Hey Ken - chatted briefly with Tim. Just as another option, instead of the revisions, you can also opt to do a QandA on this and leave the wording as is to avoid introducing what was in FES. But if the DM is ok with the revision, we just need to change "2016 Fall Economic Statement" to "2016 Ontario Economic Outlook and Fiscal Review".

Let us know the outcome. thanks

The latter, I don't believe that the DM expressed any preference, he simply had the question as to why even with pre-borrowing the % was only 100. The version I sent you provides a a response.

Thanks

Ken k

Hi Selena

I had a quick discussion with Gadi, re the DM's question and he prefers that we actually indicate how much we have borrowed in relation to the outlook published in the FES. As such, I have made a few edits all on page 14 for the consideration of you and Tim.

Pls let me know if you are ok with these.

Thanks

Ken k

Sareena,
I see that our net debt template was used for a myriad of variable presentations of net debt, such as with the fair hydro, with pension adjustments etc, along with new fiscal deficit numbers since yesterday.

We got the accumulated deficit impact of the pension adjustment this morning from OPCD and put it into the opening net debt number for 2016-17 in the attached. Our opening 2016-17 net debt number now matches what the AG has indicated it should be if following this accounting interpretation. You may have to redo the net debt calculations based on this adjustment as well as the new fiscal impacts.

As you can see, there is a significant impact to the ratio by adding over $12.4 Billion of the pension adjustment to accumulated deficit.

Thanks.

John

Subject: RE: Transition Deck: Base Case & Alternative Fiscal Scenarios

Good morning:

Per the email thread below, we're touching base to provide you with the outlooks for the three scenarios (base, 1, and 2) as they currently stand, including with the IOD forecast that you provided yesterday at 4:30pm. Please note that the only change that has not been incorporated into the attached IOD outlook is a $5M revenue decrease in 2019-20 and 2020-21 that was made this morning. Revenue has been updated in the attached document, but IOD has not since we didn't think it would make a significant difference.

In addition, we have attached a draft version of the deck that will be used to brief the SOC this afternoon at 3pm, however, we are still working through some wording edits. The net debt-to-GDP numbers that we calculated for each scenario can be found in the deck on slides 10,13,14 and 15. Also attached is a copy of the net debt-to-gdp calculator that we used.

Could you please confirm that both the IOD forecast in each scenario as well as the net debt-to-GDP numbers in the deck are correct?

Many thanks!
Sareena

Subject: Re: Transition Deck: Base Case & Alternative Fiscal Scenarios

Hi Tara

With regard to IOD, your characterization of the two versions is accurate. However since our runs were done to meet deadlines we will review the results once more tomorrow morning and confirm.

With regard to the net debt to GDP ratio, as John has pointed out, the version that includes the AG's adjustments should also incorporate the cumulative impact of reversing the pension adjustment and that should not be limited to 16-17 onwards.

We have requested the cumulative impact from OPCD and should be able to provide revised ratios tomorrow.

Thanks

Ken k

---

Hi everyone,

Thank you again for your nimbleness today - we appreciate it.

We were moving quickly today, so we wanted to take a pause just to confirm we are using the correct IOD numbers. We understand that the version sent at 3:56 (first attachment) includes the IOD changes without taking on the accounting change for pensions and Fair Hydro; and the version sent at 4:30 (second attachment) represents the IOD changes after taking on the accounting changes.

We have a small window tomorrow morning to make any final updates, so it would be great if you could confirm first thing in the morning.

John - we're working through all of the net debt-to-GDP scenarios with these new IOD figures, so we'll loop back around with you in the morning to confirm you're ok with all of the ratios for the deck.

We understand the briefing with the SOC is at 3.

Thanks,

Tara

Hi Sareena,

Attached is the revised IOD Summary for the Base Case and Alternative Scenarios together with the impacts from Pension Adjustments and Fair Hydro Plan.

The IOD forecast as of April 30, 2018 is made with the following assumptions:-

1. IOD projections based on new OEP interest rate forecasts (May 23, 2018) for F2018-19 and F2019-20 and the 20-year historical average of interest rates for F2020-21. The latest forecast indicated that there is an decrease of 16 bps for 2019-20 only while marginally the same for 2018-19.
2. Uses the new Net Investment in Capital Assets and interest cap assumptions provided by TBS.
3. The pension adjustments does not impact borrowing as it only has PSAB implications and not cash implications.
4. New borrowing is increased by the partial cost of transferring the Fair Hydro Plan onto the Province’s books as 44% of the cost is already accounted for.

Thanks.

Chi-Wa Che

Mark,

Can you provide us with the historic pension adjustment so we can ascertain the opening 16-17 accumulated deficit impact in case the DM wants to see it tomorrow first thing? It's ballpark 10.6 B plus another $2 billion I think.

Thanks.

John

Subject: RE: Transition Deck: Base Case & Alternative Fiscal Scenarios

Danny,

Thanks. We'll do it, but bear in mind that in order to fully incorporate the pension numbers, we need the cumulative effect on the accumulated deficit or otherwise we won't get the correct net debt number. Only OPCD has the amounts going back which we can use to put to accumulated deficit.

If we get it in time, we can make the calculation. Otherwise, we'll send the revised calculation to what you just sent us, but someone at the briefing today needs to mention that the pension adjustment historical impact is not fully recognized in the net debt numbers presented.

Thanks.

John

Hi,

We just ran into Gadi – he and Tim were talking and they'd like to add to the deck some more net debt-to-GDP ratios!

So for each scenario (base case, #1, #2), he'd like to be able to say by how much net debt to GDP would increase if 1) you were to layer on the impact of pensions and 2) you were to additionally layer on the impact of fair hydro.

If we send you the accounting numbers we're working with, is that doable?

I understand you probably don't have time to redo IOD with the latest information Danny just sent.

We'll send along accounting in a moment, including for 17-18. Thanks,

Tara

Hi Ken, John, and Alex,

We have scenarios for you (again!). So sorry for the last-minute request, but we rolled through some revenue changes, and would really appreciate it if you all could get us an updated IOD and Net Debt-to-GDP outlook for each scenario so we can roll them through the deck (for our 4:15 DM pre-brief).

Again, we really apologize for the short turnaround. We're happy to discuss if you have any questions or concerns.

Thanks so much!
Danny

Cc: John Psinas; Kandeepan, Ken (OFA); McGrath, Tara (MOF); IOD_RPA
Subject: RE: Transition Deck: Base Case & Alternative Fiscal Scenarios

Thank you for the request, Sareena;

1. WRT IOD forecasts and to avoid that anything falls between the cracks, please send e-mails to the copied group "IOD_RPA" which includes analysists preparing the financing table and IOD forecasts, as well as myself;

2. An IOD calculator makes sense if you envision very tight turnaround times, e.g. you provide a scenario after 5 pm and expect a turnaround the same evening. Otherwise and based on our experience during the last Budget, our preference is to do proper IOD runs with our application in order to take correctly into account the impact of fiscal scenarios on the financing table and other aspects/components of IOD;

3. Given the large impact of capital spending on the borrowing program, getting TCA profiles right is at least as important as the fiscal outlook.

Please let me know in case you have any questions.

Subject: Transition Deck: Base Case & Alternative Fiscal Scenarios

Hi Ken, John, and Alex:

Hope all is well.

As part of transition planning, we've received a request from the Secretary to create a deck that includes a base case fiscal outlook to inform the starting point for future fiscal planning. Development of the base case will build off of the medium-term fiscal outlook presented in the 2018 Budget, and will be adjusted as required to scrub the outlook. We've also been asked to include two illustrative scenarios, based on currently available fiscal anchors, that will be layered onto the base case.

In total, we will create 3 scenarios (base case + two illustrative scenarios) for which we would need updated net debt and IOD forecasts. We are talking to TBS about getting updated TCA profiles for this as well.

We are working on creating the base case and illustrative scenarios and will likely send these along piecemeal, as they are drafted. We're hoping to get you a copy of the base case for tomorrow. Not sure how quickly we'll be able to complete the illustrative scenarios, we may also receive further direction on this coming out of tomorrow's session on the fiscal plan. We will aim to get you something for Friday, with the caveat that the scenarios will likely change into the beginning of next week.

Please let us know what you think the best approach is for developing the net debt and IOD forecasts. We're happy to use an updated version of the calculator, as we did for Budget. Alternatively, we could send you individual roll ups for each scenario so that you can calculate on your end.

Hope this makes sense. Tara and I are happy to discuss in more detail on a call – we're around most of the afternoon.

Thank you!
Sareena

Hi,

We just ran into Gadi – he and Tim were talking and they'd like to add to the deck some more net debt-to-GDP ratios!

So for each scenario (base case, #1, #2), he'd like to be able to say by how much net debt to GDP would increase if 1) you were to layer on the impact of pensions and 2) you were to additionally layer on the impact of fair hydro.

If we send you the accounting numbers we're working with, is that doable?

I understand you probably don't have time to redo IOD with the latest information Danny just sent.

We'll send along accounting in a moment, including for 17-18. Thanks,

Tara

Hi Ken, John, and Alex,

We have scenarios for you (again!). So sorry for the last-minute request, but we rolled through some revenue changes, and would really appreciate it if you all could get us an updated IOD and Net Debt-to-GDP outlook for each scenario so we can roll them through the deck (for our 4:15 DM pre-brief).

Again, we really apologize for the short turnaround. We're happy to discuss if you have any questions or concerns.

Thanks so much!
Danny

Good morning:

We have scenarios for you! Attached, please find the base case and two illustrative scenarios, in millions. Mo also just sent a revised TCA profile.

There is a pre-brief with DMs this afternoon at 4:15pm, accordingly, it would be great if we could get the IOD and Net debt-to-GDP outlooks for each scenario by early afternoon so that we can roll them through the deck. I realize that these are tight timelines, and apologize for the short turnaround. Please let us know if you think this is feasible.

Tara and I are happy to discuss the attached, should you have any questions.

Thank you!

Subject: RE: Transition Deck: Base Case & Alternative Fiscal Scenarios

Good morning:

We wanted to provide an update on where things are at with the request for the SOC.

We are still working on both the base case and the illustrative scenarios, based on what came out of the whiteboard session yesterday, so we probably won't have anything to share with you before Monday.

Our colleagues at TBS have prepared an updated TCA profile that should be making its way over to you later today.

We'll be in touch on Monday.

Thanks and hope everyone has a nice weekend,
Sareena

To: Anand, Sareena (MOF)
Cc: John Psinas; Kandeepan, Ken (OFA); McGrath, Tara (MOF); IOD_RPA
Subject: RE: Transition Deck: Base Case & Alternative Fiscal Scenarios

Thank you for the request, Sareena;

1. WRT IOD forecasts and to avoid that anything falls between the cracks, please send e-mails to the copied group "IOD_RPA" which includes analysists preparing the financing table and IOD forecasts, as well as myself;

2. An IOD calculator makes sense if you envision very tight turnaround times, e.g. you provide a scenario after 5 pm and expect a turnaround the same evening. Otherwise and based on our experience during the last Budget, our preference is to do proper IOD runs with our application in order to take correctly into account the impact of fiscal scenarios on the financing table and other aspects/components of IOD;

3. Given the large impact of capital spending on the borrowing program, getting TCA profiles right is at least as important as the fiscal outlook.

Please let me know in case you have any questions.

Best regards

Subject: Transition Deck: Base Case & Alternative Fiscal Scenarios

Hi Ken, John, and Alex:

Hope all is well.

As part of transition planning, we've received a request from the Secretary to create a deck that includes a base case fiscal outlook to inform the starting point for future fiscal planning. Development of the base case will build off of the medium-term fiscal outlook presented in the 2018 Budget, and will be adjusted as required to scrub the outlook. We've also been asked to include two illustrative scenarios, based on currently available fiscal anchors, that will be layered onto the base case.

In total, we will create 3 scenarios (base case + two illustrative scenarios) for which we would need updated net debt and IOD forecasts. We are talking to TBS about getting updated TCA profiles for this as well.

We are working on creating the base case and illustrative scenarios and will likely send these along piecemeal, as they are drafted. We're hoping to get you a copy of the base case for tomorrow. Not sure how quickly we'll be able to complete the illustrative scenarios, we may also receive further direction on this coming out of tomorrow's session on the fiscal plan. We will aim to get you something for Friday, with the caveat that the scenarios will likely change into the beginning of next week.

Please let us know what you think the best approach is for developing the net debt and IOD forecasts. We're happy to use an updated version of the calculator, as we did for Budget. Alternatively, we could send you individual roll ups for each scenario so that you can calculate on your end.

Hope this makes sense. Tara and I are happy to discuss in more detail on a call – we're around most of the afternoon.

Thank you!
Sareena

Hi John,

Thanks again for this – we were wondering if it is possible to get the Net Debt-to-GDP ratio for the scenarios before the AG adjustments as well. I'm happy to do this, but want to make sure it's simply replacing the surplus/(deficit) amounts in column R for the "Base Case", "Scenario 1", and "Scenario 2" tabs.

Happy to discuss.

Thanks!
Danny

Subject: RE: Transition Deck: Base Case & Alternative Fiscal Scenarios

Danny,

Thanks. We'll do it, but bear in mind that in order to fully incorporate the pension numbers,

we need the cumulative effect on the accumulated deficit or otherwise we won't get the correct net debt number. Only OPCD has the amounts going back which we can use to put to accumulated deficit.

If we get it in time, we can make the calculation. Otherwise, we'll send the revised calculation to what you just sent us, but someone at the briefing today needs to mention that the pension adjustment historical impact is not fully recognized in the net debt numbers presented.

Thanks.

John

We have scenarios for you (again!). So sorry for the last-minute request, but we rolled through some revenue changes, and would really appreciate it if you all could get us an updated IOD and Net Debt-to-GDP outlook for each scenario so we can roll them through the deck (for our 4:15 DM pre-brief).

Again, we really apologize for the short turnaround. We're happy to discuss if you have any questions or concerns.

Thanks so much!
Danny

Good morning:

We have scenarios for you! Attached, please find the base case and two illustrative scenarios, in millions. Mo also just sent a revised TCA profile.

There is a pre-brief with DMs this afternoon at 4:15pm, accordingly, it would be great if we could get the IOD and Net debt-to-GDP outlooks for each scenario by early afternoon so that we can roll them through the deck. I realize that these are tight timelines, and apologize for the short turnaround. Please let us know if you think this is feasible.

Tara and I are happy to discuss the attached, should you have any questions.

Thank you!
Sareena

Good morning:

We wanted to provide an update on where things are at with the request for the SOC.

We are still working on both the base case and the illustrative scenarios, based on what came out of the whiteboard session yesterday, so we probably won't have anything to share with you before Monday.

Our colleagues at TBS have prepared an updated TCA profile that should be making its way over to you later today.

We'll be in touch on Monday.

Thanks and hope everyone has a nice weekend,
Sareena

Subject: RE: Transition Deck: Base Case & Alternative Fiscal Scenarios

Thank you for the request, Sareena;

1. WRT IOD forecasts and to avoid that anything falls between the cracks, please send e-mails to the copied group "IOD_RPA" which includes analysists preparing the financing table and IOD forecasts, as well as myself;

2. An IOD calculator makes sense if you envision very tight turnaround times, e.g. you provide a scenario after 5 pm and expect a turnaround the same evening. Otherwise and based on our experience during the last Budget, our preference is to do proper IOD runs with our application in order to take correctly into account the impact of fiscal scenarios on the financing table and other aspects/components of IOD;

3. Given the large impact of capital spending on the borrowing program, getting TCA profiles right is at least as important as the fiscal outlook.

Please let me know in case you have any questions.

Best regards

Subject: Transition Deck: Base Case & Alternative Fiscal Scenarios

Hi Ken, John, and Alex:

Hope all is well.

As part of transition planning, we've received a request from the Secretary to create a deck that

includes a base case fiscal outlook to inform the starting point for future fiscal planning. Development of the base case will build off of the medium-term fiscal outlook presented in the 2018 Budget, and will be adjusted as required to scrub the outlook. We've also been asked to include two illustrative scenarios, based on currently available fiscal anchors, that will be layered onto the base case.

In total, we will create 3 scenarios (base case + two illustrative scenarios) for which we would need updated net debt and IOD forecasts. We are talking to TBS about getting updated TCA profiles for this as well.

We are working on creating the base case and illustrative scenarios and will likely send these along piecemeal, as they are drafted. We're hoping to get you a copy of the base case for tomorrow. Not sure how quickly we'll be able to complete the illustrative scenarios, we may also receive further direction on this coming out of tomorrow's session on the fiscal plan. We will aim to get you something for Friday, with the caveat that the scenarios will likely change into the beginning of next week.

Please let us know what you think the best approach is for developing the net debt and IOD forecasts. We're happy to use an updated version of the calculator, as we did for Budget. Alternatively, we could send you individual roll ups for each scenario so that you can calculate on your end.

Hope this makes sense. Tara and I are happy to discuss in more detail on a call – we're around most of the afternoon.

Thank you!
Sareena

Danny,

As discussed, please see attached. As requested, can someone mention that the historic opening pension adjustment is not fully reflected in the net debt numbers.

Thanks.

John

Subject: RE: Transition Deck: Base Case & Alternative Fiscal Scenarios

Danny,

Thanks. We'll do it, but bear in mind that in order to fully incorporate the pension numbers, we need the cumulative effect on the accumulated deficit or otherwise we won't get the correct net debt number. Only OPCD has the amounts going back which we can use to put to accumulated deficit.

If we get it in time, we can make the calculation. Otherwise, we'll send the revised calculation to what you just sent us, but someone at the briefing today needs to mention that the pension adjustment historical impact is not fully recognized in the net debt numbers presented.

Thanks.

John

Subject: RE: Transition Deck: Base Case & Alternative Fiscal Scenarios

Hi,

We just ran into Gadi – he and Tim were talking and they'd like to add to the deck some more net debt-to-GDP ratios!

So for each scenario (base case, #1, #2), he'd like to be able to say by how much net debt to GDP would increase if 1) you were to layer on the impact of pensions and 2)

you were to additionally layer on the impact of fair hydro.

If we send you the accounting numbers we're working with, is that doable?

I understand you probably don't have time to redo IOD with the latest information Danny just sent.

We'll send along accounting in a moment, including for 17-18. Thanks,

Tara

Assumptions /Notes

1. Surplus for 2017-18 is $ 642 m
2. GDP - per latest information rec'd (see GDP tab)
3. TCA - per info rec'd March 3, 2018 from David Hodes
   After 2027-28 TCA increases are equal to annual amortization
4. Net Debt adjusted for prepaids starting 2014-15. From 2017-18 and onwards - same amount as prior month assumed.
5. Balanced budget continues through to 2035-36
6. GDP annual growth is 4% from 2031-32 to 2035-36
7. Revenue restated to include BPS (Hospitals, colleges, school boards) from 2012-13
8. Revenue from 2017-18 to 2019-20 has been restated for BPS
9. Revenue for 2016-17 was revised down by approx $1 million from $140,735m to $140,734.

Assumptions /Notes

1. Surplus for 2017-18 is $ 642 m
2. GDP - per latest information rec'd (see GDP tab)
3. TCA - per info rec'd May 29, 2018 from M Reghabi
   After 2027-28 TCA increases are equal to annual amortization
4. Net Debt adjusted for prepaids starting 2014-15. From 2017-18 and onwards - same amount as prior month assumed.
5. Balanced budget continues through to 2035-36
6. GDP annual growth is 4% from 2031-32 to 2035-36
7. Revenue restated to include BPS (Hospitals, colleges, school boards) from 2012-13
8. Revenue from 2017-18 to 2019-20 has been restated for BPS
9. Revenue for 2016-17 was revised down by approx $1 million from $140,735m to $140,734.

Assumptions /Notes

1. Surplus for 2017-18 is $ 642 m
2. GDP - per latest information rec'd (see GDP tab)
3. TCA - per info rec'd May 29, 2018 from M Reghabi
   After 2027-28 TCA increases are equal to annual amortization
4. Net Debt adjusted for prepaids starting 2014-15. From 2017-18 and onwards - same amount as prior month assumed.
5. Balanced budget continues through to 2035-36
6. GDP annual growth is 4% from 2031-32 to 2035-36
7. Revenue restated to include BPS (Hospitals, colleges, school boards) from 2012-13
8. Revenue from 2017-18 to 2019-20 has been restated for BPS
9. Revenue for 2016-17 was revised down by approx $1 million from $140,735m to $140,734.

Danny,

Thanks. We'll do it, but bear in mind that in order to fully incorporate the pension numbers, we need the cumulative effect on the accumulated deficit or otherwise we won't get the correct net debt number. Only OPCD has the amounts going back which we can use to put to accumulated deficit.

If we get it in time, we can make the calculation. Otherwise, we'll send the revised calculation to what you just sent us, but someone at the briefing today needs to mention that the pension adjustment historical impact is not fully recognized in the net debt numbers presented.

Thanks.

John

Hi John,

As discussed, please see attached for revised scenarios, updated to include the Pension/Hydro splits (including 2017-18)

Happy to discuss any questions or concerns.

Thanks!
Danny

Tara,

Sure. Can you send us the pension adjustment going back starting from whatever respective year is requested.

Thanks.

Subject: RE: Transition Deck: Base Case & Alternative Fiscal Scenarios

Hi,

We just ran into Gadi – he and Tim were talking and they'd like to add to the deck some more net debt-to-GDP ratios!

So for each scenario (base case, #1, #2), he'd like to be able to say by how much net debt to GDP would increase if 1) you were to layer on the impact of pensions and 2) you were to additionally layer on the impact of fair hydro.

If we send you the accounting numbers we're working with, is that doable?

I understand you probably don't have time to redo IOD with the latest information Danny just sent.

We'll send along accounting in a moment, including for 17-18. Thanks,

Tara

Subject: RE: Transition Deck: Base Case & Alternative Fiscal Scenarios

Hi Ken, John, and Alex,

We have scenarios for you (again!). So sorry for the last-minute request, but we rolled through some revenue changes, and would really appreciate it if you all could get us an updated IOD and Net Debt-to-GDP outlook for each scenario so we can roll them through the deck (for our 4:15 DM pre-brief).

Again, we really apologize for the short turnaround. We're happy to discuss if you have any questions or concerns.

Thanks so much!
Danny

Good morning:

We have scenarios for you! Attached, please find the base case and two illustrative scenarios, in millions. Mo also just sent a revised TCA profile.

There is a pre-brief with DMs this afternoon at 4:15pm, accordingly, it would be great if we could get the IOD and Net debt-to-GDP outlooks for each scenario by early afternoon so that we can roll them through the deck. I realize that these are tight timelines, and apologize for the short turnaround. Please let us know if you think this is feasible.

Tara and I are happy to discuss the attached, should you have any questions.

Thank you!
Sareena

Good morning:

We wanted to provide an update on where things are at with the request for the SOC.

We are still working on both the base case and the illustrative scenarios, based on what came out of the whiteboard session yesterday, so we probably won't have anything to share with you before Monday.

Our colleagues at TBS have prepared an updated TCA profile that should be making its way over to you later today.

We'll be in touch on Monday.

Thanks and hope everyone has a nice weekend,
Sareena

Cc: John Psinas; Kandeepan, Ken (OFA); McGrath, Tara (MOF); IOD_RPA
Subject: RE: Transition Deck: Base Case & Alternative Fiscal Scenarios

Thank you for the request, Sareena;

1. WRT IOD forecasts and to avoid that anything falls between the cracks, please send e-mails to the copied group "IOD_RPA" which includes analysists preparing the financing table and IOD forecasts, as well as myself;

2. An IOD calculator makes sense if you envision very tight turnaround times, e.g. you provide a scenario after 5 pm and expect a turnaround the same evening. Otherwise and based on our experience during the last Budget, our preference is to do proper IOD runs with our application in order to take correctly into account the impact of fiscal scenarios on the financing table and other aspects/components of IOD;

3. Given the large impact of capital spending on the borrowing program, getting TCA profiles right is at least as important as the fiscal outlook.

Please let me know in case you have any questions.

Best regards

Subject: Transition Deck: Base Case & Alternative Fiscal Scenarios

Hi Ken, John, and Alex:

Hope all is well.

As part of transition planning, we've received a request from the Secretary to create a deck that includes a base case fiscal outlook to inform the starting point for future fiscal planning. Development of the base case will build off of the medium-term fiscal outlook presented in the 2018 Budget, and will be adjusted as required to scrub the outlook. We've also been asked to include two illustrative scenarios, based on currently available fiscal anchors, that will be layered onto the base case.

In total, we will create 3 scenarios (base case + two illustrative scenarios) for which we would need updated net debt and IOD forecasts. We are talking to TBS about getting updated TCA profiles for this as well.

We are working on creating the base case and illustrative scenarios and will likely send these along piecemeal, as they are drafted. We're hoping to get you a copy of the base case for tomorrow. Not sure how quickly we'll be able to complete the illustrative scenarios, we may also receive further direction on this coming out of tomorrow's session on the fiscal plan. We will aim to get you something for Friday, with the caveat that the scenarios will likely change into the beginning of next week.

Please let us know what you think the best approach is for developing the net debt and IOD forecasts. We're happy to use an updated version of the calculator, as we did for Budget. Alternatively, we could send you individual roll ups for each scenario so that you can calculate on your end.

Hope this makes sense. Tara and I are happy to discuss in more detail on a call – we're around most of the afternoon.

Thank you!
Sareena

Hi Chi-wa:

Thank you for sending the revised IOD forecast, and all of your help yesterday and today, it's much appreciated!

The deck has already been circulated to ADMs so we will incorporate the updated IOD forecast into the next iteration of the deck post- SOC meeting this afternoon. We're expecting follow-ups to come out of this meeting so will pick up the forecast in whatever we produce thereafter.

We've also communicated the change in IOD up the line, so our ADM is aware in case Gadi wants to raise it or it comes up.

Thanks again,
Sareena

Hi Sareena,

Attached is the table of the IOD forecast for all 6 scenarios after this morning's new outlook backgrounder.
There are some slightly change on the IOD forecast.
The same assumptions as stated previously applied.

Thanks.
Chi-wa

Subject: RE: Transition Deck: Base Case & Alternative Fiscal Scenarios

Good morning:

Per the email thread below, we're touching base to provide you with the outlooks for the three scenarios (base, 1, and 2) as they currently stand, including with the IOD forecast that you provided yesterday at 4:30pm. Please note that the only change that has not been incorporated into the attached IOD outlook is a $5M revenue decrease in 2019-20 and 2020-21 that was made this morning. Revenue has been updated in the attached document, but IOD has not since we didn't think it would make a significant difference.

In addition, we have attached a draft version of the deck that will be used to brief the SOC this afternoon at 3pm, however, we are still working through some wording edits. The net debt-to-GDP numbers that we calculated for each scenario can be found in the deck on slides 10,13,14 and 15. Also attached is a copy of the net debt-to-gdp calculator that we used.

Could you please confirm that both the IOD forecast in each scenario as well as the net debt-to-GDP numbers in the deck are correct?

Many thanks!
Sareena

Ok great - thanks Ken.

Coming out of the meeting there were no further changes to the base case or alternative fiscal outlooks, save one small revenue adjustment that is less than $5M per year.

We'll touch base in the morning.

Tara

Hi Tara

With regard to IOD, your characterization of the two versions is accurate. However since our runs were done to meet deadlines we will review the results once more tomorrow morning and confirm.

With regard to the net debt to GDP ratio, as John has pointed out, the version that includes the AG's adjustments should also incorporate the cumulative impact of reversing the pension adjustment and that should not be limited to 16-17 onwards.

We have requested the cumulative impact from OPCD and should be able to provide revised ratios tomorrow.

Thanks

Ken k

Hi,

We just ran into Gadi – he and Tim were talking and they'd like to add to the deck some more net debt-to-GDP ratios!

So for each scenario (base case, #1, #2), he'd like to be able to say by how much net debt to GDP would increase if 1) you were to layer on the impact of pensions and 2) you were to additionally layer on the impact of fair hydro.

If we send you the accounting numbers we're working with, is that doable?

I understand you probably don't have time to redo IOD with the latest information Danny just sent.

We'll send along accounting in a moment, including for 17-18. Thanks,

Tara

Hi Ken, John, and Alex,

We have scenarios for you (again!). So sorry for the last-minute request, but we rolled through some revenue changes, and would really appreciate it if you all could get us an updated IOD and Net Debt-to-GDP outlook for each scenario so we can roll them through the deck (for our 4:15 DM pre-brief).

Again, we really apologize for the short turnaround. We're happy to discuss if you have any questions or concerns.

Thanks so much!
Danny

Thanks John,

We'll send in a moment the pension/Hydro plan split we have for 2018-19 to 2020-21, but we don't have the split in 2017-18. I've asked OPCD for it – waiting to hear back. But you might not even need the split for 17-18, so we'll send you the all-up number we have. Danny will send in a moment. Thanks,

Tara

Hi,

We just ran into Gadi – he and Tim were talking and they'd like to add to the deck

some more net debt-to-GDP ratios!

So for each scenario (base case, #1, #2), he'd like to be able to say by how much net debt to GDP would increase if 1) you were to layer on the impact of pensions and 2) you were to additionally layer on the impact of fair hydro.

If we send you the accounting numbers we're working with, is that doable?

I understand you probably don't have time to redo IOD with the latest information Danny just sent.

We'll send along accounting in a moment, including for 17-18. Thanks,

Tara

Hi Ken, John, and Alex,

We have scenarios for you (again!). So sorry for the last-minute request, but we rolled through some revenue changes, and would really appreciate it if you all could get us an updated IOD and Net Debt-to-GDP outlook for each scenario so we can roll them through the deck (for our 4:15 DM pre-brief).

Again, we really apologize for the short turnaround. We're happy to discuss if you have any questions or concerns.

Thanks so much!

Good morning:

We have scenarios for you! Attached, please find the base case and two illustrative scenarios, in

millions. Mo also just sent a revised TCA profile.

There is a pre-brief with DMs this afternoon at 4:15pm, accordingly, it would be great if we could get the IOD and Net debt-to-GDP outlooks for each scenario by early afternoon so that we can roll them through the deck. I realize that these are tight timelines, and apologize for the short turnaround. Please let us know if you think this is feasible.

Tara and I are happy to discuss the attached, should you have any questions.

Thank you!

Good morning:

We wanted to provide an update on where things are at with the request for the SOC.

We are still working on both the base case and the illustrative scenarios, based on what came out of the whiteboard session yesterday, so we probably won't have anything to share with you before Monday.

Our colleagues at TBS have prepared an updated TCA profile that should be making its way over to you later today.

We'll be in touch on Monday.

Thanks and hope everyone has a nice weekend,
Sareena

Subject: RE: Transition Deck: Base Case & Alternative Fiscal Scenarios

Thank you for the request, Sareena;

1. WRT IOD forecasts and to avoid that anything falls between the cracks, please send e-mails to the copied group "IOD_RPA" which includes analysists preparing the financing table and IOD forecasts, as well as myself;

2. An IOD calculator makes sense if you envision very tight turnaround times, e.g. you provide a

scenario after 5 pm and expect a turnaround the same evening. Otherwise and based on our experience during the last Budget, our preference is to do proper IOD runs with our application in order to take correctly into account the impact of fiscal scenarios on the financing table and other aspects/components of IOD;

3. Given the large impact of capital spending on the borrowing program, getting TCA profiles right is at least as important as the fiscal outlook.

Please let me know in case you have any questions.

Best regards

Subject: Transition Deck: Base Case & Alternative Fiscal Scenarios

Hi Ken, John, and Alex:

Hope all is well.

As part of transition planning, we've received a request from the Secretary to create a deck that includes a base case fiscal outlook to inform the starting point for future fiscal planning. Development of the base case will build off of the medium-term fiscal outlook presented in the 2018 Budget, and will be adjusted as required to scrub the outlook. We've also been asked to include two illustrative scenarios, based on currently available fiscal anchors, that will be layered onto the base case.

In total, we will create 3 scenarios (base case + two illustrative scenarios) for which we would need updated net debt and IOD forecasts. We are talking to TBS about getting updated TCA profiles for

this as well.

We are working on creating the base case and illustrative scenarios and will likely send these along piecemeal, as they are drafted. We're hoping to get you a copy of the base case for tomorrow. Not sure how quickly we'll be able to complete the illustrative scenarios, we may also receive further direction on this coming out of tomorrow's session on the fiscal plan. We will aim to get you something for Friday, with the caveat that the scenarios will likely change into the beginning of next week.

Please let us know what you think the best approach is for developing the net debt and IOD forecasts. We're happy to use an updated version of the calculator, as we did for Budget. Alternatively, we could send you individual roll ups for each scenario so that you can calculate on your end.

Hope this makes sense. Tara and I are happy to discuss in more detail on a call – we're around most of the afternoon.

Thank you!
Sareena

Hi Tara

When making this point pls indicate that if the AG's numbers were incorporated, as Gadi pointed out not only will the 17-18 surplus/deficit change but so will the opening accumulated deficit and hence the net debt since the pension adjustment goes back quite a few years.

OPCD has these numbers and they can be incorporated accordingly if that is indeed the decision.

Thanks

Ken K

Subject: RE: Transition Deck: Base Case & Alternative Fiscal Scenarios

Hi Anna,

Yes, that's a fair point. Right now, all of the outlooks we sent do not include taking on the AG's accounting treatment, so we should be ok. But it's a point that perhaps we can add to the deck (or can be spoken to) about how taking it on would a) impact net debt-to-GDP ratios over the medium-term, as well as b) would impact 2017-18.

Does that make sense? Thanks,

Tara

Hi Tara,

Quick question for you from Gadi – if we take on the AG's accounting treatment in any of these scenarios, would we not have to adjust the 17-18 deficit/surplus as well? That would change the starting point for the net debt-to-GDP ratio.

Thanks, Anna

Subject: RE: Transition Deck: Base Case & Alternative Fiscal Scenarios

Good morning:

Per the email thread below, we're touching base to provide you with the outlooks for the three scenarios (base, 1, and 2) as they currently stand, including with the IOD forecast that you provided yesterday at 4:30pm. Please note that the only change that has not been incorporated into the attached IOD outlook is a $5M revenue decrease in 2019-20 and 2020-21 that was made this morning. Revenue has been updated in the attached document, but IOD has not since we didn't think it would make a significant difference.

In addition, we have attached a draft version of the deck that will be used to brief the SOC this afternoon at 3pm, however, we are still working through some wording edits. The net debt-to-GDP numbers that we calculated for each scenario can be found in the deck on slides 10,13,14 and 15. Also attached is a copy of the net debt-to-gdp calculator that we used.

Could you please confirm that both the IOD forecast in each scenario as well as the net debt-to-GDP numbers in the deck are correct?

Many thanks!
Sareena

Subject: RE: Transition Deck: Base Case & Alternative Fiscal Scenarios

Ok great - thanks Ken.

Coming out of the meeting there were no further changes to the base case or alternative fiscal outlooks, save one small revenue adjustment that is less than $5M per year.

We'll touch base in the morning.

Tara

Hi Tara

With regard to IOD, your characterization of the two versions is accurate. However since our runs were done to meet deadlines we will review the results once more tomorrow morning and confirm.

With regard to the net debt to GDP ratio, as John has pointed out, the version that includes the AG's adjustments should also incorporate the cumulative impact of reversing the pension adjustment and that should not be limited to 16-17 onwards.

We have requested the cumulative impact from OPCD and should be able to provide revised ratios tomorrow.

Thanks

Ken k

Sareena,
I see that our net debt template was used for a myriad of variable presentations of net debt, such as with the fair hydro, with pension adjustments etc, along with new fiscal deficit numbers since yesterday.

We got the accumulated deficit impact of the pension adjustment this morning from OPCD and put it into the opening net debt number for 2016-17 in the attached. Our opening 2016-17 net debt number now matches what the AG has indicated it should be if following this accounting interpretation. You may have to redo the net debt calculations based on this adjustment as well as the new fiscal impacts.

As you can see, there is a significant impact to the ratio by adding over $12.4 Billion of the pension adjustment to accumulated deficit.

Thanks.

John

Assumptions /Notes

1 - deleted for this scenario -

2 GDP - per latest information rec'd (see GDP tab)

3 TCA - per info rec'd May 29, 2018 from M Reghabi

After 2027-28 TCA increases are equal to annual amortization

4 Net Debt adjusted for prepaids starting 2014-15. From 2017-18 and onwards - same amount as prior month assumed.

5 Balanced budget continues through to 2035-36

6 GDP annual growth is 4% from 2031-32 to 2035-36

7 Revenue restated to include BPS (Hospitals, colleges, school boards) from 2012-13

8 Revenue from 2017-18 to 2019-20 has been restated for BPS

9 Revenue for 2016-17 was revised down by approx $1 million from $140,735m to $140,734.

10 Accumulated deficit for 2016-17 now incorporates the pension valuation adjustment of approx $12.4b

Assumptions /Notes

1	- deleted for this scenario -
2	GDP - per latest information rec'd (see GDP tab)
3	TCA - per info rec'd May 29, 2018 from M Reghabi
	After 2027-28 TCA increases are equal to annual amortization
4	Net Debt adjusted for prepaids starting 2014-15. From 2017-18 and onwards - same amount as prior month assumed.
5	Balanced budget continues through to 2035-36
6	GDP annual growth is 4% from 2031-32 to 2035-36
7	Revenue restated to include BPS (Hospitals, colleges, school boards) from 2012-13
8	Revenue from 2017-18 to 2019-20 has been restated for BPS
9	Revenue for 2016-17 was revised down by approx $1 million from $140,735m to $140,734.
10	Accumulated deficit for 2016-17 now incorporates the pension valuation adjustment of approx $12.4b

---

Good morning:

Per the email thread below, we're touching base to provide you with the outlooks for the three scenarios (base, 1, and 2) as they currently stand, including with the IOD forecast that you provided yesterday at 4:30pm. Please note that the only change that has not been incorporated into the attached IOD outlook is a $5M revenue decrease in 2019-20 and 2020-21 that was made this morning. Revenue has been updated in the attached document, but IOD has not since we didn't think it would make a significant difference.

In addition, we have attached a draft version of the deck that will be used to brief the SOC this afternoon at 3pm, however, we are still working through some wording edits. The net debt-to-GDP numbers that we calculated for each scenario can be found in the deck on slides 10,13,14 and 15. Also attached is a copy of the net debt-to-gdp calculator that we used.

Could you please confirm that both the IOD forecast in each scenario as well as the net debt-to-GDP numbers in the deck are correct?

Many thanks!
Sareena

Subject: RE: Transition Deck: Base Case & Alternative Fiscal Scenarios

Ok great - thanks Ken.

Coming out of the meeting there were no further changes to the base case or alternative fiscal outlooks, save one small revenue adjustment that is less than $5M per year.

We'll touch base in the morning.

Tara

Hi Tara

With regard to IOD, your characterization of the two versions is accurate. However since our runs were done to meet deadlines we will review the results once more tomorrow morning and confirm.

With regard to the net debt to GDP ratio, as John has pointed out, the version that includes the AG's adjustments should also incorporate the cumulative impact of reversing the pension adjustment and that should not be limited to 16-17 onwards.

We have requested the cumulative impact from OPCD and should be able to provide revised ratios tomorrow.

Thanks

Ken k

BASE CASE & ALTERNATIVE FISCAL SCENARIOS

Office of the Budget
MINISTRY of FINANCE

OFFICE OF ECONOMIC POLICY
OEP
MINISTRY OF FINANCE

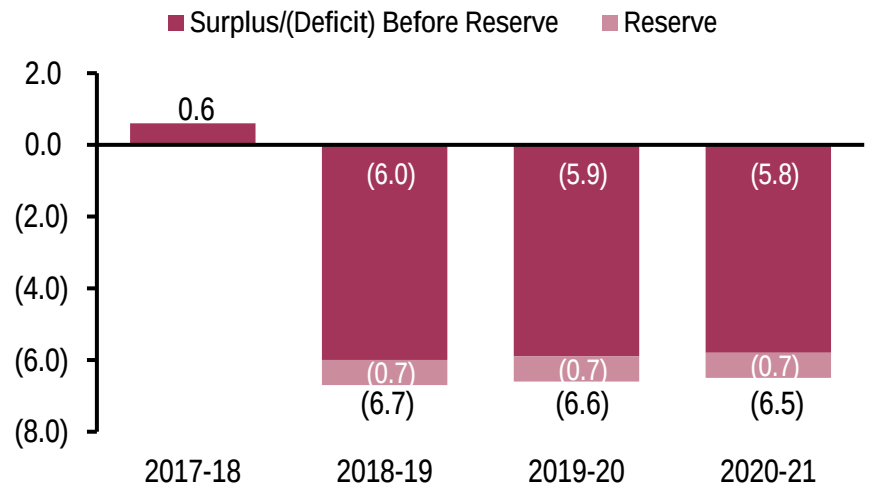
TBS

Draft, May 30, 2018 9:30AM

Confidential Advice to Cabinet

Objective

- Outline a base case medium-term fiscal outlook, to inform the starting point for future fiscal planning and reporting
- Develop and present alternative fiscal scenarios based on potential choices related to fiscal anchors



Part I: *2018 Budget*

Recapping the *2018 Budget / PER* Fiscal Architecture

- The *2018 Budget* and Pre-Election Report (PER) reviewed by the Auditor General projected a surplus of $0.6 billion in the 2017-18 fiscal year, and deficits over the medium-term.
- The *2018 Budget* also included a recovery plan that projected balance by 2024-25.

2018 Budget / PER Fiscal Targets

Fiscal Balance
($ Billions)

	2017-18	2018-19	2019-20	2020-21
Net Debt-to-GDP (%)	37.1	37.6	38.2	38.6

Average Annual Growth Rates
2018-19 to 2020-21

Revenue: 3.7%
Program Expense: 3.3%.

Overview of Medium-Term Outlook

- The forecast assumed **moderating revenue growth, primarily due to slower economic growth** – reflecting global uncertainties related to trade, rising interest rates and slowing household spending – as well as decreases from time-limited non-tax revenues.
  - The *2018 Budget* outlook included revenue measures such as eliminating the PIT surtax and paralleling federal measures.
- **Program spending was projected to increase significantly** in each year over the medium-term primarily **due to a number of new investments**, as well as demand pressures from existing programs.
  - New investments over the medium-term outlook totaled $12.9 billion, including $2.0 billion in 2018-19, $4.0 billion in 2019-20 and $6.9 billion in 2020-21 (note: excludes increases made to existing base spending to keep pace with cost drivers, technical updates, etc.).
- The Auditor General's recommended accounting adjustments for the Fair Hydro Plan and two public sector pension plans were not reflected in the *2018 Budget* and PER outlook.

2018 Budget / PER – Details of Revenue & Expense Assumptions

Revenue

- Outlook for continued economic growth
- Rebound in 2017 PIT due to tax planning
- Non Resident Speculation Tax revenues
- Federal home care services and mental care funding
- Federal infrastructure funding
- Equalization under current program
- Proceeds from cap and trade auctions

Expense

- Addressed sustainability of programs and implemented planned policy changes. Examples of supporting investments included:
  - **Program Base Adjustments for Demand**
    - Support for Hospital surge capacity and Emergency Health Services.
    - Support for higher-than-forecast OSAP applications and awards.
    - Support for policing oversight, and to address the Jahn settlement as part of correctional services support.
  - **New investments**

    Fall
    - New initiatives for small businesses, including investing in youth employment, providing support for fruit and vegetable farmers.
    - Initiatives to increase services and supports for seniors.

    Budget
    - Investments in mental health and addictions care to deliver more accessible, better integrated care.
    - Support for the reform of the social assistance system, including multi-year rate increases.
    - Support for student enrolment, special education, and child care expansion.
    - Support for the implementation of Bill 148.
    - Federal infrastructure funding including flow-throughs and provincial cost matching.
    - Implementation of the 2018-19 Greenhouse Gas Investment Plan, funded by cap and trade proceeds.
- Additional prudence built into the Contingency Fund for items such as land claims and compensation pressures.

Auditor General's Review of 2018 Pre-Election Report

"Aside from the [accounting treatments of the Fair Hydro Plan and the two public sector pension plans], we found that the government based its estimates of revenues, program expenses and interest on debt on cautious assumptions, as required by the [FTA] Act. The government also showed prudence by including a reserve amount in its fiscal plan…."

Part II: Establishing a Base Case for Future Planning

A base case/status quo scenario, or a fiscal outlook net of all new investments and prudence included in the 2018 Budget and Pre-Election Report, will help isolate the state of the Province's foundational fiscal architecture – essentially providing the underlying economic and fiscal trajectory for the current footprint of government revenue and expense – before any new government action, whether that includes new tax reductions or program investments, or new revenue tools/spending savings measures.

Base Case Methodology

The base case serves as an illustrative foundational starting point for the development of the next Provincial fiscal plan, based on the following assumptions:

- **Builds off of the baseline/core assumptions of the fiscal outlook presented in the 2018 Pre-Election Report:**
  - The medium-term outlook in the 2018 PER was found to be reasonable by the Auditor General of Ontario and the Financial Accountability Officer (FAO) – major difference identified was accounting issues and a marginally less optimistic revenue outlook for the FAO.
  - In some cases, adjustments to establish the base case for 2018-19 may be different than for the out-years – the 2018-19 fiscal year has already begun and funds have been committed. This impacts government decisions about what programs/services can be initiated/suspended.
- **2018 Budget and 2017 Fall Economic Statement measures not yet implemented or fully committed are excluded:**
  - 2018 Budget revenue measures
  - Ministry spending on hold-back for 2018-19
  - 2018 Budget and 2017 FES initiatives for 2019-20 and 2020-21
- **Most forms of prudence included in the 2018 PER are rolled back:**
  - Savings targets, both year-end and program review
  - Compensation set-asides in the contingency fund
  - Reserve
- **Interest on debt forecast updated** for base case outlook and to reflect changes to tangible capital assets from excluding 2018 Budget measures.

Revenue Measures Reversals and Outlook Updates

In order to establish a revenue base case, the following measures taken on at the time of the *2018 Budget* are removed and the outlook is updated for the impact of subsequent events.

