour income.[3]
- Corporations tax revenue is projected to benefit from the stronger outlook for corporate profits.
- Sales tax and land transfer tax revenues are expected to improve in 2016-17 and 2017-18 due to the on-going strength in Ontario's housing market.

Commented [GE(1]: [OEP comment]
The Public Accounts of Canada reference only provides the overall growth in federal PIT revenue, and that it reflects PIT planning by high-income individuals. It would be helpful if the report note also included the impact to Ontario PIT revenue specifically assumed by the FAO.

Equalization Entitlement Declines



Given Ontario's recent economic strength relative to the rest of Canada, the Province's Equalization entitlement declined $0.8 billion to $1.4 billion in 2017-18, and the FAO projected this to drop further to $0.6 billion in 2018-19. Beyond 2018-19, the FAO is projecting that Ontario will no longer be entitled to Equalization payments — a reflection of the continued relative strength of the Ontario economy.

2017-18 Revenues to Benefit from One-time Increases

Based on the 2017 Budget and incorporated into the FAO's projections, Ontario revenues will be boosted by $3.0 billion in one-time increases in 2017-18, including:

- $1.5 billion in higher revenue from federal transfers for infrastructure;
- $1.0 billion increase in sales and rentals revenue, suggesting significant additional asset sales; and
- $0.5 billion in additional cap and trade proceeds from March 2017, which will be recognized in 2016-172017-18.[4]

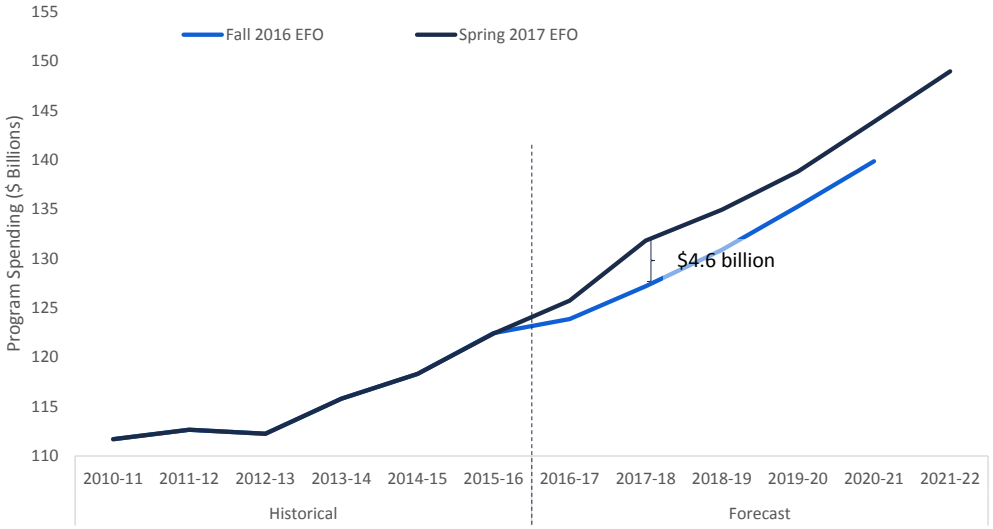
2017-18 Non-tax Revenue Boost

Source: Ontario Budgets, Ministry of Finance and FAO

[3] However, near-term revenue growth will be somewhat dampened as some high-income earners have shifted earnings into the 2015 tax year to avoid the new higher 33 per cent tax rate introduced by the federal government in 2016 (http://www.fin.gc.ca/afr-rfa/2016/report-rapport-eng.asp#_Toc463249478). The FAO continues to adopt the federal government's estimate of this income shifting, and has adjusted the personal income tax forecast accordingly.

[4] The government indicated that the cap and trade revenues will be recognized in 2017-18 because the allowances were certified and delivered on April 2, 2017.

Expense Outlook



Program Expense to Increase Significantly over the Outlook

The FAO projects program spending growth of 3.3 per cent per year over the 2016-17 to 2021-22 period.

Commented [ST(2]: Might be worth noting that this is two more years worth of forecast horizon than the Budget presents.

Over the 2016-17 to 2019-20 period, the FAO adopts the government's 2017 Budget projections for program spending[5], adjusted to reflect the Auditor General's recommended accounting treatment for jointly sponsored pension plans.[6] The expense outlook includes significant new spending across all sectors, including a new children and youth Pharmacare program, higher operating funding for hospitals, 24,000 new child care spaces[7], and the government's new 'Fair Hydro Plan'. As a result, spending is now forecast to be significantly higher by 2017-18 than assumed in the FAO's fall outlook.

Program Expense Higher than Projected in the Fall

Note: Program spending based on FAO's projection of AG recommended accounting treatment of net assets for jointly sponsored pension plans~~presentation~~.

Source: Ontario Public Accounts and FAO

With these new expenses, program spending is expected to grow 3.3 per cent per year on average over the next five years. This growth rate is in-line with underlying growth in cost - and demographic-related pressures of 3.5 per cent on average.

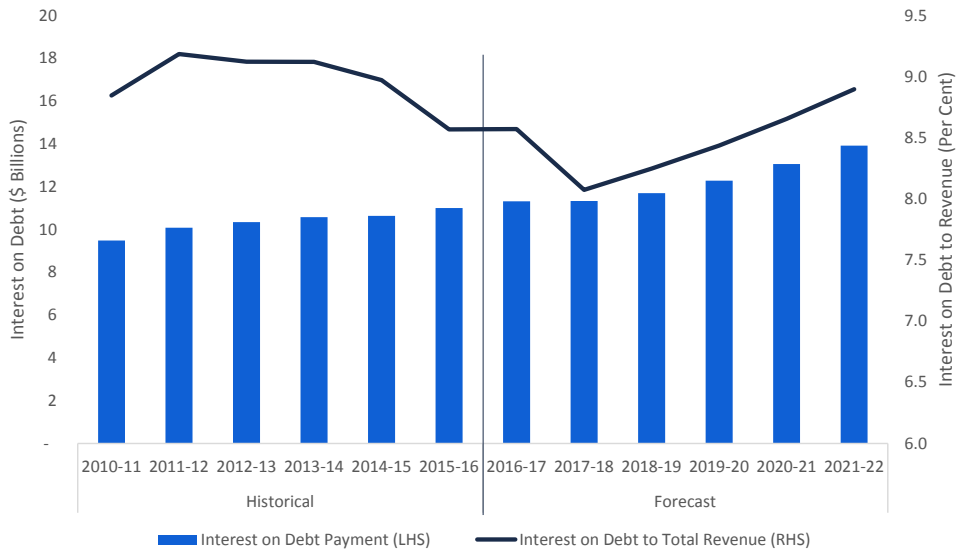
Beyond 2019-20, the FAO projects program spending to increase by 3.6 per cent annually, consistent with underlying factors including population growth, aging, and price inflation.

[5] Given the government's discretion over spending, the FAO adopts the government's announced spending plans from fiscal documents and incorporates policy announcements as appropriate.

[6] The adjustment reflects the inclusion of a valuation allowance to offset the value of net pension assets in jointly sponsored pension plans. This adjustment increases 'other program' expense by $2.2 billion in 2016-17, rising to $2.9 billion by 2020-21. based on the FAO's projection of the pension adjustment.

[7] The 2017 Budget announced 24,000 new child care spaces for 2017–18, as part of the government's September 2016 Throne Speech commitment to create 100,000 new child care spaces by 2022.~~Ministry of Finance officials indicated that the 24,000 in new child care spaces announced in the 2017 Budget is part of the government's September 2017 Throne Speech commitment to create 100,000 spaces. The remaining funding has yet to be included in the fiscal plan.~~ [Reference to inclusion in the fiscal plan (i.e., highlighted sentence) is Cabinet confidential and should be removed. It should not be disclosed publicly]

Interest on Debt



The FAO projects interest on debt (IOD) payments will increase at an average annual rate of 4.0 per cent from $11.0 billion in 2015-16 to $13.9 billion by 2021-22, reflecting higher debt and rising interest rates over the outlook. Interest on debt has become the Province's third largest spending category and will significantly outpace the growth in program expense over the outlook.

As a share of revenues, IOD is projected by the FAO to increase from 8.1 per cent in 2017-18 to 8.9 per cent by 2021-22, as the rise in interest payments outpaces growth in revenues. Over the past five years, IOD as a share of revenues declined steadily, benefitting from declining interest rates. With interest rates projected to increase significantly over the next five years, the ratio is expected to rise sharply.

Commented [GE(3]: [OB comment]
Referring to total expense for 17-18, as published in the 2017 Budget, IOD is the fifth largest spending category.

Commented [GE(4]: [OFA comment}
The basis of the FAO's IOD projections are not provided so we cannot provide any commentary.

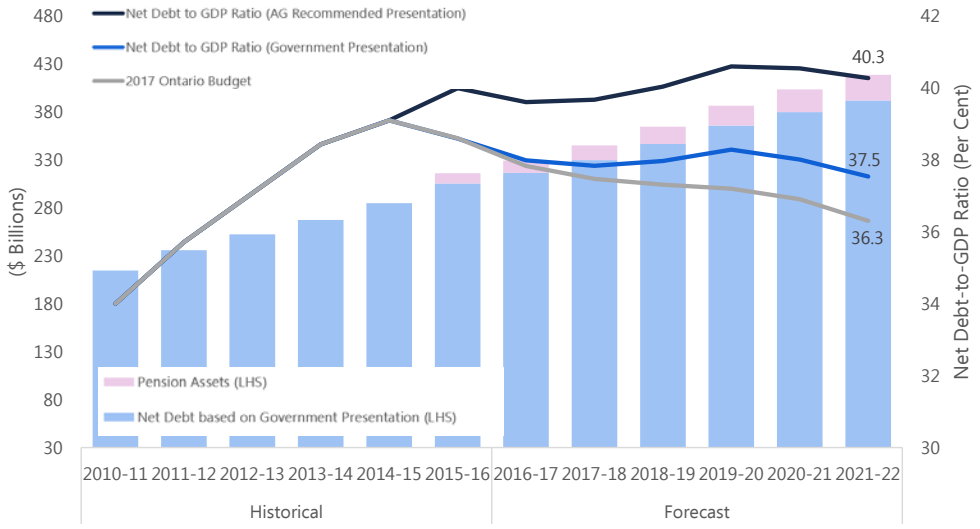
Interest on Debt to Rise Sharply as a Share of Revenues

Source: Ontario Public Accounts and FAO

Ontario Debt Outlook

Ontario Net Debt-to-GDP To Remain Elevated

Ontario's total borrowing requirements are expected to remain high over the outlook. To finance the cost of projected capital spending, finance on-going deficits (as projected by the FAO) and refinance maturing debt issues, provincial borrowing is expected to average $37 billion per year over the next five years.



As a result, the FAO projects Ontario's net debt to increase by $87 billion over the next five years to ~~more than~~ $392 billion by 2021-22 based on the AG's recommended accounting presentation. By comparison, using the accounting treatment adopted by the government in the 2017 Budget, the FAO projects Ontario's net debt will rise by $71 billion to $365 billion by 2021-22.

Commented [GE(5]: [OB comment]
Suggest double checking the number of years and the calculations. Based on Table 4a it is $76B over five years; based on Table 4b, $62B over five years.

Based on the FAO's projection of the impact of the AG's recommended accounting presentation, the FAO expects Ontario's net debt-to-GDP ratio will edge higher over the outlook, rising to 40.3 per cent by 2021-22, reflecting the projected increase in net debt and the FAO's forecast for nominal GDP growth. In contrast, based on the accounting treatment adopted by the government in the 2017 Budget, the FAO projects that net debt-to-GDP ~~is projected to~~will fall slightly from 38.6 per cent in 2015-16 to 37.5 per cent by 2021-22.

In the 2017 Budget, the Province set an interim net debt-to-GDP target of 35 per cent by 2023-24 and committed to achieving 27 per cent by 2029-30. The FAO's net debt-to-GDP projections under both accounting presentations, suggest that additional fiscal measures would be required for the government to achieve its interim target of 35 per cent by 2023-24.

Ontario's Net Debt to GDP Ratio

Source: Ontario Economic Accounts, 2017 Ontario Budget, and FAO

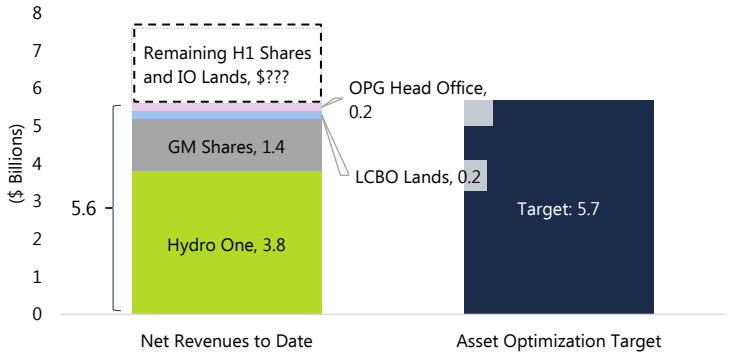
Commented [GE(6]: [OB comment]
As per Balanced Budget chart on page 1, Suggested changes to the chart labels as follows:

In the top legend it should read:
- •FAO projection – Net Debt to GDP Ratio (AG Recommended Presentation)
- •FAO projection – Net Debt to GDP Ratio (Government Presentation)
- •Net Debt to GDP Ratio as Published in the 2017 Ontario Budget.

In the bottom legend "Pension Assets (LHS) should be replaced with:
- •FAO projection: Net Debt Based on AG Recommended Presentation.

Risks to the Fiscal Plan and Policy Options

There are material risks that could impact Ontario's fiscal position.



- A sharp correction in the housing market could present a significant risk for both the broader economy and for the Province's fiscal plan. As discussed in the FAO housing commentary[8], a decline in house prices and housing market activity would directly reduce Land Transfer Tax and HST revenues. In addition, the broader economic impacts would impact personal and corporate income tax revenues.
- In the 2017 Budget, the government has significantly reduced the prudence built into its program spending projection compared to the previous budget, leaving less fiscal flexibility for the government to respond to unexpected events.[9] In addition, the FAO projects interest on debt payments as a share of both program spending and revenue ~~are expected~~ to increase significantly, exposing the government to increased fiscal risk should interest rates rise faster than expected.

On the other hand, the government has increased spending growth to a rate in line with underlying spending pressures, which diminishes the expense risk identified in earlier FAO reports.

Additionally, the government has a broad range of policy options that could improve its fiscal position, including the sale of ~~additional~~ non-core public assets beyond announced ~~targets~~initiatives. To date, the government has generated $5.6 billion in net revenues from asset sales, close to its target of $5.7 billion over 10 years.

Given that the government has indicated that it still intends to sell an additional 30 per cent of Hydro One, as well as ~~Infrastructure Ontario~~surplus real estate holdings, it may significantly overachieve its asset sales target.

Asset Optimization Revenues and Target

[8] Financial Accountability Officer of Ontario, The Impact of a Housing Market Correction on Ontario's Fiscal Position, 2017

[9] In the 2017 Budget, contingency funds total $0.6 billion for the plan year, half the size of what was built into the plan year for the 2016 Budget~~coming fiscal year, half the size built into the 2016 Budget fiscal plan~~. Similarly, the government's target for year-end savings has increased to $1.2 billion for the ~~coming~~ plan year, compared to $0.8 billion ~~in~~ for the plan year in the 2016 Budget ~~2016~~.

The Accounting Treatment of Jointly Sponsored Pension Plans

Background

Ontario's 2015-16 Public Accounts noted a disagreement between the Office of the Auditor General and the Province on the appropriate accounting treatment for net pension assets of jointly sponsored pension plans. Specifically, the Province is a joint sponsor of two pension plans, the Ontario Teachers' Pension Plan (OTPP) and the Ontario Public Service Employees Union Pension Plan (OPSEUPP).

The government's position is that these pension assets have been appropriately and consistently reflected on the Province's financial statements since 2001. The Office of the Auditor General, based on a review of these pension assets, determined that a change in the accounting treatment was required. The Auditor General concluded that under current Canadian public sector accounting standards, the government could not unilaterally recognize a pension asset on its financial statements without evidence - in the form of a written agreement - permitting it to realize the asset through reduced contributions.[10]

In response, the Province adopted regulated accounting for 2015/16 to reflect the results according to the Auditor General's interpretation of public sector accounting standards and subsequently appointed ~~its own~~an expert advisory panel to review and provide a recommended interpretation of public sector accounting standards with respect to the assets of jointly sponsored pension plans. The panel's report[11], released in February 2017, concluded that the Province's share of net assets in jointly sponsored pension plans ~~could~~ should be fully recognized in the Province's financial statements — contrary to the opinion of the Office of the Auditor General.

In the 2017 Budget, the government adopted the expert advisory panel's interpretation of public sector accounting standards and recognized the net pension assets of the jointly sponsored pension plans. The 2017 Budget also indicated that the Province's 2016–17 Public Accounts will report the net pension assets for the two jointly sponsored pension plans.

The Central Issue

The government and the Auditor General have put forward different interpretations of the application of public sector accounting standards for jointly sponsored pension plans.[12]

The different interpretations centre on the question of ~~the~~unilateral control of pension surplus assets in jointly sponsored pension plans. In particular, the issue is focused on whether there needs to be an explicit written agreement between the co-sponsors (the government and the unions representing the employees) on how the sponsors plan to use the pension assets~~, for example by~~ to lower~~ing~~ future contributions ~~or increasing benefits to pensioners~~.

Commented [GE(7]: [OPCD comment]
This latter reference is not relevant to reporting an asset under the AG's interpretation of PSAS.

~~As indicated by~~According to the Auditor General, the issue can be resolved if the government presents an agreement with the Ontario Teacher's Federation (OTF) allowing the government to access the OTPP pension assets through reduced contributions.[13] The extent and duration of the reduced contributions would determine the size of the pension asset that the government could recognize in its financial statements

The government position, ~~based on~~ confirmed by the advice of the expert advisory panel, ~~maintains~~ is that the existing agreements governing the pension plans and past history clearly reflect ~~already recognize~~ the sponsors' rights and intent to benefit from ~~access~~ surplus assets in the plans ~~and also provide the~~through mechanisms reflected in the agreements to potentially realize a benefit through lower future contribution rates.

---

[10] The government's 2016 Budget reported a negative expense for the OTPP for 2016-17 which led, in part, to the Auditor General conducting an in-depth review of the related pension assets [suggest including a reference to the AG's Annual report instead].

[11] https://news.ontario.ca/tbs/en/2017/02/pension-asset-expert-advisory-panel-submits-report.html

[12] In 2015, PSAB created an Employment Benefits Task Force to review the existing accounting standard for post-employment benefits. The work of this task force will include reviewing the appropriate accounting treatment for shared-risk and multi-employer pension plans. However, the work of this task force is not expected to be completed in the near future [suggest deleting this reference. Not relevant].

[13] Of the government's two jointly sponsored pension plans, only the OTPP is currently in a net asset position (This statement is inaccurate: OTPP, OPSEUPP and CAATPPP were all in surplus positions.

In the absence of an agreement, and given the government's decision in the ~~2017 Budget~~Q3 Finances to accept the expert advisory panel's recommended approach to accounting for jointly sponsored pension plan assets, the Auditor General would be expected to provide a qualified opinion[14] on Ontario's 2016-17 Public Accounts.

Roles and Responsibilities of the Province and the Auditor General

The Province (through the Treasury Board Secretariat) is responsible for the preparation of Ontario's Public Accounts in accordance with legislation, and based on the standards set out by the Public Sector Accounting Board (PSAB).[15] The PSAB accounting standards serve the public interest by providing an independent, high-quality accounting framework for public sector entities. Government is responsible to ensure that the financial reports fairly reflect the activities and financial position of the Province.

The Auditor General reviews the Province's annual Public Accounts and provides an audit opinion to the Legislature on whether the Consolidated Financial Statements for the Province of Ontario present fairly, in all material respects, the Province's financial position, in accordance with the PSAB accounting standards.

The FAO's Presentation of Ontario's Fiscal Outlook

The Financial Accountability Officer supports the Legislative Assembly by providing independent economic and financial analysis intended to improve the transparency of the government's fiscal plan. The Officer also looks to the Auditor General as the provincial authority on the appropriate interpretation and application of accounting standards for the Province.

Commented [GE(8]: [OPCD comment]
FAO could choose to take an alternative position which acknowledges the government as having a different interpretation, supported by an external accounting opinion and an publicly available report issued by the Expert Advisory Panel on Pensions.

The FAO has presented two fiscal projections, including and excluding the impact of the net pension assets of jointly sponsored pension plans to help members of the Legislative Assembly better understand the implications of these different interpretations of accounting standards on the Province's fiscal position.

- The projection based on the Auditor General's recommended accounting treatment assumes a valuation allowance that offsets the net pension assets.
- The projection based on the government's fiscal presentation in the 2017 Budget recognizes the net pension assets based on the FAO's projection over the budget outlook.
    - In the absence of an agreement between the co-sponsors, this presentation of Ontario's fiscal position would be expected to receive a qualified opinion from the Auditor General when published in the Province's future Public Accounts.

Based on the Auditor General's recommended accounting treatment for the net assets of jointly sponsored pension plans and the FAO's projection of the pension adjustment, the FAO is projecting budget deficits of $2.9 billion in 2017-18, rising to $6.5 billion by 2021-22. Alternatively, based on the pension accounting treatment presented by the Province in the 2017 Budget, the FAO's projection for the budget deficit decreases to $0.5 billion in 2017-18 and $3.6 billion in 2021-22.

[14] An auditor may provide a qualified opinion when financial statements do not conform in a material way to the applicable accounting standards.

2. Appendix

Developments since the FAO's Fall 2016 Economic and Fiscal Outlook

The FAO's current projection of the Ontario budget balance has generally deteriorated relative to the FAO's fall 2016 projection.

- Stronger than expected economic performance is expected to boost taxation revenues over the forecast, partially offset by lower Equalization revenue.
- Based on new government spending plans, program expense has increased significantly.

Developments since 2016 Fall EFO (AG Recommended Presentation)

	2016-17	2017-18	2018-19	2019-20	2020-21
FAO's Fall 2016 Budget Balance Forecast	-5.2	-2.6	-2.8	-3.3	-3.7
Developments Since Fall 2016					
Revenue					
Stronger Economic Outlook	2.3	4.1	3.9	4.4	4.7
Lower Federal Transfers[1]	-0.3	0.2	-1.3	-2.4	-2.2
Other Revenue Changes	0.1	0.1	-0.5	-0.6	-0.6
Total	2.1	4.4	2.1	1.3	1.8
Expense					
Children and Youth Pharmacare, and Fair Hydro Plan[3]	0.5	1.3	1.3	1.3	1.3
Revised Pension Asset[4]	0.7	0.8	1.1	1.4	1.4
Other Expense Increases	0.7	2.5	1.7	0.9	1.4
Total	2.0	4.6	4.1	3.6	4.1
Total Developments	0.2	-0.3	-2.1	-2.3	-2.3
FAO's 2017 Spring Budget Balance Forecast	-5.0	-2.9	-4.9	-5.5	-6.0

Notes:

1. Change in federal transfers forecast mainly due the reduction in Ontario's Equalization payment.

2. Other revenue changes include the $0.5 billion re-profiling of cap-and-trade proceeds from 2016-17 to 2017-18, and an increase in sales and rentals for 2017-18.

3. In the 2016 Fall EFO, the FAO included $1 billion in expenses from the HST rebate on electricity bills beginning 2017-18, which is now part of the Fair Hydro Plan. As a result, the FAO estimates that the incremental impact of the Fair Hydro Plan is $0.8 billion, compared to the Fall.

4. In the 2016 Fall EFO, the FAO assumed $1.5 billion in adjustments for net pension assets of jointly sponsored pension plans. ~~The government has revised its estimate of the impact to $2.2 billion in 2017-18, increasing to $2.9 billion by 2020-21.~~ This adjustment increases to $2.2 billion in 2016-17, rising to $2.9 billion by 2020-21, based on the FAO's revised projection of the pension adjustment.

Source: Bank of Canada, Congressional Budget Office, Statistics Canada, FAO Consensus and FAO

Commented [GE(12]: [OEP comment]
The FAO forecast is for significantly faster Bank of Canada rate increases than financial markets and private-sector economists expect. The current private-sector average has the three-month T-bill rate at 0.9% in 2018, 1.6% in 2019 and 2.0% in 2020.

Commented [GE(13]: [OEP comment]
Interest rates in 2020 are significantly higher than the 2017 Budget forecast and private-sector consensus. This is likely because some forecasters with low rates are not captured in the FAO consensus view. The current private-sector average is 3.3% in 2020.

Source: Statistics Canada, Public Accounts of Ontario, Annual Report of Ontario and FAO

Commented [ST(14]: This year is being presented inconsistently with the rest of the years. If you are taking on the AG presentation, then you need to add $1.5B here, and then this ripples through to generate higher program spending, higher total expense, and a deficit of $5.0B at the bottom. Alternative is to change footnote to say "For fiscal years after 15-16, based on….."

Table 4a: FAO Debt Outlook (Auditor General Recommended Presentation)

$ Billions	2015-16a	2016-17f	2017-18f	2018-19f	2019-20f	2020-21f	2021-22f

Source: 2017 Ontario Budget and FAO

Commented [ST(15]: This excludes the pension adjustment of $1.5B, which would be inconsistent with the remainder of the fiscal years. Not clear whats going on with the accumulated deficit number.....at $10B higher, not clear why that would be the case.

May 2017

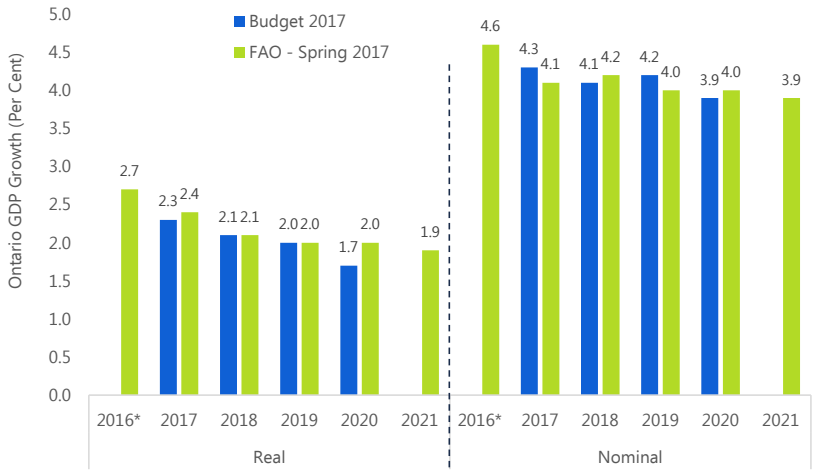
Economic Outlook

Overview

Ontario Economy Expected to Remain Strong in 2017

The Ontario economy finished 2016 with a strong 2.7 per cent increase in real GDP, reflecting solid growth in the second half of the year. Real GDP growth last year was significantly above the 2.1 per cent average gain seen from 2011 to 2015. Strong household spending, residential investment and exports contributed to the increase in real GDP in 2016.

Supported by the strong economic momentum in 2016 and continued improvement in economic indicators in the first quarter of 2017, the FAO is projecting real GDP to rise by 2.4 per cent in 2017 and 2.1 per cent in 2018.



Nominal GDP – the broadest measure of the tax base – increased by a robust 4.6 per cent in 2016. The FAO is projecting nominal GDP to increase by 4.1 per cent in 2017 and 4.2 per cent in 2018, reflecting solid gains in labour income and corporate profits.

Commented [GE(1]: [OEP comment] Consistent with the provincial economic accounts, suggest changing 'household spending' references to 'household consumption'.

Commented [GE(2]: [OEP comment] Consistent with the provincial economic accounts, suggest changing 'labour income' references to 'compensation of employees'.

Commented [GE(3]: Consistent with the provincial economic accounts, suggest changing 'corporate profits' references to 'net operating surplus - corporations'.

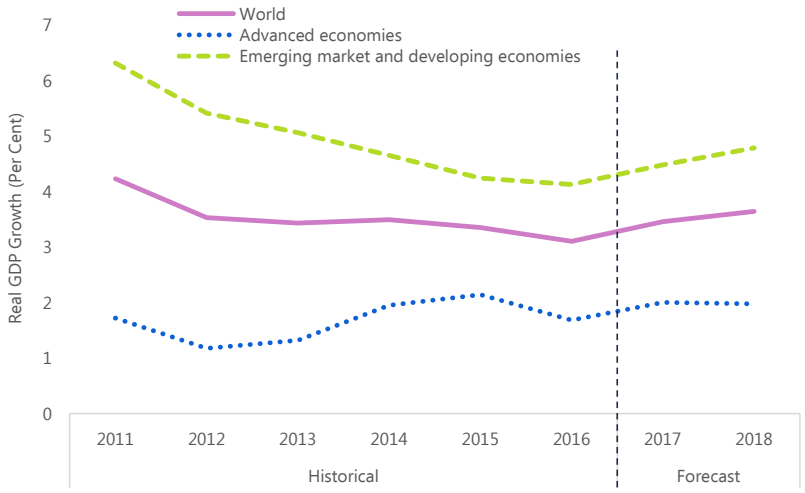
Solid Economic Performance Expected Over Outlook

* 2016 are actuals

Source: Ontario Economic Accounts, Budget 2017 and FAO

Global Economy Gaining Momentum

In its latest World Economic Outlook,[1] the International Monetary Fund (IMF) is forecasting global economic growth to strengthen from 3.1 per cent in 2016 to 3.5 per cent in 2017 and 3.6 per cent in 2018. The IMF revised the outlook slightly higher for 2017, but left it unchanged for 2018, compared to its October 2016 outlook.[2]



For advanced economies, the IMF's forecast for 2017 and 2018 has improved slightly from its October projection with growth of 2.0 per cent in 2017 and 2018.

Growth prospects for emerging market and developing economies are much more varied, but overall have weakened slightly from the IMF's October outlook, due to weaker economic conditions in key export markets. On average, the IMF has lowered its growth forecast for emerging markets and developing countries to 4.5 per cent in 2017, with 2018's forecast remaining unchanged at 4.8 per cent.

The IMF expects China – the world's second largest economy – to grow by 6.6 per cent in 2017 and 6.2 per cent in 2018, reflecting continued support from government policy. In the medium term, China's economic growth is expected to gradually moderate as its economy rebalances from investment and manufacturing-led growth to a more service-intensive economy.

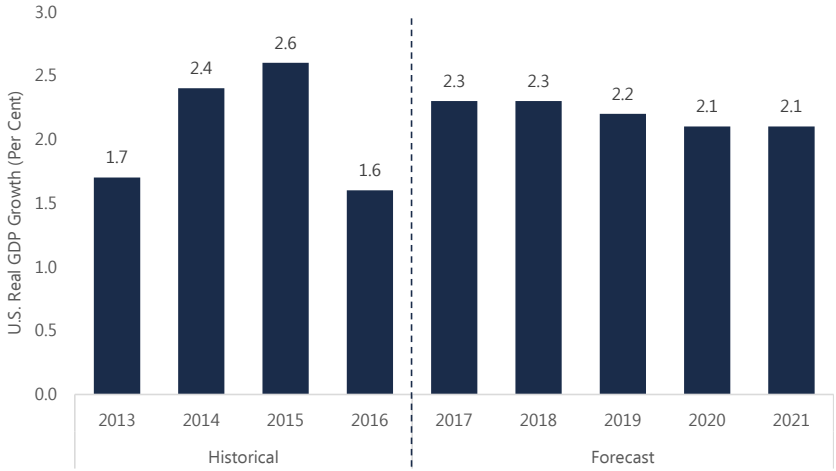
Global Growth to Improve in 2017

Source: "World Economic Outlook, Gaining Momentum?", April 2017, International Monetary Fund

U.S. Economic Growth to Strengthen in 2017



U.S. real GDP advanced by a relatively moderate 1.6 per cent in 2016, the weakest increase in three years. For 2017 and 2018, the FAO projects U.S. growth to improve to 2.3 per cent, with household spending, business investment and residential construction being key contributors to overall growth.[3]

However, the lack of specific details on the new U.S. administration's proposed policies has raised the risks associated with the current U.S. outlook. Many forecasters are cautiously optimistic that some of the proposed fiscal policies, such as expected cuts to corporate tax rates, could boost U.S. economic growth in the short-term.[4] But this optimism is tempered by the potential for large future increases in the U.S. budget deficit, which could weigh on economic growth over the medium-term.

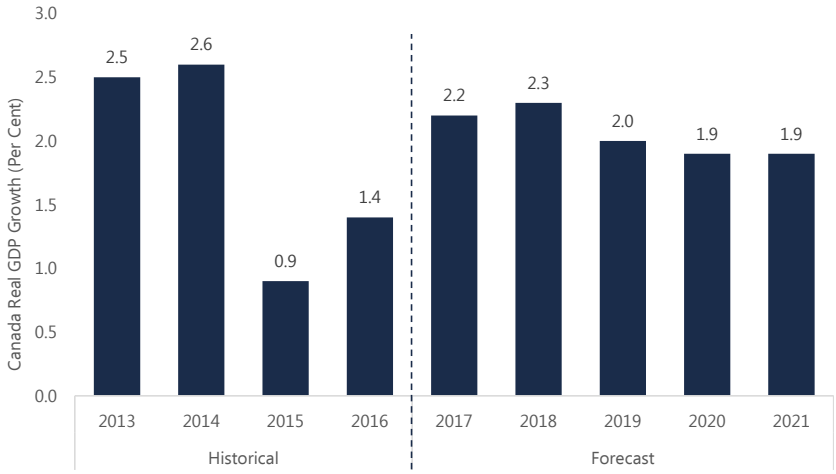
From 2019 to 2021, U.S. real GDP growth is projected to average 2.1 per cent annually, which is in-line with the average rate seen from 2012 to 2016.

U.S. Economic Growth Moderates Beyond 2017

[3] The FAO forecast for the U.S. economy in 2017 is based on the U.S. Congressional Budget Office's (CBO) latest forecast. For 2018 to 2021, the U.S. forecast is based on the average of the CBO outlook and the forecasts of three independent model-based forecasters – the Conference Board of Canada (CBOC), the Centre for Spatial Economics (C4SE) and the Policy and Economic Analysis Program (PEAP) at the University of Toronto.
[4] These forecasters include the IMF, CBO, TD Bank, RBC, BMO Capital Markets and National Bank Economics.

Source: Federal Reserve Bank of St. Louis, Congressional Budget Office and FAO Consensus

Canadian Economic Growth Expected to Rebound



The outlook for the Canadian economy has improved following strong growth over the second half of 2016.

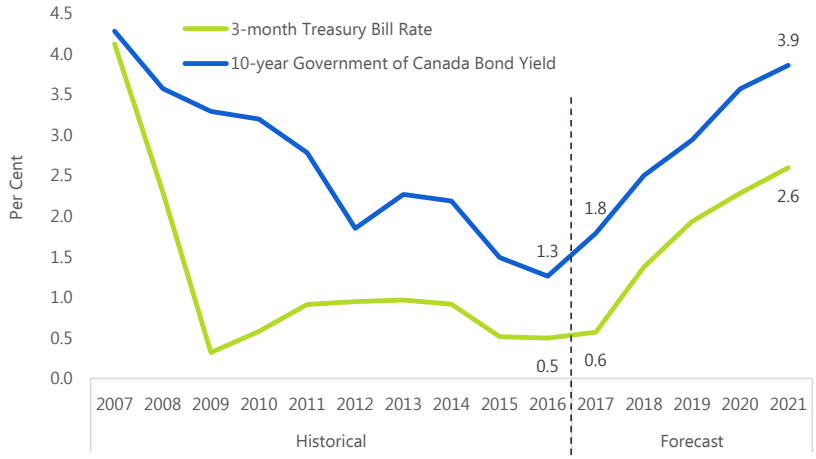
Continued momentum in recent economic indicators point to a solid start for 2017. Canadian real GDP is currently projected to grow by 2.2 per cent in 2017 and 2.3 per cent in 2018, recovering from more moderate growth in 2015 and 2016.[5] Strength in household spending and non-energy exports are expected to contribute to overall growth in 2017 and 2018.

Beyond 2018, Canadian real GDP is projected to increase at an average annual rate of 2.0 per cent, as the economy continues to adjust to slower growth in the energy sector.

Canada GDP Growth Expected to Improve in 2017

[5] The FAO forecast for the Canadian economy is based on the average quarterly forecasts of two independent, model-based forecasters – the Conference Board of Canada (CBOC) and the Policy and Economic Analysis Program (PEAP) at the University of Toronto.

Source: Statistics Canada and FAO Consensus



Based on the continuing recovery of the U.S. economy, and in particular the strength of U.S. labour markets, the U.S. Federal Reserve raised its key policy interest rate in March 2017.[6] In contrast, the Bank of Canada has remained more cautious about the underlying strength of the Canadian economy and as a result appears unlikely to raise its key policy interest rate before 2018.[7]

The FAO is projecting Canadian short-term interest rates will remain near current levels through 2017 and then begin rising modestly in 2018. Beyond 2018, interest rates are expected to gradually normalize with the 3-month Treasury Bill rate increasing to 2.6 per cent and the 10-year Government of Canada bond yield rising to 3.9 per cent by 2021.

Commented [GE(4]: [OEP comment]
Interest rates in 2020 are significantly higher than 2017 Budget forecast and private-sector consensus. This is likely because some forecasters with low rates are not captured in the FAO consensus view.

Canadian Interest Rates to Rise over the Forecast

[6] The Federal Reserve raised its key policy rate, or the Federal Funds Rate, to 1.0 per cent on March 15, 2017.
[7] In its most recent monetary policy report, the Bank of Canada (BOC) indicated that it expects the output gap to close in early 2018. At the same time, the BOC noted that "there is still considerable uncertainty about the outlook," suggesting caution with regard to future changes in its policy interest rate. Bank of Canada Monetary Policy Report, April, 2017

Source: Statistics Canada and FAO

The Canadian dollar is expected to gradually appreciate over the next five years, rising from an average of about 75 cents U.S. in 2016 to about 81 cents U.S. by 2021, supported by the steady increase in short-term interest rates and a gradual rise in oil prices.

Ontario Economic Outlook

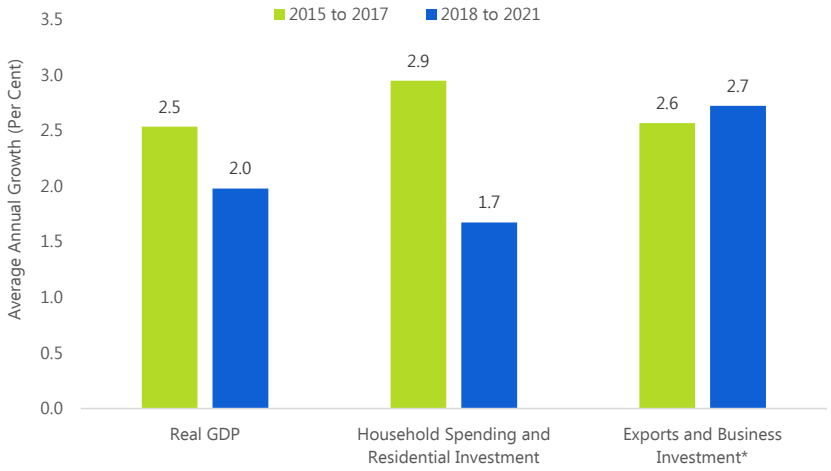
Solid Real GDP Growth Expected in 2017

Based on the Ontario Ministry of Finance's estimates,[8] Ontario real GDP rose by a strong 2.7 per cent in 2016, following equally strong gains of 2.5 per cent and 2.7 per cent in 2015 and 2014, respectively. Household spending, residential investment and exports were key contributors to overall economic growth last year. Business investment in plant and equipment disappointed expectations, declining by 4.0 per cent.

The performance of a number of economic indicators, including employment, retail sales and home sales remained solid in the first quarter of 2017. However, Ontario's merchandise export performance has been uneven so far in 2017.

[8] Ontario Economic Accounts, Fourth Quarter 2016, released April 13, 2017.

Uncertainty over the future direction of U.S. trade and industrial policy could hamper business investment growth in the near term, which would negatively impact Ontario's competitiveness. Without stronger business sector investment to expand production capacity, the growth potential of several key Ontario industries will be limited.[9] As a result, despite the projection for steady growth in the U.S. and a competitively valued Canadian dollar, Ontario's net exports[10] are projected to grow at a relatively moderate pace over the outlook.



The FAO is forecasting real GDP growth of 2.4 per cent in 2017, supported by strong household spending and residential investment.[11] The pace of Ontario's overall economic growth will moderate to 2.1 per cent in 2018 and to an average of 2.0 per cent over the last three years of the outlook.

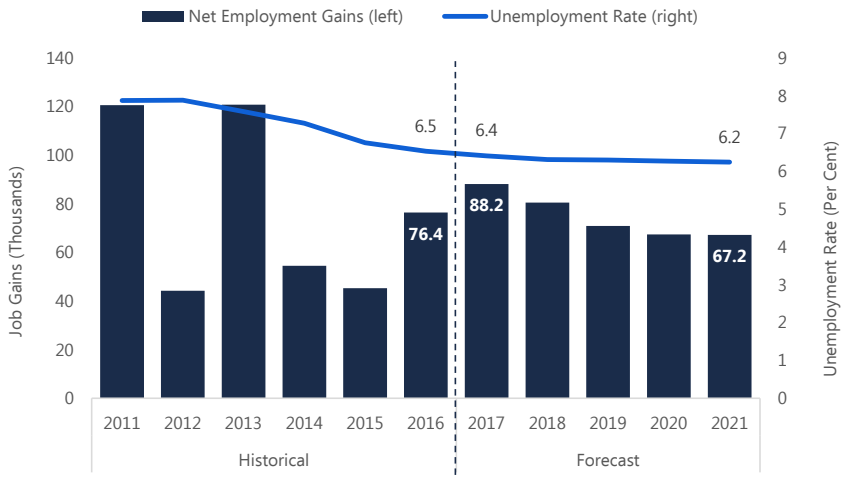
Moderate declines in residential investment in 2018 and 2019 – reflecting elevated household debt and a moderation in housing prices – is expected to contribute to the slower pace of overall economic activity.

The FAO forecast is broadly consistent with the consensus view among economists that exports and business investment will lead Ontario growth over the next several years, while household spending and residential investment will grow at a more moderate pace, as households reduce borrowing to address high debt loads.

Exports and Business Investment Expected to Drive Economic Growth

[9] As noted in a recent Conference Board of Canada report, nearly half of Ontario businesses are operating near or above capacity, hampering the ability of Ontario businesses to increase production to meet foreign demand. Conference Board of Canada Outlook, Winter 2017.
[10] Net exports are exports less imports of goods and services.
[11] The FAO forecast of the Ontario economy is based on the FAO's short-term quarterly model of the Ontario economy. For a description of the model, please refer to the textbox at the end of the Economic Outlook chapter.

* Business Investment includes both Non-Residential Investment and Machinery & Equipment Investment
Source: Ontario Economic Accounts and FAO



Steady Job Gains Over Outlook

Ontario experienced relatively strong employment growth of 1.1 per cent in 2016 (+76,400 net new jobs), the majority of which were full-time, private sector jobs. There was robust job growth in both goods and service producing industries. The construction industry in particular, posted the highest job growth (+3.4 per cent), followed by healthcare (+3.2 per cent).[12]

The strength in Ontario's labour market continued into 2017 with an increase of 99,600 jobs on a year-over-year basis during the first quarter. For the year, the FAO is projecting a 1.3 per cent gain in employment in 2017. On average, the FAO is forecasting average annual job gains of 1.0 per cent over the next four years, consistent with the outlook for solid economic growth.

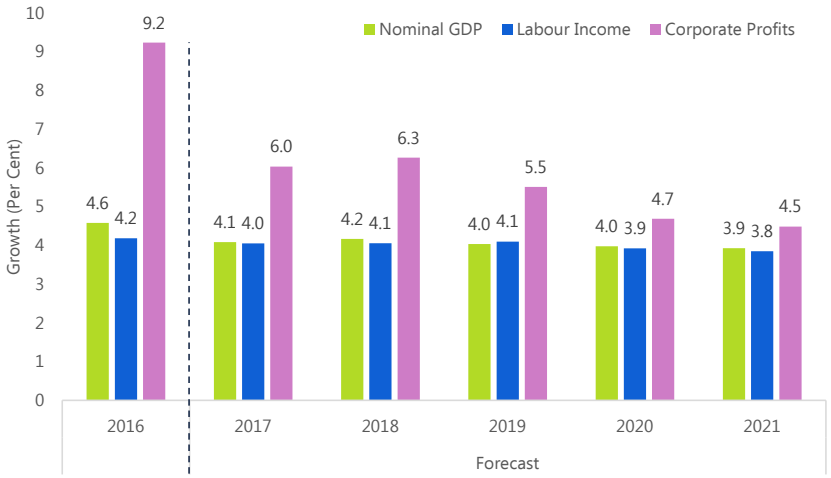
Steady Employment Gains as Unemployment Rate Slowly Trends Lower

[12] For a more detailed discussion on Ontario's labour market, see the FAO's Commentary: "Ontario Posts Solid 2016 Job Gain as the Labour Market Continues to Evolve."

Source: Statistics Canada and FAO

Sustained economic growth over the outlook is expected to attract more workers into the labour force, which is forecast to rise at a slightly higher rate than over the last five years. Faster labour force growth from 2017 to 2021, will partially offset relatively strong employment gains, leading to a more moderate decline in the unemployment rate over the outlook.

Strong Gains Expected for Labour Income and Corporate Profits



Labour income grew by a robust 4.2 per cent in 2016, above the average annual increase of 3.7 per cent from 2011 to 2015, and a reflection of the strong employment growth last year. The net operating surplus of corporations (largely corporate profits) also increased by a robust 9.2 per cent in 2016 following an equally strong gain of 9.1 per cent in 2015.

As a result of the gains in labour income and corporate profits (which together account for about two-thirds of nominal GDP), nominal GDP grew by a strong 4.6 per cent in 2016.[13]

[13] The robust 2016 increase in nominal GDP was much stronger than the 3.4 per cent increase projected in both the FAO's Economic and Fiscal Outlook, Fall 2016 Update and the government's 2016 Economic Outlook and Fiscal Review. The sharp upward shift in 2016 nominal GDP growth reflects large historical revisions to 2015 and 2016 nominal GDP growth in the Ontario Economic Accounts, consistent with new data from Statistics Canada. In particular, the net operating surplus of corporations is now estimated to have increased by 9.2 per cent in 2016 compared to an original projection of 0.3 per cent last fall.

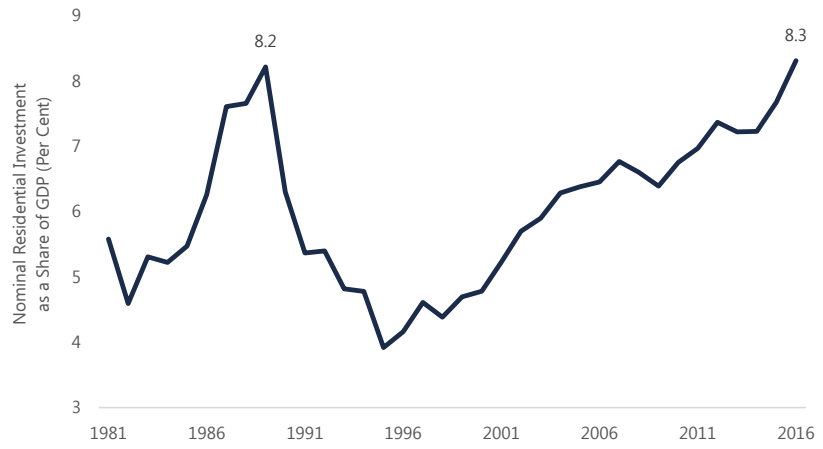
For 2017, the FAO is projecting a 4.1 per cent rise in nominal GDP, supported by strong gains in labour income (+4.0 per cent) and corporate profits (+6.0 per cent). On average, the FAO is projecting nominal GDP growth of 4.0 per cent over the 2018 to 2021 outlook.

Labour Income and Corporate Profits Support Nominal GDP Growth

Source: Ontario Economic Accounts and FAO

Key Risks for Ontario's Economic Outlook

The FAO's current economic forecast represents a reasonable outlook for the Ontario economy and an appropriate foundation for fiscal projections. However, several key risks could materialize leading to weaker than expected economic growth for the province.



In particular, there are significant risks with respect to the proposed renegotiation of the North American Free Trade Agreement (NAFTA) and the adoption of protectionist trade measures in the United States. As well, other proposed changes to U.S. fiscal and industrial policies, such as lower corporate tax rates and 'Buy America' executive orders, could harm Ontario's relative competitiveness, further discouraging business investment and limiting the contribution of exports to overall growth.

Domestically, the housing market continues to pose a significant risk to the overall economy. The sharp rise in Ontario housing prices – particularly in the

Greater Toronto Area – has contributed to record consumer debt loads and stretched levels of affordability.

At the same time, the relative importance of residential housing investment to the overall economy has increased substantially in recent years, posing a significant risk to the Ontario economy, in the event of a sharp housing market correction. In 2016, investment in residential housing accounted for a record high 8.3 per cent of Ontario's nominal GDP, up from 6.4 per cent in 2009.[14]

Residential Investment Spending Accounts for a Record Share of GDP

Source: Ontario Economic Accounts and FAO

The last time investment in residential housing accounted for a similar proportion of the economy was 1989, just prior to the 1990-1995 housing market correction.

A sharp correction in housing prices, exacerbated by the elevated levels of household debt, would negatively affect household spending and residential investment, and could lead to broader economy-wide impacts on growth and employment.

[14] Almost one-quarter (22 per cent) of the growth in nominal GDP in 2016 was directly attributable to the increase in residential investment spending.

The Province recently announced a package of measures intended to respond to the underlying factors contributing to the unsustainable rise in housing prices and the rapid growth in housing market activity. However, it is too early to assess whether these measures will adequately address the imbalance between demand and supply pressures in the market.

The FAO's Quarterly Short-term Model of the Ontario Economy

The FAO has developed a short-term forecasting model to produce quarterly five-year projections of the Ontario economy. The model is based on dynamic equations for major sub-categories of real and nominal GDP. The model also includes key labour market components, financial variables and the Canada-U.S. dollar exchange rate. The model is structured around a number of important external or exogenous concepts such as Canada-wide economic growth, U.S. economic growth, U.S. prices, U.S. interest rates and energy prices.

The model is an important tool for the FAO's bi-annual Economic and Fiscal Outlook (EFO), ensuring internal consistency of each projection as well as consistency between EFO forecasts. It also provides the majority of the inputs required by the FAO's Fiscal Outlook Model which provides the FAO's projection of the government's fiscal position.

Hi Ricky

I made a few edits in the Q&A's and deleted all of the comments that were from 2015. Can we pls add one more Q&A on the pension adjustment.

Q: The Government has adopted the accounting treatment recommended by the Auditor General resulting in a pension adjustment expense over the medium term outlook. How has this impacted borrowing?

A: The pension adjustment is a non-cash amount, as such both borrowings and total debt remain unchanged. Given that the forecast deficits in the medium term outlook remain unchanged there is also no impact on net debt as well from the pension adjustment.

Subject: RE: FT

Hi Alex and Team

I just came back from a meeting with Gadi and we agreed that the FT be developed as follows. Change Non-Cash Adjustments by the net impact of the pension adjustment and the reserve. Kevin will provide you with the revised non-cash spreadsheet shortly. Happy to provide an explanation but would like to do so in person, so pls drop in tomorrow.

You will see that non-cash increases by $1.6 billion, Gadi would like the short term long term borrowing to go to zero (reduce by $1 billion) and long term to reduce by $600 million. No changes to 17-18 and 18-19, as we discussed, Gadi agrees that the prudent course of action is to wait till the 2017 Document.

We will offset cash by $500M to fund the increase in capital investments.

Once you receive the outlook from Tara pls prepare the FT accordingly and pls provide a link for me to review. We can the present same to Gadi.

Thanks

Ken k

Hi

I understand that Tara will be providing you with the FES outlook sometime today. Can we try and have a draft FT for the end of the day for me to review and present it to Gadi sometime tomorrow. I suggest that for now we decrease cash by $1 B offset to some extent by the $500M increase in capital investments with the balance reducing the short term borrowings. There will be no change in the deficit.

For the out years Fiscal is still projecting balance so my suggestion is we don't make any changes in the FT until the 2017 Budget.

Thanks

Questions and Answers
Pension Asset Expert Advisory Panel Report

KEY MESSAGES:

- We thank the Pension Asset Expert Advisory Panel for their work on this complex issue.

- We are pleased that the independent panel's results are consistent with Ontario's view that net pension assets for jointly-sponsored plans should continue to be recognized in the Province's financial statements, as they have been for the past 14 years.

- Ontario is accepting all of the panel's recommendations and will prepare its future financial statements based on this advice.

- By applying the panel's advice to the Province's 2015-16 finances, Ontario's deficit has been lowered to $3.5B, from the $5B originally reported in the 2015-16 Public Accounts.

- The panel's advice will also help inform discussions with the Auditor General in the hopes of reaching agreement on how the accounting standard is applied to future financial statements.

- Ontario remains committed to balancing the budget by 2017-18, and remaining balanced in 2018-19.

QUESTIONS AND ANSWERS – MOF REVIEW

1. What does this mean for the upcoming Budget?

The 2017 Budget will reflect the appropriate accounting treatment for net pension assets informed by the panel's report, including the Province's updated Interim numbers for 2016-17, as well as forecasts for the fiscal planning period.

We are committed to balancing the Budget by 2017-18, and remaining balanced in 2018-19. ~~We will have more details to share about the Budget in the coming weeks.~~

In the coming weeks, we will provide an update in Ontario's Third-Quarter Finances of our progress on our plan to grow the economy.

2. What do you say to the credit rating agencies who are watching all of this unfold?

We have been impressed with the level of cooperation and understanding of the credit rating agency community.

I would say we have achieved clarity on this complex accounting issue.

We are committed to balancing the Budget by 2017-18, and remaining balanced in 2018-19. At the same time, we will continue to invest in vital government services, such as health care, education and infrastructure that are important to the people of Ontario.

Ontario's Financial Position:

3. Some have said your government has a spending problem, not a revenue problem. What do you say to that?

Even with adopting the Auditor General's view of the 2015-16 Public Accounts, the government still beat its annual deficit target for the seventh year in a row.

The government is projecting a balanced the budget by 2017-18, and remaining balanced in 2018-19.

The improvement over plan was due in large part to the Ontario government's strong focus on managing growth in spending. Ontario consistently has the lowest per capita program spending among all Canadian provinces.

Over the past four years the Province has held the average annual growth in program spending to 1.9 per cent, less than the rate of inflation, while investing in services that people rely on.

Key elements of the government's plan to eliminate the deficit are:

- Program Review, Renewal and Transformation
- Managing compensation costs
- Maintaining tax fairness and a level playing field for business

DRAFT

- Strengthening government transparency, financial management and fiscal accountability

4. **The FAO has warned that if Ontario's fiscal position deteriorates beyond 2017-18, the four international credit rating agencies could lower Ontario's credit rating, which could lead to higher borrowing costs and more challenging fiscal position. What is the government doing to manage the debt?**

   The government remains firmly committed to balancing the budget by 2017-18, and remaining balanced in 2018-19.

   Even with adopting the Auditor General's view of the 2015-16 Public Accounts, the government still beat its annual deficit target for the seventh year in a row. This reflects the government's responsible and balanced approach to fiscal management.

   Given ongoing challenges in the broader economic environment, the government recognizes that now is the time to be making investments in people, modern infrastructure and a dynamic and innovative business climate — investments that will help to spur economic growth and create the new jobs necessary to support eliminating the deficit.

   Alongside these strategic investments, the government is also taking deliberate actions to ensure it can continue to manage spending and improve outcomes for Ontarians. Together, these investments and deliberate actions will help ensure that the priority programs and services that people rely on are maintained and enhanced while the deficit is eliminated.

5. **How does the Province plan to reduce its net debt-to-GDP ratio to its pre-recession level of 27 per cent?**

   The first step in returning to the targeted 27 per cent net debt-to-GDP ratio is to balance the budget.

   Once the budget is balanced, debt will continue to rise by the difference between the annual cash investment in capital and the amortization of these investments. These investments will contribute to the debt rising at a slower rate than the increase in the Province's GDP, over time lowering the net debt-to-GDP ratio to the government's 27 per cent target.

DRAFT

Legislated Accounting:

6. Is the disagreement over accounting standards an indication of financial mismanagement on the part of government?

No. The Province's financial results show that the government has once again beaten its annual deficit targets and is on track for a balanced budget by 2017-18 and remaining balanced in 2018-19.

Prior to implementing the change to the 2015-16 Public Accounts, the government had followed the same pension accounting treatment for the past 14 years. This had been accepted by the current Auditor General for the last two years and by three previous Auditor Generals. There has been no change to the relevant accounting standards over the past 14 years.

In fact, Ontario has a strong track record of producing high-quality financial reports on a timely basis. Prior to 2015-16, Ontario had clean audit opinions for 22 years.

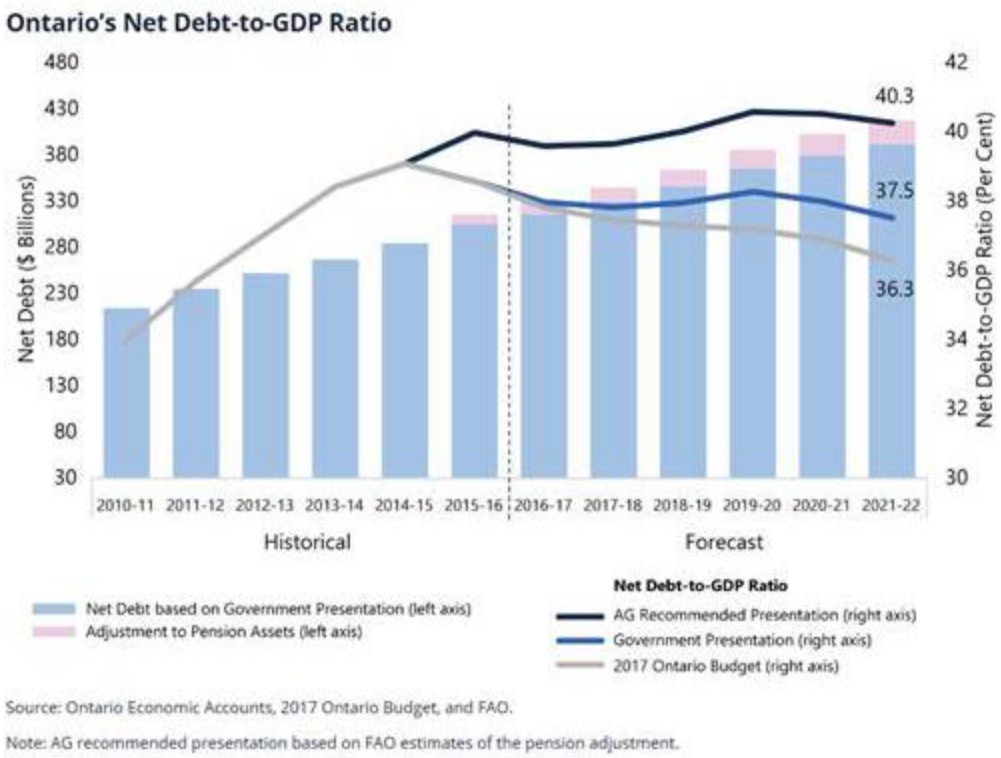
Financial Accountability Office of Ontario Spring Outlook (June 1, 2017)



Yesterday, the Financial Accountability Office of Ontario released its Economic and Fiscal Outlook Spring 2017 report which highlights specific risks to Ontario's projected path to balanced budgets and lower debt burden.

Executive Summary excerpt:

- The FAO is projecting continued Ontario budget deficits over the next five years. For 2017-18, the FAO's projection includes an improvement in the deficit, the result of a $3.0bln one-time boost to non-tax revenue and strong tax revenue growth. However, beginning in 2018-19, the FAO is projecting a steady deterioration in the budget deficit due to moderating revenue growth combined with higher expenses.
- The government and the Auditor General continue to disagree on the application of public sector accounting standards for jointly-sponsored pension plans. Based on the FAO's application of the Auditor General's recommended accounting treatment for these pension assets, the FAO is projecting significant budget deficits over the entire outlook. On this basis, it is unlikely that the government will balance without significant fiscal policy adjustments to raise revenue or lower

expense.

- Under the government's accounting presentation, the FAO projects that a balanced budget is within the government's reach in 2017-18. Beyond 2017-18, the deficit is projected to deteriorate steadily due to rising expenses and moderate revenue growth. On this basis, staying in balance after 2017-18 will likely require additional fiscal policy measures. This presentation of Ontario's fiscal position would be expected to receive a qualified opinion from the Auditor General when published in the Province's 2016-17 Public Accounts.

Source: Ontario Economic Accounts, 2017 Ontario Budget, and FAO.

Note: AG recommended presentation based on FAO estimates of the pension adjustment.

Hi Everyone.

As you can see below, the FAO has reached out to make a formal request for information in follow up to yesterday's release of the Budget (BTW we are looking to set up a mtg on Tuesday from 1pm to 2pm with the FAO).

You may have already been forwarded this email from your ADMs but we've also just now received the list of specific additional questions (attached). I've attempted to identify in the attached and below which area is responsible for what, and if I have this wrong, please let me know (and sorry!).

I thought we could do a quick touch base Monday, just to check in on what we might have readily available to be in a position to provide at Tuesday's meeting and what we may need to get back to the FAO on (but pls note that we should not be doing any new analysis to provide a response). I will send out an invite/teleconf so we can discuss.

For reference I have attached an excerpt from our protocol for interaction with the FAO in case folks need a refresher on what information can/cannot be shared. We can discuss further on Monday at our call/meeting.

Thanks and pls let me know if you have any questions.

Subject: Follow-Up on the 2017 Budget

Good Morning!

Congratulations on delivering yesterday's big, black budget!

I wanted to follow-up on the FAO's requests for some additional information.

First, as we have discussed, we have three requests for specific data/tables:

1. We would like to obtain the detailed revenue and expense tables (Tables 6.14 and 6.15) extended to 2019-20.

- Are these detailed tables available to 2020-21? If so, then please include (☺) **– OEP Table 6.14/TBS – PEMD&CPD 6.15**

2. As staff have been discussing, we would like to obtain more detailed information on the one-time adjustments to taxation revenues beginning in 2015-16 and extending over the forecast. This is basically additional information to that provided in tables 6.7, 6.8 and 6.9. **- OEP**

3. As detailed in the letter and background documents sent to Deputies Thompson and Angus on April 3, we are requesting pension expense and employer contribution details for the OTPP and OPSEUPP.- **TBS-OPCD**

We would also appreciate a meeting early next week (preferably Tuesday afternoon) to allow you to respond to a number of questions that we have with regard to the 2017 Budget.

We'll provide a list of specific questions later this afternoon, but these questions will cover a number of areas, including:

- Clarification on where the Fair Hydro Plan appears in the expenses **– CEFD/ TBS - PEMD**
- Additional details/clarification on new health spending, including the new pharmacare plan **– TBS PEMD**
- Clarification on future assumptions for asset sales and any details behind the 'Sales and Rentals' line in the detailed Revenue table. **OFA CEFD, OEP**
- Clarification on the assumptions behind new federal funding announced in the 2017 federal budget (e.g. affordable housing, child care, home care) **OEP/TBS PEMD & CPD**
- Some background on the decision to reduce the estimate of 'Carbon Allowance Proceeds' and assumptions on associated expense – **OEP, TBS PEMD**
- Additional details/clarification on new infrastructure spending **TBS CPD**
- Assumptions behind the plan to reduce net debt-to-GDP to 35% and eventually to 27%. **OFA**

We'll provide a list later this afternoon that expands somewhat on these question topics.

Happy to discuss any of these requests.

Thanks again for your support,
David

FAO
Financial
Accountability
Office of Ontario

- Approval of the Order In Council (OIC) on October 5, 2016, authorizes ministries and public entities to disclose to the FAO, financial, economic and other information contained in Cabinet records that relates to:
    - The Province's finances, budget and trends in the provincial and national economies;
    - The estimates and supplementary estimates submitted to the Legislature;
    - The financial costs or benefits of any public bill before the Assembly; and,
    - The financial costs or benefits of any proposal made by the Government or any member of the Assembly.

- This OIC authorizes ministries and public entities to share information contained in Cabinet records when the following conditions are met:
    - The information has been requested by the FAO;
    - The information is not available through other sources;
    - The policy or fiscal decisions to which the requested information relates have been announced to the public or tabled with or disclosed to the Legislative Assembly;
    - The information is provided in a format that does not reveal other information protected by subsection 12(1) of FIPPA;
    - The information would not reveal personal information or personal health information; and,
    - The FAO agrees not to disclose the information further without the consent of the Executive Council.

<u>Disclosure of Third Party/Commercial Sensitive Information</u>

- Third party/commercial sensitivity is not a valid justification for withholding information from the FAO.
- The only valid justifications for refusing to provide information to the FAO are the personal information and personal health information exceptions set out in subsections 12(2) and (3) of the FAO Act as well as any terms and conditions laid out in the OIC.
- However, the FAO has limitations on what information he can further disclose and make public.
    - The FAO cannot further disclose third party/commercially sensitive information obtained solely from a record covered by s17 of FIPPA.
    - Ministry and public entity senior management should proactively advise the FAO in writing of any sensitivity on the disclosure of information provided to the FAO. This includes specifically identifying information contained in records such as third party information, information on relations with other governments, or information on the economic and other interests of Ontario, as described respectively in sections 15, 17 and subsection 18(1) of FIPPA, information subject to solicitor-client privilege, litigation privilege or settlement privilege, and information contained in Cabinet records, when providing information to the FAO in accordance with section 12 of the Act.
    - The FAO typically consults with ministries/public entities during the development of draft reports on any disclosure restrictions related to any information provided to the FAO.

FAO Questions for MOF

April 28, 2017

Economics

- Why is the growth rate for labour compensation running significantly above the growth for primary household income, particularly in 2018 and 2019? **- OEP**
- Do you use Compensation of Employees on a 'National Basis' (from Table 11 of the OEA) as the principal PIT driver? In 2016, Labour Compensation on a national basis grew at 4.4% while on a domestic basis it grew 4.2%, which is an unusually large gap. **- OEP**

Revenue

- In Table 3.14, sales and rental revenues are projected to increase by $1 billion in 2017-18. Can we can get details about the assumptions behind this increase? **– OFA- CEFD & OEP**
- The 2017 federal budget announced new funding for affordable housing, child care, infrastructure, home care and labour-market training. To what extent are these new revenues (and the associated expense) built into the fiscal plan? **– OEP/TBS – PEMD&CPD**
- Expected revenues from Carbon Allowance Proceeds have been reduced by $0.5 billion beginning 2018-19 (Table 6.10). Any explanation of the lower revenue projection?
    - Is the annual forecast for Carbon Allowance Proceeds $1.4 billion? If so, does the higher amount in 2017-18 of $1.8 billion just reflect the shifting of proceeds from the first auction in 2016-17 (that is there is an extra auction in 2017-18 than in future years)? **– OEP**
    - Are the associated expenses from the Green Initiative Fund being reduced as well, to reflect the lower revenue forecast? **– TBS - PEMD**
- Base revenue growth for Corporations Tax and Sales Tax are noticeably stronger than the growth of their underlying drivers. What are your elasticity assumptions for Personal Income Tax, Corporations Tax and Sales Tax with respect to their drivers? **- OEP**
    - For HST, could you break out the revenues expected from housing and nominal consumption over the forecast? **- OEP**
- The federal government's 2015-16 Annual Financial Report indicated that stronger 2015 federal PIT returns partly reflect "…tax planning by high-income individuals to recognize income in the 2015 tax year before the new 33 per cent tax rate came into effect in 2016". What assumptions were made on the impact of income shifting on Ontario's PIT revenue? **- OEP**

Expense

- The anticipated fiscal impact of the Fair Hydro Plan is approximately $1.8 billion based on information provided to the FAO (roughly $1 billion for HST rebate and $800 million for the electricity social programs). However, the 2017 Budget indicates that the total cost would be around $1.4 billion in 2017-18 (Table 6.15). Can you explain the discrepancy? **– TBS - PEMD**

- A number of new programs were announced in the budget. Can you provide the fiscal impact for these new initiatives (e.g. children and youth pharma-care, child care spaces expansion) by completing the following table? Are these fiscal impacts in the plan? **– TBS PEMD&CPD, TPD**
    - The September Throne Speech announced the expansion of 100,000 new child care spaces. The budget announced 24,000 additional spaces. What is the progress in the rollout plan for the remaining spaces? Is there additional fiscal impact from the Throne Speech that have not been incorporated?

Cost of Announced Programs

	2017-18	2018-19	2019-20	2020-21
Children and Youth Pharmacare				
100,000 Child Care Spaces Expansion				
Fair Hydro Plan				
Caregiver Tax Credit				
Other major programs?				

Debt

- The budget indicated that the government aims to reduce the net debt to GDP target to 35 per cent by 2023-24 and 27 per cent by 2028-29. What assumptions are built into this projection for nominal GDP, the budget balance, and capital expenditure? **- OFA**
- What's the explanation for the increase in cash reserves? Is it related to recent changes in rating criteria requiring more liquid reserves covering the issuance of commercial paper debt? **- OFA**
- What is a Designated Purpose Account? **– TBS OPCD**

Hi Bonnie. I'm back in the office and would like to set up a time to informally discuss this information with you, along with Doug Offerman (including Doug as he's also our pension expert). We're both fairly booked today so I was going to suggest tomorrow at 1 or 1:30 pm, or after 3 pm. Friday is pretty much open all day, if you had a few minutes available then.

Thanks!
Marcy

Subject: Here is the reference to the accounting change

18. Change in Accounting for Pension Assets of Jointly Sponsored Pension Plans

For 2015-16 fiscal, the government legislated the accounting treatment for pension assets of its jointly sponsored pension plans. The legislation impacts the accounting for both the Ontario Teachers' Pension Plan and the Ontario Public Service Employees' Union Pension Plan. The legislation requires a full valuation allowance be recorded against the pension assets, therefore writing off the value of the assets. As described in Public Sector Accounting Standards (PSAS), a pension asset arises when the government's total contributions to a plan, including income earned thereon, are greater than the cumulative retirement benefit expense recognized since the start

of the plan. Contributions reflect the funding objectives of the plan. The benefit expense reflects the estimated cost of the pensions earned during the year that will be paid out to retirees in the future. In prior years, the government recorded pension assets to the extent the government expected to benefit from the asset through future reductions in contributions to the plan.

Unaudited Consolidated Financial Statements, 2015–2016 83

These plans are now accounted for in accordance with PSAS and legislation requiring a full valuation allowance be recorded. The change was made to reflect the Auditor General of Ontario's view that a full valuation allowance is required if the government does not have the legally enforceable right to unilaterally access the assets of the jointly sponsored pension plans, or in absence of that right, an irrevocable agreement in place at year-end with the joint sponsors of the plans to reduce contributions.

Subject: IOD re FAO

Gadi! Happy new year! Hope you had a nice time skiing and spending time with family over the holiday period. 2018….here we go!

We pulled together a deck on the FAO vs. FES fiscal outlook for Scott to use at a meeting tomorrow (see attached) but one thing we didn't dig into as part of the analysis of the report was the lower IOD outlook the FAO has in their fiscal outlook – some $0.6-0.7B lower than our FES. This is curious at a time when they say we will be running deficits plus interest rates on the rise. Do you have any insights into this? Scott was thinking that this was worth a call to David West to inquire. Would be good to have an understanding of this before Scott's meeting tomorrow morning. Are you able to provide any insights?

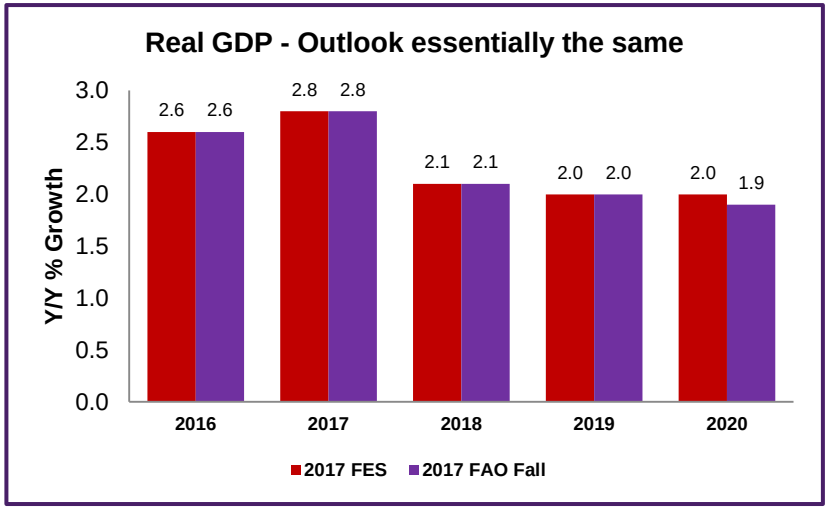
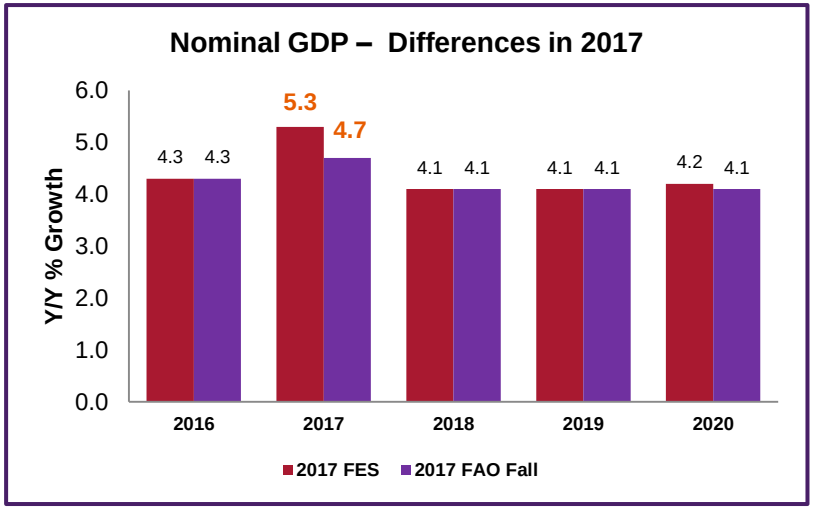
Comparing the 2017 FAO Fall Outlook with the 2017 FES

January 8, 2018



Confidential Advice to Cabinet



Highlights

- The FAO's 2017 Fall Economic and Fiscal Outlook report was released on Dec. 11, 2017 and included the **FAO's economic outlooks to 2021 and fiscal projections to 2021-22**.
  - This represents **two more fiscal years** than the government's Fall Statement outlook (with fiscal projections out to 2019-20), and **one more year of economic forecasts** (vs. government's 2020 projection).
- **The FAO's economic outlook calls for slower overall growth than the government's forecast** -- particularly for 2017 as a whole, and for components of growth that drive provincial revenues -- which results in a lower revenue outlook over the planning horizon.
- **The FAO presents two program expense outlooks which only differ in whether or not they include the Auditor General's recommended accounting treatment** of the Fair Hydro Plan and net pension assets of jointly sponsored pension plans.
- Using the government's accounting presentation (i.e. excluding the AG's recommended treatment), **the FAO is projecting a small surplus in 2017-18 and subsequent deficits of $1.9B in 2018-19, gradually increasing to $9.8B by 2021-22**.
  - Excluding the AG's recommended accounting framework, the difference between the government's balanced budget projections and the FAO's forecast of deficits over the 2017-18 to 2019-20 period are **entirely due to a lower revenue outlook**.
  - While the FAO **aligns its outlook for program expense** with the government's over the 2017-18 to 2019-20 period, (excluding accounting differences), it does provide for a **lower interest on debt outlook** than the government's projections.

FAO Economic Outlook As Compared to 2017 FES

- The FAO has raised its forecast for Ontario economic growth in 2017 from its spring outlook report. However, despite this upward revision, **the FAO forecast is still at the bottom of the current range of private sector forecasts for both real and nominal GDP growth in 2017**.
  - Beyond 2017, the FAO forecast anticipates growth to moderate as the housing market and consumer spending cool alongside gradually rising interest rates, in line with the government's FES forecast.
  - Over the 2017 to 2020 period, **the FAO's forecast for average annual real GDP growth of 2.2 per cent is the same as the 2017 FES outlook**.
  - However, for nominal GDP growth, the **FAO's average annual forecast of 4.2 per cent over the 2017 to 2020 period is slower than the FES projection of 4.4 per cent growth**. This difference is explained by a much lower FAO nominal GDP forecast in 2017 compared to the FES (4.7 per cent vs 5.3 per cent).
- The FAO forecast takes into account its estimate of the impact of the new minimum wage legislation, which is expected to boost wage growth over the forecast, but temper employment gains. Even with these employment impacts, the FAO predicts a modest decline in the unemployment rate.

FAO Economic Outlook Compared to 2017 FES

- In addition to the differences in expected nominal GDP growth, the composition of growth in the FAO's economic projection has important implications for the fiscal forecast.
- The FAO's projections for key revenue drivers such **as labour income, corporate profits and household spending are significantly lower outlooks than the FES projections**.

Comparison of FES and FAO Outlook for Economic Variables

	2017	2018	2019	2020	2017-20 Average
Labour Income					
FAO Fall 2017	4.0	4.5	4.3	4.1	4.2
2017 FES	4.3	4.7	4.8	4.4	4.6
Diff FAO - FES	*-0.3*	*-0.2*	*-0.5*	*-0.3*	*-0.4*
Corporate Profits					
FAO Fall 2017	11.7	2.2	3.7	4.4	5.5
2017 FES	16.1	2.9	2.8	3.7	6.4
Diff FAO - FES	*-4.4*	*-0.7*	*0.9*	*0.7*	*-0.9*
Housing Income					
FAO Fall 2017	4.7	4.2	4.1	3.9	4.2
2017 FES	5.1	4.3	4.3	4.3	4.5
Diff FAO - FES	*-0.4*	*-0.1*	*-0.2*	*-0.4*	*-0.3*

- The FAO has also consistently underestimated economic growth prospects for the Province – not just for specific components of economic growth, but overall growth itself.

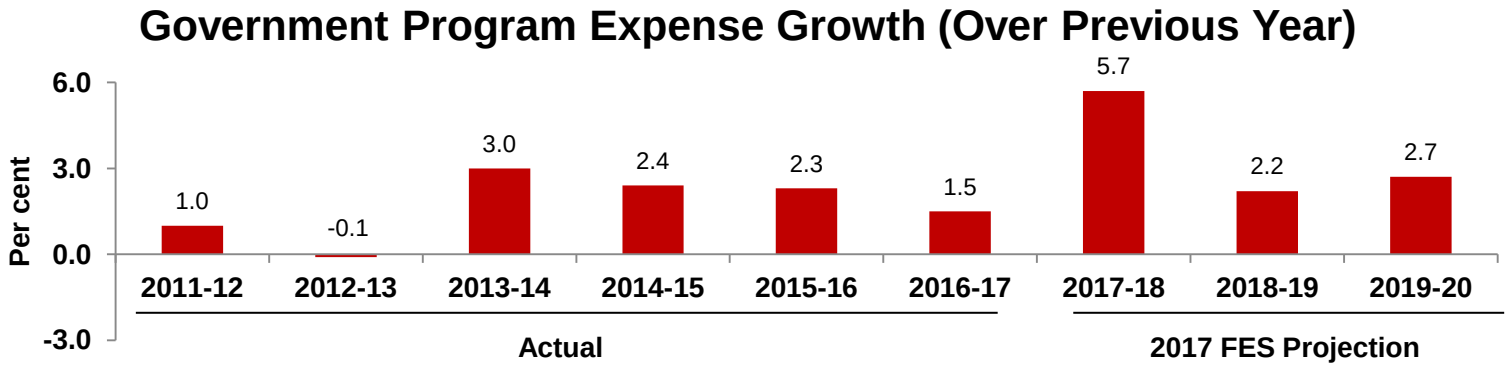
Comparison of FAO Economic Projections to Actual/Current

	2016 % Change			2017 % Change		
	FAO Spring 2016	Actual	Diff FAO - Actual	FAO Spring 2017	FAO Fall 2017	Diff Spring - Fall
Nominal GDP	3.4	4.3	*-0.9*	4.1	4.7	*-0.6*
Real GDP	2.4	2.6	*-0.2*	2.4	2.8	*-0.4*
Corporate Profits	0.3	7.3	*-7.0*	6.0	11.7	*-5.7*
Labour Income	4.0	3.3	*0.7*	4.0	4.0	*0.0*
Nominal Household Spending	4.4	4.2	*0.2*	4.2	4.7	*-0.5*

FAO Revenue Outlook As Compared to 2017 FES

- **The FAO's lower outlook for the economy as a whole in 2017 and key components of growth result in an average annual revenue growth of 3.2 per cent from 2016-17 to 2019-20, compared with the government's Fall Statement projection of 4.0 per cent**.
  - The FAO projections for **taxation revenues are $2.9 billion lower by 2019-20** than the projections in the 2017 FES due to the FAO's lower projected growth for key economic drivers such as household spending, labour income and corporate profits.
  - In addition, the FAO also suggests that revenue growth beyond 2017-18 significantly declines because of a number of **"one-time 2017-18 revenues"** including: an increase to sales and rentals from sale of final tranche of H1, higher federal transfers for infrastructure (PTIF), and a one-time boost from an additional Cap and Trade auction.
    - While revenues such as federal transfers and cap and trade revenues should be considered fiscally neutral (i.e. offset by expense), the FAO estimates that these one-time revenues in 2017-18 will amount to $4.5 billion – a significant amount that that will not continue into the future.
- As the FAO largely aligns with the government on program expense (excluding differences in accounting treatment), **the difference between the 2017 FES Outlook for balanced budgets and the FAO's fiscal projections are essentially due to the FAO's lower revenue outlook**.

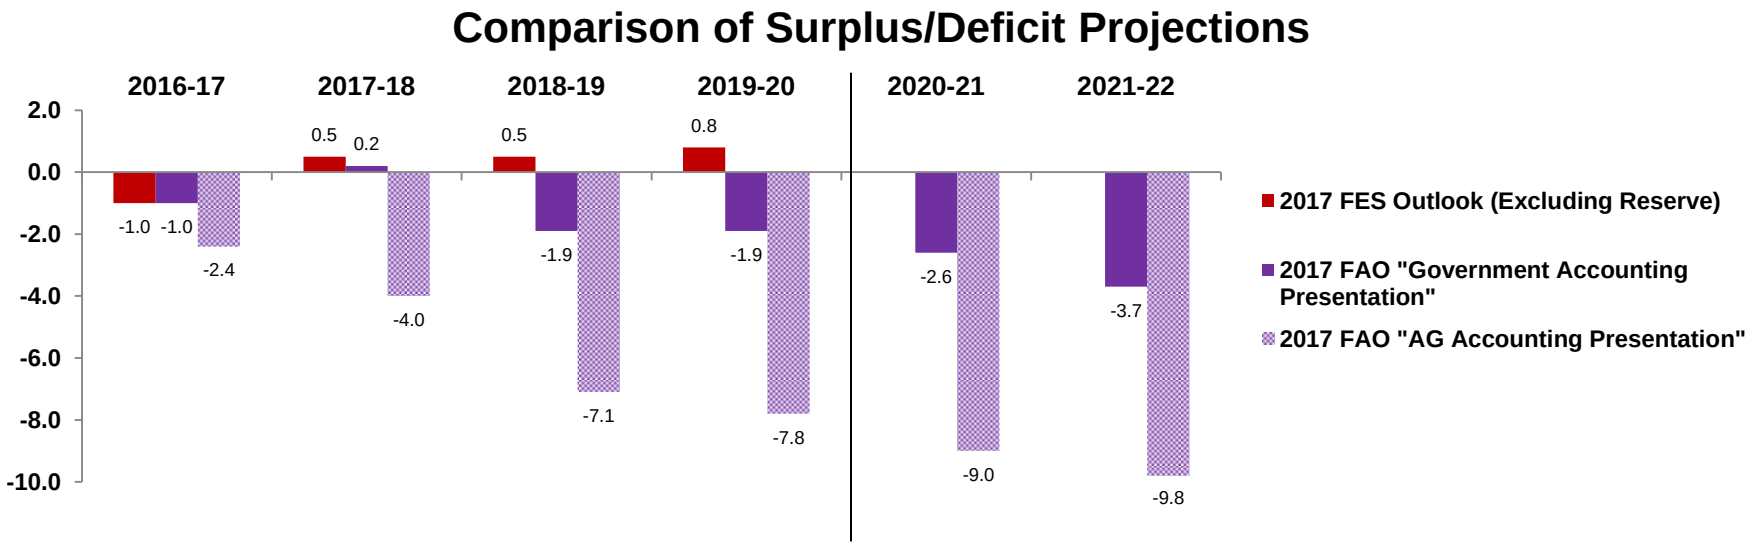
Revenue Outlook Comparison ($ Billions)	2016-17	2017-18	2018-19	2019-20	2020-21	2021-22	Avg. Annual Growth 16/17 to 19/20	Avg. Annual Growth 16/17 to 21/22
2017 FES Outlook	**140.7**	**150.1**	**153.6**	**158.2**			***4.0%***	
Difference in Taxation Revenue		(1.2)	(2.4)	(2.9)				
Difference in Federal Transfers		-	(0.5)	(0.4)				
Difference in Non-Tax Revenues		0.4	-	-				
2017 Fall FAO Outlook	**140.7**	**149.4**	**150.7**	**154.8**	**160.8**	**167.0**	***3.2%***	***3.5%***



FAO Expense Outlook As Compared to 2017 FES

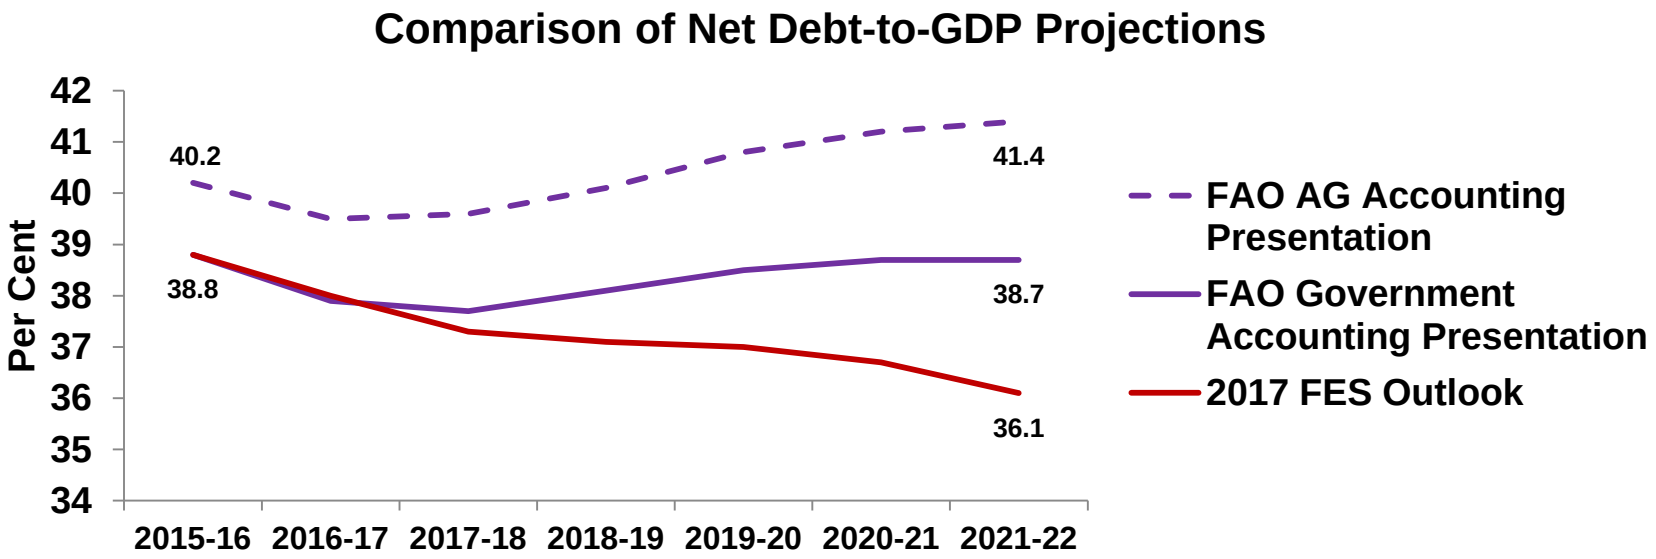
- From 2017–18 to 2019–20, the **FAO's adopts the government's 2017 FES projections for program spending** (excluding AG's recommended accounting treatment).
  - However, when including the combined impact of the AG's recommended accounting treatment for the Fair Hydro Plan and net pension asset adjustments, program spending is approximately $4.2 billion higher in 2017-18, growing to $5.8 billion more in 2019-20.
- The FAO notes that in 2018-19 and 2019-20, annual increases in program spending will be restrained at an average of 2.4 percent, below the growth in what the FAO suggests is the impact of underlying spending pressures. Beyond 2019–20 the FAO projects program spending will need to grow faster -- at an average annual rate of 4.2 per cent – due to the impact of inflation and population growth, particularly in the health and education sectors.
- The FAO's projections for interest on debt are lower than the government's. This may be due in part to lower interest rate or other forecasting assumptions.

Expense Outlook Comparison ($ Billions)	2016-17	2017-18	2018-19	2019-20	2020-21	2021-22	Avg. Annual Growth 16/17 to 19/20	Avg. Annual Growth 16/17 to 21/22
2017 FES Program Expense	**130.0**	**137.4**	**140.4**	**144.2**			***3.5%***	
Adjustment for Pension Assets	1.5	2.3	2.6	2.9				
Adjustment for Fair Hydro Plan	-	1.9	2.7	2.9				
2017 Fall FAO Program Expense	**131.5**	**141.6**	**145.7**	**150.0**	**156.6**	**163.0**	***3.5%***	***3.8%***
2017 FES IOD Expense	**11.7**	**12.2**	**12.7**	**13.3**			***4.2%***	
Difference in Interest on Debt	-	(0.4)	(0.6)	(0.7)				
2017 Fall FAO IOD Expense	**11.7**	**11.8**	**12.1**	**12.6**	**13.2**	**13.8**	***2.5%***	***3.4%***



Additional Context on Program Expense

- Consistent with past fiscal reports, the FAO has continued to adopt the government's program expense outlook – which represents 3.5 per cent growth over the period of 2016-17 to 2019-20.
  - However, the FAO notes that the growth rate in some years is below the impact of underlying cost drivers and pressures. As a result, beyond the government's published forecast horizon of 2019-20, the FAO projects 4.2 per cent growth annually, in recognition of factors such as inflation and population growth.
  - Key risks that are currently not funded within the FES fiscal outlook include items such as the impact of **Bill 148, OSAP pressures, Social Assistance caseload risks, and health sector growth of around 3 per cent compared to underlying cost pressures of up to 5 per cent.**
- Between 2016-17 and 2017-18 program expense is projected to grow by 5.7 per cent, driven by:
  - One-time public infrastructure investments as well as the first year of expense related to Ontario's Cap and Trade program – both of which are offset by revenue – as well as implementation of the Fair Hydro plan, OHIP+, and the government's child care investments, all of which have ongoing costs.
  - This is consistent with the FAO's assessment that maintaining the current rate of growth may require further fiscal effort and measures**.**



FAO Fiscal Outlook As Compared to 2017 FES

- Taking into account the FAO's differing approach to revenue and expense outlooks, as well as the AG's recommended accounting treatment, **the FAO is projecting a deficit of $4.0 billion in 2017–18.** In the absence of any fiscal policy changes, the deficit would grow steadily to $7.8 billion by 2019-20, and **approach $10 billion by 2020-21.**
  - When excluding **the** AG's recommended accounting treatment, the FAO projects a **small surplus for 2017–18 of $0.2 billion and a return to deficits beyond 2017–18** driven by entirely by the FAO's lower revenue outlook.
- The FAO suggests that by not adopting the AG's recommended accounting presentation, the 2017 Budget and the 2017 FES have **reduced transparency and clarity of Ontario's fiscal position**.

FAO Net Debt to GDP vs. FES Targets

- The differences in net debt-to-GDP are due both to the FAO's lower GDP projection as well as projected deficits rather than balanced budgets.
- The FAO report notes that additional fiscal measures would be required for the government to meet its net debt-to-GDP targets of 35 per cent in 2023-24 and 27 per cent in 2029-30.

- Under the Auditor General's Accounting presentation, the FAO projects that Ontario's net debt will increase by approximately $75 billion to over $400 billion between 2016-17 and 2021-22.

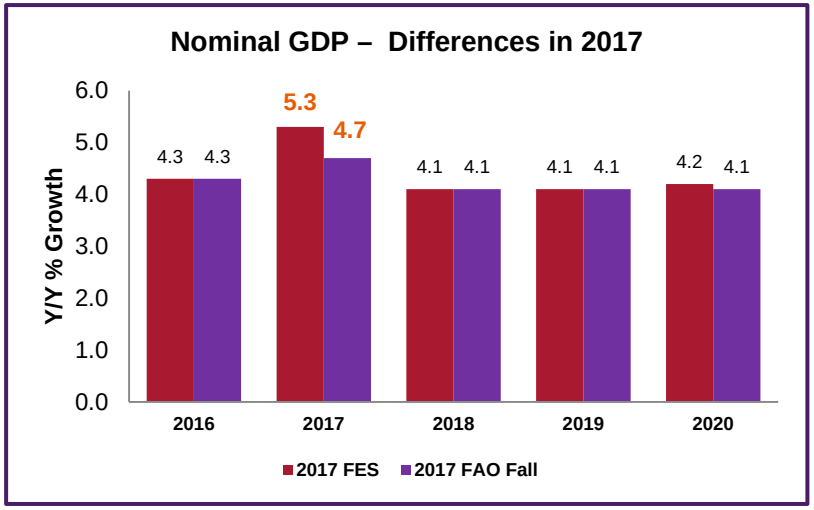
Confidential Advice to Cabinet



Highlights

- The FAO's 2017 Fall Economic and Fiscal Outlook report was released on Dec. 11, 2017 and included the **FAO's economic outlooks to 2021 and fiscal projections to 2021-22**.
  - This represents **two more fiscal years** than the government's Fall Statement outlook (with fiscal projections out to 2019-20), and **one more year of economic forecasts** (vs. government's 2020 projection).
- **The FAO's economic outlook calls for slower overall growth than the government's forecast** -- particularly for 2017 as a whole, and for components of growth that drive provincial revenues -- which results in a lower revenue outlook over the planning horizon.
- **The FAO presents two program expense outlooks which only differ in whether or not they include the Auditor General's recommended accounting treatment** of the Fair Hydro Plan and net pension assets of jointly sponsored pension plans.
- Using the government's accounting presentation (i.e. excluding the AG's recommended treatment), **the FAO is projecting a small surplus in 2017-18 and subsequent deficits of $1.9B in 2018-19, gradually increasing to $9.8B by 2021-22**.
  - Excluding the AG's recommended accounting framework, the difference between the government's balanced budget projections and the FAO's forecast of deficits over the 2017-18 to 2019-20 period are **entirely due to a lower revenue outlook**.
  - While the FAO **aligns its outlook for program expense** with the government's over the 2017-18 to 2019-20 period, (excluding accounting differences), it does provide for a **lower interest on debt outlook** than the government's projections.

FAO Economic Outlook As Compared to 2017 FES

- The FAO has raised its forecast for Ontario economic growth in 2017 from its spring outlook report. However, despite this upward revision, **the FAO forecast is still at the bottom of the current range of private sector forecasts for both real and nominal GDP growth in 2017**.
  - Beyond 2017, the FAO forecast anticipates growth to moderate as the housing market and consumer spending cool alongside gradually rising interest rates, in line with the government's FES forecast.
  - Over the 2017 to 2020 period, **the FAO's forecast for average annual real GDP growth of 2.2 per cent is the same as the 2017 FES outlook**.
  - However, for nominal GDP growth, the **FAO's average annual forecast of 4.2 per cent over the 2017 to 2020 period is slower than the FES projection of 4.4 per cent growth**. This difference is explained by a much lower FAO nominal GDP forecast in 2017 compared to the FES (4.7 per cent vs 5.3 per cent).
- The FAO forecast takes into account its estimate of the impact of the new minimum wage legislation, which is expected to boost wage growth over the forecast, but temper employment gains. Even with these employment impacts, the FAO predicts a modest decline in the unemployment rate.

FAO Economic Outlook Compared to 2017 FES

- In addition to the differences in expected nominal GDP growth, the composition of growth in the FAO's economic projection has important implications for the fiscal forecast.
- The FAO's projections for key revenue drivers such **as labour income, corporate profits and household spending are significantly lower outlooks than the FES projections**.

Comparison of FES and FAO Outlook for Economic Variables

	2017	2018	2019	2020	2017-20 Average
Labour Income					
FAO Fall 2017	4.0	4.5	4.3	4.1	4.2
2017 FES	4.3	4.7	4.8	4.4	4.6
Diff FAO - FES	*-0.3*	*-0.2*	*-0.5*	*-0.3*	*-0.4*
Corporate Profits					
FAO Fall 2017	11.7	2.2	3.7	4.4	5.5
2017 FES	16.1	2.9	2.8	3.7	6.4
Diff FAO - FES	*-4.4*	*-0.7*	*0.9*	*0.7*	*-0.9*
Housing Income					
FAO Fall 2017	4.7	4.2	4.1	3.9	4.2
2017 FES	5.1	4.3	4.3	4.3	4.5
Diff FAO - FES	*-0.4*	*-0.1*	*-0.2*	*-0.4*	*-0.3*

- The FAO has also consistently underestimated economic growth prospects for the Province – not just for specific components of economic growth, but overall growth itself.

Comparison of FAO Economic Projections to Actual/Current

	2016 % Change			2017 % Change		
	FAO Spring 2016	Actual	Diff FAO - Actual	FAO Spring 2017	FAO Fall 2017	Diff Spring - Fall
Nominal GDP	3.4	4.3	*-0.9*	4.1	4.7	*-0.6*
Real GDP	2.4	2.6	*-0.2*	2.4	2.8	*-0.4*
Corporate Profits	0.3	7.3	*-7.0*	6.0	11.7	*-5.7*
Labour Income	4.0	3.3	*0.7*	4.0	4.0	*0.0*
Nominal Household Spending	4.4	4.2	*0.2*	4.2	4.7	*-0.5*

FAO Revenue Outlook As Compared to 2017 FES

- **The FAO's lower outlook for the economy as a whole in 2017 and key components of growth result in an average annual revenue growth of 3.2 per cent from 2016-17 to 2019-20, compared with the government's Fall Statement projection of 4.0 per cent**.
  - The FAO projections for **taxation revenues are $2.9 billion lower by 2019-20** than the projections in the 2017 FES due to the FAO's lower projected growth for key economic drivers such as household spending, labour income and corporate profits.
  - In addition, the FAO also suggests that revenue growth beyond 2017-18 significantly declines because of a number of **"one-time 2017-18 revenues"** including: an increase to sales and rentals from sale of final tranche of H1, higher federal transfers for infrastructure (PTIF), and a one-time boost from an additional Cap and Trade auction.
    - While revenues such as federal transfers and cap and trade revenues should be considered fiscally neutral (i.e. offset by expense), the FAO estimates that these one-time revenues in 2017-18 will amount to $4.5 billion – a significant amount that that will not continue into the future.
- As the FAO largely aligns with the government on program expense (excluding differences in accounting treatment), **the difference between the 2017 FES Outlook for balanced budgets and the FAO's fiscal projections are essentially due to the FAO's lower revenue outlook**.

Revenue Outlook Comparison ($ Billions)	2016-17	2017-18	2018-19	2019-20	2020-21	2021-22	*Avg. Annual Growth* 16/17 to 19/20	*Avg. Annual Growth* 16/17 to 21/22

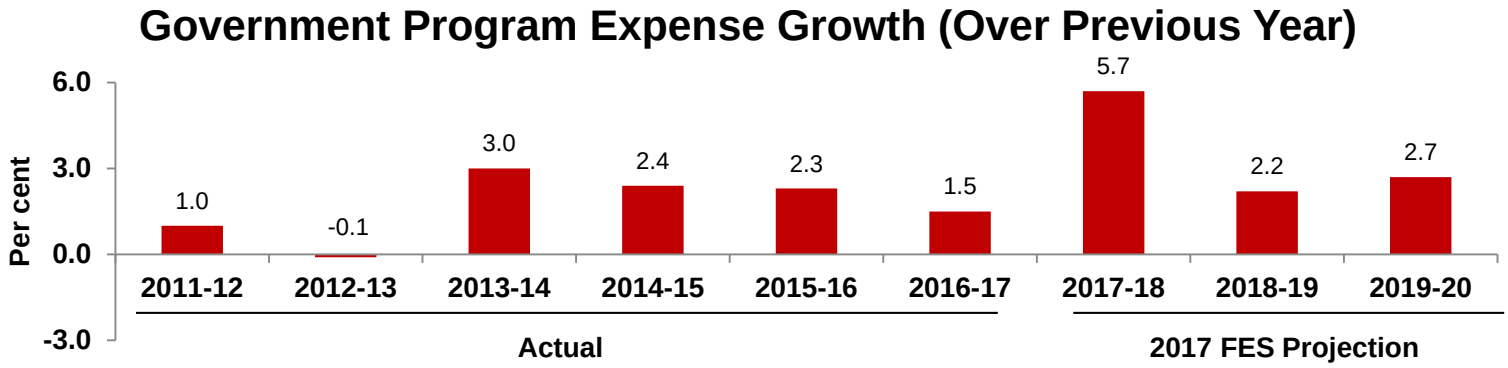
Difference in Non-Tax Revenues		0.4	-	-				
2017 Fall FAO Outlook	140.7	149.4	150.7	154.8	160.8	167.0	*3.2%*	*3.5%*



FAO Expense Outlook As Compared to 2017 FES

- From 2017–18 to 2019–20, the **FAO's adopts the government's 2017 FES projections for program spending** (excluding AG's recommended accounting treatment).
  - However, when including the combined impact of the AG's recommended accounting treatment for the Fair Hydro Plan and net pension asset adjustments, program spending is approximately $4.2 billion higher in 2017-18, growing to $5.8 billion more in 2019-20.
- The FAO notes that in 2018-19 and 2019-20, annual increases in program spending will be restrained at an average of 2.4 percent, below the growth in what the FAO suggests is the impact of underlying spending pressures. Beyond 2019–20 the FAO projects program spending will need to grow faster -- at an average annual rate of 4.2 per cent – due to the impact of inflation and population growth, particularly in the health and education sectors.
- The FAO's projections for interest on debt are lower than the government's. This may be due in part to lower interest rate or other forecasting assumptions.

Expense Outlook Comparison ($ Billions)	2016-17	2017-18	2018-19	2019-20	2020-21	2021-22	*Avg. Annual Growth* 16/17 to 19/20	*Avg. Annual Growth* 16/17 to 21/22

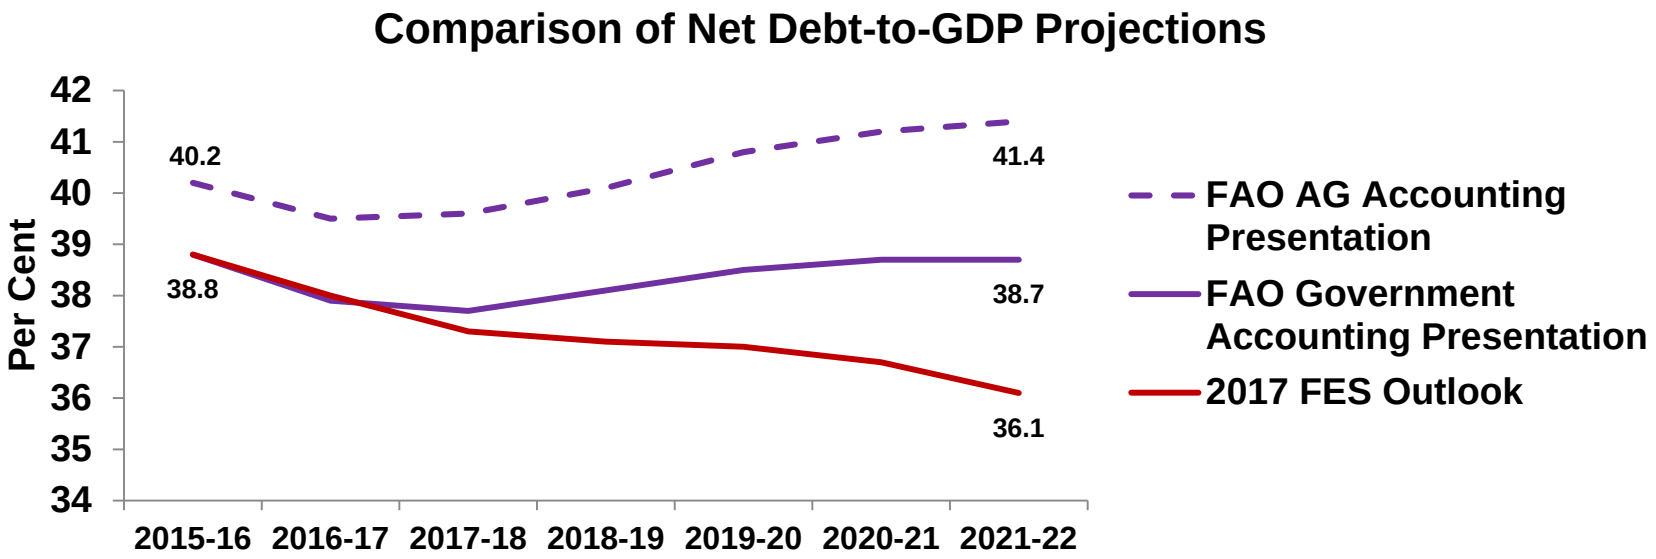
Additional Context on Program Expense

- Consistent with past fiscal reports, the FAO has continued to adopt the government's program expense outlook – which represents 3.5 per cent growth over the period of 2016-17 to 2019-20.
  - However, the FAO notes that the growth rate in some years is below the impact of underlying cost drivers and pressures. As a result, beyond the government's published forecast horizon of 2019-20, the FAO projects 4.2 per cent growth annually, in recognition of factors such as inflation and population growth.
  - Key risks that are currently not funded within the FES fiscal outlook include items such as the impact of **Bill 148, OSAP pressures, Social Assistance caseload risks, and health sector growth of around 3 per cent compared to underlying cost pressures of up to 5 per cent.**
- Between 2016-17 and 2017-18 program expense is projected to grow by 5.7 per cent, driven by:
  - One-time public infrastructure investments as well as the first year of expense related to Ontario's Cap and Trade program – both of which are offset by revenue – as well as implementation of the Fair Hydro plan, OHIP+, and the government's child care investments, all of which have ongoing costs.
  - This is consistent with the FAO's assessment that maintaining the current rate of growth may require further fiscal effort and measures**.**



FAO Fiscal Outlook As Compared to 2017 FES

- Taking into account the FAO's differing approach to revenue and expense outlooks, as well as the AG's recommended accounting treatment, **the FAO is projecting a deficit of $4.0 billion in 2017–18.** In the absence of any fiscal policy changes, the deficit would grow steadily to $7.8 billion by 2019-20, and **approach $10 billion by 2020-21.**
  - When excluding **the** AG's recommended accounting treatment, the FAO projects a **small surplus for 2017–18 of $0.2 billion and a return to deficits beyond 2017–18** driven by entirely by the FAO's lower revenue outlook.
- The FAO suggests that by not adopting the AG's recommended accounting presentation, the 2017 Budget and the 2017 FES have **reduced transparency and clarity of Ontario's fiscal position**.

FAO Net Debt to GDP vs. FES Targets

- The differences in net debt-to-GDP are due both to the FAO's lower GDP projection as well as projected deficits rather than balanced budgets.
- The FAO report notes that additional fiscal measures would be required for the government to meet its net debt-to-GDP targets of 35 per cent in 2023-24 and 27 per cent in 2029-30.

- Under the Auditor General's Accounting presentation, the FAO projects that Ontario's net debt will increase by approximately $75 billion to over $400 billion between 2016-17 and 2021-22.

---

Selena,

Here is the requested table. We strongly suggest not to use the date for 2005-06, as there was a $10.4 B adjustment that year as it was the first year BPS was consolidated. Using the next two years also skews the trend given there were surplus years.

Thanks.

John

---

Good morning,

Here we go again! =)

We've been asked to re-review the SCOPA materials one more time prior to the 12pm briefing.

- DM remarks – Attached are the latest DM remarks. Please review and let me know if you have any concerns. Would it make to reference the new Moody's report instead of the credit outlook upgrade? If so, would you mind amending his speech as appropriate?
- Gadi's remarks – Ken, thanks again for updating the 8.5 cents. I made a small edit to the speech to note that the ratio is the lowest its been since 1990. Is that okay?
- General Q&As – Ken, if you're okay with that change in the speech, I'll amend the general Q&As as well.
- Friendly Q&As – Attached incorporates edits Bonnie just sent. We're also ask to review #1, 2, 3, 8, and 9 as there's quite of overlapping. I think #1 and 2 needs to be removed. As there may not be enough time for Gadi's speech, we've been asked to reformat Gadi's remarks to Friendly Q&A format.
- PA Media package - Please also review the Q&A section and fill in any areas as necessary.

I'm working from today so please give me a call at 416-625-6524 if you have any questions.

Thanks,
Christina

Following up –

Attached are the following items and corresponding actions required from your teams in advance of the 12pm briefing tomorrow:

- DM Remarks as of Sept 30th, 2016 (please review and update your sections, where appropriate, given the recent release of 2015-16 PA)
- MOF General QAs as of Sept 30th, 2016 (no action required for this item at this time)
- Friendly QAs as of October 3rd, 2016, (please review and provide input/edits. Please note #1, 2, 3, 8, 9 and 14 have some overlap we may want to avoid. There will be discussion on what extent we want to make reference to 2015-16 numbers via friendlies at the 12pm meeting).
- TBS Media Package for 2015-16 PA as of October 3rd, 2016 (please review QAs section only and fill in any relevant MOF portions- I have asked TBS for the QA package on its own)

Let me know if there are any questions.

Thanks,

Marilyn Ize-Dukuze | ph. 416.326.8529 | bb. 416.302.3609

Subject: RE: Latest SCOPA Comms Products

Hi both –

SCOPA is still very much about the 2014-15 PA, thus current QAs do not need updating. However, additional QAs reflecting 2015-16 PA release are also now required. For this, we are asking TBS to share the QA package that was put together (with MOF input) for the 2015-16 PA release. This would be added to the SCOPA binders in addition to the QAs on 2014-15 PA.

Following up on strategy for remarks.

Thanks,
Marilyn Ize-Dukuze | ph. 416.326.8529 | bb. 416.302.3609

Current holding messaging for Minister Sandals

- As you know, Treasury Board and Ministry of Finance staff prepare the Public Accounts which are subject to independent audit by the Auditor General.

- As I announced to the House last week, there are still some ongoing discussions happening around an accounting issue.

- Earlier today I met with the Auditor General and senior ministry officials to discuss the importance of resolving this issue and releasing the 2015-16 Public Accounts.

- Ministry officials will continue to work with the Auditor General and her staff to resolve the outstanding issue over the next several months.

- What I can tell you now is that Ontario is on track to beat its deficit targets and we are committed to balancing the budget in 2017-18.

- Lower than forecast deficit projections confirm that our government's plan to achieve fiscal balance in 2017-18 is working, while we continue to invest in the programs and services that matter to Ontarians.

- Keeping the public informed through transparent financial reporting remains a priority.

- In that spirit, as part of the 2015-16 Annual Report, which includes the unaudited Consolidated Financial Statements, we have built new data visualization tools to help the public understand Ontario's finances. These tools will be available when our financials are released.

Post technical-briefing speaking points

Minister Sandals' Statement – Release of 2015-16 Financial Statements

- Ontario's Annual Report and unaudited Consolidated Financial Statements for 2015-16 show Ontario's deficit is $3.5 billion lower that the $8.5 billion projected in the 2015 Budget, with the province's deficit for 2015-16 at $5 billion.

- This is $0.7 billion lower than the $5.7 billion in the 2016 Budget interim projection.

- As I assured members of the House last week, this marks the seventh year in a row that Ontario has beaten its deficit target. We are committed to balancing the budget in 2017-18 and remain balanced in 2018-19.

- In preparing the 2015-16 Annual Report and unaudited Consolidated Financial Statements, Treasury Board staff work with their colleagues in ministries across government to assemble financial information for the Annual Report and unaudited Consolidated Financial Statements.

- The Auditor General, who issues an opinion on the government's adherence to independently established accounting standards, then audits this.

- Earlier today, Minister Sousa and I met with the Auditor General to discuss the finalization of the 2015-16 Public Accounts.

- We did so because this year, the Auditor General provided the Province with a new interpretation of public sector accounting standards related to the accounting treatment of jointly-sponsored pension plans, which are subject to a range of interpretations.

- Despite our best efforts to try to resolve concerns raised by the Auditor General, the Province's professional accounting staff and the Auditor General continue to have differences in the interpretation of public sector accounting standards on this issue.

- The Public Sector Accounting Board has set up a task force to review the current accounting standards for retirement benefits. The Province will ensure that the task force is made aware of this area of difference in interpretation.

- In addition, Ontario will also be engaging an expert panel to support a full understanding of the basis and nature of the differences. The Province will consult individuals with a range of backgrounds and experience, including preparers, joint sponsors and auditors of public sector financial reports.

- To be clear, Ontario had followed the same pension accounting treatment for the past 14 years. The current Auditor General has accepted this treatment for the last two years, resulting in unqualified – or clean audit opinions.

- Three previous Auditors General have also accepted it. There has been no change to the relevant accounting standards over the past 14 years.

- In 2016 the C.D. Howe Institute, an independent research organization that assess the fiscal planning and reporting of governments in Canada, also commented positively on the financial reporting practices of Ontario relating to its fiscal reporting activities that include Public Accounts, the annual Budget and Estimates.

- To acknowledge the different interpretations and to ensure openness and transparency with respect to province's financial position, the government is releasing its unaudited financial statements.

- The government believes it is in the public interest to release its financial information. The government also believes it is in the public interest for the Auditor General to issue an audit opinion on Ontario's consolidated financial statements as soon as possible.

- The government regulated the treatment of pension assets in a manner that is consistent with the fiscal outcome proposed by the Auditor General. The impact of the change resulted in an additional $10.7 billion being added to the Province's net debt and accumulated deficit.

- Although these financial statements are unaudited, it is important to stress that the Province's financial results show that the government has once again beaten its deficit targets, and remains committed to achieving a balanced budget by 2017-18, and remain balanced in 2018-19.

- It is also important to stress that the two pension plans in question – the Ontario Public Service Employee's Union Pension Plan, and the Ontario Teachers' Pension Plan – are both healthy and well funded.

- Based on our respective positions at this time, we believe that this accounting matter would benefit from additional discussions, information and consideration.

- Our officials and professional accounting staff will continue to work with the Auditor General’s office on this accounting issue related to pension assets so that we can table the audited Public Accounts with the Lieutenant Governor in Council as soon as possible.

Minister Sousa's Statement – Ontario's Fiscal Outlook

(TBC input by MOF comms)

The government is dedicated to a fiscally sound approach to managing the Province's finances.

As outlined in the 2016 Budget, the government is committed balancing the budget in 2017-18 and remaining balanced in 2018-19.

The 2016–17 First Quarter Finances also confirmed that the government is projecting a deficit of $4.3 billion in 2016–17, unchanged from the 2016 Budget forecast.

The Ontario economy continues to grow in a challenging global environment. In fact, Ontario posted higher real GDP growth in the first quarter of 2016 than Canada, the United States, and all other G7 countries.

The government's path to a balanced budget is being achieved through responsible fiscal management, which involves:

- Managing growth in program spending, and
- Maintaining the integrity of Provincial revenues.

At the same time, the government continues to make investments in the economy, its people, and a healthy, clean and prosperous low-carbon future.

Key messages – post release

- The government has released its 2015-16 Annual Report and unaudited Consolidated Financial Statements to ensure transparency with respect to the province's financial position.

- To align with the Auditor General, a regulation has been filed to prescribe the accounting treatment for pension assets for the 2015-16 financial statements.

- The regulation resolves the outstanding accounting issue for this year in a manner that is consistent with the fiscal outcome proposed by the Auditor General.

- This marks the seventh year in a row that Ontario has beaten its deficit target.

- Ontario remains committed to balancing the budget in 2017-18, while continuing to invest in the priorities that matter to the people of Ontario, such as healthcare, education and infrastructure.

If pressed about why a regulation was needed:

- Based on their professional judgement, the Province's professional accounting staff could not agree with the Auditor General's interpretation of Public Sector Accounting Standards as it relates to jointly-sponsored pension plans.

- A regulation was required to allow the public service to sign-off on the impact of the Auditor General's view on accounting for pension assets in Ontario's 2015-16 financial statements.

- The Province has applied consistent accounting treatment for these plans for the past 14 years, and has consistently received unqualified, or clean audit opinions from the Auditor General, without exception.

- To remain clear and transparent, we have reflected the Auditor General's view of the issue for this year. In order to do so, the government regulated the treatment of the pension assets for 2015-16.

- This is an accounting issue. However we remain optimistic that by studying the issue further and gathering third-party professional opinions, we will be able to reach an agreement on the treatment with the Auditor General in the coming months.

News Release

Last Year's Ontario Deficit $3.5 Billion Lower Than Projected

Province Remains Committed to Balance the Budget Next Year in 2017-18

News

Ontario's Annual Report and unaudited Consolidated Financial Statements for 2015-16 show Ontario's deficit is $3.5 billion lower that the $8.5 billion projected in the 2015 Budget, with the province's deficit for 2015-16 at $5 billion. This is $0.7 billion lower than the $5.7 billion in the 2016 Budget interim projection.

This marks the seventh year in a row that Ontario has beaten its deficit target. Ontario remains committed to balancing the budget in 2017-18, and remain balanced in 2018-19.

In preparing the Annual Report and unaudited Consolidated Financial Statements, the Province's professional accounting staff and the Auditor General have engaged in discussions regarding the treatment of pension assets. Pension accounting requires the application of professional judgment. Despite best efforts to resolve concerns, the Province's professional accounting staff and the Auditor General continue to have differences of opinion about the appropriate application of public sector accounting standards as they relate to pension accounting. This ongoing discussion has delayed the tabling of the Province's financial statements.

A regulation was made to allow the public service to sign-off on the impact of the Auditor General's view on accounting for pension assets in Ontario's 2015-16 financial statements. The Province has filed a time-limited regulation, which legislates the accounting for pension assets of two jointly-sponsored pension plans for 2015-16 in a manner that is consistent with the fiscal outcome proposed by the Auditor General.

To ensure openness and transparency, the government is releasing its unaudited financial statements to provide the public with the Province's financial position.

The unaudited statements show the government is beating its deficit targets through sound financial management. The Government of Ontario currently has the lowest program spending per capita among Canadian provinces and ranks the lowest among provinces in terms of public-sector employees per capita. At the same time, Ontario's economy continues to grow. Over the last two years, Ontario's economy has grown by 6.1 per cent. Last year, growth was double the national average. In the first quarter of this year, Ontario's growth was greater than that of the United States and the G7.

The Public Sector Accounting Board has set up a task force to review the current accounting standards for retirement benefits. The Province will ensure that the task force is made aware of this area of difference in interpretation. In addition Ontario will also be engaging an expert panel to support a full understanding of the basis and nature of the differences. The Province will consult individuals with a range of backgrounds and experience, including preparers, joint sponsors and auditors of public sector financial reports.

Responsible financial management is part of the government's economic plan to build Ontario up and deliver on its number-one priority to grow the economy and create jobs. The four-part plan includes helping more people get and create the jobs of the future by expanding access to high-quality college and university education. The plan is making the largest infrastructure investment in hospitals, schools, roads, bridges and transit in Ontario's history and is investing in a low-carbon economy driven by innovative, high-growth, export-oriented businesses. The plan is also helping working Ontarians achieve a more secure retirement.

QUOTES

“The Annual Report and unaudited Consolidated Financial Statements for 2015-16 show that our government’s plan to achieve fiscal balance next year in 2017-18 is working. We will continue to build on our track record of responsible fiscal management, while investing in vital government services such as health care, education and infrastructure that are important to the people of Ontario.”

- Liz Sandals, President of the Treasury Board

“Our government is dedicated to a fiscally sound approach to managing the Province’s finances. The Ontario economy continues to grow in a challenging global environment. In fact, Ontario posted higher real GDP growth in the first quarter of 2016 than Canada, the United States, and all other G7 countries. The government’s path to a balanced budget next year is being achieved through responsible fiscal management, which involves managing growth in program spending, and maintaining the integrity of Provincial revenues.”

- Charles Sousa, Minister of Finance

QUICK FACTS

- The 2015-16 unaudited Financial Statements compare Ontario's actual performance to what was planned in the 2015 Budget.

- Ontario is a recognized leader in financial reporting. The C.D. Howe Institute, an independent research organization that assesses the fiscal planning and reporting of governments in Canada, has commented positively on the financial reporting practices of Ontario, including Public Accounts, the annual Budget and Estimates.

- The unaudited Financial Statements are prepared by the Government of Ontario in accordance with legislation and the accounting principles for governments recommended by the Public Sector Accounting Board (PSAB) of the Chartered Professional Accountants of Canada (CPA Canada).

Newsroom Backgrounder

Release of Ontario's 2015-16 Financial Statements

Public Accounts are part of the Ontario government's annual fiscal cycle and are a legislative requirement under the Financial Administration Act. The President of the Treasury Board submits the Public Accounts for each fiscal year to the Lieutenant Governor in Council on or before the 180th day after the end of the fiscal year. Public Accounts include the Province's annual report and consolidated financial statements. These documents provide financial highlights of the past fiscal year compared to the Budget plan and report on performance in priority areas.

The consolidated financial statements are prepared by the Government of Ontario in accordance with legislation and the accounting principles for governments recommended by the Public Sector Accounting Board (PSAB). PSAB independently establishes accounting standards for the public sector in Canada.

These accounting standards are common, nationally recognized standards used by governments across Canada in their financial reporting

PSAB standards specify how transactions and other events are to be recognized, measured, presented and disclosed in a public sector entity's financial statements.

The objective of PSAB standards is to meet the needs of the users of financial statements by providing the information needed for accountability and decision-making.

In preparing the Annual Report and Consolidated Financial Statements for 2015-16, professional public servants and the Auditor General engaged in discussions regarding the accounting treatment of pension assets.

The Ontario Public Service Employees Union Pension Plan (OPSEUPP) and the Ontario Teachers' Pension Plan (OTPP) are jointly-sponsored pension plans where the Government of Ontario is a co-sponsor.

The assets of OPSEUPP and OTPP are held in trust for the beneficiaries of the plans. The plans are co-managed by the sponsors, and decisions regarding benefits and contributions require negotiation and agreement between them.

During the 2015-16 Public Accounts audit, the Auditor General raised some concerns with regard to Ontario's accounting practices related to pension assets for the OPSEUPP and OTPP plans.

Pension accounting requires the application of professional judgment. Despite best efforts to try to resolve concerns, the Province's professional accounting staff and the Auditor General continue to have differences of interpretation of PSAS standards as they relate to accounting for pension assets.

Given the differences in interpretation of the application of PSAB standards for the OTPP and OPSEUPP pension assets, Ontario approved a time-limited regulation which legislates the accounting for pension assets of jointly-sponsored pension plans for the 2015-16 Public Accounts. This is consistent with the fiscal outcome proposed by the Auditor General on September 13.

The *Financial Administration Act* allows Treasury Board, subject to the approval of the Lieutenant Governor in Council, to make regulations respecting the accounting policies and practices to be followed regarding the preparation of the consolidated financial statements of the Province.

The effect of the regulation is to reflect the fiscal impact of the Auditor General's position pending further review and analysis on this accounting matter. The change in accounting treatment is not a reflection on the funding status of the plans, or the quality of financial reporting by the Province. The impact of the change resulted in an additional $10.7 billion being added to the Province's net debt and accumulated deficit.

Prior to this change, Ontario had followed the same pension accounting treatment for all of the past 14 years. This had been accepted by the current Auditor General for the last two years. It has also been accepted by three previous Auditors General. There has been no change to the relevant accounting standards over the past 14 years.

The Auditor General has not issued an audit opinion on the province's financial statements for 2015-16. However the government is releasing these unaudited financial statements to ensure openness and transparency with respect to province's financial position, and because it has passed the deadline to table the Public Accounts with the Lieutenant Governor in Council. The government believes it is in the public interest to release its financial information. The government also believes it is in the public interest for the Auditor General to issue an audit opinion on Ontario's consolidated financial statements so that it can table the Public Accounts with the Lieutenant Governor in Council.

Openness and Transparency

As part of its commitment to Open Government, digital technology was used for the first time to visualize the province's financial information in an interactive and easy to understand way. This year, Ontario is further increasing the openness and transparency of the Annual Report and unaudited Consolidated Financial Statements by:

- Creating new data visualizations, including interactive bar charts and interactive data tables
- Releasing data sets through Ontario's Open Data Catalogue, including data on government organizations, government business enterprises and Trusts

Improving Outcomes for Ontarians

As the Province's 2015-16 Financial Statements show, the government remains committed to balancing the budget in 2017-18, while continuing to invest in the priorities that matter to the people of Ontario, such as healthcare, education and infrastructure.

Health Care

Building on Ontario's Patient's First: Action Plan, the government continued transforming Ontario's health care system in 2015-16 to become more patient-centred and focused on better access to care, quality and value by:

- Increasing investment in home and community care by five per cent annually: $250 million in 2015-16, for a total of $750 million over three years.

- Increasing the hourly wages of publicly funded personal support workers (PSWs) caring for patients at home and in the community by $1.50 per hour in 2015-16 to at least $15.50 per hour, in the second of three annual increases totalling up to at least $16.50 per hour by April 1, 2016. Investments in PSWs, like an increase in the hourly wage are part of the government's effort to attract and retain the best PSWs in the home and community care sector.

- Appointing Ontario's first-ever Patient Ombudsman who will help address needs of patients who have not had their concerns with health care organizations resolved through existing complaint mechanisms.

Advanced Education and Skills Development

In 2015-16, the Ontario government made progress on its plan to help more people get and create the jobs of the future by continuing to invest in student financial assistance

and expand access to high quality college and university education, resulting in 67 per cent of adults in Ontario obtaining a postsecondary degree, diploma or certificate – higher than the average of any OECD country.

Over the past 12 years, government investments have resulted in more than double the number of students qualifying for aid, while enrolment has increased by 38 per cent.

In 2015, 67 per cent of adults in Ontario had a postsecondary degree, diploma or certificate – higher than the average of any OECD country.

The government is also transforming Ontario's student aid system to help thousands of students obtain greater access to advanced education and have lower levels of student debt upon graduation. For students from lower-income and many middle-income families, it would mean free tuition. These changes will start in the 2017-18 academic year.

Childcare, Elementary and Secondary Education

The government has made gains in building and supporting an integrated early-years, elementary and secondary education system. This includes increasing funding for schools and licenced child care, the establishment of the Ontario Early Years Policy Framework and implementation of Full-Day Kindergarten.

In 2015-16, the government built on this success by:

- Increasing wages for early childhood educators and other child care professionals in licensed child care settings by providing a $1 per hour wage increase for eligible child care workers bringing the total wage increase up to $2 per hour, plus benefits.

- Increasing the five-year high school graduation rate to 85.5 per cent – the highest level in the province's history.

- Doubling the funding for school renewal projects to $500 million in 2015-16 to ensure our students are benefitting from safe, modern and efficient learning environments.

Infrastructure

Ontario is making the largest investment in public infrastructure in the province's history – about $160 billion over 12 years, starting in 2014-15. Planned investments are supporting over 110,000 jobs, on average, every year across the province.

In 2015-16, the Province continued to invest in hospitals, schools, roads, bridges and transit, including:

- Completing construction of the $1.4 billion Right Honourable Herb Gray Parkway in Windsor–Essex, which provides an express route to the country's busiest land border crossing.

- Ongoing construction of the Eglinton Crosstown Light Rail Transit line, which will offer fast, efficient service and improve travel for commuters.

- Providing small, rural and northern municipalities with funding to build and repair core infrastructure through the Ontario Community Infrastructure Fund.

- Completing the new Humber River Hospital, which offers a comprehensive range of acute care services and support for inpatient and outpatient hospital programs.

- Ontario is making $575 million investment to repair and renew schools across the province in 2016-2017.

Staying on the Path to Balance

The government is working towards a balanced budget through Program Review, Renewal and Transformation (PRRT), a government-wide approach to multi-year planning and budgeting that puts a heightened focus on evidence and outcomes to inform funding allocations.

But PRRT is about more than just savings targets – it is about doing government differently – improving outcomes for Ontarians while freeing up resources to reinvest in key government priorities, such as health care, education and infrastructure.

Examples of successful PRRT initiatives include:

- Improving the sustainability of the Ontario Drug Benefit Program and patients' access to drugs by making the program more efficient and effective. The changes saved approximately $100 million in 2015-16 and will enable over $200 million in savings annually when fully implemented.

- Changing the Second Career program by removing client targets for service providers while ensuring funding support for eligible clients. This change will generate approximately $40 million per year and will allow the government to invest in the Canada-Ontario Jobs Grant and a renewed Ontario Youth Job strategy.

- Reducing the government's office footprint by over 820,000 rentable square feet, which generated approximately $24 million in savings in 2015-16.
- Achieving approximately $56 million in savings through the consolidation of data centres, early vendor payments and lower contract costs – including for software and IT consulting services, laboratory supplies and security services.
- Achieving $7 million in savings from contracts related to government cell phone plans and toll free lines.

Top Media Qs&As

Releasing Unaudited Financial Statements

1. It sounds to me like the government is yet again fighting with the Auditor General. What do you say to this?

This is not true from the government's perspective. And let me explain why: The government respects the oversight and recommendations provided by all independent officers of the Legislative Assembly of Ontario, including the Auditor General. And in this case for this set of final accounts, while one specific issue is being sorted through, we actually are agreeing with the Auditor General's numbers.

Given these differences of opinion, the Province filed a time-limited regulation, which legislates the accounting for pension assets of jointly-sponsored pension plans for the 2015-16 Public Accounts. The government believes this is consistent with the fiscal outcome proposed by the Auditor General.

We believe that this accounting matter would benefit from additional discussions, information and consideration.

The Public Sector Accounting Board has set up a task force to review the current accounting standards for retirement benefits. The Province will ensure that the task force is made aware of this area of difference in interpretation.

In addition, Ontario will also be engaging an expert panel to support a full understanding of the basis and nature of the differences. The Province will consult individuals with a range of backgrounds and experience, including preparers, joint sponsors and auditors of public sector financial reports.

2. Why are you releasing your financial statements without the Auditor approving them?

Earlier today I met with the Auditor General to discuss the 2015-16 Public Accounts. I did so because this year, the Auditor General presented the province with a new interpretation of public sector accounting standards as it relates to an accounting issue – the treatment of pension assets.

Ontario has followed the same pension accounting treatment for the past 14 years. This had been accepted by the current Auditor General for the last two years, resulting in unqualified – or clean audit opinions. It has also been accepted by three previous Auditors General. There has been no change to the relevant accounting standards over the past 14 years.

In preparing the Annual Report and Consolidated Financial Statements, the Province's professional accounting staff and the Auditor General have engaged in discussions regarding the treatment of pension assets – which is subject to a range of interpretations.

Despite best efforts to try to resolve concerns, the Province's professional accounting staff and the Auditor General continue to have difference intepretations.

To remain clear and transparent, the government exercised its statutory authority to regulate the treatment of this particular issue for 2015-16. The government regulated the treatment of pension assets in a manner that is consistent with the fiscal outcome proposed by the Auditor General.

The government is now releasing its financial statements to ensure transparency with respect to province's financial position.

The Public Sector Accounting Board has set up a task force to review the current accounting standards for retirement benefits. The Province will ensure that the task force is made aware of this area of difference in interpretation.

In addition, Ontario will also be engaging an expert panel to support a full understanding of the basis and nature of the differences. The Province will consult individuals with a range of backgrounds and experience, including preparers, joint sponsors and auditors of public sector financial reports.

3. If the Public Sector Accounting Board is studying this issue, are other Canadian jurisdictions dealing with this as well?

No other province has similar governance frameworks for their jointly-sponsored pension plans that are in a surplus position.

<u>British Columbia</u>

Pension assets for BC's jointly sponsored pension plans are not reported on British Columbia's consolidated financial statements. The governance framework in BC is different than Ontario's and would appear to justify different accounting treatment under PSAB standards.

Specifically, the Boards of Trustees of the BC Plans, unlike their Ontario counterparts, are permitted to use ongoing surpluses through the amendment of the Plan rules governing contributions and benefits, so long as the amendment of the Plan rules:

- Does not result in an increased contribution rate for employees or employers
- Does not create or increase an unfunded liability in the Plan, and
- Is otherwise compliant with applicable legislation and the Trustees' fiduciary obligations.

In contrast, the governance arrangements with respect to the Ontario Teachers' Pension (OTPP) provide that the Partners that sponsor that arrangement, being the Minister of Education and the OTF, may use ongoing surpluses as they believe appropriate, subject only to the Ontario *Pension Benefits Act.* The Board of Directors of the OTPP, being the OTPP administrator for purposes of the PBA, has no authority with respect to the use of Plan surpluses.

The OPTrust governing documents also stipulate that it is the Sponsors of the OPTrust, being the Province of Ontario and OPSEU, who have the authority to utilize ongoing Plan surpluses. OPTrust's Board of Trustees, being the OPTrust administrator for purposes of the Ontario PBA, has no authority to utilize ongoing Plan surpluses.

<u>New Brunswick</u>

As we understand it, New Brunswick converted four of its pension plans into what it refers to as target plans.

In the prior year, New Brunswick accounted for these plans as defined contribution plans, meaning it expensed the contributions to the plan and did not reflect its share of the net asset or net liability of the plan in its financial statements. The Auditor General of New Brunswick issued a qualified opinion on those financial statements.

In the 2015-16 fiscal year, New Brunswick changed its accounting for those plans to account for them as defined benefit plans and the Auditor General of New Brunswick issued a clean opinion.

Ontario has always accounted for its share of its jointly sponsored plans as defined benefit plans.

4. What is the professional judgment that exists out there to interpreting jointly-sponsored pensions?

A key consideration in exercising professional judgment is if the resulting financial information is both relevant and reliable and gives a fair presentation of the transaction.

This area of pension accounting is particularly complex, and it is important to consider the specific facts and circumstances when assessing the appropriate accounting treatment.

In this regard, the Province has assessed the appropriate accounting treatments based on the governance frameworks applicable to Ontario's jointly-sponsored pension plans. It would be inappropriate to assume that the governance frameworks of plans in other jurisdictions would necessarily result in the same accounting treatment.

5. Are you saying the Auditor General is misinterpreting Public Sector Accounting Board standards?

The Auditor General's responsibility is to conduct an independent audit and provide her audit opinion based on her own professional judgment. A difference of opinion on the interpretation of accounting standards is not unique to this situation. Other jurisdictions have also experienced differences of opinion between preparers and auditors on complex accounting matters.

Over the coming months we will undertake activities to further assess the application of PSAB standards to Ontario's accounting for jointly-sponsored pension plans. In the meantime, it remains the professional judgment of the professional staff that the accounting treatment in place since 2001 continues to be appropriate.

6. If the Auditor General had agreed with you, what would the differences have been in the deficit or net debt?

According to the Province's interpretation of PSAB, the annual deficit would be $1.5 billion lower (at $3.5 billion), and net debt would be $10.7 billion lower.

7. **The province has been treating pensions the same way since 2001. When did the Auditor General tell you about this new accounting treatment?**

   We only learned that the Auditor General was challenging the accounting treatment of the past 14 years very late in the audit. On September 13th the Auditor General communicated her position that the Province should write off the entire pension asset amount of $10.7 billion from the balance sheet.

8. **What does this mean for the Fall Economic Statement?**

   We're in the middle of completing the fiscal plan. We need to account for all financial considerations before we can finalize it. These results will be included as part of that process. **(TBC MOF)**

9. **Is this Public Accounts or not?**

   From a content perspective, the unaudited results being released are the same as those which would be reported in the Public Accounts, including the information in the supplementary volumes.

   The only difference is that the Auditor's Opinion is not included in the Annual Report.

10. **Were you aware of this before the Speech from the Throne? Had you known about this, would that have changed the government's commitments announced in the speech?**

    Response TBC

11. **Why are you doing this today, four days after you announced the delay?**

    Despite the outstanding difference in opinion between the Auditor General and the Province's professional accounting staff with regards to pension accounting, it is important to ensure that the public interest is served by timely and transparent reporting of the government's results for 2015-16 compared to Budget.

    Although the results being released are clearly labelled as unaudited, we look forward to tabling the Public Accounts once the Auditor General provides her opinion.

12. On what exactly do you disagree with the Auditor?

Both the Auditor General and the Province agree that the Province's results should reflect PSAB's standard on pension accounting. It is just a difference in interpretation of those standards which is at the heart of the issue.

The nature of the difference in interpretation is disclosed in Note 18 of the unaudited consolidated financial statements.

13. If you think you're right, why would you change the numbers?

To clarify, the 2015-16 results are based on legislation and PSAB. Although they reflect the same fiscal results which would be presented according to the Auditor General's proposed interpretation of the standards, the results as presented do not represent our professional staff's interpretation of PSAB standards for jointly sponsored pension plans.

By adopting the Auditor General's interpretation, the financial statements could be finalized and signed off in order to complete the financial reporting process and enable Public Accounts to be completed. Unfortunately, the Auditor General's audit opinion remains outstanding at this time so the Public Accounts have yet to be finalized**.**

14. Was there something wrong with the accounting rules that the government was using before?

No.

Prior to this change, Ontario had followed the same pension accounting treatment for the past 14 years. This had been accepted by the current Auditor General for the last two years. It has also been accepted by three previous Auditors General. There has been no change to the relevant accounting standards over the past 14 years.

That said, the Province believes that this complex accounting area would benefit from additional discussion and analysis. Over the coming months, efforts will be made to engage experts to assist with further analysis of the application of PSAB to accounting for jointly-sponsored pension plans on the Province's books.

15. Why hasn't the Auditor General raised this with you in the past two years?

I cannot speak for the Auditor General. Please refer your questions to the Auditor General's Office.

16. What is the government trying to hide by releasing unaudited books?

We are releasing our unaudited financial statements to ensure openness and transparency with respect to the Province's financial position. Our unaudited financial statements reflect the same fiscal outcome that would result from the Auditor General's proposed pension accounting treatment.

Although these statements are unaudited, it's important to stress that the Province's financial results show that the government has once again beaten its deficit targets and remains committed to achieving a balanced budget by 2017-18, and remaining balanced in 2018-19.

As part of the government's initiative to enhance transparency and accountability, additional disclosure of five-year trends is now provided in the Annual Report. The increased disclosure and discussion on five-year trends is in line with recommended disclosure practices of the Public Sector Accounting Board and enhances the quality of financial reporting to the public, Legislature and other users to better meet their transparency and accountability needs.

In addition to the disclosure in the Annual Report, the government is also making available supplementary information through online data visualizations.

17. Are you fudging the books to try and show your finances are better than they really are – is that why the AG won't sign off?

No.

We are releasing our Financial Statements to ensure openness and transparency with respect to the province's financial position. In fact, we have implemented legislation that allows our officials to sign off in a way that is consistent with the fiscal outcome proposed by the Auditor General.

Prior to this change, Ontario had followed the same pension accounting treatment for the past 14 years. This had been accepted by the current Auditor General for the

last two years. It has also been accepted by three previous Auditor Generals. There has been no change to the relevant accounting standards over the past 14 years.

Although these statements are unaudited, it's important to stress that the Province's financial results show that the government has once again beaten its deficit targets and remains committed to achieving a balanced budget by 2017-18, and remaining balanced in 2018-19.

18. Is this even legal – are you in contempt of the house by releasing your financial statements before you table them in the Legislature?

We are not releasing Public Accounts, we are releasing our financial statements to ensure openness and transparency with respect to province's financial position.

The government believes it is in the public interest to release its financial information. The government also believes it is in the public interest for the Auditor General to issue an audit opinion on Ontario's finances so that we can submit the Public Accounts to the Lieutenant Governor in Council and table them as soon as possible.

