- IESO is not the first entity that has prepared its financial statements using PSAS and rate-regulated accounting. Ontario Power Authority (which was amalgamated with IESO on January 1, 2015) prepared its financial statements with PSAS and used rate-regulated accounting.
- In the Auditor General's opinion on the 2016-17 consolidated financial statements of the Province, the AG has included an "Other Matter" paragraph, drawing attention to the adoption of rate-regulated accounting by IESO. The AG's view is expressed as stating PSAS does not permit rate-regulated accounting, but that the AG has not qualified the opinion on this matter because the impact is not material to the 2016-17 consolidated financial statements.

- The AG further notes, “However, the consolidated financial statements may become materially misstated in future periods, as a result of the legislated accounting prescribed under the Ontario Fair Hydro Plan Act, 2017 (OFHPA) and its related regulations, as it is not in accordance with Canadian public sector accounting standards.”
- Neither the IESO nor the Office of the Provincial Controller Division (OPCD) agree with the statements that (a) PSAS does not permit rate-regulated accounting (as previously noted, PSAS is silent with respect to rate-regulated accounting) or (b) Fair Hydro Plan and its related legislation and regulations legislate the accounting for GA Refinancing.

OPG Accounting

- The Auditor General has not raised any concerns to date with the intended accounting for the OPG Trust on the Province’s books.
- It is expected that OPG Trust will be controlled and consolidated by OPG.
- Purchases by OPG Trust of the rate-regulated assets from the IESO will be reflected on OPG’s books as intangible assets which will be included in the Province’s financial statements as part of its investments in government business enterprises.

The Province’s Accounting

- In assessing the appropriate accounting for Ontario’s Fair Hydro Plan (OFHP) on the Province’s books, OPCD worked closely with key ministries, the Ontario Energy Board (OEB), IESO, OPG and their respective external advisors.
- The final accounting treatment for OFHP-related activities will be confirmed once all elements of the GA Refinancing framework are finalized, including provincial guarantees and financing arrangements.

- Once the details and commercial agreements of the OFHP are finalized, the external auditors of IESO and OPG are expected to provide independent accounting opinions on the accounting treatment on IESO and OPG's financial statements.
- OPCD will rely on those independent accounting opinions, the audited financial statements of IESO and OPG as of December 31, 2017 and its own research and analysis in determining the impact of the GA Refinancing on the 2017-18 consolidated financial statements.

If Pressed: AG Assertion that the Government is Using Legislated Accounting

- The Auditor General has made several incorrect references to legislated accounting which should be addressed to ensure clarity and transparency in terms of the government's accounting treatment for Ontario's Fair Hydro Plan.
- In particular, the Auditor General has referred to legislated accounting prescribed by the OFHPA that is designed to in some way manipulate the Province's financial reporting in its consolidated financial statements.
- The Province's financial statements are based on Public Sector Accounting Standards (PSAS) as issued by the Public Sector Accounting Board of CPA Canada. There is no legislated accounting that applies to the Province's consolidated financial statements.
- While the OFHPA does, under Section 24, require that IESO set up a variance account to track the cash shortfall amount resulting from the deferred recovery amount, it is just another type of regulatory account, similar to those that OPG reports and for which the OEB is responsible for approving rates.

- As far as the Province's financial reporting practices go, whether the deferred amounts reported in IESO's variance account are assessed as assets for financial reporting purposes will be determined by the interpretation and application of Public Sector Accounting Standards, not by the legislation or regulations.

Auditor General's Special Report on the Fair Hydro Plan

- The Office of the Auditor General released *The Fair Hydro Plan: Concerns about Fiscal Transparency, Accountability and Value for Money* on October 17, 2017. The report focused on the financial and accounting framework of the OFHPA.
- The Auditor General said that the accounting for the Fair Hydro Plan is not permitted under PSAS because it is silent on rate-regulated accounting, despite the fact that standard accounting practice, including under PSAS, dictates that an entity should consult other accounting standards for transactions not specifically covered by primary standards.
- The Auditor General asserts in her report that the OFHPA creates an asset through legislation. This is a fundamental disagreement the government has with the Auditor General's report. The Province will prepare its consolidated financial statements in accordance with Public Sector Accounting Standards (PSAS).

Key Messages on AG's Special Report on the Fair Hydro Plan

- The government respects independent officers of the legislature, and values the important perspective they bring, but does not agree with the assertions and conclusions expressed in the Auditor General's Fair Hydro Plan report.
- The government has a strong track record of producing high-quality financial reports on a timely basis and continues to present the province's finances fairly and accurately and in accordance with Canadian Public Sector Accounting Standards.

- In developing the Fair Hydro Plan, the government considered a range of implementation options and consulted with legal, accounting, financial and energy sector third-party experts to provide advice and ensure due diligence was completed.
- The Fair Hydro Plan operates under a financial and accounting framework that is appropriate for the intended purpose. It is in accordance with Public Sector Accounting Standards and ensures the goals underlying the program are achieved in a cost-effective manner.
- PSAS are principle based -- they are not a set of specific prescriptive rules. Applying them requires the application of professional judgment. While we expect professional accountants to agree on the vast majority of issues, we acknowledge that they may not agree on everything. When that occurs, and the difference is material to the financial statements, the Office of the Auditor General can choose to issue a qualified audit opinion.
- The financing plan and its impact will continue to be transparent and fully available to credit rating agencies, securities regulators, and the public.
- The Ministry of Energy, the Ministry of Finance, and the Treasury Board Secretariat remain committed to assisting the Office of the Auditor General in providing its independent views to the Legislative Assembly.

RECENT MEDIA COVERAGE:

- January 12, 2018 – An opinion piece in the Toronto Star argues Kathleen Wynne faces a phantom opponent in the spring election: Ontario's auditor general, who looms like an accounting apparition over the premier. The article notes, Lysyk isn't just picking fights with Liberal cabinet ministers but clashing with Ontario's non-partisan public service as well as outside consultants. The most awkward contretemps took place a year ago, when an expert panel of accounting and actuarial experts shredded the auditor's claims about the government cooking the books.
- January 4, 2018 – The Brighton Independent covers Liberal MPP Lou Rinaldi's plans for re-election, while making reference to the "issues" the government has with the Auditor General, particularly on pension asset and Fair Hydro Plan accounting.
- January 3, 2018 – The CBC runs an article "No quick fix for Ontario's energy woes, electricity analyst says," noting the criticisms from opposition parties and analysts regarding the accounting of the Fair Hydro Plan.

- December 17, 2018 – The Ottawa Sun's Lorrie Goldstein writes that "independent financial officers say Wynne government's books can't be trusted," noting the Auditor General and FAO's concerns regarding Fair Hydro Plan accounting: "In her Dec. 6 annual report, Lysyk warned "there is a very real risk" the "government's continued use of nonstandard accounting" will "seriously distort the true state of the province's finances...The government uses these incorrect accounting treatments to claim it has balanced the province's books, but in reality, legislators, the financial community and all Ontarians will be misled as to the true condition of the province's finances." In its fall economic and fiscal outlook released last week, the FAO warned, "since the government has not adopted the Auditor General's recommended accounting for both the Fair Hydro Plan and net pension assets, it is becoming more difficult for legislators and the public to assess the government's fiscal projections."
- December 13, 2017 – The Toronto Sun runs a comment piece following from the Financial Accountability Office's fiscal and economic outlook, fall update report, entitled "Liberals hiding deficit, second watchdog says," noting the Auditor General and FAO's criticisms of the accounting for the Fair Hydro Plan.
- December 11, 2017 – The Toronto Star's Robert Benzie covers the Financial Accountability Office's fiscal and economic outlook, fall update report, noting the FAO's agreement with the Auditor General's questioning of the accounting of the Fair Hydro Plan: "The FAO also backed the auditor general in questioning the complex mechanism the government has developed to bankroll the 25 per cent electricity rate cut, known as the Fair Hydro Plan. Because of the actuarial tussle "it is becoming more difficult for legislators and the public to assess the government's fiscal projections.""
- December 11, 2017 – The Canadian Press' Shawn Jeffords also covers the FAO's report, noting: "The FAO said in its report that since the government has not adopted the auditor's recommended accounting for both the pension assets and the Fair Hydro Plan it is becoming more difficult for legislators and the public to assess the government's fiscal projections."
- December 6, 2017 – The Canadian Press and other outlets cover the Auditor General's 2017 Annual Report, noting the accounting disagreements between the Auditor and the government: "Lysyk also announced through her report that her office would be auditing the IESO's books. That comes amid one of two accounting disputes the auditor has been engaged in with the Liberal government. She recently accused the government of purposely obscuring the true financial impact of its 25 per cent cut to hydro bills by keeping billions in debt used to finance that plan off the province's books. Lysyk said she will audit the IESO because of its role in the hydro plan's complex accounting scheme."
- November 2, 2017 – The Waterloo Region Record runs an editorial by analysts from the Fraser Institute entitled, "Ontarians in the dark about Fair Hydro Plan." The piece argues: "Ontario needs real reform to lower electricity prices for residents and businesses. Unfortunately, the provincial government is opting for improper accounting practices and temporary solutions, sticking current and future Ontarians with the bill."
- October 26, 2017 – CBC writes that "Ontario hydro bills to rise over next 10 years in government's energy plan," referencing the Auditor General's report on Fair Hydro: "Ontario's auditor general Bonnie Lysyk found that the Liberals concocted a "needlessly complex" system in order to achieve the savings in the Fair Hydro Plan by moving $26 billion of debt off the government's books […]Thibeault said the accounting isn't deceptive, and that similar financing strategies have been used throughout Ontario history, including for the construction of nuclear plants in the 1970s."
- October 25, 2017 – The Toronto Sun runs a column by Ben Eisen, director of the Fraser Institute's Ontario Prosperity Initiative entitled "Number's up for Wynne's government," writing "But regardless of how pension assets should be treated, or how new debt incurred by the government's Fair Hydro Plan should appear on the books, the stark reality is that Ontario taxpayers are carrying far more public debt than a decade ago and that burden is growing quickly, every year."

- October 24, 2017 – CBC references the Auditor General's report on Fair Hydro, writing "Auditor General Bonnie Lysyk criticized how the program is being financed, saying the province is "improperly" accounting for the $26 billion in debt it's taking on to cut hydro bills in the short term. The Liberals called the controversy an "accounting dispute" with the auditor."
- October 23, 2017 – Global News reporter Alan Carter wrote an analysis on "truth" and Fair Hydro. He wrote, "The war between Lysyk and the Liberals is whether the Fair Hydro Plan and its use of Ontario Power Generation as a debt vehicle is a sign of devious politicking or just the way things get done."
- October 23, 2017 – The Peterborough Examiner carried an opinion piece written by Minister of Energy, Glenn Thibeault. "I'm not surprised to see the Conservatives try to get in the middle of an accounting dispute between the government and the Auditor General for personal political gain. It's how they deflect without putting forward any policy ideas of their own."
- October 22, 2017 – The Toronto Sun's Antonella Artuso wrote that the way the Liberals "hid" the cost of its Fair hydro Plan from taxpayers could raise concerns that other governments across the country could follow suit and bury deficits.
- October 22, 2017 – The Toronto Sun's opinion piece says the Fair Hydro Plan is simply 'long-term pain for short-term gain".
- October 19, 2017 – CBC's Mike Crawley writes about the Auditor General's accusations that the government was trying to hide documents from her investigation. Crawley writes that the Progressive Conservatives have made a request to the province's "top public servant to ensure that all relevant documents and emails are saved."
- October 18, 2017 – CTV News (6pm) includes the Progressive Conservative's reaction to the Fair Hydro report: "opposition calls for resignations of ministers of finance and energy after AG report."
- October 18, 2017 – QP Briefing's Jessica Smith Cross highlighted that the $4 billion figure cited by the Auditor General and the Financial Accountability Office that would be wasted due to the government's "needlessly complex" financing structure for Ontario's Fair Hydro Plan was said 21 times by opposition parties during Question Period that morning.
- October 18, 2017 – The Globe and Mail's Justin Giovannetti (A9) highlights the Auditor General's Fair Hydro report. The article includes a quote from Minister Sandals: "Perhaps the essential accounting dispute that we have with the auditor is a dispute over what happens when the Canadian Public Sector Accounting Standards are silent, when they don't give direction,' Ms. Sandals said. 'We keep running into this problem because, quite frankly, Ontario is the biggest province, and we often have bigger projects and do things a bit differently from all the smaller provinces.'"
- October 17, 2017 – The CBC's Mike Crawley covers the Auditor General's report, writing "The auditor says the plan could also result in Ontarians paying "up to $4 billion more than necessary" in interest. That's because OPG will be required to pay higher interest rates than the province would if the government took on the debt directly."
- October 17, 2017 – The Toronto Star's Robert Benzie also focused on the Auditor General's so-called scathing report on Ontario's Fair Hydro Plan, while acknowledging the historical dispute between the Auditor's Office and the government.
- October 17, 2017 – The Ottawa Citizen's David Reevely continues with key themes in the coverage, also writing: "The Liberals really, really, really wanted to keep that debt off their books, so they could also go into the next election saying the provincial budget is balanced. Borrowing billions in an election year would get in the way. So they did some advanced financial engineering to put the debt on Ontario Power Generation instead."

- October 17, 2017 – The Canadian Press' Allison Jones cites the Auditor General's statements, and includes Minister Sandals' rebuttal on the point of asset accounting: "Treasury Board President Liz Sandals said credit rating agencies are ranking the hydro debt in preparation for selling it. 'That's the difference,' she said. 'Somebody actually wants to buy it, ergo it is an asset.'"
- October 17, 2017 – QP Briefing provided a primer on the report, and pointed to the Auditor General's criticism of the government on the alleged willingness to accept a qualified audit opinion for the province's Public Accounts.
- October 17, 2017 – The Auditor General's report and remarks during the media conference were extensively covered across the media. Coverage consistently cited the key themes in the Auditor General's report, highlighting the "needlessly complex" accounting structure, "improper accounting," and the "anticipated $4 billion more in interest payments than if the province had borrowed the funds directly."
- October 17, 2017 – The Toronto Sun's Antonella Artuso featured an overview of the Fraser Institute's report released in the morning, arguing that "Soaring electricity prices resulted in 75,000 fewer manufacturing jobs for Ontarians since the recession".
- October 17, 2017 – The Office of the Auditor General held a media conference for the release of The Fair Hydro Plan: Concerns about Fiscal Transparency, Accountability and Value for Money.
- October 17, 2017 – CBC News reports that today Auditor General Bonnie Lysyk will reveal the results of her investigation into the government's Fair Hydro Plan. The report will look at how the rate cuts are financed and whether the plan is fair for taxpayers and hydro customers. Auditor Lysyk has already told a legislative committee in May that to borrow the money on OPG's books rather than the province's is "contrary to public sector accounting standards."

Proposed Legislated Transaction Structure

Prepared by the Office of the Auditor General of Ontario

CONFIDENTIAL REVISED: January 5, 2018

PENSION ASSET EXPERT ADVISORY PANEL

ISSUE: How do you respond to the reports released by the Pension Asset Expert Advisory Panel?

KEY MESSAGES:

- The Pension Asset Expert Advisory Panel has released its independent advice and recommendations on how public sector accounting standards are interpreted as they apply to current and potential future net pension assets.
- The panel's first report concluded that the province's share of the net pension assets of both the Ontario Teachers' Pension Plan and the Ontario Public Sector Employees' Union Pension Plan should be recognized in Ontario's financial statements.
- The panel supports the accounting treatment that Ontario has used consistently since 2001.
- The panel has also issued a supplemental report that provides independent advice and recommendations on how to account for potential future net pension assets related to the Healthcare of Ontario Pension Plan and the Colleges of Applied Arts and Technology Pension Plan.
- The government has accepted the panel's recommendations and in the 2016-17 third quarter update, it indicated its plans to adopt the previous accounting treatment in the upcoming Public Accounts.
- The government has reflected the recommendations of the panel, which align with its previous accounting in the 2017 Budget, the 2016-17 Public Accounts and the 2017 Fall Economic Statement.

- The government formed the Pension Asset Expert Advisory Panel to provide independent advice on how public sector accounting standards are interpreted as they apply to current and potential future net pension assets. The panel members have expertise in the areas of jointly sponsored pension plan governance, actuarial modelling for pension plans and public sector accounting standards.
- We will continue to move forward and present the Province's finances fairly and accurately, which includes reporting for jointly sponsored pension plans in accordance with Public Sector Accounting Standards and the panel's recommendations.
- We also remain on track to balance the budget this fiscal year as well as in 2018–19 and 2019–20.

IF PRESSED: SUPPLEMENTAL REPORT HOOPP & CAATPP

- We thank the panel for their independent advice and recommendations made in relation to the Healthcare of Ontario Pension Plan and the Colleges of Applied Arts and Technology Pension Plan.
- The two additional pension plans addressed in the supplemental report are different than OTPP and OPSEUPP because they are jointly sponsored by multiple organizations. The Ontario Government is a third party sponsor and has no direct control over decisions of the employer sponsors about benefit or contribution levels, funding of deficits or use of surpluses. Because of these differences, a valuation allowance will be recorded for any net assets of these plans until the government benefits from a reduction in contributions.
- The Ontario Government agrees with the panel's conclusions in the supplemental report.

CURRENT STATUS:

- December 20, 2017 – the Treasury Board Secretariat (TBS) has been called to appear before the Standing Committee on Public Accounts (SCOPA), to review Chapter 2 – Public Accounts of the Province (Volume 1 of the 2017 Annual Report of the Office of the Auditor General of Ontario). In addition to officials from TBS, requests to attend were issued to officials from Cabinet Office, the Ministry of Finance, the Ontario Financing Authority, the Ministry of Energy, the Independent Electricity System Operator and Ontario Power Generation. Attendees will be required to provide the committee with a response to the Auditor General's report, and to answer any questions the committee members may have. Hearings are scheduled for February 28, 2018.
- As per Standing Order 108(h), the SCOPA is empowered to review and report to the House its observations, opinions and recommendations on the Report of the Auditor General and the Public Accounts, which documents shall be deemed to have been permanently referred to the committee as they become available.
- The committee may meet weekly when the Legislative Assembly is sitting. With the approval of the House, it may also meet at any time when the Legislative Assembly is not sitting.
- All meetings are open to the public with the exception of those dealing with the setting of the committee's agenda and the preparation of committee reports.
- All public committee proceedings are recorded in Hansard.
- On December 11, 2017, the Financial Accountability Office released its Economic and Fiscal Outlook, Fall 2017 Update. During the media event, the FAO said "since the government has not adopted the Auditor General's recommended accounting for both the Fair Hydro Plan and net pension assets, it is becoming more difficult for legislators and the public to assess the government's fiscal projections. This has reduced the transparency and reliability of Ontario's fiscal plan."
- On December 6, 2017, the Office of the Auditor General released their 2017 Annual Report. Chapter two of the report made recommendations regarding the Public Accounts of the Province, with the first of 10 recommendations focusing on the pension asset accounting issue. From the report: "We recommend the government record valuation allowances to offset the net pension assets it has recorded from the Ontario Teachers' Pension Plan and the Ontario Public Sector Employees' Union Pension Plan until such time as it obtains formal written authorization from their pension plan co-sponsors that they are able to lower minimum contributions or withdraw surpluses from the pension funds within the next 12 months."
- On April 27, 2017 the Pension Asset Expert Advisory Panel's Supplemental Report was released. It provides the government with independent advice and recommendations on how to account for current and potential future net pension assets related to the Healthcare of Ontario Pension Plan (HOOPP) and the Colleges of Applied Arts and Technology Pension Plan (CAATPP).
- The panel's supplemental report concludes that a net pension asset from HOOPP and CAATPP should be recognized in the province's financial statements in the same way as the net liability, but also recommends that a valuation allowance should be reported for accrued benefit assets for both of these plans in the province's financial reports.
- The panel's report on the Ontario Teachers' Pension Plan (OTPP) and the Ontario Public Sector Employees' Union Pension Plan (OPSEUPP) was made available to the public on February 13, 2017 and did not recommend that a valuation allowance be reported for either of these two plans.
- Both reports have been shared with the Auditor General of Ontario and her office.

- In the 2017 Budget, the 2015–16 actuals were restated to reflect the government's previous accounting treatment for jointly sponsored pension plans which recognized net pension assets for the Ontario Public Service Employees' Union (OPSEUPP) and the Ontario Teachers' Pension Plan (OTPP) on the Province's financial statements. The restated results follow the advice of the panel and the accounting followed previously by the Province since 2001.
- On June 12, 2017, the Ontario Teachers' Federation and the Ontario Government, joint sponsors of the Ontario Teachers' Pension Plan (OTPP), announced they will use a portion of the $11.5 billion surplus in the Plan (as of January 1, 2017) to complete the restoration of inflation protection for teachers who retired after 2009. As well, the contribution rate for the Plan's active members will be reduced by 1.1%. Both changes are effective January 1, 2018.

COSTS

	Actuals		
Panel Member	**Per Diem**	**Travel**	**Total**
Patricia O'Malley	83,000	1,057	84,057
Uros Karadzic	62,700		62,700
Paul Martin		3,898	3,898
Murray Gold	38,000		38,000
Procurement			32,458
Total	**183,700**	**4,955**	**221,113**

BACKGROUND:

- On February 17, 2017 Minister Sandals sent a memorandum to Warren (Smokey) Thomas in response to his article of February 14, 2017 in the Toronto Sun on pension assets.

  "As you are aware, the Pension Asset Expert Advisory Panel ("Panel") released its report on February 13, 2017, and concluded that the net pension assets of both the Ontario Teachers' Pension Plan and the Ontario Public Sector Employees' Union Pension Plan should be recognized in Ontario's financial statements.

  The OPSEU pension plan, which is jointly-sponsored by OPSEU and the province, clearly states that no amount of the surplus shall be paid out of the plan to either sponsor. Simply put, the province does not have the ability to make any withdrawals from the plan.

  I trust that you are reassured by this news. Your February 14 press release and your subsequent comments in a February 15 *Toronto Sun* article, suggest that you were unaware of these rules.

  In addition, the province has not proposed any pension contribution increases or reductions at this time. Any decisions with respect to changes to pension contributions or benefits must be made by the Plan Sponsors. A decision to reduce contributions would benefit both the employees and the employer."

- On November 10, 2016 Ontario established the Pension Asset Expert Advisory Panel to provide advice and recommendations to the government on the application of public sector accounting standards to Ontario's net pension assets.

  The panel was comprised of accounting, legal, and pension experts in the areas of jointly sponsored pension plans, actuarial modelling for pension plans and Public Sector Accounting Standards.

  The following four members were appointed to the Panel:

  - Tricia O'Malley (Chair)
  - Murray Gold
  - Uros Karadzic
  - Paul Martin

Panel members also provided advice on how to value net pension assets reported on the province's books, taking into account future decisions which might be made by the plan's sponsor or sponsors.

The panel's report was delivered to the President of the Treasury Board and was shared with the Auditor General of Ontario. The panel's report was made public in early 2017.

RECENT MEDIA COVERAGE:

- January 12, 2018 – The Toronto Star ran an opinion column by Martin Regg Cohn, "Independence is not infallibility when it comes to Ontario's financial books," arguing Auditor General "Lysyk's paranoia about partisan advertising is a depressing case study on how she approaches the vital role of an auditor general, which is meant to be a check and balance on the power of government — not a grudge match grounded in distortions over picayune disputes. All's fair in politics and accounting, unless you're an auditor gone awry."
- December 17, 2017 – The Ottawa Sun's Lorrie Goldstein writes that "with less than six months to go before the June 7 election, two independent, non-partisan financial watchdogs of the Ontario Legislature say the books of Premier Kathleen Wynne's Liberal government cannot be trusted." Goldstein highlights the disagreement between the Auditor and the government on the pension asset accounting issue, also noting the expert advisory panel: "Lysyk argues the government is improperly claiming the $11.5 billion surplus in the Ontario Teachers' Pension Plan as an asset, because it cannot access these funds without the permission of Ontario's teacher unions […] In November 2016 it hired what it described as an expert, four person pension advisory panel, with a budget of up to $435,000 for salaries, excluding expenses, which in February 2017 backed the government's accounting on the teachers' pension plan."
- December 17, 2017 – The Toronto Sun's Jim Warren cautions that "the role of the Auditor General is shifting in troubling ways," arguing that the Auditor General's increasing outspoken role is "making matters worse." Specifically referencing the pension asset accounting issue, Warren writes "For the first time in 16 years, Lysyk in 2016 decided to change her office's opinion on how the Ontario government presents pension assets in the audited financial statements and fought the government's claim it had balanced the budget in 2017-18. Wynne's Liberals asked an independent expert panel to determine the appropriate accounting treatment of the pension assets and they sided with the government. Lysyk provided her advice to the government and that should have been the end of it. Instead, in her latest annual report she rehashed the same issue and has gone from proving independent oversight to being an advocate for her own position."
- December 14, 2017 – The Record runs an opinion piece, "To sort out truth from pre-election fictions, turn to Bonnie Lysyk," writing that the Auditor General "warned that the Liberal government is making its financial position look rosier than it really is in part because it has counted as government assets two pension plans, including the plan of Ontario's teachers. That's extremely sketchy accounting practice. The teachers' pension plan is an independent organization and not owned by the provincial government. For the government to claim it as an asset is as dishonest as if you were to apply for a bank loan and, when you were asked to show what assets you own, telling the bank that you actually own your neighbour's home and car."
- December 13, 2017 – The Toronto Sun runs a comment piece, entitled "Liberals hiding deficit, second watchdog says" covering the Financial Accountability Officer's (FAO) fiscal outlook report. The article highlights the pension asset accounting issue, writing that the FAO's report "says these projections are based on weaker revenue growth and the Wynne government's rejection of "the Auditor General of Ontario's recommended accounting treatment for both the government's Fair Hydro Plan and the net pension assets of jointly-sponsored pension plans."

  Defying the auditor general, the Wynne government hired what it called an expert panel, which endorsed its pension accounting."

- December 12, 2017 – The Canadian Press reports on the Financial Accountability Officer's (FAO) fiscal outlook report, writing that the report says "a long simmering accounting dispute between the Liberal government and Auditor General Bonnie Lysyk over how to count two public-sector pension plans is contributing to uncertainty."
- December 12, 2017 – The Toronto Star's Robert Benzie reports on the Financial Accountability Officer's (FAO) fiscal outlook report, noting that the FAO adopts the Auditor General's accounting treatment of pension assets, resulting in a $4 billion deficit in 2017-18, "even though the Liberals maintain the books are in the black."
- December 12, 2017 – Ottawa Citizen's David Reevely also reports on the FAO report, writing: "We're up to three different versions of the provincial government's books, depending on how you count surpluses in a couple of public pension funds and money the government is borrowing to lower electricity prices temporarily. Without getting into the weeds on these disputes, the Liberals want to run the numbers in a way that makes them look good and they're not obviously wrong, but all the government's independent officers with anything to say about it - the auditor general, the financial accountability officer - say what they're doing is not OK."
- December 7, 2017 – Following the release of the Auditor General's 2017 Annual Report, the Toronto Star's Robert Benzie and Rob Ferguson outline the Auditor's various recommendations for the government. On the pension asset accounting front, the reporters write: "Even though a government-appointed expert panel of accountants concluded she is wrong about excluding the publicly owned assets of two joint-sponsored pension plans on the government's bottom line, Lysyk continues to claim she is in the right on the actuarial tiff."
- December 7, 2017 – CBC, The Star, and other news outlets report on the Auditor General's 2017 Annual Report, referencing the ongoing "accounting disagreements" between the Auditor General and the government, including reference to IESO accounting and pension asset accounting.
- October 25, 2017 – In follow-up to the release of the Auditor General's special report on the Fair Hydro Plan, the Toronto Sun runs a column "Number's up for Wynne's government," using disagreement regarding pension asset accounting as support for the Fair Hydro Plan not being the first time the government and the Auditor General have disagreed: Last year, the government and the auditor general publicly disagreed over the appropriate way to treat assets held by public pension plans. That dispute had implications for the important question of whether the government would post a balanced operating budget, or a deficit, this year."
- October 18, 2017 – The Toronto Star's Martin Regg Cohn writes "Watch out for watchdogs who don't like being watched," commenting "The last time Lysyk attacked the government's deficit calculations, an outside panel of experts rejected her arguments- because not even an auditor can make a surplus disappear from a balance sheet. There is no permanent arbiter for auditors, but Lysyk is no longer the last word on accounting disputes - merely one of many voices, right or wrong. Expect that voice to grow louder next year when she formally assesses the 2018-19 spring budget - and once again challenges Liberal claims of deficit elimination."
- September 13, 2017 – The Toronto Sun runs a column, "Wage warnings won't stop Wynne," critical of the cost of the Pension Asset Expert Advisory Panel: "Indeed, her government's typical reaction to critical, non-partisan warnings it gets from independent officers of the legislature - such as the auditor general and the FAO - is to ignore them, or to attack the messenger […]Wynne spent up to $435,000 striking an "independent" panel that unsurprisingly agreed with her position on pension accounting, not the auditor general's."
- September 8, 2017 – David Reevely writes in the Ottawa Sun and Ottawa Citizen "Lysyk and the ministers have been volleying back and forth for a couple of years now over how to count assets on the government books. Without getting too deep into it, what's in question is whether certain public sector pension plans and some holdings in the electricity system belong to the government or not."

- September 7, 2017 – The Canadian Press' Shawn Jeffords covers the tabling of Ontario's Public Accounts 2016-17, and cites the government's ongoing disagreement with the Auditor General on pension asset accounting as the reason the Auditor has issued a qualified audit opinion two years in a row. Minister Sandals is quoted in the article: Sandals maintains the government is following established accounting practices and people don't care about the on-going squabble. "The public wants to know, are you managing your deficit?" she said. "Is your deficit getting smaller? Are you going to balance the budget this year? Quite frankly, I don't think the public is terribly hung up on accounting disagreements."
- September 7, 2017 – The Toronto Star's Robert Benzie refers to the disagreement between the Auditor General and the government over IESO market accounts assets and pension asset accounting as an "accounting slugfest". Minister Sandals is quoted in the article (same quote as The Canadian Press coverage): Sandals on Thursday shrugged off Lysyk's accounting interpretation, which lead to her to issue a qualified audit opinion on the province's books for the second year in a row.

  "The experience last year was the books were qualified on the same issue and it didn't impact the credit ratings," the treasury board president said.

  "Quite frankly, I don't think the public is terribly hung up on accounting disagreements."
- September 7, 2017 – Queen's Park Briefing's Christopher Reynolds covers the disagreement between the Auditor General and the government, quoting Minister Sandals: ""The public wants to know, are you managing your deficit?" Sandals said Thursday at the release of the province's 2016-217 public accounts. "Is your deficit getting smaller? Are you going to balance the budget this year? Quite frankly, I don't think the public is terribly hung up on accounting disagreements."
- On May 1, 2017 David Reevely writes in the Ottawa Sun that "There's also $500 million booked in the government's favour from surpluses in a couple of pension plans for public employees. These are the subject of an arcane accounting dispute over whether the government, which couldn't grab the money easily, should be able to count them the way it's counting them. The auditor general says no. A panel of external blue-chip accounting types says yes (for a number of reasons, the easiest of which to grasp is that if the pension plans came up short the gap, would be the government's problem). Going with the auditor general's ruling would be the safer thing, for sure, but what the government's doing is neither trick nor a one-time manouevre.
- On April 30, 2017 David Reevely wrote about the 2017 budget and said "the Liberals are taking advantage of a surplus in some public-employee pension funds, which Auditor General Bonnie Lysyk says is improper but which other experts say is OK. And they've adopted a sort of partial distinction between operating spending and capital spending, which used to be mashed together into each year's budget in a way they no longer are."
- On February 21, 2017 the Toronto Sun (A10) has a column by Warren Thomas (OPSEU). He writes "Ontario's public service workers and retirees feel like we are about to get robbed." He notes that the Auditor General has been turned into a lapdog from a watchdog. Thomas writes "If nobody stands up to Wynne, I'm afraid her next move could be to actually steal our pension money, giving her more cash for overpaid consultants and Sunshine List executives."
- On February 20, 2017 the Toronto Sun reports on Minister Sandals' memo to OPSEU's Warren Thomas. It recounts the minister's statement that "government has no plans on making like a bandit with his members' pension funds." The short piece includes her quote: "The OPSEU pension plan, which is jointly sponsored by OPSEU and the province, clearly states that no amount of the surplus shall be paid out of the plan to either sponsor". "I trust that you are reassured by this news."
- On February 18, 2017 the Toronto Sun has a piece by Lorrie Goldstein. He writes that Premier Wynne needs to take the advice of the Auditor General in order to demonstrate openness and transparency.

- On February 18, 2017 the Ottawa Sun (A9) reports NDP Leader Horwath trusts the Auditor General's math. She spoke up on Friday on the ongoing pension account issue between government and the AG.
- On February 18, 2017 the Toronto Sun's Antonella Artuso (A10) quotes Minister Sandals who said in a statement that she will accept the findings of the panel and: "They also concluded that the government controls access to the pension surplus which has a future economic benefit to the province and recognizing the asset will provide an accurate representation of the province's financial position."
- On February 18, 2017 the Toronto Star's Martin Regg Cohn (A12) writes about the Auditor General. He says that she is no hero – in fact her "bizarre claim turns out to be a sideshow, designed to cover up her own miscalculations after an outside panel of experts found the auditor herself had conflated facts and confused figures." He concludes: "We rely on auditors to provide value for money audits. Not to introduce their own values, making up untested accounting standards as they go along."
- On February 17, 2017 the Hamilton Spectator (A16) posted an opinion piece that is negative toward Auditor General Lysyk. It notes: "Lysyk is putting that reputation and integrity on the line in Ontario. And she's not on solid ground…. If the evidence supported Bonnie Lysyk's position, we'd be the first to back her. But it doesn't. She needs to respect that and back down."
- On February 17, 2017 QP Briefing has a piece written by Bryne Purchase, former deputy minister of finance, on the 'accounting spat'. He sides with the AG: "I think it was regrettable that Premier Kathleen Wynne's government chose to attempt to undermine the legitimacy of our parliament's own accounting expert by appointing a panel of its own experts to review an unfavourable ruling."
- On February 17, 2017 the Windsor Star (A7) has a Canadian Press report that says the AG is not satisfied after the expert panel's report on the $10.7 billion pension dispute. Auditor General Bonnie Lysyk's quote is used: ``Show me the letter that says you can use that pension money with permission, with an agreement," she said Thursday. ``Until that happens the bottom line is this office can't give its stamp of approval on this particular issue." The article notes this is not the first time the Liberal government has clashed with the AG - the former energy minister suggested the electricity file was too complicated for Lysyk, and she has frequently suggested that partisan ads are being funded by taxpayer dollars.
- On February 16, 2017 the Toronto Star reported the Auditor General is demanding proof in writing from the unions that they are okay with the government using taxpayer-funded pension surpluses for accounting purposes. The article says the AG is "escalating a $10.7 billion standoff" with the government over taxpayer-funded pension surpluses. "There has been no suggestion the government intends to dip into the pension funds, which would be illegal. The question is whether the pension surplus can be counted as an asset or not at all." The AG was quoted: "It is not my money. That money is for the benefit of employees and retirees … so it's not my pension. It's not my budget deficit."
- On February 16, 2017 QP Briefing reports the AG says that until she sees a letter that says government can use that pension money with permission – her office can't give its stamp of approval on this issue. The article notes the government "isn't inclined to draft" a letter. Treasury Board President Liz Sandals is quoted from her statement: "They (the panel) concluded that the government does not need a letter from either of the unions because the joint pension agreements spell out how the surplus will be dealt with. They also concluded that there are no public-sector accounting standard requirements for any additional letter to be in place specifying when or by how much contributions will be reduced beyond the joint pension plan agreements already in place." This article also includes quotes from MPP Lisa MacLeod and OPSEU's Warren Thomas.

- On February 16, 2017 the Toronto Sun (A5) has two articles on the number crunching aspect of the expert panel. It says government spent up to $435,000 to the expert panel in the dispute with the Auditor General. The article says this has made OPSEU's Warren Smokey Thomas livid and notes that he wants a guarantee the government won't raid his members' pension fund. Ontario Treasury Board spokesman Matt Ostergard is quoted from an email, "The work of the panel is ongoing so we don't have final costs at this time but they will be in line with previous panels and will be made public."
- On February 16, 2017 The Northumberland Today.com has David Reevely's opinion piece on the pension panel's "gift' to the government. "The Ontario Liberals have an extra $1.5 billion to spend between now and the next election and can still keep their promise to balance the provincial budget by 2018, thanks to a helpful ruling on how to handle surpluses in a couple of big provincial pension funds. The article includes a written statement from Minister Sandals "We are committed to implementing the advice of this independent panel and will use it in preparing the province's financial statements."
- On February 15, 2017 QP Briefing reports Treasury Board President Liz Sandals says it's too soon to weigh in on what might happen if the Auditor General stands her ground in the pension accounting dispute. "I think we're getting way ahead of ourselves – that's a total hypothetical," Sandals told reporters. "The bottom line is, the panel gave us advice, and we're going to follow the advice of the panel." Sandals added there "is no urgency" for Lysyk to weigh in on the panel's conclusion and that she was "pleased" that the auditor was giving it a thorough read. The article notes the minister was "cagey" when pressed about if the panel's report will mean a rollback on contributions for the OPSEU plan. She is quoted, "As the panel points out, that is the traditional way in which the government would access the surplus," "That's the whole premise of the panel's report, is that the way in which the government or any other employer in that situation would access the surplus is by reducing the contribution rate."
- On February 14, 2017 OPSEU's Smokey Thomas writes that Premier Wynne should remember who owns the assets of the province's jointly trusted public pension plans. He says the dispute between the government and the Auditor General is not "just a paper war". "It's a fight over who owns billions of dollars earned by workers and invested on their behalf. I'm telling the Premier right now: the money in those plans belongs to plan members. It is not hers to play with." He "unequivocally supports" the Auditor General's position. He says his "fear is that the Liberals will try to move money out of public pension plans to help wipe out the provincial deficit in time for the 2018 provincial election."
- On February 14, 2017 the Ottawa Sun's David Reevely (A11) reports "the Ontario Liberals have an extra $1.5 billion to spend between now and the next election and can still keep their promise to balance the provincial budget by 2018, thanks to a helpful ruling on how to handle surpluses in a couple of big provincial pension funds." His article notes, "The point is, we're talking serious money - the stakes in what's otherwise the most arcane public-accounting battle ever to spill out of a comptrollers' seminar and into the streets." He writes the surpluses work in the government's favour – especially as an election approaches.
- On February 14, 2017 the Toronto Star (A7) (and online) has a negative piece about the Auditor General, written by Martin Regg Cohn. He writes the AG has been caught out in a $10.7-billion miscalculation. "Even a watchdog can lose the scent and bark up the wrong tree. Or worse, miss the fiscal forest for the trees. For the job requires not just independence but context. To be truly credible, an auditor general must fearlessly expose government boondoggles but also fess up to her blunders." "Lysyk's lack of diligence - now overdue - is a damning indictment of an auditor gone awry."

- On February 13, 2017 QP Briefing reports the government has accepted the panel's conclusion that pension surpluses are assets. The Auditor General's stance won't be known until later in the week. The article includes comments from Tory finance critic Vic Fedeli: “Basically, they've gone out and hired people whose findings would be more convenient for them ... They have appointed a private panel of auditors to come to the province's conclusion." OPSEU president Warren (Smokey) Thomas said he's concerned the panel's conclusion was politically motivated: “If I was going to fall on a side of advice, I'd fall on the advice of the auditor general," he said. "The government has gone to extraordinary length to have somebody try to disagree and discredit the auditor general."
- On February 13, 2017 the Toronto Star reported a panel of accounting experts says that $10.7 billion in government-sponsored pension plans should count toward the province’s bottom line. The article notes panel chair Tricia O’Malley said “We believe that an asset does exist – the net pension asset meets the definition of an economic resource, which is what an asset is.” The Star noted that Auditor General Lysyk is reviewing the report and will provide comment to the media later this week.
- On February 12, 2017 the Toronto Star reports a government-appointed panel of experts will announce on Feb. 13 that joint-sponsored pension surpluses should be counted as assets for the provincial treasury. The report says the Auditor General should include billions of dollars of its assets on the government’s bottom line. OPTrust says “surpluses and deficits should both be recognized on the province’s balance sheet.”
- On February 8, 2017 The Toronto Star (A6) reports Premier Wynne welcomes a report from four accounting experts that says a $10.7-billion pension surplus can be counted as an asset on the province’s bottom line. The article notes the AG was briefed on the report last week and it will be make public later this month. MPP Vic Fedeli is quoted: “The people of Ontario have to ask themselves who are they going to believe: the independent auditor general or a scandal-plagued Liberal government?”
- On February 8, 2017 QP Briefing reports the Financial Accountability Officers says “should the panel studying a pension accounting clash with the auditor general conclude that billions of dollars’ worth of pension assets should be counted on Ontario's balance sheet after all, the government will get more flexibility to balance the budget as promised.” “David West, the FAO's chief economist, said he had not heard about any conclusions from the panel but noted that if they have decided to count the pension assets, it gives the government more breathing room to achieve balance, as promised.” Auditor General Lysyk declined to confirm or comment directly because the panel is not yet public.
- On February 7, 2017 The Toronto Star’s (A4) Martin Regg Cohn reports billions of dollars are at stake in a dispute pitting Ontario's Auditor General against the government. He writes that despite an outside panel of top accounting and pension experts determining that Auditor General Bonnie Lysyk has gone out on a fiscal limb by effectively wiping away nearly $11 billion in government assets – she told this reporter that “she won't climb down,” and this now sets the stage for a public showdown over an accounting change that is worth $1.5 billion to the bottom line this year alone. “The auditor told me her mind is made up and nothing she has heard so far has changed her view….which leaves her on a limb and the government in the lurch.”
- On November 30, 2016 QP Briefing reported Minister Sandals appointed an expert panel to help resolve the government's standoff with the Auditor General over pension assets. The chair of the special panel tasked with settling an accounting dispute will be paid $2,000 per work day. The other three members of the panel will get a $1,900 per diem, as well as reimbursement.
- On November 14, 2016 QP Briefing reported an expert panel will study the AG pension dispute.

- On October 9, 2016 Focus Ontario (Global) ran a segment on the 2015-16 Public Accounts and the disagreement with the Auditor General. Both the Premier and Patrick Brown are quoted in the segment. The Premier is quoted from Question Period saying the government “accepted the Auditor General's numbers for this year. We released the documents despite the divergence in accounting opinions, specific to pension funds between Treasury Board officials and the Auditor as part of our commitment to openness and be transparency.”
- On October 9, 2016 The Toronto Sun (A17) ran an opinion piece about the disagreement with the Auditor General. The piece notes that this kind of back and forth between ministries and the Auditor General is common. The Auditor General provides time for ministries to comment on the audit in draft form so that accounting issues can be hashed out before the final audited statement is presented to the legislature. Accounting issues are generally benign. So it's surprising that the Wynne government elevated the tussle over pensions to the political realm by tabling the financial statements without the Auditor General's unqualified opinion.
- On October 6, 2016 The Financial Post has a commentary by analysts with the Fraser Institute. “It's not surprising the Wynne government is willing to go to the mat to defend its estimate of last year's budget deficit. As Ontario approaches a provincial election in 2018, a big part of the government's PR strategy is focused on celebrating an expected return to a balanced budget in next year's budget. So Premier Kathleen Wynne's team has a big incentive to push back against dissenting views.”
- On October 6, 2016 QP Briefing reports Treasury Board President Liz Sandals tabled Ontario's public accounts for fiscal 2015-16, including the Auditor General's opinion. The tabling of the public accounts was delayed by almost two weeks after months of back and forth between the Auditor General and the government over whether the bottom line should include assets for two jointly-sponsored provincial pension plans.
- On October 3, 2016 The Globe and Mail reports Ontario's Liberal government is fighting with the province's Auditor General over a $1.5-billion discrepancy in last year's deficit and a $10.7-billion difference in Ontario's net debt.
- On October 3, 2016 Canadian Press ran a story in 40 media outlets reporting that the government says Auditor General Bonnie Lysyk is taking issue with their pension asset accounting, though it says these are rules that have been used for the past 14 years. “The issue is with the accounting of the Ontario Public Service Employees Union Pension Plan and the Ontario Teachers' Pension Plan, which are jointly sponsored with the government. The government says the plans have a surplus, but the auditor general says that should not be on the province's balance sheet.”

CONFIDENTIAL REVISED: January 10, 2018

2016-17 PUBLIC ACCOUNTS

ISSUE: What is reported in the 2016-17 Public Accounts released on September 7, 2017?

KEY MESSAGES: PUBLIC ACCOUNTS

- The 2016-17 Public Accounts of Ontario show the province's deficit is $991 million.
- This result is $3.3 billion lower than projected in the 2016 Budget, and $0.5 billion lower than the interim forecast in the 2017 Budget.
- This is a result of growth in revenue that exceeded growth in program expense, and lower than forecast interest on debt.
- Ontario has beaten its deficit target eight years in a row. Ontario's plan is working.
- As promised in the 2016 Budget, Ontario grew its economy while transforming healthcare, building vital infrastructure and investing in people's talents and skills.
- Due to our prudent fiscal management and Ontario's robust economic growth, we are projecting a balanced budget for the first time since the onset of the global recession in 2008.
- We remain on track to balance the budget this fiscal year as well as in 2018–19 and 2019–20.
- This is something that has been achieved only eight times in the last 40 years in Ontario.
- We will continue moving forward on our fiscally responsible plan that creates fairness and opportunity for all Ontarians.

KEY MESSAGES: OTHER HIGHLIGHTS

- We will continue to present the province's finances fairly and accurately and in accordance with Canadian Public Sector Accounting Standards.
- We also remain on track to balance the budget this fiscal year as well as in 2018–19 and 2019–20.
- Other highlights from this year's Public Accounts include:
    - Economic growth, with a 2.7 per cent increase in real gross domestic product (GDP), up 2.2 per cent in the 2016 Budget.
    - Total revenue of $140.7 billion, up $2.2 billion from the 2016 Budget.
    - Total spending of $141.7 billion, down $0.1 billion from the 2016 Budget.
    - Interest on debt of $11.7 billion, down $0.7 billion from the 2016 Budget.
- To help Ontarians better understand their government's finances, new digital tools have been developed that present the Public Accounts data in innovative, visual formats. These tools make Ontario's finances easier to understand, access and use.
- Presenting the Public Accounts data in innovative, visual formats is part of Ontario's commitment to Open Government.

KEY MESSAGES: ACCOUNTING CHANGES

BPS REVENUE PRESENTATION

- To increase transparency, the 2016-17 Public Accounts are presenting third-party revenues for hospitals, school boards and colleges, such as tuition fees, patient fees, research grants and donations, with provincial revenue.
- In prior years, these revenues were netted against the expenses of the respective sectors (health, education, post-secondary).
- This is a change in presentation only; the change increases total revenues and expenses by approximately $8 billion, and does not impact the deficit, net debt or accumulated deficit.
- This change is consistent with public sector accounting standards and the reporting practices of other senior Canadian governments.
- The Auditor General is supportive of this change in presentation.

ACCOUNTING FOR ENERGY GOVERNMENT BUSINESS ENTERPRISES:

- The 2016-17 Public Accounts include the financial results of Ontario Power Generation (OPG) and Hydro One using International Financial Reporting Standards (IFRS).
- These two government business enterprises currently report their stand-alone financial results using Generally Accepted Accounting Principles in the United States (US GAAP).
- In prior years, the reported results of OPG and Hydro One were included in the results of the province based on US GAAP.
- This change does not have a material impact on this year's Public Accounts.
- The Auditor General is supportive of this change in presentation.

PENSION ACCOUNTING:

- The government established the Pension Asset Expert Advisory Panel following the release of the 2015-16 Public Accounts.
- The Panel delivered independent advice on how public sector accounting standards are interpreted as they apply to current net pension assets and the application of public sector accounting standards for two of Ontario's jointly sponsored pension plans; Ontario Teachers' Pension Plan (OTPP); and the Ontario Public Service Employees' Union Pension Plan (OPSEUPP).
- The Panel's report concluded that the province's share of the net pension assets of both the OTPP and the OPSEUPP should be recognized in Ontario's financial statements.
- The government accepted the Panel's recommendations, which have been reflected in the 2016-17 financial statements.
- The 2015-16 financial statements have also been restated to reflect the pension assets for these two plans.
- The Auditor General continues to not accept the application of the Public Sector Accounting Board (PSAB) standards in the 2016-17 Public Accounts regarding pension accounting for the province's jointly sponsored pension plans. For 2016-17, the Auditor General has qualified her opinion, stating that the province's deficit is understated by $1.4 billion.

KEY MESSAGES: IESO ACCOUNTING

- The Independent Electricity System Operator (IESO) reports its financial results in accordance with Public Sector Accounting Standards.
- In 2016, IESO changed its accounting policy to begin recognizing market assets (amounts due *from* power distributors) and liabilities (amounts due *to* power generators). In previous years, these amounts were omitted from IESO's financial statements.

- This change has no impact to the province's annual deficit, net debt or accumulated deficit.
- IESO also adopted rate-regulated accounting for deferred charges, such as the cost of smart meters, which will be recovered from users of these meters over time.
- Public Sector Accounting Standards are silent on rate-regulated accounting, and as a result, as provided for in the accounting standards, IESO considered other sources of guidance to assess the appropriateness of applying rate regulated accounting.
- Prior to the 2015 merger with the IESO, the Ontario Power Authority (OPA) reported market accounts and used rate-regulated accounting under PSAS. The statements of the OPA were not qualified during that time by OPA's external auditor or the Auditor General. This accounting treatment is not new to Ontario.
- The Auditor General qualified her opinion in 2016-17 based on the recognition of the IESO's market accounts. The Auditor General also noted in her opinion that the use of rate regulated accounting under PSAS is not permitted, but did not qualify on the issue of rate regulated accounting, as the impact was not material in the current year.
- The reporting changes implemented by the IESO were approved by their management and board, and received an unqualified audit opinion from their external auditor. The province's Office of the Provincial Controller also supports the changes.

KEY MESSAGES: AUDITOR GENERAL'S 2017 ANNUAL REPORT – CHAPTER ON PUBLIC ACCOUNTS

- The government thanks the Auditor General for her recommendations, and remains committed to assisting the Office of the Auditor General in providing its independent views to the Legislative Assembly.
- The government has a strong track record of producing high-quality financial reports on a timely basis and continues to present the province's finances fairly and

accurately and in accordance with Canadian Public Sector Accounting Standards.

- The government's use of external expertise for accounting and financial reporting matters supplements its own resources on complex or emerging accounting and reporting matters.
- The province will continue to provide financial statements according to Canadian Public Sector Accounting Standards that support transparency and accountability in reporting to the public, the legislature, and other users.
- The government will continue to build on its track record of responsible fiscal management.

CURRENT STATUS

- December 20, 2017 – the Treasury Board Secretariat (TBS) has been called to appear before the Standing Committee on Public Accounts (SCOPA), to review Chapter 2 – Public Accounts of the Province (Volume 1 of the 2017 Annual Report of the Office of the Auditor General of Ontario). In addition to officials from TBS, requests to attend were issued to officials from Cabinet Office, the Ministry of Finance, the Ontario Financing Authority, the Ministry of Energy, the Independent Electricity System Operator and Ontario Power Generation. Attendees will be required to provide the committee with a response to the Auditor General's report, and to answer any questions the committee members may have. Hearings are scheduled for February 28, 2018.
- As per Standing Order 108(h), the SCOPA is empowered to review and report to the House its observations, opinions and recommendations on the Report of the Auditor General and the Public Accounts, which documents shall be deemed to have been permanently referred to the committee as they become available.
- The committee may meet weekly when the Legislative Assembly is sitting. With the approval of the House, it may also meet at any time when the Legislative Assembly is not sitting.
- All meetings are open to the public with the exception of those dealing with the setting of the committee's agenda and the preparation of committee reports.
- All public committee proceedings are recorded in Hansard.

BACKGROUND:

- The Public Accounts of Ontario is a key accountability and transparency document in the government's financial cycle. It's a look back that compares Ontario's actual performance to what was planned in the Budget.

- The Public Accounts present the financial statements of the Province, provide financial highlights of the past fiscal year, and report on performance in priority areas.

- Public Accounts is audited by the Auditor General and is typically released in the fall of the following fiscal year.
- When preparing the 2016-17 Public Accounts, Ontario's professional accounting staff adopted accounting changes to further enhance accountability and transparency.

- These changes include:
    - **Accounting for hospitals, school boards and colleges** - third-party revenues (i.e. tuition fees, patient fees, research grants and donations) are now reported together with provincial revenue. This change increases transparency and is supported by the Auditor General.
    - **Accounting for energy sector government business enterprises** - the financial results of investments in Hydro One and Ontario Power Generation (OPG) now reflect International Financial Reporting Standards. Previously, these results were reported using U.S. Generally Accepted Accounting Principles. This change was made to meet Public Sector Accounting Board standards and is supported by the Auditor General.
    - **Accounting for the Independent Electricity System Operator (IESO)** - the IESO has adopted rate-regulated accounting, and is now recognizing its market accounts assets and liabilities in its financial results.
    - **Accounting for net pension assets of jointly sponsored pension plans** - the Province is reporting net pension assets for jointly sponsored pension plans. This is in line with Public Sector Accounting Board standards and the recommendations of the independent Pension Asset Expert Advisory Panel.

Pension Asset Expert Advisory Panel

- On November 10, 2016 Ontario established the Pension Asset Expert Advisory Panel to provide independent advice and recommendations to the government on the application of public sector accounting standards to Ontario's net pension assets.
- The Panel was comprised of accounting, legal and pension experts in the areas of jointly sponsored pension plans, actuarial modelling for pension plans and Public Sector Accounting Standards.
- The Panel members were:
    - Tricia O'Malley; (Chair)
    - Murray Gold;
    - Uros Karadzic; and,
    - Paul Martin.
- Panel members also provided advice on how to value net pension assets reported on the province's books, taking into account future decisions which might be made by the plan's sponsor or sponsors.

- The Panel issued its report in February 2017. Upon receiving the report, the government, supported by its own research and analysis, accepted the Panel's recommendation and has reported the pension assets of the Ontario Teachers' Pension Plan (OTPP) and Ontario Public Service Employees' Union Pension Plan (OPSEUPP) in its 2016-17 consolidated financial statements (with restatement of 2015-16).
- The Panel issued a supplementary report in March 2017 with respect to the Healthcare of Ontario Pension Plan (HOOPP) and Colleges of Applied Arts and Technology Pension Plan (CAATPP) recommending that a full valuation allowance be recorded on the net assets of both of these plans, based on the difference in governance structure between these plans and OTPP and OPSEUPP. The province agreed and has recorded a valuation allowance for CAATPP in the year (amount is not material). The HOOPP plan is not in a net asset position for accounting purposes at March 31, 2017.

Independent Electricity System Operator

- The Independent Electricity System Operator (IESO) is a not-for-profit, non-taxable corporation established pursuant to Part II of the *Electricity Act, 1998*. The Ontario Power Authority and the IESO merged on January 1, 2015.
- One of IESO's roles is to settle the market accounts, which are the amounts due to the entities that provide electricity to the market (e.g. power generators) and due from those who consume electricity (e.g. local distribution companies on behalf of their consumers).
- Rate regulated accounting is appropriate where the rates an entity is able to charge to its customers are set by another party (i.e. a regulator), provided specified criteria are met. Rate-regulated accounting permits the entity to defer costs that would otherwise be expensed to the period that the related revenue is charged to customers. Costs able to be deferred by the IESO include:
    - Unrecovered smart metering expenses; and,
    - Unrecovered pension and post-employment benefits related to PSAB transition.
- During 2016, IESO made two accounting changes (1) to recognize the market accounts in its financial statements – these amounts were not previously recognized in the IESO's financial statements, and (2) to apply rate-regulated accounting.
- The IESO received an unqualified audit opinion from KPMG (their external auditor) with respect to the financial statement presentation in their 2016 audited financial statements. IESO management, IESO's Audit Committee, IESO's Board of Directors, IESO's external auditor, and the Office of the Provincial Controller all support the recognition of the market accounts and the use of rate-regulated accounting by IESO.

Revenue Highlights

Against the Restated 2016 Budget:

- Revenues for 2016-17 came in at $140.7 billion, or $2.2 billion higher than forecast in the 2016 Budget. This was largely due to higher than projected taxation revenues, non-provincial source revenues from hospitals, school boards and colleges, and income from GBEs, partially offset by lower than projected Government of Canada transfers and other non-tax revenue.

Against the Restated Interim Estimates in the 2017 Budget:

- Revenues for 2016-17 came in at $140.7 billion, or $0.6 billion lower than the interim forecast in the 2017 Budget. This was largely due to lower than projected taxation revenues and Government of Canada transfers, partially offset by higher than projected income from GBEs.

Expense Highlights

Against the Restated 2016 Budget plan:

- Total expense in 2016-17 was $141.7 billion, or $0.1 billion lower than forecast in the 2016 Budget plan. Program spending was $130.0 billion, up by $0.6 billion from a planned spending of $129.4 billion and interest on debt was $11.7 billion, lower by $0.7 billion from planned interest cost of $12.4 billion. Program spending was higher by $0.6 billion largely due to higher than projected spending in the health, community and social services, justice sector and general government and other.

Against the Restated interim Estimates in the 2017 Budget:

- Total expense in 2016-17 was $141.7 billion or $1.1 billion lower than the interim forecast in the 2017 Budget. Program spending was $130.0 billion, $0.9 billion lower than the interim forecast of $130.9 billion in the 2017 Budget. Interest on debt was $11.7 billion, lower by $0.2 billion from planned interest cost of $11.9 billion. Program spending was lower by $0.9 billion largely due to lower than projected spending in the health and education sectors, and other programs.

Net Debt

- Net debt as of March 31, 2017, was $301.6 billion, which was $6.7 billion lower than forecast in the 2016 Budget. Net debt grew by $6.2 billion during the year, representing a $6.6 billion increase in liabilities that was partially offset by a $0.4 billion increase in financial assets.

Auditor General's 2017 Annual Report: Chapter on Public Accounts

- On December 6, 2017, the Office of the Auditor General released their 2017 Annual Report.
- The Auditor General's Annual Report, Chapter 2, makes 10 recommendations regarding the Public Accounts of the Province.
- The recommendations largely reflect opinions that have been expressed in previous reports, including the Auditor General's audit opinion in the 2016-17 Public Accounts and the Special Report on the Fair Hydro Plan.
- Treasury Board Secretariat and Ministry of Finance disagree with the characterization of the majority of the recommendations, and re-iterate the government's commitment to producing high-quality financial statements on a timely basis and in accordance with Canadian Public Sector Accounting Standards (PSAS).

Financial Accountability Office's Economic and Fiscal Outlook, Fall 2017 Update

- On December 11, 2017, the Financial Accountability Office released its Economic and Fiscal Outlook, Fall 2017 Update.
- During the media event, the FAO said "since the government has not adopted the Auditor General's recommended accounting for both the Fair Hydro Plan and net pension assets, it is becoming more difficult for legislators and the public to assess the government's fiscal projections. This has reduced the transparency and reliability of Ontario's fiscal plan."

RECENT MEDIA COVERAGE:

- January 12, 2018 – The Toronto Star ran an opinion column by Martin Regg Cohn, "Independence is not infallibility when it comes to Ontario's financial books," arguing Auditor General "Lysyk's paranoia about partisan advertising is a depressing case study on how she approaches the vital role of an auditor general, which is meant to be a check and balance on the power of government — not a grudge match grounded in distortions over picayune disputes. All's fair in politics and accounting, unless you're an auditor gone awry."
- January 9, 2018 – The Toronto Sun runs a column by Ben Eisen, director of the Fraser Institute's Ontario Prosperity Initiative entitled "Ontario's finances are still a mess." Eisen argues that people should treat the government's balanced budget claims with skepticism, writing "For starters, many analysts, including Ontario Auditor General Bonnie Lysyk, have called the government's accounting techniques into question, arguing proper accounting would show continued deficits. Others, including the government's Financial Accountability Office, warn that without additional policy changes to reduce spending, or raise taxes, Ontario will likely slip back into deficits."
- December 17, 2017 – The Ottawa Sun's Lorrie Goldstein writes that "with less than six months to go before the June 7 election, two independent, non-partisan financial watchdogs of the Ontario Legislature say the books of Premier Kathleen Wynne's Liberal government cannot be trusted." Goldstein highlights the disagreement between the Auditor and the government on the pension asset accounting issue, also noting the expert advisory panel: "Lysyk argues the government is improperly claiming the $11.5 billion surplus in the Ontario Teachers' Pension Plan as an asset, because it cannot access these funds without the permission of Ontario's teacher unions […] In November 2016 it hired what it described as an expert, four person pension advisory panel, with a budget of up to $435,000 for salaries, excluding expenses, which in February 2017 backed the government's accounting on the teachers' pension plan."
- December 17, 2017 – The Toronto Sun's Jim Warren cautions that "the role of the Auditor General is shifting in troubling ways," arguing that the Auditor General's increasing outspoken role is "making matters worse." Specifically referencing the pension asset accounting issue, Warren writes "For the first time in 16 years, Lysyk in 2016 decided to change her office's opinion on how the Ontario government presents pension assets in the audited financial statements and fought the government's claim it had balanced the budget in 2017-18. Wynne's Liberals asked an independent expert panel to determine the appropriate accounting treatment of the pension assets and they sided with the government. Lysyk provided her advice to the government and that should have been the end of it. Instead, in her latest annual report she rehashed the same issue and has gone from proving independent oversight to being an advocate for her own position."
- December 14, 2017 – The Record runs an opinion piece, "To sort out truth from pre-election fictions, turn to Bonnie Lysyk," writing that the Auditor General "warned that the Liberal government is making its financial position look rosier than it really is in part because it has counted as government assets two pension plans, including the plan of Ontario's teachers. That's extremely sketchy accounting practice. The teachers' pension plan is an independent organization and not owned by the provincial government. For the government to claim it as an asset is as dishonest as if you were to apply for a bank loan and, when you were asked to show what assets you own, telling the bank that you actually own your neighbour's home and car."
- December 13, 2017 – The Toronto Sun runs a comment piece, entitled "Liberals hiding deficit, second watchdog says" covering the Financial Accountability Officer's (FAO) fiscal outlook report. The article highlights the pension asset accounting issue, writing that the FAO's report "says these projections are based on weaker revenue growth and the Wynne government's rejection of "the Auditor General of Ontario's recommended accounting treatment for both the government's Fair Hydro Plan and the net pension assets of jointly-sponsored pension plans." Defying the auditor general, the Wynne government hired what it called an expert panel, which endorsed its pension accounting."

- December 12, 2017 – The Canadian Press reports on the Financial Accountability Officer's (FAO) fiscal outlook report, writing that the report says "a long simmering accounting dispute between the Liberal government and Auditor General Bonnie Lysyk over how to count two public-sector pension plans is contributing to uncertainty."
- December 12, 2017 – The Toronto Star's Robert Benzie reports on the Financial Accountability Officer's (FAO) fiscal outlook report, noting that the FAO adopts the Auditor General's accounting treatment of pension assets, resulting in a $4 billion deficit in 2017-18, "even though the Liberals maintain the books are in the black."
- December 12, 2017 – Ottawa Citizen's David Reevely also reports on the FAO report, writing: "We're up to three different versions of the provincial government's books, depending on how you count surpluses in a couple of public pension funds and money the government is borrowing to lower electricity prices temporarily. Without getting into the weeds on these disputes, the Liberals want to run the numbers in a way that makes them look good and they're not obviously wrong, but all the government's independent officers with anything to say about it - the auditor general, the financial accountability officer - say what they're doing is not OK."
- December 7, 2017 – Following the release of the Auditor General's 2017 Annual Report, the Toronto Star's Robert Benzie and Rob Ferguson outline the Auditor's various recommendations for the government. On the pension asset accounting front, the reporters write: "Even though a government-appointed expert panel of accountants concluded she is wrong about excluding the publicly owned assets of two joint-sponsored pension plans on the government's bottom line, Lysyk continues to claim she is in the right on the actuarial tiff."
- December 7, 2017 – CBC, The Star, and other news outlets report on the Auditor General's 2017 Annual Report, referencing the ongoing "accounting disagreements" between the Auditor General and the government, including reference to IESO accounting and pension asset accounting.
- October 25, 2017 – In follow-up to the release of the Auditor General's special report on the Fair Hydro Plan, the Toronto Sun runs a column "Number's up for Wynne's government," using disagreement regarding pension asset accounting as support for the Fair Hydro Plan not being the first time the government and the Auditor General have disagreed: Last year, the government and the auditor general publicly disagreed over the appropriate way to treat assets held by public pension plans. That dispute had implications for the important question of whether the government would post a balanced operating budget, or a deficit, this year."
- October 18, 2017 – The Toronto Star's Martin Regg Cohn writes "Watch out for watchdogs who don't like being watched," commenting "The last time Lysyk attacked the government's deficit calculations, an outside panel of experts rejected her arguments- because not even an auditor can make a surplus disappear from a balance sheet. There is no permanent arbiter for auditors, but Lysyk is no longer the last word on accounting disputes - merely one of many voices, right or wrong. Expect that voice to grow louder next year when she formally assesses the 2018-19 spring budget - and once again challenges Liberal claims of deficit elimination."
- November 15, 2017 – Ontario PC Finance Critic Vic Fedeli pens a column in the Toronto Sun on the Fall Economic Statement, making reference to the Auditor General's qualified audit opinion on the province's Public Accounts two years in a row.
- October 16, 2017 – CBC News looks to the province's Public Accounts to highlight "Four surprising things about the Ontario government's finances," including: "personal income tax revenue is dropping," "corporate tax revenue is soaring," a "real estate windfall," and "booze revenue poised to top gambling revenue."
- September 8, 2017 -- Post Media's David Reevely quotes the AG's statement that rejects the contents of the Public Accounts "The Legislature and all Ontarians must be able to rely on the province's consolidated financial statements to fairly report the fiscal results for the year. This year they cannot do so." The article mentions the FAO's commentary this week saying the FAO and AG have 'made a businesslike routine of pointing out all the extreme assumptions and accounting stretches the

government is using to make the books look good in an election year." The article concludes that considering what happened to the world economy a decade ago the government has 'done all right' but is critical of 'dismissing' the government's two most prominent independent financial experts. **Minister Sandals** mentioned in reference to releasing the PA.

- September 7, 2017 -- Toronto Star says the "stakes are high in the accounting slugfest between the government and the auditor general." The article mentions Minister Sandals "shrugging off" the AG's accounting interpretation. "The experience last year was the books were qualified on the same issue and it didn't impact the credit ratings," the treasury board president said. "Quite frankly, I don't think the public is terribly hung up on accounting disagreements."
- September 7, 2017 -- QP Briefing reports financial watchdogs aren't smiling about the government lowering the deficit to $1 billion, but instead are 'baring their teeth'. The article says auditor general Bonnie Lysyk said yesterday the government "significantly understated" its deficit, while the Financial Accountability office this week called the plan to reduce the debt burden "unlikely." Minister Sandals is quoted "The public wants to know, are you managing your deficit?" "Is your deficit getting smaller? Are you going to balance the budget this year? Quite frankly, I don't think the public is terribly hung up on accounting disagreements." The article also notes AG Lysyk is warning that the complex accounting behind the hydro bill reduction could add to a bigger than expected deficit next year, and that a special report will be tabled this fall.
- September 7, 2017 -- The CP article about Public Accounts quotes Minister Sandals "The public wants to know, are you managing your deficit?" she said. "Is your deficit getting smaller? Are you going to balance the budget this year? Quite frankly, I don't think the public is terribly hung up on accounting disagreements." The coverage says AG Lysyk disputes the government figures and that "the statements were not prepared following Canadian Public Sector Accounting Standards." This article was picked up by several media outlets but coverage was not widespread.
- February 20 & 21, 2017 -- Toronto Sun report on Minister Sandals' memo to OPSEU that "the OPSEU pension plan….clearly states that no amount of the surplus shall be paid out of the plan to either sponsor". This is followed by a column by OPSEU President Warren Thomas saying Ontario's public service workers and retirees feel like we are about to get robbed.
- February 18, 2017 – Toronto Star, Toronto Sun and Ottawa Sun coverage of the ongoing pension accounting issue between the government and Auditor General.
    - Ottawa Sun says NDP Leader Horwath trusts the Auditor General's math.
    - Toronto Sun quotes Minister Sandals who said in a statement that she will accept the findings of the panel.
    - Toronto Star columnist Martin Regg Cohn wrote that the Auditor General is no hero, and her "bizarre claim turns out to be a sideshow, designed to cover up her own miscalculations after an outside panel of experts found the auditor herself had conflated facts and confused figures."
- February 17, 2017 -- Hamilton Spectator, QP Briefing, and Windsor Star have coverage.
    - The Spectator's opinion piece is negative toward Auditor General Lysyk.
    - QP Briefing's piece written by Bryne Purchase, former deputy minister of finance, sides with the AG.
    - Windsor Star published the CP story that says the AG is not satisfied after the expert panel's report on the $10.7 billion pension dispute and that she is asking to see "the letter that says you can use that pension money with permission, with an agreement."

- February 16, 2017 – The Toronto Star, Toronto Sun & QP Briefing have coverage of the Auditor General's response to the panel's report.
    - The Toronto Star and QP Briefing say the Auditor General is demanding proof in writing from the unions that they are okay with the government using taxpayer-funded pension surpluses for accounting purposes and describes it as an "escalating a $10.7 billion standoff".
    - QP Briefing quotes Minister Sandals from her statement: "They (the panel) concluded that the government does not need a letter from either of the unions because the joint pension agreements spell out how the surplus will be dealt with. They also concluded that there are no public-sector accounting standard requirements for any additional letter to be in place specifying when or by how much contributions will be reduced beyond the joint pension plan agreements already in place."
    - The Toronto Sun has two articles on the number crunching aspect of the expert panel and that the government spent up to $435,000 on it. OPSEU's Warren 'Smokey' Thomas was livid and notes that he wants a guarantee the government won't raid his members' pension fund.
- February 15, 2017 -- QP Briefing quotes Minister Sandals about it being too soon to weigh in on what might happen if the Auditor General stands her ground in the pension accounting dispute.
- February 14, 2017 – high profile media coverage of the Pension Asset Expert Advisory Panel report release the day before.
    - Toronto Star columnist Martin Regg Cohn is critical of the Auditor General saying she has been caught out in a $10.7-billion miscalculation.
    - The Star's coverage also included article about the panel report and that $10.7 billion in government-sponsored pension plans should count toward the province's bottom line.
    - The Ottawa Sun's David Reevely says about the panel report "…we're talking serious money - the stakes in what's otherwise the most arcane public-accounting battle ever to spill out of a comptrollers' seminar and into the streets."
    - OPSEU's Smokey Thomas writes that the dispute between the government and the Auditor General is not "just a paper war" and that he "unequivocally supports" the AG's position.
- On February 13, 2017 QP Briefing reports the government has accepted the panel's conclusion that pension surpluses are assets. The Auditor General's stance won't be known until later in the week. The article includes comments from Tory finance critic Vic Fedeli: "Basically, they've gone out and hired people whose findings would be more convenient for them ... They have appointed a private panel of auditors to come to the province's conclusion." OPSEU president Warren (Smokey) Thomas said he's concerned the panel's conclusion was politically motivated: "If I was going to fall on a side of advice, I'd fall on the advice of the auditor general," he said. "The government has gone to extraordinary length to have somebody try to disagree and discredit the auditor general."
- February 7 & 8, 2017 – Toronto Star and QP Briefing have coverage about the pension asset advisory panel's soon-to-be-released report.
    - PC Finance Critic Vic Fedeli tells the Star, that the people have to ask themselves who they are going to believe-- the independent auditor general or a scandal-plagued Liberal government?"
    - Columnist Martin Regg Cohn writes the AG has gone out on a fiscal limb by effectively wiping away nearly $11 billion in government assets and she won't climb down.
- November 14 & 30th, 2016 -- QP Briefing has coverage of the expert panel announced to study the accounting dispute over pension assets.

- October 9, 2016 -- Focus Ontario (Global tv) and the Toronto Sun have coverage of the 2015-16 Public Accounts and the disagreement with the Auditor General.
    - Focus Ontario coverage balanced.
    - Toronto Sun opinion piece expresses surprise that the government elevated the tussle over pensions to the political realm by tabling the financial statements without the Auditor General's opinion.
- October 6, 2016 -- The Financial Post has a highly critical commentary by analysts with the Fraser Institute, while QP Briefing reports the public accounts for 2015-16 have been tabled almost two weeks after months of back and forth between the auditor general and the government over whether the bottom line should include assets for two jointly-sponsored provincial pension plans.
- October 3, 2016 -- The Globe and Mail and Canadian Press report the government is ‘fighting’ with the Auditor General. Globe notes focuses on the AG’s $1.5-billion discrepancy in last year's deficit and a $10.7-billion difference in Ontario's net debt. CP story (picked up by 40 media outlets) says the Auditor General is taking issue with their pension asset accounting, though it says these are rules that have been used for the past 14 years.

Appendix

Preparation and Tabling:

The Public Accounts for each fiscal year are prepared under the direction of the President of Treasury Board, as required by the *Financial Administration Act*.

The Public Accounts of Ontario consist of the Annual Report and three supplementary volumes. The Annual Report includes the province's audited consolidated financial statements and a financial statement discussion and analysis section. Supplementary information is contained in three volumes:

Volume 1: Ministry statements for expenses, assets, revenue, detailed debt and other supplementary schedules. It provides a comparison of appropriations with actual spending.

Volume 2: Financial statements of significant provincial corporations, boards, commissions that are part of the government's reporting entity, and other miscellaneous statements.

Volume 3: Detailed schedules of payments made by ministries to vendors and transfer payment recipients.

The *Financial Administration Act* requires the President of Treasury Board to submit the province's Annual Report and consolidated financial statements to the Lieutenant Governor in Council (LGIC) on or before 180 days after fiscal year-end. This year, the deadline was September 27, 2017.

The process for release of the Public Accounts is as follows:

- The Public Accounts are approved by the Lieutenant Governor in Council.
- The LGIC lays the Public Accounts before the Assembly, if the Assembly is in session, and the Public Accounts are then released on the same day.
- If the Assembly is not in session on the day of the release of the Public Accounts the LGIC is required to make the Public Accounts public and the Public Accounts are laid before the Assembly on or before the tenth day of the next session.

LOGISTICS & FORMAT OVERVIEW

Overview

- SCOPA meetings are open to the public with the exception of those dealing with the setting of the Committee's agenda and the preparation of committee reports. All public committee proceedings are recorded in Hansard.
- The Chair will advise members to consider questions that are relevant to the content of the Auditor General's Annual Report, but in practice members do sometimes ask questions outside of the report's focus. As a general rule, expect that any question related to the Province's financial statements would be ruled within scope by the committee chair.
- The Committee members may ask that ministries provide details after the session if more research or gathering of information is needed to respond to a question.

Agenda

Wednesday, February 28, 2018
Committee Room 151 (Amethyst Room), Main Legislative Building

Time	*Topic*
9:00 a.m.	Closed Session: Briefing by the Auditor General
10:00 a.m.	Briefing by the Research Officer
10:15 a.m.	RECESS
12:30 p.m.	Treasury Board Secretariat and other representatives • *Invited senior officials appear and respond to questions.* • *The Auditor General attends, and the Committee members can seek clarification from the AG on points from her report if needed during the session.*

12:30 – 3:00 p.m.

- **Opening remarks** (20 minutes)
- **First round of questions** (60 minutes)
  - Each of the three political parties get 20 minutes of questions
- **Second round of questions** (50 minutes, approximately)
  - The remaining time until 2:45 p.m. is split between the three political parties; approximately 15-17 minutes per party

DRAFT

- **Closed session** (15 minutes)
    - Committee members plus the Clerk, only; no audience or presenters
    - The Committee will discuss the outcome of the meeting and if they want to do a report
    - There are no closing statements from ministry officials

Room Setup

- Committee Room 151 (Amethyst Room) is equipped with cameras and the meeting will be available on TVs within the Legislature and streamed online.
- The room has a square table with rows of extra seating at the front the room.
- The Committee Chair, Auditor General and Clerk will sit at the head of the table with the government and opposition parties on opposite sides.
- The invitees sit opposite the Committee Chair and Clerk, either at the table or in the first row of chairs.

Media Access

- Media are allowed to sit in on the meeting as long as they do not interrupt the proceedings. They cannot ask questions in the committee room, but if they wish they can scrum participants in the hallway as they leave.
- Media can also watch SCOPA proceedings on the TVs in the Legislature or online.

STRATEGIC APPROACH

- Provide evidence and facts as the basis of decision-making wherever appropriate (e.g. other jurisdictions, external advisors).
- Provide responses that are relevant and in scope of the consideration of chapter two of the Office of the Auditor General's report
- Avoid any speculation on political decision-making or rationales; provide objective, factual responses in role as non-partisan public servant.
- Provide context wherever possible. Deputy Ministers to provide initial messaging then pass to the subject matter experts where appropriate.
- Emphasize the role of a public servant is to provide factual, non-partisan information to the Committee based on due diligence and the application of professional judgment.
- Reaffirm the government's commitment to working with the Office of the Auditor General.
- Emphasize that the province will continue to follow Public Sector Accounting Standards (PSAS), as always, and will seek appropriate expert guidance where PSAS is silent.
- Use the Committee appearance as an opportunity to communicate the facts and rationale for the decision to adopt/continue accounting practices in response to the Office of the Auditor General's recommendations.
- Highlight due diligence in decision making (Ontario Fair Hydro Plan accounting, pension asset accounting, Independent Electricity System Operator [IESO] market accounts, IESO rate-regulated accounting).

Summary Status Table in Response to the Report of the Auditor General of Ontario

Chapter 2 2017 Annual Report of the Auditor General
Treasury Board Secretariat, Ministry of Finance, Ministry of Energy

Auditor's Recommendation	Completed Undertaking	Outstanding Undertaking (including timeline)
AG Recommendation #1 *We recommend the government record valuation allowances to offset the net pension assets it has recorded from the Ontario Teachers' Pension Plan and the Ontario Public Sector Employees' Union Pension Plan until such time as it obtains formal written authorization from their pension plan co-sponsors that they are able to lower minimum contributions or withdraw surpluses from the pension funds within the next 12 months.*	The Office of the Auditor General communicated its interpretation of Public Sector Accounting Standards (PSAS) requiring a full valuation allowance on the Province's two jointly sponsored pension plans in September 2016. At that time, the government passed a time-limited regulation on the accounting treatment for its joint defined benefit plans to align with the Auditor General's interpretation of PSAS, which enabled officials from Treasury Board Secretariat and the Ministry of Finance to sign the Statement of Responsibility for the 2015-16 Public Accounts. During the 2016-17 year, the professional staff conducted further research and analysis, and determined that PSAS does not require a valuation allowance on either of the jointly sponsored pension plans. This conclusion is supported by: • The conclusions reached by an independent Pension Asset Expert Advisory Panel (the 'Panel'), established by the government to provide advice on the interpretation of PSAS with respect to the reporting of net pension assets of these two joint defined benefit plans. The Panel, comprised of accredited accounting, actuarial and legal professionals with extensive background in pension accounting and plan governance, released its report in February 2017 which supported the government's position that a valuation is not required for these two plans under PSAS. Two key findings of the Panel were: 1) there is no requirement under PSAS that any formal agreement exist between the joint sponsors regarding the timing or amount of a reduction in contributions to record an asset, as the existing agreements in place between the parties support the recognition of an expected benefit, and 2) unilateral control is not	The government will evaluate the need for a valuation allowance annually taking into consideration (a) changes, if any, in the governance structures of the plans, (b), decisions, if any, of the joint sponsors that impact the need for a valuation allowance, and b) changes, if any, in Public Sector Accounting Standards. The government is open to continue to discuss the matter in the hopes of resolving this matter.

CONFIDENTIAL DRAFT FOR DISCUSSION

	required for asset recognition; joint control with each party having the ability to deny the actions of the other sponsor, provides evidence of shared control, supporting recognition of an asset. • An opinion from Deloitte LLP on aspects of the Province's accounting as at March 31, 2016 for the Ontario Teachers' Pension Plan. The opinion, which was dated October 2, 2016, concluded that it was permissible to recognize a pension asset under Canadian Public Sector Accounting Standards, even though the Province did not have under a unilateral right to reduce contributions. The opinion did not address the value at which the asset should be recorded. • Aanalysis completed by EY as to whether any valuation allowance is required to be recorded for OTPP or OPSEUPP as of March 31, 2017. EY confirmed no valuation allowance was required for either plan. The government respectfully disagrees with the Auditor General's interpretation of the accounting standards on this issue as PSAS neither requires unilateral control to record an asset, nor does it include a requirement to obtain a letter from the co-sponsor of the plan agreeing to reduce future contributions within 12 months.

Summary Status Table in Response to the
Report of the Auditor General of Ontario
Chapter 2 2017 Annual Report of the Auditor General
Treasury Board Secretariat, Ministry of Finance, Ministry of Energy

AG Recommendation #2 *We recommend that the government remove the Independent Electricity System Operator's Market Accounts from the Province's consolidated financial statements.*	The Province consolidates the entities it controls, in accordance with Public Sector Accounting Standards (PSAS) and its internal reporting policies. Each consolidated entity produces its own stand-alone financial statements and is subject to its own financial statement audit. In 2016, the Independent Electricity System Operator (IESO) changed the accounting for the market accounts and recognized these balances on its financial statements. The financial statements of the IESO for the year-ended December 31, 2016 were subject to an external audit and received an unqualified (or clean) opinion. The government supports this enhanced reporting and greater transparency for the economic activities of the IESO. Additional comments with respect to IESO's accounting for the Market Accounts are included in the response to Recommendation #5 of this report.	The government supports the enhanced reporting and greater transparency for the economic activities of IESO resulting from the recognition of the market accounts. The government is open to continue to discuss the issue in the hopes of resolving this matter.
AG Recommendation #3 *We recommend the government follow the accounting standards established by the Public Sector Accounting Board and the Province's historical accounting precedent, and implement the recommendations in the Special Report issued*	The government prepares its financial statements in accordance with PSAS. The proposed accounting for the Ontario Fair Hydro Plan reflects the economic substance of the transaction by differentiating costs borne by taxpayers versus those borne by ratepayers. PSAS is silent on the recognition, measurement, presentation and disclosure of rate-regulated activities. In absence of a clear position on an issue, standard accounting practice dictates that an entity should consult other accounting standards. This guidance for PSAS is included in PS1150.07. Regarding the Office of the Auditor General's (OAG's) recommendation that the financing for Ontario's Fair Hydro Plan (OFHP) be pursued at the lowest cost to Ontarians, the government reiterates its concerns with this characterization, which were previously provided in the October 4, 2017 government response to the OAG's special report on OFHP (see	The government intends to continue to prepare its financial statements in accordance with Public Sector Accounting Standards (PSAS). The Fair Hydro Trust will raise financing through a combination of 3rd party senior debt and subordinated debt funded by OPG for which the cost will be primarily driven by the credit ratings assigned by Moody's and DBRS. The ultimate cost of this program will be dependent on the quantity of Global Adjustment that will be financed, prevailing market interest rates over the next 30 years, the availability of capital to invest in this type of structured debt and the

DRAFT

by our Office and tabled in the legislature on October 17, 2017, titled The Fair Hydro Plan: Concerns About Fiscal Transparency, Accountability and Value for Money, as follows: • *Record the true financial impact of the Fair Hydro Plan's electricity rate reduction on the Province's budgets and consolidated financial statements; and* • *Use a financing structure to fund the rate reduction that is least costly for Ontarians.*	Government Response to OAG Report on the Fair Hydro Plan in Appendix 5 of the Auditor General's Special Report). With respect to the Global Adjustment Refinancing (GA Refinancing) component of the OFHP, the policy objective is to more fairly allocate the cost to ratepayers over the useful life, not the contractual term, of the electricity generating assets. Therefore, it was a primary policy objective to ensure that the costs are borne by the beneficiaries of the electricity system – the ratepayers – and not the tax-base. The government believes it is appropriate for ratepayers to pay for the financing of electricity assets. The rate-base has a different risk profile than the tax-base, which would be reflected in different interest costs. The various entities that operate in the electricity industry have different financing costs that are specific to their risk profiles. The industry does not operate and is not financed through the Province. Ontario Power Generation (OPG) was identified as the Financial Services Manager responsible for the financing plans and the financing entity (i.e., Fair Hydro Trust) that will manage the debt obligations. OPG has the necessary financing and commercial expertise to assist with refinancing the Global Adjustment (GA) and will ensure that it is done in an efficient and cost-effective manner. OPG has a demonstrated track record in the financial markets with its Corporate Debt platform, private placement of insurance linked bonds, participation in securitization program and highly successful project debt issuances tied to new hydroelectric developments. OPG is beginning the process of raising funds to finance the deferred costs, and while total borrowing costs will not be known until the program is complete, accumulated interest is projected to be less than the estimates in the May 2017 report of the Financial Accountability Office (FAO). The figures referenced in the FAO's report was based on initial Ministry of Energy estimates from March 2017. Subsequent analysis	credit stability of the OFHP program which would be reflected in credit ratings assigned to this debt over time. Each of these factors will need to be managed and monitored closely. The government is open to continue to discuss the issue in the hopes of resolving this matter.

CONFIDENTIAL DRAFT FOR DISCUSSION

	conducted by the Ministry of Energy refined a number of variables, including the cost of borrowing and the quantity of GA to be refinanced. A number of variables, including interest rates, electricity demand and electricity costs, will change over the thirty-year life of OFHP. Government will continue to revise cost estimates to reflect these variable conditions. In addition, as outlined in the 2017 Long-Term Energy Plan, the government will continue to identify and implement initiatives to take costs out of the electricity system, which would reduce the cost of GA refinancing.	
AG Recommendation #4 *The Office of the Auditor General is the appointed under the Auditor General Act as the auditor for the consolidated financial statements of the Province of Ontario. We recommend that the Treasury Board Secretariat:* • *Proactively supply copies to the Auditor General of all contracts it enters into for accounting advice and opinions in order to ensure that*	Treasury Board Secretariat's use of external expertise for accounting and financial reporting matters supplements its own resources on complex or emerging accounting and reporting matters. External advisors are generally engaged to provide advice and guidance to supplement internal analysis. Treasury Board is committed to working with the Office of the Auditor General to discuss issues, once the professional staff has completed its analysis of the issue. In addition, Treasury Board believes frequent communication with the Office of the Auditor General is important and to that end, requested additional meetings with both the staff and the Auditor General during the 2016-17 audit. Where required by the CPA Ontario Code of Professional Conduct, the Auditor General has been, and will continue to be, advised of external advisor involvement.	Treasury Board Secretariat will continue to take a proactive approach to raising issues with the Office of the Auditor General. Where required by the CPA Ontario Code of Professional Conduct, the Auditor General will continue to be advised of external advisor involvement.

CONFIDENTIAL DRAFT FOR DISCUSSION

our Office is aware of the work the advisers are performing, can assess significant issues in a timely manner, and can determine the impact on the Province's consolidated financial statements and our annual audit; and • *Build into its contracts with external advisers the requirement that the advisers engaged to provide accounting advice and opinions that affect the consolidated financial statements notify our Office of*		

DRAFT

their engagement as required under the Code of Professional Conduct of the Chartered Professional Accountants of Ontario.		
AG Recommendation #5 *We recommend that the Independent Electricity System Operator (IESO), an "other government organization," use the Canadian Public Sector Accounting Standards (PSAS) in the preparation of its financial statements. Specifically, it should:*	The Independent Electricity System Operator (IESO) prepares its financial statements in accordance with Public Sector Accounting Standards (PSAS) and the financial statements are audited by a firm of independent external auditors whose responsibility is to express an opinion on whether the financial statements are fairly presented in accordance with PSAS. On its 2016 financial statements, IESO received an unqualified (clean) audit opinion. In its role as market administrator, IESO operates and settles approximately $17 billion through the electricity market. The change to include market account assets and liabilities in the financial statements provides increased transparency with respect to the value of transactions that flow through Ontario's electricity market, that otherwise would go	The IESO intends to continue to prepare its financial statements in accordance with Public Sector Accounting Standards, and will report on the results of its accounting firm's audit in its 2017 financial statements, to be published March 30, 2018. The IESO will continue to regularly review its accounting policies to ensure they are best suited to the reporting requirements of its business and the users of its financial statements. This includes providing transparency into the value of transactions that flow through Ontario's $17 billion electricity market and reflecting the economic substance of certain types of expenses that may not be directly recovered through normal revenue requirement

DRAFT

• *Remove market accounts recorded on its financial statements; and* • *Discontinue the inappropriate use of rate-regulated accounting in the preparation of its financial statements.* *To ensure that the members of the Legislative Assembly receive financial information on the operations of the IESO prepared in accordance with Canadian PSAS, the Office of the Auditor General will conduct an attest audit of the December 31, 2017, financial statements of the IESO as permitted under the Electricity Act, Subsection 25.2(2), which*	unreported in IESO's financial statements. These changes were extensively discussed with IESO's external auditors, its Audit Committee and its Board of Directors. The decision was supported by the Office of the Provincial Controller and IESO's external audit firm. Rate-regulated accounting better reflects the economic substance of certain types of IESO expenses (like those related to the Smart Metering Entity) that may not be directly recovered through normal revenue requirement models, and instead are recovered through rate regulation. This change is in line with accounting practices followed by six out of eight other independent system operators in North America and provides IESO financial statement users greater transparency into the substance of the variance accounts it holds and its right to collect an amount in the future.	models, and instead are recovered through rate regulation. The IESO recognizes the Auditor General's statutory role and authority to perform an audit of the IESO. The IESO is cooperating with the Office of the Auditor General to provide information, including the 2017 financial statements prepared by management, and for access to management for assistance in understanding such information. The IESO has likewise instructed its audit partner to cooperate with the Auditor General's audit.

DRAFT

states: "The Auditor General may audit the accounts and transactions of the IESO. 2014, c. 7, Sched. 7, s. 3 (1)."		
AG Recommendation #6 *We recommend the government follow the accounting standards established by the Public Sector Accounting Board, rather than using legislation and regulations to prescribe accounting treatments.*	The Province is committed to provide high-quality financial reports that support transparency and accountability in reporting to the public, the legislature and other users. For the 2015-16 Public Accounts, the government passed a time-limited regulation prescribing the accounting treatment for net pension assets in order to allow Treasury Board Secretariat and Ministry of Finance officials to sign off on Public Accounts consistent with the fiscal impact of the Auditor General's interpretation of Public Sector Accounting Standards (PSAS). This regulation is the only example of where the accounting treatment was legislated, and the legislation did not align with the requirements of PSAS. With respect to the Ontario Fair Hydro Plan Act and its regulations, there are no provisions in that legislation that prescribe the accounting treatment required to be followed by the Province. It is important to distinguish legislating the accounting from legislating the right of the government to recover amounts from specified ratepayers in the future,	The government intends to continue to prepare its financial statements in accordance with Public Sector Accounting Standards.

	which in the absence of the legislation, would have been collected from specified ratepayers as the costs were incurred. The accounting for the transactions resulting from the Fair Hydro Plan will be recorded in accordance with PSAS.	
AG Recommendation #7 *We recommend that in order to address the Province's growing total debt burden, the government work towards the development of a long-term total-debt reduction plan linked to its target of reducing the net debt-to-GDP ratio to its pre-recession level of 27% as measured using proper accounting for net pension assets and the projected costs of the Fair Hydro Plan. The government should also discuss publicly how it plans to pay down the debt.*	The 2017 Budget and the 2017 Fall Economic Statement stated that the government continues to maintain a target of reducing the net debt-to-GDP ratio to its pre-recession level of 27%, currently projected for 2029-30, together with an interim target of 35% by 2023-24. From 2017-18 onwards, the balanced budget environment will limit increases in debt to the difference between annual investments in infrastructure improvements and the amortization of such investments. The government's long-term infrastructure plan to invest about $190 billion over 13 years, starting in 2014-15, will contribute to the growth of the economy. The Centre for Spatial Economics found that for every $1 spent on public infrastructure, GDP increases by $6, on average, in the long term. Therefore, while overall debt will rise to fund these infrastructure investments, measurements of relative debt such as the net debt-to-GDP ratio, a recommended practice by the Public Sector Accounting Board, will gradually diminish due to the Province's GDP increasing at a faster rate than net debt. This will allow the Government to continue to move towards its 27% net debt-to-GDP target. The ratio has already commenced declining, falling to 37.3% in 2017-18 from its 2014-15 peak of 39.3%.	Continue to monitor progress. Estimated implementation by FY 2029-30.

DRAFT

	As discussed more thoroughly in responses to other recommendations in this report, the government prepares its financial statements in accordance with Public Sector Accounting Standards, including the net pension assets for its jointly sponsored pension plans and the transactions resulting from the Ontario Fair Hydro Plan.	
AG Recommendation #8 *We recommend that the Office of the Provincial Controller undertake thorough planning involving all stakeholders, including Treasury Board Secretariat, ministries and provincial government agencies, to identify the barriers and key areas to be addressed to achieve earlier finalization of the Province's consolidated financial statements, including the estimation risks associated with corporations tax and*	Treasury Board Secretariat and the Ministry of Finance are supportive of the timely delivery of the Public Accounts. The Office of the Provincial Controller works closely with the Office of the Auditor General to identify audit issues early and to ensure that stakeholders are engaged in discussions regarding risks and resolution. The Office of the Provincial Controller will continue to collaborate with the Office of the Auditor General to support the timely delivery of the Public Accounts. The Province will work with the Canada Revenue Agency on this recommendation, as reporting Personal and Corporate taxation revenues is highly dependent on information they provide.	Planning discussions for the 2017-18 Public Accounts have begun between the Office of the Provincial Controller and the Office of the Auditor General. As well, the Office of Economic Policy has been engaged in discussions on risk considerations related to economic models used to estimate personal and corporate tax revenues.

DRAFT

personal income tax revenues.		
AG Recommendation #9 *We recommend that the government avoid establishing arm's length trusts in order to record an expense in its consolidated financial statements before it is necessary, given that it loses the ability to ensure that funds are ultimately provided to the appropriate beneficiaries.*	The government works with its transfer payment recipients to ensure it receives good value for the money it provides in the form of grants. Government policy on the structured approach to program delivery takes a risk-based approach with respect to transfer payment oversight. Grants are provided to thousands of organizations annually that the government deals with at arms-length and is able to demonstrate proper oversight. A Trust structure was selected to implement the Affordability Fund in order to provide an effective solution to distributing funds to electricity distributors. With approximately 70 distributors across Ontario, it was not feasible for the Province to enter into agreements with each distributor. The Trust structure establishes an independent entity with expertise from the electricity distributor and community sectors. While the Affordability Fund was established at arm's length to the government, there are report-back requirements on the use of funds transferred as well as the ability for the government to conduct an audit to gain assurance that the funds have been used for the purposes intended.	The government will continue to assess the most appropriate vehicle for meeting its policy objectives, which include appropriate oversight of how transfer payments are spent.

PENSION ASSET ACCOUNTING

AG Recommendation #1: Pension Asset Accounting

Key Messages

- The province continues to move forward and present the province's finances fairly and accurately and in accordance with Canadian Public Sector Accounting Standards (PSAS).
- We respectfully disagree with the Auditor General's interpretation of the accounting standards, as PSAS neither requires unilateral control to record an asset, nor does it include a requirement to obtain a letter from the co-sponsor of the plan agreeing to reduce further contributions within 12 months.
- The province will evaluate the need for a valuation allowance annually taking into consideration (a) changes, if any, in the governance structures of the plans, (b), decisions, if any, of the joint sponsors that impact the need for a valuation allowance, and c) changes, if any, in Public Sector Accounting Standards.
- The province is open to continue to discuss the matter in the hopes of resolving this matter.
- For more information on pension asset accounting, I will now pass it over to:
    - Cindy Veinot, Provincial Controller

1. **How do you respond to the Auditor General's recommendation that the government should record valuation allowances to offset the net pension assets recorded from the Ontario Teacher's Pension Plan and the Ontario Public Sector Employee's Union Pension Plan until you receive formal written authorization from their pension plan co-sponsors?**

   The province continues to move forward and present the province's finances fairly and accurately and in accordance with Canadian Public Sector Accounting Standards (PSAS).

   The Office of the Auditor General communicated its interpretation of PSAS requiring a full valuation allowance on the province's two jointly sponsored pension plans in September 2016.

   At that time, the government passed a time-limited regulation on the accounting treatment of for its joint defined benefit plans to align with the Auditor General's interpretation of PSAS, which enabled officials from the Treasury Board Secretariat and the Ministry of Finance to sign the Statement of Responsibility for the 2015-16 Public Accounts.

   During the 2016-17 year, the province's professional accounting staff conducted further research and analysis, and determined that PSAS does not require a valuation allowance on either of the jointly sponsored pension plans.

DRAFT

This conclusion is supported by:

- The conclusions reached by an independent Pension Asset Expert Advisory Panel, established by the government to provide advice on the interpretation of PSAS with respect to the reporting of net pension assets of these two joint defined benefit plans.

  The panel, comprised of accredited accounting, actuarial and legal professionals with extensive background in pension accounting and plan governance, released its report in February 2017, which supported the government's position that a valuation is not required for these two plans under PSAS.

  Two key findings of the panel were:

  1) There is no requirement under PSAS that any formal agreement exist between the joint sponsors regarding the timing or amount of a reduction in contributions to record and asset, as the existing agreements in place between the parties support the recognition of an expected benefit; and

  2) Unilateral control is not required for asset recognition. Joint control with each party having the ability to deny the actions of the other sponsor provides evidence of shared control, supporting recognition of an asset.

- An opinion from Deloitte LLP on aspects of the province's accounting as of March 31, 2016 for the Ontario Teacher's Pension Plan (OTPP). The opinion, which was dated October 2, 2016, concluded that it was permissible to recognize a pension asset under PSAS, even though the province did not have a unilateral right to reduce contributions. (The opinion did not address the value at which the asset should be recorded.)

- Analysis completed by EY as to whether any valuation allowance is required to be recorded for OTPP or Ontario Public Sector Employee's Union Pension Plan (OPSEUPP) as of March 31, 2017. EY confirmed no valuation allowance was required for either plan.

After significant deliberation, including consideration of the recommendations of the panel, Deloitte LLP and EY, Ontario confirmed that the accounting for these plans prior to 2015-16 was appropriate, and prepared in accordance with PSAS for pension asset accounting. The 2016-17 financial statements include these pension assets, and we continue to apply the accounting treatment of pension

assets that the province has used consistently since 2001. In addition, the 2015-16 financial statements were restated to include these assets.

We respectfully disagree with the Auditor General's interpretation of the accounting standards, as PSAS neither requires unilateral control to record an asset, nor does it include a requirement to obtain a letter from the co-sponsor of the plan agreeing to reduce further contributions within 12 months.

The province will evaluate the need for a valuation allowance annually taking into consideration (a) changes, if any, in the governance structures of the plans, (b), decisions, if any, of the joint sponsors that impact the need for a valuation allowance, and c) changes, if any, in Public Sector Accounting Standards.

The province is open to continue to discuss the matter in the hopes of resolving this matter.

2. Why are you still fighting with the Auditor General over pension accounting?

In preparing last year's Public Accounts, the province's professional accounting staff and the Auditor General's Office engaged in discussions about the appropriate application of Public Sector Accounting Board standards regarding pension accounting for the province's jointly sponsored pension plans.

As a result, the Pension Asset Expert Advisory Panel was established to deliver independent advice and recommendations to the province on the issue. The independent panel members concluded the province's share of the net pension assets of both the Ontario Teachers' Pension Plan and the Ontario Public Service Employees' Union Pension Plan should be recognized in Ontario's financial statements.

After significant deliberation, including consideration of the recommendations of the panel, Ontario confirmed that the accounting for these plans prior to 2015-16 was appropriate. Further, EY provided additional analysis and concluded that no valuation allowance was required for either plan. The 2016-17 financial statements include these pension assets, and the government continues to apply the accounting treatment of pension assets that the province has used consistently since 2001. In addition, the 2015-16 results were restated to include these assets.

The Treasury Board Secretariat will continue to work with the Auditor General to build on the government's track record of responsible fiscal management and high quality financial reporting.

DRAFT

Advisory Panel Compensation

1. **How much did you pay the panel members? Do you think that money was justified?**

   The total cost of the panel was $221,113. This included compensation and travel expenses for the four panelists, as well as procurement. These rates are consistent with the Agencies and Appointments Directive, which specified up to $2,000 per day for appointees with unique and specialized expertise, or urgent issues affecting government priorities and requiring intense time commitments over a short period of time.

   The panel members have expertise in the areas of jointly sponsored pension plan governance, actuarial modelling for pension plans and public sector accounting standards, and provided independent advice on how to move forward with how Public Sector Accounting Board standards should be applied to current and potential future net pension assets.

2. **Why was Patricia O'Malley included in Public Accounts and not the other panel members?**

   Patricia O'Malley was the chair of the independent Pension Asset Expert Advisory Panel (PAEAP), which provided important advice to government on how to account for jointly-sponsored pension plans. She is included in Public Accounts because her compensation for her work on the Panel was above the $50,000 threshold that must be reported in detail in Public Accounts.

   The other members of PAEAP were paid less than the $50,000 minimum threshold in fiscal 2016-17 that requires they be listed in Public Accounts. Their 2016-17 compensation is captured as part of the "Accounts Under $50,000" category.

   As Paul Martin is a member of the New Brunswick Public Service, he did not receive compensation for his role on the panel. He was only eligible for expense reimbursements.

DRAFT

IESO ACCOUNTING

AG Recommendation #2: IESO Market Accounts

Key Messages

- The province consolidates the entities it controls, in accordance with Public Sector Accounting Standards (PSAS) and its internal reporting policies.
- Each consolidated entity produces its own stand-alone financial statements and is subject to its own financial statement audit.
- In 2016, the Independent Electricity System Operator (IESO) changed the accounting for the market accounts and recognized these balances on its financial statements.
- The financial statements of the IESO for the year-ended December 31, 2016 were subject to an external audit and received an unqualified (or clean) opinion.
- The government supports this enhanced reporting and greater transparency for the economic activities of the IESO.
- The province is open to continue to discuss the issue in the hopes of resolving this matter.
- For further details on the province's decision to accept IESO market accounts on the province's consolidated financial statements, I will pass it over to:
    - Cindy Veinot, Provincial Controller
- For further details on the IESO's decision to adopt market accounts, I will pass it over to:
    - Deputy Imbrogno

For QAs related to:	See:
IESO Market Accounts	Ministry of Energy (IESO)

1. **How do you respond to the Auditor General's recommendation that the government remove the Independent Electricity System Operator's (IESO) market accounts from the province's consolidated financial statements?**

   In 2016, the Independent Electricity System Operator (IESO) began recognizing its market accounts' assets (amounts due from power distributors) and liabilities (amounts due to power producers) in its financial results. IESO has chosen to recognize these markets accounts on its books for transparency reasons, as it better reflects the financial position of the IESO-administered markets at year-end. This change was supported by the IESO's audit committee, its independent external auditor, and by the Office of the Provincial Controller. This change also has no impact to the province's annual deficit, net debt or accumulated deficit.

   The financial statements of the IESO for the year-ended December 31, 2016 were subject to an external audit and received an unqualified (or clean) opinion.

DRAFT

This accounting is consistent with the presentation used previously by the Ontario Power Authority (which was merged with the IESO on January 1, 2015) in its financial statements, which was not subject to qualification from the Office of the Auditor General at that time.

AG Recommendation #5: IESO Market Accounts & Rate-Regulated Accounting

Key Messages

- The Independent Electricity System Operator (IESO) intends to continue to prepare its financial statements in accordance with Public Sector Accounting Standards (PSAS), and will report on the results of its accounting firm's audit in its 2017 financial statements, to be published March 30, 2018.
- The IESO will continue to regularly review its accounting policies to ensure they are best suited to the reporting requirements of its business and the users of its financial statements.
- The IESO recognizes the Auditor General's statutory role and authority to perform an audit of the IESO.
- As I understand, the IESO is cooperating with the Office of the Auditor General to provide information, including the 2017 financial statements prepared by management, and for access to management for assistance in understanding such information.
- As I understand, the IESO has also instructed its audit partner to cooperate with the Auditor General's Audit.
- For further details on the province's decision to accept IESO market accounts and rate-regulated accountingI will pass it over to:
    - Cindy Veinot, Provincial Controller
- For further details on the IESO, I will pass it over to:
    - Deputy Imbrogno

For QAs related to:	See:
IESO Market Accounts & Rate-Regulated Accounting	Ministry of Energy (IESO)

3. Does the Independent Electricity System Operator (IESO) use Canadian Public Sector Accounting Standards (PSAS) in the preparation of its financial statements?

Yes. The Independent Electricity System Operator (IESO) prepares its financial statements in accordance with Canadian Public Sector Accounting Standards (PSAS).

DRAFT

The IESO's financial statements are audited by a firm of independent external auditors whose responsibility is to express an opinion on whether the financial statements are fairly presented in accordance with PSAS. The IESO received an unqualified, or clean, audit opinion on its 2016 financial statements.

4. Why is the IESO now including market accounts on its financial statements? Does this go against PSAS?

The Independent Electricity System Operator (IESO) prepares its financial statements in accordance with Public Sector Accounting Standards (PSAS) and the financial statements are audited by a firm of independent external auditors whose responsibility is to express an opinion on whether the financial statements are fairly presented in accordance with PSAS.

In 2016, the Independent Electricity System Operator (IESO) began recognizing its market accounts' assets (amounts due from power distributors) and liabilities (amounts due to power producers) in its financial results. IESO has chosen to recognize these markets accounts on its books for transparency reasons, as it better reflects the financial position of the IESO-administered markets at year-end. On its 2016 financial statements, IESO received an unqualified (clean) audit opinion.

This accounting is consistent with the presentation used previously by the Ontario Power Authority (which was merged with the IESO on January 1, 2015) in its financial statements, which was not subject to qualification from the Office of the Auditor General at that time.

5. The Auditor General says that the IESO's use of rate-regulated accounting is inappropriate. Why has the government allowed the IESO to adopt this accounting method that she says is not in accordance with PSAS?

Canadian Public Sector Accounting Standards (PSAS) are silent on this issue – they neither explicitly permit, nor prohibit, the recognition, measurement, presentation, or disclosure of rate-regulated activities.

In the absence of a clear position on an issue, standard accounting practice dictates that an entity should consult other accounting standards. This guidance for PSAS is included in PS1150.07:

- *No rule of general application can be phrased to suit all circumstances or combinations of circumstances that may arise. As a result, matters may arise that are not specifically addressed in the primary sources of GAAP. It is necessary to refer to other sources when the primary sources do not deal with the accounting and reporting in financial statements of*

transactions or events that a public sector reporting entity encounters, or when additional guidance is needed to apply a primary source to specific circumstances. (Section PS 1150.07 from the PSA Handbook)

In this case, the Independent Electricity System Operator (IESO) consulted U.S. Generally Accepted Accounting Principles (GAAP), the appropriate accounting framework in North America that provides guidance on rate-regulated operations.

The IESO made the decision to adopt rate-regulated accounting because it better reflects the economic substance of certain types of expenses that may not be directly recovered through the normal revenue requirement model.

The IESO management, IESO's Audit Committee, IESO's Board of Directors, IESO's external auditor and the Office of the Provincial Controller all support the use of rate-regulated accounting by IESO.

Many entities in Canada, including Ontario Power Generation (OPG) and Hydro One use rate-regulated accounting. Rate-regulated accounting is well understood in the electricity sector, and the approach selected was taken in that context. The recognition of regulatory assets brings IESO in line with six other independent system operators in North America, including the:

- Alberta Electric System Operator (AESO)
- ISO New England
- New York Independent System Operator (NYISO)
- Midcontinent Independent System Operator (MISO)
- PJM Interconnection LLC and,
- Electric Reliability Council of Texas (ERCOT).

6. Are you concerned that the Auditor General will issue an adverse opinion on the province's next Public Accounts due to Ontario's Fair Hydro Plan accounting? What would be the impact on the province's credit rating?

It would be inappropriate to speculate about how the Auditor General may issue an opinion for Public Accounts next year. The implementation of Ontario's Fair Hydro Plan (OFHP) is ongoing, with significant decisions with accounting and financial implications still being finalized.

The Ministries of Energy and Finance, and the Treasury Board Secretariat continue to work closely with Ontario Power Generation (OPG), the Independent Electricity System Operator (IESO), as well as third-party experts to ensure appropriate due diligence is completed.

DRAFT

The province's financial statements are prepared in accordance with Canadian PSAS and will follow PSAS in accounting for the transactions resulting from OFHP in 2017-18, and in following years.

The financing plan for OFHP and its impact will be transparent. Credit rating agencies, securities regulators, and the public will see full information and full reporting of the impacts of OFHP.

Ontario has a strong track record of producing high-quality financial reports on a timely basis. Ontario will continue to move forward and present the province's finances fairly and accurately and in accordance with PSAS.

AG Audit of 2017 Statements

Key Messages

- The IESO will continue to regularly review its accounting policies to ensure they are best suited to the reporting requirements of its business and the users of its financial statements.
- The IESO recognizes the Auditor General's statutory role and authority to perform an audit of the IESO.
- As I understand, the IESO is cooperating with the Office of the Auditor General to provide information, including the 2017 financial statements prepared by management, and for access to management for assistance in understanding such information.
- As I understand, the IESO has also instructed its audit partner to cooperate with the Auditor General's Audit.

For QAs related to:	See:
Audit of IESO's statements	Ministry of Energy (IESO)

DRAFT

ONTARIO FAIR HYDRO PLAN

AG Recommendation #3: OFHP Accounting

Key Messages

- The province will continue to prepare its consolidated financial statements in accordance with Public Sector Accounting Standards (PSAS).
- The proposed accounting for the Ontario Fair Hydro Plan (OFHP) reflects the economic substance of the transaction by differentiating costs borne by taxpayers versus those borne by ratepayers.
- PSAS is silent on a key accounting issue regarding the OFHP – the standards neither explicitly permit, nor prohibit, the recognition, measurement, presentation, or disclosure of rate-regulated activities.
- In the absence of a clear position on an issue, standard accounting practice dictates that an entity should consult other accounting standards. This guidance for PSAS is included in the Public Sector Accounting Board's guidebook.
- The province's professional staff have appropriately applied this guidance in assessing the accounting for the OFHP.
- For further details on the province's decision to accept OFHP accounting, I will pass it over to:
    - Cindy Veinot, Provincial Controller
- For further details on the OFHP, I will pass it over to:
    - Deputy Imbrogno

For QAs related to:	See:
OFHP Overall, incl. IESO and OPG role	Ministry of Energy

7. Will the government follow Public Sector Accounting Standards (PSAS) for Ontario's Fair Hydro Plan?

The province will prepare its consolidated financial statements in accordance with Public Sector Accounting Standards (PSAS).

The proposed accounting for the Ontario Fair Hydro Plan (OFHP) reflects the economic substance of the transaction by differentiating costs borne by taxpayers versus those borne by ratepayers.

PSAS is silent on a key accounting issue regarding the OFHP – the standards neither explicitly permit, nor prohibit, the recognition, measurement, presentation, or disclosure of rate-regulated activities.

In the absence of a clear position on an issue, standard accounting practice dictates that an entity should consult other accounting standards. This guidance for PSAS is included in PS1150.07:

DRAFT

- *No rule of general application can be phrased to suit all circumstances or combinations of circumstances that may arise. As a result, matters may arise that are not specifically addressed in the primary sources of GAAP. It is necessary to refer to other sources when the primary sources do not deal with the accounting and reporting in financial statements of transactions or events that a public sector reporting entity encounters, or when additional guidance is needed to apply a primary source to specific circumstances. (Section PS 1150.07 from the PSA Handbook)*

The province's professional staff has appropriately applied this guidance in assessing the accounting for the Ontario Fair Hydro Plan.

8. Will the government follow the accounting standards set by historical precedent, as cited by the Auditor General?

The Auditor General's report makes a comparison between Ontario's Fair Hydro Plan (OFHP) and the Ontario Electricity Financial Corporation (OEFC) stranded debt. There are, however, crucial differences between the two.

For example, the OEFC stranded debt had already been incurred when the 1999 restructuring of the former Ontario Hydro took place.

In the case of OFHP, the difference between what will be collected and what will be paid to generators is considered to be an asset in accordance with the accounting definition, as it will generate a specific future revenue stream in the form of the Clean Energy Adjustment, which can be held and realized or can be sold.

It is important to note that the 1999 restructuring led to an "unbundling" of the electricity rate. Prior to the 1999 restructuring and the 2002 market opening, there was a "bundled rate" for electricity that included cost recovery of generation and transmission costs, operating and capital – including debt costs, as well as central market operations costs. Including debt cost recovery and matching the timing of the capital cost recovery with the benefit to the ratepayer is a normal rate-setting regulatory practice. It effectively amortized the cost of the investments in long-lived assets (including debt incurred).

The Debt Retirement Charge (DRC) represented the unbundling of a portion of the debt service costs. It effectively amortized the cost of the investments in long-lived assets (including debt incurred).

The OFHP Global Adjustment deferral is also intended to have costs recovered from specified ratepayers over a time period that better reflects the expected

lives of those assets (versus the contract lengths that may be shorter than the expected useful life of the assets).

The difference between the 1999 restructuring and OFHP is that the DRC continued to pay down, over time, debt that had already been incurred, while under OFHP, an asset is being recorded to reflect a fair allocation of electricity costs between current and future ratepayers.

The intention of OFHP is to be forward-looking, to ensure that ratepayers are sharing current and future costs, whereas the DRC was backward-looking, replacing part of a bundled rate that was already spreading the cost recovery of the debt over time.

9. Will the government implement the recommendations in the Auditor General's Special Report on the Fair Hydro Plan?

While the government does not agree with the assertions and conclusions expressed in the report, the government thanks the Office of the Auditor General for its report.

In developing Ontario's Fair Hydro Plan (OFHP), the government considered a range of implementation options and consulted with legal, accounting, financial and energy sector third-party experts to provide advice and ensure due diligence was completed.

OFHP operates under a financial and accounting framework that is appropriate for the intended purpose. It is in accordance with Public Sector Accounting Standards (PSAS) and ensures the goals underlying the program are achieved in a cost-effective manner.

On the point of "true financial impact":

In order to meet the needs of users, including the legislature and the public, for accountability in government reporting and decision making, it is essential that public sector financial statements reflect the economic substance of the government's activities.

The province's financial statements are prepared in accordance with Canadian PSAS and will follow PSAS in accounting for the transactions resulting from OFHP in 2017-18, and in following years.

As PSAS is set by an independent standard-setting body in Canada focused specifically on the public sector, and because PSAS is used by all senior

DRAFT

governments in Canada, presenting financial statements in accordance with PSAS results in transparent financial reporting for the province of Ontario.

Ontario has a strong track record of producing high-quality financial reports on a timely basis, and will continue to move forward and present the province's finances fairly, accurately and in accordance with PSAS.

On the point of "a financing structure that is the least costly for Ontarians":

The OFHP financing structure has been designed to provide electricity rate relief to current ratepayers, including by more fairly allocating costs for specified consumers, with the Global Adjustment cost amounts still ultimately borne by specified electricity ratepayers, as beneficiaries of those electricity system costs.

The government believes it is appropriate for ratepayers to pay for the financing of electricity assets. Having the rate-base pay is not a new policy, for example Hydro One has borrowed in the capital markets since 2000.

Ontario Power Generation (OPG) was identified as the Financial Services Manager responsible for the financing plans and the financing entity (the Fair Hydro Plan Trust) that will manage the debt obligations. OPG is beginning the process of raising funds to finance the deferred costs, and while total borrowing costs will not be known until the program is complete, accumulated interest is projected to be considerably less than the estimates in the May 2017 report of the Financial Accountability Office (FAO).

The cost analysis in the Office of the Auditor General's report was sourced from the FAO's May 2017 report. Total borrowing estimates over the thirty year life of OFHP have been revised down substantially by the government since the FAO released its report in May 2017, and borrowing costs are now forecast to be substantially lower than original estimates. Recent government estimates forecast that the peak debt over the thirty year life of OFHP will be below $20 billion. The preliminary estimate from March 2017 was about $28 billion.

The province will continue to prepare its consolidated financial statements in accordance with PSAS and continue to build on a track record of responsible fiscal management.

10. The Auditor General says that she has consulted with all of the Auditor Generals in Canada – and they agree with her assessments. How are we supposed to believe this government when all legislative auditors in the country say you are wrong?

DRAFT

In developing Ontario's Fair Hydro Plan, the government considered a range of implementation options and consulted with legal, accounting, financial and energy sector third-party experts to provide advice and ensure due diligence was completed.

PSAS is principle based – the standards are not a set of specific prescriptive rules. Applying them requires the application of professional judgment.

Our professional staff exercises judgment in applying the standards and as necessary consult with external experts and advisors. They provide the Office of the Auditor General with their written analysis on all significant issues that impact the financial statements for the year being audited, and they discuss the issues with the Office of the Auditor General.

All Chartered Professional Accountants (CPAs), including those employed by the Ontario Public Service (OPS), are required to comply with the Code of Professional Conduct for CPAs. One of those rules is that they not be associated with false or misleading information.

That means that if the professional accountants in the OPS do not agree with the judgment of the Ontario Auditor General, it is not as simple as just agreeing to accept the interpretation of the Office of the Auditor General if they believe that interpretation would result in false or misleading financial statements. While we expect professional accountants to agree on the vast majority of issues, we acknowledge that they may not agree on everything and when that occurs, and the difference is material to the financial statements, the Office of the Auditor General can choose to issue a qualified audit opinion.

11. Both the Auditor General and the Financial Accountability Officer have raised serious concerns about the accounting treatment of the electricity cost refinancing initiative. Why should Ontarians believe this government over two independent officers of the Legislature?

The province has the utmost respect for all independent officers of the legislature, and values the important perspective they bring.

In developing the Ontario Fair Hydro Plan, the government considered a range of implementation options and consulted with legal, accounting, financial and energy sector third-party experts to provide advice and ensure due diligence was completed.

OFHP operates under a financial and accounting framework that is appropriate for the intended purpose. It is in accordance with Public Sector Accounting

DRAFT

Standards (PSAS) and ensures the goals underlying the program are achieved in a cost-effective manner.

The province, as always, will prepare its consolidated financial statements in accordance with PSAS and continue to build on its track record of responsible fiscal management.

12. The Auditor General says that you are "obfuscating" the true financial impact of Ontario's Fair Hydro Plan through a "needlessly complex" accounting structure. How do you respond?

In developing Ontario's Fair Hydro Plan (OFHP), the government considered a range of implementation options and consulted with legal, accounting, financial and energy sector third-party experts to provide advice and ensure due diligence was completed.

OFHP operates under a financial and accounting framework that is appropriate for the intended purpose. It is in accordance with Public Sector Accounting Standards (PSAS) and ensures the goals underlying the program are achieved in a cost-effective manner.

OFHP is comprised of a series of policy decisions. The impact of some of these decisions will be borne by the province (taxpayers) where appropriate, such as sales tax relief and shifting social programs to the tax base; some will be borne by ratepayers, such as spreading the investment costs and benefits across ratepayers more fairly.

While the implementation of OFHP is ongoing, with significant decisions with accounting and financial implications still being finalized, the financing plan for OFHP and its impact will be transparent. Credit rating agencies, securities regulators, and the public will see full information and full reporting of the impacts of OFHP.

Ontario has a strong track record of producing high-quality financial reports on a timely basis. Ontario will continue to move forward and present the province's finances fairly and accurately and in accordance with PSAS.

13. How can you justify the $4 billion in additional interest expenses that will be borne by ratepayers because of the way the government has structured electricity cost refinancing (i.e. using Ontario Power Generation to finance 55 per cent, at a higher interest rate than the province, instead of the province financing the entire electricity cost financing)?

DRAFT

Ontario's Fair Hydro Plan (OFHP) is comprised of a series of policy decisions. The impact of some of these decisions will be borne by the province (taxpayers) where appropriate, such as sales tax relief and shifting social programs to the tax base; some will be borne by ratepayers, such as spreading the investment costs and benefits across ratepayers more fairly.

The accounting will reflect the economic substance of the transactions in accordance with Public Sector Accounting Standards (PSAS) and will differentiate those costs of OFHP borne by taxpayers versus those borne by ratepayers.

The Auditor General's report suggests that all the costs of OFHP should be reflected as if they will be borne by taxpayers, which is inaccurate.

Ontario Power Generation (OPG) is beginning the process of raising funds to finance the deferred costs, and while total borrowing costs will not be known until the program is complete, accumulated interest is projected to be considerably less than the estimates in the May 2017 report of the Financial Accountability Officer (FAO).

Total borrowing estimates over the thirty year life of OFHP have been revised down substantially by the government since the FAO released its report in May 2017, and borrowing costs are now forecast to be substantially lower than original estimates. Current government estimates forecast that the peak debt over the thirty year life of OFHP will be below $20 billion. The preliminary estimate from March 2017 was about $28 billion.

For further questions about borrowing estimates, please contact the Ministry of Finance.

14. The AG claims that when the government first gave Ontarians an 8 per cent break on their bills, it was reported on the books properly. She says when it jumped to 25 per cent, the accounting changed. Isn't it obvious that the government is cooking the books to suit their needs?

Ontario's Fair Hydro Plan (OFHP) is comprised of a series of policy decisions.

It is our role as public servants to provide our best advice and due diligence.

As always, the province adheres to Canadian Public Sector Accounting Standards (PSAS) issued by the Public Sector Accounting Board.

The province will continue to follow these standards for the transactions resulting from Ontario's Fair Hydro Plan (OFHP) in 2017-18 and in future years.

It's important to note that while PSAS is the primary source of guidance for the government in the preparation of its financial statements, there are circumstances where governments may refer to other accounting frameworks for guidance where PSAS is silent and does not address specific transactions.

In this case where PSAS is silent on the use of rate-regulated accounting, US accounting standards contain the most developed and appropriate guidance for this transaction.

15. The Auditor General says that even your own government officials flagged the unnecessarily high costs of Ontario's Fair Hydro Plan – and yet you chose to proceed. How can you justify this?

In developing Ontario's Fair Hydro Plan (OFHP), the government considered a range of implementation options and consulted with legal, accounting, financial and energy sector third-party experts to provide advice and ensure due diligence was completed.

Multiple options were considered in creating the OFHP framework – such as to have local distribution centres finance the difference between the amounts paid to the generators and the amounts collected from the ratepayers. This was rejected because of the inability of some local distribution centres to finance the balances.

The implementation of OFHP is ongoing, with significant decisions with accounting and financial implications still being finalized.

Ultimately, OFHP operates under a financial and accounting framework that is appropriate for the intended purpose. It is in accordance with Public Sector Accounting Standards (PSAS) and ensures the goals underlying the program are achieved in a cost-effective manner.

AG Recommendation #6: "Legislated Accounting"

Key Messages

- The province is committed to providing high-quality financial reports that support transparency and accountability in reporting to the public, the legislature, and other users.
- As always, we will prepare the province's consolidated financial statements in accordance with Public Sector Accounting Standards (PSAS), including the transactions resulting from Ontario's Fair Hydro Plan (OFHP).
- For the 2015-16 Public Accounts, the government passed a time-limited regulation prescribing the accounting treatment for net pension assets in order to

DRAFT

allow the Treasury Board Secretariat and the Ministry of Finance officials to sign off on Public Accounts consistent with the fiscal impact of the Auditor General's interpretation of PSAS.

- This regulation is the **only** example of where the accounting treatment was legislated, and the legislation did not align with the requirements with PSAS.
- The *Ontario Fair Hydro Plan Act, 2017* and its related regulations **do not** create accounting rules or legislate the accounting.
- For further details, I will pass it over to:
    - Cindy Veinot, Provincial Controller
- For further details on the OFHP, I will pass it over to:
    - Deputy Imbrogno

For QAs related to:	See:
OFHP Overall, incl. IESO and OPG role	Ministry of Energy

1. **Why has the government legislated accounting for things like Ontario's Fair Hydro Plan? Aren't you just changing the rules to suit your needs?**

   The province is committed to providing high-quality financial reports that support transparency and accountability in reporting to the public, the legislature, and other users.

   For the 2015-16 Public Accounts, the government passed a time-limited regulation prescribing the accounting treatment for net pension assets in order to allow the Treasury Board Secretariat and the Ministry of Finance officials to sign off on Public Accounts consistent with the fiscal impact of the Auditor General's interpretation of Public Sector Accounting Standards (PSAS). This regulation is the **only** example of where the accounting treatment was legislated, and the legislation did not align with the requirements with PSAS.

   The *Ontario Fair Hydro Plan Act, 2017* and its related regulations **do not** create accounting rules or legislate the accounting. It is important to distinguish legislating the accounting from legislating the right of the government to recover amounts from specified ratepayers in the future, which in the absence of legislation, would have been collected from specified ratepayers as the costs were incurred.

   The province, as always, will prepare its consolidated financial statements in accordance with PSAS, including the transactions resulting from Ontario's Fair Hydro Plan.

2. **The Auditor General said that a similar move to legislate accounting to defer costs was proposed with the restructuring of the Ontario electricity**

DRAFT

sector in the late 1990s, but the Auditor General's opinion at that time was that this would represent a departure from a central tenet of generally accepted accounting principles. The government at that time heard these concerns, and made the decision to not create an asset for future anticipated ratepayer payments. Why does the government think this is ok now?

The Auditor General's report makes a comparison between Ontario's Fair Hydro Plan (OFHP) and the Ontario Electricity Financial Corporation (OEFC) stranded debt. There are, however, crucial differences between the two.

For example, the OEFC stranded debt had already been incurred when the restructuring took place.

In the case of OFHP, the difference between what will be collected and what will be paid to generators is considered to be an asset in accordance with the accounting definition, as it will generate a specific future revenue stream in the form of the Clean Energy Adjustment.

It is important to note that the 1999 restructuring led to an "unbundling" of the electricity rate. Prior to the 1999 restructuring and the 2002 market opening, there was a "bundled rate" for electricity that included cost recovery of generation and transmission costs, operating and capital – including debt costs, as well as central market operations costs. Including debt cost recovery and matching the timing of the capital cost recovery with the benefit to the ratepayer is a normal rate-setting regulatory practice.

The Debt Retirement Charge (DRC) represented the unbundling of a portion of the debt service costs. It effectively amortized the cost of the investments in long-lived assets (including debt incurred).

The OFHP Global Adjustment deferral is also intended to have costs recovered from specified ratepayers over a time period that better reflects the expected lives of those assets (versus the contract lengths that may be shorter than the expected useful life of the assets).

The difference between the 1999 restructuring and OFHP is that the DRC continued to pay down, over time, debt that had already been incurred, while under OFHP, an asset is being recorded to reflect a fair allocation of electricity costs between current and future ratepayers.

The intention of OFHP is to be forward-looking, to ensure that ratepayers are sharing current and future costs, whereas the DRC was backward-looking, replacing part of a bundled rate that was already spreading the cost recovery of the debt over time.

DRAFT

AG Recommendation #9: Arm's Length Trusts

Key Messages

- The province works with its transfer payment recipients to ensure it receives good value for the money it provides in the form of grants.
- Government policy on the structured approach to program delivery takes a risk-based approach with respect to transfer payment oversight.
- The province will continue to assess the most appropriate vehicle for meeting its policy objectives, which include appropriate oversight of how transfer payments are spent.
- For more information on arm's length trusts, I will pass it to:
    - Cindy Veinot, Provincial Controller
    - Deputy Imbrogno

For QAs related to:	See:
OPG Accounting/Trust	Ministry of Energy

1. **Will the government avoid establishing arm's length trusts in order to record an expense in its financial statements before it is necessary, given that it loses the ability to ensure funds are provided to the appropriate beneficiaries?**

   The province works with its transfer payment recipients to ensure it receives good value for the money it provides in the form of grants.

   Government policy on the structured approach to program delivery takes a risk-based approach with respect to transfer payment oversight. Grants are provided to thousands of organizations annually that the government deals with at arm's length and is able to demonstrate proper oversight.

   A trust structure was selected to implement the Affordability Fund in order to provide an effective solution to distributing funds to electricity distributors. With approximately 70 distributors across Ontario, it was not feasible for the province to enter into agreements with each distributor.

   The trust structure establishes an independent entity with expertise from the electricity distributor and community sectors.

   While the Affordability Fund was established at arm's length to the government, there are report-back requirements on the use of funds transferred, as well as the

DRAFT

ability for the government to conduct an audit to gain assurance that the funds have been used for the purposes intended.

Records Disclosure/Process

Key Messages

- The province is committed to assisting the Office of the Auditor General so that it can provide its independent views to the Legislative Assembly.
- Senior ministry officials have met and continue to work with the Office of the Auditor General by participating in interviews and providing documentation.

For QAs related to:	See:
MOE Records Disclosure	Ministry of Energy

1. **The Auditor General alleges the government withheld information from her on the accounting treatment for Ontario's Fair Hydro Plan. Why would she say that?**

   The province is committed to assisting the Office of the Auditor General so that it can provide its independent views to the Legislative Assembly.

   The implementation of Ontario's Fair Hydro Plan is ongoing, with significant accounting and financial decisions still being finalized.

   Treasury Board Secretariat has released all requested records.

   Senior ministry officials have met with the Office of the Auditor General by participating in interviews and providing documentation.

   If asked about the Ministry of Energy emails:

   The Ministry of Energy, Finance, and the Treasury Board Secretariat are committed to assisting the Auditor General.

2. **In an email, a TBS official said [___], disagreeing with the government's policy decision. How do you respond?**

   As public servants, it is our role to provide our best advice and conduct our due diligence to inform decision-making. Part of this process includes questioning and deliberations.

DRAFT

The record you are referring to is part of that discussion process, where we as public servants engage in deliberations and explore the options to get to the point of providing our best advice.

It is important to keep in mind that an individual email represents a point in time of the discussion.
That statement is not necessarily representative of the final advice put forward and an endorsement of what the public service has identified as the best approach.

The records must be considered in the context of discussion and deliberation, as an exercise in due diligence, and not as a final endorsement of an option or approach.

3. When does TBS not provide information through a Freedom of Information request?

Since 2015, TBS has been 100 per cent compliant for all Freedom of Information requests it has received.

In some cases, records may contain information that will be withheld in accordance with the legislation, such as personal information about individuals, confidential business information, advice to government or information that is subject to solicitor client-privilege.

Re-Design of Hydro Bills

For QAs related to:	See:
Hydro Bills	Ministry of Energy

DRAFT

PRE-ELECTION REPORT

AG Recommendation #10: Pre-Election Report on Ontario's Finances

Key Messages

- The province takes the Auditor's recommendations seriously and remains committed to working constructively with the Auditor General.
- The government has not yet made a decision on whether and when to release a Pre-Election report.
- We are engaging with all officers of the legislature to keep them informed and engage constructively on considerations and approaches to ensure the people of Ontario are provided with an independent review of the province's fiscal position in advance of the election.

For QAs related to:	See:
Pre-Election Report	Ministry of Finance (Joint lead with Treasury Board Secretariat)

1. **Will the government issue a regulation confirming the source of reference for the Pre-Election Report and the timeline for issuance of the report that will be subject to the Auditor General's review?**

   Under the *Fiscal Transparency and Accountability Act, 2004*, the government may file a regulation that would require it to release a Pre-Election Report on Ontario's Finances. Should the government file such a regulation, the Auditor General would be required to issue a statement based on a prompt review following the release of such a Pre-Election Report.

   The province remains committed to meeting the legislative requirements of the Act, and working constructively with the Auditor General.

2. **Is the government required to issue a pre-Election Report?**

   Provisions in the Fiscal Transparency & Accountability Act, 2004 (FTAA) allow for – but do not require – a regulation to be filed requiring the release of a Pre-Election Report and a review of that report by the Auditor General.

3. **The Auditor General signalled her readiness to work with the government to examine the pre-election report, why has the government waited this long to engage with the Auditor?**

   The province takes the Auditor's recommendations seriously. The government has not yet made a decision on whether and when to release a Pre-Election

DRAFT

report. We are engaging with all officers of the legislature to keep them informed and engage constructively on considerations and approaches to ensure the people of Ontario are provided with an independent review of the Province's fiscal position in advance of the election.

4. **Minister Sousa recently signalled that the government is not planning on issuing a Pre-Election Report. How do you feel about the government continuing to circumvent the Auditor General and avoiding accountability?**

The province takes the Auditor's recommendations seriously. As I understand, the government has not yet made a decision on whether and when to release a Pre-Election report. We are engaging with all officers of the legislature to keep them informed and engage constructively on considerations and approaches to ensure the people of Ontario are provided with an independent review of the province's fiscal position in advance of the election.

DRAFT

PROVINCE'S FISCAL SITUATION

Recommendation #7: Province's Debt Burden

For QAs related to:	See:
Ontario's Debt Burden	Ministry of Finance

1. **How can your debt reduction plan be trusted if you're not using proper accounting for pension assets and the Fair Hydro Plan?**

   The province is committed to providing high-quality financial reports that support transparency and accountability in reporting to the public, the legislature, and other users.

   The province's financial statements are prepared in accordance with Canadian Public Sector Accounting Standards (PSAS), including the net pension assets for its jointly sponsored pension plans and the transactions resulting from the Ontario Fair Hydro Plan.

   PSAS is set by an independent standard-setting body in Canada focused specifically on the public sector, and is used by all senior governments in Canada.

   PSAS is principle based – the standards are not a set of specific prescriptive rules. Applying them requires the application of professional judgment.

   Our professional staff exercises judgment in applying the standards and as necessary consults with external experts and advisors. They provide the Office of the Auditor General with their written analysis on all significant issues that impact the financial statements for the year being audited, and they discuss the issues with the Office of the Auditor General.

   All Chartered Professional Accountants (CPAs), including those employed by the Ontario Public Service (OPS), are required to comply with the Code of Professional Conduct for CPAs. One of those rules is that they not be associated with false or misleading information.

   That means that if the professional accountants in the OPS do not agree with the judgment of the Ontario Auditor General, it is not as simple as just agreeing to accept the interpretation of the Office of the Auditor General if they believe that interpretation would result in false or misleading financial statements. While we expect professional accountants to agree on the vast majority of issues, we acknowledge that they may not agree on everything and when that occurs, and the difference is material to the financial statements, the Office of the Auditor General can choose to issue a qualified audit opinion.

Credit Ratings	Ministry of Finance

1. **Does a qualified opinion from the Auditor General impact the province's credit rating?**

   The province's financial results show that the government has beaten its annual deficit targets. In April 2017, Ontario delivered its first balanced budget since the global recession and is on track to do so again next year and the year after.

   The rating agencies will assess whether the underlying factors that lead to a qualified opinion directly affect the creditworthiness of the province. However, there were no credit rating implications in 2016 when the province received a qualified audit opinion on its 2015-16 Public Accounts. Qualified opinions by the Auditor Generals of British Columbia and Quebec have been made in their respective provinces in the past, with no negative impacts on their province's credit ratings.

DRAFT

PREPARATION OF PUBLIC ACCOUNTS

AG Recommendation # 4: External Advisors

Key Messages

- The Treasury Board Secretariat (TBS) will continue to take a proactive approach to raising issues with the Office of the Auditor General.
- The province's use of external expertise for accounting and financial reporting matters supplements its own resources on complex or emerging accounting and reporting matters.
- External advisors are generally engaged to provide advice and guidance to supplement internal analysis, and in the normal course of business.
- When required by the Chartered Professional Accountants Ontario Code of Professional Conduct, the Office of the Auditor General has been, and will continue to be, advised of external advisor involvement.

For QAs related to:	See:
Ministry use of external advisors	Ministry of Energy Ministry of Finance

1. **Will the government provide copies of contracts it enters into for accounting advice to the Auditor General?**

   The province's use of external expertise for accounting and financial reporting matters supplements its own resources on complex or emerging accounting and reporting matters.

   External advisors are generally engaged to provide advice and guidance to supplement internal analysis, and in the normal course of business.

   The province is committed to working with the Office of the Auditor General to discuss issues, once the professional staff has completed its analysis of the issue.

   When required by the Chartered Professional Accountants Ontario Code of Professional Conduct, the Office of the Auditor General has been, and will continue to be, advised of external advisor involvement.

2. **Will the government build into its contracts with external advisors a requirement to notify the Auditor General of their engagement?**

   When required by the Chartered Professional Accountants Ontario Code of Professional Conduct, the Office of the Auditor General has been, and will continue to be, advised of external advisor involvement.

DRAFT

3. **Why does the government use external advisors/consultants? It seems convenient that whenever you disagree with the Auditor General, you turn to consultants to justify your accounting methods.**

   The government has a strong track record of producing high-quality financial reports on a timely basis and continues to present the province's finances fairly and accurately and in accordance with Canadian Public Sector Accounting Standards.

   The government's use of external expertise for accounting and financial reporting matters is a normal course of business and supplements its own resources on complex or emerging accounting and reporting matters.

   External advisors are generally engaged to provide advice and guidance to supplement internal analysis.

4. **It seems like you use consultants to circumvent the Auditor General, when it looks like she may disagree with your accounting methods. Why don't you let the Auditor General know when you're using external advisors for something that impacts her Office's ability to do their job?**

   The government's use of external expertise for accounting and financial reporting matters is a normal business practice and supplements its own resources on complex or emerging accounting and reporting matters.

   External advisors are generally engaged to provide advice and guidance to supplement internal analysis. The professional staff takes responsibility for the final decisions that are made with respect to the application of PSAS to the government's transactions.

   The province is committed to working with the Office of the Auditor General to discuss issues, once the professional staff has completed its analysis of the issue.

   When required by the Chartered Professional Accountants Ontario Code of Professional Conduct, the Auditor General has been, and will continue to be, advised of external advisor involvement.

5. **Are you going to hire an expert advisory panel, as you did on the pension asset accounting matter, to settle this dispute with the Auditor General? If so, what authority would this panel have?**

DRAFT

There are no plans to establish a panel at this time.

In developing Ontario's Fair Hydro Plan (OFHP), the government considered a range of implementation options and consulted with legal, accounting, financial and energy sector third-party experts to provide advice and ensure due diligence was completed.

The province will continue to work with the Auditor General to build on the government's track record of responsible fiscal management and high quality financial reporting.

6. Can you tell us how many consultants are being paid high salaries with public money while keeping themselves off the sunshine list?

The government continues to strengthen Ontario's efforts to become the most open, transparent and digitally connected government in Canada.

Disclosure of an individual's salary information outside of the Public Sector Salary Disclosure Act list is governed by the Freedom of Information and Protection of Privacy Act. Accordingly any such disclosure would only be made in compliance with the requirements of that Act.

Questions about specific public sector organizations should be directed to the organization or ministry responsible for it.

7. How much did the Treasury Board Secretariat spend on consultants?

The Treasury Board Secretariat (TBS) spent approximately $202 million in 2016-17 on consulting services:

- $167M is procured by IT Source, Central Agencies Cluster for Ontario Public Service (OPS) ministries. TBS has an enterprise role of procuring task-based IT consulting services on behalf of other ministries.
- $36M is services procured by TBS programs primarily for IT enhancement, management and other consulting services.

Consultants are used in the OPS when the organization needs to gain external advice and specialized expertise not already available in the OPS, or for short-term and non-recurring projects and initiatives.

TBS has an enterprise role of procuring task-based IT consulting services on behalf of other ministries as a cost-saving strategy.

DRAFT

Whenever the OPS need IT consulting services, the first thing we do is look for expertise within the organization. The government turns to IT consultants when it doesn't have the expertise in house, when it needs to gain external advice and specialized expertise, or when the need is short-term and non-recurring. This is true for one-time projects that launch new programs or when Cyber Security staff combine with external experts to carry out Threat Risk Assessments to ensure personal information is safe.

AG Recommendation #8: Timeline of Finalization of Financial Statements

Key Messages

- The Treasury Board Secretariat and the Ministry of Finance are supportive of the timely delivery of Public Accounts.
- The Office of the Provincial Controller works closely with the Office of the Auditor General to identify audit issues early and to ensure that stakeholders are engaged in discussions regarding risks and resolution.
- Planning discussions for the 2017-18 Public Accounts have begun between the Office of the Provincial Controller and the Office of the Auditor General.
- As well, the Office of Economic Policy has been engaged in discussions on risk considerations related to economic models used to estimate personal and corporate tax revenues.
- For further details, I will pass it over to:
    - Karen Hughes, Associate Deputy Minister, Office of the Treasury Board
    - Deputy Thompson

For QAs related to:	See:
Finalization of Financial Statements – Tax Revenues	Ministry of Finance

1. **Will the government improve its planning across stakeholders so that the province's consolidated financial statements are finalized earlier?**

   The Treasury Board Secretariat and the Ministry of Finance are supportive of the timely delivery of Public Accounts.

   The Office of the Provincial Controller works closely with the Office of the Auditor General to identify audit issues early and to ensure that stakeholders are engaged in discussions regarding risks and resolution.

   The Office of the Provincial Controller will continue to collaborate with the Office of the Auditor General to support the timely delivery of the Public Accounts.

   Planning discussions for the 2017-18 Public Accounts have begun between the

Office of the Provincial Controller and the Office of the Auditor General. As well, the Office of Economic Policy has been engaged in discussions on risk considerations related to economic models used to estimate personal and corporate tax revenues.

2. What will the government do to figure out estimation risks associated with corporate tax and personal income tax revenues earlier?

The Treasury Board Secretariat and the Ministry of Finance are supportive of the timely delivery of Public Accounts.

The province will work with the Canada Revenue Agency (CRA) on the Auditor General's recommendation, as reporting personal and corporate taxation revenues is highly dependent on the information from the CRA.

Planning discussions for the 2017-18 Public Accounts have begun between the Office of the Provincial Controller and the Office of the Auditor General. As well, the Office of Economic Policy has been engaged in discussions on risk considerations related to economic models used to estimate personal and corporate tax revenues.

Adverse or Qualified Audit Opinion

Key Messages

- It would be inappropriate to speculate about how the Auditor General may issue an opinion for Public Accounts next year.
- The province's financial statements are prepared in accordance with Canadian Public Sector Accounting Standards (PSAS).
- As PSAS is set by an independent standard-setting body in Canada focused specifically on the public sector, and because PSAS is used by all senior governments in Canada, presenting financial statements in accordance with PSAS results in transparent financial reporting for the province of Ontario.
- PSAS are principle based -- they are not a set of specific prescriptive rules. Applying them requires the application of professional judgment.
- Our professional staff exercises judgment in applying the standards and as necessary consult with external experts and advisors.
- They provide the Office of the Auditor General with their written analysis on all significant issues that impact the financial statements for the year being audited, and they discuss the issues with the Office of the Auditor General.
- For further details, I will pass it over to:
    - Cindy Veinot, Provincial Controller

1. **The Auditor General says that you anticipated the government would receive a qualified audit opinion – and accepted this risk. In the private sector this would be unacceptable. How do you figure you can get away with this?**

   The province's financial statements are prepared in accordance with Canadian Public Sector Accounting Standards (PSAS).

   As PSAS is set by an independent standard-setting body in Canada focused specifically on the public sector, and because PSAS is used by all senior governments in Canada, presenting financial statements in accordance with PSAS results in transparent financial reporting for the province of Ontario.

   PSAS are principle based -- they are not a set of specific prescriptive rules. Applying them requires the application of professional judgment.

   Our professional staff exercises judgment in applying the standards and as necessary consult with external experts and advisors. They provide the Office of the Auditor General with their written analysis on all significant issues that impact the financial statements for the year being audited, and they discuss the issues with the Office of the Auditor General.

   All Chartered Professional Accountants (CPAs), including those employed by the Ontario Public Service (OPS), are required to comply with the Code of Professional Conduct for CPAs. One of those rules is that they not be associated with false or misleading information.

   That means that if the professional accountants in the OPS do not agree with the judgment of the Ontario Auditor General, it is not as simple as just agreeing to accept the interpretation of the Office of the Auditor General if they believe that interpretation would result in false or misleading financial statements. While we expect professional accountants to agree on the vast majority of issues, we acknowledge that they may not agree on everything and when that occurs, and the difference is material to the financial statements, the Office of the Auditor General can choose to issue a qualified audit opinion.

2. **Are you concerned that the Auditor General will issue an adverse opinion on the province's next Public Accounts due to Ontario's Fair Hydro Plan accounting?**

   It would be inappropriate to speculate about how the Auditor General may issue an opinion for Public Accounts next year. The implementation of Ontario's Fair

DRAFT

Hydro Plan (OFHP) is ongoing, with significant decisions with accounting and financial implications still being finalized.

The Ministries of Energy and Finance, and the Treasury Board Secretariat continue to work closely with Ontario Power Generation (OPG), the Independent Electricity System Operator (IESO), as well as third-party experts to ensure appropriate due diligence is completed.

The province's financial statements are prepared in accordance with Canadian PSAS and will follow PSAS in accounting for the transactions resulting from OFHP in 2017-18, and in following years.

The financing plan for OFHP and its impact will be transparent. Credit rating agencies, securities regulators, and the public will see full information and full reporting of the impacts of OFHP.

Ontario has a strong track record of producing high-quality financial reports on a timely basis. Ontario will continue to move forward and present the province's finances fairly and accurately and in accordance with PSAS.

3. The Auditor General has issued a qualified opinion for the second year in a row. Is this a sign of fiscal mismanagement?

TBS leads the overall Public Accounts process. Public Accounts is a major accountability document which presents the financial statements of the province, provides financial highlights of the past fiscal year, and reports on performance against the goals set out in the Budget.

TBS continues to move forward and present the province's finances fairly and accurately and in accordance with Canadian Public Sector Accounting Board standards. Ontario has a strong track record of producing high-quality financial reports on a timely basis. The Auditor General's qualified opinion is based on a different interpretation of Public Sector Accounting Board standards for net pension assets and recognition of market accounts.

Last year there was a disagreement among the province's professional accounting staff and the Auditor General's Office on the appropriate application of Public Sector Accounting Board standards regarding pension accounting. As a result, the Pension Asset Expert Advisory Panel was established to deliver independent advice and recommendations on the issue to the province.

The independent panel members concluded the province's share of the net pension assets of both the Ontario Teachers' Pension Plan and the Ontario

Public Service Employees' Union Pension Plan should be recognized in Ontario's financial statements.

After significant deliberation, including consideration of the recommendations of the panel, Ontario confirmed that the accounting for these plans prior to 2015-16 was appropriate, and are prepared in accordance with public sector accounting standards for pension asset accounting. Further, EY provided additional analysis and concluded that no valuation allowance was required for either plan as of March 31, 2017. The 2016-17 financial statements include these pension assets, and TBS continues to apply the accounting treatment of pension assets that the province has used consistently since 2001. In addition, the 2015-16 financial statements were restated to include these assets.

This year the Independent Electricity System Operator (IESO) began recognizing its market accounts' assets (amounts due from power distributors) and liabilities (amounts due to power producers) in their financial results. IESO has chosen to recognize these markets accounts on its books for transparency reasons, as it better reflects the financial position of the IESO-administered markets at year-end. This change was supported by the IESO's audit committee, its independent external auditor, and finally by the Office of the Provincial Controller. This change also has no impact to the province's annual deficit, net debt or accumulated deficit.

This accounting is consistent with the presentation used previously by the Ontario Power Authority (which was merged with the IESO on January 1, 2015) in its financial statements, which was not subject to qualification from the Office of the Auditor General at that time.

2016-17 Overall Accounting Changes

1. **Why have you restated prior year's financial statements?**

   When preparing the 2016-17 Public Accounts, Ontario's professional accounting staff adopted accounting changes to further enhance accountability and transparency.

   These changes include:

   a. **A change in the presentation of accounting for hospitals, school boards and colleges** - third-party revenues (i.e. tuition fees, patient fees, research grants and donations) are now reported together with provincial revenue. This change increases transparency and is supported by the Auditor General.
   b. **The adoption of International Financial Reporting Standards as the basis for accounting for energy sector government business enterprises** - the financial results of investments in Hydro One and Ontario Power Generation (OPG) now reflect International Financial Reporting

DRAFT

Standards. Previously, these results were reported using U.S. Generally Accepted Accounting Principles. This change was made to meet Public Sector Accounting Board standards and is supported by the Auditor General.

c. **Accounting for market accounts by Independent Electricity System Operator (IESO)** - the IESO has adopted rate-regulated accounting, and is now recognizing its market accounts assets and liabilities in its financial results.
d. **Accounting for net pension assets of jointly sponsored pension plans** - the province is reporting net pension assets for jointly sponsored pension plans. This is in line with Public Sector Accounting Board standards and the recommendations of the independent Pension Asset Expert Advisory Panel.

2. Spending for hospitals, school boards and colleges seems to be much higher in Public Accounts than in the 2017 Budget. Why is this?

To increase transparency, in 2016-17 we have made a simple change to how we are reporting third party revenues for broader public sector organizations.

For the first time, Public Accounts are presenting third party revenues for hospitals, school boards and colleges with provincial revenue. Third party revenues earned by these organizations, such as tuition fees, patient fees, research grants and donations, are no longer netted against the respective sectors' expenses, as they were in prior years for Public Accounts and the 2017 Budget.

This is simply a presentation change for Public Accounts. It is fiscally neutral, i.e. there is no change to the annual deficit, net debt or accumulated deficit. To ensure consistency in year-to-year and to Budget comparisons, we are reclassifying all previous years and the 2016 Budget. The 2017 Fall Economic Statement and 2018 Budget will also reflect this presentation change.

The Auditor General supports the province's decision to adopt this presentation change. It is consistent with the accounting principles for governments issued by the Public Sector Accounting Board, and the reporting practices of other senior Canadian governments.

3. What is consolidated reporting?

The Province's consolidated financial statements are presented on a consolidated basis, meaning that the Statement of Financial Position (or balance sheet) and the Statement of Operations (or statement of revenues and expenses) reflect the combination of ministry results as well as the financial

DRAFT

results for organizations that are controlled under the guidance established under PSAS.

Prior to 2016-17, the Province reported the expenses and third-party revenues of hospitals, colleges and school boards on a net basis. This was changed for 2016-17 to reflect expenses and third-party revenues as separate items (on a gross basis), as opposed to being reported together (on a net basis).This affects what you see for the expense reported for the responsible ministries (Health and Long-term Care, Education and Advanced Education and Skills Development) and the breakdown of figures for hospitals, school boards, and colleges. However this has no impact to the annual deficit, net debt or accumulated deficit.

Line-by-line consolidated reporting is in keeping with Public Sector Accounting Board standards and will mean that our presentation for Public Accounts is consistent with other governments across Canada. The Auditor General is supportive of this change.

4. Why is there a change to the accounting for Ontario Power Generation (OPG) and Hydro One?

In the 2016-17 Public Accounts, the financial results of Ontario's investments in Hydro One and Ontario Power Generation (OPG) now reflect International Financial Reporting Standards (IFRS). Previously, these results were reported using U.S. Generally Accepted Accounting Principles. This change was made to meet Public Sector Accounting Board requirements and is supported by the Auditor General.

This change has resulted in an adjustment to the opening accumulated deficit and net debt of $1,163 million, of which $683 million relates to transition to IFRS. The impact of this change to the annual deficit is not material to the province in 2016-17.

DRAFT

OTHER

1. **How does the Treasury Board Secretariat ensure transparency and accountability in financial reporting?**

   The province continues to strengthen its financial management, ensure clear and consistent accounting practices, enhance oversight and accountability and provide better data and information to the public through more channels.

   The Office of the Provincial Controller Division (OPCD) plays a key role in ensuring this transparency and accountability in the province's financial reporting through its major functions, including:
   - Providing the Ontario Public Service (OPS) and Broader Public Sector with accounting and financial management policy and controllership advice;
   - Maintaining the Public Accounts and preparing the Annual Report and Consolidated Statements and the Public Sector Salary Disclosure;
   - Liaising with the Auditor General of Ontario, as well as other jurisdictions and the Chartered Professional Accountants of Ontario and Canada, on the development of government accounting standards;
   - Supporting the development of financial management and controllership capacity across the OPS; and,
   - Supporting the modernization of government by improving the efficiency, effectiveness, and integrity of its financial systems and processes.

   Treasury Board Secretariat (TBS) also works with the Ministry of Finance to help them prepare key documents like the Budget and the Fall Economic Statement.

   TBS does have a leadership role on some financial items like Public Accounts. But for other things, TBS is mostly in a support role.

   TBS collaborates with other senior level governments to assess the impact of proposed standards by the Public Sector Accounting Board and how specific transactions are reported within the accounting frameworks.

2. **Does the province direct organizations on what accounting standards to use or how to apply them?**

   Placeholder

DRAFT

Executive Compensation

1. **How can you justify the exorbitant salaries paid to Hydro One executives when families are struggling to pay their hydro bills?**

   The province remains committed to ensuring transparency and accountability in how broader public sector employers manage executive compensation.

   However, Hydro One is now a publicly traded company, and decisions regarding compensation are not made directly by the government.

   For further questions about executive compensation and oversight of specific organizations, please contact the ministry responsible.

2. **Why are Hydro One employees not captured by the Sunshine List? MPP Todd Smith is demanding that the government add Hydro One employees back onto the list. Will you do this?**

   Only public sector employees are included on the Sunshine List.

   As a publicly-traded entity, Hydro One is no longer required to report salaries or benefits earned after December 31, 2014 under the PSSDA.

   However, similar to the Ontario Securities Commission requirements, Hydro One must disclose the total compensation levels of the CEO, CFO and three other highest-paid executives of the corporation each year. This information is available to the public online. Top executive salaries are posted on SEDAR in the Management Information Circular.

   As an Ontario Business Corporation Act (OBCA) company subject to Canadian Securities law, Hydro One continues to comply with rigorous governance requirements that include:

   - Disclosure of board-approved annual financial statements along with quarterly updates;
   - CEO and CFO Certifications and Associated Controls certifying that there are no misrepresentations in the annual or quarterly materials;
   - Shareholders' meetings requirements and rules;
   - Disclosure requirements with respect to management circulars (including information about senior management, such as share ownership, any indebtedness to the company and any interest in material transactions) as well as compensation circulars (executive compensation disclosures including shares awarded, perks and incentives).

DRAFT

3. How do you justify the upward trend of public sector employees making more than $100,000 across all sectors in 2016?

Overall, for 2016 the total number of employees disclosed in the Compendium has increased by 6.6%, to 123,410 employees in 2016 from 115,746 in 2015.

There are a number of reasons why employees may appear on the list, including:

- Employees who are progressing in their career to more challenging positions;
- Natural progression through salary ranges;
- Overtime payments;
- Retroactive pay awards;
- Performance payments; and,
- Payments that may be required on retirement (e.g. to reimburse the employee for unused vacation credits).

In addition, there were some payouts that impacted the 2016 salaries for reported employees, including an increase to base salaries for non-bargaining employees paid as a retroactive lump sum in December 2016 and an arbitration award which provided retroactive pay to members of the OPP.

The $100,000 threshold has not changed since the Public Sector Salary Disclosure Act was enacted in 1996 and has not been adjusted to keep up with inflation. If the salary threshold was adjusted for inflation, it would be $149,424 in today's dollars, reducing the number of employees included in the compendium by 84%.

The government is committed to providing high-quality public services and values the hard work of its dedicated public servants. The employees on this list:

- Deliver key government services;
- Make sure Ontario's food and water is safe;
- Make sure quality health care is available to every resident in the province;
- Make sure quality education is available to every child in the province;
- Make sure Ontario's roads and workplaces are safe; and,
- Bring jobs and investment into Ontario.

The province needs to pay salaries which are competitive in order to attract and retain top talent to deliver quality public services.

4. Who were the top 10 employees on the entire list and what were their salaries?

The top 10 earners all work largely in the health sector and in Ontario Power Generation. These people all hold executive positions:
- 6 of the 10 are in the health sector;
- 2 are from Ontario Power Generation;
- 1 is at the University of Toronto; and,
- 1 is at the Ontario Pension Board.

Questions about specific public sector organizations should be directed to the organization or ministry responsible for it.

5. **We learned that the president of OPG, who was the top earner on the province's payroll in 2016, actually made $700,000 more than the sunshine list that was disclosed earlier this year. The difference was a bonus that showed up on OPG's books, but was suspiciously left off the government's books. How many more six-figure bonuses has the President of the Treasury Board hidden from the people of Ontario?**

   The province continues to strengthen Ontario's efforts to become the most open, transparent and digitally connected government in Canada.

   Disclosure of an individual's salary information outside of the Public Sector Salary Disclosure Act list is governed by the Freedom of Information and Protection of Privacy Act. Accordingly any such disclosure would only be made in compliance with the requirements of that Act.

   For 2016, the Treasury Board Secretariat as a ministry reported 996 employees compared to 875 in 2015, an increase of 13.8%. The number increased primarily due to compensation changes, retirement pay-outs, severance payments, overtime and reorganizations.

   The $100,000 threshold has not changed since the Public Sector Salary Disclosure Act was introduced in 1996. In today's money the threshold would be $149,424 and would include only 56 (5.6%) of the 996 TBS employees on this year's list and exclude 940 (94.4%).

   Questions about specific public sector organizations should be directed to the organization or ministry responsible for it.

6. **How does this government allow salaries that are completely excessive when the average Ontarian can't afford their hydro bill/is working twice as hard because of government cuts/is not part of this millionaire's club?**

DRAFT

In the 2017 Budget, the government announced that it will continue to take a balanced approach to managing compensation. This approach will recognize the need to maintain a stable, flexible and high-performing public-sector workforce that supports the government's transformational priorities and at the same time ensures that public services continue to remain affordable.

A result of recent efforts to reduce spending through compensation restraint and program transformation, the government has delivered on its commitment to balance the budget by 2017-18, while making program spending more sustainable and also protecting the important public services that Ontarians rely on.

A balanced approach to compensation recognizes the need to attract and retain talented leaders and individuals to ensure a modern, sustainable, and inclusive Ontario Public Service, while also remaining competitive with public sector peers.

To this end, the province will continue to provide effective and affordable public services, while recognizing the need for fair compensation.

Government Advertising

1. **How can you justify spending $5.5 million on self-congratulatory advertising for Ontario's Fair Hydro Plan?**

   Ontario is the first and only jurisdiction in Canada to have legislation that bans government-paid partisan advertising in newspapers, magazines, billboards, radio, and television.

   Ontario needs government advertising that is appropriate, reasonable and effective because the public has a right to know how public money is being spent, and why the government is bringing forward policy changes.

   At this time, I would like to clarify that the Treasury Board Secretariat is *not* responsible for individual line ministry advertising campaigns, and does not determine how much funding is allocated to any campaign.

   For further questions about specific advertisements or advertising campaigns, please contact the ministry responsible.

2. **For the Hydro Bill partisan inserts – the Auditor General points out that "addressed mail" is non-reviewable (i.e., something was sent to a household by name) as compared to bulk mail which is reviewable. Will you continue to overlook this loophole so that public money can be used to send partisan messages directly to Ontarians?**

DRAFT

Ontario is the first and only jurisdiction in Canada to have legislation that bans government-paid partisan advertising in newspapers, magazines, billboards, radio, and television.

This legislation was introduced in 2004 to prevent government use of taxpayer dollars for partisan advertising.

Ministries still abide by the principles of the Government Advertising Act in all paid advertising, whether it goes to the Office of the Auditor General or not.

SCENARIO QUESTIONS

Speculation

1. **What do you think the intentions of the government were when they…**

   As a public servant, it would be inappropriate for me to speculate on the intentions of the government.

   We provide neutral advice to support decision-making.

2. **What do you think the Auditor General will do…**

   It would be inappropriate for me to speculate on how the Auditor General may issue a future opinion.

3. **Other requests for speculation…**

   I'm not able to comment on something that may or may not happen.

   I'm happy to speak to the contents of chapter two of the Auditor General's report.

Cabinet Confidential

1. **Can you tell us about the advice you provided to the government…**

   I am unable to speak to the advice that was provided, as this would be considered confidential advice provided to Cabinet.

Confidential

DRAFT

1. **Can you tell us about the advice you provided to your minister…**

   I believe this matter could be considered confidential advice provided. I would be happy to look into this matter further to clarify the scope of confidentiality and provide a written response back to the Committee.

Insisting a Specific Official Answer

1. **I do not want [____] to answer, I want to hear the response from you.**

   I am happy to provide a response to the question in my role as a public servant for the Treasury Board Secretariat.

   [Provide response as within your position's scope.]

   I cannot speak to the specific point you are raising, and as mentioned, [____] would be more appropriate to respond.

   What I can tell you is [____]

Insisting on Commitment

1. **Can you give us an exact figure on…**

   I want to be absolutely precise and specific, so I will need to get back to you with the exact number.

Politicization

1. **Why did the government make [____] decision?**

   As a public servant, it would be inappropriate for me to speculate on the intentions of the government.

   It is our role to provide our best, objective advice to support government decision-making.

PRE-ELECTION REPORT

AG Recommendation #10: Pre-Election Report on Ontario's Finances

- Messaging TBC – TBS

For QAs related to:	See:
Pre-Election Report	Treasury Board Secretariat (Joint lead with Ministry of Finance)

2. Will the government issue a regulation confirming the source of reference for the Pre-Election Report and the timeline for issuance of the report that will be subject to the Auditor General's review?

Under the *Fiscal Transparency and Accountability Act, 2004*, the government may file a regulation that would require it to release a Pre-Election Report on Ontario's Finances. Should the government file such a regulation, the Auditor General would be required to issue a statement based on a prompt review following the release of such a Pre-Election Report.

The government remains committed to meeting the legislative requirements of the Act, and working constructively with the Auditor General.

DRAFT

PROVINCE'S FISCAL SITUATION

Recommendation #7: Province's Debt Burden

- The balanced budgets from 2017–18 onwards will limit the increase in net debt-to-net investments in capital assets. These investments will contribute to the economy growing at a faster rate than net debt, allowing the government to reduce Ontario's net debt-to-GDP ratio to its pre-recession level of 27 per cent.
- There is a strong demand for Ontario bonds in both the domestic and international markets. Last fiscal year, Ontario was able to borrow $27 billion in long-term debt while our spread — or the margin that we have to pay over the equivalent Government of Canada bond — tightened, indicating an ongoing strong demand for Ontario bonds.
- We expect that the liquidity of Ontario benchmark bonds, and continuing confidence in the value of Ontario debt, will allow us to cost-effectively complete the 2017–18 borrowing program.

3. What is the government doing to manage the province's debt burden?

The very important first step in reducing debt is to balance the budget. We are projecting a balanced budget for 2017-18, delivering on a commitment first introduced in the 2010 Budget.

As the result of a balanced budget, and Ontario's strong economic growth, the net-debt-to-GDP ratio is declining.

The government has set an interim net debt-to-GDP ratio target of 35 per cent by 2023–24, and continues to maintain a target of reducing the net debt-to-GDP ratio to its pre-recession level of 27 per cent, currently projected to be achieved by 2029–30.

4. What is the status of the province's borrowing plan?

Through prudent and cost-effective debt management, we have consistently kept interest on debt costs below budget projections. Interest on debt to revenue is forecast to be 8.2 per cent in 2017-18, 8.3 per cent in 2018-19 and 8.4 per cent in 2019-20.

Term extension has allowed us to take advantage of and lock in low interest rates for a longer period, which reduces refinancing risks and helps offset the impact of expected higher interest rates on interest on debt costs.

As of January 31, 2018, $28.6 billion (or 111 per cent) of this year's long-term public borrowing of $25.8 billion has been completed.

DRAFT

Financial Accountability Office (FAO) Reports

5. What is the government's response to the FAO's fall 2017 report, which states that the government will run a deficit in 2017-18 and the following years?

Ontario's deficit for 2016-17 was $991 million — $3.3 billion lower than projected in the 2016 Budget and $0.5 billion lower than the interim projection in the 2017 Budget, according to public accounts.

The Ministry of Finance is projecting a balanced budget in 2017-18. The Ministry of Finance is committed to a responsible fiscal plan. We build prudence into our forecasts.

Since the time of the 2017 Budget, private sector forecasters have revised up their economic growth projections for Ontario over the 2017-20 period, reflecting the strength in the Ontario economy.

Using the government's accounting presentation (i.e. excluding the AG's recommended treatment), the FAO is projecting a small surplus in 2017-18.

6. Why are the FAO's revenue forecasts lower than the government's revenue forecasts?

The government is projecting total revenue to grow from $140.7 billion in 2016–17 to $158.2 billion in 2019–20. This represents an average annual growth rate of 4.0 per cent.

Growth in revenues over the medium term is driven mainly by taxation revenue which is projected to increase by $15.6 billion between 2016–17 and 2019–20, or at an average annual rate of 5.2 per cent. The projected taxation revenue growth aligns with growth actually experienced in recent years, and projections for the Ontario economy.

Credit Ratings

- Ontario currently maintains a double-A rating with three of its four credit rating agencies.
- We continue to update the rating agencies on a regular basis on economic and fiscal developments.

7. What are the credit rating agencies' views on Ontario?

Following the release of the 2017 Budget, all four rating agencies — Moody's, DBRS, Fitch, and S&P — confirmed Ontario's long-term credit ratings.

This reflects rating agencies' confidence in our government's fiscal plan.

DRAFT

8. How have rating agencies responded to the qualified opinion on the public accounts and the recent report from the Auditor General?

The rating agencies make their own assessment of the Province's finances.

However, there were no credit rating implications either this year or last when the government received a qualified audit opinion on its Public Accounts.

LONG-FORM MEMBER QUESTION

DEPUTY MINISTER HELEN ANGUS

&

KAREN HUGHES, ASSOCIATE DEPUTY MINISTER

PUBLIC ACCOUNTS PROCESS

QUESTION

- One of the recommendations in the Auditor General's report is that the Office of the Provincial Controller should "undertake thorough planning involving all stakeholders, including Treasury Board Secretariat, ministries and provincial government agencies" to allow the Office of the Provincial Controller to release Public Accounts earlier than the usual late August or September.
- I am curious about what releasing Public Accounts earlier would take on the part of the government.
- I know that the process requires a lot of work on the part of many people, although I'm not necessarily clear on the mechanics of putting the Public Accounts together.
- So, could you outline what the process is of putting Public Accounts together every year?

DRAFT

LONG-FORM MEMBER QUESTION: BALANCED BUDGET

DEPUTY MINISTER SCOTT THOMPSON

Question:

- How is Ontario planning to keep a balanced budget?

Answer:

- TBD: Revisions based on updates related to Q3 Finances once available
- My ministry has been working to execute the government's goal of balancing the budget.
- This started with a plan that was first introduced in the *2010 Budget*, when the province started to recover from the recession.
- Ontario today is projecting a balanced budget for 2017–18 and for the next two years, 2018–19 and 2019–20.
- A balanced budget makes available more investment options to spur economic growth and job creation, and helps protect the programs and services people rely on most, such as health care and education.
- Ontario's plan has five main areas of focus:
    - Maximizing revenues without causing undue tax burdens on Ontarians
    - Managing its expenses without detracting from the quality of social services and health programs
    - Balancing revenues and expenses against each other to manage the debt
    - Funding programs that help Ontarians, and
    - Investing in infrastructure to promote economic growth and job creation.

- I will now address each area in turn.

DRAFT

Revenues:

- The 2016–17 Public Accounts show that Ontario's deficit for last year was $991 million — $3.3 billion lower than projected in the 2016 Budget and $0.5 billion lower than the interim projection in the 2017 Budget.
- Fiscal 2016–17 was the eighth year in a row that the Province has beaten its deficit target.
- This was a result of growth in revenue that exceeded growth in program expenses, and lower-than-forecast interest on debt.
- And so part of the plan to balance the budget involves optimizing assets and maximizing revenues.
- The Public Accounts for 2016–17 show total revenues were $140.7 billion, $2.2 billion higher than the 2016 Budget projection.
- Additionally, Ontario's total revenues are projected to grow from this $140.7 billion in 2016–17 to $158.2 billion in 2019–20.
- This increase represents an average annual growth rate of four per cent.
- The higher revenues for 2016–17 — and the projected growth of revenues through 2019-20 — are largely due to higher-than-expected tax revenues, the optimization of government business enterprises, and transfers from the Government of Canada and other non-tax revenue.

- First, let me address tax revenues.
- Growth in revenues over the medium term is driven mainly by taxation revenue, which is projected to increase by $15.6 billion between 2016–17 and 2019–20, or at an average annual rate of 5.2 per cent.
- For fiscal year 2016–17, tax revenues were $293 million higher than projected, mainly due to higher-than-expected Harmonized Sales Tax revenue, reflecting stronger growth in Ontario household expenditures.

DRAFT

- Secondly, the Government of Ontario is also implementing a multi-year strategy to optimize its assets and maximize its revenues through the sales of shares in Hydro One, LCBO head office lands and Ontario Power Generation's head offices.
- The net revenue gains from the sale of qualifying assets are credited to the Trillium Trust for infrastructure investments, such as roads, bridges and public transit.
- The total amount credited to the Trillium Trust as of March 31, 2017 is $5.3 billion.
- The Province continues to grow and maximize revenues from its government business enterprises, such as Hydro One, Ontario Power Generation, the Liquor Control Board of Ontario and Ontario Lottery and Gaming Corporation.
- The forecast of the income from government business enterprises is projected to grow by $0.7 billion between 2016–17 and 2019–20.
- This projection, at an average annual rate of 3.7 per cent, reflects higher net income overall from government business enterprises.

- Thirdly, Ontario received larger Government of Canada transfers — $145 million higher. This increase reflected new funding for early learning and child care flowing from a bilateral agreement between Ontario and the federal government, as previously reported in the 2017-18 *First Quarter Finances*.
- The forecast for subsequent transfers is based on existing federal-provincial funding agreements.
- Overall transfers are projected to grow by $0.9 billion between 2016–17 and 2019–20, or at an average annual rate of 1.2 per cent.
- This largely reflects projected increases in major ongoing Government of Canada transfers and new funding for early learning and child care, and home care and mental health.

DRAFT

- Finally, the forecast for other non-tax revenue is based on projections provided by government ministries and agencies.
- The outlook for other non-tax revenues is projected to increase by $0.4 billion between 2016–17 and 2019–20, or at an average annual rate of 0.7 per cent.
- This increase mainly reflects:
    - Fiscally neutral revenues from carbon allowance proceeds starting in 2017–18
    - Fees, donations and other revenues for the broader public sector, and
    - Revenues from vehicle and driver registration fees.
- This is partially offset by lower revenues due to the removal of the debt retirement charge from commercial, industrial and all other electricity users in 2018–19, and the projected net impact of the government's planned asset optimization strategy.
- Notably, the increase in Ontario's revenue is not attributable to increases in personal tax returns.

Expenses:

- Let me now address expenses.
- The Public Accounts for 2016–17 show that total spending was $141.7 billion, $100 million lower than the 2016 Budget projection.
- Program spending expenses accounted for $130 billion.
- Interest on debt, at $11.7 billion, was down $0.7 billion from the 2016 Budget projection.

- Going forward, program expenses are projected to grow from $130 billion in 2016–17 to $144.2 billion in 2019–20.
- This represents an average annual growth rate of 3.5 per cent.
- Growth in program expenses over the medium term is driven by investments to help the people of Ontario, such as health care, supports for seniors, the

DRAFT

introduction of pharmacare for children and youth under OHIP+, electricity cost relief programs under the Fair Hydro Plan, and new initiatives for small businesses that will lower costs and support growth.

- Interest on debt expenses is projected to grow from $11.7 billion in 2016–17 to $13.3 billion in 2019–20.
- This increase is due to borrowing for capital spending and interest rates that are forecast to rise.
- This represents an average annual growth rate of 4.2 per cent.
- Interest on debt is projected to grow due to borrowing for capital spending and interest rates that are forecast to rise.
- Total expenses are projected to grow from $141.7 billion in 2016–17 to $157.4 billion in 2019–20.
- This represents a manageable average annual growth rate of 3.6 per cent.

Balancing Revenues and Expenses:

- Let me summarize the revenues and expenses together.
- Revenue is forecast to increase from $140.7 billion in 2016–17 to $158.2 billion in 2019–20.
- Total expenses are projected to increase from $141.7 billion to $157.4 billion over the same period.
- Based on these estimates, the Ontario government will effectively balance the budget over the next four years.

Funding Programs, Investing in Infrastructure, Promoting Growth:

- Through targeted, measured and fiscally responsible decisions, Ontario has restored its fiscal and economic strength.
- Strategic investments have helped stimulate the Ontario economy to rise from the depths of recession.

DRAFT

- Over the past three years, Ontario's economy has grown faster than Canada's and that of all other G7 countries.
- The benefits of balanced budgets and a strong economy are already providing the government with the fiscal flexibility to do more to help Ontarians.
- This flexibility enables the government to provide more investments to spur economic growth, job creation and support services people use every day.
- Notable program investments include:
    - $145 million in annual funding to increase the accessibility and affordability of high-quality licensed child care and early learning opportunities
    - $245 million over three years to lower costs for small businesses
    - $155 million over three years to support seniors to remain independent, connected, engaged, healthy and safe
    - $245 million over three years to lower costs for small businesses, create opportunities for growth and simplify their interactions with government.
    - An increase of $1 million in 2017–18 — and then $5 million in 2018–19 and beyond — to provide additional funding through the Northern Communities Grant component of the Ontario Municipal Partnership Fund.

- Growth in program expenses also includes investments in infrastructure.
- In fact, Ontario is making the biggest investment in public infrastructure in its history.
- The government's long-term infrastructure plan to invest about $190 million over 13 years, starting in 2014–15, will contribute to the growth of the economy.
- The government's historic investment in infrastructure includes:
    - $31.5 billion over 10 years for public transit, transportation and other priority infrastructure projects across Ontario
    - $11 billion over 10 years in capital grants to school boards, and
    - $900 million over 10 years for critical maintenance repairs and upgrades.

DRAFT

- These investments will not only create jobs, support business innovation and help draw investors from abroad — they will also contribute to the provincial economy growing at a faster rate than the change in its net debt.
- Investments such as these have helped to stimulate the Ontario economy, which has continued to grow despite an uncertain global climate.
- From 2014 to 2016, Ontario outpaced all G7 countries with its real GDP growth.
- As the result of a balanced budget and Ontario's strong economic growth, the net debt-to-GDP ratio is declining.
- In the 2017 Budget, the Ontario government set an interim net debt-to-GDP ratio target of 35 per cent by 2023–24. The government is now projecting to meet this target a year earlier.
- We continue to maintain a target of reducing the net debt-to-GDP ratio to its pre-recession level of 27 per cent, currently projected to be achieved by 2029–30.

Conclusion:

- In September, the Public Accounts of Ontario 2016–17 reported that the 2016–17 deficit was $1.0 billion, an improvement of $3.3 billion from the $4.3 billion projection in the 2016 Budget.
- Total revenue for 2016–17 came in at $140.7 billion, which was $2.2 billion higher than the 2016 Budget.
- This was largely due to higher-than-expected tax revenues, the optimization of government business enterprises and transfers from the Government of Canada and other non-tax revenue.
- Total spending for 2016–17 came in at $141.7 billion, which was $0.1 billion lower than the 2016 Budget.
- Program spending was $130.0 billion, up $0.6 billion from the plan of $129.4 billion.

DRAFT

- Spending in health, children's and social services, and other programs was higher than planned.
- Interest on debt expense was $11.7 billion, $0.7 billion below the plan of $12.4 billion, due mainly to lower-than-forecast interest rates, and cost-effective borrowing and debt management.
- In conclusion, the Ontario government is on track to balance the budget this fiscal year — 2017–18 — as well as the next two fiscal years.
- Prudently managing the province's finances is one of my ministry's responsibilities to the people of Ontario.
- Thank you.

DRAFT

LONG-FORM MEMBER QUESTION: CREDIT RATING

DEPUTY MINISTER SCOTT THOMPSON

Question:

- What are the plans to keep Ontario's credit rating in good standing?

Answer:

- TBD: Revisions based on updates related to Q3 Finances, once available.

Introduction:

- Following the release of the 2017 Ontario Budget, four credit rating agencies – Moody's, DBRS, Standard & Poor's and Fitch – confirmed Ontario's healthy long-term credit ratings. This reflects rating agencies' confidence in the Government's fiscal plan – and its ability to grow Ontario's economy and create jobs for Ontarians.
- Let me summarize the reports by each of the credit rating agencies.

- First, Moody's.
- Moody's cautioned that the Ontario Fair Hydro Plan, announced in March 2017 to reduce electricity prices, adds credit pressure due to the direct financial impact of the sales tax rebate and the indirect impact of an elevated debt of a provincially owned entity.
- Overall, however, Moody's said its stable outlook for Ontario "reflects Moody's forecast that, as the province moves towards and achieves balanced budgets,

DRAFT

the province's debt burden will improve marginally and interest expense will remain manageable across the medium-term….The policy decision to borrow for infrastructure spending at a time of historically low interest rates, combined with the prudent debt management practices outlined above, has helped to support the province's Aa2 rating."

- Moody's positive outlook for Ontario's credit rating is based on the following credit strengths: prudent debt management, an institutional framework providing significant fiscal policy flexibility, and a large diversified economy supporting a broad and productive tax base.

- Next, DBRS.
- DBRS noted that Ontario's credit profile is stable, but it will remain vulnerable to an economic shock in the absence of a more concerted effort to reduce debt.
- DBRS also commented on the potential downside risks to the economic outlook due to uncertainty regarding the potential renegotiation of NAFTA and U.S. tax policy, as well as political integration in Europe.
- Finally, it noted that elevated household debt and housing market dynamics leave Ontario particularly vulnerable in the event of an unforeseen shock that results in significant job losses or a rapid increase in interest rates.
- Despite these concerns, DBRS expects Ontario's credit ratings to remain stable.
- DBRS said of Ontario, its "ratings remain well supported by the province's large and diversified economy, improving budgetary results and declining debt burden" and that "the return to balance is encouraging and suggests that there will likely be some modest improvement in the Province's credit metrics over the medium term."
- DBRS concluded by saying that Ontario's stable credit profile stems from strength in the underlying economy, which provided incremental revenue more than sufficient to offset the in-year spending pressures.