Revenue Base Case

($ Millions)	2018-19	2019-20	2020-21
2018 PER – Revenue	152,461	157,569	163,834
2018 Budget – Revenue Measures			
Improving Fairness and Transparency of PIT	*(275)*	*(285)*	*(295)*
Ontario Research and Development Tax Credit	*30*	*35*	*40*
Targeting the Employer Health Tax Exemption to Small Employers	*(10)*	*(45)*	*(45)*
Small Business Limit (does not automatically parallel federal measure)	*(45)*	*(145)*	*(160)*
Total 2018 Budget Tax Measures	(300)	(440)	(460)
Subsequent Events to PER			
Private Sector Economic Forecasts	*(200)*	*(200)*	*(200)*
Housing Resales	*(130)*	*(130)*	*(130)*
Operating Profits	*35*	*34*	*34*
Taxation Revenue Collections	*12*	*12*	*12*
Total Subsequent Events to PER	(283)	(284)	(284)
Total Revenue Changes	(583)	(724)	(744)
Base Case – Revenue	151,878	156,845	163,090

To arrive at base case revenue, two adjustments to the PER outlook are required:

1. Reversing the impact of tax measures announced in the 2018 Budget, which include:
   - Improving Fairness and Transparency of Ontario's PIT
   - Enhancements to the Ontario Research and Development Tax Credit
   - Targeting the Employer Health Tax exemption to small employers
   - Limits to Small Business (does not automatically parallel federal measure)

2. Adding the impact of subsequent events since the PER, which include:
   - A downward revision to the Private-Sector Economic forecast to real GDP in 2018
   - The impact of a revised 2017 and 2018 outlook of operating profits
   - Stronger own-source tax collections

Cap & Trade is consistent with the 2018 PER.

Excluding New Investment Items and Prudence

In order to establish a program expense base case, the following holdbacks and initiatives are removed from the program expense outlook.

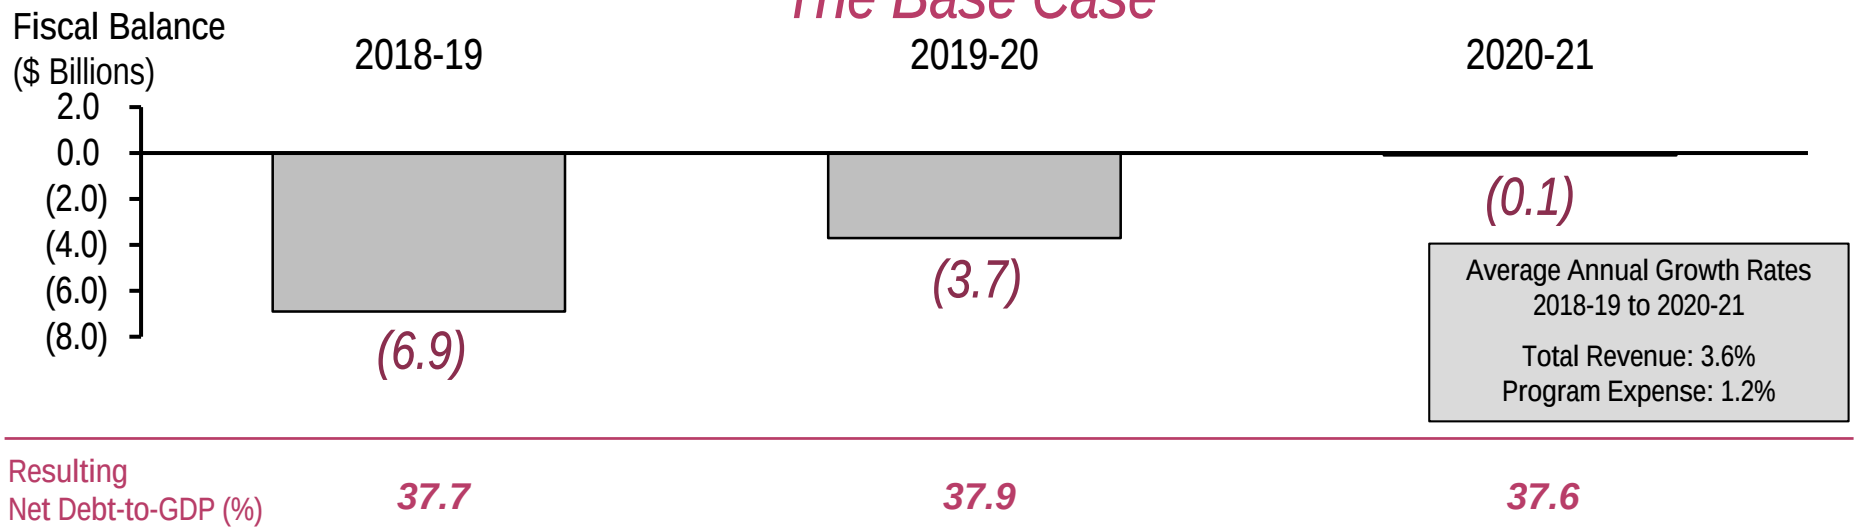
Program Expense Base Case

($ Millions)	2018-19	2019-20	2020-21
2018 PER – Program Exp.	145,922	150,427	155,760
Holdbacks/2018 Budget and 2017 FES Initiatives	(696)	(4,125)	(6,989)
Prudence			
Compensation Set-Aside	*(446)*	*(738)*	*(1,149)*
Year-end Savings Target	*1,225*	*1,175*	*1,200*
PRRT Savings Target	*200*	*750*	*850*
Total Prudence	979	1,187	901
Total Program Exp. Changes	283	(2,937)	(6,088)
Base Case – Program Exp.	146,204	147,490	149,672

Reserve Base Case

($ Millions)	2018-19	2019-20	2020-21
2018 PER – Reserve	700	700	700
Reserve Reversal	(700)	(700)	(700)
Base Case – Reserve	–	–	–

- Ministry allocations are updated to remove initiatives on holdback in 2018-19, and 2018 Budget and 2017 FES initiatives in 2019-20 and 2020-21. Key investments reversed include (see Appendix for expanded list):
  - Mental health and addictions services
  - OHIP+ for seniors
  - Child care
  - Income Security Reform
- Contingency Fund remains consistent with the *2018 Budget* – reflecting risks not included in ministry allocations – except for the reversal of compensation set-asides.
  - Results in a base case contingency fund of $1.2 billion in 2018-19, $1.9 billion in 2019-20 and $2.5 billion in 2020-21.
- Capital Plan is consistent with the 2018 PER, aside from reversal of budget initiatives associated with infrastructure expenditures.
- Cap & Trade is consistent with the 2018 PER.
- Generally speaking, spending related to federal-provincial flow-throughs has been maintained, particularly where agreements with the federal government have been signed.
- Reserve has been reversed.



The Base Case Medium-Term Outlook

- Compared to the 2018 PER, the base case represents an improvement to the fiscal outlook in 2019-20 and 2020-21.

($ Billions)	2018-19	2019-20	2020-21
2018 PER Surplus/(Deficit)	(6.7)	(6.6)	(6.5)
Total Revenue Changes	(0.6)	(0.7)	(0.7)
Total Program Expense Changes	0.3*	(2.9)	(6.1)
Total Interest on Debt Changes	0.0	(0.0)	(0.3)
Total Reserve Changes	(0.7)	(0.7)	(0.7)
Base Case Surplus/(Deficit)	(6.9)	(3.7)	(0.1)

*Program expense has increased as a result of reversing savings targets ($1.4 billion), which more than offset other program expense changes ($1.1 billion). *Note:* numbers may not add due to rounding

The Base Case

Resulting Net Debt-to-GDP (%)	2018-19	2019-20	2020-21
	37.7	*37.9*	*37.6*

Part III: Alternative Fiscal Scenarios

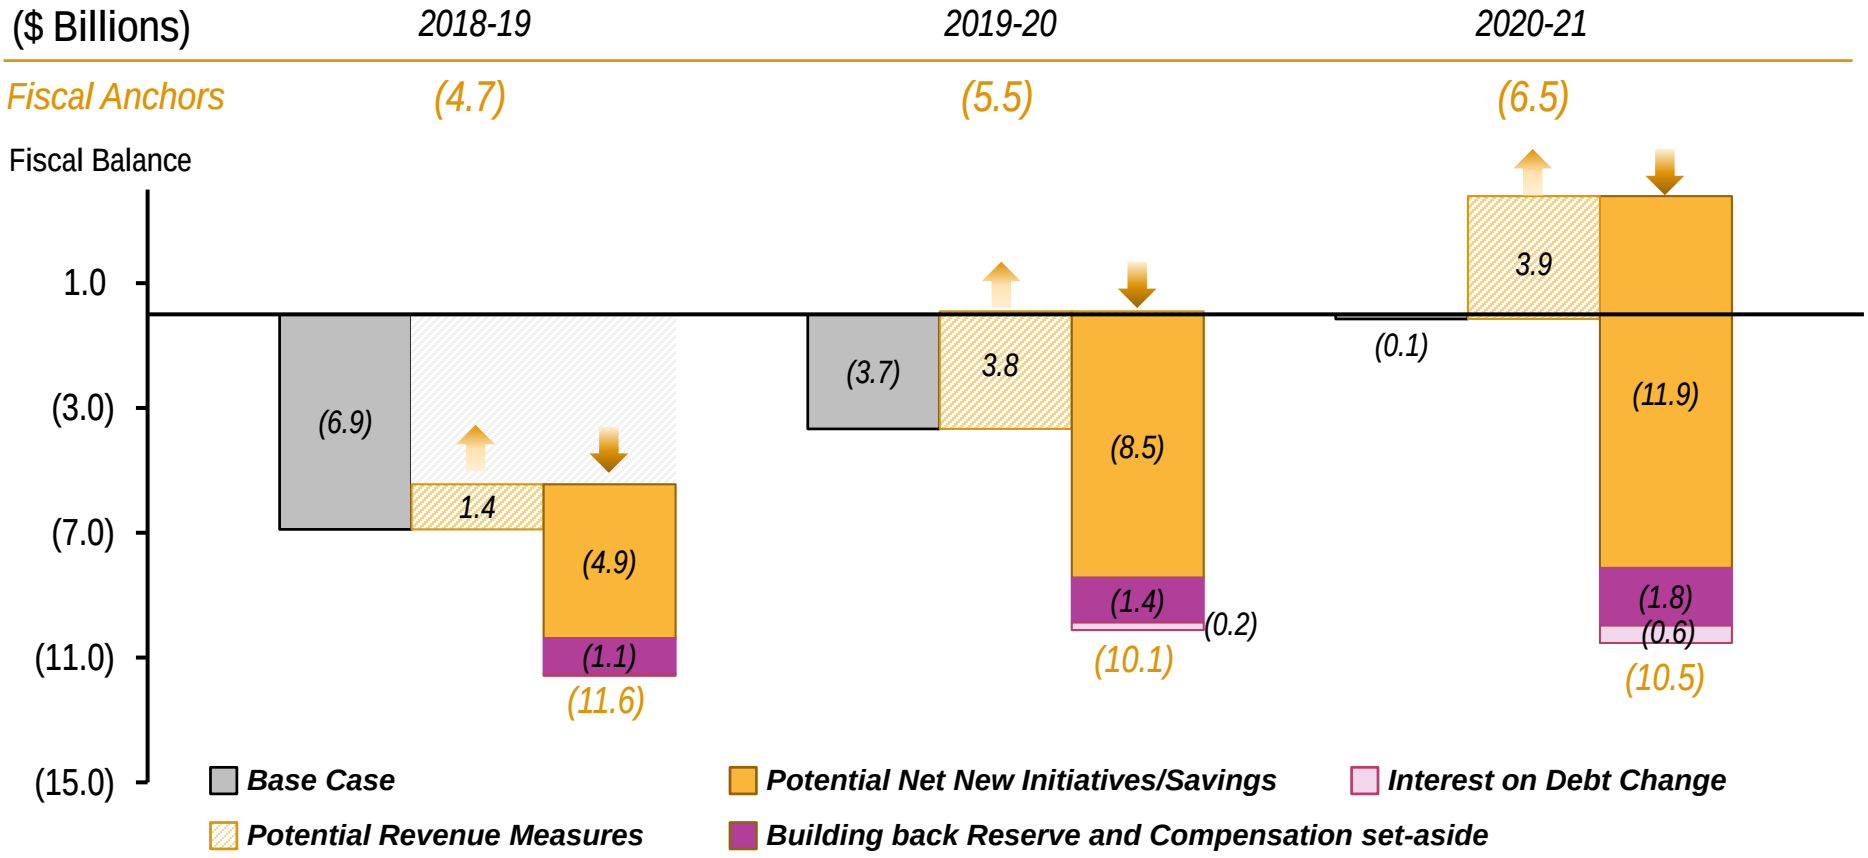
Alternative Fiscal Scenarios

The government has a number of choices it can make and tools at its disposal to build off of the fiscal architecture presented in the base case.

- This includes decisions related to how to treat 2018-19 versus the out-years.

The following two alternative fiscal scenarios presented on the next slides illustrate the impact of potential choices/tools.

The government could:



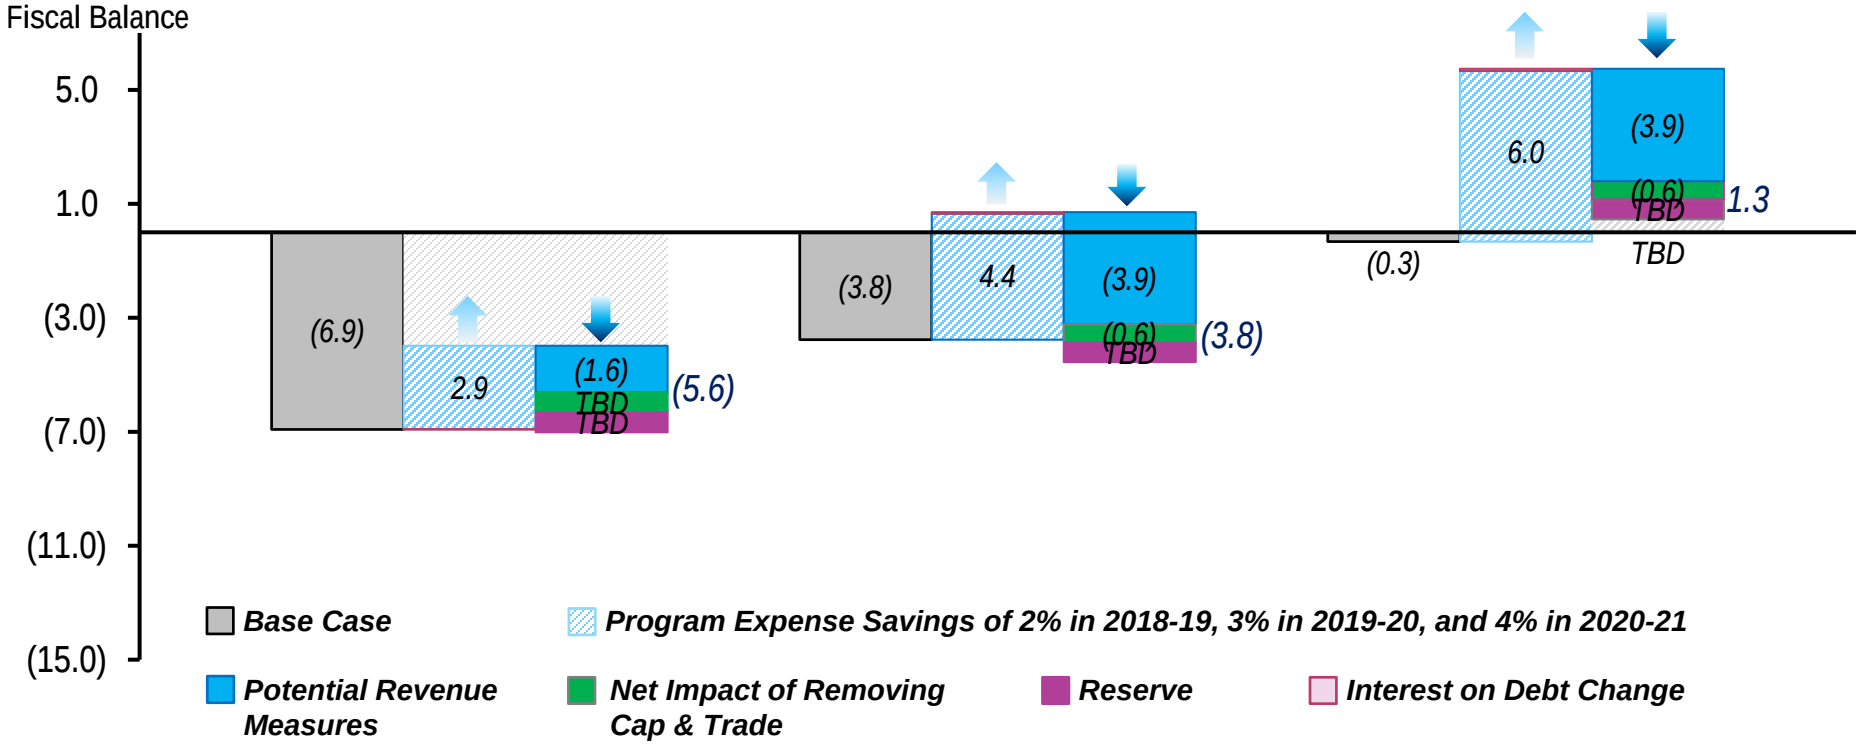
- Introduce new measures, such as new tax reductions or program investments, or new revenue tools or expenditure savings measures.
- Adjust the amount of prudence in the plan, for example:
  - Incorporate a reserve, a requirement of the *Fiscal Transparency and Accountability Act.*
- Enact legislative or policy changes to allow for the adoption of the Auditor General's recommended accounting treatment for pensions and/or the Fair Hydro Plan.

$ Billions	2018-19	2019-20	2020-21
AG's Accounting Adjustment	5.0	5.6	6.0

Alternative Fiscal Scenario #1

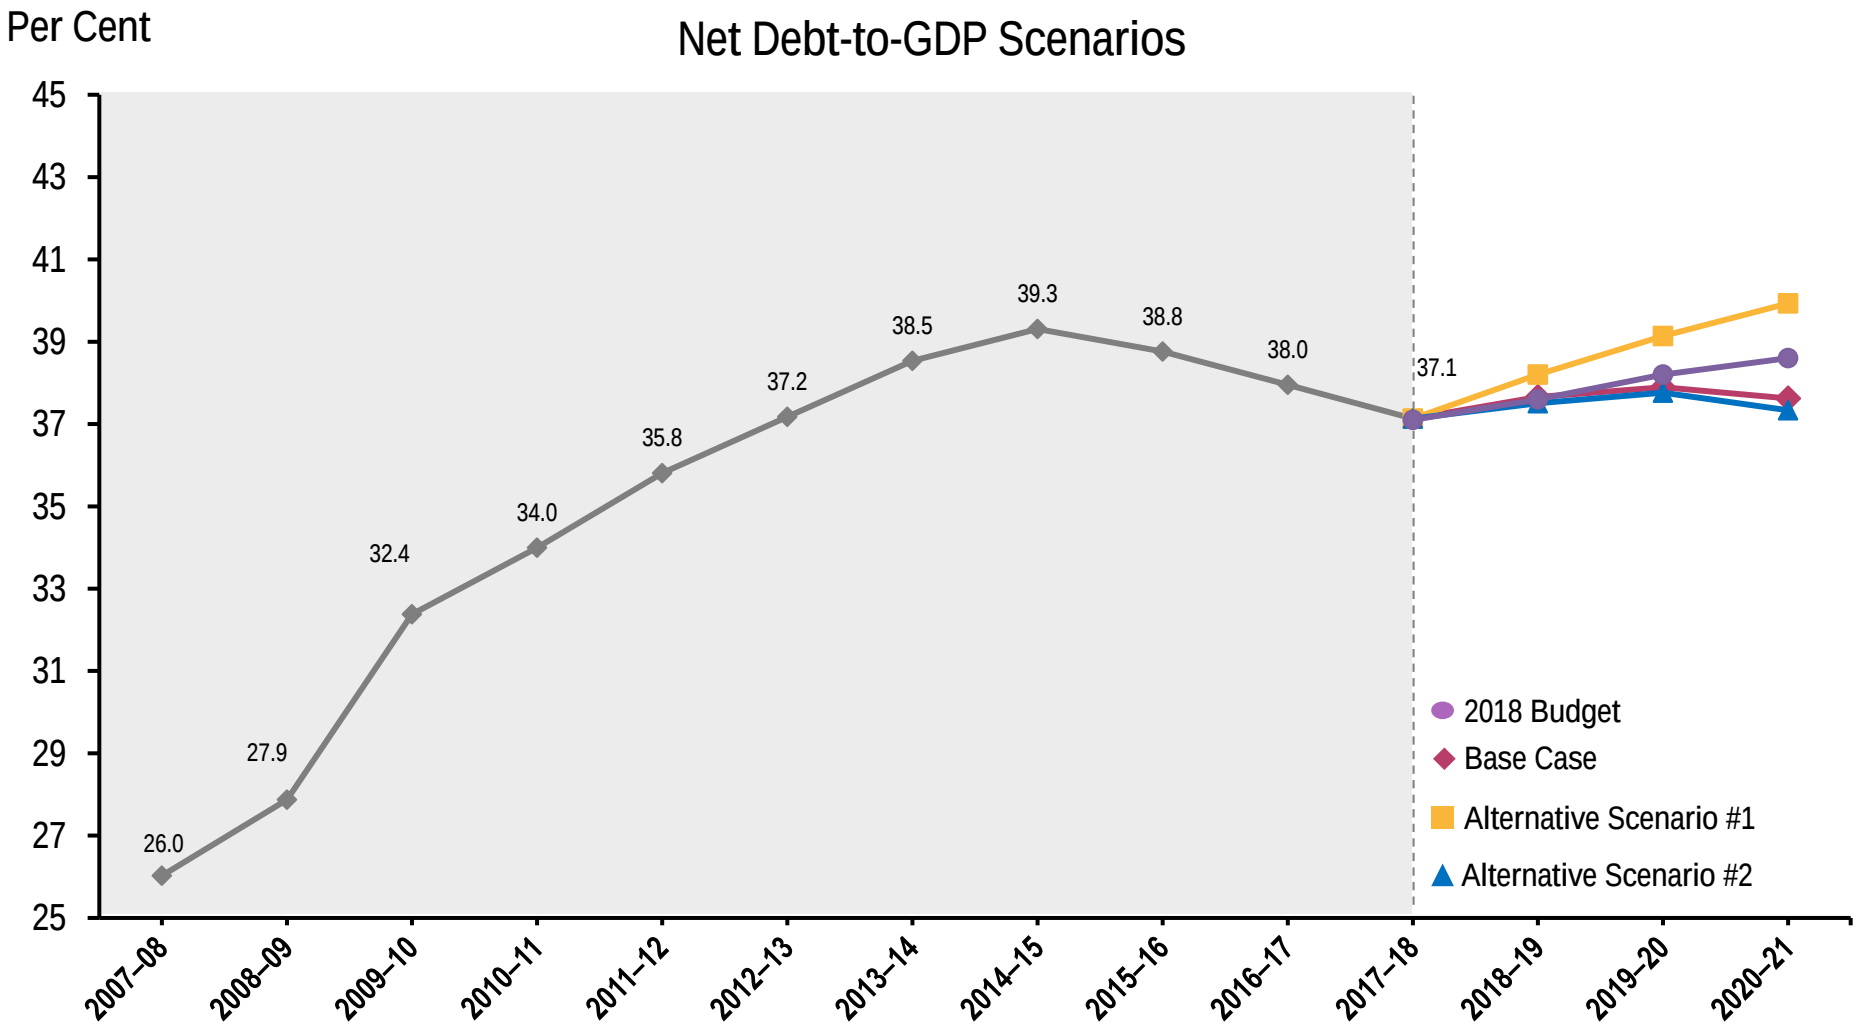
Average Annual Growth Rates 2018-19 to 2020-21

Total Revenue: 4.4%
Program Expense: 3.6%



Resulting Net Debt-to-GDP (%)	38.2	39.1	39.9
Auditor General Accounting Adjustments ($ Billions) and Resulting Net Debt-to-GDP (%)			
Pension Plans	(2.4) / 38.7	(2.6) / 39.9	(2.8) / 40.9
Fair Hydro Plan	(2.6) / 38.8	(3.0) / 40.0	(3.2) / 41.1
Total	(5.0) / 39.3	(5.6) / 40.8	(6.0) / 42.1

Alternative Fiscal Scenario #2



Average Annual Growth Rates 2018-19 to 2020-21

Total Revenue: 2.4%
Program Expense: -0.2%

Resulting Net Debt-to-GDP (%)	37.5	37.7	37.3
Auditor General Accounting Adjustments ($ Billions) and Resulting Net Debt-to-GDP (%)			
Pension Plans	(2.4) / 38.0	(2.6) / 38.5	(2.8) / 38.4
Fair Hydro Plan	(2.6) / 38.1	(3.0) / 38.6	(3.2) / 38.5
Total	(5.0) / 38.6	(5.6) / 39.4	(6.0) / 39.5

Net Debt-to-GDP

Recovery Plan

- Per the requirements of the Fiscal Transparency and Accountability Act (FTAA), the *2018 Budget* outlined a recovery plan to return to balance.
  - The 2018 Pre-Election Report and subsequent review did not include the recovery plan outlined in the 2018 Budget – however, the Financial Accountability Officer's Report projected that the Provincial deficit would most likely grow beyond 2020-21, rather than return to balance – unless the government took concerted action.
- The recovery plan spanned seven years, with a balanced budged expected in 2024-25.
  - The average annual rate of program spending growth was held to 2.5 per cent between 2018-19 and 2024-25, and 2.0 per cent between 2021-22 and 2024-25.
  - The reserve was also held constant at $700 million in each year over the recovery period.
- Based on the illustrative scenarios presented earlier, the government could consider developing a longer-term plan to balance the budget. Restoring fiscal health to Ontario's finances will require choices about the underlying fiscal trajectory of the province.
- An independent review to obtain fiscal and budgetary policy advice could help inform the next phase of Ontario's fiscal planning, including an approach to building a recovery plan.

Both Scenarios Face Additional Risks…

In addition to requiring a review of assumptions underlying these illustrative scenarios compared to government's priorities, key risks to the fiscal outlook include:

Revenue	Expense
• Economic growth • Housing market • 2017 PIT and CIT tax assessment results • 2017 HST revenue pool and Ontario share • Income shifting resulting from US tax reform • OEB decisions (e.g. Hydro One deferred tax asset) • OEB decision on OPG switching from accrual based to cash based accounting for Pension and Other Pension Benefits • The level of Federal funding assumed/projected for infrastructure projects, home care and mental health may change • Government business enterprise net income • Proceeds from cap and trade auctions	• Ministry pressures related to unfunded risks, depending on prudence/caution in the expense forecast • Impact of compensation negotiations • Policy changes to current federal funding agreements with flow-through implications • Policy changes to current cap and trade program could have fiscal implications, as some proceeds support investments in capital assets and in-plan commitments related to greenhouse gas reduction initiatives ($0.8 billion in 2018-19, $0.6 billion in 2019-20 and $0.6 billion in 2020-21) • Land claims

As part of broader fiscal architecture planning, some risks could be offset by revisiting the contingency fund and consideration could be given to building in a year-end savings target.

…and Will Require Management Strategies and Tools

Key strategies and tools for managing risks and the overall fiscal plan could include:

1. **Independent fiscal review**, which could:
   - Assess the fundamentals of Ontario's existing budgetary/fiscal construct and legislative framework;
   - Support an expenditure management review;
   - Support a review of the underlying revenue forecast; and/or
   - Provide advice to inform Ontario's fiscal planning and financial reporting.
2. **In-year and multi-year expenditure management review**
   - Government could conduct a Line-by-Line review of new and existing programs to ensure it aligns with priorities.
     - This could include taking immediate, focused action in 2018-19 to improve the fiscal trajectory.
3. **Use of prudence**
   - Government could adjust prudence measures, depending on the overall risk environment and on risk associated with underlying assumptions of the revenue forecast and ministry allocations.

Appendix

Key Holdbacks, and 2018 Budget and 2017 FES Initiatives

($ Billions)	2018-19
Holdbacks	
Support for Ontario's Comprehensive Mental Health and Addictions Strategy	0.1

Alternative Scenario #1 Revenue and Expense Measures

Alternative Scenario #1 – Expense (continued)	2018-19	2019-20	2020-21
Raising OW and ODSP Rates	800	1,720	2,230
Friendship Centres programming	10	10	10
Mercury Treatment Centre	3	1	1
Mercury Disability Benefits	12	-	-
Raise the Cap on the Risk Management Program	50	100	175
First Nations Policing	30	30	30
Parole and Probation Officers	15	15	16
A Crisis is not a Crime	5	5	5
Solving Cold Cases	1	1	1
Properly Fund the Ontario Municipal Partnership Fund	45	46	47
End Funding Freeze for Libraries	1	1	1
Library/Museum Pass	3	3	3
Better Ontario Fund	100	100	100
Anti-Racism Fund	5	5	5
Expanding Rural and Northern Broadband	100	100	100
Spending Reallocations	(430)	(539)	(571)
Total Expense Measures	4,926	8,538	11,915

Note: numbers may not add due to rounding

Alternative Scenario #2 Revenue and Expense Measures

Alternative Scenario #2 - Revenue	2018-19	2019-20	2020-21
Tax rebate of $6,750 per child for families with child care expenses	(389)	(389)	(389)
Lower Small Business rate to 3.2%	(60)	(60)	(60)
Lower General rate to 10.5%	[TBD]	[TBD]	[TBD]
Cut Gasoline Tax by 10cents a litre	(1,190)	(1,190)	(1,190)
Cut Middle class taxes by 20% in 2nd and 3rd year of term	-	(2,300)	(2,300)
Eliminate Carbon Allowance proceeds/Cap and Trade	-	(1,923)	(1,749)
Total Revenue Measures	(1,639)	(5,862)	(5,688)

Alternative Scenario #2 - Expense	2018-19	2019-20	2020-21
Suspend initiatives related to Cap and Trade program	-	(1,301)	(1,105)
Program Expense efficiencies (2%, 3% and 4% respectively)	(2,924)	(4,425)	(5,987)
Total Expense Measures	(2,924)	(5,726)	(7,092)

Note: numbers may not add due to rounding

Assumptions /Notes

1	Surplus for 2017-18 is $ 642 m
2	GDP - per latest information rec'd (see GDP tab)
3	TCA - per info rec'd May 29, 2018 from M Reghabi
	After 2027-28 TCA increases are equal to annual amortization
4	Net Debt adjusted for prepaids starting 2014-15. From 2017-18 and onwards - same amount as prior month assumed.
5	Balanced budget continues through to 2035-36
6	GDP annual growth is 4% from 2031-32 to 2035-36
7	Revenue restated to include BPS (Hospitals, colleges, school boards) from 2012-13
8	Revenue from 2017-18 to 2019-20 has been restated for BPS
9	Revenue for 2016-17 was revised down by approx $1 million from $140,735m to $140,734.

Assumptions /Notes

1. Surplus for 2017-18 is $ 642 m
2. GDP - per latest information rec'd (see GDP tab)
3. TCA - per info rec'd May 29, 2018 from M Reghabi
   After 2027-28 TCA increases are equal to annual amortization
4. Net Debt adjusted for prepaids starting 2014-15. From 2017-18 and onwards - same amount as prior month assumed.
5. Balanced budget continues through to 2035-36
6. GDP annual growth is 4% from 2031-32 to 2035-36
7. Revenue restated to include BPS (Hospitals, colleges, school boards) from 2012-13
8. Revenue from 2017-18 to 2019-20 has been restated for BPS
9. Revenue for 2016-17 was revised down by approx $1 million from $140,735m to $140,734.

Pauline,

It's the Budget password…K…

Tara and company only gave us the pension adjustment going forward for 17-18 but we needed the accumulated deficit impact to put in our scenarios for column Q. We'll put $10.6 B in that column for 2016-17.

Thanks!

John

Danny,

Thanks. We'll do it, but bear in mind that in order to fully incorporate the pension numbers, we need the cumulative effect on the accumulated deficit or otherwise we won't get the correct net debt number. Only OPCD has the amounts going back which we can use to put to accumulated deficit.

If we get it in time, we can make the calculation. Otherwise, we'll send the revised calculation to what you just sent us, but someone at the briefing today needs to mention that the pension adjustment historical impact is not fully recognized in the net debt numbers presented.

Thanks.

John

Hi,

We just ran into Gadi – he and Tim were talking and they'd like to add to the deck some more net debt-to-GDP ratios!

So for each scenario (base case, #1, #2), he'd like to be able to say by how much net debt to GDP would increase if 1) you were to layer on the impact of pensions and 2) you were to additionally layer on the impact of fair hydro.

If we send you the accounting numbers we're working with, is that doable?

I understand you probably don't have time to redo IOD with the latest information Danny just sent.

We'll send along accounting in a moment, including for 17-18. Thanks,

Tara

Hi Ken, John, and Alex,

We have scenarios for you (again!). So sorry for the last-minute request, but we rolled through some revenue changes, and would really appreciate it if you all could get us an updated IOD and Net Debt-to-GDP outlook for each scenario so we can roll them through the deck (for our 4:15 DM pre-brief).

Again, we really apologize for the short turnaround. We're happy to discuss if you have any questions or concerns.

Thanks so much!
Danny

Subject: RE: Transition Deck: Base Case & Alternative Fiscal Scenarios

Good morning:

We have scenarios for you! Attached, please find the base case and two illustrative scenarios, in millions. Mo also just sent a revised TCA profile.

There is a pre-brief with DMs this afternoon at 4:15pm, accordingly, it would be great if we could get the IOD and Net debt-to-GDP outlooks for each scenario by early afternoon so that we can roll them through the deck. I realize that these are tight timelines, and apologize for the short turnaround. Please let us know if you think this is feasible.

Tara and I are happy to discuss the attached, should you have any questions.

Thank you!
Sareena

Good morning:

We wanted to provide an update on where things are at with the request for the SOC.

We are still working on both the base case and the illustrative scenarios, based on what came out of the whiteboard session yesterday, so we probably won't have anything to share with you before Monday.

Our colleagues at TBS have prepared an updated TCA profile that should be making its way over to you later today.

We'll be in touch on Monday.

Thanks and hope everyone has a nice weekend,
Sareena

Cc: John Psinas; Kandeepan, Ken (OFA); McGrath, Tara (MOF); IOD_RPA
Subject: RE: Transition Deck: Base Case & Alternative Fiscal Scenarios

Thank you for the request, Sareena;

1. WRT IOD forecasts and to avoid that anything falls between the cracks, please send e-mails to the copied group "IOD_RPA" which includes analysists preparing the financing table and IOD forecasts, as well as myself;

2. An IOD calculator makes sense if you envision very tight turnaround times, e.g. you provide a scenario after 5 pm and expect a turnaround the same evening. Otherwise and based on our experience during the last Budget, our preference is to do proper IOD runs with our application in order to take correctly into account the impact of fiscal scenarios on the financing table and other aspects/components of IOD;

3. Given the large impact of capital spending on the borrowing program, getting TCA profiles right is at least as important as the fiscal outlook.

Please let me know in case you have any questions.

Best regards

Subject: Transition Deck: Base Case & Alternative Fiscal Scenarios

Hi Ken, John, and Alex:

Hope all is well.

As part of transition planning, we've received a request from the Secretary to create a deck that includes a base case fiscal outlook to inform the starting point for future fiscal planning. Development of the base case will build off of the medium-term fiscal outlook presented in the 2018

Budget, and will be adjusted as required to scrub the outlook. We've also been asked to include two illustrative scenarios, based on currently available fiscal anchors, that will be layered onto the base case.

In total, we will create 3 scenarios (base case + two illustrative scenarios) for which we would need updated net debt and IOD forecasts. We are talking to TBS about getting updated TCA profiles for this as well.

We are working on creating the base case and illustrative scenarios and will likely send these along piecemeal, as they are drafted. We're hoping to get you a copy of the base case for tomorrow. Not sure how quickly we'll be able to complete the illustrative scenarios, we may also receive further direction on this coming out of tomorrow's session on the fiscal plan. We will aim to get you something for Friday, with the caveat that the scenarios will likely change into the beginning of next week.

Please let us know what you think the best approach is for developing the net debt and IOD forecasts. We're happy to use an updated version of the calculator, as we did for Budget. Alternatively, we could send you individual roll ups for each scenario so that you can calculate on your end.

Hope this makes sense. Tara and I are happy to discuss in more detail on a call – we're around most of the afternoon.

Thank you!
Sareena

Hi Ken, John, and Alex,

We have scenarios for you (again!). So sorry for the last-minute request, but we rolled through some revenue changes, and would really appreciate it if you all could get us an updated IOD and Net Debt-to-GDP outlook for each scenario so we can roll them through the deck (for our 4:15 DM pre-brief).

Again, we really apologize for the short turnaround. We're happy to discuss if you have any questions or concerns.

Thanks so much!
Danny

Good morning:

We have scenarios for you! Attached, please find the base case and two illustrative scenarios, in millions. Mo also just sent a revised TCA profile.

There is a pre-brief with DMs this afternoon at 4:15pm, accordingly, it would be great if we could get the IOD and Net debt-to-GDP outlooks for each scenario by early afternoon so that we can roll them through the deck. I realize that these are tight timelines, and apologize for the short turnaround. Please let us know if you think this is feasible.

Tara and I are happy to discuss the attached, should you have any questions.

Thank you!
Sareena

Good morning:

We wanted to provide an update on where things are at with the request for the SOC.

We are still working on both the base case and the illustrative scenarios, based on what came out of the whiteboard session yesterday, so we probably won't have anything to share with you before Monday.

Our colleagues at TBS have prepared an updated TCA profile that should be making its way over to you later today.

We'll be in touch on Monday.

Thanks and hope everyone has a nice weekend,
Sareena

To: Anand, Sareena (MOF)
Cc: John Psinas; Kandeepan, Ken (OFA); McGrath, Tara (MOF); IOD_RPA
Subject: RE: Transition Deck: Base Case & Alternative Fiscal Scenarios

Thank you for the request, Sareena;

1. WRT IOD forecasts and to avoid that anything falls between the cracks, please send e-mails to the copied group "IOD_RPA" which includes analysists preparing the financing table and IOD forecasts, as well as myself;

2. An IOD calculator makes sense if you envision very tight turnaround times, e.g. you provide a scenario after 5 pm and expect a turnaround the same evening. Otherwise and based on our experience during the last Budget, our preference is to do proper IOD runs with our application in order to take correctly into account the impact of fiscal scenarios on the financing table and other aspects/components of IOD;

3. Given the large impact of capital spending on the borrowing program, getting TCA profiles right is at least as important as the fiscal outlook.

Please let me know in case you have any questions.

Best regards

Subject: Transition Deck: Base Case & Alternative Fiscal Scenarios

Hi Ken, John, and Alex:

Hope all is well.

As part of transition planning, we've received a request from the Secretary to create a deck that includes a base case fiscal outlook to inform the starting point for future fiscal planning. Development of the base case will build off of the medium-term fiscal outlook presented in the 2018 Budget, and will be adjusted as required to scrub the outlook. We've also been asked to include two illustrative scenarios, based on currently available fiscal anchors, that will be layered onto the base case.

In total, we will create 3 scenarios (base case + two illustrative scenarios) for which we would need updated net debt and IOD forecasts. We are talking to TBS about getting updated TCA profiles for this as well.

We are working on creating the base case and illustrative scenarios and will likely send these along piecemeal, as they are drafted. We're hoping to get you a copy of the base case for tomorrow. Not sure how quickly we'll be able to complete the illustrative scenarios, we may also receive further direction on this coming out of tomorrow's session on the fiscal plan. We will aim to get you something for Friday, with the caveat that the scenarios will likely change into the beginning of next

week.

Please let us know what you think the best approach is for developing the net debt and IOD forecasts. We're happy to use an updated version of the calculator, as we did for Budget. Alternatively, we could send you individual roll ups for each scenario so that you can calculate on your end.

Hope this makes sense. Tara and I are happy to discuss in more detail on a call – we're around most of the afternoon.

Thank you!
Sareena

Pauline,

It's the Budget password…K…

Tara and company only gave us the pension adjustment going forward for 17-18 but we needed the accumulated deficit impact to put in our scenarios for column Q. We'll put $10.6 B in that column for 2016-17.

Thanks!

John

Subject: RE: Transition Deck: Base Case & Alternative Fiscal Scenarios

Danny,

Thanks. We'll do it, but bear in mind that in order to fully incorporate the pension numbers, we need the cumulative effect on the accumulated deficit or otherwise we won't get the correct net debt number. Only OPCD has the amounts going back which we can use to put to accumulated deficit.

If we get it in time, we can make the calculation. Otherwise, we'll send the revised calculation to what you just sent us, but someone at the briefing today needs to mention that the pension adjustment historical impact is not fully recognized in the net debt numbers presented.

Thanks.

John

Hi,

We just ran into Gadi – he and Tim were talking and they'd like to add to the deck some more net debt-to-GDP ratios!

So for each scenario (base case, #1, #2), he'd like to be able to say by how much net debt to GDP would increase if 1) you were to layer on the impact of pensions and 2) you were to additionally layer on the impact of fair hydro.

If we send you the accounting numbers we're working with, is that doable?

I understand you probably don't have time to redo IOD with the latest information Danny just sent.

We'll send along accounting in a moment, including for 17-18. Thanks,

Tara

Subject: RE: Transition Deck: Base Case & Alternative Fiscal Scenarios

Sareena,
I see that our net debt template was used for a myriad of variable presentations of net debt, such as with the fair hydro, with pension adjustments etc, along with new fiscal deficit numbers since yesterday.

We got the accumulated deficit impact of the pension adjustment this morning from OPCD and put it into the opening net debt number for 2016-17 in the attached. Our opening 2016-17 net debt number now matches what the AG has indicated it should be if following this accounting interpretation. You may have to redo the net debt calculations based on this adjustment as well as the new fiscal impacts.

As you can see, there is a significant impact to the ratio by adding over $12.4 Billion of the pension adjustment to accumulated deficit.

Thanks.

John

Subject: RE: Transition Deck: Base Case & Alternative Fiscal Scenarios

Good morning:

Per the email thread below, we're touching base to provide you with the outlooks for the three scenarios (base, 1, and 2) as they currently stand, including with the IOD forecast that you provided yesterday at 4:30pm. Please note that the only change that has not been incorporated into the attached IOD outlook is a $5M revenue decrease in 2019-20 and 2020-21 that was made this morning. Revenue has been updated in the attached document, but IOD has not since we didn't think it would make a significant difference.

In addition, we have attached a draft version of the deck that will be used to brief the SOC this afternoon at 3pm, however, we are still working through some wording edits. The net debt-to-GDP numbers that we calculated for each scenario can be found in the deck on slides 10,13,14 and 15. Also attached is a copy of the net debt-to-gdp calculator that we used.

Could you please confirm that both the IOD forecast in each scenario as well as the net debt-to-GDP numbers in the deck are correct?

Many thanks!
Sareena

Ok great - thanks Ken.

Coming out of the meeting there were no further changes to the base case or alternative fiscal outlooks, save one small revenue adjustment that is less than $5M per year.

We'll touch base in the morning.

Tara

Hi Tara

With regard to IOD, your characterization of the two versions is accurate. However since our runs were done to meet deadlines we will review the results once more tomorrow morning and confirm.

With regard to the net debt to GDP ratio, as John has pointed out, the version that includes the AG's adjustments should also incorporate the cumulative impact of reversing the pension adjustment and that should not be limited to 16-17 onwards.

We have requested the cumulative impact from OPCD and should be able to provide revised ratios tomorrow.

Thanks

Ken k

>
> Hi Sareena,
>
> Attached is the revised IOD Summary for the Base Case and Alternative Scenarios together with the impacts from Pension Adjustments and Fair Hydro Plan.
>
> The IOD forecast as of April 30, 2018 is made with the following
> assumptions:-
>
>
> 1. IOD projections based on new OEP interest rate forecasts (May 23, 2018) for F2018-19 and F2019-20 and the 20-year historical average of interest rates for F2020-21. The latest forecast indicated that there is an decrease of 16 bps for 2019-20 only while marginally the same for 2018-19.
> 2. Uses the new Net Investment in Capital Assets and interest cap assumptions provided by TBS.
> 3. The pension adjustments does not impact borrowing as it only has PSAB implications and not cash implications.
> 4. New borrowing is increased by the partial cost of transferring the Fair Hydro Plan onto the Province's books as 44% of the cost is already accounted for.
>

BASE CASE & ALTERNATIVE FISCAL SCENARIOS

Office of the Budget
MINISTRY of FINANCE

OFFICE OF ECONOMIC POLICY
OEP
MINISTRY OF FINANCE

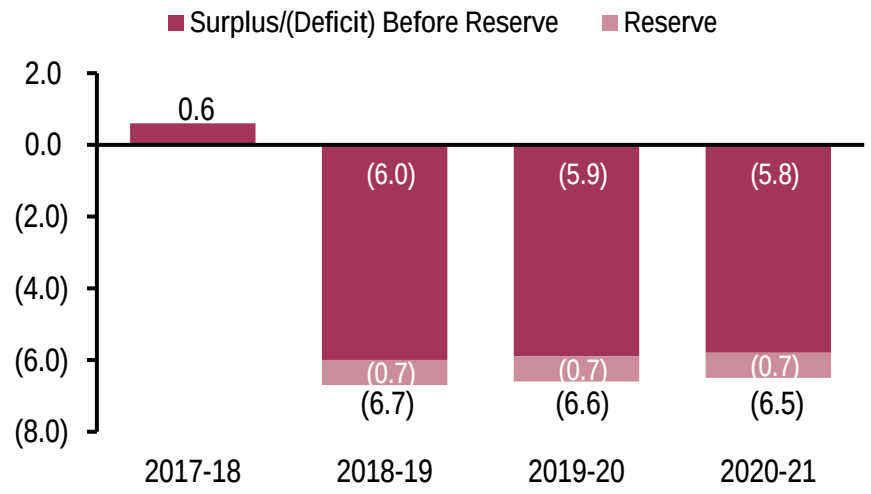
TBS

Draft, May 30, 2018 1:00PM

Confidential Advice to Cabinet

Objective

- Outline a base case medium-term fiscal outlook, to inform the starting point for future fiscal planning and reporting
- Develop and present alternative fiscal scenarios based on potential choices related to fiscal anchors



Part I: *2018 Budget*

Recapping the *2018 Budget / PER* Fiscal Architecture

- The *2018 Budget* and Pre-Election Report (PER) reviewed by the Auditor General projected a surplus of $0.6 billion in the 2017-18 fiscal year, and deficits over the medium-term.
- The *2018 Budget* also included a recovery plan that projected balance by 2024-25.