19. Has this ever happened before in Ontario? Anywhere else in Canada?

Ontario has a strong track record of producing high-quality financial reports on a timely basis, and meeting its statutory tabling requirements. Ontario has had clean audit opinions for the past 22 years.

That said, differences of opinion between preparers and auditors do occasionally occur, and have occurred in other jurisdictions in Canada.

20. How are we supposed to trust your numbers if the Auditor General hasn't approved them?

Although the financial results being presented are labelled 'unaudited', they reflect the basis of reporting for pensions that the Auditor General proposed.

Once the Auditor General has issued her Audit Opinion, the Public Accounts will be finalized and tabled with the Lieutenant Governor in Council.

21. So what happens next? When will you table the actual Public Accounts?

The government will continue to work with the Auditor General to complete tabling of the 2015-16 Public Accounts.

The Public Sector Accounting Board has set up a task force to review the current accounting standards for retirement benefits. The Province will ensure that the task force is made aware of this area of difference in interpretation.

In addition, Ontario will also be engaging an expert panel to support a full understanding of the basis and nature of the differences. The Province will consult individuals with a range of backgrounds and experience, including preparers, joint sponsors and auditors of public sector financial reports.

22. Does the change in accounting regarding the assets of the Teachers' or OPSEU pensions plans mean those plans might be financially threatened?

Absolutely not. This issue relates solely to the Province's reported financial results and the Province's historical practices of reporting pension assets.

The two pension plans in the Ontario Public Service – which are of the defined benefit type – are healthy and well-funded.

The OPSEU Pension Plan is fully funded with a small reserve of surplus assets standing to the credit of the joint-sponsors, while the Ontario Teachers' Pension Plan has a funding surplus of $13.2 billion.

23. You hired outside experts to give you a third-party accounting opinion, but you paid to get this advice. Didn't they just tell you what you wanted to hear?

The Province pays for services provided by external advisors – an accounting opinion is no different.

In providing an accounting opinion when the auditor has already provided their view, the professional standards require the firm providing the opinion confirm that the facts upon which the opinion is issued are complete so that the firm issuing the opinion is considering the same facts that the auditor is considering.

This process was followed by the Province.

24. The Auditor General has implied your Provincial Controller is in a position of conflict because she used to work for Deloitte. How do you respond?

All employees that are hired into the Ontario Public Service swear two oaths, an Oath of Allegiance and an Oath of Office. These oaths affirm that public servants will faithfully discharge their duties, and comply with all laws and confidentiality obligations.

25. The Auditor General says she raised this issue with you months ago. Why haven't you fixed this problem by now?

Until June, the Auditor General's audit plan for the 2015-16 Public Accounts only included a planned review of economic assumptions for pension plans. There were no significant issues raised by the Auditor's staff following their work on the assumptions.

The Province responded upon receiving the Auditor General's request for an actuarials valuation by procuring resources to complete the AG's request. The results were shared with the Auditor General's staff and only after several discussions did it become apparent that the Auditor General was challenging the accounting treatment that the Province had been following for the past 14 years.

On September 13th, the Auditor General communicated her position that the entire balance of pension assets ($10.7 billion) should be written off the Province's books. Despite our best efforts, the Province's professional accounting staff have not yet been able to reach a common interpretation of PSAB standards for the Province's jointly sponsored pension plans.

In light of the ongoing disagreement on interpretation of accounting standards, and the need to release the Province's financial results on a timely basis, Cabinet approved a regulation to allow for the results of the Province to be reported on a basis which reflects the fiscal outcome proposed by the Auditor General with respect to the treatment of the pension asset in question.

26. If you say you're open and transparent, why didn't you invite the Auditor General to your media technical briefing?

The technical briefing was for the purposes of updating media and members of the Opposition and the third party. However it was held in a public space in a government building, and anyone was free to attend.

27. Is the government still committed to balancing the budget by 2017-18?

Yes.

The Province's financial results show that the government has once again beaten its deficit targets and remains committed to achieving a balanced budget by 2017-18 and remaining balanced in 2018-19.

28. The financial results show that the net debt and accumulated deficit has ballooned by $10.7 billion? How did this happen and what are you doing to address it?

This year, the Auditor General presented the province with a new fiscal interpretation of public sector accounting standards as it relates to the treatment of pension assets.

After careful consideration, the Province agreed to adopt the Auditor General's fiscal interpretation. The government made a regulatory amendment to allow us to amend our accounting policies for the 2015-16 Public Accounts in order to comply with the Auditor's fiscal interpretation. The impact of the change resulted in an additional $10.7 billion being added to the net debt and accumulated deficit.

Despite this change, and as our results show, the government has once again beaten its deficit targets and remains committed to achieving a balanced budget by 2017-18, and remaining balanced in 2018-19.

Total debt remains unchanged by the pension adjustment.

The change in the Province's accounting treatment for pension assets of jointly sponsored pension plans, while increasing net debt, has no impact on the Province's borrowing requirements.

29. How can the accumulated deficit and net debt increase by $10.7 billion without causing an increase in total debt?

Total debt is cash based – it is how much money we've borrowed and is owed to our creditors.

Net debt takes into account the difference between our financial assets and liabilities, whether they are cash or not.

The province has changed the valuation of the net pension liability by reducing the pension assets by $10.7 billion, but because there is no cash involved in that valuation, the total debt does not change.

30. Should taxpayers be concerned about the rise in net debt and accumulated deficit?

No.

The Province's financial results show that the government has once again beaten its deficit targets and remains committed to achieving a balanced budget by 2017-18, and remaining balanced in 2018-19.

The treatment of pension assets is an accounting issue. In fact, the Public Sector Accounting Board has initiated a project to review pension accounting standards. PSAB will be seeking input from governments, auditors and other stakeholders to ensure that accounting standards support transparency and accountability and meet user needs. Ontario will participate in this national discussion.

Ontario will also be engaging the expert accounting community to support a full understanding of the basis and nature of the differences. The Province will consult individuals with a range of backgrounds and experience, including preparers, joint sponsors and auditors of public sector financial reports.

31. How does the Province plan to reduce its net debt-to-GDP ratio to its pre-recession level of 27 per cent?

The first step in returning to the targeted 27 per cent net debt-to-GDP ratio is to balance the budget. Once the budget is balanced, debt will continue to rise by the difference between the annual cash investment in capital and the amortization of these investments. These investments will contribute to the debt rising at a slower rate than the increase in the Province's GDP, over time lowering the net debt-to-GDP ratio to the government's 27 per cent target.

32. What is the difference between "Public Accounts" and "Financial Statements"?

Our financial statements include the Province's annual report and unaudited consolidated financial statements. These documents provide financial highlights of the past fiscal year compared to the Budget plan and report on performance in priority areas.

The full Public Accounts would also include these components, as well as a report by the Auditor General containing an audit opinion.

The full Public Accounts will be tabled with the house once the Auditor General's audit opinion is available.

33. You say you're releasing your financial results in the public interest. Aren't you creating confusion by having two sets of books – yours and the AG's?

The government passed a regulation to allow us to amend our accounting policies in order to be consistent with the fiscal outcome proposed by the Auditor General. Therefore there is only one set of books.

Our officials continue to work with the Auditor General's office. In the meantime, we felt it was in the public interest to release our unaudited financial statements.

34. How different will the Auditor General's numbers be?

There is no difference in the unaudited financial statements released and the Auditor General's view of the results for the Province for fiscal 2015-16. The government passed a regulation to allow us to amend our accounting policies in order to be consistent with the fiscal outcome proposed by the Auditor General.

35. Why didn't you just release Public Accounts last week to meet your legislated timelines?

As stated in the House there was a delay in tabling the Public Accounts because of ongoing discussions with the Auditor General to work through an accounting issue related to pension assets.

Our officials have continued to work with the AG's office to finalize the 2015-16 Public Accounts. In the meantime, we felt it was in the public interest to release our unaudited financial statements in the spirit of transparency and accountability.

36. Clearly the government is in a spat with the Auditor General – releasing unaudited financial statements seems like a slap in the face. What does this say about your relationship with the Auditor General?

The government respects the oversight and recommendations provided by all independent officers of the Legislative Assembly of Ontario, including the Auditor General. As a government, we value our important and ongoing relationship with each of these officers.

Our officials continue to work with the Auditor General's office to resolve this accounting issue related to pension assets. In the meantime, we felt it was in the public interest to release our unaudited financial statements.

37. The Auditor General claims you have been using creative accounting to overstate your numbers – how do you respond to that?

That is simply not true.

The government passed a regulation to allow us to amend our accounting policies in order to be consistent with the Auditor General's assessment of our treatment of pension assets. This reflects the fiscal outcome proposed by the Auditor General.

Prior to implementing this change, the government had followed the same pension accounting treatment for the past 14 years. This had been accepted by the current Auditor General for the last two years – resulting in unqualified (clean) audit opinions. It has also been accepted by three previous Auditors General.

There has been no change to the relevant accounting standards over the past 14 years.

That said, given the particularly complex area of pension accounting, further analysis of the impact of PSAB standards on the Province's books will be undertaken over the coming months.

38. So at the end of the day if your numbers are the same as the Auditor General's what's the issue?

Professional accounting staff and the Auditor General have a difference of interpretation as it relates to the application of public sector accounting standards to pension assets resulting from jointly-sponsored pension plans.

The government passed a regulation to allow us to amend our accounting policies in order to be consistent with the fiscal outcome proposed by the Auditor General.

The Auditor General has declined to issue an opinion on the financial statements. In the absence of the Auditor's opinion, the Province is not able to table the Public Accounts as required by law.

39. What's the difference between "audited" and "unaudited" financial results?

In practice, there should be no difference between audited and unaudited results.

An independent audit of an organization's financial statements provides independent assurance that the results fairly represent the financial position of the organization, and that those results are in accordance with generally accepted accounting principles.

The Province's unaudited financial statements include a Statement of Responsibility. This statement describes how the financial report is prepared, and attests to the government's responsibility for the objectivity and integrity of the consolidated financial statements.

The government also attests to its responsibility for maintaining appropriate systems of internal control. The systems support the integrity and completeness of the financial information reported.

40. What's the difference between a "qualified" and "unqualified" audit opinion?

Audit reports represent an auditor's professional opinion on whether an organization's financial position and results of its operations are presented fairly in its financial statements.

An unqualified, or clean opinion, is a judgment that an organization's financial records and statements are fairly and appropriately presented.

A qualified opinion indicates an auditor has concerns with the financial information. Those concerns could include things like the availability of sufficient information for users to make an informed decision, or the organization's reporting in accordance with public sector accounting standards.

In this case the Auditor General has chosen not to issue an opinion at all – either unqualified or qualified.

41. Why didn't the Auditor General issue an audit opinion? Is this even legal?

Despite best efforts to try to resolve concerns, the Province and the Auditor General continue to have differences of opinion.

The government passed a regulation to allow us to amend our accounting policies in order to be consistent with the Auditor's assessment of our numbers. This reflects the fiscal outcome proposed by the Auditor General with respect to the treatment of the pension assets in question.

Our officials continue to work with the Auditor General's office to resolve this accounting issue. In the meantime, we felt it was in the public interest to release our unaudited financial statements.

The government also believes it is in the public interest for the Auditor General to issue and audit opinion on Ontario's consolidated financial statements as soon as possible.

42. What is a jointly-sponsored pension plan?

The Ontario Public Service Employee's Union Pension Plan (OPSEUPP) and Ontario Teachers' Pension Plan (OTPP) are jointly sponsored pension plans where the Government of Ontario is a co-sponsor.

The assets of both pension plans are held in a trust for the beneficiaries of the plans. The plans are co-managed by the sponsors, and decisions regarding benefits and contributions require negotiation and agreement between both parties.

During the 2015-16 Public Accounts audit, the Auditor General raised some questions about Ontario's past accounting practices related to pension assets for the OPSEUPP and OTPP plans.

Pension accounting requires the application of professional judgment. Despite best efforts to try to resolve concerns, the Province and the Auditor General continue to have differences of opinion.

43. How does the Auditor General want you to account for jointly-sponsored pension plans?

During the 2015-16 Public Accounts audit, the Auditor General expressed a different interpretation of the existing PSAB standards which would impact the accounting for pension assets of jointly-sponsored pension plans.

The Auditor General's view is that the government does not have legally enforceable right to unilaterally access the assets of these jointly sponsored pension plans. As such, with no agreement in place to the contrary, the Auditor General believes that the pension asset should be removed from the Province's balance sheet.

The government passed a regulation to allow us to amend our accounting policies in order to be consistent with the Auditor's assessment of our numbers. We believe that this reflects the fiscal outcome proposed by the Auditor General with respect to the treatment of the pension assets in question.

Our officials continue to work with the Auditor General's office to resolve this accounting issue. In the meantime, we felt it was in the public interest to release our unaudited financial statements.

General Media Qs&As

44. Is the government artificially balancing the budget through the one-time sale of assets like Hydro One?

The government's plan to eliminate the deficit does not depend on revenues from asset sales. Maximizing the value of these assets is part of the government's economic plan for Ontario. The net revenue gains from these transactions are helping the government to deliver on its plan by investing in infrastructure.

The government is committed to dedicating the net revenue gains from asset optimization activities, including the broadening of ownership of Hydro One and real estate sales to the Trillium Trust which will be used to invest in transit, transportation and other priority infrastructure projects under Moving Ontario Forward.

45. According to your numbers the deficit was down $3.5 billion from the $8.5 billion projected in last year's budget. Where did this money come from?

The improvement over plan was largely due to revenues that were $4.0 billion above the forecast of $124.4 billion.

This reflects higher than expected tax revenue and net revenues from the first phase of broadening Hydro One ownership, and stronger overall performance from government business enterprises. Maximizing the value of these assets is part of the government's economic plan for Ontario.

46. Does the fact that your deficit is $3.5 billion lower than projected mean you have more money to bring to the table in labour negotiations (e.g. doctors)?

It is important to point out that through the Public Accounts process, we are reporting on past performance, whereas labour negotiations impact future fiscal pressures.

Our government is committed to balancing the budget by 2017-18 and remaining balanced in 2018-19. We know we have difficult choices ahead, but people can be assured that their government will take a fair and balanced approach, one that protects and improves the services that matter to Ontarians.

Managing compensation costs is critical to balancing the budget, as over half of government spending goes to salaries and benefits in the Ontario Public Service (OPS) and the broader public sector (BPS).

Compensation costs must be addressed within Ontario's existing fiscal framework and all public-sector partners must continue to work together to control current and future compensation costs.

While continuing to work to achieve fiscal balance by 2017–18, the government is achieving significant results in priority areas for Ontarians.

We know there is more hard work ahead as we work towards a balanced budget, and we are confident that our partners will work with us to build Ontario up.

47. Will you still be able to balance the budget if Ontario's economy does not perform as strongly as you forecast? Even the FAO has said that your forecast is optimistic.

The government is committed to balancing the budget by 2017-18 and remaining balanced in 2018-19.

The Ontario economy continues to grow in a challenging global environment. In fact, Ontario posted higher real GDP growth in the first quarter of 2016 than Canada, the U.S. and all other G7 countries.

While uncertainty in the global economy has increased, along with increased volatility in global financial and currency markets, Ontario has a diversified economy – meaning the Province is well positioned to respond to changing global economic conditions.

With the economy expected to continue to grow, and the Province's ongoing commitment to transform government programs and services, Ontario is well positioned to achieve balance.

48. Are you cutting back on vital services like health care to balance the budget?

No. Through Program Review, Renewal and Transformation (PRRT), we are helping the government achieve better outcomes while also lowering costs.

The primary focus of this transformation is on ensuring that services are delivered

efficiently and in a way that effectively meets Ontarians' needs.

Through cross-ministry horizontal collaboration, we are taking focused action on major transformation and efficiency initiatives that will improve outcomes for Ontarians while helping to free up resources to reinvest in key priorities, such as health care and education.

To improve programs, we are moving towards a focus on evidence-based decision making – gathering and analyzing the best available information to improve how outcomes are identified and achieved across government.

PRRT is about more than just savings targets – it is about doing government differently – improving outcomes for Ontarians while freeing up resources to reinvest in key government priorities, such as health care.

49. This is the seventh year in a row that you have reported a deficit lower than forecast. Are you purposefully overestimating your deficit projections?

The government remains committed to balancing the budget by 2017-18 and is taking deliberate and responsible steps to achieve this goal.

The government recognizes that a fiscally sound approach to managing the Province's finances will provide the foundation for the long-term well-being and prosperity of Ontarians, and protect the public services that Ontarians rely on.

The government's fiscal projections are based on the best economic and fiscal information available at the time. They reflect a realistic and responsible plan to manage the Province's resources, while still protecting the vital services that Ontarians rely on.

Beating our deficit targets helps to keep interest on debt at a manageable level and protects future generations from rising interest costs, which could otherwise crowd out spending on government priorities.

50. You spent $433 million more than you budgeted for programs. How is your government keeping spending in check?

Program Review, Renewal and Transformation (PRRT) is helping the government achieve better outcomes while also lowering costs.

The primary focus of this transformation is on ensuring that services are delivered efficiently and in a way that effectively meets Ontarians' needs.

Through cross-ministry horizontal collaboration, we are taking focused action on major transformation and efficiency initiatives that will improve outcomes for Ontarians while helping to free up resources to reinvest in key priorities, such as health care and education, and by retaining the lowest per capita program spending in Canada.

51. How would the Ontario Rebate for Electricity Consumers impact Ontario's plans for a balanced budget? How will the province pay for this $1 billion rebate?

We have incorporated that expenditure into our fiscal plan starting in 2017. The government remains committed to balancing the budget by 2017-18 and remaining balanced in 2018-19 by continuing to invest in the economy, our people and a healthy, clean and prosperous low-carbon future. These investments will help enhance the public services that Ontarians rely on, as well as stimulate economic growth.

Questions related to the Ontario Rebate for Electricity Consumers should be referred to my colleague, the Minister of Energy.

52. How is the money spent on the now defunct Ontario Retirement Pension Plan reflected in Public Accounts? How does the government justify this expense?

TBC OPCD + MOF

53. Was the delay in tabling Public Accounts because you can't afford the childcare commitment and the electricity rebate?

No. Public Accounts is a retrospective document that compares Ontario's actual performance to what was planned in the Budget.

I have directed senior Treasury Board officials to work with the Office of the Auditor General to develop a plan and finalize the Public Accounts as soon as possible.

54. In 2003, your government brought in legislated timelines for Public Accounts, yet you're past the deadline and you still haven't tabled them. Why didn't you adhere to your own legislation?

We have been working with the Office of the Auditor General to try to come to an agreement on the treatment of pension assets.

The Public Sector Accounting Board has initiated a project to review pension accounting standards, and will be seeking input from governments, auditors and other stakeholders to ensure that accounting standards support transparency and accountability and meet user needs. Ontario will participate in this national discussion.

Ontario will also be engaging the expert accounting community to support a full understanding of the basis and nature of the differences. The Province will consult individuals with a range of backgrounds and experience, including preparers, joint sponsors and auditors of public sector financial reports.

In order to be transparent, and in the public interest, the government is releasing its Financial Statements in order to show the province's financial position.

We believe that this reflects the fiscal outcome proposed by the auditor with respect to the treatment of the pension asset in question.

55. Disagreement with officers of the legislature seems to be a recurring theme – at least with the Auditor General – what's your position on this? Does this government have a problem with officers of the legislature?

The government respects the oversight and recommendations provided by all independent officers of the Legislative Assembly of Ontario, including the Auditor General. As a government, we value our important and ongoing relationship with each of these officers.

56. Is the fact that you've changed your accounting standards an indication of financial mismanagement on the part of government?

No. The Province's financial results show that the government has once again beaten its deficit targets and is on track for a balanced budget by 2017-18 and remaining balanced in 2018-19.

Prior to implementing this change, the government had followed the same pension accounting treatment for the past 14 years. This had been accepted by the current Auditor General for the last two years. It has also been accepted by three previous

Auditors General. There has been no change to the relevant accounting standards over the past 14 years.

For 2015-16 financial statements, the government legislated its accounting treatment for pension assets of its jointly-sponsored pension plans.

57. Are you concerned about how the credit rating agencies will view this issue?

The Province's financial results show that the government has once again beaten its deficit targets and remains on track for a balanced budget by 2017-18 and remaining balanced in 2018-19.

Our government remains committed to balancing the budget in 2017-18. At the same time, we will continue to invest in vital government services, such as health care, education and infrastructure that are important to the people of Ontario.

In 2016 the C.D. Howe Institute, an independent research organization that assess the fiscal planning and reporting of governments in Canada, also commented positively on the financial reporting practices of Ontario relating to its fiscal reporting activities that include Public Accounts, the annual Budget and Estimates.

58. Can credit rating agencies adjust their ratings based on this new development? What about bondholders?

The government remains committed to balancing the budget by 2017-18.

The deficit for 2015-16 is $5 billion, a $3.5 billion improvement compared to the 2015 Budget. The deficit is also a $0.7 billion improvement compared to the interim results for 2015-16 contained in the 2016 Budget, which formed the basis for three rating agencies to confirm the Province's credit rating, and the fourth to improve their assessment of the Province's credit outlook.

This marks the seventh year in a row that Ontario has beaten its annual deficit target, reflecting the government's responsible and balanced approach to fiscal management.

The rating agencies and bondholders will understand that the change in the Province's accounting treatment for pension assets of jointly-sponsored pension plans, while increasing net debt, has no impact on the Province's borrowing requirements or total debt outstanding.

Hydro One

59. Why are you selling off Hydro One?

The government is broadening the ownership in Hydro One to improve the company's long-term performance and unlock billions in value for investment in major infrastructure projects that will help grow Ontario's economy for years to come.

This approach will create an improved company that would operate more efficiently and better serve the interests of ratepayers and customers of Hydro One.

The net revenue gains from broadening the ownership of Hydro One shares will provide the government with approximately $4 billion to be credited to the Trillium Trust to invest in key infrastructure and create thousands of jobs, as well as $5 billion to reduce debt.

60. What is the Hydro One deferred tax benefit?

As a result of Hydro One exiting the Payment in Lieu (PILs) regime and the revaluation of its fixed assets upon entering the corporate tax regime, the company recognized a deferred tax benefit in fiscal 2015-16, which positively affected its net income.

At consolidation in Public Accounts of the Province's portion of Hydro One's net income, Hydro One's recognition of a deferred tax benefit increased the Province's revenues by $2.4 billion. The gain associated with Deferred Tax Benefit from the IPO has been allocated to the Trillium Trust.

61. Why did you loan the electricity unions money to buy shares of Hydro One?

In connection with the IPO, the Province sold $116 million worth of Hydro One shares to trusts of the Power Workers' Union (PWU) and the Society of Energy Professionals (SEP) trusts. Of the shares sold to the Trusts, about $108 million was purchased using loans provided by the Province. The gains from those share sales will be credited to the Trillium Trust over time as the loans are repaid.

The government is fully committed to dedicating net revenue gains from the sale of designated assets to the Trillium Trust to help fund further investments in transit, transportation and other priority infrastructure as part of Moving Ontario Forward.

The $3.2 billion being credited to the Trust at this time does not include amounts associated with shares purchased by the Power Workers' Union (PWU) and the Society of Energy Professionals (SEP) trusts using loans provided by the Province.

62. The government is being sued over the sale of Hydro One. Was the sale worth it to balance you budget now that you're being sued?

I understand Ontario has been served with a notice of claim. As this matter may be subject to litigation, it would be inappropriate to comment further.

63. The FAO has warned that the partial sale of Hydro One will have direct implications on the provinces debt and ability to balance the budget. What do you say to these concerns?

To date, Ontario has sold approximately 30 per cent, or about half of the 60 per cent of shares the government intends to sell, and with this $3.2 billion credited to the Trillium Trust is well on track to meet its multi-year asset optimization target to generate $5.7 billion over time to support investments in infrastructure.

Crediting the $3.2 billion to the Trillium Trust demonstrates Ontario's commitment to investing in infrastructure projects that help stimulate economic growth and create good, well-paying jobs.

The government acknowledges the important role played by the FAO in providing independent analysis to the Assembly on the state of the Province's finances.

Bargaining and Compensation

64. What is the government doing to control executive compensation in the Broader Public Sector?

In March 2015, the government proclaimed the Broader Public Sector Executive Compensation Act, 2014 (BPSECA) into force. This legislation allows the government to establish compensation frameworks for designated senior executives in the broader public sector.

An Executive Compensation Framework came into force on September 6, 2016. The framework reinforces that designated BPS employers are accountable for compensation decisions, sets caps and prohibitions on certain types of

compensation, requires enhanced public transparency and allows impacted employers to balance the need to attract the necessary talent to deliver high quality public services while managing public dollars responsibly.

The framework applies to all designated employers under BPSECA, including hospitals, school boards, colleges and universities, community care access corporations, provincial agencies and named hydro entities.

The framework caps salary and performance-related payments for designated executives at no more than the 50th percentile of appropriate comparators and prohibits elements like signing bonuses and pay in lieu of perquisites.

The framework also requires that each designated employer engage in public consultation on their compensation program before it is finalized and requires final programs to be posted on the designated employer's website. These requirements enhance transparency and give Ontarians the opportunity to provide input on executive compensation in the BPS.

BPSECA includes significant compliance and enforcement measures: employers will be required to complete reports concerning compliance with the framework and individuals could be subject to penalties if they willfully fail to provide a report, provide a false report or obstruct an auditor.

65. How are you managing the costs of public sector compensation?

Managing compensation costs is critical to balancing the budget, as more than half of government spending goes to salaries and benefits, including those of both the Ontario Public Service (OPS) and broader public sector (BPS). All public-sector partners must continue to work together to control current and future compensation costs.

Since July 2012, the average annual negotiated wage increase across Ontario's provincial public sector has been 0.6 per cent. This is lower than:

- Ontario's municipal public sector (1.7 per cent)
- the federal public sector in Ontario (1.7 per cent)
- Ontario's private sector (1.9 per cent)

66. Where is the agreement with OPSEU reported in Public Accounts? Was this truly net-zero?

The agreement reached with OPSEU's Central and Unified bargaining units on October 30, 2015 is net-zero and remains consistent with the fiscal plan outlined in both the 2014 and 2015 Budgets.

To achieve a net-zero outcome, there are no wage increases in 2015 and 2016. In 2016 there will be a modest 1.4% one-time lump sum payment that does not form part of employees' base salaries, and in 2017 there is a 1.4% pay increase. Both are offset through changes to employee benefits and entitlements over the three-year term of the contract, including a freeze on salary progression in 2016 and 2017 and capping of termination payments.

This agreement will support the government's ongoing efforts to eliminate the deficit while protecting the valued public services Ontario families rely on.

67. The Premier recently said the era of net zero is over. How will this affect labour negotiations?

As a government, we'll continue to do what we've always done in terms of negotiations. As the time comes to negotiate new contracts, whether it's Treasury Board Secretariat that's negotiating or an individual ministry, they always come to Treasury Board to get an approved mandate. So we'll carry on with that practice of coming to Treasury Board for an approved mandate that will fit within the fiscal plan.

Ontario's Financial Position

68. The FAO has warned that if Ontario's fiscal position deteriorates beyond 2017-18, the four international credit rating agencies could lower Ontario's credit rating, which could lead to higher borrowing costs and more challenging fiscal position. What is the government doing to manage the debt?

The government remains firmly committed to balancing the budget by 2017–18.

The deficit for 2015-16 is $5 billion, a $3.5 billion improvement compared to the 2015 Budget. This marks the seventh year in a row that Ontario has beaten its annual deficit target, reflecting the government's responsible and balanced approach to fiscal management.

Given ongoing challenges in the broader economic environment, the government recognizes that now is the time to be making investments in people, modern infrastructure and a dynamic and innovative business climate — investments that will help to spur economic growth and create the new jobs necessary to support eliminating the deficit.

Alongside these strategic investments, the government is also taking deliberate actions to ensure it can continue to manage spending and improve outcomes for Ontarians. Together, these investments and deliberate actions will help ensure that the priority programs and services that people rely on are maintained and enhanced while the deficit is eliminated.

69. Some have said your government has a spending problem, not a revenue problem. As the largest subnational borrower, what do you say to that?

The government beat its deficit target for the seventh year in a row. Last fiscal year's deficit is $5 billion, down $3.5 billion from the $8.5 billion projected in last year's budget.

The government is projecting a deficit of $4.3 billion in 2016-17 and a return to a balanced budget in 2017-18.

The improvement over plan was due in large part to the Ontario government's strong focus on managing growth in spending. Ontario consistently has the lowest per capita program spending among all Canadian provinces.

Over the past four years the Province has held the average annual growth in program spending to 1.9 per cent, less than the rate of inflation, while investing in services that people rely on.

Key elements of the government's plan to eliminate the deficit are:

- Program Review, Renewal and Transformation
- managing compensation costs
- maintaining tax fairness and a level playing field for business
- strengthening government transparency, financial management and fiscal accountability

70. How much did government spend in 2015-16?

TBC OPCD

71. Why was total expense $300 million higher than projected in the 2015 Budget plan?

Total expense in 2015–16 was $133.4 billion, $1.5 billion higher than the 2015 Budget plan. Program spending was $122.4 billion, up by $1.9 billion from a planned spending of $120.5 billion.

The increase largely reflects the government's decision, announced in the 2015 Ontario Economic Outlook and Fiscal Review, to invest $0.3 billion through the new Green Investment Fund. As well, spending in the health, children's and social services, justice sectors and other programs was higher than planned.

Total program spending was $1.9 billion higher than the Budget, resulting in actual program expense of $122.4 billion. The increases were attributable to:

- $1.5 billion pension asset valuation allowance for OTPP and OPSEU.
- Health sector expense was $294 million, or about 0.6 per cent, above plan. Higher spending resulted from increased drug costs as well as higher hospital sector expense, partially offset by underspending in agencies.
- Children's and social services sector expense that was $124 million higher than planned, due mainly to additional spending to address demand for the Ontario Disability Support Program and the cost of prescription drugs for social assistance recipients.
- Justice sector expense increased by $120 million, mainly due to settlements under the Proceedings Against the Crown Act and higher-than expected bad debt provisions related to unpaid fines.
- Other programs expense was $628 million higher than expected. The increase was due to one-time investments through the Green Investment Fund, higher than anticipated expense for the Ontario Production Services Tax Credit and costs related to the Hydro One IPO.

Increases in these sectors and programs were offset by:

- Education sector expense was $233 million lower than expected, due in part to a higher share of funding spent on capital projects that are capitalized and amortized instead of expensed, higher-than-forecasted revenues from education development charges, and slightly lower-than-projected enrolment.

- Post-secondary and training sector expense was $176 million lower than expected, mainly due to lower spending on post-secondary operating grants and lower student financial assistance as a result of lower-than-forecast enrolment. As well, spending on employment and training programs was below plan, partially offset by higher expense on tax credits to employers to support training.

72. What are you going to do if Ontario's economy does not perform as strongly as you forecast?

The Province has included prudence as part of the fiscal plan to help ensure it meets future fiscal targets as it moves towards a balanced budget in 2017–18.

As required by the Fiscal Transparency and Accountability Act, 2004 (FTAA), the fiscal plan continues to incorporate prudence in the form of a reserve to protect the fiscal outlook against adverse changes in the Province's revenue and expense, including those resulting from changes in Ontario's economic performance. The reserve has been set at $1.0 billion in 2016–17, and $1.2 billion in each of 2018–19.

The fiscal plan also includes contingency funds to help mitigate expense risks that may otherwise negatively impact Ontario's fiscal performance.

In keeping with sound fiscal practices, the Province's revenue outlook is based on prudent economic assumptions. The Ontario Economic Forecast Council, established under the FTAA, reviewed the Ministry of Finance's economic assumptions in February 2015. All council members found the assumptions to be reasonable.

73. What if interest rates go up? What affect would higher interest rates have on debt?

The Province is operating under a historically low interest rate environment, however, if interest rates did increase, a one percentage point change will result in an impact of approximately $350 million to the Province's interest expense.

74. What is the government's annual borrowing program?

The amount of money the government borrows varies from year to year and is dependent on the deficit, proposed investments in capital and amount of debt that is maturing.

Over the three years 2016-17 to 2018-19 average long term public borrowings are estimated to be $26 billion per annum, considerably lower than what the Government borrowed over the past three years which averaged at $33 billion per annum. The lower borrowings are primarily due to the Government's efforts in reducing the deficit and balancing in 2017-18.

75. Did you use your reserve fund to pad your fiscal results and pay down the debt?

For planning purposes, a reserve is included in the budgeted surplus/deficit each year to guard against unforeseen revenue and expense changes that could have a negative impact on the Province's fiscal performance. The 2015 Budget plan included a $1.0 billion reserve. Without the reserve, the actual deficit result of $5.0 billion would not have been affected.

Budget Surplus and Revenue Increase

76. Can you explain the $4.0 billion increase in revenue since your 2015 Budget?

The increase in revenues primarily reflects stronger-than-projected 2015 personal income tax assessments and a strong Ontario housing market in 2015 which boosted Sales Tax and Land Transfer Tax revenues.

Taxation revenues also reflected a one-time increase in Electricity payments-in-lieu of taxes related to Hydro One ownership broadening in 2015-16.

77. How did net income from government business enterprises increase by $100 million from your 2015 Budget projection?

This increase was mostly attributable to combined higher net income from the Liquor Board of Ontario (LCBO), Ontario Lottery and Gaming Corporation (OLG) and Ontario Power Generation Inc. (OPG).

Higher net income from these business enterprises, however, was partially offset by lower net income from Hydro One, primarily reflecting impacts from broadening Hydro One ownership.

Contingency Fund / Reserve

78. What is the difference between the contingency fund and the reserve?

The contingency fund is an amount of expense that is approved by the Legislative Assembly at the beginning of the year to cover expenses due to unforeseen events (e.g. fighting forest fires). This approved spending limit is allocated during the year to ministries for their programs and activities.

The reserve is an amount included in the forecast each year to protect the plan against unforeseen revenue and expense changes that could have a negative impact on the Province's fiscal performance.

Budget Projections vs. Public Accounts Reporting

79. What accounts for the $4.4 billion increase in taxation revenues from your 2015 Budget projection?

The increase in revenues primarily reflects stronger-than-projected 2015 personal income tax assessments and a strong Ontario housing market in 2015 which boosted Sales Tax and Land Transfer Tax revenues.

Taxation revenues also reflected a one-time increase in Electricity payments-in-lieu of taxes related to Hydro One ownership broadening in 2015-16.

80. Why did Ontario's net debt increase by $20 billion in 2015-16?

Net debt is the Province's total debt and other liabilities, less its financial assets, including cash and investments. The increase was primarily due to a $10.9 billion

increase in liability and a $10.7 billion pension accounting adjustment, which was primarily offset by a $1.0 billion increase in financial assets.

81. How do you explain the $12.4 billion increase in total debt in 2015-16?

The increase of $12.4 billion in total debt is due to borrowing for the deficit and investments in capital assets for 2015-16. It also includes pre-borrowing of $2 billion to take advantage of low interest rates and continuing demand for the Province's Debt.

82. Why is the government now including 5-year trends in the Public Accounts?

The increased disclosure and discussion on 5-year trends is in line with recommended disclosure practices of the Public Sector Accounting Board. This increased disclosure enhances the quality of financial reporting to the public, Legislature and other users to better meet their transparency and accountability needs. In addition to the disclosure in the Annual Report, the government is also making available supplementary information through data visualization.

83. Why is the interest on debt for 2015-16 $400 million lower than forecast in the 2015 Budget?

Interest on debt expense was $0.4 billion below plan in 2015-16, as a result mainly of lower-than-forecast interest rates, the lower-than-planned deficit and cost effective borrowing and debt management.

84. Why is interest on debt for 2015-16 $400 million higher than in 2014-15?

Interest of debt is higher by $332 million from last year, mainly due to the funding of the deficit and investment in capital assets and partly offset by the impact of lower interest rates.

Program, Review, Renewal and Transformation

85. How are you reviewing and transforming government programs?

Program Review, Renewal and Transformation (PRRT) is helping the government achieve better outcomes while also lowering costs.

The primary focus of this transformation is on ensuring that services are delivered

efficiently and in a way that effectively meets Ontarians' needs.

Through cross-ministry horizontal collaboration, we are taking focused action on major transformation and efficiency initiatives that will improve outcomes for Ontarians while helping to free up resources to reinvest in key priorities, such as health care and education.

To improve programs, we are moving towards a focus on evidence-based decision making – gathering and analyzing the best available information to improve how outcomes are identified and achieved across government.

86. Has PRRT achieved any tangible results/savings?

The government has achieved a number of efficiencies to make programs more sustainable, such as negotiating lower prices for goods and services and managing compensation.

But PRRT is about more than saving money — it is a continuous planning approach focused on improving outcomes for government programs and services to ensure they are effective, efficient, relevant and sustainable.

87. What do you have to say to those public sector workers who have lost their jobs or are at risk of losing their jobs because of PRRT?

Program Review, Renewal and Transformation (PRRT) is helping the government achieve better outcomes while also lowering costs.

The primary focus of this transformation is on ensuring that services are delivered efficiently and in a way that effectively meets Ontarians' needs.

Government Assets

88. What is the government doing to extract value from any government assets?

With the 2014 Budget, the government began the process of unlocking the economic value of the Province's assets, including setting up the Premier's Advisory Council on Government Assets, chaired by Ed Clark, former Group President and Chief Executive Officer of TD Bank Group.

The council delivered recommendations on the electricity sector to the Province in advance of the 2015 Budget, including broadening the ownership of Hydro One. This would involve an initial public offering of about 15 per cent of the voting securities in Hydro One, with additional share sales in subsequent years. Over time, share offerings would total up to 60 per cent of the voting securities in Hydro One.

The Province is also moving forward with its plans to unlock value from its real estate assets, including OPG's head office building, and the Seaton and Lakeview lands. In June 2016, the Province closed the sale for the Liquor Control Board of Ontario's (LCBO) head office lands, raising $260 million in gross proceeds.

All net revenue gains from the sale of qualifying assets will be dedicated to the Trillium Trust to help fund further investments in transit, transportation and other priority infrastructure as part of the Moving Ontario Forward initiative.

Trillium Trust

89. Have the net proceeds from the sale of the GM holdings and the partial sale of Hydro One been dedicated to the Trillium Trust, and how is that being reported in Public Accounts?

The Trillium Trust Act, 2014, provides for the dedication of net revenue gains from the sale of qualifying assets to help support key infrastructure priorities, such as roads, bridges and public transit. A schedule in Volume 1 of the Public Accounts reports on the financial activities of the Trillium Trust.

Volume 1 shows that $1.35 billion was available for the Trillium Trust at March 31, 2016, to help fund investments. This reflects the sale and redemption of the Province's shares in General Motors in earlier years.

In August 2016, a regulation was put in place that credited the trust with $3.2 billion from the net revenue gains resulting from the Hydro One IPO, the gain on sale of shares in November 2015 and the share of the deferred tax benefit to Hydro One that has been recognized by Ontario through its share of Hydro One net income as a result of its ownership position in Hydro One.

The net revenue gains from the secondary offering in April 2016 will be reported in the 2016-17 Public Accounts and credited to the Trillium Trust.

90. How have you spent the funds dedicated to the Trillium Trust?

As announced in the 2016 Budget, the government plans to begin drawing on the balance in the Trillium Trust in 2016-17 to support the largest investment in public infrastructure in Ontario's history.

Based on planned expenditures, in 2016–17 the Trillium Trust would support Moving Ontario Forward initiatives, such as GO Transit Regional Express Rail, Hurontario Light Rail Transit and the Ontario Community Infrastructure Fund.

91. Why are you allocating non-cash items like the deferred tax asset generated in the Hydro One transaction to the Trillium Trust?

TBC OPCD

Moving Ontario Forward

92. In the 2015 Budget, the government stated that $3.5 billion would be dedicated to the Moving Ontario Forward plan. So far, only $1.35 billion has been dedicated to the Trillium Trust. How do you propose to supply the $2.15 billion difference?

Moving Ontario Forward dedicated funds would be largely supported by:

- Dedicated proceeds from 7.5 cents of the existing provincial gasoline tax to public transit and transportation infrastructure priorities. This would be over and above the existing gas tax funding to municipalities, with no increase to the current tax rate.
- Repurposing revenues from the existing Harmonized Sales Tax charged on the current provincial taxes on gasoline and road diesel.
- Dedicated proceeds from targeted revenue measures.
- The government's asset optimization strategy, with net revenue gains dedicated to the Trillium Trust to help support investments in public infrastructure.
- Working with the federal government to secure federal funding through the Building Canada Plan.

93. How much did the government spend on Moving Ontario Forward in 2015-16?

Moving Ontario Forward is part of the government's commitment to invest more than $137 billion in public infrastructure over the next 10 years. Investments are underway, including providing $100 million per year to small, rural and northern municipalities through the Ontario Community Infrastructure Fund to build and repair critical infrastructure.

Like most large infrastructure investments, initial spending on Moving Ontario Forward projects is focused on planning, design, property acquisition and other activities to get projects construction-ready. Spending would ramp up significantly once this preliminary work is completed and construction activity is underway. Over the 10-year Moving Ontario Forward period, all of the dedicated funds are expected to be spent on priority infrastructure projects.

94. Why aren't the additional $2.2 billion in revenues dedicated to the Moving Ontario Forward plan reported in the Public Accounts?

In the 2015 Budget, the government committed to dedicate $31.5B over 10 years to support infrastructure projects under the Moving Ontario Forward plan, which included $5.7B from its asset optimization strategy. In 2014-15, this amounts to about $3.5B in dedicated funds including $1.3B from asset optimization. The remaining $2.2B in 2014-15 would be largely supported by:

- Dedicated proceeds from 7.5 cents of the existing provincial gasoline tax to public transit and transportation infrastructure priorities. This would be over and above the existing gas tax funding to municipalities, with no increase to the current tax rate.

- Repurposing revenues from the existing Harmonized Sales Tax charged on the current provincial taxes on gasoline and road diesel.

- Dedicated proceeds from targeted revenue measures.

- Working with the federal government to secure federal funding through the Building Canada Plan.

These additional amounts are largely taxation revenues and are reflected in the total revenue figures in the 2014-15 Public Accounts.

95. How does investing in public infrastructure impact the economy?

A large and growing body of independent research shows that infrastructure investments support jobs, augment personal incomes and produce real growth in the economy. For example, a September 2015 report by the Broadbent Institute and the Centre for Spatial Economics showed that, on average, investing a dollar in public infrastructure in Canada raises gross domestic product (GDP) by $1.43 in the short term and up to $3.83 in the long term.

The Province's planned investments in infrastructure are expected to support over 110,000 jobs, on average, each year.

96. The Public Accounts makes reference that the Province's investment in capital assets is guided by sound asset management planning principles, so why is the education sector facing large renewal needs?

The Province has announced new renewal investment, including: increased investments in GO Transit rehabilitation and renewal; additional annual funding of $50 million to assist hospitals in maintaining their facilities in good repair; and a $1.1 billion investment to repair and renew schools across the province (allocated to school boards in proportion to their renewal needs).

In the education sector, the School Condition Improvement program addresses renewal needs focusing on ensuring that facilities are in good condition, energy efficient and accessible and meet modern service standards. The funding will enable school boards to repair roofs, update HVAC units and modernize electrical and plumbing systems. It will also significantly improve more visible elements of schools that impact students' learning and well-being, including flooring, walls, ceilings, playing fields and more. To support transparency, the government has also released detailed information regarding the condition and renewal needs of each of Ontario's publicly funded schools.

Transparency

97. You say the Province's Annual Report is a central element in demonstrating transparency in reporting financial activities and accountability, yet the FAO continues to criticize your government for withholding information. What do you say to these criticisms?

The relationship between the FAO's office and our government is very important.

Our door is open to meet with the FAO and his staff upon request, and our government has tried to be proactive in reaching out to provide clarification when it could be of use.

We want to be accommodating and helpful, while also respecting the requirements of the 2013 FAO Act. With this in mind, Treasury Board has provided additional information to complement and/or further clarify our responses to the FAO when we've received follow-up requests from his office.

We have also reformatted information into machine-readable charts upon request, when it was possible and consistent with legislation. All requests from the FAO office to the Treasury Board Secretariat have been responded to.

Pan Am Games

98. How much was spent on the games, where does it appear in Public Accounts? And how does your government justify this expense?

These were the largest, most successful Pan/Parapan Am Games ever – creating 26,000 jobs, boosting Ontario's GDP by $3.7B and leaving a lasting legacy that will benefit Ontario for years to come. The economic boost that resulted from the Games acted as a catalyst for economic, social, infrastructure and athletic development and we were proud to host these Games.

Questions related to the Pan Am Games should be referred to my colleague, the Minister of Tourism, Culture and Sport.

Underground Economy

99. How are you ensuring revenue integrity?

A fair and efficient tax system is critical to sustaining public services. The 2014 Budget noted that when businesses aggressively avoid or evade paying taxes, everyone else is left to make up the shortfall, putting the competitiveness of legitimate businesses at risk.

Since 2013–14, the Province has taken concrete measures to help ensure tax fairness and a level playing field for business. These include enhanced auditing and compliance activities, such as a multi-year agreement with the Canada Revenue

Agency to address the underground economy and corporate tax avoidance in Ontario. The Province has also targeted areas at high risk of underground economic activity with pilot initiatives that focus on mitigating unfair and unsafe circumstances for Ontario's workers and consumers.

In total, these efforts have generated an estimated $1.1 billion for Ontario to date. The Province will build on these successful initiatives with new approaches to ensuring revenue integrity.

Remarks by Scott Thompson

Deputy Minister
Ministry of Finance

to the Standing Committee
on Public Accounts

Toronto, Ontario
October 6, 2016

Word count: ~~974~~TBD

Check against delivery

Thank you, Greg.

Good afternoon everyone.

I'm Scott Thompson, Deputy Minister for the Ministry of Finance.

I'm pleased to be here today, speaking to the Standing Committee on Public Accounts.

[Introduction]

Formatted: Font: Bold

I welcome the opportunity to discuss how the Province manages its debt through the Ontario Financing Authority.

And to discuss how the government presents its financial information and reports, whether on behalf of the ministry or in co-operation with the Treasury Board Secretariat and others.

The provincial debt and Ontario's financial statements and analysis were two salient points in the Auditor General of Ontario's 2015 annual review of the 2014-15 Public Accounts of Ontario.

Like TBS' deputy minister, I also agree with the Auditor General's recommendations.

Producing high-quality financial reports that meet the needs of the public and legislature is important.

Accurate and accessible information is crucial to accountability and transparency–two priorities for the government and public service.

The Ministry of Finance is proud of its work in these areas, and we will continue to refine and improve our efforts by using best practices.

To add to a point the deputy minister from TBS raised a few minutes ago, the Ministry of Finance takes the requirement to abide by the Fiscal Transparency and Accountability Act, 2004 very seriously.

The act requires the fiscal plan the Ministry develops to include a reserve to protect the fiscal outlook against unforeseen adverse changes in the Province's revenue and expense.

The adverse events can include those resulting from changes in Ontario's economic performance.

The reserve has been set at $1.0 billion in 2016–17, $1.1 billion in 2017–18, and $1.2 billion in 2018–19.

The fiscal plan also includes contingency funds to help mitigate expense risks that may otherwise negatively impact Ontario's fiscal performance.

With the economy expected to continue to grow, and the Province's ongoing commitment to transform government programs and services, Ontario is well positioned to achieve its fiscal plan.

[Deficit Reduction]

I'd like to take a moment to discuss the province's deficit, which plays a role in how Ontario manages the province's debt.

The government has confirmed its commitment to eliminate the deficit by 2017–18.

This includes the 2016 Budget.

The Budget, which was released in February, forecast a deficit of $5.7 billion in 2015–16.

Commented [IM(1)]: Language on this page, all the way to "Mood's said..." TBC pending Public Accounts.

If that deficit target is achieved, the deficit would be $2.8 billion lower than projected in the 2015 Budget.

It would also mark the seventh year in a row that the province has beaten its deficit target.

And it would represent a $4.6 billion improvement compared to the

2014–15 deficit.

By continuing to beat its fiscal targets, the government's accumulated deficit is $30 billion lower than it otherwise would have been.

The government is achieving these savings by managing program spending growth and by making strategically important financial decisions.

Looking ahead, the government is projecting a deficit of $4.3 billion for 2016-17, a return to balance in 2017–18 and continued balance in

2018–19.

Following the 2016 Budget, the credit rating agency Moody's affirmed its outlook for Ontario's debt and revised the outlook on the ratings to stable from negative.

Moody's said, and I quote, "The stable outlook on the Province of Ontario's ratings reflects our opinion that the province has presented a budget plan with little risk that the debt burden will exceed recent levels." End quote.

Moody’s also forecast Ontario's debt to, and I quote: "fall marginally across the medium-term and, as importantly, for interest expense to remain manageable as well." End quote.

To be sure, while the news from Moody's is positive, it is just one assessment among many third-party analyses.

Indeed, private-sector economists across the board are forecasting Ontario's economy to be among the top two growth leaders in Canada.

[Unlocking Provincial Assets]

The government is using another tool to support growth and create the jobs province wide that strengthen our economy.

That tool is our asset optimization plan—unlocking the value of certain provincial assets.

As you know, in February 2015, the Province sold its remaining shares in General Motors, and in November 2015, the Province completed an initial public offering and related share sales of approximately 16 per cent of the Hydro One common shares.

In April 2016, a secondary offering of 14 per cent of the Hydro One common shares was completed, and the sale of the LCBO head office lands closed in June 2016.

The net revenue gains from these major transactions have been, or will be, credited to the Trillium Trust and will be invested in transit, transportation and other priority infrastructure projects.

As an example, in August 2016, the government filed a regulation crediting the Trillium Trust with $3.2B in connection with the November 2015 initial public offering of Hydro One shares.

These investments will directly create jobs and positive economic spinoffs that further help improve the province's fiscal position.

The ministry is working to be as open and clear as possible when it comes to its management of the public purse.

The government's public communications on the Trillium Trust regulation, the Hydro One public offerings, our Q1 Finances and Ontario Economic Accounts are all concrete examples of these efforts.

Of course, we can do more. And we will.

I'm proud of the efforts being made by the Ministry of Finance and the Treasury Board Secretariat to improve the transparency and accountability reflected in the Public Accounts of Ontario and other financial reports and documents.

We will continue to work with the Auditor General and the Public Sector Accounting Board to support public sector reporting that best serves the needs of the public interest.

I will now turn it over to Gadi Mayman, the CEO of the Ontario Financing Authority.

He will focus on the Auditor General's points about the management of the province's debt.

Thank you.

Gadi….

Friendly Questions

1. Q. Our government has a target for reducing the net-debt-to-GDP ratio. Can you tell us more about the target and how our government is doing in terms of reaching that target?

A. Net debt, as of March 31, 2016, is forecast to be $296.1 billion, $2.8 billion lower than forecasted in the *2015 Budget.* Net debt was $284.6 billion as of March 31, 2015. The net debt-to-GDP ratio is forecast to peak at 39.6 per cent in 2015–16, remain level in 2016–17, and decline to 38.9 per cent in 2017–18 and 38.5 per cent in 2018–19.

Ontario conducts a robust and responsible borrowing program that protects the public interest. The government successfully completed its annual borrowing program in 2015-16, borrowing $32.1 billion. Long-term borrowing for 2016–17 is forecast to be $24.4 billion when factoring in $2.0 billion pre-borrowed in 2015–16. This will be the Province's smallest borrowing program since 2007–08.

As of August 31, 2016, the Province had borrowed $12.5 billion for the fiscal year. Approximately 71per cent of this year's borrowing-to-date has been completed in Canadian dollars. The remainder of the Province's borrowing-to-date has been completed in international currencies primarily through U.S. dollar global bonds, and two small Australian dollar Kangaroo bond issues.

Through prudent and cost-effective debt management, the Province has consistently kept interest on debt costs below budget projections. The *2010 Budget* forecast that, by 2016–17, the Province would have to spend 11.7 cents of every revenue dollar received on interest. The current forecast is 2.7 cents lower, at 9.0 cents of interest costs for every dollar of revenue. This ratio is lower than it was in the 1990s and 2000s, and is forecast to remain lower through the outlook period in 2018–19.

Term extension has allowed the Province to lock in low interest rates for a longer period, which reduces refinancing risks and helps offset the impact of expected higher interest rates on the Province's interest on debt costs.

Going back to the beginning of fiscal 2010-11, Ontario has issued $59.1 billion of bonds longer than 30 years to lock in low rates. As a result, the weighted-average term to maturity of long-term provincial debt issued has been extended significantly, from 8.6 years in 2008-09 to 15.6 years as of August 31.

2. Q. Noting that a key indicator of the government's ability to carry its debt entails examining the level of debt relative to the size of the economy, can

you please explain further what the forecasted net debt-to-GDP ratio is for Ontario?

What effect does this have on the government's commitment to balancing the budget by 2017-18?

A. The Province's net debt-to-GDP ratio is expected to peak in 2015–16 at 39.6 per cent, remain unchanged in 2016–17 and begin to decline in 2017–18.

The government continues to maintain a target of reducing the net debt-to-GDP ratio to its pre-recession level. Net Debt increases primarily for two reasons: to finance deficits and invest in capital assets. In the first few years after the global recession in 2008–09, the increase in net debt was primarily due to the deficit. However, the government is on track to eliminate the deficit and balance the budget by 2017–18. Once a balanced budget is achieved, the increase in net debt will be limited to the net investment in tangible capital assets.

3. Q. Why was the deficit lower than projected? Where does the government stand when it comes to reaching a balanced budget?

A. Since the last time the Office of the Auditor General reviewed these statistics in its 2013 Annual Report, the province's net debt-to GDP ratio has improved from 39.1 per cent to 38.6 per cent for 2013-14 and remained relatively unchanged for 2014-15 at 40.1 per cent. This improvement is a direct result of better than forecast deficits, although the ration for the out years has been impacted, primarily by decreases in the GDP forecast.

With regard to debt management, the government's support for and commitment to economic growth will maintain debt at sustainable levels and achieve its target of reducing the net debt-to GDP ratio to the pre-recession level of 27 per cent.

The province has consistently beaten its annual deficit targets over the last five years, resulting in borrowings and accumulated deficits that are $ 25 billion lower that they would otherwise have been. A major contributor toward beating annual deficit targets has been the focus on annual expenditure management limiting the growth in program spending to an average of 1.5 percent from 2010-11 to 2013-14. The government has also addressed Ontario's infrastructure needs through targeted capital investments.

4. Q. Chapter 2 of the Auditor General's 2015 annual report speaks to the increased vulnerability of Ontario with respect to interest rates. She points to the possible rise in rates related to borrowing.

However, I am also aware that the Province has consistently kept interest on debt costs below budget projections.

What steps has the government taken to reduce borrowing and keep interest on debt costs low?

A. Through prudent and cost-effective debt management, the Province has consistently kept interest on debt costs below budget projections. The 2010 Budget forecasted that, by 2016-17, the Province would have to spend 11.7 cents on interest for every revenue dollar received. The current forecast is 23 per cent lower, at 9.0 cents of interest costs for every dollar of revenue. This ratio is lower than it was in the 14 fiscal years from 1992–93 to 2005–06, and is forecast to remain lower through the period to balance in 2017–18.

Extending the term of the debt that the Province issues has locked in low interest rates for a longer period, which reduces refinancing risks and helps offset the impact of expected higher interest rates on the Province's interest on debt costs.

Going back to the beginning of fiscal 2010–11, Ontario has issued $59.1 billion of bonds that do not mature for at least 30 years to lock in low rates. As a result, the weighted-average term to maturity of long-term provincial debt issued has been extended significantly, from 8.6 years in 2008-09 to 15.6 years as of August 31.

5. Q. The stranded debt arose under the *Energy Competition Act of 1998*, and its schedule, the *Electricity Act, 1998*. The *Electricity Act, 1998*, also enabled the implementation of the Debt Retirement Charge (DRC) on electricity ratepayers.

Since May 2002, residential and other electricity users have been paying the DRC of 0.7 cents per kilowatt hour (kWh) on their electricity bills. The DRC is paid to the Ontario Electricity Financial Corporation (OEFC) to help service and pay down the stranded debt that arose because of the restructuring of Ontario's electricity sector under the *Energy Competition Act, 1998*.

However, I know that the government eliminated the DRC from residential bills as of January 1, 2016.

This legacy charge from the Harris government was eliminated from residential bills about 2 years earlier than previously estimated – saving the average residential user about $70/year.

Can you please inform the committee of the commitment that the government has to eliminating the debt retirement charge cost for commercial, industrial and all other electricity users by 2018?

A. Thank you for the question.

As part of its commitment to reduce electricity cost pressures, the government has removed the Debt Retirement Charge (DRC) from residential electricity users' bills as of January 1, 2016.

This would save a typical residential user about $70 each year and meant ending the DRC earlier for these users than otherwise provided for in the *Electricity Act,*

1998, as originally enacted. As a further step to mitigate electricity cost pressures for commercial, industrial and all other users, the government introduced legislation, passed on December 10, 2015, the *Budget Measures Act, 2015* to end the DRC on April 1, 2018, nine months earlier than previously estimated.

- A large industrial using 3,000 megawatt-hours (MWh) per month could save $21,000 per month, or about seven per cent off its electricity bills;

- For a large northern industrial in the Northern Industrial Electricity Rate program, this could be more than an eight per cent savings; and

- A small business using 20,000 kilowatt-hours (kWh) per month could save $140 per month, or about four per cent.

Ending the DRC on a legislated fixed date provides certainty to commercial, industrial and other users, and helps them more effectively plan their investment decisions.

I would note the following context. The government's electricity sector reforms in the Electricity Restructuring Act, 2004, and others, have put the stranded debt recovery plan back on track. Based on interim numbers in Budget 2016, this is projected to be the twelfth consecutive year that the stranded debt has been reduced, to under $5 billion as at March 31, 2016, from $20.6 billion as at March 31, 2004. This allowed the government to follow through on its commitment to reduce electricity cost pressures.

6. Q. Deputy Minister Orencsak, you mentioned that the C.D. Howe Institute has given positive feedback about the government's reporting practices. Why is that significant?

A. The C.D. Howe document "By the Numbers: The Fiscal Accountability of Canada Senior Governments, 2015" notes that Ontario along with Ottawa have "long stood out for relatively good financial presentations. " When evaluating the reporting practices and fiscal documents across Canada, the document rated Ontario an "A" grade.

The "A" grade was based on presentation criteria, as well as timeliness in their reporting schedule and timeliness of the public accounts audit. Ontario's public accounts and budget exhibited the following positive qualities per the C.D. Howe institute:

1. PSAB-consistent revenue and spending balances in public accounts
2. Revenue and spending figures that match the earliest budget figures in public accounts
3. Prominent comparison of actual results with budget plans
4. Estimates on the same bases as the budget and public accounts
5. The Province provides interim reports toward Budget targets and

6. No major audit reservations in public accounts.

Ontario and several other provinces were praised for having their budgets prepared on the same accounting basis as their end-of-year public accounts. In having budget and public accounts on the same basis, Ontario and the other such provinces have increased transparency and comparability to their citizens.

7. Q. Everyone has been doing more with less, and that includes the government. For example there are 6% fewer full time employees in the civil service now, compared to 2008. What else is the government doing to ensure its bringing costs down? What results have been achieved so far?

A. The Ontario Economic Outlook and Fiscal Review in fall 2014 announced Program Review, Renewal and Transformation (PRRT) as a key element of the government's plan to achieve a balanced budget.

PRRT is a fundamentally new approach to multi-year planning and budgeting, and is designed around four key principles:

- Examining how every government dollar is spent
- Using evidence to inform better choices and improve outcomes
- Looking across government to find the best way to deliver services, and
- Taking a multi-year approach to find opportunities to transform programs and achieve savings.

At the same time, the government is making tough choices to end programs that are not performing, do not link to key priorities or no longer serve a clear public interest.

The 2014 Budget announced that the government was implementing an annual program review savings target, and set the target at $250 million for 2014-15. The target was met through a number of initiatives that achieved the reductions while continuing to support front-line services.

An additional year-end savings target of $1.1 billion built into the plan was also achieved.

The government met its program review savings target through initiatives such as:

- Negotiating lower prices for goods and services
- Finding internal efficiencies in information technology data centre, desktop and service management operations
- Modernizing the delivery of natural resources management programs

- Restraining compensation growth in line with the government's "net zero" policy

- Finding operational and administrative efficiencies across government, including reducing the government's office footprint and prudent management of discretionary costs, such as supplies and travel.

In the 2015 Budget, the government announced a number of opportunities identified through PRRT to improve outcomes while supporting fiscal objectives. They included:

- Changing business tax credits

- Modernizing programs delivered through ServiceOntario

- Reducing the government's office footprint

- Getting better value for money invested in health care programs and services.

8. Q. Why is it important that the government has consistently beaten its deficit reduction targets in terms of the province's finances?

A. The government is dedicated to a fiscally sound approach to managing the Province's finances, which will provide the foundation for the long-term well-being and prosperity of Ontarians.

The government remains on track to eliminate the deficit by 2017-18. By continuing to beat our fiscal targets, Ontario's accumulated deficit is $30 billion lower than it otherwise would have been.

Through prudent and cost-effective debt management, the Province has also consistently kept interest on debt costs below budget projections.

Term extension has allowed the Province to lock in low interest rates for a longer period, which reduces refinancing risks and helps offset the impact of expected higher interest rates on the Province's interest on debt costs.

In addition, we have maintained a rigorous approach to control program spending to reduce Ontario's net debt-to-GDP ratio to its pre-recession level.

Our path to a balanced budget is being achieved through responsible fiscal management, which involves:

- Managing growth in program spending, and
- Maintaining the integrity of Provincial revenues.

Our plan is to first balance the budget while continuing to make strategic investments in capital assets. These infrastructure investments will stimulate economic growth, resulting in GDP growing more quickly than debt, and thereby lowering the net debt-to-GDP ratio.

9. Q. There's been concern about Ontario's net debt-to-GDP being significant; however the government is making large-scale infrastructure investments. How are these investments helping the people of Ontario?

A. The government's position is that the renewal and expansion of public infrastructure supports Ontario's industries, creates jobs and provides long-term benefits and improves the lives of Ontarians.

Large investments have been announced and made for improvements in the province's infrastructure. The province is making public infrastructure investments of more than $137 billion over the next 10 years. This builds on the 2014 Budget commitment to invest in infrastructure – resulting in about $160 billion of investment over 12 years, starting in 2014-15.

The revenues allocated to the Trillium Trust will be used to support building transit, transportation and other priority infrastructure as part of the Moving Ontario Forward plan.

A September 2015 report by the Broadbent Institute and the Centre for Spatial Economics showed that, on average, investing a dollar in public infrastructure in Canada raises gross domestic product (GDP) by $1.43 in the short term and up to $3.83 in the long term.

Ontario's planned investments in public infrastructure are expected to support over 110,000 jobs per year on average.

Building and revitalizing public infrastructure are essential to strengthening Ontario's economy.

10. Q. Given that compensation accounts for half of government spending, what has the government done to help alleviate the strain on finances as it works toward balancing its budget?

A. The government remains committed to balancing the budget by 2017-18 and managing compensation costs has been a key element of achieving this goal.

The 2016 Budget emphasized that all public-sector partners must continue to work together to control current and future compensation costs.

Since then, collective agreements have been reached in a number of key sectors, including the education sector, Ontario Public Service and provincial energy corporations that are consistent with the government's fiscal plan.

From July 2012to September 2016, the provincial public sector annual wage increases have averaged 0.6%, compared to the municipal sector at 1.7%, the private sector at 1.9% and the federal public sector in Ontario at 1.7%.

The Government has achieved a number of net-zero deals, including:

In August 2014, the Government reached a new net-zero four-year agreement with AMAPCEO, which produced savings of approximately $45 million. The agreement included zero across-the-board increases in the first two years and modest increases in the third and fourth years that were offset by savings elsewhere in the collective agreement.

On Oct. 30, 2015, the Government ratified a new net-zero three-year agreement with the Unified Bargaining Unit in OPSEU.

The Unified agreement includes no wage increases in 2015 and 2016. In 2016 there will be a modest 1.4 per cent one-time lump sum payment that does not form part of employees' base salaries, and in 2017 there is a 1.4 per cent pay increase.

The agreement is consistent with the fiscal plan. The lump-sum payment in 2016 and pay increase in 2017 are offset through changes to employee benefits and entitlements over the three-year term of the contract, including a freeze on salary progression in 2016 and 2017 and capping of termination payments.

In May of 2016, the government was able to achieve a net-zero negotiations and arbitration settlement outcome with OPSEU Corrections.

The government has a reached a tentative agreement with the Provincial Engineers Government of Ontario (PEGO) that still needs ratification by members. As such we cannot comment on the details of this deal.

11. Q. There are changes ahead for retiree benefits, how will they help the government's bottom line and how do they compare with what is happening in the private sector? How important are these kinds of changes to our plan to balance the budget?

A. Currently, persons in receipt of a pension from the Public Service Pension Plan (PSPP) or OPSEU Pension plan who have a minimum 10 years of pension credit are entitled to post-retirement group health, dental and life insurance coverage. The Ontario government pays 100% of monthly premium costs.

On Feb. 18, 2014, the government announced that the post-retirement benefits eligibility criteria and cost-sharing terms would be changing in 2017.

PSPP and OPSEU Pension Plan member employees who do not have 10 years of pension credit as of Jan. 1, 2017 would be required to have at least 20 years of pension credit to retire to an immediate unreduced pension in order to be eligible for post-retirement benefits.

Also, eligible persons who have not commenced receiving a pension before Jan. 1, 2017, would be required to pay 50% of the life, health, dental and vision and hearing aid premiums.

Employees who commenced receiving a pension before Jan. 1, 2017 will not be affected by these changes.

Announcement of the changes led to a reduction of the retiree benefit program liability by over $1 billion and brings Ontario Public Service retiree benefits more in line with other public sector organizations.

Some other public sector workers pay 100% of their benefits premiums.

Eligible retirees include former employees of the OPS, as well as former employees of other employers which participate in the OPS pension plans.

Retired judges, justices of the peace and Ontario Provincial Police Association (OPPA) members have independent retiree benefit terms.

By transitioning to a new cost-sharing model for retiree benefits, the government is moving in line with the private sector and other public sector organizations.

12. Q. The Auditor General identifies significant accounting issues related to her audit of the Province's consolidated financial statements. Some of the issues are related to accounting standard changes. Since both Ontario's budget and actual results are based on PSAB accounting standards, such changes could impact the transparency and accountability of the government's financial reports as well as fiscal policy decisions. Can you please describe if these issues are ongoing and what has been done to rectify them?

How long will it be before this is resolved?

A. As your question points out, in addition to adopting PSAB as the basis to present its actual results, Ontario has also made a **policy decision** to adopt PSAB as the basis for the government's fiscal planning process which means that changes in PSAB's accounting standards can implicitly impact fiscal policy decisions.

As has been mentioned already, the **CD Howe Institute** has given Ontario an "A" grade for the quality of our financial reporting, based on a number of factors

including the fact that we present PSAB-consistent revenue and spending balances in public accounts, and the timeliness of our reporting schedule. The fact that the actual results have been independently audited by the AG and that we have received unqualified audit opinions over the past 22 years now, means that the public and legislature can rely upon the results reported by the government.

There is tremendous value in **independently established accounting standards**, and especially for standards which are prepared taking the unique accountability and transparency needs of the public sector in mind. In this regard, Ontario has continued to support the public sector accounting standard setting process. Input to the process by stakeholders is critical to ensure high-quality standards which meet user needs and which serve **the public interest.** And we take this responsibility very seriously.

Ways that we support the standard setting process include:

- **Monitor communications** from the Public Sector Accounting Standards Board related to upcoming projects to identify potential areas of interest/concern
  Similarly, we also monitor accounting standard developments which may impact our **GBEs** (for example, potential changes in standards impacting OLG, LCBO, H1 or OPG).

- Attend as **observers meetings of the Accounting Standards Oversight Council** to hear presentations by the Chair of the Public Sector Accounting Board and the Accounting Standards Board related to current projects and issues that they are dealing with. In the past we have had Deputy Minister representation on the Oversight Council with specific background in fiscal policy (Phil Howell). Such participation helped to ensure a more robust discussion of potential standard changes on governments.

- Participation by past **Provincial Controllers** as members of the Public Sector Accounting Standards Board. For example, our recently retired ADM and Provincial Controller, Murray Lindo, still sits on PSAB, although his 3 year term will be coming to an end next March. Although this position requires that the individual represent himself and his own views (and not represent the views of the government), it is nonetheless valuable to have a voice at the table to ensure that the real impacts of any potential changes on the quality of financial information are identified and discussed. It has been valuable for example to know that the continuing debate about Financial Instruments and Government Transfers is informed by both the accounting and fiscal perspective that Ontario's Provincial Controller would bring to the table.

- Ontario provides **input to PSAB's strategic plan** to help inform decisions on key areas that PSAB should focus.

- We also provide **input on an individual project by project** basis for each standard change that PSAB issues for comment. Occasionally, such projects could require several responses over the course of the project. For example, the PSAB standard on government transfers took 9 years to develop and input continues to date as part of PSAB's on-going review of issues related to the consistency of application related to the standard.

- Occasionally, we **stakeholder with PSAB staff** on specific matters like concerns related to the Financial Instruments standard. In this case staff from both OPCD and the OFA participated in discussions with PSAB.

- We **observe PSAB Accounting Discussion Group** meetings to hear representatives from the Board, audits and preparers discuss specific issues identified by public sector entities.

- Depending on the significance of a particular item, **Ontario has often played the lead in championing inter-jurisdictional dialogue and joint action plans** to support the quality of PSAB's standard setting process. For example, the OFA has collaborated with other members of the Canadian borrowing community to compile analysis and feedback to PSAB on its Financial Instruments standard. A past DM of Finance (Colin Anderson) Co-Chaired an inter-jurisdictional PSAB/Deputy Minister of Finance Joint Working Group which was formed in 2007 in light of key concerns being raised by governments related to PSAB's direction.

- Most recently, Ontario is **Chairing a Fiscal Expert Panel** which will be meeting later this week to discuss PSAB's current project on its Conceptual Framework in an effort to gather views and valuable input to share with PSAB on this foundational and critically important project. The outcome of the project will influence the direction of future public sector accounting standards.

This list is **not exhaustive**, but I hope that it gives you the sense of the significant time and effort that Ontario invests in supporting the quality of public sector reporting. We are committed to meeting user needs for transparency and accountability in public sector reporting. We will continue to invest the time and effort required to provide valuable input to PSAB's standard setting process.

13. Q: Moody's just released a report noting that Ontario's debt burden and debt service costs will remain manageable thanks to low interest rates, as well as the province's improving fiscal position and conservative debt management policy. Can you explain how your conservative debt management policies are keeping debt service costs manageable?

A: According to Moody's, "low interest rates will keep interest costs in line with current levels." Moody's also states that "Ontario's strategy of issuing debt across a variety of maturities and markets helps ensure good access to funding and low financing costs. To protect against unfavorable market conditions, Ontario has in recent years increased its liquidity reserves. The province has also extended its weighted average debt maturity to take greater advantage of low interest rates."

This term extension reduces the Province's refinancing risks and helps offset the impact of expected higher interest rates on its IOD costs.

The 2010 Budget forecasted that, by 2016-17, the Province would have to spend 11.7 cents of every revenue dollar received on interest. Currently, the Province spends 8.5 cents of every revenue dollar on interest, 3.5 cents lower than what was forecast in 2010.

This ratio is lower than it was in the 1990s and 2000s, and is forecast to remain lower through the outlook period in 2018–19.

14. Q: Moody's just released a report noting that Ontario's policy decision to borrow for infrastructure spending at a time of historically low interest rates, combined with the prudent debt management practices has helped to support the province's Aa2 rating. Can you explain how borrowing for infrastructure helps support the province's credit rating?

A: According to Moody's although Ontario's debt will continue to increase over the medium term as it funds its 10-year infrastructure plan "any negative impact on the province's credit strength will be counterbalanced by rising revenues and a return to budgetary balance."

The government plans to invest more than $137-billion in capital over 10 years, and $160 billion over the 12-year period starting in 2014-15.

Investments in capital, supplement GDP growth and the net debt-to-GDP ratio will come down more quickly than it would without these investments. Once a balanced budget is achieved, the increase in net debt will be limited to difference between the cash investment to build the assets and the amortization, which is a non-cash amount.

WSIB QAs from last year – WSIB to review and advise.

15. Q. The Auditor General has discussed the WSIB in her report for a couple of years, suggesting that the government reconsider the exclusion of the WSIB's financial results from the Province's consolidated financial statements. Her suggestion is based on the risk that the province might have to provide funding to ensure the WSIB remains viable. Why hasn't the government consolidated the WSIB on its books?

A. Under public sector accounting standards the province only consolidates those organizations which are assessed as controlled. Where province has the power to govern the financial and operating policies of an entity with expected benefits of risk or loss, it is consolidated on our books. This is not the case with the WSIB, and furthermore the Province doesn't have any legal liability for the debts of the WSIB.

In fact, the WSIB is really a non-controlled trust in nature, and such trusts are not consolidated on the basis that it would distort the Province's books if the trust's assets, liabilities, revenues and expenses were shown on our books. Since the government does not have any legal responsibility for the unfunded liability, and does not control the entity, we feel that it should remain non-consolidated.

The current exclusion of the entity from our books best serves transparency and accountability. Otherwise, the public and legislature would assume that the WSIB debt is taxpayer debt and that any net operating income/loss of the WSIB would somehow impact the taxpayer.

16. Q: What progress has the WSIB made on its target to be fully funded by 2027?

17. Q: Can you please give us an update on the status of the WSIB review of its long term financial viability?

Remarks by Gadi Mayman

CEO

Ontario Financing Authority

to the Standing Committee

on Public Accounts

Toronto, Ontario

~~September 21~~October 5, 2016

Word count: 835~~740~~

Check against Delivery

Thank you, Deputy Minister Thompson and Deputy Minister Orencsak.

Good afternoon.

My name is Gadi Mayman, and I am the Chief Executive Officer of the Ontario Financing Authority.

In this role, I am responsible for overseeing Ontario's:

- borrowing and debt management strategy;
- corporate and electricity finance projects and;
- banking relationships.

I also manage the province's relationships with credit rating agencies, bond underwriters and investors.

Before I continue, I would like to thank the committee for the opportunity to discuss what we have been doing to address the points raised by the Auditor General regarding Ontario's debt.

[Net debt]

The government is committed towards ~~target continues to be to~~ reducinge the net debt-to-GDP ratio to its pre-recession level.

A government's net debt increases primarily for two reasons: to finance its deficits and invest in capital assets.

In the first few years after the global recession in 2008–09, the increase in the province's net debt was primarily due to Ontario's deficit. Over this period the Government continued investing in much needed improvements to the Province's capital infrastructure.

The government plans to invest more than $137-billion in capital over 10 years, and $160 billion over the 12-year period starting in 2014-15.

Investments in capital, supplement GDP growth and the net debt-to-GDP ratio will come down more quickly than it would without these investments.

~~Ontario's deliberate choice to invest in the economy during the recession~~
~~Once balance is achieved, the increase in Ontario's net debt will be limited to its net investment in tangible capital assets.~~
This means that achieving balance will put net debt-to-GDP on a declining track.

Moody's notes in a report issued October 3, 2016 that Ontario's debt burden and debt service costs will remain manageable thanks to low interest rates, as well as the province's improving fiscal position and conservative debt management policy.

The report also states, "The policy decision to borrow for infrastructure spending at a time of historically low interest rates, combined with the prudent debt management practices outlined above, has helped to support the province's Aa2 rating."

[

Ontario conducts a robust and responsible borrowing program that protects the public interest.

In 2015–16 the government successfully completed its annual borrowing program, borrowing $32.1 billion.

As of September 30, ~~August 31,~~ 2016, the province has borrowed $13.3 billion of its
$24.4 billion requirement for fiscal 2016–17.

The recently released 2015-16 unaudited Financial Statements of the Province included a legislated pension adjustment that increased net debt by $10.7 billion.

The pension adjustment was non-cash and does not impact either the Province's total debt or its borrowing requirements.

Through prudent and cost-effective debt management, Ontario has consistently kept interest on debt costs below budget projections.

Employing term extensions has allowed the Province to lock in low interest rates for longer periods, which has reduced Ontario's refinancing risks.

It also helps offset the impact of expected higher interest rates on the interest-on-debt costs.

As of ~~August 31,~~September 30, 2016, the average term to maturity for new borrowing in 2016–17 was 15.~~6~~3 years.

In fact, since 2010 Ontario has issued $59.1 billion of bonds longer than 30 years' duration to lock in low rates.

As a result, we have extended Ontario's weighted-average term to maturity of long-term provincial debt significantly.

In 2009-10 it was 8.1 years; last year it was 14.2 years.

As I mentioned a moment ago, it was 15.~~6~~3 years as of September 30th ~~August 31~~ this year.

The 2010 Ontario Budget forecast that, by 2016–17, the Province would have to spend 11.7 cents of every revenue dollar on interest.

Currently, the Province spends 8.5 cents of every revenue dollar on interest, ~~The current forecast is~~ ~~2~~3.~~7~~5 cents lower than what was forecast in 2010. ~~We are currently tracking at nine cents of every revenue dollar.~~

This ratio is the lowest~~r than it h~~was been since ~~in the~~ 1990~~s and 2000s~~, and is forecast to remain low~~er~~ through the outlook period in 2018–19.

The Province takes a very prudent approach to managing the risks associated with its borrowing program.

Ontario limits itself to a maximum net interest rate resetting exposure level of 35 per cent of debt issued for provincial purposes.

It also limits itself to a maximum foreign exchange exposure level of five per cent of debt issued for provincial purposes.

As of September 30, ~~July 31,~~ 2016, the actual values for Ontario's net interest rate resetting exposure and~~-~~ foreign exchange exposure were 10.6 ~~9.35~~ per cent and 0.33 per cent, respectively.

As you can see, this is well below the policy limit levels.

The Province will remain flexible in its borrowing approach.

The approach includes monitoring all major markets and seeking the most cost-effective means, over the long term, to finance Ontario's borrowing program.

It also includes reaching out to investors and investment banks, domestically and globally, to ensure that Ontario bond issues remain highly attractive, liquid and sought after, as they have been since Ontario began accessing public markets almost 25 years ago.

I am happy to answer any questions you may have.

OFFICE OF THE BUDGET

Q. Will you still be able to balance if Ontario's economy does not perform as strongly as you forecast? Even the FAO has said that your forecast is optimistic.

A. The government is dedicated to a fiscally sound approach to managing the Province's finances, and remains committed to balancing the budget in 2017-18 and 2018-19.

The Ontario economy continues to grow in a challenging global environment. In fact, Ontario posted higher real GDP growth in the first quarter of 2016 than Canada, the U.S. and all other G7 countries.

While uncertainty in the global economy has increased, along with increased volatility in global financial and currency markets, Ontario has a diversified economy – meaning the Province is well positioned to respond to changing global economic conditions.

From a fiscal planning perspective, Ontario incorporates prudence in its projections.

- As required by the Fiscal Transparency and Accountability Act, 2004 (FTAA), the fiscal plan incorporates includes a reserve to protect the fiscal outlook against unforeseen adverse changes in the Province's revenue and expense, including those resulting from changes in Ontario's economic performance. The reserve has been set at $1.0 billion in 2016–17, $1.1 billion in 2017–18, and $1.2 billion in 2018–19.

- The fiscal plan also includes contingency funds to help mitigate expense risks that may otherwise negatively impact Ontario's fiscal performance.

With the economy expected to continue to growth, and the Province's ongoing commitment to transform government programs and services, Ontario is well positioned to achieve balance.

Q. From your perspective, why is it important that the government has consistently beaten its deficit targets, in terms of the province's finances?

A. The government remains committed to balancing the budget by 2017-18 and is taking deliberate and responsible steps to achieve this goal.

The government recognizes that a fiscally sound approach to managing the Province's finances will:

- Provide the foundation for the long-term well-being and prosperity of Ontarians; and

- Protect the public services that Ontarians rely on.

For 2015-16, Ontario is on track to beat its deficit target for the seventh year in a row. By continuing to beat its fiscal targets, Ontario's accumulated deficit is $30 billion lower than it otherwise would have been.

Beating our deficit targets helps to keep interest on debt at a manageable level and protects future generations from rising interest costs, which could otherwise crowd out spending on government priorities.

OFFICE OF ECONOMIC POLICY

Revenue Questions and Answers

2014-15 Actual Vs. 2015 Budget Interim

	2015 Budget Interim ($M)	2014-15 Actual ($M)	Variance ($M)	Variance (%)
Taxation Revenue	82,654	82,275	-379	-0.5
Government of Canada Transfers	21,713	21,615	-98	-0.5
Income from Government Business Enterprise	5,311	5,615	304	5.7
Other Non-Tax Revenue	8,839	9,041	202	2.3
Total Revenue	**118,517**	**118,546**	**29**	**0.0**

Q. Can you explain the $29 million increase in revenue since your 2015 Budget?

A. The modest $29 million improvement in revenues is largely due to higher net income of Government Enterprises and revenues from Other Non-Tax Revenues mainly offset by lower Taxation Revenues and Federal Payments.

- Net income from Government Enterprises is $304 million higher mainly due to higher revenue from OPG (including favourable nuclear fund financial market performance) and OLG's higher numbers of large jackpots late in the fiscal year.
- Higher Other Non-Tax revenues of $202 million came from a variety of sources, including consolidated agencies and electricity sector.
- Taxation revenues are $379 million lower largely due to lower Corporations Tax revenue (-$591M) partially offset by higher Personal Income Tax revenue (+$285M).
- Lower Federal Payments (-$98M) is largely due to a decline in transfers to consolidated government agencies.

Q. **Why are Taxation revenues $379 million below your Interim estimate?**

A. Most of the weakness in Taxation revenues is due to lower Corporations Tax (-$591M) because 2014 corporate profits turned out to be lower than estimated at the time of the 2015 Budget. This is partially offset by higher Personal Income Tax revenue (+$285M) based on results from the processing of tax returns for 2014 and prior years.

2014-15 Actual Vs. 2014 Budget Plan

	2014 Budget Plan ($M)	2014-15 Actual ($M)	Variance ($M)	Variance (%)
Taxation Revenue	83,365	82,275	-1,090	-1.3
Government of Canada Transfers	21,882	21,615	-267	-1.2
Income from Government Business Enterprise	5,026	5,615	589	11.7
Other Non-Tax Revenue	8,598	9,041	443	5.2
Total Revenue	**118,871**	**118,546**	**-325**	**-0.3**

Q. Why are revenues $325 million lower than your 2014 Budget projection?

A. Revenues were $325 million below the 2014 Budget Plan largely due to lower Taxation revenues and lower Federal Payments partially offset by higher net income from Government Business Enterprises (mainly OPG) and higher Other Non-Tax Revenues.

- Taxation revenues were $1,090 million lower and Federal Payments were $267 million weaker than projected.
- Partially offset came from higher net income from Government Business Enterprises (+$589M) and Other Non-Tax Revenues ($443M).

Q. What accounts for the $1,090 million decrease in Taxation revenues from your 2014 Budget projection?

A. Taxation revenues were $1,090 million lower due mostly to lower Corporations Tax (-$697M) and lower Sales Tax (-$248M).

- The $697 million decrease in Corporations Tax revenue is due mainly to lower 2014 profits, lower 2013 corporate income tax assessments and higher refunds to corporations for years prior to 2009.
- The $248 million decrease in Sales Tax Revenue is due largely to revisions to HST entitlement estimates for 2013 and prior years.

Q. **Why were Federal transfers $267 million lower than your 2014 Budget projection?**

A. Lower Federal transfers were largely due to revised timelines for Building Canada Fund projects and lower transfers to government agencies, including Agricorp and Toronto 2015. These lower transfers are largely offset by lower spending associated with these transfer programs.

Q: How did net income from Government Business Enterprises increase by $589 million from your 2014 Budget projection?

A: This was mostly attributable to Ontario Power Generation Inc., reflecting lower operating costs and better financial market performance of its nuclear funds.

Q: What accounts for the $1.1 billion decrease in taxation revenues from your 2014 Budget projection?

A: Taxation revenues were $1.1 billion lower due largely to lower corporations tax revenue (-$0.7 billion) and lower sales tax revenue (-$0.2 billion).

- Lower 2013 corporate income tax assessments resulted in a higher repayment to the Canada Revenue Agency for amounts already paid to the Province for the 2013 tax year and, refunds to corporations for tax years prior to 2009 were also higher.
- Sales tax revenue was lower due to revisions to harmonized sales tax entitlement estimates for 2013 and prior tax years.

2014-15 Actual Vs. 2013-14 Actual

	2013-14 Actual ($M)	2014-15 Actual ($M)	Variance ($M)	Variance (%)
Taxation Revenue	79,966	82,275	2,309	2.9
Government of Canada Transfers	22,276	21,615	-661	-3.0
Income from Government Business Enterprise	5,337	5,615	278	5.2
Other Non-Tax Revenue	8,331	9,041	710	8.5
Total Revenue	**115,911**	**118,546**	**2,635**	**2.3**

Q: How did revenues perform in 2014-15 compared to 2013-14?

A: In 2014-15, revenues increased by $2.6 billion or, or 2.3 per cent, from 2013-14.

- Taxation revenue increased by $2.3 billion over the previous year. The increase was across most taxation revenue sources, partially offset by a $1.9 billion decrease in Corporations Tax reflecting adjustments in respect of prior years.
- The combined net incomes of Government Business Enterprises were up $0.3 billion from the previous year.
- Federal Payments declined by $0.7 billion mainly because of a reduction in Equalization Payments, partially offset by increased health and social transfers
- Other Non-Tax revenue increased by $0.7 billion largely due to the gain of the sale of the Province's remaining General Motors shares during 2014-15.

Q: **Why is year-over-year growth in Taxation revenue 2.9 per cent when nominal GDP growth was 3.6 per cent?**

A: Growth in Taxation revenue of 2.9 per cent is lower than 2014 nominal GDP growth of 3.6 per cent largely due to a $1.9 billion decrease in Corporations Tax reflecting prior year adjustments. This included:

- a repayment of -$1.3B, due to a Federal government overpayment of 2013 corporate income tax during 2013, and
- a projected repayment to the Federal government of $0.5B for an overpayment to the Province for the 2014 tax year.

Q: **What explains the fairly strong year-over-year growth in Personal Income tax revenues of 8.9 per cent?**

A: The higher Personal Income Tax revenues growth reflects growth in personal incomes as well as the impact of the high-income measure introduced in the 2014 Budget and the net impacts of one-time prior-year adjustments in both 2013-14 and 2014-15.

Q: **Given the recent poor results for Quebec and California allowances auctions, is the Government still expecting to meet revenue targets set out in the 2016 Budget?**

A: The poor auction results suggest a risk to cap and trade revenues. However, it is too early to determine what actual impact on revenues will be.

In three joint WCI auctions held so far in 2016, allowances have gone unsold.

- In February, 94% of the allowances offered by Quebec were sold; California sold 95% of the total allowances it offered.
- In May, both Quebec and California sold about 11% of the total allowances they each offered.
- The August auction performed relatively better though still undersubscribed, selling 35% of offered allowances.

It is possible, however, that emitters are holding off on buying allowances until they get closer to the end of the compliance period (current compliance period from 2015 through 2017).

The uncertainty related to legal challenges to California`s cap and trade program may have contributed to the poor sale of allowances at the May and August auction. In joint auctions prior to 2016, all the allowances that were offered for sales were sold.

Ontario is planning to hold stand-alone auctions starting in March 2017 before linking with California and Quebec in 2018. Initial stand-alone auctions could result in a higher-than-WCI domestic carbon price.

The medium-term revenue outlook includes projected cap-and-trade proceeds from the auctioning of carbon allowanced beginning in 2017. The current estimate for proceeds is:

- $478 million in 2016-17; and
- Between $1.8 billion and $1.9 billion annually starting in 2017-18.

Friendly Questions

Debt Burden

~~**Q. Our government has a target for reducing the net-debt-to-GDP ratio.**~~

A: Investor demand has allowed the Province to extend the term of its debt in recent years and lock in low interest rates for a longer period. This term extension reduces the Province's refinancing risks and helps offset the impact of expected higher interest rates on its IOD costs.

The 2010 Budget forecasted that, by 2016-17, the Province would have to spend 11.7 cents of every revenue dollar received on interest. The current forecast is 23 per cent lower, at only 9.0 cents of interest costs for every dollar of revenue. This ratio is lower than it was in the 14 fiscal years from 1992–93 to 2005–06, and is forecast to remain lower through the period to balance in 2017–18.

Q: Moody's just released a report noting that Ontario's policy decision to borrow for infrastructure spending at a time of historically low interest rates, combined with the prudent debt management practices has helped to support the province's Aa2 rating. Can you explain how borrowing for infrastructure helps support the province's credit rating?

A: We are making the biggest investment in public infrastructure in Ontario's history. We have a plan to invest more than $137 billion over the next 10 years, or about $160 billion over 12 years, starting in 2014–15. This is a strategic investment will grow the economy and create jobs.

Our plan is to first balance the budget while continuing to make strategic investments in capital assets. These infrastructure investments will stimulate economic growth, resulting in GDP growing more quickly than debt, and thereby lowering the net debt-to-GDP ratio.

With capital investments, the net debt-to-GDP ratio will come down more quickly than it would have without these investments in capital assets.

Capital investments are amortized over the useful life of the assets. Once a balanced budget is achieved, the increase in debt will be limited to the difference between the cash investment to build assets, and the amortization, which is a non-cash amount.

This historic investment in public infrastructure is critical to Ontario – today and tomorrow. From an economic perspective – these infrastructure investments will certainly pay off. Our investments will support an average of 110,000 jobs per year in Ontario, as well as creating significant GDP growth.

Interest Rates

Q. Chapter 2 of the Auditor General's 2014 annual report speaks to the increased vulnerability of Ontario with respect to interest rates. She points to the possible rise in rates related to borrowing.

However, I am also aware that the Province has consistently kept interest on debt costs below budget projections.

What steps has the government taken to reduce borrowing and keep interest on debt costs low?

A. Through prudent and cost-effective debt management, the Province has consistently kept interest on debt costs below budget projections. The 2010 Budget forecasted that, by 2016-17, the Province would have to spend 11.7 cents on interest for every revenue dollar received. The current forecast is 23 per cent lower, at 9.0 cents of interest costs for every dollar of revenue. This ratio is lower than it was in the 14 fiscal years from 1992–93 to 2005–06, and is forecast to remain lower through the period to balance in 2017–18.

Extending the term of the debt that the Province issues has locked in low interest rates for a longer period, which reduces refinancing risks and helps offset the impact of expected higher interest rates on the Province's interest on debt costs.

Going back to the beginning of fiscal 2010–11, Ontario has issued $59.1 billion of bonds that do not mature for at least 30 years to lock in low rates. As a result, the weighted-average term to maturity of long-term provincial debt issued has been extended significantly, from 8.6 years in 2008-09 to 15.3~~6~~ years as of ~~August 31.~~September 30.

Financial Instruments Standard

Q. I understand that proposed new standards by the Public Sector Accounting Board on Financial Instruments would affect interest on debt. Would it also affect other financial indicators of the provincial government?

A. The use of financial indicators helps the public and other readers of the Annual Report assess the financial health of the Province. Through the indicators' levels and trends, readers are able to gauge the impacts of economic and other events on the Province's finances, as well as how the government is responding to these.

The Public Sector Accounting Board's (PSAB) new standard on Financial Instruments, if implemented in its current form, would have a significant impact on how the Province uses derivatives to convert its current exposure in foreign currency debt into Canadian-dollar obligations. The proposed standard, which does not allow for hedge accounting, would introduce significant and difficult-to-forecast volatility in the accounting treatment of the Province's IOD, net debt and deficit. This is contrary to the current PSAB standard, comparable international and U.S. accounting standards, and Canadian private-sector accounting standards, all of which allow for hedge accounting.

Update to 2016 Budget, as of July 31, 2016

- The Province used derivatives to hedge approximately 98 per cent of its $61 billion in foreign currency debt into Canadian dollars.
- While $43 billion of this hedging would remain unaffected under the new standards, IOD and the deficit would become subject to significant swings entirely due to the type of derivative used on the remaining $18 billion.
- The derivative instruments used to hedge this $18 billion currently provide savings of up to 35 basis points, or over $60 million annually, relative to the cost of instruments that would otherwise have to be used under the new standard to eliminate volatility.
- From April 1st, 2016 to July 30th, 2016, the Canadian dollar depreciated by 0.7 cents against the U.S. dollar. Under the new standard, this would have resulted in a $1.3 billion accounting impact to the Province's IOD and deficit.

Ontario, supported by the borrowing communities of the majority of the provinces, has communicated its outstanding concerns with the standard to PSAB. It has requested that PSAB consider hedge accounting as an option, in line with comparable international, U.S. and Canadian private-sector accounting standards. This approach would eliminate the potential accounting swings in IOD, the deficit and net debt. This would allow Ontario to continue to use the most economically efficient means of hedging its foreign exchange exposure and also ensure that the Province's financial results reflect the economic substance underlying its use of derivative instruments.

Borrowing and Debt Management – General

Q. Why was total long-term public borrowing $32.1 billion in 2015–16 when the deficit was $5.7 billion?

A. In addition to financing the deficit, long-term public borrowing refinances debt maturities and debt redemptions, funds the Province's investments in capital assets, and loans to agencies. The Province also pre-borrowed $2.0 billion of its 2016-17 requirements.

~~**Q. Why did the Net Debt-to-GDP ratio decline to 39.6 per cent at the end of**~~ **approximately $1,753 for every person in Ontario. When will the Province eventually run into a debt wall like Greece, Portugal and Ireland and be forced to raise taxes and cut services?**

A. There is strong demand for Ontario bonds in both the domestic and international markets. Last fiscal year Ontario was able to borrow $32.1 billion in long-term debt while our spread, or the margin that we have to pay over the equivalent Government of Canada bond, tightened, indicating ongoing strong demand for Ontario bonds.

We expect that the liquidity of Ontario benchmark bonds and continuing confidence in the value of Ontario debt will allow us to cost-effectively complete the 2016–17 borrowing program. As of ~~August 31~~September 30, 2016, $13.3~~2.5~~ billion or 54~~1~~ per cent, of this year's long-term borrowing requirement has been completed.

Q. Has it been difficult to complete the Province's borrowing program?

A. The Province continues to have steady access to both domestic and international bond markets. As of ~~August 31~~September 30, 2016, the Province had borrowed $13.3~~2.5~~ billion for the fiscal year. Approximately 69~~71~~ per cent of this year's borrowing-to-date has been completed in Canadian dollars. The remainder of the Province's borrowing-to-date has been completed in international currencies primarily through U.S. dollar global bonds, and two small Australian dollar Kangaroo bond issues. In 2015–16, the Province borrowed $32.1 billion, with $2.0 billion in pre-borrowing.

Q. What is the difference between total debt, net debt and accumulated deficit?

A. Total debt represents all borrowing.

Net debt is all borrowing plus other liabilities, minus the Province's financial assets.

By analogy, think of a family's finances. A mortgage, car loans and lines of credit represent total debt. Total debt partially offset by money the family has in the bank, in RRSPs and in RESPs represents the family's net debt.

Accumulated deficit is the sum of all past Provincial surpluses and deficits, adjusted for changes in accounting rules.

Q. Is the Province planning to issue any more Green Bonds in the future?

A. On January 22, 2016, the Province of Ontario successfully priced its second Global Canadian Dollar (CAD) Green Bond for $750 million. There was strong demand for Ontario's second Green Bond issue, with 52 investors participating in the trade. Eight projects were selected as eligible and are expected to receive

funding from the second Green Bond, with an emphasis on clean transportation and energy efficiency and conservation.

To date, total Green Bond financing amounts to $1.25 billion, with up to $1.2 billion allocated to Metrolinx for clean transportation projects.

As the first Canadian province to issue Green Bonds, Ontario continues to lead the way in establishing and developing a Canadian dollar Green Bond market with investor participation from around the world.

Q. What are unrestricted liquid reserves, and how do they ensure that Ontario will have sufficient liquidity to meet its financial obligations?

A. The Province maintains liquid reserves in the form of cash and temporary investments, which can immediately be converted to cash.

In the normal course of doing business, the Province enters into transactions that may require it or its counterparties to pledge short term investments. Although the pledged investments are technically owned by the Province, they are deducted from the total liquid reserves figure to arrive at unrestricted liquid reserves. This provides a more conservative measure of the liquidity available to meet the Province's financial obligations.

The Province ensures it always has a prudent level of unrestricted liquid reserves to cover all obligations in the short term.

Interest on Debt (IOD)

Q. What is the impact on IOD of a $1.0 billion change in the deficit?

A. The 2016-17 impact is forecast to be approximately $30 million.

Q. What is the impact on IOD of a one percentage point change in interest rates?

A. The 2016-17 impact is approximately $350 million.

Q. What is your assumed interest rate for the IOD forecast in the 2016 Budget?

A. The assumed ten-year interest rates are 3.1 per cent for 2016-17 and 3.8 per cent for 2017-18, based on the forecast for Government of Canada bonds that OEP collects from the private sector, plus a spread for the Ontario credit. For 2018-19, the forecast is 4.8 per cent and is based on the average Ontario interest rates over the past 15 years. This is the same methodology that we have used

for the last number of years in putting together our IOD forecast. These rates are cautious and prudent, above current market rates.

Q. Will IOD costs crowd out other expenditures as interest rates rise and debt continues to climb? How can you address this problem?

A. Ontario has a realistic plan to balance its budget while investments are made in the priorities of Ontario families – health care, education, the environment and infrastructure.

Investor demand has allowed the Province to extend the term of its debt in recent years and lock in low interest rates for a longer period. This term extension reduces the Province's refinancing risks and helps offset the impact of expected higher interest rates on its IOD costs. The 2010 Budget forecasted that, by 2016-17, the Province would have to spend 11.7 cents of every revenue dollar received on interest. The current forecast is 23 per cent lower, at only 9.0 cents of interest costs for every dollar of revenue. This ratio is lower than it was in the 14 fiscal years from 1992–93 to 2005–06, and is forecast to remain lower through the period to balance in 2017–18.

Q. We understand that the proposed new standards by the Public Sector Accounting Board on Financial Instruments would affect IOD. Would it also affect other financial indicators of the provincial government?

A. Yes, Annual Deficit, Net Debt, Accumulated Deficit and their ratios as a percent to GDP would also be affected.

Q. If the proposed accounting change indicates savings, will the government be able to spend them?

A. The proposed accounting change introduces fair value measurement and prohibits hedge accounting. If implemented as planned, the Province's reported financial results would not accurately take into account the value of its derivatives. As a result, substantial accounting gains or losses could occur. These changes in value would be accounting changes only and not real changes in cash. This gain would only have been reflected in the Province's accounting statements, with no actual change in the cash available for program spending.

Credit Ratings

Q. What are the Province's current credit ratings?

A. The Province is rated:

	Long Term	Short Term
Moody's Investors Service:	Aa2	P-1

Standard & Poor's:	A+	A-1+
DBRS:	AA (low)	R-1 (mid)
Fitch	AA-	F1+

Q. What impact did Moody's removal of the negative outlook have on your borrowing costs?

A. Credit ratings are one of a number of factors that contribute to borrowing costs. Since the 2016 Ontario Budget was released, Ontario's credit spreads have narrowed modestly. This in part reflects the fact that all four credit rating agencies have affirmed Ontario's ratings reflecting their confidence in our plan to eliminate the deficit, with Moody's improving their outlook for Ontario's credit rating.

ONTARIO ELECTRICITY FINANCIAL CORPORATION

Friendly Question

Electricity Sector Stranded Debt

Q: The stranded debt arose under the *Energy Competition Act of 1998*, and its schedule, the *Electricity Act, 1998*. The *Electricity Act, 1998*, also enabled the implementation of the Debt Retirement Charge (DRC) on electricity ratepayers.

Since May 2002, residential and other electricity users have been paying the DRC of 0.7 cents per kilowatt hour (kWh) on their electricity bills. The DRC is paid to the Ontario Electricity Financial Corporation (OEFC) to help service and pay down the stranded debt that arose because of the restructuring of Ontario's electricity sector under the *Energy Competition Act, 1998*.

However, I know that the government eliminated the DRC from residential bills as of January 1, 2016.

This legacy charge from the Harris government was eliminated from residential bills about 2 years earlier than previously estimated – saving the average residential user about $70/year.

Can you please inform the committee of the commitment that the government has to eliminating the debt retirement charge cost for commercial, industrial and all other electricity users by 2018?

A. Thank you for the question.

As part of its commitment to reduce electricity cost pressures, the government has removed the Debt Retirement Charge (DRC) from residential electricity users' bills as of January 1, 2016.

This would save a typical residential user about $70 each year and meant ending the DRC earlier for these users than otherwise provided for in the *Electricity Act, 1998*, as originally enacted. As a further step to mitigate electricity cost pressures for commercial, industrial and all other users, the government introduced legislation, passed on December 10, 2015, the *Budget Measures Act, 2015* to end the DRC on April 1, 2018, nine months earlier than previously estimated.

- A large industrial using 3,000 megawatt-hours (MWh) per month could save $21,000 per month, or about seven per cent off its electricity bills;

- For a large northern industrial in the Northern Industrial Electricity Rate program, this could be more than an eight per cent savings; and

- A small business using 20,000 kilowatt-hours (kWh) per month could save $140 per month, or about four per cent.

Ending the DRC on a legislated fixed date provides certainty to commercial, industrial and other users, and helps them more effectively plan their investment decisions.

I would note the following context. The government's electricity sector reforms in the *Electricity Restructuring Act, 2004*, and others, have put the stranded debt recovery plan back on track. Based on interim numbers in *Budget 2016*, this is projected to be the twelfth consecutive year that the stranded debt has been reduced, to under $5 billion as at March 31, 2016, from $20.6 billion as at March 31, 2004. This allowed the government to follow through on its commitment to reduce electricity cost pressures.

Stranded Debt and Residual Stranded Debt Qs&As

Q. What is the impact of broadening ownership of H1 on Stranded Debt?

A. The interim 2015–16 results reflect the upfront benefits to OEFC of broadening the ownership of Hydro One through an initial public offering (IPO). This includes the OEFC receiving in fiscal 2015-16 – that is after March 31, 2015 -- $2.6 billion in departure tax and about $200 million in one-time additional payments in lieu of taxes (PILs), as Hydro One exited the PILs regime and will no longer pay corporate tax PILs to the OEFC.

The upfront impact on OEFC of the departure tax and one-time PILs payments on the OEFC's unfunded liability was partly offset by lower Electricity Sector Dedicated Income. In addition, the one-time departure tax reflects that Hydro One is now a taxable corporation, so it will no longer pay payments-in-lieu of corporate taxes (PILs) to OEFC, which reduces the estimated present value of future dedicated revenues to OEFC.

The government recognizes its commitment to electricity ratepayers under section 50.3 of the *Electricity Act, 1998*, and has taken steps to clarify and ensure that the benefits of selling shares in Hydro One are recognized by OEFC to contribute to the continuing reduction of its unfunded liability.

As part of the government's commitment to using the proceeds from broadening Hydro One ownership for infrastructure investments and paying down debt, proceeds related to the book value of the shares sold and the pre-IPO special dividend payment of $800 million paid by Hydro One to the Province will be used to pay down the Province's electricity sector debt and other payables.

This will allow the OEFC to reduce its overall debt, and contribute towards the Province's targeted $5 billion debt paydown. This debt paydown does not affect OEFC's stranded debt, as OEFC's receivables from the Province will be reduced by an equivalent amount.

[Note, Provincial payables to OEFC are notes payable to OEFC from the Province's acquisition of the equity in Hydro One in 1999, and in respect of cumulative net income since 1999.

Note this portion of the proceeds would have no net impact on OEFC's unfunded liability, as the cash asset would be offset by the reduction in the OEFC's receivable from the Province.]

Additional details

Under a Hydro One disposition, two future dedicated streams are affected:

1. Lower Hydro One earnings: The Province has committed to direct the income it earns from Hydro One (and OPG) in excess of the interest cost of its investment in the company. Upon a divestment, the Province would only be able to dedicate the portion of the net income that reflects its ownership stake. For example, in the case of a 15 per cent divestment, only 85 per cent of Hydro One's earnings less the associated interest cost, would be dedicated to OEFC. Currently, the Province owns about 70 per cent of Hydro One.

Loss of federal portion of Payments in Lieu of Taxes: Prior to the IPO, Hydro One was exempted from regular federal and Ontario income tax and instead made payments in lieu of taxes to OEFC which helped service and paid down the stranded debt of the electricity sector. Payments in lieu of taxes to OEFC were equal to the federal and Ontario income tax Hydro One would pay if it were a taxable corporation. Following the beginning of broadening of ownership in Hydro One in November 2015, the Province's ownership of Hydro One fell below 90 per cent and the company ceased to be exempt from federal and Ontario income taxes and started to pay actual federal and provincial corporate income tax (CIT). As a result, OEFC would no longer receive the PILs from Hydro One equivalent to federal CIT. Under the amendments made to the *Electricity Act, 1998* in the *Budget Measures Act, 2015*, the Minister of Finance will pay the OEFC an amount equal to tax payable under the *Taxation Act, 2007* (i.e., the provincial CIT) by Hydro One Inc. (HOI), to continue to help service and pay down the electricity sector stranded debt. HOI is composed of Hydro One Ltd.'s regulated Ontario distribution, transmission and remotes businesses.

Q. What is the status of the old Ontario Hydro's stranded debt?

A. The government dedicates the revenues it receives from the electricity sector to the Ontario Electricity Financial Corporation (OEFC). All OEFC revenues, including the Debt Retirement Charge (DRC) paid by electricity consumers, are used to service and retire its debt and other obligations, as provided for under the *Electricity Act, 1998*.

For the twelfth consecutive year, the stranded debt is projected to be reduced, based on the interim 2015–16 results for the OEFC showing a projected excess of revenue over expense of more than $3 billion. The OEFC has paid down stranded debt by an estimated total of more than $15 billion from its peak in 2003-04, reducing stranded debt to under $5 billion as at March 31, 2016, based on interim numbers.

- The following table shows the unfunded liability (or "stranded debt") of OEFC since the opening amount of $19,433 million on April 1, 1999.

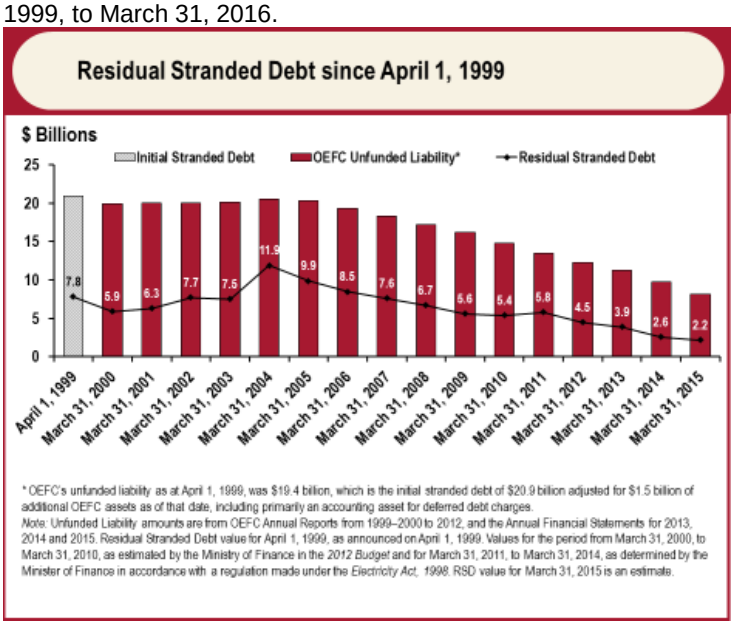
At March 31 ($M unless noted)	April 1, 1999	2000	2001	2002	2003	2004	2005	2006	2007
Unfunded Liability	$19,433	$20,034	$20,016	$20,085	$20,183	$20,550	$20,363	$19,293	$18,289
Increase / (Decrease)		$601	($18)	$69	$98	$367	($187)	($1,070)	($1,004)
At March 31 ($M unless noted)	2008	2009	2010	2011	2012	2013	2014	2015	Interim 2015-16
Unfunded Liability	$17,225	$16,182	$14,810	$13,448	$12,321	$11,257	$9,781	$8,185	<$5Bn
Increase / (Decrease)	($1,064)	($1,043)	($1,372)	($1,362)	($1,127)	($1,064)	($1,476)	($1,596)	>$3Bn

Residual Stranded Debt

Q. What is the residual stranded debt as at March 31, 2016?

A. The *Electricity Act, 1998* was amended by the *Budget Measures Act, 2015* (Bill 144) and, effective December 10, 2015, all reference to the "stranded debt" and "residual stranded debt", were repealed. This included the removal of the requirement to determine the residual stranded debt from time-to-time and the regulation-making authority for O. Reg. 89/12 – rendering the regulation obsolete. On February 11, 2016, the government filed Ontario Regulation 20/16 revoking Ontario Regulation 89/12.

Q. What is the current status of the residual stranded debt or what was the residual stranded debt the last time it was determined or estimated?



A. Prior to amendments in the *Budget Measures Act, 2015* under the *Electricity Act, 1998* the residual stranded debt was defined as the stranded debt minus the present value of projected future payments in-lieu of taxes (PILs), Gross Revenue Charge (GRC) and electricity sector dedicated income to be paid to OEFC.

In the *2015 Ontario Economic Outlook and Fiscal Review*, the residual stranded debt was estimated to be $2.2 billion as at March 31, 2015. This was a decrease of $0.4 billion compared to residual stranded debt of $2.6 billion as at March 31, 2014, and was a total estimated decrease of $9.7 billion from an estimated peak of residual stranded debt of $11.9 billion as at March 31, 2004. Residual stranded debt was initially estimated as $7.8 billion as at April 1, 1999.

Residual stranded debt is estimated to have increased to a peak of $11.9 billion as at March 31, 2004, primarily due to the electricity price freeze, the downward revision in 2004 of the previous overestimation of future financial performance of Ontario Power Generation (OPG) which lowered the estimated future dedicated revenues to OEFC from the sector, and lower tax rates, resulting in lower projected future PILs to OEFC. OPG had significantly underperformed compared to its plans over the previous period of 1999 to 2004.

The estimated residual stranded debt amount and timing for its retirement were subject to uncertainty in forecasting future OEFC results and dedicated revenues to OEFC, which depend on the financial performance of Ontario Power Generation, Hydro One and municipal electricity utilities, and other factors such as interest rates and electricity consumption. The changes to the levels of unfunded liability to-date, based in part on the upfront impact on OEFC of the departure tax and one-time PILs payments, also reflect the fact that OEFC will have reduced dedicated revenues as a result of reduced ownership in Hydro One going forward.

The following chart illustrates the path of residual stranded debt from April 1, 1999, to March 31, 2016.

Q. When will the residual stranded debt be retired and the DRC end?

A. The *Electricity Act, 1998* was amended by the *Budget Measures Act, 2015* (Bill 144) and, effective December 10, 2015, all reference to the "stranded debt" and "residual stranded debt" were repealed. This included the removal of the requirement to determine the residual stranded debt from time-to-time and the regulation-making authority for O. Reg. 89/12 – rendering the regulation obsolete. On February 11, 2016, the government filed Ontario Regulation 20/16 revoking Ontario Regulation 89/12.As originally enacted, the *Electricity Act, 1998*, previously allowed for the Debt Retirement Charge (DRC) to be paid by consumers until the Minister of Finance determines that the residual stranded debt is retired.

The residual stranded debt determination was not a one-time determination. It was based on actual financial performance to-date and forecasting future OEFC results and future dedicated revenues to OEFC, which was subject to uncertainty and depended on the future financial performance of Ontario Power Generation, Hydro One and municipal electricity utilities, as well as other factors such as interest rates and electricity consumption.

As part of its commitment to reduce electricity cost pressures, the government has removed the DRC from residential electricity users' bills as of January 1, 2016.

This would save a typical residential user about $70 each year and would mean ending the DRC earlier for these users than otherwise provided for in the *Electricity Act, 1998*.

As a further step to mitigate electricity cost pressures for non-residential users, the government introduced legislation the *Budget Measures Act, 2015*, passed in December 2015, to end the DRC for all other users on April 1, 2018, nine months earlier than previously estimated.

Ending the DRC on a legislated fixed date provides certainty to commercial, industrial and other users, and helps them more effectively plan their investment decisions.

Even after the end of the DRC, there would still be stranded debt remaining, to be serviced and paid down by OEFC's other dedicated revenues, such as payments in lieu of taxes and the Gross Revenue Charge.

Q. Why did the residual stranded debt only fall from $2.6 billion to $2.2 billion between March 31, 2014, and March 31, 2015, if the Ontario Electricity Financial Corporation's (OEFC) unfunded liability fell by about $1.6 billion and the DRC collected the same year was $0.956 billion?

A. Prior to the *Budget Measures Act, 2015* amendments of the *Electricity Act, 1998* and the revocation of Ontario Regulation 89/12, the residual stranded debt was defined under the *Electricity Act, 1998* as the stranded debt minus the estimated present value of future payments in-lieu of taxes (PILs), Gross Revenue Charge (GRC) and electricity sector dedicated income to be paid to OEFC. The Debt Retirement Charge would have been charged to consumers until the Minister of Finance determined that the residual stranded debt had been retired.

The residual stranded debt fell by less than the decrease in OEFC's unfunded liability due to a reduction in the estimated present value of future dedicated revenues to OEFC from $7.2 billion as at March 31, 2014, to $6.0 billion as at March 31, 2015, which reflected the uncertainty of and update to the forecast of future dedicated revenues to OEFC. These forecasted revenues depend on the financial performance of Ontario Power Generation, Hydro One and municipal electricity utilities, regulatory decisions by the Ontario Energy Board, as well as other factors such as interest rates and electricity consumption.

The residual stranded debt was not a fixed, one-time determination. Under the *Electricity Act, 1998*, and Ontario Regulation 89/12, the estimated amount of residual stranded debt depended on actual OEFC results to-date and a forecast of future revenues to OEFC.

Q. Why has the residual stranded debt only declined by $5.6 billion since April 1, 1999, to March 31, 2015?

A. The residual stranded debt increased from $7.8 billion as at April 1, 1999, to an estimated $11.9 billion as at March 31, 2004, as a result of an increase in stranded debt primarily due to the electricity price freeze, as well as a reduction in the estimated present value of future dedicated revenues to the Ontario Electricity Financial Corporation (OEFC), mainly reflecting the downward revision in 2004 of the previous overestimation of future financial performance of Ontario Power Generation (OPG), and lower tax rates. OPG had significantly underperformed compared to its plans over the previous period of 1999 to 2004.

Since 2004, the government's electricity sector reforms in the *Electricity Restructuring Act, 2004*, and others, have put the stranded debt recovery plan back on track. The residual stranded debt has been reduced by an estimated $9.3 billion, from an estimated peak of $11.9 billion as at March 31, 2004, to $2.2 billion as at March 31, 2015.

Prior to the *Budget Measures Act, 2015* amendments of the *Electricity Act, 1998* and the revocation of Ontario Regulation 89/12, the residual stranded debt was defined under the *Electricity Act, 1998* as the stranded debt minus the estimated present value of future payments in-lieu of taxes (PILs), Gross Revenue Charge (GRC) and electricity sector dedicated income to be paid to OEFC. The Debt Retirement Charge would have been charged to consumers until the Minister of Finance determined that the residual stranded debt had been retired.

The *Electricity Act, 1998* was amended by the *Budget Measures Act, 2015* and, effective December 10, 2015, all reference to the "stranded debt" and "residual stranded debt" were repealed. This included the removal of the requirement to determine the residual stranded debt from time-to-time and the regulation-making authority for O. Reg. 89/12 – rendering the regulation obsolete. On February 11, 2016, the government filed Ontario Regulation 20/16 revoking Ontario Regulation 89/12.

Q. Since you have collected more than $12.5 billion in Debt Retirement Charge (DRC) revenue to March 31, 2015, why hasn't stranded debt declined by more?

A. Since 2004, the government's electricity sector reforms in the *Electricity Restructuring Act, 2004*, and others, have put the stranded debt recovery plan back on track. The Ontario Electricity Financial Corporation (OEFC) has paid down stranded debt by an estimated total of about $12.3 billion from its peak in 2003-04, reducing stranded debt to $8.2 billion as at March 31, 2015.

- As confirmed in the Auditor General's 2011 Annual Report, the DRC is used exclusively by OEFC to meet its mandate, as provided for under the *Electricity Act, 1998*, which includes servicing and retiring its debt and other liabilities.

- Servicing costs to the OEFC include interest expense, which is currently about $1.4 billion per year and has totalled about $30.5 billion between April 1, 1999 and March 31, 2015.

- Stranded debt increased by over $1 billion between April 1, 1999, and March 31, 2004, primarily as a result of the 4.3 ¢/kilowatt-hour (kWh) price freeze, which cost OEFC about $900 million.

- The Auditor General audits OEFC's annual financial statements and has provided an unqualified opinion every year since the initial 1999–2000 financial statements.

Q. After the removal of the DRC what is the government's plan to pay into the OEFC, to make up for that money? With the lower revenue going into the OEFC, isn't there a danger of it becoming insolvent?

A. The government has removed the Debt Retirement Charge (DRC) from residential users' electricity bills as of January 1, 2016. As a further step to mitigate electricity cost pressures for commercial, industrial and all other users, the government introduced legislation, passed on December 10, 2015, the *Budget Measures Act, 2015* to end the DRC on April 1, 2018, nine months earlier than previously estimated.

Prior to the *Budget Measures Act, 2015* amendments of the *Electricity Act, 1998*, the DRC would have been charged to consumers until the Minister of Finance determined that the residual stranded debt had been retired.

Even after the end of the DRC, there would still be stranded debt remaining, to be serviced and paid down by OEFC's other dedicated revenues, such as payments in lieu of taxes and the Gross Revenue Charge. The government expects that the stranded debt will continue to decline following the end of the DRC.

Background

Q. What is OEFC?

A. The Ontario Electricity Financial Corporation (OEFC) is an agency of the Province and was established by the *Electricity Act, 1998* as the legal continuation of the former Ontario Hydro.

OEFC's mandate includes servicing and retiring the former Ontario Hydro's debt and certain other liabilities.

- OEFC inherited $38.1 billion in total debt and other liabilities from the former Ontario Hydro when the Ontario electricity sector was restructured on April 1, 1999. The debt was accumulated by building Ontario's electricity generation and transmission infrastructure.

- A portion of the $38.1 billion was supported by the value of the assets of Ontario Hydro successor companies, leaving $20.9 billion of stranded debt not supported by those assets

OEFC receives dedicated revenues to service and retire the stranded debt from a number of sources, including payments in lieu of taxes (PILs) from Ontario Power Generation (OPG), Hydro One and municipal electricity utilities (MEUs); Electricity Sector Dedicated Income from the Province in respect of the net incomes of OPG and Hydro One; and the Debt Retirement Charge paid by electricity users, as provided for by the *Electricity Act, 1998*.

Q. When will the OEFC's 2015-16 Annual Report be released publicly?

A. The 2015-16 Annual Report is currently being prepared. Under the Electricity Act, 1998, the time frame for preparing and submitting the Annual Report may be extended to reflect the timeframe for Public Accounts. Given the changes to the Electricity Act and significant activities during 2015-16 that affected OEFC, it was prudent to take additional time to review the impacts on OEFC in preparing the financial results for 2015-16..

- OEFC’s annual reports contain OEFC’s audited financial statements which are also released as part of the Province’s Public Accounts

    - OEFC's audited 2014-2015 financial statements, including the notes to the financial statements, were released on Sep 28, 2015 in Volume Two of the 2014-15 Public Accounts.

- The Auditor General audits OEFC’s annual financial statements and has provided an unqualified opinion every year since the initial 1999-2000 financial statements.

- Public Accounts may be downloaded from the Ministry of Finance web site (http://www.fin.gov.on.ca/en/budget/paccts/).

- OEFC’s past Annual Reports (1999-2000 to 2014-2015) can be downloaded from the OEFC website. (http://www.oefc.on.ca/publications.html).

- A spreadsheet containing OEFC's historical financial statements can be accessed on OEFC’s website (http://www.oefc.on.ca/pdf/OEFC_financials_historicals_en.xls)

Q. What is the difference between stranded debt and unfunded liability?

A. The Ontario Electricity Financial Corporation (OEFC) inherited $38.1 billion in total debt and other liabilities from the former Ontario Hydro when the Ontario electricity sector was restructured on April 1, 1999. The debt was accumulated by building Ontario's electricity generation and transmission infrastructure. This amount included $30.5 billion in total debt.

A portion of the $38.1 billion was supported by the value of the assets of Ontario Hydro successor companies, leaving $20.9 billion of stranded debt not supported by those assets.

OEFC's initial unfunded liability of $19.4 billion as at April 1, 1999, was the stranded debt adjusted for $1.5 billion of additional assets, including primarily an accounting asset for deferred debt charges.

Q. What was the origin of the residual stranded debt?

A. The Ontario Electricity Financial Corporation (OEFC) is one of five entities established by the *Electricity Act, 1998*, as part of the restructuring of the former Ontario Hydro. OEFC's mandate includes servicing and retiring the debt and other liabilities of the former Ontario Hydro.

- OEFC inherited $38.1 billion in total debt and other liabilities from the former Ontario Hydro when the Ontario electricity sector was restructured on April 1, 1999. A portion of the $38.1 billion was supported by the value of the assets of Ontario Hydro successor companies, leaving $20.9 billion of stranded debt not supported by those assets.

- As of April 1, 1999, the present value of future payments-in-lieu of taxes and electricity sector dedicated income was estimated at $13.1 billion. Subtracting the $13.1 billion from stranded debt of $20.9 billion resulted in a difference of $7.8 billion, the initial estimated residual stranded debt.

The *Electricity Act, 1998* was amended by the *Budget Measures Act, 2015* and, effective December 10, 2015, all reference to the "stranded debt" and "residual stranded debt", including the regulation-making authority of Ontario Regulation 89/12, were repealed. This included the removal of the requirement to determine the residual stranded debt from time-to-time and the regulation-making authority for O. Reg. 89/12 – rendering the regulation obsolete. On February 11, 2016, the government filed Ontario Regulation 20/16 revoking Ontario Regulation 89/12.

Q. How does OEFC provide financial assistance to the successor corporations of Ontario Hydro? Are these loans added to residual stranded debt/outstanding liabilities?

A. Consistent with its mandate, OEFC provides financial assistance to the successor corporations of Ontario Hydro, namely Ontario Power Generation (OPG) and the Independent Electricity System Operator (IESO). For example, financing is provided by OEFC for new generation development projects such as the Niagara tunnel project.

OEFC borrows to provide these loans, thereby increasing its debt portfolio, but with an offsetting asset (Notes and Loan Receivables) from the companies, thereby not affecting the unfunded liability ("stranded debt") on OEFC's balance sheet.

Q. What is the "due from the Province of Ontario" payment?

A. Due from Province

The Due from Province of Ontario that appears in OEFC's financial statements represents the cumulative value of the Electricity Sector Dedicated Income (ESDI) since April 1, 1999.

ESDI reflects the Province's commitment to dedicate its cumulative combined net income of OPG and Hydro One in excess of the Province's interest cost of its investment in its electricity subsidiaries to OEFC.

- For example, the combined net incomes of OPG and Hydro One in 2014-15 was $1,558M, and the Province's interest cost in acquiring the equity in the two companies totals about $520 million annually. This resulted in an ESDI of $1,038 million in 2014-15, so the ESDI Due from Province of Ontario increased from $3,865 million as of March 31, 2014, to $4,903 million as of March 31, 2015.

The ESDI commitment is reflected in Public Accounts as a transfer payment to OEFC from the Province's Consolidated Revenue Fund and is authorized by a voted appropriation.

CORPORATE AND ELECTRICITY FINANCE DIVISION

Asset Optimization and the Trillium Trust

Q: What asset optimization initiatives did the Province move forward with in 2014-15?

A: On February 4, 2015, the Province completed the sale of its remaining 36.7 million GM common shares for total proceeds of $1.55 billion, resulting in a fiscal gain of $1.08 billion.

General Motors also redeemed the Province's preferred shares on December 31, 2014, for total proceeds of $0.16 billion, including a gain of $0.02 billion.

The $1.1 billion gain on the sale of the common and preferred shares exceeded the $900 million asset optimization target included in the 2014 Budget for 2014–15 Net Revenue Gains from Asset Optimization.

The Ontario government directed the gain from the sale, including the additional $200 million generated above the 2014 target, to the Trillium Trust. The Province also directed to the Trillium Trust the $249 million net proceeds from the September 2013 sale of the Province's interest in 10 million shares of GM.

Q: The 2014-15 Public Accounts showed that the sale of GM shares provided revenue benefits to the Province. Is the Province selling assets to improve the path to balance?

A: The government's plan to balance the budget is centred on:

- Responsibly Managing Spending
- Transforming and Modernizing Government
- Addressing the Underground Economic and Tax Compliance
- Investing Strategically to Grow the Economy

The government's plan to eliminate the deficit does not depend on the revenues from asset sales. Maximizing the value of these assets is part of the government's economic plan for Ontario. The net revenue gains from these transactions are helping the government to deliver on its plan by investing in infrastructure.

The *Trillium Trust Act, 2014*, provides for the dedication of net revenue gains associated with the sale of designated assets to the Trust to help fund investments in transit, transportation and other priority infrastructure under Moving Ontario Forward.

Q: What's the status of the funds in the Trillium Trust?

A: The Public Accounts of Ontario 2014-2015, published in September 2015, show that $1.35 billion has been dedicated to the Trillium Trust.

These are the net proceeds from the sale of the Province's remaining General Motors common shares in early 2015, combined with net proceeds from a September 2013 GM share sale and the redemption of preferred shares in late 2014.

On August 30, 2016, the Province announced the dedication of $3.2 billion from the sale of Hydro One shares in 2015 to the Trillium Trust.

This brings the total balance of the Trillium Trust to over $4.5 billion, to help fund further investments in transit, transportation and other priority infrastructure as part of Moving Ontario Forward.

- The $3.2 billion credit to the Trillium Trust comes from:
    - About $0.8 billion in gains on sale from the sale of Hydro One shares in November 2015.
    - The net benefit to the Province of about $2.4 billion from Hydro One's recognition of the deferred tax benefit.

Q: When will the government actually start using funds from the Trillium Trust to pay for transit and infrastructure?

A: As outlined in the 2016 Budget, the government plans to begin drawing down on the balance in the Trillium Trust in 2016-17 to support the largest investment in public infrastructure in Ontario's history. Based on planned expenditures, in 2016-17 the Trillium Trust would support Moving Ontario Forward initiatives, such as

- Regional Express Rail (RER);
- Hurontario Light Rail Transit (LRT); and
- Ontario Community Infrastructure Fund.

Like most large infrastructure investments, initial spending on Moving Ontario Forward projects is focused on planning, design, property acquisition and other activities to get projects construction-ready. This will allow for identification for expenditures, as this preliminary work is completed and construction activity

becomes underway, and for cash flow timing requirements from the Trillium Trust during 2016-17 and subsequent years.

Q: What is the current status of broadening Hydro One ownership?

A: The Province completed the Hydro One initial public offering (IPO) in November 2015 and raised approximately $1.83 billion in gross proceeds and about $116 million from related share sales. As announced in early May, a secondary offering of Hydro One shares raised approximately $1.97 billion in gross proceeds, and as announced in July, the Province has an agreement in principle to sell to First Nations in Ontario up to 2.5% of Hydro One shares at a price of $18 per share.

There were other associated benefits in connection with the IPO, including a positive impact to the Province's income from Hydro One as a result of a deferred tax benefit recorded by Hydro One. The Province also received cash of $1 billion in special payments from Hydro One, including $800 million in a special dividend paid prior to the IPO, and about $200 million in additional payments in lieu of taxes to the Ontario Electricity Financial Corporation (OEFC).

On August 30, 2016, the Province announced the dedication of $3.2 billion from the sale of Hydro One shares in 2015 to the Trillium Trust, bringing total balance of the Trillium Trust to over $4.5 billion. The net revenue gains from the secondary offering in April 2016 will be credited to the Trillium Trust in the future.

The Province will proceed with future offerings in a staged and prudent manner, over time reducing its stake to 40 per cent while remaining the largest shareholder.

Through this initiative, the Province expects to generate $4 billion in net revenue gains that, through the Trillium Trust, will be reinvested in infrastructure under Moving Ontario Forward, and $5 billion to reduce debt.

Q: In April 2015, the Premier's Advisory Council on Government Assets estimated Hydro One's valuation at between $13.5 billion and $15 billion; using this estimate, the province could realize up to $9 billion from the sale of 60% of Hydro One. Does the Province still expect these benefits?

A: The Province is on track to generate approximately $9 billion in gross proceeds and other revenue benefits from broadening the ownership of Hydro One, while remaining the largest single shareholder.

Through this initiative, the Province expects to generate $4 billion in net revenue gains that, through the Trillium Trust, will be reinvested in infrastructure under Moving Ontario Forward, and $5 billion to reduce debt.

Q: In moving forward with broadening Hydro One ownership, isn't the government giving up future revenues from the company?

A: While broadening ownership in a revenue generating asset means that there may be an impact on revenues over the longer term, the fiscal impact of an asset sale includes upfront gains that the government will reinvest into public infrastructure, improving the lives of Ontarians where they live, work and play. In turn, this will create jobs, generate economic growth and additional revenues for the Province.

- The Province would also retain 40 per cent of Hydro One, following the IPO and subsequent share offerings, which would continue generating revenue for the Province.

Q: Why did the government remove certain oversight powers of the Office of the Auditor General over Hydro One?

A: To support Hydro One's transition from being wholly-owned by the Province to being publicly traded, the government agreed with the Premier Advisory Council's recommendations that the company should operate, to the extent possible, in the same legislative and regulatory environment as other publicly–traded, rate-regulated entities.

However, the Province has ensured Hydro One oversight measures are in place. Hydro One continues to be subject rate regulation by the Ontario Energy Board (OEB) and as a publicly traded company Hydro One is subject to requirements of the Business Corporations Act (Ontario) and the Securities Act (Ontario).

To further ensure the protection of ratepayers, the government required Hydro One to create a dedicated Ombudsperson, similar to those found at other publicly traded companies. The Ombudsperson is able to receive and investigate customer complaints.

The government has also put in place a governance agreement and registration rights agreement with Hydro One to clarify the Province's role as investor, including the process through which the Province nominates 40 per cent of the board of directors and the Province's rights related to future share sales by the Province or Hydro One.

The government will remain, by law, the largest single shareholder in Hydro One – and no other single shareholder or group of shareholders will be permitted to hold more than 10 per cent of the company's shares.

Q: What is the status of the potential merger between Hydro One Brampton and a group of urban local distribution companies (LDCs)?

A: The proposed merger of Hydro One Brampton with PowerStream, Enersource, and Horizon Utilities, continues to move forward.

The municipal councils for the cities of Barrie, Markham, Vaughan, Mississauga, Hamilton and St. Catharines have all voted to proceed with the merger. Ontario has also executed a Share Purchase Agreement with PowerStream, Enersource, and Horizon.

Commercial closing of the transaction would be subject to certain closing conditions, including Ontario Energy Board (OEB) approval. The proposed merger is currently being reviewed by the OEB.

- The proposed merger of these three strong performing utilities with Hydro One Brampton would create the second-largest electricity distributor in Ontario by number of customers. The merged entity would deliver efficiencies and economies of scale while continuing to provide safe, reliable and clean electricity.

Q: Will the Province realize any up-front benefit from the sale / merger of Hydro One Brampton with other local distribution companies (LDCs)? Would these benefits go to the Trillium Trust or to the Ontario Electricity Financial Corporation (OEFC)?

A: The purchasers have agreed to pay $607 million for Hydro One Brampton, subject to post-closing adjustments and regulatory approval from the Ontario Energy Board (OEB).

The *Trillium Trust Act, 2014*, ensures that net revenue gains from the sale of Hydro One Brampton shares would be credited to the Trillium Trust. Under the Act, the net revenue gains would take into account the gross proceeds less the book value of the asset and costs incurred in the disposition of the asset.

The *Electricity Act, 1998*, also allows the Province to meet its obligations to OEFC by, for example, relieving OEFC of certain debt obligations that it currently owes to the Province.

Q: Why is Hydro One Brampton being merged with three other urban local distribution companies – Powerstream, Horizon Utilities, and Enersource? Why wasn't there a competitive process for the sale/merger of Hydro One Brampton?

Together these utilities can take advantage of efficiencies of scale and resources sharing, which in turn could translate into savings for their respective ratepayers.

In the course of its Phase 2 consultations, the Premier's Advisory Council received a strong pre-emptive bid from the consortium of local distribution companies (LDCs) at the higher end of the indicative values identified in the Council's market soundings.

Such a merger will provide a much needed catalyst for wider Local Distribution Company consolidation.

As noted by the Auditor General in her 2015 Annual Report, based on information provided to the Office of the Auditor General (OAG) by Hydro One and the Ministry of Energy, the OAG's estimates that the purchase price is reasonable for Hydro One Brampton Networks, and would provide the province with a fair return on its investment.

Hi,

This should be the very last piece. Hopefully.

Please let me know if you have any concerns with the Q&As in the attached media products package that was used for yesterday's announcement. You may want to focus on Qs: 30, 31, 57, 58, 68, 74, 75, 80, 81, 83, and 84.

Thanks,
Christina

Subject: FW: Latest SCOPA Comms Products

Good morning,

Here we go again! =)

We've been asked to re-review the SCOPA materials one more time prior to the 12pm briefing.

- DM remarks – Attached are the latest DM remarks. Please review and let me know if you have any concerns. Would it make to reference the new Moody's report instead of the credit outlook upgrade? If so, would you mind amending his speech as appropriate?
- Gadi's remarks – Ken, thanks again for updating the 8.5 cents. I made a small edit to the speech to note that the ratio is the lowest its been since 1990. Is that okay?
- General Q&As – Ken, if you're okay with that change in the speech, I'll amend the general Q&As as well.
- Friendly Q&As – Attached incorporates edits Bonnie just sent. We're also ask to review #1, 2, 3, 8, and 9 as there's quite of overlapping. I think #1 and 2 needs to be removed. As there may not be enough time for Gadi's speech, we've been asked to reformat Gadi's remarks to Friendly Q&A format.
- PA Media package - Please also review the Q&A section and fill in any areas as necessary.

I'm working from today so please give me a call at 416-625-6524 if you have any questions.

Thanks,
Christina

Following up –

Attached are the following items and corresponding actions required from your teams in advance of the 12pm briefing tomorrow:

- DM Remarks as of Sept 30th, 2016 (please review and update your sections, where appropriate, given the recent release of 2015-16 PA)
- MOF General QAs as of Sept 30th, 2016 (no action required for this item at this time)
- Friendly QAs as of October 3rd, 2016, (please review and provide input/edits. Please note #1, 2, 3, 8, 9 and 14 have some overlap we may want to avoid. There will be discussion on what extent we want to make reference to 2015-16 numbers via friendlies at the 12pm meeting).
- TBS Media Package for 2015-16 PA as of October 3rd, 2016 (please review QAs section only and fill in any relevant MOF portions- I have asked TBS for the QA package on its own)

Let me know if there are any questions.

Thanks,

Marilyn Ize-Dukuze | ph. 416.326.8529 | bb. 416.302.3609

Hi both –

SCOPA is still very much about the 2014-15 PA, thus current QAs do not need updating. However, additional QAs reflecting 2015-16 PA release are also now required. For this, we are asking TBS to share the QA package that was put together (with MOF input) for the 2015-16 PA release. This would be added to the SCOPA binders in addition to the QAs on 2014-15 PA.

Following up on strategy for remarks.

Thanks,
Marilyn Ize-Dukuze | ph. 416.326.8529 | bb. 416.302.3609

Current holding messaging for Minister Sandals

- As you know, Treasury Board and Ministry of Finance staff prepare the Public Accounts which are subject to independent audit by the Auditor General.

- As I announced to the House last week, there are still some ongoing discussions happening around an accounting issue.

- Earlier today I met with the Auditor General and senior ministry officials to discuss the importance of resolving this issue and releasing the 2015-16 Public Accounts.

- Ministry officials will continue to work with the Auditor General and her staff to resolve the outstanding issue over the next several months.

- What I can tell you now is that Ontario is on track to beat its deficit targets and we are committed to balancing the budget in 2017-18.

- Lower than forecast deficit projections confirm that our government's plan to achieve fiscal balance in 2017-18 is working, while we continue to invest in the programs and services that matter to Ontarians.

- Keeping the public informed through transparent financial reporting remains a priority.

- In that spirit, as part of the 2015-16 Annual Report, which includes the unaudited Consolidated Financial Statements, we have built new data visualization tools to help the public understand Ontario's finances. These tools will be available when our financials are released.

Post technical-briefing speaking points

Minister Sandals' Statement – Release of 2015-16 Financial Statements

- Ontario's Annual Report and unaudited Consolidated Financial Statements for 2015-16 show Ontario's deficit is $3.5 billion lower that the $8.5 billion projected in the 2015 Budget, with the province's deficit for 2015-16 at $5 billion.

- This is $0.7 billion lower than the $5.7 billion in the 2016 Budget interim projection.

- As I assured members of the House last week, this marks the seventh year in a row that Ontario has beaten its deficit target. We are committed to balancing the budget in 2017-18 and remain balanced in 2018-19.

- In preparing the 2015-16 Annual Report and unaudited Consolidated Financial Statements, Treasury Board staff work with their colleagues in ministries across government to assemble financial information for the Annual Report and unaudited Consolidated Financial Statements.

- The Auditor General, who issues an opinion on the government's adherence to independently established accounting standards, then audits this.

- Earlier today, Minister Sousa and I met with the Auditor General to discuss the finalization of the 2015-16 Public Accounts.

- We did so because this year, the Auditor General provided the Province with a new interpretation of public sector accounting standards related to the accounting treatment of jointly-sponsored pension plans, which are subject to a range of interpretations.

- Despite our best efforts to try to resolve concerns raised by the Auditor General, the Province's professional accounting staff and the Auditor General continue to have differences in the interpretation of public sector accounting standards on this issue.

- The Public Sector Accounting Board has set up a task force to review the current accounting standards for retirement benefits. The Province will ensure that the task force is made aware of this area of difference in interpretation.

- In addition, Ontario will also be engaging an expert panel to support a full understanding of the basis and nature of the differences. The Province will consult individuals with a range of backgrounds and experience, including preparers, joint sponsors and auditors of public sector financial reports.

- To be clear, Ontario had followed the same pension accounting treatment for the past 14 years. The current Auditor General has accepted this treatment for the last two years, resulting in unqualified – or clean audit opinions.

- Three previous Auditors General have also accepted it. There has been no change to the relevant accounting standards over the past 14 years.

- In 2016 the C.D. Howe Institute, an independent research organization that assess the fiscal planning and reporting of governments in Canada, also commented positively on the financial reporting practices of Ontario relating to its fiscal reporting activities that include Public Accounts, the annual Budget and Estimates.

- To acknowledge the different interpretations and to ensure openness and transparency with respect to province's financial position, the government is releasing its unaudited financial statements.

- The government believes it is in the public interest to release its financial information. The government also believes it is in the public interest for the Auditor General to issue an audit opinion on Ontario's consolidated financial statements as soon as possible.

- The government regulated the treatment of pension assets in a manner that is consistent with the fiscal outcome proposed by the Auditor General. The impact of the change resulted in an additional $10.7 billion being added to the Province's net debt and accumulated deficit.

- Although these financial statements are unaudited, it is important to stress that the Province's financial results show that the government has once again beaten its deficit targets, and remains committed to achieving a balanced budget by 2017-18, and remain balanced in 2018-19.

- It is also important to stress that the two pension plans in question – the Ontario Public Service Employee's Union Pension Plan, and the Ontario Teachers' Pension Plan – are both healthy and well funded.

- Based on our respective positions at this time, we believe that this accounting matter would benefit from additional discussions, information and consideration.

- Our officials and professional accounting staff will continue to work with the Auditor General’s office on this accounting issue related to pension assets so that we can table the audited Public Accounts with the Lieutenant Governor in Council as soon as possible.

Minister Sousa's Statement – Ontario's Fiscal Outlook

(TBC input by MOF comms)

The government is dedicated to a fiscally sound approach to managing the Province's finances.

As outlined in the 2016 Budget, the government is committed balancing the budget in 2017-18 and remaining balanced in 2018-19.

The 2016–17 First Quarter Finances also confirmed that the government is projecting a deficit of $4.3 billion in 2016–17, unchanged from the 2016 Budget forecast.

The Ontario economy continues to grow in a challenging global environment. In fact, Ontario posted higher real GDP growth in the first quarter of 2016 than Canada, the United States, and all other G7 countries.