- Standard & Poor's is next.

- Standard & Poor's believed that Ontario's credit profile is strengthening.
- But before considering a positive rating action, they would need to see sustained improvement in budgetary performance leading to near-balanced after-capital results, coupled with ongoing declines in the tax-supported debt burden, making Ontario's finances more comparable with peers in the 'AA' category.
- Standard and Poor's said it "expects the province of Ontario to benefit from solid economic growth over the next two years, allowing it to generate additional revenues to fund its capital spending plan and stabilize its finances following its eight-year path back to a balanced operating budget."
- Standard & Poor's concluded by saying that its stable outlook reflects expectations that, within the next two years, the Province will sustain a more balanced budgetary performance, including steady liquidity metrics, modest after-capital deficits, and a high but slowly declining debt burden.

- Finally there is Fitch.
- Fitch's report stated that the Province has demonstrated the ability to exert considerable expenditure restraint while instituting revenue changes to achieve its deficit reduction objectives.
- It said Ontario's 'AA-' rating is supported by its wealth, diversified economy and generally sound financial management.
- Fitch's rating reflected the Province's very strong and diversified economy, strong financial management, very predictable and well-balanced institutional framework and low contingent liabilities.
- Ontario's credit profile is stable.

- For Ontario's credit profile to grow in strength, the Province will need to do several things.
- It will need to show a track record of consistent operating surpluses and balanced or near-balanced after-capital results, coupled with continuing declines in direct and tax-supported debt burdens.

DRAFT

- **To that end, Ontario has the following plan to ensure that its credit rating remains in good standing.** It is:
    - Optimizing assets and revenues without causing undue tax burdens on Ontarians.
    - Managing expenses without detracting from the quality of social and health services.
    - Balancing revenues and expenses against each other to manage the debt, and
    - Maintaining a reserve fund to mitigate unforeseen financial risks.
- I will now go into more detail on each of these points.

Revenues:

- Total revenues for 2016–17 were $140.7 billion, $2.2 billion higher than the 2016 Budget.
- Additionally, Ontario's total revenues are projected to grow from $140.7 billion in 2016–17 to $158.2 billion in 2019–20.
- This represents an average annual growth rate of four per cent.
- The higher revenues for 2016–17 and the projected growth of revenues through 2019–20 are largely due to three factors:
    - Higher-than-expected tax revenues.
    - Income from government business enterprises and fees, and
    - Transfers from the Government of Canada and other non-tax revenue.
- Growth in revenues over the medium term is driven mainly by taxation revenue, which is projected to increase by $15.6 billion between 2016–17 and 2019–20, or at an average annual rate of 5.2 per cent. The taxation outlook reflects current revenue information and projections for the Ontario economy. Tax revenues were $293 million higher than projected in 2016–17, mainly due to higher-than-expected Harmonized Sales Tax revenue, reflecting stronger growth in Ontario household expenditures.

DRAFT

- The Government of Ontario is also implementing a multi-year strategy to optimize its assets and maximize its revenues through the sales of Hydro One, LCBO head office lands and Ontario Power Generation's head offices. The total amount credited to the Trillium Trust as of March 31, 2017 is $5.3 billion. The net revenue gains from the sale of qualifying assets will be credited to the Trillium Trust for infrastructure investments, such as roads, bridges and public transit, under the Moving Ontario Forward plan. In 2016–17, the Trillium Trust was drawn down by approximately $260 million to help support these projects.
- Finally, Ontario received larger Government of Canada transfers — $145 million higher. This increase reflected new funding for early learning and child care flowing from a bilateral agreement between Ontario and the federal government, as previously reported in the 2017–18 *First Quarter Finances*.
- Notably, the increase in Ontario's revenue is not attributable to increases in personal tax returns.

Expenses:

- Ontario's total spending for 2016–17 was $141.7 billion, $100 million lower than the 2016 Budget.
- Program spending expenses accounted for $130.0 billion.
- Interest on debt expense accounted for $11.7 billion – $0.7 billion below the plan of $12.4 billion.
- This drop was due mainly to lower-than-forecast interest rates, and Ontario's cost-effective borrowing and debt management.
- Going forward, Ontario program expenses are projected to grow from $130.0 billion in 2016–17 to $144.2 billion in 2019–20.
- This represents an average annual growth rate of 3.5 per cent.
- Interest on debt expenses is projected to grow from $11.7 billion in 2016–17 to $13.3 billion in 2019–20.
- This represents an average annual growth rate of 4.2 per cent.

DRAFT

- Total expenses are projected to grow from $141.7 billion in 2016–17 to $157.4 billion in 2019–20.
- This represents a manageable average annual growth rate of 3.6 per cent.
- These increases align with the government's plans for modernizing the public services people rely on every day.
- They are also fiscally sustainable.
- In short, the Ontario government has been managing its program expenses as well as its interest-on-debt expenses.

Balancing Revenues and Expenses:

- To bring the revenues and expenses together…
- Revenue is forecast to increase from $140.7 billion in 2016–17 to $158.2 billion in 2019–20.
- Total expenses are projected to increase from $141.7 billion to $157.4 billion over the same period.
- Based on these estimates, the Ontario government will effectively balance the budget over the next four years.

The Reserve:

- I will now take a moment to address the Province's financial reserve and contingency funds.
- As required under the *Fiscal Transparency and Accountability Act*, Ontario's fiscal plan incorporates prudence in the form of a reserve to protect the fiscal outlook against unforeseen adverse changes in revenue and expenses.
- The current fiscal outlook includes a reserve of $0.5 billion in 2017–18, $0.5 billion in 2018–19 and $0.8 billion in 2019–20.
- The current outlook also maintains contingency funds to help mitigate expense risks that may otherwise negatively impact Ontario's fiscal performance — particularly in cases where health and safety may be compromised, services to the most vulnerable are jeopardized, or natural disasters occur.

DRAFT

Conclusion:

- Credit ratings provide an assessment of a government's credit-worthiness.
- They are a reflection largely based on its capacity to generate revenue to service its debt.
- They consider factors such as a government's economic resources and prospects, industrial and institutional strengths, financial health, and susceptibility to major risks.
- As you know, a credit rating affects the cost of future government borrowing with a lower rating, indicating that an agency believes there is a relatively higher risk that a government will default on its debt.
- Accordingly, investors will lend to the government only in return for a greater risk premium, in the form of higher interest rates.
- A rating downgrade could also shrink the potential market for a government's debt, because some investors will not hold debt below a certain rating.
- Therefore, it is critical that Ontario maintain its credit rating in good standing to manage its debt and preserve its fiscal health.
- Ontario's plan to keep its credit rating in good standing involves the following strategies:
    - Optimizing assets and revenues without causing undue tax burdens on Ontarians.
    - Prudently managing expenses without diminishing the quality of Ontario's services and programs.
    - Balancing revenues and expenses against each other to manage the debt, and
    - Preserving a reserve fund to mitigate unforeseen financial risks.

- Seen as a whole, these strategies will ensure confidence in Ontario's credit-worthiness through its ability to effectively manage its debt obligations.

DRAFT

- Protecting the financing of Ontario's public services will continue to be one of my ministry's highest priorities.
- Thank you.

DRAFT

LONG-FORM MEMBER QUESTION: DEBT MANAGEMENT

DEPUTY MINISTER SCOTT THOMPSON

Question

- What is Ontario's debt management plan?

Answer

- TBD: Revisions based on updates related to Q3 Finances, once available.
- The Ministry of Finance has a track record of responsible fiscal management and remains committed to executing the government's goal of reducing the provincial debt burden.
- The government's plan to manage the debt focuses on three key areas:
    - Decreasing the net debt-to-GDP ratio.
    - Decreasing the interest on debt-to-revenue ratio.
    - Utilizing term extensions.
- I would like to provide an update of progress on this goal.

Net Debt-to GDP Ratio:

- A key indicator of the government's ability to manage its debt is the level of debt relative to the size of the economy, known as the net debt-to-GDP ratio.
- The ratio of net government debt to the market value of goods and services produced by an economy — known as gross domestic product or GDP — measures the relationship between a government's debt obligations and its capacity to raise the funds needed to meet them.
- It is an indicator of the relative burden of government debt on the economy.

DRAFT

- If the amount of debt that must be repaid relative to the value of the GDP is rising — in other words, if the ratio is rising — it means the government's net debt is growing faster than the provincial economy, and becoming an increasing burden.

- Before considering Ontario's net debt-to-GDP ratio, let me first discuss the components.
- First, I want to address Ontario's net debt situation.
- Ontario's net debt increased from $295.4 billion as of March 31, 2016 to $301.6 billion as of March 31, 2017.
- It is projected to increase to $311.7 billion by March 31, 2018 and to $323 billion by March 31, 2019.
- About 62 per cent of the increase in net debt from 2008–09 to 2016–17 was due to the deficit.
- The remaining net debt increase was a result of investments in capital assets.
- Balanced budgets from 2017–18 onwards will ensure that increases in net debt will be limited to net investments in capital assets such as roads, bridges, hospitals and schools.
- In other words, the net debt is increasing at a manageable rate, and a smaller portion of it is collected from the deficit.

- Next, let me briefly address the GDP.
- The government's investments in capital assets increased economic growth and helped support Ontario's GDP to advance more quickly than debt, helping the government achieve its net debt-to-GDP targets.
- Over the past three years, Ontario's economy has grown faster than Canada's and that of all other G7 countries.
- In fact, Ontario's real GDP is now 21.3 per cent above its recessionary low.
- Over the 2017–20 period, the Ministry of Finance is forecasting average annual growth of 2.2 per cent in Ontario's real GDP.

DRAFT

- Government investments have helped stimulate the Ontario economy to rise from the depths of the recession, and it is now enjoying a period of economic strength and growth.

- I briefly addressed the net debt and GDP situations separately; now let me bring them together.
- The 2017 Fall Economic Statement reported that Ontario's net debt-to-GDP ratio is lower than previously forecast.
- The net debt-to-GDP ratio peaked at 39.3 per cent in 2014–15 and has been declining ever since, as a result of Ontario's economic growth and the government's progress towards a balanced budget in 2017–18.
- It is now projected to be 37.3 per cent at the end of fiscal 2017–18, 0.2 per cent lower than was forecast in the 2017 Budget.
- This ratio is projected to continue to decline to 37.1 per cent in 2018–19.
- In the 2017 Budget, the government set an interim net debt-to-GDP ratio target of 35 per cent by 2023–24, and re-stated its commitment to reduce the net debt-to-GDP ratio to its pre-recession level of 27 per cent by 2029–30.
- A declining net debt-to-GDP ratio, together with low interest on debt costs as a percentage of revenues, positions the province for long-term sustainability.
- It also allows for a greater proportion of government spending to be invested in programs and services.

- The reduction of debt is complemented by Ontario's investments in infrastructure, which are supporting economic growth and job creation.
- In fact, Ontario is making the biggest investment in public infrastructure in its history.
- The government's long-term infrastructure plan to invest about $190 million over 13 years, starting in 2014–15, will contribute to the growth of the economy.

DRAFT

- These investments will not only create jobs, support business innovation and draw investors from abroad — they will also contribute to the growth of the provincial economy at a faster rate than the change in its net debt.
- The positive impact of these capital investments on the province's economy was confirmed by the Centre for Spatial Economics.
- It recently reported that, over the long term, GDP in Ontario increases by up to $6 for every dollar of public infrastructure spending.
- The government's economic strategy was further supported in a report by the International Monetary Fund in June 2016, which recommended that Canadian "fiscal policy should be pro-growth."
- Christine Lagarde, the International Monetary Fund's Managing Director, expressed her support for the government's growth strategy and agreed that investment in infrastructure should be an essential element.
- In summary, Ontario's net debt-to-GDP ratio will gradually diminish due to the GDP increasing at a faster rate than net debt.
- This will allow the government to continue to move towards its 27 per cent net debt-to-GDP target.

Interest on Debt-to-Revenue Ratio:

- Another major thrust of Ontario's plan to manage its debt centres on the interest on debt-to-revenue ratio.
- This is another key indicator of the government's ability to meet its financial obligations.
- Through prudent and cost-effective debt management, the government has consistently kept interest on debt costs below budget projections.
- The 2016–17 Public Accounts show that Ontario's deficit for the last fiscal year was $991 million — $3.3 billion lower than projected in the 2016 Budget and half a billion lower than the interim deficit projection in the 2017 Budget.
- This smaller-than-projected deficit is due to stronger revenues, and reflects positively on the debt-to-revenue ratio.

DRAFT

- Ontario's interest on debt for 2017–18 is forecast to be $12.2 billion.
- The interest on debt-to-revenue ratio is forecast to be 8.2 per cent in 2017–18, 8.3 per cent in 2018–19 and 8.4 per cent in 2019–20.
- The savings on interest on debt have improved a key measure of the affordability of debt.
- For example, the 2010 Budget forecast that, by 2017–18, the Province would have to spend 11.3 cents of every revenue dollar received on interest.
- By the 2017 Budget, the amount needed for interest payments had dropped significantly.
- The current forecast is 3.1 cents lower — 8.2 cents of interest costs for every dollar of revenue.
- This ratio is lower than it was in the 1990s and 2000s, and is forecast to remain lower through Ontario's outlook period to 2019–20.

Term Extension on Debt:

- Finally, record-low interest rates have enabled the government to keep its annual interest expense steady.
- However, the global decline in interest rates over the last 25 years could not continue indefinitely.
- The Bank of Canada has increased interest rates — twice last year and already once this year.
- Ontario has taken necessary precautions to protect the financing of the province's public services, now that interest rates are widely understood to be on a net rising trajectory.
- To protect the province from these increases, the government has continued to extend the term of its debt.
- Term extension has allowed the government to lock in low interest rates for a longer period, which reduces refinancing risks.
- Extending the term also helps offset the impact of expected higher interest rates on interest on debt costs.

DRAFT

- Going back to the beginning of fiscal 2010–11, Ontario has issued $68.6 billion in bonds longer than 30 years to lock in low rates.
- As a result, the weighted-average term to maturity of long-term provincial debt issued has been extended significantly, from 8.6 years in 2008–09 to 13.9 years in 2016–17.
- For 2017–18, it stood at 12.8 years as of October 31, 2017.
- If or when interest rates continue to rise, the government will assess whether it will remain cost-effective over the long term to continue to extend the term of its debt.

Conclusion:

- As I said at the outset, the Ontario government has a track record of responsible fiscal management and remains committed to executing its goal of reducing the provincial debt burden.
- To conclude, the government's plan to manage the debt focuses on three key areas:
    - One, decreasing the net debt-to-GDP ratio.
    - Two, decreasing the interest on debt-to-revenue ratio.
    - And three, extending the term on its debt.
- As I have stated, the government has decreased the net debt-to-GDP ratio.
- In the 2017 Budget and the 2017 Fall Economic Statement, Ontario stated that the government continues to maintain a target of reducing the net debt-to-GDP ratio to its pre-recession level of 27 per cent, currently projected for 2029-2030, together with an interim target of 35 per cent by 2023-2024.
- I also explained how the government has decreased the interest on debt-to-revenue ratio.
- The 2010 Budget forecast that, by 2017–18, the Province would have to spend 11.3 cents of every revenue dollar received on interest.
- However, by the 2017 Budget, the amount needed for interest payments had dropped.

DRAFT

- The current forecast is 3.1 cents lower — at 8.2 cents of interest costs for every dollar of revenue.
- Finally, I explained how the government has taken advantage of low-interest rates and extended the term on its debt.
- The weighted-average term to maturity of long-term provincial debt issued has been extended significantly, from 8.6 years in 2008–09 to 13.9 years in 2016–17, and 12.8 years for 2017–18 as of October 31, 2017.
- In short, Ontario's economy remains strong.
- Protecting the financing of the province's public services will continue to be one of the government's highest priorities.
- Thank you.

DRAFT

LONG-FORM MEMBER QUESTION: FAIR HYDRO PLAN

DEPUTY MINISTER SCOTT THOMPSON

Question:

- What is the financial impact of the Fair Hydro Plan's electricity rate reduction on the Province's budget?

Answer:

- As Deputy Minister of the Ministry of Finance, I will speak specifically to the financial implications of the Fair Hydro Plan on the Province's budget and financial statements.

Ontario's Fair Hydro Plan

- To address issues related to rising electricity costs, especially for families and small businesses, the government announced Ontario's Fair Hydro Plan on March 2, 2017.
- As part of the plan, electricity bills were reduced by 25 per cent on average, or about $41 per month, for all Ontario residents as of July 1, 2017.
- The plan included several important measures.
- First, let me discuss the refinancing of the Global Adjustment.
- The Global Adjustment is the cost of building new electricity infrastructure in the province and maintaining existing resources.
- The majority of the province's electricity generators currently have 20-year contracts.
- Many of these generators will be able to operate past their contract term.

DRAFT

- In other words, they would still generate electricity after the upfront capital costs have been paid for by the current generation of ratepayers.
- The Government of Ontario believed that present-day consumers should not be burdened with paying for a disproportionate share of investments that provide benefits for decades to come.
- To relieve the current burden on ratepayers, and share costs more fairly, a portion of the Global Adjustment is being refinanced over a longer period.
- This is providing significant and immediate rate relief to ratepayers by spreading the cost of electricity investments over time, to better reflect the expected lifecycle of the infrastructure that has been built.
- According to estimates provided when the Fair Hydro Plan was announced, the immediate reduction in the Global Adjustment would be about $2.5 billion per year, on average, over the first 10 years.

- Second, the plan included an expansion of the Industrial Conservation Initiative or ICI.
- The ICI allows participating customers to manage their Global Adjustment costs by reducing demand during peak periods.
- Customers who participate in the ICI, referred to as Class A, pay Global Adjustment based on their percentage contribution to the top five peak Ontario demand hours over a 12-month base period.
- Ontario expanded eligibility for the ICI program by reducing the threshold from 1 MW to 500 kW.
- This measure allows small manufacturers and industrial consumers the opportunity to participate in the ICI and save on their electricity costs.

- A third component of the plan is Ontario’s rebate for electricity consumers.

DRAFT

- The government provided an eight per cent Ontario Rebate for Electricity Consumers on electricity bills, equivalent to the amount of the provincial portion of the Harmonized Sales Tax.
- This change was effective January 1, 2017.

- A fourth and important part of the plan allows future increases to hydro bills to be set by regulation.
- This enables the government to hold increases, for four years, to the rate of inflation.
- While rates will rise gradually over time, the government remains committed to avoiding sharp increases.

Assisting the Most Vulnerable Electricity Consumers

- The government has introduced other measures to help the most vulnerable electricity consumers.
- It did this by introducing legislation to enhance some existing programs or introduce new initiatives.
- In particular it enhanced the Ontario Electricity Support Program.
- The Ontario Electricity Support Program is an income-tested, application-based program that lowers electricity costs for the most vulnerable consumers.
- In practice, it provides them with a rebate directly on their bills.
- Effective May 1, 2017, Ontario increased the program by 50 per cent, meaning that single, low-income consumers would get an increase in their rebates ranging from $180 to $276 per year.
- According to the 2017 Provincial Expenditure Estimates, the program is anticipated to cost $140 million in 2017–18.
- This amount will be covered by provincial revenues.

DRAFT

- As well, as part of the plan, Ontario has enhanced the Rural or Remote Rate Protection Program, or RRRP.
- The RRRP provides a rate subsidy to rural and remote residential customers who face higher distribution costs.
- As part of the Ontario Fair Hydro Plan, the Province expanded the program to provide distribution delivery charge relief to about 800,000 customers.
- According to the 2017 Provincial Expenditure Estimates, the program is anticipated to cost $344 million in 2017–18, which will also be covered by provincial revenues.
- Ontario is also helping customers through local distribution companies.

- In October 2017, the Province launched the $100 million Affordability Fund.
- The Affordability Fund provides local distribution companies with an additional tool to help customers in need.
- Local distribution companies can use the fund to provide support to qualifying customers for energy efficiency improvements, to help them reduce their future electricity bills.
- The Affordability Fund is paid through provincial revenues.

- Finally, Indigenous communities in Ontario are also receiving assistance through the First Nations On-Reserve Delivery Credit.
- In 2016, the Ontario Energy Board engaged with First Nations, including remote communities, the distributors serving them and consumer groups.
- Following the engagement process, the board recommended to the Government of Ontario the elimination of the delivery charge for all on-reserve First Nations residential customers.
- The board also recommended removing the monthly service charge for customers of licensed distributors that charge a bundled rate.

DRAFT

- The board estimates this would provide residential customers an average monthly benefit of $85.
- According to the 2017 Provincial Expenditure Estimates, the credit is anticipated to cost $15 million in 2017–18, which will be funded by provincial revenues.

- In summary, these new measures will cost the government up to $2.5 billion over the next three years.
- The cost is about $500 million in 2017–18, based on a part-year implementation, according to the 2017 Provincial Expenditure Estimates.

Conclusion:

- Taken together, these changes are delivering the single-largest reduction to electricity rates in Ontario's history.
- For all residential consumers in the province, electricity bills have been reduced by 25 per cent on average, or about $41 per month, as of July 1, 2017.
- People with low incomes and those living in eligible rural or remote communities are receiving even greater reductions, as much as 40 to 50 per cent.
- Approximately 500,000 small businesses and farms are also benefitting from the changes.
- On-reserve First Nation residential customers of licensed distributors are getting a 100 per cent credit on the delivery line of their bills.
- Although hydro rate relief costs were additions to the fiscal framework, the government continues to project a balanced budget for 2017-18, and will provide a full update on its fiscal plan in the spring budget.

DRAFT

TIPS FOR PRESENTING AT SCOPA

Tips for Addressing Committee Members:

Note: Tips are applicable for addressing both Committee Members and media.

- When speaking be mindful of what you say – the proceedings are recorded and there's no such thing as "off the record."

- Adhere to the scripted remarks and prepared Q&As. Do not embellish and ***when in doubt, leave it out.***

    - Be sure you understand the question being asked (it's ok to ask for clarification) and Do NOT answer something you're not 100% sure of.

- If you do not have the response, you may advise Committee Members that the matter needs to be redirected to another ministry, or that you will get the requested information by saying, "I'll look into what is possible to provide."

- Be mindful of only addressing questions/issues that relate directly to the TBS.

- It is acceptable to decline to answer an unrelated question by noting that you are not clear of its relevance to TBS, and that you are prepared to address matters related to the ministry.

- If caught off guard, breathe, listen, work to understand the question, or ask for clarification.

    - Ask the questioner 'Excuse me' or 'I beg your pardon?'
    - Ask the questioner 'Can you kindly help me understand the context of the question/or what you just said?'

- If possible, use a bridging statement to get to your key message/prepared response. (See Appendix A).

- Do not offer personal opinions. Stick to the facts:

    - Leave off qualifiers like "I think" "I feel," and "I believe" which represents an opinion. To sound confident and assured, be mindful not to use qualifiers.
    - Do not use 'I assure you."

- Offer examples of success whenever possible.

Body Language, Tone:

- Be aware of how you come across. There is no benefit to being seen as defensive, argumentative, or unresponsive.

- Project an image of openness, honesty, and empathy.

- Remember to breathe deeply and speak slowly.

    - Controlling your breathing helps deal with the stress.
    - Take several deep breaths as you sit down and get organized.
    - Ahead of appearance take a few minutes in a quiet spot to breathe slowly and deeply.
    - "Super Hero Pose" – stand with your legs shoulder width apart, hands on hips, shoulders back. Do this for two minutes. It helps mentally prepare you ahead of having to speak.

- Use your hands while talking to look natural and help release anxiety. (Note palms up is a subconscious message to those looking at you that you are open and have nothing to hide)

- Avoid body language leakage—those involuntary movements that indicate you're nervous or stressed - e.g. head nodding, swallowing, and pursing your lips.

- Do not touch your face with your hands.

- Avoid repeating negative words that members use in questions. Doing so indicates you accept the negative premise.

- If you feel overwhelmed while speaking in front of an audience, recalibrate by breathing and pausing.

What-Ifs:

1. What if you don't want to answer the question, but you have to say something?

    - Offer a credible reason why you are unwilling to answer the question and identify what you prefer to discuss.

2. What if you're asked for hard numbers, and you don't have the answer?

- Explain, “I want to be absolutely precise and specific, so I will need to get back to you with the exact number”

- Words like “precise,” “specific,” and “exact” convey that the question has been taken seriously.

3. What if you don’t know the answer, but a colleague who is with you may know it?

   - If you need help from the other ADMs, open your response with ‘In a moment I’m going to call on my colleague to get into more detail about this…’ This gives the other TBS representative time to know they’ll be called upon.

   - Briefly discuss a related subject, then pass the question.

4. What if you need to pause?

   - If you have said absolutely everything you need to say, then let there be a pause.

   - Remember it’s not up to you to keep the proceedings going. That’s the Chair’s job. They may intentionally leave dead air in the hopes that you’ll jump in to fill it by saying something you hadn’t intended to.

5. What if the answer is confidential?

   - Explain that confidentiality rules must be respected, so you cannot directly address the issue at hand. (e.g.: that matter is before the courts).

6. What if it’s a question about a rumour?

   - When asked to respond to a rumour, it is best to not respond at all. Instead, state that your focus is always on fact, not rumour.

7. What if the answer is HR related?

   - Say as little as possible. Commenting on someone’s employment record in a negative context can potentially put you in legal jeopardy.

8. What if you don’t like what you’re saying?

   - Don’t feel obligated to complete a sentence or thought. Simply begin the response again.

9. What if it’s a “yes or no” question?

- Unless the question relates to a sensitive issue, skip “yes” or “no” and go right to the message that would follow.

10. What if it's an "is it possible" question?

    - Avoid speculating and tell the committee – "I'm not able to comment on something that may or may not happen."

11. What if you're interrupted mid-answer?

    - The first time, let it go. The second time, ask the Chair to be allowed to finish your thought.

APPENDIX

A. Sample Bridging Statements

1. "We find the more important issue is…"
2. "I think it would be more accurate (or correct) to say…"
3. "Let me emphasize again…"
4. "What matters most in this situation is…"
5. "While _____ is important, it's also important to remember that…"
6. "It all boils down to this…"
7. "And that reminds me…"
8. "Before we leave this subject, I need to add…"

Environmental Scan

Based on the Auditor General's 2017 Annual Report, media analysis, Hansard analysis, and the invitee list for the SCOPA session on February 28, 2018, it is anticipated that the focus of the Committee will be the following:

- **Pension asset accounting**
- **Ontario Fair Hydro Plan (OFHP) Accounting**
- **Independent Electricity System Operator (IESO) Accounting (market accounts; rate-regulated accounting; other – IESO/OPG "inappropriate expenses"; OPG compensation)**
- **Pre-Election Report**
- **Province's debt burden**

Following the release of the Auditor General's Annual Report on December 6, 2017, TBS-related issues were referenced in 41 per cent of articles, including specifically the "accounting disputes" between the Auditor General and the government, spending on government advertising, and the Auditor General's commitment to audit the IESO's consolidated financial statements. In the House, there were eight questions related to TBS issues: 50 per cent were related to the IESO/OPG "inappropriate expenses"; 25 per cent were related to government advertising; and the remaining two questions focused on the balanced budget narrative and the Pre-Election Report.

Overall, the focus on Public Accounts specifically has been limited in the media and the House alike: between September and December 2017, there were 12 mentions of Public Accounts. 50 per cent of mentions referenced "accounting rules" or the alleged existence of "multiple sets of books". Following the tabling of Public Accounts 2016-17, media coverage was limited and 80 per cent of coverage was neutral in tone.

Media Scan

Auditor General 2017 Annual Report

- **Media Events – December 6, 2017**
    - **Auditor General**
        - Overall, TBS-related issues represented 28% of the Auditor General's remarks.
        - Media questions on TBS-related issues represented 28% of all questions asked (7 out of 25)– **including on the planned audit of IESO's financial statements, government numbers vs. AG numbers being used for the PC's platform, and concerns regarding pre-election reports.**
    - **Government Response**
        - Overall, TBS-related issues represented approximately 20% of the discussion.

        - Media questions on TBS-related issues represented 20.8% of all questions asked (5 out of 24) – questions focused on government advertising and **on comments made by the Auditor General to "address significant issues without fear of push-back and reprisal."**

    - **PC Response**
        - Introductory remarks focused generally on waste and mismanagement.
        - Media questions on TBS-related issues represented 17% of all questions asked (2 out of 12) – **questions focused on the PC's use of the government's numbers in their "People's Guarantee" platform**

    - **NDP Response**
        - TBS-related issues related to 8% of the third party leader's remarks, particularly on government advertising
        - No direct mention of TBS-led chapters, **however 38% of questions (3 out of 8) focused on IESO expenditures**

- **Initial Media Coverage**
    - There were approximately 17 stories focusing on the Auditor Generals' 2017 Annual Report
    - 41% of articles referenced TBS-related issues
    - Key themes related to TBS issues include: **"accounting disputes" between the AG and the government** – and the effect it has on the balanced budget narrative, spending on government advertising, and **the AG's statement that she will audit the IESO's financial statements.**

- **Recent Media Coverage** (December 2017 – January 2018) has focused on the following key themes:
    - **The government's relationship with the Auditor General**
    - **Pre-election report**
    - **Distrust of government numbers/"two sets of books"**

Public Accounts

- **Media Coverage**
    - Media coverage was short-term (24-hours), with **80% of media coverage neutral in tone** (compared to 26% in 2016)
    - Government key messages were picked up 100% of the time
    - Balanced budget key messages were picked up in 60% of the coverage

- **Key Themes**
    - Disagreement between the government and auditor general

- Ontario's fiscal position: government debt and deficit
- The government's alleged continued dismissal of watchdogs

Pre-Election Report

- **Media Coverage**
  - On December 17, 2017, the Toronto Sun published a column by Lorrie Goldstein, "Auditor General headed for a showdown with Wynne over financial vows Liberals made in 2004" focusing on the Pre-Election Report
  - On January 24, 2018, Minister Sousa was asked by Jessica Smith Cross (QP Briefing) about the plans for the Pre-Election Report. Minister Sousa signalled that plans were uncertain at this time: "What happens is, you produce a document then you provide the pre-election report. So I have to manage this concurrently. But again, we recognize the timing and the constraints that that brings. **So I have to find other ways** to ensure that full disclosure is given to her and the other legislative, to the FAO."

Hansard Scan

Auditor General 2017 Annual Report

Following the release of the Auditor General's 2017 Annual Report, there were eight questions in the House relating to TBS issues:

- 50% (4/8) were related to **OPG/IESO "inappropriate expenses"**
- 25% referenced the FAO - one on balanced budget, one on the **pre-election report**

Public Accounts

Public Accounts were mentioned in the House at least 12 times between September and December 2017:

- 50% mention some form of "accounting rules" / two sets of books
- 42% (5/12) related to infrastructure spending
- 25% (3/12) mention FAO and AG together
- 25% regarding Fair Hydro Plan accounting
- One reference to pre-election finance report

FOIs/OPQs

There is one OPQ currently in progress with TBS related to Ontario Fair Hydro Plan accounting.

Overview	Key Issues	Key Dates	Next Steps
OPQ #700		OPQ will be formally filed on	In progress –

MPP Vic Fedeli Would the President of the Treasury Board state whether the government is in possession of an opinion from KPMG or E&Y on how the Fair Hydro Plan transaction should be recorded in the government's Consolidated Financial Statements, and further state precisely where they disagree with the Auditor General	**Ontario Fair Hydro Plan Accounting** **Relationship with the Auditor General** **Use of external advisors**	February 20, 2018	**Products:** Response to OPQ. **Notes:** Draft will be sent first week of January 2018 to OPCD to draft response. OPQ will be formally filed on February 20, 2018 TBS is the only ministry to have received this OPQ. **Next Steps:** Develop and approve response

Other Considerations

- Executive compensation (OPG, OEB, IESO)
- "Inappropriate expenses" (OPG, IESO)
- Hydro bill redesign ("$15 million")

Key Issues

Issue/Consideration	Strategy	Key Messages	Evidence
Pension Asset Accounting: Auditor General's qualified opinion	Confirm that the province will continue to follow PSAS, as always, and seek appropriate expert guidance where PSAS is silent. Highlight supporting perspectives from external consultants.	The government continues to move forward and present the province's finances fairly and accurately and in accordance with Canadian Public Sector Accounting Standards (PSAS). The government respectfully disagrees with the Auditor General's interpretation of the accounting standards, as PSAS neither requires unilateral control to record an asset, nor does it include a requirement to obtain a letter from the co-sponsor of the	• Pension Asset Expert Advisory Panel • Opinion from Deloitte LLP • Analysis Completed by EY

		plan agreeing to reduce further contributions within 12 months. The government is open to continue to discuss the matter in hopes of resolving this matter.	
IESO Accounting: **1) Market Asset Accounts** **2) Rate-Regulated Accounting** **3) AG to audit IESO's 2017 statements** 4) OPG/IESO "inappropriate expenses" 5) Peripheral: OPG Executive Compensation	Confirm that the province will continue to follow PSAS, as always, and seek appropriate expert guidance where PSAS is silent. Re-iterate government's appreciation of the Auditor General's independent review and the IESO's recent unqualified audit record.	The government welcomes the Auditor General's independent review and remains committed to assisting her office in providing its views to the Legislative Assembly. IESO's recent accounting changes are supported by the IESO's audit committee, board of directors, its independent external auditor, and by the Office of the Provincial Controller. The IESO prepares its financial statements in accordance with PSAS, and received an unqualified, or clean, audit opinion on its 2016 financial statements.	Opinion supported by: • IESO audit committee • Independent external auditor (unqualified opinion) • OPCD • Same method used by Ontario Power Authority previously
Fair Hydro Plan Accounting: "convenient/inappropriate accounting"	Highlight due diligence included in OFHP decision making, and that the accounting structure is still being finalized. Refuse to speculate about AG's potential future audit opinion.	The province will continue to prepare its consolidated financial statements in accordance with Public Sector Accounting Standards (PSAS).	• PSAS Guidance • CPA professional code of conduct • External advisors • Other jurisdictions

	Emphasize that the province will continue to follow PSAS, as always, and seek appropriate expert guidance where PSAS is silent.	The proposed accounting for the Ontario Fair Hydro Plan (OFHP) reflects the economic substance of the transaction by differentiating costs borne by taxpayers versus those borne by ratepayers. PSAS is silent on a key accounting issue regarding the OFHP – the standards neither explicitly permit, nor prohibit, the recognition, measurement, presentation, or disclosure of rate-regulated activities. In the absence of a clear position on an issue, standard accounting practice dictates that an entity should consult other accounting standards. The professional staff has appropriately applied this guidance in assessing the accounting for the Ontario Fair Hydro Plan.	
Pre-Election Report: "government should publicly communicate if and when"	Re-iterate the government's commitment to working with the Office of the Auditor General. Confirm that the government will, as always, continue to follow the relevant legislation.	Under the *Fiscal Transparency and Accountability Act, 2004*, the government may file a regulation that would require it to release a Pre-Election Report on Ontario's Finances. Should the government file such a regulation, the Auditor General would be required to issue a statement based on a	• Highlight how the government has been working with the Office of the Auditor General (stated by Minister Sandals in a Dec 16, 2017 Toronto Sun article)

		prompt review following the release of such a Pre-Election Report. The government remains committed to meeting the legislative requirements of the Act, and working constructively with the Auditor General.	
Debt Reduction Plan: "Ontario has the highest sub-sovereign debt in the world"	Re-iterate government's track record of responsible fiscal management and provide high-level overview of debt reduction plan.	The government's long-term infrastructure plan to invest about $190 billion over 13 years, starting in 2014-15, will contribute to the growth of the economy. The Centre for Spatial Economics found that for every $1 spent on public infrastructure, GDP increases by up to $6, on average, in the long term.	• C4SE study • MOF
"Legislated Accounting"	Emphasize that the province will continue to follow PSAS, as always, and seek appropriate expert guidance where PSAS is silent. Provide example of the only time legislated accounting was used; explain how OFHP does not legislate accounting.	The *Ontario Fair Hydro Plan Act, 2017* and its related regulations do not create accounting rules or legislate the accounting. It is important to distinguish legislating the accounting from legislating the right of the government to recover amounts from specified ratepayers in the future, which in the absence of legislation, would have been collected from specified ratepayers as the costs were incurred. The province, as always, will prepare its	• Example of single use of legislated accounting (Public Accounts 15-16)

		consolidated financial statements in accordance with PSAS, including the transactions resulting from Ontario's Fair Hydro Plan.	
Use of External Advisors: Perception that the government looks to external advisors to circumvent the Auditor General	Confirm that the province seeks external expertise when appropriate as a normal course of business.	The government's use of external expertise for accounting and financial reporting matters supplements its own resources on complex or emerging accounting and reporting matters. External advisors are generally engaged to provide advice and guidance to supplement internal analysis, and in the normal course of business.	• CPA professional code of conduct
FOI/OPQ/Records Disclosure			

Questions & Answers

Top Questions*

1. How do you respond to the Auditor General's recommendation that the government should record valuation allowances to offset the net pension assets recorded from the Ontario Teacher's Pension Plan and the Ontario Public Sector Employee's Union Pension Plan until you receive formal written authorization from their pension plan co-sponsors?

2. How do you respond to the Auditor General's recommendation that the government remove the Independent Electricity System Operator's (IESO) market accounts from the province's consolidated financial statements?

3. The government has received a second qualified audit opinion on its Public Accounts – this time based on two separate issues. Why do you continue to disagree with the Auditor General?

4. The Auditor General says that you anticipated the government would receive a qualified audit opinion – and accepted this risk. In the private sector this would be unacceptable. How do you figure you can get away with this?

5. Will the government implement the recommendations in the Auditor General's Special Report on the Fair Hydro Plan?

6. The Auditor General says that she has consulted with all of the Auditor Generals in Canada – and they agree with her assessments. How are we supposed to believe this government when all legislative auditors in the country say you are wrong?

7. Why does the government use external advisors/consultants? It seems convenient that whenever you disagree with the Auditor General, you turn to consultants to justify your accounting methods.

8. The Auditor General says that the IESO's use of rate-regulated accounting is inappropriate. Why has the government allowed the IESO to adopt this accounting method that she says is not in accordance with PSAS?

9. Are you concerned that the Auditor General will issue an adverse opinion on the province's next Public Accounts due to Ontario's Fair Hydro Plan accounting? What would be the impact on the province's credit rating?

10. Why has the government legislated accounting for things like Ontario's Fair Hydro Plan? Aren't you just changing the rules to suit your needs?

11. When will the government issue a regulation confirming the source of reference for the Pre-Election Report and the timeline for issuance of the report that will be subject to the Auditor General's review?

**See appendix A for a full list of QAs.*

Long-Form Answers

1. **Why did the government choose to recognize pension assets from the Ontario Teacher's Pension Plan and the Ontario Public Sector Employee's Union Pension Plan? What evidence and processes were used to support this decision?**

2. **Why did the Treasury Board Secretariat accept the IESO's recognition of market accounts on the province's consolidated financial statements? Is there any precedent for this?**

3. **Can you explain when and how the Treasury Board Secretariat looks to other accounting methods to support the preparation of Public Accounts?**

Summary of Government Responses to the Auditor General's 2017 Annual Report Chapter on Public Accounts

December 6, 2017

The government thanks the Auditor General for her recommendations, and remains committed to assisting the Office of the Auditor General in providing its independent views to the Legislative Assembly.

Below is a summary of the government's position regarding the Auditor's recommendations in Chapter 2 – Public Accounts of the Province.

Accounting for Pension Assets

The government continues to move forward and present the Province's finances fairly and accurately and in accordance with Canadian Public Sector Accounting Standards (PSAS).

Last year there was a disagreement among the Province's professional accounting staff and the Auditor General's Office on the appropriate application of PSAS regarding pension accounting. As a result, the Pension Asset Expert Advisory Panel was established to deliver independent advice and recommendations on the issue. The independent panel members concluded the Province's share of the net pension assets of both the Ontario Teachers' Pension Plan and the Ontario Public Service Employees' Union Pension Plan should be recognized in Ontario's financial statements.

After significant deliberation, Ontario confirmed that the accounting for these plans prior to 2015-16 was appropriate. This conclusion is supported by:

- The conclusions reached by an independent Pension Asset Expert Advisory Panel (the 'Panel'), established by the government to provide advice on the interpretation of PSAS with respect to the reporting of net pension assets of these two joint defined benefit plans. The Panel, comprised of accredited accounting, actuarial and legal professionals with extensive background in pension accounting and plan governance, released its report in February 2017 which supported the government's position that a valuation is not required for these two plans under PSAS. Two key findings of the Panel were: 1) there is no requirement under PSAS that any formal agreement exist between the joint sponsors regarding the timing or amount of a reduction in contributions to record an asset, as the existing agreements in place between the parties support the recognition of an expected benefit, and 2) unilateral control is not required for asset recognition; joint control with each party having the ability to deny the actions of the other sponsor, provides evidence of shared control, supporting recognition of an asset.
- An opinion from Deloitte LLP on aspects of the Province's accounting as at March 31, 2016 for the Ontario Teachers' Pension Plan. The opinion, which was dated October 2, 2016, concluded that it was permissible to recognize a pension asset under Canadian Public Sector Accounting Standards, even though the Province did not have under a unilateral right to reduce contributions. The opinion did not address the value at which the asset should be recorded.

- Analysis completed by EY as to whether any valuation allowance is required to be recorded for OTPP or OPSEUPP as of March 31, 2017. EY confirmed no valuation allowance was required for either plan.

The government continues to apply the accounting treatment of pension assets that the Province has used consistently since 2001.

IESO Market Accounts

In 2016, the Independent Electricity System Operator (IESO) began recognizing its market accounts' assets (amounts due from power distributors) and liabilities (amounts due to power producers) in its financial results. The IESO chose to recognize these markets accounts on its books for transparency reasons, as it better reflects the financial position of IESO-administered markets at year-end.

This change was supported by IESO's Audit Committee, its Board of Directors, its independent external auditor, and by the Office of the Provincial Controller. It has no impact to the Province's annual deficit, net debt or accumulated deficit.

The financial statements of IESO for the year-ended December 31, 2016 were subject to an external audit and received an unqualified (or clean) opinion.

The accounting concepts used are consistent with those used previously by the Ontario Power Authority (which was merged with IESO on January 1, 2015) in its financial statements, which was not subject to qualification from the Office of the Auditor General at that time.

IESO Rate-Regulated Accounting

PSAS is silent on the issue of rate-regulated accounting – the standards neither explicitly permit, nor prohibit, the recognition, measurement, presentation, or disclosure of rate-regulated activities.

In the absence of a clear position on an issue, standard accounting practice dictates that an entity should consult other accounting standards. This guidance for PSAS is included in section PS1150.07 from the Public Sector Accounting Standards Handbook.

In this case, IESO consulted U.S. Generally Accepted Accounting Principles (GAAP), the appropriate accounting framework that provides guidance on rate-regulated operations.

IESO made the decision to adopt rate-regulated accounting because it better reflects the economic substance of certain types of expenses that may not be directly recovered through the normal revenue requirement model.

IESO management, IESO's Audit Committee, IESO's Board of Directors, IESO's external auditor and the Office of the Provincial Controller all support the use of rate-regulated accounting by IESO.

Many entities in Canada, including Ontario Power Generation (OPG) and Hydro One use rate-regulated accounting. Rate-regulated accounting is well understood in the electricity sector, and the approach selected was taken in that context. The recognition of regulatory assets brings IESO in line with six other independent system operators in North America.

Ontario Fair Hydro Plan Accounting

In developing Ontario's Fair Hydro Plan (OFHP), the government considered a range of implementation options and consulted with legal, accounting, financial and energy sector third-party experts to provide advice and ensure due diligence was completed.

The proposed accounting for OFHP reflects the economic substance of the transaction by differentiating costs borne by taxpayers versus those borne by ratepayers.

PSAS is silent on a key accounting issue regarding the OFHP – the standards neither explicitly permit, nor prohibit, the recognition, measurement, presentation or disclosure of rate-regulated activities.

In the absence of a clear position on an issue, standard accounting practice dictates that an entity should consult other accounting standards. This guidance for PSAS is included in section PS1150.07 from the Public Sector Accounting Handbook.

This guidance has been appropriately applied in assessing the accounting for the OFHP.

The Province, as always, will prepare its consolidated financial statements in accordance with PSAS, including the transactions resulting from OFHP.

Legislated Accounting

The Province is committed to providing high-quality financial reports that support transparency and accountability in reporting to the public, the legislature, and other users.

For the 2015-16 Public Accounts, the government passed a time-limited regulation prescribing the accounting treatment for certain net pension assets in order to allow Treasury Board Secretariat and the Ministry of Finance officials to sign off on Public Accounts consistent with the fiscal impact of the Auditor General's interpretation of Public Sector Accounting Standards (PSAS). This regulation is the **only** example of where the accounting treatment was legislated, and the legislation did not align with the requirements of PSAS.

The *Ontario Fair Hydro Plan Act, 2017* and its related regulations **do not** create accounting rules or legislate the accounting. It is important to distinguish legislating the accounting from legislating the right of the government to recover amounts from specified ratepayers in the future, which in the absence of legislation, would have been collected from specified ratepayers as the costs were incurred.

The Province, as always, will prepare its consolidated financial statements in accordance with PSAS.

STATEMENT

Treasury Board Secretariat

Statement from the President of the Treasury Board on the Auditor General's Annual Report

December 6, 2017

Today, Liz Sandals, President of the Treasury Board, released the following statement:

"We thank the Auditor General for her report, and continue to appreciate our ongoing working relationship with the Office of the Auditor General (OAG). The Treasury Board Secretariat works closely with the OAG on a wide variety of issues on a regular basis, and her oversight and insight is welcomed both during our regular interactions and with this annual report.

The Auditor General mentions a number of topics that represent ongoing conversations between government and her office; for instance, the accounting practices regarding pension assets and the application of the United States Generally Accepted Accounting Principles when the Public Sector Accounting Board's standards are silent. The government's position on these differences of opinion has not changed.

We agree with the Auditor General's comments on the importance of accountability for agencies, boards, commissions and other broader public sector entities. Since 2010, our government has implemented a number of important measures to strengthen broader public sector and provincial agency accountability, transparency and governance. Our recent Fall Economic Statement, if passed, responds to the recommendations of the Auditor General in her 2015 Annual Report to streamline administration and establish consistency in the tabling and communication of provincial agency annual reports. However, we know that making process changes to annual reports may not be the complete solution. We will continue working with the OAG to enhance oversight and ensure accountability across all of our agencies.

We share the Office of the Auditor General's belief that the Auditor General has an important role to play in the oversight of government advertising, and that's one of the reasons that we are proud that Ontario is the only jurisdiction in Canada to have legislation in place to ensure that oversight. In fact, we have recently expanded her oversight to include digital advertising.

We know that the government has a responsibility to communicate to the public it serves, and that advertisements are one medium through which we can do that. For example, our Sexual Violence and Harassment prevention campaign – #WhoWillYouHelp challenged existing attitudes, and sparked international discussion. Our video was viewed over seven million times in the first 10 days, and generated more than 85 million views worldwide. And within 6 months, we had measurable results – 55 per cent strongly agreed they had an obligation to intervene when witnessing sexual harassment, up from 37 per cent.

As the President of the Treasury Board, I am committed to leading the government's efforts on accountability, openness and modernization, while working to deliver good government and public services in the most effective and efficient way possible. As part of this commitment, we work side-by-side with our partners, including the Auditor General, throughout the year to ensure that we continue to become more efficient in our processes and more open and

accountable as a government.”

Lawvin Hadisi, Minister’s Office, 416-326-3839
Bryant Sullivan, Communications, 416-325-1378

CONFIDENTIAL REVISED: January 10, 2018

ONTARIO'S FAIR HYDRO PLAN ACCOUNTING (GLOBAL ADJUSTMENT REFINANCING)

ISSUE: What is the basis for the proposed accounting for the Global Adjustment Refinancing on the Province's books?

CONTEXT:

- The Global Adjustment Refinancing is one component of Ontario's Fair Hydro Plan announced in March 2017, and is the most significant contributor to the reduction in hydro rates for residential consumers.
- The other parts of the Plan for residential consumers include:
  - Expansion of the Ontario Electricity Support Program;
  - Reductions in distribution rates for consumers in rural and remote areas;
  - Reductions for First Nations residential consumers living on-reserve; and,
  - A fund set up to assist consumers in making their homes more energy efficient.
- The only impact on the 2016-17 consolidated financial statements from Ontario's Fair Hydro Plan is related to the fund set up to assist consumers in making their homes more energy efficient, which was expensed in the year and increased the annual deficit. In addition, the 8 per cent rebate on electricity bills, introduced as of January 1, 2017, while not part of the March 2017 announcement, also impacted the 2016-17 consolidated financial statements as an expense that increased the annual deficit.
- The implementation of OFHP is ongoing, with significant decisions with accounting and financial implications still being finalized. The government will present the Province's finances in the 2017-18 Public Accounts fairly and accurately and in accordance with Public Sector Accounting Standards (PSAS).

KEY MESSAGES:

GA Financing Status and Structure

- In order to meet the needs of users, including the legislature and the public, for accountability in government reporting and decision making, it is essential that public sector financial statements reflect the economic substance of the government's activities.
- All of the agreements necessary for the Global Adjustment (GA) Refinancing will be finalized in the current fiscal year. The final accounting for the GA Refinancing will be completed once all of the elements are complete. The balance of the note is based on the expected outcome. As previously noted, there was no impact on the 2016-17 consolidated financial statements from the GA Refinancing.
- In analyzing the appropriate accounting treatment for the GA refinancing component of Ontario's Fair Hydro Plan on the Province's consolidated financial statements in 2017-18 and going forward, the Province considered authoritative guidance issued by the Public Sector Accounting Board, as well as the accounting assessments of the Independent Electricity System Operator (IESO) and Ontario Power Generation (OPG) management, including the accounting opinions of their external auditors.
- The complexity and unique structure of the GA Refinancing structure requires the use of professional judgment to ensure that key financial reporting objectives of transparency and accountability are best served.
- Under GA Refinancing, as enabled by the Ontario Fair Hydro Plan Act, 2017 ("OFHPA"), a Financing Entity established by Ontario Power Generation will borrow amounts to fund the payment of a portion of electricity costs charged by the electricity generators, thereby temporarily reducing the amount paid by eligible consumers (or ratepayers). The deferred amounts, including interest and other costs, will be recoverable from consumers/ratepayers in the future.

- The Independent Electricity System Operator (IESO), an independent, not-for-profit agency of the Province, is responsible for the management and operation of the wholesale electricity market. IESO makes payments to the electricity generators with cash received from the local distribution companies (and ultimately the consumers/ratepayers).
- Over the last 10+ years, investments have been made to phase-out coal and modernize Ontario's electricity system (i.e., build and maintain a reliable electricity system). This involves a move away from coal to cleaner, but more expensive methods of electricity generation, including wind, solar and natural gas. The cost of these investments were passed on to consumers/ratepayers as incurred or based on contractual payment terms, but not based on the period of benefit (i.e., the life of many generators is expected to exceed the length of the contracts).
- The GA refinancing acknowledges that the current generation of electricity consumers has paid more than its fair share for these costs, and spreads these costs incurred out over more years so they are shared proportionally by future electricity consumers.
- In simple terms, the IESO will continue to make payments to the electricity generators based on their contractual terms, but will collect less from the local distribution companies, as the consumers or ratepayers will pay a reduced amount. The amount not collected from the consumers now, or the shortfall, will be collected from consumers/ratepayers in the future.

- OFHPA permits the IESO to sell that shortfall, also referred to in the Act as a regulatory asset, which represents the right to collect payments from consumers/ratepayers in the future, to a financing entity. To recap, the IESO will continue to pay the electricity generators at their current contract rates. But it will do this with cash collected from the local distribution companies for electricity consumed (at a rate set by the OEB which reflects a significant portion of the 25 per cent reduction in the initial years) and cash received from the financing entity for the sale of the regulatory asset.
- The financing entity will be part of Ontario Power Generation (OPG Trust), a government business enterprise, wholly owned by the Province. The operations of Ontario Power Generation have been and will continue to be included in the consolidated financial statements of the Province using the modified equity method, the method Public Sector Accounting Standards (PSAS) require for government business enterprises.
- At its discretion, OPG Trust will purchase the shortfall amounts (or regulatory asset) from the IESO through a combination of provincial borrowing (flowed through OPG as an equity investment), amounts advanced from OPG and direct borrowing from capital markets.
- In the future, when the consumers/ratepayers pay for the deferred amount, those amounts will be used to repay the accumulated debt whether that be direct borrowing from the capital markets, amounts advanced from OPG or provincial borrowing.

IESO Accounting

- There was no impact on the 2016 financial statements of IESO from the GA Refinancing. The GA refinancing is expected to impact the 2017 financial statements.

- In 2017, the shortfall or regulatory asset that IESO incurs as a result of collecting less from the local distribution companies than it pays to the electricity generators would be accounted for as a rate-regulated asset. The rate-regulated asset would then be sold to OPG Trust for cash used to pay the electricity generators.
- For 2016, IESO adopted the use of rate-regulated accounting for costs incurred unrelated to the GA Refinancing; however, the impact to the financial statements of the Province was immaterial (impact on annual deficit of $24 million).
- PSAS is silent on the use of rate-regulated accounting. However, like all major accounting frameworks, PSAS encourages both preparers and auditors to consider guidance in other accounting frameworks when accounting for transactions not specifically addressed by the specific standards.
- IESO management, their audit committee, their board of directors and their external auditors, agree with the adoption of rate-regulated accounting by IESO. The Office of the Provincial Controller also supports the adoption of rate-regulated accounting by IESO.
- IESO is not the first entity that has prepared its financial statements using PSAS and rate-regulated accounting. Ontario Power Authority (which was amalgamated with IESO on January 1, 2015) prepared its financial statements with PSAS and used rate-regulated accounting.
- In the Auditor General's opinion on the 2016-17 consolidated financial statements of the Province, the AG has included an "Other Matter" paragraph, drawing attention to the adoption of rate-regulated accounting by IESO. The AG's view is expressed as stating PSAS does not permit rate-regulated accounting, but that the AG has not qualified the opinion on this matter because the impact is not material to the 2016-17 consolidated financial statements.

- The AG further notes, “However, the consolidated financial statements may become materially misstated in future periods, as a result of the legislated accounting prescribed under the Ontario Fair Hydro Plan Act, 2017 (OFHPA) and its related regulations, as it is not in accordance with Canadian public sector accounting standards.”
- Neither the IESO nor the Office of the Provincial Controller Division (OPCD) agree with the statements that (a) PSAS does not permit rate-regulated accounting (as previously noted, PSAS is silent with respect to rate-regulated accounting) or (b) Fair Hydro Plan and its related legislation and regulations legislate the accounting for GA Refinancing.

OPG Accounting

- The Auditor General has not raised any concerns to date with the intended accounting for the OPG Trust on the Province’s books.
- It is expected that OPG Trust will be controlled and consolidated by OPG.
- Purchases by OPG Trust of the rate-regulated assets from the IESO will be reflected on OPG’s books as intangible assets which will be included in the Province’s financial statements as part of its investments in government business enterprises.

The Province’s Accounting

- In assessing the appropriate accounting for Ontario’s Fair Hydro Plan (OFHP) on the Province’s books, OPCD worked closely with key ministries, the Ontario Energy Board (OEB), IESO, OPG and their respective external advisors.
- The final accounting treatment for OFHP-related activities will be confirmed once all elements of the GA Refinancing framework are finalized, including provincial guarantees and financing arrangements.

- Once the details and commercial agreements of the OFHP are finalized, the external auditors of IESO and OPG are expected to provide independent accounting opinions on the accounting treatment on IESO and OPG's financial statements.
- OPCD will rely on those independent accounting opinions, the audited financial statements of IESO and OPG as of December 31, 2017 and its own research and analysis in determining the impact of the GA Refinancing on the 2017-18 consolidated financial statements.

If Pressed: AG Assertion that the Government is Using Legislated Accounting

- The Auditor General has made several incorrect references to legislated accounting which should be addressed to ensure clarity and transparency in terms of the government's accounting treatment for Ontario's Fair Hydro Plan.
- In particular, the Auditor General has referred to legislated accounting prescribed by the OFHPA that is designed to in some way manipulate the Province's financial reporting in its consolidated financial statements.
- The Province's financial statements are based on Public Sector Accounting Standards (PSAS) as issued by the Public Sector Accounting Board of CPA Canada. There is no legislated accounting that applies to the Province's consolidated financial statements.
- While the OFHPA does, under Section 24, require that IESO set up a variance account to track the cash shortfall amount resulting from the deferred recovery amount, it is just another type of regulatory account, similar to those that OPG reports and for which the OEB is responsible for approving rates.

- As far as the Province's financial reporting practices go, whether the deferred amounts reported in IESO's variance account are assessed as assets for financial reporting purposes will be determined by the interpretation and application of Public Sector Accounting Standards, not by the legislation or regulations.

Auditor General's Special Report on the Fair Hydro Plan

- The Office of the Auditor General released *The Fair Hydro Plan: Concerns about Fiscal Transparency, Accountability and Value for Money* on October 17, 2017. The report focused on the financial and accounting framework of the OFHPA.
- The Auditor General said that the accounting for the Fair Hydro Plan is not permitted under PSAS because it is silent on rate-regulated accounting, despite the fact that standard accounting practice, including under PSAS, dictates that an entity should consult other accounting standards for transactions not specifically covered by primary standards.
- The Auditor General asserts in her report that the OFHPA creates an asset through legislation. This is a fundamental disagreement the government has with the Auditor General's report. The Province will prepare its consolidated financial statements in accordance with Public Sector Accounting Standards (PSAS).

Key Messages on AG's Special Report on the Fair Hydro Plan

- The government respects independent officers of the legislature, and values the important perspective they bring, but does not agree with the assertions and conclusions expressed in the Auditor General's Fair Hydro Plan report.
- The government has a strong track record of producing high-quality financial reports on a timely basis and continues to present the province's finances fairly and accurately and in accordance with Canadian Public Sector Accounting Standards.

- In developing the Fair Hydro Plan, the government considered a range of implementation options and consulted with legal, accounting, financial and energy sector third-party experts to provide advice and ensure due diligence was completed.
- The Fair Hydro Plan operates under a financial and accounting framework that is appropriate for the intended purpose. It is in accordance with Public Sector Accounting Standards and ensures the goals underlying the program are achieved in a cost-effective manner.
- PSAS are principle based -- they are not a set of specific prescriptive rules. Applying them requires the application of professional judgment. While we expect professional accountants to agree on the vast majority of issues, we acknowledge that they may not agree on everything. When that occurs, and the difference is material to the financial statements, the Office of the Auditor General can choose to issue a qualified audit opinion.
- The financing plan and its impact will continue to be transparent and fully available to credit rating agencies, securities regulators, and the public.
- The Ministry of Energy, the Ministry of Finance, and the Treasury Board Secretariat remain committed to assisting the Office of the Auditor General in providing its independent views to the Legislative Assembly.

RECENT MEDIA COVERAGE:

- January 12, 2018 – An opinion piece in the Toronto Star argues Kathleen Wynne faces a phantom opponent in the spring election: Ontario's auditor general, who looms like an accounting apparition over the premier. The article notes, Lysyk isn't just picking fights with Liberal cabinet ministers but clashing with Ontario's non-partisan public service as well as outside consultants. The most awkward contretemps took place a year ago, when an expert panel of accounting and actuarial experts shredded the auditor's claims about the government cooking the books.
- January 4, 2018 – The Brighton Independent covers Liberal MPP Lou Rinaldi's plans for re-election, while making reference to the "issues" the government has with the Auditor General, particularly on pension asset and Fair Hydro Plan accounting.
- January 3, 2018 – The CBC runs an article "No quick fix for Ontario's energy woes, electricity analyst says," noting the criticisms from opposition parties and analysts regarding the accounting of the Fair Hydro Plan.

- December 17, 2018 – The Ottawa Sun's Lorrie Goldstein writes that "independent financial officers say Wynne government's books can't be trusted," noting the Auditor General and FAO's concerns regarding Fair Hydro Plan accounting: "In her Dec. 6 annual report, Lysyk warned "there is a very real risk" the "government's continued use of nonstandard accounting" will "seriously distort the true state of the province's finances...The government uses these incorrect accounting treatments to claim it has balanced the province's books, but in reality, legislators, the financial community and all Ontarians will be misled as to the true condition of the province's finances." In its fall economic and fiscal outlook released last week, the FAO warned, "since the government has not adopted the Auditor General's recommended accounting for both the Fair Hydro Plan and net pension assets, it is becoming more difficult for legislators and the public to assess the government's fiscal projections."
- December 13, 2017 – The Toronto Sun runs a comment piece following from the Financial Accountability Office's fiscal and economic outlook, fall update report, entitled "Liberals hiding deficit, second watchdog says," noting the Auditor General and FAO's criticisms of the accounting for the Fair Hydro Plan.
- December 11, 2017 – The Toronto Star's Robert Benzie covers the Financial Accountability Office's fiscal and economic outlook, fall update report, noting the FAO's agreement with the Auditor General's questioning of the accounting of the Fair Hydro Plan: "The FAO also backed the auditor general in questioning the complex mechanism the government has developed to bankroll the 25 per cent electricity rate cut, known as the Fair Hydro Plan. Because of the actuarial tussle "it is becoming more difficult for legislators and the public to assess the government's fiscal projections.""
- December 11, 2017 – The Canadian Press' Shawn Jeffords also covers the FAO's report, noting: "The FAO said in its report that since the government has not adopted the auditor's recommended accounting for both the pension assets and the Fair Hydro Plan it is becoming more difficult for legislators and the public to assess the government's fiscal projections."
- December 6, 2017 – The Canadian Press and other outlets cover the Auditor General's 2017 Annual Report, noting the accounting disagreements between the Auditor and the government: "Lysyk also announced through her report that her office would be auditing the IESO's books. That comes amid one of two accounting disputes the auditor has been engaged in with the Liberal government. She recently accused the government of purposely obscuring the true financial impact of its 25 per cent cut to hydro bills by keeping billions in debt used to finance that plan off the province's books. Lysyk said she will audit the IESO because of its role in the hydro plan's complex accounting scheme."
- November 2, 2017 – The Waterloo Region Record runs an editorial by analysts from the Fraser Institute entitled, "Ontarians in the dark about Fair Hydro Plan." The piece argues: "Ontario needs real reform to lower electricity prices for residents and businesses. Unfortunately, the provincial government is opting for improper accounting practices and temporary solutions, sticking current and future Ontarians with the bill."
- October 26, 2017 – CBC writes that "Ontario hydro bills to rise over next 10 years in government's energy plan," referencing the Auditor General's report on Fair Hydro: "Ontario's auditor general Bonnie Lysyk found that the Liberals concocted a "needlessly complex" system in order to achieve the savings in the Fair Hydro Plan by moving $26 billion of debt off the government's books […]Thibeault said the accounting isn't deceptive, and that similar financing strategies have been used throughout Ontario history, including for the construction of nuclear plants in the 1970s."
- October 25, 2017 – The Toronto Sun runs a column by Ben Eisen, director of the Fraser Institute's Ontario Prosperity Initiative entitled "Number's up for Wynne's government," writing "But regardless of how pension assets should be treated, or how new debt incurred by the government's Fair Hydro Plan should appear on the books, the stark reality is that Ontario taxpayers are carrying far more public debt than a decade ago and that burden is growing quickly, every year."

- October 24, 2017 – CBC references the Auditor General's report on Fair Hydro, writing "Auditor General Bonnie Lysyk criticized how the program is being financed, saying the province is "improperly" accounting for the $26 billion in debt it's taking on to cut hydro bills in the short term. The Liberals called the controversy an "accounting dispute" with the auditor."
- October 23, 2017 – Global News reporter Alan Carter wrote an analysis on "truth" and Fair Hydro. He wrote, "The war between Lysyk and the Liberals is whether the Fair Hydro Plan and its use of Ontario Power Generation as a debt vehicle is a sign of devious politicking or just the way things get done."
- October 23, 2017 – The Peterborough Examiner carried an opinion piece written by Minister of Energy, Glenn Thibeault. "I'm not surprised to see the Conservatives try to get in the middle of an accounting dispute between the government and the Auditor General for personal political gain. It's how they deflect without putting forward any policy ideas of their own."
- October 22, 2017 – The Toronto Sun's Antonella Artuso wrote that the way the Liberals "hid" the cost of its Fair hydro Plan from taxpayers could raise concerns that other governments across the country could follow suit and bury deficits.
- October 22, 2017 – The Toronto Sun's opinion piece says the Fair Hydro Plan is simply 'long-term pain for short-term gain".
- October 19, 2017 – CBC's Mike Crawley writes about the Auditor General's accusations that the government was trying to hide documents from her investigation. Crawley writes that the Progressive Conservatives have made a request to the province's "top public servant to ensure that all relevant documents and emails are saved."
- October 18, 2017 – CTV News (6pm) includes the Progressive Conservative's reaction to the Fair Hydro report: "opposition calls for resignations of ministers of finance and energy after AG report."
- October 18, 2017 – QP Briefing's Jessica Smith Cross highlighted that the $4 billion figure cited by the Auditor General and the Financial Accountability Office that would be wasted due to the government's "needlessly complex" financing structure for Ontario's Fair Hydro Plan was said 21 times by opposition parties during Question Period that morning.
- October 18, 2017 – The Globe and Mail's Justin Giovannetti (A9) highlights the Auditor General's Fair Hydro report. The article includes a quote from Minister Sandals: "Perhaps the essential accounting dispute that we have with the auditor is a dispute over what happens when the Canadian Public Sector Accounting Standards are silent, when they don't give direction,' Ms. Sandals said. 'We keep running into this problem because, quite frankly, Ontario is the biggest province, and we often have bigger projects and do things a bit differently from all the smaller provinces.'"
- October 17, 2017 – The CBC's Mike Crawley covers the Auditor General's report, writing "The auditor says the plan could also result in Ontarians paying "up to $4 billion more than necessary" in interest. That's because OPG will be required to pay higher interest rates than the province would if the government took on the debt directly."
- October 17, 2017 – The Toronto Star's Robert Benzie also focused on the Auditor General's so-called scathing report on Ontario's Fair Hydro Plan, while acknowledging the historical dispute between the Auditor's Office and the government.
- October 17, 2017 – The Ottawa Citizen's David Reevely continues with key themes in the coverage, also writing: "The Liberals really, really, really wanted to keep that debt off their books, so they could also go into the next election saying the provincial budget is balanced. Borrowing billions in an election year would get in the way. So they did some advanced financial engineering to put the debt on Ontario Power Generation instead."

- October 17, 2017 – The Canadian Press' Allison Jones cites the Auditor General's statements, and includes Minister Sandals' rebuttal on the point of asset accounting: "Treasury Board President Liz Sandals said credit rating agencies are ranking the hydro debt in preparation for selling it. 'That's the difference,' she said. 'Somebody actually wants to buy it, ergo it is an asset.'"
- October 17, 2017 – QP Briefing provided a primer on the report, and pointed to the Auditor General's criticism of the government on the alleged willingness to accept a qualified audit opinion for the province's Public Accounts.
- October 17, 2017 – The Auditor General's report and remarks during the media conference were extensively covered across the media. Coverage consistently cited the key themes in the Auditor General's report, highlighting the "needlessly complex" accounting structure, "improper accounting," and the "anticipated $4 billion more in interest payments than if the province had borrowed the funds directly."
- October 17, 2017 – The Toronto Sun's Antonella Artuso featured an overview of the Fraser Institute's report released in the morning, arguing that "Soaring electricity prices resulted in 75,000 fewer manufacturing jobs for Ontarians since the recession".
- October 17, 2017 – The Office of the Auditor General held a media conference for the release of The Fair Hydro Plan: Concerns about Fiscal Transparency, Accountability and Value for Money.
- October 17, 2017 – CBC News reports that today Auditor General Bonnie Lysyk will reveal the results of her investigation into the government's Fair Hydro Plan. The report will look at how the rate cuts are financed and whether the plan is fair for taxpayers and hydro customers. Auditor Lysyk has already told a legislative committee in May that to borrow the money on OPG's books rather than the province's is "contrary to public sector accounting standards."

Proposed Legislated Transaction Structure

Prepared by the Office of the Auditor General of Ontario

CONFIDENTIAL REVISED: January 5, 2018

PENSION ASSET EXPERT ADVISORY PANEL

ISSUE: How do you respond to the reports released by the Pension Asset Expert Advisory Panel?

KEY MESSAGES:

- The Pension Asset Expert Advisory Panel has released its independent advice and recommendations on how public sector accounting standards are interpreted as they apply to current and potential future net pension assets.
- The panel's first report concluded that the province's share of the net pension assets of both the Ontario Teachers' Pension Plan and the Ontario Public Sector Employees' Union Pension Plan should be recognized in Ontario's financial statements.
- The panel supports the accounting treatment that Ontario has used consistently since 2001.
- The panel has also issued a supplemental report that provides independent advice and recommendations on how to account for potential future net pension assets related to the Healthcare of Ontario Pension Plan and the Colleges of Applied Arts and Technology Pension Plan.
- The government has accepted the panel's recommendations and in the 2016-17 third quarter update, it indicated its plans to adopt the previous accounting treatment in the upcoming Public Accounts.
- The government has reflected the recommendations of the panel, which align with its previous accounting in the 2017 Budget, the 2016-17 Public Accounts and the 2017 Fall Economic Statement.

- The government formed the Pension Asset Expert Advisory Panel to provide independent advice on how public sector accounting standards are interpreted as they apply to current and potential future net pension assets. The panel members have expertise in the areas of jointly sponsored pension plan governance, actuarial modelling for pension plans and public sector accounting standards.
- We will continue to move forward and present the Province's finances fairly and accurately, which includes reporting for jointly sponsored pension plans in accordance with Public Sector Accounting Standards and the panel's recommendations.
- We also remain on track to balance the budget this fiscal year as well as in 2018–19 and 2019–20.

IF PRESSED: SUPPLEMENTAL REPORT HOOPP & CAATPP

- We thank the panel for their independent advice and recommendations made in relation to the Healthcare of Ontario Pension Plan and the Colleges of Applied Arts and Technology Pension Plan.
- The two additional pension plans addressed in the supplemental report are different than OTPP and OPSEUPP because they are jointly sponsored by multiple organizations. The Ontario Government is a third party sponsor and has no direct control over decisions of the employer sponsors about benefit or contribution levels, funding of deficits or use of surpluses. Because of these differences, a valuation allowance will be recorded for any net assets of these plans until the government benefits from a reduction in contributions.
- The Ontario Government agrees with the panel's conclusions in the supplemental report.

CURRENT STATUS:

- December 20, 2017 – the Treasury Board Secretariat (TBS) has been called to appear before the Standing Committee on Public Accounts (SCOPA), to review Chapter 2 – Public Accounts of the Province (Volume 1 of the 2017 Annual Report of the Office of the Auditor General of Ontario). In addition to officials from TBS, requests to attend were issued to officials from Cabinet Office, the Ministry of Finance, the Ontario Financing Authority, the Ministry of Energy, the Independent Electricity System Operator and Ontario Power Generation. Attendees will be required to provide the committee with a response to the Auditor General's report, and to answer any questions the committee members may have. Hearings are scheduled for February 28, 2018.
- As per Standing Order 108(h), the SCOPA is empowered to review and report to the House its observations, opinions and recommendations on the Report of the Auditor General and the Public Accounts, which documents shall be deemed to have been permanently referred to the committee as they become available.
- The committee may meet weekly when the Legislative Assembly is sitting. With the approval of the House, it may also meet at any time when the Legislative Assembly is not sitting.
- All meetings are open to the public with the exception of those dealing with the setting of the committee's agenda and the preparation of committee reports.
- All public committee proceedings are recorded in Hansard.
- On December 11, 2017, the Financial Accountability Office released its Economic and Fiscal Outlook, Fall 2017 Update. During the media event, the FAO said "since the government has not adopted the Auditor General's recommended accounting for both the Fair Hydro Plan and net pension assets, it is becoming more difficult for legislators and the public to assess the government's fiscal projections. This has reduced the transparency and reliability of Ontario's fiscal plan."
- On December 6, 2017, the Office of the Auditor General released their 2017 Annual Report. Chapter two of the report made recommendations regarding the Public Accounts of the Province, with the first of 10 recommendations focusing on the pension asset accounting issue. From the report: "We recommend the government record valuation allowances to offset the net pension assets it has recorded from the Ontario Teachers' Pension Plan and the Ontario Public Sector Employees' Union Pension Plan until such time as it obtains formal written authorization from their pension plan co-sponsors that they are able to lower minimum contributions or withdraw surpluses from the pension funds within the next 12 months."
- On April 27, 2017 the Pension Asset Expert Advisory Panel's Supplemental Report was released. It provides the government with independent advice and recommendations on how to account for current and potential future net pension assets related to the Healthcare of Ontario Pension Plan (HOOPP) and the Colleges of Applied Arts and Technology Pension Plan (CAATPP).
- The panel's supplemental report concludes that a net pension asset from HOOPP and CAATPP should be recognized in the province's financial statements in the same way as the net liability, but also recommends that a valuation allowance should be reported for accrued benefit assets for both of these plans in the province's financial reports.
- The panel's report on the Ontario Teachers' Pension Plan (OTPP) and the Ontario Public Sector Employees' Union Pension Plan (OPSEUPP) was made available to the public on February 13, 2017 and did not recommend that a valuation allowance be reported for either of these two plans.
- Both reports have been shared with the Auditor General of Ontario and her office.

- In the 2017 Budget, the 2015–16 actuals were restated to reflect the government's previous accounting treatment for jointly sponsored pension plans which recognized net pension assets for the Ontario Public Service Employees' Union (OPSEUPP) and the Ontario Teachers' Pension Plan (OTPP) on the Province's financial statements. The restated results follow the advice of the panel and the accounting followed previously by the Province since 2001.
- On June 12, 2017, the Ontario Teachers' Federation and the Ontario Government, joint sponsors of the Ontario Teachers' Pension Plan (OTPP), announced they will use a portion of the $11.5 billion surplus in the Plan (as of January 1, 2017) to complete the restoration of inflation protection for teachers who retired after 2009. As well, the contribution rate for the Plan's active members will be reduced by 1.1%. Both changes are effective January 1, 2018.

COSTS

	Actuals		
Panel Member	**Per Diem**	**Travel**	**Total**
Patricia O'Malley	83,000	1,057	84,057
Uros Karadzic	62,700		62,700
Paul Martin		3,898	3,898
Murray Gold	38,000		38,000
Procurement			32,458
Total	**183,700**	**4,955**	**221,113**

BACKGROUND:

- On February 17, 2017 Minister Sandals sent a memorandum to Warren (Smokey) Thomas in response to his article of February 14, 2017 in the Toronto Sun on pension assets.

  "As you are aware, the Pension Asset Expert Advisory Panel ("Panel") released its report on February 13, 2017, and concluded that the net pension assets of both the Ontario Teachers' Pension Plan and the Ontario Public Sector Employees' Union Pension Plan should be recognized in Ontario's financial statements.

  The OPSEU pension plan, which is jointly-sponsored by OPSEU and the province, clearly states that no amount of the surplus shall be paid out of the plan to either sponsor. Simply put, the province does not have the ability to make any withdrawals from the plan.

  I trust that you are reassured by this news. Your February 14 press release and your subsequent comments in a February 15 *Toronto Sun* article, suggest that you were unaware of these rules.

  In addition, the province has not proposed any pension contribution increases or reductions at this time. Any decisions with respect to changes to pension contributions or benefits must be made by the Plan Sponsors. A decision to reduce contributions would benefit both the employees and the employer."

- On November 10, 2016 Ontario established the Pension Asset Expert Advisory Panel to provide advice and recommendations to the government on the application of public sector accounting standards to Ontario's net pension assets.

  The panel was comprised of accounting, legal, and pension experts in the areas of jointly sponsored pension plans, actuarial modelling for pension plans and Public Sector Accounting Standards.

  The following four members were appointed to the Panel:

  - Tricia O'Malley (Chair)
  - Murray Gold
  - Uros Karadzic
  - Paul Martin

Panel members also provided advice on how to value net pension assets reported on the province's books, taking into account future decisions which might be made by the plan's sponsor or sponsors.

The panel's report was delivered to the President of the Treasury Board and was shared with the Auditor General of Ontario. The panel's report was made public in early 2017.

RECENT MEDIA COVERAGE:

- January 12, 2018 – The Toronto Star ran an opinion column by Martin Regg Cohn, "Independence is not infallibility when it comes to Ontario's financial books," arguing Auditor General "Lysyk's paranoia about partisan advertising is a depressing case study on how she approaches the vital role of an auditor general, which is meant to be a check and balance on the power of government — not a grudge match grounded in distortions over picayune disputes. All's fair in politics and accounting, unless you're an auditor gone awry."
- December 17, 2017 – The Ottawa Sun's Lorrie Goldstein writes that "with less than six months to go before the June 7 election, two independent, non-partisan financial watchdogs of the Ontario Legislature say the books of Premier Kathleen Wynne's Liberal government cannot be trusted." Goldstein highlights the disagreement between the Auditor and the government on the pension asset accounting issue, also noting the expert advisory panel: "Lysyk argues the government is improperly claiming the $11.5 billion surplus in the Ontario Teachers' Pension Plan as an asset, because it cannot access these funds without the permission of Ontario's teacher unions […] In November 2016 it hired what it described as an expert, four person pension advisory panel, with a budget of up to $435,000 for salaries, excluding expenses, which in February 2017 backed the government's accounting on the teachers' pension plan."
- December 17, 2017 – The Toronto Sun's Jim Warren cautions that "the role of the Auditor General is shifting in troubling ways," arguing that the Auditor General's increasing outspoken role is "making matters worse." Specifically referencing the pension asset accounting issue, Warren writes "For the first time in 16 years, Lysyk in 2016 decided to change her office's opinion on how the Ontario government presents pension assets in the audited financial statements and fought the government's claim it had balanced the budget in 2017-18. Wynne's Liberals asked an independent expert panel to determine the appropriate accounting treatment of the pension assets and they sided with the government. Lysyk provided her advice to the government and that should have been the end of it. Instead, in her latest annual report she rehashed the same issue and has gone from proving independent oversight to being an advocate for her own position."
- December 14, 2017 – The Record runs an opinion piece, "To sort out truth from pre-election fictions, turn to Bonnie Lysyk," writing that the Auditor General "warned that the Liberal government is making its financial position look rosier than it really is in part because it has counted as government assets two pension plans, including the plan of Ontario's teachers. That's extremely sketchy accounting practice. The teachers' pension plan is an independent organization and not owned by the provincial government. For the government to claim it as an asset is as dishonest as if you were to apply for a bank loan and, when you were asked to show what assets you own, telling the bank that you actually own your neighbour's home and car."
- December 13, 2017 – The Toronto Sun runs a comment piece, entitled "Liberals hiding deficit, second watchdog says" covering the Financial Accountability Officer's (FAO) fiscal outlook report. The article highlights the pension asset accounting issue, writing that the FAO's report "says these projections are based on weaker revenue growth and the Wynne government's rejection of "the Auditor General of Ontario's recommended accounting treatment for both the government's Fair Hydro Plan and the net pension assets of jointly-sponsored pension plans."

  Defying the auditor general, the Wynne government hired what it called an expert panel, which endorsed its pension accounting."

- December 12, 2017 – The Canadian Press reports on the Financial Accountability Officer's (FAO) fiscal outlook report, writing that the report says "a long simmering accounting dispute between the Liberal government and Auditor General Bonnie Lysyk over how to count two public-sector pension plans is contributing to uncertainty."
- December 12, 2017 – The Toronto Star's Robert Benzie reports on the Financial Accountability Officer's (FAO) fiscal outlook report, noting that the FAO adopts the Auditor General's accounting treatment of pension assets, resulting in a $4 billion deficit in 2017-18, "even though the Liberals maintain the books are in the black."
- December 12, 2017 – Ottawa Citizen's David Reevely also reports on the FAO report, writing: "We're up to three different versions of the provincial government's books, depending on how you count surpluses in a couple of public pension funds and money the government is borrowing to lower electricity prices temporarily. Without getting into the weeds on these disputes, the Liberals want to run the numbers in a way that makes them look good and they're not obviously wrong, but all the government's independent officers with anything to say about it - the auditor general, the financial accountability officer - say what they're doing is not OK."
- December 7, 2017 – Following the release of the Auditor General's 2017 Annual Report, the Toronto Star's Robert Benzie and Rob Ferguson outline the Auditor's various recommendations for the government. On the pension asset accounting front, the reporters write: "Even though a government-appointed expert panel of accountants concluded she is wrong about excluding the publicly owned assets of two joint-sponsored pension plans on the government's bottom line, Lysyk continues to claim she is in the right on the actuarial tiff."
- December 7, 2017 – CBC, The Star, and other news outlets report on the Auditor General's 2017 Annual Report, referencing the ongoing "accounting disagreements" between the Auditor General and the government, including reference to IESO accounting and pension asset accounting.
- October 25, 2017 – In follow-up to the release of the Auditor General's special report on the Fair Hydro Plan, the Toronto Sun runs a column "Number's up for Wynne's government," using disagreement regarding pension asset accounting as support for the Fair Hydro Plan not being the first time the government and the Auditor General have disagreed: Last year, the government and the auditor general publicly disagreed over the appropriate way to treat assets held by public pension plans. That dispute had implications for the important question of whether the government would post a balanced operating budget, or a deficit, this year."
- October 18, 2017 – The Toronto Star's Martin Regg Cohn writes "Watch out for watchdogs who don't like being watched," commenting "The last time Lysyk attacked the government's deficit calculations, an outside panel of experts rejected her arguments- because not even an auditor can make a surplus disappear from a balance sheet. There is no permanent arbiter for auditors, but Lysyk is no longer the last word on accounting disputes - merely one of many voices, right or wrong. Expect that voice to grow louder next year when she formally assesses the 2018-19 spring budget - and once again challenges Liberal claims of deficit elimination."
- September 13, 2017 – The Toronto Sun runs a column, "Wage warnings won't stop Wynne," critical of the cost of the Pension Asset Expert Advisory Panel: "Indeed, her government's typical reaction to critical, non-partisan warnings it gets from independent officers of the legislature - such as the auditor general and the FAO - is to ignore them, or to attack the messenger […]Wynne spent up to $435,000 striking an "independent" panel that unsurprisingly agreed with her position on pension accounting, not the auditor general's."
- September 8, 2017 – David Reevely writes in the Ottawa Sun and Ottawa Citizen "Lysyk and the ministers have been volleying back and forth for a couple of years now over how to count assets on the government books. Without getting too deep into it, what's in question is whether certain public sector pension plans and some holdings in the electricity system belong to the government or not."

- September 7, 2017 – The Canadian Press' Shawn Jeffords covers the tabling of Ontario's Public Accounts 2016-17, and cites the government's ongoing disagreement with the Auditor General on pension asset accounting as the reason the Auditor has issued a qualified audit opinion two years in a row. Minister Sandals is quoted in the article: Sandals maintains the government is following established accounting practices and people don't care about the on-going squabble. "The public wants to know, are you managing your deficit?" she said. "Is your deficit getting smaller? Are you going to balance the budget this year? Quite frankly, I don't think the public is terribly hung up on accounting disagreements."
- September 7, 2017 – The Toronto Star's Robert Benzie refers to the disagreement between the Auditor General and the government over IESO market accounts assets and pension asset accounting as an "accounting slugfest". Minister Sandals is quoted in the article (same quote as The Canadian Press coverage): Sandals on Thursday shrugged off Lysyk's accounting interpretation, which lead to her to issue a qualified audit opinion on the province's books for the second year in a row.

  "The experience last year was the books were qualified on the same issue and it didn't impact the credit ratings," the treasury board president said.

  "Quite frankly, I don't think the public is terribly hung up on accounting disagreements."
- September 7, 2017 – Queen's Park Briefing's Christopher Reynolds covers the disagreement between the Auditor General and the government, quoting Minister Sandals: ""The public wants to know, are you managing your deficit?" Sandals said Thursday at the release of the province's 2016-217 public accounts. "Is your deficit getting smaller? Are you going to balance the budget this year? Quite frankly, I don't think the public is terribly hung up on accounting disagreements."
- On May 1, 2017 David Reevely writes in the Ottawa Sun that "There's also $500 million booked in the government's favour from surpluses in a couple of pension plans for public employees. These are the subject of an arcane accounting dispute over whether the government, which couldn't grab the money easily, should be able to count them the way it's counting them. The auditor general says no. A panel of external blue-chip accounting types says yes (for a number of reasons, the easiest of which to grasp is that if the pension plans came up short the gap, would be the government's problem). Going with the auditor general's ruling would be the safer thing, for sure, but what the government's doing is neither trick nor a one-time manouevre.
- On April 30, 2017 David Reevely wrote about the 2017 budget and said "the Liberals are taking advantage of a surplus in some public-employee pension funds, which Auditor General Bonnie Lysyk says is improper but which other experts say is OK. And they've adopted a sort of partial distinction between operating spending and capital spending, which used to be mashed together into each year's budget in a way they no longer are."
- On February 21, 2017 the Toronto Sun (A10) has a column by Warren Thomas (OPSEU). He writes "Ontario's public service workers and retirees feel like we are about to get robbed." He notes that the Auditor General has been turned into a lapdog from a watchdog. Thomas writes "If nobody stands up to Wynne, I'm afraid her next move could be to actually steal our pension money, giving her more cash for overpaid consultants and Sunshine List executives."
- On February 20, 2017 the Toronto Sun reports on Minister Sandals' memo to OPSEU's Warren Thomas. It recounts the minister's statement that "government has no plans on making like a bandit with his members' pension funds." The short piece includes her quote: "The OPSEU pension plan, which is jointly sponsored by OPSEU and the province, clearly states that no amount of the surplus shall be paid out of the plan to either sponsor". "I trust that you are reassured by this news."
- On February 18, 2017 the Toronto Sun has a piece by Lorrie Goldstein. He writes that Premier Wynne needs to take the advice of the Auditor General in order to demonstrate openness and transparency.

- On February 18, 2017 the Ottawa Sun (A9) reports NDP Leader Horwath trusts the Auditor General's math. She spoke up on Friday on the ongoing pension account issue between government and the AG.
- On February 18, 2017 the Toronto Sun's Antonella Artuso (A10) quotes Minister Sandals who said in a statement that she will accept the findings of the panel and: "They also concluded that the government controls access to the pension surplus which has a future economic benefit to the province and recognizing the asset will provide an accurate representation of the province's financial position."
- On February 18, 2017 the Toronto Star's Martin Regg Cohn (A12) writes about the Auditor General. He says that she is no hero – in fact her "bizarre claim turns out to be a sideshow, designed to cover up her own miscalculations after an outside panel of experts found the auditor herself had conflated facts and confused figures." He concludes: "We rely on auditors to provide value for money audits. Not to introduce their own values, making up untested accounting standards as they go along."
- On February 17, 2017 the Hamilton Spectator (A16) posted an opinion piece that is negative toward Auditor General Lysyk. It notes: "Lysyk is putting that reputation and integrity on the line in Ontario. And she's not on solid ground…. If the evidence supported Bonnie Lysyk's position, we'd be the first to back her. But it doesn't. She needs to respect that and back down."
- On February 17, 2017 QP Briefing has a piece written by Bryne Purchase, former deputy minister of finance, on the 'accounting spat'. He sides with the AG: "I think it was regrettable that Premier Kathleen Wynne's government chose to attempt to undermine the legitimacy of our parliament's own accounting expert by appointing a panel of its own experts to review an unfavourable ruling."
- On February 17, 2017 the Windsor Star (A7) has a Canadian Press report that says the AG is not satisfied after the expert panel's report on the $10.7 billion pension dispute. Auditor General Bonnie Lysyk's quote is used: ``Show me the letter that says you can use that pension money with permission, with an agreement," she said Thursday. ``Until that happens the bottom line is this office can't give its stamp of approval on this particular issue." The article notes this is not the first time the Liberal government has clashed with the AG - the former energy minister suggested the electricity file was too complicated for Lysyk, and she has frequently suggested that partisan ads are being funded by taxpayer dollars.
- On February 16, 2017 the Toronto Star reported the Auditor General is demanding proof in writing from the unions that they are okay with the government using taxpayer-funded pension surpluses for accounting purposes. The article says the AG is "escalating a $10.7 billion standoff" with the government over taxpayer-funded pension surpluses. "There has been no suggestion the government intends to dip into the pension funds, which would be illegal. The question is whether the pension surplus can be counted as an asset or not at all." The AG was quoted: "It is not my money. That money is for the benefit of employees and retirees … so it's not my pension. It's not my budget deficit."
- On February 16, 2017 QP Briefing reports the AG says that until she sees a letter that says government can use that pension money with permission – her office can't give its stamp of approval on this issue. The article notes the government "isn't inclined to draft" a letter. Treasury Board President Liz Sandals is quoted from her statement: "They (the panel) concluded that the government does not need a letter from either of the unions because the joint pension agreements spell out how the surplus will be dealt with. They also concluded that there are no public-sector accounting standard requirements for any additional letter to be in place specifying when or by how much contributions will be reduced beyond the joint pension plan agreements already in place." This article also includes quotes from MPP Lisa MacLeod and OPSEU's Warren Thomas.

- On February 16, 2017 the Toronto Sun (A5) has two articles on the number crunching aspect of the expert panel. It says government spent up to $435,000 to the expert panel in the dispute with the Auditor General. The article says this has made OPSEU's Warren Smokey Thomas livid and notes that he wants a guarantee the government won't raid his members' pension fund. Ontario Treasury Board spokesman Matt Ostergard is quoted from an email, "The work of the panel is ongoing so we don't have final costs at this time but they will be in line with previous panels and will be made public."
- On February 16, 2017 The Northumberland Today.com has David Reevely's opinion piece on the pension panel's "gift' to the government. "The Ontario Liberals have an extra $1.5 billion to spend between now and the next election and can still keep their promise to balance the provincial budget by 2018, thanks to a helpful ruling on how to handle surpluses in a couple of big provincial pension funds. The article includes a written statement from Minister Sandals "We are committed to implementing the advice of this independent panel and will use it in preparing the province's financial statements."
- On February 15, 2017 QP Briefing reports Treasury Board President Liz Sandals says it's too soon to weigh in on what might happen if the Auditor General stands her ground in the pension accounting dispute. "I think we're getting way ahead of ourselves – that's a total hypothetical," Sandals told reporters. "The bottom line is, the panel gave us advice, and we're going to follow the advice of the panel." Sandals added there "is no urgency" for Lysyk to weigh in on the panel's conclusion and that she was "pleased" that the auditor was giving it a thorough read. The article notes the minister was "cagey" when pressed about if the panel's report will mean a rollback on contributions for the OPSEU plan. She is quoted, "As the panel points out, that is the traditional way in which the government would access the surplus," "That's the whole premise of the panel's report, is that the way in which the government or any other employer in that situation would access the surplus is by reducing the contribution rate."
- On February 14, 2017 OPSEU's Smokey Thomas writes that Premier Wynne should remember who owns the assets of the province's jointly trusted public pension plans. He says the dispute between the government and the Auditor General is not "just a paper war". "It's a fight over who owns billions of dollars earned by workers and invested on their behalf. I'm telling the Premier right now: the money in those plans belongs to plan members. It is not hers to play with." He "unequivocally supports" the Auditor General's position. He says his "fear is that the Liberals will try to move money out of public pension plans to help wipe out the provincial deficit in time for the 2018 provincial election."
- On February 14, 2017 the Ottawa Sun's David Reevely (A11) reports "the Ontario Liberals have an extra $1.5 billion to spend between now and the next election and can still keep their promise to balance the provincial budget by 2018, thanks to a helpful ruling on how to handle surpluses in a couple of big provincial pension funds." His article notes, "The point is, we're talking serious money - the stakes in what's otherwise the most arcane public-accounting battle ever to spill out of a comptrollers' seminar and into the streets." He writes the surpluses work in the government's favour – especially as an election approaches.
- On February 14, 2017 the Toronto Star (A7) (and online) has a negative piece about the Auditor General, written by Martin Regg Cohn. He writes the AG has been caught out in a $10.7-billion miscalculation. "Even a watchdog can lose the scent and bark up the wrong tree. Or worse, miss the fiscal forest for the trees. For the job requires not just independence but context. To be truly credible, an auditor general must fearlessly expose government boondoggles but also fess up to her blunders." "Lysyk's lack of diligence - now overdue - is a damning indictment of an auditor gone awry."

- On February 13, 2017 QP Briefing reports the government has accepted the panel's conclusion that pension surpluses are assets. The Auditor General's stance won't be known until later in the week. The article includes comments from Tory finance critic Vic Fedeli: “Basically, they've gone out and hired people whose findings would be more convenient for them ... They have appointed a private panel of auditors to come to the province's conclusion." OPSEU president Warren (Smokey) Thomas said he's concerned the panel's conclusion was politically motivated: “If I was going to fall on a side of advice, I'd fall on the advice of the auditor general," he said. "The government has gone to extraordinary length to have somebody try to disagree and discredit the auditor general."
- On February 13, 2017 the Toronto Star reported a panel of accounting experts says that $10.7 billion in government-sponsored pension plans should count toward the province’s bottom line. The article notes panel chair Tricia O’Malley said “We believe that an asset does exist – the net pension asset meets the definition of an economic resource, which is what an asset is.” The Star noted that Auditor General Lysyk is reviewing the report and will provide comment to the media later this week.
- On February 12, 2017 the Toronto Star reports a government-appointed panel of experts will announce on Feb. 13 that joint-sponsored pension surpluses should be counted as assets for the provincial treasury. The report says the Auditor General should include billions of dollars of its assets on the government’s bottom line. OPTrust says “surpluses and deficits should both be recognized on the province’s balance sheet.”
- On February 8, 2017 The Toronto Star (A6) reports Premier Wynne welcomes a report from four accounting experts that says a $10.7-billion pension surplus can be counted as an asset on the province’s bottom line. The article notes the AG was briefed on the report last week and it will be make public later this month. MPP Vic Fedeli is quoted: “The people of Ontario have to ask themselves who are they going to believe: the independent auditor general or a scandal-plagued Liberal government?”
- On February 8, 2017 QP Briefing reports the Financial Accountability Officers says “should the panel studying a pension accounting clash with the auditor general conclude that billions of dollars’ worth of pension assets should be counted on Ontario's balance sheet after all, the government will get more flexibility to balance the budget as promised.” “David West, the FAO's chief economist, said he had not heard about any conclusions from the panel but noted that if they have decided to count the pension assets, it gives the government more breathing room to achieve balance, as promised.” Auditor General Lysyk declined to confirm or comment directly because the panel is not yet public.
- On February 7, 2017 The Toronto Star’s (A4) Martin Regg Cohn reports billions of dollars are at stake in a dispute pitting Ontario's Auditor General against the government. He writes that despite an outside panel of top accounting and pension experts determining that Auditor General Bonnie Lysyk has gone out on a fiscal limb by effectively wiping away nearly $11 billion in government assets – she told this reporter that “she won't climb down,” and this now sets the stage for a public showdown over an accounting change that is worth $1.5 billion to the bottom line this year alone. “The auditor told me her mind is made up and nothing she has heard so far has changed her view….which leaves her on a limb and the government in the lurch.”
- On November 30, 2016 QP Briefing reported Minister Sandals appointed an expert panel to help resolve the government's standoff with the Auditor General over pension assets. The chair of the special panel tasked with settling an accounting dispute will be paid $2,000 per work day. The other three members of the panel will get a $1,900 per diem, as well as reimbursement.
- On November 14, 2016 QP Briefing reported an expert panel will study the AG pension dispute.

- On October 9, 2016 Focus Ontario (Global) ran a segment on the 2015-16 Public Accounts and the disagreement with the Auditor General. Both the Premier and Patrick Brown are quoted in the segment. The Premier is quoted from Question Period saying the government “accepted the Auditor General's numbers for this year. We released the documents despite the divergence in accounting opinions, specific to pension funds between Treasury Board officials and the Auditor as part of our commitment to openness and be transparency.”
- On October 9, 2016 The Toronto Sun (A17) ran an opinion piece about the disagreement with the Auditor General. The piece notes that this kind of back and forth between ministries and the Auditor General is common. The Auditor General provides time for ministries to comment on the audit in draft form so that accounting issues can be hashed out before the final audited statement is presented to the legislature. Accounting issues are generally benign. So it's surprising that the Wynne government elevated the tussle over pensions to the political realm by tabling the financial statements without the Auditor General's unqualified opinion.
- On October 6, 2016 The Financial Post has a commentary by analysts with the Fraser Institute. “It's not surprising the Wynne government is willing to go to the mat to defend its estimate of last year's budget deficit. As Ontario approaches a provincial election in 2018, a big part of the government's PR strategy is focused on celebrating an expected return to a balanced budget in next year's budget. So Premier Kathleen Wynne's team has a big incentive to push back against dissenting views.”
- On October 6, 2016 QP Briefing reports Treasury Board President Liz Sandals tabled Ontario's public accounts for fiscal 2015-16, including the Auditor General's opinion. The tabling of the public accounts was delayed by almost two weeks after months of back and forth between the Auditor General and the government over whether the bottom line should include assets for two jointly-sponsored provincial pension plans.
- On October 3, 2016 The Globe and Mail reports Ontario's Liberal government is fighting with the province's Auditor General over a $1.5-billion discrepancy in last year's deficit and a $10.7-billion difference in Ontario's net debt.
- On October 3, 2016 Canadian Press ran a story in 40 media outlets reporting that the government says Auditor General Bonnie Lysyk is taking issue with their pension asset accounting, though it says these are rules that have been used for the past 14 years. “The issue is with the accounting of the Ontario Public Service Employees Union Pension Plan and the Ontario Teachers' Pension Plan, which are jointly sponsored with the government. The government says the plans have a surplus, but the auditor general says that should not be on the province's balance sheet.”

CONFIDENTIAL REVISED: January 10, 2018

2016-17 PUBLIC ACCOUNTS

ISSUE: What is reported in the 2016-17 Public Accounts released on September 7, 2017?

KEY MESSAGES: PUBLIC ACCOUNTS

- The 2016-17 Public Accounts of Ontario show the province's deficit is $991 million.
- This result is $3.3 billion lower than projected in the 2016 Budget, and $0.5 billion lower than the interim forecast in the 2017 Budget.
- This is a result of growth in revenue that exceeded growth in program expense, and lower than forecast interest on debt.
- Ontario has beaten its deficit target eight years in a row. Ontario's plan is working.
- As promised in the 2016 Budget, Ontario grew its economy while transforming healthcare, building vital infrastructure and investing in people's talents and skills.
- Due to our prudent fiscal management and Ontario's robust economic growth, we are projecting a balanced budget for the first time since the onset of the global recession in 2008.
- We remain on track to balance the budget this fiscal year as well as in 2018–19 and 2019–20.
- This is something that has been achieved only eight times in the last 40 years in Ontario.
- We will continue moving forward on our fiscally responsible plan that creates fairness and opportunity for all Ontarians.

KEY MESSAGES: OTHER HIGHLIGHTS

- We will continue to present the province's finances fairly and accurately and in accordance with Canadian Public Sector Accounting Standards.
- We also remain on track to balance the budget this fiscal year as well as in 2018–19 and 2019–20.
- Other highlights from this year's Public Accounts include:
    - Economic growth, with a 2.7 per cent increase in real gross domestic product (GDP), up 2.2 per cent in the 2016 Budget.
    - Total revenue of $140.7 billion, up $2.2 billion from the 2016 Budget.
    - Total spending of $141.7 billion, down $0.1 billion from the 2016 Budget.
    - Interest on debt of $11.7 billion, down $0.7 billion from the 2016 Budget.
- To help Ontarians better understand their government's finances, new digital tools have been developed that present the Public Accounts data in innovative, visual formats. These tools make Ontario's finances easier to understand, access and use.
- Presenting the Public Accounts data in innovative, visual formats is part of Ontario's commitment to Open Government.

KEY MESSAGES: ACCOUNTING CHANGES

BPS REVENUE PRESENTATION

- To increase transparency, the 2016-17 Public Accounts are presenting third-party revenues for hospitals, school boards and colleges, such as tuition fees, patient fees, research grants and donations, with provincial revenue.
- In prior years, these revenues were netted against the expenses of the respective sectors (health, education, post-secondary).
- This is a change in presentation only; the change increases total revenues and expenses by approximately $8 billion, and does not impact the deficit, net debt or accumulated deficit.
- This change is consistent with public sector accounting standards and the reporting practices of other senior Canadian governments.
- The Auditor General is supportive of this change in presentation.

ACCOUNTING FOR ENERGY GOVERNMENT BUSINESS ENTERPRISES:

- The 2016-17 Public Accounts include the financial results of Ontario Power Generation (OPG) and Hydro One using International Financial Reporting Standards (IFRS).
- These two government business enterprises currently report their stand-alone financial results using Generally Accepted Accounting Principles in the United States (US GAAP).
- In prior years, the reported results of OPG and Hydro One were included in the results of the province based on US GAAP.
- This change does not have a material impact on this year's Public Accounts.
- The Auditor General is supportive of this change in presentation.

PENSION ACCOUNTING:

- The government established the Pension Asset Expert Advisory Panel following the release of the 2015-16 Public Accounts.
- The Panel delivered independent advice on how public sector accounting standards are interpreted as they apply to current net pension assets and the application of public sector accounting standards for two of Ontario's jointly sponsored pension plans; Ontario Teachers' Pension Plan (OTPP); and the Ontario Public Service Employees' Union Pension Plan (OPSEUPP).
- The Panel's report concluded that the province's share of the net pension assets of both the OTPP and the OPSEUPP should be recognized in Ontario's financial statements.
- The government accepted the Panel's recommendations, which have been reflected in the 2016-17 financial statements.
- The 2015-16 financial statements have also been restated to reflect the pension assets for these two plans.
- The Auditor General continues to not accept the application of the Public Sector Accounting Board (PSAB) standards in the 2016-17 Public Accounts regarding pension accounting for the province's jointly sponsored pension plans. For 2016-17, the Auditor General has qualified her opinion, stating that the province's deficit is understated by $1.4 billion.

KEY MESSAGES: IESO ACCOUNTING

- The Independent Electricity System Operator (IESO) reports its financial results in accordance with Public Sector Accounting Standards.
- In 2016, IESO changed its accounting policy to begin recognizing market assets (amounts due *from* power distributors) and liabilities (amounts due *to* power generators). In previous years, these amounts were omitted from IESO's financial statements.

- This change has no impact to the province's annual deficit, net debt or accumulated deficit.
- IESO also adopted rate-regulated accounting for deferred charges, such as the cost of smart meters, which will be recovered from users of these meters over time.
- Public Sector Accounting Standards are silent on rate-regulated accounting, and as a result, as provided for in the accounting standards, IESO considered other sources of guidance to assess the appropriateness of applying rate regulated accounting.
- Prior to the 2015 merger with the IESO, the Ontario Power Authority (OPA) reported market accounts and used rate-regulated accounting under PSAS. The statements of the OPA were not qualified during that time by OPA's external auditor or the Auditor General. This accounting treatment is not new to Ontario.
- The Auditor General qualified her opinion in 2016-17 based on the recognition of the IESO's market accounts. The Auditor General also noted in her opinion that the use of rate regulated accounting under PSAS is not permitted, but did not qualify on the issue of rate regulated accounting, as the impact was not material in the current year.
- The reporting changes implemented by the IESO were approved by their management and board, and received an unqualified audit opinion from their external auditor. The province's Office of the Provincial Controller also supports the changes.

KEY MESSAGES: AUDITOR GENERAL'S 2017 ANNUAL REPORT – CHAPTER ON PUBLIC ACCOUNTS

- The government thanks the Auditor General for her recommendations, and remains committed to assisting the Office of the Auditor General in providing its independent views to the Legislative Assembly.
- The government has a strong track record of producing high-quality financial reports on a timely basis and continues to present the province's finances fairly and

accurately and in accordance with Canadian Public Sector Accounting Standards.

- The government's use of external expertise for accounting and financial reporting matters supplements its own resources on complex or emerging accounting and reporting matters.
- The province will continue to provide financial statements according to Canadian Public Sector Accounting Standards that support transparency and accountability in reporting to the public, the legislature, and other users.
- The government will continue to build on its track record of responsible fiscal management.

CURRENT STATUS

- December 20, 2017 – the Treasury Board Secretariat (TBS) has been called to appear before the Standing Committee on Public Accounts (SCOPA), to review Chapter 2 – Public Accounts of the Province (Volume 1 of the 2017 Annual Report of the Office of the Auditor General of Ontario). In addition to officials from TBS, requests to attend were issued to officials from Cabinet Office, the Ministry of Finance, the Ontario Financing Authority, the Ministry of Energy, the Independent Electricity System Operator and Ontario Power Generation. Attendees will be required to provide the committee with a response to the Auditor General's report, and to answer any questions the committee members may have. Hearings are scheduled for February 28, 2018.
- As per Standing Order 108(h), the SCOPA is empowered to review and report to the House its observations, opinions and recommendations on the Report of the Auditor General and the Public Accounts, which documents shall be deemed to have been permanently referred to the committee as they become available.
- The committee may meet weekly when the Legislative Assembly is sitting. With the approval of the House, it may also meet at any time when the Legislative Assembly is not sitting.
- All meetings are open to the public with the exception of those dealing with the setting of the committee's agenda and the preparation of committee reports.
- All public committee proceedings are recorded in Hansard.

BACKGROUND:

- The Public Accounts of Ontario is a key accountability and transparency document in the government's financial cycle. It's a look back that compares Ontario's actual performance to what was planned in the Budget.

- The Public Accounts present the financial statements of the Province, provide financial highlights of the past fiscal year, and report on performance in priority areas.

- Public Accounts is audited by the Auditor General and is typically released in the fall of the following fiscal year.
- When preparing the 2016-17 Public Accounts, Ontario's professional accounting staff adopted accounting changes to further enhance accountability and transparency.

- These changes include:
    - **Accounting for hospitals, school boards and colleges** - third-party revenues (i.e. tuition fees, patient fees, research grants and donations) are now reported together with provincial revenue. This change increases transparency and is supported by the Auditor General.
    - **Accounting for energy sector government business enterprises** - the financial results of investments in Hydro One and Ontario Power Generation (OPG) now reflect International Financial Reporting Standards. Previously, these results were reported using U.S. Generally Accepted Accounting Principles. This change was made to meet Public Sector Accounting Board standards and is supported by the Auditor General.
    - **Accounting for the Independent Electricity System Operator (IESO)** - the IESO has adopted rate-regulated accounting, and is now recognizing its market accounts assets and liabilities in its financial results.
    - **Accounting for net pension assets of jointly sponsored pension plans** - the Province is reporting net pension assets for jointly sponsored pension plans. This is in line with Public Sector Accounting Board standards and the recommendations of the independent Pension Asset Expert Advisory Panel.

Pension Asset Expert Advisory Panel

- On November 10, 2016 Ontario established the Pension Asset Expert Advisory Panel to provide independent advice and recommendations to the government on the application of public sector accounting standards to Ontario's net pension assets.
- The Panel was comprised of accounting, legal and pension experts in the areas of jointly sponsored pension plans, actuarial modelling for pension plans and Public Sector Accounting Standards.
- The Panel members were:
    - Tricia O'Malley; (Chair)
    - Murray Gold;
    - Uros Karadzic; and,
    - Paul Martin.
- Panel members also provided advice on how to value net pension assets reported on the province's books, taking into account future decisions which might be made by the plan's sponsor or sponsors.

- The Panel issued its report in February 2017. Upon receiving the report, the government, supported by its own research and analysis, accepted the Panel's recommendation and has reported the pension assets of the Ontario Teachers' Pension Plan (OTPP) and Ontario Public Service Employees' Union Pension Plan (OPSEUPP) in its 2016-17 consolidated financial statements (with restatement of 2015-16).
- The Panel issued a supplementary report in March 2017 with respect to the Healthcare of Ontario Pension Plan (HOOPP) and Colleges of Applied Arts and Technology Pension Plan (CAATPP) recommending that a full valuation allowance be recorded on the net assets of both of these plans, based on the difference in governance structure between these plans and OTPP and OPSEUPP. The province agreed and has recorded a valuation allowance for CAATPP in the year (amount is not material). The HOOPP plan is not in a net asset position for accounting purposes at March 31, 2017.

Independent Electricity System Operator

- The Independent Electricity System Operator (IESO) is a not-for-profit, non-taxable corporation established pursuant to Part II of the *Electricity Act, 1998*. The Ontario Power Authority and the IESO merged on January 1, 2015.
- One of IESO's roles is to settle the market accounts, which are the amounts due to the entities that provide electricity to the market (e.g. power generators) and due from those who consume electricity (e.g. local distribution companies on behalf of their consumers).
- Rate regulated accounting is appropriate where the rates an entity is able to charge to its customers are set by another party (i.e. a regulator), provided specified criteria are met. Rate-regulated accounting permits the entity to defer costs that would otherwise be expensed to the period that the related revenue is charged to customers. Costs able to be deferred by the IESO include:
    - Unrecovered smart metering expenses; and,
    - Unrecovered pension and post-employment benefits related to PSAB transition.
- During 2016, IESO made two accounting changes (1) to recognize the market accounts in its financial statements – these amounts were not previously recognized in the IESO's financial statements, and (2) to apply rate-regulated accounting.
- The IESO received an unqualified audit opinion from KPMG (their external auditor) with respect to the financial statement presentation in their 2016 audited financial statements. IESO management, IESO's Audit Committee, IESO's Board of Directors, IESO's external auditor, and the Office of the Provincial Controller all support the recognition of the market accounts and the use of rate-regulated accounting by IESO.

Revenue Highlights

Against the Restated 2016 Budget:

- Revenues for 2016-17 came in at $140.7 billion, or $2.2 billion higher than forecast in the 2016 Budget. This was largely due to higher than projected taxation revenues, non-provincial source revenues from hospitals, school boards and colleges, and income from GBEs, partially offset by lower than projected Government of Canada transfers and other non-tax revenue.

Against the Restated Interim Estimates in the 2017 Budget:

- Revenues for 2016-17 came in at $140.7 billion, or $0.6 billion lower than the interim forecast in the 2017 Budget. This was largely due to lower than projected taxation revenues and Government of Canada transfers, partially offset by higher than projected income from GBEs.

Expense Highlights

Against the Restated 2016 Budget plan:

- Total expense in 2016-17 was $141.7 billion, or $0.1 billion lower than forecast in the 2016 Budget plan. Program spending was $130.0 billion, up by $0.6 billion from a planned spending of $129.4 billion and interest on debt was $11.7 billion, lower by $0.7 billion from planned interest cost of $12.4 billion. Program spending was higher by $0.6 billion largely due to higher than projected spending in the health, community and social services, justice sector and general government and other.

Against the Restated interim Estimates in the 2017 Budget:

- Total expense in 2016-17 was $141.7 billion or $1.1 billion lower than the interim forecast in the 2017 Budget. Program spending was $130.0 billion, $0.9 billion lower than the interim forecast of $130.9 billion in the 2017 Budget. Interest on debt was $11.7 billion, lower by $0.2 billion from planned interest cost of $11.9 billion. Program spending was lower by $0.9 billion largely due to lower than projected spending in the health and education sectors, and other programs.

Net Debt

- Net debt as of March 31, 2017, was $301.6 billion, which was $6.7 billion lower than forecast in the 2016 Budget. Net debt grew by $6.2 billion during the year, representing a $6.6 billion increase in liabilities that was partially offset by a $0.4 billion increase in financial assets.

Auditor General's 2017 Annual Report: Chapter on Public Accounts

- On December 6, 2017, the Office of the Auditor General released their 2017 Annual Report.
- The Auditor General's Annual Report, Chapter 2, makes 10 recommendations regarding the Public Accounts of the Province.
- The recommendations largely reflect opinions that have been expressed in previous reports, including the Auditor General's audit opinion in the 2016-17 Public Accounts and the Special Report on the Fair Hydro Plan.
- Treasury Board Secretariat and Ministry of Finance disagree with the characterization of the majority of the recommendations, and re-iterate the government's commitment to producing high-quality financial statements on a timely basis and in accordance with Canadian Public Sector Accounting Standards (PSAS).

Financial Accountability Office's Economic and Fiscal Outlook, Fall 2017 Update

- On December 11, 2017, the Financial Accountability Office released its Economic and Fiscal Outlook, Fall 2017 Update.
- During the media event, the FAO said "since the government has not adopted the Auditor General's recommended accounting for both the Fair Hydro Plan and net pension assets, it is becoming more difficult for legislators and the public to assess the government's fiscal projections. This has reduced the transparency and reliability of Ontario's fiscal plan."

RECENT MEDIA COVERAGE:

- January 12, 2018 – The Toronto Star ran an opinion column by Martin Regg Cohn, "Independence is not infallibility when it comes to Ontario's financial books," arguing Auditor General "Lysyk's paranoia about partisan advertising is a depressing case study on how she approaches the vital role of an auditor general, which is meant to be a check and balance on the power of government — not a grudge match grounded in distortions over picayune disputes. All's fair in politics and accounting, unless you're an auditor gone awry."
- January 9, 2018 – The Toronto Sun runs a column by Ben Eisen, director of the Fraser Institute's Ontario Prosperity Initiative entitled "Ontario's finances are still a mess." Eisen argues that people should treat the government's balanced budget claims with skepticism, writing "For starters, many analysts, including Ontario Auditor General Bonnie Lysyk, have called the government's accounting techniques into question, arguing proper accounting would show continued deficits. Others, including the government's Financial Accountability Office, warn that without additional policy changes to reduce spending, or raise taxes, Ontario will likely slip back into deficits."
- December 17, 2017 – The Ottawa Sun's Lorrie Goldstein writes that "with less than six months to go before the June 7 election, two independent, non-partisan financial watchdogs of the Ontario Legislature say the books of Premier Kathleen Wynne's Liberal government cannot be trusted." Goldstein highlights the disagreement between the Auditor and the government on the pension asset accounting issue, also noting the expert advisory panel: "Lysyk argues the government is improperly claiming the $11.5 billion surplus in the Ontario Teachers' Pension Plan as an asset, because it cannot access these funds without the permission of Ontario's teacher unions […] In November 2016 it hired what it described as an expert, four person pension advisory panel, with a budget of up to $435,000 for salaries, excluding expenses, which in February 2017 backed the government's accounting on the teachers' pension plan."
- December 17, 2017 – The Toronto Sun's Jim Warren cautions that "the role of the Auditor General is shifting in troubling ways," arguing that the Auditor General's increasing outspoken role is "making matters worse." Specifically referencing the pension asset accounting issue, Warren writes "For the first time in 16 years, Lysyk in 2016 decided to change her office's opinion on how the Ontario government presents pension assets in the audited financial statements and fought the government's claim it had balanced the budget in 2017-18. Wynne's Liberals asked an independent expert panel to determine the appropriate accounting treatment of the pension assets and they sided with the government. Lysyk provided her advice to the government and that should have been the end of it. Instead, in her latest annual report she rehashed the same issue and has gone from proving independent oversight to being an advocate for her own position."
- December 14, 2017 – The Record runs an opinion piece, "To sort out truth from pre-election fictions, turn to Bonnie Lysyk," writing that the Auditor General "warned that the Liberal government is making its financial position look rosier than it really is in part because it has counted as government assets two pension plans, including the plan of Ontario's teachers. That's extremely sketchy accounting practice. The teachers' pension plan is an independent organization and not owned by the provincial government. For the government to claim it as an asset is as dishonest as if you were to apply for a bank loan and, when you were asked to show what assets you own, telling the bank that you actually own your neighbour's home and car."
- December 13, 2017 – The Toronto Sun runs a comment piece, entitled "Liberals hiding deficit, second watchdog says" covering the Financial Accountability Officer's (FAO) fiscal outlook report. The article highlights the pension asset accounting issue, writing that the FAO's report "says these projections are based on weaker revenue growth and the Wynne government's rejection of "the Auditor General of Ontario's recommended accounting treatment for both the government's Fair Hydro Plan and the net pension assets of jointly-sponsored pension plans." Defying the auditor general, the Wynne government hired what it called an expert panel, which endorsed its pension accounting."

- December 12, 2017 – The Canadian Press reports on the Financial Accountability Officer's (FAO) fiscal outlook report, writing that the report says "a long simmering accounting dispute between the Liberal government and Auditor General Bonnie Lysyk over how to count two public-sector pension plans is contributing to uncertainty."
- December 12, 2017 – The Toronto Star's Robert Benzie reports on the Financial Accountability Officer's (FAO) fiscal outlook report, noting that the FAO adopts the Auditor General's accounting treatment of pension assets, resulting in a $4 billion deficit in 2017-18, "even though the Liberals maintain the books are in the black."
- December 12, 2017 – Ottawa Citizen's David Reevely also reports on the FAO report, writing: "We're up to three different versions of the provincial government's books, depending on how you count surpluses in a couple of public pension funds and money the government is borrowing to lower electricity prices temporarily. Without getting into the weeds on these disputes, the Liberals want to run the numbers in a way that makes them look good and they're not obviously wrong, but all the government's independent officers with anything to say about it - the auditor general, the financial accountability officer - say what they're doing is not OK."
- December 7, 2017 – Following the release of the Auditor General's 2017 Annual Report, the Toronto Star's Robert Benzie and Rob Ferguson outline the Auditor's various recommendations for the government. On the pension asset accounting front, the reporters write: "Even though a government-appointed expert panel of accountants concluded she is wrong about excluding the publicly owned assets of two joint-sponsored pension plans on the government's bottom line, Lysyk continues to claim she is in the right on the actuarial tiff."
- December 7, 2017 – CBC, The Star, and other news outlets report on the Auditor General's 2017 Annual Report, referencing the ongoing "accounting disagreements" between the Auditor General and the government, including reference to IESO accounting and pension asset accounting.
- October 25, 2017 – In follow-up to the release of the Auditor General's special report on the Fair Hydro Plan, the Toronto Sun runs a column "Number's up for Wynne's government," using disagreement regarding pension asset accounting as support for the Fair Hydro Plan not being the first time the government and the Auditor General have disagreed: Last year, the government and the auditor general publicly disagreed over the appropriate way to treat assets held by public pension plans. That dispute had implications for the important question of whether the government would post a balanced operating budget, or a deficit, this year."
- October 18, 2017 – The Toronto Star's Martin Regg Cohn writes "Watch out for watchdogs who don't like being watched," commenting "The last time Lysyk attacked the government's deficit calculations, an outside panel of experts rejected her arguments- because not even an auditor can make a surplus disappear from a balance sheet. There is no permanent arbiter for auditors, but Lysyk is no longer the last word on accounting disputes - merely one of many voices, right or wrong. Expect that voice to grow louder next year when she formally assesses the 2018-19 spring budget - and once again challenges Liberal claims of deficit elimination."
- November 15, 2017 – Ontario PC Finance Critic Vic Fedeli pens a column in the Toronto Sun on the Fall Economic Statement, making reference to the Auditor General's qualified audit opinion on the province's Public Accounts two years in a row.
- October 16, 2017 – CBC News looks to the province's Public Accounts to highlight "Four surprising things about the Ontario government's finances," including: "personal income tax revenue is dropping," "corporate tax revenue is soaring," a "real estate windfall," and "booze revenue poised to top gambling revenue."
- September 8, 2017 -- Post Media's David Reevely quotes the AG's statement that rejects the contents of the Public Accounts "The Legislature and all Ontarians must be able to rely on the province's consolidated financial statements to fairly report the fiscal results for the year. This year they cannot do so." The article mentions the FAO's commentary this week saying the FAO and AG have 'made a businesslike routine of pointing out all the extreme assumptions and accounting stretches the

government is using to make the books look good in an election year." The article concludes that considering what happened to the world economy a decade ago the government has 'done all right' but is critical of 'dismissing' the government's two most prominent independent financial experts. **Minister Sandals** mentioned in reference to releasing the PA.

- September 7, 2017 -- Toronto Star says the "stakes are high in the accounting slugfest between the government and the auditor general." The article mentions Minister Sandals "shrugging off" the AG's accounting interpretation. "The experience last year was the books were qualified on the same issue and it didn't impact the credit ratings," the treasury board president said. "Quite frankly, I don't think the public is terribly hung up on accounting disagreements."
- September 7, 2017 -- QP Briefing reports financial watchdogs aren't smiling about the government lowering the deficit to $1 billion, but instead are 'baring their teeth'. The article says auditor general Bonnie Lysyk said yesterday the government "significantly understated" its deficit, while the Financial Accountability office this week called the plan to reduce the debt burden "unlikely." Minister Sandals is quoted "The public wants to know, are you managing your deficit?" "Is your deficit getting smaller? Are you going to balance the budget this year? Quite frankly, I don't think the public is terribly hung up on accounting disagreements." The article also notes AG Lysyk is warning that the complex accounting behind the hydro bill reduction could add to a bigger than expected deficit next year, and that a special report will be tabled this fall.
- September 7, 2017 -- The CP article about Public Accounts quotes Minister Sandals "The public wants to know, are you managing your deficit?" she said. "Is your deficit getting smaller? Are you going to balance the budget this year? Quite frankly, I don't think the public is terribly hung up on accounting disagreements." The coverage says AG Lysyk disputes the government figures and that "the statements were not prepared following Canadian Public Sector Accounting Standards." This article was picked up by several media outlets but coverage was not widespread.
- February 20 & 21, 2017 -- Toronto Sun report on Minister Sandals' memo to OPSEU that "the OPSEU pension plan….clearly states that no amount of the surplus shall be paid out of the plan to either sponsor". This is followed by a column by OPSEU President Warren Thomas saying Ontario's public service workers and retirees feel like we are about to get robbed.
- February 18, 2017 – Toronto Star, Toronto Sun and Ottawa Sun coverage of the ongoing pension accounting issue between the government and Auditor General.
    - Ottawa Sun says NDP Leader Horwath trusts the Auditor General's math.
    - Toronto Sun quotes Minister Sandals who said in a statement that she will accept the findings of the panel.
    - Toronto Star columnist Martin Regg Cohn wrote that the Auditor General is no hero, and her "bizarre claim turns out to be a sideshow, designed to cover up her own miscalculations after an outside panel of experts found the auditor herself had conflated facts and confused figures."
- February 17, 2017 -- Hamilton Spectator, QP Briefing, and Windsor Star have coverage.
    - The Spectator's opinion piece is negative toward Auditor General Lysyk.
    - QP Briefing's piece written by Bryne Purchase, former deputy minister of finance, sides with the AG.
    - Windsor Star published the CP story that says the AG is not satisfied after the expert panel's report on the $10.7 billion pension dispute and that she is asking to see "the letter that says you can use that pension money with permission, with an agreement."

- February 16, 2017 – The Toronto Star, Toronto Sun & QP Briefing have coverage of the Auditor General's response to the panel's report.
    - The Toronto Star and QP Briefing say the Auditor General is demanding proof in writing from the unions that they are okay with the government using taxpayer-funded pension surpluses for accounting purposes and describes it as an "escalating a $10.7 billion standoff".
    - QP Briefing quotes Minister Sandals from her statement: "They (the panel) concluded that the government does not need a letter from either of the unions because the joint pension agreements spell out how the surplus will be dealt with. They also concluded that there are no public-sector accounting standard requirements for any additional letter to be in place specifying when or by how much contributions will be reduced beyond the joint pension plan agreements already in place."
    - The Toronto Sun has two articles on the number crunching aspect of the expert panel and that the government spent up to $435,000 on it. OPSEU's Warren 'Smokey' Thomas was livid and notes that he wants a guarantee the government won't raid his members' pension fund.
- February 15, 2017 -- QP Briefing quotes Minister Sandals about it being too soon to weigh in on what might happen if the Auditor General stands her ground in the pension accounting dispute.
- February 14, 2017 – high profile media coverage of the Pension Asset Expert Advisory Panel report release the day before.
    - Toronto Star columnist Martin Regg Cohn is critical of the Auditor General saying she has been caught out in a $10.7-billion miscalculation.
    - The Star's coverage also included article about the panel report and that $10.7 billion in government-sponsored pension plans should count toward the province's bottom line.
    - The Ottawa Sun's David Reevely says about the panel report "…we're talking serious money - the stakes in what's otherwise the most arcane public-accounting battle ever to spill out of a comptrollers' seminar and into the streets."
    - OPSEU's Smokey Thomas writes that the dispute between the government and the Auditor General is not "just a paper war" and that he "unequivocally supports" the AG's position.
- On February 13, 2017 QP Briefing reports the government has accepted the panel's conclusion that pension surpluses are assets. The Auditor General's stance won't be known until later in the week. The article includes comments from Tory finance critic Vic Fedeli: "Basically, they've gone out and hired people whose findings would be more convenient for them ... They have appointed a private panel of auditors to come to the province's conclusion." OPSEU president Warren (Smokey) Thomas said he's concerned the panel's conclusion was politically motivated: "If I was going to fall on a side of advice, I'd fall on the advice of the auditor general," he said. "The government has gone to extraordinary length to have somebody try to disagree and discredit the auditor general."
- February 7 & 8, 2017 – Toronto Star and QP Briefing have coverage about the pension asset advisory panel's soon-to-be-released report.
    - PC Finance Critic Vic Fedeli tells the Star, that the people have to ask themselves who they are going to believe-- the independent auditor general or a scandal-plagued Liberal government?"
    - Columnist Martin Regg Cohn writes the AG has gone out on a fiscal limb by effectively wiping away nearly $11 billion in government assets and she won't climb down.
- November 14 & 30th, 2016 -- QP Briefing has coverage of the expert panel announced to study the accounting dispute over pension assets.

- October 9, 2016 -- Focus Ontario (Global tv) and the Toronto Sun have coverage of the 2015-16 Public Accounts and the disagreement with the Auditor General.
    - Focus Ontario coverage balanced.
    - Toronto Sun opinion piece expresses surprise that the government elevated the tussle over pensions to the political realm by tabling the financial statements without the Auditor General's opinion.
- October 6, 2016 -- The Financial Post has a highly critical commentary by analysts with the Fraser Institute, while QP Briefing reports the public accounts for 2015-16 have been tabled almost two weeks after months of back and forth between the auditor general and the government over whether the bottom line should include assets for two jointly-sponsored provincial pension plans.
- October 3, 2016 -- The Globe and Mail and Canadian Press report the government is ‘fighting’ with the Auditor General. Globe notes focuses on the AG’s $1.5-billion discrepancy in last year's deficit and a $10.7-billion difference in Ontario's net debt. CP story (picked up by 40 media outlets) says the Auditor General is taking issue with their pension asset accounting, though it says these are rules that have been used for the past 14 years.

Appendix

Preparation and Tabling:

The Public Accounts for each fiscal year are prepared under the direction of the President of Treasury Board, as required by the *Financial Administration Act*.

The Public Accounts of Ontario consist of the Annual Report and three supplementary volumes. The Annual Report includes the province's audited consolidated financial statements and a financial statement discussion and analysis section. Supplementary information is contained in three volumes:

Volume 1: Ministry statements for expenses, assets, revenue, detailed debt and other supplementary schedules. It provides a comparison of appropriations with actual spending.

Volume 2: Financial statements of significant provincial corporations, boards, commissions that are part of the government's reporting entity, and other miscellaneous statements.

Volume 3: Detailed schedules of payments made by ministries to vendors and transfer payment recipients.

The *Financial Administration Act* requires the President of Treasury Board to submit the province's Annual Report and consolidated financial statements to the Lieutenant Governor in Council (LGIC) on or before 180 days after fiscal year-end. This year, the deadline was September 27, 2017.

The process for release of the Public Accounts is as follows:

- The Public Accounts are approved by the Lieutenant Governor in Council.
- The LGIC lays the Public Accounts before the Assembly, if the Assembly is in session, and the Public Accounts are then released on the same day.
- If the Assembly is not in session on the day of the release of the Public Accounts the LGIC is required to make the Public Accounts public and the Public Accounts are laid before the Assembly on or before the tenth day of the next session.

LOGISTICS & FORMAT OVERVIEW

Overview

- SCOPA meetings are open to the public with the exception of those dealing with the setting of the Committee's agenda and the preparation of committee reports. All public committee proceedings are recorded in Hansard.
- The Chair will advise members to consider questions that are relevant to the content of the Auditor General's Annual Report, but in practice members do sometimes ask questions outside of the report's focus. As a general rule, expect that any question related to the Province's financial statements would be ruled within scope by the committee chair.
- The Committee members may ask that ministries provide details after the session if more research or gathering of information is needed to respond to a question.

Agenda

Wednesday, February 28, 2018
Committee Room 151 (Amethyst Room), Main Legislative Building

Time	*Topic*
9:00 a.m.	Closed Session: Briefing by the Auditor General
10:00 a.m.	Briefing by the Research Officer
10:15 a.m.	RECESS
12:30 p.m.	Treasury Board Secretariat and other representatives • *Invited senior officials appear and respond to questions.* • *The Auditor General attends, and the Committee members can seek clarification from the AG on points from her report if needed during the session.*

12:30 – 3:00 p.m.

- **Opening remarks** (20 minutes)
- **First round of questions** (60 minutes)
  - Each of the three political parties get 20 minutes of questions
- **Second round of questions** (50 minutes, approximately)
  - The remaining time until 2:45 p.m. is split between the three political parties; approximately 15-17 minutes per party

DRAFT

- **Closed session** (15 minutes)
    - Committee members plus the Clerk, only; no audience or presenters
    - The Committee will discuss the outcome of the meeting and if they want to do a report
    - There are no closing statements from ministry officials

Room Setup

- Committee Room 151 (Amethyst Room) is equipped with cameras and the meeting will be available on TVs within the Legislature and streamed online.
- The room has a square table with rows of extra seating at the front the room.
- The Committee Chair, Auditor General and Clerk will sit at the head of the table with the government and opposition parties on opposite sides.
- The invitees sit opposite the Committee Chair and Clerk, either at the table or in the first row of chairs.

Media Access

- Media are allowed to sit in on the meeting as long as they do not interrupt the proceedings. They cannot ask questions in the committee room, but if they wish they can scrum participants in the hallway as they leave.
- Media can also watch SCOPA proceedings on the TVs in the Legislature or online.

STRATEGIC APPROACH

- Provide evidence and facts as the basis of decision-making wherever appropriate (e.g. other jurisdictions, external advisors).
- Provide responses that are relevant and in scope of the consideration of chapter two of the Office of the Auditor General's report
- Avoid any speculation on political decision-making or rationales; provide objective, factual responses in role as non-partisan public servant.
- Provide context wherever possible. Deputy Ministers to provide initial messaging then pass to the subject matter experts where appropriate.
- Emphasize the role of a public servant is to provide factual, non-partisan information to the Committee based on due diligence and the application of professional judgment.
- Reaffirm the government's commitment to working with the Office of the Auditor General.
- Emphasize that the province will continue to follow Public Sector Accounting Standards (PSAS), as always, and will seek appropriate expert guidance where PSAS is silent.
- Use the Committee appearance as an opportunity to communicate the facts and rationale for the decision to adopt/continue accounting practices in response to the Office of the Auditor General's recommendations.
- Highlight due diligence in decision making (Ontario Fair Hydro Plan accounting, pension asset accounting, Independent Electricity System Operator [IESO] market accounts, IESO rate-regulated accounting).

Summary Status Table in Response to the Report of the Auditor General of Ontario

Chapter 2 2017 Annual Report of the Auditor General
Treasury Board Secretariat, Ministry of Finance, Ministry of Energy

Auditor's Recommendation	Completed Undertaking	Outstanding Undertaking (including timeline)
AG Recommendation #1 *We recommend the government record valuation allowances to offset the net pension assets it has recorded from the Ontario Teachers' Pension Plan and the Ontario Public Sector Employees' Union Pension Plan until such time as it obtains formal written authorization from their pension plan co-sponsors that they are able to lower minimum contributions or withdraw surpluses from the pension funds within the next 12 months.*	The Office of the Auditor General communicated its interpretation of Public Sector Accounting Standards (PSAS) requiring a full valuation allowance on the Province's two jointly sponsored pension plans in September 2016. At that time, the government passed a time-limited regulation on the accounting treatment for its joint defined benefit plans to align with the Auditor General's interpretation of PSAS, which enabled officials from Treasury Board Secretariat and the Ministry of Finance to sign the Statement of Responsibility for the 2015-16 Public Accounts. During the 2016-17 year, the professional staff conducted further research and analysis, and determined that PSAS does not require a valuation allowance on either of the jointly sponsored pension plans. This conclusion is supported by: • The conclusions reached by an independent Pension Asset Expert Advisory Panel (the 'Panel'), established by the government to provide advice on the interpretation of PSAS with respect to the reporting of net pension assets of these two joint defined benefit plans. The Panel, comprised of accredited accounting, actuarial and legal professionals with extensive background in pension accounting and plan governance, released its report in February 2017 which supported the government's position that a valuation is not required for these two plans under PSAS. Two key findings of the Panel were: 1) there is no requirement under PSAS that any formal agreement exist between the joint sponsors regarding the timing or amount of a reduction in contributions to record an asset, as the existing agreements in place between the parties support the recognition of an expected benefit, and 2) unilateral control is not	The government will evaluate the need for a valuation allowance annually taking into consideration (a) changes, if any, in the governance structures of the plans, (b), decisions, if any, of the joint sponsors that impact the need for a valuation allowance, and b) changes, if any, in Public Sector Accounting Standards. The government is open to continue to discuss the matter in the hopes of resolving this matter.

CONFIDENTIAL DRAFT FOR DISCUSSION

	required for asset recognition; joint control with each party having the ability to deny the actions of the other sponsor, provides evidence of shared control, supporting recognition of an asset. • An opinion from Deloitte LLP on aspects of the Province's accounting as at March 31, 2016 for the Ontario Teachers' Pension Plan. The opinion, which was dated October 2, 2016, concluded that it was permissible to recognize a pension asset under Canadian Public Sector Accounting Standards, even though the Province did not have under a unilateral right to reduce contributions. The opinion did not address the value at which the asset should be recorded. • Aanalysis completed by EY as to whether any valuation allowance is required to be recorded for OTPP or OPSEUPP as of March 31, 2017. EY confirmed no valuation allowance was required for either plan. The government respectfully disagrees with the Auditor General's interpretation of the accounting standards on this issue as PSAS neither requires unilateral control to record an asset, nor does it include a requirement to obtain a letter from the co-sponsor of the plan agreeing to reduce future contributions within 12 months.	

DRAFT

Summary Status Table in Response to the
Report of the Auditor General of Ontario
Chapter 2 2017 Annual Report of the Auditor General
Treasury Board Secretariat, Ministry of Finance, Ministry of Energy

AG Recommendation #2 *We recommend that the government remove the Independent Electricity System Operator's Market Accounts from the Province's consolidated financial statements.*	The Province consolidates the entities it controls, in accordance with Public Sector Accounting Standards (PSAS) and its internal reporting policies. Each consolidated entity produces its own stand-alone financial statements and is subject to its own financial statement audit. In 2016, the Independent Electricity System Operator (IESO) changed the accounting for the market accounts and recognized these balances on its financial statements. The financial statements of the IESO for the year-ended December 31, 2016 were subject to an external audit and received an unqualified (or clean) opinion. The government supports this enhanced reporting and greater transparency for the economic activities of the IESO. Additional comments with respect to IESO's accounting for the Market Accounts are included in the response to Recommendation #5 of this report.	The government supports the enhanced reporting and greater transparency for the economic activities of IESO resulting from the recognition of the market accounts. The government is open to continue to discuss the issue in the hopes of resolving this matter.
AG Recommendation #3 *We recommend the government follow the accounting standards established by the Public Sector Accounting Board and the Province's historical accounting precedent, and implement the recommendations in the Special Report issued*	The government prepares its financial statements in accordance with PSAS. The proposed accounting for the Ontario Fair Hydro Plan reflects the economic substance of the transaction by differentiating costs borne by taxpayers versus those borne by ratepayers. PSAS is silent on the recognition, measurement, presentation and disclosure of rate-regulated activities. In absence of a clear position on an issue, standard accounting practice dictates that an entity should consult other accounting standards. This guidance for PSAS is included in PS1150.07. Regarding the Office of the Auditor General's (OAG's) recommendation that the financing for Ontario's Fair Hydro Plan (OFHP) be pursued at the lowest cost to Ontarians, the government reiterates its concerns with this characterization, which were previously provided in the October 4, 2017 government response to the OAG's special report on OFHP (see	The government intends to continue to prepare its financial statements in accordance with Public Sector Accounting Standards (PSAS). The Fair Hydro Trust will raise financing through a combination of 3rd party senior debt and subordinated debt funded by OPG for which the cost will be primarily driven by the credit ratings assigned by Moody's and DBRS. The ultimate cost of this program will be dependent on the quantity of Global Adjustment that will be financed, prevailing market interest rates over the next 30 years, the availability of capital to invest in this type of structured debt and the

DRAFT

by our Office and tabled in the legislature on October 17, 2017, titled The Fair Hydro Plan: Concerns About Fiscal Transparency, Accountability and Value for Money, as follows: • *Record the true financial impact of the Fair Hydro Plan's electricity rate reduction on the Province's budgets and consolidated financial statements; and* • *Use a financing structure to fund the rate reduction that is least costly for Ontarians.*	Government Response to OAG Report on the Fair Hydro Plan in Appendix 5 of the Auditor General's Special Report). With respect to the Global Adjustment Refinancing (GA Refinancing) component of the OFHP, the policy objective is to more fairly allocate the cost to ratepayers over the useful life, not the contractual term, of the electricity generating assets. Therefore, it was a primary policy objective to ensure that the costs are borne by the beneficiaries of the electricity system – the ratepayers – and not the tax-base. The government believes it is appropriate for ratepayers to pay for the financing of electricity assets. The rate-base has a different risk profile than the tax-base, which would be reflected in different interest costs. The various entities that operate in the electricity industry have different financing costs that are specific to their risk profiles. The industry does not operate and is not financed through the Province. Ontario Power Generation (OPG) was identified as the Financial Services Manager responsible for the financing plans and the financing entity (i.e., Fair Hydro Trust) that will manage the debt obligations. OPG has the necessary financing and commercial expertise to assist with refinancing the Global Adjustment (GA) and will ensure that it is done in an efficient and cost-effective manner. OPG has a demonstrated track record in the financial markets with its Corporate Debt platform, private placement of insurance linked bonds, participation in securitization program and highly successful project debt issuances tied to new hydroelectric developments. OPG is beginning the process of raising funds to finance the deferred costs, and while total borrowing costs will not be known until the program is complete, accumulated interest is projected to be less than the estimates in the May 2017 report of the Financial Accountability Office (FAO). The figures referenced in the FAO's report was based on initial Ministry of Energy estimates from March 2017. Subsequent analysis	credit stability of the OFHP program which would be reflected in credit ratings assigned to this debt over time. Each of these factors will need to be managed and monitored closely. The government is open to continue to discuss the issue in the hopes of resolving this matter.

CONFIDENTIAL DRAFT FOR DISCUSSION

	conducted by the Ministry of Energy refined a number of variables, including the cost of borrowing and the quantity of GA to be refinanced. A number of variables, including interest rates, electricity demand and electricity costs, will change over the thirty-year life of OFHP. Government will continue to revise cost estimates to reflect these variable conditions. In addition, as outlined in the 2017 Long-Term Energy Plan, the government will continue to identify and implement initiatives to take costs out of the electricity system, which would reduce the cost of GA refinancing.	
AG Recommendation #4 *The Office of the Auditor General is the appointed under the Auditor General Act as the auditor for the consolidated financial statements of the Province of Ontario. We recommend that the Treasury Board Secretariat:* • *Proactively supply copies to the Auditor General of all contracts it enters into for accounting advice and opinions in order to ensure that*	Treasury Board Secretariat's use of external expertise for accounting and financial reporting matters supplements its own resources on complex or emerging accounting and reporting matters. External advisors are generally engaged to provide advice and guidance to supplement internal analysis. Treasury Board is committed to working with the Office of the Auditor General to discuss issues, once the professional staff has completed its analysis of the issue. In addition, Treasury Board believes frequent communication with the Office of the Auditor General is important and to that end, requested additional meetings with both the staff and the Auditor General during the 2016-17 audit. Where required by the CPA Ontario Code of Professional Conduct, the Auditor General has been, and will continue to be, advised of external advisor involvement.	Treasury Board Secretariat will continue to take a proactive approach to raising issues with the Office of the Auditor General. Where required by the CPA Ontario Code of Professional Conduct, the Auditor General will continue to be advised of external advisor involvement.

CONFIDENTIAL DRAFT FOR DISCUSSION

our Office is aware of the work the advisers are performing, can assess significant issues in a timely manner, and can determine the impact on the Province's consolidated financial statements and our annual audit; and • *Build into its contracts with external advisers the requirement that the advisers engaged to provide accounting advice and opinions that affect the consolidated financial statements notify our Office of*		

DRAFT

their engagement as required under the Code of Professional Conduct of the Chartered Professional Accountants of Ontario.		
AG Recommendation #5 *We recommend that the Independent Electricity System Operator (IESO), an "other government organization," use the Canadian Public Sector Accounting Standards (PSAS) in the preparation of its financial statements. Specifically, it should:*	The Independent Electricity System Operator (IESO) prepares its financial statements in accordance with Public Sector Accounting Standards (PSAS) and the financial statements are audited by a firm of independent external auditors whose responsibility is to express an opinion on whether the financial statements are fairly presented in accordance with PSAS. On its 2016 financial statements, IESO received an unqualified (clean) audit opinion. In its role as market administrator, IESO operates and settles approximately $17 billion through the electricity market. The change to include market account assets and liabilities in the financial statements provides increased transparency with respect to the value of transactions that flow through Ontario's electricity market, that otherwise would go	The IESO intends to continue to prepare its financial statements in accordance with Public Sector Accounting Standards, and will report on the results of its accounting firm's audit in its 2017 financial statements, to be published March 30, 2018. The IESO will continue to regularly review its accounting policies to ensure they are best suited to the reporting requirements of its business and the users of its financial statements. This includes providing transparency into the value of transactions that flow through Ontario's $17 billion electricity market and reflecting the economic substance of certain types of expenses that may not be directly recovered through normal revenue requirement

DRAFT

• *Remove market accounts recorded on its financial statements; and* • *Discontinue the inappropriate use of rate-regulated accounting in the preparation of its financial statements.* *To ensure that the members of the Legislative Assembly receive financial information on the operations of the IESO prepared in accordance with Canadian PSAS, the Office of the Auditor General will conduct an attest audit of the December 31, 2017, financial statements of the IESO as permitted under the Electricity Act, Subsection 25.2(2), which*	unreported in IESO's financial statements. These changes were extensively discussed with IESO's external auditors, its Audit Committee and its Board of Directors. The decision was supported by the Office of the Provincial Controller and IESO's external audit firm. Rate-regulated accounting better reflects the economic substance of certain types of IESO expenses (like those related to the Smart Metering Entity) that may not be directly recovered through normal revenue requirement models, and instead are recovered through rate regulation. This change is in line with accounting practices followed by six out of eight other independent system operators in North America and provides IESO financial statement users greater transparency into the substance of the variance accounts it holds and its right to collect an amount in the future.	models, and instead are recovered through rate regulation. The IESO recognizes the Auditor General's statutory role and authority to perform an audit of the IESO. The IESO is cooperating with the Office of the Auditor General to provide information, including the 2017 financial statements prepared by management, and for access to management for assistance in understanding such information. The IESO has likewise instructed its audit partner to cooperate with the Auditor General's audit.

DRAFT

states: "The Auditor General may audit the accounts and transactions of the IESO. 2014, c. 7, Sched. 7, s. 3 (1)."		
AG Recommendation #6 *We recommend the government follow the accounting standards established by the Public Sector Accounting Board, rather than using legislation and regulations to prescribe accounting treatments.*	The Province is committed to provide high-quality financial reports that support transparency and accountability in reporting to the public, the legislature and other users. For the 2015-16 Public Accounts, the government passed a time-limited regulation prescribing the accounting treatment for net pension assets in order to allow Treasury Board Secretariat and Ministry of Finance officials to sign off on Public Accounts consistent with the fiscal impact of the Auditor General's interpretation of Public Sector Accounting Standards (PSAS). This regulation is the only example of where the accounting treatment was legislated, and the legislation did not align with the requirements of PSAS. With respect to the Ontario Fair Hydro Plan Act and its regulations, there are no provisions in that legislation that prescribe the accounting treatment required to be followed by the Province. It is important to distinguish legislating the accounting from legislating the right of the government to recover amounts from specified ratepayers in the future,	The government intends to continue to prepare its financial statements in accordance with Public Sector Accounting Standards.

	which in the absence of the legislation, would have been collected from specified ratepayers as the costs were incurred. The accounting for the transactions resulting from the Fair Hydro Plan will be recorded in accordance with PSAS.	
AG Recommendation #7 *We recommend that in order to address the Province's growing total debt burden, the government work towards the development of a long-term total-debt reduction plan linked to its target of reducing the net debt-to-GDP ratio to its pre-recession level of 27% as measured using proper accounting for net pension assets and the projected costs of the Fair Hydro Plan. The government should also discuss publicly how it plans to pay down the debt.*	The 2017 Budget and the 2017 Fall Economic Statement stated that the government continues to maintain a target of reducing the net debt-to-GDP ratio to its pre-recession level of 27%, currently projected for 2029-30, together with an interim target of 35% by 2023-24. From 2017-18 onwards, the balanced budget environment will limit increases in debt to the difference between annual investments in infrastructure improvements and the amortization of such investments. The government's long-term infrastructure plan to invest about $190 billion over 13 years, starting in 2014-15, will contribute to the growth of the economy. The Centre for Spatial Economics found that for every $1 spent on public infrastructure, GDP increases by $6, on average, in the long term. Therefore, while overall debt will rise to fund these infrastructure investments, measurements of relative debt such as the net debt-to-GDP ratio, a recommended practice by the Public Sector Accounting Board, will gradually diminish due to the Province's GDP increasing at a faster rate than net debt. This will allow the Government to continue to move towards its 27% net debt-to-GDP target. The ratio has already commenced declining, falling to 37.3% in 2017-18 from its 2014-15 peak of 39.3%.	Continue to monitor progress. Estimated implementation by FY 2029-30.

DRAFT

	As discussed more thoroughly in responses to other recommendations in this report, the government prepares its financial statements in accordance with Public Sector Accounting Standards, including the net pension assets for its jointly sponsored pension plans and the transactions resulting from the Ontario Fair Hydro Plan.	
AG Recommendation #8 *We recommend that the Office of the Provincial Controller undertake thorough planning involving all stakeholders, including Treasury Board Secretariat, ministries and provincial government agencies, to identify the barriers and key areas to be addressed to achieve earlier finalization of the Province's consolidated financial statements, including the estimation risks associated with corporations tax and*	Treasury Board Secretariat and the Ministry of Finance are supportive of the timely delivery of the Public Accounts. The Office of the Provincial Controller works closely with the Office of the Auditor General to identify audit issues early and to ensure that stakeholders are engaged in discussions regarding risks and resolution. The Office of the Provincial Controller will continue to collaborate with the Office of the Auditor General to support the timely delivery of the Public Accounts. The Province will work with the Canada Revenue Agency on this recommendation, as reporting Personal and Corporate taxation revenues is highly dependent on information they provide.	Planning discussions for the 2017-18 Public Accounts have begun between the Office of the Provincial Controller and the Office of the Auditor General. As well, the Office of Economic Policy has been engaged in discussions on risk considerations related to economic models used to estimate personal and corporate tax revenues.

DRAFT

personal income tax revenues.		
AG Recommendation #9 *We recommend that the government avoid establishing arm's length trusts in order to record an expense in its consolidated financial statements before it is necessary, given that it loses the ability to ensure that funds are ultimately provided to the appropriate beneficiaries.*	The government works with its transfer payment recipients to ensure it receives good value for the money it provides in the form of grants. Government policy on the structured approach to program delivery takes a risk-based approach with respect to transfer payment oversight. Grants are provided to thousands of organizations annually that the government deals with at arms-length and is able to demonstrate proper oversight. A Trust structure was selected to implement the Affordability Fund in order to provide an effective solution to distributing funds to electricity distributors. With approximately 70 distributors across Ontario, it was not feasible for the Province to enter into agreements with each distributor. The Trust structure establishes an independent entity with expertise from the electricity distributor and community sectors. While the Affordability Fund was established at arm's length to the government, there are report-back requirements on the use of funds transferred as well as the ability for the government to conduct an audit to gain assurance that the funds have been used for the purposes intended.	The government will continue to assess the most appropriate vehicle for meeting its policy objectives, which include appropriate oversight of how transfer payments are spent.

PENSION ASSET ACCOUNTING

AG Recommendation #1: Pension Asset Accounting

Key Messages

- The province continues to move forward and present the province's finances fairly and accurately and in accordance with Canadian Public Sector Accounting Standards (PSAS).
- We respectfully disagree with the Auditor General's interpretation of the accounting standards, as PSAS neither requires unilateral control to record an asset, nor does it include a requirement to obtain a letter from the co-sponsor of the plan agreeing to reduce further contributions within 12 months.
- The province will evaluate the need for a valuation allowance annually taking into consideration (a) changes, if any, in the governance structures of the plans, (b), decisions, if any, of the joint sponsors that impact the need for a valuation allowance, and c) changes, if any, in Public Sector Accounting Standards.
- The province is open to continue to discuss the matter in the hopes of resolving this matter.
- For more information on pension asset accounting, I will now pass it over to:
    - Cindy Veinot, Provincial Controller

1. **How do you respond to the Auditor General's recommendation that the government should record valuation allowances to offset the net pension assets recorded from the Ontario Teacher's Pension Plan and the Ontario Public Sector Employee's Union Pension Plan until you receive formal written authorization from their pension plan co-sponsors?**

   The province continues to move forward and present the province's finances fairly and accurately and in accordance with Canadian Public Sector Accounting Standards (PSAS).

   The Office of the Auditor General communicated its interpretation of PSAS requiring a full valuation allowance on the province's two jointly sponsored pension plans in September 2016.

   At that time, the government passed a time-limited regulation on the accounting treatment of for its joint defined benefit plans to align with the Auditor General's interpretation of PSAS, which enabled officials from the Treasury Board Secretariat and the Ministry of Finance to sign the Statement of Responsibility for the 2015-16 Public Accounts.

   During the 2016-17 year, the province's professional accounting staff conducted further research and analysis, and determined that PSAS does not require a valuation allowance on either of the jointly sponsored pension plans.

DRAFT

This conclusion is supported by:

- The conclusions reached by an independent Pension Asset Expert Advisory Panel, established by the government to provide advice on the interpretation of PSAS with respect to the reporting of net pension assets of these two joint defined benefit plans.

  The panel, comprised of accredited accounting, actuarial and legal professionals with extensive background in pension accounting and plan governance, released its report in February 2017, which supported the government's position that a valuation is not required for these two plans under PSAS.

  Two key findings of the panel were:

  1) There is no requirement under PSAS that any formal agreement exist between the joint sponsors regarding the timing or amount of a reduction in contributions to record and asset, as the existing agreements in place between the parties support the recognition of an expected benefit; and

  2) Unilateral control is not required for asset recognition. Joint control with each party having the ability to deny the actions of the other sponsor provides evidence of shared control, supporting recognition of an asset.

- An opinion from Deloitte LLP on aspects of the province's accounting as of March 31, 2016 for the Ontario Teacher's Pension Plan (OTPP). The opinion, which was dated October 2, 2016, concluded that it was permissible to recognize a pension asset under PSAS, even though the province did not have a unilateral right to reduce contributions. (The opinion did not address the value at which the asset should be recorded.)

- Analysis completed by EY as to whether any valuation allowance is required to be recorded for OTPP or Ontario Public Sector Employee's Union Pension Plan (OPSEUPP) as of March 31, 2017. EY confirmed no valuation allowance was required for either plan.

After significant deliberation, including consideration of the recommendations of the panel, Deloitte LLP and EY, Ontario confirmed that the accounting for these plans prior to 2015-16 was appropriate, and prepared in accordance with PSAS for pension asset accounting. The 2016-17 financial statements include these pension assets, and we continue to apply the accounting treatment of pension

assets that the province has used consistently since 2001. In addition, the 2015-16 financial statements were restated to include these assets.

We respectfully disagree with the Auditor General's interpretation of the accounting standards, as PSAS neither requires unilateral control to record an asset, nor does it include a requirement to obtain a letter from the co-sponsor of the plan agreeing to reduce further contributions within 12 months.

The province will evaluate the need for a valuation allowance annually taking into consideration (a) changes, if any, in the governance structures of the plans, (b), decisions, if any, of the joint sponsors that impact the need for a valuation allowance, and c) changes, if any, in Public Sector Accounting Standards.

The province is open to continue to discuss the matter in the hopes of resolving this matter.

2. Why are you still fighting with the Auditor General over pension accounting?

In preparing last year's Public Accounts, the province's professional accounting staff and the Auditor General's Office engaged in discussions about the appropriate application of Public Sector Accounting Board standards regarding pension accounting for the province's jointly sponsored pension plans.

As a result, the Pension Asset Expert Advisory Panel was established to deliver independent advice and recommendations to the province on the issue. The independent panel members concluded the province's share of the net pension assets of both the Ontario Teachers' Pension Plan and the Ontario Public Service Employees' Union Pension Plan should be recognized in Ontario's financial statements.

After significant deliberation, including consideration of the recommendations of the panel, Ontario confirmed that the accounting for these plans prior to 2015-16 was appropriate. Further, EY provided additional analysis and concluded that no valuation allowance was required for either plan. The 2016-17 financial statements include these pension assets, and the government continues to apply the accounting treatment of pension assets that the province has used consistently since 2001. In addition, the 2015-16 results were restated to include these assets.

The Treasury Board Secretariat will continue to work with the Auditor General to build on the government's track record of responsible fiscal management and high quality financial reporting.

DRAFT

Advisory Panel Compensation

1. **How much did you pay the panel members? Do you think that money was justified?**

   The total cost of the panel was $221,113. This included compensation and travel expenses for the four panelists, as well as procurement. These rates are consistent with the Agencies and Appointments Directive, which specified up to $2,000 per day for appointees with unique and specialized expertise, or urgent issues affecting government priorities and requiring intense time commitments over a short period of time.

   The panel members have expertise in the areas of jointly sponsored pension plan governance, actuarial modelling for pension plans and public sector accounting standards, and provided independent advice on how to move forward with how Public Sector Accounting Board standards should be applied to current and potential future net pension assets.

2. **Why was Patricia O'Malley included in Public Accounts and not the other panel members?**

   Patricia O'Malley was the chair of the independent Pension Asset Expert Advisory Panel (PAEAP), which provided important advice to government on how to account for jointly-sponsored pension plans. She is included in Public Accounts because her compensation for her work on the Panel was above the $50,000 threshold that must be reported in detail in Public Accounts.

   The other members of PAEAP were paid less than the $50,000 minimum threshold in fiscal 2016-17 that requires they be listed in Public Accounts. Their 2016-17 compensation is captured as part of the "Accounts Under $50,000" category.

   As Paul Martin is a member of the New Brunswick Public Service, he did not receive compensation for his role on the panel. He was only eligible for expense reimbursements.

DRAFT

IESO ACCOUNTING

AG Recommendation #2: IESO Market Accounts

Key Messages

- The province consolidates the entities it controls, in accordance with Public Sector Accounting Standards (PSAS) and its internal reporting policies.
- Each consolidated entity produces its own stand-alone financial statements and is subject to its own financial statement audit.
- In 2016, the Independent Electricity System Operator (IESO) changed the accounting for the market accounts and recognized these balances on its financial statements.
- The financial statements of the IESO for the year-ended December 31, 2016 were subject to an external audit and received an unqualified (or clean) opinion.
- The government supports this enhanced reporting and greater transparency for the economic activities of the IESO.
- The province is open to continue to discuss the issue in the hopes of resolving this matter.
- For further details on the province's decision to accept IESO market accounts on the province's consolidated financial statements, I will pass it over to:
    - Cindy Veinot, Provincial Controller
- For further details on the IESO's decision to adopt market accounts, I will pass it over to:
    - Deputy Imbrogno

For QAs related to:	See:
IESO Market Accounts	Ministry of Energy (IESO)

1. **How do you respond to the Auditor General's recommendation that the government remove the Independent Electricity System Operator's (IESO) market accounts from the province's consolidated financial statements?**

   In 2016, the Independent Electricity System Operator (IESO) began recognizing its market accounts' assets (amounts due from power distributors) and liabilities (amounts due to power producers) in its financial results. IESO has chosen to recognize these markets accounts on its books for transparency reasons, as it better reflects the financial position of the IESO-administered markets at year-end. This change was supported by the IESO's audit committee, its independent external auditor, and by the Office of the Provincial Controller. This change also has no impact to the province's annual deficit, net debt or accumulated deficit.

   The financial statements of the IESO for the year-ended December 31, 2016 were subject to an external audit and received an unqualified (or clean) opinion.

DRAFT

This accounting is consistent with the presentation used previously by the Ontario Power Authority (which was merged with the IESO on January 1, 2015) in its financial statements, which was not subject to qualification from the Office of the Auditor General at that time.

AG Recommendation #5: IESO Market Accounts & Rate-Regulated Accounting

Key Messages

- The Independent Electricity System Operator (IESO) intends to continue to prepare its financial statements in accordance with Public Sector Accounting Standards (PSAS), and will report on the results of its accounting firm's audit in its 2017 financial statements, to be published March 30, 2018.
- The IESO will continue to regularly review its accounting policies to ensure they are best suited to the reporting requirements of its business and the users of its financial statements.
- The IESO recognizes the Auditor General's statutory role and authority to perform an audit of the IESO.
- As I understand, the IESO is cooperating with the Office of the Auditor General to provide information, including the 2017 financial statements prepared by management, and for access to management for assistance in understanding such information.
- As I understand, the IESO has also instructed its audit partner to cooperate with the Auditor General's Audit.
- For further details on the province's decision to accept IESO market accounts and rate-regulated accountingI will pass it over to:
    - Cindy Veinot, Provincial Controller
- For further details on the IESO, I will pass it over to:
    - Deputy Imbrogno

For QAs related to:	See:
IESO Market Accounts & Rate-Regulated Accounting	Ministry of Energy (IESO)

3. Does the Independent Electricity System Operator (IESO) use Canadian Public Sector Accounting Standards (PSAS) in the preparation of its financial statements?

Yes. The Independent Electricity System Operator (IESO) prepares its financial statements in accordance with Canadian Public Sector Accounting Standards (PSAS).

DRAFT

The IESO's financial statements are audited by a firm of independent external auditors whose responsibility is to express an opinion on whether the financial statements are fairly presented in accordance with PSAS. The IESO received an unqualified, or clean, audit opinion on its 2016 financial statements.

4. Why is the IESO now including market accounts on its financial statements? Does this go against PSAS?

The Independent Electricity System Operator (IESO) prepares its financial statements in accordance with Public Sector Accounting Standards (PSAS) and the financial statements are audited by a firm of independent external auditors whose responsibility is to express an opinion on whether the financial statements are fairly presented in accordance with PSAS.

In 2016, the Independent Electricity System Operator (IESO) began recognizing its market accounts' assets (amounts due from power distributors) and liabilities (amounts due to power producers) in its financial results. IESO has chosen to recognize these markets accounts on its books for transparency reasons, as it better reflects the financial position of the IESO-administered markets at year-end. On its 2016 financial statements, IESO received an unqualified (clean) audit opinion.

This accounting is consistent with the presentation used previously by the Ontario Power Authority (which was merged with the IESO on January 1, 2015) in its financial statements, which was not subject to qualification from the Office of the Auditor General at that time.

5. The Auditor General says that the IESO's use of rate-regulated accounting is inappropriate. Why has the government allowed the IESO to adopt this accounting method that she says is not in accordance with PSAS?

Canadian Public Sector Accounting Standards (PSAS) are silent on this issue – they neither explicitly permit, nor prohibit, the recognition, measurement, presentation, or disclosure of rate-regulated activities.

In the absence of a clear position on an issue, standard accounting practice dictates that an entity should consult other accounting standards. This guidance for PSAS is included in PS1150.07:

- *No rule of general application can be phrased to suit all circumstances or combinations of circumstances that may arise. As a result, matters may arise that are not specifically addressed in the primary sources of GAAP. It is necessary to refer to other sources when the primary sources do not deal with the accounting and reporting in financial statements of*

transactions or events that a public sector reporting entity encounters, or when additional guidance is needed to apply a primary source to specific circumstances. (Section PS 1150.07 from the PSA Handbook)

In this case, the Independent Electricity System Operator (IESO) consulted U.S. Generally Accepted Accounting Principles (GAAP), the appropriate accounting framework in North America that provides guidance on rate-regulated operations.

The IESO made the decision to adopt rate-regulated accounting because it better reflects the economic substance of certain types of expenses that may not be directly recovered through the normal revenue requirement model.

The IESO management, IESO's Audit Committee, IESO's Board of Directors, IESO's external auditor and the Office of the Provincial Controller all support the use of rate-regulated accounting by IESO.

Many entities in Canada, including Ontario Power Generation (OPG) and Hydro One use rate-regulated accounting. Rate-regulated accounting is well understood in the electricity sector, and the approach selected was taken in that context. The recognition of regulatory assets brings IESO in line with six other independent system operators in North America, including the:

- Alberta Electric System Operator (AESO)
- ISO New England
- New York Independent System Operator (NYISO)
- Midcontinent Independent System Operator (MISO)
- PJM Interconnection LLC and,
- Electric Reliability Council of Texas (ERCOT).

6. Are you concerned that the Auditor General will issue an adverse opinion on the province's next Public Accounts due to Ontario's Fair Hydro Plan accounting? What would be the impact on the province's credit rating?

It would be inappropriate to speculate about how the Auditor General may issue an opinion for Public Accounts next year. The implementation of Ontario's Fair Hydro Plan (OFHP) is ongoing, with significant decisions with accounting and financial implications still being finalized.

The Ministries of Energy and Finance, and the Treasury Board Secretariat continue to work closely with Ontario Power Generation (OPG), the Independent Electricity System Operator (IESO), as well as third-party experts to ensure appropriate due diligence is completed.

DRAFT

The province's financial statements are prepared in accordance with Canadian PSAS and will follow PSAS in accounting for the transactions resulting from OFHP in 2017-18, and in following years.

The financing plan for OFHP and its impact will be transparent. Credit rating agencies, securities regulators, and the public will see full information and full reporting of the impacts of OFHP.

Ontario has a strong track record of producing high-quality financial reports on a timely basis. Ontario will continue to move forward and present the province's finances fairly and accurately and in accordance with PSAS.

AG Audit of 2017 Statements

Key Messages

- The IESO will continue to regularly review its accounting policies to ensure they are best suited to the reporting requirements of its business and the users of its financial statements.
- The IESO recognizes the Auditor General's statutory role and authority to perform an audit of the IESO.
- As I understand, the IESO is cooperating with the Office of the Auditor General to provide information, including the 2017 financial statements prepared by management, and for access to management for assistance in understanding such information.
- As I understand, the IESO has also instructed its audit partner to cooperate with the Auditor General's Audit.

For QAs related to:	See:
Audit of IESO's statements	Ministry of Energy (IESO)

DRAFT

ONTARIO FAIR HYDRO PLAN

AG Recommendation #3: OFHP Accounting

Key Messages

- The province will continue to prepare its consolidated financial statements in accordance with Public Sector Accounting Standards (PSAS).
- The proposed accounting for the Ontario Fair Hydro Plan (OFHP) reflects the economic substance of the transaction by differentiating costs borne by taxpayers versus those borne by ratepayers.
- PSAS is silent on a key accounting issue regarding the OFHP – the standards neither explicitly permit, nor prohibit, the recognition, measurement, presentation, or disclosure of rate-regulated activities.
- In the absence of a clear position on an issue, standard accounting practice dictates that an entity should consult other accounting standards. This guidance for PSAS is included in the Public Sector Accounting Board's guidebook.
- The province's professional staff have appropriately applied this guidance in assessing the accounting for the OFHP.
- For further details on the province's decision to accept OFHP accounting, I will pass it over to:
    - Cindy Veinot, Provincial Controller
- For further details on the OFHP, I will pass it over to:
    - Deputy Imbrogno

For QAs related to:	See:
OFHP Overall, incl. IESO and OPG role	Ministry of Energy

7. Will the government follow Public Sector Accounting Standards (PSAS) for Ontario's Fair Hydro Plan?

The province will prepare its consolidated financial statements in accordance with Public Sector Accounting Standards (PSAS).

The proposed accounting for the Ontario Fair Hydro Plan (OFHP) reflects the economic substance of the transaction by differentiating costs borne by taxpayers versus those borne by ratepayers.

PSAS is silent on a key accounting issue regarding the OFHP – the standards neither explicitly permit, nor prohibit, the recognition, measurement, presentation, or disclosure of rate-regulated activities.

In the absence of a clear position on an issue, standard accounting practice dictates that an entity should consult other accounting standards. This guidance for PSAS is included in PS1150.07:

DRAFT

- *No rule of general application can be phrased to suit all circumstances or combinations of circumstances that may arise. As a result, matters may arise that are not specifically addressed in the primary sources of GAAP. It is necessary to refer to other sources when the primary sources do not deal with the accounting and reporting in financial statements of transactions or events that a public sector reporting entity encounters, or when additional guidance is needed to apply a primary source to specific circumstances. (Section PS 1150.07 from the PSA Handbook)*

The province's professional staff has appropriately applied this guidance in assessing the accounting for the Ontario Fair Hydro Plan.

8. Will the government follow the accounting standards set by historical precedent, as cited by the Auditor General?

The Auditor General's report makes a comparison between Ontario's Fair Hydro Plan (OFHP) and the Ontario Electricity Financial Corporation (OEFC) stranded debt. There are, however, crucial differences between the two.

For example, the OEFC stranded debt had already been incurred when the 1999 restructuring of the former Ontario Hydro took place.

In the case of OFHP, the difference between what will be collected and what will be paid to generators is considered to be an asset in accordance with the accounting definition, as it will generate a specific future revenue stream in the form of the Clean Energy Adjustment, which can be held and realized or can be sold.

It is important to note that the 1999 restructuring led to an "unbundling" of the electricity rate. Prior to the 1999 restructuring and the 2002 market opening, there was a "bundled rate" for electricity that included cost recovery of generation and transmission costs, operating and capital – including debt costs, as well as central market operations costs. Including debt cost recovery and matching the timing of the capital cost recovery with the benefit to the ratepayer is a normal rate-setting regulatory practice. It effectively amortized the cost of the investments in long-lived assets (including debt incurred).

The Debt Retirement Charge (DRC) represented the unbundling of a portion of the debt service costs. It effectively amortized the cost of the investments in long-lived assets (including debt incurred).

The OFHP Global Adjustment deferral is also intended to have costs recovered from specified ratepayers over a time period that better reflects the expected

lives of those assets (versus the contract lengths that may be shorter than the expected useful life of the assets).

The difference between the 1999 restructuring and OFHP is that the DRC continued to pay down, over time, debt that had already been incurred, while under OFHP, an asset is being recorded to reflect a fair allocation of electricity costs between current and future ratepayers.

The intention of OFHP is to be forward-looking, to ensure that ratepayers are sharing current and future costs, whereas the DRC was backward-looking, replacing part of a bundled rate that was already spreading the cost recovery of the debt over time.

9. Will the government implement the recommendations in the Auditor General's Special Report on the Fair Hydro Plan?

While the government does not agree with the assertions and conclusions expressed in the report, the government thanks the Office of the Auditor General for its report.

In developing Ontario's Fair Hydro Plan (OFHP), the government considered a range of implementation options and consulted with legal, accounting, financial and energy sector third-party experts to provide advice and ensure due diligence was completed.

OFHP operates under a financial and accounting framework that is appropriate for the intended purpose. It is in accordance with Public Sector Accounting Standards (PSAS) and ensures the goals underlying the program are achieved in a cost-effective manner.

On the point of "true financial impact":

In order to meet the needs of users, including the legislature and the public, for accountability in government reporting and decision making, it is essential that public sector financial statements reflect the economic substance of the government's activities.

The province's financial statements are prepared in accordance with Canadian PSAS and will follow PSAS in accounting for the transactions resulting from OFHP in 2017-18, and in following years.

As PSAS is set by an independent standard-setting body in Canada focused specifically on the public sector, and because PSAS is used by all senior

DRAFT

governments in Canada, presenting financial statements in accordance with PSAS results in transparent financial reporting for the province of Ontario.

Ontario has a strong track record of producing high-quality financial reports on a timely basis, and will continue to move forward and present the province's finances fairly, accurately and in accordance with PSAS.

On the point of "a financing structure that is the least costly for Ontarians":

The OFHP financing structure has been designed to provide electricity rate relief to current ratepayers, including by more fairly allocating costs for specified consumers, with the Global Adjustment cost amounts still ultimately borne by specified electricity ratepayers, as beneficiaries of those electricity system costs.

The government believes it is appropriate for ratepayers to pay for the financing of electricity assets. Having the rate-base pay is not a new policy, for example Hydro One has borrowed in the capital markets since 2000.

Ontario Power Generation (OPG) was identified as the Financial Services Manager responsible for the financing plans and the financing entity (the Fair Hydro Plan Trust) that will manage the debt obligations. OPG is beginning the process of raising funds to finance the deferred costs, and while total borrowing costs will not be known until the program is complete, accumulated interest is projected to be considerably less than the estimates in the May 2017 report of the Financial Accountability Office (FAO).

The cost analysis in the Office of the Auditor General's report was sourced from the FAO's May 2017 report. Total borrowing estimates over the thirty year life of OFHP have been revised down substantially by the government since the FAO released its report in May 2017, and borrowing costs are now forecast to be substantially lower than original estimates. Recent government estimates forecast that the peak debt over the thirty year life of OFHP will be below $20 billion. The preliminary estimate from March 2017 was about $28 billion.

The province will continue to prepare its consolidated financial statements in accordance with PSAS and continue to build on a track record of responsible fiscal management.

10. The Auditor General says that she has consulted with all of the Auditor Generals in Canada – and they agree with her assessments. How are we supposed to believe this government when all legislative auditors in the country say you are wrong?

DRAFT

In developing Ontario's Fair Hydro Plan, the government considered a range of implementation options and consulted with legal, accounting, financial and energy sector third-party experts to provide advice and ensure due diligence was completed.

PSAS is principle based – the standards are not a set of specific prescriptive rules. Applying them requires the application of professional judgment.

Our professional staff exercises judgment in applying the standards and as necessary consult with external experts and advisors. They provide the Office of the Auditor General with their written analysis on all significant issues that impact the financial statements for the year being audited, and they discuss the issues with the Office of the Auditor General.

All Chartered Professional Accountants (CPAs), including those employed by the Ontario Public Service (OPS), are required to comply with the Code of Professional Conduct for CPAs. One of those rules is that they not be associated with false or misleading information.

That means that if the professional accountants in the OPS do not agree with the judgment of the Ontario Auditor General, it is not as simple as just agreeing to accept the interpretation of the Office of the Auditor General if they believe that interpretation would result in false or misleading financial statements. While we expect professional accountants to agree on the vast majority of issues, we acknowledge that they may not agree on everything and when that occurs, and the difference is material to the financial statements, the Office of the Auditor General can choose to issue a qualified audit opinion.

11. Both the Auditor General and the Financial Accountability Officer have raised serious concerns about the accounting treatment of the electricity cost refinancing initiative. Why should Ontarians believe this government over two independent officers of the Legislature?

The province has the utmost respect for all independent officers of the legislature, and values the important perspective they bring.

In developing the Ontario Fair Hydro Plan, the government considered a range of implementation options and consulted with legal, accounting, financial and energy sector third-party experts to provide advice and ensure due diligence was completed.

OFHP operates under a financial and accounting framework that is appropriate for the intended purpose. It is in accordance with Public Sector Accounting

DRAFT

Standards (PSAS) and ensures the goals underlying the program are achieved in a cost-effective manner.

The province, as always, will prepare its consolidated financial statements in accordance with PSAS and continue to build on its track record of responsible fiscal management.

12. The Auditor General says that you are "obfuscating" the true financial impact of Ontario's Fair Hydro Plan through a "needlessly complex" accounting structure. How do you respond?

In developing Ontario's Fair Hydro Plan (OFHP), the government considered a range of implementation options and consulted with legal, accounting, financial and energy sector third-party experts to provide advice and ensure due diligence was completed.

OFHP operates under a financial and accounting framework that is appropriate for the intended purpose. It is in accordance with Public Sector Accounting Standards (PSAS) and ensures the goals underlying the program are achieved in a cost-effective manner.

OFHP is comprised of a series of policy decisions. The impact of some of these decisions will be borne by the province (taxpayers) where appropriate, such as sales tax relief and shifting social programs to the tax base; some will be borne by ratepayers, such as spreading the investment costs and benefits across ratepayers more fairly.

While the implementation of OFHP is ongoing, with significant decisions with accounting and financial implications still being finalized, the financing plan for OFHP and its impact will be transparent. Credit rating agencies, securities regulators, and the public will see full information and full reporting of the impacts of OFHP.

Ontario has a strong track record of producing high-quality financial reports on a timely basis. Ontario will continue to move forward and present the province's finances fairly and accurately and in accordance with PSAS.

13. How can you justify the $4 billion in additional interest expenses that will be borne by ratepayers because of the way the government has structured electricity cost refinancing (i.e. using Ontario Power Generation to finance 55 per cent, at a higher interest rate than the province, instead of the province financing the entire electricity cost financing)?

DRAFT

Ontario's Fair Hydro Plan (OFHP) is comprised of a series of policy decisions. The impact of some of these decisions will be borne by the province (taxpayers) where appropriate, such as sales tax relief and shifting social programs to the tax base; some will be borne by ratepayers, such as spreading the investment costs and benefits across ratepayers more fairly.

The accounting will reflect the economic substance of the transactions in accordance with Public Sector Accounting Standards (PSAS) and will differentiate those costs of OFHP borne by taxpayers versus those borne by ratepayers.

The Auditor General's report suggests that all the costs of OFHP should be reflected as if they will be borne by taxpayers, which is inaccurate.

Ontario Power Generation (OPG) is beginning the process of raising funds to finance the deferred costs, and while total borrowing costs will not be known until the program is complete, accumulated interest is projected to be considerably less than the estimates in the May 2017 report of the Financial Accountability Officer (FAO).

Total borrowing estimates over the thirty year life of OFHP have been revised down substantially by the government since the FAO released its report in May 2017, and borrowing costs are now forecast to be substantially lower than original estimates. Current government estimates forecast that the peak debt over the thirty year life of OFHP will be below $20 billion. The preliminary estimate from March 2017 was about $28 billion.

For further questions about borrowing estimates, please contact the Ministry of Finance.

14. The AG claims that when the government first gave Ontarians an 8 per cent break on their bills, it was reported on the books properly. She says when it jumped to 25 per cent, the accounting changed. Isn't it obvious that the government is cooking the books to suit their needs?

Ontario's Fair Hydro Plan (OFHP) is comprised of a series of policy decisions.

It is our role as public servants to provide our best advice and due diligence.

As always, the province adheres to Canadian Public Sector Accounting Standards (PSAS) issued by the Public Sector Accounting Board.

The province will continue to follow these standards for the transactions resulting from Ontario's Fair Hydro Plan (OFHP) in 2017-18 and in future years.

It's important to note that while PSAS is the primary source of guidance for the government in the preparation of its financial statements, there are circumstances where governments may refer to other accounting frameworks for guidance where PSAS is silent and does not address specific transactions.

In this case where PSAS is silent on the use of rate-regulated accounting, US accounting standards contain the most developed and appropriate guidance for this transaction.

15. The Auditor General says that even your own government officials flagged the unnecessarily high costs of Ontario's Fair Hydro Plan – and yet you chose to proceed. How can you justify this?

In developing Ontario's Fair Hydro Plan (OFHP), the government considered a range of implementation options and consulted with legal, accounting, financial and energy sector third-party experts to provide advice and ensure due diligence was completed.

Multiple options were considered in creating the OFHP framework – such as to have local distribution centres finance the difference between the amounts paid to the generators and the amounts collected from the ratepayers. This was rejected because of the inability of some local distribution centres to finance the balances.

The implementation of OFHP is ongoing, with significant decisions with accounting and financial implications still being finalized.

Ultimately, OFHP operates under a financial and accounting framework that is appropriate for the intended purpose. It is in accordance with Public Sector Accounting Standards (PSAS) and ensures the goals underlying the program are achieved in a cost-effective manner.

AG Recommendation #6: "Legislated Accounting"

Key Messages

- The province is committed to providing high-quality financial reports that support transparency and accountability in reporting to the public, the legislature, and other users.
- As always, we will prepare the province's consolidated financial statements in accordance with Public Sector Accounting Standards (PSAS), including the transactions resulting from Ontario's Fair Hydro Plan (OFHP).
- For the 2015-16 Public Accounts, the government passed a time-limited regulation prescribing the accounting treatment for net pension assets in order to

DRAFT

allow the Treasury Board Secretariat and the Ministry of Finance officials to sign off on Public Accounts consistent with the fiscal impact of the Auditor General's interpretation of PSAS.

- This regulation is the **only** example of where the accounting treatment was legislated, and the legislation did not align with the requirements with PSAS.
- The *Ontario Fair Hydro Plan Act, 2017* and its related regulations **do not** create accounting rules or legislate the accounting.
- For further details, I will pass it over to:
    - Cindy Veinot, Provincial Controller
- For further details on the OFHP, I will pass it over to:
    - Deputy Imbrogno

For QAs related to:	See:
OFHP Overall, incl. IESO and OPG role	Ministry of Energy

1. **Why has the government legislated accounting for things like Ontario's Fair Hydro Plan? Aren't you just changing the rules to suit your needs?**

   The province is committed to providing high-quality financial reports that support transparency and accountability in reporting to the public, the legislature, and other users.