2018 Budget / PER Fiscal Targets

Fiscal Balance
($ Billions)

	2017-18	2018-19	2019-20	2020-21
Net Debt-to-GDP (%)	37.1	37.6	38.2	38.6

Average Annual Growth Rates
2018-19 to 2020-21

Revenue: 3.7%
Program Expense: 3.3%.

Overview of Medium-Term Outlook

- The forecast assumed **moderating revenue growth, primarily due to slower economic growth** – reflecting global uncertainties related to trade, rising interest rates and slowing household spending – as well as decreases from time-limited non-tax revenues.
  - The *2018 Budget* outlook included revenue measures such as eliminating the PIT surtax and paralleling federal measures.
- **Program spending was projected to increase significantly** in each year over the medium-term primarily **due to a number of new investments**, as well as demand pressures from existing programs.
  - New investments over the medium-term outlook totalled $12.9 billion, including $2.0 billion in 2018-19, $4.0 billion in 2019-20 and $6.9 billion in 2020-21 (note: excludes increases made to existing base spending to keep pace with cost drivers, technical updates, etc.).
- The Auditor General's recommended accounting adjustments for the Fair Hydro Plan and two public sector pension plans were not reflected in the *2018 Budget* and PER outlook.

2018 Budget / PER – Details of Revenue & Expense Assumptions

Revenue

- Outlook for continued economic growth
- Rebound in 2017 PIT due to tax planning
- Non Resident Speculation Tax revenues
- Federal home care services and mental care funding
- Federal infrastructure funding
- Equalization under current program
- Proceeds from cap and trade auctions

Expense

- Addressed sustainability of programs and implemented announced policy changes. Examples of investments include:
  - **Program Base Adjustments for Demand**
    - Hospital surge capacity and Emergency Health Services.
    - Higher-than-forecast OSAP applications and awards.
    - Police oversight and community policing and the Jahn settlement in Correctional Services.
  - **New investments**

    Fall
    - Small business support, including youth employment and fruit & vegetable farmers.
    - Seniors services and supports.

    Budget
    - Mental health and addictions care for children, youth and adults.
    - Social assistance system reform, including multi-year rate increases.
    - Special education and child care expansion.
    - Home care expansion and dental care program.
    - Developmental services expansion.
    - Federal infrastructure funding (e.g. flow-throughs and provincial cost match).
    - Greenhouse Gas Investment Plan, funded by cap and trade proceeds.
- Additional prudence built into the Contingency Fund for items such as land claims and compensation pressures.

Auditor General's Review of 2018 Pre-Election Report

"Aside from the [accounting treatments of the Fair Hydro Plan and the two public sector pension plans], we found that the government based its estimates of revenues, program expenses and interest on debt on cautious assumptions, as required by the [FTA] Act. The government also showed prudence by including a reserve amount in its fiscal plan…."

Part II: Establishing a Base Case for Future Planning

A base case/status quo scenario, or a fiscal outlook net of all new investments and prudence included in the 2018 Budget and Pre-Election Report, will help isolate the state of the Province's foundational fiscal architecture – essentially providing the underlying economic and fiscal trajectory for the current footprint of government revenue and expense – before any new government action, whether that includes new tax reductions or program investments, or new revenue tools/spending savings measures.

Base Case Methodology

The base case serves as an illustrative foundational starting point for the development of the next Provincial fiscal plan, based on the following assumptions:

- **Builds off of the baseline/core assumptions of the fiscal outlook presented in the 2018 Pre-Election Report:**
  - The medium-term outlook in the 2018 PER was found to be reasonable by the Auditor General of Ontario and the Financial Accountability Officer (FAO) – major difference identified was accounting issues and a marginally less optimistic revenue outlook for the FAO.
  - In some cases, adjustments to establish the base case for 2018-19 may be different than for the out-years – the 2018-19 fiscal year has already begun and funds have been committed. This impacts government decisions about what programs/services can be initiated/suspended.
- **2018 Budget and 2017 Fall Economic Statement measures not yet implemented or fully committed are excluded:**
  - 2018 Budget revenue measures
  - Ministry spending on hold-back for 2018-19
  - 2018 Budget and 2017 FES initiatives for 2019-20 and 2020-21
- **Most forms of prudence included in the 2018 PER are rolled back:**
  - Savings targets, both year-end and program review
  - Compensation set-asides in the contingency fund
  - Reserve
- **Interest on debt forecast updated** for base case outlook and to reflect changes to tangible capital assets from excluding 2018 Budget measures.

Revenue Measures Reversals and Outlook Updates

In order to establish a revenue base case, the following measures taken on at the time of the *2018 Budget* are removed and the outlook is updated for the impact of subsequent events.

Revenue Base Case

($ Millions)	2018-19	2019-20	2020-21
2018 PER – Revenue	152,461	157,569	163,834
2018 Budget – Revenue Measures			
Improving Fairness and Transparency of PIT	*(275)*	*(285)*	*(295)*
Ontario Research and Development Tax Credit	*30*	*35*	*40*
Targeting the Employer Health Tax Exemption to Small Employers	*(10)*	*(45)*	*(45)*
Small Business Limit (does not automatically parallel federal measure)	*(45)*	*(145)*	*(160)*
Total 2018 Budget Tax Measures	(300)	(440)	(460)
2018 Budget Expense Initiatives with Revenue Offset	–	(5)	(5)
Subsequent Events to PER			
Private Sector Economic Forecasts	*(200)*	*(200)*	*(200)*
Housing Resales	*(130)*	*(130)*	*(130)*
Operating Profits	*35*	*34*	*34*
Taxation Revenue Collections	*12*	*12*	*12*
Total Subsequent Events to PER	(283)	(284)	(284)
Total Revenue Changes	(583)	(729)	(749)
Base Case – Revenue	151,878	156,840	163,085

To arrive at base case revenue, two adjustments to the PER outlook are required:

1. Reversing the impact of tax measures announced in the 2018 Budget, which include:
   - Improving Fairness and Transparency of Ontario's PIT
   - Enhancements to the Ontario Research and Development Tax Credit
   - Targeting the Employer Health Tax exemption to small employers
   - Limits to Small Business (does not automatically parallel federal measure)

2. Adding the impact of subsequent events since the PER, which include:
   - A downward revision to the Private-Sector Economic forecast to real GDP in 2018
   - The impact of a revised 2017 and 2018 outlook of operating profits
   - Stronger own-source tax collections

Cap & Trade is consistent with the 2018 PER.

Excluding New Investment Items and Prudence

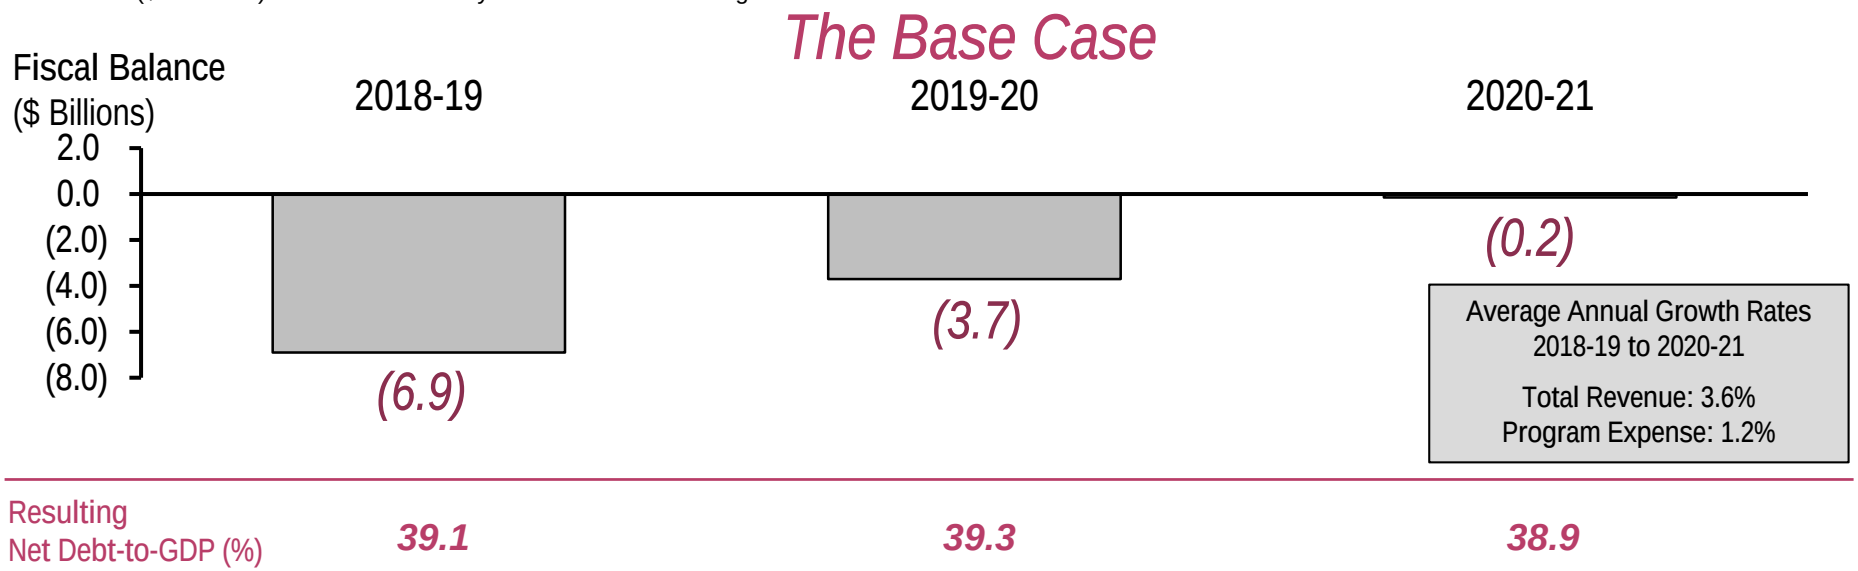
In order to establish a program expense base case, the following holdbacks and initiatives are removed and prudence adjustments are made to the program expense outlook.

Program Expense Base Case

($ Millions)	2018-19	2019-20	2020-21
2018 PER – Program Exp.	145,922	150,427	155,760
Holdbacks/2018 Budget and 2017 FES Initiatives	(697)	(4,125)	(6,989)
Prudence Adjustments			
Remove Compensation Set-Aside	*(446)*	*(738)*	*(1,149)*
Exclude Year-end Savings Target	*1,225*	*1,175*	*1,200*
Remove PRRT Savings Target	*200*	*750*	*850*
Total Prudence Adjustments	979	1,187	901
Total Program Exp. Changes	282	(2,937)	(6,088)
Base Case – Program Exp.	146,203	147,490	149,672

Reserve Base Case

($ Millions)	2018-19	2019-20	2020-21
2018 PER – Reserve	700	700	700
Reserve Reversal	(700)	(700)	(700)
Base Case – Reserve	–	–	–



- Ministry allocations are updated to remove initiatives on holdback in 2018-19, and 2018 Budget and 2017 FES initiatives in 2019-20 and 2020-21. Key investments reversed include (see Appendix for expanded list):
  - Mental health and addictions services
  - OHIP+ for seniors
  - Child care
  - Income Security Reform
- Contingency Fund remains consistent with the *2018 Budget* – reflecting risks not included in ministry allocations – except for the reversal of compensation set-asides.
  - Results in a base case contingency fund of $1.2 billion in 2018-19, $1.9 billion in 2019-20 and $2.5 billion in 2020-21 (includes PTIF held centrally).
- Year-end and program review savings targets are reversed as part of prudence adjustments.
- Capital Plan is consistent with the 2018 PER, aside from reversal of budget initiatives associated with infrastructure expenditures.
- Cap & Trade is consistent with the 2018 PER.
- Generally speaking, spending related to federal-provincial flow-throughs has been maintained, particularly where agreements with the federal government have been signed.
- Reserve has been reversed.

The Base Case Medium-Term Outlook

- Compared to the 2018 PER, the base case represents an improvement to the fiscal outlook in 2019-20 and 2020-21.

($ Billions)	2018-19	2019-20	2020-21
2018 PER Surplus/(Deficit)	(6.7)	(6.6)	(6.5)
Total Revenue Changes	(0.6)	(0.7)	(0.7)
Total Program Expense Changes	0.3*	(2.9)	(6.1)
Total Interest on Debt Changes	0.0	(0.0)	(0.3)
Total Reserve Changes	(0.7)	(0.7)	(0.7)
Base Case Surplus/(Deficit)	(6.9)	(3.7)	(0.2)

*Program expense has increased as a result of reversing savings targets ($1.4 billion), which more than offset other program expense changes ($1.1 billion). *Note:* numbers may not add due to rounding

Part III: Alternative Fiscal Scenarios

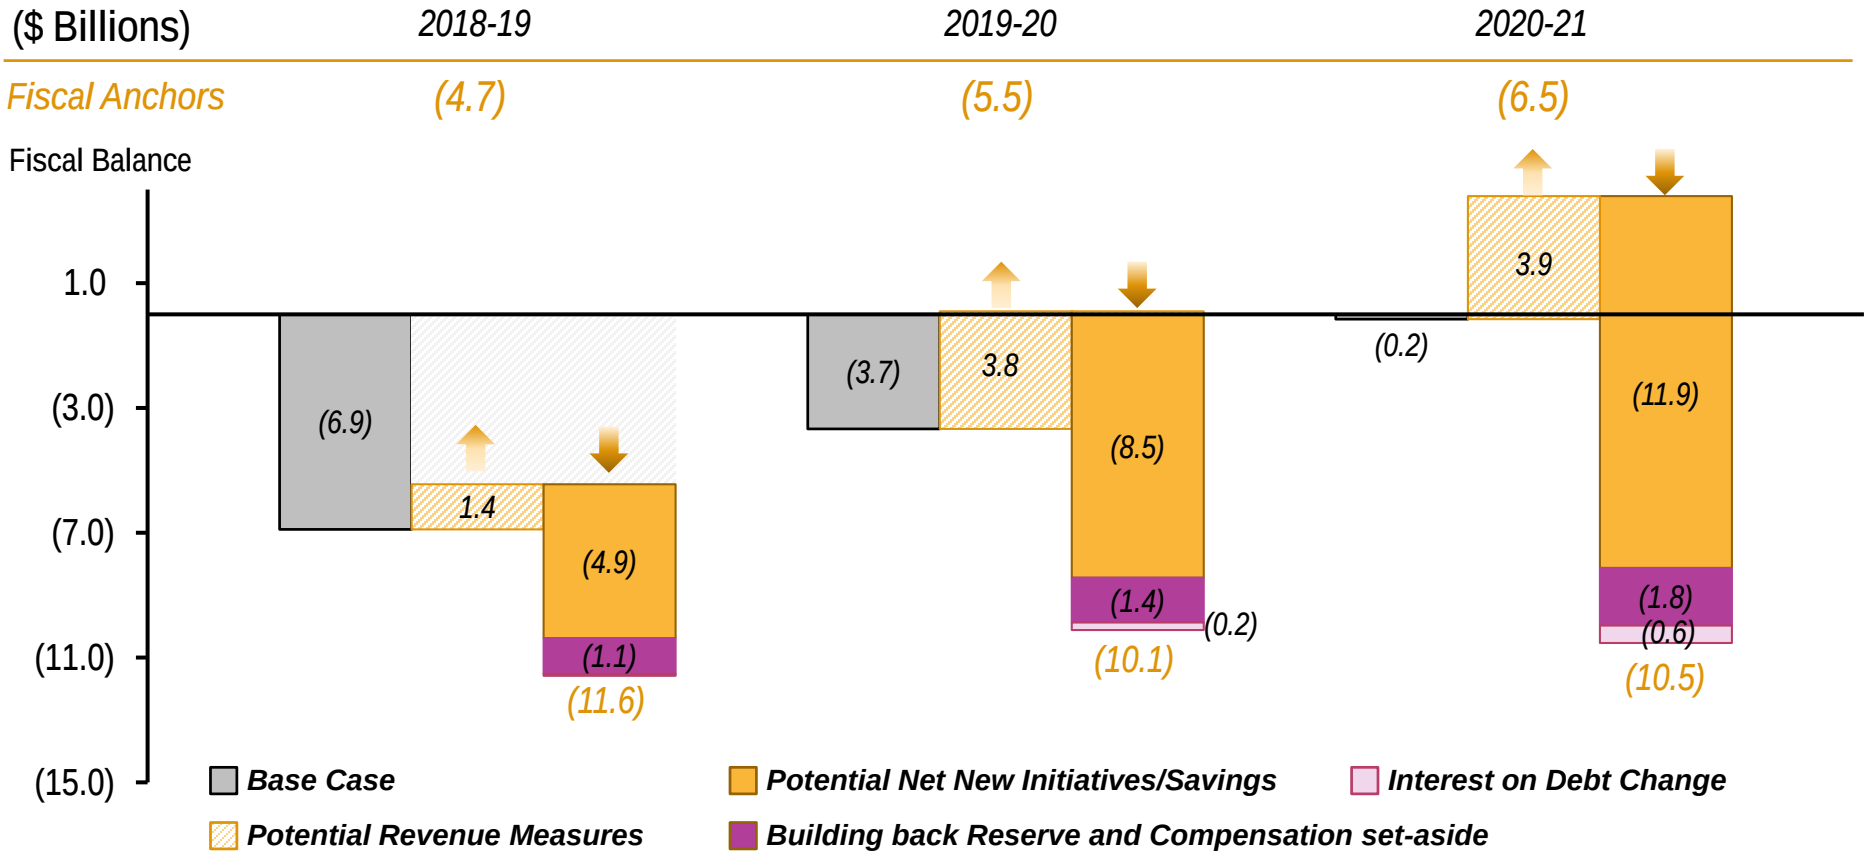
Alternative Fiscal Scenarios

The government has a number of choices it can make and tools at its disposal to build off of the fiscal architecture presented in the base case.

- This includes decisions related to how to treat 2018-19 versus the out-years.
- Information will continue to evolve over the course of the fiscal year.

The following two alternative fiscal scenarios presented on the next slides illustrate the impact of potential choices/tools.

The government could:



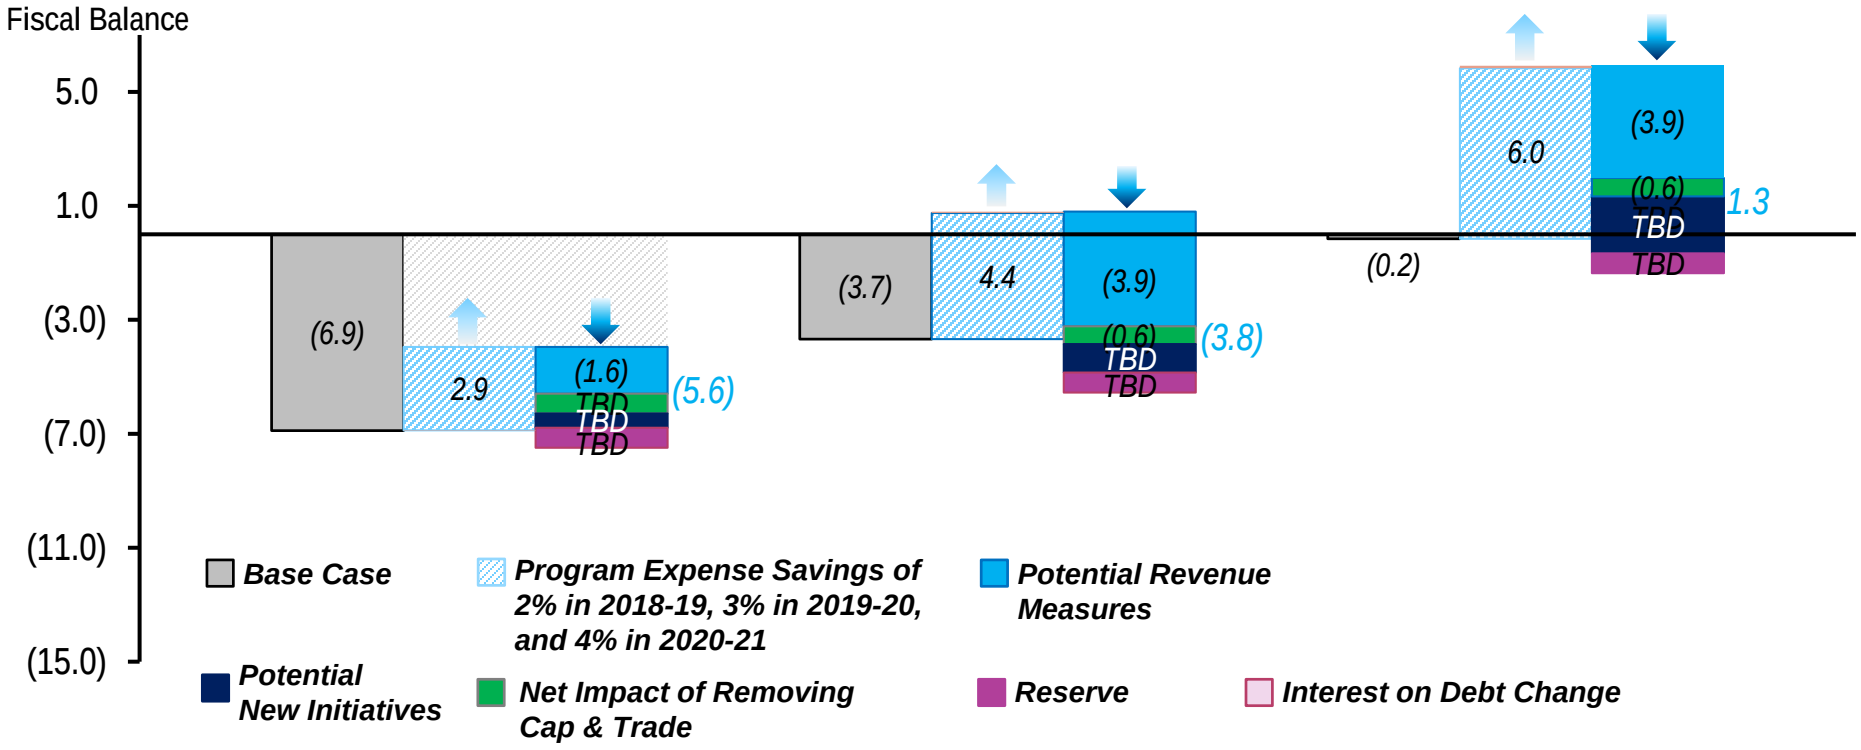
- Introduce new measures, such as new tax reductions or program investments, or new revenue tools or expenditure savings measures.
- Adjust the amount of prudence in the plan, for example:
  - Incorporate a reserve, (currently required under *Fiscal Transparency and Accountability Act.),* or take an alternative view of the revenue or expense forecast.
- Enact legislative or policy changes to allow for the adoption of the Auditor General's recommended accounting treatment for pensions and/or the Fair Hydro Plan.

$ Billions	2018-19	2019-20	2020-21
AG's Accounting Adjustment	5.0	5.6	6.0

Alternative Fiscal Scenario #1

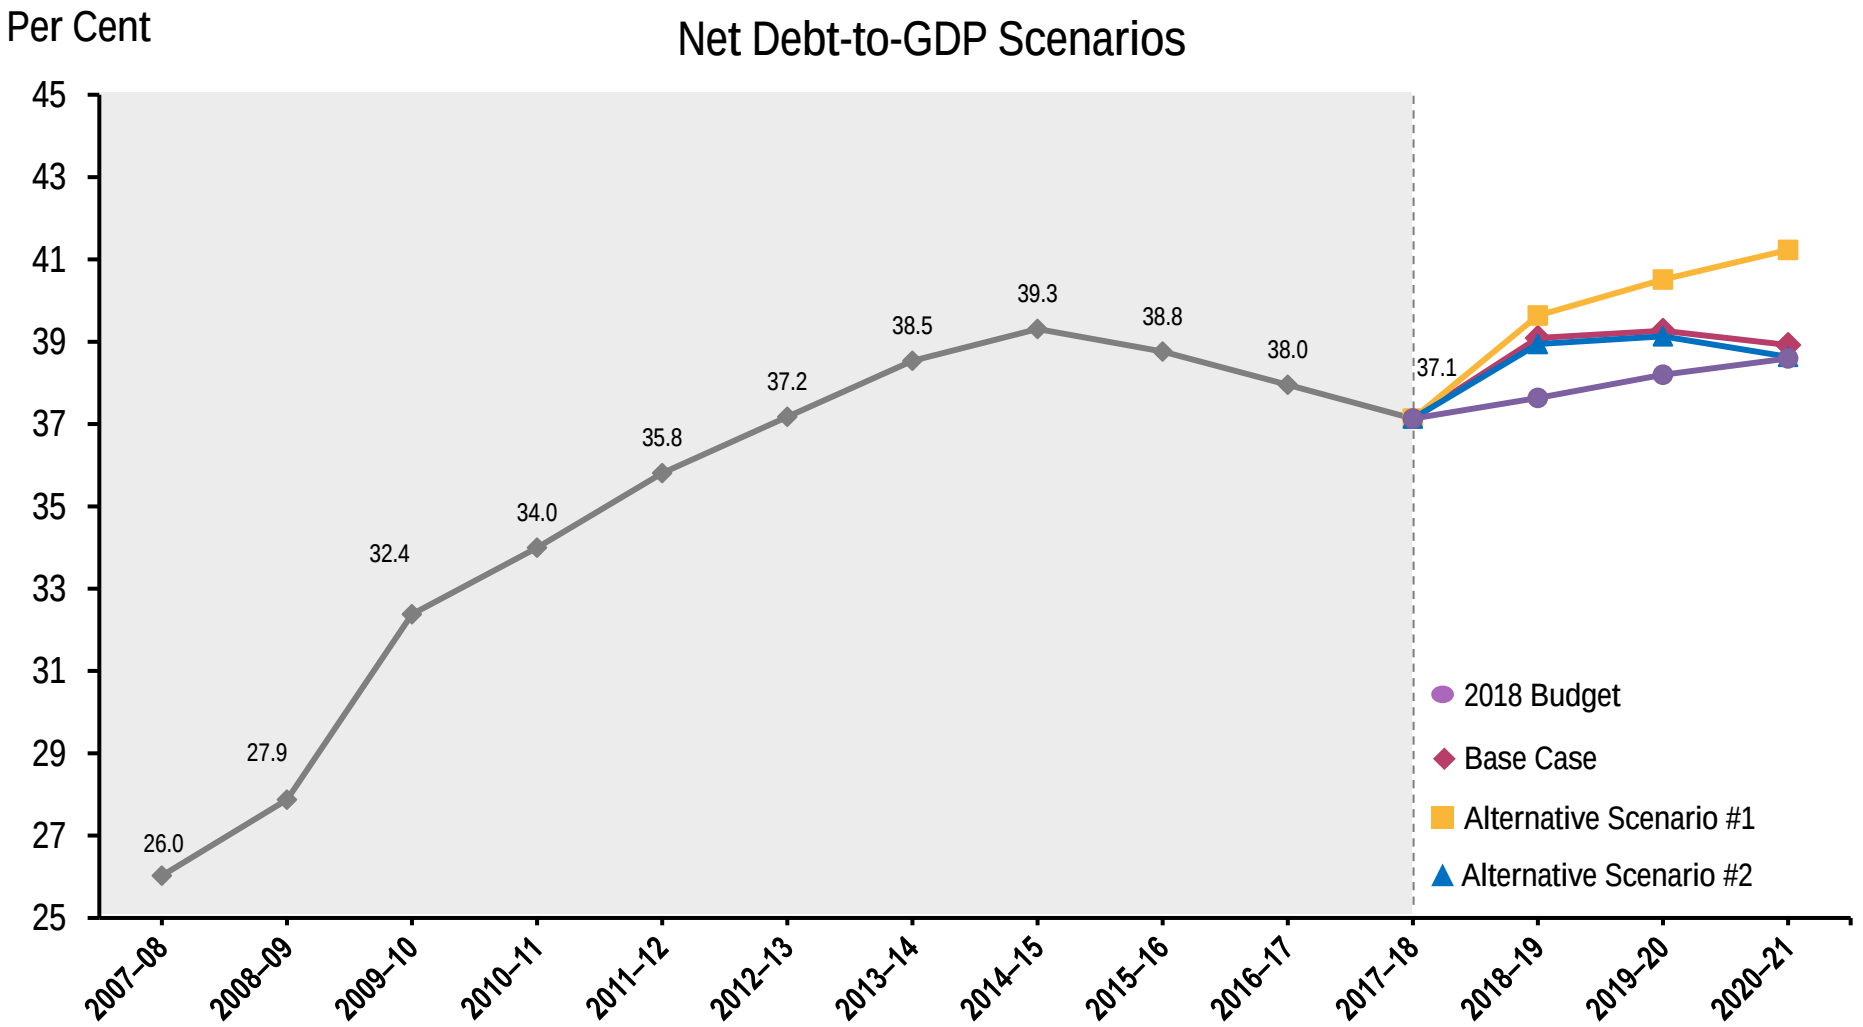
Average Annual Growth Rates 2018-19 to 2020-21

Total Revenue: 4.4%
Program Expense: 3.6%



Resulting Net Debt-to-GDP (%)	39.6	40.5	41.2
Auditor General Accounting Adjustments ($ Billions) and Resulting Net Debt-to-GDP (%)			
Pension Plans	(2.4) / 40.1	(2.6) / 41.3	(2.8) / 42.3
Fair Hydro Plan	(2.6) / 40.2	(3.0) / 41.4	(3.2) / 42.4
Total	(5.0) / 40.7	(5.6) / 42.2	(6.0) / 43.5

Alternative Fiscal Scenario #2



Average Annual Growth Rates 2018-19 to 2020-21

Total Revenue: 2.4%
Program Expense: -0.2%

	2018-19	2019-20	2020-21
Resulting Net Debt-to-GDP (%)	38.9	39.1	38.6
Auditor General Accounting Adjustments ($ Billions) and Resulting Net Debt-to-GDP (%)			
Pension Plans	(2.4) / 39.5	(2.6) / 39.9	(2.8) / 39.7
Fair Hydro Plan	(2.6) / 39.5	(3.0) / 40.0	(3.2) / 39.8
Total	(5.0) / 40.0	(5.6) / 40.8	(6.0) / 40.9

Net Debt-to-GDP

Recovery Plan

- Per the requirements of the Fiscal Transparency and Accountability Act (FTAA), the *2018 Budget* outlined a recovery plan to return to balance.
  - The 2018 Pre-Election Report and subsequent review did not include the recovery plan outlined in the 2018 Budget – however, the Financial Accountability Officer's Report projected that the Provincial deficit would most likely grow beyond 2020-21, rather than return to balance – unless the government took concerted action.
- The recovery plan spanned seven years, with a balanced budged expected in 2024-25.
  - The average annual rate of program spending growth was held to 2.5 per cent between 2018-19 and 2024-25, and 2.0 per cent between 2021-22 and 2024-25.
  - The reserve was also held constant at $700 million in each year over the recovery period.
- Based on the illustrative scenarios presented earlier, the government could consider developing a longer-term plan to balance the budget. Restoring fiscal health to Ontario's finances will require choices about the underlying fiscal trajectory of the province.
- An independent review to obtain fiscal and budgetary policy advice could help inform the next phase of Ontario's fiscal planning, including an approach to building a recovery plan.

Both Scenarios Face Additional Risks…

In addition to requiring a review of assumptions underlying these illustrative scenarios compared to government's priorities, key risks to the fiscal outlook include:

Revenue	Expense
• Economic growth • Housing market • 2017 PIT and CIT tax assessment results • 2017 HST revenue pool and Ontario share • Income shifting resulting from US tax reform • OEB decisions (e.g. Hydro One deferred tax asset) • OEB decision on OPG switching from accrual based to cash based accounting for Pension and Other Pension Benefits • The level of Federal funding assumed/projected for infrastructure projects, home care and mental health may change • Government business enterprise net income • Proceeds from cap and trade auctions	• Ministry pressures related to unfunded risks, depending on prudence/caution in the expense forecast • Impact of compensation negotiations • Policy changes to current federal funding agreements with flow-through implications • Policy changes to current cap and trade program could have fiscal implications, as some proceeds support investments in capital assets and in-plan commitments related to greenhouse gas reduction initiatives ($0.8 billion in 2018-19, $0.6 billion in 2019-20 and $0.6 billion in 2020-21) • Land claims

As part of broader fiscal architecture planning, some risks could be offset by revisiting the contingency fund and consideration could be given to building in a year-end savings target.

…and Will Require Management Strategies and Tools

Key strategies and tools for managing risks and the overall fiscal plan could include:

1. **Independent fiscal review**, which could:
   - Assess the fundamentals of Ontario's existing budgetary/fiscal construct and legislative framework;
   - Support an expenditure management review;
   - Support a review of the underlying revenue forecast; and/or
   - Provide advice to inform Ontario's fiscal planning and financial reporting.
2. **In-year and multi-year expenditure management review**
   - Government could conduct a Line-by-Line review of new and existing programs to ensure it aligns with priorities.
     - This could include taking immediate, focused action in 2018-19 to improve the fiscal trajectory.
3. **Use of prudence**
   - Government could adjust prudence measures, depending on the overall risk environment and on risk associated with underlying assumptions of the revenue forecast and ministry allocations.

Appendix

Key Holdbacks, and 2018 Budget and 2017 FES Initiatives

($ Millions)	2018-19
Holdbacks	
Support for the Good Jobs and Growth Plan	120.0
Mental Health and Addictions Care	89.8
Ontario Autism Program	62.0
K-12 Education Bundle - Special Education	50.4
Enhanced Funding for Developmental Services	44.0
Correctional Services Transformation	62.3
Other Holdbacks	268.4
Total Holdbacks Reversed	**696.9**

($ Millions)	2019-20	2020-21
2018 Budget and 2017 FES Initiatives		
Reforming the Income Security System	727.0	1,253.0
Developmental Services Expansion	492.0	682.0
Mental Health and Addictions Care	417.3	633.8
Extended Health Benefits - Drug and Dental	293.6	508.3
Home and Community Care	210.0	210.0
Childcare Expansion	287.1	672.5
Childcare Expansion – Preschool	–	930.9
K-12 Education Bundle - Special Education	92.6	115.8
FES – Support for Seniors	60.9	60.9
FES – Support for Small Business	1.5	–
Other 2018 Budget and 2017 FES Initiatives	1,542.6	1,921.7
Total Initiatives Reversed	**4,124.6**	**6,988.9**

Note: numbers may not add due to rounding

Alternative Scenario #1 Details

$ Millions	2018-19	2019-20	2020-21
Base Case Surplus/(Deficit)	(6,892)	(3,676)	(153)
Alternative Scenario #1 – Revenue Measures			
Personal Income Tax Increase on High Income Earners	606	642	679
Raise General Corporate Income Tax on Profitable Corporations	-	1,357	1,391
Limit Employer Health Tax Exemption to Small Business	-	159	166
Luxury Car Tax	12	12	12
Fairness in the Business Education Tax	-	269	358
Value Tax on Tobacco	233	233	233
Revenue Integrity	425	425	425

Assumptions /Notes

1 - deleted for this scenario -

2 GDP - per latest information rec'd (see GDP tab)

3 TCA - per info rec'd May 29, 2018 from M Reghabi

After 2027-28 TCA increases are equal to annual amortization

4 Net Debt adjusted for prepaids starting 2014-15. From 2017-18 and onwards - same amount as prior month assumed.

5 Balanced budget continues through to 2035-36

6 GDP annual growth is 4% from 2031-32 to 2035-36

7 Revenue restated to include BPS (Hospitals, colleges, school boards) from 2012-13

8 Revenue from 2017-18 to 2019-20 has been restated for BPS

9 Revenue for 2016-17 was revised down by approx $1 million from $140,735m to $140,734.

10 Accumulated deficit for 2016-17 now incorporates the pension valuation adjustment of approx $12.4b

Prepared by OFA, FTD

30-May-18

	2017 ($ million)	2016 ($ million)
	(301,648)	(295,372)
	(12,429)	(10,985)
r accounting standards	(314,077)	(306,357)

ged to the amount indicated by the AG in her
nts, $314,077 M.

Net Debt for 2016-17 has
opinion of the 2016-17 P

Assumptions /Notes

1 - deleted for this scenario - m

2 GDP - per latest information rec'd (see GDP tab)

3 TCA - per info rec'd May 29, 2018 from M Reghabi

After 2027-28 TCA increases are equal to annual amortization

4 Net Debt adjusted for prepaids starting 2014-15. From 2017-18 and onwards - same amount as prior month assumed.

5 Balanced budget continues through to 2035-36

6 GDP annual growth is 4% from 2031-32 to 2035-36

7 Revenue restated to include BPS (Hospitals, colleges, school boards) from 2012-13

8 Revenue from 2017-18 to 2019-20 has been restated for BPS

9 Revenue for 2016-17 was revised down by approx $1 million from $140,735m to $140,734.

10 Accumulated deficit for 2016-17 now incorporates the pension valuation adjustment of approx $12.4b

Subject: Estimates Defence Document Submissions

Good afternoon –

Program areas are asked to please submit Top Facts (formerly called Q&As) and update Accomplishments no later than September 11th to Pauline Padmore and cc Nicole Yanqui. Attached for your reference is the table of contents from last years' Estimates Briefing Binder, Accomplishments and Top Facts.

Here is the Minister's Office recommended list of top facts & top issues **by order of importance**:

Tab 3: Top Facts

- Office of the Budget

- Ontario Financing Authority
- Office of Economic Policy
- Corporate Electricity Finance Division
- Taxation Policy Division
- Tax and Benefits Administration
- Provincial Local Division
- Cannabis Retail Implementation Project
- Government Business Enterprise Division
- ORPP Implementation Secretariat / Admin Corporation
- Income Security & Pension Policy Division
- Financial Services Policy Division

Tab 4: Top Issues

- Fiscal Plan (in relation to questions that might come up about balancing)
- Debt (Interest on Debt costs)
- Public Accounts (emphasis on AG Accounting)
- Fair Hydro Plan
- Housing Market
- Cannabis
- Cap & Trade
- Trillium Trust
- OLG Modernization
- LBCO
- ORPP – if needed

In addition to the corporate preparations, program areas should prepare their ADM/Program Head in the event we do appear before the Estimates Committee – for those questions that are of a technical or operational nature. This also includes preparations for your ADM/Program Head to explain any financial variances from the Estimates Briefing Book, should those questions arise at the proceedings. This work should currently be underway.

Please let me know if you have any questions about this process.

Thank you.

Pauline Padmore

INCOME SECURITY AND PENSION POLICY

Investment Management Corporation of Ontario (IMCO)

Q: What is the status of IMCO? And when will it be operational?

A: The government is developing regulations under the IMCO Act. These regulations will name the initial participants of the corporation, appoint Board members and proclaim the Act later this year.

Most of the remaining work required before IMCO becomes operational is in the development of governance structures, implementation planning, the completion of investment agreements for initial members and the development of the investment pools. The corporation is expected to be operational in 2017.

Q: Have you heard from many plans in the BPS about joining IMCO? How many plans could potentially participate in it?

A: There has been expression of interest from some plan sponsors but it's too early to disclose those details. When IMCO is up and running, it will be flexible and scalable enough to accommodate funds from all qualified organizations in the BPS that could benefit from its services.

Q: How will you be selecting the initial board members, including the Chair?

A: The government is working closely with OPB and WSIB on the selection of board members, including the Chair. The government is committed to selecting an expert board in accordance with the advice received from the Technical Working Group. We plan to have the initial directors, including the Chair, appointed by summer this year.

Q: Why did you provide in the Act for the government to appoint three board members if IMCO is an arm's length corporation?

A: The government agrees with the Technical Working Group's advice to allow the corporation to focus, without distractions, on achieving the benefits of asset pooling for its members. However, given that the members of the corporation would be broader public sector entities, the government considers it prudent to preserve the right to appoint some, but not a majority, of the board members. This would provide a minimal degree of government involvement in the corporation's affairs, which would not undermine the fundamental independence of the corporation from government. All government appointees to the board will be legally bound to promote the interest of the corporation and its members in making their decisions.

Q: Is the government providing "start-up" funding or ongoing financial `support to IMCO?

A: There are no plans to provide any government funding to IMCO. The financial benefits that asset pooling brings should be sufficient to encourage participation and for those initial participants to make arrangements to meet the start-up costs.

Q: If all potential participants were to join IMCO, how big could it get in terms of assets under management?

A: It is difficult to determine the total assets of the pool of potential participants at this time. However, the 2012 Morneau report, which studied the viability of asset pooling in Ontario, estimated an excess of $100 billion in potential assets under management.

Amending the Teachers' Pension Act (TPA) to include a retroactive override of Section 14 of the Pensions Benefit Act (PBA).

Q: What is the current reemployment limit? For how long have they existed?

A: The OTPP contains provisions that require the pension of a retired teacher to be suspended if the retired teacher works more than a specified number of days in the education sector. Current limits are set out in the TPA and were updated as recently as 2010 to set a limit of 50 days per school year for all retired teachers.

Re-employment limits have been part of the OTPP for over 70 years, with different limits on the number of days a retired teacher could work without affecting pension payments.

Q: What is the purpose of the re-employment provisions?

A: The current re-employment limit of 50 days per school year is intended to:

- Open up employment opportunities for new teachers;
- Create equity between pensioners working for different employers; and
- Provide flexibility to school boards who find it more difficult to replace retired teachers.

Q: Why do this amendment now?

A: In response to recent complaints by retired teachers, it is anticipated that Financial Services Commission of Ontario (FSCO) could rule that provisions in the pension plan that allow pension suspensions are inconsistent with the PBA rules, and are therefore void. The amendment would ensure the continuing validity of the current and any prior re-employment provisions by clarifying that these rules prevail over the PBA.

Q: What will the amendment do?

A: The amendment will add a retroactive override of the PBA to the TPA with respect to the re-employment provisions in the OTPP. More specifically, the amendment would specify that the TPA prevails in the event of a conflict with the PBA.

The proposed amendment would exempt the re-employment rules from the PBA. It will also protect the Crown, the OTF and the Ontario Teachers' Pension Plan Board from potential litigation.

Q: If approved, when will the amendment be effective?

A: This legislative amendment would come into force on Royal Assent of the Budget Bill. The amendment would be retroactive to January 1,1990 (the date the TPA came into force).

Q: Does the Ontario Teachers Federation (co-sponsor of the Plan) endorse this approach?

A: The OTF strongly supports a legislative amendment to preserve the re-employment provisions.

Q: How does the proposed amendment compare to other provincial pension plans?

A: Other public pension plans in Ontario (CAAT Pension Plan, Healthcare of Ontario Pension Plan (HOOPP), Ontario Municipal Employees Retirement System (OMERS), Public Sector Pension Plan (PSPP) and OPSEU Pension Trust) all have provisions related to re-employment. However, their re-employment rules are not subject to challenge under the PBA.

- OPSEU allows a pension reduction if the re-employment period exceeds a specified limit. The constituting legislation of OPSEU includes specific overrides of the PBA;
- PSPP also allows a pension reduction if the re-employment period exceeds a specified limit. The re-employment provisions have not been amended since the inception of the plan and therefore do not conflict with the PBA;
- CAAT, HOOPP and OMERS permit either the continued payment of a pension or pension re-accrual post-retirement, and are therefore not in conflict with the PBA.

Temporary Solvency Relief and Solvency Funding Review

Q: Why is Ontario providing sponsors of private sector defined benefit pension plans with temporary solvency funding relief?

A: Due to persistently low long term interest rates, the next actuarial valuation filed by many pension plan sponsors will continue to show significant solvency funding requirements.

Solvency funding relief will help private sector employers meet this challenge while protecting the benefits of plan members and retirees.

Q: What kind of funding relief will be made available?

A: Temporary measures will be introduced to help employers adjust to increased solvency payments.

Temporary solvency funding relief measures introduced in 2009 and offered again in 2012 would be extended for the first valuation report filed during the three year period starting December 31, 2015. A plan administrator would be able to:

- Consolidate existing solvency payment schedules into a new 5-year payment schedule.
- Extend the solvency special payment schedule to up to 10 years for new solvency deficiencies, with the consent of members and retirees.

Q: When will these measures come into effect?

A: Related regulations are targeted for this spring.

Q: How do these measures protect the benefits of plan members and retirees?

A: Solvency relief measures are intended to support jobs and growth by helping employers meet the challenge of higher solvency special payments.

As with the 2009 and 2012 solvency relief provisions, members and retirees would be provided with additional disclosure when temporary relief measures are employed. They would also have to consent to the extension of solvency payment schedules.

Q: What consent mechanism will be used for the option to extend a new solvency payment schedule?

A: Consistent with solvency funding relief provided in 2009 and again in 2012, the solvency payment schedule would only be extended if no more than one third of the aggregate of all active, former and retired plan members indicate (before the

start of payments) that they do not consent. Collective bargaining agents would only be able to provide consent for the proportionate share of the active members whom they represent.

Q: Why is the government undertaking a review of the current solvency funding framework?

A: Over the last several years, private sector sponsors of single employer defined benefit pension plans have faced funding pressures associated with the low interest rate environment. Many sponsors continue to face challenging contribution requirements as a result of these economic conditions. Recognizing this situation, the government has initiated a review of the current solvency funding framework with a view towards developing a balanced set of reforms that would take into account interests of pension stakeholders – including sponsors, unions, members, and retirees.

Q: What will David Marshall's role be in the solvency funding review?

A: The government has appointed David Marshall to lead the solvency funding review process and provide advice and recommendations to the Minister of Finance with a view to assisting the Ministry of Finance in developing a balanced set of solvency funding reforms that would focus on plan sustainability, affordability and benefit security. He will also assist in ensuring that the review is informed by feedback from a diverse group of stakeholders.

Pooled Registered Pension Plans (PRPPs)

Q: What is the status of PRPP legislation in Ontario?

A: On May 28, 2015, the *Pooled Registered Pension Plans Act, 2015* (Act) received Royal Assent.

The Act would come into force on proclamation once supporting regulations have been developed. Regulations are currently being drafted.

Q: Why is Ontario's Act so similar to the federal framework?