The government's path to a balanced budget is being achieved through responsible fiscal management, which involves:

- Managing growth in program spending, and
- Maintaining the integrity of Provincial revenues.

At the same time, the government continues to make investments in the economy, its people, and a healthy, clean and prosperous low-carbon future.

Key messages – post release

- The government has released its 2015-16 Annual Report and unaudited Consolidated Financial Statements to ensure transparency with respect to the province's financial position.

- To align with the Auditor General, a regulation has been filed to prescribe the accounting treatment for pension assets for the 2015-16 financial statements.

- The regulation resolves the outstanding accounting issue for this year in a manner that is consistent with the fiscal outcome proposed by the Auditor General.

- This marks the seventh year in a row that Ontario has beaten its deficit target.

- Ontario remains committed to balancing the budget in 2017-18, while continuing to invest in the priorities that matter to the people of Ontario, such as healthcare, education and infrastructure.

If pressed about why a regulation was needed:

- Based on their professional judgement, the Province's professional accounting staff could not agree with the Auditor General's interpretation of Public Sector Accounting Standards as it relates to jointly-sponsored pension plans.

- A regulation was required to allow the public service to sign-off on the impact of the Auditor General's view on accounting for pension assets in Ontario's 2015-16 financial statements.

- The Province has applied consistent accounting treatment for these plans for the past 14 years, and has consistently received unqualified, or clean audit opinions from the Auditor General, without exception.

- To remain clear and transparent, we have reflected the Auditor General's view of the issue for this year. In order to do so, the government regulated the treatment of the pension assets for 2015-16.

- This is an accounting issue. However we remain optimistic that by studying the issue further and gathering third-party professional opinions, we will be able to reach an agreement on the treatment with the Auditor General in the coming months.

News Release

Last Year's Ontario Deficit $3.5 Billion Lower Than Projected

Province Remains Committed to Balance the Budget Next Year in 2017-18

News

Ontario's Annual Report and unaudited Consolidated Financial Statements for 2015-16 show Ontario's deficit is $3.5 billion lower that the $8.5 billion projected in the 2015 Budget, with the province's deficit for 2015-16 at $5 billion. This is $0.7 billion lower than the $5.7 billion in the 2016 Budget interim projection.

This marks the seventh year in a row that Ontario has beaten its deficit target. Ontario remains committed to balancing the budget in 2017-18, and remain balanced in 2018-19.

In preparing the Annual Report and unaudited Consolidated Financial Statements, the Province's professional accounting staff and the Auditor General have engaged in discussions regarding the treatment of pension assets. Pension accounting requires the application of professional judgment. Despite best efforts to resolve concerns, the Province's professional accounting staff and the Auditor General continue to have differences of opinion about the appropriate application of public sector accounting standards as they relate to pension accounting. This ongoing discussion has delayed the tabling of the Province's financial statements.

A regulation was made to allow the public service to sign-off on the impact of the Auditor General's view on accounting for pension assets in Ontario's 2015-16 financial statements. The Province has filed a time-limited regulation, which legislates the accounting for pension assets of two jointly-sponsored pension plans for 2015-16 in a manner that is consistent with the fiscal outcome proposed by the Auditor General.

To ensure openness and transparency, the government is releasing its unaudited financial statements to provide the public with the Province's financial position.

The unaudited statements show the government is beating its deficit targets through sound financial management. The Government of Ontario currently has the lowest program spending per capita among Canadian provinces and ranks the lowest among provinces in terms of public-sector employees per capita. At the same time, Ontario's economy continues to grow. Over the last two years, Ontario's economy has grown by 6.1 per cent. Last year, growth was double the national average. In the first quarter of this year, Ontario's growth was greater than that of the United States and the G7.

The Public Sector Accounting Board has set up a task force to review the current accounting standards for retirement benefits. The Province will ensure that the task force is made aware of this area of difference in interpretation. In addition Ontario will also be engaging an expert panel to support a full understanding of the basis and nature of the differences. The Province will consult individuals with a range of backgrounds and experience, including preparers, joint sponsors and auditors of public sector financial reports.

Responsible financial management is part of the government's economic plan to build Ontario up and deliver on its number-one priority to grow the economy and create jobs. The four-part plan includes helping more people get and create the jobs of the future by expanding access to high-quality college and university education. The plan is making the largest infrastructure investment in hospitals, schools, roads, bridges and transit in Ontario's history and is investing in a low-carbon economy driven by innovative, high-growth, export-oriented businesses. The plan is also helping working Ontarians achieve a more secure retirement.

QUOTES

“The Annual Report and unaudited Consolidated Financial Statements for 2015-16 show that our government’s plan to achieve fiscal balance next year in 2017-18 is working. We will continue to build on our track record of responsible fiscal management, while investing in vital government services such as health care, education and infrastructure that are important to the people of Ontario.”

- Liz Sandals, President of the Treasury Board

“Our government is dedicated to a fiscally sound approach to managing the Province’s finances. The Ontario economy continues to grow in a challenging global environment. In fact, Ontario posted higher real GDP growth in the first quarter of 2016 than Canada, the United States, and all other G7 countries. The government’s path to a balanced budget next year is being achieved through responsible fiscal management, which involves managing growth in program spending, and maintaining the integrity of Provincial revenues.”

- Charles Sousa, Minister of Finance

QUICK FACTS

- The 2015-16 unaudited Financial Statements compare Ontario's actual performance to what was planned in the 2015 Budget.

- Ontario is a recognized leader in financial reporting. The C.D. Howe Institute, an independent research organization that assesses the fiscal planning and reporting of governments in Canada, has commented positively on the financial reporting practices of Ontario, including Public Accounts, the annual Budget and Estimates.

- The unaudited Financial Statements are prepared by the Government of Ontario in accordance with legislation and the accounting principles for governments recommended by the Public Sector Accounting Board (PSAB) of the Chartered Professional Accountants of Canada (CPA Canada).

Newsroom Backgrounder

Release of Ontario's 2015-16 Financial Statements

Public Accounts are part of the Ontario government's annual fiscal cycle and are a legislative requirement under the Financial Administration Act. The President of the Treasury Board submits the Public Accounts for each fiscal year to the Lieutenant Governor in Council on or before the 180th day after the end of the fiscal year. Public Accounts include the Province's annual report and consolidated financial statements. These documents provide financial highlights of the past fiscal year compared to the Budget plan and report on performance in priority areas.

The consolidated financial statements are prepared by the Government of Ontario in accordance with legislation and the accounting principles for governments recommended by the Public Sector Accounting Board (PSAB). PSAB independently establishes accounting standards for the public sector in Canada.

These accounting standards are common, nationally recognized standards used by governments across Canada in their financial reporting

PSAB standards specify how transactions and other events are to be recognized, measured, presented and disclosed in a public sector entity's financial statements.

The objective of PSAB standards is to meet the needs of the users of financial statements by providing the information needed for accountability and decision-making.

In preparing the Annual Report and Consolidated Financial Statements for 2015-16, professional public servants and the Auditor General engaged in discussions regarding the accounting treatment of pension assets.

The Ontario Public Service Employees Union Pension Plan (OPSEUPP) and the Ontario Teachers' Pension Plan (OTPP) are jointly-sponsored pension plans where the Government of Ontario is a co-sponsor.

The assets of OPSEUPP and OTPP are held in trust for the beneficiaries of the plans. The plans are co-managed by the sponsors, and decisions regarding benefits and contributions require negotiation and agreement between them.

During the 2015-16 Public Accounts audit, the Auditor General raised some concerns with regard to Ontario's accounting practices related to pension assets for the OPSEUPP and OTPP plans.

Pension accounting requires the application of professional judgment. Despite best efforts to try to resolve concerns, the Province's professional accounting staff and the Auditor General continue to have differences of interpretation of PSAS standards as they relate to accounting for pension assets.

Given the differences in interpretation of the application of PSAB standards for the OTPP and OPSEUPP pension assets, Ontario approved a time-limited regulation which legislates the accounting for pension assets of jointly-sponsored pension plans for the 2015-16 Public Accounts. This is consistent with the fiscal outcome proposed by the Auditor General on September 13.

The *Financial Administration Act* allows Treasury Board, subject to the approval of the Lieutenant Governor in Council, to make regulations respecting the accounting policies and practices to be followed regarding the preparation of the consolidated financial statements of the Province.

The effect of the regulation is to reflect the fiscal impact of the Auditor General's position pending further review and analysis on this accounting matter. The change in accounting treatment is not a reflection on the funding status of the plans, or the quality of financial reporting by the Province. The impact of the change resulted in an additional $10.7 billion being added to the Province's net debt and accumulated deficit.

Prior to this change, Ontario had followed the same pension accounting treatment for all of the past 14 years. This had been accepted by the current Auditor General for the last two years. It has also been accepted by three previous Auditors General. There has been no change to the relevant accounting standards over the past 14 years.

The Auditor General has not issued an audit opinion on the province's financial statements for 2015-16. However the government is releasing these unaudited financial statements to ensure openness and transparency with respect to province's financial position, and because it has passed the deadline to table the Public Accounts with the Lieutenant Governor in Council. The government believes it is in the public interest to release its financial information. The government also believes it is in the public interest for the Auditor General to issue an audit opinion on Ontario's consolidated financial statements so that it can table the Public Accounts with the Lieutenant Governor in Council.

Openness and Transparency

As part of its commitment to Open Government, digital technology was used for the first time to visualize the province's financial information in an interactive and easy to understand way. This year, Ontario is further increasing the openness and transparency of the Annual Report and unaudited Consolidated Financial Statements by:

- Creating new data visualizations, including interactive bar charts and interactive data tables
- Releasing data sets through Ontario's Open Data Catalogue, including data on government organizations, government business enterprises and Trusts

Improving Outcomes for Ontarians

As the Province's 2015-16 Financial Statements show, the government remains committed to balancing the budget in 2017-18, while continuing to invest in the priorities that matter to the people of Ontario, such as healthcare, education and infrastructure.

Health Care

Building on Ontario's Patient's First: Action Plan, the government continued transforming Ontario's health care system in 2015-16 to become more patient-centred and focused on better access to care, quality and value by:

- Increasing investment in home and community care by five per cent annually: $250 million in 2015-16, for a total of $750 million over three years.

- Increasing the hourly wages of publicly funded personal support workers (PSWs) caring for patients at home and in the community by $1.50 per hour in 2015-16 to at least $15.50 per hour, in the second of three annual increases totalling up to at least $16.50 per hour by April 1, 2016. Investments in PSWs, like an increase in the hourly wage are part of the government's effort to attract and retain the best PSWs in the home and community care sector.

- Appointing Ontario's first-ever Patient Ombudsman who will help address needs of patients who have not had their concerns with health care organizations resolved through existing complaint mechanisms.

Advanced Education and Skills Development

In 2015-16, the Ontario government made progress on its plan to help more people get and create the jobs of the future by continuing to invest in student financial assistance

and expand access to high quality college and university education, resulting in 67 per cent of adults in Ontario obtaining a postsecondary degree, diploma or certificate – higher than the average of any OECD country.

Over the past 12 years, government investments have resulted in more than double the number of students qualifying for aid, while enrolment has increased by 38 per cent.

In 2015, 67 per cent of adults in Ontario had a postsecondary degree, diploma or certificate – higher than the average of any OECD country.

The government is also transforming Ontario's student aid system to help thousands of students obtain greater access to advanced education and have lower levels of student debt upon graduation. For students from lower-income and many middle-income families, it would mean free tuition. These changes will start in the 2017-18 academic year.

Childcare, Elementary and Secondary Education

The government has made gains in building and supporting an integrated early-years, elementary and secondary education system. This includes increasing funding for schools and licenced child care, the establishment of the Ontario Early Years Policy Framework and implementation of Full-Day Kindergarten.

In 2015-16, the government built on this success by:

- Increasing wages for early childhood educators and other child care professionals in licensed child care settings by providing a $1 per hour wage increase for eligible child care workers bringing the total wage increase up to $2 per hour, plus benefits.

- Increasing the five-year high school graduation rate to 85.5 per cent – the highest level in the province's history.

- Doubling the funding for school renewal projects to $500 million in 2015-16 to ensure our students are benefitting from safe, modern and efficient learning environments.

Infrastructure

Ontario is making the largest investment in public infrastructure in the province's history – about $160 billion over 12 years, starting in 2014-15. Planned investments are supporting over 110,000 jobs, on average, every year across the province.

In 2015-16, the Province continued to invest in hospitals, schools, roads, bridges and transit, including:

- Completing construction of the $1.4 billion Right Honourable Herb Gray Parkway in Windsor–Essex, which provides an express route to the country's busiest land border crossing.

- Ongoing construction of the Eglinton Crosstown Light Rail Transit line, which will offer fast, efficient service and improve travel for commuters.

- Providing small, rural and northern municipalities with funding to build and repair core infrastructure through the Ontario Community Infrastructure Fund.

- Completing the new Humber River Hospital, which offers a comprehensive range of acute care services and support for inpatient and outpatient hospital programs.

- Ontario is making $575 million investment to repair and renew schools across the province in 2016-2017.

Staying on the Path to Balance

The government is working towards a balanced budget through Program Review, Renewal and Transformation (PRRT), a government-wide approach to multi-year planning and budgeting that puts a heightened focus on evidence and outcomes to inform funding allocations.

But PRRT is about more than just savings targets – it is about doing government differently – improving outcomes for Ontarians while freeing up resources to reinvest in key government priorities, such as health care, education and infrastructure.

Examples of successful PRRT initiatives include:

- Improving the sustainability of the Ontario Drug Benefit Program and patients' access to drugs by making the program more efficient and effective. The changes saved approximately $100 million in 2015-16 and will enable over $200 million in savings annually when fully implemented.

- Changing the Second Career program by removing client targets for service providers while ensuring funding support for eligible clients. This change will generate approximately $40 million per year and will allow the government to invest in the Canada-Ontario Jobs Grant and a renewed Ontario Youth Job strategy.

- Reducing the government's office footprint by over 820,000 rentable square feet, which generated approximately $24 million in savings in 2015-16.
- Achieving approximately $56 million in savings through the consolidation of data centres, early vendor payments and lower contract costs – including for software and IT consulting services, laboratory supplies and security services.
- Achieving $7 million in savings from contracts related to government cell phone plans and toll free lines.

Top Media Qs&As

Releasing Unaudited Financial Statements

1. It sounds to me like the government is yet again fighting with the Auditor General. What do you say to this?

This is not true from the government's perspective. And let me explain why: The government respects the oversight and recommendations provided by all independent officers of the Legislative Assembly of Ontario, including the Auditor General. And in this case for this set of final accounts, while one specific issue is being sorted through, we actually are agreeing with the Auditor General's numbers.

Given these differences of opinion, the Province filed a time-limited regulation, which legislates the accounting for pension assets of jointly-sponsored pension plans for the 2015-16 Public Accounts. The government believes this is consistent with the fiscal outcome proposed by the Auditor General.

We believe that this accounting matter would benefit from additional discussions, information and consideration.

The Public Sector Accounting Board has set up a task force to review the current accounting standards for retirement benefits. The Province will ensure that the task force is made aware of this area of difference in interpretation.

In addition, Ontario will also be engaging an expert panel to support a full understanding of the basis and nature of the differences. The Province will consult individuals with a range of backgrounds and experience, including preparers, joint sponsors and auditors of public sector financial reports.

2. Why are you releasing your financial statements without the Auditor approving them?

Earlier today I met with the Auditor General to discuss the 2015-16 Public Accounts. I did so because this year, the Auditor General presented the province with a new interpretation of public sector accounting standards as it relates to an accounting issue – the treatment of pension assets.

Ontario has followed the same pension accounting treatment for the past 14 years. This had been accepted by the current Auditor General for the last two years, resulting in unqualified – or clean audit opinions. It has also been accepted by three previous Auditors General. There has been no change to the relevant accounting standards over the past 14 years.

In preparing the Annual Report and Consolidated Financial Statements, the Province's professional accounting staff and the Auditor General have engaged in discussions regarding the treatment of pension assets – which is subject to a range of interpretations.

Despite best efforts to try to resolve concerns, the Province's professional accounting staff and the Auditor General continue to have difference intepretations.

To remain clear and transparent, the government exercised its statutory authority to regulate the treatment of this particular issue for 2015-16. The government regulated the treatment of pension assets in a manner that is consistent with the fiscal outcome proposed by the Auditor General.

The government is now releasing its financial statements to ensure transparency with respect to province's financial position.

The Public Sector Accounting Board has set up a task force to review the current accounting standards for retirement benefits. The Province will ensure that the task force is made aware of this area of difference in interpretation.

In addition, Ontario will also be engaging an expert panel to support a full understanding of the basis and nature of the differences. The Province will consult individuals with a range of backgrounds and experience, including preparers, joint sponsors and auditors of public sector financial reports.

3. If the Public Sector Accounting Board is studying this issue, are other Canadian jurisdictions dealing with this as well?

No other province has similar governance frameworks for their jointly-sponsored pension plans that are in a surplus position.

<u>British Columbia</u>

Pension assets for BC's jointly sponsored pension plans are not reported on British Columbia's consolidated financial statements. The governance framework in BC is different than Ontario's and would appear to justify different accounting treatment under PSAB standards.

Specifically, the Boards of Trustees of the BC Plans, unlike their Ontario counterparts, are permitted to use ongoing surpluses through the amendment of the Plan rules governing contributions and benefits, so long as the amendment of the Plan rules:

- Does not result in an increased contribution rate for employees or employers
- Does not create or increase an unfunded liability in the Plan, and
- Is otherwise compliant with applicable legislation and the Trustees' fiduciary obligations.

In contrast, the governance arrangements with respect to the Ontario Teachers' Pension (OTPP) provide that the Partners that sponsor that arrangement, being the Minister of Education and the OTF, may use ongoing surpluses as they believe appropriate, subject only to the Ontario *Pension Benefits Act.* The Board of Directors of the OTPP, being the OTPP administrator for purposes of the PBA, has no authority with respect to the use of Plan surpluses.

The OPTrust governing documents also stipulate that it is the Sponsors of the OPTrust, being the Province of Ontario and OPSEU, who have the authority to utilize ongoing Plan surpluses. OPTrust's Board of Trustees, being the OPTrust administrator for purposes of the Ontario PBA, has no authority to utilize ongoing Plan surpluses.

<u>New Brunswick</u>

As we understand it, New Brunswick converted four of its pension plans into what it refers to as target plans.

In the prior year, New Brunswick accounted for these plans as defined contribution plans, meaning it expensed the contributions to the plan and did not reflect its share of the net asset or net liability of the plan in its financial statements. The Auditor General of New Brunswick issued a qualified opinion on those financial statements.

In the 2015-16 fiscal year, New Brunswick changed its accounting for those plans to account for them as defined benefit plans and the Auditor General of New Brunswick issued a clean opinion.

Ontario has always accounted for its share of its jointly sponsored plans as defined benefit plans.

4. What is the professional judgment that exists out there to interpreting jointly-sponsored pensions?

A key consideration in exercising professional judgment is if the resulting financial information is both relevant and reliable and gives a fair presentation of the transaction.

This area of pension accounting is particularly complex, and it is important to consider the specific facts and circumstances when assessing the appropriate accounting treatment.

In this regard, the Province has assessed the appropriate accounting treatments based on the governance frameworks applicable to Ontario's jointly-sponsored pension plans. It would be inappropriate to assume that the governance frameworks of plans in other jurisdictions would necessarily result in the same accounting treatment.

5. Are you saying the Auditor General is misinterpreting Public Sector Accounting Board standards?

The Auditor General's responsibility is to conduct an independent audit and provide her audit opinion based on her own professional judgment. A difference of opinion on the interpretation of accounting standards is not unique to this situation. Other jurisdictions have also experienced differences of opinion between preparers and auditors on complex accounting matters.

Over the coming months we will undertake activities to further assess the application of PSAB standards to Ontario's accounting for jointly-sponsored pension plans. In the meantime, it remains the professional judgment of the professional staff that the accounting treatment in place since 2001 continues to be appropriate.

6. If the Auditor General had agreed with you, what would the differences have been in the deficit or net debt?

According to the Province's interpretation of PSAB, the annual deficit would be $1.5 billion lower (at $3.5 billion), and net debt would be $10.7 billion lower.

7. **The province has been treating pensions the same way since 2001. When did the Auditor General tell you about this new accounting treatment?**

   We only learned that the Auditor General was challenging the accounting treatment of the past 14 years very late in the audit. On September 13th the Auditor General communicated her position that the Province should write off the entire pension asset amount of $10.7 billion from the balance sheet.

8. **What does this mean for the Fall Economic Statement?**

   We're in the middle of completing the fiscal plan. We need to account for all financial considerations before we can finalize it. These results will be included as part of that process. **(TBC MOF)**

9. **Is this Public Accounts or not?**

   From a content perspective, the unaudited results being released are the same as those which would be reported in the Public Accounts, including the information in the supplementary volumes.

   The only difference is that the Auditor's Opinion is not included in the Annual Report.

10. **Were you aware of this before the Speech from the Throne? Had you known about this, would that have changed the government's commitments announced in the speech?**

    Response TBC

11. **Why are you doing this today, four days after you announced the delay?**

    Despite the outstanding difference in opinion between the Auditor General and the Province's professional accounting staff with regards to pension accounting, it is important to ensure that the public interest is served by timely and transparent reporting of the government's results for 2015-16 compared to Budget.

    Although the results being released are clearly labelled as unaudited, we look forward to tabling the Public Accounts once the Auditor General provides her opinion.

12. On what exactly do you disagree with the Auditor?

Both the Auditor General and the Province agree that the Province's results should reflect PSAB's standard on pension accounting. It is just a difference in interpretation of those standards which is at the heart of the issue.

The nature of the difference in interpretation is disclosed in Note 18 of the unaudited consolidated financial statements.

13. If you think you're right, why would you change the numbers?

To clarify, the 2015-16 results are based on legislation and PSAB. Although they reflect the same fiscal results which would be presented according to the Auditor General's proposed interpretation of the standards, the results as presented do not represent our professional staff's interpretation of PSAB standards for jointly sponsored pension plans.

By adopting the Auditor General's interpretation, the financial statements could be finalized and signed off in order to complete the financial reporting process and enable Public Accounts to be completed. Unfortunately, the Auditor General's audit opinion remains outstanding at this time so the Public Accounts have yet to be finalized**.**

14. Was there something wrong with the accounting rules that the government was using before?

No.

Prior to this change, Ontario had followed the same pension accounting treatment for the past 14 years. This had been accepted by the current Auditor General for the last two years. It has also been accepted by three previous Auditors General. There has been no change to the relevant accounting standards over the past 14 years.

That said, the Province believes that this complex accounting area would benefit from additional discussion and analysis. Over the coming months, efforts will be made to engage experts to assist with further analysis of the application of PSAB to accounting for jointly-sponsored pension plans on the Province's books.

15. Why hasn't the Auditor General raised this with you in the past two years?

I cannot speak for the Auditor General. Please refer your questions to the Auditor General's Office.

16. What is the government trying to hide by releasing unaudited books?

We are releasing our unaudited financial statements to ensure openness and transparency with respect to the Province's financial position. Our unaudited financial statements reflect the same fiscal outcome that would result from the Auditor General's proposed pension accounting treatment.

Although these statements are unaudited, it's important to stress that the Province's financial results show that the government has once again beaten its deficit targets and remains committed to achieving a balanced budget by 2017-18, and remaining balanced in 2018-19.

As part of the government's initiative to enhance transparency and accountability, additional disclosure of five-year trends is now provided in the Annual Report. The increased disclosure and discussion on five-year trends is in line with recommended disclosure practices of the Public Sector Accounting Board and enhances the quality of financial reporting to the public, Legislature and other users to better meet their transparency and accountability needs.

In addition to the disclosure in the Annual Report, the government is also making available supplementary information through online data visualizations.

17. Are you fudging the books to try and show your finances are better than they really are – is that why the AG won't sign off?

No.

We are releasing our Financial Statements to ensure openness and transparency with respect to the province's financial position. In fact, we have implemented legislation that allows our officials to sign off in a way that is consistent with the fiscal outcome proposed by the Auditor General.

Prior to this change, Ontario had followed the same pension accounting treatment for the past 14 years. This had been accepted by the current Auditor General for the

last two years. It has also been accepted by three previous Auditor Generals. There has been no change to the relevant accounting standards over the past 14 years.

Although these statements are unaudited, it's important to stress that the Province's financial results show that the government has once again beaten its deficit targets and remains committed to achieving a balanced budget by 2017-18, and remaining balanced in 2018-19.

18. Is this even legal – are you in contempt of the house by releasing your financial statements before you table them in the Legislature?

We are not releasing Public Accounts, we are releasing our financial statements to ensure openness and transparency with respect to province's financial position.

The government believes it is in the public interest to release its financial information. The government also believes it is in the public interest for the Auditor General to issue an audit opinion on Ontario's finances so that we can submit the Public Accounts to the Lieutenant Governor in Council and table them as soon as possible.

19. Has this ever happened before in Ontario? Anywhere else in Canada?

Ontario has a strong track record of producing high-quality financial reports on a timely basis, and meeting its statutory tabling requirements. Ontario has had clean audit opinions for the past 22 years.

That said, differences of opinion between preparers and auditors do occasionally occur, and have occurred in other jurisdictions in Canada.

20. How are we supposed to trust your numbers if the Auditor General hasn't approved them?

Although the financial results being presented are labelled 'unaudited', they reflect the basis of reporting for pensions that the Auditor General proposed.

Once the Auditor General has issued her Audit Opinion, the Public Accounts will be finalized and tabled with the Lieutenant Governor in Council.

21. So what happens next? When will you table the actual Public Accounts?

The government will continue to work with the Auditor General to complete tabling of the 2015-16 Public Accounts.

The Public Sector Accounting Board has set up a task force to review the current accounting standards for retirement benefits. The Province will ensure that the task force is made aware of this area of difference in interpretation.

In addition, Ontario will also be engaging an expert panel to support a full understanding of the basis and nature of the differences. The Province will consult individuals with a range of backgrounds and experience, including preparers, joint sponsors and auditors of public sector financial reports.

22. Does the change in accounting regarding the assets of the Teachers' or OPSEU pensions plans mean those plans might be financially threatened?

Absolutely not. This issue relates solely to the Province's reported financial results and the Province's historical practices of reporting pension assets.

The two pension plans in the Ontario Public Service – which are of the defined benefit type – are healthy and well-funded.

The OPSEU Pension Plan is fully funded with a small reserve of surplus assets standing to the credit of the joint-sponsors, while the Ontario Teachers' Pension Plan has a funding surplus of $13.2 billion.

23. You hired outside experts to give you a third-party accounting opinion, but you paid to get this advice. Didn't they just tell you what you wanted to hear?

The Province pays for services provided by external advisors – an accounting opinion is no different.

In providing an accounting opinion when the auditor has already provided their view, the professional standards require the firm providing the opinion confirm that the facts upon which the opinion is issued are complete so that the firm issuing the opinion is considering the same facts that the auditor is considering.

This process was followed by the Province.

24. The Auditor General has implied your Provincial Controller is in a position of conflict because she used to work for Deloitte. How do you respond?

All employees that are hired into the Ontario Public Service swear two oaths, an Oath of Allegiance and an Oath of Office. These oaths affirm that public servants will faithfully discharge their duties, and comply with all laws and confidentiality obligations.

25. The Auditor General says she raised this issue with you months ago. Why haven't you fixed this problem by now?

Until June, the Auditor General's audit plan for the 2015-16 Public Accounts only included a planned review of economic assumptions for pension plans. There were no significant issues raised by the Auditor's staff following their work on the assumptions.

The Province responded upon receiving the Auditor General's request for an actuarials valuation by procuring resources to complete the AG's request. The results were shared with the Auditor General's staff and only after several discussions did it become apparent that the Auditor General was challenging the accounting treatment that the Province had been following for the past 14 years.

On September 13th, the Auditor General communicated her position that the entire balance of pension assets ($10.7 billion) should be written off the Province's books. Despite our best efforts, the Province's professional accounting staff have not yet been able to reach a common interpretation of PSAB standards for the Province's jointly sponsored pension plans.

In light of the ongoing disagreement on interpretation of accounting standards, and the need to release the Province's financial results on a timely basis, Cabinet approved a regulation to allow for the results of the Province to be reported on a basis which reflects the fiscal outcome proposed by the Auditor General with respect to the treatment of the pension asset in question.

26. If you say you're open and transparent, why didn't you invite the Auditor General to your media technical briefing?

The technical briefing was for the purposes of updating media and members of the Opposition and the third party. However it was held in a public space in a government building, and anyone was free to attend.

27. Is the government still committed to balancing the budget by 2017-18?

Yes.

The Province's financial results show that the government has once again beaten its deficit targets and remains committed to achieving a balanced budget by 2017-18 and remaining balanced in 2018-19.

28. The financial results show that the net debt and accumulated deficit has ballooned by $10.7 billion? How did this happen and what are you doing to address it?

This year, the Auditor General presented the province with a new fiscal interpretation of public sector accounting standards as it relates to the treatment of pension assets.

After careful consideration, the Province agreed to adopt the Auditor General's fiscal interpretation. The government made a regulatory amendment to allow us to amend our accounting policies for the 2015-16 Public Accounts in order to comply with the Auditor's fiscal interpretation. The impact of the change resulted in an additional $10.7 billion being added to the net debt and accumulated deficit.

Despite this change, and as our results show, the government has once again beaten its deficit targets and remains committed to achieving a balanced budget by 2017-18, and remaining balanced in 2018-19.

Total debt remains unchanged by the pension adjustment.

The change in the Province's accounting treatment for pension assets of jointly sponsored pension plans, while increasing net debt, has no impact on the Province's borrowing requirements.

29. How can the accumulated deficit and net debt increase by $10.7 billion without causing an increase in total debt?

Total debt is cash based – it is how much money we've borrowed and is owed to our creditors.

Net debt takes into account the difference between our financial assets and liabilities, whether they are cash or not.

The province has changed the valuation of the net pension liability by reducing the pension assets by $10.7 billion, but because there is no cash involved in that valuation, the total debt does not change.

30. Should taxpayers be concerned about the rise in net debt and accumulated deficit?

No.

The Province's financial results show that the government has once again beaten its deficit targets and remains committed to achieving a balanced budget by 2017-18, and remaining balanced in 2018-19.

The treatment of pension assets is an accounting issue. In fact, the Public Sector Accounting Board has initiated a project to review pension accounting standards. PSAB will be seeking input from governments, auditors and other stakeholders to ensure that accounting standards support transparency and accountability and meet user needs. Ontario will participate in this national discussion.

Ontario will also be engaging the expert accounting community to support a full understanding of the basis and nature of the differences. The Province will consult individuals with a range of backgrounds and experience, including preparers, joint sponsors and auditors of public sector financial reports.

31. How does the Province plan to reduce its net debt-to-GDP ratio to its pre-recession level of 27 per cent?

The first step in returning to the targeted 27 per cent net debt-to-GDP ratio is to balance the budget. Once the budget is balanced, debt will continue to rise by the difference between the annual cash investment in capital and the amortization of these investments. These investments will contribute to the debt rising at a slower rate than the increase in the Province's GDP, over time lowering the net debt-to-GDP ratio to the government's 27 per cent target.

32. What is the difference between "Public Accounts" and "Financial Statements"?

Our financial statements include the Province's annual report and unaudited consolidated financial statements. These documents provide financial highlights of the past fiscal year compared to the Budget plan and report on performance in priority areas.

The full Public Accounts would also include these components, as well as a report by the Auditor General containing an audit opinion.

The full Public Accounts will be tabled with the house once the Auditor General's audit opinion is available.

33. You say you're releasing your financial results in the public interest. Aren't you creating confusion by having two sets of books – yours and the AG's?

The government passed a regulation to allow us to amend our accounting policies in order to be consistent with the fiscal outcome proposed by the Auditor General. Therefore there is only one set of books.

Our officials continue to work with the Auditor General's office. In the meantime, we felt it was in the public interest to release our unaudited financial statements.

34. How different will the Auditor General's numbers be?

There is no difference in the unaudited financial statements released and the Auditor General's view of the results for the Province for fiscal 2015-16. The government passed a regulation to allow us to amend our accounting policies in order to be consistent with the fiscal outcome proposed by the Auditor General.

35. Why didn't you just release Public Accounts last week to meet your legislated timelines?

As stated in the House there was a delay in tabling the Public Accounts because of ongoing discussions with the Auditor General to work through an accounting issue related to pension assets.

Our officials have continued to work with the AG's office to finalize the 2015-16 Public Accounts. In the meantime, we felt it was in the public interest to release our unaudited financial statements in the spirit of transparency and accountability.

36. Clearly the government is in a spat with the Auditor General – releasing unaudited financial statements seems like a slap in the face. What does this say about your relationship with the Auditor General?

The government respects the oversight and recommendations provided by all independent officers of the Legislative Assembly of Ontario, including the Auditor General. As a government, we value our important and ongoing relationship with each of these officers.

Our officials continue to work with the Auditor General's office to resolve this accounting issue related to pension assets. In the meantime, we felt it was in the public interest to release our unaudited financial statements.

37. The Auditor General claims you have been using creative accounting to overstate your numbers – how do you respond to that?

That is simply not true.

The government passed a regulation to allow us to amend our accounting policies in order to be consistent with the Auditor General's assessment of our treatment of pension assets. This reflects the fiscal outcome proposed by the Auditor General.

Prior to implementing this change, the government had followed the same pension accounting treatment for the past 14 years. This had been accepted by the current Auditor General for the last two years – resulting in unqualified (clean) audit opinions. It has also been accepted by three previous Auditors General.

There has been no change to the relevant accounting standards over the past 14 years.

That said, given the particularly complex area of pension accounting, further analysis of the impact of PSAB standards on the Province's books will be undertaken over the coming months.

38. So at the end of the day if your numbers are the same as the Auditor General's what's the issue?

Professional accounting staff and the Auditor General have a difference of interpretation as it relates to the application of public sector accounting standards to pension assets resulting from jointly-sponsored pension plans.

The government passed a regulation to allow us to amend our accounting policies in order to be consistent with the fiscal outcome proposed by the Auditor General.

The Auditor General has declined to issue an opinion on the financial statements. In the absence of the Auditor's opinion, the Province is not able to table the Public Accounts as required by law.

39. What's the difference between "audited" and "unaudited" financial results?

In practice, there should be no difference between audited and unaudited results.

An independent audit of an organization's financial statements provides independent assurance that the results fairly represent the financial position of the organization, and that those results are in accordance with generally accepted accounting principles.

The Province's unaudited financial statements include a Statement of Responsibility. This statement describes how the financial report is prepared, and attests to the government's responsibility for the objectivity and integrity of the consolidated financial statements.

The government also attests to its responsibility for maintaining appropriate systems of internal control. The systems support the integrity and completeness of the financial information reported.

40. What's the difference between a "qualified" and "unqualified" audit opinion?

Audit reports represent an auditor's professional opinion on whether an organization's financial position and results of its operations are presented fairly in its financial statements.

An unqualified, or clean opinion, is a judgment that an organization's financial records and statements are fairly and appropriately presented.

A qualified opinion indicates an auditor has concerns with the financial information. Those concerns could include things like the availability of sufficient information for users to make an informed decision, or the organization's reporting in accordance with public sector accounting standards.

In this case the Auditor General has chosen not to issue an opinion at all – either unqualified or qualified.

41. Why didn't the Auditor General issue an audit opinion? Is this even legal?

Despite best efforts to try to resolve concerns, the Province and the Auditor General continue to have differences of opinion.

The government passed a regulation to allow us to amend our accounting policies in order to be consistent with the Auditor's assessment of our numbers. This reflects the fiscal outcome proposed by the Auditor General with respect to the treatment of the pension assets in question.

Our officials continue to work with the Auditor General's office to resolve this accounting issue. In the meantime, we felt it was in the public interest to release our unaudited financial statements.

The government also believes it is in the public interest for the Auditor General to issue and audit opinion on Ontario's consolidated financial statements as soon as possible.

42. What is a jointly-sponsored pension plan?

The Ontario Public Service Employee's Union Pension Plan (OPSEUPP) and Ontario Teachers' Pension Plan (OTPP) are jointly sponsored pension plans where the Government of Ontario is a co-sponsor.

The assets of both pension plans are held in a trust for the beneficiaries of the plans. The plans are co-managed by the sponsors, and decisions regarding benefits and contributions require negotiation and agreement between both parties.

During the 2015-16 Public Accounts audit, the Auditor General raised some questions about Ontario's past accounting practices related to pension assets for the OPSEUPP and OTPP plans.

Pension accounting requires the application of professional judgment. Despite best efforts to try to resolve concerns, the Province and the Auditor General continue to have differences of opinion.

43. How does the Auditor General want you to account for jointly-sponsored pension plans?

During the 2015-16 Public Accounts audit, the Auditor General expressed a different interpretation of the existing PSAB standards which would impact the accounting for pension assets of jointly-sponsored pension plans.

The Auditor General's view is that the government does not have legally enforceable right to unilaterally access the assets of these jointly sponsored pension plans. As such, with no agreement in place to the contrary, the Auditor General believes that the pension asset should be removed from the Province's balance sheet.

The government passed a regulation to allow us to amend our accounting policies in order to be consistent with the Auditor's assessment of our numbers. We believe that this reflects the fiscal outcome proposed by the Auditor General with respect to the treatment of the pension assets in question.

Our officials continue to work with the Auditor General's office to resolve this accounting issue. In the meantime, we felt it was in the public interest to release our unaudited financial statements.

General Media Qs&As

44. Is the government artificially balancing the budget through the one-time sale of assets like Hydro One?

The government's plan to eliminate the deficit does not depend on revenues from asset sales. Maximizing the value of these assets is part of the government's economic plan for Ontario. The net revenue gains from these transactions are helping the government to deliver on its plan by investing in infrastructure.

The government is committed to dedicating the net revenue gains from asset optimization activities, including the broadening of ownership of Hydro One and real estate sales to the Trillium Trust which will be used to invest in transit, transportation and other priority infrastructure projects under Moving Ontario Forward.

45. According to your numbers the deficit was down $3.5 billion from the $8.5 billion projected in last year's budget. Where did this money come from?

The improvement over plan was largely due to revenues that were $4.0 billion above the forecast of $124.4 billion.

This reflects higher than expected tax revenue and net revenues from the first phase of broadening Hydro One ownership, and stronger overall performance from government business enterprises. Maximizing the value of these assets is part of the government's economic plan for Ontario.

46. Does the fact that your deficit is $3.5 billion lower than projected mean you have more money to bring to the table in labour negotiations (e.g. doctors)?

It is important to point out that through the Public Accounts process, we are reporting on past performance, whereas labour negotiations impact future fiscal pressures.

Our government is committed to balancing the budget by 2017-18 and remaining balanced in 2018-19. We know we have difficult choices ahead, but people can be assured that their government will take a fair and balanced approach, one that protects and improves the services that matter to Ontarians.

Managing compensation costs is critical to balancing the budget, as over half of government spending goes to salaries and benefits in the Ontario Public Service (OPS) and the broader public sector (BPS).

Compensation costs must be addressed within Ontario's existing fiscal framework and all public-sector partners must continue to work together to control current and future compensation costs.

While continuing to work to achieve fiscal balance by 2017–18, the government is achieving significant results in priority areas for Ontarians.

We know there is more hard work ahead as we work towards a balanced budget, and we are confident that our partners will work with us to build Ontario up.

47. Will you still be able to balance the budget if Ontario's economy does not perform as strongly as you forecast? Even the FAO has said that your forecast is optimistic.

The government is committed to balancing the budget by 2017-18 and remaining balanced in 2018-19.

The Ontario economy continues to grow in a challenging global environment. In fact, Ontario posted higher real GDP growth in the first quarter of 2016 than Canada, the U.S. and all other G7 countries.

While uncertainty in the global economy has increased, along with increased volatility in global financial and currency markets, Ontario has a diversified economy – meaning the Province is well positioned to respond to changing global economic conditions.

With the economy expected to continue to grow, and the Province's ongoing commitment to transform government programs and services, Ontario is well positioned to achieve balance.

48. Are you cutting back on vital services like health care to balance the budget?

No. Through Program Review, Renewal and Transformation (PRRT), we are helping the government achieve better outcomes while also lowering costs.

The primary focus of this transformation is on ensuring that services are delivered

efficiently and in a way that effectively meets Ontarians' needs.

Through cross-ministry horizontal collaboration, we are taking focused action on major transformation and efficiency initiatives that will improve outcomes for Ontarians while helping to free up resources to reinvest in key priorities, such as health care and education.

To improve programs, we are moving towards a focus on evidence-based decision making – gathering and analyzing the best available information to improve how outcomes are identified and achieved across government.

PRRT is about more than just savings targets – it is about doing government differently – improving outcomes for Ontarians while freeing up resources to reinvest in key government priorities, such as health care.

49. This is the seventh year in a row that you have reported a deficit lower than forecast. Are you purposefully overestimating your deficit projections?

The government remains committed to balancing the budget by 2017-18 and is taking deliberate and responsible steps to achieve this goal.

The government recognizes that a fiscally sound approach to managing the Province's finances will provide the foundation for the long-term well-being and prosperity of Ontarians, and protect the public services that Ontarians rely on.

The government's fiscal projections are based on the best economic and fiscal information available at the time. They reflect a realistic and responsible plan to manage the Province's resources, while still protecting the vital services that Ontarians rely on.

Beating our deficit targets helps to keep interest on debt at a manageable level and protects future generations from rising interest costs, which could otherwise crowd out spending on government priorities.

50. You spent $433 million more than you budgeted for programs. How is your government keeping spending in check?

Program Review, Renewal and Transformation (PRRT) is helping the government achieve better outcomes while also lowering costs.

The primary focus of this transformation is on ensuring that services are delivered efficiently and in a way that effectively meets Ontarians' needs.

Through cross-ministry horizontal collaboration, we are taking focused action on major transformation and efficiency initiatives that will improve outcomes for Ontarians while helping to free up resources to reinvest in key priorities, such as health care and education, and by retaining the lowest per capita program spending in Canada.

51. How would the Ontario Rebate for Electricity Consumers impact Ontario's plans for a balanced budget? How will the province pay for this $1 billion rebate?

We have incorporated that expenditure into our fiscal plan starting in 2017. The government remains committed to balancing the budget by 2017-18 and remaining balanced in 2018-19 by continuing to invest in the economy, our people and a healthy, clean and prosperous low-carbon future. These investments will help enhance the public services that Ontarians rely on, as well as stimulate economic growth.

Questions related to the Ontario Rebate for Electricity Consumers should be referred to my colleague, the Minister of Energy.

52. How is the money spent on the now defunct Ontario Retirement Pension Plan reflected in Public Accounts? How does the government justify this expense?

TBC OPCD + MOF

53. Was the delay in tabling Public Accounts because you can't afford the childcare commitment and the electricity rebate?

No. Public Accounts is a retrospective document that compares Ontario's actual performance to what was planned in the Budget.

I have directed senior Treasury Board officials to work with the Office of the Auditor General to develop a plan and finalize the Public Accounts as soon as possible.

54. In 2003, your government brought in legislated timelines for Public Accounts, yet you're past the deadline and you still haven't tabled them. Why didn't you adhere to your own legislation?

We have been working with the Office of the Auditor General to try to come to an agreement on the treatment of pension assets.

The Public Sector Accounting Board has initiated a project to review pension accounting standards, and will be seeking input from governments, auditors and other stakeholders to ensure that accounting standards support transparency and accountability and meet user needs. Ontario will participate in this national discussion.

Ontario will also be engaging the expert accounting community to support a full understanding of the basis and nature of the differences. The Province will consult individuals with a range of backgrounds and experience, including preparers, joint sponsors and auditors of public sector financial reports.

In order to be transparent, and in the public interest, the government is releasing its Financial Statements in order to show the province's financial position.

We believe that this reflects the fiscal outcome proposed by the auditor with respect to the treatment of the pension asset in question.

55. Disagreement with officers of the legislature seems to be a recurring theme – at least with the Auditor General – what's your position on this? Does this government have a problem with officers of the legislature?

The government respects the oversight and recommendations provided by all independent officers of the Legislative Assembly of Ontario, including the Auditor General. As a government, we value our important and ongoing relationship with each of these officers.

56. Is the fact that you've changed your accounting standards an indication of financial mismanagement on the part of government?

No. The Province's financial results show that the government has once again beaten its deficit targets and is on track for a balanced budget by 2017-18 and remaining balanced in 2018-19.

Prior to implementing this change, the government had followed the same pension accounting treatment for the past 14 years. This had been accepted by the current Auditor General for the last two years. It has also been accepted by three previous

Auditors General. There has been no change to the relevant accounting standards over the past 14 years.

For 2015-16 financial statements, the government legislated its accounting treatment for pension assets of its jointly-sponsored pension plans.

57. Are you concerned about how the credit rating agencies will view this issue?

The Province's financial results show that the government has once again beaten its deficit targets and remains on track for a balanced budget by 2017-18 and remaining balanced in 2018-19.

Our government remains committed to balancing the budget in 2017-18. At the same time, we will continue to invest in vital government services, such as health care, education and infrastructure that are important to the people of Ontario.

In 2016 the C.D. Howe Institute, an independent research organization that assess the fiscal planning and reporting of governments in Canada, also commented positively on the financial reporting practices of Ontario relating to its fiscal reporting activities that include Public Accounts, the annual Budget and Estimates.

58. Can credit rating agencies adjust their ratings based on this new development? What about bondholders?

The government remains committed to balancing the budget by 2017-18.

The deficit for 2015-16 is $5 billion, a $3.5 billion improvement compared to the 2015 Budget. The deficit is also a $0.7 billion improvement compared to the interim results for 2015-16 contained in the 2016 Budget, which formed the basis for three rating agencies to confirm the Province's credit rating, and the fourth to improve their assessment of the Province's credit outlook.

This marks the seventh year in a row that Ontario has beaten its annual deficit target, reflecting the government's responsible and balanced approach to fiscal management.

The rating agencies and bondholders will understand that the change in the Province's accounting treatment for pension assets of jointly-sponsored pension plans, while increasing net debt, has no impact on the Province's borrowing requirements or total debt outstanding.

Hydro One

59. Why are you selling off Hydro One?

The government is broadening the ownership in Hydro One to improve the company's long-term performance and unlock billions in value for investment in major infrastructure projects that will help grow Ontario's economy for years to come.

This approach will create an improved company that would operate more efficiently and better serve the interests of ratepayers and customers of Hydro One.

The net revenue gains from broadening the ownership of Hydro One shares will provide the government with approximately $4 billion to be credited to the Trillium Trust to invest in key infrastructure and create thousands of jobs, as well as $5 billion to reduce debt.

60. What is the Hydro One deferred tax benefit?

As a result of Hydro One exiting the Payment in Lieu (PILs) regime and the revaluation of its fixed assets upon entering the corporate tax regime, the company recognized a deferred tax benefit in fiscal 2015-16, which positively affected its net income.

At consolidation in Public Accounts of the Province's portion of Hydro One's net income, Hydro One's recognition of a deferred tax benefit increased the Province's revenues by $2.4 billion. The gain associated with Deferred Tax Benefit from the IPO has been allocated to the Trillium Trust.

61. Why did you loan the electricity unions money to buy shares of Hydro One?

In connection with the IPO, the Province sold $116 million worth of Hydro One shares to trusts of the Power Workers' Union (PWU) and the Society of Energy Professionals (SEP) trusts. Of the shares sold to the Trusts, about $108 million was purchased using loans provided by the Province. The gains from those share sales will be credited to the Trillium Trust over time as the loans are repaid.

The government is fully committed to dedicating net revenue gains from the sale of designated assets to the Trillium Trust to help fund further investments in transit, transportation and other priority infrastructure as part of Moving Ontario Forward.

The $3.2 billion being credited to the Trust at this time does not include amounts associated with shares purchased by the Power Workers' Union (PWU) and the Society of Energy Professionals (SEP) trusts using loans provided by the Province.

62. The government is being sued over the sale of Hydro One. Was the sale worth it to balance you budget now that you're being sued?

I understand Ontario has been served with a notice of claim. As this matter may be subject to litigation, it would be inappropriate to comment further.

63. The FAO has warned that the partial sale of Hydro One will have direct implications on the provinces debt and ability to balance the budget. What do you say to these concerns?

To date, Ontario has sold approximately 30 per cent, or about half of the 60 per cent of shares the government intends to sell, and with this $3.2 billion credited to the Trillium Trust is well on track to meet its multi-year asset optimization target to generate $5.7 billion over time to support investments in infrastructure.

Crediting the $3.2 billion to the Trillium Trust demonstrates Ontario's commitment to investing in infrastructure projects that help stimulate economic growth and create good, well-paying jobs.

The government acknowledges the important role played by the FAO in providing independent analysis to the Assembly on the state of the Province's finances.

Bargaining and Compensation

64. What is the government doing to control executive compensation in the Broader Public Sector?

In March 2015, the government proclaimed the Broader Public Sector Executive Compensation Act, 2014 (BPSECA) into force. This legislation allows the government to establish compensation frameworks for designated senior executives in the broader public sector.

An Executive Compensation Framework came into force on September 6, 2016. The framework reinforces that designated BPS employers are accountable for compensation decisions, sets caps and prohibitions on certain types of

compensation, requires enhanced public transparency and allows impacted employers to balance the need to attract the necessary talent to deliver high quality public services while managing public dollars responsibly.

The framework applies to all designated employers under BPSECA, including hospitals, school boards, colleges and universities, community care access corporations, provincial agencies and named hydro entities.

The framework caps salary and performance-related payments for designated executives at no more than the 50th percentile of appropriate comparators and prohibits elements like signing bonuses and pay in lieu of perquisites.

The framework also requires that each designated employer engage in public consultation on their compensation program before it is finalized and requires final programs to be posted on the designated employer's website. These requirements enhance transparency and give Ontarians the opportunity to provide input on executive compensation in the BPS.

BPSECA includes significant compliance and enforcement measures: employers will be required to complete reports concerning compliance with the framework and individuals could be subject to penalties if they willfully fail to provide a report, provide a false report or obstruct an auditor.

65. How are you managing the costs of public sector compensation?

Managing compensation costs is critical to balancing the budget, as more than half of government spending goes to salaries and benefits, including those of both the Ontario Public Service (OPS) and broader public sector (BPS). All public-sector partners must continue to work together to control current and future compensation costs.

Since July 2012, the average annual negotiated wage increase across Ontario's provincial public sector has been 0.6 per cent. This is lower than:

- Ontario's municipal public sector (1.7 per cent)
- the federal public sector in Ontario (1.7 per cent)
- Ontario's private sector (1.9 per cent)

66. Where is the agreement with OPSEU reported in Public Accounts? Was this truly net-zero?

The agreement reached with OPSEU's Central and Unified bargaining units on October 30, 2015 is net-zero and remains consistent with the fiscal plan outlined in both the 2014 and 2015 Budgets.

To achieve a net-zero outcome, there are no wage increases in 2015 and 2016. In 2016 there will be a modest 1.4% one-time lump sum payment that does not form part of employees' base salaries, and in 2017 there is a 1.4% pay increase. Both are offset through changes to employee benefits and entitlements over the three-year term of the contract, including a freeze on salary progression in 2016 and 2017 and capping of termination payments.

This agreement will support the government's ongoing efforts to eliminate the deficit while protecting the valued public services Ontario families rely on.

67. The Premier recently said the era of net zero is over. How will this affect labour negotiations?

As a government, we'll continue to do what we've always done in terms of negotiations. As the time comes to negotiate new contracts, whether it's Treasury Board Secretariat that's negotiating or an individual ministry, they always come to Treasury Board to get an approved mandate. So we'll carry on with that practice of coming to Treasury Board for an approved mandate that will fit within the fiscal plan.

Ontario's Financial Position

68. The FAO has warned that if Ontario's fiscal position deteriorates beyond 2017-18, the four international credit rating agencies could lower Ontario's credit rating, which could lead to higher borrowing costs and more challenging fiscal position. What is the government doing to manage the debt?

The government remains firmly committed to balancing the budget by 2017–18.

The deficit for 2015-16 is $5 billion, a $3.5 billion improvement compared to the 2015 Budget. This marks the seventh year in a row that Ontario has beaten its annual deficit target, reflecting the government's responsible and balanced approach to fiscal management.

Given ongoing challenges in the broader economic environment, the government recognizes that now is the time to be making investments in people, modern infrastructure and a dynamic and innovative business climate — investments that will help to spur economic growth and create the new jobs necessary to support eliminating the deficit.

Alongside these strategic investments, the government is also taking deliberate actions to ensure it can continue to manage spending and improve outcomes for Ontarians. Together, these investments and deliberate actions will help ensure that the priority programs and services that people rely on are maintained and enhanced while the deficit is eliminated.

69. Some have said your government has a spending problem, not a revenue problem. As the largest subnational borrower, what do you say to that?

The government beat its deficit target for the seventh year in a row. Last fiscal year's deficit is $5 billion, down $3.5 billion from the $8.5 billion projected in last year's budget.

The government is projecting a deficit of $4.3 billion in 2016-17 and a return to a balanced budget in 2017-18.

The improvement over plan was due in large part to the Ontario government's strong focus on managing growth in spending. Ontario consistently has the lowest per capita program spending among all Canadian provinces.

Over the past four years the Province has held the average annual growth in program spending to 1.9 per cent, less than the rate of inflation, while investing in services that people rely on.

Key elements of the government's plan to eliminate the deficit are:

- Program Review, Renewal and Transformation
- managing compensation costs
- maintaining tax fairness and a level playing field for business
- strengthening government transparency, financial management and fiscal accountability

70. How much did government spend in 2015-16?

TBC OPCD

71. Why was total expense $300 million higher than projected in the 2015 Budget plan?

Total expense in 2015–16 was $133.4 billion, $1.5 billion higher than the 2015 Budget plan. Program spending was $122.4 billion, up by $1.9 billion from a planned spending of $120.5 billion.

The increase largely reflects the government's decision, announced in the 2015 Ontario Economic Outlook and Fiscal Review, to invest $0.3 billion through the new Green Investment Fund. As well, spending in the health, children's and social services, justice sectors and other programs was higher than planned.

Total program spending was $1.9 billion higher than the Budget, resulting in actual program expense of $122.4 billion. The increases were attributable to:

- $1.5 billion pension asset valuation allowance for OTPP and OPSEU.
- Health sector expense was $294 million, or about 0.6 per cent, above plan. Higher spending resulted from increased drug costs as well as higher hospital sector expense, partially offset by underspending in agencies.
- Children's and social services sector expense that was $124 million higher than planned, due mainly to additional spending to address demand for the Ontario Disability Support Program and the cost of prescription drugs for social assistance recipients.
- Justice sector expense increased by $120 million, mainly due to settlements under the Proceedings Against the Crown Act and higher-than expected bad debt provisions related to unpaid fines.
- Other programs expense was $628 million higher than expected. The increase was due to one-time investments through the Green Investment Fund, higher than anticipated expense for the Ontario Production Services Tax Credit and costs related to the Hydro One IPO.

Increases in these sectors and programs were offset by:

- Education sector expense was $233 million lower than expected, due in part to a higher share of funding spent on capital projects that are capitalized and amortized instead of expensed, higher-than-forecasted revenues from education development charges, and slightly lower-than-projected enrolment.

- Post-secondary and training sector expense was $176 million lower than expected, mainly due to lower spending on post-secondary operating grants and lower student financial assistance as a result of lower-than-forecast enrolment. As well, spending on employment and training programs was below plan, partially offset by higher expense on tax credits to employers to support training.

72. What are you going to do if Ontario's economy does not perform as strongly as you forecast?

The Province has included prudence as part of the fiscal plan to help ensure it meets future fiscal targets as it moves towards a balanced budget in 2017–18.

As required by the Fiscal Transparency and Accountability Act, 2004 (FTAA), the fiscal plan continues to incorporate prudence in the form of a reserve to protect the fiscal outlook against adverse changes in the Province's revenue and expense, including those resulting from changes in Ontario's economic performance. The reserve has been set at $1.0 billion in 2016–17, and $1.2 billion in each of 2018–19.

The fiscal plan also includes contingency funds to help mitigate expense risks that may otherwise negatively impact Ontario's fiscal performance.

In keeping with sound fiscal practices, the Province's revenue outlook is based on prudent economic assumptions. The Ontario Economic Forecast Council, established under the FTAA, reviewed the Ministry of Finance's economic assumptions in February 2015. All council members found the assumptions to be reasonable.

73. What if interest rates go up? What affect would higher interest rates have on debt?

The Province is operating under a historically low interest rate environment, however, if interest rates did increase, a one percentage point change will result in an impact of approximately $350 million to the Province's interest expense.

74. What is the government's annual borrowing program?

The amount of money the government borrows varies from year to year and is dependent on the deficit, proposed investments in capital and amount of debt that is maturing.

Over the three years 2016-17 to 2018-19 average long term public borrowings are estimated to be $26 billion per annum, considerably lower than what the Government borrowed over the past three years which averaged at $33 billion per annum. The lower borrowings are primarily due to the Government's efforts in reducing the deficit and balancing in 2017-18.

75. Did you use your reserve fund to pad your fiscal results and pay down the debt?

For planning purposes, a reserve is included in the budgeted surplus/deficit each year to guard against unforeseen revenue and expense changes that could have a negative impact on the Province's fiscal performance. The 2015 Budget plan included a $1.0 billion reserve. Without the reserve, the actual deficit result of $5.0 billion would not have been affected.

Budget Surplus and Revenue Increase

76. Can you explain the $4.0 billion increase in revenue since your 2015 Budget?

The increase in revenues primarily reflects stronger-than-projected 2015 personal income tax assessments and a strong Ontario housing market in 2015 which boosted Sales Tax and Land Transfer Tax revenues.

Taxation revenues also reflected a one-time increase in Electricity payments-in-lieu of taxes related to Hydro One ownership broadening in 2015-16.

77. How did net income from government business enterprises increase by $100 million from your 2015 Budget projection?

This increase was mostly attributable to combined higher net income from the Liquor Board of Ontario (LCBO), Ontario Lottery and Gaming Corporation (OLG) and Ontario Power Generation Inc. (OPG).

Higher net income from these business enterprises, however, was partially offset by lower net income from Hydro One, primarily reflecting impacts from broadening Hydro One ownership.

Contingency Fund / Reserve

78. What is the difference between the contingency fund and the reserve?

The contingency fund is an amount of expense that is approved by the Legislative Assembly at the beginning of the year to cover expenses due to unforeseen events (e.g. fighting forest fires). This approved spending limit is allocated during the year to ministries for their programs and activities.

The reserve is an amount included in the forecast each year to protect the plan against unforeseen revenue and expense changes that could have a negative impact on the Province's fiscal performance.

Budget Projections vs. Public Accounts Reporting

79. What accounts for the $4.4 billion increase in taxation revenues from your 2015 Budget projection?

The increase in revenues primarily reflects stronger-than-projected 2015 personal income tax assessments and a strong Ontario housing market in 2015 which boosted Sales Tax and Land Transfer Tax revenues.

Taxation revenues also reflected a one-time increase in Electricity payments-in-lieu of taxes related to Hydro One ownership broadening in 2015-16.

80. Why did Ontario's net debt increase by $20 billion in 2015-16?

Net debt is the Province's total debt and other liabilities, less its financial assets, including cash and investments. The increase was primarily due to a $10.9 billion

increase in liability and a $10.7 billion pension accounting adjustment, which was primarily offset by a $1.0 billion increase in financial assets.

81. How do you explain the $12.4 billion increase in total debt in 2015-16?

The increase of $12.4 billion in total debt is due to borrowing for the deficit and investments in capital assets for 2015-16. It also includes pre-borrowing of $2 billion to take advantage of low interest rates and continuing demand for the Province's Debt.

82. Why is the government now including 5-year trends in the Public Accounts?

The increased disclosure and discussion on 5-year trends is in line with recommended disclosure practices of the Public Sector Accounting Board. This increased disclosure enhances the quality of financial reporting to the public, Legislature and other users to better meet their transparency and accountability needs. In addition to the disclosure in the Annual Report, the government is also making available supplementary information through data visualization.

83. Why is the interest on debt for 2015-16 $400 million lower than forecast in the 2015 Budget?

Interest on debt expense was $0.4 billion below plan in 2015-16, as a result mainly of lower-than-forecast interest rates, the lower-than-planned deficit and cost effective borrowing and debt management.

84. Why is interest on debt for 2015-16 $400 million higher than in 2014-15?

Interest of debt is higher by $332 million from last year, mainly due to the funding of the deficit and investment in capital assets and partly offset by the impact of lower interest rates.

Program, Review, Renewal and Transformation

85. How are you reviewing and transforming government programs?

Program Review, Renewal and Transformation (PRRT) is helping the government achieve better outcomes while also lowering costs.

The primary focus of this transformation is on ensuring that services are delivered

efficiently and in a way that effectively meets Ontarians' needs.

Through cross-ministry horizontal collaboration, we are taking focused action on major transformation and efficiency initiatives that will improve outcomes for Ontarians while helping to free up resources to reinvest in key priorities, such as health care and education.

To improve programs, we are moving towards a focus on evidence-based decision making – gathering and analyzing the best available information to improve how outcomes are identified and achieved across government.

86. Has PRRT achieved any tangible results/savings?

The government has achieved a number of efficiencies to make programs more sustainable, such as negotiating lower prices for goods and services and managing compensation.

But PRRT is about more than saving money — it is a continuous planning approach focused on improving outcomes for government programs and services to ensure they are effective, efficient, relevant and sustainable.

87. What do you have to say to those public sector workers who have lost their jobs or are at risk of losing their jobs because of PRRT?

Program Review, Renewal and Transformation (PRRT) is helping the government achieve better outcomes while also lowering costs.

The primary focus of this transformation is on ensuring that services are delivered efficiently and in a way that effectively meets Ontarians' needs.

Government Assets

88. What is the government doing to extract value from any government assets?

With the 2014 Budget, the government began the process of unlocking the economic value of the Province's assets, including setting up the Premier's Advisory Council on Government Assets, chaired by Ed Clark, former Group President and Chief Executive Officer of TD Bank Group.

The council delivered recommendations on the electricity sector to the Province in advance of the 2015 Budget, including broadening the ownership of Hydro One. This would involve an initial public offering of about 15 per cent of the voting securities in Hydro One, with additional share sales in subsequent years. Over time, share offerings would total up to 60 per cent of the voting securities in Hydro One.

The Province is also moving forward with its plans to unlock value from its real estate assets, including OPG's head office building, and the Seaton and Lakeview lands. In June 2016, the Province closed the sale for the Liquor Control Board of Ontario's (LCBO) head office lands, raising $260 million in gross proceeds.

All net revenue gains from the sale of qualifying assets will be dedicated to the Trillium Trust to help fund further investments in transit, transportation and other priority infrastructure as part of the Moving Ontario Forward initiative.

Trillium Trust

89. Have the net proceeds from the sale of the GM holdings and the partial sale of Hydro One been dedicated to the Trillium Trust, and how is that being reported in Public Accounts?

The Trillium Trust Act, 2014, provides for the dedication of net revenue gains from the sale of qualifying assets to help support key infrastructure priorities, such as roads, bridges and public transit. A schedule in Volume 1 of the Public Accounts reports on the financial activities of the Trillium Trust.

Volume 1 shows that $1.35 billion was available for the Trillium Trust at March 31, 2016, to help fund investments. This reflects the sale and redemption of the Province's shares in General Motors in earlier years.

In August 2016, a regulation was put in place that credited the trust with $3.2 billion from the net revenue gains resulting from the Hydro One IPO, the gain on sale of shares in November 2015 and the share of the deferred tax benefit to Hydro One that has been recognized by Ontario through its share of Hydro One net income as a result of its ownership position in Hydro One.

The net revenue gains from the secondary offering in April 2016 will be reported in the 2016-17 Public Accounts and credited to the Trillium Trust.

90. How have you spent the funds dedicated to the Trillium Trust?

As announced in the 2016 Budget, the government plans to begin drawing on the balance in the Trillium Trust in 2016-17 to support the largest investment in public infrastructure in Ontario's history.

Based on planned expenditures, in 2016–17 the Trillium Trust would support Moving Ontario Forward initiatives, such as GO Transit Regional Express Rail, Hurontario Light Rail Transit and the Ontario Community Infrastructure Fund.

91. Why are you allocating non-cash items like the deferred tax asset generated in the Hydro One transaction to the Trillium Trust?

TBC OPCD

Moving Ontario Forward

92. In the 2015 Budget, the government stated that $3.5 billion would be dedicated to the Moving Ontario Forward plan. So far, only $1.35 billion has been dedicated to the Trillium Trust. How do you propose to supply the $2.15 billion difference?

Moving Ontario Forward dedicated funds would be largely supported by:

- Dedicated proceeds from 7.5 cents of the existing provincial gasoline tax to public transit and transportation infrastructure priorities. This would be over and above the existing gas tax funding to municipalities, with no increase to the current tax rate.
- Repurposing revenues from the existing Harmonized Sales Tax charged on the current provincial taxes on gasoline and road diesel.
- Dedicated proceeds from targeted revenue measures.
- The government's asset optimization strategy, with net revenue gains dedicated to the Trillium Trust to help support investments in public infrastructure.
- Working with the federal government to secure federal funding through the Building Canada Plan.

93. How much did the government spend on Moving Ontario Forward in 2015-16?

Moving Ontario Forward is part of the government's commitment to invest more than $137 billion in public infrastructure over the next 10 years. Investments are underway, including providing $100 million per year to small, rural and northern municipalities through the Ontario Community Infrastructure Fund to build and repair critical infrastructure.

Like most large infrastructure investments, initial spending on Moving Ontario Forward projects is focused on planning, design, property acquisition and other activities to get projects construction-ready. Spending would ramp up significantly once this preliminary work is completed and construction activity is underway. Over the 10-year Moving Ontario Forward period, all of the dedicated funds are expected to be spent on priority infrastructure projects.

94. Why aren't the additional $2.2 billion in revenues dedicated to the Moving Ontario Forward plan reported in the Public Accounts?

In the 2015 Budget, the government committed to dedicate $31.5B over 10 years to support infrastructure projects under the Moving Ontario Forward plan, which included $5.7B from its asset optimization strategy. In 2014-15, this amounts to about $3.5B in dedicated funds including $1.3B from asset optimization. The remaining $2.2B in 2014-15 would be largely supported by:

- Dedicated proceeds from 7.5 cents of the existing provincial gasoline tax to public transit and transportation infrastructure priorities. This would be over and above the existing gas tax funding to municipalities, with no increase to the current tax rate.

- Repurposing revenues from the existing Harmonized Sales Tax charged on the current provincial taxes on gasoline and road diesel.

- Dedicated proceeds from targeted revenue measures.

- Working with the federal government to secure federal funding through the Building Canada Plan.

These additional amounts are largely taxation revenues and are reflected in the total revenue figures in the 2014-15 Public Accounts.

95. How does investing in public infrastructure impact the economy?

A large and growing body of independent research shows that infrastructure investments support jobs, augment personal incomes and produce real growth in the economy. For example, a September 2015 report by the Broadbent Institute and the Centre for Spatial Economics showed that, on average, investing a dollar in public infrastructure in Canada raises gross domestic product (GDP) by $1.43 in the short term and up to $3.83 in the long term.

The Province's planned investments in infrastructure are expected to support over 110,000 jobs, on average, each year.

96. The Public Accounts makes reference that the Province's investment in capital assets is guided by sound asset management planning principles, so why is the education sector facing large renewal needs?

The Province has announced new renewal investment, including: increased investments in GO Transit rehabilitation and renewal; additional annual funding of $50 million to assist hospitals in maintaining their facilities in good repair; and a $1.1 billion investment to repair and renew schools across the province (allocated to school boards in proportion to their renewal needs).

In the education sector, the School Condition Improvement program addresses renewal needs focusing on ensuring that facilities are in good condition, energy efficient and accessible and meet modern service standards. The funding will enable school boards to repair roofs, update HVAC units and modernize electrical and plumbing systems. It will also significantly improve more visible elements of schools that impact students' learning and well-being, including flooring, walls, ceilings, playing fields and more. To support transparency, the government has also released detailed information regarding the condition and renewal needs of each of Ontario's publicly funded schools.

Transparency

97. You say the Province's Annual Report is a central element in demonstrating transparency in reporting financial activities and accountability, yet the FAO continues to criticize your government for withholding information. What do you say to these criticisms?

The relationship between the FAO's office and our government is very important.

Our door is open to meet with the FAO and his staff upon request, and our government has tried to be proactive in reaching out to provide clarification when it could be of use.

We want to be accommodating and helpful, while also respecting the requirements of the 2013 FAO Act. With this in mind, Treasury Board has provided additional information to complement and/or further clarify our responses to the FAO when we've received follow-up requests from his office.

We have also reformatted information into machine-readable charts upon request, when it was possible and consistent with legislation. All requests from the FAO office to the Treasury Board Secretariat have been responded to.

Pan Am Games

98. How much was spent on the games, where does it appear in Public Accounts? And how does your government justify this expense?

These were the largest, most successful Pan/Parapan Am Games ever – creating 26,000 jobs, boosting Ontario's GDP by $3.7B and leaving a lasting legacy that will benefit Ontario for years to come. The economic boost that resulted from the Games acted as a catalyst for economic, social, infrastructure and athletic development and we were proud to host these Games.

Questions related to the Pan Am Games should be referred to my colleague, the Minister of Tourism, Culture and Sport.

Underground Economy

99. How are you ensuring revenue integrity?

A fair and efficient tax system is critical to sustaining public services. The 2014 Budget noted that when businesses aggressively avoid or evade paying taxes, everyone else is left to make up the shortfall, putting the competitiveness of legitimate businesses at risk.

Since 2013–14, the Province has taken concrete measures to help ensure tax fairness and a level playing field for business. These include enhanced auditing and compliance activities, such as a multi-year agreement with the Canada Revenue

Agency to address the underground economy and corporate tax avoidance in Ontario. The Province has also targeted areas at high risk of underground economic activity with pilot initiatives that focus on mitigating unfair and unsafe circumstances for Ontario's workers and consumers.

In total, these efforts have generated an estimated $1.1 billion for Ontario to date. The Province will build on these successful initiatives with new approaches to ensuring revenue integrity.

Date: Monday, January 15, 2018 11:13:35 AM
Attachments: Summary of Draft FAO Fall Economic and Fiscal Outlook_v6d.docx

---

Hi Ken,

Office of the Budget is releasing the attached note in response to an FOI request. The request was for final documents related to the FAO's Fall Economic and Fiscal Outlook. The attached summary note was provided to the DMO and MO. We've been asked to review to determine whether anything needs to be redacted (i.e., advice to Cabinet).

I've reviewed and only see two areas for the OFA to consider:

Borrowing and Net Debt (p. 3-4)

- Using the **government's accounting presentation** net debt-to-GDP is expected to reach 38.5 per cent by 2019–20 and 38.7 per cent by 2021–22. This increases to 41.4 per cent by 2021–22 **under the AG's accounting presentation for jointly sponsored pension plans and the Fair Hydro Plan**.

    - The 2017 FES projected a net debt-to-GDP ratio of 37.0 per cent by 2019–20.

This information is already public – I see no need for redaction.

Chart on page 5 compares the 2017 FES fiscal table with the FAO's outlook

While we have not published the delta, all of the inputs to the table are public – I see no need for redaction.

Could you please have a quick review and let me know if you agree with my assessment?

Thanks, Anna

Subject: FW: MOF FOI Request A-17-189 (Economic and Fiscal Outlook FAO Report) - Request Narrowed

Hi Ghufran, Sarah, and Anna,

We received an FOI request for final documents related to the FAO's Fall Economic and Fiscal Outlook (EFO). OB is planning on providing the attached final summary note to the FOI office. We're just in the process of verifying whether any of our components of the summary note need to be redacted.

Can your areas please review the note and flag whether any of the information should be redacted in line with FIPPA exemptions **by noon on Tuesday, January 16**? Exemptions should be limited to information that is not publically available (e.g. internal analysis/advice for government officials).

Please let me know if you have any questions.

Thanks,
Ryan

FAO's 2017 Fall Economic and Fiscal Outlook

ISSUE

On Monday Dec 11th, 2017 the Financial Accountability Office will release its 'Fall Economic and Fiscal Outlook' report. This note is a summary.

TOP MESSAGES

- I would like to thank the Financial Accountability Officer (FAO) for releasing his fall economic and fiscal outlook for Ontario. We value the FAO's independent assessment and projections of the province's fiscal plan.
- The government is committed to a responsible fiscal plan that provides the conditions for all Ontarians to thrive.
- As outlined in the 2017 Ontario Economic Outlook and Fiscal Review, the government is projecting a balanced budget for 2017–18 and continued balance in 2018–19 and 2019–20.
- The FAO's deficit projections differ from the government's, but as with any future oriented forecast there is uncertainty.
- What we do know for certain is that this government has a strong track record of beating its fiscal targets. In fact, the Public Accounts of Ontario reported that the 2016–17 deficit was $1.0 billion, beating our annual deficit target again, for the eighth year in a row.
- The 2017 Ontario Economic Outlook and Fiscal Review builds on the government's track record of fiscal management that has resulted in $29 billion in accumulated deficits being avoided over the past seven years, relative to the 2010 Budget forecast.
- We are also targeting a net debt-to-GDP ratio of 35 per cent by 2023–24 and reducing Ontario's net debt-to-GDP ratio to its pre-recession level of 27 per cent, with current projections showing that this will be achieved by 2029–30.
- Since 2014, Ontario's real GDP growth has strengthened, positioning Ontario as a growth leader, not only in Canada, but among G7 countries. In fact, over the 2014-17 period, Ontario's real GDP growth is on pace to exceed that of all G7 countries.
- Private-sector economists are projecting continued growth for Ontario over the forecast horizon; the FAO's real GDP projections are aligned with the 2017 Fall Economic Statement over the 2017 to 2020 period.
- This shows that our plan to make strategic investments in Ontario to grow the economy is working.
- A balanced budget is providing the Province the fiscal flexibility to invest more in health care, education, support for seniors and small businesses and other public services that matter most to Ontario families. A balanced budget also adds stability to Ontario's finances and positions the government to better respond to demographic challenges and unexpected global economic shocks that the province will face over the next decade.

- We will continue moving forward on our fiscally responsible plan that creates fairness and opportunity for all Ontarians.

KEY POINTS

Economic Outlook

- The FAO has raised its forecast for Ontario economic growth in 2017 from its spring outlook report. However, despite this upward revision, the FAO forecast is at the bottom of the current range of the MOF survey of private sector forecasts for both real and nominal GDP growth in 2017.
- Beyond 2017, the FAO forecast anticipates growth to moderate as the housing market and consumer spending cool alongside gradually rising interest rates, in line with the FES forecast.
- Over the 2017 to 2020 period, the FAO's forecast for average annual real GDP growth of 2.2 per cent is the same as the 2017 FES outlook.
- However, for nominal GDP growth, the FAO's average annual forecast of 4.2 per cent over the 2017 to 2020 period is slower than the FES projection of 4.4 per cent growth. This difference is explained by a much lower FAO nominal GDP forecast in 2017 compared to the FES (4.7 per cent vs 5.3 per cent).
- The FAO forecast takes into account its estimate of the impact of the new minimum wage legislation, which is expected to boost wage growth over the forecast, but temper employment gains. Even with these employment impacts, the FAO predicts a modest decline in the unemployment rate.

Fiscal Outlook

- The FAO is projecting a budget deficit of $4.0 billion in 2017–18 using the **Auditor General's recommended accounting treatment for both the Fair Hydro Plan and the net pension assets of jointly sponsored pension plans.** In the absence of any fiscal policy changes the deficit grows steadily to $9.8 billion in 2021-22.
- Under the **government's accounting presentation (excluding the AG's recommendations)**, the FAO projects a small surplus for 2017–18 of $0.2 billion (excluding the reserve) and a return to deficits beyond 2017–18 driven by revenue factors - loss of temporary revenues combined with more moderate tax revenue growth.
- The FAO suggests that by not adopting the AG's recommended accounting presentation, the 2017 Budget and the 2017 FES have reduced transparency and clarity of Ontario's fiscal position and Ontario will continue to receive qualified opinions from the AG on its Pubic Accounts.

Budget Balance - FAO's Fiscal Outlook ($ Billions)	2015-16	2016-17	2017-18	2018-19	2019-20	2020-21	2021-22
AG Presentation	-5.0	-2.4	-4.0	-7.1	-7.8	-9.0	-9.8
Government Presentation	-3.5	-1.0	0.2	-1.9	-1.9	-2.6	-3.7
2017 FES -- Excluding Reserve	-3.5	-1.0	0.5	0.5	0.8	N/A	N/A

Revenue Outlook

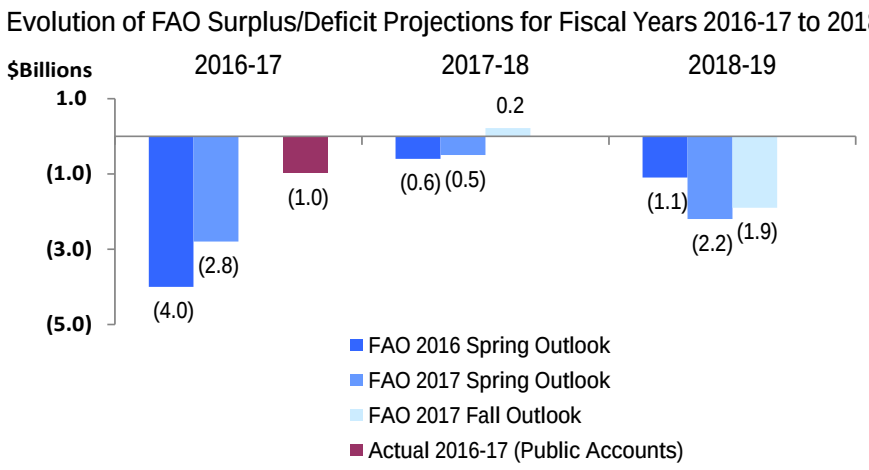
- The FAO is projecting average annual revenue growth of 3.2 per cent from 2016-17 to 2019-20 as compared with the government's projections of 4.0 per cent. The main drivers are:
    - The FAO projections for taxation revenues are $2.9 billion lower by 2019-20 than the projections in the 2017 FES due to lower projected growth in household spending, labour income and corporate profits.
    - In addition, the FAO continues to highlight a number of one-time 2017-18 revenues, including: increase to sales and rentals from sale of final tranche of H1, higher federal transfers for infrastructure (PTIF), a one-time boost from extra Cap and Trade auction. Taken together the FAO estimates that these amount to $4.5 billion in additional one-time revenues in 2017-18.

Expense Outlook

- From 2017–18 to 2019–20 the FAO's outlook adopts the government's 2017 FES projections for program spending, **adjusted to reflect the AG's recommended accounting presentation.**
    - Both the Fair Hydro Plan and net pension asset adjustment impact the expense side with a combined impact of approximately $4.2 billion in 2017-18.
- The FAO notes that in 2018-19 and 2019-20, increases in program spending will be restrained to an average of 2.4 percent, below the growth in underlying spending pressures. Beyond 2019–20 the FAO projects program spending will grow faster -- at an average annual rate of 4.2 per cent – due to population pressures.

Borrowing and Net Debt

- Using the **government's accounting presentation** net debt-to-GDP is expected to reach 38.5 per cent by 2019–20 and 38.7 per cent by 2021–22. This increases to 41.4 per cent by 2021–22 **under the AG's accounting presentation for jointly sponsored pension plans and the Fair Hydro Plan**.



- The 2017 FES projected a net debt-to-GDP ratio of 37.0 per cent by 2019–20.

Comparison: 2017 Fall Economic Statement and the 2017 Fall FAO Fiscal Outlook

FAO ECONOMIC AND FISCAL OUTLOOK REPORT
November 3, 2016

Time / Location:
12:15 p.m. / Media Studio, Queen's Park

Speakers:
J. David Wake, acting Financial Accountability Officer; David West, Financial Accountability Office. MPPs Vic Fedeli and Catherine Fife scrummed with reporters afterwards.

Media Attendance:
Print – 5
TV – 6
Radio – 1

Media Outlets:
Jones – CP; Benzie – Star; Jeffords – Sun; Zochodne – QP Briefing; Smith – QP Today; Lamoureux - Radio Canada TV; Unidentified – Newstalk 1010; Rath - CHCH Television (scrums only); Tumelty - City TV; Wong – CP24 (scrums only)

Statements:
David Wake: My name is David Wake. I'm the Ontario Integrity Commissioner but as of last week I was also appointed as the Financial Accountability Officer on a temporary basis while Stephen Leclair's on medical leave. I can also indicate we put this gathering back 15 to 20 minutes to accommodate you because you had questions elsewhere. Unfortunately I have to leave for another engagement so I may have to slip away at some point. But David West can continue with answering any questions you may have. So last week after I agreed to take on the additional duties of the Financial Accountability Officer on a temporary basis, I met with the staff of that office and reviewed its draft fall 2016 update. I decided that this report should be released as originally contemplated by the office. I also decided that that timing of the FAO report's release in fairness to the minister who will soon be issuing his fall economic statement, should be prior to the minister's statement. So accordingly today I delivered to the speaker for tabling, a report providing an updated economic and fiscal outlook for the province of Ontario. The report details the FAO's assessment of the current economic outlook and the province's fiscal position given developments since the FAO's last economic and fiscal outlook released in May. Based on this assessment and in the absence of additional government measures Ontario's budget

would be expected in deficit over the next five years. So at this point I'll ask the Financial Accountability Office's chief economist David West to provide an overview of the report's highlights.

David West: Thank you commissioner Wake. There've been three significant developments since the FAO's Spring report. The release of the 2015-2016 Public Accounts earlier in October; the government's speech from the Throne in September and a revised economic outlook. Each of these developments had a significant impact on the province's fiscal position. The recent Public Accounts reported than expected tax revenues in the fiscal year 2015-16 which translated into higher revenues over the outlook. The Public Accounts also included a legislated change in the accounting treatment for jointly sponsored pension plans, which increased the province's net debt by $10.7 billion in 2015-16 and the annual deficit by $1.5 billion in that same year. However there is significant uncertainty on the impact of this accounting change going forward. In developing this updated projection, the FAO has assumed a program expense would $1.5 billion higher each year over the outlook as a result of the accounting change. The report provides Ontario's fiscal position both including and excluding the accounting change to allow for consistency with the 2015-16 Public Accounts as well comparability with our spring report. The second major development since the FAO's spring report was the government's Throne Speech which included new commitments to expand childcare spaces and provide an HST rebate on electricity bills. When fully phased in these commitments are expected to result in new operating expense of about $1.8 billion per year. Finally the outlook for the economic growth in Ontario has moderated since the spring, reflecting weaker economic conditions in Canada and globally. Slightly slower economic growth leads to modestly lower tax revenues. At the same time, slower growth of the Canadian economy has resulted in a lower interest rate forecast which reduces projection for interest on debt expense. Excluding the change in accounting treatment for pension plans, these developments, the 2015-16 Public Accounts, the Throne Speech commitments and a revised economic outlook were largely offsetting, resulting in a modest deterioration of the budget over the outlook, moderately higher budget deficit over the outlook compared with the FAO's Spring report. Including the assumed impact of the accounting change, the FAO project Ontario budget deficits of $5.2-billion in 2016-17 and $2.6-billion in 2017-18. Beginning of 2018-19 the deficit is forecasted to deteriorate steadily to $3.7-billion by 2020-21 as the growth of revenue is outpaced by increases in program expense and interest on debt. However the government remains committed to balancing the budget in 2017-18 and maintaining balance going forward. Eliminating the deficit by 2017-18 will be more challenging given the assumed impact of the change in accounting treatment. Even so achieving budget balance in 2017-18 may still be within the government's reach through the sale of public assets, the allocation of new revenues to existing spending or through other steps. But maintaining a balanced budget after 2017-18 will likely require additional to raise revenue or lower expense. Based on the FAO's projections Ontario's net debt is expected to rise by $64-billion over the next five years to $370 billion dollars in 2020-21. The result of accumulative deficits, capital spending and a change in accounting treatment. This about $20-billion higher than we forecast in our spring outlook primarily due to the accounting change. As a result of the higher debt, combined with slightly slower growth in nominal GDP Ontario's debt-to-GDP ratio is

expected to plateau at 41%, significantly above the FAO's spring projects. As noted in the FAO spring report, the government has committed to reduce the debt to GDP ratio to 27%, approximately 14 percentage points below the projected value in 2020-21, but has yet to provide any details on how or when it plans to achieve this goal. This report summarizes the FAO's estimates of the most likely outcomes for Ontario's fiscal position, given developments over the past six months. (Inaudible) highlighted in the FAO's spring report, there are significant risks. Economic growth turns out to be even moderately weaker than projected, tax revenues will be lower. At the same, pressures to increase the growth in program spending continue to build, reflecting the growth in population and price inflation. The government has also built into its fiscal plan specific assumptions about revenues from the new cap-and-trade program and from new federal transfers, assumptions which are incorporated in the FAO's projections. These two revenue sources are expected to total over $3 billion in 2017-18. Differences in the timing or net benefit of these new revenues would have a significant impact on the government's fiscal position. To summarize, there have been a number of significant developments since the FAO's spring report on Ontario's economic and fiscal outlook. When taken together, these developments suggest a moderate deterioration in the province's fiscal position compared to our spring report. However, when the assumed impact of the change in the accounting treatment of jointly-sponsored pension plans is included, the projected deficits become more significant, suggesting the need for additional fiscal measures to achieve the government's goal of a balanced budget. Thank you, the commissioner and I are happy to take questions.

Media Questions:

Q. Jones: How difficult is it going to be to lower the net-debt-to-GDP ratio by 14 percentage points?

West: I don't know how to respond to how difficult (inaudible) be. It's certainly going to be a challenge. I mean, for the next five years we see the debt-to-GDP ratio basically plateauing at 41 per cent, and the government hasn't released plans to how it would anticipate to lower that ratio.

Q. Jeffords: It sounds like the accounting squabble that took place earlier with the AG has had a domino effect and is now rolling out and impacting net debt as well (inaudible) probably predictable outcomes. Could you talk about the – just how pronounced that impact is here?

West: So in our spring report, we forecast (inaudible) the net debt to rise to $350 billion by 2020-21. In this current projection, we have net debt rising to $370 billion. As I said, approximately $20 billion higher than what we anticipated in the spring. Deficits are just slightly larger now in this projection. (Inaudible) $18 billion of that $20-billion increase is largely attributable to the accounting change. It's worth noting that the accounting change is not cash, right. This is a non-cash adjustment to the government's books.

Q. Lamoureux: Can you explain as to what the government will have to do if they want to stick to their plan to balance the budget by next year?

West: Well as we point out in the report, it seems likely that the government would have to either raise revenues or lower expense. It's the – the FAO's mandate is to provide an account – you know, a reasonable, independent projections for the economy and the fiscal position of the government. It's not within our mandate to provide policy recommendations or advice on the specific measures that they may choose.

Q. Jones: I couldn't help but notice that in the report, you cite media reports, Queen's Park Briefing specifically, for the – what the government says it will cost – the Throne Speech commitments, the hydro rebate and the child care spaces. Is the office still having trouble getting information from the government, or is there just no information to be had on those spending promises?

West: That's a fair question. So maybe you'll answer the second part of the question. So we based – we did run our report, draft version of our report, by government officials and they agreed – and we lay out our assumptions for the roll-out of those two spending commitments. The government didn't comment on it. I think, you know, they don't have a projection for the roll-out of these (inaudible) one that they weren't going to share with us. I don't see it as a material – they – I don't think it would make a material impact on our projections though the actual timing of the introduction of these programs – and as I said, the government did see what we're preparing to release and we're comfortable with that.

Wake: Just as a follow-up to that, I (inaudible) indicate that maybe past frustrations expressed in the annual report, to which I think you're alluding, may have been addressed by the issuance of the order in council early last month. And I can tell that subsequent to that, we've met with the Secretary of Cabinet and the ministry officials so that at this point we're satisfied that things are in place so that this information can be obtained if it's needed. We'll see, but I think the structure's now in place for the FAO to get all of the material it needs.

Q. Zochodne: Is the FAO going to try and flesh out some more details about the rebate and the child care spaces going forward?

West: So we would be looking forward to the government's own fiscal statement coming in – expected in coming weeks, and would review our assumption (inaudible) in light of that. If necessary, we could make additional requests at that time for additional information if we thought it was necessary.

Q. Zochodne: How big of a swing is that on the government's books that those – the spending promises?

West: $1.8 billion and some. And as I said, you know, the – we looked at a number of developments. That was one of the several developments, and when you include the better-than-expected results from the Public Accounts, savings on interest-on-debt expense, (inaudible) weaker economic growth, which leads to lower tax revenues, all told, all in, there's a moderate deterioration in the deficit. Throw in the accounting

change, and it's a more significant deterioration.

Questions for MPP Fedeli:

Well we've always known there was a trust deficit with this government and now that we have had it proved there's also a financial deficit. We've heard from the FAO that Ontario will plunge into deficit and stay there for at least the very next five years. And that is contrary to what the government says. The FAO also told us today the only way the government can artificially balance the budget for the election year is to continue to sell assets. So these are the one-time sale of assets and he has also said when the assets sales run out that's why our deficits will continue on a downward spiral for the next fears.

Q. Jones: Which scenario do you think we'll see? Do you think we'll see continued deficits or do you think we'll see them raise taxes to cancel those debts?

I think we're going to see both. We're going to see continued deficits, the FAO is fairly clear about that and I think you're going to continue to see raised taxes. They raised taxes 20% in the past five years which oddly makes us the most taxed province in all of Canada and the same time the most indebted subnational on the planet. That just defies logic that you be both.

Q. Jones: They really seem to have gone all in on this promise to balance the budget in 2017-18. You don't think that they'll do anything at all cost to get there?

They will and that's why they'll artificially balance the budget. They will sell the OPG headquarters across the street, they'll continue to sell Hydro One, they'll continue to sell lands such as the LCBO headquarters they will sell anything that isn't nailed down and that's the only way, according to the FAO that they are going to balance, artificially, is by the one-time sale of assets. And of course he also said what happens when you run out of assets to sell? That's why we have the next five years of deficits. We have a structural deficit in the province of Ontario.

Q. Lamoureux: So what will you do if you form the government in 2018? (inaudible) the situation?

The first thing you would do is cut waste, mismanagement and scandal. That's really when you look at some of the things that have happened in the last month we learned we many billions were wasted on the last one. $308 million were wasted on the failed attempt to modernize the OLG. It was $300 million was spent in five different hydro scandals, including the $179 million in the Windstream case, you've got $25 million in another case, $12 million in another case, $300 million alone wasted in two-weeks this month in hydro. So it's waste mismanagement and scandals that have caused this government to continue their deficits.

Q. Zochodne: (inaudible) situation with whoever forms government in 2018 is going to inherit some much worse than expected (inaudible)

It’s interesting you bring that up because in advance, the law states that six months in advance of the next election the Auditor-General must bring out a report that verifies the government’s numbers. Well the government is moving the election to the 7th of June 2018 which would prohibit the Auditor-General from performing that duty. So we are going to into next election on June 7th 2018 without having any audited numbers. That may or may not be one of the reasons the government is moving to that date.

Q. Zochodne: How will that stop (inaudible)

Because it’s six months in advance would be December of 2017 and the year isn’t over then they would be working with a year old set of numbers and the Auditor has confirmed that to us, that she cannot perform an audit by six months in advance, the 7th of June so we’re going to go into the next election absolutely not knowing any audit numbers whatsoever.

Q. Zochodne: Does it give you a good idea based on (inaudible) Fall Economic Statement?

No she has explained that her role would be to use the numbers that are provided at year end only and this would prohibit that so we’re going to go into the next election, only with the government’s word that they’ve balanced and of course we now know they have a trust deficit in Ontario.

Q. Zochodne: She would have to compare an outlook for you based off of the 2017 year end financials?

Which we’re going to get from her anyway about a year in advance.

Q. Jeffords: What’s the solution to that then? What can be done?

That’s something that the Auditor General has to look into and try to decide how on Earth that can be corrected. Here we’re going into an election with a government that is telling us one thing, the Financial Accountability Officer of Ontario is telling us something 180 degrees completely different than the government is telling. You have to decide which one to trust and I think there’s a trust deficit in Ontario, in addition to fiscal (inaudible)

Q. Rath: How can they be so different?

Well they can be different because the government is counting on the one-time sale of assets. They’re literally burning the furniture to heat the house. Selling off Hydro One and instead of putting that in reserves as you would do with one-time sale they’re using that as general revenue, well that revenue does not repeat year after year. Selling OPG headquarters across the street is a desperate move to bring revenue in for one year to artificially balance. They promised us so much yet they cannot contain themselves. Spending has continued to grow faster than the revenue and that’s the problem. They just can’t help themselves.

Questions for MPP Fife:

(joined in progress) desperately trying to rebrand themselves. The gamble they took is to sell off Hydro One. That has proven to not work. And also you've seen other public assets that are on the chopping block, like Ontario Place. This is very much a real possibility here at Queen's Park. So this government is scrambling on almost every file around controlling spending in some areas, and controlling waste. And clearly they are failing. And thankfully we have the Financial Accountability Office to actually prove that to the people of this province.

Q. Tumelty: The officer also said that the long-term—we're going to be struggling with our debt.

Yes. I mean, and the accounting treatment is actually part of that. And that's why when the Auditor General stood her ground against this government, that's the important piece of that independent officer, to actually tell the truth of what's happening here at Queen's Park. Quite honestly, we are—any party going forward is going to have to deal with some very difficult decisions. The selling off of Hydro One, though, needs to stop. It has proven to not be successful. It is a quick cash grab, which they've proven today will not serve the people of the province in the long-term.

Q. Unidentified: (inaudible) FAO saying (inaudible)

Absolutely.

Q. Jeffords: So, how would you explain to Ontarians why that is the case?

Well, I mean, we have Auditor General reports (inaudible) ten years which shows the waste and mismanagement. The increased privatization on almost every portfolio. The Financial Accountability Officer has obviously looked at a downgrade in the deficit reduction, because of lost revenue and because of increased promises around spending. We know going forward that if this government is going to try to reach their targets, they're going to have to start cutting. And it's our job to try to mitigate some of that damage.

Q. Jones: You think they may cut or (inaudible)

This government, I mean, this government has—who knows what this government's going to do. I really do feel, as the finance critic for the NDP, that they are making it up as they go along. And we have the Auditor General and the Financial Accountability Officer to expose what is happening in the province, but as we've said, time and again, the one-time cash grab with the sell-off of Hydro One has proven to be a failure. Kathleen Wynne gambled on that, and now she really is committed to selling off everything, including Ontario Place.

Q. Lamoureux: What do you make of the fact the Minister still said, no, we're in control, even after this report, and he's saying we will balance the books next year?

I know. In the briefing this morning it was interesting. The government did not show

up for the briefing and I asked that very question. There is a disconnect between the spin that is coming right from the Premier's Office, and thankfully we actually have this report to counter that. This is a government that is not actually willing to do the hard work of looking at the waste that's actually here at Queen's Park. And we know going forward that if they are going to try to meet that target, they are going to cut public services and they are going to continue to sell off the assets that belong to the people of this province.

Q. Zochodne: Did you manage to eavesdrop at all on what Vic was saying about the —you're not going to get a financial statement going into the next election?

You know, I—that's speculation on his part. The Auditor General [end of recording]

Statements:

David Wake: My name is David Wake. I'm the Ontario Integrity Commissioner but as of last week I was also appointed as the Financial Accountability Officer on a temporary basis while Stephen Leclair's on medical leave. I can also indicate we put this gathering back 15 to 20 minutes to accommodate you because you had questions elsewhere. Unfortunately I have to leave for another engagement so I may have to slip away at some point. But David West can continue with answering any questions you may have. So last week after I agreed to take on the additional duties of the Financial Accountability Officer on a temporary basis, I met with the staff of that office and reviewed its draft fall 2016 update. I decided that this report should be released as originally contemplated by the office. I also decided that that timing of the FAO report's release in fairness to the minister who will soon be issuing his fall economic statement, should be prior to the minister's statement. So accordingly today I delivered to the speaker for tabling, a report providing an updated economic and fiscal outlook for the province of Ontario. The report details the FAO's assessment of the current economic outlook and the province's fiscal position given developments since the FAO's last economic and fiscal outlook released in May. Based on this assessment and in the absence of additional government measures Ontario's budget would be expected in deficit over the next five years. So at this point I'll ask the Financial Accountability Office's chief economist David West to provide an overview of the report's highlights.

David West: Thank you commissioner Wake. There've been three significant developments since the FAO's Spring report. The release of the 2015-2016 Public Accounts earlier in October; the government's speech from the Throne in September and a revised economic outlook. Each of these developments had a significant impact on the province's fiscal position. The recent Public Accounts reported than expected tax revenues in the fiscal year 2015-16 which translated into higher revenues over the outlook. The Public Accounts also included a legislated change in the accounting treatment for jointly sponsored pension plans, which increased the province's net debt by $10.7 billion in 2015-16 and the annual deficit by $1.5 billion in that same year. However there is significant uncertainty on the impact of this accounting change going forward. In developing this updated projection, the FAO has assumed a program expense would $1.5 billion higher each year over the outlook as a result of the accounting change. The report provides Ontario's fiscal position both including and excluding the accounting change to allow for consistency with the 2015-16 Public Accounts as well comparability with our spring report. The second major development since the FAO's spring report was the government's Throne Speech which included new commitments to expand childcare spaces and provide an HST rebate on electricity bills. When fully phased in these commitments are expected to result in new operating expense of about $1.8 billion per year. Finally the outlook for the economic growth in Ontario has moderated since the spring, reflecting weaker economic conditions in Canada and globally. Slightly slower economic growth leads to modestly lower tax revenues.

At the same time, slower growth of the Canadian economy has resulted in a lower interest rate forecast which reduces projection for interest on debt expense. Excluding the change in accounting treatment for pension plans, these developments, the 2015-16 Public Accounts, the Throne Speech commitments and a revised economic outlook were largely offsetting, resulting in a modest deterioration of the budget over the outlook, moderately higher budget deficit over the outlook compared with the FAO's Spring report. Including the assumed impact of the accounting change, the FAO project Ontario budget deficits of $5.2-billion in 2016-17 and $2.6-billion in 2017-18. Beginning of 2018-19 the deficit is forecasted to deteriorate steadily to $3.7-billion by 2020-21 as the growth of revenue is outpaced by increases in program expense and interest on debt. However the government remains committed to balancing the budget in 2017-18 and maintaining balance going forward. Eliminating the deficit by 2017-18 will be more challenging given the assumed impact of the change in accounting treatment. Even so achieving budget balance in 2017-18 may still be within the government's reach through the sale of public assets, the allocation of new revenues to existing spending or through other steps. But maintaining a balanced budget after 2017-18 will likely require additional to raise revenue or lower expense. Based on the FAO's projections Ontario's net debt is expected to rise by $64-billion over the next five years to $370 billion dollars in 2020-21. The result of accumulative deficits, capital spending and a change in accounting treatment. This about $20-billion higher than we forecast in our spring outlook primarily due to the accounting change. As a result of the higher debt, combined with slightly slower growth in nominal GDP Ontario's debt-to-GDP ratio is expected to plateau at 41%, significantly above the FAO's spring projects. As noted in the FAO spring report, the government has committed to reduce the debt to GDP ratio to 27%, approximately 14 percentage points below the projected value in 2020-21, but has yet to provide any details on how or when it plans to achieve this goal. This report summarizes the FAO's estimates of the most likely outcomes for Ontario's fiscal position, given developments over the past six months. (Inaudible) highlighted in the FAO's spring report, there are significant risks. Economic growth turns out to be even moderately weaker than projected, tax revenues will be lower. At the same, pressures to increase the growth in program spending continue to build, reflecting the growth in population and price inflation. The government has also built into its fiscal plan specific assumptions about revenues from the new cap-and-trade program and from new federal transfers, assumptions which are incorporated in the FAO's projections. These two revenue sources are expected to total over $3 billion in 2017-18. Differences in the timing or net benefit of these new revenues would have a significant impact on the government's fiscal position. To summarize, there have been a number of significant developments since the FAO's spring report on Ontario's economic and fiscal outlook. When taken together, these developments suggest a moderate deterioration in the province's fiscal position compared to our spring report. However, when the assumed impact of the change in the accounting treatment of jointly-sponsored pension plans is included, the projected deficits become more significant, suggesting the need for additional fiscal measures to achieve the government's goal of a balanced budget. Thank you, the commissioner and I are happy to take questions.	
Media Questions:	
Q. Jones: How difficult is it going to be to lower the net-debt-to-GDP ratio by 14 percentage points?	West: I don't know how to respond to how difficult (inaudible) be. It's certainly going to be a challenge. I mean, for the next five years we see the debt-to-GDP ratio basically plateauing at 41 per cent, and the government hasn't released plans to how it would anticipate to lower that ratio.
Q. Jeffords: It sounds like the accounting squabble that took place earlier with the AG has had a domino effect and is now rolling out and impacting net debt as well (inaudible) probably predictable outcomes. Could you talk about the – just how pronounced that impact is here?	West: So in our spring report, we forecast (inaudible) the net debt to rise to $350 billion by 2020-21. In this current projection, we have net debt rising to $370 billion. As I said, approximately $20 billion higher than what we anticipated in the spring. Deficits are just slightly larger now in this projection. (Inaudible) $18 billion of that $20-billion increase is largely attributable to the accounting change. It's worth noting that the accounting change is not cash, right. This is a non-cash adjustment to the government's books.

Q. Lamoureux: Can you explain as to what the government will have to do if they want to stick to their plan to balance the budget by next year?	West: Well as we point out in the report, it seems likely that the government would have to either raise revenues or lower expense. It's the – the FAO's mandate is to provide an account – you know, a reasonable, independent projections for the economy and the fiscal position of the government. It's not within our mandate to provide policy recommendations or advice on the specific measures that they may choose.
Q. Jones: I couldn't help but notice that in the report, you cite media reports, Queen's Park Briefing specifically, for the – what the government says it will cost – the Throne Speech commitments, the hydro rebate and the child care spaces. Is the office still having trouble getting information from the government, or is there just no information to be had on those spending promises?	West: That's a fair question. So maybe you'll answer the second part of the question. So we based – we did run our report, draft version of our report, by government officials and they agreed – and we lay out our assumptions for the roll-out of those two spending commitments. The government didn't comment on it. I think, you know, they don't have a projection for the roll-out of these (inaudible) one that they weren't going to share with us. I don't see it as a material – they – I don't think it would make a material impact on our projections though the actual timing of the introduction of these programs – and as I said, the government did see what we're preparing to release and we're comfortable with that. Wake: Just as a follow-up to that, I (inaudible) indicate that maybe past frustrations expressed in the annual report, to which I think you're alluding, may have been addressed by the issuance of the order in council early last month. And I can tell that subsequent to that, we've met with the Secretary of Cabinet and the ministry officials so that at this point we're satisfied that things are in place so that this information can be obtained if it's needed. We'll see, but I think the structure's now in place for the FAO to get all of the material it needs.
Q. Zochodne: Is the FAO going to try and flesh out some more details about the rebate and the child care spaces going forward?	West: So we would be looking forward to the government's own fiscal statement coming in – expected in coming weeks, and would review our assumption (inaudible) in light of that. If necessary, we could make additional requests at that time for additional information if we thought it was necessary.
Q. Zochodne: How big of a swing is that on the government's books that those – the spending promises?	West: $1.8 billion and some. And as I said, you know, the – we looked at a number of developments. That was one of the several developments, and when you include the better-than-expected results from the Public Accounts, savings on interest-on-debt expense, (inaudible) weaker economic growth, which leads to lower tax revenues, all told, all in, there's a moderate deterioration in the deficit. Throw in the accounting change, and it's a more significant deterioration.
Questions for MPP Fedeli:	
Well we've always known there was a trust deficit with this government and now that we have had it proved there's also a financial deficit. We've heard from the FAO that Ontario will plunge into deficit and stay there for at least the very next five years. And that is contrary to what the government says. The FAO also told us today the only way the government can artificially balance the budget for the election year is	

to continue to sell assets. So these are the one-time sale of assets and he has also said when the assets sales run out that's why our deficits will continue on a downward spiral for the next fears.	
Q. Jones: Which scenario do you think we'll see? Do you think we'll see continued deficits or do you think we'll see them raise taxes to cancel those debts?	I think we're going to see both. We're going to see continued deficits, the FAO is fairly clear about that and I think you're going to continue to see raised taxes. They raised taxes 20% in the past five years which oddly makes us the most taxed province in all of Canada and the same time the most indebted subnational on the planet. That just defies logic that you be both.
Q. Jones: They really seem to have gone all in on this promise to balance the budget in 2017-18. You don't think that they'll do anything at all cost to get there?	They will and that's why they'll artificially balance the budget. They will sell the OPG headquarters across the street, they'll continue to sell Hydro One, they'll continue to sell lands such as the LCBO headquarters they will sell anything that isn't nailed down and that's the only way, according to the FAO that they are going to balance, artificially, is by the one-time sale of assets. And of course he also said what happens when you run out of assets to sell? That's why we have the next five years of deficits. We have a structural deficit in the province of Ontario.
Q. Lamoureux: So what will you do if you form the government in 2018? (inaudible) the situation?	The first thing you would do is cut waste, mismanagement and scandal. That's really when you look at some of the things that have happened in the last month we learned we many billions were wasted on the last one. $308 million were wasted on the failed attempt to modernize the OLG. It was $300 million was spent in five different hydro scandals, including the $179 million in the Windstream case, you've got $25 million in another case, $12 million in another case, $300 million alone wasted in two-weeks this month in hydro. So it's waste mismanagement and scandals that have caused this government to continue their deficits.
Q. Zochodne: (inaudible) situation with whoever forms government in 2018 is going to inherit some much worse than expected (inaudible)	It's interesting you bring that up because in advance, the law states that six months in advance of the next election the Auditor-General must bring out a report that verifies the government's numbers. Well the government is moving the election to the 7th of June 2018 which would prohibit the Auditor-General from performing that duty. So we are going to into next election on June 7th 2018 without having any audited numbers. That may or may not be one of the reasons the government is moving to that date.
Q. Zochodne: How will that stop (inaudible)	Because it's six months in advance would be December of 2017 and the year isn't over then they would be working with a year old set of numbers and the Auditor has confirmed that to us, that she cannot perform an audit by six months in advance, the 7th of June so we're going to go into the next election absolutely not knowing any audit numbers whatsoever.
Q. Zochodne: Does it give you a good idea based on (inaudible) Fall Economic Statement?	No she has explained that her role would be to use the numbers that are provided at year end only and this would prohibit that so we're going to go into the next election, only

	with the government's word that they've balanced and of course we now know they have a trust deficit in Ontario.
Q. Zochodne: She would have to compare an outlook for you based off of the 2017 year end financials?	Which we're going to get from her anyway about a year in advance.
Q. Jeffords: What's the solution to that then? What can be done?	That's something that the Auditor General has to look into and try to decide how on Earth that can be corrected. Here we're going into an election with a government that is telling us one thing, the Financial Accountability Officer of Ontario is telling us something 180 degrees completely different than the government is telling. You have to decide which one to trust and I think there's a trust deficit in Ontario, in addition to fiscal (inaudible)
Q. Rath: How can they be so different?	Well they can be different because the government is counting on the one-time sale of assets. They're literally burning the furniture to heat the house. Selling off Hydro One and instead of putting that in reserves as you would do with one-time sale they're using that as general revenue, well that revenue does not repeat year after year. Selling OPG headquarters across the street is a desperate move to bring revenue in for one year to artificially balance. They promised us so much yet they cannot contain themselves. Spending has continued to grow faster than the revenue and that's the problem. They just can't help themselves.
Questions for MPP Fife:	
(joined in progress) desperately trying to rebrand themselves. The gamble they took is to sell off Hydro One. That has proven to not work. And also you've seen other public assets that are on the chopping block, like Ontario Place. This is very much a real possibility here at Queen's Park. So this government is scrambling on almost every file around controlling spending in some areas, and controlling waste. And clearly they are failing. And thankfully we have the Financial Accountability Office to actually prove that to the people of this province.	
Q. Tumelty: The officer also said that the long-term—we're going to be struggling with our debt.	Yes. I mean, and the accounting treatment is actually part of that. And that's why when the Auditor General stood her ground against this government, that's the important piece of that independent officer, to actually tell the truth of what's happening here at Queen's Park. Quite honestly, we are—any party going forward is going to have to deal with some very difficult decisions. The selling off of Hydro One, though, needs to stop. It has proven to not be successful. It is a quick cash grab, which they've proven today will not serve the people of the province in the long-term.
Q. Unidentified: (inaudible) FAO saying (inaudible)	Absolutely.
Q. Jeffords: So, how would you explain to Ontarians why that is the case?	Well, I mean, we have Auditor General reports (inaudible) ten years which shows the waste and mismanagement. The increased privatization on almost every portfolio. The Financial Accountability Officer has obviously looked at a

	downgrade in the deficit reduction, because of lost revenue and because of increased promises around spending. We know going forward that if this government is going to try to reach their targets, they're going to have to start cutting. And it's our job to try to mitigate some of that damage.
Q. Jones: You think they may cut or (inaudible)	This government, I mean, this government has—who knows what this government's going to do. I really do feel, as the finance critic for the NDP, that they are making it up as they go along. And we have the Auditor General and the Financial Accountability Officer to expose what is happening in the province, but as we've said, time and again, the one-time cash grab with the sell-off of Hydro One has proven to be a failure. Kathleen Wynne gambled on that, and now she really is committed to selling off everything, including Ontario Place.
Q. Lamoureux: What do you make of the fact the Minister still said, no, we're in control, even after this report, and he's saying we will balance the books next year?	I know. In the briefing this morning it was interesting. The government did not show up for the briefing and I asked that very question. There is a disconnect between the spin that is coming right from the Premier's Office, and thankfully we actually have this report to counter that. This is a government that is not actually willing to do the hard work of looking at the waste that's actually here at Queen's Park. And we know going forward that if they are going to try to meet that target, they are going to cut public services and they are going to continue to sell off the assets that belong to the people of this province.
Q. Zochodne: Did you manage to eavesdrop at all on what Vic was saying about the—you're not going to get a financial statement going into the next election?	You know, I—that's speculation on his part. The Auditor General [end of recording]

Hi Bonnie,

Please see attached for some detail on our projection. The first part of the table shows the FAO's projection for net debt, TCA and accumulated deficit on an AG basis. As you can see, the identity holds pretty well for each year. There's a small, under $1 billion variance, and I think it's due to a small adjustment in public accounts, which I commented in the Excel sheet.

The second table breaks down the net debt variance between the projection in the FES and our projection on an AG basis. As discussed, the difference is due to the pension asset for the jointly sponsored pension plans, the FHP, the differences in the deficit projections and the reserve. The last table will probably be interesting for you. It shows that, on the government accounting basis, we're only $3.6 billion higher than the 2017 FES projection – and this is entirely due to differences in the underlying deficit (abstracting from any accounting differences).

As discussed, for the purposes of the AG presentation, which we adopted based on the recommendation in her recent FHP report, we're assuming that:

- The elimination of the IESO market asset would reduce the net income of OPG;
- This would then reduce the Province's total revenue and increase the deficit by an equivalent amount; and that
- Ontario's net debt would increase by the stock of that market asset (since the elimination of the market asset would reduce OPG's equity, which the Province records as a financial asset)

However, there would be no impact to borrowing and gross debt relative to the government's FES presentation because the government already incorporates the provincial portion of FHP borrowing in its fiscal plan.

Anyway, have a look and we'll be happy to meet on Monday to discuss further.

Luan Ngo

Hi Selena

That's a good point, however, in the Debt chapter we have intentionally tried to refrain from any mention of the medium term as it relates to the net debt to GDP. There is a reason for our reticence, if the independent review of the pension adjustment supports the Government's position, there is a strong possibility that the accumulated deficit and the net debt will reduce by at least $10.7 billion with an equally material reduction in the ratio.

However, if you strongly feel that a reference to the medium term is required pls consider the following – I have slightly edited John's version plus added a reference to the medium term.

"The net debt to GDP ratio is projected to increase slightly in 2016-17, primarily as a result of a nominal GDP that is forecast to be marginally lower than what was forecast in the 2016 Budget. Over the medium term the ratio is projected to decline progressively".

Thanks

Ken k

Hi Ken, John, - understand Ken, you couldn't make it to sign-off today and John you came – thank you.

Im signing off on 3b now as the director responsible for the chapter and noticed that John, you inserted language regarding what's happening to net debt to GDP for 2016-17 in the fiscal outlook section. However, because this insertion just refers to 2016-17 it is seems out of context from the remainder of the section and wondering if you could propose a revision that speaks to the trend of declining after balance or what's happening over the medium term.

Here's the insertion per John pen edits:

The net debt to GDP ratio is projected to increase slightly in 2016-17 primarily as a result of marginally lower than forecast nominal GDP when compared to the 2016 Budget forecast.

Let me know. Thanks.

Ontario 2016/17 Public Accounts Beats Budget Projections

September 7, 2017

Credit Implications: Moderately Positive

Credit Ratings: DBRS AA (low), Moody's Aa2, S&P A+, Fitch AA-, All Outlooks Stable

Today Ontario released its 2016/17 Public Accounts showing a deficit of -$991mln, an improvement of $3.3bln when compared to the 2016 Budget and $0.5bln relative to the 2017 Budget.

The year-end results received a qualified opinion from the Auditor General reflecting a difference in opinion regarding the interpretation of accounting for pensions under Canadian Public Sector Accounting Standards. A reconciliation of the statements show that the deficit would have been -$2.435bln if the Province would have applied the Auditor General's interpretation of the standards. As well, Net Debt would have been $12.4bln higher. The Province's professional staff have a different interpretation and, earlier this year, engaged an expert panel of accountants to review the matter. In the end, the panel sided with the Province. For more information on the pension issue, please see our research note "Expert advisory panel agrees with Ontario in pension accounting issue" Click Here[cibcmacro.com]

In addition to the change in accounting for net pension assets of jointly sponsored pension plans, there were other "Accounting Changes to Ontario's Financial Statements" which bring reporting more in line with "PSAB standards and the reporting practices of other senior Canadian governments." For more information on this, please Click Here[news.ontario.ca].

Source: Ontario 2016/17 Public Accounts

Although Ontario's improved results reflect in part a change in basis of accounting for pensions, we view these results as constructive towards the end goal of returning to balance in Fiscal 2017/18. The expected return to balance puts the Province on track to eventually getting a positive review from Standard & Poor's who downgraded it in 2015. However, we believe an outlook change to positive is more likely to occur after the election on June 7, 2018. The rating agency will be looking for more comfort that the elected government will remain steadfast in its goal of reducing debt to pre-recession levels.

In the 2017 Budget, the Province set an interim target to reduce debt to 35% by 2023-24. Its long-term target is to reduce this figure to the pre-recession level of 27%, which is currently shown being met by 2029-30.

S&P Ratings Scorecard: Province of Ontario	
Date	Jun-15-2017
Rating	A+
Outlook	Stable
Institutional Framework	Very predictable and well-balanced
Economy	Very strong
Financial Management	Strong
Budgetary Flexibility	Average
Budgetary Performance	Weak
Liquidity	Adequate
Debt Burden	Very high
Contingent Liabilities	Low

Source: S&P

While Ontario appears on track to returning to balance, it has a formidable capital program that will require debt funding. As presented in the 2017 Budget, Ontario's capital program is projected to total $190bln over a 13-year period that started in 2014/15.

Funding for the program will factor in the implications of both the Federal and Provincial climate change plans, Federal funding and infrastructure needs. The latter will need to take into account renewal, replacement and growth. The particulars of all these aforementioned factors continue to evolve.

Earlier this year, the Federal government announced that it will fund 43% of the Province's $4.4bln upgrades to the GO Transit Regional Express Rail. The Province had previously committed to funding 100%.

The Hydro One privatization strategy, which is largely concluded, has been a means to fund part of Ontario's capital program. For more information on the Hydro One privatization, please see our note "Ontario Sells Final Stake in Hydro One" Click Here[cibcmacro.com]

Overall, we consider today's announcement to be moderately positive. The results reflected a combination of stronger revenues from better than projected economic growth and effective cost management.

2016/17 Public Account Highlights:

- Economic growth, with a 2.7 per cent increase in real gross domestic product (GDP), up from 2.2 per cent projected in the 2016 Budget
- Total revenue of $140.7bln, up $2.2bln from the 2016 Budget projection
- Total spending of $141.7bln, down $0.1bln from the 2016 Budget projection
- Interest on debt of $11.7bln, down $0.7bln from the 2016 Budget projection

Ontario 2016/17 Public Accounts Beats Budget Projections

September 07, 2017

Credit Implications: Moderately Positive

Credit Ratings: DBRS AA (low), Moody's Aa2, S&P A+, Fitch AA-, All Outlooks Stable

Today Ontario released its 2016/17 Public Accounts showing a deficit of -$991mln, an improvement of $3.3bln when compared to the 2016 Budget and $0.5bln relative to the 2017 Budget.

The year-end results received a qualified opinion from the Auditor General reflecting a difference in opinion regarding the interpretation of accounting for pensions under Canadian Public Sector Accounting Standards. A reconciliation of the statements show that the deficit would have been -$2.435bln if the Province would have applied the Auditor General's interpretation of the standards. As well, Net Debt would have been $12.4bln higher. The Province's professional staff have a different interpretation and, earlier this year, engaged an expert panel of accountants to review the matter. In the end, the panel sided with the Province. For more information on the pension issue, please see our research note "Expert advisory panel agrees with Ontario in pension accounting issue" Click Here

In addition to the change in accounting for net pension assets of jointly sponsored pension plans, there were other "Accounting Changes to Ontario's Financial Statements" which bring reporting more in line with "PSAB standards and the reporting practices of other senior Canadian governments." For more information on this, please Click Here.

$million	2017	2016
Annual deficit as presented	(991)	(3,515)
Effect of valuation allowance on:	(1,364)	(1,480)
Education expense	(80)	(351)
General Government and other expense	-	-
Annual deficit in accordance with Canadian public sector accounting standards	**(2,435)**	**(5,346)**
Net debt as presented	(301,648)	(295,372)
Effect of valuation allowance	(12,429)	(10,985)
Net debt in accordance with Canadian public sector accounting standards	**(314,077)**	**(306,357)**

Source: Ontario 2016/17 Public Accounts

Although Ontario's improved results reflect in part a change in basis of accounting for pensions, we view these results as constructive towards the end goal of returning to balance in Fiscal 2017/18. The expected return to balance puts the Province on track to eventually getting a positive review from Standard & Poor's who downgraded it in 2015. However, we believe an outlook change to positive is more likely to occur after the election on June 7, 2018. The rating agency will be looking for more comfort that the elected government will remain steadfast in its goal of reducing debt to pre-recession levels.

In the 2017 Budget, the Province set an interim target to reduce debt to 35% by 2023-24. Its long-term target is to reduce this figure to the pre-recession level of 27%, which is currently shown being met by 2029-30.

S&P Ratings Scorecard: Province of Ontario	
Date	Jun-15-2017
Rating	A+
Outlook	Stable
Institutional Framework	Very predictable and well-balanced
Economy	Very strong
Financial Management	Strong
Budgetary Flexibility	Average
Budgetary Performance	Weak
Liquidity	Adequate
Debt Burden	Very high
Contingent Liabilities	Low

Source: S&P

While Ontario appears on track to returning to balance, it has a formidable capital program that will require debt funding. As presented in the 2017 Budget, Ontario's capital program is projected to total $190bln over a 13-year period that started in 2014/15.

Funding for the program will factor in the implications of both the Federal and Provincial climate change plans, Federal funding and infrastructure needs. The latter will need to take into account renewal, replacement and growth. The particulars of all these aforementioned factors continue to evolve.

Earlier this year, the Federal government announced that it will fund 43% of the Province's $4.4bln upgrades to the GO Transit Regional Express Rail. The Province had previously committed to funding 100%.

The Hydro One privatization strategy, which is largely concluded, has been a means to fund part of Ontario's capital program. For more information on the Hydro One privatization, please see our note "Ontario Sells Final Stake in Hydro One" Click Here

Overall, we consider today's announcement to be moderately positive. The results reflected a combination of stronger revenues from better than projected economic growth and effective cost management.

2016/17 Public Account Highlights:

- Economic growth, with a 2.7 per cent increase in real gross domestic product (GDP), up from 2.2 per cent projected in the 2016 Budget
- Total revenue of $140.7bln, up $2.2bln from the 2016 Budget projection
- Total spending of $141.7bln, down $0.1bln from the 2016 Budget projection
- Interest on debt of $11.7bln, down $0.7bln from the 2016 Budget projection

Subject: Re: Ontario High Debt and Province's Financial Statements - press releases

Hi Sarah,

Thank you for this.

I have one question. I noticed in the Moody's release a reference to the weighted average of the Province's debt being 15 years. Looking at the maturity schedule provided in the Quarterly Program Status, etc. report provided to us at the ARMC, it appears that the average maturity would be less than that. I did a very cursory calculation eyeballing the numbers and arrived at a lower number (closer to 13 years). I'm clearly missing something or maybe my eyesight is faulty. Could you please clarify?

Thanks,

Mario

News Release

Last Year's Ontario Deficit $3.5 Billion Lower Than Projected[news.ontario.ca]

October 3, 2016

Province Remains Committed to Balance the Budget Next Year in 2017-18

Ontario's Annual Report and unaudited Consolidated Financial Statements for 2015-16 show Ontario's deficit is $3.5 billion lower that the $8.5 billion projected in the 2015

Budget, with the province's deficit for 2015-16 at $5 billion. This is $0.7 billion lower than the $5.7 billion in the 2016 Budget interim projection.
This marks the seventh year in a row that Ontario has beaten its deficit target. Ontario remains committed to balancing the budget in 2017-18, and remain balanced in 2018-19.

In preparing the Annual Report and unaudited Consolidated Financial Statements, the Province's professional accounting staff and the Auditor General have engaged in discussions regarding the treatment of pension assets. Pension accounting requires the application of professional judgment. Despite best efforts to resolve concerns, the Province's professional accounting staff and the Auditor General continue to have differences of opinion about the appropriate application of public sector accounting standards as they relate to pension accounting. This ongoing discussion has delayed the tabling of the Province's financial statements.

A regulation was made to allow the public service to sign-off on the impact of the Auditor General's view on accounting for pension assets in Ontario's 2015-16 financial statements. The Province has filed a time-limited regulation, which legislates the accounting for pension assets of two jointly-sponsored pension plans for 2015-16 in a manner that is consistent with the fiscal outcome proposed by the Auditor General.

To ensure openness and transparency, the government is releasing its unaudited financial statements to provide the public with the Province's financial position.

The unaudited statements show the government is beating its deficit targets through sound financial management. The Government of Ontario currently has the lowest program spending per capita among Canadian provinces and ranks the lowest among provinces in terms of public-sector employees per capita. At the same time, Ontario's economy continues to grow. Over the last two years, Ontario's economy has grown by 6.1 per cent[news.ontario.ca]. Last year, growth was double the national average[news.ontario.ca]. In the first quarter of this year, Ontario's growth was greater than that of the United States and the G7[fin.gov.on.ca finances/2016/ofin16_1.html].

The Public Sector Accounting Board has set up a task force to review the current accounting standards for retirement benefits. The Province will ensure that the task force is made aware of this area of difference in interpretation. In addition Ontario willalso be engaging an expert panel to support a full understanding of the basis and nature of the differences. The Province will consult individuals with a range of backgrounds and experience, including preparers, joint sponsors and auditors of public sector financial reports.

Responsible financial management is part of the government's economic plan to build Ontario up and deliver on its number-one priority to grow the economy and create jobs.

The four-part plan includes helping more people get and create the jobs of the future by expanding access to high-quality college and university education. The plan is making the largest infrastructure investment in hospitals, schools, roads, bridges and transit in Ontario's history and is investing in a low-carbon economy driven by innovative, high-growth, export-oriented businesses. The plan is also helping working Ontarians achieve a more secure retirement.

QUICK FACTS

- The 2015-16 unaudited Financial Statements compare Ontario's actual performance to what was planned in the 2015 Budget.
- Ontario is a recognized leader in financial reporting. The C.D. Howe Institute, an independent research organization that assesses the fiscal planning and reporting of governments in Canada, has commented positively on the financial reporting practices of Ontario, including Public Accounts, the annual Budget and Estimates.
- The unaudited Financial Statements are prepared by the Government of Ontario in accordance with legislation and the accounting principles for governments recommended by the Public Sector Accounting Board (PSAB) of the Chartered Professional Accountants of Canada (CPA Canada).

QUOTES

"The Annual Report and unaudited Consolidated Financial Statements for 2015-16 show that our government's plan to achieve fiscal balance next year in 2017-18 is working. We will continue to build on our track record of responsible fiscal management, while investing in vital government services such as health care, education and infrastructure that are important to the people of Ontario."

— *Liz Sandals, President of the Treasury Board*

"Our government is dedicated to a fiscally sound approach to managing the Province's finances. The Ontario economy continues to grow in a challenging global environment. In fact, Ontario posted higher real GDP growth in the first quarter of 2016 than Canada, the United States, and all other G7 countries. The government's path to a balanced budget next year is being achieved through responsible fiscal management, which involves managing growth in program spending, and maintaining the integrity of Provincial revenues."

— *Charles Sousa, Minister of Finance*

Hi Sarah,

The average term of debt issued in 2015-16 was approximately 14.0 years, whereas year-to-date for 2016-17 is 15.3 years. So, I would suspect it is the current year.

However, I have copied Bonnie on my reply as she may be able to provide more insight on the Moody's figures.

Bonnie, any feedback would be appreciated.

Thanks,
David

Subject: RE: Ontario High Debt and Province's Financial Statements - press releases

Thanks David – this is helpful. Anticipating a follow up question, is the year being referenced by Moody's the most recent fiscal year, 2015-16?

Sarah

Hi Christina,

I think the figures referred to in the Moody's report are for the average term of debt issued in a particular year as opposed to the average term of total outstanding debt. Hope this helps.

Subject: Re: Ontario High Debt and Province's Financial Statements - press releases

Hi Sarah,

Thank you for this.

I have one question. I noticed in the Moody's release a reference to the weighted average of the Province's debt being 15 years. Looking at the maturity schedule provided in the Quarterly Program Status, etc. report provided to us at the ARMC, it appears that the average maturity would be less than that. I did a very cursory calculation eyeballing the numbers and arrived at a lower number (closer to 13 years). I'm clearly missing something or maybe my eyesight is faulty. Could you please clarify?

Thanks,

Mario

Dear Board Members – Gadi has requested that I forward to you two press releases issued today. They are a Moody's release on Ontario's debt burden (attached) and a Provincial release about the financial statements (below). I am advised that Bonnie has spoken to the rating agencies and they haven't expressed any concerns.

Please let me know if you have any questions.

Thanks very much, and best regards,

Sarah

Subject: Last Year's Ontario Deficit $3.5 Billion Lower Than Projected

Ontario Newsroom

News Release

Last Year's Ontario Deficit $3.5 Billion Lower Than Projected[news.ontario.ca]

October 3, 2016

Province Remains Committed to Balance the Budget Next Year in 2017-18

Ontario's Annual Report and unaudited Consolidated Financial Statements for 2015-16 show Ontario's deficit is $3.5 billion lower that the $8.5 billion projected in the 2015 Budget, with the province's deficit for 2015-16 at $5 billion. This is $0.7 billion lower than the $5.7 billion in the 2016 Budget interim projection.
This marks the seventh year in a row that Ontario has beaten its deficit target. Ontario remains committed to balancing the budget in 2017-18, and remain balanced in 2018-19.

In preparing the Annual Report and unaudited Consolidated Financial Statements, the Province's professional accounting staff and the Auditor General have engaged in discussions regarding the treatment of pension assets. Pension accounting requires the application of professional judgment. Despite best efforts to resolve concerns, the Province's professional accounting staff and the Auditor General continue to have differences of opinion about the appropriate application of public sector accounting standards as they relate to pension accounting. This ongoing discussion has delayed the tabling of the Province's financial statements.

A regulation was made to allow the public service to sign-off on the impact of the Auditor General's view on accounting for pension assets in Ontario's 2015-16 financial statements. The Province has filed a time-limited regulation, which legislates the accounting for pension assets of two jointly-sponsored pension plans for 2015-16 in a manner that is consistent with the fiscal outcome proposed by the Auditor General.

To ensure openness and transparency, the government is releasing its unaudited financial statements to provide the public with the Province's financial position.

The unaudited statements show the government is beating its deficit targets through

sound financial management. The Government of Ontario currently has the lowest program spending per capita among Canadian provinces and ranks the lowest among provinces in terms of public-sector employees per capita. At the same time, Ontario's economy continues to grow. Over the last two years, Ontario's economy has grown by 6.1 per cent[news.ontario.ca]. Last year, growth was double the national average[news.ontario.ca]. In the first quarter of this year, Ontario's growth was greater than that of the United States and the G7[fin.gov.on.ca finances/2016/ofin16_1.html].

The Public Sector Accounting Board has set up a task force to review the current accounting standards for retirement benefits. The Province will ensure that the task force is made aware of this area of difference in interpretation. In addition Ontario willalso be engaging an expert panel to support a full understanding of the basis and nature of the differences. The Province will consult individuals with a range of backgrounds and experience, including preparers, joint sponsors and auditors of public sector financial reports.

Responsible financial management is part of the government's economic plan to build Ontario up and deliver on its number-one priority to grow the economy and create jobs. The four-part plan includes helping more people get and create the jobs of the future by expanding access to high-quality college and university education. The plan is making the largest infrastructure investment in hospitals, schools, roads, bridges and transit in Ontario's history and is investing in a low-carbon economy driven by innovative, high-growth, export-oriented businesses. The plan is also helping working Ontarians achieve a more secure retirement.

QUICK FACTS

- The 2015-16 unaudited Financial Statements compare Ontario’s actual performance to what was planned in the 2015 Budget.
- Ontario is a recognized leader in financial reporting. The C.D. Howe Institute, an independent research organization that assesses the fiscal planning and reporting of governments in Canada, has commented positively on the financial reporting practices of Ontario, including Public Accounts, the annual Budget and Estimates.
- The unaudited Financial Statements are prepared by the Government of Ontario in accordance with legislation and the accounting principles for governments recommended by the Public Sector Accounting Board (PSAB) of the Chartered Professional Accountants of Canada (CPA Canada).

QUOTES

"The Annual Report and unaudited Consolidated Financial Statements for 2015-16 show that our government's plan to achieve fiscal balance next year in 2017-18 is working. We will continue to build on our track record of responsible fiscal management, while investing in vital government services such as health care, education and infrastructure that are important to the people of Ontario."
— *Liz Sandals, President of the Treasury Board*

"Our government is dedicated to a fiscally sound approach to managing the Province's finances. The Ontario economy continues to grow in a challenging global environment. In fact, Ontario posted higher real GDP growth in the first quarter of 2016 than Canada, the United States, and all other G7 countries. The government's path to a balanced budget next year is being achieved through responsible fiscal management, which involves managing growth in program spending, and maintaining the integrity of Provincial revenues."
— *Charles Sousa, Minister of Finance*

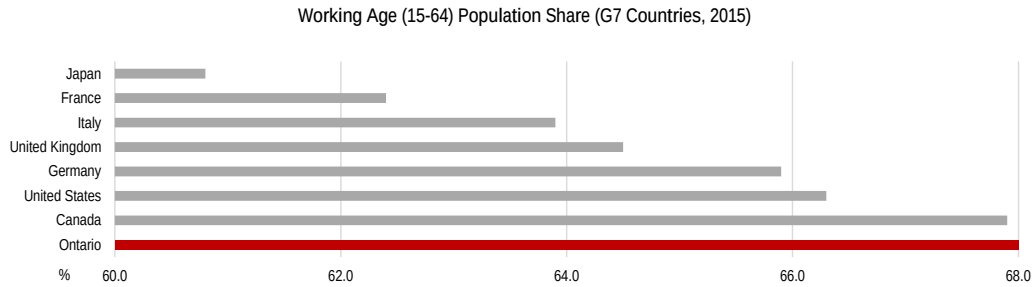
Hi Cindy,

CIBC is planning on releasing a document on Ontario (see attached). There are some comments on Ontario's course of action given the Auditor General of Ontario's qualified opinion on Pension Accounting that we would like you to review. They would like to send the report out tomorrow so I would appreciate if you could get comments back to me by noon tomorrow if possible.



Thanks,

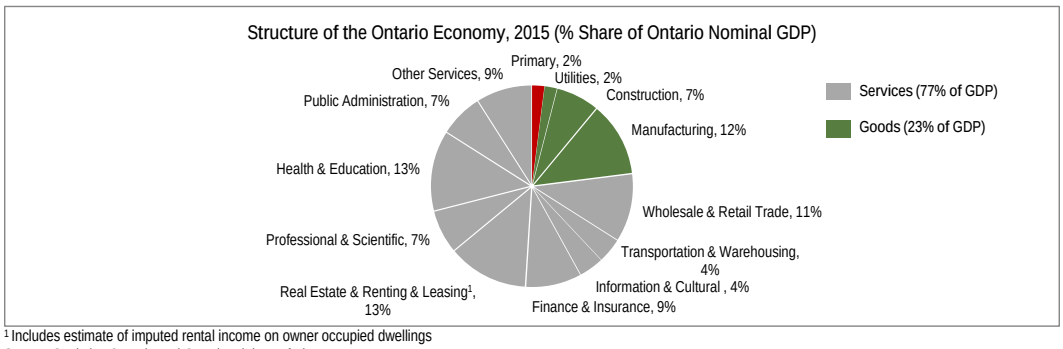
Ontario Talking Points (January 4, 2017)

Insights from our meeting last month with officials from the province.

- How is Ontario positioned with respect to the quality and rising cost of healthcare?
  - Ontario is building and/or upgrading 44 hospitals with state-of-the-art facilities.
  - As the population grows and ages, healthcare costs will rise, but the healthcare cost curve is flattening, which is consistent with the experience in advanced economies.
  - Ontario has been successful at containing health care expense growth at less than 5% annually over the past 6 years. In the last three years, the annual average increase was only 2.1%. In Fiscal 2015-16, health care expense growth was only 1.1% versus overall program spending growth of 4.2%. [Ontario 2015-16 Annual Report Click Here]
  - The aging population adds about 1% to annual expense growth.
  - Experience has shown that healthcare costs for individuals is the highest in the first two years and last two years of life.
  - While the population is aging and people are living longer, they are "healthier and wealthier". Moreover, since the 2006 amendment to the Ontario Human Rights Code which effectively eliminated the 65 mandatory retirement age, people are working and contributing longer to the economy. In 2006, the Ontario participation rate (55+) was **33.3%. In 2015, it was almost 38%.**
  - Ontario has the largest working-age (15-64) population share compared to the G7 countries and has enjoyed strong employment gains in above-average wage industries since the Global Recession.

Source: Statistics Canada and The World Bank

- What agreement does the province expect with the Federal government under the federal/provincial Health Accord?
  - We don't expect to get back to when the federal government paid for around 50% of provincial health spending. The federal share of health funding is currently between 20-25%.
  - The minimum escalator is set to drop to 3% in 2017 from 6% previously, and this is not acceptable.
  - Background Note: At the December "health talk" meetings between the Federal Government, provinces, and territories, the collective ask of the federal government was for a 5.2% annual escalator. The federal government raised its offer from 3% to 3.5% plus $11bln over 10 years for home care and mental health as well as another $544mln over 5 years for initiatives on prescription drugs and health innovation. An agreement was not reached. A few days following the meetings, the Province of New Brunswick announced that it had reached a separate bilateral agreement securing an additional $230mln more for health care which it assesses is equivalent to an effective 4.1% annual escalator. The provinces of Nova Scotia and Newfoundland and Labrador reached similar agreements.



- How will Federal infrastructure funding affect borrowing and capital plans?
  - It is not clear at this stage how the federal infrastructure spending program will work into the $137bln 10-year capital plan, but it will be factored into the spring budget along with implications of both federal and provincial climate change plans.

- Will Ontario consider using its fiscal capacity to raise taxes/fees to ensure meeting its balanced budget target in Fiscal 2017-18?
  - Ontario is committed to returning to balance next year and is pursuing several options laid-out in the recommendations of the "Commission on the Reform of Ontario's Public Services, Public Services for Ontarians: A Path to Sustainability and Excellence" by Chair Don Drummond, an economist (The Drummond Report is a deficit-reduction report released in February 2012 to advise the Ontario government on how to reduce its debt levels). Click Here
  - Budget 2016 has identified a $500mln Program Review Savings Target for Fiscal 2016-17 that entails Review, Renewal and Transformation. Click Here
  - The 2016 savings target follows the $250mln target that was set and achieved in Fiscal 2015-16.
  - Fiscal capacity is not seen as the best option at this time due to the importance of remaining competitive with the United States and other countries in the competitive global landscape. The United States is articulating plans to reduce both corporate and income taxes. The United States is also potentially changing its stance on environmental issues. These factors must be taken into consideration for Ontario to remain competitive.
  - External factors are supportive of Ontario's growth. These include a recovering US economy, still low energy prices and accommodative financial conditions, and a weak Canadian currency.

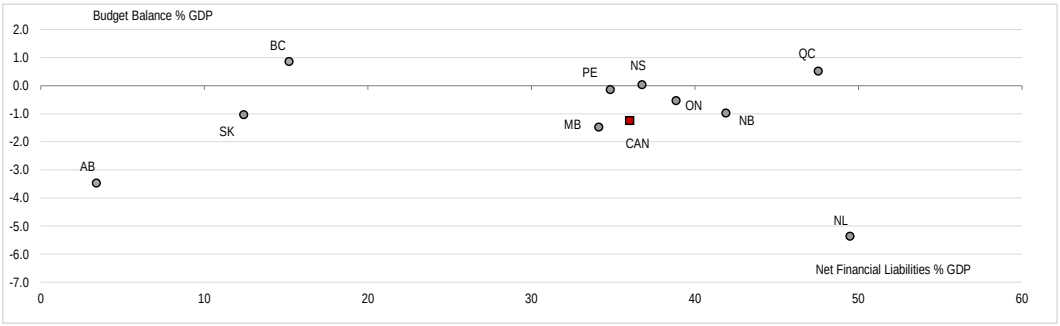
- Could you clarify Ontario's course of action given the Auditor General of Ontario's qualified opinion on Pension Accounting?
  - Although the pension expense is a non-cash charge, it is still very important to achieving the balanced budget target in Fiscal 2017-18.
  - The Province has engaged an expert panel of accountants to assess the issue.
  - The core matter is whether the pension plan is in a positive funding position given the assumptions used, which we believe to be the case.
  - Effectively, two fundamental questions need to be answered in the affirmative: "Is there an asset and does the province own it?" The answers will depend on a number of factors related to both the underlying assumptions and the contractual arrangements.
  - The calculation is sensitive to the discount rate used which is currently at 6.25%.
  - Background – Ontario Public Accounts 2015-16: In Ontario's fall fiscal and economic update, the government adopted the Auditor General's accounting interpretation for the treatment of net pension assets for 2015–16 through a time-limited regulatory amendment (the "Pension Adjustment"). The impact of the change resulted in an additional $10.7bln being added to the net debt and accumulated deficit and an increase of $1.5bln to the annual deficit for 2015–16. Consistent with the accounting treatment adopted in the Public Accounts of Ontario 2015–2016, the medium-term fiscal outlook provided reflects a cautious approach to forecasting the projected annual Pension Adjustment. This cautious approach results in an estimated potential impact of $2.2bln in 2016–17, $2.8bln in 2017–18, and $3.7bln in 2018–19 to the annual Pension Adjustment.

- What is the future of Ontario's automotive sector?
  - Ontario's auto industry is very important, but just one component of Ontario's diversified economy.

- Overall, the auto industry represents only **2.5%** of GDP, but it is the largest manufacturing sector accounting for **almost 20%** of total manufacturing.
- Ontario is the largest single auto jurisdiction in North America, ranking ahead of Michigan.
- Ontario cannot compete with low-wage assembly jobs, but needs to remain competitive on the basis of technological leadership.

[1] Includes estimate of imputed rental income on owner occupied dwellings
Source: Statistics Canada and Ontario Ministry of Finance

- What trends do you see with respect to immigration?
  - Ontario attracts about 40% of new immigrants to Canada based on long-term averages. This level is above the provincial average.
  - The percentage of new immigrants fluctuates from quarter-to-quarter and has been as low as 30%.
  - Ontario anticipates that its share of immigration will increase to 45-50% in the coming years.
  - Inter-provincial migration has been historically very low, near 0%.



- What is Ontario's housing market outlook?
  - The range of forecasts is quite wide. We expect some moderation, but this will be mitigated by continuing population growth and financial conditions that are still financial stimulative, although borrowing rates and mortgage underwriting conditions have moved tighter.