   For the 2015-16 Public Accounts, the government passed a time-limited regulation prescribing the accounting treatment for net pension assets in order to allow the Treasury Board Secretariat and the Ministry of Finance officials to sign off on Public Accounts consistent with the fiscal impact of the Auditor General's interpretation of Public Sector Accounting Standards (PSAS). This regulation is the **only** example of where the accounting treatment was legislated, and the legislation did not align with the requirements with PSAS.

   The *Ontario Fair Hydro Plan Act, 2017* and its related regulations **do not** create accounting rules or legislate the accounting. It is important to distinguish legislating the accounting from legislating the right of the government to recover amounts from specified ratepayers in the future, which in the absence of legislation, would have been collected from specified ratepayers as the costs were incurred.

   The province, as always, will prepare its consolidated financial statements in accordance with PSAS, including the transactions resulting from Ontario's Fair Hydro Plan.

2. **The Auditor General said that a similar move to legislate accounting to defer costs was proposed with the restructuring of the Ontario electricity**

DRAFT

sector in the late 1990s, but the Auditor General's opinion at that time was that this would represent a departure from a central tenet of generally accepted accounting principles. The government at that time heard these concerns, and made the decision to not create an asset for future anticipated ratepayer payments. Why does the government think this is ok now?

The Auditor General's report makes a comparison between Ontario's Fair Hydro Plan (OFHP) and the Ontario Electricity Financial Corporation (OEFC) stranded debt. There are, however, crucial differences between the two.

For example, the OEFC stranded debt had already been incurred when the restructuring took place.

In the case of OFHP, the difference between what will be collected and what will be paid to generators is considered to be an asset in accordance with the accounting definition, as it will generate a specific future revenue stream in the form of the Clean Energy Adjustment.

It is important to note that the 1999 restructuring led to an "unbundling" of the electricity rate. Prior to the 1999 restructuring and the 2002 market opening, there was a "bundled rate" for electricity that included cost recovery of generation and transmission costs, operating and capital – including debt costs, as well as central market operations costs. Including debt cost recovery and matching the timing of the capital cost recovery with the benefit to the ratepayer is a normal rate-setting regulatory practice.

The Debt Retirement Charge (DRC) represented the unbundling of a portion of the debt service costs. It effectively amortized the cost of the investments in long-lived assets (including debt incurred).

The OFHP Global Adjustment deferral is also intended to have costs recovered from specified ratepayers over a time period that better reflects the expected lives of those assets (versus the contract lengths that may be shorter than the expected useful life of the assets).

The difference between the 1999 restructuring and OFHP is that the DRC continued to pay down, over time, debt that had already been incurred, while under OFHP, an asset is being recorded to reflect a fair allocation of electricity costs between current and future ratepayers.

The intention of OFHP is to be forward-looking, to ensure that ratepayers are sharing current and future costs, whereas the DRC was backward-looking, replacing part of a bundled rate that was already spreading the cost recovery of the debt over time.

DRAFT

AG Recommendation #9: Arm's Length Trusts

Key Messages

- The province works with its transfer payment recipients to ensure it receives good value for the money it provides in the form of grants.
- Government policy on the structured approach to program delivery takes a risk-based approach with respect to transfer payment oversight.
- The province will continue to assess the most appropriate vehicle for meeting its policy objectives, which include appropriate oversight of how transfer payments are spent.
- For more information on arm's length trusts, I will pass it to:
    - Cindy Veinot, Provincial Controller
    - Deputy Imbrogno

For QAs related to:	See:
OPG Accounting/Trust	Ministry of Energy

1. **Will the government avoid establishing arm's length trusts in order to record an expense in its financial statements before it is necessary, given that it loses the ability to ensure funds are provided to the appropriate beneficiaries?**

   The province works with its transfer payment recipients to ensure it receives good value for the money it provides in the form of grants.

   Government policy on the structured approach to program delivery takes a risk-based approach with respect to transfer payment oversight. Grants are provided to thousands of organizations annually that the government deals with at arm's length and is able to demonstrate proper oversight.

   A trust structure was selected to implement the Affordability Fund in order to provide an effective solution to distributing funds to electricity distributors. With approximately 70 distributors across Ontario, it was not feasible for the province to enter into agreements with each distributor.

   The trust structure establishes an independent entity with expertise from the electricity distributor and community sectors.

   While the Affordability Fund was established at arm's length to the government, there are report-back requirements on the use of funds transferred, as well as the

DRAFT

ability for the government to conduct an audit to gain assurance that the funds have been used for the purposes intended.

Records Disclosure/Process

Key Messages

- The province is committed to assisting the Office of the Auditor General so that it can provide its independent views to the Legislative Assembly.
- Senior ministry officials have met and continue to work with the Office of the Auditor General by participating in interviews and providing documentation.

For QAs related to:	See:
MOE Records Disclosure	Ministry of Energy

1. **The Auditor General alleges the government withheld information from her on the accounting treatment for Ontario's Fair Hydro Plan. Why would she say that?**

   The province is committed to assisting the Office of the Auditor General so that it can provide its independent views to the Legislative Assembly.

   The implementation of Ontario's Fair Hydro Plan is ongoing, with significant accounting and financial decisions still being finalized.

   Treasury Board Secretariat has released all requested records.

   Senior ministry officials have met with the Office of the Auditor General by participating in interviews and providing documentation.

   If asked about the Ministry of Energy emails:

   The Ministry of Energy, Finance, and the Treasury Board Secretariat are committed to assisting the Auditor General.

2. **In an email, a TBS official said [___], disagreeing with the government's policy decision. How do you respond?**

   As public servants, it is our role to provide our best advice and conduct our due diligence to inform decision-making. Part of this process includes questioning and deliberations.

DRAFT

The record you are referring to is part of that discussion process, where we as public servants engage in deliberations and explore the options to get to the point of providing our best advice.

It is important to keep in mind that an individual email represents a point in time of the discussion.
That statement is not necessarily representative of the final advice put forward and an endorsement of what the public service has identified as the best approach.

The records must be considered in the context of discussion and deliberation, as an exercise in due diligence, and not as a final endorsement of an option or approach.

3. When does TBS not provide information through a Freedom of Information request?

Since 2015, TBS has been 100 per cent compliant for all Freedom of Information requests it has received.

In some cases, records may contain information that will be withheld in accordance with the legislation, such as personal information about individuals, confidential business information, advice to government or information that is subject to solicitor client-privilege.

Re-Design of Hydro Bills

For QAs related to:	See:
Hydro Bills	Ministry of Energy

DRAFT

PRE-ELECTION REPORT

AG Recommendation #10: Pre-Election Report on Ontario's Finances

Key Messages

- The province takes the Auditor's recommendations seriously and remains committed to working constructively with the Auditor General.
- The government has not yet made a decision on whether and when to release a Pre-Election report.
- We are engaging with all officers of the legislature to keep them informed and engage constructively on considerations and approaches to ensure the people of Ontario are provided with an independent review of the province's fiscal position in advance of the election.

For QAs related to:	See:
Pre-Election Report	Ministry of Finance (Joint lead with Treasury Board Secretariat)

1. **Will the government issue a regulation confirming the source of reference for the Pre-Election Report and the timeline for issuance of the report that will be subject to the Auditor General's review?**

   Under the *Fiscal Transparency and Accountability Act, 2004*, the government may file a regulation that would require it to release a Pre-Election Report on Ontario's Finances. Should the government file such a regulation, the Auditor General would be required to issue a statement based on a prompt review following the release of such a Pre-Election Report.

   The province remains committed to meeting the legislative requirements of the Act, and working constructively with the Auditor General.

2. **Is the government required to issue a pre-Election Report?**

   Provisions in the Fiscal Transparency & Accountability Act, 2004 (FTAA) allow for – but do not require – a regulation to be filed requiring the release of a Pre-Election Report and a review of that report by the Auditor General.

3. **The Auditor General signalled her readiness to work with the government to examine the pre-election report, why has the government waited this long to engage with the Auditor?**

   The province takes the Auditor's recommendations seriously. The government has not yet made a decision on whether and when to release a Pre-Election

DRAFT

report. We are engaging with all officers of the legislature to keep them informed and engage constructively on considerations and approaches to ensure the people of Ontario are provided with an independent review of the Province's fiscal position in advance of the election.

4. **Minister Sousa recently signalled that the government is not planning on issuing a Pre-Election Report. How do you feel about the government continuing to circumvent the Auditor General and avoiding accountability?**

The province takes the Auditor's recommendations seriously. As I understand, the government has not yet made a decision on whether and when to release a Pre-Election report. We are engaging with all officers of the legislature to keep them informed and engage constructively on considerations and approaches to ensure the people of Ontario are provided with an independent review of the province's fiscal position in advance of the election.

DRAFT

PROVINCE'S FISCAL SITUATION

Recommendation #7: Province's Debt Burden

For QAs related to:	See:
Ontario's Debt Burden	Ministry of Finance

1. **How can your debt reduction plan be trusted if you're not using proper accounting for pension assets and the Fair Hydro Plan?**

   The province is committed to providing high-quality financial reports that support transparency and accountability in reporting to the public, the legislature, and other users.

   The province's financial statements are prepared in accordance with Canadian Public Sector Accounting Standards (PSAS), including the net pension assets for its jointly sponsored pension plans and the transactions resulting from the Ontario Fair Hydro Plan.

   PSAS is set by an independent standard-setting body in Canada focused specifically on the public sector, and is used by all senior governments in Canada.

   PSAS is principle based – the standards are not a set of specific prescriptive rules. Applying them requires the application of professional judgment.

   Our professional staff exercises judgment in applying the standards and as necessary consults with external experts and advisors. They provide the Office of the Auditor General with their written analysis on all significant issues that impact the financial statements for the year being audited, and they discuss the issues with the Office of the Auditor General.

   All Chartered Professional Accountants (CPAs), including those employed by the Ontario Public Service (OPS), are required to comply with the Code of Professional Conduct for CPAs. One of those rules is that they not be associated with false or misleading information.

   That means that if the professional accountants in the OPS do not agree with the judgment of the Ontario Auditor General, it is not as simple as just agreeing to accept the interpretation of the Office of the Auditor General if they believe that interpretation would result in false or misleading financial statements. While we expect professional accountants to agree on the vast majority of issues, we acknowledge that they may not agree on everything and when that occurs, and the difference is material to the financial statements, the Office of the Auditor General can choose to issue a qualified audit opinion.

DRAFT

Financial Accountability Office Reports

For QAs related to:	See:
FAO Reports	Ministry of Finance

Credit Ratings

For QAs related to:	See:
Credit Ratings	Ministry of Finance

1. **Does a qualified opinion from the Auditor General impact the province's credit rating?**

   The province's financial results show that the government has beaten its annual deficit targets. In April 2017, Ontario delivered its first balanced budget since the global recession and is on track to do so again next year and the year after.

   The rating agencies will assess whether the underlying factors that lead to a qualified opinion directly affect the creditworthiness of the province. However, there were no credit rating implications in 2016 when the province received a qualified audit opinion on its 2015-16 Public Accounts. Qualified opinions by the Auditor Generals of British Columbia and Quebec have been made in their respective provinces in the past, with no negative impacts on their province's credit ratings.

DRAFT

PREPARATION OF PUBLIC ACCOUNTS

AG Recommendation # 4: External Advisors

Key Messages

- The Treasury Board Secretariat (TBS) will continue to take a proactive approach to raising issues with the Office of the Auditor General.
- The province's use of external expertise for accounting and financial reporting matters supplements its own resources on complex or emerging accounting and reporting matters.
- External advisors are generally engaged to provide advice and guidance to supplement internal analysis, and in the normal course of business.
- When required by the Chartered Professional Accountants Ontario Code of Professional Conduct, the Office of the Auditor General has been, and will continue to be, advised of external advisor involvement.

For QAs related to:	See:
Ministry use of external advisors	Ministry of Energy Ministry of Finance

1. **Will the government provide copies of contracts it enters into for accounting advice to the Auditor General?**

   The province's use of external expertise for accounting and financial reporting matters supplements its own resources on complex or emerging accounting and reporting matters.

   External advisors are generally engaged to provide advice and guidance to supplement internal analysis, and in the normal course of business.

   The province is committed to working with the Office of the Auditor General to discuss issues, once the professional staff has completed its analysis of the issue.

   When required by the Chartered Professional Accountants Ontario Code of Professional Conduct, the Office of the Auditor General has been, and will continue to be, advised of external advisor involvement.

2. **Will the government build into its contracts with external advisors a requirement to notify the Auditor General of their engagement?**

   When required by the Chartered Professional Accountants Ontario Code of Professional Conduct, the Office of the Auditor General has been, and will continue to be, advised of external advisor involvement.

DRAFT

3. **Why does the government use external advisors/consultants? It seems convenient that whenever you disagree with the Auditor General, you turn to consultants to justify your accounting methods.**

   The government has a strong track record of producing high-quality financial reports on a timely basis and continues to present the province's finances fairly and accurately and in accordance with Canadian Public Sector Accounting Standards.

   The government's use of external expertise for accounting and financial reporting matters is a normal course of business and supplements its own resources on complex or emerging accounting and reporting matters.

   External advisors are generally engaged to provide advice and guidance to supplement internal analysis.

4. **It seems like you use consultants to circumvent the Auditor General, when it looks like she may disagree with your accounting methods. Why don't you let the Auditor General know when you're using external advisors for something that impacts her Office's ability to do their job?**

   The government's use of external expertise for accounting and financial reporting matters is a normal business practice and supplements its own resources on complex or emerging accounting and reporting matters.

   External advisors are generally engaged to provide advice and guidance to supplement internal analysis. The professional staff takes responsibility for the final decisions that are made with respect to the application of PSAS to the government's transactions.

   The province is committed to working with the Office of the Auditor General to discuss issues, once the professional staff has completed its analysis of the issue.

   When required by the Chartered Professional Accountants Ontario Code of Professional Conduct, the Auditor General has been, and will continue to be, advised of external advisor involvement.

5. **Are you going to hire an expert advisory panel, as you did on the pension asset accounting matter, to settle this dispute with the Auditor General? If so, what authority would this panel have?**

DRAFT

There are no plans to establish a panel at this time.

In developing Ontario's Fair Hydro Plan (OFHP), the government considered a range of implementation options and consulted with legal, accounting, financial and energy sector third-party experts to provide advice and ensure due diligence was completed.

The province will continue to work with the Auditor General to build on the government's track record of responsible fiscal management and high quality financial reporting.

6. Can you tell us how many consultants are being paid high salaries with public money while keeping themselves off the sunshine list?

The government continues to strengthen Ontario's efforts to become the most open, transparent and digitally connected government in Canada.

Disclosure of an individual's salary information outside of the Public Sector Salary Disclosure Act list is governed by the Freedom of Information and Protection of Privacy Act. Accordingly any such disclosure would only be made in compliance with the requirements of that Act.

Questions about specific public sector organizations should be directed to the organization or ministry responsible for it.

7. How much did the Treasury Board Secretariat spend on consultants?

The Treasury Board Secretariat (TBS) spent approximately $202 million in 2016-17 on consulting services:

- $167M is procured by IT Source, Central Agencies Cluster for Ontario Public Service (OPS) ministries. TBS has an enterprise role of procuring task-based IT consulting services on behalf of other ministries.
- $36M is services procured by TBS programs primarily for IT enhancement, management and other consulting services.

Consultants are used in the OPS when the organization needs to gain external advice and specialized expertise not already available in the OPS, or for short-term and non-recurring projects and initiatives.

TBS has an enterprise role of procuring task-based IT consulting services on behalf of other ministries as a cost-saving strategy.

DRAFT

Whenever the OPS need IT consulting services, the first thing we do is look for expertise within the organization. The government turns to IT consultants when it doesn't have the expertise in house, when it needs to gain external advice and specialized expertise, or when the need is short-term and non-recurring. This is true for one-time projects that launch new programs or when Cyber Security staff combine with external experts to carry out Threat Risk Assessments to ensure personal information is safe.

AG Recommendation #8: Timeline of Finalization of Financial Statements

Key Messages

- The Treasury Board Secretariat and the Ministry of Finance are supportive of the timely delivery of Public Accounts.
- The Office of the Provincial Controller works closely with the Office of the Auditor General to identify audit issues early and to ensure that stakeholders are engaged in discussions regarding risks and resolution.
- Planning discussions for the 2017-18 Public Accounts have begun between the Office of the Provincial Controller and the Office of the Auditor General.
- As well, the Office of Economic Policy has been engaged in discussions on risk considerations related to economic models used to estimate personal and corporate tax revenues.
- For further details, I will pass it over to:
    - Karen Hughes, Associate Deputy Minister, Office of the Treasury Board
    - Deputy Thompson

For QAs related to:	See:
Finalization of Financial Statements – Tax Revenues	Ministry of Finance

1. **Will the government improve its planning across stakeholders so that the province's consolidated financial statements are finalized earlier?**

   The Treasury Board Secretariat and the Ministry of Finance are supportive of the timely delivery of Public Accounts.

   The Office of the Provincial Controller works closely with the Office of the Auditor General to identify audit issues early and to ensure that stakeholders are engaged in discussions regarding risks and resolution.

   The Office of the Provincial Controller will continue to collaborate with the Office of the Auditor General to support the timely delivery of the Public Accounts.

   Planning discussions for the 2017-18 Public Accounts have begun between the

Office of the Provincial Controller and the Office of the Auditor General. As well, the Office of Economic Policy has been engaged in discussions on risk considerations related to economic models used to estimate personal and corporate tax revenues.

2. What will the government do to figure out estimation risks associated with corporate tax and personal income tax revenues earlier?

The Treasury Board Secretariat and the Ministry of Finance are supportive of the timely delivery of Public Accounts.

The province will work with the Canada Revenue Agency (CRA) on the Auditor General's recommendation, as reporting personal and corporate taxation revenues is highly dependent on the information from the CRA.

Planning discussions for the 2017-18 Public Accounts have begun between the Office of the Provincial Controller and the Office of the Auditor General. As well, the Office of Economic Policy has been engaged in discussions on risk considerations related to economic models used to estimate personal and corporate tax revenues.

Adverse or Qualified Audit Opinion

Key Messages

- It would be inappropriate to speculate about how the Auditor General may issue an opinion for Public Accounts next year.
- The province's financial statements are prepared in accordance with Canadian Public Sector Accounting Standards (PSAS).
- As PSAS is set by an independent standard-setting body in Canada focused specifically on the public sector, and because PSAS is used by all senior governments in Canada, presenting financial statements in accordance with PSAS results in transparent financial reporting for the province of Ontario.
- PSAS are principle based -- they are not a set of specific prescriptive rules. Applying them requires the application of professional judgment.
- Our professional staff exercises judgment in applying the standards and as necessary consult with external experts and advisors.
- They provide the Office of the Auditor General with their written analysis on all significant issues that impact the financial statements for the year being audited, and they discuss the issues with the Office of the Auditor General.
- For further details, I will pass it over to:
    - Cindy Veinot, Provincial Controller

1. **The Auditor General says that you anticipated the government would receive a qualified audit opinion – and accepted this risk. In the private sector this would be unacceptable. How do you figure you can get away with this?**

   The province's financial statements are prepared in accordance with Canadian Public Sector Accounting Standards (PSAS).

   As PSAS is set by an independent standard-setting body in Canada focused specifically on the public sector, and because PSAS is used by all senior governments in Canada, presenting financial statements in accordance with PSAS results in transparent financial reporting for the province of Ontario.

   PSAS are principle based -- they are not a set of specific prescriptive rules. Applying them requires the application of professional judgment.

   Our professional staff exercises judgment in applying the standards and as necessary consult with external experts and advisors. They provide the Office of the Auditor General with their written analysis on all significant issues that impact the financial statements for the year being audited, and they discuss the issues with the Office of the Auditor General.

   All Chartered Professional Accountants (CPAs), including those employed by the Ontario Public Service (OPS), are required to comply with the Code of Professional Conduct for CPAs. One of those rules is that they not be associated with false or misleading information.

   That means that if the professional accountants in the OPS do not agree with the judgment of the Ontario Auditor General, it is not as simple as just agreeing to accept the interpretation of the Office of the Auditor General if they believe that interpretation would result in false or misleading financial statements. While we expect professional accountants to agree on the vast majority of issues, we acknowledge that they may not agree on everything and when that occurs, and the difference is material to the financial statements, the Office of the Auditor General can choose to issue a qualified audit opinion.

2. **Are you concerned that the Auditor General will issue an adverse opinion on the province's next Public Accounts due to Ontario's Fair Hydro Plan accounting?**

   It would be inappropriate to speculate about how the Auditor General may issue an opinion for Public Accounts next year. The implementation of Ontario's Fair

DRAFT

Hydro Plan (OFHP) is ongoing, with significant decisions with accounting and financial implications still being finalized.

The Ministries of Energy and Finance, and the Treasury Board Secretariat continue to work closely with Ontario Power Generation (OPG), the Independent Electricity System Operator (IESO), as well as third-party experts to ensure appropriate due diligence is completed.

The province's financial statements are prepared in accordance with Canadian PSAS and will follow PSAS in accounting for the transactions resulting from OFHP in 2017-18, and in following years.

The financing plan for OFHP and its impact will be transparent. Credit rating agencies, securities regulators, and the public will see full information and full reporting of the impacts of OFHP.

Ontario has a strong track record of producing high-quality financial reports on a timely basis. Ontario will continue to move forward and present the province's finances fairly and accurately and in accordance with PSAS.

3. The Auditor General has issued a qualified opinion for the second year in a row. Is this a sign of fiscal mismanagement?

TBS leads the overall Public Accounts process. Public Accounts is a major accountability document which presents the financial statements of the province, provides financial highlights of the past fiscal year, and reports on performance against the goals set out in the Budget.

TBS continues to move forward and present the province's finances fairly and accurately and in accordance with Canadian Public Sector Accounting Board standards. Ontario has a strong track record of producing high-quality financial reports on a timely basis. The Auditor General's qualified opinion is based on a different interpretation of Public Sector Accounting Board standards for net pension assets and recognition of market accounts.

Last year there was a disagreement among the province's professional accounting staff and the Auditor General's Office on the appropriate application of Public Sector Accounting Board standards regarding pension accounting. As a result, the Pension Asset Expert Advisory Panel was established to deliver independent advice and recommendations on the issue to the province.

The independent panel members concluded the province's share of the net pension assets of both the Ontario Teachers' Pension Plan and the Ontario

Public Service Employees' Union Pension Plan should be recognized in Ontario's financial statements.

After significant deliberation, including consideration of the recommendations of the panel, Ontario confirmed that the accounting for these plans prior to 2015-16 was appropriate, and are prepared in accordance with public sector accounting standards for pension asset accounting. Further, EY provided additional analysis and concluded that no valuation allowance was required for either plan as of March 31, 2017. The 2016-17 financial statements include these pension assets, and TBS continues to apply the accounting treatment of pension assets that the province has used consistently since 2001. In addition, the 2015-16 financial statements were restated to include these assets.

This year the Independent Electricity System Operator (IESO) began recognizing its market accounts' assets (amounts due from power distributors) and liabilities (amounts due to power producers) in their financial results. IESO has chosen to recognize these markets accounts on its books for transparency reasons, as it better reflects the financial position of the IESO-administered markets at year-end. This change was supported by the IESO's audit committee, its independent external auditor, and finally by the Office of the Provincial Controller. This change also has no impact to the province's annual deficit, net debt or accumulated deficit.

This accounting is consistent with the presentation used previously by the Ontario Power Authority (which was merged with the IESO on January 1, 2015) in its financial statements, which was not subject to qualification from the Office of the Auditor General at that time.

2016-17 Overall Accounting Changes

1. **Why have you restated prior year's financial statements?**

   When preparing the 2016-17 Public Accounts, Ontario's professional accounting staff adopted accounting changes to further enhance accountability and transparency.

   These changes include:

   a. **A change in the presentation of accounting for hospitals, school boards and colleges** - third-party revenues (i.e. tuition fees, patient fees, research grants and donations) are now reported together with provincial revenue. This change increases transparency and is supported by the Auditor General.
   b. **The adoption of International Financial Reporting Standards as the basis for accounting for energy sector government business enterprises** - the financial results of investments in Hydro One and Ontario Power Generation (OPG) now reflect International Financial Reporting

DRAFT

Standards. Previously, these results were reported using U.S. Generally Accepted Accounting Principles. This change was made to meet Public Sector Accounting Board standards and is supported by the Auditor General.

c. **Accounting for market accounts by Independent Electricity System Operator (IESO)** - the IESO has adopted rate-regulated accounting, and is now recognizing its market accounts assets and liabilities in its financial results.
d. **Accounting for net pension assets of jointly sponsored pension plans** - the province is reporting net pension assets for jointly sponsored pension plans. This is in line with Public Sector Accounting Board standards and the recommendations of the independent Pension Asset Expert Advisory Panel.

2. Spending for hospitals, school boards and colleges seems to be much higher in Public Accounts than in the 2017 Budget. Why is this?

To increase transparency, in 2016-17 we have made a simple change to how we are reporting third party revenues for broader public sector organizations.

For the first time, Public Accounts are presenting third party revenues for hospitals, school boards and colleges with provincial revenue. Third party revenues earned by these organizations, such as tuition fees, patient fees, research grants and donations, are no longer netted against the respective sectors' expenses, as they were in prior years for Public Accounts and the 2017 Budget.

This is simply a presentation change for Public Accounts. It is fiscally neutral, i.e. there is no change to the annual deficit, net debt or accumulated deficit. To ensure consistency in year-to-year and to Budget comparisons, we are reclassifying all previous years and the 2016 Budget. The 2017 Fall Economic Statement and 2018 Budget will also reflect this presentation change.

The Auditor General supports the province's decision to adopt this presentation change. It is consistent with the accounting principles for governments issued by the Public Sector Accounting Board, and the reporting practices of other senior Canadian governments.

3. What is consolidated reporting?

The Province's consolidated financial statements are presented on a consolidated basis, meaning that the Statement of Financial Position (or balance sheet) and the Statement of Operations (or statement of revenues and expenses) reflect the combination of ministry results as well as the financial

DRAFT

results for organizations that are controlled under the guidance established under PSAS.

Prior to 2016-17, the Province reported the expenses and third-party revenues of hospitals, colleges and school boards on a net basis. This was changed for 2016-17 to reflect expenses and third-party revenues as separate items (on a gross basis), as opposed to being reported together (on a net basis).This affects what you see for the expense reported for the responsible ministries (Health and Long-term Care, Education and Advanced Education and Skills Development) and the breakdown of figures for hospitals, school boards, and colleges. However this has no impact to the annual deficit, net debt or accumulated deficit.

Line-by-line consolidated reporting is in keeping with Public Sector Accounting Board standards and will mean that our presentation for Public Accounts is consistent with other governments across Canada. The Auditor General is supportive of this change.

4. Why is there a change to the accounting for Ontario Power Generation (OPG) and Hydro One?

In the 2016-17 Public Accounts, the financial results of Ontario's investments in Hydro One and Ontario Power Generation (OPG) now reflect International Financial Reporting Standards (IFRS). Previously, these results were reported using U.S. Generally Accepted Accounting Principles. This change was made to meet Public Sector Accounting Board requirements and is supported by the Auditor General.

This change has resulted in an adjustment to the opening accumulated deficit and net debt of $1,163 million, of which $683 million relates to transition to IFRS. The impact of this change to the annual deficit is not material to the province in 2016-17.

DRAFT

OTHER

1. **How does the Treasury Board Secretariat ensure transparency and accountability in financial reporting?**

   The province continues to strengthen its financial management, ensure clear and consistent accounting practices, enhance oversight and accountability and provide better data and information to the public through more channels.

   The Office of the Provincial Controller Division (OPCD) plays a key role in ensuring this transparency and accountability in the province's financial reporting through its major functions, including:
   - Providing the Ontario Public Service (OPS) and Broader Public Sector with accounting and financial management policy and controllership advice;
   - Maintaining the Public Accounts and preparing the Annual Report and Consolidated Statements and the Public Sector Salary Disclosure;
   - Liaising with the Auditor General of Ontario, as well as other jurisdictions and the Chartered Professional Accountants of Ontario and Canada, on the development of government accounting standards;
   - Supporting the development of financial management and controllership capacity across the OPS; and,
   - Supporting the modernization of government by improving the efficiency, effectiveness, and integrity of its financial systems and processes.

   Treasury Board Secretariat (TBS) also works with the Ministry of Finance to help them prepare key documents like the Budget and the Fall Economic Statement.

   TBS does have a leadership role on some financial items like Public Accounts. But for other things, TBS is mostly in a support role.

   TBS collaborates with other senior level governments to assess the impact of proposed standards by the Public Sector Accounting Board and how specific transactions are reported within the accounting frameworks.

2. **Does the province direct organizations on what accounting standards to use or how to apply them?**

   Placeholder

DRAFT

Executive Compensation

1. **How can you justify the exorbitant salaries paid to Hydro One executives when families are struggling to pay their hydro bills?**

   The province remains committed to ensuring transparency and accountability in how broader public sector employers manage executive compensation.

   However, Hydro One is now a publicly traded company, and decisions regarding compensation are not made directly by the government.

   For further questions about executive compensation and oversight of specific organizations, please contact the ministry responsible.

2. **Why are Hydro One employees not captured by the Sunshine List? MPP Todd Smith is demanding that the government add Hydro One employees back onto the list. Will you do this?**

   Only public sector employees are included on the Sunshine List.

   As a publicly-traded entity, Hydro One is no longer required to report salaries or benefits earned after December 31, 2014 under the PSSDA.

   However, similar to the Ontario Securities Commission requirements, Hydro One must disclose the total compensation levels of the CEO, CFO and three other highest-paid executives of the corporation each year. This information is available to the public online. Top executive salaries are posted on SEDAR in the Management Information Circular.

   As an Ontario Business Corporation Act (OBCA) company subject to Canadian Securities law, Hydro One continues to comply with rigorous governance requirements that include:

   - Disclosure of board-approved annual financial statements along with quarterly updates;
   - CEO and CFO Certifications and Associated Controls certifying that there are no misrepresentations in the annual or quarterly materials;
   - Shareholders' meetings requirements and rules;
   - Disclosure requirements with respect to management circulars (including information about senior management, such as share ownership, any indebtedness to the company and any interest in material transactions) as well as compensation circulars (executive compensation disclosures including shares awarded, perks and incentives).

DRAFT

3. How do you justify the upward trend of public sector employees making more than $100,000 across all sectors in 2016?

Overall, for 2016 the total number of employees disclosed in the Compendium has increased by 6.6%, to 123,410 employees in 2016 from 115,746 in 2015.

There are a number of reasons why employees may appear on the list, including:

- Employees who are progressing in their career to more challenging positions;
- Natural progression through salary ranges;
- Overtime payments;
- Retroactive pay awards;
- Performance payments; and,
- Payments that may be required on retirement (e.g. to reimburse the employee for unused vacation credits).

In addition, there were some payouts that impacted the 2016 salaries for reported employees, including an increase to base salaries for non-bargaining employees paid as a retroactive lump sum in December 2016 and an arbitration award which provided retroactive pay to members of the OPP.

The $100,000 threshold has not changed since the Public Sector Salary Disclosure Act was enacted in 1996 and has not been adjusted to keep up with inflation. If the salary threshold was adjusted for inflation, it would be $149,424 in today's dollars, reducing the number of employees included in the compendium by 84%.

The government is committed to providing high-quality public services and values the hard work of its dedicated public servants. The employees on this list:

- Deliver key government services;
- Make sure Ontario's food and water is safe;
- Make sure quality health care is available to every resident in the province;
- Make sure quality education is available to every child in the province;
- Make sure Ontario's roads and workplaces are safe; and,
- Bring jobs and investment into Ontario.

The province needs to pay salaries which are competitive in order to attract and retain top talent to deliver quality public services.

4. Who were the top 10 employees on the entire list and what were their salaries?

The top 10 earners all work largely in the health sector and in Ontario Power Generation. These people all hold executive positions:
- 6 of the 10 are in the health sector;
- 2 are from Ontario Power Generation;
- 1 is at the University of Toronto; and,
- 1 is at the Ontario Pension Board.

Questions about specific public sector organizations should be directed to the organization or ministry responsible for it.

5. **We learned that the president of OPG, who was the top earner on the province's payroll in 2016, actually made $700,000 more than the sunshine list that was disclosed earlier this year. The difference was a bonus that showed up on OPG's books, but was suspiciously left off the government's books. How many more six-figure bonuses has the President of the Treasury Board hidden from the people of Ontario?**

   The province continues to strengthen Ontario's efforts to become the most open, transparent and digitally connected government in Canada.

   Disclosure of an individual's salary information outside of the Public Sector Salary Disclosure Act list is governed by the Freedom of Information and Protection of Privacy Act. Accordingly any such disclosure would only be made in compliance with the requirements of that Act.

   For 2016, the Treasury Board Secretariat as a ministry reported 996 employees compared to 875 in 2015, an increase of 13.8%. The number increased primarily due to compensation changes, retirement pay-outs, severance payments, overtime and reorganizations.

   The $100,000 threshold has not changed since the Public Sector Salary Disclosure Act was introduced in 1996. In today's money the threshold would be $149,424 and would include only 56 (5.6%) of the 996 TBS employees on this year's list and exclude 940 (94.4%).

   Questions about specific public sector organizations should be directed to the organization or ministry responsible for it.

6. **How does this government allow salaries that are completely excessive when the average Ontarian can't afford their hydro bill/is working twice as hard because of government cuts/is not part of this millionaire's club?**

DRAFT

In the 2017 Budget, the government announced that it will continue to take a balanced approach to managing compensation. This approach will recognize the need to maintain a stable, flexible and high-performing public-sector workforce that supports the government's transformational priorities and at the same time ensures that public services continue to remain affordable.

A result of recent efforts to reduce spending through compensation restraint and program transformation, the government has delivered on its commitment to balance the budget by 2017-18, while making program spending more sustainable and also protecting the important public services that Ontarians rely on.

A balanced approach to compensation recognizes the need to attract and retain talented leaders and individuals to ensure a modern, sustainable, and inclusive Ontario Public Service, while also remaining competitive with public sector peers.

To this end, the province will continue to provide effective and affordable public services, while recognizing the need for fair compensation.

Government Advertising

1. **How can you justify spending $5.5 million on self-congratulatory advertising for Ontario's Fair Hydro Plan?**

   Ontario is the first and only jurisdiction in Canada to have legislation that bans government-paid partisan advertising in newspapers, magazines, billboards, radio, and television.

   Ontario needs government advertising that is appropriate, reasonable and effective because the public has a right to know how public money is being spent, and why the government is bringing forward policy changes.

   At this time, I would like to clarify that the Treasury Board Secretariat is *not* responsible for individual line ministry advertising campaigns, and does not determine how much funding is allocated to any campaign.

   For further questions about specific advertisements or advertising campaigns, please contact the ministry responsible.

2. **For the Hydro Bill partisan inserts – the Auditor General points out that "addressed mail" is non-reviewable (i.e., something was sent to a household by name) as compared to bulk mail which is reviewable. Will you continue to overlook this loophole so that public money can be used to send partisan messages directly to Ontarians?**

DRAFT

Ontario is the first and only jurisdiction in Canada to have legislation that bans government-paid partisan advertising in newspapers, magazines, billboards, radio, and television.

This legislation was introduced in 2004 to prevent government use of taxpayer dollars for partisan advertising.

Ministries still abide by the principles of the Government Advertising Act in all paid advertising, whether it goes to the Office of the Auditor General or not.

SCENARIO QUESTIONS

Speculation

1. **What do you think the intentions of the government were when they…**

   As a public servant, it would be inappropriate for me to speculate on the intentions of the government.

   We provide neutral advice to support decision-making.

2. **What do you think the Auditor General will do…**

   It would be inappropriate for me to speculate on how the Auditor General may issue a future opinion.

3. **Other requests for speculation…**

   I'm not able to comment on something that may or may not happen.

   I'm happy to speak to the contents of chapter two of the Auditor General's report.

Cabinet Confidential

1. **Can you tell us about the advice you provided to the government…**

   I am unable to speak to the advice that was provided, as this would be considered confidential advice provided to Cabinet.

Confidential

DRAFT

1. **Can you tell us about the advice you provided to your minister…**

   I believe this matter could be considered confidential advice provided. I would be happy to look into this matter further to clarify the scope of confidentiality and provide a written response back to the Committee.

Insisting a Specific Official Answer

1. **I do not want [____] to answer, I want to hear the response from you.**

   I am happy to provide a response to the question in my role as a public servant for the Treasury Board Secretariat.

   [Provide response as within your position's scope.]

   I cannot speak to the specific point you are raising, and as mentioned, [____] would be more appropriate to respond.

   What I can tell you is [____]

Insisting on Commitment

1. **Can you give us an exact figure on…**

   I want to be absolutely precise and specific, so I will need to get back to you with the exact number.

Politicization

1. **Why did the government make [____] decision?**

   As a public servant, it would be inappropriate for me to speculate on the intentions of the government.

   It is our role to provide our best, objective advice to support government decision-making.

2. Will the government issue a regulation confirming the source of reference for the Pre-Election Report and the timeline for issuance of the report that will be subject to the Auditor General's review?

Under the *Fiscal Transparency and Accountability Act, 2004*, the government may file a regulation that would require it to release a Pre-Election Report on Ontario's Finances. Should the government file such a regulation, the Auditor General would be required to issue a statement based on a prompt review following the release of such a Pre-Election Report.

The government remains committed to meeting the legislative requirements of the Act, and working constructively with the Auditor General.

DRAFT

PROVINCE'S FISCAL SITUATION

Recommendation #7: Province's Debt Burden

- The balanced budgets from 2017–18 onwards will limit the increase in net debt-to-net investments in capital assets. These investments will contribute to the economy growing at a faster rate than net debt, allowing the government to reduce Ontario's net debt-to-GDP ratio to its pre-recession level of 27 per cent.
- There is a strong demand for Ontario bonds in both the domestic and international markets. Last fiscal year, Ontario was able to borrow $27 billion in long-term debt while our spread — or the margin that we have to pay over the equivalent Government of Canada bond — tightened, indicating an ongoing strong demand for Ontario bonds.
- We expect that the liquidity of Ontario benchmark bonds, and continuing confidence in the value of Ontario debt, will allow us to cost-effectively complete the 2017–18 borrowing program.

3. What is the government doing to manage the province's debt burden?

The very important first step in reducing debt is to balance the budget. We are projecting a balanced budget for 2017-18, delivering on a commitment first introduced in the 2010 Budget.

As the result of a balanced budget, and Ontario's strong economic growth, the net-debt-to-GDP ratio is declining.

The government has set an interim net debt-to-GDP ratio target of 35 per cent by 2023–24, and continues to maintain a target of reducing the net debt-to-GDP ratio to its pre-recession level of 27 per cent, currently projected to be achieved by 2029–30.

4. What is the status of the province's borrowing plan?

Through prudent and cost-effective debt management, we have consistently kept interest on debt costs below budget projections. Interest on debt to revenue is forecast to be 8.2 per cent in 2017-18, 8.3 per cent in 2018-19 and 8.4 per cent in 2019-20.

Term extension has allowed us to take advantage of and lock in low interest rates for a longer period, which reduces refinancing risks and helps offset the impact of expected higher interest rates on interest on debt costs.

As of January 31, 2018, $28.6 billion (or 111 per cent) of this year's long-term public borrowing of $25.8 billion has been completed.

DRAFT

Financial Accountability Office (FAO) Reports

5. What is the government's response to the FAO's fall 2017 report, which states that the government will run a deficit in 2017-18 and the following years?

Ontario's deficit for 2016-17 was $991 million — $3.3 billion lower than projected in the 2016 Budget and $0.5 billion lower than the interim projection in the 2017 Budget, according to public accounts.

The Ministry of Finance is projecting a balanced budget in 2017-18. The Ministry of Finance is committed to a responsible fiscal plan. We build prudence into our forecasts.

Since the time of the 2017 Budget, private sector forecasters have revised up their economic growth projections for Ontario over the 2017-20 period, reflecting the strength in the Ontario economy.

Using the government's accounting presentation (i.e. excluding the AG's recommended treatment), the FAO is projecting a small surplus in 2017-18.

6. Why are the FAO's revenue forecasts lower than the government's revenue forecasts?

The government is projecting total revenue to grow from $140.7 billion in 2016–17 to $158.2 billion in 2019–20. This represents an average annual growth rate of 4.0 per cent.

Growth in revenues over the medium term is driven mainly by taxation revenue which is projected to increase by $15.6 billion between 2016–17 and 2019–20, or at an average annual rate of 5.2 per cent. The projected taxation revenue growth aligns with growth actually experienced in recent years, and projections for the Ontario economy.

Credit Ratings

- Ontario currently maintains a double-A rating with three of its four credit rating agencies.
- We continue to update the rating agencies on a regular basis on economic and fiscal developments.

7. What are the credit rating agencies' views on Ontario?

Following the release of the 2017 Budget, all four rating agencies — Moody's, DBRS, Fitch, and S&P — confirmed Ontario's long-term credit ratings.

This reflects rating agencies' confidence in our government's fiscal plan.

DRAFT

8. How have rating agencies responded to the qualified opinion on the public accounts and the recent report from the Auditor General?

The rating agencies make their own assessment of the Province's finances.

However, there were no credit rating implications either this year or last when the government received a qualified audit opinion on its Public Accounts.

LONG-FORM MEMBER QUESTION

DEPUTY MINISTER HELEN ANGUS

&

KAREN HUGHES, ASSOCIATE DEPUTY MINISTER

PUBLIC ACCOUNTS PROCESS

QUESTION

- One of the recommendations in the Auditor General's report is that the Office of the Provincial Controller should "undertake thorough planning involving all stakeholders, including Treasury Board Secretariat, ministries and provincial government agencies" to allow the Office of the Provincial Controller to release Public Accounts earlier than the usual late August or September.
- I am curious about what releasing Public Accounts earlier would take on the part of the government.
- I know that the process requires a lot of work on the part of many people, although I'm not necessarily clear on the mechanics of putting the Public Accounts together.
- So, could you outline what the process is of putting Public Accounts together every year?

LONG-FORM MEMBER QUESTION: BALANCED BUDGET

DEPUTY MINISTER SCOTT THOMPSON

Question:

- How is Ontario planning to keep a balanced budget?

Answer:

- TBD: Revisions based on updates related to Q3 Finances once available
- My ministry has been working to execute the government's goal of balancing the budget.
- This started with a plan that was first introduced in the *2010 Budget*, when the province started to recover from the recession.
- Ontario today is projecting a balanced budget for 2017–18 and for the next two years, 2018–19 and 2019–20.
- A balanced budget makes available more investment options to spur economic growth and job creation, and helps protect the programs and services people rely on most, such as health care and education.
- Ontario's plan has five main areas of focus:
    - Maximizing revenues without causing undue tax burdens on Ontarians
    - Managing its expenses without detracting from the quality of social services and health programs
    - Balancing revenues and expenses against each other to manage the debt
    - Funding programs that help Ontarians, and
    - Investing in infrastructure to promote economic growth and job creation.

- I will now address each area in turn.

DRAFT

Revenues:

- The 2016–17 Public Accounts show that Ontario's deficit for last year was $991 million — $3.3 billion lower than projected in the 2016 Budget and $0.5 billion lower than the interim projection in the 2017 Budget.
- Fiscal 2016–17 was the eighth year in a row that the Province has beaten its deficit target.
- This was a result of growth in revenue that exceeded growth in program expenses, and lower-than-forecast interest on debt.
- And so part of the plan to balance the budget involves optimizing assets and maximizing revenues.
- The Public Accounts for 2016–17 show total revenues were $140.7 billion, $2.2 billion higher than the 2016 Budget projection.
- Additionally, Ontario's total revenues are projected to grow from this $140.7 billion in 2016–17 to $158.2 billion in 2019–20.
- This increase represents an average annual growth rate of four per cent.
- The higher revenues for 2016–17 — and the projected growth of revenues through 2019-20 — are largely due to higher-than-expected tax revenues, the optimization of government business enterprises, and transfers from the Government of Canada and other non-tax revenue.

- First, let me address tax revenues.
- Growth in revenues over the medium term is driven mainly by taxation revenue, which is projected to increase by $15.6 billion between 2016–17 and 2019–20, or at an average annual rate of 5.2 per cent.
- For fiscal year 2016–17, tax revenues were $293 million higher than projected, mainly due to higher-than-expected Harmonized Sales Tax revenue, reflecting stronger growth in Ontario household expenditures.

DRAFT

- Secondly, the Government of Ontario is also implementing a multi-year strategy to optimize its assets and maximize its revenues through the sales of shares in Hydro One, LCBO head office lands and Ontario Power Generation's head offices.
- The net revenue gains from the sale of qualifying assets are credited to the Trillium Trust for infrastructure investments, such as roads, bridges and public transit.
- The total amount credited to the Trillium Trust as of March 31, 2017 is $5.3 billion.
- The Province continues to grow and maximize revenues from its government business enterprises, such as Hydro One, Ontario Power Generation, the Liquor Control Board of Ontario and Ontario Lottery and Gaming Corporation.
- The forecast of the income from government business enterprises is projected to grow by $0.7 billion between 2016–17 and 2019–20.
- This projection, at an average annual rate of 3.7 per cent, reflects higher net income overall from government business enterprises.

- Thirdly, Ontario received larger Government of Canada transfers — $145 million higher. This increase reflected new funding for early learning and child care flowing from a bilateral agreement between Ontario and the federal government, as previously reported in the 2017-18 *First Quarter Finances*.
- The forecast for subsequent transfers is based on existing federal-provincial funding agreements.
- Overall transfers are projected to grow by $0.9 billion between 2016–17 and 2019–20, or at an average annual rate of 1.2 per cent.
- This largely reflects projected increases in major ongoing Government of Canada transfers and new funding for early learning and child care, and home care and mental health.

DRAFT

- Finally, the forecast for other non-tax revenue is based on projections provided by government ministries and agencies.
- The outlook for other non-tax revenues is projected to increase by $0.4 billion between 2016–17 and 2019–20, or at an average annual rate of 0.7 per cent.
- This increase mainly reflects:
    - Fiscally neutral revenues from carbon allowance proceeds starting in 2017–18
    - Fees, donations and other revenues for the broader public sector, and
    - Revenues from vehicle and driver registration fees.
- This is partially offset by lower revenues due to the removal of the debt retirement charge from commercial, industrial and all other electricity users in 2018–19, and the projected net impact of the government's planned asset optimization strategy.
- Notably, the increase in Ontario's revenue is not attributable to increases in personal tax returns.

Expenses:

- Let me now address expenses.
- The Public Accounts for 2016–17 show that total spending was $141.7 billion, $100 million lower than the 2016 Budget projection.
- Program spending expenses accounted for $130 billion.
- Interest on debt, at $11.7 billion, was down $0.7 billion from the 2016 Budget projection.

- Going forward, program expenses are projected to grow from $130 billion in 2016–17 to $144.2 billion in 2019–20.
- This represents an average annual growth rate of 3.5 per cent.
- Growth in program expenses over the medium term is driven by investments to help the people of Ontario, such as health care, supports for seniors, the

DRAFT

introduction of pharmacare for children and youth under OHIP+, electricity cost relief programs under the Fair Hydro Plan, and new initiatives for small businesses that will lower costs and support growth.

- Interest on debt expenses is projected to grow from $11.7 billion in 2016–17 to $13.3 billion in 2019–20.
- This increase is due to borrowing for capital spending and interest rates that are forecast to rise.
- This represents an average annual growth rate of 4.2 per cent.
- Interest on debt is projected to grow due to borrowing for capital spending and interest rates that are forecast to rise.
- Total expenses are projected to grow from $141.7 billion in 2016–17 to $157.4 billion in 2019–20.
- This represents a manageable average annual growth rate of 3.6 per cent.

Balancing Revenues and Expenses:

- Let me summarize the revenues and expenses together.
- Revenue is forecast to increase from $140.7 billion in 2016–17 to $158.2 billion in 2019–20.
- Total expenses are projected to increase from $141.7 billion to $157.4 billion over the same period.
- Based on these estimates, the Ontario government will effectively balance the budget over the next four years.

Funding Programs, Investing in Infrastructure, Promoting Growth:

- Through targeted, measured and fiscally responsible decisions, Ontario has restored its fiscal and economic strength.
- Strategic investments have helped stimulate the Ontario economy to rise from the depths of recession.

DRAFT

- Over the past three years, Ontario's economy has grown faster than Canada's and that of all other G7 countries.
- The benefits of balanced budgets and a strong economy are already providing the government with the fiscal flexibility to do more to help Ontarians.
- This flexibility enables the government to provide more investments to spur economic growth, job creation and support services people use every day.
- Notable program investments include:
    - $145 million in annual funding to increase the accessibility and affordability of high-quality licensed child care and early learning opportunities
    - $245 million over three years to lower costs for small businesses
    - $155 million over three years to support seniors to remain independent, connected, engaged, healthy and safe
    - $245 million over three years to lower costs for small businesses, create opportunities for growth and simplify their interactions with government.
    - An increase of $1 million in 2017–18 — and then $5 million in 2018–19 and beyond — to provide additional funding through the Northern Communities Grant component of the Ontario Municipal Partnership Fund.

- Growth in program expenses also includes investments in infrastructure.
- In fact, Ontario is making the biggest investment in public infrastructure in its history.
- The government's long-term infrastructure plan to invest about $190 million over 13 years, starting in 2014–15, will contribute to the growth of the economy.
- The government's historic investment in infrastructure includes:
    - $31.5 billion over 10 years for public transit, transportation and other priority infrastructure projects across Ontario
    - $11 billion over 10 years in capital grants to school boards, and
    - $900 million over 10 years for critical maintenance repairs and upgrades.

DRAFT

- These investments will not only create jobs, support business innovation and help draw investors from abroad — they will also contribute to the provincial economy growing at a faster rate than the change in its net debt.
- Investments such as these have helped to stimulate the Ontario economy, which has continued to grow despite an uncertain global climate.
- From 2014 to 2016, Ontario outpaced all G7 countries with its real GDP growth.
- As the result of a balanced budget and Ontario's strong economic growth, the net debt-to-GDP ratio is declining.
- In the 2017 Budget, the Ontario government set an interim net debt-to-GDP ratio target of 35 per cent by 2023–24. The government is now projecting to meet this target a year earlier.
- We continue to maintain a target of reducing the net debt-to-GDP ratio to its pre-recession level of 27 per cent, currently projected to be achieved by 2029–30.

Conclusion:

- In September, the Public Accounts of Ontario 2016–17 reported that the 2016–17 deficit was $1.0 billion, an improvement of $3.3 billion from the $4.3 billion projection in the 2016 Budget.
- Total revenue for 2016–17 came in at $140.7 billion, which was $2.2 billion higher than the 2016 Budget.
- This was largely due to higher-than-expected tax revenues, the optimization of government business enterprises and transfers from the Government of Canada and other non-tax revenue.
- Total spending for 2016–17 came in at $141.7 billion, which was $0.1 billion lower than the 2016 Budget.
- Program spending was $130.0 billion, up $0.6 billion from the plan of $129.4 billion.

DRAFT

- Spending in health, children's and social services, and other programs was higher than planned.
- Interest on debt expense was $11.7 billion, $0.7 billion below the plan of $12.4 billion, due mainly to lower-than-forecast interest rates, and cost-effective borrowing and debt management.
- In conclusion, the Ontario government is on track to balance the budget this fiscal year — 2017–18 — as well as the next two fiscal years.
- Prudently managing the province's finances is one of my ministry's responsibilities to the people of Ontario.
- Thank you.

DRAFT

LONG-FORM MEMBER QUESTION: CREDIT RATING

DEPUTY MINISTER SCOTT THOMPSON

Question:

- What are the plans to keep Ontario's credit rating in good standing?

Answer:

- TBD: Revisions based on updates related to Q3 Finances, once available.

Introduction:

- Following the release of the 2017 Ontario Budget, four credit rating agencies – Moody's, DBRS, Standard & Poor's and Fitch – confirmed Ontario's healthy long-term credit ratings. This reflects rating agencies' confidence in the Government's fiscal plan – and its ability to grow Ontario's economy and create jobs for Ontarians.
- Let me summarize the reports by each of the credit rating agencies.

- First, Moody's.
- Moody's cautioned that the Ontario Fair Hydro Plan, announced in March 2017 to reduce electricity prices, adds credit pressure due to the direct financial impact of the sales tax rebate and the indirect impact of an elevated debt of a provincially owned entity.
- Overall, however, Moody's said its stable outlook for Ontario "reflects Moody's forecast that, as the province moves towards and achieves balanced budgets,

DRAFT

the province's debt burden will improve marginally and interest expense will remain manageable across the medium-term….The policy decision to borrow for infrastructure spending at a time of historically low interest rates, combined with the prudent debt management practices outlined above, has helped to support the province's Aa2 rating."

- Moody's positive outlook for Ontario's credit rating is based on the following credit strengths: prudent debt management, an institutional framework providing significant fiscal policy flexibility, and a large diversified economy supporting a broad and productive tax base.

- Next, DBRS.
- DBRS noted that Ontario's credit profile is stable, but it will remain vulnerable to an economic shock in the absence of a more concerted effort to reduce debt.
- DBRS also commented on the potential downside risks to the economic outlook due to uncertainty regarding the potential renegotiation of NAFTA and U.S. tax policy, as well as political integration in Europe.
- Finally, it noted that elevated household debt and housing market dynamics leave Ontario particularly vulnerable in the event of an unforeseen shock that results in significant job losses or a rapid increase in interest rates.
- Despite these concerns, DBRS expects Ontario's credit ratings to remain stable.
- DBRS said of Ontario, its "ratings remain well supported by the province's large and diversified economy, improving budgetary results and declining debt burden" and that "the return to balance is encouraging and suggests that there will likely be some modest improvement in the Province's credit metrics over the medium term."
- DBRS concluded by saying that Ontario's stable credit profile stems from strength in the underlying economy, which provided incremental revenue more than sufficient to offset the in-year spending pressures.

- Standard & Poor's is next.

- Standard & Poor's believed that Ontario's credit profile is strengthening.
- But before considering a positive rating action, they would need to see sustained improvement in budgetary performance leading to near-balanced after-capital results, coupled with ongoing declines in the tax-supported debt burden, making Ontario's finances more comparable with peers in the 'AA' category.
- Standard and Poor's said it "expects the province of Ontario to benefit from solid economic growth over the next two years, allowing it to generate additional revenues to fund its capital spending plan and stabilize its finances following its eight-year path back to a balanced operating budget."
- Standard & Poor's concluded by saying that its stable outlook reflects expectations that, within the next two years, the Province will sustain a more balanced budgetary performance, including steady liquidity metrics, modest after-capital deficits, and a high but slowly declining debt burden.

- Finally there is Fitch.
- Fitch's report stated that the Province has demonstrated the ability to exert considerable expenditure restraint while instituting revenue changes to achieve its deficit reduction objectives.
- It said Ontario's 'AA-' rating is supported by its wealth, diversified economy and generally sound financial management.
- Fitch's rating reflected the Province's very strong and diversified economy, strong financial management, very predictable and well-balanced institutional framework and low contingent liabilities.
- Ontario's credit profile is stable.

- For Ontario's credit profile to grow in strength, the Province will need to do several things.
- It will need to show a track record of consistent operating surpluses and balanced or near-balanced after-capital results, coupled with continuing declines in direct and tax-supported debt burdens.

DRAFT

- **To that end, Ontario has the following plan to ensure that its credit rating remains in good standing.** It is:
    - Optimizing assets and revenues without causing undue tax burdens on Ontarians.
    - Managing expenses without detracting from the quality of social and health services.
    - Balancing revenues and expenses against each other to manage the debt, and
    - Maintaining a reserve fund to mitigate unforeseen financial risks.
- I will now go into more detail on each of these points.

Revenues:

- Total revenues for 2016–17 were $140.7 billion, $2.2 billion higher than the 2016 Budget.
- Additionally, Ontario's total revenues are projected to grow from $140.7 billion in 2016–17 to $158.2 billion in 2019–20.
- This represents an average annual growth rate of four per cent.
- The higher revenues for 2016–17 and the projected growth of revenues through 2019–20 are largely due to three factors:
    - Higher-than-expected tax revenues.
    - Income from government business enterprises and fees, and
    - Transfers from the Government of Canada and other non-tax revenue.
- Growth in revenues over the medium term is driven mainly by taxation revenue, which is projected to increase by $15.6 billion between 2016–17 and 2019–20, or at an average annual rate of 5.2 per cent. The taxation outlook reflects current revenue information and projections for the Ontario economy. Tax revenues were $293 million higher than projected in 2016–17, mainly due to higher-than-expected Harmonized Sales Tax revenue, reflecting stronger growth in Ontario household expenditures.

DRAFT

- The Government of Ontario is also implementing a multi-year strategy to optimize its assets and maximize its revenues through the sales of Hydro One, LCBO head office lands and Ontario Power Generation's head offices. The total amount credited to the Trillium Trust as of March 31, 2017 is $5.3 billion. The net revenue gains from the sale of qualifying assets will be credited to the Trillium Trust for infrastructure investments, such as roads, bridges and public transit, under the Moving Ontario Forward plan. In 2016–17, the Trillium Trust was drawn down by approximately $260 million to help support these projects.
- Finally, Ontario received larger Government of Canada transfers — $145 million higher. This increase reflected new funding for early learning and child care flowing from a bilateral agreement between Ontario and the federal government, as previously reported in the 2017–18 *First Quarter Finances*.
- Notably, the increase in Ontario's revenue is not attributable to increases in personal tax returns.

Expenses:

- Ontario's total spending for 2016–17 was $141.7 billion, $100 million lower than the 2016 Budget.
- Program spending expenses accounted for $130.0 billion.
- Interest on debt expense accounted for $11.7 billion – $0.7 billion below the plan of $12.4 billion.
- This drop was due mainly to lower-than-forecast interest rates, and Ontario's cost-effective borrowing and debt management.
- Going forward, Ontario program expenses are projected to grow from $130.0 billion in 2016–17 to $144.2 billion in 2019–20.
- This represents an average annual growth rate of 3.5 per cent.
- Interest on debt expenses is projected to grow from $11.7 billion in 2016–17 to $13.3 billion in 2019–20.
- This represents an average annual growth rate of 4.2 per cent.

DRAFT

- Total expenses are projected to grow from $141.7 billion in 2016–17 to $157.4 billion in 2019–20.
- This represents a manageable average annual growth rate of 3.6 per cent.
- These increases align with the government's plans for modernizing the public services people rely on every day.
- They are also fiscally sustainable.
- In short, the Ontario government has been managing its program expenses as well as its interest-on-debt expenses.

Balancing Revenues and Expenses:

- To bring the revenues and expenses together…
- Revenue is forecast to increase from $140.7 billion in 2016–17 to $158.2 billion in 2019–20.
- Total expenses are projected to increase from $141.7 billion to $157.4 billion over the same period.
- Based on these estimates, the Ontario government will effectively balance the budget over the next four years.

The Reserve:

- I will now take a moment to address the Province's financial reserve and contingency funds.
- As required under the *Fiscal Transparency and Accountability Act*, Ontario's fiscal plan incorporates prudence in the form of a reserve to protect the fiscal outlook against unforeseen adverse changes in revenue and expenses.
- The current fiscal outlook includes a reserve of $0.5 billion in 2017–18, $0.5 billion in 2018–19 and $0.8 billion in 2019–20.
- The current outlook also maintains contingency funds to help mitigate expense risks that may otherwise negatively impact Ontario's fiscal performance — particularly in cases where health and safety may be compromised, services to the most vulnerable are jeopardized, or natural disasters occur.

DRAFT

Conclusion:

- Credit ratings provide an assessment of a government's credit-worthiness.
- They are a reflection largely based on its capacity to generate revenue to service its debt.
- They consider factors such as a government's economic resources and prospects, industrial and institutional strengths, financial health, and susceptibility to major risks.
- As you know, a credit rating affects the cost of future government borrowing with a lower rating, indicating that an agency believes there is a relatively higher risk that a government will default on its debt.
- Accordingly, investors will lend to the government only in return for a greater risk premium, in the form of higher interest rates.
- A rating downgrade could also shrink the potential market for a government's debt, because some investors will not hold debt below a certain rating.
- Therefore, it is critical that Ontario maintain its credit rating in good standing to manage its debt and preserve its fiscal health.
- Ontario's plan to keep its credit rating in good standing involves the following strategies:
    - Optimizing assets and revenues without causing undue tax burdens on Ontarians.
    - Prudently managing expenses without diminishing the quality of Ontario's services and programs.
    - Balancing revenues and expenses against each other to manage the debt, and
    - Preserving a reserve fund to mitigate unforeseen financial risks.

- Seen as a whole, these strategies will ensure confidence in Ontario's credit-worthiness through its ability to effectively manage its debt obligations.

DRAFT

- Protecting the financing of Ontario's public services will continue to be one of my ministry's highest priorities.
- Thank you.

DRAFT

LONG-FORM MEMBER QUESTION: DEBT MANAGEMENT

DEPUTY MINISTER SCOTT THOMPSON

Question

- What is Ontario's debt management plan?

Answer

- TBD: Revisions based on updates related to Q3 Finances, once available.
- The Ministry of Finance has a track record of responsible fiscal management and remains committed to executing the government's goal of reducing the provincial debt burden.
- The government's plan to manage the debt focuses on three key areas:
    - Decreasing the net debt-to-GDP ratio.
    - Decreasing the interest on debt-to-revenue ratio.
    - Utilizing term extensions.
- I would like to provide an update of progress on this goal.

Net Debt-to GDP Ratio:

- A key indicator of the government's ability to manage its debt is the level of debt relative to the size of the economy, known as the net debt-to-GDP ratio.
- The ratio of net government debt to the market value of goods and services produced by an economy — known as gross domestic product or GDP — measures the relationship between a government's debt obligations and its capacity to raise the funds needed to meet them.
- It is an indicator of the relative burden of government debt on the economy.

DRAFT

- If the amount of debt that must be repaid relative to the value of the GDP is rising — in other words, if the ratio is rising — it means the government's net debt is growing faster than the provincial economy, and becoming an increasing burden.

- Before considering Ontario's net debt-to-GDP ratio, let me first discuss the components.
- First, I want to address Ontario's net debt situation.
- Ontario's net debt increased from $295.4 billion as of March 31, 2016 to $301.6 billion as of March 31, 2017.
- It is projected to increase to $311.7 billion by March 31, 2018 and to $323 billion by March 31, 2019.
- About 62 per cent of the increase in net debt from 2008–09 to 2016–17 was due to the deficit.
- The remaining net debt increase was a result of investments in capital assets.
- Balanced budgets from 2017–18 onwards will ensure that increases in net debt will be limited to net investments in capital assets such as roads, bridges, hospitals and schools.
- In other words, the net debt is increasing at a manageable rate, and a smaller portion of it is collected from the deficit.

- Next, let me briefly address the GDP.
- The government's investments in capital assets increased economic growth and helped support Ontario's GDP to advance more quickly than debt, helping the government achieve its net debt-to-GDP targets.
- Over the past three years, Ontario's economy has grown faster than Canada's and that of all other G7 countries.
- In fact, Ontario's real GDP is now 21.3 per cent above its recessionary low.
- Over the 2017–20 period, the Ministry of Finance is forecasting average annual growth of 2.2 per cent in Ontario's real GDP.

DRAFT

- Government investments have helped stimulate the Ontario economy to rise from the depths of the recession, and it is now enjoying a period of economic strength and growth.

- I briefly addressed the net debt and GDP situations separately; now let me bring them together.
- The 2017 Fall Economic Statement reported that Ontario's net debt-to-GDP ratio is lower than previously forecast.
- The net debt-to-GDP ratio peaked at 39.3 per cent in 2014–15 and has been declining ever since, as a result of Ontario's economic growth and the government's progress towards a balanced budget in 2017–18.
- It is now projected to be 37.3 per cent at the end of fiscal 2017–18, 0.2 per cent lower than was forecast in the 2017 Budget.
- This ratio is projected to continue to decline to 37.1 per cent in 2018–19.
- In the 2017 Budget, the government set an interim net debt-to-GDP ratio target of 35 per cent by 2023–24, and re-stated its commitment to reduce the net debt-to-GDP ratio to its pre-recession level of 27 per cent by 2029–30.
- A declining net debt-to-GDP ratio, together with low interest on debt costs as a percentage of revenues, positions the province for long-term sustainability.
- It also allows for a greater proportion of government spending to be invested in programs and services.

- The reduction of debt is complemented by Ontario's investments in infrastructure, which are supporting economic growth and job creation.
- In fact, Ontario is making the biggest investment in public infrastructure in its history.
- The government's long-term infrastructure plan to invest about $190 million over 13 years, starting in 2014–15, will contribute to the growth of the economy.

DRAFT

- These investments will not only create jobs, support business innovation and draw investors from abroad — they will also contribute to the growth of the provincial economy at a faster rate than the change in its net debt.
- The positive impact of these capital investments on the province's economy was confirmed by the Centre for Spatial Economics.
- It recently reported that, over the long term, GDP in Ontario increases by up to $6 for every dollar of public infrastructure spending.
- The government's economic strategy was further supported in a report by the International Monetary Fund in June 2016, which recommended that Canadian "fiscal policy should be pro-growth."
- Christine Lagarde, the International Monetary Fund's Managing Director, expressed her support for the government's growth strategy and agreed that investment in infrastructure should be an essential element.
- In summary, Ontario's net debt-to-GDP ratio will gradually diminish due to the GDP increasing at a faster rate than net debt.
- This will allow the government to continue to move towards its 27 per cent net debt-to-GDP target.

Interest on Debt-to-Revenue Ratio:

- Another major thrust of Ontario's plan to manage its debt centres on the interest on debt-to-revenue ratio.
- This is another key indicator of the government's ability to meet its financial obligations.
- Through prudent and cost-effective debt management, the government has consistently kept interest on debt costs below budget projections.
- The 2016–17 Public Accounts show that Ontario's deficit for the last fiscal year was $991 million — $3.3 billion lower than projected in the 2016 Budget and half a billion lower than the interim deficit projection in the 2017 Budget.
- This smaller-than-projected deficit is due to stronger revenues, and reflects positively on the debt-to-revenue ratio.

DRAFT

- Ontario's interest on debt for 2017–18 is forecast to be $12.2 billion.
- The interest on debt-to-revenue ratio is forecast to be 8.2 per cent in 2017–18, 8.3 per cent in 2018–19 and 8.4 per cent in 2019–20.
- The savings on interest on debt have improved a key measure of the affordability of debt.
- For example, the 2010 Budget forecast that, by 2017–18, the Province would have to spend 11.3 cents of every revenue dollar received on interest.
- By the 2017 Budget, the amount needed for interest payments had dropped significantly.
- The current forecast is 3.1 cents lower — 8.2 cents of interest costs for every dollar of revenue.
- This ratio is lower than it was in the 1990s and 2000s, and is forecast to remain lower through Ontario's outlook period to 2019–20.

Term Extension on Debt:

- Finally, record-low interest rates have enabled the government to keep its annual interest expense steady.
- However, the global decline in interest rates over the last 25 years could not continue indefinitely.
- The Bank of Canada has increased interest rates — twice last year and already once this year.
- Ontario has taken necessary precautions to protect the financing of the province's public services, now that interest rates are widely understood to be on a net rising trajectory.
- To protect the province from these increases, the government has continued to extend the term of its debt.
- Term extension has allowed the government to lock in low interest rates for a longer period, which reduces refinancing risks.
- Extending the term also helps offset the impact of expected higher interest rates on interest on debt costs.

DRAFT

- Going back to the beginning of fiscal 2010–11, Ontario has issued $68.6 billion in bonds longer than 30 years to lock in low rates.
- As a result, the weighted-average term to maturity of long-term provincial debt issued has been extended significantly, from 8.6 years in 2008–09 to 13.9 years in 2016–17.
- For 2017–18, it stood at 12.8 years as of October 31, 2017.
- If or when interest rates continue to rise, the government will assess whether it will remain cost-effective over the long term to continue to extend the term of its debt.

Conclusion:

- As I said at the outset, the Ontario government has a track record of responsible fiscal management and remains committed to executing its goal of reducing the provincial debt burden.
- To conclude, the government's plan to manage the debt focuses on three key areas:
    - One, decreasing the net debt-to-GDP ratio.
    - Two, decreasing the interest on debt-to-revenue ratio.
    - And three, extending the term on its debt.
- As I have stated, the government has decreased the net debt-to-GDP ratio.
- In the 2017 Budget and the 2017 Fall Economic Statement, Ontario stated that the government continues to maintain a target of reducing the net debt-to-GDP ratio to its pre-recession level of 27 per cent, currently projected for 2029-2030, together with an interim target of 35 per cent by 2023-2024.
- I also explained how the government has decreased the interest on debt-to-revenue ratio.
- The 2010 Budget forecast that, by 2017–18, the Province would have to spend 11.3 cents of every revenue dollar received on interest.
- However, by the 2017 Budget, the amount needed for interest payments had dropped.

DRAFT

- The current forecast is 3.1 cents lower — at 8.2 cents of interest costs for every dollar of revenue.
- Finally, I explained how the government has taken advantage of low-interest rates and extended the term on its debt.
- The weighted-average term to maturity of long-term provincial debt issued has been extended significantly, from 8.6 years in 2008–09 to 13.9 years in 2016–17, and 12.8 years for 2017–18 as of October 31, 2017.
- In short, Ontario's economy remains strong.
- Protecting the financing of the province's public services will continue to be one of the government's highest priorities.
- Thank you.

DRAFT

LONG-FORM MEMBER QUESTION: FAIR HYDRO PLAN

DEPUTY MINISTER SCOTT THOMPSON

Question:

- What is the financial impact of the Fair Hydro Plan's electricity rate reduction on the Province's budget?

Answer:

- As Deputy Minister of the Ministry of Finance, I will speak specifically to the financial implications of the Fair Hydro Plan on the Province's budget and financial statements.

Ontario's Fair Hydro Plan

- To address issues related to rising electricity costs, especially for families and small businesses, the government announced Ontario's Fair Hydro Plan on March 2, 2017.
- As part of the plan, electricity bills were reduced by 25 per cent on average, or about $41 per month, for all Ontario residents as of July 1, 2017.
- The plan included several important measures.
- First, let me discuss the refinancing of the Global Adjustment.
- The Global Adjustment is the cost of building new electricity infrastructure in the province and maintaining existing resources.
- The majority of the province's electricity generators currently have 20-year contracts.
- Many of these generators will be able to operate past their contract term.

DRAFT

- In other words, they would still generate electricity after the upfront capital costs have been paid for by the current generation of ratepayers.
- The Government of Ontario believed that present-day consumers should not be burdened with paying for a disproportionate share of investments that provide benefits for decades to come.
- To relieve the current burden on ratepayers, and share costs more fairly, a portion of the Global Adjustment is being refinanced over a longer period.
- This is providing significant and immediate rate relief to ratepayers by spreading the cost of electricity investments over time, to better reflect the expected lifecycle of the infrastructure that has been built.
- According to estimates provided when the Fair Hydro Plan was announced, the immediate reduction in the Global Adjustment would be about $2.5 billion per year, on average, over the first 10 years.

- Second, the plan included an expansion of the Industrial Conservation Initiative or ICI.
- The ICI allows participating customers to manage their Global Adjustment costs by reducing demand during peak periods.
- Customers who participate in the ICI, referred to as Class A, pay Global Adjustment based on their percentage contribution to the top five peak Ontario demand hours over a 12-month base period.
- Ontario expanded eligibility for the ICI program by reducing the threshold from 1 MW to 500 kW.
- This measure allows small manufacturers and industrial consumers the opportunity to participate in the ICI and save on their electricity costs.

- A third component of the plan is Ontario’s rebate for electricity consumers.

DRAFT

- The government provided an eight per cent Ontario Rebate for Electricity Consumers on electricity bills, equivalent to the amount of the provincial portion of the Harmonized Sales Tax.
- This change was effective January 1, 2017.

- A fourth and important part of the plan allows future increases to hydro bills to be set by regulation.
- This enables the government to hold increases, for four years, to the rate of inflation.
- While rates will rise gradually over time, the government remains committed to avoiding sharp increases.

Assisting the Most Vulnerable Electricity Consumers

- The government has introduced other measures to help the most vulnerable electricity consumers.
- It did this by introducing legislation to enhance some existing programs or introduce new initiatives.
- In particular it enhanced the Ontario Electricity Support Program.
- The Ontario Electricity Support Program is an income-tested, application-based program that lowers electricity costs for the most vulnerable consumers.
- In practice, it provides them with a rebate directly on their bills.
- Effective May 1, 2017, Ontario increased the program by 50 per cent, meaning that single, low-income consumers would get an increase in their rebates ranging from $180 to $276 per year.
- According to the 2017 Provincial Expenditure Estimates, the program is anticipated to cost $140 million in 2017–18.
- This amount will be covered by provincial revenues.

DRAFT

- As well, as part of the plan, Ontario has enhanced the Rural or Remote Rate Protection Program, or RRRP.
- The RRRP provides a rate subsidy to rural and remote residential customers who face higher distribution costs.
- As part of the Ontario Fair Hydro Plan, the Province expanded the program to provide distribution delivery charge relief to about 800,000 customers.
- According to the 2017 Provincial Expenditure Estimates, the program is anticipated to cost $344 million in 2017–18, which will also be covered by provincial revenues.
- Ontario is also helping customers through local distribution companies.

- In October 2017, the Province launched the $100 million Affordability Fund.
- The Affordability Fund provides local distribution companies with an additional tool to help customers in need.
- Local distribution companies can use the fund to provide support to qualifying customers for energy efficiency improvements, to help them reduce their future electricity bills.
- The Affordability Fund is paid through provincial revenues.

- Finally, Indigenous communities in Ontario are also receiving assistance through the First Nations On-Reserve Delivery Credit.
- In 2016, the Ontario Energy Board engaged with First Nations, including remote communities, the distributors serving them and consumer groups.
- Following the engagement process, the board recommended to the Government of Ontario the elimination of the delivery charge for all on-reserve First Nations residential customers.
- The board also recommended removing the monthly service charge for customers of licensed distributors that charge a bundled rate.

DRAFT

- The board estimates this would provide residential customers an average monthly benefit of $85.
- According to the 2017 Provincial Expenditure Estimates, the credit is anticipated to cost $15 million in 2017–18, which will be funded by provincial revenues.

- In summary, these new measures will cost the government up to $2.5 billion over the next three years.
- The cost is about $500 million in 2017–18, based on a part-year implementation, according to the 2017 Provincial Expenditure Estimates.

Conclusion:

- Taken together, these changes are delivering the single-largest reduction to electricity rates in Ontario's history.
- For all residential consumers in the province, electricity bills have been reduced by 25 per cent on average, or about $41 per month, as of July 1, 2017.
- People with low incomes and those living in eligible rural or remote communities are receiving even greater reductions, as much as 40 to 50 per cent.
- Approximately 500,000 small businesses and farms are also benefitting from the changes.
- On-reserve First Nation residential customers of licensed distributors are getting a 100 per cent credit on the delivery line of their bills.
- Although hydro rate relief costs were additions to the fiscal framework, the government continues to project a balanced budget for 2017-18, and will provide a full update on its fiscal plan in the spring budget.

DRAFT

TIPS FOR PRESENTING AT SCOPA

Tips for Addressing Committee Members:

Note: Tips are applicable for addressing both Committee Members and media.

- When speaking be mindful of what you say – the proceedings are recorded and there's no such thing as "off the record."

- Adhere to the scripted remarks and prepared Q&As. Do not embellish and ***when in doubt, leave it out.***

    - Be sure you understand the question being asked (it's ok to ask for clarification) and Do NOT answer something you're not 100% sure of.

- If you do not have the response, you may advise Committee Members that the matter needs to be redirected to another ministry, or that you will get the requested information by saying, "I'll look into what is possible to provide."

- Be mindful of only addressing questions/issues that relate directly to the TBS.

- It is acceptable to decline to answer an unrelated question by noting that you are not clear of its relevance to TBS, and that you are prepared to address matters related to the ministry.

- If caught off guard, breathe, listen, work to understand the question, or ask for clarification.

    - Ask the questioner 'Excuse me' or 'I beg your pardon?'
    - Ask the questioner 'Can you kindly help me understand the context of the question/or what you just said?'

- If possible, use a bridging statement to get to your key message/prepared response. (See Appendix A).

- Do not offer personal opinions. Stick to the facts:

    - Leave off qualifiers like "I think" "I feel," and "I believe" which represents an opinion. To sound confident and assured, be mindful not to use qualifiers.
    - Do not use 'I assure you."

- Offer examples of success whenever possible.

Body Language, Tone:

- Be aware of how you come across. There is no benefit to being seen as defensive, argumentative, or unresponsive.

- Project an image of openness, honesty, and empathy.

- Remember to breathe deeply and speak slowly.

    - Controlling your breathing helps deal with the stress.
    - Take several deep breaths as you sit down and get organized.
    - Ahead of appearance take a few minutes in a quiet spot to breathe slowly and deeply.
    - "Super Hero Pose" – stand with your legs shoulder width apart, hands on hips, shoulders back. Do this for two minutes. It helps mentally prepare you ahead of having to speak.

- Use your hands while talking to look natural and help release anxiety. (Note palms up is a subconscious message to those looking at you that you are open and have nothing to hide)

- Avoid body language leakage—those involuntary movements that indicate you're nervous or stressed - e.g. head nodding, swallowing, and pursing your lips.

- Do not touch your face with your hands.

- Avoid repeating negative words that members use in questions. Doing so indicates you accept the negative premise.

- If you feel overwhelmed while speaking in front of an audience, recalibrate by breathing and pausing.

What-Ifs:

1. What if you don't want to answer the question, but you have to say something?

    - Offer a credible reason why you are unwilling to answer the question and identify what you prefer to discuss.

2. What if you're asked for hard numbers, and you don't have the answer?

- Explain, “I want to be absolutely precise and specific, so I will need to get back to you with the exact number”

- Words like “precise,” “specific,” and “exact” convey that the question has been taken seriously.

3. What if you don’t know the answer, but a colleague who is with you may know it?

   - If you need help from the other ADMs, open your response with ‘In a moment I’m going to call on my colleague to get into more detail about this…’ This gives the other TBS representative time to know they’ll be called upon.

   - Briefly discuss a related subject, then pass the question.

4. What if you need to pause?

   - If you have said absolutely everything you need to say, then let there be a pause.

   - Remember it’s not up to you to keep the proceedings going. That’s the Chair’s job. They may intentionally leave dead air in the hopes that you’ll jump in to fill it by saying something you hadn’t intended to.

5. What if the answer is confidential?

   - Explain that confidentiality rules must be respected, so you cannot directly address the issue at hand. (e.g.: that matter is before the courts).

6. What if it’s a question about a rumour?

   - When asked to respond to a rumour, it is best to not respond at all. Instead, state that your focus is always on fact, not rumour.

7. What if the answer is HR related?

   - Say as little as possible. Commenting on someone’s employment record in a negative context can potentially put you in legal jeopardy.

8. What if you don’t like what you’re saying?

   - Don’t feel obligated to complete a sentence or thought. Simply begin the response again.

9. What if it’s a “yes or no” question?

- Unless the question relates to a sensitive issue, skip “yes” or “no” and go right to the message that would follow.

10. What if it's an "is it possible" question?

    - Avoid speculating and tell the committee – "I'm not able to comment on something that may or may not happen."

11. What if you're interrupted mid-answer?

    - The first time, let it go. The second time, ask the Chair to be allowed to finish your thought.

APPENDIX

A. Sample Bridging Statements

1. "We find the more important issue is…"
2. "I think it would be more accurate (or correct) to say…"
3. "Let me emphasize again…"
4. "What matters most in this situation is…"
5. "While _____ is important, it's also important to remember that…"
6. "It all boils down to this…"
7. "And that reminds me…"
8. "Before we leave this subject, I need to add…"

Environmental Scan

Based on the Auditor General's 2017 Annual Report, media analysis, Hansard analysis, and the invitee list for the SCOPA session on February 28, 2018, it is anticipated that the focus of the Committee will be the following:

- **Pension asset accounting**
- **Ontario Fair Hydro Plan (OFHP) Accounting**
- **Independent Electricity System Operator (IESO) Accounting (market accounts; rate-regulated accounting; other – IESO/OPG "inappropriate expenses"; OPG compensation)**
- **Pre-Election Report**
- **Province's debt burden**

Following the release of the Auditor General's Annual Report on December 6, 2017, TBS-related issues were referenced in 41 per cent of articles, including specifically the "accounting disputes" between the Auditor General and the government, spending on government advertising, and the Auditor General's commitment to audit the IESO's consolidated financial statements. In the House, there were eight questions related to TBS issues: 50 per cent were related to the IESO/OPG "inappropriate expenses"; 25 per cent were related to government advertising; and the remaining two questions focused on the balanced budget narrative and the Pre-Election Report.

Overall, the focus on Public Accounts specifically has been limited in the media and the House alike: between September and December 2017, there were 12 mentions of Public Accounts. 50 per cent of mentions referenced "accounting rules" or the alleged existence of "multiple sets of books". Following the tabling of Public Accounts 2016-17, media coverage was limited and 80 per cent of coverage was neutral in tone.

Media Scan

Auditor General 2017 Annual Report

- **Media Events – December 6, 2017**
    - **Auditor General**
        - Overall, TBS-related issues represented 28% of the Auditor General's remarks.
        - Media questions on TBS-related issues represented 28% of all questions asked (7 out of 25)– **including on the planned audit of IESO's financial statements, government numbers vs. AG numbers being used for the PC's platform, and concerns regarding pre-election reports.**
    - **Government Response**
        - Overall, TBS-related issues represented approximately 20% of the discussion.

        - Media questions on TBS-related issues represented 20.8% of all questions asked (5 out of 24) – questions focused on government advertising and **on comments made by the Auditor General to "address significant issues without fear of push-back and reprisal."**

    - **PC Response**
        - Introductory remarks focused generally on waste and mismanagement.
        - Media questions on TBS-related issues represented 17% of all questions asked (2 out of 12) – **questions focused on the PC's use of the government's numbers in their "People's Guarantee" platform**

    - **NDP Response**
        - TBS-related issues related to 8% of the third party leader's remarks, particularly on government advertising
        - No direct mention of TBS-led chapters, **however 38% of questions (3 out of 8) focused on IESO expenditures**

- **Initial Media Coverage**
    - There were approximately 17 stories focusing on the Auditor Generals' 2017 Annual Report
    - 41% of articles referenced TBS-related issues
    - Key themes related to TBS issues include: **"accounting disputes" between the AG and the government** – and the effect it has on the balanced budget narrative, spending on government advertising, and **the AG's statement that she will audit the IESO's financial statements.**

- **Recent Media Coverage** (December 2017 – January 2018) has focused on the following key themes:
    - **The government's relationship with the Auditor General**
    - **Pre-election report**
    - **Distrust of government numbers/"two sets of books"**

Public Accounts

- **Media Coverage**
    - Media coverage was short-term (24-hours), with **80% of media coverage neutral in tone** (compared to 26% in 2016)
    - Government key messages were picked up 100% of the time
    - Balanced budget key messages were picked up in 60% of the coverage

- **Key Themes**
    - Disagreement between the government and auditor general

- Ontario's fiscal position: government debt and deficit
- The government's alleged continued dismissal of watchdogs

Pre-Election Report

- **Media Coverage**
  - On December 17, 2017, the Toronto Sun published a column by Lorrie Goldstein, "Auditor General headed for a showdown with Wynne over financial vows Liberals made in 2004" focusing on the Pre-Election Report
  - On January 24, 2018, Minister Sousa was asked by Jessica Smith Cross (QP Briefing) about the plans for the Pre-Election Report. Minister Sousa signalled that plans were uncertain at this time: "What happens is, you produce a document then you provide the pre-election report. So I have to manage this concurrently. But again, we recognize the timing and the constraints that that brings. **So I have to find other ways** to ensure that full disclosure is given to her and the other legislative, to the FAO."

Hansard Scan

Auditor General 2017 Annual Report

Following the release of the Auditor General's 2017 Annual Report, there were eight questions in the House relating to TBS issues:

- 50% (4/8) were related to **OPG/IESO "inappropriate expenses"**
- 25% referenced the FAO - one on balanced budget, one on the **pre-election report**

Public Accounts

Public Accounts were mentioned in the House at least 12 times between September and December 2017:

- 50% mention some form of "accounting rules" / two sets of books
- 42% (5/12) related to infrastructure spending
- 25% (3/12) mention FAO and AG together
- 25% regarding Fair Hydro Plan accounting
- One reference to pre-election finance report

FOIs/OPQs

There is one OPQ currently in progress with TBS related to Ontario Fair Hydro Plan accounting.

Overview	Key Issues	Key Dates	Next Steps
OPQ #700		OPQ will be formally filed on	In progress –

MPP Vic Fedeli Would the President of the Treasury Board state whether the government is in possession of an opinion from KPMG or E&Y on how the Fair Hydro Plan transaction should be recorded in the government's Consolidated Financial Statements, and further state precisely where they disagree with the Auditor General	**Ontario Fair Hydro Plan Accounting** **Relationship with the Auditor General** **Use of external advisors**	February 20, 2018	**Products:** Response to OPQ. **Notes:** Draft will be sent first week of January 2018 to OPCD to draft response. OPQ will be formally filed on February 20, 2018 TBS is the only ministry to have received this OPQ. **Next Steps:** Develop and approve response

Other Considerations

- Executive compensation (OPG, OEB, IESO)
- "Inappropriate expenses" (OPG, IESO)
- Hydro bill redesign ("$15 million")

Key Issues

Issue/Consideration	Strategy	Key Messages	Evidence
Pension Asset Accounting: Auditor General's qualified opinion	Confirm that the province will continue to follow PSAS, as always, and seek appropriate expert guidance where PSAS is silent. Highlight supporting perspectives from external consultants.	The government continues to move forward and present the province's finances fairly and accurately and in accordance with Canadian Public Sector Accounting Standards (PSAS). The government respectfully disagrees with the Auditor General's interpretation of the accounting standards, as PSAS neither requires unilateral control to record an asset, nor does it include a requirement to obtain a letter from the co-sponsor of the	• Pension Asset Expert Advisory Panel • Opinion from Deloitte LLP • Analysis Completed by EY

		plan agreeing to reduce further contributions within 12 months. The government is open to continue to discuss the matter in hopes of resolving this matter.	
IESO Accounting: **1) Market Asset Accounts** **2) Rate-Regulated Accounting** **3) AG to audit IESO's 2017 statements** 4) OPG/IESO "inappropriate expenses" 5) Peripheral: OPG Executive Compensation	Confirm that the province will continue to follow PSAS, as always, and seek appropriate expert guidance where PSAS is silent. Re-iterate government's appreciation of the Auditor General's independent review and the IESO's recent unqualified audit record.	The government welcomes the Auditor General's independent review and remains committed to assisting her office in providing its views to the Legislative Assembly. IESO's recent accounting changes are supported by the IESO's audit committee, board of directors, its independent external auditor, and by the Office of the Provincial Controller. The IESO prepares its financial statements in accordance with PSAS, and received an unqualified, or clean, audit opinion on its 2016 financial statements.	Opinion supported by: • IESO audit committee • Independent external auditor (unqualified opinion) • OPCD • Same method used by Ontario Power Authority previously
Fair Hydro Plan Accounting: "convenient/inappropriate accounting"	Highlight due diligence included in OFHP decision making, and that the accounting structure is still being finalized. Refuse to speculate about AG's potential future audit opinion.	The province will continue to prepare its consolidated financial statements in accordance with Public Sector Accounting Standards (PSAS).	• PSAS Guidance • CPA professional code of conduct • External advisors • Other jurisdictions

	Emphasize that the province will continue to follow PSAS, as always, and seek appropriate expert guidance where PSAS is silent.	The proposed accounting for the Ontario Fair Hydro Plan (OFHP) reflects the economic substance of the transaction by differentiating costs borne by taxpayers versus those borne by ratepayers. PSAS is silent on a key accounting issue regarding the OFHP – the standards neither explicitly permit, nor prohibit, the recognition, measurement, presentation, or disclosure of rate-regulated activities. In the absence of a clear position on an issue, standard accounting practice dictates that an entity should consult other accounting standards. The professional staff has appropriately applied this guidance in assessing the accounting for the Ontario Fair Hydro Plan.	
Pre-Election Report: "government should publicly communicate if and when"	Re-iterate the government's commitment to working with the Office of the Auditor General. Confirm that the government will, as always, continue to follow the relevant legislation.	Under the *Fiscal Transparency and Accountability Act, 2004*, the government may file a regulation that would require it to release a Pre-Election Report on Ontario's Finances. Should the government file such a regulation, the Auditor General would be required to issue a statement based on a	• Highlight how the government has been working with the Office of the Auditor General (stated by Minister Sandals in a Dec 16, 2017 Toronto Sun article)

		prompt review following the release of such a Pre-Election Report. The government remains committed to meeting the legislative requirements of the Act, and working constructively with the Auditor General.	
Debt Reduction Plan: "Ontario has the highest sub-sovereign debt in the world"	Re-iterate government's track record of responsible fiscal management and provide high-level overview of debt reduction plan.	The government's long-term infrastructure plan to invest about $190 billion over 13 years, starting in 2014-15, will contribute to the growth of the economy. The Centre for Spatial Economics found that for every $1 spent on public infrastructure, GDP increases by up to $6, on average, in the long term.	• C4SE study • MOF
"Legislated Accounting"	Emphasize that the province will continue to follow PSAS, as always, and seek appropriate expert guidance where PSAS is silent. Provide example of the only time legislated accounting was used; explain how OFHP does not legislate accounting.	The *Ontario Fair Hydro Plan Act, 2017* and its related regulations do not create accounting rules or legislate the accounting. It is important to distinguish legislating the accounting from legislating the right of the government to recover amounts from specified ratepayers in the future, which in the absence of legislation, would have been collected from specified ratepayers as the costs were incurred. The province, as always, will prepare its	• Example of single use of legislated accounting (Public Accounts 15-16)

Questions & Answers

Top Questions*

1. How do you respond to the Auditor General's recommendation that the government should record valuation allowances to offset the net pension assets recorded from the Ontario Teacher's Pension Plan and the Ontario Public Sector Employee's Union Pension Plan until you receive formal written authorization from their pension plan co-sponsors?

2. How do you respond to the Auditor General's recommendation that the government remove the Independent Electricity System Operator's (IESO) market accounts from the province's consolidated financial statements?

3. The government has received a second qualified audit opinion on its Public Accounts – this time based on two separate issues. Why do you continue to disagree with the Auditor General?

4. The Auditor General says that you anticipated the government would receive a qualified audit opinion – and accepted this risk. In the private sector this would be unacceptable. How do you figure you can get away with this?

5. Will the government implement the recommendations in the Auditor General's Special Report on the Fair Hydro Plan?

6. The Auditor General says that she has consulted with all of the Auditor Generals in Canada – and they agree with her assessments. How are we supposed to believe this government when all legislative auditors in the country say you are wrong?

7. Why does the government use external advisors/consultants? It seems convenient that whenever you disagree with the Auditor General, you turn to consultants to justify your accounting methods.

8. The Auditor General says that the IESO's use of rate-regulated accounting is inappropriate. Why has the government allowed the IESO to adopt this accounting method that she says is not in accordance with PSAS?

9. Are you concerned that the Auditor General will issue an adverse opinion on the province's next Public Accounts due to Ontario's Fair Hydro Plan accounting? What would be the impact on the province's credit rating?

10. Why has the government legislated accounting for things like Ontario's Fair Hydro Plan? Aren't you just changing the rules to suit your needs?

11. When will the government issue a regulation confirming the source of reference for the Pre-Election Report and the timeline for issuance of the report that will be subject to the Auditor General's review?

**See appendix A for a full list of QAs.*

Long-Form Answers

1. **Why did the government choose to recognize pension assets from the Ontario Teacher's Pension Plan and the Ontario Public Sector Employee's Union Pension Plan? What evidence and processes were used to support this decision?**

2. **Why did the Treasury Board Secretariat accept the IESO's recognition of market accounts on the province's consolidated financial statements? Is there any precedent for this?**

3. **Can you explain when and how the Treasury Board Secretariat looks to other accounting methods to support the preparation of Public Accounts?**

Summary of Government Responses to the Auditor General's 2017 Annual Report Chapter on Public Accounts

December 6, 2017

The government thanks the Auditor General for her recommendations, and remains committed to assisting the Office of the Auditor General in providing its independent views to the Legislative Assembly.

Below is a summary of the government's position regarding the Auditor's recommendations in Chapter 2 – Public Accounts of the Province.

Accounting for Pension Assets

The government continues to move forward and present the Province's finances fairly and accurately and in accordance with Canadian Public Sector Accounting Standards (PSAS).

Last year there was a disagreement among the Province's professional accounting staff and the Auditor General's Office on the appropriate application of PSAS regarding pension accounting. As a result, the Pension Asset Expert Advisory Panel was established to deliver independent advice and recommendations on the issue. The independent panel members concluded the Province's share of the net pension assets of both the Ontario Teachers' Pension Plan and the Ontario Public Service Employees' Union Pension Plan should be recognized in Ontario's financial statements.

After significant deliberation, Ontario confirmed that the accounting for these plans prior to 2015-16 was appropriate. This conclusion is supported by:

- The conclusions reached by an independent Pension Asset Expert Advisory Panel (the 'Panel'), established by the government to provide advice on the interpretation of PSAS with respect to the reporting of net pension assets of these two joint defined benefit plans. The Panel, comprised of accredited accounting, actuarial and legal professionals with extensive background in pension accounting and plan governance, released its report in February 2017 which supported the government's position that a valuation is not required for these two plans under PSAS. Two key findings of the Panel were: 1) there is no requirement under PSAS that any formal agreement exist between the joint sponsors regarding the timing or amount of a reduction in contributions to record an asset, as the existing agreements in place between the parties support the recognition of an expected benefit, and 2) unilateral control is not required for asset recognition; joint control with each party having the ability to deny the actions of the other sponsor, provides evidence of shared control, supporting recognition of an asset.
- An opinion from Deloitte LLP on aspects of the Province's accounting as at March 31, 2016 for the Ontario Teachers' Pension Plan. The opinion, which was dated October 2, 2016, concluded that it was permissible to recognize a pension asset under Canadian Public Sector Accounting Standards, even though the Province did not have under a unilateral right to reduce contributions. The opinion did not address the value at which the asset should be recorded.

- Analysis completed by EY as to whether any valuation allowance is required to be recorded for OTPP or OPSEUPP as of March 31, 2017. EY confirmed no valuation allowance was required for either plan.

The government continues to apply the accounting treatment of pension assets that the Province has used consistently since 2001.

IESO Market Accounts

In 2016, the Independent Electricity System Operator (IESO) began recognizing its market accounts' assets (amounts due from power distributors) and liabilities (amounts due to power producers) in its financial results. The IESO chose to recognize these markets accounts on its books for transparency reasons, as it better reflects the financial position of IESO-administered markets at year-end.

This change was supported by IESO's Audit Committee, its Board of Directors, its independent external auditor, and by the Office of the Provincial Controller. It has no impact to the Province's annual deficit, net debt or accumulated deficit.

The financial statements of IESO for the year-ended December 31, 2016 were subject to an external audit and received an unqualified (or clean) opinion.

The accounting concepts used are consistent with those used previously by the Ontario Power Authority (which was merged with IESO on January 1, 2015) in its financial statements, which was not subject to qualification from the Office of the Auditor General at that time.

IESO Rate-Regulated Accounting

PSAS is silent on the issue of rate-regulated accounting – the standards neither explicitly permit, nor prohibit, the recognition, measurement, presentation, or disclosure of rate-regulated activities.

In the absence of a clear position on an issue, standard accounting practice dictates that an entity should consult other accounting standards. This guidance for PSAS is included in section PS1150.07 from the Public Sector Accounting Standards Handbook.

In this case, IESO consulted U.S. Generally Accepted Accounting Principles (GAAP), the appropriate accounting framework that provides guidance on rate-regulated operations.

IESO made the decision to adopt rate-regulated accounting because it better reflects the economic substance of certain types of expenses that may not be directly recovered through the normal revenue requirement model.

IESO management, IESO's Audit Committee, IESO's Board of Directors, IESO's external auditor and the Office of the Provincial Controller all support the use of rate-regulated accounting by IESO.

Many entities in Canada, including Ontario Power Generation (OPG) and Hydro One use rate-regulated accounting. Rate-regulated accounting is well understood in the electricity sector, and the approach selected was taken in that context. The recognition of regulatory assets brings IESO in line with six other independent system operators in North America.

Ontario Fair Hydro Plan Accounting

In developing Ontario's Fair Hydro Plan (OFHP), the government considered a range of implementation options and consulted with legal, accounting, financial and energy sector third-party experts to provide advice and ensure due diligence was completed.

The proposed accounting for OFHP reflects the economic substance of the transaction by differentiating costs borne by taxpayers versus those borne by ratepayers.

PSAS is silent on a key accounting issue regarding the OFHP – the standards neither explicitly permit, nor prohibit, the recognition, measurement, presentation or disclosure of rate-regulated activities.

In the absence of a clear position on an issue, standard accounting practice dictates that an entity should consult other accounting standards. This guidance for PSAS is included in section PS1150.07 from the Public Sector Accounting Handbook.

This guidance has been appropriately applied in assessing the accounting for the OFHP.

The Province, as always, will prepare its consolidated financial statements in accordance with PSAS, including the transactions resulting from OFHP.

Legislated Accounting

The Province is committed to providing high-quality financial reports that support transparency and accountability in reporting to the public, the legislature, and other users.

For the 2015-16 Public Accounts, the government passed a time-limited regulation prescribing the accounting treatment for certain net pension assets in order to allow Treasury Board Secretariat and the Ministry of Finance officials to sign off on Public Accounts consistent with the fiscal impact of the Auditor General's interpretation of Public Sector Accounting Standards (PSAS). This regulation is the **only** example of where the accounting treatment was legislated, and the legislation did not align with the requirements of PSAS.

The *Ontario Fair Hydro Plan Act, 2017* and its related regulations **do not** create accounting rules or legislate the accounting. It is important to distinguish legislating the accounting from legislating the right of the government to recover amounts from specified ratepayers in the future, which in the absence of legislation, would have been collected from specified ratepayers as the costs were incurred.

The Province, as always, will prepare its consolidated financial statements in accordance with PSAS.

STATEMENT

Treasury Board Secretariat

Statement from the President of the Treasury Board on the Auditor General's Annual Report

December 6, 2017

Today, Liz Sandals, President of the Treasury Board, released the following statement:

"We thank the Auditor General for her report, and continue to appreciate our ongoing working relationship with the Office of the Auditor General (OAG). The Treasury Board Secretariat works closely with the OAG on a wide variety of issues on a regular basis, and her oversight and insight is welcomed both during our regular interactions and with this annual report.

The Auditor General mentions a number of topics that represent ongoing conversations between government and her office; for instance, the accounting practices regarding pension assets and the application of the United States Generally Accepted Accounting Principles when the Public Sector Accounting Board's standards are silent. The government's position on these differences of opinion has not changed.

We agree with the Auditor General's comments on the importance of accountability for agencies, boards, commissions and other broader public sector entities. Since 2010, our government has implemented a number of important measures to strengthen broader public sector and provincial agency accountability, transparency and governance. Our recent Fall Economic Statement, if passed, responds to the recommendations of the Auditor General in her 2015 Annual Report to streamline administration and establish consistency in the tabling and communication of provincial agency annual reports. However, we know that making process changes to annual reports may not be the complete solution. We will continue working with the OAG to enhance oversight and ensure accountability across all of our agencies.

We share the Office of the Auditor General's belief that the Auditor General has an important role to play in the oversight of government advertising, and that's one of the reasons that we are proud that Ontario is the only jurisdiction in Canada to have legislation in place to ensure that oversight. In fact, we have recently expanded her oversight to include digital advertising.

We know that the government has a responsibility to communicate to the public it serves, and that advertisements are one medium through which we can do that. For example, our Sexual Violence and Harassment prevention campaign – #WhoWillYouHelp challenged existing attitudes, and sparked international discussion. Our video was viewed over seven million times in the first 10 days, and generated more than 85 million views worldwide. And within 6 months, we had measurable results – 55 per cent strongly agreed they had an obligation to intervene when witnessing sexual harassment, up from 37 per cent.

As the President of the Treasury Board, I am committed to leading the government's efforts on accountability, openness and modernization, while working to deliver good government and public services in the most effective and efficient way possible. As part of this commitment, we work side-by-side with our partners, including the Auditor General, throughout the year to ensure that we continue to become more efficient in our processes and more open and

accountable as a government.”

Lawvin Hadisi, Minister’s Office, 416-326-3839
Bryant Sullivan, Communications, 416-325-1378

CONFIDENTIAL REVISED: January 10, 2018

ONTARIO'S FAIR HYDRO PLAN ACCOUNTING (GLOBAL ADJUSTMENT REFINANCING)

ISSUE: What is the basis for the proposed accounting for the Global Adjustment Refinancing on the Province's books?

CONTEXT:

- The Global Adjustment Refinancing is one component of Ontario's Fair Hydro Plan announced in March 2017, and is the most significant contributor to the reduction in hydro rates for residential consumers.
- The other parts of the Plan for residential consumers include:
  - Expansion of the Ontario Electricity Support Program;
  - Reductions in distribution rates for consumers in rural and remote areas;
  - Reductions for First Nations residential consumers living on-reserve; and,
  - A fund set up to assist consumers in making their homes more energy efficient.
- The only impact on the 2016-17 consolidated financial statements from Ontario's Fair Hydro Plan is related to the fund set up to assist consumers in making their homes more energy efficient, which was expensed in the year and increased the annual deficit. In addition, the 8 per cent rebate on electricity bills, introduced as of January 1, 2017, while not part of the March 2017 announcement, also impacted the 2016-17 consolidated financial statements as an expense that increased the annual deficit.
- The implementation of OFHP is ongoing, with significant decisions with accounting and financial implications still being finalized. The government will present the Province's finances in the 2017-18 Public Accounts fairly and accurately and in accordance with Public Sector Accounting Standards (PSAS).

KEY MESSAGES:

GA Financing Status and Structure

- In order to meet the needs of users, including the legislature and the public, for accountability in government reporting and decision making, it is essential that public sector financial statements reflect the economic substance of the government's activities.
- All of the agreements necessary for the Global Adjustment (GA) Refinancing will be finalized in the current fiscal year. The final accounting for the GA Refinancing will be completed once all of the elements are complete. The balance of the note is based on the expected outcome. As previously noted, there was no impact on the 2016-17 consolidated financial statements from the GA Refinancing.
- In analyzing the appropriate accounting treatment for the GA refinancing component of Ontario's Fair Hydro Plan on the Province's consolidated financial statements in 2017-18 and going forward, the Province considered authoritative guidance issued by the Public Sector Accounting Board, as well as the accounting assessments of the Independent Electricity System Operator (IESO) and Ontario Power Generation (OPG) management, including the accounting opinions of their external auditors.
- The complexity and unique structure of the GA Refinancing structure requires the use of professional judgment to ensure that key financial reporting objectives of transparency and accountability are best served.
- Under GA Refinancing, as enabled by the Ontario Fair Hydro Plan Act, 2017 ("OFHPA"), a Financing Entity established by Ontario Power Generation will borrow amounts to fund the payment of a portion of electricity costs charged by the electricity generators, thereby temporarily reducing the amount paid by eligible consumers (or ratepayers). The deferred amounts, including interest and other costs, will be recoverable from consumers/ratepayers in the future.

- The Independent Electricity System Operator (IESO), an independent, not-for-profit agency of the Province, is responsible for the management and operation of the wholesale electricity market. IESO makes payments to the electricity generators with cash received from the local distribution companies (and ultimately the consumers/ratepayers).
- Over the last 10+ years, investments have been made to phase-out coal and modernize Ontario's electricity system (i.e., build and maintain a reliable electricity system). This involves a move away from coal to cleaner, but more expensive methods of electricity generation, including wind, solar and natural gas. The cost of these investments were passed on to consumers/ratepayers as incurred or based on contractual payment terms, but not based on the period of benefit (i.e., the life of many generators is expected to exceed the length of the contracts).
- The GA refinancing acknowledges that the current generation of electricity consumers has paid more than its fair share for these costs, and spreads these costs incurred out over more years so they are shared proportionally by future electricity consumers.
- In simple terms, the IESO will continue to make payments to the electricity generators based on their contractual terms, but will collect less from the local distribution companies, as the consumers or ratepayers will pay a reduced amount. The amount not collected from the consumers now, or the shortfall, will be collected from consumers/ratepayers in the future.

- OFHPA permits the IESO to sell that shortfall, also referred to in the Act as a regulatory asset, which represents the right to collect payments from consumers/ratepayers in the future, to a financing entity. To recap, the IESO will continue to pay the electricity generators at their current contract rates. But it will do this with cash collected from the local distribution companies for electricity consumed (at a rate set by the OEB which reflects a significant portion of the 25 per cent reduction in the initial years) and cash received from the financing entity for the sale of the regulatory asset.
- The financing entity will be part of Ontario Power Generation (OPG Trust), a government business enterprise, wholly owned by the Province. The operations of Ontario Power Generation have been and will continue to be included in the consolidated financial statements of the Province using the modified equity method, the method Public Sector Accounting Standards (PSAS) require for government business enterprises.
- At its discretion, OPG Trust will purchase the shortfall amounts (or regulatory asset) from the IESO through a combination of provincial borrowing (flowed through OPG as an equity investment), amounts advanced from OPG and direct borrowing from capital markets.
- In the future, when the consumers/ratepayers pay for the deferred amount, those amounts will be used to repay the accumulated debt whether that be direct borrowing from the capital markets, amounts advanced from OPG or provincial borrowing.

IESO Accounting

- There was no impact on the 2016 financial statements of IESO from the GA Refinancing. The GA refinancing is expected to impact the 2017 financial statements.

- In 2017, the shortfall or regulatory asset that IESO incurs as a result of collecting less from the local distribution companies than it pays to the electricity generators would be accounted for as a rate-regulated asset. The rate-regulated asset would then be sold to OPG Trust for cash used to pay the electricity generators.
- For 2016, IESO adopted the use of rate-regulated accounting for costs incurred unrelated to the GA Refinancing; however, the impact to the financial statements of the Province was immaterial (impact on annual deficit of $24 million).
- PSAS is silent on the use of rate-regulated accounting. However, like all major accounting frameworks, PSAS encourages both preparers and auditors to consider guidance in other accounting frameworks when accounting for transactions not specifically addressed by the specific standards.
- IESO management, their audit committee, their board of directors and their external auditors, agree with the adoption of rate-regulated accounting by IESO. The Office of the Provincial Controller also supports the adoption of rate-regulated accounting by IESO.
- IESO is not the first entity that has prepared its financial statements using PSAS and rate-regulated accounting. Ontario Power Authority (which was amalgamated with IESO on January 1, 2015) prepared its financial statements with PSAS and used rate-regulated accounting.
- In the Auditor General's opinion on the 2016-17 consolidated financial statements of the Province, the AG has included an "Other Matter" paragraph, drawing attention to the adoption of rate-regulated accounting by IESO. The AG's view is expressed as stating PSAS does not permit rate-regulated accounting, but that the AG has not qualified the opinion on this matter because the impact is not material to the 2016-17 consolidated financial statements.

- The AG further notes, “However, the consolidated financial statements may become materially misstated in future periods, as a result of the legislated accounting prescribed under the Ontario Fair Hydro Plan Act, 2017 (OFHPA) and its related regulations, as it is not in accordance with Canadian public sector accounting standards.”
- Neither the IESO nor the Office of the Provincial Controller Division (OPCD) agree with the statements that (a) PSAS does not permit rate-regulated accounting (as previously noted, PSAS is silent with respect to rate-regulated accounting) or (b) Fair Hydro Plan and its related legislation and regulations legislate the accounting for GA Refinancing.

OPG Accounting

- The Auditor General has not raised any concerns to date with the intended accounting for the OPG Trust on the Province’s books.
- It is expected that OPG Trust will be controlled and consolidated by OPG.
- Purchases by OPG Trust of the rate-regulated assets from the IESO will be reflected on OPG’s books as intangible assets which will be included in the Province’s financial statements as part of its investments in government business enterprises.

The Province’s Accounting

- In assessing the appropriate accounting for Ontario’s Fair Hydro Plan (OFHP) on the Province’s books, OPCD worked closely with key ministries, the Ontario Energy Board (OEB), IESO, OPG and their respective external advisors.
- The final accounting treatment for OFHP-related activities will be confirmed once all elements of the GA Refinancing framework are finalized, including provincial guarantees and financing arrangements.

- Once the details and commercial agreements of the OFHP are finalized, the external auditors of IESO and OPG are expected to provide independent accounting opinions on the accounting treatment on IESO and OPG's financial statements.
- OPCD will rely on those independent accounting opinions, the audited financial statements of IESO and OPG as of December 31, 2017 and its own research and analysis in determining the impact of the GA Refinancing on the 2017-18 consolidated financial statements.

If Pressed: AG Assertion that the Government is Using Legislated Accounting

- The Auditor General has made several incorrect references to legislated accounting which should be addressed to ensure clarity and transparency in terms of the government's accounting treatment for Ontario's Fair Hydro Plan.
- In particular, the Auditor General has referred to legislated accounting prescribed by the OFHPA that is designed to in some way manipulate the Province's financial reporting in its consolidated financial statements.
- The Province's financial statements are based on Public Sector Accounting Standards (PSAS) as issued by the Public Sector Accounting Board of CPA Canada. There is no legislated accounting that applies to the Province's consolidated financial statements.
- While the OFHPA does, under Section 24, require that IESO set up a variance account to track the cash shortfall amount resulting from the deferred recovery amount, it is just another type of regulatory account, similar to those that OPG reports and for which the OEB is responsible for approving rates.

- As far as the Province's financial reporting practices go, whether the deferred amounts reported in IESO's variance account are assessed as assets for financial reporting purposes will be determined by the interpretation and application of Public Sector Accounting Standards, not by the legislation or regulations.

Auditor General's Special Report on the Fair Hydro Plan

- The Office of the Auditor General released *The Fair Hydro Plan: Concerns about Fiscal Transparency, Accountability and Value for Money* on October 17, 2017. The report focused on the financial and accounting framework of the OFHPA.
- The Auditor General said that the accounting for the Fair Hydro Plan is not permitted under PSAS because it is silent on rate-regulated accounting, despite the fact that standard accounting practice, including under PSAS, dictates that an entity should consult other accounting standards for transactions not specifically covered by primary standards.
- The Auditor General asserts in her report that the OFHPA creates an asset through legislation. This is a fundamental disagreement the government has with the Auditor General's report. The Province will prepare its consolidated financial statements in accordance with Public Sector Accounting Standards (PSAS).

Key Messages on AG's Special Report on the Fair Hydro Plan

- The government respects independent officers of the legislature, and values the important perspective they bring, but does not agree with the assertions and conclusions expressed in the Auditor General's Fair Hydro Plan report.
- The government has a strong track record of producing high-quality financial reports on a timely basis and continues to present the province's finances fairly and accurately and in accordance with Canadian Public Sector Accounting Standards.

- In developing the Fair Hydro Plan, the government considered a range of implementation options and consulted with legal, accounting, financial and energy sector third-party experts to provide advice and ensure due diligence was completed.
- The Fair Hydro Plan operates under a financial and accounting framework that is appropriate for the intended purpose. It is in accordance with Public Sector Accounting Standards and ensures the goals underlying the program are achieved in a cost-effective manner.
- PSAS are principle based -- they are not a set of specific prescriptive rules. Applying them requires the application of professional judgment. While we expect professional accountants to agree on the vast majority of issues, we acknowledge that they may not agree on everything. When that occurs, and the difference is material to the financial statements, the Office of the Auditor General can choose to issue a qualified audit opinion.
- The financing plan and its impact will continue to be transparent and fully available to credit rating agencies, securities regulators, and the public.
- The Ministry of Energy, the Ministry of Finance, and the Treasury Board Secretariat remain committed to assisting the Office of the Auditor General in providing its independent views to the Legislative Assembly.

RECENT MEDIA COVERAGE:

- January 12, 2018 – An opinion piece in the Toronto Star argues Kathleen Wynne faces a phantom opponent in the spring election: Ontario's auditor general, who looms like an accounting apparition over the premier. The article notes, Lysyk isn't just picking fights with Liberal cabinet ministers but clashing with Ontario's non-partisan public service as well as outside consultants. The most awkward contretemps took place a year ago, when an expert panel of accounting and actuarial experts shredded the auditor's claims about the government cooking the books.
- January 4, 2018 – The Brighton Independent covers Liberal MPP Lou Rinaldi's plans for re-election, while making reference to the "issues" the government has with the Auditor General, particularly on pension asset and Fair Hydro Plan accounting.
- January 3, 2018 – The CBC runs an article "No quick fix for Ontario's energy woes, electricity analyst says," noting the criticisms from opposition parties and analysts regarding the accounting of the Fair Hydro Plan.

- December 17, 2018 – The Ottawa Sun's Lorrie Goldstein writes that "independent financial officers say Wynne government's books can't be trusted," noting the Auditor General and FAO's concerns regarding Fair Hydro Plan accounting: "In her Dec. 6 annual report, Lysyk warned "there is a very real risk" the "government's continued use of nonstandard accounting" will "seriously distort the true state of the province's finances...The government uses these incorrect accounting treatments to claim it has balanced the province's books, but in reality, legislators, the financial community and all Ontarians will be misled as to the true condition of the province's finances." In its fall economic and fiscal outlook released last week, the FAO warned, "since the government has not adopted the Auditor General's recommended accounting for both the Fair Hydro Plan and net pension assets, it is becoming more difficult for legislators and the public to assess the government's fiscal projections."
- December 13, 2017 – The Toronto Sun runs a comment piece following from the Financial Accountability Office's fiscal and economic outlook, fall update report, entitled "Liberals hiding deficit, second watchdog says," noting the Auditor General and FAO's criticisms of the accounting for the Fair Hydro Plan.
- December 11, 2017 – The Toronto Star's Robert Benzie covers the Financial Accountability Office's fiscal and economic outlook, fall update report, noting the FAO's agreement with the Auditor General's questioning of the accounting of the Fair Hydro Plan: "The FAO also backed the auditor general in questioning the complex mechanism the government has developed to bankroll the 25 per cent electricity rate cut, known as the Fair Hydro Plan. Because of the actuarial tussle "it is becoming more difficult for legislators and the public to assess the government's fiscal projections.""
- December 11, 2017 – The Canadian Press' Shawn Jeffords also covers the FAO's report, noting: "The FAO said in its report that since the government has not adopted the auditor's recommended accounting for both the pension assets and the Fair Hydro Plan it is becoming more difficult for legislators and the public to assess the government's fiscal projections."
- December 6, 2017 – The Canadian Press and other outlets cover the Auditor General's 2017 Annual Report, noting the accounting disagreements between the Auditor and the government: "Lysyk also announced through her report that her office would be auditing the IESO's books. That comes amid one of two accounting disputes the auditor has been engaged in with the Liberal government. She recently accused the government of purposely obscuring the true financial impact of its 25 per cent cut to hydro bills by keeping billions in debt used to finance that plan off the province's books. Lysyk said she will audit the IESO because of its role in the hydro plan's complex accounting scheme."
- November 2, 2017 – The Waterloo Region Record runs an editorial by analysts from the Fraser Institute entitled, "Ontarians in the dark about Fair Hydro Plan." The piece argues: "Ontario needs real reform to lower electricity prices for residents and businesses. Unfortunately, the provincial government is opting for improper accounting practices and temporary solutions, sticking current and future Ontarians with the bill."
- October 26, 2017 – CBC writes that "Ontario hydro bills to rise over next 10 years in government's energy plan," referencing the Auditor General's report on Fair Hydro: "Ontario's auditor general Bonnie Lysyk found that the Liberals concocted a "needlessly complex" system in order to achieve the savings in the Fair Hydro Plan by moving $26 billion of debt off the government's books […]Thibeault said the accounting isn't deceptive, and that similar financing strategies have been used throughout Ontario history, including for the construction of nuclear plants in the 1970s."
- October 25, 2017 – The Toronto Sun runs a column by Ben Eisen, director of the Fraser Institute's Ontario Prosperity Initiative entitled "Number's up for Wynne's government," writing "But regardless of how pension assets should be treated, or how new debt incurred by the government's Fair Hydro Plan should appear on the books, the stark reality is that Ontario taxpayers are carrying far more public debt than a decade ago and that burden is growing quickly, every year."

- October 24, 2017 – CBC references the Auditor General's report on Fair Hydro, writing "Auditor General Bonnie Lysyk criticized how the program is being financed, saying the province is "improperly" accounting for the $26 billion in debt it's taking on to cut hydro bills in the short term. The Liberals called the controversy an "accounting dispute" with the auditor."
- October 23, 2017 – Global News reporter Alan Carter wrote an analysis on "truth" and Fair Hydro. He wrote, "The war between Lysyk and the Liberals is whether the Fair Hydro Plan and its use of Ontario Power Generation as a debt vehicle is a sign of devious politicking or just the way things get done."
- October 23, 2017 – The Peterborough Examiner carried an opinion piece written by Minister of Energy, Glenn Thibeault. "I'm not surprised to see the Conservatives try to get in the middle of an accounting dispute between the government and the Auditor General for personal political gain. It's how they deflect without putting forward any policy ideas of their own."
- October 22, 2017 – The Toronto Sun's Antonella Artuso wrote that the way the Liberals "hid" the cost of its Fair hydro Plan from taxpayers could raise concerns that other governments across the country could follow suit and bury deficits.
- October 22, 2017 – The Toronto Sun's opinion piece says the Fair Hydro Plan is simply 'long-term pain for short-term gain".
- October 19, 2017 – CBC's Mike Crawley writes about the Auditor General's accusations that the government was trying to hide documents from her investigation. Crawley writes that the Progressive Conservatives have made a request to the province's "top public servant to ensure that all relevant documents and emails are saved."
- October 18, 2017 – CTV News (6pm) includes the Progressive Conservative's reaction to the Fair Hydro report: "opposition calls for resignations of ministers of finance and energy after AG report."
- October 18, 2017 – QP Briefing's Jessica Smith Cross highlighted that the $4 billion figure cited by the Auditor General and the Financial Accountability Office that would be wasted due to the government's "needlessly complex" financing structure for Ontario's Fair Hydro Plan was said 21 times by opposition parties during Question Period that morning.
- October 18, 2017 – The Globe and Mail's Justin Giovannetti (A9) highlights the Auditor General's Fair Hydro report. The article includes a quote from Minister Sandals: "Perhaps the essential accounting dispute that we have with the auditor is a dispute over what happens when the Canadian Public Sector Accounting Standards are silent, when they don't give direction,' Ms. Sandals said. 'We keep running into this problem because, quite frankly, Ontario is the biggest province, and we often have bigger projects and do things a bit differently from all the smaller provinces.'"
- October 17, 2017 – The CBC's Mike Crawley covers the Auditor General's report, writing "The auditor says the plan could also result in Ontarians paying "up to $4 billion more than necessary" in interest. That's because OPG will be required to pay higher interest rates than the province would if the government took on the debt directly."
- October 17, 2017 – The Toronto Star's Robert Benzie also focused on the Auditor General's so-called scathing report on Ontario's Fair Hydro Plan, while acknowledging the historical dispute between the Auditor's Office and the government.
- October 17, 2017 – The Ottawa Citizen's David Reevely continues with key themes in the coverage, also writing: "The Liberals really, really, really wanted to keep that debt off their books, so they could also go into the next election saying the provincial budget is balanced. Borrowing billions in an election year would get in the way. So they did some advanced financial engineering to put the debt on Ontario Power Generation instead."

- October 17, 2017 – The Canadian Press' Allison Jones cites the Auditor General's statements, and includes Minister Sandals' rebuttal on the point of asset accounting: "Treasury Board President Liz Sandals said credit rating agencies are ranking the hydro debt in preparation for selling it. 'That's the difference,' she said. 'Somebody actually wants to buy it, ergo it is an asset.'"
- October 17, 2017 – QP Briefing provided a primer on the report, and pointed to the Auditor General's criticism of the government on the alleged willingness to accept a qualified audit opinion for the province's Public Accounts.
- October 17, 2017 – The Auditor General's report and remarks during the media conference were extensively covered across the media. Coverage consistently cited the key themes in the Auditor General's report, highlighting the "needlessly complex" accounting structure, "improper accounting," and the "anticipated $4 billion more in interest payments than if the province had borrowed the funds directly."
- October 17, 2017 – The Toronto Sun's Antonella Artuso featured an overview of the Fraser Institute's report released in the morning, arguing that "Soaring electricity prices resulted in 75,000 fewer manufacturing jobs for Ontarians since the recession".
- October 17, 2017 – The Office of the Auditor General held a media conference for the release of The Fair Hydro Plan: Concerns about Fiscal Transparency, Accountability and Value for Money.
- October 17, 2017 – CBC News reports that today Auditor General Bonnie Lysyk will reveal the results of her investigation into the government's Fair Hydro Plan. The report will look at how the rate cuts are financed and whether the plan is fair for taxpayers and hydro customers. Auditor Lysyk has already told a legislative committee in May that to borrow the money on OPG's books rather than the province's is "contrary to public sector accounting standards."

Proposed Legislated Transaction Structure

Prepared by the Office of the Auditor General of Ontario

CONFIDENTIAL REVISED: January 5, 2018

PENSION ASSET EXPERT ADVISORY PANEL

ISSUE: How do you respond to the reports released by the Pension Asset Expert Advisory Panel?

KEY MESSAGES:

- The Pension Asset Expert Advisory Panel has released its independent advice and recommendations on how public sector accounting standards are interpreted as they apply to current and potential future net pension assets.
- The panel's first report concluded that the province's share of the net pension assets of both the Ontario Teachers' Pension Plan and the Ontario Public Sector Employees' Union Pension Plan should be recognized in Ontario's financial statements.
- The panel supports the accounting treatment that Ontario has used consistently since 2001.
- The panel has also issued a supplemental report that provides independent advice and recommendations on how to account for potential future net pension assets related to the Healthcare of Ontario Pension Plan and the Colleges of Applied Arts and Technology Pension Plan.
- The government has accepted the panel's recommendations and in the 2016-17 third quarter update, it indicated its plans to adopt the previous accounting treatment in the upcoming Public Accounts.
- The government has reflected the recommendations of the panel, which align with its previous accounting in the 2017 Budget, the 2016-17 Public Accounts and the 2017 Fall Economic Statement.

- The government formed the Pension Asset Expert Advisory Panel to provide independent advice on how public sector accounting standards are interpreted as they apply to current and potential future net pension assets. The panel members have expertise in the areas of jointly sponsored pension plan governance, actuarial modelling for pension plans and public sector accounting standards.
- We will continue to move forward and present the Province's finances fairly and accurately, which includes reporting for jointly sponsored pension plans in accordance with Public Sector Accounting Standards and the panel's recommendations.
- We also remain on track to balance the budget this fiscal year as well as in 2018–19 and 2019–20.

IF PRESSED: SUPPLEMENTAL REPORT HOOPP & CAATPP

- We thank the panel for their independent advice and recommendations made in relation to the Healthcare of Ontario Pension Plan and the Colleges of Applied Arts and Technology Pension Plan.
- The two additional pension plans addressed in the supplemental report are different than OTPP and OPSEUPP because they are jointly sponsored by multiple organizations. The Ontario Government is a third party sponsor and has no direct control over decisions of the employer sponsors about benefit or contribution levels, funding of deficits or use of surpluses. Because of these differences, a valuation allowance will be recorded for any net assets of these plans until the government benefits from a reduction in contributions.
- The Ontario Government agrees with the panel's conclusions in the supplemental report.

CURRENT STATUS:

- December 20, 2017 – the Treasury Board Secretariat (TBS) has been called to appear before the Standing Committee on Public Accounts (SCOPA), to review Chapter 2 – Public Accounts of the Province (Volume 1 of the 2017 Annual Report of the Office of the Auditor General of Ontario). In addition to officials from TBS, requests to attend were issued to officials from Cabinet Office, the Ministry of Finance, the Ontario Financing Authority, the Ministry of Energy, the Independent Electricity System Operator and Ontario Power Generation. Attendees will be required to provide the committee with a response to the Auditor General's report, and to answer any questions the committee members may have. Hearings are scheduled for February 28, 2018.
- As per Standing Order 108(h), the SCOPA is empowered to review and report to the House its observations, opinions and recommendations on the Report of the Auditor General and the Public Accounts, which documents shall be deemed to have been permanently referred to the committee as they become available.
- The committee may meet weekly when the Legislative Assembly is sitting. With the approval of the House, it may also meet at any time when the Legislative Assembly is not sitting.
- All meetings are open to the public with the exception of those dealing with the setting of the committee's agenda and the preparation of committee reports.
- All public committee proceedings are recorded in Hansard.
- On December 11, 2017, the Financial Accountability Office released its Economic and Fiscal Outlook, Fall 2017 Update. During the media event, the FAO said "since the government has not adopted the Auditor General's recommended accounting for both the Fair Hydro Plan and net pension assets, it is becoming more difficult for legislators and the public to assess the government's fiscal projections. This has reduced the transparency and reliability of Ontario's fiscal plan."
- On December 6, 2017, the Office of the Auditor General released their 2017 Annual Report. Chapter two of the report made recommendations regarding the Public Accounts of the Province, with the first of 10 recommendations focusing on the pension asset accounting issue. From the report: "We recommend the government record valuation allowances to offset the net pension assets it has recorded from the Ontario Teachers' Pension Plan and the Ontario Public Sector Employees' Union Pension Plan until such time as it obtains formal written authorization from their pension plan co-sponsors that they are able to lower minimum contributions or withdraw surpluses from the pension funds within the next 12 months."
- On April 27, 2017 the Pension Asset Expert Advisory Panel's Supplemental Report was released. It provides the government with independent advice and recommendations on how to account for current and potential future net pension assets related to the Healthcare of Ontario Pension Plan (HOOPP) and the Colleges of Applied Arts and Technology Pension Plan (CAATPP).
- The panel's supplemental report concludes that a net pension asset from HOOPP and CAATPP should be recognized in the province's financial statements in the same way as the net liability, but also recommends that a valuation allowance should be reported for accrued benefit assets for both of these plans in the province's financial reports.
- The panel's report on the Ontario Teachers' Pension Plan (OTPP) and the Ontario Public Sector Employees' Union Pension Plan (OPSEUPP) was made available to the public on February 13, 2017 and did not recommend that a valuation allowance be reported for either of these two plans.
- Both reports have been shared with the Auditor General of Ontario and her office.

- In the 2017 Budget, the 2015–16 actuals were restated to reflect the government's previous accounting treatment for jointly sponsored pension plans which recognized net pension assets for the Ontario Public Service Employees' Union (OPSEUPP) and the Ontario Teachers' Pension Plan (OTPP) on the Province's financial statements. The restated results follow the advice of the panel and the accounting followed previously by the Province since 2001.
- On June 12, 2017, the Ontario Teachers' Federation and the Ontario Government, joint sponsors of the Ontario Teachers' Pension Plan (OTPP), announced they will use a portion of the $11.5 billion surplus in the Plan (as of January 1, 2017) to complete the restoration of inflation protection for teachers who retired after 2009. As well, the contribution rate for the Plan's active members will be reduced by 1.1%. Both changes are effective January 1, 2018.

COSTS

	Actuals		
Panel Member	**Per Diem**	**Travel**	**Total**
Patricia O'Malley	83,000	1,057	84,057

Paul Martin		3,898	3,898
Murray Gold	38,000		38,000
Procurement			32,458
Total	**183,700**	**4,955**	**221,113**

BACKGROUND:

- On February 17, 2017 Minister Sandals sent a memorandum to Warren (Smokey) Thomas in response to his article of February 14, 2017 in the Toronto Sun on pension assets.

  "As you are aware, the Pension Asset Expert Advisory Panel ("Panel") released its report on February 13, 2017, and concluded that the net pension assets of both the Ontario Teachers' Pension Plan and the Ontario Public Sector Employees' Union Pension Plan should be recognized in Ontario's financial statements.

  The OPSEU pension plan, which is jointly-sponsored by OPSEU and the province, clearly states that no amount of the surplus shall be paid out of the plan to either sponsor. Simply put, the province does not have the ability to make any withdrawals from the plan.

  I trust that you are reassured by this news. Your February 14 press release and your subsequent comments in a February 15 *Toronto Sun* article, suggest that you were unaware of these rules.

  In addition, the province has not proposed any pension contribution increases or reductions at this time. Any decisions with respect to changes to pension contributions or benefits must be made by the Plan Sponsors. A decision to reduce contributions would benefit both the employees and the employer."

- On November 10, 2016 Ontario established the Pension Asset Expert Advisory Panel to provide advice and recommendations to the government on the application of public sector accounting standards to Ontario's net pension assets.

  The panel was comprised of accounting, legal, and pension experts in the areas of jointly sponsored pension plans, actuarial modelling for pension plans and Public Sector Accounting Standards.

  The following four members were appointed to the Panel:

  - Tricia O'Malley (Chair)
  - Murray Gold
  - Uros Karadzic
  - Paul Martin

Panel members also provided advice on how to value net pension assets reported on the province's books, taking into account future decisions which might be made by the plan's sponsor or sponsors.

The panel's report was delivered to the President of the Treasury Board and was shared with the Auditor General of Ontario. The panel's report was made public in early 2017.

RECENT MEDIA COVERAGE:

- January 12, 2018 – The Toronto Star ran an opinion column by Martin Regg Cohn, "Independence is not infallibility when it comes to Ontario's financial books," arguing Auditor General "Lysyk's paranoia about partisan advertising is a depressing case study on how she approaches the vital role of an auditor general, which is meant to be a check and balance on the power of government — not a grudge match grounded in distortions over picayune disputes. All's fair in politics and accounting, unless you're an auditor gone awry."
- December 17, 2017 – The Ottawa Sun's Lorrie Goldstein writes that "with less than six months to go before the June 7 election, two independent, non-partisan financial watchdogs of the Ontario Legislature say the books of Premier Kathleen Wynne's Liberal government cannot be trusted." Goldstein highlights the disagreement between the Auditor and the government on the pension asset accounting issue, also noting the expert advisory panel: "Lysyk argues the government is improperly claiming the $11.5 billion surplus in the Ontario Teachers' Pension Plan as an asset, because it cannot access these funds without the permission of Ontario's teacher unions […] In November 2016 it hired what it described as an expert, four person pension advisory panel, with a budget of up to $435,000 for salaries, excluding expenses, which in February 2017 backed the government's accounting on the teachers' pension plan."
- December 17, 2017 – The Toronto Sun's Jim Warren cautions that "the role of the Auditor General is shifting in troubling ways," arguing that the Auditor General's increasing outspoken role is "making matters worse." Specifically referencing the pension asset accounting issue, Warren writes "For the first time in 16 years, Lysyk in 2016 decided to change her office's opinion on how the Ontario government presents pension assets in the audited financial statements and fought the government's claim it had balanced the budget in 2017-18. Wynne's Liberals asked an independent expert panel to determine the appropriate accounting treatment of the pension assets and they sided with the government. Lysyk provided her advice to the government and that should have been the end of it. Instead, in her latest annual report she rehashed the same issue and has gone from proving independent oversight to being an advocate for her own position."
- December 14, 2017 – The Record runs an opinion piece, "To sort out truth from pre-election fictions, turn to Bonnie Lysyk," writing that the Auditor General "warned that the Liberal government is making its financial position look rosier than it really is in part because it has counted as government assets two pension plans, including the plan of Ontario's teachers. That's extremely sketchy accounting practice. The teachers' pension plan is an independent organization and not owned by the provincial government. For the government to claim it as an asset is as dishonest as if you were to apply for a bank loan and, when you were asked to show what assets you own, telling the bank that you actually own your neighbour's home and car."
- December 13, 2017 – The Toronto Sun runs a comment piece, entitled "Liberals hiding deficit, second watchdog says" covering the Financial Accountability Officer's (FAO) fiscal outlook report. The article highlights the pension asset accounting issue, writing that the FAO's report "says these projections are based on weaker revenue growth and the Wynne government's rejection of "the Auditor General of Ontario's recommended accounting treatment for both the government's Fair Hydro Plan and the net pension assets of jointly-sponsored pension plans."

  Defying the auditor general, the Wynne government hired what it called an expert panel, which endorsed its pension accounting."

- December 12, 2017 – The Canadian Press reports on the Financial Accountability Officer's (FAO) fiscal outlook report, writing that the report says "a long simmering accounting dispute between the Liberal government and Auditor General Bonnie Lysyk over how to count two public-sector pension plans is contributing to uncertainty."
- December 12, 2017 – The Toronto Star's Robert Benzie reports on the Financial Accountability Officer's (FAO) fiscal outlook report, noting that the FAO adopts the Auditor General's accounting treatment of pension assets, resulting in a $4 billion deficit in 2017-18, "even though the Liberals maintain the books are in the black."
- December 12, 2017 – Ottawa Citizen's David Reevely also reports on the FAO report, writing: "We're up to three different versions of the provincial government's books, depending on how you count surpluses in a couple of public pension funds and money the government is borrowing to lower electricity prices temporarily. Without getting into the weeds on these disputes, the Liberals want to run the numbers in a way that makes them look good and they're not obviously wrong, but all the government's independent officers with anything to say about it - the auditor general, the financial accountability officer - say what they're doing is not OK."
- December 7, 2017 – Following the release of the Auditor General's 2017 Annual Report, the Toronto Star's Robert Benzie and Rob Ferguson outline the Auditor's various recommendations for the government. On the pension asset accounting front, the reporters write: "Even though a government-appointed expert panel of accountants concluded she is wrong about excluding the publicly owned assets of two joint-sponsored pension plans on the government's bottom line, Lysyk continues to claim she is in the right on the actuarial tiff."
- December 7, 2017 – CBC, The Star, and other news outlets report on the Auditor General's 2017 Annual Report, referencing the ongoing "accounting disagreements" between the Auditor General and the government, including reference to IESO accounting and pension asset accounting.
- October 25, 2017 – In follow-up to the release of the Auditor General's special report on the Fair Hydro Plan, the Toronto Sun runs a column "Number's up for Wynne's government," using disagreement regarding pension asset accounting as support for the Fair Hydro Plan not being the first time the government and the Auditor General have disagreed: Last year, the government and the auditor general publicly disagreed over the appropriate way to treat assets held by public pension plans. That dispute had implications for the important question of whether the government would post a balanced operating budget, or a deficit, this year."
- October 18, 2017 – The Toronto Star's Martin Regg Cohn writes "Watch out for watchdogs who don't like being watched," commenting "The last time Lysyk attacked the government's deficit calculations, an outside panel of experts rejected her arguments- because not even an auditor can make a surplus disappear from a balance sheet. There is no permanent arbiter for auditors, but Lysyk is no longer the last word on accounting disputes - merely one of many voices, right or wrong. Expect that voice to grow louder next year when she formally assesses the 2018-19 spring budget - and once again challenges Liberal claims of deficit elimination."
- September 13, 2017 – The Toronto Sun runs a column, "Wage warnings won't stop Wynne," critical of the cost of the Pension Asset Expert Advisory Panel: "Indeed, her government's typical reaction to critical, non-partisan warnings it gets from independent officers of the legislature - such as the auditor general and the FAO - is to ignore them, or to attack the messenger […]Wynne spent up to $435,000 striking an "independent" panel that unsurprisingly agreed with her position on pension accounting, not the auditor general's."
- September 8, 2017 – David Reevely writes in the Ottawa Sun and Ottawa Citizen "Lysyk and the ministers have been volleying back and forth for a couple of years now over how to count assets on the government books. Without getting too deep into it, what's in question is whether certain public sector pension plans and some holdings in the electricity system belong to the government or not."

- September 7, 2017 – The Canadian Press' Shawn Jeffords covers the tabling of Ontario's Public Accounts 2016-17, and cites the government's ongoing disagreement with the Auditor General on pension asset accounting as the reason the Auditor has issued a qualified audit opinion two years in a row. Minister Sandals is quoted in the article: Sandals maintains the government is following established accounting practices and people don't care about the on-going squabble. "The public wants to know, are you managing your deficit?" she said. "Is your deficit getting smaller? Are you going to balance the budget this year? Quite frankly, I don't think the public is terribly hung up on accounting disagreements."
- September 7, 2017 – The Toronto Star's Robert Benzie refers to the disagreement between the Auditor General and the government over IESO market accounts assets and pension asset accounting as an "accounting slugfest". Minister Sandals is quoted in the article (same quote as The Canadian Press coverage): Sandals on Thursday shrugged off Lysyk's accounting interpretation, which lead to her to issue a qualified audit opinion on the province's books for the second year in a row.

  "The experience last year was the books were qualified on the same issue and it didn't impact the credit ratings," the treasury board president said.

  "Quite frankly, I don't think the public is terribly hung up on accounting disagreements."
- September 7, 2017 – Queen's Park Briefing's Christopher Reynolds covers the disagreement between the Auditor General and the government, quoting Minister Sandals: ""The public wants to know, are you managing your deficit?" Sandals said Thursday at the release of the province's 2016-217 public accounts. "Is your deficit getting smaller? Are you going to balance the budget this year? Quite frankly, I don't think the public is terribly hung up on accounting disagreements."
- On May 1, 2017 David Reevely writes in the Ottawa Sun that "There's also $500 million booked in the government's favour from surpluses in a couple of pension plans for public employees. These are the subject of an arcane accounting dispute over whether the government, which couldn't grab the money easily, should be able to count them the way it's counting them. The auditor general says no. A panel of external blue-chip accounting types says yes (for a number of reasons, the easiest of which to grasp is that if the pension plans came up short the gap, would be the government's problem). Going with the auditor general's ruling would be the safer thing, for sure, but what the government's doing is neither trick nor a one-time manouevre.
- On April 30, 2017 David Reevely wrote about the 2017 budget and said "the Liberals are taking advantage of a surplus in some public-employee pension funds, which Auditor General Bonnie Lysyk says is improper but which other experts say is OK. And they've adopted a sort of partial distinction between operating spending and capital spending, which used to be mashed together into each year's budget in a way they no longer are."
- On February 21, 2017 the Toronto Sun (A10) has a column by Warren Thomas (OPSEU). He writes "Ontario's public service workers and retirees feel like we are about to get robbed." He notes that the Auditor General has been turned into a lapdog from a watchdog. Thomas writes "If nobody stands up to Wynne, I'm afraid her next move could be to actually steal our pension money, giving her more cash for overpaid consultants and Sunshine List executives."
- On February 20, 2017 the Toronto Sun reports on Minister Sandals' memo to OPSEU's Warren Thomas. It recounts the minister's statement that "government has no plans on making like a bandit with his members' pension funds." The short piece includes her quote: "The OPSEU pension plan, which is jointly sponsored by OPSEU and the province, clearly states that no amount of the surplus shall be paid out of the plan to either sponsor". "I trust that you are reassured by this news."
- On February 18, 2017 the Toronto Sun has a piece by Lorrie Goldstein. He writes that Premier Wynne needs to take the advice of the Auditor General in order to demonstrate openness and transparency.

- On February 18, 2017 the Ottawa Sun (A9) reports NDP Leader Horwath trusts the Auditor General's math. She spoke up on Friday on the ongoing pension account issue between government and the AG.
- On February 18, 2017 the Toronto Sun's Antonella Artuso (A10) quotes Minister Sandals who said in a statement that she will accept the findings of the panel and: "They also concluded that the government controls access to the pension surplus which has a future economic benefit to the province and recognizing the asset will provide an accurate representation of the province's financial position."
- On February 18, 2017 the Toronto Star's Martin Regg Cohn (A12) writes about the Auditor General. He says that she is no hero – in fact her "bizarre claim turns out to be a sideshow, designed to cover up her own miscalculations after an outside panel of experts found the auditor herself had conflated facts and confused figures." He concludes: "We rely on auditors to provide value for money audits. Not to introduce their own values, making up untested accounting standards as they go along."
- On February 17, 2017 the Hamilton Spectator (A16) posted an opinion piece that is negative toward Auditor General Lysyk. It notes: "Lysyk is putting that reputation and integrity on the line in Ontario. And she's not on solid ground…. If the evidence supported Bonnie Lysyk's position, we'd be the first to back her. But it doesn't. She needs to respect that and back down."
- On February 17, 2017 QP Briefing has a piece written by Bryne Purchase, former deputy minister of finance, on the 'accounting spat'. He sides with the AG: "I think it was regrettable that Premier Kathleen Wynne's government chose to attempt to undermine the legitimacy of our parliament's own accounting expert by appointing a panel of its own experts to review an unfavourable ruling."
- On February 17, 2017 the Windsor Star (A7) has a Canadian Press report that says the AG is not satisfied after the expert panel's report on the $10.7 billion pension dispute. Auditor General Bonnie Lysyk's quote is used: ``Show me the letter that says you can use that pension money with permission, with an agreement," she said Thursday. ``Until that happens the bottom line is this office can't give its stamp of approval on this particular issue." The article notes this is not the first time the Liberal government has clashed with the AG - the former energy minister suggested the electricity file was too complicated for Lysyk, and she has frequently suggested that partisan ads are being funded by taxpayer dollars.
- On February 16, 2017 the Toronto Star reported the Auditor General is demanding proof in writing from the unions that they are okay with the government using taxpayer-funded pension surpluses for accounting purposes. The article says the AG is "escalating a $10.7 billion standoff" with the government over taxpayer-funded pension surpluses. "There has been no suggestion the government intends to dip into the pension funds, which would be illegal. The question is whether the pension surplus can be counted as an asset or not at all." The AG was quoted: "It is not my money. That money is for the benefit of employees and retirees … so it's not my pension. It's not my budget deficit."
- On February 16, 2017 QP Briefing reports the AG says that until she sees a letter that says government can use that pension money with permission – her office can't give its stamp of approval on this issue. The article notes the government "isn't inclined to draft" a letter. Treasury Board President Liz Sandals is quoted from her statement: "They (the panel) concluded that the government does not need a letter from either of the unions because the joint pension agreements spell out how the surplus will be dealt with. They also concluded that there are no public-sector accounting standard requirements for any additional letter to be in place specifying when or by how much contributions will be reduced beyond the joint pension plan agreements already in place." This article also includes quotes from MPP Lisa MacLeod and OPSEU's Warren Thomas.

- On February 16, 2017 the Toronto Sun (A5) has two articles on the number crunching aspect of the expert panel. It says government spent up to $435,000 to the expert panel in the dispute with the Auditor General. The article says this has made OPSEU's Warren Smokey Thomas livid and notes that he wants a guarantee the government won't raid his members' pension fund. Ontario Treasury Board spokesman Matt Ostergard is quoted from an email, "The work of the panel is ongoing so we don't have final costs at this time but they will be in line with previous panels and will be made public."
- On February 16, 2017 The Northumberland Today.com has David Reevely's opinion piece on the pension panel's "gift' to the government. "The Ontario Liberals have an extra $1.5 billion to spend between now and the next election and can still keep their promise to balance the provincial budget by 2018, thanks to a helpful ruling on how to handle surpluses in a couple of big provincial pension funds. The article includes a written statement from Minister Sandals "We are committed to implementing the advice of this independent panel and will use it in preparing the province's financial statements."
- On February 15, 2017 QP Briefing reports Treasury Board President Liz Sandals says it's too soon to weigh in on what might happen if the Auditor General stands her ground in the pension accounting dispute. "I think we're getting way ahead of ourselves – that's a total hypothetical," Sandals told reporters. "The bottom line is, the panel gave us advice, and we're going to follow the advice of the panel." Sandals added there "is no urgency" for Lysyk to weigh in on the panel's conclusion and that she was "pleased" that the auditor was giving it a thorough read. The article notes the minister was "cagey" when pressed about if the panel's report will mean a rollback on contributions for the OPSEU plan. She is quoted, "As the panel points out, that is the traditional way in which the government would access the surplus," "That's the whole premise of the panel's report, is that the way in which the government or any other employer in that situation would access the surplus is by reducing the contribution rate."
- On February 14, 2017 OPSEU's Smokey Thomas writes that Premier Wynne should remember who owns the assets of the province's jointly trusted public pension plans. He says the dispute between the government and the Auditor General is not "just a paper war". "It's a fight over who owns billions of dollars earned by workers and invested on their behalf. I'm telling the Premier right now: the money in those plans belongs to plan members. It is not hers to play with." He "unequivocally supports" the Auditor General's position. He says his "fear is that the Liberals will try to move money out of public pension plans to help wipe out the provincial deficit in time for the 2018 provincial election."
- On February 14, 2017 the Ottawa Sun's David Reevely (A11) reports "the Ontario Liberals have an extra $1.5 billion to spend between now and the next election and can still keep their promise to balance the provincial budget by 2018, thanks to a helpful ruling on how to handle surpluses in a couple of big provincial pension funds." His article notes, "The point is, we're talking serious money - the stakes in what's otherwise the most arcane public-accounting battle ever to spill out of a comptrollers' seminar and into the streets." He writes the surpluses work in the government's favour – especially as an election approaches.
- On February 14, 2017 the Toronto Star (A7) (and online) has a negative piece about the Auditor General, written by Martin Regg Cohn. He writes the AG has been caught out in a $10.7-billion miscalculation. "Even a watchdog can lose the scent and bark up the wrong tree. Or worse, miss the fiscal forest for the trees. For the job requires not just independence but context. To be truly credible, an auditor general must fearlessly expose government boondoggles but also fess up to her blunders." "Lysyk's lack of diligence - now overdue - is a damning indictment of an auditor gone awry."

- On February 13, 2017 QP Briefing reports the government has accepted the panel's conclusion that pension surpluses are assets. The Auditor General's stance won't be known until later in the week. The article includes comments from Tory finance critic Vic Fedeli: “Basically, they've gone out and hired people whose findings would be more convenient for them ... They have appointed a private panel of auditors to come to the province's conclusion." OPSEU president Warren (Smokey) Thomas said he's concerned the panel's conclusion was politically motivated: “If I was going to fall on a side of advice, I'd fall on the advice of the auditor general," he said. "The government has gone to extraordinary length to have somebody try to disagree and discredit the auditor general."
- On February 13, 2017 the Toronto Star reported a panel of accounting experts says that $10.7 billion in government-sponsored pension plans should count toward the province’s bottom line. The article notes panel chair Tricia O’Malley said “We believe that an asset does exist – the net pension asset meets the definition of an economic resource, which is what an asset is.” The Star noted that Auditor General Lysyk is reviewing the report and will provide comment to the media later this week.
- On February 12, 2017 the Toronto Star reports a government-appointed panel of experts will announce on Feb. 13 that joint-sponsored pension surpluses should be counted as assets for the provincial treasury. The report says the Auditor General should include billions of dollars of its assets on the government’s bottom line. OPTrust says “surpluses and deficits should both be recognized on the province’s balance sheet.”
- On February 8, 2017 The Toronto Star (A6) reports Premier Wynne welcomes a report from four accounting experts that says a $10.7-billion pension surplus can be counted as an asset on the province’s bottom line. The article notes the AG was briefed on the report last week and it will be make public later this month. MPP Vic Fedeli is quoted: “The people of Ontario have to ask themselves who are they going to believe: the independent auditor general or a scandal-plagued Liberal government?”
- On February 8, 2017 QP Briefing reports the Financial Accountability Officers says “should the panel studying a pension accounting clash with the auditor general conclude that billions of dollars’ worth of pension assets should be counted on Ontario's balance sheet after all, the government will get more flexibility to balance the budget as promised.” “David West, the FAO's chief economist, said he had not heard about any conclusions from the panel but noted that if they have decided to count the pension assets, it gives the government more breathing room to achieve balance, as promised.” Auditor General Lysyk declined to confirm or comment directly because the panel is not yet public.
- On February 7, 2017 The Toronto Star’s (A4) Martin Regg Cohn reports billions of dollars are at stake in a dispute pitting Ontario's Auditor General against the government. He writes that despite an outside panel of top accounting and pension experts determining that Auditor General Bonnie Lysyk has gone out on a fiscal limb by effectively wiping away nearly $11 billion in government assets – she told this reporter that “she won't climb down,” and this now sets the stage for a public showdown over an accounting change that is worth $1.5 billion to the bottom line this year alone. “The auditor told me her mind is made up and nothing she has heard so far has changed her view….which leaves her on a limb and the government in the lurch.”
- On November 30, 2016 QP Briefing reported Minister Sandals appointed an expert panel to help resolve the government's standoff with the Auditor General over pension assets. The chair of the special panel tasked with settling an accounting dispute will be paid $2,000 per work day. The other three members of the panel will get a $1,900 per diem, as well as reimbursement.
- On November 14, 2016 QP Briefing reported an expert panel will study the AG pension dispute.

- On October 9, 2016 Focus Ontario (Global) ran a segment on the 2015-16 Public Accounts and the disagreement with the Auditor General. Both the Premier and Patrick Brown are quoted in the segment. The Premier is quoted from Question Period saying the government “accepted the Auditor General's numbers for this year. We released the documents despite the divergence in accounting opinions, specific to pension funds between Treasury Board officials and the Auditor as part of our commitment to openness and be transparency.”
- On October 9, 2016 The Toronto Sun (A17) ran an opinion piece about the disagreement with the Auditor General. The piece notes that this kind of back and forth between ministries and the Auditor General is common. The Auditor General provides time for ministries to comment on the audit in draft form so that accounting issues can be hashed out before the final audited statement is presented to the legislature. Accounting issues are generally benign. So it's surprising that the Wynne government elevated the tussle over pensions to the political realm by tabling the financial statements without the Auditor General's unqualified opinion.
- On October 6, 2016 The Financial Post has a commentary by analysts with the Fraser Institute. “It's not surprising the Wynne government is willing to go to the mat to defend its estimate of last year's budget deficit. As Ontario approaches a provincial election in 2018, a big part of the government's PR strategy is focused on celebrating an expected return to a balanced budget in next year's budget. So Premier Kathleen Wynne's team has a big incentive to push back against dissenting views.”
- On October 6, 2016 QP Briefing reports Treasury Board President Liz Sandals tabled Ontario's public accounts for fiscal 2015-16, including the Auditor General's opinion. The tabling of the public accounts was delayed by almost two weeks after months of back and forth between the Auditor General and the government over whether the bottom line should include assets for two jointly-sponsored provincial pension plans.
- On October 3, 2016 The Globe and Mail reports Ontario's Liberal government is fighting with the province's Auditor General over a $1.5-billion discrepancy in last year's deficit and a $10.7-billion difference in Ontario's net debt.
- On October 3, 2016 Canadian Press ran a story in 40 media outlets reporting that the government says Auditor General Bonnie Lysyk is taking issue with their pension asset accounting, though it says these are rules that have been used for the past 14 years. “The issue is with the accounting of the Ontario Public Service Employees Union Pension Plan and the Ontario Teachers' Pension Plan, which are jointly sponsored with the government. The government says the plans have a surplus, but the auditor general says that should not be on the province's balance sheet.”

CONFIDENTIAL REVISED: January 10, 2018

2016-17 PUBLIC ACCOUNTS

ISSUE: What is reported in the 2016-17 Public Accounts released on September 7, 2017?

KEY MESSAGES: PUBLIC ACCOUNTS

- The 2016-17 Public Accounts of Ontario show the province's deficit is $991 million.
- This result is $3.3 billion lower than projected in the 2016 Budget, and $0.5 billion lower than the interim forecast in the 2017 Budget.
- This is a result of growth in revenue that exceeded growth in program expense, and lower than forecast interest on debt.
- Ontario has beaten its deficit target eight years in a row. Ontario's plan is working.
- As promised in the 2016 Budget, Ontario grew its economy while transforming healthcare, building vital infrastructure and investing in people's talents and skills.
- Due to our prudent fiscal management and Ontario's robust economic growth, we are projecting a balanced budget for the first time since the onset of the global recession in 2008.
- We remain on track to balance the budget this fiscal year as well as in 2018–19 and 2019–20.
- This is something that has been achieved only eight times in the last 40 years in Ontario.
- We will continue moving forward on our fiscally responsible plan that creates fairness and opportunity for all Ontarians.

KEY MESSAGES: OTHER HIGHLIGHTS

- We will continue to present the province's finances fairly and accurately and in accordance with Canadian Public Sector Accounting Standards.
- We also remain on track to balance the budget this fiscal year as well as in 2018–19 and 2019–20.
- Other highlights from this year's Public Accounts include:
    - Economic growth, with a 2.7 per cent increase in real gross domestic product (GDP), up 2.2 per cent in the 2016 Budget.
    - Total revenue of $140.7 billion, up $2.2 billion from the 2016 Budget.
    - Total spending of $141.7 billion, down $0.1 billion from the 2016 Budget.
    - Interest on debt of $11.7 billion, down $0.7 billion from the 2016 Budget.
- To help Ontarians better understand their government's finances, new digital tools have been developed that present the Public Accounts data in innovative, visual formats. These tools make Ontario's finances easier to understand, access and use.
- Presenting the Public Accounts data in innovative, visual formats is part of Ontario's commitment to Open Government.

KEY MESSAGES: ACCOUNTING CHANGES

BPS REVENUE PRESENTATION

- To increase transparency, the 2016-17 Public Accounts are presenting third-party revenues for hospitals, school boards and colleges, such as tuition fees, patient fees, research grants and donations, with provincial revenue.
- In prior years, these revenues were netted against the expenses of the respective sectors (health, education, post-secondary).
- This is a change in presentation only; the change increases total revenues and expenses by approximately $8 billion, and does not impact the deficit, net debt or accumulated deficit.
- This change is consistent with public sector accounting standards and the reporting practices of other senior Canadian governments.
- The Auditor General is supportive of this change in presentation.

ACCOUNTING FOR ENERGY GOVERNMENT BUSINESS ENTERPRISES:

- The 2016-17 Public Accounts include the financial results of Ontario Power Generation (OPG) and Hydro One using International Financial Reporting Standards (IFRS).
- These two government business enterprises currently report their stand-alone financial results using Generally Accepted Accounting Principles in the United States (US GAAP).
- In prior years, the reported results of OPG and Hydro One were included in the results of the province based on US GAAP.
- This change does not have a material impact on this year's Public Accounts.
- The Auditor General is supportive of this change in presentation.

PENSION ACCOUNTING:

- The government established the Pension Asset Expert Advisory Panel following the release of the 2015-16 Public Accounts.
- The Panel delivered independent advice on how public sector accounting standards are interpreted as they apply to current net pension assets and the application of public sector accounting standards for two of Ontario's jointly sponsored pension plans; Ontario Teachers' Pension Plan (OTPP); and the Ontario Public Service Employees' Union Pension Plan (OPSEUPP).
- The Panel's report concluded that the province's share of the net pension assets of both the OTPP and the OPSEUPP should be recognized in Ontario's financial statements.
- The government accepted the Panel's recommendations, which have been reflected in the 2016-17 financial statements.
- The 2015-16 financial statements have also been restated to reflect the pension assets for these two plans.
- The Auditor General continues to not accept the application of the Public Sector Accounting Board (PSAB) standards in the 2016-17 Public Accounts regarding pension accounting for the province's jointly sponsored pension plans. For 2016-17, the Auditor General has qualified her opinion, stating that the province's deficit is understated by $1.4 billion.

KEY MESSAGES: IESO ACCOUNTING

- The Independent Electricity System Operator (IESO) reports its financial results in accordance with Public Sector Accounting Standards.
- In 2016, IESO changed its accounting policy to begin recognizing market assets (amounts due *from* power distributors) and liabilities (amounts due *to* power generators). In previous years, these amounts were omitted from IESO's financial statements.

- This change has no impact to the province's annual deficit, net debt or accumulated deficit.
- IESO also adopted rate-regulated accounting for deferred charges, such as the cost of smart meters, which will be recovered from users of these meters over time.
- Public Sector Accounting Standards are silent on rate-regulated accounting, and as a result, as provided for in the accounting standards, IESO considered other sources of guidance to assess the appropriateness of applying rate regulated accounting.
- Prior to the 2015 merger with the IESO, the Ontario Power Authority (OPA) reported market accounts and used rate-regulated accounting under PSAS. The statements of the OPA were not qualified during that time by OPA's external auditor or the Auditor General. This accounting treatment is not new to Ontario.
- The Auditor General qualified her opinion in 2016-17 based on the recognition of the IESO's market accounts. The Auditor General also noted in her opinion that the use of rate regulated accounting under PSAS is not permitted, but did not qualify on the issue of rate regulated accounting, as the impact was not material in the current year.
- The reporting changes implemented by the IESO were approved by their management and board, and received an unqualified audit opinion from their external auditor. The province's Office of the Provincial Controller also supports the changes.

KEY MESSAGES: AUDITOR GENERAL'S 2017 ANNUAL REPORT – CHAPTER ON PUBLIC ACCOUNTS

- The government thanks the Auditor General for her recommendations, and remains committed to assisting the Office of the Auditor General in providing its independent views to the Legislative Assembly.
- The government has a strong track record of producing high-quality financial reports on a timely basis and continues to present the province's finances fairly and

accurately and in accordance with Canadian Public Sector Accounting Standards.

- The government's use of external expertise for accounting and financial reporting matters supplements its own resources on complex or emerging accounting and reporting matters.
- The province will continue to provide financial statements according to Canadian Public Sector Accounting Standards that support transparency and accountability in reporting to the public, the legislature, and other users.
- The government will continue to build on its track record of responsible fiscal management.

CURRENT STATUS

- December 20, 2017 – the Treasury Board Secretariat (TBS) has been called to appear before the Standing Committee on Public Accounts (SCOPA), to review Chapter 2 – Public Accounts of the Province (Volume 1 of the 2017 Annual Report of the Office of the Auditor General of Ontario). In addition to officials from TBS, requests to attend were issued to officials from Cabinet Office, the Ministry of Finance, the Ontario Financing Authority, the Ministry of Energy, the Independent Electricity System Operator and Ontario Power Generation. Attendees will be required to provide the committee with a response to the Auditor General's report, and to answer any questions the committee members may have. Hearings are scheduled for February 28, 2018.
- As per Standing Order 108(h), the SCOPA is empowered to review and report to the House its observations, opinions and recommendations on the Report of the Auditor General and the Public Accounts, which documents shall be deemed to have been permanently referred to the committee as they become available.
- The committee may meet weekly when the Legislative Assembly is sitting. With the approval of the House, it may also meet at any time when the Legislative Assembly is not sitting.
- All meetings are open to the public with the exception of those dealing with the setting of the committee's agenda and the preparation of committee reports.
- All public committee proceedings are recorded in Hansard.

BACKGROUND:

- The Public Accounts of Ontario is a key accountability and transparency document in the government's financial cycle. It's a look back that compares Ontario's actual performance to what was planned in the Budget.

- The Public Accounts present the financial statements of the Province, provide financial highlights of the past fiscal year, and report on performance in priority areas.

- Public Accounts is audited by the Auditor General and is typically released in the fall of the following fiscal year.
- When preparing the 2016-17 Public Accounts, Ontario's professional accounting staff adopted accounting changes to further enhance accountability and transparency.

- These changes include:
    - **Accounting for hospitals, school boards and colleges** - third-party revenues (i.e. tuition fees, patient fees, research grants and donations) are now reported together with provincial revenue. This change increases transparency and is supported by the Auditor General.
    - **Accounting for energy sector government business enterprises** - the financial results of investments in Hydro One and Ontario Power Generation (OPG) now reflect International Financial Reporting Standards. Previously, these results were reported using U.S. Generally Accepted Accounting Principles. This change was made to meet Public Sector Accounting Board standards and is supported by the Auditor General.
    - **Accounting for the Independent Electricity System Operator (IESO)** - the IESO has adopted rate-regulated accounting, and is now recognizing its market accounts assets and liabilities in its financial results.
    - **Accounting for net pension assets of jointly sponsored pension plans** - the Province is reporting net pension assets for jointly sponsored pension plans. This is in line with Public Sector Accounting Board standards and the recommendations of the independent Pension Asset Expert Advisory Panel.

Pension Asset Expert Advisory Panel

- On November 10, 2016 Ontario established the Pension Asset Expert Advisory Panel to provide independent advice and recommendations to the government on the application of public sector accounting standards to Ontario's net pension assets.
- The Panel was comprised of accounting, legal and pension experts in the areas of jointly sponsored pension plans, actuarial modelling for pension plans and Public Sector Accounting Standards.
- The Panel members were:
    - Tricia O'Malley; (Chair)
    - Murray Gold;
    - Uros Karadzic; and,
    - Paul Martin.
- Panel members also provided advice on how to value net pension assets reported on the province's books, taking into account future decisions which might be made by the plan's sponsor or sponsors.

- The Panel issued its report in February 2017. Upon receiving the report, the government, supported by its own research and analysis, accepted the Panel's recommendation and has reported the pension assets of the Ontario Teachers' Pension Plan (OTPP) and Ontario Public Service Employees' Union Pension Plan (OPSEUPP) in its 2016-17 consolidated financial statements (with restatement of 2015-16).
- The Panel issued a supplementary report in March 2017 with respect to the Healthcare of Ontario Pension Plan (HOOPP) and Colleges of Applied Arts and Technology Pension Plan (CAATPP) recommending that a full valuation allowance be recorded on the net assets of both of these plans, based on the difference in governance structure between these plans and OTPP and OPSEUPP. The province agreed and has recorded a valuation allowance for CAATPP in the year (amount is not material). The HOOPP plan is not in a net asset position for accounting purposes at March 31, 2017.

Independent Electricity System Operator

- The Independent Electricity System Operator (IESO) is a not-for-profit, non-taxable corporation established pursuant to Part II of the *Electricity Act, 1998*. The Ontario Power Authority and the IESO merged on January 1, 2015.
- One of IESO's roles is to settle the market accounts, which are the amounts due to the entities that provide electricity to the market (e.g. power generators) and due from those who consume electricity (e.g. local distribution companies on behalf of their consumers).
- Rate regulated accounting is appropriate where the rates an entity is able to charge to its customers are set by another party (i.e. a regulator), provided specified criteria are met. Rate-regulated accounting permits the entity to defer costs that would otherwise be expensed to the period that the related revenue is charged to customers. Costs able to be deferred by the IESO include:
    - Unrecovered smart metering expenses; and,
    - Unrecovered pension and post-employment benefits related to PSAB transition.
- During 2016, IESO made two accounting changes (1) to recognize the market accounts in its financial statements – these amounts were not previously recognized in the IESO's financial statements, and (2) to apply rate-regulated accounting.
- The IESO received an unqualified audit opinion from KPMG (their external auditor) with respect to the financial statement presentation in their 2016 audited financial statements. IESO management, IESO's Audit Committee, IESO's Board of Directors, IESO's external auditor, and the Office of the Provincial Controller all support the recognition of the market accounts and the use of rate-regulated accounting by IESO.

Revenue Highlights

Against the Restated 2016 Budget:

- Revenues for 2016-17 came in at $140.7 billion, or $2.2 billion higher than forecast in the 2016 Budget. This was largely due to higher than projected taxation revenues, non-provincial source revenues from hospitals, school boards and colleges, and income from GBEs, partially offset by lower than projected Government of Canada transfers and other non-tax revenue.

Against the Restated Interim Estimates in the 2017 Budget:

- Revenues for 2016-17 came in at $140.7 billion, or $0.6 billion lower than the interim forecast in the 2017 Budget. This was largely due to lower than projected taxation revenues and Government of Canada transfers, partially offset by higher than projected income from GBEs.

Expense Highlights

Against the Restated 2016 Budget plan:

- Total expense in 2016-17 was $141.7 billion, or $0.1 billion lower than forecast in the 2016 Budget plan. Program spending was $130.0 billion, up by $0.6 billion from a planned spending of $129.4 billion and interest on debt was $11.7 billion, lower by $0.7 billion from planned interest cost of $12.4 billion. Program spending was higher by $0.6 billion largely due to higher than projected spending in the health, community and social services, justice sector and general government and other.

Against the Restated interim Estimates in the 2017 Budget:

- Total expense in 2016-17 was $141.7 billion or $1.1 billion lower than the interim forecast in the 2017 Budget. Program spending was $130.0 billion, $0.9 billion lower than the interim forecast of $130.9 billion in the 2017 Budget. Interest on debt was $11.7 billion, lower by $0.2 billion from planned interest cost of $11.9 billion. Program spending was lower by $0.9 billion largely due to lower than projected spending in the health and education sectors, and other programs.

Net Debt

- Net debt as of March 31, 2017, was $301.6 billion, which was $6.7 billion lower than forecast in the 2016 Budget. Net debt grew by $6.2 billion during the year, representing a $6.6 billion increase in liabilities that was partially offset by a $0.4 billion increase in financial assets.

Auditor General's 2017 Annual Report: Chapter on Public Accounts

- On December 6, 2017, the Office of the Auditor General released their 2017 Annual Report.
- The Auditor General's Annual Report, Chapter 2, makes 10 recommendations regarding the Public Accounts of the Province.
- The recommendations largely reflect opinions that have been expressed in previous reports, including the Auditor General's audit opinion in the 2016-17 Public Accounts and the Special Report on the Fair Hydro Plan.
- Treasury Board Secretariat and Ministry of Finance disagree with the characterization of the majority of the recommendations, and re-iterate the government's commitment to producing high-quality financial statements on a timely basis and in accordance with Canadian Public Sector Accounting Standards (PSAS).

Financial Accountability Office's Economic and Fiscal Outlook, Fall 2017 Update

- On December 11, 2017, the Financial Accountability Office released its Economic and Fiscal Outlook, Fall 2017 Update.
- During the media event, the FAO said "since the government has not adopted the Auditor General's recommended accounting for both the Fair Hydro Plan and net pension assets, it is becoming more difficult for legislators and the public to assess the government's fiscal projections. This has reduced the transparency and reliability of Ontario's fiscal plan."

RECENT MEDIA COVERAGE:

- January 12, 2018 – The Toronto Star ran an opinion column by Martin Regg Cohn, "Independence is not infallibility when it comes to Ontario's financial books," arguing Auditor General "Lysyk's paranoia about partisan advertising is a depressing case study on how she approaches the vital role of an auditor general, which is meant to be a check and balance on the power of government — not a grudge match grounded in distortions over picayune disputes. All's fair in politics and accounting, unless you're an auditor gone awry."
- January 9, 2018 – The Toronto Sun runs a column by Ben Eisen, director of the Fraser Institute's Ontario Prosperity Initiative entitled "Ontario's finances are still a mess." Eisen argues that people should treat the government's balanced budget claims with skepticism, writing "For starters, many analysts, including Ontario Auditor General Bonnie Lysyk, have called the government's accounting techniques into question, arguing proper accounting would show continued deficits. Others, including the government's Financial Accountability Office, warn that without additional policy changes to reduce spending, or raise taxes, Ontario will likely slip back into deficits."
- December 17, 2017 – The Ottawa Sun's Lorrie Goldstein writes that "with less than six months to go before the June 7 election, two independent, non-partisan financial watchdogs of the Ontario Legislature say the books of Premier Kathleen Wynne's Liberal government cannot be trusted." Goldstein highlights the disagreement between the Auditor and the government on the pension asset accounting issue, also noting the expert advisory panel: "Lysyk argues the government is improperly claiming the $11.5 billion surplus in the Ontario Teachers' Pension Plan as an asset, because it cannot access these funds without the permission of Ontario's teacher unions […] In November 2016 it hired what it described as an expert, four person pension advisory panel, with a budget of up to $435,000 for salaries, excluding expenses, which in February 2017 backed the government's accounting on the teachers' pension plan."
- December 17, 2017 – The Toronto Sun's Jim Warren cautions that "the role of the Auditor General is shifting in troubling ways," arguing that the Auditor General's increasing outspoken role is "making matters worse." Specifically referencing the pension asset accounting issue, Warren writes "For the first time in 16 years, Lysyk in 2016 decided to change her office's opinion on how the Ontario government presents pension assets in the audited financial statements and fought the government's claim it had balanced the budget in 2017-18. Wynne's Liberals asked an independent expert panel to determine the appropriate accounting treatment of the pension assets and they sided with the government. Lysyk provided her advice to the government and that should have been the end of it. Instead, in her latest annual report she rehashed the same issue and has gone from proving independent oversight to being an advocate for her own position."
- December 14, 2017 – The Record runs an opinion piece, "To sort out truth from pre-election fictions, turn to Bonnie Lysyk," writing that the Auditor General "warned that the Liberal government is making its financial position look rosier than it really is in part because it has counted as government assets two pension plans, including the plan of Ontario's teachers. That's extremely sketchy accounting practice. The teachers' pension plan is an independent organization and not owned by the provincial government. For the government to claim it as an asset is as dishonest as if you were to apply for a bank loan and, when you were asked to show what assets you own, telling the bank that you actually own your neighbour's home and car."
- December 13, 2017 – The Toronto Sun runs a comment piece, entitled "Liberals hiding deficit, second watchdog says" covering the Financial Accountability Officer's (FAO) fiscal outlook report. The article highlights the pension asset accounting issue, writing that the FAO's report "says these projections are based on weaker revenue growth and the Wynne government's rejection of "the Auditor General of Ontario's recommended accounting treatment for both the government's Fair Hydro Plan and the net pension assets of jointly-sponsored pension plans." Defying the auditor general, the Wynne government hired what it called an expert panel, which endorsed its pension accounting."

- December 12, 2017 – The Canadian Press reports on the Financial Accountability Officer's (FAO) fiscal outlook report, writing that the report says "a long simmering accounting dispute between the Liberal government and Auditor General Bonnie Lysyk over how to count two public-sector pension plans is contributing to uncertainty."
- December 12, 2017 – The Toronto Star's Robert Benzie reports on the Financial Accountability Officer's (FAO) fiscal outlook report, noting that the FAO adopts the Auditor General's accounting treatment of pension assets, resulting in a $4 billion deficit in 2017-18, "even though the Liberals maintain the books are in the black."
- December 12, 2017 – Ottawa Citizen's David Reevely also reports on the FAO report, writing: "We're up to three different versions of the provincial government's books, depending on how you count surpluses in a couple of public pension funds and money the government is borrowing to lower electricity prices temporarily. Without getting into the weeds on these disputes, the Liberals want to run the numbers in a way that makes them look good and they're not obviously wrong, but all the government's independent officers with anything to say about it - the auditor general, the financial accountability officer - say what they're doing is not OK."
- December 7, 2017 – Following the release of the Auditor General's 2017 Annual Report, the Toronto Star's Robert Benzie and Rob Ferguson outline the Auditor's various recommendations for the government. On the pension asset accounting front, the reporters write: "Even though a government-appointed expert panel of accountants concluded she is wrong about excluding the publicly owned assets of two joint-sponsored pension plans on the government's bottom line, Lysyk continues to claim she is in the right on the actuarial tiff."
- December 7, 2017 – CBC, The Star, and other news outlets report on the Auditor General's 2017 Annual Report, referencing the ongoing "accounting disagreements" between the Auditor General and the government, including reference to IESO accounting and pension asset accounting.
- October 25, 2017 – In follow-up to the release of the Auditor General's special report on the Fair Hydro Plan, the Toronto Sun runs a column "Number's up for Wynne's government," using disagreement regarding pension asset accounting as support for the Fair Hydro Plan not being the first time the government and the Auditor General have disagreed: Last year, the government and the auditor general publicly disagreed over the appropriate way to treat assets held by public pension plans. That dispute had implications for the important question of whether the government would post a balanced operating budget, or a deficit, this year."
- October 18, 2017 – The Toronto Star's Martin Regg Cohn writes "Watch out for watchdogs who don't like being watched," commenting "The last time Lysyk attacked the government's deficit calculations, an outside panel of experts rejected her arguments- because not even an auditor can make a surplus disappear from a balance sheet. There is no permanent arbiter for auditors, but Lysyk is no longer the last word on accounting disputes - merely one of many voices, right or wrong. Expect that voice to grow louder next year when she formally assesses the 2018-19 spring budget - and once again challenges Liberal claims of deficit elimination."
- November 15, 2017 – Ontario PC Finance Critic Vic Fedeli pens a column in the Toronto Sun on the Fall Economic Statement, making reference to the Auditor General's qualified audit opinion on the province's Public Accounts two years in a row.
- October 16, 2017 – CBC News looks to the province's Public Accounts to highlight "Four surprising things about the Ontario government's finances," including: "personal income tax revenue is dropping," "corporate tax revenue is soaring," a "real estate windfall," and "booze revenue poised to top gambling revenue."
- September 8, 2017 -- Post Media's David Reevely quotes the AG's statement that rejects the contents of the Public Accounts "The Legislature and all Ontarians must be able to rely on the province's consolidated financial statements to fairly report the fiscal results for the year. This year they cannot do so." The article mentions the FAO's commentary this week saying the FAO and AG have 'made a businesslike routine of pointing out all the extreme assumptions and accounting stretches the

government is using to make the books look good in an election year." The article concludes that considering what happened to the world economy a decade ago the government has 'done all right' but is critical of 'dismissing' the government's two most prominent independent financial experts. **Minister Sandals** mentioned in reference to releasing the PA.

- September 7, 2017 -- Toronto Star says the "stakes are high in the accounting slugfest between the government and the auditor general." The article mentions Minister Sandals "shrugging off" the AG's accounting interpretation. "The experience last year was the books were qualified on the same issue and it didn't impact the credit ratings," the treasury board president said. "Quite frankly, I don't think the public is terribly hung up on accounting disagreements."
- September 7, 2017 -- QP Briefing reports financial watchdogs aren't smiling about the government lowering the deficit to $1 billion, but instead are 'baring their teeth'. The article says auditor general Bonnie Lysyk said yesterday the government "significantly understated" its deficit, while the Financial Accountability office this week called the plan to reduce the debt burden "unlikely." Minister Sandals is quoted "The public wants to know, are you managing your deficit?" "Is your deficit getting smaller? Are you going to balance the budget this year? Quite frankly, I don't think the public is terribly hung up on accounting disagreements." The article also notes AG Lysyk is warning that the complex accounting behind the hydro bill reduction could add to a bigger than expected deficit next year, and that a special report will be tabled this fall.
- September 7, 2017 -- The CP article about Public Accounts quotes Minister Sandals "The public wants to know, are you managing your deficit?" she said. "Is your deficit getting smaller? Are you going to balance the budget this year? Quite frankly, I don't think the public is terribly hung up on accounting disagreements." The coverage says AG Lysyk disputes the government figures and that "the statements were not prepared following Canadian Public Sector Accounting Standards." This article was picked up by several media outlets but coverage was not widespread.
- February 20 & 21, 2017 -- Toronto Sun report on Minister Sandals' memo to OPSEU that "the OPSEU pension plan….clearly states that no amount of the surplus shall be paid out of the plan to either sponsor". This is followed by a column by OPSEU President Warren Thomas saying Ontario's public service workers and retirees feel like we are about to get robbed.
- February 18, 2017 – Toronto Star, Toronto Sun and Ottawa Sun coverage of the ongoing pension accounting issue between the government and Auditor General.
    - Ottawa Sun says NDP Leader Horwath trusts the Auditor General's math.
    - Toronto Sun quotes Minister Sandals who said in a statement that she will accept the findings of the panel.
    - Toronto Star columnist Martin Regg Cohn wrote that the Auditor General is no hero, and her "bizarre claim turns out to be a sideshow, designed to cover up her own miscalculations after an outside panel of experts found the auditor herself had conflated facts and confused figures."
- February 17, 2017 -- Hamilton Spectator, QP Briefing, and Windsor Star have coverage.
    - The Spectator's opinion piece is negative toward Auditor General Lysyk.
    - QP Briefing's piece written by Bryne Purchase, former deputy minister of finance, sides with the AG.
    - Windsor Star published the CP story that says the AG is not satisfied after the expert panel's report on the $10.7 billion pension dispute and that she is asking to see "the letter that says you can use that pension money with permission, with an agreement."

- February 16, 2017 – The Toronto Star, Toronto Sun & QP Briefing have coverage of the Auditor General's response to the panel's report.
    - The Toronto Star and QP Briefing say the Auditor General is demanding proof in writing from the unions that they are okay with the government using taxpayer-funded pension surpluses for accounting purposes and describes it as an "escalating a $10.7 billion standoff".
    - QP Briefing quotes Minister Sandals from her statement: "They (the panel) concluded that the government does not need a letter from either of the unions because the joint pension agreements spell out how the surplus will be dealt with. They also concluded that there are no public-sector accounting standard requirements for any additional letter to be in place specifying when or by how much contributions will be reduced beyond the joint pension plan agreements already in place."
    - The Toronto Sun has two articles on the number crunching aspect of the expert panel and that the government spent up to $435,000 on it. OPSEU's Warren 'Smokey' Thomas was livid and notes that he wants a guarantee the government won't raid his members' pension fund.
- February 15, 2017 -- QP Briefing quotes Minister Sandals about it being too soon to weigh in on what might happen if the Auditor General stands her ground in the pension accounting dispute.
- February 14, 2017 – high profile media coverage of the Pension Asset Expert Advisory Panel report release the day before.
    - Toronto Star columnist Martin Regg Cohn is critical of the Auditor General saying she has been caught out in a $10.7-billion miscalculation.
    - The Star's coverage also included article about the panel report and that $10.7 billion in government-sponsored pension plans should count toward the province's bottom line.
    - The Ottawa Sun's David Reevely says about the panel report "…we're talking serious money - the stakes in what's otherwise the most arcane public-accounting battle ever to spill out of a comptrollers' seminar and into the streets."
    - OPSEU's Smokey Thomas writes that the dispute between the government and the Auditor General is not "just a paper war" and that he "unequivocally supports" the AG's position.
- On February 13, 2017 QP Briefing reports the government has accepted the panel's conclusion that pension surpluses are assets. The Auditor General's stance won't be known until later in the week. The article includes comments from Tory finance critic Vic Fedeli: "Basically, they've gone out and hired people whose findings would be more convenient for them ... They have appointed a private panel of auditors to come to the province's conclusion." OPSEU president Warren (Smokey) Thomas said he's concerned the panel's conclusion was politically motivated: "If I was going to fall on a side of advice, I'd fall on the advice of the auditor general," he said. "The government has gone to extraordinary length to have somebody try to disagree and discredit the auditor general."
- February 7 & 8, 2017 – Toronto Star and QP Briefing have coverage about the pension asset advisory panel's soon-to-be-released report.
    - PC Finance Critic Vic Fedeli tells the Star, that the people have to ask themselves who they are going to believe-- the independent auditor general or a scandal-plagued Liberal government?"
    - Columnist Martin Regg Cohn writes the AG has gone out on a fiscal limb by effectively wiping away nearly $11 billion in government assets and she won't climb down.
- November 14 & 30th, 2016 -- QP Briefing has coverage of the expert panel announced to study the accounting dispute over pension assets.