A: Ontario continues to support national efforts to improve the retirement income system and recognizes the value in working with other jurisdictions to develop innovative solutions that advance this important goal for all Canadians.

An Ontario PRPP framework that is harmonized with those of the federal government and other provincial jurisdictions would assist in creating a coordinated approach to administration and regulation across the country. Not only would this help to create economies of scale and minimize costs, but it would also foster greater portability, supporting a modern, mobile workforce.

Q: How many PRPPs are currently registered throughout Canada?

A: To date, only Québec and the federal jurisdiction have legislation in effect and as such, the only plans currently in existence are those registered in those two jurisdictions.

Québec: As of April 2016, Quebec had registered nine plans belonging to the following administrators: National Bank; Sunlife; Société de gérance des fonds FMOQ Inc.; Morneau Shepell; London Life; Manulife; Industrial Alliance; Desjardins; and Compagnie Trust Royal/RBC.

Federal: As of April 2016, the federal Office of the Superintendent of Financial Institutions had registered four plans belonging to the following administrators: Industrielle Alliance Assurance et Services Financiers Inc.; London Life; Manulife; and Sun Life.

Q: How are PRPPs different from individual Registered Retirement Savings Plans (RRSPs) and how will they be more effective than RRSPs in encouraging people to save for retirement?

A: PRPPs differ from RRSPs in a number of important respects, including the pooling of accounts for investment purposes, the higher legal standard of care applied to administrators, and the requirement that PRPPs be offered at low-cost to ensure that individuals' retirement savings and investments are not eroded by high management fees.

Similar to RRSPs, individuals' annual PRPP contributions are deductible in calculating their annual taxable income. Also, similar to group RRSPs, employer PRPP contributions would be tax deductible. However, unlike employer contributions to a group RRSP, employer PRPP contributions are excluded from salaried compensation of employees and would therefore not be subject to Employer Health Tax, Employment Insurance Premiums, Canada Pension Plan contributions or workers' compensation premiums.

Finally, unlike RRSPs, PRPP funds are required by legislation to be locked-in until a specified age to ensure they provide for retirement income (some exceptions exist).

Q: Who are PRPPs intended to benefit? How?

A: Employees & Self-Employed: PRPPs are intended to make it easier to save for retirement by providing employees and self-employed individuals with an additional savings vehicle that is low cost (achieved through a simple design and economies of scale), professionally managed, and portable from one workplace to another.

Employers: PRPPs can result in lower employer taxes and withholdings than Group RRSPs, since employer contributions are not subject to the Employer Health Tax, Employment Insurance premiums, Canada Pension Plan contributions or workers' compensation premiums.

Business: PRPPs are intended to be particularly beneficial for small and medium-sized businesses that may not have the capacity to offer traditional pension plans.

Q: What is the multilateral agreement for PRPPs? What is the status?

A: The federal government and provinces with PRPP legislation in place – British Columbia, Alberta, Saskatchewan, Nova Scotia and Ontario – are currently in negotiations regarding a multilateral agreement for the regulation and supervision of PRPPs with members in more than one jurisdiction (i.e., multi-jurisdictional PRPPs).

If signed, such an agreement would assist in creating a coordinated approach to the administration and regulation of PRPPs across the country.

On July 15, 2015, the federal government released for public consultation the draft multilateral agreement for PRPPs. Comments were due September 1, 2015. Negotiations with other provinces are ongoing and it is anticipated that a draft will be finalised in 2016.

Q: What amendments would be made to the Act in Bill 173, the 2016 Spring Budget Bill?

A: The amendment to the application section would clarify that the Act also applies to individuals formerly employed in the specified forms of employment who continue to maintain funds in a PRPP account.

To further facilitate harmonization with other jurisdictions and to ensure the efficient operation of PRPPs, and amendment would remove provisions that permit transfers from registered pension plans to PRPPs. This amendment would also help to simplify regulatory oversight.

Other amendments would provide that the Superintendent will not issue a licence authorizing a corporation to be an administrator of a PRPP before a multilateral agreement described in section 8 of the Act comes into effect in Ontario. This is a procedural measure to help Ontario put the multilateral agreement into effect.

Finally, the Lieutenant Governor in Council's regulation making powers would be amended in respect of the issuing of licences, the requirements for registration and the provision of information under the Act. This additional regulatory authority would promote streamlined administration and oversight of PRPPs.

Q: Will PRPPs be considered a comparable plan?

A: The government will be developing an appropriate test to determine comparability for the purposes of the ORPP.

Target Benefit Pension Plans

Q: What are target benefit pension plans?

A: Target benefit pension plans combine features of defined benefit and defined contribution plans. They "target" a specified retirement pension funded by fixed contributions, but can address funding shortfalls by reducing accrued benefits, including pensions in pay.

Q: Why is Ontario considering target benefit pension models?

A: Target benefit pension plans have the potential to increase workplace pension plan coverage by providing employers and employees with a more flexible pension option. With a more predictable cost structure, employers that may not be able to manage the risks of a defined benefit plan would have another option to offer employees. Members and retirees would also benefit from pooling of investment risk and longevity risk, which can reduce the cost of pensions.

Q: Why did we only consult on multi-employer pension plans?

A: While numerous target benefit multi-employer pension plans (MEPPs) exist in Ontario, there is no specific framework for target benefit pension plans in the Pension Benefits Act (PBA). For the purposes of the PBA, they are classified as defined benefit plans. Feedback from the consultation will help inform the development of a comprehensive framework for target benefit MEPPs that will replace the time-limited funding regulations that are currently in place for certain MEPPs, known as specified Ontario multi-employer pension plans (SOMEPPs).

Currently, there are no target benefit single-employer pension plans. Additional issues may need to be addressed in a framework for single-employer plans. For example, single-employer plans have a higher risk of winding up than multi-employer plans.

Feedback from consultations relating to MEPPs will help in subsequently developing a framework for single-employer target benefit pension plans.

Q: What concerns did stakeholders express in the consultation?

A: While submissions were supportive of a new framework, including a solvency funding exemption, some concerns were raised that certain MEPPs may face challenges transitioning to a new framework and implementing changes in funding rules.

The government will continue to consult with affected stakeholders on all aspects of a target benefit MEPP framework, including funding rules, and is committed to providing a transition period that allows sufficient time and ensures minimal disruption to the collective bargaining process.

Q: How will the solvency funding review and any potential reforms to Ontario's current funding regime affect the development of a new funding framework for TB MEPPs?

A: In order to ensure a comprehensive and coherent framework for TB MEPPs, a new TB MEPP framework will be developed in the context of any changes to the current solvency funding regime.

Pension Advisory Committees

Q: What is the government doing to facilitate the establishment of Pension Advisory Committees (PACs)?

A: The role of PACs will be to monitor plan administration, make recommendations to the administrator regarding the pension plan, and promote awareness and understanding of the pension plan.

The government is proposing legislative changes to facilitate the establishment of PACs.

Draft regulations under the Pension Benefits Act were posted for public consultation in the fall of 2015. Regulations incorporating stakeholder feedback will be finalized later this year once the necessary legislative amendments have been passed.

Q: What are the legislative changes that the government is proposing to enable the implementation of PACs?

A: The government is proposing two amendments relating to PACs to facilitate the establishment of PACs.

1) Allow for transitional rules for pension plans that already have advisory committees to be included in the regulatory framework for PACs which is currently under development.

2) Allow the government to make regulations to provide for the exemption of pension plans that meet specified criteria from the requirement to establish a PAC. Currently, jointly sponsored pension plans and multi-employer pension plans would be exempt from this requirement because their governance structures already require member representation. It has been brought to the attention of the Ministry of Finance that certain other pension plans also

provide for member or retiree representation in their governance structure. As a result, the PBA is being amended to avoid potential duplication.

Pension Benefits Guarantee Fund (PBGF)

Q: What is the government doing to ensure that the PBGF remains a sustainable source of protection for Ontarians?

A: The PBGF was created in 1980 to provide a measure of security to help offset the effects of pension shortfalls that occur when a plan is wound up without sufficient assets to pay full benefits for all members and the employer is unable to fund the pension shortfalls (e.g., if the employer is insolvent).

Ontario is the only jurisdiction in Canada with a Pension Benefits Guarantee Fund (PBGF). The PBGF guarantees eligible pension benefits up to the first $1000 per month in respect of covered employment in Ontario.

The PBGF plays an important role in Ontario's pension system by ensuring a minimum level of benefit security for plan beneficiaries. Reforms to the PBGF were made in 2012 to put it on a more sustainable footing including increasing assessments and eligibility conditions for covered benefits. As the government continues to pursue reforms to Ontario's pension regulatory landscape consideration will also be given to how any reforms may impact the PBGF to ensure that the fund remains a sustainable source of protection for covered plans.

"Split Pensions"

Q: What is the government doing to help public sector employees whose pensions were affected by past government-initiated restructuring?

A: Reforms were made to the Pension Benefits Act and its regulations to allow certain pension plans, such as HOOPP, OMERS and the OPS plan, to enter into agreements and offer eligible individuals an opportunity to consolidate their pension benefits in their successor plan. These reforms came into force on January 1, 2014.

The regulation names the affected plans and sets out the information that must be given to eligible individuals, including any implications of consolidating their pension benefits. This should help individuals make informed decisions about whether or not to consolidate their pensions.

An amendment in the 2015 budget bill extended the date by which the affected plans must fully implement their agreements, from July 1, 2016 to July 1, 2017.

A minor amendment is being proposed to ensure that affected plans have until July 1, 2017 to implement their agreements.

Social Assistance

Social Assistance Rate Increase

Q: Why is the government giving a higher rate increase to Ontario Works single adults without children compared to everyone else on social assistance?

A: The increase will provide a top-up to singles without children receiving Ontario Works, who have the lowest incomes among social assistance recipients. With the increase and the top-up, this group of recipients will receive a total increase of $25 per month, which is $100 per month, or 16.5 per cent, more than they received in 2012.

Q: Why are the non-disabled spouses of ODSP recipients excluded from the rate increase? Is the $25 increase for OW singles adults without children being made at the expense of ODSP recipients?

A: All individuals and families receiving Ontario Disability Support Program (ODSP) benefits will benefit from the 1.5 per cent increase for persons with disabilities.

This approach helps reduce the disparity between Ontario Works and ODSP rates for non-disabled spouses and takes an initial step towards treating non-disabled recipients more equally.

Q: Will the province cover the 2016 municipal share of the cost of the Ontario Works rate increase?

A: Yes. The government recognizes that most 2016 municipal budgets have already been completed. Municipalities would not be required to share the cost of the rate increase until January 2017.

Social Assistance Consultations

Q: Is the government starting yet another consultation on social assistance reform?

A: In the 2015 Budget, Ontario introduced a consultation on social assistance rate restructuring. Through ongoing discussions, there emerged a clear consensus on the need to move policy considerations beyond social assistance rates to include aspects of the broader income security system.

The government is continuing to engage with delivery partners, clients and sector advocates to chart the path to a comprehensive system that effectively reduces poverty, supports people in their efforts to participate in the economy, and provides human services in a way that makes sense to the people who need them.

This process will look across the government and at the broader income security landscape to ensure that various existing and future programs work together to

help Ontarians. The government will also engage First Nation, Inuit and Metis communities to ensure that the path forward recognizes unique challenges on- and off-reserve and helps all Ontarians live a better life.

One area of research that will inform the path to comprehensive reform will be the evaluation of a Basic Income pilot. The government will work with communities, researchers and other stakeholders in 2016 to determine how best to design and implement a Basic Income pilot.

Child Support Exemption in Social Assistance

Q: Why is the government going to introduce changes to social assistance rules to exempt child support payments?

A: Currently, families receiving child support have their social assistance benefits reduced by the full amount of child support they receive. This means that families on social assistance are no better off when they receive child support, and the parent responsible for making child support payments may feel little incentive to do so.

That is why the government will introduce changes to social assistance rules so that families on social assistance who receive child support payments can benefit from more of this income.

Q: When is the government going to exempt child support for the purpose of determining social assistance benefits?

A: Over the next year, the government will introduce changes to social assistance rules so that families on social assistance who receive child support payments can benefit from more of this income. Details will be provided in the near future.

Q: Will child support be fully exempt or treated like employment income as recommended by the Lankin-Sheikh Report? Will social assistance recipients still be required to seek child support?

A: Over the next year, the government will be considering different approaches to implementing a change to how child support payments are treated for the purpose of social assistance and will announce details in the near future.

Prosper Canada

Q: What is Prosper Canada?

A: Prosper Canada is a national organization dedicated to expanding economic opportunity and financial empowerment to low-income Canadians. Prosper Canada works with government, business and community partners to develop programs such as Financial Empowerment and Problem Solving (FEPS).

Q: What will Proper Canada do with the funds?

A: Through the Ministry of Community and Social Services, the government will invest up to $1 million annually over five years to partner with Prosper Canada in order to provide a range of financial empowerment tools and services to more Ontario communities.

The Ministry of Community and Social Services will work with Prosper Canada to develop a plan for the best way to use the funds to support new financial empowerment services. The new programs would be evaluated for their effectiveness on enhancing the financial stability and empowerment of participants.

Q: What is FEPS?

A: The Financial Empowerment and Problem Solving (FEPS) program helps low-income people boost their incomes and take control of their finances.

The program offers individualized counseling and hands-on help to those in financial crisis to obtain banking services, apply for benefits such as Canada Learning Bonds to save for their children's education, manage debt and enable participants to move from crisis to longer-term financial planning.

Funny Money

Q: Why is the government funding Funny Money? Isn't financial literacy already part of the Ontario high school curriculum?

A: Financial literacy education is integrated in the existing Ontario curriculum for students in grades 4-12, so they have the knowledge and skills to take responsibility for managing their personal financial well-being with confidence and competence, but is not currently offered as a separate course.

Funny Money would complement the curriculum through standalone sessions that use humour to educate youth about money management, credit, debt and savings in order to empower students with the knowledge they need to make good financial choices.

Basic Income Pilot Project

Q: Why is the government implementing a Basic Income pilot project?

A: A Basic Income pilot will test a growing view at home and abroad that a basic income could build on the success of minimum wage policies and increases in child benefits by providing more consistent and predictable support in the context of today's dynamic labour market.

The pilot would also test whether a basic income would provide a more efficient way of delivering income support, strengthen labour market attachment and achieve savings in other areas, such as health care and housing supports.

Q: When and where will the Basic Income pilot be implemented? How much will the Basic Income pilot cost? Your Estimates show $5 million in 2016-17 for the pilot.

A: The pilot in still in the inception stage. A start date and criteria for determining a location for the Basic Income pilot have not yet been determined. The government will be gathering expert advice on the design of the Basic Income pilot over the course of 2016. Once this work has been completed, the government will finalize the costs for the pilot.

Canada Pension Plan Enhancement

Q: Minister Morneau has begun a process to enhance the Canada Pension Plan (CPP). What does Ontario want from this process?

A: Ontario has long been a champion of strengthening the retirement income security system and is pleased that the federal government shares this commitment and has renewed national discussions to enhance the CPP.

The Province's extensive consultations in developing the Ontario Retirement Pension Plan (ORPP) have helped to inform Ontario's view that any CPP enhancement must be timely and provide a level of adequacy and targeted coverage that is consistent with the ORPP.

Q: If there is an agreement on CPP enhancement within the year, will Ontario still implement the ORPP?

A: While Ontario is pleased that the federal government understands the importance of enhancing retirement security, the process to enhance the CPP is not simple and could take a very long time.

Ontario will continue to be an advocate of the need for enhanced retirement security and will work intensively with its federal, provincial and territorial counterparts to address the needs of future retirees.

To provide more time for discussion among provinces and the federal government, Ontario is phasing-in the launch of the ORPP by starting enrollment one year later than the original start date, and by starting the first phase of contributions in January, 2018.

Q: If there is agreement on a CPP enhancement that does not meet Ontario's objectives, what is Ontario's position?

A: The Province's extensive consultations in developing the ORPP have helped to inform Ontario's view that any CPP enhancement must be timely and provide a level of adequacy and targeted coverage that is consistent with the ORPP.

The government looks forward to collaboration on a CPP enhancement and other innovative approaches at the Federal-Provincial-Territorial Finance Ministers meeting in June 2016.

Ontario's main objective is to look at ways to meet the goals of the ORPP in an enhanced CPP framework, while preserving the ability to implement the ORPP, should that not be possible.

Q: The federal budget announced that in the coming months the federal government will launch consultations to give Canadians an opportunity to share their views on enhancing the CPP. How will the federal consultation process affect the timeline to reach agreement on a CPP enhancement by the end of 2016?

A: Details of the federal consultation process on CPP enhancement are unknown at this time.

Our government will continue to be an advocate of the need for enhanced retirement security and will work intensively with its federal, provincial and territorial counterparts to address the needs of future retirees.

The Province's extensive consultations in developing the ORPP helped inform Ontario's view that any CPP enhancement must be timely and provide a level of adequacy and coverage consistent with the ORPP.

REVENUE AGENCIES OVERSIGHT DIVISION

Wine and Spirits Retailing

Overview

Q: What are the key recommendations and changes being implemented?

A: There are a handful of key changes that consumers will notice.

The government is expanding wine sales in up to 300 grocery stores across the province. This includes:

- 150 brand new authorizations to grocery stores that will allow them to sell domestic and imported wine and beer. These new authorizations will also allow grocers to sell cider and fruit wine.
    - 70 of these authorizations will be issued this fall. Of these 70:
        - 35 will allow grocers to sell imported and domestic wine immediately.
        - 35 will allow for the sale of Ontario Vintners Quality Alliance (VQA) wine from producers other that the larger owners of winery retail stores. After three years, these authorizations will automatically open up to allow for the sale of all imported and domestic wine. This transitional arrangement allows time for the industry to adapt to the new channel.
- Up to 150 of the existing winery retail outlets at grocery stores that consumers are already familiar with will be allowed to operate their stores inside grocery locations. These locations will expand their product selection and sell wine from other Ontario producers. Winery retail stores will be pairing with grocers that can also sell beer. There will no longer be a separate checkout at these locations.
- And finally, we will continue to issue beer-only authorizations to grocery stores until up to 450 grocery stores sell beer.
- All grocers that sell beer will be allowed to sell cider.

For industry – including producers of cider, beer, domestic and international wine – these changes open up new retail opportunities.

Q: When will wine be available on grocery store shelves? What are the next steps?

A: The first 70 stores will be authorized by this fall, and the process will be similar to the one for beer. As with beer, we expect that grocers will want to move quickly to have wine on shelves shortly after authorizations are issued.

We expect to continue to issue authorizations to grocery stores on a rolling basis, while allowing the same number of winery retail stores to operate their stores inside grocery locations with a shared checkout. The Council has recommended that the government review the outcomes of the initial tranche of 70 new outlets before proceeding with future tranches.

Ultimately, up to 300 grocery stores will sell beer, cider and wine. Beer-only authorizations will be issued to bring the total number of grocery stores with beer and cider to 450.

Q: Why did it take so long for you to do this?

A: The wine industry in Ontario is complex. We have stakeholders with a range of interests: local and international wine producers, grape growers, winery retail store owners, grocery store operators and social responsibility groups.

We just changed a 90 year old regime in December with respect to beer sales. It became obvious in the fall that taking more time to get things right was the sensible approach.

In the end, we have a solution that is win-win-win - for wine lovers, for Ontario wine producers and the farmers who support them, and for international wine producers.

We'll have wine in up to 300 grocery stores – including up to 70 locations authorized to sell by this fall.

Q: Why is the Council recommending only introducing wine into 150 grocery stores? There will be beer in 450 grocery stores.

A: We are expanding access responsibly. The number of new licences in the proposed new model is based on the total number of beer in grocery licences that were established under the beer framework – 450. There are currently 292 "off site" winery retail stores, so we added 150 new authorizations to bring it to about the same as beer.

The exact number of grocery stores selling wine through their own checkouts will depend on the number of WRS outlets that ultimately move inside the check-out at grocery stores. Of the 292 existing WRS outlets, the Council is recommending that up to 150 that are currently located in grocery and outside the grocery store checkout be enabled to operate inside grocery with a shared checkout.

In total, wine could be available in up to 300 grocery stores – including up to 70 locations authorized to sell by this fall.

Q: What does this mean for beer in grocery stores?

A: We are committed to expanding beer sales to up to 450 grocery stores. To reach this target:

- 150 brand new authorizations will allow grocers to sell beer, cider, wine and fruit wine.
- Up to 150 existing winery retail stores will operate their stores inside grocery, where beer and cider will also be sold.
- Beer-only authorizations will be issued to grocers to bring the total number of grocery stores selling beer to up to 450.

Q: Why is this so complicated? There will be universal authorizations, existing winery stores operating inside grocery, controls on who sells what, some will be matched with beer but some won't. Why not just open it up?

A: The Council did not start from scratch in making its recommendations. It recognized the benefits of the existing retail channels for wine, including the LCBO and winery retail stores, and how we could build on and improve them for consumers and all producers.

There will be differences in the consumer experience. Just like beer, and just like grocery stores in general.

The bottom line is that we're getting what consumers want done — wine will be sold alongside beer in grocery stores.

Q: How will this affect Ontario's wine industry?

A: These changes open up opportunities for all producers – from Ontario, across Canada and around the world. All producers will benefit from being able to sell their wine in more locations.

Here in Ontario, these changes build on our already-thriving industry. Ontario's wine and grape industry contributes to developing tourism destinations, creating jobs and growing our economy. VQA wine sales in Ontario have increased by over $115 million since 2009 to $288 million – a 66 per cent increase.

This is a win for consumers and all producers.

Q: Will bringing winery retail stores inside grocery stores make a big difference to consumers?

A: As consumers will be able to shop for wine in a convenient way, we expect that they will respond favourably to the changes.

Q: Why will it take so long to roll out only 150 new authorizations?

A: By making these changes in stages, we are giving the industry time to adapt.

Unlike beer, wine requires grapes to be grown and wine to be aged, which creates much longer lead times for domestic industry to ramp up.

We have moved quite quickly to increase consumer convenience and choice.

We were pleased to launch the sale of beer in grocery stores this past December, and we look forward to seeing wine on shelves beginning this fall.

Product Assortment and Prices

Q: What type of wine will consumers be able to purchase in grocery stores?

A: In grocery stores, Ontarians will have access to Ontario wines as well as wines from the rest of Canada and around the world. Fruit wine will also be available.

The product selection will vary depending on the grocery store.

Q: Will there be restrictions on wine sales like there are for beer sales?

A: Yes, there will be restrictions similar to beer, to ensure that:

- The sale of wine and beer adheres to standard hours;
- Staff selling and handling wine and beer in grocery stores must be a minimum of 18 years of age;
- Staff must be fully trained to ensure Ontario's standards for social responsibility are always met;
- Staff will be responsible to ensure that customers under the age of 19 and intoxicated adults do not purchase beer.

Q: Why will grocery stores only be able to sell wine that costs $10.95 or more?

A: We believe that, where access is expanded, social responsibility standards should be strengthened. This price restriction is supported by social responsibility groups, including MADD.

This price restriction also supports the competitiveness of Ontario VQA wines in the grocery channel, and promotes the objectives of Ontario's Wine and Grape Strategy.

Q: Why is the price restriction set at $10.95, and not higher/lower?

The $10.95 price restriction strikes a balance between providing a broad product selection and maintaining social responsibility standards. The majority of Ontario VQA wines are priced at $10.95 or higher, and therefore the price restriction supports their competitiveness in this channel.

Q: What are the differences between the grocery stores what will get new authorizations vs. the stores that will have wine retail stores move inside their checkouts?

A: The new wine authorizations will see wine fully integrated on grocery store shelves with a full assortment of domestic and imported wine.

Winery retail outlets that operate their stores inside grocery locations will broaden their assortment to sell the wines of any Ontario producer.

In both cases, there would be a shared checkout for both groceries and wine.

Q: Who decides which wines will be sold in grocery stores?

A: While the product selection will vary depending on the grocery store, the new grocery store channel will sell imported and domestic wine.

For the grocery stores that secure one of the new beer and wine authorizations, it will be the grocers that decide which products to offer.

The owners of winery retail stores will continue to decide which products they offer, however they will broaden their selection to sell the wines of any Ontario producer. There will be minimum shelf space requirements for the wines of other Ontario producers and small wineries to ensure fair representation.

Q: The Council's report suggests that some authorizations be restricted until three years after they are issued. What does this mean?

A: The initial allocation of 70 licences should be split into two equal groups of 35 licences. One group of 35 would allow for the immediate sale of both imported and domestic wine. The remaining 35 would be restricted for the first three years to selling only Ontario VQA wines from producers other than the larger owners of off-site WRS outlets. After the initial three-year period, these stores would automatically be permitted to sell all wine. This transitional arrangement is designed to allow time for the industry to adapt to the new Wine in Grocery channel.

The Council is suggesting that the Province consider allocating further tranches at three-year intervals to coincide with the date that the previous tranche converts to permit the sale of all wine, up to 150 licences in total.

Q: Will there be a minimum amount of shelf space for Ontario wines?

A: The Council has recommended that the government discuss with grocers opportunities for small producers to access the new Wine in Grocery channel, and ways to provide adequate display of VQA wines.

The government will take this recommendation into consideration in the lead up to the allocation process for Wine in Grocery.

Off-site winery retail stores are only permitted to sell Ontario wines.

Q: Will wine prices increase as a result of these changes? How much? What about beer and other alcoholic beverages?

A: Beverage alcohol producers will continue to set prices for their products.

It's important to keep in mind that Ontario enjoys the lowest prices in Canada for wine – and among the lowest prices for beer.

Q: Will wine prices be the same at grocery stores as in the LCBO and winery retail stores?

A: Yes. Consumers will pay the same price for the same product no matter where they buy it.

This applies to all types of alcoholic beverages, whether purchased at the LCBO, grocery stores or on-site where the product is made.

Revenue and LCBO Impact

Q: How will these changes affect the Province's revenue?

A: We believe government revenues will be mostly unaffected by this move to better integrate wine retailing into grocery stores. We will know better over time, as all participants adjust to the changing retail landscape.

We are doing this to deliver on consumer demand for increased convenience and choice while ensuring returns to fund key government priorities like healthcare and education.

The Ministry of Finance is moving ahead with the 2016 Budget announcement to increase LCBO mark-ups on wine and corresponding increases to the wine taxes at winery retail stores, as well as increases to the minimum price for wine. These will generate approximately $75 million in new revenue at year 3 of implementation, in 2018-19.

Q: Will grocers profit from wine sales? Will government share in this benefit?

A: This model creates opportunities for producers, grocers and the LCBO while ensuring Ontario continues to have necessary revenue for investing in key priorities like infrastructure.

As is the case with beer sold in grocery stores, producers, grocers and government will earn revenue from wine sales in grocery stores.

Because grocers purchase product from the LCBO at a discount, the grocers earn the gross margin bid in the auction when they sell it to consumers.

Grocers will compete in a competitive allocation process based on the minimum discounts bid.

We expect wine prices to remain the lowest in the country after these changes are implemented.

Q: How will the LCBO's business change as a result of expanded wine and beer sales in Ontario?

A: These changes mean the biggest increase in competition the LCBO has ever faced. The grocery channel also shifts the LCBO's focus to its role as a supplier.

LCBO will become a more innovative retailer, including continuing to focus on the customer experience and expanding in key areas like eCommerce.

The LCBO is developing its long-term strategic plan to address these challenges. This is demonstrated by key consumer-focused initiatives including store upgrades and merchandising innovations like "Products of the World."

We look forward to the LCBO's moving forward on its eCommerce platform later this year.

Q: How will these changes affect the LCBO? Are LCBO employees at risk of losing their jobs?

We are building Ontario up, with our number-one priority being growing the economy and creating jobs.

We recognize that these changes will mean the LCBO has to adapt the way it does business.

LCBO will become a more innovative retailer, including continuing to focus on the customer experience and expanding in key areas like eCommerce.

Competitive Allocation Process

Q: Who will run the competitive allocation process, issue the authorizations and enforce social responsibility requirements?

A: As with beer, the LCBO will run the competitive allocation process and enter into supply agreements with grocers.

The AGCO will ensure that any locations with supply agreements meet store eligibility criteria, as well as criteria for the socially responsible sale of beer and wine in their stores, before authorizing them to sell.

Q: When will grocers be able to bid on authorizations to sell wine?

A: The LCBO is expected to launch the competitive allocation process this summer. Grocers would be authorized and begin to put product on their shelves by fall.

Q: Is there a required geographic distribution for the authorizations?

A: As with beer, we will put measures in place to ensure a fair representation of grocers and equitable geographic distribution across Ontario.

Q: Will large and independent grocers be given the same opportunities?

A: As with beer, we will put measures in place to ensure fair representation of grocers and equitable geographic distribution across Ontario.

In fact, of the first 70 wine authorizations, at least 18 will be allocated to independent grocers.

Q: What does this mean for grocery stores that already have winery retail stores on their premises?

A: Up to 150 winery retail outlets that are currently located in grocery stores and just outside the checkout will be enabled to operate their stores inside grocery locations with a shared checkout so that consumers can check out wine along with the rest of their groceries.

To facilitate that process, up to 70 beer authorizations will be offered to grocers that are able to reach an agreement with winery retail store owners by May 1, 2017. These beer authorizations would be granted directly to the grocer based on a set discount of 3% off the net price, which was the minimum bid in the 2015 Beer in Grocery allocation.

This is in addition to the 150 brand new authorizations that will be issued for grocers to sell wine, beer, cider and fruit wine on shelves.

The remainder of the winery retail stores will continue to operate as they do now. Grocery locations with winery retail stores on their premises would not be eligible for one of the 150 new universal wine authorizations. They could, however, apply for an authorization to sell beer.

Q: What about the grocery stores already selling beer?

A: Grocers that successfully won beer authorizations in the last allocation can bid on wine and beer authorizations and to co-locate with winery retail stores. Large grocers are free to move beer authorizations between stores within a region they would not be prevented from bidding on wine authorizations.

Single store grocery operators that were successful in the 2015 allocation would be able to bid for a new universal wine authorization for their store to combine with their existing beer authorization.

Q: How much will it cost grocers to apply for and maintain their authorizations?

A: These details will be made available when the competitive process opens this summer.

<u>Other</u>

Q: What are the terms for a winery retail outlet seeking to relocate inside a grocery store?

A: The grocer and the existing winery retail outlet must form an agreement for the winery retail outlet to operate its store inside the grocer's space.

To facilitate this process, up to 70 beer licences will be offered to grocers that are able to reach an agreement with winery retail store owners by May 1, 2017. These beer licences would be granted directly to the grocer based on a set discount of 3% off the net price, which was the minimum bid in the 2015 Beer in Grocery allocation.

Q: What is the outcome and status of the pilot project for farmers' markets?

A: The VQA wine sales at farmers' markets initiative is part of the overall renewed Wine and Grape Strategy. The two-year pilot project started on May 1, 2014. To date, 83 wineries and 212 farmers' markets have participated and sales have surpassed $1.4 million. The Council has recommended that craft cider and fruit wine be included in the farmers' market initiative.

The government is accepting the Council's recommendations and is taking steps to ensure these products are included in this initiative. The details regarding implementation will be announced in the coming months.

Q: You're opening new retail channels for wine, beer, cider and fruit wine. Why not for spirits?

A: The Council's recommendations recognize and build in the existing retail systems for beverage alcohol. We are confident the LCBO is a fair, competitive and effective retail channel for spirits. Spirits are key to the LCBO's profitability and the LCBO engages in a number of activities to ensure the industry continues to thrive.

The LCBO, as the exclusive retailer of spirits in Ontario, is encouraged to continue to find customer-focused ways to offer new and innovative merchandising and promotional opportunities for this important product category.

Q. What changes are you making for spirits producers?

The government will allow craft distillers to deliver directly to bars and restaurants, replace the current markup/commission structure at on-site stores for all distillers with a consumer tax, provide craft distillers with improved margins at their on-site stores, and provide an exemption on a limited volume of spirits for promotional distribution at on-site stores.

Acknowledging that spirits are subject to the highest markups of the three major categories, the government is not increasing spirits mark-ups at this time.

Q: You're preserving advantages for Ontario wineries – are you certain that you're trade compliant? Aren't you worried that allowing winery retail stores to operate inside grocery markets and keeping them domestic will lead to a trade challenge?

A: In an increasingly global economy, Ontario's trade and investment relationships are important to us. Trade obligations were a key consideration in the Council's recommendations for the wine sector.

We're confident we've created a win-win-win scenario – for the province's wine lovers, for Ontario's outstanding wine producers and the many farmers who support them and for wine producers from across the country and around the world.

The reality is that these changes open up new market opportunities for imports as well as Ontario products.

Q: How does this proposal manage the social responsibility risks associated with increased access to alcohol?

A: As we did with beer in grocery, we will make sure that wine is sold in a way that is consistent with Ontario's social responsibility mandate for the sale of alcoholic beverages.

This will include restricted hours of sale and mandatory training for all staff handling alcohol, and restrictions, such as maximum alcohol content and package sizes.

At the same time, we need to recognize that we are expanding the alcohol retailing network, and this has corresponding social responsibility impacts.

That is why the work we are doing with the Ministry of Health and Long-term Care on the provincial alcohol strategy is so important. The Ministry of Health is consulting with stakeholders on that work, and we expect to report back in the spring with a comprehensive plan.

Q: How is the government supporting Ontario's domestic beverage alcohol industry?

A: Ontario will provide increased retail access and other improvement to support Ontario's domestic beverage alcohol manufacturing industry.

- **Cider:** Allow cider (both imported and domestic) to be sold in grocery stores, and allow Ontario craft cider to be sold at farmers' markets.
- **Fruit Wine:** Allow fruit wine to be sold in grocery stores as part of the universal wine authorizations and at farmers' markets, and allow fruit wineries to deliver directly to bars and restaurants at the same rate as VQA wine.
- **Spirits:** Allow craft distillers to deliver directly to bars and restaurants, replace the current markup/commission structure at on-site stores for all distillers with a consumer tax, provide craft distillers with improved margins at their on-site stores, and provide an exemption on a limited volume of spirits for promotional distribution at on-site stores.

Ontario Microbrewery Strategy Renewal

Q: Why is the government extending the Ontario Microbrewery Strategy program two years to March 31, 2018?

A: The program is being extended to assist with craft brewers' successful launch in grocery stores.

The funding would also allow the Ontario Craft Brewers Association (OCB) to:

- continue building their brand;
- finish implementing quality programs for new members;
- establish breweries in more communities; and

- further explore export markets.

Q: How much funding will the Ontario Craft Brewers Association receive?

A: The program extension will provide $1.4 million over two years to the Ontario Craft Brewers Association (OCB).

- $800,000 would be allocated for 2016-17 and $600,000 would be allocated for 2017-18.
- The program would expire on March 31, 2018.

Q: Why is the program only being extended for two years? Why not extend it beyond March 2018?

A: The program is being extended in line with the rollout of beer in grocery stores and will help craft brewers' successful launch in that new channel.

Q: How have Ontario craft beer sales grown in Ontario?

A: Since first being introduced to the market in 1984, locally brewed, small batch beer has steadily gained popularity and market share to become one of LCBO's fastest-growing product categories.

In 2014-15, sales of Ontario craft beer in the LCBO were more than $68 million. This represents an increase of about 635 per cent since 2006-07.

Beer Framework Agreement

Q: Why does Ontario need a beer framework? Why not simply open up the sale of beer as widely as possible?

A: The Beer Store operates as part of Ontario's low-cost, efficient distribution system, which will be maintained and will continue to benefit Ontarians by keeping beer prices below the Canadian average.

We have expanded convenience and choice for consumers by expanding the sale of beer to grocery stores. This new approach brings added competition to the beer retail market and provides new growth opportunities for small brewers.

Q: The government's strict controls around beer in grocery stores have been criticized. Why are you still so involved in alcohol retailing?

A: Selling alcohol is a public trust that our government takes very seriously. These are the biggest changes to beer retailing in Ontario since the repeal of prohibition.

Our approach balances a number of considerations, including how to best meet consumer demand, secure good value, ensure fair competition, avoid regional

concentration and serve communities across the province, while maintaining our strong commitment to social responsibility.

The government is proceeding prudently and responsibly.

Q: Are beer prices going up as the result of the new beer framework agreements?

A: On November 1, 2015, the charge on beer increased by three cents per litre, or 25 cents per 24-pack, and will increase by 3 cents per litre each November until 2018. These four increases will generate about $100 million a year when fully implemented.

Even with these changes, Ontario beer prices are expected to remain below the Canadian average.

The industry's largest brewers have also committed to cap price increases to inflation for some of their most popular beer products until May 2017.

Any revenue generated from selling alcohol in a socially responsible manner supports key government priorities such as health care, education and skills training, and infrastructure and transit investments that benefit all Ontarians.

Q: How much does beer cost in the grocery store compared to the cost of beer at the LCBO or the Beer Store?

A: Beer prices are set by the brewer, subject to minimum price requirements to encourage responsible consumption, and under our uniform pricing policy, the retail price for a particular product is the same at the LCBO, the Beer Store, the brewer's own on-site store, or in a grocery store

For example, a 6-pack of Steam Whistle Premium Pilsner that sells at the LCBO for $13.85, including container deposit, sells for the identical price at the grocery store and the Beer Store. And a 6-pack of Molson Canadian that sells at the Beer Store for $10.95, including container deposit, sells for the identical price at the grocery store and the LCBO.

Q: How is social responsibility being upheld for beer sold in grocery stores?

A: Grocers must follow strict rules for the safe sale of alcohol.

Beer can only be sold within permissible hours, in a single section of the store, it cannot exceed 7.1 per cent alcohol by volume, and is limited to six-packs or less.

Staff selling and handling beer in grocery stores must be at least 18 years old, and fully trained to ensure that underage customers and intoxicated adults do not buy beer.

The government is also consulting industry and social responsibility groups to develop a comprehensive alcohol policy framework to support the safe and responsible consumption of alcohol.

Q: Why can't convenience stores sell beer?

A: The Premier's Advisory Council on Government Assets recommended that the expansion of beer sales be limited to grocery stores, which it defined as retailers with at least 10,000 square feet of food products. The government believes that grocery stores are best positioned to maintain our system's strong social responsibility standards. Smaller, locally owned grocers are among the 60 stores authorized to sell beer.

Q: When will the LCBO run the next competitive allocation for beer?

A: The government proceeded with its first beer authorizations in December 2015.

The LCBO is expected to launch the competitive allocation process for 70 wine and beer licences this summer. Grocers would be authorized and begin to put product on their shelves in the fall.

The government will review the outcomes of this initial tranche before proceeding with future tranches.

Q: How does the new Beer Framework bring enhanced transparency and accountability to the Beer Store?

A: The Beer Store is being returned to its co-operative roots. By opening up its ownership to all brewers with facilities in Ontario it will be more transparent and responsive to brewers, the government and the public. All transactions between the Beer Store and its shareholders will be conducted in a transparent, auditable and commercially reasonable way.

The Beer Store will also operate under a new governance structure to provide fair representation for all shareholders.

- Four Independent Directors will approve key policies related to brewer neutrality, will approve transactions between the Beer Store and its owners, and will participate on all board committees.

- An independent Beer Store Ombudsperson will ensure brewer and customer complaints are handled in an unbiased manner.

Q: How do Ontario small brewers benefit from the new Beer Framework?

A: The government is committed to supporting Ontario's small and craft brewers. The Beer Store's retailing and marketing practices will treat all brewers fairly and provide additional retail opportunities.

Small brewers can pool deliveries to licensees and the LCBO, and use third party carriers and warehousing.

At least 20 per cent of shelf space in the Beer Store network and in grocery stores is dedicated to small brewers, and there is a new marketing sub-category called "Ontario Craft in the Beer Store.

Q: What other improvements can consumers expect to see at the Beer Store?

A: The Beer Store will improve the customer experience over time, by converting its stores to modern self-serve and open concept formats. It will also spend $100 million in capital improvements over the next four years, including $80 million on its retail stores.

Q: Why does the Beer Store have a new rebate program for small licensees?

A: Under the new beer framework, as of January 31, 2016, small licensees who purchase less than 2,046 litres of beer (up to 250 cases) annually are eligible to purchase it at consumer retail prices.

Due to technical issues associated with the Beer Store's pricing systems, a rebate program is currently the quickest way for the Beer Store to implement this new program and extend the benefit of lower prices to small licensees.

Licensees will receive a rebate for the difference between the licensee price and consumer retail price on the purchase date. The rebate will be paid quarterly, within 60 days after quarter end.

Alcohol Policy Framework

Q: How much money will you be dedicating to support an alcohol policy framework and how will you be distributing the money across the province?

A: As indicated in the Budget, we expect to dedicate a portion of revenue to support the strategy. However, it is premature to determine the exact amount required until the Ministry of Health and Long-Term Care reports back on the strategy. We need to understand where there is a need for additional funds and determine how to invest to ensure the best outcome. I look forward to their advice.

LCBO Head Office Land Sale

Q: The government originally announced its intention to sell the LCBO head office lands in the 2012 Budget. Why is it taking so long?

A: The Province is in the final stages of the process to sell the LCBO's head office lands. Proponents were invited to submit development plans and a purchase price

through the Request for Proposal process, which closed in September 2015. Negotiations with a potential purchaser are underway, with the transaction expected to close in the spring of 2016.

Q: How will the proceeds from the sale of the LCBO head office lands be used?

A: Net revenue gains from the sale will be dedicated to the Trillium Trust to help fund investments in transit, transportation and other priority infrastructure in the Moving Ontario Forward initiative. These investments are being made under the Province's plan to grow the economy, create jobs and enhance the quality of life for Ontarians.

Q: Do you have any comment on the Statement of Claim to the Ontario Superior Court of Justice by a proponent that was disqualified from the head office lands sale RFP process?

A: As a formal legal process has been initiated, I am not in a position to comment.

LCBO Modernization

Q: Why is the LCBO developing an e-commerce marketplace?

A: In response to the Premier's Advisory Council recommendation that the LCBO improve its e-commerce offerings, the LCBO is developing a best-in-class e-commerce marketplace to expand the assortment of products available for pick-up at local stores and eventually home delivery in accordance with strict rules for social responsibility.

Q: When will the LCBO launch its new e-commerce website? Will consumers be able to have LCBO products delivered to their homes?

A: This new platform will be operational by mid-2016.

Domestic producers, suppliers and agents from around the world will be able to list products for purchase for pickup at local LCBO stores or for home delivery in accordance with strict rules for social responsibility.

Q: When is the LCBO going to expand the sale of 12-packs of beer to more of its stores?

A: The LCBO is selling 12-packs of beer on a pilot basis in 10 stores across the province. The results of this pilot program will be evaluated by an independent third party later this year, and if found to be successful, the program could expand to up to 60 stores.

Q: How is the LCBO supporting Ontario's craft and small brewers?

A: The LCBO is rolling out Craft Beer Zones to 25 locations across Ontario, bringing together Ontario, Canadian and international craft beers, grouped by style.

In addition, a growler-filling station at the LCBO Summerhill store features a rotating selection of three different Ontario craft beers not available in any other format. Consumers can also sample the featured brands for a small fee.

Q: What types of specialty shops has the LCBO launched recently?

A: The LCBO's "Products of the World" program has destination stores with expanded boutique formats for products from Greece, Portugal and Spain, as well as two kosher boutiques and a specialty whisky boutique.

Q: What other measures will the LCBO consider coming out of the Premier's Advisory Council's recommendations?

A: In response to the Council's recommendations, the LCBO will launch a pilot program in 2016 offering suppliers the opportunity to tender for unique or exclusive product calls that would include special promotional benefits in exchange for higher margins on these products.

The proposed changes to introduce beer and wine in grocery stores represent a significant increase in competition, and the LCBO is developing its strategic plan to take account of the new realities of Ontario's beverage alcohol system. The LCBO will continue to focus on the customer experience, such as its recent "Products of the World" initiative, and on expanding in key areas like eCommerce.

Alcohol Charges

Q: What change is being made to the minimum price for wine and why?

A: The government will change the minimum price for wine from a wholesale to retail price to be consistent with spirits and beer. Minimum prices are an important measure for reducing alcohol-related harm.

- The minimum retail price for table wine will be set at $6.45 on March 1, 2017, $7.25 on March 1, 2018 and $7.95 on March 1, 2019. These prices include a 20 cent deposit.
- The minimum retail price for cider, fortified wine and low-alcohol wine will also be phased in over three years.

Q: What is the impact of the wine minimum price change?

A: Changing the minimum price for wine from a wholesale to retail price of $6.45 won't happen until March 1, 2017.

There are very few wine products listed in the LCBO that are at the minimum price. For example, only 5 wine products listed in the LCBO will be at the March 1, 2016 minimum price of $6.30.

Q: What is the minimum price now?

A: The current wine minimum price is a wholesale minimum price. As a result of differing wholesale bases, wine minimum retail prices vary by source and type of wine. This is why we are changing the wine minimum price from a wholesale level to a retail level.

- For example, the current minimum retail price equivalent for a 750mL bottle of 100% Canadian table wine, including deposit, is $5.30, while U.S. Table wine is $6.30.

The current beer and spirits minimum prices are identical for domestic and imported products because they are retail minimum prices.

- The current minimum retail price for a typical case of 24 bottles of beer with 5% alcohol is $31.35, including deposit, regarding of whether it is a domestic product or imported product.
- Similarly, the current retail minimum price for a 750ml of spirits is $25.75, including deposit, regarding of whether it is a domestic product or imported product.

Q: How do the changes you are making to the minimum price for wine fit with the minimum price increase that occurred on March 1, 2016?

A: Changing the minimum price for wine from a wholesale to retail price won't happen until March 1, 2017.

The adjustment on March 1, 2016 was made in accordance with a regulation under the *Liquor Control Act* which provides for annual indexing of the beer, wine and spirits minimum prices based on the three-year average of Ontario CPI. This adjustment happens every year on March 1st - or the following Monday if March 1st falls on a weekend.

The March 1, 2016 adjustment was 1.5%. For a 750mL bottle of table wine, the minimum retail prices increased by 5 cents to:

- $5.30 for VQA/100% Ontario wine
- $6.15 for blended Ontario wine
- $6.30 for imported table wine

Per the Premier's Advisory Council on Government Assets' recommendation, the wine minimum price for a 750mL bottle of imported or domestic table wine in subsequent years will be adjusted to ensure wine is sold at a price per litre of absolute alcohol that is more in line with beer and spirits:

- March 1, 2017: $6.45
- March 1, 2018: $7.25
- March 1, 2019: $7.95

Recommencing on March 1, 2020, the wine minimum retail prices will be adjusted by the three-year average of Ontario CPI.