- Why is the province's debt risk-weighted 20% instead of 0% in some international jurisdictions?
  - Each country has its own financial institutions regulator.
  - We continue to dedicate time and resources to educate international regulators about the creditworthiness of the province and have been successful in many jurisdictions to have the risk-weighting reduced to 0%. This work is ongoing work.
  - In at least 15 countries, including where our major international borrowers are located such as the United States, United Kingdom, and Germany, the risk-weighting is 0%.

- What is the expectation for changes in Equalization payments from the Federal government?
  - Ontario began collecting equalization in 2009-2010. Click Here
  - Given Ontario's leading economic growth, we expect equalization to gradually diminish. This was confirmed in the recent announcement by the federal government in regards to major federal transfers. Ontario's Fiscal 2017-18 Equalization Transfer will be $1,424mln. This is down from $2,304mln **in 2016-17**. The Equalization Framework is a system of a three-year weighted moving average **with a two-year lag** of measured fiscal capacities which takes into account the variation in the revenue generating capacity of the provinces. with a two-year lag. The weightings allocate more weight to the last year (50%) and less weight to the first two years (25% each). There is a two-year lag in the calculation.

- When is the next and final IPO planned for Hydro One?
  -

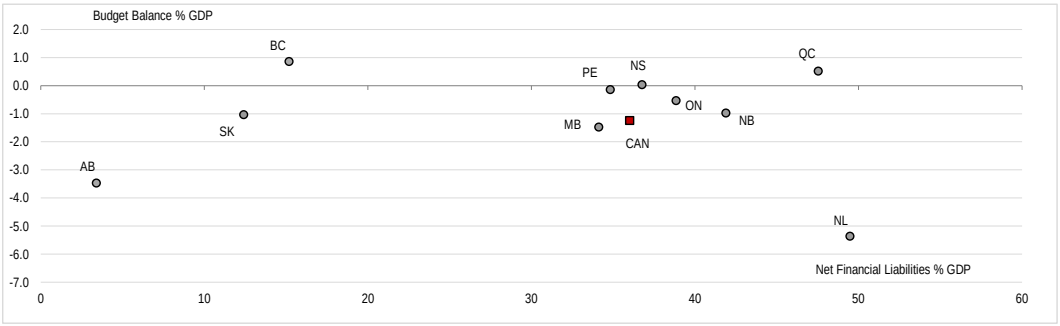
  - The Province has engaged an expert panel of accountants to assess the issue.
  - The core matter is whether the pension plan is in a positive funding position given the assumptions used, which we believe to be the case.
  - Effectively, two fundamental questions need to be answered in the affirmative: "Is there an asset and does the province own it?" The answers will depend on a number of factors related to both the underlying assumptions and the contractual arrangements.
  - The calculation is sensitive to the discount rate used which is currently at 6.25%.
  - Background – Ontario Public Accounts 2015-16: In Ontario's fall fiscal and economic update, the government adopted the Auditor General's accounting interpretation for the treatment of net pension assets for 2015–16 through a time-limited regulatory amendment (the "Pension Adjustment"). The impact of the change resulted in an additional $10.7bln being added to the net debt and accumulated deficit and an increase of $1.5bln to the annual deficit for 2015–16. Consistent with the accounting treatment adopted in the Public Accounts of Ontario 2015–2016, the medium-term fiscal outlook provided reflects a cautious approach to forecasting the projected annual Pension Adjustment. This cautious approach results in an estimated potential impact of $2.2bln in 2016–17, $2.8bln in 2017–18, and $3.7bln in 2018–19 to the annual Pension Adjustment.

- What is the future of Ontario's automotive sector?
  - Ontario's auto industry is very important, but just one component of Ontario's diversified economy.

- Overall, the auto industry represents only **2.5%** of GDP, but it is the largest manufacturing sector accounting for **almost 20%** of total manufacturing.
- Ontario is the largest single auto jurisdiction in North America, ranking ahead of Michigan.
- Ontario cannot compete with low-wage assembly jobs, but needs to remain competitive on the basis of technological leadership.

[1] Includes estimate of imputed rental income on owner occupied dwellings
Source: Statistics Canada and Ontario Ministry of Finance

- What trends do you see with respect to immigration?
  - Ontario attracts about 40% of new immigrants to Canada based on long-term averages. This level is above the provincial average.
  - The percentage of new immigrants fluctuates from quarter-to-quarter and has been as low as 30%.
  - Ontario anticipates that its share of immigration will increase to 45-50% in the coming years.
  - Inter-provincial migration has been historically very low, near 0%.



- What is Ontario's housing market outlook?
  - The range of forecasts is quite wide. We expect some moderation, but this will be mitigated by continuing population growth and financial conditions that are still financial stimulative, although borrowing rates and mortgage underwriting conditions have moved tighter.

- Why is the province's debt risk-weighted 20% instead of 0% in some international jurisdictions?
  - Each country has its own financial institutions regulator.
  - We continue to dedicate time and resources to educate international regulators about the creditworthiness of the province and have been successful in many jurisdictions to have the risk-weighting reduced to 0%. This work is ongoing work.
  - In at least 15 countries, including where our major international borrowers are located such as the United States, United Kingdom, and Germany, the risk-weighting is 0%.

- What is the expectation for changes in Equalization payments from the Federal government?
  - Ontario began collecting equalization in 2009-2010. Click Here
  - Given Ontario's leading economic growth, we expect equalization to gradually diminish. This was confirmed in the recent announcement by the federal government in regards to major federal transfers. Ontario's Fiscal 2017-18 Equalization Transfer will be $1,424mln. This is down from $2,304mln **in 2016-17**. The Equalization Framework is a system of a three-year weighted moving average **with a two-year lag** of measured fiscal capacities which takes into account the variation in the revenue generating capacity of the provinces. with a two-year lag. The weightings allocate more weight to the last year (50%) and less weight to the first two years (25% each). There is a two-year lag in the calculation.

- When is the next and final IPO planned for Hydro One?
  -

Hi Ken,

We provided feedback to Maria with input from OPCD. Maria is still a bit confused about the accounting treatment on the pension issue. She mentioned that Gadi had said something about B.C. not treating its pension plan in the same way as Ontario which is why the Auditor raised this issue.

I explained that it was not an issue of the positive funding valuation but rather whether we are allowed to recognize the asset of the jointly sponsored plan on our books. I thought it might be a good idea to have her talk to you rather than trying to get someone from OPCD.

Let me know. I am working from home today but if you are available this afternoon, I could set up a conference call.

Bonnie

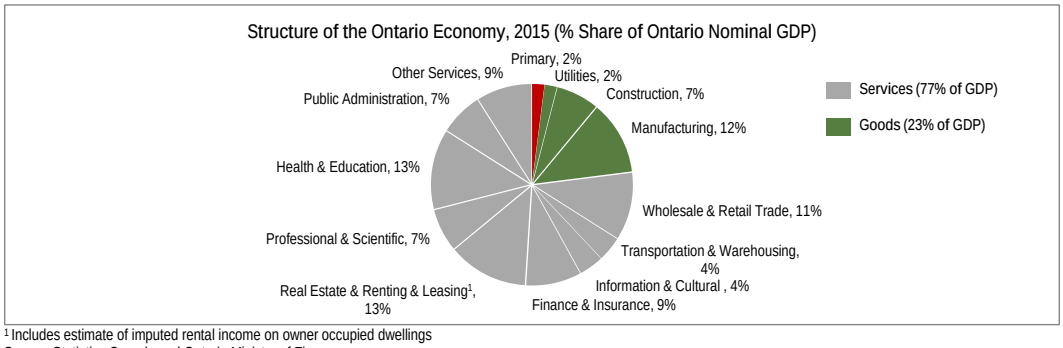
Insights from our meeting last month with officials from the province.

- How is Ontario positioned with respect to the quality and rising cost of healthcare?
  - Ontario is planning, building and/or upgrading 37 hospitals ~~44 hospitals with state-of-the-art facilities~~ across the province.
  - As the population grows and ages, healthcare costs will rise, but the healthcare cost curve is flattening, which is consistent with the experience in advanced economies.
  - Ontario has been successful at containing health care expense growth at less than 5% annually over the past 6 years. In the last three years, the annual average increase was only 2.1%. In Fiscal 2015-16, health care expense growth was only ~~1.1%~~ 2.1%versus overall program spending growth of ~~4.2%~~ 3.6%. [Ontario 2015-16 Annual Report Click Here]
  - The aging population adds about 1% to annual expense growth.
  - Experience has shown that healthcare costs for individuals is the highest in the first two years and last two years of life.
  - While the population is aging and people are living longer, they are "healthier and wealthier". Moreover, since the 2006 amendment to the Ontario Human Rights Code which effectively eliminated the 65 mandatory retirement age, people are working and contributing longer to the economy. In 2006, the Ontario participation rate (55+) was **33.3%. In 2015, it was almost 38%.**
  - Ontario has the largest working-age (15-64) population share compared to the G7 countries and has enjoyed strong employment gains in above-average wage industries since the Global Recession.

Source: Statistics Canada and The World Bank

- What agreement does the province expect with the Federal government under the federal/provincial Health Accord?
  - We don't expect to get back to when the federal government paid for around 50% of provincial health spending. The federal share of health funding is currently between 20-25%.
  - The minimum escalator is set to drop to 3% in 2017 from 6% previously, and this is not acceptable.
  - Background Note: At the December "health talk" meetings between the Federal Government, provinces, and territories, the collective ask of the federal government was for a 5.2% annual escalator. The federal government raised its offer from 3% to 3.5% plus $11bln over 10 years for home care and mental health as well as another $544mln over 5 years for initiatives on prescription drugs and health innovation, which would be provided directly to federal and pan-Canadian health organizations. An agreement was not reached. A few days following the meetings, the Province of New Brunswick announced that it had reached a separate bilateral agreement securing an additional $230mln more for health care which represents a 3.9% average annual growth

rate over the next ten years ~~it assesses is equivalent to an effective 4.1% annual escalator~~. The provinces of Nova Scotia and Newfoundland and Labrador reached similar agreements.



- How will Federal infrastructure funding affect borrowing and capital plans?
  - It is not clear at this stage how the federal infrastructure spending program will work into Ontario's capital investment of $160bln over 12 years ~~$137bln 10-year capital plan~~, but it will be factored into the spring budget along with implications of both federal and provincial climate change plans.

- Will Ontario consider using its fiscal capacity to raise taxes/fees to ensure meeting its balanced budget target in Fiscal 2017-18?
  - Ontario is committed to returning to balance next year and is pursuing several options, some of which were laid-out in the recommendations of the "Commission on the Reform of Ontario's Public Services, Public Services for Ontarians: A Path to Sustainability and Excellence" by Chair Don Drummond, an economist (The Drummond Report is a deficit-reduction report released in February 2012 to advise the Ontario government on how to reduce its debt levels). Click Here
  - Budget 2016 has identified a $500mln Program Review Savings Target for Fiscal 2016-17 that entails Review, Renewal and Transformation. Click Here
  - The 2016 savings target follows the $250mln target that was set and achieved in Fiscal 2015-16.
  - Fiscal capacity is not seen as the best option at this time due to the importance of remaining competitive with the United States and other countries in the competitive global landscape. The United States is articulating plans to reduce both corporate and income taxes. The United States is also potentially changing its stance on environmental issues. These factors must be taken into consideration for Ontario to remain competitive.
  - External factors are supportive of Ontario's growth. These include a recovering US economy, still low energy prices and accommodative financial conditions, and a weak Canadian currency.

- Could you clarify Ontario's course of action given the Auditor General of Ontario's qualified opinion on Pension Accounting?
  - Although the pension expense is a non-cash charge, it is still very important to achieving the balanced budget target in Fiscal 2017-18 since Ontario's results are reported based on accrual accounting and not cash.
  - The Province has engaged an expert panel of accountants to assess the issue.
  - The issue being assessed is whether the Province can record an asset for the jointly sponsored plans under the accounting standards. The Province believes that an asset should be reported.
  - The panel will focus on the accounting question, but will also provide advice on how to measure an asset, assuming it concludes that it should be reported. The calculation is sensitive to management's assumptions, including the discount rate which reflects management's best estimate of long-term returns on the assets which is currently at 6.25% and consistent with rates used by most other senior Canadian governments.
  - ~~The core matter is whether the pension plan is in a positive funding position given the assumptions used, which we believe to be the case.~~
  - ~~Effectively, two fundamental questions need to be answered in the affirmative: "Is there an asset and does the province own it?" The answers will depend on a number of factors related to both the underlying assumptions and the contractual arrangements.~~
  - ~~The calculation is sensitive to the discount rate used which is currently at 6.25%.~~
  - Background – Ontario Public Accounts 2015-16: In Ontario's fall fiscal and economic update, the government adopted the Auditor General's accounting interpretation for the treatment of net pension assets for

2015–16 through a time-limited regulatory amendment (the "Pension Adjustment"). The impact of the change resulted in an additional $10.7bln being added to the net debt and accumulated deficit and an increase of $1.5bln to the annual deficit for 2015–16. Consistent with the accounting treatment adopted in the Public Accounts of Ontario 2015–2016, the medium-term fiscal outlook provided reflects a cautious approach to forecasting the projected annual Pension Adjustment. This cautious approach results in an estimated potential impact of $2.2bln in 2016–17, $2.8bln in 2017–18, and $3.7bln in 2018–19 to the annual Pension Adjustment.

- What is the future of Ontario's automotive sector?
  - Ontario's auto industry is very important, but just one component of Ontario's diversified economy.
  - Overall, the auto industry represents only **2.5%** of GDP, but it is the largest manufacturing sector accounting for **almost 20%** of total manufacturing.
  - Ontario is the largest ~~single~~ sub-national ~~auto~~ jurisdiction for auto assembly in North America, ranking ahead of Michigan.
  - Ontario can compete ~~not compete~~ with low-wage jurisdictions ~~assembly jobs, but needs to remain competitive~~ on the basis of productivity, technological leadership and our highly skilled workforce.

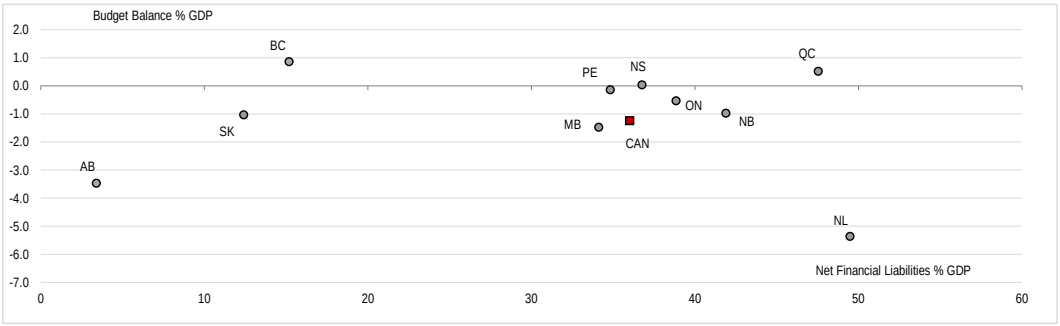
Source: Statistics Canada and Ontario Ministry of Finance

- What trends do you see with respect to immigration?
  - Ontario attracts about 40% of new immigrants to Canada based on long-term averages. This level is above the provincial average.
  - The percentage of new immigrants fluctuates from quarter-to-quarter and has been as low as 30%.
  - Ontario anticipates that its share of immigration will increase to 45-50% in the coming years.
  - Inter-provincial migration has been historically very low, near 0%.



- What is Ontario's housing market outlook?
  - The range of forecasts is quite wide. We expect some moderation, but this will be mitigated by continuing population growth and financial conditions that are still financial stimulative, although borrowing rates and mortgage underwriting conditions have moved tighter.

- Why is the province's debt risk-weighted 20% instead of 0% in some international jurisdictions?
  - Each country has its own financial institutions regulator.
  - We continue to dedicate time and resources to educate international regulators about the creditworthiness of the province and have been successful in many jurisdictions to have the risk-weighting reduced to 0%. This work is ongoing work.
  - In at least 15 countries, including where our major international borrowers are located such as the United States, United Kingdom, and Germany, the risk-weighting is 0%.

- What is the expectation for changes in Equalization payments from the Federal government?
  - Ontario began collecting equalization in 2009-2010. Click Here
  - Given Ontario's leading economic growth, we expect equalization to gradually diminish. This was confirmed in the recent announcement by the federal government in regards to major federal transfers. Ontario's Fiscal 2017-18 Equalization Transfer will be $1,424mln. This is down from $2,304mln **in 2016-17**. The Equalization Framework is a system of a three-year weighted moving average **with a two-year lag** of measured fiscal capacities which takes into account the variation in the revenue generating capacity of the provinces. ~~with a two-year lag.~~ The weightings allocate more weight to the last year (50%) and less weight to the first two years (25% each). ~~There is a two-year lag in the calculation.~~

- When is the next ~~and final~~ IPO planned for Hydro One?
  - **The Province is continuing to move forward with its plan to broaden Hydro One ownership. Ontario successfully completed a secondary offering of 14 per cent of common shares in April [2016] and raised approximately $2.0 billion in total gross proceeds. The Province now holds approximately 70 per cent of Hydro One common shares and will reduce its stake to 40 per cent over time.**

Hi Lynsey

I have included a bullet on net debt in the key messages, I have refrained from the net debt to GDP ratio since the revised and lower versions will be part of Q3.

Thanks

Ken k

Questions and Answers
Pension Asset Expert Advisory Panel Report

KEY MESSAGES:

- We thank the Pension Asset Expert Advisory Panel for their work on this complex issue.

- We are pleased that the independent panel's results are consistent with Ontario's view that net pension assets for jointly-sponsored plans should continue to be recognized in the Province's financial statements, as they have been for the past 14 years.

- Ontario is accepting all of the panel's recommendations and will prepare its future financial statements based on this advice.

- By applying the panel's advice to the Province's 2015-16 finances, Ontario's deficit has been lowered to $3.5B, from the $5B originally reported in the 2015-16 Public Accounts.

- The application of the Panel's advice has also resulted in Ontario's 2015-16 net debt reducing to $294.6 billion from the $305.2 billion reported in the 2015-16 Public Accounts

- The panel's advice will also help inform discussions with the Auditor General in the hopes of reaching agreement on how the accounting standard is applied to future financial statements.

- Ontario remains committed to balancing the budget by 2017-18, and remaining balanced in 2018-19.

Formatted: Font: (Default) Arial

Formatted: Indent: Left: 0.5", Space After: 10 pt, No bullets or numbering

QUESTIONS AND ANSWERS – MOF REVIEW

1. What does this mean for the upcoming Budget?

The 2017 Budget will reflect the appropriate accounting treatment for net pension assets informed by the panel's report, including the Province's updated Interim numbers for 2016-17, as well as forecasts for the fiscal planning period.

DRAFT

We are committed to balancing the Budget by 2017-18, and remaining balanced in 2018-19. ~~We will have more details to share about the Budget in the coming weeks.~~

In the coming weeks, we will provide an update in Ontario's Third-Quarter Finances of our progress on our plan to grow the economy.

2. **What do you say to the credit rating agencies who are watching all of this unfold?**

   We have been impressed with the level of cooperation and understanding of the credit rating agency community.

   I would say we have achieved clarity on this complex accounting issue.

   We are committed to balancing the Budget by 2017-18, and remaining balanced in 2018-19. At the same time, we will continue to invest in vital government services, such as health care, education and infrastructure that are important to the people of Ontario.

Ontario's Financial Position:

3. **Some have said your government has a spending problem, not a revenue problem. What do you say to that?**

   Even with adopting the Auditor General's view of the 2015-16 Public Accounts, the government still beat its annual deficit target for the seventh year in a row.

   The government is projecting a balanced the budget by 2017-18, and remaining balanced in 2018-19.

   The improvement over plan was due in large part to the Ontario government's strong focus on managing growth in spending. Ontario consistently has the lowest per capita program spending among all Canadian provinces.

   Over the past four years the Province has held the average annual growth in program spending to 1.9 per cent, less than the rate of inflation, while investing in services that people rely on.

   Key elements of the government's plan to eliminate the deficit are:

DRAFT

- Program Review, Renewal and Transformation
- Managing compensation costs
- Maintaining tax fairness and a level playing field for business
- Strengthening government transparency, financial management and fiscal accountability

4. **The FAO has warned that if Ontario's fiscal position deteriorates beyond 2017-18, the four international credit rating agencies could lower Ontario's credit rating, which could lead to higher borrowing costs and more challenging fiscal position. What is the government doing to manage the debt?**

   The government remains firmly committed to balancing the budget by 2017-18, and remaining balanced in 2018-19.

   Even with adopting the Auditor General's view of the 2015-16 Public Accounts, the government still beat its annual deficit target for the seventh year in a row. This reflects the government's responsible and balanced approach to fiscal management.

   Given ongoing challenges in the broader economic environment, the government recognizes that now is the time to be making investments in people, modern infrastructure and a dynamic and innovative business climate — investments that will help to spur economic growth and create the new jobs necessary to support eliminating the deficit.

   Alongside these strategic investments, the government is also taking deliberate actions to ensure it can continue to manage spending and improve outcomes for Ontarians. Together, these investments and deliberate actions will help ensure that the priority programs and services that people rely on are maintained and enhanced while the deficit is eliminated.

5. **How does the Province plan to reduce its net debt-to-GDP ratio to its pre-recession level of 27 per cent?**

   The first step in returning to the targeted 27 per cent net debt-to-GDP ratio is to balance the budget.

   Once the budget is balanced, debt will continue to rise by the difference between the annual cash investment in capital and the amortization of these investments. These

investments will contribute to the debt rising at a slower rate than the increase in the Province's GDP, over time lowering the net debt-to-GDP ratio to the government's 27 per cent target.

Legislated Accounting:

6. Is the disagreement over accounting standards an indication of financial mismanagement on the part of government?

No. The Province's financial results show that the government has once again beaten its annual deficit targets and is on track for a balanced budget by 2017-18 and remaining balanced in 2018-19.

Prior to implementing the change to the 2015-16 Public Accounts, the government had followed the same pension accounting treatment for the past 14 years. This had been accepted by the current Auditor General for the last two years and by three previous Auditor Generals. There has been no change to the relevant accounting standards over the past 14 years.

In fact, Ontario has a strong track record of producing high-quality financial reports on a timely basis. Prior to 2015-16, Ontario had clean audit opinions for 22 years.

Hi Cindy and Nadine

As you may expect there is considerable interest on the part of the Rating Agencies in obtaining more detail on the Province's pension adjustment. We had a tele-conference yesterday with Fitch where the questions were very high level and since over the last couple of weeks I had access to most of OPCD's material on this issue I was able to respond, I believe to their satisfaction.

I do have a couple of questions though:

- Looking at the PP presentation from yesterday, based on the Province's interpretation of PSAB, for 2016-17 the TPP Pension Expenses are offset by $452M. My question; is this our share of the surplus with regard to this jointly sponsored plan or simply the PV of the reduction in future contributions because plan assets exceed liabilities, or a combination.

- Again, under the Province's accounting approach, the 2016 Budget on page 284 has a foot note indicating that that the cash payments related to the Province's contribution to the TPP are $1,664 million (revised to $1,672 in yesterday's presentation). What is the debit for this transaction, it is Pension assets?

- Finally, I understand that the AG contends that the Province cannot access surpluses on the TPP in the absence of an MOU. My question; I understand that the Province's contributions to the TPP is already reflected as a pension asset in the Province's Balance Sheet, if the AG is agreeable to these contributions being presented as an asset why distinguish the surplus. This is similar to an individual depositing $1000 in a savings account and at the year of the year seeing it grow to $1,050 and being told that he/she has access to only the original $1,000 and not the growth.

John and I will be happy to come meet with you if that is more useful. If there are any written questions from the Rating Agencies we will be sure to run our responses by you.

Thanks very much

Ken K

Thanks very much Cindy, as always a very clear and concise explanation. This is adequate for our purposes and we take note of your point that the Province has not mentioned HOOP and CAATT as yet.

As such, if the question is ever asked by investors as to why the expenditure offset and of course it's reversal increases materially from 15-16 to 18-19 we shall respond that in addition to the amortization and the net interest income of the two plans in question other pension plans of the province are also moving in to an asset position.

As they do so the expenditure offset and its reversal increases. All of these are being reviewed by the Independent Panel and we await its report with bated breath. Well perhaps that's an exaggeration but certainly with great interest.

Thanks again

> 1) As you noted, based on the estimate generated last year for the budget and public accounts for OTPP, the amortization of the unrealized gains is expected to increase (e.g. $400M to $1 Billion between 15-16 and 18-19). In addition,

the excess of the interest income generated on the assets as compared to the interest in the obligation is forecast to continue to increase (e.g. $900M to $1.3 Billion between 15-16 and 18-19)

2) The $3.7 includes 4 plans vs. 2 plans – both HOOPP and CAATT are expected to move into an asset position by 2018-19. The governance structure for these plans differs from OTPP and OPSEU, so the results of the Panel review may differ on the treatment of these plans. We have never disclosed that HOOPP and CAATT may be impacted by name.

Hope that helps,

Cindy

Subject: Pension Adjustment

Hi Nadine

As Mike Manning meets investors including financial institutions the pension adjustment questions does come up on a regular basis. Thanks to the explanations previously provided by you, including the briefing note that you shared we are able to adequately respond to all questions so far.

However, on a pro-active basis I do have one more. The PA increases to $3.7 billion in 2018-19 from $1.5 billion in 2015-16. As I understand it a major component of the PA is the amortization of the gain on the assets over an appropriate period. So our question is; does it mean that the gain on assets has increased to such an extent that the resulting amortization of the gain has also increased by more than two-fold over 3 years.

I am including Cindy as well in this questions since she has provided me with some explanations on other aspects of this issue and she may also be able to shed some clarity.

Thanks and if you believe this can be best answered by a short meeting between you and Mike and myself, we will be happy to schedule one.

Hi Gadi,

Here are the questions – this is **not** directly related to Ontario's rating. They are related to the governance and legislation around public pensions. I think I should send to Elizabeth Doherty (ADM Income Security and Pension Policy) to start.

Please let me know if you think I should send to someone else.

Subject: RE: Pension questions

Hi Bonnie,

To follow up from Marcy's email, our colleagues in Fitch's non-bank financial institutions group are looking at the credit quality of public pension funds and pension asset managers as it pertains to their own direct debt obligations. As part of that assessment, they review the nature and extent of powers that a sovereign or sub-sovereign sponsor has to affect the performance of a pension. Canada's public pensions are on this list given their global prominence.

We have found a tremendous amount of online data and information on Canadian public pensions (authorizing laws, public accounts, actuarial valuations), but much of it addresses or references the powers and duties of the pension plans themselves, as opposed to what powers the sponsoring governments retain or could exercise in certain circumstances. The questions below are really intended to address that sovereign/provincial perspective. I should also note also that the questions are not necessarily Ontario-specific, but I did modify some of them in view of the many different institutional/governance structures for public pensions in Ontario.

--In the event of a sovereign/provincial default, what is the legal basis by which a public pension fund retains its capacity to pay its own debt obligations?

--In the event of a sovereign/provincial default, what legally prevents the sovereign/province from restricting the ability of a public pension fund to pay its obligations?

--Who owns the assets held by the pension fund—the pension fund itself, the contributing employers, retirees, the pension plan sponsors/sponsors, or the sovereign/province that originally authorized the pension? Do the assets have a legal status that protects them in the event of a bankruptcy by a contributing employer?

--Can the sovereign/province, pension fund sponsor/sponsors, or participating governments make use of pension assets in the event of their own fiscal distress?

--Can the sovereign/province compel a pension fund to buy government debt or take responsibility for public capital investment (separate from the investment choices that the pension fund is authorized to make by itself)?

--Can the sovereign/province restrict or eliminate its own employer contributions to a pension fund if it faces fiscal distress?

--Can a pension plan sponsor or contributing employer remove its assets and sever its relationship with the pension fund without sovereign/provincial approval?

To the extent there are legal/statutory or judicial references, I would welcome them; I've already downloaded the Pension Benefits Act and other available financial, actuarial and legal information for CPP and for several other plans like HOOPP, MERS and OTPP. I've also attached a copy of our published criteria for "non-bank" financial institutions, for your reference. If it makes more sense for you, we would be happy to schedule a phone call to discuss!

Subject: Pension questions

Bonnie,

Good afternoon. I am reaching out on Doug's behalf to solicit assistance regarding the province's employee pension plans. Separate from our discussions related to Ontario's economy and finances, some colleagues of ours at Fitch who focus on "non-bank" financial institutions are developing a framework for looking at pension funds globally; given the size and scope of Canada's public pensions, Doug would like to ask some general questions to understand Ontario's relationship to its pensions plans. A possible start could be Doug sending you questions directly and asking you to put him in touch with the correct individual after you have had a chance to review them. Please advise and thank you.

Best,
Marcy

Scope

This criteria report specifies Fitch Ratings' methodology for assigning new ratings to, and monitoring existing ratings of, non-bank financial institutions globally, including securities firms, investment managers (including investment companies and investment funds), business development companies (BDCs), finance and leasing companies (including mortgage real estate investment trusts [REITs] and non-bank policy institutions) and financial market infrastructure (FMI) companies. With the exception of a limited number of financial institutions with banking licenses, the criteria discussed herein do not apply to banks, the rating criteria for which are outlined in Fitch's "Bank Rating Criteria" or to insurance companies or equity REITs.

Key Rating Drivers

Five Factors in Stand-Alone Assessment: Unless driven by sovereign, subnational or institutional support, a non-bank financial institution's Issuer Default Rating (IDR) is determined by an assessment of its fundamental creditworthiness. In assessing a non-bank financial institution's stand-alone profile, Fitch considers five key factors: the operating environment; company profile; management and strategy; risk appetite; and financial profile.

While the first three factors are relatively common across financial institutions, an assessment of a firm's risk appetite and financial profile is more specific to the subsector in which the company operates.

Balance Sheet Distinction: Within non-bank financial institution subsectors, Fitch also makes distinctions in its analysis for businesses with high balance sheet usage versus businesses with low balance sheet usage. Profitability metrics for balance sheet-intensive businesses are focused on asset and equity yields, while leverage ratios focus on capitalization measures. For asset-light strategies, operating margins are a common indicator of profitability, while cash flow ratios are used to assess leverage.

Support Factors: The most common form of support factored into Fitch's ratings of non-bank financial institutions is institutional support from parent institutions. In assessing potential support, Fitch considers both the ability and propensity of the supporter to provide assistance on a timely basis. For example, the ratings of captive finance subsidiaries often benefit from a high probability of support, because they frequently enhance the firm's franchise, strategic objectives and revenue prospects.

While sovereign support is often a rating factor for non-bank policy institutions, it is not common for other non-bank financial institutions, given their more limited systemic importance.

Default Risks, Recovery Prospects: Issue ratings of non-bank financial institutions, in common with other corporate finance sectors, reflect Fitch's view of the overall level of credit risk attached to specific financial commitments, usually securities. This view incorporates an assessment of both the likelihood of default (or "non-performance" risk) on the specific obligation and of potential recoveries for creditors in case of default/non-performance.

Senior Debt Aligned with IDR: Ratings of a non-bank financial institution's senior unsecured obligations are usually equalized with its Long-Term IDR, although they can be notched downward if there is deep effective subordination or high balance-sheet encumbrance.

Report Summary and Structure

I. Ratings Framework

Fitch assigns both issuer and issue ratings to non-bank financial institutions and their obligations. The two primary issuer ratings are:

- Long-Term IDRs; and
- Short-Term IDRs.

In limited circumstances, Fitch may also assign Support Ratings (SRs), Support Rating Floors (SRFs) and/or Derivative Counterparty Ratings (DCRs) to non-bank financial institutions. For complete rating definitions, click here.

Fitch generally adopts a "higher of" approach in assigning Long-Term IDRs to non-bank financial institutions. Specifically, Fitch first determines what level of Long-Term IDR a non-bank financial institution could attain based solely on its stand-alone financial strength or based solely on support, whether sovereign support from government authorities (as reflected in the SRF) or institutional support, usually from shareholders. Fitch then (almost always) assigns the non-bank financial institution's IDR at the higher of these two levels absent extraordinary constraints represented by the Country Ceiling.

II. Stand-Alone Assessment

An assessment of the stand-alone credit profile of a non-bank financial institution considers five key factors:

- operating environment;
- company profile;
- management and strategy;
- risk appetite; and
- financial profile.

For details on the stand-alone assessment aspect of Fitch's ratings framework, click here.

III. Support

For non-bank financial institutions, the most usual source of support is from the shareholders (institutional support); for example, when a corporate parent has a finance subsidiary. Support from government authorities (sovereign support) is a much less frequent occurrence for non-bank financial institutions than for banks, given the generally relatively smaller size and influence of a non-bank financial institution on a country's financial system. If present, sovereign support is often based on the non-bank financial institution's policy role and less on its systemic importance. Fitch's view of the likelihood of external support being made available in case of need may be reflected in a non-bank financial institution's SR. Where Fitch believes the most likely form of support is sovereign support, this is also reflected in the non-bank financial institution's SRF, which indicates the minimum level to which the entity's Long-Term IDR could fall for the level of extraordinary support assumed.

The key sovereign support rating factors are:

- sovereign's ability to support;
- sovereign's propensity to support a specific non-bank sector; and
- sovereign's propensity to support a specific non-bank financial institution.

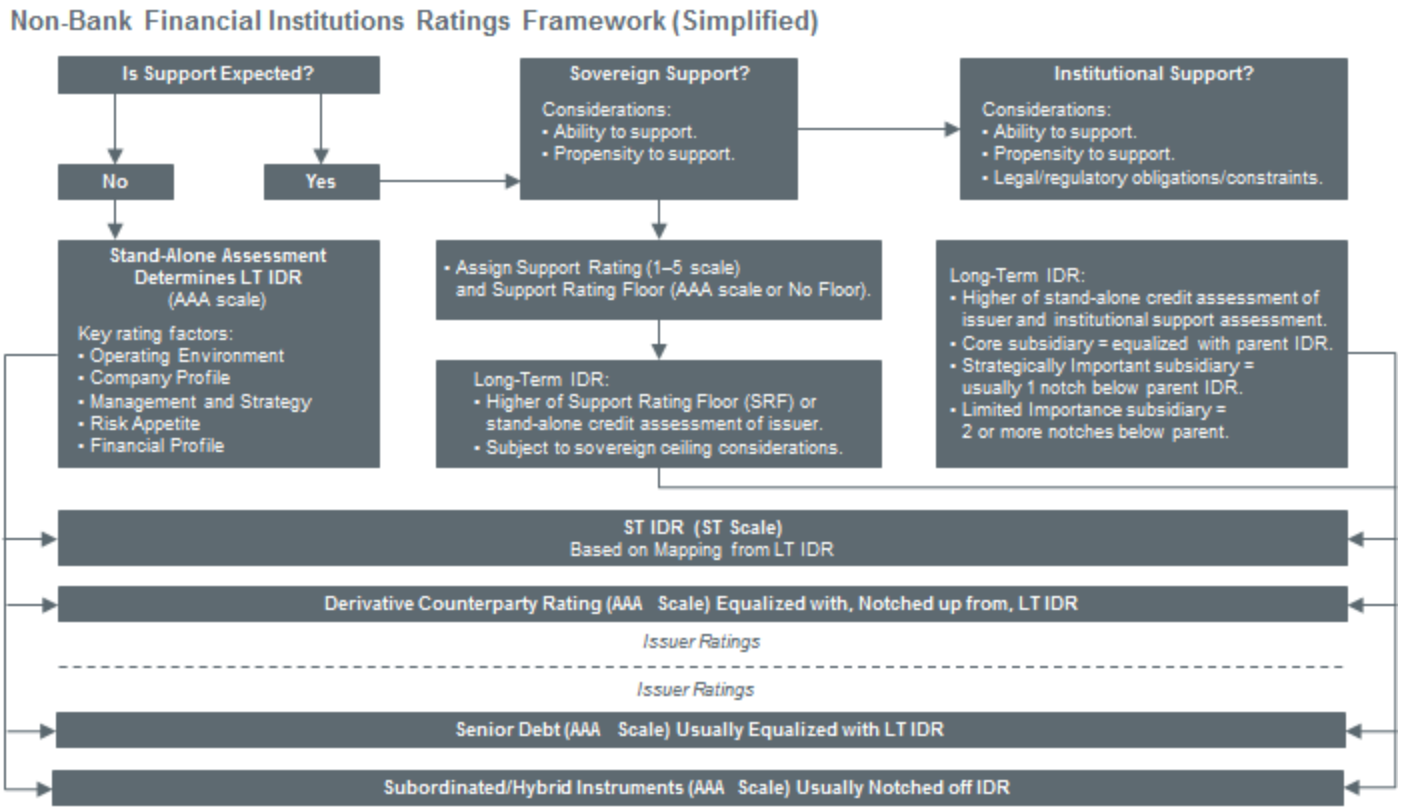
The key institutional support rating factors are:

- parent's ability to support;
- parent's propensity to support; and
- legal and regulatory obligations/constraints.

For details on the support framework, click here.

IV. Issue Ratings

Ratings of non-banks financial institutions' senior, subordinated/hybrid and other securities issues incorporate an assessment both of the likelihood of default (or "non-performance" risk) on the specific obligation and (for debt securities assigned long-term ratings) of potential recoveries for creditors in case of default/non-performance. For details, click here.



V. Annexes

For additional information on specific aspects of the non-bank financial institutions rating criteria, a summary of non-bank financial institution quantitative benchmarks and metrics by subsector and information on certain rating procedures, click here.

I. Ratings Framework

This section provides an overview of the international and national scale ratings assigned to non-bank financial institutions and their issues, indicating: what the different ratings measure, when they are assigned, the scales on which they are assigned; and how, in broad terms, the rating levels are determined. This section first reviews non-bank financial institution issuer ratings and then issue ratings.

Sections II, III and IV provide more detail on the criteria for assigning IDRs, SRs and SRFs and issue ratings, respectively. Readers who do not wish to review in detail Fitch's rating framework should turn to these sections. A simplified version of the framework is presented in the chart below.

LT IDR – Long-term Issuer Default Rating. ST IDR – Short-term Issuer Default Rating.

I.1. Long-Term Issuer Default Ratings

What They Measure

IDRs for non-bank financial institutions, as for issuers in other sectors, express Fitch's opinion on an entity's relative vulnerability to default on its financial obligations. In accordance with Fitch's rating definitions, the default risk addressed by the IDR is generally that of the financial obligations whose non-payment would "best reflect the uncured failure of that entity."

For a small population of mostly prudentially regulated non-bank financial institutions, Fitch considers that the obligations whose non-payment would best reflect uncured failure are usually senior obligations to third-party, non-government creditors. For the larger universe of other non-bank financial institutions, Fitch generally considers that non-payment of both senior and subordinated obligations to third party, non-government creditors (including by way of a distressed debt exchange) would reflect the uncured failure of the issuer. Therefore, for most non-bank financial institutions, only certain hybrid securities that contractually allow for going concern non-performance (e.g. coupon deferral) are likely to fall outside the scope of the IDR. For more details, see What Non-Bank Financial Institution IDRs Reflect: Definition of Reference Obligations below.

What Non-Bank Financial Institution IDRs Reflect: Definition of Reference Obligations

A non-bank financial institution's IDRs usually express Fitch's opinion on the risk of default on its senior or (with the exception of a small number of prudentially regulated non-bank financial institutions) subordinated obligations to third-party, non-government creditors, as in Fitch's view, these are typically the obligations whose non-performance would best reflect the uncured failure of the entity. In accordance with Fitch's rating definitions, and in common with issuers in other sectors, a non-bank financial institution's default may take a number of forms, including non-payment of obligations beyond the available cure period, bail in, a distressed debt exchange or the issuer entering into bankruptcy proceedings.

When considering whether a debt restructuring or exchange should be classified as a distressed debt exchange, Fitch expects both of the following to apply: i) the restructuring imposes a material reduction in terms compared with the original contractual terms; and ii) the restructuring or exchange is conducted to avoid bankruptcy, similar insolvency or intervention (including resolution) proceedings or a traditional payment default.

A non-bank financial institution's SR and SRF, should they be applicable, also rate to the same reference obligations, i.e. they reflect Fitch's view on whether external support will be sufficient for a non-bank financial institution to avoid default on its relevant obligations to third-party, non-government creditors.

The rationale for Fitch's definition of reference obligations for IDRs is as follows:

Third-Party vs. Intra-Group Obligations

Non-bank financial institution IDRs do not usually rate to default risk on funding from entities under common control (e.g. parent/sister companies or related non-financial corporations) for three main reasons. First, these facilities may not be extended with the same expectations of an unaffiliated creditor, for example the borrower may not always be expected to repay, rather than roll over, the facilities at maturity. Second, Fitch would not usually expect there to be a high level of transparency on whether an entity has "defaulted" on intra-group debt, e.g. whether a roll-over has been "voluntary" or "forced". Third, Fitch would not usually regard entities under common control as the main users of its ratings, as in most cases they would have privileged, direct access to information on the financial condition of the borrower.

Private vs. Government Creditors

Non-banks financial institutions are largely funded in the private sector, as they do not generally have access to central bank funding. However, non-bank financial institutions that, for example, have a policy role or that have a banking license but are viewed by Fitch as more akin to non-bank financial institutions may have access to government funding, particularly during periods of market stress. When this is the case, non-bank financial institution IDRs will not usually rate to default risk on obligations owed to central banks and other national government institutions. This reflects the special relationship between a central bank, as lender of last resort, and issuers that benefit from this form of funding, and the fact that, where facilities due to central banks are rolled over or restructured, there is likely to be considerable ambiguity regarding whether such a restructuring should be regarded as "voluntary" or "forced." In addition, it will often be difficult to ascertain in a timely fashion whether an issuer has performed on debt owed to its central bank.

Different Categories of Obligations

In some cases a non-bank financial institution may default on some categories of third-party, private sector debt, while continuing to perform on others. Where Fitch considers there to be significantly different levels of default risk on different categories of senior liabilities, the IDRs will rate to the (material) category with highest risk. If a non-bank financial institution defaults on a material category of third-party, private sector senior debt, but remains current on other categories, its IDRs will be downgraded to 'RD' (Restricted Default).

When They Are Assigned

Long-Term IDRs are assigned to virtually all non-bank financial institutions with international ratings. The main exceptions are rare cases where an entity issues exclusively short-term debt and may therefore be assigned only a Short-Term IDR.

Where Fitch believes it is useful to separately highlight the level of default risk on foreign-currency and local-currency obligations, it may assign separate Foreign-Currency (FC) and Local-Currency (LC) Long-Term IDRs to a non-bank financial institution. This may be done, for example, when the agency considers there to be a material difference in default risk on obligations in different currencies (for intrinsic or support reasons, or because of a greater risk of legal restrictions on servicing foreign-currency debt), or when the assignment of a LC IDR is undertaken as part of the process to derive a non-bank financial institutions' National Rating *(see Section I.8)*.

On Which Scale

Long-Term IDRs are assigned on the 'AAA' scale *(see table at left)*.

How They Are Determined

Fitch generally adopts a "higher of" approach in assigning Long-Term IDRs to non-bank financial institutions. Specifically, the agency first determines what level of Long-Term IDR a non-bank financial institution could attain based solely on its stand-alone financial strength (*see Section II, 'Stand-Alone Assessment'*) or based solely on support (*see Section III, 'Support'*), whether it is sovereign support from government authorities (as reflected in the SRF) or institutional support, usually from shareholders. Fitch then (almost always) assigns the FI's Long-Term IDR at the higher of these two levels, absent extraordinary constraints represented by the Country Ceiling.

In some instances non-bank financial institution credit profiles may deteriorate relatively rapidly, while in other instances they can remain fundamentally weak for relatively extended periods of time (e.g. in countries where the sovereign is lowly rated, but relatively stable). Use of '+' or '-' modifiers in the 'CCC' range is more likely for the latter than the former.

Should institutional support exist, the Long-Term IDR is based on Fitch's opinion of the strategic importance of the entity to its parent and an assessment of the parent's propensity and ability to support the subsidiary. In many cases, such as for some captive finance companies, Fitch is not able to form a stand-alone rating opinion on the non-bank financial institution subsidiary, when there are high levels of financial, operational and management integration with the parent entity. For example, if the franchise position of the subsidiary is highly correlated with that of the parent and/or the subsidiary's access to funding is heavily dependent upon the parent, these may limit Fitch's ability to assign a stand-alone rating to the subsidiary.

If the subsidiary is small and of a non-material size relative to the parent, this may also limit Fitch's ability to assign a stand-alone rating to the subsidiary. Stand-alone ratings are not usually assigned to development institutions or other non-bank financial institutions whose operations are largely determined by their policy roles (i.e. they have limited commercial operations).

In certain circumstances, a non-bank financial institutions' Long-Term Foreign-Currency IDR can also be constrained at a level below that implied by the "higher of" approach. This occurs when the non-bank financial institution's stand-alone assessment is higher than the Country Ceiling of the jurisdiction in which it is domiciled, and the Country Ceiling constrains the non-bank financial institution's Long-Term IDR. A non-bank financial institution's SR (unlike its stand-alone assessment) already captures the constraints (the risk of transfer and convertibility

Long-Term IDR Scale

Category	Brief Description
AAA	Highest credit quality
AA	Very high credit quality
A	High credit quality
BBB	Good credit quality
BB	Speculative credit quality
B	Highly speculative credit quality
CCC	Substantial credit risk
CC	Very high levels of credit risk
C	Exceptionally high levels of credit risk
RD	Restricted default
D	Default

The modifiers '+' or '-' may be appended to a rating to denote relative status within categories from 'AA' to 'CCC'. Click here for full descriptions of each rating category.

Source: Fitch.

restrictions) reflected in the Country Ceiling, and so would not be assigned at a level implying a higher Long-Term IDR than the Country Ceiling.

On rare occasions, a non-bank financial institution's IDR could be above the level implied by its stand-alone assessment. This could occur if the non-bank financial institution has sufficient buffers of liabilities that rank below the reference liabilities for its IDRs that could be restructured or bailed in to recapitalize the non-bank financial institution without the reference liabilities for its IDRs suffering a default. In determining the sufficiency of the buffers, Fitch will use the same 'qualifying junior debt' principles outlined in the Bank Rating Criteria.

LC IDRs are generally viewed as reflecting the underlying credit quality of the company and incorporate economic/political risk and liquidity and foreign-exchange risks. While LC IDRs measure the likelihood of repayment in the currency of the jurisdiction, they do not account for the possibility that it may not be possible to convert local currency into foreign currency or make transfers between sovereign jurisdictions (i.e. transfer and convertibility risks).

It is important to note that the LC IDR incorporates the probability of default for all of an issuer's debt obligations (local- and foreign currency-denominated) in the absence of transfer and convertibility risks. This takes into account the probability that an issuer under stress will default on all obligations and will not pick and choose specific debt instruments on which to default. Therefore, when the LC IDR is at or below the Country Ceiling, the LC IDR and the FC IDR will be equal virtually all of the time.

Short-Term IDR Scale

Category	Brief Description
F1	Highest short-term credit quality
F2	Good short-term credit quality
F3	Fair short-term credit quality
B	Speculative short-term credit quality
C	High short-term default risk
RD	Restricted default
D	Default

A '+' modifier may be appended to the 'F1' rating to denote exceptionally strong credit quality. Click here for full descriptions of each rating category.

I.2. Short-Term Issuer Default Ratings

What They Measure

As with issuers in other sectors, Short-term IDRs reflect the non-bank financial institution's vulnerability to default in the short term. For non-bank financial institutions and most other issuers, the "short-term" typically means up to 13 months.

When They Are Assigned

Short-term IDRs are assigned to all non-bank financial institutions that have Long-Term IDRs, except where an issuer does not have, and is not expected to have, material short-term obligations. The short-term instrument most commonly rated by Fitch in the non-bank financial institution space is commercial paper (CP).

On Which Scale

Short-term IDRs are assigned on a seven-point scale *(see table at left)*.

How Are They Determined

Short-Term IDRs are almost always assigned in accordance with a correspondence table between Long-Term and Short-Term IDRs *(see table at left)*. Where the Long-Term IDR can correspond to either of two Short-Term IDRs (and the Long-Term IDR is driven by the non-bank financial institution's stand-alone profile), the Short-Term IDR will usually be determined based primarily on the strength of the issuer's liquidity profile, for example by considering its level of liquid assets, access to the capital markets or breadth of contingency funding sources *(see Section IV.1)*.

Where the Long-Term IDR is support driven, the higher of the two possible Short-Term IDRs will typically be assigned where the issuer is rated lower than the supporting entity. This is because Fitch generally views the propensity to support as more certain in the near term.

I.3. Viability Ratings

What They Measure

Only in rare circumstances are VRs assigned to non-bank financial institutions. VRs are primarily used to measure the intrinsic creditworthiness of a bank on a stand-alone basis, without the benefit of government or institutional support. Since non-bank financial institutions do not typically have the systemic influence of a bank, they do not generally have the potential to receive sovereign support. As a result, the measure of a non-bank financial institution's stand-alone credit profile is generally encompassed in the LT IDR.

Fitch will assign VRs to non-bank financial institutions, only in limited circumstances, for example to aid transparency when the IDRs are driven by external sovereign support or where the entity has features of a bank (including potentially a banking license and a deposit base), but where Fitch believes that, on balance, the non-bank financial institutions criteria is the main driver for the analysis. If a non-bank financial institution is assigned a VR, it would be in accordance with criteria and standards applicable to determining the stand-alone credit profile of that type of entity, as outlined in this criteria report. For more information on Viability Ratings, refer to the Bank Rating Criteria.

I.4. Support Ratings

What They Measure

Fitch's SRs reflect the agency's view on the likelihood that a non-bank financial institution will receive extraordinary support, in case of need, to prevent it from defaulting. Extraordinary support typically comes from one of two sources: the rated entity's shareholders (institutional support) or the national authorities of the country where it is domiciled (sovereign support). However, in some circumstances SRs may also reflect potential support from other sources, e.g. international financial institutions, regional governments or expected acquirers of the rated entity.

In some cases, Fitch may judge that the likelihood of a non-bank financial institution receiving external support is materially different regarding its foreign- and local-currency obligations. This may happen, for example, when the sovereign that is the potential support provider itself has Foreign- and Local-Currency IDRs assigned at different levels. In such cases, the non-bank financial institution's SR (and SRF) will be assigned based on the obligations less likely to be supported (usually, those in foreign currency), while the non-bank's Foreign-and Local-Currency IDRs may be assigned at different levels to reflect the difference in risk.

SRs do not specifically address transfer and convertibility risk for each and every foreign jurisdiction in which a non-bank financial institution operates, nor do they reflect jurisdiction-specific resolution risks.

When They Are Assigned

SRs may be assigned to non-bank financial institutions that Fitch expects to be beneficiaries of sovereign, subnational, or institutional support.

On Which Scale

SRs are assigned on a five-point scale, with '1' representing an extremely high probability of support, and '5' indicating that support cannot be relied on.

How They Are Determined

Fitch's criteria for assessing the likelihood of external support for a non-bank financial institution is outlined in Section III of this report. Whether considering sovereign or institutional support, Fitch will analyze both the ability and propensity of the supporting entity to provide assistance to the FI concerned and, in the case of institutional support, potential constraints that may be imposed upon the institution as a result of sovereign risk. Once a non-bank financial institution's institutional support-driven IDR or SRF has been determined, its SR is determined in accordance with the 'Support Rating Scale Correspondence Table' below.

I.5. Support Rating Floors

What They Measure

SRFs reflect the agency's view about the likelihood that the rated entity will receive extraordinary support, in case of need, specifically from government authorities. This usually means from the national authorities of the country where the non-bank financial institution is domiciled, although in certain cases, Fitch may also factor potential support from subnational or international government institutions into its assessment depending on factors outlined in Section III.1. Therefore, SRFs do not capture the potential for institutional support from the entity's shareholders. SRFs indicate the minimum level to which the entity's Long-Term IDRs could fall if the agency does not change its view on potential sovereign support.

Support Rating Scale Correspondence Table

IDR/Implied IDR Based on Support (SRF for Sovereign Support) Rating	Probability of Support	Support Rating
'A–' or Above	A non-bank financial institution for which there is an extremely high probability of external support. The potential provider of support is very highly rated in its own right and has a very high propensity to support the non-bank financial institution in question.	1
'BBB' Category	A non-bank financial institution for which there is a high probability of external support. The potential provider of support is highly rated in its own right and has a high propensity to support the non-bank financial institution in question.	2
'BB' Category	A non-bank financial institution for which there is a moderate probability of support because of uncertainties about the ability or propensity of the potential provider of support to do so.	3
'B+' or 'B'	A non-bank financial institution for which there is a limited probability of support because of significant uncertainties about the ability or propensity of any possible provider of support to do so.	4
'B–' or Below	A non-bank financial institution for which there is a possibility of external support, but it cannot be relied on. This may be due to a lack of propensity to provide support or to very weak financial ability to do so.	5

Source: Fitch.

SRFs do not specifically address transfer and convertibility risk for each and every foreign jurisdiction in which a non-bank financial institution operates, nor do they reflect jurisdiction-specific resolution risks.

When They Are Assigned

SRFs are assigned to non-bank financial institutions where Fitch believes the most likely source of potential extraordinary support is government authorities, rather than the non-bank financial institution's shareholders. For example, Fitch may assign a SRF to a non-bank financial institution which exhibits systemic importance or serves as a core component of the financial market infrastructure. They may also be assigned where institutional (shareholder) support is viewed as more reliable, but the agency believes it would be useful to also indicate the level below which the ratings are unlikely to fall due to government support.

On Which Scale

SRFs are assigned on the 'AAA' rating scale. Where there is no reasonable assumption that sovereign support will be forthcoming, an SRF of 'No Floor' is assigned.

How They Are Determined

Fitch's criteria for assessing the likelihood of sovereign support for a non-bank financial institution and assigning its SRF are outlined in Section III.1 of this report. Fitch analyzes the ability of the sovereign to provide support, its propensity to support the specific non-bank sector as a whole and its propensity to support the specific non-bank financial institution in question. The 'Support Rating Scale Correspondence Table' above is used to link a non-bank financial institutions' Support Rating and its institutional support-driven IDR or SRF. The table can be read left to right or right to left, depending on whether the support-driven IDR/SRF or SR is determined first.

I.6. Derivative Counterparty Ratings

What They Measure

In some jurisdictions, developments in resolution frameworks or insolvency frameworks mean the vulnerability to default on a derivative contract could be lower than the vulnerability to default on other senior liabilities, even equally ranking ones. This could be because derivatives enjoy legal preference over, say, senior debt or because of powers granted to resolution authorities to treat equally ranking liabilities differently.

DCRs are issuer-level ratings and express Fitch's opinion on a non-bank financial institution's relative vulnerability to default, due to an inability to pay, on any derivative contract with third-party, non-government counterparties. Short-term 'stays' on derivatives at the outset of a resolution process would not be considered a default.

The vulnerability to default could vary even within this class of exposure (e.g. collateralized derivative exposures or cleared derivatives being less vulnerable to default than uncollateralized). DCRs in effect address the vulnerability to default on the riskiest type of counterparty exposure, which Fitch assumes, either jointly or in isolation, will be an uncollateralized derivative exposure.

Unless Fitch explicitly assigns ratings at the foreign subsidiary level, DCRs apply both to material domestic derivative liabilities and those originated by foreign subsidiaries. However, they do not specifically address transfer and convertibility risk for each and every foreign jurisdiction in which a non-bank financial institution operates, nor do they reflect jurisdiction-specific resolution risks.

When They Are Assigned

Unlike Long-Term IDRs, which are assigned to virtually all non-bank financial institutions with international ratings, Fitch only assigns DCRs to selected non-bank financial institutions that may be subject to resolution in selected jurisdictions where: i) Fitch believes derivative counterparties may be able to avoid default when other senior creditors suffer default (e.g., due to an effective resolution regime and/or clear legal preference for derivative counterparties) and ii) an issuer either acts as a notable derivative counterparty nationally or internationally, acts as derivative counterparty to Fitch-rated transactions (e.g. structured finance) or where Fitch otherwise understands there to be market interest.

Given that non-bank financial institutions rarely benefit from comparably formalized resolution frameworks as banks, Fitch expects the application of DCRs to stand-alone non-bank financial institutions to be limited to a small number of broker-dealers and FMIs.

Derivative Counterparty Rating Scale

Category	Brief Description
AAA(dcr)	Highest credit quality
AA(dcr)	Very high credit quality
A(dcr)	High credit quality
BBB(dcr)	Good credit quality
BB(dcr)	Speculative credit quality
B(dcr)	Highly speculative credit quality
CCC(dcr)	Substantial credit risk
CC(dcr)	Very high levels of credit risk
C(dcr)	Exceptionally high levels of credit risk
RD(dcr)	Restricted default
D(dcr)	Default

The modifiers '+' or '-' may be appended to a rating to denote relative status within categories from 'AA' to 'CCC'. Click here for full descriptions of each rating category. Source: Fitch.

On Which Scale

DCRs are assigned on the 'AAA' scale, but with a '(dcr)' suffix *(see table at left)*.

How They Are Determined

DCRs are anchored to an entity's Long-Term IDR and will be in line with an entity's Long-Term IDR, except in the following circumstances.

A DCR will be above a non-bank financial institution's IDR when: i) a non-bank financial institution's Long-Term IDR is driven by its VR or stand-alone assessment or is aligned with a parent's IDR due to integration. The parent and subsidiary would have to be located in the same jurisdiction and capital/liquidity fungibility would normally be expected to be high; ii) there is clear legal preference for derivative counterparties over senior debt and/or other senior instruments (or this is expected to occur within a typical rating horizon); and iii) Fitch believes these (legally junior) senior liabilities to be of sufficient size to avoid a liquidation and absorb losses, either through statutory means, contractual means or a distressed debt exchange, without triggering a default on any derivative counterparty.

When deciding whether to notch up, Fitch uses the same recapitalization volume principles as are employed when determining whether to notch up an IDR above the level implied by a non-bank financial institution's stand-alone assessment *(see I.1 Long-Term IDRs: How They Are Determined)*. Like IDRs, DCRs are subject to Country Ceilings and other sovereign constraints, for example relating to intervention risk *(as outlined in Annex 2: Rating Non-Bank Financial Institutions Above the Sovereign)*. DCRs are capped one notch above an entity's IDR when IDRs are in the 'BB' range or higher but potential uplift can be greater when IDRs are in the 'B' range or lower.

In some instances non-bank financial institution credit profiles may deteriorate relatively rapidly, while in other instances they can remain fundamentally weak for relatively extended periods of time (e.g. in countries where the sovereign is lowly rated, but relatively stable). Use of '+' or '-' modifiers in the 'CCC' DCR range is more likely for the latter than the former.

I.7 Issue Ratings

What They Measure

Issue ratings of non-bank financial institutions, like those of other corporate finance sectors, reflect Fitch's view of the overall level of credit risk attached to specific financial commitments, usually securities. This view incorporates an assessment of the likelihood of default (or of "non-performance" risk in the case of subordinated/hybrid securities) on the specific obligation, and potential recoveries for creditors in case of default/non-performance. Short-term non-bank financial institution issue ratings, like those of other sectors, incorporate only an assessment of the default risk on the instrument.

Non-performance by a non-bank financial institution on its subordinated/hybrid securities is defined as any of the following:

- the missing (omission or deferral) of a coupon or similar distribution;
- contingent conversion into a more junior instrument to the detriment of the investor (other than at the investor's option);
- the writedown, writeoff, conversion or non-payment of principal; and
- a distressed debt exchange.

Recovery Rating Scale

Rating	Recovery Prospects Given Default	Typical Historical Recoveries (%)	Notching of Issue Rating[a]
RR1	Outstanding	91–100	+3
RR2	Superior	71–90	+2
RR3	Good	51–70	+1
RR4	Average	31–50	0
RR5	Below Average	11–30	(1)
RR6	Poor	0–10	(2)[b]

Click here for full descriptions of each rating. [a]Relative to level of non-performance risk. [b]Fitch's RR definitions allow for minus three notches in case of 'RR6'; however, Fitch does not notch more than twice for FI issues.
Source: Fitch.

When They Are Assigned

Issue ratings may be assigned to individual obligations or debt programs of non-bank financial institutions.

On Which Scale

Non-bank financial institution issues with an initial maturity of more than 13 months are usually rated on the long-term rating scale, whereas issues with an initial maturity of less than 13 months are usually assigned ratings on the short-term rating scale. Whether Fitch rates issues on the short- or long-term rating scale will also depend on market convention and local regulation.

Where a non-bank financial institution (or corporate) has a Long-Term IDR of 'B+' or below, Fitch also usually assigns a Recovery Rating (RR) to the entity's issues rated on the long-term scale. RRs provide greater transparency on the recovery component of Fitch's assessment of the credit risk of lowly rated issuers' securities.

How They Are Determined

For long-term non-bank financial institution issues, Fitch first determines the likelihood of default/non-performance on the specific obligation, which is measured on the long-term 'AAA' rating scale. This is judged to be either in line with, or notched off of, the obligor's Long-Term IDR, which serves as the "anchor rating" for the issue rating.

Having established the level of default/non-performance risk on the issue, Fitch may then adjust this upwards or downwards to arrive at the issue rating if the agency views the instrument as having above- or below-average recovery prospects. Where recovery prospects are viewed as average, the issue rating will be in line with the assessment of default/non-performance risk. The extent of potential upward/downward adjustment of the issue rating based on the instrument's recovery prospects is shown in the table above.

Fitch's approach to assigning issue ratings to different classes of securities issued by non-bank financial institutions is outlined in Section IV of this report.

I.8. National Ratings

What They Measure

National scale ratings are an opinion of creditworthiness relative to the universe of issuers and issues within a single country.

When They Are Assigned

National scale ratings are most commonly used in emerging market countries with sub- or low investment grade sovereign ratings on the international scale.

On Which Scale

National scale ratings are assigned on the long-term ('AAA') and short-term ('F1') rating scales, but with a country suffix to identify them as national scale ratings. Cross border issues carry the suffix of the country into which the debt has been issued, rather than the suffix of the issuer's domicile. In some monetary union countries, a single country suffix may be applied (e.g. the 'zaf' suffix for South Africa and Namibia National Ratings).

How They Are Determined

National scale ratings are assigned on the basis that the "best credits or issuers" in the country are rated 'AAA' on the national scale. National Ratings are then assessed using the full range of the national scale based on a comparative analysis of issuers rated under the same national scale to establish a relative ranking of credit worthiness.

Fitch uses the Non-Bank Financial Institutions Rating Criteria to assign national scale ratings to non-bank financial institutions, as it describes how Fitch assesses the relevant qualitative and quantitative factors that reflect the risk profile of issuers and their financial obligations. The rating assignment process uses the same rating framework as for international ratings, i.e. a combination of intrinsic and external support analysis.

Fitch adopts the following steps to assign national scale ratings:

1) Using either international or domestic peers as a starting point a comparative analysis is undertaken using the qualitative and quantitative factors of the Non-Bank Financial Institutions Rating Criteria. This process facilitates an initial relative positioning and ranking of credit risk both with other peer issuers within a country and/or internationally.
2) Fitch uses equivalence tables, where relevant, to ensure relativities between issuers on the international scale and the more granular, country-specific national long-term rating scale are maintained.
3) Where assigned, national short-term ratings are then determined using the same process and principles outlined in section I.2 of this report. National scale short-term issue ratings are aligned with a non-bank financial institution's national short-term rating issuer unless there are exceptional circumstances (e.g. a specific issue is guaranteed by a third party).
4) National scale long-term debt ratings are aligned with or notched from an issuer's national long-term rating using the same framework as outlined in section IV of this report.

Fitch does not publish rating navigators for national ratings.

II. Stand-Alone Assessment

In assessing a non-bank financial institution's stand-alone profile, Fitch considers five key factors: operating environment; company profile; management and strategy; risk appetite; and financial profile. While the first three factors are relatively common across banks and non-bank financial institutions, an assessment of a firm's risk appetite and financial profile is more specific to the subsector in which the company operates.

There may be instances where the assessment of the credit profile of an entity includes components of the bank and non-bank financial institution's criteria. For example, several non-bank entities have transitioned to bank/financial holding companies and/or acquired bank subsidiaries since the financial crisis in an effort to access more stable deposit funding. Examples include credit card companies, auto finance companies, commercial lenders and broker-dealers. In these instances, Fitch considers how the entity's credit profile compares to banks and non-bank financial institutions that undertake similar activities. In any case, Fitch would expect to designate the primary criteria in the associated Rating Action Commentary and, where relevant, Rating Navigator.

All factors are relevant in determining a non-bank financial institution's stand-alone credit risk profile, but their relative importance varies from institution to institution depending on operating environments and the specifics of individual institutions and can change over time. Hence, Fitch does not assign fixed weightings to each factor but rather assigns the relative importance of each key rating factor in the determination of the stand-alone credit risk profile of a given institution. The relative importance indicator, as well as a trend/outlook indicator for each key rating factor and each financial profile subfactor, is generally published by Fitch in its Rating Navigators.

Key Issuer Default Rating Framework Considerations

	Securities Firms	Investment Managers[a]	BDCs	Finance & Leasing Companies[b]	FMIs
Operating Environment	Sovereign Rating, Economic and Business Environment, Financial Market Development, Regulatory and Legal Framework				
Company Profile	Franchise, Business Model and Organizational Structure				
Management and Strategy	Management Quality, Corporate Governance, Strategic Objectives and Execution				
Risk Appetite	Operational Risk	Operational Risk (IMs, IFs)/ Underwriting Standards (ICs)	Underwriting Standards	Underwriting Standards	Operational, Reputational and Legal Risks
	Risk Controls	Risk Controls	Risk Controls	Risk Controls	N.A.[c]
	Growth				
	Market Risk	Market and Counterparty Risk	Market Risk	Market Risk	Counterparty Risk Management
Financial Profile	Asset Quality	Asset Performance (IMs, ICs, IFs) / Asset Quality (ICs)	Asset Quality	Asset Quality	Counterparty Exposure
	Earnings and Profitability				
	Capitalization and Leverage				
	Funding, Liquidity and Coverage				

[a]Includes traditional and alternative investment managers (IMs), investment companies (ICs) and investment funds (IFs). [b]Includes mortgage real estate investment trusts. [c]Does not imply that risk controls are not considered, but rather, that the assessment is embedded within the "Operational, Reputational and Legal Risks" and "Counterparty Risk Management" sections. N.A. – Not applicable.
Source: Fitch.

Fitch's assessment of a non-bank financial institution's operating environment usually has an influence on its assessment of other credit factors. This is because the operating environment can impact, for example, the vulnerability of a non-bank financial institution's asset quality and capital,

the sustainability of its earnings and the stability of its funding. The operating environment may also affect assessments of non-financial factors, for example, the quality of a non-bank financial institution's franchise (company profile), its ability to execute its strategy (management and strategy) and the risks associated with its underwriting standards (risk appetite).

The operating environment will typically act as a constraint on the stand-alone credit rating, and other key rating factor scores, other than in cases where a non-bank financial institution can demonstrate an ability to insulate itself from the environment(s) in which it operates.

For each rating factor, Fitch has provided subfactor/rating category matrices that provide representative characteristics for that rating category. These characteristics are not necessarily an exhaustive and determinative review of that factor or subfactor. For example, a non-bank financial institution may meet some of the characteristics associated with more than one category, or some characteristics may not apply at all because of the specifics of the non-bank financial institution's profile. In those instances, Fitch will apply the category that best fits.

The stand-alone assessment framework considers five key rating factors:

- operating environment;
- company profile;
- management and strategy;
- risk appetite; and
- financial profile.

The first four key rating factors listed above are predominantly qualitative, although quantitative measures are considered where available and relevant, such as economic data (operating environment), market shares and business footprint (company profile) and limit structures (risk management). These qualitative factors, individually or in combination, provide the context in which quantitative financial metrics are considered. Further detail is provided in the relevant sections that follow.

Fitch's factor and subfactor assessment framework is based on consideration of 'core' and 'complementary' attributes. Core attributes are present in the analysis of all or most non-bank financial institutions and in most circumstances. Complementary attributes are present in some, but not all, circumstances. All attributes are considered in the application of the criteria, but where an attribute is either not present or immaterial to the credit profile it will make no, or limited, contribution to the analysis. The materiality and influence of each attribute in the analysis of each factor and subfactor varies by institution. A complementary attribute could carry an elevated influence in the stand-alone analysis, particularly if the rating factor that the attribute underlies is a key rating driver.

For the purposes of this criteria report, Fitch splits the non-bank financial institution universe into five subsectors, but recognizes that there may be issuers whose business model straddles various components of these subsectors or falls outside of the five subsectors. In these cases,

Fitch employs a hybrid or bespoke analytical approach, which would be articulated in Fitch's Rating Action Commentary on the issuer.

The five non-bank financial institution subsectors are: securities firms, investment managers, BDCs (which only exist in the U.S.), finance and leasing companies and FMIs. Finance and leasing companies include mortgage REITs, debt purchasers (i.e. companies that buy portfolios of defaulted assets or non-performing loans) and most non-bank policy institutions. FMIs include exchanges, clearing houses and non-bank central securities depositories (CSDs).

The investment manager subsector includes traditional and alternative investment managers, investment companies and investment funds. Traditional and alternative investment managers primarily manage third-party assets and, therefore, typically assume limited balance sheet risk while earning revenue through management fees.

Investment companies typically deploy permanent capital to assume investment/balance sheet risk while seeking to create value through asset appreciation and dividend and interest income. Investment companies that are relatively concentrated (five to 10 investments), have the ability to exert some influence over portfolio companies and exhibit investment holding periods generally extending over several years, may be rated by Fitch's Corporate group under the criteria titled "Investment Holding Companies Rating Criteria." The magnitude of underlying investments in financial institutions may also influence whether Fitch's "Non-Bank Financial Institutions Rating Criteria" or "Rating Investment Holding Companies" criteria is applied.

Investment funds also invest their own capital and assume the associated investment/balance sheet risk but are typically open-ended vehicles subject to redemption risk that seek to achieve returns primarily through trading gains over a shorter investment horizon. In practice, the primary type of investment fund to which this analytical approach is applicable is open-ended hedge funds, but it could also encompass pension funds and profit-oriented sovereign wealth funds, which may have lower relative levels of near- and medium-term financial obligations, and as a result, longer-term investment horizons than other investment funds. This may also contribute to a broader revenue mix for such investment funds, including realized/unrealized asset appreciation, dividends and interest income in addition to trading revenue.

Broadly diversified closed-end investment funds with more defined regulatory/structural frameworks, greater asset liquidity and/or more frequent investment turnover are typically rated by Fitch's Funds & Asset Managers group under the criteria titled "Closed-End Funds and Market Value Structures Rating Criteria," available on Fitch's website at www.fitchratings.com.

The Analytical Frameworks for Investment Managers, Investment Companies and Investment Funds table summarizes the various types of business models for the investment manager subsector and the applicable rating criteria.

Source: Fitch.

An assessment of the operating environment, company profile and management and strategy is largely common across the various subsectors (as well as banks), although some nuanced considerations are outlined herein. Conversely, assessments of the risk appetite and financial profile of a non-bank financial institution may differ by industry, so these factors are divided into five subcategories.

II.1 Operating Environment Assessment

Fitch's assessment of an institution's operating environment considers the following subfactors:

- sovereign rating;
- economic and business environment;
- financial market development; and
- regulatory and legal framework.

Importance of this Assessment

The first step in Fitch's assessment of stand-alone creditworthiness is a review of the institution's operating environment, as this sets the range for potential IDRs. The operating environment to a large degree serves as a constraining factor for the IDR, as it is rare for the IDR to be assigned significantly above the operating environment assessment, however well the issuer scores on other factors or subfactors.

Sovereign Rating

Attribute	Core Versus Complementary	Description
Sovereign Rating Cap	Core	The sovereign rating often acts as an effective cap on the maximum level of IDRs in a jurisdiction, due to the deterioration in the operating environment that typically accompanies a sovereign default. Sovereign default risk can also directly influence non-bank financial institutions' access to and cost of funding. However, in limited circumstances, where a non-bank financial institution has a very strong (in the context of the domestic market) overall credit profile and, in particular, a robust funding profile, the IDR may exceed the sovereign rating. International geographical diversification of business activities may also support a higher rating than that of the home sovereign. See Annex 2 for more details.
Divergence Between Sovereign Rating and Economic Environment	Complementary	It is also quite possible for the overall operating environment assessment and, hence, the IDRs for non-bank financial institutions in the country to be significantly lower than the sovereign rating. This may occur, for example, where the economic environment for non-bank financial institutions is relatively weak, but the sovereign rating is supported by factors specific to government finances and the sovereign balance sheet.
Divergence Between Domicile and Business Activity	Complementary	For certain non-bank financial institutions, the sovereign rating assessment may be higher or lower than the sovereign rating in their primary jurisdiction. For example, aircraft lessors may be domiciled in certain locations for tax purposes but have a portfolio of aircraft that are dispersed among lessees in a variety of countries around the globe. In these cases, Fitch would consider any geographic concentrations and the portability of the collateral, as determined by local law. The same may apply for diversified investment managers, investment companies and investment funds if the funds they manage, the assets they invest in, or the investors they service are in more favorable operating environments or there are ring-fenced assets or cash flows that strongly support rated obligations.
Business Model Specifics	Complementary (for Financial Market Infrastructure Companies)	The sovereign rating assessment is likely to have less of an influence on FMIs relative to banks or other non-bank financial institutions, given that many FMIs do not typically have significant credit exposure to sovereigns by holding bonds or placements with central banks. In many ways, FMIs may act like financial utilities, which are unlikely to be materially affected by sovereign stress. Indeed, the performance of certain FMI subsectors, such as exchanges, may be countercyclical to the credit profile of the sovereign, as there may be increased trading activity during periods of stress. As a result, a FMI could have a rating above the sovereign rating, with the primary exception being when the FMI holds a majority of its balance sheet or guarantee fund in sovereign securities, in which case the sovereign rating may take on a higher influence.

Source: Fitch.

Fitch's assessment of the operating environment incorporates both sovereign risk and broader country risks related to doing business in a particular jurisdiction; however, it does not capture transfer and convertibility risks, which are reflected separately in Fitch's Country Ceilings. For institutions that operate in multiple geographies, the subfactor and overall operating environment assessments will take a blended view of the different jurisdictions.

An assessment of the economic environment and the regulatory and legal framework for non-bank financial institutions may not align with that of a bank located in the same jurisdiction and it may also differ across the various categories of non-bank financial institutions. Additionally, regulatory scrutiny of banks around the globe is believed to be considerably more robust than regulation of non-bank financial institution subsectors.

The following tables identify those operating environment attributes that Fitch has defined as 'core' versus 'complementary' together with an indication of how each attribute is typically assessed. The accompanying subfactor/rating category matrix provides representative characteristics that aid the determination of the overall factor score assigned in each case.

Economic and Business Environment

Attribute	Core Versus Complementary	Description
Economic Variables, Forecasts and Judgements	Core	Fitch's view of the economic environment reflects its Sovereign Group's economic forecasts and judgments, and reflects Fitch's views on those macro variables that may affect a non-bank financial institution's fundamental credit strengths through their impact on the business environment. These may include, but are not limited to, the stage of economic development, economic growth expectations, private credit growth and employment and demographic prospects. The extent to which specific variables may be relevant and material in each jurisdiction will vary.
Industry or Subsector Specifics	Core	Fitch also considers a specific industry or subsector's sensitivity to changes in the economic climate in which it operates. Some industries will be more influenced by cyclical changes in the broader economic environment (e.g. aircraft leasing), while others may perform well under a variety of market scenarios (e.g. alternative investment management). Still, other businesses may be highly sensitive to specific indicators, like interest rates (e.g. mortgage servicing). Not all non-bank financial institutions within a country may receive the same categorization under this factor, as the various subsectors may respond very differently to economic trends. Still, each assessment will take a blended view of the operating environment for institutions that operate in multiple geographies. The economic environment, which also influences the sovereign rating, is considered separately because it is only one factor influencing the sovereign rating, and it is possible that the two will be assessed at significantly different levels.
Asset, Commodity and Market Price Movements	Complementary	Fitch considers changes in house/real estate prices, equity prices, interest rates and exchange rates in order to aid identification of potential stress arising from buildup of risk. Where a high degree of dollarization of an economy creates foreign exchange imbalances, Fitch will assess the system's ability to manage and mitigate the risk effectively.

Source: Fitch.

Financial Market Development

Attribute	Core Versus Complementary	Description
Size and Structure of the Financial System	Core	Large, healthy and highly developed financial markets, all else being equal, will result in a higher Financial Market Development score as this may underpin a non-bank financial institution's franchise. Conversely, small, developing or highly diffuse financial markets may result in a lower Financial Market Development score, as a non-bank financial institution may be unable to generate any discernible competitive advantage or economies of scale. An oligopolistic market structure may assist in protecting a non-bank financial institution's franchise or market position or create a material obstacle for new participants.
Depth and Liquidity of National Capital Markets	Core	A deep and liquid capital market supports market stability and will typically result in higher Financial Market Development scores. An underdeveloped capital market, in terms of scale and/or market liquidity, would generally result in lower Financial Market Development scores.
Central Bank Market Support	Complementary	The existence of central bank support measures and a reliable, predictable and transparent lender of last resort for a banking system will typically be neutral to the Financial Market Development assessment. Where ordinary support measures or options available to the banking system via the central bank are limited or opaque, or where there is a dependence on the central bank to circulate liquidity within the system throughout the business cycle this would generally result in lower Financial Market Development scores.
Institutional Frameworks to Support Functioning Financial System	Complementary	The existence of institutional frameworks to support the smooth functioning of the financial system, such as a credit bureau or a depositor protection scheme, will be neutral to positive for the Financial Market Development score. The lack of any effective institutional frameworks will generally be commensurate with a lower financial market development score. For example, the extent to which a clearing house or CSD does not have the ability to hold a first priority lien on a counterparty's collateral in the event of the counterparty's default could be viewed as a constraint.

Source: Fitch.

Regulatory and Legal Framework

Attribute	Core Versus Complementary	Description
Robustness and Effectiveness of Framework	Core	The regulatory and legal framework assessment considers how relevant non-bank financial institution legislation, accounting standards and the legal framework compare to international practices as well as the willingness of regulators to intervene and enforce laws and regulations. A jurisdiction's regulatory and legal framework is typically commensurate with its general operating environment and stage of maturity and, therefore, is often neutral to the overall Operating Environment assessment.
National Versus International Standards	Complementary	To the extent that relevant legislation and/or implementation, including the willingness of regulators to intervene and enforce laws and regulations, are materially weaker than international practice, or implementation is relatively slow, this would be considered a weakness.
Audit and Accounting Standards	Complementary	This analysis also considers the general accounting framework employed, such as IFRS or U.S. GAAP, audit effectiveness and the frequency and robustness of required reporting. In cases where audit or accounting standards or their compliance with legal reporting requirements is weaker than international practice this will result in a lower Regulatory & Legal Framework score.
Creditor Rights	Complementary	The regulatory and legal framework assessment considers the extent to which national legislation provides appropriate creditor protection and enforcement of creditor rights as far as they relate to the rights of a non-bank financial institution's creditors. Deficiencies in the legislative framework that could affect a non-bank financial institution's ability to enforce its rights as a creditor are reflected in the Asset Quality assessment.
Governance	Complementary	Corporate governance is assessed on both a systemic and issuer-specific basis. Notable systemic weaknesses, such as the adverse influence of the state in the financial system and the functioning of the private sector, would have a negative impact on the regulatory and legal framework assessment.
Regulatory Restrictions on Operating/Financial Profile	Complementary (for BDCs)	BDCs are subject to a variety of regulatory requirements, as dictated by the Investment Company Act of 1940 (40 Act), and Fitch carefully weighs the impact of each in its assessment of the sector. A 200% asset coverage requirement, which effectively limits balance sheet leverage to 1.0x, is viewed favorably. However, most BDCs elect to be treated as Regulated Investment Companies (RICs) for tax purposes, which limits capital retention, and is viewed more negatively by Fitch.
Tax Legislation	Complementary (for Mortgage REITs)	For finance companies that have elected REIT status under the U.S. Internal Revenue Service tax code (i.e. mortgage REITs including commercial mortgage REITs, residential mortgage REITs and hybrid mortgage REITs), Fitch considers the impact of U.S. federal tax legislation. Namely, U.S. mortgage REITs benefit from favorable tax treatment, as they do not pay income taxes on the portion of taxable income paid as dividends to shareholders. Conversely, required dividend distributions weaken REITs' capital retention capabilities relative to other financial institutions that do not have this requirement.
Business Model Specifics	Complementary	In general, Fitch views the regulatory and legal frameworks of non-bank financial institutions to be weaker than those related to banks, given that banks are subject to a variety of rules and regulations on a local and international scale. While the breadth and depth of bank regulation comes with a cost, it does provide an independent layer of oversight, which covers quantitative metrics, like capital adequacy, in addition to requirements related to risk management and infrastructure sufficiency.

II.2 – Company Profile Assessment

Fitch's Company Profile assessment considers the following subfactors:

- franchise;
- business model; and
- organizational structure.

Importance of this Assessment

Assessment of a company's franchise, business model, and organizational structure help identify the types of business risks an institution could face together with its ability to safeguard or defend existing businesses and earnings, and gain new business through an analysis of its longer term competitive strengths, weaknesses, opportunities and threats.

The company profile assessment is typically conditioned, and often constrained, by the operating environment assessment, unless Fitch believes the non-bank financial institution's business profile is insulated from the effects of its operating environment(s). Within that operating environment context, the company profile is determined at a level that primarily reflects the strength and quality of its franchise and stability of its business model.

The following tables identify those company profile attributes that Fitch has defined as 'core' versus 'complementary,' together with an indication of how each attribute is typically assessed. The accompanying subfactor/rating category matrix provides representative characteristics that aid the determination of the overall factor score assigned in each case.

Franchise

Attribute	Core Versus Complementary	Description
Market Shares	Core	A non-bank financial institution's franchise is typically reflected in market shares in the entity's core offered product(s). Franchise value is assessed on the most relevant basis - global, national or regional - taking into account both the size of the market in which a non-bank financial institution operates and its position within that market. Small relative market shares, particularly in large markets, are not necessarily negative for the assessment and may be offset by sustainable, competitive advantage and stable performance in core product and client segments. Large market share in a small market can potentially be positive for the assessment, provided it is not constrained by the strength or quality of the market itself or the relevant operating environment assessment.
Competitive Position	Core	A non-bank financial institution's competitive position relative to peers' may be evident in relative product leadership and pricing power as well as reflective of any material barriers to entry. Product leadership will often be a function of scale, where traditional financial products are concerned, and may also reflect technology and efficiency advantages, or deficiencies, relative to peers. In the case of certain niche products or offerings, leadership may be reflected in relevant "league tables."
Critical Mass	Complementary	Size, taken in isolation, is unlikely to be a driver for the company profile assessment, but may affect pricing power and client relationships. Non-bank financial institutions which lack critical mass are likely to be assigned lower scores.
Client Relationships	Complementary	Fitch considers the nature of client relationships and the extent to which product range and/or expertise is the key driver of client retention or business volume growth as opposed to price.
Intragroup Benefits and Risks	Complementary	An institution's franchise may also incorporate any benefits it receives from being part of a larger (typically financial) group. This could include client relationships, funding access, product offering or technical expertise that the institution would not otherwise have access to, as well as potential diversification benefits of other businesses of subsidiaries or related companies. Conversely, a non-bank financial institution's franchise may incorporate contagion risks where a weakness in the broader group's credit profile exists.

Source: Fitch.

Business Model

Attribute	Core Versus Complementary	Description
Business Mix	Core	An institution's business model encompasses the ways in which it generates revenue and profits. This includes an assessment of an institution's business mix, such as by asset/product, service composition and proportion of revenue and earnings generated from core business lines.
Earnings Volatility	Core	Business models that are highly reliant on volatile businesses, such as trading, or where market conditions exert a greater influence on business volumes and revenue generation between reporting periods will typically result in a lower business model score relative to other financial institutions with lower observed volatility. Stability in earnings through credit and interest rate cycles will typically contribute to higher scores.
Geographical Diversification	Complementary	A high concentration of a non-bank financial institution's operations in less developed economies is likely to weigh on Fitch's assessment of its business model. Concentrations from a client and/or investor perspective may also be a limiting factor. Geographic diversification may be a positive rating attribute, but expansion into areas that add little or limited overall synergies may be viewed as neutral or negative to the company profile assessment.
Product Concentration	Complementary	The perceived risk associated with the particular product(s) and the quality of the product franchise can influence the assessment for a business model with a narrow product focus, (e.g. a monoline lender) versus one that provides a broader array of products. Product diversification may be a positive rating attribute, but expansion into business areas that add little or limited overall synergies may be viewed as neutral or negative to the company profile assessment.

Source: Fitch.

Organizational Structure

Attribute	**Core Versus Complementary**	**Description**
Appropriateness Relative to Business Model	Core	A group's organizational structure is typically commensurate with its business model. Group structure rarely affects Fitch's overall rating assessment, but has the potential to when Fitch considers the group as overly complex (relative to its operations and footprint), opaque or with material risks arising from intragroup transactions. Examples of business model complexity include layers of intermediate holding companies whose locations may be mainly tax-driven, or unnecessarily complex structures that appear inconsistent with the size, scale and footprint of the institution/group.
Opaqueness	Complementary	Unexplained cross-ownership agreements or large minority interests, which are not commensurate with the non-bank financial institution's business model, would typically result in a lower company profile score.
Intragroup Transactions	Complementary	Intragroup transactions may affect risks associated with the rated entity. This is especially important where cash or capital can get trapped in subsidiaries and therefore is not readily available for distribution to the group as a whole.
Ownership Dynamics	Complementary	Fitch also considers ownership dynamics, including whether an issuer is publicly traded privately held or mutually owned, whether there is private equity ownership and/or non-strategic ownership and whether there is significant influence from related parties to understand the impact on strategic decisions, liquidity and/or capitalization. Mutually owned institutions, such as many clearing houses, may be viewed more favorably to the extent they reduce conflicts of interest between risk management and profit maximization.

Company Profile

	aaa	aa	a	bbb	bb	b	ccc and Below
Franchise	Dominant franchise in multiple business segments or geographies. Strong competitive advantages likely to endure. Possesses strong competitive advantages and pricing power in principal operating segments. These strengths maintained through economic cycles.	Leading franchise in multiple business segments or geographies. Solid competitive advantages likely to endure into the long term. Demonstrated competitive advantages and pricing power. These strengths maintained over multiple economic cycles.	Strong franchise in key markets or businesses. Has leading franchise in some key operating segments or geographies. Demonstrated competitive advantages and pricing power in key operating segments.	Adequate franchise in geographies. Operating in somewhat less developed markets or has limited competitive advantages or pricing power in main operating segments.	Moderate franchise in key business segment or geographies. Operating in somewhat less developed markets or has limited competitive advantages and generally a price taker in main operating segment(s). Limited operating history.	May have nominal franchise in a key business segment or geographies. Operating in less developed markets or has no discernible competitive advantage. Very limited operating history.	Operating in undeveloped markets or has no discernible franchise value or competitive advantage. Extremely limited operating history.
Business Model	Highly diverse and stable business model across multiple operating segments or geographies. Critical mass maintained in all business segments and geographies in which it operates. Minimal reliance on volatile businesses.	Very diverse and stable business model across multiple operating segments or geographies. Maintains critical mass in most business segments and geographies in which it operates. Modest reliance on volatile businesses.	Diverse and stable business model. Critical mass maintained in key operating segments or geographies in which it operates. Notable reliance on volatile businesses.	Less stable and/or diverse business model, potentially dominated by a key operating segment or geography. Greater reliance on volatile businesses.	Less diverse and stable business model, potentially with more specialization in a key operating segment or less stable/advanced economies. Significant reliance on volatile businesses.	Limited business model stability. May be wholly reliant on volatile businesses or economies.	Business model rapidly evolving or operating in unstable economic environment.
Organizational Structure	Organizational structure complexity commensurate with 'aaa/aa' business model. Major legal entities exist principally for clear business reasons. High visibility into principal legal entities.		Organizational structure complexity commensurate with 'a/bbb' business model. Potentially increased organizational structure complexity. Good visibility into major legal entities.		Significant organizational structure complexity. Potentially limited visibility into main legal entities.		Highly complex, opaque or materially changing organizational structure.

Source: Fitch.

II.3 – Management and Strategy Assessment

Fitch's assessment of Management and Strategy considers the following subfactors:

- management quality;
- corporate governance;
- strategic objectives; and
- execution.

Importance of this Assessment

An assessment of management, corporate governance, strategic objectives and execution is one of the least tangible aspects of its fundamental analysis but is important in considering how an institution is run, for example through establishing particular business or financial goals, developing a strategy to pursue those goals, and demonstrating an ability to meet these goals, all of which provide insight into motivations and incentives within the institution.

The management and strategy assessment is typically conditioned, and often constrained, by the operating environment and company profile assessments, unless Fitch believes the elements assessed are insulated from the effects of the non-bank financial institution's operating environment(s) and business model. In weaker operating environments, corporate governance issues tend to be more prevalent, strategic objectives may be more likely to shift over time or be more opportunistic, and execution of strategy is often more challenging. It is possible for a management and strategy score to be higher than the operating environment (e.g. a very good management team operating in a weak environment). However, in such cases, it is likely that the

management and strategy score would be of lower influence to the rating if the superior management quality is unable to exert meaningful influence on the overall risk profile.

The quality and effectiveness of management is reflected in individuals and the overall management structure, as well as other factors such as corporate governance and strategy. While this is, on the face of it, a subjective assessment, there will typically be some tangible evidence of management's effectiveness through its impact on financial and/or risk metrics.

The following tables identify those management and strategy attributes that Fitch has defined as 'core' versus 'complementary,' together with an indication of how each attribute is typically assessed. The accompanying subfactor/rating category matrix provides representative characteristics that aid the determination of the overall factor score assigned in each case.

Management Quality

Attribute	Core Versus Complementary	Description
Depth and Stability of Senior Management	Core	A strong management teams will demonstrate a high degree of credibility, experience, and competence and, commensurate with the size and complexity of the institution, reflect those same qualities in an appropriate depth of experienced, capable management. The impact of any turnover is considered in the context of the existence of succession plans (where key person risk is present) and/or the qualities brought by incoming personnel in cases where those individuals have a proven track record with similar institutions or businesses elsewhere.
Corporate Culture	Complementary	An established record of a firmly entrenched cultural identity may help ensure that coherent business philosophies are adopted throughout the organization and remain in place when there are management transitions and across business cycles This can prove beneficial to the management quality score as harmonization and predictability generally instill market confidence.
Key Person Risk	Complementary	Smaller, niche institutions may be reliant on a specific individual or a small group of key individuals, often the institution's founder(s). Fitch expects an institution's senior management structure to be commensurate with its scale and complexity but will usually view any reliance on key individuals as a constraint, regardless of how well-intentioned, as a departure could cause material disruption in the organization's future business prospects and damage its franchise. For certain investment managers, there may also be trigger events in fund governing documents (such as the limited partnership [LP] agreements or articles of incorporation) that would permit early redemptions or withdrawals by LPs or the removal of a general partner if a key person left the firm. If there are significant triggers that are easily triggered and create potentially significant liquidity calls, this is likely to be a constraint.

Corporate Governance

Attribute	Core Versus Complementary	Description
Protection of Creditor Rights	Core	Fitch considers the extent to which a non-bank financial institution's intrinsic governance practices provide reasonable protection of creditors' interests, or whether the latter might suffer at the expense of the interests of other stakeholders, in particular shareholders, management, or due to government influence. Fitch considers the effectiveness of the supervisory board collectively, whether it comprises sufficient expertise, resources, independence and credibility to effectively oversee management.
Quality of Financial Reporting and Audit Processes	Complementary	In cases where there are perceived to be weaknesses in financial reporting (quality, frequency and/or timeliness) compared to international best practice, or where internal or external audit processes appear less robust relative to the operating environment, Fitch may assign a lower corporate governance score.
Related Party Transactions	Complementary	The existence of significant related party transactions may be negative for the corporate governance assessment. Their volume, whether they are conducted on market terms and the internal procedures for their review and approval are key elements of this assessment.
Management of Potential Investment Conflicts of Interest	Complementary (for BDCs and Investment Managers)	Fitch will evaluate the governance structure established by the management company to address potential conflicts of interest. Policies may allow establishing both equity and debt positions in the same company in different investment vehicles. In companies undergoing restructuring or facing potential bankruptcy, the ownership of both debt and equity interests can present material conflicts of interest. Fitch will evaluate allocation policies and procedures and board involvement to limit the risks such conflicts may present.
Internal Versus External Management	Complementary (for BDCs and Mortgage REITs)	For BDCs and mortgage REITs, Fitch focuses on whether the company is internally or externally managed. Externally managed entities are typically managed by affiliated companies that, through a management agreement, provide all managerial and operational services. From a corporate governance perspective, Fitch generally has a more favorable view of internal management teams than external management teams, because internal management teams are dedicated solely to the issuer in question, minimizing conflicts of interest. External management may have several investment vehicles under management, with potentially overlapping investment objectives.
Private/Partnership Structures	Complementary	Some non-bank financial institutions are privately held or structured as partnerships. This can make insight into management more challenging and mean that managers who are also partners in the firm act as agent and principal at the same time, potentially affecting the governance assessment. If partner-managers act prudently in the general interests of the company and take measured actions or personally suffer the economic consequences of excessive risk-taking, the governance assessment could be positively influenced. Conversely, unchecked decision-making by individuals can be negative to the governance assessment.

Source: Fitch.

Strategic Objectives

Attribute	Core Versus Complementary	Description
Quantitative Strategic Targets	Core	An institution's strategic objectives are a reflection of its business and financial goals, which may include business targets for market position/share or financial metrics. Fulfillment of these objectives drives decision-making throughout the organization and often motivates management and employees. Fitch will consider how achievable and sustainable objectives are and will assess underlying assumptions for plausibility, consistency and appropriateness, such as taking account of challenges posed by the non-bank financial institution's operating environment, business model and market position. The strategic objectives score is typically influenced by the extent to which financial and business targets are clearly and consistently articulated, and strategic direction appears appropriate to the non-bank financial institution's operating environment, company profile, competitive position and management expertise.
Qualitative Strategic Framework	Core	The strategic objectives assessment reflects the extent to which medium/long-term strategy is well-construed, cohesive and robust, communicated effectively to stakeholders and balances risks and rewards. Fitch will consider management's key strategic philosophies, for example, acquisition-led versus organic growth and/or regional/international expansion versus concentration on domestic markets, as this may highlight strengths or weaknesses in the strategic plan Fitch's assessment may be negatively affected if a non-bank financial institution's business model changes frequently and significantly over time (whether due to organic development or mergers/acquisitions) or the entity undergoes significant restructuring.
Disclosure	Complementary	Where budgets or forecasts are not available to support management's articulation of strategic direction, Fitch will use judgement in determining the appropriateness and plausibility of the narrative and underlying assumptions.

Source: Fitch.

Execution

Attribute	Core Versus Complementary	Description
Track Record in Meeting Stated Objectives	Core	Fitch considers the non-bank financial institution's track record of execution against its stated goals and objectives over multiple periods, and in the context of how realistic or appropriate financial and business targets are. An inability to meet a strategic objective, including a specific target financial metric) in a single reporting period will not necessarily result in a weaker score provided Fitch believes that the strategic objective is achievable over a medium-term horizon.
M&A Activity	Complementary	Poor or slow execution of a merger, acquisition or restructuring initiative or where Fitch considers there to be an inconsistent track record of executing on such transactions or initiatives will likely result in a lower execution score. Effective execution of a business acquisition in line with plan may positively influence the execution score. If Fitch views future execution risk to be elevated, this will also be factored into Fitch's assessment of a non-bank financial institution's execution. .

Management and Strategy

	aaa	aa	a	bbb	bb	b	ccc and Below
Management Quality	Management has an unparalleled degree of depth, stability and experience. Key person risk is non-existent. Succession planning for all key roles is routinely undertaken. Management maintains a strong degree of credibility among all major constituencies throughout economic cycles. Institution has a strong and consistent corporate culture.	Management has a very high degree of depth, stability and experience. Key person risk is limited. Succession planning for key executive roles is routinely undertaken and turnover is very low. Management has maintained a very high degree of credibility among all major constituencies over a lengthy period. Institution has a solid and consistent corporate culture.	Management has a high degree of depth, stability and experience. Key person risk is modest. Succession planning for key executive roles in place and turnover is low. Management maintains a high degree of credibility among major constituencies. Institution has a good and consistent corporate culture.	Management has a good degree of depth, stability and experience. Key person risk is moderate. Executive turnover is manageable. Management has a good level of credibility among major constituencies. Corporate culture is sound, but may be less consistent than higher rated entities.	Management has an acceptable degree of depth, stability and experience, but noticeably less than higher rated entities. Key person risk is elevated. Management turnover or reliance on key individuals may be more prevalent than higher rated entities.	Management may have noticeable weaknesses, including lack of depth, stability, or experience. Key person risk is high. Management turnover may be considered high.	Management deficiencies may be significant.
Corporate Governance	Very strong corporate governance, providing robust protection of creditors' interests. Very effective board oversight, high quality and frequent financial reporting and very limited related party transactions.		Sound corporate governance, providing reasonable protection of creditors' interests. Effective board oversight, good quality financial reporting and limited related party transactions.		Governance is less developed than for higher rated peers but without presenting clear, significant risks for creditors.	Governance gives rise to significant risks for creditors due to weak board oversight, poor financial reporting or significant related party transactions.	Governance gives rise to major risks for creditors due to very weak board oversight, considerable accounting deficiencies or large related party transactions.
Strategic Objectives	Strategic objectives are clearly articulated and reflect long-term sustainable levels of business and financial performance. Strategic objectives remain highly consistent over a lengthy period.	Strategic objectives are clearly articulated and reflect a long-term sustainable level of business and financial performance. Strategic objectives are very consistent over time.	Strategic objectives are well articulated and reflect a medium-term level of business and financial performance. Strategic objectives may shift modestly over time.	Strategic objectives are documented and reflect a medium-term level of business and financial performance. Strategic objectives may shift over time and may be more opportunistic.	Strategic objectives may not be clearly articulated and/or reflect a short-term level of business and financial performance. Strategic objectives may shift based on market opportunities or less stable economic environment.	Strategic objectives are not articulated and reflect a short-term level of business and financial performance. Strategic objectives frequently shift including due to economic environment volatility.	Strategic objectives are lacking or likely to be highly variable due to an unstable economic or operating environment.
Execution	Institution consistently meets target business and financial objectives throughout economic and/or market cycles.	Institution routinely meets target business and financial objectives with very limited variability over economic and/or market cycles.	Institution generally meets target business and financial objectives, albeit with modest variability over economic and/or market cycles.	Institution generally meets target business and financial objectives. Execution could be more variable with changes in economic and/or market cycles.	Institution often fails to meet target business and financial objectives. Execution could be variable based on changes in economic and/or market cycles.	Institution typically fails to meet target business and financial objectives. Execution could be highly variable based on changes in economic and/or market cycles.	Institution does not meet business or financial objectives.

Source: Fitch.

II.4 Risk Appetite Assessment

Importance of this Assessment

Assessment of a company's underwriting standards, risk controls, growth and market risk are important considerations in determining a non-bank financial institution's stand-alone credit risk profile, as they will eventually feed through to changes in a non-bank financial institution's key financial metrics. Fitch will apply its own judgment as to the degree of risk inherent in a particular business line, product or strategy. Fitch will also consider operational and/or reputational risks where these are material for the institution.

Fitch's analysis of risk appetite is focused on those risks that have a material influence on the overall credit profile. The risk appetite assessment is typically conditioned, and often

constrained, by the operating environment and company profile assessments unless Fitch believes the underlying risks can be isolated from the effects of the non-bank financial institution's operating environment(s) and its chosen business model/strategy. It is possible for a risk appetite score to be higher than the operating environment or company profile (e.g. an 'atypical' very low risk appetite relative to the environment or the operating model). However, a very low risk appetite would be expected to be reflected in consistently better asset quality and less earnings volatility.

Stability of results throughout the cycle may be a useful indicator of risk appetite. A high risk appetite may be somewhat mitigated through the employment of strong risk controls, collateral, and risk-based pricing although the natural rating range for non-bank financial institutions with an inherently higher risk appetite will generally be lower than for those non-bank financial institutions whose risk appetite Fitch considers modest or better managed. In addition, risks can be high at non-bank financial institutions with stated low risk appetites, if controls are viewed to be weak or have been ineffective.

The risk controls assessment includes operational (including cyber) and reputational (including litigation) risks where these are material for the institution or an integral part of the business model or operating jurisdiction(s).

Fitch will analyze those aspects of market risk that are considered material to the overall assessment of risk appetite. The most typical form of market risk is interest-rate risk given many non-bank financial institutions' core maturity transformation function, but the assessment will include other elements such as valuation, derivatives and foreign exchange risks where these are material. Market risks will be higher for institutions with material trading operations or where cross-border activity or balance sheet structure gives rise to foreign-exchange risks, so this factor may take on greater relative importance in those instances.

The following tables identify those risk appetite attributes that Fitch has defined as 'core' versus 'complementary,' together with an indication of how each attribute is typically assessed. The accompanying subfactor/rating category matrix provides representative characteristics that aid the determination of the overall factor score assigned in each case.

II.4.a Securities Firms

Fitch's risk appetite assessment for securities firms considers the following subfactors:

- risk controls;
- growth;
- market risk; and
- operational risk.

Risk Controls — Securities Firms

Attribute	Core Versus Complementary	Description
Risk Management Tools	Core	Fitch's assessment of risk controls considers the breadth and sophistication of risk management systems relative to the risk profile of the business and the types of management reporting used, where these are available. This may help indicate how far risk controls permeate the organization with respect to key risks a typical securities firm may incur, such as market, operational, reputational and credit risks. Fitch may also assess how the launch of material new business activities are vetted in the context of the associated credit, market, operational and reputational risks and their effect on the overall franchise.
Staffing and Culture	Complementary	Fitch attempts to understand the level of risk management engagement across the firm, the variety of committees and membership, as well as the independence and authority carried by risk functions. The backgrounds and experience levels of risk management professionals may also be considered.

Source: Fitch.

Growth — Securities Firms

Attribute	Core Versus Complementary	Description
Absolute and Relative Rates of Growth	Core	Fitch generally measures overall balance-sheet expansion against underlying economic growth, earnings retention, staffing growth, market activity, and peer, sector and industry averages to identify any outliers and assess the build-up of potential risks. Rapid growth can obscure financial analysis, for example making it difficult to form a view of inventory turnover and may be indicative of a lowering of standards or slowing demand.
Accompanying Infrastructure Growth	Complementary	Rapid growth may introduce other challenges such as operational strains, as back-office staff or systems may not be capable of handling increased business volumes and, therefore, would be negative for the assessment of growth.

Source: Fitch.

Market Risk — Securities Firms

Attribute	Core Versus Complementary	Description
Market Risk Exposure	Core (For securities firms with high balance sheet usage) Complementary (For securities firms with low balance sheet usage)	For firms with significant trading activities, Fitch's assessment of market risk focuses on the degree of market risk exposure and the means of measuring and managing it. These usually include value at risk (VaR), stop-loss limits, concentration limits, sensitivity analysis and stress testing.
Sensitivity to Marketwide Dynamics	Core (For securities firms with low balance sheet usage) Complementary (For securities firms with high balance sheet usage)	Although securities firms that do not hold securities on their balance sheets generally have only limited exposure to market risk, their revenue is heavily exposed to the volume of transactions in the market, and therefore, Fitch's assessment of market risk focuses more broadly on the sensitivity of the business model to marketwide dynamics.
Stress Testing and Sensitivity Analysis	Complementary	When available, Fitch evaluates management's reports of specific products' risks, sensitivities and supplemental stress scenarios on a position and consolidated bases. When available, Fitch also reviews reports that include adjusted VaR using liquidity-stressed scenarios or replicate historical periods of stress. Fitch evaluates the use of stress limits, but this is not comparable across peers. When possible, Fitch assesses market risk concentration (by product, issuer/counterparty, industry and country) in trading and investment portfolios and reviews management's oversight of aged inventory. Fitch may also review policies with respect to collateral and margin calls and the reasons for any changes made to these.
Hedging Activity and Effectiveness	Complementary	Collateral and hedging are frequently employed to mitigate market risk, but hedges are imperfect, and so some degree of market and credit exposure generally remains. As a result, both gross and net positions are considered in Fitch's rating evaluation to the extent such information is reported.
Market Development	Complementary	In markets where volatility and liquidity issues can be extreme, greater emphasis may be placed on the level of nominal/cash limits. In emerging markets, credit/settlement risk can still be significant. Fitch assesses the level of "free of payment" deliveries (in contrast to payment on delivery) particularly closely in emerging markets, where payment may not be so readily forthcoming.

Source: Fitch.

Market Risk Metrics — Securities Firms

Average VaR/Fitch Core Capital (FCC)
Fitch Stressed VaR/FCC
Principal Daily Trading Revenue/Average Trading VaR
Principal Transaction Revenue/Total Revenue

Source: Fitch.

Operational Risk — Securities Firms

Attribute	Core Versus Complementary	Description
Operational Infrastructure/Framework	Core	Fitch's assessment of securities firms' operational risk focuses on investment in front-, middle- and back-office systems commensurate with the nature of the business, including new product development/implementation and systems upgrades. Backlogs of settlements, resolutions and customer complaints or a history of problems with the firm's custodian can be indicators of insufficient back-office staff support. These challenges can be exacerbated for institutions that have undertaken material acquisition activity.
Operational Loss Experience	Complementary	If Fitch determines that a firm has a weak operational risk infrastructure or control environment, such as systems failures, inaccurate trade processing or limit breaches (such as rogue trading incidents) this will typically have a negative effect on the operational risk assessment, particularly to the extent failures result in reputational damage, loss of business, and or outsized fines/penalties. Operational risk can potentially have a more pronounced effect on less diversified businesses, where an operational shortfall can result in temporary or permanent damage to the company's core franchise.

Source: Fitch.

Risk Appetite — Securities Firms

	aaa	aa	a	bbb	bb	b	ccc and Below
Risk Controls	Risk and reporting tools are extremely robust. Risk limits are highly conservative and overwhelmingly adhered to. Risk limits are routinely monitored with minimal changes over lengthy periods. Risk controls permeate the organization. Exposure to operational risks is very low. New products are heavily vetted and tested before rollout.	Risk and reporting tools are very robust. Risk limits are very conservative. Risk limits are routinely monitored with nominal changes over lengthy periods. Risk controls permeate the organization. Exposure to operational risks is low. New products are carefully vetted and tested before rollout.	Risk and reporting tools are robust. Risk limits are conservative. Risk limits are monitored but may change based on business conditions. Risk controls are centralized. Exposure to operational risks is modest. New products are carefully tested before rollout.	Risk and reporting tools are good. Risk limits are sound and monitored, although they may fluctuate based on opportunities. Risk controls are less pervasive throughout the organization. Exposure to operational risks is moderate. New products are tested before rollout.	Risk and reporting tools are acceptable, but may lack depth or sophistication. Risk limits are monitored less frequently than higher rated institutions. Risk limits may change based on business opportunities. Exposure to operational risks is heightened. New products may not be thoroughly vetted or tested before rollout.	Risk and reporting tools may be deficient. Risk limits are crude and may not be monitored frequently. Breaches of limits may not trigger heightened management attention. Exposure to operational risks is high. New products are not tested before rollout.	There are significant risk control deficiencies.
Growth	Balance-sheet growth or business growth is unlikely to pressure solvency or outpace the long-term sustainable growth of main business segments. Control environment is systematically adapted to meet higher business volumes.	Balance-sheet growth or business growth seldom pressures solvency or outpaces the long-term sustainable growth of main business segments. Control environment is systematically adapted to meet higher business volumes.	Balance-sheet growth or business growth may at times pressure solvency and exceed the long-term sustainable growth of main business segments. Control environment is usually suitably adapted to meet higher business volumes.	Balance-sheet growth or business growth more often pressures solvency and exceeds the long-term sustainable growth of main business segments. Control environment may lag behind higher business volumes.	Balance-sheet or business growth often pressures solvency and exceeds the long-term sustainable growth of main business segments. Control environment likely to lag behind higher business volumes.	Balance-sheet growth usually pressures solvency and the long-term sustainable growth of business segments. Control environment routinely lags behind higher business volumes.	Growth may be well in excess of sustainable levels. Or unable to sell assets to achieve necessary balance sheet contraction.
Market Risk (Direct and Indirect)	Exposure to market risks is very low. Structural interest rate and foreign exchange risks are very low relative to peers. Proprietary trading is very low.	Exposure to market risks is low. Structural interest rate and foreign exchange risks are low relative to peers and appropriately mitigated through hedging. Proprietary trading is low.	Exposure to market risks is modest. Structural interest rate and foreign exchange risks are modest and appropriately mitigated through hedging. Proprietary trading may be material, but have sound controls.	Exposure to market risks is average. Appropriate hedging techniques are likely to be employed. Proprietary trading may be material. Controls may be satisfactory, but somewhat below industry best practice.	Exposure to market risks is heightened. Market risks may encompass structural interest rate and foreign exchange risks. Basic hedging techniques may be employed or effectiveness somewhat compromised.	Exposure to market risks is high or highly variable. Risks may not be effectively hedged	There may be significant market risk. Controls have not been established.
Operational Risk	Very strong operational risk infrastructure/framework. Demonstrated track record of limited operational losses.	Strong operational risk infrastructure/framework. Demonstrated track record of limited operational losses.	Good operational risk infrastructure/framework. Significant operational losses are corrected promptly.	Adequate operational risk infrastructure, with some processes outsourced to third-party processors. Operational losses may occur but are manageable.	Limited operational risk infrastructure, with heavy reliance on third-party providers. History of operational losses/issues.	Weak operational risk infrastructure. History of operational losses/issues.	Significant operational risk management shortfalls.

Source: Fitch.

II.4.b Investment Managers

Fitch's risk appetite assessment for investment managers, investment companies and investment funds considers the following subfactors:

- risk controls;
- growth;
- market risk and counterparty risk; and
- operational risk (for investment managers and investment funds) or underwriting standards (for investment companies).

Risk Controls — Investment Managers

Attribute	Core Versus Complementary	Description
Risk Management Tools	Core	Fitch assesses investment managers' ability to identify, measure, manage and monitor risk, as supported by its risk and reporting systems and investment in technology. Key areas that Fitch takes into consideration are the independence and effectiveness of the risk management and compliance functions, senior management's understanding and involvement in risk management issues and the reporting lines in place, and whether there is a corporatewide investment risk function that monitors investment risks taken by individual managers to evaluate their potential cumulative impact on the firm's asset performance/asset quality, earnings and franchise. Fitch's assessment of risk controls may consider the types of management reporting used, where these are available. This may help indicate how far risk controls permeate the organization. For investment companies and investment funds, risk management oversight and infrastructure is conducted either by the employees of the investment company or through an affiliated but external investment manager. Therefore, the risk management framework at the investment manager level is considered when relevant. The investment manager may also provide the risk framework and strategy of the fund.
Risk Limits	Complementary	Fitch's assessment of risk controls may also extend to formalized risk limits that are in place, particularly for firms or funds with more complex market risk exposures. Fitch's analysis will tend to focus on a firm's VaR or earnings at risk output, stop-loss limits, concentrations and stress test results where available.
Scenario Testing	Complementary	When available and relevant, Fitch will evaluate scenario tests conducted on current/prospective business activities and, to the extent possible, evaluate the performance against risk measurements. In cases where stress testing results are deemed relevant, but are not available, this may lead to lower stand-alone ratings.

Source: Fitch.

Growth — Investment Managers

Attribute	Core Versus Complementary	Description
Absolute and Relative Rates of Growth	Core	Where growth has been organic, Fitch's growth assessment focuses on whether the firm has the appropriate in-house investment expertise to manage new and/or larger strategies, as underperformance on a relative basis could yield meaningful reputational damage for the firm. Fitch also seeks to understand why (F)AUM growth rates may differ among peer firms.
Impacts of Inorganic Growth	Complementary	For investment managers that have grown rapidly through acquisitions, success of a growth strategy is assessed by evaluating acquisition parameters and price discipline, pre- and post-acquisition performance, client turnover, employee retention statistics and the ability to manage firm culture.
Accompanying Infrastructure Growth	Complementary	Fitch's assessment can be negatively affected in instances when there is not commensurate infrastructure to support growth. On the other hand, successful execution of measured growth with demonstrated discipline in infrastructure and integration management could positively affect Fitch's assessment of growth if accretive to the franchise by building FAUM, earnings power (particularly if it is a stable source), reputation, distribution channels (new client bases) and diversifying product or geographic scope. For investment companies and investment funds, growth can be viewed positively when driven by strong asset appreciation.

Source: Fitch.

Market Risk and Counterparty Risk — Investment Managers

Attribute	Core Versus Complementary	Description
Asset Valuation Risk	Core	Fitch's assessment of market risk considers the extent to which the investment manager relies on net asset value (NAV)-based fees given the impact of valuation movements on management fees. This risk is more prevalent for traditional investment managers because they operate open-end funds with relatively liquid assets. Alternative investment managers generally have a larger portion of fees based on committed capital or invested capital, which will not be affected by underlying valuation movements or redemption activity, although broader market downturns can slow the pace of fund capital calls/investments and, thereby, pressure fund internal rates of return. Market risk is also an important stand-alone credit rating factor for investment companies, investment funds and for investment managers that co-invest, earn performance fees or defer fees into the fund, as earnings and balance sheet leverage will be based on the valuation of underlying fund investments.
Asset Valuation Process	Complementary	The independence of the periodic valuation processes and whether it is done internally or utilizing third parties can be an important consideration, particularly for private investments, which may require modeling techniques or relying upon comparable sales. In such instances, Fitch reviews the reasonableness of the valuation methodology, how management resolves troubled investments and the use of third parties for valuation purposes. Model validation tools to make sure that valuation processes are reasonable and consistent with the seniority of the investment in the underlying company can be critical. Model risk is less relevant for traditional investment managers given that the majority of their assets are considered Level 1 for accounting purposes, meaning they have a readily available market value. Fitch may gain comfort with a firm's valuation process over time by comparing investment exit values to prior-quarter fair values.
Interest Rate and Foreign Exchange Risk	Complementary	Fitch's market risk assessment may also include a review of methods used to measure, monitor and control interest rate risk, which can manifest itself in several forms including its impact on fee generation (such as for cash management products), investment performance (such as for fixed-income funds) and balance sheet sensitivity (such as for co-investment assets or floating-rate liabilities). Where relevant, Fitch also considers earnings sensitivity to movements in interest rates and currencies and whether the exposure is naturally hedged, with offsets within the asset portfolio, or actively hedged with derivatives. Sizable unhedged exposure is more likely to have a negative impact on Fitch's market risk assessment.
Counterparty Quality and Diversification	Complementary	Counterparty quality and diversification are assessed in the context of the placement of an investment manager's own surplus funds, but also on behalf of managed fund assets, given the potential need to move clearing, trading, and/or securities lending activities to other parties should one counterparty face difficulty. Counterparty concentrations could pose increased operational and/or financial risks, which have a negative impact on Fitch's market risk assessment. For investment companies, the reliance on counterparties for hedging and/or funding is typically limited and, as such, counterparty risk is typically a low influence factor. For investment funds, Fitch assesses the diversity of prime brokerage relationships, which are an important source of financing, as well as clearing, settlement and other services. Outsized exposure to a single counterparty that faces financial hardship could result in the fund's inability to withdraw posted collateral or excess funds. Diversification of these counterparties can have a positive influence on the market risk assessment, although this is balanced against the higher cost and potential loss of efficiency when reviewing prime brokerage relationships. Fitch also seeks to understand the extent to which an investment fund requires segregation of its assets, including collateral, or limits on rehypothecation at the broker dealer to ensure access to its securities should its prime broker face difficulties.

Source: Fitch.

Operational Risk — Investment Managers

Attribute	Core Versus Complementary	Description
Operational Infrastructure/ Framework	Core	In assessing operational risk, Fitch considers processes in place relating to compliance, operations, credit and/or investment performance. If Fitch determines that the operational infrastructure is weak or operational risk is not well controlled, this is likely to negatively impact Fitch's operational risk assessment given the potential for reputational risk, legal risk or both. For investment funds, operational risk can be an important consideration, particularly if the fund focuses on trading strategies involving high complexity, volume and/or automation. For investment companies, operational risk is typically a low influence factor given a smaller (relative) number of investments and less frequent (relative) investment turnover. Furthermore, given that value creation is typically premised on asset appreciation, Fitch tends to place more emphasis on investment companies' underwriting standards in terms of sourcing, due diligence, investment committee review, structuring and monitoring.
Operational Outsourcing	Complementary	Many investment managers, investment companies and investment funds outsource key operational functions to outside processors, such as asset custodians, independent pricing services or trade processors. In such cases, operational risk still exists but is controlled by the firm's management and analysis of its vendors. Fitch's operational risk assessment may evaluate how vendor selection and retention are managed.
Operational Loss History	Complementary	Another possible indicator of the quality of operational risk management is past operational loss history, if available. Most publicly traded firms will discuss significant losses in their financial disclosures. For privately held firms, Fitch will seek to review a record of such losses to understand their nature and whether sufficient controls have been put in place to make their recurrence less likely.

History of operational losses/issues.	Significant operational and counterparty risk management shortfalls.

Source: Fitch.

II.4.c Business Development Companies

Fitch's risk appetite assessment for BDCs considers the following subfactors:

- underwriting standards;
- risk controls;
- growth; and
- market risk.

Underwriting Standards — Business Development Companies

Attribute	Core Versus Complementary	Description
Portfolio Construct	Core	Fitch attempts to identify a BDC's general risk appetite by reviewing the portfolio construct, yields, industry and issuer concentrations, and underlying portfolio company statistics, including average EBITDA, leverage, interest coverage, and exposure to covenant lite loans. A BDC that is generating outsized portfolio yields relative to peers could indicate an ability to identify and structure unique and complex investments that command a higher yield, which could be a positive factor, or could indicate a higher risk appetite, which would be a negative factor. An observation of portfolio performance over an extended period aids Fitch in its ability to differentiate between these two possibilities.
Underwriting Process	Complementary	Fitch's assessment of a BDC's underwriting standards considers sourcing, due diligence, investment committee review, structuring, funding and monitoring. Fitch may review investment memos and other underwriting documentation, where available, to assesses whether the process is comprehensive, particularly where the BDC does not have a long and established underwriting track record. Fitch also focuses on the development and monitoring of key sponsor relationships to understand concentration risks and the potential for adverse selection.
Performance/ Portfolio Consistency	Complementary	A BDC's credit culture and standards should generally exhibit consistency, although Fitch recognizes that a BDC's origination volume may vary to some extent based on market conditions. An opinion about a BDC's underwriting acumen and consistency is formed over time and best observed based on performance through a full economic cycle. In the absence of that information, Fitch will seek insight into management's prior performance managing similar assets and structures through a variety of market conditions, although a short operating history is generally a limiting rating factor. Evidence of strong and consistent underwriting over an extended period can positively influence Fitch's assessment of underwriting standards.

Source: Fitch.

Risk Controls — Business Development Companies

Attribute	Core Versus Complementary	Description
Risk Management Tools	Core	Fitch's assessment of a BDCs risk controls can be positively influenced by strong and effective risk management tools which allow the BDC to effectively adhere to its risk appetite framework and underwriting standards. These generally include limits pertaining to industry or issuer concentrations, market risks, and operational controls. They may also include tools such as internal ratings, watchlists or other risk monitoring scales.
Risk Reporting	Complementary	Fitch's assessment of a BDC's risk controls may also consider the types of management reporting used, where these are available. This may help indicate how far risk controls permeate the organization with respect to key risks a BDC may incur, such as credit, market and operational risks. A negative driver of Fitch's assessment of a BDC's risk controls would be deficiencies in operational risk management that have already manifested themselves and are uncured.

Source: Fitch.

Growth — Business Development Companies

Attribute	Core Versus Complementary	Description
Absolute and Relative Rates of Growth	Core	A BDC's growth is assessed on an absolute and relative basis based on market opportunities, underwriting conditions and the firm's own experience and track record in the sector. Outsized growth in competitive market conditions, characterized by tighter spreads, higher leverage and looser covenant packages, could increase the risks of vintage concentrations and lead to potential asset quality issues down the road, which would be viewed negatively. Fitch does consider whether the BDC's size and relationships provide it with more deal selectivity and structuring flexibility despite tougher market conditions, but sacrificing quality for growth would have a negative impact on Fitch's assessment.
Accompanying Infrastructure Growth	Complementary	Fitch assessment of growth also considers whether the BDC's infrastructure is expanding appropriately to manage a larger portfolio. Infrastructure growth should span front-line investment professionals, back-office accounting, finance and administrative support and technology resources. Expansion into new industry verticals should also be measured and accompanied by commensurate growth in appropriately skilled staff. Failure to sufficiently invest in the operating platform could lead to credit and/or operational losses, which would have a negative impact on Fitch's assessment.

Source: Fitch.

Market Risk — Business Development Companies

Attribute	Core Versus Complementary	Description
Portfolio Valuation Process	Core	Given the illiquidity of the majority of BDCs' portfolio assets, fair value estimates often require numerous management assumptions. As a result, Fitch views the involvement of independent third-parties in the quarterly valuation process favorably. A BDC that receives independent valuations on its entire portfolio every quarter would be viewed more favorably than a BDC that only has a portion of its portfolio valued by a third party or has its entire portfolio valued by a third party but with less frequency. However, Fitch does expect management and the board to be actively involved in the quarterly process to identify discrepancies or inconsistencies in portfolio company valuation and as a tool to monitor portfolio performance.
Portfolio Valuation Consistency	Complementary	Fitch assesses a BDC's valuation competency over time by reviewing portfolio company exits versus prior-quarter fair value marks. If sale proceeds are consistently below fair value, Fitch would call into question the sufficiency of the valuation process and/or the competency of the third-party provider. Conversely, if exits are consistently above the prior-quarter fair value, Fitch would consider whether the BDC was being too conservative in its valuation process, in an effort to recognize regular realized gains. Fitch expects the above/below marks to generally average out in the long run.
Interest Rate and Foreign Exchange Risks	Complementary	Fitch considers how the BDC's earnings may be affected by a changing rate environment, taking into consideration the fixed/floating asset and funding mix. Where derivatives are employed to manage interest rate exposure, Fitch considers their cost and effectiveness over time, in addition to the counterparty exposure. When applicable, Fitch considers the BDC's exposure to foreign currency movements and the potential impact on profitability and leverage. If derivatives are employed to manage the exposure, Fitch considers their cost and effectiveness over time, in addition to the counterparty exposure.

II.4.d Finance and Leasing Companies

Fitch's risk appetite assessment for finance and leasing companies considers the following subfactors:

- underwriting standards;
- risk controls;
- growth; and
- market risk.

Underwriting Standards — Finance and Leasing Companies

Attribute	Core Versus Complementary	Description
Policies and Procedures	Core	Fitch's assessment of a finance and leasing company's underwriting standards considers internal management credit reports and variances from policy, if available, how problem loans are reported and forbearance practices, to ensure that an issuer is not delaying the recognition of problem credits, particularly in instances where the issuer does not have a long and established track record of underwriting through the cycle.
Residual Value Risk Management	Complementary	Fitch assesses an issuer's exposure to and management of residual value risk by understanding the company's pricing policies, its ability to monitor the condition of assets under lease, its flexibility to alter lease payments (e.g. additional charges for unfair wear and tear) or amend contracts, the relative market liquidity for used collateral and the leasing company's access to a variety of disposal channels. An ability to control residual value gains/losses effectively through a variety of asset cycles is viewed as the clearest demonstration of residual risk management capabilities.
Business Model Specifics	Complementary	Certain types of finance and leasing companies, such as debt purchasers, do not originate or underwrite the original loans they carry on balance sheet or manage. Their business model means asset quality will be inherently weak and their ability to generate cash flow to service debt will largely be a function of the extent recoveries/collections exceed the price paid for the loans. Consequently, for such companies, Fitch's assessment of underwriting standards will additionally focus on pricing discipline through economic cycles. Industry measures such as 'cash on cash multiples' (i.e. collections to date plus estimated remaining collections divided by purchase price) can be a useful indicator of pricing discipline that Fitch would review, where available.

Source: Fitch.

Risk Controls — Finance and Leasing Companies

Attribute	Core Versus Complementary	Description
Risk Management Tools	Core	Fitch assesses a finance and leasing company's adherence to its risk appetite framework and underwriting standards by considering the strength and effectiveness of its risk management tools and systems. These generally include limits pertaining to credit concentrations, geography, market risks and operational controls. They may also include tools such as custom scorecards, internal ratings or third-party data sources such as national credit bureaus.
Risk Reporting	Complementary	Fitch's assessment of risk controls may consider the types of management reporting used, where these are available. This may help indicate how far risk controls permeate the organization with respect to all risks the finance and leasing company may incur, such as credit, market and operational risks.

Source: Fitch.

Growth — Finance and Leasing Companies

Attribute	Core Versus Complementary	Description
Absolute and Relative Rates of Growth	Core	Fitch generally assesses growth in the context of business and balance sheet expansion relative to underlying economic growth, earnings retention, staffing growth and peer, sector and industry averages. Rapid loan growth can also obscure financial analysis, for example, making it more difficult to form a view of true asset quality because loan portfolios have not had time to mature and may be indicative of a lowering of underwriting standards or growth outstripping risk controls.
Accompanying Infrastructure Growth	Complementary	Fitch's growth assessment may be negatively influenced by rapid growth if it introduces other challenges such as operational strains (as back-office or systems may not be capable of handling increased business volumes) or higher leverage (should growth outstrip earnings retention).
Impacts of Inorganic Growth	Complementary	Where growth has been driven by acquisitions of assets or entire companies, Fitch considers the strategic fit, due diligence process, economic impact and integration success. A track record of dilutive transactions, on-boarding missteps and/or expansion into non-core product categories, may negatively influence Fitch's growth assessment.

Source: Fitch.

Market Risk — Finance and Leasing Companies

Attribute	Core Versus Complementary	Description
Interest Rate and Foreign Exchange Risks	Core	Fitch's assessment of a finance or leasing company's market risk primarily considers interest rate risk, arising from differences in the asset and funding profiles of the firm, but may also include elements such as derivatives use or direct and indirect foreign exchange risks. Market risks will be higher for issuers where cross-border activity gives rise to foreign exchange risks, so this factor may take on greater relative importance in that instance. For mortgage servicers, the valuation of servicing rights will be heavily influenced by the level and direction of interest rates but will also be affected by trends in housing prices, applicable hedges and other portfolio characteristics.
Market Risk Management Tools and Controls	Complementary	Effective mitigation tools and controls, coupled with a robust stress-testing framework, may be strong mitigating factors in reducing market risk. Where market risk is significant, Fitch assesses the appropriateness of controls relative to this risk, hedging practices and other market risk information across the business.

II.4.e Financial Market Infrastructure Companies

Fitch's risk appetite assessment for FMIs considers the following subfactors:

- operational, reputational and legal risk;
- counterparty risk management; and
- growth.

Operational, Reputational and Legal Risks — Financial Market Infrastructure Companies

Attribute	Core Versus Complementary	Description
Operational Risk Infrastructure	Core	Fitch's assessment of operational, reputational and legal risk centers on the ability to accurately and efficiently process large volumes of transactions as supported by an operational risk infrastructure with robust technological platforms, and appropriate controls and back-office operations. Fitch's assessment will typically be negatively affected if Fitch determines a FMI has a weak or outdated operational risk infrastructure or control environment. In this context, Fitch considers the level of capital expenditures for technology upgrades when assessing operational risk for FMIs. Additionally, legal risk can arise from a FMI processing trades incorrectly or from a breach of applicable laws or regulations (e.g. if it is in breach of sanctions).
Business Continuity and System Availability	Complementary	To ensure business continuity in the event of physical disasters, FMIs must operate effective duplicate and backup computer systems and develop and maintain business continuity plans, including disaster recovery sites that are geographically dispersed. Fitch also considers the system availability ratios (defined as the time a given FMI platform is actually available to operate versus the maximum time a given FMI platform is expected to be available to operate), relative to peers and industry standards as well as frequency and average duration of system outages when activity is interrupted on one or more platforms.

Source: Fitch.

Counterparty Risk Management — Financial Market Infrastructure Companies

Attribute	Core Versus Complementary	Description
Collateral Margining	Core	FMIs seek to minimize counterparty risk by taking significant counterparty collateral that can be utilized in the event of counterparty default. Fitch's counterparty risk management assessment considers the initial sizing and ongoing maintenance of this collateral, along with the predefined counterparty/customer default mechanisms.
Default Processes/ Waterfalls	Core	Fitch's assessment maybe positively influenced by robust and clearly defined default procedures that protect the clearing house and non-defaulting clearing members from a clearing member default. This may include prescribed processes via default waterfalls in place that include using a defaulting clearing member's collateral (margin) and guarantee fund contributions to reduce or eliminate losses. In the event that all losses are not covered, the clearing house can then access clearing house capital contributions, non-defaulting clearing member guarantee fund contributions and potentially further resources of non-defaulting clearing members. Fitch's assessment of counterparty risk management focuses on mechanisms that do not rely upon the imposition of economic losses to clearing participants. Thus, the use of clearing suspension mechanisms, or loss-sharing components at the end of default waterfall, including write-downs of non-defaulting members' contributions to default funds or variation margin gains haircutting would be viewed negatively by Fitch. From a quantitative perspective, Fitch also may assess the level of largest counterparties' exposure in excess of collateral held against the resources allocated by a clearing house for loss mitigation (referred to as "skin in the game") before collective funds can be drawn.
Clearing Member Standards	Complementary	Counterparty risk is managed by stringent clearing member standards, margin requirements, acceptable collateral requirements and guaranty funds. Fitch generally reviews clearing houses' policies and procedures with respect to counterparty risk management to determine the extent to which they capture potential counterparty risks in a comprehensive and forward-looking manner. Fitch considers the factors outlined in the Considerations for FMIs' Counterparty Risk Management Framework table below when assessing the sufficiency of a clearing house's counterparty risk management framework.
Business Model Specifics	Complementary	Pure exchanges and CSDs without banking licenses act simply as a venue for trading activity or securities depository and direct subsequent settlement and clearing to third parties. With the exception of minimal counterparty risk arising from trade invoices and potentially from investments in financial assets, exchanges and CSDs without banking licenses are not materially exposed to counterparty risk. As such, counterparty risk is not a key stand-alone ratings driver for exchanges or CSDs without banking licenses, although both types of organizations typically subject their members to minimum qualitative and quantitative requirements.

Counterparty Risk Management	Margin Procedures	Guaranty Funds	Dedicated Resources (i.e. "Skin in the Game")
Initial Margin/Variation Margin	Calculation	Size Versus Counterparty Exposure	Size Versus Counterparty Exposure
Financial Requirements	Frequency	Frequency of Resizing	Size Versus Member Contributions
Due Diligence	Posting	Quality	Determination Mechanism (i.e re-sizing based on exposure amounts)
Remediation	Valuation	Diversification	
Membership Rules	Buffers	Custody	
Concentration Management	Haircuts		
	Review		

Source: Fitch.

Growth — Financial Market Infrastructure Companies

Attribute	Core Versus Complementary	Description
Absolute and Relative Rates of Growth	Core	Fitch assesses FMIs' growth in the context of balance sheet and/or business growth relative to underlying market conditions, volatility and peer averages. Generally, clearing houses have significant margin deposit and guaranty fund contribution offsets on both sides of the balance sheet associated with the respective securities cleared. Growth of these balance sheet components are highly correlated to overall market conditions. When assessing the growth of a clearing house, Fitch excludes these balances from its primary analysis, as these funds are for the benefit of clearing member creditors and do not reflect growth of the core balance sheet. That said, the trend in the growth of the consolidated balance can be informative over the longer term.
Accompanying Infrastructure Growth	Complementary	Fitch's growth assessment may be negatively influenced if rapid growth strains the ability of technology platforms and back-office operations to handle increased trading, clearing or depository volumes.
Impacts of Inorganic Growth	Complementary	Non-accretive acquisitions may negatively affect Fitch's growth assessment if they do not complement the long-term strategy of the combined entity. Additionally, acquisitions could negatively affect Fitch's growth assessment if leverage metrics are elevated and/or integration costs are high.

Balance sheet growth usually exceeds long-term sustainable growth of business segments. Control environment routinely lags behind higher business volumes.	Growth may be well in excess of sustainable levels.

II.5 Financial Profile Assessment

Importance of this Assessment

A non-bank financial institution's financial profile, which can often be measured by analyzing key financial metrics and trends in and stability of those metrics, is relevant because it provides a strong indication of how the firm is performing across key dimensions of creditworthiness. In many respects, financial measures are the outcome of the non-bank financial institution's operating environment, company profile, management and strategy and risk appetite.

Risk measures enable an analysis of how a non-bank financial institution's risk appetite and management compare with those of peers and whether performance is commensurate with business cycles. Asset quality is relevant because weak asset quality can undermine a non-bank financial institution's balance sheet solvency and ultimately its ability to meet obligations to creditors. Leverage and capital adequacy measures are relevant because they determine a non-bank financial institution's ability to grow and absorb unexpected losses. Funding and liquidity are relevant because inadequacies in these two areas often lead to non-bank financial institution failures as a result of asset/liability mismatches or asset illiquidity. Profitability matters as it determines the non-bank financial institution's ability to service debt and/or generate capital internally to act as a first line of defense against rising impairment charges or other sources of risk or loss.

Fitch's starting point is typically audited financial statements, but it will generally also consider unaudited and interim financial statements. Fitch makes adjustments to allow for greater comparability across jurisdictions (IFRS versus U.S. GAAP), such as re-classification of items to fit its standard spreadsheets and ratio calculations. Adjustments could entail exclusion of one-off gains/losses or non-cash earnings and expenses from operating profitability, exclusion of intangible assets from capital or inclusion of restructured loans as part of impaired assets.

Fitch generally employs its own stress tests on various aspects of a non-bank financial institution's financial profile *(See Annex 4)* such as asset quality, capital adequacy or liquidity. These may include various institution-specific, regional or broad industry scenarios to determine an institution's ability to withstand a rapid shift in the operating environment. The results of these stress tests are informative on both an absolute and relative basis but by themselves may not necessarily drive rating decisions. Fitch also considers issuer-generated stress tests to understand how these drive decision-making within the organization.

Quantitative Ranges

For each non-bank financial institution subsector, Fitch uses a set of core metrics and complementary metrics for financial profile factors. Figures in the sections below set out the indicative quantitative ranges for core financial profile metrics. Fitch uses a four-year average (where data are available) to determine the implied factor score for all metrics, other than for capitalization and leverage, for which it uses the latest available data point, as Fitch views this as a more reliable indicator of the level of the metric in the future. Four-year averages represent an average of the metric in question over each of the four individual periods, as opposed to an aggregation of the numerators and denominators for the cumulative time period.

While a single metric cannot explain a factor score in its entirety, the implied factor score is the starting point in the determination of the actual score. For example, the view of a non-bank financial institution's asset quality would incorporate other aspects such as the rate of growth, collateral and reserves and loan writeoffs, which may result in the implied factor score being adjusted before arriving at the final factor score. Some of these other aspects of a non-bank financial institution's financial profile are captured in complementary metrics, but Fitch

combines quantitative analysis with qualitative judgement to determine the assigned factor scores, which are expressed by a three-notch range.

The most common analytical reasons for adjusting the implied factor scores are outlined in the sections below. Adjustments may negatively or positively influence the final factor score. In general terms, the adjustments tend to fall into two broad categories: (1) Fitch adjusts for specific risk elements or business profile features that may not be adequately captured in the core financial ratios; and (2) Fitch adjusts for cyclical and/or structural elements that, in Fitch's opinion, mean that historical ratios may not be reliable predictors of future performance.

Adjustments to Implied Asset Quality/Asset Performance/Counterparty Exposure Factor Score

The most common adjustments to a non-bank financial institution's implied asset quality/asset performance score are as follow:

Growth: High growth relative to peers or the domestic economy(ies) may lead to a significant deterioration in asset quality or asset performance. In addition, high growth rates may reduce asset quality ratios due to the lag effect on the numerator, while deleveraging may inflate it. Significantly lower growth than peers could be viewed as conservative and positive for the assigned factor score, particularly if market conditions are challenging.

Collateral and Reserves: Strong reserve coverage of impaired loans relative to peers, such as reflected in the ratio of reserves for impaired loans to impaired loans for finance and leasing companies with high balance sheet usage, or a high proportion of secured or government lending (e.g. guaranteed student loans) may reduce the risks from the non-bank financial institution's impaired exposures. Conversely, a focus on unsecured lending or weak reserve coverage would likely have the opposite effect. Deficiencies in the legislative framework that could impact a non-bank financial institution's ability to liquidate collateral, or enforce its rights as a creditor generally, may result in a downward adjustment to the implied score.

Loan Writeoffs: The impaired loans/gross loans ratio may not fully capture the non-bank financial institution's underlying asset quality performance where it writes off a high proportion of loans soon after they become impaired or, conversely, retains legacy problem loans on its balance sheet for an extended period after they become delinquent. Therefore, Fitch also considers the loan impairments generated in recent periods, as reflected in the complementary ratio of loan impairment charges to average gross loans.

Loan Classification Policies: If Fitch believes a non-bank financial institution has a relatively large proportion of high-risk assets that are not captured by traditional impaired asset definitions, (e.g. because they have been restructured or are classified in the watch category), this may weigh on Fitch's assessment of asset quality. Conservative asset classification relative to peers may be moderately positive for Fitch's assessment.

Concentrations: The existence of high concentration exposures with respect to single borrowers/counterparties, sectors or asset classes (for example equities, fixed income or alternatives for investment managers) may increase vulnerability to cyclical asset performance fluctuations. Conversely, good portfolio/product diversification may be a moderately positive factor in assessing asset quality or asset performance.

Non-Loan Exposures: Fitch may adjust downward the asset quality score where it believes there are material risks of losses arising from non-loan and lease assets, such as securities, derivative fair values or foreclosed assets or from off-balance sheet exposures, such as managed funds, guarantees and commitments. Conversely, where a relatively high proportion of a non-bank financial institution's risk exposures are outside of the loan book and these are

low risk (e.g. highly rated securities or off-balance sheet trade finance exposures), this may result in a positive adjustment to the implied asset quality score.

Risk Appetite and Business Model: Fitch may adjust the asset quality score downwards where it views the non-bank financial institution as having a relatively high risk appetite, or a business model or asset class specialization which in the agency's view may be more likely to result in future asset quality deterioration or volatility. In such cases, Fitch may take the view that recently reported asset quality metrics are more vulnerable to deterioration as loan and other exposures season. Conversely, a low risk appetite or lower risk business model may result in a moderate positive adjustment to the asset quality score. However, the scope for any positive adjustment is likely to be limited in cases where asset quality metrics are weak due to legacy problem exposures and the non-bank financial institution has only recently reduced its risk appetite.

Historical and Future Metrics: Fitch may view historical asset quality metrics as not being reliable indicators of future metrics, for example, due to changes in a non-bank financial institution's strategy or operations, because mergers, acquisitions or disposals may have a material impact on group risk exposures, Fitch's economic expectations materially deviate from past conditions, or recent asset quality metrics correspond to a particularly favorable or unfavorable part of the credit cycle.

Relative Size: The absolute size of an investment manager's AUM will affect net client flow percentages. Net inflows could outpace peers on a dollar basis but lag as a percentage of AUM. Outsized client flows could be troublesome if investable assets exceed investment opportunities, while below-average flows could be appropriate depending on market conditions.

Adjustments to Implied Earnings and Profitability Factor Score

The most common adjustments to a non-bank financial institution's implied earnings and profitability score are as follow:

Portfolio Risk: For a given business model, earnings may be lower than its peers if a non-bank financial institution is managing a lower risk and, thus, lower yielding portfolio. In such cases, Fitch will also utilize risk-adjusted return measures to assess overall profitability.

Revenue Diversification: Fitch assesses more favorably a non-bank financial institution's performance where operating revenues are more diversified than its peers. Reliance on a single or concentrated set of business lines, client relationships or revenue streams could negatively affect Fitch's assessment.

Earnings Stability: A positive adjustment could be made to a non-bank financial institution's earnings and profitability score where earnings have proved to be stable through a cycle or where recent performance suggests a sustainable improvement compared to the non-bank financial institution's four-year average. Conversely, high earnings volatility or a recent structural weakening of performance could lead to a negative adjustment. Certain business models or asset classes may also be more vulnerable to cyclical performance swings, even if these have not been observed to date; in such cases, recently reported data may not be sustainable or representative of expected performance through a cycle, which could warrant a downward adjustment to the earnings and performance score.