- October 9, 2016 -- Focus Ontario (Global tv) and the Toronto Sun have coverage of the 2015-16 Public Accounts and the disagreement with the Auditor General.
    - Focus Ontario coverage balanced.
    - Toronto Sun opinion piece expresses surprise that the government elevated the tussle over pensions to the political realm by tabling the financial statements without the Auditor General's opinion.
- October 6, 2016 -- The Financial Post has a highly critical commentary by analysts with the Fraser Institute, while QP Briefing reports the public accounts for 2015-16 have been tabled almost two weeks after months of back and forth between the auditor general and the government over whether the bottom line should include assets for two jointly-sponsored provincial pension plans.
- October 3, 2016 -- The Globe and Mail and Canadian Press report the government is ‘fighting’ with the Auditor General. Globe notes focuses on the AG’s $1.5-billion discrepancy in last year's deficit and a $10.7-billion difference in Ontario's net debt. CP story (picked up by 40 media outlets) says the Auditor General is taking issue with their pension asset accounting, though it says these are rules that have been used for the past 14 years.

Appendix

Preparation and Tabling:

The Public Accounts for each fiscal year are prepared under the direction of the President of Treasury Board, as required by the *Financial Administration Act*.

The Public Accounts of Ontario consist of the Annual Report and three supplementary volumes. The Annual Report includes the province's audited consolidated financial statements and a financial statement discussion and analysis section. Supplementary information is contained in three volumes:

Volume 1: Ministry statements for expenses, assets, revenue, detailed debt and other supplementary schedules. It provides a comparison of appropriations with actual spending.

Volume 2: Financial statements of significant provincial corporations, boards, commissions that are part of the government's reporting entity, and other miscellaneous statements.

Volume 3: Detailed schedules of payments made by ministries to vendors and transfer payment recipients.

The *Financial Administration Act* requires the President of Treasury Board to submit the province's Annual Report and consolidated financial statements to the Lieutenant Governor in Council (LGIC) on or before 180 days after fiscal year-end. This year, the deadline was September 27, 2017.

The process for release of the Public Accounts is as follows:

- The Public Accounts are approved by the Lieutenant Governor in Council.
- The LGIC lays the Public Accounts before the Assembly, if the Assembly is in session, and the Public Accounts are then released on the same day.
- If the Assembly is not in session on the day of the release of the Public Accounts the LGIC is required to make the Public Accounts public and the Public Accounts are laid before the Assembly on or before the tenth day of the next session.

LOGISTICS & FORMAT OVERVIEW

Overview

- SCOPA meetings are open to the public with the exception of those dealing with the setting of the Committee's agenda and the preparation of committee reports. All public committee proceedings are recorded in Hansard.
- The Chair will advise members to consider questions that are relevant to the content of the Auditor General's Annual Report, but in practice members do sometimes ask questions outside of the report's focus. As a general rule, expect that any question related to the Province's financial statements would be ruled within scope by the committee chair.
- The Committee members may ask that ministries provide details after the session if more research or gathering of information is needed to respond to a question.

Agenda

Wednesday, February 28, 2018
Committee Room 151 (Amethyst Room), Main Legislative Building

Time	*Topic*
9:00 a.m.	Closed Session: Briefing by the Auditor General
10:00 a.m.	Briefing by the Research Officer
10:15 a.m.	RECESS
12:30 p.m.	Treasury Board Secretariat and other representatives • *Invited senior officials appear and respond to questions.* • *The Auditor General attends, and the Committee members can seek clarification from the AG on points from her report if needed during the session.*

12:30 – 3:00 p.m.

- **Opening remarks** (20 minutes)
- **First round of questions** (60 minutes)
  - Each of the three political parties get 20 minutes of questions
- **Second round of questions** (50 minutes, approximately)
  - The remaining time until 2:45 p.m. is split between the three political parties; approximately 15-17 minutes per party

DRAFT

- **Closed session** (15 minutes)
    - Committee members plus the Clerk, only; no audience or presenters
    - The Committee will discuss the outcome of the meeting and if they want to do a report
    - There are no closing statements from ministry officials

Room Setup

- Committee Room 151 (Amethyst Room) is equipped with cameras and the meeting will be available on TVs within the Legislature and streamed online.
- The room has a square table with rows of extra seating at the front the room.
- The Committee Chair, Auditor General and Clerk will sit at the head of the table with the government and opposition parties on opposite sides.
- The invitees sit opposite the Committee Chair and Clerk, either at the table or in the first row of chairs.

Media Access

- Media are allowed to sit in on the meeting as long as they do not interrupt the proceedings. They cannot ask questions in the committee room, but if they wish they can scrum participants in the hallway as they leave.
- Media can also watch SCOPA proceedings on the TVs in the Legislature or online.

STRATEGIC APPROACH

- Provide evidence and facts as the basis of decision-making wherever appropriate (e.g. other jurisdictions, external advisors).
- Provide responses that are relevant and in scope of the consideration of chapter two of the Office of the Auditor General's report
- Avoid any speculation on political decision-making or rationales; provide objective, factual responses in role as non-partisan public servant.
- Provide context wherever possible. Deputy Ministers to provide initial messaging then pass to the subject matter experts where appropriate.
- Emphasize the role of a public servant is to provide factual, non-partisan information to the Committee based on due diligence and the application of professional judgment.
- Reaffirm the government's commitment to working with the Office of the Auditor General.
- Emphasize that the province will continue to follow Public Sector Accounting Standards (PSAS), as always, and will seek appropriate expert guidance where PSAS is silent.
- Use the Committee appearance as an opportunity to communicate the facts and rationale for the decision to adopt/continue accounting practices in response to the Office of the Auditor General's recommendations.
- Highlight due diligence in decision making (Ontario Fair Hydro Plan accounting, pension asset accounting, Independent Electricity System Operator [IESO] market accounts, IESO rate-regulated accounting).

Summary Status Table in Response to the Report of the Auditor General of Ontario

Chapter 2 2017 Annual Report of the Auditor General
Treasury Board Secretariat, Ministry of Finance, Ministry of Energy

Auditor's Recommendation	Completed Undertaking	Outstanding Undertaking (including timeline)
AG Recommendation #1 *We recommend the government record valuation allowances to offset the net pension assets it has recorded from the Ontario Teachers' Pension Plan and the Ontario Public Sector Employees' Union Pension Plan until such time as it obtains formal written authorization from their pension plan co-sponsors that they are able to lower minimum contributions or withdraw surpluses from the pension funds within the next 12 months.*	The Office of the Auditor General communicated its interpretation of Public Sector Accounting Standards (PSAS) requiring a full valuation allowance on the Province's two jointly sponsored pension plans in September 2016. At that time, the government passed a time-limited regulation on the accounting treatment for its joint defined benefit plans to align with the Auditor General's interpretation of PSAS, which enabled officials from Treasury Board Secretariat and the Ministry of Finance to sign the Statement of Responsibility for the 2015-16 Public Accounts. During the 2016-17 year, the professional staff conducted further research and analysis, and determined that PSAS does not require a valuation allowance on either of the jointly sponsored pension plans. This conclusion is supported by: • The conclusions reached by an independent Pension Asset Expert Advisory Panel (the 'Panel'), established by the government to provide advice on the interpretation of PSAS with respect to the reporting of net pension assets of these two joint defined benefit plans. The Panel, comprised of accredited accounting, actuarial and legal professionals with extensive background in pension accounting and plan governance, released its report in February 2017 which supported the government's position that a valuation is not required for these two plans under PSAS. Two key findings of the Panel were: 1) there is no requirement under PSAS that any formal agreement exist between the joint sponsors regarding the timing or amount of a reduction in contributions to record an asset, as the existing agreements in place between the parties support the recognition of an expected benefit, and 2) unilateral control is not	The government will evaluate the need for a valuation allowance annually taking into consideration (a) changes, if any, in the governance structures of the plans, (b), decisions, if any, of the joint sponsors that impact the need for a valuation allowance, and b) changes, if any, in Public Sector Accounting Standards. The government is open to continue to discuss the matter in the hopes of resolving this matter.

CONFIDENTIAL DRAFT FOR DISCUSSION

	required for asset recognition; joint control with each party having the ability to deny the actions of the other sponsor, provides evidence of shared control, supporting recognition of an asset. • An opinion from Deloitte LLP on aspects of the Province's accounting as at March 31, 2016 for the Ontario Teachers' Pension Plan. The opinion, which was dated October 2, 2016, concluded that it was permissible to recognize a pension asset under Canadian Public Sector Accounting Standards, even though the Province did not have under a unilateral right to reduce contributions. The opinion did not address the value at which the asset should be recorded. • Aanalysis completed by EY as to whether any valuation allowance is required to be recorded for OTPP or OPSEUPP as of March 31, 2017. EY confirmed no valuation allowance was required for either plan. The government respectfully disagrees with the Auditor General's interpretation of the accounting standards on this issue as PSAS neither requires unilateral control to record an asset, nor does it include a requirement to obtain a letter from the co-sponsor of the plan agreeing to reduce future contributions within 12 months.

Summary Status Table in Response to the
Report of the Auditor General of Ontario
Chapter 2 2017 Annual Report of the Auditor General
Treasury Board Secretariat, Ministry of Finance, Ministry of Energy

AG Recommendation #2 *We recommend that the government remove the Independent Electricity System Operator's Market Accounts from the Province's consolidated financial statements.*	The Province consolidates the entities it controls, in accordance with Public Sector Accounting Standards (PSAS) and its internal reporting policies. Each consolidated entity produces its own stand-alone financial statements and is subject to its own financial statement audit. In 2016, the Independent Electricity System Operator (IESO) changed the accounting for the market accounts and recognized these balances on its financial statements. The financial statements of the IESO for the year-ended December 31, 2016 were subject to an external audit and received an unqualified (or clean) opinion. The government supports this enhanced reporting and greater transparency for the economic activities of the IESO. Additional comments with respect to IESO's accounting for the Market Accounts are included in the response to Recommendation #5 of this report.	The government supports the enhanced reporting and greater transparency for the economic activities of IESO resulting from the recognition of the market accounts. The government is open to continue to discuss the issue in the hopes of resolving this matter.
AG Recommendation #3 *We recommend the government follow the accounting standards established by the Public Sector Accounting Board and the Province's historical accounting precedent, and implement the recommendations in the Special Report issued*	The government prepares its financial statements in accordance with PSAS. The proposed accounting for the Ontario Fair Hydro Plan reflects the economic substance of the transaction by differentiating costs borne by taxpayers versus those borne by ratepayers. PSAS is silent on the recognition, measurement, presentation and disclosure of rate-regulated activities. In absence of a clear position on an issue, standard accounting practice dictates that an entity should consult other accounting standards. This guidance for PSAS is included in PS1150.07. Regarding the Office of the Auditor General's (OAG's) recommendation that the financing for Ontario's Fair Hydro Plan (OFHP) be pursued at the lowest cost to Ontarians, the government reiterates its concerns with this characterization, which were previously provided in the October 4, 2017 government response to the OAG's special report on OFHP (see	The government intends to continue to prepare its financial statements in accordance with Public Sector Accounting Standards (PSAS). The Fair Hydro Trust will raise financing through a combination of 3rd party senior debt and subordinated debt funded by OPG for which the cost will be primarily driven by the credit ratings assigned by Moody's and DBRS. The ultimate cost of this program will be dependent on the quantity of Global Adjustment that will be financed, prevailing market interest rates over the next 30 years, the availability of capital to invest in this type of structured debt and the

CONFIDENTIAL DRAFT FOR DISCUSSION

by our Office and tabled in the legislature on October 17, 2017, titled The Fair Hydro Plan: Concerns About Fiscal Transparency, Accountability and Value for Money, as follows: • *Record the true financial impact of the Fair Hydro Plan's electricity rate reduction on the Province's budgets and consolidated financial statements; and* • *Use a financing structure to fund the rate reduction that is least costly for Ontarians.*	Government Response to OAG Report on the Fair Hydro Plan in Appendix 5 of the Auditor General's Special Report). With respect to the Global Adjustment Refinancing (GA Refinancing) component of the OFHP, the policy objective is to more fairly allocate the cost to ratepayers over the useful life, not the contractual term, of the electricity generating assets. Therefore, it was a primary policy objective to ensure that the costs are borne by the beneficiaries of the electricity system – the ratepayers – and not the tax-base. The government believes it is appropriate for ratepayers to pay for the financing of electricity assets. The rate-base has a different risk profile than the tax-base, which would be reflected in different interest costs. The various entities that operate in the electricity industry have different financing costs that are specific to their risk profiles. The industry does not operate and is not financed through the Province. Ontario Power Generation (OPG) was identified as the Financial Services Manager responsible for the financing plans and the financing entity (i.e., Fair Hydro Trust) that will manage the debt obligations. OPG has the necessary financing and commercial expertise to assist with refinancing the Global Adjustment (GA) and will ensure that it is done in an efficient and cost-effective manner. OPG has a demonstrated track record in the financial markets with its Corporate Debt platform, private placement of insurance linked bonds, participation in securitization program and highly successful project debt issuances tied to new hydroelectric developments. OPG is beginning the process of raising funds to finance the deferred costs, and while total borrowing costs will not be known until the program is complete, accumulated interest is projected to be less than the estimates in the May 2017 report of the Financial Accountability Office (FAO). The figures referenced in the FAO's report was based on initial Ministry of Energy estimates from March 2017. Subsequent analysis	credit stability of the OFHP program which would be reflected in credit ratings assigned to this debt over time. Each of these factors will need to be managed and monitored closely. The government is open to continue to discuss the issue in the hopes of resolving this matter.

CONFIDENTIAL DRAFT FOR DISCUSSION

	conducted by the Ministry of Energy refined a number of variables, including the cost of borrowing and the quantity of GA to be refinanced. A number of variables, including interest rates, electricity demand and electricity costs, will change over the thirty-year life of OFHP. Government will continue to revise cost estimates to reflect these variable conditions. In addition, as outlined in the 2017 Long-Term Energy Plan, the government will continue to identify and implement initiatives to take costs out of the electricity system, which would reduce the cost of GA refinancing.	
AG Recommendation #4 *The Office of the Auditor General is the appointed under the Auditor General Act as the auditor for the consolidated financial statements of the Province of Ontario. We recommend that the Treasury Board Secretariat:* • *Proactively supply copies to the Auditor General of all contracts it enters into for accounting advice and opinions in order to ensure that*	Treasury Board Secretariat's use of external expertise for accounting and financial reporting matters supplements its own resources on complex or emerging accounting and reporting matters. External advisors are generally engaged to provide advice and guidance to supplement internal analysis. Treasury Board is committed to working with the Office of the Auditor General to discuss issues, once the professional staff has completed its analysis of the issue. In addition, Treasury Board believes frequent communication with the Office of the Auditor General is important and to that end, requested additional meetings with both the staff and the Auditor General during the 2016-17 audit. Where required by the CPA Ontario Code of Professional Conduct, the Auditor General has been, and will continue to be, advised of external advisor involvement.	Treasury Board Secretariat will continue to take a proactive approach to raising issues with the Office of the Auditor General. Where required by the CPA Ontario Code of Professional Conduct, the Auditor General will continue to be advised of external advisor involvement.

CONFIDENTIAL DRAFT FOR DISCUSSION

our Office is aware of the work the advisers are performing, can assess significant issues in a timely manner, and can determine the impact on the Province's consolidated financial statements and our annual audit; and • *Build into its contracts with external advisers the requirement that the advisers engaged to provide accounting advice and opinions that affect the consolidated financial statements notify our Office of*

their engagement as required under the Code of Professional Conduct of the Chartered Professional Accountants of Ontario.		
AG Recommendation #5 *We recommend that the Independent Electricity System Operator (IESO), an "other government organization," use the Canadian Public Sector Accounting Standards (PSAS) in the preparation of its financial statements. Specifically, it should:*	The Independent Electricity System Operator (IESO) prepares its financial statements in accordance with Public Sector Accounting Standards (PSAS) and the financial statements are audited by a firm of independent external auditors whose responsibility is to express an opinion on whether the financial statements are fairly presented in accordance with PSAS. On its 2016 financial statements, IESO received an unqualified (clean) audit opinion. In its role as market administrator, IESO operates and settles approximately $17 billion through the electricity market. The change to include market account assets and liabilities in the financial statements provides increased transparency with respect to the value of transactions that flow through Ontario's electricity market, that otherwise would go	The IESO intends to continue to prepare its financial statements in accordance with Public Sector Accounting Standards, and will report on the results of its accounting firm's audit in its 2017 financial statements, to be published March 30, 2018. The IESO will continue to regularly review its accounting policies to ensure they are best suited to the reporting requirements of its business and the users of its financial statements. This includes providing transparency into the value of transactions that flow through Ontario's $17 billion electricity market and reflecting the economic substance of certain types of expenses that may not be directly recovered through normal revenue requirement

DRAFT

• *Remove market accounts recorded on its financial statements; and* • *Discontinue the inappropriate use of rate-regulated accounting in the preparation of its financial statements.* *To ensure that the members of the Legislative Assembly receive financial information on the operations of the IESO prepared in accordance with Canadian PSAS, the Office of the Auditor General will conduct an attest audit of the December 31, 2017, financial statements of the IESO as permitted under the Electricity Act, Subsection 25.2(2), which*	unreported in IESO's financial statements. These changes were extensively discussed with IESO's external auditors, its Audit Committee and its Board of Directors. The decision was supported by the Office of the Provincial Controller and IESO's external audit firm. Rate-regulated accounting better reflects the economic substance of certain types of IESO expenses (like those related to the Smart Metering Entity) that may not be directly recovered through normal revenue requirement models, and instead are recovered through rate regulation. This change is in line with accounting practices followed by six out of eight other independent system operators in North America and provides IESO financial statement users greater transparency into the substance of the variance accounts it holds and its right to collect an amount in the future.	models, and instead are recovered through rate regulation. The IESO recognizes the Auditor General's statutory role and authority to perform an audit of the IESO. The IESO is cooperating with the Office of the Auditor General to provide information, including the 2017 financial statements prepared by management, and for access to management for assistance in understanding such information. The IESO has likewise instructed its audit partner to cooperate with the Auditor General's audit.

DRAFT

states: "The Auditor General may audit the accounts and transactions of the IESO. 2014, c. 7, Sched. 7, s. 3 (1)."		
AG Recommendation #6 *We recommend the government follow the accounting standards established by the Public Sector Accounting Board, rather than using legislation and regulations to prescribe accounting treatments.*	The Province is committed to provide high-quality financial reports that support transparency and accountability in reporting to the public, the legislature and other users. For the 2015-16 Public Accounts, the government passed a time-limited regulation prescribing the accounting treatment for net pension assets in order to allow Treasury Board Secretariat and Ministry of Finance officials to sign off on Public Accounts consistent with the fiscal impact of the Auditor General's interpretation of Public Sector Accounting Standards (PSAS). This regulation is the only example of where the accounting treatment was legislated, and the legislation did not align with the requirements of PSAS. With respect to the Ontario Fair Hydro Plan Act and its regulations, there are no provisions in that legislation that prescribe the accounting treatment required to be followed by the Province. It is important to distinguish legislating the accounting from legislating the right of the government to recover amounts from specified ratepayers in the future,	The government intends to continue to prepare its financial statements in accordance with Public Sector Accounting Standards.

	which in the absence of the legislation, would have been collected from specified ratepayers as the costs were incurred. The accounting for the transactions resulting from the Fair Hydro Plan will be recorded in accordance with PSAS.	
AG Recommendation #7 *We recommend that in order to address the Province's growing total debt burden, the government work towards the development of a long-term total-debt reduction plan linked to its target of reducing the net debt-to-GDP ratio to its pre-recession level of 27% as measured using proper accounting for net pension assets and the projected costs of the Fair Hydro Plan. The government should also discuss publicly how it plans to pay down the debt.*	The 2017 Budget and the 2017 Fall Economic Statement stated that the government continues to maintain a target of reducing the net debt-to-GDP ratio to its pre-recession level of 27%, currently projected for 2029-30, together with an interim target of 35% by 2023-24. From 2017-18 onwards, the balanced budget environment will limit increases in debt to the difference between annual investments in infrastructure improvements and the amortization of such investments. The government's long-term infrastructure plan to invest about $190 billion over 13 years, starting in 2014-15, will contribute to the growth of the economy. The Centre for Spatial Economics found that for every $1 spent on public infrastructure, GDP increases by $6, on average, in the long term. Therefore, while overall debt will rise to fund these infrastructure investments, measurements of relative debt such as the net debt-to-GDP ratio, a recommended practice by the Public Sector Accounting Board, will gradually diminish due to the Province's GDP increasing at a faster rate than net debt. This will allow the Government to continue to move towards its 27% net debt-to-GDP target. The ratio has already commenced declining, falling to 37.3% in 2017-18 from its 2014-15 peak of 39.3%.	Continue to monitor progress. Estimated implementation by FY 2029-30.

DRAFT

	As discussed more thoroughly in responses to other recommendations in this report, the government prepares its financial statements in accordance with Public Sector Accounting Standards, including the net pension assets for its jointly sponsored pension plans and the transactions resulting from the Ontario Fair Hydro Plan.	
AG Recommendation #8 *We recommend that the Office of the Provincial Controller undertake thorough planning involving all stakeholders, including Treasury Board Secretariat, ministries and provincial government agencies, to identify the barriers and key areas to be addressed to achieve earlier finalization of the Province's consolidated financial statements, including the estimation risks associated with corporations tax and*	Treasury Board Secretariat and the Ministry of Finance are supportive of the timely delivery of the Public Accounts. The Office of the Provincial Controller works closely with the Office of the Auditor General to identify audit issues early and to ensure that stakeholders are engaged in discussions regarding risks and resolution. The Office of the Provincial Controller will continue to collaborate with the Office of the Auditor General to support the timely delivery of the Public Accounts. The Province will work with the Canada Revenue Agency on this recommendation, as reporting Personal and Corporate taxation revenues is highly dependent on information they provide.	Planning discussions for the 2017-18 Public Accounts have begun between the Office of the Provincial Controller and the Office of the Auditor General. As well, the Office of Economic Policy has been engaged in discussions on risk considerations related to economic models used to estimate personal and corporate tax revenues.

DRAFT

personal income tax revenues.		
AG Recommendation #9 *We recommend that the government avoid establishing arm's length trusts in order to record an expense in its consolidated financial statements before it is necessary, given that it loses the ability to ensure that funds are ultimately provided to the appropriate beneficiaries.*	The government works with its transfer payment recipients to ensure it receives good value for the money it provides in the form of grants. Government policy on the structured approach to program delivery takes a risk-based approach with respect to transfer payment oversight. Grants are provided to thousands of organizations annually that the government deals with at arms-length and is able to demonstrate proper oversight. A Trust structure was selected to implement the Affordability Fund in order to provide an effective solution to distributing funds to electricity distributors. With approximately 70 distributors across Ontario, it was not feasible for the Province to enter into agreements with each distributor. The Trust structure establishes an independent entity with expertise from the electricity distributor and community sectors. While the Affordability Fund was established at arm's length to the government, there are report-back requirements on the use of funds transferred as well as the ability for the government to conduct an audit to gain assurance that the funds have been used for the purposes intended.	The government will continue to assess the most appropriate vehicle for meeting its policy objectives, which include appropriate oversight of how transfer payments are spent.

DRAFT

Summary Status Table in Response to the
Report of the Auditor General of Ontario
Chapter 2 2017 Annual Report of the Auditor General
Treasury Board Secretariat, Ministry of Finance, Ministry of Energy

AG Recommendation #10 *We recommend that the government determine when it will issue a regulation as outlined under subsection 11(1) of the Fiscal Transparency and Accountability Act, 2004 confirming the source of reference for the Pre-Election Report and the timeline for issuance of the report that will be subject to our review under the Act.*	Under the *Fiscal Transparency and Accountability Act*, 2004, the government may file a regulation that would require it to release a Pre-Election Report on Ontario's Finances. Should the government file such a regulation, the Auditor General would be required to issue a Statement based on a prompt review following the release of such a Pre-Election Report.	The government remains committed to meeting the legislative requirements of the Act and working constructively with the Office of the Auditor General.

PENSION ASSET ACCOUNTING

AG Recommendation #1: Pension Asset Accounting

Key Messages

- The province continues to move forward and present the province's finances fairly and accurately and in accordance with Canadian Public Sector Accounting Standards (PSAS).
- We respectfully disagree with the Auditor General's interpretation of the accounting standards, as PSAS neither requires unilateral control to record an asset, nor does it include a requirement to obtain a letter from the co-sponsor of the plan agreeing to reduce further contributions within 12 months.
- The province will evaluate the need for a valuation allowance annually taking into consideration (a) changes, if any, in the governance structures of the plans, (b), decisions, if any, of the joint sponsors that impact the need for a valuation allowance, and c) changes, if any, in Public Sector Accounting Standards.
- The province is open to continue to discuss the matter in the hopes of resolving this matter.
- For more information on pension asset accounting, I will now pass it over to:
    - Cindy Veinot, Provincial Controller

1. **How do you respond to the Auditor General's recommendation that the government should record valuation allowances to offset the net pension assets recorded from the Ontario Teacher's Pension Plan and the Ontario Public Sector Employee's Union Pension Plan until you receive formal written authorization from their pension plan co-sponsors?**

   The province continues to move forward and present the province's finances fairly and accurately and in accordance with Canadian Public Sector Accounting Standards (PSAS).

   The Office of the Auditor General communicated its interpretation of PSAS requiring a full valuation allowance on the province's two jointly sponsored pension plans in September 2016.

   At that time, the government passed a time-limited regulation on the accounting treatment of for its joint defined benefit plans to align with the Auditor General's interpretation of PSAS, which enabled officials from the Treasury Board Secretariat and the Ministry of Finance to sign the Statement of Responsibility for the 2015-16 Public Accounts.

   During the 2016-17 year, the province's professional accounting staff conducted further research and analysis, and determined that PSAS does not require a valuation allowance on either of the jointly sponsored pension plans.

DRAFT

This conclusion is supported by:

- The conclusions reached by an independent Pension Asset Expert Advisory Panel, established by the government to provide advice on the interpretation of PSAS with respect to the reporting of net pension assets of these two joint defined benefit plans.

  The panel, comprised of accredited accounting, actuarial and legal professionals with extensive background in pension accounting and plan governance, released its report in February 2017, which supported the government's position that a valuation is not required for these two plans under PSAS.

  Two key findings of the panel were:

  1) There is no requirement under PSAS that any formal agreement exist between the joint sponsors regarding the timing or amount of a reduction in contributions to record and asset, as the existing agreements in place between the parties support the recognition of an expected benefit; and

  2) Unilateral control is not required for asset recognition. Joint control with each party having the ability to deny the actions of the other sponsor provides evidence of shared control, supporting recognition of an asset.

- An opinion from Deloitte LLP on aspects of the province's accounting as of March 31, 2016 for the Ontario Teacher's Pension Plan (OTPP). The opinion, which was dated October 2, 2016, concluded that it was permissible to recognize a pension asset under PSAS, even though the province did not have a unilateral right to reduce contributions. (The opinion did not address the value at which the asset should be recorded.)

- Analysis completed by EY as to whether any valuation allowance is required to be recorded for OTPP or Ontario Public Sector Employee's Union Pension Plan (OPSEUPP) as of March 31, 2017. EY confirmed no valuation allowance was required for either plan.

After significant deliberation, including consideration of the recommendations of the panel, Deloitte LLP and EY, Ontario confirmed that the accounting for these plans prior to 2015-16 was appropriate, and prepared in accordance with PSAS for pension asset accounting. The 2016-17 financial statements include these pension assets, and we continue to apply the accounting treatment of pension

assets that the province has used consistently since 2001. In addition, the 2015-16 financial statements were restated to include these assets.

We respectfully disagree with the Auditor General's interpretation of the accounting standards, as PSAS neither requires unilateral control to record an asset, nor does it include a requirement to obtain a letter from the co-sponsor of the plan agreeing to reduce further contributions within 12 months.

The province will evaluate the need for a valuation allowance annually taking into consideration (a) changes, if any, in the governance structures of the plans, (b), decisions, if any, of the joint sponsors that impact the need for a valuation allowance, and c) changes, if any, in Public Sector Accounting Standards.

The province is open to continue to discuss the matter in the hopes of resolving this matter.

2. Why are you still fighting with the Auditor General over pension accounting?

In preparing last year's Public Accounts, the province's professional accounting staff and the Auditor General's Office engaged in discussions about the appropriate application of Public Sector Accounting Board standards regarding pension accounting for the province's jointly sponsored pension plans.

As a result, the Pension Asset Expert Advisory Panel was established to deliver independent advice and recommendations to the province on the issue. The independent panel members concluded the province's share of the net pension assets of both the Ontario Teachers' Pension Plan and the Ontario Public Service Employees' Union Pension Plan should be recognized in Ontario's financial statements.

After significant deliberation, including consideration of the recommendations of the panel, Ontario confirmed that the accounting for these plans prior to 2015-16 was appropriate. Further, EY provided additional analysis and concluded that no valuation allowance was required for either plan. The 2016-17 financial statements include these pension assets, and the government continues to apply the accounting treatment of pension assets that the province has used consistently since 2001. In addition, the 2015-16 results were restated to include these assets.

The Treasury Board Secretariat will continue to work with the Auditor General to build on the government's track record of responsible fiscal management and high quality financial reporting.

DRAFT

Advisory Panel Compensation

1. **How much did you pay the panel members? Do you think that money was justified?**

   The total cost of the panel was $221,113. This included compensation and travel expenses for the four panelists, as well as procurement. These rates are consistent with the Agencies and Appointments Directive, which specified up to $2,000 per day for appointees with unique and specialized expertise, or urgent issues affecting government priorities and requiring intense time commitments over a short period of time.

   The panel members have expertise in the areas of jointly sponsored pension plan governance, actuarial modelling for pension plans and public sector accounting standards, and provided independent advice on how to move forward with how Public Sector Accounting Board standards should be applied to current and potential future net pension assets.

2. **Why was Patricia O'Malley included in Public Accounts and not the other panel members?**

   Patricia O'Malley was the chair of the independent Pension Asset Expert Advisory Panel (PAEAP), which provided important advice to government on how to account for jointly-sponsored pension plans. She is included in Public Accounts because her compensation for her work on the Panel was above the $50,000 threshold that must be reported in detail in Public Accounts.

   The other members of PAEAP were paid less than the $50,000 minimum threshold in fiscal 2016-17 that requires they be listed in Public Accounts. Their 2016-17 compensation is captured as part of the "Accounts Under $50,000" category.

   As Paul Martin is a member of the New Brunswick Public Service, he did not receive compensation for his role on the panel. He was only eligible for expense reimbursements.

DRAFT

IESO ACCOUNTING

AG Recommendation #2: IESO Market Accounts

Key Messages

- The province consolidates the entities it controls, in accordance with Public Sector Accounting Standards (PSAS) and its internal reporting policies.
- Each consolidated entity produces its own stand-alone financial statements and is subject to its own financial statement audit.
- In 2016, the Independent Electricity System Operator (IESO) changed the accounting for the market accounts and recognized these balances on its financial statements.
- The financial statements of the IESO for the year-ended December 31, 2016 were subject to an external audit and received an unqualified (or clean) opinion.
- The government supports this enhanced reporting and greater transparency for the economic activities of the IESO.
- The province is open to continue to discuss the issue in the hopes of resolving this matter.
- For further details on the province's decision to accept IESO market accounts on the province's consolidated financial statements, I will pass it over to:
    - Cindy Veinot, Provincial Controller
- For further details on the IESO's decision to adopt market accounts, I will pass it over to:
    - Deputy Imbrogno

For QAs related to:	See:
IESO Market Accounts	Ministry of Energy (IESO)

1. **How do you respond to the Auditor General's recommendation that the government remove the Independent Electricity System Operator's (IESO) market accounts from the province's consolidated financial statements?**

   In 2016, the Independent Electricity System Operator (IESO) began recognizing its market accounts' assets (amounts due from power distributors) and liabilities (amounts due to power producers) in its financial results. IESO has chosen to recognize these markets accounts on its books for transparency reasons, as it better reflects the financial position of the IESO-administered markets at year-end. This change was supported by the IESO's audit committee, its independent external auditor, and by the Office of the Provincial Controller. This change also has no impact to the province's annual deficit, net debt or accumulated deficit.

   The financial statements of the IESO for the year-ended December 31, 2016 were subject to an external audit and received an unqualified (or clean) opinion.

DRAFT

This accounting is consistent with the presentation used previously by the Ontario Power Authority (which was merged with the IESO on January 1, 2015) in its financial statements, which was not subject to qualification from the Office of the Auditor General at that time.

AG Recommendation #5: IESO Market Accounts & Rate-Regulated Accounting

Key Messages

- The Independent Electricity System Operator (IESO) intends to continue to prepare its financial statements in accordance with Public Sector Accounting Standards (PSAS), and will report on the results of its accounting firm's audit in its 2017 financial statements, to be published March 30, 2018.
- The IESO will continue to regularly review its accounting policies to ensure they are best suited to the reporting requirements of its business and the users of its financial statements.
- The IESO recognizes the Auditor General's statutory role and authority to perform an audit of the IESO.
- As I understand, the IESO is cooperating with the Office of the Auditor General to provide information, including the 2017 financial statements prepared by management, and for access to management for assistance in understanding such information.
- As I understand, the IESO has also instructed its audit partner to cooperate with the Auditor General's Audit.
- For further details on the province's decision to accept IESO market accounts and rate-regulated accountingI will pass it over to:
    - Cindy Veinot, Provincial Controller
- For further details on the IESO, I will pass it over to:
    - Deputy Imbrogno

For QAs related to:	See:
IESO Market Accounts & Rate-Regulated Accounting	Ministry of Energy (IESO)

3. Does the Independent Electricity System Operator (IESO) use Canadian Public Sector Accounting Standards (PSAS) in the preparation of its financial statements?

Yes. The Independent Electricity System Operator (IESO) prepares its financial statements in accordance with Canadian Public Sector Accounting Standards (PSAS).

DRAFT

The IESO's financial statements are audited by a firm of independent external auditors whose responsibility is to express an opinion on whether the financial statements are fairly presented in accordance with PSAS. The IESO received an unqualified, or clean, audit opinion on its 2016 financial statements.

4. Why is the IESO now including market accounts on its financial statements? Does this go against PSAS?

The Independent Electricity System Operator (IESO) prepares its financial statements in accordance with Public Sector Accounting Standards (PSAS) and the financial statements are audited by a firm of independent external auditors whose responsibility is to express an opinion on whether the financial statements are fairly presented in accordance with PSAS.

In 2016, the Independent Electricity System Operator (IESO) began recognizing its market accounts' assets (amounts due from power distributors) and liabilities (amounts due to power producers) in its financial results. IESO has chosen to recognize these markets accounts on its books for transparency reasons, as it better reflects the financial position of the IESO-administered markets at year-end. On its 2016 financial statements, IESO received an unqualified (clean) audit opinion.

This accounting is consistent with the presentation used previously by the Ontario Power Authority (which was merged with the IESO on January 1, 2015) in its financial statements, which was not subject to qualification from the Office of the Auditor General at that time.

5. The Auditor General says that the IESO's use of rate-regulated accounting is inappropriate. Why has the government allowed the IESO to adopt this accounting method that she says is not in accordance with PSAS?

Canadian Public Sector Accounting Standards (PSAS) are silent on this issue – they neither explicitly permit, nor prohibit, the recognition, measurement, presentation, or disclosure of rate-regulated activities.

In the absence of a clear position on an issue, standard accounting practice dictates that an entity should consult other accounting standards. This guidance for PSAS is included in PS1150.07:

- *No rule of general application can be phrased to suit all circumstances or combinations of circumstances that may arise. As a result, matters may arise that are not specifically addressed in the primary sources of GAAP. It is necessary to refer to other sources when the primary sources do not deal with the accounting and reporting in financial statements of*

transactions or events that a public sector reporting entity encounters, or when additional guidance is needed to apply a primary source to specific circumstances. (Section PS 1150.07 from the PSA Handbook)

In this case, the Independent Electricity System Operator (IESO) consulted U.S. Generally Accepted Accounting Principles (GAAP), the appropriate accounting framework in North America that provides guidance on rate-regulated operations.

The IESO made the decision to adopt rate-regulated accounting because it better reflects the economic substance of certain types of expenses that may not be directly recovered through the normal revenue requirement model.

The IESO management, IESO's Audit Committee, IESO's Board of Directors, IESO's external auditor and the Office of the Provincial Controller all support the use of rate-regulated accounting by IESO.

Many entities in Canada, including Ontario Power Generation (OPG) and Hydro One use rate-regulated accounting. Rate-regulated accounting is well understood in the electricity sector, and the approach selected was taken in that context. The recognition of regulatory assets brings IESO in line with six other independent system operators in North America, including the:

- Alberta Electric System Operator (AESO)
- ISO New England
- New York Independent System Operator (NYISO)
- Midcontinent Independent System Operator (MISO)
- PJM Interconnection LLC and,
- Electric Reliability Council of Texas (ERCOT).

6. Are you concerned that the Auditor General will issue an adverse opinion on the province's next Public Accounts due to Ontario's Fair Hydro Plan accounting? What would be the impact on the province's credit rating?

It would be inappropriate to speculate about how the Auditor General may issue an opinion for Public Accounts next year. The implementation of Ontario's Fair Hydro Plan (OFHP) is ongoing, with significant decisions with accounting and financial implications still being finalized.

The Ministries of Energy and Finance, and the Treasury Board Secretariat continue to work closely with Ontario Power Generation (OPG), the Independent Electricity System Operator (IESO), as well as third-party experts to ensure appropriate due diligence is completed.

DRAFT

The province's financial statements are prepared in accordance with Canadian PSAS and will follow PSAS in accounting for the transactions resulting from OFHP in 2017-18, and in following years.

The financing plan for OFHP and its impact will be transparent. Credit rating agencies, securities regulators, and the public will see full information and full reporting of the impacts of OFHP.

Ontario has a strong track record of producing high-quality financial reports on a timely basis. Ontario will continue to move forward and present the province's finances fairly and accurately and in accordance with PSAS.

AG Audit of 2017 Statements

Key Messages

- The IESO will continue to regularly review its accounting policies to ensure they are best suited to the reporting requirements of its business and the users of its financial statements.
- The IESO recognizes the Auditor General's statutory role and authority to perform an audit of the IESO.
- As I understand, the IESO is cooperating with the Office of the Auditor General to provide information, including the 2017 financial statements prepared by management, and for access to management for assistance in understanding such information.
- As I understand, the IESO has also instructed its audit partner to cooperate with the Auditor General's Audit.

For QAs related to:	See:
Audit of IESO's statements	Ministry of Energy (IESO)

DRAFT

ONTARIO FAIR HYDRO PLAN

AG Recommendation #3: OFHP Accounting

Key Messages

- The province will continue to prepare its consolidated financial statements in accordance with Public Sector Accounting Standards (PSAS).
- The proposed accounting for the Ontario Fair Hydro Plan (OFHP) reflects the economic substance of the transaction by differentiating costs borne by taxpayers versus those borne by ratepayers.
- PSAS is silent on a key accounting issue regarding the OFHP – the standards neither explicitly permit, nor prohibit, the recognition, measurement, presentation, or disclosure of rate-regulated activities.
- In the absence of a clear position on an issue, standard accounting practice dictates that an entity should consult other accounting standards. This guidance for PSAS is included in the Public Sector Accounting Board's guidebook.
- The province's professional staff have appropriately applied this guidance in assessing the accounting for the OFHP.
- For further details on the province's decision to accept OFHP accounting, I will pass it over to:
    - Cindy Veinot, Provincial Controller
- For further details on the OFHP, I will pass it over to:
    - Deputy Imbrogno

For QAs related to:	See:
OFHP Overall, incl. IESO and OPG role	Ministry of Energy

7. Will the government follow Public Sector Accounting Standards (PSAS) for Ontario's Fair Hydro Plan?

The province will prepare its consolidated financial statements in accordance with Public Sector Accounting Standards (PSAS).

The proposed accounting for the Ontario Fair Hydro Plan (OFHP) reflects the economic substance of the transaction by differentiating costs borne by taxpayers versus those borne by ratepayers.

PSAS is silent on a key accounting issue regarding the OFHP – the standards neither explicitly permit, nor prohibit, the recognition, measurement, presentation, or disclosure of rate-regulated activities.

In the absence of a clear position on an issue, standard accounting practice dictates that an entity should consult other accounting standards. This guidance for PSAS is included in PS1150.07:

DRAFT

- *No rule of general application can be phrased to suit all circumstances or combinations of circumstances that may arise. As a result, matters may arise that are not specifically addressed in the primary sources of GAAP. It is necessary to refer to other sources when the primary sources do not deal with the accounting and reporting in financial statements of transactions or events that a public sector reporting entity encounters, or when additional guidance is needed to apply a primary source to specific circumstances. (Section PS 1150.07 from the PSA Handbook)*

The province's professional staff has appropriately applied this guidance in assessing the accounting for the Ontario Fair Hydro Plan.

8. Will the government follow the accounting standards set by historical precedent, as cited by the Auditor General?

The Auditor General's report makes a comparison between Ontario's Fair Hydro Plan (OFHP) and the Ontario Electricity Financial Corporation (OEFC) stranded debt. There are, however, crucial differences between the two.

For example, the OEFC stranded debt had already been incurred when the 1999 restructuring of the former Ontario Hydro took place.

In the case of OFHP, the difference between what will be collected and what will be paid to generators is considered to be an asset in accordance with the accounting definition, as it will generate a specific future revenue stream in the form of the Clean Energy Adjustment, which can be held and realized or can be sold.

It is important to note that the 1999 restructuring led to an "unbundling" of the electricity rate. Prior to the 1999 restructuring and the 2002 market opening, there was a "bundled rate" for electricity that included cost recovery of generation and transmission costs, operating and capital – including debt costs, as well as central market operations costs. Including debt cost recovery and matching the timing of the capital cost recovery with the benefit to the ratepayer is a normal rate-setting regulatory practice. It effectively amortized the cost of the investments in long-lived assets (including debt incurred).

The Debt Retirement Charge (DRC) represented the unbundling of a portion of the debt service costs. It effectively amortized the cost of the investments in long-lived assets (including debt incurred).

The OFHP Global Adjustment deferral is also intended to have costs recovered from specified ratepayers over a time period that better reflects the expected

lives of those assets (versus the contract lengths that may be shorter than the expected useful life of the assets).

The difference between the 1999 restructuring and OFHP is that the DRC continued to pay down, over time, debt that had already been incurred, while under OFHP, an asset is being recorded to reflect a fair allocation of electricity costs between current and future ratepayers.

The intention of OFHP is to be forward-looking, to ensure that ratepayers are sharing current and future costs, whereas the DRC was backward-looking, replacing part of a bundled rate that was already spreading the cost recovery of the debt over time.

9. Will the government implement the recommendations in the Auditor General's Special Report on the Fair Hydro Plan?

While the government does not agree with the assertions and conclusions expressed in the report, the government thanks the Office of the Auditor General for its report.

In developing Ontario's Fair Hydro Plan (OFHP), the government considered a range of implementation options and consulted with legal, accounting, financial and energy sector third-party experts to provide advice and ensure due diligence was completed.

OFHP operates under a financial and accounting framework that is appropriate for the intended purpose. It is in accordance with Public Sector Accounting Standards (PSAS) and ensures the goals underlying the program are achieved in a cost-effective manner.

On the point of "true financial impact":

In order to meet the needs of users, including the legislature and the public, for accountability in government reporting and decision making, it is essential that public sector financial statements reflect the economic substance of the government's activities.

The province's financial statements are prepared in accordance with Canadian PSAS and will follow PSAS in accounting for the transactions resulting from OFHP in 2017-18, and in following years.

As PSAS is set by an independent standard-setting body in Canada focused specifically on the public sector, and because PSAS is used by all senior

DRAFT

governments in Canada, presenting financial statements in accordance with PSAS results in transparent financial reporting for the province of Ontario.

Ontario has a strong track record of producing high-quality financial reports on a timely basis, and will continue to move forward and present the province's finances fairly, accurately and in accordance with PSAS.

On the point of "a financing structure that is the least costly for Ontarians":

The OFHP financing structure has been designed to provide electricity rate relief to current ratepayers, including by more fairly allocating costs for specified consumers, with the Global Adjustment cost amounts still ultimately borne by specified electricity ratepayers, as beneficiaries of those electricity system costs.

The government believes it is appropriate for ratepayers to pay for the financing of electricity assets. Having the rate-base pay is not a new policy, for example Hydro One has borrowed in the capital markets since 2000.

Ontario Power Generation (OPG) was identified as the Financial Services Manager responsible for the financing plans and the financing entity (the Fair Hydro Plan Trust) that will manage the debt obligations. OPG is beginning the process of raising funds to finance the deferred costs, and while total borrowing costs will not be known until the program is complete, accumulated interest is projected to be considerably less than the estimates in the May 2017 report of the Financial Accountability Office (FAO).

The cost analysis in the Office of the Auditor General's report was sourced from the FAO's May 2017 report. Total borrowing estimates over the thirty year life of OFHP have been revised down substantially by the government since the FAO released its report in May 2017, and borrowing costs are now forecast to be substantially lower than original estimates. Recent government estimates forecast that the peak debt over the thirty year life of OFHP will be below $20 billion. The preliminary estimate from March 2017 was about $28 billion.

The province will continue to prepare its consolidated financial statements in accordance with PSAS and continue to build on a track record of responsible fiscal management.

10. The Auditor General says that she has consulted with all of the Auditor Generals in Canada – and they agree with her assessments. How are we supposed to believe this government when all legislative auditors in the country say you are wrong?

DRAFT

In developing Ontario's Fair Hydro Plan, the government considered a range of implementation options and consulted with legal, accounting, financial and energy sector third-party experts to provide advice and ensure due diligence was completed.

PSAS is principle based – the standards are not a set of specific prescriptive rules. Applying them requires the application of professional judgment.

Our professional staff exercises judgment in applying the standards and as necessary consult with external experts and advisors. They provide the Office of the Auditor General with their written analysis on all significant issues that impact the financial statements for the year being audited, and they discuss the issues with the Office of the Auditor General.

All Chartered Professional Accountants (CPAs), including those employed by the Ontario Public Service (OPS), are required to comply with the Code of Professional Conduct for CPAs. One of those rules is that they not be associated with false or misleading information.

That means that if the professional accountants in the OPS do not agree with the judgment of the Ontario Auditor General, it is not as simple as just agreeing to accept the interpretation of the Office of the Auditor General if they believe that interpretation would result in false or misleading financial statements. While we expect professional accountants to agree on the vast majority of issues, we acknowledge that they may not agree on everything and when that occurs, and the difference is material to the financial statements, the Office of the Auditor General can choose to issue a qualified audit opinion.

11. Both the Auditor General and the Financial Accountability Officer have raised serious concerns about the accounting treatment of the electricity cost refinancing initiative. Why should Ontarians believe this government over two independent officers of the Legislature?

The province has the utmost respect for all independent officers of the legislature, and values the important perspective they bring.

In developing the Ontario Fair Hydro Plan, the government considered a range of implementation options and consulted with legal, accounting, financial and energy sector third-party experts to provide advice and ensure due diligence was completed.

OFHP operates under a financial and accounting framework that is appropriate for the intended purpose. It is in accordance with Public Sector Accounting

DRAFT

Standards (PSAS) and ensures the goals underlying the program are achieved in a cost-effective manner.

The province, as always, will prepare its consolidated financial statements in accordance with PSAS and continue to build on its track record of responsible fiscal management.

12. The Auditor General says that you are "obfuscating" the true financial impact of Ontario's Fair Hydro Plan through a "needlessly complex" accounting structure. How do you respond?

In developing Ontario's Fair Hydro Plan (OFHP), the government considered a range of implementation options and consulted with legal, accounting, financial and energy sector third-party experts to provide advice and ensure due diligence was completed.

OFHP operates under a financial and accounting framework that is appropriate for the intended purpose. It is in accordance with Public Sector Accounting Standards (PSAS) and ensures the goals underlying the program are achieved in a cost-effective manner.

OFHP is comprised of a series of policy decisions. The impact of some of these decisions will be borne by the province (taxpayers) where appropriate, such as sales tax relief and shifting social programs to the tax base; some will be borne by ratepayers, such as spreading the investment costs and benefits across ratepayers more fairly.

While the implementation of OFHP is ongoing, with significant decisions with accounting and financial implications still being finalized, the financing plan for OFHP and its impact will be transparent. Credit rating agencies, securities regulators, and the public will see full information and full reporting of the impacts of OFHP.

Ontario has a strong track record of producing high-quality financial reports on a timely basis. Ontario will continue to move forward and present the province's finances fairly and accurately and in accordance with PSAS.

13. How can you justify the $4 billion in additional interest expenses that will be borne by ratepayers because of the way the government has structured electricity cost refinancing (i.e. using Ontario Power Generation to finance 55 per cent, at a higher interest rate than the province, instead of the province financing the entire electricity cost financing)?

DRAFT

Ontario's Fair Hydro Plan (OFHP) is comprised of a series of policy decisions. The impact of some of these decisions will be borne by the province (taxpayers) where appropriate, such as sales tax relief and shifting social programs to the tax base; some will be borne by ratepayers, such as spreading the investment costs and benefits across ratepayers more fairly.

The accounting will reflect the economic substance of the transactions in accordance with Public Sector Accounting Standards (PSAS) and will differentiate those costs of OFHP borne by taxpayers versus those borne by ratepayers.

The Auditor General's report suggests that all the costs of OFHP should be reflected as if they will be borne by taxpayers, which is inaccurate.

Ontario Power Generation (OPG) is beginning the process of raising funds to finance the deferred costs, and while total borrowing costs will not be known until the program is complete, accumulated interest is projected to be considerably less than the estimates in the May 2017 report of the Financial Accountability Officer (FAO).

Total borrowing estimates over the thirty year life of OFHP have been revised down substantially by the government since the FAO released its report in May 2017, and borrowing costs are now forecast to be substantially lower than original estimates. Current government estimates forecast that the peak debt over the thirty year life of OFHP will be below $20 billion. The preliminary estimate from March 2017 was about $28 billion.

For further questions about borrowing estimates, please contact the Ministry of Finance.

14. The AG claims that when the government first gave Ontarians an 8 per cent break on their bills, it was reported on the books properly. She says when it jumped to 25 per cent, the accounting changed. Isn't it obvious that the government is cooking the books to suit their needs?

Ontario's Fair Hydro Plan (OFHP) is comprised of a series of policy decisions.

It is our role as public servants to provide our best advice and due diligence.

As always, the province adheres to Canadian Public Sector Accounting Standards (PSAS) issued by the Public Sector Accounting Board.

The province will continue to follow these standards for the transactions resulting from Ontario's Fair Hydro Plan (OFHP) in 2017-18 and in future years.

It's important to note that while PSAS is the primary source of guidance for the government in the preparation of its financial statements, there are circumstances where governments may refer to other accounting frameworks for guidance where PSAS is silent and does not address specific transactions.

In this case where PSAS is silent on the use of rate-regulated accounting, US accounting standards contain the most developed and appropriate guidance for this transaction.

15. The Auditor General says that even your own government officials flagged the unnecessarily high costs of Ontario's Fair Hydro Plan – and yet you chose to proceed. How can you justify this?

In developing Ontario's Fair Hydro Plan (OFHP), the government considered a range of implementation options and consulted with legal, accounting, financial and energy sector third-party experts to provide advice and ensure due diligence was completed.

Multiple options were considered in creating the OFHP framework – such as to have local distribution centres finance the difference between the amounts paid to the generators and the amounts collected from the ratepayers. This was rejected because of the inability of some local distribution centres to finance the balances.

The implementation of OFHP is ongoing, with significant decisions with accounting and financial implications still being finalized.

Ultimately, OFHP operates under a financial and accounting framework that is appropriate for the intended purpose. It is in accordance with Public Sector Accounting Standards (PSAS) and ensures the goals underlying the program are achieved in a cost-effective manner.

AG Recommendation #6: "Legislated Accounting"

Key Messages

- The province is committed to providing high-quality financial reports that support transparency and accountability in reporting to the public, the legislature, and other users.
- As always, we will prepare the province's consolidated financial statements in accordance with Public Sector Accounting Standards (PSAS), including the transactions resulting from Ontario's Fair Hydro Plan (OFHP).
- For the 2015-16 Public Accounts, the government passed a time-limited regulation prescribing the accounting treatment for net pension assets in order to

DRAFT

allow the Treasury Board Secretariat and the Ministry of Finance officials to sign off on Public Accounts consistent with the fiscal impact of the Auditor General's interpretation of PSAS.

- This regulation is the **only** example of where the accounting treatment was legislated, and the legislation did not align with the requirements with PSAS.
- The *Ontario Fair Hydro Plan Act, 2017* and its related regulations **do not** create accounting rules or legislate the accounting.
- For further details, I will pass it over to:
    - Cindy Veinot, Provincial Controller
- For further details on the OFHP, I will pass it over to:
    - Deputy Imbrogno

For QAs related to:	See:
OFHP Overall, incl. IESO and OPG role	Ministry of Energy

1. **Why has the government legislated accounting for things like Ontario's Fair Hydro Plan? Aren't you just changing the rules to suit your needs?**

   The province is committed to providing high-quality financial reports that support transparency and accountability in reporting to the public, the legislature, and other users.

   For the 2015-16 Public Accounts, the government passed a time-limited regulation prescribing the accounting treatment for net pension assets in order to allow the Treasury Board Secretariat and the Ministry of Finance officials to sign off on Public Accounts consistent with the fiscal impact of the Auditor General's interpretation of Public Sector Accounting Standards (PSAS). This regulation is the **only** example of where the accounting treatment was legislated, and the legislation did not align with the requirements with PSAS.

   The *Ontario Fair Hydro Plan Act, 2017* and its related regulations **do not** create accounting rules or legislate the accounting. It is important to distinguish legislating the accounting from legislating the right of the government to recover amounts from specified ratepayers in the future, which in the absence of legislation, would have been collected from specified ratepayers as the costs were incurred.

   The province, as always, will prepare its consolidated financial statements in accordance with PSAS, including the transactions resulting from Ontario's Fair Hydro Plan.

2. **The Auditor General said that a similar move to legislate accounting to defer costs was proposed with the restructuring of the Ontario electricity**

DRAFT

sector in the late 1990s, but the Auditor General's opinion at that time was that this would represent a departure from a central tenet of generally accepted accounting principles. The government at that time heard these concerns, and made the decision to not create an asset for future anticipated ratepayer payments. Why does the government think this is ok now?

The Auditor General's report makes a comparison between Ontario's Fair Hydro Plan (OFHP) and the Ontario Electricity Financial Corporation (OEFC) stranded debt. There are, however, crucial differences between the two.

For example, the OEFC stranded debt had already been incurred when the restructuring took place.

In the case of OFHP, the difference between what will be collected and what will be paid to generators is considered to be an asset in accordance with the accounting definition, as it will generate a specific future revenue stream in the form of the Clean Energy Adjustment.

It is important to note that the 1999 restructuring led to an "unbundling" of the electricity rate. Prior to the 1999 restructuring and the 2002 market opening, there was a "bundled rate" for electricity that included cost recovery of generation and transmission costs, operating and capital – including debt costs, as well as central market operations costs. Including debt cost recovery and matching the timing of the capital cost recovery with the benefit to the ratepayer is a normal rate-setting regulatory practice.

The Debt Retirement Charge (DRC) represented the unbundling of a portion of the debt service costs. It effectively amortized the cost of the investments in long-lived assets (including debt incurred).

The OFHP Global Adjustment deferral is also intended to have costs recovered from specified ratepayers over a time period that better reflects the expected lives of those assets (versus the contract lengths that may be shorter than the expected useful life of the assets).

The difference between the 1999 restructuring and OFHP is that the DRC continued to pay down, over time, debt that had already been incurred, while under OFHP, an asset is being recorded to reflect a fair allocation of electricity costs between current and future ratepayers.

The intention of OFHP is to be forward-looking, to ensure that ratepayers are sharing current and future costs, whereas the DRC was backward-looking, replacing part of a bundled rate that was already spreading the cost recovery of the debt over time.

DRAFT

AG Recommendation #9: Arm's Length Trusts

Key Messages

- The province works with its transfer payment recipients to ensure it receives good value for the money it provides in the form of grants.
- Government policy on the structured approach to program delivery takes a risk-based approach with respect to transfer payment oversight.
- The province will continue to assess the most appropriate vehicle for meeting its policy objectives, which include appropriate oversight of how transfer payments are spent.
- For more information on arm's length trusts, I will pass it to:
    - Cindy Veinot, Provincial Controller
    - Deputy Imbrogno

For QAs related to:	See:
OPG Accounting/Trust	Ministry of Energy

1. **Will the government avoid establishing arm's length trusts in order to record an expense in its financial statements before it is necessary, given that it loses the ability to ensure funds are provided to the appropriate beneficiaries?**

   The province works with its transfer payment recipients to ensure it receives good value for the money it provides in the form of grants.

   Government policy on the structured approach to program delivery takes a risk-based approach with respect to transfer payment oversight. Grants are provided to thousands of organizations annually that the government deals with at arm's length and is able to demonstrate proper oversight.

   A trust structure was selected to implement the Affordability Fund in order to provide an effective solution to distributing funds to electricity distributors. With approximately 70 distributors across Ontario, it was not feasible for the province to enter into agreements with each distributor.

   The trust structure establishes an independent entity with expertise from the electricity distributor and community sectors.

   While the Affordability Fund was established at arm's length to the government, there are report-back requirements on the use of funds transferred, as well as the

DRAFT

ability for the government to conduct an audit to gain assurance that the funds have been used for the purposes intended.

Records Disclosure/Process

Key Messages

- The province is committed to assisting the Office of the Auditor General so that it can provide its independent views to the Legislative Assembly.
- Senior ministry officials have met and continue to work with the Office of the Auditor General by participating in interviews and providing documentation.

For QAs related to:	See:
MOE Records Disclosure	Ministry of Energy

1. **The Auditor General alleges the government withheld information from her on the accounting treatment for Ontario's Fair Hydro Plan. Why would she say that?**

   The province is committed to assisting the Office of the Auditor General so that it can provide its independent views to the Legislative Assembly.

   The implementation of Ontario's Fair Hydro Plan is ongoing, with significant accounting and financial decisions still being finalized.

   Treasury Board Secretariat has released all requested records.

   Senior ministry officials have met with the Office of the Auditor General by participating in interviews and providing documentation.

   If asked about the Ministry of Energy emails:

   The Ministry of Energy, Finance, and the Treasury Board Secretariat are committed to assisting the Auditor General.

2. **In an email, a TBS official said [___], disagreeing with the government's policy decision. How do you respond?**

   As public servants, it is our role to provide our best advice and conduct our due diligence to inform decision-making. Part of this process includes questioning and deliberations.

DRAFT

The record you are referring to is part of that discussion process, where we as public servants engage in deliberations and explore the options to get to the point of providing our best advice.

It is important to keep in mind that an individual email represents a point in time of the discussion.
That statement is not necessarily representative of the final advice put forward and an endorsement of what the public service has identified as the best approach.

The records must be considered in the context of discussion and deliberation, as an exercise in due diligence, and not as a final endorsement of an option or approach.

3. When does TBS not provide information through a Freedom of Information request?

Since 2015, TBS has been 100 per cent compliant for all Freedom of Information requests it has received.

In some cases, records may contain information that will be withheld in accordance with the legislation, such as personal information about individuals, confidential business information, advice to government or information that is subject to solicitor client-privilege.

Re-Design of Hydro Bills

Hydro Bills	Ministry of Energy

DRAFT

PRE-ELECTION REPORT

AG Recommendation #10: Pre-Election Report on Ontario's Finances

Key Messages

- The province takes the Auditor's recommendations seriously and remains committed to working constructively with the Auditor General.
- The government has not yet made a decision on whether and when to release a Pre-Election report.
- We are engaging with all officers of the legislature to keep them informed and engage constructively on considerations and approaches to ensure the people of Ontario are provided with an independent review of the province's fiscal position in advance of the election.

For QAs related to:	See:
Pre-Election Report	Ministry of Finance (Joint lead with Treasury Board Secretariat)

1. **Will the government issue a regulation confirming the source of reference for the Pre-Election Report and the timeline for issuance of the report that will be subject to the Auditor General's review?**

   Under the *Fiscal Transparency and Accountability Act, 2004*, the government may file a regulation that would require it to release a Pre-Election Report on Ontario's Finances. Should the government file such a regulation, the Auditor General would be required to issue a statement based on a prompt review following the release of such a Pre-Election Report.

   The province remains committed to meeting the legislative requirements of the Act, and working constructively with the Auditor General.

2. **Is the government required to issue a pre-Election Report?**

   Provisions in the Fiscal Transparency & Accountability Act, 2004 (FTAA) allow for – but do not require – a regulation to be filed requiring the release of a Pre-Election Report and a review of that report by the Auditor General.

3. **The Auditor General signalled her readiness to work with the government to examine the pre-election report, why has the government waited this long to engage with the Auditor?**

   The province takes the Auditor's recommendations seriously. The government has not yet made a decision on whether and when to release a Pre-Election

DRAFT

report. We are engaging with all officers of the legislature to keep them informed and engage constructively on considerations and approaches to ensure the people of Ontario are provided with an independent review of the Province's fiscal position in advance of the election.

4. **Minister Sousa recently signalled that the government is not planning on issuing a Pre-Election Report. How do you feel about the government continuing to circumvent the Auditor General and avoiding accountability?**

The province takes the Auditor's recommendations seriously. As I understand, the government has not yet made a decision on whether and when to release a Pre-Election report. We are engaging with all officers of the legislature to keep them informed and engage constructively on considerations and approaches to ensure the people of Ontario are provided with an independent review of the province's fiscal position in advance of the election.

DRAFT

PROVINCE'S FISCAL SITUATION

Recommendation #7: Province's Debt Burden

For QAs related to:	See:
Ontario's Debt Burden	Ministry of Finance

1. **How can your debt reduction plan be trusted if you're not using proper accounting for pension assets and the Fair Hydro Plan?**

   The province is committed to providing high-quality financial reports that support transparency and accountability in reporting to the public, the legislature, and other users.

   The province's financial statements are prepared in accordance with Canadian Public Sector Accounting Standards (PSAS), including the net pension assets for its jointly sponsored pension plans and the transactions resulting from the Ontario Fair Hydro Plan.

   PSAS is set by an independent standard-setting body in Canada focused specifically on the public sector, and is used by all senior governments in Canada.

   PSAS is principle based – the standards are not a set of specific prescriptive rules. Applying them requires the application of professional judgment.

   Our professional staff exercises judgment in applying the standards and as necessary consults with external experts and advisors. They provide the Office of the Auditor General with their written analysis on all significant issues that impact the financial statements for the year being audited, and they discuss the issues with the Office of the Auditor General.

   All Chartered Professional Accountants (CPAs), including those employed by the Ontario Public Service (OPS), are required to comply with the Code of Professional Conduct for CPAs. One of those rules is that they not be associated with false or misleading information.

   That means that if the professional accountants in the OPS do not agree with the judgment of the Ontario Auditor General, it is not as simple as just agreeing to accept the interpretation of the Office of the Auditor General if they believe that interpretation would result in false or misleading financial statements. While we expect professional accountants to agree on the vast majority of issues, we acknowledge that they may not agree on everything and when that occurs, and the difference is material to the financial statements, the Office of the Auditor General can choose to issue a qualified audit opinion.

DRAFT

Financial Accountability Office Reports

For QAs related to:	See:
FAO Reports	Ministry of Finance

Credit Ratings

For QAs related to:	See:
Credit Ratings	Ministry of Finance

1. **Does a qualified opinion from the Auditor General impact the province's credit rating?**

   The province's financial results show that the government has beaten its annual deficit targets. In April 2017, Ontario delivered its first balanced budget since the global recession and is on track to do so again next year and the year after.

   The rating agencies will assess whether the underlying factors that lead to a qualified opinion directly affect the creditworthiness of the province. However, there were no credit rating implications in 2016 when the province received a qualified audit opinion on its 2015-16 Public Accounts. Qualified opinions by the Auditor Generals of British Columbia and Quebec have been made in their respective provinces in the past, with no negative impacts on their province's credit ratings.

DRAFT

PREPARATION OF PUBLIC ACCOUNTS

AG Recommendation # 4: External Advisors

Key Messages

- The Treasury Board Secretariat (TBS) will continue to take a proactive approach to raising issues with the Office of the Auditor General.
- The province's use of external expertise for accounting and financial reporting matters supplements its own resources on complex or emerging accounting and reporting matters.
- External advisors are generally engaged to provide advice and guidance to supplement internal analysis, and in the normal course of business.
- When required by the Chartered Professional Accountants Ontario Code of Professional Conduct, the Office of the Auditor General has been, and will continue to be, advised of external advisor involvement.

For QAs related to:	See:
Ministry use of external advisors	Ministry of Energy Ministry of Finance

1. **Will the government provide copies of contracts it enters into for accounting advice to the Auditor General?**

   The province's use of external expertise for accounting and financial reporting matters supplements its own resources on complex or emerging accounting and reporting matters.

   External advisors are generally engaged to provide advice and guidance to supplement internal analysis, and in the normal course of business.

   The province is committed to working with the Office of the Auditor General to discuss issues, once the professional staff has completed its analysis of the issue.

   When required by the Chartered Professional Accountants Ontario Code of Professional Conduct, the Office of the Auditor General has been, and will continue to be, advised of external advisor involvement.

2. **Will the government build into its contracts with external advisors a requirement to notify the Auditor General of their engagement?**

   When required by the Chartered Professional Accountants Ontario Code of Professional Conduct, the Office of the Auditor General has been, and will continue to be, advised of external advisor involvement.

DRAFT

3. **Why does the government use external advisors/consultants? It seems convenient that whenever you disagree with the Auditor General, you turn to consultants to justify your accounting methods.**

   The government has a strong track record of producing high-quality financial reports on a timely basis and continues to present the province's finances fairly and accurately and in accordance with Canadian Public Sector Accounting Standards.

   The government's use of external expertise for accounting and financial reporting matters is a normal course of business and supplements its own resources on complex or emerging accounting and reporting matters.

   External advisors are generally engaged to provide advice and guidance to supplement internal analysis.

4. **It seems like you use consultants to circumvent the Auditor General, when it looks like she may disagree with your accounting methods. Why don't you let the Auditor General know when you're using external advisors for something that impacts her Office's ability to do their job?**

   The government's use of external expertise for accounting and financial reporting matters is a normal business practice and supplements its own resources on complex or emerging accounting and reporting matters.

   External advisors are generally engaged to provide advice and guidance to supplement internal analysis. The professional staff takes responsibility for the final decisions that are made with respect to the application of PSAS to the government's transactions.

   The province is committed to working with the Office of the Auditor General to discuss issues, once the professional staff has completed its analysis of the issue.

   When required by the Chartered Professional Accountants Ontario Code of Professional Conduct, the Auditor General has been, and will continue to be, advised of external advisor involvement.

5. **Are you going to hire an expert advisory panel, as you did on the pension asset accounting matter, to settle this dispute with the Auditor General? If so, what authority would this panel have?**

DRAFT

There are no plans to establish a panel at this time.

In developing Ontario's Fair Hydro Plan (OFHP), the government considered a range of implementation options and consulted with legal, accounting, financial and energy sector third-party experts to provide advice and ensure due diligence was completed.

The province will continue to work with the Auditor General to build on the government's track record of responsible fiscal management and high quality financial reporting.

6. Can you tell us how many consultants are being paid high salaries with public money while keeping themselves off the sunshine list?

The government continues to strengthen Ontario's efforts to become the most open, transparent and digitally connected government in Canada.

Disclosure of an individual's salary information outside of the Public Sector Salary Disclosure Act list is governed by the Freedom of Information and Protection of Privacy Act. Accordingly any such disclosure would only be made in compliance with the requirements of that Act.

Questions about specific public sector organizations should be directed to the organization or ministry responsible for it.

7. How much did the Treasury Board Secretariat spend on consultants?

The Treasury Board Secretariat (TBS) spent approximately $202 million in 2016-17 on consulting services:

- $167M is procured by IT Source, Central Agencies Cluster for Ontario Public Service (OPS) ministries. TBS has an enterprise role of procuring task-based IT consulting services on behalf of other ministries.
- $36M is services procured by TBS programs primarily for IT enhancement, management and other consulting services.

Consultants are used in the OPS when the organization needs to gain external advice and specialized expertise not already available in the OPS, or for short-term and non-recurring projects and initiatives.

TBS has an enterprise role of procuring task-based IT consulting services on behalf of other ministries as a cost-saving strategy.

DRAFT

Whenever the OPS need IT consulting services, the first thing we do is look for expertise within the organization. The government turns to IT consultants when it doesn't have the expertise in house, when it needs to gain external advice and specialized expertise, or when the need is short-term and non-recurring. This is true for one-time projects that launch new programs or when Cyber Security staff combine with external experts to carry out Threat Risk Assessments to ensure personal information is safe.

AG Recommendation #8: Timeline of Finalization of Financial Statements

Key Messages

- The Treasury Board Secretariat and the Ministry of Finance are supportive of the timely delivery of Public Accounts.
- The Office of the Provincial Controller works closely with the Office of the Auditor General to identify audit issues early and to ensure that stakeholders are engaged in discussions regarding risks and resolution.
- Planning discussions for the 2017-18 Public Accounts have begun between the Office of the Provincial Controller and the Office of the Auditor General.
- As well, the Office of Economic Policy has been engaged in discussions on risk considerations related to economic models used to estimate personal and corporate tax revenues.
- For further details, I will pass it over to:
    - Karen Hughes, Associate Deputy Minister, Office of the Treasury Board
    - Deputy Thompson

For QAs related to:	See:
Finalization of Financial Statements – Tax Revenues	Ministry of Finance

1. **Will the government improve its planning across stakeholders so that the province's consolidated financial statements are finalized earlier?**

   The Treasury Board Secretariat and the Ministry of Finance are supportive of the timely delivery of Public Accounts.

   The Office of the Provincial Controller works closely with the Office of the Auditor General to identify audit issues early and to ensure that stakeholders are engaged in discussions regarding risks and resolution.

   The Office of the Provincial Controller will continue to collaborate with the Office of the Auditor General to support the timely delivery of the Public Accounts.

   Planning discussions for the 2017-18 Public Accounts have begun between the

Office of the Provincial Controller and the Office of the Auditor General. As well, the Office of Economic Policy has been engaged in discussions on risk considerations related to economic models used to estimate personal and corporate tax revenues.

2. What will the government do to figure out estimation risks associated with corporate tax and personal income tax revenues earlier?

The Treasury Board Secretariat and the Ministry of Finance are supportive of the timely delivery of Public Accounts.

The province will work with the Canada Revenue Agency (CRA) on the Auditor General's recommendation, as reporting personal and corporate taxation revenues is highly dependent on the information from the CRA.

Planning discussions for the 2017-18 Public Accounts have begun between the Office of the Provincial Controller and the Office of the Auditor General. As well, the Office of Economic Policy has been engaged in discussions on risk considerations related to economic models used to estimate personal and corporate tax revenues.

Adverse or Qualified Audit Opinion

Key Messages

- It would be inappropriate to speculate about how the Auditor General may issue an opinion for Public Accounts next year.
- The province's financial statements are prepared in accordance with Canadian Public Sector Accounting Standards (PSAS).
- As PSAS is set by an independent standard-setting body in Canada focused specifically on the public sector, and because PSAS is used by all senior governments in Canada, presenting financial statements in accordance with PSAS results in transparent financial reporting for the province of Ontario.
- PSAS are principle based -- they are not a set of specific prescriptive rules. Applying them requires the application of professional judgment.
- Our professional staff exercises judgment in applying the standards and as necessary consult with external experts and advisors.
- They provide the Office of the Auditor General with their written analysis on all significant issues that impact the financial statements for the year being audited, and they discuss the issues with the Office of the Auditor General.
- For further details, I will pass it over to:
    - Cindy Veinot, Provincial Controller

1. **The Auditor General says that you anticipated the government would receive a qualified audit opinion – and accepted this risk. In the private sector this would be unacceptable. How do you figure you can get away with this?**

   The province's financial statements are prepared in accordance with Canadian Public Sector Accounting Standards (PSAS).

   As PSAS is set by an independent standard-setting body in Canada focused specifically on the public sector, and because PSAS is used by all senior governments in Canada, presenting financial statements in accordance with PSAS results in transparent financial reporting for the province of Ontario.

   PSAS are principle based -- they are not a set of specific prescriptive rules. Applying them requires the application of professional judgment.

   Our professional staff exercises judgment in applying the standards and as necessary consult with external experts and advisors. They provide the Office of the Auditor General with their written analysis on all significant issues that impact the financial statements for the year being audited, and they discuss the issues with the Office of the Auditor General.

   All Chartered Professional Accountants (CPAs), including those employed by the Ontario Public Service (OPS), are required to comply with the Code of Professional Conduct for CPAs. One of those rules is that they not be associated with false or misleading information.

   That means that if the professional accountants in the OPS do not agree with the judgment of the Ontario Auditor General, it is not as simple as just agreeing to accept the interpretation of the Office of the Auditor General if they believe that interpretation would result in false or misleading financial statements. While we expect professional accountants to agree on the vast majority of issues, we acknowledge that they may not agree on everything and when that occurs, and the difference is material to the financial statements, the Office of the Auditor General can choose to issue a qualified audit opinion.

2. **Are you concerned that the Auditor General will issue an adverse opinion on the province's next Public Accounts due to Ontario's Fair Hydro Plan accounting?**

   It would be inappropriate to speculate about how the Auditor General may issue an opinion for Public Accounts next year. The implementation of Ontario's Fair

DRAFT

Hydro Plan (OFHP) is ongoing, with significant decisions with accounting and financial implications still being finalized.

The Ministries of Energy and Finance, and the Treasury Board Secretariat continue to work closely with Ontario Power Generation (OPG), the Independent Electricity System Operator (IESO), as well as third-party experts to ensure appropriate due diligence is completed.

The province's financial statements are prepared in accordance with Canadian PSAS and will follow PSAS in accounting for the transactions resulting from OFHP in 2017-18, and in following years.

The financing plan for OFHP and its impact will be transparent. Credit rating agencies, securities regulators, and the public will see full information and full reporting of the impacts of OFHP.

Ontario has a strong track record of producing high-quality financial reports on a timely basis. Ontario will continue to move forward and present the province's finances fairly and accurately and in accordance with PSAS.

3. The Auditor General has issued a qualified opinion for the second year in a row. Is this a sign of fiscal mismanagement?

TBS leads the overall Public Accounts process. Public Accounts is a major accountability document which presents the financial statements of the province, provides financial highlights of the past fiscal year, and reports on performance against the goals set out in the Budget.

TBS continues to move forward and present the province's finances fairly and accurately and in accordance with Canadian Public Sector Accounting Board standards. Ontario has a strong track record of producing high-quality financial reports on a timely basis. The Auditor General's qualified opinion is based on a different interpretation of Public Sector Accounting Board standards for net pension assets and recognition of market accounts.

Last year there was a disagreement among the province's professional accounting staff and the Auditor General's Office on the appropriate application of Public Sector Accounting Board standards regarding pension accounting. As a result, the Pension Asset Expert Advisory Panel was established to deliver independent advice and recommendations on the issue to the province.

The independent panel members concluded the province's share of the net pension assets of both the Ontario Teachers' Pension Plan and the Ontario

Public Service Employees' Union Pension Plan should be recognized in Ontario's financial statements.

After significant deliberation, including consideration of the recommendations of the panel, Ontario confirmed that the accounting for these plans prior to 2015-16 was appropriate, and are prepared in accordance with public sector accounting standards for pension asset accounting. Further, EY provided additional analysis and concluded that no valuation allowance was required for either plan as of March 31, 2017. The 2016-17 financial statements include these pension assets, and TBS continues to apply the accounting treatment of pension assets that the province has used consistently since 2001. In addition, the 2015-16 financial statements were restated to include these assets.

This year the Independent Electricity System Operator (IESO) began recognizing its market accounts' assets (amounts due from power distributors) and liabilities (amounts due to power producers) in their financial results. IESO has chosen to recognize these markets accounts on its books for transparency reasons, as it better reflects the financial position of the IESO-administered markets at year-end. This change was supported by the IESO's audit committee, its independent external auditor, and finally by the Office of the Provincial Controller. This change also has no impact to the province's annual deficit, net debt or accumulated deficit.

This accounting is consistent with the presentation used previously by the Ontario Power Authority (which was merged with the IESO on January 1, 2015) in its financial statements, which was not subject to qualification from the Office of the Auditor General at that time.

2016-17 Overall Accounting Changes

1. **Why have you restated prior year's financial statements?**

   When preparing the 2016-17 Public Accounts, Ontario's professional accounting staff adopted accounting changes to further enhance accountability and transparency.

   These changes include:

   a. **A change in the presentation of accounting for hospitals, school boards and colleges** - third-party revenues (i.e. tuition fees, patient fees, research grants and donations) are now reported together with provincial revenue. This change increases transparency and is supported by the Auditor General.
   b. **The adoption of International Financial Reporting Standards as the basis for accounting for energy sector government business enterprises** - the financial results of investments in Hydro One and Ontario Power Generation (OPG) now reflect International Financial Reporting

DRAFT

Standards. Previously, these results were reported using U.S. Generally Accepted Accounting Principles. This change was made to meet Public Sector Accounting Board standards and is supported by the Auditor General.

c. **Accounting for market accounts by Independent Electricity System Operator (IESO)** - the IESO has adopted rate-regulated accounting, and is now recognizing its market accounts assets and liabilities in its financial results.
d. **Accounting for net pension assets of jointly sponsored pension plans** - the province is reporting net pension assets for jointly sponsored pension plans. This is in line with Public Sector Accounting Board standards and the recommendations of the independent Pension Asset Expert Advisory Panel.

2. Spending for hospitals, school boards and colleges seems to be much higher in Public Accounts than in the 2017 Budget. Why is this?

To increase transparency, in 2016-17 we have made a simple change to how we are reporting third party revenues for broader public sector organizations.

For the first time, Public Accounts are presenting third party revenues for hospitals, school boards and colleges with provincial revenue. Third party revenues earned by these organizations, such as tuition fees, patient fees, research grants and donations, are no longer netted against the respective sectors' expenses, as they were in prior years for Public Accounts and the 2017 Budget.

This is simply a presentation change for Public Accounts. It is fiscally neutral, i.e. there is no change to the annual deficit, net debt or accumulated deficit. To ensure consistency in year-to-year and to Budget comparisons, we are reclassifying all previous years and the 2016 Budget. The 2017 Fall Economic Statement and 2018 Budget will also reflect this presentation change.

The Auditor General supports the province's decision to adopt this presentation change. It is consistent with the accounting principles for governments issued by the Public Sector Accounting Board, and the reporting practices of other senior Canadian governments.

3. What is consolidated reporting?

The Province's consolidated financial statements are presented on a consolidated basis, meaning that the Statement of Financial Position (or balance sheet) and the Statement of Operations (or statement of revenues and expenses) reflect the combination of ministry results as well as the financial

DRAFT

results for organizations that are controlled under the guidance established under PSAS.

Prior to 2016-17, the Province reported the expenses and third-party revenues of hospitals, colleges and school boards on a net basis. This was changed for 2016-17 to reflect expenses and third-party revenues as separate items (on a gross basis), as opposed to being reported together (on a net basis).This affects what you see for the expense reported for the responsible ministries (Health and Long-term Care, Education and Advanced Education and Skills Development) and the breakdown of figures for hospitals, school boards, and colleges. However this has no impact to the annual deficit, net debt or accumulated deficit.

Line-by-line consolidated reporting is in keeping with Public Sector Accounting Board standards and will mean that our presentation for Public Accounts is consistent with other governments across Canada. The Auditor General is supportive of this change.

4. Why is there a change to the accounting for Ontario Power Generation (OPG) and Hydro One?

In the 2016-17 Public Accounts, the financial results of Ontario's investments in Hydro One and Ontario Power Generation (OPG) now reflect International Financial Reporting Standards (IFRS). Previously, these results were reported using U.S. Generally Accepted Accounting Principles. This change was made to meet Public Sector Accounting Board requirements and is supported by the Auditor General.

This change has resulted in an adjustment to the opening accumulated deficit and net debt of $1,163 million, of which $683 million relates to transition to IFRS. The impact of this change to the annual deficit is not material to the province in 2016-17.

DRAFT

OTHER

1. **How does the Treasury Board Secretariat ensure transparency and accountability in financial reporting?**

   The province continues to strengthen its financial management, ensure clear and consistent accounting practices, enhance oversight and accountability and provide better data and information to the public through more channels.

   The Office of the Provincial Controller Division (OPCD) plays a key role in ensuring this transparency and accountability in the province's financial reporting through its major functions, including:
   - Providing the Ontario Public Service (OPS) and Broader Public Sector with accounting and financial management policy and controllership advice;
   - Maintaining the Public Accounts and preparing the Annual Report and Consolidated Statements and the Public Sector Salary Disclosure;
   - Liaising with the Auditor General of Ontario, as well as other jurisdictions and the Chartered Professional Accountants of Ontario and Canada, on the development of government accounting standards;
   - Supporting the development of financial management and controllership capacity across the OPS; and,
   - Supporting the modernization of government by improving the efficiency, effectiveness, and integrity of its financial systems and processes.

   Treasury Board Secretariat (TBS) also works with the Ministry of Finance to help them prepare key documents like the Budget and the Fall Economic Statement.

   TBS does have a leadership role on some financial items like Public Accounts. But for other things, TBS is mostly in a support role.

   TBS collaborates with other senior level governments to assess the impact of proposed standards by the Public Sector Accounting Board and how specific transactions are reported within the accounting frameworks.

2. **Does the province direct organizations on what accounting standards to use or how to apply them?**

   Placeholder

DRAFT

Executive Compensation

1. **How can you justify the exorbitant salaries paid to Hydro One executives when families are struggling to pay their hydro bills?**

   The province remains committed to ensuring transparency and accountability in how broader public sector employers manage executive compensation.

   However, Hydro One is now a publicly traded company, and decisions regarding compensation are not made directly by the government.

   For further questions about executive compensation and oversight of specific organizations, please contact the ministry responsible.

2. **Why are Hydro One employees not captured by the Sunshine List? MPP Todd Smith is demanding that the government add Hydro One employees back onto the list. Will you do this?**

   Only public sector employees are included on the Sunshine List.

   As a publicly-traded entity, Hydro One is no longer required to report salaries or benefits earned after December 31, 2014 under the PSSDA.

   However, similar to the Ontario Securities Commission requirements, Hydro One must disclose the total compensation levels of the CEO, CFO and three other highest-paid executives of the corporation each year. This information is available to the public online. Top executive salaries are posted on SEDAR in the Management Information Circular.

   As an Ontario Business Corporation Act (OBCA) company subject to Canadian Securities law, Hydro One continues to comply with rigorous governance requirements that include:

   - Disclosure of board-approved annual financial statements along with quarterly updates;
   - CEO and CFO Certifications and Associated Controls certifying that there are no misrepresentations in the annual or quarterly materials;
   - Shareholders' meetings requirements and rules;
   - Disclosure requirements with respect to management circulars (including information about senior management, such as share ownership, any indebtedness to the company and any interest in material transactions) as well as compensation circulars (executive compensation disclosures including shares awarded, perks and incentives).

DRAFT

3. How do you justify the upward trend of public sector employees making more than $100,000 across all sectors in 2016?

Overall, for 2016 the total number of employees disclosed in the Compendium has increased by 6.6%, to 123,410 employees in 2016 from 115,746 in 2015.

There are a number of reasons why employees may appear on the list, including:

- Employees who are progressing in their career to more challenging positions;
- Natural progression through salary ranges;
- Overtime payments;
- Retroactive pay awards;
- Performance payments; and,
- Payments that may be required on retirement (e.g. to reimburse the employee for unused vacation credits).

In addition, there were some payouts that impacted the 2016 salaries for reported employees, including an increase to base salaries for non-bargaining employees paid as a retroactive lump sum in December 2016 and an arbitration award which provided retroactive pay to members of the OPP.

The $100,000 threshold has not changed since the Public Sector Salary Disclosure Act was enacted in 1996 and has not been adjusted to keep up with inflation. If the salary threshold was adjusted for inflation, it would be $149,424 in today's dollars, reducing the number of employees included in the compendium by 84%.

The government is committed to providing high-quality public services and values the hard work of its dedicated public servants. The employees on this list:

- Deliver key government services;
- Make sure Ontario's food and water is safe;
- Make sure quality health care is available to every resident in the province;
- Make sure quality education is available to every child in the province;
- Make sure Ontario's roads and workplaces are safe; and,
- Bring jobs and investment into Ontario.

The province needs to pay salaries which are competitive in order to attract and retain top talent to deliver quality public services.

4. Who were the top 10 employees on the entire list and what were their salaries?

The top 10 earners all work largely in the health sector and in Ontario Power Generation. These people all hold executive positions:
- 6 of the 10 are in the health sector;
- 2 are from Ontario Power Generation;
- 1 is at the University of Toronto; and,
- 1 is at the Ontario Pension Board.

Questions about specific public sector organizations should be directed to the organization or ministry responsible for it.

5. **We learned that the president of OPG, who was the top earner on the province's payroll in 2016, actually made $700,000 more than the sunshine list that was disclosed earlier this year. The difference was a bonus that showed up on OPG's books, but was suspiciously left off the government's books. How many more six-figure bonuses has the President of the Treasury Board hidden from the people of Ontario?**

   The province continues to strengthen Ontario's efforts to become the most open, transparent and digitally connected government in Canada.

   Disclosure of an individual's salary information outside of the Public Sector Salary Disclosure Act list is governed by the Freedom of Information and Protection of Privacy Act. Accordingly any such disclosure would only be made in compliance with the requirements of that Act.

   For 2016, the Treasury Board Secretariat as a ministry reported 996 employees compared to 875 in 2015, an increase of 13.8%. The number increased primarily due to compensation changes, retirement pay-outs, severance payments, overtime and reorganizations.

   The $100,000 threshold has not changed since the Public Sector Salary Disclosure Act was introduced in 1996. In today's money the threshold would be $149,424 and would include only 56 (5.6%) of the 996 TBS employees on this year's list and exclude 940 (94.4%).

   Questions about specific public sector organizations should be directed to the organization or ministry responsible for it.

6. **How does this government allow salaries that are completely excessive when the average Ontarian can't afford their hydro bill/is working twice as hard because of government cuts/is not part of this millionaire's club?**

DRAFT

In the 2017 Budget, the government announced that it will continue to take a balanced approach to managing compensation. This approach will recognize the need to maintain a stable, flexible and high-performing public-sector workforce that supports the government's transformational priorities and at the same time ensures that public services continue to remain affordable.

A result of recent efforts to reduce spending through compensation restraint and program transformation, the government has delivered on its commitment to balance the budget by 2017-18, while making program spending more sustainable and also protecting the important public services that Ontarians rely on.

A balanced approach to compensation recognizes the need to attract and retain talented leaders and individuals to ensure a modern, sustainable, and inclusive Ontario Public Service, while also remaining competitive with public sector peers.

To this end, the province will continue to provide effective and affordable public services, while recognizing the need for fair compensation.

Government Advertising

1. **How can you justify spending $5.5 million on self-congratulatory advertising for Ontario's Fair Hydro Plan?**

   Ontario is the first and only jurisdiction in Canada to have legislation that bans government-paid partisan advertising in newspapers, magazines, billboards, radio, and television.

   Ontario needs government advertising that is appropriate, reasonable and effective because the public has a right to know how public money is being spent, and why the government is bringing forward policy changes.

   At this time, I would like to clarify that the Treasury Board Secretariat is *not* responsible for individual line ministry advertising campaigns, and does not determine how much funding is allocated to any campaign.

   For further questions about specific advertisements or advertising campaigns, please contact the ministry responsible.

2. **For the Hydro Bill partisan inserts – the Auditor General points out that "addressed mail" is non-reviewable (i.e., something was sent to a household by name) as compared to bulk mail which is reviewable. Will you continue to overlook this loophole so that public money can be used to send partisan messages directly to Ontarians?**

DRAFT

Ontario is the first and only jurisdiction in Canada to have legislation that bans government-paid partisan advertising in newspapers, magazines, billboards, radio, and television.

This legislation was introduced in 2004 to prevent government use of taxpayer dollars for partisan advertising.

Ministries still abide by the principles of the Government Advertising Act in all paid advertising, whether it goes to the Office of the Auditor General or not.

SCENARIO QUESTIONS

Speculation

1. **What do you think the intentions of the government were when they…**

   As a public servant, it would be inappropriate for me to speculate on the intentions of the government.

   We provide neutral advice to support decision-making.

2. **What do you think the Auditor General will do…**

   It would be inappropriate for me to speculate on how the Auditor General may issue a future opinion.

3. **Other requests for speculation…**

   I'm not able to comment on something that may or may not happen.

   I'm happy to speak to the contents of chapter two of the Auditor General's report.

Cabinet Confidential

1. **Can you tell us about the advice you provided to the government…**

   I am unable to speak to the advice that was provided, as this would be considered confidential advice provided to Cabinet.

Confidential

DRAFT

1. **Can you tell us about the advice you provided to your minister…**

   I believe this matter could be considered confidential advice provided. I would be happy to look into this matter further to clarify the scope of confidentiality and provide a written response back to the Committee.

Insisting a Specific Official Answer

1. **I do not want [____] to answer, I want to hear the response from you.**

   I am happy to provide a response to the question in my role as a public servant for the Treasury Board Secretariat.

   [Provide response as within your position's scope.]

   I cannot speak to the specific point you are raising, and as mentioned, [____] would be more appropriate to respond.

   What I can tell you is [____]

Insisting on Commitment

1. **Can you give us an exact figure on…**

   I want to be absolutely precise and specific, so I will need to get back to you with the exact number.

Politicization

1. **Why did the government make [____] decision?**

   As a public servant, it would be inappropriate for me to speculate on the intentions of the government.

   It is our role to provide our best, objective advice to support government decision-making.

2. Will the government issue a regulation confirming the source of reference for the Pre-Election Report and the timeline for issuance of the report that will be subject to the Auditor General's review?

Under the *Fiscal Transparency and Accountability Act, 2004*, the government may file a regulation that would require it to release a Pre-Election Report on Ontario's Finances. Should the government file such a regulation, the Auditor General would be required to issue a statement based on a prompt review following the release of such a Pre-Election Report.

The government remains committed to meeting the legislative requirements of the Act, and working constructively with the Auditor General.

DRAFT

PROVINCE'S FISCAL SITUATION

Recommendation #7: Province's Debt Burden

- The balanced budgets from 2017–18 onwards will limit the increase in net debt-to-net investments in capital assets. These investments will contribute to the economy growing at a faster rate than net debt, allowing the government to reduce Ontario's net debt-to-GDP ratio to its pre-recession level of 27 per cent.
- There is a strong demand for Ontario bonds in both the domestic and international markets. Last fiscal year, Ontario was able to borrow $27 billion in long-term debt while our spread — or the margin that we have to pay over the equivalent Government of Canada bond — tightened, indicating an ongoing strong demand for Ontario bonds.
- We expect that the liquidity of Ontario benchmark bonds, and continuing confidence in the value of Ontario debt, will allow us to cost-effectively complete the 2017–18 borrowing program.

3. What is the government doing to manage the province's debt burden?

The very important first step in reducing debt is to balance the budget. We are projecting a balanced budget for 2017-18, delivering on a commitment first introduced in the 2010 Budget.

As the result of a balanced budget, and Ontario's strong economic growth, the net-debt-to-GDP ratio is declining.

The government has set an interim net debt-to-GDP ratio target of 35 per cent by 2023–24, and continues to maintain a target of reducing the net debt-to-GDP ratio to its pre-recession level of 27 per cent, currently projected to be achieved by 2029–30.

4. What is the status of the province's borrowing plan?

Through prudent and cost-effective debt management, we have consistently kept interest on debt costs below budget projections. Interest on debt to revenue is forecast to be 8.2 per cent in 2017-18, 8.3 per cent in 2018-19 and 8.4 per cent in 2019-20.

Term extension has allowed us to take advantage of and lock in low interest rates for a longer period, which reduces refinancing risks and helps offset the impact of expected higher interest rates on interest on debt costs.

As of January 31, 2018, $28.6 billion (or 111 per cent) of this year's long-term public borrowing of $25.8 billion has been completed.

DRAFT

Financial Accountability Office (FAO) Reports

5. What is the government's response to the FAO's fall 2017 report, which states that the government will run a deficit in 2017-18 and the following years?

Ontario's deficit for 2016-17 was $991 million — $3.3 billion lower than projected in the 2016 Budget and $0.5 billion lower than the interim projection in the 2017 Budget, according to public accounts.

The Ministry of Finance is projecting a balanced budget in 2017-18. The Ministry of Finance is committed to a responsible fiscal plan. We build prudence into our forecasts.

Since the time of the 2017 Budget, private sector forecasters have revised up their economic growth projections for Ontario over the 2017-20 period, reflecting the strength in the Ontario economy.

Using the government's accounting presentation (i.e. excluding the AG's recommended treatment), the FAO is projecting a small surplus in 2017-18.

6. Why are the FAO's revenue forecasts lower than the government's revenue forecasts?

The government is projecting total revenue to grow from $140.7 billion in 2016–17 to $158.2 billion in 2019–20. This represents an average annual growth rate of 4.0 per cent.

Growth in revenues over the medium term is driven mainly by taxation revenue which is projected to increase by $15.6 billion between 2016–17 and 2019–20, or at an average annual rate of 5.2 per cent. The projected taxation revenue growth aligns with growth actually experienced in recent years, and projections for the Ontario economy.

Credit Ratings

- Ontario currently maintains a double-A rating with three of its four credit rating agencies.
- We continue to update the rating agencies on a regular basis on economic and fiscal developments.

7. What are the credit rating agencies' views on Ontario?

Following the release of the 2017 Budget, all four rating agencies — Moody's, DBRS, Fitch, and S&P — confirmed Ontario's long-term credit ratings.

This reflects rating agencies' confidence in our government's fiscal plan.

DRAFT

8. How have rating agencies responded to the qualified opinion on the public accounts and the recent report from the Auditor General?

The rating agencies make their own assessment of the Province's finances.

However, there were no credit rating implications either this year or last when the government received a qualified audit opinion on its Public Accounts.

LONG-FORM MEMBER QUESTION

DEPUTY MINISTER HELEN ANGUS

&

KAREN HUGHES, ASSOCIATE DEPUTY MINISTER

PUBLIC ACCOUNTS PROCESS

QUESTION

- One of the recommendations in the Auditor General's report is that the Office of the Provincial Controller should "undertake thorough planning involving all stakeholders, including Treasury Board Secretariat, ministries and provincial government agencies" to allow the Office of the Provincial Controller to release Public Accounts earlier than the usual late August or September.
- I am curious about what releasing Public Accounts earlier would take on the part of the government.
- I know that the process requires a lot of work on the part of many people, although I'm not necessarily clear on the mechanics of putting the Public Accounts together.
- So, could you outline what the process is of putting Public Accounts together every year?

LONG-FORM MEMBER QUESTION: BALANCED BUDGET

DEPUTY MINISTER SCOTT THOMPSON

Question:

- How is Ontario planning to keep a balanced budget?

Answer:

- TBD: Revisions based on updates related to Q3 Finances once available
- My ministry has been working to execute the government's goal of balancing the budget.
- This started with a plan that was first introduced in the *2010 Budget*, when the province started to recover from the recession.
- Ontario today is projecting a balanced budget for 2017–18 and for the next two years, 2018–19 and 2019–20.
- A balanced budget makes available more investment options to spur economic growth and job creation, and helps protect the programs and services people rely on most, such as health care and education.
- Ontario's plan has five main areas of focus:
    - Maximizing revenues without causing undue tax burdens on Ontarians
    - Managing its expenses without detracting from the quality of social services and health programs
    - Balancing revenues and expenses against each other to manage the debt
    - Funding programs that help Ontarians, and
    - Investing in infrastructure to promote economic growth and job creation.

- I will now address each area in turn.

DRAFT

Revenues:

- The 2016–17 Public Accounts show that Ontario's deficit for last year was $991 million — $3.3 billion lower than projected in the 2016 Budget and $0.5 billion lower than the interim projection in the 2017 Budget.
- Fiscal 2016–17 was the eighth year in a row that the Province has beaten its deficit target.
- This was a result of growth in revenue that exceeded growth in program expenses, and lower-than-forecast interest on debt.
- And so part of the plan to balance the budget involves optimizing assets and maximizing revenues.
- The Public Accounts for 2016–17 show total revenues were $140.7 billion, $2.2 billion higher than the 2016 Budget projection.
- Additionally, Ontario's total revenues are projected to grow from this $140.7 billion in 2016–17 to $158.2 billion in 2019–20.
- This increase represents an average annual growth rate of four per cent.
- The higher revenues for 2016–17 — and the projected growth of revenues through 2019-20 — are largely due to higher-than-expected tax revenues, the optimization of government business enterprises, and transfers from the Government of Canada and other non-tax revenue.

- First, let me address tax revenues.
- Growth in revenues over the medium term is driven mainly by taxation revenue, which is projected to increase by $15.6 billion between 2016–17 and 2019–20, or at an average annual rate of 5.2 per cent.
- For fiscal year 2016–17, tax revenues were $293 million higher than projected, mainly due to higher-than-expected Harmonized Sales Tax revenue, reflecting stronger growth in Ontario household expenditures.

DRAFT

- Secondly, the Government of Ontario is also implementing a multi-year strategy to optimize its assets and maximize its revenues through the sales of shares in Hydro One, LCBO head office lands and Ontario Power Generation's head offices.
- The net revenue gains from the sale of qualifying assets are credited to the Trillium Trust for infrastructure investments, such as roads, bridges and public transit.
- The total amount credited to the Trillium Trust as of March 31, 2017 is $5.3 billion.
- The Province continues to grow and maximize revenues from its government business enterprises, such as Hydro One, Ontario Power Generation, the Liquor Control Board of Ontario and Ontario Lottery and Gaming Corporation.
- The forecast of the income from government business enterprises is projected to grow by $0.7 billion between 2016–17 and 2019–20.
- This projection, at an average annual rate of 3.7 per cent, reflects higher net income overall from government business enterprises.

- Thirdly, Ontario received larger Government of Canada transfers — $145 million higher. This increase reflected new funding for early learning and child care flowing from a bilateral agreement between Ontario and the federal government, as previously reported in the 2017-18 *First Quarter Finances*.
- The forecast for subsequent transfers is based on existing federal-provincial funding agreements.
- Overall transfers are projected to grow by $0.9 billion between 2016–17 and 2019–20, or at an average annual rate of 1.2 per cent.
- This largely reflects projected increases in major ongoing Government of Canada transfers and new funding for early learning and child care, and home care and mental health.

DRAFT

- Finally, the forecast for other non-tax revenue is based on projections provided by government ministries and agencies.
- The outlook for other non-tax revenues is projected to increase by $0.4 billion between 2016–17 and 2019–20, or at an average annual rate of 0.7 per cent.
- This increase mainly reflects:
    - Fiscally neutral revenues from carbon allowance proceeds starting in 2017–18
    - Fees, donations and other revenues for the broader public sector, and
    - Revenues from vehicle and driver registration fees.
- This is partially offset by lower revenues due to the removal of the debt retirement charge from commercial, industrial and all other electricity users in 2018–19, and the projected net impact of the government's planned asset optimization strategy.
- Notably, the increase in Ontario's revenue is not attributable to increases in personal tax returns.

Expenses:

- Let me now address expenses.
- The Public Accounts for 2016–17 show that total spending was $141.7 billion, $100 million lower than the 2016 Budget projection.
- Program spending expenses accounted for $130 billion.
- Interest on debt, at $11.7 billion, was down $0.7 billion from the 2016 Budget projection.

- Going forward, program expenses are projected to grow from $130 billion in 2016–17 to $144.2 billion in 2019–20.
- This represents an average annual growth rate of 3.5 per cent.
- Growth in program expenses over the medium term is driven by investments to help the people of Ontario, such as health care, supports for seniors, the

DRAFT

introduction of pharmacare for children and youth under OHIP+, electricity cost relief programs under the Fair Hydro Plan, and new initiatives for small businesses that will lower costs and support growth.

- Interest on debt expenses is projected to grow from $11.7 billion in 2016–17 to $13.3 billion in 2019–20.
- This increase is due to borrowing for capital spending and interest rates that are forecast to rise.
- This represents an average annual growth rate of 4.2 per cent.
- Interest on debt is projected to grow due to borrowing for capital spending and interest rates that are forecast to rise.
- Total expenses are projected to grow from $141.7 billion in 2016–17 to $157.4 billion in 2019–20.
- This represents a manageable average annual growth rate of 3.6 per cent.

Balancing Revenues and Expenses:

- Let me summarize the revenues and expenses together.
- Revenue is forecast to increase from $140.7 billion in 2016–17 to $158.2 billion in 2019–20.
- Total expenses are projected to increase from $141.7 billion to $157.4 billion over the same period.
- Based on these estimates, the Ontario government will effectively balance the budget over the next four years.

Funding Programs, Investing in Infrastructure, Promoting Growth:

- Through targeted, measured and fiscally responsible decisions, Ontario has restored its fiscal and economic strength.
- Strategic investments have helped stimulate the Ontario economy to rise from the depths of recession.

DRAFT

- Over the past three years, Ontario's economy has grown faster than Canada's and that of all other G7 countries.
- The benefits of balanced budgets and a strong economy are already providing the government with the fiscal flexibility to do more to help Ontarians.
- This flexibility enables the government to provide more investments to spur economic growth, job creation and support services people use every day.
- Notable program investments include:
    - $145 million in annual funding to increase the accessibility and affordability of high-quality licensed child care and early learning opportunities
    - $245 million over three years to lower costs for small businesses
    - $155 million over three years to support seniors to remain independent, connected, engaged, healthy and safe
    - $245 million over three years to lower costs for small businesses, create opportunities for growth and simplify their interactions with government.
    - An increase of $1 million in 2017–18 — and then $5 million in 2018–19 and beyond — to provide additional funding through the Northern Communities Grant component of the Ontario Municipal Partnership Fund.

- Growth in program expenses also includes investments in infrastructure.
- In fact, Ontario is making the biggest investment in public infrastructure in its history.
- The government's long-term infrastructure plan to invest about $190 million over 13 years, starting in 2014–15, will contribute to the growth of the economy.
- The government's historic investment in infrastructure includes:
    - $31.5 billion over 10 years for public transit, transportation and other priority infrastructure projects across Ontario
    - $11 billion over 10 years in capital grants to school boards, and
    - $900 million over 10 years for critical maintenance repairs and upgrades.

DRAFT

- These investments will not only create jobs, support business innovation and help draw investors from abroad — they will also contribute to the provincial economy growing at a faster rate than the change in its net debt.
- Investments such as these have helped to stimulate the Ontario economy, which has continued to grow despite an uncertain global climate.
- From 2014 to 2016, Ontario outpaced all G7 countries with its real GDP growth.
- As the result of a balanced budget and Ontario's strong economic growth, the net debt-to-GDP ratio is declining.
- In the 2017 Budget, the Ontario government set an interim net debt-to-GDP ratio target of 35 per cent by 2023–24. The government is now projecting to meet this target a year earlier.
- We continue to maintain a target of reducing the net debt-to-GDP ratio to its pre-recession level of 27 per cent, currently projected to be achieved by 2029–30.

Conclusion:

- In September, the Public Accounts of Ontario 2016–17 reported that the 2016–17 deficit was $1.0 billion, an improvement of $3.3 billion from the $4.3 billion projection in the 2016 Budget.
- Total revenue for 2016–17 came in at $140.7 billion, which was $2.2 billion higher than the 2016 Budget.
- This was largely due to higher-than-expected tax revenues, the optimization of government business enterprises and transfers from the Government of Canada and other non-tax revenue.
- Total spending for 2016–17 came in at $141.7 billion, which was $0.1 billion lower than the 2016 Budget.
- Program spending was $130.0 billion, up $0.6 billion from the plan of $129.4 billion.

DRAFT

- Spending in health, children's and social services, and other programs was higher than planned.
- Interest on debt expense was $11.7 billion, $0.7 billion below the plan of $12.4 billion, due mainly to lower-than-forecast interest rates, and cost-effective borrowing and debt management.
- In conclusion, the Ontario government is on track to balance the budget this fiscal year — 2017–18 — as well as the next two fiscal years.
- Prudently managing the province's finances is one of my ministry's responsibilities to the people of Ontario.
- Thank you.

DRAFT

LONG-FORM MEMBER QUESTION: CREDIT RATING

DEPUTY MINISTER SCOTT THOMPSON

Question:

- What are the plans to keep Ontario's credit rating in good standing?

Answer:

- TBD: Revisions based on updates related to Q3 Finances, once available.

Introduction:

- Following the release of the 2017 Ontario Budget, four credit rating agencies – Moody's, DBRS, Standard & Poor's and Fitch – confirmed Ontario's healthy long-term credit ratings. This reflects rating agencies' confidence in the Government's fiscal plan – and its ability to grow Ontario's economy and create jobs for Ontarians.
- Let me summarize the reports by each of the credit rating agencies.

- First, Moody's.
- Moody's cautioned that the Ontario Fair Hydro Plan, announced in March 2017 to reduce electricity prices, adds credit pressure due to the direct financial impact of the sales tax rebate and the indirect impact of an elevated debt of a provincially owned entity.
- Overall, however, Moody's said its stable outlook for Ontario "reflects Moody's forecast that, as the province moves towards and achieves balanced budgets,

DRAFT

the province's debt burden will improve marginally and interest expense will remain manageable across the medium-term….The policy decision to borrow for infrastructure spending at a time of historically low interest rates, combined with the prudent debt management practices outlined above, has helped to support the province's Aa2 rating."

- Moody's positive outlook for Ontario's credit rating is based on the following credit strengths: prudent debt management, an institutional framework providing significant fiscal policy flexibility, and a large diversified economy supporting a broad and productive tax base.

- Next, DBRS.
- DBRS noted that Ontario's credit profile is stable, but it will remain vulnerable to an economic shock in the absence of a more concerted effort to reduce debt.
- DBRS also commented on the potential downside risks to the economic outlook due to uncertainty regarding the potential renegotiation of NAFTA and U.S. tax policy, as well as political integration in Europe.
- Finally, it noted that elevated household debt and housing market dynamics leave Ontario particularly vulnerable in the event of an unforeseen shock that results in significant job losses or a rapid increase in interest rates.
- Despite these concerns, DBRS expects Ontario's credit ratings to remain stable.
- DBRS said of Ontario, its "ratings remain well supported by the province's large and diversified economy, improving budgetary results and declining debt burden" and that "the return to balance is encouraging and suggests that there will likely be some modest improvement in the Province's credit metrics over the medium term."
- DBRS concluded by saying that Ontario's stable credit profile stems from strength in the underlying economy, which provided incremental revenue more than sufficient to offset the in-year spending pressures.

- Standard & Poor's is next.

- Standard & Poor's believed that Ontario's credit profile is strengthening.
- But before considering a positive rating action, they would need to see sustained improvement in budgetary performance leading to near-balanced after-capital results, coupled with ongoing declines in the tax-supported debt burden, making Ontario's finances more comparable with peers in the 'AA' category.
- Standard and Poor's said it "expects the province of Ontario to benefit from solid economic growth over the next two years, allowing it to generate additional revenues to fund its capital spending plan and stabilize its finances following its eight-year path back to a balanced operating budget."
- Standard & Poor's concluded by saying that its stable outlook reflects expectations that, within the next two years, the Province will sustain a more balanced budgetary performance, including steady liquidity metrics, modest after-capital deficits, and a high but slowly declining debt burden.

- Finally there is Fitch.
- Fitch's report stated that the Province has demonstrated the ability to exert considerable expenditure restraint while instituting revenue changes to achieve its deficit reduction objectives.
- It said Ontario's 'AA-' rating is supported by its wealth, diversified economy and generally sound financial management.
- Fitch's rating reflected the Province's very strong and diversified economy, strong financial management, very predictable and well-balanced institutional framework and low contingent liabilities.
- Ontario's credit profile is stable.

- For Ontario's credit profile to grow in strength, the Province will need to do several things.
- It will need to show a track record of consistent operating surpluses and balanced or near-balanced after-capital results, coupled with continuing declines in direct and tax-supported debt burdens.

DRAFT

- **To that end, Ontario has the following plan to ensure that its credit rating remains in good standing.** It is:
    - Optimizing assets and revenues without causing undue tax burdens on Ontarians.
    - Managing expenses without detracting from the quality of social and health services.
    - Balancing revenues and expenses against each other to manage the debt, and
    - Maintaining a reserve fund to mitigate unforeseen financial risks.
- I will now go into more detail on each of these points.

Revenues:

- Total revenues for 2016–17 were $140.7 billion, $2.2 billion higher than the 2016 Budget.
- Additionally, Ontario's total revenues are projected to grow from $140.7 billion in 2016–17 to $158.2 billion in 2019–20.
- This represents an average annual growth rate of four per cent.
- The higher revenues for 2016–17 and the projected growth of revenues through 2019–20 are largely due to three factors:
    - Higher-than-expected tax revenues.
    - Income from government business enterprises and fees, and
    - Transfers from the Government of Canada and other non-tax revenue.
- Growth in revenues over the medium term is driven mainly by taxation revenue, which is projected to increase by $15.6 billion between 2016–17 and 2019–20, or at an average annual rate of 5.2 per cent. The taxation outlook reflects current revenue information and projections for the Ontario economy. Tax revenues were $293 million higher than projected in 2016–17, mainly due to higher-than-expected Harmonized Sales Tax revenue, reflecting stronger growth in Ontario household expenditures.

DRAFT

- The Government of Ontario is also implementing a multi-year strategy to optimize its assets and maximize its revenues through the sales of Hydro One, LCBO head office lands and Ontario Power Generation's head offices. The total amount credited to the Trillium Trust as of March 31, 2017 is $5.3 billion. The net revenue gains from the sale of qualifying assets will be credited to the Trillium Trust for infrastructure investments, such as roads, bridges and public transit, under the Moving Ontario Forward plan. In 2016–17, the Trillium Trust was drawn down by approximately $260 million to help support these projects.
- Finally, Ontario received larger Government of Canada transfers — $145 million higher. This increase reflected new funding for early learning and child care flowing from a bilateral agreement between Ontario and the federal government, as previously reported in the 2017–18 *First Quarter Finances*.
- Notably, the increase in Ontario's revenue is not attributable to increases in personal tax returns.

Expenses:

- Ontario's total spending for 2016–17 was $141.7 billion, $100 million lower than the 2016 Budget.
- Program spending expenses accounted for $130.0 billion.
- Interest on debt expense accounted for $11.7 billion – $0.7 billion below the plan of $12.4 billion.
- This drop was due mainly to lower-than-forecast interest rates, and Ontario's cost-effective borrowing and debt management.
- Going forward, Ontario program expenses are projected to grow from $130.0 billion in 2016–17 to $144.2 billion in 2019–20.
- This represents an average annual growth rate of 3.5 per cent.
- Interest on debt expenses is projected to grow from $11.7 billion in 2016–17 to $13.3 billion in 2019–20.
- This represents an average annual growth rate of 4.2 per cent.

DRAFT

- Total expenses are projected to grow from $141.7 billion in 2016–17 to $157.4 billion in 2019–20.
- This represents a manageable average annual growth rate of 3.6 per cent.
- These increases align with the government's plans for modernizing the public services people rely on every day.
- They are also fiscally sustainable.
- In short, the Ontario government has been managing its program expenses as well as its interest-on-debt expenses.

Balancing Revenues and Expenses:

- To bring the revenues and expenses together…
- Revenue is forecast to increase from $140.7 billion in 2016–17 to $158.2 billion in 2019–20.
- Total expenses are projected to increase from $141.7 billion to $157.4 billion over the same period.
- Based on these estimates, the Ontario government will effectively balance the budget over the next four years.

The Reserve:

- I will now take a moment to address the Province's financial reserve and contingency funds.
- As required under the *Fiscal Transparency and Accountability Act*, Ontario's fiscal plan incorporates prudence in the form of a reserve to protect the fiscal outlook against unforeseen adverse changes in revenue and expenses.
- The current fiscal outlook includes a reserve of $0.5 billion in 2017–18, $0.5 billion in 2018–19 and $0.8 billion in 2019–20.
- The current outlook also maintains contingency funds to help mitigate expense risks that may otherwise negatively impact Ontario's fiscal performance — particularly in cases where health and safety may be compromised, services to the most vulnerable are jeopardized, or natural disasters occur.

DRAFT

Conclusion:

- Credit ratings provide an assessment of a government's credit-worthiness.
- They are a reflection largely based on its capacity to generate revenue to service its debt.
- They consider factors such as a government's economic resources and prospects, industrial and institutional strengths, financial health, and susceptibility to major risks.
- As you know, a credit rating affects the cost of future government borrowing with a lower rating, indicating that an agency believes there is a relatively higher risk that a government will default on its debt.
- Accordingly, investors will lend to the government only in return for a greater risk premium, in the form of higher interest rates.
- A rating downgrade could also shrink the potential market for a government's debt, because some investors will not hold debt below a certain rating.
- Therefore, it is critical that Ontario maintain its credit rating in good standing to manage its debt and preserve its fiscal health.
- Ontario's plan to keep its credit rating in good standing involves the following strategies:
    - Optimizing assets and revenues without causing undue tax burdens on Ontarians.
    - Prudently managing expenses without diminishing the quality of Ontario's services and programs.
    - Balancing revenues and expenses against each other to manage the debt, and
    - Preserving a reserve fund to mitigate unforeseen financial risks.

- Seen as a whole, these strategies will ensure confidence in Ontario's credit-worthiness through its ability to effectively manage its debt obligations.

DRAFT

- Protecting the financing of Ontario's public services will continue to be one of my ministry's highest priorities.
- Thank you.

DRAFT

LONG-FORM MEMBER QUESTION: DEBT MANAGEMENT

DEPUTY MINISTER SCOTT THOMPSON

Question

- What is Ontario's debt management plan?

Answer

- TBD: Revisions based on updates related to Q3 Finances, once available.
- The Ministry of Finance has a track record of responsible fiscal management and remains committed to executing the government's goal of reducing the provincial debt burden.
- The government's plan to manage the debt focuses on three key areas:
    - Decreasing the net debt-to-GDP ratio.
    - Decreasing the interest on debt-to-revenue ratio.
    - Utilizing term extensions.
- I would like to provide an update of progress on this goal.

Net Debt-to GDP Ratio:

- A key indicator of the government's ability to manage its debt is the level of debt relative to the size of the economy, known as the net debt-to-GDP ratio.
- The ratio of net government debt to the market value of goods and services produced by an economy — known as gross domestic product or GDP — measures the relationship between a government's debt obligations and its capacity to raise the funds needed to meet them.
- It is an indicator of the relative burden of government debt on the economy.

DRAFT

- If the amount of debt that must be repaid relative to the value of the GDP is rising — in other words, if the ratio is rising — it means the government's net debt is growing faster than the provincial economy, and becoming an increasing burden.

- Before considering Ontario's net debt-to-GDP ratio, let me first discuss the components.
- First, I want to address Ontario's net debt situation.
- Ontario's net debt increased from $295.4 billion as of March 31, 2016 to $301.6 billion as of March 31, 2017.
- It is projected to increase to $311.7 billion by March 31, 2018 and to $323 billion by March 31, 2019.
- About 62 per cent of the increase in net debt from 2008–09 to 2016–17 was due to the deficit.
- The remaining net debt increase was a result of investments in capital assets.
- Balanced budgets from 2017–18 onwards will ensure that increases in net debt will be limited to net investments in capital assets such as roads, bridges, hospitals and schools.
- In other words, the net debt is increasing at a manageable rate, and a smaller portion of it is collected from the deficit.

- Next, let me briefly address the GDP.
- The government's investments in capital assets increased economic growth and helped support Ontario's GDP to advance more quickly than debt, helping the government achieve its net debt-to-GDP targets.
- Over the past three years, Ontario's economy has grown faster than Canada's and that of all other G7 countries.
- In fact, Ontario's real GDP is now 21.3 per cent above its recessionary low.
- Over the 2017–20 period, the Ministry of Finance is forecasting average annual growth of 2.2 per cent in Ontario's real GDP.

DRAFT

- Government investments have helped stimulate the Ontario economy to rise from the depths of the recession, and it is now enjoying a period of economic strength and growth.

- I briefly addressed the net debt and GDP situations separately; now let me bring them together.
- The 2017 Fall Economic Statement reported that Ontario's net debt-to-GDP ratio is lower than previously forecast.
- The net debt-to-GDP ratio peaked at 39.3 per cent in 2014–15 and has been declining ever since, as a result of Ontario's economic growth and the government's progress towards a balanced budget in 2017–18.
- It is now projected to be 37.3 per cent at the end of fiscal 2017–18, 0.2 per cent lower than was forecast in the 2017 Budget.
- This ratio is projected to continue to decline to 37.1 per cent in 2018–19.
- In the 2017 Budget, the government set an interim net debt-to-GDP ratio target of 35 per cent by 2023–24, and re-stated its commitment to reduce the net debt-to-GDP ratio to its pre-recession level of 27 per cent by 2029–30.
- A declining net debt-to-GDP ratio, together with low interest on debt costs as a percentage of revenues, positions the province for long-term sustainability.
- It also allows for a greater proportion of government spending to be invested in programs and services.

- The reduction of debt is complemented by Ontario's investments in infrastructure, which are supporting economic growth and job creation.
- In fact, Ontario is making the biggest investment in public infrastructure in its history.
- The government's long-term infrastructure plan to invest about $190 million over 13 years, starting in 2014–15, will contribute to the growth of the economy.

DRAFT

- These investments will not only create jobs, support business innovation and draw investors from abroad — they will also contribute to the growth of the provincial economy at a faster rate than the change in its net debt.
- The positive impact of these capital investments on the province's economy was confirmed by the Centre for Spatial Economics.
- It recently reported that, over the long term, GDP in Ontario increases by up to $6 for every dollar of public infrastructure spending.
- The government's economic strategy was further supported in a report by the International Monetary Fund in June 2016, which recommended that Canadian "fiscal policy should be pro-growth."
- Christine Lagarde, the International Monetary Fund's Managing Director, expressed her support for the government's growth strategy and agreed that investment in infrastructure should be an essential element.
- In summary, Ontario's net debt-to-GDP ratio will gradually diminish due to the GDP increasing at a faster rate than net debt.
- This will allow the government to continue to move towards its 27 per cent net debt-to-GDP target.

Interest on Debt-to-Revenue Ratio:

- Another major thrust of Ontario's plan to manage its debt centres on the interest on debt-to-revenue ratio.
- This is another key indicator of the government's ability to meet its financial obligations.
- Through prudent and cost-effective debt management, the government has consistently kept interest on debt costs below budget projections.
- The 2016–17 Public Accounts show that Ontario's deficit for the last fiscal year was $991 million — $3.3 billion lower than projected in the 2016 Budget and half a billion lower than the interim deficit projection in the 2017 Budget.
- This smaller-than-projected deficit is due to stronger revenues, and reflects positively on the debt-to-revenue ratio.

DRAFT

- Ontario's interest on debt for 2017–18 is forecast to be $12.2 billion.
- The interest on debt-to-revenue ratio is forecast to be 8.2 per cent in 2017–18, 8.3 per cent in 2018–19 and 8.4 per cent in 2019–20.
- The savings on interest on debt have improved a key measure of the affordability of debt.
- For example, the 2010 Budget forecast that, by 2017–18, the Province would have to spend 11.3 cents of every revenue dollar received on interest.
- By the 2017 Budget, the amount needed for interest payments had dropped significantly.
- The current forecast is 3.1 cents lower — 8.2 cents of interest costs for every dollar of revenue.
- This ratio is lower than it was in the 1990s and 2000s, and is forecast to remain lower through Ontario's outlook period to 2019–20.

Term Extension on Debt:

- Finally, record-low interest rates have enabled the government to keep its annual interest expense steady.
- However, the global decline in interest rates over the last 25 years could not continue indefinitely.
- The Bank of Canada has increased interest rates — twice last year and already once this year.
- Ontario has taken necessary precautions to protect the financing of the province's public services, now that interest rates are widely understood to be on a net rising trajectory.
- To protect the province from these increases, the government has continued to extend the term of its debt.
- Term extension has allowed the government to lock in low interest rates for a longer period, which reduces refinancing risks.
- Extending the term also helps offset the impact of expected higher interest rates on interest on debt costs.

DRAFT

- Going back to the beginning of fiscal 2010–11, Ontario has issued $68.6 billion in bonds longer than 30 years to lock in low rates.
- As a result, the weighted-average term to maturity of long-term provincial debt issued has been extended significantly, from 8.6 years in 2008–09 to 13.9 years in 2016–17.
- For 2017–18, it stood at 12.8 years as of October 31, 2017.
- If or when interest rates continue to rise, the government will assess whether it will remain cost-effective over the long term to continue to extend the term of its debt.

Conclusion:

- As I said at the outset, the Ontario government has a track record of responsible fiscal management and remains committed to executing its goal of reducing the provincial debt burden.
- To conclude, the government's plan to manage the debt focuses on three key areas:
    - One, decreasing the net debt-to-GDP ratio.
    - Two, decreasing the interest on debt-to-revenue ratio.
    - And three, extending the term on its debt.
- As I have stated, the government has decreased the net debt-to-GDP ratio.
- In the 2017 Budget and the 2017 Fall Economic Statement, Ontario stated that the government continues to maintain a target of reducing the net debt-to-GDP ratio to its pre-recession level of 27 per cent, currently projected for 2029-2030, together with an interim target of 35 per cent by 2023-2024.
- I also explained how the government has decreased the interest on debt-to-revenue ratio.
- The 2010 Budget forecast that, by 2017–18, the Province would have to spend 11.3 cents of every revenue dollar received on interest.
- However, by the 2017 Budget, the amount needed for interest payments had dropped.

DRAFT

- The current forecast is 3.1 cents lower — at 8.2 cents of interest costs for every dollar of revenue.
- Finally, I explained how the government has taken advantage of low-interest rates and extended the term on its debt.
- The weighted-average term to maturity of long-term provincial debt issued has been extended significantly, from 8.6 years in 2008–09 to 13.9 years in 2016–17, and 12.8 years for 2017–18 as of October 31, 2017.
- In short, Ontario's economy remains strong.
- Protecting the financing of the province's public services will continue to be one of the government's highest priorities.
- Thank you.

DRAFT

LONG-FORM MEMBER QUESTION: FAIR HYDRO PLAN

DEPUTY MINISTER SCOTT THOMPSON

Question:

- What is the financial impact of the Fair Hydro Plan's electricity rate reduction on the Province's budget?

Answer:

- As Deputy Minister of the Ministry of Finance, I will speak specifically to the financial implications of the Fair Hydro Plan on the Province's budget and financial statements.

Ontario's Fair Hydro Plan

- To address issues related to rising electricity costs, especially for families and small businesses, the government announced Ontario's Fair Hydro Plan on March 2, 2017.
- As part of the plan, electricity bills were reduced by 25 per cent on average, or about $41 per month, for all Ontario residents as of July 1, 2017.
- The plan included several important measures.
- First, let me discuss the refinancing of the Global Adjustment.
- The Global Adjustment is the cost of building new electricity infrastructure in the province and maintaining existing resources.
- The majority of the province's electricity generators currently have 20-year contracts.
- Many of these generators will be able to operate past their contract term.

DRAFT

- In other words, they would still generate electricity after the upfront capital costs have been paid for by the current generation of ratepayers.
- The Government of Ontario believed that present-day consumers should not be burdened with paying for a disproportionate share of investments that provide benefits for decades to come.
- To relieve the current burden on ratepayers, and share costs more fairly, a portion of the Global Adjustment is being refinanced over a longer period.
- This is providing significant and immediate rate relief to ratepayers by spreading the cost of electricity investments over time, to better reflect the expected lifecycle of the infrastructure that has been built.
- According to estimates provided when the Fair Hydro Plan was announced, the immediate reduction in the Global Adjustment would be about $2.5 billion per year, on average, over the first 10 years.

- Second, the plan included an expansion of the Industrial Conservation Initiative or ICI.
- The ICI allows participating customers to manage their Global Adjustment costs by reducing demand during peak periods.
- Customers who participate in the ICI, referred to as Class A, pay Global Adjustment based on their percentage contribution to the top five peak Ontario demand hours over a 12-month base period.
- Ontario expanded eligibility for the ICI program by reducing the threshold from 1 MW to 500 kW.
- This measure allows small manufacturers and industrial consumers the opportunity to participate in the ICI and save on their electricity costs.

- A third component of the plan is Ontario’s rebate for electricity consumers.

DRAFT

- The government provided an eight per cent Ontario Rebate for Electricity Consumers on electricity bills, equivalent to the amount of the provincial portion of the Harmonized Sales Tax.
- This change was effective January 1, 2017.

- A fourth and important part of the plan allows future increases to hydro bills to be set by regulation.
- This enables the government to hold increases, for four years, to the rate of inflation.
- While rates will rise gradually over time, the government remains committed to avoiding sharp increases.

Assisting the Most Vulnerable Electricity Consumers

- The government has introduced other measures to help the most vulnerable electricity consumers.
- It did this by introducing legislation to enhance some existing programs or introduce new initiatives.
- In particular it enhanced the Ontario Electricity Support Program.
- The Ontario Electricity Support Program is an income-tested, application-based program that lowers electricity costs for the most vulnerable consumers.
- In practice, it provides them with a rebate directly on their bills.
- Effective May 1, 2017, Ontario increased the program by 50 per cent, meaning that single, low-income consumers would get an increase in their rebates ranging from $180 to $276 per year.
- According to the 2017 Provincial Expenditure Estimates, the program is anticipated to cost $140 million in 2017–18.
- This amount will be covered by provincial revenues.

DRAFT

- As well, as part of the plan, Ontario has enhanced the Rural or Remote Rate Protection Program, or RRRP.
- The RRRP provides a rate subsidy to rural and remote residential customers who face higher distribution costs.
- As part of the Ontario Fair Hydro Plan, the Province expanded the program to provide distribution delivery charge relief to about 800,000 customers.
- According to the 2017 Provincial Expenditure Estimates, the program is anticipated to cost $344 million in 2017–18, which will also be covered by provincial revenues.
- Ontario is also helping customers through local distribution companies.

- In October 2017, the Province launched the $100 million Affordability Fund.
- The Affordability Fund provides local distribution companies with an additional tool to help customers in need.
- Local distribution companies can use the fund to provide support to qualifying customers for energy efficiency improvements, to help them reduce their future electricity bills.
- The Affordability Fund is paid through provincial revenues.

- Finally, Indigenous communities in Ontario are also receiving assistance through the First Nations On-Reserve Delivery Credit.
- In 2016, the Ontario Energy Board engaged with First Nations, including remote communities, the distributors serving them and consumer groups.
- Following the engagement process, the board recommended to the Government of Ontario the elimination of the delivery charge for all on-reserve First Nations residential customers.
- The board also recommended removing the monthly service charge for customers of licensed distributors that charge a bundled rate.

DRAFT

- The board estimates this would provide residential customers an average monthly benefit of $85.
- According to the 2017 Provincial Expenditure Estimates, the credit is anticipated to cost $15 million in 2017–18, which will be funded by provincial revenues.

- In summary, these new measures will cost the government up to $2.5 billion over the next three years.
- The cost is about $500 million in 2017–18, based on a part-year implementation, according to the 2017 Provincial Expenditure Estimates.

Conclusion:

- Taken together, these changes are delivering the single-largest reduction to electricity rates in Ontario's history.
- For all residential consumers in the province, electricity bills have been reduced by 25 per cent on average, or about $41 per month, as of July 1, 2017.
- People with low incomes and those living in eligible rural or remote communities are receiving even greater reductions, as much as 40 to 50 per cent.
- Approximately 500,000 small businesses and farms are also benefitting from the changes.
- On-reserve First Nation residential customers of licensed distributors are getting a 100 per cent credit on the delivery line of their bills.
- Although hydro rate relief costs were additions to the fiscal framework, the government continues to project a balanced budget for 2017-18, and will provide a full update on its fiscal plan in the spring budget.

DRAFT

TIPS FOR PRESENTING AT SCOPA

Tips for Addressing Committee Members:

Note: Tips are applicable for addressing both Committee Members and media.

- When speaking be mindful of what you say – the proceedings are recorded and there's no such thing as "off the record."

- Adhere to the scripted remarks and prepared Q&As. Do not embellish and ***when in doubt, leave it out.***

    - Be sure you understand the question being asked (it's ok to ask for clarification) and Do NOT answer something you're not 100% sure of.

- If you do not have the response, you may advise Committee Members that the matter needs to be redirected to another ministry, or that you will get the requested information by saying, "I'll look into what is possible to provide."

- Be mindful of only addressing questions/issues that relate directly to the TBS.

- It is acceptable to decline to answer an unrelated question by noting that you are not clear of its relevance to TBS, and that you are prepared to address matters related to the ministry.

- If caught off guard, breathe, listen, work to understand the question, or ask for clarification.

    - Ask the questioner 'Excuse me' or 'I beg your pardon?'
    - Ask the questioner 'Can you kindly help me understand the context of the question/or what you just said?'

- If possible, use a bridging statement to get to your key message/prepared response. (See Appendix A).

- Do not offer personal opinions. Stick to the facts:

    - Leave off qualifiers like "I think" "I feel," and "I believe" which represents an opinion. To sound confident and assured, be mindful not to use qualifiers.
    - Do not use 'I assure you."

- Offer examples of success whenever possible.

Body Language, Tone:

- Be aware of how you come across. There is no benefit to being seen as defensive, argumentative, or unresponsive.

- Project an image of openness, honesty, and empathy.

- Remember to breathe deeply and speak slowly.

    - Controlling your breathing helps deal with the stress.
    - Take several deep breaths as you sit down and get organized.
    - Ahead of appearance take a few minutes in a quiet spot to breathe slowly and deeply.
    - "Super Hero Pose" – stand with your legs shoulder width apart, hands on hips, shoulders back. Do this for two minutes. It helps mentally prepare you ahead of having to speak.

- Use your hands while talking to look natural and help release anxiety. (Note palms up is a subconscious message to those looking at you that you are open and have nothing to hide)

- Avoid body language leakage—those involuntary movements that indicate you're nervous or stressed - e.g. head nodding, swallowing, and pursing your lips.

- Do not touch your face with your hands.

- Avoid repeating negative words that members use in questions. Doing so indicates you accept the negative premise.

- If you feel overwhelmed while speaking in front of an audience, recalibrate by breathing and pausing.

What-Ifs:

1. What if you don't want to answer the question, but you have to say something?

    - Offer a credible reason why you are unwilling to answer the question and identify what you prefer to discuss.

2. What if you're asked for hard numbers, and you don't have the answer?

- Explain, “I want to be absolutely precise and specific, so I will need to get back to you with the exact number”

- Words like “precise,” “specific,” and “exact” convey that the question has been taken seriously.

3. What if you don’t know the answer, but a colleague who is with you may know it?

   - If you need help from the other ADMs, open your response with ‘In a moment I’m going to call on my colleague to get into more detail about this…’ This gives the other TBS representative time to know they’ll be called upon.

   - Briefly discuss a related subject, then pass the question.

4. What if you need to pause?

   - If you have said absolutely everything you need to say, then let there be a pause.

   - Remember it’s not up to you to keep the proceedings going. That’s the Chair’s job. They may intentionally leave dead air in the hopes that you’ll jump in to fill it by saying something you hadn’t intended to.

5. What if the answer is confidential?

   - Explain that confidentiality rules must be respected, so you cannot directly address the issue at hand. (e.g.: that matter is before the courts).

6. What if it’s a question about a rumour?

   - When asked to respond to a rumour, it is best to not respond at all. Instead, state that your focus is always on fact, not rumour.

7. What if the answer is HR related?

   - Say as little as possible. Commenting on someone’s employment record in a negative context can potentially put you in legal jeopardy.

8. What if you don’t like what you’re saying?

   - Don’t feel obligated to complete a sentence or thought. Simply begin the response again.

9. What if it’s a “yes or no” question?

- Unless the question relates to a sensitive issue, skip “yes” or “no” and go right to the message that would follow.

10. What if it's an "is it possible" question?

    - Avoid speculating and tell the committee – "I'm not able to comment on something that may or may not happen."

11. What if you're interrupted mid-answer?

    - The first time, let it go. The second time, ask the Chair to be allowed to finish your thought.

APPENDIX

A. Sample Bridging Statements

1. "We find the more important issue is…"
2. "I think it would be more accurate (or correct) to say…"
3. "Let me emphasize again…"
4. "What matters most in this situation is…"
5. "While _____ is important, it's also important to remember that…"
6. "It all boils down to this…"
7. "And that reminds me…"
8. "Before we leave this subject, I need to add…"

Standing Committee on Public Accounts

Secretary of the Cabinet Briefing on Chapter 2, Public Accounts of the Province

February 9, 2018

Overview

- Auditor General's Annual Report, Chapter 2, makes 10 recommendations regarding Public Accounts of the Province.

- Recommendations largely reflect opinions expressed in previous reports, including AG's audit opinion in 2016-17 Public Accounts and Special Report on the Fair Hydro Plan.

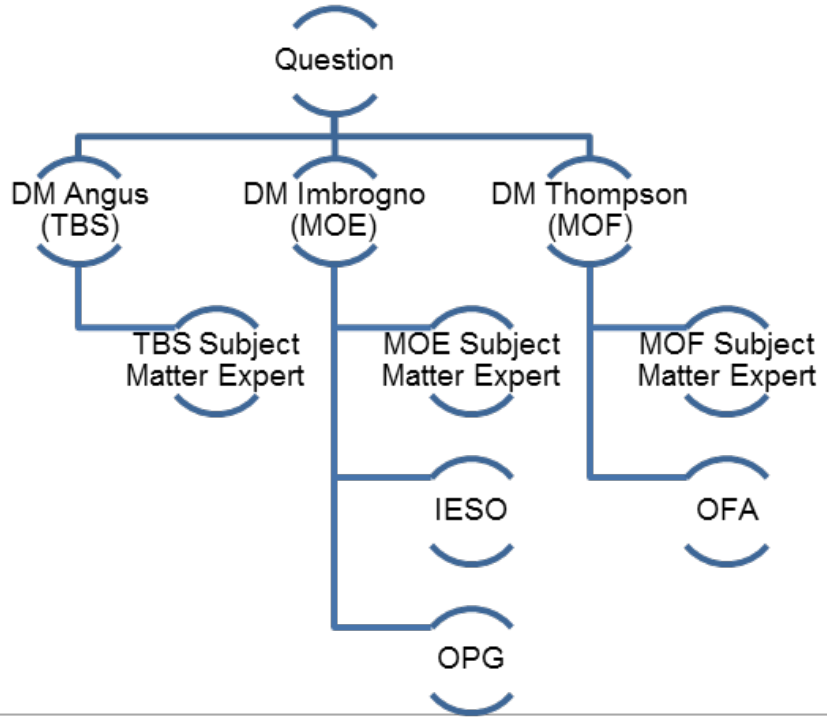
- The province disagrees with the characterization of the majority of the recommendations, and re-iterates its commitment to producing high-quality financial reports on a timely basis and in accordance with Canadian Public Sector Accounting Standards (PSAS).

Logistics

- Agenda
  - *See: Tab 1 p. 1 of the Briefing Binder*
- Room setup
  - *See: Tab 1 p. 2 of the Briefing Binder*
- Media access
  - *See: Tab 1 p. 2 of the Briefing Binder*
- Ministry/organization representatives to attend
  - *See: Tab 1 p. 3 & 4 of the Briefing Binder*
- Committee members
  - *See: Tab 1 p. 5 of the Briefing Binder*

Strategic Approach

- Provide **evidence and facts** as basis of decision-making wherever appropriate (e.g. other jurisdictions, external advisors).



- Emphasize **role of public servant** to provide factual, non-partisan information to committee based on due diligence and application of professional judgment.

- Use committee appearance as opportunity to communicate facts and rationale for decision to **adopt/continue accounting practices** in response to AG's recommendations.

- Highlight **due diligence in decision making** (Ontario Fair Hydro Plan accounting, pension asset accounting, Independent Electricity System Operator [IESO] market accounts, IESO rate-regulated accounting).

Roles & Responsibilities

- Secretary of the Cabinet will be seated in the first row behind the three Deputy Ministers.
- Deputy Ministers to provide initial messaging then pass to subject matter experts where appropriate.
- Specific roles and responsibilities are outlined in Tab 3 of Briefing Binder.

Key Issues

- Based on AG's 2017 Annual Report, media and Hansard analysis, and SCOPA invitee list, anticipated key issues include:
  - Ontario Fair Hydro Plan accounting
  - IESO accounting (market accounts; rate-regulated accounting)
  - Pre-Election Report
  - Pension asset accounting
  - Province's debt

- Additional considerations:
  - Stakeholder reports and commentaries (e.g. Ontario Chamber of Commerce Economic report; FAO report on Hydro One; Fraser Institute commentaries on fiscal situation)
  - Third Quarter Ontario Finances
  - Executive compensation (e.g. OPG & IESO)
  - IESO/OPG "inappropriate expenses"
  - IESO Audit Committee meeting
  - OPG Financing of Regulatory Assets

Issues Management Strategy Summary

Issue	Strategy	Key Messages
Pension asset accounting TBS lead	• Emphasize due diligence and objective advice to support government decision-making. • Leverage external analysis where appropriate. • Reaffirm commitment to working with AG.	• The province has a strong track record of producing high-quality financial reports on a timely basis and continues to present the province's finances fairly and accurately and in accordance with Canadian PSAS. • The province will continue to evaluate the need for a valuation allowance annually.
IESO accounting Finance/IESO lead TBS to speak to government decision to accept accounting	• Emphasize due diligence and objective advice to support government decision-making. • Leverage external analysis where appropriate. • Reaffirm commitment to working with AG.	• The province supports this enhanced reporting and greater transparency for the economic activities of the IESO. • The province is open to continue to discuss the issue in the hopes of resolving this matter.
Ontario Fair Hydro Plan Energy/OPG/IESO lead TBS to speak to accounting	• Highlight due diligence included in OFHP decision-making, and that the accounting structure is still being finalized. • Avoid any speculation on political decision-making or future events.	• It would be inappropriate to speculate about how the Auditor General may issue an opinion for Public Accounts next year. • The implementation of OFHP is ongoing, with significant decisions with accounting and financial implications still being finalized.

Issues Management Strategy Summary

Issue	Strategy	Key Messages
Pre-Election Report Joint TBS/Finance lead	• Reaffirm government's commitment to working with Office of Auditor General. • Avoid speculation on political decision-making or future events.	• The province remains committed to meeting the legislative requirements of the FTAA and working constructively with the Office of the Auditor General. • *(TBC as decisions are finalized.)*
Province's Fiscal Situation Finance/OFA lead	• Provide context, evidence and facts; refer to documents in public domain where appropriate. • Highlight due diligence. • Avoid speculation on political decision-making or future events.	• The province has a strong track record of producing high-quality financial reports on a timely basis and continues to present the province's finances fairly and accurately and in accordance with Canadian PSAS.
Preparation of Public Accounts TBS lead Finance to speak to timelines re: tax revenues	• Avoid speculation on political decision-making or future events. • Reaffirm commitment to working with AG. • Confirm province seeks external expertise when appropriate as normal course of business.	• It would be inappropriate to speculate about how the Auditor General may issue an opinion for Public Accounts next year. • The province's use of external expertise for accounting and financial reporting matters supplements its own resources on complex or emerging accounting and reporting matters.

Issues Management Strategy Summary

Issue	Strategy	Key Messages
Insisting on Speculation	• Emphasize role of public servant is to provide objective advice to support government decision-making. • Avoid speculation on political decision-making or future events.	• As a public servant, it would be inappropriate for me to speculate on the intentions of the government. • We provide neutral advice to support decision-making.
Confidential Advice	• Emphasize role of public servant is to provide objective advice to support government decision-making. • Avoid any commitment if unsure whether information is confidential or not.	• This matter could be considered confidential advice provided. • I would be happy to look into this matter further to clarify the scope of confidentiality and provide a written response back to the committee.
Out of Scope	• Provide responses that are relevant and in scope of the consideration of chapter two of the Office of the Auditor General's report.	• I am happy to provide a response to the question as it relates to chapter two of the Annual Report. • I cannot speak to the specific point you are raising, and as mentioned, [____] would be more appropriate to respond.

Response to Recommendations

- Refer to Appendix A for the province's management response to the Office of the Auditor General's recommendations.

Anticipated Questions

- Refer to Appendix B for anticipated top questions, including key messaging for Secretary of the Cabinet.

- Refer to Tab 6 of Briefing Binder for comprehensive list of anticipated questions and answers.

Summary Status Table in Response to the Report of the Auditor General of Ontario

Chapter 2 2017 Annual Report of the Auditor General
Treasury Board Secretariat, Ministry of Finance, Ministry of Energy

Auditor's Recommendation	Completed Undertaking	Outstanding Undertaking (including timeline)
AG Recommendation #1 *We recommend the government record valuation allowances to offset the net pension assets it has recorded from the Ontario Teachers' Pension Plan and the Ontario Public Sector Employees' Union Pension Plan until such time as it obtains formal written authorization from their pension plan co-sponsors that they are able to lower minimum contributions or withdraw surpluses from the pension funds within the next 12 months.*	The Office of the Auditor General communicated its interpretation of Public Sector Accounting Standards (PSAS) requiring a full valuation allowance on the Province's two jointly sponsored pension plans in September 2016. At that time, the government passed a time-limited regulation on the accounting treatment for its joint defined benefit plans to align with the Auditor General's interpretation of PSAS, which enabled officials from Treasury Board Secretariat and the Ministry of Finance to sign the Statement of Responsibility for the 2015-16 Public Accounts. During the 2016-17 year, the professional staff conducted further research and analysis, and determined that PSAS does not require a valuation allowance on either of the jointly sponsored pension plans. This conclusion is supported by: • The conclusions reached by an independent Pension Asset Expert Advisory Panel (the 'Panel'), established by the government to provide advice on the interpretation of PSAS with respect to the reporting of net pension assets of these two joint defined benefit plans. The Panel, comprised of accredited accounting, actuarial and legal professionals with extensive background in pension accounting and plan governance, released its report in February 2017 which supported the government's position that a valuation is not required for these two plans under PSAS. Two key findings of the Panel were: 1) there is no requirement under PSAS that any formal agreement exist between the joint sponsors regarding the timing or amount of a reduction in contributions to record an asset, as the existing agreements in place between the parties support the recognition of an expected benefit, and 2) unilateral control is not	The government will evaluate the need for a valuation allowance annually taking into consideration (a) changes, if any, in the governance structures of the plans, (b), decisions, if any, of the joint sponsors that impact the need for a valuation allowance, and b) changes, if any, in Public Sector Accounting Standards. The government is open to continue to discuss the matter in the hopes of resolving this matter.

DRAFT

Summary Status Table in Response to the Report of the Auditor General of Ontario

Chapter 2 2017 Annual Report of the Auditor General

Treasury Board Secretariat, Ministry of Finance, Ministry of Energy

	required for asset recognition; joint control with each party having the ability to deny the actions of the other sponsor, provides evidence of shared control, supporting recognition of an asset. • An opinion from Deloitte LLP on aspects of the Province's accounting as at March 31, 2016 for the Ontario Teachers' Pension Plan. The opinion, which was dated October 2, 2016, concluded that it was permissible to recognize a pension asset under Canadian Public Sector Accounting Standards, even though the Province did not have under a unilateral right to reduce contributions. The opinion did not address the value at which the asset should be recorded. • Analysis completed by EY as to whether any valuation allowance is required to be recorded for OTPP or OPSEUPP as of March 31, 2017. EY confirmed no valuation allowance was required for either plan. The government respectfully disagrees with the Auditor General's interpretation of the accounting standards on this issue as PSAS neither requires unilateral control to record an asset, nor does it include a requirement to obtain a letter from the co-sponsor of the plan agreeing to reduce future contributions within 12 months.	

DRAFT

Summary Status Table in Response to the Report of the Auditor General of Ontario

Chapter 2 2017 Annual Report of the Auditor General
Treasury Board Secretariat, Ministry of Finance, Ministry of Energy

AG Recommendation #2 *We recommend that the government remove the Independent Electricity System Operator's Market Accounts from the Province's consolidated financial statements.*	The Province consolidates the entities it controls, in accordance with Public Sector Accounting Standards (PSAS) and its internal reporting policies. Each consolidated entity produces its own stand-alone financial statements and is subject to its own financial statement audit. In 2016, the Independent Electricity System Operator (IESO) changed the accounting for the market accounts and recognized these balances on its financial statements. The financial statements of the IESO for the year-ended December 31, 2016 were subject to an external audit and received an unqualified (or clean) opinion. The government supports this enhanced reporting and greater transparency for the economic activities of the IESO. Additional comments with respect to IESO's accounting for the Market Accounts are included in the response to Recommendation #5 of this report.	The government supports the enhanced reporting and greater transparency for the economic activities of IESO resulting from the recognition of the market accounts. The government is open to continue to discuss the issue in the hopes of resolving this matter.
AG Recommendation #3 *We recommend the government follow the accounting standards established by the Public Sector Accounting Board and the Province's historical accounting precedent, and implement the recommendations in the Special Report issued*	The government prepares its financial statements in accordance with PSAS. The proposed accounting for the Ontario Fair Hydro Plan reflects the economic substance of the transaction by differentiating costs borne by taxpayers versus those borne by ratepayers. PSAS is silent on the recognition, measurement, presentation and disclosure of rate-regulated activities. In absence of a clear position on an issue, standard accounting practice dictates that an entity should consult other accounting standards. This guidance for PSAS is included in PS1150.07. Regarding the Office of the Auditor General's (OAG's) recommendation that the financing for Ontario's Fair Hydro Plan (OFHP) be pursued at the lowest cost to Ontarians, the government reiterates its concerns with this characterization, which were previously provided in the October 4, 2017 government response to the OAG's special report on OFHP (see	The government intends to continue to prepare its financial statements in accordance with Public Sector Accounting Standards (PSAS). The Fair Hydro Trust will raise financing through a combination of 3rd party senior debt and subordinated debt funded by OPG for which the cost will be primarily driven by the credit ratings assigned by Moody's and DBRS. The ultimate cost of this program will be dependent on the quantity of Global Adjustment that will be financed, prevailing market interest rates over the next 30 years, the availability of capital to invest in this type of structured debt and the

DRAFT

Summary Status Table in Response to the Report of the Auditor General of Ontario

Chapter 2 2017 Annual Report of the Auditor General
Treasury Board Secretariat, Ministry of Finance, Ministry of Energy

by our Office and tabled in the legislature on October 17, 2017, titled The Fair Hydro Plan: Concerns About Fiscal Transparency, Accountability and Value for Money, as follows: • *Record the true financial impact of the Fair Hydro Plan's electricity rate reduction on the Province's budgets and consolidated financial statements; and* • *Use a financing structure to fund the rate reduction that is least costly for Ontarians.*	Government Response to OAG Report on the Fair Hydro Plan in Appendix 5 of the Auditor General's Special Report). With respect to the Global Adjustment Refinancing (GA Refinancing) component of the OFHP, the policy objective is to more fairly allocate the cost to ratepayers over the useful life, not the contractual term, of the electricity generating assets. Therefore, it was a primary policy objective to ensure that the costs are borne by the beneficiaries of the electricity system – the ratepayers – and not the tax-base. The government believes it is appropriate for ratepayers to pay for the financing of electricity assets. The rate-base has a different risk profile than the tax-base, which would be reflected in different interest costs. The various entities that operate in the electricity industry have different financing costs that are specific to their risk profiles. The industry does not operate and is not financed through the Province. Ontario Power Generation (OPG) was identified as the Financial Services Manager responsible for the financing plans and the financing entity (i.e., Fair Hydro Trust) that will manage the debt obligations. OPG has the necessary financing and commercial expertise to assist with refinancing the Global Adjustment (GA) and will ensure that it is done in an efficient and cost-effective manner. OPG has a demonstrated track record in the financial markets with its Corporate Debt platform, private placement of insurance linked bonds, participation in securitization program and highly successful project debt issuances tied to new hydroelectric developments. OPG is beginning the process of raising funds to finance the deferred costs, and while total borrowing costs will not be known until the program is complete, accumulated interest is projected to be less than the estimates in the May 2017 report of the Financial Accountability Office (FAO). The figures referenced in the FAO's report was based on initial Ministry of Energy estimates from March 2017. Subsequent analysis	credit stability of the OFHP program which would be reflected in credit ratings assigned to this debt over time. Each of these factors will need to be managed and monitored closely. The government is open to continue to discuss the issue in the hopes of resolving this matter.

DRAFT

Summary Status Table in Response to the Report of the Auditor General of Ontario

Chapter 2 2017 Annual Report of the Auditor General

Treasury Board Secretariat, Ministry of Finance, Ministry of Energy

	conducted by the Ministry of Energy refined a number of variables, including the cost of borrowing and the quantity of GA to be refinanced. A number of variables, including interest rates, electricity demand and electricity costs, will change over the thirty-year life of OFHP. Government will continue to revise cost estimates to reflect these variable conditions. In addition, as outlined in the 2017 Long-Term Energy Plan, the government will continue to identify and implement initiatives to take costs out of the electricity system, which would reduce the cost of GA refinancing.	
AG Recommendation #4 *The Office of the Auditor General is the appointed under the Auditor General Act as the auditor for the consolidated financial statements of the Province of Ontario. We recommend that the Treasury Board Secretariat:* • *Proactively supply copies to the Auditor General of all contracts it enters into for accounting advice and opinions in order to ensure that*	Treasury Board Secretariat's use of external expertise for accounting and financial reporting matters supplements its own resources on complex or emerging accounting and reporting matters. External advisors are generally engaged to provide advice and guidance to supplement internal analysis. Treasury Board is committed to working with the Office of the Auditor General to discuss issues, once the professional staff has completed its analysis of the issue. In addition, Treasury Board believes frequent communication with the Office of the Auditor General is important and to that end, requested additional meetings with both the staff and the Auditor General during the 2016-17 audit. Where required by the CPA Ontario Code of Professional Conduct, the Auditor General has been, and will continue to be, advised of external advisor involvement.	Treasury Board Secretariat will continue to take a proactive approach to raising issues with the Office of the Auditor General. Where required by the CPA Ontario Code of Professional Conduct, the Auditor General will continue to be advised of external advisor involvement.

their engagement as required under the Code of Professional Conduct of the Chartered Professional Accountants of Ontario.		
AG Recommendation #5 *We recommend that the Independent Electricity System Operator (IESO), an "other government organization," use the Canadian Public Sector Accounting Standards (PSAS) in the preparation of its financial statements. Specifically, it should:*	The Independent Electricity System Operator (IESO) prepares its financial statements in accordance with Public Sector Accounting Standards (PSAS) and the financial statements are audited by a firm of independent external auditors whose responsibility is to express an opinion on whether the financial statements are fairly presented in accordance with PSAS. On its 2016 financial statements, IESO received an unqualified (clean) audit opinion. In its role as market administrator, IESO operates and settles approximately $17 billion through the electricity market. The change to include market account assets and liabilities in the financial statements provides increased transparency with respect to the value of transactions that flow through Ontario's electricity market, that otherwise would go	The IESO intends to continue to prepare its financial statements in accordance with Public Sector Accounting Standards, and will report on the results of its accounting firm's audit in its 2017 financial statements, to be published March 30, 2018. The IESO will continue to regularly review its accounting policies to ensure they are best suited to the reporting requirements of its business and the users of its financial statements. This includes providing transparency into the value of transactions that flow through Ontario's $17 billion electricity market and reflecting the economic substance of certain types of expenses that may not be directly recovered through normal revenue requirement

DRAFT

Chapter 2 2017 Annual Report of the Auditor General

Treasury Board Secretariat, Ministry of Finance, Ministry of Energy

• *Remove market accounts recorded on its financial statements; and* • *Discontinue the inappropriate use of rate-regulated accounting in the preparation of its financial statements.* *To ensure that the members of the Legislative Assembly receive financial information on the operations of the IESO prepared in accordance with Canadian PSAS, the Office of the Auditor General will conduct an attest audit of the December 31, 2017, financial statements of the IESO as permitted under the Electricity Act, Subsection 25.2(2), which*	unreported in IESO's financial statements. These changes were extensively discussed with IESO's external auditors, its Audit Committee and its Board of Directors. The decision was supported by the Office of the Provincial Controller and IESO's external audit firm. Rate-regulated accounting better reflects the economic substance of certain types of IESO expenses (like those related to the Smart Metering Entity) that may not be directly recovered through normal revenue requirement models, and instead are recovered through rate regulation. This change is in line with accounting practices followed by six out of eight other independent system operators in North America and provides IESO financial statement users greater transparency into the substance of the variance accounts it holds and its right to collect an amount in the future.	models, and instead are recovered through rate regulation. The IESO recognizes the Auditor General's statutory role and authority to perform an audit of the IESO. The IESO is cooperating with the Office of the Auditor General to provide information, including the 2017 financial statements prepared by management, and for access to management for assistance in understanding such information. The IESO has likewise instructed its audit partner to cooperate with the Auditor General's audit.

DRAFT

states: "The Auditor General may audit the accounts and transactions of the IESO. 2014, c. 7, Sched. 7, s. 3 (1)."		
AG Recommendation #6 *We recommend the government follow the accounting standards established by the Public Sector Accounting Board, rather than using legislation and regulations to prescribe accounting treatments.*	The Province is committed to provide high-quality financial reports that support transparency and accountability in reporting to the public, the legislature and other users. For the 2015-16 Public Accounts, the government passed a time-limited regulation prescribing the accounting treatment for net pension assets in order to allow Treasury Board Secretariat and Ministry of Finance officials to sign off on Public Accounts consistent with the fiscal impact of the Auditor General's interpretation of Public Sector Accounting Standards (PSAS). This regulation is the only example of where the accounting treatment was legislated, and the legislation did not align with the requirements of PSAS. With respect to the Ontario Fair Hydro Plan Act and its regulations, there are no provisions in that legislation that prescribe the accounting treatment required to be followed by the Province. It is important to distinguish legislating the accounting from legislating the right of the government to recover amounts from specified ratepayers in the future,	The government intends to continue to prepare its financial statements in accordance with Public Sector Accounting Standards.

DRAFT

Summary Status Table in Response to the Report of the Auditor General of Ontario

Chapter 2 2017 Annual Report of the Auditor General

Treasury Board Secretariat, Ministry of Finance, Ministry of Energy

	which in the absence of the legislation, would have been collected from specified ratepayers as the costs were incurred. The accounting for the transactions resulting from the Fair Hydro Plan will be recorded in accordance with PSAS.	
AG Recommendation #7 *We recommend that in order to address the Province's growing total debt burden, the government work towards the development of a long-term total-debt reduction plan linked to its target of reducing the net debt-to-GDP ratio to its pre-recession level of 27% as measured using proper accounting for net pension assets and the projected costs of the Fair Hydro Plan. The government should also discuss publicly how it plans to pay down the debt.*	The 2017 Budget and the 2017 Fall Economic Statement stated that the government continues to maintain a target of reducing the net debt-to-GDP ratio to its pre-recession level of 27%, currently projected for 2029-30, together with an interim target of 35% by 2023-24. From 2017-18 onwards, the balanced budget environment will limit increases in debt to the difference between annual investments in infrastructure improvements and the amortization of such investments. The government's long-term infrastructure plan to invest about $190 billion over 13 years, starting in 2014-15, will contribute to the growth of the economy. The Centre for Spatial Economics found that for every $1 spent on public infrastructure, GDP increases by $6, on average, in the long term. Therefore, while overall debt will rise to fund these infrastructure investments, measurements of relative debt such as the net debt-to-GDP ratio, a recommended practice by the Public Sector Accounting Board, will gradually diminish due to the Province's GDP increasing at a faster rate than net debt. This will allow the Government to continue to move towards its 27% net debt-to-GDP target. The ratio has already commenced declining, falling to 37.3% in 2017-18 from its 2014-15 peak of 39.3%.	Continue to monitor progress. Estimated implementation by FY 2029-30.

DRAFT

Summary Status Table in Response to the Report of the Auditor General of Ontario

Chapter 2 2017 Annual Report of the Auditor General

Treasury Board Secretariat, Ministry of Finance, Ministry of Energy

	As discussed more thoroughly in responses to other recommendations in this report, the government prepares its financial statements in accordance with Public Sector Accounting Standards, including the net pension assets for its jointly sponsored pension plans and the transactions resulting from the Ontario Fair Hydro Plan.	
AG Recommendation #8 *We recommend that the Office of the Provincial Controller undertake thorough planning involving all stakeholders, including Treasury Board Secretariat, ministries and provincial government agencies, to identify the barriers and key areas to be addressed to achieve earlier finalization of the Province's consolidated financial statements, including the estimation risks associated with corporations tax and*	Treasury Board Secretariat and the Ministry of Finance are supportive of the timely delivery of the Public Accounts. The Office of the Provincial Controller works closely with the Office of the Auditor General to identify audit issues early and to ensure that stakeholders are engaged in discussions regarding risks and resolution. The Office of the Provincial Controller will continue to collaborate with the Office of the Auditor General to support the timely delivery of the Public Accounts. The Province will work with the Canada Revenue Agency on this recommendation, as reporting Personal and Corporate taxation revenues is highly dependent on information they provide.	Planning discussions for the 2017-18 Public Accounts have begun between the Office of the Provincial Controller and the Office of the Auditor General. As well, the Office of Economic Policy has been engaged in discussions on risk considerations related to economic models used to estimate personal and corporate tax revenues.

DRAFT

Summary Status Table in Response to the Report of the Auditor General of Ontario

Chapter 2 2017 Annual Report of the Auditor General

Treasury Board Secretariat, Ministry of Finance, Ministry of Energy

personal income tax revenues.		
AG Recommendation #9 *We recommend that the government avoid establishing arm's length trusts in order to record an expense in its consolidated financial statements before it is necessary, given that it loses the ability to ensure that funds are ultimately provided to the appropriate beneficiaries.*	The government works with its transfer payment recipients to ensure it receives good value for the money it provides in the form of grants. Government policy on the structured approach to program delivery takes a risk-based approach with respect to transfer payment oversight. Grants are provided to thousands of organizations annually that the government deals with at arms-length and is able to demonstrate proper oversight. A Trust structure was selected to implement the Affordability Fund in order to provide an effective solution to distributing funds to electricity distributors. With approximately 70 distributors across Ontario, it was not feasible for the Province to enter into agreements with each distributor. The Trust structure establishes an independent entity with expertise from the electricity distributor and community sectors. While the Affordability Fund was established at arm's length to the government, there are report-back requirements on the use of funds transferred as well as the ability for the government to conduct an audit to gain assurance that the funds have been used for the purposes intended.	The government will continue to assess the most appropriate vehicle for meeting its policy objectives, which include appropriate oversight of how transfer payments are spent.

DRAFT

Chapter 2 2017 Annual Report of the Auditor General
Treasury Board Secretariat, Ministry of Finance, Ministry of Energy

AG Recommendation #10 *We recommend that the government determine when it will issue a regulation as outlined under subsection 11(1) of the Fiscal Transparency and Accountability Act, 2004 confirming the source of reference for the Pre-Election Report and the timeline for issuance of the report that will be subject to our review under the Act.*	Under the *Fiscal Transparency and Accountability Act*, 2004, the government may file a regulation that would require it to release a Pre-Election Report on Ontario's Finances. Should the government file such a regulation, the Auditor General would be required to issue a Statement based on a prompt review following the release of such a Pre-Election Report.	The government remains committed to meeting the legislative requirements of the Act and working constructively with the Office of the Auditor General.

QUESTIONS FOR THE SECRETARY OF THE CABINET

1. **Secretary, we want to hear from you, as the head of the Public Service – can you answer the question on ___?**

   Thank you for your question.

   If applicable:
   What I can say is that [*refer to key messages below*].

   I cannot speak to the specifics of your question, but I would be happy to pass it over to my colleague, Deputy ___.

2. **How can you say the province is responsibly managing its finances when Ontario is the most indebted sub-sovereign jurisdiction, has received a qualified audit opinion two years in a row, and continues to go down a path of questionable accounting with the Fair Hydro Plan?**

   Thank you for your question.

   The province has a strong track record of producing high-quality financial reports on a timely basis and continues to present the province's finances fairly and accurately and in accordance with Canadian Public Sector Accounting Standards.

   We will continue to ensure appropriate due diligence is completed in all objective advice that we provide to support government decision-making.

   This includes completing our own internal analysis, building prudence into financial forecasts, looking to other jurisdictions or external advisors to supplement our own analysis, and always bringing our best professional judgment to the table.

   If you'd like further details on these points, I will pass it over to my colleagues, who would be pleased to provide the Committee with further information.

3. **If your colleagues are, as you say they are, providing objective, good advice, why do you think the elected government continues to ignore the public service and go ahead with policy decisions like the Fair Hydro Plan?**

   Thank you for your question.

As a public servant, as you can appreciate, it would be inappropriate for me to speculate on the intentions of the government.

What I can say is that I am confident in my colleagues, who like me, work to provide our best, objective advice to support government decision-making.

Whether it is for the Ontario Fair Hydro Plan, or anything else, the province will continue to prepare its consolidated financial statements in accordance with Public Sector Accounting Standards.

Where these standards are silent, our professional staff will exercise their professional judgment and apply the standards' guidelines as appropriate.

For the purposes of Ontario's Fair Hydro Plan, the province considered a range of implementation options and consulted with legal, accounting, financial, and energy sector experts to provide advice and ensure due diligence was completed.

For further details on the Fair Hydro Plan, I will pass it over to Deputy Imbrogno. He and his team would be pleased to provide the Committee with further information.

4. What advice did you give the Premier regarding on the Ontario Fair Hydro Plan?

Thank you for your question.

As a public servant, it is our role to provide our best, objective advice to support government decision-making.

I am unable to speak to the specific advice that was provided, as this would be considered confidential. However, I would like to assure the Committee that for this policy matter, like any other, our professional staff ensured due diligence was completed in providing their advice.

For further details on that due diligence, including the consideration of a range of implementation options and consultations with legal, accounting, financial, and energy sector experts, I will pass it over to Deputy Imbrogno. He and his team would be pleased to provide further details.

5. **Is the province willing to move forward, ignoring the advice of the Auditor General, at the risk of another qualified audit opinion – or worse, an adverse audit opinion? Don't you think this would affect the province's credit rating, and make debt even worse than it is for future generations?**

   Thank you for your question.

   As you can appreciate, it would be inappropriate for me to speculate on how the Auditor General may issue an opinion for the next Public Accounts.

   What I can say is that the province has a strong track record of producing high-quality financial reports on a timely basis. We will continue to present the province's finances fairly and accurately and in accordance with Canadian Public Sector Accounting Standards.

   If you would like further details on the preparation of Public Accounts and the province's work with the Office of the Auditor General, I would be happy to pass it over to Deputy Angus.

   If you would like further details on the province's fiscal management, I would be pleased to pass it over to Deputy Thompson.

6. **Why has the government avoided a clear answer on the Pre-Election Report? Will you, as per legislative requirements, issue this important accountability document?**

   Thank you for your question.

   I want to stress that the province takes the Auditor General's recommendations seriously.

   Our teams are engaging all officers of the legislature to keep them informed and engage constructively on considerations and approaches to ensure the people of Ontario are provided with an independent review of the province's fiscal position in advance of the election.

   The government has not yet made a decision on whether and when to release a Pre-Election Report.

   For further details on the Pre-Election Report, and how the province has been working with the Office of the Auditor General, I will pass it over to Deputy Angus and Deputy Thompson.

7. **How can you justify the exorbitant salaries that are being paid to consultants, to OPG and IESO executives, when the people of this province are struggling to make ends meet?**

   Thank you for your question.

   I would like to emphasize that province remains committed to ensuring transparency and accountability in how broader public sector employers manage executive compensation.

   I believe this topic may be out of scope for today's consideration of chapter two of the Auditor General's 2017 Annual Report.

8. **What has been your relationship with the Auditor General? As the head of the public service, aren't you concerned that the government continues to undermine independent officers of the legislature?**

   Thank you for your question.

   I speak for myself and my colleagues when I say that the OPS has the utmost respect for all independent officers of the legislature, and we value the important and necessary perspective they bring.

   Our professional staff will continue to take a proactive approach to raising issues with the Office of the Auditor General.

   I know, for example, that the Office of the Provincial Controller works closely with the Office of the Auditor General to identify audit issues early and to ensure that stakeholders are engaged in discussions regarding risks and resolution.

   As public servants, we will continue to ensure due diligence and provide our best, objective advice to support decision-making. In addition, we will continue to work with all officers of the legislature to keep them informed and engage constructively on considerations and approaches.

   For further details on recent collaborations with the Office of the Auditor General on the topic of the preparation of Public Accounts, I will pass it over to Deputy Angus.

9. **Secretary, why does the province continue to turn to consultants or external advisors whenever there is disagreement with the Auditor General? Doesn't the public service have the expertise in-house? Or do**

DRAFT

you just turn to external experts as a way to circumvent the opinions and recommendations expressed by the Auditor General?

Thank you for your question.

I would like to emphasize that the OPS has the utmost respect for all independent officers of the legislature, and we value the important and necessary perspective they bring.

Our professional staff will continue to take a proactive approach to raising issues with the Office of the Auditor General.

The province's use of external expertise for accounting and financial reporting matters supplements our own resources on complex or emerging matters.

External advisors are generally engaged to provide advice and guidance to supplement our own internal analysis. This is within a normal course of business, and is part of our responsibility to ensure due diligence.

We remain committed to working with the Office of the Auditor General to discuss issues.

For further details on how we use external expertise to support our own internal analysis, I will pass it over to Deputy Angus.

PENSION ASSET ACCOUNTING

Key Messages

- The province continues to move forward and present the province's finances fairly and accurately and in accordance with Canadian Public Sector Accounting Standards (PSAS).
- We respectfully disagree with the Auditor General's interpretation of the accounting standards.
- The province is open to continue to discuss the matter in the hopes of resolving this matter.
- For more information on pension asset accounting, I will now pass it over to:
    - Deputy Angus

DRAFT

IESO ACCOUNTING

Key Messages

- The province consolidates the entities it controls, in accordance with Public Sector Accounting Standards (PSAS) and its internal reporting policies.
- In 2016, the Independent Electricity System Operator (IESO) changed the accounting for the market accounts and recognized these balances on its financial statements.
- The financial statements of the IESO for the year-ended December 31, 2016 were subject to an external audit and received an unqualified (or clean) opinion.
- The government supports this enhanced reporting and greater transparency for the economic activities of the IESO.
- The province is open to continue to discuss the issue in the hopes of resolving this matter.
- For further details on the province's decision to accept IESO market accounts on the province's consolidated financial statements, I will pass it over to:
    - Deputy Angus
- For further details on the IESO's decision to adopt market accounts, I will pass it over to:
    - Deputy Imbrogno

ONTARIO FAIR HYDRO PLAN

Key Messages

- The province will continue to prepare its consolidated financial statements in accordance with Public Sector Accounting Standards (PSAS).
- The proposed accounting for the Ontario Fair Hydro Plan (OFHP) reflects the economic substance of the transaction by differentiating costs borne by taxpayers versus those borne by ratepayers.

DRAFT

- The province's professional staff have appropriately applied PSAS guidance in assessing the accounting for the OFHP.
- For further details on the province's decision to accept OFHP accounting, I will pass it over to:
    - Deputy Angus
- For further details on the OFHP, I will pass it over to:
    - Deputy Imbrogno

PRE-ELECTION REPORT

Key Messages

- The province takes the Auditor's recommendations seriously and remains committed to working constructively with the Auditor General.
- The government has not yet made a decision on whether and when to release a Pre-Election report.
- My colleagues are engaging with all officers of the legislature to keep them informed and engage constructively on considerations and approaches to ensure the people of Ontario are provided with an independent review of the province's fiscal position in advance of the election.
- For further details, I will pass it over to:
    - Deputy Angus

PROVINCE'S FISCAL SITUATION

Key Messages

- The province has a strong track record of producing high-quality financial reports on a timely basis and continues to present the province's finances fairly and accurately and in accordance with Canadian Public Sector Accounting Standards.
- We are projecting a balanced budget in 2017-18.

- The Ministry of Finance is committed to a responsible fiscal plan and they build prudence into our forecasts.
- For further details, I will pass it over to:
    - Deputy Thompson

PREPARATION OF PUBLIC ACCOUNTS

Key Messages

- The Treasury Board Secretariat and the Ministry of Finance are supportive of the timely delivery of Public Accounts.
- The province's financial statements are prepared in accordance with Canadian Public Sector Accounting Standards (PSAS).
- Our professional staff exercise judgment in applying the standards and as necessary consult with external experts and advisors.
- The Office of the Provincial Controller works closely with the Office of the Auditor General to identify audit issues early and to ensure that stakeholders are engaged in discussions regarding risks and resolution.
- The province's use of external expertise for accounting and financial reporting matters supplements its own resources on complex or emerging accounting and reporting matters.
- External advisors are generally engaged to provide advice and guidance to supplement internal analysis, and in the normal course of business.

Environmental Scan

Based on the Auditor General's 2017 Annual Report, media analysis, Hansard analysis, and the invitee list for the SCOPA session on February 28, 2018, it is anticipated that the focus of the Committee will be the following:

- **Pension asset accounting**
- **Ontario Fair Hydro Plan (OFHP) Accounting**
- **Independent Electricity System Operator (IESO) Accounting (market accounts; rate-regulated accounting; other – IESO/OPG "inappropriate expenses"; OPG compensation)**
- **Pre-Election Report**
- **Province's debt burden**

Following the release of the Auditor General's Annual Report on December 6, 2017, TBS-related issues were referenced in 41 per cent of articles, including specifically the "accounting disputes" between the Auditor General and the government, spending on government advertising, and the Auditor General's commitment to audit the IESO's consolidated financial statements. In the House, there were eight questions related to TBS issues: 50 per cent were related to the IESO/OPG "inappropriate expenses"; 25 per cent were related to government advertising; and the remaining two questions focused on the balanced budget narrative and the Pre-Election Report.

Overall, the focus on Public Accounts specifically has been limited in the media and the House alike: between September and December 2017, there were 12 mentions of Public Accounts. 50 per cent of mentions referenced "accounting rules" or the alleged existence of "multiple sets of books". Following the tabling of Public Accounts 2016-17, media coverage was limited and 80 per cent of coverage was neutral in tone.

Auditor General 2017 Annual Report

- **Media Events – December 6, 2017**
    - **Auditor General**
        - Overall, TBS-related issues represented 28% of the Auditor General's remarks.
        - Media questions on TBS-related issues represented 28% of all questions asked (7 out of 25)– **including on the planned audit of IESO's financial statements, government numbers vs. AG numbers being used for the PC's platform, and concerns regarding pre-election reports.**
    - **Government Response**
        - Overall, TBS-related issues represented approximately 20% of the discussion.

        - Media questions on TBS-related issues represented 20.8% of all questions asked (5 out of 24) – questions focused on government advertising and **on comments made by the Auditor General to "address significant issues without fear of push-back and reprisal."**

    - **PC Response**
        - Introductory remarks focused generally on waste and mismanagement.
        - Media questions on TBS-related issues represented 17% of all questions asked (2 out of 12) – **questions focused on the PC's use of the government's numbers in their "People's Guarantee" platform**

    - **NDP Response**
        - TBS-related issues related to 8% of the third party leader's remarks, particularly on government advertising
        - No direct mention of TBS-led chapters, **however 38% of questions (3 out of 8) focused on IESO expenditures**

- **Initial Media Coverage**
    - There were approximately 17 stories focusing on the Auditor Generals' 2017 Annual Report
    - 41% of articles referenced TBS-related issues
    - Key themes related to TBS issues include: **"accounting disputes" between the AG and the government** – and the effect it has on the balanced budget narrative, spending on government advertising, and **the AG's statement that she will audit the IESO's financial statements.**

- **Recent Media Coverage** (December 2017 – January 2018) has focused on the following key themes:
    - **The government's relationship with the Auditor General**
    - **Pre-election report**
    - **Distrust of government numbers/"two sets of books"**

Public Accounts

- **Media Coverage**
    - Media coverage was short-term (24-hours), with **80% of media coverage neutral in tone** (compared to 26% in 2016)
    - Government key messages were picked up 100% of the time
    - Balanced budget key messages were picked up in 60% of the coverage

- **Key Themes**
    - Disagreement between the government and auditor general

- Ontario's fiscal position: government debt and deficit
- The government's alleged continued dismissal of watchdogs

Pre-Election Report

- **Media Coverage**
  - On December 17, 2017, the Toronto Sun published a column by Lorrie Goldstein, "Auditor General headed for a showdown with Wynne over financial vows Liberals made in 2004" focusing on the Pre-Election Report
  - On January 24, 2018, Minister Sousa was asked by Jessica Smith Cross (QP Briefing) about the plans for the Pre-Election Report. Minister Sousa signalled that plans were uncertain at this time: "What happens is, you produce a document then you provide the pre-election report. So I have to manage this concurrently. But again, we recognize the timing and the constraints that that brings. **So I have to find other ways** to ensure that full disclosure is given to her and the other legislative, to the FAO."

Hansard Scan

Auditor General 2017 Annual Report

Following the release of the Auditor General's 2017 Annual Report, there were eight questions in the House relating to TBS issues:

- 50% (4/8) were related to **OPG/IESO "inappropriate expenses"**
- 25% referenced the FAO - one on balanced budget, one on the **pre-election report**

Public Accounts

Public Accounts were mentioned in the House at least 12 times between September and December 2017:

- 50% mention some form of "accounting rules" / two sets of books
- 42% (5/12) related to infrastructure spending
- 25% (3/12) mention FAO and AG together
- 25% regarding Fair Hydro Plan accounting
- One reference to pre-election finance report

FOIs/OPQs

There is one OPQ currently in progress with TBS related to Ontario Fair Hydro Plan accounting.

Overview	Key Issues	Key Dates	Next Steps
OPQ #700		OPQ will be formally filed on	In progress –

MPP Vic Fedeli Would the President of the Treasury Board state whether the government is in possession of an opinion from KPMG or E&Y on how the Fair Hydro Plan transaction should be recorded in the government's Consolidated Financial Statements, and further state precisely where they disagree with the Auditor General	**Ontario Fair Hydro Plan Accounting** **Relationship with the Auditor General** **Use of external advisors**	February 20, 2018	**Products:** Response to OPQ. **Notes:** Draft will be sent first week of January 2018 to OPCD to draft response. OPQ will be formally filed on February 20, 2018 TBS is the only ministry to have received this OPQ. **Next Steps:** Develop and approve response

Other Considerations

- Executive compensation (OPG, OEB, IESO)
- "Inappropriate expenses" (OPG, IESO)
- Hydro bill redesign ("$15 million")

Key Issues

Issue/Consideration	Strategy	Key Messages	Evidence
Pension Asset Accounting: Auditor General's qualified opinion	Confirm that the province will continue to follow PSAS, as always, and seek appropriate expert guidance where PSAS is silent. Highlight supporting perspectives from external consultants.	The government continues to move forward and present the province's finances fairly and accurately and in accordance with Canadian Public Sector Accounting Standards (PSAS). The government respectfully disagrees with the Auditor General's interpretation of the accounting standards, as PSAS neither requires unilateral control to record an asset, nor does it include a requirement to obtain a letter from the co-sponsor of the	• Pension Asset Expert Advisory Panel • Opinion from Deloitte LLP • Analysis Completed by EY

		plan agreeing to reduce further contributions within 12 months. The government is open to continue to discuss the matter in hopes of resolving this matter.	
IESO Accounting: **1) Market Asset Accounts** **2) Rate-Regulated Accounting** **3) AG to audit IESO's 2017 statements** 4) OPG/IESO "inappropriate expenses" 5) Peripheral: OPG Executive Compensation	Confirm that the province will continue to follow PSAS, as always, and seek appropriate expert guidance where PSAS is silent. Re-iterate government's appreciation of the Auditor General's independent review and the IESO's recent unqualified audit record.	The government welcomes the Auditor General's independent review and remains committed to assisting her office in providing its views to the Legislative Assembly. IESO's recent accounting changes are supported by the IESO's audit committee, board of directors, its independent external auditor, and by the Office of the Provincial Controller. The IESO prepares its financial statements in accordance with PSAS, and received an unqualified, or clean, audit opinion on its 2016 financial statements.	Opinion supported by: • IESO audit committee • Independent external auditor (unqualified opinion) • OPCD • Same method used by Ontario Power Authority previously
Fair Hydro Plan Accounting: "convenient/inappropriate accounting"	Highlight due diligence included in OFHP decision making, and that the accounting structure is still being finalized. Refuse to speculate about AG's potential future audit opinion.	The province will continue to prepare its consolidated financial statements in accordance with Public Sector Accounting Standards (PSAS).	• PSAS Guidance • CPA professional code of conduct • External advisors • Other jurisdictions

	Emphasize that the province will continue to follow PSAS, as always, and seek appropriate expert guidance where PSAS is silent.	The proposed accounting for the Ontario Fair Hydro Plan (OFHP) reflects the economic substance of the transaction by differentiating costs borne by taxpayers versus those borne by ratepayers. PSAS is silent on a key accounting issue regarding the OFHP – the standards neither explicitly permit, nor prohibit, the recognition, measurement, presentation, or disclosure of rate-regulated activities. In the absence of a clear position on an issue, standard accounting practice dictates that an entity should consult other accounting standards. The professional staff has appropriately applied this guidance in assessing the accounting for the Ontario Fair Hydro Plan.	
Pre-Election Report: "government should publicly communicate if and when"	Re-iterate the government's commitment to working with the Office of the Auditor General. Confirm that the government will, as always, continue to follow the relevant legislation.	Under the *Fiscal Transparency and Accountability Act, 2004*, the government may file a regulation that would require it to release a Pre-Election Report on Ontario's Finances. Should the government file such a regulation, the Auditor General would be required to issue a statement based on a	• Highlight how the government has been working with the Office of the Auditor General (stated by Minister Sandals in a Dec 16, 2017 Toronto Sun article)

		prompt review following the release of such a Pre-Election Report. The government remains committed to meeting the legislative requirements of the Act, and working constructively with the Auditor General.	
Debt Reduction Plan: "Ontario has the highest sub-sovereign debt in the world"	Re-iterate government's track record of responsible fiscal management and provide high-level overview of debt reduction plan.	The government's long-term infrastructure plan to invest about $190 billion over 13 years, starting in 2014-15, will contribute to the growth of the economy. The Centre for Spatial Economics found that for every $1 spent on public infrastructure, GDP increases by up to $6, on average, in the long term.	• C4SE study • MOF
"Legislated Accounting"	Emphasize that the province will continue to follow PSAS, as always, and seek appropriate expert guidance where PSAS is silent. Provide example of the only time legislated accounting was used; explain how OFHP does not legislate accounting.	The *Ontario Fair Hydro Plan Act, 2017* and its related regulations do not create accounting rules or legislate the accounting. It is important to distinguish legislating the accounting from legislating the right of the government to recover amounts from specified ratepayers in the future, which in the absence of legislation, would have been collected from specified ratepayers as the costs were incurred. The province, as always, will prepare its	• Example of single use of legislated accounting (Public Accounts 15-16)

		consolidated financial statements in accordance with PSAS, including the transactions resulting from Ontario's Fair Hydro Plan.	
Use of External Advisors: Perception that the government looks to external advisors to circumvent the Auditor General	Confirm that the province seeks external expertise when appropriate as a normal course of business.	The government's use of external expertise for accounting and financial reporting matters supplements its own resources on complex or emerging accounting and reporting matters. External advisors are generally engaged to provide advice and guidance to supplement internal analysis, and in the normal course of business.	• CPA professional code of conduct
FOI/OPQ/Records Disclosure			

Questions & Answers

Top Questions*

1. How do you respond to the Auditor General's recommendation that the government should record valuation allowances to offset the net pension assets recorded from the Ontario Teacher's Pension Plan and the Ontario Public Sector Employee's Union Pension Plan until you receive formal written authorization from their pension plan co-sponsors?