Q: Why did the Council recommend increasing the minimum price of wine increasing to $7.95, and not higher/lower?

Minimum retail prices are an important component of Ontario's socially responsible beverage alcohol system. The minimum price for wine will change from a wholesale to retail price and will increase to $7.95 on March 1, 2019. These changes will help bring the minimum price per litre of absolute alcohol for wine more in line with beer and spirits.

We expect Ontario's wine prices to remain the lowest in the country after these changes are implemented. Only 2% of wine sold in the LCBO is below $7.95 per bottle.

Q: How much will the price of wine increase as a result of the 2 percentage point mark-up change this year?

A: The impact of the mark-up change will depend on the price of the product and whether the producer wants to keep the price the same or increase it.

- A $13.95 bottle of wine could increase by $0.15 to $14.10 if the producer decides to change the price in response to the mark-up change. Due to uniform pricing, the price would be the same at the LCBO, a grocery store and a winery retail store.
- With the full 7 percentage point mark-up increases, the price of the $13.95 bottle of wine could increase by $0.55 to $14.50. This price would not be in effect until April 1, 2019.

Q: How much revenue will the Province make as a result of these changes?

A: The wine mark-up, tax and minimum price changes will generate about $15 million in 2016-17, $45 million in 2017-18 and $75 million in 2018-19.

- The increase in the wine mark-up accounts for about 96% of the estimated revenue.

Q: Are you making changes to on-site distillery stores because of the court case?

A: We are responding to industry requests for lower charges on craft spirits products sold in on-site distillery stores. The government expects to introduce legislation in the future that will outline the design and establish the rate that will apply to craft spirits sold in on-site distillery stores.

Q: How much of a reduction will there be to the charges applied at on-site distillery stores?

A: No decision has been made yet on the rate.

The government expects to introduce legislation in the future that will outline the design and establish the rate that will apply to craft spirits sold in on-site distillery stores.

Q: What will be the exemption for promotional distribution at on-site distillery stores?

A: Currently wine and beer manufacturers are exempt from paying the wine and beer taxes on the first 10,000 litres of product used for promotional purposes. It is proposed that this exemption be extended to spirit manufacturers' who provide promotional products from their on-site distillery stores.

- Promotional distribution of craft spirits by Ontario manufacturers helps increase awareness of and demand for Ontario products.

Q: What are you doing to the basic tax on non-Ontario (blended) wine? Why?

A: The increases to the basic tax for non-Ontario wine will help close the gap between the charges applied in the LCBO and the winery retail store network. The revenue generated from the wine tax and mark-up changes will support key government priorities such as health care, education and skills training, and infrastructure and transit investments that benefit all Ontarians.

The basic tax on non-Ontario (blended) wine purchased at winery retail stores will be increased by one percentage point on each of June 1, 2016, April 2017, April 2018 and April 2019.

- The current basic tax rate of 16.1 will increase to 17.1, 18.1, 19.1 and 20.1.

Q: Why is the tax rate for non-Ontario (blended) wine increasing but not the tax rate for Ontario (VQA and 100%) wine is not?

A: Maintaining the current tax rate on Ontario (VQA and 100%) wine while increasing the tax rate on non-Ontario (blended) wine is consistent with Ontario's wine and grape strategy.

The strategy focuses on VQA wines with a goal to compete internationally on quality. The strategy continues to support industry growth in general to improve the competitiveness of our local wine industry.

Q: Why are LCBO mark-ups increasing and how much are they increasing?

A: The government has accepted the Council's recommendation to adjust the LCBO mark-ups that apply to wine to bring them more in line with those applied to other alcohol products.

Except for adjustments for the Harmonized Sales Tax (HST) in July 2010, there have been no mark-up increases to wine since 1998.

The LCBO wine mark-ups will increase:

- 2 percentage points on June 20, 2016;
- 2 percentage points on April 1, 2017;
- 2 percentage points on April 1, 2018, and;
- 1 percentage point on April 1, 2019.

Horse Racing Partnership Funding Program

Q: Why is the Government extending the Horse Racing Partnership Funding Program (HRPFP) for two years?

A: The HRPFP came into effect on April 1, 2014 as the government's plan to invest up to $500M over five years (to March 31, 2019) to support a world-class horse racing industry in the province.

The two year extension (to March 31, 2021) will give confidence to the industry to make investments and business decisions for the coming years.

Q: How much money will the government spend for these additional two years?

A: The two year extension will provide funding consistent with the initial five year program in that up to $100M will be provided to the industry annually.

Q: If OLG is taking over responsibility for HRPFP, what is OMAFRA's role going forward?

A: OLG has taken responsibility for HRPFP. Previously the Ontario Racing Commission delivered this funding. The agreements and level of funding for this program will not change. OLG has outreached to racetracks to make them aware of this transition.

OMAFRA will still provide funding to the industry for breeding support programs and initiatives such as equine health.

Q: What is the future of the HRPFP?

A: The two year program extension will give confidence to the industry to make investments and business decisions for the coming years.

Beyond this time, the intention would be for OLG to establish a future, longer-term funding arrangement with the industry. The arrangement would be subject to government approvals, and further integrate gaming with horse racing and support industry sustainability.

Q: What will a long-term funding arrangement look like between OLG and the horse racing industry?

A: OLG is working with the horse racing industry to further inform what a long-term funding arrangement would be. Any provincial funding arrangement directly delivered by OLG will require prior government approval.

The overall objective of this funding is to assist the industry in sustaining a quality, internationally recognized horse racing product for the wagering customer and to support the industry and jobs across rural Ontario.

As with any funding arrangement, performance measures will be established and tracked to further inform ongoing funding.

Q: Why is horse racing integration taking so long?

A: The integration began in 2013 and continues. Over the previous year, the government advanced its integration efforts by realigning provincial regulation, adjudication and funding support to the industry.

We want to make sure that we get the provincial support for the industry right. This is a collaborative ongoing process with the industry. The government is committed to horse racing integration, and the extension of the Horse Racing Partnership Funding Program (HRPFP) for another two years, is a critical next step to providing ongoing certainty to the industry while a long-term strategy is developed.

Q: The government is establishing leases with racetracks where OLG slots are located. How is this proceeding?

A: OLG currently has long-term leases in place with 12 racetracks. OLG is working to finalize the remaining leases as soon as possible.

Q. What is the role of the Alcohol and Gaming Commission of Ontario (AGCO) in horse racing regulation?

A: The AGCO currently regulates gaming activity in Ontario. To streamline all gaming regulatory activities, as of April 1, 2016, AGCO will also regulate and license the horse racing industry.

Q: **Why is OLG net profit to the province (NPP) expected to decline slightly from 2015-16 to 2016-17?**

A: OLG continues to provide approximately $2 billion to the province, which helps to fund key public services like health care and education.

Delays in the procurement processes for private sector service providers for gaming and lottery have impacted the timelines for increased NPP from modernization.

2015-16 was an exceptional year for OLG NPP with projections of over $150M more than Budget 2015, mainly due to increased sales revenue from national lottery tickets (Lottomax, Lotto 6/49). NPP in 2016-17 is expected to decrease slightly in comparison, as lottery sales and resulting revenues return to more normal levels.

Q: Why is net profit to the province higher in 2015-16 compared with projections in Budget 2015?

A: Revenue from national lotteries (Lottomax and Lotto 6/49) is higher than was projected in Budget 2015, primarily due to a higher number of large jackpots. More large jackpots led to higher sales revenues.

Q: Is funding to hospitals being reduced by $107M in 2016-17 as a result of OLG's projected lower net profit to the province?

A: Revenue generated by OLG is paid into the province's Consolidated Revenue Fund (CRF). Allocations to the Ministry of Health and Long-Term Care (MOHLTC) are made from the CRF. OLG revenues targeted for health care only amount to 3% of MOHLTC's $52B budget.

Fluctuations in OLG's revenues do not impact health care funding levels or projections.

Q: Is OLG still expecting to have an increase of $1B in NPP as a result of modernization?

A: OLG is continuing with modernization. When OLG's plan is fully implemented, the Province will benefit from increased profit to the province each year. This money will be used to fund the vital public services - especially health care and education - that Ontarians count on. Current projections are that modernization will be fully implemented by 2021-22.

Q: What is the status of OLG modernization?

A: Modernization is expected to be fully implemented by 2021-22. To date, OLG has released the Lottery, North, Southwest and the GTA Requests for Proposals (RFPs). Operators for these sites will be selected throughout 2017. The RFPs for the other gaming bundles will be released in the coming months. Additionally, this past January, OLG and Ontario Gaming East Limited Partnership (OGELP) entered into a 20-year Casino Operating and Services Agreement for the East Gaming Bundle.

Under this agreement, OGELP is running the daily operations of the former OLG Casino Thousand Islands and OLG Slots at Kawartha Downs under its Shorelines Brand. OGELP also intends to build and operate a new site in Belleville.

OLG has also announced it is adding the Niagara Casinos to its modernization procurement process. The Request for Pre-Qualification (RFPQ) for the Niagara Gaming Bundle is expected to be released in Summer 2016.

Q: Why did OLG cancel the Ottawa Request for Pre-Qualification (RFPQ) Procurement?

A: In December 2015, OLG cancelled the RFPQ for the Ottawa Gaming Bundle. OLG and the landlord have not been able to finalize a lease for the gaming site at Rideau Carleton Raceway, which is required to proceed with the modernization procurement process. OLG hopes to reach a commercially viable solution in the near future so the procurement process can proceed.

Q: When will the labour dispute between OLG and gaming employees at the Rideau Carleton Raceway (near Ottawa) be settled?

A: OLG is expected to proceed with negotiations that are reflective of the ongoing modernization procurement exercises and are within the parameters of the government's expectations for fiscal responsibility.

The Government respects the collective bargaining process and will respect OLG's role as an agency in this matter.

Q: Why isn't Great Blue Heron part of the GTA Gaming Bundle?

A: OLG continues to have discussions with the Mississaugas of Scugog Island First Nation (MSIFN) regarding the possible inclusion of the Great Blue Heron Casino within the GTA Gaming Bundle. Some draft agreements have been developed and will be put forward for required approvals by the provincial government, the OLG Board of Directors and others as necessary. The government is also involved in ongoing discussions about inclusion of Great Blue Heron in the GTA Gaming Bundle. If and when applicable, further details will be provided by OLG to proponents during the RFP process.

Q: Why has OLG entered in to two long-term leases with the Woodbine Entertainment Group (WEG)?

A: OLG has entered into two long-term leases with WEG, one for the existing site where OLG's slots facility is co-located, and one for land which a future service provider will develop to build a casino. The long-term lease agreements help OLG achieve its modernization objectives, which include job creation, new capital investment and increased revenue for the Province of Ontario.

These agreements will be assigned to the successful service provider when it assumes operation of the gaming sites in the GTA Gaming Bundle (i.e. upon execution of the Casino Operating Service Agreement ([COSA]). These agreements will replace the current Interim Racetrack leases between OLG and WEG.

Q: What is the status of OLG's Internet Gaming (iGaming)?

A: In January 2016, OLG's Internet gaming site, PlayOLG.ca, celebrated its one-year anniversary. Ontario joined British Columbia, Manitoba, Quebec, and all of the Atlantic Provinces in offering a provincially regulated Internet gambling option.

Ontarians spend an estimated $400 million per year on offshore gaming websites that are not regulated in Ontario. Quebec put forward in their 2015 Budget a proposal to require internet service providers to block access to illegal gaming websites. Discussions between the provinces and the federal government are taking place to determine what options exist under the Criminal Code of Canada to deal with the grey market.

The Ontario Government and OLG will work together to decide on prudent next steps, in 2016.

Q: How are municipalities, that host gaming sites, benefiting under OLG's Municipality Contribution Agreements (MCA)?

A: In the third quarter of 2015-16, OLG gaming sites generated a combined total of $24.9 million for 23 host municipal communities.

Since the launch of gaming sites in Ontario, host municipalities have received more than $1.2 billion in non-tax revenue.

Host OLG municipalities invest their revenues in important local programs and infrastructure projects, creating robust communities.

OFFICE OF ECONOMIC POLICY

Chapter 1A: Fostering a More Innovative and Dynamic Business Environment

Q: How will the Business Growth Initiative help Ontario's economy?

A: The Business Growth Initiative (BGI) is Ontario's new five year, $400 million strategy to increase the province's global competitiveness. It has three elements to accelerate the province's shift towards a more knowledge-based economy:

- Creating an Innovation-Driven Economy;
- Helping Ontario Businesses Scale Up; and
- Modernizing the Regulatory Systems and Lowering the Cost of Doing Business.

As part of the BGI, the government is announcing a number of initiatives in the 2016 Budget, including:

- A $50 million investment over five years in the Perimeter Institute, a world-leading research centre for theoretical physics;
- Investing $35 milion over the next five years towards the establishment of the Advanced Manufacturing Consortium, which will partner the manufacturing industry with three Ontario universities – McMaster, Waterloo, and Western;
- A $20 million fund over three years to better connect colleges and industry on applied research projects;
- Investing $15 million over four years to boost the competitiveness of the automotive sector;
- Support for southwestern Ontario's bioeconomy and biochemical sector through a $3 million investment in Bioindustrial Innovation Canada over four years; and
- Creating a voucher program to help new and emerging firms scale up by supporting commercialization activities, including market research and proof of concept testing;

The Business Growth Initiative builds upon the government's long-term commitment to create a more innovative economy. As part of this commitment, the government has:

- Made significant investments to create a more highly-skilled workforce;
- Supported world-class research at Ontario's postsecondary institutions;
- Provided significant support for research and development (R&D) and other innovation-related activities; and
- Encouraged more knowledge-based startups and innovative small and medium-sized enterprises (SMEs).

Q: What is Ontario doing to help the auto manufacturing sector transition to the innovation-driven economy of the 21st century?

A: The successful transition of Ontario's auto industry to a more innovation driven and higher value-added business model is crucial for the Ontario economy. The industry is a major contributor to the provincial economy, directly employing over 100,000 highly skilled workers. It also generated almost 20 per cent of the real GDP of the province's manufacturing sector in 2014 and is a major driver of our international exports.

Ontario has demonstrated an ongoing commitment to working with automotive companies to ensure continuing investment, employment and innovation.

- We have encouraged vehicle assemblers and parts suppliers to grow their operations in Ontario resulting in over $4.5 billion in investment in the last two years.
- For example, in 2015, in addition to Toyota's $421 million investment at its assembly plants in Cambridge and Woodstock, Chrysler invested more than $2 billion in their Windsor assembly plant and GM invested $585 million into their Ontario operations.

The 2016 Budget announced $15 million over four years through the Business Growth Initiative to help boost competitiveness, including:

- Investing $5 million over two years to establish an Automotive Supplier Competitiveness Program to strengthen the technological capabilities of small and medium sized auto parts firms; and

- Committing $10 million over four years to the Canadian Urban Transit Research and Innovation Consortium to support R&D and commercialization of technologies like light-weighting and autonomous software, in partnership with the federal and Quebec governments.

Additionally, Ontario recently became the first Canadian jurisdiction to allow the on-road testing of automated vehicles and is investing $20 million to build more public charging stations for electric vehicles.

Continuing to promote innovative anchor investments in the auto sector will help further develop the strength of the auto cluster in Ontario and turn it into a technology hub where Original Equipment Manufacturers (OEMs), auto parts companies, universities and colleges, and technology firms can collaborate to push forward the boundaries of transportation technology.

- Last year GM Canada announced that it would be focussing its engineering centre in Oshawa into an innovation hub for connected and green car technologies as well as supporting a research chair and student research at the University of Waterloo and partnering with Waterloo's Communitech Hub to establish an innovation research hub that will initially focus on urban mobility, car sharing and mobile app innovation.

Q: What is the state of venture capital in Ontario?

A: Venture capital is an important source of financing for high-potential, entrepreneurial firms. In 2015, Ontario-based businesses received more than $1.2 billion in venture capital investments – the most since 2001. Ontario accounted for almost half of all venture capital investment in Canada in 2015 according to Thomson Reuters.

In January 2014, the Province launched the Northleaf Venture Catalyst Fund (NVCF) in partnership with the federal government and private sector partners. The NVCF has made a number of investments, including in nine venture capital funds and five Ontario-based companies.. This builds upon the success of the Ontario Venture Capital Fund, which has invested in 50 Ontario-based companies to date. As well, the Investment Accelerator Fund (IAF) and the Youth IAF have invested in more than 110 companies.

In April 2015, the government announced Scale Up Ventures, an initiative to provide promising Ontario start-ups with both capital and access to top influential business leaders. The $50 million venture capital fund, with $25 million from the Province, will be complemented by a Leadership Council led by Nadir Mohamed, from president and CEO of Rogers Communications.

Ontario Student Assistance Program

Q: Will the 30% Off Ontario Tuition grant still be available or has it been eliminated?

A: The government will create a single major upfront grant — the Ontario Student Grant (OSG) starting in the 2017–18 school year by redirecting 100 per cent of the funding from the 30% Off Ontario Tuition grant and other grants offered by OSAP. This will make the student financial assistance system more progressive, effective and transparent for students and their families. The changes will provide students who have the greatest need for financial assistance with better access to grants upfront, when they need them.

The additional revenue from the proposed discontinuation of the tuition and education tax credits would be reinvested to support the OSG or other postsecondary, education, training and youth job programs.

Q: Will increasing access to student loans for middle- and upper-income families result in students taking on more debt for their studies?

A: Currently, many students who do not qualify for OSAP seek financial assistance from private sources such as banks or credit unions. With the student aid transformation, Ontario will increase access to interest-free and low-cost loans for middle-and upper-income families.

OSAP loans are interest-free while a student is in studies and less expensive than a bank loan once students graduate. Moreover, if a student is struggling with repayment they can enter in the Repayment Assistance Program, which will scale a student's loan payment to what is affordable based on their income. This is why increasing access to OSAP loans is a benefit to parents looking to finance their children's education.

Also, Ontario will ensure that the maximum OSAP loan debt a student can incur is not greater than $10,000 for two-terms of academic studies.

Q: When will the changes to student financial assistance be implemented?

A: The changes to student financial assistance will be carried out in two phases and be fully implemented by the 2018-19 academic year.

The first phase will be to implement the Ontario Student Grant and other changes to OSAP to increase the program's assistance limits. These changes will take

effect as of the 2017-18 academic year (August 1, 2017). The second phase of the changes will be to increase access to loans and will be in place by August 1, 2018.

Q: Some students do not attend university or college for reasons that are completely unrelated to finances. Will the government do anything to help these students access postsecondary education?

A: The government wants every Ontarian to recognize and understand the benefit of obtaining a postsecondary education – be it in an apprenticeship program, diploma or degree. The more these students succeed in studies, the better off we are as a Province.

To help students understand the opportunities available to them, Ontario will implement programs to ensure more effective communication of how easy it is to access postsecondary education, and afford it.

This will build on the important work that Ontario's universities, colleges, school boards and communities are already doing to address non-financial barriers to postsecondary education for under-represented groups including Indigenous students, low-income students, students with disabilities and mature students with early outreach programs beginning as early as elementary schools.

Recent Economic Performance

Q: What evidence do you have that Ontario's economy is performing better than Canada's?

A: Ontario became one of the fastest growing provinces in 2014 and 2015, and private-sector economists expect this will continue until at least 2017.

On an annual basis, Ontario's real GDP increased by 2.7 per cent in 2014, strengthening from growth of 1.3 per cent in 2013 and outpacing the national average for the first time since 2002.

After a slow start to 2015 when the economy was affected by a number of temporary factors including unusually harsh winter weather, closure at auto plants for retooling, and a west coast port strike affecting exports, Ontario's economic growth gained pace in the second and third quarters of 2015, with real GDP advancing 0.4 per cent and 0.9 per cent, respectively. Ontario's economy outpaced the Canadian economy in all three quarters in 2015.

Q: The FAO claims that Ontario's export gains have been disappointing in 2015, yet the Budget claims that Ontario's exports continue to strengthen. What evidence do you have to support this claim?

A: Ontario's real (or volume of) merchandise exports has increased by around 3% in 2015, following an increase of 2.8% in 2014, according to Ontario Ministry of Finance estimates, using Statistics Canada international export price data.

Ontario's economy in early 2015 was affected by a number of temporary factors including unusually harsh winter weather, closures at auto plants for retooling, and a west coast port strike – all of which impacted exports. Ontario real exports declined 2.0% in the first quarter of 2015, but rebounded in the second (+0.2%) and third quarters (+3.0%) of the year.

In a previous commentary, the FAO noted that "exports did increase by a strong 3.0% in the third quarter, following a weak performance over the first half of the year, providing some promise that exports may continue to support growth in 2016."

The Budget projects real gains of 3.0% annually, on average, over the 2016 to 2019 period, benefiting from the lower Canadian dollar and ongoing solid U.S. demand.

Q: Employment gains may have been over 600,000 since June 2009, but Ontario created less than 50,000 jobs in 2015. Why was employment growth weak in 2015?

A: Employment growth was dampened in the first quarter of 2015 as a result of various temporary factors that impacted the overall economy.

Employment gains were stronger over the rest of 2015. In Ontario, all the employment gains in 2015 were in full-time positions and in industries paying above average wages.

Employment growth is expected to pick up in the medium term, growing by 1.1% or 78,000 net new jobs in 2016 and then average of 1.2 per cent annually, from 2017 to 2019.

Ontario's unemployment rate declined from 7.3 per cent in 2014 to 6.8 per cent in 2015, below the national average for the first time since 2005.

The unemployment rate is projected to improve to 6.6 per cent in 2016, down from 6.8 per cent in 2015, and is forecast to steadily decline to 6.1 per cent by 2019.

Q: The FAO claims an additional 285,000 jobs is required to return Ontario's employment rate to its pre-recession levels. Is that a realistic assumption?

A: The employment rate refers to the ratio of total employment-to-population in the province. The rate has yet to return to pre-recession levels for a number of reasons:

- The global economic recovery following the recession has been weak in most advanced economies, dampening job growth.
- As well, the population aging has put downward pressure on the employment ratio as an increasing number of baby boomers have retired.
    - If we look at core age workers, those between the age of 25 and 54, it would take about a quarter of the FAO estimate (77,000 jobs) to return that rate to its pre-recession level.

Despite a challenging environment, Ontario has recovered all of the jobs lost during the recession, and employment is now 5.1% or 338,000 above the pre-recession peak. In addition, the unemployment rate continues to improve, declining from a recessionary high of 9.6% in June 2009 to 6,8% in March 2016 close r to its pre-recession rate of 6.6% in October 2008.

Economic Outlook

Q: Over the last 18-months there has been a significant shift in the global economic environment. Why do you remain positive about Ontario's economic prospects?

A: There have been significant shifts in the external economic environment over the past year and a half. Growth has slowed in emerging economies, commodity prices have fallen dramatically, and the Canadian dollar has weakened. This has shaken business confidence and left Ontario households unsure about the ultimate impact on their budgets and spending plans.

Yet, overall, Ontario is expected to benefit from the shifting global economic environment. Growth in the U.S., our largest trading partner, is expected to remain solid. As well, the more competitive Canadian dollar provides additional lift to our exporters. Finally, Ontario is an oil-importing province which means consumers and businesses are benefitting from low oil prices. These factors provide an increasingly compelling case for increased business investment and will help support continued solid economic growth in coming years.

Q: Why do forecasters believe Ontario will be among the provincial leaders in economic growth over the next two years, with growth outpacing the national average?

A: Ontario has been among the fastest growing provinces for the past two years.

Overall, Ontario is expected to benefit from the shifting global economic environment. Growth in the U.S., our largest trading partner, is expected to remain solid. As well, the more competitive Canadian dollar provides additional lift to our exporters. Ontario is an oil-importing province which means consumers and businesses are benefitting from low oil prices. These factors will help Ontario lead provincial growth over the next two years.

At the same time, economies in resource-rich provinces have been negatively affected by the low commodity price environment. Private-sector forecasters, on average, expect that Alberta, Saskatchewan and Newfoundland and Labrador all experienced a recession in 2015 while real GDP is expected to decline further in both Alberta and Newfoundland and Labrador in 2016.

Q: Why do you believe Ontario economic growth will be led by business investment and trade?

A: Exports and business investment improved in 2015 and are expected to be key drivers of Ontario's economic growth over the forecast period. Growth in the U.S., our largest trading partner, is expected to remain solid this year. As well, the more competitive Canadian dollar provides additional lift to our exporters. Indeed, the latest data shows that Ontario exporters are already benefiting from strong U.S. demand and the lower exchange rate. On an annual basis, exchange-rate sensitive exports rose 14.1% in 2015.

Solid U.S. demand and a more competitive Canadian dollar will provide an increasingly compelling case for increased business investment, especially now that Ontario's businesses are operating close to full capacity. Business investment will also continue to be supported by Ontario's competitive tax structure.

Q: Is the housing market headed for a correction?

A: The Ontario housing market has experienced years of strong growth, driven by low borrowing rates, steady employment gains and growth in the number of households.

Looking ahead, the housing market is expected to experience a soft landing. Continued gains in employment and healthy demographic demand are expected to support rising house prices. However, rising interest rates, historically high valuations and mortgage debt are expected to provide an offset and result in a more modest rate of growth in house prices and residential investment when compared to recent years.

Q: What are the net risks facing the Ontario economy?

A: While there are both upside and downside risks to Ontario's economic outlook, overall the risks surrounding the outlook appear evenly balanced.

Sustained lower oil prices could provide a greater-than-expected boost to the economy through lower costs for businesses and households.

Despite strong U.S. demand and a more competitive Canadian dollar, challenges remain for Ontario's export sector. The loss of U.S. market share to Mexico and China suggests Ontario export growth to the U.S. may be less robust than experienced during previous periods of currency depreciation.

The housing market is expected to experience a soft landing as price appreciation is expected to moderate following a number of years in which house prices rose faster than incomes. This has led to rising mortgage debt and elevated carrying costs for households which pose a downside risk to Ontario's economic outlook.

Q: Won't weak growth in the rest of Canada drag Ontario down?

A: While Ontario is expected to see continued economic growth, we are feeling the impact of weaker economic activity in resource-rich provinces. Indeed, a recent report from the Bank of Canada noted that 'the adverse impact of the decline in oil prices has gradually spread outside Western Canada into all regions and sectors'.

However, at a time of weak commodity prices and recession in resource-rich provinces, we project real GDP in Ontario rose by 2.5 per cent in 2015 as the economy benefited from solid growth in the U.S., a more competitive Canadian dollar and falling oil prices that lowered costs for consumers and businesses. Ontario's real GDP is projected to rise by 2.2 per cent in 2016 as these factors are expected to continue to support growth going forward.

2015–16 In-Year Change from 2015 Budget

Q: Land Transfer Tax revenues in 2015–16 are $311 million higher than Plan. Are you expecting continued strength in the housing market?

A: The strong Ontario housing market in 2015 boosted the 2015–16 Land Transfer tax revenue to a record level. However, going forward, the Ontario housing market is projected to moderate over the next two years. As a result, LTT revenue is

projected fall from the record 2015–16 level, yet remains above the levels projected in last year's budget.

Q: Why is Employer Health Tax revenue up if wages and salaries growth was slower in 2015? Was there an increase in the tax rate?

A: No, there was no increase in the EHT rates. The increase in EHT including is likely due to the Province's efforts to enhance auditing of provincially-administered taxes. EHT revenues could also rise because firms grow in size and may now be subject to EHT for the first time, or they move up to a higher EHT bracket and now pay more in EHT.

Medium-Term Revenue Outlook

Q: Comparing your Sales Tax revenue outlook to your 2015 Budget outlook, revenues are lower in 2016–17 and 2017–18 even though revenue in 2015–16 is $504 million higher. Why is this higher revenue not sustained into the medium term?

A: Sales Tax revenue in 2015–16 was boosted by one-time factors, specifically, a 36.6 per cent spike in housing completions in 2015 and one-time prior-year adjustments. The spike in housing completion is projected to give way to a significant decline in 2016 of 12.6 per cent. In addition, the more heavily taxed components of consumption such as durables and semi-durables are projected to grow more slowly than projected in the 2015 Budget.

Q: Given a $3 per carton increase in Tobacco Tax rates announced in the 2016 Budget, why is Tobacco Tax revenue for 2016–17 projected to increase by only 1.1 per cent?

A: The 2016–17 increase appears low because 2015–16 Tobacco Tax revenues include a $51 million one-time audit assessments against two companies. Excluding the $51 million one-time boost to 2015–16 Tobacco Tax revenues, the increase for 2016–17 would be 5.5 per cent.

Q: Experts, and even former finance minister Joe Oliver, have stated that the large drop in oil revenue from oil-producing provinces could have impacts on the Equalization program, and that the entry of other provinces into the program could push Ontario out. Is this true?

A: Ontario is projected to receive Equalization payments over the medium-term. There are however, risks to Ontario's Equalization forecast over the medium and longer term if the low oil prices persist and continue to negatively impact oil-producing provinces or if there is a sustained improvement in Ontario's economic growth relative to other provinces.

Equalization is driven by a formula defined by the federal government.

Ontario will continue to focus our efforts on taking action to support job creation and economic growth within the Province.

Despite continued volatility in global financial and commodity markets, Ontario's economic growth is now outpacing national growth, and is expected to continue being among the strongest in Canada over the next two years.

Equalization funding is tied to growth in Canada-wide nominal GDP. To the extent that lower oil prices have lowered expectations for Canada-wide nominal GDP growth, Equalization entitlements among all receiving provinces could be affected.

Given certain features of the Equalization program, such as the weighted averages and lags used for calculating fiscal capacities, it takes some time for current economic conditions to be reflected in Equalization entitlements.

Key Changes since the *2015 Budget*

Q: Compared to the 2015 Budget, revenues are higher by $2.2 billion in 2015–16, $1.2 billion in 2016–17 and $3.3 billion in 2017–18. Isn't that a substantial tax increase?

A: No. There are several factors contributing to the increase in the revenue outlook including, strength in the housing market, prudent assumptions related to federal government commitments for additional funding for infrastructure, home care and jobs and training, projected proceeds from the Province's cap and trade program and Measures discussed in the 2016 *[Document].*

Higher than projected up-front net revenues from asset optimization, related to the Hydro One IPO are also boosting revenue in 2015–16. [Ch. 1B, Pg. 21]

Q: In the key changes from Budget, the positive impact from the housing market falls from $0.7 billion in 2015–16 to $0.3 billion in 2016–17. Are you expecting a strong correction in the housing market?

A: No, we do not expect a strong correction in the Ontario housing market. A significant portion (about 60 per cent) of the relatively large 2015–16 impact was due to a one-time spike in housing completions in 2015, specifically, multiples which can be quite volatile. Excluding the one-time impact, the contribution of the housing market to revenue would show a modest decline. This is consistent with a projected moderation in the Ontario housing market over the next two years.

Q: The Ontario budget states that new federal funding has been included in the fiscal outlook based on 'prudent assumptions' about new transfers, but the federal government has not said how much Ontario will receive. What are these prudent assumptions and how much new federal money is counted in this budget?

A: The 2016 budget continues the government's plan to build Ontario up and deliver on its number-one priority of growing the economy and supporting job creations. Ontario's plan includes investing in people's talents and skills, as well as making the largest investment in public infrastructure in the province's history.

Ontario and the federal government share common goals, common values and have the same priorities. The federal government has recognized that coordinated and collaborative action is needed to address the issues facing Ontarians and Canadians. And the Province is ready to work with a federal partner to build on Ontario's investments and welcomes federal support for Ontario's plans in areas that matter to Ontarians and Canadians.

The 2016 Ontario budget included some prudent assumptions about what new revenue Ontario could expect from the federal government based on what was in the federal government's election platform. Even the Financial Accountability Officer (FAO) indicated these assumptions were prudent.

For instance, the federal government has committed to $60 billion in new infrastructure funding over 10 years. The Province welcomes this new commitment to build on existing programs and provide both immediate infrastructure investments and longer-term funding to support shared infrastructure priorities, and is working with the federal government to secure its per capita share.

More information will become available in the coming months as the federal government rolls out the details of its various plans around infrastructure, climate change and skills training.

While in some cases, federal measures have already been included in Ontario's fiscal plan, the full extent of the impact of these measures must be analyzed when more details of federal proposals are released.

This is particularly true of infrastructure, where both levels of government are making significant fiscal commitments.

All other forecasts for Government of Canada transfers are based on existing federal-provincial funding arrangements.

Q: In your Fall Statement you estimated cap and trade proceeds to be $325 million in 2016–17 and $1.3 billion in 2017–18. This has now increased to $478 million in 2016–17 and $1.9 billion in 2017–18. Why has the estimated amount of proceeds increased?

A: The cap and trade proceeds estimated at the time of the Fall Statement was based on preliminary design of the cap and trade program and a preliminary forecast for emissions and auction allowances. Given the greater uncertainty at the time with respect to final program design, the estimate for cap and trade proceeds was intentionally cautious. Since the Fall Statement, the Canada-U.S. exchange rate has declined and projected allowances to be auctioned has increased. In addition, the prudence included in the Fall Statement estimate has been removed. Each of these changes has contributed to an increase in the cap and trade proceeds estimate.

FINANCIAL SERVICES POLICY DIVISION

CCMR

Q: Some media reports have been sceptical about the public timelines for launching the Cooperative Capital Markets Regulatory System (CCMR). When is the CCMR expected to be established and operational?

A: The participating jurisdictions have agreed to target the enactment of legislation by June 30, 2016 and the Capital Markets Regulatory Authority becoming operational in the fall of 2016.

These timelines will be challenging given the need for the enactment of legislation by multiple legislatures. The participating jurisdictions are committed to moving forward with this initiative and market participants should take comfort that we will take the time necessary to ensure a successful launch of the Cooperative System. We will work to ensure a smooth transition to the new system for market participants and their businesses.

Q: What are the next steps in establishing the Cooperative Capital Markets Regulatory System?

A: Going forward, the government plans to introduce the Capital Markets Act and related Cooperative System legislation, following work with other participating jurisdictions to finalize the proposed Cooperative System legislative framework.

- Stakeholder comments on the August 2015 consultation draft provincial / territorial Capital Markets Act and draft initial regulations are being reviewed and have been posted online. These comments will inform work to finalize Cooperative System legislation for introduction.

Q: What is the effect of Alberta's recent announcement that it will not participate in the Cooperative Capital Markets Regulatory System?

A: We were disappointed that Alberta has confirmed its previous position that it will not participate, but this will not impact continuing work. While the Cooperative System would be stronger with the participation of all provinces and territories it still represents a better approach than the status quo and, once it is in place, it will make capital markets in Canada safer, more efficient and more competitive.

Q: What is Ontario doing with regard to the reference on constitutional questions that Quebec is taking to the Quebec Court of Appeal and what will the affect be if the court rules in Quebec's favour?

A: Ontario is not intervening in this matter. We will monitor developments closely. I would refer any legal or constitutional questions related to this matter to the Attorney General.

Review of Financial Planning and Financial Advisory Services

Q: What is the government's reaction to the preliminary policy recommendations released by the Expert Committee to Consider Financial Advisory and Financial Planning Policy Alternatives?

A: It would be premature for the government to comment at this time on the preliminary policy recommendations.

The independent Expert Committee to Consider Financial Advisory and Financial Planning Policy Alternatives released their preliminary policy recommendations in April 2016 as a means of facilitating further input from stakeholders and the public. The expert committee is seeking feedback through written submissions and an across-the-province public consultation process.

The Government expects the expert committee's final report in fall 2016 and will consider their recommendations at that time.

Q: Why did you launch a review of regulation relating to financial planning and advisory services? Will this review result in additional regulatory burden for the financial services sector?

A: Consumers today face complex financial decisions. They need informed, professional financial planning and advisory services that best meets their financial goals. With this in mind, the government launched this expert committee to review and propose how Ontario should regulate individuals who offer financial planning and financial advisory services. Regulatory oversight could raise proficiency and quality standards and minimize conflicts of interest in the sector.

Ontario is pursuing a modern and flexible approach to financial services regulation that protects consumers and strengthens the financial services sector. The expert committee has committed to ensuring its recommendations avoid imposing unnecessary or duplicative regulation.

The goal is for consumers to get trustworthy financial planning and advisory services that best meet their interests so they can face complex financial decisions with confidence. Growth in the sector will be fostered when consumers are able to make more confident financial decisions.

Q: How much is MOF spending in the 2016-17 estimates (1) on the Cooperative Capital Markets Regulatory System (CCMR) and (2) on the Review of Financial Planning and Advisory Services (FP review)?

A: The estimates for the Financial Services Policy Division include the estimates for the Securities Reform Policy Branch (SRPB), which is responsible for the CCMR project and the Review of Financial Planning and Advisory Services as well as other work and oversight on the securities regulatory side of things, and the other portion of the Division that has responsibility for the other areas discussed in the Estimates Briefing Book at page 88. Of the $4,577,700 total showing in the estimates, the portion allocable to the SRPB is approximately $1.5 million. The largest part of the estimated costs are employee related. SRPB staff work on many different projects at the same time, so the estimates do not break down the numbers for CCMR or the FP Review. The costs of the work on CCMR are born by a number of different parties, including the securities regulatory authorities and governments of the participating jurisdictions.

Review of the Credit Unions and Caisses Populaires Act, 1994

Q: When was the Parliamentary Assistant's report on the review of the Credit Unions and Caisses Populaires Act, 1994, released and what were the key recommendations?

A: The Minister of Finance released Parliamentary Assistant Laura Albanese's report on the review of the Credit Unions and Caisses Populaires Act, 1994, on February 12, 2016. The report is available on the Ministry of Finance website at: ***http://www.fin.gov.on.ca/en/consultations/cu-cp/legislative-review.html***.

The recommendations aim to ensure that the legislative framework continues to protect consumers, is aligned with international best practices and enables credit unions to meet the revolving needs of their members. Some of the key recommendations include:

- Setting the deposit insurance limit at $250,000, including $250,000 coverage for deposits held in each type of registered account (such as RRSPs or TFSAs).
- Harmonizing subsidiary ownership rules with those in place for banks and permitting credit unions to own insurance brokerage subsidiaries.
- Working with relevant ministries to remove legislative barriers that impede the ability of credit unions to do business with municipalities, universities, school boards, and hospitals ("the MUSH sector") and other sectors.
- Permitting credit unions to enter into loan syndication agreements with credit unions in other provinces.

- Removing differentiated rules for small credit unions.
- Strengthening Ontario's credit union consumer protection framework, as well as working with credit unions to explore voluntary commitments to provide notices of branch closures, and options for providing consumers with alternatives to high-cost payday loans.

Q: Why did Ontario review the Act? What was the trigger? Was there a problem in the sector?

A: The Credit Unions and Caisses Populaires Act requires that the Minister of Finance appoint a person to review the legislation and regulations every five years. The Act was previously reviewed in 2009.

Reviewing Ontario's legislative framework for credit unions and caisses populaires is important to ensure it stays current to protect consumers and their deposits, help Ontario's 110 credit unions continue to meet the needs of their 1.6 million members, as well as promote competition in the financial services sector.

Q: When will the Act be amended? When will credit unions and their members see changes from the recommendations?

A: When and how the recommendations are implemented varies by recommendation. Some require regulation amendments which must be approved by Cabinet, some require tabling and passage of legislative changes by the Legislature and some can be implemented by credit unions voluntarily and immediately. On March 16th, the government posted, on the Ontario Regulatory Registry, a proposal for implementing the recommendations related to the deposit insurance limit and subsidiary ownership rules. The comment period ends on April 30th.

Q: Why is Ontario changing the deposit insurance coverage limit for credit unions to $250,000 when the federal government only provides $100,000 coverage for bank deposits?

A: Ontario's current deposit insurance limit of $100,000 for basic deposits was set in 2000. It is important that the level and scope of coverage be reviewed periodically to ensure that they meet the public policy objectives of the deposit insurance system, such as maintaining confidence in, and contributing to the stability of, the financial system.

The proposed $250,000 limit is higher than the limit provided by the Canada Deposit Insurance Corporation for bank deposits. It would, however, be equal to the coverage currently provided for credit union deposits in New Brunswick, Nova Scotia and Newfoundland and Labrador and for credit union and bank deposits in the United States. It is important to work towards harmonizing deposit insurance coverage levels among jurisdictions in order to alleviate competitive concerns and reduce consumer confusion.

Q: Why is the government reversing its decision made in 2009 for deposits in registered accounts—such as RRSPs, RRIFs and TFSAs—to have unlimited coverage?

A: International best practices have evolved since 2009, and it is now explicit that they do not support unlimited deposit insurance coverage. Unlimited deposit insurance or deposit insurance limits that are set too high may give rise to moral hazard, the situation when financial institutions have incentives to take on more risk because they are insulated from the consequences of their actions. One of the key objectives of the review was to ensure that Ontario remains in line with international best practices.

Ms. Albanese's report recommended limiting the coverage for registered deposits to same level as for basic deposits in order to mitigate against moral hazard - defined as an incentive to accept more risk because the costs are borne by others. Under the proposal, each type of registered account will be insured to a limit of $250,000. Potentially, this could provide $1,250,000 in total coverage for registered accounts: RRSPs ($250,000), RRIFs ($250,000), RESPs ($250,000), RDSPs ($250,000) and TFSAs ($250,000). In addition, it is important to note that the proposed limit would only apply to deposits that are held in registered accounts and would not affect other investment products more typically held in such accounts (e.g., mutual funds), as deposit insurance does not cover such products.

Q: Is the government concerned that permitting credit unions to own insurance brokerages as subsidiaries may encourage practices like tied-selling, where credit unions might pressure their members to buy insurance from their insurance broker subsidiary?

A: Credit unions are currently allowed under the *Credit Unions and Caisses Populaires Act* (CUCPA) to own an insurance company as a subsidiary. Expanding the list of prescribed subsidiaries to include insurance brokerages would help to put credit unions on an equal footing with banks.

There are currently rules under the CUCPA that protect consumers against being pressured by a credit union to purchase insurance from a specific provider, for the security of the credit union.

In addition, a credit union that chooses to invest in an insurance brokerage subsidiary would be required to adhere to the CUCPA rules regarding insurance retailing and promotion. This includes prohibitions on retailing or promoting insurance products in a branch and on the credit union's website, as well as sharing any member's information with an insurance company, agent or broker.

Under the CUCPA, any promotion of insurance must take place outside of the physical premises of the credit union and must be directed at all of the credit card holders, the members or the credit union, or the general public. For example, promotional material may be included in monthly statements of account that are

mailed, but it must be provided to all account holders. In addition, any insurance operations on premises adjacent to a credit union branch must be clearly indicated as being separate and distinct from the credit union.

Q: What types of barriers currently exist to municipalities and other MUSH sector organizations from doing business with credit unions? Why does the government want to encourage such organizations to do more business with credit unions, as opposed to other financial institutions?

A: A number of restrictions and omissions exist in Ontario's municipal legislative framework, as well as other statutes that govern the MUSH and other sectors, that create barriers for municipalities and other organizations to doing business with credit unions.

Investment rules for municipalities require that a financial institution have a credit rating in order for a municipality to invest a deposit with a term of greater than two years with the financial institution. Credit unions do not have credit ratings, as they do not issue bonds, and hence are not being given equal access to municipal deposits to other financial institutions.

In addition, rules exist under many other Ontario statutes governing organizations from the MUSH and other sectors that do not treat credit unions equally to other financial institutions. For example, administrators of nursing homes are required to establish and maintain trust accounts at either a bank or trust corporation to hold certain resident deposits, but trust accounts at credit unions are not permitted for this purpose. The government will appoint a leader to undertake an initiative to identify all such provisions under Ontario statutes and propose the amendments necessary in order to put credit unions on an equal footing with other financial institutions.

Modernizing the Regulation and Oversight of Financial Services and Pensions

Q: What is the government's reaction to the Panel's Preliminary Position Paper? Will the government be taking any action?

A: It would be premature for the government to comment at this time on this consultation paper.

The independent Expert Advisory Panel released their Preliminary Position Paper in November 2015 as a means of facilitating further input from stakeholders and the public.

The Panel's Final Report will be released this Spring. The Government will review the Final Report and consider its recommendations at that time.

Q: Does the Government support the Expert Advisory Panel's recommendation to establish a new, independent regulator?

A: The financial services and pensions sectors are vital to the economy and to the well-being of Ontario's consumers, investors and pension plan beneficiaries.

The mandate reviews of FSCO, the FST and DICO will ensure we are doing our best to protect Ontario's consumers, investors, and pension plan beneficiaries while fostering a strong business climate. They also provide the opportunity to modernize the regulation of financial services and pensions, and improve agency governance and accountability.

The Panel's Final Report will be released this Spring. The Government will review the Final Report and consider its recommendations at that time. .

Q: What legislative or regulatory changes will the Government be undertaking as a result of the reviews?

A: The mandate reviews of FSCO, the FST and DICO will ensure we are doing our best to protect Ontario's consumers, investors, and pension plan beneficiaries while fostering a strong business climate. They also provide the opportunity to modernize the regulation of financial services and pensions, and improve agency governance and accountability.

The Panel's Final Report will be released this Spring. The Government will review the Final Report and consider its recommendations at that time. Necessary legislative or regulatory changes will be identified and pursued as early as possible.

Q: When will the government be receiving the Expert Advisory Panel's final recommendations? When will the recommendations be public?

A: The independent Expert Advisory Panel released their Preliminary Position Paper last Fall as a means of facilitating ongoing consultation.

The Panel has completed their consultations and will release their Final Report this Spring.

Q: Who did the Expert Advisory Panel consult with in developing the Preliminary Position Paper?

A: The independent Expert Advisory Panel released a consultation paper in April 2015 and received written submissions from over 45 organizations and individuals. The Panel released a Preliminary Position Paper in November 2015 to seek further input and received approximately 50 submissions from industry stakeholders, regulators, and consumer, investor and pension plan beneficiary representatives.

The Panel also held seven sector roundtable discussions, and engaged in open dialogue with regulators, financial services and pension sector stakeholders, and investor advocates.

Q: Why did the government undertake mandate reviews of FSCO, FST and DICO?