Historical and Future Metrics: Fitch may view historical earnings and profitability metrics as not being reliably indicative of future metrics, for example, due to changes in a non-bank financial institution's strategy or operations, because mergers, acquisitions or disposals may have a material impact on group profitability, because Fitch's economic expectations materially deviate from past conditions, or because recent performance metrics correspond to a particularly favorable or unfavorable part of the credit cycle.

Ownership and Structural Considerations: While non-bank financial institutions with external shareholders will often be focused on consistently maximizing earnings, non-bank financial institutions that are narrowly owned or employee-owned may have more flexibility to sacrifice current earnings in exchange for future growth potential, competitive positioning and/or employee retention. This flexibility will be factored into a non-bank financial institution's earnings assessment.

Adjustments to Implied Capitalization and Leverage Factor Score

The most common adjustments to a non-bank financial institution's implied capitalization and leverage score are as follow:

Reserve Coverage and Asset Valuation: An adjustment to capital may be required to reflect any material under- or over-provisioning of impaired assets, as captured in the ratio of impaired loans less reserves for impaired loans to Fitch core capital. Aggressive or conservative valuations of performing assets or high volumes of other higher risk assets (e.g. foreclosed assets) could also affect Fitch's assessment of capitalization.

Profitability, Payouts and Growth: Fitch may adjust downward the capitalization and leverage score where a non-bank financial institution's earnings retention is weak (e.g. due to weak profitability and/or high pay-out ratios or share repurchase rates) or the non-bank financial institution's expected rate of growth is high, to reflect the likely negative impact this will have on capital metrics. Conversely, strong earnings retention or low growth may result in a positive adjustment to the capitalization and leverage score.

Concentrations: The existence of high concentration to single borrowers/counterparties, sectors or asset classes may increase the vulnerability of capital to asset performance fluctuations. Conversely, good portfolio diversification may be a moderately positive factor in assessing capitalization and leverage.

Size: A small (in absolute terms) capital base can leave an institution more vulnerable to unforeseen events, especially where there are risk concentrations, even if capital ratios are relatively strong. This may result in a downward adjustment of a non-bank financial institution's capitalization and leverage score. A large (in absolute terms) capital base could be moderately positive for the assessment.

Fungibility: Fitch may adjust downward a parent non-bank financial institution's capitalization and leverage score where it has material subsidiaries, in particular regulated or foreign ones, and there are significant restrictions on transfers of capital within the group. Weaker stand-alone capital ratios than for the group on a consolidated basis would increase the likelihood of such an adjustment.

Capital Raising (or Distribution): Fitch may adjust the capitalization and leverage score to reflect capital raising or distribution (or expectations of these) that have occurred subsequent to the last financial reporting date.

Risk Appetite and Business Model: Certain business models or asset class specializations may be more vulnerable to cyclical performance swings, such that a larger capital buffer is required to achieve a given capitalization and leverage score. Conversely, a positive adjustment could be made where performance has proved to be stable through a cycle or if the entity benefits from both balance sheet assets and cash flow generation capability. The capitalization and leverage score for non-bank financial institutions assessed on the basis of cash flow leverage (debt/EBITDA) could also be adjusted to reflect variability in EBITDA generation.

Historical and Future Metrics: Fitch may view the most recent reported capitalization and leverage metrics as not being reliable indicators of future metrics, for example, due to changes in a non-bank financial institution's strategy or operations, because mergers, acquisitions or disposals may have a material impact on the group profile or because of anticipated changes in the bank's asset-quality performance or profitability.

Sustained, Elevated Cash Balances: Although Fitch tends to focus on leverage ratios based on gross debt, the agency may adjust the capitalization and leverage score upward where, for example, a non-bank financial institution has consistently maintained elevated cash balances, in which case Fitch may place greater emphasis on net debt leverage ratios. Consideration of net debt leverage ratios would be supported by the presence of structural features that ensure the ongoing availability of cash to benefit debtholders, demonstration of cash maintenance through periods of stress or public articulation of a strategy to maintain such cash balances. The absence of these features would make such an upward adjustment unlikely.

Adjustments to Implied Funding, Liquidity and Coverage Factor Score

The most common adjustments to a non-bank financial institution's implied funding, liquidity and coverage score are as follow:

Liquidity Coverage: Strong or weak coverage of a non-bank financial institution's short-term liabilities by liquid assets could result in upward or downward adjustment, respectively, to the funding, liquidity and coverage score. Fitch will consider the volume, quality and encumbrance of a non-bank financial institution's liquid assets in making this assessment. The absence of near- and medium-term debt maturities may reduce the need for significant liquidity, particularly if liability maturities extend beyond asset maturities. Similarly, the funding, liquid and coverage score may be adjusted upwards for investment funds with limited near- and medium-term financial obligations.

Cash Flow Generative Business Model: A higher funding, liquidity and coverage score could result if the non-bank financial institution's business model is viewed as highly cash flow generative, particularly during times of stress, economic slowdown and/or reduced capital expenditures. For example, certain business models with contractual cash flows (servicers, rental/leasing companies) have historically demonstrated an ability to generate significant cash flow once discretionary capital expenditures are moderated.

Confidence Sensitivity: Fitch will consider a non-bank financial institution's term structure, diversification by source and reliability of market access in assessing risks associated with its wholesale funding. Stable long-term funding (e.g. due to well-established market access) could result in an upward adjustment to the funding, liquidity and coverage score. Conversely, a non-bank financial institution's implied funding, liquidity and coverage score may be adjusted downward where it has inconsistent or limited access to the capital markets.

Foreign Currency Liquidity: A non-bank financial institution's funding, liquidity and coverage score may be adjusted downward where coverage of foreign currency liabilities by foreign currency liquidity is weak, in particular where it could be difficult for a non-bank financial institution to convert local currency into foreign currency, in case of need.

Fungibility: Fitch may adjust downward a non-bank financial institution's funding, liquidity and coverage score where it has material subsidiaries, in particular foreign or regulated ones, and there are significant restrictions on transfers of liquidity within the group. Weaker stand-alone liquidity and funding ratios than for the group on a consolidated basis would increase the likelihood of such an adjustment.

Contingent Access: A relatively strong ability to access contingent liquidity, for example, as a result of sizable, committed and long-duration credit lines, could result in a positive adjustment to the funding, liquidity and coverage score. Conversely, undue reliance on short-duration or uncommitted funding could result in a negative adjustment.

Historical and Future Metrics: Fitch may view historical funding and liquidity metrics as not being reliable indicators of future metrics, for example, due to changes in a non-bank financial institution's strategy or operations or because mergers, acquisitions or disposals may have a material impact on balance-sheet structure.

Financial measures are usually influenced by the operating environment, and Fitch views them in that context. Therefore, comparisons of financial measures across geographies will reflect the differing operating, legal, and regulatory environments for non-banks. Consequently, comparisons of financial measures of direct or in-market peers will generally take on greater importance in this assessment.

Fitch does not employ pre-set weightings for factors or subfactors, as their relative influence may vary. For example, the relative importance of capitalization and leverage and asset quality for the stand-alone credit profile of a non-bank financial institution suffering from a material capital shortfall as a result of high idiosyncratic loan losses is likely to be high (and the stand-alone credit rating very low), even if the non-bank financial institution fares well or better on other factors or subfactors.

Throughout the remainder of the Financial Profile section of the criteria, reference is periodically made to EBITDA. For the avoidance of doubt, Fitch typically adjusts EBITDA calculations to account for various analytical considerations, including, but not limited to, non-recurring items, performance-related items or other non-cash expenses, such as stock compensation.

Throughout the remainder of the Financial Profile section of the criteria, reference is periodically made to common equity. For the avoidance of doubt, Fitch focuses on tangible equity, excluding goodwill and other intangibles from its calculations.

The following tables identify those financial profile attributes that Fitch has defined as 'core' versus 'complementary,' together with an indication of how each attribute is typically assessed. The accompanying subfactor/rating category matrix provides representative characteristics that aid the determination of the overall factor score assigned in each case.

EBITDA Calculation[a]

Pre-tax income
+ interest expense
+ depreciation
+ amortization
+/- adjustments for non-recurring items
+/- other analytical adjustments (e.g. non-cash items)
= EBITDA

[a]For investment managers, Fitch typically uses a fee-based EBITDA calculation (FEBITDA) as defined on page 52.
Source: Fitch.

II.5.a Securities Firms

Fitch's financial profile assessment for securities firms considers the following subfactors:

- asset quality;
- earnings and profitability;
- capitalization and leverage; and
- funding, liquidity and coverage.

Risk Characteristics of Securities Firms' Primary Business Activities

Activity	Balance Sheet Usage	Risk Level	Level of Profitability	Stability of Profitability
Securities Market Making	High	High	Medium	Cyclical
Prime Brokerage	High	High	Medium	Cyclical
Proprietary Trading	High	High	Medium	Cyclical
Securities Underwriting	High	Medium	High	Cyclical
Lending	High	Medium	Low	Cyclical
Securities Broking	Low	Medium	Low	Cyclical
Financial Advisory	Low	Low	Medium	Cyclical
Post Trade Services	Low	Low	Low	Stable
Investment Management	Low	Low	Medium-to-High	Stable

Source: Fitch.

Asset Quality — Securities Firms

Attribute	Core Versus Complementary	Description
Impaired and Nonperforming Ratio	Core (For Securities Firms with Meaningful Lending Activity)	For securities firms with more meaningful balance sheet exposure to investing and lending activities, the assessment of asset quality is akin to Fitch's analysis for other non-bank financial institution lenders, taking into account loan impairments, related reserving and asset growth. For securities firms with low balance sheet usage, asset quality may be a lower influence consideration or may even by viewed as not applicable.
Coverage, Collateral and Margin	Complementary (For Securities Firms with Meaningful Lending Activity)	Fitch considers reserve coverage ratios, the adequacy of collateral and margin requirements and the ability to enforce security claims. Fitch's focus is to determine whether the firm's capital is likely to be negatively affected due to inadequate reserve coverage levels. For assets held at fair or market value, Fitch assesses measurement methodologies, particularly regarding model-based valuations. Fitch also considers the management of non-performing assets and management's approach to restructuring and rescheduling impaired assets.
Counterparty and Settlement Risks	Complementary	Counterparty risk is a consideration for firms engaged in securities and derivatives transactions. The absence of independent credit functions and scoring or rating policies for securities/derivative counterparty exposures would negatively influence Fitch's asset quality assessment. However, credit risk is not as significant for pure brokerage activity (such as for some interdealer brokers) or for firms that provide advisory services, rather than invest in securities transactions. A credit risk department independent of the sales and trading desks that determines counterparty limits, actively monitors usage and reports violations could positively influence Fitch's asset quality assessment, as could risk parameters with respect to the credit quality of the main custodians used.
Securitization and Other Off Balance Sheet Exposure	Complementary (For Securities Firms with Meaningful Lending Activity)	To the extent that Fitch is able to ascertain and evaluate a securities firm's exposure to securitization risks, first-loss tranches of off-balance-sheet securitizations are deducted from Fitch's Core Capital calculations. The agency may also add these risks to the balance sheet if they are not already reported as such. Fitch considers off-balance sheet risks and commitments where these are large in relation either to capital or risk-weighted assets, or where they pose significant reputational or liquidity risks. This is likely to be an inherent risk faced by firms that have agreed to fund special purpose vehicles or other non-consolidated contingencies but is also important for firms that sponsor investment funds.

Source: Fitch.

Earnings and Profitability — Securities Firms

Attribute	Core Versus Complementary	Description
Operating Profit/Average Equity	Core (For Securities Firms with High Balance Sheet Usage)	Earnings and profitability are important considerations in Fitch's analysis of securities firms with high balance sheet usage because they indicate a securities firm's ability to generate, or conversely erode, its capital. Strong or weak performance may also affect market confidence in the issuer and, hence, its access to funding. The core metric, operating profit/average equity, captures a securities firm's ability to generate recurring profits relative to the risks it assumes.
Adjusted EBITDA/ Revenue	Core (For Securities Firms with Low Balance Sheet Usage)	For securities firms with limited balance sheet-intensive activities, the primary cash flow profitability measure is adjusted EBITDA margin. Given many securities firms with low balance sheet usage have a continual need to invest in technology development, Fitch also considers the amount of operating cash flow generated to support capital expenditures.
Earnings Stability	Complementary	Fitch's earnings and profitability assessment may be negatively influenced by proprietary trading and investment activity due to the significant potential earnings volatility it can introduce. Conversely, if higher risk businesses are supplemented with more stable operating revenue, such as investment management, clearing operations or securities financings, this can positively influence Fitch's earnings and profitability assessment.
Compensation Expenses	Complementary	Compensation expenses are often analyzed as a percentage of net revenue, to determine the costs relative to activity levels, with outsized compensation ratios potentially constraining stand-alone credit ratings. However, business mix is an important consideration in evaluating this ratio as specific business lines may require greater or less infrastructure and personnel support. The stability of the compensation ratio through various revenue cycles is also an important measure of the flexibility of the cost structure. Fitch evaluates the effectiveness of a firm's compensation, mainly its bonus, policy in controlling compensation expenses. This includes the extent to which bonuses are linked to company or individual performance, are spread out over time, or are paid in shares or options rather than cash.
Non-Compensation Expenses	Complementary	Fitch evaluates non-staff costs as a percentage of non-interest expenses in aggregate and, where possible or relevant, by individual line items. The agency may also consider the business mix of the firm in evaluating non-staff cost ratios. Although an abnormally high non-staff costs expense ratio or a rising trend may indicate a lack of management control over expense levels, low ratios may indicate insufficient reinvestment in systems technology and infrastructure to enhance productivity, meet regulatory requirements and sustain the firm's competitiveness or to maintain good oversight of risk development.

Capitalization and Leverage — Securities Firms

Attribute	Core Versus Complementary	Description
Net Adjusted Leverage (tangible assets less reverse repo and securities borrowed over FCC, or its inverse)	Core (For securities firms with high balance sheet usage)	For those securities firms that maintain a substantial volume of assets on balance sheet or commitments that could require financing, Fitch's assessment of leverage more closely reflects a bank analysis. The quality and absolute size of a firm's capital and its capital adequacy (i.e. the size of its capital in relation to its risks) as expressed by the FCC ratio, is the fundamental consideration in assessing balance sheet intensive securities firms' capitalization and leverage.
Gross Debt/ Adjusted EBITDA	Core (For securities firms with low balance sheet usage)	For securities firms carrying relatively few risk assets, the assessment of debt coverage is based more on cash flows. For interdealer brokers and some other securities firms, a large proportion of cash is usually tied up in subsidiaries for regulatory and operational purposes, so leverage is best assessed on a gross debt basis. Fitch also considers net debt/adjusted EBITDA, but recognizes that excess cash can be otherwise consumed or deployed, particularly during periods of stress. For securities firms that have a combination of businesses which have different degrees of balance sheet usage, such a retail brokers, Fitch will typically evaluate both cash flow and balance sheet leverage ratios, with balance sheet ratios taking increasing importance in the analysis in instances where balance sheet usage is more pronounced.
Double Leverage	Complementary	Where relevant, Fitch also looks at double leverage, defined as equity investments in subsidiaries plus holding company intangibles divided by equity, which reflects debt issued at the parent company level that has been downstreamed as equity into subsidiaries. While a small amount of double leverage can be expected, Fitch is concerned when double leverage is high (i.e. above 120% or more of a parent company's common equity) on a sustained basis, unless mitigated by some other means (e.g. subsidiary liquidity support agreement). A high degree of double leverage can result in increased rating differentials between a parent company and its subsidiaries, particularly if regulated subsidiaries are involved, since dividends from these entities may be restricted. When feasible, Fitch will review a regulated subsidiary's dividend capacity relative to the holding company's fixed costs and dividends.
Internal, Regulatory and Covenant-Based Capital	Complementary	In addition to Fitch's capital measures, a firm's capital management plans and an understanding of its economic capital models are important to the ratings. Fitch views economic capital models that positively influence business activities and support stable and robust capital levels over an extended period of time as positive for the ratings. When relevant, Fitch monitors regulatory capital ratios and capital covenant ratios to ensure the firm is not in danger of becoming non-compliant.

Funding, Liquidity and Coverage — Securities Firms

Attribute	Core Versus Complementary	Description
Liquid Assets/ Short-Term Funding	Core (For securities firms with high balance sheet usage)	It is important that securities firms appropriately match the term of their funding to the liquidity of their assets, with particular focus on the amount of liquid assets available to support short-term funding sources, which are subject to refinancing risk. To the extent that short-term repurchase agreements (repos) are used primarily to finance highly liquid assets that can be pledged to an exchange, this is viewed as more appropriate.
Adjusted EBITDA/Interest Expense	Core (For securities Firms with Low Balance Sheet Usage)	For securities firms with low balance sheet usage, funding, liquidity and coverage are primarily evaluated in the context of adjusted EBITDA to interest expense.
Long-Term Funding/ Illiquid Assets	Complementary (For Securities Firms with High Balance Sheet Usage)	Fitch evaluates the funding of illiquid assets, such as merchant banking and high-yield securities, fixed assets, and private equity, and considers the extent to which they are funded by long-term debt and capital. Fitch also evaluates any contingent funding requirements the firm may face, such as liquidity lines or backup facilities extended, or additional collateral calls that may be made on it if market conditions change.
Funding Diversity	Complementary	Fitch assesses a securities firm's funding diversity, debt maturity profile, liquidity status and the proportion of unencumbered liquid assets. Access to central bank liquidity facilities can also a positive factor in the funding, liquidity and coverage assessment, but not all securities firms benefit from this, as such access depends on jurisdiction and legal status within that jurisdiction.
Covenant Compliance	Complementary	Fitch's funding, liquidity and coverage assessment may also include consideration of an issuer's compliance with any funding covenants, the extent to which compliance with such covenants fluctuates and management's ability to operate the business and obtain funding without being unduly constrained by covenant requirements.

Asset Quality	Lending and Investing Activities: Extremely stable throughout market cycles. Asset-quality measures are consistently better than comparable institutions. Concentration risks are very low. Trading Activities: Counterparty risk is extremely well managed and diversified.	Lending and Investing Activities: Very high degree of stability throughout market cycles. Asset-quality measures are better than comparable institutions. Concentration risks are low. Trading Activities: Counterparty risk is well managed and diversified.	Lending and Investing Activities: Has a high degree of stability throughout market cycles. Asset-quality measures are likely to be modestly better than at peer institutions or less vulnerable to economic rate cycles. Concentration risks may be modestly better than peers. Trading Activities: Counterparty risk is reasonably managed and diversified	Lending and Investing Activities: Has a degree of stability throughout market cycles. Asset-quality and/or concentration risk measures are generally in-line with broad industry averages. Trading Activities: Counterparty risk is adequately managed and diversified.	Lending and Investing Activities: Asset quality measures are more volatile in the face of changes in economic/market cycles and generally worse or more vulnerable than broad industry averages. Concentration risks may be above average. Trading Activities: Counterparty risk management is below average with limited diversification	Lending and Investing Activities: Asset quality measures are very volatile based on changes in economic/market cycles and generally significantly worse or more vulnerable than broad industry averages. Concentration risks may be very high. Trading Activities: Weak counterparty risk management with high concentration.	Lending and Investing Activities: Has or is likely to have asset-quality measures that materially deviate from industry benchmarks or historical norms. Trading Activities: Significant counterparty risk management shortfalls.
Earnings and Profitability	Earnings and profitability are highly predictable throughout economic and/or interest rate cycles. Limited reliance on transactional revenue. Highly variable cost structure. Superior returns relative to peer.	Earnings and profitability are very predictable over multiple economic and interest rate cycles. Limited reliance on transactional revenue. Highly variable cost structure. Strong returns relative to peer.	Earnings and profitability are moderately variable over economic and/or interest rate cycles. Modest reliance on transactional revenue. Largely variable cost structure. Solid returns relative to peer.	Earnings and profitability may be variable over economic and/or interest rate cycles. Modest reliance on transactional revenue. Largely variable cost structure. Adequate returns relative to peer.	Earnings and profitability may be highly variable over economic and/or interest rate cycles. Moderate reliance on transactional revenue. Cost structure is less variable than peer firms. Below-average returns relative to peer.	Earnings and profitability are volatile and highly correlated with economic and/or interest rate cycles. Heavy reliance on transactional revenue. Cost structure is largely fixed. Weak returns relative to peer.	May be structurally unprofitable on either a reported or operating basis. Return to break-even or sustainable profitability is highly uncertain.
Capitalization and Leverage	Capitalization and leverage are extremely strong and commensurate with risk. Capitalization and leverage are maintained with very significant buffers over regulatory minimums as well as peer institutions. Capital and leverage targets incorporate ability to withstand severe shocks.	Capitalization and leverage are strong and commensurate with risk. Capitalization and leverage are maintained with comfortable buffers over regulatory minimums as well as peer institutions. Capital and leverage targets incorporate ability to withstand significant shocks.	Capitalization and leverage levels broadly commensurate with risk. Capitalization and leverage are maintained with solid buffers versus regulatory minimums and generally above peer institutions. Capital and leverage levels may be relatively more volatile but likely only modestly affected by severe asset quality and market value shocks.	Capitalization and leverage may not be fully commensurate with risk. Capitalization and leverage are maintained with satisfactory buffers over regulatory minimums and generally in line with peer institutions. Capital and leverage levels may be more vulnerable to severe shocks.	Capitalization and leverage are not fully commensurate with risk. Capitalization and leverage are maintained with moderate buffers over regulatory minimums and may be below peer institutions or are somewhat vulnerable due to significant country risks. Capital and leverage are highly vulnerable to sever shocks, but capable of withstanding moderate shocks.	Capitalization and leverage are not commensurate with risk. Capitalization and leverage are low and buffers over regulatory minimums are small, or capital is vulnerable due to high country risks. Capital and leverage levels may be well below peer institutions and highly vulnerable to shocks.	Capitalization and leverage have clear deficiencies that either have or may require capital injections.
Funding, Liquidity and Coverage	Funding and liquidity are exceptionally stable. Minimal reliance on wholesale funding. Funding is not confidence sensitive. Fund sources are highly diverse. Extremely robust contingency funding plans are in place.	Funding and liquidity are very stable. Minimal reliance on short-term funding. Wholesale funding is predominantly long-term with established investor appetite. Funding is relatively less confidence sensitive. Fund sources are very diverse. Very robust contingency funding plans are in place.	Funding and liquidity are stable. Wholesale funding is predominantly long term. Funding may be modestly confidence sensitive. Funding sources are relatively diverse. Robust contingency funding plans are in place.	Funding and liquidity are generally stable, although there may be moderate funding concentrations or reliance on less stable wholesale funding sources. Funding is confidence sensitive and liquidity may become more expensive or less stable during periods of stress. Reasonable contingency funding plans are in place.	Funding and liquidity are generally stable, although there may be material funding concentrations or meaningful reliance on less stable wholesale funding sources. Access to funding may be uncertain during periods of market stress. Contingency funding plans may not be sufficient.	Funding and liquidity are less stable and may be prone to sudden changes in creditor sentiment. Access to funding during periods of market stress is very uncertain. Contingent funding plans may not be well developed.	Funding and liquidity are unstable absent any formal extraordinary support mechanisms. Contingent funding plans are non-existent.

II.5.b Investment Managers

Fitch's financial profile assessment for investment managers, investment companies and investment funds considers the following subfactors:

- asset performance (and asset quality for investment companies);
- earnings and profitability;
- capitalization and leverage; and
- funding, liquidity and coverage.

Asset Performance — Investment Managers

Attribute	Core Versus Complementary	Description
Net Client Flows/ Beginning (F)AUM	Core (for investment managers and investment funds)	Fitch evaluates fund flows on an absolute and relative basis to understand a firm's ability to take advantage of market conditions to invest and/or exit investments and, for liquid funds, to assess net inflows or redemptions over a variety of market cycles. More stable fund flows translate into greater fee stability over time. To the extent that the manager or fund has more predictable inflows and/or an ability to manage the pace of outflows, these could positively influence Fitch's assessment. Examples of more predictable inflows could include an investment manager with a sister insurance company which uses the investment manager to manage all or a portion of its general investment account or a pension fund established to manage the contributions of a defined portion of employees or citizens. Examples of managed outflows could include fund structures where the investment manager can influence the timing or amount of redemption.
Asset Performance and Quality	Complementary (for investment companies)	For investment companies, Fitch considers a combination of asset performance and asset quality factors. Asset performance is intended to indicate how market value appreciation/depreciation has impacted the value of assets collateralizing outstanding debt while also providing an indication as to the asset selection capabilities of the investment company (or its investment manager). Asset quality is intended to indicate the quality of the investments collateralizing outstanding debt and the quality/reliability of the upstream dividend and interest income received from portfolio companies. For investment companies that invest in a finite number (less than 30) of portfolio companies or exhibit material portfolio concentration (individual holding greater than 15%), Fitch considers the credit quality and seniority of the underlying investments to assess the overall asset quality profile. This is typically achieved by looking to Fitch's ratings of such portfolio companies or by considering other external sources of information in the absence of such information. To the extent that a portfolio company comprising a large portion (greater than 15%) of the portfolio is unrated, Fitch may elect to conduct an internal Credit Opinion of such entity to support the rating of the investment company.
Performance Relative to Benchmarks and Peers	Complementary	Fitch considers the stability of investment performance, on an absolute basis and relative to investor expectations. Fitch will consider firm-specific benchmarks when assessing fund performance, but will also look to independent sources for performance data, where available, to understand relative fund performance based on vintage, size, geography, and strategy. However, prolonged periods of unexplained outperformance would also require further analysis and could lead to a negative adjustment to Fitch's asset performance assessment if material weaknesses in risk management and/or style drift were the catalyst.
Management Fee Stability	Complementary	Fitch will also assess management fee stability by looking at earnings contributions by fund, strategy and/or segment. Similarly, outsized exposure to a sector or industry strategy could increase correlations and volatility in fee streams. Fitch reviews average fee rates on individual strategies on a relative basis to assess the investment manager's pricing power and ability to withstand incremental fee pressure.

Earnings and Profitability — Investment Managers

Attribute	Core Versus Complementary	Description
(F)EBITDA/ Fee Revenue	Core (for Investment Managers)	Fitch assesses investment managers' earnings and profitability primary on the basis of fee-related earnings measures, such as (F)EBITDA margin. (F)EBITDA includes transaction, monitoring and advisory fees, but Fitch may remove them from its recurring cash flow calculation if they are believed to be very volatile over time. Conversely, interest and/or dividend income that an alternative investment manager may earn from balance sheet investments could be added to (F)EBITDA if the revenue is believed to be contractual (e.g. interest coupons and preferred dividends), less correlated with core management fees and relatively stable over time.
Returns on Assets	Core (for Investment Companies and Investment Funds)	For more balance-sheet intensive investment managers, returns on assets (ROA) is the primary earnings and profitability consideration. For investment companies, earnings and profitability is typically a lower influence rating factor given the analytical focus on asset overcollateralization and liquidity relative to debt and that earnings can be periodically influenced by unrealized gains/losses as a result of changes in the market values of underlying investments. On a complementary basis, earnings and profitability may also be assessed on the basis of return on equity (ROE).
Earnings Stability and Diversity	Complementary	Fitch's evaluation of earnings and profitability considers the historical trend of an investment manager's earnings performance, the diversity, stability, and quality of its earnings, and the investment manager's capacity to generate profits through cycles. The product mix and strength of performance by product are key factors in providing earnings stability. An additional component in assessing the stability of earnings and fees is whether there are lock-ups on fund investors.
Incentive Fee Generation	Complementary	While Fitch focuses on recurring cash flow measures when assessing an investment manager's core earnings performance, the agency does not ignore the generation of co-investment income or incentive income (also known as carry income and performance fees), as they can provide an additional cushion for debt service capacity and speak to the success of the fund manager, which aids the company in the raising of future funds and, hence, the generation of future management fees. Carried interest can be material, but has significant variability over time.
Fund Structures and Maturities	Complementary	Fitch views fund structures with lock-ups, particularly longer term ones, more favorably as they provide a more stable base upon which to earn fees. Laddered funds and lock-ups are also generally viewed more favorably from an earnings perspective since they ensure that the closure of one fund does not result in a dramatic drop in fees and consequently earnings.

Capitalization and Leverage — Investment Managers

Attribute	Core Versus Complementary	Description
Gross Debt/(F)EBITDA	Core (for Investment Managers)	Leverage, as measured by debt divided by (F)EBITDA, is analyzed from a trend perspective and relative to peer firms and Fitch's general tolerance levels for a given rating. Fitch applies more conservative leverage benchmarks for investment managers with the majority of their fees assessed against NAV, compared ones with the majority of their fees assessed against committed capital.
Gross Debt/ Tangible Equity	Core (for Investment Companies)	For investment companies, investment funds and investment managers that have material co-investment exposure, balance sheet capitalization is a more meaningful consideration. In reviewing the adequacy of capitalization, Fitch considers the size of the capital base in relation to the investment manager, investment company, or investment fund's risks. To the extent capital is a meaningful analytical factor, Fitch takes into account management's policies with regard to minimum capital ratio objectives, share buyback programs, and dividend payouts, as well as the ability to raise new capital and internally generate capital. If subject to regulatory capital requirements, Fitch will also review these, whether at the firm itself or at any regulated subsidiary.
Gross Debt (Long + Short) to NAV	Core (for Investment Funds)	For investment funds, Fitch typically analyzes leverage similarly to securities firms, using NAV as a substitute for equity. High levels of leverage would be viewed as a negative ratings attribute for investment funds given less stable earnings and the fact that repayment on obligations usually comes from asset sales and these assets are often less liquid. That said, leverage for investment funds can vary widely depending on the risk profile, liquidity and duration of assets.
Balance Sheet Size and Composition	Complementary	Fitch notes that investment managers that solely manage assets for external investors often do not have sizable balance sheets that require meaningful loss absorption. In such cases, capitalization could be lower and tangible common equity could be negative, even at an investment-grade capitalization and leverage score level. However, Fitch would expect such investment managers to have enough cash and cash generation capacity to offset unexpected litigation or operational losses as appropriate given the scope of their operations. All things being equal, an investment manager that makes extensive use of its balance sheet and invests in illiquid investments will tend to have a lower capitalization and leverage score than one that makes little use of its balance sheet. However, other factors such as capitalization, access to capital and liquidity may counterbalance these factors.
Goodwill	Complementary	Many investment managers grow by acquisition and, therefore, will carry a significant amount of goodwill and other intangibles on their balance sheet. These assets are also subject to impairment if the viability of the acquired business deteriorates. Fitch will factor the potential for such impairment into its capitalization and leverage analysis as appropriate. Fitch notes that impairment will not have any impact on tangible capital or FCC, as goodwill is excluded from both measures. However, significant impairment would be a negative indicator of the overall health of an investment manager's core earnings.
Consolidated Leverage	Complementary (for Investment Companies)	For investment companies, Fitch tends to focus on unconsolidated debt to equity as the primary leverage metric and considers cash flow leverage metrics to be of a low influence. Consolidated leverage may be considered as a complementary metric to assess the aggregate degree of leverage across underlying portfolio investments. Fitch may also focus more on consolidated leverage metrics in its analysis to the extent that an investment company has a sustained track record of providing financial support to portfolio companies.

Funding, Liquidity and Coverage — Investment Managers

Attribute	Core Versus Complementary	Description
(F)EBITDA/ Interest Expense	Core (for Investment Managers)	Fitch assesses investment managers' funding, liquidity and coverage primarily on the basis of interest coverage. Fitch applies more conservative interest coverage benchmarks for investment managers with the majority of their fees assessed against NAV relative to investment managers with the majority of their fees assessed against committed capital. For investment managers that pay preferred dividends, Fitch would also calculate (F)EBITDA coverage of both interest expense and preferred dividends.
Upstream Dividend and Interest Income Coverage of Holdco Interest Expense	Core (for Investment Companies)	For investment companies, coverage is evaluated in the context of upstream dividend and interest income from portfolio companies and investments relative to holding company operating expenses, interest expenses and dividends, with greater than two years' coverage being viewed as consistent with an investment-grade funding, liquidity and coverage score. For investment companies that are privately held and do not have stated dividend policies, Fitch will likely remove holding company dividends from the denominator of this ratio reflecting the highly discretionary nature of any such dividends and the absence of similar reputational risk that a publicly traded investment company may face by reducing or cutting its dividend.
(Cash + Unpledged Assets)/Unsecured Debt	Core (for Investment Funds)	For investment funds, Fitch focuses more heavily on the liquidity of the assets rather than their cash flow generation capacity.
Funding Stability and Diversity	Complementary	In assessing the stability of such funding sources, Fitch reviews the maturity profile of the debt, sources of repayment for any near-term maturities, the nature of significant debt covenants and current and recent performance under those covenants. Access to unsecured debt and lack of reliance on any single funding source are viewed as positive factors for the funding, liquidity and coverage score, as is laddering of debt maturities. For investment companies, investment funds and investment managers with more material sheet balance sheet exposure, Fitch also considers the debt maturity profile of the firm's funding sources relative to its asset maturities and asset liquidity.
Liquidity Sources and Terms	Complementary	Fitch considers investment managers' sources of liquidity including committed facilities, cash flow generation capacity, unencumbered balance sheet cash and balance sheet investments. With respect to liability-based sources of liquidity, Fitch considers the terms and maturities of the facilities, associated covenants and the quality of the funding providers. For alternative investment managers, Fitch reviews liquidity levels relative to unfunded commitments, with particular attention to balance sheet cash and liquid securities as a percentage of unfunded commitments. The same considerations apply, albeit to a lesser degree, for investment managers that do not make extensive use of their own balance sheet. Fitch expects such investment managers to have reasonable levels of cash or liability-based liquidity to meet unexpected losses, expected debt maturities, interest service and other outflows.
Distributions	Complementary	Investment managers tend to distribute a significant portion of their earnings on an annual basis. While Fitch believes investment managers have the flexibility to adjust distributions as necessary, liquidity constraints often develop during tougher economic and market environments, when supplementary earnings streams tend to be relatively low. As a result, a high distribution rate can be a constraint on the funding, liquidity and coverage score.
Track Record of Fund Support	Complementary	Fitch assesses the track record of providing financial support to funds, considering both the frequency and magnitude of such support. In conjunction with this review, Fitch will also seek to assess if past support has created a perception among fund investors that future support of funds may be more likely. Material levels of expected future support may negatively affect an issuer's funding, liquidity and coverage score.
Redemption Risk	Complementary (for Investment Funds)	For investment funds, Fitch analyzes the structure of the initial lock-up period, redemption parameters (frequency, notice period, amount, etc.) of the funds thereafter, as well as any gates in its assessment of liquidity management.

Financial Profile — Investment Managers

	aaa	aa	a	bbb	bb	b	ccc and Below
Asset Performance	Exceptionally strong track record of (F)AUM inflows/stability through market cycles. Exceptional performance versus benchmarks and/or top quartile fund performance across strategies. Fee rates and incentive structures are significantly above industry standards. Concentration risks (industry, vintage and investor) are very low or effectively mitigated.	Very strong track record of (F)AUM inflows/stability through market cycles. Consistent outperformance vs. benchmarks and/or top quartile fund performance across strategies. Fee rates and incentive structures are well-above industry standards. Concentration risks (industry, vintage and investor) are low or effectively mitigated.	Strong track record of (F)AUM inflows/stability through market cycles, although flows may turn negative in periods of extreme market stress. Investment/fund performance largely meets or beats benchmark; however, certain strategies/funds may underperform following periods of market stress. Fee rates and incentive structures are above industry standards. Concentration risks (industry, vintage and investor) may be modest.	(F)AUM inflows/stability may be more affected by market conditions/trends. Sound investment/fund performance; but may frequently underperform or lag benchmark. Fee rates and incentive structures largely in-line with industry standards. Concentration risks (industry, vintage and investor) are moderate.	(F)AUM flows may be significantly affected by market conditions/trends. Investment/fund performance may be extremely sensitive to market conditions. Fee rates and incentive structures are below industry standards. Concentration risks (industry, vintage and investor) are meaningful.	(F)AUM flows may stay negative after extreme market stress due to concentration in product/fund type. Persistently weak investment/fund performance. Fee rates and incentive structures are well below industry standards. Concentration risks (industry, vintage and investor) are significant.	(F)AUM flows are highly volatile due to significant concentration within funds/asset classes. Very weak investment/fund performance. Fee rates and incentive structures are well below industry standards.
Earnings and Profitability	Earnings and profitability are highly predictable throughout economic and/or interest rate cycles. Limited reliance on transactional revenue. Highly variable cost structure. Superior returns relative to peer.	Earnings and profitability are very predictable over multiple economic and interest rate cycles. Limited reliance on transactional revenue. Highly variable cost structure. Strong returns relative to peer.	Earnings and profitability are moderately variable over economic and/or interest rate cycles. Modest reliance on transactional revenue. Largely variable cost structure. Solid returns relative to peer.	Earnings and profitability may be variable over economic and/or interest rate cycles. Modest reliance on transactional revenue. Largely variable cost structure. Adequate returns relative to peer.	Earnings and profitability may be highly variable over economic and/or interest rate cycles. Moderate reliance on transactional revenue. Cost structure is less variable than peer firms. Below-average returns relative to peer.	Earnings and profitability are volatile and highly correlated with economic and/or interest rate cycles. Heavy reliance on transactional revenue. Cost structure is largely fixed. Weak returns relative to peer.	May be structurally unprofitable on either a reported or operating basis. Return to break-even or sustainable profitability is highly uncertain.
Capitalization and Leverage	Capitalization and leverage are extremely strong and commensurate with balance sheet risk and/or earnings variability. Leverage targets incorporate ability to withstand severe market value shocks.	Capitalization and leverage are strong and commensurate with balance sheet risk and/or earnings variability. Leverage targets incorporate ability to withstand significant asset quality and market value shocks.	Capitalization and leverage levels broadly commensurate with balance sheet risk and/or earnings variability. Leverage levels may be relatively more volatile, but likely only modestly affected by severe asset quality and market value shocks.	Capitalization and leverage levels may not be fully commensurate with balance sheet risk and/or earnings variability. Leverage levels may be more vulnerable to severe asset quality and market value shocks.	Capitalization and leverage are not fully commensurate with balance sheet risk and/or earnings variability. Leverage is above peer but should be capable of withstanding asset quality and market value shocks.	Capitalization and leverage are not commensurate with balance sheet risk and/or earnings variability. Leverage levels may be well above peer institutions and highly vulnerable to asset quality and market value shocks.	Capitalization and leverage have clear deficiencies that have or may require capital injections.
Funding, Liquidity and Coverage	Funding and liquidity are exceptionally stable. Minimal reliance on wholesale funding. Funding is not confidence sensitive. Funding sources are highly diverse. Funding is fully unsecured. Extremely robust contingency funding plans are in place.	Funding and liquidity are very stable. Minimal reliance on short-term funding. Wholesale funding is predominantly long-term with established investor appetite. Funding is relatively less confidence sensitive. Funding sources are very diverse. Funding is fully unsecured. Very robust contingency funding plans are in place.	Funding and liquidity are stable. Wholesale funding is predominantly long-term. Funding may be modestly confidence sensitive. Funding sources are relatively diverse. Funding is largely unsecured. Robust contingency funding plans are in place.	Funding and liquidity are generally stable, although there may be moderate funding concentrations or reliance on less stable wholesale funding sources. Funding is confidence sensitive and liquidity may become more expensive or less stable during periods of stress. Funding sources are moderately diverse. Meaningful unsecured funding component. Reasonable contingency funding plans are in place.	Funding and liquidity are generally stable, although there may be funding concentrations or meaningful reliance on less-stable wholesale sources of funding. Access to funding may be uncertain during periods of market stress. Funding sources are relatively limited. Lack of an unsecured funding component. Contingency funding plans may not be sufficient.	Funding and liquidity are less stable and may be prone to sudden changes in creditor sentiment. Access to funding during periods of market stress is very uncertain. Funding sources are very limited. Lack of an unsecured funding component. Contingent funding plans may not be well developed.	Funding and liquidity are unstable. Lack of an unsecured funding component. Contingent funding plans are non-existent.

II.5.c Business Development Companies

Fitch's financial profile assessment for BDCs considers the following subfactors:

- asset quality;
- earnings and profitability;
- capitalization and leverage; and
- funding, liquidity and coverage.

Asset Quality — Business Development Companies

Attribute	Core Versus Complementary	Description
Net Realized Gains/ Average Portfolio, at Value	Core	For BDCs, Fitch assesses asset quality primarily by using net realized gains as a percent of average portfolio value as a proxy for net chargeoffs. The generation of significant cumulative net realized portfolio losses over a cycle may be an indicator of weak underwriting particularly if performance is meaningfully weaker than peer BDCs. Still, realized losses may also be generated due to portfolio optimization strategies, where lower yielding securities are sold so that proceeds may be reinvested into higher earning assets. In all cases, Fitch attempts to understand the source of realized losses.
Unrealized Portfolio Depreciation	Complementary	Trends in unrealized portfolio depreciation can serve as an early warning signal of potential asset quality issues, as BDCs must incorporate the credit profile of the underlying borrower into quarterly valuation decisions. Relative trends can also provide insight into the strength of a BDC's risk assessment and/or valuation processes. For example, an increase in portfolio depreciation which runs counter to peer-trends and the then-current credit environment may indicate weak underwriting and/or flawed valuation procedures. An increase in non-cash interest coupons (also known as payment-in-kind [PIK]) can also signal weaker underlying portfolio credit, as portfolio companies may have insufficient cash flows to service their interest payments and the capitalization of coupon payments may be a precursor to eventual writeoffs.
Portfolio Concentrations	Complementary	**Industry:** Certain industry concentrations may be supported by a successful track record and in-house expertise, but Fitch believes outsized concentrations could increase correlations in portfolio company performance, negatively influencing Fitch's asset quality assessment. **Issuer:** Fitch evaluates the largest portfolio investments, at fair value, as a percentage of assets and equity to gauge a BDC's sensitivity to valuation declines in individual investments. Fitch also considers the magnitude of exposure to equity securities, which may experience more volatile valuation movements. Many BDCs are invested in diversified loan funds or portfolio companies that are themselves large, diversified lenders. This underlying diversification may reduce the sensitivity of the investment to valuation movements, although this may be offset by the subordination of the BDC's investment, which is typically a majority equity stake. Outsized issued concentration may negatively influence Fitch's asset quality assessment. **Vintage:** For vintage concentrations, Fitch considers the underwriting environment. A significant amount of origination activity during highly competitive market conditions could yield asset quality issues down the road, negatively influencing Fitch's asset quality assessment. Fitch considers underlying portfolio company statistics including leverage, interest coverage, and average EBITDA to assess the potential for asset quality weakening in a stressed environment.

Earnings and Profitability — Business Development Companies

Attribute	Core Versus Complementary	Description
Net Investment Income/Average Portfolio, at Cost	Core	Earnings and profitability tends to be a lower influence factor for BDCs given they are primarily secured lenders, seeking return of principal at an appropriate risk adjusted return. In this context, outsized investment returns can be as much of a concern as investment returns that are low (or negative), as the former could indicate an elevated risk appetite while the latter could signal weak underwriting and/or pricing power.
Earnings Mix	Complementary	Fitch views earnings profiles comprised primarily of interest income favorably given the relative stability of this income stream. Outsized contributions from transactional fees, driven by originations and/or repayment volume or more episodic equity yields are viewed negatively by Fitch, as these revenue sources are likely to be more volatile over time or provide the wrong motivation for growth. For example, a BDC may be inclined to continue to originate investments in a competitive credit environment if fee income is needed to meet dividend payments.
Realized and Unrealized Gains/Losses	Complementary	When considering unrealized gains and losses arising from the GAAP requirement to mark the portfolio to fair value every quarter, Fitch focuses on what gave rise to the changes and the likelihood these will be realized. Generally speaking, Fitch expects net realized portfolio gains and losses to be relatively modest over time, particularly if underwriting standards are prudent and exposure to equity investments is minimal. However, since BDCs are not allowed to create loan loss reserves, it is realistic to assume that a BDC will have periodic realized credit losses. Therefore, Fitch assesses a firm's net realized loss performance over time and on a relative basis to gain insight into the strength of its underwriting standards.
Cost Structure	Complementary	A BDC's cost structure is analyzed for the amount of flexibility provided when market conditions are less favorable. In this regard, Fitch considers how much of the cost base is variable. Fitch also considers the structure of the management contract for externally managed firms and views total return requirements more favorably. A review of a BDC's expenses as a percentage of the portfolio at cost provides insight into the scalability of the platform and its appropriateness relative to the business model and strategy. If expense ratios are high, it could be an indicator that the BDC has a significant fixed cost burden. Conversely, if expense ratios are too low, it could signal a lack of sufficient infrastructure to manage the portfolio.

Capitalization and Leverage — Business Development Companies

Attribute	Core Versus Complementary	Description
Debt/Tangible Equity	Core	Regulatory requirements essentially limit the debt/equity ratio of a BDC to 1.0x. A breach of this limit precludes the firm from incurring additional debt and will often result in covenant breaches on a BDC's credit facilities. Fitch considers a BDC's leverage target on an absolute basis but also relative to the portfolio construct and market conditions. The leverage target should provide for adequate cushion relative to the 1.0x limitation to account for potential variability in portfolio valuation on a quarterly basis. Fitch believes the cushion should increase when a BDC's investment portfolio is more heavily weighted to the lower part of the capital structure. For example, a BDC with outsized exposure to subordinated debt and/or equity investments would be expected to have a lower leverage target than a BDC focused on senior secured debt investments, all else equal. The 40 Act allows for the exclusion of Small Business Administration (SBA) borrowings from the calculation of asset coverage compliance. However, Fitch includes SBA borrowings in its leverage calculation and its overall assessment of a BDC's credit risk profile.
Adherence to Leverage Policy	Complementary	Most BDCs articulate a leverage target/range which they are expected to adhere to during the normal course of business operations. In such instances, Fitch evaluates the BDC's historical leverage relative to the target. Frequent and/or sustained breaches of the leverage target (absent a material change in portfolio mix) or periodic changes to the articulated strategy could negatively impact Fitch's capitalization and leverage assessment. Conversely, strict adherence to the target, including instances of actively deleveraging in order to maintain compliance, could positively affect Fitch's capitalization and leverage assessment.

Funding, Liquidity and Coverage — Business Development Companies

Attribute	Core Versus Complementary	Description
Unsecured Debt/ Total Debt	Core	Fitch considers the mix of secured and unsecured funding in the BDC capital structure and views a meaningful unsecured funding component positively given that it provides the BDC with the flexibility to add a security interest in the event of a significant disruption in the capital markets. BDCs often have secured bank revolving credit lines with blanket liens on all investment assets, which does not technically provide for an unencumbered pool of assets for unsecured creditors. However, BDCs are generally able to issue secured term debt, which shares in the revolver's blanket lien, if economic access to unsecured funding is not available.
Funding Diversity	Complementary	A BDC with a diverse set of available funding sources, which could consist of revolving credit facilities, special purpose vehicles, securitizations, SBA funding, private placements, public notes and equity, would be viewed more favorably. Fitch tends to view commitments from a diverse group of banks more favorably than single or concentrated lender relationships, as changing conditions at any one financial institution could result in a reduction in lending to the industry and a cancellation of the existing commitment upon maturity, or before if permissible.
Liquidity	Complementary	Liquidity is evaluated based on unrestricted balance sheet cash, undrawn borrowing capacity on revolving facilities, portfolio cash generation and cash earnings coverage of dividend payments. Fitch expects a BDC to have sufficient cash on hand and undrawn capacity on its credit facilities to, at a minimum, provide for follow-on investments in portfolio companies, as necessary, and to meet near-term debt maturities. However, BDCs which maintain borrowing (and leverage) capacity to take advantage of attractive market opportunities as they arise are viewed more favorably.
Net Interest Income Coverage of Dividends	Complementary	BDCs electing to be considered RICs for tax purposes are required to distribute 90% of their taxable income on an annual basis to shareholders. As a result, Fitch expects NII to fund the majority of dividends over time. For its dividend coverage calculation, Fitch adjusts NII by non-cash income and expenses to match cash earnings with dividend payments. Non-cash earnings are generally in the form of PIK interest, which is capitalized to the principal amount of the loan. PIK interest is included in taxable income and is, therefore, subject to distribution, but it may never be collected in cash if the investment is restructured or written off. Fitch views a BDC with outsized exposure to PIK earnings more negatively given the greater disconnect between cash earnings and taxable income. When realized portfolio gains occur, Fitch views it more favorably when those proceeds are distributed as a special dividend or carried over into the next taxable year, as spillover income, which Fitch believes provides more stability to the dividend over time. Raising the regular quarterly dividend due to the generation of realized gains is likely to pressure dividend coverage in the future, as those gains are generally episodic. Realized gains can also be used to backfill NII dividend shortfalls, particularly when underperforming debt investments have been restructured into equity. Fitch believes a decline in cash NII coverage of dividends below 100% for an extended period of time should be met with a dividend reduction. Any indication that the BDC is borrowing or raising equity capital to fund its distribution would be viewed negatively.

Financial Profile — Business Development Companies

	aaa	aa	a	bbb	bb	b	ccc and Below
Asset Quality	Has an unparalleled degree of stability as reflected in very low levels of non-accruals and/or minimal losses throughout economic and/or interest rate cycles. Asset-quality measures are consistently better than comparable institutions. Concentration risks are very low or effectively mitigated. Generation of cumulative net realized portfolio gains over a cycle.	Has a very high degree of stability as reflected in low levels of non-accruals and/or low losses over multiple economic and/or interest rate cycles. Asset-quality measures are better than comparable institutions. Concentration risks are low or effectively mitigated. Absence of cumulative net realized portfolio losses over a cycle.	Has a high degree of stability as may be reflected in modest levels of non-accruals and/or losses. Asset quality is moderately variable over economic or interest rate cycles. Asset-quality measures are likely to be modestly better than at peer institutions or less vulnerable to economic and/or interest rate cycles. Portfolio concentrations are modest. May have minimal cumulative net realized portfolio losses over a cycle.	Has a degree of stability as may be reflected in average levels of non-accruals and/or losses. Asset quality measures are likely to fluctuate over economic and/or interest rate cycles. Asset-quality measures are generally in line with broad industry averages. Portfolio concentrations are moderate. May have modest cumulative net realized portfolio losses over a cycle.	Has above-average levels of non-accrual assets and losses. Asset quality measures are likely to be more volatile in the face of changes in economic and/or interest rate cycles and generally worse or more vulnerable than broad industry averages. Portfolio concentrations are high. May have meaningful cumulative net realized portfolio losses over a cycle or lack of performance through a cycle.	Has significantly above -average non-accruals and losses. Asset quality measures are likely to be very volatile based on changes in economic and/or interest rate cycles and generally significantly worse or more vulnerable than broad industry averages. Portfolio concentrations are very high. May have significant cumulative net realized portfolio losses over a cycle or limited performance track record.	Has or is likely to have asset-quality measures that are considerably weaker than industry benchmarks or historical norms.
Earnings and Profitability	Earnings and profitability are highly predictable throughout economic and/or interest rate cycles. Limited reliance on transactional revenue. Highly variable cost structure. Profitability measures are consistently commensurate with risk-averse nature.	Earnings and profitability are very predictable over multiple economic and interest rate cycles. Limited reliance on transactional revenue. Highly variable cost structure. Profitability measures are commensurate with very low risk but may vary modestly, although they remain generally superior to comparable institutions.	Earnings and profitability are moderately variable over economic and/or interest rate cycles. Modest reliance on transactional revenue. Largely variable cost structure. Profitability measures are commensurate with low risk, but subject to variability. Profitability is generally better than industry averages.	Earnings and profitability may be variable over economic and/or interest rate cycles. Modest reliance on transactional revenue. Largely variable cost structure. Profitability measures reflect inherent risk or a highly competitive environment and can be subject to increased variability. Profitability is average relative to broad industry averages.	Earnings and profitability may be highly variable over economic and/or interest rate cycles. Moderate reliance on transactional revenue. Cost structure is less variable than peer firms. Profitability measures may not fully reflect inherent risk and are subject to variability. Profitability is below average relative to broad industry averages.	Earnings and profitability are volatile and highly correlated with economic and/or interest rate cycles. Heavy reliance on transactional revenue. Cost structure is largely fixed. Profitability measures may not fully reflect inherent risk and are subject to variability. Profitability is well below average relative to broad industry averages.	May be structurally unprofitable on either a reported or operating basis. Return to break-even or sustainable profitability is highly uncertain.
Capitalization and Leverage	Capitalization is extremely strong and commensurate with risk. Capitalization and leverage are maintained with very significant buffers versus regulatory minimums as well as peer institutions.	Capitalization is very strong and commensurate with risk. Capitalization and leverage are maintained with comfortable buffers versus regulatory minimums as well as peer institutions.	Capitalization levels are strong and commensurate with risk. Capitalization and leverage are maintained with solid buffers versus regulatory minimums as generally above peer institutions.	Capital levels broadly commensurate with risk. Capitalization and leverage are maintained with satisfactory buffers versus regulatory minimums and generally in line with peer institutions.	Capital levels may not be fully commensurate with risk. Capitalization and leverage are maintained with moderate buffers versus regulatory minimums and may be below peer institutions.	Capital levels are not commensurate with risk. Capitalization is low and buffers versus regulatory minimums are small.	Capitalization and leverage have clear deficiencies that wither have or may require capital injections.
Funding, Liquidity and Coverage	Funding and liquidity are exceptionally stable. Minimal reliance on wholesale funding. Funding is not confidence sensitive. Funding sources are highly diverse. Funding is fully unsecured. Funding duration significantly exceeds average maturity of portfolio assets. Demonstrated access to equity markets across cycles. Absence of non-cash income. Cash net investment income significantly exceeds dividend payments. Extremely robust contingency funding plans are in place.	Funding and liquidity are very stable. Minimal reliance on short-term funding. Wholesale funding is predominantly long term with established investor appetite. Funding sources are very diverse. Funding is predominantly unsecured. Funding duration exceeds average maturity of portfolio assets. Demonstrated access to equity markets across cycles. Minimal non-cash income. Cash net investment income meaningfully exceeds dividend payments. Very robust contingency funding plans are in place.	Funding and liquidity are stable. Wholesale funding is predominantly long term. Funding may be moderately confidence sensitive. Funding sources are relatively diverse. Funding is largely unsecured. Funding duration is commensurate with average maturity of portfolio assets. Demonstrated access to equity markets across cycles. Minimal non-cash income. Cash net investment income exceeds dividend payments. Robust contingency funding plans are in place.	Funding and liquidity are generally stable, although there may be moderate funding concentrations. Reliance on less stable wholesale funding sources. Funding is confidence sensitive, and liquidity may become more expensive or less stable during periods of stress. Meaningful unsecured funding component. Funding duration is commensurate with average maturity of portfolio assets. Demonstrated access to equity markets but may be more sensitive to market conditions. Modest non-cash income. Cash net investment income meets dividend payments. Reasonable contingency funding plans are in place.	Funding and liquidity are generally stable, although there may be funding concentrations or meaningful reliance on less stable wholesale sources of funding. Access to funding may be uncertain during periods of market stress. Lack of an unsecured funding component. Funding duration may not be commensurate with average maturity of portfolio assets. No proven ability to access the equity markets. Moderate non-cash income. Cash net investment income is below dividend payments. Contingency funding plans may not be sufficient.	Funding and liquidity are less stable and may be prone to sudden changes in creditor sentiment. Access to funding during periods of market stress is very uncertain. Lack of an unsecured funding component. Funding duration may not commensurate with average maturity of portfolio assets. Inability to access the equity markets. Meaningful non-cash income. Cash net investment income is well below dividend payments. Contingent funding plans may not be well developed.	Funding and liquidity are unstable. Funding duration is very short term. Lack of an unsecured funding component. Significant non-cash income. Cash net investment income is significantly below dividend payments. Contingent funding plans are non-existent.

II.5.d Finance and Leasing Companies

Fitch's financial profile assessment for finance and leasing companies considers the following subfactors:

- asset quality;
- earnings and profitability;
- capitalization and leverage; and
- funding, liquidity and coverage.

Risk Characteristics of Finance and Leasing Companies' Primary Business Activities

Activity	Balance Sheet Usage	Primary Funding Source[a]	Residual Value Risk?	Primary Earnings Source	Stability of Profitability
Leasing					
Aircraft Leasing	High	Secured/ABS/Unsecured	Yes	Lease Income	More Cyclical
Container Leasing	High	ABS/Secured Bank Lines	Yes	Lease Income	Cyclical
Fleet Leasing	High	ABS/Unsecured	Generally No	Lease Income	Less Cyclical
Truck Leasing	High	Unsecured/Secured	Yes	Lease Income	Less Cyclical
Railcar Leasing	High	Secured	Yes	Lease Income	Cyclical
Rental					
Rental Car	High	ABS	Yes	Rental Income	More Cyclical
Rental Equipment	High	Secured	Yes	Rental Income	More Cyclical
Consumer and Commercial Finance					
Commercial Lending	High	Deposits/Unsecured	No	Spread Income	Cyclical
Auto Lending	High	ABS/Deposits/Unsecured	Yes	Spread Income	Cyclical
Credit Card	High	ABS/Deposits	No	Spread Income	Cyclical
Student Lending	High	ABS/Deposits	No	Spread Income	Stable
Mortgage Origination	High	Secured	No	Origination Fees/Servicing Revenue	Stable
Factoring	High	Deposits/Unsecured	No	Fee Income	Cyclical
Pawn Brokerage	High	Unsecured	Yes	Fee Income/Merchandise Sales	Cyclical
Payday Lending	High	Secured Bank Lines	No	Spread and Fee Income	Cyclical
Debt Purchasers	Medium-High	Bank Lines/Secured Debt	No	Fees/Excess Collections over Purchase Price	Less Cyclical
Financial Services					
Marketplace Lending	Low	Non-Recourse Retail/Institutional	No	Origination Fees	Cyclical
Mortgage Servicing	Low	Secured	No	Servicing Revenue	Cyclical

Asset Quality — Finance and Leasing Companies

Attribute	Core Versus Complementary	Description
Impaired and Nonperforming Ratio	Core (For finance and leasing companies with high balance sheet usage)	Fitch's assessment of finance and leasing companies' asset quality primarily focuses on loan impairments but also considers delinquencies, non-accruals, net chargeoffs and reserve rates. Fitch considers the performance of these metrics over time and through market cycles, relative to the firm's underwriting criteria and articulated risk appetite and compares measures to peer firms with like products. Consistent with Fitch's asset quality benchmarks for banks, Fitch's asset quality benchmarks for finance and leasing companies with high balance sheet usage are derived by combining the entity's operating environment with the financial metric value. This reflects Fitch's expectation that the operating environment will account for a significant proportion of actual metric differences across countries and regions because of differences in the financial risk profiles that arise directly from the environments in which the entities operate *(see Section II.1, Operating Environment Assessment)*. Tiering by operating environment is not applied to other non-bank financial institution metrics or subsectors given that asset quality is not a primary analytical consideration for certain subsectors (such as for investment managers, where asset performance is more relevant) or operating environment differences are not present (such as for BDCs, which operate in a single operating environment).
Borrower Profile	Complementary	For consumer lenders, Fitch may review data on the loan portfolio, such as the average balance per account and average yield, as well as variations from the mean. This may also involve demographic data on the underlying portfolio or an internal or external credit score. For commercial lenders and lessors, Fitch may review the types of businesses or equipment financed, loan to value ratios, as well as any internal credit rankings or watchlists with respect to lessees. For rental companies, lessee quality may be less relevant depending on the duration of the rental agreement and the type of equipment being rented.
Servicing, Collections and Disposition	Complementary	Fitch believes that a robust servicing and collection platform is an integral part of asset quality, since it can have a significant influence on impairment/delinquency and chargeoff experience. For example, Fitch considers an issuer's collection strategies for impaired/delinquent accounts and the ability to improve upon expected roll rates. For leasing companies, Fitch also considers an issuer's ability to repossess and dispose of collateral in an economic and efficient manner. Fitch considers the issuer's flexibility with regard to disposal channels and seeks to assess an issuer's ability to rapidly de-fleet or re-fleet in response to changing market conditions. Collateral sale proceeds are considered over time relative to residual values to assess the effectiveness of a leasing company's depreciation policies.
Seasonality and Growth Impacts	Complementary	Since asset quality can be distorted by growth, where possible, Fitch may perform analysis on a static-pool basis to measure asset quality of different vintages. Static-pool or vintage analysis can provide an early warning of problems, such as rapid asset-quality deterioration, forcing accelerated chargeoffs, which may highlight loosening of underwriting policies. Fitch recognizes that seasonality can play a role in distorting asset quality and, to complement static-pool analysis, Fitch may analyze other growth-adjusted asset-quality metrics, looking at impairment/delinquency and net chargeoff ratios on both a coincident (current) and lagged basis. In addition, portfolio shrinkage can also skew coincident and lagged credit metrics, so, in these instances, Fitch will also track the relative absolute change in portfolio impairments/delinquencies and losses from one period to another.
Business Model Specifics	Complementary	The key asset quality metrics for finance and leasing companies are less relevant for debt purchasers, whose assets are typically impaired, but acquired at a significant discount. Instead, Fitch will focus on the stability and resilience of cash flow generation from acquired portfolios relative to their purchase price. Fitch will also review industry measures such as gross 'cash on cash' multiples, net cash on cash multiples (net of collection activity costs) and price paid/face value of purchased assets, where available.

Earnings and Profitability — Finance and Leasing Companies

Attribute	Core Versus Complementary	Description
Pre-Tax Net Income/ Average Assets	Core (For Finance and Leasing Companies with High Balance Sheet Usage)	For finance and leasing companies with high balance sheet usage, Fitch focuses primarily on portfolio yields and return on assets and return on equity measures, which are more easily comparable across the bank and non-bank universes. Fitch will also consider risk-adjusted margins, which measure the level of profitability for the risk taken, since it deducts provision expense and interest expense from total net operating revenue. A review of earnings quality primarily reflects an assessment of recurring cash-based earnings, principally net interest and lease and fee income, as opposed to nonrecurring gains/losses, noncash gains or mark-to-market gains on derivatives or investments.
Adjusted EBITDA/ Revenues	Core (For Finance and Leasing Companies with Low Balance Sheet Usage)	For finance and leasing companies with low balance sheet usage, Fitch places emphasis on adjusted EBITDA margin analysis. To the extent a good portion of income is from fee-type sources, as is the case with finance and leasing companies with low balance sheet usage, Fitch evaluates the reliability and variability of these fees over a cycle. Additionally, Fitch may also review accruals for fee-type services, such as rewards for credit card usage or fee suppression policies for unearned income, to assess the collectability over time, where applicable. For leasing companies where the average lease term is relatively short, such as rental car companies and small ticket lessors, and for companies with proven stable asset-based cash generation and/or significant non-balance sheet-related earnings, such as debt purchasers, Fitch's analysis of earnings and profitability typically focuses on cash flow metrics and analysis. Fitch may make adjustments to its EBITDA calculation to exclude depreciation expense if it is believed to be a recurring operating expense and no significant change in leased asset levels is expected. However, in that case, Fitch would look to add back proceeds from the sale of leased assets to its calculation of cash flow, as it would likely be deemed a significant source of debt repayment.
Operating Expenses	Complementary	Fitch also looks at operating expenses relative to loans or leases, including the mix of variable and fixed costs. Fitch recognizes that finance and leasing companies may have very different cost structures. For example, a company with a global footprint, like an aircraft lessor, is likely to have a higher level of operating expenses versus one that relies on centralized functions but this may be offset by other factors such as lower credit losses or higher asset yields.
Depreciation and Non-Cash Items	Complementary	Depreciation expense is typically a significant noncash item for leasing companies and Fitch views it as an important cost, since such companies typically need to continually replace equipment involved in operating leases and stay within certain age parameters. To the extent an issuer reports a material amount of noncash income, Fitch may request a reconciliation of reported earnings to operating cash flows. Fitch views significant noncash items as lowering the quality of earnings.
Treatment of Securitizations	Complementary	To the extent that a finance and leasing company securitizes receivables and removes them from its balance sheet or services assets not on its balance sheet, Fitch focuses on managed measures of profitability, which consider reported profits and expenses relative to the company's serviced portfolio of loans or leases. This provides a clearer picture of the underlying profitability of the book of business, since an issuer typically earns a fee for servicing the assets in the securitization vehicle.

Capitalization and Leverage — Finance and Leasing Companies

Attribute	Core Versus Complementary	Description
Debt/ Tangible Equity	Core (For Finance and Leasing Companies with High Balance Sheet Usage)	Fitch's assessment of a finance and leasing company's capitalization and leverage metrics focuses primarily on traditional leverage measures, such as debt to tangible equity and debt to FCC for finance and leasing companies with high balance sheet usage.
Debt/ Adjusted EBITDA	Core (For Finance and Leasing Companies with Low Balance Sheet Usage)	Fitch's assessment of a finance and leasing company's capitalization and leverage metrics focuses primarily on debt/adjusted EBITDA for finance and leasing companies with low balance sheet usage and for companies with proven stable asset-based cash generation and/or significant non-balance-sheet-related earnings, such as debt purchasers.
Business Model Specifics	Complementary	For leasing companies with longer term leases and material residual value risk, such as large equipment lessors, the primary capitalization and leverage focus is on balance sheet metrics such as debt to equity. For leasing companies where the average lease term is relatively short, such as rental car companies and small ticket lessors, and for companies with proven stable asset-based cash generation and/or significant non-balance sheet-related earnings, such as debt purchasers, Fitch's analysis of leverage and capitalization may take a corporate approach, in which the focus is on cash flow coverage and debt service. Fitch uses adjusted EBITDA as a proxy for cash flow. For debt purchasers, Fitch will also assess gross debt/estimated remaining collections, where available.
Double Leverage	Complementary	Where relevant, Fitch also looks at double leverage, defined as equity investments in subsidiaries plus holding company intangibles divided by equity, which reflects debt issued at the parent company level that has been down streamed as equity into subsidiaries. While a small amount of double leverage can be expected, Fitch is concerned when double leverage is high (i.e. above 120% or more of a parent company's common equity) on a sustained basis, unless mitigated by some other means (e.g. subsidiary liquidity support agreement). A high degree of double leverage can result in increased rating differentials between a parent company and its subsidiaries, particularly if regulated subsidiaries are involved, since dividends from these entities may be restricted. When feasible, Fitch will review a regulated subsidiary's dividend capacity relative to the holding company's fixed costs and dividends.

Funding, Liquidity and Coverage — Finance and Leasing Companies

Attribute	Core Versus Complementary	Description
Unsecured Debt/Total Debt	Core (For finance and leasing companies with high balance sheet usage)	Fitch believes an overreliance on secured financing sources such as asset-backed securitization, repurchase agreements, covered bonds, or secured bank loans, may constrain a finance and leasing company's funding, liquidity and coverage assessment, as a high proportion of encumbered assets will reduce financial flexibility. In assessing creditor protections, when information is available, Fitch will focus on unsecured debt as a percent total debt and, by extension, unencumbered assets relative to unsecured debt. This encompasses not only the amount, but also the relative quality of assets supporting unsecured debt obligations. Fitch typically stresses asset values by applying haircuts, depending on the riskiness of the asset class. In considering unencumbered assets, Fitch also makes adjustments based on seniority of liens that may exist in financing agreements and for pledged assets.
Adjusted EBITDA /Interest Expense	Core (For finance and leasing companies with low balance sheet usage)	For finance and leasing companies with low balance sheet usage, Fitch assesses funding, liquidity and coverage, primarily on the basis of interest coverage more so than funding or liquidity. For leasing companies where the average lease term is relatively short, such as rental car companies and small ticket lessors, and for companies with proven stable asset-based cash generation and/or significant non-balance sheet-related earnings, such as debt purchasers, Fitch's analysis of funding, liquidity and coverage typically focuses on cash flow metrics. For finance and leasing companies that pay preferred dividends, Fitch would also calculate EBITDA coverage of both interest expense and preferred dividends.
Reliance on Short-Term Funding	Complementary	Fitch understands that issuers may be motivated to fund themselves with short-term debt, since this is often less costly; however, it is Fitch's view that an overreliance on short-term financing can be very problematic, especially during times of market duress. In thinking about short-term financing, Fitch focuses on asset maturities. For example, an issuer with very short-dated assets (charge card, factoring receivables, auto floorplan loans or certain consumer loans) may be better able to rely upon asset cash flow to support a reasonable component of short-term financing than an issuer with long-dated assets, such as mortgages, student loans or aircraft. Nonetheless, even when asset maturities are very short term, a degree of longer term financing should be in place to finance the book of business.
Contingent Funding	Complementary	Sound contingency plans should be established to cover the potential that short-term assets financed by short-term debt may not produce expected levels of cash flow in all phases of a business or product cycle. This would include coverage for potential extensior of hold periods for assets expected to be sold and that are funded by short-term debt. Contingent funding should be reasonably accessible during times of financial duress and should not rely on an issuer to maintain covenant compliance. Fitch would expect investment-grade finance and leasing companies to be able to demonstrate contingency plans that allow the entity to navigate a prolonged disruption in liquidity and funding markets. This can be demonstrated by an ability to fund core operations over a 12-month period via cash flow generation and committed financing facilities from appropriately rated entities but excluding access to public unsecured markets if that is the primary source of funding in periods of normal market conditions. Additionally, Fitch may evaluate a firm's wind-down or liquidation scenarios to gain an understanding of how effectively and efficiently assets can be liquidated to cover costs, including debt service, on a timely basis.
Order Books	Complementary	Contingency funding plans take on added significance for leasing companies with large order books, particularly given that these obligations must be financed through a variety of economic environments. Order books are more prevalent in the aircraft, railcar and container leasing sectors, and represent commitments to purchase assets from manufacturers, in some cases years before they will be leased. The existence of committed financing, such as warehouse facilities, helps to mitigate some of this risk; however, the maturity of the facilities may pre-date order deliveries, which can yield refinancing risk. Fitch considers a lessor's order book size in relation to the size of its balance sheet, existing fleet, operational and marketing capabilities, the extent to which committed leases are in place at the time of the order, as well as its capital raising track record. However, the existence of significant order books, particularly if they are long-tailed, may be a rating constraint.
Funding Quality and Diversity	Complementary	Fitch views diverse sources of funding, in terms of markets, investors and geography, as well as funding stability, to be positive for the funding, liquidity and coverage score. Fitch looks at the portion of credit facilities that is committed versus uncommitted, the composition of the credit providers and the frequency with which facilities are utilized. Fitch looks at the length of the relationships, as well as other business flows (such as cash management or securities underwriting) that a finance and leasing company maintains with its credit providers, since this may have a material impact on whether lenders accommodate the issuer during periods of financial duress. Fitch may only take account of available liquidity from backup lines of credit from highly rated banks and/or banks rated the same or higher than the issuer itself.
Treatment of Securitizations	Complementary	When there is a significant portion of securitization activity, Fitch may compare the quality of securitized receivables to those remaining unencumbered to ensure that no "cherry picking" or adverse selection has occurred. Fitch believes that securitized receivables should reflect a cross-section of originated loans or leases. As a result, strategies that rely on either selling the weakest or strongest credits may negatively affect the funding, liquidity and coverage score. Moreover, Fitch believes a finance and leasing company should be able to demonstrate liquidity in all the asset types it originates. For example, if an issuer cannot demonstrate secondary market liquidity for a particular asset class, Fitch may view additional capital and/or liquidity to support that particular asset as appropriate. Additionally, Fitch may factor in an increased likelihood of voluntary support for non-recourse obligations for finance and leasing companies that are overly reliant on securitization as a source of funding. Voluntary support could arise as a means for the issuer to limit reputational damage and potential loss of market access to this funding source in the event of underperformance.
Covenant Compliance	Complementary	Fitch may consider covenants in credit agreements to understand covenant and security features, as these can have a bearing on a finance and leasing company's ability to conduct its business. Although technical defaults, such as a financial covenant violation, may often be waived, this usually comes at considerable expense. Therefore, a covenant breach may negatively affect Fitch's funding, liquidity and coverage assessment if it is viewed as an indicator of a material change in the entity's risk profile or financial flexibility.
Payout Ratio	Complementary	Many finance and leasing companies pay out some portion of earnings, either to a parent company or to public/private shareholders, which is a cash use. For payout ratios, Fitch focuses on combined measures, which include both dividends and net share repurchases, in order to assess the impact on liquidity.
Mortgage REIT Specifics	Complementary	Fitch typically views mortgage REITs as having weaker liquidity positions than similar finance companies that have not elected REIT status, as REITs have weaker capital retention flexibility. However, REITs that address required dividend distributions through the issuance of new shares as opposed to cash dividend payments may have stronger liquidity than REITs that pay out the majority of taxable income as cash dividends to stockholders. Based on guidelines established by the National Association of Real Estate Investment Trusts, funds from operations (FFO) for mortgage REITs are defined as net income excluding gains (or losses) from property sales, plus depreciation and amortization, plus adjustments for unconsolidated partnerships and joint ventures. Fitch compares dividends paid to stockholders with FFO for mortgage REITs. Adjustments for unconsolidated partnerships and joint ventures will be calculated to reflect FFO on the same basis. Fitch subtracts capital expenditures and excludes noncash items included in FFO to arrive at adjusted funds from operations (AFFO) for mortgage REITs and compares dividends paid to stockholders with AFFO. Although FFO and AFFO are after-interest expense measures, these measures are relevant to bondholders and preferred stockholders. Namely, if FFO or AFFO payout ratios are close to or exceed 100%, it indicates the REIT is not retaining cash flow for future liquidity to meet its fixed-charge obligations and is accessing other forms of cash flow to pay its dividends, which Fitch views negatively.

Financial Profile — Finance and Leasing Companies

	aaa	aa	a	bbb	bb	b	ccc and Below
Asset Quality	Has an unparalleled degree of stability as reflected in very low levels of impaired assets and/or minimal losses throughout economic and/or interest rate cycles. Asset-quality measures are consistently better than comparable institutions. Concentration risks are very low or effectively mitigated.	Has a very high degree of stability as reflected in low levels of impaired assets and/or low losses over multiple economic and/or interest rate cycles. Asset-quality measures are better than comparable institutions. Concentration risks are low or effectively mitigated.	Has a high degree of stability as may be reflected in modest levels of impaired assets and/or losses. Asset quality is moderately variable over economic or interest rate cycles. Asset-quality measures are likely to be modestly better than at peer institutions or less vulnerable to economic and/or interest rate cycles. Concentration risks may be modestly better than peers.	Has a degree of stability as may be reflected in average levels of impaired assets and/or losses. Asset quality measures are likely to fluctuate over economic and/or interest rate cycles. Asset-quality and/or concentration risk measures are generally in line with broad industry averages.	Has above-average levels of impaired assets and losses. Asset quality measures are likely to be more volatile in the face of changes in economic and/or interest rate cycles and generally worse or more vulnerable than broad industry averages. Concentration risks may be above average.	Has highly variable or poor asset quality, impaired assets and losses. Asset quality measures are likely to be very volatile based on changes in economic and/or interest rate cycles and generally significantly worse or more vulnerable than broad industry averages. Concentration risks may be very high.	Has or is likely to have asset-quality measures that are considerably weaker than industry benchmarks or historical norms.
Earnings and Profitability	Earnings and profitability are highly predictable throughout economic and/or interest rate cycles. Profitability measures are consistently commensurate with risk-averse nature.	Earnings and profitability are very predictable over multiple economic and interest rate cycles. Profitability measures are commensurate with very low risk but may vary modestly, although they remain generally superior to comparable institutions.	Earnings and profitability are moderately variable over economic and/or interest rate cycles. Profitability measures are commensurate with low risk but subject to variability. Profitability is generally better than industry averages.	Earnings and profitability may be variable over economic and/or interest rate cycles. Profitability measures reflect inherent risk or a highly competitive environment and can be subject to increased variability. Profitability is average relative to broad industry averages.	Earnings and profitability may be highly variable over economic and/or interest rate cycles. Profitability measures may not fully reflect inherent risk and are subject to variability. Profitability is below average relative to broad industry averages.	Earnings and profitability are volatile and highly correlated with economic and/or interest rate cycles. Profitability measures may not fully reflect inherent risk and are subject to variability. Profitability is well below average relative to broad industry averages.	May be structurally unprofitable on either a reported or operating basis. Return to break-even or sustainable profitability is highly uncertain.
Capitalization and Leverage	Capitalization is extremely strong and commensurate with risk. Capital and leverage targets incorporate ability to withstand severe asset quality and market value shocks.	Capitalization is strong and commensurate with risk. Capital and leverage targets incorporate ability to withstand significant asset quality and market value shocks.	Capitalization levels broadly commensurate with risk. Capital and leverage levels may be relatively more volatile but likely only modestly affected by severe asset quality and market value shocks.	Capital levels may not be fully commensurate with risk. Capital and leverage levels may be more vulnerable to severe asset quality and market value shocks.	Capital levels may not be fully commensurate with risk. Capital and leverage can withstand asset quality and market value shocks.	Capital levels are not commensurate with risk. Capital and leverage levels may be well below peer institutions and highly vulnerable to asset quality and market value shocks.	Capitalization and leverage have clear deficiencies that have or may require capital injections.
Funding, Liquidity and Coverage	Funding and liquidity are exceptionally stable. Minimal reliance on wholesale funding. Funding is not confidence sensitive. Funding sources are highly diverse. Funding duration significantly exceeds average maturity of portfolio assets. Funding is fully unsecured, supported by extremely robust pool of unencumbered assets. Extremely robust contingency funding plans are in place.	Funding and liquidity are very stable. Minimal reliance on short-term funding. Wholesale funding is predominantly long term with established investor appetite. Funding is relatively less confidence sensitive. Funding sources are very diverse. Funding duration exceeds average maturity of portfolio assets. Funding is predominantly unsecured, supported by a very robust pool of unencumbered assets. Very robust contingency funding plans are in place.	Funding and liquidity are stable. Wholesale funding is predominantly long term. Funding may be modestly confidence sensitive. Funding sources are relatively diverse. Funding duration is commensurate with average maturity of portfolio assets. Funding is largely unsecured, supported by a robust pool of unencumbered assets. Robust contingency funding plans are in place.	Funding and liquidity are generally stable, although there may be moderate funding concentrations. Reliance on less stable wholesale funding sources. Funding is confidence sensitive. Funding duration is commensurate with average maturity of portfolio assets. Meaningful unsecured funding component, supported by a modest pool of unencumbered assets. Reasonable contingency funding plans are in place.	Funding and liquidity are generally stable, although there may be funding concentrations. Meaningful reliance on less-stable wholesale sources of funding. Access to funding may be uncertain during periods of market stress. Funding duration may not be commensurate with average maturity of portfolio assets. Meaningful secured funding, with some encumbrance of balance sheet assets. Contingency funding plans may not be sufficient.	Funding and liquidity are less stable and may be prone to sudden changes in creditor sentiment. Access to funding during periods of market stress is very uncertain. Funding duration is not commensurate with average maturity of portfolio assets. Largely secured funding, with meaningful encumbrance of balance sheet assets. Contingent funding plans may not be well	Funding and liquidity are unstable. Funding duration is very short term. Fully secured funded and fully encumbered balance sheet. Contingent funding plans are non-existent.

II.5.e Financial Market Infrastructure Companies

Fitch's financial profile assessment for FMIs considers the following subfactors:

- capitalization and leverage;
- funding, liquidity and coverage;
- earnings and profitability; and
- counterparty exposure.

FMI Subsector Typical Characteristics and Analytical Considerations

	Exchanges	Clearing Houses	CSDs Without Banking License	Bank-Licensed CSDs
Primary Activities	Operate marketplace to buy/sell listed financial instruments, disseminate trade info, provide market data.	Clear and settle trades executed on an exchange, perform trade comparison, act as agent, principal or guarantor on settled trades.	Settle trades, provide safekeeping/custody of securities, act as paying and transfer agent, provide recordkeeping services.	In addition to activities similar to those of CSDs without banking licenses, also take deposits from and provide overdraft credit facilities to clients.
Primary Risk(s)	Operational	Counterparty	Operational	Operational, counterparty
Degree of Balance Sheet Risk	Limited	Limited, aside from consolidated guaranty funds	Limited	Present, but often low risk
Degree of Counterparty Risk	Limited	Material	Limited	Modest
Primary Capitalization and Leverage Metric(s)	Debt/EBITDA	Debt/EBITDA, supplemented with sufficiency of guaranty fund	Debt/EBITDA	Fitch core capital to weighted risks; regulatory ratios
Primary Earnings and Profitability Metric(s)	EBITDA margin, capex/revenue	EBITDA margin, capex/revenue	EBITDA margin, capex/revenue	Operating costs relative to fees

Capitalization and Leverage — Financial Market Infrastructure Companies

Attribute	Core Versus Complementary	Description
Gross Debt/ Adjusted EBITDA	Core	Fitch primarily focuses on cash flow leverage metrics when assessing FMIs due to the low balance sheet usage of their businesses. In these cases, debt repayment is likely to be a function of cash flow generated by the business as opposed to liquidation of collateral or monetization of assets on the balance sheet. Fitch defines cash flow leverage as gross debt to adjusted EBITDA. Fitch may focus on net debt/adjusted EBITDA where cash is set aside for near-term debt service. Where applicable, Fitch may additionally assess lease adjusted debt to EBITDAR to account for material operating lease expenses. Under this approach, Fitch adjusts gross debt by adding the net present value of future lease payments, or 8.0x the current rental expense and adjusts EBITDA by adding the current rental expense.
Gross Debt/ Tangible Equity	Complementary	For clearing houses, Fitch considers cash flow leverage metrics, especially in the cases where a clearing house does not take legal ownership of margin deposits but also will review balance sheet leverage metrics, collateral margining and guarantee fund contributions relative to counterparty exposure. With respect to balance sheet leverage metrics, Fitch primarily considers gross debt to tangible equity and gross debt to FCC. As a result of consolidation and mergers and acquisitions, a substantial amount of goodwill is recorded on the balance sheets of many FMIs, which Fitch excludes when calculating balance sheet leverage metrics.
Capital Structure and Capital Expenditures	Complementary	Fitch's assessment of capital adequacy will also take into consideration a FMI's capital structure and regulatory requirements, where applicable. Fitch also considers free cash flow relative to gross debt, in order to assess cash flow leverage net of the amount of capital expenditures FMIs are making to maintain and upgrade technology platforms.
Capital Outside the Default Waterfall	Complementary	As a clearing house bears all losses that are not associated with a clearing member default, Fitch may also assess the capital available outside the waterfall to manage potential losses outside of the clearing mechanism. Such losses could include losses on margin collateral or losses/impairments associated with acquisitions.

Funding, Liquidity and Coverage — Financial Market Infrastructure Companies

Attribute	Core Versus Complementary	Description
Adjusted EBITDA/ Interest Expense	Core	Fitch assesses FMIs' funding, liquidity and coverage primarily on the basis of interest coverage. Where applicable, Fitch additionally assesses lease adjusted EBITDAR to interest expense to account for material operating lease expenses.
Contingent Funding Sources	Complementary	Under normal operating conditions, an exchange or CSD without a banking license has limited liquidity needs and primarily relies on operating cash flows to support capital expenditures and near-term debt maturities. Liquidity needs may be elevated during periods of stress and, as such, Fitch considers contingent funding sources such as lines of credit relative to capital expenditures and general corporate purposes. On the other hand, clearing houses have more distinct liquidity needs related to clearing and settlement functions in the event of a temporary market disruption or a clearing member or custody bank default. As such, Fitch considers the amount of contingent funding available, including access to committed credit facilities, the size of available lines, for which offered products the lines can be utilized and unrestricted cash and investment securities on the balance sheet.
Covenant Compliance	Complementary	Fitch will review a FMI's compliance with covenants (financial and negative) related to lines of credit and debt. Non-compliance with debt covenants is likely to negatively influence Fitch's funding, liquidity and coverage assessment unless the assessment already reflects a high probability of non-compliance.
Payout Ratio	Complementary	Many FMIs pay out some portion of earnings, either to a parent company or to public/private shareholders, which is a cash use. For payout ratios, Fitch focuses on combined measures, which include both dividends and net share repurchases, in order to assess the impact on liquidity.
Business Model Specifics	Complementary	Certain clearing houses take legal ownership of margin deposits. In such instances, Fitch will consider the percentage of liquid assets relative to potential outflows and the historical level and fluctuation of customer deposits when evaluating the liquidity of clearing house.

Earnings and Profitability — Financial Market Infrastructure Companies

Attribute	Core Versus Complementary	Description
Adjusted EBITDA/ Total Revenues	Core	A key profitability measure for exchanges, clearing houses and CSDs without banking licenses is adjusted EBITDA margin, defined as adjusted EBITDA divided by total revenues. Fitch evaluates the reliability and variability of these margins over time to assess sensitivity to market conditions.
Earnings Stability and Diversity	Complementary	For FMIs that are not member owned, Fitch evaluates the ability to generate profits through various market cycles. Fitch considers whether revenues are highly dependent on transaction volumes (executed, cleared and/or settled), which are driven by market conditions and looks at trends with a longer term horizon. Fitch also evaluates non-transactional revenue sources such as market data and information services, which can help diversify and stabilize performance over market cycles. Fitch also evaluates revenue contributions by product and geography, revenue by asset class relative to volume (rate per contract), revenue volatility and volume volatility. Cost controls, the flexibility and variability of expenses and performance relative to peers are also reviewed by Fitch. Lastly, for those clearinghouses that take legal ownership of margin deposits, Fitch may also consider the extent to which net interest income contributes to earnings stability and diversity.
Capital Expenditures	Complementary	Fitch will consider trends in capital expenditures as a percentage of depreciation and amortization to ascertain the degree of reinvestment in the business through cycles. The magnitude of the ratio is not necessarily as important as whether it is positive (implying increased investment in the business), neutral (implying balanced reinvestment in the business) or negative (implying reduced investment in the business).
Business Model Specifics	Complementary	In analyzing the profitability of FMIs, it is necessary to ascertain whether the entity is operating as a profit-maximizing entity or not. If it is not a profit-maximizing entity (i.e. it is member-owned), the likely focus is on cost controls (maintaining low execution, clearing and/or settlement costs) and break-even results. Excess profits in the form of dividends or rebates are typically returned to owner-members. In these instances, Fitch will assess the ability of a FMI to limit payouts to its owner-members during stressed marked conditions, which could positively influence the earnings and profitability score.

Counterparty Exposure — Financial Market Infrastructure Companies

Attribute	Core Versus Complementary	Description
Member Concentration	Core	With respect to clearing houses, Fitch assesses clearing member concentrations and the steps the clearing house takes to monitor and minimize exposure to individual clearing members. Fitch reviews guarantee fund contributions by clearing member, top 10 counterparty exposures, guarantee fund coverage of the largest counterparty exposures and margin deposits (by asset class) compared to respective volumes.
Limits and Remediation	Complementary	Fitch also reviews clearing houses' limits for clearing members and steps taken when limits are breached.

Financial Profile — Financial Market Infrastructure Companies

	aaa	aa	a	bbb	bb	b	ccc and Below
Capitalization and Leverage	Capitalization and leverage are extremely strong and commensurate with risk. Capitalization and leverage are maintained with very significant buffers over regulatory minimums or as compared to peer institutions. Capital and leverage targets incorporate ability to withstand severe shocks.	Capitalization and leverage are strong and commensurate with risk. Capitalization and leverage are maintained with comfortable buffers over regulatory minimums or as compared to peer institutions. Capital and leverage targets incorporate ability to withstand significant shocks.	Capitalization and leverage levels broadly commensurate with risk. Capitalization and leverage are maintained with solid buffers versus regulatory minimums and generally above peer institutions. Capital and leverage levels may be relatively more volatile but likely only modestly affected by significant asset quality and market value shocks.	Capitalization and leverage may not be fully commensurate with risk. Capitalization and leverage are maintained with satisfactory buffers over regulatory minimums and generally in line with peer institutions. Capital and leverage levels may be more vulnerable to significant shocks.	Capitalization and leverage are not fully commensurate with risk. Capitalization and leverage are maintained with moderate buffers over regulatory minimums and may be below peer institutions. Capital and leverage are highly vulnerable to significant shocks but can withstand moderate shocks.	Capitalization and leverage are not commensurate with risk. Capitalization and leverage are low, and buffers over regulatory minimums are small. Capital and leverage levels may be well below peer institutions and highly vulnerable to shocks.	Capitalization and leverage have clear deficiencies that either have or may require capital injections.
Funding, Liquidity and Coverage	Extremely strong operating cash flows and liquidity levels relative to capital expenditures, operational needs and near-term debt maturities. Lines of credit and contingent funding more than sufficient for business model and liquidity needs.	Very strong operating cash flows and liquidity levels relative to capital expenditures, operational needs and near-term debt maturities. Lines of credit and contingent funding consistent with business model and liquidity needs.	Strong operating cash flows and liquidity levels relative to capital expenditures, operational needs and near-term debt maturities. Lines of credit and contingent funding consistent with business model and liquidity needs.	Sound operating cash flows and liquidity levels relative to capital expenditures, operational needs and near-term debt maturities. Lines of credit and contingent funding are generally able to support business model and liquidity needs.	Limited operating cash flows and liquidity levels relative to capital expenditures, operational needs and near-term debt maturities. Lines of credit and contingent funding are adequate to support business model and liquidity needs.	Very limited operating cash flows and liquidity levels relative to capital expenditures, operational needs and near-term debt maturities. Lines of credit and contingent funding are minimal and may not meet liquidity needs.	No operating cash flows and liquidity levels relative to capital expenditures, operational needs and near-term debt maturities. No access to lines of credit and/or contingent funding.
Earnings and Profitability	Earnings and profitability are highly predictable throughout economic cycles. Profitability measures are commensurate with risk-averse nature and consistently superior to comparable peer institutions.	Earnings and profitability are very predictable over multiple economic cycles. Profitability measures are commensurate with very low risk but may vary modestly. Profitability measures generally superior to comparable institutions.	Earnings and profitability are moderately variable over economic cycles. Profitability measures are commensurate with low risk but subject to variability. Profitability is generally better than broad industry averages.	Earnings and profitability may be variable over economic cycles. Profitability measures reflect inherent risk or a highly competitive environment and can be subject to increased variability. Profitability is average relative to broad industry averages.	Earnings and profitability may be highly variable over economic cycles. Profitability measures may not fully reflect inherent risk and are subject to variability. Profitability is below average relative to broad industry averages.	Earnings and profitability are volatile and highly correlated with economic rate cycles. Profitability measures may not fully reflect inherent risk and are subject to variability. Profitability is well below average relative to broad industry averages.	May be structurally unprofitable on either a reported or operating basis. Return to break-even or sustainable profitability is highly uncertain.
Counterparty Exposure	Very limited clearing member concentration. Guarantee fund covers loss from the simultaneous default of at least two of its largest clearing members. Appropriate level of collateral to support margin and guarantee fund requirements. Extremely prudent investment of surplus funds and extension of credit to facilitate settlement.		Limited clearing member concentration. Guarantee fund covers loss from the simultaneous default of at least two of its largest clearing members. Appropriate level of collateral to support margin and guarantee fund requirements. Prudent investment of surplus funds and extension of credit to facilitate settlement.	Average clearing member concentration. Guarantee fund covers loss from the simultaneous default of only two of its largest clearing members. Satisfactory level of collateral to support margin and guarantee fund requirements. Less prudent investment of surplus funds and extension of credit to facilitate settlement.		Above-average clearing member concentration. Guarantee fund covers loss from default of largest clearing member. Sufficient level of collateral to support margin and guarantee fund requirements. Aggressive investment of surplus funds and extension of credit to facilitate settlement.	Significant clearing member concentration. Guarantee fund does not cover loss from the default of largest clearing member. Insufficient level of collateral to support margin and guarantee fund requirements. Very aggressive investment of surplus funds and extension of credit to facilitate settlement.

III. Support

Unlike banks, most non-bank financial institutions do not often receive extraordinary sovereign support that allows them to continue performing on their obligations in case of failure. As indicated in Section I of this report, the most usual source of support for non-bank financial institutions is shareholders (institutional support), with support from government authorities (sovereign support) being much less common. Fitch's view of the likelihood of support being made available in case of need may be reflected in an entity's SR. Where the agency believes the most likely form of support is sovereign support, this is also reflected in the non-bank financial institution's SRF. Where there is no reasonable assumption that extraordinary sovereign support is likely for a given issuer, a SRF will not be assigned. Section III.1 below focuses on sovereign support and section III.2 focuses on institutional support.

III.1. Sovereign Support

In assessing the likelihood of extraordinary government support for a non-bank financial institution, Fitch's primary focus is usually on potential assistance from the national authorities of the country where the non-bank financial institution is domiciled. This is because it is the non-bank financial institution's national authorities that are most likely to have both an incentive to prevent the entity from defaulting and the regulatory and legal powers to intervene. However, in certain cases, Fitch also assesses the possibility of support being made available to a failing non-bank financial institution from a combination of national sovereign authorities, subnational authorities and/or international public institutions.

Sovereign support decisions for non-bank financial institutions may be more often driven by an assessment of the entity's policy role as opposed to its systemic importance, although certain non-bank financial institutions whose activities are more akin to financial utilities may have a higher potential to exhibit systemic importance.

Sovereign Ratings and Support Rating Floors

Sovereign Rating	Typical SRFs in Case of High Support Propensity
AAA, AA+	A+ to A–
AA, AA–	A or A–
A category	1–2 notches below sovereign rating
BBB category	0–2 notches below sovereign rating
BB category	0–1 notch below sovereign rating
B category and below	Equalized with sovereign rating

Source: Fitch.

III.1.1 Ability of Sovereign to Provide Support

Importance of this Assessment: For a non-bank financial institution to receive government support, the sovereign must, by definition, be both able and willing to provide it. Where the ability of the sovereign to provide support is more constrained, support will usually be less likely, resulting in lower SRs and SRFs or the absence of SRs and SRFs.

In assessing a government's ability to provide support, Fitch's starting point is the sovereign's own ratings (or potentially a Fitch Credit Opinion if the opinion is in the single 'B' rating category or lower). The sovereign rating used is almost always the sovereign in which the entity is domiciled, but could sometimes be a subnational and/or third-party sovereign with an interest in supporting the non-bank financial institution.

Key Factors in Assigning Support Rating Floors[a]

	Factor	Positive (Higher SRF)	Neutral	Negative (Lower SRF)
Sovereign Ability to Support	Size of financial system relative to economy	Small	Average	Large
	Size of potential problem	Low vulnerability of financial sector to large losses in downturn	Moderate vulnerability of financial sector to large losses in downturn	High vulnerability of financial sector to large losses in downturn
	Structure of financial system	Low concentration, ownership mainly by strong shareholders	Moderate concentration, some ownership by strong shareholders	High concentration, limited ownership by strong shareholders
	Liability structure of financial system	Predominantly long-term/stable local-currency funding	Moderate funding instability and/or foreign-currency liabilities	Considerable short-term foreign-currency funding
	Sovereign financial flexibility (for rating level)	Superior (e.g. low debt, large FX reserves and/or good market access)	Average (e.g. average debt and reserves and/or reasonable market access)	Weak (e.g. high debt, low FX reserves and/or uncertain market access)
Sovereign Propensity to Support Non-Bank Financial Institution	Systemic importance or policy role	Exceptionally high systemic importance to financial system and contagion risk; dominant market shares or highly strategic policy role	Strong significance to financial system and economy; high contagion risk or meaningful policy role	Moderate or low systemic significance, more limited contagion risk or limited policy role
	Liability structure of financial institutions	Very limited politically acceptable, if any, possibilities to bail in senior creditors	Significant foreign / wholesale funds, which could be politically acceptable to bail-in in some circumstances	High foreign/wholesale funding, which could be politically acceptable to bail-in in many scenarios
	Ownership	Strategic government ownership or private domestic owners with strong government relations.	Non-strategic government ownership or domestic owners with neither close nor difficult government relations	Foreign ownership or domestic owners with poor government relations
	Specifics of non-bank financial institution failure	N.A.	More likely to fail as a result of usual operating activities	Significant risk that failure could result from corporate governance weaknesses

[a]The factors identified in this table determine the levels of SRFs relative to the ranges indicated in the table Sovereign Ratings and Support Rating Floors. For each factor, other relevant considerations may exist that are not explicitly referenced here.
Source: Fitch.

In rare cases where Fitch does not assign a credit rating or Credit Opinion to the sovereign, Fitch will either not assign a sovereign support-driven SR/SRF (no assessment undertaken) or assign them at '5'/'No floor' (e.g., unable to reliably assess sovereign creditworthiness or sovereign ability/propensity support concerns are present). Although the sovereign's ratings reflect Fitch's view only on the likelihood of the government servicing its own debt, in practice this is usually closely correlated with its broader financial flexibility and, therefore, ability to provide support to financial institutions. Typical SRFs at each sovereign rating level are outlined in the Key Factors in Assigning Support Rating Floors table.

III.1.1 Propensity of Sovereign to Provide Support

Non-bank financial institutions are generally less likely to be deemed as systemically important as banks, especially if not integral to a country's financial system. As a result, most non-bank financial institutions are not likely to receive sovereign support. Having a policy role is a more likely reason for a non-bank financial institution to receive sovereign support, although systemic importance and interconnectedness with the financial system are other possible reasons for the sovereign to consider supporting the non-bank financial institution.

III.2. Institutional Support

Fitch's ratings of non-bank financial institution subsidiaries may or may not factor in a high probability of support from parent institutions. On one end of the spectrum, a captive finance subsidiary may be afforded a high probability of support, because its existence enhances the parent's franchise, strategic objectives and revenue growth prospects. The other end of the spectrum could be an entity that is afforded a lower probability of support because it is held primarily as a tax-advantaged investment opportunity, such as an aircraft leasing subsidiary of an insurance company.

In determining potential support for non-bank financial institution subsidiaries from parent institutions, Fitch considers the parent's ability and propensity to provide support and a subsidiary's ability to make use of parental support, as outlined in sections III.2.1 and III.2.2 below and in Annex 2.

III.2.1 Parent's Ability to Support Subsidiary and Subsidiary's Ability to Use Support

Importance of this Assessment: For a non-bank financial institution to receive shareholder support, the owner must, by definition, be both able and willing to provide it and a subsidiary must be able to make use of parental support to avoid default.

Parent IDRs: Fitch's assessment of the parent's ability to support its subsidiary starts by considering the parent's Long-Term IDRs. These ratings cap the ability of the parent to provide support, as Fitch would not expect support for a subsidiary to be forthcoming when the parent is itself in default. In addition, other factors, namely parent/group regulation and relative size, may also affect the ability of the parent to provide support.

Parent VR: In cases where the parent's Long-Term IDR is driven by potential sovereign support, such as if the parent is a bank, Fitch will consider whether this support would be allowed to flow through to subsidiaries, in particular those operating in foreign jurisdictions. In Fitch's view, parent regulators will in many cases have quite strong incentives to allow support to flow through to subsidiaries given the potential negative impact of a subsidiary default on the group's operations and reputation.

However, in cases where Fitch judges there to be significant uncertainty about support flowing through, it may increase the notching between parent and subsidiary Long-Term IDRs compared to what would usually be applied given the propensity of the parent to support. Where the agency considers there to be high uncertainty about support flowing through, it may use the parent's VR or stand-alone credit risk assessment, rather than its Long-Term IDR, as its anchor rating in assessing the parent's ability to support its subsidiary.

Where possible, Fitch may consult with representatives of the parent's regulatory authorities to form a view on whether support would flow through. In addition, many of the factors determining a parent's propensity to support a subsidiary (e.g. strategic importance, integration and ownership) will, in Fitch's view, also be likely to influence a parent regulator's decision on whether to let support flow through to the subsidiary.

Parent/Group Regulation: Aside from the issue of "sovereign support flow through," significant regulatory restrictions at the parent level, if relevant, may more generally reduce the fungibility of capital and liquidity within a group, reducing the ability of the parent to provide support to a subsidiary.

Conversely, regulatory requirements to support subsidiaries can positively influence the levels of IDRs assigned to a subsidiary, resulting in them being closely aligned to those of the parent even where propensity to support might otherwise have been low. Formal or informal agreements between parent and subsidiary regulators could also make it more likely that support would be forthcoming.

Relative Size: In cases where subsidiaries form a relatively large part of the consolidated group, the parent may find it more difficult to provide sufficient and timely extraordinary support, even in cases where its own (stand-alone) balance sheet remains relatively unimpaired. This risk will be greater where Fitch believes that different subsidiaries' needs for support are likely to be quite highly correlated, for example, because they operate in a single region. Where subsidiaries are

large relative to the consolidated group, Fitch may increase the notching between parent and subsidiary Long-Term IDRs, where the latter are driven by parental support.

Common Ratings: In some cases, where a subsidiary is very large (for example, accounting for more than 25% of group assets), the parent may not be able to support the subsidiary because its balance sheet is simply not big enough, it does not generate sufficient operating cash flow, or it does not have meaningful access to the capital markets. Furthermore, such very large subsidiaries tend to be highly integrated with their parents in terms of management, balance sheet fungibility and systems, meaning subsidiary and parent credit profiles are likely to be highly correlated. In such cases, Fitch will not base the subsidiary's ratings on support from the parent, but will instead assign 'common' ratings, to parent and subsidiary, reflecting the fact that their credit profiles cannot be meaningfully disentangled.

Both the size and integration characteristics must be met for common IDRs to be assigned. If a subsidiary is highly integrated, but relatively small and does not make a significant contribution to the group's overall credit profile, then its IDR, if assigned, will be based on either its parent rating (if parental support is believed to be forthcoming) or its own stand-alone profile (if parental support is not believed to be forthcoming). Common VRs and, hence IDRs, may also be applied to sister entities or entities in the same group, for example, under a holding company structure, when their operations are highly integrated or complementary to the functioning of the group or where regulation effectively makes entities within a group liable for each other's losses.

Country Risks: Fitch considers whether country risks in the jurisdiction of the subsidiary may limit its ability to utilize parent support to service its obligations. Where country risks are high, subsidiary ratings may be capped at levels significantly below those which would be possible based on the parent's ability and propensity to provide support. The domestic Country Ceiling, which captures transfer and convertibility risk, will almost always cap the subsidiary's Long-Term Foreign Currency IDR unless there are strong mitigating circumstances (e.g. material assets and cash flows are outside the country and available to service debt.) Broader country risks will usually prevent the subsidiary's Long-Term Foreign and LC IDRs being more than three notches above the sovereign. For more details, see Annex 2: Rating Non-Bank Financial Institutions Above the Sovereign.

III.2.2 Parent's Propensity to Support Subsidiary

Importance of this assessment: Even if a parent has the ability to provide support to a subsidiary, whether it does or not will depend on the parent's propensity to provide support. In general, Fitch believes parents that are prudentially regulated (e.g. banks or insurance companies) or whose non-bank financial institution subsidiaries support the parent's core business (e.g. captive auto lenders or institutions acting as group treasuries) are likely to exhibit a higher propensity to support non-bank financial institution subsidiaries than parents whose subsidiaries are more akin to investments driven by return, tax and/or diversification goals.

In assessing support propensity, Fitch analyzes the factors listed below *(also see the Notching of Subsidiaries table)*. In the absence of ability constraints (including country risk), a subsidiary that Fitch views as "core" will usually have ratings equalized with the parent; a subsidiary viewed as "strategically important" will usually have ratings one notch (but in some cases, two notches) lower than the parent; and a subsidiary viewed as being of "limited importance" will usually be rated at least two notches below the parent or notched up from its stand-alone rating. Where a parent has adopted a resolution plan, Fitch may review this, where possible, for indications as to whether the parent would be likely to support the subsidiary in case of need.

Role in Group: A subsidiary's role in the broader group is often a key factor in determining the parent's propensity to provide support. Where the subsidiary represents a key and integral part of the group's business, providing some of the group's core products/services to customers in core markets, the propensity to support will usually be higher than when the subsidiary has limited synergies with the parent and is not operating in a target market. In some cases, Fitch's view of the strategic importance of the market where a subsidiary operates will take into account the role of a group of subsidiaries. An example may be a small foreign subsidiary which is of limited importance by itself but is one of several subsidiaries operating in a strategically important region for the parent.

Fitch will typically rate foreign subsidiaries operating in non-core markets at least one notch below their parents. This reflects the usually somewhat lower strategic importance and integration of foreign entities, and moderately less severe contagion risk from a foreign subsidiary default, compared to that of a domestic entity. It also reflects the somewhat lower likelihood of pressure from the parent's regulator to provide support to a foreign subsidiary, as opposed to a domestic subsidiary.

On the other hand, Fitch will often equalize the ratings of a foreign subsidiary with its parent institution where the subsidiary operates in a market long regarded as core by the parent.

Potential for Disposal: Where the potential for disposal is very low, for example, because the sale of the subsidiary would significantly alter the overall shape of the group and deprive the group of a key part of its business, subsidiary ratings are more likely to be equalized with those of the parent. Where the subsidiary could be more easily separated from the group and, in particular, where the entity is already up for sale or being prepared for sale, Fitch usually views the support propensity as being less strong.

Country risks can also affect the long-term financial prospects of an overseas subsidiary and thus weaken a parent's commitment to maintaining a presence in a country. This means subsidiary ratings are usually capped no more than two notches (three notches where Fitch views the commitment as being very robust in a high sovereign stress scenario) above a sovereign IDR even if a country ceiling is higher.

Implication of Subsidiary Default: The parent institution's decision on whether to support a subsidiary will in many cases consider the near-term costs and benefits of providing (or not providing) support. Where default would constitute a huge reputational risk to the parent and could undermine its franchise or even viability, the propensity to support will often be higher than when reputational risk is limited and the direct impact on the parent will be containable.

Integration: A high level of management, operational and balance sheet integration between parent and subsidiary would usually be viewed by Fitch as underlining the parent's strategic commitment to the subsidiary and making a default of the subsidiary potentially more onerous and costly for the parent. These factors would typically result in a higher propensity to support, in the agency's view and, therefore, reduced notching or equalization of ratings between parent and subsidiary Long-Term IDRs. In particular, if the parent provides a high proportion of the subsidiary's non-equity funding, this could raise considerably the cost for the parent of the subsidiary's default and potential bankruptcy and increase the incentive to provide support.

Where the degree of integration between parent and subsidiary is very high, such that the latter operates similarly to a branch, or is effectively a booking entity, Fitch may equalize the Long-Term IDRs of parent and subsidiary or assign these within one notch of each other.

Ownership: Fitch does not usually distinguish between full and large majority (over 75%) ownership in assessing a parent's propensity to support a subsidiary. However, if a minority

owner has a relatively large (over 25%) stake, this could moderately reduce the perceived moral obligation of the parent to unilaterally support the subsidiary and might complicate and delay decisions on the provision of joint support. Therefore, Fitch will be less likely to equalize ratings where a large minority shareholder exists. Furthermore, the agency might notch twice or more, rather than once, where the stakes of majority and minority shareholders are close to parity, or where some element of competition or confrontation exists between the shareholders.

Support Track Record: A strong track record of provision of timely extraordinary support to a subsidiary (or to other subsidiaries within the group) under a broad range of stress scenarios can positively influence Fitch's assessment of a parent institution's propensity to provide support, and thus limit the notching of a subsidiary's Long-Term IDR relative to that of its parent. In addition, Fitch views positively a high level of 'ordinary' support, whereby a parent operates a subsidiary with comfortable liquidity and, in particular, capital buffers, rather than simply meeting minimum regulatory requirements. A track record of not providing support, or the absence of a track record altogether given a limited operating history, could constrain the degree of institutional support uplift.

In the event of a default by its home sovereign, the stand-alone profile of a subsidiary will probably have suffered significant impairment. Potential uplift of a subsidiary's rating above the sovereign rating of its domicile will, therefore, usually be limited because of some uncertainty that the owner's commitment to providing continued support will remain in place in a sovereign default scenario. Uplift will be usually be limited to two notches above a sovereign IDR (or three notches if Fitch views support as being very robust in a high sovereign stress scenario) even if a country ceiling is higher.

Subsidiary Performance and Prospects: A strongly performing subsidiary with generally good prospects will usually, in Fitch's view, be somewhat more likely to be supported by its parent than a subsidiary with a track record of moderate or weak performance. At the same time, the agency also takes into account that a subsidiary in need of extraordinary support has by definition suffered a sharp deterioration in its performance, which weakens the relevance of any historically strong profitability in assessing future prospects.

Branding: Where a subsidiary shares branding with its parent institution, this may signal an increased commitment to, or greater integration with, the subsidiary on the part of the parent. Common branding may also increase reputational risk for the parent in case of a subsidiary default, potentially also increasing the propensity to support.

Notching of Subsidiaries

Notching Relative to Parent Rating[a]	Core/Equalized	Strategically Important/One (or in Some Cases Two) Notches	Limited Importance/Two or More Notches[b]
Parent Ability to Support and Subsidiary's Ability to Use Support			
Parent/Group Regulation	Parent regulator and/or regulation would be likely to favor support of subsidiary by parent entity	Parent regulator/regulation is neutral for subsidiary support	Parent not regulated or parent regulator/ regulation may restrict support or capital/tax implications of support may be very onerous
Relative Size	Any required support would be immaterial relative to ability of parent to provide it	Any required support would likely be manageable relative to ability of parent to provide it	Required support could be considerable relative to ability of parent to provide it
Country Risks	N.A.	Country risks (e.g. transfer and convertibility risks) represent moderate constraint on subsidiary's ability to use parent support	Country risks (e.g. transfer and convertibility risks) represent significant constraint on subsidiary's ability to use parent support
Parent Propensity to Support			
Role in Group	Key and integral part of the group's business, provides some of group's core products/services in same jurisdiction as parent or to core market(s)	Strong synergies with parent, providing products/services in jurisdictions or markets identified as strategically important	Limited synergies with parent, not operating in target jurisdictions or markets
Potential for Disposal	Sale is very hard to conceive; disposal would noticeably alter overall shape of group	No plans to sell, although disposal would not fundamentally alter overall group franchise; country risks raise moderate doubts over long-term commitment to the subsidiary	Potential candidate for sale, or might already be up for sale; disposal would not be material for group franchise; country risks raise more material doubts over long-term commitment to the subsidiary
Implication of Subsidiary Default	Default would constitute huge reputational risk to parent, and very materially damage its franchise	High reputational risk for parent, with potential for significant negative impact on other parts of group	Reputational risk would probably be containable for parent
Integration	High level of management and operational integration; capital and funding largely fungible	Significant management independence; some operational/regulatory restrictions on transfers of capital and funding	Considerable management independence; significant operational/regulatory restrictions on transfers of capital and funding
Size of Ownership Stake	Full ownership or large majority stake (typically more than 75%)	Ownership of less than 75%, but limited influence of minority shareholder(s) on subsidiary operations	Ownership of less than 75%, and significant influence of minority shareholder(s) on subsidiary operations
Support Track Record	Support is unquestioned, reflecting high level of integration and fungibility of capital/funding	Timely and sufficient provision of support, when the need has arisen, or no prior cases of support being needed; country risks raise moderate concerns over support in a sovereign default scenario	Support has been provided with some delays, has only been moderate in volume relative to subsidiary needs or has not been observed given a limited operating history; country risks raise more material concerns over support in a sovereign default scenario
Subsidiary Performance and Prospects	Long and successful track record in supporting group objectives, which is likely to continue	Limited track record of successful operation, or moderate long-term prospects	Weak performance track record, or question marks over long-term viability of business
Branding	Shares same brand as parent	Combines parent and own branding	Subsidiary branded independently from parent
Legal Commitments	Parent has made strong legal commitment to support subsidiary	Parent has made non-binding commitment to support subsidiary	Parent has not made any legal commitment to support subsidiary
Cross-Default Clauses	Potential acceleration of parent debt provides strong incentive to prevent subsidiary default	Potential acceleration of parent debt provides moderate incentive to prevent subsidiary default	Subsidiary default would not trigger acceleration of parent debt

[a]Indicates typical differential between support-driven Long-Term IDR of subsidiary and Long-Term IDR of parent. Subsidiary could be rated higher than the level implied by parental support if it has a higher stand-alone profile or SRF. [b]Where Fitch judges support to be unlikely or highly uncertain, the Long-Term IDR of a subsidiary with limited importance may be based solely on its stand-alone strength, or may be notched up from a rating level commensurate with its stand-alone strength.
Source: Fitch.

Legal Commitments: In rare cases, a subsidiary may be incorporated with unlimited liability, creating a clear legal obligation for the parent institution to provide support. In such cases, Fitch would be likely to equalize the Long-Term IDRs of subsidiary and parent, unless there were constraints arising from country risks. An unconditional and irrevocable guarantee, which contains specific third-party beneficiary language, and permits subsidiary creditors to press claims against the guarantor in the event of default by the subsidiary, would also serve to create a floor for the IDR of the subsidiary and/or its guaranteed debt at the same level as the guarantor.

A formal support agreement entered into by the parent entity, for example, to maintain capital and liquidity requirements of a non-bank financial institution subsidiary above a defined threshold, will be regarded as moderately positive for subsidiary ratings. However, although certain support agreements are legally binding while in force, they are usually revocable and can also be withdrawn if the subsidiary is divested, meaning they will typically provide very limited uplift, if any, for a subsidiary's ratings.

Non-binding commitments from parents to support subsidiaries, such as public management comfort letters (for example, in bond prospectuses), strategic statements (for example, in annual reports) or letters lodged with subsidiary regulators, add some value to the rating process by defining management's intent and potentially providing a stronger moral obligation on the part of the parent to provide support to the subsidiary. However, as such non-binding commitments are not enforceable, they generally have limited direct bearing on rating decisions in and of themselves.

Cross-Default Clauses: Cross-default clauses in parent funding agreements may specify that a subsidiary default will constitute an event of default on parent obligations, thereby granting acceleration rights to parent creditors. While this creates no obligation for the parent to support the subsidiary, it may create a significant incentive to do so, raising the propensity to provide support. The strength of this incentive will depend, among other things, on the volume of obligations potentially subject to acceleration, whether the terms of the acceleration would be attractive to creditors and hence be taken up (for example, whether the redemption price would be above or below the current market price) and whether creditors might waive their acceleration rights, perhaps for a fee.

Level of Parent IDRs: Where the parent institution's Long-Term IDR is at a low, speculative-grade level (typically in the 'B' range or below), Fitch is more likely to equalize parent and subsidiary Long-Term IDRs. This reflects the fact at the lower end of the rating scale the difference in default risk between successive rating notches becomes greater and so it may be appropriate to assign a parent and subsidiary with relatively little risk differential the same levels of Long-Term IDRs.

Non-Bank Parent Companies: The propensity and ability of corporate and insurance parents to support non-bank financial institution subsidiaries is assessed using similar principles as for bank parents. The relative size of the parent and subsidiary, the parent's creditworthiness and financial flexibility and the importance of the subsidiary to the core business of the parent will be relevant considerations. In general, Fitch believes parent companies that are prudentially regulated (e.g. insurance companies) or whose non-bank financial institution subsidiaries support the parent's core business (e.g. captive auto lenders or finance subsidiaries acting as group treasuries) are likely to have a higher propensity to support non-bank financial institution subsidiaries than corporate parent companies whose subsidiaries are more akin to investments, driven by return, tax and/or diversification goals.

Support from Sister Entities: Fitch may factor support from sister entities, as well as parent institutions, into non-bank financial institution ratings, where it believes this potential support to be strong. However, in assessing this potential support, Fitch will consider in particular: (i) whether the sister company's propensity to support could be materially weaker because it does not hold a stake and, therefore, would not suffer any direct balance sheet impairment as a result of the rated entity's bankruptcy; and (ii) whether the regulator of the sister institution may seek to restrict support to safeguard the solvency of the former.

Subnational Governments: Sometimes Fitch views potential support from federal, state or other subnational (regional, municipal or local) authorities as sufficiently strong to drive a non-bank financial institution's IDR. Fitch usually treats this as a form of institutional support and, therefore, typically does not assign SRFs based on support from a subnational. However, in exceptional cases, for example, when the subnational itself benefits from a robust and tested framework of integration and support at the national level, Fitch may also assign a SRF based on subnational support.

In Fitch's view, it is very unlikely that a subnational would seek to provide support to a non-bank financial institution subsector in its entirety, and so the agency's assessment of support will focus on the subnational's ability and propensity to support specific institutions. In assessing a subnational's ability to support, the following additional considerations will apply in respect to some of the factors listed in the Notching of Subsidiaries table.

Relative Size: Fitch will consider the overall financial flexibility of the subnational government (to the extent that this may be somewhat greater or lower than suggested by its ratings), including the size of its budget, available liquidity and ability to raise additional debt, if required.

Role in Group: Fitch will consider the existence of any special relationship between the subnational and the non-bank financial institution (e.g. the non-bank financial institution has an important policy role or agency function in the region).

Implication of Subsidiary Default: Fitch will consider the systemic importance of the non-bank financial institution to the regional financial system and economy as a whole (as measured, for example, by its shares of loans in the region).

Domestic Presence: Ratings based on subnational support are more likely where a non-bank financial institution has a strong presence in its home region but limited operations in the rest of the country or internationally.

Changes in Support Propensity and Sale of Subsidiary

Based on changes in circumstances, Fitch may change its view on a parent's propensity to support a given subsidiary. In some cases, for example, if Fitch were to perceive a sharp change in a subsidiary's role in the group, the potential change in a subsidiary's Support Rating and IDR could be significant (e.g. by multiple notches).

Gradual Trend: If Fitch believes that a parent's propensity to support a given subsidiary is gradually changing, whether because of changes in strategic importance or due to other factors listed above, Fitch may change the Rating Outlook on the subsidiary's Long-Term IDR (assuming it is support-driven), and the revised Rating Outlook could be different to that on the parent's Long-Term IDR. For example, if a parent has a Stable Rating Outlook, but Fitch believes a core FI subsidiary is becoming less important to the group, Fitch could change the Rating Outlook on the subsidiary to Negative to indicate the potential change in rating associated with its lessening strategic importance. Conversely, a gradual increase in a subsidiary's strategic importance could result in its Long-Term IDR having a Positive Rating Outlook while the Rating Outlook on the parent's Long-Term IDR is Stable.

Sale Risk: Fitch does not explicitly capture sale risk in its ratings, prior to a formal announcement that a subsidiary is to be sold or is up for sale. However, in the agency's view, there is usually a close correlation between a subsidiary's strategic importance and the likelihood of it being sold. Sale risk should therefore usually be low in cases where a subsidiary's Long-Term IDR is equalized with, or within one notch of, that of its parent.

Sale Announced, Buyer not Identified: If a parent announces that a subsidiary is up for sale without a buyer yet being identified or that management is exploring strategic alternatives with respect to the entity or if, for example, a regulator requires that a parent divest a subsidiary, then Fitch will reassess the parent's propensity to provide support to the entity concerned. If the agency believes the strategic importance of the subsidiary has reduced, such that the parent will have a lower propensity to provide support prior to the sale, or in case a sale does not go through, the Long-Term IDR of the subsidiary may be downgraded. If Fitch believes there is a significant probability a sale will take place, the ratings of the subsidiary are also likely to be placed on Rating Watch.

In taking rating actions following a sale announcement, Fitch will also consider whether a relatively narrow group of highly-rated potential acquirers has already been identified. In such cases, the risk of the subsidiary's Long-Term IDR being downgraded may be limited, and the ratings may therefore be maintained at their former levels even when Fitch believes the subsidiary has become less strategically important for its current parent.

Conversely, if Fitch believes that a subsidiary will most likely be sold to an entity with a much lower rating than the current parent, then the subsidiary's Long-Term IDR may be downgraded immediately following the announcement concerning the potential sale. This may be the case, for example, when a highly rated parent is exiting an emerging market and Fitch believes that local, more lowly rated entities are more likely acquirers than other highly rated foreign entities.

Sale Announced, Buyer Identified: If a parent announces that it has reached an agreement to sell a subsidiary to a specific buyer, and, in Fitch's view the probability of support from the new buyer differs from that of the current owner (with the potential to affect the subsidiary's Long-Term IDR), then Fitch will place the subsidiary's Long-Term IDR on Rating Watch. The Rating Watch may be Positive, Negative or Evolving, depending on the potential impact of support from the new owner on the rating.

If the Long-Term IDR is likely to be downgraded following the sale, and if Fitch believes the current owner would have a materially lower propensity to support the subsidiary should the sale not go through for any reason — i.e. in all likely scenarios the ratings will be downgraded — then it may downgrade the IDR immediately following the announcement. If Fitch believes that the sale could also result in material changes in the subsidiary's stand-alone profile, e.g. because of the loss of 'ordinary support' or because of changes in strategy, then its stand-alone credit profile may also be adversely affected.

Upon completion of the sale, or earlier if appropriate, Fitch will resolve the Rating Watch on the IDR based on its assessment of the probability of support from the new owner.

IV. Issue Ratings

As indicated in section I.6 of this report, issue ratings of non-bank financial institutions, like those of other corporate finance sectors, incorporate an assessment both of the likelihood of default (or of non-performance risk in the case of subordinated/hybrid securities) on the specific obligation and of potential recoveries for creditors in case of default/non-performance. This section outlines how Fitch assesses default/non-performance risks and recovery prospects on different types of non-bank financial institution securities and how this is factored into long-term ratings and RRs assigned to issues.

IV.1 Short-Term Debt

Short-Term IDRs are almost always assigned in accordance with a correspondence table between Long-Term and Short-Term IDRs *(see the Rating Correspondence table)*. Where the Long-Term IDR can correspond to either of two Short-Term IDRs, the Short-Term IDR will usually be determined based primarily on the strength of the issuer's liquidity profile.

Key rating elements regarding a non-bank financial institution's liquidity profile include:

- a review of the non-bank financial institution's liquidity profile, liquidity management and alternative funding sources;
- available liquid assets;
- sources and maturity profiles of backup liquidity;
- credit quality of liquidity providers; and
- conditions precedent to drawing upon liquidity sources.

If a non-bank financial institution's CP funding does not match its normal asset conversion cycle or operational free cash flow, the issuer must seek to refund CP notes already in the market, either with the issuance of new CP notes or long-term bonds or by accessing committed, CP-specific or general corporate purpose bank lines that enable same-day funding. If the issuer does not have such immediate funding, the company may not be able to repay maturing obligations. As such, Fitch considers backup liquidity for outstanding CP and other short-term debt obligations an important element in assigning instrument-level ratings, as well as an element in assessing the LT IDR.

Liquidity backup is either adequate or inadequate. More than adequate liquidity backup does not justify a higher short-term credit rating. On the other hand, when CP is explicitly enhanced, such as if it is backed by a direct-pay line of credit or similar form of guarantee, the ultimate CP rating will be the higher of the direct-pay line of credit or similar credit enhancement or the short-term rating of the issuer itself.

Fitch typically expects investment-grade-rated CP issuers to have full (100%) liquidity backup available for its outstanding CP and other short-term obligations, regardless of the credit rating of the entity. Backup liquidity may not only be in the form of bank commitments but may also include cash or marketable securities, expected operational cash flow sources, tangible parental support or other alternative forms of liquidity support depending on how reliable these sources may be.

If the majority of backup facilities are maturing in one year or less, the CP issuer is exposed to non-renewal risk, since some banks may be unwilling to renew their maturing commitments. For issuers with substantial amounts of CP outstanding, the need for multiyear liquidity backup is even more important. Companies with multiple long-term backup facilities can reduce non-renewal risk by having tiered maturities.

IV.2 Senior Unsecured Obligations

IV.2.1 Overview

Ratings of senior unsecured obligations are usually assigned in line with a non-bank financial institution's Long-Term IDR, because:

- Fitch almost always views the likelihood of default on any given senior unsecured obligation as the same as the likelihood of default of the non-bank financial institution (as reflected by the Long-Term IDR) because default on any material class of senior unsecured obligations would be treated by Fitch as a default of the entity.
- Fitch usually treats senior unsecured obligations of non-bank financial institutions as having average recovery prospects. In view of the high uncertainty regarding what a non-bank financial institution's balance sheet will look like upon default, Fitch requires a high burden of proof to notch senior debt upwards or downwards based on recovery prospects. RRs on non-bank financial institutions' senior unsecured debt, where assigned, are therefore usually 'RR4', consistent with an average recovery rate of 31%–50%.

Nevertheless, in the circumstances outlined below, senior unsecured issue ratings may be assigned at levels below, or above, the non-bank financial institution's Long-Term IDR:

Weak Recovery Prospects, Lower Issue Rating: In some cases in which an issuer has substantial levels of secured borrowings, Fitch may view a senior unsecured issue as having weaker-than-average recovery prospects, resulting in it being assigned an issue rating below the Long-Term IDR. This may be because of general concerns about the quality of a non-bank financial institution's assets, potentially impairing recovery prospects for all creditors in case of default. Or it may be driven by specific concerns related to the non-bank financial institution's funding structure; for example, very high levels of balance sheet encumbrance or very deep subordination of senior unsecured creditors in the liability structure.

Secured funding has historically been a cost efficient method for funding non-bank financial institution assets. Therefore, unsecured debt may be a very small part of the capital structure and may be rated one-notch below the Long-Term IDR until it accounts for a meaningful part of the funding mix.

Strong Recovery Prospects, Higher Issue Rating: Fitch will not usually rate senior unsecured liabilities higher than the non-bank financial institution's Long-Term IDR because of high uncertainty in assessing recovery prospects. An example might be when an entity is closer to default and there is greater visibility on recovery prospects for senior unsecured creditors.

Higher Default Risk, Lower Rating: In rare cases, Fitch may take the view that a non-bank financial institution may selectively default on certain senior unsecured obligations, but that such a default would not indicate the uncured failure of the entity because of the specific circumstances of the default, usually relating to some form of regulatory intervention and/or because the obligations in question do not comprise a significant part of the overall funding base. In such a case, the issue ratings may reflect the specific selective default risk relating to the instruments concerned, while the Long-Term IDR will continue to reflect the risk of default on the bulk of the issuer's senior liabilities.

Lower Default Risk, Higher Rating: In exceptional circumstances Fitch may rate certain senior unsecured obligations higher than the obligor's Long-Term IDR because the agency believes default on the securities is less likely than on other reference obligations to which the IDRs rate.

Substitution and Variation Clauses: Periodically, senior debt securities include clauses that permit the contractual terms of the securities to be varied or the securities themselves to be substituted with new securities. Such clauses may be at an issuer's discretion, subject to approval by a trustee, etc.

Fitch assesses whether such clauses should affect a bond's rating on a case-by-case basis. Where both the probability of variation or substitution is considered high and there is a high degree of clarity over the form of the substitution/variation securities, Fitch will rate to the terms of the likely substitution or variation securities.

IV.2.2 Recovery Rating Analysis

Where a non-bank financial institution has a Long-Term IDR of 'B+' or below, Fitch typically assigns a RR to the entity's issues rated on the long-term scale based on a bespoke recovery analysis. RRs provide greater transparency on the recovery component of Fitch's assessment of the credit risk of lowly rated issuers' securities, based on a scale ranging from 'RR1' for the strongest recovery prospects to 'RR6' for poor recovery prospects, as per the table below. However, when insufficient data are available or the potential recovery outcome is highly variable, Fitch would not assign a RR.

Credit ratings for the obligations of issuers rated between 'AAA' and 'BB–' for the most part take aggregate recoveries on the defaulted bond market as a whole into consideration, as per the Notching Guidance for 'BB–' and Above Rated Issuers table. Instruments of a particular priority and security position will be assigned credit ratings that reflect the average recoveries expected to be received by such an instrument in the event of a default. Fitch does not typically conduct bespoke recovery analysis for such obligations as they are so far from default that assumptions that might be used for the analysis of a default scenario could be too speculative to be of added value.

Recovery Rating Scale

Rating	Recovery Prospects Given Default	Typical Historical Recoveries (%)	Notching of Issue Rating[a]
RR1	Outstanding	91–100	3
RR2	Superior	71–90	2
RR3	Good	51–70	1
RR4	Average	31–50	0
RR5	Below Average	11–30	(1)
RR6	Poor	0–10	(2)

Click here for full descriptions of each rating. [a]Relative to level of non-performance risk. As outlined in the 'Strong Recovery Prospects, Higher Issue Rating' sub-section of IV.2.1, it is exceptionally rare for Fitch to notch up senior unsecured debt for recovery reasons.
Source: Fitch.

At any rating level where the bespoke recovery approach is not used, Fitch can denote contractual or structural subordination that is detrimental to the unsecured debt by rating it lower than the IDR. This can potentially be the case where there are large proportions of secured debt relative to total debt, particularly where leverage is relatively high, or where a portion of debt is structurally removed from the operations and, therefore, relies on dividend flows for debt servicing. Forms of subordination can also include lower levels of guarantees from group entities for a particular tranche of debt.

Where IDRs have transitioned from the 'B' rating category to the 'BB' rating category, at which rating levels RRs are no longer assigned, existing debt instruments previously benefiting from RRs of 'RR2' and 'RR1' under the bespoke analysis may stay at their previous rating levels notwithstanding the IDR being upgraded, if warranted. This may be the case if the capital

structure contains a large component of higher-ranking debt. A 'BB+' rated instrument is unlikely to be upgraded to 'BBB–' until the IDR is 'BB+', unless superior recoveries are expected.

Conversely, should an IDR migrate from 'BB–' or above to the 'B' rating category where bespoke recovery analysis is undertaken, Fitch may position ratings assigned to secured and unsecured tranches of debt by undertaking recovery analysis so that an upgrade of the instrument rating does not occur when the IDR is downgraded.

Instrument Ratings for Combinations of IDRs and RRs

	Long-Term IDR							
Recovery Rating	**B+**	**B**	**B–**	**CCC+**	**CCC**	**CCC-**	**CC**	**C/RD/D**
RR1	BB+	BB	BB–	B+	B	B–	CCC+	CCC
RR2	BB	BB–	B+	B	B–	CCC+	CCC	CCC–
RR3	BB–	B+	B	B–	CCC+	CCC	CCC-	CC
RR4	B+	B	B–	CCC+	CCC	CCC-	CC	C
RR5	B	B–	CCC+	CCC	CCC-	CC	C	C
RR6	B–	CCC+	CCC	CCC–	CC	C	C	C

Note: Assumes no incremental non-performance risk in instrument rating relative to the IDR. As outlined in the 'Strong Recovery Prospects, Higher Issue Rating' sub-section of IV.2.1, it is exceptionally rare for Fitch to notch up senior unsecured debt for recovery reasons.
Source: Fitch.

How Recovery Ratings Are Determined

Fitch first determines the likelihood of default/non-performance by an issuer, which it measures on the long-term 'AAA' rating scale. Fitch then arrives at the issue rating as a function of its recovery prospects in case of default/non-performance. As per the table below, where recovery prospects are viewed as average, the issue rating will be in line with the assessment of default/non-performance risk. If the agency views the instrument as having above- or below-average recovery prospects, for example as a function of leverage, funding mix and stressed valuation, Fitch may adjust upwards or downwards, respectively, from the default/non-performance risk to arrive at the issue rating. The extent of potential upward/downward adjustment of the issue rating based on the instrument's recovery prospects is shown in the table below.

Notching Guidance for 'BB–' and Above Rated Issuers

	Investment Grade		High Speculative Grade 'BB+' to 'BB–'	
Notches from IDR	**Secured Debt**	**Unsecured Debt**	**Secured Debt**	**Unsecured Debt**
3				
2				
1	Notched by +0 to +1	At average recoveries: +0 Notch. At below average recoveries +0 to -1 notches	Notched by +0 and +3, but capped at 'BBB-'	Low levels of secured debt: +0 to +1 Notch
+0				
-1		Subordinated debt: -0 to -2 notches		Unsecured and/or subordinated with secured debt: -0 to -2 notches
-2

Valuation Methods Used

The valuation methods Fitch typically applies for deriving the RR of issuances by non-bank financial institutions include the liquidation value (LV) approach and the going-concern (GC) approach. The choice of valuation techniques employed may be influenced by common practice for specific non-bank financial institution segments, the issuer's ownership status, the

make-up of multi-entity groups and applicable insolvency regimes. If Fitch believes either the LV or GC approach is not applicable in the case of default of a given entity, the agency may opt to only undertake recovery analysis using one valuation method.

For subsectors with high balance sheet usage there tends to be a bias toward the LV approach in Fitch's analysis, possibly supplemented with a stressed NAV or net book value calculation. For subsectors with low balance sheet usage, Fitch will also typically conduct the LV approach, but it is more common for the GC approach to be used.

Where Fitch analyzes both methods, it may opt for the one that results in the higher enterprise value, consistent with the practice of creditors seeking to maximize firm value under bankruptcy proceedings. The table below shows the valuation methods and multiples typically used by Fitch by main subsector.

Valuation Method by Non-Bank Financial Institution Segment

NBFI Subsector	Liquidation Approach Typically Applied?	Going Concern Approach Applied When Relevant (Typical Multiple Range)
Securities Firms		
Cash Flow Business Model	Yes	Stressed Adjusted EBITDA multiple (5.0x–10x)
Balance Sheet Business Model	Yes	Stressed tangible book multiple (0.3x–1.5x)
Investment Managers		
Cash Flow Business Model	Yes	Stressed Adjusted EBITDA multiple (4.0x–10x)
Balance Sheet Business Model	Yes	Stressed NAV (0.5x–1.0x)
Business Development Companies	Yes	Stressed NAV (0.5x–1.0x)
Finance and Leasing Companies		
Cash Flow Business Model	Yes	Stressed Adjusted EBITDA multiple (4.0x–10x)
Balance Sheet Business Model	Yes	Stressed tangible book multiple (0.3x–1.5x)
Financial Market Infrastructure Companies		
Exchanges, CCPs and Non-Bank CSDs	Yes	Stressed Adjusted EBITDA Multiple (5.0x–10.0x)

Source: Fitch.

In deriving a consolidated enterprise value, Fitch may separate an entity's operating units by segment or by region to distinctly apply the most relevant valuation method to the various components.

Liquidation Approach

For non-bank financial institutions rated 'B+' or below that would likely be liquidated upon default, Fitch typically conducts a break-up analysis of their balance sheet to assess potential recoveries for creditors. This may involve an elimination of at least a portion of existing cash balances, reflecting their likely utilization under stress. In most cases, Fitch will deduct common equity from total assets to reflect an expectation that the institution will have exhausted its capital base in the event of a default.

Under the LV approach, Fitch applies haircuts to the remaining assets to reflect Fitch's expectation that these assets would likely be sold for less than book value in a liquidation scenario. Fitch then allocates the cash generated by asset sales to the creditors, based on the expected priority of claims.

Assets consolidated on balance sheets but assigned directly to specific creditors of the institution will generally be excluded from the calculation. Similarly, assets still on balance sheet but pledged to support securitization issues will be excluded from recovery calculations,

to the extent excess collateral is not present and receivers would lack the ability to control related assets. Deferred tax assets are typically not given any credit.

Haircuts applied can vary significantly by business model, asset class and region, among other factors, and Fitch will assess this on a case-by-case basis. By way of guidance, the table below reflects typical discount ranges for a number of broad asset classes that are often found on the balance sheets of asset-heavy non-bank financial institutions.

Asset Haircuts[a]

Asset	Characteristics	Discount (%)
Cash And Equivalents	No risk, adjustment may be made to reflect expected balance at default	0–50
Fixed Income Securities	Variability in risk and liquidity	5–75+
Equities	Variability in liquidity and volatility	15–100
Tangible Fixed Assets	Variability in liquidity and volatility	15–75+
Mortgage Lending	Low risk if first charge, higher risk if second charge; variable liquidity	5–40
Unsecured Personal Lending	High risk	25–50+
Associates and JVs	Illiquid and variable value	20–60
Intangible Assets[b]	Illiquid and questionable value in distress	70–100

[a]For assets purchased at a significant discount (e.g. in the case of debt purchasers), Fitch will typically apply a haircut at the lower end of the indicated range to reflect more limited additional write-down risk in a stressed scenario. [b]For non-bank financial institutions with sizable balance sheet-light subsidiaries (that could be sold as a going concern in their entirety), haircuts on intangibles might be at the lower end of the cited 70% to 100% range.
Source: Fitch.

Going Concern Approach

The GC approach involves a two-step process:

- Estimate the level of post-default earnings, typically adjusted EBITDA, upon which to base the valuation.
- Apply a conservative valuation multiple reflecting a company's relative position within its sector based on actual or expected market and/or distressed multiples. Where no statistically significant sample of market transactions is available, analysts will seek out near-proxy sectors or make assumptions based on general trends for distressed market transactions.

Valuation multiple ranges provided in the Valuation Method by Non-Bank Financial Institution Segment table are purposefully broad for the various subsectors. The actual multiple that is applied in the recovery analysis will be dependent upon a review of then-current market conditions and an assessment of valuation multiples applied to similar market transactions around the time of the analysis.

For some non-bank financial institutions segments, Fitch may apply additional segment-specific valuation approaches. For example, for investment managers Fitch may consider valuation as percentage of stressed AUM in addition to an adjusted EBITDA multiple approach. For mortgage REITs, Fitch considers stressed values based on the criteria reports "U.S. and Canadian Multiborrower CMBS Rating Criteria" and "Structured Finance CDOs Surveillance Rating Criteria," in addition to an adjusted EBITDA multiple approach.

Estimating Creditor Claims

In an effort to estimate creditor claims Fitch's analysis takes into consideration:

- **Revolving Claims:** Fitch assumes that unused portions of committed lines of credit (secured or unsecured), revolving credit facilities and letter of credit commitments are fully drawn to the extent permitted. Greater judgment is exercised for facilities, which can only be drawn for specific uses, such as those designated for use for acquisitions and capital expenditures. Fitch will assess the extent to which such drawings may also give rise to

additional recoverable assets according to the purposes for which these credit lines are typically utilized.

- **Priority Administrative Claims:** These typically range between 2% and 10% of distressed enterprise value, depending on country, institution size and complexity.
- **Lease Rejection Claims:** Where lease rejection claims have been made, Fitch assesses the ability of the issuer to rationalize leases in a default scenario and notes that under the GC approach a certain level must typically be maintained, while under the LV approach 100% of non-residential leases are typically deemed rejected. The value of rejected leases is calculated consistent with the bankruptcy code applicable in each jurisdiction, where such concepts exist.
- **Concession Assumption:** The value distributed to senior unsecured creditors may be reduced by an amount that is redistributed to junior claimants to secure their approval of the plan of reorganization or liquidation. The amount of such concession payments is highly dependent on circumstances.
- **Pension and Other Post-Employment Benefit Obligations:** Underfunded pension plans and other post-employment benefit claims can be significant claims on the bankruptcy estate, although the claims may vary in priority depending on jurisdiction and issuer-specific intercreditor agreements.
- **Other Claims:** Other non-debt and contingent claims, including material lawsuits and contingent liabilities (and guarantees) may be considered, where these are particularly pertinent to an institution.
- **Related-Party Funding:** Where a non-bank financial institution has a large amount of related-party funding, Fitch will consider whether related-party creditors would be likely to effectively become senior to creditors by withdrawing their funds prior to default.

Fitch's recovery analysis typically takes a legal waterfall approach. However, application of value is not only affected by relative priority of instruments for a particular issuer but also by organizational structure. Absent a specific legal or regulatory construct to the contrary, Fitch will assume creditors of specific legal entities have a priority claim on assets of that entity relative to creditors of affiliates and related entities. In instances where there are multiple entities in a group, Fitch may establish valuation and claims at the entity level and consider the residual values available for creditors of parent or affiliated entities.

In this context, Fitch will generally use an entity's unconsolidated balance sheet as the basis for its recovery calculations. Factors that may partially offset the effect of structural subordination include the presence of upstream guarantees and intercompany obligations owed by the subsidiary to the parent. Cross-border complexities may add conservatism to the analysis of recoveries for non-bank financial institutions that operate internationally.

Fitch acknowledges that an analysis based on the LV or GC approach requires a large number of important assumptions concerning the structure of an issuer's financial profile upon default. In view of these assumptions, the agency will not necessarily map expected recoveries to corresponding RRs and long-term issue ratings. Instead, Fitch may increase or reduce the RRs suggested by the valuation and notching approaches, depending on the sensitivities of expected recoveries to small changes in assumptions, pending events, contractual terms within specific instruments, scope of collateral or views about the operating environment of a particular company.

Fitch's recovery analysis does not attempt to capture the full spectrum of possibly conflicting motivations for creditors or the speed with which such motivations can change. Fitch would not assign RRs where it believes available information to be insufficient or the outcome of the analysis to be particularly unpredictable.

Fitch has provided country caps for RRs to encompass the creditor-friendliness (or otherwise) of jurisdictions and enforceability of security in the event of a default (see the criteria report "Exposure Draft: Country-Specific Treatment of Recovery Ratings Criteria"). These caps permit the compression of senior and junior obligations where jurisdictional or other structural features indicate that this is warranted. Fitch will endeavor to explain findings from its issuer-specific recovery analysis in its research.