2. How do you respond to the Auditor General's recommendation that the government remove the Independent Electricity System Operator's (IESO) market accounts from the province's consolidated financial statements?

3. The government has received a second qualified audit opinion on its Public Accounts – this time based on two separate issues. Why do you continue to disagree with the Auditor General?

4. The Auditor General says that you anticipated the government would receive a qualified audit opinion – and accepted this risk. In the private sector this would be unacceptable. How do you figure you can get away with this?

5. Will the government implement the recommendations in the Auditor General's Special Report on the Fair Hydro Plan?

6. The Auditor General says that she has consulted with all of the Auditor Generals in Canada – and they agree with her assessments. How are we supposed to believe this government when all legislative auditors in the country say you are wrong?

7. Why does the government use external advisors/consultants? It seems convenient that whenever you disagree with the Auditor General, you turn to consultants to justify your accounting methods.

8. The Auditor General says that the IESO's use of rate-regulated accounting is inappropriate. Why has the government allowed the IESO to adopt this accounting method that she says is not in accordance with PSAS?

9. Are you concerned that the Auditor General will issue an adverse opinion on the province's next Public Accounts due to Ontario's Fair Hydro Plan accounting? What would be the impact on the province's credit rating?

10. Why has the government legislated accounting for things like Ontario's Fair Hydro Plan? Aren't you just changing the rules to suit your needs?

11. When will the government issue a regulation confirming the source of reference for the Pre-Election Report and the timeline for issuance of the report that will be subject to the Auditor General's review?

**See appendix A for a full list of QAs.*

Long-Form Answers

1. **Why did the government choose to recognize pension assets from the Ontario Teacher's Pension Plan and the Ontario Public Sector Employee's Union Pension Plan? What evidence and processes were used to support this decision?**

2. **Why did the Treasury Board Secretariat accept the IESO's recognition of market accounts on the province's consolidated financial statements? Is there any precedent for this?**

3. **Can you explain when and how the Treasury Board Secretariat looks to other accounting methods to support the preparation of Public Accounts?**

Summary of Government Responses to the Auditor General's 2017 Annual Report Chapter on Public Accounts

December 6, 2017

The government thanks the Auditor General for her recommendations, and remains committed to assisting the Office of the Auditor General in providing its independent views to the Legislative Assembly.

Below is a summary of the government's position regarding the Auditor's recommendations in Chapter 2 – Public Accounts of the Province.

Accounting for Pension Assets

The government continues to move forward and present the Province's finances fairly and accurately and in accordance with Canadian Public Sector Accounting Standards (PSAS).

Last year there was a disagreement among the Province's professional accounting staff and the Auditor General's Office on the appropriate application of PSAS regarding pension accounting. As a result, the Pension Asset Expert Advisory Panel was established to deliver independent advice and recommendations on the issue. The independent panel members concluded the Province's share of the net pension assets of both the Ontario Teachers' Pension Plan and the Ontario Public Service Employees' Union Pension Plan should be recognized in Ontario's financial statements.

After significant deliberation, Ontario confirmed that the accounting for these plans prior to 2015-16 was appropriate. This conclusion is supported by:

- The conclusions reached by an independent Pension Asset Expert Advisory Panel (the 'Panel'), established by the government to provide advice on the interpretation of PSAS with respect to the reporting of net pension assets of these two joint defined benefit plans. The Panel, comprised of accredited accounting, actuarial and legal professionals with extensive background in pension accounting and plan governance, released its report in February 2017 which supported the government's position that a valuation is not required for these two plans under PSAS. Two key findings of the Panel were: 1) there is no requirement under PSAS that any formal agreement exist between the joint sponsors regarding the timing or amount of a reduction in contributions to record an asset, as the existing agreements in place between the parties support the recognition of an expected benefit, and 2) unilateral control is not required for asset recognition; joint control with each party having the ability to deny the actions of the other sponsor, provides evidence of shared control, supporting recognition of an asset.
- An opinion from Deloitte LLP on aspects of the Province's accounting as at March 31, 2016 for the Ontario Teachers' Pension Plan. The opinion, which was dated October 2, 2016, concluded that it was permissible to recognize a pension asset under Canadian Public Sector Accounting Standards, even though the Province did not have under a unilateral right to reduce contributions. The opinion did not address the value at which the asset should be recorded.

- Analysis completed by EY as to whether any valuation allowance is required to be recorded for OTPP or OPSEUPP as of March 31, 2017. EY confirmed no valuation allowance was required for either plan.

The government continues to apply the accounting treatment of pension assets that the Province has used consistently since 2001.

IESO Market Accounts

In 2016, the Independent Electricity System Operator (IESO) began recognizing its market accounts' assets (amounts due from power distributors) and liabilities (amounts due to power producers) in its financial results. The IESO chose to recognize these markets accounts on its books for transparency reasons, as it better reflects the financial position of IESO-administered markets at year-end.

This change was supported by IESO's Audit Committee, its Board of Directors, its independent external auditor, and by the Office of the Provincial Controller. It has no impact to the Province's annual deficit, net debt or accumulated deficit.

The financial statements of IESO for the year-ended December 31, 2016 were subject to an external audit and received an unqualified (or clean) opinion.

The accounting concepts used are consistent with those used previously by the Ontario Power Authority (which was merged with IESO on January 1, 2015) in its financial statements, which was not subject to qualification from the Office of the Auditor General at that time.

IESO Rate-Regulated Accounting

PSAS is silent on the issue of rate-regulated accounting – the standards neither explicitly permit, nor prohibit, the recognition, measurement, presentation, or disclosure of rate-regulated activities.

In the absence of a clear position on an issue, standard accounting practice dictates that an entity should consult other accounting standards. This guidance for PSAS is included in section PS1150.07 from the Public Sector Accounting Standards Handbook.

In this case, IESO consulted U.S. Generally Accepted Accounting Principles (GAAP), the appropriate accounting framework that provides guidance on rate-regulated operations.

IESO made the decision to adopt rate-regulated accounting because it better reflects the economic substance of certain types of expenses that may not be directly recovered through the normal revenue requirement model.

IESO management, IESO's Audit Committee, IESO's Board of Directors, IESO's external auditor and the Office of the Provincial Controller all support the use of rate-regulated accounting by IESO.

Many entities in Canada, including Ontario Power Generation (OPG) and Hydro One use rate-regulated accounting. Rate-regulated accounting is well understood in the electricity sector, and the approach selected was taken in that context. The recognition of regulatory assets brings IESO in line with six other independent system operators in North America.

Ontario Fair Hydro Plan Accounting

In developing Ontario's Fair Hydro Plan (OFHP), the government considered a range of implementation options and consulted with legal, accounting, financial and energy sector third-party experts to provide advice and ensure due diligence was completed.

The proposed accounting for OFHP reflects the economic substance of the transaction by differentiating costs borne by taxpayers versus those borne by ratepayers.

PSAS is silent on a key accounting issue regarding the OFHP – the standards neither explicitly permit, nor prohibit, the recognition, measurement, presentation or disclosure of rate-regulated activities.

In the absence of a clear position on an issue, standard accounting practice dictates that an entity should consult other accounting standards. This guidance for PSAS is included in section PS1150.07 from the Public Sector Accounting Handbook.

This guidance has been appropriately applied in assessing the accounting for the OFHP.

The Province, as always, will prepare its consolidated financial statements in accordance with PSAS, including the transactions resulting from OFHP.

Legislated Accounting

The Province is committed to providing high-quality financial reports that support transparency and accountability in reporting to the public, the legislature, and other users.

For the 2015-16 Public Accounts, the government passed a time-limited regulation prescribing the accounting treatment for certain net pension assets in order to allow Treasury Board Secretariat and the Ministry of Finance officials to sign off on Public Accounts consistent with the fiscal impact of the Auditor General's interpretation of Public Sector Accounting Standards (PSAS). This regulation is the **only** example of where the accounting treatment was legislated, and the legislation did not align with the requirements of PSAS.

The *Ontario Fair Hydro Plan Act, 2017* and its related regulations **do not** create accounting rules or legislate the accounting. It is important to distinguish legislating the accounting from legislating the right of the government to recover amounts from specified ratepayers in the future, which in the absence of legislation, would have been collected from specified ratepayers as the costs were incurred.

The Province, as always, will prepare its consolidated financial statements in accordance with PSAS.

STATEMENT

Treasury Board Secretariat

Statement from the President of the Treasury Board on the Auditor General's Annual Report

December 6, 2017

Today, Liz Sandals, President of the Treasury Board, released the following statement:

"We thank the Auditor General for her report, and continue to appreciate our ongoing working relationship with the Office of the Auditor General (OAG). The Treasury Board Secretariat works closely with the OAG on a wide variety of issues on a regular basis, and her oversight and insight is welcomed both during our regular interactions and with this annual report.

The Auditor General mentions a number of topics that represent ongoing conversations between government and her office; for instance, the accounting practices regarding pension assets and the application of the United States Generally Accepted Accounting Principles when the Public Sector Accounting Board's standards are silent. The government's position on these differences of opinion has not changed.

We agree with the Auditor General's comments on the importance of accountability for agencies, boards, commissions and other broader public sector entities. Since 2010, our government has implemented a number of important measures to strengthen broader public sector and provincial agency accountability, transparency and governance. Our recent Fall Economic Statement, if passed, responds to the recommendations of the Auditor General in her 2015 Annual Report to streamline administration and establish consistency in the tabling and communication of provincial agency annual reports. However, we know that making process changes to annual reports may not be the complete solution. We will continue working with the OAG to enhance oversight and ensure accountability across all of our agencies.

We share the Office of the Auditor General's belief that the Auditor General has an important role to play in the oversight of government advertising, and that's one of the reasons that we are proud that Ontario is the only jurisdiction in Canada to have legislation in place to ensure that oversight. In fact, we have recently expanded her oversight to include digital advertising.

We know that the government has a responsibility to communicate to the public it serves, and that advertisements are one medium through which we can do that. For example, our Sexual Violence and Harassment prevention campaign – #WhoWillYouHelp challenged existing attitudes, and sparked international discussion. Our video was viewed over seven million times in the first 10 days, and generated more than 85 million views worldwide. And within 6 months, we had measurable results – 55 per cent strongly agreed they had an obligation to intervene when witnessing sexual harassment, up from 37 per cent.

As the President of the Treasury Board, I am committed to leading the government's efforts on accountability, openness and modernization, while working to deliver good government and public services in the most effective and efficient way possible. As part of this commitment, we work side-by-side with our partners, including the Auditor General, throughout the year to ensure that we continue to become more efficient in our processes and more open and

accountable as a government.”

Lawvin Hadisi, Minister’s Office, 416-326-3839
Bryant Sullivan, Communications, 416-325-1378

CONFIDENTIAL REVISED: January 10, 2018

ONTARIO'S FAIR HYDRO PLAN ACCOUNTING (GLOBAL ADJUSTMENT REFINANCING)

ISSUE: What is the basis for the proposed accounting for the Global Adjustment Refinancing on the Province's books?

CONTEXT:

- The Global Adjustment Refinancing is one component of Ontario's Fair Hydro Plan announced in March 2017, and is the most significant contributor to the reduction in hydro rates for residential consumers.
- The other parts of the Plan for residential consumers include:
  - Expansion of the Ontario Electricity Support Program;
  - Reductions in distribution rates for consumers in rural and remote areas;
  - Reductions for First Nations residential consumers living on-reserve; and,
  - A fund set up to assist consumers in making their homes more energy efficient.
- The only impact on the 2016-17 consolidated financial statements from Ontario's Fair Hydro Plan is related to the fund set up to assist consumers in making their homes more energy efficient, which was expensed in the year and increased the annual deficit. In addition, the 8 per cent rebate on electricity bills, introduced as of January 1, 2017, while not part of the March 2017 announcement, also impacted the 2016-17 consolidated financial statements as an expense that increased the annual deficit.
- The implementation of OFHP is ongoing, with significant decisions with accounting and financial implications still being finalized. The government will present the Province's finances in the 2017-18 Public Accounts fairly and accurately and in accordance with Public Sector Accounting Standards (PSAS).

KEY MESSAGES:

GA Financing Status and Structure

- In order to meet the needs of users, including the legislature and the public, for accountability in government reporting and decision making, it is essential that public sector financial statements reflect the economic substance of the government's activities.
- All of the agreements necessary for the Global Adjustment (GA) Refinancing will be finalized in the current fiscal year. The final accounting for the GA Refinancing will be completed once all of the elements are complete. The balance of the note is based on the expected outcome. As previously noted, there was no impact on the 2016-17 consolidated financial statements from the GA Refinancing.
- In analyzing the appropriate accounting treatment for the GA refinancing component of Ontario's Fair Hydro Plan on the Province's consolidated financial statements in 2017-18 and going forward, the Province considered authoritative guidance issued by the Public Sector Accounting Board, as well as the accounting assessments of the Independent Electricity System Operator (IESO) and Ontario Power Generation (OPG) management, including the accounting opinions of their external auditors.
- The complexity and unique structure of the GA Refinancing structure requires the use of professional judgment to ensure that key financial reporting objectives of transparency and accountability are best served.
- Under GA Refinancing, as enabled by the Ontario Fair Hydro Plan Act, 2017 ("OFHPA"), a Financing Entity established by Ontario Power Generation will borrow amounts to fund the payment of a portion of electricity costs charged by the electricity generators, thereby temporarily reducing the amount paid by eligible consumers (or ratepayers). The deferred amounts, including interest and other costs, will be recoverable from consumers/ratepayers in the future.

- The Independent Electricity System Operator (IESO), an independent, not-for-profit agency of the Province, is responsible for the management and operation of the wholesale electricity market. IESO makes payments to the electricity generators with cash received from the local distribution companies (and ultimately the consumers/ratepayers).
- Over the last 10+ years, investments have been made to phase-out coal and modernize Ontario's electricity system (i.e., build and maintain a reliable electricity system). This involves a move away from coal to cleaner, but more expensive methods of electricity generation, including wind, solar and natural gas. The cost of these investments were passed on to consumers/ratepayers as incurred or based on contractual payment terms, but not based on the period of benefit (i.e., the life of many generators is expected to exceed the length of the contracts).
- The GA refinancing acknowledges that the current generation of electricity consumers has paid more than its fair share for these costs, and spreads these costs incurred out over more years so they are shared proportionally by future electricity consumers.
- In simple terms, the IESO will continue to make payments to the electricity generators based on their contractual terms, but will collect less from the local distribution companies, as the consumers or ratepayers will pay a reduced amount. The amount not collected from the consumers now, or the shortfall, will be collected from consumers/ratepayers in the future.

- OFHPA permits the IESO to sell that shortfall, also referred to in the Act as a regulatory asset, which represents the right to collect payments from consumers/ratepayers in the future, to a financing entity. To recap, the IESO will continue to pay the electricity generators at their current contract rates. But it will do this with cash collected from the local distribution companies for electricity consumed (at a rate set by the OEB which reflects a significant portion of the 25 per cent reduction in the initial years) and cash received from the financing entity for the sale of the regulatory asset.
- The financing entity will be part of Ontario Power Generation (OPG Trust), a government business enterprise, wholly owned by the Province. The operations of Ontario Power Generation have been and will continue to be included in the consolidated financial statements of the Province using the modified equity method, the method Public Sector Accounting Standards (PSAS) require for government business enterprises.
- At its discretion, OPG Trust will purchase the shortfall amounts (or regulatory asset) from the IESO through a combination of provincial borrowing (flowed through OPG as an equity investment), amounts advanced from OPG and direct borrowing from capital markets.
- In the future, when the consumers/ratepayers pay for the deferred amount, those amounts will be used to repay the accumulated debt whether that be direct borrowing from the capital markets, amounts advanced from OPG or provincial borrowing.

IESO Accounting

- There was no impact on the 2016 financial statements of IESO from the GA Refinancing. The GA refinancing is expected to impact the 2017 financial statements.

- In 2017, the shortfall or regulatory asset that IESO incurs as a result of collecting less from the local distribution companies than it pays to the electricity generators would be accounted for as a rate-regulated asset. The rate-regulated asset would then be sold to OPG Trust for cash used to pay the electricity generators.
- For 2016, IESO adopted the use of rate-regulated accounting for costs incurred unrelated to the GA Refinancing; however, the impact to the financial statements of the Province was immaterial (impact on annual deficit of $24 million).
- PSAS is silent on the use of rate-regulated accounting. However, like all major accounting frameworks, PSAS encourages both preparers and auditors to consider guidance in other accounting frameworks when accounting for transactions not specifically addressed by the specific standards.
- IESO management, their audit committee, their board of directors and their external auditors, agree with the adoption of rate-regulated accounting by IESO. The Office of the Provincial Controller also supports the adoption of rate-regulated accounting by IESO.
- IESO is not the first entity that has prepared its financial statements using PSAS and rate-regulated accounting. Ontario Power Authority (which was amalgamated with IESO on January 1, 2015) prepared its financial statements with PSAS and used rate-regulated accounting.
- In the Auditor General's opinion on the 2016-17 consolidated financial statements of the Province, the AG has included an "Other Matter" paragraph, drawing attention to the adoption of rate-regulated accounting by IESO. The AG's view is expressed as stating PSAS does not permit rate-regulated accounting, but that the AG has not qualified the opinion on this matter because the impact is not material to the 2016-17 consolidated financial statements.

- The AG further notes, “However, the consolidated financial statements may become materially misstated in future periods, as a result of the legislated accounting prescribed under the Ontario Fair Hydro Plan Act, 2017 (OFHPA) and its related regulations, as it is not in accordance with Canadian public sector accounting standards.”
- Neither the IESO nor the Office of the Provincial Controller Division (OPCD) agree with the statements that (a) PSAS does not permit rate-regulated accounting (as previously noted, PSAS is silent with respect to rate-regulated accounting) or (b) Fair Hydro Plan and its related legislation and regulations legislate the accounting for GA Refinancing.

OPG Accounting

- The Auditor General has not raised any concerns to date with the intended accounting for the OPG Trust on the Province’s books.
- It is expected that OPG Trust will be controlled and consolidated by OPG.
- Purchases by OPG Trust of the rate-regulated assets from the IESO will be reflected on OPG’s books as intangible assets which will be included in the Province’s financial statements as part of its investments in government business enterprises.

The Province’s Accounting

- In assessing the appropriate accounting for Ontario’s Fair Hydro Plan (OFHP) on the Province’s books, OPCD worked closely with key ministries, the Ontario Energy Board (OEB), IESO, OPG and their respective external advisors.
- The final accounting treatment for OFHP-related activities will be confirmed once all elements of the GA Refinancing framework are finalized, including provincial guarantees and financing arrangements.

- Once the details and commercial agreements of the OFHP are finalized, the external auditors of IESO and OPG are expected to provide independent accounting opinions on the accounting treatment on IESO and OPG's financial statements.
- OPCD will rely on those independent accounting opinions, the audited financial statements of IESO and OPG as of December 31, 2017 and its own research and analysis in determining the impact of the GA Refinancing on the 2017-18 consolidated financial statements.

If Pressed: AG Assertion that the Government is Using Legislated Accounting

- The Auditor General has made several incorrect references to legislated accounting which should be addressed to ensure clarity and transparency in terms of the government's accounting treatment for Ontario's Fair Hydro Plan.
- In particular, the Auditor General has referred to legislated accounting prescribed by the OFHPA that is designed to in some way manipulate the Province's financial reporting in its consolidated financial statements.
- The Province's financial statements are based on Public Sector Accounting Standards (PSAS) as issued by the Public Sector Accounting Board of CPA Canada. There is no legislated accounting that applies to the Province's consolidated financial statements.
- While the OFHPA does, under Section 24, require that IESO set up a variance account to track the cash shortfall amount resulting from the deferred recovery amount, it is just another type of regulatory account, similar to those that OPG reports and for which the OEB is responsible for approving rates.

- As far as the Province's financial reporting practices go, whether the deferred amounts reported in IESO's variance account are assessed as assets for financial reporting purposes will be determined by the interpretation and application of Public Sector Accounting Standards, not by the legislation or regulations.

Auditor General's Special Report on the Fair Hydro Plan

- The Office of the Auditor General released *The Fair Hydro Plan: Concerns about Fiscal Transparency, Accountability and Value for Money* on October 17, 2017. The report focused on the financial and accounting framework of the OFHPA.
- The Auditor General said that the accounting for the Fair Hydro Plan is not permitted under PSAS because it is silent on rate-regulated accounting, despite the fact that standard accounting practice, including under PSAS, dictates that an entity should consult other accounting standards for transactions not specifically covered by primary standards.
- The Auditor General asserts in her report that the OFHPA creates an asset through legislation. This is a fundamental disagreement the government has with the Auditor General's report. The Province will prepare its consolidated financial statements in accordance with Public Sector Accounting Standards (PSAS).

Key Messages on AG's Special Report on the Fair Hydro Plan

- The government respects independent officers of the legislature, and values the important perspective they bring, but does not agree with the assertions and conclusions expressed in the Auditor General's Fair Hydro Plan report.
- The government has a strong track record of producing high-quality financial reports on a timely basis and continues to present the province's finances fairly and accurately and in accordance with Canadian Public Sector Accounting Standards.

- In developing the Fair Hydro Plan, the government considered a range of implementation options and consulted with legal, accounting, financial and energy sector third-party experts to provide advice and ensure due diligence was completed.
- The Fair Hydro Plan operates under a financial and accounting framework that is appropriate for the intended purpose. It is in accordance with Public Sector Accounting Standards and ensures the goals underlying the program are achieved in a cost-effective manner.
- PSAS are principle based -- they are not a set of specific prescriptive rules. Applying them requires the application of professional judgment. While we expect professional accountants to agree on the vast majority of issues, we acknowledge that they may not agree on everything. When that occurs, and the difference is material to the financial statements, the Office of the Auditor General can choose to issue a qualified audit opinion.
- The financing plan and its impact will continue to be transparent and fully available to credit rating agencies, securities regulators, and the public.
- The Ministry of Energy, the Ministry of Finance, and the Treasury Board Secretariat remain committed to assisting the Office of the Auditor General in providing its independent views to the Legislative Assembly.

RECENT MEDIA COVERAGE:

- January 12, 2018 – An opinion piece in the Toronto Star argues Kathleen Wynne faces a phantom opponent in the spring election: Ontario's auditor general, who looms like an accounting apparition over the premier. The article notes, Lysyk isn't just picking fights with Liberal cabinet ministers but clashing with Ontario's non-partisan public service as well as outside consultants. The most awkward contretemps took place a year ago, when an expert panel of accounting and actuarial experts shredded the auditor's claims about the government cooking the books.
- January 4, 2018 – The Brighton Independent covers Liberal MPP Lou Rinaldi's plans for re-election, while making reference to the "issues" the government has with the Auditor General, particularly on pension asset and Fair Hydro Plan accounting.
- January 3, 2018 – The CBC runs an article "No quick fix for Ontario's energy woes, electricity analyst says," noting the criticisms from opposition parties and analysts regarding the accounting of the Fair Hydro Plan.

- December 17, 2018 – The Ottawa Sun's Lorrie Goldstein writes that "independent financial officers say Wynne government's books can't be trusted," noting the Auditor General and FAO's concerns regarding Fair Hydro Plan accounting: "In her Dec. 6 annual report, Lysyk warned "there is a very real risk" the "government's continued use of nonstandard accounting" will "seriously distort the true state of the province's finances...The government uses these incorrect accounting treatments to claim it has balanced the province's books, but in reality, legislators, the financial community and all Ontarians will be misled as to the true condition of the province's finances." In its fall economic and fiscal outlook released last week, the FAO warned, "since the government has not adopted the Auditor General's recommended accounting for both the Fair Hydro Plan and net pension assets, it is becoming more difficult for legislators and the public to assess the government's fiscal projections."
- December 13, 2017 – The Toronto Sun runs a comment piece following from the Financial Accountability Office's fiscal and economic outlook, fall update report, entitled "Liberals hiding deficit, second watchdog says," noting the Auditor General and FAO's criticisms of the accounting for the Fair Hydro Plan.
- December 11, 2017 – The Toronto Star's Robert Benzie covers the Financial Accountability Office's fiscal and economic outlook, fall update report, noting the FAO's agreement with the Auditor General's questioning of the accounting of the Fair Hydro Plan: "The FAO also backed the auditor general in questioning the complex mechanism the government has developed to bankroll the 25 per cent electricity rate cut, known as the Fair Hydro Plan. Because of the actuarial tussle "it is becoming more difficult for legislators and the public to assess the government's fiscal projections.""
- December 11, 2017 – The Canadian Press' Shawn Jeffords also covers the FAO's report, noting: "The FAO said in its report that since the government has not adopted the auditor's recommended accounting for both the pension assets and the Fair Hydro Plan it is becoming more difficult for legislators and the public to assess the government's fiscal projections."
- December 6, 2017 – The Canadian Press and other outlets cover the Auditor General's 2017 Annual Report, noting the accounting disagreements between the Auditor and the government: "Lysyk also announced through her report that her office would be auditing the IESO's books. That comes amid one of two accounting disputes the auditor has been engaged in with the Liberal government. She recently accused the government of purposely obscuring the true financial impact of its 25 per cent cut to hydro bills by keeping billions in debt used to finance that plan off the province's books. Lysyk said she will audit the IESO because of its role in the hydro plan's complex accounting scheme."
- November 2, 2017 – The Waterloo Region Record runs an editorial by analysts from the Fraser Institute entitled, "Ontarians in the dark about Fair Hydro Plan." The piece argues: "Ontario needs real reform to lower electricity prices for residents and businesses. Unfortunately, the provincial government is opting for improper accounting practices and temporary solutions, sticking current and future Ontarians with the bill."
- October 26, 2017 – CBC writes that "Ontario hydro bills to rise over next 10 years in government's energy plan," referencing the Auditor General's report on Fair Hydro: "Ontario's auditor general Bonnie Lysyk found that the Liberals concocted a "needlessly complex" system in order to achieve the savings in the Fair Hydro Plan by moving $26 billion of debt off the government's books […]Thibeault said the accounting isn't deceptive, and that similar financing strategies have been used throughout Ontario history, including for the construction of nuclear plants in the 1970s."
- October 25, 2017 – The Toronto Sun runs a column by Ben Eisen, director of the Fraser Institute's Ontario Prosperity Initiative entitled "Number's up for Wynne's government," writing "But regardless of how pension assets should be treated, or how new debt incurred by the government's Fair Hydro Plan should appear on the books, the stark reality is that Ontario taxpayers are carrying far more public debt than a decade ago and that burden is growing quickly, every year."

- October 24, 2017 – CBC references the Auditor General's report on Fair Hydro, writing "Auditor General Bonnie Lysyk criticized how the program is being financed, saying the province is "improperly" accounting for the $26 billion in debt it's taking on to cut hydro bills in the short term. The Liberals called the controversy an "accounting dispute" with the auditor."
- October 23, 2017 – Global News reporter Alan Carter wrote an analysis on "truth" and Fair Hydro. He wrote, "The war between Lysyk and the Liberals is whether the Fair Hydro Plan and its use of Ontario Power Generation as a debt vehicle is a sign of devious politicking or just the way things get done."
- October 23, 2017 – The Peterborough Examiner carried an opinion piece written by Minister of Energy, Glenn Thibeault. "I'm not surprised to see the Conservatives try to get in the middle of an accounting dispute between the government and the Auditor General for personal political gain. It's how they deflect without putting forward any policy ideas of their own."
- October 22, 2017 – The Toronto Sun's Antonella Artuso wrote that the way the Liberals "hid" the cost of its Fair hydro Plan from taxpayers could raise concerns that other governments across the country could follow suit and bury deficits.
- October 22, 2017 – The Toronto Sun's opinion piece says the Fair Hydro Plan is simply 'long-term pain for short-term gain".
- October 19, 2017 – CBC's Mike Crawley writes about the Auditor General's accusations that the government was trying to hide documents from her investigation. Crawley writes that the Progressive Conservatives have made a request to the province's "top public servant to ensure that all relevant documents and emails are saved."
- October 18, 2017 – CTV News (6pm) includes the Progressive Conservative's reaction to the Fair Hydro report: "opposition calls for resignations of ministers of finance and energy after AG report."
- October 18, 2017 – QP Briefing's Jessica Smith Cross highlighted that the $4 billion figure cited by the Auditor General and the Financial Accountability Office that would be wasted due to the government's "needlessly complex" financing structure for Ontario's Fair Hydro Plan was said 21 times by opposition parties during Question Period that morning.
- October 18, 2017 – The Globe and Mail's Justin Giovannetti (A9) highlights the Auditor General's Fair Hydro report. The article includes a quote from Minister Sandals: "Perhaps the essential accounting dispute that we have with the auditor is a dispute over what happens when the Canadian Public Sector Accounting Standards are silent, when they don't give direction,' Ms. Sandals said. 'We keep running into this problem because, quite frankly, Ontario is the biggest province, and we often have bigger projects and do things a bit differently from all the smaller provinces.'"
- October 17, 2017 – The CBC's Mike Crawley covers the Auditor General's report, writing "The auditor says the plan could also result in Ontarians paying "up to $4 billion more than necessary" in interest. That's because OPG will be required to pay higher interest rates than the province would if the government took on the debt directly."
- October 17, 2017 – The Toronto Star's Robert Benzie also focused on the Auditor General's so-called scathing report on Ontario's Fair Hydro Plan, while acknowledging the historical dispute between the Auditor's Office and the government.
- October 17, 2017 – The Ottawa Citizen's David Reevely continues with key themes in the coverage, also writing: "The Liberals really, really, really wanted to keep that debt off their books, so they could also go into the next election saying the provincial budget is balanced. Borrowing billions in an election year would get in the way. So they did some advanced financial engineering to put the debt on Ontario Power Generation instead."

- October 17, 2017 – The Canadian Press' Allison Jones cites the Auditor General's statements, and includes Minister Sandals' rebuttal on the point of asset accounting: "Treasury Board President Liz Sandals said credit rating agencies are ranking the hydro debt in preparation for selling it. 'That's the difference,' she said. 'Somebody actually wants to buy it, ergo it is an asset.'"
- October 17, 2017 – QP Briefing provided a primer on the report, and pointed to the Auditor General's criticism of the government on the alleged willingness to accept a qualified audit opinion for the province's Public Accounts.
- October 17, 2017 – The Auditor General's report and remarks during the media conference were extensively covered across the media. Coverage consistently cited the key themes in the Auditor General's report, highlighting the "needlessly complex" accounting structure, "improper accounting," and the "anticipated $4 billion more in interest payments than if the province had borrowed the funds directly."
- October 17, 2017 – The Toronto Sun's Antonella Artuso featured an overview of the Fraser Institute's report released in the morning, arguing that "Soaring electricity prices resulted in 75,000 fewer manufacturing jobs for Ontarians since the recession".
- October 17, 2017 – The Office of the Auditor General held a media conference for the release of The Fair Hydro Plan: Concerns about Fiscal Transparency, Accountability and Value for Money.
- October 17, 2017 – CBC News reports that today Auditor General Bonnie Lysyk will reveal the results of her investigation into the government's Fair Hydro Plan. The report will look at how the rate cuts are financed and whether the plan is fair for taxpayers and hydro customers. Auditor Lysyk has already told a legislative committee in May that to borrow the money on OPG's books rather than the province's is "contrary to public sector accounting standards."

Proposed Legislated Transaction Structure

Prepared by the Office of the Auditor General of Ontario

CONFIDENTIAL REVISED: January 5, 2018

PENSION ASSET EXPERT ADVISORY PANEL

ISSUE: How do you respond to the reports released by the Pension Asset Expert Advisory Panel?

KEY MESSAGES:

- The Pension Asset Expert Advisory Panel has released its independent advice and recommendations on how public sector accounting standards are interpreted as they apply to current and potential future net pension assets.
- The panel's first report concluded that the province's share of the net pension assets of both the Ontario Teachers' Pension Plan and the Ontario Public Sector Employees' Union Pension Plan should be recognized in Ontario's financial statements.
- The panel supports the accounting treatment that Ontario has used consistently since 2001.
- The panel has also issued a supplemental report that provides independent advice and recommendations on how to account for potential future net pension assets related to the Healthcare of Ontario Pension Plan and the Colleges of Applied Arts and Technology Pension Plan.
- The government has accepted the panel's recommendations and in the 2016-17 third quarter update, it indicated its plans to adopt the previous accounting treatment in the upcoming Public Accounts.
- The government has reflected the recommendations of the panel, which align with its previous accounting in the 2017 Budget, the 2016-17 Public Accounts and the 2017 Fall Economic Statement.

- The government formed the Pension Asset Expert Advisory Panel to provide independent advice on how public sector accounting standards are interpreted as they apply to current and potential future net pension assets. The panel members have expertise in the areas of jointly sponsored pension plan governance, actuarial modelling for pension plans and public sector accounting standards.
- We will continue to move forward and present the Province's finances fairly and accurately, which includes reporting for jointly sponsored pension plans in accordance with Public Sector Accounting Standards and the panel's recommendations.
- We also remain on track to balance the budget this fiscal year as well as in 2018–19 and 2019–20.

IF PRESSED: SUPPLEMENTAL REPORT HOOPP & CAATPP

- We thank the panel for their independent advice and recommendations made in relation to the Healthcare of Ontario Pension Plan and the Colleges of Applied Arts and Technology Pension Plan.
- The two additional pension plans addressed in the supplemental report are different than OTPP and OPSEUPP because they are jointly sponsored by multiple organizations. The Ontario Government is a third party sponsor and has no direct control over decisions of the employer sponsors about benefit or contribution levels, funding of deficits or use of surpluses. Because of these differences, a valuation allowance will be recorded for any net assets of these plans until the government benefits from a reduction in contributions.
- The Ontario Government agrees with the panel's conclusions in the supplemental report.

CURRENT STATUS:

- December 20, 2017 – the Treasury Board Secretariat (TBS) has been called to appear before the Standing Committee on Public Accounts (SCOPA), to review Chapter 2 – Public Accounts of the Province (Volume 1 of the 2017 Annual Report of the Office of the Auditor General of Ontario). In addition to officials from TBS, requests to attend were issued to officials from Cabinet Office, the Ministry of Finance, the Ontario Financing Authority, the Ministry of Energy, the Independent Electricity System Operator and Ontario Power Generation. Attendees will be required to provide the committee with a response to the Auditor General's report, and to answer any questions the committee members may have. Hearings are scheduled for February 28, 2018.
- As per Standing Order 108(h), the SCOPA is empowered to review and report to the House its observations, opinions and recommendations on the Report of the Auditor General and the Public Accounts, which documents shall be deemed to have been permanently referred to the committee as they become available.
- The committee may meet weekly when the Legislative Assembly is sitting. With the approval of the House, it may also meet at any time when the Legislative Assembly is not sitting.
- All meetings are open to the public with the exception of those dealing with the setting of the committee's agenda and the preparation of committee reports.
- All public committee proceedings are recorded in Hansard.
- On December 11, 2017, the Financial Accountability Office released its Economic and Fiscal Outlook, Fall 2017 Update. During the media event, the FAO said "since the government has not adopted the Auditor General's recommended accounting for both the Fair Hydro Plan and net pension assets, it is becoming more difficult for legislators and the public to assess the government's fiscal projections. This has reduced the transparency and reliability of Ontario's fiscal plan."
- On December 6, 2017, the Office of the Auditor General released their 2017 Annual Report. Chapter two of the report made recommendations regarding the Public Accounts of the Province, with the first of 10 recommendations focusing on the pension asset accounting issue. From the report: "We recommend the government record valuation allowances to offset the net pension assets it has recorded from the Ontario Teachers' Pension Plan and the Ontario Public Sector Employees' Union Pension Plan until such time as it obtains formal written authorization from their pension plan co-sponsors that they are able to lower minimum contributions or withdraw surpluses from the pension funds within the next 12 months."
- On April 27, 2017 the Pension Asset Expert Advisory Panel's Supplemental Report was released. It provides the government with independent advice and recommendations on how to account for current and potential future net pension assets related to the Healthcare of Ontario Pension Plan (HOOPP) and the Colleges of Applied Arts and Technology Pension Plan (CAATPP).
- The panel's supplemental report concludes that a net pension asset from HOOPP and CAATPP should be recognized in the province's financial statements in the same way as the net liability, but also recommends that a valuation allowance should be reported for accrued benefit assets for both of these plans in the province's financial reports.
- The panel's report on the Ontario Teachers' Pension Plan (OTPP) and the Ontario Public Sector Employees' Union Pension Plan (OPSEUPP) was made available to the public on February 13, 2017 and did not recommend that a valuation allowance be reported for either of these two plans.
- Both reports have been shared with the Auditor General of Ontario and her office.

- In the 2017 Budget, the 2015–16 actuals were restated to reflect the government's previous accounting treatment for jointly sponsored pension plans which recognized net pension assets for the Ontario Public Service Employees' Union (OPSEUPP) and the Ontario Teachers' Pension Plan (OTPP) on the Province's financial statements. The restated results follow the advice of the panel and the accounting followed previously by the Province since 2001.
- On June 12, 2017, the Ontario Teachers' Federation and the Ontario Government, joint sponsors of the Ontario Teachers' Pension Plan (OTPP), announced they will use a portion of the $11.5 billion surplus in the Plan (as of January 1, 2017) to complete the restoration of inflation protection for teachers who retired after 2009. As well, the contribution rate for the Plan's active members will be reduced by 1.1%. Both changes are effective January 1, 2018.

COSTS

	Actuals		
Panel Member	**Per Diem**	**Travel**	**Total**
Patricia O'Malley	83,000	1,057	84,057
Uros Karadzic	62,700		62,700
Paul Martin		3,898	3,898
Murray Gold	38,000		38,000
Procurement			32,458
Total	**183,700**	**4,955**	**221,113**

BACKGROUND:

- On February 17, 2017 Minister Sandals sent a memorandum to Warren (Smokey) Thomas in response to his article of February 14, 2017 in the Toronto Sun on pension assets.

  "As you are aware, the Pension Asset Expert Advisory Panel ("Panel") released its report on February 13, 2017, and concluded that the net pension assets of both the Ontario Teachers' Pension Plan and the Ontario Public Sector Employees' Union Pension Plan should be recognized in Ontario's financial statements.

  The OPSEU pension plan, which is jointly-sponsored by OPSEU and the province, clearly states that no amount of the surplus shall be paid out of the plan to either sponsor. Simply put, the province does not have the ability to make any withdrawals from the plan.

  I trust that you are reassured by this news. Your February 14 press release and your subsequent comments in a February 15 *Toronto Sun* article, suggest that you were unaware of these rules.

  In addition, the province has not proposed any pension contribution increases or reductions at this time. Any decisions with respect to changes to pension contributions or benefits must be made by the Plan Sponsors. A decision to reduce contributions would benefit both the employees and the employer."

- On November 10, 2016 Ontario established the Pension Asset Expert Advisory Panel to provide advice and recommendations to the government on the application of public sector accounting standards to Ontario's net pension assets.

  The panel was comprised of accounting, legal, and pension experts in the areas of jointly sponsored pension plans, actuarial modelling for pension plans and Public Sector Accounting Standards.

  The following four members were appointed to the Panel:

  - Tricia O'Malley (Chair)
  - Murray Gold
  - Uros Karadzic
  - Paul Martin

Panel members also provided advice on how to value net pension assets reported on the province's books, taking into account future decisions which might be made by the plan's sponsor or sponsors.

The panel's report was delivered to the President of the Treasury Board and was shared with the Auditor General of Ontario. The panel's report was made public in early 2017.

RECENT MEDIA COVERAGE:

- January 12, 2018 – The Toronto Star ran an opinion column by Martin Regg Cohn, "Independence is not infallibility when it comes to Ontario's financial books," arguing Auditor General "Lysyk's paranoia about partisan advertising is a depressing case study on how she approaches the vital role of an auditor general, which is meant to be a check and balance on the power of government — not a grudge match grounded in distortions over picayune disputes. All's fair in politics and accounting, unless you're an auditor gone awry."
- December 17, 2017 – The Ottawa Sun's Lorrie Goldstein writes that "with less than six months to go before the June 7 election, two independent, non-partisan financial watchdogs of the Ontario Legislature say the books of Premier Kathleen Wynne's Liberal government cannot be trusted." Goldstein highlights the disagreement between the Auditor and the government on the pension asset accounting issue, also noting the expert advisory panel: "Lysyk argues the government is improperly claiming the $11.5 billion surplus in the Ontario Teachers' Pension Plan as an asset, because it cannot access these funds without the permission of Ontario's teacher unions […] In November 2016 it hired what it described as an expert, four person pension advisory panel, with a budget of up to $435,000 for salaries, excluding expenses, which in February 2017 backed the government's accounting on the teachers' pension plan."
- December 17, 2017 – The Toronto Sun's Jim Warren cautions that "the role of the Auditor General is shifting in troubling ways," arguing that the Auditor General's increasing outspoken role is "making matters worse." Specifically referencing the pension asset accounting issue, Warren writes "For the first time in 16 years, Lysyk in 2016 decided to change her office's opinion on how the Ontario government presents pension assets in the audited financial statements and fought the government's claim it had balanced the budget in 2017-18. Wynne's Liberals asked an independent expert panel to determine the appropriate accounting treatment of the pension assets and they sided with the government. Lysyk provided her advice to the government and that should have been the end of it. Instead, in her latest annual report she rehashed the same issue and has gone from proving independent oversight to being an advocate for her own position."
- December 14, 2017 – The Record runs an opinion piece, "To sort out truth from pre-election fictions, turn to Bonnie Lysyk," writing that the Auditor General "warned that the Liberal government is making its financial position look rosier than it really is in part because it has counted as government assets two pension plans, including the plan of Ontario's teachers. That's extremely sketchy accounting practice. The teachers' pension plan is an independent organization and not owned by the provincial government. For the government to claim it as an asset is as dishonest as if you were to apply for a bank loan and, when you were asked to show what assets you own, telling the bank that you actually own your neighbour's home and car."
- December 13, 2017 – The Toronto Sun runs a comment piece, entitled "Liberals hiding deficit, second watchdog says" covering the Financial Accountability Officer's (FAO) fiscal outlook report. The article highlights the pension asset accounting issue, writing that the FAO's report "says these projections are based on weaker revenue growth and the Wynne government's rejection of "the Auditor General of Ontario's recommended accounting treatment for both the government's Fair Hydro Plan and the net pension assets of jointly-sponsored pension plans."

  Defying the auditor general, the Wynne government hired what it called an expert panel, which endorsed its pension accounting."

- December 12, 2017 – The Canadian Press reports on the Financial Accountability Officer's (FAO) fiscal outlook report, writing that the report says "a long simmering accounting dispute between the Liberal government and Auditor General Bonnie Lysyk over how to count two public-sector pension plans is contributing to uncertainty."
- December 12, 2017 – The Toronto Star's Robert Benzie reports on the Financial Accountability Officer's (FAO) fiscal outlook report, noting that the FAO adopts the Auditor General's accounting treatment of pension assets, resulting in a $4 billion deficit in 2017-18, "even though the Liberals maintain the books are in the black."
- December 12, 2017 – Ottawa Citizen's David Reevely also reports on the FAO report, writing: "We're up to three different versions of the provincial government's books, depending on how you count surpluses in a couple of public pension funds and money the government is borrowing to lower electricity prices temporarily. Without getting into the weeds on these disputes, the Liberals want to run the numbers in a way that makes them look good and they're not obviously wrong, but all the government's independent officers with anything to say about it - the auditor general, the financial accountability officer - say what they're doing is not OK."
- December 7, 2017 – Following the release of the Auditor General's 2017 Annual Report, the Toronto Star's Robert Benzie and Rob Ferguson outline the Auditor's various recommendations for the government. On the pension asset accounting front, the reporters write: "Even though a government-appointed expert panel of accountants concluded she is wrong about excluding the publicly owned assets of two joint-sponsored pension plans on the government's bottom line, Lysyk continues to claim she is in the right on the actuarial tiff."
- December 7, 2017 – CBC, The Star, and other news outlets report on the Auditor General's 2017 Annual Report, referencing the ongoing "accounting disagreements" between the Auditor General and the government, including reference to IESO accounting and pension asset accounting.
- October 25, 2017 – In follow-up to the release of the Auditor General's special report on the Fair Hydro Plan, the Toronto Sun runs a column "Number's up for Wynne's government," using disagreement regarding pension asset accounting as support for the Fair Hydro Plan not being the first time the government and the Auditor General have disagreed: Last year, the government and the auditor general publicly disagreed over the appropriate way to treat assets held by public pension plans. That dispute had implications for the important question of whether the government would post a balanced operating budget, or a deficit, this year."
- October 18, 2017 – The Toronto Star's Martin Regg Cohn writes "Watch out for watchdogs who don't like being watched," commenting "The last time Lysyk attacked the government's deficit calculations, an outside panel of experts rejected her arguments- because not even an auditor can make a surplus disappear from a balance sheet. There is no permanent arbiter for auditors, but Lysyk is no longer the last word on accounting disputes - merely one of many voices, right or wrong. Expect that voice to grow louder next year when she formally assesses the 2018-19 spring budget - and once again challenges Liberal claims of deficit elimination."
- September 13, 2017 – The Toronto Sun runs a column, "Wage warnings won't stop Wynne," critical of the cost of the Pension Asset Expert Advisory Panel: "Indeed, her government's typical reaction to critical, non-partisan warnings it gets from independent officers of the legislature - such as the auditor general and the FAO - is to ignore them, or to attack the messenger […]Wynne spent up to $435,000 striking an "independent" panel that unsurprisingly agreed with her position on pension accounting, not the auditor general's."
- September 8, 2017 – David Reevely writes in the Ottawa Sun and Ottawa Citizen "Lysyk and the ministers have been volleying back and forth for a couple of years now over how to count assets on the government books. Without getting too deep into it, what's in question is whether certain public sector pension plans and some holdings in the electricity system belong to the government or not."

- September 7, 2017 – The Canadian Press' Shawn Jeffords covers the tabling of Ontario's Public Accounts 2016-17, and cites the government's ongoing disagreement with the Auditor General on pension asset accounting as the reason the Auditor has issued a qualified audit opinion two years in a row. Minister Sandals is quoted in the article: Sandals maintains the government is following established accounting practices and people don't care about the on-going squabble. "The public wants to know, are you managing your deficit?" she said. "Is your deficit getting smaller? Are you going to balance the budget this year? Quite frankly, I don't think the public is terribly hung up on accounting disagreements."
- September 7, 2017 – The Toronto Star's Robert Benzie refers to the disagreement between the Auditor General and the government over IESO market accounts assets and pension asset accounting as an "accounting slugfest". Minister Sandals is quoted in the article (same quote as The Canadian Press coverage): Sandals on Thursday shrugged off Lysyk's accounting interpretation, which lead to her to issue a qualified audit opinion on the province's books for the second year in a row.

  "The experience last year was the books were qualified on the same issue and it didn't impact the credit ratings," the treasury board president said.

  "Quite frankly, I don't think the public is terribly hung up on accounting disagreements."
- September 7, 2017 – Queen's Park Briefing's Christopher Reynolds covers the disagreement between the Auditor General and the government, quoting Minister Sandals: ""The public wants to know, are you managing your deficit?" Sandals said Thursday at the release of the province's 2016-217 public accounts. "Is your deficit getting smaller? Are you going to balance the budget this year? Quite frankly, I don't think the public is terribly hung up on accounting disagreements."
- On May 1, 2017 David Reevely writes in the Ottawa Sun that "There's also $500 million booked in the government's favour from surpluses in a couple of pension plans for public employees. These are the subject of an arcane accounting dispute over whether the government, which couldn't grab the money easily, should be able to count them the way it's counting them. The auditor general says no. A panel of external blue-chip accounting types says yes (for a number of reasons, the easiest of which to grasp is that if the pension plans came up short the gap, would be the government's problem). Going with the auditor general's ruling would be the safer thing, for sure, but what the government's doing is neither trick nor a one-time manouevre.
- On April 30, 2017 David Reevely wrote about the 2017 budget and said "the Liberals are taking advantage of a surplus in some public-employee pension funds, which Auditor General Bonnie Lysyk says is improper but which other experts say is OK. And they've adopted a sort of partial distinction between operating spending and capital spending, which used to be mashed together into each year's budget in a way they no longer are."
- On February 21, 2017 the Toronto Sun (A10) has a column by Warren Thomas (OPSEU). He writes "Ontario's public service workers and retirees feel like we are about to get robbed." He notes that the Auditor General has been turned into a lapdog from a watchdog. Thomas writes "If nobody stands up to Wynne, I'm afraid her next move could be to actually steal our pension money, giving her more cash for overpaid consultants and Sunshine List executives."
- On February 20, 2017 the Toronto Sun reports on Minister Sandals' memo to OPSEU's Warren Thomas. It recounts the minister's statement that "government has no plans on making like a bandit with his members' pension funds." The short piece includes her quote: "The OPSEU pension plan, which is jointly sponsored by OPSEU and the province, clearly states that no amount of the surplus shall be paid out of the plan to either sponsor". "I trust that you are reassured by this news."
- On February 18, 2017 the Toronto Sun has a piece by Lorrie Goldstein. He writes that Premier Wynne needs to take the advice of the Auditor General in order to demonstrate openness and transparency.

- On February 18, 2017 the Ottawa Sun (A9) reports NDP Leader Horwath trusts the Auditor General's math. She spoke up on Friday on the ongoing pension account issue between government and the AG.
- On February 18, 2017 the Toronto Sun's Antonella Artuso (A10) quotes Minister Sandals who said in a statement that she will accept the findings of the panel and: "They also concluded that the government controls access to the pension surplus which has a future economic benefit to the province and recognizing the asset will provide an accurate representation of the province's financial position."
- On February 18, 2017 the Toronto Star's Martin Regg Cohn (A12) writes about the Auditor General. He says that she is no hero – in fact her "bizarre claim turns out to be a sideshow, designed to cover up her own miscalculations after an outside panel of experts found the auditor herself had conflated facts and confused figures." He concludes: "We rely on auditors to provide value for money audits. Not to introduce their own values, making up untested accounting standards as they go along."
- On February 17, 2017 the Hamilton Spectator (A16) posted an opinion piece that is negative toward Auditor General Lysyk. It notes: "Lysyk is putting that reputation and integrity on the line in Ontario. And she's not on solid ground…. If the evidence supported Bonnie Lysyk's position, we'd be the first to back her. But it doesn't. She needs to respect that and back down."
- On February 17, 2017 QP Briefing has a piece written by Bryne Purchase, former deputy minister of finance, on the 'accounting spat'. He sides with the AG: "I think it was regrettable that Premier Kathleen Wynne's government chose to attempt to undermine the legitimacy of our parliament's own accounting expert by appointing a panel of its own experts to review an unfavourable ruling."
- On February 17, 2017 the Windsor Star (A7) has a Canadian Press report that says the AG is not satisfied after the expert panel's report on the $10.7 billion pension dispute. Auditor General Bonnie Lysyk's quote is used: ``Show me the letter that says you can use that pension money with permission, with an agreement," she said Thursday. ``Until that happens the bottom line is this office can't give its stamp of approval on this particular issue." The article notes this is not the first time the Liberal government has clashed with the AG - the former energy minister suggested the electricity file was too complicated for Lysyk, and she has frequently suggested that partisan ads are being funded by taxpayer dollars.
- On February 16, 2017 the Toronto Star reported the Auditor General is demanding proof in writing from the unions that they are okay with the government using taxpayer-funded pension surpluses for accounting purposes. The article says the AG is "escalating a $10.7 billion standoff" with the government over taxpayer-funded pension surpluses. "There has been no suggestion the government intends to dip into the pension funds, which would be illegal. The question is whether the pension surplus can be counted as an asset or not at all." The AG was quoted: "It is not my money. That money is for the benefit of employees and retirees … so it's not my pension. It's not my budget deficit."
- On February 16, 2017 QP Briefing reports the AG says that until she sees a letter that says government can use that pension money with permission – her office can't give its stamp of approval on this issue. The article notes the government "isn't inclined to draft" a letter. Treasury Board President Liz Sandals is quoted from her statement: "They (the panel) concluded that the government does not need a letter from either of the unions because the joint pension agreements spell out how the surplus will be dealt with. They also concluded that there are no public-sector accounting standard requirements for any additional letter to be in place specifying when or by how much contributions will be reduced beyond the joint pension plan agreements already in place." This article also includes quotes from MPP Lisa MacLeod and OPSEU's Warren Thomas.

- On February 16, 2017 the Toronto Sun (A5) has two articles on the number crunching aspect of the expert panel. It says government spent up to $435,000 to the expert panel in the dispute with the Auditor General. The article says this has made OPSEU's Warren Smokey Thomas livid and notes that he wants a guarantee the government won't raid his members' pension fund. Ontario Treasury Board spokesman Matt Ostergard is quoted from an email, "The work of the panel is ongoing so we don't have final costs at this time but they will be in line with previous panels and will be made public."
- On February 16, 2017 The Northumberland Today.com has David Reevely's opinion piece on the pension panel's "gift' to the government. "The Ontario Liberals have an extra $1.5 billion to spend between now and the next election and can still keep their promise to balance the provincial budget by 2018, thanks to a helpful ruling on how to handle surpluses in a couple of big provincial pension funds. The article includes a written statement from Minister Sandals "We are committed to implementing the advice of this independent panel and will use it in preparing the province's financial statements."
- On February 15, 2017 QP Briefing reports Treasury Board President Liz Sandals says it's too soon to weigh in on what might happen if the Auditor General stands her ground in the pension accounting dispute. "I think we're getting way ahead of ourselves – that's a total hypothetical," Sandals told reporters. "The bottom line is, the panel gave us advice, and we're going to follow the advice of the panel." Sandals added there "is no urgency" for Lysyk to weigh in on the panel's conclusion and that she was "pleased" that the auditor was giving it a thorough read. The article notes the minister was "cagey" when pressed about if the panel's report will mean a rollback on contributions for the OPSEU plan. She is quoted, "As the panel points out, that is the traditional way in which the government would access the surplus," "That's the whole premise of the panel's report, is that the way in which the government or any other employer in that situation would access the surplus is by reducing the contribution rate."
- On February 14, 2017 OPSEU's Smokey Thomas writes that Premier Wynne should remember who owns the assets of the province's jointly trusted public pension plans. He says the dispute between the government and the Auditor General is not "just a paper war". "It's a fight over who owns billions of dollars earned by workers and invested on their behalf. I'm telling the Premier right now: the money in those plans belongs to plan members. It is not hers to play with." He "unequivocally supports" the Auditor General's position. He says his "fear is that the Liberals will try to move money out of public pension plans to help wipe out the provincial deficit in time for the 2018 provincial election."
- On February 14, 2017 the Ottawa Sun's David Reevely (A11) reports "the Ontario Liberals have an extra $1.5 billion to spend between now and the next election and can still keep their promise to balance the provincial budget by 2018, thanks to a helpful ruling on how to handle surpluses in a couple of big provincial pension funds." His article notes, "The point is, we're talking serious money - the stakes in what's otherwise the most arcane public-accounting battle ever to spill out of a comptrollers' seminar and into the streets." He writes the surpluses work in the government's favour – especially as an election approaches.
- On February 14, 2017 the Toronto Star (A7) (and online) has a negative piece about the Auditor General, written by Martin Regg Cohn. He writes the AG has been caught out in a $10.7-billion miscalculation. "Even a watchdog can lose the scent and bark up the wrong tree. Or worse, miss the fiscal forest for the trees. For the job requires not just independence but context. To be truly credible, an auditor general must fearlessly expose government boondoggles but also fess up to her blunders." "Lysyk's lack of diligence - now overdue - is a damning indictment of an auditor gone awry."

- On February 13, 2017 QP Briefing reports the government has accepted the panel's conclusion that pension surpluses are assets. The Auditor General's stance won't be known until later in the week. The article includes comments from Tory finance critic Vic Fedeli: “Basically, they've gone out and hired people whose findings would be more convenient for them ... They have appointed a private panel of auditors to come to the province's conclusion." OPSEU president Warren (Smokey) Thomas said he's concerned the panel's conclusion was politically motivated: “If I was going to fall on a side of advice, I'd fall on the advice of the auditor general," he said. "The government has gone to extraordinary length to have somebody try to disagree and discredit the auditor general."
- On February 13, 2017 the Toronto Star reported a panel of accounting experts says that $10.7 billion in government-sponsored pension plans should count toward the province’s bottom line. The article notes panel chair Tricia O’Malley said “We believe that an asset does exist – the net pension asset meets the definition of an economic resource, which is what an asset is.” The Star noted that Auditor General Lysyk is reviewing the report and will provide comment to the media later this week.
- On February 12, 2017 the Toronto Star reports a government-appointed panel of experts will announce on Feb. 13 that joint-sponsored pension surpluses should be counted as assets for the provincial treasury. The report says the Auditor General should include billions of dollars of its assets on the government’s bottom line. OPTrust says “surpluses and deficits should both be recognized on the province’s balance sheet.”
- On February 8, 2017 The Toronto Star (A6) reports Premier Wynne welcomes a report from four accounting experts that says a $10.7-billion pension surplus can be counted as an asset on the province’s bottom line. The article notes the AG was briefed on the report last week and it will be make public later this month. MPP Vic Fedeli is quoted: “The people of Ontario have to ask themselves who are they going to believe: the independent auditor general or a scandal-plagued Liberal government?”
- On February 8, 2017 QP Briefing reports the Financial Accountability Officers says “should the panel studying a pension accounting clash with the auditor general conclude that billions of dollars’ worth of pension assets should be counted on Ontario's balance sheet after all, the government will get more flexibility to balance the budget as promised.” “David West, the FAO's chief economist, said he had not heard about any conclusions from the panel but noted that if they have decided to count the pension assets, it gives the government more breathing room to achieve balance, as promised.” Auditor General Lysyk declined to confirm or comment directly because the panel is not yet public.
- On February 7, 2017 The Toronto Star’s (A4) Martin Regg Cohn reports billions of dollars are at stake in a dispute pitting Ontario's Auditor General against the government. He writes that despite an outside panel of top accounting and pension experts determining that Auditor General Bonnie Lysyk has gone out on a fiscal limb by effectively wiping away nearly $11 billion in government assets – she told this reporter that “she won't climb down,” and this now sets the stage for a public showdown over an accounting change that is worth $1.5 billion to the bottom line this year alone. “The auditor told me her mind is made up and nothing she has heard so far has changed her view….which leaves her on a limb and the government in the lurch.”
- On November 30, 2016 QP Briefing reported Minister Sandals appointed an expert panel to help resolve the government's standoff with the Auditor General over pension assets. The chair of the special panel tasked with settling an accounting dispute will be paid $2,000 per work day. The other three members of the panel will get a $1,900 per diem, as well as reimbursement.
- On November 14, 2016 QP Briefing reported an expert panel will study the AG pension dispute.

- On October 9, 2016 Focus Ontario (Global) ran a segment on the 2015-16 Public Accounts and the disagreement with the Auditor General. Both the Premier and Patrick Brown are quoted in the segment. The Premier is quoted from Question Period saying the government “accepted the Auditor General's numbers for this year. We released the documents despite the divergence in accounting opinions, specific to pension funds between Treasury Board officials and the Auditor as part of our commitment to openness and be transparency.”
- On October 9, 2016 The Toronto Sun (A17) ran an opinion piece about the disagreement with the Auditor General. The piece notes that this kind of back and forth between ministries and the Auditor General is common. The Auditor General provides time for ministries to comment on the audit in draft form so that accounting issues can be hashed out before the final audited statement is presented to the legislature. Accounting issues are generally benign. So it's surprising that the Wynne government elevated the tussle over pensions to the political realm by tabling the financial statements without the Auditor General's unqualified opinion.
- On October 6, 2016 The Financial Post has a commentary by analysts with the Fraser Institute. “It's not surprising the Wynne government is willing to go to the mat to defend its estimate of last year's budget deficit. As Ontario approaches a provincial election in 2018, a big part of the government's PR strategy is focused on celebrating an expected return to a balanced budget in next year's budget. So Premier Kathleen Wynne's team has a big incentive to push back against dissenting views.”
- On October 6, 2016 QP Briefing reports Treasury Board President Liz Sandals tabled Ontario's public accounts for fiscal 2015-16, including the Auditor General's opinion. The tabling of the public accounts was delayed by almost two weeks after months of back and forth between the Auditor General and the government over whether the bottom line should include assets for two jointly-sponsored provincial pension plans.
- On October 3, 2016 The Globe and Mail reports Ontario's Liberal government is fighting with the province's Auditor General over a $1.5-billion discrepancy in last year's deficit and a $10.7-billion difference in Ontario's net debt.
- On October 3, 2016 Canadian Press ran a story in 40 media outlets reporting that the government says Auditor General Bonnie Lysyk is taking issue with their pension asset accounting, though it says these are rules that have been used for the past 14 years. “The issue is with the accounting of the Ontario Public Service Employees Union Pension Plan and the Ontario Teachers' Pension Plan, which are jointly sponsored with the government. The government says the plans have a surplus, but the auditor general says that should not be on the province's balance sheet.”

CONFIDENTIAL REVISED: January 10, 2018

2016-17 PUBLIC ACCOUNTS

ISSUE: What is reported in the 2016-17 Public Accounts released on September 7, 2017?

KEY MESSAGES: PUBLIC ACCOUNTS

- The 2016-17 Public Accounts of Ontario show the province's deficit is $991 million.
- This result is $3.3 billion lower than projected in the 2016 Budget, and $0.5 billion lower than the interim forecast in the 2017 Budget.
- This is a result of growth in revenue that exceeded growth in program expense, and lower than forecast interest on debt.
- Ontario has beaten its deficit target eight years in a row. Ontario's plan is working.
- As promised in the 2016 Budget, Ontario grew its economy while transforming healthcare, building vital infrastructure and investing in people's talents and skills.
- Due to our prudent fiscal management and Ontario's robust economic growth, we are projecting a balanced budget for the first time since the onset of the global recession in 2008.
- We remain on track to balance the budget this fiscal year as well as in 2018–19 and 2019–20.
- This is something that has been achieved only eight times in the last 40 years in Ontario.
- We will continue moving forward on our fiscally responsible plan that creates fairness and opportunity for all Ontarians.

KEY MESSAGES: OTHER HIGHLIGHTS

- We will continue to present the province's finances fairly and accurately and in accordance with Canadian Public Sector Accounting Standards.
- We also remain on track to balance the budget this fiscal year as well as in 2018–19 and 2019–20.
- Other highlights from this year's Public Accounts include:
    - Economic growth, with a 2.7 per cent increase in real gross domestic product (GDP), up 2.2 per cent in the 2016 Budget.
    - Total revenue of $140.7 billion, up $2.2 billion from the 2016 Budget.
    - Total spending of $141.7 billion, down $0.1 billion from the 2016 Budget.
    - Interest on debt of $11.7 billion, down $0.7 billion from the 2016 Budget.
- To help Ontarians better understand their government's finances, new digital tools have been developed that present the Public Accounts data in innovative, visual formats. These tools make Ontario's finances easier to understand, access and use.
- Presenting the Public Accounts data in innovative, visual formats is part of Ontario's commitment to Open Government.

KEY MESSAGES: ACCOUNTING CHANGES

BPS REVENUE PRESENTATION

- To increase transparency, the 2016-17 Public Accounts are presenting third-party revenues for hospitals, school boards and colleges, such as tuition fees, patient fees, research grants and donations, with provincial revenue.
- In prior years, these revenues were netted against the expenses of the respective sectors (health, education, post-secondary).
- This is a change in presentation only; the change increases total revenues and expenses by approximately $8 billion, and does not impact the deficit, net debt or accumulated deficit.
- This change is consistent with public sector accounting standards and the reporting practices of other senior Canadian governments.
- The Auditor General is supportive of this change in presentation.

ACCOUNTING FOR ENERGY GOVERNMENT BUSINESS ENTERPRISES:

- The 2016-17 Public Accounts include the financial results of Ontario Power Generation (OPG) and Hydro One using International Financial Reporting Standards (IFRS).
- These two government business enterprises currently report their stand-alone financial results using Generally Accepted Accounting Principles in the United States (US GAAP).
- In prior years, the reported results of OPG and Hydro One were included in the results of the province based on US GAAP.
- This change does not have a material impact on this year's Public Accounts.
- The Auditor General is supportive of this change in presentation.

PENSION ACCOUNTING:

- The government established the Pension Asset Expert Advisory Panel following the release of the 2015-16 Public Accounts.
- The Panel delivered independent advice on how public sector accounting standards are interpreted as they apply to current net pension assets and the application of public sector accounting standards for two of Ontario's jointly sponsored pension plans; Ontario Teachers' Pension Plan (OTPP); and the Ontario Public Service Employees' Union Pension Plan (OPSEUPP).
- The Panel's report concluded that the province's share of the net pension assets of both the OTPP and the OPSEUPP should be recognized in Ontario's financial statements.
- The government accepted the Panel's recommendations, which have been reflected in the 2016-17 financial statements.
- The 2015-16 financial statements have also been restated to reflect the pension assets for these two plans.
- The Auditor General continues to not accept the application of the Public Sector Accounting Board (PSAB) standards in the 2016-17 Public Accounts regarding pension accounting for the province's jointly sponsored pension plans. For 2016-17, the Auditor General has qualified her opinion, stating that the province's deficit is understated by $1.4 billion.

KEY MESSAGES: IESO ACCOUNTING

- The Independent Electricity System Operator (IESO) reports its financial results in accordance with Public Sector Accounting Standards.
- In 2016, IESO changed its accounting policy to begin recognizing market assets (amounts due *from* power distributors) and liabilities (amounts due *to* power generators). In previous years, these amounts were omitted from IESO's financial statements.

- This change has no impact to the province's annual deficit, net debt or accumulated deficit.
- IESO also adopted rate-regulated accounting for deferred charges, such as the cost of smart meters, which will be recovered from users of these meters over time.
- Public Sector Accounting Standards are silent on rate-regulated accounting, and as a result, as provided for in the accounting standards, IESO considered other sources of guidance to assess the appropriateness of applying rate regulated accounting.
- Prior to the 2015 merger with the IESO, the Ontario Power Authority (OPA) reported market accounts and used rate-regulated accounting under PSAS. The statements of the OPA were not qualified during that time by OPA's external auditor or the Auditor General. This accounting treatment is not new to Ontario.
- The Auditor General qualified her opinion in 2016-17 based on the recognition of the IESO's market accounts. The Auditor General also noted in her opinion that the use of rate regulated accounting under PSAS is not permitted, but did not qualify on the issue of rate regulated accounting, as the impact was not material in the current year.
- The reporting changes implemented by the IESO were approved by their management and board, and received an unqualified audit opinion from their external auditor. The province's Office of the Provincial Controller also supports the changes.

KEY MESSAGES: AUDITOR GENERAL'S 2017 ANNUAL REPORT – CHAPTER ON PUBLIC ACCOUNTS

- The government thanks the Auditor General for her recommendations, and remains committed to assisting the Office of the Auditor General in providing its independent views to the Legislative Assembly.
- The government has a strong track record of producing high-quality financial reports on a timely basis and continues to present the province's finances fairly and

accurately and in accordance with Canadian Public Sector Accounting Standards.

- The government's use of external expertise for accounting and financial reporting matters supplements its own resources on complex or emerging accounting and reporting matters.
- The province will continue to provide financial statements according to Canadian Public Sector Accounting Standards that support transparency and accountability in reporting to the public, the legislature, and other users.
- The government will continue to build on its track record of responsible fiscal management.

CURRENT STATUS

- December 20, 2017 – the Treasury Board Secretariat (TBS) has been called to appear before the Standing Committee on Public Accounts (SCOPA), to review Chapter 2 – Public Accounts of the Province (Volume 1 of the 2017 Annual Report of the Office of the Auditor General of Ontario). In addition to officials from TBS, requests to attend were issued to officials from Cabinet Office, the Ministry of Finance, the Ontario Financing Authority, the Ministry of Energy, the Independent Electricity System Operator and Ontario Power Generation. Attendees will be required to provide the committee with a response to the Auditor General's report, and to answer any questions the committee members may have. Hearings are scheduled for February 28, 2018.
- As per Standing Order 108(h), the SCOPA is empowered to review and report to the House its observations, opinions and recommendations on the Report of the Auditor General and the Public Accounts, which documents shall be deemed to have been permanently referred to the committee as they become available.
- The committee may meet weekly when the Legislative Assembly is sitting. With the approval of the House, it may also meet at any time when the Legislative Assembly is not sitting.
- All meetings are open to the public with the exception of those dealing with the setting of the committee's agenda and the preparation of committee reports.
- All public committee proceedings are recorded in Hansard.

BACKGROUND:

- The Public Accounts of Ontario is a key accountability and transparency document in the government's financial cycle. It's a look back that compares Ontario's actual performance to what was planned in the Budget.

- The Public Accounts present the financial statements of the Province, provide financial highlights of the past fiscal year, and report on performance in priority areas.

- Public Accounts is audited by the Auditor General and is typically released in the fall of the following fiscal year.
- When preparing the 2016-17 Public Accounts, Ontario's professional accounting staff adopted accounting changes to further enhance accountability and transparency.

- These changes include:
    - **Accounting for hospitals, school boards and colleges** - third-party revenues (i.e. tuition fees, patient fees, research grants and donations) are now reported together with provincial revenue. This change increases transparency and is supported by the Auditor General.
    - **Accounting for energy sector government business enterprises** - the financial results of investments in Hydro One and Ontario Power Generation (OPG) now reflect International Financial Reporting Standards. Previously, these results were reported using U.S. Generally Accepted Accounting Principles. This change was made to meet Public Sector Accounting Board standards and is supported by the Auditor General.
    - **Accounting for the Independent Electricity System Operator (IESO)** - the IESO has adopted rate-regulated accounting, and is now recognizing its market accounts assets and liabilities in its financial results.
    - **Accounting for net pension assets of jointly sponsored pension plans** - the Province is reporting net pension assets for jointly sponsored pension plans. This is in line with Public Sector Accounting Board standards and the recommendations of the independent Pension Asset Expert Advisory Panel.

Pension Asset Expert Advisory Panel

- On November 10, 2016 Ontario established the Pension Asset Expert Advisory Panel to provide independent advice and recommendations to the government on the application of public sector accounting standards to Ontario's net pension assets.
- The Panel was comprised of accounting, legal and pension experts in the areas of jointly sponsored pension plans, actuarial modelling for pension plans and Public Sector Accounting Standards.
- The Panel members were:
    - Tricia O'Malley; (Chair)
    - Murray Gold;
    - Uros Karadzic; and,
    - Paul Martin.
- Panel members also provided advice on how to value net pension assets reported on the province's books, taking into account future decisions which might be made by the plan's sponsor or sponsors.

- The Panel issued its report in February 2017. Upon receiving the report, the government, supported by its own research and analysis, accepted the Panel's recommendation and has reported the pension assets of the Ontario Teachers' Pension Plan (OTPP) and Ontario Public Service Employees' Union Pension Plan (OPSEUPP) in its 2016-17 consolidated financial statements (with restatement of 2015-16).
- The Panel issued a supplementary report in March 2017 with respect to the Healthcare of Ontario Pension Plan (HOOPP) and Colleges of Applied Arts and Technology Pension Plan (CAATPP) recommending that a full valuation allowance be recorded on the net assets of both of these plans, based on the difference in governance structure between these plans and OTPP and OPSEUPP. The province agreed and has recorded a valuation allowance for CAATPP in the year (amount is not material). The HOOPP plan is not in a net asset position for accounting purposes at March 31, 2017.

Independent Electricity System Operator

- The Independent Electricity System Operator (IESO) is a not-for-profit, non-taxable corporation established pursuant to Part II of the *Electricity Act, 1998*. The Ontario Power Authority and the IESO merged on January 1, 2015.
- One of IESO's roles is to settle the market accounts, which are the amounts due to the entities that provide electricity to the market (e.g. power generators) and due from those who consume electricity (e.g. local distribution companies on behalf of their consumers).
- Rate regulated accounting is appropriate where the rates an entity is able to charge to its customers are set by another party (i.e. a regulator), provided specified criteria are met. Rate-regulated accounting permits the entity to defer costs that would otherwise be expensed to the period that the related revenue is charged to customers. Costs able to be deferred by the IESO include:
    - Unrecovered smart metering expenses; and,
    - Unrecovered pension and post-employment benefits related to PSAB transition.
- During 2016, IESO made two accounting changes (1) to recognize the market accounts in its financial statements – these amounts were not previously recognized in the IESO's financial statements, and (2) to apply rate-regulated accounting.
- The IESO received an unqualified audit opinion from KPMG (their external auditor) with respect to the financial statement presentation in their 2016 audited financial statements. IESO management, IESO's Audit Committee, IESO's Board of Directors, IESO's external auditor, and the Office of the Provincial Controller all support the recognition of the market accounts and the use of rate-regulated accounting by IESO.

Revenue Highlights

Against the Restated 2016 Budget:

- Revenues for 2016-17 came in at $140.7 billion, or $2.2 billion higher than forecast in the 2016 Budget. This was largely due to higher than projected taxation revenues, non-provincial source revenues from hospitals, school boards and colleges, and income from GBEs, partially offset by lower than projected Government of Canada transfers and other non-tax revenue.

Against the Restated Interim Estimates in the 2017 Budget:

- Revenues for 2016-17 came in at $140.7 billion, or $0.6 billion lower than the interim forecast in the 2017 Budget. This was largely due to lower than projected taxation revenues and Government of Canada transfers, partially offset by higher than projected income from GBEs.

Expense Highlights

Against the Restated 2016 Budget plan:

- Total expense in 2016-17 was $141.7 billion, or $0.1 billion lower than forecast in the 2016 Budget plan. Program spending was $130.0 billion, up by $0.6 billion from a planned spending of $129.4 billion and interest on debt was $11.7 billion, lower by $0.7 billion from planned interest cost of $12.4 billion. Program spending was higher by $0.6 billion largely due to higher than projected spending in the health, community and social services, justice sector and general government and other.

Against the Restated interim Estimates in the 2017 Budget:

- Total expense in 2016-17 was $141.7 billion or $1.1 billion lower than the interim forecast in the 2017 Budget. Program spending was $130.0 billion, $0.9 billion lower than the interim forecast of $130.9 billion in the 2017 Budget. Interest on debt was $11.7 billion, lower by $0.2 billion from planned interest cost of $11.9 billion. Program spending was lower by $0.9 billion largely due to lower than projected spending in the health and education sectors, and other programs.

Net Debt

- Net debt as of March 31, 2017, was $301.6 billion, which was $6.7 billion lower than forecast in the 2016 Budget. Net debt grew by $6.2 billion during the year, representing a $6.6 billion increase in liabilities that was partially offset by a $0.4 billion increase in financial assets.

Auditor General's 2017 Annual Report: Chapter on Public Accounts

- On December 6, 2017, the Office of the Auditor General released their 2017 Annual Report.
- The Auditor General's Annual Report, Chapter 2, makes 10 recommendations regarding the Public Accounts of the Province.
- The recommendations largely reflect opinions that have been expressed in previous reports, including the Auditor General's audit opinion in the 2016-17 Public Accounts and the Special Report on the Fair Hydro Plan.
- Treasury Board Secretariat and Ministry of Finance disagree with the characterization of the majority of the recommendations, and re-iterate the government's commitment to producing high-quality financial statements on a timely basis and in accordance with Canadian Public Sector Accounting Standards (PSAS).

Financial Accountability Office's Economic and Fiscal Outlook, Fall 2017 Update

- On December 11, 2017, the Financial Accountability Office released its Economic and Fiscal Outlook, Fall 2017 Update.
- During the media event, the FAO said "since the government has not adopted the Auditor General's recommended accounting for both the Fair Hydro Plan and net pension assets, it is becoming more difficult for legislators and the public to assess the government's fiscal projections. This has reduced the transparency and reliability of Ontario's fiscal plan."

RECENT MEDIA COVERAGE:

- January 12, 2018 – The Toronto Star ran an opinion column by Martin Regg Cohn, "Independence is not infallibility when it comes to Ontario's financial books," arguing Auditor General "Lysyk's paranoia about partisan advertising is a depressing case study on how she approaches the vital role of an auditor general, which is meant to be a check and balance on the power of government — not a grudge match grounded in distortions over picayune disputes. All's fair in politics and accounting, unless you're an auditor gone awry."
- January 9, 2018 – The Toronto Sun runs a column by Ben Eisen, director of the Fraser Institute's Ontario Prosperity Initiative entitled "Ontario's finances are still a mess." Eisen argues that people should treat the government's balanced budget claims with skepticism, writing "For starters, many analysts, including Ontario Auditor General Bonnie Lysyk, have called the government's accounting techniques into question, arguing proper accounting would show continued deficits. Others, including the government's Financial Accountability Office, warn that without additional policy changes to reduce spending, or raise taxes, Ontario will likely slip back into deficits."
- December 17, 2017 – The Ottawa Sun's Lorrie Goldstein writes that "with less than six months to go before the June 7 election, two independent, non-partisan financial watchdogs of the Ontario Legislature say the books of Premier Kathleen Wynne's Liberal government cannot be trusted." Goldstein highlights the disagreement between the Auditor and the government on the pension asset accounting issue, also noting the expert advisory panel: "Lysyk argues the government is improperly claiming the $11.5 billion surplus in the Ontario Teachers' Pension Plan as an asset, because it cannot access these funds without the permission of Ontario's teacher unions […] In November 2016 it hired what it described as an expert, four person pension advisory panel, with a budget of up to $435,000 for salaries, excluding expenses, which in February 2017 backed the government's accounting on the teachers' pension plan."
- December 17, 2017 – The Toronto Sun's Jim Warren cautions that "the role of the Auditor General is shifting in troubling ways," arguing that the Auditor General's increasing outspoken role is "making matters worse." Specifically referencing the pension asset accounting issue, Warren writes "For the first time in 16 years, Lysyk in 2016 decided to change her office's opinion on how the Ontario government presents pension assets in the audited financial statements and fought the government's claim it had balanced the budget in 2017-18. Wynne's Liberals asked an independent expert panel to determine the appropriate accounting treatment of the pension assets and they sided with the government. Lysyk provided her advice to the government and that should have been the end of it. Instead, in her latest annual report she rehashed the same issue and has gone from proving independent oversight to being an advocate for her own position."
- December 14, 2017 – The Record runs an opinion piece, "To sort out truth from pre-election fictions, turn to Bonnie Lysyk," writing that the Auditor General "warned that the Liberal government is making its financial position look rosier than it really is in part because it has counted as government assets two pension plans, including the plan of Ontario's teachers. That's extremely sketchy accounting practice. The teachers' pension plan is an independent organization and not owned by the provincial government. For the government to claim it as an asset is as dishonest as if you were to apply for a bank loan and, when you were asked to show what assets you own, telling the bank that you actually own your neighbour's home and car."
- December 13, 2017 – The Toronto Sun runs a comment piece, entitled "Liberals hiding deficit, second watchdog says" covering the Financial Accountability Officer's (FAO) fiscal outlook report. The article highlights the pension asset accounting issue, writing that the FAO's report "says these projections are based on weaker revenue growth and the Wynne government's rejection of "the Auditor General of Ontario's recommended accounting treatment for both the government's Fair Hydro Plan and the net pension assets of jointly-sponsored pension plans." Defying the auditor general, the Wynne government hired what it called an expert panel, which endorsed its pension accounting."

- December 12, 2017 – The Canadian Press reports on the Financial Accountability Officer's (FAO) fiscal outlook report, writing that the report says "a long simmering accounting dispute between the Liberal government and Auditor General Bonnie Lysyk over how to count two public-sector pension plans is contributing to uncertainty."
- December 12, 2017 – The Toronto Star's Robert Benzie reports on the Financial Accountability Officer's (FAO) fiscal outlook report, noting that the FAO adopts the Auditor General's accounting treatment of pension assets, resulting in a $4 billion deficit in 2017-18, "even though the Liberals maintain the books are in the black."
- December 12, 2017 – Ottawa Citizen's David Reevely also reports on the FAO report, writing: "We're up to three different versions of the provincial government's books, depending on how you count surpluses in a couple of public pension funds and money the government is borrowing to lower electricity prices temporarily. Without getting into the weeds on these disputes, the Liberals want to run the numbers in a way that makes them look good and they're not obviously wrong, but all the government's independent officers with anything to say about it - the auditor general, the financial accountability officer - say what they're doing is not OK."
- December 7, 2017 – Following the release of the Auditor General's 2017 Annual Report, the Toronto Star's Robert Benzie and Rob Ferguson outline the Auditor's various recommendations for the government. On the pension asset accounting front, the reporters write: "Even though a government-appointed expert panel of accountants concluded she is wrong about excluding the publicly owned assets of two joint-sponsored pension plans on the government's bottom line, Lysyk continues to claim she is in the right on the actuarial tiff."
- December 7, 2017 – CBC, The Star, and other news outlets report on the Auditor General's 2017 Annual Report, referencing the ongoing "accounting disagreements" between the Auditor General and the government, including reference to IESO accounting and pension asset accounting.
- October 25, 2017 – In follow-up to the release of the Auditor General's special report on the Fair Hydro Plan, the Toronto Sun runs a column "Number's up for Wynne's government," using disagreement regarding pension asset accounting as support for the Fair Hydro Plan not being the first time the government and the Auditor General have disagreed: Last year, the government and the auditor general publicly disagreed over the appropriate way to treat assets held by public pension plans. That dispute had implications for the important question of whether the government would post a balanced operating budget, or a deficit, this year."
- October 18, 2017 – The Toronto Star's Martin Regg Cohn writes "Watch out for watchdogs who don't like being watched," commenting "The last time Lysyk attacked the government's deficit calculations, an outside panel of experts rejected her arguments- because not even an auditor can make a surplus disappear from a balance sheet. There is no permanent arbiter for auditors, but Lysyk is no longer the last word on accounting disputes - merely one of many voices, right or wrong. Expect that voice to grow louder next year when she formally assesses the 2018-19 spring budget - and once again challenges Liberal claims of deficit elimination."
- November 15, 2017 – Ontario PC Finance Critic Vic Fedeli pens a column in the Toronto Sun on the Fall Economic Statement, making reference to the Auditor General's qualified audit opinion on the province's Public Accounts two years in a row.
- October 16, 2017 – CBC News looks to the province's Public Accounts to highlight "Four surprising things about the Ontario government's finances," including: "personal income tax revenue is dropping," "corporate tax revenue is soaring," a "real estate windfall," and "booze revenue poised to top gambling revenue."
- September 8, 2017 -- Post Media's David Reevely quotes the AG's statement that rejects the contents of the Public Accounts "The Legislature and all Ontarians must be able to rely on the province's consolidated financial statements to fairly report the fiscal results for the year. This year they cannot do so." The article mentions the FAO's commentary this week saying the FAO and AG have 'made a businesslike routine of pointing out all the extreme assumptions and accounting stretches the

government is using to make the books look good in an election year." The article concludes that considering what happened to the world economy a decade ago the government has 'done all right' but is critical of 'dismissing' the government's two most prominent independent financial experts. **Minister Sandals** mentioned in reference to releasing the PA.

- September 7, 2017 -- Toronto Star says the "stakes are high in the accounting slugfest between the government and the auditor general." The article mentions Minister Sandals "shrugging off" the AG's accounting interpretation. "The experience last year was the books were qualified on the same issue and it didn't impact the credit ratings," the treasury board president said. "Quite frankly, I don't think the public is terribly hung up on accounting disagreements."
- September 7, 2017 -- QP Briefing reports financial watchdogs aren't smiling about the government lowering the deficit to $1 billion, but instead are 'baring their teeth'. The article says auditor general Bonnie Lysyk said yesterday the government "significantly understated" its deficit, while the Financial Accountability office this week called the plan to reduce the debt burden "unlikely." Minister Sandals is quoted "The public wants to know, are you managing your deficit?" "Is your deficit getting smaller? Are you going to balance the budget this year? Quite frankly, I don't think the public is terribly hung up on accounting disagreements." The article also notes AG Lysyk is warning that the complex accounting behind the hydro bill reduction could add to a bigger than expected deficit next year, and that a special report will be tabled this fall.
- September 7, 2017 -- The CP article about Public Accounts quotes Minister Sandals "The public wants to know, are you managing your deficit?" she said. "Is your deficit getting smaller? Are you going to balance the budget this year? Quite frankly, I don't think the public is terribly hung up on accounting disagreements." The coverage says AG Lysyk disputes the government figures and that "the statements were not prepared following Canadian Public Sector Accounting Standards." This article was picked up by several media outlets but coverage was not widespread.
- February 20 & 21, 2017 -- Toronto Sun report on Minister Sandals' memo to OPSEU that "the OPSEU pension plan….clearly states that no amount of the surplus shall be paid out of the plan to either sponsor". This is followed by a column by OPSEU President Warren Thomas saying Ontario's public service workers and retirees feel like we are about to get robbed.
- February 18, 2017 – Toronto Star, Toronto Sun and Ottawa Sun coverage of the ongoing pension accounting issue between the government and Auditor General.
    - Ottawa Sun says NDP Leader Horwath trusts the Auditor General's math.
    - Toronto Sun quotes Minister Sandals who said in a statement that she will accept the findings of the panel.
    - Toronto Star columnist Martin Regg Cohn wrote that the Auditor General is no hero, and her "bizarre claim turns out to be a sideshow, designed to cover up her own miscalculations after an outside panel of experts found the auditor herself had conflated facts and confused figures."
- February 17, 2017 -- Hamilton Spectator, QP Briefing, and Windsor Star have coverage.
    - The Spectator's opinion piece is negative toward Auditor General Lysyk.
    - QP Briefing's piece written by Bryne Purchase, former deputy minister of finance, sides with the AG.
    - Windsor Star published the CP story that says the AG is not satisfied after the expert panel's report on the $10.7 billion pension dispute and that she is asking to see "the letter that says you can use that pension money with permission, with an agreement."

- February 16, 2017 – The Toronto Star, Toronto Sun & QP Briefing have coverage of the Auditor General's response to the panel's report.
    - The Toronto Star and QP Briefing say the Auditor General is demanding proof in writing from the unions that they are okay with the government using taxpayer-funded pension surpluses for accounting purposes and describes it as an "escalating a $10.7 billion standoff".
    - QP Briefing quotes Minister Sandals from her statement: "They (the panel) concluded that the government does not need a letter from either of the unions because the joint pension agreements spell out how the surplus will be dealt with. They also concluded that there are no public-sector accounting standard requirements for any additional letter to be in place specifying when or by how much contributions will be reduced beyond the joint pension plan agreements already in place."
    - The Toronto Sun has two articles on the number crunching aspect of the expert panel and that the government spent up to $435,000 on it. OPSEU's Warren 'Smokey' Thomas was livid and notes that he wants a guarantee the government won't raid his members' pension fund.
- February 15, 2017 -- QP Briefing quotes Minister Sandals about it being too soon to weigh in on what might happen if the Auditor General stands her ground in the pension accounting dispute.
- February 14, 2017 – high profile media coverage of the Pension Asset Expert Advisory Panel report release the day before.
    - Toronto Star columnist Martin Regg Cohn is critical of the Auditor General saying she has been caught out in a $10.7-billion miscalculation.
    - The Star's coverage also included article about the panel report and that $10.7 billion in government-sponsored pension plans should count toward the province's bottom line.
    - The Ottawa Sun's David Reevely says about the panel report "…we're talking serious money - the stakes in what's otherwise the most arcane public-accounting battle ever to spill out of a comptrollers' seminar and into the streets."
    - OPSEU's Smokey Thomas writes that the dispute between the government and the Auditor General is not "just a paper war" and that he "unequivocally supports" the AG's position.
- On February 13, 2017 QP Briefing reports the government has accepted the panel's conclusion that pension surpluses are assets. The Auditor General's stance won't be known until later in the week. The article includes comments from Tory finance critic Vic Fedeli: "Basically, they've gone out and hired people whose findings would be more convenient for them ... They have appointed a private panel of auditors to come to the province's conclusion." OPSEU president Warren (Smokey) Thomas said he's concerned the panel's conclusion was politically motivated: "If I was going to fall on a side of advice, I'd fall on the advice of the auditor general," he said. "The government has gone to extraordinary length to have somebody try to disagree and discredit the auditor general."
- February 7 & 8, 2017 – Toronto Star and QP Briefing have coverage about the pension asset advisory panel's soon-to-be-released report.
    - PC Finance Critic Vic Fedeli tells the Star, that the people have to ask themselves who they are going to believe-- the independent auditor general or a scandal-plagued Liberal government?"
    - Columnist Martin Regg Cohn writes the AG has gone out on a fiscal limb by effectively wiping away nearly $11 billion in government assets and she won't climb down.
- November 14 & 30th, 2016 -- QP Briefing has coverage of the expert panel announced to study the accounting dispute over pension assets.

- October 9, 2016 -- Focus Ontario (Global tv) and the Toronto Sun have coverage of the 2015-16 Public Accounts and the disagreement with the Auditor General.
    - Focus Ontario coverage balanced.
    - Toronto Sun opinion piece expresses surprise that the government elevated the tussle over pensions to the political realm by tabling the financial statements without the Auditor General's opinion.
- October 6, 2016 -- The Financial Post has a highly critical commentary by analysts with the Fraser Institute, while QP Briefing reports the public accounts for 2015-16 have been tabled almost two weeks after months of back and forth between the auditor general and the government over whether the bottom line should include assets for two jointly-sponsored provincial pension plans.
- October 3, 2016 -- The Globe and Mail and Canadian Press report the government is ‘fighting’ with the Auditor General. Globe notes focuses on the AG’s $1.5-billion discrepancy in last year's deficit and a $10.7-billion difference in Ontario's net debt. CP story (picked up by 40 media outlets) says the Auditor General is taking issue with their pension asset accounting, though it says these are rules that have been used for the past 14 years.

Appendix

Preparation and Tabling:

The Public Accounts for each fiscal year are prepared under the direction of the President of Treasury Board, as required by the *Financial Administration Act*.

The Public Accounts of Ontario consist of the Annual Report and three supplementary volumes. The Annual Report includes the province's audited consolidated financial statements and a financial statement discussion and analysis section. Supplementary information is contained in three volumes:

Volume 1: Ministry statements for expenses, assets, revenue, detailed debt and other supplementary schedules. It provides a comparison of appropriations with actual spending.

Volume 2: Financial statements of significant provincial corporations, boards, commissions that are part of the government's reporting entity, and other miscellaneous statements.

Volume 3: Detailed schedules of payments made by ministries to vendors and transfer payment recipients.

The *Financial Administration Act* requires the President of Treasury Board to submit the province's Annual Report and consolidated financial statements to the Lieutenant Governor in Council (LGIC) on or before 180 days after fiscal year-end. This year, the deadline was September 27, 2017.

The process for release of the Public Accounts is as follows:

- The Public Accounts are approved by the Lieutenant Governor in Council.
- The LGIC lays the Public Accounts before the Assembly, if the Assembly is in session, and the Public Accounts are then released on the same day.
- If the Assembly is not in session on the day of the release of the Public Accounts the LGIC is required to make the Public Accounts public and the Public Accounts are laid before the Assembly on or before the tenth day of the next session.

LOGISTICS & FORMAT OVERVIEW

Overview

- SCOPA meetings are open to the public with the exception of those dealing with the setting of the Committee's agenda and the preparation of committee reports. All public committee proceedings are recorded in Hansard.
- The Chair will advise members to consider questions that are relevant to the content of the Auditor General's Annual Report, but in practice members do sometimes ask questions outside of the report's focus. As a general rule, expect that any question related to the Province's financial statements would be ruled within scope by the committee chair.
- The Committee members may ask that ministries provide details after the session if more research or gathering of information is needed to respond to a question.

Agenda

Wednesday, February 28, 2018
Committee Room 151 (Amethyst Room), Main Legislative Building

Time	*Topic*
9:00 a.m.	Closed Session: Briefing by the Auditor General
10:00 a.m.	Briefing by the Research Officer
10:15 a.m.	RECESS
12:30 p.m.	Treasury Board Secretariat and other representatives • *Invited senior officials appear and respond to questions.* • *The Auditor General attends, and the Committee members can seek clarification from the AG on points from her report if needed during the session.*

12:30 – 3:00 p.m.

- **Opening remarks** (20 minutes)
- **First round of questions** (60 minutes)
  - Each of the three political parties get 20 minutes of questions
- **Second round of questions** (50 minutes, approximately)
  - The remaining time until 2:45 p.m. is split between the three political parties; approximately 15-17 minutes per party

DRAFT

- **Closed session** (15 minutes)
    - Committee members plus the Clerk, only; no audience or presenters
    - The Committee will discuss the outcome of the meeting and if they want to do a report
    - There are no closing statements from ministry officials

Room Setup

- Committee Room 151 (Amethyst Room) is equipped with cameras and the meeting will be available on TVs within the Legislature and streamed online.
- The room has a square table with rows of extra seating at the front the room.
- The Committee Chair, Auditor General and Clerk will sit at the head of the table with the government and opposition parties on opposite sides.
- The invitees sit opposite the Committee Chair and Clerk, either at the table or in the first row of chairs.

Media Access

- Media are allowed to sit in on the meeting as long as they do not interrupt the proceedings. They cannot ask questions in the committee room, but if they wish they can scrum participants in the hallway as they leave.
- Media can also watch SCOPA proceedings on the TVs in the Legislature or online.

STRATEGIC APPROACH

- Provide evidence and facts as the basis of decision-making wherever appropriate (e.g. other jurisdictions, external advisors).
- Provide responses that are relevant and in scope of the consideration of chapter two of the Office of the Auditor General's report
- Avoid any speculation on political decision-making or rationales; provide objective, factual responses in role as non-partisan public servant.
- Provide context wherever possible. Deputy Ministers to provide initial messaging then pass to the subject matter experts where appropriate.
- Emphasize the role of a public servant is to provide factual, non-partisan information to the Committee based on due diligence and the application of professional judgment.
- Reaffirm the government's commitment to working with the Office of the Auditor General.
- Emphasize that the province will continue to follow Public Sector Accounting Standards (PSAS), as always, and will seek appropriate expert guidance where PSAS is silent.
- Use the Committee appearance as an opportunity to communicate the facts and rationale for the decision to adopt/continue accounting practices in response to the Office of the Auditor General's recommendations.
- Highlight due diligence in decision making (Ontario Fair Hydro Plan accounting, pension asset accounting, Independent Electricity System Operator [IESO] market accounts, IESO rate-regulated accounting).

Summary Status Table in Response to the Report of the Auditor General of Ontario

Chapter 2 2017 Annual Report of the Auditor General
Treasury Board Secretariat, Ministry of Finance, Ministry of Energy

Auditor's Recommendation	Completed Undertaking	Outstanding Undertaking (including timeline)
AG Recommendation #1 *We recommend the government record valuation allowances to offset the net pension assets it has recorded from the Ontario Teachers' Pension Plan and the Ontario Public Sector Employees' Union Pension Plan until such time as it obtains formal written authorization from their pension plan co-sponsors that they are able to lower minimum contributions or withdraw surpluses from the pension funds within the next 12 months.*	The Office of the Auditor General communicated its interpretation of Public Sector Accounting Standards (PSAS) requiring a full valuation allowance on the Province's two jointly sponsored pension plans in September 2016. At that time, the government passed a time-limited regulation on the accounting treatment for its joint defined benefit plans to align with the Auditor General's interpretation of PSAS, which enabled officials from Treasury Board Secretariat and the Ministry of Finance to sign the Statement of Responsibility for the 2015-16 Public Accounts. During the 2016-17 year, the professional staff conducted further research and analysis, and determined that PSAS does not require a valuation allowance on either of the jointly sponsored pension plans. This conclusion is supported by: • The conclusions reached by an independent Pension Asset Expert Advisory Panel (the 'Panel'), established by the government to provide advice on the interpretation of PSAS with respect to the reporting of net pension assets of these two joint defined benefit plans. The Panel, comprised of accredited accounting, actuarial and legal professionals with extensive background in pension accounting and plan governance, released its report in February 2017 which supported the government's position that a valuation is not required for these two plans under PSAS. Two key findings of the Panel were: 1) there is no requirement under PSAS that any formal agreement exist between the joint sponsors regarding the timing or amount of a reduction in contributions to record an asset, as the existing agreements in place between the parties support the recognition of an expected benefit, and 2) unilateral control is not	The government will evaluate the need for a valuation allowance annually taking into consideration (a) changes, if any, in the governance structures of the plans, (b), decisions, if any, of the joint sponsors that impact the need for a valuation allowance, and b) changes, if any, in Public Sector Accounting Standards. The government is open to continue to discuss the matter in the hopes of resolving this matter.

DRAFT

	required for asset recognition; joint control with each party having the ability to deny the actions of the other sponsor, provides evidence of shared control, supporting recognition of an asset. • An opinion from Deloitte LLP on aspects of the Province's accounting as at March 31, 2016 for the Ontario Teachers' Pension Plan. The opinion, which was dated October 2, 2016, concluded that it was permissible to recognize a pension asset under Canadian Public Sector Accounting Standards, even though the Province did not have under a unilateral right to reduce contributions. The opinion did not address the value at which the asset should be recorded. • Analysis completed by EY as to whether any valuation allowance is required to be recorded for OTPP or OPSEUPP as of March 31, 2017. EY confirmed no valuation allowance was required for either plan. The government respectfully disagrees with the Auditor General's interpretation of the accounting standards on this issue as PSAS neither requires unilateral control to record an asset, nor does it include a requirement to obtain a letter from the co-sponsor of the plan agreeing to reduce future contributions within 12 months.

Summary Status Table in Response to the
Report of the Auditor General of Ontario
Chapter 2 2017 Annual Report of the Auditor General
Treasury Board Secretariat, Ministry of Finance, Ministry of Energy

AG Recommendation #2 *We recommend that the government remove the Independent Electricity System Operator's Market Accounts from the Province's consolidated financial statements.*	The Province consolidates the entities it controls, in accordance with Public Sector Accounting Standards (PSAS) and its internal reporting policies. Each consolidated entity produces its own stand-alone financial statements and is subject to its own financial statement audit. In 2016, the Independent Electricity System Operator (IESO) changed the accounting for the market accounts and recognized these balances on its financial statements. The financial statements of the IESO for the year-ended December 31, 2016 were subject to an external audit and received an unqualified (or clean) opinion. The government supports this enhanced reporting and greater transparency for the economic activities of the IESO. Additional comments with respect to IESO's accounting for the Market Accounts are included in the response to Recommendation #5 of this report.	The government supports the enhanced reporting and greater transparency for the economic activities of IESO resulting from the recognition of the market accounts. The government is open to continue to discuss the issue in the hopes of resolving this matter.
AG Recommendation #3 *We recommend the government follow the accounting standards established by the Public Sector Accounting Board and the Province's historical accounting precedent, and implement the recommendations in the Special Report issued*	The government prepares its financial statements in accordance with PSAS. The proposed accounting for the Ontario Fair Hydro Plan reflects the economic substance of the transaction by differentiating costs borne by taxpayers versus those borne by ratepayers. PSAS is silent on the recognition, measurement, presentation and disclosure of rate-regulated activities. In absence of a clear position on an issue, standard accounting practice dictates that an entity should consult other accounting standards. This guidance for PSAS is included in PS1150.07. Regarding the Office of the Auditor General's (OAG's) recommendation that the financing for Ontario's Fair Hydro Plan (OFHP) be pursued at the lowest cost to Ontarians, the government reiterates its concerns with this characterization, which were previously provided in the October 4, 2017 government response to the OAG's special report on OFHP (see	The government intends to continue to prepare its financial statements in accordance with Public Sector Accounting Standards (PSAS). The Fair Hydro Trust will raise financing through a combination of 3rd party senior debt and subordinated debt funded by OPG for which the cost will be primarily driven by the credit ratings assigned by Moody's and DBRS. The ultimate cost of this program will be dependent on the quantity of Global Adjustment that will be financed, prevailing market interest rates over the next 30 years, the availability of capital to invest in this type of structured debt and the

DRAFT

by our Office and tabled in the legislature on October 17, 2017, titled The Fair Hydro Plan: Concerns About Fiscal Transparency, Accountability and Value for Money, as follows: • *Record the true financial impact of the Fair Hydro Plan's electricity rate reduction on the Province's budgets and consolidated financial statements; and* • *Use a financing structure to fund the rate reduction that is least costly for Ontarians.*	Government Response to OAG Report on the Fair Hydro Plan in Appendix 5 of the Auditor General's Special Report). With respect to the Global Adjustment Refinancing (GA Refinancing) component of the OFHP, the policy objective is to more fairly allocate the cost to ratepayers over the useful life, not the contractual term, of the electricity generating assets. Therefore, it was a primary policy objective to ensure that the costs are borne by the beneficiaries of the electricity system – the ratepayers – and not the tax-base. The government believes it is appropriate for ratepayers to pay for the financing of electricity assets. The rate-base has a different risk profile than the tax-base, which would be reflected in different interest costs. The various entities that operate in the electricity industry have different financing costs that are specific to their risk profiles. The industry does not operate and is not financed through the Province. Ontario Power Generation (OPG) was identified as the Financial Services Manager responsible for the financing plans and the financing entity (i.e., Fair Hydro Trust) that will manage the debt obligations. OPG has the necessary financing and commercial expertise to assist with refinancing the Global Adjustment (GA) and will ensure that it is done in an efficient and cost-effective manner. OPG has a demonstrated track record in the financial markets with its Corporate Debt platform, private placement of insurance linked bonds, participation in securitization program and highly successful project debt issuances tied to new hydroelectric developments. OPG is beginning the process of raising funds to finance the deferred costs, and while total borrowing costs will not be known until the program is complete, accumulated interest is projected to be less than the estimates in the May 2017 report of the Financial Accountability Office (FAO). The figures referenced in the FAO's report was based on initial Ministry of Energy estimates from March 2017. Subsequent analysis	credit stability of the OFHP program which would be reflected in credit ratings assigned to this debt over time. Each of these factors will need to be managed and monitored closely. The government is open to continue to discuss the issue in the hopes of resolving this matter.

DRAFT

	conducted by the Ministry of Energy refined a number of variables, including the cost of borrowing and the quantity of GA to be refinanced. A number of variables, including interest rates, electricity demand and electricity costs, will change over the thirty-year life of OFHP. Government will continue to revise cost estimates to reflect these variable conditions. In addition, as outlined in the 2017 Long-Term Energy Plan, the government will continue to identify and implement initiatives to take costs out of the electricity system, which would reduce the cost of GA refinancing.	
AG Recommendation #4 *The Office of the Auditor General is the appointed under the Auditor General Act as the auditor for the consolidated financial statements of the Province of Ontario. We recommend that the Treasury Board Secretariat:* • *Proactively supply copies to the Auditor General of all contracts it enters into for accounting advice and opinions in order to ensure that*	Treasury Board Secretariat's use of external expertise for accounting and financial reporting matters supplements its own resources on complex or emerging accounting and reporting matters. External advisors are generally engaged to provide advice and guidance to supplement internal analysis. Treasury Board is committed to working with the Office of the Auditor General to discuss issues, once the professional staff has completed its analysis of the issue. In addition, Treasury Board believes frequent communication with the Office of the Auditor General is important and to that end, requested additional meetings with both the staff and the Auditor General during the 2016-17 audit. Where required by the CPA Ontario Code of Professional Conduct, the Auditor General has been, and will continue to be, advised of external advisor involvement.	Treasury Board Secretariat will continue to take a proactive approach to raising issues with the Office of the Auditor General. Where required by the CPA Ontario Code of Professional Conduct, the Auditor General will continue to be advised of external advisor involvement.

DRAFT

our Office is aware of the work the advisers are performing, can assess significant issues in a timely manner, and can determine the impact on the Province's consolidated financial statements and our annual audit; and • *Build into its contracts with external advisers the requirement that the advisers engaged to provide accounting advice and opinions that affect the consolidated financial statements notify our Office of*		

DRAFT

their engagement as required under the Code of Professional Conduct of the Chartered Professional Accountants of Ontario.		
AG Recommendation #5 *We recommend that the Independent Electricity System Operator (IESO), an "other government organization," use the Canadian Public Sector Accounting Standards (PSAS) in the preparation of its financial statements. Specifically, it should:*	The Independent Electricity System Operator (IESO) prepares its financial statements in accordance with Public Sector Accounting Standards (PSAS) and the financial statements are audited by a firm of independent external auditors whose responsibility is to express an opinion on whether the financial statements are fairly presented in accordance with PSAS. On its 2016 financial statements, IESO received an unqualified (clean) audit opinion. In its role as market administrator, IESO operates and settles approximately $17 billion through the electricity market. The change to include market account assets and liabilities in the financial statements provides increased transparency with respect to the value of transactions that flow through Ontario's electricity market, that otherwise would go	The IESO intends to continue to prepare its financial statements in accordance with Public Sector Accounting Standards, and will report on the results of its accounting firm's audit in its 2017 financial statements, to be published March 30, 2018. The IESO will continue to regularly review its accounting policies to ensure they are best suited to the reporting requirements of its business and the users of its financial statements. This includes providing transparency into the value of transactions that flow through Ontario's $17 billion electricity market and reflecting the economic substance of certain types of expenses that may not be directly recovered through normal revenue requirement

DRAFT

• *Remove market accounts recorded on its financial statements; and* • *Discontinue the inappropriate use of rate-regulated accounting in the preparation of its financial statements.* *To ensure that the members of the Legislative Assembly receive financial information on the operations of the IESO prepared in accordance with Canadian PSAS, the Office of the Auditor General will conduct an attest audit of the December 31, 2017, financial statements of the IESO as permitted under the Electricity Act, Subsection 25.2(2), which*	unreported in IESO's financial statements. These changes were extensively discussed with IESO's external auditors, its Audit Committee and its Board of Directors. The decision was supported by the Office of the Provincial Controller and IESO's external audit firm. Rate-regulated accounting better reflects the economic substance of certain types of IESO expenses (like those related to the Smart Metering Entity) that may not be directly recovered through normal revenue requirement models, and instead are recovered through rate regulation. This change is in line with accounting practices followed by six out of eight other independent system operators in North America and provides IESO financial statement users greater transparency into the substance of the variance accounts it holds and its right to collect an amount in the future.	models, and instead are recovered through rate regulation. The IESO recognizes the Auditor General's statutory role and authority to perform an audit of the IESO. The IESO is cooperating with the Office of the Auditor General to provide information, including the 2017 financial statements prepared by management, and for access to management for assistance in understanding such information. The IESO has likewise instructed its audit partner to cooperate with the Auditor General's audit.

DRAFT

states: "The Auditor General may audit the accounts and transactions of the IESO. 2014, c. 7, Sched. 7, s. 3 (1)."		
AG Recommendation #6 *We recommend the government follow the accounting standards established by the Public Sector Accounting Board, rather than using legislation and regulations to prescribe accounting treatments.*	The Province is committed to provide high-quality financial reports that support transparency and accountability in reporting to the public, the legislature and other users. For the 2015-16 Public Accounts, the government passed a time-limited regulation prescribing the accounting treatment for net pension assets in order to allow Treasury Board Secretariat and Ministry of Finance officials to sign off on Public Accounts consistent with the fiscal impact of the Auditor General's interpretation of Public Sector Accounting Standards (PSAS). This regulation is the only example of where the accounting treatment was legislated, and the legislation did not align with the requirements of PSAS. With respect to the Ontario Fair Hydro Plan Act and its regulations, there are no provisions in that legislation that prescribe the accounting treatment required to be followed by the Province. It is important to distinguish legislating the accounting from legislating the right of the government to recover amounts from specified ratepayers in the future,	The government intends to continue to prepare its financial statements in accordance with Public Sector Accounting Standards.

DRAFT

	which in the absence of the legislation, would have been collected from specified ratepayers as the costs were incurred. The accounting for the transactions resulting from the Fair Hydro Plan will be recorded in accordance with PSAS.	
AG Recommendation #7 *We recommend that in order to address the Province's growing total debt burden, the government work towards the development of a long-term total-debt reduction plan linked to its target of reducing the net debt-to-GDP ratio to its pre-recession level of 27% as measured using proper accounting for net pension assets and the projected costs of the Fair Hydro Plan. The government should also discuss publicly how it plans to pay down the debt.*	The 2017 Budget and the 2017 Fall Economic Statement stated that the government continues to maintain a target of reducing the net debt-to-GDP ratio to its pre-recession level of 27%, currently projected for 2029-30, together with an interim target of 35% by 2023-24. From 2017-18 onwards, the balanced budget environment will limit increases in debt to the difference between annual investments in infrastructure improvements and the amortization of such investments. The government's long-term infrastructure plan to invest about $190 billion over 13 years, starting in 2014-15, will contribute to the growth of the economy. The Centre for Spatial Economics found that for every $1 spent on public infrastructure, GDP increases by $6, on average, in the long term. Therefore, while overall debt will rise to fund these infrastructure investments, measurements of relative debt such as the net debt-to-GDP ratio, a recommended practice by the Public Sector Accounting Board, will gradually diminish due to the Province's GDP increasing at a faster rate than net debt. This will allow the Government to continue to move towards its 27% net debt-to-GDP target. The ratio has already commenced declining, falling to 37.3% in 2017-18 from its 2014-15 peak of 39.3%.	Continue to monitor progress. Estimated implementation by FY 2029-30.

DRAFT

	As discussed more thoroughly in responses to other recommendations in this report, the government prepares its financial statements in accordance with Public Sector Accounting Standards, including the net pension assets for its jointly sponsored pension plans and the transactions resulting from the Ontario Fair Hydro Plan.	
AG Recommendation #8 *We recommend that the Office of the Provincial Controller undertake thorough planning involving all stakeholders, including Treasury Board Secretariat, ministries and provincial government agencies, to identify the barriers and key areas to be addressed to achieve earlier finalization of the Province's consolidated financial statements, including the estimation risks associated with corporations tax and*	Treasury Board Secretariat and the Ministry of Finance are supportive of the timely delivery of the Public Accounts. The Office of the Provincial Controller works closely with the Office of the Auditor General to identify audit issues early and to ensure that stakeholders are engaged in discussions regarding risks and resolution. The Office of the Provincial Controller will continue to collaborate with the Office of the Auditor General to support the timely delivery of the Public Accounts. The Province will work with the Canada Revenue Agency on this recommendation, as reporting Personal and Corporate taxation revenues is highly dependent on information they provide.	Planning discussions for the 2017-18 Public Accounts have begun between the Office of the Provincial Controller and the Office of the Auditor General. As well, the Office of Economic Policy has been engaged in discussions on risk considerations related to economic models used to estimate personal and corporate tax revenues.

DRAFT

personal income tax revenues.		
AG Recommendation #9 *We recommend that the government avoid establishing arm's length trusts in order to record an expense in its consolidated financial statements before it is necessary, given that it loses the ability to ensure that funds are ultimately provided to the appropriate beneficiaries.*	The government works with its transfer payment recipients to ensure it receives good value for the money it provides in the form of grants. Government policy on the structured approach to program delivery takes a risk-based approach with respect to transfer payment oversight. Grants are provided to thousands of organizations annually that the government deals with at arms-length and is able to demonstrate proper oversight. A Trust structure was selected to implement the Affordability Fund in order to provide an effective solution to distributing funds to electricity distributors. With approximately 70 distributors across Ontario, it was not feasible for the Province to enter into agreements with each distributor. The Trust structure establishes an independent entity with expertise from the electricity distributor and community sectors. While the Affordability Fund was established at arm's length to the government, there are report-back requirements on the use of funds transferred as well as the ability for the government to conduct an audit to gain assurance that the funds have been used for the purposes intended.	The government will continue to assess the most appropriate vehicle for meeting its policy objectives, which include appropriate oversight of how transfer payments are spent.

PENSION ASSET ACCOUNTING

AG Recommendation #1: Pension Asset Accounting

Key Messages

- The province continues to move forward and present the province's finances fairly and accurately and in accordance with Canadian Public Sector Accounting Standards (PSAS).
- We respectfully disagree with the Auditor General's interpretation of the accounting standards, as PSAS neither requires unilateral control to record an asset, nor does it include a requirement to obtain a letter from the co-sponsor of the plan agreeing to reduce further contributions within 12 months.
- The province will evaluate the need for a valuation allowance annually taking into consideration (a) changes, if any, in the governance structures of the plans, (b), decisions, if any, of the joint sponsors that impact the need for a valuation allowance, and c) changes, if any, in Public Sector Accounting Standards.
- The province is open to continue to discuss the matter in the hopes of resolving this matter.
- For more information on pension asset accounting, I will now pass it over to:
    - Cindy Veinot, Provincial Controller

1. **How do you respond to the Auditor General's recommendation that the government should record valuation allowances to offset the net pension assets recorded from the Ontario Teacher's Pension Plan and the Ontario Public Sector Employee's Union Pension Plan until you receive formal written authorization from their pension plan co-sponsors?**

   The province continues to move forward and present the province's finances fairly and accurately and in accordance with Canadian Public Sector Accounting Standards (PSAS).

   The Office of the Auditor General communicated its interpretation of PSAS requiring a full valuation allowance on the province's two jointly sponsored pension plans in September 2016.

   At that time, the government passed a time-limited regulation on the accounting treatment of for its joint defined benefit plans to align with the Auditor General's interpretation of PSAS, which enabled officials from the Treasury Board Secretariat and the Ministry of Finance to sign the Statement of Responsibility for the 2015-16 Public Accounts.

   During the 2016-17 year, the province's professional accounting staff conducted further research and analysis, and determined that PSAS does not require a valuation allowance on either of the jointly sponsored pension plans.

DRAFT

This conclusion is supported by:

- The conclusions reached by an independent Pension Asset Expert Advisory Panel, established by the government to provide advice on the interpretation of PSAS with respect to the reporting of net pension assets of these two joint defined benefit plans.

  The panel, comprised of accredited accounting, actuarial and legal professionals with extensive background in pension accounting and plan governance, released its report in February 2017, which supported the government's position that a valuation is not required for these two plans under PSAS.

  Two key findings of the panel were:

  1) There is no requirement under PSAS that any formal agreement exist between the joint sponsors regarding the timing or amount of a reduction in contributions to record and asset, as the existing agreements in place between the parties support the recognition of an expected benefit; and

  2) Unilateral control is not required for asset recognition. Joint control with each party having the ability to deny the actions of the other sponsor provides evidence of shared control, supporting recognition of an asset.

- An opinion from Deloitte LLP on aspects of the province's accounting as of March 31, 2016 for the Ontario Teacher's Pension Plan (OTPP). The opinion, which was dated October 2, 2016, concluded that it was permissible to recognize a pension asset under PSAS, even though the province did not have a unilateral right to reduce contributions. (The opinion did not address the value at which the asset should be recorded.)

- Analysis completed by EY as to whether any valuation allowance is required to be recorded for OTPP or Ontario Public Sector Employee's Union Pension Plan (OPSEUPP) as of March 31, 2017. EY confirmed no valuation allowance was required for either plan.

After significant deliberation, including consideration of the recommendations of the panel, Deloitte LLP and EY, Ontario confirmed that the accounting for these plans prior to 2015-16 was appropriate, and prepared in accordance with PSAS for pension asset accounting. The 2016-17 financial statements include these pension assets, and we continue to apply the accounting treatment of pension

assets that the province has used consistently since 2001. In addition, the 2015-16 financial statements were restated to include these assets.

We respectfully disagree with the Auditor General's interpretation of the accounting standards, as PSAS neither requires unilateral control to record an asset, nor does it include a requirement to obtain a letter from the co-sponsor of the plan agreeing to reduce further contributions within 12 months.

The province will evaluate the need for a valuation allowance annually taking into consideration (a) changes, if any, in the governance structures of the plans, (b), decisions, if any, of the joint sponsors that impact the need for a valuation allowance, and c) changes, if any, in Public Sector Accounting Standards.

The province is open to continue to discuss the matter in the hopes of resolving this matter.

2. Why are you still fighting with the Auditor General over pension accounting?

In preparing last year's Public Accounts, the province's professional accounting staff and the Auditor General's Office engaged in discussions about the appropriate application of Public Sector Accounting Board standards regarding pension accounting for the province's jointly sponsored pension plans.

As a result, the Pension Asset Expert Advisory Panel was established to deliver independent advice and recommendations to the province on the issue. The independent panel members concluded the province's share of the net pension assets of both the Ontario Teachers' Pension Plan and the Ontario Public Service Employees' Union Pension Plan should be recognized in Ontario's financial statements.

After significant deliberation, including consideration of the recommendations of the panel, Ontario confirmed that the accounting for these plans prior to 2015-16 was appropriate. Further, EY provided additional analysis and concluded that no valuation allowance was required for either plan. The 2016-17 financial statements include these pension assets, and the government continues to apply the accounting treatment of pension assets that the province has used consistently since 2001. In addition, the 2015-16 results were restated to include these assets.

The Treasury Board Secretariat will continue to work with the Auditor General to build on the government's track record of responsible fiscal management and high quality financial reporting.

DRAFT

Advisory Panel Compensation

1. **How much did you pay the panel members? Do you think that money was justified?**

   The total cost of the panel was $221,113. This included compensation and travel expenses for the four panelists, as well as procurement. These rates are consistent with the Agencies and Appointments Directive, which specified up to $2,000 per day for appointees with unique and specialized expertise, or urgent issues affecting government priorities and requiring intense time commitments over a short period of time.

   The panel members have expertise in the areas of jointly sponsored pension plan governance, actuarial modelling for pension plans and public sector accounting standards, and provided independent advice on how to move forward with how Public Sector Accounting Board standards should be applied to current and potential future net pension assets.

2. **Why was Patricia O'Malley included in Public Accounts and not the other panel members?**

   Patricia O'Malley was the chair of the independent Pension Asset Expert Advisory Panel (PAEAP), which provided important advice to government on how to account for jointly-sponsored pension plans. She is included in Public Accounts because her compensation for her work on the Panel was above the $50,000 threshold that must be reported in detail in Public Accounts.

   The other members of PAEAP were paid less than the $50,000 minimum threshold in fiscal 2016-17 that requires they be listed in Public Accounts. Their 2016-17 compensation is captured as part of the "Accounts Under $50,000" category.

   As Paul Martin is a member of the New Brunswick Public Service, he did not receive compensation for his role on the panel. He was only eligible for expense reimbursements.

DRAFT

IESO ACCOUNTING

AG Recommendation #2: IESO Market Accounts

Key Messages

- The province consolidates the entities it controls, in accordance with Public Sector Accounting Standards (PSAS) and its internal reporting policies.
- Each consolidated entity produces its own stand-alone financial statements and is subject to its own financial statement audit.
- In 2016, the Independent Electricity System Operator (IESO) changed the accounting for the market accounts and recognized these balances on its financial statements.
- The financial statements of the IESO for the year-ended December 31, 2016 were subject to an external audit and received an unqualified (or clean) opinion.
- The government supports this enhanced reporting and greater transparency for the economic activities of the IESO.
- The province is open to continue to discuss the issue in the hopes of resolving this matter.
- For further details on the province's decision to accept IESO market accounts on the province's consolidated financial statements, I will pass it over to:
    - Cindy Veinot, Provincial Controller
- For further details on the IESO's decision to adopt market accounts, I will pass it over to:
    - Deputy Imbrogno

For QAs related to:	See:
IESO Market Accounts	Ministry of Energy (IESO)

1. **How do you respond to the Auditor General's recommendation that the government remove the Independent Electricity System Operator's (IESO) market accounts from the province's consolidated financial statements?**

   In 2016, the Independent Electricity System Operator (IESO) began recognizing its market accounts' assets (amounts due from power distributors) and liabilities (amounts due to power producers) in its financial results. IESO has chosen to recognize these markets accounts on its books for transparency reasons, as it better reflects the financial position of the IESO-administered markets at year-end. This change was supported by the IESO's audit committee, its independent external auditor, and by the Office of the Provincial Controller. This change also has no impact to the province's annual deficit, net debt or accumulated deficit.

   The financial statements of the IESO for the year-ended December 31, 2016 were subject to an external audit and received an unqualified (or clean) opinion.

DRAFT

This accounting is consistent with the presentation used previously by the Ontario Power Authority (which was merged with the IESO on January 1, 2015) in its financial statements, which was not subject to qualification from the Office of the Auditor General at that time.

AG Recommendation #5: IESO Market Accounts & Rate-Regulated Accounting

Key Messages

- The Independent Electricity System Operator (IESO) intends to continue to prepare its financial statements in accordance with Public Sector Accounting Standards (PSAS), and will report on the results of its accounting firm's audit in its 2017 financial statements, to be published March 30, 2018.
- The IESO will continue to regularly review its accounting policies to ensure they are best suited to the reporting requirements of its business and the users of its financial statements.
- The IESO recognizes the Auditor General's statutory role and authority to perform an audit of the IESO.
- As I understand, the IESO is cooperating with the Office of the Auditor General to provide information, including the 2017 financial statements prepared by management, and for access to management for assistance in understanding such information.
- As I understand, the IESO has also instructed its audit partner to cooperate with the Auditor General's Audit.
- For further details on the province's decision to accept IESO market accounts and rate-regulated accountingI will pass it over to:
    - Cindy Veinot, Provincial Controller
- For further details on the IESO, I will pass it over to:
    - Deputy Imbrogno

For QAs related to:	See:
IESO Market Accounts & Rate-Regulated Accounting	Ministry of Energy (IESO)

3. Does the Independent Electricity System Operator (IESO) use Canadian Public Sector Accounting Standards (PSAS) in the preparation of its financial statements?

Yes. The Independent Electricity System Operator (IESO) prepares its financial statements in accordance with Canadian Public Sector Accounting Standards (PSAS).

DRAFT

The IESO's financial statements are audited by a firm of independent external auditors whose responsibility is to express an opinion on whether the financial statements are fairly presented in accordance with PSAS. The IESO received an unqualified, or clean, audit opinion on its 2016 financial statements.

4. Why is the IESO now including market accounts on its financial statements? Does this go against PSAS?

The Independent Electricity System Operator (IESO) prepares its financial statements in accordance with Public Sector Accounting Standards (PSAS) and the financial statements are audited by a firm of independent external auditors whose responsibility is to express an opinion on whether the financial statements are fairly presented in accordance with PSAS.

In 2016, the Independent Electricity System Operator (IESO) began recognizing its market accounts' assets (amounts due from power distributors) and liabilities (amounts due to power producers) in its financial results. IESO has chosen to recognize these markets accounts on its books for transparency reasons, as it better reflects the financial position of the IESO-administered markets at year-end. On its 2016 financial statements, IESO received an unqualified (clean) audit opinion.

This accounting is consistent with the presentation used previously by the Ontario Power Authority (which was merged with the IESO on January 1, 2015) in its financial statements, which was not subject to qualification from the Office of the Auditor General at that time.

5. The Auditor General says that the IESO's use of rate-regulated accounting is inappropriate. Why has the government allowed the IESO to adopt this accounting method that she says is not in accordance with PSAS?

Canadian Public Sector Accounting Standards (PSAS) are silent on this issue – they neither explicitly permit, nor prohibit, the recognition, measurement, presentation, or disclosure of rate-regulated activities.

In the absence of a clear position on an issue, standard accounting practice dictates that an entity should consult other accounting standards. This guidance for PSAS is included in PS1150.07:

- *No rule of general application can be phrased to suit all circumstances or combinations of circumstances that may arise. As a result, matters may arise that are not specifically addressed in the primary sources of GAAP. It is necessary to refer to other sources when the primary sources do not deal with the accounting and reporting in financial statements of*

transactions or events that a public sector reporting entity encounters, or when additional guidance is needed to apply a primary source to specific circumstances. (Section PS 1150.07 from the PSA Handbook)

In this case, the Independent Electricity System Operator (IESO) consulted U.S. Generally Accepted Accounting Principles (GAAP), the appropriate accounting framework in North America that provides guidance on rate-regulated operations.

The IESO made the decision to adopt rate-regulated accounting because it better reflects the economic substance of certain types of expenses that may not be directly recovered through the normal revenue requirement model.

The IESO management, IESO's Audit Committee, IESO's Board of Directors, IESO's external auditor and the Office of the Provincial Controller all support the use of rate-regulated accounting by IESO.

Many entities in Canada, including Ontario Power Generation (OPG) and Hydro One use rate-regulated accounting. Rate-regulated accounting is well understood in the electricity sector, and the approach selected was taken in that context. The recognition of regulatory assets brings IESO in line with six other independent system operators in North America, including the:

- Alberta Electric System Operator (AESO)
- ISO New England
- New York Independent System Operator (NYISO)
- Midcontinent Independent System Operator (MISO)
- PJM Interconnection LLC and,
- Electric Reliability Council of Texas (ERCOT).

6. Are you concerned that the Auditor General will issue an adverse opinion on the province's next Public Accounts due to Ontario's Fair Hydro Plan accounting? What would be the impact on the province's credit rating?

It would be inappropriate to speculate about how the Auditor General may issue an opinion for Public Accounts next year. The implementation of Ontario's Fair Hydro Plan (OFHP) is ongoing, with significant decisions with accounting and financial implications still being finalized.

The Ministries of Energy and Finance, and the Treasury Board Secretariat continue to work closely with Ontario Power Generation (OPG), the Independent Electricity System Operator (IESO), as well as third-party experts to ensure appropriate due diligence is completed.

DRAFT

The province's financial statements are prepared in accordance with Canadian PSAS and will follow PSAS in accounting for the transactions resulting from OFHP in 2017-18, and in following years.

The financing plan for OFHP and its impact will be transparent. Credit rating agencies, securities regulators, and the public will see full information and full reporting of the impacts of OFHP.

Ontario has a strong track record of producing high-quality financial reports on a timely basis. Ontario will continue to move forward and present the province's finances fairly and accurately and in accordance with PSAS.

AG Audit of 2017 Statements

Key Messages

- The IESO will continue to regularly review its accounting policies to ensure they are best suited to the reporting requirements of its business and the users of its financial statements.
- The IESO recognizes the Auditor General's statutory role and authority to perform an audit of the IESO.
- As I understand, the IESO is cooperating with the Office of the Auditor General to provide information, including the 2017 financial statements prepared by management, and for access to management for assistance in understanding such information.
- As I understand, the IESO has also instructed its audit partner to cooperate with the Auditor General's Audit.

For QAs related to:	See:
Audit of IESO's statements	Ministry of Energy (IESO)

DRAFT

ONTARIO FAIR HYDRO PLAN

AG Recommendation #3: OFHP Accounting

Key Messages

- The province will continue to prepare its consolidated financial statements in accordance with Public Sector Accounting Standards (PSAS).
- The proposed accounting for the Ontario Fair Hydro Plan (OFHP) reflects the economic substance of the transaction by differentiating costs borne by taxpayers versus those borne by ratepayers.
- PSAS is silent on a key accounting issue regarding the OFHP – the standards neither explicitly permit, nor prohibit, the recognition, measurement, presentation, or disclosure of rate-regulated activities.
- In the absence of a clear position on an issue, standard accounting practice dictates that an entity should consult other accounting standards. This guidance for PSAS is included in the Public Sector Accounting Board's guidebook.
- The province's professional staff have appropriately applied this guidance in assessing the accounting for the OFHP.
- For further details on the province's decision to accept OFHP accounting, I will pass it over to:
    - Cindy Veinot, Provincial Controller
- For further details on the OFHP, I will pass it over to:
    - Deputy Imbrogno

For QAs related to:	See:
OFHP Overall, incl. IESO and OPG role	Ministry of Energy

7. Will the government follow Public Sector Accounting Standards (PSAS) for Ontario's Fair Hydro Plan?

The province will prepare its consolidated financial statements in accordance with Public Sector Accounting Standards (PSAS).

The proposed accounting for the Ontario Fair Hydro Plan (OFHP) reflects the economic substance of the transaction by differentiating costs borne by taxpayers versus those borne by ratepayers.

PSAS is silent on a key accounting issue regarding the OFHP – the standards neither explicitly permit, nor prohibit, the recognition, measurement, presentation, or disclosure of rate-regulated activities.

In the absence of a clear position on an issue, standard accounting practice dictates that an entity should consult other accounting standards. This guidance for PSAS is included in PS1150.07:

DRAFT

- *No rule of general application can be phrased to suit all circumstances or combinations of circumstances that may arise. As a result, matters may arise that are not specifically addressed in the primary sources of GAAP. It is necessary to refer to other sources when the primary sources do not deal with the accounting and reporting in financial statements of transactions or events that a public sector reporting entity encounters, or when additional guidance is needed to apply a primary source to specific circumstances. (Section PS 1150.07 from the PSA Handbook)*

The province's professional staff has appropriately applied this guidance in assessing the accounting for the Ontario Fair Hydro Plan.

8. Will the government follow the accounting standards set by historical precedent, as cited by the Auditor General?

The Auditor General's report makes a comparison between Ontario's Fair Hydro Plan (OFHP) and the Ontario Electricity Financial Corporation (OEFC) stranded debt. There are, however, crucial differences between the two.

For example, the OEFC stranded debt had already been incurred when the 1999 restructuring of the former Ontario Hydro took place.

In the case of OFHP, the difference between what will be collected and what will be paid to generators is considered to be an asset in accordance with the accounting definition, as it will generate a specific future revenue stream in the form of the Clean Energy Adjustment, which can be held and realized or can be sold.

It is important to note that the 1999 restructuring led to an "unbundling" of the electricity rate. Prior to the 1999 restructuring and the 2002 market opening, there was a "bundled rate" for electricity that included cost recovery of generation and transmission costs, operating and capital – including debt costs, as well as central market operations costs. Including debt cost recovery and matching the timing of the capital cost recovery with the benefit to the ratepayer is a normal rate-setting regulatory practice. It effectively amortized the cost of the investments in long-lived assets (including debt incurred).

The Debt Retirement Charge (DRC) represented the unbundling of a portion of the debt service costs. It effectively amortized the cost of the investments in long-lived assets (including debt incurred).

The OFHP Global Adjustment deferral is also intended to have costs recovered from specified ratepayers over a time period that better reflects the expected

lives of those assets (versus the contract lengths that may be shorter than the expected useful life of the assets).

The difference between the 1999 restructuring and OFHP is that the DRC continued to pay down, over time, debt that had already been incurred, while under OFHP, an asset is being recorded to reflect a fair allocation of electricity costs between current and future ratepayers.

The intention of OFHP is to be forward-looking, to ensure that ratepayers are sharing current and future costs, whereas the DRC was backward-looking, replacing part of a bundled rate that was already spreading the cost recovery of the debt over time.

9. Will the government implement the recommendations in the Auditor General's Special Report on the Fair Hydro Plan?

While the government does not agree with the assertions and conclusions expressed in the report, the government thanks the Office of the Auditor General for its report.

In developing Ontario's Fair Hydro Plan (OFHP), the government considered a range of implementation options and consulted with legal, accounting, financial and energy sector third-party experts to provide advice and ensure due diligence was completed.

OFHP operates under a financial and accounting framework that is appropriate for the intended purpose. It is in accordance with Public Sector Accounting Standards (PSAS) and ensures the goals underlying the program are achieved in a cost-effective manner.

On the point of "true financial impact":

In order to meet the needs of users, including the legislature and the public, for accountability in government reporting and decision making, it is essential that public sector financial statements reflect the economic substance of the government's activities.

The province's financial statements are prepared in accordance with Canadian PSAS and will follow PSAS in accounting for the transactions resulting from OFHP in 2017-18, and in following years.

As PSAS is set by an independent standard-setting body in Canada focused specifically on the public sector, and because PSAS is used by all senior

DRAFT

governments in Canada, presenting financial statements in accordance with PSAS results in transparent financial reporting for the province of Ontario.

Ontario has a strong track record of producing high-quality financial reports on a timely basis, and will continue to move forward and present the province's finances fairly, accurately and in accordance with PSAS.

On the point of "a financing structure that is the least costly for Ontarians":

The OFHP financing structure has been designed to provide electricity rate relief to current ratepayers, including by more fairly allocating costs for specified consumers, with the Global Adjustment cost amounts still ultimately borne by specified electricity ratepayers, as beneficiaries of those electricity system costs.

The government believes it is appropriate for ratepayers to pay for the financing of electricity assets. Having the rate-base pay is not a new policy, for example Hydro One has borrowed in the capital markets since 2000.

Ontario Power Generation (OPG) was identified as the Financial Services Manager responsible for the financing plans and the financing entity (the Fair Hydro Plan Trust) that will manage the debt obligations. OPG is beginning the process of raising funds to finance the deferred costs, and while total borrowing costs will not be known until the program is complete, accumulated interest is projected to be considerably less than the estimates in the May 2017 report of the Financial Accountability Office (FAO).

The cost analysis in the Office of the Auditor General's report was sourced from the FAO's May 2017 report. Total borrowing estimates over the thirty year life of OFHP have been revised down substantially by the government since the FAO released its report in May 2017, and borrowing costs are now forecast to be substantially lower than original estimates. Recent government estimates forecast that the peak debt over the thirty year life of OFHP will be below $20 billion. The preliminary estimate from March 2017 was about $28 billion.

The province will continue to prepare its consolidated financial statements in accordance with PSAS and continue to build on a track record of responsible fiscal management.

10. The Auditor General says that she has consulted with all of the Auditor Generals in Canada – and they agree with her assessments. How are we supposed to believe this government when all legislative auditors in the country say you are wrong?

DRAFT

In developing Ontario's Fair Hydro Plan, the government considered a range of implementation options and consulted with legal, accounting, financial and energy sector third-party experts to provide advice and ensure due diligence was completed.

PSAS is principle based – the standards are not a set of specific prescriptive rules. Applying them requires the application of professional judgment.

Our professional staff exercises judgment in applying the standards and as necessary consult with external experts and advisors. They provide the Office of the Auditor General with their written analysis on all significant issues that impact the financial statements for the year being audited, and they discuss the issues with the Office of the Auditor General.

All Chartered Professional Accountants (CPAs), including those employed by the Ontario Public Service (OPS), are required to comply with the Code of Professional Conduct for CPAs. One of those rules is that they not be associated with false or misleading information.

That means that if the professional accountants in the OPS do not agree with the judgment of the Ontario Auditor General, it is not as simple as just agreeing to accept the interpretation of the Office of the Auditor General if they believe that interpretation would result in false or misleading financial statements. While we expect professional accountants to agree on the vast majority of issues, we acknowledge that they may not agree on everything and when that occurs, and the difference is material to the financial statements, the Office of the Auditor General can choose to issue a qualified audit opinion.

11. Both the Auditor General and the Financial Accountability Officer have raised serious concerns about the accounting treatment of the electricity cost refinancing initiative. Why should Ontarians believe this government over two independent officers of the Legislature?

The province has the utmost respect for all independent officers of the legislature, and values the important perspective they bring.

In developing the Ontario Fair Hydro Plan, the government considered a range of implementation options and consulted with legal, accounting, financial and energy sector third-party experts to provide advice and ensure due diligence was completed.

OFHP operates under a financial and accounting framework that is appropriate for the intended purpose. It is in accordance with Public Sector Accounting

DRAFT

Standards (PSAS) and ensures the goals underlying the program are achieved in a cost-effective manner.

The province, as always, will prepare its consolidated financial statements in accordance with PSAS and continue to build on its track record of responsible fiscal management.

12. The Auditor General says that you are "obfuscating" the true financial impact of Ontario's Fair Hydro Plan through a "needlessly complex" accounting structure. How do you respond?

In developing Ontario's Fair Hydro Plan (OFHP), the government considered a range of implementation options and consulted with legal, accounting, financial and energy sector third-party experts to provide advice and ensure due diligence was completed.

OFHP operates under a financial and accounting framework that is appropriate for the intended purpose. It is in accordance with Public Sector Accounting Standards (PSAS) and ensures the goals underlying the program are achieved in a cost-effective manner.

OFHP is comprised of a series of policy decisions. The impact of some of these decisions will be borne by the province (taxpayers) where appropriate, such as sales tax relief and shifting social programs to the tax base; some will be borne by ratepayers, such as spreading the investment costs and benefits across ratepayers more fairly.

While the implementation of OFHP is ongoing, with significant decisions with accounting and financial implications still being finalized, the financing plan for OFHP and its impact will be transparent. Credit rating agencies, securities regulators, and the public will see full information and full reporting of the impacts of OFHP.

Ontario has a strong track record of producing high-quality financial reports on a timely basis. Ontario will continue to move forward and present the province's finances fairly and accurately and in accordance with PSAS.

13. How can you justify the $4 billion in additional interest expenses that will be borne by ratepayers because of the way the government has structured electricity cost refinancing (i.e. using Ontario Power Generation to finance 55 per cent, at a higher interest rate than the province, instead of the province financing the entire electricity cost financing)?

DRAFT

Ontario's Fair Hydro Plan (OFHP) is comprised of a series of policy decisions. The impact of some of these decisions will be borne by the province (taxpayers) where appropriate, such as sales tax relief and shifting social programs to the tax base; some will be borne by ratepayers, such as spreading the investment costs and benefits across ratepayers more fairly.

The accounting will reflect the economic substance of the transactions in accordance with Public Sector Accounting Standards (PSAS) and will differentiate those costs of OFHP borne by taxpayers versus those borne by ratepayers.

The Auditor General's report suggests that all the costs of OFHP should be reflected as if they will be borne by taxpayers, which is inaccurate.

Ontario Power Generation (OPG) is beginning the process of raising funds to finance the deferred costs, and while total borrowing costs will not be known until the program is complete, accumulated interest is projected to be considerably less than the estimates in the May 2017 report of the Financial Accountability Officer (FAO).

Total borrowing estimates over the thirty year life of OFHP have been revised down substantially by the government since the FAO released its report in May 2017, and borrowing costs are now forecast to be substantially lower than original estimates. Current government estimates forecast that the peak debt over the thirty year life of OFHP will be below $20 billion. The preliminary estimate from March 2017 was about $28 billion.

For further questions about borrowing estimates, please contact the Ministry of Finance.

14. The AG claims that when the government first gave Ontarians an 8 per cent break on their bills, it was reported on the books properly. She says when it jumped to 25 per cent, the accounting changed. Isn't it obvious that the government is cooking the books to suit their needs?

Ontario's Fair Hydro Plan (OFHP) is comprised of a series of policy decisions.

It is our role as public servants to provide our best advice and due diligence.

As always, the province adheres to Canadian Public Sector Accounting Standards (PSAS) issued by the Public Sector Accounting Board.

The province will continue to follow these standards for the transactions resulting from Ontario's Fair Hydro Plan (OFHP) in 2017-18 and in future years.

It's important to note that while PSAS is the primary source of guidance for the government in the preparation of its financial statements, there are circumstances where governments may refer to other accounting frameworks for guidance where PSAS is silent and does not address specific transactions.

In this case where PSAS is silent on the use of rate-regulated accounting, US accounting standards contain the most developed and appropriate guidance for this transaction.

15. The Auditor General says that even your own government officials flagged the unnecessarily high costs of Ontario's Fair Hydro Plan – and yet you chose to proceed. How can you justify this?

In developing Ontario's Fair Hydro Plan (OFHP), the government considered a range of implementation options and consulted with legal, accounting, financial and energy sector third-party experts to provide advice and ensure due diligence was completed.

Multiple options were considered in creating the OFHP framework – such as to have local distribution centres finance the difference between the amounts paid to the generators and the amounts collected from the ratepayers. This was rejected because of the inability of some local distribution centres to finance the balances.

The implementation of OFHP is ongoing, with significant decisions with accounting and financial implications still being finalized.

Ultimately, OFHP operates under a financial and accounting framework that is appropriate for the intended purpose. It is in accordance with Public Sector Accounting Standards (PSAS) and ensures the goals underlying the program are achieved in a cost-effective manner.

AG Recommendation #6: "Legislated Accounting"

Key Messages

- The province is committed to providing high-quality financial reports that support transparency and accountability in reporting to the public, the legislature, and other users.
- As always, we will prepare the province's consolidated financial statements in accordance with Public Sector Accounting Standards (PSAS), including the transactions resulting from Ontario's Fair Hydro Plan (OFHP).
- For the 2015-16 Public Accounts, the government passed a time-limited regulation prescribing the accounting treatment for net pension assets in order to

DRAFT

allow the Treasury Board Secretariat and the Ministry of Finance officials to sign off on Public Accounts consistent with the fiscal impact of the Auditor General's interpretation of PSAS.

- This regulation is the **only** example of where the accounting treatment was legislated, and the legislation did not align with the requirements with PSAS.
- The *Ontario Fair Hydro Plan Act, 2017* and its related regulations **do not** create accounting rules or legislate the accounting.
- For further details, I will pass it over to:
    - Cindy Veinot, Provincial Controller
- For further details on the OFHP, I will pass it over to:
    - Deputy Imbrogno

For QAs related to:	See:
OFHP Overall, incl. IESO and OPG role	Ministry of Energy

1. **Why has the government legislated accounting for things like Ontario's Fair Hydro Plan? Aren't you just changing the rules to suit your needs?**

   The province is committed to providing high-quality financial reports that support transparency and accountability in reporting to the public, the legislature, and other users.

   For the 2015-16 Public Accounts, the government passed a time-limited regulation prescribing the accounting treatment for net pension assets in order to allow the Treasury Board Secretariat and the Ministry of Finance officials to sign off on Public Accounts consistent with the fiscal impact of the Auditor General's interpretation of Public Sector Accounting Standards (PSAS). This regulation is the **only** example of where the accounting treatment was legislated, and the legislation did not align with the requirements with PSAS.

   The *Ontario Fair Hydro Plan Act, 2017* and its related regulations **do not** create accounting rules or legislate the accounting. It is important to distinguish legislating the accounting from legislating the right of the government to recover amounts from specified ratepayers in the future, which in the absence of legislation, would have been collected from specified ratepayers as the costs were incurred.

   The province, as always, will prepare its consolidated financial statements in accordance with PSAS, including the transactions resulting from Ontario's Fair Hydro Plan.

2. **The Auditor General said that a similar move to legislate accounting to defer costs was proposed with the restructuring of the Ontario electricity**

DRAFT

sector in the late 1990s, but the Auditor General's opinion at that time was that this would represent a departure from a central tenet of generally accepted accounting principles. The government at that time heard these concerns, and made the decision to not create an asset for future anticipated ratepayer payments. Why does the government think this is ok now?

The Auditor General's report makes a comparison between Ontario's Fair Hydro Plan (OFHP) and the Ontario Electricity Financial Corporation (OEFC) stranded debt. There are, however, crucial differences between the two.

For example, the OEFC stranded debt had already been incurred when the restructuring took place.

In the case of OFHP, the difference between what will be collected and what will be paid to generators is considered to be an asset in accordance with the accounting definition, as it will generate a specific future revenue stream in the form of the Clean Energy Adjustment.

It is important to note that the 1999 restructuring led to an "unbundling" of the electricity rate. Prior to the 1999 restructuring and the 2002 market opening, there was a "bundled rate" for electricity that included cost recovery of generation and transmission costs, operating and capital – including debt costs, as well as central market operations costs. Including debt cost recovery and matching the timing of the capital cost recovery with the benefit to the ratepayer is a normal rate-setting regulatory practice.

The Debt Retirement Charge (DRC) represented the unbundling of a portion of the debt service costs. It effectively amortized the cost of the investments in long-lived assets (including debt incurred).

The OFHP Global Adjustment deferral is also intended to have costs recovered from specified ratepayers over a time period that better reflects the expected lives of those assets (versus the contract lengths that may be shorter than the expected useful life of the assets).

The difference between the 1999 restructuring and OFHP is that the DRC continued to pay down, over time, debt that had already been incurred, while under OFHP, an asset is being recorded to reflect a fair allocation of electricity costs between current and future ratepayers.

The intention of OFHP is to be forward-looking, to ensure that ratepayers are sharing current and future costs, whereas the DRC was backward-looking, replacing part of a bundled rate that was already spreading the cost recovery of the debt over time.

DRAFT

AG Recommendation #9: Arm's Length Trusts

Key Messages

- The province works with its transfer payment recipients to ensure it receives good value for the money it provides in the form of grants.
- Government policy on the structured approach to program delivery takes a risk-based approach with respect to transfer payment oversight.
- The province will continue to assess the most appropriate vehicle for meeting its policy objectives, which include appropriate oversight of how transfer payments are spent.
- For more information on arm's length trusts, I will pass it to:
    - Cindy Veinot, Provincial Controller
    - Deputy Imbrogno

For QAs related to:	See:
OPG Accounting/Trust	Ministry of Energy

1. **Will the government avoid establishing arm's length trusts in order to record an expense in its financial statements before it is necessary, given that it loses the ability to ensure funds are provided to the appropriate beneficiaries?**

   The province works with its transfer payment recipients to ensure it receives good value for the money it provides in the form of grants.

   Government policy on the structured approach to program delivery takes a risk-based approach with respect to transfer payment oversight. Grants are provided to thousands of organizations annually that the government deals with at arm's length and is able to demonstrate proper oversight.

   A trust structure was selected to implement the Affordability Fund in order to provide an effective solution to distributing funds to electricity distributors. With approximately 70 distributors across Ontario, it was not feasible for the province to enter into agreements with each distributor.

   The trust structure establishes an independent entity with expertise from the electricity distributor and community sectors.

   While the Affordability Fund was established at arm's length to the government, there are report-back requirements on the use of funds transferred, as well as the

DRAFT

ability for the government to conduct an audit to gain assurance that the funds have been used for the purposes intended.

Records Disclosure/Process

Key Messages

- The province is committed to assisting the Office of the Auditor General so that it can provide its independent views to the Legislative Assembly.
- Senior ministry officials have met and continue to work with the Office of the Auditor General by participating in interviews and providing documentation.

For QAs related to:	See:
MOE Records Disclosure	Ministry of Energy

1. **The Auditor General alleges the government withheld information from her on the accounting treatment for Ontario's Fair Hydro Plan. Why would she say that?**

   The province is committed to assisting the Office of the Auditor General so that it can provide its independent views to the Legislative Assembly.

   The implementation of Ontario's Fair Hydro Plan is ongoing, with significant accounting and financial decisions still being finalized.

   Treasury Board Secretariat has released all requested records.

   Senior ministry officials have met with the Office of the Auditor General by participating in interviews and providing documentation.

   If asked about the Ministry of Energy emails:

   The Ministry of Energy, Finance, and the Treasury Board Secretariat are committed to assisting the Auditor General.

2. **In an email, a TBS official said [___], disagreeing with the government's policy decision. How do you respond?**

   As public servants, it is our role to provide our best advice and conduct our due diligence to inform decision-making. Part of this process includes questioning and deliberations.

DRAFT

The record you are referring to is part of that discussion process, where we as public servants engage in deliberations and explore the options to get to the point of providing our best advice.

It is important to keep in mind that an individual email represents a point in time of the discussion.
That statement is not necessarily representative of the final advice put forward and an endorsement of what the public service has identified as the best approach.

The records must be considered in the context of discussion and deliberation, as an exercise in due diligence, and not as a final endorsement of an option or approach.

3. When does TBS not provide information through a Freedom of Information request?

Since 2015, TBS has been 100 per cent compliant for all Freedom of Information requests it has received.

In some cases, records may contain information that will be withheld in accordance with the legislation, such as personal information about individuals, confidential business information, advice to government or information that is subject to solicitor client-privilege.

Re-Design of Hydro Bills

For QAs related to:	See:
Hydro Bills	Ministry of Energy

DRAFT

PRE-ELECTION REPORT

AG Recommendation #10: Pre-Election Report on Ontario's Finances

Key Messages

- The province takes the Auditor's recommendations seriously and remains committed to working constructively with the Auditor General.
- The government has not yet made a decision on whether and when to release a Pre-Election report.
- We are engaging with all officers of the legislature to keep them informed and engage constructively on considerations and approaches to ensure the people of Ontario are provided with an independent review of the province's fiscal position in advance of the election.

For QAs related to:	See:
Pre-Election Report	Ministry of Finance (Joint lead with Treasury Board Secretariat)

1. **Will the government issue a regulation confirming the source of reference for the Pre-Election Report and the timeline for issuance of the report that will be subject to the Auditor General's review?**

   Under the *Fiscal Transparency and Accountability Act, 2004*, the government may file a regulation that would require it to release a Pre-Election Report on Ontario's Finances. Should the government file such a regulation, the Auditor General would be required to issue a statement based on a prompt review following the release of such a Pre-Election Report.

   The province remains committed to meeting the legislative requirements of the Act, and working constructively with the Auditor General.

2. **Is the government required to issue a pre-Election Report?**

   Provisions in the Fiscal Transparency & Accountability Act, 2004 (FTAA) allow for – but do not require – a regulation to be filed requiring the release of a Pre-Election Report and a review of that report by the Auditor General.

3. **The Auditor General signalled her readiness to work with the government to examine the pre-election report, why has the government waited this long to engage with the Auditor?**

   The province takes the Auditor's recommendations seriously. The government has not yet made a decision on whether and when to release a Pre-Election

DRAFT

report. We are engaging with all officers of the legislature to keep them informed and engage constructively on considerations and approaches to ensure the people of Ontario are provided with an independent review of the Province's fiscal position in advance of the election.

4. **Minister Sousa recently signalled that the government is not planning on issuing a Pre-Election Report. How do you feel about the government continuing to circumvent the Auditor General and avoiding accountability?**

The province takes the Auditor's recommendations seriously. As I understand, the government has not yet made a decision on whether and when to release a Pre-Election report. We are engaging with all officers of the legislature to keep them informed and engage constructively on considerations and approaches to ensure the people of Ontario are provided with an independent review of the province's fiscal position in advance of the election.

DRAFT

PROVINCE'S FISCAL SITUATION

Recommendation #7: Province's Debt Burden

For QAs related to:	See:
Ontario's Debt Burden	Ministry of Finance

1. **How can your debt reduction plan be trusted if you're not using proper accounting for pension assets and the Fair Hydro Plan?**

   The province is committed to providing high-quality financial reports that support transparency and accountability in reporting to the public, the legislature, and other users.

   The province's financial statements are prepared in accordance with Canadian Public Sector Accounting Standards (PSAS), including the net pension assets for its jointly sponsored pension plans and the transactions resulting from the Ontario Fair Hydro Plan.

   PSAS is set by an independent standard-setting body in Canada focused specifically on the public sector, and is used by all senior governments in Canada.

   PSAS is principle based – the standards are not a set of specific prescriptive rules. Applying them requires the application of professional judgment.

   Our professional staff exercises judgment in applying the standards and as necessary consults with external experts and advisors. They provide the Office of the Auditor General with their written analysis on all significant issues that impact the financial statements for the year being audited, and they discuss the issues with the Office of the Auditor General.

   All Chartered Professional Accountants (CPAs), including those employed by the Ontario Public Service (OPS), are required to comply with the Code of Professional Conduct for CPAs. One of those rules is that they not be associated with false or misleading information.

   That means that if the professional accountants in the OPS do not agree with the judgment of the Ontario Auditor General, it is not as simple as just agreeing to accept the interpretation of the Office of the Auditor General if they believe that interpretation would result in false or misleading financial statements. While we expect professional accountants to agree on the vast majority of issues, we acknowledge that they may not agree on everything and when that occurs, and the difference is material to the financial statements, the Office of the Auditor General can choose to issue a qualified audit opinion.

DRAFT

Financial Accountability Office Reports

For QAs related to:	See:
FAO Reports	Ministry of Finance

Credit Ratings

For QAs related to:	See:
Credit Ratings	Ministry of Finance

1. **Does a qualified opinion from the Auditor General impact the province's credit rating?**

   The province's financial results show that the government has beaten its annual deficit targets. In April 2017, Ontario delivered its first balanced budget since the global recession and is on track to do so again next year and the year after.

   The rating agencies will assess whether the underlying factors that lead to a qualified opinion directly affect the creditworthiness of the province. However, there were no credit rating implications in 2016 when the province received a qualified audit opinion on its 2015-16 Public Accounts. Qualified opinions by the Auditor Generals of British Columbia and Quebec have been made in their respective provinces in the past, with no negative impacts on their province's credit ratings.

DRAFT

PREPARATION OF PUBLIC ACCOUNTS

AG Recommendation # 4: External Advisors

Key Messages

- The Treasury Board Secretariat (TBS) will continue to take a proactive approach to raising issues with the Office of the Auditor General.
- The province's use of external expertise for accounting and financial reporting matters supplements its own resources on complex or emerging accounting and reporting matters.
- External advisors are generally engaged to provide advice and guidance to supplement internal analysis, and in the normal course of business.
- When required by the Chartered Professional Accountants Ontario Code of Professional Conduct, the Office of the Auditor General has been, and will continue to be, advised of external advisor involvement.

For QAs related to:	See:
Ministry use of external advisors	Ministry of Energy Ministry of Finance

1. **Will the government provide copies of contracts it enters into for accounting advice to the Auditor General?**

   The province's use of external expertise for accounting and financial reporting matters supplements its own resources on complex or emerging accounting and reporting matters.

   External advisors are generally engaged to provide advice and guidance to supplement internal analysis, and in the normal course of business.

   The province is committed to working with the Office of the Auditor General to discuss issues, once the professional staff has completed its analysis of the issue.

   When required by the Chartered Professional Accountants Ontario Code of Professional Conduct, the Office of the Auditor General has been, and will continue to be, advised of external advisor involvement.

2. **Will the government build into its contracts with external advisors a requirement to notify the Auditor General of their engagement?**

   When required by the Chartered Professional Accountants Ontario Code of Professional Conduct, the Office of the Auditor General has been, and will continue to be, advised of external advisor involvement.

DRAFT

3. **Why does the government use external advisors/consultants? It seems convenient that whenever you disagree with the Auditor General, you turn to consultants to justify your accounting methods.**

   The government has a strong track record of producing high-quality financial reports on a timely basis and continues to present the province's finances fairly and accurately and in accordance with Canadian Public Sector Accounting Standards.

   The government's use of external expertise for accounting and financial reporting matters is a normal course of business and supplements its own resources on complex or emerging accounting and reporting matters.

   External advisors are generally engaged to provide advice and guidance to supplement internal analysis.

4. **It seems like you use consultants to circumvent the Auditor General, when it looks like she may disagree with your accounting methods. Why don't you let the Auditor General know when you're using external advisors for something that impacts her Office's ability to do their job?**

   The government's use of external expertise for accounting and financial reporting matters is a normal business practice and supplements its own resources on complex or emerging accounting and reporting matters.

   External advisors are generally engaged to provide advice and guidance to supplement internal analysis. The professional staff takes responsibility for the final decisions that are made with respect to the application of PSAS to the government's transactions.

   The province is committed to working with the Office of the Auditor General to discuss issues, once the professional staff has completed its analysis of the issue.

   When required by the Chartered Professional Accountants Ontario Code of Professional Conduct, the Auditor General has been, and will continue to be, advised of external advisor involvement.

5. **Are you going to hire an expert advisory panel, as you did on the pension asset accounting matter, to settle this dispute with the Auditor General? If so, what authority would this panel have?**

DRAFT

There are no plans to establish a panel at this time.

In developing Ontario's Fair Hydro Plan (OFHP), the government considered a range of implementation options and consulted with legal, accounting, financial and energy sector third-party experts to provide advice and ensure due diligence was completed.

The province will continue to work with the Auditor General to build on the government's track record of responsible fiscal management and high quality financial reporting.

6. Can you tell us how many consultants are being paid high salaries with public money while keeping themselves off the sunshine list?

The government continues to strengthen Ontario's efforts to become the most open, transparent and digitally connected government in Canada.

Disclosure of an individual's salary information outside of the Public Sector Salary Disclosure Act list is governed by the Freedom of Information and Protection of Privacy Act. Accordingly any such disclosure would only be made in compliance with the requirements of that Act.

Questions about specific public sector organizations should be directed to the organization or ministry responsible for it.

7. How much did the Treasury Board Secretariat spend on consultants?

The Treasury Board Secretariat (TBS) spent approximately $202 million in 2016-17 on consulting services:

- $167M is procured by IT Source, Central Agencies Cluster for Ontario Public Service (OPS) ministries. TBS has an enterprise role of procuring task-based IT consulting services on behalf of other ministries.
- $36M is services procured by TBS programs primarily for IT enhancement, management and other consulting services.

Consultants are used in the OPS when the organization needs to gain external advice and specialized expertise not already available in the OPS, or for short-term and non-recurring projects and initiatives.

TBS has an enterprise role of procuring task-based IT consulting services on behalf of other ministries as a cost-saving strategy.

DRAFT

Whenever the OPS need IT consulting services, the first thing we do is look for expertise within the organization. The government turns to IT consultants when it doesn't have the expertise in house, when it needs to gain external advice and specialized expertise, or when the need is short-term and non-recurring. This is true for one-time projects that launch new programs or when Cyber Security staff combine with external experts to carry out Threat Risk Assessments to ensure personal information is safe.

AG Recommendation #8: Timeline of Finalization of Financial Statements

Key Messages

- The Treasury Board Secretariat and the Ministry of Finance are supportive of the timely delivery of Public Accounts.
- The Office of the Provincial Controller works closely with the Office of the Auditor General to identify audit issues early and to ensure that stakeholders are engaged in discussions regarding risks and resolution.
- Planning discussions for the 2017-18 Public Accounts have begun between the Office of the Provincial Controller and the Office of the Auditor General.
- As well, the Office of Economic Policy has been engaged in discussions on risk considerations related to economic models used to estimate personal and corporate tax revenues.
- For further details, I will pass it over to:
    - Karen Hughes, Associate Deputy Minister, Office of the Treasury Board
    - Deputy Thompson

For QAs related to:	See:
Finalization of Financial Statements – Tax Revenues	Ministry of Finance

1. **Will the government improve its planning across stakeholders so that the province's consolidated financial statements are finalized earlier?**

   The Treasury Board Secretariat and the Ministry of Finance are supportive of the timely delivery of Public Accounts.

   The Office of the Provincial Controller works closely with the Office of the Auditor General to identify audit issues early and to ensure that stakeholders are engaged in discussions regarding risks and resolution.

   The Office of the Provincial Controller will continue to collaborate with the Office of the Auditor General to support the timely delivery of the Public Accounts.

   Planning discussions for the 2017-18 Public Accounts have begun between the

Office of the Provincial Controller and the Office of the Auditor General. As well, the Office of Economic Policy has been engaged in discussions on risk considerations related to economic models used to estimate personal and corporate tax revenues.

2. What will the government do to figure out estimation risks associated with corporate tax and personal income tax revenues earlier?

The Treasury Board Secretariat and the Ministry of Finance are supportive of the timely delivery of Public Accounts.

The province will work with the Canada Revenue Agency (CRA) on the Auditor General's recommendation, as reporting personal and corporate taxation revenues is highly dependent on the information from the CRA.

Planning discussions for the 2017-18 Public Accounts have begun between the Office of the Provincial Controller and the Office of the Auditor General. As well, the Office of Economic Policy has been engaged in discussions on risk considerations related to economic models used to estimate personal and corporate tax revenues.

Adverse or Qualified Audit Opinion

Key Messages

- It would be inappropriate to speculate about how the Auditor General may issue an opinion for Public Accounts next year.
- The province's financial statements are prepared in accordance with Canadian Public Sector Accounting Standards (PSAS).
- As PSAS is set by an independent standard-setting body in Canada focused specifically on the public sector, and because PSAS is used by all senior governments in Canada, presenting financial statements in accordance with PSAS results in transparent financial reporting for the province of Ontario.
- PSAS are principle based -- they are not a set of specific prescriptive rules. Applying them requires the application of professional judgment.
- Our professional staff exercises judgment in applying the standards and as necessary consult with external experts and advisors.
- They provide the Office of the Auditor General with their written analysis on all significant issues that impact the financial statements for the year being audited, and they discuss the issues with the Office of the Auditor General.
- For further details, I will pass it over to:
    - Cindy Veinot, Provincial Controller

1. **The Auditor General says that you anticipated the government would receive a qualified audit opinion – and accepted this risk. In the private sector this would be unacceptable. How do you figure you can get away with this?**

   The province's financial statements are prepared in accordance with Canadian Public Sector Accounting Standards (PSAS).

   As PSAS is set by an independent standard-setting body in Canada focused specifically on the public sector, and because PSAS is used by all senior governments in Canada, presenting financial statements in accordance with PSAS results in transparent financial reporting for the province of Ontario.

   PSAS are principle based -- they are not a set of specific prescriptive rules. Applying them requires the application of professional judgment.

   Our professional staff exercises judgment in applying the standards and as necessary consult with external experts and advisors. They provide the Office of the Auditor General with their written analysis on all significant issues that impact the financial statements for the year being audited, and they discuss the issues with the Office of the Auditor General.

   All Chartered Professional Accountants (CPAs), including those employed by the Ontario Public Service (OPS), are required to comply with the Code of Professional Conduct for CPAs. One of those rules is that they not be associated with false or misleading information.

   That means that if the professional accountants in the OPS do not agree with the judgment of the Ontario Auditor General, it is not as simple as just agreeing to accept the interpretation of the Office of the Auditor General if they believe that interpretation would result in false or misleading financial statements. While we expect professional accountants to agree on the vast majority of issues, we acknowledge that they may not agree on everything and when that occurs, and the difference is material to the financial statements, the Office of the Auditor General can choose to issue a qualified audit opinion.

2. **Are you concerned that the Auditor General will issue an adverse opinion on the province's next Public Accounts due to Ontario's Fair Hydro Plan accounting?**

   It would be inappropriate to speculate about how the Auditor General may issue an opinion for Public Accounts next year. The implementation of Ontario's Fair

DRAFT

Hydro Plan (OFHP) is ongoing, with significant decisions with accounting and financial implications still being finalized.

The Ministries of Energy and Finance, and the Treasury Board Secretariat continue to work closely with Ontario Power Generation (OPG), the Independent Electricity System Operator (IESO), as well as third-party experts to ensure appropriate due diligence is completed.

The province's financial statements are prepared in accordance with Canadian PSAS and will follow PSAS in accounting for the transactions resulting from OFHP in 2017-18, and in following years.

The financing plan for OFHP and its impact will be transparent. Credit rating agencies, securities regulators, and the public will see full information and full reporting of the impacts of OFHP.

Ontario has a strong track record of producing high-quality financial reports on a timely basis. Ontario will continue to move forward and present the province's finances fairly and accurately and in accordance with PSAS.

3. The Auditor General has issued a qualified opinion for the second year in a row. Is this a sign of fiscal mismanagement?

TBS leads the overall Public Accounts process. Public Accounts is a major accountability document which presents the financial statements of the province, provides financial highlights of the past fiscal year, and reports on performance against the goals set out in the Budget.

TBS continues to move forward and present the province's finances fairly and accurately and in accordance with Canadian Public Sector Accounting Board standards. Ontario has a strong track record of producing high-quality financial reports on a timely basis. The Auditor General's qualified opinion is based on a different interpretation of Public Sector Accounting Board standards for net pension assets and recognition of market accounts.

Last year there was a disagreement among the province's professional accounting staff and the Auditor General's Office on the appropriate application of Public Sector Accounting Board standards regarding pension accounting. As a result, the Pension Asset Expert Advisory Panel was established to deliver independent advice and recommendations on the issue to the province.

The independent panel members concluded the province's share of the net pension assets of both the Ontario Teachers' Pension Plan and the Ontario

Public Service Employees' Union Pension Plan should be recognized in Ontario's financial statements.

After significant deliberation, including consideration of the recommendations of the panel, Ontario confirmed that the accounting for these plans prior to 2015-16 was appropriate, and are prepared in accordance with public sector accounting standards for pension asset accounting. Further, EY provided additional analysis and concluded that no valuation allowance was required for either plan as of March 31, 2017. The 2016-17 financial statements include these pension assets, and TBS continues to apply the accounting treatment of pension assets that the province has used consistently since 2001. In addition, the 2015-16 financial statements were restated to include these assets.

This year the Independent Electricity System Operator (IESO) began recognizing its market accounts' assets (amounts due from power distributors) and liabilities (amounts due to power producers) in their financial results. IESO has chosen to recognize these markets accounts on its books for transparency reasons, as it better reflects the financial position of the IESO-administered markets at year-end. This change was supported by the IESO's audit committee, its independent external auditor, and finally by the Office of the Provincial Controller. This change also has no impact to the province's annual deficit, net debt or accumulated deficit.

This accounting is consistent with the presentation used previously by the Ontario Power Authority (which was merged with the IESO on January 1, 2015) in its financial statements, which was not subject to qualification from the Office of the Auditor General at that time.

2016-17 Overall Accounting Changes

1. **Why have you restated prior year's financial statements?**

   When preparing the 2016-17 Public Accounts, Ontario's professional accounting staff adopted accounting changes to further enhance accountability and transparency.

   These changes include:

   a. **A change in the presentation of accounting for hospitals, school boards and colleges** - third-party revenues (i.e. tuition fees, patient fees, research grants and donations) are now reported together with provincial revenue. This change increases transparency and is supported by the Auditor General.
   b. **The adoption of International Financial Reporting Standards as the basis for accounting for energy sector government business enterprises** - the financial results of investments in Hydro One and Ontario Power Generation (OPG) now reflect International Financial Reporting

DRAFT

Standards. Previously, these results were reported using U.S. Generally Accepted Accounting Principles. This change was made to meet Public Sector Accounting Board standards and is supported by the Auditor General.

c. **Accounting for market accounts by Independent Electricity System Operator (IESO)** - the IESO has adopted rate-regulated accounting, and is now recognizing its market accounts assets and liabilities in its financial results.
d. **Accounting for net pension assets of jointly sponsored pension plans** - the province is reporting net pension assets for jointly sponsored pension plans. This is in line with Public Sector Accounting Board standards and the recommendations of the independent Pension Asset Expert Advisory Panel.

2. Spending for hospitals, school boards and colleges seems to be much higher in Public Accounts than in the 2017 Budget. Why is this?

To increase transparency, in 2016-17 we have made a simple change to how we are reporting third party revenues for broader public sector organizations.

For the first time, Public Accounts are presenting third party revenues for hospitals, school boards and colleges with provincial revenue. Third party revenues earned by these organizations, such as tuition fees, patient fees, research grants and donations, are no longer netted against the respective sectors' expenses, as they were in prior years for Public Accounts and the 2017 Budget.

This is simply a presentation change for Public Accounts. It is fiscally neutral, i.e. there is no change to the annual deficit, net debt or accumulated deficit. To ensure consistency in year-to-year and to Budget comparisons, we are reclassifying all previous years and the 2016 Budget. The 2017 Fall Economic Statement and 2018 Budget will also reflect this presentation change.

The Auditor General supports the province's decision to adopt this presentation change. It is consistent with the accounting principles for governments issued by the Public Sector Accounting Board, and the reporting practices of other senior Canadian governments.

3. What is consolidated reporting?

The Province's consolidated financial statements are presented on a consolidated basis, meaning that the Statement of Financial Position (or balance sheet) and the Statement of Operations (or statement of revenues and expenses) reflect the combination of ministry results as well as the financial

DRAFT

results for organizations that are controlled under the guidance established under PSAS.

Prior to 2016-17, the Province reported the expenses and third-party revenues of hospitals, colleges and school boards on a net basis. This was changed for 2016-17 to reflect expenses and third-party revenues as separate items (on a gross basis), as opposed to being reported together (on a net basis).This affects what you see for the expense reported for the responsible ministries (Health and Long-term Care, Education and Advanced Education and Skills Development) and the breakdown of figures for hospitals, school boards, and colleges. However this has no impact to the annual deficit, net debt or accumulated deficit.

Line-by-line consolidated reporting is in keeping with Public Sector Accounting Board standards and will mean that our presentation for Public Accounts is consistent with other governments across Canada. The Auditor General is supportive of this change.

4. Why is there a change to the accounting for Ontario Power Generation (OPG) and Hydro One?

In the 2016-17 Public Accounts, the financial results of Ontario's investments in Hydro One and Ontario Power Generation (OPG) now reflect International Financial Reporting Standards (IFRS). Previously, these results were reported using U.S. Generally Accepted Accounting Principles. This change was made to meet Public Sector Accounting Board requirements and is supported by the Auditor General.

This change has resulted in an adjustment to the opening accumulated deficit and net debt of $1,163 million, of which $683 million relates to transition to IFRS. The impact of this change to the annual deficit is not material to the province in 2016-17.

DRAFT

OTHER

1. **How does the Treasury Board Secretariat ensure transparency and accountability in financial reporting?**

   The province continues to strengthen its financial management, ensure clear and consistent accounting practices, enhance oversight and accountability and provide better data and information to the public through more channels.

   The Office of the Provincial Controller Division (OPCD) plays a key role in ensuring this transparency and accountability in the province's financial reporting through its major functions, including:
   - Providing the Ontario Public Service (OPS) and Broader Public Sector with accounting and financial management policy and controllership advice;
   - Maintaining the Public Accounts and preparing the Annual Report and Consolidated Statements and the Public Sector Salary Disclosure;
   - Liaising with the Auditor General of Ontario, as well as other jurisdictions and the Chartered Professional Accountants of Ontario and Canada, on the development of government accounting standards;
   - Supporting the development of financial management and controllership capacity across the OPS; and,
   - Supporting the modernization of government by improving the efficiency, effectiveness, and integrity of its financial systems and processes.

   Treasury Board Secretariat (TBS) also works with the Ministry of Finance to help them prepare key documents like the Budget and the Fall Economic Statement.

   TBS does have a leadership role on some financial items like Public Accounts. But for other things, TBS is mostly in a support role.

   TBS collaborates with other senior level governments to assess the impact of proposed standards by the Public Sector Accounting Board and how specific transactions are reported within the accounting frameworks.

2. **Does the province direct organizations on what accounting standards to use or how to apply them?**

   Placeholder

DRAFT

Executive Compensation

1. **How can you justify the exorbitant salaries paid to Hydro One executives when families are struggling to pay their hydro bills?**

   The province remains committed to ensuring transparency and accountability in how broader public sector employers manage executive compensation.

   However, Hydro One is now a publicly traded company, and decisions regarding compensation are not made directly by the government.

   For further questions about executive compensation and oversight of specific organizations, please contact the ministry responsible.

2. **Why are Hydro One employees not captured by the Sunshine List? MPP Todd Smith is demanding that the government add Hydro One employees back onto the list. Will you do this?**

   Only public sector employees are included on the Sunshine List.

   As a publicly-traded entity, Hydro One is no longer required to report salaries or benefits earned after December 31, 2014 under the PSSDA.

   However, similar to the Ontario Securities Commission requirements, Hydro One must disclose the total compensation levels of the CEO, CFO and three other highest-paid executives of the corporation each year. This information is available to the public online. Top executive salaries are posted on SEDAR in the Management Information Circular.

   As an Ontario Business Corporation Act (OBCA) company subject to Canadian Securities law, Hydro One continues to comply with rigorous governance requirements that include:

   - Disclosure of board-approved annual financial statements along with quarterly updates;
   - CEO and CFO Certifications and Associated Controls certifying that there are no misrepresentations in the annual or quarterly materials;
   - Shareholders' meetings requirements and rules;
   - Disclosure requirements with respect to management circulars (including information about senior management, such as share ownership, any indebtedness to the company and any interest in material transactions) as well as compensation circulars (executive compensation disclosures including shares awarded, perks and incentives).

DRAFT

3. How do you justify the upward trend of public sector employees making more than $100,000 across all sectors in 2016?

Overall, for 2016 the total number of employees disclosed in the Compendium has increased by 6.6%, to 123,410 employees in 2016 from 115,746 in 2015.

There are a number of reasons why employees may appear on the list, including:

- Employees who are progressing in their career to more challenging positions;
- Natural progression through salary ranges;
- Overtime payments;
- Retroactive pay awards;
- Performance payments; and,
- Payments that may be required on retirement (e.g. to reimburse the employee for unused vacation credits).

In addition, there were some payouts that impacted the 2016 salaries for reported employees, including an increase to base salaries for non-bargaining employees paid as a retroactive lump sum in December 2016 and an arbitration award which provided retroactive pay to members of the OPP.

The $100,000 threshold has not changed since the Public Sector Salary Disclosure Act was enacted in 1996 and has not been adjusted to keep up with inflation. If the salary threshold was adjusted for inflation, it would be $149,424 in today's dollars, reducing the number of employees included in the compendium by 84%.

The government is committed to providing high-quality public services and values the hard work of its dedicated public servants. The employees on this list:

- Deliver key government services;
- Make sure Ontario's food and water is safe;
- Make sure quality health care is available to every resident in the province;
- Make sure quality education is available to every child in the province;
- Make sure Ontario's roads and workplaces are safe; and,
- Bring jobs and investment into Ontario.

The province needs to pay salaries which are competitive in order to attract and retain top talent to deliver quality public services.

4. Who were the top 10 employees on the entire list and what were their salaries?

The top 10 earners all work largely in the health sector and in Ontario Power Generation. These people all hold executive positions:
- 6 of the 10 are in the health sector;
- 2 are from Ontario Power Generation;
- 1 is at the University of Toronto; and,
- 1 is at the Ontario Pension Board.

Questions about specific public sector organizations should be directed to the organization or ministry responsible for it.

5. **We learned that the president of OPG, who was the top earner on the province's payroll in 2016, actually made $700,000 more than the sunshine list that was disclosed earlier this year. The difference was a bonus that showed up on OPG's books, but was suspiciously left off the government's books. How many more six-figure bonuses has the President of the Treasury Board hidden from the people of Ontario?**

   The province continues to strengthen Ontario's efforts to become the most open, transparent and digitally connected government in Canada.

   Disclosure of an individual's salary information outside of the Public Sector Salary Disclosure Act list is governed by the Freedom of Information and Protection of Privacy Act. Accordingly any such disclosure would only be made in compliance with the requirements of that Act.

   For 2016, the Treasury Board Secretariat as a ministry reported 996 employees compared to 875 in 2015, an increase of 13.8%. The number increased primarily due to compensation changes, retirement pay-outs, severance payments, overtime and reorganizations.

   The $100,000 threshold has not changed since the Public Sector Salary Disclosure Act was introduced in 1996. In today's money the threshold would be $149,424 and would include only 56 (5.6%) of the 996 TBS employees on this year's list and exclude 940 (94.4%).

   Questions about specific public sector organizations should be directed to the organization or ministry responsible for it.

6. **How does this government allow salaries that are completely excessive when the average Ontarian can't afford their hydro bill/is working twice as hard because of government cuts/is not part of this millionaire's club?**

DRAFT

In the 2017 Budget, the government announced that it will continue to take a balanced approach to managing compensation. This approach will recognize the need to maintain a stable, flexible and high-performing public-sector workforce that supports the government's transformational priorities and at the same time ensures that public services continue to remain affordable.

A result of recent efforts to reduce spending through compensation restraint and program transformation, the government has delivered on its commitment to balance the budget by 2017-18, while making program spending more sustainable and also protecting the important public services that Ontarians rely on.

A balanced approach to compensation recognizes the need to attract and retain talented leaders and individuals to ensure a modern, sustainable, and inclusive Ontario Public Service, while also remaining competitive with public sector peers.

To this end, the province will continue to provide effective and affordable public services, while recognizing the need for fair compensation.

Government Advertising

1. **How can you justify spending $5.5 million on self-congratulatory advertising for Ontario's Fair Hydro Plan?**

   Ontario is the first and only jurisdiction in Canada to have legislation that bans government-paid partisan advertising in newspapers, magazines, billboards, radio, and television.