A: The financial services sector is vital to the economy and to the well-being of Ontario consumers and pension plan holders.

The mandate reviews of FSCO, the FST and DICO will ensure we are doing our best to protect Ontario's consumers of financial services and pension plan beneficiaries while fostering a strong business climate.

Mandate reviews are also part of the government's commitment to review the role, structure and efficacy of all its agencies on a regular basis. Ontario is committed to strong agency oversight, and the government will be prepared to take legislative action to help modernize financial services and pension regulation, and to improve agency accountability and governance following the independent Expert Advisory Panel's final recommendations.

Lowering the Cost of Auto Insurance

Q: You set a target for a 15% reduction in auto insurance rates but have only achieved 7% to date. Isn't your auto insurance strategy a failure?

A: The 15% target was just that – a target. The government has made significant progress in lowering the cost of auto insurance in Ontario. Rates have already decreased by more than 7% on average, and there are further reductions expected.

Reforms that were announced in the 2015 Budget demonstrate that the government remains committed to achieving lower rates. These reforms are significant, and we need to give these changes time to work through the system to deliver further rate reductions in the months to come.

The reforms also included pro-consumer initiatives, such as an industry-wide discount for winter tires that became effective on January 1, 2016.

Ontario has a highly competitive insurance marketplace. Drivers should always shop around for the best possible rates and coverage that meets their needs.

Q: The winter tire discount became effective January 1, but some consumers are reporting that their insurer won't give them the discount until they renew their policy. What are you doing to help those consumers?

A: Insurers are not required to offer mid-term discounts to consumers, but many have been doing just that. Consumers with policies renewing later in the year should call their insurer to inquire about a possible mid-term discount.

Requiring insurers to offer discounts for winter tires was a key part of the reforms announced by the government in the 2015 Budget. Other consumer protection measures, such as a reduction to the maximum interest rate insurers can charge for monthly premium payment plans, will become effective on June 1, 2016.

Q: You posted KPMG's 2015 "Auto Insurance Transparency and Accountability" report online with little fanfare. What does that report say?

A: KPMG's report for 2015 shows that our strategy for keeping auto insurance affordable is working.

KPMG found that although claims costs are starting to trend back up, recent initiatives, including the reforms announced in last year's Budget, will help to decrease those costs and put downward pressure on auto insurance rates.

KPMG also found that in Ontario's competitive market for auto insurance, consumers that shop around should be able to reduce their premiums. Consumers should always take advantage of Ontario's competitive system to find the rates and coverage that work for them.

The government encourages participants in the auto insurance system and individual consumers to review the entire report.

Q: What specifically will David Marshall do as an advisor on auto insurance issues?

A: David Marshall's expertise in active claims management practices gained in his experience as president and CEO of WSIB should help identify new opportunities to reform the auto insurance system.

The goal of Mr. Marshall's work is to improve health outcomes, lower costs and achieve more affordable insurance premiums. He is in the early days of his appointment, which began on February 1, 2016.

Q: How are you responding to calls for a public inquiry into the quality of independent medical examinations in the auto insurance system?

A: The government is committed to protecting consumers and claimants in the auto insurance system. For example, significant action has been taken in recent years to develop a new auto insurance dispute resolution system to help claimants get

faster access to the benefits they need. The new system will begin accepting dispute applications on April 1, 2016.

The government will continue to improve Ontario's auto insurance system. As part of that commitment, the government appointed David Marshall as an adviser on auto insurance and pensions.

Mr. Marshall's appointment began February 1, 2016. He will apply expertise he developed as president and CEO of WSIB to identify additional opportunities to improve health outcomes and reduce costs in Ontario's auto insurance system.

Auto Insurance – Sharing Economy

Q: Both the City of Ottawa and City of Toronto staff reports on vehicles for hire recommend minimum insurance requirements for drivers involved in ride-sharing. What are you doing to make sure that insurance is in place?

A: The sharing economy is changing the way transportation services are provided in Ontario. The government is committed to ensuring that Ontario`s auto insurance system can help provide peace of mind to those offering and using these new types of transportation services.

Ontario's competitive market for auto insurance is already responding and adapting. FSCO has received filings from different companies proposing new auto insurance products tailored to the sharing economy, and in January FSCO approved one product allowing individual drivers to purchase coverage.

Other proposals are currently being reviewed by FSCO. While this work is proceeding, the reality is that there continues to be a significant insurance coverage gap.

The government is committed to protecting Ontario drivers and consumers by addressing that gap, and FSCO is aware of the importance to the government of achieving this objective as quickly as possible.

Towards that end, the government and FSCO are exploring how Ontario's flexible insurance regulatory system can quickly approve new insurance products. Using such flexible responses would allow new products to be introduced in the market while the government, working with the regulator and the insurance industry, develops the legislative and regulatory changes necessary to fully integrate the sharing economy into Ontario's auto insurance system.

Q: Aviva has already announced it is selling auto insurance coverage for ride-sharing. Why do you need to take further action?

A: Ontario's competitive market for auto insurance is beginning to respond and adapt to the sharing economy. And our province's flexible regulatory framework for insurance is letting that innovation happen. But there continues to be a significant

insurance coverage gap for thousands of Ontarians driving and using ride-sharing services every day.

Closing that gap is a critical government priority, and the government and FSCO are exploring how our flexible regulatory system can quickly approve new insurance products.

A flexible response to new products will help give drivers and passengers peace of mind while the government works with stakeholders to develop the necessary legislative and regulatory changes to fully integrate the sharing economy into the auto insurance system.

Q: What would your flexible approach involve? What specifically are you exploring with FSCO?

A: The government has made clear to the public, and to FSCO, that protection of consumers and drivers involved in ride-sharing is an objective that needs to be achieved as quickly as possible.

Our flexible approach involves working with FSCO to explore how Ontario's insurance regulatory system can quickly approve new insurance products. This could involve interim approvals of new products.

The government is also working with FSCO and stakeholders in the auto insurance system to develop the legislative and regulatory changes necessary to fully integrate the sharing economy into Ontario's auto insurance system.

This flexible approach ensures Ontario's auto insurance system can help provide peace of mind to those involved in ride-sharing.

Towards that end, the government and FSCO are exploring how Ontario's flexible insurance regulatory system can quickly approve new insurance products.

Q: What do you mean by interim approvals?

A: The idea of interim approvals is just an example of what the government and FSCO are exploring. Everything is on the table to make sure Ontario's auto insurance system can help provide peace of mind to those involved in ride-sharing.

As a government, we are making it clear that the insurance coverage gap for those engaged in ride-sharing in Ontario needs to be addressed as quickly as possible. This is a government priority.

One insurance product has already been approved; this is a good first step. And we need more companies to step forward with other new products to provide more insurance options.

And the government, working with FSCO, is exploring ways to approve more new insurance products, including approving new products on an interim basis, while we make the necessary changes to fully integrate the sharing economy into Ontario's auto insurance system.

Q: Aren't you playing into Uber's hands by approving insurance products that don't comply with the law?

A: When it comes to auto insurance and ride-sharing, our top concern is for the protection of drivers and their passengers. New auto insurance products have to be filed with FSCO for review and approval, and we are confident in FSCO's internal review processes.

One insurance product has already been approved by FSCO, and other proposals are currently being reviewed. The government and FSCO are exploring how Ontario's flexible insurance regulatory system can quickly approve new insurance products. This work isn't being done to satisfy any single company – it is being done to help ensure Ontario drivers and consumers are protected.

Q: Uber has launched a public campaign to pressure Alberta's government. Is this announcement pre-empting similar criticism by Uber in Ontario?

A: This isn't about what's going on in other jurisdictions. When it comes to auto insurance and ride-sharing, our top concern is for the protection of drivers and their passengers.

Ontario's auto insurance system has already demonstrated flexibility and responsiveness to ride-sharing. One insurance product has already been approved by FSCO, and other proposals are currently being reviewed. The government and FSCO are exploring how Ontario's flexible system can quickly approve new insurance products to help give drivers and consumers peace of mind.

This work isn't being done to satisfy a single company – it is being done to help ensure Ontario drivers and consumers are protected.

Q: When can we expect FSCO to announce interim approval of these other auto insurance products?

A: FSCO is an independent regulator. It would be inappropriate for the government to comment on FSCO's internal processes.

What the government has made clear to the public, and to what FSCO is aware of, is that protection of consumers and drivers involved in ride-sharing is an objective that needs to be achieved as quickly as possible.

Towards that end, the government and FSCO are exploring how Ontario's flexible insurance regulatory system can quickly approve new insurance products.

Q: How long do you need to make the long-term changes you're talking about?

A: The government and FSCO are exploring how Ontario's flexible insurance regulatory system can quickly approve new insurance products to help protect consumers and drivers engaged in ride-sharing activity.

In parallel with that work, the government is also working with the regulator and the insurance industry to develop the legislative and regulatory changes necessary to fully integrate the sharing economy into Ontario's auto insurance system. These changes will be comprehensive and complex, and will require careful consideration over the coming months.

Q: Have you been working with the City of Toronto on this?

A: Ontario's strategy for the sharing economy includes taking a coordinated government approach. Ministry of Finance and FSCO staff have engaged other jurisdictions and levels of government, including the City of Toronto, to build relationships and share information. We are also reviewing the recent staff reports published by the City of Ottawa and the City of Toronto.

The focus of our government's early action is on ensuring Ontario's auto insurance system can help provide peace of mind to Ontarians engaged in ride-sharing activity. Other jurisdictions and levels of governments may have different priorities, and we will continue to work with them as we develop more long-term changes to fully integrate the sharing economy into Ontario's auto insurance system.

The Province is also looking at other aspects of the sharing economy. And in the coming months we will launch a consultation to help determine the best approach for Ontario, which will include engagement with municipalities like the City of Toronto.

PROVINCIAL-LOCAL FINANCE DIVISION

Provincial-Municipal Partnership:

Q: What is the government doing to support municipalities?

A: Our government has a strong record of supporting and working with municipalities.

In 2016 alone, municipalities will benefit from over $3.8 billion in ongoing support through the Ontario Municipal Partnership Fund (OMPF), provincial uploads and other provincial initiatives – an increase of $2.7 billion above the support provided in 2003.

The government will continue to fulfill its commitment to upload social assistance benefit programs as well as court security and prisoner transportation costs off the property tax base. This will ensure that municipalities have more property tax dollars to invest in local priorities like roads, transit and economic development.

In partnership with communities, Ontario is making significant investments to revitalize infrastructure and grow the economy. The Province's infrastructure commitments include:

- Transit, transportation and other priority infrastructure through *Moving Ontario Forward* that is supported by $31.5 billion in dedicated funds, with about $16 billion available within the Greater Toronto and Hamilton Area (GTHA) and about $15 billion available outside the GTHA.
    - As part of *Moving Ontario Forward*, the Ontario Community Infrastructure Fund is being expanded to $300 million per year by 2018–19, which will provide ongoing support for critical local infrastructure priorities.
- Introducing a new Connecting Links program that will provide $20 million in 2016-17, up from $15 million announced in the *2015 Budget,* to help municipalities pay for construction and repair costs for municipal roads that connect two ends of a provincial highway through a community or to a border crossing. Funding for this program will increase to $30 million per year by 2018-19.

In addition to implementing the provincial uploads, the Province has worked in partnership with municipalities to introduce measures that support communities. These include:

- Sharing provincial gas tax revenues;
- Unconditional funding through the Ontario Municipal Partnership Fund;

- Long-term funding through the Ontario Community Infrastructure Fund;
- Connecting Links program;
- Developing a fair and equitable Ontario Provincial Police billing model;
- Working with municipalities to enhance the fairness, effectiveness and predictability of the Ontario's property tax and assessment system;
- Consulting with municipal partners through the Memorandum of Understanding with the Association of Municipalities of Ontario, as well as other forums;
- Undertaking an integrated review of the *Municipal Act*, the *City of Toronto Act* and the *Municipal Conflict of Interest Act*.

Q: Will the government commit to implementing the uploads of social assistance benefit programs as well as court security and prisoner transportation costs in accordance with the timelines agreed to through the Provincial-Municipal Fiscal and Service Delivery Review?

A: Yes. The government will continue to fulfil its commitment to upload social assistance benefit programs, as well as court security and prisoner transportation costs off the property tax base, as agreed with municipalities in 2008. The uploads will be fully implemented by 2018. This represents a significant milestone in the provincial-municipal relationship and will help put municipalities on a financially sustainable footing.

Q: Ontario's ongoing funding for municipalities will be $3.8 billion in 2016. Will this be sufficient to address the fiscal pressures facing Ontario's cities?

A: Our government has a strong record of supporting and working with municipalities. We will continue to fulfil its commitment to upload social assistance benefit programs, as well as court security and prisoner transportation costs off the property tax base, as agreed with municipalities in 2008. The uploads will be fully implemented by 2018. This represents a significant milestone in the provincial-municipal relationship and will help put municipalities on a financially sustainable footing.

It is important to note that support to municipalities has increased significantly at a greater rate than support to other sectors. In 2016 alone, municipalities will benefit from over $3.8 billion in ongoing support through the Ontario Municipal Partnership Fund (OMPF), provincial uploads and other provincial initiatives – an increase of $2.7 billion above the support provided in 2003.

Provincial measures are helping to improve municipal fiscal sustainability, but the province must also consider its responsibility to protect key public services such as health, education and infrastructure.

Q: The government has stated that going forward, it will shift its focus to investing in infrastructure. Does this mean that it will be reducing other support to municipalities?

A: Our government will continue to fulfil its commitment to upload social assistance benefit programs, as well as court security and prisoner transportation costs off the property tax base, as agreed with municipalities in 2008. The uploads will be fully implemented by 2018. This represents a significant milestone in the provincial-municipal relationship and will help put municipalities on a financially sustainable footing.

It is important to note that support to municipalities has increased significantly at a greater rate than support to other sectors. In 2016 alone, municipalities will benefit from over $3.8 billion in ongoing support through the Ontario Municipal Partnership Fund (OMPF), provincial uploads and other provincial initiatives – an increase of $2.7 billion above the support provided in 2003.

Provincial measures are helping to improve municipal fiscal sustainability, but the province must also consider its responsibility to protect key public services such as health, education and infrastructure.

Given that the government will be fulfilling its commitment to upload social assistance benefit programs, as well as court security and prisoner transportation costs off the property tax base by 2018, it is important to manage expectations regarding any new ongoing support to municipalities. Going forward, the government will shift its focus to investing in the infrastructure that is vital to the health, prosperity and quality of life of Ontarians.

The Province's infrastructure commitments include transit, transportation and other priority infrastructure through *Moving Ontario Forward* that is supported by $31.5 billion in dedicated funds, with about $16 billion available within the Greater Toronto and Hamilton Area (GTHA) and about $15 billion available outside the GTHA. As part of *Moving Ontario Forward*, the Ontario Community Infrastructure Fund is being expanded to $300 million per year by 2018–19, which will provide ongoing support for critical local infrastructure priorities.

Q: Will the Ontario Municipal Partnership Fund (OMPF) be further reduced beyond 2016?

A. During our consultations, municipalities have been clear that the OMPF is an important unconditional funding program for many municipalities.

The Ontario Municipal Partnership Fund (OMPF) will continue to provide unconditional support to municipalities in 2016 and beyond. In 2016, the phase-down of the OMPF is complete, and the design of the core grants now reflects the long-term objectives of the program.

At this time, there is no plan to further reduce the OMPF.

It is also important to note that as announced in the *2015 Ontario Budget*, the OMPF has been increased by an additional $5 million in 2016, bringing the total OMPF envelope to $505 million rather than the $500 million previously planned for 2016. This additional funding is being provided through the Northern Communities Grant of the program to further recognize the challenges of northern municipalities.

Q: What are the government's plans for the Ontario Municipal Partnership Fund?

A: The Ontario Municipal Partnership Fund (OMPF) will continue to provide unconditional support to municipalities in 2016 and beyond. In 2016, the phase down of the OMPF is complete, and the design of the core grants now reflects the long-term objectives of the program.

This year, we will continue to work with our municipal partners to ensure the design of the OMPF reflects the long-term priorities of municipalities.

The program includes a significant amount of Transitional Assistance, and in the coming year, we will examine how some of this funding can be reallocated to the core objectives.

Q: Will the government commit to further uploads, e.g. social housing costs, once the uploads agreed to through the Provincial-Municipal Fiscal and Service Delivery Review have been completed?

A: Our government will continue to fulfill its commitment to upload social assistance benefit programs as well as court security and prisoner transportation costs off the property tax base. This will ensure that municipalities have more property tax dollars to invest in local priorities like roads, transit and economic development.

It is important to note that support to municipalities has increased significantly at a greater rate than support to other sector. In 2016 alone, municipalities will benefit from over $3.8 billion in ongoing support through the OMPF, provincial uploads and other provincial initiatives – an increase of $2.7 billion above the support provided in 2003.

Provincial measures are helping to improve municipal fiscal sustainability, but the province must also consider its responsibility to protect key public services such as health, education and infrastructure.

Given that the government will be fulfilling its commitment to upload social assistance benefit programs, as well as court security and prisoner transportation costs off the property tax base by 2018, it is important to manage expectations regarding any new ongoing support to municipalities. Going forward, the

government will shift its focus to investing in the infrastructure that is vital to the health, prosperity and quality of life of Ontarians.

The Province's infrastructure commitments include transit, transportation and other priority infrastructure through Moving Ontario Forward that is supported by $31.5 billion in dedicated funds, with about $16 billion available within the Greater Toronto and Hamilton Area (GTHA) and about $15 billion available outside the GTHA. As part of Moving Ontario Forward, the Ontario Community Infrastructure Fund is being expanded to $300 million per year by 2018–19, which will provide ongoing support for critical local infrastructure priorities.

Q: What is the province doing to enhance the fairness, effectiveness and predictability of Ontario's property tax and assessment system?

A: The Province is working to improve the property assessment system by implementing the recommendations of the Assessment Review (Special Purpose Business Property Assessment Review) in partnership with the Municipal Property Assessment Corporation (MPAC), municipalities and stakeholders.

- The objective of the Assessment Review is to enhance transparency, predictability and accuracy of assessed values for the next province-wide reassessment.

One of the key recommendations from the Assessment Review is the introduction of an advance disclosure process, which enables affected businesses and municipalities to contribute to the determination of assessed values before the assessment roll is finalized. An important objective of this process is to reduce the number and impact of assessment appeals.

To further support the objectives of accuracy, transparency and predictability through early disclosure of information, the Ministry of Finance and MPAC have also established an assessment methodology change protocol.

- This protocol establishes a consultative approach to any major changes that are proposed in assessment methodology.

Non-PLFD items

Q: What are the province's plans for developing a new Ontario Provincial Policing billing model?

A: Our government is continually impressed by the service the OPP provides throughout the province to help keep our communities safe. And now, the services that keep our communities safe are paired with a fair and equitable billing model.

The new OPP Billing Model will help municipalities to better direct crime prevention resources to save money and keep their communities safe. The new model will be

phased in over five years with annual limits on changes in policing costs to provide stability and predictability for both taxpayers and municipalities.

The new OPP Billing Model:

- Eliminates the huge differences in how much municipalities were paying for policing by more equitably redistributing costs
- It also provides municipalities with data so they can better understand the types of calls in their community

The new model represents a fair, responsive, equitable, transparent and responsible approach.

Q: What is the status of the integrated review of the *Municipal Act*, the *City of Toronto Act* and the Municipal Conflict of Interest Act?

A: Our government wants to ensure that our local governments remain strong and financially-sustainable, and that they continue to be accountable, open, flexible and responsive to the people they serve. We continue to undertake an integrated review of the *Municipal Act*, the *City of Toronto Act* and the *Municipal Conflict of Interest Act*.

The review is examining if municipalities are using, and have in place, the tools to address local concern. Through recent consultations, we have heard from the public and many municipalities, community groups and key stakeholders on a range of important issues.

We thank everyone for taking the time to provide comments and suggestions about what we can do to improve the acts. We are assessing the feedback received and will develop recommendations on how to improve the legislation.

Q: What changes is the Province making to the Ontario Community Infrastructure Fund?

A: Through the Ontario Community Infrastructure Fund, the Province is providing small, rural and northern municipalities access to $100 million per year to build and repair critical infrastructure and create jobs across Ontario. Reflecting consultation feedback and the progress municipalities have made on their asset management plans, the Ontario Community Infrastructure Fund will be expanded to $300 million per year by 2018–19. This increased funding will help municipalities invest even more in the critical infrastructure they need to thrive, while also creating jobs across the province. The expanded fund will be re-launched in late spring.

Business Property Tax Capping Program

Q: What are the changes proposed in the Spring Bill?

A: The Capping Program review continues in 2016 building on the enhancements announced in the *2015 Ontario Economic Outlook and Fiscal Review* and will consider issues such as stakeholder concerns about the interaction between reassessment impacts and the Capping Program. The Spring Bill amendments support potential changes as a result of the ongoing review by providing the framework to facilitate potential future refinements and program flexibility.

Q: With announcements in the *2015 Ontario Economic Outlook and Fiscal Review* and amendments in the Spring Bill, why is the Capping Review ongoing?

A: The Capping Program review continues in 2016 building on the enhancements announced in the *2015 Ontario Economic Outlook and Fiscal Review* and will consider issues such as stakeholder concerns about the interaction between reassessment impacts and the Capping Program.

Q: The Province has made changes to the Capping Program to accelerate progress towards CVA level taxes. Why won't the government get rid of the Capping Program?

A: The government has announced significant enhancements to the capping program through the *2015 Ontario Economic Outlook and Fiscal Review* and subsequent regulations that will improve fairness and transparency in the property tax system. Beginning in 2016, municipalities will have increased flexibility to accelerate progress to current value assessment (CVA) level taxes.

Additionally, municipalities that meet certain criteria established by the province will have the option to exit or phase-out the Capping Program, if doing so would have a limited impact on business properties.

These enhancements will enable municipalities to adjust the capping program to best suit their local circumstances, and also address the potential for inequities and economic distortions that may result from the program

Q: What are the Capping Program enhancements for 2016?

A: The *2015 Ontario Economic Outlook and Fiscal Review* announced that beginning in 2016, municipalities would have additional flexibility to adjust capping parameters to increase progress towards CVA level taxes:

Parameters	CVA Taxes	Threshold
Current Maximum	5%	± $250
Proposed Maximum	10%	± $500

Municipalities that meet certain eligibility criteria established by the Province would also be given the option to exit or phase-out from the Capping Program, if this would have a limited impact on business properties.

- A municipality would be eligible for a four-year phase-out from the Capping Program once it has no capped properties beyond 50% of CVA level taxes in a property class.
- Municipalities with no properties currently remaining in the Capping Program would be eligible to exit the program immediately.

These new proposed flexibility measures would enable municipalities to adjust the Capping Program to best suit their local circumstances, and also address the potential for inequities and economic distortions that may result from the program.

A municipality can choose to apply these options to all business property classes, or limit it to individual business property classes. As these are municipal options, each municipal Council would be required to pass a by-law to adopt options. As such, municipalities need to be able to explain any associated tax impacts to individual business taxpayers, just as they have in the past with other municipal tax policy decisions.

Q: The Capping Program enhancements are complicated. What is the Province doing to support municipal analysis?

A: The provincially-funded Online Property Tax Analysis (OPTA) system provides a number of tools and reports to assist municipalities with property-level tax analysis. OPTA will be updated to include a learning tool to reflect the proposed Capping Program enhancements allowing municipalities to analyse the proposed enhancements in their own local circumstances.

Q: When will the Capping Program enhancements be implemented?

A: Capping Program enhancements will be implemented through regulation and be in effect for the 2016 tax year. Regulations are anticipated in the coming weeks and municipalities will be notified when filed.

Q: What will be the impact to my property tax bill?

A: The government is proposing enhancements that would improve fairness and transparency of the Capping Program. As a result more properties will benefit from increased property tax predictability, knowing their taxes are now calculated as rate x assessment, without capping or claw-back adjustments.

Individual business property tax impacts will vary. Some capped properties may see related property tax increases, but clawed-back properties may see property tax decreases.

All Capping Program enhancements are implemented at the municipal level and adopted through municipal by-law. Therefore, questions about individual business property tax bills should be directed to your municipality.

Vacant Unit Rebate and Tax Class Programs

Q: The Province initiated a review of the Vacant Unit Rebate and Vacant/Excess Land Subclasses in response to stakeholders concerns. What are some of the concerns raised by stakeholders?

A: Stakeholders have raised concerns regarding the appropriateness of the lower tax level provided through these programs and unintended implications this may have for local economies. Some stakeholders have also noted that Ontario is the only province providing these types of programs in Canada.

Q: What are some of the potential changes the government is considering?

A: The Vacant Unit Rebate and Vacant/Excess Land Subclasses review continues in 2016 with stakeholder consultations on the potential provision of additional municipal flexibility to reflect local needs. Through the Spring Bill, the Province is introducing a legislative framework to facilitate potential changes to the programs as a result of the review.

Q: Business stakeholders provided feedback requesting province-wide program consistency. The Budget suggests the government is going a different route consulting on the "potential provision of additional municipal flexibility". Why?

A: The Province believes it is important to give municipalities, an independent, accountable level of government, the flexibility to make tax policy decisions that are sensitive to local circumstances but at the same time, recognizes the concerns of the business community. Therefore, it will continue to consult with municipalities and business stakeholders before making any changes to the vacant unit rebate and vacant/excess land subclasses programs.

Property Tax Rate Calculation Adjustment

Q: The Province plans to include a technical adjustment to the provincially prescribed property tax rate calculation. Isn't this just a property tax increase?

A: No, this is not a tax increase. In response to municipal requests, starting in 2016, the Province will allow a technical adjustment to the prescribed property tax rate calculation. This change to the property tax rate calculation would enable the Province and municipalities to make technical adjustments to account for in-year assessment changes, such as assessment appeal losses. This will ensure municipalities and the Province have the ability to avoid revenue losses due to in-year property assessment changes.

Q: Why is this adjustment being made now?

A: Municipalities and municipal associations approached the Province requesting an adjustment for in-year tax changes in 2015. This technical adjustment is in response to those requests.

A regulation implementing the adjustment is anticipated in the coming weeks and municipalities will be notified when filed.

Q: How will this technical adjustment be implemented for municipalities?

A: Applying the technical adjustment will be an annual municipal decision, as impacts will vary each year and for each municipality.

As requested by municipal stakeholders, municipalities will have the option to adopt the technical adjustment based on their analysis of the impacts in their local circumstances and advise their Council on whether to adopt the adjustment annually. If adopted, an adjustment would be applied to the annual property tax rate setting calculation for the municipality.

Q: Will the Province also adopt this technical adjustment?

A: Municipalities and municipal associations approached the Province requesting an adjustment for in-year tax changes to the annual property tax rate calculation. The technical adjustment will help ensure that assessment appeal losses affecting the annual rate setting calculation do not further erode the property tax base going-forward. To ensure consistency with municipal property tax calculations, the Province will also apply the technical adjustment to the calculation of education property taxes.

Q: The Budget states "... the Province will also ensure the ongoing integrity of education property tax revenues". What does this mean?

A: The technical adjustment will help ensure that assessment appeal losses affecting the annual rate setting calculation do not further erode the property tax base going-forward. As a forward-looking measure, the technical adjustment does not address revenue lost due to past assessment appeals losses.

Since 1998, when the Province took over responsibility for setting the education property tax rates, the rates have been reset to offset reassessment impacts. The Province has also implemented several education property tax cuts totaling over **$900M**.

Unlike municipal property taxes, which have generally addressed historic assessment appeal losses as a part of annual levy considerations, education property tax rates have not been adjusted for assessment appeal losses.

Therefore, as a part of the ongoing review of education property tax rate setting policies, the Province is considering revenue integrity measures to prevent the continued erosion of the property tax base due to assessment appeal losses.

Provincial Land Tax

Q: Why is the government continuing the review of the Provincial Land Tax (PLT)?

A: The 2015 Budget announced changes to the Provincial Land Tax (PLT). Before these changes were announced, PLT rates had not been updated to increase revenues in over 60 years. As a result, property tax inequities had developed in northern Ontario.

While this initial stage of PLT reform made important strides in creating a more equitable PLT, the government committed to continue discussions with northerners on ways to further address tax inequities in the North.

The 2016 Ontario Budget reiterated the government's commitment to consult with northerners on ways to further address property tax inequities before determining PLT rate adjustments for 2017.

As part of this commitment, the Ministry is inviting property owners to provide input through the "PLT Consultation Questionnaire". The questionnaire will be available on the Ministry of Finance website until June 1, 2016. The consultations will also include further discussions with local board representatives, northern municipalities and business.

The second stage of the PLT review will continue to address inequities in taxation and in how important services are paid for in the north. The Province remains committed to transforming the PLT into a fair and modern property tax system.

Q: Why did PLT rates increase in 2015 and 2016 - isn't this just a tax grab by the government?

A: The government announced a review of the PLT in 2013 in response to concerns raised by Northern municipalities about significant differences between their property taxes and the PLT.

The 2015 Ontario Budget announced an important first step in PLT reform, including 2015 and 2016 PLT rate changes. For residential taxpayers, the PLT rate was adjusted by $10 per $100,000 of assessed value in 2015 and by an additional $40 per $100,000 of assessed value in 2016. The PLT rate increase for all business properties is in line with the percentage change for residential properties outside schoolboard areas.

Prior to the changes announced in the 2015 Ontario Budget, PLT rates had not been adjusted to increase revenues in over 60 years. As a result, a gap of more than $50 million developed between PLT revenues and the additional amount that the province spends on services on behalf of unincorporated areas.

While the initial stage of PLT reform made important strides in creating a more equitable PLT, the government committed to continue discussions with northerners on ways to further address tax inequities in the North.

The second stage of the PLT review will continue to address inequities in taxation and in how important services are paid for in the north. The government is consulting with northerners on ways to further address tax inequities before determining PLT rate adjustments for 2017.

Q: Is there a plan to increase services now that PLT rates have increased?

A: The PLT paid by unincorporated area property owners contributes only a portion of the cost of providing services that benefit the broader community, including policing, public health, land ambulance, child care and social assistance.

Prior to the changes announced in the 2015 Ontario Budget, PLT rates had not been adjusted to increase revenues in over 60 years. As a result, a gap of more than $50 million developed between PLT revenues and the additional amount that the province spends on these important services on behalf of unincorporated areas.

Differences in the way services are paid for in the North are a significant reason why average residential PLT is lower than average northern residential municipal tax.

While the initial stage of PLT reform made important strides in creating a more equitable PLT, the government committed to continue discussions with northerners on ways to further address tax inequities in the north.

The 2016 Ontario Budget reiterated the government's commitment to consult with northerners on ways to further address property tax inequities before determining PLT rate adjustments for 2017.

As part of this commitment, the Ministry is inviting property owners to provide input through the "PLT Consultation Questionnaire", and discussions with local board representatives, northern municipalities and business will also take place.

The second stage of the PLT review will continue to address inequities in taxation and in how important services are paid for in the North.

Q: What consultations have taken place so far?

A: In 2014, the Ministry of Finance held 21 consultation sessions with unincorporated area representatives across northern Ontario. A PLT working group of northern municipal representatives was also established to provide input and meetings were held with business.

The findings of the first stage of the PLT review formed the basis of a paper, "Provincial Land Tax Review, A Summary of Stakeholder Consultations", (December 2014). The province requested feedback on the summary paper and received numerous helpful responses from unincorporated area property owners.

The Province initiated the next round of consultations by holding 15 open houses across northern Ontario in 2015. The open houses provided unincorporated area property owners the opportunity to hear more about PLT changes and provide input.

These sessions are summarized in "Provincial Land Tax Reform: Overview of the Provincial Land Tax Open Houses", published by the Ministry of Finance.

The 2016 Ontario Budget reiterated commitments to ongoing discussions with northerners on ways to further address property tax inequities prior to determining PLT rate adjustments for 2017.

The consultations include the "PLT Consultation Questionnaire", available on the Ministry of Finance website until June 1, 2016, for unincorporated area property owners to provide additional input. There will also be ongoing discussions with local board representatives, northern municipalities and business in this stage of consultations. The feedback received will be carefully considered before determining PLT rate adjustments for 2017.

•

Strengthening Ontario's Assessment System

Assessment Review

Q: What is the status of the Advance Disclosure process and how will it improve Ontario's property assessment system?

A: The Municipal Property Assessment Corporation (MPAC) has made considerable progress on implementing advance disclosure, including publishing an information and data sharing policy, methodology guides, and market valuation reports for special purpose business properties, and a protocol describing the new advance disclosure process, all of which are available on MPAC's website at www.mpac.ca/AboutMPAC/20132016StrategicPlan/Disclosure2016AssessmentUpdate

Building on the advance disclosure work completed to date, MPAC is now working on preliminary values. MPAC plans to share summary preliminary valuations with property owners, municipalities and representatives in spring 2016. The advance disclosure process is expected to be completed by the summer.

An important objective of the advance disclosure process is to reduce the number and impact of appeals following the 2016 reassessment by increasing the transparency, predictability and accuracy of assessed values.

Q: What changes were announced in the *2015 Ontario Economic Outlook and Fiscal Review* to the Request for Reconsideration Process?

A: A recurring theme expressed during consultations on the implementation of the Assessment Review (Special Purpose Business Property Assessment Review recommendations) was the need for earlier resolution of assessment issues.

To support this objective, and to complement the Municipal Property Assessment Corporation's (MPAC) plans for the earlier staggered mailing of assessment notices, improvements were made to the Request for Reconsideration (RfR) process. The *2015 Ontario Economic Outlook and Fiscal Review* announced changes made to the RfR process to standardize the amount of time that property owners have to file an RfR and encourage the earlier resolution of assessment issues.

Specifically, the deadline for property owners to file an RfR with MPAC in a reassessment year is now 120 days after the assessment notice is issued. The RfR deadline for regular notices in non-reassessment years remains unchanged at March 31 of the taxation year.

Q: What is the status of the Ministry of Finance's review of the assessment of landfills?

A: The Ministry of Finance remains committed to arriving at a recommended valuation approach for landfills in time for the 2016 province-wide reassessment.

To support this objective, the Ministry has selected a Reviewer who will provide recommendations with regards to an appropriate valuation methodology to assess landfills:

- Through a competitive procurement process, the Ministry has retained the services of PricewaterhouseCoopers (PwC).
- PwC brought the expertise of former Ontario Cabinet Minister John Wilkinson to lead this review
- Mr. Wilkinson's role is to review the potential options for assessing landfills and make recommendations on an appropriate methodology for the 2016 reassessment cycle.
- Mr. Wilkinson has sought input from stakeholders and municipalities on a recommended solution and is expected to provide advice to the Minister by early spring2016.

Governance of MPAC

Q: What changes are being proposed to the Board of Directors of the Municipal Property Assessment Corporation (MPAC)? How is the amendment different from the way members are currently appointed to MPAC's Board of Directors?

A: The Province is proposing a legislative amendment to change the number of terms a member can serve on MPAC's board of directors. If passed, directors may be reappointed for a third term of up to three years, for a maximum duration of nine years on the board. Currently, board members can serve for a maximum of two terms of up to three years each (maximum term of six years).

Q: Why is the Province proposing this change?

A: This would enhance the continuity of MPAC's leadership and membership on the board, allowing members to make a greater contribution to the oversight of MPAC's operations and develop the necessary expertise to more effectively fulfil their mandate.

Q: What other changes is the Province considering to MPAC's governance structure? How will this make MPAC more accountable to municipalities and property owners?

A: The Province is committed to continue improving the property assessment system in partnership with municipalities and stakeholders.

The government will be consulting on potential further changes and identify ways to strengthen MPAC's governance structure and support its objective of remaining accountable to stakeholders while maintaining excellence in assessment service delivery.

Q: Who will the government be consulting with regarding future changes to MPAC's governance?

A: A collaborative approach to consulting with municipalities and stakeholders has been key to implementing improvements to the property assessment system. The ministry intends to continue this collaborative approach and is working with MPAC to engage the Association of Municipalities of Ontario (AMO) and the City of Toronto to better understand issues and opportunities for improvement related to its board governance. For example, AMO has raised the issue of the direct appointment of MPAC board members.

Q: Has the Province introduced any other changes recently to MPAC's board structure?

A: In the 2015 Ontario Budget, legislative amendments were made to clarify that the length of a term a member can serve on MPAC's board is up to three years, but could be shorter than three years at the Minister's option.

- If a member is reappointed for a second term, that would also be for up to three years, but could be shorter.
- As a result of changes introduced through the 2015 Ontario Budget, the maximum total amount of time that a member may currently serve on the board is six years.

Authorizing appointments "up to" a maximum period of time, rather than stipulating fixed appointment terms, is consistent with the approach taken in legislation governing other provincial corporations, and would bring MPAC in line with the Agencies and Appointments Directive (issued by Management Board of Cabinet in February 2015).

Q: What is the composition of MPAC's Board of Directors?

A: MPAC is governed by a 15-member Board of Directors, the majority of whom are municipal representatives nominated by the Association of Municipalities of Ontario (AMO).

The Board is composed of the following individuals:

- eight municipal representatives;
- five taxpayer representatives;
- two provincial representatives.

The municipal representatives are selected by the Minister of Finance based on nominations made by AMO and the City of Toronto.

The taxpayer and provincial representatives may be selected by the Minister at his / her discretion.

Q: Who appoints members to MPAC's Board of Directors?

A: Appointments to the MPAC Board are made by the Minister of Finance. The municipal representatives are chosen based on nominations made by the Association of Municipalities of Ontario (AMO) and the City of Toronto.

Power Dam Special Payment Program

Q: What is the Power Dam Special Payment Program?

A: Through the Power Dam Special Payment Program, the Province provides mitigation funding to 111 municipalities in respect of the former property tax on hydro-electric generating stations ("power dams").

Power dams became exempt from property taxation in 2001 when the provincial Gross Revenue Charge (GRC) was introduced.

Q: In the 2014 Budget, the Province announced that payments to municipalities under the Power Dam Special Payment Program would be reduced. What is the status of this phase-down?

A: The 2014 Budget announced a plan to phase down the program over three years, ensuring that more than 75% of the current funding level is maintained.

However, the phase-down reductions for 2015 and 2016 were deferred in light of consultations and analysis that were underway to consider alternative options to the phase-down, including the re-introduction of property taxation for power dams.

As announced in the 2016 Budget, following extensive review and consultations on this program, the Province has confirmed that stable funding to municipalities with respect to currently-eligible hydroelectric generating stations will remain in place for 2017 and future years.

Q: What was the focus and outcome of the review?

A: As part of the plan to phase-down the Power Dam Special Payment Program, the Premier asked the Ministry to consider the option of reintroducing property taxation. The Ministry held numerous consultations with municipal and electricity stakeholder representatives and conducted extensive analysis on a range of funding and taxation options.

A number of challenging and complex issues were raised with respect to the property taxation option, particularly when taking into account the priority of avoiding impacts on electricity ratepayers. However, throughout our review, municipalities have consistently emphasized the importance of stability.

The review is now concluded and the government is pleased to announce that as a result of our discussions with municipalities, we will not proceed with the previously proposed phase-down. Stable funding with respect to currently eligible hydroelectric generating stations will therefore remain in place for 2017 and future years.

While no meetings are currently planned to further review the program, the Ministry is always open to discussing issues that our municipal partners may have and would be happy to facilitate additional consultations if necessary.

Q: Why has this process taken so long?

A: Considering property taxation for power dams was a complex and challenging proposal, particularly when balancing the priority of avoiding impacts on electricity ratepayers.

It is important that due diligence was exercised to mitigate the risk of creating a new approach that would lead to unintended consequences, such as costly assessment appeals that would undermine the tax base of municipalities.

Q. Will the payments for 2016 be the same as they were in 2015?

A. In the *2015 Ontario Economic Outlook and Fiscal Review*, the government announced that stable funding to municipalities under the Power Dam Special Payment Program would be maintained for the 2016 taxation year.

This means that eligible municipalities will receive the same payment under this program for 2016 as they received in 2015, subject to any necessary maintenance adjustments. For example, if a generating station is decommissioned, payments under the program will be adjusted accordingly.

Q: Payments under this program haven't changed for a number of years. Now that the government has committed to providing stable funding under the program, what about indexation?

A. There is no plan to increase payments under the Power Dam Special Payment Program. The government has committed to maintain stable funding for 2017 and future years, rather than proceed with the previously proposed phase-down

Our government has a very strong record of supporting municipalities through a number of programs and initiatives.

In 2016, the Province is providing the 111 municipalities that receive payments under the Power Dam Special Payment Program with $750 million in support through the combined benefit of the Ontario Municipal Partnership Fund (OMPF) and provincial uploads.

This is equivalent to 16% of all municipal property tax revenue in these municipalities, and exceeds the amount of support provided to these municipalities in 2015 by $14 million. This also exceeds payments provided in 2004 by $460 million, or by more than 2.5 times.

Value-Added Farm Activities

Q: What is a "value-added activity"?

A: In the context of a farm operation, "value-added" refers to activities which utilize farm products to create a new product, such as turning strawberries into jam.

The phrase is also used to refer to the retail sale of farm products.

Q: Why is the government reviewing the property tax treatment of value-added activities on farms?

A: The government has heard from the agriculture sector that current property tax increases relating to small-scale on-farm agricultural processing and manufacturing can be a disincentive for some farmers to expand and diversify their operations.

Municipalities, particularly in rural Ontario, have also expressed support for encouraging small-scale on-farm agricultural innovations that contribute to local economies.

As a result, the Province will be consulting with the farming community and the municipal sector to review the property tax treatment of small-scale value-added activities on farms, while maintaining a level playing field for large agricultural processors.

Q. What will the government be consulting on with respect to the property tax treatment of value-added activities on farms?

A: The objective of this review will be to develop and consider options that would provide sustainable property tax treatment for farmers who conduct value-added activities on a small-scale, while maintaining a level playing field for large agricultural processors.

Q: What does the Province consider a "small-scale" value-added activity?

A: The Province will be working with the farming community and the municipal sector to solicit feedback on all aspects of this initiative, including the determination of what constitutes "small-scale".

Our goal is to ensure fair and equitable property tax treatment for all taxpayers.

Q: How can the government ensure a level playing field for large processors if it provides special tax treatment to small-scale operations?

A: We recognize the challenges involved in addressing concerns about small scale value-added activities on farms, while at the same time maintaining a level playing field for large agricultural processors. This is an important issue that will be given careful consideration during the review process.

Our goal is to ensure fair and equitable property tax treatment for all taxpayers.

To that end, the Province will be working with the farming community and the municipal sector to solicit feedback on all aspects of this initiative, including the determination of what constitutes "small-scale".

Q: When will the review be completed and changes implemented?

A: Over the next several months, the Province will be working with the municipal sector and the farming community, including the Association of Municipalities of Ontario (AMO) and the Ontario Federation of Agriculture (OFA), to develop options for the government's consideration.

It is important to note that no decisions have been made at this time. However, it is our intention to ensure that the review will be completed in time to inform decisions that may be considered for implementation in the 2017 taxation year.

Q: The agriculture sector has been asking for reduced property taxes for value-added activities on farms for years. Why is the government just reviewing this issue now?

A: The government appreciates the importance of encouraging emerging innovations in the agriculture sector. The Province understands that building a strong rural economy includes providing farmers with the support they need to engage in small-scale value-added activities as part of their farm operation.

While the focus of our current review is on small-scale value-added activities, the government has acted on a number of property tax issues affecting the agricultural sector over the years.

For example, since 2004, we have established clear, consistent and equitable guidelines governing the assessment and classification of the following activities, provided specific conditions are met for each type of operation:

Activity	Property Tax Treatment
Maple Sap Processing	Farm classification, if 50% of sap is from trees owned by the processor and products contain no other additives
Equestrian Farms	Farm or Residential classification for different types of activities (e.g., boarding treated as farm activity, land used for recreational riding classified as residential).
Sour Cherry Processing	Farm classification, if 50% of cherries were harvested from trees owned by the processor, and no other products are manufactured from the cherries.
Bunkhouses on Farms	Farm classification, if used only on a temporary basis by on-farm labourers
Grain Elevators	Farm classification or partly Commercial classification for licenced grain elevator operations, based on the amount of customer grain being stored.

OFFICE OF THE BUDGET

Ontario's 2015-16 Interim Fiscal Performance

Q: The government is reporting overachievement on its annual deficit target for the 7th year in a row. How is this possible? Is the government purposely setting easy targets?

A: The government is projecting a deficit of $5.7 billion in 2015-16, an improvement of $2.8 billion compared with the *2015 Budget* forecast. It is also a $4.6 billion improvement compared with the 2014-15 deficit of $10.3 billion. This represents the Province's largest year-over-year reduction in the deficit in the last five years. [Ch. 2A, Pg. 4]

The overachievement in 2015-16 is mainly due to total revenue projected to be $2.2 billion above the *2015 Budget* plan, due to higher revenue from asset optimization in 2015-16, higher taxation revenues and stronger overall performance from Government Business Enterprises (GBEs). [~Ch. 3B, Pg. 4]

It is also the result of $0.2 billion in lower interest on debt expense, from lower-than-forecast interest rates, the lower forecast deficit and cost-effective debt management. [~Ch. 3B, Pg. 4]

Ontario's program expense is projected to be $0.4 billion higher than outlined in the *2015 Budget*, but consistent with the forecast laid out in the *2015 Ontario Economic Outlook and Fiscal Review*. This is primarily due to the $325 million down payment through the Green Investment Fund. [~Ch. 3B, Pg. 4]

The *2015 Budget* included a $1.0 billion reserve for 2015-16. In the *2016 Document*, the 2015-16 interim outlook maintains a $150 million reserve to protect the fiscal plan against any potential adverse changes that may occur before year-end. [~Ch. 3B. Pg. 5]

The government's fiscal targets are based on the best available economic and fiscal information at the time. They reflect a realistic and responsible plan to manage the Province's resources, while still protecting the vital services that Ontarians rely on. [Framework]

Q: What has changed since the 2015 Ontario Economic Outlook and Fiscal Review was released in November to improve the government's deficit projection by $1.8 billion?