IV.3 Subordinated and Hybrid Securities

Typically speaking, subordinated and hybrid instruments issued by non-bank financial institutions will follow the ratings approach and potential equity credit methodology outlined in the criteria report "Non-Financial Corporates Hybrids Treatment and Notching Criteria" (for traditional subordinated debt and hybrid securities) or the "Corporate Rating Criteria" (for shareholder loans). In instances in which such instruments are determined not to qualify as debt per the "Non-Financial Corporates Hybrids Treatment and Notching Criteria or Corporate Rating," Fitch will typically afford 100% equity credit for such instruments if balance sheet capitalization metrics are relevant to the analysis of the issuing entity.

If a subordinated or hybrid instrument is issued by a non-bank financial institution prudentially regulated under a similar framework as banks, the ratings approach will follow the rationale outlined in the "Bank Rating Criteria." If a subordinated or hybrid instrument is issued by a policy institution or other entity with some form of government sponsorship, linkage or ownership, the ratings approach will follow the rationale outlined in the "Bank Rating Criteria." If a subordinated or hybrid instrument is issued by a non-bank financial institution prudentially regulated under a similar framework as insurance companies, the ratings approach will follow the rationale outlined in the criteria report "Insurance Rating Criteria."

Determining Ratings and Potential Equity Credit for Subordinated and Hybrid Securities Issued by Non-Bank Financial Institutions

Issuer Type	Applicable Criteria
Traditional non-bank financial institutions (i.e. does not fall under one of the three categories outlined below)	Non-Financial Corporates Hybrids Treatment and Notching Criteria (for traditional subordinated debt and hybrid securities) or Corporate Rating Criteria (for shareholder loans)
Non-bank financial institutions prudentially regulated under a similar framework as banks	Bank Rating Criteria
Non-bank policy institution or other entity with some form of government sponsorship, linkage or ownership	Bank Rating Criteria
Non-bank financial institution prudentially regulated under a similar framework as insurance companies	Insurance Rating Criteria

Source: Fitch.

IV.4 Guaranteed and Secured Debt

Fitch usually rates fully guaranteed debt (or debt that Fitch deems to be exposed to an equivalent degree of credit risk as guaranteed debt) in line with the senior unsecured debt of the guarantor (if this is higher than the unsecured debt rating of the non-bank financial institution issuer). Equalization of the guaranteed debt rating with the senior unsecured rating of the guarantor will depend on the guarantee ranking equally with the guarantor's senior unsecured debt, the jurisdiction of the guarantee being acceptable to Fitch at the rating level, its enforceability, timeliness and/or expectations that the guarantor will honor the guarantee. A non-bank financial institution's debt benefiting from a guarantee that ranks equally with the guarantor's subordinated obligations is usually rated in line with the subordinated debt of the

guarantor. In cases where the above conditions for equalization with the guarantor's rating are not met, Fitch will usually rate such obligations in line with the issuer's debt ratings.

In cases where Fitch has sufficient information to analyze and monitor the underlying collateral, it will rate long-term secured obligations of non-bank financial institutions, particularly those with relatively straightforward structures, using the default risk/recovery prospects approach outlined in the Notching Guidance for 'BB–' and Above Rated Issuers table. Issues with more complex forms of structural enhancement, e.g. securitizations, covered bonds and partially guaranteed obligations, are usually rated by Fitch's Structured Finance, Covered Bonds or Fund and Asset Manager group, respectively, based on separate criteria.

Ratings of non-bank financial institutions' short-term obligations are based solely on the issues' default risk and so do not take account of structural enhancements that may improve recoveries in case of default.

IV.5 Market-Linked Notes

Some non-bank financial institutions issue or guarantee securities that return amounts referenced to a market risk essentially independent of the issuer's/guarantor's own creditworthiness (sometimes referred to as market-linked notes or MLNs). In some cases, only the coupon stream references the market risk (referred to as principal-protected notes) and, in others, both the coupon stream and principal repayment are driven by the reference market risk (referred to as non-principal-protected notes). MLNs may reference a very broad array of risks, most commonly related to equities, currencies and commodities and are often structured in response to reverse inquiries.

MLN ratings are aligned with the ratings of a given issuer or guarantor's traditional debt instruments of an equivalent seniority (senior debt, preferred senior debt, etc.). Ratings are assigned by Fitch only when the principal is protected and solely address the credit risk of the issuer or guarantor. Coupon risk unrelated to the issuer or guarantor's credit risk is thus excluded from MLN ratings. Dual currency notes may be rated provided they can or will be settled in an equivalent amount of a second currency.

Fitch does not rate notes whose risk of principal return is unrelated to the issuer's credit risk. Consequently, for the avoidance of doubt, Fitch will not rate credit-linked notes, which reference the credit risk of a third party or basket of third parties, under this criteria. These notes may be rated by Fitch's Structured Finance Group.

IV.6 Debt Issuance Distinctions Between Holding Companies and Non-Bank-Financial Institution Operating Subsidiaries

When rating debt instruments that are structurally subordinated to other debt instruments within a group structure, for example debt issued by a holding company or debt-issuing vehicle, Fitch will assess the strategic, operational or legal links between the different elements in the structure.

If Fitch's analysis determines that such debt is sufficiently isolated from the remainder of the group, failure to service it may have limited implications for the creditworthiness of the operating subsidiaries. Fitch's analysis will still start with an assessment of the operating subsidiaries' credit profiles. However, this analysis will likely be supplemented by an assessment of the stand-alone profile of the issuing entity. In this case, Fitch's analysis would likely incorporate elements of Fitch's rating approach for investment companies, notably when assessing the issuer's capitalization and leverage as well as its funding, liquidity and coverage profile. Fitch may assign a public rating to the issuing entity, informing investors of its different default probability compared with the operating subsidiaries.

Under certain circumstances, for instance, if there is a strong ring-fencing mechanism in place (as may be the case where operating subsidiaries are prudentially regulated, for example), this could lead Fitch to exclude such holding company or debt-issuing vehicle debt from the analysis of the ring-fenced group.

On the other hand, if Fitch concludes that the strategic, operational or legal links between a holding company or debt-issuing vehicle and an operating entity are relatively significant and there is no or limited ring-fencing in place protecting the operating entity and holders of its debt, the structurally subordinated debt will most likely be consolidated in the analysis of the operating entity and the issue rating of the holding company or debt issuance vehicle's debt instrument will be determined through a notching approach.

In determining the notching relativities between a holding company or debt-issuing vehicle and an operating company and their respective debt instruments, Fitch assesses potential differences in default probabilities. As part of this assessment, Fitch analyzes relevant regulatory and legislative aspects, the operating entity's ability to upstream dividends to the issuing entity in comparison to the debt quantum and interest expenses of the issuing entity. Fitch would also take other potential income streams of the issuing entity into consideration, including, where relevant, interest income on intercompany loans and cash flows from other group entities.

Annex 1: Variations from Criteria

Fitch's criteria are designed to be used in conjunction with experienced analytical judgment exercised through a committee process. The combination of transparent criteria, analytical judgment applied on a transaction-by-transaction or issuer-by-issuer basis and full disclosure via rating commentary strengthens Fitch's rating process while assisting market participants in understanding the analysis behind the ratings.

A rating committee may adjust the application of these criteria to reflect the risks of a specific transaction or entity. Such adjustments are called variations. All variations will be disclosed in the respective rating action commentaries, including their impact on the rating where appropriate.

A variation can be approved by a ratings committee where the risk, feature or other factor relevant to the assignment of a rating and the methodology applied to it are both included within the scope of the criteria, but where the analysis described in the criteria requires modification to address factors specific to the particular transaction or entity.

Annex 2: Rating Non-Bank Financial Institutions Above the Sovereign

Fitch is more likely to rate a non-bank financial institution above the sovereign – i.e. assign a LC Long-Term IDR to the non-bank financial institution above the sovereign LC Long-Term IDR, or a FC Long-Term IDR to the non-bank financial institution above the sovereign FC Long-Term IDR – when both of two conditions hold. First, Fitch must believe that a non-bank financial institution would probably retain the capacity to service its obligations in the relevant currency following a sovereign default in that currency. This capacity may be retained either because the non-bank financial institution receives external support or because the non-bank financial institution's intrinsic strength, as reflected in its stand-alone credit risk profile, is sufficient to enable it to continue servicing its obligations after a sovereign default.

Second, the agency must believe that the sovereign, following its own default in a currency, would probably not impose restrictions on the non-bank financial institution's ability to service its obligations in that currency. Restrictions may be applied to FC or LC obligations. Fitch usually regards restrictions to the former as somewhat more likely than the latter, which tends to result in the non-bank financial institution's LC ratings being less constrained, relative to the sovereign, than FC ratings. However, in some countries where governments have been more interventionist, both FC and LC ratings of non-bank financial institutions may be capped at the level of the sovereign.

Additionally, unlike banks, which often have strong ties to the credit profile of the sovereign in which they reside, non-banks may not experience the same linkage or potential restrictions on their ability to service their own debt. As an example, a global investment manager may have the majority of its capital invested in other countries, with limited exposure to the economy in which it domiciled. Therefore, the credit profile of the investment manager may not be directly affected by the credit profile of the sovereign.

Annex 3: Information Used to Issue and Maintain Ratings

Key Principles

Fitch bases its research and rating analysis on a thorough analysis of all relevant information known and believed to be relevant to the analysis and the rating decision.

This information includes publicly available information, information provided directly by the issuer and information provided by third parties and relevant information gathered by Fitch during its interaction with other issuers.

All rating committees are required to verify that data was sufficient and robust relative to the rating decision. Where there is insufficient information to assign or maintain a rating, no rating shall be assigned or maintained.

Criteria Data Sources

The key rating assumptions for the criteria are informed by discussions with external parties, such as issuers, institutional owners, supervisors and governments and Fitch's analysis of financial and non-financial information, such as issuer financial statements and annual reports, bond documentation and financial market, industry, academic and economic data, research and history.

Information Threshold

The core information relied on in the rating process is publicly available information such as annual and interim financial statements (typically at least three years of audited accounts), transaction documents for public issues, public statements, presentations and other ad hoc disclosure made by issuer management, public regulatory filings and official industry commentary. This public information represents the minimum requirements for investors to form an investment decision and is based on the level and type of information typically presented by a publicly listed company.

Public disclosure is often supplemented by additional information provided directly by issuer management. Such additional information may take the form of more frequent or confidential updates of information typically disclosed publicly and/or specific non-public information considered analytically important. Meetings may be held with members of issuer management to discuss the information provided and to understand any assumptions used in the preparation of the information. Non-financial information used in the rating process would typically include a description of the institution's core products, client base, geographical markets, risk management framework, group structure, ownership and strategy.

Fitch works with the most recent information available. Public disclosure will generally be predictable in its timing; periodic updates of other information will typically be timed to coincide with a scheduled review, or ad hoc, in response to changing conditions. This supplemental information can provide periodic insights, but its provision is subject to the discretion of the rated entity. Historical time series information provides important insight but the most recent information typically has a greater weighting in the prospective rating opinion.

Fitch undertakes a reasonable verification of the factual information relied on in accordance with the relevant rating methodology and criteria as far as is possible from information from independent sources, to the extent such sources are available.

Surveillance

Analysts perform ongoing surveillance of information received and/or requested. Where a factor or trend could have an impact on the rating, Fitch will determine the appropriate course of action, which may be one of the following:

- The non-bank financial institution is taken to rating committee.
- The non-bank financial institution is issued with a request for additional specific information (Fitch may also consider it appropriate to place it on Rating Watch at this point).

Fitch may also conclude that no action is necessary. There are no differences between new rating analysis and surveillance analysis.

Annex 4: Use of Stress Testing and Other Tools in the Rating Process

Key Principles

Where relevant, Fitch will complement its analysis of the relevant information with an assessment of the potential impact of a range of reasonable/plausible stress scenarios or simulations.

Assumptions

Assumptions used in stress or scenario analyses will vary but will typically incorporate macro-economic variables, loss rates and changes in risk parameters (such as probability of default and loss given default), and the impact will typically be framed in the context of impact on earnings, liquidity, interest coverage and/or capital/leverage. The variable(s) selected will be driven by the nature and/or severity of the stress envisaged or being tested and will be established at an issuer-specific, sector, country and/or region level.

Tools Used in the Rating Process

Where relevant, Fitch will use a range of standardized tools to simulate the effect of asset quality/performance, earnings, capital and liquidity stresses. Stress testing may be carried out on an issuer-specific or sector basis and may be supplemented by bespoke simulations in cases where standardized approaches may not be appropriate.

To the extent that regulators in various jurisdictions may conduct stress tests or asset quality reviews across a country or sector, Fitch may use its own similar tools to understand better regulatory stress tests and their sensitivities, recognizing the varying degrees of disclosure regarding factors such as baseline data and stress variables.

Inputs and Outputs

Stress and scenario testing may require standard issuer inputs of a non-public nature, and Fitch will request those that are considered necessary. If such inputs are not provided, Fitch will use conservative estimates based on analytical judgment together with its broader industry and sector knowledge. Alternatively, Fitch may be provided with an issuer's own scenario analyses. In such cases, Fitch will discuss these with issuer management to understand the underlying assumptions used in the analysis and, if appropriate, make further analytical adjustments to management's underlying assumptions.

Outputs may, at Fitch's discretion, be disclosed in full or part where such disclosure adds value to the analysis and/or research. However, the presence of non-public data typically results in disclosure being in aggregate or summarized form. Fitch will use peer comparison, where relevant, to evaluate relative resilience to specific stresses or scenarios.

Annex 5: Rating Sensitivities and Limitations

Rating Sensitivites

Fitch's opinions are forward looking and include the agency's views of future performance. Non-bank financial institution ratings are subject to positive or negative adjustment based on actual or projected financial and operational performance. The list below includes a non-exhaustive list of the primary sensitivities that can influence the ratings and/or Rating Outlook.

- **Operating Environment Risk:** Deterioration in an issuer's operating environment due to weakening of general economic environment, sovereign risks, financial market health, changes in regulatory/legislative requirements or conditions and systemic governance in the countries where the issuer is operating as well as possible imposition of foreign exchange controls.

- **Business Risk:** Developments in an issuer's ability to withstand competitive pressures as shown in its position/franchise in key markets, its business model/diversification, its level of pricing power and its operating efficiency.

- **Financial Risk:** Changes in an issuer's financial profile due to the impact of operational developments, a weakening of an issuer's operating environment, the issuer's financial policy or risk appetite or the availability of funding in case of market disruption.

- **Event Risk:** An unforeseen event, which, until it is explicit and defined, is excluded from existing ratings. Event risks can be externally triggered — a change in law, a natural disaster, a political shock or an ownership change — or internally triggered, such as a change in policy on capitalization, a major acquisition, fraud or a management or strategic restructuring. As most non-bank financial institutions tend to have an asset-liability mismatch (asset duration longer than funding duration), they can be vulnerable to extreme liquidity stress. While funding, liquidity and coverage are core parts of Fitch's rating analysis, sometimes idiosyncratic events can cause a rapid, potentially materially detrimental, deterioration in liquidity.

- **Change in Support Risk:** A change in extraordinary support likely to be available to an issuer, for example, due to a change in ownership or developments in resolution frameworks. Event risk and changes in support can often have more material implications for non-bank financial institution ratings than other risks outlined above.

- **Instrument-Specific Risk:** In the case of issue-level ratings, these may be sensitive to changes in the company's issuer-level ratings, performance risk relative to the risk captured in issuer-level ratings (e.g. hybrid securities) and changes in default risk or recovery prospects for such instrument, for example as a function of the seniority of the instrument, the volume of pari passu liabilities, the volume and relative ranking of other liabilities, the availability of unencumbered assets and/ or the enterprise value of the business.

Limitations

This master criteria identifies factors that are considered by Fitch in assigning ratings to a particular entity or obligation within the scope of the master criteria. Not all factors in these criteria

may apply to each individual rating or rating action. Each specific rating action commentary or rating report will discuss those factors most relevant to the individual rating action.

Ratings, including Rating Watches and Rating Outlooks, assigned by Fitch are subject to the limitations specified in Fitch's Rating Definitions, available at www.fitchratings.com/site/definitions. More specifically to non-bank financial institutions, IDRs, VRs, SRs, SRFs and DCRs do not specifically address transfer and convertibility risk for each and every foreign jurisdiction in which a non-bank financial institution operates, nor do they reflect jurisdiction-specific resolution risks.

Annex 6: Related Criteria

This criteria report has been published together with the following criteria report:

Bank Rating Criteria

The following cross-sector criteria reports remain in force and will be applied to the ratings of non-bank financial institutions and other financial institutions, where appropriate:

Country Ceilings Criteria

Sukuk Rating Criteria

National Scale Ratings Criteria

Non-Financial Corporates Hybrids Treatment and Notching Criteria

Exposure Draft: Country-Specific Treatment of Recovery Ratings

Third-Party Partial Credit Guarantees Rating Criteria

The Distressed Debt Exchange Rating Criteria no longer applies to non-bank financial institutions as the relevant analytical concepts have been incorporated it into this criteria.

Annex 7: Subsector Financial Ratios and Definitions

Summary of Non-Bank Financial Institution Core Ratios and Quantitative Benchmarks

		aa or Above	a	bbb	bb	b or Below
Securities Firms (High Balance Sheet Usage)						
Earnings and Profitability	Operating Income/Average Equity (%)	x>20	10<x≤20	5<x≤10	3<x≤5	x≤3
Capitalization and Leverage	(Tangible Assets – Reverse Repo – Sec. Borrowed)/FCC (x)	x<5	5≤x<10	10≤x<15	15≤x<20	x≥20
Funding, Liquidity and Coverage	Liquid Assets/Short-Term Funding (%)	x>200	150<x≤200	100<x≤150	85<x≤100	x≤85
Securities Firms (Low Balance Sheet Usage)						
Earnings and Profitability	Adjusted EBITDA/Revenue (%)	x>25	20<x≤25	15<x≤20	10<x≤15	x≤10
Capitalization and Leverage	Gross Debt/Adjusted EBITDA (x)	x<0.5	0.5≤x<1.5	1.5≤x<2.5	2.5≤x<3.5	x≥3.5
Funding, Liquidity and Coverage	Adjusted EBITDA/Interest Expense (x)	x>15	10<x≤15	6<x≤10	3<x≤6	x≤3
Investment Managers Primarily Charging Fees Based on Net Asset Value (Traditional Investment Managers and Hedge Fund Managers)						
Asset Performance	Net Client Flows/Beginning (F)AUM (%)	x>10	5<x≤10	5≥x>(5)	(5)≥x>(10)	x≤(10)
Earnings and Profitability	Adjusted (F)EBITDA/Fee Revenue (%)	x>50	30<x≤50	20<x≤30	10<x≤20	x≤10
Capitalization and Leverage	Gross Debt/Adjusted (F)EBITDA (x)	x<0.25	0.25≤x<1.5	1.5≤x<3.0	3.0≤x<5.0	≥5.0
Funding, Liquidity and Coverage	Adjusted (F)EBITDA/Interest Expense (x)	x>18	12<x≤18	6<x≤12	3<x≤6	x≤3
Investment Managers Primarily Charging Fees Based on Invested/Committed Capital (Alternative Investment Managers)						
Asset Performance	Net Client Flows/Beginning (F)AUM (%)	x>10	5<x≤10	5≥x>(5)	(5)≥x>(10)	x≤(10)
Earnings and Profitability	Adjusted (F)EBITDA/Fee Revenue (%)	x>50	30<x≤50	20<x≤30	10<x≤20	x≤10
Capitalization and Leverage	Gross Debt/Adjusted (F)EBITDA (x)	x<0.50	0.50≤x<2.5	2.5≤x<4.0	4.0≤x<6.0	≥6.0
Funding, Liquidity and Coverage	Adjusted (F)EBITDA/Interest Expense (x)	x>12	8<x≤12	4<x≤8	2<x≤4	x≤2
Investment Companies						
Capitalization and Leverage	Gross Debt/Tangible Equity (x)	x<0.15	0.15≤x<0.35	0.35≤x<0.50	0.50≤x<1.0	≥1.0
Funding, Liquidity and Coverage	One year's upstream dividend and interest income coverage of one years' holdco interest expense (x)	x>10	6<x≤10	3.5<x≤6.0	2.5<x≤3.5	x≤2.5
Funding, Liquidity and Coverage	One year's upstream dividend and interest income coverage of two years' holdco operating expenses, interest expense and dividends (x)	x>1.0	x>1.0	x>1.0	x≤1.0	x≤1.0
Business Development Companies						
Asset Quality	Net Realized Gains/Average Portfolio, at Value (%)	x>(1.0)	(1)≥x>(3)	(3)≥x>(4)	(4)≥x>(6)	x≤(6)
Earnings and Profitability	Net Investment Income/Average Portfolio, at Cost (%)	5<x≤10	5<x≤10	5<x≤10	x≤5 or x>10	x≤5 or x>10
Capitalization and Leverage	Debt/Tangible Equity (x)	x<0.25	0.25≤x<0.50	0.50≤x<0.80	0.80≤x<1.00	x≥1.00
Funding, Liquidity and Coverage	Unsecured Debt/Total Debt (%)	x>90	50<x≤90	35<x≤50	x≤35	x = 0
Finance and Leasing Companies (High Balance Sheet Usage)						
Asset Quality[a]	Impaired Loans/Gross Loans ('aa' operating environment) (%)	x≤1	1<x≤3	3<x≤6	6<x≤14	x>14
Asset Quality[a]	Impaired Loans/Gross Loans ('a' operating environment) (%)	x≤0.25	0.25<x≤2	2<x≤5	5<x≤12	x>12
Asset Quality[a]	Impaired Loans/Gross Loans ('bbb' operating environment) (%)		X≤0.5	0.5<x≤4	4<x≤10	x>10
Asset Quality[a]	Impaired Loans/Gross Loans ('bb' operating environment) (%)			x≤0.75	0.75<x≤5	x>5
Asset Quality[a]	Impaired Loans/Gross Loans ('b' operating environment) (%)				x≤1	x>1
Earnings and Profitability	Pre-Tax Income/Average Assets (%)	x>4	3<x≤4	2<x≤3	1<x≤2	x≤1
Capitalization and Leverage	Debt/Tangible Equity (x)	x<1.0	1.0≤x<3.0	3.0≤x<5.0	5.0≤x<7.0	x≥7.0
Funding, Liquidity and Coverage)	Unsecured Debt/Total Debt (%)	x>90	50<x≤90	35<x≤50	x≤35	x = 0

[a]In instances where asset quality metrics exhibit seasonal differences in performance, Fitch may seek to normalize such metrics when assessing asset quality at a given point in time. Fitch may exclude or normalize a quarterly data point if it is believed to be unduly influenced by seasonality rather than reflecting a longer term asset quality trend. Note: If/when additional ratios are considered material on an issuer-specific basis, such ratios will be articulated in the accompanying Rating Action Commentary for such issuer. *Continued on next page.*

Securities Firm Ratios

Metric	Definition	Core or Complementary	Firms with High Balance Sheet Usage	Firms with Low Balance Sheet Usage
Asset Quality Ratios				
Impaired and Nonperforming Ratio	Loans where income has stopped accruing, loan has been restructured or the receivable is deemed otherwise impaired/period-end loans.	Complementary.	✓	
Reserves for Impaired Loans/ Impaired Loans	Reserves for Impairments/Impaired Loans	Complementary	✓	
Loan Impairment Charges/Average Gross Loans	Impairment Charges on Loans/Average Gross Loans	Complementary	✓	
Impaired Loans Less Reserves for Impaired Loans/FCC	(Impaired Loans and Leases – Associated Reserves)/FCC	Complementary	✓	
Growth of Gross Loans	Increase in total customer loans at the end of the accounting period less total customer loans at the beginning of the accounting period as a percentage of customer loans at the beginning of the accounting period.	Complementary	✓	
Market Risk Ratios				
Average VaR/FCC	Average period trading VaR considered as reported and adjusted to 99% confidence interval and one-day holding period; data are assessed both including and excluding attributed diversification. FCC equals shareholders' equity, less hybrid capital reported as equity, non-controlling interests reported outside equity, less non-controlling interests not regarded as loss absorbing by Fitch, less goodwill and all other intangibles, less ineligible deferred tax assets, +/- fair value of own credit risk, less first-loss tranches of retained off-balance sheet securitizations, less life assurance/insurance company interests	Complementary	✓	
Fitch Stressed VaR/FCC	Fitch stressed VaR is calculated by multiplying the aggregated 10-day, 99% level maximum VaR by a factor of five; intended to capture market risk under extremely severe market conditions.	Complementary	✓	
Trading Efficiency Ratio	Principal daily trading revenue (annual/252 days) or (quarterly/63 days)/average trading VaR (99%, one day, U.S. dollars)	Complementary	✓	
Earnings and Profitability Ratios				
Operating Profit/Average Equity	Pre-tax profit before non-recurring and non-operating income and expenses as a percentage of average reported equity.	Core	✓	
Adjusted EBITDA/Revenue	EBITDA with adjustments for significant non-cash items, such as non-cash compensation expenses, as a percentage of total revenue.	Core		✓
Adjusted ROAE	Reported net income, excluding discontinued operations and extraordinary one-time items and the effects of CVA/DVA, as a percentage of average reported equity.	Complementary	✓	
Operating Expense/Revenue	Operating expenses, including interest expense, as a percentage of total revenue.	Complementary	✓	
Compensation/Net Revenue	Compensation paid in the period as a percentage of net revenue, isolated for brokers and traders compensation where possible	Complementary	✓	

[a]Applicable only for those entities subject to Basel regulation. Note: If/when additional ratios are considered material on an issuer-specific basis, such ratios will be articulated in the accompanying Rating Action Commentary for such issuer. *Continued on next page.*

Securities Firm Ratios (continued)

Metric	Definition	Core or Complementary	Firms with High Balance Sheet Usage	Firms with Low Balance Sheet Usage
Capitalization and Leverage Ratios				
Net Adjusted Leverage	(Tangible Assets - Reverse Repurchase Agreements - Securities Borrowed)/FCC	Core	✓	
Gross Debt/Adjusted EBITDA	Gross debt divided by EBITDA, with adjustments for significant non-cash items such as non-cash compensation expenses	Core		✓
Gross Leverage	Total assets divided by total equity	Complementary	✓	
Tangible Gross Leverage	(Tangible Assets plus Gross ups for Derivatives, Reverse Repurchase Agreements and Securities Borrowed)/FCC Tangible assets equal total assets minus goodwill and intangibles Derivatives, reverse repurchase agreements and securities borrowed are grossed up for any netting amounts that may otherwise be excluded from amounts reported on the balance sheet	Complementary	✓	
Adjusted Leverage	(Tangible Assets - Reverse Repurchase Agreements)/FCC	Complementary	✓	
Tier I Capital Ratio[a]	Ratio as reported to the regulators in the relevant jurisdiction; the calculation is: common equity as defined by local regulators as a percentage of risk weighted assets as defined by local regulators.	Complementary	✓	
FCC/RWA[a]	FCC divided by risk weighted assets as reported to the regulator in the relevant jurisdiction	Complementary	✓	
Funding and Liquidity Ratios				
Liquid Assets/ST Funding	Total assets minus illiquid assets *(defined below)* as a percentage of wholesale funding due within 12 months Illiquid assets typically include high yield debt + merchant bank, private equity investments + emerging market + consumer loans + bank loans + goodwill + intangibles + non-investment-grade derivatives marked to market + other assets + non-investment-grade residual assets	Core	✓	
Adjusted EBITDA/Interest Expense	EBITDA with adjustments for significant noncash items, such as noncash compensation expenses, as a multiple of interest expense	Core		✓
LT Funding/Illiquid Assets	Equity and long-term borrowing as a percentage of illiquid assets *(as defined above)*	Complementary	✓	

[a]Applicable only for those entities subject to Basel regulation. Note: If/when additional ratios are considered material on an issuer-specific basis, such ratios will be articulated in the accompanying Rating Action Commentary for such issuer.

In issuing and maintaining its ratings and in making other reports (including forecast information), Fitch relies on factual information it receives from issuers and underwriters and from other sources Fitch believes to be credible. Fitch conducts a reasonable investigation of the factual information relied upon by it in accordance with its ratings methodology, and obtains reasonable verification of that information from independent sources, to the extent such sources are available for a given security or in a given jurisdiction. The manner of Fitch's factual investigation and the scope of the third-party verification it obtains will vary depending on the nature of the rated security and its issuer, the requirements and practices in the jurisdiction in which the rated security is offered and sold and/or the issuer is located, the availability and nature of relevant public information, access to the management of the issuer and its advisers, the availability of pre-existing third-party verifications such as audit reports, agreed-upon procedures letters, appraisals, actuarial reports, engineering reports, legal opinions and other reports provided by third parties, the availability of independent and competent third-party verification sources with respect to the particular security or in the particular jurisdiction of the issuer, and a variety of other factors. Users of Fitch's ratings and reports should understand that neither an enhanced factual investigation nor any third-party verification can ensure that all of the information Fitch relies on in connection with a rating or a report will be accurate and complete. Ultimately, the issuer and its advisers are responsible for the accuracy of the information they provide to Fitch and to the market in offering documents and other reports. In issuing its ratings and its reports, Fitch must rely on the work of experts, including independent auditors with respect to financial statements and attorneys with respect to legal and tax matters. Further, ratings and forecasts of financial and other information are inherently forward-looking and embody assumptions and predictions about future events that by their nature cannot be verified as facts. As a result, despite any verification of current facts, ratings and forecasts can be affected by future events or conditions that were not anticipated at the time a rating or forecast was issued or affirmed.

The information in this report is provided "as is" without any representation or warranty of any kind, and Fitch does not represent or warrant that the report or any of its contents will meet any of the requirements of a recipient of the report. A Fitch rating is an opinion as to the creditworthiness of a security. This opinion and reports made by Fitch are based on established criteria and methodologies that Fitch is continuously evaluating and updating. Therefore, ratings and reports are the collective work product of Fitch and no individual, or group of individuals, is solely responsible for a rating or a report. The rating does not address the risk of loss due to risks other than credit risk, unless such risk is specifically mentioned. Fitch is not engaged in the offer or sale of any security. All Fitch reports have shared authorship. Individuals identified in a Fitch report were involved in, but are not solely responsible for, the opinions stated therein. The individuals are named for contact purposes only. A report providing a Fitch rating is neither a prospectus nor a substitute for the information assembled, verified and presented to investors by the issuer and its agents in connection with the sale of the securities. Ratings may be changed or withdrawn at any time for any reason in the sole discretion of Fitch. Fitch does not provide investment advice of any sort. Ratings are not a recommendation to buy, sell, or hold any security. Ratings do not comment on the adequacy of market price, the suitability of any security for a particular investor, or the tax-exempt nature or taxability of payments made in respect to any security. Fitch receives fees from issuers, insurers, guarantors, other obligors, and underwriters for rating securities. Such fees generally vary from US$1,000 to US$750,000 (or the applicable currency equivalent) per issue. In certain cases, Fitch will rate all or a number of issues issued by a particular issuer, or insured or guaranteed by a particular insurer or guarantor, for a single annual fee. Such fees are expected to vary from US$10,000 to US$1,500,000 (or the applicable currency equivalent). The assignment, publication, or dissemination of a rating by Fitch shall not constitute a consent by Fitch to use its name as an expert in connection with any registration statement filed under the United States securities laws, the Financial Services and Markets Act of 2000 of the United Kingdom, or the securities laws of any particular jurisdiction. Due to the relative efficiency of electronic publishing and distribution, Fitch research may be available to electronic subscribers up to three days earlier than to print subscribers.

For Australia, New Zealand, Taiwan and South Korea only: Fitch Australia Pty Ltd holds an Australian financial services license (AFS license no. 337123) which authorizes it to provide credit ratings to wholesale clients only. Credit ratings information published by Fitch is not intended to be used by persons who are retail clients within the meaning of the Corporations Act 2001.

Attachments: 2018-03-22_Fitch_NBFI-Criteria_Report.pdf

Hi Gadi,

Here are the questions – this is **not** directly related to Ontario's rating. They are related to the governance and legislation around public pensions. I think I should send to Elizabeth Doherty (ADM Income Security and Pension Policy) to start.

Please let me know if you think I should send to someone else.

Bonnie

Subject: RE: Pension questions

Hi Bonnie,

To follow up from Marcy's email, our colleagues in Fitch's non-bank financial institutions group are looking at the credit quality of public pension funds and pension asset managers as it pertains to their own direct debt obligations. As part of that assessment, they review the nature and extent of powers that a sovereign or sub-sovereign sponsor has to affect the performance of a pension. Canada's public pensions are on this list given their global prominence.

We have found a tremendous amount of online data and information on Canadian public pensions (authorizing laws, public accounts, actuarial valuations), but much of it addresses or references the powers and duties of the pension plans themselves, as opposed to what powers the sponsoring governments retain or could exercise in certain circumstances. The questions below are really intended to address that sovereign/provincial perspective. I should also note also that the questions are not necessarily Ontario-specific, but I did modify some of them in view of the many different institutional/governance structures for public pensions in Ontario.

--In the event of a sovereign/provincial default, what is the legal basis by which a public pension fund retains its capacity to pay its own debt obligations?

--In the event of a sovereign/provincial default, what legally prevents the sovereign/province from restricting the ability of a public pension fund to pay its obligations?

--Who owns the assets held by the pension fund—the pension fund itself, the contributing employers, retirees, the pension plan sponsors/sponsors, or the sovereign/province that originally authorized the pension? Do the assets have a legal status that protects them in the event of a bankruptcy by a contributing employer?

--Can the sovereign/province, pension fund sponsor/sponsors, or participating governments make use of pension assets in the event of their own fiscal distress?

--Can the sovereign/province compel a pension fund to buy government debt or take responsibility for public capital investment (separate from the investment choices that the pension fund is authorized to make by itself)?

--Can the sovereign/province restrict or eliminate its own employer contributions to a pension fund if it faces fiscal distress?

--Can a pension plan sponsor or contributing employer remove its assets and sever its relationship with the pension fund without sovereign/provincial approval?

To the extent there are legal/statutory or judicial references, I would welcome them; I've already downloaded the Pension Benefits Act and other available financial, actuarial and legal information for CPP and for several other plans like HOOPP, MERS and OTPP. I've also attached a copy of our published criteria for "non-bank" financial institutions, for your reference. If it makes more sense for you, we would be happy to schedule a phone call to discuss!

Subject: Pension questions

Bonnie,

Good afternoon. I am reaching out on Doug's behalf to solicit assistance regarding the province's employee pension plans. Separate from our discussions related to Ontario's economy and finances, some colleagues of ours at Fitch who focus on "non-bank" financial institutions are developing a framework for looking at pension funds globally; given the size and scope of Canada's public pensions, Doug would like to ask some general questions to understand Ontario's relationship to its pensions plans. A possible start could be Doug sending you questions directly and asking you to put him in touch with the correct individual after you have had a chance to review them. Please advise and thank you.

Best,
Marcy

Scope

This criteria report specifies Fitch Ratings' methodology for assigning new ratings to, and monitoring existing ratings of, non-bank financial institutions globally, including securities firms, investment managers (including investment companies and investment funds), business development companies (BDCs), finance and leasing companies (including mortgage real estate investment trusts [REITs] and non-bank policy institutions) and financial market infrastructure (FMI) companies. With the exception of a limited number of financial institutions with banking licenses, the criteria discussed herein do not apply to banks, the rating criteria for which are outlined in Fitch's "Bank Rating Criteria" or to insurance companies or equity REITs.

Key Rating Drivers

Five Factors in Stand-Alone Assessment: Unless driven by sovereign, subnational or institutional support, a non-bank financial institution's Issuer Default Rating (IDR) is determined by an assessment of its fundamental creditworthiness. In assessing a non-bank financial institution's stand-alone profile, Fitch considers five key factors: the operating environment; company profile; management and strategy; risk appetite; and financial profile.

While the first three factors are relatively common across financial institutions, an assessment of a firm's risk appetite and financial profile is more specific to the subsector in which the company operates.

Balance Sheet Distinction: Within non-bank financial institution subsectors, Fitch also makes distinctions in its analysis for businesses with high balance sheet usage versus businesses with low balance sheet usage. Profitability metrics for balance sheet-intensive businesses are focused on asset and equity yields, while leverage ratios focus on capitalization measures. For asset-light strategies, operating margins are a common indicator of profitability, while cash flow ratios are used to assess leverage.

Support Factors: The most common form of support factored into Fitch's ratings of non-bank financial institutions is institutional support from parent institutions. In assessing potential support, Fitch considers both the ability and propensity of the supporter to provide assistance on a timely basis. For example, the ratings of captive finance subsidiaries often benefit from a high probability of support, because they frequently enhance the firm's franchise, strategic objectives and revenue prospects.

While sovereign support is often a rating factor for non-bank policy institutions, it is not common for other non-bank financial institutions, given their more limited systemic importance.

Default Risks, Recovery Prospects: Issue ratings of non-bank financial institutions, in common with other corporate finance sectors, reflect Fitch's view of the overall level of credit risk attached to specific financial commitments, usually securities. This view incorporates an assessment of both the likelihood of default (or "non-performance" risk) on the specific obligation and of potential recoveries for creditors in case of default/non-performance.

Senior Debt Aligned with IDR: Ratings of a non-bank financial institution's senior unsecured obligations are usually equalized with its Long-Term IDR, although they can be notched downward if there is deep effective subordination or high balance-sheet encumbrance.

Report Summary and Structure

I. Ratings Framework

Fitch assigns both issuer and issue ratings to non-bank financial institutions and their obligations. The two primary issuer ratings are:

- Long-Term IDRs; and
- Short-Term IDRs.

In limited circumstances, Fitch may also assign Support Ratings (SRs), Support Rating Floors (SRFs) and/or Derivative Counterparty Ratings (DCRs) to non-bank financial institutions. For complete rating definitions, click here.

Fitch generally adopts a "higher of" approach in assigning Long-Term IDRs to non-bank financial institutions. Specifically, Fitch first determines what level of Long-Term IDR a non-bank financial institution could attain based solely on its stand-alone financial strength or based solely on support, whether sovereign support from government authorities (as reflected in the SRF) or institutional support, usually from shareholders. Fitch then (almost always) assigns the non-bank financial institution's IDR at the higher of these two levels absent extraordinary constraints represented by the Country Ceiling.

II. Stand-Alone Assessment

An assessment of the stand-alone credit profile of a non-bank financial institution considers five key factors:

- operating environment;
- company profile;
- management and strategy;
- risk appetite; and
- financial profile.

For details on the stand-alone assessment aspect of Fitch's ratings framework, click here.

III. Support

For non-bank financial institutions, the most usual source of support is from the shareholders (institutional support); for example, when a corporate parent has a finance subsidiary. Support from government authorities (sovereign support) is a much less frequent occurrence for non-bank financial institutions than for banks, given the generally relatively smaller size and influence of a non-bank financial institution on a country's financial system. If present, sovereign support is often based on the non-bank financial institution's policy role and less on its systemic importance. Fitch's view of the likelihood of external support being made available in case of need may be reflected in a non-bank financial institution's SR. Where Fitch believes the most likely form of support is sovereign support, this is also reflected in the non-bank financial institution's SRF, which indicates the minimum level to which the entity's Long-Term IDR could fall for the level of extraordinary support assumed.

The key sovereign support rating factors are:

- sovereign's ability to support;
- sovereign's propensity to support a specific non-bank sector; and
- sovereign's propensity to support a specific non-bank financial institution.

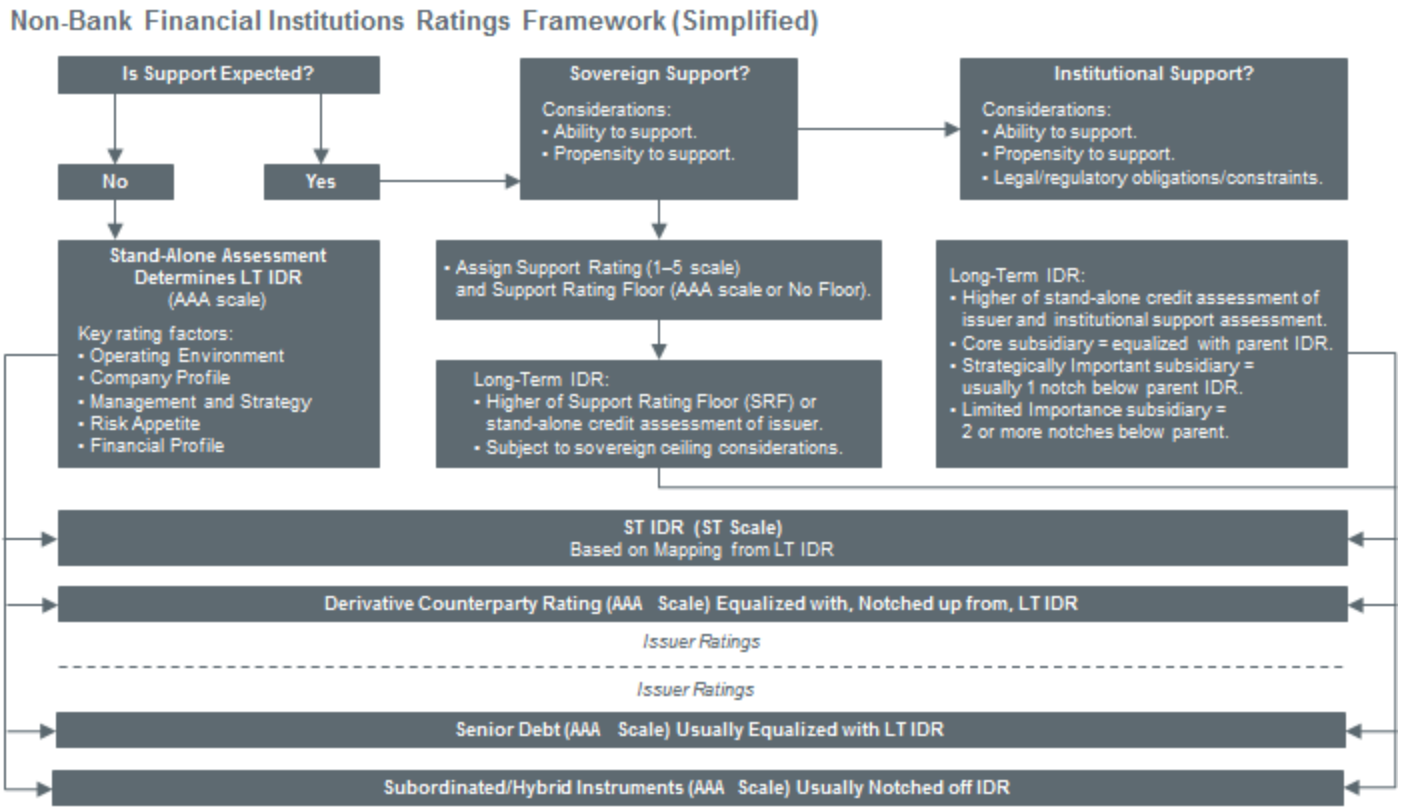
The key institutional support rating factors are:

- parent's ability to support;
- parent's propensity to support; and
- legal and regulatory obligations/constraints.

For details on the support framework, click here.

IV. Issue Ratings

Ratings of non-banks financial institutions' senior, subordinated/hybrid and other securities issues incorporate an assessment both of the likelihood of default (or "non-performance" risk) on the specific obligation and (for debt securities assigned long-term ratings) of potential recoveries for creditors in case of default/non-performance. For details, click here.



V. Annexes

For additional information on specific aspects of the non-bank financial institutions rating criteria, a summary of non-bank financial institution quantitative benchmarks and metrics by subsector and information on certain rating procedures, click here.

I. Ratings Framework

This section provides an overview of the international and national scale ratings assigned to non-bank financial institutions and their issues, indicating: what the different ratings measure, when they are assigned, the scales on which they are assigned; and how, in broad terms, the rating levels are determined. This section first reviews non-bank financial institution issuer ratings and then issue ratings.

Sections II, III and IV provide more detail on the criteria for assigning IDRs, SRs and SRFs and issue ratings, respectively. Readers who do not wish to review in detail Fitch's rating framework should turn to these sections. A simplified version of the framework is presented in the chart below.

LT IDR – Long-term Issuer Default Rating. ST IDR – Short-term Issuer Default Rating.

I.1. Long-Term Issuer Default Ratings

What They Measure

IDRs for non-bank financial institutions, as for issuers in other sectors, express Fitch's opinion on an entity's relative vulnerability to default on its financial obligations. In accordance with Fitch's rating definitions, the default risk addressed by the IDR is generally that of the financial obligations whose non-payment would "best reflect the uncured failure of that entity."

For a small population of mostly prudentially regulated non-bank financial institutions, Fitch considers that the obligations whose non-payment would best reflect uncured failure are usually senior obligations to third-party, non-government creditors. For the larger universe of other non-bank financial institutions, Fitch generally considers that non-payment of both senior and subordinated obligations to third party, non-government creditors (including by way of a distressed debt exchange) would reflect the uncured failure of the issuer. Therefore, for most non-bank financial institutions, only certain hybrid securities that contractually allow for going concern non-performance (e.g. coupon deferral) are likely to fall outside the scope of the IDR. For more details, see What Non-Bank Financial Institution IDRs Reflect: Definition of Reference Obligations below.

What Non-Bank Financial Institution IDRs Reflect: Definition of Reference Obligations

A non-bank financial institution's IDRs usually express Fitch's opinion on the risk of default on its senior or (with the exception of a small number of prudentially regulated non-bank financial institutions) subordinated obligations to third-party, non-government creditors, as in Fitch's view, these are typically the obligations whose non-performance would best reflect the uncured failure of the entity. In accordance with Fitch's rating definitions, and in common with issuers in other sectors, a non-bank financial institution's default may take a number of forms, including non-payment of obligations beyond the available cure period, bail in, a distressed debt exchange or the issuer entering into bankruptcy proceedings.

When considering whether a debt restructuring or exchange should be classified as a distressed debt exchange, Fitch expects both of the following to apply: i) the restructuring imposes a material reduction in terms compared with the original contractual terms; and ii) the restructuring or exchange is conducted to avoid bankruptcy, similar insolvency or intervention (including resolution) proceedings or a traditional payment default.

A non-bank financial institution's SR and SRF, should they be applicable, also rate to the same reference obligations, i.e. they reflect Fitch's view on whether external support will be sufficient for a non-bank financial institution to avoid default on its relevant obligations to third-party, non-government creditors.

The rationale for Fitch's definition of reference obligations for IDRs is as follows:

Third-Party vs. Intra-Group Obligations

Non-bank financial institution IDRs do not usually rate to default risk on funding from entities under common control (e.g. parent/sister companies or related non-financial corporations) for three main reasons. First, these facilities may not be extended with the same expectations of an unaffiliated creditor, for example the borrower may not always be expected to repay, rather than roll over, the facilities at maturity. Second, Fitch would not usually expect there to be a high level of transparency on whether an entity has "defaulted" on intra-group debt, e.g. whether a roll-over has been "voluntary" or "forced". Third, Fitch would not usually regard entities under common control as the main users of its ratings, as in most cases they would have privileged, direct access to information on the financial condition of the borrower.

Private vs. Government Creditors

Non-banks financial institutions are largely funded in the private sector, as they do not generally have access to central bank funding. However, non-bank financial institutions that, for example, have a policy role or that have a banking license but are viewed by Fitch as more akin to non-bank financial institutions may have access to government funding, particularly during periods of market stress. When this is the case, non-bank financial institution IDRs will not usually rate to default risk on obligations owed to central banks and other national government institutions. This reflects the special relationship between a central bank, as lender of last resort, and issuers that benefit from this form of funding, and the fact that, where facilities due to central banks are rolled over or restructured, there is likely to be considerable ambiguity regarding whether such a restructuring should be regarded as "voluntary" or "forced." In addition, it will often be difficult to ascertain in a timely fashion whether an issuer has performed on debt owed to its central bank.

Different Categories of Obligations

In some cases a non-bank financial institution may default on some categories of third-party, private sector debt, while continuing to perform on others. Where Fitch considers there to be significantly different levels of default risk on different categories of senior liabilities, the IDRs will rate to the (material) category with highest risk. If a non-bank financial institution defaults on a material category of third-party, private sector senior debt, but remains current on other categories, its IDRs will be downgraded to 'RD' (Restricted Default).

When They Are Assigned

Long-Term IDRs are assigned to virtually all non-bank financial institutions with international ratings. The main exceptions are rare cases where an entity issues exclusively short-term debt and may therefore be assigned only a Short-Term IDR.

Where Fitch believes it is useful to separately highlight the level of default risk on foreign-currency and local-currency obligations, it may assign separate Foreign-Currency (FC) and Local-Currency (LC) Long-Term IDRs to a non-bank financial institution. This may be done, for example, when the agency considers there to be a material difference in default risk on obligations in different currencies (for intrinsic or support reasons, or because of a greater risk of legal restrictions on servicing foreign-currency debt), or when the assignment of a LC IDR is undertaken as part of the process to derive a non-bank financial institutions' National Rating *(see Section I.8)*.

On Which Scale

Long-Term IDRs are assigned on the 'AAA' scale *(see table at left)*.

How They Are Determined

Fitch generally adopts a "higher of" approach in assigning Long-Term IDRs to non-bank financial institutions. Specifically, the agency first determines what level of Long-Term IDR a non-bank financial institution could attain based solely on its stand-alone financial strength (*see Section II, 'Stand-Alone Assessment'*) or based solely on support (*see Section III, 'Support'*), whether it is sovereign support from government authorities (as reflected in the SRF) or institutional support, usually from shareholders. Fitch then (almost always) assigns the FI's Long-Term IDR at the higher of these two levels, absent extraordinary constraints represented by the Country Ceiling.

In some instances non-bank financial institution credit profiles may deteriorate relatively rapidly, while in other instances they can remain fundamentally weak for relatively extended periods of time (e.g. in countries where the sovereign is lowly rated, but relatively stable). Use of '+' or '-' modifiers in the 'CCC' range is more likely for the latter than the former.

Should institutional support exist, the Long-Term IDR is based on Fitch's opinion of the strategic importance of the entity to its parent and an assessment of the parent's propensity and ability to support the subsidiary. In many cases, such as for some captive finance companies, Fitch is not able to form a stand-alone rating opinion on the non-bank financial institution subsidiary, when there are high levels of financial, operational and management integration with the parent entity. For example, if the franchise position of the subsidiary is highly correlated with that of the parent and/or the subsidiary's access to funding is heavily dependent upon the parent, these may limit Fitch's ability to assign a stand-alone rating to the subsidiary.

If the subsidiary is small and of a non-material size relative to the parent, this may also limit Fitch's ability to assign a stand-alone rating to the subsidiary. Stand-alone ratings are not usually assigned to development institutions or other non-bank financial institutions whose operations are largely determined by their policy roles (i.e. they have limited commercial operations).

In certain circumstances, a non-bank financial institutions' Long-Term Foreign-Currency IDR can also be constrained at a level below that implied by the "higher of" approach. This occurs when the non-bank financial institution's stand-alone assessment is higher than the Country Ceiling of the jurisdiction in which it is domiciled, and the Country Ceiling constrains the non-bank financial institution's Long-Term IDR. A non-bank financial institution's SR (unlike its stand-alone assessment) already captures the constraints (the risk of transfer and convertibility

Long-Term IDR Scale

Category	Brief Description
AAA	Highest credit quality
AA	Very high credit quality
A	High credit quality
BBB	Good credit quality
BB	Speculative credit quality
B	Highly speculative credit quality
CCC	Substantial credit risk
CC	Very high levels of credit risk
C	Exceptionally high levels of credit risk
RD	Restricted default
D	Default

The modifiers '+' or '-' may be appended to a rating to denote relative status within categories from 'AA' to 'CCC'. Click here for full descriptions of each rating category.

Source: Fitch.

restrictions) reflected in the Country Ceiling, and so would not be assigned at a level implying a higher Long-Term IDR than the Country Ceiling.

On rare occasions, a non-bank financial institution's IDR could be above the level implied by its stand-alone assessment. This could occur if the non-bank financial institution has sufficient buffers of liabilities that rank below the reference liabilities for its IDRs that could be restructured or bailed in to recapitalize the non-bank financial institution without the reference liabilities for its IDRs suffering a default. In determining the sufficiency of the buffers, Fitch will use the same 'qualifying junior debt' principles outlined in the Bank Rating Criteria.

LC IDRs are generally viewed as reflecting the underlying credit quality of the company and incorporate economic/political risk and liquidity and foreign-exchange risks. While LC IDRs measure the likelihood of repayment in the currency of the jurisdiction, they do not account for the possibility that it may not be possible to convert local currency into foreign currency or make transfers between sovereign jurisdictions (i.e. transfer and convertibility risks).

It is important to note that the LC IDR incorporates the probability of default for all of an issuer's debt obligations (local- and foreign currency-denominated) in the absence of transfer and convertibility risks. This takes into account the probability that an issuer under stress will default on all obligations and will not pick and choose specific debt instruments on which to default. Therefore, when the LC IDR is at or below the Country Ceiling, the LC IDR and the FC IDR will be equal virtually all of the time.

Short-Term IDR Scale

Category	Brief Description
F1	Highest short-term credit quality
F2	Good short-term credit quality
F3	Fair short-term credit quality
B	Speculative short-term credit quality
C	High short-term default risk
RD	Restricted default
D	Default

A '+' modifier may be appended to the 'F1' rating to denote exceptionally strong credit quality. Click here for full descriptions of each rating category.

I.2. Short-Term Issuer Default Ratings

What They Measure

As with issuers in other sectors, Short-term IDRs reflect the non-bank financial institution's vulnerability to default in the short term. For non-bank financial institutions and most other issuers, the "short-term" typically means up to 13 months.

When They Are Assigned

Short-term IDRs are assigned to all non-bank financial institutions that have Long-Term IDRs, except where an issuer does not have, and is not expected to have, material short-term obligations. The short-term instrument most commonly rated by Fitch in the non-bank financial institution space is commercial paper (CP).

On Which Scale

Short-term IDRs are assigned on a seven-point scale *(see table at left)*.

How Are They Determined

Short-Term IDRs are almost always assigned in accordance with a correspondence table between Long-Term and Short-Term IDRs *(see table at left)*. Where the Long-Term IDR can correspond to either of two Short-Term IDRs (and the Long-Term IDR is driven by the non-bank financial institution's stand-alone profile), the Short-Term IDR will usually be determined based primarily on the strength of the issuer's liquidity profile, for example by considering its level of liquid assets, access to the capital markets or breadth of contingency funding sources *(see Section IV.1)*.

Where the Long-Term IDR is support driven, the higher of the two possible Short-Term IDRs will typically be assigned where the issuer is rated lower than the supporting entity. This is because Fitch generally views the propensity to support as more certain in the near term.

I.3. Viability Ratings

What They Measure

Only in rare circumstances are VRs assigned to non-bank financial institutions. VRs are primarily used to measure the intrinsic creditworthiness of a bank on a stand-alone basis, without the benefit of government or institutional support. Since non-bank financial institutions do not typically have the systemic influence of a bank, they do not generally have the potential to receive sovereign support. As a result, the measure of a non-bank financial institution's stand-alone credit profile is generally encompassed in the LT IDR.

Fitch will assign VRs to non-bank financial institutions, only in limited circumstances, for example to aid transparency when the IDRs are driven by external sovereign support or where the entity has features of a bank (including potentially a banking license and a deposit base), but where Fitch believes that, on balance, the non-bank financial institutions criteria is the main driver for the analysis. If a non-bank financial institution is assigned a VR, it would be in accordance with criteria and standards applicable to determining the stand-alone credit profile of that type of entity, as outlined in this criteria report. For more information on Viability Ratings, refer to the Bank Rating Criteria.

I.4. Support Ratings

What They Measure

Fitch's SRs reflect the agency's view on the likelihood that a non-bank financial institution will receive extraordinary support, in case of need, to prevent it from defaulting. Extraordinary support typically comes from one of two sources: the rated entity's shareholders (institutional support) or the national authorities of the country where it is domiciled (sovereign support). However, in some circumstances SRs may also reflect potential support from other sources, e.g. international financial institutions, regional governments or expected acquirers of the rated entity.

In some cases, Fitch may judge that the likelihood of a non-bank financial institution receiving external support is materially different regarding its foreign- and local-currency obligations. This may happen, for example, when the sovereign that is the potential support provider itself has Foreign- and Local-Currency IDRs assigned at different levels. In such cases, the non-bank financial institution's SR (and SRF) will be assigned based on the obligations less likely to be supported (usually, those in foreign currency), while the non-bank's Foreign-and Local-Currency IDRs may be assigned at different levels to reflect the difference in risk.

SRs do not specifically address transfer and convertibility risk for each and every foreign jurisdiction in which a non-bank financial institution operates, nor do they reflect jurisdiction-specific resolution risks.

When They Are Assigned

SRs may be assigned to non-bank financial institutions that Fitch expects to be beneficiaries of sovereign, subnational, or institutional support.

On Which Scale

SRs are assigned on a five-point scale, with '1' representing an extremely high probability of support, and '5' indicating that support cannot be relied on.

How They Are Determined

Fitch's criteria for assessing the likelihood of external support for a non-bank financial institution is outlined in Section III of this report. Whether considering sovereign or institutional support, Fitch will analyze both the ability and propensity of the supporting entity to provide assistance to the FI concerned and, in the case of institutional support, potential constraints that may be imposed upon the institution as a result of sovereign risk. Once a non-bank financial institution's institutional support-driven IDR or SRF has been determined, its SR is determined in accordance with the 'Support Rating Scale Correspondence Table' below.

I.5. Support Rating Floors

What They Measure

SRFs reflect the agency's view about the likelihood that the rated entity will receive extraordinary support, in case of need, specifically from government authorities. This usually means from the national authorities of the country where the non-bank financial institution is domiciled, although in certain cases, Fitch may also factor potential support from subnational or international government institutions into its assessment depending on factors outlined in Section III.1. Therefore, SRFs do not capture the potential for institutional support from the entity's shareholders. SRFs indicate the minimum level to which the entity's Long-Term IDRs could fall if the agency does not change its view on potential sovereign support.

Support Rating Scale Correspondence Table

IDR/Implied IDR Based on Support (SRF for Sovereign Support) Rating	Probability of Support	Support Rating
'A–' or Above	A non-bank financial institution for which there is an extremely high probability of external support. The potential provider of support is very highly rated in its own right and has a very high propensity to support the non-bank financial institution in question.	1
'BBB' Category	A non-bank financial institution for which there is a high probability of external support. The potential provider of support is highly rated in its own right and has a high propensity to support the non-bank financial institution in question.	2
'BB' Category	A non-bank financial institution for which there is a moderate probability of support because of uncertainties about the ability or propensity of the potential provider of support to do so.	3
'B+' or 'B'	A non-bank financial institution for which there is a limited probability of support because of significant uncertainties about the ability or propensity of any possible provider of support to do so.	4
'B–' or Below	A non-bank financial institution for which there is a possibility of external support, but it cannot be relied on. This may be due to a lack of propensity to provide support or to very weak financial ability to do so.	5

Source: Fitch.

SRFs do not specifically address transfer and convertibility risk for each and every foreign jurisdiction in which a non-bank financial institution operates, nor do they reflect jurisdiction-specific resolution risks.

When They Are Assigned

SRFs are assigned to non-bank financial institutions where Fitch believes the most likely source of potential extraordinary support is government authorities, rather than the non-bank financial institution's shareholders. For example, Fitch may assign a SRF to a non-bank financial institution which exhibits systemic importance or serves as a core component of the financial market infrastructure. They may also be assigned where institutional (shareholder) support is viewed as more reliable, but the agency believes it would be useful to also indicate the level below which the ratings are unlikely to fall due to government support.

On Which Scale

SRFs are assigned on the 'AAA' rating scale. Where there is no reasonable assumption that sovereign support will be forthcoming, an SRF of 'No Floor' is assigned.

How They Are Determined

Fitch's criteria for assessing the likelihood of sovereign support for a non-bank financial institution and assigning its SRF are outlined in Section III.1 of this report. Fitch analyzes the ability of the sovereign to provide support, its propensity to support the specific non-bank sector as a whole and its propensity to support the specific non-bank financial institution in question. The 'Support Rating Scale Correspondence Table' above is used to link a non-bank financial institutions' Support Rating and its institutional support-driven IDR or SRF. The table can be read left to right or right to left, depending on whether the support-driven IDR/SRF or SR is determined first.

I.6. Derivative Counterparty Ratings

What They Measure

In some jurisdictions, developments in resolution frameworks or insolvency frameworks mean the vulnerability to default on a derivative contract could be lower than the vulnerability to default on other senior liabilities, even equally ranking ones. This could be because derivatives enjoy legal preference over, say, senior debt or because of powers granted to resolution authorities to treat equally ranking liabilities differently.

DCRs are issuer-level ratings and express Fitch's opinion on a non-bank financial institution's relative vulnerability to default, due to an inability to pay, on any derivative contract with third-party, non-government counterparties. Short-term 'stays' on derivatives at the outset of a resolution process would not be considered a default.

The vulnerability to default could vary even within this class of exposure (e.g. collateralized derivative exposures or cleared derivatives being less vulnerable to default than uncollateralized). DCRs in effect address the vulnerability to default on the riskiest type of counterparty exposure, which Fitch assumes, either jointly or in isolation, will be an uncollateralized derivative exposure.

Unless Fitch explicitly assigns ratings at the foreign subsidiary level, DCRs apply both to material domestic derivative liabilities and those originated by foreign subsidiaries. However, they do not specifically address transfer and convertibility risk for each and every foreign jurisdiction in which a non-bank financial institution operates, nor do they reflect jurisdiction-specific resolution risks.

When They Are Assigned

Unlike Long-Term IDRs, which are assigned to virtually all non-bank financial institutions with international ratings, Fitch only assigns DCRs to selected non-bank financial institutions that may be subject to resolution in selected jurisdictions where: i) Fitch believes derivative counterparties may be able to avoid default when other senior creditors suffer default (e.g., due to an effective resolution regime and/or clear legal preference for derivative counterparties) and ii) an issuer either acts as a notable derivative counterparty nationally or internationally, acts as derivative counterparty to Fitch-rated transactions (e.g. structured finance) or where Fitch otherwise understands there to be market interest.

Given that non-bank financial institutions rarely benefit from comparably formalized resolution frameworks as banks, Fitch expects the application of DCRs to stand-alone non-bank financial institutions to be limited to a small number of broker-dealers and FMIs.

Derivative Counterparty Rating Scale

Category	Brief Description
AAA(dcr)	Highest credit quality
AA(dcr)	Very high credit quality
A(dcr)	High credit quality
BBB(dcr)	Good credit quality
BB(dcr)	Speculative credit quality
B(dcr)	Highly speculative credit quality
CCC(dcr)	Substantial credit risk
CC(dcr)	Very high levels of credit risk
C(dcr)	Exceptionally high levels of credit risk
RD(dcr)	Restricted default
D(dcr)	Default

The modifiers '+' or '-' may be appended to a rating to denote relative status within categories from 'AA' to 'CCC'. Click here for full descriptions of each rating category. Source: Fitch.

On Which Scale

DCRs are assigned on the 'AAA' scale, but with a '(dcr)' suffix *(see table at left)*.

How They Are Determined

DCRs are anchored to an entity's Long-Term IDR and will be in line with an entity's Long-Term IDR, except in the following circumstances.

A DCR will be above a non-bank financial institution's IDR when: i) a non-bank financial institution's Long-Term IDR is driven by its VR or stand-alone assessment or is aligned with a parent's IDR due to integration. The parent and subsidiary would have to be located in the same jurisdiction and capital/liquidity fungibility would normally be expected to be high; ii) there is clear legal preference for derivative counterparties over senior debt and/or other senior instruments (or this is expected to occur within a typical rating horizon); and iii) Fitch believes these (legally junior) senior liabilities to be of sufficient size to avoid a liquidation and absorb losses, either through statutory means, contractual means or a distressed debt exchange, without triggering a default on any derivative counterparty.

When deciding whether to notch up, Fitch uses the same recapitalization volume principles as are employed when determining whether to notch up an IDR above the level implied by a non-bank financial institution's stand-alone assessment *(see I.1 Long-Term IDRs: How They Are Determined)*. Like IDRs, DCRs are subject to Country Ceilings and other sovereign constraints, for example relating to intervention risk *(as outlined in Annex 2: Rating Non-Bank Financial Institutions Above the Sovereign)*. DCRs are capped one notch above an entity's IDR when IDRs are in the 'BB' range or higher but potential uplift can be greater when IDRs are in the 'B' range or lower.

In some instances non-bank financial institution credit profiles may deteriorate relatively rapidly, while in other instances they can remain fundamentally weak for relatively extended periods of time (e.g. in countries where the sovereign is lowly rated, but relatively stable). Use of '+' or '-' modifiers in the 'CCC' DCR range is more likely for the latter than the former.

I.7 Issue Ratings

What They Measure

Issue ratings of non-bank financial institutions, like those of other corporate finance sectors, reflect Fitch's view of the overall level of credit risk attached to specific financial commitments, usually securities. This view incorporates an assessment of the likelihood of default (or of "non-performance" risk in the case of subordinated/hybrid securities) on the specific obligation, and potential recoveries for creditors in case of default/non-performance. Short-term non-bank financial institution issue ratings, like those of other sectors, incorporate only an assessment of the default risk on the instrument.

Non-performance by a non-bank financial institution on its subordinated/hybrid securities is defined as any of the following:

- the missing (omission or deferral) of a coupon or similar distribution;
- contingent conversion into a more junior instrument to the detriment of the investor (other than at the investor's option);
- the writedown, writeoff, conversion or non-payment of principal; and
- a distressed debt exchange.

Recovery Rating Scale

Rating	Recovery Prospects Given Default	Typical Historical Recoveries (%)	Notching of Issue Rating[a]
RR1	Outstanding	91–100	+3
RR2	Superior	71–90	+2
RR3	Good	51–70	+1
RR4	Average	31–50	0
RR5	Below Average	11–30	(1)
RR6	Poor	0–10	(2)[b]

Click here for full descriptions of each rating. [a]Relative to level of non-performance risk. [b]Fitch's RR definitions allow for minus three notches in case of 'RR6'; however, Fitch does not notch more than twice for FI issues.
Source: Fitch.

When They Are Assigned

Issue ratings may be assigned to individual obligations or debt programs of non-bank financial institutions.

On Which Scale

Non-bank financial institution issues with an initial maturity of more than 13 months are usually rated on the long-term rating scale, whereas issues with an initial maturity of less than 13 months are usually assigned ratings on the short-term rating scale. Whether Fitch rates issues on the short- or long-term rating scale will also depend on market convention and local regulation.

Where a non-bank financial institution (or corporate) has a Long-Term IDR of 'B+' or below, Fitch also usually assigns a Recovery Rating (RR) to the entity's issues rated on the long-term scale. RRs provide greater transparency on the recovery component of Fitch's assessment of the credit risk of lowly rated issuers' securities.

How They Are Determined

For long-term non-bank financial institution issues, Fitch first determines the likelihood of default/non-performance on the specific obligation, which is measured on the long-term 'AAA' rating scale. This is judged to be either in line with, or notched off of, the obligor's Long-Term IDR, which serves as the "anchor rating" for the issue rating.

Having established the level of default/non-performance risk on the issue, Fitch may then adjust this upwards or downwards to arrive at the issue rating if the agency views the instrument as having above- or below-average recovery prospects. Where recovery prospects are viewed as average, the issue rating will be in line with the assessment of default/non-performance risk. The extent of potential upward/downward adjustment of the issue rating based on the instrument's recovery prospects is shown in the table above.

Fitch's approach to assigning issue ratings to different classes of securities issued by non-bank financial institutions is outlined in Section IV of this report.

I.8. National Ratings

What They Measure

National scale ratings are an opinion of creditworthiness relative to the universe of issuers and issues within a single country.

When They Are Assigned

National scale ratings are most commonly used in emerging market countries with sub- or low investment grade sovereign ratings on the international scale.

On Which Scale

National scale ratings are assigned on the long-term ('AAA') and short-term ('F1') rating scales, but with a country suffix to identify them as national scale ratings. Cross border issues carry the suffix of the country into which the debt has been issued, rather than the suffix of the issuer's domicile. In some monetary union countries, a single country suffix may be applied (e.g. the 'zaf' suffix for South Africa and Namibia National Ratings).

How They Are Determined

National scale ratings are assigned on the basis that the "best credits or issuers" in the country are rated 'AAA' on the national scale. National Ratings are then assessed using the full range of the national scale based on a comparative analysis of issuers rated under the same national scale to establish a relative ranking of credit worthiness.

Fitch uses the Non-Bank Financial Institutions Rating Criteria to assign national scale ratings to non-bank financial institutions, as it describes how Fitch assesses the relevant qualitative and quantitative factors that reflect the risk profile of issuers and their financial obligations. The rating assignment process uses the same rating framework as for international ratings, i.e. a combination of intrinsic and external support analysis.

Fitch adopts the following steps to assign national scale ratings:

1) Using either international or domestic peers as a starting point a comparative analysis is undertaken using the qualitative and quantitative factors of the Non-Bank Financial Institutions Rating Criteria. This process facilitates an initial relative positioning and ranking of credit risk both with other peer issuers within a country and/or internationally.
2) Fitch uses equivalence tables, where relevant, to ensure relativities between issuers on the international scale and the more granular, country-specific national long-term rating scale are maintained.
3) Where assigned, national short-term ratings are then determined using the same process and principles outlined in section I.2 of this report. National scale short-term issue ratings are aligned with a non-bank financial institution's national short-term rating issuer unless there are exceptional circumstances (e.g. a specific issue is guaranteed by a third party).
4) National scale long-term debt ratings are aligned with or notched from an issuer's national long-term rating using the same framework as outlined in section IV of this report.

Fitch does not publish rating navigators for national ratings.

II. Stand-Alone Assessment

In assessing a non-bank financial institution's stand-alone profile, Fitch considers five key factors: operating environment; company profile; management and strategy; risk appetite; and financial profile. While the first three factors are relatively common across banks and non-bank financial institutions, an assessment of a firm's risk appetite and financial profile is more specific to the subsector in which the company operates.

There may be instances where the assessment of the credit profile of an entity includes components of the bank and non-bank financial institution's criteria. For example, several non-bank entities have transitioned to bank/financial holding companies and/or acquired bank subsidiaries since the financial crisis in an effort to access more stable deposit funding. Examples include credit card companies, auto finance companies, commercial lenders and broker-dealers. In these instances, Fitch considers how the entity's credit profile compares to banks and non-bank financial institutions that undertake similar activities. In any case, Fitch would expect to designate the primary criteria in the associated Rating Action Commentary and, where relevant, Rating Navigator.

All factors are relevant in determining a non-bank financial institution's stand-alone credit risk profile, but their relative importance varies from institution to institution depending on operating environments and the specifics of individual institutions and can change over time. Hence, Fitch does not assign fixed weightings to each factor but rather assigns the relative importance of each key rating factor in the determination of the stand-alone credit risk profile of a given institution. The relative importance indicator, as well as a trend/outlook indicator for each key rating factor and each financial profile subfactor, is generally published by Fitch in its Rating Navigators.

Key Issuer Default Rating Framework Considerations

	Securities Firms	Investment Managers[a]	BDCs	Finance & Leasing Companies[b]	FMIs

	Capitalization and Leverage				
	Funding, Liquidity and Coverage				

[a]Includes traditional and alternative investment managers (IMs), investment companies (ICs) and investment funds (IFs). [b]Includes mortgage real estate investment trusts. [c]Does not imply that risk controls are not considered, but rather, that the assessment is embedded within the "Operational, Reputational and Legal Risks" and "Counterparty Risk Management" sections. N.A. – Not applicable.
Source: Fitch.

Fitch's assessment of a non-bank financial institution's operating environment usually has an influence on its assessment of other credit factors. This is because the operating environment can impact, for example, the vulnerability of a non-bank financial institution's asset quality and capital,

the sustainability of its earnings and the stability of its funding. The operating environment may also affect assessments of non-financial factors, for example, the quality of a non-bank financial institution's franchise (company profile), its ability to execute its strategy (management and strategy) and the risks associated with its underwriting standards (risk appetite).

The operating environment will typically act as a constraint on the stand-alone credit rating, and other key rating factor scores, other than in cases where a non-bank financial institution can demonstrate an ability to insulate itself from the environment(s) in which it operates.

For each rating factor, Fitch has provided subfactor/rating category matrices that provide representative characteristics for that rating category. These characteristics are not necessarily an exhaustive and determinative review of that factor or subfactor. For example, a non-bank financial institution may meet some of the characteristics associated with more than one category, or some characteristics may not apply at all because of the specifics of the non-bank financial institution's profile. In those instances, Fitch will apply the category that best fits.

The stand-alone assessment framework considers five key rating factors:

- operating environment;
- company profile;
- management and strategy;
- risk appetite; and
- financial profile.

The first four key rating factors listed above are predominantly qualitative, although quantitative measures are considered where available and relevant, such as economic data (operating environment), market shares and business footprint (company profile) and limit structures (risk management). These qualitative factors, individually or in combination, provide the context in which quantitative financial metrics are considered. Further detail is provided in the relevant sections that follow.

Fitch's factor and subfactor assessment framework is based on consideration of 'core' and 'complementary' attributes. Core attributes are present in the analysis of all or most non-bank financial institutions and in most circumstances. Complementary attributes are present in some, but not all, circumstances. All attributes are considered in the application of the criteria, but where an attribute is either not present or immaterial to the credit profile it will make no, or limited, contribution to the analysis. The materiality and influence of each attribute in the analysis of each factor and subfactor varies by institution. A complementary attribute could carry an elevated influence in the stand-alone analysis, particularly if the rating factor that the attribute underlies is a key rating driver.

For the purposes of this criteria report, Fitch splits the non-bank financial institution universe into five subsectors, but recognizes that there may be issuers whose business model straddles various components of these subsectors or falls outside of the five subsectors. In these cases,

Fitch employs a hybrid or bespoke analytical approach, which would be articulated in Fitch's Rating Action Commentary on the issuer.

The five non-bank financial institution subsectors are: securities firms, investment managers, BDCs (which only exist in the U.S.), finance and leasing companies and FMIs. Finance and leasing companies include mortgage REITs, debt purchasers (i.e. companies that buy portfolios of defaulted assets or non-performing loans) and most non-bank policy institutions. FMIs include exchanges, clearing houses and non-bank central securities depositories (CSDs).

The investment manager subsector includes traditional and alternative investment managers, investment companies and investment funds. Traditional and alternative investment managers primarily manage third-party assets and, therefore, typically assume limited balance sheet risk while earning revenue through management fees.

Investment companies typically deploy permanent capital to assume investment/balance sheet risk while seeking to create value through asset appreciation and dividend and interest income. Investment companies that are relatively concentrated (five to 10 investments), have the ability to exert some influence over portfolio companies and exhibit investment holding periods generally extending over several years, may be rated by Fitch's Corporate group under the criteria titled "Investment Holding Companies Rating Criteria." The magnitude of underlying investments in financial institutions may also influence whether Fitch's "Non-Bank Financial Institutions Rating Criteria" or "Rating Investment Holding Companies" criteria is applied.

Investment funds also invest their own capital and assume the associated investment/balance sheet risk but are typically open-ended vehicles subject to redemption risk that seek to achieve returns primarily through trading gains over a shorter investment horizon. In practice, the primary type of investment fund to which this analytical approach is applicable is open-ended hedge funds, but it could also encompass pension funds and profit-oriented sovereign wealth funds, which may have lower relative levels of near- and medium-term financial obligations, and as a result, longer-term investment horizons than other investment funds. This may also contribute to a broader revenue mix for such investment funds, including realized/unrealized asset appreciation, dividends and interest income in addition to trading revenue.

Broadly diversified closed-end investment funds with more defined regulatory/structural frameworks, greater asset liquidity and/or more frequent investment turnover are typically rated by Fitch's Funds & Asset Managers group under the criteria titled "Closed-End Funds and Market Value Structures Rating Criteria," available on Fitch's website at www.fitchratings.com.

The Analytical Frameworks for Investment Managers, Investment Companies and Investment Funds table summarizes the various types of business models for the investment manager subsector and the applicable rating criteria.

Source: Fitch.

An assessment of the operating environment, company profile and management and strategy is largely common across the various subsectors (as well as banks), although some nuanced considerations are outlined herein. Conversely, assessments of the risk appetite and financial profile of a non-bank financial institution may differ by industry, so these factors are divided into five subcategories.

II.1 Operating Environment Assessment

Fitch's assessment of an institution's operating environment considers the following subfactors:

- sovereign rating;
- economic and business environment;
- financial market development; and
- regulatory and legal framework.

Importance of this Assessment

The first step in Fitch's assessment of stand-alone creditworthiness is a review of the institution's operating environment, as this sets the range for potential IDRs. The operating environment to a large degree serves as a constraining factor for the IDR, as it is rare for the IDR to be assigned significantly above the operating environment assessment, however well the issuer scores on other factors or subfactors.

Sovereign Rating

Attribute	Core Versus Complementary	Description
Sovereign Rating Cap	Core	The sovereign rating often acts as an effective cap on the maximum level of IDRs in a jurisdiction, due to the deterioration in the operating environment that typically accompanies a sovereign default. Sovereign default risk can also directly influence non-bank financial institutions' access to and cost of funding. However, in limited circumstances, where a non-bank financial institution has a very strong (in the context of the domestic market) overall credit profile and, in particular, a robust funding profile, the IDR may exceed the sovereign rating. International geographical diversification of business activities may also support a higher rating than that of the home sovereign. See Annex 2 for more details.
Divergence Between Sovereign Rating and Economic Environment	Complementary	It is also quite possible for the overall operating environment assessment and, hence, the IDRs for non-bank financial institutions in the country to be significantly lower than the sovereign rating. This may occur, for example, where the economic environment for non-bank financial institutions is relatively weak, but the sovereign rating is supported by factors specific to government finances and the sovereign balance sheet.
Divergence Between Domicile and Business Activity	Complementary	For certain non-bank financial institutions, the sovereign rating assessment may be higher or lower than the sovereign rating in their primary jurisdiction. For example, aircraft lessors may be domiciled in certain locations for tax purposes but have a portfolio of aircraft that are dispersed among lessees in a variety of countries around the globe. In these cases, Fitch would consider any geographic concentrations and the portability of the collateral, as determined by local law. The same may apply for diversified investment managers, investment companies and investment funds if the funds they manage, the assets they invest in, or the investors they service are in more favorable operating environments or there are ring-fenced assets or cash flows that strongly support rated obligations.
Business Model Specifics	Complementary (for Financial Market Infrastructure Companies)	The sovereign rating assessment is likely to have less of an influence on FMIs relative to banks or other non-bank financial institutions, given that many FMIs do not typically have significant credit exposure to sovereigns by holding bonds or placements with central banks. In many ways, FMIs may act like financial utilities, which are unlikely to be materially affected by sovereign stress. Indeed, the performance of certain FMI subsectors, such as exchanges, may be countercyclical to the credit profile of the sovereign, as there may be increased trading activity during periods of stress. As a result, a FMI could have a rating above the sovereign rating, with the primary exception being when the FMI holds a majority of its balance sheet or guarantee fund in sovereign securities, in which case the sovereign rating may take on a higher influence.

Source: Fitch.

Fitch's assessment of the operating environment incorporates both sovereign risk and broader country risks related to doing business in a particular jurisdiction; however, it does not capture transfer and convertibility risks, which are reflected separately in Fitch's Country Ceilings. For institutions that operate in multiple geographies, the subfactor and overall operating environment assessments will take a blended view of the different jurisdictions.

An assessment of the economic environment and the regulatory and legal framework for non-bank financial institutions may not align with that of a bank located in the same jurisdiction and it may also differ across the various categories of non-bank financial institutions. Additionally, regulatory scrutiny of banks around the globe is believed to be considerably more robust than regulation of non-bank financial institution subsectors.

The following tables identify those operating environment attributes that Fitch has defined as 'core' versus 'complementary' together with an indication of how each attribute is typically assessed. The accompanying subfactor/rating category matrix provides representative characteristics that aid the determination of the overall factor score assigned in each case.

Economic and Business Environment

Attribute	Core Versus Complementary	Description
Economic Variables, Forecasts and Judgements	Core	Fitch's view of the economic environment reflects its Sovereign Group's economic forecasts and judgments, and reflects Fitch's views on those macro variables that may affect a non-bank financial institution's fundamental credit strengths through their impact on the business environment. These may include, but are not limited to, the stage of economic development, economic growth expectations, private credit growth and employment and demographic prospects. The extent to which specific variables may be relevant and material in each jurisdiction will vary.
Industry or Subsector Specifics	Core	Fitch also considers a specific industry or subsector's sensitivity to changes in the economic climate in which it operates. Some industries will be more influenced by cyclical changes in the broader economic environment (e.g. aircraft leasing), while others may perform well under a variety of market scenarios (e.g. alternative investment management). Still, other businesses may be highly sensitive to specific indicators, like interest rates (e.g. mortgage servicing). Not all non-bank financial institutions within a country may receive the same categorization under this factor, as the various subsectors may respond very differently to economic trends. Still, each assessment will take a blended view of the operating environment for institutions that operate in multiple geographies. The economic environment, which also influences the sovereign rating, is considered separately because it is only one factor influencing the sovereign rating, and it is possible that the two will be assessed at significantly different levels.
Asset, Commodity and Market Price Movements	Complementary	Fitch considers changes in house/real estate prices, equity prices, interest rates and exchange rates in order to aid identification of potential stress arising from buildup of risk. Where a high degree of dollarization of an economy creates foreign exchange imbalances, Fitch will assess the system's ability to manage and mitigate the risk effectively.

Source: Fitch.

Financial Market Development

Attribute	Core Versus Complementary	Description
Size and Structure of the Financial System	Core	Large, healthy and highly developed financial markets, all else being equal, will result in a higher Financial Market Development score as this may underpin a non-bank financial institution's franchise. Conversely, small, developing or highly diffuse financial markets may result in a lower Financial Market Development score, as a non-bank financial institution may be unable to generate any discernible competitive advantage or economies of scale. An oligopolistic market structure may assist in protecting a non-bank financial institution's franchise or market position or create a material obstacle for new participants.
Depth and Liquidity of National Capital Markets	Core	A deep and liquid capital market supports market stability and will typically result in higher Financial Market Development scores. An underdeveloped capital market, in terms of scale and/or market liquidity, would generally result in lower Financial Market Development scores.
Central Bank Market Support	Complementary	The existence of central bank support measures and a reliable, predictable and transparent lender of last resort for a banking system will typically be neutral to the Financial Market Development assessment. Where ordinary support measures or options available to the banking system via the central bank are limited or opaque, or where there is a dependence on the central bank to circulate liquidity within the system throughout the business cycle this would generally result in lower Financial Market Development scores.
Institutional Frameworks to Support Functioning Financial System	Complementary	The existence of institutional frameworks to support the smooth functioning of the financial system, such as a credit bureau or a depositor protection scheme, will be neutral to positive for the Financial Market Development score. The lack of any effective institutional frameworks will generally be commensurate with a lower financial market development score. For example, the extent to which a clearing house or CSD does not have the ability to hold a first priority lien on a counterparty's collateral in the event of the counterparty's default could be viewed as a constraint.

Source: Fitch.

Regulatory and Legal Framework

Attribute	Core Versus Complementary	Description
Robustness and Effectiveness of Framework	Core	The regulatory and legal framework assessment considers how relevant non-bank financial institution legislation, accounting standards and the legal framework compare to international practices as well as the willingness of regulators to intervene and enforce laws and regulations. A jurisdiction's regulatory and legal framework is typically commensurate with its general operating environment and stage of maturity and, therefore, is often neutral to the overall Operating Environment assessment.
National Versus International Standards	Complementary	To the extent that relevant legislation and/or implementation, including the willingness of regulators to intervene and enforce laws and regulations, are materially weaker than international practice, or implementation is relatively slow, this would be considered a weakness.
Audit and Accounting Standards	Complementary	This analysis also considers the general accounting framework employed, such as IFRS or U.S. GAAP, audit effectiveness and the frequency and robustness of required reporting. In cases where audit or accounting standards or their compliance with legal reporting requirements is weaker than international practice this will result in a lower Regulatory & Legal Framework score.
Creditor Rights	Complementary	The regulatory and legal framework assessment considers the extent to which national legislation provides appropriate creditor protection and enforcement of creditor rights as far as they relate to the rights of a non-bank financial institution's creditors. Deficiencies in the legislative framework that could affect a non-bank financial institution's ability to enforce its rights as a creditor are reflected in the Asset Quality assessment.
Governance	Complementary	Corporate governance is assessed on both a systemic and issuer-specific basis. Notable systemic weaknesses, such as the adverse influence of the state in the financial system and the functioning of the private sector, would have a negative impact on the regulatory and legal framework assessment.
Regulatory Restrictions on Operating/Financial Profile	Complementary (for BDCs)	BDCs are subject to a variety of regulatory requirements, as dictated by the Investment Company Act of 1940 (40 Act), and Fitch carefully weighs the impact of each in its assessment of the sector. A 200% asset coverage requirement, which effectively limits balance sheet leverage to 1.0x, is viewed favorably. However, most BDCs elect to be treated as Regulated Investment Companies (RICs) for tax purposes, which limits capital retention, and is viewed more negatively by Fitch.
Tax Legislation	Complementary (for Mortgage REITs)	For finance companies that have elected REIT status under the U.S. Internal Revenue Service tax code (i.e. mortgage REITs including commercial mortgage REITs, residential mortgage REITs and hybrid mortgage REITs), Fitch considers the impact of U.S. federal tax legislation. Namely, U.S. mortgage REITs benefit from favorable tax treatment, as they do not pay income taxes on the portion of taxable income paid as dividends to shareholders. Conversely, required dividend distributions weaken REITs' capital retention capabilities relative to other financial institutions that do not have this requirement.
Business Model Specifics	Complementary	In general, Fitch views the regulatory and legal frameworks of non-bank financial institutions to be weaker than those related to banks, given that banks are subject to a variety of rules and regulations on a local and international scale. While the breadth and depth of bank regulation comes with a cost, it does provide an independent layer of oversight, which covers quantitative metrics, like capital adequacy, in addition to requirements related to risk management and infrastructure sufficiency.

Enforcement of legislation and regulation may be less effective or transparent.	Regulatory environment is developing. Financial reporting and regulatory enforcement is relatively less transparent.	Regulatory environment is underdeveloped or developing, with minimal transparency. Difficulties with enforcement of legislation and regulation. Financial reporting and regulatory enforcement lack transparency.	Regulatory environment is undeveloped, with limited transparency.

Source: Fitch.

II.2 – Company Profile Assessment

Fitch's Company Profile assessment considers the following subfactors:

- franchise;
- business model; and
- organizational structure.

Importance of this Assessment

Assessment of a company's franchise, business model, and organizational structure help identify the types of business risks an institution could face together with its ability to safeguard or defend existing businesses and earnings, and gain new business through an analysis of its longer term competitive strengths, weaknesses, opportunities and threats.

The company profile assessment is typically conditioned, and often constrained, by the operating environment assessment, unless Fitch believes the non-bank financial institution's business profile is insulated from the effects of its operating environment(s). Within that operating environment context, the company profile is determined at a level that primarily reflects the strength and quality of its franchise and stability of its business model.

The following tables identify those company profile attributes that Fitch has defined as 'core' versus 'complementary,' together with an indication of how each attribute is typically assessed. The accompanying subfactor/rating category matrix provides representative characteristics that aid the determination of the overall factor score assigned in each case.

Franchise

Attribute	Core Versus Complementary	Description
Market Shares	Core	A non-bank financial institution's franchise is typically reflected in market shares in the entity's core offered product(s). Franchise value is assessed on the most relevant basis - global, national or regional - taking into account both the size of the market in which a non-bank financial institution operates and its position within that market. Small relative market shares, particularly in large markets, are not necessarily negative for the assessment and may be offset by sustainable, competitive advantage and stable performance in core product and client segments. Large market share in a small market can potentially be positive for the assessment, provided it is not constrained by the strength or quality of the market itself or the relevant operating environment assessment.
Competitive Position	Core	A non-bank financial institution's competitive position relative to peers' may be evident in relative product leadership and pricing power as well as reflective of any material barriers to entry. Product leadership will often be a function of scale, where traditional financial products are concerned, and may also reflect technology and efficiency advantages, or deficiencies, relative to peers. In the case of certain niche products or offerings, leadership may be reflected in relevant "league tables."
Critical Mass	Complementary	Size, taken in isolation, is unlikely to be a driver for the company profile assessment, but may affect pricing power and client relationships. Non-bank financial institutions which lack critical mass are likely to be assigned lower scores.
Client Relationships	Complementary	Fitch considers the nature of client relationships and the extent to which product range and/or expertise is the key driver of client retention or business volume growth as opposed to price.
Intragroup Benefits and Risks	Complementary	An institution's franchise may also incorporate any benefits it receives from being part of a larger (typically financial) group. This could include client relationships, funding access, product offering or technical expertise that the institution would not otherwise have access to, as well as potential diversification benefits of other businesses of subsidiaries or related companies. Conversely, a non-bank financial institution's franchise may incorporate contagion risks where a weakness in the broader group's credit profile exists.

Source: Fitch.

Business Model

Attribute	Core Versus Complementary	Description
Business Mix	Core	An institution's business model encompasses the ways in which it generates revenue and profits. This includes an assessment of an institution's business mix, such as by asset/product, service composition and proportion of revenue and earnings generated from core business lines.
Earnings Volatility	Core	Business models that are highly reliant on volatile businesses, such as trading, or where market conditions exert a greater influence on business volumes and revenue generation between reporting periods will typically result in a lower business model score relative to other financial institutions with lower observed volatility. Stability in earnings through credit and interest rate cycles will typically contribute to higher scores.
Geographical Diversification	Complementary	A high concentration of a non-bank financial institution's operations in less developed economies is likely to weigh on Fitch's assessment of its business model. Concentrations from a client and/or investor perspective may also be a limiting factor. Geographic diversification may be a positive rating attribute, but expansion into areas that add little or limited overall synergies may be viewed as neutral or negative to the company profile assessment.
Product Concentration	Complementary	The perceived risk associated with the particular product(s) and the quality of the product franchise can influence the assessment for a business model with a narrow product focus, (e.g. a monoline lender) versus one that provides a broader array of products. Product diversification may be a positive rating attribute, but expansion into business areas that add little or limited overall synergies may be viewed as neutral or negative to the company profile assessment.

Organizational Structure

Attribute	**Core Versus Complementary**	**Description**
Appropriateness Relative to Business Model	Core	A group's organizational structure is typically commensurate with its business model. Group structure rarely affects Fitch's overall rating assessment, but has the potential to when Fitch considers the group as overly complex (relative to its operations and footprint), opaque or with material risks arising from intragroup transactions. Examples of business model complexity include layers of intermediate holding companies whose locations may be mainly tax-driven, or unnecessarily complex structures that appear inconsistent with the size, scale and footprint of the institution/group.
Opaqueness	Complementary	Unexplained cross-ownership agreements or large minority interests, which are not commensurate with the non-bank financial institution's business model, would typically result in a lower company profile score.
Intragroup Transactions	Complementary	Intragroup transactions may affect risks associated with the rated entity. This is especially important where cash or capital can get trapped in subsidiaries and therefore is not readily available for distribution to the group as a whole.
Ownership Dynamics	Complementary	Fitch also considers ownership dynamics, including whether an issuer is publicly traded privately held or mutually owned, whether there is private equity ownership and/or non-strategic ownership and whether there is significant influence from related parties to understand the impact on strategic decisions, liquidity and/or capitalization. Mutually owned institutions, such as many clearing houses, may be viewed more favorably to the extent they reduce conflicts of interest between risk management and profit maximization.

Source: Fitch.

Company Profile

	aaa	aa	a	bbb	bb	b	ccc and Below
Franchise	Dominant franchise in multiple business segments or geographies. Strong competitive advantages likely to endure. Possesses strong competitive advantages and pricing power in principal operating segments. These strengths maintained through economic cycles.	Leading franchise in multiple business segments or geographies. Solid competitive advantages likely to endure into the long term. Demonstrated competitive advantages and pricing power. These strengths maintained over multiple economic cycles.	Strong franchise in key markets or businesses. Has leading franchise in some key operating segments or geographies. Demonstrated competitive advantages and pricing power in key operating segments.	Adequate franchise in geographies. Operating in somewhat less developed markets or has limited competitive advantages or pricing power in main operating segments.	Moderate franchise in key business segment or geographies. Operating in somewhat less developed markets or has limited competitive advantages and generally a price taker in main operating segment(s). Limited operating history.	May have nominal franchise in a key business segment or geographies. Operating in less developed markets or has no discernible competitive advantage. Very limited operating history.	Operating in undeveloped markets or has no discernible franchise value or competitive advantage. Extremely limited operating history.
Business Model	Highly diverse and stable business model across multiple operating segments or geographies. Critical mass maintained in all business segments and geographies in which it operates. Minimal reliance on volatile businesses.	Very diverse and stable business model across multiple operating segments or geographies. Maintains critical mass in most business segments and geographies in which it operates. Modest reliance on volatile businesses.	Diverse and stable business model. Critical mass maintained in key operating segments or geographies in which it operates. Notable reliance on volatile businesses.	Less stable and/or diverse business model, potentially dominated by a key operating segment or geography. Greater reliance on volatile businesses.	Less diverse and stable business model, potentially with more specialization in a key operating segment or less stable/advanced economies. Significant reliance on volatile businesses.	Limited business model stability. May be wholly reliant on volatile businesses or economies.	Business model rapidly evolving or operating in unstable economic environment.
Organizational Structure	Organizational structure complexity commensurate with 'aaa/aa' business model. Major legal entities exist principally for clear business reasons. High visibility into principal legal entities.		Organizational structure complexity commensurate with 'a/bbb' business model. Potentially increased organizational structure complexity. Good visibility into major legal entities.		Significant organizational structure complexity. Potentially limited visibility into main legal entities.		Highly complex, opaque or materially changing organizational structure.

Source: Fitch.

II.3 – Management and Strategy Assessment

Fitch's assessment of Management and Strategy considers the following subfactors:

- management quality;
- corporate governance;
- strategic objectives; and
- execution.

Importance of this Assessment

An assessment of management, corporate governance, strategic objectives and execution is one of the least tangible aspects of its fundamental analysis but is important in considering how an institution is run, for example through establishing particular business or financial goals, developing a strategy to pursue those goals, and demonstrating an ability to meet these goals, all of which provide insight into motivations and incentives within the institution.

The management and strategy assessment is typically conditioned, and often constrained, by the operating environment and company profile assessments, unless Fitch believes the elements assessed are insulated from the effects of the non-bank financial institution's operating environment(s) and business model. In weaker operating environments, corporate governance issues tend to be more prevalent, strategic objectives may be more likely to shift over time or be more opportunistic, and execution of strategy is often more challenging. It is possible for a management and strategy score to be higher than the operating environment (e.g. a very good management team operating in a weak environment). However, in such cases, it is likely that the

management and strategy score would be of lower influence to the rating if the superior management quality is unable to exert meaningful influence on the overall risk profile.

The quality and effectiveness of management is reflected in individuals and the overall management structure, as well as other factors such as corporate governance and strategy. While this is, on the face of it, a subjective assessment, there will typically be some tangible evidence of management's effectiveness through its impact on financial and/or risk metrics.

The following tables identify those management and strategy attributes that Fitch has defined as 'core' versus 'complementary,' together with an indication of how each attribute is typically assessed. The accompanying subfactor/rating category matrix provides representative characteristics that aid the determination of the overall factor score assigned in each case.

Management Quality

Attribute	Core Versus Complementary	Description
Depth and Stability of Senior Management	Core	A strong management teams will demonstrate a high degree of credibility, experience, and competence and, commensurate with the size and complexity of the institution, reflect those same qualities in an appropriate depth of experienced, capable management. The impact of any turnover is considered in the context of the existence of succession plans (where key person risk is present) and/or the qualities brought by incoming personnel in cases where those individuals have a proven track record with similar institutions or businesses elsewhere.
Corporate Culture	Complementary	An established record of a firmly entrenched cultural identity may help ensure that coherent business philosophies are adopted throughout the organization and remain in place when there are management transitions and across business cycles This can prove beneficial to the management quality score as harmonization and predictability generally instill market confidence.
Key Person Risk	Complementary	Smaller, niche institutions may be reliant on a specific individual or a small group of key individuals, often the institution's founder(s). Fitch expects an institution's senior management structure to be commensurate with its scale and complexity but will usually view any reliance on key individuals as a constraint, regardless of how well-intentioned, as a departure could cause material disruption in the organization's future business prospects and damage its franchise. For certain investment managers, there may also be trigger events in fund governing documents (such as the limited partnership [LP] agreements or articles of incorporation) that would permit early redemptions or withdrawals by LPs or the removal of a general partner if a key person left the firm. If there are significant triggers that are easily triggered and create potentially significant liquidity calls, this is likely to be a constraint.

Corporate Governance

Attribute	Core Versus Complementary	Description
Protection of Creditor Rights	Core	Fitch considers the extent to which a non-bank financial institution's intrinsic governance practices provide reasonable protection of creditors' interests, or whether the latter might suffer at the expense of the interests of other stakeholders, in particular shareholders, management, or due to government influence. Fitch considers the effectiveness of the supervisory board collectively, whether it comprises sufficient expertise, resources, independence and credibility to effectively oversee management.
Quality of Financial Reporting and Audit Processes	Complementary	In cases where there are perceived to be weaknesses in financial reporting (quality, frequency and/or timeliness) compared to international best practice, or where internal or external audit processes appear less robust relative to the operating environment, Fitch may assign a lower corporate governance score.
Related Party Transactions	Complementary	The existence of significant related party transactions may be negative for the corporate governance assessment. Their volume, whether they are conducted on market terms and the internal procedures for their review and approval are key elements of this assessment.
Management of Potential Investment Conflicts of Interest	Complementary (for BDCs and Investment Managers)	Fitch will evaluate the governance structure established by the management company to address potential conflicts of interest. Policies may allow establishing both equity and debt positions in the same company in different investment vehicles. In companies undergoing restructuring or facing potential bankruptcy, the ownership of both debt and equity interests can present material conflicts of interest. Fitch will evaluate allocation policies and procedures and board involvement to limit the risks such conflicts may present.
Internal Versus External Management	Complementary (for BDCs and Mortgage REITs)	For BDCs and mortgage REITs, Fitch focuses on whether the company is internally or externally managed. Externally managed entities are typically managed by affiliated companies that, through a management agreement, provide all managerial and operational services. From a corporate governance perspective, Fitch generally has a more favorable view of internal management teams than external management teams, because internal management teams are dedicated solely to the issuer in question, minimizing conflicts of interest. External management may have several investment vehicles under management, with potentially overlapping investment objectives.
Private/Partnership Structures	Complementary	Some non-bank financial institutions are privately held or structured as partnerships. This can make insight into management more challenging and mean that managers who are also partners in the firm act as agent and principal at the same time, potentially affecting the governance assessment. If partner-managers act prudently in the general interests of the company and take measured actions or personally suffer the economic consequences of excessive risk-taking, the governance assessment could be positively influenced. Conversely, unchecked decision-making by individuals can be negative to the governance assessment.

Source: Fitch.

Strategic Objectives

Attribute	Core Versus Complementary	Description
Quantitative Strategic Targets	Core	An institution's strategic objectives are a reflection of its business and financial goals, which may include business targets for market position/share or financial metrics. Fulfillment of these objectives drives decision-making throughout the organization and often motivates management and employees. Fitch will consider how achievable and sustainable objectives are and will assess underlying assumptions for plausibility, consistency and appropriateness, such as taking account of challenges posed by the non-bank financial institution's operating environment, business model and market position. The strategic objectives score is typically influenced by the extent to which financial and business targets are clearly and consistently articulated, and strategic direction appears appropriate to the non-bank financial institution's operating environment, company profile, competitive position and management expertise.
Qualitative Strategic Framework	Core	The strategic objectives assessment reflects the extent to which medium/long-term strategy is well-construed, cohesive and robust, communicated effectively to stakeholders and balances risks and rewards. Fitch will consider management's key strategic philosophies, for example, acquisition-led versus organic growth and/or regional/international expansion versus concentration on domestic markets, as this may highlight strengths or weaknesses in the strategic plan Fitch's assessment may be negatively affected if a non-bank financial institution's business model changes frequently and significantly over time (whether due to organic development or mergers/acquisitions) or the entity undergoes significant restructuring.
Disclosure	Complementary	Where budgets or forecasts are not available to support management's articulation of strategic direction, Fitch will use judgement in determining the appropriateness and plausibility of the narrative and underlying assumptions.

Source: Fitch.

Execution

Attribute	Core Versus Complementary	Description
Track Record in Meeting Stated Objectives	Core	Fitch considers the non-bank financial institution's track record of execution against its stated goals and objectives over multiple periods, and in the context of how realistic or appropriate financial and business targets are. An inability to meet a strategic objective, including a specific target financial metric) in a single reporting period will not necessarily result in a weaker score provided Fitch believes that the strategic objective is achievable over a medium-term horizon.
M&A Activity	Complementary	Poor or slow execution of a merger, acquisition or restructuring initiative or where Fitch considers there to be an inconsistent track record of executing on such transactions or initiatives will likely result in a lower execution score. Effective execution of a business acquisition in line with plan may positively influence the execution score. If Fitch views future execution risk to be elevated, this will also be factored into Fitch's assessment of a non-bank financial institution's execution. .

Source: Fitch.

Management and Strategy

	aaa	aa	a	bbb	bb	b	ccc and Below
Management Quality	Management has an unparalleled degree of depth, stability and experience. Key person risk is non-existent. Succession planning for all key roles is routinely undertaken. Management maintains a strong degree of credibility among all major constituencies throughout economic cycles. Institution has a strong and consistent corporate culture.	Management has a very high degree of depth, stability and experience. Key person risk is limited. Succession planning for key executive roles is routinely undertaken and turnover is very low. Management has maintained a very high degree of credibility among all major constituencies over a lengthy period. Institution has a solid and consistent corporate culture.	Management has a high degree of depth, stability and experience. Key person risk is modest. Succession planning for key executive roles in place and turnover is low. Management maintains a high degree of credibility among major constituencies. Institution has a good and consistent corporate culture.	Management has a good degree of depth, stability and experience. Key person risk is moderate. Executive turnover is manageable. Management has a good level of credibility among major constituencies. Corporate culture is sound, but may be less consistent than higher rated entities.	Management has an acceptable degree of depth, stability and experience, but noticeably less than higher rated entities. Key person risk is elevated. Management turnover or reliance on key individuals may be more prevalent than higher rated entities.	Management may have noticeable weaknesses, including lack of depth, stability, or experience. Key person risk is high. Management turnover may be considered high.	Management deficiencies may be significant.
Corporate Governance	Very strong corporate governance, providing robust protection of creditors' interests. Very effective board oversight, high quality and frequent financial reporting and very limited related party transactions.		Sound corporate governance, providing reasonable protection of creditors' interests. Effective board oversight, good quality financial reporting and limited related party transactions.		Governance is less developed than for higher rated peers but without presenting clear, significant risks for creditors.	Governance gives rise to significant risks for creditors due to weak board oversight, poor financial reporting or significant related party transactions.	Governance gives rise to major risks for creditors due to very weak board oversight, considerable accounting deficiencies or large related party transactions.
Strategic Objectives	Strategic objectives are clearly articulated and reflect long-term sustainable levels of business and financial performance. Strategic objectives remain highly consistent over a lengthy period.	Strategic objectives are clearly articulated and reflect a long-term sustainable level of business and financial performance. Strategic objectives are very consistent over time.	Strategic objectives are well articulated and reflect a medium-term level of business and financial performance. Strategic objectives may shift modestly over time.	Strategic objectives are documented and reflect a medium-term level of business and financial performance. Strategic objectives may shift over time and may be more opportunistic.	Strategic objectives may not be clearly articulated and/or reflect a short-term level of business and financial performance. Strategic objectives may shift based on market opportunities or less stable economic environment.	Strategic objectives are not articulated and reflect a short-term level of business and financial performance. Strategic objectives frequently shift including due to economic environment volatility.	Strategic objectives are lacking or likely to be highly variable due to an unstable economic or operating environment.
Execution	Institution consistently meets target business and financial objectives throughout economic and/or market cycles.	Institution routinely meets target business and financial objectives with very limited variability over economic and/or market cycles.	Institution generally meets target business and financial objectives, albeit with modest variability over economic and/or market cycles.	Institution generally meets target business and financial objectives. Execution could be more variable with changes in economic and/or market cycles.	Institution often fails to meet target business and financial objectives. Execution could be variable based on changes in economic and/or market cycles.	Institution typically fails to meet target business and financial objectives. Execution could be highly variable based on changes in economic and/or market cycles.	Institution does not meet business or financial objectives.

Source: Fitch.

II.4 Risk Appetite Assessment

Importance of this Assessment

Assessment of a company's underwriting standards, risk controls, growth and market risk are important considerations in determining a non-bank financial institution's stand-alone credit risk profile, as they will eventually feed through to changes in a non-bank financial institution's key financial metrics. Fitch will apply its own judgment as to the degree of risk inherent in a particular business line, product or strategy. Fitch will also consider operational and/or reputational risks where these are material for the institution.

Fitch's analysis of risk appetite is focused on those risks that have a material influence on the overall credit profile. The risk appetite assessment is typically conditioned, and often

constrained, by the operating environment and company profile assessments unless Fitch believes the underlying risks can be isolated from the effects of the non-bank financial institution's operating environment(s) and its chosen business model/strategy. It is possible for a risk appetite score to be higher than the operating environment or company profile (e.g. an 'atypical' very low risk appetite relative to the environment or the operating model). However, a very low risk appetite would be expected to be reflected in consistently better asset quality and less earnings volatility.

Stability of results throughout the cycle may be a useful indicator of risk appetite. A high risk appetite may be somewhat mitigated through the employment of strong risk controls, collateral, and risk-based pricing although the natural rating range for non-bank financial institutions with an inherently higher risk appetite will generally be lower than for those non-bank financial institutions whose risk appetite Fitch considers modest or better managed. In addition, risks can be high at non-bank financial institutions with stated low risk appetites, if controls are viewed to be weak or have been ineffective.

The risk controls assessment includes operational (including cyber) and reputational (including litigation) risks where these are material for the institution or an integral part of the business model or operating jurisdiction(s).

Fitch will analyze those aspects of market risk that are considered material to the overall assessment of risk appetite. The most typical form of market risk is interest-rate risk given many non-bank financial institutions' core maturity transformation function, but the assessment will include other elements such as valuation, derivatives and foreign exchange risks where these are material. Market risks will be higher for institutions with material trading operations or where cross-border activity or balance sheet structure gives rise to foreign-exchange risks, so this factor may take on greater relative importance in those instances.

The following tables identify those risk appetite attributes that Fitch has defined as 'core' versus 'complementary,' together with an indication of how each attribute is typically assessed. The accompanying subfactor/rating category matrix provides representative characteristics that aid the determination of the overall factor score assigned in each case.

II.4.a Securities Firms

Fitch's risk appetite assessment for securities firms considers the following subfactors:

- risk controls;
- growth;
- market risk; and
- operational risk.

Risk Controls — Securities Firms

Attribute	Core Versus Complementary	Description
Risk Management Tools	Core	Fitch's assessment of risk controls considers the breadth and sophistication of risk management systems relative to the risk profile of the business and the types of management reporting used, where these are available. This may help indicate how far risk controls permeate the organization with respect to key risks a typical securities firm may incur, such as market, operational, reputational and credit risks. Fitch may also assess how the launch of material new business activities are vetted in the context of the associated credit, market, operational and reputational risks and their effect on the overall franchise.
Staffing and Culture	Complementary	Fitch attempts to understand the level of risk management engagement across the firm, the variety of committees and membership, as well as the independence and authority carried by risk functions. The backgrounds and experience levels of risk management professionals may also be considered.

Source: Fitch.

Growth — Securities Firms

Attribute	Core Versus Complementary	Description
Absolute and Relative Rates of Growth	Core	Fitch generally measures overall balance-sheet expansion against underlying economic growth, earnings retention, staffing growth, market activity, and peer, sector and industry averages to identify any outliers and assess the build-up of potential risks. Rapid growth can obscure financial analysis, for example making it difficult to form a view of inventory turnover and may be indicative of a lowering of standards or slowing demand.
Accompanying Infrastructure Growth	Complementary	Rapid growth may introduce other challenges such as operational strains, as back-office staff or systems may not be capable of handling increased business volumes and, therefore, would be negative for the assessment of growth.

Source: Fitch.

Market Risk — Securities Firms

Attribute	Core Versus Complementary	Description
Market Risk Exposure	Core (For securities firms with high balance sheet usage) Complementary (For securities firms with low balance sheet usage)	For firms with significant trading activities, Fitch's assessment of market risk focuses on the degree of market risk exposure and the means of measuring and managing it. These usually include value at risk (VaR), stop-loss limits, concentration limits, sensitivity analysis and stress testing.
Sensitivity to Marketwide Dynamics	Core (For securities firms with low balance sheet usage) Complementary (For securities firms with high balance sheet usage)	Although securities firms that do not hold securities on their balance sheets generally have only limited exposure to market risk, their revenue is heavily exposed to the volume of transactions in the market, and therefore, Fitch's assessment of market risk focuses more broadly on the sensitivity of the business model to marketwide dynamics.
Stress Testing and Sensitivity Analysis	Complementary	When available, Fitch evaluates management's reports of specific products' risks, sensitivities and supplemental stress scenarios on a position and consolidated bases. When available, Fitch also reviews reports that include adjusted VaR using liquidity-stressed scenarios or replicate historical periods of stress. Fitch evaluates the use of stress limits, but this is not comparable across peers. When possible, Fitch assesses market risk concentration (by product, issuer/counterparty, industry and country) in trading and investment portfolios and reviews management's oversight of aged inventory. Fitch may also review policies with respect to collateral and margin calls and the reasons for any changes made to these.
Hedging Activity and Effectiveness	Complementary	Collateral and hedging are frequently employed to mitigate market risk, but hedges are imperfect, and so some degree of market and credit exposure generally remains. As a result, both gross and net positions are considered in Fitch's rating evaluation to the extent such information is reported.
Market Development	Complementary	In markets where volatility and liquidity issues can be extreme, greater emphasis may be placed on the level of nominal/cash limits. In emerging markets, credit/settlement risk can still be significant. Fitch assesses the level of "free of payment" deliveries (in contrast to payment on delivery) particularly closely in emerging markets, where payment may not be so readily forthcoming.

Source: Fitch.

Market Risk Metrics — Securities Firms

Average VaR/Fitch Core Capital (FCC)
Fitch Stressed VaR/FCC
Principal Daily Trading Revenue/Average Trading VaR
Principal Transaction Revenue/Total Revenue

Source: Fitch.

Operational Risk — Securities Firms

Attribute	Core Versus Complementary	Description
Operational Infrastructure/Framework	Core	Fitch's assessment of securities firms' operational risk focuses on investment in front-, middle- and back-office systems commensurate with the nature of the business, including new product development/implementation and systems upgrades. Backlogs of settlements, resolutions and customer complaints or a history of problems with the firm's custodian can be indicators of insufficient back-office staff support. These challenges can be exacerbated for institutions that have undertaken material acquisition activity.
Operational Loss Experience	Complementary	If Fitch determines that a firm has a weak operational risk infrastructure or control environment, such as systems failures, inaccurate trade processing or limit breaches (such as rogue trading incidents) this will typically have a negative effect on the operational risk assessment, particularly to the extent failures result in reputational damage, loss of business, and or outsized fines/penalties. Operational risk can potentially have a more pronounced effect on less diversified businesses, where an operational shortfall can result in temporary or permanent damage to the company's core franchise.

Source: Fitch.

Risk Appetite — Securities Firms

	aaa	aa	a	bbb	bb	b	ccc and Below
Risk Controls	Risk and reporting tools are extremely robust. Risk limits are highly conservative and overwhelmingly adhered to. Risk limits are routinely monitored with minimal changes over lengthy periods. Risk controls permeate the organization. Exposure to operational risks is very low. New products are heavily vetted and tested before rollout.	Risk and reporting tools are very robust. Risk limits are very conservative. Risk limits are routinely monitored with nominal changes over lengthy periods. Risk controls permeate the organization. Exposure to operational risks is low. New products are carefully vetted and tested before rollout.	Risk and reporting tools are robust. Risk limits are conservative. Risk limits are monitored but may change based on business conditions. Risk controls are centralized. Exposure to operational risks is modest. New products are carefully tested before rollout.	Risk and reporting tools are good. Risk limits are sound and monitored, although they may fluctuate based on opportunities. Risk controls are less pervasive throughout the organization. Exposure to operational risks is moderate. New products are tested before rollout.	Risk and reporting tools are acceptable, but may lack depth or sophistication. Risk limits are monitored less frequently than higher rated institutions. Risk limits may change based on business opportunities. Exposure to operational risks is heightened. New products may not be thoroughly vetted or tested before rollout.	Risk and reporting tools may be deficient. Risk limits are crude and may not be monitored frequently. Breaches of limits may not trigger heightened management attention. Exposure to operational risks is high. New products are not tested before rollout.	There are significant risk control deficiencies.
Growth	Balance-sheet growth or business growth is unlikely to pressure solvency or outpace the long-term sustainable growth of main business segments. Control environment is systematically adapted to meet higher business volumes.	Balance-sheet growth or business growth seldom pressures solvency or outpaces the long-term sustainable growth of main business segments. Control environment is systematically adapted to meet higher business volumes.	Balance-sheet growth or business growth may at times pressure solvency and exceed the long-term sustainable growth of main business segments. Control environment is usually suitably adapted to meet higher business volumes.	Balance-sheet growth or business growth more often pressures solvency and exceeds the long-term sustainable growth of main business segments. Control environment may lag behind higher business volumes.	Balance-sheet or business growth often pressures solvency and exceeds the long-term sustainable growth of main business segments. Control environment likely to lag behind higher business volumes.	Balance-sheet growth usually pressures solvency and the long-term sustainable growth of business segments. Control environment routinely lags behind higher business volumes.	Growth may be well in excess of sustainable levels. Or unable to sell assets to achieve necessary balance sheet contraction.
Market Risk (Direct and Indirect)	Exposure to market risks is very low. Structural interest rate and foreign exchange risks are very low relative to peers. Proprietary trading is very low.	Exposure to market risks is low. Structural interest rate and foreign exchange risks are low relative to peers and appropriately mitigated through hedging. Proprietary trading is low.	Exposure to market risks is modest. Structural interest rate and foreign exchange risks are modest and appropriately mitigated through hedging. Proprietary trading may be material, but have sound controls.	Exposure to market risks is average. Appropriate hedging techniques are likely to be employed. Proprietary trading may be material. Controls may be satisfactory, but somewhat below industry best practice.	Exposure to market risks is heightened. Market risks may encompass structural interest rate and foreign exchange risks. Basic hedging techniques may be employed or effectiveness somewhat compromised.	Exposure to market risks is high or highly variable. Risks may not be effectively hedged	There may be significant market risk. Controls have not been established.
Operational Risk	Very strong operational risk infrastructure/framework. Demonstrated track record of limited operational losses.	Strong operational risk infrastructure/framework. Demonstrated track record of limited operational losses.	Good operational risk infrastructure/framework. Significant operational losses are corrected promptly.	Adequate operational risk infrastructure, with some processes outsourced to third-party processors. Operational losses may occur but are manageable.	Limited operational risk infrastructure, with heavy reliance on third-party providers. History of operational losses/issues.	Weak operational risk infrastructure. History of operational losses/issues.	Significant operational risk management shortfalls.

Source: Fitch.

II.4.b Investment Managers

Fitch's risk appetite assessment for investment managers, investment companies and investment funds considers the following subfactors:

- risk controls;
- growth;
- market risk and counterparty risk; and
- operational risk (for investment managers and investment funds) or underwriting standards (for investment companies).

Risk Controls — Investment Managers

Attribute	Core Versus Complementary	Description
Risk Management Tools	Core	Fitch assesses investment managers' ability to identify, measure, manage and monitor risk, as supported by its risk and reporting systems and investment in technology. Key areas that Fitch takes into consideration are the independence and effectiveness of the risk management and compliance functions, senior management's understanding and involvement in risk management issues and the reporting lines in place, and whether there is a corporatewide investment risk function that monitors investment risks taken by individual managers to evaluate their potential cumulative impact on the firm's asset performance/asset quality, earnings and franchise. Fitch's assessment of risk controls may consider the types of management reporting used, where these are available. This may help indicate how far risk controls permeate the organization. For investment companies and investment funds, risk management oversight and infrastructure is conducted either by the employees of the investment company or through an affiliated but external investment manager. Therefore, the risk management framework at the investment manager level is considered when relevant. The investment manager may also provide the risk framework and strategy of the fund.
Risk Limits	Complementary	Fitch's assessment of risk controls may also extend to formalized risk limits that are in place, particularly for firms or funds with more complex market risk exposures. Fitch's analysis will tend to focus on a firm's VaR or earnings at risk output, stop-loss limits, concentrations and stress test results where available.
Scenario Testing	Complementary	When available and relevant, Fitch will evaluate scenario tests conducted on current/prospective business activities and, to the extent possible, evaluate the performance against risk measurements. In cases where stress testing results are deemed relevant, but are not available, this may lead to lower stand-alone ratings.

Source: Fitch.

Growth — Investment Managers

Attribute	Core Versus Complementary	Description
Absolute and Relative Rates of Growth	Core	Where growth has been organic, Fitch's growth assessment focuses on whether the firm has the appropriate in-house investment expertise to manage new and/or larger strategies, as underperformance on a relative basis could yield meaningful reputational damage for the firm. Fitch also seeks to understand why (F)AUM growth rates may differ among peer firms.
Impacts of Inorganic Growth	Complementary	For investment managers that have grown rapidly through acquisitions, success of a growth strategy is assessed by evaluating acquisition parameters and price discipline, pre- and post-acquisition performance, client turnover, employee retention statistics and the ability to manage firm culture.
Accompanying Infrastructure Growth	Complementary	Fitch's assessment can be negatively affected in instances when there is not commensurate infrastructure to support growth. On the other hand, successful execution of measured growth with demonstrated discipline in infrastructure and integration management could positively affect Fitch's assessment of growth if accretive to the franchise by building FAUM, earnings power (particularly if it is a stable source), reputation, distribution channels (new client bases) and diversifying product or geographic scope. For investment companies and investment funds, growth can be viewed positively when driven by strong asset appreciation.

Source: Fitch.

Market Risk and Counterparty Risk — Investment Managers

Attribute	Core Versus Complementary	Description
Asset Valuation Risk	Core	Fitch's assessment of market risk considers the extent to which the investment manager relies on net asset value (NAV)-based fees given the impact of valuation movements on management fees. This risk is more prevalent for traditional investment managers because they operate open-end funds with relatively liquid assets. Alternative investment managers generally have a larger portion of fees based on committed capital or invested capital, which will not be affected by underlying valuation movements or redemption activity, although broader market downturns can slow the pace of fund capital calls/investments and, thereby, pressure fund internal rates of return. Market risk is also an important stand-alone credit rating factor for investment companies, investment funds and for investment managers that co-invest, earn performance fees or defer fees into the fund, as earnings and balance sheet leverage will be based on the valuation of underlying fund investments.
Asset Valuation Process	Complementary	The independence of the periodic valuation processes and whether it is done internally or utilizing third parties can be an important consideration, particularly for private investments, which may require modeling techniques or relying upon comparable sales. In such instances, Fitch reviews the reasonableness of the valuation methodology, how management resolves troubled investments and the use of third parties for valuation purposes. Model validation tools to make sure that valuation processes are reasonable and consistent with the seniority of the investment in the underlying company can be critical. Model risk is less relevant for traditional investment managers given that the majority of their assets are considered Level 1 for accounting purposes, meaning they have a readily available market value. Fitch may gain comfort with a firm's valuation process over time by comparing investment exit values to prior-quarter fair values.
Interest Rate and Foreign Exchange Risk	Complementary	Fitch's market risk assessment may also include a review of methods used to measure, monitor and control interest rate risk, which can manifest itself in several forms including its impact on fee generation (such as for cash management products), investment performance (such as for fixed-income funds) and balance sheet sensitivity (such as for co-investment assets or floating-rate liabilities). Where relevant, Fitch also considers earnings sensitivity to movements in interest rates and currencies and whether the exposure is naturally hedged, with offsets within the asset portfolio, or actively hedged with derivatives. Sizable unhedged exposure is more likely to have a negative impact on Fitch's market risk assessment.
Counterparty Quality and Diversification	Complementary	Counterparty quality and diversification are assessed in the context of the placement of an investment manager's own surplus funds, but also on behalf of managed fund assets, given the potential need to move clearing, trading, and/or securities lending activities to other parties should one counterparty face difficulty. Counterparty concentrations could pose increased operational and/or financial risks, which have a negative impact on Fitch's market risk assessment. For investment companies, the reliance on counterparties for hedging and/or funding is typically limited and, as such, counterparty risk is typically a low influence factor. For investment funds, Fitch assesses the diversity of prime brokerage relationships, which are an important source of financing, as well as clearing, settlement and other services. Outsized exposure to a single counterparty that faces financial hardship could result in the fund's inability to withdraw posted collateral or excess funds. Diversification of these counterparties can have a positive influence on the market risk assessment, although this is balanced against the higher cost and potential loss of efficiency when reviewing prime brokerage relationships. Fitch also seeks to understand the extent to which an investment fund requires segregation of its assets, including collateral, or limits on rehypothecation at the broker dealer to ensure access to its securities should its prime broker face difficulties.

Source: Fitch.

Operational Risk — Investment Managers

Attribute	Core Versus Complementary	Description
Operational Infrastructure/ Framework	Core	In assessing operational risk, Fitch considers processes in place relating to compliance, operations, credit and/or investment performance. If Fitch determines that the operational infrastructure is weak or operational risk is not well controlled, this is likely to negatively impact Fitch's operational risk assessment given the potential for reputational risk, legal risk or both. For investment funds, operational risk can be an important consideration, particularly if the fund focuses on trading strategies involving high complexity, volume and/or automation. For investment companies, operational risk is typically a low influence factor given a smaller (relative) number of investments and less frequent (relative) investment turnover. Furthermore, given that value creation is typically premised on asset appreciation, Fitch tends to place more emphasis on investment companies' underwriting standards in terms of sourcing, due diligence, investment committee review, structuring and monitoring.
Operational Outsourcing	Complementary	Many investment managers, investment companies and investment funds outsource key operational functions to outside processors, such as asset custodians, independent pricing services or trade processors. In such cases, operational risk still exists but is controlled by the firm's management and analysis of its vendors. Fitch's operational risk assessment may evaluate how vendor selection and retention are managed.
Operational Loss History	Complementary	Another possible indicator of the quality of operational risk management is past operational loss history, if available. Most publicly traded firms will discuss significant losses in their financial disclosures. For privately held firms, Fitch will seek to review a record of such losses to understand their nature and whether sufficient controls have been put in place to make their recurrence less likely.

Limited operational risk infrastructure, with heavy reliance on third-party providers. History of operational losses/issues.	Weak operational risk infrastructure. History of operational losses/issues.	Significant operational and counterparty risk management shortfalls.

Source: Fitch.

II.4.c Business Development Companies

Fitch's risk appetite assessment for BDCs considers the following subfactors:

- underwriting standards;
- risk controls;
- growth; and
- market risk.

Underwriting Standards — Business Development Companies

Attribute	Core Versus Complementary	Description
Portfolio Construct	Core	Fitch attempts to identify a BDC's general risk appetite by reviewing the portfolio construct, yields, industry and issuer concentrations, and underlying portfolio company statistics, including average EBITDA, leverage, interest coverage, and exposure to covenant lite loans. A BDC that is generating outsized portfolio yields relative to peers could indicate an ability to identify and structure unique and complex investments that command a higher yield, which could be a positive factor, or could indicate a higher risk appetite, which would be a negative factor. An observation of portfolio performance over an extended period aids Fitch in its ability to differentiate between these two possibilities.
Underwriting Process	Complementary	Fitch's assessment of a BDC's underwriting standards considers sourcing, due diligence, investment committee review, structuring, funding and monitoring. Fitch may review investment memos and other underwriting documentation, where available, to assesses whether the process is comprehensive, particularly where the BDC does not have a long and established underwriting track record. Fitch also focuses on the development and monitoring of key sponsor relationships to understand concentration risks and the potential for adverse selection.
Performance/ Portfolio Consistency	Complementary	A BDC's credit culture and standards should generally exhibit consistency, although Fitch recognizes that a BDC's origination volume may vary to some extent based on market conditions. An opinion about a BDC's underwriting acumen and consistency is formed over time and best observed based on performance through a full economic cycle. In the absence of that information, Fitch will seek insight into management's prior performance managing similar assets and structures through a variety of market conditions, although a short operating history is generally a limiting rating factor. Evidence of strong and consistent underwriting over an extended period can positively influence Fitch's assessment of underwriting standards.

Source: Fitch.

Risk Controls — Business Development Companies

Attribute	Core Versus Complementary	Description
Risk Management Tools	Core	Fitch's assessment of a BDCs risk controls can be positively influenced by strong and effective risk management tools which allow the BDC to effectively adhere to its risk appetite framework and underwriting standards. These generally include limits pertaining to industry or issuer concentrations, market risks, and operational controls. They may also include tools such as internal ratings, watchlists or other risk monitoring scales.
Risk Reporting	Complementary	Fitch's assessment of a BDC's risk controls may also consider the types of management reporting used, where these are available. This may help indicate how far risk controls permeate the organization with respect to key risks a BDC may incur, such as credit, market and operational risks. A negative driver of Fitch's assessment of a BDC's risk controls would be deficiencies in operational risk management that have already manifested themselves and are uncured.

Source: Fitch.

Growth — Business Development Companies

Attribute	Core Versus Complementary	Description
Absolute and Relative Rates of Growth	Core	A BDC's growth is assessed on an absolute and relative basis based on market opportunities, underwriting conditions and the firm's own experience and track record in the sector. Outsized growth in competitive market conditions, characterized by tighter spreads, higher leverage and looser covenant packages, could increase the risks of vintage concentrations and lead to potential asset quality issues down the road, which would be viewed negatively. Fitch does consider whether the BDC's size and relationships provide it with more deal selectivity and structuring flexibility despite tougher market conditions, but sacrificing quality for growth would have a negative impact on Fitch's assessment.
Accompanying Infrastructure Growth	Complementary	Fitch assessment of growth also considers whether the BDC's infrastructure is expanding appropriately to manage a larger portfolio. Infrastructure growth should span front-line investment professionals, back-office accounting, finance and administrative support and technology resources. Expansion into new industry verticals should also be measured and accompanied by commensurate growth in appropriately skilled staff. Failure to sufficiently invest in the operating platform could lead to credit and/or operational losses, which would have a negative impact on Fitch's assessment.

Source: Fitch.

Market Risk — Business Development Companies

Attribute	Core Versus Complementary	Description
Portfolio Valuation Process	Core	Given the illiquidity of the majority of BDCs' portfolio assets, fair value estimates often require numerous management assumptions. As a result, Fitch views the involvement of independent third-parties in the quarterly valuation process favorably. A BDC that receives independent valuations on its entire portfolio every quarter would be viewed more favorably than a BDC that only has a portion of its portfolio valued by a third party or has its entire portfolio valued by a third party but with less frequency. However, Fitch does expect management and the board to be actively involved in the quarterly process to identify discrepancies or inconsistencies in portfolio company valuation and as a tool to monitor portfolio performance.
Portfolio Valuation Consistency	Complementary	Fitch assesses a BDC's valuation competency over time by reviewing portfolio company exits versus prior-quarter fair value marks. If sale proceeds are consistently below fair value, Fitch would call into question the sufficiency of the valuation process and/or the competency of the third-party provider. Conversely, if exits are consistently above the prior-quarter fair value, Fitch would consider whether the BDC was being too conservative in its valuation process, in an effort to recognize regular realized gains. Fitch expects the above/below marks to generally average out in the long run.
Interest Rate and Foreign Exchange Risks	Complementary	Fitch considers how the BDC's earnings may be affected by a changing rate environment, taking into consideration the fixed/floating asset and funding mix. Where derivatives are employed to manage interest rate exposure, Fitch considers their cost and effectiveness over time, in addition to the counterparty exposure. When applicable, Fitch considers the BDC's exposure to foreign currency movements and the potential impact on profitability and leverage. If derivatives are employed to manage the exposure, Fitch considers their cost and effectiveness over time, in addition to the counterparty exposure.

II.4.d Finance and Leasing Companies

Fitch's risk appetite assessment for finance and leasing companies considers the following subfactors:

- underwriting standards;
- risk controls;
- growth; and
- market risk.

Underwriting Standards — Finance and Leasing Companies

Attribute	Core Versus Complementary	Description
Policies and Procedures	Core	Fitch's assessment of a finance and leasing company's underwriting standards considers internal management credit reports and variances from policy, if available, how problem loans are reported and forbearance practices, to ensure that an issuer is not delaying the recognition of problem credits, particularly in instances where the issuer does not have a long and established track record of underwriting through the cycle.
Residual Value Risk Management	Complementary	Fitch assesses an issuer's exposure to and management of residual value risk by understanding the company's pricing policies, its ability to monitor the condition of assets under lease, its flexibility to alter lease payments (e.g. additional charges for unfair wear and tear) or amend contracts, the relative market liquidity for used collateral and the leasing company's access to a variety of disposal channels. An ability to control residual value gains/losses effectively through a variety of asset cycles is viewed as the clearest demonstration of residual risk management capabilities.
Business Model Specifics	Complementary	Certain types of finance and leasing companies, such as debt purchasers, do not originate or underwrite the original loans they carry on balance sheet or manage. Their business model means asset quality will be inherently weak and their ability to generate cash flow to service debt will largely be a function of the extent recoveries/collections exceed the price paid for the loans. Consequently, for such companies, Fitch's assessment of underwriting standards will additionally focus on pricing discipline through economic cycles. Industry measures such as 'cash on cash multiples' (i.e. collections to date plus estimated remaining collections divided by purchase price) can be a useful indicator of pricing discipline that Fitch would review, where available.

Source: Fitch.

Risk Controls — Finance and Leasing Companies

Attribute	Core Versus Complementary	Description
Risk Management Tools	Core	Fitch assesses a finance and leasing company's adherence to its risk appetite framework and underwriting standards by considering the strength and effectiveness of its risk management tools and systems. These generally include limits pertaining to credit concentrations, geography, market risks and operational controls. They may also include tools such as custom scorecards, internal ratings or third-party data sources such as national credit bureaus.
Risk Reporting	Complementary	Fitch's assessment of risk controls may consider the types of management reporting used, where these are available. This may help indicate how far risk controls permeate the organization with respect to all risks the finance and leasing company may incur, such as credit, market and operational risks.

Source: Fitch.

Growth — Finance and Leasing Companies

Attribute	Core Versus Complementary	Description
Absolute and Relative Rates of Growth	Core	Fitch generally assesses growth in the context of business and balance sheet expansion relative to underlying economic growth, earnings retention, staffing growth and peer, sector and industry averages. Rapid loan growth can also obscure financial analysis, for example, making it more difficult to form a view of true asset quality because loan portfolios have not had time to mature and may be indicative of a lowering of underwriting standards or growth outstripping risk controls.
Accompanying Infrastructure Growth	Complementary	Fitch's growth assessment may be negatively influenced by rapid growth if it introduces other challenges such as operational strains (as back-office or systems may not be capable of handling increased business volumes) or higher leverage (should growth outstrip earnings retention).
Impacts of Inorganic Growth	Complementary	Where growth has been driven by acquisitions of assets or entire companies, Fitch considers the strategic fit, due diligence process, economic impact and integration success. A track record of dilutive transactions, on-boarding missteps and/or expansion into non-core product categories, may negatively influence Fitch's growth assessment.

Source: Fitch.

Market Risk — Finance and Leasing Companies

Attribute	Core Versus Complementary	Description
Interest Rate and Foreign Exchange Risks	Core	Fitch's assessment of a finance or leasing company's market risk primarily considers interest rate risk, arising from differences in the asset and funding profiles of the firm, but may also include elements such as derivatives use or direct and indirect foreign exchange risks. Market risks will be higher for issuers where cross-border activity gives rise to foreign exchange risks, so this factor may take on greater relative importance in that instance. For mortgage servicers, the valuation of servicing rights will be heavily influenced by the level and direction of interest rates but will also be affected by trends in housing prices, applicable hedges and other portfolio characteristics.
Market Risk Management Tools and Controls	Complementary	Effective mitigation tools and controls, coupled with a robust stress-testing framework, may be strong mitigating factors in reducing market risk. Where market risk is significant, Fitch assesses the appropriateness of controls relative to this risk, hedging practices and other market risk information across the business.

Source: Fitch.

II.4.e Financial Market Infrastructure Companies

Fitch's risk appetite assessment for FMIs considers the following subfactors:

- operational, reputational and legal risk;
- counterparty risk management; and
- growth.

Operational, Reputational and Legal Risks — Financial Market Infrastructure Companies

Attribute	Core Versus Complementary	Description
Operational Risk Infrastructure	Core	Fitch's assessment of operational, reputational and legal risk centers on the ability to accurately and efficiently process large volumes of transactions as supported by an operational risk infrastructure with robust technological platforms, and appropriate controls and back-office operations. Fitch's assessment will typically be negatively affected if Fitch determines a FMI has a weak or outdated operational risk infrastructure or control environment. In this context, Fitch considers the level of capital expenditures for technology upgrades when assessing operational risk for FMIs. Additionally, legal risk can arise from a FMI processing trades incorrectly or from a breach of applicable laws or regulations (e.g. if it is in breach of sanctions).
Business Continuity and System Availability	Complementary	To ensure business continuity in the event of physical disasters, FMIs must operate effective duplicate and backup computer systems and develop and maintain business continuity plans, including disaster recovery sites that are geographically dispersed. Fitch also considers the system availability ratios (defined as the time a given FMI platform is actually available to operate versus the maximum time a given FMI platform is expected to be available to operate), relative to peers and industry standards as well as frequency and average duration of system outages when activity is interrupted on one or more platforms.

Source: Fitch.

Counterparty Risk Management — Financial Market Infrastructure Companies

Attribute	Core Versus Complementary	Description
Collateral Margining	Core	FMIs seek to minimize counterparty risk by taking significant counterparty collateral that can be utilized in the event of counterparty default. Fitch's counterparty risk management assessment considers the initial sizing and ongoing maintenance of this collateral, along with the predefined counterparty/customer default mechanisms.
Default Processes/ Waterfalls	Core	Fitch's assessment maybe positively influenced by robust and clearly defined default procedures that protect the clearing house and non-defaulting clearing members from a clearing member default. This may include prescribed processes via default waterfalls in place that include using a defaulting clearing member's collateral (margin) and guarantee fund contributions to reduce or eliminate losses. In the event that all losses are not covered, the clearing house can then access clearing house capital contributions, non-defaulting clearing member guarantee fund contributions and potentially further resources of non-defaulting clearing members. Fitch's assessment of counterparty risk management focuses on mechanisms that do not rely upon the imposition of economic losses to clearing participants. Thus, the use of clearing suspension mechanisms, or loss-sharing components at the end of default waterfall, including write-downs of non-defaulting members' contributions to default funds or variation margin gains haircutting would be viewed negatively by Fitch. From a quantitative perspective, Fitch also may assess the level of largest counterparties' exposure in excess of collateral held against the resources allocated by a clearing house for loss mitigation (referred to as "skin in the game") before collective funds can be drawn.
Clearing Member Standards	Complementary	Counterparty risk is managed by stringent clearing member standards, margin requirements, acceptable collateral requirements and guaranty funds. Fitch generally reviews clearing houses' policies and procedures with respect to counterparty risk management to determine the extent to which they capture potential counterparty risks in a comprehensive and forward-looking manner. Fitch considers the factors outlined in the Considerations for FMIs' Counterparty Risk Management Framework table below when assessing the sufficiency of a clearing house's counterparty risk management framework.
Business Model Specifics	Complementary	Pure exchanges and CSDs without banking licenses act simply as a venue for trading activity or securities depository and direct subsequent settlement and clearing to third parties. With the exception of minimal counterparty risk arising from trade invoices and potentially from investments in financial assets, exchanges and CSDs without banking licenses are not materially exposed to counterparty risk. As such, counterparty risk is not a key stand-alone ratings driver for exchanges or CSDs without banking licenses, although both types of organizations typically subject their members to minimum qualitative and quantitative requirements.

Remediation	Valuation	Diversification	
Membership Rules	Buffers	Custody	
Concentration Management	Haircuts		
	Review		

Source: Fitch.

Growth — Financial Market Infrastructure Companies

Attribute	Core Versus Complementary	Description
Absolute and Relative Rates of Growth	Core	Fitch assesses FMIs' growth in the context of balance sheet and/or business growth relative to underlying market conditions, volatility and peer averages. Generally, clearing houses have significant margin deposit and guaranty fund contribution offsets on both sides of the balance sheet associated with the respective securities cleared. Growth of these balance sheet components are highly correlated to overall market conditions. When assessing the growth of a clearing house, Fitch excludes these balances from its primary analysis, as these funds are for the benefit of clearing member creditors and do not reflect growth of the core balance sheet. That said, the trend in the growth of the consolidated balance can be informative over the longer term.
Accompanying Infrastructure Growth	Complementary	Fitch's growth assessment may be negatively influenced if rapid growth strains the ability of technology platforms and back-office operations to handle increased trading, clearing or depository volumes.
Impacts of Inorganic Growth	Complementary	Non-accretive acquisitions may negatively affect Fitch's growth assessment if they do not complement the long-term strategy of the combined entity. Additionally, acquisitions could negatively affect Fitch's growth assessment if leverage metrics are elevated and/or integration costs are high.

Balance sheet growth usually exceeds long-term sustainable growth of business segments. Control environment routinely lags behind higher business volumes.	Growth may be well in excess of sustainable levels.

II.5 Financial Profile Assessment

Importance of this Assessment

A non-bank financial institution's financial profile, which can often be measured by analyzing key financial metrics and trends in and stability of those metrics, is relevant because it provides a strong indication of how the firm is performing across key dimensions of creditworthiness. In many respects, financial measures are the outcome of the non-bank financial institution's operating environment, company profile, management and strategy and risk appetite.

Risk measures enable an analysis of how a non-bank financial institution's risk appetite and management compare with those of peers and whether performance is commensurate with business cycles. Asset quality is relevant because weak asset quality can undermine a non-bank financial institution's balance sheet solvency and ultimately its ability to meet obligations to creditors. Leverage and capital adequacy measures are relevant because they determine a non-bank financial institution's ability to grow and absorb unexpected losses. Funding and liquidity are relevant because inadequacies in these two areas often lead to non-bank financial institution failures as a result of asset/liability mismatches or asset illiquidity. Profitability matters as it determines the non-bank financial institution's ability to service debt and/or generate capital internally to act as a first line of defense against rising impairment charges or other sources of risk or loss.

Fitch's starting point is typically audited financial statements, but it will generally also consider unaudited and interim financial statements. Fitch makes adjustments to allow for greater comparability across jurisdictions (IFRS versus U.S. GAAP), such as re-classification of items to fit its standard spreadsheets and ratio calculations. Adjustments could entail exclusion of one-off gains/losses or non-cash earnings and expenses from operating profitability, exclusion of intangible assets from capital or inclusion of restructured loans as part of impaired assets.

Fitch generally employs its own stress tests on various aspects of a non-bank financial institution's financial profile *(See Annex 4)* such as asset quality, capital adequacy or liquidity. These may include various institution-specific, regional or broad industry scenarios to determine an institution's ability to withstand a rapid shift in the operating environment. The results of these stress tests are informative on both an absolute and relative basis but by themselves may not necessarily drive rating decisions. Fitch also considers issuer-generated stress tests to understand how these drive decision-making within the organization.

Quantitative Ranges

For each non-bank financial institution subsector, Fitch uses a set of core metrics and complementary metrics for financial profile factors. Figures in the sections below set out the indicative quantitative ranges for core financial profile metrics. Fitch uses a four-year average (where data are available) to determine the implied factor score for all metrics, other than for capitalization and leverage, for which it uses the latest available data point, as Fitch views this as a more reliable indicator of the level of the metric in the future. Four-year averages represent an average of the metric in question over each of the four individual periods, as opposed to an aggregation of the numerators and denominators for the cumulative time period.