   Ontario needs government advertising that is appropriate, reasonable and effective because the public has a right to know how public money is being spent, and why the government is bringing forward policy changes.

   At this time, I would like to clarify that the Treasury Board Secretariat is *not* responsible for individual line ministry advertising campaigns, and does not determine how much funding is allocated to any campaign.

   For further questions about specific advertisements or advertising campaigns, please contact the ministry responsible.

2. **For the Hydro Bill partisan inserts – the Auditor General points out that "addressed mail" is non-reviewable (i.e., something was sent to a household by name) as compared to bulk mail which is reviewable. Will you continue to overlook this loophole so that public money can be used to send partisan messages directly to Ontarians?**

DRAFT

Ontario is the first and only jurisdiction in Canada to have legislation that bans government-paid partisan advertising in newspapers, magazines, billboards, radio, and television.

This legislation was introduced in 2004 to prevent government use of taxpayer dollars for partisan advertising.

Ministries still abide by the principles of the Government Advertising Act in all paid advertising, whether it goes to the Office of the Auditor General or not.

SCENARIO QUESTIONS

Speculation

1. **What do you think the intentions of the government were when they…**

   As a public servant, it would be inappropriate for me to speculate on the intentions of the government.

   We provide neutral advice to support decision-making.

2. **What do you think the Auditor General will do…**

   It would be inappropriate for me to speculate on how the Auditor General may issue a future opinion.

3. **Other requests for speculation…**

   I'm not able to comment on something that may or may not happen.

   I'm happy to speak to the contents of chapter two of the Auditor General's report.

Cabinet Confidential

1. **Can you tell us about the advice you provided to the government…**

   I am unable to speak to the advice that was provided, as this would be considered confidential advice provided to Cabinet.

Confidential

DRAFT

1. **Can you tell us about the advice you provided to your minister…**

   I believe this matter could be considered confidential advice provided. I would be happy to look into this matter further to clarify the scope of confidentiality and provide a written response back to the Committee.

Insisting a Specific Official Answer

1. **I do not want [____] to answer, I want to hear the response from you.**

   I am happy to provide a response to the question in my role as a public servant for the Treasury Board Secretariat.

   [Provide response as within your position's scope.]

   I cannot speak to the specific point you are raising, and as mentioned, [____] would be more appropriate to respond.

   What I can tell you is [____]

Insisting on Commitment

1. **Can you give us an exact figure on…**

   I want to be absolutely precise and specific, so I will need to get back to you with the exact number.

Politicization

1. **Why did the government make [____] decision?**

   As a public servant, it would be inappropriate for me to speculate on the intentions of the government.

   It is our role to provide our best, objective advice to support government decision-making.

Pension Asset Accounting	Treasury Board Secretariat

Advisory Panel Compensation

For QAs related to:	See:
Pension Asset Accounting	Treasury Board Secretariat

DRAFT

IESO ACCOUNTING

AG Recommendation #2: IESO Market Accounts

- The Independent Electricity System Operator's (IESO) accounting changes are supported by IESO's audit committee, board of directors, its independent external auditor and by the Office of the Provincial Controller.
- The IESO prepares its financial statements in accordance with Canadian Public Sector Accounting Standards (PSAS), and received an unqualified, or clean, audit opinion on its 2016 financial statements.
- The change to include market account assets and liabilities in the financial statements provides increased transparency with respect to the value of transactions that flow through Ontario's electricity market.
- The government supports the enhanced reporting and greater transparency for the economic activities of IESO resulting from the recognition of the market accounts.

For QAs related to:	See:
Government decision to accept IESO market accounts	Treasury Board Secretariat

Q. Why did the IESO choose to recognize market accounts?

The Independent Electricity System Operator (IESO) began recognizing its market accounts' assets (amounts due from power distributors) and liabilities (amounts due to power producers) in their financial results. The IESO has chosen to recognize these markets accounts on its books for transparency reasons, as it better reflects its net financial position on behalf of IESO-administered markets at year-end.

This accounting change was accepted by IESO's independent external auditor, which issued an unqualified, or "clean," audit opinion. It also brought IESO in line with seven of the eight other independent system operators in North America. These accounting changes were highlighted in the IESO's 2016 annual report which was published online in March 2017.

This change has no impact to the province's annual deficit, net debt or accumulated deficit.

This accounting change has been supported by the professional accounting staff of the Office of the Provincial Controller.

We will continue to work with the Auditor General to build on the government's track record of responsible fiscal management and high quality financial reporting.

AG Recommendation #5: IESO Market Accounts & Rate-Regulated Accounting

- The Independent Electricity System Operator (IESO) management, IESO's Audit Committee, IESO's Board of Directors, IESO's external auditor and the Office of the Provincial Controller all support the use of rate-regulated accounting by IESO.
- In the development of Ontario's Fair Hydro Plan (OFHP), the government consulted with several third party advisors in the application of accounting standards. This is normal course of business governments take for complex transactions.

For QAs related to:	See:
Government decision to accept IESO market accounts & rate-regulated accounting	Treasury Board Secretariat

Q. Why did the IESO choose to adopt rate-regulated accounting?

The Independent Electricity System Operator (IESO) made the decision to adopt rate-regulated accounting because it better reflects the economic substance of certain types of expenses that may not be directly recovered through the normal revenue requirement model and instead are recovered through rate regulation.

The IESO, like Hydro One and Ontario Power Generation (OPG), is regulated by the Ontario Energy Board (OEB).

The IESO adopted rate-regulated accounting for its year ended December 31, 2016. The impact on the financial statements of the Province is a decrease of $82 million in the 2016-17 opening accumulated deficit and an increase in the 2016-17 annual deficit by $24 million.

This accounting change was accepted by IESO's independent external auditor, which issued an unqualified, or "clean," audit opinion. These accounting changes were highlighted in IESO's annual report which was published online in March 2017.

Q. What was the financial impact of these accounting changes, on Ontario's electricity rate payers?

These changes in no way affect Independent Electricity System Operator's (IESO) costs, or have any financial impact on electricity ratepayers.

Ultimately, IESO made these changes because it will provide the users of its financial statements greater transparency into the market transactions it oversees, which amounted to $17 billion last year, and better reflects the economic substance of IESO expenses that are recovered through rate-regulation.

AG Audit of 2017 Statements

- We will continue to work with the Auditor General to build on the government's track record of responsible fiscal management and high quality financial reporting.
- The Ministry of Energy, the Ministry of Finance and the Treasury Board Secretariat remain committed to assisting the Office of the Auditor General so that it can provide its independent views to the Legislative Assembly.
- With regards to the Auditor General's report on Ontario's Fair Hydro Plan (OFHP) – while the government does not agree with the assertions and conclusions expressed in the report, the government thanks the Office of the Auditor General for its report.
- While we expect professional accountants to agree on the vast majority of issues, we acknowledge that they may not agree on everything and when that occurs, and the difference is material to the financial statements, the Office of the Auditor General can choose to issue a qualified audit opinion.

For QAs related to:	See:
Relationship with Auditor General	Treasury Board Secretariat

Q. How will IESO respond to the Auditor General's decision to audit the 2017 consolidated financial statements?

The Independent Electricity System Operator (IESO) recognizes the Auditor General's statutory role and authority to perform an audit of IESO.

The IESO is cooperating with the Office of the Auditor General to provide information, including the 2017 financial statements prepared by management, and for access to management for assistance in understanding such information.

The IESO has likewise instructed its audit partner to cooperate with the Auditor General's audit.

Q. The Auditor General says that the Independent Electricity System Operator's decision to adopt rate-regulated accounting was a deviation from Public Sector Accounting Standards, and cautioned against its use in her Independent Auditor's Report. Why was this change made and was it appropriate?

Canadian Public Sector Accounting Standards (PSAS) are effectively silent on this issue of whether or not to adopt rate-regulated accounting as the preferred accounting method – they neither explicitly permit, nor prohibit, the recognition, measurement, presentation or disclosure of rate-regulated activities.

In the absence of a clear position on an issue, standard accounting practice dictates that an entity should consult other accounting standards for guidance.

Paragraph 11 of the *Introduction to Public Sector Accounting Standards* ("Introduction") states: "When applying the CPA Canadian Public Sector Accounting (PSA) Handbook, where the standards are silent on an issue, public sector entities should apply Generally Accepted Accounting Principles (GAAP), Section PS 1150."

In this case, the Independent Electricity System Operator (IESO) consulted U.S. Generally Accepted Accounting Principles (GAAP), the appropriate accounting framework in North America that provides guidance on rate-regulated operations. The IESO made the decision to adopt rate-regulated accounting because it better reflects the economic substance of certain types of expenses that may not be directly recovered through the normal revenue requirement model.

The IESO, like Hydro One and Ontario Power Generation (OPG), is regulated by the Ontario Energy Board (OEB). The IESO adopted rate-regulated accounting for its year ended December 31, 2016.

This accounting change was accepted by IESO's independent external auditor, which issued an unqualified, or "clean," audit opinion. These accounting changes were highlighted in IESO's annual report which was published online in March 2017.

It is worth noting that currently 8 out of 9 electricity system operators in North American markets employ accounting for rate-regulated assets, including IESO.

Q. The Auditor General says that the use of rate-regulated accounting is inappropriate for the Independent Electricity System Operator (IESO) and the Ontario Energy Board (OEB) according to U.S. Generally Accepted Accounting Principles. How do you respond?

In commenting on the use of rate-regulated accounting and the role of the Ontario Energy Board (OEB), the Auditor General's report makes reference to a requirement under U.S. accounting standards in connection with the use of rate-regulated accounting that "there must be an independent regulator."

This reference is misleading as it does not provide the criteria in its entirety, which is as follows:

"The entity's rates for regulated services or products provided to its customers are established by or are subject to approval by an independent, third-party regulator ***or by its own governing board empowered by statute or contract to establish rates that bind customers"*** *[ASC 980-10-15-2].*

The U.S. accounting standard was developed specifically to not preclude the application of rate-regulated accounting by government utilities where the rate regulator would not necessarily be viewed as independent (FAS 71, par. 64).

In addition, the position that rate-regulated accounting is precluded because the OEB is not considered independent of the government of Ontario is contradictory to accepting the use of rate-regulated accounting by Ontario Power Generation (OPG) and Hydro One – both of which are regulated by the OEB and whose results, using rate-regulated accounting, are and have been included in the consolidated financial statements of the Province.

IESO Response

Canadian Public Sector Accounting Standards (PSAS) are effectively silent on this issue – they neither explicitly permit, nor prohibit, the recognition, measurement, presentation, or disclosure of rate-regulated activities.

In the absence of a clear position on an issue, standard accounting practice dictates that an entity should consult other accounting standards.

In this case, IESO consulted U.S. Generally Accepted Accounting Principles (GAAP), the appropriate accounting framework in North America that provides guidance on rate-regulated operations.

ONTARIO'S FAIR HYDRO PLAN

AG Recommendation #3: OFHP Accounting

- The province will continue to prepare its consolidated financial statements in accordance with Public Sector Accounting Standards (PSAS).
- The proposed accounting for the refinancing of the Global Adjustment (GA) aspect of Ontario Fair Hydro Plan (OFHP) reflects the economic substance of the transaction by differentiating costs borne by taxpayers versus those borne by ratepayers.
- PSAS is silent on a key accounting issue regarding the OFHP – the standards neither explicitly permit, nor prohibit, the recognition, measurement, presentation, or disclosure of rate-regulated activities.
- In the absence of a clear position on an issue, standard accounting practice dictates that an entity should consult other accounting standards for guidance.

For QAs related to:	See:
Decision to accept OFHP accounting	Treasury Board Secretariat

Q. Why did the government introduce the Ontario Fair Hydro Plan?

The government has been making important investments in a cleaner and more reliable electricity system, but these investments have led to higher bills. Since 2003, nearly $70 billion[1] has been invested in the electricity system, including more than $37[2] billion in electricity generation to ensure the system is clean and reliable.

Ontario's Fair Hydro Plan (OFHP) is delivering the single-largest reduction in electricity rates in the province's history. OFHP lowered electricity bills by 25 per cent on average for residential consumers and will hold increases to the rate of inflation for four years. As many as half a million small businesses and farms are also benefitting from a reduction.

To address the impact of our electricity system investments on consumers, Ontario's Fair Hydro Plan includes:

- Refinancing the Global Adjustment (GA) over a longer term period for Regulated Price Plan (RPP) eligible consumers, including families, small businesses and farms.

- Helping vulnerable electricity consumers by enhancing electricity support programs and shifting costs off the electricity bill. Eligible consumers will receive additional funding through assistance programs including:
  - Establishing a new Affordability Fund which will support Ontarians who are not eligible for the Home Assistance Program and who have difficulty paying their electricity bills.
  - Broadening Rural or Remote Rate Protection (RRRP) to provide distribution charge relief for the customers of the local distribution companies (LDC's) with the highest distribution charges.
  - Expanding the Ontario Electricity Support Program (OESP) to increase participation and provide further assistance to eligible participants.
  - Establishing a new On-Reserve First Nations Delivery Rate.

- Improving sector efficiency and modernizing Ontario's electricity market, working in collaboration with the Independent Electricity System Operator (IESO) and the Ontario Energy Board (OEB).

- Any rate increases over the next four years will be held to the rate of inflation.

[1] Ministry of Energy, *2017 Long-Term Energy Plan*
[2] Ministry of Energy, *2017 Long-Term Energy Plan*

In the development of Ontario Fair Hydro Plan, the government made the decision to provide rate relief to specific residential consumers thought the introduction of new and enhanced electricity social programs, such as OESP and RRRP. At the same time, the government also made a policy decision that these new measures would be more appropriately funded from the tax-base, not the rate-base.

If pressed on the cost of these new and enhanced social programs:

On March 2, 2017, the government publicly announced the enhancement of the existing OESP and RRRP and the new Affordability Fund and on-reserve First Nations delivery credit. At the time, the government indicated that these new measures would cost the government up to $2.5 billion over the next three years.

Refinancing the Global Adjustment

To reduce pressure on today's electricity consumers, a portion of Global Adjustment (GA) costs is being refinanced. In later years, the cost of financing will be recovered from consumers.

Refinancing the GA is providing significant and immediate rate relief by spreading the cost of electricity investments over the expected lifecycle of the infrastructure that has been built. The majority of the province's electricity generators have 20-year contracts. Many of these generators will be able to operate past their contract term, meaning that generating assets are expected to have ongoing useful life and will benefit future ratepayers by reducing the need to finance the development of new generating assets.

Electricity bills have been reduced for current ratepayers, and future ratepayers will in turn pay for their fair share of the significant investments that we've made to build a clean and reliable electricity system. This more fairly shares the cost of our investments across the generations of electricity ratepayers who will benefit from them.

Given that the policy objective of OFHP is to more fairly allocate the cost to ratepayers over the useful life, not the contractual term, of the electricity generating assets, it was a primary policy objective to ensure that the costs are borne by the beneficiaries of the electricity system – the rate-base – not the tax-base.

Based on this policy decision, it was decided that the debt obligation would be recognized as a regulatory asset that would be sold and securitized. This design appropriately aligns the costs and benefits within the group of eligible electricity consumers.

In developing the policy to refinance the GA, the government considered a range of implementation options and consulted with legal, accounting, financial and energy sector third-party experts to provide advice and ensure due diligence was completed.

OFHP operates under a financial and accounting framework that is appropriate for the intended purpose and in accordance with Public Sector Accounting Standards (PSAS) and ensures that the fairness goals underlying the program are achieved in a cost-effective manner.

Q. What is Global Adjustment (GA)?

Global Adjustment (GA) is a mechanism that recovers certain electricity system costs, such as capital costs incurred by generators. GA is calculated by the Independent Electricity System Operator (IESO) based on the difference between the market price for electricity, which represents the marginal cost of electricity production, and rates paid to regulated and contracted generators to ensure they can recover their fixed costs. It also recovers costs associated with running conservation programs in the province.

GA has been an important factor in providing stable prices while ensuring that sufficient generating capacity is in place to deliver a clean, reliable supply of electricity.

GA pays for the bulk of the recent investments in the electricity system. The majority of the province's renewable electricity generators operate under 20-year contracts. Third-party experts have confirmed that many of these generators will be able to continue to operate beyond the end of their contract. This means that renewable generating assets are expected to have ongoing useful life and benefit future ratepayers by reducing the need to finance the development of new generating assets. This is the basis for the spreading of the costs across present and future generations of rate-payers.

Refinancing the GA is providing significant and immediate rate relief by spreading the cost of electricity investments over the expected lifecycle of the infrastructure that has been built. This more fairly shares the cost of our investments across the generations of electricity ratepayers who will benefit from them.

Q. Who was involved in the policy and implementation process to meet the mandate?

Senior officials and staff from several departments and agencies, led by the Ministry of Energy, collaborated to plan a structure, identify risks, make decisions and take other actions to meet the mandate.

The senior officials and staff were from:

- Ministry of Energy;
- Ministry of Finance;
- Treasury Board Secretariat;
- Office of the Provincial Controller;

- Cabinet Office;
- Ontario Financing Authority (OFA);
- Independent Electricity System Operator (IESO); and
- Ontario Power Generation Inc. (OPG).

In development and implementation of Global Adjustment (GA) refinancing, the government considered a range of implementation options and consulted with internal and external legal, accounting, financial and energy sector experts, including third-party experts, to provide advice and ensure due diligence was completed.

Q. Has the Ministry of Energy's estimate for "peak debt" related to Ontario's Fair Hydro Plan (OFHP) changed? How much is the program expected to cost?

Ontario Power Generation (OPG) has begun the process of raising funds to finance the deferred costs, and while total borrowing costs will not be known until the program is complete, accumulated interest is projected to be considerably less than original estimates.

Current government estimates forecast that the peak debt over the thirty year life of OFHP will be approximately $20 billion[3]. The preliminary estimate from March 2017 was about $28 billion[4].

A number of variables, including interest rates, electricity demand and electricity costs, will vary over the thirty-year life of OFHP and cost estimates will continue to be revised to reflect these changing conditions.

If pressed on the details of the revised peak debt number:

Peak debt for OFHP has been revised down substantially from March 2017, from about $28 billion[5] to approximately $20 billion[6]. These estimates are consistent with 2017 Long-Term Energy Plan (LTEP) projections, include fees charged by OPG in its role as financial service manager (FSM) and assume a 5 per cent interest rate.

Q. Why is the government using Ontario Power Generation (OPG) as a borrowing agent for Ontario's Fair Hydro Plan? Would it be easier to use a traditional government borrowing agent like the Ontario Financing Authority (OFA)?

Ontario Power Generation (OPG) has the necessary financing and commercial expertise to assist with refinancing the Global Adjustment (GA).

[3] Ministry of Energy
[4] Ministry of Energy, submission to Financial Accountability Officer
[5] Ministry of Energy
[6] Ministry of Energy

OPG currently manages approximately $20 billion[7] in segregated nuclear funds to manage nuclear liabilities, and, is an electricity sector entity regulated by the Ontario Energy Board (OEB) with extensive experience with regulatory deferral and variance accounts.

OPG also has the breadth and demonstrated track record in the financial markets with its Corporate Debt platform, private placement of insurance linked bonds, participation in securitization programs and highly successful project debt issuances tied to new hydroelectric developments. These financing initiatives have been well received by investors at a reasonable cost to OPG. The innovative, cost saving and precedent setting aspects of these structures have resulted in international recognition.

OPG has developed solid investor relationships and has a large investor base in the structured finance space that would be the target market for financing Ontario's Fair Hydro Plan initiative. For example, Lower Mattagami project financing attracted a broad investor base of ~80 institutional investors[8], including major investors in the Canadian power and utility bonds market.

In terms of administration, OPG is currently managing its own Corporate public debt program and three project financing programs totalling more than $2 billion[9] and two commercial paper programs.

Finally, OPG's Treasury functions are well positioned given their management of existing multiple debt programs.

Q. The Auditor General and the Financial Accountability Office both suggest that the cost of borrowing will be more expensive than traditional government borrowing? Is this true?

In the development of Ontario's Fair Hydro Plan (OFHP), the government made the policy decision that deferred electricity system costs should be borne by the rate-base and not the tax-base.

Based on this policy decision, it was decided that the debt obligation would be recognized as a regulatory asset that would be sold and securitized. This design appropriately aligns the costs and benefits within the group of eligible consumers.

Ontario Power Generation (OPG) was identified as the Financial Services Manager responsible for the financing plans and the financing entity (i.e., Fair Hydro Plan Trust) that will manage the debt obligations. OPG has the necessary financing and commercial

[7] Ontario Financing Authority
[8] Ontario Power Generation
[9] Ontario Power Generation

expertise to assist with refinancing the Global Adjustment (GA) and will ensure that it is done in an efficient and cost-effective manner.

OPG has a demonstrated track record in the financial markets with its Corporate Debt platform, private placement of insurance linked bonds, participation in securitization programs and highly successful project debt issuances tied to new hydroelectric developments. The innovative, cost saving and precedent setting aspects of these structures have resulted in international recognition.

With respect to the $4 billion[10] figure referenced by the Financial Accountability Office (FAO) in its May 2017 report, it should be noted that the FAO's report was based on initial Ministry of Energy estimates from March 2017. Subsequent analysis conducted by the Ministry of Energy refined a number of variables, including the cost of borrowing and electricity system cost forecasts.

Total borrowing estimates over the thirty year life of OFHP have been revised down substantially by the government since the FAO released its report in May 2017, and borrowing costs are now forecast to be substantially lower than original estimates. Current government estimates forecast that the peak debt over the thirty year life of OFHP will be approximately $20 billion[11]. The preliminary estimate from March 2017 was about $28 billion[12].

A number of variables, including interest rates, electricity demand and electricity costs, will vary over the thirty year life of OFHP and cost estimates will continue to be revised to reflect these changing conditions.

The government will continue to identify and implement initiatives to take costs out of the electricity system, which would reduce the cost of the GA refinancing program.

If pressed on the details of the revised peak debt number:

Peak debt for OFHP has been revised down substantially from March 2017, from about $ 28 billion[13] to approximately $20 billion[14]. The higher March 2017 estimate was used by the FAO in its May 2017 report.

Updated estimates are consistent with 2017 Long-Term Energy Plan (LTEP) projections, include fees charged by OPG in its role as financial service manage (FSM) and assume a 5 per cent interest rate.

---

[10] Financial Accountability Officer, *An Assessment of the Fiscal Impact of the Province's Fair Hydro Plan*
[11] Ministry of Energy
[12] Ministry of Energy, submission to Financial Accountability Officer
[13] Ministry of Energy
[14] Ministry of Energy

If pressed on interest costs:

The government estimates of total interest cost also decreased from $25 billion[15] to less than $19 billion[16].

Q. How does the 3.357% price of the Ontario Power Generation's Fair Hydro Trust's first issuance of senior notes compare with the Ministry of Energy's Fair Allocation Amount (FAA) assumptions?

A number of inputs will vary over the thirty-year life of the Global Adjustment (GA) refinancing program and will continue to be revised to reflect changing conditions (e.g., changes in interest rates).

The Ministry analysis underpinning the *2017 Fair Allocation Amount* (2017 FAA) included a 5.0% average interest rate over the life of the GA refinancing program (i.e., 30 years). Note: Navigant's modelling of GA refinancing assumed an interest rate of 4.5%. In the development of the 2017 FAA the interest rate assumptions were revised to 5% based on consultations with OPG.

On February 6, 2017, OPG announced that it was able to secure an interest rate of 3.357% for the senior debt on its first issuance that has a 15 year term and a value of $500 million.

OPG advises that the remainder of the debt is split between "subordinated" and "junior subordinated" debt. The effective interest rate will be the weighted average of these three series of debt (i.e., senior, subordinated and junior subordinated). OPG is expected to finalize the pricing for the subordinated and junior subordinated debt within the next 48 hours. The pricing will be based in part on the pricing of the senior series.

Q. Some say you are unfairly placing the burden of debt on future generations through things like Ontario's Fair Hydro Plan, how do you respond?

The OFHP is designed to ensure that future generations will be paying their fair share for a system they will be benefiting from in their lifetime.

Over the last decade Ontario has rebuilt our transmission and distribution grid, invested in clean generation, and closed the last coal-fired power plant. Since 2003, nearly $70 billion has been invested in the electricity system, including more than $37 billion in electricity generation to ensure the system is clean and reliable.

To address the impact of our electricity system investments on consumers, Ontario's Fair Hydro Plan includes:

[15] Ministry of Energy
[16] Ministry of Energy

- Refinancing the Global Adjustment (GA) over a longer term period for Regulated Price Plan (RPP) eligible consumers, including families, small businesses and farms.

- Helping vulnerable electricity consumers by enhancing electricity support programs and shifting costs off the electricity bill. Eligible consumers will receive additional funding through assistance programs including:
  - Establishing a new Affordability Fund which will support Ontarians who are not eligible for the Home Assistance Program and who have difficulty paying their electricity bills.
  - Broadening Rural or Remote Rate Protection (RRRP) to provide distribution charge relief for the customers of the local distribution companies (LDC's) with the highest distribution charges.
  - Expanding the Ontario Electricity Support Program (OESP) to increase participation and provide further assistance to eligible participants.
  - Establishing a new On-Reserve First Nations Delivery Rate.

- Improving sector efficiency and modernizing Ontario's electricity market, working in collaboration with the Independent Electricity System Operator (IESO) and the Ontario Energy Board (OEB).

- Any rate increases over the next four years will be held to the rate of inflation.

In the development of Ontario Fair Hydro Plan, the government made the decision to provide rate relief to specific residential consumers thought the introduction of new and enhanced electricity social programs, such as OESP and RRRP. At the same time, the government also made a policy decision that these new measures would be more appropriately funded from the tax-base, not the rate-base.

If pressed on the cost of these new and enhanced social programs:

On March 2, 2017, the government publicly announced the enhancement of the existing OESP and RRRP and the new Affordability Fund and on-reserve First Nations delivery credit. At the time, the government indicated that these new measures would cost the government up to $2.5 billion over the next three years.

Refinancing the Global Adjustment

To reduce pressure on today's electricity consumers, a portion of Global Adjustment (GA) costs is being refinanced. In later years, the cost of financing will be recovered from consumers.

Refinancing the GA is providing significant and immediate rate relief by spreading the cost of electricity investments over the expected lifecycle of the infrastructure that has been built. The majority of the province's electricity generators have 20-year contracts. Many of these generators will be able to operate past their contract term, meaning that generating assets are expected to have ongoing useful life and will benefit future ratepayers by reducing the need to finance the development of new generating assets.

Electricity bills have been reduced for current ratepayers, and future ratepayers will in turn pay for their fair share of the significant investments that we've made to build a clean and reliable electricity system. This more fairly shares the cost of our investments across the generations of electricity ratepayers who will benefit from them.

Given that the policy objective of OFHP is to more fairly allocate the cost to ratepayers over the useful life, not the contractual term, of the electricity generating assets, it was a primary policy objective to ensure that the costs are borne by the beneficiaries of the electricity system – the rate-base – not the tax-base. We believe it is appropriate for ratepayers to pay for the financing of electricity assets.

In addition, the rate-base has a different risk profile than the tax-base, which is reflected in different financing costs. Having the rate-base pay for financing of electricity system assets is not a new policy; for example Hydro One has borrowed in the capital markets since the early 2000s.

Based on this policy decision, it was decided that the debt obligation would be recognized as a regulatory asset that would be sold and securitized. This design appropriately aligns the costs and benefits within the group of eligible electricity consumers.

Moving forward, Ontario's 2017 Long-Term Energy Plan (2017 LTEP) focuses on continuing to put downward pressure on electricity bills over the long term. Our robust electricity supply puts us in a good position to improve efficiency, increase transparency and enhance opportunities for innovation and competition to further reduce system costs. That is why Ontario's Fair Hydro Plan includes a commitment to improving sector efficiency and modernizing Ontario's electricity market, building on the collaboration of the Independent Electricity System Operator (IESO) and the Ontario Energy Board (OEB).

For example, IESO's Market Renewal initiative will result in a more efficient marketplace with competitive and transparent mechanisms that meet future system needs at the lowest cost. The initiative is expected to save up to $5.2 billion[17] over a 10-year period

[17] Independent Electricity System Operator, *Assessment of the Benefits of Market Renewal (Brattle Group)*

and forms a key component of Ontario's plan to ensure the affordability of electricity in the longer term.

Q. In the development of Ontario's Fair Hydro Plan, did the government set up the financing structure intentionally to keep it off government books?

No. GA refinancing is designed so that deferred costs are borne by the rate-base, as the beneficiaries of the electricity system, and not the tax-base.

GA refinancing operates under a financial and accounting framework that is appropriate for the intended purpose and in accordance with Public Sector Accounting Standards (PSAS) and ensures that the fairness goals underlying the program are achieved in a cost-effective manner.

AG Recommendation #6: "Legislated Accounting"

- The *Ontario Fair Hydro Plan Act, 2017* and its related regulations do not create accounting rules or legislate the accounting.
- It is important to distinguish legislating the accounting from legislating the right of the government to recover amounts from specified ratepayers in the future, which in the absence of legislation, would have been collected from specified ratepayers as the costs were incurred.
- The province, as always, will prepare its consolidated financial statements in accordance with PSAS, including the transactions resulting from Ontario's Fair Hydro Plan.

For QAs related to:	**See:**
Issue of OFHP "legislated" accounting	Treasury Board Secretariat

AG Recommendation #9: Arm's Length Trusts

- A Trust structure was selected to implement the Affordability Fund in order to provide an effective solution to distributing funds to electricity distributors. With approximately 65 distributors across Ontario, it was not feasible for the Province to enter into agreements with each distributor.
- The Trust structure establishes an independent entity with expertise from the electricity distributor and community sectors.
- There are report-back requirements on the use of funds transferred as well as the ability for the government to conduct an audit to gain assurance that the funds have been used for the purposes intended.
- The government will continue to assess the most appropriate vehicle for meeting its policy objectives, which include appropriate oversight of how transfer payments are spent.

For QAs related to:	See:
Accounting for Trust	Treasury Board Secretariat

Q. Why is there a need for an Affordability Fund?

From 2015 to early 2017, electricity distributors and other stakeholders indicated to the government that there was an immediate need to help customers struggling with their electricity bills, such as those in bill arrears and facing service disconnection.

Electricity distributors reported to the Ontario Energy Board (OEB) that around 56,500 customers were disconnected in 2015 and over 58,000 customers were disconnected in 2016. Electricity distributors also reported about 400,000 residential electricity accounts in arrears in 2016.

In January 2017, Hydro One submitted to the Ministry a report, "Addressing Affordability" which outlined a number of recommendations on electricity rate mitigation, including a recommendation to establish an Affordability Fund to assist struggling customers who do not qualify for low-income conservation programs.

Q. Who is eligible to benefit through the Affordability Fund and what measures will the average household receive?

Affordability Fund was established to provide energy efficiency measures to help those Ontarians not eligible for the Save on Energy Home Assistance Program, and who need support to improve the energy efficiency of their homes.

There are three levels of support available. The level each home qualifies for depends on net household income and average electricity bill. Measures offered may vary by participating electricity distributors:

- Level 1: households receive a Home Energy Kit with energy-saving products they can install themselves (e.g. LEDs, power bars, hot water pipe insulation).

- Level 2: Households may receive an in-home visit from a professional Home Energy Advisor, a Home Energy Plan and upgrades that may include ENERGY STAR appliances (e.g. efficient air conditioners, refrigerators, and dehumidifiers).

- Level 3: For electrically-heated homes only, households that qualify for this level may receive an in-home visit from a professional Home Energy Advisor, a Home Energy Plan and upgrades that may include insulation and/or an ENERGYSTAR heat pump.

DRAFT

Q. How many households are expected to benefit from the Affordability Fund?

Number of households that the $100 million investment in the Affordability Fund will support will depend on the types of measures installed per household. Customers may be eligible to receive varying levels of support based on their total household income and average electricity bill.

As of January 12, 2018, 2,522 applications had been received by the Affordability Fund Trust, of which 1,794 have been delivered to 47 active LDCs. Eligible customers are expected to start receiving benefits through the Affordability Fund in early 2018. **Note:** Numbers are not static and should be updated (closer to Public Accounts) as they become available.

Records Disclosure/Process

- The Ministry conducted a search consistent with the 40 plus search terms provided by the Auditor General.
- The Ministry of Energy has selected McCarthys/Wortzmans to assist with processing and analysis of approximately 2.2 million records that resulted from the search of 81 custodians.
- The Ministry has been regularly providing the Auditor General batches of responsive documents.

For QAs related to:	See:
Records - TBS	Treasury Board Secretariat
Records - MOF	

Q. Why has the Ministry of Energy not provided all e-mails requested by the Auditor General?

As of October 26, 2017, the Ministry has provided all responsive records (more than 73,000 emails) to the AG.

Q. How much money did the Ministry spend on lawyers?

Although the retainer agreement includes a cap of up to $500,000, the Ministry of Energy spent approximately $150,000 on the retainer.

Q. What was the Ministry of Energy's process for providing the emails requested by the Auditor General?

DRAFT

The Ministry conducted a search consistent with the 40 plus search terms provided to the AG. In order to manage the approximately 2.2 million records resulted from the search of 81 custodians, the Ministry of Energy selected McCarthys/Wortzmans to assist with processing and analysis of the documents.

No legal advice on relevancy of documents was provided by Wortzmans. The Ministry completed its response to the AG on October 26, 2017.

Re-Design of Hydro Bills

- The objective of the bill redesign initiative is to make bills easier for customers to understand and ensure that they get the most useful information out of their bills.
- Comparisons of costs from previous billing periods will continue to be possible.
- Electricity bills are a customer's main window into the electricity system. Through the LTEP consultation process, the government heard that customers found their bills confusing and inaccessible.
- Hydro One has been a leader in consumer research on ways to improve the appearance and comprehension of its bill. Hydro One enlisted the services of a behavioural research firm and engaged with thousands of customers to develop a new bill design which has been observed to increase customer satisfaction and comprehension.
- Building on this research, the Ministry launched the Bill Redesign Action Plan with the aim of revising the regulatory framework on invoicing to improve the value of electricity bills for consumers. The Ministry continues to engage with industry and consumers to better understand consumer concerns and preferences with respect to the bill to ensure that any proposed changes to the bill's design will meet consumer's needs.

For QAs related to:	See:
N/A	N/A

Q. Isn't the problem the amount on people's bills, not the design?

The government recognizes that the much-needed investments in our electricity system have led to higher electricity prices. That's why the government developed Ontario's Fair Hydro Plan (OFHP) – to relieve the cost pressures caused by these system improvements.

Through the 2017 Long Term Energy Plan (2017 LTEP) consultation process, the government heard that consumers find their current bills confusing and inaccessible, as part of 2017 LTEP, the Ministry committed to continue to work with the Ontario Energy

Board (OEB), industry and consumers to explore opportunities to redesign electricity bills to make them easier for customers to understand.

Q. How can Ontarian's know redesigning bills isn't just a way to hide increases?

The objective of the bill redesign initiative is to make bills easier for customers to understand and ensure that they get the most useful information out of their bills. Comparisons of costs from previous billing periods will continue to be possible.

Q. What Is the overall cost of the bill redesign?

Each LDC will have different costs to implement a re-designed bill depending on current billing and customer information systems. Changes to billing systems are a part of an LDC's cost of doing business.

Q. Are all customers in Ontario getting redesigned bills, or just in some areas?

All LDCs will be required to comply with any new requirements implemented as part of a bill-redesign initiative. By March 31, 2018, all LDCs will come into compliance with the new requirement to provide customer-specific OFHP savings on invoices.

Q How do the new regulatory amendments to require that LDCs provide customer-specific savings associated with Ontario's Fair Hydro Plan on invoices fit in to the broader redesign action plan?

The requirement for dynamic messaging or customer-specific Fair Hydro savings on invoices is the first step in the broader, longer term bill re-design project. Providing customer specific savings promotes greater understanding of the associated bill impacts of Ontario's Fair Hydro Plan (OFHP) for consumers.

The new regulatory amendments are being discussed with industry stakeholders as part of the bill redesign working group.

The Ministry of Energy is continuing to work with stakeholders to examine opportunities to redesign electricity bills to make them more understandable and to give consumers the information that they want on the bill.

AG Recommendation # 4: External Advisors

For QAs related to:	See:
External Advisors	Treasury Board Secretariat

Q. Who was involved in the policy and implementation process to meet the mandate?

Senior officials and staff from several departments and agencies, led by the Ministry of Energy, collaborated to plan a structure, identify risks, make decisions and take other actions to meet the mandate.

The senior officials and staff were from:

- Ministry of Energy;
- Ministry of Finance;
- Treasury Board Secretariat;
- Office of the Provincial Controller;
- Cabinet Office;
- Ontario Financing Authority (OFA);
- Independent Electricity System Operator (IESO); and
- Ontario Power Generation Inc. (OPG).

In development and implementation of Global Adjustment (GA) refinancing, the government considered a range of implementation options and consulted with legal, accounting, financial and energy sector third-party experts to provide advice and ensure due diligence was completed.

RESPONSE TABLE

Issue/Consideration	Strategy	Key Messages
Pension Asset Accounting: Auditor General's qualified opinion	Confirm that the province will continue to follow PSAS, as always, and seek appropriate expert guidance where PSAS is silent. Highlight supporting perspectives from external consultants.	The government continues to move forward and present the province's finances fairly and accurately and in accordance with Canadian Public Sector Accounting Standards (PSAS). The government respectfully disagrees with the Auditor General's interpretation of the accounting standards, as PSAS neither requires unilateral control to record an asset, nor does it include a requirement to obtain a letter from the co-sponsor of the plan agreeing to reduce further contributions within 12 months. The government is open to continue to discuss the matter in hopes of resolving this matter.
IESO Accounting: **1) Market Asset Accounts** **2) Rate-Regulated Accounting** **3) AG to audit IESO's 2017 statements** 4) OPG/IESO "inappropriate expenses" 5) Peripheral: OPG Executive Compensation	Confirm that the province will continue to follow PSAS, as always, and seek appropriate expert guidance where PSAS is silent. Re-iterate government's appreciation of the Auditor General's independent review and the IESO's recent unqualified audit record.	The government welcomes the Auditor General's independent review and remains committed to assisting her office in providing its views to the Legislative Assembly. The Independent Electricity System Operator's (IESO) change of accounting policy provides more transparency into the value of transactions that flow through Ontario's $17 billion electricity market and reflect the economic substance of certain types of expenses that may not be directly recovered through normal revenue requirement models, and instead are recovered through rate regulation. The IESO's recent accounting changes are supported by IESO's audit committee, board of directors, its independent external auditor and by the Office of the Provincial Controller. The IESO prepares its financial statements in accordance with PSAS, and received an unqualified, or clean, audit opinion on its 2016 financial statements.

DRAFT

Issue/Consideration	Strategy	Key Messages
Fair Hydro Plan Accounting: "convenient/inappropriate accounting"	Highlight due diligence included in OFHP decision making Refuse to speculate about AG's potential future audit opinion. Emphasize that the province will continue to follow PSAS, as always, and seek appropriate expert guidance where PSAS is silent.	As part of Ontario's Fair Hydro Plan (OFHP), bills have been reduced for current ratepayers, and future ratepayers will in turn pay for their fair share of the significant investments that we've made to build a clean and reliable electricity system. This more fairly shares the cost of our investments across the generations of electricity ratepayers who will benefit from them. Given that the policy objective of OFHP is to more fairly allocate the cost to ratepayers over the useful life, not the contractual term, of the electricity generating assets, it was a primary policy objective to ensure that the costs are borne by the beneficiaries of the electricity system – the rate-base – not the tax-base. Based on this policy decision, it was decided that the debt obligation would be recognized as a regulatory asset that would be sold and securitized. This design appropriately aligns the costs and benefits within the group of eligible electricity consumers. Ontario Power Generation (OPG) was identified as the Financial Services Manager (FSM) responsible for the financing plans and the financing entity (i.e., Fair Hydro Plan Trust) that will manage the debt obligations. OPG has the necessary expertise to assist with refinancing the GA and will ensure that it is done efficiently and cost-effectively. OFHP operates under a financial and accounting framework that is appropriate for the intended purpose and in accordance with PSAS and ensures that the fairness goals underlying the program are achieved in a cost-effective manner. In developing the policy, the government considered a range of implementation options. Senior officials and staff from several departments and agencies, led by the Ministry of Energy, collaborated to plan a structure, identify risks and take necessary actions to meet the mandate. The government also consulted with legal, accounting, financial and energy sector third-party experts to provide advice and ensure due

DRAFT

Issue/Consideration	Strategy	Key Messages
		diligence was completed. The province will continue to prepare its consolidated financial statements in accordance with PSAS. PSAS is silent on a key accounting issue regarding the OFHP – the standards neither explicitly permit, nor prohibit, the recognition, measurement, presentation, or disclosure of rate-regulated activities. In the absence of a clear position on an issue, standard accounting practice dictates that an entity should consult other accounting standards. In this case, IESO consulted US GAAP, the accounting framework in North America that provides the most developed guidance on rate regulated operations.
Pre-Election Report: "government should publicly communicate if and when"	Re-iterate the government's commitment to working with the Office of the Auditor General. Confirm that the government will, as always, continue to follow the relevant legislation.	Under the *Fiscal Transparency and Accountability Act, 2004*, the government may file a regulation that would require it to release a Pre-Election Report on Ontario's Finances. Should the government file such a regulation, the Auditor General would be required to issue a statement based on a prompt review following the release of such a Pre-Election Report. The government remains committed to meeting the legislative requirements of the Act, and working constructively with the Auditor General.
Debt Reduction Plan: "Ontario has the highest sub-sovereign debt in the world"	Re-iterate government's track record of responsible fiscal management and provide high-level overview of debt reduction plan.	The government's long-term infrastructure plan to invest about $190 billion over 13 years, starting in 2014-15, will contribute to the growth of the economy. The Centre for Spatial Economics found that for every $1 spent on public infrastructure, GDP increases by up to $6, on average, in the long term.
"Legislated Accounting"	Emphasize that the province will continue to follow PSAS, as always, and seek appropriate expert guidance where PSAS is silent.	The *Ontario Fair Hydro Plan Act, 2017* and its related regulations do not create accounting rules or legislate the accounting. It is important to distinguish legislating the accounting from legislating the right of the government to recover amounts from specified ratepayers in the future,

Issue/Consideration	Strategy	Key Messages
	Provide example of the only time legislated accounting was used; explain how OFHP does not legislate accounting.	which in the absence of legislation, would have been collected from specified ratepayers as the costs were incurred. The province, as always, will prepare its consolidated financial statements in accordance with PSAS, including the transactions resulting from Ontario's Fair Hydro Plan.
Use of External Advisors: Perception that the government looks to external advisors to circumvent the Auditor General	Confirm that the province seeks external expertise when appropriate as a normal course of business.	The government's use of external expertise for accounting and financial reporting matters supplements its own resources on complex or emerging accounting and reporting matters. External advisors are generally engaged to provide advice and guidance to supplement internal analysis, and in the normal course of business.

2. Will the government issue a regulation confirming the source of reference for the Pre-Election Report and the timeline for issuance of the report that will be subject to the Auditor General's review?

Under the *Fiscal Transparency and Accountability Act, 2004*, the government may file a regulation that would require it to release a Pre-Election Report on Ontario's Finances. Should the government file such a regulation, the Auditor General would be required to issue a statement based on a prompt review following the release of such a Pre-Election Report.

The government remains committed to meeting the legislative requirements of the Act, and working constructively with the Auditor General.

DRAFT

PROVINCE'S FISCAL SITUATION

Recommendation #7: Province's Debt Burden

- The balanced budgets from 2017–18 onwards will limit the increase in net debt-to-net investments in capital assets. These investments will contribute to the economy growing at a faster rate than net debt, allowing the government to reduce Ontario's net debt-to-GDP ratio to its pre-recession level of 27 per cent.
- There is a strong demand for Ontario bonds in both the domestic and international markets. Last fiscal year, Ontario was able to borrow $27 billion in long-term debt while our spread — or the margin that we have to pay over the equivalent Government of Canada bond — tightened, indicating an ongoing strong demand for Ontario bonds.
- We expect that the liquidity of Ontario benchmark bonds, and continuing confidence in the value of Ontario debt, will allow us to cost-effectively complete the 2017–18 borrowing program.

3. What is the government doing to manage the province's debt burden?

The very important first step in reducing debt is to balance the budget. We are projecting a balanced budget for 2017-18, delivering on a commitment first introduced in the 2010 Budget.

As the result of a balanced budget, and Ontario's strong economic growth, the net-debt-to-GDP ratio is declining.

The government has set an interim net debt-to-GDP ratio target of 35 per cent by 2023–24, and continues to maintain a target of reducing the net debt-to-GDP ratio to its pre-recession level of 27 per cent, currently projected to be achieved by 2029–30.

4. What is the status of the province's borrowing plan?

Through prudent and cost-effective debt management, we have consistently kept interest on debt costs below budget projections. Interest on debt to revenue is forecast to be 8.2 per cent in 2017-18, 8.3 per cent in 2018-19 and 8.4 per cent in 2019-20.

Term extension has allowed us to take advantage of and lock in low interest rates for a longer period, which reduces refinancing risks and helps offset the impact of expected higher interest rates on interest on debt costs.

As of January 31, 2018, $28.6 billion (or 111 per cent) of this year's long-term public borrowing of $25.8 billion has been completed.

DRAFT

Financial Accountability Office (FAO) Reports

5. What is the government's response to the FAO's fall 2017 report, which states that the government will run a deficit in 2017-18 and the following years?

Ontario's deficit for 2016-17 was $991 million — $3.3 billion lower than projected in the 2016 Budget and $0.5 billion lower than the interim projection in the 2017 Budget, according to public accounts.

The Ministry of Finance is projecting a balanced budget in 2017-18. The Ministry of Finance is committed to a responsible fiscal plan. We build prudence into our forecasts.

Since the time of the 2017 Budget, private sector forecasters have revised up their economic growth projections for Ontario over the 2017-20 period, reflecting the strength in the Ontario economy.

Using the government's accounting presentation (i.e. excluding the AG's recommended treatment), the FAO is projecting a small surplus in 2017-18.

6. Why are the FAO's revenue forecasts lower than the government's revenue forecasts?

The government is projecting total revenue to grow from $140.7 billion in 2016–17 to $158.2 billion in 2019–20. This represents an average annual growth rate of 4.0 per cent.

Growth in revenues over the medium term is driven mainly by taxation revenue which is projected to increase by $15.6 billion between 2016–17 and 2019–20, or at an average annual rate of 5.2 per cent. The projected taxation revenue growth aligns with growth actually experienced in recent years, and projections for the Ontario economy.

Credit Ratings

- Ontario currently maintains a double-A rating with three of its four credit rating agencies.
- We continue to update the rating agencies on a regular basis on economic and fiscal developments.

7. What are the credit rating agencies' views on Ontario?

Following the release of the 2017 Budget, all four rating agencies — Moody's, DBRS, Fitch, and S&P — confirmed Ontario's long-term credit ratings.

This reflects rating agencies' confidence in our government's fiscal plan.

DRAFT

8. How have rating agencies responded to the qualified opinion on the public accounts and the recent report from the Auditor General?

The rating agencies make their own assessment of the Province's finances.

However, there were no credit rating implications either this year or last when the government received a qualified audit opinion on its Public Accounts.

Ministry of Energy – Proposed Friendly Questions:

1. **To the Deputy Minister of Energy, why is keeping the financing costs of Ontario's Fair Hydro Plan (OFHP) on the rate-base, as opposed to the tax-base appropriate?**

   And, why is Ontario Power Generation (OPG) best placed to minimize the cost of the overall program from your perspective?

   Policy Objectives of Ontario's Fair Hydro Plan

   Over the last decade Ontario has rebuilt our transmission and distribution grid, invested in clean generation, and closed the last coal-fired power plant. The government has been making important investments in a cleaner and more reliable electricity system, but these investments have led to higher bills. Since 2003, nearly $70 billion[1] has been invested in the electricity system, including more than $37[2] billion in electricity generation to ensure the system is clean and reliable.

   Ontario's Fair Hydro Plan (OFHP) is delivering the single-largest reduction in electricity rates in the province's history. Ontario's Fair Hydro Plan has introduced new measures to lower electricity bills by 25 per cent on average for residential consumers and will hold increases to the rate of inflation for four years. As many as half a million small businesses and farms are also benefitting from a reduction.

   To address the impact of our electricity system investments on consumers, Ontario's Fair Hydro Plan includes:

   - Refinancing the Global Adjustment (GA) over a longer term period for Regulated Price Plan (RPP) eligible consumers, including families, small businesses and farms.

   - Helping vulnerable electricity consumers by enhancing electricity support programs and shifting costs off the electricity bill. Eligible consumers will receive additional funding through assistance programs including:

     - Establishing a new Affordability Fund which will support Ontarians who are not eligible for the Home Assistance Program and who have difficulty paying their electricity bills.

[1] Ministry of Energy, *2017 Long-Term Energy Plan*
[2] Ministry of Energy, *2017 Long-Term Energy Plan*

  - Broadening Rural or Remote Rate Protection (RRRP) to provide distribution charge relief for the customers of the local distribution companies (LDC's) with the highest distribution charges.

  - Expanding the Ontario Electricity Support Program (OESP) to increase participation and provide further assistance to eligible participants.

  - Establishing a new On-Reserve First Nations Delivery Rate.

- Improving sector efficiency and modernizing Ontario's electricity market, working in collaboration with the Independent Electricity System Operator (IESO) and the Ontario Energy Board (OEB).

- Any rate increases over the next four years will be held to the rate of inflation.

In the development of Ontario Fair Hydro Plan, the government made the decision to provide rate relief to specific residential consumers thought the introduction of new and enhanced electricity social programs, such as OESP and RRRP. At the same time, the government also made a policy decision that these new measures would be more appropriately funded from the tax-base, not the rate-base.

If pressed on the cost of these new and enhanced social programs:

On March 2, 2017, the government publicly announced the enhancement of the existing OESP and RRRP and the new Affordability Fund and on-reserve First Nations delivery credit. At the time, the government indicated that these new measures would cost the government up to $2.5 billion over the next three years.

Refinancing the Global Adjustment

To reduce pressure on today's electricity consumers, a portion of Global Adjustment (GA) costs is being refinanced. In later years, the cost of financing will be recovered from consumers.

Refinancing the Global Adjustment (GA) is providing significant and immediate rate relief by spreading the cost of electricity investments over the expected lifecycle of the infrastructure that has been built. The majority of the province's electricity generators have 20-year contracts. Many of these generators will be able to operate past their contract term, meaning that generating assets are expected to have ongoing useful life and will benefit future ratepayers by reducing the need to finance the development of new generating assets.

Electricity bills have been reduced for current ratepayers, and future ratepayers will in turn pay for their fair share of the significant investments that we've made to build

a clean and reliable electricity system. This more fairly shares the cost of our investments across the generations of electricity ratepayers who will benefit from them.

Given that the policy objective of Ontario Fair Hydro Plan (OFHP) is to more fairly allocate the cost to ratepayers over the useful life, not the contractual term, of the electricity generating assets, it was a primary policy objective to ensure that the costs are borne by the beneficiaries of the electricity system – the rate-base – not the tax-base. We believe it is appropriate for ratepayers to pay for the financing of electricity assets.

In addition, the rate-base has a different risk profile than the tax-base, which is reflected in different financing costs. Having the rate-base pay for financing of electricity system assets is not a new policy; for example Hydro One has borrowed in the capital markets since the early 2000s.

Based on this policy decision, it was decided that the debt obligation would be recognized as a regulatory asset that would be sold and securitized. This design appropriately aligns the costs and benefits within the group of eligible electricity consumers.

Ontario's Fair Hydro Plan (OFHP) operates under a financial and accounting framework that is appropriate for the intended purpose and in accordance with Public Sector Accounting Standards (PSAS) and ensures that the fairness goals underlying the program are achieved in a cost-effective manner.

Development of Ontario Fair Hydro Plan (OFHP)

In developing the policy to refinance the Global Adjustment (GA), the government considered a range of implementation options. Senior officials and staff from several departments and agencies, led by the Ministry of Energy, collaborated to plan a structure, identify risks and take necessary actions to meet the mandate.

The senior officials and staff included:

- Ministry of Energy;
- Ministry of Finance;
- Treasury Board Secretariat;
- Office of the Provincial Controller;
- Cabinet Office;
- Ontario Financing Authority (OFA);
- Independent Electricity System Operator (IESO); and
- Ontario Power Generation Inc. (OPG).

The government also consulted with legal, accounting, financial and energy sector third-party experts to provide advice and ensure due diligence was completed. This is normal course of business governments take for complex transactions.

Role of Ontario Power Generation (OPG)

With respect to Ontario Power Generation (OPG), it was identified as the Financial Services Manager (FSM) responsible for the financing plans and the financing entity (i.e., Fair Hydro Plan Trust) that will manage the debt obligations associated with Global Adjustment (GA) refinancing. Financing requirements are determined by the legislation and will be funded through the Trust.

Ontario Power Generation (OPG) is uniquely positioned to be the Financial Service Manager (FSM), it understands the characteristics of the market, regularly interacts with the Ontario Energy Board (OEB) and the Independent Electricity System Operator (IESO).

Ontario Power Generation (OPG) has extensive experience in the Ontario energy market, capital markets, regulation and fund management and will ensure that the refinancing will be done in the most efficient and cost-effective manner.

Ontario Power Generation (OPG) currently manages approximately $20 billion in nuclear funds through the Decommissioning Segregated Fund and the *Used Fuel Segregated Fund* to manage nuclear liabilities, $15 billion in pension funds and is an electricity sector entity regulated by the Ontario Energy Board (OEB) with extensive experience in regulatory deferral and variance accounts.

Ontario Power Generation (OPG) has a demonstrated track record in the financial markets with its Corporate Debt platform, private placement of insurance linked bonds, participation in securitization programs and highly successful project debt issuances tied to new hydroelectric developments. These financing initiatives have been well received by investors at a reasonable cost to Ontario Power Generation (OPG). The innovative, cost saving and precedent setting aspects of these structures have resulted in international recognition.

In addition to executing hundreds of millions in project financing over the past several years, Ontario Power Generation (OPG) completed its first bond offering in the Canadian public market with $500 million unsecured 10-year bonds in October 2017.

Ontario Power Generation (OPG) has developed solid investor relationships and has a large investor base in the structured finance space that comprises the target market for financing Ontario's Fair Hydro Plan (OFHP) initiative. For example, the Lower Mattagami project financing attracted a broad investor base of ~80

institutional investors, including major investors in the Canadian power and utility bonds markets.

Ontario Power Generation (OPG) has a strong track record of producing high-quality financial reports on a timely basis. In addition, Ontario Power Generation (OPG) will report on the activities of the Fair Hydro Trust in its quarterly financial reporting. The Fair Hydro Trust will be reported as a separate segment in these public documents

In terms of administration, Ontario Power Generation (OPG) is currently managing its own corporate public debt program, three project financing programs totaling more than $2 billion and two commercial paper programs.

Finally, Ontario Power Generation's (OPG) Treasury functions are well positioned given their management of existing multiple debt programs.

As the implementation of the financing program progresses, focus has remained on minimizing costs to ratepayers. Particular attention has be given to achieving a strong credit rating for the Trust, with the objective of mitigating the impact to ratepayers through effective market pricing of the funds being borrowed by the Trust.

Ontario Fair Hydro Plan (OFHP) is delivering much-needed rate relief to electricity consumers. The policy decisions we have made in implementing Global Adjustment (GA) refinancing, in consultation with third-party experts, senior officials and staff from across government, most effectively achieve the policy goals of the refinancing program and ensure that the cost of important investments in the electricity system are allocated fairly amongst electricity consumers in proportion to the benefit from received from them.

2. To Independent Electricity System Operator (IESO), how did IESO come to the conclusion that it was acceptable to use US Generally Accepted Accounting Principles (GAAP) instead of Public Sector Accounting Standards (PSAS) for rate regulated activities?

And, is there a clause or section of PSAS that permits the use of GAAP in a given scenario?

Response

Independent Electricity System Operator's Approach to Accounting

The Independent Electricity System Operator (IESO) follows Public Sector Accounting Standards (PSAS) for its accounting.

The PSAS neither explicitly permits, nor prohibits, the recognition, measurement, presentation or disclosure of rate-regulated activities. In absence of a clear position on an issue, standard accounting practice dictates that an entity is entitled to consult another accounting standard. If I may cite from the PSAS Handbook, Section 1150.18 and 19:

> *"Paragraphs PS 1150.19-.24 identify some of the other sources that a public sector reporting entity might consult to assist in selecting accounting policies and disclosures that comply with paragraph PS 1150.05.Pronouncements issued by other bodies authorized to issue accounting standards may be useful sources to consult.*
>
> *For example, accounting pronouncements published with the authority of the Canadian Accounting Standards Board (AcSB), International Accounting Standards Board (IASB), US Federal Accounting Standards Advisory Board (FASAB), US Governmental Accounting Standards Board (GASB), or International Public Sector Accounting Standards Board (IPSASB) are often important sources to consult on matters not covered by primary sources of GAAP or for assistance in applying a primary source of GAAP to specific circumstances."*

In this case, IESO consulted US GAAP, the only accounting framework in North America that provides guidance on rate regulated operations. The IESO has since adopted aspects of the US GAAP accounting framework allowing IESO to recognize a regulatory asset.

This decision was supported by an accounting opinion from our external auditors at KPMG and aligns IESO with six of the eight other independent system operators in North America.

It's a decision IESO made after careful consideration and extensive consultation with external experts. In fact, more than one of the big-four accounting firms agree with our decision on this matter. The IESO regularly reviews its accounting policies to ensure our financial reporting best represents our operations and the substance of the accounts we oversee.

Prompted by conversation with government about Ontario's Fair Hydro Plan (OFHP) and recognizing the need to consider impacts of future government policy, IESO revisited its options for reporting market accounts and recognizing regulatory assets.

Working with its audit partner KPMG, IESO determined that there were reporting options for market accounts and regulatory assets and that a choice was required as to whether or not to report these in IESO financial statements.

DRAFT

By analyzing the nature of the accounts, IESO's economic relationship to them, legislative requirements and market rules it was concluded that an appropriate position for either treatment was acceptable.

Organizations in Other Jurisdictions

When we started looking into changes to our accounting policies, we wanted to look at other organizations that have similar mandates to us.

Including IESO, there are 9 independent system operators in North America; seven in the U.S. and two in Canada: The IESO and Alberta's AESO.

We had discussions with these organizations about their operations and accounting practices.

We looked at their location, the accounting framework they follow, the type of organization they are (either not-for-profit or otherwise), whether they are subject to income tax, their capital structure, how they are governed, by which body they are regulated, and finally, whether they recognized balances of market participants and regulatory assets in their financial reporting.

From this research, we found that 7 of the other 8 ISOs recognize the balances of the market participants. They are:

1. **ISO New England;**
2. **NYISO**, in New York;
3. **MISO**, Midcontinent ISO which covers Midwest United States, Manitoba, and much of Arkansas, Mississippi and Louisiana;
4. **PJM**, covering the eastern U.S. states: Delaware, Illinois, Indiana, Kentucky, Maryland, Michigan, New Jersey, North Carolina, Ohio, Pennsylvania, Tennessee, Virginia, West Virginia and the District of Columbia;
5. **CAISO**, in California;
6. **ERCOT**, in Texas; and
7. **Southwest Power Pool**, in central US.

When we talked to our counterparts across North America about regulatory assets, we found out that 6 of the other 8 entities recognize the economic effects of rate regulation, they are:

1. **AESO**, in Alberta;
2. ISO New England;
3. NYISO;

4. MISO;
5. PJM; and
6. ERCOT.

I should mention that the two ISOs that do not recognize the effect of rate regulation are California ISO (CAISO) and Southwest Power Pool (SPP).

When we talked to CAISO, we found out that their accounting framework actually allows for the recognition of regulatory assets and liabilities, but that it had concluded the need to recognize regulatory assets was no longer necessary.

When we talked to Southwest Power Pool, we learned that they simply do not have any variance accounts that would qualify as regulatory assets or liabilities.

So, when we looked at making the accounting change we considered that:

1. Including **market accounts** on our financial statements would provide increased transparency into the value of transactions that flow through Ontario's $17 billion electricity market;
2. That **regulatory accounting** better reflected the economic substance of certain types of IESO expenses (like Smart Metering Entity expenses) which are recovered through a rate regulated by the OEB;
3. That the change would **enhance the relevance, transparency and accountability of our financial reporting**;
4. That this change would **bring IESO in line with its peers** across North America; and
5. Finally, that this accounting change would in **no way affect IESO's costs, or have any financial impact on electricity ratepayers –** all these factors confirmed our decision to make the accounting change.

Ultimately, IESO felt the public reporting of market accounts was relevant to the needs of its financial statement users and enabled greater transparency into the market transactions it oversees, which amounted to $17 billion last year.

We also felt that recognizing regulatory assets would provide more transparency into the substance of the variance accounts we oversee.

As we just covered, this change to recognize regulated assets and market accounts brings IESO in line with accounting practices followed by other independent system operators in North America.

DRAFT

I should also mention, that in the past, the Ontario Power Authority, a predecessor organization of IESO, reported a subset of the market accounts on its financial statements – so this isn't new.

Role of an Independent Audit Firm

To confirm our view that the change was appropriate, IESO engaged independent audit firm KPMG for accounting research on the matter.

KPMG conducted its own research into the issue. KPMG subsequently issued a white paper on the accounting change, supporting IESO's decision to change its accounting policy. The changes were also reviewed with and supported by the Office of the Provincial Controller.

The accounting change was reviewed by IESO's Board of Directors, and approved.

As part of our regular 2016 year-end audit, KPMG issued an accounting opinion on our financial reporting. The accounting firm issued an unqualified or "clean" accounting opinion, meaning they supported the decision.

Finally, when publishing our 2016 financial statements, in order to communicate the change of accounting policy, IESO added additional notes in its 2016 financial statements to explain the changes in the Summary of Significant Accounting Policies section of its 2016 annual report.

These changes in no way affect IESO's costs, or have any financial impact on electricity ratepayers.

Ultimately, IESO made these changes because it will provide the users of its financial statements greater transparency into the market transactions it oversees, which amounted to $17 billion last year, and better reflects the economic substance of IESO expenses that are recovered through rate-regulation.

It is KPMG's responsibility to express an opinion on the financial statements based on their audit.

In our case, KPMG conducted their audit in accordance with Canadian generally accepted accounting standards.

Those accounting standards require that the auditors comply with ethical requirements and plan and perform the audit to obtain reasonable assurance about whether the entity's financial statements are free from material misstatement.

Here are some of the things an audit looks into:

- An audit involves performing procedures to obtain audit evidence about the amounts and disclosures in the financial statements.

- The procedures selected depend on the auditor's judgment, including the assessment of the risks of material misstatement of the financial statements, whether due to fraud or error.

- In making those risk assessments, the auditor considers internal control relevant to the entity's preparation and fair presentation of the financial statements in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the entity's internal control.

In addition, an audit also includes evaluating the appropriateness of accounting policies used and the reasonableness of accounting estimates made by management, as well as evaluating the overall presentation of the financial statements.

In IESO's 2016 financial statements, KPMG stated: "We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our audit opinion".

This was followed by a statement of their unqualified opinion:

- In our opinion, the financial statements present fairly, in all material respects, the financial position of IESO as at December 31, 2016, and its results of operations and the changes in its new debt and its cash flows for the year then ended in accordance with Canadian public sector accounting standards.

This is taken directly from our 2016 financial statements, which are publically available.

So the "unqualified opinion" is basically accounting-speak to say that the audit partner undertook the thorough audit process, applied the appropriate standards and believes the financial statements follow the appropriate accounting standard and fairly and accurately represent IESO's financial position at year-end.

KPMG also found that US GAAP was an appropriate accounting framework to look to for guidance on rate-regulated operations, since PSAS was silent on the issue. And that regulatory assets under ASC 980 is not an exemption from the application of US GAAP.

Finally, KPMG's research also found that the accounting change would bring IESO in line with the majority of its ISO peers across North America.

DRAFT

When we considered the results of our own and KPMG's research, along with the fact that the change would have no impact on IESO's costs, or have any financial impact on electricity ratepayers, we went ahead and made the accounting change.

3. To Ontario Power Generation (OPG), can you explain what sort of external expertise OPG enlisted?

And, can you explain what counsel these experts provided with respect to the structure that has been set up and the accounting that will be used?

Response

Ontario Power Generation's Qualifications

Let me make a few remarks about Ontario Power Generation's (OPG) qualifications as the financing manager of Ontario's Fair Hydro Plan.

OPG currently manages a $20 billion nuclear fund and $15 billion in pension funds and as an entity regulated by the Ontario Energy Board (OEB), OPG also has extensive experience with regulatory deferral and variance accounts.

In addition, OPG has the breadth and demonstrated track record in the financial markets including the highly successful inaugural public debt offering earlier in October, private placement of insurance linked bonds, participation in securitization programs, and the very successful project debt issuances tied to new hydroelectric developments.

These financing initiatives have been well received by investors at a reasonable cost to OPG. The innovative, cost saving and precedent setting aspects of these financing structures have resulted in international recognition.

OPG has also developed solid investor relationships and has a large investor base in the structured finance space who would be the target market for financing Ontario's Fair Hydro Plan initiative.

For example, the Lower Mattagami project financing attracted a broad investor base of about 80 institutional investors, including major investors in the Canadian power and utility bonds market.

In terms of administration, OPG is currently managing its own Corporate public debt and three project financing programs totaling more than $2 billion, as well as two commercial paper programs.

Role of Ontario Power Generation as the Finance Service Manager

OPG is acting as the Finance Service Manager (FSM) as prescribed under the Ontario Fair Hydro legislation, assigned to develop the financing plans and manage the Fair Hydro Trust, which manages the debt obligations associated with Global Adjustment (GA) refinancing.

In December we set up the Fair Hydro Trust, which is ring fenced from the generation activities of OPG in an effort to reflect the unique nature of this business and not co-mingle the operational activities of the two businesses.

The financing requirements are determined by the legislation and the reduction in consumers' bills, and are funded through the Trust.

OPG is responsible for arranging for third party debt to finance the purchase of the regulatory asset from IESO. This funding will be supplemented by both the Province and OPG.

- The first tranche of public debt was issued in early February 2018.

- The Trust will continue to borrow funds through the debt markets 3-4 times each year to purchase assets from Independent Electricity System Operate (IESO).

OPG is uniquely positioned to be the financing manager of Ontario's Fair Hydro Plan as we understand the supply and demand characteristics of the market. As previously mentioned, we regularly interact with the Ontario Energy Board (OEB) and the IESO, and we have experience in Treasury operations in the marketplace including relationships with credit rating agencies.

There are three specific areas that we supplemented our team with external resources.

- First, was legal advice to ensure there is clear alignment between the legislation and the Trust and its related requirements and obligations.

- The second was financing advice directed at the capital markets again to ensure alignment with the markets focused on achieving the most cost effective financing to ensure the rate payer impact is minimized.

- The third was accounting advice directed at the set up and governance of the Trust and then to achieve the transparency in reporting that is critical.

Greater Transparency

As has been mentioned OPG has strong capabilities across these areas, but felt it was prudent to ensure that all steps are taken to establish the Trust and its activities in a clear and transparent manner.

The structure that has been set up in fact ensures a high level of transparency.

As these deferred amounts are funded through third party financing, the process by design in financial market space requires disclosure and oversight including credit rating agencies, the OEB, external audit of the Trust itself, additional OPG disclosure in its reports, oversight from lenders through Trust indenture documents.

Ratepayers and taxpayers will be able to clearly see the financial results of the Trust as it relates to the legislation.

Due to OPG's ownership and control over the key activities of the OPG's Fair Hydro Trust, OPG will consolidate the financial results of the Trust in accordance with US GAAP.

OPG will report the financial results of the Trust's operations as part of its regular quarterly and annual reporting process, beginning in March 2018.

The Trust's activities will be clearly reported as a separate segment in OPG's overall results.

OPG's financial reports are audited (currently by ERNST & Young) and filed with the Ontario Securities Commission (OSC) and subject to OSC oversight and a public news release is always issued when the reports are filed.

DRAFT

LONG-FORM MEMBER QUESTION: BALANCED BUDGET

DEPUTY MINISTER SCOTT THOMPSON

Question:

- How is Ontario planning to keep a balanced budget?

Answer:

- TBD: Revisions based on updates related to Q3 Finances once available
- My ministry has been working to execute the government's goal of balancing the budget.
- This started with a plan that was first introduced in the *2010 Budget*, when the province started to recover from the recession.
- Ontario today is projecting a balanced budget for 2017–18 and for the next two years, 2018–19 and 2019–20.
- A balanced budget makes available more investment options to spur economic growth and job creation, and helps protect the programs and services people rely on most, such as health care and education.
- Ontario's plan has five main areas of focus:
    - Maximizing revenues without causing undue tax burdens on Ontarians
    - Managing its expenses without detracting from the quality of social services and health programs
    - Balancing revenues and expenses against each other to manage the debt
    - Funding programs that help Ontarians, and
    - Investing in infrastructure to promote economic growth and job creation.

- I will now address each area in turn.

DRAFT

Revenues:

- The 2016–17 Public Accounts show that Ontario's deficit for last year was $991 million — $3.3 billion lower than projected in the 2016 Budget and $0.5 billion lower than the interim projection in the 2017 Budget.
- Fiscal 2016–17 was the eighth year in a row that the Province has beaten its deficit target.
- This was a result of growth in revenue that exceeded growth in program expenses, and lower-than-forecast interest on debt.
- And so part of the plan to balance the budget involves optimizing assets and maximizing revenues.
- The Public Accounts for 2016–17 show total revenues were $140.7 billion, $2.2 billion higher than the 2016 Budget projection.
- Additionally, Ontario's total revenues are projected to grow from this $140.7 billion in 2016–17 to $158.2 billion in 2019–20.
- This increase represents an average annual growth rate of four per cent.
- The higher revenues for 2016–17 — and the projected growth of revenues through 2019-20 — are largely due to higher-than-expected tax revenues, the optimization of government business enterprises, and transfers from the Government of Canada and other non-tax revenue.

- First, let me address tax revenues.
- Growth in revenues over the medium term is driven mainly by taxation revenue, which is projected to increase by $15.6 billion between 2016–17 and 2019–20, or at an average annual rate of 5.2 per cent.
- For fiscal year 2016–17, tax revenues were $293 million higher than projected, mainly due to higher-than-expected Harmonized Sales Tax revenue, reflecting stronger growth in Ontario household expenditures.

DRAFT

- Secondly, the Government of Ontario is also implementing a multi-year strategy to optimize its assets and maximize its revenues through the sales of shares in Hydro One, LCBO head office lands and Ontario Power Generation's head offices.
- The net revenue gains from the sale of qualifying assets are credited to the Trillium Trust for infrastructure investments, such as roads, bridges and public transit.
- The total amount credited to the Trillium Trust as of March 31, 2017 is $5.3 billion.
- The Province continues to grow and maximize revenues from its government business enterprises, such as Hydro One, Ontario Power Generation, the Liquor Control Board of Ontario and Ontario Lottery and Gaming Corporation.
- The forecast of the income from government business enterprises is projected to grow by $0.7 billion between 2016–17 and 2019–20.
- This projection, at an average annual rate of 3.7 per cent, reflects higher net income overall from government business enterprises.

- Thirdly, Ontario received larger Government of Canada transfers — $145 million higher. This increase reflected new funding for early learning and child care flowing from a bilateral agreement between Ontario and the federal government, as previously reported in the 2017-18 *First Quarter Finances*.
- The forecast for subsequent transfers is based on existing federal-provincial funding agreements.
- Overall transfers are projected to grow by $0.9 billion between 2016–17 and 2019–20, or at an average annual rate of 1.2 per cent.
- This largely reflects projected increases in major ongoing Government of Canada transfers and new funding for early learning and child care, and home care and mental health.

DRAFT

- Finally, the forecast for other non-tax revenue is based on projections provided by government ministries and agencies.
- The outlook for other non-tax revenues is projected to increase by $0.4 billion between 2016–17 and 2019–20, or at an average annual rate of 0.7 per cent.
- This increase mainly reflects:
    - Fiscally neutral revenues from carbon allowance proceeds starting in 2017–18
    - Fees, donations and other revenues for the broader public sector, and
    - Revenues from vehicle and driver registration fees.
- This is partially offset by lower revenues due to the removal of the debt retirement charge from commercial, industrial and all other electricity users in 2018–19, and the projected net impact of the government's planned asset optimization strategy.
- Notably, the increase in Ontario's revenue is not attributable to increases in personal tax returns.

Expenses:

- Let me now address expenses.
- The Public Accounts for 2016–17 show that total spending was $141.7 billion, $100 million lower than the 2016 Budget projection.
- Program spending expenses accounted for $130 billion.
- Interest on debt, at $11.7 billion, was down $0.7 billion from the 2016 Budget projection.

- Going forward, program expenses are projected to grow from $130 billion in 2016–17 to $144.2 billion in 2019–20.
- This represents an average annual growth rate of 3.5 per cent.
- Growth in program expenses over the medium term is driven by investments to help the people of Ontario, such as health care, supports for seniors, the

DRAFT

introduction of pharmacare for children and youth under OHIP+, electricity cost relief programs under the Fair Hydro Plan, and new initiatives for small businesses that will lower costs and support growth.

- Interest on debt expenses is projected to grow from $11.7 billion in 2016–17 to $13.3 billion in 2019–20.
- This increase is due to borrowing for capital spending and interest rates that are forecast to rise.
- This represents an average annual growth rate of 4.2 per cent.
- Interest on debt is projected to grow due to borrowing for capital spending and interest rates that are forecast to rise.
- Total expenses are projected to grow from $141.7 billion in 2016–17 to $157.4 billion in 2019–20.
- This represents a manageable average annual growth rate of 3.6 per cent.

Balancing Revenues and Expenses:

- Let me summarize the revenues and expenses together.
- Revenue is forecast to increase from $140.7 billion in 2016–17 to $158.2 billion in 2019–20.
- Total expenses are projected to increase from $141.7 billion to $157.4 billion over the same period.
- Based on these estimates, the Ontario government will effectively balance the budget over the next four years.

Funding Programs, Investing in Infrastructure, Promoting Growth:

- Through targeted, measured and fiscally responsible decisions, Ontario has restored its fiscal and economic strength.
- Strategic investments have helped stimulate the Ontario economy to rise from the depths of recession.

DRAFT

- Over the past three years, Ontario's economy has grown faster than Canada's and that of all other G7 countries.
- The benefits of balanced budgets and a strong economy are already providing the government with the fiscal flexibility to do more to help Ontarians.
- This flexibility enables the government to provide more investments to spur economic growth, job creation and support services people use every day.
- Notable program investments include:
    - $145 million in annual funding to increase the accessibility and affordability of high-quality licensed child care and early learning opportunities
    - $245 million over three years to lower costs for small businesses
    - $155 million over three years to support seniors to remain independent, connected, engaged, healthy and safe
    - $245 million over three years to lower costs for small businesses, create opportunities for growth and simplify their interactions with government.
    - An increase of $1 million in 2017–18 — and then $5 million in 2018–19 and beyond — to provide additional funding through the Northern Communities Grant component of the Ontario Municipal Partnership Fund.

- Growth in program expenses also includes investments in infrastructure.
- In fact, Ontario is making the biggest investment in public infrastructure in its history.
- The government's long-term infrastructure plan to invest about $190 million over 13 years, starting in 2014–15, will contribute to the growth of the economy.
- The government's historic investment in infrastructure includes:
    - $31.5 billion over 10 years for public transit, transportation and other priority infrastructure projects across Ontario
    - $11 billion over 10 years in capital grants to school boards, and
    - $900 million over 10 years for critical maintenance repairs and upgrades.

DRAFT

- These investments will not only create jobs, support business innovation and help draw investors from abroad — they will also contribute to the provincial economy growing at a faster rate than the change in its net debt.
- Investments such as these have helped to stimulate the Ontario economy, which has continued to grow despite an uncertain global climate.
- From 2014 to 2016, Ontario outpaced all G7 countries with its real GDP growth.
- As the result of a balanced budget and Ontario's strong economic growth, the net debt-to-GDP ratio is declining.
- In the 2017 Budget, the Ontario government set an interim net debt-to-GDP ratio target of 35 per cent by 2023–24. The government is now projecting to meet this target a year earlier.
- We continue to maintain a target of reducing the net debt-to-GDP ratio to its pre-recession level of 27 per cent, currently projected to be achieved by 2029–30.

Conclusion:

- In September, the Public Accounts of Ontario 2016–17 reported that the 2016–17 deficit was $1.0 billion, an improvement of $3.3 billion from the $4.3 billion projection in the 2016 Budget.
- Total revenue for 2016–17 came in at $140.7 billion, which was $2.2 billion higher than the 2016 Budget.
- This was largely due to higher-than-expected tax revenues, the optimization of government business enterprises and transfers from the Government of Canada and other non-tax revenue.
- Total spending for 2016–17 came in at $141.7 billion, which was $0.1 billion lower than the 2016 Budget.
- Program spending was $130.0 billion, up $0.6 billion from the plan of $129.4 billion.

DRAFT

- Spending in health, children's and social services, and other programs was higher than planned.
- Interest on debt expense was $11.7 billion, $0.7 billion below the plan of $12.4 billion, due mainly to lower-than-forecast interest rates, and cost-effective borrowing and debt management.
- In conclusion, the Ontario government is on track to balance the budget this fiscal year — 2017–18 — as well as the next two fiscal years.
- Prudently managing the province's finances is one of my ministry's responsibilities to the people of Ontario.
- Thank you.

DRAFT

LONG-FORM MEMBER QUESTION: CREDIT RATING

DEPUTY MINISTER SCOTT THOMPSON

Question:

- What are the plans to keep Ontario's credit rating in good standing?

Answer:

- TBD: Revisions based on updates related to Q3 Finances, once available.

Introduction:

- Following the release of the 2017 Ontario Budget, four credit rating agencies – Moody's, DBRS, Standard & Poor's and Fitch – confirmed Ontario's healthy long-term credit ratings. This reflects rating agencies' confidence in the Government's fiscal plan – and its ability to grow Ontario's economy and create jobs for Ontarians.
- Let me summarize the reports by each of the credit rating agencies.

- First, Moody's.
- Moody's cautioned that the Ontario Fair Hydro Plan, announced in March 2017 to reduce electricity prices, adds credit pressure due to the direct financial impact of the sales tax rebate and the indirect impact of an elevated debt of a provincially owned entity.
- Overall, however, Moody's said its stable outlook for Ontario "reflects Moody's forecast that, as the province moves towards and achieves balanced budgets,

DRAFT

the province's debt burden will improve marginally and interest expense will remain manageable across the medium-term….The policy decision to borrow for infrastructure spending at a time of historically low interest rates, combined with the prudent debt management practices outlined above, has helped to support the province's Aa2 rating."

- Moody's positive outlook for Ontario's credit rating is based on the following credit strengths: prudent debt management, an institutional framework providing significant fiscal policy flexibility, and a large diversified economy supporting a broad and productive tax base.

- Next, DBRS.
- DBRS noted that Ontario's credit profile is stable, but it will remain vulnerable to an economic shock in the absence of a more concerted effort to reduce debt.
- DBRS also commented on the potential downside risks to the economic outlook due to uncertainty regarding the potential renegotiation of NAFTA and U.S. tax policy, as well as political integration in Europe.
- Finally, it noted that elevated household debt and housing market dynamics leave Ontario particularly vulnerable in the event of an unforeseen shock that results in significant job losses or a rapid increase in interest rates.
- Despite these concerns, DBRS expects Ontario's credit ratings to remain stable.
- DBRS said of Ontario, its "ratings remain well supported by the province's large and diversified economy, improving budgetary results and declining debt burden" and that "the return to balance is encouraging and suggests that there will likely be some modest improvement in the Province's credit metrics over the medium term."
- DBRS concluded by saying that Ontario's stable credit profile stems from strength in the underlying economy, which provided incremental revenue more than sufficient to offset the in-year spending pressures.

- Standard & Poor's is next.

- Standard & Poor's believed that Ontario's credit profile is strengthening.
- But before considering a positive rating action, they would need to see sustained improvement in budgetary performance leading to near-balanced after-capital results, coupled with ongoing declines in the tax-supported debt burden, making Ontario's finances more comparable with peers in the 'AA' category.
- Standard and Poor's said it "expects the province of Ontario to benefit from solid economic growth over the next two years, allowing it to generate additional revenues to fund its capital spending plan and stabilize its finances following its eight-year path back to a balanced operating budget."
- Standard & Poor's concluded by saying that its stable outlook reflects expectations that, within the next two years, the Province will sustain a more balanced budgetary performance, including steady liquidity metrics, modest after-capital deficits, and a high but slowly declining debt burden.

- Finally there is Fitch.
- Fitch's report stated that the Province has demonstrated the ability to exert considerable expenditure restraint while instituting revenue changes to achieve its deficit reduction objectives.
- It said Ontario's 'AA-' rating is supported by its wealth, diversified economy and generally sound financial management.
- Fitch's rating reflected the Province's very strong and diversified economy, strong financial management, very predictable and well-balanced institutional framework and low contingent liabilities.
- Ontario's credit profile is stable.

- For Ontario's credit profile to grow in strength, the Province will need to do several things.
- It will need to show a track record of consistent operating surpluses and balanced or near-balanced after-capital results, coupled with continuing declines in direct and tax-supported debt burdens.

DRAFT

- **To that end, Ontario has the following plan to ensure that its credit rating remains in good standing.** It is:
    - Optimizing assets and revenues without causing undue tax burdens on Ontarians.
    - Managing expenses without detracting from the quality of social and health services.
    - Balancing revenues and expenses against each other to manage the debt, and
    - Maintaining a reserve fund to mitigate unforeseen financial risks.
- I will now go into more detail on each of these points.

Revenues:

- Total revenues for 2016–17 were $140.7 billion, $2.2 billion higher than the 2016 Budget.
- Additionally, Ontario's total revenues are projected to grow from $140.7 billion in 2016–17 to $158.2 billion in 2019–20.
- This represents an average annual growth rate of four per cent.
- The higher revenues for 2016–17 and the projected growth of revenues through 2019–20 are largely due to three factors:
    - Higher-than-expected tax revenues.
    - Income from government business enterprises and fees, and
    - Transfers from the Government of Canada and other non-tax revenue.
- Growth in revenues over the medium term is driven mainly by taxation revenue, which is projected to increase by $15.6 billion between 2016–17 and 2019–20, or at an average annual rate of 5.2 per cent. The taxation outlook reflects current revenue information and projections for the Ontario economy. Tax revenues were $293 million higher than projected in 2016–17, mainly due to higher-than-expected Harmonized Sales Tax revenue, reflecting stronger growth in Ontario household expenditures.

DRAFT

- The Government of Ontario is also implementing a multi-year strategy to optimize its assets and maximize its revenues through the sales of Hydro One, LCBO head office lands and Ontario Power Generation's head offices. The total amount credited to the Trillium Trust as of March 31, 2017 is $5.3 billion. The net revenue gains from the sale of qualifying assets will be credited to the Trillium Trust for infrastructure investments, such as roads, bridges and public transit, under the Moving Ontario Forward plan. In 2016–17, the Trillium Trust was drawn down by approximately $260 million to help support these projects.
- Finally, Ontario received larger Government of Canada transfers — $145 million higher. This increase reflected new funding for early learning and child care flowing from a bilateral agreement between Ontario and the federal government, as previously reported in the 2017–18 *First Quarter Finances*.
- Notably, the increase in Ontario's revenue is not attributable to increases in personal tax returns.

Expenses:

- Ontario's total spending for 2016–17 was $141.7 billion, $100 million lower than the 2016 Budget.
- Program spending expenses accounted for $130.0 billion.
- Interest on debt expense accounted for $11.7 billion – $0.7 billion below the plan of $12.4 billion.
- This drop was due mainly to lower-than-forecast interest rates, and Ontario's cost-effective borrowing and debt management.
- Going forward, Ontario program expenses are projected to grow from $130.0 billion in 2016–17 to $144.2 billion in 2019–20.
- This represents an average annual growth rate of 3.5 per cent.
- Interest on debt expenses is projected to grow from $11.7 billion in 2016–17 to $13.3 billion in 2019–20.
- This represents an average annual growth rate of 4.2 per cent.

DRAFT

- Total expenses are projected to grow from $141.7 billion in 2016–17 to $157.4 billion in 2019–20.
- This represents a manageable average annual growth rate of 3.6 per cent.
- These increases align with the government's plans for modernizing the public services people rely on every day.
- They are also fiscally sustainable.
- In short, the Ontario government has been managing its program expenses as well as its interest-on-debt expenses.

Balancing Revenues and Expenses:

- To bring the revenues and expenses together…
- Revenue is forecast to increase from $140.7 billion in 2016–17 to $158.2 billion in 2019–20.
- Total expenses are projected to increase from $141.7 billion to $157.4 billion over the same period.
- Based on these estimates, the Ontario government will effectively balance the budget over the next four years.

The Reserve:

- I will now take a moment to address the Province's financial reserve and contingency funds.
- As required under the *Fiscal Transparency and Accountability Act*, Ontario's fiscal plan incorporates prudence in the form of a reserve to protect the fiscal outlook against unforeseen adverse changes in revenue and expenses.
- The current fiscal outlook includes a reserve of $0.5 billion in 2017–18, $0.5 billion in 2018–19 and $0.8 billion in 2019–20.
- The current outlook also maintains contingency funds to help mitigate expense risks that may otherwise negatively impact Ontario's fiscal performance — particularly in cases where health and safety may be compromised, services to the most vulnerable are jeopardized, or natural disasters occur.

DRAFT

Conclusion:

- Credit ratings provide an assessment of a government's credit-worthiness.
- They are a reflection largely based on its capacity to generate revenue to service its debt.
- They consider factors such as a government's economic resources and prospects, industrial and institutional strengths, financial health, and susceptibility to major risks.
- As you know, a credit rating affects the cost of future government borrowing with a lower rating, indicating that an agency believes there is a relatively higher risk that a government will default on its debt.
- Accordingly, investors will lend to the government only in return for a greater risk premium, in the form of higher interest rates.
- A rating downgrade could also shrink the potential market for a government's debt, because some investors will not hold debt below a certain rating.
- Therefore, it is critical that Ontario maintain its credit rating in good standing to manage its debt and preserve its fiscal health.
- Ontario's plan to keep its credit rating in good standing involves the following strategies:
    - Optimizing assets and revenues without causing undue tax burdens on Ontarians.
    - Prudently managing expenses without diminishing the quality of Ontario's services and programs.
    - Balancing revenues and expenses against each other to manage the debt, and
    - Preserving a reserve fund to mitigate unforeseen financial risks.

- Seen as a whole, these strategies will ensure confidence in Ontario's credit-worthiness through its ability to effectively manage its debt obligations.

DRAFT

- Protecting the financing of Ontario's public services will continue to be one of my ministry's highest priorities.
- Thank you.

DRAFT

LONG-FORM MEMBER QUESTION: DEBT MANAGEMENT

DEPUTY MINISTER SCOTT THOMPSON

Question

- What is Ontario's debt management plan?

Answer

- TBD: Revisions based on updates related to Q3 Finances, once available.
- The Ministry of Finance has a track record of responsible fiscal management and remains committed to executing the government's goal of reducing the provincial debt burden.
- The government's plan to manage the debt focuses on three key areas:
    - Decreasing the net debt-to-GDP ratio.
    - Decreasing the interest on debt-to-revenue ratio.
    - Utilizing term extensions.
- I would like to provide an update of progress on this goal.

Net Debt-to GDP Ratio:

- A key indicator of the government's ability to manage its debt is the level of debt relative to the size of the economy, known as the net debt-to-GDP ratio.
- The ratio of net government debt to the market value of goods and services produced by an economy — known as gross domestic product or GDP — measures the relationship between a government's debt obligations and its capacity to raise the funds needed to meet them.
- It is an indicator of the relative burden of government debt on the economy.

DRAFT

- If the amount of debt that must be repaid relative to the value of the GDP is rising — in other words, if the ratio is rising — it means the government's net debt is growing faster than the provincial economy, and becoming an increasing burden.

- Before considering Ontario's net debt-to-GDP ratio, let me first discuss the components.
- First, I want to address Ontario's net debt situation.
- Ontario's net debt increased from $295.4 billion as of March 31, 2016 to $301.6 billion as of March 31, 2017.
- It is projected to increase to $311.7 billion by March 31, 2018 and to $323 billion by March 31, 2019.
- About 62 per cent of the increase in net debt from 2008–09 to 2016–17 was due to the deficit.
- The remaining net debt increase was a result of investments in capital assets.
- Balanced budgets from 2017–18 onwards will ensure that increases in net debt will be limited to net investments in capital assets such as roads, bridges, hospitals and schools.
- In other words, the net debt is increasing at a manageable rate, and a smaller portion of it is collected from the deficit.

- Next, let me briefly address the GDP.
- The government's investments in capital assets increased economic growth and helped support Ontario's GDP to advance more quickly than debt, helping the government achieve its net debt-to-GDP targets.
- Over the past three years, Ontario's economy has grown faster than Canada's and that of all other G7 countries.
- In fact, Ontario's real GDP is now 21.3 per cent above its recessionary low.
- Over the 2017–20 period, the Ministry of Finance is forecasting average annual growth of 2.2 per cent in Ontario's real GDP.

DRAFT

- Government investments have helped stimulate the Ontario economy to rise from the depths of the recession, and it is now enjoying a period of economic strength and growth.

- I briefly addressed the net debt and GDP situations separately; now let me bring them together.
- The 2017 Fall Economic Statement reported that Ontario's net debt-to-GDP ratio is lower than previously forecast.
- The net debt-to-GDP ratio peaked at 39.3 per cent in 2014–15 and has been declining ever since, as a result of Ontario's economic growth and the government's progress towards a balanced budget in 2017–18.
- It is now projected to be 37.3 per cent at the end of fiscal 2017–18, 0.2 per cent lower than was forecast in the 2017 Budget.
- This ratio is projected to continue to decline to 37.1 per cent in 2018–19.
- In the 2017 Budget, the government set an interim net debt-to-GDP ratio target of 35 per cent by 2023–24, and re-stated its commitment to reduce the net debt-to-GDP ratio to its pre-recession level of 27 per cent by 2029–30.
- A declining net debt-to-GDP ratio, together with low interest on debt costs as a percentage of revenues, positions the province for long-term sustainability.
- It also allows for a greater proportion of government spending to be invested in programs and services.

- The reduction of debt is complemented by Ontario's investments in infrastructure, which are supporting economic growth and job creation.
- In fact, Ontario is making the biggest investment in public infrastructure in its history.
- The government's long-term infrastructure plan to invest about $190 million over 13 years, starting in 2014–15, will contribute to the growth of the economy.

DRAFT

- These investments will not only create jobs, support business innovation and draw investors from abroad — they will also contribute to the growth of the provincial economy at a faster rate than the change in its net debt.
- The positive impact of these capital investments on the province's economy was confirmed by the Centre for Spatial Economics.
- It recently reported that, over the long term, GDP in Ontario increases by up to $6 for every dollar of public infrastructure spending.
- The government's economic strategy was further supported in a report by the International Monetary Fund in June 2016, which recommended that Canadian "fiscal policy should be pro-growth."
- Christine Lagarde, the International Monetary Fund's Managing Director, expressed her support for the government's growth strategy and agreed that investment in infrastructure should be an essential element.
- In summary, Ontario's net debt-to-GDP ratio will gradually diminish due to the GDP increasing at a faster rate than net debt.
- This will allow the government to continue to move towards its 27 per cent net debt-to-GDP target.

Interest on Debt-to-Revenue Ratio:

- Another major thrust of Ontario's plan to manage its debt centres on the interest on debt-to-revenue ratio.
- This is another key indicator of the government's ability to meet its financial obligations.
- Through prudent and cost-effective debt management, the government has consistently kept interest on debt costs below budget projections.
- The 2016–17 Public Accounts show that Ontario's deficit for the last fiscal year was $991 million — $3.3 billion lower than projected in the 2016 Budget and half a billion lower than the interim deficit projection in the 2017 Budget.
- This smaller-than-projected deficit is due to stronger revenues, and reflects positively on the debt-to-revenue ratio.

DRAFT

- Ontario's interest on debt for 2017–18 is forecast to be $12.2 billion.
- The interest on debt-to-revenue ratio is forecast to be 8.2 per cent in 2017–18, 8.3 per cent in 2018–19 and 8.4 per cent in 2019–20.
- The savings on interest on debt have improved a key measure of the affordability of debt.
- For example, the 2010 Budget forecast that, by 2017–18, the Province would have to spend 11.3 cents of every revenue dollar received on interest.
- By the 2017 Budget, the amount needed for interest payments had dropped significantly.
- The current forecast is 3.1 cents lower — 8.2 cents of interest costs for every dollar of revenue.
- This ratio is lower than it was in the 1990s and 2000s, and is forecast to remain lower through Ontario's outlook period to 2019–20.

Term Extension on Debt:

- Finally, record-low interest rates have enabled the government to keep its annual interest expense steady.
- However, the global decline in interest rates over the last 25 years could not continue indefinitely.
- The Bank of Canada has increased interest rates — twice last year and already once this year.
- Ontario has taken necessary precautions to protect the financing of the province's public services, now that interest rates are widely understood to be on a net rising trajectory.
- To protect the province from these increases, the government has continued to extend the term of its debt.
- Term extension has allowed the government to lock in low interest rates for a longer period, which reduces refinancing risks.
- Extending the term also helps offset the impact of expected higher interest rates on interest on debt costs.

DRAFT

- Going back to the beginning of fiscal 2010–11, Ontario has issued $68.6 billion in bonds longer than 30 years to lock in low rates.
- As a result, the weighted-average term to maturity of long-term provincial debt issued has been extended significantly, from 8.6 years in 2008–09 to 13.9 years in 2016–17.
- For 2017–18, it stood at 12.8 years as of October 31, 2017.
- If or when interest rates continue to rise, the government will assess whether it will remain cost-effective over the long term to continue to extend the term of its debt.

Conclusion:

- As I said at the outset, the Ontario government has a track record of responsible fiscal management and remains committed to executing its goal of reducing the provincial debt burden.
- To conclude, the government's plan to manage the debt focuses on three key areas:
    - One, decreasing the net debt-to-GDP ratio.
    - Two, decreasing the interest on debt-to-revenue ratio.
    - And three, extending the term on its debt.
- As I have stated, the government has decreased the net debt-to-GDP ratio.
- In the 2017 Budget and the 2017 Fall Economic Statement, Ontario stated that the government continues to maintain a target of reducing the net debt-to-GDP ratio to its pre-recession level of 27 per cent, currently projected for 2029-2030, together with an interim target of 35 per cent by 2023-2024.
- I also explained how the government has decreased the interest on debt-to-revenue ratio.
- The 2010 Budget forecast that, by 2017–18, the Province would have to spend 11.3 cents of every revenue dollar received on interest.
- However, by the 2017 Budget, the amount needed for interest payments had dropped.

DRAFT

- The current forecast is 3.1 cents lower — at 8.2 cents of interest costs for every dollar of revenue.
- Finally, I explained how the government has taken advantage of low-interest rates and extended the term on its debt.
- The weighted-average term to maturity of long-term provincial debt issued has been extended significantly, from 8.6 years in 2008–09 to 13.9 years in 2016–17, and 12.8 years for 2017–18 as of October 31, 2017.
- In short, Ontario's economy remains strong.
- Protecting the financing of the province's public services will continue to be one of the government's highest priorities.
- Thank you.

DRAFT

LONG-FORM MEMBER QUESTION: FAIR HYDRO PLAN

DEPUTY MINISTER SCOTT THOMPSON

Question:

- What is the financial impact of the Fair Hydro Plan's electricity rate reduction on the Province's budget?

Answer:

- As Deputy Minister of the Ministry of Finance, I will speak specifically to the financial implications of the Fair Hydro Plan on the Province's budget and financial statements.

Ontario's Fair Hydro Plan

- To address issues related to rising electricity costs, especially for families and small businesses, the government announced Ontario's Fair Hydro Plan on March 2, 2017.
- As part of the plan, electricity bills were reduced by 25 per cent on average, or about $41 per month, for all Ontario residents as of July 1, 2017.
- The plan included several important measures.
- First, let me discuss the refinancing of the Global Adjustment.
- The Global Adjustment is the cost of building new electricity infrastructure in the province and maintaining existing resources.
- The majority of the province's electricity generators currently have 20-year contracts.
- Many of these generators will be able to operate past their contract term.

DRAFT

- In other words, they would still generate electricity after the upfront capital costs have been paid for by the current generation of ratepayers.
- The Government of Ontario believed that present-day consumers should not be burdened with paying for a disproportionate share of investments that provide benefits for decades to come.
- To relieve the current burden on ratepayers, and share costs more fairly, a portion of the Global Adjustment is being refinanced over a longer period.
- This is providing significant and immediate rate relief to ratepayers by spreading the cost of electricity investments over time, to better reflect the expected lifecycle of the infrastructure that has been built.
- According to estimates provided when the Fair Hydro Plan was announced, the immediate reduction in the Global Adjustment would be about $2.5 billion per year, on average, over the first 10 years.

- Second, the plan included an expansion of the Industrial Conservation Initiative or ICI.
- The ICI allows participating customers to manage their Global Adjustment costs by reducing demand during peak periods.
- Customers who participate in the ICI, referred to as Class A, pay Global Adjustment based on their percentage contribution to the top five peak Ontario demand hours over a 12-month base period.
- Ontario expanded eligibility for the ICI program by reducing the threshold from 1 MW to 500 kW.
- This measure allows small manufacturers and industrial consumers the opportunity to participate in the ICI and save on their electricity costs.

- A third component of the plan is Ontario’s rebate for electricity consumers.

DRAFT

- The government provided an eight per cent Ontario Rebate for Electricity Consumers on electricity bills, equivalent to the amount of the provincial portion of the Harmonized Sales Tax.
- This change was effective January 1, 2017.

- A fourth and important part of the plan allows future increases to hydro bills to be set by regulation.
- This enables the government to hold increases, for four years, to the rate of inflation.
- While rates will rise gradually over time, the government remains committed to avoiding sharp increases.

Assisting the Most Vulnerable Electricity Consumers

- The government has introduced other measures to help the most vulnerable electricity consumers.
- It did this by introducing legislation to enhance some existing programs or introduce new initiatives.
- In particular it enhanced the Ontario Electricity Support Program.
- The Ontario Electricity Support Program is an income-tested, application-based program that lowers electricity costs for the most vulnerable consumers.
- In practice, it provides them with a rebate directly on their bills.
- Effective May 1, 2017, Ontario increased the program by 50 per cent, meaning that single, low-income consumers would get an increase in their rebates ranging from $180 to $276 per year.
- According to the 2017 Provincial Expenditure Estimates, the program is anticipated to cost $140 million in 2017–18.
- This amount will be covered by provincial revenues.

DRAFT

- As well, as part of the plan, Ontario has enhanced the Rural or Remote Rate Protection Program, or RRRP.
- The RRRP provides a rate subsidy to rural and remote residential customers who face higher distribution costs.
- As part of the Ontario Fair Hydro Plan, the Province expanded the program to provide distribution delivery charge relief to about 800,000 customers.
- According to the 2017 Provincial Expenditure Estimates, the program is anticipated to cost $344 million in 2017–18, which will also be covered by provincial revenues.
- Ontario is also helping customers through local distribution companies.

- In October 2017, the Province launched the $100 million Affordability Fund.
- The Affordability Fund provides local distribution companies with an additional tool to help customers in need.
- Local distribution companies can use the fund to provide support to qualifying customers for energy efficiency improvements, to help them reduce their future electricity bills.
- The Affordability Fund is paid through provincial revenues.

- Finally, Indigenous communities in Ontario are also receiving assistance through the First Nations On-Reserve Delivery Credit.
- In 2016, the Ontario Energy Board engaged with First Nations, including remote communities, the distributors serving them and consumer groups.
- Following the engagement process, the board recommended to the Government of Ontario the elimination of the delivery charge for all on-reserve First Nations residential customers.
- The board also recommended removing the monthly service charge for customers of licensed distributors that charge a bundled rate.

DRAFT

- The board estimates this would provide residential customers an average monthly benefit of $85.
- According to the 2017 Provincial Expenditure Estimates, the credit is anticipated to cost $15 million in 2017–18, which will be funded by provincial revenues.

- In summary, these new measures will cost the government up to $2.5 billion over the next three years.
- The cost is about $500 million in 2017–18, based on a part-year implementation, according to the 2017 Provincial Expenditure Estimates.

Conclusion:

- Taken together, these changes are delivering the single-largest reduction to electricity rates in Ontario's history.
- For all residential consumers in the province, electricity bills have been reduced by 25 per cent on average, or about $41 per month, as of July 1, 2017.
- People with low incomes and those living in eligible rural or remote communities are receiving even greater reductions, as much as 40 to 50 per cent.
- Approximately 500,000 small businesses and farms are also benefitting from the changes.
- On-reserve First Nation residential customers of licensed distributors are getting a 100 per cent credit on the delivery line of their bills.
- Although hydro rate relief costs were additions to the fiscal framework, the government continues to project a balanced budget for 2017-18, and will provide a full update on its fiscal plan in the spring budget.

DRAFT

TIPS FOR PRESENTING AT SCOPA

Tips for Addressing Committee Members:

Note: Tips are applicable for addressing both Committee Members and media.

- When speaking be mindful of what you say – the proceedings are recorded and there's no such thing as "off the record."

- Adhere to the scripted remarks and prepared Q&As. Do not embellish and ***when in doubt, leave it out.***

    - Be sure you understand the question being asked (it's ok to ask for clarification) and Do NOT answer something you're not 100% sure of.

- If you do not have the response, you may advise Committee Members that the matter needs to be redirected to another ministry, or that you will get the requested information by saying, "I'll look into what is possible to provide."

- Be mindful of only addressing questions/issues that relate directly to the TBS.

- It is acceptable to decline to answer an unrelated question by noting that you are not clear of its relevance to TBS, and that you are prepared to address matters related to the ministry.

- If caught off guard, breathe, listen, work to understand the question, or ask for clarification.

    - Ask the questioner 'Excuse me' or 'I beg your pardon?'
    - Ask the questioner 'Can you kindly help me understand the context of the question/or what you just said?'

- If possible, use a bridging statement to get to your key message/prepared response. (See Appendix A).

- Do not offer personal opinions. Stick to the facts:

    - Leave off qualifiers like "I think" "I feel," and "I believe" which represents an opinion. To sound confident and assured, be mindful not to use qualifiers.
    - Do not use 'I assure you."

- Offer examples of success whenever possible.

Body Language, Tone:

- Be aware of how you come across. There is no benefit to being seen as defensive, argumentative, or unresponsive.

- Project an image of openness, honesty, and empathy.

- Remember to breathe deeply and speak slowly.

    - Controlling your breathing helps deal with the stress.
    - Take several deep breaths as you sit down and get organized.
    - Ahead of appearance take a few minutes in a quiet spot to breathe slowly and deeply.
    - "Super Hero Pose" – stand with your legs shoulder width apart, hands on hips, shoulders back. Do this for two minutes. It helps mentally prepare you ahead of having to speak.

- Use your hands while talking to look natural and help release anxiety. (Note palms up is a subconscious message to those looking at you that you are open and have nothing to hide)

- Avoid body language leakage—those involuntary movements that indicate you're nervous or stressed - e.g. head nodding, swallowing, and pursing your lips.

- Do not touch your face with your hands.

- Avoid repeating negative words that members use in questions. Doing so indicates you accept the negative premise.

- If you feel overwhelmed while speaking in front of an audience, recalibrate by breathing and pausing.

What-Ifs:

1. What if you don't want to answer the question, but you have to say something?

    - Offer a credible reason why you are unwilling to answer the question and identify what you prefer to discuss.

2. What if you're asked for hard numbers, and you don't have the answer?

- Explain, “I want to be absolutely precise and specific, so I will need to get back to you with the exact number”

- Words like “precise,” “specific,” and “exact” convey that the question has been taken seriously.

3. What if you don’t know the answer, but a colleague who is with you may know it?

   - If you need help from the other ADMs, open your response with ‘In a moment I’m going to call on my colleague to get into more detail about this…’ This gives the other TBS representative time to know they’ll be called upon.

   - Briefly discuss a related subject, then pass the question.

4. What if you need to pause?

   - If you have said absolutely everything you need to say, then let there be a pause.

   - Remember it’s not up to you to keep the proceedings going. That’s the Chair’s job. They may intentionally leave dead air in the hopes that you’ll jump in to fill it by saying something you hadn’t intended to.

5. What if the answer is confidential?

   - Explain that confidentiality rules must be respected, so you cannot directly address the issue at hand. (e.g.: that matter is before the courts).

6. What if it’s a question about a rumour?

   - When asked to respond to a rumour, it is best to not respond at all. Instead, state that your focus is always on fact, not rumour.

7. What if the answer is HR related?

   - Say as little as possible. Commenting on someone’s employment record in a negative context can potentially put you in legal jeopardy.

8. What if you don’t like what you’re saying?

   - Don’t feel obligated to complete a sentence or thought. Simply begin the response again.

9. What if it’s a “yes or no” question?

- Unless the question relates to a sensitive issue, skip “yes” or “no” and go right to the message that would follow.

10. What if it's an "is it possible" question?

    - Avoid speculating and tell the committee – "I'm not able to comment on something that may or may not happen."

11. What if you're interrupted mid-answer?

    - The first time, let it go. The second time, ask the Chair to be allowed to finish your thought.

APPENDIX

A. Sample Bridging Statements

1. "We find the more important issue is…"
2. "I think it would be more accurate (or correct) to say…"
3. "Let me emphasize again…"
4. "What matters most in this situation is…"
5. "While _____ is important, it's also important to remember that…"
6. "It all boils down to this…"
7. "And that reminds me…"
8. "Before we leave this subject, I need to add…"

Pension Asset Expert Advisory Panel

Next Steps

October 14, 2016

Decisions to make

- Panel
  - Number of members
  - Members
  - Chair (and role of chair in decision making)

- Support for panel
  - Report writer
  - Project management
  - Legal support

- Using the results of the report from the Panel

- Other

Composition of Panel

3 Person Panel (all have confirmed interest)
Accounting expert – **Bill Matthews** (Comptroller General Canada)
Actuarial expert - **Uros Karadzic** (Partner EY; member PSAB Task Force)
Governance expert – **Murray Gold** (Partner – Koskie Minsky)

4 Person Panel – 3 person + Chair (interest of all potential chairs not yet confirmed)

Chair – Options under consideration:

Jim Leech – former CEO OTPP

Tricia O'Malley – Accountant, former partner at KPMG, former standard setter

Sheila Fraser – Accountant, former Federal Auditor General

David Smith – Accountant, former Chairman of PwC Canada

Considerations for selection of chair:

- Spokesperson for the panel
- Should the chair be an accountant given the nature of the issue
- Potential conflicts

Support for panel – report writer

- Report writer – requirements:
  - Knowledge of pension accounting and actuarial modelling
  - Writing skills

- Considerations
  - PwC – lead by Lucy Durocher
    - Advisor to province on issue – working on comprehensive position paper but not issuing an opinion – consider whether conflicted
    - Knowledgeable on plans and issues
    - Member of PSAB Task Force
  - Panel hires independent consultant
    - OPS will complete pre-work for procurement of another firm

Support for panel – project management

- Short timeline – Report due by December 31, 2016

- Role
  - Coordination and scheduling
  - Liaison with Province
  - Interim reports
  - Coordination with TBS communications re: final report
  - Administrative reporting

- Potential candidates
  - Process in place to identify senior manager/director from OIAD, supported by others as necessary

Support for panel – legal support

- Existing opinions
  - MAG
  - Oslers
  - Koskie Minsky – Ontario vs. BC

- Additional work required
  - Comparison of Ontario plans to New Brunswick Target Benefit Plans
  - Understanding of governance structures for HOOPP and CAATTPP
    - Multi-employer plans vs jointly sponsored plans

Using the result of the report from the panel

- Provision of report to Auditor General
  - Any other contact with AG during the process
    - Panel may invite AG to discuss issue
    - Panel may request written document of AG's position
- Communications strategy
  - Commitment to make the report public
- Use of Deloitte summary if made available
  - May align or conflict with report of panel

Other

- Valuation opinion
  - Only OTPP? Expected increase in value of OPSEU asset – less than $250 million
  - Start as soon as panel completes its work – procurement timing

- Responding to AG's 2016 Report -- Chapter 2
  - Expecting section on pension accounting; will be released prior to completion of work by panel; impact on panel's work

- Meeting with PSAB Task Force on employee future benefits -- timing

APPENDIX – POTENTIAL PANEL MEMBERS -- BIOS

Potential panel members

Name	Accounting Expertise	Actuarial Expertise	JSPP Governance Expertise	Interest confirmed
Bill Matthews (Comptroller General – Canada)	Yes			Yes
Uros Karadzic (Partner EY – member PSAB Task Force)	Yes	Yes		Yes
Murray Gold (Lawyer – Koskie Minsky)			Yes	Yes
Jim Leech (former CEO OTPP)			Yes	Yes
Tricia O'Malley (former KPMG partner and standard setter)	Yes			No
Sheila Fraser (former Federal Auditor General)	Yes			No
David Smith (former PwC Chairman)	Yes			No
Wayne Strelioff (former AG BC and Sask.)	Yes			Yes
Scott Simpson (Retired - former OTF Actuary)		Yes	Yes	Yes
Andrew Fung (Actuary – Morneau Shepell)		Yes		No
Anne Soh (Actuary – OMERS)		Yes		No
Philip Morse (Actuary – Willis Towers Watson)		Yes		No
Darlene Himick (Professor – U of Ottawa)	Yes			No
Christine Wiedman (Professor – U of Waterloo)	Yes			No

Bill Mathews – Comptroller General of Canada, PSAB Board Member

Bill Matthews was appointed Comptroller General of Canada effective July 17, 2014.

The Comptroller General is responsible for government-wide direction and leadership for financial management, internal audit, federal assets and acquired services. The Comptroller General also supports capacity building and professional development in each of these areas.

Prior to becoming the Comptroller General, Mr. Matthews was Assistant Secretary, Expenditure Management Sector, at the Treasury Board of Canada Secretariat, a position he accepted in 2011.

Before joining the Expenditure Management Sector, Mr. Matthews worked at the Office of the Comptroller General for seven years, serving as the Assistant Comptroller General in the Financial Management and Analysis Sector from 2009 to 2011.

Mr. Matthews is a chartered professional accountant with over 25 years of experience in accounting and financial management in both the public and private sectors.

He holds a Bachelor of Commerce from Dalhousie University.

He also serves as a board member of the Public Sector Accounting Board and the University of Ottawa's Institute for Mental Health Research.

Uros Karadzic – Actuary, Partner EY, Member PSAB Pensions Task Force

Uros Karadzic is a partner and the national leader of the Reward practice. He is a pension actuary located in Toronto, Canada.

His primary focus is in the following areas:

- Pension audit and internal audit;
- Pension and benefit issues in Merger & Acquisition transactions; and
- On-going advisory services on retirement benefit plans.

He has advised clients (Canadian and multinational) on all aspects of their pension and benefit plans, including accounting, funding, design, implementation, management, risk and administration.

Extensive experience in accounting for benefit plan obligations. He works with numerous EY audit teams, the EY Professional Practice (Canadian and Global) and industry bodies on benefit accounting issues.

M&A transaction and integration, supporting clients by clearly identifying and measuring risks and costs. He also advised on appropriate measures to reduce those costs, focusing on post-acquisition funding requirements.

Murray Gold – Koskie Minsky

Murray Gold is a senior pension and benefits partner (see: Chambers Canada 2017 Rankings) with a national pension and benefits practice. He is a leading practitioner in the area of pensions and employee benefits. Mr. Gold was appointed by the Premier of Ontario to Ontario's Technical Advisory Group on Retirement Security in February 2014. In 2008 he served as an expert advisor to the Ontario Expert Commission on Pensions.

Mr. Gold advises governing boards of public sector and jointly trusteed pension and benefits plans across Canada in regard to compliance and best-practice issues. He represents pension boards, as well as plan sponsors, retiree groups and active members in pension litigation in pension regulatory and judicial proceedings.

Mr. Gold is lead counsel for Koskie Minsky in regard to current pension reform initiatives in Newfoundland, New Brunswick, Ontario and Alberta, and in health benefit plan reforms in Ontario and British Columbia. He represented stakeholder interests in insolvency proceedings involving Air Canada in 2003 and 2009, and Stelco in 2005. In 2009 – 2010, he lead Koskie Minsky's team in establishing Canada's first funded postretirement health care trust in the auto sector. This involved the creation of new tax laws governing the tax treatment of postretirement benefit trusts and the negotiation and implementation of arrangements to govern Canada's first funded employee life health trust.

Murray Gold is a Fellow of the Ontario Teachers' Federation, an honor in recognition of his work in regard to the Ontario Teachers' Pension Plan.

Murray served on the Firm's Executive Committee and then as the Firm's Managing Partner from 2012-2016.

Jim Leech – former CEO of Ontario Teacher's Pension Plan

Mr. Leech joined Teachers' in 2001 to lead Teachers' Private Capital and was appointed President & CEO in 2007. Under his leadership, the organization became one of the world's leading private equity investors.

Mr. Leech has gained recognition for his expertise and leadership in the private equity industry and as CEO of several public companies. He has a solid reputation for building businesses and strong management teams and has led large public companies operating and investing in the financial services, real estate and energy industries, as well as start-up technology businesses.

Before joining Teachers', Mr. Leech was president and CEO of Unicorp Canada Corporation, one of Canada's first public merchant banks, and Union Energy Inc., then one of North America's largest integrated energy and pipeline companies. During the 1990s, he guided two start-up technology companies - Disys Corporation and Kasten Chase Applied Research - to the revenue generation stage.

Mr. Leech holds a B.Sc. (Hons Math and Physics) from the Royal Military College of Canada and an MBA from Queen's University. He is also a graduate of the Institute of Corporate Directors.

Mr. Leech is chair of the board of Toronto General and Western Hospital Foundation. He is a member of the board of the MasterCard Foundation and was a founding director of Right To Play International. He has been named Chancellor-designate of Queen's University, effective July 1, 2014 and currently chairs the advisory board of the Queen's School of Business. Mr. Leech also serves on the advisory board for The Learning Partnership, the advisory council for the Toronto Region Board of Trade and the Toronto Financial Services Leadership Council. In addition, Mr. Leech is a member of the government of Ontario's Economic Advisory Panel.

In 2012, Mr. Leech was awarded the Queen's Diamond Jubilee medal in recognition of his work with the True Patriot Love Foundation. In 2013, he co-authored (with Globe and Mail Senior Writer Jacquie McNish) a book on pension reform called The Third Rail: Confronting our pension failures. He has announced his retirement effective December 31, 2013.

Wayne Strelioff, FCPA, FCA – former Auditor General

Mr. Strelioff has served as both the Auditor General of British Columbia (2000-2006) and the Provincial Auditor of Saskatchewan (1990-2000). He was the Assistant Director of Public Sector Accounting and Auditing at the Canadian Institute of Chartered Accountants (CICA), contributing to the initial development of ground breaking professional accounting and auditing standards for the public sector.

Mr. Strelioff has consistently worked to strengthen public sector governance, management and accountability practices. He has served on many national organizations including as a member and governor of the CCAF (formerly the Canadian Comprehensive Auditing Foundation), as the inaugural chair of the Canadian Council of Legislative Auditors Planning and Coordinating Committee and as a member of the CICA's Public Sector Accounting Board.

Since retirement in 2006, he has served as the inaugural Chair of the Quality Worklife/Quality Healthcare Collaborative, a nationwide group of 12 Canadian health organizations dedicated to developing an evidence-informed framework and action strategy to ensure a healthier Canadian public health workplace and, thus, improving the quality of patient care; he has served as a member of the Health Council of Canada's Value for Money Steering Committee; and he has advised senior officials in the public and private sectors on various governance, management and accountability matters.

Mr. Strelioff received B.A., B.Comm. and M.Sc. degrees from the University of Saskatchewan. He obtained his C.A. at Peat Marwick Mitchell (now KPMG).

In 1992, Mr. Strelioff was awarded the Commemorative Medal for the 125th Anniversary of Confederation of Canada in recognition of his significant contributions to compatriots, the community and to Canada. In 2003, he was recognized by the Institute of Chartered Accountants of British Columbia for his contribution to the accounting profession, by naming him a Fellow and awarding him the FCA designation.

Andrew Fung – Morneau Shepell

Andrew Fung, FSA, FCIA, CFA joined Morneau Shepell on November 10, 2015 as a partner in its Ontario Retirement Solutions Practice.

Prior to joining Morneau Shepell, Mr. Fung was a Senior Vice President at one of the largest public sector pension plans in Ontario. He has extensive experience in the areas of board governance, stakeholder relations, policy and research, strategy and growth, service and product development, government relations and advocacy, and communications. He is well versed in areas such as pension funding policy and risk management, having practiced as a senior actuary in both an international actuarial firm and a major accounting firm.

Mr. Fung is Fellow of the Society of Actuaries, a Fellow of the Canadian Institute of Actuaries, and a Chartered Financial Analyst. He has a Bachelor of Mathematics degree (Dean's Honour List) from the University of Waterloo, and is currently enrolled in the Institute of Corporate Directors - Director Education Program.

Anne G.S. Soh - OMERS

Anne Soh is Vice President, Actuarial Services and Plan Actuary at the Ontario Municipal Employees Retirement System (OMERS). She serves as the actuarial advisor to both OMERS Boards of Directors in managing the funding of the OMERS Pension Plans and oversees the in-house actuarial department.

Anne is an actuary with over 20 years of experience in the pension and benefits industry. Prior to joining OMERS, she was a senior consulting actuary at both Mercer and at Watson Wyatt (now Willis Towers Watson), where she provided advice to her clients on funding strategies, plan design, administration and communication issues.

She also serves as the Chair of the Pension Plan Advisory Committee of the Pension Plan of the United Church of Canada and is a pension committee member for the Pension Plan for Employees of Canada's National Ballet School.

Anne is a Fellow of the Canadian Institute of Actuaries, a Fellow of the Society of Actuaries and holds a Honours BSc from the University of Western Ontario.

Philip Morse – Willis Towers Watson

Philip Morse is a Fellow of the Canadian Institute of Actuaries (CIA), the professional body governing the education, qualification, conduct and work of actuaries in Canada.

He was involved in the preparation of “Independent Review of the Actuarial Funding Report on the Ontario Retirement Pension Plan (ORPP) – June 30, 2016.”

Darlene Himick, Ph.D., MBA, CFA – University of Ottawa

Darlene Himick received a Ph.D. in Accounting from the University of Calgary and an MBA from Dalhousie University. Professor Himick also earned an LLB from Osgoode Hall Law School, York University and is a member of the Nova Scotia Bar. She was previously an Assistant Professor at the John Molson School of Business, Concordia University. Her teaching interests include financial accounting, managerial accounting, accounting theory, and financial statement analysis. A Charterholder with the CFA Institute, Ms. Himick served for several years as a pension investment consultant before she began her academic career. Among her many current roles, she is a Senior Research Fellow with the Shareholder Association for Research and Education, based in Vancouver, B.C.

Professor Himick has presented her research at numerous academic conferences and has been an invited speaker at several industry forums. Her studies have been published in peer-reviewed journals such as Auditing and Accountability Journal and Critical Perspectives on Accounting. Her research focuses on pension accounting, responsible investing by pension funds, and the use of experts during standard setting. She is also interested in accounting history and the accounting profession, specifically its interaction with the actuarial profession. Ms. Himick has received funding from the Fonds québécois de la recherche sur la société et la culture (FQRSC) to study the use of accounting information in the context of retirement plans in Canada and the United States.

Christine Wiedman, Ph.D., FCPA – University of Waterloo

- Christine is interested in financial reporting and governance issues, including the determinants of firms' financial reporting and disclosure choices, the role of regulation on corporate fraud, and the interpretation of accounting information by capital market participants. Current projects examine: voluntary disclosure of political spending; whistleblower provisions of the Dodd-Frank Reform Act of 2010; gender diversity on corporate boards; changes in reporting and disclosure quality for restatement firms; and the role of gender in the reward of research collaboration.
- Christine has authored papers on pension related topics

OPCD

Pension Asset Expert Advisory Panel

Next Steps

October 14, 2016

Decisions to make

- Panel
  - Number of members
  - Members
  - Chair (and role of chair in decision making)

- Support for panel
  - Report writer
  - Project management
  - Legal support

- Using the results of the report from the Panel

- Other

Composition of Panel

3 Person Panel (all have confirmed interest)
Accounting expert – **Bill Matthews** (Comptroller General Canada)
Actuarial expert - **Uros Karadzic** (Partner EY; member PSAB Task Force)
Governance expert – **Murray Gold** (Partner – Koskie Minsky)

4 Person Panel – 3 person + Chair (interest of all potential chairs not yet confirmed)

Chair – Options under consideration:

Jim Leech – former CEO OTPP

Tricia O'Malley – Accountant, former partner at KPMG, former standard setter

Sheila Fraser – Accountant, former Federal Auditor General

David Smith – Accountant, former Chairman of PwC Canada

Considerations for selection of chair:

- Spokesperson for the panel
- Should the chair be an accountant given the nature of the issue
- Potential conflicts

Support for panel – report writer

- Report writer – requirements:
  - Knowledge of pension accounting and actuarial modelling
  - Writing skills

- Considerations
  - PwC – lead by Lucy Durocher
    - Advisor to province on issue – working on comprehensive position paper but not issuing an opinion – consider whether conflicted
    - Knowledgeable on plans and issues
    - Member of PSAB Task Force
  - Panel hires independent consultant
    - OPS will complete pre-work for procurement of another firm

Support for panel – project management

- Short timeline – Report due by December 31, 2016

- Role
  - Coordination and scheduling
  - Liaison with Province
  - Interim reports
  - Coordination with TBS communications re: final report
  - Administrative reporting

- Potential candidates
  - Process in place to identify senior manager/director from OIAD, supported by others as necessary

Support for panel – legal support

- Existing opinions
  - MAG
  - Oslers
  - Koskie Minsky – Ontario vs. BC

- Additional work required
  - Comparison of Ontario plans to New Brunswick Target Benefit Plans
  - Understanding of governance structures for HOOPP and CAATTPP
    - Multi-employer plans vs jointly sponsored plans

Using the result of the report from the panel

- Provision of report to Auditor General
  - Any other contact with AG during the process
    - Panel may invite AG to discuss issue
    - Panel may request written document of AG's position
- Communications strategy
  - Commitment to make the report public
- Use of Deloitte summary if made available
  - May align or conflict with report of panel

Other

- Valuation opinion
  - Only OTPP? Expected increase in value of OPSEU asset – less than $250 million
  - Start as soon as panel completes its work – procurement timing

- Responding to AG's 2016 Report -- Chapter 2
  - Expecting section on pension accounting; will be released prior to completion of work by panel; impact on panel's work

- Meeting with PSAB Task Force on employee future benefits -- timing

APPENDIX – POTENTIAL PANEL MEMBERS -- BIOS

Potential panel members

Name	Accounting Expertise	Actuarial Expertise	JSPP Governance Expertise	Interest confirmed
Bill Matthews (Comptroller General – Canada)	Yes			Yes
Uros Karadzic (Partner EY – member PSAB Task Force)	Yes	Yes		Yes
Murray Gold (Lawyer – Koskie Minsky)			Yes	Yes
Jim Leech (former CEO OTPP)			Yes	Yes
Tricia O'Malley (former KPMG partner and standard setter)	Yes			No
Sheila Fraser (former Federal Auditor General)	Yes			No
David Smith (former PwC Chairman)	Yes			No
Wayne Strelioff (former AG BC and Sask.)	Yes			Yes
Scott Simpson (Retired - former OTF Actuary)		Yes	Yes	Yes
Andrew Fung (Actuary – Morneau Shepell)		Yes		No
Anne Soh (Actuary – OMERS)		Yes		No
Philip Morse (Actuary – Willis Towers Watson)		Yes		No
Darlene Himick (Professor – U of Ottawa)	Yes			No
Christine Wiedman (Professor – U of Waterloo)	Yes			No

Bill Mathews – Comptroller General of Canada, PSAB Board Member

Bill Matthews was appointed Comptroller General of Canada effective July 17, 2014.

The Comptroller General is responsible for government-wide direction and leadership for financial management, internal audit, federal assets and acquired services. The Comptroller General also supports capacity building and professional development in each of these areas.

Prior to becoming the Comptroller General, Mr. Matthews was Assistant Secretary, Expenditure Management Sector, at the Treasury Board of Canada Secretariat, a position he accepted in 2011.

Before joining the Expenditure Management Sector, Mr. Matthews worked at the Office of the Comptroller General for seven years, serving as the Assistant Comptroller General in the Financial Management and Analysis Sector from 2009 to 2011.

Mr. Matthews is a chartered professional accountant with over 25 years of experience in accounting and financial management in both the public and private sectors.

He holds a Bachelor of Commerce from Dalhousie University.

He also serves as a board member of the Public Sector Accounting Board and the University of Ottawa's Institute for Mental Health Research.

Uros Karadzic – Actuary, Partner EY, Member PSAB Pensions Task Force

Uros Karadzic is a partner and the national leader of the Reward practice. He is a pension actuary located in Toronto, Canada.

His primary focus is in the following areas:

- Pension audit and internal audit;
- Pension and benefit issues in Merger & Acquisition transactions; and
- On-going advisory services on retirement benefit plans.

He has advised clients (Canadian and multinational) on all aspects of their pension and benefit plans, including accounting, funding, design, implementation, management, risk and administration.

Extensive experience in accounting for benefit plan obligations. He works with numerous EY audit teams, the EY Professional Practice (Canadian and Global) and industry bodies on benefit accounting issues.

M&A transaction and integration, supporting clients by clearly identifying and measuring risks and costs. He also advised on appropriate measures to reduce those costs, focusing on post-acquisition funding requirements.

Murray Gold – Koskie Minsky

Murray Gold is a senior pension and benefits partner (see: Chambers Canada 2017 Rankings) with a national pension and benefits practice. He is a leading practitioner in the area of pensions and employee benefits. Mr. Gold was appointed by the Premier of Ontario to Ontario's Technical Advisory Group on Retirement Security in February 2014. In 2008 he served as an expert advisor to the Ontario Expert Commission on Pensions.

Mr. Gold advises governing boards of public sector and jointly trusteed pension and benefits plans across Canada in regard to compliance and best-practice issues. He represents pension boards, as well as plan sponsors, retiree groups and active members in pension litigation in pension regulatory and judicial proceedings.

Mr. Gold is lead counsel for Koskie Minsky in regard to current pension reform initiatives in Newfoundland, New Brunswick, Ontario and Alberta, and in health benefit plan reforms in Ontario and British Columbia. He represented stakeholder interests in insolvency proceedings involving Air Canada in 2003 and 2009, and Stelco in 2005. In 2009 – 2010, he lead Koskie Minsky's team in establishing Canada's first funded postretirement health care trust in the auto sector. This involved the creation of new tax laws governing the tax treatment of postretirement benefit trusts and the negotiation and implementation of arrangements to govern Canada's first funded employee life health trust.

Murray Gold is a Fellow of the Ontario Teachers' Federation, an honor in recognition of his work in regard to the Ontario Teachers' Pension Plan.

Murray served on the Firm's Executive Committee and then as the Firm's Managing Partner from 2012-2016.

Jim Leech – former CEO of Ontario Teacher's Pension Plan

Mr. Leech joined Teachers' in 2001 to lead Teachers' Private Capital and was appointed President & CEO in 2007. Under his leadership, the organization became one of the world's leading private equity investors.

Mr. Leech has gained recognition for his expertise and leadership in the private equity industry and as CEO of several public companies. He has a solid reputation for building businesses and strong management teams and has led large public companies operating and investing in the financial services, real estate and energy industries, as well as start-up technology businesses.

Before joining Teachers', Mr. Leech was president and CEO of Unicorp Canada Corporation, one of Canada's first public merchant banks, and Union Energy Inc., then one of North America's largest integrated energy and pipeline companies. During the 1990s, he guided two start-up technology companies - Disys Corporation and Kasten Chase Applied Research - to the revenue generation stage.

Mr. Leech holds a B.Sc. (Hons Math and Physics) from the Royal Military College of Canada and an MBA from Queen's University. He is also a graduate of the Institute of Corporate Directors.

Mr. Leech is chair of the board of Toronto General and Western Hospital Foundation. He is a member of the board of the MasterCard Foundation and was a founding director of Right To Play International. He has been named Chancellor-designate of Queen's University, effective July 1, 2014 and currently chairs the advisory board of the Queen's School of Business. Mr. Leech also serves on the advisory board for The Learning Partnership, the advisory council for the Toronto Region Board of Trade and the Toronto Financial Services Leadership Council. In addition, Mr. Leech is a member of the government of Ontario's Economic Advisory Panel.

In 2012, Mr. Leech was awarded the Queen's Diamond Jubilee medal in recognition of his work with the True Patriot Love Foundation. In 2013, he co-authored (with Globe and Mail Senior Writer Jacquie McNish) a book on pension reform called The Third Rail: Confronting our pension failures. He has announced his retirement effective December 31, 2013.

Wayne Strelioff, FCPA, FCA – former Auditor General

Mr. Strelioff has served as both the Auditor General of British Columbia (2000-2006) and the Provincial Auditor of Saskatchewan (1990-2000). He was the Assistant Director of Public Sector Accounting and Auditing at the Canadian Institute of Chartered Accountants (CICA), contributing to the initial development of ground breaking professional accounting and auditing standards for the public sector.

Mr. Strelioff has consistently worked to strengthen public sector governance, management and accountability practices. He has served on many national organizations including as a member and governor of the CCAF (formerly the Canadian Comprehensive Auditing Foundation), as the inaugural chair of the Canadian Council of Legislative Auditors Planning and Coordinating Committee and as a member of the CICA's Public Sector Accounting Board.

Since retirement in 2006, he has served as the inaugural Chair of the Quality Worklife/Quality Healthcare Collaborative, a nationwide group of 12 Canadian health organizations dedicated to developing an evidence-informed framework and action strategy to ensure a healthier Canadian public health workplace and, thus, improving the quality of patient care; he has served as a member of the Health Council of Canada's Value for Money Steering Committee; and he has advised senior officials in the public and private sectors on various governance, management and accountability matters.

Mr. Strelioff received B.A., B.Comm. and M.Sc. degrees from the University of Saskatchewan. He obtained his C.A. at Peat Marwick Mitchell (now KPMG).

In 1992, Mr. Strelioff was awarded the Commemorative Medal for the 125th Anniversary of Confederation of Canada in recognition of his significant contributions to compatriots, the community and to Canada. In 2003, he was recognized by the Institute of Chartered Accountants of British Columbia for his contribution to the accounting profession, by naming him a Fellow and awarding him the FCA designation.

Andrew Fung – Morneau Shepell

Andrew Fung, FSA, FCIA, CFA joined Morneau Shepell on November 10, 2015 as a partner in its Ontario Retirement Solutions Practice.

Prior to joining Morneau Shepell, Mr. Fung was a Senior Vice President at one of the largest public sector pension plans in Ontario. He has extensive experience in the areas of board governance, stakeholder relations, policy and research, strategy and growth, service and product development, government relations and advocacy, and communications. He is well versed in areas such as pension funding policy and risk management, having practiced as a senior actuary in both an international actuarial firm and a major accounting firm.

Mr. Fung is Fellow of the Society of Actuaries, a Fellow of the Canadian Institute of Actuaries, and a Chartered Financial Analyst. He has a Bachelor of Mathematics degree (Dean's Honour List) from the University of Waterloo, and is currently enrolled in the Institute of Corporate Directors - Director Education Program.

Anne G.S. Soh - OMERS

Anne Soh is Vice President, Actuarial Services and Plan Actuary at the Ontario Municipal Employees Retirement System (OMERS). She serves as the actuarial advisor to both OMERS Boards of Directors in managing the funding of the OMERS Pension Plans and oversees the in-house actuarial department.

Anne is an actuary with over 20 years of experience in the pension and benefits industry. Prior to joining OMERS, she was a senior consulting actuary at both Mercer and at Watson Wyatt (now Willis Towers Watson), where she provided advice to her clients on funding strategies, plan design, administration and communication issues.

She also serves as the Chair of the Pension Plan Advisory Committee of the Pension Plan of the United Church of Canada and is a pension committee member for the Pension Plan for Employees of Canada's National Ballet School.

Anne is a Fellow of the Canadian Institute of Actuaries, a Fellow of the Society of Actuaries and holds a Honours BSc from the University of Western Ontario.

Philip Morse – Willis Towers Watson

Philip Morse is a Fellow of the Canadian Institute of Actuaries (CIA), the professional body governing the education, qualification, conduct and work of actuaries in Canada.

He was involved in the preparation of “Independent Review of the Actuarial Funding Report on the Ontario Retirement Pension Plan (ORPP) – June 30, 2016.”

Darlene Himick, Ph.D., MBA, CFA – University of Ottawa

Darlene Himick received a Ph.D. in Accounting from the University of Calgary and an MBA from Dalhousie University. Professor Himick also earned an LLB from Osgoode Hall Law School, York University and is a member of the Nova Scotia Bar. She was previously an Assistant Professor at the John Molson School of Business, Concordia University. Her teaching interests include financial accounting, managerial accounting, accounting theory, and financial statement analysis. A Charterholder with the CFA Institute, Ms. Himick served for several years as a pension investment consultant before she began her academic career. Among her many current roles, she is a Senior Research Fellow with the Shareholder Association for Research and Education, based in Vancouver, B.C.

Professor Himick has presented her research at numerous academic conferences and has been an invited speaker at several industry forums. Her studies have been published in peer-reviewed journals such as Auditing and Accountability Journal and Critical Perspectives on Accounting. Her research focuses on pension accounting, responsible investing by pension funds, and the use of experts during standard setting. She is also interested in accounting history and the accounting profession, specifically its interaction with the actuarial profession. Ms. Himick has received funding from the Fonds québécois de la recherche sur la société et la culture (FQRSC) to study the use of accounting information in the context of retirement plans in Canada and the United States.

Christine Wiedman, Ph.D., FCPA – University of Waterloo

Hi Tim and Selina

With regard to slide 15 in the attached deck, Scott had a quick discussion with Gadi and suggested the following changes:

Remove the bullet at the top of the slide since the header clearly refers to balanced budgets. With regard to the box, no change for the description of the black line. For the second line the description should read as follows:

“Balanced budgets 2017-18 onwards and reversal of pension adjustment”.

Thanks

Ken k

2017 Document:
Fiscal Plan Strategy Update

Office of the Budget MINISTRY of FINANCE

TBS

OFFICE OF ECONOMIC POLICY
OEP
MINISTRY OF FINANCE

MMP, February 2016

Preliminary Draft (All numbers to be confirmed) – February 7, 2017 9:00 PM

Purpose

- To outline the frame, priorities, and approach to the 2017 Document.
  - Determine the fiscal anchors that will set the foundation and framework.
- Set the stage to determine the intersection point between key investments and the government's fiscal objectives, and the potential tools that could support this intersection point.
- Discuss next steps and key choices to be made as part of the planning process.

2017 Document – Framing and Anchoring

Framing the Balance of Choices for the 2017 Document

Build on Government's Plan, Demonstrate Progress, and Provide a Vision for Tomorrow

- Show progress on the government's plan to **invest in the economy and build Ontario up for everyone**.
- Demonstrate **responsible fiscal management**.
- Continue to **transform** and protect public services for longer term sustainability.

Confirm Recent Investments, Launch New Supporting Priority Investments

- Point to **2016 Budget investments**, as well as important **additional commitments** made in the 2016-17 year that demonstrate progress.
- Launch **select new priority investments** that create jobs and grow the economy of tomorrow.

Maintain Fiscal Credibility

- Continue to beat **deficit targets** and return the Province to **balanced budgets**.
- Moving forward, ensuring a **fiscally sustainable** and credible plan.

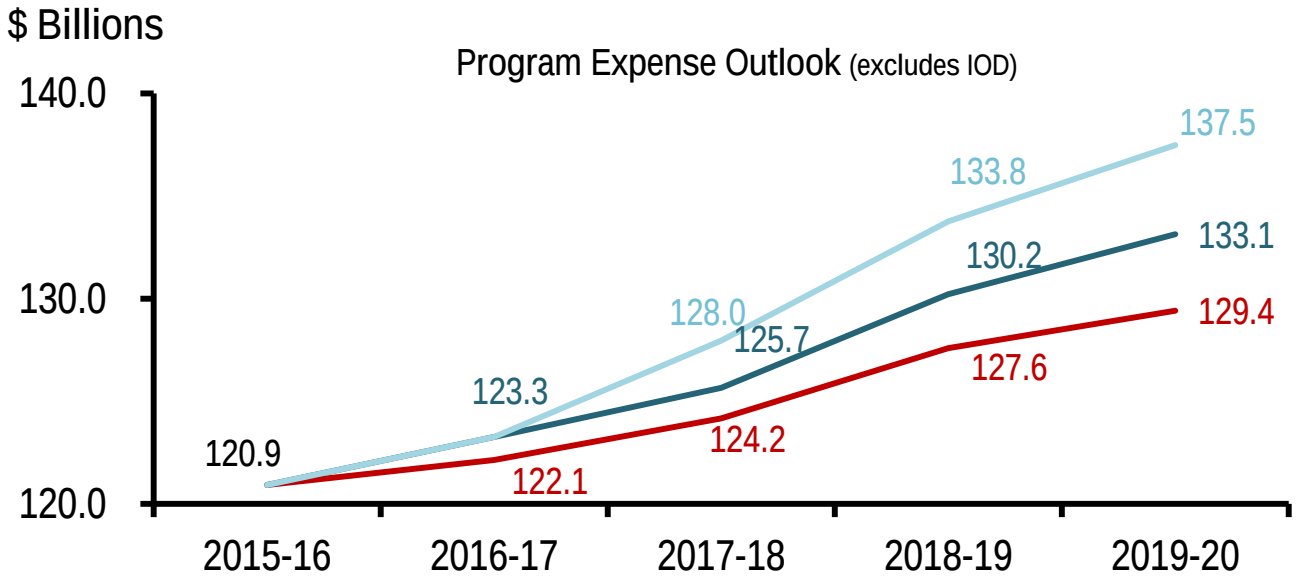
Reconciling and Balancing the Approach

- **Reconciling the government's fiscal anchors**, such as balancing the budget in 2017-18 and ongoing, **with the commitment to invest in priorities,** such as **additional electricity relief,** will require **trade-offs**.
- This means the scope, size and roll-out of new priority investments **may require the consideration of all viable revenue tools and other measures** in the lead-up to the 2017 Document.
- Need to maintain a longer-term view to the **2018 Document, Pre-Election Report** and beyond.

2017 Document: Determining Fiscal Anchors

- The 2014, 2015 and 2016 Budgets consistently laid out plans that balanced the government's plan to invest in the Ontario economy and public services, while also balancing the budget.

- As a continuation and culmination of these plans, the 2017 Document will need to be able to demonstrate progress on the government's plan to invest in today's jobs and tomorrow's economy, ensure Ontarians can count on key public services, and make Ontario an affordable place to live, while delivering on the **commitment to balance the budget in 2017-18**.



- As part of the planning for the 2017 Document, the government must confirm its **fiscal objectives and anchors – for the upcoming year (2017-18), as well as the two subsequent years –** in order to provide the right overall financial framing and envelope that will support new investments.

	2016 Budget Targets		Decision Required for 2017 Document	
Potential Fiscal Anchors	**2017-18**	**2018-19**	**2019-20**	Net debt-to-GDP target: Flat-lined or continued progress towards 27%
	Balance	Balance	Balance	

- With fiscal anchors and overarching objectives in place, the government will be in a position to determine the fiscal envelope available for new investments.
  - The fiscal envelope can also be augmented through additional tools and levers, as well as trade-offs between investments (including delaying some investments for the 2018 Document).
  - Revenue and expense information will continue to come in as part of the lead-up to the 2017 Document that could impact the fiscal envelope (e.g. Federal Budget).

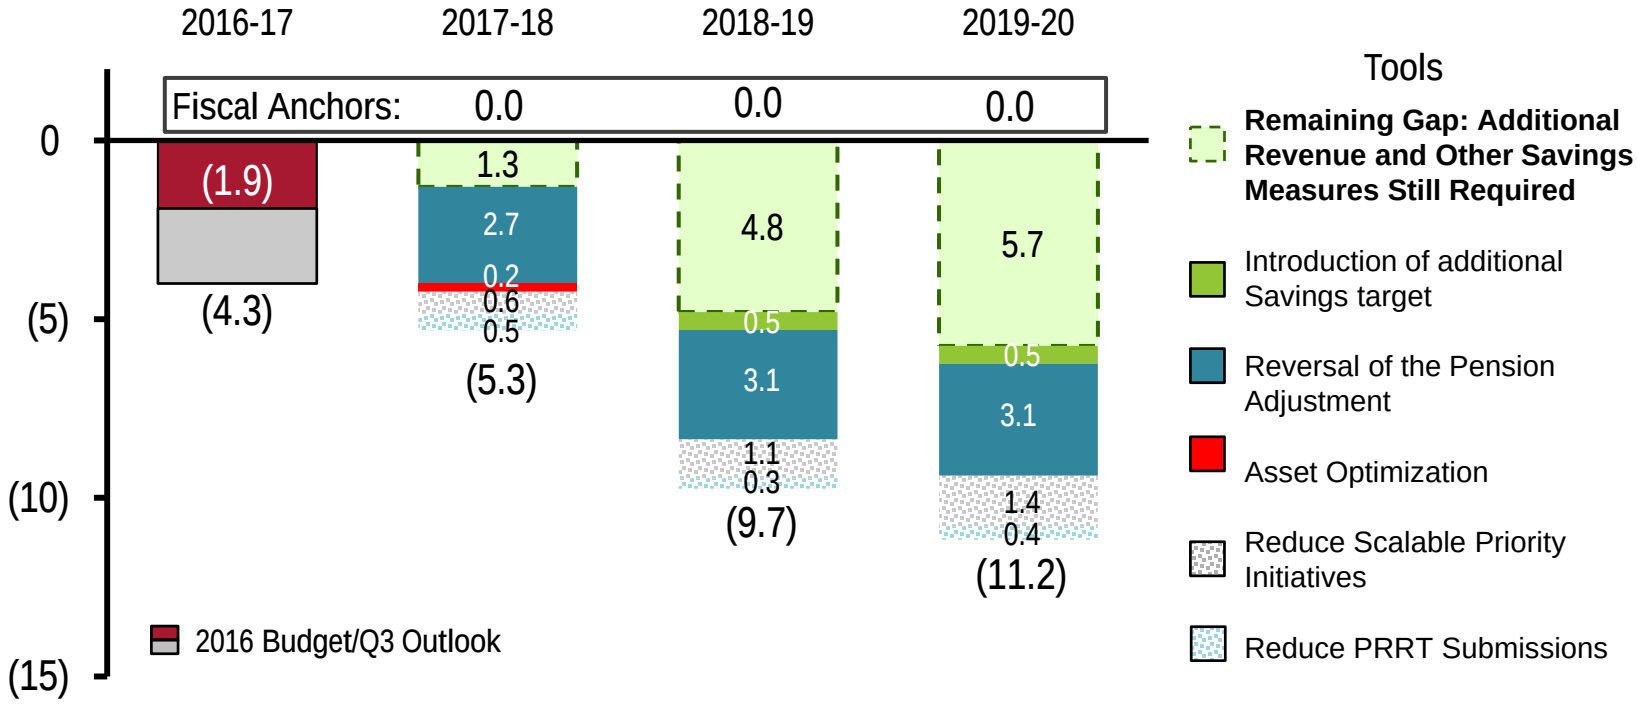
Current Planning Outlook
3.0% Avg. Growth
2016-17 to 2019-20

2016 Budget Outlook
3.9% Avg. Growth
2015-16 to 2018-19
(as published in 2016 Budget)



Assessing the Fiscal Challenge

While the 2016 Budget outlined a plan to balance the budget in 2017-18 and remain balanced in 2018-19, **changes since the Budget have created a gap compared to the government's fiscal targets.**

- A stronger outlook for revenue and lower interest on debt expense are currently tracking against the Budget forecast – **however, spending pressures, new strategic investments, and the pension adjustment have also materialized** – together creating a fiscal gap.

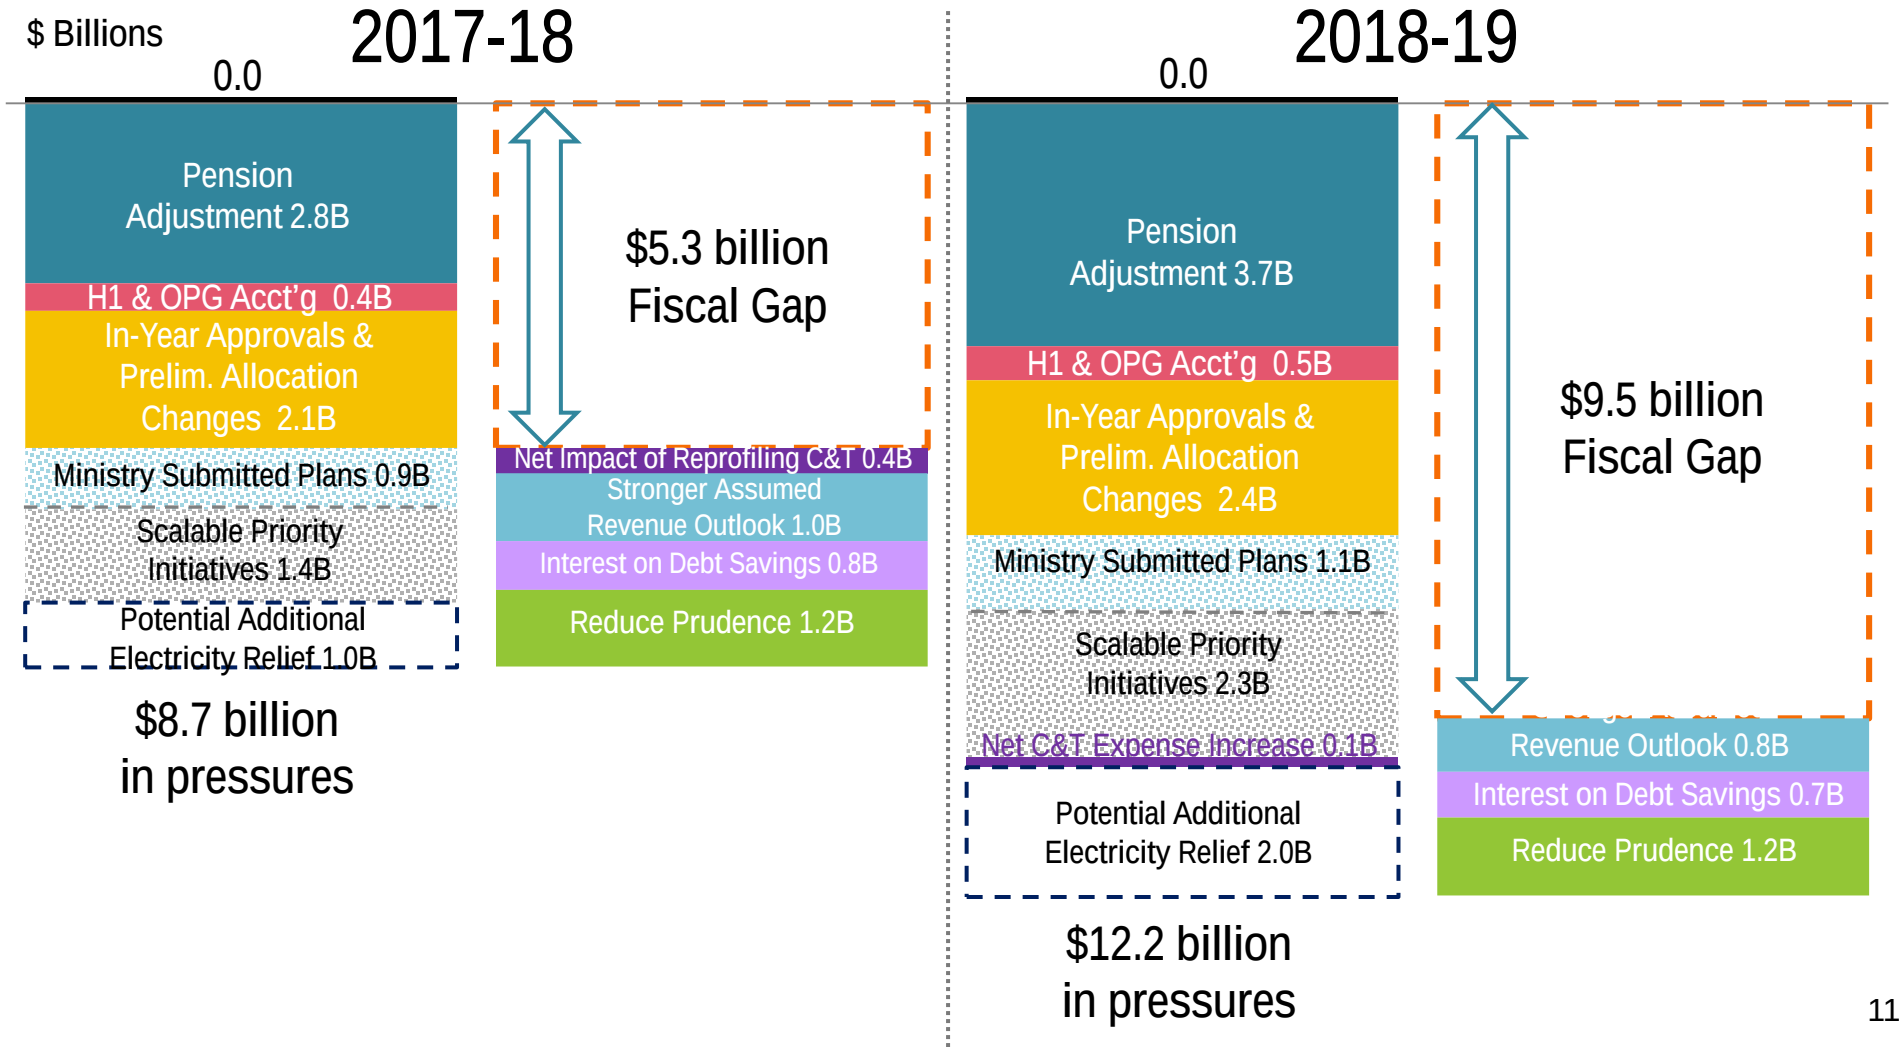
Some measures have already been identified to help close the gap – including reversal of the pension adjustment, scaling back PRRT requests and scalable initiatives, and higher savings targets.

However, **continuing to assume fiscal anchors of balanced budgets** over the forecast horizon **means a limited envelope for new investments, and the need to identify additional tools and levers.**

Note: Due to the asset optimization tool assumed in 2017-18, the 2018-19 gap increases from $9.5 billion to $9.7 billion

Key Decisions

A number of framing and anchoring decisions are required in order to firm up the overall approach to the 2017 Document.

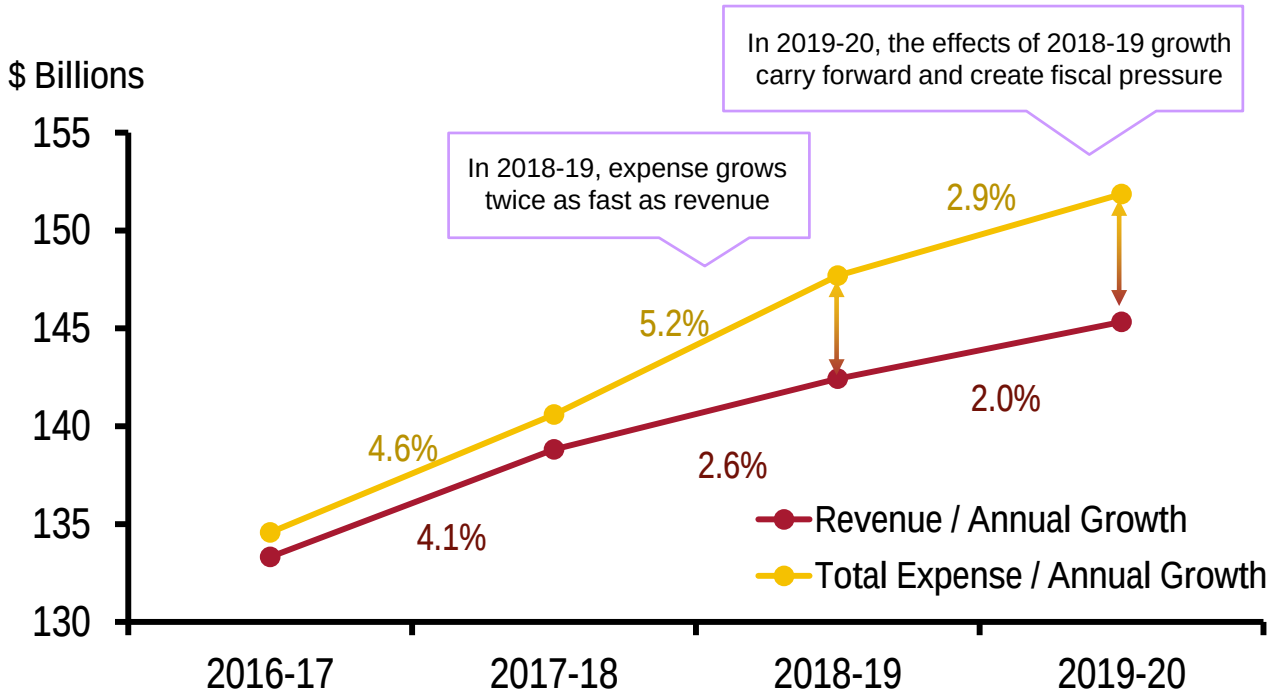


- What fiscal anchors does the government want to set for 2017-18 to 2019-20?
- What balance of revenue and expense measures to set in order to meet fiscal anchors?

Appendix

The Fiscal Challenge

In order to accommodate fiscal pressures in 2017-18 and 2018-19, tools were taken on in the 2016 FES and the 2016 Budget.



The remaining fiscal gap will need to be addressed through additional tools.

2019-20 Risk-Based Outlook

Over the outlook and in the absence of any tools, **total expense growth outpaces revenue growth**.

Substantial growth in expense in 2017-18 and 2018-19 results in higher levels of program expense, which **carry forward into 2019-20**.

2019-20 Expense Consists of:

- Includes Pension Adjustment of $0.8 billion for HOOPP and CAATPP
- In-year approvals of $2.7 billion
- Additional Electricity Cost Relief of $2.0 billion
- Full requests PRRT Submissions and Scalable Priority Initiatives of $4.6 billion
- Lower proceeds of $0.5 billion and the reversal of $0.6 billion in-plan expense results in an increase of $0.1 billion to expense for new climate change initiatives
- Increase to municipal share of Gas Tax of $0.1 billion

2019-20 Revenue Growth Slowed by:

- Reduced federal funding
- Lower net income and PiLs due to the net impact of the asset plan
- Projected taxation revenue growth of $3.9 billion in 2019-20, consistent with current private sector forecasts for Ontario economic growth.

Note: Scenario assumes the reversal of the pension adjustment for both OTPP and OPSEUPP (in all years).

Economic Outlook

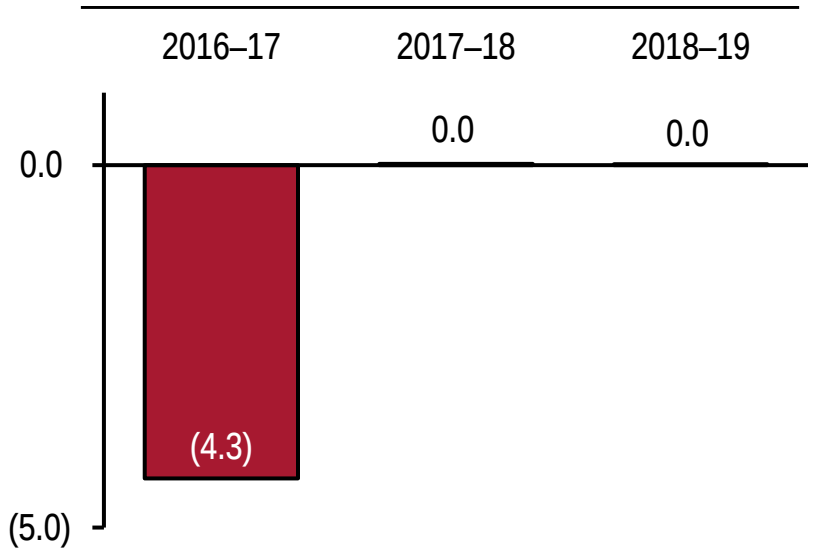
* The Current Outlook above includes the impact of the IFRS reporting change and also assumes an acceleration of the Hydro One IPO from 2018-19 to 2017-18.

Information still to come:

- 2016Q4 economic results
- Document economic outlook update
- Ongoing provincially-administered tax receipts
- PRRT revenue updates for ministries, agencies and government business enterprises
- PRRT revenue decisions
- Document Initiative decisions

Net Debt-to-GDP With Balanced Budgets

- Depending on the fiscal anchors chosen for the government's fiscal plan, reversal of the pension adjustment, as well as any changes made to the borrowing (e.g. electricity relief, changes in capital spending), net debt to GDP could be in decline.



2016 FES Recap

In the 2016 FES, the government continued to forecast deficits of $4.3 billion in 2016-17, a return to balance in 2017-18, and continued balance in 2018-19.

2016 FES Fiscal Targets

Fiscal Balance
($ Billions)

Revenue Plan (2016-17 to 2018-19)

- **$2.1 to $3.0 billion** per year increased revenue compared to the 2016 Budget, resulting from higher taxation revenues and a stronger housing market.

Expense Plan (2016-17 to 2018-19)

- **$3.1 billion to $4.1 billion** per year increase compared to the 2016 Budget, as a result of the Pension Adjustment, and to support strategic initiatives in new child care spaces, hospitals and electricity cost relief for consumers.
- **Contingency Funds** of $0.7 billion in 2016-17, growing to $2.9 billion in 2018-19.
- **Year-end Savings Targets** of $0.8 billion in 2016-17, growing to $1.2 billion in 2018-19.

Reserve of $0.4 billion in 2016–17, $0.7 billion in 2017–18, $0.8 billion in 2018–19

---

Hi Ken,

For the MMP prep session later today. As per the attached agenda, today's session will really be on the expense side and TBS is planning to provide an update on the pension accounting issue. TBS is also planning to provide a short verbal update on the non-tax revenue item, as it's a TBS lead.

The revenue levers will be discussed tomorrow, with a formal agenda being shared later tonight or tomorrow morning.

Thanks,
Christina

Early 2017 Document Planning – January Fiscal Decision-Making Roadmap

Key Decision-Making Milestones and Forum

- DM/MO Workshops (January 4/5)
- FPC Meetings (January 11 with SOC; January 12 FPC Workshop; weekly thereafter)
- MMP (January 19-TBC)
- Ongoing PRRT Meetings (TB/MBC)
- Pension Panel Recommendations (January TBD)
- TB/MBC Wrap-up (early Feb)

Key Fiscal Decisions to Track in January

- Update **fiscal gap** analysis based on new information and decisions since December
  - Revenue updates (tax revenue updates, federal transfers, asset optimization)
  - PRRT Approvals -- Over/under allocation decisions; Deferred decisions
  - Other information updates (IOD, consolidations, technical updates, etc.)
- Early Direction on **Strategic Investments** – determine priority strategic investments for inclusion in 2017 Document; incorporate other Document initiatives envelope?
- Early Direction on **Fiscal Tools/Levers** – Revenue and expense tools "in scope" and potential ranges for each
- Review **level of Prudence** (reserve, Cfund, other) and determine whether to rebuild
- Early direction on **fiscal anchors** for at least the next three years
- Early Read on **Accounting** – direction on Pensions and other accounting risks
- 2016-17 **Q3 Finances** (public reporting on 16-17 fiscal performance)

Products To Be Developed and Target Decision-Makers:

January 4/5 Workshops:

- Summary of PRRT Decisions to Date – Lists (TBS-OTB lead)
- Update on Accounting – Deck (TBS-OTB lead)
- Potential Expense Levers and Tools (savings targets, etc) – Discussion (TBS-OTB lead)
- Potential Revenue Tools – Deck (MOF-TPD lead)

January 12 FPC

- Economic and Revenue Update – Deck (MOF-OEP lead)
- Summary of PRRT Decisions to Date – Deck/Lists (TBS-OTB lead)
- Update on Accounting – Deck (TBS-OTB lead)
- Fiscal Plan Update (updated gap, review of prudence, fiscal anchors) – Deck (MOF-OB lead)
- Summary of Potential Revenue Tools – Deck (MOF-TPD lead)
- Summary of Potential Expense Tools – Deck (TBS-OTB lead)

January 19 MMP (previewed at FPC Jan 18)

- 2017 Document: Fiscal Update and Key Decisions – Decision Deck (MOF-OB lead, supported by OEP, TBS-OTB, TPD); plus appendix decks/lists/binder on revenue/ economic update, revenue/expense levers and tools, accounting, list of strategic investments, and PRRT decisions to date

January 25/31 FPC

- 2016-17 Q3 Finances Considerations -- Deck (MOF-OB lead)
- Follow-up to MMP Discussions on Fiscal Tools/Strategic Investments (MOF-OB lead)

Agenda

Office of the Treasury Board

MMP Prep Meeting

Date: Wednesday, January 4th, 2017

From: 3:30 – 5:00pm

Location: DM's Boardroom – 5th Floor - Whitney Block

Topic	Time	Materials
Fiscal Planning Roadmap	5 mins	2017 Document Fiscal Planning -- Jan
TBS Levers Discussion - Accounting updates - Reducing above allocation asks (blues) - Reducing cost of new initiatives (greys) - Save to re-invest scheme - Exceeding savings targets associated with existing and new boulder initiatives - Short term savings - Long term savings targets - Non-tax Revenue	45 mins	Fiscal Planning Deck_FPC_v9.pptx
Sector Summary Discussion - Health - Children and Social Services - Justice	40 mins	

2017 Document Fiscal Planning

Presentation to Fiscal Prep Committee
December 15, 2016

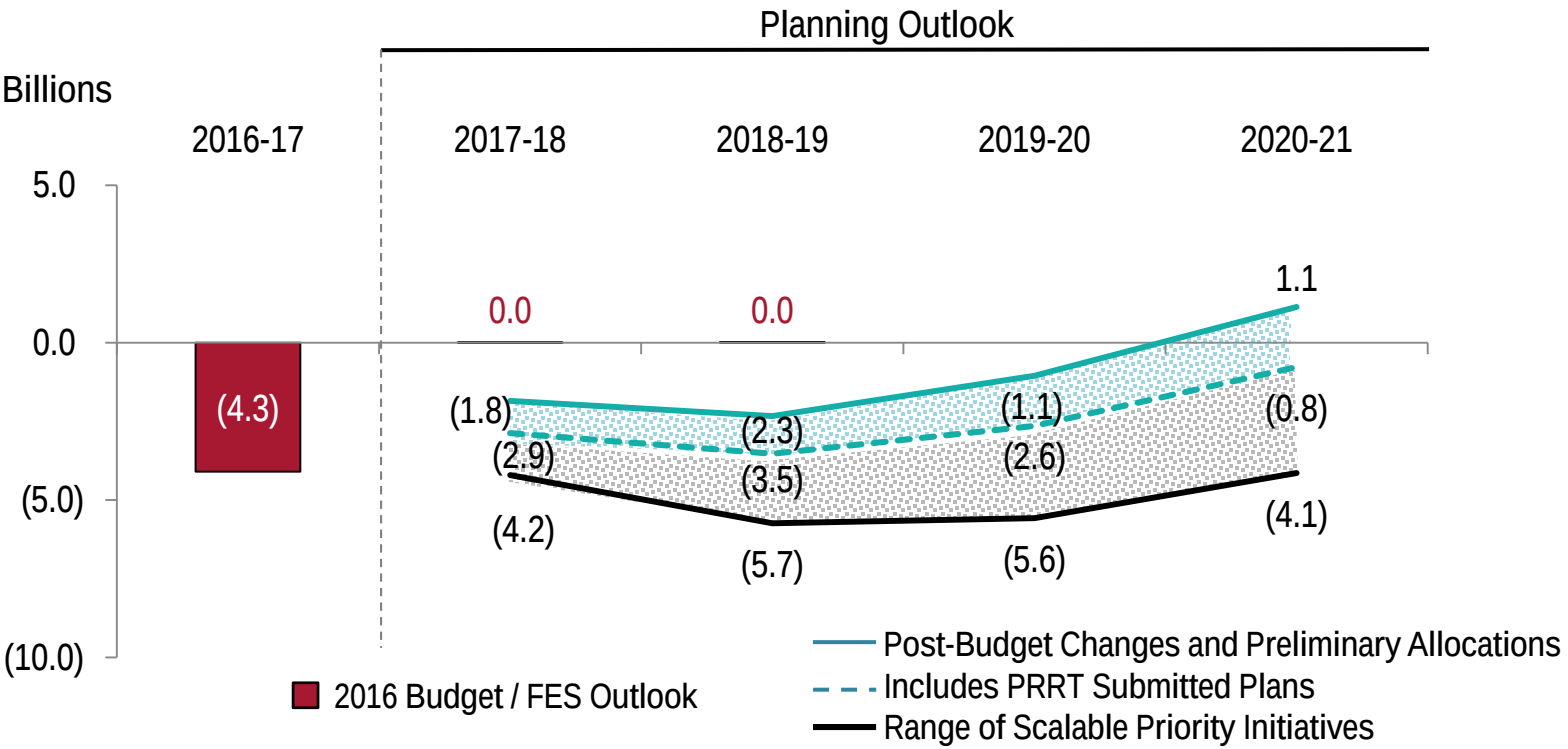
Draft – December 14, 2016 1:30 PM

Purpose

To identify government priorities for the 2017 Document and determine anchors that will form the basis of fiscal decision-making leading up to the 2017 Document. The following slides will:

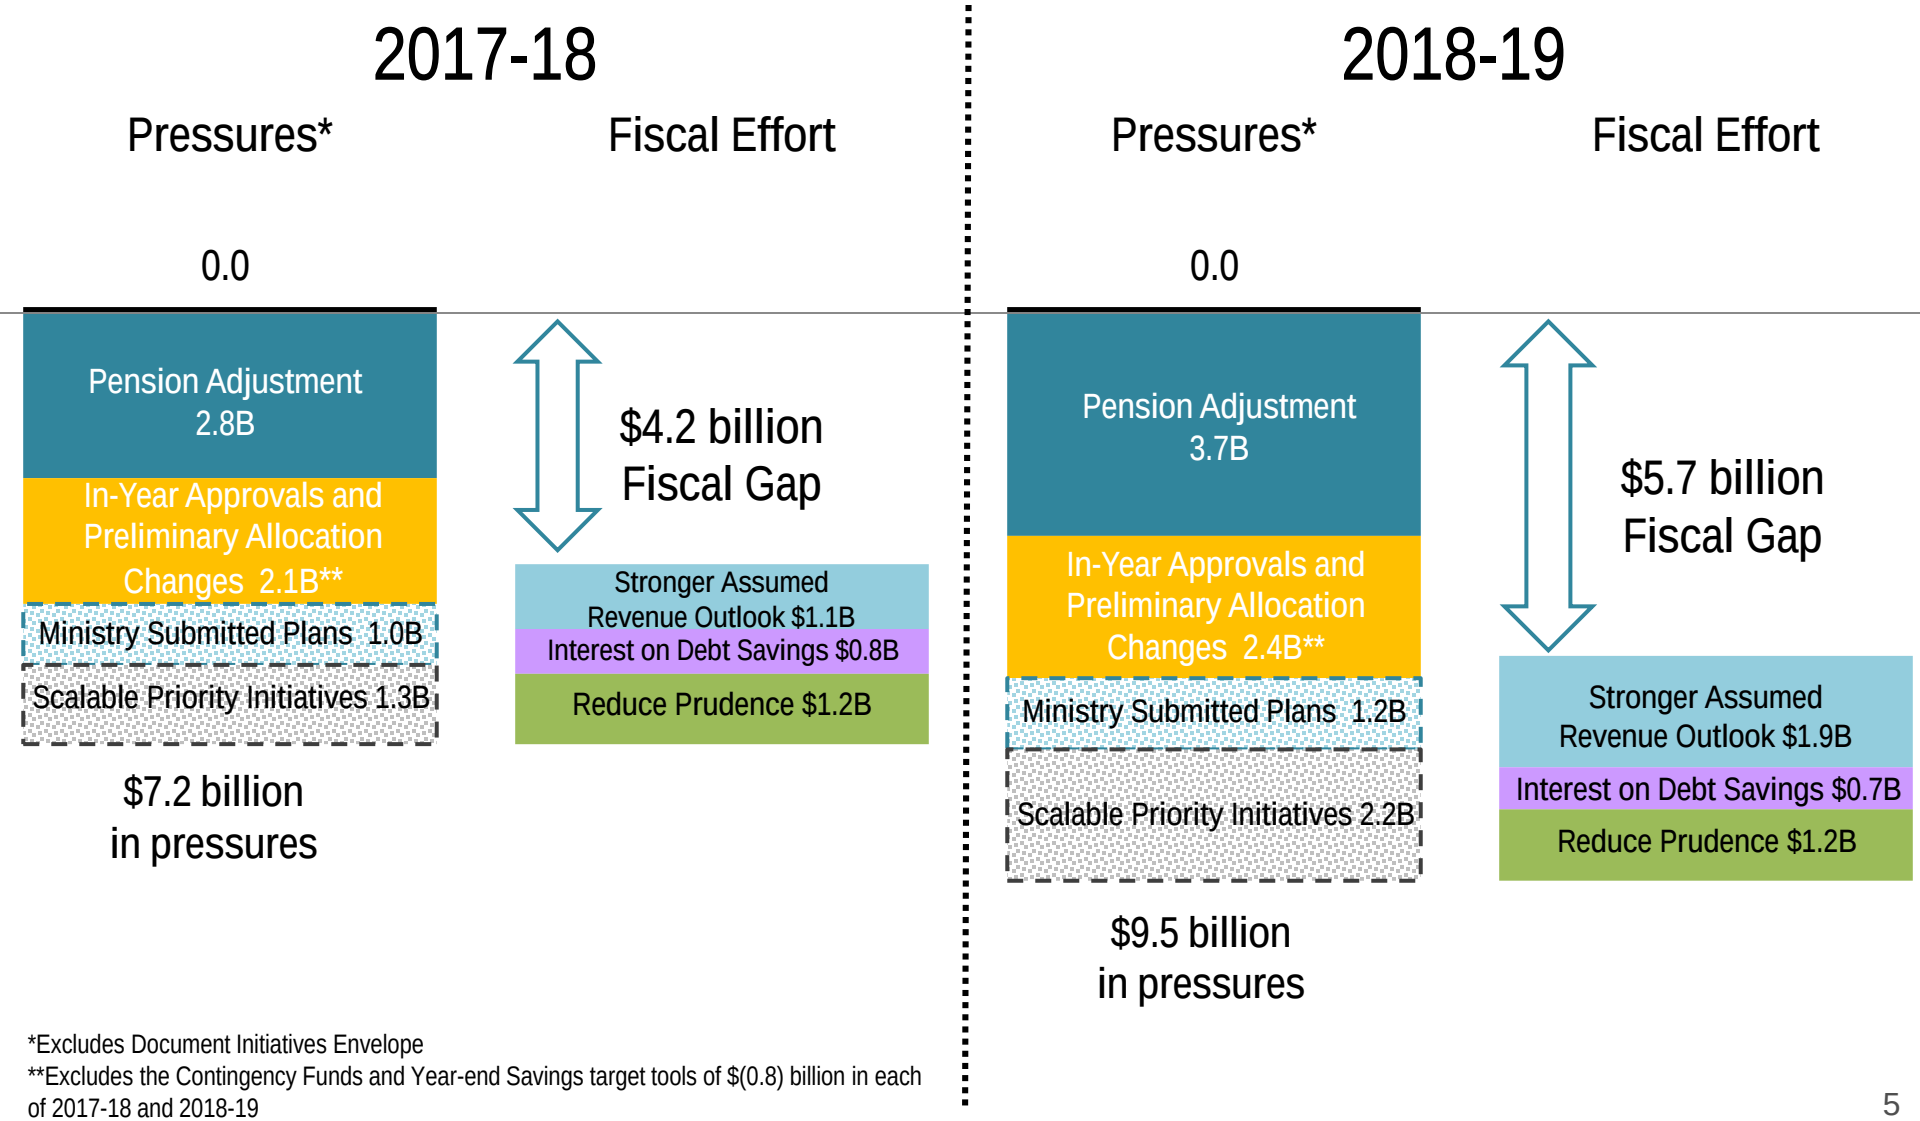
Review the current fiscal context

- Provide an overview of the current state of the fiscal plan, including the impact of Ministry PRRT requests, proposals for scalable priority investment opportunities, revenue updates, and tools already incorporated into the plan



Establish a path forward

- Identify planning questions to inform the development of the fiscal architecture



Review: Current Fiscal Context

The Multi-Year Fiscal Challenge

- Compared to the 2016 Budget, the impact of in-year investment decisions and the Pension Adjustment created pressures that were partially mitigated by higher revenue, lower interest on debt expense, and reduced prudence in the 2016 FES. These changes, in addition to the recent downward revision in the equalization entitlement forecast, result in a fiscal gap of $1.8 billion in 2017-18 and $2.3 billion in 2018-19.
- This fiscal gap widens with the additional impact of PRRT submitted plans coming in above preliminary allocations.
- Without implementing additional revenue and expense tools, the deficit could potentially reach $4.2 billion in 2017-18 and $5.7 billion in 2018-19. As new information is received leading up to the 2017 Document, deficit estimates could deteriorate further.
    - Since October, the range of the fiscal gap has widened mostly as a result of lower equalization entitlements mentioned above, and ministry PRRT submissions coming in above preliminary allocations.

Details of the 2017-18 and 2018-19 Fiscal Challenge

*Excludes Document Initiatives Envelope
**Excludes the Contingency Funds and Year-end Savings target tools of $(0.8) billion in each of 2017-18 and 2018-19

Confidential Advice to Cabinet – PRELIMINARY DRAFT, All numbers to be confirmed

Current Fiscal Outlook Gap – 2017-18

PRRT Submitted Plans above Preliminary Allocations*

- Social Assistance forecast
- Clean Water and Wastewater Fund provincial contribution
- Electricity Rebate – revised forecast
- Further OSAP enhancements
- Cost and/or timing changes for municipal and provincially owned transit projects (e.g., Ottawa LRT Phase 1, Waterloo RT, Metrolinx projects)
- TTC PRESTO

Scalable Priority Investment Initiatives

- Highly skilled workforce investments
- More funding for Project Momentum
- Early years and child care space expansion
- Social assistance rate increase and reforms
- MCSS Response to Ombudsman
- Priority health investments
- Corrections transformation
- Youth Jobs strategy
- GO Transit / RER Operating Subsidy
- Other capital expense (e.g., Ontario 150)

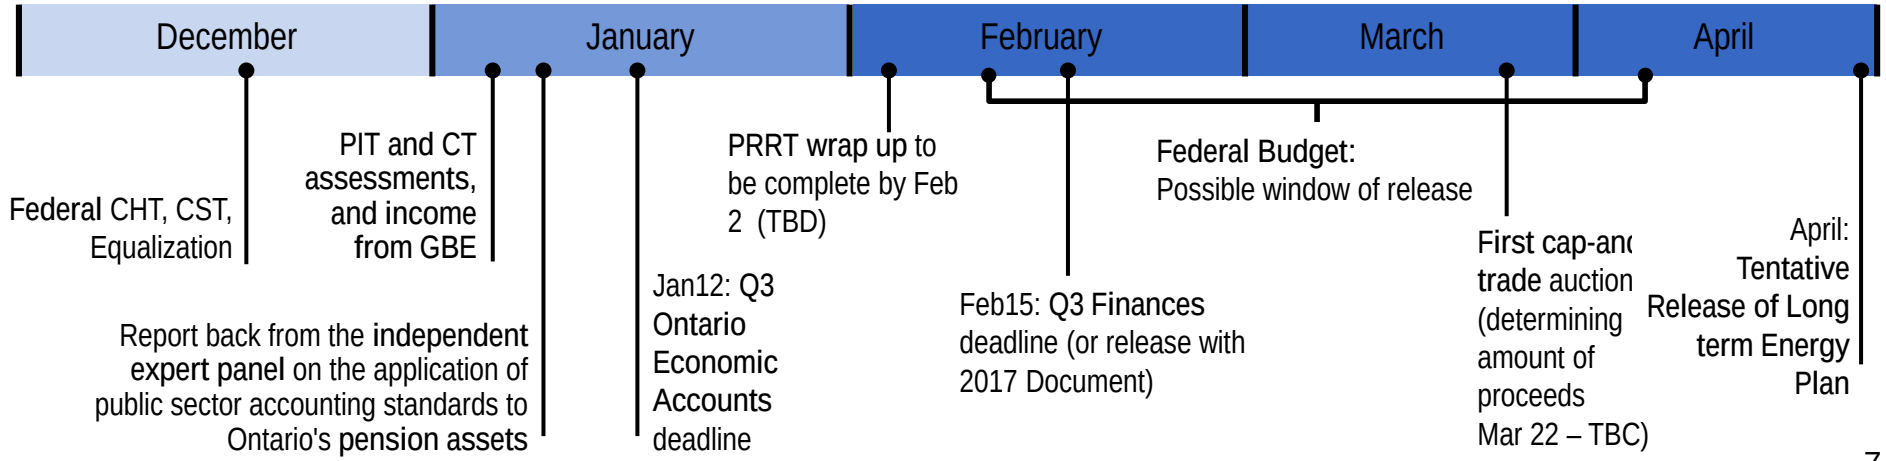
Not Included in Gap

- Document initiatives envelope
- Additional electricity price relief
- Education remedy rollover

Additional New Capital Asks Not included in the Gap

- New facilities including Halton Consolidated Courthouse, correctional facilities, resources road labs
- Funding to reduce GHG emissions and facilities renewal in government realty portfolio

* Based on ministry requests. Does not reflect potential recommendations.