A: Ontario's deficit for 2015-16 is projected to be $5.7 billion, an improvement of $2.8 billion compared with the *2015 Budget* forecast and $1.8 billion compared with the projection laid out in the *2015 Ontario Economic Outlook and Fiscal Review*. [Ch. 3B, Pg. 4]

Since the *2015 Ontario Economic Outlook and Fiscal Review*, total revenue is projected to be about $1 billion higher. Key revenue changes include:

- Higher Sales Tax revenues, largely reflecting an increase in Harmonized Sales Tax (HST) revenues due to Ontario's strong housing market, particularly housing completions in 2015, and one-time positive adjustments to estimates of Ontario's prior-year HST entitlements. [~Ch. 3B, Pg. 7]

- Higher Land Transfer Tax revenues due to the strong housing market in 2015.

- Stronger overall performance from Government Business Enterprises, which also accounts for estimated Hydro One Limited net income changes unrelated to the government's asset optimization strategy. [~Ch. 3B, Pg. 6]

Ontario's program expense is consistent with the forecast laid out in the *2015 Ontario Economic Outlook and Fiscal Review.* [~Ch. 3B, Pg. 4]

In the *2015 Ontario Economic Outlook and Fiscal Review*, the reserve for 2015-16 was $ 1.0 billion. The 2015-16 outlook in the *2016 Document* maintains a $150 million reserve to protect the fiscal plan against any potential adverse changes that may occur before year-end. [~Ch. 3B, Pg. 5]

Q: Why is the government maintaining a $150 million reserve for 2015-16?

A: As required by the *Fiscal Transparency and Accountability Act*, Ontario's fiscal plan incorporates prudence in the form of a reserve to protect the fiscal outlook against adverse changes in the Province's revenue and expense. [Ch. 3B. Pg. 35]

The fiscal plan outlined in the *2015 Budget* included a $1.0 billion reserve. The 2015-16 outlook in the *2016 Document* maintains a $150 million reserve to protect the fiscal plan against any potential adverse changes that may occur before year-end. [~Ch. 3B. Pg. 5]

Q: What was the Contingency fund used for in 2015-16?

A: The *2015 Budget* included contingency funds totalling $650 million in 2015-16 to help mitigate expense risks that may otherwise adversely affect Ontario's fiscal performance.

The contingency funds were used for a number of unexpected expenses. For example:

- $29.6 million to support emergency forest firefighting activities until the end of the 2015 fire season; [2015 FES, Pg. 104]
- $4.5 million to support a land claim settlement with Windy Point First Nation and a settlement to address a historical flooding claim with Rainy River First Nation; and [2015 FES, Pg. 104]
- $3.8 million to support the arrival and settlement of refugees and international relief efforts. [2015 FES, Pg. 104]

As a result of the government's success in managing growth in spending, total contingency funds were not needed for the fiscal year.

The 2015-16 interim expense projection maintains a total balance in the contingency funds of $15 million in recognition of expense changes that could materialize as the Public Accounts of Ontario for 2015-16 are finalized.

Q: How has the government lowered the deficit from $10.3 billion in 2014-15 to $5.7 billion in 2015-16? What programs were cut?

A: The improvement in the deficit between 2014-15 and 2015-16 at interim is driven mainly by increased revenue.

Between 2014-15 actuals and 2015-16 interim projections:

- Revenue increased by $8.0 billion, or 6.7% [from $118.5 billion in 2014-15 to $126.5 billion for 2015-16 at interim].
- Total expense increased by $3.2 billion, or 2.5% [from $128.9 billion in 2014-15 to $132.1 billion for 2015-16 at interim].

The year-over-year increase in revenue is mainly due to taxation revenue, which increased by $8.5 billion. The largest changes in taxation revenue were:

- A $3.1 billion increase to Electricity Payments-in-Lieu of Taxes – mainly related to the November 2015 Hydro One IPO;
- A $1.8 billion increase in Corporations Tax;

- A $1.8 billion increase in Sales Tax; and
- A $1.0 billion increase in Personal Income Tax.

Ontario's Medium-Term Fiscal Outlook and Path to Balance

Q: The federal government is committed to running a deficit to boost the economy. Why has the Ontario government decided to maintain a balanced budget in 2018-19?

A: The government is dedicated to a fiscally sound approach to managing the Province's finances, which will provide the foundation for the long-term well-being and prosperity of Ontarians. [Ch. 2A, Pg. 3]

Ontario is projecting it will meet its commitment to return to balance in 2017-18, the result of a plan to eliminate the deficit that was first laid out in the *2010 Budget*. Ontario is also projecting to remain balanced in 2018-19. [Ch. 2A. Pg. 5]

Through strong fiscal management, the Province is achieving its targets while continuing to invest in the economy, its people and a healthy, clean and prosperous low-carbon future. These investments will help enhance the public services that Ontarians rely on, as well as stimulate economic growth. [Ch. 2A, Pg. 3]

Building and revitalizing public infrastructure are critical to strengthening Ontario's economy and supporting jobs for today and tomorrow. The government previously committed to investing more than $134 billion in priority projects, such as roads, bridges, public transit, hospitals and schools, over the next 10 years. [News Release, Pg. 2]

The *2016 Document* builds on this plan, which started in 2014-15, by increasing investments by $26 billion over an additional two years, bringing total investments to $160 billion over 12 years. This is the largest investment in public infrastructure in the Province's history. Over this period, these investments would support over 110,000 jobs each year, on average. [News Release, Pg. 2&3]

Q: What is the government's plan to hold average annual growth in program expense to 1.9% going forward? Given that this is below inflation, what programs are being cut?

A: Program expense is projected to grow at an average annual rate of 1.9 per cent between 2014-15 and 2018-19. This reflects the government's commitment to invest in priority areas to enhance public services, support economic growth and a low-carbon economy, and create jobs. [Ch. 3B, Pg. 29]

A key pillar of Ontario's plan to eliminate the deficit is transforming government and responsibly managing spending. [~Ch. 2A, Pg. 3] The government is

achieving this through Program Review, Renewal and Transformation (PRRT) – a new approach to fiscal planning and expenditure management this is designed around four key principles:

- Examining how every government dollar is spent;
- Using evidence to inform better choices and improve outcomes;
- Looking across government to find the best way to deliver services; and
- Taking a multi-year approach to find opportunities to transform programs and achieve savings. [~Ch. 2B, Pg. 3]

PRRT is about more than saving money – it is a continuous planning approach focused on improving outcomes for government programs and services to ensure they are effective, efficient and sustainable. [Ch. 2B, Pg. 3]

Through cross-ministry horizontal collaboration, the government is taking focused action on major transformation and efficiency initiatives that will improve outcomes for Ontarians while helping to free up resources to invest in key priorities, such as health care and education. [Ch. 2B, Pg. 7]

The *2016 Budget* outlines progress on and expected outcomes of these major transformation and efficiency initiatives.

Q: Compared to the 2015 Budget, program spending is higher in each year. How is the government going to balance when spending is up?

A: Compared with the *2015 Budget*, program expense is projected to be $1.6 billion higher in 2016-17 and $4.2 billion higher in 2017-18. [Ch. 3B, Pg. 32]

These changes primarily reflect:

- Projected emissions reduction initiatives offset by cap-and-trade revenue;
- Small changes to Moving Ontario Forward projects;
- Adjustments for changes in demand and demographics across many programs; and
- Other investments in infrastructure. [Ch. 3B, Pg. 32]

These investments will help enhance the public services that Ontarians rely on, as well as stimulate economic growth to generate revenues on the path to balance. [~Ch. 2A, Pg. 3]

The government remains dedicated to a fiscally sound approach to managing the Province's finances, and to balancing the budget by 2017-18. The government is taking deliberate and responsible steps to achieve that goal. [~Ch. 2A, Pg. 3]

The government is projecting deficits of $5.7 billion in 2015-16 and $4.3 billion in 2016-17 – improvements of $2.8 billion and $0.5 billion compared with the 2015 Budget forecasts. [~Ch. 2A, Pg. 4, 5]

With the economy expected to continue to growth, and the Province's ongoing commitment to transform government programs and services, Ontario is projecting to return to balance in 2017-18 and remain balanced in 2018-19. Achieving balance will put net debt-to-GDP on a declining track. [~Ch. 2A, Pg. 5]

- Ontario's plan to eliminate the deficit includes: [2A, Pg. 3]
- Transforming government and responsibly managing spending; and
- Ensuring revenue integrity and addressing the underground economy.

Q: Why is the Contingency Fund being increased by $0.6 billion (to $1.2 billion) in 2016-17?

A: The combined operating and capital contingency funds for 2016-17 are $0.6 billion higher than the combined contingency funds included in the *2015 Budget* for the 2015-16 fiscal year.

These increased contingencies provide flexibility to allow the government to respond to changing needs and help mitigate expense risks that may otherwise adversely affect Ontario's fiscal performance. [Ch. 3B, Pg. 32]

Q: Compared to the 2015 Budget, program spending is up in every year. What is the government spending the extra money on?

A: Compared with the 2015 Budget, program expense is projected to be $1.6 billion higher in 2016–17 and $4.2 billion higher in 2017–18.

These changes primarily reflect:

- Projected emissions reduction initiatives offset by cap-and-trade revenue;
- Small changes to Moving Ontario Forward projects;
- Adjustments for changes in demand and demographics across many programs; and
- Other investments in infrastructure.

In addition, the 2016 Budget includes combined operating and capital contingency funds for 2016–17 that are $0.6 billion higher than the combined contingency funds included in the 2015 Budget for the 2015–16 fiscal year. These increased contingencies provide flexibility to allow the government to respond to changing needs and help mitigate expense risks that may otherwise adversely affect Ontario's fiscal performance. [Ch. 3B, Pg. 32]

CHAPTER IV: Together Towards a Stronger Ontario and a Stronger Canada

Q: The Ontario budget states that new federal funding has been included in the fiscal outlook based on 'prudent assumptions' about new transfers, but the federal government has not said how much Ontario will receive. What are these prudent assumptions and how much new federal money is counted in this budget?

A: The 2016 budget continues the government's plan to build Ontario up and deliver on its priority of growing the economy and supporting job creation. Ontario's plan includes investing in people's talents and skills, as well as making the largest investment in public infrastructure in the province's history.

Ontario and the federal government share common goals, common values and have the same priorities. The federal government has recognized that coordinated and collaborative action is needed to address the issues facing Ontarians and Canadians. And the Province is ready to work with a federal partner to build on Ontario's investments and welcomes federal support for Ontario's plans in areas that matter to Ontarians and Canadians.

The 2016 Ontario budget included some prudent assumptions about what new revenue Ontario could expect from the federal government based on what was in the federal government's election platform. Even the Financial Accountability Officer (FAO) indicated these assumptions were prudent.

For instance, the federal government has committed to $60 billion in new infrastructure funding over 10 years. The Province welcomes this new commitment to build on existing programs and provide both immediate infrastructure investments and longer-term funding to support shared infrastructure priorities, and is working with the federal government to secure its per capita share.

More information will become available in the coming months as the federal government rolls out the details of its various plans around infrastructure, climate change and skills training.

While in some cases, federal measures have already been included in Ontario's fiscal plan, the full extent of the impact of these measures must be analyzed when more details of federal proposals are released.

This is particularly true of infrastructure, where both levels of government are making significant fiscal commitments.

All other forecasts for Government of Canada transfers are based on existing federal-provincial funding arrangements.

Q: In the past, Ontario has stated that there is a structural vertical fiscal imbalance, where provinces and territories are in a worse fiscal position than the federal government. Is that still the case?

A: Provinces are the custodians of those public services that are not only of greatest importance to Canadians, but also those services that which are subject to the greatest increasing cost pressures, such as health care, education and social services.

- While provinces raise less own-source revenues than they require to cover expenditure responsibilities, the federal government has a greater ability to raise revenues relative to the services it delivers.

- Major think tanks and experts, such as the Conference Board of Canada and the Parliamentary Budget Officer, have shown that there are significant challenges if action is not taken to address this imbalance between resources and responsibilities, particularly as the population ages.

The important challenges facing the country cannot, and should not, be tackled by one order of government alone – in the Canadian system, the best solutions result from governments working together.

- Ontario is committed to continuing to be a collaborative partner in the federation, and Ontarians recognize the long-standing important role that the Province has historically played as a contributor to the federation.

- The Province is ready to work with a federal partner to build on Ontario's investments and create a modern and effective federation that will support sustainable public services, economic growth and job creation.

Q: Experts, and even former finance minister Joe Oliver, have stated that the large drop in oil revenue from oil-producing provinces could have impacts on the Equalization program, and that the entry of other provinces into the program could push Ontario out. Is this true?

A: Ontario is projected to receive Equalization payments over the medium-term. There are however, risks to Ontario's Equalization forecast over the medium and longer term if the low oil prices persist and continue to negatively impact oil-producing provinces or if there is a sustained improvement in Ontario's economic growth relative to other provinces.

Equalization is driven by a formula defined by the federal government.

- Ontario will continue to focus our efforts on taking action to support job creation and economic growth within the Province.

- Despite continued volatility in global financial and commodity markets, Ontario's economic growth is now outpacing national growth, and is expected to continue being among the strongest in Canada over the next two years.

Equalization funding is tied to growth in Canada-wide nominal GDP. To the extent that lower oil prices have lowered expectations for Canada-wide nominal GDP growth, Equalization entitlements among all receiving provinces could be affected.

Given certain features of the Equalization program, such as the weighted averages and lags used for calculating fiscal capacities, it takes some time for current economic conditions to be reflected in Equalization entitlements.

Q: The federal government has said that it wants to negotiate a health accord with provinces. What would Ontario be looking for from a new health accord?

A: In January 2016, federal, provincial and territorial ministers of health met in Vancouver to move ahead on shared health priorities. Ministers agreed to work individually and collectively on the following areas where efforts will yield the greatest impact:

- Enhancing the affordability, accessibility and appropriate use of prescription drugs;

- Improving community care, home care and mental health services to better meet the needs of patients closer to home; and

- Fostering innovation in health care services that improves both the quality of care and value for money.

Ontario welcomes federal commitments in these areas.

- Ontario welcomes the federal government's decision to join the provinces and territories pan-Canadian Pharmaceutical Alliance, which negotiates lower drug prices on behalf of public drug plans.

- The federal government also agreed, at the invitation of Ontario, to join a federal–provincial–territorial working group exploring ways to improve coverage and equitable access to appropriate prescription drugs for Canadians.

In the spirit of collaboration, all ministers agreed that new resources are needed to stimulate and support health care and drive transformation.

- The federal minister also confirmed the federal government's commitment to work collaboratively with provinces and territories towards a long-term funding arrangement for health care.

Ontario will continue to seek additional funding so that support for health care is adequate, responds to the needs of Ontarians and ensures the sustainability of the health care system over the long term.

Q: All health ministers have agreed that new resources for health are needed, and Ontario has called for the federal government to invest adequately in health care, yet the Canada Health Transfer is growing faster than Ontario health expenditure. How do you reconcile and explain these facts?

A: Since 2004-05, spending by the Ministry of Health and Long-Term Care has increased by more than $18 billion while Canada Health Transfer (CHT) revenues to Ontario have increased by $6.8 billion.

- Ontario's 2014-15 Public Accounts and the 2015 Budget showed that, in 2015-16, CHT revenue increased by $657 million over the previous year to approximately $13.1 billion.

- During the same period, health expenses increased by $758 million, to nearly $51 billion.

The CHT now represents roughly one-quarter of health care spending in Ontario.

- Currently, federal legislation is set to reduce CHT annual growth to the rate of nominal gross domestic product (GDP) growth.

- Without action, this change will take effect in 2017-18 and is expected to remove at minimum $21 billion from health care nationally – $8 billion in Ontario alone – by 2023-24. And with economic growth in Canada falling below earlier forecasts, the actual impact could be even greater.

A federal partner on health issues could help support investments in innovation and transformation of health care systems, in particular by building on Ontario's investments in home care and mental health.

- Ontario looks forward to ongoing collaboration in this critical area, and to working with the federal government to ensure federal support for health is adequate, responds to the needs of an aging population, and is sustainable over the long term.

Q: The 2016 budget shows that the federal government was under-spending in infrastructure compared to the provinces and municipalities in 2013. The current federal government has committed to significant new infrastructure funding. Is this enough to address the funding gap?

A: Ontario is making the largest investment in public infrastructure in the Province's history of more than $137 billion over the next 10 years, or about $160 billion over 12 years, starting in 2014–15.

- Over the next ten years, these planned investments would support over 110,000 jobs each year, on average.

Other provinces have announced similar multi-year capital plans, recognizing the importance of public infrastructure investments, and now the federal government has committed to make significant new investments.

The Province welcomes the new federal government's commitment to build on existing programs and provide both immediate infrastructure investments and longer-term funding to support shared infrastructure priorities, and will work with the federal government to ensure investments maximize the positive impact on the economy, both now and in the future.

Q: You have welcomed the federal commitment to increase infrastructure funding, but have stated Ontario has an interest in the design of new programs. What design does Ontario want for these new federal programs?

A: The Province welcomes the new federal government's commitment to build on existing programs and provide both immediate infrastructure investments and longer-term funding to support shared infrastructure priorities.

- As the design of these new federal investments is finalized, it is critical that the federal government work together with the provinces and territories to ensure that programs are predictable, support jobs and economic growth, and respect fiscal plans.

New federal infrastructure funding should give provinces and territories a greater ability to identify those projects that can be acted on to maximize the positive impact on the economy, both now and in the future.

- Ontario is working with the federal government to secure its per capita share to further invest in shovel-ready and shovel-worthy projects for transit and social and green infrastructure.

Q: Ontario has stated that it will work with the federal government and other provinces and territories on a pan-Canadian climate change framework. What does Ontario want from this framework, and how should any new action recognize what Ontario has already done, as the province has asked?

A: The Province continues to lead in fighting climate change. Ontario recently signed memorandums of understanding with Quebec and Manitoba, signalling the intention to link future cap-and-trade markets and committing to concerted climate change actions.

Ontario has already made significant contributions towards addressing this global challenge.

- The Province successfully phased out coal-fired electricity generation in 2014, the single largest greenhouse gas (GHG) reduction initiative of its kind in North America.

As the federal government continues to engage provinces and territories on national initiatives, it is critical that any action recognize the steps Ontario has already taken to reduce GHG emissions.

- In addition, Ontario is eager to share the benefit of its experiences to help inform the development of potential national initiatives based on its own experience of developing a broad provincial climate policy.

Q: Ontario has called for improvements to federal labour market programs, while the mandate letter to Minister Bill Morneau directs him to improve and modernize EI and the job training system. What specifically does the province want from the federal government on this issue?

A: Ontario looks forward to working with the federal government to ensure that new Labour Market Development (LMDA) funding and other training funding is able to best meet the needs of Ontario's labour market.

The Province welcomes the federal government's commitment to increase investments for employment and training services. These new investments will provide an opportunity to improve the federal labour market transfers that fall short of meeting the needs of Ontarians.

- Currently, the Employment Insurance system is not well aligned with the realities of Ontario's labour market. The majority of unemployed Ontarians do not qualify for employment insurance and so are not eligible for LMDA funded training.

- For LMDA funding to be most beneficial to Ontarians, a significant expansion of client eligibility is necessary.

- Ontario receives a share of LMDA funding that is well below its share of Canada's population and of Canada's unemployed. A proportionate and fair allocation of LMDAs and other skills funding would help Ontario better meet the needs of unemployed workers.

Q: Ontario's ongoing funding for municipalities will be $3.8 billion in 2016. Will this be sufficient to address the fiscal pressures facing Ontario's cities?

A: Our government has a strong record of supporting and working with municipalities.

- We will continue to fulfil its commitment to upload social assistance benefit program, as well as court security and prisoner transportation costs off the property tax base, as agreed with municipalities in 2008.

- The uploads will be fully implemented by 2018. This represents a significant milestone in the provincial-municipal relationship and will help put municipalities on a financially sustainable footing.

It is important to note that support to municipalities has increased significantly at a greater rate than support to other sectors.

- In 2016 alone, municipalities will benefit from over $3.8 billion in ongoing support through the OMPF, provincial uploads and other provincial initiatives – an increase of $2.7 billion above the support provided in 2003.

Provincial measures are helping to improve municipal fiscal sustainability, but the province must also consider its responsibility to protect key public services such as health, education and infrastructure.

Asset Optimization

Q: Is the Government using Asset Optimization Revenues to balance the Budget?

A: The government's plan to eliminate the deficit does not depend on the revenues from asset sales. Maximizing the value of these assets is part of the government's economic plan for Ontario.

In fact, the government is taking deliberate and responsible steps to achieve its goal of balancing the budget in 2017-18. Ontario's plan to eliminate the deficit is centred on transforming government and managing costs, and ensuring revenue integrity and addressing the underground economy.

Under the *Trillium Trust Act*, *2014,* all net revenue gains from the sale of designated assets are to be credited to the Trillium Trust to help fund further investments in public transit, transportation and other priority infrastructure as part of the Moving Ontario Forward initiatives.

The asset optimization target will help support the largest infrastructure investment in the province's history.

Cap and Trade:

Q: Will cap-and-trade impact the Province's bottom line?

A: The government is committed to dedicating all proceeds from the auctioning of allowances under the cap and trade program to fund GHG-emissions reduction initiatives – which would help Ontario meet its 2020 and 2030 emissions reduction targets.

The fiscal plan included in the 2016 Budget reflects this commitment.

The medium-term revenue outlook includes projected cap-and-trade proceeds from the auctioning of carbon allowanced beginning in 2017. The current estimate for proceeds is:

- $478 million in 2016-17; and
- Between $1.8 billion and $1.9 billion annually starting in 2017-18.

The government has already taken an important step towards investing cap-and-trade proceeds with the investment of $325 million in 2015-16 through a new Green Investment Fund.

For spending of cap and trade proceeds in 2016-17 and beyond, the government is still working out the details which is subject to the enabling legislative framework that's currently under review by the Legislature – any changes to the legislation could impact the potential areas of investment that are eligible for funding from cap and trade proceeds.

Moving forward, Ontario's approach to the investment of cap-and-trade proceeds will be both balanced and strategic, focusing on initiatives where the opportunity for emissions reduction and sustainable economic growth is greatest.

The fiscal plan reflects the most recent information available at the time of the Budget, including the impact of new initiatives announced as part of the Budget. The government recognizes that different factors could affect the Province's outlook for revenue and expense. That is why the fiscal plan incorporates prudence – to protect the fiscal outlook against these potential adverse changes.

- The fiscal plan incorporates a reserve, set at $1.0 billion in 2016-17, $1.1 billion in 2017-18 and $1.2 billion in 2018-19.

- It also includes contingency funds to help mitigate expense risks that may otherwise adversely affect Ontario's fiscal performance.

Q: Will the FAO be able to review all cap and trade spending plans before they are approved?

A: The FAO has a mandate to provide independent analysis to the Legislative Assembly about the state of the province's finances, including the Ontario Budget, as well as trends in the provincial and national economies.

At his discretion, the FAO could undertake an analysis and comment on any aspect of the province's finances, including the approved spending plans outlined in the Ontario Budget.

However, before these spending plans are incorporated in the Budget, Treasury Board and Cabinet must first review, evaluate and approve these proposals. These discussions are protected by subsection 12(1) of the *Freedom of Information and Protection of Privacy Act* (FIPPA) as they would reveal the substance of deliberations of the Executive Council or its committees and in accordance to Section 12(2) of the *Financial Accountability Officer Act* (FAOA) the government is prohibited from sharing this information with the FAO.

Financial Accountability Officer (FAO):

Q: Is the government restricting the ability of the FAO to access Cabinet Confidential documents?

A: No, the government is acting in accordance with the governing legislation that was approved by all three parties.

As per Section 12(2) of the *Financial Accountability Officer Act* (FAOA), a ministry or public entity is prohibited from disclosing to the Financial Accountability Officer (FAO) a record "described in subsection 12(1) of *the Freedom of Information and Protection of Privacy Act*" (FIPPA). Section 12(1) of FIPPA prohibits the release of any record that would reveal the substance of deliberations of the Executive Council or its committees.

In the end, the primary purpose of subsection 12(1) of FIPPA is to protect the deliberations or future deliberations of Cabinet. As a result, the section prohibits the disclosure of both existing records as well as any newly created records that would reveal those deliberations.

TAX POLICY DIVISION

Tuition and Education Tax Credits

Q: How many students will be affected when the tuition and education tax credits end?

A: About 1 million students are expected to report that they attended studies in 2015 that qualified them for tuition and education tax credits. About 800,000 attended full time studies, and about 200,000 attended part-time studies.

Q: Will everyone who loses their tax credits get back the money through the new student grant?

A: Currently, tax credits go to a larger group of students than those eligible for OSAP. The grant design has not been finalised. The government will announce details of the new program later this year.

Q: How much tax relief do the tax credits currently provide to Ontario students?

A: The tuition and education credits for studies in 2015 are expected to provide about $400, on average, in tax relief. This includes tax relief immediately received by students, tax relief received by their family members through transfers, and tax relief that would be received in future years through carry-forwards.

Q: What will happen to students' carry-forward pools?

A: Tax filers who are resident in Ontario on December 31, 2017 and have unused tuition and education tax credits will be able to claim their credits for tax relief in future tax years.

Ontario students would no longer be able to accumulate these credits after 2017. Similarly, tax filers who move to Ontario from other provinces after December 31, 2017, would no longer be able to claim their carry-forward amounts for Ontario credits.

Children's Activity Tax Credit

Q: Why are you ending a tax credit that helps parents enroll their children in extra-curricular activities?

A: The Children's Activity Tax credit largely goes to higher-income families who are less likely to need it to help pay for their children's activities. About half of 2015 claimants are estimated to have family incomes above $100,000.

Other existing programs support the objective of providing more opportunities for children and youth to stay healthy, such as the Healthy Kids Strategy.

Q: How much will Ontario save by no longer providing this credit?

A: Ontario would save about $15 million in 2016-17 and over $50 million per fiscal year thereafter.

Q: If you end this credit, what are impacted families left with?

A: Ontario will focus on developing other programs to encourage physical activity and healthy eating for Ontario's children. Several such programs are provided through the Healthy Kids Strategy.

Q: Would I be able to claim the credit for activity fees I paid for my child this year?

A: You would be able to claim the credit for eligible expenses paid for your child's activities in 2016. No provincial credit would be provided for similar expenses incurred for future years.

Q: How many parents will be affected when this credit ends and how much will they lose?

A: About 675,000 parents are expected to receive a CATC of about $70 on average for eligible activities in 2015.

Healthy Homes Renovation Tax Credit

Q: Why are you ending a tax credit that helps seniors live longer in their homes?

A: Ontario proposes to end the HHRTC because take-up of the credit is low and it largely benefits higher-income families. For 2015, only 10% of the credit is expected to go to claimants with net family incomes below $30,000.

Assistance with home modification costs is provided for people with mobility-related disabilities or impairments through other Ontario programs, including the Ontario Home and Vehicle Modification Program.

Q: How much will Ontario save by no longer providing this credit?

A: Ontario will save about $4 million in 2016-17 and about $15 million in the following years.

Q: What help would seniors with mobility issues get in the absence of this credit?

A: Assistance with home modification costs is provided for people with mobility-related disabilities or impairments through the Ontario Home and Vehicle Modification Program.

Many qualifying expenses for HHRTC are also eligible for the medical expense tax credit (METC). Examples of eligible renovation expenses include the purchase and installation of ramps; widening halls and doorways; and lowering of kitchen or bathroom cabinets.

In addition, the federal government recently announced the Home Accessibility Tax Credit. The credit is similar to the HHRTC and would also be available to all people with disabilities. The federal credit is a non-refundable tax credit of 15% of eligible expenses of up to $10,000.

Q: The federal government recently introduced the Home Accessibility Tax Credit, and B.C. just announced it would parallel the credit. Why have you taken the opposite approach by eliminating HHRTC?

A: The Program Review Renewal and Transformation process helped us determine that this program is not effectively meeting desired outcomes. The credit was made refundable so that even lower-income seniors could fully benefit. Despite this, the credit has had lower take-up than expected and only 10% of the credit goes to claimants with net family incomes below $30,000.

Ontario's Home and Vehicle Modification Program better meets people's needs by providing funds upfront to make home accessibility modifications. The program is application based and is available to low- and moderate-income people with disabilities.

Q: Would I be able to claim the credit for home accessibility renovations I paid for this year?

A: Yes, you would be able to claim the credit for eligible expenses you incurred in 2016 to make your home more accessible. For 2017 and future years, the credit would no longer be available.

Q: How many people will be affected when this credit ends and how much will they lose?

A: About 25,000 people are estimated to receive about $575 on average through the HHRTC for expenses paid in 2015. About 90% of claimants have net family incomes over $30,000.

Seniors who plan on making accessibility renovations in 2017 and subsequent years may be eligible for the federal Home Accessibility Tax Credit that provides up to $1,500 (or 15% of up to $10,000 of qualifying expenses).

Tax on Split Income

Q: Why did you introduce a 20.53% tax rate on income split with certain related minor children when Ontario's top rate is only 13.16%? Is this a sneaky tax increase?

A: The tax on split income is a measure designed to discourage splitting income with children for tax planning purposes. By paralleling the federal approach of imposing the top marginal tax rate on split income, Ontario is closing a tax planning loophole to ensure there is no incentive for this method of income splitting in Ontario.

Q: How can you claim that an increase in a tax rate is not designed to generate additional revenue?

A: The proposed fix is intended to ensure that the tax on split income measure is effective at discouraging income splitting with children. Raising revenue is not the objective of this change, and the revenue impact is estimated to be less than $1 million.

Tax-Free Savings Accounts

Q: How much do Tax-Free Savings Accounts (TFSAs) cost Ontario?

A: TFSAs are estimated to cost Ontario about $165 million in foregone revenue in 2015.

Q: The TFSA contribution limit was almost cut in half. Why doesn't this change generate more revenue for Ontario?

A: The foregone revenue from increasing the contribution limit to $10,000 was forecasted to be relatively small. This is because as the total contribution room increases, fewer Ontarians are able to make use of the larger TFSA limit.

Ontario has not received any information on how people have responded to the policy changes announced in 2015. Cautious revenue estimates were made until these data become available.

Reviewing Personal Income Tax

Q: Does the review to simplify the Personal Income Tax calculation mean that you're going to increase taxes?

A: The review will examine ways to simplify Ontario's Personal Income Tax calculation so that Ontarians can better understand their effective tax rates. The review is not intended to make recommendations about the overall amount of Personal Income Tax revenue collected.

Q: What is the scope of the review? Are you going to conduct consultations?

A: The government is designing a plan for evaluating Personal Income Tax and looking for ways to simplify the calculation. I cannot comment at this point whether formal consultations will form part of that plan.

Q: How does the complexity of Ontario's Personal Income Tax calculation compare to other provinces?

A: Ontario is the only province that has a surtax, health premium, and low-income tax reduction.

Prince Edward Island is the only other province with a surtax. Quebec is the only other province with a health premium in its PIT calculation. Quebec's premium will be eliminated for low-income taxpayers and reduced for others in 2017 and fully eliminated in 2018.

Five other provinces have low-income tax reductions. Ontario's low-income tax reduction is based on an intermediary calculation of individual tax owed, which is not easily understood by tax filers.

Q: When will Ontario be announcing the results of the review?

A: A detailed plan for conducting the evaluation is still being developed. I cannot comment at this point about the timing of its completion or any subsequent announcements that may be made.

Research and Development (R&D) Tax Credits

Q: You've twice announced that you're reviewing R&D tax credits. Why are you now cutting them without consultation?

A: The Ontario Government reviewed options to restructure Ontario's R&D tax credits. The R&D tax credits, like all of the business support programs, were reviewed as part of the Program Review, Renewal and Transformation (PRRT) process which is focused on improving outcomes for government programs to ensure they are efficient, effective, and sustainable.

As part of the PRRT process, the government proposes to reduce the level of support provided through the Ontario Research and Development Tax Credit (ORDTC) and the Ontario Innovation Tax Credit (OITC).

R&D remains a key priority for the government, which is why the government will reinvest savings from the proposed tax credit changes into targeted investments across key sectors of Ontario's economy.

Through the Business Growth Initiative, the province will continue to examine ways to encourage R&D investment in Ontario, increase the commercialization of research, and better support export activity.

Q: Why are you cutting R&D Tax Credits (i.e. OITC and ORDTC) when you say you want to support innovation?

A: Research and Development remains a key priority for the government. That is why the government is reinvesting savings from the proposed R&D tax credit changes into new targeted investments across key sectors of Ontario's economy.

The government is investing $35 million over five years towards establishing the Advanced Manufacturing Consortium; $20 million over three years to partner with Colleges to tackle industry challenges through innovation projects; and $50 million over five years in world-leading research at the Perimeter Institute.

Through the province's Business Growth Initiative, the government will continue to examine ways to encourage R&D investment in Ontario, increase the commercialization of research and better support export activity.

Q: Who will be affected by the change to the R&D Tax Credits (OITC and ORDTC)?

A: The proposed changes would affect all businesses that invest in R&D in Ontario and claim the OITC or the ORDTC. Smaller firms who can claim both the OITC and the ORDTC on the same R&D expenditure will be affected by both rate reductions.

Q: When will the change to the R&D Tax Credits take place? What is the transition period? Why wasn't more time provided?

A: These changes would be effective for eligible R&D expenditures incurred in taxation years that end on or after June 1, 2016. A transition period from Budget day until June 1, 2016 is being proposed to ensure that businesses have some lead time to adjust to these changes. The rate reductions would be prorated for taxation years straddling June 1, 2016.

Q: Won't this reduce jobs and business investment in innovation and high-tech sectors?

A: R&D remains a key priority of the government. That is why the government will reinvest savings from the proposed tax credit changes into new targeted investments across key sectors of Ontario's economy, including: $35 million over five years towards establishing the Advanced Manufacturing Consortium; $20 million over three years to partner with colleges to tackle industry challenges through innovation projects; and $50 million over five years in world-leading research at the Perimeter Institute.

Through the Business Growth Initiative, the province will continue to examine ways to encourage R&D investment in Ontario, increase the commercialization of research, and better support export activity.

Q: Will Ontario still be competitive with other provinces/jurisdictions?

A: Smaller businesses performing R&D in Ontario would continue to be able to claim both the 8 per cent refundable OITC and the 3.5 per cent non-refundable ORDTC on their R&D investments. With the proposed rate reductions, Ontario tax support for small businesses would remain competitive with other provinces. Larger businesses would be able to claim the 3.5 per cent non-refundable ORDTC.

R&D remains a key priority of the government. The government will reinvest savings from the proposed tax credit changes into new targeted investments across key sectors of Ontario's economy. This includes $35 million over five years towards establishing the Advanced Manufacturing Consortium; $20 million over three years to partner with colleges to tackle industry challenges through innovation projects; and $50 million over five years in world-leading research at the Perimeter Institute.

The government is also committed to lowering the costs of doing business by maintaining a competitive tax environment. Ontario's general corporate income tax (CIT) rate of 11.5 per cent is the second lowest in Canada. Also, Ontario's combined federal-provincial general CIT rate of 26.5 per cent is lower than the comparable rate in any of the U.S. states.

Q: If business R&D has been declining in Ontario, why is the government reducing support? Shouldn't the government be increasing support?

A: The R&D tax credits, like all of the business support programs, were reviewed as part of the Program Review, Renewal and Transformation (PRRT) process which is focused on improving outcomes for government programs to ensure they are efficient, effective, and sustainable.

As part of the PRRT process, the government proposes to reduce the level of support provided through the ORDTC and the OITC.

R&D remains a key priority of the government. That is why the government will reinvest savings from the proposed tax credit changes, including: $35 million over five years towards establishing the Advanced Manufacturing Consortium; $20 million over three years to partner with colleges to tackle industry challenges through innovation projects; and $50 million over five years in world-leading research at the Perimeter Institute.

Q: How much will the reductions to the R&D tax credits save the Province?

A: The proposed R&D tax credit rate reductions are estimated to save the province approximately $35 million in 2016-17, $65 million in 2017-18 and $65 million in 2018-19.

Q: How are the savings from this change being used? Will the savings help to balance the Budget or be redirected into other programs to incent innovation in the Province?

A: Research and Development remains a key priority of the government. That is why the government will reinvest savings from the proposed tax credit changes, including: $35 million over five years towards establishing the Advanced Manufacturing Consortium; $20 million over three years to partner with colleges to tackle industry challenges through innovation projects; and $50 million over five years in world-leading research at the Perimeter Institute.

Through the Business Growth Initiative, the province will continue to examine ways to encourage R&D investment in Ontario, increase the commercialization of research, and better support export activity.

Q: What was the rationale for lowering the amount of the credit?

A: The Ontario Government reviewed options to restructure Ontario's R&D tax credits. The R&D tax credits, like all of the business support programs, were reviewed as part of the Program Review, Renewal and Transformation (PRRT) process which is focused on improving outcomes for government programs to ensure they are efficient, effective, and sustainable.

As part of the PRRT process, the government proposes to reduce the level of support provided through the Ontario Research and Development Tax Credit (ORDTC) and the Ontario Innovation Tax Credit (OITC).

Despite total Ontario R&D support of approximately $400 million delivered annually through the tax system, in addition to federal programs, business spending on R&D in Ontario has declined over the last decade and continues to lag the United States as a share of the economy.

R&D remains a key priority for the government, which is why the government will reinvest savings from the proposed tax credit changes into targeted investments across key sectors of Ontario's economy.

The government is investing $35 million over five years towards establishing the Advanced Manufacturing Consortium; $20 million over three years to partner with Colleges to tackle industry challenges through innovation projects; and $50 million over five years in world-leading research at the Perimeter Institute.

Through the Business Growth Initiative, the province will continue to examine ways to encourage R&D investment in Ontario, increase the commercialization of research, and better support export activity.

Maintaining a Competitive Tax Environment

Q: How competitive are Ontario's business taxes with other international jurisdictions?

A: Ontario's combined federal-provincial general Corporate Income Tax (CIT) rate of 26.5 per cent is lower than the comparable rate in any of the U.S. States. Ontario's combined rate is also lower than the Great Lakes States average (39.7 per cent) and the average CIT rate of G7 and G20 member countries (30.5 per cent and 28.2 per cent respectively).

Q: How competitive are Ontario's business taxes with other provinces?

A: Ontario has the second lowest general CIT rate of 11.5 per cent when being compared with Canada's federal and provincial general CIT rates. British Columbia has the lowest general CIT rate of 11 per cent and Nova Scotia and Prince Edward Island have the highest general CIT rate of 16 per cent.

CIT Rates (Chapter 1A)

Q: Why is the government not raising corporate taxes in this Budget?

A: Since 2009 Ontario has taken significant steps to improve business tax competitiveness to make the province a more attractive location for business investment which is necessary to support long-term economic growth and job creation.

Ontario's general Corporate Income Tax (CIT) rate was reduced in stages from 14 per cent in 2009 to the current 11.5 per cent, making it the second lowest in Canada. We now have a combined federal-provincial general CIT rate of 26.5 per cent, which is lower than the comparable CIT rate in any of the U.S. States.

We have also introduced several measures to better target Ontario's business tax credits to ensure that they are effective and fiscally sustainable.

Taking a balanced approach will help to ensure that Ontario remains a competitive location for business investment and that support provided to Ontario businesses contributes to economic growth and job creation, and promotes investment in key industries.

Business Supports Program Review Panel Report

Q: Why didn't Ontario release the Business Supports Program Review Panel Report?

A: The report was used for internal government decision making and played a valuable role in informing the government's review of existing business support programs.

Land Transfer Tax (LTT) "De Minimis" Exemption for Partnerships: Clarifying Amendments Made on February 18, 2016 for Certain Dispositions

Q. What is the "de minimis" partnership exemption?

A: In Ontario, Land Transfer Tax (LTT) applies to transfers of land, both registered and unregistered, with few exceptions. A person acquiring a beneficial interest in land by becoming a beneficiary of a trust or a partner in a partnership is required to file a return and pay tax within 30 days after the date of the transaction, if an instrument is not registered on title.

Ontario Regulation 70/91, made under the Land Transfer Tax Act, provides a "de minimis" partnership exemption from the LTT for small changes in partnerships (up to 5 per cent). The five per cent threshold is measured by a change (increase) in the entitlement to profits in the partnership during the fiscal year of the partnership in which the disposition(s) was (were) made.

The exemption is available only to a person who becomes a partner in a partnership that holds land, or to a person who is an existing partner whose partnership interest increases (provided other requirements are met).

Q. Why have retroactive amendments to the Land Transfer Tax (LTT) "de minimis" partnership exemption been made?

A: The amendments made on February 18, 2016 clarify the application of the Land Transfer Tax (LTT) to certain dispositions occurring as part of complex real estate structures, such as those involving real estate investment trusts (REITs).

These amendments are intended to further ensure the integrity of the LTT system.

Some taxpayers have attempted to apply the "de minimis" partnership exemption incorrectly, avoiding LTT on large transactions occurring within complex real estate structures, such as those involving real estate investment trusts (REITs).

The amendments will help maintain a level playing field for investors in real estate vehicles such as REITs that have paid tax in similar circumstances.

As they are clarifying, the amendments are applicable on or after July 19, 1989 (the date on which the Exemption became effective).

However, on March 24, 2016 the ministry announced its administrative approach to facilitate compliance. As part of that approach, for dispositions of a beneficial interest in land through one or more partnerships, the Minister will assess and/or reassess only dispositions that occurred on or after February 18, 2012. This is a balanced approach to administration that recognizes the practicalities involved in complying with taxpayer obligations at this time.

TAX AND BENEFITS ADMINISTRATION

Supporting the Sharing Economy

Q: How is Ontario supporting the sharing economy?

A: The government has taken action to begin supporting the development of a robust sharing economy, including announcing the creation of the Sharing Economy Advisory Committee, with representation from key ministries, to oversee the development and coordination of Ontario's approach to the sharing economy.

Further, in the 2016 Budget, the government announced a series of new measures, including:

- Working to ensure the province's auto insurance system can help provide peace of mind to those offering and using new types of transportation services through the sharing economy;
- Commencing consultation with industry and communities in spring 2016 on options to facilitate new and innovative choices for intercity passenger travel. The government will consult on a new regulatory regime to ensure safe and sustainable intercity passenger travel services;
- Piloting a program with Airbnb, a key sharing economy platform, to inform Ontarians who engage in home sharing about their consumer rights and responsibilities, and raise awareness of tax obligations; and
- Committing to consultations led by the Sharing Economy Advisory Committee, and focussed on the sharing economy, to help determine the best approach for Ontario moving forward.

Q: Why is the government supporting the sharing economy?

A: The sharing economy has significant potential to drive economic growth, productivity and innovation.

According to an estimate by PricewaterhouseCoopers, revenues from five of the key sharing economy sectors (accommodation, transportation, finance, services and labour, and music/video streaming) are projected to grow from USD $15 billion today to USD $335 billion by 2025.

Further, according to research done by the University of California, Berkley and the Wharton School of the University of Pennsylvania, the benefits of the sharing economy extend to cost savings for consumers, flexible employment opportunities,

greater supply and choice of services across sectors, and increased access to capital for small start-ups.

Q: Why aren't you doing something about Uber?

A: In the 2016 Budget, the government committed to a consultation to determine the best approach for Ontario moving forward. Ride-sharing and home-sharing will undoubtedly be a key topic of discussion.

Adapting Ontario's economy to accommodate new business models requires careful consideration and consultations with key stakeholders, including industry, municipalities, the public and other interested parties. The government looks forward to having more to say on this in the coming months.

Q: What is the Sharing Economy Advisory Committee?

A: The Sharing Economy Advisory Committee is an internal committee of Assistant Deputy Ministers who have been tasked with developing an integrated approach to the sharing economy for Ontario.

Key committee objectives include fostering innovation while seizing the opportunities presented by this emerging sector, and helping to ensure a level playing field as well as safety for consumers and workers.

Q: When will we see an Integrated Strategy to Address the Sharing Economy?

A: The government, led by the Sharing Economy Advisory Committee, is developing an integrated strategy to address the sharing economy. However, the government must consult to become better informed, and to gain insights into the best approach for Ontario moving forward. Following these consultations, the government will finalize its integrated strategy.

Auto Insurance – Sharing Economy

Q: Aviva has already announced it is selling auto insurance coverage for ride-sharing. Why do you need to take further action?

A: Ontario's competitive market for auto insurance is beginning to respond and adapt to the sharing economy. And our province's flexible regulatory framework for insurance is letting that innovation happen. But there continues to be a significant insurance coverage gap for thousands of Ontarians driving and using ride-sharing services every day.

Closing that gap is a critical government priority, and the government and the Financial Services Commission of Ontario (FSCO) are exploring how our flexible regulatory system can quickly approve new insurance products.

A flexible response to new products will help give drivers and passengers peace of mind while the government works with stakeholders to develop the necessary legislative and regulatory changes to fully integrate the sharing economy into the auto insurance system.

Q: What would your flexible approach involve? What specifically are you exploring with FSCO?

A: The government has made clear to the public, and to FSCO, that protection of consumers and drivers involved in ride-sharing is an objective that needs to be achieved as quickly as possible.

Our flexible approach involves working with FSCO to explore how Ontario's insurance regulatory system can quickly approve new insurance products. This could involve interim approvals of new products.

The government is also working with FSCO and stakeholders in the auto insurance system to develop the legislative and regulatory changes necessary to fully integrate the sharing economy into Ontario's auto insurance system.

This flexible approach ensures Ontario's auto insurance system can help provide peace of mind to those involved in ride-sharing.

Towards that end, the government and FSCO are exploring how Ontario's flexible insurance regulatory system can quickly approve new insurance products.

Q: What do you mean by interim approvals?

A: The idea of interim approvals is just an example of what the government and FSCO are exploring. Everything is on the table to make sure Ontario's auto insurance system can help provide peace of mind to those involved in ride-sharing.

As a government, we are making it clear that the insurance coverage gap for those engaged in ride-sharing in Ontario needs to be addressed as quickly as possible. This is a government priority.

One insurance product has already been approved; this is a good first step. And we need more companies to step forward with other new products to provide more insurance options.

And the government, working with FSCO, is exploring ways to approve more new insurance products, including approving new products on an interim basis, while we make the necessary changes to fully integrate the sharing economy into Ontario's auto insurance system.

Q: Aren't you playing into Uber's hands by approving insurance products that don't comply with the law?

A: When it comes to auto insurance and ride-sharing, our top concern is for the protection of drivers and their passengers. New auto insurance products have to be filed with FSCO for review and approval, and we are confident in FSCO's internal review processes.