While a single metric cannot explain a factor score in its entirety, the implied factor score is the starting point in the determination of the actual score. For example, the view of a non-bank financial institution's asset quality would incorporate other aspects such as the rate of growth, collateral and reserves and loan writeoffs, which may result in the implied factor score being adjusted before arriving at the final factor score. Some of these other aspects of a non-bank financial institution's financial profile are captured in complementary metrics, but Fitch

combines quantitative analysis with qualitative judgement to determine the assigned factor scores, which are expressed by a three-notch range.

The most common analytical reasons for adjusting the implied factor scores are outlined in the sections below. Adjustments may negatively or positively influence the final factor score. In general terms, the adjustments tend to fall into two broad categories: (1) Fitch adjusts for specific risk elements or business profile features that may not be adequately captured in the core financial ratios; and (2) Fitch adjusts for cyclical and/or structural elements that, in Fitch's opinion, mean that historical ratios may not be reliable predictors of future performance.

Adjustments to Implied Asset Quality/Asset Performance/Counterparty Exposure Factor Score

The most common adjustments to a non-bank financial institution's implied asset quality/asset performance score are as follow:

Growth: High growth relative to peers or the domestic economy(ies) may lead to a significant deterioration in asset quality or asset performance. In addition, high growth rates may reduce asset quality ratios due to the lag effect on the numerator, while deleveraging may inflate it. Significantly lower growth than peers could be viewed as conservative and positive for the assigned factor score, particularly if market conditions are challenging.

Collateral and Reserves: Strong reserve coverage of impaired loans relative to peers, such as reflected in the ratio of reserves for impaired loans to impaired loans for finance and leasing companies with high balance sheet usage, or a high proportion of secured or government lending (e.g. guaranteed student loans) may reduce the risks from the non-bank financial institution's impaired exposures. Conversely, a focus on unsecured lending or weak reserve coverage would likely have the opposite effect. Deficiencies in the legislative framework that could impact a non-bank financial institution's ability to liquidate collateral, or enforce its rights as a creditor generally, may result in a downward adjustment to the implied score.

Loan Writeoffs: The impaired loans/gross loans ratio may not fully capture the non-bank financial institution's underlying asset quality performance where it writes off a high proportion of loans soon after they become impaired or, conversely, retains legacy problem loans on its balance sheet for an extended period after they become delinquent. Therefore, Fitch also considers the loan impairments generated in recent periods, as reflected in the complementary ratio of loan impairment charges to average gross loans.

Loan Classification Policies: If Fitch believes a non-bank financial institution has a relatively large proportion of high-risk assets that are not captured by traditional impaired asset definitions, (e.g. because they have been restructured or are classified in the watch category), this may weigh on Fitch's assessment of asset quality. Conservative asset classification relative to peers may be moderately positive for Fitch's assessment.

Concentrations: The existence of high concentration exposures with respect to single borrowers/counterparties, sectors or asset classes (for example equities, fixed income or alternatives for investment managers) may increase vulnerability to cyclical asset performance fluctuations. Conversely, good portfolio/product diversification may be a moderately positive factor in assessing asset quality or asset performance.

Non-Loan Exposures: Fitch may adjust downward the asset quality score where it believes there are material risks of losses arising from non-loan and lease assets, such as securities, derivative fair values or foreclosed assets or from off-balance sheet exposures, such as managed funds, guarantees and commitments. Conversely, where a relatively high proportion of a non-bank financial institution's risk exposures are outside of the loan book and these are

low risk (e.g. highly rated securities or off-balance sheet trade finance exposures), this may result in a positive adjustment to the implied asset quality score.

Risk Appetite and Business Model: Fitch may adjust the asset quality score downwards where it views the non-bank financial institution as having a relatively high risk appetite, or a business model or asset class specialization which in the agency's view may be more likely to result in future asset quality deterioration or volatility. In such cases, Fitch may take the view that recently reported asset quality metrics are more vulnerable to deterioration as loan and other exposures season. Conversely, a low risk appetite or lower risk business model may result in a moderate positive adjustment to the asset quality score. However, the scope for any positive adjustment is likely to be limited in cases where asset quality metrics are weak due to legacy problem exposures and the non-bank financial institution has only recently reduced its risk appetite.

Historical and Future Metrics: Fitch may view historical asset quality metrics as not being reliable indicators of future metrics, for example, due to changes in a non-bank financial institution's strategy or operations, because mergers, acquisitions or disposals may have a material impact on group risk exposures, Fitch's economic expectations materially deviate from past conditions, or recent asset quality metrics correspond to a particularly favorable or unfavorable part of the credit cycle.

Relative Size: The absolute size of an investment manager's AUM will affect net client flow percentages. Net inflows could outpace peers on a dollar basis but lag as a percentage of AUM. Outsized client flows could be troublesome if investable assets exceed investment opportunities, while below-average flows could be appropriate depending on market conditions.

Adjustments to Implied Earnings and Profitability Factor Score

The most common adjustments to a non-bank financial institution's implied earnings and profitability score are as follow:

Portfolio Risk: For a given business model, earnings may be lower than its peers if a non-bank financial institution is managing a lower risk and, thus, lower yielding portfolio. In such cases, Fitch will also utilize risk-adjusted return measures to assess overall profitability.

Revenue Diversification: Fitch assesses more favorably a non-bank financial institution's performance where operating revenues are more diversified than its peers. Reliance on a single or concentrated set of business lines, client relationships or revenue streams could negatively affect Fitch's assessment.

Earnings Stability: A positive adjustment could be made to a non-bank financial institution's earnings and profitability score where earnings have proved to be stable through a cycle or where recent performance suggests a sustainable improvement compared to the non-bank financial institution's four-year average. Conversely, high earnings volatility or a recent structural weakening of performance could lead to a negative adjustment. Certain business models or asset classes may also be more vulnerable to cyclical performance swings, even if these have not been observed to date; in such cases, recently reported data may not be sustainable or representative of expected performance through a cycle, which could warrant a downward adjustment to the earnings and performance score.

Historical and Future Metrics: Fitch may view historical earnings and profitability metrics as not being reliably indicative of future metrics, for example, due to changes in a non-bank financial institution's strategy or operations, because mergers, acquisitions or disposals may have a material impact on group profitability, because Fitch's economic expectations materially deviate from past conditions, or because recent performance metrics correspond to a particularly favorable or unfavorable part of the credit cycle.

Ownership and Structural Considerations: While non-bank financial institutions with external shareholders will often be focused on consistently maximizing earnings, non-bank financial institutions that are narrowly owned or employee-owned may have more flexibility to sacrifice current earnings in exchange for future growth potential, competitive positioning and/or employee retention. This flexibility will be factored into a non-bank financial institution's earnings assessment.

Adjustments to Implied Capitalization and Leverage Factor Score

The most common adjustments to a non-bank financial institution's implied capitalization and leverage score are as follow:

Reserve Coverage and Asset Valuation: An adjustment to capital may be required to reflect any material under- or over-provisioning of impaired assets, as captured in the ratio of impaired loans less reserves for impaired loans to Fitch core capital. Aggressive or conservative valuations of performing assets or high volumes of other higher risk assets (e.g. foreclosed assets) could also affect Fitch's assessment of capitalization.

Profitability, Payouts and Growth: Fitch may adjust downward the capitalization and leverage score where a non-bank financial institution's earnings retention is weak (e.g. due to weak profitability and/or high pay-out ratios or share repurchase rates) or the non-bank financial institution's expected rate of growth is high, to reflect the likely negative impact this will have on capital metrics. Conversely, strong earnings retention or low growth may result in a positive adjustment to the capitalization and leverage score.

Concentrations: The existence of high concentration to single borrowers/counterparties, sectors or asset classes may increase the vulnerability of capital to asset performance fluctuations. Conversely, good portfolio diversification may be a moderately positive factor in assessing capitalization and leverage.

Size: A small (in absolute terms) capital base can leave an institution more vulnerable to unforeseen events, especially where there are risk concentrations, even if capital ratios are relatively strong. This may result in a downward adjustment of a non-bank financial institution's capitalization and leverage score. A large (in absolute terms) capital base could be moderately positive for the assessment.

Fungibility: Fitch may adjust downward a parent non-bank financial institution's capitalization and leverage score where it has material subsidiaries, in particular regulated or foreign ones, and there are significant restrictions on transfers of capital within the group. Weaker stand-alone capital ratios than for the group on a consolidated basis would increase the likelihood of such an adjustment.

Capital Raising (or Distribution): Fitch may adjust the capitalization and leverage score to reflect capital raising or distribution (or expectations of these) that have occurred subsequent to the last financial reporting date.

Risk Appetite and Business Model: Certain business models or asset class specializations may be more vulnerable to cyclical performance swings, such that a larger capital buffer is required to achieve a given capitalization and leverage score. Conversely, a positive adjustment could be made where performance has proved to be stable through a cycle or if the entity benefits from both balance sheet assets and cash flow generation capability. The capitalization and leverage score for non-bank financial institutions assessed on the basis of cash flow leverage (debt/EBITDA) could also be adjusted to reflect variability in EBITDA generation.

Historical and Future Metrics: Fitch may view the most recent reported capitalization and leverage metrics as not being reliable indicators of future metrics, for example, due to changes in a non-bank financial institution's strategy or operations, because mergers, acquisitions or disposals may have a material impact on the group profile or because of anticipated changes in the bank's asset-quality performance or profitability.

Sustained, Elevated Cash Balances: Although Fitch tends to focus on leverage ratios based on gross debt, the agency may adjust the capitalization and leverage score upward where, for example, a non-bank financial institution has consistently maintained elevated cash balances, in which case Fitch may place greater emphasis on net debt leverage ratios. Consideration of net debt leverage ratios would be supported by the presence of structural features that ensure the ongoing availability of cash to benefit debtholders, demonstration of cash maintenance through periods of stress or public articulation of a strategy to maintain such cash balances. The absence of these features would make such an upward adjustment unlikely.

Adjustments to Implied Funding, Liquidity and Coverage Factor Score

The most common adjustments to a non-bank financial institution's implied funding, liquidity and coverage score are as follow:

Liquidity Coverage: Strong or weak coverage of a non-bank financial institution's short-term liabilities by liquid assets could result in upward or downward adjustment, respectively, to the funding, liquidity and coverage score. Fitch will consider the volume, quality and encumbrance of a non-bank financial institution's liquid assets in making this assessment. The absence of near- and medium-term debt maturities may reduce the need for significant liquidity, particularly if liability maturities extend beyond asset maturities. Similarly, the funding, liquid and coverage score may be adjusted upwards for investment funds with limited near- and medium-term financial obligations.

Cash Flow Generative Business Model: A higher funding, liquidity and coverage score could result if the non-bank financial institution's business model is viewed as highly cash flow generative, particularly during times of stress, economic slowdown and/or reduced capital expenditures. For example, certain business models with contractual cash flows (servicers, rental/leasing companies) have historically demonstrated an ability to generate significant cash flow once discretionary capital expenditures are moderated.

Confidence Sensitivity: Fitch will consider a non-bank financial institution's term structure, diversification by source and reliability of market access in assessing risks associated with its wholesale funding. Stable long-term funding (e.g. due to well-established market access) could result in an upward adjustment to the funding, liquidity and coverage score. Conversely, a non-bank financial institution's implied funding, liquidity and coverage score may be adjusted downward where it has inconsistent or limited access to the capital markets.

Foreign Currency Liquidity: A non-bank financial institution's funding, liquidity and coverage score may be adjusted downward where coverage of foreign currency liabilities by foreign currency liquidity is weak, in particular where it could be difficult for a non-bank financial institution to convert local currency into foreign currency, in case of need.

Fungibility: Fitch may adjust downward a non-bank financial institution's funding, liquidity and coverage score where it has material subsidiaries, in particular foreign or regulated ones, and there are significant restrictions on transfers of liquidity within the group. Weaker stand-alone liquidity and funding ratios than for the group on a consolidated basis would increase the likelihood of such an adjustment.

Contingent Access: A relatively strong ability to access contingent liquidity, for example, as a result of sizable, committed and long-duration credit lines, could result in a positive adjustment to the funding, liquidity and coverage score. Conversely, undue reliance on short-duration or uncommitted funding could result in a negative adjustment.

Historical and Future Metrics: Fitch may view historical funding and liquidity metrics as not being reliable indicators of future metrics, for example, due to changes in a non-bank financial institution's strategy or operations or because mergers, acquisitions or disposals may have a material impact on balance-sheet structure.

Financial measures are usually influenced by the operating environment, and Fitch views them in that context. Therefore, comparisons of financial measures across geographies will reflect the differing operating, legal, and regulatory environments for non-banks. Consequently, comparisons of financial measures of direct or in-market peers will generally take on greater importance in this assessment.

Fitch does not employ pre-set weightings for factors or subfactors, as their relative influence may vary. For example, the relative importance of capitalization and leverage and asset quality for the stand-alone credit profile of a non-bank financial institution suffering from a material capital shortfall as a result of high idiosyncratic loan losses is likely to be high (and the stand-alone credit rating very low), even if the non-bank financial institution fares well or better on other factors or subfactors.

Throughout the remainder of the Financial Profile section of the criteria, reference is periodically made to EBITDA. For the avoidance of doubt, Fitch typically adjusts EBITDA calculations to account for various analytical considerations, including, but not limited to, non-recurring items, performance-related items or other non-cash expenses, such as stock compensation.

Throughout the remainder of the Financial Profile section of the criteria, reference is periodically made to common equity. For the avoidance of doubt, Fitch focuses on tangible equity, excluding goodwill and other intangibles from its calculations.

The following tables identify those financial profile attributes that Fitch has defined as 'core' versus 'complementary,' together with an indication of how each attribute is typically assessed. The accompanying subfactor/rating category matrix provides representative characteristics that aid the determination of the overall factor score assigned in each case.

EBITDA Calculation[a]

Pre-tax income
+ interest expense
+ depreciation
+ amortization
+/- adjustments for non-recurring items
+/- other analytical adjustments (e.g. non-cash items)
= EBITDA

[a]For investment managers, Fitch typically uses a fee-based EBITDA calculation (FEBITDA) as defined on page 52.

II.5.a Securities Firms

Fitch's financial profile assessment for securities firms considers the following subfactors:

- asset quality;
- earnings and profitability;
- capitalization and leverage; and
- funding, liquidity and coverage.

Risk Characteristics of Securities Firms' Primary Business Activities

Activity	Balance Sheet Usage	Risk Level	Level of Profitability	Stability of Profitability
Securities Market Making	High	High	Medium	Cyclical
Prime Brokerage	High	High	Medium	Cyclical
Proprietary Trading	High	High	Medium	Cyclical
Securities Underwriting	High	Medium	High	Cyclical
Lending	High	Medium	Low	Cyclical
Securities Broking	Low	Medium	Low	Cyclical
Financial Advisory	Low	Low	Medium	Cyclical
Post Trade Services	Low	Low	Low	Stable
Investment Management	Low	Low	Medium-to-High	Stable

Source: Fitch.

Asset Quality — Securities Firms

Attribute	Core Versus Complementary	Description
Impaired and Nonperforming Ratio	Core (For Securities Firms with Meaningful Lending Activity)	For securities firms with more meaningful balance sheet exposure to investing and lending activities, the assessment of asset quality is akin to Fitch's analysis for other non-bank financial institution lenders, taking into account loan impairments, related reserving and asset growth. For securities firms with low balance sheet usage, asset quality may be a lower influence consideration or may even by viewed as not applicable.
Coverage, Collateral and Margin	Complementary (For Securities Firms with Meaningful Lending Activity)	Fitch considers reserve coverage ratios, the adequacy of collateral and margin requirements and the ability to enforce security claims. Fitch's focus is to determine whether the firm's capital is likely to be negatively affected due to inadequate reserve coverage levels. For assets held at fair or market value, Fitch assesses measurement methodologies, particularly regarding model-based valuations. Fitch also considers the management of non-performing assets and management's approach to restructuring and rescheduling impaired assets.
Counterparty and Settlement Risks	Complementary	Counterparty risk is a consideration for firms engaged in securities and derivatives transactions. The absence of independent credit functions and scoring or rating policies for securities/derivative counterparty exposures would negatively influence Fitch's asset quality assessment. However, credit risk is not as significant for pure brokerage activity (such as for some interdealer brokers) or for firms that provide advisory services, rather than invest in securities transactions. A credit risk department independent of the sales and trading desks that determines counterparty limits, actively monitors usage and reports violations could positively influence Fitch's asset quality assessment, as could risk parameters with respect to the credit quality of the main custodians used.
Securitization and Other Off Balance Sheet Exposure	Complementary (For Securities Firms with Meaningful Lending Activity)	To the extent that Fitch is able to ascertain and evaluate a securities firm's exposure to securitization risks, first-loss tranches of off-balance-sheet securitizations are deducted from Fitch's Core Capital calculations. The agency may also add these risks to the balance sheet if they are not already reported as such. Fitch considers off-balance sheet risks and commitments where these are large in relation either to capital or risk-weighted assets, or where they pose significant reputational or liquidity risks. This is likely to be an inherent risk faced by firms that have agreed to fund special purpose vehicles or other non-consolidated contingencies but is also important for firms that sponsor investment funds.

Source: Fitch.

Earnings and Profitability — Securities Firms

Attribute	Core Versus Complementary	Description
Operating Profit/Average Equity	Core (For Securities Firms with High Balance Sheet Usage)	Earnings and profitability are important considerations in Fitch's analysis of securities firms with high balance sheet usage because they indicate a securities firm's ability to generate, or conversely erode, its capital. Strong or weak performance may also affect market confidence in the issuer and, hence, its access to funding. The core metric, operating profit/average equity, captures a securities firm's ability to generate recurring profits relative to the risks it assumes.
Adjusted EBITDA/ Revenue	Core (For Securities Firms with Low Balance Sheet Usage)	For securities firms with limited balance sheet-intensive activities, the primary cash flow profitability measure is adjusted EBITDA margin. Given many securities firms with low balance sheet usage have a continual need to invest in technology development, Fitch also considers the amount of operating cash flow generated to support capital expenditures.
Earnings Stability	Complementary	Fitch's earnings and profitability assessment may be negatively influenced by proprietary trading and investment activity due to the significant potential earnings volatility it can introduce. Conversely, if higher risk businesses are supplemented with more stable operating revenue, such as investment management, clearing operations or securities financings, this can positively influence Fitch's earnings and profitability assessment.
Compensation Expenses	Complementary	Compensation expenses are often analyzed as a percentage of net revenue, to determine the costs relative to activity levels, with outsized compensation ratios potentially constraining stand-alone credit ratings. However, business mix is an important consideration in evaluating this ratio as specific business lines may require greater or less infrastructure and personnel support. The stability of the compensation ratio through various revenue cycles is also an important measure of the flexibility of the cost structure. Fitch evaluates the effectiveness of a firm's compensation, mainly its bonus, policy in controlling compensation expenses. This includes the extent to which bonuses are linked to company or individual performance, are spread out over time, or are paid in shares or options rather than cash.
Non-Compensation Expenses	Complementary	Fitch evaluates non-staff costs as a percentage of non-interest expenses in aggregate and, where possible or relevant, by individual line items. The agency may also consider the business mix of the firm in evaluating non-staff cost ratios. Although an abnormally high non-staff costs expense ratio or a rising trend may indicate a lack of management control over expense levels, low ratios may indicate insufficient reinvestment in systems technology and infrastructure to enhance productivity, meet regulatory requirements and sustain the firm's competitiveness or to maintain good oversight of risk development.

Capitalization and Leverage — Securities Firms

Attribute	Core Versus Complementary	Description
Net Adjusted Leverage (tangible assets less reverse repo and securities borrowed over FCC, or its inverse)	Core (For securities firms with high balance sheet usage)	For those securities firms that maintain a substantial volume of assets on balance sheet or commitments that could require financing, Fitch's assessment of leverage more closely reflects a bank analysis. The quality and absolute size of a firm's capital and its capital adequacy (i.e. the size of its capital in relation to its risks) as expressed by the FCC ratio, is the fundamental consideration in assessing balance sheet intensive securities firms' capitalization and leverage.
Gross Debt/ Adjusted EBITDA	Core (For securities firms with low balance sheet usage)	For securities firms carrying relatively few risk assets, the assessment of debt coverage is based more on cash flows. For interdealer brokers and some other securities firms, a large proportion of cash is usually tied up in subsidiaries for regulatory and operational purposes, so leverage is best assessed on a gross debt basis. Fitch also considers net debt/adjusted EBITDA, but recognizes that excess cash can be otherwise consumed or deployed, particularly during periods of stress. For securities firms that have a combination of businesses which have different degrees of balance sheet usage, such a retail brokers, Fitch will typically evaluate both cash flow and balance sheet leverage ratios, with balance sheet ratios taking increasing importance in the analysis in instances where balance sheet usage is more pronounced.
Double Leverage	Complementary	Where relevant, Fitch also looks at double leverage, defined as equity investments in subsidiaries plus holding company intangibles divided by equity, which reflects debt issued at the parent company level that has been downstreamed as equity into subsidiaries. While a small amount of double leverage can be expected, Fitch is concerned when double leverage is high (i.e. above 120% or more of a parent company's common equity) on a sustained basis, unless mitigated by some other means (e.g. subsidiary liquidity support agreement). A high degree of double leverage can result in increased rating differentials between a parent company and its subsidiaries, particularly if regulated subsidiaries are involved, since dividends from these entities may be restricted. When feasible, Fitch will review a regulated subsidiary's dividend capacity relative to the holding company's fixed costs and dividends.
Internal, Regulatory and Covenant-Based Capital	Complementary	In addition to Fitch's capital measures, a firm's capital management plans and an understanding of its economic capital models are important to the ratings. Fitch views economic capital models that positively influence business activities and support stable and robust capital levels over an extended period of time as positive for the ratings. When relevant, Fitch monitors regulatory capital ratios and capital covenant ratios to ensure the firm is not in danger of becoming non-compliant.

Funding, Liquidity and Coverage — Securities Firms

Attribute	Core Versus Complementary	Description
Liquid Assets/ Short-Term Funding	Core (For securities firms with high balance sheet usage)	It is important that securities firms appropriately match the term of their funding to the liquidity of their assets, with particular focus on the amount of liquid assets available to support short-term funding sources, which are subject to refinancing risk. To the extent that short-term repurchase agreements (repos) are used primarily to finance highly liquid assets that can be pledged to an exchange, this is viewed as more appropriate.
Adjusted EBITDA/Interest Expense	Core (For securities Firms with Low Balance Sheet Usage)	For securities firms with low balance sheet usage, funding, liquidity and coverage are primarily evaluated in the context of adjusted EBITDA to interest expense.
Long-Term Funding/ Illiquid Assets	Complementary (For Securities Firms with High Balance Sheet Usage)	Fitch evaluates the funding of illiquid assets, such as merchant banking and high-yield securities, fixed assets, and private equity, and considers the extent to which they are funded by long-term debt and capital. Fitch also evaluates any contingent funding requirements the firm may face, such as liquidity lines or backup facilities extended, or additional collateral calls that may be made on it if market conditions change.
Funding Diversity	Complementary	Fitch assesses a securities firm's funding diversity, debt maturity profile, liquidity status and the proportion of unencumbered liquid assets. Access to central bank liquidity facilities can also a positive factor in the funding, liquidity and coverage assessment, but not all securities firms benefit from this, as such access depends on jurisdiction and legal status within that jurisdiction.
Covenant Compliance	Complementary	Fitch's funding, liquidity and coverage assessment may also include consideration of an issuer's compliance with any funding covenants, the extent to which compliance with such covenants fluctuates and management's ability to operate the business and obtain funding without being unduly constrained by covenant requirements.

Financial Profile — Securities Firms

	aaa	aa	a	bbb	bb	b	ccc and Below
Asset Quality	Lending and Investing Activities: Extremely stable throughout market cycles. Asset-quality measures are consistently better than comparable institutions. Concentration risks are very low. Trading Activities: Counterparty risk is extremely well managed and diversified.	Lending and Investing Activities: Very high degree of stability throughout market cycles. Asset-quality measures are better than comparable institutions. Concentration risks are low. Trading Activities: Counterparty risk is well managed and diversified.	Lending and Investing Activities: Has a high degree of stability throughout market cycles. Asset-quality measures are likely to be modestly better than at peer institutions or less vulnerable to economic rate cycles. Concentration risks may be modestly better than peers. Trading Activities: Counterparty risk is reasonably managed and diversified	Lending and Investing Activities: Has a degree of stability throughout market cycles. Asset-quality and/or concentration risk measures are generally in-line with broad industry averages. Trading Activities: Counterparty risk is adequately managed and diversified.	Lending and Investing Activities: Asset quality measures are more volatile in the face of changes in economic/market cycles and generally worse or more vulnerable than broad industry averages. Concentration risks may be above average. Trading Activities: Counterparty risk management is below average with limited diversification	Lending and Investing Activities: Asset quality measures are very volatile based on changes in economic/market cycles and generally significantly worse or more vulnerable than broad industry averages. Concentration risks may be very high. Trading Activities: Weak counterparty risk management with high concentration.	Lending and Investing Activities: Has or is likely to have asset-quality measures that materially deviate from industry benchmarks or historical norms. Trading Activities: Significant counterparty risk management shortfalls.
Earnings and Profitability	Earnings and profitability are highly predictable throughout economic and/or interest rate cycles. Limited reliance on transactional revenue. Highly variable cost structure. Superior returns relative to peer.	Earnings and profitability are very predictable over multiple economic and interest rate cycles. Limited reliance on transactional revenue. Highly variable cost structure. Strong returns relative to peer.	Earnings and profitability are moderately variable over economic and/or interest rate cycles. Modest reliance on transactional revenue. Largely variable cost structure. Solid returns relative to peer.	Earnings and profitability may be variable over economic and/or interest rate cycles. Modest reliance on transactional revenue. Largely variable cost structure. Adequate returns relative to peer.	Earnings and profitability may be highly variable over economic and/or interest rate cycles. Moderate reliance on transactional revenue. Cost structure is less variable than peer firms. Below-average returns relative to peer.	Earnings and profitability are volatile and highly correlated with economic and/or interest rate cycles. Heavy reliance on transactional revenue. Cost structure is largely fixed. Weak returns relative to peer.	May be structurally unprofitable on either a reported or operating basis. Return to break-even or sustainable profitability is highly uncertain.
Capitalization and Leverage	Capitalization and leverage are extremely strong and commensurate with risk. Capitalization and leverage are maintained with very significant buffers over regulatory minimums as well as peer institutions. Capital and leverage targets incorporate ability to withstand severe shocks.	Capitalization and leverage are strong and commensurate with risk. Capitalization and leverage are maintained with comfortable buffers over regulatory minimums as well as peer institutions. Capital and leverage targets incorporate ability to withstand significant shocks.	Capitalization and leverage levels broadly commensurate with risk. Capitalization and leverage are maintained with solid buffers versus regulatory minimums and generally above peer institutions. Capital and leverage levels may be relatively more volatile but likely only modestly affected by severe asset quality and market value shocks.	Capitalization and leverage may not be fully commensurate with risk. Capitalization and leverage are maintained with satisfactory buffers over regulatory minimums and generally in line with peer institutions. Capital and leverage levels may be more vulnerable to severe shocks.	Capitalization and leverage are not fully commensurate with risk. Capitalization and leverage are maintained with moderate buffers over regulatory minimums and may be below peer institutions or are somewhat vulnerable due to significant country risks. Capital and leverage are highly vulnerable to sever shocks, but capable of withstanding moderate shocks.	Capitalization and leverage are not commensurate with risk. Capitalization and leverage are low and buffers over regulatory minimums are small, or capital is vulnerable due to high country risks. Capital and leverage levels may be well below peer institutions and highly vulnerable to shocks.	Capitalization and leverage have clear deficiencies that either have or may require capital injections.
Funding, Liquidity and Coverage	Funding and liquidity are exceptionally stable. Minimal reliance on wholesale funding. Funding is not confidence sensitive. Fund sources are highly diverse. Extremely robust contingency funding plans are in place.	Funding and liquidity are very stable. Minimal reliance on short-term funding. Wholesale funding is predominantly long-term with established investor appetite. Funding is relatively less confidence sensitive. Fund sources are very diverse. Very robust contingency funding plans are in place.	Funding and liquidity are stable. Wholesale funding is predominantly long term. Funding may be modestly confidence sensitive. Funding sources are relatively diverse. Robust contingency funding plans are in place.	Funding and liquidity are generally stable, although there may be moderate funding concentrations or reliance on less stable wholesale funding sources. Funding is confidence sensitive and liquidity may become more expensive or less stable during periods of stress. Reasonable contingency funding plans are in place.	Funding and liquidity are generally stable, although there may be material funding concentrations or meaningful reliance on less stable wholesale funding sources. Access to funding may be uncertain during periods of market stress. Contingency funding plans may not be sufficient.	Funding and liquidity are less stable and may be prone to sudden changes in creditor sentiment. Access to funding during periods of market stress is very uncertain. Contingent funding plans may not be well developed.	Funding and liquidity are unstable absent any formal extraordinary support mechanisms. Contingent funding plans are non-existent.

II.5.b Investment Managers

Fitch's financial profile assessment for investment managers, investment companies and investment funds considers the following subfactors:

- asset performance (and asset quality for investment companies);
- earnings and profitability;
- capitalization and leverage; and
- funding, liquidity and coverage.

Asset Performance — Investment Managers

Attribute	Core Versus Complementary	Description
Net Client Flows/ Beginning (F)AUM	Core (for investment managers and investment funds)	Fitch evaluates fund flows on an absolute and relative basis to understand a firm's ability to take advantage of market conditions to invest and/or exit investments and, for liquid funds, to assess net inflows or redemptions over a variety of market cycles. More stable fund flows translate into greater fee stability over time. To the extent that the manager or fund has more predictable inflows and/or an ability to manage the pace of outflows, these could positively influence Fitch's assessment. Examples of more predictable inflows could include an investment manager with a sister insurance company which uses the investment manager to manage all or a portion of its general investment account or a pension fund established to manage the contributions of a defined portion of employees or citizens. Examples of managed outflows could include fund structures where the investment manager can influence the timing or amount of redemption.
Asset Performance and Quality	Complementary (for investment companies)	For investment companies, Fitch considers a combination of asset performance and asset quality factors. Asset performance is intended to indicate how market value appreciation/depreciation has impacted the value of assets collateralizing outstanding debt while also providing an indication as to the asset selection capabilities of the investment company (or its investment manager). Asset quality is intended to indicate the quality of the investments collateralizing outstanding debt and the quality/reliability of the upstream dividend and interest income received from portfolio companies. For investment companies that invest in a finite number (less than 30) of portfolio companies or exhibit material portfolio concentration (individual holding greater than 15%), Fitch considers the credit quality and seniority of the underlying investments to assess the overall asset quality profile. This is typically achieved by looking to Fitch's ratings of such portfolio companies or by considering other external sources of information in the absence of such information. To the extent that a portfolio company comprising a large portion (greater than 15%) of the portfolio is unrated, Fitch may elect to conduct an internal Credit Opinion of such entity to support the rating of the investment company.
Performance Relative to Benchmarks and Peers	Complementary	Fitch considers the stability of investment performance, on an absolute basis and relative to investor expectations. Fitch will consider firm-specific benchmarks when assessing fund performance, but will also look to independent sources for performance data, where available, to understand relative fund performance based on vintage, size, geography, and strategy. However, prolonged periods of unexplained outperformance would also require further analysis and could lead to a negative adjustment to Fitch's asset performance assessment if material weaknesses in risk management and/or style drift were the catalyst.
Management Fee Stability	Complementary	Fitch will also assess management fee stability by looking at earnings contributions by fund, strategy and/or segment. Similarly, outsized exposure to a sector or industry strategy could increase correlations and volatility in fee streams. Fitch reviews average fee rates on individual strategies on a relative basis to assess the investment manager's pricing power and ability to withstand incremental fee pressure.

Earnings and Profitability — Investment Managers

Attribute	Core Versus Complementary	Description
(F)EBITDA/ Fee Revenue	Core (for Investment Managers)	Fitch assesses investment managers' earnings and profitability primary on the basis of fee-related earnings measures, such as (F)EBITDA margin. (F)EBITDA includes transaction, monitoring and advisory fees, but Fitch may remove them from its recurring cash flow calculation if they are believed to be very volatile over time. Conversely, interest and/or dividend income that an alternative investment manager may earn from balance sheet investments could be added to (F)EBITDA if the revenue is believed to be contractual (e.g. interest coupons and preferred dividends), less correlated with core management fees and relatively stable over time.
Returns on Assets	Core (for Investment Companies and Investment Funds)	For more balance-sheet intensive investment managers, returns on assets (ROA) is the primary earnings and profitability consideration. For investment companies, earnings and profitability is typically a lower influence rating factor given the analytical focus on asset overcollateralization and liquidity relative to debt and that earnings can be periodically influenced by unrealized gains/losses as a result of changes in the market values of underlying investments. On a complementary basis, earnings and profitability may also be assessed on the basis of return on equity (ROE).
Earnings Stability and Diversity	Complementary	Fitch's evaluation of earnings and profitability considers the historical trend of an investment manager's earnings performance, the diversity, stability, and quality of its earnings, and the investment manager's capacity to generate profits through cycles. The product mix and strength of performance by product are key factors in providing earnings stability. An additional component in assessing the stability of earnings and fees is whether there are lock-ups on fund investors.
Incentive Fee Generation	Complementary	While Fitch focuses on recurring cash flow measures when assessing an investment manager's core earnings performance, the agency does not ignore the generation of co-investment income or incentive income (also known as carry income and performance fees), as they can provide an additional cushion for debt service capacity and speak to the success of the fund manager, which aids the company in the raising of future funds and, hence, the generation of future management fees. Carried interest can be material, but has significant variability over time.
Fund Structures and Maturities	Complementary	Fitch views fund structures with lock-ups, particularly longer term ones, more favorably as they provide a more stable base upon which to earn fees. Laddered funds and lock-ups are also generally viewed more favorably from an earnings perspective since they ensure that the closure of one fund does not result in a dramatic drop in fees and consequently earnings.

Capitalization and Leverage — Investment Managers

Attribute	Core Versus Complementary	Description
Gross Debt/(F)EBITDA	Core (for Investment Managers)	Leverage, as measured by debt divided by (F)EBITDA, is analyzed from a trend perspective and relative to peer firms and Fitch's general tolerance levels for a given rating. Fitch applies more conservative leverage benchmarks for investment managers with the majority of their fees assessed against NAV, compared ones with the majority of their fees assessed against committed capital.
Gross Debt/ Tangible Equity	Core (for Investment Companies)	For investment companies, investment funds and investment managers that have material co-investment exposure, balance sheet capitalization is a more meaningful consideration. In reviewing the adequacy of capitalization, Fitch considers the size of the capital base in relation to the investment manager, investment company, or investment fund's risks. To the extent capital is a meaningful analytical factor, Fitch takes into account management's policies with regard to minimum capital ratio objectives, share buyback programs, and dividend payouts, as well as the ability to raise new capital and internally generate capital. If subject to regulatory capital requirements, Fitch will also review these, whether at the firm itself or at any regulated subsidiary.
Gross Debt (Long + Short) to NAV	Core (for Investment Funds)	For investment funds, Fitch typically analyzes leverage similarly to securities firms, using NAV as a substitute for equity. High levels of leverage would be viewed as a negative ratings attribute for investment funds given less stable earnings and the fact that repayment on obligations usually comes from asset sales and these assets are often less liquid. That said, leverage for investment funds can vary widely depending on the risk profile, liquidity and duration of assets.
Balance Sheet Size and Composition	Complementary	Fitch notes that investment managers that solely manage assets for external investors often do not have sizable balance sheets that require meaningful loss absorption. In such cases, capitalization could be lower and tangible common equity could be negative, even at an investment-grade capitalization and leverage score level. However, Fitch would expect such investment managers to have enough cash and cash generation capacity to offset unexpected litigation or operational losses as appropriate given the scope of their operations. All things being equal, an investment manager that makes extensive use of its balance sheet and invests in illiquid investments will tend to have a lower capitalization and leverage score than one that makes little use of its balance sheet. However, other factors such as capitalization, access to capital and liquidity may counterbalance these factors.
Goodwill	Complementary	Many investment managers grow by acquisition and, therefore, will carry a significant amount of goodwill and other intangibles on their balance sheet. These assets are also subject to impairment if the viability of the acquired business deteriorates. Fitch will factor the potential for such impairment into its capitalization and leverage analysis as appropriate. Fitch notes that impairment will not have any impact on tangible capital or FCC, as goodwill is excluded from both measures. However, significant impairment would be a negative indicator of the overall health of an investment manager's core earnings.
Consolidated Leverage	Complementary (for Investment Companies)	For investment companies, Fitch tends to focus on unconsolidated debt to equity as the primary leverage metric and considers cash flow leverage metrics to be of a low influence. Consolidated leverage may be considered as a complementary metric to assess the aggregate degree of leverage across underlying portfolio investments. Fitch may also focus more on consolidated leverage metrics in its analysis to the extent that an investment company has a sustained track record of providing financial support to portfolio companies.

Funding, Liquidity and Coverage — Investment Managers

Attribute	Core Versus Complementary	Description
(F)EBITDA/ Interest Expense	Core (for Investment Managers)	Fitch assesses investment managers' funding, liquidity and coverage primarily on the basis of interest coverage. Fitch applies more conservative interest coverage benchmarks for investment managers with the majority of their fees assessed against NAV relative to investment managers with the majority of their fees assessed against committed capital. For investment managers that pay preferred dividends, Fitch would also calculate (F)EBITDA coverage of both interest expense and preferred dividends.
Upstream Dividend and Interest Income Coverage of Holdco Interest Expense	Core (for Investment Companies)	For investment companies, coverage is evaluated in the context of upstream dividend and interest income from portfolio companies and investments relative to holding company operating expenses, interest expenses and dividends, with greater than two years' coverage being viewed as consistent with an investment-grade funding, liquidity and coverage score. For investment companies that are privately held and do not have stated dividend policies, Fitch will likely remove holding company dividends from the denominator of this ratio reflecting the highly discretionary nature of any such dividends and the absence of similar reputational risk that a publicly traded investment company may face by reducing or cutting its dividend.
(Cash + Unpledged Assets)/Unsecured Debt	Core (for Investment Funds)	For investment funds, Fitch focuses more heavily on the liquidity of the assets rather than their cash flow generation capacity.
Funding Stability and Diversity	Complementary	In assessing the stability of such funding sources, Fitch reviews the maturity profile of the debt, sources of repayment for any near-term maturities, the nature of significant debt covenants and current and recent performance under those covenants. Access to unsecured debt and lack of reliance on any single funding source are viewed as positive factors for the funding, liquidity and coverage score, as is laddering of debt maturities. For investment companies, investment funds and investment managers with more material sheet balance sheet exposure, Fitch also considers the debt maturity profile of the firm's funding sources relative to its asset maturities and asset liquidity.
Liquidity Sources and Terms	Complementary	Fitch considers investment managers' sources of liquidity including committed facilities, cash flow generation capacity, unencumbered balance sheet cash and balance sheet investments. With respect to liability-based sources of liquidity, Fitch considers the terms and maturities of the facilities, associated covenants and the quality of the funding providers. For alternative investment managers, Fitch reviews liquidity levels relative to unfunded commitments, with particular attention to balance sheet cash and liquid securities as a percentage of unfunded commitments. The same considerations apply, albeit to a lesser degree, for investment managers that do not make extensive use of their own balance sheet. Fitch expects such investment managers to have reasonable levels of cash or liability-based liquidity to meet unexpected losses, expected debt maturities, interest service and other outflows.
Distributions	Complementary	Investment managers tend to distribute a significant portion of their earnings on an annual basis. While Fitch believes investment managers have the flexibility to adjust distributions as necessary, liquidity constraints often develop during tougher economic and market environments, when supplementary earnings streams tend to be relatively low. As a result, a high distribution rate can be a constraint on the funding, liquidity and coverage score.
Track Record of Fund Support	Complementary	Fitch assesses the track record of providing financial support to funds, considering both the frequency and magnitude of such support. In conjunction with this review, Fitch will also seek to assess if past support has created a perception among fund investors that future support of funds may be more likely. Material levels of expected future support may negatively affect an issuer's funding, liquidity and coverage score.
Redemption Risk	Complementary (for Investment Funds)	For investment funds, Fitch analyzes the structure of the initial lock-up period, redemption parameters (frequency, notice period, amount, etc.) of the funds thereafter, as well as any gates in its assessment of liquidity management.

Financial Profile — Investment Managers

	aaa	aa	a	bbb	bb	b	ccc and Below
Asset Performance	Exceptionally strong track record of (F)AUM inflows/stability through market cycles. Exceptional performance versus benchmarks and/or top quartile fund performance across strategies. Fee rates and incentive structures are significantly above industry standards. Concentration risks (industry, vintage and investor) are very low or effectively mitigated.	Very strong track record of (F)AUM inflows/stability through market cycles. Consistent outperformance vs. benchmarks and/or top quartile fund performance across strategies. Fee rates and incentive structures are well-above industry standards. Concentration risks (industry, vintage and investor) are low or effectively mitigated.	Strong track record of (F)AUM inflows/stability through market cycles, although flows may turn negative in periods of extreme market stress. Investment/fund performance largely meets or beats benchmark; however, certain strategies/funds may underperform following periods of market stress. Fee rates and incentive structures are above industry standards. Concentration risks (industry, vintage and investor) may be modest.	(F)AUM inflows/stability may be more affected by market conditions/trends. Sound investment/fund performance; but may frequently underperform or lag benchmark. Fee rates and incentive structures largely in-line with industry standards. Concentration risks (industry, vintage and investor) are moderate.	(F)AUM flows may be significantly affected by market conditions/trends. Investment/fund performance may be extremely sensitive to market conditions. Fee rates and incentive structures are below industry standards. Concentration risks (industry, vintage and investor) are meaningful.	(F)AUM flows may stay negative after extreme market stress due to concentration in product/fund type. Persistently weak investment/fund performance. Fee rates and incentive structures are well below industry standards. Concentration risks (industry, vintage and investor) are significant.	(F)AUM flows are highly volatile due to significant concentration within funds/asset classes. Very weak investment/fund performance. Fee rates and incentive structures are well below industry standards.
Earnings and Profitability	Earnings and profitability are highly predictable throughout economic and/or interest rate cycles. Limited reliance on transactional revenue. Highly variable cost structure. Superior returns relative to peer.	Earnings and profitability are very predictable over multiple economic and interest rate cycles. Limited reliance on transactional revenue. Highly variable cost structure. Strong returns relative to peer.	Earnings and profitability are moderately variable over economic and/or interest rate cycles. Modest reliance on transactional revenue. Largely variable cost structure. Solid returns relative to peer.	Earnings and profitability may be variable over economic and/or interest rate cycles. Modest reliance on transactional revenue. Largely variable cost structure. Adequate returns relative to peer.	Earnings and profitability may be highly variable over economic and/or interest rate cycles. Moderate reliance on transactional revenue. Cost structure is less variable than peer firms. Below-average returns relative to peer.	Earnings and profitability are volatile and highly correlated with economic and/or interest rate cycles. Heavy reliance on transactional revenue. Cost structure is largely fixed. Weak returns relative to peer.	May be structurally unprofitable on either a reported or operating basis. Return to break-even or sustainable profitability is highly uncertain.
Capitalization and Leverage	Capitalization and leverage are extremely strong and commensurate with balance sheet risk and/or earnings variability. Leverage targets incorporate ability to withstand severe market value shocks.	Capitalization and leverage are strong and commensurate with balance sheet risk and/or earnings variability. Leverage targets incorporate ability to withstand significant asset quality and market value shocks.	Capitalization and leverage levels broadly commensurate with balance sheet risk and/or earnings variability. Leverage levels may be relatively more volatile, but likely only modestly affected by severe asset quality and market value shocks.	Capitalization and leverage levels may not be fully commensurate with balance sheet risk and/or earnings variability. Leverage levels may be more vulnerable to severe asset quality and market value shocks.	Capitalization and leverage are not fully commensurate with balance sheet risk and/or earnings variability. Leverage is above peer but should be capable of withstanding asset quality and market value shocks.	Capitalization and leverage are not commensurate with balance sheet risk and/or earnings variability. Leverage levels may be well above peer institutions and highly vulnerable to asset quality and market value shocks.	Capitalization and leverage have clear deficiencies that have or may require capital injections.
Funding, Liquidity and Coverage	Funding and liquidity are exceptionally stable. Minimal reliance on wholesale funding. Funding is not confidence sensitive. Funding sources are highly diverse. Funding is fully unsecured. Extremely robust contingency funding plans are in place.	Funding and liquidity are very stable. Minimal reliance on short-term funding. Wholesale funding is predominantly long-term with established investor appetite. Funding is relatively less confidence sensitive. Funding sources are very diverse. Funding is fully unsecured. Very robust contingency funding plans are in place.	Funding and liquidity are stable. Wholesale funding is predominantly long-term. Funding may be modestly confidence sensitive. Funding sources are relatively diverse. Funding is largely unsecured. Robust contingency funding plans are in place.	Funding and liquidity are generally stable, although there may be moderate funding concentrations or reliance on less stable wholesale funding sources. Funding is confidence sensitive and liquidity may become more expensive or less stable during periods of stress. Funding sources are moderately diverse. Meaningful unsecured funding component. Reasonable contingency funding plans are in place.	Funding and liquidity are generally stable, although there may be funding concentrations or meaningful reliance on less-stable wholesale sources of funding. Access to funding may be uncertain during periods of market stress. Funding sources are relatively limited. Lack of an unsecured funding component. Contingency funding plans may not be sufficient.	Funding and liquidity are less stable and may be prone to sudden changes in creditor sentiment. Access to funding during periods of market stress is very uncertain. Funding sources are very limited. Lack of an unsecured funding component. Contingent funding plans may not be well developed.	Funding and liquidity are unstable. Lack of an unsecured funding component. Contingent funding plans are non-existent.

II.5.c Business Development Companies

Fitch's financial profile assessment for BDCs considers the following subfactors:

- asset quality;
- earnings and profitability;
- capitalization and leverage; and
- funding, liquidity and coverage.

Asset Quality — Business Development Companies

Attribute	Core Versus Complementary	Description
Net Realized Gains/ Average Portfolio, at Value	Core	For BDCs, Fitch assesses asset quality primarily by using net realized gains as a percent of average portfolio value as a proxy for net chargeoffs. The generation of significant cumulative net realized portfolio losses over a cycle may be an indicator of weak underwriting particularly if performance is meaningfully weaker than peer BDCs. Still, realized losses may also be generated due to portfolio optimization strategies, where lower yielding securities are sold so that proceeds may be reinvested into higher earning assets. In all cases, Fitch attempts to understand the source of realized losses.
Unrealized Portfolio Depreciation	Complementary	Trends in unrealized portfolio depreciation can serve as an early warning signal of potential asset quality issues, as BDCs must incorporate the credit profile of the underlying borrower into quarterly valuation decisions. Relative trends can also provide insight into the strength of a BDC's risk assessment and/or valuation processes. For example, an increase in portfolio depreciation which runs counter to peer-trends and the then-current credit environment may indicate weak underwriting and/or flawed valuation procedures. An increase in non-cash interest coupons (also known as payment-in-kind [PIK]) can also signal weaker underlying portfolio credit, as portfolio companies may have insufficient cash flows to service their interest payments and the capitalization of coupon payments may be a precursor to eventual writeoffs.
Portfolio Concentrations	Complementary	**Industry:** Certain industry concentrations may be supported by a successful track record and in-house expertise, but Fitch believes outsized concentrations could increase correlations in portfolio company performance, negatively influencing Fitch's asset quality assessment. **Issuer:** Fitch evaluates the largest portfolio investments, at fair value, as a percentage of assets and equity to gauge a BDC's sensitivity to valuation declines in individual investments. Fitch also considers the magnitude of exposure to equity securities, which may experience more volatile valuation movements. Many BDCs are invested in diversified loan funds or portfolio companies that are themselves large, diversified lenders. This underlying diversification may reduce the sensitivity of the investment to valuation movements, although this may be offset by the subordination of the BDC's investment, which is typically a majority equity stake. Outsized issued concentration may negatively influence Fitch's asset quality assessment. **Vintage:** For vintage concentrations, Fitch considers the underwriting environment. A significant amount of origination activity during highly competitive market conditions could yield asset quality issues down the road, negatively influencing Fitch's asset quality assessment. Fitch considers underlying portfolio company statistics including leverage, interest coverage, and average EBITDA to assess the potential for asset quality weakening in a stressed environment.

Earnings and Profitability — Business Development Companies

Attribute	Core Versus Complementary	Description
Net Investment Income/Average Portfolio, at Cost	Core	Earnings and profitability tends to be a lower influence factor for BDCs given they are primarily secured lenders, seeking return of principal at an appropriate risk adjusted return. In this context, outsized investment returns can be as much of a concern as investment returns that are low (or negative), as the former could indicate an elevated risk appetite while the latter could signal weak underwriting and/or pricing power.
Earnings Mix	Complementary	Fitch views earnings profiles comprised primarily of interest income favorably given the relative stability of this income stream. Outsized contributions from transactional fees, driven by originations and/or repayment volume or more episodic equity yields are viewed negatively by Fitch, as these revenue sources are likely to be more volatile over time or provide the wrong motivation for growth. For example, a BDC may be inclined to continue to originate investments in a competitive credit environment if fee income is needed to meet dividend payments.
Realized and Unrealized Gains/Losses	Complementary	When considering unrealized gains and losses arising from the GAAP requirement to mark the portfolio to fair value every quarter, Fitch focuses on what gave rise to the changes and the likelihood these will be realized. Generally speaking, Fitch expects net realized portfolio gains and losses to be relatively modest over time, particularly if underwriting standards are prudent and exposure to equity investments is minimal. However, since BDCs are not allowed to create loan loss reserves, it is realistic to assume that a BDC will have periodic realized credit losses. Therefore, Fitch assesses a firm's net realized loss performance over time and on a relative basis to gain insight into the strength of its underwriting standards.
Cost Structure	Complementary	A BDC's cost structure is analyzed for the amount of flexibility provided when market conditions are less favorable. In this regard, Fitch considers how much of the cost base is variable. Fitch also considers the structure of the management contract for externally managed firms and views total return requirements more favorably. A review of a BDC's expenses as a percentage of the portfolio at cost provides insight into the scalability of the platform and its appropriateness relative to the business model and strategy. If expense ratios are high, it could be an indicator that the BDC has a significant fixed cost burden. Conversely, if expense ratios are too low, it could signal a lack of sufficient infrastructure to manage the portfolio.

Capitalization and Leverage — Business Development Companies

Attribute	Core Versus Complementary	Description
Debt/Tangible Equity	Core	Regulatory requirements essentially limit the debt/equity ratio of a BDC to 1.0x. A breach of this limit precludes the firm from incurring additional debt and will often result in covenant breaches on a BDC's credit facilities. Fitch considers a BDC's leverage target on an absolute basis but also relative to the portfolio construct and market conditions. The leverage target should provide for adequate cushion relative to the 1.0x limitation to account for potential variability in portfolio valuation on a quarterly basis. Fitch believes the cushion should increase when a BDC's investment portfolio is more heavily weighted to the lower part of the capital structure. For example, a BDC with outsized exposure to subordinated debt and/or equity investments would be expected to have a lower leverage target than a BDC focused on senior secured debt investments, all else equal. The 40 Act allows for the exclusion of Small Business Administration (SBA) borrowings from the calculation of asset coverage compliance. However, Fitch includes SBA borrowings in its leverage calculation and its overall assessment of a BDC's credit risk profile.
Adherence to Leverage Policy	Complementary	Most BDCs articulate a leverage target/range which they are expected to adhere to during the normal course of business operations. In such instances, Fitch evaluates the BDC's historical leverage relative to the target. Frequent and/or sustained breaches of the leverage target (absent a material change in portfolio mix) or periodic changes to the articulated strategy could negatively impact Fitch's capitalization and leverage assessment. Conversely, strict adherence to the target, including instances of actively deleveraging in order to maintain compliance, could positively affect Fitch's capitalization and leverage assessment.

Funding, Liquidity and Coverage — Business Development Companies

Attribute	Core Versus Complementary	Description
Unsecured Debt/ Total Debt	Core	Fitch considers the mix of secured and unsecured funding in the BDC capital structure and views a meaningful unsecured funding component positively given that it provides the BDC with the flexibility to add a security interest in the event of a significant disruption in the capital markets. BDCs often have secured bank revolving credit lines with blanket liens on all investment assets, which does not technically provide for an unencumbered pool of assets for unsecured creditors. However, BDCs are generally able to issue secured term debt, which shares in the revolver's blanket lien, if economic access to unsecured funding is not available.
Funding Diversity	Complementary	A BDC with a diverse set of available funding sources, which could consist of revolving credit facilities, special purpose vehicles, securitizations, SBA funding, private placements, public notes and equity, would be viewed more favorably. Fitch tends to view commitments from a diverse group of banks more favorably than single or concentrated lender relationships, as changing conditions at any one financial institution could result in a reduction in lending to the industry and a cancellation of the existing commitment upon maturity, or before if permissible.
Liquidity	Complementary	Liquidity is evaluated based on unrestricted balance sheet cash, undrawn borrowing capacity on revolving facilities, portfolio cash generation and cash earnings coverage of dividend payments. Fitch expects a BDC to have sufficient cash on hand and undrawn capacity on its credit facilities to, at a minimum, provide for follow-on investments in portfolio companies, as necessary, and to meet near-term debt maturities. However, BDCs which maintain borrowing (and leverage) capacity to take advantage of attractive market opportunities as they arise are viewed more favorably.
Net Interest Income Coverage of Dividends	Complementary	BDCs electing to be considered RICs for tax purposes are required to distribute 90% of their taxable income on an annual basis to shareholders. As a result, Fitch expects NII to fund the majority of dividends over time. For its dividend coverage calculation, Fitch adjusts NII by non-cash income and expenses to match cash earnings with dividend payments. Non-cash earnings are generally in the form of PIK interest, which is capitalized to the principal amount of the loan. PIK interest is included in taxable income and is, therefore, subject to distribution, but it may never be collected in cash if the investment is restructured or written off. Fitch views a BDC with outsized exposure to PIK earnings more negatively given the greater disconnect between cash earnings and taxable income. When realized portfolio gains occur, Fitch views it more favorably when those proceeds are distributed as a special dividend or carried over into the next taxable year, as spillover income, which Fitch believes provides more stability to the dividend over time. Raising the regular quarterly dividend due to the generation of realized gains is likely to pressure dividend coverage in the future, as those gains are generally episodic. Realized gains can also be used to backfill NII dividend shortfalls, particularly when underperforming debt investments have been restructured into equity. Fitch believes a decline in cash NII coverage of dividends below 100% for an extended period of time should be met with a dividend reduction. Any indication that the BDC is borrowing or raising equity capital to fund its distribution would be viewed negatively.

Generation of cumulative net realized portfolio gains over a cycle.	Has a very high degree of stability as reflected in low levels of non-accruals and/or low losses over multiple economic and/or interest rate cycles. Asset-quality measures are better than comparable institutions. Concentration risks are low or effectively mitigated. Absence of cumulative net realized portfolio losses over a cycle.	Has a high degree of stability as may be reflected in modest levels of non-accruals and/or losses. Asset quality is moderately variable over economic or interest rate cycles. Asset-quality measures are likely to be modestly better than at peer institutions or less vulnerable to economic and/or interest rate cycles. Portfolio concentrations are modest. May have minimal cumulative net realized portfolio losses over a cycle.	Has a degree of stability as may be reflected in average levels of non-accruals and/or losses. Asset quality measures are likely to fluctuate over economic and/or interest rate cycles. Asset-quality measures are generally in line with broad industry averages. Portfolio concentrations are moderate. May have modest cumulative net realized portfolio losses over a cycle.	Has above-average levels of non-accrual assets and losses. Asset quality measures are likely to be more volatile in the face of changes in economic and/or interest rate cycles and generally worse or more vulnerable than broad industry averages. Portfolio concentrations are high. May have meaningful cumulative net realized portfolio losses over a cycle or lack of performance through a cycle.	Has significantly above -average non-accruals and losses. Asset quality measures are likely to be very volatile based on changes in economic and/or interest rate cycles and generally significantly worse or more vulnerable than broad industry averages. Portfolio concentrations are very high. May have significant cumulative net realized portfolio losses over a cycle or limited performance track record.	Has or is likely to have asset-quality measures that are considerably weaker than industry benchmarks or historical norms.
Earnings and Profitability	Earnings and profitability are highly predictable throughout economic and/or interest rate cycles. Limited reliance on transactional revenue. Highly variable cost structure. Profitability measures are consistently commensurate with risk-averse nature.	Earnings and profitability are very predictable over multiple economic and interest rate cycles. Limited reliance on transactional revenue. Highly variable cost structure. Profitability measures are commensurate with very low risk but may vary modestly, although they remain generally superior to comparable institutions.	Earnings and profitability are moderately variable over economic and/or interest rate cycles. Modest reliance on transactional revenue. Largely variable cost structure. Profitability measures are commensurate with low risk, but subject to variability. Profitability is generally better than industry averages.	Earnings and profitability may be variable over economic and/or interest rate cycles. Modest reliance on transactional revenue. Largely variable cost structure. Profitability measures reflect inherent risk or a highly competitive environment and can be subject to increased variability. Profitability is average relative to broad industry averages.	Earnings and profitability may be highly variable over economic and/or interest rate cycles. Moderate reliance on transactional revenue. Cost structure is less variable than peer firms. Profitability measures may not fully reflect inherent risk and are subject to variability. Profitability is below average relative to broad industry averages.	Earnings and profitability are volatile and highly correlated with economic and/or interest rate cycles. Heavy reliance on transactional revenue. Cost structure is largely fixed. Profitability measures may not fully reflect inherent risk and are subject to variability. Profitability is well below average relative to broad industry averages.	May be structurally unprofitable on either a reported or operating basis. Return to break-even or sustainable profitability is highly uncertain.
Capitalization and Leverage	Capitalization is extremely strong and commensurate with risk. Capitalization and leverage are maintained with very significant buffers versus regulatory minimums as well as peer institutions.	Capitalization is very strong and commensurate with risk. Capitalization and leverage are maintained with comfortable buffers versus regulatory minimums as well as peer institutions.	Capitalization levels are strong and commensurate with risk. Capitalization and leverage are maintained with solid buffers versus regulatory minimums as generally above peer institutions.	Capital levels broadly commensurate with risk. Capitalization and leverage are maintained with satisfactory buffers versus regulatory minimums and generally in line with peer institutions.	Capital levels may not be fully commensurate with risk. Capitalization and leverage are maintained with moderate buffers versus regulatory minimums and may be below peer institutions.	Capital levels are not commensurate with risk. Capitalization is low and buffers versus regulatory minimums are small.	Capitalization and leverage have clear deficiencies that wither have or may require capital injections.
Funding, Liquidity and Coverage	Funding and liquidity are exceptionally stable. Minimal reliance on wholesale funding. Funding is not confidence sensitive. Funding sources are highly diverse. Funding is fully unsecured. Funding duration significantly exceeds average maturity of portfolio assets. Demonstrated access to equity markets across cycles. Absence of non-cash income. Cash net investment income significantly exceeds dividend payments. Extremely robust contingency funding plans are in place.	Funding and liquidity are very stable. Minimal reliance on short-term funding. Wholesale funding is predominantly long term with established investor appetite. Funding sources are very diverse. Funding is predominantly unsecured. Funding duration exceeds average maturity of portfolio assets. Demonstrated access to equity markets across cycles. Minimal non-cash income. Cash net investment income meaningfully exceeds dividend payments. Very robust contingency funding plans are in place.	Funding and liquidity are stable. Wholesale funding is predominantly long term. Funding may be moderately confidence sensitive. Funding sources are relatively diverse. Funding is largely unsecured. Funding duration is commensurate with average maturity of portfolio assets. Demonstrated access to equity markets across cycles. Minimal non-cash income. Cash net investment income exceeds dividend payments. Robust contingency funding plans are in place.	Funding and liquidity are generally stable, although there may be moderate funding concentrations. Reliance on less stable wholesale funding sources. Funding is confidence sensitive, and liquidity may become more expensive or less stable during periods of stress. Meaningful unsecured funding component. Funding duration is commensurate with average maturity of portfolio assets. Demonstrated access to equity markets but may be more sensitive to market conditions. Modest non-cash income. Cash net investment income meets dividend payments. Reasonable contingency funding plans are in place.	Funding and liquidity are generally stable, although there may be funding concentrations or meaningful reliance on less stable wholesale sources of funding. Access to funding may be uncertain during periods of market stress. Lack of an unsecured funding component. Funding duration may not be commensurate with average maturity of portfolio assets. No proven ability to access the equity markets. Moderate non-cash income. Cash net investment income is below dividend payments. Contingency funding plans may not be sufficient.	Funding and liquidity are less stable and may be prone to sudden changes in creditor sentiment. Access to funding during periods of market stress is very uncertain. Lack of an unsecured funding component. Funding duration may not commensurate with average maturity of portfolio assets. Inability to access the equity markets. Meaningful non-cash income. Cash net investment income is well below dividend payments. Contingent funding plans may not be well developed.	Funding and liquidity are unstable. Funding duration is very short term. Lack of an unsecured funding component. Significant non-cash income. Cash net investment income is significantly below dividend payments. Contingent funding plans are non-existent.

II.5.d Finance and Leasing Companies

Fitch's financial profile assessment for finance and leasing companies considers the following subfactors:

- asset quality;
- earnings and profitability;
- capitalization and leverage; and
- funding, liquidity and coverage.

Risk Characteristics of Finance and Leasing Companies' Primary Business Activities

Activity	Balance Sheet Usage	Primary Funding Source[a]	Residual Value Risk?	Primary Earnings Source	Stability of Profitability
Leasing					
Aircraft Leasing	High	Secured/ABS/Unsecured	Yes	Lease Income	More Cyclical
Container Leasing	High	ABS/Secured Bank Lines	Yes	Lease Income	Cyclical
Fleet Leasing	High	ABS/Unsecured	Generally No	Lease Income	Less Cyclical
Truck Leasing	High	Unsecured/Secured	Yes	Lease Income	Less Cyclical
Railcar Leasing	High	Secured	Yes	Lease Income	Cyclical
Rental					
Rental Car	High	ABS	Yes	Rental Income	More Cyclical
Rental Equipment	High	Secured	Yes	Rental Income	More Cyclical
Consumer and Commercial Finance					
Commercial Lending	High	Deposits/Unsecured	No	Spread Income	Cyclical
Auto Lending	High	ABS/Deposits/Unsecured	Yes	Spread Income	Cyclical
Credit Card	High	ABS/Deposits	No	Spread Income	Cyclical
Student Lending	High	ABS/Deposits	No	Spread Income	Stable
Mortgage Origination	High	Secured	No	Origination Fees/Servicing Revenue	Stable
Factoring	High	Deposits/Unsecured	No	Fee Income	Cyclical
Pawn Brokerage	High	Unsecured	Yes	Fee Income/Merchandise Sales	Cyclical
Payday Lending	High	Secured Bank Lines	No	Spread and Fee Income	Cyclical
Debt Purchasers	Medium-High	Bank Lines/Secured Debt	No	Fees/Excess Collections over Purchase Price	Less Cyclical
Financial Services					
Marketplace Lending	Low	Non-Recourse Retail/Institutional	No	Origination Fees	Cyclical
Mortgage Servicing	Low	Secured	No	Servicing Revenue	Cyclical

Asset Quality — Finance and Leasing Companies

Attribute	Core Versus Complementary	Description
Impaired and Nonperforming Ratio	Core (For finance and leasing companies with high balance sheet usage)	Fitch's assessment of finance and leasing companies' asset quality primarily focuses on loan impairments but also considers delinquencies, non-accruals, net chargeoffs and reserve rates. Fitch considers the performance of these metrics over time and through market cycles, relative to the firm's underwriting criteria and articulated risk appetite and compares measures to peer firms with like products. Consistent with Fitch's asset quality benchmarks for banks, Fitch's asset quality benchmarks for finance and leasing companies with high balance sheet usage are derived by combining the entity's operating environment with the financial metric value. This reflects Fitch's expectation that the operating environment will account for a significant proportion of actual metric differences across countries and regions because of differences in the financial risk profiles that arise directly from the environments in which the entities operate *(see Section II.1, Operating Environment Assessment)*. Tiering by operating environment is not applied to other non-bank financial institution metrics or subsectors given that asset quality is not a primary analytical consideration for certain subsectors (such as for investment managers, where asset performance is more relevant) or operating environment differences are not present (such as for BDCs, which operate in a single operating environment).
Borrower Profile	Complementary	For consumer lenders, Fitch may review data on the loan portfolio, such as the average balance per account and average yield, as well as variations from the mean. This may also involve demographic data on the underlying portfolio or an internal or external credit score. For commercial lenders and lessors, Fitch may review the types of businesses or equipment financed, loan to value ratios, as well as any internal credit rankings or watchlists with respect to lessees. For rental companies, lessee quality may be less relevant depending on the duration of the rental agreement and the type of equipment being rented.
Servicing, Collections and Disposition	Complementary	Fitch believes that a robust servicing and collection platform is an integral part of asset quality, since it can have a significant influence on impairment/delinquency and chargeoff experience. For example, Fitch considers an issuer's collection strategies for impaired/delinquent accounts and the ability to improve upon expected roll rates. For leasing companies, Fitch also considers an issuer's ability to repossess and dispose of collateral in an economic and efficient manner. Fitch considers the issuer's flexibility with regard to disposal channels and seeks to assess an issuer's ability to rapidly de-fleet or re-fleet in response to changing market conditions. Collateral sale proceeds are considered over time relative to residual values to assess the effectiveness of a leasing company's depreciation policies.
Seasonality and Growth Impacts	Complementary	Since asset quality can be distorted by growth, where possible, Fitch may perform analysis on a static-pool basis to measure asset quality of different vintages. Static-pool or vintage analysis can provide an early warning of problems, such as rapid asset-quality deterioration, forcing accelerated chargeoffs, which may highlight loosening of underwriting policies. Fitch recognizes that seasonality can play a role in distorting asset quality and, to complement static-pool analysis, Fitch may analyze other growth-adjusted asset-quality metrics, looking at impairment/delinquency and net chargeoff ratios on both a coincident (current) and lagged basis. In addition, portfolio shrinkage can also skew coincident and lagged credit metrics, so, in these instances, Fitch will also track the relative absolute change in portfolio impairments/delinquencies and losses from one period to another.
Business Model Specifics	Complementary	The key asset quality metrics for finance and leasing companies are less relevant for debt purchasers, whose assets are typically impaired, but acquired at a significant discount. Instead, Fitch will focus on the stability and resilience of cash flow generation from acquired portfolios relative to their purchase price. Fitch will also review industry measures such as gross 'cash on cash' multiples, net cash on cash multiples (net of collection activity costs) and price paid/face value of purchased assets, where available.

Earnings and Profitability — Finance and Leasing Companies

Attribute	Core Versus Complementary	Description
Pre-Tax Net Income/ Average Assets	Core (For Finance and Leasing Companies with High Balance Sheet Usage)	For finance and leasing companies with high balance sheet usage, Fitch focuses primarily on portfolio yields and return on assets and return on equity measures, which are more easily comparable across the bank and non-bank universes. Fitch will also consider risk-adjusted margins, which measure the level of profitability for the risk taken, since it deducts provision expense and interest expense from total net operating revenue. A review of earnings quality primarily reflects an assessment of recurring cash-based earnings, principally net interest and lease and fee income, as opposed to nonrecurring gains/losses, noncash gains or mark-to-market gains on derivatives or investments.
Adjusted EBITDA/ Revenues	Core (For Finance and Leasing Companies with Low Balance Sheet Usage)	For finance and leasing companies with low balance sheet usage, Fitch places emphasis on adjusted EBITDA margin analysis. To the extent a good portion of income is from fee-type sources, as is the case with finance and leasing companies with low balance sheet usage, Fitch evaluates the reliability and variability of these fees over a cycle. Additionally, Fitch may also review accruals for fee-type services, such as rewards for credit card usage or fee suppression policies for unearned income, to assess the collectability over time, where applicable. For leasing companies where the average lease term is relatively short, such as rental car companies and small ticket lessors, and for companies with proven stable asset-based cash generation and/or significant non-balance sheet-related earnings, such as debt purchasers, Fitch's analysis of earnings and profitability typically focuses on cash flow metrics and analysis. Fitch may make adjustments to its EBITDA calculation to exclude depreciation expense if it is believed to be a recurring operating expense and no significant change in leased asset levels is expected. However, in that case, Fitch would look to add back proceeds from the sale of leased assets to its calculation of cash flow, as it would likely be deemed a significant source of debt repayment.
Operating Expenses	Complementary	Fitch also looks at operating expenses relative to loans or leases, including the mix of variable and fixed costs. Fitch recognizes that finance and leasing companies may have very different cost structures. For example, a company with a global footprint, like an aircraft lessor, is likely to have a higher level of operating expenses versus one that relies on centralized functions but this may be offset by other factors such as lower credit losses or higher asset yields.
Depreciation and Non-Cash Items	Complementary	Depreciation expense is typically a significant noncash item for leasing companies and Fitch views it as an important cost, since such companies typically need to continually replace equipment involved in operating leases and stay within certain age parameters. To the extent an issuer reports a material amount of noncash income, Fitch may request a reconciliation of reported earnings to operating cash flows. Fitch views significant noncash items as lowering the quality of earnings.
Treatment of Securitizations	Complementary	To the extent that a finance and leasing company securitizes receivables and removes them from its balance sheet or services assets not on its balance sheet, Fitch focuses on managed measures of profitability, which consider reported profits and expenses relative to the company's serviced portfolio of loans or leases. This provides a clearer picture of the underlying profitability of the book of business, since an issuer typically earns a fee for servicing the assets in the securitization vehicle.

Capitalization and Leverage — Finance and Leasing Companies

Attribute	Core Versus Complementary	Description
Debt/ Tangible Equity	Core (For Finance and Leasing Companies with High Balance Sheet Usage)	Fitch's assessment of a finance and leasing company's capitalization and leverage metrics focuses primarily on traditional leverage measures, such as debt to tangible equity and debt to FCC for finance and leasing companies with high balance sheet usage.
Debt/ Adjusted EBITDA	Core (For Finance and Leasing Companies with Low Balance Sheet Usage)	Fitch's assessment of a finance and leasing company's capitalization and leverage metrics focuses primarily on debt/adjusted EBITDA for finance and leasing companies with low balance sheet usage and for companies with proven stable asset-based cash generation and/or significant non-balance-sheet-related earnings, such as debt purchasers.
Business Model Specifics	Complementary	For leasing companies with longer term leases and material residual value risk, such as large equipment lessors, the primary capitalization and leverage focus is on balance sheet metrics such as debt to equity. For leasing companies where the average lease term is relatively short, such as rental car companies and small ticket lessors, and for companies with proven stable asset-based cash generation and/or significant non-balance sheet-related earnings, such as debt purchasers, Fitch's analysis of leverage and capitalization may take a corporate approach, in which the focus is on cash flow coverage and debt service. Fitch uses adjusted EBITDA as a proxy for cash flow. For debt purchasers, Fitch will also assess gross debt/estimated remaining collections, where available.
Double Leverage	Complementary	Where relevant, Fitch also looks at double leverage, defined as equity investments in subsidiaries plus holding company intangibles divided by equity, which reflects debt issued at the parent company level that has been down streamed as equity into subsidiaries. While a small amount of double leverage can be expected, Fitch is concerned when double leverage is high (i.e. above 120% or more of a parent company's common equity) on a sustained basis, unless mitigated by some other means (e.g. subsidiary liquidity support agreement). A high degree of double leverage can result in increased rating differentials between a parent company and its subsidiaries, particularly if regulated subsidiaries are involved, since dividends from these entities may be restricted. When feasible, Fitch will review a regulated subsidiary's dividend capacity relative to the holding company's fixed costs and dividends.

Funding, Liquidity and Coverage — Finance and Leasing Companies

Attribute	Core Versus Complementary	Description
Unsecured Debt/Total Debt	Core (For finance and leasing companies with high balance sheet usage)	Fitch believes an overreliance on secured financing sources such as asset-backed securitization, repurchase agreements, covered bonds, or secured bank loans, may constrain a finance and leasing company's funding, liquidity and coverage assessment, as a high proportion of encumbered assets will reduce financial flexibility. In assessing creditor protections, when information is available, Fitch will focus on unsecured debt as a percent total debt and, by extension, unencumbered assets relative to unsecured debt. This encompasses not only the amount, but also the relative quality of assets supporting unsecured debt obligations. Fitch typically stresses asset values by applying haircuts, depending on the riskiness of the asset class. In considering unencumbered assets, Fitch also makes adjustments based on seniority of liens that may exist in financing agreements and for pledged assets.
Adjusted EBITDA /Interest Expense	Core (For finance and leasing companies with low balance sheet usage)	For finance and leasing companies with low balance sheet usage, Fitch assesses funding, liquidity and coverage, primarily on the basis of interest coverage more so than funding or liquidity. For leasing companies where the average lease term is relatively short, such as rental car companies and small ticket lessors, and for companies with proven stable asset-based cash generation and/or significant non-balance sheet-related earnings, such as debt purchasers, Fitch's analysis of funding, liquidity and coverage typically focuses on cash flow metrics. For finance and leasing companies that pay preferred dividends, Fitch would also calculate EBITDA coverage of both interest expense and preferred dividends.
Reliance on Short-Term Funding	Complementary	Fitch understands that issuers may be motivated to fund themselves with short-term debt, since this is often less costly; however, it is Fitch's view that an overreliance on short-term financing can be very problematic, especially during times of market duress. In thinking about short-term financing, Fitch focuses on asset maturities. For example, an issuer with very short-dated assets (charge card, factoring receivables, auto floorplan loans or certain consumer loans) may be better able to rely upon asset cash flow to support a reasonable component of short-term financing than an issuer with long-dated assets, such as mortgages, student loans or aircraft. Nonetheless, even when asset maturities are very short term, a degree of longer term financing should be in place to finance the book of business.
Contingent Funding	Complementary	Sound contingency plans should be established to cover the potential that short-term assets financed by short-term debt may not produce expected levels of cash flow in all phases of a business or product cycle. This would include coverage for potential extensior of hold periods for assets expected to be sold and that are funded by short-term debt. Contingent funding should be reasonably accessible during times of financial duress and should not rely on an issuer to maintain covenant compliance. Fitch would expect investment-grade finance and leasing companies to be able to demonstrate contingency plans that allow the entity to navigate a prolonged disruption in liquidity and funding markets. This can be demonstrated by an ability to fund core operations over a 12-month period via cash flow generation and committed financing facilities from appropriately rated entities but excluding access to public unsecured markets if that is the primary source of funding in periods of normal market conditions. Additionally, Fitch may evaluate a firm's wind-down or liquidation scenarios to gain an understanding of how effectively and efficiently assets can be liquidated to cover costs, including debt service, on a timely basis.
Order Books	Complementary	Contingency funding plans take on added significance for leasing companies with large order books, particularly given that these obligations must be financed through a variety of economic environments. Order books are more prevalent in the aircraft, railcar and container leasing sectors, and represent commitments to purchase assets from manufacturers, in some cases years before they will be leased. The existence of committed financing, such as warehouse facilities, helps to mitigate some of this risk; however, the maturity of the facilities may pre-date order deliveries, which can yield refinancing risk. Fitch considers a lessor's order book size in relation to the size of its balance sheet, existing fleet, operational and marketing capabilities, the extent to which committed leases are in place at the time of the order, as well as its capital raising track record. However, the existence of significant order books, particularly if they are long-tailed, may be a rating constraint.
Funding Quality and Diversity	Complementary	Fitch views diverse sources of funding, in terms of markets, investors and geography, as well as funding stability, to be positive for the funding, liquidity and coverage score. Fitch looks at the portion of credit facilities that is committed versus uncommitted, the composition of the credit providers and the frequency with which facilities are utilized. Fitch looks at the length of the relationships, as well as other business flows (such as cash management or securities underwriting) that a finance and leasing company maintains with its credit providers, since this may have a material impact on whether lenders accommodate the issuer during periods of financial duress. Fitch may only take account of available liquidity from backup lines of credit from highly rated banks and/or banks rated the same or higher than the issuer itself.
Treatment of Securitizations	Complementary	When there is a significant portion of securitization activity, Fitch may compare the quality of securitized receivables to those remaining unencumbered to ensure that no "cherry picking" or adverse selection has occurred. Fitch believes that securitized receivables should reflect a cross-section of originated loans or leases. As a result, strategies that rely on either selling the weakest or strongest credits may negatively affect the funding, liquidity and coverage score. Moreover, Fitch believes a finance and leasing company should be able to demonstrate liquidity in all the asset types it originates. For example, if an issuer cannot demonstrate secondary market liquidity for a particular asset class, Fitch may view additional capital and/or liquidity to support that particular asset as appropriate. Additionally, Fitch may factor in an increased likelihood of voluntary support for non-recourse obligations for finance and leasing companies that are overly reliant on securitization as a source of funding. Voluntary support could arise as a means for the issuer to limit reputational damage and potential loss of market access to this funding source in the event of underperformance.
Covenant Compliance	Complementary	Fitch may consider covenants in credit agreements to understand covenant and security features, as these can have a bearing on a finance and leasing company's ability to conduct its business. Although technical defaults, such as a financial covenant violation, may often be waived, this usually comes at considerable expense. Therefore, a covenant breach may negatively affect Fitch's funding, liquidity and coverage assessment if it is viewed as an indicator of a material change in the entity's risk profile or financial flexibility.
Payout Ratio	Complementary	Many finance and leasing companies pay out some portion of earnings, either to a parent company or to public/private shareholders, which is a cash use. For payout ratios, Fitch focuses on combined measures, which include both dividends and net share repurchases, in order to assess the impact on liquidity.
Mortgage REIT Specifics	Complementary	Fitch typically views mortgage REITs as having weaker liquidity positions than similar finance companies that have not elected REIT status, as REITs have weaker capital retention flexibility. However, REITs that address required dividend distributions through the issuance of new shares as opposed to cash dividend payments may have stronger liquidity than REITs that pay out the majority of taxable income as cash dividends to stockholders. Based on guidelines established by the National Association of Real Estate Investment Trusts, funds from operations (FFO) for mortgage REITs are defined as net income excluding gains (or losses) from property sales, plus depreciation and amortization, plus adjustments for unconsolidated partnerships and joint ventures. Fitch compares dividends paid to stockholders with FFO for mortgage REITs. Adjustments for unconsolidated partnerships and joint ventures will be calculated to reflect FFO on the same basis. Fitch subtracts capital expenditures and excludes noncash items included in FFO to arrive at adjusted funds from operations (AFFO) for mortgage REITs and compares dividends paid to stockholders with AFFO. Although FFO and AFFO are after-interest expense measures, these measures are relevant to bondholders and preferred stockholders. Namely, if FFO or AFFO payout ratios are close to or exceed 100%, it indicates the REIT is not retaining cash flow for future liquidity to meet its fixed-charge obligations and is accessing other forms of cash flow to pay its dividends, which Fitch views negatively.

Financial Profile — Finance and Leasing Companies

	aaa	aa	a	bbb	bb	b	ccc and Below
Asset Quality	Has an unparalleled degree of stability as reflected in very low levels of impaired assets and/or minimal losses throughout economic and/or interest rate cycles. Asset-quality measures are consistently better than comparable institutions. Concentration risks are very low or effectively mitigated.	Has a very high degree of stability as reflected in low levels of impaired assets and/or low losses over multiple economic and/or interest rate cycles. Asset-quality measures are better than comparable institutions. Concentration risks are low or effectively mitigated.	Has a high degree of stability as may be reflected in modest levels of impaired assets and/or losses. Asset quality is moderately variable over economic or interest rate cycles. Asset-quality measures are likely to be modestly better than at peer institutions or less vulnerable to economic and/or interest rate cycles. Concentration risks may be modestly better than peers.	Has a degree of stability as may be reflected in average levels of impaired assets and/or losses. Asset quality measures are likely to fluctuate over economic and/or interest rate cycles. Asset-quality and/or concentration risk measures are generally in line with broad industry averages.	Has above-average levels of impaired assets and losses. Asset quality measures are likely to be more volatile in the face of changes in economic and/or interest rate cycles and generally worse or more vulnerable than broad industry averages. Concentration risks may be above average.	Has highly variable or poor asset quality, impaired assets and losses. Asset quality measures are likely to be very volatile based on changes in economic and/or interest rate cycles and generally significantly worse or more vulnerable than broad industry averages. Concentration risks may be very high.	Has or is likely to have asset-quality measures that are considerably weaker than industry benchmarks or historical norms.
Earnings and Profitability	Earnings and profitability are highly predictable throughout economic and/or interest rate cycles. Profitability measures are consistently commensurate with risk-averse nature.	Earnings and profitability are very predictable over multiple economic and interest rate cycles. Profitability measures are commensurate with very low risk but may vary modestly, although they remain generally superior to comparable institutions.	Earnings and profitability are moderately variable over economic and/or interest rate cycles. Profitability measures are commensurate with low risk but subject to variability. Profitability is generally better than industry averages.	Earnings and profitability may be variable over economic and/or interest rate cycles. Profitability measures reflect inherent risk or a highly competitive environment and can be subject to increased variability. Profitability is average relative to broad industry averages.	Earnings and profitability may be highly variable over economic and/or interest rate cycles. Profitability measures may not fully reflect inherent risk and are subject to variability. Profitability is below average relative to broad industry averages.	Earnings and profitability are volatile and highly correlated with economic and/or interest rate cycles. Profitability measures may not fully reflect inherent risk and are subject to variability. Profitability is well below average relative to broad industry averages.	May be structurally unprofitable on either a reported or operating basis. Return to break-even or sustainable profitability is highly uncertain.
Capitalization and Leverage	Capitalization is extremely strong and commensurate with risk. Capital and leverage targets incorporate ability to withstand severe asset quality and market value shocks.	Capitalization is strong and commensurate with risk. Capital and leverage targets incorporate ability to withstand significant asset quality and market value shocks.	Capitalization levels broadly commensurate with risk. Capital and leverage levels may be relatively more volatile but likely only modestly affected by severe asset quality and market value shocks.	Capital levels may not be fully commensurate with risk. Capital and leverage levels may be more vulnerable to severe asset quality and market value shocks.	Capital levels may not be fully commensurate with risk. Capital and leverage can withstand asset quality and market value shocks.	Capital levels are not commensurate with risk. Capital and leverage levels may be well below peer institutions and highly vulnerable to asset quality and market value shocks.	Capitalization and leverage have clear deficiencies that have or may require capital injections.
Funding, Liquidity and Coverage	Funding and liquidity are exceptionally stable. Minimal reliance on wholesale funding. Funding is not confidence sensitive. Funding sources are highly diverse. Funding duration significantly exceeds average maturity of portfolio assets. Funding is fully unsecured, supported by extremely robust pool of unencumbered assets. Extremely robust contingency funding plans are in place.	Funding and liquidity are very stable. Minimal reliance on short-term funding. Wholesale funding is predominantly long term with established investor appetite. Funding is relatively less confidence sensitive. Funding sources are very diverse. Funding duration exceeds average maturity of portfolio assets. Funding is predominantly unsecured, supported by a very robust pool of unencumbered assets. Very robust contingency funding plans are in place.	Funding and liquidity are stable. Wholesale funding is predominantly long term. Funding may be modestly confidence sensitive. Funding sources are relatively diverse. Funding duration is commensurate with average maturity of portfolio assets. Funding is largely unsecured, supported by a robust pool of unencumbered assets. Robust contingency funding plans are in place.	Funding and liquidity are generally stable, although there may be moderate funding concentrations. Reliance on less stable wholesale funding sources. Funding is confidence sensitive. Funding duration is commensurate with average maturity of portfolio assets. Meaningful unsecured funding component, supported by a modest pool of unencumbered assets. Reasonable contingency funding plans are in place.	Funding and liquidity are generally stable, although there may be funding concentrations. Meaningful reliance on less-stable wholesale sources of funding. Access to funding may be uncertain during periods of market stress. Funding duration may not be commensurate with average maturity of portfolio assets. Meaningful secured funding, with some encumbrance of balance sheet assets. Contingency funding plans may not be sufficient.	Funding and liquidity are less stable and may be prone to sudden changes in creditor sentiment. Access to funding during periods of market stress is very uncertain. Funding duration is not commensurate with average maturity of portfolio assets. Largely secured funding, with meaningful encumbrance of balance sheet assets. Contingent funding plans may not be well	Funding and liquidity are unstable. Funding duration is very short term. Fully secured funded and fully encumbered balance sheet. Contingent funding plans are non-existent.

II.5.e Financial Market Infrastructure Companies

Fitch's financial profile assessment for FMIs considers the following subfactors:

- capitalization and leverage;
- funding, liquidity and coverage;
- earnings and profitability; and
- counterparty exposure.

FMI Subsector Typical Characteristics and Analytical Considerations

	Exchanges	Clearing Houses	CSDs Without Banking License	Bank-Licensed CSDs
Primary Activities	Operate marketplace to buy/sell listed financial instruments, disseminate trade info, provide market data.	Clear and settle trades executed on an exchange, perform trade comparison, act as agent, principal or guarantor on settled trades.	Settle trades, provide safekeeping/custody of securities, act as paying and transfer agent, provide recordkeeping services.	In addition to activities similar to those of CSDs without banking licenses, also take deposits from and provide overdraft credit facilities to clients.
Primary Risk(s)	Operational	Counterparty	Operational	Operational, counterparty
Degree of Balance Sheet Risk	Limited	Limited, aside from consolidated guaranty funds	Limited	Present, but often low risk
Degree of Counterparty Risk	Limited	Material	Limited	Modest
Primary Capitalization and Leverage Metric(s)	Debt/EBITDA	Debt/EBITDA, supplemented with sufficiency of guaranty fund	Debt/EBITDA	Fitch core capital to weighted risks; regulatory ratios
Primary Earnings and Profitability Metric(s)	EBITDA margin, capex/revenue	EBITDA margin, capex/revenue	EBITDA margin, capex/revenue	Operating costs relative to fees
Primary Master Rating Criteria	Non-Bank Financial Institutions Rating Criteria	Non-Bank Financial Institutions Rating Criteria	Non-Bank Financial Institutions Rating Criteria	Bank Rating Criteria

Source: Fitch.

Capitalization and Leverage — Financial Market Infrastructure Companies

Attribute	Core Versus Complementary	Description
Gross Debt/ Adjusted EBITDA	Core	Fitch primarily focuses on cash flow leverage metrics when assessing FMIs due to the low balance sheet usage of their businesses. In these cases, debt repayment is likely to be a function of cash flow generated by the business as opposed to liquidation of collateral or monetization of assets on the balance sheet. Fitch defines cash flow leverage as gross debt to adjusted EBITDA. Fitch may focus on net debt/adjusted EBITDA where cash is set aside for near-term debt service. Where applicable, Fitch may additionally assess lease adjusted debt to EBITDAR to account for material operating lease expenses. Under this approach, Fitch adjusts gross debt by adding the net present value of future lease payments, or 8.0x the current rental expense and adjusts EBITDA by adding the current rental expense.
Gross Debt/ Tangible Equity	Complementary	For clearing houses, Fitch considers cash flow leverage metrics, especially in the cases where a clearing house does not take legal ownership of margin deposits but also will review balance sheet leverage metrics, collateral margining and guarantee fund contributions relative to counterparty exposure. With respect to balance sheet leverage metrics, Fitch primarily considers gross debt to tangible equity and gross debt to FCC. As a result of consolidation and mergers and acquisitions, a substantial amount of goodwill is recorded on the balance sheets of many FMIs, which Fitch excludes when calculating balance sheet leverage metrics.
Capital Structure and Capital Expenditures	Complementary	Fitch's assessment of capital adequacy will also take into consideration a FMI's capital structure and regulatory requirements, where applicable. Fitch also considers free cash flow relative to gross debt, in order to assess cash flow leverage net of the amount of capital expenditures FMIs are making to maintain and upgrade technology platforms.
Capital Outside the Default Waterfall	Complementary	As a clearing house bears all losses that are not associated with a clearing member default, Fitch may also assess the capital available outside the waterfall to manage potential losses outside of the clearing mechanism. Such losses could include losses on margin collateral or losses/impairments associated with acquisitions.

Funding, Liquidity and Coverage — Financial Market Infrastructure Companies

Attribute	Core Versus Complementary	Description
Adjusted EBITDA/ Interest Expense	Core	Fitch assesses FMIs' funding, liquidity and coverage primarily on the basis of interest coverage. Where applicable, Fitch additionally assesses lease adjusted EBITDAR to interest expense to account for material operating lease expenses.
Contingent Funding Sources	Complementary	Under normal operating conditions, an exchange or CSD without a banking license has limited liquidity needs and primarily relies on operating cash flows to support capital expenditures and near-term debt maturities. Liquidity needs may be elevated during periods of stress and, as such, Fitch considers contingent funding sources such as lines of credit relative to capital expenditures and general corporate purposes. On the other hand, clearing houses have more distinct liquidity needs related to clearing and settlement functions in the event of a temporary market disruption or a clearing member or custody bank default. As such, Fitch considers the amount of contingent funding available, including access to committed credit facilities, the size of available lines, for which offered products the lines can be utilized and unrestricted cash and investment securities on the balance sheet.
Covenant Compliance	Complementary	Fitch will review a FMI's compliance with covenants (financial and negative) related to lines of credit and debt. Non-compliance with debt covenants is likely to negatively influence Fitch's funding, liquidity and coverage assessment unless the assessment already reflects a high probability of non-compliance.
Payout Ratio	Complementary	Many FMIs pay out some portion of earnings, either to a parent company or to public/private shareholders, which is a cash use. For payout ratios, Fitch focuses on combined measures, which include both dividends and net share repurchases, in order to assess the impact on liquidity.
Business Model Specifics	Complementary	Certain clearing houses take legal ownership of margin deposits. In such instances, Fitch will consider the percentage of liquid assets relative to potential outflows and the historical level and fluctuation of customer deposits when evaluating the liquidity of clearing house.

Funding, Liquidity and Coverage Metrics — Financial Market Infrastructure Companies

Metric	Core Versus Complementary
Adjusted EBITDA/Interest Expense	Core
Unrestricted Cash and Marketable (investments) Securities/Short-Term Debt	Complementary

Source: Fitch.

Earnings and Profitability — Financial Market Infrastructure Companies

Attribute	Core Versus Complementary	Description
Adjusted EBITDA/ Total Revenues	Core	A key profitability measure for exchanges, clearing houses and CSDs without banking licenses is adjusted EBITDA margin, defined as adjusted EBITDA divided by total revenues. Fitch evaluates the reliability and variability of these margins over time to assess sensitivity to market conditions.
Earnings Stability and Diversity	Complementary	For FMIs that are not member owned, Fitch evaluates the ability to generate profits through various market cycles. Fitch considers whether revenues are highly dependent on transaction volumes (executed, cleared and/or settled), which are driven by market conditions and looks at trends with a longer term horizon. Fitch also evaluates non-transactional revenue sources such as market data and information services, which can help diversify and stabilize performance over market cycles. Fitch also evaluates revenue contributions by product and geography, revenue by asset class relative to volume (rate per contract), revenue volatility and volume volatility. Cost controls, the flexibility and variability of expenses and performance relative to peers are also reviewed by Fitch. Lastly, for those clearinghouses that take legal ownership of margin deposits, Fitch may also consider the extent to which net interest income contributes to earnings stability and diversity.
Capital Expenditures	Complementary	Fitch will consider trends in capital expenditures as a percentage of depreciation and amortization to ascertain the degree of reinvestment in the business through cycles. The magnitude of the ratio is not necessarily as important as whether it is positive (implying increased investment in the business), neutral (implying balanced reinvestment in the business) or negative (implying reduced investment in the business).
Business Model Specifics	Complementary	In analyzing the profitability of FMIs, it is necessary to ascertain whether the entity is operating as a profit-maximizing entity or not. If it is not a profit-maximizing entity (i.e. it is member-owned), the likely focus is on cost controls (maintaining low execution, clearing and/or settlement costs) and break-even results. Excess profits in the form of dividends or rebates are typically returned to owner-members. In these instances, Fitch will assess the ability of a FMI to limit payouts to its owner-members during stressed marked conditions, which could positively influence the earnings and profitability score.

Counterparty Exposure — Financial Market Infrastructure Companies

Attribute	Core Versus Complementary	Description
Member Concentration	Core	With respect to clearing houses, Fitch assesses clearing member concentrations and the steps the clearing house takes to monitor and minimize exposure to individual clearing members. Fitch reviews guarantee fund contributions by clearing member, top 10 counterparty exposures, guarantee fund coverage of the largest counterparty exposures and margin deposits (by asset class) compared to respective volumes.
Limits and Remediation	Complementary	Fitch also reviews clearing houses' limits for clearing members and steps taken when limits are breached.

Financial Profile — Financial Market Infrastructure Companies

	aaa	aa	a	bbb	bb	b	ccc and Below
Capitalization and Leverage	Capitalization and leverage are extremely strong and commensurate with risk. Capitalization and leverage are maintained with very significant buffers over regulatory minimums or as compared to peer institutions. Capital and leverage targets incorporate ability to withstand severe shocks.	Capitalization and leverage are strong and commensurate with risk. Capitalization and leverage are maintained with comfortable buffers over regulatory minimums or as compared to peer institutions. Capital and leverage targets incorporate ability to withstand significant shocks.	Capitalization and leverage levels broadly commensurate with risk. Capitalization and leverage are maintained with solid buffers versus regulatory minimums and generally above peer institutions. Capital and leverage levels may be relatively more volatile but likely only modestly affected by significant asset quality and market value shocks.	Capitalization and leverage may not be fully commensurate with risk. Capitalization and leverage are maintained with satisfactory buffers over regulatory minimums and generally in line with peer institutions. Capital and leverage levels may be more vulnerable to significant shocks.	Capitalization and leverage are not fully commensurate with risk. Capitalization and leverage are maintained with moderate buffers over regulatory minimums and may be below peer institutions. Capital and leverage are highly vulnerable to significant shocks but can withstand moderate shocks.	Capitalization and leverage are not commensurate with risk. Capitalization and leverage are low, and buffers over regulatory minimums are small. Capital and leverage levels may be well below peer institutions and highly vulnerable to shocks.	Capitalization and leverage have clear deficiencies that either have or may require capital injections.
Funding, Liquidity and Coverage	Extremely strong operating cash flows and liquidity levels relative to capital expenditures, operational needs and near-term debt maturities. Lines of credit and contingent funding more than sufficient for business model and liquidity needs.	Very strong operating cash flows and liquidity levels relative to capital expenditures, operational needs and near-term debt maturities. Lines of credit and contingent funding consistent with business model and liquidity needs.	Strong operating cash flows and liquidity levels relative to capital expenditures, operational needs and near-term debt maturities. Lines of credit and contingent funding consistent with business model and liquidity needs.	Sound operating cash flows and liquidity levels relative to capital expenditures, operational needs and near-term debt maturities. Lines of credit and contingent funding are generally able to support business model and liquidity needs.	Limited operating cash flows and liquidity levels relative to capital expenditures, operational needs and near-term debt maturities. Lines of credit and contingent funding are adequate to support business model and liquidity needs.	Very limited operating cash flows and liquidity levels relative to capital expenditures, operational needs and near-term debt maturities. Lines of credit and contingent funding are minimal and may not meet liquidity needs.	No operating cash flows and liquidity levels relative to capital expenditures, operational needs and near-term debt maturities. No access to lines of credit and/or contingent funding.
Earnings and Profitability	Earnings and profitability are highly predictable throughout economic cycles. Profitability measures are commensurate with risk-averse nature and consistently superior to comparable peer institutions.	Earnings and profitability are very predictable over multiple economic cycles. Profitability measures are commensurate with very low risk but may vary modestly. Profitability measures generally superior to comparable institutions.	Earnings and profitability are moderately variable over economic cycles. Profitability measures are commensurate with low risk but subject to variability. Profitability is generally better than broad industry averages.	Earnings and profitability may be variable over economic cycles. Profitability measures reflect inherent risk or a highly competitive environment and can be subject to increased variability. Profitability is average relative to broad industry averages.	Earnings and profitability may be highly variable over economic cycles. Profitability measures may not fully reflect inherent risk and are subject to variability. Profitability is below average relative to broad industry averages.	Earnings and profitability are volatile and highly correlated with economic rate cycles. Profitability measures may not fully reflect inherent risk and are subject to variability. Profitability is well below average relative to broad industry averages.	May be structurally unprofitable on either a reported or operating basis. Return to break-even or sustainable profitability is highly uncertain.
Counterparty Exposure	Very limited clearing member concentration. Guarantee fund covers loss from the simultaneous default of at least two of its largest clearing members. Appropriate level of collateral to support margin and guarantee fund requirements. Extremely prudent investment of surplus funds and extension of credit to facilitate settlement.		Limited clearing member concentration. Guarantee fund covers loss from the simultaneous default of at least two of its largest clearing members. Appropriate level of collateral to support margin and guarantee fund requirements. Prudent investment of surplus funds and extension of credit to facilitate settlement.	Average clearing member concentration. Guarantee fund covers loss from the simultaneous default of only two of its largest clearing members. Satisfactory level of collateral to support margin and guarantee fund requirements. Less prudent investment of surplus funds and extension of credit to facilitate settlement.		Above-average clearing member concentration. Guarantee fund covers loss from default of largest clearing member. Sufficient level of collateral to support margin and guarantee fund requirements. Aggressive investment of surplus funds and extension of credit to facilitate settlement.	Significant clearing member concentration. Guarantee fund does not cover loss from the default of largest clearing member. Insufficient level of collateral to support margin and guarantee fund requirements. Very aggressive investment of surplus funds and extension of credit to facilitate settlement.

III. Support

Unlike banks, most non-bank financial institutions do not often receive extraordinary sovereign support that allows them to continue performing on their obligations in case of failure. As indicated in Section I of this report, the most usual source of support for non-bank financial institutions is shareholders (institutional support), with support from government authorities (sovereign support) being much less common. Fitch's view of the likelihood of support being made available in case of need may be reflected in an entity's SR. Where the agency believes the most likely form of support is sovereign support, this is also reflected in the non-bank financial institution's SRF. Where there is no reasonable assumption that extraordinary sovereign support is likely for a given issuer, a SRF will not be assigned. Section III.1 below focuses on sovereign support and section III.2 focuses on institutional support.

III.1. Sovereign Support

In assessing the likelihood of extraordinary government support for a non-bank financial institution, Fitch's primary focus is usually on potential assistance from the national authorities of the country where the non-bank financial institution is domiciled. This is because it is the non-bank financial institution's national authorities that are most likely to have both an incentive to prevent the entity from defaulting and the regulatory and legal powers to intervene. However, in certain cases, Fitch also assesses the possibility of support being made available to a failing non-bank financial institution from a combination of national sovereign authorities, subnational authorities and/or international public institutions.

Sovereign support decisions for non-bank financial institutions may be more often driven by an assessment of the entity's policy role as opposed to its systemic importance, although certain non-bank financial institutions whose activities are more akin to financial utilities may have a higher potential to exhibit systemic importance.

Sovereign Ratings and Support Rating Floors

Sovereign Rating	Typical SRFs in Case of High Support Propensity
AAA, AA+	A+ to A–
AA, AA–	A or A–
A category	1–2 notches below sovereign rating
BBB category	0–2 notches below sovereign rating
BB category	0–1 notch below sovereign rating
B category and below	Equalized with sovereign rating

Source: Fitch.

III.1.1 Ability of Sovereign to Provide Support

Importance of this Assessment: For a non-bank financial institution to receive government support, the sovereign must, by definition, be both able and willing to provide it. Where the ability of the sovereign to provide support is more constrained, support will usually be less likely, resulting in lower SRs and SRFs or the absence of SRs and SRFs.

In assessing a government's ability to provide support, Fitch's starting point is the sovereign's own ratings (or potentially a Fitch Credit Opinion if the opinion is in the single 'B' rating category or lower). The sovereign rating used is almost always the sovereign in which the entity is domiciled, but could sometimes be a subnational and/or third-party sovereign with an interest in supporting the non-bank financial institution.

Key Factors in Assigning Support Rating Floors[a]

	Factor	Positive (Higher SRF)	Neutral	Negative (Lower SRF)
Sovereign Ability to Support	Size of financial system relative to economy	Small	Average	Large
	Size of potential problem	Low vulnerability of financial sector to large losses in downturn	Moderate vulnerability of financial sector to large losses in downturn	High vulnerability of financial sector to large losses in downturn
	Structure of financial system	Low concentration, ownership mainly by strong shareholders	Moderate concentration, some ownership by strong shareholders	High concentration, limited ownership by strong shareholders
	Liability structure of financial system	Predominantly long-term/stable local-currency funding	Moderate funding instability and/or foreign-currency liabilities	Considerable short-term foreign-currency funding
	Sovereign financial flexibility (for rating level)	Superior (e.g. low debt, large FX reserves and/or good market access)	Average (e.g. average debt and reserves and/or reasonable market access)	Weak (e.g. high debt, low FX reserves and/or uncertain market access)
Sovereign Propensity to Support Non-Bank Financial Institution	Systemic importance or policy role	Exceptionally high systemic importance to financial system and contagion risk; dominant market shares or highly strategic policy role	Strong significance to financial system and economy; high contagion risk or meaningful policy role	Moderate or low systemic significance, more limited contagion risk or limited policy role
	Liability structure of financial institutions	Very limited politically acceptable, if any, possibilities to bail in senior creditors	Significant foreign / wholesale funds, which could be politically acceptable to bail-in in some circumstances	High foreign/wholesale funding, which could be politically acceptable to bail-in in many scenarios
	Ownership	Strategic government ownership or private domestic owners with strong government relations.	Non-strategic government ownership or domestic owners with neither close nor difficult government relations	Foreign ownership or domestic owners with poor government relations
	Specifics of non-bank financial institution failure	N.A.	More likely to fail as a result of usual operating activities	Significant risk that failure could result from corporate governance weaknesses

[a]The factors identified in this table determine the levels of SRFs relative to the ranges indicated in the table Sovereign Ratings and Support Rating Floors. For each factor, other relevant considerations may exist that are not explicitly referenced here.
Source: Fitch.

In rare cases where Fitch does not assign a credit rating or Credit Opinion to the sovereign, Fitch will either not assign a sovereign support-driven SR/SRF (no assessment undertaken) or assign them at '5'/'No floor' (e.g., unable to reliably assess sovereign creditworthiness or sovereign ability/propensity support concerns are present). Although the sovereign's ratings reflect Fitch's view only on the likelihood of the government servicing its own debt, in practice this is usually closely correlated with its broader financial flexibility and, therefore, ability to provide support to financial institutions. Typical SRFs at each sovereign rating level are outlined in the Key Factors in Assigning Support Rating Floors table.

III.1.1 Propensity of Sovereign to Provide Support

Non-bank financial institutions are generally less likely to be deemed as systemically important as banks, especially if not integral to a country's financial system. As a result, most non-bank financial institutions are not likely to receive sovereign support. Having a policy role is a more likely reason for a non-bank financial institution to receive sovereign support, although systemic importance and interconnectedness with the financial system are other possible reasons for the sovereign to consider supporting the non-bank financial institution.

III.2. Institutional Support

Fitch's ratings of non-bank financial institution subsidiaries may or may not factor in a high probability of support from parent institutions. On one end of the spectrum, a captive finance subsidiary may be afforded a high probability of support, because its existence enhances the parent's franchise, strategic objectives and revenue growth prospects. The other end of the spectrum could be an entity that is afforded a lower probability of support because it is held primarily as a tax-advantaged investment opportunity, such as an aircraft leasing subsidiary of an insurance company.

In determining potential support for non-bank financial institution subsidiaries from parent institutions, Fitch considers the parent's ability and propensity to provide support and a subsidiary's ability to make use of parental support, as outlined in sections III.2.1 and III.2.2 below and in Annex 2.

III.2.1 Parent's Ability to Support Subsidiary and Subsidiary's Ability to Use Support

Importance of this Assessment: For a non-bank financial institution to receive shareholder support, the owner must, by definition, be both able and willing to provide it and a subsidiary must be able to make use of parental support to avoid default.

Parent IDRs: Fitch's assessment of the parent's ability to support its subsidiary starts by considering the parent's Long-Term IDRs. These ratings cap the ability of the parent to provide support, as Fitch would not expect support for a subsidiary to be forthcoming when the parent is itself in default. In addition, other factors, namely parent/group regulation and relative size, may also affect the ability of the parent to provide support.

Parent VR: In cases where the parent's Long-Term IDR is driven by potential sovereign support, such as if the parent is a bank, Fitch will consider whether this support would be allowed to flow through to subsidiaries, in particular those operating in foreign jurisdictions. In Fitch's view, parent regulators will in many cases have quite strong incentives to allow support to flow through to subsidiaries given the potential negative impact of a subsidiary default on the group's operations and reputation.

However, in cases where Fitch judges there to be significant uncertainty about support flowing through, it may increase the notching between parent and subsidiary Long-Term IDRs compared to what would usually be applied given the propensity of the parent to support. Where the agency considers there to be high uncertainty about support flowing through, it may use the parent's VR or stand-alone credit risk assessment, rather than its Long-Term IDR, as its anchor rating in assessing the parent's ability to support its subsidiary.

Where possible, Fitch may consult with representatives of the parent's regulatory authorities to form a view on whether support would flow through. In addition, many of the factors determining a parent's propensity to support a subsidiary (e.g. strategic importance, integration and ownership) will, in Fitch's view, also be likely to influence a parent regulator's decision on whether to let support flow through to the subsidiary.

Parent/Group Regulation: Aside from the issue of "sovereign support flow through," significant regulatory restrictions at the parent level, if relevant, may more generally reduce the fungibility of capital and liquidity within a group, reducing the ability of the parent to provide support to a subsidiary.

Conversely, regulatory requirements to support subsidiaries can positively influence the levels of IDRs assigned to a subsidiary, resulting in them being closely aligned to those of the parent even where propensity to support might otherwise have been low. Formal or informal agreements between parent and subsidiary regulators could also make it more likely that support would be forthcoming.

Relative Size: In cases where subsidiaries form a relatively large part of the consolidated group, the parent may find it more difficult to provide sufficient and timely extraordinary support, even in cases where its own (stand-alone) balance sheet remains relatively unimpaired. This risk will be greater where Fitch believes that different subsidiaries' needs for support are likely to be quite highly correlated, for example, because they operate in a single region. Where subsidiaries are

large relative to the consolidated group, Fitch may increase the notching between parent and subsidiary Long-Term IDRs, where the latter are driven by parental support.

Common Ratings: In some cases, where a subsidiary is very large (for example, accounting for more than 25% of group assets), the parent may not be able to support the subsidiary because its balance sheet is simply not big enough, it does not generate sufficient operating cash flow, or it does not have meaningful access to the capital markets. Furthermore, such very large subsidiaries tend to be highly integrated with their parents in terms of management, balance sheet fungibility and systems, meaning subsidiary and parent credit profiles are likely to be highly correlated. In such cases, Fitch will not base the subsidiary's ratings on support from the parent, but will instead assign 'common' ratings, to parent and subsidiary, reflecting the fact that their credit profiles cannot be meaningfully disentangled.

Both the size and integration characteristics must be met for common IDRs to be assigned. If a subsidiary is highly integrated, but relatively small and does not make a significant contribution to the group's overall credit profile, then its IDR, if assigned, will be based on either its parent rating (if parental support is believed to be forthcoming) or its own stand-alone profile (if parental support is not believed to be forthcoming). Common VRs and, hence IDRs, may also be applied to sister entities or entities in the same group, for example, under a holding company structure, when their operations are highly integrated or complementary to the functioning of the group or where regulation effectively makes entities within a group liable for each other's losses.

Country Risks: Fitch considers whether country risks in the jurisdiction of the subsidiary may limit its ability to utilize parent support to service its obligations. Where country risks are high, subsidiary ratings may be capped at levels significantly below those which would be possible based on the parent's ability and propensity to provide support. The domestic Country Ceiling, which captures transfer and convertibility risk, will almost always cap the subsidiary's Long-Term Foreign Currency IDR unless there are strong mitigating circumstances (e.g. material assets and cash flows are outside the country and available to service debt.) Broader country risks will usually prevent the subsidiary's Long-Term Foreign and LC IDRs being more than three notches above the sovereign. For more details, see Annex 2: Rating Non-Bank Financial Institutions Above the Sovereign.

III.2.2 Parent's Propensity to Support Subsidiary

Importance of this assessment: Even if a parent has the ability to provide support to a subsidiary, whether it does or not will depend on the parent's propensity to provide support. In general, Fitch believes parents that are prudentially regulated (e.g. banks or insurance companies) or whose non-bank financial institution subsidiaries support the parent's core business (e.g. captive auto lenders or institutions acting as group treasuries) are likely to exhibit a higher propensity to support non-bank financial institution subsidiaries than parents whose subsidiaries are more akin to investments driven by return, tax and/or diversification goals.

In assessing support propensity, Fitch analyzes the factors listed below *(also see the Notching of Subsidiaries table)*. In the absence of ability constraints (including country risk), a subsidiary that Fitch views as "core" will usually have ratings equalized with the parent; a subsidiary viewed as "strategically important" will usually have ratings one notch (but in some cases, two notches) lower than the parent; and a subsidiary viewed as being of "limited importance" will usually be rated at least two notches below the parent or notched up from its stand-alone rating. Where a parent has adopted a resolution plan, Fitch may review this, where possible, for indications as to whether the parent would be likely to support the subsidiary in case of need.

Role in Group: A subsidiary's role in the broader group is often a key factor in determining the parent's propensity to provide support. Where the subsidiary represents a key and integral part of the group's business, providing some of the group's core products/services to customers in core markets, the propensity to support will usually be higher than when the subsidiary has limited synergies with the parent and is not operating in a target market. In some cases, Fitch's view of the strategic importance of the market where a subsidiary operates will take into account the role of a group of subsidiaries. An example may be a small foreign subsidiary which is of limited importance by itself but is one of several subsidiaries operating in a strategically important region for the parent.

Fitch will typically rate foreign subsidiaries operating in non-core markets at least one notch below their parents. This reflects the usually somewhat lower strategic importance and integration of foreign entities, and moderately less severe contagion risk from a foreign subsidiary default, compared to that of a domestic entity. It also reflects the somewhat lower likelihood of pressure from the parent's regulator to provide support to a foreign subsidiary, as opposed to a domestic subsidiary.

On the other hand, Fitch will often equalize the ratings of a foreign subsidiary with its parent institution where the subsidiary operates in a market long regarded as core by the parent.

Potential for Disposal: Where the potential for disposal is very low, for example, because the sale of the subsidiary would significantly alter the overall shape of the group and deprive the group of a key part of its business, subsidiary ratings are more likely to be equalized with those of the parent. Where the subsidiary could be more easily separated from the group and, in particular, where the entity is already up for sale or being prepared for sale, Fitch usually views the support propensity as being less strong.

Country risks can also affect the long-term financial prospects of an overseas subsidiary and thus weaken a parent's commitment to maintaining a presence in a country. This means subsidiary ratings are usually capped no more than two notches (three notches where Fitch views the commitment as being very robust in a high sovereign stress scenario) above a sovereign IDR even if a country ceiling is higher.

Implication of Subsidiary Default: The parent institution's decision on whether to support a subsidiary will in many cases consider the near-term costs and benefits of providing (or not providing) support. Where default would constitute a huge reputational risk to the parent and could undermine its franchise or even viability, the propensity to support will often be higher than when reputational risk is limited and the direct impact on the parent will be containable.

Integration: A high level of management, operational and balance sheet integration between parent and subsidiary would usually be viewed by Fitch as underlining the parent's strategic commitment to the subsidiary and making a default of the subsidiary potentially more onerous and costly for the parent. These factors would typically result in a higher propensity to support, in the agency's view and, therefore, reduced notching or equalization of ratings between parent and subsidiary Long-Term IDRs. In particular, if the parent provides a high proportion of the subsidiary's non-equity funding, this could raise considerably the cost for the parent of the subsidiary's default and potential bankruptcy and increase the incentive to provide support.

Where the degree of integration between parent and subsidiary is very high, such that the latter operates similarly to a branch, or is effectively a booking entity, Fitch may equalize the Long-Term IDRs of parent and subsidiary or assign these within one notch of each other.

Ownership: Fitch does not usually distinguish between full and large majority (over 75%) ownership in assessing a parent's propensity to support a subsidiary. However, if a minority

owner has a relatively large (over 25%) stake, this could moderately reduce the perceived moral obligation of the parent to unilaterally support the subsidiary and might complicate and delay decisions on the provision of joint support. Therefore, Fitch will be less likely to equalize ratings where a large minority shareholder exists. Furthermore, the agency might notch twice or more, rather than once, where the stakes of majority and minority shareholders are close to parity, or where some element of competition or confrontation exists between the shareholders.

Support Track Record: A strong track record of provision of timely extraordinary support to a subsidiary (or to other subsidiaries within the group) under a broad range of stress scenarios can positively influence Fitch's assessment of a parent institution's propensity to provide support, and thus limit the notching of a subsidiary's Long-Term IDR relative to that of its parent. In addition, Fitch views positively a high level of 'ordinary' support, whereby a parent operates a subsidiary with comfortable liquidity and, in particular, capital buffers, rather than simply meeting minimum regulatory requirements. A track record of not providing support, or the absence of a track record altogether given a limited operating history, could constrain the degree of institutional support uplift.

In the event of a default by its home sovereign, the stand-alone profile of a subsidiary will probably have suffered significant impairment. Potential uplift of a subsidiary's rating above the sovereign rating of its domicile will, therefore, usually be limited because of some uncertainty that the owner's commitment to providing continued support will remain in place in a sovereign default scenario. Uplift will be usually be limited to two notches above a sovereign IDR (or three notches if Fitch views support as being very robust in a high sovereign stress scenario) even if a country ceiling is higher.

Subsidiary Performance and Prospects: A strongly performing subsidiary with generally good prospects will usually, in Fitch's view, be somewhat more likely to be supported by its parent than a subsidiary with a track record of moderate or weak performance. At the same time, the agency also takes into account that a subsidiary in need of extraordinary support has by definition suffered a sharp deterioration in its performance, which weakens the relevance of any historically strong profitability in assessing future prospects.

Branding: Where a subsidiary shares branding with its parent institution, this may signal an increased commitment to, or greater integration with, the subsidiary on the part of the parent. Common branding may also increase reputational risk for the parent in case of a subsidiary default, potentially also increasing the propensity to support.

Notching of Subsidiaries

Notching Relative to Parent Rating[a]	Core/Equalized	Strategically Important/One (or in Some Cases Two) Notches	Limited Importance/Two or More Notches[b]
Parent Ability to Support and Subsidiary's Ability to Use Support			
Parent/Group Regulation	Parent regulator and/or regulation would be likely to favor support of subsidiary by parent entity	Parent regulator/regulation is neutral for subsidiary support	Parent not regulated or parent regulator/ regulation may restrict support or capital/tax implications of support may be very onerous
Relative Size	Any required support would be immaterial relative to ability of parent to provide it	Any required support would likely be manageable relative to ability of parent to provide it	Required support could be considerable relative to ability of parent to provide it
Country Risks	N.A.	Country risks (e.g. transfer and convertibility risks) represent moderate constraint on subsidiary's ability to use parent support	Country risks (e.g. transfer and convertibility risks) represent significant constraint on subsidiary's ability to use parent support
Parent Propensity to Support			
Role in Group	Key and integral part of the group's business, provides some of group's core products/services in same jurisdiction as parent or to core market(s)	Strong synergies with parent, providing products/services in jurisdictions or markets identified as strategically important	Limited synergies with parent, not operating in target jurisdictions or markets
Potential for Disposal	Sale is very hard to conceive; disposal would noticeably alter overall shape of group	No plans to sell, although disposal would not fundamentally alter overall group franchise; country risks raise moderate doubts over long-term commitment to the subsidiary	Potential candidate for sale, or might already be up for sale; disposal would not be material for group franchise; country risks raise more material doubts over long-term commitment to the subsidiary
Implication of Subsidiary Default	Default would constitute huge reputational risk to parent, and very materially damage its franchise	High reputational risk for parent, with potential for significant negative impact on other parts of group	Reputational risk would probably be containable for parent
Integration	High level of management and operational integration; capital and funding largely fungible	Significant management independence; some operational/regulatory restrictions on transfers of capital and funding	Considerable management independence; significant operational/regulatory restrictions on transfers of capital and funding
Size of Ownership Stake	Full ownership or large majority stake (typically more than 75%)	Ownership of less than 75%, but limited influence of minority shareholder(s) on subsidiary operations	Ownership of less than 75%, and significant influence of minority shareholder(s) on subsidiary operations
Support Track Record	Support is unquestioned, reflecting high level of integration and fungibility of capital/funding	Timely and sufficient provision of support, when the need has arisen, or no prior cases of support being needed; country risks raise moderate concerns over support in a sovereign default scenario	Support has been provided with some delays, has only been moderate in volume relative to subsidiary needs or has not been observed given a limited operating history; country risks raise more material concerns over support in a sovereign default scenario
Subsidiary Performance and Prospects	Long and successful track record in supporting group objectives, which is likely to continue	Limited track record of successful operation, or moderate long-term prospects	Weak performance track record, or question marks over long-term viability of business
Branding	Shares same brand as parent	Combines parent and own branding	Subsidiary branded independently from parent
Legal Commitments	Parent has made strong legal commitment to support subsidiary	Parent has made non-binding commitment to support subsidiary	Parent has not made any legal commitment to support subsidiary
Cross-Default Clauses	Potential acceleration of parent debt provides strong incentive to prevent subsidiary default	Potential acceleration of parent debt provides moderate incentive to prevent subsidiary default	Subsidiary default would not trigger acceleration of parent debt

[a]Indicates typical differential between support-driven Long-Term IDR of subsidiary and Long-Term IDR of parent. Subsidiary could be rated higher than the level implied by parental support if it has a higher stand-alone profile or SRF. [b]Where Fitch judges support to be unlikely or highly uncertain, the Long-Term IDR of a subsidiary with limited importance may be based solely on its stand-alone strength, or may be notched up from a rating level commensurate with its stand-alone strength.
Source: Fitch.

Legal Commitments: In rare cases, a subsidiary may be incorporated with unlimited liability, creating a clear legal obligation for the parent institution to provide support. In such cases, Fitch would be likely to equalize the Long-Term IDRs of subsidiary and parent, unless there were constraints arising from country risks. An unconditional and irrevocable guarantee, which contains specific third-party beneficiary language, and permits subsidiary creditors to press claims against the guarantor in the event of default by the subsidiary, would also serve to create a floor for the IDR of the subsidiary and/or its guaranteed debt at the same level as the guarantor.

A formal support agreement entered into by the parent entity, for example, to maintain capital and liquidity requirements of a non-bank financial institution subsidiary above a defined threshold, will be regarded as moderately positive for subsidiary ratings. However, although certain support agreements are legally binding while in force, they are usually revocable and can also be withdrawn if the subsidiary is divested, meaning they will typically provide very limited uplift, if any, for a subsidiary's ratings.

Non-binding commitments from parents to support subsidiaries, such as public management comfort letters (for example, in bond prospectuses), strategic statements (for example, in annual reports) or letters lodged with subsidiary regulators, add some value to the rating process by defining management's intent and potentially providing a stronger moral obligation on the part of the parent to provide support to the subsidiary. However, as such non-binding commitments are not enforceable, they generally have limited direct bearing on rating decisions in and of themselves.

Cross-Default Clauses: Cross-default clauses in parent funding agreements may specify that a subsidiary default will constitute an event of default on parent obligations, thereby granting acceleration rights to parent creditors. While this creates no obligation for the parent to support the subsidiary, it may create a significant incentive to do so, raising the propensity to provide support. The strength of this incentive will depend, among other things, on the volume of obligations potentially subject to acceleration, whether the terms of the acceleration would be attractive to creditors and hence be taken up (for example, whether the redemption price would be above or below the current market price) and whether creditors might waive their acceleration rights, perhaps for a fee.

Level of Parent IDRs: Where the parent institution's Long-Term IDR is at a low, speculative-grade level (typically in the 'B' range or below), Fitch is more likely to equalize parent and subsidiary Long-Term IDRs. This reflects the fact at the lower end of the rating scale the difference in default risk between successive rating notches becomes greater and so it may be appropriate to assign a parent and subsidiary with relatively little risk differential the same levels of Long-Term IDRs.

Non-Bank Parent Companies: The propensity and ability of corporate and insurance parents to support non-bank financial institution subsidiaries is assessed using similar principles as for bank parents. The relative size of the parent and subsidiary, the parent's creditworthiness and financial flexibility and the importance of the subsidiary to the core business of the parent will be relevant considerations. In general, Fitch believes parent companies that are prudentially regulated (e.g. insurance companies) or whose non-bank financial institution subsidiaries support the parent's core business (e.g. captive auto lenders or finance subsidiaries acting as group treasuries) are likely to have a higher propensity to support non-bank financial institution subsidiaries than corporate parent companies whose subsidiaries are more akin to investments, driven by return, tax and/or diversification goals.

Support from Sister Entities: Fitch may factor support from sister entities, as well as parent institutions, into non-bank financial institution ratings, where it believes this potential support to be strong. However, in assessing this potential support, Fitch will consider in particular: (i) whether the sister company's propensity to support could be materially weaker because it does not hold a stake and, therefore, would not suffer any direct balance sheet impairment as a result of the rated entity's bankruptcy; and (ii) whether the regulator of the sister institution may seek to restrict support to safeguard the solvency of the former.

Subnational Governments: Sometimes Fitch views potential support from federal, state or other subnational (regional, municipal or local) authorities as sufficiently strong to drive a non-bank financial institution's IDR. Fitch usually treats this as a form of institutional support and, therefore, typically does not assign SRFs based on support from a subnational. However, in exceptional cases, for example, when the subnational itself benefits from a robust and tested framework of integration and support at the national level, Fitch may also assign a SRF based on subnational support.

In Fitch's view, it is very unlikely that a subnational would seek to provide support to a non-bank financial institution subsector in its entirety, and so the agency's assessment of support will focus on the subnational's ability and propensity to support specific institutions. In assessing a subnational's ability to support, the following additional considerations will apply in respect to some of the factors listed in the Notching of Subsidiaries table.

Relative Size: Fitch will consider the overall financial flexibility of the subnational government (to the extent that this may be somewhat greater or lower than suggested by its ratings), including the size of its budget, available liquidity and ability to raise additional debt, if required.

Role in Group: Fitch will consider the existence of any special relationship between the subnational and the non-bank financial institution (e.g. the non-bank financial institution has an important policy role or agency function in the region).

Implication of Subsidiary Default: Fitch will consider the systemic importance of the non-bank financial institution to the regional financial system and economy as a whole (as measured, for example, by its shares of loans in the region).

Domestic Presence: Ratings based on subnational support are more likely where a non-bank financial institution has a strong presence in its home region but limited operations in the rest of the country or internationally.

Changes in Support Propensity and Sale of Subsidiary

Based on changes in circumstances, Fitch may change its view on a parent's propensity to support a given subsidiary. In some cases, for example, if Fitch were to perceive a sharp change in a subsidiary's role in the group, the potential change in a subsidiary's Support Rating and IDR could be significant (e.g. by multiple notches).

Gradual Trend: If Fitch believes that a parent's propensity to support a given subsidiary is gradually changing, whether because of changes in strategic importance or due to other factors listed above, Fitch may change the Rating Outlook on the subsidiary's Long-Term IDR (assuming it is support-driven), and the revised Rating Outlook could be different to that on the parent's Long-Term IDR. For example, if a parent has a Stable Rating Outlook, but Fitch believes a core FI subsidiary is becoming less important to the group, Fitch could change the Rating Outlook on the subsidiary to Negative to indicate the potential change in rating associated with its lessening strategic importance. Conversely, a gradual increase in a subsidiary's strategic importance could result in its Long-Term IDR having a Positive Rating Outlook while the Rating Outlook on the parent's Long-Term IDR is Stable.

Sale Risk: Fitch does not explicitly capture sale risk in its ratings, prior to a formal announcement that a subsidiary is to be sold or is up for sale. However, in the agency's view, there is usually a close correlation between a subsidiary's strategic importance and the likelihood of it being sold. Sale risk should therefore usually be low in cases where a subsidiary's Long-Term IDR is equalized with, or within one notch of, that of its parent.

Sale Announced, Buyer not Identified: If a parent announces that a subsidiary is up for sale without a buyer yet being identified or that management is exploring strategic alternatives with respect to the entity or if, for example, a regulator requires that a parent divest a subsidiary, then Fitch will reassess the parent's propensity to provide support to the entity concerned. If the agency believes the strategic importance of the subsidiary has reduced, such that the parent will have a lower propensity to provide support prior to the sale, or in case a sale does not go through, the Long-Term IDR of the subsidiary may be downgraded. If Fitch believes there is a significant probability a sale will take place, the ratings of the subsidiary are also likely to be placed on Rating Watch.

In taking rating actions following a sale announcement, Fitch will also consider whether a relatively narrow group of highly-rated potential acquirers has already been identified. In such cases, the risk of the subsidiary's Long-Term IDR being downgraded may be limited, and the ratings may therefore be maintained at their former levels even when Fitch believes the subsidiary has become less strategically important for its current parent.

Conversely, if Fitch believes that a subsidiary will most likely be sold to an entity with a much lower rating than the current parent, then the subsidiary's Long-Term IDR may be downgraded immediately following the announcement concerning the potential sale. This may be the case, for example, when a highly rated parent is exiting an emerging market and Fitch believes that local, more lowly rated entities are more likely acquirers than other highly rated foreign entities.

Sale Announced, Buyer Identified: If a parent announces that it has reached an agreement to sell a subsidiary to a specific buyer, and, in Fitch's view the probability of support from the new buyer differs from that of the current owner (with the potential to affect the subsidiary's Long-Term IDR), then Fitch will place the subsidiary's Long-Term IDR on Rating Watch. The Rating Watch may be Positive, Negative or Evolving, depending on the potential impact of support from the new owner on the rating.

If the Long-Term IDR is likely to be downgraded following the sale, and if Fitch believes the current owner would have a materially lower propensity to support the subsidiary should the sale not go through for any reason — i.e. in all likely scenarios the ratings will be downgraded — then it may downgrade the IDR immediately following the announcement. If Fitch believes that the sale could also result in material changes in the subsidiary's stand-alone profile, e.g. because of the loss of 'ordinary support' or because of changes in strategy, then its stand-alone credit profile may also be adversely affected.

Upon completion of the sale, or earlier if appropriate, Fitch will resolve the Rating Watch on the IDR based on its assessment of the probability of support from the new owner.

IV. Issue Ratings

As indicated in section I.6 of this report, issue ratings of non-bank financial institutions, like those of other corporate finance sectors, incorporate an assessment both of the likelihood of default (or of non-performance risk in the case of subordinated/hybrid securities) on the specific obligation and of potential recoveries for creditors in case of default/non-performance. This section outlines how Fitch assesses default/non-performance risks and recovery prospects on different types of non-bank financial institution securities and how this is factored into long-term ratings and RRs assigned to issues.

IV.1 Short-Term Debt

Short-Term IDRs are almost always assigned in accordance with a correspondence table between Long-Term and Short-Term IDRs *(see the Rating Correspondence table)*. Where the Long-Term IDR can correspond to either of two Short-Term IDRs, the Short-Term IDR will usually be determined based primarily on the strength of the issuer's liquidity profile.

Key rating elements regarding a non-bank financial institution's liquidity profile include:

- a review of the non-bank financial institution's liquidity profile, liquidity management and alternative funding sources;
- available liquid assets;
- sources and maturity profiles of backup liquidity;
- credit quality of liquidity providers; and
- conditions precedent to drawing upon liquidity sources.

If a non-bank financial institution's CP funding does not match its normal asset conversion cycle or operational free cash flow, the issuer must seek to refund CP notes already in the market, either with the issuance of new CP notes or long-term bonds or by accessing committed, CP-specific or general corporate purpose bank lines that enable same-day funding. If the issuer does not have such immediate funding, the company may not be able to repay maturing obligations. As such, Fitch considers backup liquidity for outstanding CP and other short-term debt obligations an important element in assigning instrument-level ratings, as well as an element in assessing the LT IDR.

Liquidity backup is either adequate or inadequate. More than adequate liquidity backup does not justify a higher short-term credit rating. On the other hand, when CP is explicitly enhanced, such as if it is backed by a direct-pay line of credit or similar form of guarantee, the ultimate CP rating will be the higher of the direct-pay line of credit or similar credit enhancement or the short-term rating of the issuer itself.

Fitch typically expects investment-grade-rated CP issuers to have full (100%) liquidity backup available for its outstanding CP and other short-term obligations, regardless of the credit rating of the entity. Backup liquidity may not only be in the form of bank commitments but may also include cash or marketable securities, expected operational cash flow sources, tangible parental support or other alternative forms of liquidity support depending on how reliable these sources may be.

If the majority of backup facilities are maturing in one year or less, the CP issuer is exposed to non-renewal risk, since some banks may be unwilling to renew their maturing commitments. For issuers with substantial amounts of CP outstanding, the need for multiyear liquidity backup is even more important. Companies with multiple long-term backup facilities can reduce non-renewal risk by having tiered maturities.

IV.2 Senior Unsecured Obligations

IV.2.1 Overview

Ratings of senior unsecured obligations are usually assigned in line with a non-bank financial institution's Long-Term IDR, because:

- Fitch almost always views the likelihood of default on any given senior unsecured obligation as the same as the likelihood of default of the non-bank financial institution (as reflected by the Long-Term IDR) because default on any material class of senior unsecured obligations would be treated by Fitch as a default of the entity.
- Fitch usually treats senior unsecured obligations of non-bank financial institutions as having average recovery prospects. In view of the high uncertainty regarding what a non-bank financial institution's balance sheet will look like upon default, Fitch requires a high burden of proof to notch senior debt upwards or downwards based on recovery prospects. RRs on non-bank financial institutions' senior unsecured debt, where assigned, are therefore usually 'RR4', consistent with an average recovery rate of 31%–50%.

Nevertheless, in the circumstances outlined below, senior unsecured issue ratings may be assigned at levels below, or above, the non-bank financial institution's Long-Term IDR:

Weak Recovery Prospects, Lower Issue Rating: In some cases in which an issuer has substantial levels of secured borrowings, Fitch may view a senior unsecured issue as having weaker-than-average recovery prospects, resulting in it being assigned an issue rating below the Long-Term IDR. This may be because of general concerns about the quality of a non-bank financial institution's assets, potentially impairing recovery prospects for all creditors in case of default. Or it may be driven by specific concerns related to the non-bank financial institution's funding structure; for example, very high levels of balance sheet encumbrance or very deep subordination of senior unsecured creditors in the liability structure.

Secured funding has historically been a cost efficient method for funding non-bank financial institution assets. Therefore, unsecured debt may be a very small part of the capital structure and may be rated one-notch below the Long-Term IDR until it accounts for a meaningful part of the funding mix.

Strong Recovery Prospects, Higher Issue Rating: Fitch will not usually rate senior unsecured liabilities higher than the non-bank financial institution's Long-Term IDR because of high uncertainty in assessing recovery prospects. An example might be when an entity is closer to default and there is greater visibility on recovery prospects for senior unsecured creditors.

Higher Default Risk, Lower Rating: In rare cases, Fitch may take the view that a non-bank financial institution may selectively default on certain senior unsecured obligations, but that such a default would not indicate the uncured failure of the entity because of the specific circumstances of the default, usually relating to some form of regulatory intervention and/or because the obligations in question do not comprise a significant part of the overall funding base. In such a case, the issue ratings may reflect the specific selective default risk relating to the instruments concerned, while the Long-Term IDR will continue to reflect the risk of default on the bulk of the issuer's senior liabilities.

Lower Default Risk, Higher Rating: In exceptional circumstances Fitch may rate certain senior unsecured obligations higher than the obligor's Long-Term IDR because the agency believes default on the securities is less likely than on other reference obligations to which the IDRs rate.

Substitution and Variation Clauses: Periodically, senior debt securities include clauses that permit the contractual terms of the securities to be varied or the securities themselves to be substituted with new securities. Such clauses may be at an issuer's discretion, subject to approval by a trustee, etc.

Fitch assesses whether such clauses should affect a bond's rating on a case-by-case basis. Where both the probability of variation or substitution is considered high and there is a high degree of clarity over the form of the substitution/variation securities, Fitch will rate to the terms of the likely substitution or variation securities.

IV.2.2 Recovery Rating Analysis

Where a non-bank financial institution has a Long-Term IDR of 'B+' or below, Fitch typically assigns a RR to the entity's issues rated on the long-term scale based on a bespoke recovery analysis. RRs provide greater transparency on the recovery component of Fitch's assessment of the credit risk of lowly rated issuers' securities, based on a scale ranging from 'RR1' for the strongest recovery prospects to 'RR6' for poor recovery prospects, as per the table below. However, when insufficient data are available or the potential recovery outcome is highly variable, Fitch would not assign a RR.

Credit ratings for the obligations of issuers rated between 'AAA' and 'BB–' for the most part take aggregate recoveries on the defaulted bond market as a whole into consideration, as per the Notching Guidance for 'BB–' and Above Rated Issuers table. Instruments of a particular priority and security position will be assigned credit ratings that reflect the average recoveries expected to be received by such an instrument in the event of a default. Fitch does not typically conduct bespoke recovery analysis for such obligations as they are so far from default that assumptions that might be used for the analysis of a default scenario could be too speculative to be of added value.

Recovery Rating Scale

Rating	Recovery Prospects Given Default	Typical Historical Recoveries (%)	Notching of Issue Rating[a]
RR1	Outstanding	91–100	3
RR2	Superior	71–90	2
RR3	Good	51–70	1
RR4	Average	31–50	0
RR5	Below Average	11–30	(1)
RR6	Poor	0–10	(2)

Click here for full descriptions of each rating. [a]Relative to level of non-performance risk. As outlined in the 'Strong Recovery Prospects, Higher Issue Rating' sub-section of IV.2.1, it is exceptionally rare for Fitch to notch up senior unsecured debt for recovery reasons.
Source: Fitch.

At any rating level where the bespoke recovery approach is not used, Fitch can denote contractual or structural subordination that is detrimental to the unsecured debt by rating it lower than the IDR. This can potentially be the case where there are large proportions of secured debt relative to total debt, particularly where leverage is relatively high, or where a portion of debt is structurally removed from the operations and, therefore, relies on dividend flows for debt servicing. Forms of subordination can also include lower levels of guarantees from group entities for a particular tranche of debt.

Where IDRs have transitioned from the 'B' rating category to the 'BB' rating category, at which rating levels RRs are no longer assigned, existing debt instruments previously benefiting from RRs of 'RR2' and 'RR1' under the bespoke analysis may stay at their previous rating levels notwithstanding the IDR being upgraded, if warranted. This may be the case if the capital

structure contains a large component of higher-ranking debt. A 'BB+' rated instrument is unlikely to be upgraded to 'BBB–' until the IDR is 'BB+', unless superior recoveries are expected.

Conversely, should an IDR migrate from 'BB–' or above to the 'B' rating category where bespoke recovery analysis is undertaken, Fitch may position ratings assigned to secured and unsecured tranches of debt by undertaking recovery analysis so that an upgrade of the instrument rating does not occur when the IDR is downgraded.

Instrument Ratings for Combinations of IDRs and RRs

	Long-Term IDR							
Recovery Rating	**B+**	**B**	**B–**	**CCC+**	**CCC**	**CCC-**	**CC**	**C/RD/D**
RR1	BB+	BB	BB–	B+	B	B–	CCC+	CCC
RR2	BB	BB–	B+	B	B–	CCC+	CCC	CCC–
RR3	BB–	B+	B	B–	CCC+	CCC	CCC-	CC
RR4	B+	B	B–	CCC+	CCC	CCC-	CC	C
RR5	B	B–	CCC+	CCC	CCC-	CC	C	C
RR6	B–	CCC+	CCC	CCC–	CC	C	C	C

Note: Assumes no incremental non-performance risk in instrument rating relative to the IDR. As outlined in the 'Strong Recovery Prospects, Higher Issue Rating' sub-section of IV.2.1, it is exceptionally rare for Fitch to notch up senior unsecured debt for recovery reasons.
Source: Fitch.

How Recovery Ratings Are Determined

Fitch first determines the likelihood of default/non-performance by an issuer, which it measures on the long-term 'AAA' rating scale. Fitch then arrives at the issue rating as a function of its recovery prospects in case of default/non-performance. As per the table below, where recovery prospects are viewed as average, the issue rating will be in line with the assessment of default/non-performance risk. If the agency views the instrument as having above- or below-average recovery prospects, for example as a function of leverage, funding mix and stressed valuation, Fitch may adjust upwards or downwards, respectively, from the default/non-performance risk to arrive at the issue rating. The extent of potential upward/downward adjustment of the issue rating based on the instrument's recovery prospects is shown in the table below.

Notching Guidance for 'BB–' and Above Rated Issuers

	Investment Grade		High Speculative Grade 'BB+' to 'BB–'	
Notches from IDR	**Secured Debt**	**Unsecured Debt**	**Secured Debt**	**Unsecured Debt**
3				
2				
1	Notched by +0 to +1	At average recoveries: +0 Notch. At below average recoveries +0 to -1 notches	Notched by +0 and +3, but capped at 'BBB-'	Low levels of secured debt: +0 to +1 Notch
+0				
-1		Subordinated debt: -0 to -2 notches		Unsecured and/or subordinated with secured debt: -0 to -2 notches
-2				

Source: Fitch

Valuation Methods Used

The valuation methods Fitch typically applies for deriving the RR of issuances by non-bank financial institutions include the liquidation value (LV) approach and the going-concern (GC) approach. The choice of valuation techniques employed may be influenced by common practice for specific non-bank financial institution segments, the issuer's ownership status, the

make-up of multi-entity groups and applicable insolvency regimes. If Fitch believes either the LV or GC approach is not applicable in the case of default of a given entity, the agency may opt to only undertake recovery analysis using one valuation method.

For subsectors with high balance sheet usage there tends to be a bias toward the LV approach in Fitch's analysis, possibly supplemented with a stressed NAV or net book value calculation. For subsectors with low balance sheet usage, Fitch will also typically conduct the LV approach, but it is more common for the GC approach to be used.

Where Fitch analyzes both methods, it may opt for the one that results in the higher enterprise value, consistent with the practice of creditors seeking to maximize firm value under bankruptcy proceedings. The table below shows the valuation methods and multiples typically used by Fitch by main subsector.

Valuation Method by Non-Bank Financial Institution Segment

NBFI Subsector	Liquidation Approach Typically Applied?	Going Concern Approach Applied When Relevant (Typical Multiple Range)
Securities Firms		
Cash Flow Business Model	Yes	Stressed Adjusted EBITDA multiple (5.0x–10x)
Balance Sheet Business Model	Yes	Stressed tangible book multiple (0.3x–1.5x)
Investment Managers		
Cash Flow Business Model	Yes	Stressed Adjusted EBITDA multiple (4.0x–10x)
Balance Sheet Business Model	Yes	Stressed NAV (0.5x–1.0x)
Business Development Companies	Yes	Stressed NAV (0.5x–1.0x)
Finance and Leasing Companies		
Cash Flow Business Model	Yes	Stressed Adjusted EBITDA multiple (4.0x–10x)
Balance Sheet Business Model	Yes	Stressed tangible book multiple (0.3x–1.5x)
Financial Market Infrastructure Companies		
Exchanges, CCPs and Non-Bank CSDs	Yes	Stressed Adjusted EBITDA Multiple (5.0x–10.0x)

Source: Fitch.

In deriving a consolidated enterprise value, Fitch may separate an entity's operating units by segment or by region to distinctly apply the most relevant valuation method to the various components.

Liquidation Approach

For non-bank financial institutions rated 'B+' or below that would likely be liquidated upon default, Fitch typically conducts a break-up analysis of their balance sheet to assess potential recoveries for creditors. This may involve an elimination of at least a portion of existing cash balances, reflecting their likely utilization under stress. In most cases, Fitch will deduct common equity from total assets to reflect an expectation that the institution will have exhausted its capital base in the event of a default.

Under the LV approach, Fitch applies haircuts to the remaining assets to reflect Fitch's expectation that these assets would likely be sold for less than book value in a liquidation scenario. Fitch then allocates the cash generated by asset sales to the creditors, based on the expected priority of claims.

Assets consolidated on balance sheets but assigned directly to specific creditors of the institution will generally be excluded from the calculation. Similarly, assets still on balance sheet but pledged to support securitization issues will be excluded from recovery calculations,

to the extent excess collateral is not present and receivers would lack the ability to control related assets. Deferred tax assets are typically not given any credit.

Haircuts applied can vary significantly by business model, asset class and region, among other factors, and Fitch will assess this on a case-by-case basis. By way of guidance, the table below reflects typical discount ranges for a number of broad asset classes that are often found on the balance sheets of asset-heavy non-bank financial institutions.