Other Factors That Could Further Impact the Gap

Revenue

- Economic updates
- Estimated proceeds for cap-and-trade
- Adjustments to the government's asset optimization strategy
- Key revenue information including federal HST update, and Equalization entitlements, and finalization of PIT and CT assessments.
- Monthly updates to personal and corporate income tax and income from Government Business Enterprises
- Implications of Federal Budget

Expense

- Decisions related to PRRT items that may be deferred to the 2017 Document process, including:
  - 2017 Document initiatives
  - Alignment of climate change investments with available proceeds, and accounting treatment
- Interest on debt forecast updates
- Treatment of Pension Accounting and other accounting issues
- Impact of expense pressures that ministries have been asked to manage

Confidential Advice to Cabinet – PRELIMINARY DRAFT, All numbers to be confirmed

Establishing a Path Forward

Establishing Building Blocks and Anchors for the 2017 Document

- Several planning questions will need to be addressed in order to drive decisions to land on a fiscal outlook for the 2017 Document:

Should we maintain the current anchors for the 2017 Document?

Commitment to balance the budget in 2017-18 and remain balanced in 2018-19	Net debt-to-GDP target declining to pre-recession level of 27%	What is the surplus/(deficit) target for 2019-20?

Considerations:

Revenue: What additional revenue measures are in scope? How can a federal engagement strategy provide additional support?

Expense: How to limit Ministry requests above preliminary allocations? What initiatives need to be announced in the 2017 Budget, what is scalable and what can be delayed? Is there scope for ongoing multi-year savings? How to address accounting risks? Will there be an envelope for Document Initiatives?

Prudence: What is the appropriate level of the C-Fund and reserve that should be built into the fiscal plan?

Narrative: What are the key themes around which to construct the narrative for the 2017 Document?

FTAA Requirements: To publish the fiscal year of the budget plus the following two years, and a longer period, should a deficit be projected (i.e. recovery plan).

Pre-election Report: The 2017 Document will set the stage for the 2018 Document and pre-election report.

Tools to Achieve Fiscal Targets

There are a number of revenue and expense measures that could be considered to achieve fiscal targets.

Additional Revenue Measures	Federal Revenue Strategy

• Determine the scope for revenue tools, including:
  • Tax measures
  • Asset optimization
  • Non-tax revenue
  • Federal tax measures
	• Engagement strategy with the federal government to maximize new federal funding, including:
	  • Relief on equalization
	  • Funding for climate change initiatives
	  • Infrastructure
	  • Health funding

Additional Expense Measures	**Review level of Prudence**

• Determine the scope for expense measures, including:
  • Undertaking additional transformative initiatives
  • Revisiting in year approvals
  • Timing/scaling mandate letter commitments
  • Additional savings targets
• Interest on Debt Savings
	• What is the appropriate level of the C-Fund and reserve that should be built into the fiscal plan?
	  • Further reductions to the reserve or C-Fund increase vulnerability to future forecast changes

Revenue Measures

Increasing revenue significantly means looking at the biggest taxes:

- Personal Income Tax
- Corporate Taxes
- A combination of tax measures
- HST
- Education Property Tax

Examples of Potential Tax Measures	Revenue in 2018-19
Suspend indexation of Personal Income Tax brackets and non-refundable tax credits for one year in 2017	$395M*
Eliminate the advantage for surtax payers in claiming tax credits	$260M*
Simplify the Ontario Health Premium and make it more proportional to income	$495M*
Increase tax paid by companies on insurance premiums (last changed in 1978)	$360M*
Increase beer tax by an additional 3 cents per litre in each of Nov 2017 and Nov 2018 (6 cents total in each year) • Incremental price impact would be about $0.50 per 24-pack of beer • May allow large brewers to break from a commitment to constrain prices on popular beer brands until May 2017 • Consistent with government policy direction to more closely align government charges across beer, wine and spirits categories	$41.1M Increasing to $58.5M in 2019-20

* Assumes January 1, 2017 implementation

Revenue Measures cont'd

Examples of Federal Tax Measures:

1) Ask Federal Government to tighten the rules to ensure proper taxation of property flipping

2) Share revenue from tax measures with a provincial connection

- The federal government keeps all the tax revenue from certain income tax measures that have a substantial provincial connection (e.g. withholding tax on rent, from real estate in Ontario, paid to a non-resident). The Province can press the federal government on sharing this revenue.
- Marijuana tax for recreational purposes (post-legalization). Could either be a direct provincial tax or a federal tax (could ask for revenue-sharing with the province, however, note that parameters and associated revenue with this option are highly dependent on direction provided by federal government)

3) Ask Federal Government to review tax concessions for corporate meals and expenses

4) The federal review of tax expenditures is expected to be completed early in 2017. While some potential changes could automatically benefit Ontario, there has been no indication on specific measures or timing of announcements.

Examples Related to Asset Optimization (AO) (see further details in appendix)

Asset Optimization (incl. Hydro One & Real Estate ($M)	2017-18	2018-19
Budget 2016	*695*	*170*
Revised Outlook	370	(135)
Variance	*(325)*	*(305)*

- Asset optimization outlook is down for 2017-18 and 2018-19 since Budget 2016, primarily due to lower gains on sale from Hydro One shares (due to a higher book value of Hydro One shares because of the higher deferred tax benefit, no gain for the planned COO and Métis sales, and lower recent Hydro One share prices), assumed earlier timing for share sales in the fiscal year that advances lost net income from Hydro One, and lower associated IOD savings.

Acceleration of Hydro One share sales to 2017-18

Accelerated H1 Share Sale vs. 2016 Budget ($M)	2017-18	2018-19
Variance	*(65)*	*(685)*

- Selling most of remaining 30% of Hydro One common shares in 2017-18 instead of 2018-19 could offset most of the current projected negative AO variance in 2017-18 (above based on a 26% sale, as advisors suggested retaining 4% to maintain a cushion to the legislated 40% level).
  - Leaves a significant negative impact of about ($685)M in 2018-19, with no shares available for sale in 2018-19 if maintain a 4% cushion
- Risks to the outlook would include market share price risk, generally and, e.g., from large share sale in 17-18, interest rate environment, OEB regulatory decisions, and impact of any Hydro One acquisition activities; as well as risks on real estate sales.

Federal Revenue Strategy

- In April 2016, Cabinet directed Ministries to coordinate the development of strategies to maximize the financial benefits from federal budget measures, and to mitigate any negative fiscal impacts.
  - While Ontario and the federal government have signed agreements in a number of areas, there are additional opportunities to maximize new federal funding, minimize the negative impact of conditions on new programs, and leverage federal investment to support provincially-planned programs.

Program Area	Example
Federal health funding	• Continue to work with other provinces and territories to engage the federal government on adequate, sustainable and principled health funding.
Equalization program	• Defensive tactic: ensure GDP constraint acts as a 'top-up' as currently described in legislation • Offensive tactic: push for 'protection' from year-over-year declines in transfer entitlements.
Climate change funding	• With the release of the Pan-Canadian Framework on Climate Change, the federal government will likely begin funding through new environmental programs, including the Low Carbon Economy Fund.
Early learning and child care	• Work to ensure National Framework and bilateral agreements provide Ontario flexibility to direct federal funding to in-plan expenditures and support Provincial priority areas.
Infrastructure	• Ontario continues to work with the federal government on the next phase of its infrastructure plan, including limiting the federal government's use of incrementality provisions.
Indigenous files	• Maximize opportunities to leverage historic $8.4B planned federal spending, both to make ON's planned investments (health, TRC response, anti-violence) go further and reduce downstream costs associated with inaction/failure to address root causes.
Innovation Agenda	• Ontario will likely have a number of programs that are aligned with the Innovation Agenda, and should look for opportunities to leverage funding to provincial priorities.

Program Expense Tools – 2017-18

Managing Expense

- Revisit in-year approvals (up to $1.3 billion in 2017-18)
- Limit any increases above allocation (up to $1.0 billion in 2017-18)
- Maintain a focused view on scalable investments (up to $1.3 billion in 2017-18)
- Ask ministries to manage new initiatives from within existing allocations
- Defer all new capital investments not in-plan until fall 2017, pending the completion of the Ministry of Infrastructure's prioritization framework for infrastructure investments.

Savings Targets

Since 2009-10, the margin between budgeted and actual program expense has been diminishing:

- Actual program expense in 2009-10 was $4.4 billion lower than the projection in the 2009 Fall Economic Statement.
- Actual program expense in 2015-16 was $0.4 billion higher than the projection in the 2015 Budget.

Corporate savings targets can be used to reduce the expense forecast. The current outlook includes a **year-end savings** target of $1.2 billion in 2017-18. This is relatively high by historic standards but could be increased.

Program Expense Tools – 2018-19 onward

Through PRRT, programs are assessed for relevance, effectiveness, efficiency, and sustainability. This approach can continue to be used to drive further transformation.

Horizontal Transformation

The government could continue to identify new areas for cross-ministry, horizontal transformation. These could be linked to ideas ministries have submitted through the current PRRT.

- There remain many areas where there are multiple programs providing similar services to the same stakeholders. Further transformation can lead to better outcomes while being more efficient.
- This approach would require significant changes to program design and would require actively engaging stakeholders.
- Given the timelines, such an approach would likely have only a modest impact in 2018-19.

Prioritization

Within each ministry, once ministry and program level measures are put in place the government could initiate a process, using the PRRT Sub-Committee, to require the ministries to identify low performing programs within the existing base to support:

- Realignment of funding to existing commitments/priorities yet to be implemented (alleviating pressures on the Fiscal Plan while moving the policy agenda forward); and
- Providing an opportunity for a portion of the savings to be used corporately.

Alternative Approaches to Fiscal Anchors

The government could consider alternative approaches to measure and communicate balance and fiscal sustainability. Each of these approaches would still require substantial fiscal effort in order to be able to communicate a credible narrative.

Balancing Before the Reserve

- The government could communicate that balance is achievable if the reserve is not needed.
- There may be scrutiny about inconsistent reporting of surplus/(deficit) targets, which have always included the reserve (per FTAA).
- Maintains a similar framework used in previous documents leading to the path to balance.
- Comparable with actual results and consistent with FAO reporting.

Balancing the Operating Budget Only

- The government could exclude capital expense from the surplus/(deficit).
- The narrative could focus on running an operating surplus and indicate deficits are a result of capital investments to spur economic growth.
- May be scrutinized for introducing a new definition of balance in 2017-18. However, Ontario communicated operating surplus/(deficits) in the 90s; similar approach taken by AB in 2013-14 & 2014-15.
- Given that capital expense is approximately $7B to $8B each year, this could result in a surplus and create room to fund additional priorities.

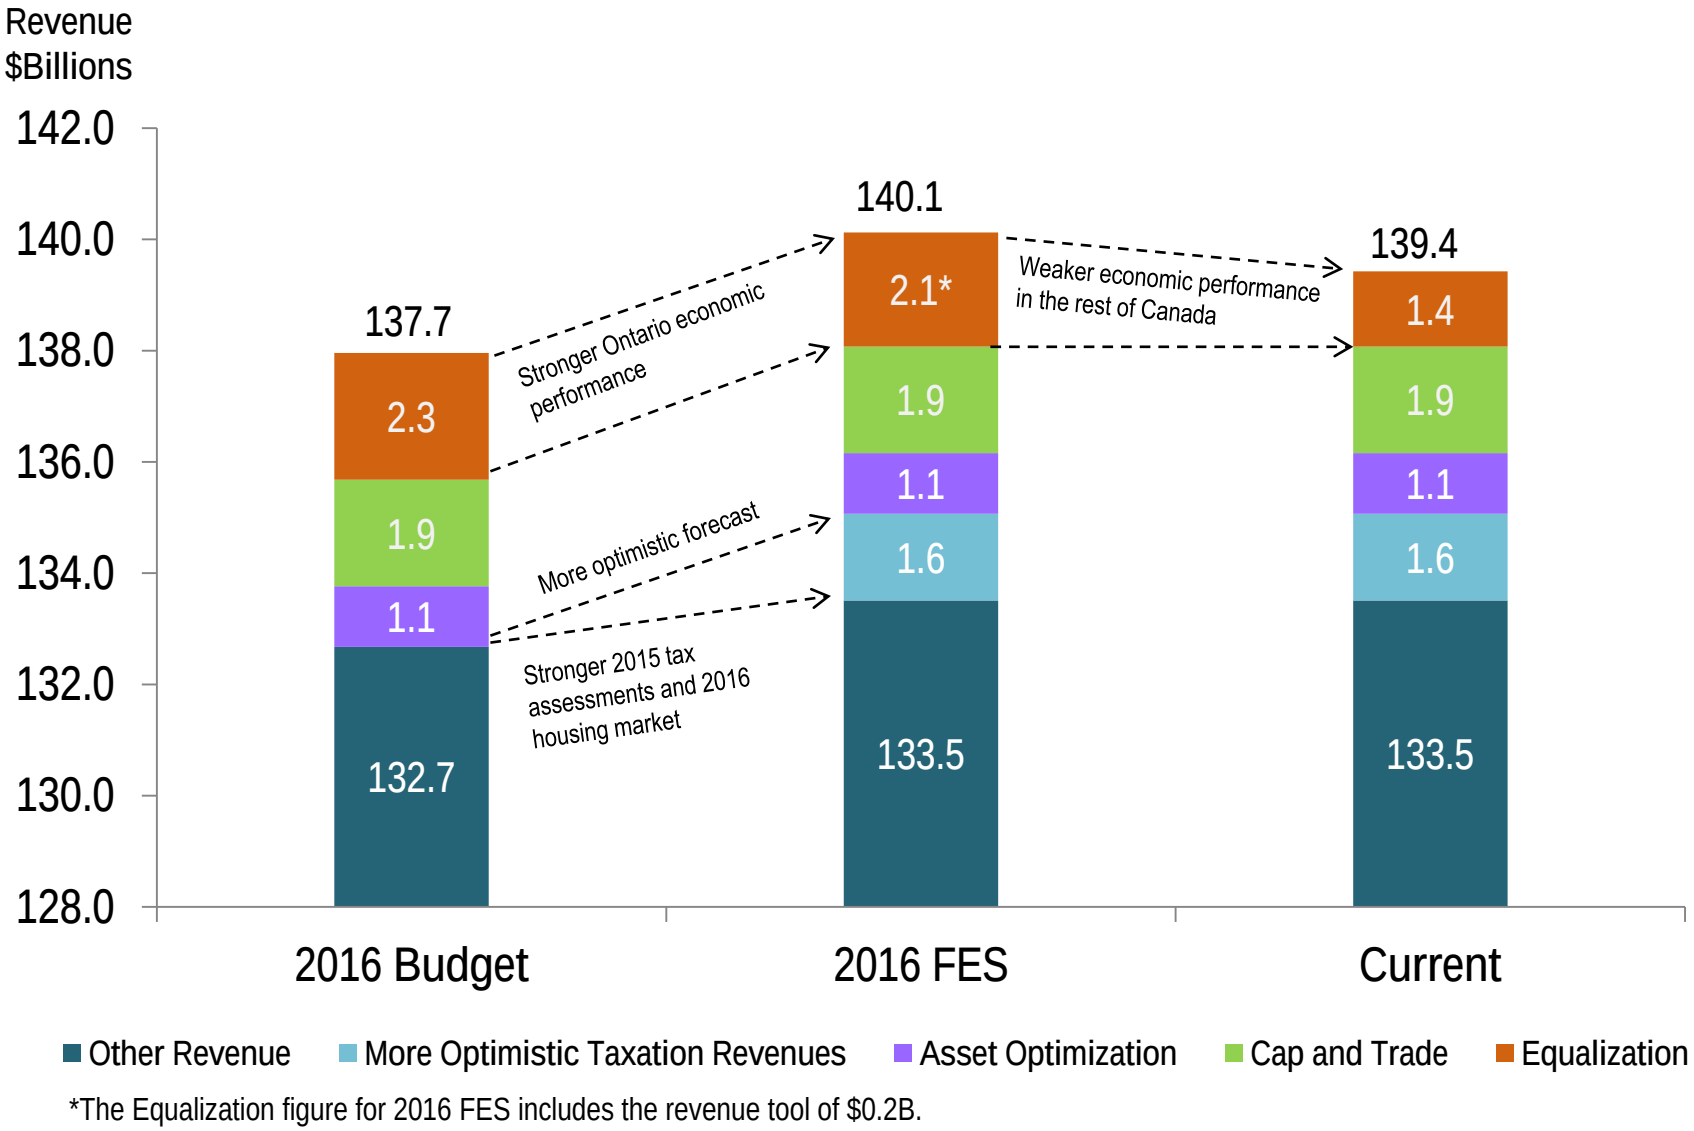
Shifting to a Net Debt-to-GDP Narrative

- The government could shift its fiscal anchor to focus on the net debt-to-GDP ratio rather than a surplus/(deficit).
- Would shift the narrative away from budget balance to a measure of longer-term fiscal sustainability.
- Subject to volatility, resulting from changes in economic growth, investments in capital, and shifts in accounting standards.

Postponing Balance Date

- The government could consider postponing balance to 2018-19 or a later fiscal year.
- Provides some flexibility in 2017-18 but would still require significant fiscal effort to balance by 2018-19.
- May be scrutinized by stakeholders (e.g. rating agencies) for moving off of targets that were originally set out in 2010 and reinforced thereafter.
- If the government continues to run deficits, a recovery plan would be required.

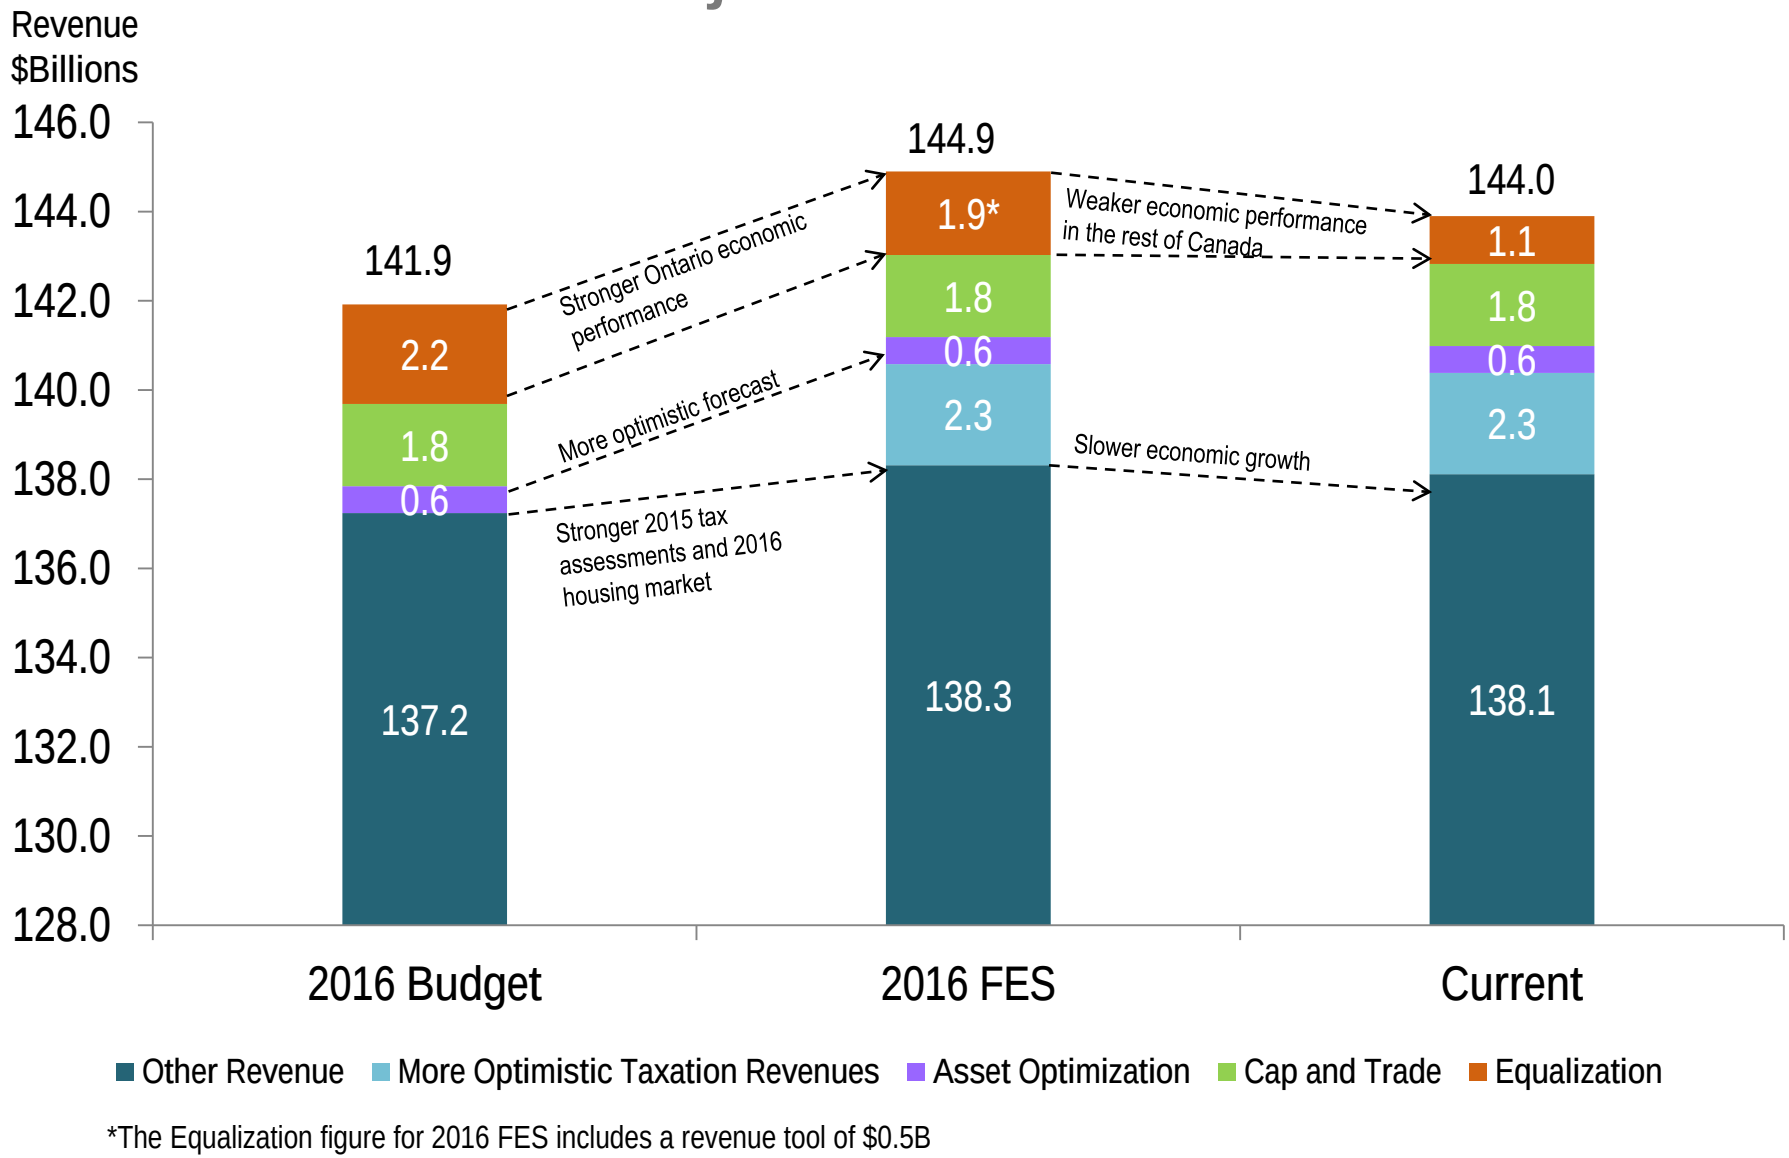
Confidential Advice to Cabinet – PRELIMINARY DRAFT, All numbers to be confirmed



Next Steps

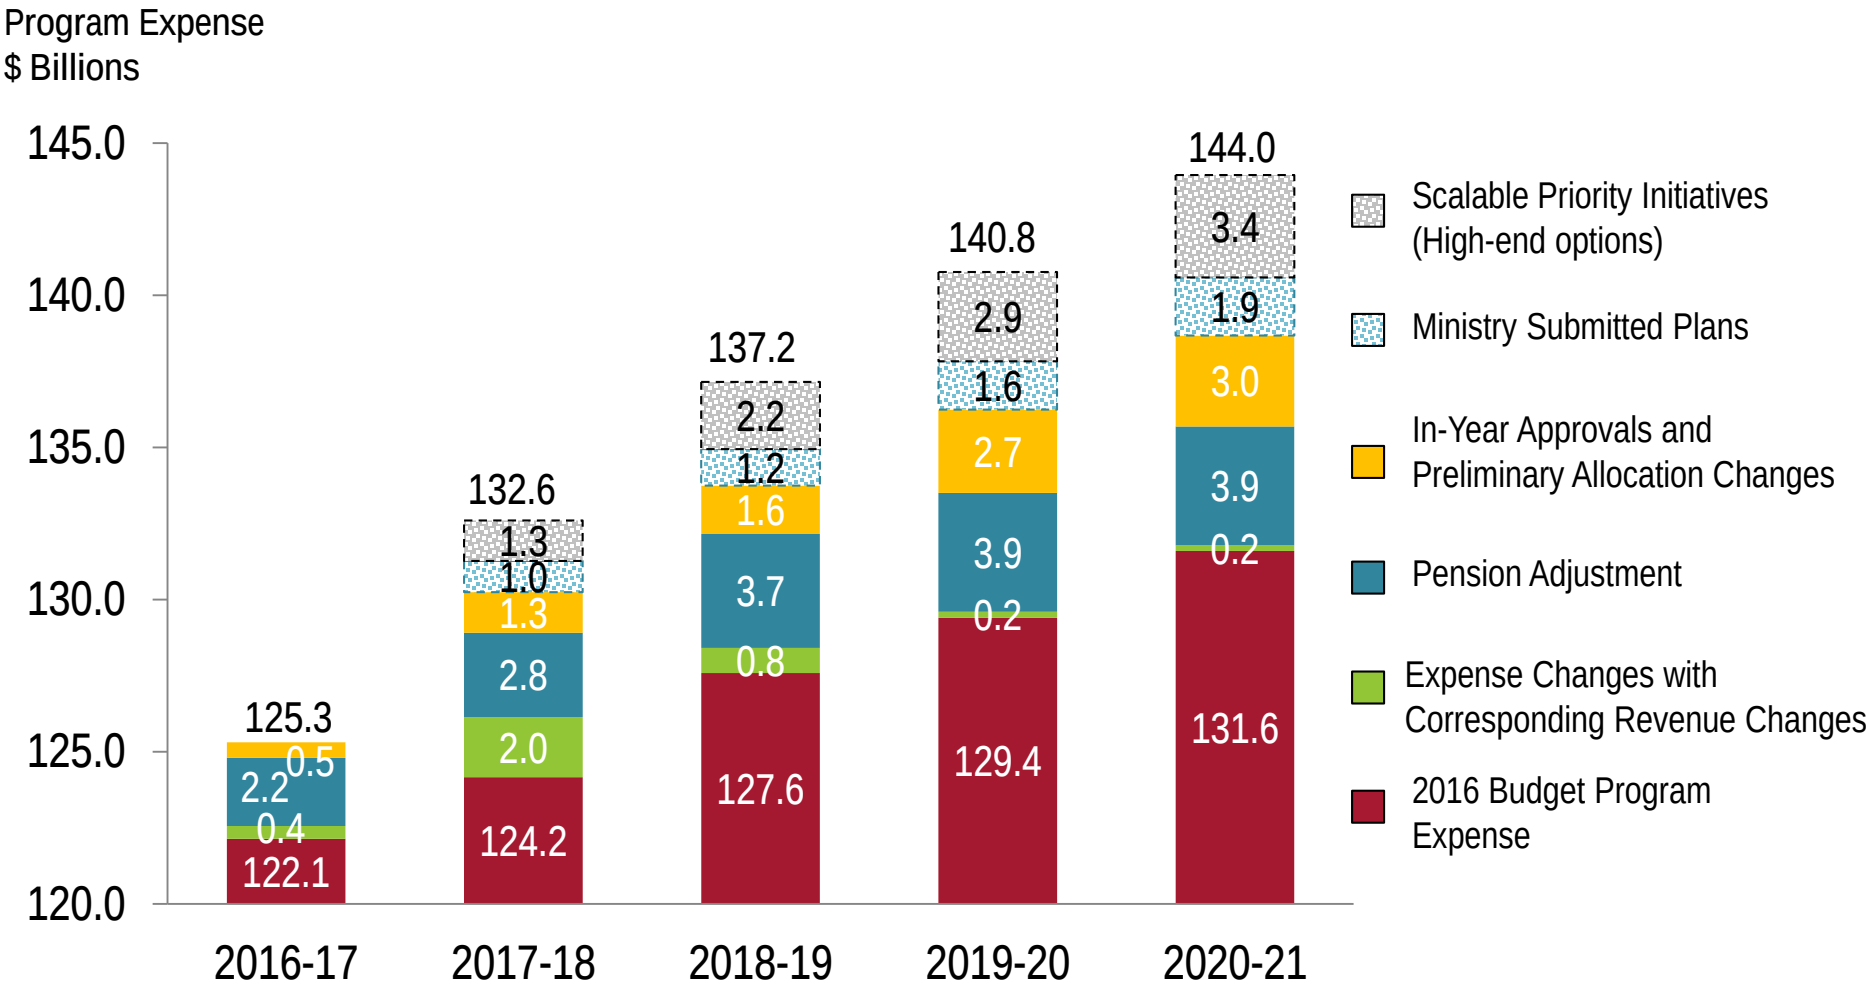
✓ **STAGE 1 - Assessment of current fiscal plan (FPC, December 7)**	
STAGE 2 - Where do we go from here?	
FPC Meeting December 15	• Establish a path forward • Identify planning questions, potential tools, and strategies to achieve fiscal targets
STAGE 3 – Fiscal Architecture Planning for the 2017 Document	

Strategies Meeting
Date TBD
	• With greater clarity around the tools available, discuss prioritizing initiatives for 2017 Document.
	  • Prioritize scalable initiatives relative to the use of tools
	  • Discuss potential themes for 2017 Document



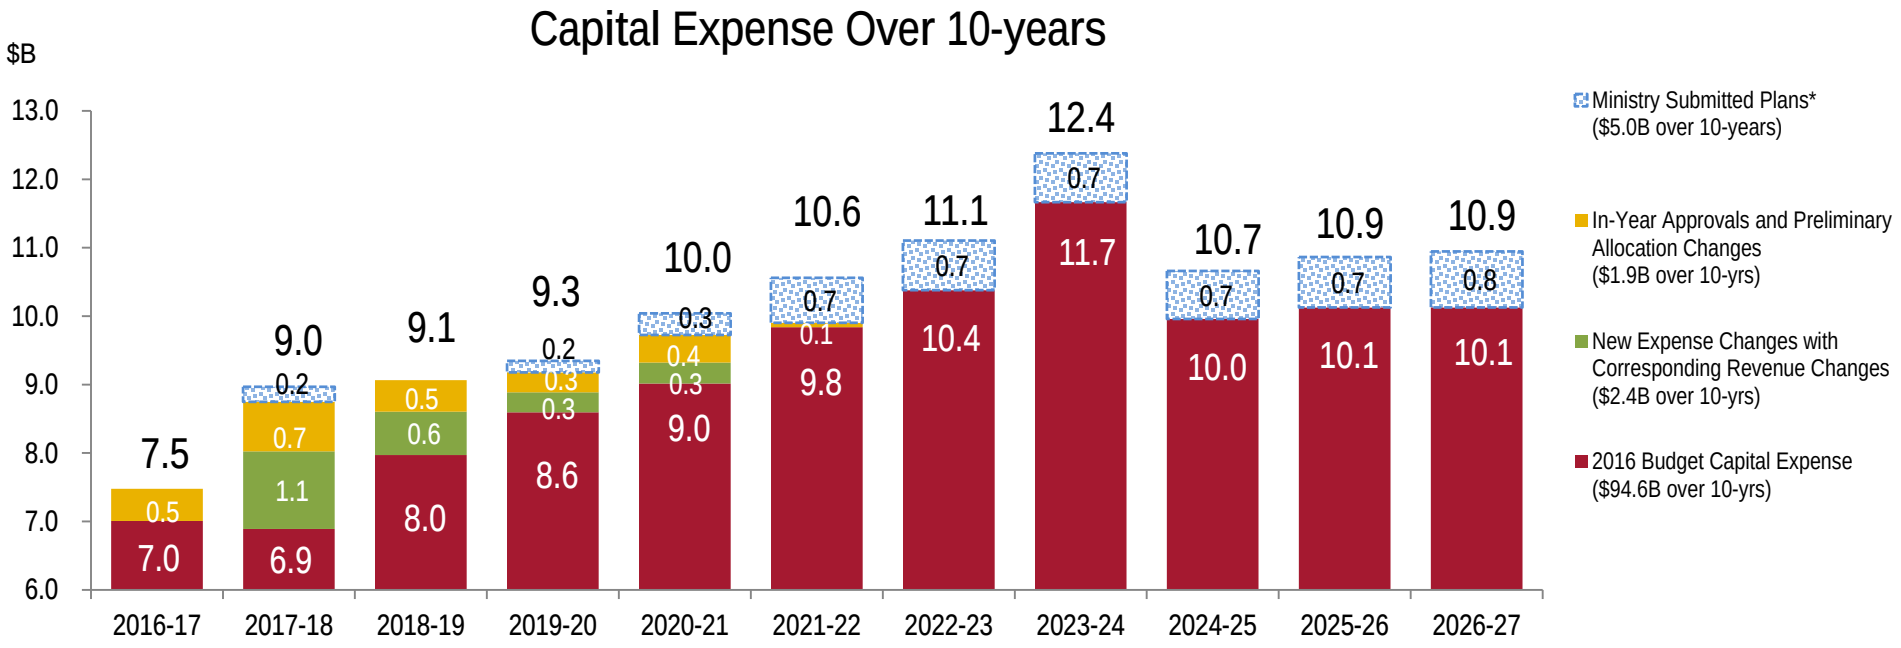
Appendix

Ontario Revenue Projections for 2017-18



*The Equalization figure for 2016 FES includes the revenue tool of $0.2B.

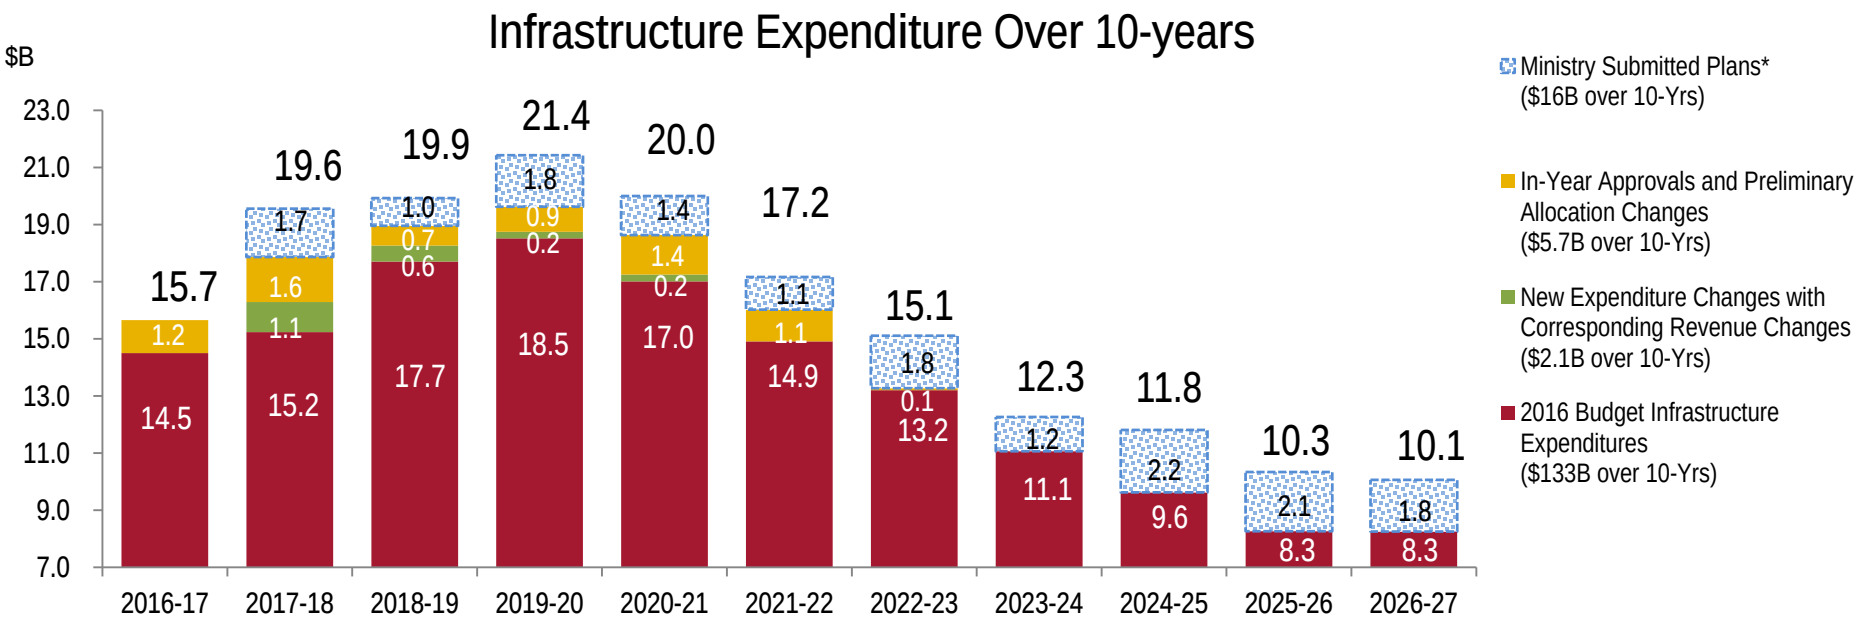
Ontario Revenue Projections for 2018-19



*The Equalization figure for 2016 FES includes a revenue tool of $0.5B

Program Expense Changes Since the 2016 Budget

- Taking into account all program expenses including scalable priority initiatives and ministry submitted plans results in an average annual growth in program spending between 2015-16 and 2020-21 of 3.3%



Capital Expense Changes Since the 2016 Budget

- Capital Expense Base includes: Amortization of assets currently under construction, in planning, or publicly announced; and transfer payments to non-consolidated entities (including cost-matched, federal-provincial infrastructure programs).
- New Expense Changes with Corresponding Revenue Changes: Mostly for federal flow-throughs for Public Transit Infrastructure Fund
- In-Year Approvals and Preliminary Allocation Changes: Mostly related to out-year funding for in-year TB/MBC approvals and updated costs for Moving Ontario Forward projects (held centrally in the capital contingency fund).
- Ministry Submitted Plans: Mostly for cost and timing changes for provincial and municipal transit projects, new facilities (e.g., Halton Consolidated Courthouse, correctional facilities, MOECC labs), and new programs (e.g., school renewal)

**Does not include MOHLTC submission, which could contain Stage 2 (Construction) requests for hospital projects.*

Infrastructure Expenditures Changes Since the 2016 Budget

Note: Figures exclude third party contributions

- Infrastructure Expenditures Base: Mostly comprised of acquisition of government-owned and consolidated capital assets (e.g., Schools, Hospitals, Metrolinx transit assets), and capital transfer payments to non-consolidated entities (e.g., municipalities).
- New Expenditure Changes with Corresponding Revenue Changes: Mostly for federal flow-throughs for Public Transit Infrastructure Fund.
- In-Year Approvals and Preliminary Allocation Changes: Mostly related to out-year funding for in-year TB/MBC approvals and updated costs for Moving Ontario Forward projects (held centrally in the capital contingency fund).
- Ministry Submitted Plans: Mostly for cost and timing changes for provincial and municipal transit projects, new facilities (e.g., Halton Consolidated Courthouse, correctional facilities, MOECC labs), and new programs (e.g., school renewal)

**Does not include MOHLTC submission, which could contain Stage 2 (Construction) requests for hospital projects.*

Tools Included in the 2016 Budget

$ Billions	2017-18	2018-19	Risk Assessment	Timing of Outcome/Decision
Prudence	**0.1**	**n/a**	**Low**	**n/a**
Reduced the reserve from $1.2 billion to $1.1 billion in 2017-18. 2018-19 reserve of $1.2 billion was unchanged.				
Cap and Trade	**0.6**	**0.6**	**Low – 2017-18 High – 2018-19**	**2017 Doc/ March Auction**
Impact of a strategy that meets the government's climate change objectives while providing a benefit to the fiscal plan by funding $0.6B in plan projects annually with projected Cap and Trade proceeds.				
Other Revenue Measures	**0.1**	**0.2**	**Low**	**Implemented**
Tobacco tax increase of $3/carton in 2016-17 and indexation thereafter, and the wine strategy.				
Re-profile Asset Optimization Strategy	**0.3**	**–**	**Low**	**Pending**
Strategy assumed sale of OPG headquarters was delayed from 2016-17 to 2017-18.				
Federal Revenue	**1.3**	**1.3**	**High**	**Dec 2016 FMM/ 2017 Fed Budget**
Assumed a potential impact of $1.0 billion in each of 2017-18 and 2018-19 in unconditional infrastructure funding in each year (for in-plan projects). In addition, per-capita homecare and jobs and training funding in each fiscal year (applied to existing spending).				
Update Interest on Debt Outlook	**0.3**	**0.4**	**Low**	**Jan/Feb 2017**
Revised IOD outlook, reflecting updated interest rate forecasts.				
Key Tools included in the 2016 Budget Fiscal Outlook	**2.8**	**2.5**		

Risk Assessment	
Low	Tool is likely to fully materialize
Medium	There is some uncertainty whether the tool will fully materialize
High	Significant uncertainty whether the tool will fully materialize

Assumptions and Tools Included in the 2016 FES

$ Billions	2017-18	2018-19	Risk Assessment	Timing of Outcome/Decision
Revenue Tools	**1.8**	**2.7**		
The FES included more aggressive forecasts for economic growth, federal transfers, and non-tax revenues.				
Taxation				
CIT Revenue Yield	0.5	0.7	**High**	**2017-18 Pub. Accts.**
HST higher revenues	0.3	0.3	**Low**	**December 2016**
Federal Transfers (unconditional)	0.7	1.5	**High**	**Dec 2016 FMM/ 2017 Fed Budget**
Government Business Enterprises	0.2	0.2	**Medium**	**Dec – Jan**
Other Non-tax Revenue	0.1	0.1	**Low**	**2017-18 Pub. Accts.**
Prudence	**1.2**	**1.2**	**High**	**n/a**
The Contingency Funds were drawn down by $0.6 billion in 2017-18 and 2018-19; the Year-End Savings Targets were increased by $0.2 billion in each year, and the Reserve was reduced by $0.4 billion in both years.				
Interest on Debt	**0.8**	**0.7**	**Medium**	**Jan/Feb 2017**
The FES outlook included a significant increase to estimated interest on debt savings.				
Key Tools included in the 2016 FES Fiscal Outlook	**3.7**	**4.6**		
Other Revenue assumptions: PIT carry forward	**0.6**	**0.6**	**Medium**	**June-Dec 2017**

Risk Assessment

Low	Tool is likely to fully materialize
Medium	There is some uncertainty whether the tool will fully materialize
High	Significant uncertainty whether the tool will fully materialize

Revenue Measures in Ontario since 2012

- Some key Ontario tax changes over the past four years include:
  - Over $325M in annual savings/additional revenue from business tax credits.
  - Increased the top statutory income tax rate from 11.16 per cent to 13.16 per cent, on taxable incomes over $500,000.
  - Lowered the taxable income threshold for Ontario's top PIT rate from $514,090 to $220,000; a new tax rate of 12.16 per cent on taxable income between $150,000 and $220,000 was added, increasing taxes for the top two per cent of Ontario tax filers.
  - Revenue neutral changes to the Land Transfer Tax (LTT) were proposed in the *2016 FES:*
    - Increased LTT rate from 2% to 2.5% on portion of the value of the consideration over $2 million for one or two single family residences and from 1.5% to 2% on the portion of the value of the consideration over $400,000 for all other property types.
    - Revenue from the aforementioned rate increases to be used to double the maximum LTT refund for first-time homebuyers from $2,000 to $4,000.

Asset Optimization Outlook: Changes since 2016 Budget

- Budget 2016 outlook assumed ~15% of Hydro One shares sold in each of 2017-18 and 2018-19. Based on updates, could imply ~12% sold to the market / ~3% sold to First Nations and Métis Nation of Ontario in 17-18, ~15% sold to the market in 18-19.
- The following provides a preliminary, illustrative (based on a recent low Hydro One share price) update summary of revisions to the asset optimization outlook since the 2016 Budget, including the secondary sale in April 2016 at a higher than projected gain, but increased forgone net income. Given recent volatility in share prices and interest rates, further assessment will be needed closer to a transaction date.
- **2016-17:** Tracking slightly lower than plan, driven by push in expected timing for Seaton land sales to future fiscal years and higher than expected book value of Hydro One Brampton reducing gain on sale, partially offset by the higher LCBO gain.
  - The outlook also assumes ~$70M gain from Hydro One share sales to OPG is not recognized in 2016-17.
- **2017-18:** Tracking lower than plan, primarily due to lower forecasted benefits from Hydro One shares sales driven by:
  - lower potential market prices for Hydro One shares, based on market prices in Nov. / Dec. 2016 -- recent reduction from a high of $26.59/share in July 2016 to a low of $22.65/share in November 2016
  - agreement-in-principle with COO to sell Hydro One shares @ $18/share / provide up to $45M in 2017-18 in seed capital
  - a potential similar agreement with the Métis Nation of Ontario
  - higher forecasted carrying value (book value) of Hydro One shares, due to the higher deferred tax benefit reported in 2015, which negatively affects projected future gains on sale
- **2018-19:** Lower than plan, primarily due to Hydro One shares, driven by the market price and book value issues noted above.

$ Millions	2016-17	2017-18	2018-19
2016 Budget AO Outlook	*685*	*695*	*170*
Changes since 2016 Budget			
Hydro One	*20*	*(335)*	*(305)*
Hydro One Brampton	*(70)*	*(5)*	*(5)*
LCBO Head Office Lands	*50*	*-*	*-*
OPG Headquarters and Parking Garage	*-*	*(5)*	*-*
Seaton Lands	*(70)*	*40*	*-*
Lakeview Lands	*-*	*(20)*	*-*
Total AO Variance	*(75)*	*(325)*	*(305)*
Revised AO Outlook*	610	370	(135)

** Hydro One impacts include the following assumed IOD savings: $115 M in 2016-17 / $164 M in 2017-18 / $258 M in 2018-19 that are subject to potential reporting reclassification. Numbers are rounded to the nearest $5M and may not add due to rounding. All asset optimization values are subject to market conditions, and with increased uncertainty in out years.*

Asset Optimization Scenario: Acceleration of Hydro One Share Sales to 2017-18

- The following scenario shows an acceleration of Hydro One share sales to 2017-18.
- The scenario below assumes ~26% of Hydro One common shares are sold in 2017-18. This would
  - Offset a significant portion of the current projected negative AO variance in 2017-18 by shifting forward gains on sale. AO outlook for 2017-18 still remains about $65M lower than Budget 2016, taking into account recent low share prices.
  - Leave 4% of shares as a cushion to maintain Hydro One share ownership of at least 40%
  - Leave no shares available for sale in 2018-19 if a 4% cushion maintained, with a significant negative impact of about ($685)M in 2018-19 (this includes the impact of higher forgone Hydro One net income due to a sooner lower Provincial ownership share)
  - Potentially add downward pressure on market prices and upward pressure on sale discount or fees under a scenario with a high volume of shares sales at once / in one year, further lowering realised gains on sale.
- All estimates are subject to a number of factors, most notably the market price of Hydro One shares and the % of shares sold.
  - Under a ~15% share sale in a fiscal year, each $1 change in the market price of Hydro One shares would change the annual impact by about $90M.
  - Under a ~23% share sale in a fiscal year (noting no change for First Nation and Métis transactions, assumed at a fixed price), each $1 change in the Hydro One share price would change the total impact by about $135M.
  - Each 1 percentage point change in Hydro One share sales would change the net impact, in 2017-18, by about $25M.
- Other risks would include market risk, interest rate environment, OEB regulatory decisions, and impact of any Hydro One acquisition activities.

$ Millions	2016-17	2017-18	2018-19

** Hydro One impacts include the following assumed IOD savings: $115 M in 2016-17 / $201 M in 2017-18 / $226 M in 2018-19 that are subject to reporting reclassification. Numbers are rounded to the nearest $5M and may not add due to rounding. All asset optimization values are subject to market conditions, and with increased uncertainty in out years.*

2016 Budget AO Outlook

- The table below provides a summary of the estimated contributions from AO, assumed for 2016 Budget fiscal planning purposes. Of note:
  - The estimates assumed that 14 $^{2}/_{3}$ per cent of Hydro One shares would be sold in each of fiscal 2016-17, 2017-18 and 2018-19.
  - In addition to the sale of the LCBO head office lands in 2016-17, the estimates assumed that the process to sell the Seaton lands in parcels would begin in 2016-17, with gains occurring in 2016-17 and 2017-18. Hydro One Brampton was assumed to be sold mid 2016-17, and the OPG HQ and Lakeview lands were assumed to be sold in 2017-18.

AO Contribution Summary ($M)*	**2016-17**	**2017-18**	**2018-19**
Hydro One components:			
+ Gain on Sale	*415*	*515*	*575*
- Loss of Net Income and PILs (from cumulative % sold)	*(375)*	*(535)*	*(700)*
+ Potential Interest Savings (from cumulative proceeds)	*155*	*240*	*330*
Hydro One	195	220	200
Hydro One Brampton	200	5	5
LCBO Head Office Lands	195	(5)	(5)
OPG Headquarters and Parking Garage	-	310	(30)
Lakeview	-	75	-
Seaton	85	90	-
GM Shares	-	-	-
2016 Budget AO Outlook	**685**	**695**	**170**

* *Numbers rounded to the nearest $5M. Numbers may not add due to rounding. Numbers shown are estimated net impacts (e.g., net of book value and costs, any revenue losses and IOD savings). The AO outlook has been revised down from initial outlook at the time of the 2016 Budget, driven by additional expense allocations that were provided to the Ministry of Energy (ENERGY) to support broadening Hydro One ownership. GM contribution includes both 2013-14 and 2014-15 amounts from GM Share sales.*

2016-17 FES - Excluding Pens					
			Scenario	What is the change in GDP that wi	
2016-17 GDP			789,176		
2016-17 Net Debt to GDP %			0.3890		
2016-17 Net Debt			307,353		
			Net Debt to GDP		Scenario GDP
by up	0.01%		307,353	=	789,907.00
	38.91	0.3891	0.3891002		
by down	0.10%	0.3880	307,353	=	792,147.00
	38.80		0.3880000		

Scenario	What is the change in net debt hol result?
	Change in Net Debt
Projected ND +	-285
Projected ND -	1153

Draft wording for slide 4:

For 2016-17, the net debt-to-GDP ratio is 38.9%.

An decrease of $285 million to net

An increase of $1,153 million to ne

Since the 2016-17 net debt-to-GDI
38.91% versus the larger changes

ion Adjustment (adj 2015/16)

ll make the Net Debt ratio change by 0.1%?

Actual Projected GDP	GDP Variance	GDP Variance %
789,176.00	731.00	0.09%
789,176.00	2,971.00	0.38%

lding GDP constant that will yield the same

Scenario Net Debt	Scenario Net Debt to GDP	Rounded	Target
307,068	38.909952%	38.91%	38.91
306,200	38.799964%	38.80%	38.80

: debt or a increase of $731 million in nominal GDP would increase the net-debt-to-GDP ratio to 38.91%

et debt or an increase of $2,971 million in nominal GDP would decrease the net-debt-to-GDP ratio to 38

P ratio was 38.9% smaller changes to net debt or nominal GDP resulted in changing the net debt-to-GDP
required to lower the ratio to 38.8%.

Ken,

Please find attached the requested scenario analyses. Please note we used revised GDP numbers used for the FES, as well as the most current capital numbers given to us by CPD used in earlier scenario analyses.

Thanks.

John

Net Debt to GDP %

	2016-17	2017-18	2018-19
Option 1	41.1	40.5	40.0
Option 2	41.2	40.6	40.1
Option 3	41.1	40.5	40.0

Option 1: Incorporates partial impact by taking half of pension asset accountin

Option 2 : Incorporates full potential impact of pension asset accounting chang

Option 3: Pension adjustment equals the deficit.

Attachments:	Net Debt - 2016-17 -(March 28 2017).xlsx Net debt analysis.xlsx

---

Serena,

Please find attached our net debt calculations and the breakdown of what makes up net debt. In the net debt analysis file, can you double check that column K is correctly entered for Budget, as the old number may have changed from last week given changes in TCA and the deficit in the last couple of days. If major changes in TCA are announced tomorrow, we'll resend you revised numbers tomorrow as well.

George and I will be going to Frost tomorrow and we'll see you at BudSec.

Thanks.

John

2017 Document

Scenario: $1.5 B deficit in 2016-17, balanced budget afterwards.

Assumptions

1 Pension is reversed and deficit for 2016-17 is $1,472
2 GDP - per latest information rec'd March 28, 2017 (see GDP tab)
3 TCA - per info rec'd Mar 20, 2017 (see TCA tab)
4 Net Debt not adjusted for prepaids

	2017 Doc Net Debt ($M)	2017 Doc	2016 Budget	Q3
		Net Debt to GDP %		
2016-17	301,904	37.82	39.61	38.26
2017-18	311,340	37.39	38.94	37.80
2018-19	321,172	37.06	38.53	37.46
2019-20	332,704	36.85	38.18	37.16

Other Assumptions

Balanced budget continues through to 2030-31
TCA is the same from 2020-21 to 2030-31, i.e. no change
GDP annual growth is 4% from 2021-22 to 2030-31

Based on the assumptions above, the net debt to GDP threshold of 27% is achieved in

FES

38.26
37.80

Subject: Non Cash Adjustments
Date: Wednesday, December 07, 2016 4:04:40 PM
Attachments: image001.png

Hi Ken,

We had an investor meeting today and one of their questions was on what "non-cash adjustments" in the financing table represents.

I showed Jim the response we have in the FES Q&A's, but he was wondering whether we could get a more complete breakdown. Would it be fine to share the breakdown below with investors?

Details	2016-17 ($ Billions)
Reserve	(400)
Total BPS Timing Differences	(407)
Total AFP Timing Adjustments	(678)
Amortization expense	(5,137)
H1 Tax Shelter*	-
Student loan - grant expenditures	(446)
Pension adjustment	(2,240)
General timing adjustments	1,864
Non Cash Adjustments in Financing Table	(7,444)

*offset 85% of Hydro One tax shelter gain included in deficit

Q: What does non-cash adjustments of $7.4 billion in 2016–17 represent?

Non-cash adjustments convert accounting accruals into cash requirements. Cash and accruals differ primarily because of $2.6 billion in Alternative Financing Procurements (AFPs) funded by third parties plus the reserve of $0.4 billion, partly offset by payments to be made in 2016–17 upon substantial completion of prior AFP projects. The total non-cash adjustment also reflects the impact of the pension adjustment. Another significant adjustment is amortization that is currently over $5 billion but is, partly offset by general timing adjustments that always arise between the Province's inflows and outflows on a cash versus accrual basis. A notable example of the latter is the variance between the net incomes of the Government Business Enterprises and the dividends they pay to the Province.

Thanks,
Serena

---

Hi Michael,

Please find attached, OFA edits to SCOPA materials. I have included both clean and track change versions (against the drafts Comms sent earlier this week).

A few notes:

- Our edits to the Balanced Budget Q&As only relate to IOD (highlighted sections). Office of the Budget is the lead on this note, so I'm **copying Ryan so that he may incorporate our input into his final version**.
- You'll note I have not included the Fair Hydro Plan long-form Q&A. **Our recommendation is not to include it**. All questions related to the Fair Hydro Plan should be directed to the Ministry of Energy, OPG and IESO.
- We've included wording around the records disclosure in the general Q&A document, but please ensure the OFA language is aligned with the broader MOF response (per my email to Minzi earlier).

Thanks and happy to discuss should you have any questions.

LONG-FORM MEMBER QUESTION: BALANCED BUDGET

DEPUTY MINISTER SCOTT THOMPSON

Question:

- How is Ontario planning to keep a balanced budget?

Answer:

- ….

Expenses:

- Let me now address expenses.
- The Public Accounts for 2016–17 show that total spending was $141.7 billion, $100 million lower than the 2016 Budget projection.
- Program spending expenses accounted for $130 billion.
- Interest on debt, at $11.7 billion, was down $0.7 billion from the 2016 Budget projection.

- Going forward, program expenses are projected to grow from $130 billion in 2016–17 to $144.2 billion in 2019–20.
- This represents an average annual growth rate of 3.5 per cent.
- Growth in program expenses over the medium term is driven by investments to help the people of Ontario, such as health care, supports for seniors, the introduction of pharmacare for children and youth under OHIP+, electricity cost relief programs under the Fair Hydro Plan, and new initiatives for small businesses that will lower costs and support growth.

DRAFT

- Interest on debt expense is projected to grow from $11.7 billion in 2016–17 to $13.3 billion in 2019–20.
- This increase is due to borrowing for capital spending and interest rates that are forecast to rise.
- This represents an average annual growth rate of 4.2 per cent.
- Total expenses are projected to grow from $141.7 billion in 2016–17 to $157.4 billion in 2019–20.
- This represents a manageable average annual growth rate of 3.6 per cent.

Conclusion:

- In September, the Public Accounts of Ontario 2016–17 reported that the 2016–17 deficit was $1.0 billion, an improvement of $3.3 billion from the $4.3 billion projection in the 2016 Budget.
- Total revenue for 2016–17 came in at $140.7 billion, which was $2.2 billion higher than the 2016 Budget.
- This was largely due to higher-than-expected tax revenues, the optimization of government business enterprises and transfers from the Government of Canada and other non-tax revenue.
- Total spending for 2016–17 came in at $141.7 billion, which was $0.1 billion lower than the 2016 Budget.
- Program spending was $130.0 billion, up $0.6 billion from the plan of $129.4 billion.
- Spending in health, children's and social services, and other programs was higher than planned.
- Interest on debt expense was $11.7 billion, $0.7 billion below the plan of $12.4 billion, due mainly to lower-than-forecast interest rates, and cost-effective borrowing and debt management.
- In conclusion, the Ontario government is on track to balance the budget this fiscal year — 2017–18 — as well as the next two fiscal years.

DRAFT

- Prudently managing the province's finances is one of my ministry's responsibilities to the people of Ontario.
- Thank you.

DRAFT

LONG-FORM MEMBER QUESTION: BALANCED BUDGET

DEPUTY MINISTER SCOTT THOMPSON

Question:

- How is Ontario planning to keep a balanced budget?

Answer:

- TBD: Revisions based on updates related to Q3 Finances once available
- My ministry has been working to execute the government's goal of balancing the budget.
- This started with a plan that was first introduced in the *2010 Budget*, when the province started to recover from the recession.
- Ontario today is projecting a balanced budget for 2017–18 and for the next two years, 2018–19 and 2019–20.
- A balanced budget makes available more investment options to spur economic growth and job creation, and helps protect the programs and services people rely on most, such as health care and education.
- Ontario's plan has five main areas of focus:
    - Maximizing revenues without causing undue tax burdens on Ontarians
    - Managing its expenses without detracting from the quality of social services and health programs
    - Balancing revenues and expenses against each other to manage the debt
    - Funding programs that help Ontarians, and
    - Investing in infrastructure to promote economic growth and job creation.

- I will now address each area in turn.

DRAFT

Revenues:

- The 2016–17 Public Accounts show that Ontario's deficit for last year was $991 million — $3.3 billion lower than projected in the 2016 Budget and $0.5 billion lower than the interim projection in the 2017 Budget.
- Fiscal 2016–17 was the eighth year in a row that the Province has beaten its deficit target.
- This was a result of growth in revenue that exceeded growth in program expenses, and lower-than-forecast interest on debt.
- And so part of the plan to balance the budget involves optimizing assets and maximizing revenues.
- The Public Accounts for 2016–17 show total revenues were $140.7 billion, $2.2 billion higher than the 2016 Budget projection.
- Additionally, Ontario's total revenues are projected to grow from this $140.7 billion in 2016–17 to $158.2 billion in 2019–20.
- This increase represents an average annual growth rate of four per cent.
- The higher revenues for 2016–17 — and the projected growth of revenues through 2019-20 — are largely due to higher-than-expected tax revenues, the optimization of government business enterprises, and transfers from the Government of Canada and other non-tax revenue.

- First, let me address tax revenues.
- Growth in revenues over the medium term is driven mainly by taxation revenue, which is projected to increase by $15.6 billion between 2016–17 and 2019–20, or at an average annual rate of 5.2 per cent.
- For fiscal year 2016–17, tax revenues were $293 million higher than projected, mainly due to higher-than-expected Harmonized Sales Tax revenue, reflecting stronger growth in Ontario household expenditures.

DRAFT

- Secondly, the Government of Ontario is also implementing a multi-year strategy to optimize its assets and maximize its revenues through the sales of shares in Hydro One, LCBO head office lands and Ontario Power Generation's head offices.
- The net revenue gains from the sale of qualifying assets are credited to the Trillium Trust for infrastructure investments, such as roads, bridges and public transit.
- The total amount credited to the Trillium Trust as of March 31, 2017 is $5.3 billion.
- The Province continues to grow and maximize revenues from its government business enterprises, such as Hydro One, Ontario Power Generation, the Liquor Control Board of Ontario and Ontario Lottery and Gaming Corporation.
- The forecast of the income from government business enterprises is projected to grow by $0.7 billion between 2016–17 and 2019–20.
- This projection, at an average annual rate of 3.7 per cent, reflects higher net income overall from government business enterprises.

- Thirdly, Ontario received larger Government of Canada transfers — $145 million higher. This increase reflected new funding for early learning and child care flowing from a bilateral agreement between Ontario and the federal government, as previously reported in the 2017-18 *First Quarter Finances*.
- The forecast for subsequent transfers is based on existing federal-provincial funding agreements.
- Overall transfers are projected to grow by $0.9 billion between 2016–17 and 2019–20, or at an average annual rate of 1.2 per cent.
- This largely reflects projected increases in major ongoing Government of Canada transfers and new funding for early learning and child care, and home care and mental health.

DRAFT

- Finally, the forecast for other non-tax revenue is based on projections provided by government ministries and agencies.
- The outlook for other non-tax revenues is projected to increase by $0.4 billion between 2016–17 and 2019–20, or at an average annual rate of 0.7 per cent.
- This increase mainly reflects:
    - Fiscally neutral revenues from carbon allowance proceeds starting in 2017–18
    - Fees, donations and other revenues for the broader public sector, and
    - Revenues from vehicle and driver registration fees.
- This is partially offset by lower revenues due to the removal of the debt retirement charge from commercial, industrial and all other electricity users in 2018–19, and the projected net impact of the government's planned asset optimization strategy.
- Notably, the increase in Ontario's revenue is not attributable to increases in personal tax returns.

Expenses:

- Let me now address expenses.
- The Public Accounts for 2016–17 show that total spending was $141.7 billion, $100 million lower than the 2016 Budget projection.
- Program spending expenses accounted for $130 billion.
- Interest on debt, at $11.7 billion, was down $0.7 billion from the 2016 Budget projection.

- Going forward, program expenses are projected to grow from $130 billion in 2016–17 to $144.2 billion in 2019–20.
- This represents an average annual growth rate of 3.5 per cent.
- Growth in program expenses over the medium term is driven by investments to help the people of Ontario, such as health care, supports for seniors, the

DRAFT

introduction of pharmacare for children and youth under OHIP+, electricity cost relief programs under the Fair Hydro Plan, and new initiatives for small businesses that will lower costs and support growth.

- Interest on debt expenses is projected to grow from $11.7 billion in 2016–17 to $13.3 billion in 2019–20.
- This increase is due to borrowing for capital spending and interest rates that are forecast to rise.
- This represents an average annual growth rate of 4.2 per cent.
- ~~Interest on debt is projected to grow due to borrowing for capital spending and interest rates that are forecast to rise.~~
- Total expenses are projected to grow from $141.7 billion in 2016–17 to $157.4 billion in 2019–20.
- This represents a manageable average annual growth rate of 3.6 per cent.

Balancing Revenues and Expenses:

- Let me summarize the revenues and expenses together.
- Revenue is forecast to increase from $140.7 billion in 2016–17 to $158.2 billion in 2019–20.
- Total expenses are projected to increase from $141.7 billion to $157.4 billion over the same period.
- Based on these estimates, the Ontario government will effectively balance the budget over the next four years.

Funding Programs, Investing in Infrastructure, Promoting Growth:

- Through targeted, measured and fiscally responsible decisions, Ontario has restored its fiscal and economic strength.
- Strategic investments have helped stimulate the Ontario economy to rise from the depths of recession.

DRAFT

- Over the past three years, Ontario's economy has grown faster than Canada's and that of all other G7 countries.
- The benefits of balanced budgets and a strong economy are already providing the government with the fiscal flexibility to do more to help Ontarians.
- This flexibility enables the government to provide more investments to spur economic growth, job creation and support services people use every day.
- Notable program investments include:
    - $145 million in annual funding to increase the accessibility and affordability of high-quality licensed child care and early learning opportunities
    - $245 million over three years to lower costs for small businesses
    - $155 million over three years to support seniors to remain independent, connected, engaged, healthy and safe
    - $245 million over three years to lower costs for small businesses, create opportunities for growth and simplify their interactions with government.
    - An increase of $1 million in 2017–18 — and then $5 million in 2018–19 and beyond — to provide additional funding through the Northern Communities Grant component of the Ontario Municipal Partnership Fund.

- Growth in program expenses also includes investments in infrastructure.
- In fact, Ontario is making the biggest investment in public infrastructure in its history.
- The government's long-term infrastructure plan to invest about $190 million over 13 years, starting in 2014–15, will contribute to the growth of the economy.
- The government's historic investment in infrastructure includes:
    - $31.5 billion over 10 years for public transit, transportation and other priority infrastructure projects across Ontario
    - $11 billion over 10 years in capital grants to school boards, and
    - $900 million over 10 years for critical maintenance repairs and upgrades.

DRAFT

- These investments will not only create jobs, support business innovation and help draw investors from abroad — they will also contribute to the provincial economy growing at a faster rate than the change in its net debt.
- Investments such as these have helped to stimulate the Ontario economy, which has continued to grow despite an uncertain global climate.
- From 2014 to 2016, Ontario outpaced all G7 countries with its real GDP growth.
- As the result of a balanced budget and Ontario's strong economic growth, the net debt-to-GDP ratio is declining.
- In the 2017 Budget, the Ontario government set an interim net debt-to-GDP ratio target of 35 per cent by 2023–24. The government is now projecting to meet this target a year earlier.
- We continue to maintain a target of reducing the net debt-to-GDP ratio to its pre-recession level of 27 per cent, currently projected to be achieved by 2029–30.

Conclusion:

- In September, the Public Accounts of Ontario 2016–17 reported that the 2016–17 deficit was $1.0 billion, an improvement of $3.3 billion from the $4.3 billion projection in the 2016 Budget.
- Total revenue for 2016–17 came in at $140.7 billion, which was $2.2 billion higher than the 2016 Budget.
- This was largely due to higher-than-expected tax revenues, the optimization of government business enterprises and transfers from the Government of Canada and other non-tax revenue.
- Total spending for 2016–17 came in at $141.7 billion, which was $0.1 billion lower than the 2016 Budget.
- Program spending was $130.0 billion, up $0.6 billion from the plan of $129.4 billion.

DRAFT

- Spending in health, children's and social services, and other programs was higher than planned.
- Interest on debt expense was $11.7 billion, $0.7 billion below the plan of $12.4 billion, due mainly to lower-than-forecast interest rates, and cost-effective borrowing and debt management.
- In conclusion, the Ontario government is on track to balance the budget this fiscal year — 2017–18 — as well as the next two fiscal years.
- Prudently managing the province's finances is one of my ministry's responsibilities to the people of Ontario.
- Thank you.

DRAFT

LONG-FORM MEMBER QUESTION: CREDIT RATING

DEPUTY MINISTER SCOTT THOMPSON

Question:

- What are the plans to keep Ontario's credit rating in good standing?

Answer:

- TBD: Revisions based on updates related to Q3 Finances, once available.

Introduction:

- All four credit rating agencies – Moody's, DBRS, Standard & Poor's and Fitch – have a stable outlook on Ontario's long-term credit ratings. This reflects rating agencies' confidence in the Government's fiscal plan.
- Let me summarize the reports by each of the credit rating agencies.

- First, **Moody's.**
- Moody's updated their Credit Opinion on February 2nd
- The stable outlook reflects Moody's forecast that the debt burden will continue to fall marginally and interest expense will remain manageable over the next two years.
- Moody's outlook for Ontario's credit rating is based on the following credit strengths: prudent debt management with a focus on market access and debt affordability; an institutional framework providing significant fiscal policy flexibility**;** and, revenue supported by a large diversified economy supporting a broad and productive tax base.

DRAFT

- Moody's highlighted a number of credit challenges: high debt burden and debt will continue to increase despite balanced budget projections; elevated interest expense, with higher rates anticipated; and, rising expenditures risk to balanced fiscal targets.
- A significant reduction in the province's debt burden, accompanied by lower interest expense, could put upward pressure on the rating.
- A return to an upward trend in the province's debt burden leading to higher interest expense or increases in provincial liabilities, including off-balance sheet contingent liabilities, could put downward pressure on the rating. Loss of fiscal discipline leading to consecutive years of material consolidated deficits could also lead to downward credit pressure.
- Next, **DBRS.**
- DBRS notes that the ratings remain well supported by the Province's large and diversified economy, improving budgetary results and declining debt burden.
- Debt growth has slowed with the return to balance, which is leading to a gradual decline in the debt-to-GDP ratio.
- DBRS expects the ratings to remain stable. Improvement or deterioration in Ontario's credit profile tends to be gradual because of the diverse economy and revenue base.
- An upgrade would require a significant reduction in the provincial debt burden to a level commensurate with the AA-range rating.
- A downgrade could occur if debt were to rise sharply because of a downturn in the economy or a change in the government's fiscal policies.

DRAFT

- **Standard & Poor's** is next.
- Standard & Poor's said it "expects the Province of Ontario to benefit from solid economic growth over the next two years, allowing it to generate additional revenues to fund its capital spending plan and stabilize its finances following its eight-year path back to a balanced operating budget."
- The stable outlook reflects S&P's expectations that "within the next two years the province will sustain a more balanced budgetary performance, including fairly steady liquidity metrics, modest after-capital deficits, and a high but slowly declining debt burden."
- A sustained improvement in budgetary performance leading to "near-balanced after-capital results, coupled with ongoing declines in the tax-supported debt burden, making Ontario's finances more comparable with peers in the 'AA' category could result in a positive outlook or upgrade.
- Conversely, an unexpected economic shock coupled with the introduction of fiscal policies that endanger Ontario's fiscal sustainability that result in after-capital deficits beyond our expectations could put downward pressure on the ratings within the next two years.

- Finally there is **Fitch.**
- Fitch's report stated that "the Province has demonstrated the ability to exert considerable expenditure restraint while instituting revenue changes to achieve its deficit reduction objectives."
- It said Ontario's 'AA-' rating is supported by its wealth, diversified economy and generally sound financial management.
- Fitch's rating reflected the Province's very strong and diversified economy, strong financial management, very predictable and well-balanced institutional framework and low contingent liabilities.
- Ontario's credit profile is stable and assumes **the** Province retains its focus on tabling balanced budgets and gradually lowering the burden of debt.

DRAFT

- The resumption of significant borrowing to support operating deficits would result in negative pressure on the rating.

Ontario is maintaining its credit rating in good standing by:

- Ensuring Ontario's debt burden and debt service costs remain manageable by:
  - Decreasing the net debt-to-GDP ratio.
  - Decreasing the interest on debt-to-revenue ratio.
  - Extending the term of its debt; and
  - Increasing its liquid reserves.

- I will now go into more detail on each of these points:

Decreasing the net debt-to-GDP ratio

- In the 2017 Budget, the government set an interim net debt-to-GDP ratio target of 35 per cent by 2023–24 and continues to maintain a target of reducing the net debt-to-GDP ratio to its pre-recession level of 27 per cent, currently projected to be achieved by 2029–30.
- The 2017 Fall Economic Statement forecast the net debt-to-GDP ratio to be 37.3 per cent in 2017-18, or 0.2 per cent lower than was forecast in the 2017 Budget (update for Q3).

Decreasing the interest on debt-to-revenue ratio

- The 2010 Budget forecast that, by 2017–18, the Province would have to spend 11.3 cents of every revenue dollar received on interest.
- The current forecast is 3.1 cents lower, at a cost of 8.2 cents in interest for every dollar of revenue.
- This ratio is lower than it was in the 1990s and 2000s, and is forecast to remain lower throughout the outlook period to 2019–20.

DRAFT

Extending the term of its debt

- To protect the province from an increase in interest rates, the government has continued to extend the term of its debt.
- The weighted –average term to maturity of long-term provincial debt issued has been extended significantly, from 8.6 years in 2008-09 to 13.9 years in 2016-17 and 12.8 years for 2017-18 as at October 31, 2017.

Increasing its liquid reserves

- The government has increased the level of its liquid, or cash, reserves as the province came through the financial crisis of 2008–09.
- These reserves are currently over $30 billion as compared to an average of $7.3 billion in 2007, preceding the financial crisis. The Province is targeting a level in excess of $25 billion at the end of this fiscal year.
- This build-up in cash reserves will allow the Province to withstand unexpected economic events including any market disruptions. It also ensures that the Province will be well prepared to meet large single-day maturities in both 2018–19 and 2019–20.
- Investors and rating agencies also look favourably upon liquid reserves that are consistently high as evidence that the Province will be able to meet its financial commitments, and include this as a factor in their assessment of the Province's credit worthiness.

Conclusion:

- Credit ratings provide an assessment of a government's credit-worthiness.
- They are a reflection largely based on its capacity to generate revenue to service its debt.

DRAFT

- They consider factors such as a government's economic resources and prospects, industrial and institutional strengths, financial health, and susceptibility to major risks.
- As you know, a credit rating is one of the factors that can affect the cost of future government borrowing
- A rating downgrade could shrink the potential market for a government's debt, because some investors will not hold debt below a certain rating.
- The government's plan to manage the debt focuses on three key areas:
    - Decreasing the net debt-to-GDP ratio.
    - Decreasing the interest on debt-to-revenue ratio.
    - Extend the term of its debt.
    - Increase its liquid reserves
- These strategies are aimed to ensure confidence in Ontario**'**s credit-worthiness through its ability to effectively manage its debt obligations.
- Protecting the financing of Ontario's public services will continue to be one of my ministry's highest priorities.
- Thank you.

DRAFT

LONG-FORM MEMBER QUESTION: CREDIT RATING

DEPUTY MINISTER SCOTT THOMPSON

Question:

- What are the plans to keep Ontario's credit rating in good standing?

Answer:

- TBD: Revisions based on updates related to Q3 Finances, once available.

Introduction:

- ~~Following the release of the 2017 Ontario Budget,~~All four credit rating agencies – Moody's, DBRS, Standard & Poor's and Fitch – ~~confirmed~~have a stable outlook on Ontario's ~~healthy~~ long-term credit ratings. This reflects rating agencies' confidence in the Government's fiscal plan ~~– and its ability to grow Ontario's economy and create jobs for Ontarians.~~ .
- Let me summarize the reports by each of the credit rating agencies.

- First, **Moody's.**
- ~~Moody's cautioned that the Ontario Fair Hydro Plan, announced in March 2017 to reduce electricity prices, adds credit pressure due to the direct financial impact of the sales tax rebate and the indirect impact of an elevated debt of a provincially owned entity.~~
- ~~Overall, however, Moody's said its~~ Moody's updated their Credit Opinion on February 2nd

Style Definition: Emphasis

Formatted: Font: Bold

- The stable outlook ~~for Ontario "~~reflects Moody's forecast that~~, as the province moves towards and achieves balanced budgets, the province's~~ the debt burden will ~~improve~~continue to fall marginally and interest expense will remain manageable ~~across the medium-term….The policy decision to borrow for infrastructure spending at a time of historically low interest rates, combined with the prudent debt management practices outlined above, has helped to support the province's Aa2 rating."~~~~18-24 month horizon~~over the next two years.
- Moody's ~~positive~~ outlook for Ontario's credit rating is based on the following credit strengths: prudent debt management~~,~~ with a focus on market access and debt affordability; an institutional framework providing significant fiscal policy flexibility~~,~~**;** and, revenue supported by a large diversified economy supporting a broad and productive tax base.

- Moody's highlighted a number of credit challenges: high debt burden and debt will continue to increase despite balanced budget projections; elevated interest expense, with higher rates anticipated; and, rising expenditures risk to balanced fiscal targets.
- A significant reduction in the province's debt burden, accompanied by lower interest expense, could put upward pressure on the rating.
- A return to an upward trend in the province's debt burden leading to higher interest expense or increases in provincial liabilities, including off-balance sheet contingent liabilities, could put downward pressure on the rating. Loss of fiscal discipline leading to consecutive years of material consolidated deficits could also lead to downward credit pressure.
- Next, **DBRS.**
- DBRS ~~noted~~notes that ~~Ontario's credit profile is stable, but it will remain vulnerable to an economic shock in the absence of a more concerted effort to reduce debt.~~

Formatted: Don't adjust space between Latin and Asian text, Don't adjust space between Asian text and numbers

Formatted: Font: Bold

Formatted: Font: Bold

Commented [AS1]: Bonnie wanted you to weigh in on whether to include/exclude the text in red highlight.

DRAFT

- ~~DBRS also commented on the potential downside risks to the economic outlook due to uncertainty regarding the potential renegotiation of NAFTA and U.S. tax policy, as well as political integration in Europe.~~
- ~~Finally, it noted that elevated household debt and housing market dynamics leave Ontario particularly vulnerable in the event of an unforeseen shock that results in significant job losses or a rapid increase in interest rates.~~
- ~~Despite these concerns, DBRS expects Ontario's credit ratings to remain stable.~~
- ~~DBRS said of Ontario, its "~~the ratings remain well supported by the ~~province's~~Province's large and diversified economy, improving budgetary results and declining debt burden~~" and that "the return to balance is encouraging and suggests that there will likely be some modest improvement in the Province's credit metrics over the medium term." .~~
- Debt growth has slowed with the return to balance, which is leading to a gradual decline in the debt-to-GDP ratio.
- DBRS ~~concluded by saying that~~expects the ratings to remain stable. Improvement or deterioration in Ontario's ~~stable~~ credit profile ~~stems from strength in the underlying~~tends to be gradual because of the diverse economy~~, which provided incremental~~ and revenue ~~more than sufficient to offset the in-year spending pressures~~base.
- An upgrade would require a significant reduction in the provincial debt burden to a level commensurate with the AA-range rating.
- ~~A downgrade could occur if debt were to rise sharply because of a downturn in the economy or a change in the government's fiscal policies.~~

DRAFT

- **Standard & Poor's** is next.
- Standard & Poor's ~~believed that Ontario's credit profile is strengthening.~~
- ~~But before considering a positive rating action, they would need to see sustained improvement in budgetary performance leading to near-balanced after-capital results, coupled with ongoing declines in the tax-supported debt burden, making Ontario's finances more comparable with peers in the 'AA' category.~~
- ~~Standard and Poor's~~ said it "expects the ~~province~~Province of Ontario to benefit from solid economic growth over the next two years, allowing it to generate additional revenues to fund its capital spending plan and stabilize its finances following its eight-year path back to a balanced operating budget."
- ~~Standard & Poor's concluded by saying that its~~The stable outlook reflects S&P's expectations that~~,~~ "within the next two years~~,~~ the ~~Province~~province will sustain a more balanced budgetary performance, including fairly steady liquidity metrics, modest
- after-capital deficits, and a high but slowly declining debt burden~~.~~."
- A sustained improvement in budgetary performance leading to "near-balanced after-capital results, coupled with ongoing declines in the tax-supported debt burden, making Ontario's finances more comparable with peers in the 'AA' category could result in a positive outlook or upgrade.
- ~~Conversely, an unexpected economic shock coupled with the introduction of fiscal policies that endanger Ontario's fiscal sustainability that result in after-capital deficits beyond our expectations could put downward pressure on the ratings within the next two years.~~

Formatted: Bulleted + Level: 1 + Aligned at: 0.25" + Indent at: 0.5"

- Finally there is **Fitch.**
- Fitch's report stated that "the Province has demonstrated the ability to exert considerable expenditure restraint while instituting revenue changes to achieve its deficit reduction objectives~~.~~."

DRAFT

- It said Ontario's 'AA-' rating is supported by its wealth, diversified economy and generally sound financial management.
- Fitch's rating reflected the Province's very strong and diversified economy, strong financial management, very predictable and well-balanced institutional framework and low contingent liabilities.
- Ontario's credit profile is stable.

- For Ontario's credit profile to grow in strength, and assumes **the** Province will need to do several things.
- It will need to show a track record of consistent operating surpluses and provinceProvince retains its focus on tabling balanced or near-balanced after-capital results, coupled with continuing declines in directbudgets and tax-supported gradually lowering the burden of debt burdens..
- **To that end,** The resumption of significant borrowing to support operating deficits would result in negative pressure on the rating.

Ontario has the following plan to ensureis maintaining that its credit rating remains in good standing by:

- . It is:

o Optimizing assets and revenues without causing undue tax burdens on Ontarians.

- o Managing expenses without detracting from the quality of social and health services.
- o Balancing revenues and expenses against each other to manage the debt, and
- Maintaining a reserve fund to mitigate unforeseen financial risks.

O Ensuringe Ontario's debt burden and debt service costs will remain manageable and ensure the province's maintains a conservative debt management policy by by:

- Decreasing the net debt-to-GDP ratio.

- Decreasing the interest on debt-to-revenue ratio.
- Extending the term of its debt~~.~~; and
- ~~o~~ Increasing~~e~~ its liquid reserves.
-

I will now go into more detail on each of these points:

- ~~I will now go into more detail on each of these points.~~

~~Revenues:~~

- ~~Total revenues for 2016–17 were $140.7 billion, $2.2 billion higher than the 2016 Budget.~~
- ~~Additionally, Ontario's total revenues are projected to grow from $140.7 billion in 2016–17 to $158.2 billion in 2019–20.~~
- ~~This represents an average annual growth rate of four per cent.~~
- ~~The higher revenues for 2016–17 and the projected growth of revenues through 2019–20 are largely due to three factors:~~
  - ~~Higher-than-expected tax revenues.~~
  - ~~Income from government business enterprises and fees, and~~
  - ~~Transfers from the Government of Canada and other non-tax revenue.~~
- ~~Growth in revenues over the medium term is driven mainly by taxation revenue, which is projected to increase by $15.6 billion between 2016–17 and 2019–20, or at an average annual rate of 5.2 per cent. The taxation outlook reflects current revenue information and projections for the Ontario economy. Tax revenues were $293 million higher than projected in 2016–17, mainly due to higher-than-expected Harmonized Sales Tax revenue, reflecting stronger growth in Ontario household expenditures.~~
- ~~The Government of Ontario is also implementing a multi-year strategy to optimize its assets and maximize its revenues through the sales of Hydro One, LCBO head office lands and Ontario Power Generation's head offices. The total amount~~

DRAFT

credited to the Trillium Trust as of March 31, 2017 is $5.3 billion. The net revenue gains from the sale of qualifying assets will be credited to the Trillium Trust for infrastructure investments, such as roads, bridges and public transit, under the Moving Ontario Forward plan. In 2016–17, the Trillium Trust was drawn down by approximately $260 million to help support these projects.

- Finally, Ontario received larger Government of Canada transfers — $145 million higher. This increase reflected new funding for early learning and child care flowing from a bilateral agreement between Ontario and the federal government, as previously reported in the 2017–18 First Quarter Finances.
- Notably, the increase in Ontario's revenue is not attributable to increases in personal tax returns.

Expenses:

- Ontario's total spending for 2016–17 was $141.7 billion, $100 million lower than the 2016 Budget.
- Program spending expenses accounted for $130.0 billion.
- Interest on debt expense accounted for $11.7 billion — $0.7 billion below the plan of $12.4 billion.
- This drop was due mainly to lower-than-forecast interest rates, and Ontario's cost-effective borrowing and debt management.
- Going forward, Ontario program expenses are projected to grow from $130.0 billion in 2016–17 to $144.2 billion in 2019–20.
- This represents an average annual growth rate of 3.5 per cent.
- Interest on debt expenses is projected to grow from $11.7 billion in 2016–17 to $13.3 billion in 2019–20.
- This represents an average annual growth rate of 4.2 per cent.
- Total expenses are projected to grow from $141.7 billion in 2016–17 to $157.4 billion in 2019–20.
- This represents a manageable average annual growth rate of 3.6 per cent.

DRAFT

- ~~These increases align with the government's plans for modernizing the public services people rely on every day.~~
- ~~They are also fiscally sustainable.~~
- ~~In short, the Ontario government has been managing its program expenses as well as its interest-on-debt expenses.~~

~~Balancing Revenues and Expenses:~~

- ~~To bring the revenues and expenses together…~~
- ~~Revenue is forecast to increase from $140.7 billion in 2016–17 to $158.2 billion in 2019–20.~~
- ~~Total expenses are projected to increase from $141.7 billion to $157.4 billion over the same period.~~
- ~~Based on these estimates, the Ontario government will effectively balance the budget over the next four years.~~

~~The Reserve:~~

Formatted: Indent: Left: 0.2", Hanging: 0.25"

- ~~I will now take a moment to address the Province's financial reserve and contingency funds.~~
- ~~As required under the *Fiscal Transparency and Accountability Act*, Ontario's fiscal plan incorporates prudence in the form of a reserve to protect the fiscal outlook against unforeseen adverse changes in revenue and expenses.~~

Formatted: Indent: Left: 0.2"

- ~~The current fiscal outlook includes a reserve of $0.5 billion in 2017–18, $0.5 billion in 2018–19 and $0.8 billion in 2019–20.~~
- ~~The current outlook also maintains contingency funds to help mitigate expense risks that may otherwise negatively impact Ontario's fiscal performance — particularly in cases where health and safety may be compromised, services to the most vulnerable are jeopardized, or natural disasters occur.~~

Formatted: Indent: Left: 0.2", Hanging: 0.25"

~~Ontario's debt and borrowing~~Decreasing the net debt-to-GDP ratio

- In the 2017 Budget, the government set an interim net debt-to-GDP ratio target of 35 per cent by 2023–24 and continues to maintain a target of reducing the net

DRAFT

debt-to-GDP ratio to its pre-recession level of 27 per cent, currently projected to be achieved by 2029–30.

- ~~In 2017–18~~The 2017 Fall Economic Statement forecast~~,~~ the net debt-to-GDP ratio to be ~~will be~~ 37.3 per cent in 2017-18, or 0.2 per cent lower than was forecast in the 2017 Budget.

Formatted: Highlight

Commented [AS2]: Update for Q3

Decreasing the interest on debt-to-revenue ratio

- The 2010 Budget forecast that, by 2017–18, the Province would have to spend 11.3 cents of every revenue dollar received on interest.
- The current forecast is 3.1 cents lower, at a cost of 8.2 cents in interest for every dollar of revenue.
- This ratio is lower than it was in the 1990s and 2000s, and is forecast to remain lower throughout the outlook period to 2019–20.

Extending the term of its debt

- To protect the province from an increase in interest rates, the government has continued to extend the term of its debt.
- The weighted –average term to maturity of long-term provincial debt issued has been extended significantly, from 8.6 years in 2008-09 to 13.9 years in 2016-17 and 12.8 years for 2017-18 as at October 31, 2017.

Increasing its liquid reserves

- The government has increased the level of its liquid, or cash, reserves as the province came through the financial crisis of 2008–09.
- These reserves are currently over $30 billion as compared to an average of $7.3 billion in 2007, preceding the financial crisis. The Province is targeting a level in excess of $25 billion at the end of this fiscal year.

DRAFT

- This build-up in cash reserves will allow the Province to withstand unexpected economic events including any market disruptions. It also ensures that the Province will be well prepared to meet large single-day maturities in both 2018–19 and 2019–20.
- Investors and rating agencies also look favourably upon liquid reserves that are consistently high as evidence that the Province will be able to meet its financial commitments, and include this as a factor in their assessment of the Province's credit worthiness. ~~Increased its liquid reserves to allow the Province to withstand unexpected economic events including any market disruptions.~~

Conclusion:

- Credit ratings provide an assessment of a government's credit-worthiness.
- They are a reflection largely based on its capacity to generate revenue to service its debt.
- They consider factors such as a government's economic resources and prospects, industrial and institutional strengths, financial health, and susceptibility to major risks.
- As you know, a credit rating ~~affects~~is one of the factors that can affect the cost of future government borrowing ~~with a lower rating, indicating that an agency believes there is a relatively higher risk that a government will default on its debt.~~
- ~~Accordingly, investors will lend to the government only in return for a greater risk premium, in the form of higher interest rates.~~
- A rating downgrade could ~~also~~ shrink the potential market for a government's debt, because some investors will not hold debt below a certain rating.
- ~~Therefore, it is critical that Ontario maintain its credit rating in good standing to manage its debt and preserve its fiscal health.~~
- ~~Ontario's plan to keep its credit rating in good standing involves the following strategies:~~
    - ~~Optimizing assets and revenues without causing undue tax burdens on Ontarians.~~

DRAFT

~~o Prudently managing expenses without diminishing the quality of Ontario's services and programs.~~

~~o Balancing revenues and expenses against each other to manage the debt, and~~

~~o Preserving a reserve fund to mitigate unforeseen financial risks.~~

- The government's plan to manage the debt focuses on three key areas:
  - o Decreasing the net debt-to-GDP ratio.
  - o Decreasing the interest on debt-to-revenue ratio.
  - o Extend the term of its debt.
  - o Increase its liquid reserves

- ~~Seen as a whole, t~~These strategies ~~will~~are aimed to ensure confidence in Ontario's
  credit-worthiness through its ability to effectively manage its debt obligations.
- Protecting the financing of Ontario's public services will continue to be one of my ministry's highest priorities.
- Thank you.

DRAFT

LONG-FORM MEMBER QUESTION: DEBT MANAGEMENT

DEPUTY MINISTER SCOTT THOMPSON

Question

- What is Ontario's debt management plan?

Answer

- TBD: Revisions based on updates related to Q3 Finances, once available.
- The Ministry of Finance has a track record of responsible fiscal management and remains committed to executing the government's goal of reducing the provincial debt burden.
- The government's plan to manage the debt focuses on three key areas:
    - Decreasing the net debt-to-GDP ratio.
    - Decreasing the interest on debt-to-revenue ratio.
    - Utilizing term extensions.
- I would like to provide an update of progress on this goal.

Net Debt-to GDP Ratio:

- A key indicator of the government's ability to manage its debt is the level of debt relative to the size of the economy, known as the net debt-to-GDP ratio.
- The ratio of net government debt to the market value of goods and services produced by an economy — known as gross domestic product or GDP — measures the relationship between a government's debt obligations and its capacity to raise revenue needed to meet them.
- It is an indicator of the relative burden of government debt on the economy.

DRAFT

- If the amount of debt that must be repaid relative to the value of the GDP is rising — in other words, if the ratio is rising — it means the government's net debt is growing faster than the provincial economy, and making it more difficult to repay.
- The net debt-to-GDP ratio peaked at 39.3 per cent in 2014–15 and has declined ever since, as a result of Ontario's economic growth and the government's progress towards a balanced budget in 2017–18.
- One of the ways to manage to the net debt-to-GDP ratio is to promote policies and investments that support economic growth and job creation, thereby accelerating GDP growth.
- In fact, Ontario is making the biggest investment in public infrastructure in its history.
- The government's long-term infrastructure plan to invest about $190 million over 13 years, starting in 2014–15, will contribute to the growth of the economy.
- These investments will not only create jobs, support business innovation and draw investors from abroad — they will also contribute to the growth of the provincial economy at a faster rate than the change in its net debt.
- The positive impact of these capital investments on the province's economy was confirmed by the Centre for Spatial Economics.
- It recently reported that, over the long term, GDP in Ontario increases by up to $6 for every dollar of public infrastructure spending.
- The government's economic strategy was further supported in a report by the International Monetary Fund in June 2016, which recommended that Canadian "fiscal policy should be pro-growth."
- Christine Lagarde, the International Monetary Fund's Managing Director, expressed her support for the government's growth strategy and agreed that investment in infrastructure should be an essential element.
- In summary, Ontario's net debt-to-GDP ratio will gradually diminish due to the GDP increasing at a faster rate than net debt.

DRAFT

Interest on Debt-to-Revenue Ratio:

- Another major thrust of Ontario's plan to manage its debt centers on the interest on debt-to-revenue ratio.
- This is another key indicator of the government's ability to meet its financial obligations.
- Through prudent and cost-effective debt management, the government has consistently kept interest on debt costs below budget projections.
- The 2010 Budget forecast that, by 2017–18, the Province would have to spend 11.3 cents of every revenue dollar received on interest.
- By the 2017 Budget, the amount needed for interest payments had dropped significantly.
- The current forecast is 3.1 cents lower — 8.2 cents of interest costs for every dollar of revenue.
- This ratio is lower than it was in the 1990s and 2000s, and is forecast to remain lower through Ontario's outlook period to 2019–20.

Term Extension on Debt:

- Finally, record-low interest rates have enabled the government to control its annual interest expense.
- However, the global decline in interest rates over the last 25 years could not continue indefinitely.
- The Bank of Canada has increased interest rates — twice last year and already once this year.
- Ontario has taken necessary precautions to protect the financing of the province's public services, now that interest rates are widely understood to be on a rising trajectory.
- To protect the province from these increases, the government has extended the term of its debt.
- Term extension has allowed the government to lock in low interest rates for a longer period, which reduces refinancing risks.

DRAFT

- Extending the term also helps offset the impact of expected higher interest rates on interest on debt costs.
- Going back to the beginning of fiscal 2010–11, Ontario has issued $70.6 billion in bonds longer than 30 years to lock in low rates.
- As a result, the weighted-average term to maturity of long-term provincial debt issued has been extended significantly, from 8.6 years in 2008–09 to 13.9 years in 2016–17.
- For 2017–18, it stood at 13.7 years as of January 31, 2018.
- The average term of total debt outstanding is 11 years.
- If or when interest rates continue to rise, the government will assess whether it will remain cost-effective over the long term to continue to extend the term of its debt.

Conclusion:

- As I said at the outset, the Ontario government has a track record of responsible fiscal management and remains committed to executing its goal of reducing the provincial debt burden.
- To conclude, the government's plan to manage the debt focuses on three key areas:
    - Net debt-to-GDP ratio;
    - Interest on debt-to-revenue ratio; and
    - Extending the term on its debt when interest rates are low.
- Protecting the financing of the province's public services will continue to be one of the government's highest priorities.
- Thank you.

DRAFT

LONG-FORM MEMBER QUESTION: DEBT MANAGEMENT

DEPUTY MINISTER SCOTT THOMPSON

Question

- What is Ontario's debt management plan?

Answer

- TBD: Revisions based on updates related to Q3 Finances, once available.
- The Ministry of Finance has a track record of responsible fiscal management and remains committed to executing the government's goal of reducing the provincial debt burden.
- The government's plan to manage the debt focuses on three key areas:
    - Decreasing the net debt-to-GDP ratio.
    - Decreasing the interest on debt-to-revenue ratio.
    - Utilizing term extensions.
- I would like to provide an update of progress on this goal.

Net Debt-to GDP Ratio:

- A key indicator of the government's ability to manage its debt is the level of debt relative to the size of the economy, known as the net debt-to-GDP ratio.
- The ratio of net government debt to the market value of goods and services produced by an economy — known as gross domestic product or GDP — measures the relationship between a government's debt obligations and its capacity to raise ~~the funds~~revenue needed to meet them.
- It is an indicator of the relative burden of government debt on the economy.

DRAFT

- If the amount of debt that must be repaid relative to the value of the GDP is rising — in other words, if the ratio is rising — it means the government's net debt is growing faster than the provincial economy, and ~~becoming an increasing burden~~thus making it more difficult to repay.

- ~~Before considering Ontario's net debt-to-GDP ratio, let me first discuss the components.~~
- ~~First, I want to address Ontario's net debt situation.~~
- ~~Ontario's net debt increased from $295.4 billion as of March 31, 2016 to $301.6 billion as of March 31, 2017.~~
- ~~It is projected to increase to $311.7 billion by March 31, 2018 and to $323.3 billion by March 31, 2019.~~
- ~~About 621 per cent of the increase in net debt from 2008-09 to 2016-17 was due to the deficit.~~
- ~~The remaining net debt increase was a result of investments in capital assets.~~
- ~~Balanced budgets from 2017-18 onwards will ensure that increases in net debt will be limited to net investments in capital assets such as roads, bridges, hospitals and schools.~~
- ~~The Centre for Spatial Economics recently reported that, over the long term, GDP in Ontario increases by up to $6 for every dollar of public infrastructure spending.~~
- ~~In other words, these capital investments will result in GDP growing more quickly than debt, thereby helping to lower the net debt-to-GDP ratio to its pre-recession level. net debt is increasing at a manageable rate, and a smaller portion of it is collected from the deficit.~~

Commented [KK1]: There arguments were asserted in the 2017 Budget, not sure how applicable they continue to be.

- ~~Next, let me briefly address the GDP.~~
- ~~The government's investments in capital assets increased economic growth and helped support Ontario's GDP to advance more quickly than debt, helping the government achieve its net debt-to-GDP targets.~~

DRAFT

- ~~Over the past three years, Ontario's economy has grown faster than Canada's and that of all other G7 countries.~~
- ~~In fact, Ontario's real GDP is now 21.3 per cent above its recessionary low.~~
- ~~Over the 2017–20 period, the Ministry of Finance is forecasting average annual growth of 2.2 per cent in Ontario's real GDP.~~
- ~~Government investments have helped stimulate the Ontario economy to rise from the depths of the recession, and it is now enjoying a period of economic strength and growth.~~

- ~~I briefly addressed the net debt and GDP situations separately; now let me bring them together.~~
- ~~The 2017 Fall Economic Statement reported that Ontario's net debt-to-GDP ratio is lower than previously forecast.~~
- The net debt-to-GDP ratio peaked at 39.3 per cent in 2014–15 and has ~~been~~ declined~~ing~~ ever since, as a result of Ontario's economic growth and the government's progress towards a balanced budget in 2017–18.
- ~~It is now projected to be 37.36 per cent at the end of fiscal 2017–18, lower than the 38 per cent for 2016-17.0.2 per cent lower than was forecast in the 2017 Budget.~~
- ~~This ratio is projected to continue to decline to 37.1 per cent in 2018–19.~~
- In the 2017 Budget, the government set an interim net debt-to-GDP ratio target of 35 per cent by 2023–24, and re-stated its commitment to reduce the net debt-to-GDP ratio to its pre-recession level of 27 per cent by 2029–30.
- ~~A declining net debt-to-GDP ratio, together with low interest on debt costs as a percentage of revenues, positions the province for long-term sustainability.~~
- ~~It also allows for a greater proportion of government spending to be invested in programs and services.~~

Commented [KK2]: I don't believe this is still correct, OEP needs to review

Commented [KK3]: Likewise OEP to check

Commented [KK4]: Does this confirm to FES 2017, is there a

Commented [KK5]: Given that Q3 forecasts 37.6 for 2017-18 I would remove this

Commented [KK6]: Since Q3 does not project out years we can maybe leave this in.

DRAFT

- ~~The reduction of debt is complemented by~~While managing the net debt-to-GDP ratio, the Province will continue to grow because of Ontario's investments in infrastructure, which are supporting economic growth and job creation.
- In fact, Ontario is making the biggest investment in public infrastructure in its history.
- The government's long-term infrastructure plan to invest about $190 million over 13 years, starting in 2014–15, will contribute to the growth of the economy.
- These investments will not only create jobs, support business innovation and draw investors from abroad — they will also contribute to the growth of the provincial economy at a faster rate than the change in its net debt.
- The positive impact of these capital investments on the province's economy was confirmed by the Centre for Spatial Economics.
- It recently reported that, over the long term, GDP in Ontario increases by up to $6 for every dollar of public infrastructure spending.
- The government's economic strategy was further supported in a report by the International Monetary Fund in June 2016, which recommended that Canadian "fiscal policy should be pro-growth."
- Christine Lagarde, the International Monetary Fund's Managing Director, expressed her support for the government's growth strategy and agreed that investment in infrastructure should be an essential element.
- In summary, Ontario's net debt-to-GDP ratio will gradually diminish due to the GDP increasing at a faster rate than net debt.
- This will allow the government to continue to move towards its 27 per cent net debt-to-GDP target.

Interest on Debt-to-Revenue Ratio:

- Another major thrust of Ontario's plan to manage its debt centreres on the interest on debt-to-revenue ratio.
- This is another key indicator of the government's ability to meet its financial obligations.

- Through prudent and cost-effective debt management, the government has consistently kept interest on debt costs below budget projections.
- ~~The 2016–17 Public Accounts show that Ontario's deficit for the last fiscal year was $991 million — $3.3 billion lower than projected in the 2016 Budget and half a billion lower than the interim deficit projection in the 2017 Budget.~~
- ~~This smaller-than-projected deficit is due to stronger revenues, and reflects positively on the debt-to-revenue ratio.~~
- ~~Ontario's interest on debt for 2017–18 is forecast to be $12.2 billion.~~
- ~~The interest on debt-to-revenue ratio is forecast to be 8.2 per cent in 2017–18, 8.3 per cent in 2018–19 and 8.4 per cent in 2019–20.~~
- ~~The savings on interest on debt have improved a key measure of the affordability of debt.~~
- ~~For example, t~~The 2010 Budget forecast that, by 2017–18, the Province would have to spend 11.3 cents of every revenue dollar received on interest.
- By the 2017 Budget, the amount needed for interest payments had dropped significantly.
- The current forecast is 3.1 cents lower — 8.2 cents of interest costs for every dollar of revenue.
- This ratio is lower than it was in the 1990s and 2000s, and is forecast to remain lower through Ontario's outlook period to 2019–20.

Term Extension on Debt:

- Finally, record-low interest rates have enabled the government to ~~keep~~ control its annual interest expense ~~steady~~.
- However, the global decline in interest rates over the last 25 years could not continue indefinitely.
- The Bank of Canada has increased interest rates — twice last year and already once this year.

DRAFT

- Ontario has taken necessary precautions to protect the financing of the province's public services, now that interest rates are widely understood to be on a ~~net~~ rising trajectory.
- To protect the province from these increases, the government has ~~continued to~~ extended the term of its debt.
- Term extension has allowed the government to lock in low interest rates for a longer period, which reduces refinancing risks.
- Extending the term also helps offset the impact of expected higher interest rates on interest on debt costs.
- Going back to the beginning of fiscal 2010–11, Ontario has issued $~~68~~70.6 billion in bonds longer than 30 years to lock in low rates.
- As a result, the weighted-average term to maturity of long-term provincial debt issued has been extended significantly, from 8.6 years in 2008–09 to 13.9 years in 2016–17.
- For 2017–18, it stood at ~~12.8~~ 13.7 years as of ~~October~~January 31, 201~~7~~8.
- The average term of the debt outstanding is ….
- If or when interest rates continue to rise, the government will assess whether it will remain cost-effective over the long term to continue to extend the term of its debt.

Conclusion:

- As I said at the outset, the Ontario government has a track record of responsible fiscal management and remains committed to executing its goal of reducing the provincial debt burden.
- To conclude, the government's plan to manage the debt focuses on three key areas:
  - ~~One, decreasing the n~~Net debt-to-GDP ratio~~.~~;
  - ~~Two, decreasing the i~~interest on debt-to-revenue ratio~~.~~; and
  - ~~And three, e~~Extending the term on its debt when interest rates are low.
- ~~As I have stated, the government has decreased the net debt-to-GDP ratio.~~

PRE-ELECTION REPORT

AG Recommendation #10: Pre-Election Report on Ontario's Finances

- Messaging TBC – TBS

For QAs related to:	See:
Pre-Election Report	Treasury Board Secretariat (Joint lead with Ministry of Finance)

2. Will the government issue a regulation confirming the source of reference for the Pre-Election Report and the timeline for issuance of the report that will be subject to the Auditor General's review?

Under the *Fiscal Transparency and Accountability Act, 2004*, the government may file a regulation that would require it to release a Pre-Election Report on Ontario's Finances. Should the government file such a regulation, the Auditor General would be required to issue a statement based on a prompt review following the release of such a Pre-Election Report.

The government remains committed to meeting the legislative requirements of the Act, and working constructively with the Auditor General.

DRAFT

PROVINCE'S FISCAL SITUATION

Recommendation #7: Province's Debt Burden

- The forecast balanced budget in 2017–18 onwards will limit the increase in net debt-to-net investments in capital assets. These investments will contribute to the economy growing at a faster rate than net debt, allowing the government to manage Ontario's net debt-to-GDP ratio.
- There is a strong demand for Ontario bonds in both the domestic and international markets. Ontario was able to borrow $27 billion in long-term debt in fiscal 2016-17 while our spread — or the margin that we have to pay over the equivalent Government of Canada bond — tightened, indicating an ongoing strong demand for Ontario bonds.
- The liquidity of Ontario benchmark bonds, and continuing confidence in the value of Ontario debt, has allowed us to cost-effectively complete the 2017–18 borrowing program and begin prefunding the 2018-19 borrowing program.

3. **What is the government doing to manage the province's debt burden?**

   The very important first step in reducing debt is to balance the budget. A balanced budget is projected for 2017-18, delivering on a commitment first introduced in the 2010 Budget.

   As the result of a balanced budget, and Ontario's strong economic growth, the net-debt-to-GDP ratio has been declining.

4. **What is the status of the province's borrowing plan?**

   Through prudent and cost-effective debt management, we have consistently kept interest on debt costs below budget projections. Interest on debt to revenue is forecast to be 8.2 per cent in 2017-18, 8.3 per cent in 2018-19 and 8.4 per cent in 2019-20.

   Term extension has allowed us to take advantage of and lock in low interest rates for a longer period, which reduces refinancing risks and helps offset the impact of expected higher interest rates on interest on debt costs.

   As of February 7, 2018, the Province had issued $33.9 billion in long-term public borrowing this fiscal year, thereby completing this year's program of $25.8 billion and prefunding $8.1 billion of the currently forecast 2018-19 long-term borrowing requirement.

Financial Accountability Office (FAO) Reports

DRAFT

5. **What is the government's response to the FAO's fall 2017 report, which states that the government will run a deficit in 2017-18 and the following years?**

   Ontario's deficit for 2016-17 was $991 million — $3.3 billion lower than projected in the 2016 Budget and $0.5 billion lower than the interim projection in the 2017 Budget, according to public accounts.

   The Ministry of Finance is projecting a balanced budget in 2017-18. The Ministry of Finance is committed to a responsible fiscal plan. We build prudence into our forecasts.

   Since the time of the 2017 Budget, private sector forecasters have revised up their economic growth projections for Ontario over the 2017-20 period, reflecting the strength in the Ontario economy.

   Using the government's accounting presentation (i.e. excluding the AG's recommended treatment), the FAO is projecting a small surplus in 2017-18.

6. **Why are the FAO's revenue forecasts lower than the government's revenue forecasts?**

   The government is projecting total revenue to grow from $140.7 billion in 2016–17 to $158.2 billion in 2019–20. This represents an average annual growth rate of 4.0 per cent.

   Growth in revenues over the medium term is driven mainly by taxation revenue which is projected to increase by $15.6 billion between 2016–17 and 2019–20, or at an average annual rate of 5.2 per cent. The projected taxation revenue growth aligns with growth actually experienced in recent years, and projections for the Ontario economy.

Credit Ratings

- Ontario currently maintains a double-A rating with three of its four credit rating agencies.
- We continue to update the rating agencies on a regular basis on economic and fiscal developments.

7. **What are the credit rating agencies' views on Ontario?**

   Following the release of the 2017 Budget, all four rating agencies — Moody's, DBRS, Fitch, and S&P — confirmed Ontario's long-term credit ratings.

   This reflects rating agencies' confidence in our government's fiscal plan.

DRAFT

8. How have rating agencies responded to the qualified opinion on the public accounts and the recent report from the Auditor General?

The rating agencies make their own assessment of the Province's finances.

However, there were no credit rating implications either this year or last when the government received a qualified audit opinion on its Public Accounts.

Attachments:	PA2015 - Media Products - No Opinion w Reg (Oct 3 140pm) - ofa changes.docx

Hi Christina,

I made a couple of small additions to Q57 and 58 (see attached). Please wait until Mike/Jim confirm the last point before we send.

1. Are you concerned about how the credit rating agencies will view this issue?

The Province's financial results show that the government has once again beaten its deficit targets and remains on track for a balanced budget by 2017-18 and remaining balanced in 2018-19.

Our government remains committed to balancing the budget in 2017-18. At the same time, we will continue to invest in vital government services, such as health care, education and infrastructure that are important to the people of Ontario.

~~In 2016 the C.D. Howe Institute, an independent research organization that assess the fiscal planning and reporting of governments in Canada, also commented positively on the financial reporting practices of Ontario relating to its fiscal reporting activities that include Public Accounts, the annual Budget and Estimates.~~

The legislated pension accounting change has no impact on the province's total debt, which is one of the key numbers the rating agencies focus on.

2. Can credit rating agencies adjust their ratings based on this new development? What about bondholders?

The government remains committed to balancing the budget by 2017-18.

The deficit for 2015-16 is $5 billion, a $3.5 billion improvement compared to the 2015 Budget. The deficit is also a $0.7 billion improvement compared to the interim results for 2015-16 contained in the 2016 Budget, which formed the basis for three rating agencies to confirm the Province's credit rating, and the fourth to improve their assessment of the Province's credit outlook.

This marks the seventh year in a row that Ontario has beaten its annual deficit target, reflecting the government's responsible and balanced approach to fiscal management.

The rating agencies and bondholders will understand that the change in the Province's accounting treatment for pension assets of jointly-sponsored pension plans, while increasing net debt, has no impact on the Province's borrowing requirements or total debt outstanding.

Since the province released its financial statements, Ontario's 10-year spread (how

much interest we need to pay above a comparable Government of Canada bond) has remained unchanged and is slightly lower than it was when we released our budget in February.

Bonnie

Since the province released its financial statements, Ontario’s 10-year spread (how much interest we need to pay above a comparable Government of Canada bond) has remained unchanged and is slightly lower than it was when we released our budget in February.

Current holding messaging for Minister Sandals

- As you know, Treasury Board and Ministry of Finance staff prepare the Public Accounts which are subject to independent audit by the Auditor General.

- As I announced to the House last week, there are still some ongoing discussions happening around an accounting issue.

- Earlier today I met with the Auditor General and senior ministry officials to discuss the importance of resolving this issue and releasing the 2015-16 Public Accounts.

- Ministry officials will continue to work with the Auditor General and her staff to resolve the outstanding issue over the next several months.

- What I can tell you now is that Ontario is on track to beat its deficit targets and we are committed to balancing the budget in 2017-18.

- Lower than forecast deficit projections confirm that our government's plan to achieve fiscal balance in 2017-18 is working, while we continue to invest in the programs and services that matter to Ontarians.

- Keeping the public informed through transparent financial reporting remains a priority.

- In that spirit, as part of the 2015-16 Annual Report, which includes the unaudited Consolidated Financial Statements, we have built new data visualization tools to help the public understand Ontario's finances. These tools will be available when our financials are released.

Post technical-briefing speaking points

Minister Sandals' Statement – Release of 2015-16 Financial Statements

- Ontario's Annual Report and unaudited Consolidated Financial Statements for 2015-16 show Ontario's deficit is $3.5 billion lower that the $8.5 billion projected in the 2015 Budget, with the province's deficit for 2015-16 at $5 billion.

- This is $0.7 billion lower than the $5.7 billion in the 2016 Budget interim projection.

- As I assured members of the House last week, this marks the seventh year in a row that Ontario has beaten its deficit target. We are committed to balancing the budget in 2017-18 and remain balanced in 2018-19.

- In preparing the 2015-16 Annual Report and unaudited Consolidated Financial Statements, Treasury Board staff work with their colleagues in ministries across government to assemble financial information for the Annual Report and unaudited Consolidated Financial Statements.

- The Auditor General, who issues an opinion on the government's adherence to independently established accounting standards, then audits this.

- Earlier today, Minister Sousa and I met with the Auditor General to discuss the finalization of the 2015-16 Public Accounts.

- We did so because this year, the Auditor General provided the Province with a new interpretation of public sector accounting standards related to the accounting treatment of jointly-sponsored pension plans, which are subject to a range of interpretations.

- Despite our best efforts to try to resolve concerns raised by the Auditor General, the Province's professional accounting staff and the Auditor General continue to have differences in the interpretation of public sector accounting standards on this issue.

- The Public Sector Accounting Board has set up a task force to review the current accounting standards for retirement benefits. The Province will ensure that the task force is made aware of this area of difference in interpretation.

- In addition, Ontario will also be engaging an expert panel to support a full understanding of the basis and nature of the differences. The Province will consult individuals with a range of backgrounds and experience, including preparers, joint sponsors and auditors of public sector financial reports.

- To be clear, Ontario had followed the same pension accounting treatment for the past 14 years. The current Auditor General has accepted this treatment for the last two years, resulting in unqualified – or clean audit opinions.

- Three previous Auditors General have also accepted it. There has been no change to the relevant accounting standards over the past 14 years.

- In 2016 the C.D. Howe Institute, an independent research organization that assess the fiscal planning and reporting of governments in Canada, also commented positively on the financial reporting practices of Ontario relating to its fiscal reporting activities that include Public Accounts, the annual Budget and Estimates.

- To acknowledge the different interpretations and to ensure openness and transparency with respect to province's financial position, the government is releasing its unaudited financial statements.

- The government believes it is in the public interest to release its financial information. The government also believes it is in the public interest for the Auditor General to issue an audit opinion on Ontario's consolidated financial statements as soon as possible.

- The government regulated the treatment of pension assets in a manner that is consistent with the fiscal outcome proposed by the Auditor General. The impact of the change resulted in an additional $10.7 billion being added to the Province's net debt and accumulated deficit.

- Although these financial statements are unaudited, it is important to stress that the Province's financial results show that the government has once again beaten its deficit targets, and remains committed to achieving a balanced budget by 2017-18, and remain balanced in 2018-19.

- It is also important to stress that the two pension plans in question – the Ontario Public Service Employee's Union Pension Plan, and the Ontario Teachers' Pension Plan – are both healthy and well funded.

- Based on our respective positions at this time, we believe that this accounting matter would benefit from additional discussions, information and consideration.

- Our officials and professional accounting staff will continue to work with the Auditor General’s office on this accounting issue related to pension assets so that we can table the audited Public Accounts with the Lieutenant Governor in Council as soon as possible.

Minister Sousa's Statement – Ontario's Fiscal Outlook

(TBC input by MOF comms)

The government is dedicated to a fiscally sound approach to managing the Province's finances.

As outlined in the 2016 Budget, the government is committed balancing the budget in 2017-18 and remaining balanced in 2018-19.

The 2016–17 First Quarter Finances also confirmed that the government is projecting a deficit of $4.3 billion in 2016–17, unchanged from the 2016 Budget forecast.

The Ontario economy continues to grow in a challenging global environment. In fact, Ontario posted higher real GDP growth in the first quarter of 2016 than Canada, the United States, and all other G7 countries.

The government's path to a balanced budget is being achieved through responsible fiscal management, which involves:

- Managing growth in program spending, and
- Maintaining the integrity of Provincial revenues.

At the same time, the government continues to make investments in the economy, its people, and a healthy, clean and prosperous low-carbon future.

Key messages – post release

- The government has released its 2015-16 Annual Report and unaudited Consolidated Financial Statements to ensure transparency with respect to the province's financial position.

- To align with the Auditor General, a regulation has been filed to prescribe the accounting treatment for pension assets for the 2015-16 financial statements.

- The regulation resolves the outstanding accounting issue for this year in a manner that is consistent with the fiscal outcome proposed by the Auditor General.

- This marks the seventh year in a row that Ontario has beaten its deficit target.

- Ontario remains committed to balancing the budget in 2017-18, while continuing to invest in the priorities that matter to the people of Ontario, such as healthcare, education and infrastructure.

If pressed about why a regulation was needed:

- Based on their professional judgement, the Province's professional accounting staff could not agree with the Auditor General's interpretation of Public Sector Accounting Standards as it relates to jointly-sponsored pension plans.

- A regulation was required to allow the public service to sign-off on the impact of the Auditor General's view on accounting for pension assets in Ontario's 2015-16 financial statements.

- The Province has applied consistent accounting treatment for these plans for the past 14 years, and has consistently received unqualified, or clean audit opinions from the Auditor General, without exception.

- To remain clear and transparent, we have reflected the Auditor General's view of the issue for this year. In order to do so, the government regulated the treatment of the pension assets for 2015-16.

- This is an accounting issue. However we remain optimistic that by studying the issue further and gathering third-party professional opinions, we will be able to reach an agreement on the treatment with the Auditor General in the coming months.

News Release

Last Year's Ontario Deficit $3.5 Billion Lower Than Projected

Province Remains Committed to Balance the Budget Next Year in 2017-18

News

Ontario's Annual Report and unaudited Consolidated Financial Statements for 2015-16 show Ontario's deficit is $3.5 billion lower that the $8.5 billion projected in the 2015 Budget, with the province's deficit for 2015-16 at $5 billion. This is $0.7 billion lower than the $5.7 billion in the 2016 Budget interim projection.

This marks the seventh year in a row that Ontario has beaten its deficit target. Ontario remains committed to balancing the budget in 2017-18, and remain balanced in 2018-19.

In preparing the Annual Report and unaudited Consolidated Financial Statements, the Province's professional accounting staff and the Auditor General have engaged in discussions regarding the treatment of pension assets. Pension accounting requires the application of professional judgment. Despite best efforts to resolve concerns, the Province's professional accounting staff and the Auditor General continue to have differences of opinion about the appropriate application of public sector accounting standards as they relate to pension accounting. This ongoing discussion has delayed the tabling of the Province's financial statements.

A regulation was made to allow the public service to sign-off on the impact of the Auditor General's view on accounting for pension assets in Ontario's 2015-16 financial statements. The Province has filed a time-limited regulation, which legislates the accounting for pension assets of two jointly-sponsored pension plans for 2015-16 in a manner that is consistent with the fiscal outcome proposed by the Auditor General.

To ensure openness and transparency, the government is releasing its unaudited financial statements to provide the public with the Province's financial position.

The unaudited statements show the government is beating its deficit targets through sound financial management. The Government of Ontario currently has the lowest program spending per capita among Canadian provinces and ranks the lowest among provinces in terms of public-sector employees per capita. At the same time, Ontario's economy continues to grow. Over the last two years, Ontario's economy has grown by 6.1 per cent. Last year, growth was double the national average. In the first quarter of this year, Ontario's growth was greater than that of the United States and the G7.

The Public Sector Accounting Board has set up a task force to review the current accounting standards for retirement benefits. The Province will ensure that the task force is made aware of this area of difference in interpretation. In addition Ontario will also be engaging an expert panel to support a full understanding of the basis and nature of the differences. The Province will consult individuals with a range of backgrounds and experience, including preparers, joint sponsors and auditors of public sector financial reports.

Responsible financial management is part of the government's economic plan to build Ontario up and deliver on its number-one priority to grow the economy and create jobs. The four-part plan includes helping more people get and create the jobs of the future by expanding access to high-quality college and university education. The plan is making the largest infrastructure investment in hospitals, schools, roads, bridges and transit in Ontario's history and is investing in a low-carbon economy driven by innovative, high-growth, export-oriented businesses. The plan is also helping working Ontarians achieve a more secure retirement.

QUOTES

“The Annual Report and unaudited Consolidated Financial Statements for 2015-16 show that our government’s plan to achieve fiscal balance next year in 2017-18 is working. We will continue to build on our track record of responsible fiscal management, while investing in vital government services such as health care, education and infrastructure that are important to the people of Ontario.”

- Liz Sandals, President of the Treasury Board

“Our government is dedicated to a fiscally sound approach to managing the Province’s finances. The Ontario economy continues to grow in a challenging global environment. In fact, Ontario posted higher real GDP growth in the first quarter of 2016 than Canada, the United States, and all other G7 countries. The government’s path to a balanced budget next year is being achieved through responsible fiscal management, which involves managing growth in program spending, and maintaining the integrity of Provincial revenues.”

- Charles Sousa, Minister of Finance

QUICK FACTS

- The 2015-16 unaudited Financial Statements compare Ontario's actual performance to what was planned in the 2015 Budget.

- Ontario is a recognized leader in financial reporting. The C.D. Howe Institute, an independent research organization that assesses the fiscal planning and reporting of governments in Canada, has commented positively on the financial reporting practices of Ontario, including Public Accounts, the annual Budget and Estimates.

- The unaudited Financial Statements are prepared by the Government of Ontario in accordance with legislation and the accounting principles for governments recommended by the Public Sector Accounting Board (PSAB) of the Chartered Professional Accountants of Canada (CPA Canada).

Newsroom Backgrounder

Release of Ontario's 2015-16 Financial Statements

Public Accounts are part of the Ontario government's annual fiscal cycle and are a legislative requirement under the Financial Administration Act. The President of the Treasury Board submits the Public Accounts for each fiscal year to the Lieutenant Governor in Council on or before the 180th day after the end of the fiscal year. Public Accounts include the Province's annual report and consolidated financial statements. These documents provide financial highlights of the past fiscal year compared to the Budget plan and report on performance in priority areas.

The consolidated financial statements are prepared by the Government of Ontario in accordance with legislation and the accounting principles for governments recommended by the Public Sector Accounting Board (PSAB). PSAB independently establishes accounting standards for the public sector in Canada.

These accounting standards are common, nationally recognized standards used by governments across Canada in their financial reporting

PSAB standards specify how transactions and other events are to be recognized, measured, presented and disclosed in a public sector entity's financial statements.

The objective of PSAB standards is to meet the needs of the users of financial statements by providing the information needed for accountability and decision-making.

In preparing the Annual Report and Consolidated Financial Statements for 2015-16, professional public servants and the Auditor General engaged in discussions regarding the accounting treatment of pension assets.

The Ontario Public Service Employees Union Pension Plan (OPSEUPP) and the Ontario Teachers' Pension Plan (OTPP) are jointly-sponsored pension plans where the Government of Ontario is a co-sponsor.

The assets of OPSEUPP and OTPP are held in trust for the beneficiaries of the plans. The plans are co-managed by the sponsors, and decisions regarding benefits and contributions require negotiation and agreement between them.

During the 2015-16 Public Accounts audit, the Auditor General raised some concerns with regard to Ontario's accounting practices related to pension assets for the OPSEUPP and OTPP plans.

Pension accounting requires the application of professional judgment. Despite best efforts to try to resolve concerns, the Province's professional accounting staff and the Auditor General continue to have differences of interpretation of PSAS standards as they relate to accounting for pension assets.

Given the differences in interpretation of the application of PSAB standards for the OTPP and OPSEUPP pension assets, Ontario approved a time-limited regulation which legislates the accounting for pension assets of jointly-sponsored pension plans for the 2015-16 Public Accounts. This is consistent with the fiscal outcome proposed by the Auditor General on September 13.

The *Financial Administration Act* allows Treasury Board, subject to the approval of the Lieutenant Governor in Council, to make regulations respecting the accounting policies and practices to be followed regarding the preparation of the consolidated financial statements of the Province.

The effect of the regulation is to reflect the fiscal impact of the Auditor General's position pending further review and analysis on this accounting matter. The change in accounting treatment is not a reflection on the funding status of the plans, or the quality of financial reporting by the Province. The impact of the change resulted in an additional $10.7 billion being added to the Province's net debt and accumulated deficit.

Prior to this change, Ontario had followed the same pension accounting treatment for all of the past 14 years. This had been accepted by the current Auditor General for the last two years. It has also been accepted by three previous Auditors General. There has been no change to the relevant accounting standards over the past 14 years.

The Auditor General has not issued an audit opinion on the province's financial statements for 2015-16. However the government is releasing these unaudited financial statements to ensure openness and transparency with respect to province's financial position, and because it has passed the deadline to table the Public Accounts with the Lieutenant Governor in Council. The government believes it is in the public interest to release its financial information. The government also believes it is in the public interest for the Auditor General to issue an audit opinion on Ontario's consolidated financial statements so that it can table the Public Accounts with the Lieutenant Governor in Council.

Openness and Transparency

As part of its commitment to Open Government, digital technology was used for the first time to visualize the province's financial information in an interactive and easy to understand way. This year, Ontario is further increasing the openness and transparency of the Annual Report and unaudited Consolidated Financial Statements by:

- Creating new data visualizations, including interactive bar charts and interactive data tables
- Releasing data sets through Ontario's Open Data Catalogue, including data on government organizations, government business enterprises and Trusts

Improving Outcomes for Ontarians

As the Province's 2015-16 Financial Statements show, the government remains committed to balancing the budget in 2017-18, while continuing to invest in the priorities that matter to the people of Ontario, such as healthcare, education and infrastructure.

Health Care

Building on Ontario's Patient's First: Action Plan, the government continued transforming Ontario's health care system in 2015-16 to become more patient-centred and focused on better access to care, quality and value by:

- Increasing investment in home and community care by five per cent annually: $250 million in 2015-16, for a total of $750 million over three years.

- Increasing the hourly wages of publicly funded personal support workers (PSWs) caring for patients at home and in the community by $1.50 per hour in 2015-16 to at least $15.50 per hour, in the second of three annual increases totalling up to at least $16.50 per hour by April 1, 2016. Investments in PSWs, like an increase in the hourly wage are part of the government's effort to attract and retain the best PSWs in the home and community care sector.

- Appointing Ontario's first-ever Patient Ombudsman who will help address needs of patients who have not had their concerns with health care organizations resolved through existing complaint mechanisms.

Advanced Education and Skills Development

In 2015-16, the Ontario government made progress on its plan to help more people get and create the jobs of the future by continuing to invest in student financial assistance

and expand access to high quality college and university education, resulting in 67 per cent of adults in Ontario obtaining a postsecondary degree, diploma or certificate – higher than the average of any OECD country.

Over the past 12 years, government investments have resulted in more than double the number of students qualifying for aid, while enrolment has increased by 38 per cent.

In 2015, 67 per cent of adults in Ontario had a postsecondary degree, diploma or certificate – higher than the average of any OECD country.

The government is also transforming Ontario's student aid system to help thousands of students obtain greater access to advanced education and have lower levels of student debt upon graduation. For students from lower-income and many middle-income families, it would mean free tuition. These changes will start in the 2017-18 academic year.

Childcare, Elementary and Secondary Education

The government has made gains in building and supporting an integrated early-years, elementary and secondary education system. This includes increasing funding for schools and licenced child care, the establishment of the Ontario Early Years Policy Framework and implementation of Full-Day Kindergarten.

In 2015-16, the government built on this success by:

- Increasing wages for early childhood educators and other child care professionals in licensed child care settings by providing a $1 per hour wage increase for eligible child care workers bringing the total wage increase up to $2 per hour, plus benefits.

- Increasing the five-year high school graduation rate to 85.5 per cent – the highest level in the province's history.

- Doubling the funding for school renewal projects to $500 million in 2015-16 to ensure our students are benefitting from safe, modern and efficient learning environments.

Infrastructure

Ontario is making the largest investment in public infrastructure in the province's history – about $160 billion over 12 years, starting in 2014-15. Planned investments are supporting over 110,000 jobs, on average, every year across the province.

In 2015-16, the Province continued to invest in hospitals, schools, roads, bridges and transit, including:

- Completing construction of the $1.4 billion Right Honourable Herb Gray Parkway in Windsor–Essex, which provides an express route to the country's busiest land border crossing.

- Ongoing construction of the Eglinton Crosstown Light Rail Transit line, which will offer fast, efficient service and improve travel for commuters.

- Providing small, rural and northern municipalities with funding to build and repair core infrastructure through the Ontario Community Infrastructure Fund.

- Completing the new Humber River Hospital, which offers a comprehensive range of acute care services and support for inpatient and outpatient hospital programs.

- Ontario is making $575 million investment to repair and renew schools across the province in 2016-2017.

Staying on the Path to Balance

The government is working towards a balanced budget through Program Review, Renewal and Transformation (PRRT), a government-wide approach to multi-year planning and budgeting that puts a heightened focus on evidence and outcomes to inform funding allocations.

But PRRT is about more than just savings targets – it is about doing government differently – improving outcomes for Ontarians while freeing up resources to reinvest in key government priorities, such as health care, education and infrastructure.

Examples of successful PRRT initiatives include:

- Improving the sustainability of the Ontario Drug Benefit Program and patients' access to drugs by making the program more efficient and effective. The changes saved approximately $100 million in 2015-16 and will enable over $200 million in savings annually when fully implemented.

- Changing the Second Career program by removing client targets for service providers while ensuring funding support for eligible clients. This change will generate approximately $40 million per year and will allow the government to invest in the Canada-Ontario Jobs Grant and a renewed Ontario Youth Job strategy.

- Reducing the government's office footprint by over 820,000 rentable square feet, which generated approximately $24 million in savings in 2015-16.
- Achieving approximately $56 million in savings through the consolidation of data centres, early vendor payments and lower contract costs – including for software and IT consulting services, laboratory supplies and security services.
- Achieving $7 million in savings from contracts related to government cell phone plans and toll free lines.

Top Media Qs&As

Releasing Unaudited Financial Statements

1. It sounds to me like the government is yet again fighting with the Auditor General. What do you say to this?

This is not true from the government's perspective. And let me explain why: The government respects the oversight and recommendations provided by all independent officers of the Legislative Assembly of Ontario, including the Auditor General. And in this case for this set of final accounts, while one specific issue is being sorted through, we actually are agreeing with the Auditor General's numbers.

Given these differences of opinion, the Province filed a time-limited regulation, which legislates the accounting for pension assets of jointly-sponsored pension plans for the 2015-16 Public Accounts. The government believes this is consistent with the fiscal outcome proposed by the Auditor General.

We believe that this accounting matter would benefit from additional discussions, information and consideration.

The Public Sector Accounting Board has set up a task force to review the current accounting standards for retirement benefits. The Province will ensure that the task force is made aware of this area of difference in interpretation.

In addition, Ontario will also be engaging an expert panel to support a full understanding of the basis and nature of the differences. The Province will consult individuals with a range of backgrounds and experience, including preparers, joint sponsors and auditors of public sector financial reports.

2. Why are you releasing your financial statements without the Auditor approving them?

Earlier today I met with the Auditor General to discuss the 2015-16 Public Accounts. I did so because this year, the Auditor General presented the province with a new interpretation of public sector accounting standards as it relates to an accounting issue – the treatment of pension assets.

Ontario has followed the same pension accounting treatment for the past 14 years. This had been accepted by the current Auditor General for the last two years, resulting in unqualified – or clean audit opinions. It has also been accepted by three previous Auditors General. There has been no change to the relevant accounting standards over the past 14 years.

In preparing the Annual Report and Consolidated Financial Statements, the Province's professional accounting staff and the Auditor General have engaged in discussions regarding the treatment of pension assets – which is subject to a range of interpretations.

Despite best efforts to try to resolve concerns, the Province's professional accounting staff and the Auditor General continue to have difference intepretations.

To remain clear and transparent, the government exercised its statutory authority to regulate the treatment of this particular issue for 2015-16. The government regulated the treatment of pension assets in a manner that is consistent with the fiscal outcome proposed by the Auditor General.

The government is now releasing its financial statements to ensure transparency with respect to province's financial position.

The Public Sector Accounting Board has set up a task force to review the current accounting standards for retirement benefits. The Province will ensure that the task force is made aware of this area of difference in interpretation.

In addition, Ontario will also be engaging an expert panel to support a full understanding of the basis and nature of the differences. The Province will consult individuals with a range of backgrounds and experience, including preparers, joint sponsors and auditors of public sector financial reports.

3. If the Public Sector Accounting Board is studying this issue, are other Canadian jurisdictions dealing with this as well?

No other province has similar governance frameworks for their jointly-sponsored pension plans that are in a surplus position.

<u>British Columbia</u>

Pension assets for BC's jointly sponsored pension plans are not reported on British Columbia's consolidated financial statements. The governance framework in BC is

different than Ontario's and would appear to justify different accounting treatment under PSAB standards.

Specifically, the Boards of Trustees of the BC Plans, unlike their Ontario counterparts, are permitted to use ongoing surpluses through the amendment of the Plan rules governing contributions and benefits, so long as the amendment of the Plan rules:

- Does not result in an increased contribution rate for employees or employers
- Does not create or increase an unfunded liability in the Plan, and
- Is otherwise compliant with applicable legislation and the Trustees' fiduciary obligations.

In contrast, the governance arrangements with respect to the Ontario Teachers' Pension (OTPP) provide that the Partners that sponsor that arrangement, being the Minister of Education and the OTF, may use ongoing surpluses as they believe appropriate, subject only to the Ontario *Pension Benefits Act.* The Board of Directors of the OTPP, being the OTPP administrator for purposes of the PBA, has no authority with respect to the use of Plan surpluses.

The OPTrust governing documents also stipulate that it is the Sponsors of the OPTrust, being the Province of Ontario and OPSEU, who have the authority to utilize ongoing Plan surpluses. OPTrust's Board of Trustees, being the OPTrust administrator for purposes of the Ontario PBA, has no authority to utilize ongoing Plan surpluses.

<u>New Brunswick</u>

As we understand it, New Brunswick converted four of its pension plans into what it refers to as target plans.

In the prior year, New Brunswick accounted for these plans as defined contribution plans, meaning it expensed the contributions to the plan and did not reflect its share of the net asset or net liability of the plan in its financial statements. The Auditor General of New Brunswick issued a qualified opinion on those financial statements.

In the 2015-16 fiscal year, New Brunswick changed its accounting for those plans to account for them as defined benefit plans and the Auditor General of New Brunswick issued a clean opinion.

Ontario has always accounted for its share of its jointly sponsored plans as defined benefit plans.

4. What is the professional judgment that exists out there to interpreting jointly-sponsored pensions?

A key consideration in exercising professional judgment is if the resulting financial information is both relevant and reliable and gives a fair presentation of the transaction.

This area of pension accounting is particularly complex, and it is important to consider the specific facts and circumstances when assessing the appropriate accounting treatment.

In this regard, the Province has assessed the appropriate accounting treatments based on the governance frameworks applicable to Ontario's jointly-sponsored pension plans. It would be inappropriate to assume that the governance frameworks of plans in other jurisdictions would necessarily result in the same accounting treatment.

5. Are you saying the Auditor General is misinterpreting Public Sector Accounting Board standards?

The Auditor General's responsibility is to conduct an independent audit and provide her audit opinion based on her own professional judgment. A difference of opinion on the interpretation of accounting standards is not unique to this situation. Other jurisdictions have also experienced differences of opinion between preparers and auditors on complex accounting matters.

Over the coming months we will undertake activities to further assess the application of PSAB standards to Ontario's accounting for jointly-sponsored pension plans. In the meantime, it remains the professional judgment of the professional staff that the accounting treatment in place since 2001 continues to be appropriate.

6. If the Auditor General had agreed with you, what would the differences have been in the deficit or net debt?

According to the Province's interpretation of PSAB, the annual deficit would be $1.5 billion lower (at $3.5 billion), and net debt would be $10.7 billion lower.

7. The province has been treating pensions the same way since 2001. When did the Auditor General tell you about this new accounting treatment?

We only learned that the Auditor General was challenging the accounting treatment of the past 14 years very late in the audit. On September 13th the Auditor General communicated her position that the Province should write off the entire pension asset amount of $10.7 billion from the balance sheet.

8. What does this mean for the Fall Economic Statement?

We're in the middle of completing the fiscal plan. We need to account for all financial considerations before we can finalize it. These results will be included as part of that process. **(TBC MOF)**

9. Is this Public Accounts or not?

From a content perspective, the unaudited results being released are the same as those which would be reported in the Public Accounts, including the information in the supplementary volumes.

The only difference is that the Auditor's Opinion is not included in the Annual Report.

10. Were you aware of this before the Speech from the Throne? Had you known about this, would that have changed the government's commitments announced in the speech?

Response TBC

11. Why are you doing this today, four days after you announced the delay?

Despite the outstanding difference in opinion between the Auditor General and the Province's professional accounting staff with regards to pension accounting, it is important to ensure that the public interest is served by timely and transparent reporting of the government's results for 2015-16 compared to Budget.

Although the results being released are clearly labelled as unaudited, we look forward to tabling the Public Accounts once the Auditor General provides her opinion.

12. On what exactly do you disagree with the Auditor?

Both the Auditor General and the Province agree that the Province's results should reflect PSAB's standard on pension accounting. It is just a difference in interpretation of those standards which is at the heart of the issue.

The nature of the difference in interpretation is disclosed in Note 18 of the unaudited consolidated financial statements.

13. If you think you're right, why would you change the numbers?

To clarify, the 2015-16 results are based on legislation and PSAB. Although they reflect the same fiscal results which would be presented according to the Auditor General's proposed interpretation of the standards, the results as presented do not represent our professional staff's interpretation of PSAB standards for jointly sponsored pension plans.

By adopting the Auditor General's interpretation, the financial statements could be finalized and signed off in order to complete the financial reporting process and enable Public Accounts to be completed. Unfortunately, the Auditor General's audit opinion remains outstanding at this time so the Public Accounts have yet to be finalized**.**

14. Was there something wrong with the accounting rules that the government was using before?

No.

Prior to this change, Ontario had followed the same pension accounting treatment for the past 14 years. This had been accepted by the current Auditor General for the last two years. It has also been accepted by three previous Auditors General. There has been no change to the relevant accounting standards over the past 14 years.

That said, the Province believes that this complex accounting area would benefit from additional discussion and analysis. Over the coming months, efforts will be made to engage experts to assist with further analysis of the application of PSAB to accounting for jointly-sponsored pension plans on the Province's books.

15. Why hasn't the Auditor General raised this with you in the past two years?

I cannot speak for the Auditor General. Please refer your questions to the Auditor General's Office.

16. What is the government trying to hide by releasing unaudited books?

We are releasing our unaudited financial statements to ensure openness and transparency with respect to the Province's financial position. Our unaudited financial statements reflect the same fiscal outcome that would result from the Auditor General's proposed pension accounting treatment.

Although these statements are unaudited, it's important to stress that the Province's financial results show that the government has once again beaten its deficit targets and remains committed to achieving a balanced budget by 2017-18, and remaining balanced in 2018-19.

As part of the government's initiative to enhance transparency and accountability, additional disclosure of five-year trends is now provided in the Annual Report. The increased disclosure and discussion on five-year trends is in line with recommended disclosure practices of the Public Sector Accounting Board and enhances the quality of financial reporting to the public, Legislature and other users to better meet their transparency and accountability needs.

In addition to the disclosure in the Annual Report, the government is also making available supplementary information through online data visualizations.

17. Are you fudging the books to try and show your finances are better than they really are – is that why the AG won't sign off?

No.

We are releasing our Financial Statements to ensure openness and transparency with respect to the province's financial position. In fact, we have implemented legislation that allows our officials to sign off in a way that is consistent with the fiscal outcome proposed by the Auditor General.

Prior to this change, Ontario had followed the same pension accounting treatment for the past 14 years. This had been accepted by the current Auditor General for the last two years. It has also been accepted by three previous Auditor Generals. There has been no change to the relevant accounting standards over the past 14 years.

Although these statements are unaudited, it's important to stress that the Province's financial results show that the government has once again beaten its deficit targets and remains committed to achieving a balanced budget by 2017-18, and remaining balanced in 2018-19.

18. Is this even legal – are you in contempt of the house by releasing your financial statements before you table them in the Legislature?

We are not releasing Public Accounts, we are releasing our financial statements to ensure openness and transparency with respect to province's financial position.

The government believes it is in the public interest to release its financial information. The government also believes it is in the public interest for the Auditor General to issue an audit opinion on Ontario's finances so that we can submit the Public Accounts to the Lieutenant Governor in Council and table them as soon as possible.

19. Has this ever happened before in Ontario? Anywhere else in Canada?

Ontario has a strong track record of producing high-quality financial reports on a timely basis, and meeting its statutory tabling requirements. Ontario has had clean audit opinions for the past 22 years.

That said, differences of opinion between preparers and auditors do occasionally occur, and have occurred in other jurisdictions in Canada.

20. How are we supposed to trust your numbers if the Auditor General hasn't approved them?

Although the financial results being presented are labelled 'unaudited', they reflect the basis of reporting for pensions that the Auditor General proposed.

Once the Auditor General has issued her Audit Opinion, the Public Accounts will be finalized and tabled with the Lieutenant Governor in Council.

21. So what happens next? When will you table the actual Public Accounts?

The government will continue to work with the Auditor General to complete tabling of the 2015-16 Public Accounts.

The Public Sector Accounting Board has set up a task force to review the current accounting standards for retirement benefits. The Province will ensure that the task force is made aware of this area of difference in interpretation.

In addition, Ontario will also be engaging an expert panel to support a full understanding of the basis and nature of the differences. The Province will consult individuals with a range of backgrounds and experience, including preparers, joint sponsors and auditors of public sector financial reports.

22. Does the change in accounting regarding the assets of the Teachers' or OPSEU pensions plans mean those plans might be financially threatened?

Absolutely not. This issue relates solely to the Province's reported financial results and the Province's historical practices of reporting pension assets.

The two pension plans in the Ontario Public Service – which are of the defined benefit type – are healthy and well-funded.

The OPSEU Pension Plan is fully funded with a small reserve of surplus assets standing to the credit of the joint-sponsors, while the Ontario Teachers' Pension Plan has a funding surplus of $13.2 billion.

23. You hired outside experts to give you a third-party accounting opinion, but you paid to get this advice. Didn't they just tell you what you wanted to hear?

The Province pays for services provided by external advisors – an accounting opinion is no different.

In providing an accounting opinion when the auditor has already provided their view, the professional standards require the firm providing the opinion confirm that the facts upon which the opinion is issued are complete so that the firm issuing the opinion is considering the same facts that the auditor is considering.

This process was followed by the Province.

24. The Auditor General has implied your Provincial Controller is in a position of conflict because she used to work for Deloitte. How do you respond?

All employees that are hired into the Ontario Public Service swear two oaths, an Oath of Allegiance and an Oath of Office. These oaths affirm that public servants will faithfully discharge their duties, and comply with all laws and confidentiality obligations.

25. The Auditor General says she raised this issue with you months ago. Why haven't you fixed this problem by now?

Until June, the Auditor General's audit plan for the 2015-16 Public Accounts only included a planned review of economic assumptions for pension plans. There were no significant issues raised by the Auditor's staff following their work on the assumptions.

The Province responded upon receiving the Auditor General's request for an actuarials valuation by procuring resources to complete the AG's request. The results were shared with the Auditor General's staff and only after several discussions did it become apparent that the Auditor General was challenging the accounting treatment that the Province had been following for the past 14 years.

On September 13th, the Auditor General communicated her position that the entire balance of pension assets ($10.7 billion) should be written off the Province's books. Despite our best efforts, the Province's professional accounting staff have not yet been able to reach a common interpretation of PSAB standards for the Province's jointly sponsored pension plans.

In light of the ongoing disagreement on interpretation of accounting standards, and the need to release the Province's financial results on a timely basis, Cabinet approved a regulation to allow for the results of the Province to be reported on a basis which reflects the fiscal outcome proposed by the Auditor General with respect to the treatment of the pension asset in question.

26. If you say you're open and transparent, why didn't you invite the Auditor General to your media technical briefing?

The technical briefing was for the purposes of updating media and members of the Opposition and the third party. However it was held in a public space in a government building, and anyone was free to attend.

27. Is the government still committed to balancing the budget by 2017-18?

Yes.

The Province's financial results show that the government has once again beaten its deficit targets and remains committed to achieving a balanced budget by 2017-18 and remaining balanced in 2018-19.

28. The financial results show that the net debt and accumulated deficit has ballooned by $10.7 billion? How did this happen and what are you doing to address it?

This year, the Auditor General presented the province with a new fiscal interpretation of public sector accounting standards as it relates to the treatment of pension assets.

After careful consideration, the Province agreed to adopt the Auditor General's fiscal interpretation. The government made a regulatory amendment to allow us to amend our accounting policies for the 2015-16 Public Accounts in order to comply with the Auditor's fiscal interpretation. The impact of the change resulted in an additional $10.7 billion being added to the net debt and accumulated deficit.

Despite this change, and as our results show, the government has once again beaten its deficit targets and remains committed to achieving a balanced budget by 2017-18, and remaining balanced in 2018-19.

Total debt remains unchanged by the pension adjustment.

The change in the Province's accounting treatment for pension assets of jointly sponsored pension plans, while increasing net debt, has no impact on the Province's borrowing requirements.

29. How can the accumulated deficit and net debt increase by $10.7 billion without causing an increase in total debt?

Total debt is cash based – it is how much money we've borrowed and is owed to our creditors.

Net debt takes into account the difference between our financial assets and liabilities, whether they are cash or not.

The province has changed the valuation of the net pension liability by reducing the pension assets by $10.7 billion, but because there is no cash involved in that valuation, the total debt does not change.

30. Should taxpayers be concerned about the rise in net debt and accumulated deficit?

No.

The Province's financial results show that the government has once again beaten its deficit targets and remains committed to achieving a balanced budget by 2017-18, and remaining balanced in 2018-19.

The treatment of pension assets is an accounting issue. In fact, the Public Sector Accounting Board has initiated a project to review pension accounting standards. PSAB will be seeking input from governments, auditors and other stakeholders to ensure that accounting standards support transparency and accountability and meet user needs. Ontario will participate in this national discussion.

Ontario will also be engaging the expert accounting community to support a full understanding of the basis and nature of the differences. The Province will consult individuals with a range of backgrounds and experience, including preparers, joint sponsors and auditors of public sector financial reports.

31. How does the Province plan to reduce its net debt-to-GDP ratio to its pre-recession level of 27 per cent?

The first step in returning to the targeted 27 per cent net debt-to-GDP ratio is to balance the budget. Once the budget is balanced, debt will continue to rise by the difference between the annual cash investment in capital and the amortization of these investments. These investments will contribute to the debt rising at a slower rate than the increase in the Province's GDP, over time lowering the net debt-to-GDP ratio to the government's 27 per cent target.

32. What is the difference between "Public Accounts" and "Financial Statements"?

Our financial statements include the Province's annual report and unaudited consolidated financial statements. These documents provide financial highlights of the past fiscal year compared to the Budget plan and report on performance in priority areas.

The full Public Accounts would also include these components, as well as a report by the Auditor General containing an audit opinion.

The full Public Accounts will be tabled with the house once the Auditor General's audit opinion is available.

33. You say you're releasing your financial results in the public interest. Aren't you creating confusion by having two sets of books – yours and the AG's?

The government passed a regulation to allow us to amend our accounting policies in order to be consistent with the fiscal outcome proposed by the Auditor General. Therefore there is only one set of books.

Our officials continue to work with the Auditor General's office. In the meantime, we felt it was in the public interest to release our unaudited financial statements.

34. How different will the Auditor General's numbers be?

There is no difference in the unaudited financial statements released and the Auditor General's view of the results for the Province for fiscal 2015-16. The government passed a regulation to allow us to amend our accounting policies in order to be consistent with the fiscal outcome proposed by the Auditor General.

35. Why didn't you just release Public Accounts last week to meet your legislated timelines?

As stated in the House there was a delay in tabling the Public Accounts because of ongoing discussions with the Auditor General to work through an accounting issue related to pension assets.

Our officials have continued to work with the AG's office to finalize the 2015-16 Public Accounts. In the meantime, we felt it was in the public interest to release our unaudited financial statements in the spirit of transparency and accountability.

36. Clearly the government is in a spat with the Auditor General – releasing unaudited financial statements seems like a slap in the face. What does this say about your relationship with the Auditor General?

The government respects the oversight and recommendations provided by all independent officers of the Legislative Assembly of Ontario, including the Auditor General. As a government, we value our important and ongoing relationship with each of these officers.

Our officials continue to work with the Auditor General's office to resolve this accounting issue related to pension assets. In the meantime, we felt it was in the public interest to release our unaudited financial statements.

37. The Auditor General claims you have been using creative accounting to overstate your numbers – how do you respond to that?

That is simply not true.

The government passed a regulation to allow us to amend our accounting policies in order to be consistent with the Auditor General's assessment of our treatment of pension assets. This reflects the fiscal outcome proposed by the Auditor General.

Prior to implementing this change, the government had followed the same pension accounting treatment for the past 14 years. This had been accepted by the current Auditor General for the last two years – resulting in unqualified (clean) audit opinions. It has also been accepted by three previous Auditors General.

There has been no change to the relevant accounting standards over the past 14 years.

That said, given the particularly complex area of pension accounting, further analysis of the impact of PSAB standards on the Province's books will be undertaken over the coming months.

38. So at the end of the day if your numbers are the same as the Auditor General's what's the issue?

Professional accounting staff and the Auditor General have a difference of interpretation as it relates to the application of public sector accounting standards to pension assets resulting from jointly-sponsored pension plans.

The government passed a regulation to allow us to amend our accounting policies in order to be consistent with the fiscal outcome proposed by the Auditor General.

The Auditor General has declined to issue an opinion on the financial statements. In the absence of the Auditor's opinion, the Province is not able to table the Public Accounts as required by law.

39. What's the difference between "audited" and "unaudited" financial results?

In practice, there should be no difference between audited and unaudited results.

An independent audit of an organization's financial statements provides independent assurance that the results fairly represent the financial position of the organization, and that those results are in accordance with generally accepted accounting principles.

The Province's unaudited financial statements include a Statement of Responsibility. This statement describes how the financial report is prepared, and attests to the government's responsibility for the objectivity and integrity of the consolidated financial statements.

The government also attests to its responsibility for maintaining appropriate systems of internal control. The systems support the integrity and completeness of the financial information reported.

40. What's the difference between a "qualified" and "unqualified" audit opinion?

Audit reports represent an auditor's professional opinion on whether an organization's financial position and results of its operations are presented fairly in its financial statements.

An unqualified, or clean opinion, is a judgment that an organization's financial records and statements are fairly and appropriately presented.

A qualified opinion indicates an auditor has concerns with the financial information. Those concerns could include things like the availability of sufficient information for

users to make an informed decision, or the organization's reporting in accordance with public sector accounting standards.

In this case the Auditor General has chosen not to issue an opinion at all – either unqualified or qualified.

41. Why didn't the Auditor General issue an audit opinion? Is this even legal?

Despite best efforts to try to resolve concerns, the Province and the Auditor General continue to have differences of opinion.

The government passed a regulation to allow us to amend our accounting policies in order to be consistent with the Auditor's assessment of our numbers. This reflects the fiscal outcome proposed by the Auditor General with respect to the treatment of the pension assets in question.

Our officials continue to work with the Auditor General's office to resolve this accounting issue. In the meantime, we felt it was in the public interest to release our unaudited financial statements.

The government also believes it is in the public interest for the Auditor General to issue and audit opinion on Ontario's consolidated financial statements as soon as possible.

42. What is a jointly-sponsored pension plan?

The Ontario Public Service Employee's Union Pension Plan (OPSEUPP) and Ontario Teachers' Pension Plan (OTPP) are jointly sponsored pension plans where the Government of Ontario is a co-sponsor.

The assets of both pension plans are held in a trust for the beneficiaries of the plans. The plans are co-managed by the sponsors, and decisions regarding benefits and contributions require negotiation and agreement between both parties.

During the 2015-16 Public Accounts audit, the Auditor General raised some questions about Ontario's past accounting practices related to pension assets for the OPSEUPP and OTPP plans.

Pension accounting requires the application of professional judgment. Despite best efforts to try to resolve concerns, the Province and the Auditor General continue to have differences of opinion.

43. How does the Auditor General want you to account for jointly-sponsored pension plans?

During the 2015-16 Public Accounts audit, the Auditor General expressed a different interpretation of the existing PSAB standards which would impact the accounting for pension assets of jointly-sponsored pension plans.

The Auditor General's view is that the government does not have legally enforceable right to unilaterally access the assets of these jointly sponsored pension plans. As such, with no agreement in place to the contrary, the Auditor General believes that the pension asset should be removed from the Province's balance sheet.

The government passed a regulation to allow us to amend our accounting policies in order to be consistent with the Auditor's assessment of our numbers. We believe that this reflects the fiscal outcome proposed by the Auditor General with respect to the treatment of the pension assets in question.

Our officials continue to work with the Auditor General's office to resolve this accounting issue. In the meantime, we felt it was in the public interest to release our unaudited financial statements.

General Media Qs&As

44. Is the government artificially balancing the budget through the one-time sale of assets like Hydro One?

The government's plan to eliminate the deficit does not depend on revenues from asset sales. Maximizing the value of these assets is part of the government's economic plan for Ontario. The net revenue gains from these transactions are helping the government to deliver on its plan by investing in infrastructure.

The government is committed to dedicating the net revenue gains from asset optimization activities, including the broadening of ownership of Hydro One and real estate sales to the Trillium Trust which will be used to invest in transit, transportation and other priority infrastructure projects under Moving Ontario Forward.

45. According to your numbers the deficit was down $3.5 billion from the $8.5 billion projected in last year's budget. Where did this money come from?

The improvement over plan was largely due to revenues that were $4.0 billion above the forecast of $124.4 billion.

This reflects higher than expected tax revenue and net revenues from the first phase of broadening Hydro One ownership, and stronger overall performance from government business enterprises. Maximizing the value of these assets is part of the government's economic plan for Ontario.

46. Does the fact that your deficit is $3.5 billion lower than projected mean you have more money to bring to the table in labour negotiations (e.g. doctors)?

It is important to point out that through the Public Accounts process, we are reporting on past performance, whereas labour negotiations impact future fiscal pressures.

Our government is committed to balancing the budget by 2017-18 and remaining balanced in 2018-19. We know we have difficult choices ahead, but people can be assured that their government will take a fair and balanced approach, one that protects and improves the services that matter to Ontarians.

Managing compensation costs is critical to balancing the budget, as over half of government spending goes to salaries and benefits in the Ontario Public Service (OPS) and the broader public sector (BPS).

Compensation costs must be addressed within Ontario's existing fiscal framework and all public-sector partners must continue to work together to control current and future compensation costs.

While continuing to work to achieve fiscal balance by 2017–18, the government is achieving significant results in priority areas for Ontarians.

We know there is more hard work ahead as we work towards a balanced budget, and we are confident that our partners will work with us to build Ontario up.

47. Will you still be able to balance the budget if Ontario's economy does not perform as strongly as you forecast? Even the FAO has said that your forecast is optimistic.

The government is committed to balancing the budget by 2017-18 and remaining balanced in 2018-19.

The Ontario economy continues to grow in a challenging global environment. In fact, Ontario posted higher real GDP growth in the first quarter of 2016 than Canada, the U.S. and all other G7 countries.

While uncertainty in the global economy has increased, along with increased volatility in global financial and currency markets, Ontario has a diversified economy – meaning the Province is well positioned to respond to changing global economic conditions.

With the economy expected to continue to grow, and the Province's ongoing commitment to transform government programs and services, Ontario is well positioned to achieve balance.

48. Are you cutting back on vital services like health care to balance the budget?

No. Through Program Review, Renewal and Transformation (PRRT), we are helping the government achieve better outcomes while also lowering costs.

The primary focus of this transformation is on ensuring that services are delivered

efficiently and in a way that effectively meets Ontarians' needs.

Through cross-ministry horizontal collaboration, we are taking focused action on major transformation and efficiency initiatives that will improve outcomes for Ontarians while helping to free up resources to reinvest in key priorities, such as health care and education.

To improve programs, we are moving towards a focus on evidence-based decision making – gathering and analyzing the best available information to improve how outcomes are identified and achieved across government.

PRRT is about more than just savings targets – it is about doing government differently – improving outcomes for Ontarians while freeing up resources to reinvest in key government priorities, such as health care.

49. This is the seventh year in a row that you have reported a deficit lower than forecast. Are you purposefully overestimating your deficit projections?

The government remains committed to balancing the budget by 2017-18 and is taking deliberate and responsible steps to achieve this goal.

The government recognizes that a fiscally sound approach to managing the Province's finances will provide the foundation for the long-term well-being and prosperity of Ontarians, and protect the public services that Ontarians rely on.

The government's fiscal projections are based on the best economic and fiscal information available at the time. They reflect a realistic and responsible plan to manage the Province's resources, while still protecting the vital services that Ontarians rely on.

Beating our deficit targets helps to keep interest on debt at a manageable level and protects future generations from rising interest costs, which could otherwise crowd out spending on government priorities.

50. You spent $433 million more than you budgeted for programs. How is your government keeping spending in check?

Program Review, Renewal and Transformation (PRRT) is helping the government achieve better outcomes while also lowering costs.

The primary focus of this transformation is on ensuring that services are delivered efficiently and in a way that effectively meets Ontarians' needs.

Through cross-ministry horizontal collaboration, we are taking focused action on major transformation and efficiency initiatives that will improve outcomes for Ontarians while helping to free up resources to reinvest in key priorities, such as health care and education, and by retaining the lowest per capita program spending in Canada.

51. How would the Ontario Rebate for Electricity Consumers impact Ontario's plans for a balanced budget? How will the province pay for this $1 billion rebate?

We have incorporated that expenditure into our fiscal plan starting in 2017. The government remains committed to balancing the budget by 2017-18 and remaining balanced in 2018-19 by continuing to invest in the economy, our people and a healthy, clean and prosperous low-carbon future. These investments will help enhance the public services that Ontarians rely on, as well as stimulate economic growth.

Questions related to the Ontario Rebate for Electricity Consumers should be referred to my colleague, the Minister of Energy.

52. How is the money spent on the now defunct Ontario Retirement Pension Plan reflected in Public Accounts? How does the government justify this expense?

TBC OPCD + MOF

53. Was the delay in tabling Public Accounts because you can't afford the childcare commitment and the electricity rebate?

No. Public Accounts is a retrospective document that compares Ontario's actual performance to what was planned in the Budget.

I have directed senior Treasury Board officials to work with the Office of the Auditor General to develop a plan and finalize the Public Accounts as soon as possible.

54. In 2003, your government brought in legislated timelines for Public Accounts, yet you're past the deadline and you still haven't tabled them. Why didn't you adhere to your own legislation?

We have been working with the Office of the Auditor General to try to come to an agreement on the treatment of pension assets.

The Public Sector Accounting Board has initiated a project to review pension accounting standards, and will be seeking input from governments, auditors and other stakeholders to ensure that accounting standards support transparency and accountability and meet user needs. Ontario will participate in this national discussion.

Ontario will also be engaging the expert accounting community to support a full understanding of the basis and nature of the differences. The Province will consult individuals with a range of backgrounds and experience, including preparers, joint sponsors and auditors of public sector financial reports.

In order to be transparent, and in the public interest, the government is releasing its Financial Statements in order to show the province's financial position.

We believe that this reflects the fiscal outcome proposed by the auditor with respect to the treatment of the pension asset in question.

55. Disagreement with officers of the legislature seems to be a recurring theme – at least with the Auditor General – what's your position on this? Does this government have a problem with officers of the legislature?

The government respects the oversight and recommendations provided by all independent officers of the Legislative Assembly of Ontario, including the Auditor General. As a government, we value our important and ongoing relationship with each of these officers.

56. Is the fact that you've changed your accounting standards an indication of financial mismanagement on the part of government?

No. The Province's financial results show that the government has once again beaten its deficit targets and is on track for a balanced budget by 2017-18 and remaining balanced in 2018-19.

Prior to implementing this change, the government had followed the same pension accounting treatment for the past 14 years. This had been accepted by the current Auditor General for the last two years. It has also been accepted by three previous

Auditors General. There has been no change to the relevant accounting standards over the past 14 years.

For 2015-16 financial statements, the government legislated its accounting treatment for pension assets of its jointly-sponsored pension plans.

57. Are you concerned about how the credit rating agencies will view this issue?

The Province's financial results show that the government has once again beaten its deficit targets and remains on track for a balanced budget by 2017-18 and remaining balanced in 2018-19.

Our government remains committed to balancing the budget in 2017-18. At the same time, we will continue to invest in vital government services, such as health care, education and infrastructure that are important to the people of Ontario.

The legislated pension accounting change has no impact on the province's total debt, which is one of the key numbers the rating agencies focus on.

~~In 2016 the C.D. Howe Institute, an independent research organization that assess the fiscal planning and reporting of governments in Canada, also commented positively on the financial reporting practices of Ontario relating to its fiscal reporting activities that include Public Accounts, the annual Budget and Estimates.~~

58. Can credit rating agencies adjust their ratings based on this new development? What about bondholders?

The government remains committed to balancing the budget by 2017-18.

The deficit for 2015-16 is $5 billion, a $3.5 billion improvement compared to the 2015 Budget. The deficit is also a $0.7 billion improvement compared to the interim results for 2015-16 contained in the 2016 Budget, which formed the basis for three rating agencies to confirm the Province's credit rating, and the fourth to improve their assessment of the Province's credit outlook.

This marks the seventh year in a row that Ontario has beaten its annual deficit target, reflecting the government's responsible and balanced approach to fiscal management.

The rating agencies and bondholders will understand that the change in the

Province's accounting treatment for pension assets of jointly-sponsored pension plans, while increasing net debt, has no impact on the Province's borrowing requirements or total debt outstanding.

Since the province released its financial statements, Ontario's 10-year spread (how much interest we need to pay above a comparable Government of Canada bond) has remained unchanged and is slightly lower than it was when we released our budget in February.

Hydro One

59. Why are you selling off Hydro One?

The government is broadening the ownership in Hydro One to improve the company's long-term performance and unlock billions in value for investment in major infrastructure projects that will help grow Ontario's economy for years to come.

This approach will create an improved company that would operate more efficiently and better serve the interests of ratepayers and customers of Hydro One.

The net revenue gains from broadening the ownership of Hydro One shares will provide the government with approximately $4 billion to be credited to the Trillium Trust to invest in key infrastructure and create thousands of jobs, as well as $5 billion to reduce debt.

60. What is the Hydro One deferred tax benefit?

As a result of Hydro One exiting the Payment in Lieu (PILs) regime and the revaluation of its fixed assets upon entering the corporate tax regime, the company recognized a deferred tax benefit in fiscal 2015-16, which positively affected its net income.

At consolidation in Public Accounts of the Province's portion of Hydro One's net income, Hydro One's recognition of a deferred tax benefit increased the Province's revenues by $2.4 billion. The gain associated with Deferred Tax Benefit from the IPO has been allocated to the Trillium Trust.

61. Why did you loan the electricity unions money to buy shares of Hydro One?

In connection with the IPO, the Province sold $116 million worth of Hydro One shares to trusts of the Power Workers' Union (PWU) and the Society of Energy Professionals (SEP) trusts. Of the shares sold to the Trusts, about $108 million was purchased using loans provided by the Province. The gains from those share sales will be credited to the Trillium Trust over time as the loans are repaid.

The government is fully committed to dedicating net revenue gains from the sale of designated assets to the Trillium Trust to help fund further investments in transit, transportation and other priority infrastructure as part of Moving Ontario Forward.

The $3.2 billion being credited to the Trust at this time does not include amounts associated with shares purchased by the Power Workers' Union (PWU) and the Society of Energy Professionals (SEP) trusts using loans provided by the Province.

62. The government is being sued over the sale of Hydro One. Was the sale worth it to balance you budget now that you're being sued?

I understand Ontario has been served with a notice of claim. As this matter may be subject to litigation, it would be inappropriate to comment further.

63. The FAO has warned that the partial sale of Hydro One will have direct implications on the provinces debt and ability to balance the budget. What do you say to these concerns?

To date, Ontario has sold approximately 30 per cent, or about half of the 60 per cent of shares the government intends to sell, and with this $3.2 billion credited to the Trillium Trust is well on track to meet its multi-year asset optimization target to generate $5.7 billion over time to support investments in infrastructure.

Crediting the $3.2 billion to the Trillium Trust demonstrates Ontario's commitment to investing in infrastructure projects that help stimulate economic growth and create good, well-paying jobs.

The government acknowledges the important role played by the FAO in providing independent analysis to the Assembly on the state of the Province's finances.

Bargaining and Compensation

64. What is the government doing to control executive compensation in the Broader Public Sector?

In March 2015, the government proclaimed the Broader Public Sector Executive Compensation Act, 2014 (BPSECA) into force. This legislation allows the government to establish compensation frameworks for designated senior executives in the broader public sector.

An Executive Compensation Framework came into force on September 6, 2016. The framework reinforces that designated BPS employers are accountable for compensation decisions, sets caps and prohibitions on certain types of compensation, requires enhanced public transparency and allows impacted employers to balance the need to attract the necessary talent to deliver high quality public services while managing public dollars responsibly.

The framework applies to all designated employers under BPSECA, including hospitals, school boards, colleges and universities, community care access corporations, provincial agencies and named hydro entities.

The framework caps salary and performance-related payments for designated executives at no more than the 50th percentile of appropriate comparators and prohibits elements like signing bonuses and pay in lieu of perquisites.

The framework also requires that each designated employer engage in public consultation on their compensation program before it is finalized and requires final programs to be posted on the designated employer's website. These requirements enhance transparency and give Ontarians the opportunity to provide input on executive compensation in the BPS.

BPSECA includes significant compliance and enforcement measures: employers will be required to complete reports concerning compliance with the framework and individuals could be subject to penalties if they willfully fail to provide a report, provide a false report or obstruct an auditor.

65. How are you managing the costs of public sector compensation?

Managing compensation costs is critical to balancing the budget, as more than half of government spending goes to salaries and benefits, including those of both the Ontario Public Service (OPS) and broader public sector (BPS). All public-sector partners must continue to work together to control current and future compensation costs.

Since July 2012, the average annual negotiated wage increase across Ontario's provincial public sector has been 0.6 per cent. This is lower than:

- Ontario's municipal public sector (1.7 per cent)
- the federal public sector in Ontario (1.7 per cent)
- Ontario's private sector (1.9 per cent)

66. Where is the agreement with OPSEU reported in Public Accounts? Was this truly net-zero?

The agreement reached with OPSEU's Central and Unified bargaining units on October 30, 2015 is net-zero and remains consistent with the fiscal plan outlined in both the 2014 and 2015 Budgets.

To achieve a net-zero outcome, there are no wage increases in 2015 and 2016. In 2016 there will be a modest 1.4% one-time lump sum payment that does not form part of employees' base salaries, and in 2017 there is a 1.4% pay increase. Both are offset through changes to employee benefits and entitlements over the three-year term of the contract, including a freeze on salary progression in 2016 and 2017 and capping of termination payments.

This agreement will support the government's ongoing efforts to eliminate the deficit while protecting the valued public services Ontario families rely on.

67. The Premier recently said the era of net zero is over. How will this affect labour negotiations?

As a government, we'll continue to do what we've always done in terms of negotiations. As the time comes to negotiate new contracts, whether it's Treasury Board Secretariat that's negotiating or an individual ministry, they always come to Treasury Board to get an approved mandate. So we'll carry on with that practice of coming to Treasury Board for an approved mandate that will fit within the fiscal plan.

Ontario's Financial Position

68. The FAO has warned that if Ontario's fiscal position deteriorates beyond 2017-18, the four international credit rating agencies could lower Ontario's credit

rating, which could lead to higher borrowing costs and more challenging fiscal position. What is the government doing to manage the debt?

The government remains firmly committed to balancing the budget by 2017–18.

The deficit for 2015-16 is $5 billion, a $3.5 billion improvement compared to the 2015 Budget. This marks the seventh year in a row that Ontario has beaten its annual deficit target, reflecting the government's responsible and balanced approach to fiscal management.

Given ongoing challenges in the broader economic environment, the government recognizes that now is the time to be making investments in people, modern infrastructure and a dynamic and innovative business climate — investments that will help to spur economic growth and create the new jobs necessary to support eliminating the deficit.

Alongside these strategic investments, the government is also taking deliberate actions to ensure it can continue to manage spending and improve outcomes for Ontarians. Together, these investments and deliberate actions will help ensure that the priority programs and services that people rely on are maintained and enhanced while the deficit is eliminated.

69. Some have said your government has a spending problem, not a revenue problem. As the largest subnational borrower, what do you say to that?

The government beat its deficit target for the seventh year in a row. Last fiscal year's deficit is $5 billion, down $3.5 billion from the $8.5 billion projected in last year's budget.

The government is projecting a deficit of $4.3 billion in 2016-17 and a return to a balanced budget in 2017-18.

The improvement over plan was due in large part to the Ontario government's strong focus on managing growth in spending. Ontario consistently has the lowest per capita program spending among all Canadian provinces.

Over the past four years the Province has held the average annual growth in program spending to 1.9 per cent, less than the rate of inflation, while investing in services that people rely on.

Key elements of the government's plan to eliminate the deficit are:

- Program Review, Renewal and Transformation
- managing compensation costs
- maintaining tax fairness and a level playing field for business
- strengthening government transparency, financial management and fiscal accountability

70. How much did government spend in 2015-16?

TBC OPCD

71. Why was total expense $300 million higher than projected in the 2015 Budget plan?

Total expense in 2015–16 was $133.4 billion, $1.5 billion higher than the 2015 Budget plan. Program spending was $122.4 billion, up by $1.9 billion from a planned spending of $120.5 billion.

The increase largely reflects the government's decision, announced in the 2015 Ontario Economic Outlook and Fiscal Review, to invest $0.3 billion through the new Green Investment Fund. As well, spending in the health, children's and social services, justice sectors and other programs was higher than planned.

Total program spending was $1.9 billion higher than the Budget, resulting in actual program expense of $122.4 billion. The increases were attributable to:

- $1.5 billion pension asset valuation allowance for OTPP and OPSEU.

- Health sector expense was $294 million, or about 0.6 per cent, above plan. Higher spending resulted from increased drug costs as well as higher hospital sector expense, partially offset by underspending in agencies.

- Children's and social services sector expense that was $124 million higher than planned, due mainly to additional spending to address demand for the Ontario Disability Support Program and the cost of prescription drugs for social assistance recipients.

- Justice sector expense increased by $120 million, mainly due to settlements under the Proceedings Against the Crown Act and higher-than expected bad debt provisions related to unpaid fines.

- Other programs expense was $628 million higher than expected. The increase was due to one-time investments through the Green Investment Fund, higher than anticipated expense for the Ontario Production Services Tax Credit and costs related to the Hydro One IPO.

Increases in these sectors and programs were offset by:

- Education sector expense was $233 million lower than expected, due in part to a higher share of funding spent on capital projects that are capitalized and amortized instead of expensed, higher-than-forecasted revenues from education development charges, and slightly lower-than-projected enrolment.

- Post-secondary and training sector expense was $176 million lower than expected, mainly due to lower spending on post-secondary operating grants and lower student financial assistance as a result of lower-than-forecast enrolment. As well, spending on employment and training programs was below plan, partially offset by higher expense on tax credits to employers to support training.

72. What are you going to do if Ontario's economy does not perform as strongly as you forecast?

The Province has included prudence as part of the fiscal plan to help ensure it meets future fiscal targets as it moves towards a balanced budget in 2017–18.

As required by the Fiscal Transparency and Accountability Act, 2004 (FTAA), the fiscal plan continues to incorporate prudence in the form of a reserve to protect the fiscal outlook against adverse changes in the Province's revenue and expense, including those resulting from changes in Ontario's economic performance. The reserve has been set at $1.0 billion in 2016–17, and $1.2 billion in each of 2018–19.

The fiscal plan also includes contingency funds to help mitigate expense risks that may otherwise negatively impact Ontario's fiscal performance.

In keeping with sound fiscal practices, the Province's revenue outlook is based on prudent economic assumptions. The Ontario Economic Forecast Council, established under the FTAA, reviewed the Ministry of Finance's economic assumptions in February 2015. All council members found the assumptions to be reasonable.

73. What if interest rates go up? What affect would higher interest rates have on debt?

The Province is operating under a historically low interest rate environment, however, if interest rates did increase, a one percentage point change will result in an impact of approximately $350 million to the Province's interest expense.

74. What is the government's annual borrowing program?

The amount of money the government borrows varies from year to year and is dependent on the deficit, proposed investments in capital and amount of debt that is maturing.

Over the three years 2016-17 to 2018-19 average long term public borrowings are estimated to be $26 billion per annum, considerably lower than what the Government borrowed over the past three years which averaged at $33 billion per annum. The lower borrowings are primarily due to the Government's efforts in reducing the deficit and balancing in 2017-18.

75. Did you use your reserve fund to pad your fiscal results and pay down the debt?

For planning purposes, a reserve is included in the budgeted surplus/deficit each year to guard against unforeseen revenue and expense changes that could have a negative impact on the Province's fiscal performance. The 2015 Budget plan included a $1.0 billion reserve. Without the reserve, the actual deficit result of $5.0 billion would not have been affected.

Budget Surplus and Revenue Increase

76. Can you explain the $4.0 billion increase in revenue since your 2015 Budget?

The increase in revenues primarily reflects stronger-than-projected 2015 personal income tax assessments and a strong Ontario housing market in 2015 which boosted Sales Tax and Land Transfer Tax revenues.

Taxation revenues also reflected a one-time increase in Electricity payments-in-lieu of taxes related to Hydro One ownership broadening in 2015-16.

77. How did net income from government business enterprises increase by $100 million from your 2015 Budget projection?

This increase was mostly attributable to combined higher net income from the Liquor Board of Ontario (LCBO), Ontario Lottery and Gaming Corporation (OLG) and Ontario Power Generation Inc. (OPG).

Higher net income from these business enterprises, however, was partially offset by lower net income from Hydro One, primarily reflecting impacts from broadening Hydro One ownership.

Contingency Fund / Reserve

78. What is the difference between the contingency fund and the reserve?

The contingency fund is an amount of expense that is approved by the Legislative Assembly at the beginning of the year to cover expenses due to unforeseen events (e.g. fighting forest fires). This approved spending limit is allocated during the year to ministries for their programs and activities.

The reserve is an amount included in the forecast each year to protect the plan against unforeseen revenue and expense changes that could have a negative impact on the Province's fiscal performance.

Budget Projections vs. Public Accounts Reporting

79. What accounts for the $4.4 billion increase in taxation revenues from your 2015 Budget projection?

The increase in revenues primarily reflects stronger-than-projected 2015 personal income tax assessments and a strong Ontario housing market in 2015 which boosted Sales Tax and Land Transfer Tax revenues.

Taxation revenues also reflected a one-time increase in Electricity payments-in-lieu of taxes related to Hydro One ownership broadening in 2015-16.

80. Why did Ontario's net debt increase by $20 billion in 2015-16?

Net debt is the Province's total debt and other liabilities, less its financial assets, including cash and investments. The increase was primarily due to a $10.9 billion increase in liability and a $10.7 billion pension accounting adjustment, which was primarily offset by a $1.0 billion increase in financial assets.

81. How do you explain the $12.4 billion increase in total debt in 2015-16?

The increase of $12.4 billion in total debt is due to borrowing for the deficit and investments in capital assets for 2015-16. It also includes pre-borrowing of $2 billion to take advantage of low interest rates and continuing demand for the Province's Debt.

82. Why is the government now including 5-year trends in the Public Accounts?

The increased disclosure and discussion on 5-year trends is in line with recommended disclosure practices of the Public Sector Accounting Board. This increased disclosure enhances the quality of financial reporting to the public, Legislature and other users to better meet their transparency and accountability needs. In addition to the disclosure in the Annual Report, the government is also making available supplementary information through data visualization.

83. Why is the interest on debt for 2015-16 $400 million lower than forecast in the 2015 Budget?

Interest on debt expense was $0.4 billion below plan in 2015-16, as a result mainly of lower-than-forecast interest rates, the lower-than-planned deficit and cost effective borrowing and debt management.

84. Why is interest on debt for 2015-16 $400 million higher than in 2014-15?

Interest of debt is higher by $332 million from last year, mainly due to the funding of the deficit and investment in capital assets and partly offset by the impact of lower interest rates.

Program, Review, Renewal and Transformation

85. How are you reviewing and transforming government programs?

Program Review, Renewal and Transformation (PRRT) is helping the government achieve better outcomes while also lowering costs.

The primary focus of this transformation is on ensuring that services are delivered efficiently and in a way that effectively meets Ontarians' needs.

Through cross-ministry horizontal collaboration, we are taking focused action on major transformation and efficiency initiatives that will improve outcomes for Ontarians while helping to free up resources to reinvest in key priorities, such as health care and education.

To improve programs, we are moving towards a focus on evidence-based decision making – gathering and analyzing the best available information to improve how outcomes are identified and achieved across government.

86. Has PRRT achieved any tangible results/savings?

The government has achieved a number of efficiencies to make programs more sustainable, such as negotiating lower prices for goods and services and managing compensation.

But PRRT is about more than saving money — it is a continuous planning approach focused on improving outcomes for government programs and services to ensure they are effective, efficient, relevant and sustainable.

87. What do you have to say to those public sector workers who have lost their jobs or are at risk of losing their jobs because of PRRT?

Program Review, Renewal and Transformation (PRRT) is helping the government achieve better outcomes while also lowering costs.

The primary focus of this transformation is on ensuring that services are delivered

efficiently and in a way that effectively meets Ontarians' needs.

Government Assets

88. What is the government doing to extract value from any government assets?

With the 2014 Budget, the government began the process of unlocking the economic value of the Province's assets, including setting up the Premier's Advisory Council on Government Assets, chaired by Ed Clark, former Group President and Chief Executive Officer of TD Bank Group.

The council delivered recommendations on the electricity sector to the Province in advance of the 2015 Budget, including broadening the ownership of Hydro One. This would involve an initial public offering of about 15 per cent of the voting securities in Hydro One, with additional share sales in subsequent years. Over time, share offerings would total up to 60 per cent of the voting securities in Hydro One.

The Province is also moving forward with its plans to unlock value from its real estate assets, including OPG's head office building, and the Seaton and Lakeview lands. In June 2016, the Province closed the sale for the Liquor Control Board of Ontario's (LCBO) head office lands, raising $260 million in gross proceeds.

All net revenue gains from the sale of qualifying assets will be dedicated to the Trillium Trust to help fund further investments in transit, transportation and other priority infrastructure as part of the Moving Ontario Forward initiative.

Trillium Trust

89. Have the net proceeds from the sale of the GM holdings and the partial sale of Hydro One been dedicated to the Trillium Trust, and how is that being reported in Public Accounts?

The Trillium Trust Act, 2014, provides for the dedication of net revenue gains from the sale of qualifying assets to help support key infrastructure priorities, such as roads, bridges and public transit. A schedule in Volume 1 of the Public Accounts reports on the financial activities of the Trillium Trust.

Volume 1 shows that $1.35 billion was available for the Trillium Trust at March 31, 2016, to help fund investments. This reflects the sale and redemption of the Province's shares in General Motors in earlier years.

In August 2016, a regulation was put in place that credited the trust with $3.2 billion from the net revenue gains resulting from the Hydro One IPO, the gain on sale of shares in November 2015 and the share of the deferred tax benefit to Hydro One that has been recognized by Ontario through its share of Hydro One net income as a result of its ownership position in Hydro One.

The net revenue gains from the secondary offering in April 2016 will be reported in the 2016-17 Public Accounts and credited to the Trillium Trust.

90. How have you spent the funds dedicated to the Trillium Trust?

As announced in the 2016 Budget, the government plans to begin drawing on the balance in the Trillium Trust in 2016-17 to support the largest investment in public infrastructure in Ontario's history.

Based on planned expenditures, in 2016–17 the Trillium Trust would support Moving Ontario Forward initiatives, such as GO Transit Regional Express Rail, Hurontario Light Rail Transit and the Ontario Community Infrastructure Fund.

91. Why are you allocating non-cash items like the deferred tax asset generated in the Hydro One transaction to the Trillium Trust?

TBC OPCD

Moving Ontario Forward

92. In the 2015 Budget, the government stated that $3.5 billion would be dedicated to the Moving Ontario Forward plan. So far, only $1.35 billion has been dedicated to the Trillium Trust. How do you propose to supply the $2.15 billion difference?

Moving Ontario Forward dedicated funds would be largely supported by:

- Dedicated proceeds from 7.5 cents of the existing provincial gasoline tax to public transit and transportation infrastructure priorities. This would be over and above the existing gas tax funding to municipalities, with no increase to the current tax rate.

- Repurposing revenues from the existing Harmonized Sales Tax charged on the current provincial taxes on gasoline and road diesel.

- Dedicated proceeds from targeted revenue measures.

- The government's asset optimization strategy, with net revenue gains dedicated to the Trillium Trust to help support investments in public infrastructure.

- Working with the federal government to secure federal funding through the Building Canada Plan.

93. How much did the government spend on Moving Ontario Forward in 2015-16?

Moving Ontario Forward is part of the government's commitment to invest more than $137 billion in public infrastructure over the next 10 years. Investments are underway, including providing $100 million per year to small, rural and northern municipalities through the Ontario Community Infrastructure Fund to build and repair critical infrastructure.

Like most large infrastructure investments, initial spending on Moving Ontario Forward projects is focused on planning, design, property acquisition and other activities to get projects construction-ready. Spending would ramp up significantly once this preliminary work is completed and construction activity is underway. Over the 10-year Moving Ontario Forward period, all of the dedicated funds are expected to be spent on priority infrastructure projects.

94. Why aren't the additional $2.2 billion in revenues dedicated to the Moving Ontario Forward plan reported in the Public Accounts?

In the 2015 Budget, the government committed to dedicate $31.5B over 10 years to support infrastructure projects under the Moving Ontario Forward plan, which included $5.7B from its asset optimization strategy. In 2014-15, this amounts to about $3.5B in dedicated funds including $1.3B from asset optimization. The remaining $2.2B in 2014-15 would be largely supported by:

- Dedicated proceeds from 7.5 cents of the existing provincial gasoline tax to public transit and transportation infrastructure priorities. This would be over and above the existing gas tax funding to municipalities, with no increase to the current tax rate.

- Repurposing revenues from the existing Harmonized Sales Tax charged on the current provincial taxes on gasoline and road diesel.

- Dedicated proceeds from targeted revenue measures.

- Working with the federal government to secure federal funding through the Building Canada Plan.

These additional amounts are largely taxation revenues and are reflected in the total revenue figures in the 2014-15 Public Accounts.

95. How does investing in public infrastructure impact the economy?

A large and growing body of independent research shows that infrastructure investments support jobs, augment personal incomes and produce real growth in the economy. For example, a September 2015 report by the Broadbent Institute and the Centre for Spatial Economics showed that, on average, investing a dollar in public infrastructure in Canada raises gross domestic product (GDP) by $1.43 in the short term and up to $3.83 in the long term.

The Province's planned investments in infrastructure are expected to support over 110,000 jobs, on average, each year.

96. The Public Accounts makes reference that the Province's investment in capital assets is guided by sound asset management planning principles, so why is the education sector facing large renewal needs?

The Province has announced new renewal investment, including: increased investments in GO Transit rehabilitation and renewal; additional annual funding of $50 million to assist hospitals in maintaining their facilities in good repair; and a $1.1 billion investment to repair and renew schools across the province (allocated to school boards in proportion to their renewal needs).

In the education sector, the School Condition Improvement program addresses renewal needs focusing on ensuring that facilities are in good condition, energy efficient and accessible and meet modern service standards. The funding will enable school boards to repair roofs, update HVAC units and modernize electrical and plumbing systems. It will also significantly improve more visible elements of schools that impact students' learning and well-being, including flooring, walls, ceilings,

playing fields and more. To support transparency, the government has also released detailed information regarding the condition and renewal needs of each of Ontario's publicly funded schools.

Transparency

97. You say the Province's Annual Report is a central element in demonstrating transparency in reporting financial activities and accountability, yet the FAO continues to criticize your government for withholding information. What do you say to these criticisms?

The relationship between the FAO's office and our government is very important.

Our door is open to meet with the FAO and his staff upon request, and our government has tried to be proactive in reaching out to provide clarification when it could be of use.

We want to be accommodating and helpful, while also respecting the requirements of the 2013 FAO Act. With this in mind, Treasury Board has provided additional information to complement and/or further clarify our responses to the FAO when we've received follow-up requests from his office.

We have also reformatted information into machine-readable charts upon request, when it was possible and consistent with legislation. All requests from the FAO office to the Treasury Board Secretariat have been responded to.

Pan Am Games

98. How much was spent on the games, where does it appear in Public Accounts? And how does your government justify this expense?

These were the largest, most successful Pan/Parapan Am Games ever – creating 26,000 jobs, boosting Ontario's GDP by $3.7B and leaving a lasting legacy that will benefit Ontario for years to come. The economic boost that resulted from the Games acted as a catalyst for economic, social, infrastructure and athletic development and we were proud to host these Games.

Questions related to the Pan Am Games should be referred to my colleague, the Minister of Tourism, Culture and Sport.

Underground Economy

99. How are you ensuring revenue integrity?

A fair and efficient tax system is critical to sustaining public services. The 2014 Budget noted that when businesses aggressively avoid or evade paying taxes, everyone else is left to make up the shortfall, putting the competitiveness of legitimate businesses at risk.

Since 2013–14, the Province has taken concrete measures to help ensure tax fairness and a level playing field for business. These include enhanced auditing and compliance activities, such as a multi-year agreement with the Canada Revenue Agency to address the underground economy and corporate tax avoidance in Ontario. The Province has also targeted areas at high risk of underground economic activity with pilot initiatives that focus on mitigating unfair and unsafe circumstances for Ontario's workers and consumers.

In total, these efforts have generated an estimated $1.1 billion for Ontario to date. The Province will build on these successful initiatives with new approaches to ensuring revenue integrity.

Treasury Board Secretariat

Pension Asset Expert Advisory Panel Submits Final Report

Government Accepts Independent Panel's Recommendations on Accounting for Pension Plans

NEWS February 13, 2017

The Pension Asset Expert Advisory Panel has released its independent advice and recommendations on the application of public sector accounting standards to two of Ontario's jointly sponsored pension plans: the Ontario Teachers' Pension Plan (OTPP) and the Ontario Public Sector Employees' Union Pension Plan (OPSEUPP).

The panel's report concluded that the province's share of the net pension assets of both the OTPP and the OPSEUPP should be recognized in Ontario's financial statements, which Ontario has done consistently since 2001.

The panel's report outlined the following reasons why an asset exists and should be reported in the financial statements:

- Recognizing the asset will provide a faithful representation of the Province's financial position
- The accounting surplus in the plan has a future economic benefit
- The government controls access to that accounting surplus
- The accounting surplus exists as the result of past transactions and events
- It would be misleading not to recognize the Province's share of the assets in Public Accounts

In addition, the panel concluded that the government will be able to benefit from the full amount of each net pension asset, and as a result, no reduction in the value is necessary.

As a result, the government is accepting the panel's recommendations, which will inform the preparation of the Province's financial statements.

The Province remains on track to balance the budget by 2017-18, and remain balanced in 2018-19.

Responsible financial management is part of the government's plan to create jobs, grow our economy and help people in their everyday lives.

QUOTES

"**TBC** I would like to thank the expert advisory panel for their thorough analysis and recommendations on this complex accounting issue. We accept the advice of the panel and will use it in preparing the province's financial statements."
— Liz Sandals, President of the Treasury Board

"As a result of the expert assessment of the independent advisory panel, we now have additional advice on how to account for these jointly sponsored pension plans as assets. This advice will help us continue to present the province's finances fairly and accurately, as we work

Commented [CV1]: There were two main aspects to the panel's work – whether to recognize the assets and if so, how to measure them – this only addresses the first issue

Commented [CV2]: Not a reason why the asset exists – hence the change above

Commented [CV3]: Also not a reason by the asset exists – see comment 2 re: the change necessary in the introductory sentence

Commented [CV4]: See comment #1

DRAFT

toward balancing the budget in 2017-18. We will provide a full update on the Province's fiscal situation in the near future."
— Charles Sousa, Minister of Finance

QUICK FACTS

- ~~By applying the panel's advice, the province would see a reduction in debt to now $10.7 billion.~~

- For 2015-16, ~~this~~ following the advice of the panel means the province's deficit ~~has~~ would be~~been~~ lowered by $1.5 billion and its net debt by $10.7 billion~~.~~

- In preparing the 2015-16 Public Accounts of Ontario, the Province's professional accounting staff and the Auditor General's Office could not reach an agreement on the appropriate application of the Public Sector Accounting Board standards regarding pension accounting for the Province's jointly sponsored pension plans.

- The government formed the Pension Asset Expert Advisory Panel to provide independent advice on how public sector accounting standards are interpreted as they apply to net pension assets.

- The panel members have expertise in the areas of jointly sponsored pension plan governance, actuarial modelling for pension plans and Public Sector Accounting Standards.

- In the coming weeks, the panel will issue a supplemental report that will provide advice and recommendations on how to account for potential future net pension assets related to the Healthcare of Ontario Pension Plan (HOOPP) and the Colleges of Applied Arts and Technology Pension Plan (CAATPP).

Questions and Answers
Pension Asset Expert Advisory Panel Report

KEY MESSAGES:

- We thank the Pension Asset Expert Advisory Panel for their work on this complex issue.

- We are pleased that the independent panel's results are consistent with Ontario's view that net pension assets for jointly-sponsored plans should continue to be recognized in the Province's financial statements, as they have been for the past 14 years.

- Ontario is accepting all of the panel's recommendations and will prepare its future financial statements based on this advice.

- By applying the panel's advice to the Province's 2015-16 finances, Ontario's deficit has been lowered to $3.5B, from the $5B originally reported in the 2015-16 Public Accounts.

- The application of the Panel's advice has also resulted in Ontario's 2015-16 net debt reducing to $294.6 billion from the $305.2 billion reported in the 2015-16 Public Accounts

- The panel's advice will also help inform discussions with the Auditor General in the hopes of reaching agreement on how the accounting standard is applied to future financial statements.

- Ontario remains committed to balancing the budget by 2017-18, and remaining balanced in 2018-19.

QUESTIONS AND ANSWERS – MOF REVIEW

1. What does this mean for the upcoming Budget?

The 2017 Budget will reflect the appropriate accounting treatment for net pension assets informed by the panel's report, including the Province's updated Interim numbers for 2016-17, as well as forecasts for the fiscal planning period.

DRAFT

We are committed to balancing the Budget by 2017-18, and remaining balanced in 2018-19. ~~We will have more details to share about the Budget in the coming weeks.~~

In the coming weeks, we will provide an update in Ontario's Third-Quarter Finances of our progress on our plan to grow the economy.

2. **What do you say to the credit rating agencies who are watching all of this unfold?**

   We have been impressed with the level of cooperation and understanding of the credit rating agency community.

   I would say we have achieved clarity on this complex accounting issue.

   We are committed to balancing the Budget by 2017-18, and remaining balanced in 2018-19. At the same time, we will continue to invest in vital government services, such as health care, education and infrastructure that are important to the people of Ontario.

Ontario's Financial Position:

3. **Some have said your government has a spending problem, not a revenue problem. What do you say to that?**

   Even with adopting the Auditor General's view of the 2015-16 Public Accounts, the government still beat its annual deficit target for the seventh year in a row.

   The government is projecting a balanced the budget by 2017-18, and remaining balanced in 2018-19.

   The improvement over plan was due in large part to the Ontario government's strong focus on managing growth in spending. Ontario consistently has the lowest per capita program spending among all Canadian provinces.

   Over the past four years the Province has held the average annual growth in program spending to 1.9 per cent, less than the rate of inflation, while investing in services that people rely on.

   Key elements of the government's plan to eliminate the deficit are:

DRAFT

- Program Review, Renewal and Transformation
- Managing compensation costs
- Maintaining tax fairness and a level playing field for business
- Strengthening government transparency, financial management and fiscal accountability

4. **The FAO has warned that if Ontario's fiscal position deteriorates beyond 2017-18, the four international credit rating agencies could lower Ontario's credit rating, which could lead to higher borrowing costs and more challenging fiscal position. What is the government doing to manage the debt?**

   The government remains firmly committed to balancing the budget by 2017-18, and remaining balanced in 2018-19.

   Even with adopting the Auditor General's view of the 2015-16 Public Accounts, the government still beat its annual deficit target for the seventh year in a row. This reflects the government's responsible and balanced approach to fiscal management.

   Given ongoing challenges in the broader economic environment, the government recognizes that now is the time to be making investments in people, modern infrastructure and a dynamic and innovative business climate — investments that will help to spur economic growth and create the new jobs necessary to support eliminating the deficit.

   Alongside these strategic investments, the government is also taking deliberate actions to ensure it can continue to manage spending and improve outcomes for Ontarians. Together, these investments and deliberate actions will help ensure that the priority programs and services that people rely on are maintained and enhanced while the deficit is eliminated.

5. **How does the Province plan to reduce its net debt-to-GDP ratio to its pre-recession level of 27 per cent?**

   The first step in returning to the targeted 27 per cent net debt-to-GDP ratio is to balance the budget.

   Once the budget is balanced, debt will continue to rise by the difference between the annual cash investment in capital and the amortization of these investments. These

investments will contribute to the debt rising at a slower rate than the increase in the Province's GDP, over time lowering the net debt-to-GDP ratio to the government's 27 per cent target.

Legislated Accounting:

6. Is the disagreement over accounting standards an indication of financial mismanagement on the part of government?

No. The Province's financial results show that the government has once again beaten its annual deficit targets and is on track for a balanced budget by 2017-18 and remaining balanced in 2018-19.

Prior to implementing the change to the 2015-16 Public Accounts, the government had followed the same pension accounting treatment for the past 14 years. This had been accepted by the current Auditor General for the last two years and by three previous Auditor Generals. There has been no change to the relevant accounting standards over the past 14 years.

In fact, Ontario has a strong track record of producing high-quality financial reports on a timely basis. Prior to 2015-16, Ontario had clean audit opinions for 22 years.

Hi John

I want to send the following email to Cindy and Nadine, just running it by you first. Feel free to edit.

Hi Cindy and Nadine

As you may expect there is considerable interest on the part of the Rating Agencies in obtaining more detail on the Province's pension adjustment. We had a tele-conference yesterday with Fitch where the questions were very high level and since over the last couple of weeks I had access to most of OPCD's material on this issue I was able to respond, I believe to their satisfaction.

I do have a couple of questions though:

- Looking at the PP presentation from yesterday, based on the Province's interpretation of PSAB, for 2016-17 the TPP Pension Expenses are offset by $452M. My question; is this our share of the surplus or simply the PV of the reduction in future contributions because plan assets exceed liabilities.
- Again, under the Province's accounting approach, the 2016 Budget on page 284 has a foot note indicating that that the cash payments related to the Province's contribution to the TPP are $1,664 million (revised to $1,672 in yesterday's presentation). What is the debit for this transaction, it is Pension assets?
- Finally, I understand that the AG contends that the Province cannot access surpluses on the TPP in the absence of an MOU. My question; is the Province's share of the TPP assets already reflected in the Province's Balance Sheet, if the AG is agreeable to these contributions being presented as an asset why distinguish the surplus. This is similar to an individual depositing $1000 in a savings account and at the year of the year seeing it grow to $1,050 and being told that he/she has access to only the original $1,000 and not the growth.

John and I will be happy to come meet with you if that is more useful. If there are any written questions from the Rating Agencies we will be sure to run our responses by you.

Hi Bonnie, I forgot to mention when you were here that Cindy (the Provincial Controller) spoke to me this morning. She asked whether we'd want to give the rating agencies a heads up before the Panel's report was released (currently scheduled for the 13th) and I said yes. Cindy, or someone in her office will be in touch with you to work out the logistics. I said that you'd likely call the agencies the day it was being released and let them know it was coming and generally what the conclusions were, and then get the report to them as soon as it's public.

Ken is very close to this and aware of what's going on, so I've copied him.

Subject: Pension Adjustment
Date: Thursday, December 01, 2016 4:13:56 PM

Hi Nadine

As Mike Manning meets investors including financial institutions the pension adjustment questions does come up on a regular basis. Thanks to the explanations previously provided by you, including the briefing note that you shared we are able to adequately respond to all questions so far.

However, on a pro-active basis I do have one more. The PA increases to $3.7 billion in 2018-19 from $1.5 billion in 2015-16. As I understand it a major component of the PA is the amortization of the gain on the assets over an appropriate period. So our question is; does it mean that the gain on assets has increased to such an extent that the resulting amortization of the gain has also increased by more than two-fold over 3 years.

I am including Cindy as well in this questions since she has provided me with some explanations on other aspects of this issue and she may also be able to shed some clarity.

Thanks and if you believe this can be best answered by a short meeting between you and Mike and myself, we will be happy to schedule one.

OPCD

Pension Asset Expert Advisory Panel

Next Steps

October 14, 2016

Decisions to make

- Panel
  - Number of members
  - Members
  - Chair (and role of chair in decision making)

- Support for panel
  - Report writer
  - Project management
  - Legal support

- Using the results of the report from the Panel

- Other

Composition of Panel

3 Person Panel (all have confirmed interest)
Accounting expert – **Bill Matthews** (Comptroller General Canada)
Actuarial expert - **Uros Karadzic** (Partner EY; member PSAB Task Force)
Governance expert – **Murray Gold** (Partner – Koskie Minsky)

4 Person Panel – 3 person + Chair (interest of all potential chairs not yet confirmed)

Chair – Options under consideration:

Jim Leech – former CEO OTPP

Tricia O'Malley – Accountant, former partner at KPMG, former standard setter

Sheila Fraser – Accountant, former Federal Auditor General

David Smith – Accountant, former Chairman of PwC Canada

Considerations for selection of chair:

- Spokesperson for the panel
- Should the chair be an accountant given the nature of the issue
- Potential conflicts

Support for panel – report writer

- Report writer – requirements:
  - Knowledge of pension accounting and actuarial modelling
  - Writing skills

- Considerations
  - PwC – lead by Lucy Durocher
    - Advisor to province on issue – working on comprehensive position paper but not issuing an opinion – consider whether conflicted
    - Knowledgeable on plans and issues
    - Member of PSAB Task Force
  - Panel hires independent consultant
    - OPS will complete pre-work for procurement of another firm

Support for panel – project management

- Short timeline – Report due by December 31, 2016

- Role
  - Coordination and scheduling
  - Liaison with Province
  - Interim reports
  - Coordination with TBS communications re: final report
  - Administrative reporting

- Potential candidates
  - Process in place to identify senior manager/director from OIAD, supported by others as necessary

Support for panel – legal support

- Existing opinions
  - MAG
  - Oslers
  - Koskie Minsky – Ontario vs. BC

- Additional work required
  - Comparison of Ontario plans to New Brunswick Target Benefit Plans
  - Understanding of governance structures for HOOPP and CAATTPP
    - Multi-employer plans vs jointly sponsored plans

Using the result of the report from the panel

- Provision of report to Auditor General
  - Any other contact with AG during the process
    - Panel may invite AG to discuss issue
    - Panel may request written document of AG's position
- Communications strategy
  - Commitment to make the report public
- Use of Deloitte summary if made available
  - May align or conflict with report of panel

Other

- Valuation opinion
  - Only OTPP? Expected increase in value of OPSEU asset – less than $250 million
  - Start as soon as panel completes its work – procurement timing

- Responding to AG's 2016 Report -- Chapter 2
  - Expecting section on pension accounting; will be released prior to completion of work by panel; impact on panel's work

- Meeting with PSAB Task Force on employee future benefits -- timing

APPENDIX – POTENTIAL PANEL MEMBERS -- BIOS

Potential panel members

Name	Accounting Expertise	Actuarial Expertise	JSPP Governance Expertise	Interest confirmed
Bill Matthews (Comptroller General – Canada)	Yes			Yes
Uros Karadzic (Partner EY – member PSAB Task Force)	Yes	Yes		Yes
Murray Gold (Lawyer – Koskie Minsky)			Yes	Yes
Jim Leech (former CEO OTPP)			Yes	Yes
Tricia O'Malley (former KPMG partner and standard setter)	Yes			No
Sheila Fraser (former Federal Auditor General)	Yes			No
David Smith (former PwC Chairman)	Yes			No
Wayne Strelioff (former AG BC and Sask.)	Yes			Yes
Scott Simpson (Retired - former OTF Actuary)		Yes	Yes	Yes
Andrew Fung (Actuary – Morneau Shepell)		Yes		No
Anne Soh (Actuary – OMERS)		Yes		No
Philip Morse (Actuary – Willis Towers Watson)		Yes		No
Darlene Himick (Professor – U of Ottawa)	Yes			No
Christine Wiedman (Professor – U of Waterloo)	Yes			No

Bill Mathews – Comptroller General of Canada, PSAB Board Member

Bill Matthews was appointed Comptroller General of Canada effective July 17, 2014.

The Comptroller General is responsible for government-wide direction and leadership for financial management, internal audit, federal assets and acquired services. The Comptroller General also supports capacity building and professional development in each of these areas.

Prior to becoming the Comptroller General, Mr. Matthews was Assistant Secretary, Expenditure Management Sector, at the Treasury Board of Canada Secretariat, a position he accepted in 2011.

Before joining the Expenditure Management Sector, Mr. Matthews worked at the Office of the Comptroller General for seven years, serving as the Assistant Comptroller General in the Financial Management and Analysis Sector from 2009 to 2011.

Mr. Matthews is a chartered professional accountant with over 25 years of experience in accounting and financial management in both the public and private sectors.

He holds a Bachelor of Commerce from Dalhousie University.

He also serves as a board member of the Public Sector Accounting Board and the University of Ottawa's Institute for Mental Health Research.

Uros Karadzic – Actuary, Partner EY, Member PSAB Pensions Task Force

Uros Karadzic is a partner and the national leader of the Reward practice. He is a pension actuary located in Toronto, Canada.

His primary focus is in the following areas:

- Pension audit and internal audit;
- Pension and benefit issues in Merger & Acquisition transactions; and
- On-going advisory services on retirement benefit plans.

He has advised clients (Canadian and multinational) on all aspects of their pension and benefit plans, including accounting, funding, design, implementation, management, risk and administration.

Extensive experience in accounting for benefit plan obligations. He works with numerous EY audit teams, the EY Professional Practice (Canadian and Global) and industry bodies on benefit accounting issues.

M&A transaction and integration, supporting clients by clearly identifying and measuring risks and costs. He also advised on appropriate measures to reduce those costs, focusing on post-acquisition funding requirements.

Murray Gold – Koskie Minsky

Murray Gold is a senior pension and benefits partner (see: Chambers Canada 2017 Rankings) with a national pension and benefits practice. He is a leading practitioner in the area of pensions and employee benefits. Mr. Gold was appointed by the Premier of Ontario to Ontario's Technical Advisory Group on Retirement Security in February 2014. In 2008 he served as an expert advisor to the Ontario Expert Commission on Pensions.

Mr. Gold advises governing boards of public sector and jointly trusteed pension and benefits plans across Canada in regard to compliance and best-practice issues. He represents pension boards, as well as plan sponsors, retiree groups and active members in pension litigation in pension regulatory and judicial proceedings.

Mr. Gold is lead counsel for Koskie Minsky in regard to current pension reform initiatives in Newfoundland, New Brunswick, Ontario and Alberta, and in health benefit plan reforms in Ontario and British Columbia. He represented stakeholder interests in insolvency proceedings involving Air Canada in 2003 and 2009, and Stelco in 2005. In 2009 – 2010, he lead Koskie Minsky's team in establishing Canada's first funded postretirement health care trust in the auto sector. This involved the creation of new tax laws governing the tax treatment of postretirement benefit trusts and the negotiation and implementation of arrangements to govern Canada's first funded employee life health trust.

Murray Gold is a Fellow of the Ontario Teachers' Federation, an honor in recognition of his work in regard to the Ontario Teachers' Pension Plan.

Murray served on the Firm's Executive Committee and then as the Firm's Managing Partner from 2012-2016.

Jim Leech – former CEO of Ontario Teacher's Pension Plan

Mr. Leech joined Teachers' in 2001 to lead Teachers' Private Capital and was appointed President & CEO in 2007. Under his leadership, the organization became one of the world's leading private equity investors.

Mr. Leech has gained recognition for his expertise and leadership in the private equity industry and as CEO of several public companies. He has a solid reputation for building businesses and strong management teams and has led large public companies operating and investing in the financial services, real estate and energy industries, as well as start-up technology businesses.

Before joining Teachers', Mr. Leech was president and CEO of Unicorp Canada Corporation, one of Canada's first public merchant banks, and Union Energy Inc., then one of North America's largest integrated energy and pipeline companies. During the 1990s, he guided two start-up technology companies - Disys Corporation and Kasten Chase Applied Research - to the revenue generation stage.

Mr. Leech holds a B.Sc. (Hons Math and Physics) from the Royal Military College of Canada and an MBA from Queen's University. He is also a graduate of the Institute of Corporate Directors.

Mr. Leech is chair of the board of Toronto General and Western Hospital Foundation. He is a member of the board of the MasterCard Foundation and was a founding director of Right To Play International. He has been named Chancellor-designate of Queen's University, effective July 1, 2014 and currently chairs the advisory board of the Queen's School of Business. Mr. Leech also serves on the advisory board for The Learning Partnership, the advisory council for the Toronto Region Board of Trade and the Toronto Financial Services Leadership Council. In addition, Mr. Leech is a member of the government of Ontario's Economic Advisory Panel.

In 2012, Mr. Leech was awarded the Queen's Diamond Jubilee medal in recognition of his work with the True Patriot Love Foundation. In 2013, he co-authored (with Globe and Mail Senior Writer Jacquie McNish) a book on pension reform called The Third Rail: Confronting our pension failures. He has announced his retirement effective December 31, 2013.

Wayne Strelioff, FCPA, FCA – former Auditor General

Mr. Strelioff has served as both the Auditor General of British Columbia (2000-2006) and the Provincial Auditor of Saskatchewan (1990-2000). He was the Assistant Director of Public Sector Accounting and Auditing at the Canadian Institute of Chartered Accountants (CICA), contributing to the initial development of ground breaking professional accounting and auditing standards for the public sector.

Mr. Strelioff has consistently worked to strengthen public sector governance, management and accountability practices. He has served on many national organizations including as a member and governor of the CCAF (formerly the Canadian Comprehensive Auditing Foundation), as the inaugural chair of the Canadian Council of Legislative Auditors Planning and Coordinating Committee and as a member of the CICA's Public Sector Accounting Board.

Since retirement in 2006, he has served as the inaugural Chair of the Quality Worklife/Quality Healthcare Collaborative, a nationwide group of 12 Canadian health organizations dedicated to developing an evidence-informed framework and action strategy to ensure a healthier Canadian public health workplace and, thus, improving the quality of patient care; he has served as a member of the Health Council of Canada's Value for Money Steering Committee; and he has advised senior officials in the public and private sectors on various governance, management and accountability matters.

Mr. Strelioff received B.A., B.Comm. and M.Sc. degrees from the University of Saskatchewan. He obtained his C.A. at Peat Marwick Mitchell (now KPMG).

In 1992, Mr. Strelioff was awarded the Commemorative Medal for the 125th Anniversary of Confederation of Canada in recognition of his significant contributions to compatriots, the community and to Canada. In 2003, he was recognized by the Institute of Chartered Accountants of British Columbia for his contribution to the accounting profession, by naming him a Fellow and awarding him the FCA designation.

Andrew Fung – Morneau Shepell

Andrew Fung, FSA, FCIA, CFA joined Morneau Shepell on November 10, 2015 as a partner in its Ontario Retirement Solutions Practice.

Prior to joining Morneau Shepell, Mr. Fung was a Senior Vice President at one of the largest public sector pension plans in Ontario. He has extensive experience in the areas of board governance, stakeholder relations, policy and research, strategy and growth, service and product development, government relations and advocacy, and communications. He is well versed in areas such as pension funding policy and risk management, having practiced as a senior actuary in both an international actuarial firm and a major accounting firm.

Mr. Fung is Fellow of the Society of Actuaries, a Fellow of the Canadian Institute of Actuaries, and a Chartered Financial Analyst. He has a Bachelor of Mathematics degree (Dean's Honour List) from the University of Waterloo, and is currently enrolled in the Institute of Corporate Directors - Director Education Program.

Anne G.S. Soh - OMERS

Anne Soh is Vice President, Actuarial Services and Plan Actuary at the Ontario Municipal Employees Retirement System (OMERS). She serves as the actuarial advisor to both OMERS Boards of Directors in managing the funding of the OMERS Pension Plans and oversees the in-house actuarial department.

Anne is an actuary with over 20 years of experience in the pension and benefits industry. Prior to joining OMERS, she was a senior consulting actuary at both Mercer and at Watson Wyatt (now Willis Towers Watson), where she provided advice to her clients on funding strategies, plan design, administration and communication issues.

She also serves as the Chair of the Pension Plan Advisory Committee of the Pension Plan of the United Church of Canada and is a pension committee member for the Pension Plan for Employees of Canada's National Ballet School.

Anne is a Fellow of the Canadian Institute of Actuaries, a Fellow of the Society of Actuaries and holds a Honours BSc from the University of Western Ontario.

Philip Morse – Willis Towers Watson

Philip Morse is a Fellow of the Canadian Institute of Actuaries (CIA), the professional body governing the education, qualification, conduct and work of actuaries in Canada.

He was involved in the preparation of “Independent Review of the Actuarial Funding Report on the Ontario Retirement Pension Plan (ORPP) – June 30, 2016.”

Darlene Himick, Ph.D., MBA, CFA – University of Ottawa

Darlene Himick received a Ph.D. in Accounting from the University of Calgary and an MBA from Dalhousie University. Professor Himick also earned an LLB from Osgoode Hall Law School, York University and is a member of the Nova Scotia Bar. She was previously an Assistant Professor at the John Molson School of Business, Concordia University. Her teaching interests include financial accounting, managerial accounting, accounting theory, and financial statement analysis. A Charterholder with the CFA Institute, Ms. Himick served for several years as a pension investment consultant before she began her academic career. Among her many current roles, she is a Senior Research Fellow with the Shareholder Association for Research and Education, based in Vancouver, B.C.

Professor Himick has presented her research at numerous academic conferences and has been an invited speaker at several industry forums. Her studies have been published in peer-reviewed journals such as Auditing and Accountability Journal and Critical Perspectives on Accounting. Her research focuses on pension accounting, responsible investing by pension funds, and the use of experts during standard setting. She is also interested in accounting history and the accounting profession, specifically its interaction with the actuarial profession. Ms. Himick has received funding from the Fonds québécois de la recherche sur la société et la culture (FQRSC) to study the use of accounting information in the context of retirement plans in Canada and the United States.

Christine Wiedman, Ph.D., FCPA – University of Waterloo

- Christine is interested in financial reporting and governance issues, including the determinants of firms' financial reporting and disclosure choices, the role of regulation on corporate fraud, and the interpretation of accounting information by capital market participants. Current projects examine: voluntary disclosure of political spending; whistleblower provisions of the Dodd-Frank Reform Act of 2010; gender diversity on corporate boards; changes in reporting and disclosure quality for restatement firms; and the role of gender in the reward of research collaboration.
- Christine has authored papers on pension related topics

Pension Asset Expert Advisory Panel

Next Steps

October 14, 2016

Decisions to make

- Panel
  - Number of members
  - Members
  - Chair (and role of chair in decision making)

- Support for panel
  - Report writer
  - Project management
  - Legal support

- Using the results of the report from the Panel

- Other

Composition of Panel

3 Person Panel (all have confirmed interest)
Accounting expert – **Bill Matthews** (Comptroller General Canada)
Actuarial expert - **Uros Karadzic** (Partner EY; member PSAB Task Force)
Governance expert – **Murray Gold** (Partner – Koskie Minsky)

4 Person Panel – 3 person + Chair (interest of all potential chairs not yet confirmed)

Chair – Options under consideration:

Jim Leech – former CEO OTPP

Tricia O'Malley – Accountant, former partner at KPMG, former standard setter

Sheila Fraser – Accountant, former Federal Auditor General

David Smith – Accountant, former Chairman of PwC Canada

Considerations for selection of chair:

- Spokesperson for the panel
- Should the chair be an accountant given the nature of the issue
- Potential conflicts

Support for panel – report writer

- Report writer – requirements:
  - Knowledge of pension accounting and actuarial modelling
  - Writing skills

- Considerations
  - PwC – lead by Lucy Durocher
    - Advisor to province on issue – working on comprehensive position paper but not issuing an opinion – consider whether conflicted
    - Knowledgeable on plans and issues
    - Member of PSAB Task Force
  - Panel hires independent consultant
    - OPS will complete pre-work for procurement of another firm

Support for panel – project management

- Short timeline – Report due by December 31, 2016

- Role
  - Coordination and scheduling
  - Liaison with Province
  - Interim reports
  - Coordination with TBS communications re: final report
  - Administrative reporting

- Potential candidates
  - Process in place to identify senior manager/director from OIAD, supported by others as necessary

Support for panel – legal support

- Existing opinions
  - MAG
  - Oslers
  - Koskie Minsky – Ontario vs. BC

- Additional work required
  - Comparison of Ontario plans to New Brunswick Target Benefit Plans
  - Understanding of governance structures for HOOPP and CAATTPP
    - Multi-employer plans vs jointly sponsored plans

Using the result of the report from the panel

- Provision of report to Auditor General
  - Any other contact with AG during the process
    - Panel may invite AG to discuss issue
    - Panel may request written document of AG's position
- Communications strategy
  - Commitment to make the report public
- Use of Deloitte summary if made available
  - May align or conflict with report of panel

Other

- Valuation opinion
  - Only OTPP? Expected increase in value of OPSEU asset – less than $250 million
  - Start as soon as panel completes its work – procurement timing

- Responding to AG's 2016 Report -- Chapter 2
  - Expecting section on pension accounting; will be released prior to completion of work by panel; impact on panel's work

- Meeting with PSAB Task Force on employee future benefits -- timing

Bill Mathews – Comptroller General of Canada, PSAB Board Member

Bill Matthews was appointed Comptroller General of Canada effective July 17, 2014.

The Comptroller General is responsible for government-wide direction and leadership for financial management, internal audit, federal assets and acquired services. The Comptroller General also supports capacity building and professional development in each of these areas.

Prior to becoming the Comptroller General, Mr. Matthews was Assistant Secretary, Expenditure Management Sector, at the Treasury Board of Canada Secretariat, a position he accepted in 2011.

Before joining the Expenditure Management Sector, Mr. Matthews worked at the Office of the Comptroller General for seven years, serving as the Assistant Comptroller General in the Financial Management and Analysis Sector from 2009 to 2011.

Mr. Matthews is a chartered professional accountant with over 25 years of experience in accounting and financial management in both the public and private sectors.

He holds a Bachelor of Commerce from Dalhousie University.

He also serves as a board member of the Public Sector Accounting Board and the University of Ottawa's Institute for Mental Health Research.

Uros Karadzic – Actuary, Partner EY, Member PSAB Pensions Task Force

Uros Karadzic is a partner and the national leader of the Reward practice. He is a pension actuary located in Toronto, Canada.

His primary focus is in the following areas:

- Pension audit and internal audit;
- Pension and benefit issues in Merger & Acquisition transactions; and
- On-going advisory services on retirement benefit plans.

He has advised clients (Canadian and multinational) on all aspects of their pension and benefit plans, including accounting, funding, design, implementation, management, risk and administration.

Extensive experience in accounting for benefit plan obligations. He works with numerous EY audit teams, the EY Professional Practice (Canadian and Global) and industry bodies on benefit accounting issues.

M&A transaction and integration, supporting clients by clearly identifying and measuring risks and costs. He also advised on appropriate measures to reduce those costs, focusing on post-acquisition funding requirements.

Murray Gold – Koskie Minsky

Murray Gold is a senior pension and benefits partner (see: Chambers Canada 2017 Rankings) with a national pension and benefits practice. He is a leading practitioner in the area of pensions and employee benefits. Mr. Gold was appointed by the Premier of Ontario to Ontario's Technical Advisory Group on Retirement Security in February 2014. In 2008 he served as an expert advisor to the Ontario Expert Commission on Pensions.

Mr. Gold advises governing boards of public sector and jointly trusteed pension and benefits plans across Canada in regard to compliance and best-practice issues. He represents pension boards, as well as plan sponsors, retiree groups and active members in pension litigation in pension regulatory and judicial proceedings.

Mr. Gold is lead counsel for Koskie Minsky in regard to current pension reform initiatives in Newfoundland, New Brunswick, Ontario and Alberta, and in health benefit plan reforms in Ontario and British Columbia. He represented stakeholder interests in insolvency proceedings involving Air Canada in 2003 and 2009, and Stelco in 2005. In 2009 – 2010, he lead Koskie Minsky's team in establishing Canada's first funded postretirement health care trust in the auto sector. This involved the creation of new tax laws governing the tax treatment of postretirement benefit trusts and the negotiation and implementation of arrangements to govern Canada's first funded employee life health trust.

Murray Gold is a Fellow of the Ontario Teachers' Federation, an honor in recognition of his work in regard to the Ontario Teachers' Pension Plan.

Murray served on the Firm's Executive Committee and then as the Firm's Managing Partner from 2012-2016.

Jim Leech – former CEO of Ontario Teacher's Pension Plan

Mr. Leech joined Teachers' in 2001 to lead Teachers' Private Capital and was appointed President & CEO in 2007. Under his leadership, the organization became one of the world's leading private equity investors.

Mr. Leech has gained recognition for his expertise and leadership in the private equity industry and as CEO of several public companies. He has a solid reputation for building businesses and strong management teams and has led large public companies operating and investing in the financial services, real estate and energy industries, as well as start-up technology businesses.

Before joining Teachers', Mr. Leech was president and CEO of Unicorp Canada Corporation, one of Canada's first public merchant banks, and Union Energy Inc., then one of North America's largest integrated energy and pipeline companies. During the 1990s, he guided two start-up technology companies - Disys Corporation and Kasten Chase Applied Research - to the revenue generation stage.

Mr. Leech holds a B.Sc. (Hons Math and Physics) from the Royal Military College of Canada and an MBA from Queen's University. He is also a graduate of the Institute of Corporate Directors.

Mr. Leech is chair of the board of Toronto General and Western Hospital Foundation. He is a member of the board of the MasterCard Foundation and was a founding director of Right To Play International. He has been named Chancellor-designate of Queen's University, effective July 1, 2014 and currently chairs the advisory board of the Queen's School of Business. Mr. Leech also serves on the advisory board for The Learning Partnership, the advisory council for the Toronto Region Board of Trade and the Toronto Financial Services Leadership Council. In addition, Mr. Leech is a member of the government of Ontario's Economic Advisory Panel.

In 2012, Mr. Leech was awarded the Queen's Diamond Jubilee medal in recognition of his work with the True Patriot Love Foundation. In 2013, he co-authored (with Globe and Mail Senior Writer Jacquie McNish) a book on pension reform called The Third Rail: Confronting our pension failures. He has announced his retirement effective December 31, 2013.

Wayne Strelioff, FCPA, FCA – former Auditor General

Mr. Strelioff has served as both the Auditor General of British Columbia (2000-2006) and the Provincial Auditor of Saskatchewan (1990-2000). He was the Assistant Director of Public Sector Accounting and Auditing at the Canadian Institute of Chartered Accountants (CICA), contributing to the initial development of ground breaking professional accounting and auditing standards for the public sector.

Mr. Strelioff has consistently worked to strengthen public sector governance, management and accountability practices. He has served on many national organizations including as a member and governor of the CCAF (formerly the Canadian Comprehensive Auditing Foundation), as the inaugural chair of the Canadian Council of Legislative Auditors Planning and Coordinating Committee and as a member of the CICA's Public Sector Accounting Board.

Since retirement in 2006, he has served as the inaugural Chair of the Quality Worklife/Quality Healthcare Collaborative, a nationwide group of 12 Canadian health organizations dedicated to developing an evidence-informed framework and action strategy to ensure a healthier Canadian public health workplace and, thus, improving the quality of patient care; he has served as a member of the Health Council of Canada's Value for Money Steering Committee; and he has advised senior officials in the public and private sectors on various governance, management and accountability matters.

Mr. Strelioff received B.A., B.Comm. and M.Sc. degrees from the University of Saskatchewan. He obtained his C.A. at Peat Marwick Mitchell (now KPMG).

In 1992, Mr. Strelioff was awarded the Commemorative Medal for the 125th Anniversary of Confederation of Canada in recognition of his significant contributions to compatriots, the community and to Canada. In 2003, he was recognized by the Institute of Chartered Accountants of British Columbia for his contribution to the accounting profession, by naming him a Fellow and awarding him the FCA designation.

Andrew Fung – Morneau Shepell

Andrew Fung, FSA, FCIA, CFA joined Morneau Shepell on November 10, 2015 as a partner in its Ontario Retirement Solutions Practice.

Prior to joining Morneau Shepell, Mr. Fung was a Senior Vice President at one of the largest public sector pension plans in Ontario. He has extensive experience in the areas of board governance, stakeholder relations, policy and research, strategy and growth, service and product development, government relations and advocacy, and communications. He is well versed in areas such as pension funding policy and risk management, having practiced as a senior actuary in both an international actuarial firm and a major accounting firm.

Mr. Fung is Fellow of the Society of Actuaries, a Fellow of the Canadian Institute of Actuaries, and a Chartered Financial Analyst. He has a Bachelor of Mathematics degree (Dean's Honour List) from the University of Waterloo, and is currently enrolled in the Institute of Corporate Directors - Director Education Program.

Anne G.S. Soh - OMERS

Anne Soh is Vice President, Actuarial Services and Plan Actuary at the Ontario Municipal Employees Retirement System (OMERS). She serves as the actuarial advisor to both OMERS Boards of Directors in managing the funding of the OMERS Pension Plans and oversees the in-house actuarial department.

Anne is an actuary with over 20 years of experience in the pension and benefits industry. Prior to joining OMERS, she was a senior consulting actuary at both Mercer and at Watson Wyatt (now Willis Towers Watson), where she provided advice to her clients on funding strategies, plan design, administration and communication issues.

She also serves as the Chair of the Pension Plan Advisory Committee of the Pension Plan of the United Church of Canada and is a pension committee member for the Pension Plan for Employees of Canada's National Ballet School.

Anne is a Fellow of the Canadian Institute of Actuaries, a Fellow of the Society of Actuaries and holds a Honours BSc from the University of Western Ontario.

Philip Morse – Willis Towers Watson

Philip Morse is a Fellow of the Canadian Institute of Actuaries (CIA), the professional body governing the education, qualification, conduct and work of actuaries in Canada.

He was involved in the preparation of “Independent Review of the Actuarial Funding Report on the Ontario Retirement Pension Plan (ORPP) – June 30, 2016.”

Darlene Himick, Ph.D., MBA, CFA – University of Ottawa

Darlene Himick received a Ph.D. in Accounting from the University of Calgary and an MBA from Dalhousie University. Professor Himick also earned an LLB from Osgoode Hall Law School, York University and is a member of the Nova Scotia Bar. She was previously an Assistant Professor at the John Molson School of Business, Concordia University. Her teaching interests include financial accounting, managerial accounting, accounting theory, and financial statement analysis. A Charterholder with the CFA Institute, Ms. Himick served for several years as a pension investment consultant before she began her academic career. Among her many current roles, she is a Senior Research Fellow with the Shareholder Association for Research and Education, based in Vancouver, B.C.

Professor Himick has presented her research at numerous academic conferences and has been an invited speaker at several industry forums. Her studies have been published in peer-reviewed journals such as Auditing and Accountability Journal and Critical Perspectives on Accounting. Her research focuses on pension accounting, responsible investing by pension funds, and the use of experts during standard setting. She is also interested in accounting history and the accounting profession, specifically its interaction with the actuarial profession. Ms. Himick has received funding from the Fonds québécois de la recherche sur la société et la culture (FQRSC) to study the use of accounting information in the context of retirement plans in Canada and the United States.

Christine Wiedman, Ph.D., FCPA – University of Waterloo

- Christine is interested in financial reporting and governance issues, including the determinants of firms' financial reporting and disclosure choices, the role of regulation on corporate fraud, and the interpretation of accounting information by capital market participants. Current projects examine: voluntary disclosure of political spending; whistleblower provisions of the Dodd-Frank Reform Act of 2010; gender diversity on corporate boards; changes in reporting and disclosure quality for restatement firms; and the role of gender in the reward of research collaboration.
- Christine has authored papers on pension related topics

Pension Asset Expert Advisory Panel

Next Steps

October 14, 2016

Decisions to make

- Panel
  - Number of members
  - Members
  - Chair (and role of chair in decision making)

- Support for panel
  - Report writer
  - Project management
  - Legal support

- Using the results of the report from the Panel

- Other

Composition of Panel

3 Person Panel (all have confirmed interest)
Accounting expert – **Bill Matthews** (Comptroller General Canada)
Actuarial expert - **Uros Karadzic** (Partner EY; member PSAB Task Force)
Governance expert – **Murray Gold** (Partner – Koskie Minsky)

4 Person Panel – 3 person + Chair (interest of all potential chairs not yet confirmed)

Chair – Options under consideration:

Jim Leech – former CEO OTPP

Tricia O'Malley – Accountant, former partner at KPMG, former standard setter

Sheila Fraser – Accountant, former Federal Auditor General

David Smith – Accountant, former Chairman of PwC Canada

Considerations for selection of chair:

- Spokesperson for the panel
- Should the chair be an accountant given the nature of the issue
- Potential conflicts

Support for panel – report writer

- Report writer – requirements:
  - Knowledge of pension accounting and actuarial modelling
  - Writing skills

- Considerations
  - PwC – lead by Lucy Durocher
    - Advisor to province on issue – working on comprehensive position paper but not issuing an opinion – consider whether conflicted
    - Knowledgeable on plans and issues
    - Member of PSAB Task Force
  - Panel hires independent consultant
    - OPS will complete pre-work for procurement of another firm

Support for panel – project management

- Short timeline – Report due by December 31, 2016

- Role
  - Coordination and scheduling
  - Liaison with Province
  - Interim reports
  - Coordination with TBS communications re: final report
  - Administrative reporting

- Potential candidates
  - Process in place to identify senior manager/director from OIAD, supported by others as necessary

Support for panel – legal support

- Existing opinions
  - MAG
  - Oslers
  - Koskie Minsky – Ontario vs. BC

- Additional work required
  - Comparison of Ontario plans to New Brunswick Target Benefit Plans
  - Understanding of governance structures for HOOPP and CAATTPP
    - Multi-employer plans vs jointly sponsored plans

Using the result of the report from the panel

- Provision of report to Auditor General
  - Any other contact with AG during the process
    - Panel may invite AG to discuss issue
    - Panel may request written document of AG's position
- Communications strategy
  - Commitment to make the report public
- Use of Deloitte summary if made available
  - May align or conflict with report of panel

Other

- Valuation opinion
  - Only OTPP? Expected increase in value of OPSEU asset – less than $250 million
  - Start as soon as panel completes its work – procurement timing

- Responding to AG's 2016 Report -- Chapter 2
  - Expecting section on pension accounting; will be released prior to completion of work by panel; impact on panel's work

- Meeting with PSAB Task Force on employee future benefits -- timing

Bill Mathews – Comptroller General of Canada, PSAB Board Member

Bill Matthews was appointed Comptroller General of Canada effective July 17, 2014.

The Comptroller General is responsible for government-wide direction and leadership for financial management, internal audit, federal assets and acquired services. The Comptroller General also supports capacity building and professional development in each of these areas.

Prior to becoming the Comptroller General, Mr. Matthews was Assistant Secretary, Expenditure Management Sector, at the Treasury Board of Canada Secretariat, a position he accepted in 2011.

Before joining the Expenditure Management Sector, Mr. Matthews worked at the Office of the Comptroller General for seven years, serving as the Assistant Comptroller General in the Financial Management and Analysis Sector from 2009 to 2011.

Mr. Matthews is a chartered professional accountant with over 25 years of experience in accounting and financial management in both the public and private sectors.

He holds a Bachelor of Commerce from Dalhousie University.

He also serves as a board member of the Public Sector Accounting Board and the University of Ottawa's Institute for Mental Health Research.

Uros Karadzic – Actuary, Partner EY, Member PSAB Pensions Task Force

Uros Karadzic is a partner and the national leader of the Reward practice. He is a pension actuary located in Toronto, Canada.

His primary focus is in the following areas:

- Pension audit and internal audit;
- Pension and benefit issues in Merger & Acquisition transactions; and
- On-going advisory services on retirement benefit plans.

He has advised clients (Canadian and multinational) on all aspects of their pension and benefit plans, including accounting, funding, design, implementation, management, risk and administration.

Extensive experience in accounting for benefit plan obligations. He works with numerous EY audit teams, the EY Professional Practice (Canadian and Global) and industry bodies on benefit accounting issues.

M&A transaction and integration, supporting clients by clearly identifying and measuring risks and costs. He also advised on appropriate measures to reduce those costs, focusing on post-acquisition funding requirements.

Murray Gold – Koskie Minsky

Murray Gold is a senior pension and benefits partner (see: Chambers Canada 2017 Rankings) with a national pension and benefits practice. He is a leading practitioner in the area of pensions and employee benefits. Mr. Gold was appointed by the Premier of Ontario to Ontario's Technical Advisory Group on Retirement Security in February 2014. In 2008 he served as an expert advisor to the Ontario Expert Commission on Pensions.

Mr. Gold advises governing boards of public sector and jointly trusteed pension and benefits plans across Canada in regard to compliance and best-practice issues. He represents pension boards, as well as plan sponsors, retiree groups and active members in pension litigation in pension regulatory and judicial proceedings.

Mr. Gold is lead counsel for Koskie Minsky in regard to current pension reform initiatives in Newfoundland, New Brunswick, Ontario and Alberta, and in health benefit plan reforms in Ontario and British Columbia. He represented stakeholder interests in insolvency proceedings involving Air Canada in 2003 and 2009, and Stelco in 2005. In 2009 – 2010, he lead Koskie Minsky's team in establishing Canada's first funded postretirement health care trust in the auto sector. This involved the creation of new tax laws governing the tax treatment of postretirement benefit trusts and the negotiation and implementation of arrangements to govern Canada's first funded employee life health trust.

Murray Gold is a Fellow of the Ontario Teachers' Federation, an honor in recognition of his work in regard to the Ontario Teachers' Pension Plan.

Murray served on the Firm's Executive Committee and then as the Firm's Managing Partner from 2012-2016.

Jim Leech – former CEO of Ontario Teacher's Pension Plan

Mr. Leech joined Teachers' in 2001 to lead Teachers' Private Capital and was appointed President & CEO in 2007. Under his leadership, the organization became one of the world's leading private equity investors.

Mr. Leech has gained recognition for his expertise and leadership in the private equity industry and as CEO of several public companies. He has a solid reputation for building businesses and strong management teams and has led large public companies operating and investing in the financial services, real estate and energy industries, as well as start-up technology businesses.

Before joining Teachers', Mr. Leech was president and CEO of Unicorp Canada Corporation, one of Canada's first public merchant banks, and Union Energy Inc., then one of North America's largest integrated energy and pipeline companies. During the 1990s, he guided two start-up technology companies - Disys Corporation and Kasten Chase Applied Research - to the revenue generation stage.

Mr. Leech holds a B.Sc. (Hons Math and Physics) from the Royal Military College of Canada and an MBA from Queen's University. He is also a graduate of the Institute of Corporate Directors.

Mr. Leech is chair of the board of Toronto General and Western Hospital Foundation. He is a member of the board of the MasterCard Foundation and was a founding director of Right To Play International. He has been named Chancellor-designate of Queen's University, effective July 1, 2014 and currently chairs the advisory board of the Queen's School of Business. Mr. Leech also serves on the advisory board for The Learning Partnership, the advisory council for the Toronto Region Board of Trade and the Toronto Financial Services Leadership Council. In addition, Mr. Leech is a member of the government of Ontario's Economic Advisory Panel.

In 2012, Mr. Leech was awarded the Queen's Diamond Jubilee medal in recognition of his work with the True Patriot Love Foundation. In 2013, he co-authored (with Globe and Mail Senior Writer Jacquie McNish) a book on pension reform called The Third Rail: Confronting our pension failures. He has announced his retirement effective December 31, 2013.

Wayne Strelioff, FCPA, FCA – former Auditor General

Mr. Strelioff has served as both the Auditor General of British Columbia (2000-2006) and the Provincial Auditor of Saskatchewan (1990-2000). He was the Assistant Director of Public Sector Accounting and Auditing at the Canadian Institute of Chartered Accountants (CICA), contributing to the initial development of ground breaking professional accounting and auditing standards for the public sector.

Mr. Strelioff has consistently worked to strengthen public sector governance, management and accountability practices. He has served on many national organizations including as a member and governor of the CCAF (formerly the Canadian Comprehensive Auditing Foundation), as the inaugural chair of the Canadian Council of Legislative Auditors Planning and Coordinating Committee and as a member of the CICA's Public Sector Accounting Board.

Since retirement in 2006, he has served as the inaugural Chair of the Quality Worklife/Quality Healthcare Collaborative, a nationwide group of 12 Canadian health organizations dedicated to developing an evidence-informed framework and action strategy to ensure a healthier Canadian public health workplace and, thus, improving the quality of patient care; he has served as a member of the Health Council of Canada's Value for Money Steering Committee; and he has advised senior officials in the public and private sectors on various governance, management and accountability matters.

Mr. Strelioff received B.A., B.Comm. and M.Sc. degrees from the University of Saskatchewan. He obtained his C.A. at Peat Marwick Mitchell (now KPMG).

In 1992, Mr. Strelioff was awarded the Commemorative Medal for the 125th Anniversary of Confederation of Canada in recognition of his significant contributions to compatriots, the community and to Canada. In 2003, he was recognized by the Institute of Chartered Accountants of British Columbia for his contribution to the accounting profession, by naming him a Fellow and awarding him the FCA designation.

Andrew Fung – Morneau Shepell

Andrew Fung, FSA, FCIA, CFA joined Morneau Shepell on November 10, 2015 as a partner in its Ontario Retirement Solutions Practice.

Prior to joining Morneau Shepell, Mr. Fung was a Senior Vice President at one of the largest public sector pension plans in Ontario. He has extensive experience in the areas of board governance, stakeholder relations, policy and research, strategy and growth, service and product development, government relations and advocacy, and communications. He is well versed in areas such as pension funding policy and risk management, having practiced as a senior actuary in both an international actuarial firm and a major accounting firm.

Mr. Fung is Fellow of the Society of Actuaries, a Fellow of the Canadian Institute of Actuaries, and a Chartered Financial Analyst. He has a Bachelor of Mathematics degree (Dean's Honour List) from the University of Waterloo, and is currently enrolled in the Institute of Corporate Directors - Director Education Program.

Anne G.S. Soh - OMERS

Anne Soh is Vice President, Actuarial Services and Plan Actuary at the Ontario Municipal Employees Retirement System (OMERS). She serves as the actuarial advisor to both OMERS Boards of Directors in managing the funding of the OMERS Pension Plans and oversees the in-house actuarial department.

Anne is an actuary with over 20 years of experience in the pension and benefits industry. Prior to joining OMERS, she was a senior consulting actuary at both Mercer and at Watson Wyatt (now Willis Towers Watson), where she provided advice to her clients on funding strategies, plan design, administration and communication issues.

She also serves as the Chair of the Pension Plan Advisory Committee of the Pension Plan of the United Church of Canada and is a pension committee member for the Pension Plan for Employees of Canada's National Ballet School.

Anne is a Fellow of the Canadian Institute of Actuaries, a Fellow of the Society of Actuaries and holds a Honours BSc from the University of Western Ontario.

Philip Morse – Willis Towers Watson

Philip Morse is a Fellow of the Canadian Institute of Actuaries (CIA), the professional body governing the education, qualification, conduct and work of actuaries in Canada.

He was involved in the preparation of “Independent Review of the Actuarial Funding Report on the Ontario Retirement Pension Plan (ORPP) – June 30, 2016.”

Darlene Himick, Ph.D., MBA, CFA – University of Ottawa

Darlene Himick received a Ph.D. in Accounting from the University of Calgary and an MBA from Dalhousie University. Professor Himick also earned an LLB from Osgoode Hall Law School, York University and is a member of the Nova Scotia Bar. She was previously an Assistant Professor at the John Molson School of Business, Concordia University. Her teaching interests include financial accounting, managerial accounting, accounting theory, and financial statement analysis. A Charterholder with the CFA Institute, Ms. Himick served for several years as a pension investment consultant before she began her academic career. Among her many current roles, she is a Senior Research Fellow with the Shareholder Association for Research and Education, based in Vancouver, B.C.

Professor Himick has presented her research at numerous academic conferences and has been an invited speaker at several industry forums. Her studies have been published in peer-reviewed journals such as Auditing and Accountability Journal and Critical Perspectives on Accounting. Her research focuses on pension accounting, responsible investing by pension funds, and the use of experts during standard setting. She is also interested in accounting history and the accounting profession, specifically its interaction with the actuarial profession. Ms. Himick has received funding from the Fonds québécois de la recherche sur la société et la culture (FQRSC) to study the use of accounting information in the context of retirement plans in Canada and the United States.

Christine Wiedman, Ph.D., FCPA – University of Waterloo

- Christine is interested in financial reporting and governance issues, including the determinants of firms' financial reporting and disclosure choices, the role of regulation on corporate fraud, and the interpretation of accounting information by capital market participants. Current projects examine: voluntary disclosure of political spending; whistleblower provisions of the Dodd-Frank Reform Act of 2010; gender diversity on corporate boards; changes in reporting and disclosure quality for restatement firms; and the role of gender in the reward of research collaboration.
- Christine has authored papers on pension related topics

Actuarial expert - **Uros Karadzic** (Partner EY; member PSAB Task Force)
Governance expert – **Murray Gold** (Partner – Koskie Minsky)

4 Person Panel – 3 person + Chair (interest of all potential chairs not yet confirmed)

Chair – Options under consideration:

Jim Leech – former CEO OTPP

Tricia O'Malley – Accountant, former partner at KPMG, former standard setter

Sheila Fraser – Accountant, former Federal Auditor General

David Smith – Accountant, former Chairman of PwC Canada

Considerations for selection of chair:

- Spokesperson for the panel
- Should the chair be an accountant given the nature of the issue
- Potential conflicts

Support for panel – report writer

- Report writer – requirements:
  - Knowledge of pension accounting and actuarial modelling
  - Writing skills

- Considerations
  - PwC – lead by Lucy Durocher
    - Advisor to province on issue – working on comprehensive position paper but not issuing an opinion – consider whether conflicted
    - Knowledgeable on plans and issues
    - Member of PSAB Task Force
  - Panel hires independent consultant
    - OPS will complete pre-work for procurement of another firm

Support for panel – project management

- Short timeline – Report due by December 31, 2016

- Role
  - Coordination and scheduling
  - Liaison with Province
  - Interim reports
  - Coordination with TBS communications re: final report
  - Administrative reporting

- Potential candidates
  - Process in place to identify senior manager/director from OIAD, supported by others as necessary

Support for panel – legal support

- Existing opinions
  - MAG
  - Oslers
  - Koskie Minsky – Ontario vs. BC

- Additional work required
  - Comparison of Ontario plans to New Brunswick Target Benefit Plans
  - Understanding of governance structures for HOOPP and CAATTPP
    - Multi-employer plans vs jointly sponsored plans

Using the result of the report from the panel

- Provision of report to Auditor General
  - Any other contact with AG during the process
    - Panel may invite AG to discuss issue
    - Panel may request written document of AG's position
- Communications strategy
  - Commitment to make the report public
- Use of Deloitte summary if made available
  - May align or conflict with report of panel

Other

- Valuation opinion
  - Only OTPP? Expected increase in value of OPSEU asset – less than $250 million
  - Start as soon as panel completes its work – procurement timing

- Responding to AG's 2016 Report -- Chapter 2
  - Expecting section on pension accounting; will be released prior to completion of work by panel; impact on panel's work

- Meeting with PSAB Task Force on employee future benefits -- timing

APPENDIX – POTENTIAL PANEL MEMBERS -- BIOS

Potential panel members

Name	Accounting Expertise	Actuarial Expertise	JSPP Governance Expertise	Interest confirmed
Bill Matthews (Comptroller General – Canada)	Yes			Yes
Uros Karadzic (Partner EY – member PSAB Task Force)	Yes	Yes		Yes
Murray Gold (Lawyer – Koskie Minsky)			Yes	Yes
Jim Leech (former CEO OTPP)			Yes	Yes
Tricia O'Malley (former KPMG partner and standard setter)	Yes			No
Sheila Fraser (former Federal Auditor General)	Yes			No

Andrew Fung (Actuary – Morneau Shepell)		Yes		No
Anne Soh (Actuary – OMERS)		Yes		No
Philip Morse (Actuary – Willis Towers Watson)		Yes		No
Darlene Himick (Professor – U of Ottawa)	Yes			No
Christine Wiedman (Professor – U of Waterloo)	Yes			No

Bill Mathews – Comptroller General of Canada, PSAB Board Member

Bill Matthews was appointed Comptroller General of Canada effective July 17, 2014.

The Comptroller General is responsible for government-wide direction and leadership for financial management, internal audit, federal assets and acquired services. The Comptroller General also supports capacity building and professional development in each of these areas.

Prior to becoming the Comptroller General, Mr. Matthews was Assistant Secretary, Expenditure Management Sector, at the Treasury Board of Canada Secretariat, a position he accepted in 2011.

Before joining the Expenditure Management Sector, Mr. Matthews worked at the Office of the Comptroller General for seven years, serving as the Assistant Comptroller General in the Financial Management and Analysis Sector from 2009 to 2011.

Mr. Matthews is a chartered professional accountant with over 25 years of experience in accounting and financial management in both the public and private sectors.

He holds a Bachelor of Commerce from Dalhousie University.

He also serves as a board member of the Public Sector Accounting Board and the University of Ottawa's Institute for Mental Health Research.

Uros Karadzic – Actuary, Partner EY, Member PSAB Pensions Task Force

Uros Karadzic is a partner and the national leader of the Reward practice. He is a pension actuary located in Toronto, Canada.

His primary focus is in the following areas:

- Pension audit and internal audit;
- Pension and benefit issues in Merger & Acquisition transactions; and
- On-going advisory services on retirement benefit plans.

He has advised clients (Canadian and multinational) on all aspects of their pension and benefit plans, including accounting, funding, design, implementation, management, risk and administration.

Extensive experience in accounting for benefit plan obligations. He works with numerous EY audit teams, the EY Professional Practice (Canadian and Global) and industry bodies on benefit accounting issues.

M&A transaction and integration, supporting clients by clearly identifying and measuring risks and costs. He also advised on appropriate measures to reduce those costs, focusing on post-acquisition funding requirements.

Murray Gold – Koskie Minsky

Murray Gold is a senior pension and benefits partner (see: Chambers Canada 2017 Rankings) with a national pension and benefits practice. He is a leading practitioner in the area of pensions and employee benefits. Mr. Gold was appointed by the Premier of Ontario to Ontario's Technical Advisory Group on Retirement Security in February 2014. In 2008 he served as an expert advisor to the Ontario Expert Commission on Pensions.

Mr. Gold advises governing boards of public sector and jointly trusteed pension and benefits plans across Canada in regard to compliance and best-practice issues. He represents pension boards, as well as plan sponsors, retiree groups and active members in pension litigation in pension regulatory and judicial proceedings.

Mr. Gold is lead counsel for Koskie Minsky in regard to current pension reform initiatives in Newfoundland, New Brunswick, Ontario and Alberta, and in health benefit plan reforms in Ontario and British Columbia. He represented stakeholder interests in insolvency proceedings involving Air Canada in 2003 and 2009, and Stelco in 2005. In 2009 – 2010, he lead Koskie Minsky's team in establishing Canada's first funded postretirement health care trust in the auto sector. This involved the creation of new tax laws governing the tax treatment of postretirement benefit trusts and the negotiation and implementation of arrangements to govern Canada's first funded employee life health trust.

Murray Gold is a Fellow of the Ontario Teachers' Federation, an honor in recognition of his work in regard to the Ontario Teachers' Pension Plan.

Murray served on the Firm's Executive Committee and then as the Firm's Managing Partner from 2012-2016.

Jim Leech – former CEO of Ontario Teacher's Pension Plan

Mr. Leech joined Teachers' in 2001 to lead Teachers' Private Capital and was appointed President & CEO in 2007. Under his leadership, the organization became one of the world's leading private equity investors.

Mr. Leech has gained recognition for his expertise and leadership in the private equity industry and as CEO of several public companies. He has a solid reputation for building businesses and strong management teams and has led large public companies operating and investing in the financial services, real estate and energy industries, as well as start-up technology businesses.

Before joining Teachers', Mr. Leech was president and CEO of Unicorp Canada Corporation, one of Canada's first public merchant banks, and Union Energy Inc., then one of North America's largest integrated energy and pipeline companies. During the 1990s, he guided two start-up technology companies - Disys Corporation and Kasten Chase Applied Research - to the revenue generation stage.

Mr. Leech holds a B.Sc. (Hons Math and Physics) from the Royal Military College of Canada and an MBA from Queen's University. He is also a graduate of the Institute of Corporate Directors.

Mr. Leech is chair of the board of Toronto General and Western Hospital Foundation. He is a member of the board of the MasterCard Foundation and was a founding director of Right To Play International. He has been named Chancellor-designate of Queen's University, effective July 1, 2014 and currently chairs the advisory board of the Queen's School of Business. Mr. Leech also serves on the advisory board for The Learning Partnership, the advisory council for the Toronto Region Board of Trade and the Toronto Financial Services Leadership Council. In addition, Mr. Leech is a member of the government of Ontario's Economic Advisory Panel.

In 2012, Mr. Leech was awarded the Queen's Diamond Jubilee medal in recognition of his work with the True Patriot Love Foundation. In 2013, he co-authored (with Globe and Mail Senior Writer Jacquie McNish) a book on pension reform called The Third Rail: Confronting our pension failures. He has announced his retirement effective December 31, 2013.

Wayne Strelioff, FCPA, FCA – former Auditor General

Mr. Strelioff has served as both the Auditor General of British Columbia (2000-2006) and the Provincial Auditor of Saskatchewan (1990-2000). He was the Assistant Director of Public Sector Accounting and Auditing at the Canadian Institute of Chartered Accountants (CICA), contributing to the initial development of ground breaking professional accounting and auditing standards for the public sector.

Mr. Strelioff has consistently worked to strengthen public sector governance, management and accountability practices. He has served on many national organizations including as a member and governor of the CCAF (formerly the Canadian Comprehensive Auditing Foundation), as the inaugural chair of the Canadian Council of Legislative Auditors Planning and Coordinating Committee and as a member of the CICA's Public Sector Accounting Board.

Since retirement in 2006, he has served as the inaugural Chair of the Quality Worklife/Quality Healthcare Collaborative, a nationwide group of 12 Canadian health organizations dedicated to developing an evidence-informed framework and action strategy to ensure a healthier Canadian public health workplace and, thus, improving the quality of patient care; he has served as a member of the Health Council of Canada's Value for Money Steering Committee; and he has advised senior officials in the public and private sectors on various governance, management and accountability matters.

Mr. Strelioff received B.A., B.Comm. and M.Sc. degrees from the University of Saskatchewan. He obtained his C.A. at Peat Marwick Mitchell (now KPMG).

In 1992, Mr. Strelioff was awarded the Commemorative Medal for the 125th Anniversary of Confederation of Canada in recognition of his significant contributions to compatriots, the community and to Canada. In 2003, he was recognized by the Institute of Chartered Accountants of British Columbia for his contribution to the accounting profession, by naming him a Fellow and awarding him the FCA designation.

Andrew Fung – Morneau Shepell

Andrew Fung, FSA, FCIA, CFA joined Morneau Shepell on November 10, 2015 as a partner in its Ontario Retirement Solutions Practice.

Prior to joining Morneau Shepell, Mr. Fung was a Senior Vice President at one of the largest public sector pension plans in Ontario. He has extensive experience in the areas of board governance, stakeholder relations, policy and research, strategy and growth, service and product development, government relations and advocacy, and communications. He is well versed in areas such as pension funding policy and risk management, having practiced as a senior actuary in both an international actuarial firm and a major accounting firm.

Mr. Fung is Fellow of the Society of Actuaries, a Fellow of the Canadian Institute of Actuaries, and a Chartered Financial Analyst. He has a Bachelor of Mathematics degree (Dean's Honour List) from the University of Waterloo, and is currently enrolled in the Institute of Corporate Directors - Director Education Program.

Anne G.S. Soh - OMERS

Anne Soh is Vice President, Actuarial Services and Plan Actuary at the Ontario Municipal Employees Retirement System (OMERS). She serves as the actuarial advisor to both OMERS Boards of Directors in managing the funding of the OMERS Pension Plans and oversees the in-house actuarial department.

Anne is an actuary with over 20 years of experience in the pension and benefits industry. Prior to joining OMERS, she was a senior consulting actuary at both Mercer and at Watson Wyatt (now Willis Towers Watson), where she provided advice to her clients on funding strategies, plan design, administration and communication issues.

She also serves as the Chair of the Pension Plan Advisory Committee of the Pension Plan of the United Church of Canada and is a pension committee member for the Pension Plan for Employees of Canada's National Ballet School.

Anne is a Fellow of the Canadian Institute of Actuaries, a Fellow of the Society of Actuaries and holds a Honours BSc from the University of Western Ontario.

Philip Morse – Willis Towers Watson

Philip Morse is a Fellow of the Canadian Institute of Actuaries (CIA), the professional body governing the education, qualification, conduct and work of actuaries in Canada.

He was involved in the preparation of “Independent Review of the Actuarial Funding Report on the Ontario Retirement Pension Plan (ORPP) – June 30, 2016.”

Darlene Himick, Ph.D., MBA, CFA – University of Ottawa

Darlene Himick received a Ph.D. in Accounting from the University of Calgary and an MBA from Dalhousie University. Professor Himick also earned an LLB from Osgoode Hall Law School, York University and is a member of the Nova Scotia Bar. She was previously an Assistant Professor at the John Molson School of Business, Concordia University. Her teaching interests include financial accounting, managerial accounting, accounting theory, and financial statement analysis. A Charterholder with the CFA Institute, Ms. Himick served for several years as a pension investment consultant before she began her academic career. Among her many current roles, she is a Senior Research Fellow with the Shareholder Association for Research and Education, based in Vancouver, B.C.

Professor Himick has presented her research at numerous academic conferences and has been an invited speaker at several industry forums. Her studies have been published in peer-reviewed journals such as Auditing and Accountability Journal and Critical Perspectives on Accounting. Her research focuses on pension accounting, responsible investing by pension funds, and the use of experts during standard setting. She is also interested in accounting history and the accounting profession, specifically its interaction with the actuarial profession. Ms. Himick has received funding from the Fonds québécois de la recherche sur la société et la culture (FQRSC) to study the use of accounting information in the context of retirement plans in Canada and the United States.

Christine Wiedman, Ph.D., FCPA – University of Waterloo

- Christine is interested in financial reporting and governance issues, including the determinants of firms' financial reporting and disclosure choices, the role of regulation on corporate fraud, and the interpretation of accounting information by capital market participants. Current projects examine: voluntary disclosure of political spending; whistleblower provisions of the Dodd-Frank Reform Act of 2010; gender diversity on corporate boards; changes in reporting and disclosure quality for restatement firms; and the role of gender in the reward of research collaboration.
- Christine has authored papers on pension related topics

From: Mike Manning
To: Ken Kandeepan
Subject: Pension adjustment
Date: Thursday, November 24, 2016 5:38:48 PM

Hi Ken:
I should have asked this question when I saw you earlier. I was looking at Public Accounts to get a better understanding of the Pension Adjustment. I think I understand the logic of the $10.7 b increase in net debt but had a question on how this flows through to expenses in a given year. Is it that the write-down in assets must come back to increase expenses over time? For example, expense is higher by $ 1.5 billion last year, $2.2 billion this year, $2.8 billion next year, etc. and this will total to $10.7 billion over time? Would this be offset by a non-cash adjustment? Anyway, sorry to bug you but a bit confused.
Regards, Mike

Office of the Provincial Controller Division

Public Accounts Steering Committee
Briefing #1

June 13, 2017

Briefing Outline

- Key Public Accounts deliverables
- Consideration of other financial reporting products
- Impact of BPS line-by-line presentation
- Current accounting issues
- Key dates and considerations
- Planning timelines

Public Accounts Deliverables

1. **2016-17 Annual Financial Report, including**
   - Financial Statement Discussion and Analysis (FSD&A)
     - Discusses the Province's actual results against Budget, prior year and earlier years' actuals
     - Discusses indicators of financial condition and other information
   - Audited consolidated financial statements (CFS)
   - Management's Statement of Responsibility
     - Province's acknowledgement of responsibility for effectiveness of internal controls and the objectivity and integrity of the CFS and related notes
   - Auditor General's Audit Opinion
     - The AG's opinion that the financial statements are fairly stated
     - Expect qualified opinion for recognition of OTTP/OPSEU pension assets and inclusion of IESO regulatory assets/liabilities in the Province's financial statements
2. **Supplementary Volumes 1, 2, 3**
   - **Appendix 1** provides further details
3. **Various Communication Products**
   - News release, Q and As, briefing binders (limited distribution)

Financial Statement Discussion & Analysis

- **Purpose** – To enhance the users' understanding of the government's actual results compared to the approved Budget and prior years' results
- **Process –**
  - Identification of potential themes consistent with other public documents
  - Drafting content of FSD&A with input from stakeholders
  - To circulate drafts/extracts of FSD&A for feedback and suggestions
  - Oversight of the Public Accounts process (compilation, production, audit issues and communications) by the Public Accounts Steering Committee
  - TBS and MOF Ministers approval obtained on final version (shared with PO)
  - Streamlined distribution and sign-off process

Consideration of Other Financial Reporting Products

- Consistency of messaging and results between the Public Accounts and other financial reporting products is important, including:
  - **1st Quarter Economic Accounts (released by July 15)**
    - First public update on economy following Budget release
    - Previews messaging of 1st Quarter Finances (in-year outlook)
  - **1st Quarter Finances (released by August 15th)**
    - Signals governments performance against Budget plan
  - **Other**
    - 2017 Budget
    - Pre-Election Report

Impact of BPS Line-by-Line Presentation

- Presentation change only, which has no fiscal impact, i.e. no impact to annual deficit, net debt or accumulated deficit
- The revenues and expenses will be grossed up by the same amount of BPS third-party revenues
  - BPS direct receipt of federal transfers will be reported as revenue from Government of Canada
  - BPS fees, donations and other revenues will be reported as provincial revenue
  - Program spending of MOHLTC, EDU and MAESD will increase
  - Interest on debt (IOD) expense will increase by reflecting net interest expense on BPS debt

Impact of BPS Line-by-Line Presentation (cont'd)

- Impact to key financial indicators
  - No change to indicators related to the annual deficit, net debt or accumulated deficit
  - Favorable impact to debt charge to total revenue and net debt to total revenue
  - Program spending per capita will increase, but is expected to remain the lowest based on the restated interim results
- 2016 Budget and historical results have been restated reflecting line-by-line consolidation of BPS sectors.
- OPCD is stakeholdering with sector ministries and central agencies on the line-by-line variance analysis
  - See Appendix 2 additional details on line-by-line presentation

Current Accounting Issues

- **Pension:**
  - OPCD currently reviewing and refining adjustments related to pension plans (to impact annual deficit, opening balance sheet and net debt)
  - Awaiting feedback from OAG on pension assumptions.
  - AG has not accepted Province's position on net pension assets for OTPP and OPSEUPP and has advised that she will qualify her audit opinion for 2016-17 Public Accounts
- **Hydro Sector IFRS:**
  - OPG and H1 to be reported on an IFRS basis effective April 1/16 (AG supports)
  - Change from US GAAP to IFRS will have an estimated transitionary impact of $1.1B on the Province's opening accumulated deficit, impacting net debt
  - Change will also impact annual surplus/deficit in current and future years

Current Accounting Issues

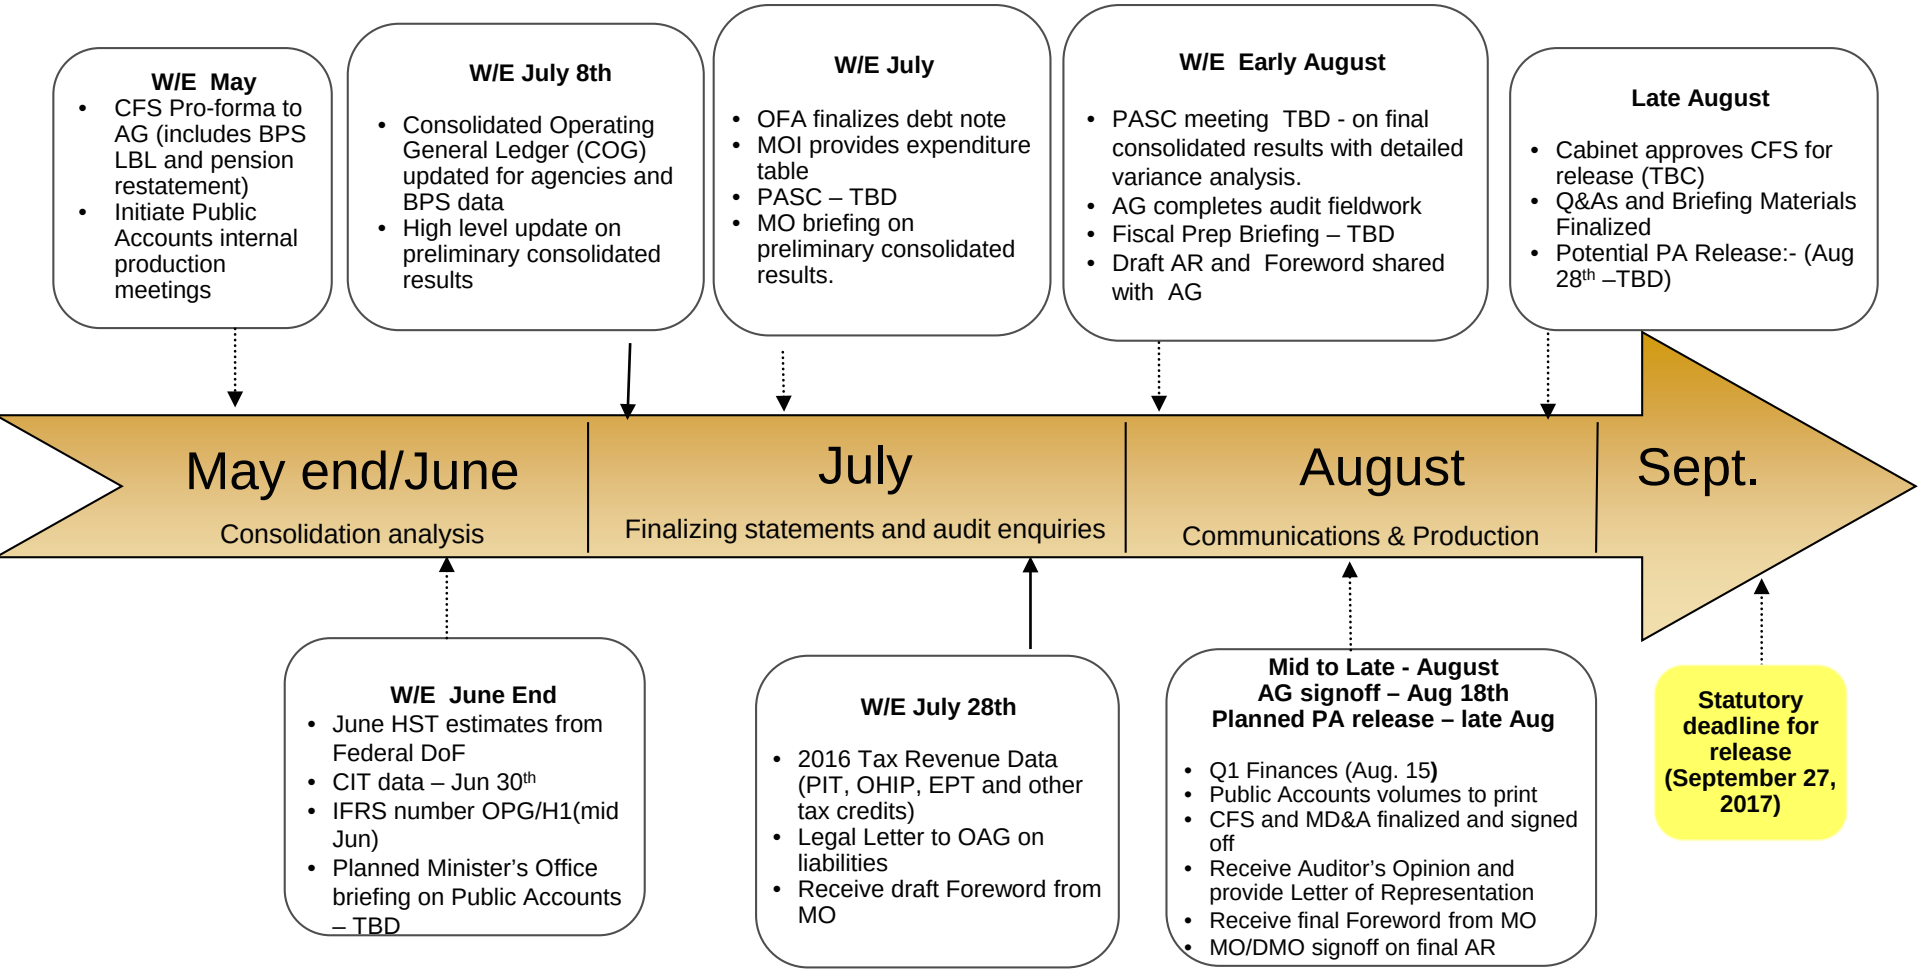
- **Remedy:**
  - EDU update for AG planned for early June on status of negotiations
  - OPCD/EDU will monitor and track the status as potential subsequent event item
- **OMA Negotiations:**
  - MOHLTC will submit Arbitration Framework for TB approval indicating that there will be no retroactive adjustment/payout for services prior to April 1, 2017
  - OMA ratification of Arbitration Framework scheduled for mid-June 2017
  - Impact on 2016/17 Public Accounts unlikely – will continue to monitor
- **Contaminated Sites:**
  - AG VFM follow-up audit on-going
  - Grassy Narrows analysis from MOECC outstanding (AG briefing has occurred)

Key Dates & Considerations

- **Public Accounts Planning Meeting**
  - Meeting occurred between AG and Deputy Ministers of TBS and MOF to discuss audit plan and select issues (Mar. 24)
  - Updated Audit Planning Report received May 16

- **Ministers' Offices Briefings on Public Accounts** – Early June
  - To provide overview of Public Accounts process and timelines

- **Public Accounts Steering Committee Meetings** – (Jun-Aug)
  - Kickoff meeting June 13th
  - Results meetings throughout July and early August
  - Refer to Appendix 2 for composition and role of the PAS Committee



Key Dates & Considerations (cont.)

- **Fiscal Prep Committee Briefing** – mid to late August (TBD)
  - Focus on consolidated results, including variance analysis

- **Expected audit opinion date** – August 18, 2017
  - Management Representation Letter (to be signed by DM)
  - Meeting between AG and Deputy Ministers to discuss audit findings and the AG's error summary (Summary of Unadjusted Differences) after which the signed audit opinion letter will be provided

- **Release date** - Late August
  - FAA legislated release within 180 days after the fiscal year-end (September 27, 2017)
  - 2015/16 release date (Audited version of PA- Oct 6, 2016)
  - 2016/17 - tentative date for planning purposes August 28, 2017

Draft Timeline

Updates on Financial Results

- **Two update points**
  - **Mid July** – Update on preliminary consolidated results, including:
    - Consolidated actuals and preliminary deficit range
    - Actual expense by ministry with placeholders for outstanding or unresolved matters
    - Revenue by source with placeholders for outstanding tax accruals
    - Ranges of variance identified to measure risk of changes in results, including potential impacts from unresolved reporting items
  - **Late July / Early August** – Update on preliminary consolidated results, including:
    - Final 2016-17 fiscal results and associated debt, net debt and accumulated deficit
    - Tax revenue numbers (PIT data Jul 28th)
    - Detailed analysis for significant variances
    - Final error summary (SUDS) for confirmation with OAG

Appendix 1: Supplementary Volumes to the Public Accounts

- **Volume 1:**

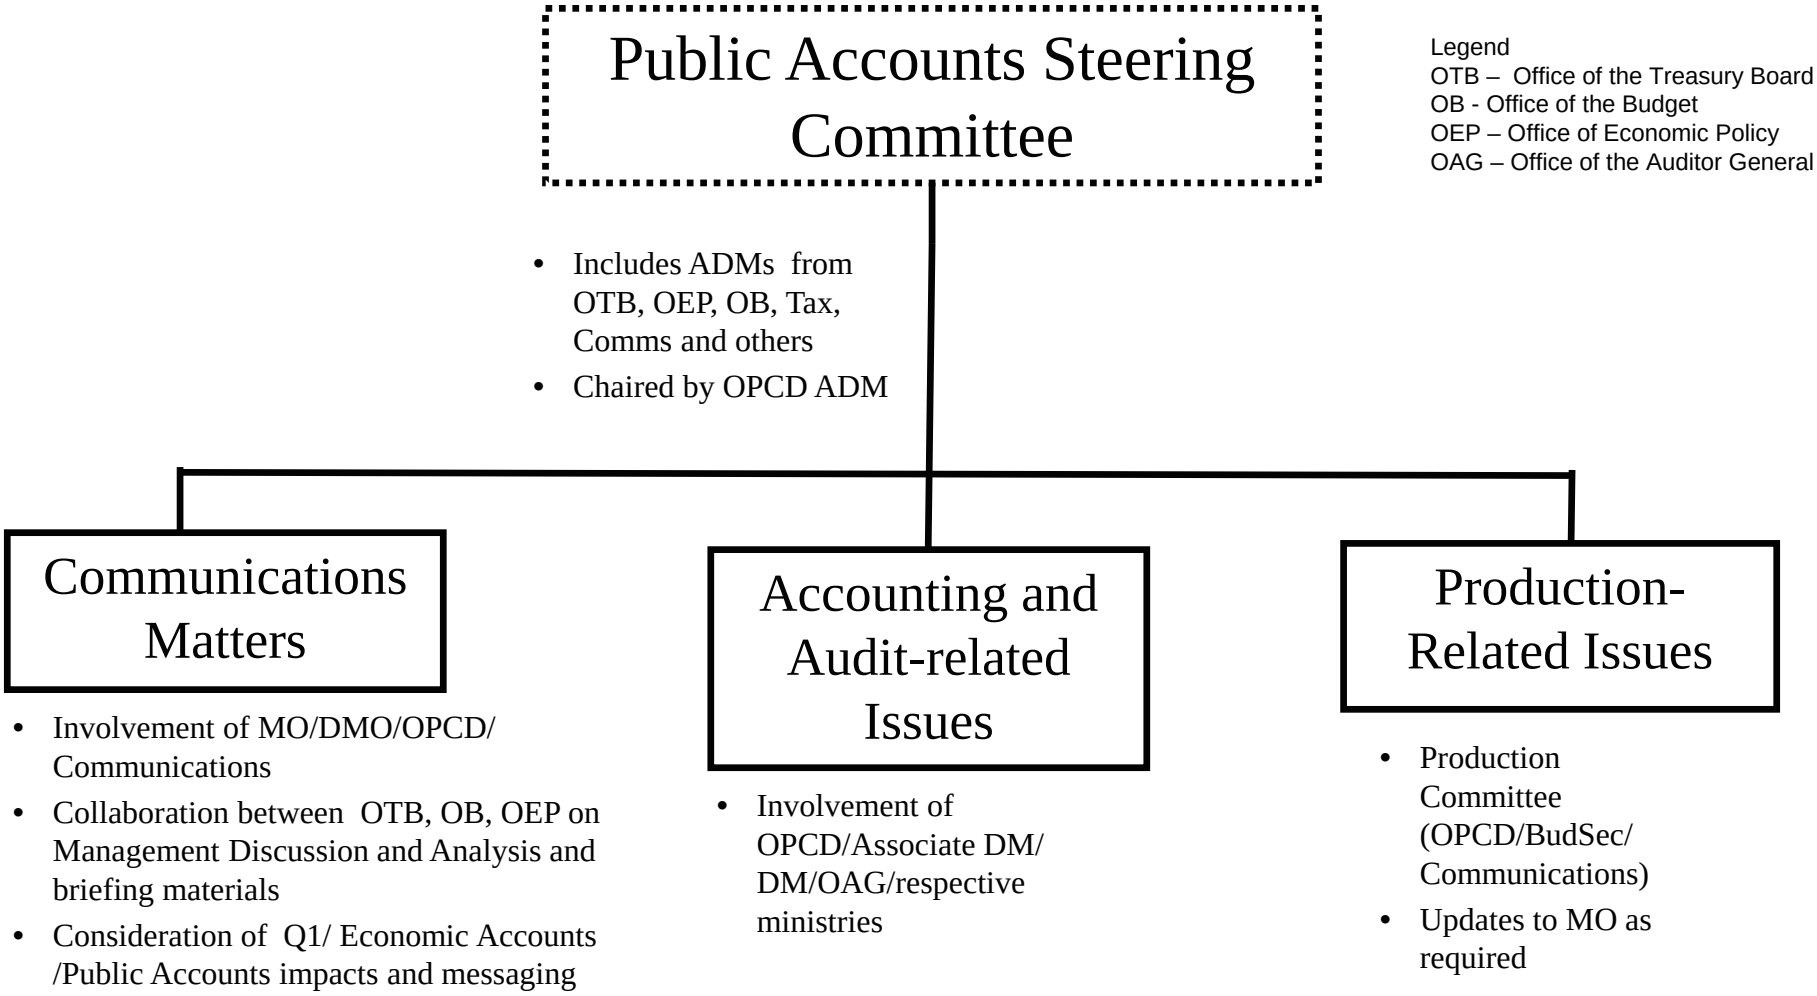
  Consolidated Revenue Fund (CRF) schedules and ministry statements on an accrual basis

- **Volume 2:**

  Financial statements of selected Crown Corporations, Boards, Commissions, and other miscellaneous statements

- **Volume 3:**

  Details of transfer payments and vendor payments by ministry (including salary and benefit payments to non-government entities), statutory salaries of Ministers and Parliamentary Assistants, and travel expenses of Ministers, Deputy Ministers as well as specific individual ministry staff where expenses exceed threshold



Appendix 2: BPS Line-by-Line Impact

Province of Ontario

This is what we are currently tracking.

For the year ended March 31

($ Millions)		2017		2016
Annual (Deficit) Surplus		TBD		(3,515)
Acquisition of Tangible Capital Assets (Note 9)	(10,023)		(10,922)	
Amortization of Tangible Capital Assets (Note 9)	5,192		4,913	
Proceeds on Sale of Tangible Capital Assets	152		175	
Loss (Gain) on Sale of Tangible Capital Assets	(72)		363	
Decrease/(increase) in Prepaid Expenses and Other Non-Financial	(20)		20	
		(4,771)		(5,451)
Decrease in Accumulated Other Comprehensive Loss		134		116
Increase/(Decrease) in ONFA Fund Fair Market Value Adjustment		1,094		(1,003)
Increase in Net Debt		(2,779)		(9,853)
Net Debt at beginning of year		(295,869)		(293,730)
Reversal of Pension Asset Valuation Allowances (Note 16)				9,154
IFRS Transitional Impact for OPG & Hydro 1		(683)		-
Pension adjustment		(617)		
Accumulated Other Comprehensive Loss				(613)
Other (Note 16)		82		(827)
PSAB Transitional Impact of Liabilities for Contaminated Sites				
Restated Net Debt at beginning of year		**(297,087)**		(286,016)

Hi Wendy,

Can you please provide the net debt numbers that you are tracking to us and OFA, so that we are all on the same page?

Also please let John know the expected timeline when the balance sheet can be finalized.

John - I will connect with you on Monday on your other comments.

Thanks,
Alicia

Subject: RE: 2016-17 FSD&A Process

Alicia,

We were looking at the latest FSD&A. There are some minor rounding discrepancies throughout, starting from Table 1 and Table 2.

On page 20, the sentence that starts with "Interest expense grew from $11.6 billion in 2015-16…. We would need to verify the BPS IOD for 16-17, to confirm the amount.

Regarding references to net debt, we will need the final acc. deficit and TCA before completing it. Also, we are getting discrepancies for prior year net debt on Table 7.

Can one of OPCD's analysts who populate the FSD&A call Shemin Meralli, as it will be easier to go over the FSD&A, given the salmon-coloured protocol.

Thanks.

John

Alicia,

Hopefully, we can get final TCA and final acc. deficit (which of course, needs the tax revenue numbers) from Public Accounts, in order for us to finalize net debt for FSD&A soon.

Thanks.

John

Subject: 2016-17 FSD&A Process

Hello everyone,
As OPCD initiates the process for compiling the Financial Statement Discussion and Analysis (FSD&A) section of the Annual Report, I am reaching out to you as key partners in this year's process. In light of everyone's busy schedule, we would like to share some details regarding our planning timelines. Please note that there will be fewer distributions of the draft FSD&A than last year, so it will be more important to ensure that our initial drafts reflect our best efforts.

The first draft of FSD&A will be made available on broad distribution during the second week of July (scheduled for July 11th). To help facilitate your input to the document, my staff will prepare an extract of last year's sections applicable to your area, populated with preliminary actual expense numbers (placeholders will be included for revenues until available in late July). The extracts will be provided in late June/early July and password protected. We will require your edits provided EOD July 7th in order for us to compile the complete document and perform an quality review and formatting prior to release on July 11th. In the meantime, if you would like a non-updated version of your area's extracts (based on the 2015/16 FSD&A), please contact me directly.
Please provide your updated extracts to: Daria Zaslaver (Daria.Zaslaver2@ontario.ca), Senior Analyst of BPS Reporting Unit of OPCD.
Below are currently planned key dates for your information.

- July 11th 1st distribution (reflecting preliminary expense numbers and placeholders for revenue numbers)
- July 18th 2nd distribution (same content as above and edits from 1st distribution)
- *July 27th Copy of FSD&A shared with OAG*
- August 4th 3rd distribution (both expense and revenue numbers)
- August 9th 4th distribution (for Manager/Director sign-off on August 11th)
- *August 10th Copy of FSD&A shared with OAG*
- August 14th 5th distribution (for ADM sign-off on August 15th)
- *August 15th Copy of FSD&A shared with the OAG*
- August 17th 6th distribution (for DM/MO sign-off on August 21st)

Please note that the AG reviews the FSD&A as part of the audit of the Public Accounts and requires support for any figures, statements, variance analysis and narratives reflected in the document, including both financial and non-financial. OPCD will provide support for the details included in the financial statement tables; however, please plan to send the relevant support for any non-financial data (e.g. performance or TCA related), variance explanations as appropriate. Please include these details at the same time as you provide your initial narrative.
Following the first distribution of the FSD&A, we will also initiate the process for compiling Q&As related to expenses. Similarly, Q&As for capital, debt and revenue-related matters will also be initiated at the appropriate times in the FSD&A compilation cycle. By incorporating the FSD&A support requirements and Q&A processes as part of the FSD&A compilation exercise, we hope to minimize the amount of time and effort on your teams.
If in case I have missed any key partners, please feel free to forward as appropriate.
We look forward to working with you throughout the Public Accounts process. Please feel free to contact me if you have questions related to the document, timeline and the process.
Thanks,
Alicia

Subject: 3c

A few questions/comments:

In the introduction, I think that the second line should have "to be" added, in the line: "this is the smallest amount **to be** borrowed since 2008-09", given that we haven't completed the year yet.

On page 7, first sentence, third line, I'd like to replace "...lower deficit for 2015-16..." with "lower borrowing requirements". That way we don't have to be specific to 15-16, as this year also has a lower borrowing requirement.

On pages 9 and 10, why don't we have the cost of debt as at September 30, 2016, instead of just leaving the March 31st number in there? My recollection is that in past FESs we've had a September update, even if the rate has remained the same as in March, and the September wording was in place in previous versions of this year's 3C, but without numbers. If memory serves correctly, the chart in last year's FES had a footnote, indicating that the current year was as of September 30th, while the other years were as of March 31st.

It would be best if we could incorporate these changes before ADM signoff on Wednesday, so that we can speed up that process with everyone having the most up-to-date version as we sit around the table. Maybe we could have Bud Sec do that at the same time as whatever changes come out of the Pension Extract review meeting tomorrow? Speaking of which, on 3B, page 5, third paragraph, I'd like to make the IOD paragraph consistent with what we have in 3C, paragraph 2 of page 7, so it would read (leaving the numbers out given that this email isn't password protected):

"Interest on debt expense for 2016-17 is forecast to be $x billion, $y billion lower than forecast in the *2016 Budget,* continuing a trend that has been in place since 2010, through a combination of lower deficits and borrowing requirements, and lower than forecast interest rates."

Could someone please pass that change on to whomever is responsible for updates to 3B, or should Ken and I just do this at tomorrow's meeting on the Pension Extract, given that's one of the pages that we'll be going over?

Thanks for everyone's hard work on getting 3C, and anything else related to debt and IOD elsewhere in the document, to this point. Almost there!

Yes, that change makes sense. Given that it's directly related to the pension adjustment, I think that it's best for you to bring it up at the meeting tomorrow, rather than changing it in advance.

Thanks,
Gadi

Hi Gadi

Thanks, John is liaising with Daniel and one of them will make these changes today.

I do have one more edit for your consideration in the attached document. The current wording is the FES which was actually mine, appears upon second thought, a little bit contradictory so I have provided an alternate. If you are ok with it then John/Daniel can input this edit as well.

Thanks

Ken k

Subject: 3c

A few questions/comments:

In the introduction, I think that the second line should have "to be" added, in the line: "this is the smallest amount **to be** borrowed since 2008-09", given that we haven't completed the year yet.

On page 7, first sentence, third line, I'd like to replace "...lower deficit for 2015-16..." with "lower borrowing requirements". That way we don't have to be specific to 15-16, as this year also has a lower borrowing requirement.

On pages 9 and 10, why don't we have the cost of debt as at September 30, 2016, instead of just leaving the March 31st number in there? My recollection is that in past FESs we've had a September update, even if the rate has remained the same as in March, and the September wording was in place in previous versions of this year's 3C, but without numbers. If memory serves correctly, the chart in last year's FES had a footnote, indicating that the current year was as of September 30th, while the other years were as of March 31st.

It would be best if we could incorporate these changes before ADM signoff on Wednesday, so that we can speed up that process with everyone having the most up-to-date version as we sit around the table. Maybe we could have Bud Sec do that at the same time as whatever changes come out of the Pension Extract review meeting tomorrow? Speaking of which, on 3B, page 5, third paragraph, I'd like to make the IOD paragraph consistent with what we have in 3C, paragraph 2 of page 7, so it would read (leaving the numbers out given that this email isn't password protected):

"Interest on debt expense for 2016-17 is forecast to be $x billion, $y billion lower than forecast in the *2016 Budget,* continuing a trend that has been in place since 2010, through a combination of lower deficits and borrowing requirements, and lower than forecast interest rates."

Could someone please pass that change on to whomever is responsible for updates to 3B, or should Ken and I just do this at tomorrow's meeting on the Pension Extract, given that's one of the pages that we'll be going over?

Thanks for everyone's hard work on getting 3C, and anything else related to debt and IOD elsewhere in the document, to this point. Almost there!

Gadi

Good question Anna, as you can see from the chart it extends to 2026-27 only, hence our assumption in 6) that there is no increase in the TCA from that point onwards to the 2030-31, the projected date for attaining the 27%.

A number of assumptions were available but we felt this represented the optimum selection, in other words we assume that post 2026-27 any capital investments by the Province are fully offset by amortization thus flat lining the TCA.

Sorry I couldn't come and see Gadi at Frost, Carlos had scheduled a conference call with TDS at 11.30 so I had to rush back to 1 Dundas as soon as the OEFC Audit Committee ended.
Thanks

Hi Ken, attached are the consolidated answers to the FAO questions. Could you please take a look at the chart that CPD added to A9 on p. 6. Do tangible capital assets appear in that chart? And if so, how does that relate to our point number 6 re no change in TCA?

Are you in trillium or have you gone back to 1 Dundas? Gadi is on the 7th floor now. Feel free to come out and chat with him here when you're done in the audit committee or call him when you have a moment.

Subject: Follow-Up on the 2017 Budget

Good Morning!

Congratulations on delivering yesterday's big, black budget!

I wanted to follow-up on the FAO's requests for some additional information.

First, as we have discussed, we have three requests for specific data/tables:

1. We would like to obtain the detailed revenue and expense tables (Tables 6.14 and 6.15) extended to 2019-20.
   - Are these detailed tables available to 2020-21? If so, then please include (☺)

2. As staff have been discussing, we would like to obtain more detailed information on the one-time adjustments to taxation revenues beginning in 2015-16 and extending over the forecast. This is basically additional information to that provided in tables 6.7, 6.8 and 6.9.

3. As detailed in the letter and background documents sent to Deputies Thompson and Angus on April 3, we are requesting pension expense and employer contribution details for the OTPP and OPSEUPP.

We would also appreciate a meeting early next week (preferably Tuesday afternoon) to allow you to respond to a number of questions that we have with regard to the 2017 Budget.

We'll provide a list of specific questions later this afternoon, but these questions will cover a number of areas, including:

- Clarification on where the Fair Hydro Plan appears in the expenses
- Additional details/clarification on new health spending, including the new pharmacare plan
- Clarification on future assumptions for asset sales and any details behind the 'Sales and Rentals' line in the detailed Revenue table.
- Clarification on the assumptions behind new federal funding announced in the 2017 federal budget (e.g. affordable housing, child care, home care)
- Some background on the decision to reduce the estimate of 'Carbon Allowance Proceeds' and assumptions on associated expense
- Additional details/clarification on new infrastructure spending
- Assumptions behind the plan to reduce net debt-to-GDP to 35% and eventually to 27%.

We'll provide a list later this afternoon that expands somewhat on these question topics.

Happy to discuss any of these requests.

Thanks again for your support,
David

---

Hello Ken and Bonnie,

Thank you again for the call and explaining in more detail the pension issue. It was very helpful.

I'm attaching the following documents that I wrote in regards to accounting which I hope that you will find interesting, but I am sending them in two parts as, all together, they exceed our band-width limit.

- AcSB 5 Year Strategic Plan
- Several issues of our flagship publication "CDN Govt Central" which feature accounting-based articles that I wrote (see index). The latest December 2016 is also my trip notes piece from my meetings in Europe and Asia.
- Special article on Government Transfer Accounting
- Special article on Saskatchewan's Pension Advantage….

…more to come in a follow-up email

On a separate note, I thought I would mention that the Vice Chair of the Accounting Standards Board (AcSB) is Karen Higgins. Karen is the national director of accounting services for Deloitte & Touche LLP Canada and a member of Deloitte's Global IFRS leadership team. Also represented on the AcSB are accounting firms BDO and KPMG.

On the PSAB board, the Vice-Chair is Andrew Newman and he is from KPMG. There is also a CPA staff person who is a non-voting member of both the AcSB and PSAB. Her name is Stephenie Fox. That provides some linkage between the two boards.

Sincere regards,

Maria

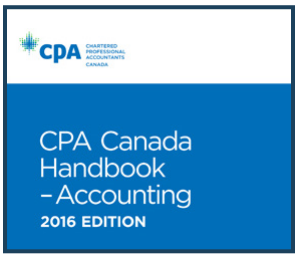
The Accounting Standards Oversight Council (AcSOC) oversees the activities of the Board, and assesses and reports to the public on its performance.

CPA CHARTERED PROFESSIONAL ACCOUNTANTS CANADA

The structures and processes that support the operations of the AcSB are funded by the Chartered Professional Accountants of Canada (CPA Canada).

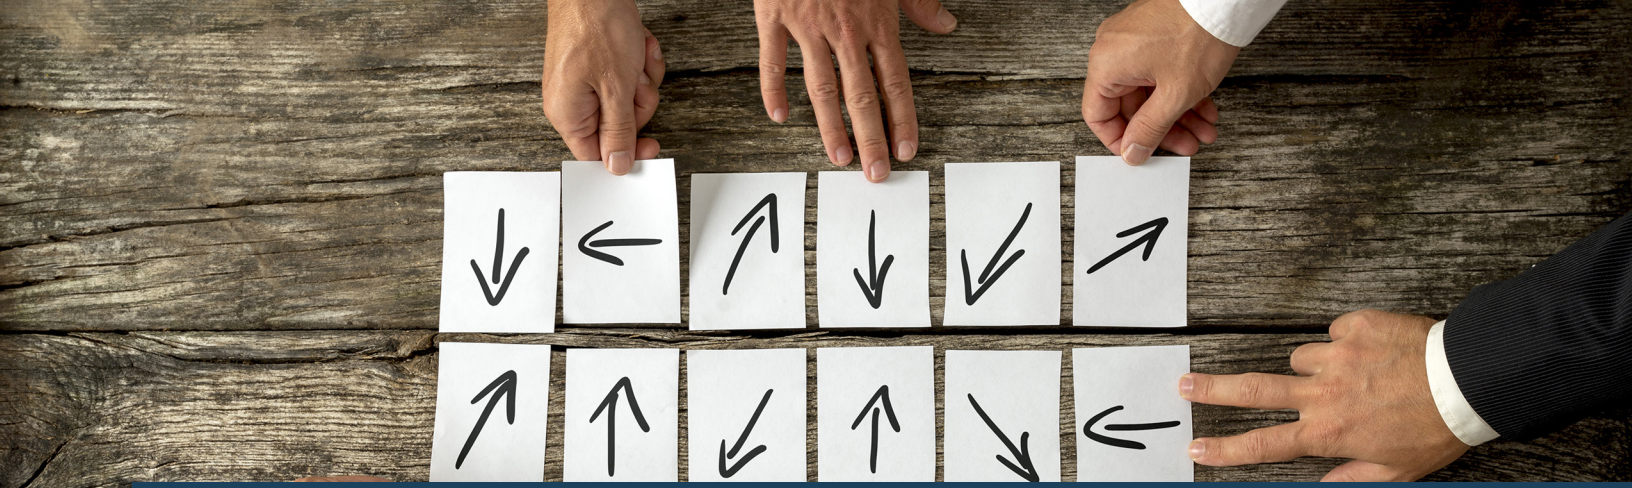


Our mission

To support informed economic decision making by maintaining frameworks that provide a basis for high-quality information about financial performance reported by Canadian private sector entities.

Serving the public interest

The AcSB serves the public interest by:



Establishing high-quality accounting standards that promote stakeholder confidence in the information reported by Canadian private sector entities with due consideration for the costs and benefits to preparers and users of financial statements, and changes in the economic environment

Being accountable to stakeholders by responding to their needs in a timely manner, and facilitating their participation and input into the development of the standards that affect them

Contributing to global best practices in accounting standard setting for every major category of reporting entity in Canada's private sector — publicly accountable enterprises, private enterprises, not-for-profit organizations and pension plans

Research — necessary for evidence-based standard setting

Effectiveness and efficiency are key qualitative characteristics of a world-class standard setter.

Effective and efficient standard setters do more than look for process improvements and prioritize. They also conduct research on a timely basis.

Research aids in identifying the key issues to be addressed during the development of a standard on a particular topic, allowing for more focused deliberations. Research also supports evidence-based decision making — a goal shared by standard setters around the globe.

During the period 2016-2021, the AcSB will begin a formal research program relating to all the major categories of reporting entities that:

- focuses on topics of importance to Canadians
- contributes to evidence-based global best practices that consider the Canadian perspective

When undertaking research, we will consider how stakeholders with expertise might assist with a particular project.

Due process

The AcSB follows due process when setting financial reporting standards. Our due process is based on three key principles.

Transparency
Conducting the standard-setting process openly, being clear about how we make our decisions and telling stakeholders about standard-setting developments

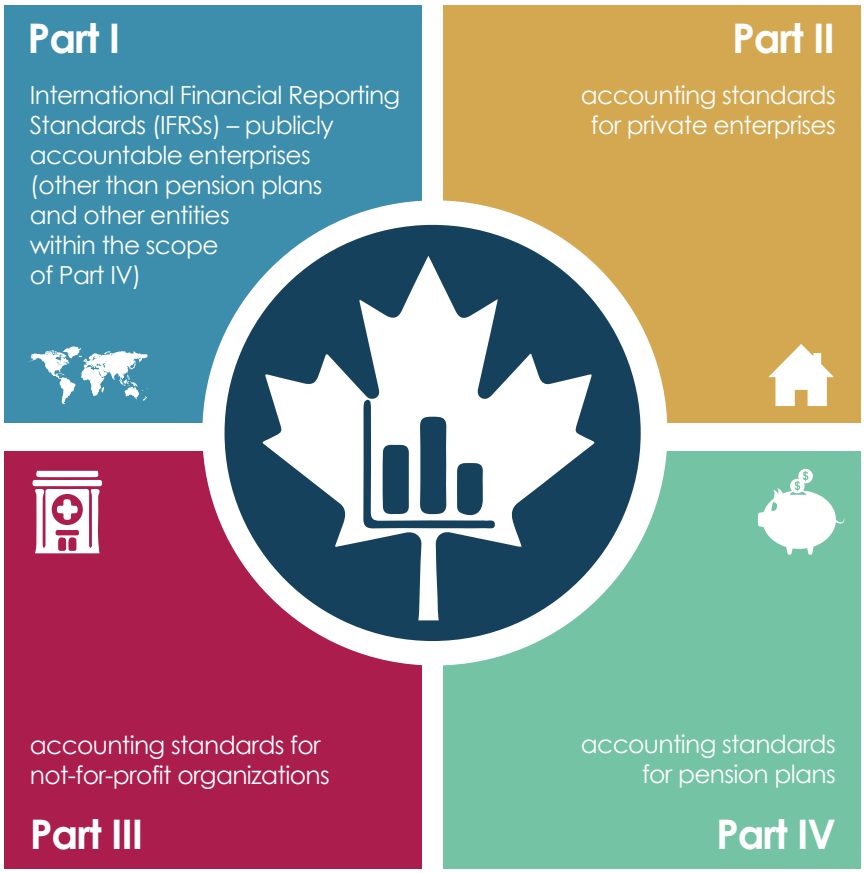
Consultation
Considering the perspectives of those affected by Canadian financial reporting standards

Accountability
Analyzing the potential effects of standard-setting proposals on our stakeholders and explaining the rationale for our decisions

Hearing from our stakeholders

The AcSB considers a successful standard-setting process to be one in which stakeholders participate. In order to raise the level of stakeholder awareness and engagement in our process and activities, we will look for ways to increase our transparency.

We will also continue our initiatives of recent years to find new opportunities and methods to communicate with Canadians. That includes building on relationships recently established with individuals and groups we talked with for the first time, and ensuring we are accessible to all stakeholders — regardless of their type and geographical location.



Strategies for the major categories of reporting entities

When meeting the needs of Canadians, "one size does not fit all".

The AcSB is committed to meeting the financial reporting needs of Canadians. This results in improved information that facilitates the allocation of capital from all sources, both public and private.

We demonstrated that commitment by adopting different financial reporting strategies for the major categories of Canadian reporting entities.

We established a separate set of accounting standards for each reporting category, tailored to meet the specific needs of that sector. These standards are found in the CPA Canada Handbook – Accounting.

Improving how we implement our strategies

The AcSB concluded, and Canadians strongly agree, that the overall strategies adopted for the various categories of reporting entities are meeting stakeholder needs.

We think we can do even better by not only listening to what our stakeholders say they need, but also anticipating changes in those needs resulting from developments in the financial reporting environment for each category.

This strategic plan incorporates improvements to the way we implement each strategy in order to do just that.

Publicly Accountable Enterprises

Strategy

Support the application in Canada of IFRSs

Publicly accountable enterprises in Canada operate in a North American and, increasingly, a global environment.

For this sector, the AcSB adopted, into Part I, International Financial Reporting Standards (IFRSs) as issued by the International Accounting Standards Board (IASB).

Reflecting the frequency of cross-border activities and comparisons made between Canadian and U.S. entities operating in the same industries, some publicly accountable enterprises apply U.S. GAAP instead of IFRSs, as permitted by Canadian securities regulations for dual-listed companies.

Regardless of the accounting framework they follow, our objective is to add value for publicly accountable enterprises by maintaining a strong global presence. We are at the international table when issues important to Canadians are discussed, ensuring the Canadian perspective is considered.

Support the application in Canada of IFRSs *(continued)*

We have earned respect as a strong national standard setter and wield influence internationally as a result. We will work to leverage Canada's influence by:

1. Actively participating in international groups and looking for new opportunities to liaise with others who share our goal of high-quality financial reporting
2. Connecting Canadians with the IASB on particular standard-setting projects when appropriate
3. Nurturing our relationships with the IASB and the U.S. Financial Accounting Standards Board, encouraging them to narrow the differences between their respective sets of standards, and supporting appointments of high-calibre Canadians to their committees
4. Conducting research that provides thought leadership to the global community on topics important to Canada

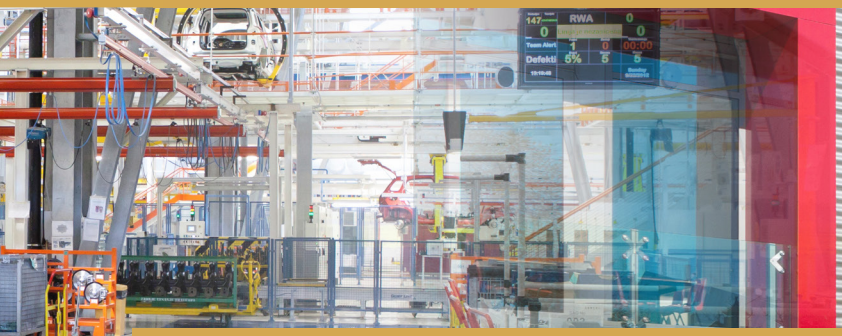
Our responsibility to establish accounting standards for all categories of Canadian private sector reporting entities means we do not simply wait for the IASB to issue IFRSs.

We work hard to influence the development of IFRSs, especially early in the process.

We raise awareness about all projects to develop an IFRS and provide every opportunity for Canadians to make their views known — by responding to documents for comment on the IASB's proposals, and participating in roundtables and other meetings we arrange with members and staff of the IASB.

Finally, we complete a multi-step process before considering whether to approve a final IFRS for incorporation into Canadian GAAP. We decide to do so only when we are satisfied that it is suitable for application in Canada.

Support the application in Canada of IFRSs *(continued)*



During the period 2016-2021, Canadians will adopt a number of complex new IFRSs. To assist them, we will:

- work with others around the world to encourage a common global adoption date
- encourage the early identification and resolution of IFRS implementation issues including through our IFRS Discussion Group, and by supporting Canadian members of IASB transition resource groups
- develop a process for incorporating into the CPA Canada Handbook – Accounting, certain non-authoritative guidance issued by the IASB that Canadians consider necessary for the application of IFRSs

These actions will mitigate the challenges to Canadians of sometimes being among the first to adopt an IFRS when other jurisdictions decide on a mandatory effective date different from the one set by the IASB.

Nevertheless, circumstances may arise in the future that could warrant further action here at home if adopting a particular standard ahead of others would put our publicly accountable enterprises at a disadvantage.

Private Enterprises

Strategy

Retain and improve the set of standards in Part II

The AcSB developed accounting standards for private enterprises (ASPE) with the specific needs of this sector in mind. They are principles-based, require the exercise of professional judgment, and are intended to help users make informed decisions.

However, they are not as complex as IFRSs, and involve less effort and cost to apply.

Our previous research indicated that creditors were the traditional users of private enterprise financial statements and could obtain additional information upon request. Therefore, our focus was to simplify the disclosure requirements in ASPE. The goal was to provide enough information for users to understand the financial statements and make informed inquiries when they need more details.

The private enterprise world is changing. Some domestic enterprises are now operating globally and entering into complex transactions. Greater attention is being paid to private enterprise financial statements by other users besides creditors. Private equity investors are just one example.

The AcSB has no intention to move private enterprises to IFRSs. Instead, we will respond to these environmental changes by being mindful of their effect on the information needs of users when making future amendments to ASPE.

During the period 2016-2021, the goal remains a high-quality set of standards that:

- produces decision-useful information for creditors and other frequent financial statement users
- is complete in terms of addressing the accounting issues for which stakeholders say they need guidance
- supports the exercise of professional judgment yet provides sufficient guidance to result in consistent application

We will use our connections with international standard setters to ensure we not only consider global best practices when making our private enterprise decisions, but also contribute to the development of those practices.

Not-for-Profit Organizations

Strategy

Retain and improve the set of standards in Part III

Accounting standards for not-for-profit organizations (NFPOs) address the unique transactions and circumstances arising in the private not-for-profit sector. For other transactions, organizations are directed to apply ASPE.

Not-for-profit accounting is garnering greater attention globally. Opportunities exist for all jurisdictions wishing to develop high-quality standards for NFPOs to learn from each other.

The AcSB recently established the Not-for-Profit Advisory Committee, a standing committee to provide input on standard-setting matters of interest to private sector NFPOs. The Committee is assisting the AcSB's improvements initiative to review the accounting standards for NFPOs so that the AcSB can update as necessary, ensuring that these standards continue to meet the sector's needs.

During the period 2016-2021, we will:

- carry out our improvements initiative after considering the advice of our Advisory Committee as well as feedback from our stakeholders
- conduct research, including consultations, on recognizing revenue from contributions
- consider global best practices when making decisions on our Canadian standards
- contribute to global best practices through continued dialogue with other jurisdictions involved in setting standards for NFPOs
- develop and implement a process to manage the maintenance of Part III

Central to these activities is a clear understanding of financial statement user needs in this sector. We will enhance our understanding of the differing needs of users of the financial statements of the public benefit and member benefit organizations that make up the private not-for-profit sector. That better understanding will assist us in deciding, on a case-by-case basis, the extent to which a standard we are improving should align with or differ from the corresponding public sector not-for-profit accounting standard (as issued by the Public Sector Accounting Board).

Pension Plans

Strategy

Retain the set of standards in Part IV

Pension plans apply the separate set of standards developed by the AcSB for this sector.

Feedback from our public consultations suggests that the Canadian private sector pension plan environment is currently stable. To date, plans growing increasingly common in the public sector that combine features of both defined benefit and defined contribution pension plans have not yet appeared in the private sector.

We previously indicated that we intend to undertake a project to improve accounting standards for pension plans. However, stakeholders agree that the issues to be addressed are not sufficiently pressing to warrant starting that project in the short term.

During the period 2016-2021, we will monitor developments in this sector:

- to determine when we should start our improvements project
- for signs that emerging new types of pension plans requiring standard-setting attention are appearing in the private sector

We will stand ready to act should new types of plans emerge. In the meantime, we are committed to working with other jurisdictions to advance our collective understanding of global developments in this area and possible approaches to developing guidance to address these new types of plans.

Monitoring for Success

The AcSB will monitor its progress in implementing this strategic plan on an ongoing basis, comparing results achieved against desired outcomes. As well, we have an established risk management process that includes monitoring developments in the environment to identify when to change our standard-setting approach. The key risks we manage to ensure we achieve our mandate relate to:

- how effectively we consult and communicate with Canadians
- the effectiveness of our involvement in international standard-setting processes
- the effectiveness of our staff
- whether preparers apply some or all of the standards
- the strength of our reputation

In developing our annual plans, we review the controls we have in place to mitigate these risks, and determine if there are other risks to manage or actions to be taken.

Accordingly, the actions we take to implement this plan will be adjusted as necessary during the period 2016-2021 to see that our planned initiatives continue to meet the needs of our stakeholders.

In overseeing our activities, the Accounting Standards Oversight Council (AcSOC) will assess our performance against the objectives set out in this strategic plan and our annual plans, to ensure the effective, efficient and economic fulfillment of our public interest mandate.

Bloomberg Ticker: FNFACA

First Nations Finance Authority ('FNFA' or 'Authority') was built on a robust planning framework that spanned more than 20 years in development. The process originated with meticulous federal government policy research, and eventually led to the enactment of supportive and protective legislation that underpins sound financing practices. This framework ensures the utmost protection for bank lenders and bondholders. The framework establishes clear parameters which gives First Nations communities access to capital for important infrastructure and business development.

Canada's First Nations have made strong progress over the past decade in securing their entitlement to share in the financial benefits of Canada's natural resources, and asserting their rights to be consulted on major energy and resource projects. First Nations and Canadian government relations at all levels are being re-set on a course of stronger understanding and cooperation to secure a brighter and better future for all Canadians. To this end, FNFA is an important funding platform that harnesses the capacity of the institutional capital markets to participate in this journey. There are currently 200 First Nations out of 634 across Canada scheduled in the program. **FNFA projects its loan program to grow from approximately $297mln today to over $1.2bln by 2021**.

"Resetting the relationship and affirming First Nation rights and First Nation government responsibilities to their people can unlock economic potential, and generate significant and essential opportunity for all Canadians," stated Shawn Atleo, former National Chief of the Assembly of First Nations.

Dr Dominique Collin is a former senior economist with the Government of Canada (Department of Indigenous and Northern Affairs Canada, or 'INAC'), and is now Principal of Waterstone Strategies, a private consulting firm.

A quote from Dr Dominique Collin:

> I have been involved in Aboriginal access to capital issues for 30 years, from the federal government side and from the Aboriginal financial institution side, and in all that time I have not come across any instance of First Nation governments defaulting on long-term infrastructure or public work-related debt. Social housing debt, the single largest block of First Nation government debt, has been an important feature of First Nation government finances for more than a generation, most of it with federal government backstop. The published loss rates for government housing backstop programs are close to nil, as confirmed by a sequence of Auditor General reports on Aboriginal housing, confirming that First Nation governments are a good lending risk.
>
> Over the past 10 years, a rapid increase in own-source revenues from benefit agreements, royalties, revenue sharing agreements, participation in

> major energy, and resource projects has multiplied the capacity of First Nation governments to address business and infrastructure investment needs with debt. Setting aside community-owned business ventures, which on the whole have done well but remain within the business risk category, I am not aware of any defaults. This likely results from the solidity of the revenue streams used for borrowing, the increased ability of lenders to understand the lending environment and, most important, from the willingness of revenue-rich First Nations to opt into rigorous financial administration oversight regimes such as the one provided by the First Nations Financial Management Board certification process.
>
> Dr Collin has been involved in a number of Aboriginal financial institution development initiatives in the areas of business, infrastructure and housing finance. He is the co-author, with Michael Rice, of *Access To Capital for Business: Scoping out the First Nation and Inuit Challenge*, an in-depth analysis of Aboriginal access to capital performance and issues from 1975 to 2003. An update of this report to 2013, with an analysis of the 10-year increase in outstanding business/infrastructure debt, will be published in the fall of 2016.

An example of an FNFA loan is the $5.27mln, 30-year term loan to fund the Songhees Wellness Centre in Victoria, British Columbia (shown below), which is backed by a federal 20-year Right-of-Way contract giving a Canadian naval base road access through lands owned by the Songhees First Nation.

The Songhees Wellness Centre, Victoria, British Columbia

FTSE TMX Canada Universe Bond Index Classification

- Sector: Government
- Industry Group: Municipal
- Industry Sub-Group: British Columbia
- Rating: A
- Index Weight: Less than 0.5%

Regulatory Classification:

- Basel III Risk-Weighting – Standardized Approach*: FNFA is a non-share, non-profit corporation and may meet the criteria for a 'Claim on Corporate' with a credit assessment rating of A- to A+. Under this criteria, bonds would be subject to a 50% haircut. Investors are advised to consult their legal counsel.
- HQLA – OSFI Liquidity Adequacy Guideline/Basel III: FNFA is a non-share, non-profit corporation and may meet the requirement of a Level 2B asset (50% haircut). Investors are advised to consult their legal counsel.

  *FNFA is not classified as a Public Sector Entity (PSE) for purposes of the Capital Adequacy Guidelines. Chapter 3.1.3 of the guidelines provides that where PSEs other than Canadian provincial or territorial governments provide guarantees or other support arrangements other than in respect of financing of their own municipal or public services, the PSE risk weight may not be used. The PSE risk weight is meant for the financing of the PSE's own municipal and public services.

First Nations Finance Authority began funding in the institutional debt markets in June 2014 with its inaugural 10Y issue of $90mln (FNFACA 3.4% June 26, 2024). Since 2014, the Authority has tapped the market once a year by upsizing the existing issue twice.

Going forward, FNFA is planning to continue targeting the 10-year funding area. It expects to issue $130mln annually for next two fiscal years as the client base increases. In the third fiscal year, it anticipates doing both spring and fall issuances, aggregating about $250mln in each fiscal year.

FNFACA 3.4% June 26, 2024 $251mln – S&P Rating A- Moody's Rating A3 Stable

Like other government issuers, FNFA raises debt in the exempt market by offering securities via an Information Memorandum. The Authority has historically borrowed through a syndicated market process. There are 20 to 25 investors currently participating in FNFA's debt issues, crossing all investor types. While the majority of investors fall into the category of large Canadian institutionals, there has been a modest level of Canadian retail participation. There has also been a good level of participation by US investors. The most recent transaction was distributed to 22 institutional investors, with an overall blend of almost 50/50 between repeat and new, as the investor base continues to grow.

Debt Issuance by Type

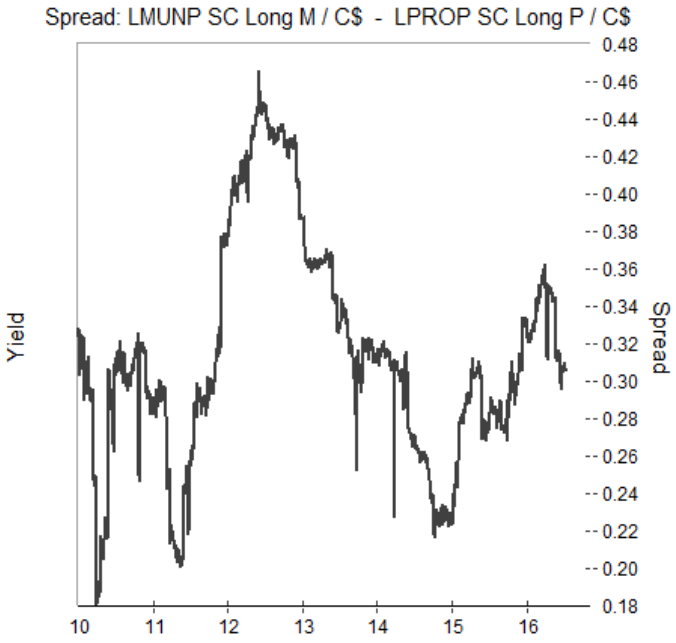
Debt Issuance by Location

Source: FNFA, CIBC Capital Markets – Macro Strategy

FNFA bonds are classified in the FTSE TMX Canada Universe Bond Index in the Municipal sub-sector category. Like other Canadian bonds in this category, FNFA bonds are best suited in investment portfolios as 'buy-and-hold' positions in passive mandates, as well as a component of active mandates. They also have broad appeal in retail accounts due to their investment grade quality and name familiarity. FNFA bonds may also be suitable for holdings by regulated financial institutions.



The municipal sub-sector represents about 2% of the FTSE TMX Canada Universe Bond Index, and we are constructive on a 'modest' overweight position (3-4%) at current spread levels, and a position in FNFA bonds towards an overweight.

In spite of the generally stronger credit risk profiles of municipal bonds, these types of bonds trade back of their more senior provincial counterparts and generally move in tandem. As

depicted in the spread graph below, earlier in the year, municipal spreads moved wider than their provincial counterparts (i.e. basis risk) reflecting a global re-pricing of liquidity premiums that was spurred by extreme market volatility and risk aversion. Spreads have since tightened somewhat, but the liquidity spread premiums remain attractive in the current low interest rate environment where investors are searching for yield.

It's important to highlight that secondary market liquidity continues to be impinged upon by regulatory requirements imposed on financial institutions and their broker/dealers. Moreover, a trend towards dealer inventory aging requirements is also having an impact.

Long Muni Index Spread over Long Provi Index

Source: PC Bond

We like FNFA municipal bonds as a means to anchor portfolio credit quality (Moody's A3, Standard & Poor's A-, all outlooks 'stable') and for yield pick-up. We expect FNFA's credit risk profile to be relatively stable, and improve over time.

Source: CIBC *Outlooks stable unless otherwise noted. N=Negative P=Positive

FNFA's credit ratings are predicated on several factors. These factors include the strong institutional and legislative framework, the expectation that FNFA is likely to receive extraordinary government support, a solid governance and management structure, a rigorous credit review process, strong interest and debt service coverage ratios, and several structural protections that include:

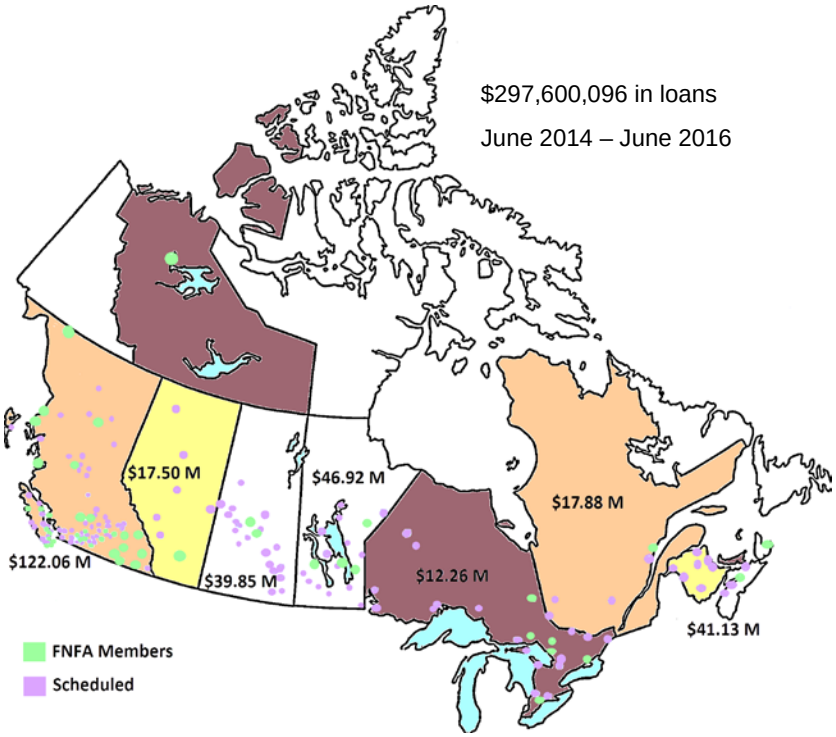
- A mechanism to intercept revenue streams ('Other Revenues') that secure a Borrowing Member's loan payments and the deposit of these revenues, either directly or by an intermediate account, into a segregated trust account (a 'Secured Revenues Trust Account');
- A Debt Service Reserve Fund (DRF) that is funded by a hold-back of 5% of the loan advance, which serves as a layer of cross-collateral protection. Recent changes to the First Nations Financial Management Act, FNFMA, now permit the holdback to vary between 1-5%, but Management's intentions are to stick with the practice of 5%. (Additionally, rating agencies will be consulted ahead of a change, as the FNFMA provides that the FNFA's Board can only permit a lower hold-back if there are no adverse

rating consequences.). There is a requirement to replenish the DRF on a 'joint and several' basis among all Borrowing Members who received financing from the FNFA, but only within each borrowing stream (i.e. Property Taxes or Other Revenues);

- A $10mln Credit Enhancement Fund (CEF) that was funded by the federal government. The CEF was established to enhance the FNFA's credit rating by being available to temporarily offset any shortfalls in the Debt Reserve Fund. The CEF will be increased to $30mln within the next year with a $10mln instalment this fall and another $10mln instalment next spring; and
- A legislative requirement to establish a sinking fund for each bond issue, which builds based on the amortizing structure of the underlying loan.

The presumption of extraordinary federal government support is reasoned on the fact that it is highly embedded in the overall program. The federal government has played an integral role in establishing the framework for the FNFA through the enactment of federal legislation, the establishment of federally operated boards engaged in processing First Nations community groups into the program, ongoing oversight thereafter, and the provision of funds for the Credit Enhancement Fund. With respect to the latter, the recent Federal budget explicitly mentions ongoing intentions to build a better future for Canada's Indigenous Peoples through a wide range of initiatives as well as support for the First Nations Finance Authority to provide $20mln over two years, beginning in fiscal 2016-17, to strengthen the Authority's capital base.

While there is no explicit federal guarantee on FNFA bonds, the aforementioned factors add up to a strong level of implicit and explicit support.



FNFA offers its borrowing members two types of loan facilities: Interim, and Long-Term Loans. These facilities are discussed in more detail below. FNFA finances these loans through a syndicated Bridge Financing Facility (the 'Facility') with three Canadian chartered banks until it arranges long-term funding through a debenture offering.

The Facility is secured by first-ranking liens on all real and personal, corporeal and incorporeal, present and future assets, including on all of the accounts of FNFA (including accounts that hold the CEF and Debt Reserve Fund) and the rights of FNFA in the Secured Revenues Trust Accounts and the Property Tax Accounts. FNFA is subject to non-financial covenants, including a Material Adverse Change Clause and the ratings dropping to outside of investment grade. The credit facility also requires the maintenance of two ratings, which indirectly provides protections to bondholders as the debentures do not contain this provision. Since inception of the Facility, there has never been a breach.

In February 2016, the security rankings of FNFA's debentures were upgraded to rank *pari passu* with FNFA's $130mln secured line of credit. This was a major enhancement for bondholders.

We note, however, that FNFA's ratings are constrained by a number of rating factors which are expected to abate over time. The rating agencies have cited FNFA's relatively high – but declining – volatility in profitability (previous losses from one-time start-up, and lower federal grants and management fees), the geographic concentration of borrowers in the province of British Columbia, which currently stands at 41% (July 2016), but is down from 65% in 2014, as well as its short operating history. An improvement in any of these along with a stronger liquidity profile could drive the ratings up. Conversely, a deterioration in the overall quality of the loan pool or change in the FNFA's framework and/or structural considerations for the rating, including a reduction in government support, could put downward pressure on the ratings. **We are not expecting any changes to FNFA's credit ratings in the near term, but we believe there is more upside potential than downside risk to bondholders.**

FNFA Borrowing Map

Source: FNFA

FNFA's internal liquidity consists of approximately $2.2mln in cash and equivalents, $12.5mln in investments representing amounts held in the Debt Reserve Fund and $10mln in the CEF, which will grow to $30mln by next spring. Today's level of internal liquidity of around $25mln is just under 10% of outstanding debt, which is considered adequate for the ratings, but low for higher rating categories. The liquidity metric will improve with additional deposits in the CEF. External liquidity consists of the $130mln Bridge Financing Facility.

All in all, liquidity is considered adequate given the conduit nature of the intermediation process where payments are intercepted from Borrowing Member revenue sources to service outstanding debt and, therefore, liquidity needs beyond what is necessary for servicing debt are minimal. Although FNFA's borrowing powers are not restricted to providing loans to Borrowing Members and it could borrow to finance working capital, historically the FNFA has financed its operations through federal government grants and operating income from the spread between what it borrows and lends at. On the lending side, FNFA's mandate is only to make loans to First Nations that have qualified as Borrowing Members.

In the past year, FNFA's loan portfolio has grown from $140mln to $297mln, with an increase in members from 23 to 34. In a year's time, based upon the current loan portfolio plus the expected disbursement of $130mln in additional loans prior to March 31, 2017, the DRF will accumulate to approximately $21.5mln and the annual interest liability will be approximately $12.4mln. With the CEF at $30mln, interest coverage will be over 4 times ($30+21.5/$12.4). **The FNFA plans to submit a request for a further $20mln to the CEF to expand it to $50mln in 2017 in order to maintain the interest coverage ratio at or above four times coverage (target interest coverage).** Both Moody's and S&P rate FNFA according to their government-related entities methodology. With respect to S&P, the criteria falls specifically under *Rating Government-Related Entities: Methodology and Assumptions*, published March 25, 2015. S&P gives FNFA a two-notch uplift from its Stand-Alone Credit Profile, or SACP, rating of 'bbb' because it views the likelihood of FNFA receiving extraordinary government support as 'moderately high'. In a sovereign downgrade scenario – which we are not anticipating – the methodology permits the Government of Canada rating to fall two notches

(i.e. from AAA to AA), without impacting FNFA's ratings (all else remaining unchanged).

Under Moody's *Government-Related Issuers Rating Methodology* (October 30, 2014), Moody's applies its Joint Default Analysis (JDA) framework to its analysis of Government-Related Issuers (GRI) to explain the credit links between GRIs and their supporting central, regional, and local governments. This approach gives FNFA a two-notch uplift from Moody's intrinsic Baseline Credit Assessment score of 'baa2' on a "strong likelihood of extraordinary support". Moody's framework incorporates the concepts of dependency and support which, in FNFA's case, would also accommodate a multiple notch downgrade of Canada. The framework suggests a rating change only if Canada's Aaa were to drop to A1, assuming everything else remains the same.

We caution that all rating agency methodologies are theoretical reference points and final ratings are subject to the adjudication of the rating committees, but the aforementioned analysis does suggest a strong degree of flexibility in a sovereign downgrade scenario.

Legislative Framework, Lending Approach, and Bondholder Protections

First Nations Finance Authority (the 'FNFA' or the 'Authority') is a non-share, non-profit corporation established under Part 4, Section 58 of the First Nations Fiscal Management Act (FNFMA, or the 'Act') which came into force on April 1, 2006. The FNFA is not an agent of Her Majesty or a Crown Corporation.

First Nations Finance Authority's head office is in Westbank, British Columbia. It operates within the terms of reference embodied in the FNFA. It runs its operations from a single location with credit adjudication done in-house as well as externally through a network of advisors located across Canada.

The impetus for the development of the First Nations Finance Authority was based on government policy research that concluded that a large gap exists in First Nations/Inuit access to affordable private capital which is hindering their economic potential. This conclusion was reached following a study that covered data from 1975 up to and including 2003.

> First Nations/Inuit business financing access levels, trends and gaps all point to historical over-reliance on insufficient levels of government contribution capital and growth stalled at the early expansion phases for both the small and mid-sized ventures for lack of an organic connection to market capital. Correcting the situation is urgent and will require innovative ways to engage market sources of capital beyond the limited leverage ability of existing sources of government help.

From *Access to Capital for Business: Scoping out the First Nation and Inuit Challenge,* by Dr Dominique Collin, Waterstone Strategies and Michael Rice, Indian and Northern Affairs Canada, May 2009.

First Nations Finance Authority fulfills an important role in reducing this gap. To facilitate funding for First Nations communities, FNFA's objectives are to monetize federal and provincial revenue agreements with First Nations as well as First Nation's own-source revenues.

The First Nations Fiscal Management Act sets out the procedure for First Nations to become 'Borrowing Members' of the Authority and the requirements that must be fulfilled as part of the borrowing process. It also gives the First Nations Finance Authority the powers to secure financing for its Borrowing Members, and to issue securities.

In addition to facilitating access to funding for its Borrowing Members, the FNFA also sponsors a pooled investment fund program for its 'Investing Members'. Two pooled funds are offered: the MFA Money Market Fund, and the MFA Intermediate Fund. The funds are

operated and managed by the Municipal Finance Authority of BC.

It's important to understand that participation in the FNFMA is optional. It was designed as an optional piece of legislation to promote the continued economic development of participating First Nations, but respecting their rights to self-government and self-determination.

While all First Nations have the authority to pass by-laws related to the taxation of land under the Indian Act, the FNFMA offers an alternative and rigorous authority for First Nations to collect property tax. By opting into the property tax system under FNFMA, First Nations are better positioned to promote economic growth and capitalize on solid business relationships, resulting in a better quality of life for community members.

The act enables First Nations to participate more fully in the Canadian economy and foster business-friendly environments while meeting local needs by:

- strengthening First Nations real property tax systems and First Nations financial management systems
- providing First Nations with increased revenue raising tools, strong standards for accountability, and access to capital markets available to other governments
- allowing for the borrowing of funds for the development of infrastructure on-reserve through a co-operative, public-style bond issuance
- providing greater representation for First Nation taxpayers

The process to initiate participation in the FNFMA is via submission by a Band Council Resolution to the Minister of Indigenous and Northern Affairs requesting that the band be added to the schedule of the FNFMA. The process takes four to six months from the time the Band Council Resolution is received, but recent amendments to the Act are expected to shorten and streamline the process.

The FNFMA framework is supported by the work of the First Nations Finance Authority (FNFA), First Nations Tax Commission (FNTC), and First Nations Financial Management Board (FMB). The FNTC provides regulatory support to First Nations' property tax jurisdictions. The FMB sets standards for financial administration laws that it must review and approve as well as conducts certification reviews of First Nations' financial management systems and financial performance.

An important protection to bondholders is that before a First Nation can borrow funds from the Authority, the First Nation is required to make a Financial Administration Law regarding its financial administration. The law must be approved by the First Nations Financial Management Board (the 'FMB'), the independent board established pursuant to the Legislation, that reviews the law for compliance with the Legislation and the FMB's standards. The FMB's standards are intended to support sound financial administration practices for a First Nation.

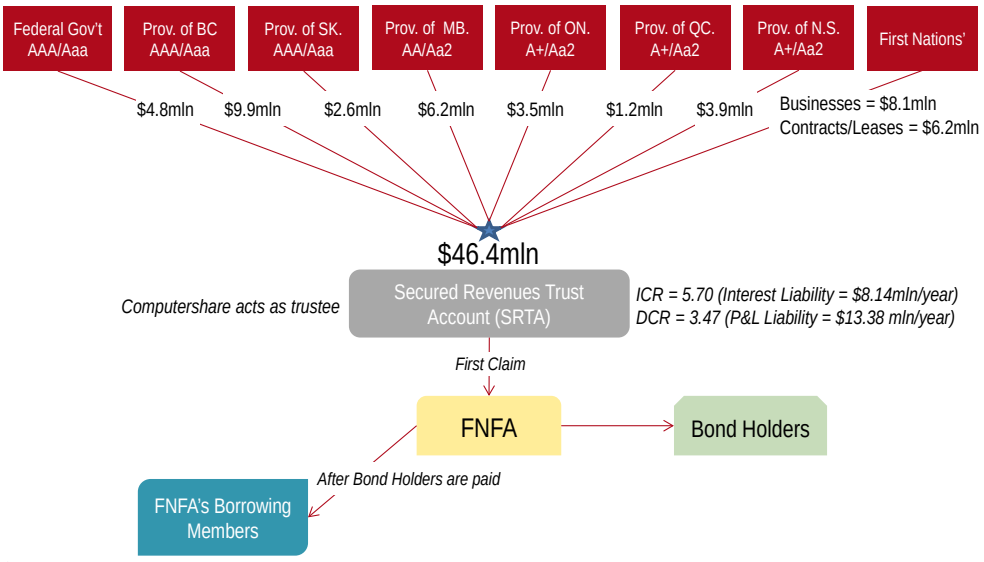
A First Nation is required under the Legislation to obtain a Financial Performance Certificate from the FMB before it can become a Borrowing Member of the Authority. A Financial Performance Certificate will only be issued after the FMB reviews a First Nation's financial condition to determine if it complies, in all material respects, with the FMB's standards. These standards are comprised of seven financial ratios that are applied to the First Nation's past five years of audited financial statements. The ratios are intended to measure financial capacity or risk of overall structural deficit; ability to meet short-term operating obligations; ability to generate sufficient annual cash flows to maintain operations; ability to maintain a sustainable level of capital investment; debt burden and overall insolvency; ability to manage and execute budgets; and, the efficiency and stability in collecting property taxes. These financial tests are intended to measure financial capacity or risk of overall structural deficit; ability to meet short-term operating obligations; ability to generate sufficient annual cash flows to maintain operations; ability to maintain a sustainable level of capital investment; debt

burden and overall solvency; ability to manage and execute budgets; and, the efficiency and stability in collecting property taxes.

A First Nation must also obtain a Financial Management Systems Certificate within 36 months of receiving financing from the Authority (other than interim financing). Also, the Authority will require such a First Nation to obtain a Financial Management Systems Certificate prior to providing any loans subsequent to the loans contemplated by that First Nation's initial borrowing law. A Financial Management Systems Certificate is more encompassing than a Financial Performance Certificate and will only be issued after the FMB reviews a First Nation's financial management system to ensure it is operational and complies, in all material respects, with the FMB's standards. These standards are intended to establish sound financial practices for the operation, management, reporting and control of the financial management system of a First Nation.

Claims to and collection of financial cash flows to service the FNFA's debt is assured by several legal and structural protections.

Direction to Pay | Intercept



The Authority uses a mechanism to intercept revenue streams ('Other Revenues') that secure a Borrowing Member's loan payments. As required by the Legislation, each Borrowing Member irrevocably instructs third parties paying Other Revenues that secure a loan to pay those revenues, either directly or by an intermediate account, into a trust account (a 'Secured Revenues Trust Account') maintained by Computershare Trust Company of Canada (the 'SRTA Manager') throughout the period of the loan. Under the terms of the Secured Revenues Trust Account, only the Authority (and not the applicable Borrowing Member) is entitled to instruct the SRTA Manager on the allocation and payment out of amounts from the Secured Revenues Trust Account and all payments to the Authority from the Secured Revenues Trust Account are made by the SRTA Manager. This ensures that amounts due to the Authority, including any amounts required to replenish the Debt Reserve Funds, are paid before any remaining amounts are paid to the Borrowing Member.

Financial Ratios

FMB examines the First Nation's past five years of audited financial statements to assess the following 7 financial ratios:

1. Fiscal Growth Ratio (if a decline greater than 5% occurs, then test failed)
2. Liquidity Test (if a decline greater than 10% occurs, then test failed)
3. Core Surplus Test (weighted average EBITDA must exceed 5% of current revenues)
4. Asset Maintenance (maintenance/replacement must exceed depreciation)
5. Net Debt Ratio (EBITDA is equal to or exceeds 1.5 times interest expenses)
6. Budget Performance (actual expenses cannot exceed budget more than 15%)
7. Property Tax Collection Rate (prior 5 year average collection rate must exceed 95%)

Intercepted Revenues Supporting FNFA Loans

Source: FNFA

Where the Other Revenues comes from a contract or an agreement, generally, the full amount of the Other Revenues is paid into the Secured Revenues Trust Account. Where the Other Revenues is from a Borrowing Member's owned business, the amount collected into the Secured Revenues Trust Account is greater than that needed to fulfill loan payments. The

Authority ensures the Secured Revenues Trust Account collections are equal to or greater than a debt coverage ratio. Each revenue stream is evaluated upon criteria such as payor risk, duration of stream, stability, etc. and has a debt coverage ratio applied to it.

Revenue Sharing by Province

Province	Type of Revenue Shared
BC	Forest Tenure Agreements, Added Value Rebate Tax, BC Hydro-IPPs, Mineral Specific Resource Revenue Sharing Policy, Gaming (Host)
AB	Added Value Tax Rebate, Fuel Tax Rebate, Gaming
MB	Added Value Tax Rebate, Fuel Tax Rebate, Gaming
NB	Forestry Stumpage, Fuel Tax Rebate, Added Value Tax, Gaming
NS	Added Value Tax Rebate, Gaming
ON	Mineral Specific Resource Revenue Sharing Policy, Gaming (OFNLP)
QC	Mineral Specific Resource Revenue Sharing Policy, Hydro Revenues, Added Value and Fuel Tax
SK	Fuel and Added Value Rebate Tax, Gaming
Canada	FNGST/FN Sales Tax (opt-in only), FN Personal Income Tax (Self-Government Agreement only)

Source: FNFA

Priority of Claims

In the event that a Borrowing Member becomes insolvent, the Legislation (section 78) provides that the Authority has priority over all other creditors of the Borrowing Member (other than the Crown) for any amounts payable by the Borrowing Member to the Authority in connection with a loan secured by Other Revenues (as authorized under an agreement governing a Secured Revenues Trust Account) or under the Legislation.

The Authority does not rely on provincial Personal Property Security Act ('PPSA') legislation to perfect its security. To prevent inconsistent priorities, PPSA legislation generally excludes from its application security given by another enactment. Moreover, the Indian Act (section 88) provides that provincial laws of general application (such as PPSA legislation) are not applicable to or in respect of Indians to the extent that those laws are inconsistent with the Legislation.

Sinking Fund

The Authority is required by the Legislation to maintain a Sinking Fund to fulfill its repayment obligations for each bond issue. All principal repayments by Borrowing Members on loans from the Authority financed with proceeds of bonds are placed in a Sinking Fund for such bonds.

Debt Reserve Fund

The Authority is required by the Legislation, in connection with providing loans to Borrowing Members, to establish a Debt Reserve Fund. The Authority is required to withhold between 1% and 5% (the Authority currently withholds 5%) of the amount of any loan secured by Borrowing Members using Other Revenues and deposits that amount into the Other Revenues Debt Reserve Fund. If at any time the Authority has insufficient funds from Borrowing Members that have received financing secured by Other Revenues to make payments to bondholders, including Sinking Fund contributions, such payments are to be made from the Other Revenues Debt Reserve Fund.

If payments from the Other Revenues Debt Reserve Fund reduce its balance by 50% or more of the total amount contributed by Borrowing Members, then the Legislation provides that the Authority must (and may where the balance is reduced by less than 50%) require all Borrowing Members who contributed to the Other Revenues Debt Reserve Fund to pay

amounts sufficient to replenish that fund. As a consequence of this replenishment mechanism, Borrowing Members that have received financing secured by Other Revenues are potentially liable for, and support, the debt obligations of any defaulting Borrowing Members that have received financing secured by Other Revenues. Amounts due to the Authority to replenish the Debt Reserve Fund may be drawn from the Secured Reserve Trust Account of a Borrowing Member, which collects an amount above what is required to service regular debt payments.

Credit Enhancement Fund

In accordance with the Legislation, the Authority has established a Credit Enhancement Fund of $10mln to support the Debt Reserve Funds in making payments to bondholders. This fund may be used by the Authority to temporarily off-set any shortfalls in the Debt Reserve Funds. On March 22, 2016, the Government of Canada, as part of its 2016 budget, announced that it proposes to provide $20mln over two years, beginning in the Government of Canada's 2016-2017 fiscal year, to strengthen the Authority's capital base. Any such amounts received by the Authority from the Government of Canada will be added to the Credit Enhancement Fund.

Investment Authority

The Legislation provides that amounts in Sinking Funds, Debt Service Reserve Funds and the Credit Enhancement Fund can only be invested in certain eligible investments. The Authority may only invest in: (a) securities issued or guaranteed by Canada or a province; (b) investments guaranteed by a bank, trust company or credit union; and (c) deposits in a bank or trust company, or non-equity or membership shares in a credit union. With respect to Sinking Funds, the Authority may also invest in (a) securities of a local, municipal or regional government in Canada and (b) securities of the Authority or a municipal finance authority established by a province, if the day on which they mature is not less than the day on which the security for which the sinking fund is established matures.

The Authority has adopted a formal Investment Policy not to invest funds in a Sinking Fund for deposits in a trust company, or non-equity or membership shares in a credit union.

The Investment Policy has incorporated the following constraints:

- Sinking Fund investments should attempt to preserve capital and approximately match the debenture maturity date. However, it is understood that prudent investment management may entail some investments matching the loan term to the Borrowing Members instead of the debenture maturity term where these loan terms are for a longer period than the debenture (i.e. loans that will need to be refinanced over their term).
- DRF investments should attempt to provide sufficient liquidity through cash or cash equivalents to permit the FNFA to meet up to one year of sinking fund and interest payments for all outstanding debentures.

The Investment Policy has established guidelines with respect to credit quality and diversification.

Intervention Mechanism

If a Borrowing Member that has received financing secured by Other Revenues fails to make a payment to the Authority under a borrowing agreement, or fails to pay a charge imposed by the Authority in connection with replenishing a shortfall in the Other Revenues Debt Reserve Fund, the Authority can require the FMB to either impose a 'co-management arrangement' in respect of that Borrowing Member's Other Revenues, or assume 'third-party management' of that Borrowing Member's Other Revenues. If the FMB assumes 'third-party management' of the Borrowing Member's Other Revenues, the FMB has exclusive right to, among other things, act in place of the Council of that Borrowing Member in relation to assets of that Borrowing Member that are generating Other Revenues.

In four years of FNFA loans, no third-party management or co-management arrangement has ever been initiated as a result of a Borrowing Member failing to make payments to the FNFA. It is highly unlikely in the future for any of FNFA's clients since revenue streams are irrevocably intercepted for the full loan term from the payor source prior to loan release and the majority of these loans are payments from provincial governments or crowns. Hence, a failure in the intercept arrangements and/or a default of a province (or crown) would be a necessary scenario for this to happen. We highlight Canada's strong AAA rating and the senior ratings enjoyed by Canada's provinces. We also point out that FNFA does not have any single revenue stream clients.

In a revenue intercept scenario, FNFA staff would immediately contact the payor for an understanding. If the payor still refused to pay into the revenue intercept account with the SRTA manager, then a court action would be started.

The Financial Management Board, under the Legislation, has full authority to become the manager/treasurer over all of a Borrowing Member's Other Revenues, including Other Revenues that currently do not secure loans by the FNFA. The FMB can use that authority to ensure amounts due to the FNFA are repaid. The FMB's authority is under the Legislation, rather than contractual, which makes enforceability very strong. FMB staff do not do this intervention. FMB has an agreement with a national accounting firm that is an experienced intervenor to handle this function.

There is only one co-management arrangement existing in FNFA's portfolio. The co-arrangement is with St. Theresa Point, a band in Manitoba. The co-arrangement existed prior to joining the program. The co-arrangement was not related to failure to pay loan service or any liabilities, but rather related to the band asking for help in the areas of accounting and finance. The revenues servicing FNFA's loan to St. Theresa Point are coming directly from the Province of Manitoba and the Debt Service Coverage Ratio (P&I) is strong at 6.28 times. The band is in a strong operating surplus position.

Recent Changes to the FNFMA

Legislative and regulatory amendments to the FNFMA came into force on April 1, 2016 stemming from recommendations and consultations with the FNFA, FMB and FNTC to improve the regime's overall framework. The changes are expected to have a positive impact on facilitating entry of more First Nations, accelerate bond issuance and strengthen investor confidence.

Notable enhancements include:

- Allowing payments in lieu of taxation through a new fiscal power to collect fees for water, sewer, waste management, animal control, recreation, transportation and other similar services.
- Giving First Nations the power to recover costs of enforcement, including the costs for seizure and sale of taxable property.
- First Nations' Financial administration laws must meet higher requirements set by the Financial Management Board (FMB) on an ongoing basis and these laws cannot be repealed unless they are replaced by laws approved by the FMB.
- Tougher requirements on management of local revenues including their maintenance in separate accounts from all other First Nations moneys as well as separate financial reporting and auditing requirements, unless permitted by FMB to include as part of audited annual financial statements.
- Clarification of the separation and distinction of Debt Service Reserve Funds (DRF) for loans secured by property tax revenues and loans secured by other revenues. The FNFA has been given flexibility to withhold between 1-5% of the loan amount, depending on the

circumstances and in accordance with regulations. Initially, the withheld rate was set at 5%, at a higher threshold than observed in municipal borrowing practices. Some flexibility was granted with this change, but the Authority's practices are expected to remain unchanged. Clarification was also given that only Borrowing Members who have received financing can be called on to contribute to or replenish a DRF and only the DRF for their borrowing stream. There are two streams, one for Property Taxation and the other for Other Revenues. In each stream, however, Borrowing Member obligations to replenish are joint and several. Enhancement to the Act also established that the FNFA's priority over other creditors of a First Nation in the event of an insolvency arises from the date the borrowing member has received financing from the FNFA, thus strengthening its priority.

- The ability to invest sinking fund proceeds in FNFA bonds to reduce net funding costs, although, from a ratings perspective, this does not reduce the total amount of outstanding debt. The increased flexibility will also allow FNFA to manage its bonds in the secondary markets.
- Introducing a mechanism for repayment to the Credit Enhancement Fund (CEF), within 18 months, where the CEF has been used to replenish a DRF.

Credit Underwriting Process and Experience

This credit history of lending to First Nations through the First Nations Finance Authority is short as it only came into existence in 2006. More history can be found in the bank lending sector of making loans on First Nations reserves. There has not been a recorded loan default by a First Nation since at least 1970. There have been only a few known cases in the past where there was difficulty in collecting but, in those cases, either the financial institution failed to follow its own normal lending criteria or failed to properly contractually secure its position including the 'Redirection to Pay'. Banking lenders have often noted strong moral suasion and moral obligation to fulfill loan repayment requirements due to the closeness of First Nations Communities and a sense of duty and honour. We highlight that FNFA's experience to date shows a meaningful percentage of First Nations making payments ahead of schedule. In FNFA's 2016 Annual Report, the level of prepayments is shown at $5.8mln, almost a full year's interest payment ahead.

The financial strength and economic potential of First Nations communities continues to evolve in a constructive manner as evidenced by the number of First Nations that are participating in the First Nations Fiscal Management Act (FNFMA) and the growth in their own-source revenue. A total of 13 First Nations opted to participate in the FNFMA shortly after it came into force in April 2006 (i.e. original members). Today, there are 200 First Nations scheduled versus 634 First Nations across Canada.

It is estimated by Dr Dominique Collin of Waterford Strategies that own-source revenues accounted for about one-third of total revenues of participating First Nations combined, or $2.6bln, in Fiscal 2014-15. This is up from about 16% 10 years ago.

FNFA's mandate allows First Nations to access 'Long-Term Loans' or financing that is supported by two types of revenue streams: property taxation revenues and other revenues. It also offers 'Interim Financing Loans' to cover costs during construction or bridge financing until FNFA issues its next debenture. **FNFA has yet to receive a loan application which falls under the property taxation revenue stream, although the legislation was originally contemplated for this type of borrowing.**

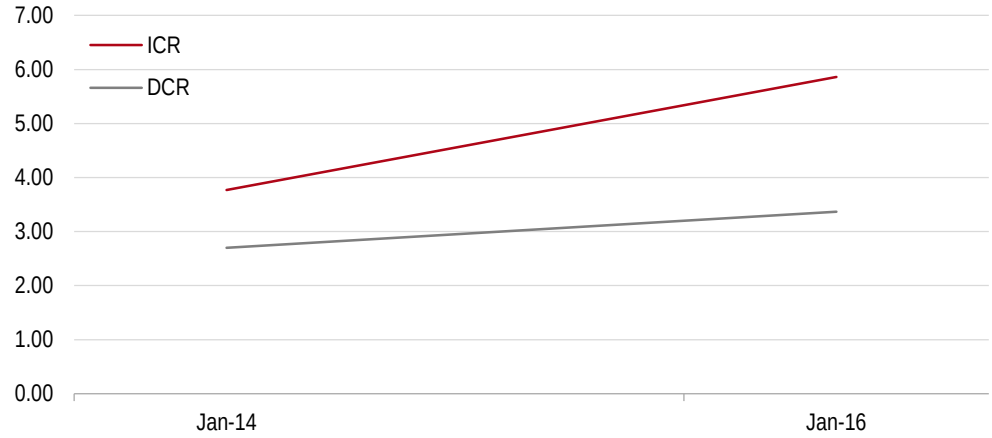
Long-term financing or lease financing of capital assets is made for the provision of local services on reserve bands. Short-term financing for operating or capital purposes is made either in accordance with the stated purposes of paragraph 5(1)(b) of the FNFMA which relates to spending supported by Property Tax Revenues or to refinance short-term debt incurred for capital purposes. The Other Revenues Regulation outlines spending purposes for

Other Revenues (i.e. infrastructure, social and economic, land purchases, etc.).

FNFA's ratings are constrained to the upside by a lack of diversity in size, credit quality and geographic diversification of its loan portfolio. Rating agencies have taken a cautious approach to rating the FNFA given its short operating history, rapid loan growth and loan concentration issues; but these overall characteristics are expected to strengthen over time as the program grows and expands across Canada. **FNFA projects its loan portfolio to grow from about $297mln today to over $1.2bln by 2021 (Loan Growth: 2017 projected to $385mln; 2018 $515mln; 2019 $715mln; 2020 $955mln; 2021 $1.225bln).**

As a matter of practice to ensure adequate diversification and to support its strong credit ratings, the FNFA has reduced its individual loan exposures with the goal of keeping concentrations below 20%. In 2014, Membertou (largest borrower) was 24.59% of the loan pool. In July 2016, it was down to 11%.

FNFA aspires to stronger geographical distribution as currently its members are located in only eight provinces. FNFA Board Policy for minimum Debt Coverage Ratio ('DCR') of its individual Borrowing Member loans is set to at least 1.23 times, but its members are operating at much higher thresholds. While Borrowing Members must meet stringent requirement to participate in the program already, the Authority limits their borrowing to 75% of their calculated borrowing capacity (75% Rule). Should a member want their loan amount to exceed 75%, the FNFA staff do a further review of financial information/revenue stream documents before granting such loan privileges.

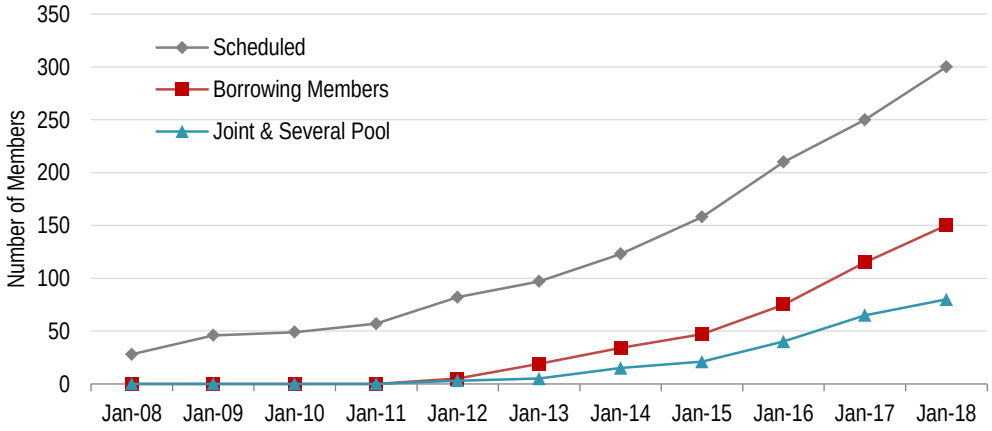


Borrowing Member loans are all in Canadian dollars and are amortizing, but have loan terms that expire ahead of full amortization and therefore must be refinanced. FNFA's borrowings are done in Canadian dollars, hence there is no foreign exchange risk assumed.

With respect to the amortization of client loans and refinancing risk, 90% of client loans have repayment terms that extend beyond FNFA's debenture maturity in 2024. These clients are given a choice to lock-in rates with an interest rate swap for their full loan term, but none have taken this since Supreme Court decisions in respect of First Nations entitlements have caused revenues to grow much faster than the national average of revenue growth for First Nations (up 2.5 times since 2005) and, therefore, First Nations generally want the option to fully payout their loans in 2024. Of those First Nations that do not payout the loan and need to refinance, because FNFA operates under a sinking-fund approach with debt service collected to include principal along with interest, any amounts refinanced would approximate 50% of the original balance. Thus, interest rates would have to double to maintain the same annual interest commitments for FNFA's clients.

Currently, the majority of FNFA's intercepted revenues are from federal and provincial grants or revenue sharing arrangements, accounting for approximately 70% of total intercepted revenues. Some risks exists with respect the cyclicality of these revenue streams or other credit factors, but in general, these are well secured. As FNFA's intercepted revenue stream contains a significant percentage of other revenues (i.e. non-government), normal credit risk factors apply. Today, business revenues include lease contracts from owned buildings that are anchored by strong national tenants. There is also a gaming business. The only existing pipeline and utility related revenues are associated with BC Hydro, Hydro Quebec and Hydro One which are provincial crowns.

In 2014-2015, the FNFA's intercepted revenues had an Interest Rate Coverage Ratio ('IRC') of 6.3 times (i.e. revenues intercepted were 6.3 times greater than the debenture's interest liability). Approximately 75% of these revenues were from federal/provincial revenue sharing agreements; the balance being contractual revenues, lease agreements and established Band businesses. At the time of the recent debenture issues, the percentage has fallen from 75% to 67%, but the coverage ratios have improved. Intercepted revenues are from Fed/Provincial sources alone have a Debt Coverage Ratio ('DCR') of 2.25 times annual debt service.



Interest Rate Coverage Ratio ('IRC') and Debt coverage Ratio ('DCR')

Financial Reporting and Transparency

Canada's accounting architecture is founded on the work of several independent, volunteer bodies to establish authoritative standards of recommended or required practice. These bodies include the Public Sector Accounting Board (PSAB). PSAB issues standards and guidance with respect to matters of accounting (Public Sector Accounting Standards – PSAS), as well as financial reporting recommendations of good practice (Statements of Recommended Practice – SORPs). Their work is to serve the public interest by strengthening accountability in the public sector. The public sector refers to governments, government components, government organizations, and government partnerships. While compliance with PSASs is voluntary by the sovereign (Federal Government of Canada) and sub-sovereigns (Provinces), adherence to the PSAB requirements is legally required at the municipal level under various municipal acts. As it pertains to First Nations and their right to self-govern, reporting and transparency is voluntary by opting to participate under the First Nations Transparency Act and report under PSAB.

Successful monitoring of participating First Nations by the First Nations Finance Authority is dependent on access to financial information. The First Nations Transparency Act requires that each First Nation to which the Act applies publish on its Internet site, or cause to be published on an Internet site, the following documents within 120 days after the end of each

financial year:

- its audited consolidated financial statements
- the Schedule of Remuneration and Expenses
- the auditor's written report respecting the consolidated financial statements; and
- the auditor's report or the review engagement report, as the case may be, respecting the Schedule of Remuneration and Expenses

These documents must remain accessible to the public on an internet website, for at least 10 years.

The Act further states that the Minister of Aboriginal Affairs and Northern Development must publish these same documents on the departmental website "without delay after the First Nation has provided him or her with those documents or they have been published."

First Nations do not have interim reporting requirements.

With respect to the First Nations Finance Authority, it has to file an annual report before July 31 of each year, within 120 days after year end (Section 88 of the Act). There are no interim reporting requirements, but Management is actively engaged in providing investors with regular updates.

Canada's Political System and First Nations

Canada's political system is a Westminster-style democracy with a federal system of parliamentary government. Canada is a constitutional monarchy in which the Queen or King is recognized as the head of state. Since February 6, 1952, the Canadian monarch has been Queen Elizabeth II, who is represented by the Governor General. The federal system is a union of partially self-governing regions, known as provinces (i.e. sub-sovereigns), under a central (federal) government (i.e. sovereign) where there is a division of power between the federal government and the provinces.

Canada has three main levels of government: federal, provincial (and territories), and municipal. The Constitution Act, signed in 1867, defines their respective powers, some of which are shared. While territories and municipalities have their own governments, they are not considered sub-sovereigns as they have no legislative authority to determine their powers and responsibilities. The responsibilities of the three territories are granted to them by the federal government while the responsibilities of municipal governments are granted by their respective provincial governments.

Under the constitution, the federal government has jurisdiction over: national defence, foreign affairs, employment insurance, banking, federal taxes, the post office, fisheries, shipping, railways, telephones, pipelines, aboriginal lands and rights, and criminal law. The federal government re-distributes wealth among the provinces through a system of equalization payments (i.e. extra money) given to provinces that are less wealthy, thus ensuring that the standards of health, education and welfare are the same for every Canadian.

The provinces have powers over: direct taxation, health care, prisons, education, some natural resources, marriage, road regulations and property and civil rights. Power over

agriculture and immigration is shared between the federal and provincial governments.

Municipalities are responsible for areas such as libraries, parks, community water systems, local police, roadways and parking, receive their authority from the provincial governments. Across the country there are also band councils, which govern First Nations communities. These elected councils are similar to municipal councils and make decisions that affect their local communities and operate under a framework of right to self-government or self-determination.

Aboriginal self-government is specifically referred to governments designed, established and administered by Aboriginal peoples under the Canadian Constitution through a process of negotiation and, where applicable, the provincial or territorial government.

History of Canada's First Nations

According to the last census (2011), there were approximately 1.4 million indigenous people living in Canada (status and non-status), representing just over 4% of Canada's 34.3 million population at that time. The indigenous count included 851,000 First Nations, 451,000 Métis, and 59,000 Inuit. A Canadian status indigenous person is a legal term referring to any First Nations individual who is registered with the federal government or a band which signed a treaty with the Crown. Many indigenous First Nations Canadians live on reserves, an area of land in which the legal title is held by the Crown, but is set apart for the use and benefit of a First Nations band.

First Nations lived in Canada for thousands of years before the arrival of the Europeans in the eleventh century. These First Nations were able to satisfy their material and spiritual needs through the resources of the natural world surrounding them. Historians tend to group Canada's First Nations into six main geographic areas of the country as it exists today:

- Woodland First Nations, who lived in dense boreal forest in the eastern part of the country
- Iroquoian First Nations, who inhabited the southernmost area, a fertile land suitable for planting corn, beans and squash
- Plains First Nations, who lived on the grasslands of the prairies
- Plateau First Nations, whose geography ranged from semi-desert conditions in the south, to high mountains and dense forest in the north
- Pacific Coast First Nations, who had access to abundant salmon and shellfish and gigantic red cedar trees used for building houses
- First Nations of the Mackenzie and Yukon River Basins, whose harsh environment consisted of dark forests, barren lands, and the swampy terrain known as muskeg

Within each of these six areas, First Nations had very similar cultures, largely shaped by a common environment. They tended to function on the basis of a complex system of government based on democratic principles.

Today, the relationship between First Nations and the government is based on a broad collection of treaties covering pre-confederation, peace, and friendship treaties, as well as post-confederation or numbered treaties. In more recent history, there are also 'Modern Treaties', with the first one historically documented in the mid-1970s. Modern treaties have been entered into to satisfy comprehensive or specific land claim rights of Aboriginals that were not addressed by previous treaties, or by other legal means.

Aboriginal peoples, under the treaties, are recognized as the descendants of the original inhabitants of North America. The Canadian Constitution recognizes three groups of Aboriginal people with unique heritages, languages, cultural practices and spiritual beliefs. These are the Indians, Métis and Inuit. The term 'First Nation' came into usage in the 1970s

and is widely used today to replace the word ‘Indian’ or ‘band’, although it is not a term that is legally recognized.

An historic Canadian settlement in the right to self-government was achieved in 2006, after 16 years of legal negotiations challenging the authority of the federal government. The agreement resulted in the transfer of $350mln in energy royalties to the Samson Cree. The money was placed in an independent trust fund (‘Kisoniyaminaw Heritage Trust’). It was the first time an Indian group was successful in seizing its own moneys and setting up a trust to which it had power of trustee and control of its own assets. The settlement also saw the removal of the federal government as trustee of all energy royalties for the Samson Cree and Ermineskin, two bands located on the Hobbena reserve in central Alberta.

"Control of our heritage trust moneys is a major step forward for the present and future generations of Samson Cree Nation members, and an important recognition of our Treaty 6 rights," said Chief Victor Buffalo.

Disclosure: Maria Berlettano is a former member of the Canadian Accounting Standards Board (AcSB), an independent body with the authority to develop and establish accounting standards for use by all Canadian entities outside the public sector. The information contained in this article is based only on public information, is largely descriptive and not intended to represent the views of any accounting body.

Reviews of the 2014-15 Public Accounts (and 2015-16 when available) reveal some interesting findings with respect to accounting treatment for government transfers. Below we discuss some of these findings, which demonstrate that additional work is needed to obtain more consistent practices in order to render financial statements comparable.

Preparation of the Public Accounts

The Annual Statements of Public Accounts for the Government of Canada are accompanied by a Statement of Responsibility that is signed by the Secretary of the Treasury Board of Canada, Deputy Minister of Finance, Deputy Receiver General for Canada, and Comptroller General of Canada. Each Canadian province (sub-sovereign) is held to account on a similar basis.

The Government of Canada's annual consolidated statements are independently audited by the Auditor General of Canada. The Auditor General also audits the accounts of the Canadian territories, as they are not sovereigns and fall under the jurisdiction of the federal government. The provinces, however, each have their own independent auditor generals.

The federal and provincial governments prepare their financial statements according to Public Sector Accounting Standards (PSAS), as well as financial reporting recommendations of good practice (Statements of Recommended Practice – SORPs). PSAS is authoritative, while SORPs are non-authoritative guidelines. Compliance with PSAS is voluntary at the sovereign and sub-sovereign levels. Municipal governments, on the other hand, must comply with the requirements of the PSAB standards as stipulated in their enabling legislation.

Canadian sovereign and sub-sovereign governments can pass enabling legislation that prescribes specific accounting approaches that are not necessarily in line with the PSAB standards. When this occurs, the legislation may allow a government to meet the requirements for an unqualified or unmodified audit opinion, as the auditor is then opining under a different compliance framework.

Unqualified Opinions vs. Qualified Opinions

We reviewed the Auditor General's audit report of the Government of Canada's consolidated financial statements for fiscal 2014-15 and note that it received an unmodified audit opinion from the Auditor General of Canada for the seventeenth consecutive year.

At the provincial level, the majority of Canada's provinces have received unqualified opinions except for the provinces of British Columbia, Québec, and New Brunswick. But, as we discuss below, an unqualified opinion does not necessarily equate to a stronger level of assurance when the distinction between a qualified and unqualified opinion is a matter of judgment and there is a large measure of diversity in practice.

In British Colombia, the Auditor General states as its 'Basis for Qualified Opinion' (Fiscal 2015-16 statements) the inappropriate deferral of revenues as follows:

"Government's accounting treatment for funds received from other governments, and for

externally restricted funds received from non-government sources, is to initially record them as deferred revenue (a liability), and then recognize revenue in the statement of operations either on the same basis as the related expenditures occur, or – in the case of funds for the purchase or construction of capital assets – to recognize revenue on the same basis as the related assets are amortized. In this respect, the summary financial statements are not in accordance with Canadian public sector accounting standards, which require that (i) transfers from other governments be recorded as revenues, except when the transfer meets the definition of a liability for the recipient government, and (ii) externally restricted funds received from non-government sources be recorded as revenue in the period in which the funds are used for the purpose(s) specified." ***In this instance, one of the issues the auditor general is focused on is 'recipient capital transfers', and the definition of a liability.***

With respect to Québec, its auditor general states in its Basis for Qualified Opinion that, "The Government of Québec did not record as at March 31, 2015 and 2014, in the consolidated statement of financial position, government transfers related to different assistance programs for the construction of tangible capital assets and other expenditures that are financed or are to be financed by loans for which the work has been completed. These government transfers are currently reported as contractual obligations in a note to the consolidated financial statements. This situation constitutes a departure from the accounting standard for government transfers (Canadian public sector accounting standards), which states that subsidies are recognized when they are authorized by the government as a result of the exercise of its enabling authority, and when all eligibility criteria have been met by the recipients."