Asset Haircuts[a]

Asset	Characteristics	Discount (%)
Cash And Equivalents	No risk, adjustment may be made to reflect expected balance at default	0–50
Fixed Income Securities	Variability in risk and liquidity	5–75+
Equities	Variability in liquidity and volatility	15–100
Tangible Fixed Assets	Variability in liquidity and volatility	15–75+
Mortgage Lending	Low risk if first charge, higher risk if second charge; variable liquidity	5–40
Unsecured Personal Lending	High risk	25–50+
Associates and JVs	Illiquid and variable value	20–60
Intangible Assets[b]	Illiquid and questionable value in distress	70–100

[a]For assets purchased at a significant discount (e.g. in the case of debt purchasers), Fitch will typically apply a haircut at the lower end of the indicated range to reflect more limited additional write-down risk in a stressed scenario. [b]For non-bank financial institutions with sizable balance sheet-light subsidiaries (that could be sold as a going concern in their entirety), haircuts on intangibles might be at the lower end of the cited 70% to 100% range.
Source: Fitch.

Going Concern Approach

The GC approach involves a two-step process:

- Estimate the level of post-default earnings, typically adjusted EBITDA, upon which to base the valuation.
- Apply a conservative valuation multiple reflecting a company's relative position within its sector based on actual or expected market and/or distressed multiples. Where no statistically significant sample of market transactions is available, analysts will seek out near-proxy sectors or make assumptions based on general trends for distressed market transactions.

Valuation multiple ranges provided in the Valuation Method by Non-Bank Financial Institution Segment table are purposefully broad for the various subsectors. The actual multiple that is applied in the recovery analysis will be dependent upon a review of then-current market conditions and an assessment of valuation multiples applied to similar market transactions around the time of the analysis.

For some non-bank financial institutions segments, Fitch may apply additional segment-specific valuation approaches. For example, for investment managers Fitch may consider valuation as percentage of stressed AUM in addition to an adjusted EBITDA multiple approach. For mortgage REITs, Fitch considers stressed values based on the criteria reports "U.S. and Canadian Multiborrower CMBS Rating Criteria" and "Structured Finance CDOs Surveillance Rating Criteria," in addition to an adjusted EBITDA multiple approach.

Estimating Creditor Claims

In an effort to estimate creditor claims Fitch's analysis takes into consideration:

- **Revolving Claims:** Fitch assumes that unused portions of committed lines of credit (secured or unsecured), revolving credit facilities and letter of credit commitments are fully drawn to the extent permitted. Greater judgment is exercised for facilities, which can only be drawn for specific uses, such as those designated for use for acquisitions and capital expenditures. Fitch will assess the extent to which such drawings may also give rise to

additional recoverable assets according to the purposes for which these credit lines are typically utilized.

- **Priority Administrative Claims:** These typically range between 2% and 10% of distressed enterprise value, depending on country, institution size and complexity.
- **Lease Rejection Claims:** Where lease rejection claims have been made, Fitch assesses the ability of the issuer to rationalize leases in a default scenario and notes that under the GC approach a certain level must typically be maintained, while under the LV approach 100% of non-residential leases are typically deemed rejected. The value of rejected leases is calculated consistent with the bankruptcy code applicable in each jurisdiction, where such concepts exist.
- **Concession Assumption:** The value distributed to senior unsecured creditors may be reduced by an amount that is redistributed to junior claimants to secure their approval of the plan of reorganization or liquidation. The amount of such concession payments is highly dependent on circumstances.
- **Pension and Other Post-Employment Benefit Obligations:** Underfunded pension plans and other post-employment benefit claims can be significant claims on the bankruptcy estate, although the claims may vary in priority depending on jurisdiction and issuer-specific intercreditor agreements.
- **Other Claims:** Other non-debt and contingent claims, including material lawsuits and contingent liabilities (and guarantees) may be considered, where these are particularly pertinent to an institution.
- **Related-Party Funding:** Where a non-bank financial institution has a large amount of related-party funding, Fitch will consider whether related-party creditors would be likely to effectively become senior to creditors by withdrawing their funds prior to default.

Fitch's recovery analysis typically takes a legal waterfall approach. However, application of value is not only affected by relative priority of instruments for a particular issuer but also by organizational structure. Absent a specific legal or regulatory construct to the contrary, Fitch will assume creditors of specific legal entities have a priority claim on assets of that entity relative to creditors of affiliates and related entities. In instances where there are multiple entities in a group, Fitch may establish valuation and claims at the entity level and consider the residual values available for creditors of parent or affiliated entities.

In this context, Fitch will generally use an entity's unconsolidated balance sheet as the basis for its recovery calculations. Factors that may partially offset the effect of structural subordination include the presence of upstream guarantees and intercompany obligations owed by the subsidiary to the parent. Cross-border complexities may add conservatism to the analysis of recoveries for non-bank financial institutions that operate internationally.

Fitch acknowledges that an analysis based on the LV or GC approach requires a large number of important assumptions concerning the structure of an issuer's financial profile upon default. In view of these assumptions, the agency will not necessarily map expected recoveries to corresponding RRs and long-term issue ratings. Instead, Fitch may increase or reduce the RRs suggested by the valuation and notching approaches, depending on the sensitivities of expected recoveries to small changes in assumptions, pending events, contractual terms within specific instruments, scope of collateral or views about the operating environment of a particular company.

Fitch's recovery analysis does not attempt to capture the full spectrum of possibly conflicting motivations for creditors or the speed with which such motivations can change. Fitch would not assign RRs where it believes available information to be insufficient or the outcome of the analysis to be particularly unpredictable.

Fitch has provided country caps for RRs to encompass the creditor-friendliness (or otherwise) of jurisdictions and enforceability of security in the event of a default (see the criteria report "Exposure Draft: Country-Specific Treatment of Recovery Ratings Criteria"). These caps permit the compression of senior and junior obligations where jurisdictional or other structural features indicate that this is warranted. Fitch will endeavor to explain findings from its issuer-specific recovery analysis in its research.

IV.3 Subordinated and Hybrid Securities

Typically speaking, subordinated and hybrid instruments issued by non-bank financial institutions will follow the ratings approach and potential equity credit methodology outlined in the criteria report "Non-Financial Corporates Hybrids Treatment and Notching Criteria" (for traditional subordinated debt and hybrid securities) or the "Corporate Rating Criteria" (for shareholder loans). In instances in which such instruments are determined not to qualify as debt per the "Non-Financial Corporates Hybrids Treatment and Notching Criteria or Corporate Rating," Fitch will typically afford 100% equity credit for such instruments if balance sheet capitalization metrics are relevant to the analysis of the issuing entity.

If a subordinated or hybrid instrument is issued by a non-bank financial institution prudentially regulated under a similar framework as banks, the ratings approach will follow the rationale outlined in the "Bank Rating Criteria." If a subordinated or hybrid instrument is issued by a policy institution or other entity with some form of government sponsorship, linkage or ownership, the ratings approach will follow the rationale outlined in the "Bank Rating Criteria." If a subordinated or hybrid instrument is issued by a non-bank financial institution prudentially regulated under a similar framework as insurance companies, the ratings approach will follow the rationale outlined in the criteria report "Insurance Rating Criteria."

Determining Ratings and Potential Equity Credit for Subordinated and Hybrid Securities Issued by Non-Bank Financial Institutions

Issuer Type	Applicable Criteria
Traditional non-bank financial institutions (i.e. does not fall under one of the three categories outlined below)	Non-Financial Corporates Hybrids Treatment and Notching Criteria (for traditional subordinated debt and hybrid securities) or Corporate Rating Criteria (for shareholder loans)
Non-bank financial institutions prudentially regulated under a similar framework as banks	Bank Rating Criteria
Non-bank policy institution or other entity with some form of government sponsorship, linkage or ownership	Bank Rating Criteria
Non-bank financial institution prudentially regulated under a similar framework as insurance companies	Insurance Rating Criteria

Source: Fitch.

IV.4 Guaranteed and Secured Debt

Fitch usually rates fully guaranteed debt (or debt that Fitch deems to be exposed to an equivalent degree of credit risk as guaranteed debt) in line with the senior unsecured debt of the guarantor (if this is higher than the unsecured debt rating of the non-bank financial institution issuer). Equalization of the guaranteed debt rating with the senior unsecured rating of the guarantor will depend on the guarantee ranking equally with the guarantor's senior unsecured debt, the jurisdiction of the guarantee being acceptable to Fitch at the rating level, its enforceability, timeliness and/or expectations that the guarantor will honor the guarantee. A non-bank financial institution's debt benefiting from a guarantee that ranks equally with the guarantor's subordinated obligations is usually rated in line with the subordinated debt of the

guarantor. In cases where the above conditions for equalization with the guarantor's rating are not met, Fitch will usually rate such obligations in line with the issuer's debt ratings.

In cases where Fitch has sufficient information to analyze and monitor the underlying collateral, it will rate long-term secured obligations of non-bank financial institutions, particularly those with relatively straightforward structures, using the default risk/recovery prospects approach outlined in the Notching Guidance for 'BB–' and Above Rated Issuers table. Issues with more complex forms of structural enhancement, e.g. securitizations, covered bonds and partially guaranteed obligations, are usually rated by Fitch's Structured Finance, Covered Bonds or Fund and Asset Manager group, respectively, based on separate criteria.

Ratings of non-bank financial institutions' short-term obligations are based solely on the issues' default risk and so do not take account of structural enhancements that may improve recoveries in case of default.

IV.5 Market-Linked Notes

Some non-bank financial institutions issue or guarantee securities that return amounts referenced to a market risk essentially independent of the issuer's/guarantor's own creditworthiness (sometimes referred to as market-linked notes or MLNs). In some cases, only the coupon stream references the market risk (referred to as principal-protected notes) and, in others, both the coupon stream and principal repayment are driven by the reference market risk (referred to as non-principal-protected notes). MLNs may reference a very broad array of risks, most commonly related to equities, currencies and commodities and are often structured in response to reverse inquiries.

MLN ratings are aligned with the ratings of a given issuer or guarantor's traditional debt instruments of an equivalent seniority (senior debt, preferred senior debt, etc.). Ratings are assigned by Fitch only when the principal is protected and solely address the credit risk of the issuer or guarantor. Coupon risk unrelated to the issuer or guarantor's credit risk is thus excluded from MLN ratings. Dual currency notes may be rated provided they can or will be settled in an equivalent amount of a second currency.

Fitch does not rate notes whose risk of principal return is unrelated to the issuer's credit risk. Consequently, for the avoidance of doubt, Fitch will not rate credit-linked notes, which reference the credit risk of a third party or basket of third parties, under this criteria. These notes may be rated by Fitch's Structured Finance Group.

IV.6 Debt Issuance Distinctions Between Holding Companies and Non-Bank-Financial Institution Operating Subsidiaries

When rating debt instruments that are structurally subordinated to other debt instruments within a group structure, for example debt issued by a holding company or debt-issuing vehicle, Fitch will assess the strategic, operational or legal links between the different elements in the structure.

If Fitch's analysis determines that such debt is sufficiently isolated from the remainder of the group, failure to service it may have limited implications for the creditworthiness of the operating subsidiaries. Fitch's analysis will still start with an assessment of the operating subsidiaries' credit profiles. However, this analysis will likely be supplemented by an assessment of the stand-alone profile of the issuing entity. In this case, Fitch's analysis would likely incorporate elements of Fitch's rating approach for investment companies, notably when assessing the issuer's capitalization and leverage as well as its funding, liquidity and coverage profile. Fitch may assign a public rating to the issuing entity, informing investors of its different default probability compared with the operating subsidiaries.

Under certain circumstances, for instance, if there is a strong ring-fencing mechanism in place (as may be the case where operating subsidiaries are prudentially regulated, for example), this could lead Fitch to exclude such holding company or debt-issuing vehicle debt from the analysis of the ring-fenced group.

On the other hand, if Fitch concludes that the strategic, operational or legal links between a holding company or debt-issuing vehicle and an operating entity are relatively significant and there is no or limited ring-fencing in place protecting the operating entity and holders of its debt, the structurally subordinated debt will most likely be consolidated in the analysis of the operating entity and the issue rating of the holding company or debt issuance vehicle's debt instrument will be determined through a notching approach.

In determining the notching relativities between a holding company or debt-issuing vehicle and an operating company and their respective debt instruments, Fitch assesses potential differences in default probabilities. As part of this assessment, Fitch analyzes relevant regulatory and legislative aspects, the operating entity's ability to upstream dividends to the issuing entity in comparison to the debt quantum and interest expenses of the issuing entity. Fitch would also take other potential income streams of the issuing entity into consideration, including, where relevant, interest income on intercompany loans and cash flows from other group entities.

Annex 1: Variations from Criteria

Fitch's criteria are designed to be used in conjunction with experienced analytical judgment exercised through a committee process. The combination of transparent criteria, analytical judgment applied on a transaction-by-transaction or issuer-by-issuer basis and full disclosure via rating commentary strengthens Fitch's rating process while assisting market participants in understanding the analysis behind the ratings.

A rating committee may adjust the application of these criteria to reflect the risks of a specific transaction or entity. Such adjustments are called variations. All variations will be disclosed in the respective rating action commentaries, including their impact on the rating where appropriate.

A variation can be approved by a ratings committee where the risk, feature or other factor relevant to the assignment of a rating and the methodology applied to it are both included within the scope of the criteria, but where the analysis described in the criteria requires modification to address factors specific to the particular transaction or entity.

Annex 2: Rating Non-Bank Financial Institutions Above the Sovereign

Fitch is more likely to rate a non-bank financial institution above the sovereign – i.e. assign a LC Long-Term IDR to the non-bank financial institution above the sovereign LC Long-Term IDR, or a FC Long-Term IDR to the non-bank financial institution above the sovereign FC Long-Term IDR – when both of two conditions hold. First, Fitch must believe that a non-bank financial institution would probably retain the capacity to service its obligations in the relevant currency following a sovereign default in that currency. This capacity may be retained either because the non-bank financial institution receives external support or because the non-bank financial institution's intrinsic strength, as reflected in its stand-alone credit risk profile, is sufficient to enable it to continue servicing its obligations after a sovereign default.

Second, the agency must believe that the sovereign, following its own default in a currency, would probably not impose restrictions on the non-bank financial institution's ability to service its obligations in that currency. Restrictions may be applied to FC or LC obligations. Fitch usually regards restrictions to the former as somewhat more likely than the latter, which tends to result in the non-bank financial institution's LC ratings being less constrained, relative to the sovereign, than FC ratings. However, in some countries where governments have been more interventionist, both FC and LC ratings of non-bank financial institutions may be capped at the level of the sovereign.

Additionally, unlike banks, which often have strong ties to the credit profile of the sovereign in which they reside, non-banks may not experience the same linkage or potential restrictions on their ability to service their own debt. As an example, a global investment manager may have the majority of its capital invested in other countries, with limited exposure to the economy in which it domiciled. Therefore, the credit profile of the investment manager may not be directly affected by the credit profile of the sovereign.

Annex 3: Information Used to Issue and Maintain Ratings

Key Principles

Fitch bases its research and rating analysis on a thorough analysis of all relevant information known and believed to be relevant to the analysis and the rating decision.

This information includes publicly available information, information provided directly by the issuer and information provided by third parties and relevant information gathered by Fitch during its interaction with other issuers.

All rating committees are required to verify that data was sufficient and robust relative to the rating decision. Where there is insufficient information to assign or maintain a rating, no rating shall be assigned or maintained.

Criteria Data Sources

The key rating assumptions for the criteria are informed by discussions with external parties, such as issuers, institutional owners, supervisors and governments and Fitch's analysis of financial and non-financial information, such as issuer financial statements and annual reports, bond documentation and financial market, industry, academic and economic data, research and history.

Information Threshold

The core information relied on in the rating process is publicly available information such as annual and interim financial statements (typically at least three years of audited accounts), transaction documents for public issues, public statements, presentations and other ad hoc disclosure made by issuer management, public regulatory filings and official industry commentary. This public information represents the minimum requirements for investors to form an investment decision and is based on the level and type of information typically presented by a publicly listed company.

Public disclosure is often supplemented by additional information provided directly by issuer management. Such additional information may take the form of more frequent or confidential updates of information typically disclosed publicly and/or specific non-public information considered analytically important. Meetings may be held with members of issuer management to discuss the information provided and to understand any assumptions used in the preparation of the information. Non-financial information used in the rating process would typically include a description of the institution's core products, client base, geographical markets, risk management framework, group structure, ownership and strategy.

Fitch works with the most recent information available. Public disclosure will generally be predictable in its timing; periodic updates of other information will typically be timed to coincide with a scheduled review, or ad hoc, in response to changing conditions. This supplemental information can provide periodic insights, but its provision is subject to the discretion of the rated entity. Historical time series information provides important insight but the most recent information typically has a greater weighting in the prospective rating opinion.

Fitch undertakes a reasonable verification of the factual information relied on in accordance with the relevant rating methodology and criteria as far as is possible from information from independent sources, to the extent such sources are available.

Surveillance

Analysts perform ongoing surveillance of information received and/or requested. Where a factor or trend could have an impact on the rating, Fitch will determine the appropriate course of action, which may be one of the following:

- The non-bank financial institution is taken to rating committee.
- The non-bank financial institution is issued with a request for additional specific information (Fitch may also consider it appropriate to place it on Rating Watch at this point).

Fitch may also conclude that no action is necessary. There are no differences between new rating analysis and surveillance analysis.

Annex 4: Use of Stress Testing and Other Tools in the Rating Process

Key Principles

Where relevant, Fitch will complement its analysis of the relevant information with an assessment of the potential impact of a range of reasonable/plausible stress scenarios or simulations.

Assumptions

Assumptions used in stress or scenario analyses will vary but will typically incorporate macro-economic variables, loss rates and changes in risk parameters (such as probability of default and loss given default), and the impact will typically be framed in the context of impact on earnings, liquidity, interest coverage and/or capital/leverage. The variable(s) selected will be driven by the nature and/or severity of the stress envisaged or being tested and will be established at an issuer-specific, sector, country and/or region level.

Tools Used in the Rating Process

Where relevant, Fitch will use a range of standardized tools to simulate the effect of asset quality/performance, earnings, capital and liquidity stresses. Stress testing may be carried out on an issuer-specific or sector basis and may be supplemented by bespoke simulations in cases where standardized approaches may not be appropriate.

To the extent that regulators in various jurisdictions may conduct stress tests or asset quality reviews across a country or sector, Fitch may use its own similar tools to understand better regulatory stress tests and their sensitivities, recognizing the varying degrees of disclosure regarding factors such as baseline data and stress variables.

Inputs and Outputs

Stress and scenario testing may require standard issuer inputs of a non-public nature, and Fitch will request those that are considered necessary. If such inputs are not provided, Fitch will use conservative estimates based on analytical judgment together with its broader industry and sector knowledge. Alternatively, Fitch may be provided with an issuer's own scenario analyses. In such cases, Fitch will discuss these with issuer management to understand the underlying assumptions used in the analysis and, if appropriate, make further analytical adjustments to management's underlying assumptions.

Outputs may, at Fitch's discretion, be disclosed in full or part where such disclosure adds value to the analysis and/or research. However, the presence of non-public data typically results in disclosure being in aggregate or summarized form. Fitch will use peer comparison, where relevant, to evaluate relative resilience to specific stresses or scenarios.

Annex 5: Rating Sensitivities and Limitations

Rating Sensitivites

Fitch's opinions are forward looking and include the agency's views of future performance. Non-bank financial institution ratings are subject to positive or negative adjustment based on actual or projected financial and operational performance. The list below includes a non-exhaustive list of the primary sensitivities that can influence the ratings and/or Rating Outlook.

- **Operating Environment Risk:** Deterioration in an issuer's operating environment due to weakening of general economic environment, sovereign risks, financial market health, changes in regulatory/legislative requirements or conditions and systemic governance in the countries where the issuer is operating as well as possible imposition of foreign exchange controls.

- **Business Risk:** Developments in an issuer's ability to withstand competitive pressures as shown in its position/franchise in key markets, its business model/diversification, its level of pricing power and its operating efficiency.

- **Financial Risk:** Changes in an issuer's financial profile due to the impact of operational developments, a weakening of an issuer's operating environment, the issuer's financial policy or risk appetite or the availability of funding in case of market disruption.

- **Event Risk:** An unforeseen event, which, until it is explicit and defined, is excluded from existing ratings. Event risks can be externally triggered — a change in law, a natural disaster, a political shock or an ownership change — or internally triggered, such as a change in policy on capitalization, a major acquisition, fraud or a management or strategic restructuring. As most non-bank financial institutions tend to have an asset-liability mismatch (asset duration longer than funding duration), they can be vulnerable to extreme liquidity stress. While funding, liquidity and coverage are core parts of Fitch's rating analysis, sometimes idiosyncratic events can cause a rapid, potentially materially detrimental, deterioration in liquidity.

- **Change in Support Risk:** A change in extraordinary support likely to be available to an issuer, for example, due to a change in ownership or developments in resolution frameworks. Event risk and changes in support can often have more material implications for non-bank financial institution ratings than other risks outlined above.

- **Instrument-Specific Risk:** In the case of issue-level ratings, these may be sensitive to changes in the company's issuer-level ratings, performance risk relative to the risk captured in issuer-level ratings (e.g. hybrid securities) and changes in default risk or recovery prospects for such instrument, for example as a function of the seniority of the instrument, the volume of pari passu liabilities, the volume and relative ranking of other liabilities, the availability of unencumbered assets and/ or the enterprise value of the business.

Limitations

This master criteria identifies factors that are considered by Fitch in assigning ratings to a particular entity or obligation within the scope of the master criteria. Not all factors in these criteria

may apply to each individual rating or rating action. Each specific rating action commentary or rating report will discuss those factors most relevant to the individual rating action.

Ratings, including Rating Watches and Rating Outlooks, assigned by Fitch are subject to the limitations specified in Fitch's Rating Definitions, available at www.fitchratings.com/site/definitions. More specifically to non-bank financial institutions, IDRs, VRs, SRs, SRFs and DCRs do not specifically address transfer and convertibility risk for each and every foreign jurisdiction in which a non-bank financial institution operates, nor do they reflect jurisdiction-specific resolution risks.

Annex 6: Related Criteria

This criteria report has been published together with the following criteria report:

Bank Rating Criteria

The following cross-sector criteria reports remain in force and will be applied to the ratings of non-bank financial institutions and other financial institutions, where appropriate:

Country Ceilings Criteria

Sukuk Rating Criteria

National Scale Ratings Criteria

Non-Financial Corporates Hybrids Treatment and Notching Criteria

Exposure Draft: Country-Specific Treatment of Recovery Ratings

Third-Party Partial Credit Guarantees Rating Criteria

The Distressed Debt Exchange Rating Criteria no longer applies to non-bank financial institutions as the relevant analytical concepts have been incorporated it into this criteria.

Annex 7: Subsector Financial Ratios and Definitions

Summary of Non-Bank Financial Institution Core Ratios and Quantitative Benchmarks

		aa or Above	a	bbb	bb	b or Below
Securities Firms (High Balance Sheet Usage)						
Earnings and Profitability	Operating Income/Average Equity (%)	x>20	10<x≤20	5<x≤10	3<x≤5	x≤3
Capitalization and Leverage	(Tangible Assets – Reverse Repo – Sec. Borrowed)/FCC (x)	x<5	5≤x<10	10≤x<15	15≤x<20	x≥20
Funding, Liquidity and Coverage	Liquid Assets/Short-Term Funding (%)	x>200	150<x≤200	100<x≤150	85<x≤100	x≤85
Securities Firms (Low Balance Sheet Usage)						
Earnings and Profitability	Adjusted EBITDA/Revenue (%)	x>25	20<x≤25	15<x≤20	10<x≤15	x≤10
Capitalization and Leverage	Gross Debt/Adjusted EBITDA (x)	x<0.5	0.5≤x<1.5	1.5≤x<2.5	2.5≤x<3.5	x≥3.5
Funding, Liquidity and Coverage	Adjusted EBITDA/Interest Expense (x)	x>15	10<x≤15	6<x≤10	3<x≤6	x≤3
Investment Managers Primarily Charging Fees Based on Net Asset Value (Traditional Investment Managers and Hedge Fund Managers)						
Asset Performance	Net Client Flows/Beginning (F)AUM (%)	x>10	5<x≤10	5≥x>(5)	(5)≥x>(10)	x≤(10)
Earnings and Profitability	Adjusted (F)EBITDA/Fee Revenue (%)	x>50	30<x≤50	20<x≤30	10<x≤20	x≤10
Capitalization and Leverage	Gross Debt/Adjusted (F)EBITDA (x)	x<0.25	0.25≤x<1.5	1.5≤x<3.0	3.0≤x<5.0	≥5.0
Funding, Liquidity and Coverage	Adjusted (F)EBITDA/Interest Expense (x)	x>18	12<x≤18	6<x≤12	3<x≤6	x≤3
Investment Managers Primarily Charging Fees Based on Invested/Committed Capital (Alternative Investment Managers)						
Asset Performance	Net Client Flows/Beginning (F)AUM (%)	x>10	5<x≤10	5≥x>(5)	(5)≥x>(10)	x≤(10)
Earnings and Profitability	Adjusted (F)EBITDA/Fee Revenue (%)	x>50	30<x≤50	20<x≤30	10<x≤20	x≤10
Capitalization and Leverage	Gross Debt/Adjusted (F)EBITDA (x)	x<0.50	0.50≤x<2.5	2.5≤x<4.0	4.0≤x<6.0	≥6.0
Funding, Liquidity and Coverage	Adjusted (F)EBITDA/Interest Expense (x)	x>12	8<x≤12	4<x≤8	2<x≤4	x≤2
Investment Companies						
Capitalization and Leverage	Gross Debt/Tangible Equity (x)	x<0.15	0.15≤x<0.35	0.35≤x<0.50	0.50≤x<1.0	≥1.0
Funding, Liquidity and Coverage	One year's upstream dividend and interest income coverage of one years' holdco interest expense (x)	x>10	6<x≤10	3.5<x≤6.0	2.5<x≤3.5	x≤2.5
Funding, Liquidity and Coverage	One year's upstream dividend and interest income coverage of two years' holdco operating expenses, interest expense and dividends (x)	x>1.0	x>1.0	x>1.0	x≤1.0	x≤1.0
Business Development Companies						
Asset Quality	Net Realized Gains/Average Portfolio, at Value (%)	x>(1.0)	(1)≥x>(3)	(3)≥x>(4)	(4)≥x>(6)	x≤(6)
Earnings and Profitability	Net Investment Income/Average Portfolio, at Cost (%)	5<x≤10	5<x≤10	5<x≤10	x≤5 or x>10	x≤5 or x>10
Capitalization and Leverage	Debt/Tangible Equity (x)	x<0.25	0.25≤x<0.50	0.50≤x<0.80	0.80≤x<1.00	x≥1.00
Funding, Liquidity and Coverage	Unsecured Debt/Total Debt (%)	x>90	50<x≤90	35<x≤50	x≤35	x = 0
Finance and Leasing Companies (High Balance Sheet Usage)						
Asset Quality[a]	Impaired Loans/Gross Loans ('aa' operating environment) (%)	x≤1	1<x≤3	3<x≤6	6<x≤14	x>14
Asset Quality[a]	Impaired Loans/Gross Loans ('a' operating environment) (%)	x≤0.25	0.25<x≤2	2<x≤5	5<x≤12	x>12
Asset Quality[a]	Impaired Loans/Gross Loans ('bbb' operating environment) (%)		X≤0.5	0.5<x≤4	4<x≤10	x>10
Asset Quality[a]	Impaired Loans/Gross Loans ('bb' operating environment) (%)			x≤0.75	0.75<x≤5	x>5
Asset Quality[a]	Impaired Loans/Gross Loans ('b' operating environment) (%)				x≤1	x>1
Earnings and Profitability	Pre-Tax Income/Average Assets (%)	x>4	3<x≤4	2<x≤3	1<x≤2	x≤1
Capitalization and Leverage	Debt/Tangible Equity (x)	x<1.0	1.0≤x<3.0	3.0≤x<5.0	5.0≤x<7.0	x≥7.0
Funding, Liquidity and Coverage)	Unsecured Debt/Total Debt (%)	x>90	50<x≤90	35<x≤50	x≤35	x = 0

[a]In instances where asset quality metrics exhibit seasonal differences in performance, Fitch may seek to normalize such metrics when assessing asset quality at a given point in time. Fitch may exclude or normalize a quarterly data point if it is believed to be unduly influenced by seasonality rather than reflecting a longer term asset quality trend. Note: If/when additional ratios are considered material on an issuer-specific basis, such ratios will be articulated in the accompanying Rating Action Commentary for such issuer. *Continued on next page.*

Securities Firm Ratios

Metric	Definition	Core or Complementary	Firms with High Balance Sheet Usage	Firms with Low Balance Sheet Usage
Asset Quality Ratios				
Impaired and Nonperforming Ratio	Loans where income has stopped accruing, loan has been restructured or the receivable is deemed otherwise impaired/period-end loans.	Complementary.	✓	
Reserves for Impaired Loans/ Impaired Loans	Reserves for Impairments/Impaired Loans	Complementary	✓	
Loan Impairment Charges/Average Gross Loans	Impairment Charges on Loans/Average Gross Loans	Complementary	✓	
Impaired Loans Less Reserves for Impaired Loans/FCC	(Impaired Loans and Leases – Associated Reserves)/FCC	Complementary	✓	
Growth of Gross Loans	Increase in total customer loans at the end of the accounting period less total customer loans at the beginning of the accounting period as a percentage of customer loans at the beginning of the accounting period.	Complementary	✓	
Market Risk Ratios				
Average VaR/FCC	Average period trading VaR considered as reported and adjusted to 99% confidence interval and one-day holding period; data are assessed both including and excluding attributed diversification. FCC equals shareholders' equity, less hybrid capital reported as equity, non-controlling interests reported outside equity, less non-controlling interests not regarded as loss absorbing by Fitch, less goodwill and all other intangibles, less ineligible deferred tax assets, +/- fair value of own credit risk, less first-loss tranches of retained off-balance sheet securitizations, less life assurance/insurance company interests	Complementary	✓	
Fitch Stressed VaR/FCC	Fitch stressed VaR is calculated by multiplying the aggregated 10-day, 99% level maximum VaR by a factor of five; intended to capture market risk under extremely severe market conditions.	Complementary	✓	
Trading Efficiency Ratio	Principal daily trading revenue (annual/252 days) or (quarterly/63 days)/average trading VaR (99%, one day, U.S. dollars)	Complementary	✓	
Earnings and Profitability Ratios				
Operating Profit/Average Equity	Pre-tax profit before non-recurring and non-operating income and expenses as a percentage of average reported equity.	Core	✓	
Adjusted EBITDA/Revenue	EBITDA with adjustments for significant non-cash items, such as non-cash compensation expenses, as a percentage of total revenue.	Core		✓
Adjusted ROAE	Reported net income, excluding discontinued operations and extraordinary one-time items and the effects of CVA/DVA, as a percentage of average reported equity.	Complementary	✓	
Operating Expense/Revenue	Operating expenses, including interest expense, as a percentage of total revenue.	Complementary	✓	
Compensation/Net Revenue	Compensation paid in the period as a percentage of net revenue, isolated for brokers and traders compensation where possible	Complementary	✓	

[a]Applicable only for those entities subject to Basel regulation. Note: If/when additional ratios are considered material on an issuer-specific basis, such ratios will be articulated in the accompanying Rating Action Commentary for such issuer. *Continued on next page.*

In issuing and maintaining its ratings and in making other reports (including forecast information), Fitch relies on factual information it receives from issuers and underwriters and from other sources Fitch believes to be credible. Fitch conducts a reasonable investigation of the factual information relied upon by it in accordance with its ratings methodology, and obtains reasonable verification of that information from independent sources, to the extent such sources are available for a given security or in a given jurisdiction. The manner of Fitch's factual investigation and the scope of the third-party verification it obtains will vary depending on the nature of the rated security and its issuer, the requirements and practices in the jurisdiction in which the rated security is offered and sold and/or the issuer is located, the availability and nature of relevant public information, access to the management of the issuer and its advisers, the availability of pre-existing third-party verifications such as audit reports, agreed-upon procedures letters, appraisals, actuarial reports, engineering reports, legal opinions and other reports provided by third parties, the availability of independent and competent third-party verification sources with respect to the particular security or in the particular jurisdiction of the issuer, and a variety of other factors. Users of Fitch's ratings and reports should understand that neither an enhanced factual investigation nor any third-party verification can ensure that all of the information Fitch relies on in connection with a rating or a report will be accurate and complete. Ultimately, the issuer and its advisers are responsible for the accuracy of the information they provide to Fitch and to the market in offering documents and other reports. In issuing its ratings and its reports, Fitch must rely on the work of experts, including independent auditors with respect to financial statements and attorneys with respect to legal and tax matters. Further, ratings and forecasts of financial and other information are inherently forward-looking and embody assumptions and predictions about future events that by their nature cannot be verified as facts. As a result, despite any verification of current facts, ratings and forecasts can be affected by future events or conditions that were not anticipated at the time a rating or forecast was issued or affirmed.

The information in this report is provided "as is" without any representation or warranty of any kind, and Fitch does not represent or warrant that the report or any of its contents will meet any of the requirements of a recipient of the report. A Fitch rating is an opinion as to the creditworthiness of a security. This opinion and reports made by Fitch are based on established criteria and methodologies that Fitch is continuously evaluating and updating. Therefore, ratings and reports are the collective work product of Fitch and no individual, or group of individuals, is solely responsible for a rating or a report. The rating does not address the risk of loss due to risks other than credit risk, unless such risk is specifically mentioned. Fitch is not engaged in the offer or sale of any security. All Fitch reports have shared authorship. Individuals identified in a Fitch report were involved in, but are not solely responsible for, the opinions stated therein. The individuals are named for contact purposes only. A report providing a Fitch rating is neither a prospectus nor a substitute for the information assembled, verified and presented to investors by the issuer and its agents in connection with the sale of the securities. Ratings may be changed or withdrawn at any time for any reason in the sole discretion of Fitch. Fitch does not provide investment advice of any sort. Ratings are not a recommendation to buy, sell, or hold any security. Ratings do not comment on the adequacy of market price, the suitability of any security for a particular investor, or the tax-exempt nature or taxability of payments made in respect to any security. Fitch receives fees from issuers, insurers, guarantors, other obligors, and underwriters for rating securities. Such fees generally vary from US$1,000 to US$750,000 (or the applicable currency equivalent) per issue. In certain cases, Fitch will rate all or a number of issues issued by a particular issuer, or insured or guaranteed by a particular insurer or guarantor, for a single annual fee. Such fees are expected to vary from US$10,000 to US$1,500,000 (or the applicable currency equivalent). The assignment, publication, or dissemination of a rating by Fitch shall not constitute a consent by Fitch to use its name as an expert in connection with any registration statement filed under the United States securities laws, the Financial Services and Markets Act of 2000 of the United Kingdom, or the securities laws of any particular jurisdiction. Due to the relative efficiency of electronic publishing and distribution, Fitch research may be available to electronic subscribers up to three days earlier than to print subscribers.

For Australia, New Zealand, Taiwan and South Korea only: Fitch Australia Pty Ltd holds an Australian financial services license (AFS license no. 337123) which authorizes it to provide credit ratings to wholesale clients only. Credit ratings information published by Fitch is not intended to be used by persons who are retail clients within the meaning of the Corporations Act 2001.

Hi Ken, Ron,

Apologies for passing this along a little late, but Office of the Budget is looking for our comments on the attached commentary by C.D. Howe which describes a Shadow Budget for Ontario.

There is content related to the fiscal outlook (and our net debt-to-GDP forecast), the Fair Hydro Plan, and Electricity Policy. Could you/your staff please review the content related to your areas of expertise and provide any edits or comments in track-changes? I'm clarifying timelines, but it sounds like Office of the Budget is looking for something before eod tomorrow.

Mike, FYI only, unless you see anything in here that you would like to comment on.

Thanks, Anna

Hey Anna – do you know who in your shop is looking at this stuff? Tim has asked us to coordinate comments on this from across the Ministry and so I'd like to pass along a point person and timelines – we are looking for track changes or other issues that the DM may want to pass along for EOD tomorrow. Let me know! Thanks.

Dear Mr. Thompson,

Re Potential C.D. Howe Institute Commentary, our project code: 18-PUB-0464

I hope you are well, and have the time and inclination to support the C.D. Howe Institute's research on Canadian economic policy by reviewing a potential Institute publication. I enclose a draft provisionally titled "**A Shadow Budget for Ontario, 2018-2019."** The views of experts such as you will be critical in our decision as to whether to publish this paper and what changes would be desirable if we did proceed to publication.

We look forward to receiving any comments you may have. While we will copy-edit the paper thoroughly should it proceed to publication, we welcome comments of all types – on the logic, the facts, the policy recommendations, and matters of exposition.

Because timeliness enhances the value of policy papers, we would appreciate receiving your comments by **Thursday, February 8, 2018**. We have approached you for comment because your thoughts are particularly important to us, in light of your interest and expertise in the issues discussed in this paper. Please let us know if you will be unable to comment by that date.

You are welcome to send your comments by email (**peerreview@cdhowe.org**), regular mail, or fax – whichever is most convenient for you.

For clarity, the attached is a confidential anonymous review draft and we trust that you will not cite or circulate it beyond your office.

We will treat review comments as anonymous throughout the review process. If you wish to be identified as a reviewer in the acknowledgements section of the finished paper, should it proceed to publication, please let us know at the time you provide comments, and we will be happy to acknowledge your contribution in the publication.

Thank you in advance for any views you may wish to share on this paper.

Sincerely,

Daniel Schwanen

A Shadow Budget for Ontario, 2018-2019

*Draft not for circulation

January 24, 2018

As Ontario enters an election year, the policy debate will likely involve the difficult choices the province faces regarding the fiscal outlook and long-term sustainability of a number of government programs. The budget the provincial government puts in place for the 2018-19 fiscal year will lay out a framework for the debate in the coming months.

To aid this debate, the C.D. Howe Institute has launched its inaugural Shadow Budget for Ontario, following similar Shadow Budgets at the federal level (see last year's edition from Robson, Laurin, and Wyonch 2017). This Shadow Budget shows that the fiscal course the province is currently on is unsustainable. This Shadow Budget would act to bring the long-term cost of government in line with the revenue-raising capacity of the province. It would balance increases in spending and cuts to poorly designed taxes with new ways to generate revenues and reducing spending on ineffective programs.

Although providing specific costing of programs is outside of the scope of this Shadow Budget, it presents an overview of policy directions that balance increases in spending with generating new revenues and cost-savings measures. This Shadow Budget proposes to:

- Restate the province's books to reflect the Auditor General's concerns about incorrect treatment of pension assets and electricity-sector debt;
- Reduce future expense growth to reach a balanced budget as soon as possible;
- Adopt long-term fiscal policy – which requires surpluses, not just balanced budgets – that meets the government's debt-to-GDP target ratio of 27 percent;
- Contain healthcare costs by extending capitated payments to family doctors and revising contractual arrangements with healthcare providers;
- Slow the increase in the minimum wage and focus on improving education and to create economic opportunities for Ontarians;
- Adopt an indigenous identifier in standardized test and oversample indigenous students to permit reliable rural-urban and district-level analysis;
- Modernize funding formulas for post-secondary education by taking outcomes into consideration;
- Reform the school curriculum with an emphasis on improving math performance;
- Open retailing for alcohol and marijuana and revising the tax scheme for both products;
- Adopt personal income tax reforms that reflect the cost of raising children, while reforming personal income taxes to lower high marginal rates, which occur even at low incomes;
- Replace targeted business tax breaks with lower provincial business property taxes to create a level playing field across the province and across different types of businesses;
- Rethink the fiscal relationship between municipal government and the province by retooling grants and transit governance while modernizing municipal financial reporting to match that of the province;
- Reduce the cost that governments impose on building new housing;
- Retain the plan to price greenhouse gas emissions, but re-focus the government plans to spend money raised by such a price away from cost-inefficient programs; and
- Seek out long-term cost savings in the electricity sector, as opposed to short-term fixes that only add to the long-term cost of energy.

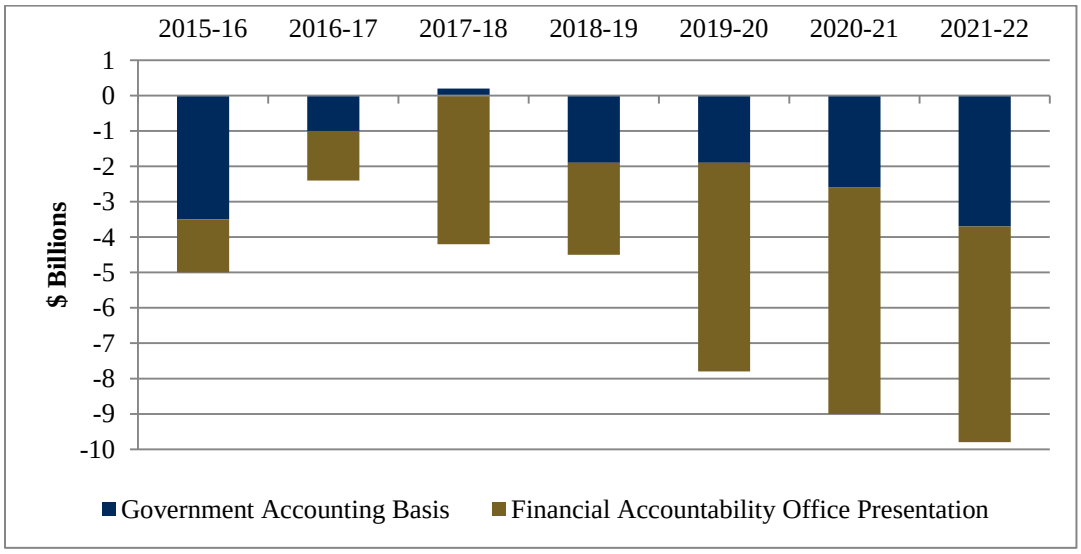
The Fiscal Outlook

This Shadow Budget adopts the consensus view of the independent officers of the Ontario legislature – the Auditor General and Financial Accountability Office – as the authoritative outlook of the short-, medium-, and long-term fiscal outlook. While the government may claim to have balanced the budget for 2017-18,

that declaration is in the eye of the beholder and the medium- and long-term fiscal outlook for Ontario is dire.

Cleaning up Ontario's Books – The Short Term Deficit Debate

The government has made the argument that it has reached a balanced budget. However, the Auditor General has two specific objections related to this claim because of the government's accounting treatment of pensions and whether the recent Fair Hydro Plan amounts to new spending.



The pension dispute centres on the government's treatment of the Ontario Teachers' Pension Plan (OTPP) and the Ontario Public Service Employees' Union Pension Plan (OPSEUPP). The province has decided to report the full asset value of the plan on the province's balance sheet, which neglects the fact that future retirees already have a claim on these assets. Doing so reduces the deficit and the Auditor General (2016) objects to this. Further, as Robson and Laurin (2016) argue, the government discounts OTPP and OPSEUPP liabilities by more than the plans do themselves. This understates the liabilities provincial taxpayers face.

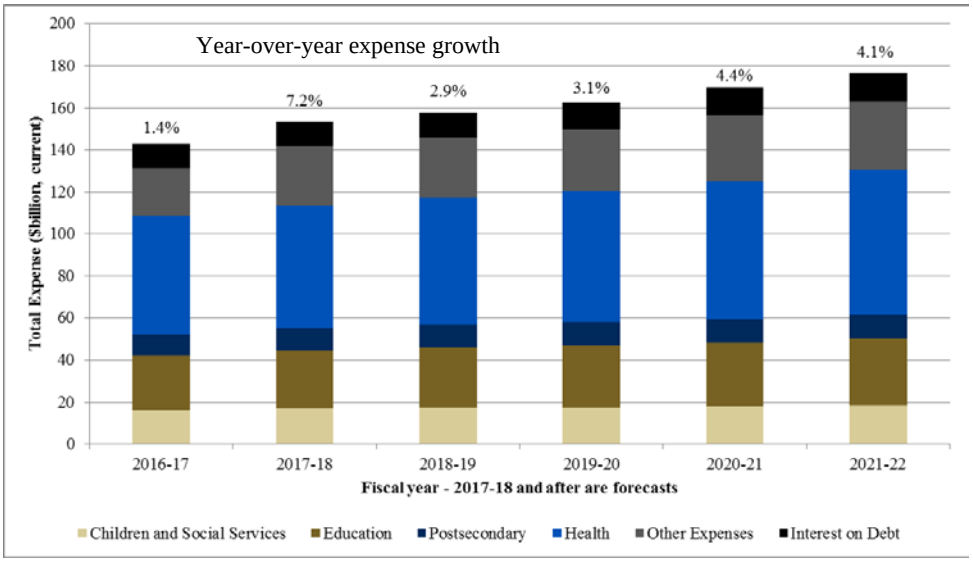
However, the view of the Auditor General is not universally shared. The Ontario government appointed a Pension Asset Expert Advisory Panel to advise on the difference of opinion between the government and Auditor General. The Panel's Report (2017) argued that an asset does exist for the government, saying that the government does have sufficient access to the plan's assets, if even just through reducing contributions to the plans, to merit including it. However, given that we have taken the Financial Accountability Office's presentation of financial data, which is independent of both the government and the Auditor General, we have decided to use the presentation of provincial finances as recommended by the Auditor General.

The second dispute hinges on the Fair Hydro Plan. As the Auditor General (2017a) points out, the government "is making up its own accounting rules" by creating an accounting asset for a government-controlled entity to offset the debt the province placed on another government-controlled entity. The asset the government created only exists because of legislation that gives a government entity the authority to collect higher prices in the future. The true value of this asset should be zero, or highly discounted, because of great uncertainty of the ability to collect higher prices in the future. For example, electricity markets may change because of technology, making it impossible for a central government agency to collect future revenues to pay this debt. As such, this debt should be reflected in the province's financial statements now. Incorporating the debt amount in today's books means that the proper accounting treatment would increase the deficit by $2.5 billion per year through to 2027.

This Shadow Budget would restate the province's books to reflect the Auditor General's concerns. It would restate the province's finances to show a deficit in the upcoming 2018-2019 fiscal year to be about $7 billion (Figure 1).

Figure 1: Ontario Budget Balance

Source: Financial Accountability Office of Ontario. Does not include reserve fund. 2017-18 and beyond are projections by the Financial Accountability Office.



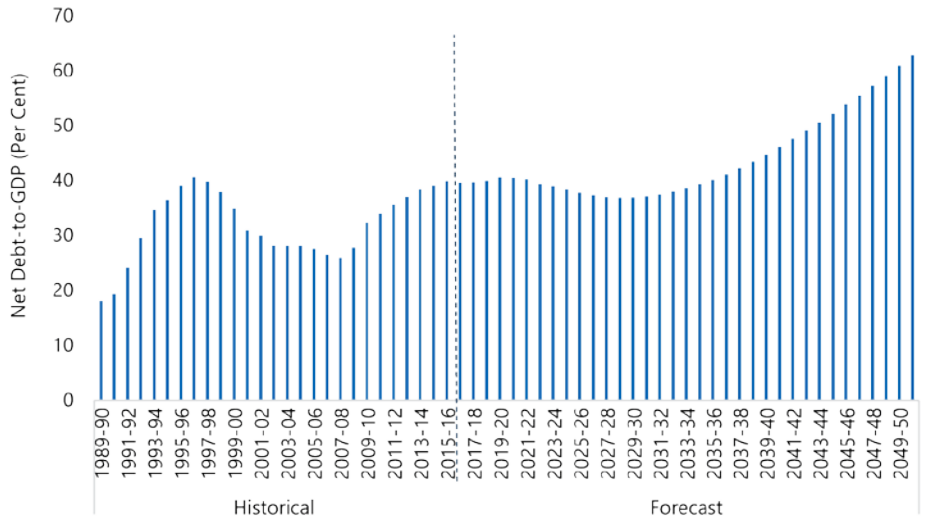
Medium-term Fiscal Sustainability

The question of whether there is a deficit for the 2017-18 fiscal year is far less important, from the point of view of the sustainability of public finances, than future trends. Under current trends, the deficit would rise to nearly $10 billion by 2021-22 (Figure 1), according to the Financial Accountability Office (2017a). These long-term deficits will return because of two main causes: the deficits the government should account for under the Fair Hydro Plan, as discussed above, and fast-rising expenses. Future revenues are not likely to grow as fast in the future as in previous years because of a number of factors, such as one-time revenues that have come in recently and economic growth that is likely to slow. Further, the Financial Accountability Office (2017a) argues that the government has made overly optimistic revenue forecasts that rely on above-trend income growth in the province and corporate income tax receipts.

The province can look to balance its budget in the near future in a number of ways. First, it can look to increase revenues. It can do so through short-term revenue gains such as sales of provincial assets – as this Shadow Budget will suggest in more detail below. Alternatively, it can raise tax rates, such as the provincial component of the HST. Or, it may seek more grants from the federal government. However, aside from hiking tax rates, none of these steps to increase revenues are directly within the control of the province or offer more than a single year's worth of solutions.

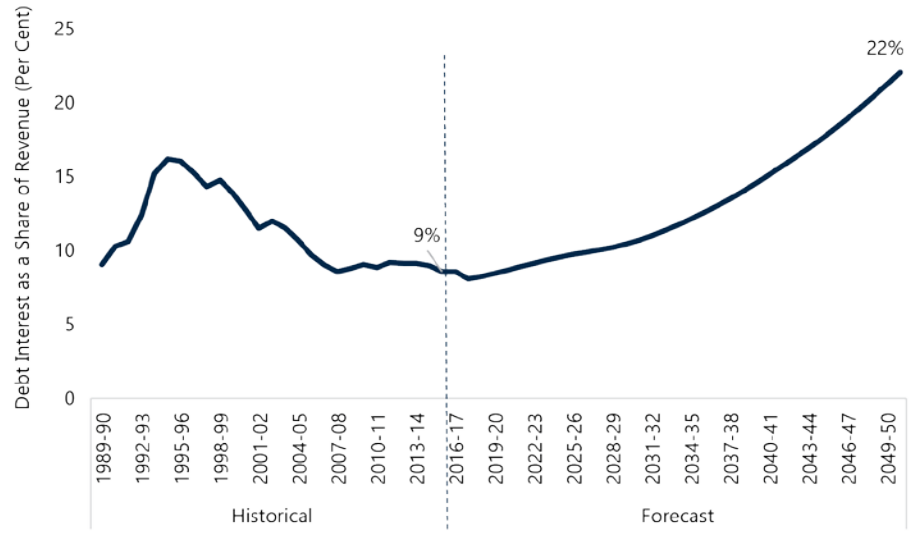
The province must address fast-growing spending to reduce future deficits. The first trend that this Shadow Budget would address is the projected pattern of total spending growth. 2017-18 spending is forecast to grow at over 7 percent over the previous year's spending. This kind of spending growth is unsustainable. Future expenses beyond 2020 of over 4 percent are also likely unsustainable. This Shadow Budget would aim to reduce future expense growth to reach a balanced budget as soon as possible.

Figure 2: Ontario Provincial Spending and Year-over-Year Spending Growth Rates



Source: Financial Accountability Office of Ontario

Long-term Fiscal Sustainability



Balanced budgets will not be enough for Ontario to be fiscally sustainable. The government has targeted a net debt-to-GDP ratio of 27 percent, a sensible target that is similar to that of the federal government of 25 percent of GDP. This Shadow Budget would continue pursuing such a target and take the necessary action to achieve it within 15 years. As the Financial Accountability Office (2017b) projects, achieving 27 per cent requires the province to run budget surpluses until 2033-34. If the province continues on the current trend, and not run first balanced budgets and then surpluses, the net debt-to-GDP ratio will reach 63 percent by 2050-51 (Figure 3).

Figure 3: Net-Debt-to-GDP, Under Current Fiscal Trajectory

Source: Financial Accountability Office of Ontario

Figure 4: Interest Expense as a Share of Revenue

Source: Financial Accountability Office of Ontario

If the government doesn't tackle the long-term fiscal challenges, the cost of debt will take up an enormous share of total government revenues. Interest costs currently sit at 9 percent of revenues; at current trends, interest costs will increase to 22 percent in 2050-51 (Figure 4). If debt costs take up a large share of total revenues, that will leave less for other needs.

Health Policy

Given that Ontario spends roughly half of its own-source revenues (which excludes transfers from the federal government) on health, getting good value for money in healthcare will be critical for the financial and societal well-being of Ontarians. Although the province has successfully contained the annual growth of healthcare spending from 2010 to 2015 to 2.4 percent, on average, the rate of health spending is starting to tick upwards again alongside worries about emergency room overcrowding, long waits for long-term care beds as well as overburdened caregivers . Progress on addressing these issues – in addition to limiting public and private gaps in coverage for prescription drugs, dental services and mental health – while allocating reasonable increases for health spending, is a critical challenge.

Efforts to enable self-directed homecare services – such as recent moves to increase the number of hours nurses, personal support workers, and therapists will provide care in homes – should help alleviate the emergency room pressures for elderly patients, and these programs should continue to expand on their current trajectory. Relative to providers, patients with mild to modest physical disabilities are more likely to know the abilities of family and informal caregivers to offer care and their schedules, and which services they would prefer to have delivered by other health professionals. Although there are some legitimate concerns about patient's ability to choose among groups of healthcare professionals to meet their needs, there should still be enough flexibility around the use of self-directed home care budgets to ensure appropriate innovation from those delivering services. This means sufficient flexibility in how patients select and schedule professional help.

Ensuring that people without private insurance for dental, drug and mental health services get access to services is also a priority for healthcare policy. On this score, there are a number of avenues to ensure appropriate coverage and do so at minimal public cost, including the expansion of these services among the most vulnerable (Blomqvist and Busby 2016, Busby and Pedde 2014). This Shadow Budget would look at new ways to revise contractual arrangements with providers – pharmacists, dentists and dental hygienists, and phycologists – to improve the efficiency of spending in these areas.

Although government needs to spend more money to improve access to mental health services, more money alone will not ensure that all illnesses get treated in appropriate timeframes. It may be more advantageous to give a greater share of the overall budgetary spending on physiologists to hospitals and primary care doctors for outpatient needs.

The way in which the province pays for the delivery of health services matters. Paying hospitals, hospital-based doctors and necessary outpatient services for a needed intervention often results in silos of poorly coordinated care. This Shadow Budget would instead look at more bundled payments by procedure for hospital-based services (Sutherland and Hellsten 2017). And in primary care, this Shadow Budget would extend capitated payments to family doctors to include budgets for enrolled patient drugs, lab and diagnostic imaging budgets as part of the evolution in payment reforms for family doctors (Blomqvist and Busby 2011).

Labour and Education Policy

Many governments are struggling to respond to the challenges of precarious work – employment that is often more insecure and uncertain than traditional full-time employment, with greater prevalence for part-time work. Further, as wage gaps exist between temporary or part-time vis-à-vis full-time workers, policymakers have recently passed legislation intended to bridge these differences. While there are no ideal policy levers for addressing these issues, it should be recognized that, in general, increases to the minimum wage are a reasonable option available to policymakers. However, gradual and evaluated increases to the minimum wage are the best way to increase minimum wages over time. Ontario's recent, large increase in the minimum wage means that the right response for government should be to pause and evaluate. One particular concern is the impact on smaller municipalities that risk being most negatively affected.

This Shadow Budget would amend the current minimum wage in two ways, as recommended by Marchand (2017). First, it would allow for regional variation in minimum wages. This Shadow Budget would allow upper-tier and single-tier municipalities across the province the option to return to a lower minimum wage for a five-year period. New York has a similar policy, in which the minimum wage is highest in New York City than in other parts of the states. Second, this Shadow Budget would build a provision into the minimum wage legislation to reduce it in the case of a recession, as California has recently done.

As trade, technology and worker preferences continue to change the dynamic for skills desired by employers, a competitive labour force will need an abundance of core numeracy and literacy skills. For Ontario, the news on these scores is mixed. On literacy, the results are strong (EQAO 2015). In terms of numeracy, however, the results are alarming – only half of all grade 6 students in the province meet the provincial standard for numeracy and its OECD Programme for International Student Assessment (PISA) scores have plummeted over time, from 530 in 2003 to 509 in 2015, one of the largest drops among Canadian provinces, putting Ontario statistically below the average in Canada(Richards 2017). This needs

fixing. This Shadow Budget would continue the province's re-examination of the math curriculum and pedagogy, where the effectiveness of different pedagogies should be explored as potential causes (Stokke 2015). This Shadow Budget would also look at teacher preparedness and consider evaluating teacher knowledge in subject matter with the administration of student exams to teachers prior to the academic year. Insufficient results should require immediate intervention.

Furthermore, collecting, analysing, and reporting educational outcomes are essential to closing the achievement gap between more and less advantaged students. Including a question that identifies indigenous student in PISA tests is a great way to track educational achievement of indigenous students and help educators and policymakers to design more effective strategies to improve outcomes. The province should also oversample to ensure sufficiently large sample of indigenous student to produce reliable estimates at the district level and to perform urban/rural analysis (Richards and Mahboubi, forthcoming).

Many OECD countries consider Performance-Based Funding (PBF) systems for their post-secondary education, but Canadian provinces, including Ontario, lag behind in adopting this innovating way of financing. Usher (forthcoming) shows the benefits associated with PBF include less burden of funding negotiations, higher accountability of the post-secondary institutions, and greater competition between institutions, leading to a greater focus on results. A similar approach to competition in grants for research has been effective at improving the performance within universities, and should apply to universities themselves. The government needs to review its funding formula and learn from the experience of other developed countries.

Tax Policy

Commodity Taxation

Alcohol

In 2015-16, the Liquor Control Board of Ontario (LCBO) paid the provincial government a dividend of $1.9 billion. It also remitted $867 million to the federal and provincial governments in Harmonized Sales Tax, excise taxes and customs duties (LCBO 2016). In addition to the LCBO, there is a system of beer and off-winery stores, which operate as a quasi-monopoly thanks to government regulation. Masson and Sen (2014) find that freeing up alcoholic beverage retailing would result in increased government revenue, lower prices, and more convenience. They find that, other factors being equal, Western Canadian provinces with more beverage alcohol retail competition had 7 percent more per capita provincial alcohol profits than provinces with government-run monopolies. The province has begun to introduce beer sales at grocery stores. However, it has done so slowly with limits on the amount of sales by the store. This Shadow Budget would go further by auctioning licenses for other retail outlets. It would also auction licences for off-winery stores to other wineries and also to new wine retailers. The result would be increased provincial revenues and more choice for Ontario consumers.

This Shadow Budget would also revise taxation of alcoholic beverages. Currently, tax rates are fixed by type of beverage, currently ranging from 52 cents per litre to $1.06 per litre, depending on the type of manufacture, not alcohol strength. Wine is taxed as a percent of sale value and sprits are taxed at up to 38 cents per litre plus a percentage of the retail price. This Shadow Budget would graduate the tax on alcohol

to relate to alcohol content. This reform would target the health problems caused by alcohol, which is directly in line with the alcohol content of any drink (The Economist 2013).

Marijuana

The federal government has legalized marijuana for recreational consumption with legal sales scheduled to begin in July. The main policy objectives driving marijuana legalization are the improvement of public health and the minimization of the black market and its associated criminal activity. Ending the prohibition of marijuana involves coordination between all levels of government. Provinces must determine the structure, distribution, and regulation of the retail market and jointly determine taxation levels of marijuana with the federal and municipal governments.

Ontario has announced that it will restrict retailing of recreational marijuana to LCBO-run stores. Only 40 of these locations will be in place by next July 1, the federal target date for legalization, with a total of 150 locations expected by 2020. The province missed the opportunity to have a competitive market for retail marijuana. Independent businesses have an incentive to locate where market demand isn't being met and competition between businesses constrains operating costs and keeps prices low. Lower prices in the legal market make it more likely to be competitive with the existing black market.

The province's decision to enter the market also implies considerable resources will be expended in the construction and maintenance of stores, higher salary expenditures and other overhead costs. These will be met at the expense of other sectors, which will receive lower government funding.

Having few retail locations means that access to recreational marijuana will be inconvenient for a significant number of Ontarians. Recreational consumers are highly unlikely to switch their dollars to the regulated market if there isn't easy access. This means that there will be significant opportunity for the black market to continue operating in all the areas without enough legal stores to meet market demand or that are convenient to access. (By contrast, there are more than 650 LCBO outlets in the province.) Further, to levy penalties against illicit businesses will require significant justice and police resources. And since there won't be enough regulated retail outlets to meet market demand, it is likely that at least some of these businesses will still find it profitable to operate. This Shadow Budget would make retailing of marijuana competitive and allow for the licensing of privately-run retail stores. This could take the form of entirely private retail, as in Alberta. Alternately, licensed establishments could operate alongside government retail stores and deliver better market coverage faster than the crown corporation on its own.

Ontario has joined the federal government’s proposed coordinated excise tax framework for recreational marijuana. While Crown-corporation retail isn’t particularly competitive in terms of convenience, keeping taxes low will help ensure that the legal market will be price competitive with the illicit market. The tax rate on dried cannabis flowers will be $1 per gram or 10 percent, whichever is higher, with 75 percent of the revenue going to the provincial government. The revenue from this excise tax will initially be modest, bringing in $50 to $95 million in 2018 and $175 to $200 million annually by 2021.

Gasoline and Fuel

The government should be concerned about the prospect of declining revenues from fuel and gasoline taxes, which will intensify as vehicles become more fuel efficient and become increasingly electric. This Shadow Budget would begin a study of the potential to replace fuel taxes with tolls for use. Further, the best solution for traffic congestion is a road toll. Road pricing could also bring the price that drivers pay for

infrastructure they use closer to the actual cost of it. Gas taxes (which are about 75 to 80 per cent of road-related revenues), vehicle licences and other revenues from drivers have covered less than two-thirds of roadway expenses across Canada since 2008. Taxpayers should only subsidize transportation to the extent that it encourages broader access to all in society and the government should review whether a one-third subsidy is the appropriate amount of taxpayer subsidy for roads.

Personal Taxation

Income taxes affect individual and business incentives to earn income, save, invest, and take risks. Excessively high taxes at the margin can also drive tax avoidance behaviour.

At the personal level, the impact of income tax variations on work participation decisions is particularly acute for the secondary earner in families with children and lower-skilled workers. In general, lower income, less educated people have a greater tendency to adjust their paid work behaviour through workforce participation decisions, while more-educated workers and high-income earners tend to adjust through the number of hours they work (Duclos et al. 2015).

High income earners' taxable income has been shown to be particularly responsive to high marginal tax rates – through both tax planning avoidance behaviour and earnings decisions (Laurin 2015). And the sensitivity to rate changes is higher at the provincial level in response to provincial rate changes than at the federal level in response to federal changes. This is because high-income earners can take advantage of provincial tax rate differences by shifting their income tax attributes and work locations to the most tax-advantageous province (Milligan and Smart 2014).

Provinces like Ontario with one of the highest top combined federal and provincial marginal tax rates of over 53 percent on high-income earners should aim to reduce that rate to a level at or below 50 percent. The responsiveness to the change would have a beneficial impact on the tax base that would ensure a very low fiscal cost for the policy. Furthermore, the income tax system should be clear and transparent. Ontario has a surtax notionally in place for health care expenses. However, this tax is treated as general revenue. The province should replace this surtax and set income tax rates and brackets that transparently show the marginal tax rate people are paying.

Other tax changes should aim to lower the burden of taxes on secondary earners in family with children. This Shadow Budget would reform the tax recognition of child care expenses through the replacement of the child care expense deduction with the introduction of a new refundable tax credit for child care expenses. It would encourage stay-at-home parents to join the workforce, producing extra tax revenues, considerably limiting the net fiscal cost of its implementation (Laurin and Milligan 2017).

Also, typical labour arrangements are changing with technological change. Workers are becoming less attached to a single employer and move around more freely between projects and contracts. Their incomes are also more prone to be fluctuating from year to year – a period of low earnings followed by a year of higher earnings, or vice versa. But a worker with fluctuating income may end up paying more tax (and losing more income-tested government benefits) than another worker with a flat income profile but earning the same amount over a period of years. Wen and Gordon (2017) find that Canada's "fluctuation tax penalty" is most severe for individuals who earn lower incomes or are self-employed. This Shadow Budget would lessen the impact of fluctuating incomes on tax liability by allowing workers to average their

income over many years, so that any single large earning year would not lead to a disproportionate loss of fiscal benefits and higher tax payments.

Business Taxation

A properly designed business tax regime would provide for a common provincial tax rate for all businesses operating across the province, regardless of their location or sector. However, Ontario's tax regime selectively rewards a number of sectors, such as manufacturing, through the income tax system while punishing companies with overly high provincial property tax rates. The province of Ontario can simplify its tax regime, create a more level playing field across sectors and the province, and reduce the effective tax rate on new business investment all without reducing overall provincial revenues.

Eliminating Wasteful Business Tax Expenditures

The largest tax expenditure in the corporate income tax system, by far, is the Small Business Deduction, which costs Ontario over $2 billion in foregone revenue. A better alternative to the Small Business Deduction is a lower general corporate income tax rate. That is because the net impact of the Small Business Deduction is an expansion of the small business sector at the expense of large businesses. Since small firms are less productive than large firms, the Small Business Deduction lowers overall economic performance (Dachis and Lester 2015). This Shadow Budget would not proceed with any further cuts geared to small business.

Most Canadian provinces provide a tax incentive for innovation. They mimic the federal tax system which provides eligible businesses with a Scientific Research and Experimental Development (SR&ED) credit. Ontario provides a non-refundable tax-credit worth 3.5 percent of the value of eligible expenses for firms to deduct from their taxes. The total innovation tax incentive for Canadian businesses is one of the highest in the world, but Canada consistently lags behind international peers on measures of business innovation (Parsons 2011). The Ontario SR&ED credit comes at a large fiscal cost: a tax expenditure of $150 million in the 2017 calendar year (Ontario 2017). Instead of targeting up-front tax credits for innovation, a better solution to encouraging innovation is with a low overall income-tax rate (McKenzie 2006). In addition, the province provides manufacturing and processing businesses a preferential lower tax rate than those in the rest of the economy: 10 percent instead of the usual 11.5 percent. This lower rate cost taxpayers $290 million in the 2017 calendar year.

This Shadow Budget would eliminate the Ontario SR&ED credit and the lower rate for manufacturing and processing, and use that revenue to cut high provincial property tax rates that choke investment, as discussed below. It would also initiate a comprehensive review of tax expenditures to determine whether the existing tax expenditures are still appropriate or whether they should be redesigned as deductions or credits (see Robson and Laurin 2017). Tax expenditures can be removed when shown to be no longer effective, as the government has already committed to eliminating ineffective tuition and education tax credits, as recommended by Neill (2013).

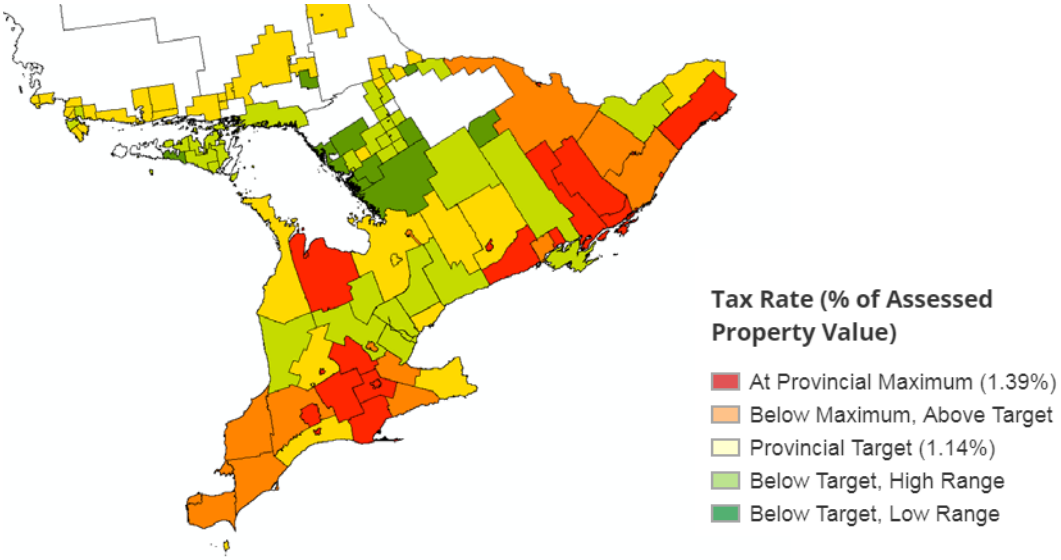
Cutting Provincial Business Property Taxes – A Revenue Neutral Cut in Investment Taxes

Ontario took over the local education property tax from local school boards in 1998. School boards had widely varying tax rates across the province and by property type when the province took over. The province immediately made its residential tax rate the same for all residents across the province. It's a different story for businesses. Each year since 2007, the province has set a maximum tax rate, called

the ceiling rate, and a lower target rate designed to be revenue-neutral for the province. The province committed in its 2007 budget to lower higher rates down to the target rate over time, but the province has stalled on tax cuts since 2013.

The provincial property tax still varies wildly across cities and for different buildings within cities (See Figure 5a and 5b, which shows provincial rates for commercial and industrial properties). Provincial commercial property tax rates in some Ontario municipalities are more than three times those in others. The provincial tax is highest on industrial property across much of Southern Ontario. As Found (2017) shows, the average provincial business property tax rate is more than 6 times its residential counterpart.

Figure 5a: Provincial Commercial Property Taxes in Southern Ontario



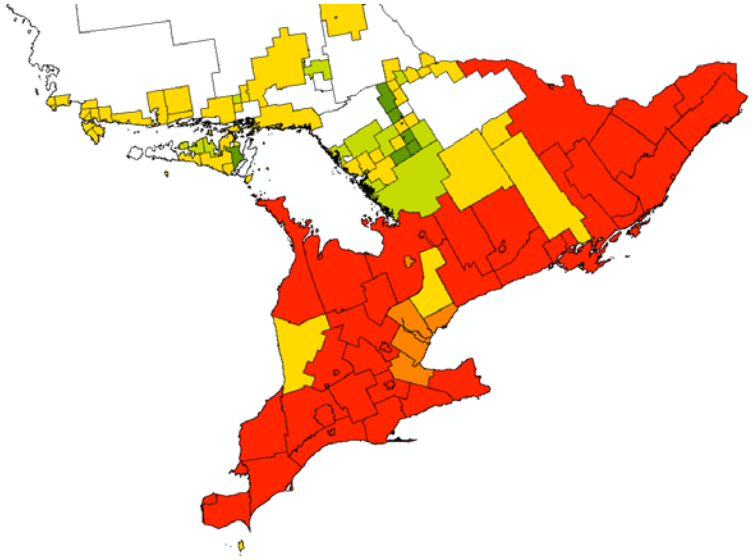


Figure 5b: Provincial Industrial Property Taxes in Southern Ontario

Source: Jacobs, Dachis and Found (2017). Results include Northern Ontario. Hollow areas not subject to provincial property tax.

Cities collect the money on behalf of the province after receiving a regulation from the province of how much to collect. In the 2017-18 fiscal year, the province will collect $6 billion in property taxes, which it reports as general revenue. Since different education tax rates by region have nothing to do with local school spending, each school board now gets a provincial top-up grant in order to level the playing field. Each school board`s total revenue is based on its enrolment and the needs of students, not the value of buildings in the area. That means the provincial property tax now has no bearing on school boards' spending. Yet, the province still uses the misleading name "education property tax" to describe it on tax bills.

These high property taxes have a large economic cost. Property taxes act like a tax on capital, specifically building capital. A tax on capital reduces the incentive to invest, resulting in lower investment which leads to lower productivity and therefore income and standards of living of Canadians. A 10 percent increase in commercial property tax rates decreases the long-run value of the business property assessment base by 8.2 percent. At the average level of business property taxation in Ontario, a $1.00 business property tax hike costs the Ontario economy $5.56 (Found 2017). Higher taxes shrink the tax base, which makes it harder for governments to raise revenues. The total business tax rates in some cities across Ontario – such as London, Windsor and Brantford – are so high that cities and the province might see revenues increase if they cut their taxes to attract more business investment.

This Shadow Budget proposes to complete the harmonization of business property tax rates. To make such a tax reform revenue-neutral, it proposes to eliminate the SR&ED credit and the lower manufacturing and processing corporate income tax rate and reduce provincial business property taxes that would reduce revenues by the same amount saved. Such a change would have a number of benefits. First, it would create a more level playing field across different types of businesses that currently face different tax rates. Secondly, it would improve fairness in the provincial property tax regime across the province. Third, a revenue-neutral property tax reduction would lower the marginal effective tax rate on new investment in most parts of the province – and almost all of Southern Ontario – by more than any increase in provincial income taxes would increase the effective rate. Property taxes have an especially large effect on tax costs on investment because they are insensitive to profit and are akin to a direct tax on capital (Found and Tomlinson 2017). Such a reduction in provincial property taxes would be largest for the same sectors that would see a removal of their special, lower income tax rate, across most of Southern Ontario.

Housing, Municipal, and Infrastructure Policy

This Shadow Budget would seek to lower the cost of housing across the province by taking steps to reduce barriers to construction and eliminating economically costly rent controls and transfer taxes. It would also fundamentally change the relationship between municipalities and the province by granting cities the ability to put their budgets on a sound financial footing and allow them more flexibility in financing infrastructure.

A Smart Housing Plan

The cost of housing in Ontario has increased dramatically in recent years. According to data from Brookfield's Real Property Solutions, home prices the Greater Toronto Area increased by more than 250 percent between January 2005 and the end of the 2017. In response, the province has taken steps such as introducing taxes on foreign buyers and rent controls. The government's policies have focused mostly on curtailing the demand of housing.

On April 20, 2017, the province introduced a 15 percent Non-Resident Speculation Tax in the Greater Toronto Area. This transfer tax is substantially higher than the existing provincial land transfer tax that has a maximum rate of 2.5 percent. Land transfer taxes such as these have a high economic cost of reducing the mobility of households (see Dachis 2012 and Dachis, Duranton, Turner 2008). In addition, land transfer taxes are highly volatile and present a large fiscal risk to the province if the housing market has a serious downturn (Ngo, Angastiniotis, and West 2017). This Shadow Budget would immediately eliminate the additional 15 percent tax and look to begin reductions in the general land transfer tax in future fiscal years.

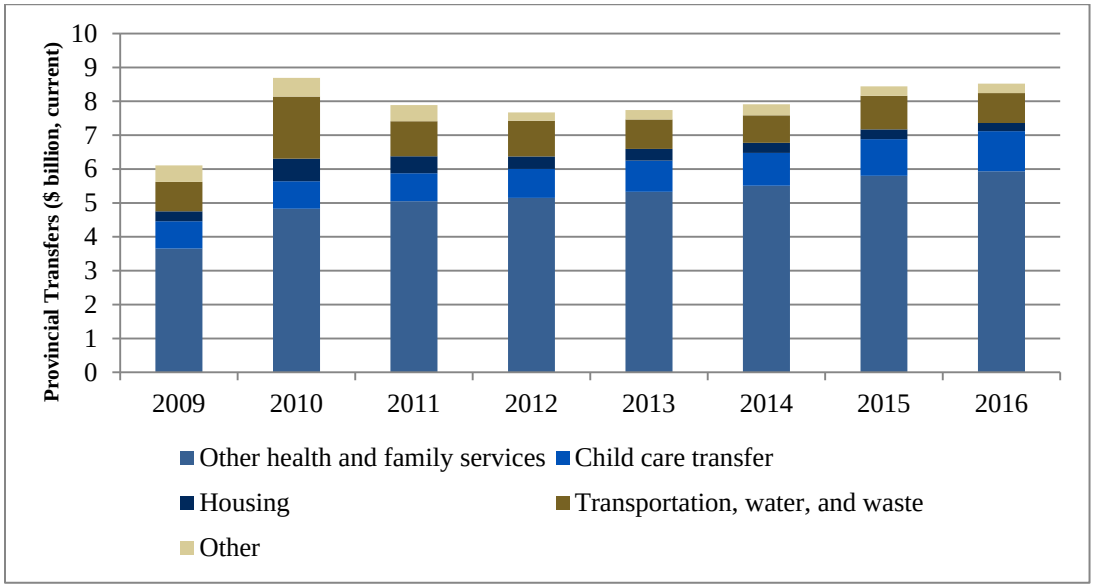
On the same day, the province expanded rent control to all rental units in the province, rather than only those built before 1991, as was the case prior. Rent control is one of the few economic policies around which there is a solid, evidence-based consensus about its long-term effect on the cost of housing: it does not lower it in the long-run (Kronick 2017). The likely result of rent control is that housing developers will not build rental housing knowing they face a cap on potential returns, while facing no commensurate cap on their investment risk. The result will be fewer units available, leading to housing shortages. This Shadow Budget would phase out rent control on all rental units. It would start by reducing the extent to which rent control binds the market by increasing the allowable increase, doing so annually until eventual repeal. Rather than rely on rent control, this Shadow Budget would embrace the recent federal decision to create a Canada Housing Benefit that provides low-income renters with the funds to seek a wide range of market-priced rental units (Canada 2017). This Shadow Budget would re-orient financial support for housing construction, which is often part of transfers to local governments, as discussed below, to match the federal contribution in creating the Canada Housing Benefit.

Reducing the Cost of Housing

There is strong evidence that restrictions and extra costs on building new housing – such as zoning regulations, delays on permit approvals, development charges, and limits on greenfield housing development – are dramatically increasing the price of housing. Dachis and Thivierge (forthcoming) find that a limited lowering of these restrictions can reduce house prices in some municipalities in the Greater Toronto Area by around $100,000.

What can the province do to reduce supply barriers? Toronto heavily uses a clause in the provincial *Planning Act* – the legislation governing municipal zoning policy – that allows it to require additional payments from developers in exchange for a site-specific variance from zoning bylaws (Moore forthcoming). These additional payments, known as section 37 payments for the relevant part of the *Act*, increase uncertainty for developers and therefore increase the cost of housing. In addition, municipalities have an incentive to keep zoning bylaws out of date because updating them would take away the future section 37 payments. This Shadow Budget would place greater restrictions on the use of section 37 of the *Planning Act*, which would result in municipalities having a greater incentive to set more appropriate zoning regulations.

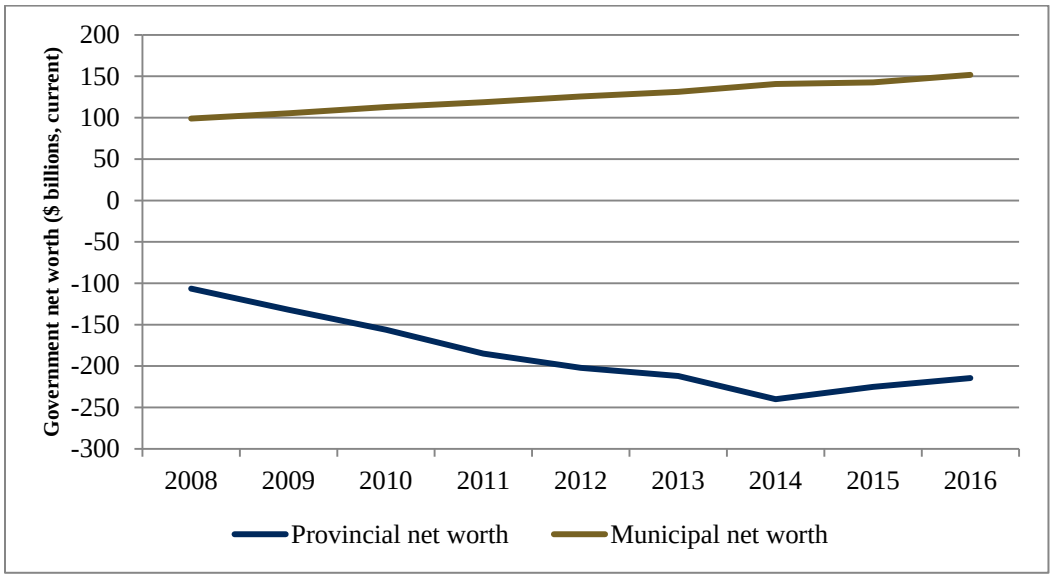
Developers pay development charges to compensate municipalities for the cost of building municipal infrastructure that services homes and commercial properties in a newly developed area. The largest single component of these charges is for water and wastewater construction (Dachis forthcoming). This Shadow Budget would require that cities replace development charges for water and wastewater infrastructure with volumetric uses fees that reflect capital costs. Such a move would reflect a change to a utility-based model and encourage conservation of water.



Finally, housing developers in GTA cities are facing a shortage of land available for new housing development (Clayton 2015). The primary cause is not because of the Greenbelt, a policy that forbids development on certain agricultural and parkland. Dachis and Thivierge (forthcoming) find that the main land-supply driven cause of higher house prices is not the Greenbelt, but the Growth Plan for the Greater Golden Horseshoe, a policy that requires cities in the GTA to approve a certain share of their homes within existing urban development boundaries and at a certain density. This Shadow Budget would relax the density and intensity targets that may not be appropriate across all cities subject to the Growth Plan while preserving the Greenbelt.

Rethinking Relative Municipal and Provincial Fiscal Health

One of the province's largest expenditures is on grants to municipalities. Transfers to municipalities have increased since 2009, including a large spike in 2010 to support infrastructure stimulus projects. Transfers to municipal governments from the province are now over $7 billion (Figure 6). Indeed, this trend is set to accelerate. In January of 2017, the province committed to double the amount of the fuel tax it transfers to municipal governments for transportation investment (Jones 2017). Ontario transferred $335 million in provincial gas tax revenue to municipal governments in 2017, and made a commitment to double the funding to bring the total transfer to $642 million by 2021-22.



The largest share of transfers is for health services – such as public health – and for childcare benefits. The latter, in particular, are dispersed to municipalities under a complex set of qualification criteria. These programs are ripe for review and evaluation, as their impact on workforce participation and the ability for single-parent and underrepresented families to engage in the labour force are critical. The child care transfer has increased by nearly 50 percent since 2008 reaching $1.2 billion in 2016, suggesting that a review of the program is in order

Figure 6: Ontario Provincial Transfers to Municipalities, 2009-2016

Source: Authors' calculations from Ontario Financial Information Return. Note: Some small cities have not yet submitted their 2016 financial information.

Figure 7: Ontario Provincial and Municipal Net Worth, 2008-2016

Source: Authors' calculations from Cansim Tables 385-0034 and 385-0037.

Does it make sense for the province to send such grants to municipal governments? Ontario's municipalities are, on average, in better fiscal shape than the provincial government. They are major investors in capital assets, but unlike the province, whose chronic deficits have resulted in financial liabilities that vastly exceeds its financial and non-financial assets, Ontario municipalities have positive net worth. They have borrowed to finance some capital assets, but the value of their assets exceeds their debt by a substantial margin. In the nine years from 2008 to 2016, Ontario municipal governments have increased their net worth by more than 50 percent, registering an increase of over $50 billion (Figure 7). In contrast, provincial net indebtedness has approximately doubled over that time, even after a slight improvement in net asset values over the last two years.

The Important Difference between Municipal and Provincial Accounting

How did such a fiscal health imbalance come about? Transfers are often the result of cities claiming they are struggling to meet their service or infrastructure demands and then calling on the province for support. However, the way that cities present their budgets, especially relative to the way the province reports its finances, makes municipal finances appear more precarious than they actually are. Ontario municipalities typically use cash accounting in their budget.[1] However, the province – as well as municipal end-of-year financial statements – uses the accrual accounting standard. Accrual-based budgets appropriately do not record the entire cost of capital items as expenses in the year of the cash outlay, but apply annual amortization over their useful live. Figure 7 presents municipal and provincial finances on the equivalent accrual financial basis.

Presenting councillors with budgets that show outlays on such assets as in-year expenses (as cash budgeting does), rather than amortizing them as they deliver their services (as accrual accounting does),

[1] A common practice is to show expected cash outlays in a "capital" budget alongside an "operating" budget for items to be consumed and expensed during the year.

likely leads municipalities to delay or reject some capital projects they would otherwise approve. It also likely leads them to finance the projects they do approve by raising revenues up front, rather than by borrowing and servicing the debt over the period the project yields its benefits. The result is that today's taxpayers – whether through property taxes, grants to cities, or development charges on houses – are paying disproportionately more than they are receiving in municipal services.

Reframing the Municipal-Provincial Financial Relationship

This Shadow Budget would cancel the proposed doubling of the amount of provincial fuel taxes that the province transfers to municipal governments. In fact, it would go further to limit transfers to cities. As above, this Shadow Budget would begin a long-term commitment to reducing property taxes levied by the province. Every dollar of provincial property tax reduction creates tax room that municipalities can decide to take up. Cities would have the freedom to choose how best to finance local services or whether to increase or reduces taxes and services.

The province's commitment to double gasoline tax transfers to municipalities emerged as a response to the City of Toronto's request for the province to enact an enabling regulation permitting it to introduce a toll on municipally owned highways. The province forbade Toronto from the move, offering all cities the gasoline tax transfer instead. This Shadow Budget would allow cities the ability to introduce road pricing without requiring a provincial regulation, as long as the intention and design of the toll is to reduce congestion, not as a purely revenue-raising option.

In addition, instead of allowing cities to have parcel-by-parcel zoning amendments, as discussed above, this Shadow Budget would expand the ability of cities to put in place a tax-increment financing plan for major infrastructure. This would allow cities to capture some of the increase in property values that result from a new transportation or other municipal investment that increases the value of nearby properties (Found 2016).

Finally, this Shadow Budget would require municipal governments to produce their beginning-of-year budgets on an accrual basis. Importantly, it would not require that cities produce a balanced budget every calendar year and would instead enact a review of the appropriate fiscal and economic benchmarks that cities should adhere to under an accrual accounting system. A revised budget process would allow cities the flexibility they need to finance long-term infrastructure without relying on provincial grants or upfront revenues.

Transit Governance

Originally created in 2007, Metrolinx started with the intent of creating a regional transit plan for the Greater Toronto and Hamilton area with a board made up of local government officials. Two years later, Metrolinx expanded to become the GO Transit operator. The province then removed the local government officials from the Metrolinx board, which is now made up of people appointed by the province.

How can the region overcome local opposition to changes while finding a way to act in the regional interest? Right now, it's easy for local politicians to pass blame around, especially to an unelected transit board. One proposal is to create a single, amalgamated transit operator for the whole Greater Toronto Area

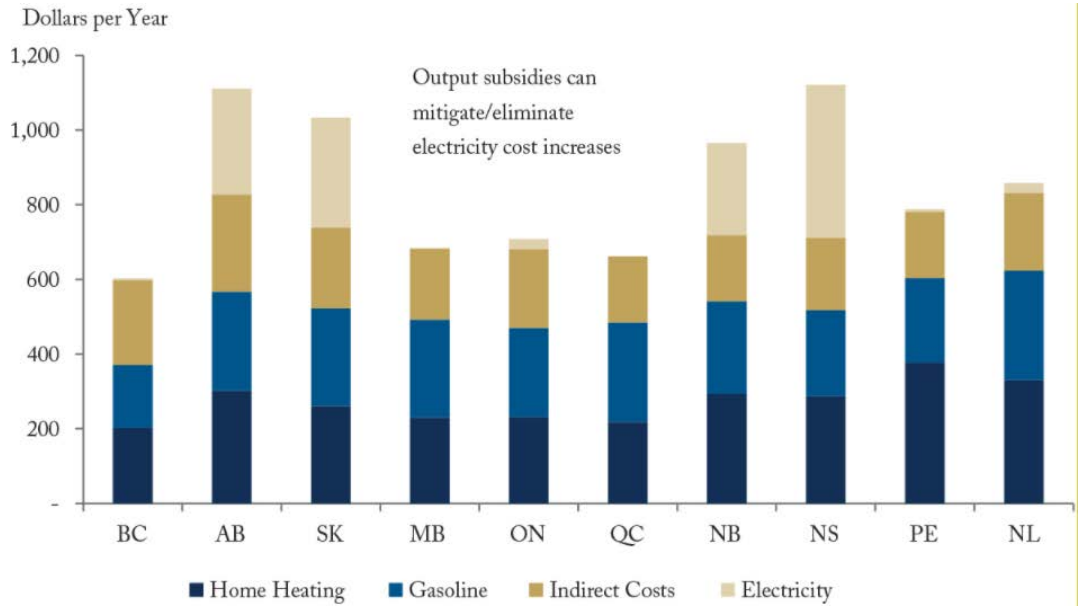
(Gill, Kelcey, Parker, 2017). But rather than amalgamation, which has shown to not result in significant savings (Bish, 2001, Found 2012), another approach is to restore the role of municipal governments on the board of Metrolinx.

Toronto should follow the Vancouver model, in which provincial legislation tasks a Mayor's Council made up of representatives from each of the region's 21 municipalities to appoint a board of Translink, the regional transit coordinating body. Translink has many subsidiary companies that operate transit services under contract (Translink 2017). The regional transit body is the regional coordinator, less than it is a regional authority and another new layer of government (Spicer and Found 2016). The reformed Metrolinx can contract with subsidiary transit operators, private contractors, or municipal governments that can supplement Metrolinx-supported routes.

Greenhouse Gas and Energy Policy

Greenhouse Gas Policy

This Shadow Budget would continue to increase the price on greenhouse gas emissions. This Shadow Budget does not take a position of the merits of a cap-and-trade program as opposed to a carbon tax. A carbon tax would be simpler to administer than a cap-and-trade program and would also generate more revenue for the province of Ontario. On the other hand, a cap-and-trade program that allows Ontario to link with the emissions permit market in California and Quebec allows for a lower cost on emissions to meet the same reduction target. Trading emissions permits across borders and between markets allows emissions reductions to occur wherever it is cheapest to do so, reducing the overall cost (Thivierge 2017).



If prices on emissions rise to $50 per tonne, which they are set to with federal government policy, the upfront cost to the average Ontario household would be around $700 per year (Figure 8). However, the final cost to consumers will depend on how governments recycle that revenue back to households. It is on how the government plans to use the revenues from a carbon price that this Shadow Budget proposes a change of direction for the province of Ontario.

Eliminate Energy Efficiency Programs and Consumer Subsidies

The current plan for the government of Ontario is to spend between $6 and $8.3 billion over five years on projects intended to further emissions reductions beyond that planned to occur using the existing cap-and-trade policy (Ontario 2016). The government plans to finance the subsidies with revenues from an auction for permits that greenhouse-gas-emitting companies must buy. Many of the proposed spending programs are exceptionally costly. For example, subsidies to retrofit apartments will cost as much as $900 million over five years. They will cost taxpayers $425 per tonne of GHG emissions reduced, much higher than any reasonable estimate of future carbon prices. Another example of a wasteful subsidy is the Electric Vehicle Incentive Program, which provides incentives of up to $14,000 per electric vehicle.[2] These kinds of subsidies are regressive and economically costly ways to further reduce emissions (Rivers and Shiell 2015). Other announced programs will not have a direct cost to taxpayers, but will be costly to drivers, homeowners and businesses. The government is planning to boost the amount of renewable content in gasoline and natural gas. Renewable-fuel mandates push the cost onto consumers and are an economically expensive way to reduce emissions (Auld 2008).

[2] See http://www.mto.gov.on.ca/english/vehicles/electric/electric-vehicle-incentive-program.shtml

Figure 8: Cost of a $50/tonne of CO_2 price on typical household

Source: Dachis and Tombe (2017) from Jennifer Winter.

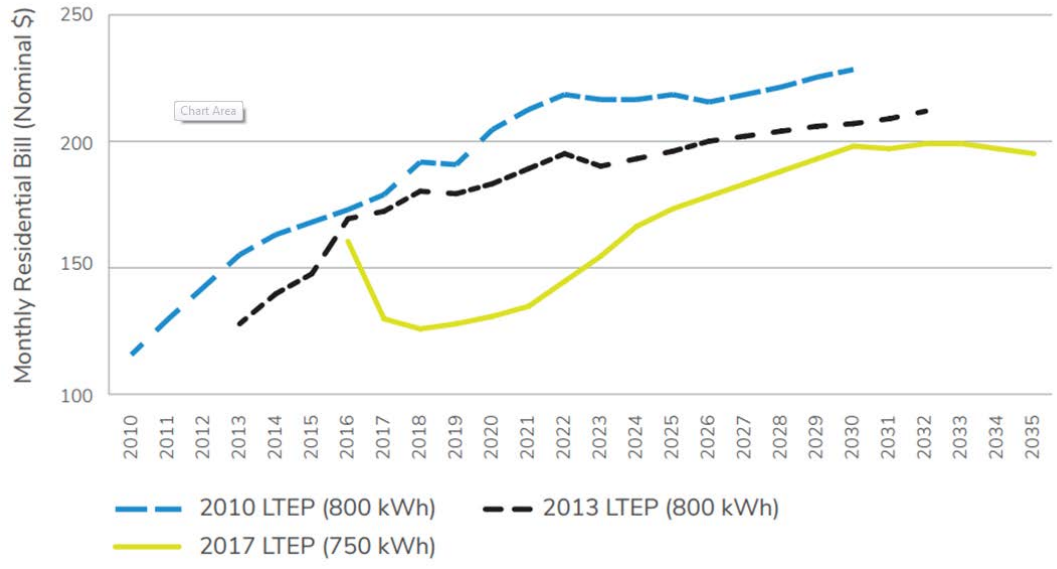
This Shadow Budget would eliminate nearly all of these existing subsidies and mandates and instead use the revenue to reduce taxation on households and businesses. The exact design of the tax cuts is outside of the scope of this Shadow Budget, but such a tax cut should promote two principles. First, it should reduce the average cost to businesses of emissions pricing while still providing a marginal incentive for them to reduce emissions. Second, households should receive tax cuts broadly in proportion to the cost of emissions pricing as a share of their income. This would mean tax cuts and enriching renewable tax credits geared to low-income families, for whom energy costs are a large share of total income.

To ensure industrial competitiveness, this Shadow Budget would adopt one of two paths. This Shadow Budget would prefer to adopt Alberta's emissions pricing policy, which is similar to the federal system. Producers in Alberta face little competitive disadvantage under this model. Although emitters pay the full cost of their own emissions, they receive a credit per unit of output, with the amount of the credit based on a provincial average emissions benchmark. Companies still have a strong incentive to reduce their emissions while having a minimal net impact on the competitiveness of industrial emitters. Indeed, companies with below-average emissions are better off in this system. This Shadow Budget would adopt a similar system if the cap-and-trade program is no longer the most effective means of putting a price on emissions. If, on balance, removing the apparatus of a cap-and-trade program for industrial emitters is too costly, it would preserve the system of allocating some permits for free to industrial producers.

Promote Long-term Energy Research

As research from Popp (2016) shows, a carbon price will drive 95 percent of the lowest-cost emissions reductions to meet reduction targets. Subsidies for energy adoption, as has been common in Ontario with electricity polices, encourages firms to use technology that is closest to market. Subsidies for adoption don't solve a market failure and don't encourage innovation. However, there is a market failure for longer-term energy research. The benefits of such research are broad, but the returns to firms of doing such research are relatively smaller, uncertain, and if they materialize at all will be far in the future. On their

own, research subsidies would achieve about 10 percent of economically efficient emissions reductions (Popp 2016). As such, this Shadow Budget would devote around 10 percent of revenues from an emissions price to long-term research.



Electricity Policy

Few topics have generated as much controversy in Ontario as electricity policy, with a number of previous policies resulting in a dramatic increase in electricity prices (Trebilcock 2017). The government has taken a series of measures that will immediately reduce electricity prices for residential customers. However, within five years, prices are forecast to increase dramatically as the current policy does not address the actual cost of generating and delivering electricity, and relies on taxpayers and future ratepayers to subsidize electricity use today (Figure 9). Further, many industrial consumers are receiving no reduction to their bills. This Shadow Budget would take actions now that will begin to reduce system cost and reduce prices for businesses and consumers in the future.

Market Design and Regulation

The Independent Electricity System Operator (IESO), which manages the electricity market for Ontario, is undertaking a major market reform. The IESO projects that the market reform will reduce the cost of purchasing electricity by billions of dollars, eventually resulting in savings for consumers. The single-largest cost savings for consumers is set to come from the IESO adopting what is called a capacity market. A capacity market provides electricity generators with a revenue stream for being available to produce electricity, in addition to their revenues from selling electricity. Such a market is a major improvement to the government's previous approach of signing 20-year contracts with generators that effectively covers both. The government's plan is a sensible one that has been shown to be effective in a number of other jurisdictions, and this Shadow Budget would continue to proceed with it (see Goulding 2013 and Wyman 2014).

Figure 9: Electricity Price Outlook – Residential Consumers

Source: Ontario (2017b).

This Shadow Budget would propose the government look to take the market reform one step further by reforming the purchasing role of the IESO. The current proposal for the capacity market is to make the IESO the only buyer of generation contracts. The downside of that plan is that it does not create competition among potential electricity buyers. This Shadow Budget would delegate the purchasing power in the capacity market to local buying groups across the province. These local buying groups, known as load-serving entities, would have the ability to purchase electricity that suits local needs. Large business, currently limited to buying electricity from the IESO and paying a share of the Global Adjustment, which pays for capacity investments, could form their own load-serving entities and contract directly with generators. Further, these local buying groups would encourage consolidation of local distribution companies, to which we will return to below.

However, as Goulding (2013) argues, to be effective, the government must pair a capacity market with changes to improve the independence of Ontario's electricity regulatory bodies. Ontario governments of all political stripes haved directed various government agencies to take specific action in the electricity sector while circumventing regulators (Vegh 2016). This Shadow Budget would end the cycle of government price interventions, specific directives, and decisions on procurement by requiring the Ontario Energy Board to review all major decisions in the energy market with a mandate to approve actions only if they increase economic efficiency (see Church 2017 for a discussion of economic efficiency in regulatory hearings).

Economic efficiency means having an electricity market that has decisions determined by prices, and not arbitrary government rules. One of the most intrusive arbitrary government electricity market rules is the Industrial Conservation Initiative. In this program, eligible industrial consumers save money if they slash electricity use during the five highest Ontario-wide demand hours of the year. It's an arbitrary and expensive way to cut electricity costs for some (Sen 2015). Small businesses and residents pay higher bills because of the policy. Instead, this Shadow Budget would eliminate this program and let large consumers pay only for what they buy in a capacity market and the hourly electricity market.

Similarly, a portion of the electricity bills of Ontario households support subsidies for residential consumers to purchase smart thermostats and other energy-efficiency devices. These programs cost ratepayers $600 million in 2016 (Auditor General 2017b). As with direct government spending on such programs these programs often do not pass a cost-benefit test for the use of government fund. Many households would make such investments if energy prices were sufficiently high and they were sufficiently informed. This Shadow Budget would remove any directives requiring such energy efficiency measures, and grant the Ontario Energy Board the authority to approve or reject energy efficiency programs, such as the Industrial Conservation Initiative, based solely on whether they improve economic efficiency.

Encouraging Private Investment in the Ontario Energy Sector

As of 2017, municipal governments in the province owned local electricity distribution companies that had a value of $11 to $15 billion (Robins 2017a). Cities could sell these companies to finance infrastructure investment. Sales would have no negative effect on ratepayers, since the Ontario Energy Board keeps a close regulatory eye on all price changes regardless of who owns the companies. Furthermore, private investors are usually best placed to make the decisions about the appropriate boundaries of companies, geographically and across distribution, transmission and even generation investment. Private investors would bear the consequences of poor choices, but reap some of the rewards of good mergers (Fyfe, Garner,

and Vegh 2013). The incentives for these private-sector companies to keep costs down are often better aligned with ratepayers than those facing publicly owned electricity companies.

However, cities have not been able to take advantage of the value of these assets because of provincial taxes on such sales.[3] The province would collect $1.8 to $2.5 billion in such taxes (Robins 2017a). These overly high taxes pose a significant barrier to any sale. This year will be the last year of a three-year partial tax holiday on provincial transfer taxes in Ontario on the sales of municipally owned local electricity distribution companies. The intent of this tax change was to encourage mergers using private investors, rather than only encouraging merger with other government-owned companies. However, there have been few sales so far, partly because the tax holiday was limited largely to sales of very small companies. Private investor showed little appetite for such assets. This Shadow Budget would exempt municipalities entirely from all taxes on sales, as long as the proceeds of a sale are reinvested in qualifying infrastructure projects.

Private investment in provincially owned electricity assets has been a controversial topic, but a wise policy move. As Robins (2017b) argues, it is not necessary for the province to continue to own its minority share in Hydro One, the transmission utility, or Ontario Power Generation (OPG), a major power generator, if its policy objective is to keep electricity prices down. As with municipal companies, a strong Ontario Energy Board can protect consumers no matter the owner. A sale of the remaining government stake in Hydro One would net the province somewhere in the order of $7 billion and a sale of OPG could also generate substantial revenue.

The upfront revenue is not necessarily the best reason for the province to sell electricity assets. The main reason to sell is reduced risks. The sale would reduce dividends in the future, such as the $250 million from Hydro One. However, using such a sale to eliminate debt could result in cost-savings and reduced fiscal risks if interest rates increase. Second, the electricity sector is undergoing fundamental change. OPG and Hydro One deliver electricity in a traditional long-distance network. However, the electricity system of the future may look very different, with the emergence of small-scale renewable electricity generation. The result could be a decline in value of, and therefore dividends flowing to the treasury from, Hydro One and OPG. The best way for the province to mitigate that risk is to continue selling stakes in Hydro One and begin to include private investors in OPG.

Conclusion

A fiscally sustainable Ontario will mean higher standards of living for Canadians through better government services and faster economic growth. The province should take action to correct a fiscal course that is unsustainable. The government must act to bring the long-term cost of government in line with the revenue-raising capacity of the province. This Shadow Budget shows that there are a number of policy directions the government can and intends to take in areas as diverse as electricity, greenhouse gas, municipal, health, social and tax policy that can balance increases in spending with generating new revenues and cost-savings measures, and generally enhancing the well-being of Ontarians.

[3] See Fyfe, Garner, and Vegh (2013) for more details on the complex system of transfer and departure taxes in the Ontario local electricity distribution sector.

A Shadow Budget for Ontario, 2018-2019

*Draft not for circulation

January 24, 2018

As Ontario enters an election year, the policy debate will likely involve the difficult choices the province faces regarding the fiscal outlook and long-term sustainability of a number of government programs. The budget the provincial government puts in place for the 2018-19 fiscal year will lay out a framework for the debate in the coming months.

To aid this debate, the C.D. Howe Institute has launched its inaugural Shadow Budget for Ontario, following similar Shadow Budgets at the federal level (see last year's edition from Robson, Laurin, and Wyonch 2017). This Shadow Budget shows that the fiscal course the province is currently on is unsustainable. This Shadow Budget would act to bring the long-term cost of government in line with the revenue-raising capacity of the province. It would balance increases in spending and cuts to poorly designed taxes with new ways to generate revenues and reducing spending on ineffective programs.

Although providing specific costing of programs is outside of the scope of this Shadow Budget, it presents an overview of policy directions that balance increases in spending with generating new revenues and cost-savings measures. This Shadow Budget proposes to:

- Restate the province's books to reflect the Auditor General's concerns about incorrect treatment of pension assets and electricity-sector debt;
- Reduce future expense growth to reach a balanced budget as soon as possible;
- Adopt long-term fiscal policy – which requires surpluses, not just balanced budgets – that meets the government's debt-to-GDP target ratio of 27 percent;
- Contain healthcare costs by extending capitated payments to family doctors and revising contractual arrangements with healthcare providers;
- Slow the increase in the minimum wage and focus on improving education and to create economic opportunities for Ontarians;
- Adopt an indigenous identifier in standardized test and oversample indigenous students to permit reliable rural-urban and district-level analysis;
- Modernize funding formulas for post-secondary education by taking outcomes into consideration;
- Reform the school curriculum with an emphasis on improving math performance;
- Open retailing for alcohol and marijuana and revising the tax scheme for both products;
- Adopt personal income tax reforms that reflect the cost of raising children, while reforming personal income taxes to lower high marginal rates, which occur even at low incomes;
- Replace targeted business tax breaks with lower provincial business property taxes to create a level playing field across the province and across different types of businesses;
- Rethink the fiscal relationship between municipal government and the province by retooling grants and transit governance while modernizing municipal financial reporting to match that of the province;
- Reduce the cost that governments impose on building new housing;
- Retain the plan to price greenhouse gas emissions, but re-focus the government plans to spend money raised by such a price away from cost-inefficient programs; and
- Seek out long-term cost savings in the electricity sector, as opposed to short-term fixes that only add to the long-term cost of energy.

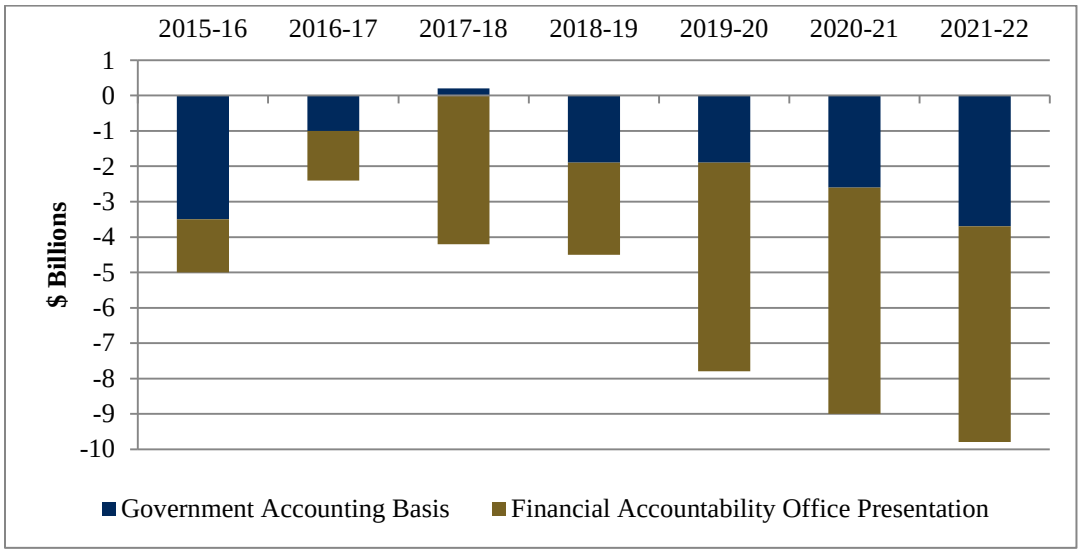
The Fiscal Outlook

This Shadow Budget adopts the consensus view of the independent officers of the Ontario legislature – the Auditor General and Financial Accountability Office – as the authoritative outlook of the short-, medium-, and long-term fiscal outlook. While the government may claim to have balanced the budget for 2017-18,

that declaration is in the eye of the beholder and the medium- and long-term fiscal outlook for Ontario is dire.

Cleaning up Ontario's Books – The Short Term Deficit Debate

The government has made the argument that it has reached a balanced budget. However, the Auditor General has two specific objections related to this claim because of the government's accounting treatment of pensions and whether the recent Fair Hydro Plan amounts to new spending.



The pension dispute centres on the government's treatment of the Ontario Teachers' Pension Plan (OTPP) and the Ontario Public Service Employees' Union Pension Plan (OPSEUPP). The province has decided to report the full asset value of the plan on the province's balance sheet, which neglects the fact that future retirees already have a claim on these assets. Doing so reduces the deficit and the Auditor General (2016) objects to this. Further, as Robson and Laurin (2016) argue, the government discounts OTPP and OPSEUPP liabilities by more than the plans do themselves. This understates the liabilities provincial taxpayers face.

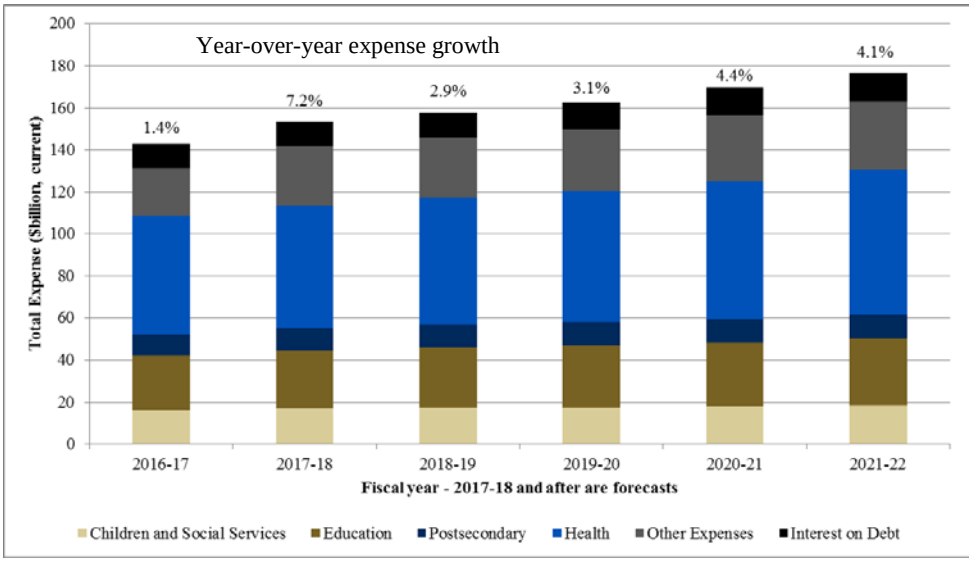
However, the view of the Auditor General is not universally shared. The Ontario government appointed a Pension Asset Expert Advisory Panel to advise on the difference of opinion between the government and Auditor General. The Panel's Report (2017) argued that an asset does exist for the government, saying that the government does have sufficient access to the plan's assets, if even just through reducing contributions to the plans, to merit including it. However, given that we have taken the Financial Accountability Office's presentation of financial data, which is independent of both the government and the Auditor General, we have decided to use the presentation of provincial finances as recommended by the Auditor General.

The second dispute hinges on the Fair Hydro Plan. As the Auditor General (2017a) points out, the government "is making up its own accounting rules" by creating an accounting asset for a government-controlled entity to offset the debt the province placed on another government-controlled entity. The asset the government created only exists because of legislation that gives a government entity the authority to collect higher prices in the future. The true value of this asset should be zero, or highly discounted, because of great uncertainty of the ability to collect higher prices in the future. For example, electricity markets may change because of technology, making it impossible for a central government agency to collect future revenues to pay this debt. As such, this debt should be reflected in the province's financial statements now. Incorporating the debt amount in today's books means that the proper accounting treatment would increase the deficit by $2.5 billion per year through to 2027.

This Shadow Budget would restate the province's books to reflect the Auditor General's concerns. It would restate the province's finances to show a deficit in the upcoming 2018-2019 fiscal year to be about $7 billion (Figure 1).

Figure 1: Ontario Budget Balance

Source: Financial Accountability Office of Ontario. Does not include reserve fund. 2017-18 and beyond are projections by the Financial Accountability Office.



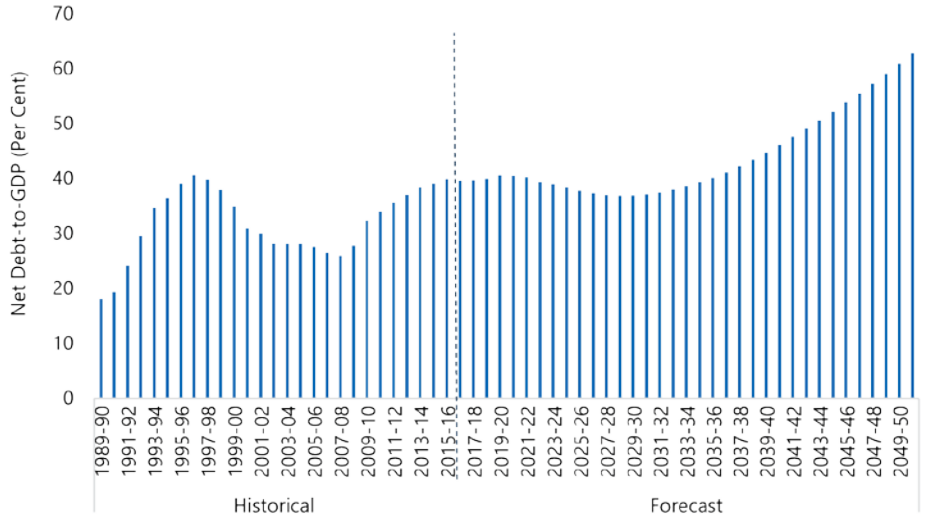
Medium-term Fiscal Sustainability

The question of whether there is a deficit for the 2017-18 fiscal year is far less important, from the point of view of the sustainability of public finances, than future trends. Under current trends, the deficit would rise to nearly $10 billion by 2021-22 (Figure 1), according to the Financial Accountability Office (2017a). These long-term deficits will return because of two main causes: the deficits the government should account for under the Fair Hydro Plan, as discussed above, and fast-rising expenses. Future revenues are not likely to grow as fast in the future as in previous years because of a number of factors, such as one-time revenues that have come in recently and economic growth that is likely to slow. Further, the Financial Accountability Office (2017a) argues that the government has made overly optimistic revenue forecasts that rely on above-trend income growth in the province and corporate income tax receipts.

The province can look to balance its budget in the near future in a number of ways. First, it can look to increase revenues. It can do so through short-term revenue gains such as sales of provincial assets – as this Shadow Budget will suggest in more detail below. Alternatively, it can raise tax rates, such as the provincial component of the HST. Or, it may seek more grants from the federal government. However, aside from hiking tax rates, none of these steps to increase revenues are directly within the control of the province or offer more than a single year's worth of solutions.

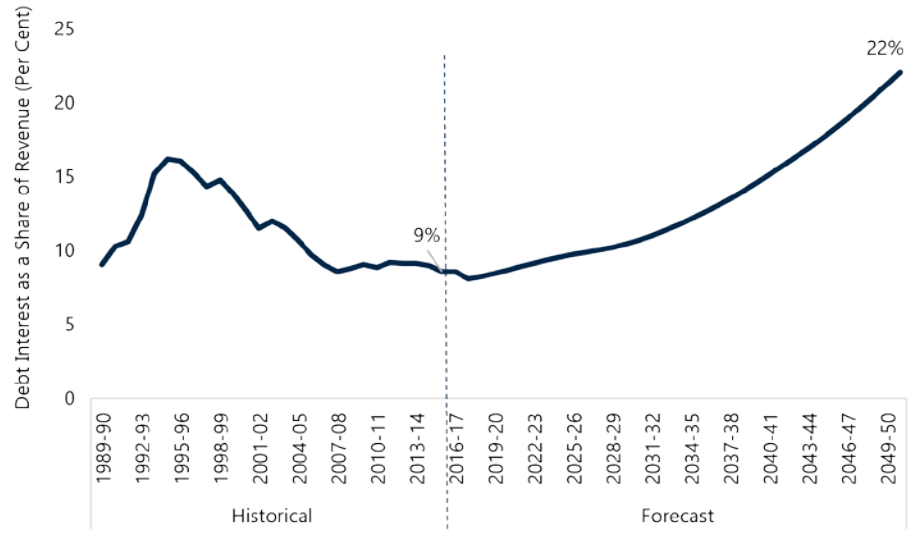
The province must address fast-growing spending to reduce future deficits. The first trend that this Shadow Budget would address is the projected pattern of total spending growth. 2017-18 spending is forecast to grow at over 7 percent over the previous year's spending. This kind of spending growth is unsustainable. Future expenses beyond 2020 of over 4 percent are also likely unsustainable. This Shadow Budget would aim to reduce future expense growth to reach a balanced budget as soon as possible.

Figure 2: Ontario Provincial Spending and Year-over-Year Spending Growth Rates



Source: Financial Accountability Office of Ontario

Long-term Fiscal Sustainability



Balanced budgets will not be enough for Ontario to be fiscally sustainable. The government has targeted a net debt-to-GDP ratio of 27 percent, a sensible target that is similar to that of the federal government of 25 percent of GDP. This Shadow Budget would continue pursuing such a target and take the necessary action to achieve it within 15 years. As the Financial Accountability Office (2017b) projects, achieving 27 per cent requires the province to run budget surpluses until 2033-34. If the province continues on the current trend, and not run first balanced budgets and then surpluses, the net debt-to-GDP ratio will reach 63 percent by 2050-51 (Figure 3).

Figure 3: Net-Debt-to-GDP, Under Current Fiscal Trajectory

Source: Financial Accountability Office of Ontario

Figure 4: Interest Expense as a Share of Revenue

Source: Financial Accountability Office of Ontario

If the government doesn't tackle the long-term fiscal challenges, the cost of debt will take up an enormous share of total government revenues. Interest costs currently sit at 9 percent of revenues; at current trends, interest costs will increase to 22 percent in 2050-51 (Figure 4). If debt costs take up a large share of total revenues, that will leave less for other needs.

Health Policy

Given that Ontario spends roughly half of its own-source revenues (which excludes transfers from the federal government) on health, getting good value for money in healthcare will be critical for the financial and societal well-being of Ontarians. Although the province has successfully contained the annual growth of healthcare spending from 2010 to 2015 to 2.4 percent, on average, the rate of health spending is starting to tick upwards again alongside worries about emergency room overcrowding, long waits for long-term care beds as well as overburdened caregivers . Progress on addressing these issues – in addition to limiting public and private gaps in coverage for prescription drugs, dental services and mental health – while allocating reasonable increases for health spending, is a critical challenge.

Efforts to enable self-directed homecare services – such as recent moves to increase the number of hours nurses, personal support workers, and therapists will provide care in homes – should help alleviate the emergency room pressures for elderly patients, and these programs should continue to expand on their current trajectory. Relative to providers, patients with mild to modest physical disabilities are more likely to know the abilities of family and informal caregivers to offer care and their schedules, and which services they would prefer to have delivered by other health professionals. Although there are some legitimate concerns about patient's ability to choose among groups of healthcare professionals to meet their needs, there should still be enough flexibility around the use of self-directed home care budgets to ensure appropriate innovation from those delivering services. This means sufficient flexibility in how patients select and schedule professional help.

Ensuring that people without private insurance for dental, drug and mental health services get access to services is also a priority for healthcare policy. On this score, there are a number of avenues to ensure appropriate coverage and do so at minimal public cost, including the expansion of these services among the most vulnerable (Blomqvist and Busby 2016, Busby and Pedde 2014). This Shadow Budget would look at new ways to revise contractual arrangements with providers – pharmacists, dentists and dental hygienists, and phycologists – to improve the efficiency of spending in these areas.

Although government needs to spend more money to improve access to mental health services, more money alone will not ensure that all illnesses get treated in appropriate timeframes. It may be more advantageous to give a greater share of the overall budgetary spending on physiologists to hospitals and primary care doctors for outpatient needs.

The way in which the province pays for the delivery of health services matters. Paying hospitals, hospital-based doctors and necessary outpatient services for a needed intervention often results in silos of poorly coordinated care. This Shadow Budget would instead look at more bundled payments by procedure for hospital-based services (Sutherland and Hellsten 2017). And in primary care, this Shadow Budget would extend capitated payments to family doctors to include budgets for enrolled patient drugs, lab and diagnostic imaging budgets as part of the evolution in payment reforms for family doctors (Blomqvist and Busby 2011).

Labour and Education Policy

Many governments are struggling to respond to the challenges of precarious work – employment that is often more insecure and uncertain than traditional full-time employment, with greater prevalence for part-time work. Further, as wage gaps exist between temporary or part-time vis-à-vis full-time workers, policymakers have recently passed legislation intended to bridge these differences. While there are no ideal policy levers for addressing these issues, it should be recognized that, in general, increases to the minimum wage are a reasonable option available to policymakers. However, gradual and evaluated increases to the minimum wage are the best way to increase minimum wages over time. Ontario's recent, large increase in the minimum wage means that the right response for government should be to pause and evaluate. One particular concern is the impact on smaller municipalities that risk being most negatively affected.

This Shadow Budget would amend the current minimum wage in two ways, as recommended by Marchand (2017). First, it would allow for regional variation in minimum wages. This Shadow Budget would allow upper-tier and single-tier municipalities across the province the option to return to a lower minimum wage for a five-year period. New York has a similar policy, in which the minimum wage is highest in New York City than in other parts of the states. Second, this Shadow Budget would build a provision into the minimum wage legislation to reduce it in the case of a recession, as California has recently done.

As trade, technology and worker preferences continue to change the dynamic for skills desired by employers, a competitive labour force will need an abundance of core numeracy and literacy skills. For Ontario, the news on these scores is mixed. On literacy, the results are strong (EQAO 2015). In terms of numeracy, however, the results are alarming – only half of all grade 6 students in the province meet the provincial standard for numeracy and its OECD Programme for International Student Assessment (PISA) scores have plummeted over time, from 530 in 2003 to 509 in 2015, one of the largest drops among Canadian provinces, putting Ontario statistically below the average in Canada(Richards 2017). This needs

fixing. This Shadow Budget would continue the province's re-examination of the math curriculum and pedagogy, where the effectiveness of different pedagogies should be explored as potential causes (Stokke 2015). This Shadow Budget would also look at teacher preparedness and consider evaluating teacher knowledge in subject matter with the administration of student exams to teachers prior to the academic year. Insufficient results should require immediate intervention.

Furthermore, collecting, analysing, and reporting educational outcomes are essential to closing the achievement gap between more and less advantaged students. Including a question that identifies indigenous student in PISA tests is a great way to track educational achievement of indigenous students and help educators and policymakers to design more effective strategies to improve outcomes. The province should also oversample to ensure sufficiently large sample of indigenous student to produce reliable estimates at the district level and to perform urban/rural analysis (Richards and Mahboubi, forthcoming).

Many OECD countries consider Performance-Based Funding (PBF) systems for their post-secondary education, but Canadian provinces, including Ontario, lag behind in adopting this innovating way of financing. Usher (forthcoming) shows the benefits associated with PBF include less burden of funding negotiations, higher accountability of the post-secondary institutions, and greater competition between institutions, leading to a greater focus on results. A similar approach to competition in grants for research has been effective at improving the performance within universities, and should apply to universities themselves. The government needs to review its funding formula and learn from the experience of other developed countries.

Tax Policy

Commodity Taxation

Alcohol

In 2015-16, the Liquor Control Board of Ontario (LCBO) paid the provincial government a dividend of $1.9 billion. It also remitted $867 million to the federal and provincial governments in Harmonized Sales Tax, excise taxes and customs duties (LCBO 2016). In addition to the LCBO, there is a system of beer and off-winery stores, which operate as a quasi-monopoly thanks to government regulation. Masson and Sen (2014) find that freeing up alcoholic beverage retailing would result in increased government revenue, lower prices, and more convenience. They find that, other factors being equal, Western Canadian provinces with more beverage alcohol retail competition had 7 percent more per capita provincial alcohol profits than provinces with government-run monopolies. The province has begun to introduce beer sales at grocery stores. However, it has done so slowly with limits on the amount of sales by the store. This Shadow Budget would go further by auctioning licenses for other retail outlets. It would also auction licences for off-winery stores to other wineries and also to new wine retailers. The result would be increased provincial revenues and more choice for Ontario consumers.

This Shadow Budget would also revise taxation of alcoholic beverages. Currently, tax rates are fixed by type of beverage, currently ranging from 52 cents per litre to $1.06 per litre, depending on the type of manufacture, not alcohol strength. Wine is taxed as a percent of sale value and sprits are taxed at up to 38 cents per litre plus a percentage of the retail price. This Shadow Budget would graduate the tax on alcohol

to relate to alcohol content. This reform would target the health problems caused by alcohol, which is directly in line with the alcohol content of any drink (The Economist 2013).

Marijuana

The federal government has legalized marijuana for recreational consumption with legal sales scheduled to begin in July. The main policy objectives driving marijuana legalization are the improvement of public health and the minimization of the black market and its associated criminal activity. Ending the prohibition of marijuana involves coordination between all levels of government. Provinces must determine the structure, distribution, and regulation of the retail market and jointly determine taxation levels of marijuana with the federal and municipal governments.

Ontario has announced that it will restrict retailing of recreational marijuana to LCBO-run stores. Only 40 of these locations will be in place by next July 1, the federal target date for legalization, with a total of 150 locations expected by 2020. The province missed the opportunity to have a competitive market for retail marijuana. Independent businesses have an incentive to locate where market demand isn't being met and competition between businesses constrains operating costs and keeps prices low. Lower prices in the legal market make it more likely to be competitive with the existing black market.

The province's decision to enter the market also implies considerable resources will be expended in the construction and maintenance of stores, higher salary expenditures and other overhead costs. These will be met at the expense of other sectors, which will receive lower government funding.

Having few retail locations means that access to recreational marijuana will be inconvenient for a significant number of Ontarians. Recreational consumers are highly unlikely to switch their dollars to the regulated market if there isn't easy access. This means that there will be significant opportunity for the black market to continue operating in all the areas without enough legal stores to meet market demand or that are convenient to access. (By contrast, there are more than 650 LCBO outlets in the province.) Further, to levy penalties against illicit businesses will require significant justice and police resources. And since there won't be enough regulated retail outlets to meet market demand, it is likely that at least some of these businesses will still find it profitable to operate. This Shadow Budget would make retailing of marijuana competitive and allow for the licensing of privately-run retail stores. This could take the form of entirely private retail, as in Alberta. Alternately, licensed establishments could operate alongside government retail stores and deliver better market coverage faster than the crown corporation on its own.

Ontario has joined the federal government’s proposed coordinated excise tax framework for recreational marijuana. While Crown-corporation retail isn’t particularly competitive in terms of convenience, keeping taxes low will help ensure that the legal market will be price competitive with the illicit market. The tax rate on dried cannabis flowers will be $1 per gram or 10 percent, whichever is higher, with 75 percent of the revenue going to the provincial government. The revenue from this excise tax will initially be modest, bringing in $50 to $95 million in 2018 and $175 to $200 million annually by 2021.

Gasoline and Fuel

The government should be concerned about the prospect of declining revenues from fuel and gasoline taxes, which will intensify as vehicles become more fuel efficient and become increasingly electric. This Shadow Budget would begin a study of the potential to replace fuel taxes with tolls for use. Further, the best solution for traffic congestion is a road toll. Road pricing could also bring the price that drivers pay for

infrastructure they use closer to the actual cost of it. Gas taxes (which are about 75 to 80 per cent of road-related revenues), vehicle licences and other revenues from drivers have covered less than two-thirds of roadway expenses across Canada since 2008. Taxpayers should only subsidize transportation to the extent that it encourages broader access to all in society and the government should review whether a one-third subsidy is the appropriate amount of taxpayer subsidy for roads.

Personal Taxation

Income taxes affect individual and business incentives to earn income, save, invest, and take risks. Excessively high taxes at the margin can also drive tax avoidance behaviour.

At the personal level, the impact of income tax variations on work participation decisions is particularly acute for the secondary earner in families with children and lower-skilled workers. In general, lower income, less educated people have a greater tendency to adjust their paid work behaviour through workforce participation decisions, while more-educated workers and high-income earners tend to adjust through the number of hours they work (Duclos et al. 2015).

High income earners' taxable income has been shown to be particularly responsive to high marginal tax rates – through both tax planning avoidance behaviour and earnings decisions (Laurin 2015). And the sensitivity to rate changes is higher at the provincial level in response to provincial rate changes than at the federal level in response to federal changes. This is because high-income earners can take advantage of provincial tax rate differences by shifting their income tax attributes and work locations to the most tax-advantageous province (Milligan and Smart 2014).

Provinces like Ontario with one of the highest top combined federal and provincial marginal tax rates of over 53 percent on high-income earners should aim to reduce that rate to a level at or below 50 percent. The responsiveness to the change would have a beneficial impact on the tax base that would ensure a very low fiscal cost for the policy. Furthermore, the income tax system should be clear and transparent. Ontario has a surtax notionally in place for health care expenses. However, this tax is treated as general revenue. The province should replace this surtax and set income tax rates and brackets that transparently show the marginal tax rate people are paying.

Other tax changes should aim to lower the burden of taxes on secondary earners in family with children. This Shadow Budget would reform the tax recognition of child care expenses through the replacement of the child care expense deduction with the introduction of a new refundable tax credit for child care expenses. It would encourage stay-at-home parents to join the workforce, producing extra tax revenues, considerably limiting the net fiscal cost of its implementation (Laurin and Milligan 2017).

Also, typical labour arrangements are changing with technological change. Workers are becoming less attached to a single employer and move around more freely between projects and contracts. Their incomes are also more prone to be fluctuating from year to year – a period of low earnings followed by a year of higher earnings, or vice versa. But a worker with fluctuating income may end up paying more tax (and losing more income-tested government benefits) than another worker with a flat income profile but earning the same amount over a period of years. Wen and Gordon (2017) find that Canada's "fluctuation tax penalty" is most severe for individuals who earn lower incomes or are self-employed. This Shadow Budget would lessen the impact of fluctuating incomes on tax liability by allowing workers to average their

income over many years, so that any single large earning year would not lead to a disproportionate loss of fiscal benefits and higher tax payments.

Business Taxation

A properly designed business tax regime would provide for a common provincial tax rate for all businesses operating across the province, regardless of their location or sector. However, Ontario's tax regime selectively rewards a number of sectors, such as manufacturing, through the income tax system while punishing companies with overly high provincial property tax rates. The province of Ontario can simplify its tax regime, create a more level playing field across sectors and the province, and reduce the effective tax rate on new business investment all without reducing overall provincial revenues.

Eliminating Wasteful Business Tax Expenditures

The largest tax expenditure in the corporate income tax system, by far, is the Small Business Deduction, which costs Ontario over $2 billion in foregone revenue. A better alternative to the Small Business Deduction is a lower general corporate income tax rate. That is because the net impact of the Small Business Deduction is an expansion of the small business sector at the expense of large businesses. Since small firms are less productive than large firms, the Small Business Deduction lowers overall economic performance (Dachis and Lester 2015). This Shadow Budget would not proceed with any further cuts geared to small business.

Most Canadian provinces provide a tax incentive for innovation. They mimic the federal tax system which provides eligible businesses with a Scientific Research and Experimental Development (SR&ED) credit. Ontario provides a non-refundable tax-credit worth 3.5 percent of the value of eligible expenses for firms to deduct from their taxes. The total innovation tax incentive for Canadian businesses is one of the highest in the world, but Canada consistently lags behind international peers on measures of business innovation (Parsons 2011). The Ontario SR&ED credit comes at a large fiscal cost: a tax expenditure of $150 million in the 2017 calendar year (Ontario 2017). Instead of targeting up-front tax credits for innovation, a better solution to encouraging innovation is with a low overall income-tax rate (McKenzie 2006). In addition, the province provides manufacturing and processing businesses a preferential lower tax rate than those in the rest of the economy: 10 percent instead of the usual 11.5 percent. This lower rate cost taxpayers $290 million in the 2017 calendar year.

This Shadow Budget would eliminate the Ontario SR&ED credit and the lower rate for manufacturing and processing, and use that revenue to cut high provincial property tax rates that choke investment, as discussed below. It would also initiate a comprehensive review of tax expenditures to determine whether the existing tax expenditures are still appropriate or whether they should be redesigned as deductions or credits (see Robson and Laurin 2017). Tax expenditures can be removed when shown to be no longer effective, as the government has already committed to eliminating ineffective tuition and education tax credits, as recommended by Neill (2013).

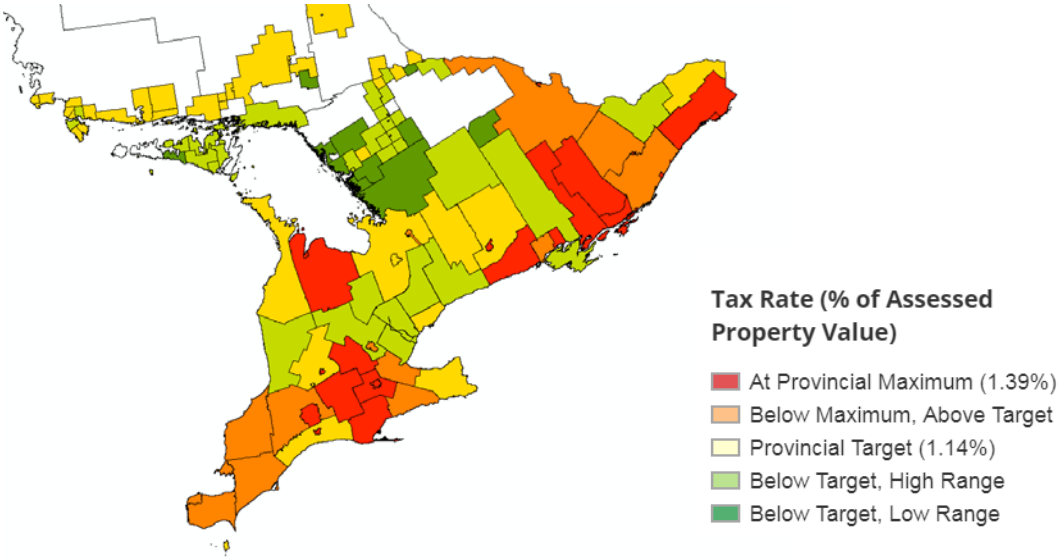
Cutting Provincial Business Property Taxes – A Revenue Neutral Cut in Investment Taxes

Ontario took over the local education property tax from local school boards in 1998. School boards had widely varying tax rates across the province and by property type when the province took over. The province immediately made its residential tax rate the same for all residents across the province. It's a different story for businesses. Each year since 2007, the province has set a maximum tax rate, called

the ceiling rate, and a lower target rate designed to be revenue-neutral for the province. The province committed in its 2007 budget to lower higher rates down to the target rate over time, but the province has stalled on tax cuts since 2013.

The provincial property tax still varies wildly across cities and for different buildings within cities (See Figure 5a and 5b, which shows provincial rates for commercial and industrial properties). Provincial commercial property tax rates in some Ontario municipalities are more than three times those in others. The provincial tax is highest on industrial property across much of Southern Ontario. As Found (2017) shows, the average provincial business property tax rate is more than 6 times its residential counterpart.

Figure 5a: Provincial Commercial Property Taxes in Southern Ontario



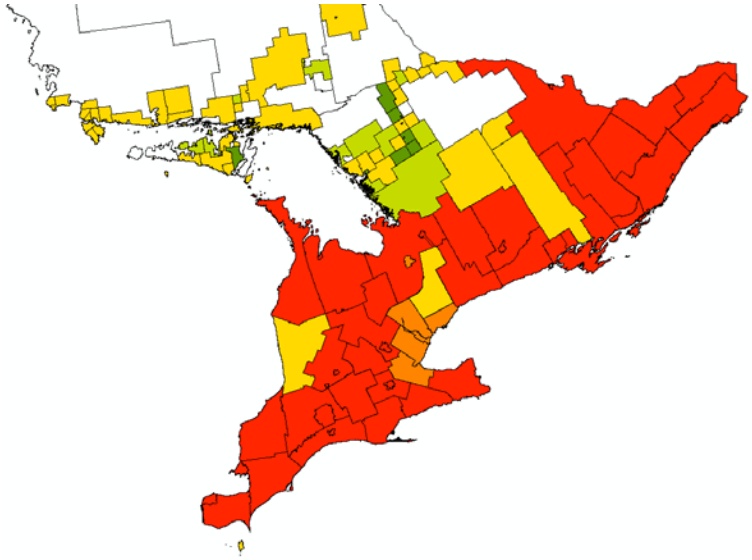


Figure 5b: Provincial Industrial Property Taxes in Southern Ontario

Source: Jacobs, Dachis and Found (2017). Results include Northern Ontario. Hollow areas not subject to provincial property tax.

Cities collect the money on behalf of the province after receiving a regulation from the province of how much to collect. In the 2017-18 fiscal year, the province will collect $6 billion in property taxes, which it reports as general revenue. Since different education tax rates by region have nothing to do with local school spending, each school board now gets a provincial top-up grant in order to level the playing field. Each school board`s total revenue is based on its enrolment and the needs of students, not the value of buildings in the area. That means the provincial property tax now has no bearing on school boards' spending. Yet, the province still uses the misleading name "education property tax" to describe it on tax bills.

These high property taxes have a large economic cost. Property taxes act like a tax on capital, specifically building capital. A tax on capital reduces the incentive to invest, resulting in lower investment which leads to lower productivity and therefore income and standards of living of Canadians. A 10 percent increase in commercial property tax rates decreases the long-run value of the business property assessment base by 8.2 percent. At the average level of business property taxation in Ontario, a $1.00 business property tax hike costs the Ontario economy $5.56 (Found 2017). Higher taxes shrink the tax base, which makes it harder for governments to raise revenues. The total business tax rates in some cities across Ontario – such as London, Windsor and Brantford – are so high that cities and the province might see revenues increase if they cut their taxes to attract more business investment.

This Shadow Budget proposes to complete the harmonization of business property tax rates. To make such a tax reform revenue-neutral, it proposes to eliminate the SR&ED credit and the lower manufacturing and processing corporate income tax rate and reduce provincial business property taxes that would reduce revenues by the same amount saved. Such a change would have a number of benefits. First, it would create a more level playing field across different types of businesses that currently face different tax rates. Secondly, it would improve fairness in the provincial property tax regime across the province. Third, a revenue-neutral property tax reduction would lower the marginal effective tax rate on new investment in most parts of the province – and almost all of Southern Ontario – by more than any increase in provincial income taxes would increase the effective rate. Property taxes have an especially large effect on tax costs on investment because they are insensitive to profit and are akin to a direct tax on capital (Found and Tomlinson 2017). Such a reduction in provincial property taxes would be largest for the same sectors that would see a removal of their special, lower income tax rate, across most of Southern Ontario.

Housing, Municipal, and Infrastructure Policy

This Shadow Budget would seek to lower the cost of housing across the province by taking steps to reduce barriers to construction and eliminating economically costly rent controls and transfer taxes. It would also fundamentally change the relationship between municipalities and the province by granting cities the ability to put their budgets on a sound financial footing and allow them more flexibility in financing infrastructure.

A Smart Housing Plan

The cost of housing in Ontario has increased dramatically in recent years. According to data from Brookfield's Real Property Solutions, home prices the Greater Toronto Area increased by more than 250 percent between January 2005 and the end of the 2017. In response, the province has taken steps such as introducing taxes on foreign buyers and rent controls. The government's policies have focused mostly on curtailing the demand of housing.

On April 20, 2017, the province introduced a 15 percent Non-Resident Speculation Tax in the Greater Toronto Area. This transfer tax is substantially higher than the existing provincial land transfer tax that has a maximum rate of 2.5 percent. Land transfer taxes such as these have a high economic cost of reducing the mobility of households (see Dachis 2012 and Dachis, Duranton, Turner 2008). In addition, land transfer taxes are highly volatile and present a large fiscal risk to the province if the housing market has a serious downturn (Ngo, Angastiniotis, and West 2017). This Shadow Budget would immediately eliminate the additional 15 percent tax and look to begin reductions in the general land transfer tax in future fiscal years.

On the same day, the province expanded rent control to all rental units in the province, rather than only those built before 1991, as was the case prior. Rent control is one of the few economic policies around which there is a solid, evidence-based consensus about its long-term effect on the cost of housing: it does not lower it in the long-run (Kronick 2017). The likely result of rent control is that housing developers will not build rental housing knowing they face a cap on potential returns, while facing no commensurate cap on their investment risk. The result will be fewer units available, leading to housing shortages. This Shadow Budget would phase out rent control on all rental units. It would start by reducing the extent to which rent control binds the market by increasing the allowable increase, doing so annually until eventual repeal. Rather than rely on rent control, this Shadow Budget would embrace the recent federal decision to create a Canada Housing Benefit that provides low-income renters with the funds to seek a wide range of market-priced rental units (Canada 2017). This Shadow Budget would re-orient financial support for housing construction, which is often part of transfers to local governments, as discussed below, to match the federal contribution in creating the Canada Housing Benefit.

Reducing the Cost of Housing

There is strong evidence that restrictions and extra costs on building new housing – such as zoning regulations, delays on permit approvals, development charges, and limits on greenfield housing development – are dramatically increasing the price of housing. Dachis and Thivierge (forthcoming) find that a limited lowering of these restrictions can reduce house prices in some municipalities in the Greater Toronto Area by around $100,000.

What can the province do to reduce supply barriers? Toronto heavily uses a clause in the provincial *Planning Act* – the legislation governing municipal zoning policy – that allows it to require additional payments from developers in exchange for a site-specific variance from zoning bylaws (Moore forthcoming). These additional payments, known as section 37 payments for the relevant part of the *Act*, increase uncertainty for developers and therefore increase the cost of housing. In addition, municipalities have an incentive to keep zoning bylaws out of date because updating them would take away the future section 37 payments. This Shadow Budget would place greater restrictions on the use of section 37 of the *Planning Act*, which would result in municipalities having a greater incentive to set more appropriate zoning regulations.