One insurance product has already been approved by FSCO, and other proposals are currently being reviewed. The government and FSCO are exploring how Ontario's flexible insurance regulatory system can quickly approve new insurance products. This work isn't being done to satisfy any single company – it is being done to help ensure Ontario drivers and consumers are protected.

Q: Uber has launched a public campaign to pressure Alberta's government? Is this announcement pre-empting similar criticism by Uber in Ontario?

A: This isn't about what's going on in other jurisdictions. When it comes to auto insurance and ride-sharing, our top concern is for the protection of drivers and their passengers.

Ontario's auto insurance system has already demonstrated flexibility and responsiveness to ride-sharing. One insurance product has already been approved by FSCO, and other proposals are currently being reviewed. The government and FSCO are exploring how Ontario's flexible system can quickly approve new insurance products to help give drivers and consumers peace of mind.

This work isn't being done to satisfy a single company – it is being done to help ensure Ontario drivers and consumers are protected.

Q: When can we expect FSCO to announce interim approval of these other auto insurance products?

A: FSCO is an independent regulator. It would be inappropriate for the government to comment on FSCO's internal processes.

What the government has made clear to the public, and to what FSCO is aware of, is that protection of consumers and drivers involved in ride-sharing is an objective that needs to be achieved as quickly as possible.

Towards that end, the government and FSCO are exploring how Ontario's flexible insurance regulatory system can quickly approve new insurance products.

Q: How long do you need to make the long-term changes you're talking about?

A: The government and FSCO are exploring how Ontario's flexible insurance regulatory system can quickly approve new insurance products to help protect consumers and drivers engaged in ride-sharing activity.

In parallel with that work, the government is also working with the regulator and the insurance industry to develop the legislative and regulatory changes necessary to fully integrate the sharing economy into Ontario's auto insurance system. These changes will be comprehensive and complex, and will require careful consideration over the coming months.

Q: What about other issues with ride-sharing services like Uber? What's the government doing to ensure these vehicles are safe and drivers are paying their fair share of taxes?

A: To help realize the benefits of the sharing economy, the government is developing an integrated strategy to promote a more level playing field and tax fairness, foster innovation and support new business, ensure a coordinated government approach is taken and protect workers, consumers and communities.

Adapting Ontario's economy to accommodate new business models requires careful consideration and consultations with key stakeholders, including industry, municipalities, the public and other interested parties. The government's Sharing Economy Advisory Committee will launch a more targeted consultation in the coming months.

Q: Have you been working with the City of Toronto on this?

A: Ontario's strategy for the sharing economy includes taking a coordinated government approach. Ministry of Finance and FSCO staff has engaged other jurisdictions and levels of government, including the City of Toronto, to build relationships and share information.

The focus of our government's early action is on ensuring Ontario's auto insurance system can help provide peace of mind to Ontarians engaged in ride-sharing activity. Other jurisdictions and levels of governments may have different priorities, and we will continue to work with them as we develop more long-term changes to fully integrate the sharing economy into Ontario's auto insurance system.

The Province is also looking at other aspects of the sharing economy. And in the coming months we will launch a consultation to help determine the best approach for Ontario, which will include engagement with municipalities like the City of Toronto.

Underground Economy and Other Revenue Integrity Measures

Q: What is Ontario doing to address the underground economy?

A: The government has made progress in fighting underground economic activities through:

- Ongoing enhanced compliance-focused measures, including those that address the underground economy and aggressive tax planning, the Province has generated over $930 million to date - a $330 million increase over what was reported in the 2015 Budget;
- Consultations with high-risk sectors, with a view to partnering with industry and gaining insight into how best to tackle the underground economy;
- Requiring corporations to demonstrate federal and provincial tax compliance before receiving government contracts. Since February 2014, the government has verified compliance with tax obligations for more than 2,200 contracts; and
- Amending the Taxation Act, 2007, to make the sale, use or distribution of electronic sales suppression devices an offence.
- Taking specific actions in response to Parliamentary Assistant Laura Albanese's consultation with the residential construction industry, including:
    - Extending the residential roofing pilot project for an additional two years and examining opportunities to expand its scope beyond roofing to other areas of residential construction;
    - Launching a public awareness campaign to educate the public on the risks and potential liabilities associated with participation in the underground economy;
    - Dispatching specialized audit teams to focus on sectors that are at high risk of underground economy activity, in partnership with the Canada Revenue Agency;
    - Proposing legislation that would enhance information sharing, enable greater enforcement, and introduce additional penalties for participation in the underground economy; and
    - Helping home owners hire legitimate contractors when taking advantage of government-funded rebates for enhancing the energy efficiency of their homes.

Q: Why isn't Ontario doing more to address the underground economy?

A: Since 2013–14, the government has made progress in fighting underground economic activities:

- Through ongoing enhanced compliance-focused measures, including those that address the underground economy, the Province has generated over $ 930 million to date - a $ 330 million increase over what was reported in the 2015 Budget;
- The government has held consultations with high-risk sectors, with a view to partnering with industry and gaining insight into how best to tackle the underground economy;
- Corporations are required to demonstrate federal and provincial tax compliance before receiving government contracts. Since February 2014, the government has verified compliance with tax obligations for more than 2,200 contracts; and
- The Taxation Act, 2007, was amended to make the sale, use or distribution of electronic sales suppression devices an offence.

Q: What new initiatives is the government announcing in the Budget?

A: In the 2016 Budget, the government committed to taking specific actions in response to Parliamentary Assistant Laura Albanese's recent consultation with the residential construction industry, including:

- Extending the residential roofing pilot project for an additional two years and examining opportunities to expand its scope beyond roofing to other areas of residential construction;
- Launching a public awareness campaign to educate the public on the risks and potential liabilities associated with participation in the underground economy;
- Dispatching specialized audit teams to focus on sectors that are at high risk of underground economy activity, in partnership with the Canada Revenue Agency;
- Proposing legislation that would enhance information sharing, enable greater enforcement, and introduce additional penalties for participation in the underground economy; and
- Helping home owners hire legitimate contractors when taking advantage of government-funded rebates for enhancing the energy efficiency of their homes.

Q: Can you explain the $ 930 million figure for enhanced compliance initiatives? Where does it come from?

A: Enhanced compliance initiatives consist of:

- The government's agreement with the federal government to address non-compliance with federally administered provincial taxes which has generated over $630M since 2013-14; and
- Ontario's own enhanced compliance measures focused on provincially administered taxes, such as the Employer Health Tax, which have generated over $ 300M since 2013-14.
- When combined, these compliance measures have generated over $ 930 million for Ontario since 2013-14.

Q: What do you mean by "the government was able to work with non-compliant businesses to help them satisfy their tax obligations before starting work"?

A: The government requires businesses to be compliant with their tax obligations before awarding a government contract. If a business is not compliant, the government generally allows for a short grace period to become complaint. This gives the business an opportunity to work with either the Canada Revenue Agency and/or the provincial government to meet their tax obligations before starting work.

Q: Why has the government introduced more red tape for estate representatives?

A: Following a 2011 Budget commitment to enhance EAT compliance, the Ministry of Finance (MOF) is collecting information needed to perform audits and verify that correct amounts of the tax have been paid. Effective January 1, 2015, estate representatives are required to submit an Estate Information Return with MOF to substantiate the total estate value provided to the courts. This new requirement does not alter the amount of tax payable or how the tax is calculated. An Estate Information Return is only required where an Estate Certificate has been applied for and issued by the courts.

Q: Why are Bad Debt Expenses increasing from approximately $46.7Million (2014-2015 Actuals) to $90Million (2015-2016 interim actuals)?

A: In recent years, the Ministry of Finance has uncovered several large scale tax evasion schemes while conducting tobacco tax audits. As a result of these audits, there have been a number of large tobacco assessments which have proven to be problematic from a collectability standpoint. The increase of $58M above the 2015-16 Printed Estimates was primarily a result of these large tobacco tax assessments.

Q: Why is the Ministry of Finance seeking an increase of $13.2Million in its Bad Debt Expense allocation in 2016-17 (from $32Million to $45.2Million)?

A: The Ministry of Finance has uncovered several large scale tax evasion schemes while conducting tobacco tax audits. As a result of these audits, there have been a number of large tobacco assessments which have proven to be problematic from a collectability standpoint. It is anticipated that these assessments will continue in the 2016-17 year. These assessments will be uncollectible and as a result the ministry has requested a $13.2M internal ministry re-allocation to increase the Bad Debt Expense allocation in the 2016-17 estimates.

Q: Has the government seen an increase in the Estate Administration Tax collected since January 1, 2015?

A: Tackling tax avoidance remains a key strategy as part of a robust and transparent administration process. The requirement to file an Estate Information Return (EIR) came into effect on January 1, 2015, for all applications made for an Estate Certificate on or after this date. Therefore, the first EIRs did not become due until the spring of 2015. In addition to verifying and auditing selected files, MOF continues to respond to written enquiries, telephone calls, and provide outreach activities to estate representatives and the legal profession to raise their awareness and understanding in meeting their obligations with respect to the Estate Administration Tax Act.

Q: What is the government doing to address Aggressive International Tax Planning?

A: All corporations should pay their fair share of taxes. That is why Ontario, in conjunction with the federal government, has taken substantive actions to help better address aggressive corporate tax avoidance. For example, under a fee-for-service agreement with the Canada Revenue Agency, Ontario invests in audit activities targeting aggressive international tax planning and the underground economy.

With Ontario's significant investment the Canada Revenue Agency was able to increase overall audit coverage rates, further reinforcing the integrity of the tax system. The government's agreement with the federal government to address non-compliance with federally administered provincial taxes through ongoing enhanced compliance-focused measures, including those that address the underground economy and aggressive tax planning has generated over $630M since 2013-14.

Contraband Tobacco

Q: Smoking rates are going down over time. Are further measures targeting contraband tobacco really necessary?

A: Increasing tobacco taxes has been key to Ontario's approach to encouraging smoking cessation and prevention, particularly amongst youth. The Smoke-Free Ontario Strategy has contributed to reduced tobacco use and lowered health risks for all Ontarians.

However, further measures to target contraband tobacco are needed. The presence of contraband tobacco in Ontario undermines provincial health objectives, results in less tobacco tax revenue for critical public services and compromises public safety through links with organized crime.

Q: What are the benefits to the taxpayer of tackling contraband tobacco?

A: The presence of contraband tobacco in Ontario undermines provincial health objectives, results in less tobacco tax revenue for critical public services and compromises public safety through links with organized crime.

Easy access to a large supply of low-cost contraband tobacco products prevents tobacco taxes from being as effective as they should be, both as a health policy tool and a source of revenue to provide for critical public services that benefit all Ontarians.

Q: What is the size of the contraband tobacco market in Ontario?

A: By virtue of being illegal activity, it is difficult to precisely measure the size of the contraband tobacco market in Ontario. However, a variety of reports typically estimate the size of the contraband market to be between 20% and 40% of the Ontario tobacco market.

In 2008, the Auditor General estimated that Ontario loses up to $500 million in tobacco tax revenues annually due to contraband tobacco.

Q: What is the government doing about contraband tobacco in Ontario?

A: Addressing contraband tobacco is a priority for the government. Enforcing Ontario's tobacco tax laws complements the Smoke-Free Ontario Strategy.

Since 2008, MOF inspections have resulted in penalties of more than $37 million assessed against retailers under the TTA. In addition, more than 252 million contraband cigarettes, 4.3 million untaxed cigars, and 169 million grams of untaxed fine-cut or other tobacco products have been seized by MOF since 2008. Addressing contraband tobacco requires a balance of partnerships and enforcement, and the government has taken some important steps forward in this regard.

Effective January 1, 2015, the Ministry assumed oversight of raw leaf tobacco in Ontario. Implementation of raw leaf tobacco oversight helps impede the flow of raw leaf tobacco to contraband tobacco product manufacturers.

Building on the government's existing raw leaf oversight regime, the 2016 Budget indicated a regulation prescribing labelling and other requirements for bales and packages of raw leaf tobacco will be filed in advance of the 2016 raw leaf tobacco harvest. The government will continue to monitor the results of its raw leaf tobacco oversight and may propose future enhancements and amendments under the *Tobacco Tax Act*.

The government is also enhancing partnerships with key enforcement agencies by providing resources to the Ontario Provincial Police to address the link between contraband tobacco and organized crime.

The government is partnering with a number of public health units to undertake cross-designation pilot projects where inspection officers will be cross-designated under both the *Tobacco Tax Act* and *Smoke-Free Ontario Act*. These projects will allow inspectors to identify and seize contraband tobacco and flavoured tobacco products during retail inspections.

In addition, the province continues to work towards building a strong, sustainable partnership with First Nation communities. The government continues to support two tobacco pilot projects with the Chippewas of the Thames First Nation and the Mohawk Council of Akwesasne, with the goal of reaching agreements on self-regulation of tobacco on-reserve, and revenue-sharing.

Q: Why is the government amending its forfeiture provisions for raw leaf tobacco under the Tobacco Tax Act?

A: The province is proposing updates to the *Tobacco Tax Act* to align forfeiture powers for raw leaf tobacco with other forfeiture powers on products seized as evidence of a contravention of the Act. Currently, when raw leaf tobacco is seized by search warrant, there is no provision for forfeiture to the Minister of Finance upon conviction. Raw leaf tobacco seized by search warrant as evidence of an offence must be returned to the person from whom it was seized upon completion of the court matter, even if the person is convicted.

The proposed amendments will provide consistency with existing *Tobacco Tax Act* forfeiture provisions, and will increase the consequence of illegal activity to include the loss of the raw leaf tobacco.

Q: What does the Ministry of Finance mean by "asset forfeiture"?

A: The Ministry of Finance will examine the possibility of introducing amendments to the *Tobacco Tax Act* to allow for the forfeiture of assets used in or derived from the

commission of a tobacco-related offence. This could include things like vehicles and cash.

Expanding asset forfeiture provisions within the TTA would create an added deterrent against dealing in contraband tobacco.

Q: Why is the government taking a heavy-handed enforcement approach on tobacco rather than engaging and partnering with First Nations?

A: Ontario's tobacco strategy consists of a balanced approach of partnerships and compliance activities to address the issue of contraband tobacco.

The Province remains committed to an ongoing dialogue with First Nations communities and leaders on tobacco, including discussions on the self-regulation of tobacco on-reserve and revenue sharing.

Q: What is the Contraband Tobacco Enforcement Team?

A: Building on commitments in the 2015 Budget, the province has worked with the OPP to establish of a dedicated contraband tobacco enforcement team to focus on addressing the link between contraband tobacco and organized crime.

Tobacco smuggling and production is seen as a lucrative opportunity for organized crime. Links have been made between organized crime groups involved in tobacco smuggling with other more serious illegal activity such as drug and weapons trafficking.

The enforcement team provides intelligence and coordinates enforcement to address organized crime and sophisticated contraband tobacco networks in Ontario. It also shares information across enforcement and revenue agencies provincially, nationally and internationally.

Q: Why was the Contraband Tobacco Enforcement Team established?

A: The presence of contraband tobacco in Ontario is a persistent and complex challenge that undermines provincial health objectives under the Smoke-Free Ontario Strategy, results in less tobacco tax revenue for critical public services and compromises public safety.

The RCMP estimates that there are 175 organized crime groups involved in contraband tobacco in Canada. Disrupting the links between organized crime and contraband tobacco is a key component of tobacco enforcement.

Tobacco smuggling and production is seen as a lucrative opportunity for organized crime. Links have been made between organized crime groups involved in tobacco smuggling with other more serious illegal activity such as drug and weapons trafficking.

Q: How will this Contraband Tobacco Enforcement Team impact First Nation communities?

A: Ontario recognizes and respects the ceremonial value and economic importance of tobacco to First Nations, and remains committed to continuing a dialogue with First Nation communities on tobacco. This includes discussions on self-regulation of tobacco on-reserve and revenue sharing.

The new Contraband Tobacco Enforcement Team was created by the Ontario Provincial Police and is located within their Organized Crime Enforcement Bureau.

The team has been established to allow for the prioritization of investigations with respect to organized crime groups in Ontario involved in illegal activities and contraband tobacco. The team gathers intelligence and coordinates enforcement interventions for the purpose of addressing organized crime and contraband tobacco networks in Ontario. CTET leverages the OPP's relationship with municipal police and First Nations police services in gathering intelligence and for enforcement interventions, as permitted by law.

In addition, the team works with Ministry of Finance tobacco tax enforcement staff by sharing information and collaborating on contraband tobacco enforcement investigations.

Q: What is the purpose of cross-designating tobacco inspections officials under the Smoke-Free Ontario Act, and the Tobacco Tax Act?

A:. The government will partner with up to four municipal public health units across Ontario to undertake cross-designation pilot projects where inspection officers will be cross-designated under both the Tobacco Tax Act and Smoke-Free Ontario Act.

The pilot projects will enable both MOF Inspectors and Tobacco Enforcement Officers to seize tobacco that is found to be in contravention of select provisions of *Tobacco Tax Act* and/or *Smoke-Free Ontario Act* during their regular course of inspections. As a result, inspectors will be able to identify and seize contraband tobacco and flavoured tobacco products during routine retail inspections.

Moving Towards Community Regulation

Q: How is the government working with First Nation communities to address contraband tobacco?

A: The government is committed to continuing a dialogue with First Nations to identify mutually-beneficial solutions to tobacco.

The government continues to support two tobacco pilot projects with the Chippewas of the Thames First Nation and the Mohawk Council of Akwesasne,

with the goal of reaching agreements on self-regulation of tobacco on-reserve, and revenue-sharing.

The province will also be working with the Anishinabek Nation, representing 39 First Nation communities across Ontario, to develop an agreement related to tobacco and gasoline that could generate revenue for Anishinabek Nation communities from on-reserve sales of tobacco and gas.

In addition, the Province also launched a review of the First Nations Cigarette Allocation System in April 2015, led by two independent co-facilitators. The facilitators engaged First Nation communities and leadership, as well as key stakeholders, to gather input and perspectives, and provide options to the government on ways to modernize and improve the system.

The facilitators provided a Final Report to the government in February 2016.

The government is carefully considering the options outlined in the Final Report, including the convening of a Tobacco Forum to discuss the outcomes of the allocation system review with First Nation communities and options for moving forward on community-based regulation of tobacco on-reserve.

Q: What does "modernizing" the allocation system mean?

A: The government is examining a variety of options and seeking perspectives on how to modernize and improve the current allocation system. Modernization could range from updating the current formula and approaches used to allocate cigarettes among First Nations, identifying alternative approaches to allocating cigarettes to tax-exempt First Nation consumers, or implementing a new model for tobacco sales on-reserve.

Q: What were the outcomes of the formal review?

A: The facilitators provided a final report to the Ministry of Finance in February 2016 detailing what was heard during the formal review, and outlining potential options for the government’s consideration. MOF is currently reviewing the report and is carefully considering each of the recommendations.

This includes the possibility of convening a tobacco forum with representatives from First Nations communities to present options and discuss potential broad-based solutions to tobacco, as recommended by the facilitators.

Q: Why is the government working with the Anishinabek Nation?

A: Building on the work from the two First Nation tobacco pilot projects and the First Nations allocation review, there is an opportunity for the province and the political territorial organization of the Anishinabek Nation to broaden the dialogue and engage more First Nation communities on developing an agreement regarding tobacco and gasoline sales on reserve.

The Anishinabek Nation is a political territorial organization that represents 39 First Nations across Ontario. The Anishinabek Nation has four regional areas Southwest, Southeast, Lake Huron and Northern Superior and each region is represented by a Regional Grand Chief.

Q: What does "modernizing" the Ontario Gas Card Program mean?

A: The government is committed to seeking First Nations' advice on modernizing the Ontario Gas Card Program.

The objective of the engagement process, beginning in spring 2016, is to provide First Nation gasoline retailers and consumers with the opportunity to share their experiences related to the Ontario Gas Card Program.

The information gathered through the engagement process will inform the development of recommendations to improve the efficiency of the current tax refund delivery model and the integrity of the Ontario Gas Card Program.

Ontario's Tobacco Strategy

Q: What changes are being made to the tobacco tax rate?

A: To support the Smoke-Free Ontario Strategy, effective February 26, 2016 at 12:01 a.m., Ontario's tobacco tax increased from 13.975 cents to 15.475 cents per cigarette and per gram of tobacco product other than cigars.

This change is equivalent to a $3 increase per carton of 200 cigarettes.

This increase will help support smoking cessation efforts under the strategy, leading towards meeting the Province's goal of having the lowest smoking rate in Canada.

In addition, moving forward, to ensure tobacco tax rates retain their real value over time, annual tobacco tax rate increases based on inflation will occur over each of the next five years, beginning in 2017.

Q: Why was the tobacco tax rate increased?

A Tobacco taxes are a proven method of supporting smoking cessation and prevention efforts.

Increasing the tobacco tax rate in 2016 will help support smoking cessation efforts under the Smoke Free Ontario Strategy, leading towards meeting the Province's goal of having the lowest smoking rate in Canada. Public health research indicates that tobacco taxes are a key measure in helping to reduce smoking rates, particularly amongst youth.

Moving forward, by raising tobacco taxes on an annual basis for five years beginning in 2017, the Province will ensure that, at a minimum, the tobacco tax rate remains consistent on a real dollar basis over time.

Q: How much incremental revenue does the government expect the tobacco tax increases announced in the 2016 Budget to generate?

A: The government projects that the tobacco tax rate increases will generate up to $100 million over each of the next three years.

Q: Why is the government clarifying the obligations of retailers after a tax rate change?

A: The government has introduced legislation that will amend the Tobacco Tax Act to allow retailers to charge the lower tax rate on products in their inventory before the increase and that provision would be retroactive to Budget day.

This relieves retailers of the obligation to remit additional tax on existing inventories, in accordance with existing practice.

Q: Did the government consider a larger increase to the tobacco tax rate?

A: There is a risk that significant increases to the tobacco tax rate may result in increased consumption of contraband tobacco. Several reports have estimated that approximately 20-40% of the tobacco market is illegal.

The presence of low-cost contraband tobacco undermines provincial health objectives, results in less tobacco tax revenue for the province, and compromises public safety through links with organized crime.

The government will monitor the impact of the increase on the contraband market to ensure the stated objectives are met. Addressing contraband tobacco is a priority for the government.

Q: The government announced the tobacco tax rate would increase on an annual basis at an amount based on the rate of inflation over five years, beginning in 2017. What assumptions about the rate of inflation over the next five years has the government made?

A: As announced in the 2016 Ontario Budget, the Ontario tax rate on cigarettes and other tobacco products (except cigars) is increasing by an amount based on inflation, each year for five years, beginning on June 1, 2017.

Annual 2% increases are currently scheduled to reflect the Bank of Canada's 2% inflation-control target.

This means that the tobacco tax rate on a carton of 200 cigarettes is currently scheduled to increase by 62 cents, 63 cents, 64.4 cents, 65.8 cents and 67 cents on June 1st of 2017, 2018, 2019, 2020 and 2021 respectively.

The scheduled tobacco tax rate increases may be adjusted due to changes in the actual rate of inflation, as measured by the CPI.

Q: Why is the government raising tobacco taxes, given the high prevalence of contraband tobacco in Ontario?

A: Tobacco taxes are a proven method of discouraging tobacco use.

This tobacco tax increase announced in the 2016 Budget will help support smoking prevention and cessation efforts under the Smoke-Free Ontario Strategy, leading towards meeting the Province's goal of having the lowest smoking rate in Canada.

Ontario's tobacco strategy consists of a balanced approach of partnerships and compliance activities to address the issue of contraband tobacco. Ontario's Smoke-Free Strategy is central to the government's approach to tobacco.

The province continues to make progress on addressing contraband tobacco. The presence of contraband tobacco in Ontario undermines provincial health objectives, results in less tobacco tax revenue for critical public services and compromises public safety through links with organized crime.

Benefits Transformation

Q: How will Benefits Transformation impact Ontarians?

A: Benefits Transformation is about improving the way people access benefits by implementing initiatives such as single-window online access for multiple programs and making program administration of some common functions more efficient. Online access would be provided while maintaining phone and walk-in presence for clients.

Q: Which benefit programs will have integrated administration?

A: Specific programs have not been identified at this stage. The government is exploring a variety of opportunities to improve how benefit programs are delivered. Benefits transformation initiatives will be designed and implemented in alignment with other government priorities.

Q: Under proposed legislation, what information would be shared and with whom? How are you modernizing privacy frameworks?

A: Proposed framework legislation would authorize the collection, use and disclosure of personal information for the purpose of administering some or all functions of prescribed benefit programs. The specific information shared and parties authorized would need to be prescribed by regulation once opportunities for integrated administration are identified and confirmed.

The Ministry of Finance has engaged the Office of the Information and Privacy Commissioner (OIPC) in the development of legislation and will continue to do so as regulations and specific initiatives are developed. Consultations with key stakeholders will also take place in order to identify and mitigate issues related to confidentiality.

Q: What is the government doing to ensure personal information is protected?

A: Privacy rules would be included as part of the new legislation, and appropriate controls and procedures would be built into initiatives to ensure personal information is protected. Any supporting technology systems would include controls to ensure appropriate authorities are assigned for information sharing.

The Ministry of Finance has engaged the Office of the Information and Privacy Commissioner (OIPC) in the development of legislation and will continue to do so as regulations and specific initiatives are developed. Consultations with key stakeholders will also take place in order to identify and mitigate issues related to confidentiality.

Q: How will transformation of benefits delivery impact service delivery partners and provincial staff?

A: At this stage, multiple ministries are collaborating to explore benefits transformation initiatives including integrated delivery of common administrative functions. The impact of benefits transformation activities will depend upon specific opportunities pursued. As opportunities are explored, engagement with Bargaining Agents and service delivery partners will take place on the approach to transformation and to identify any specific impacts of initiatives.

ORPP ADMINISTRATION CORPORATION

Q: Why is the government providing the ORPP AC with a loan?

A: The ORPP AC is the independent, arms-length organization that will set-up and administer the ORPP.

The government is providing the ORPP AC with a repayable loan for essential work required to develop administrative systems, recruit a skilled team and launch the employer verification and enrolment process in 2017 and begin collection of contributions on January 1, 2018.

Ongoing costs to administer the ORPP would come from the plan, not from government revenues.

The ORPP AC is expected to repay the loan, with interest, from plan assets within a 10-year period.

Q: How much money is being loaned?

A: The government is providing flexibility for the ORPP AC to draw down based on operational requirements, up to $400M over three fiscal years. Costs would cover set-up expenses, including organizational start-up, development of tools/systems required for the verification and enrolment process, and the build/launch of administrative systems.

The government will monitor spending of the ORPP AC, while giving the Corporation the independence and flexibility it requires to administer the ORPP.

Accountability is at the core of the ORPP. Through a strong accountability and transparency framework, the independent Board of Directors and ORPP executives will be fully accountable to the plan's members. This framework has been benchmarked against the best practices of other leading independent pension plans.

Accountability measures include:

- An annual report tabled in the Legislature;
- Annual meetings for members;
- A publicly available Memorandum of Understanding; and,
- External auditing and strong financial controls.

Q: In the 2016/17 estimates, it shows a loan amount of up to $240M. How is that money going to be used?

A: This year (2016) is a critical period for the ORPP AC, with the launch of the employer verification/enrolment process and the building of systems needed to begin collecting contributions on January 1, 2018.

If pressed for more information: Further questions regarding ORPP AC expenditures can be directed towards the Administration Corporation.

Q: The ORPP AC has already received a loan $20M in 2015/16. How has that money been used?

A: The money has been used to fund essential start-up requirements for the ORPP AC. This includes contracts for expert services required to administer and operationalize the ORPP (e.g. organizational start-up, legal services, technical experts) and initial recruitment of staff.

If pressed for more information: Further questions regarding ORPP AC expenditures can be directed towards the Administration Corporation.

Q: Does the government expect to be repaid?

A: Yes, the repayable loan is structured on commercial terms. This means that it includes repayment obligations, with interest, over an established period of time.

Q: How long does the ORPP AC have to repay the loan? Will it be charged interest?

A: The ORPP AC has an obligation to repay the loan, principal and interest, within ten years.

This repayment period will help ensure that payments do not negatively impact plan sustainability. It is intended that the ORPP AC repay the loan from investment returns to make sure that contributions and benefits are reserved in trust for members.

Q: Why doesn't the ORPP AC get a traditional bank loan?

A: The repayable loan is structured on commercial terms. This was the appropriate vehicle given the ORPP AC would not have assets until contributions begin in 2018.

Q: Will there be any public reporting or accountability to how the loan is spent?

A: The loan to the ORPP AC is structured on commercial terms and will be repaid with interest. Actual expenditures from the loan will be reported through public accounts.

In addition, the ORPP AC is required to develop and publicly release an annual report, which would include financial statements of the Corporation. The report will also include compensation for the top five executive positions.

Accountability is at the core of the ORPP. Through a strong accountability and transparency framework, the independent Board of Directors and ORPP executives will be fully accountable to the plan's members and to government. This framework has been benchmarked against the best practices of other leading independent pension plans.

Q: What types of costs will the loan be used to pay?

A: The repayable loan will be used to fund set-up expenses, including organizational start-up, development of tools/systems required for the verification and enrolment process (e.g. software licencing, hardware and technical writing), and the build and initial operation of administrative systems.

The loan will not be used to fund ongoing plan operations or investments.

Q: What happens to the loan if there is a CPP enhancement and the ORPP does not go ahead?

A: The government has been clear about the need to enhance retirement security for current and future generations of Ontarians.

Given the complexity of both options, the government is pursing ORPP and an enhanced CPP simultaneously to ensure it achieves its objective of improving retirement security.

If pressed for more specifics: It is premature to discuss the impact of CPP enhancement on the loan.

Q: How much money has the ORPP AC spent on the services of consultants?

A: The ORPP AC has obtained expert services required to administer and operationalize the ORPP (e.g. organizational start-up, legal services, technical experts).

The government and the ORPP AC are committed to leveraging the expertise and experience of the industry and the financial sector to deliver a simple, reliable and cost-effective plan.

If pressed for more specifics: The ORPP AC procures goods and services based on a policy that was benchmarked against government and other leading pension plans. Further questions regarding ORPP AC expenditures can be directed towards the Administration Corporation.

Q: Is this money being spent on high salaries? What is the compensation framework for the ORPP AC?

A: The independent initial board of directors of the ORPP AC is responsible for establishing the Corporation's compensation framework.

Salaries would be benchmarked to other leading pension plans in Ontario to ensure that the ORPP AC is able to recruit essential talent.

The compensation of the top five executives, including the CEO, will be reported on an annual basis in the ORPP AC's Annual Report. This is in line with the best practices of Ontario's leading pension plans.

If pressed for more information: The ORPP AC has hired external advisors to assist with the compensation framework. Further question regarding this framework can be directed towards the Administration Corporation.

Q: How does the loan relate to administration costs of the ORPP?

A: ORPP will be one of the largest pension plans in the Canada. At maturity, the ORPP is expected to have over 4 million members, involve nearly 450,000 employers and collect more than $6 billion annually.

The government is committed to a simple, reliable and cost effective administration. This includes leveraging the strong, existing capabilities found in Ontario's pension and financial services sector and benchmarking ORPP administration costs against Canada's leading pension organizations.

We are continuing to have discussions with federal government departments on the possibility of cooperation in registration and administering the plan. This is in addition to the exploring and assessing different options, including leveraging infrastructure that exists within the Government of Ontario and exploring third-party private sector delivery.

Q: Why does the Ministry's spending for ORPP decrease by $12.5M in 2016-17?

A: The Ministry, through Ontario Retirement Pension Plan Implementation Secretariat, continues to lead the implementation of the Ontario Retirement Pension Plan. However, now that the ORPP AC has been established, it is expected that certain costs and responsibilities related to the operational work will transfer to the new organization, thus decreasing funding requirements for the Secretariat.

Q: Why is the ORPP IS still in place now that the ORPP AC has been established?

A: The Ontario Retirement Pension Plan Implementation Secretariat leads the policy, governance and legislative functions to establish the ORPP and supports the set-up of the ORPP AC.

Specific responsibilities include:

- Finalizing the plan design for the ORPP, including conducting analysis, developing policy options, preparing the plan text, developing a funding policy, conducting actuarial analysis, and drafting legislation.
- Leading discussions between governments with respect to ORPP implementation, including registration of the plan, data sharing agreement, and exploration of options for administration cooperation.
- Establishing and supporting the ORPP AC to ensure successful launch and implementation.
- Providing strategic communications and stakeholder engagement advice and services to support ORPP development and implementation.
- Developing an oversight function related to the ORPP, including monitoring progress of deliverables and achievements.

ORPP IMPLEMENTATION SECRETARIAT

TOP QAs

Q: Why is the government providing the ORPP AC with a loan?

A: The ORPP AC is the independent, arms-length organization that will set-up and administer the ORPP.

The government is providing the ORPP AC with a repayable loan for essential work required to develop administrative systems, recruit a skilled team and launch the employer verification and enrolment process in 2017 and begin collection of contributions on January 1, 2018.

Ongoing costs to administer the ORPP would come from the plan, not from government revenues.

The ORPP AC is expected to repay the loan, with interest, from plan assets within a 10-year period.

Q: Who pays for the ORPP start-up costs if the CPP is enhanced and the plan is never implemented?

A: The government's intention is that all eligible start-up costs it incurs would be recovered from the plan. If the ORPP is not implemented that won't be possible.

If those circumstances arise, however, it means that there is an agreement on a CPP enhancement that will address the retirement security challenges facing Ontarians. That has always been the government's objective.

By continuing with preparations for the ORPP, the government is ensuring that, if no consensus on CPP enhancement is reached, retirement security can be strengthened in Ontario through the ORPP.

Q: How much has been spent on the ORPP Implementation Secretariat (ORPP IS) to date?

A: The Ministry is currently in the process of closing its books. The final expenditures for the ORPP IS will be included in the government's Public Accounts for 2015-16. The current $20M projection addresses costs associated with staffing and other related costs for the ORPP IS.

With regards to ODOE, the majority of expenses incurred by ORPP IS can be attributed to the costs of services provided by third party vendors, mainly in areas where expertise external to government were required, such as actuarial analysis, legal advice and expert technical advice for the pension administration.

Loan Agreement with the ORPP Administration Corporation

Q: How much money is being loaned?

A: The government is providing flexibility for the ORPP AC to draw down based on operational requirements, up to $400M over three fiscal years. Costs would cover set-up expenses, including organizational start-up, development of tools/systems required for the verification and enrolment process, and the build/launch of administrative systems.

The government will monitor spending of the ORPP AC, while giving the Corporation the independence and flexibility it requires to administer the ORPP.

Accountability is at the core of the ORPP. Through a strong accountability and transparency framework, the independent Board of Directors and ORPP executives will be fully accountable to the plan's members. This framework has been benchmarked against the best practices of other leading independent pension plans.

Accountability measures include:

- An annual report tabled in the Legislature;
- Annual meetings for members;
- A publicly available Memorandum of Understanding; and,
- External auditing and strong financial controls.

Q: In the 2016/17 estimates, it shows a loan amount of up to $240M. How is that money going to be used?

A: This year (2016) is a critical period for the ORPP AC, with the launch of the employer verification/enrolment process and the building of systems needed to begin collecting contributions on January 1, 2018.

If pressed for more information: Further questions regarding ORPP AC expenditures can be directed towards the Administration Corporation.

Q: The ORPP AC has already received a loan $20M in 2015/16. How has that money been used?

A: The money has been used to fund essential start-up requirements for the ORPP AC. This includes contracts for expert services required to administer and operationalize the ORPP (e.g. organizational start-up, legal services, technical experts) and initial recruitment of staff.

If pressed for more information: Further questions regarding ORPP AC expenditures can be directed towards the Administration Corporation.

Q: Is this money being spent on high salaries? What is the compensation framework for the ORPP AC?

A: The independent initial board of directors of the ORPP AC is responsible for establishing the Corporation's compensation framework.

Salaries would be benchmarked to other leading pension plans in Ontario to ensure that the ORPP AC is able to recruit essential talent.

The compensation of the top five executives, including the CEO, will be reported on an annual basis in the ORPP AC's Annual Report. This is in line with the best practices of Ontario's leading pension plans.

If pressed for more information: The ORPP AC has hired external advisors to assist with the compensation framework. Further question regarding this framework can be directed towards the Administration Corporation.

Q: Does the government expect to be repaid?

A: Yes, the repayable loan is structured on commercial terms. This means that it includes repayment obligations, with interest, over an established period of time.

Q: How long does the ORPP AC have to repay the loan? Will it be charged interest?

A: The ORPP AC has an obligation to repay the loan, principal and interest, within ten years.

This repayment period will help ensure that payments do not negatively impact plan sustainability. It is intended that the ORPP AC repay the loan from investment returns to make sure that contributions and benefits are reserved in trust for members.

Q: Why doesn't the ORPP AC get a traditional bank loan?

A: The repayable loan is structured on commercial terms. This was the appropriate vehicle given the ORPP AC would not have assets until contributions begin in 2018.

Q: Will there be any public reporting or accountability to how the loan is spent?

A: The loan to the ORPP AC is structured on commercial terms and will be repaid with interest. Actual expenditures from the loan will be reported through public accounts.

In addition, the ORPP AC is required to develop and publicly release an annual report, which would include financial statements of the Corporation. The report will also include compensation for the top five executive positions.

Accountability is at the core of the ORPP. Through a strong accountability and transparency framework, the independent Board of Directors and ORPP executives will be fully accountable to the plan's members and to government. This framework has been benchmarked against the best practices of other leading independent pension plans.

Q: What types of costs will the loan be used to pay?

A: The repayable loan will be used to fund set-up expenses, including organizational start-up, development of tools/systems required for the verification and enrolment process (e.g. software licencing, hardware and technical writing), and the build and initial operation of administrative systems.

The loan will not be used to fund ongoing plan operations or investments.

Q: How much money has the ORPP AC spent on the services of consultants?

A: The ORPP AC has obtained expert services required to administer and operationalize the ORPP (e.g. organizational start-up, legal services, technical experts).

The government and the ORPP AC are committed to leveraging the expertise and experience of the industry and the financial sector to deliver a simple, reliable and cost-effective plan.

If pressed for more specifics: The ORPP AC procures goods and services based on a policy that was benchmarked against government and other leading pension plans. Further questions regarding ORPP AC expenditures can be directed towards the Administration Corporation.

Q: Is this money being spent on high salaries? What is the compensation framework for the ORPP AC?

A: The independent initial board of directors of the ORPP AC is responsible for establishing the Corporation's compensation framework.

Salaries would be benchmarked to other leading pension plans in Ontario to ensure that the ORPP AC is able to recruit essential talent.

The compensation of the top five executives, including the CEO, will be reported on an annual basis in the ORPP AC's Annual Report. This is in line with the best practices of Ontario's leading pension plans.

If pressed for more information: The ORPP AC has hired external advisors to assist with the compensation framework. Further question regarding this framework can be directed towards the Administration Corporation.

Q: How does the loan relate to administration costs of the ORPP?

A: ORPP will be one of the largest pension plans in the Canada. At maturity, the ORPP is expected to have over 4 million members, involve nearly 450,000 employers and collect more than $6 billion annually.

The government is committed to a simple, reliable and cost effective administration. This includes leveraging the strong, existing capabilities found in Ontario's pension and financial services sector and benchmarking ORPP administration costs against Canada's leading pension organizations.

We are continuing to have discussions with federal government departments on the possibility of cooperation in registration and administering the plan. This is in addition to the exploring and assessing different options, including leveraging infrastructure that exists within the Government of Ontario and exploring third-party private sector delivery.

Q: Why does the Ministry's spending for ORPP decrease by $12.5M in 2016-17?

A: The Ministry, through Ontario Retirement Pension Plan Implementation Secretariat, continues to lead the implementation of the ORPP. However, now that the Ontario Retirement Pension Plan Administration Corporation has been established, it is expected that the operational work will transfer to the new organization, thus decreasing funding requirements for the Secretariat.

Q: Why is the ORPP IS still in place now that the ORPP AC has been established?

A: The Ontario Retirement Pension Plan Implementation Secretariat leads the policy, governance and legislative functions to establish the ORPP and supports the set-up of the ORPP AC.

Specific responsibilities include:

- Finalizing the plan design for the ORPP, including conducting analysis, developing policy options, preparing the plan text, developing a funding policy, conducting actuarial analysis, and drafting legislation.
- Leading discussions between governments with respect to ORPP implementation, including registration of the plan, data sharing agreement, and exploration of options for administration cooperation.
- Establishing and supporting the ORPP AC to ensure successful launch and implementation.

- Providing strategic communications and stakeholder engagement advice and services to support ORPP development and implementation.

- Developing an oversight function related to the ORPP, including monitoring progress of deliverables and achievements.

Q: What is the ORPP Administration Corporation?

A: The ORPP Administration Corporation is the independent, arm's length organization that will administer the ORPP. Its responsibilities include:

- Enrolling eligible employers and employees;

- Collecting, investing and holding contributions in trust for members;

- Administering benefits; and

- Communicating with employers, members and other beneficiaries.

Q: What are the accountability mechanisms of the ORPP Administration Corporation? To whom does it report?

A: Accountability is at the core of the governance structure of the ORPP Administration Corporation. Through a strong accountability and transparency framework, the independent board of directors and ORPP executives will be fully accountable to the plan's members. This framework mirrors the best practices of other leading independent pension plans.

Accountability measures include:

- A Memorandum of Understanding being developed between the ORPP Administration Corporation and the Minister of Finance

- An annual report;

- An annual meeting for beneficiaries;

- External auditing and strong financial controls; and

- A review of the governance framework established by legislation within 10 years.

Federal Collaboration

Q: On one hand you say you are launching the ORPP in 2017, but then indicate that the collection of contributions won't start until 2018…which is it?

A: The ORPP implementation timeline has being modified. Employer verification will begin later in 2016 with enrollment of employers beginning in January 2017. This process will support a seamless transition to the collection of contributions starting on January 1, 2018 for large and medium size employers.

All other implementation dates remain the same. Contribution rates for employers without a registered pension plan will still be phased in as previously announced.

Many employer groups have called on the government to delay the launch of the plan to ensure a successful and smooth implementation, and allow a window to discuss a national solution. The government has modified the ORPP timelines to reflect this advice.

The government is on track to ensure that all eligible Ontario workers are enrolled in a comparable workplace plan or the ORPP by 2020.

ORPP Phase-In and Contribution Schedule

(rates reflect contributions to be made by each employer and employee)

Employer registration in the ORPP would begin on January 1, 2017.

Type of Employer	Jan 1, 2018	Jan 1, 2019	Jan 1, 2020	Jan 1, 2021
Wave 1: large employers without registered workplace pension plans	**0.8%**	**1.6%**	**1.9%**	**1.9%**
Wave 2: medium employers without registered workplace pension plans	**0.8%**	**1.6%**	**1.9%**	**1.9%**
Wave 3: small employers without registered workplace pension plans	**0%**	**0.8%**	**1.6%**	**1.9%**
Wave 4: employers with registered pension plans that either do not meet the comparability test or do not cover all classes of employees	**0%**	**0%**	**1.9%**	**1.9%**

Q: Is the federal government committing to administer your plan if CPP talks fail?

A: Ontario is pleased with the cooperation and partnership it has received from the new federal government. They have agreed to facilitate ORPP plan registration and to enter into a data sharing agreement to support implementation. The federal government has also committed to working with Ontario to ensure effective plan administration.

Ontario has always stated that it is committed to a simple, reliable and cost effective administration of the ORPP. Partnering with the federal government on plan registration, data sharing, and exploring models of plan administration supports this objective.

However, running a modern pension plan is not simple and so other options for administration are being explored including within the broader public sector and in partnership with private sector vendors. In fact, it may make sense to work with several partners to support effective administration of the plan.

Q: Would Ontario support a CPP enhancement that is a universal program to all employers and employees?

A: In designing the ORPP it was clear that, even though two thirds of Ontarians are not members of a workplace pension plan, many employers do provide generous workplace pension plans.

With this in mind, the government developed the framework of a comparable plan – so that employers that provide a generous workplace pension plan would not be required to contribute to the ORPP. This is a central part of the ORPP and reflects the objective of introducing the ORPP in a manner that doesn't adversely impact generous workplace pension plan arrangements that are already working well for employees and employers.

The Province's extensive consultations in developing the ORPP have helped to inform its view that a CPP enhancement must be timely and provide a level of adequacy and targeted coverage that is consistent with the ORPP. Ontario is bringing this insight to the national discussion.

The province is also listening to the federal government and the other provinces and territories, and reflecting on their perspective on a CPP enhancement.

Q: If the government is going to proceed with measures such as introducing legislation on ORPP plan design, are you even serious about discussing the CPP?

A: The government has always said a national solution to enhancing retirement security is the best way forward. It has also said that it is imperative to address the challenge of retirement security ***now***. It is a critical issue for the future well-being of Ontarians and the economy that cannot be delayed.

Minister Morneau has outlined an aggressive timeline to enhance the CPP, including achieving a consensus to move forward by June and a national agreement by the end of 2016. The province looks forward to these discussions.

Legislation

Q: What progress has the government made on the ORPP to date?

A: The government is on track to meet its objective that, by 2020, all eligible Ontario workers are covered by a comparable workplace plan or the ORPP.

The ORPP Administration Corporation is now established and the process to register the plan with the Canada Revenue Agency is well underway. Final elements of plan design will be enshrined in legislation this spring. 6.

Employer verification will begin later in 2016 with enrollment of employers beginning in January 2017. This process will support a seamless transition to the collection of contributions starting on January 1, 2018 for large and medium size employers. The additional time is also enabling national discussion on a CPP enhancement to proceed.

Q: Why introduce legislation now? Didn't you commit to ongoing national discussions on a CPP enhancement?

[Legislation tracking to be introduced April 14, 2016]

The government has been clear that about the need to enhance retirement security today. The problem cannot be left to some ambiguous future date. It is critical for the well-being of Ontarians and the economy that we take action now.

Ontario moved to create the ORPP after the previous federal government refused to discuss enhancing the CPP. Today, the circumstances have changed and Ontario is playing a leading role in discussing a national solution.

However, to successfully launch the ORPP plan preparations must continue alongside federal discussions to ensure that, no matter the outcome, Ontario will retire with enhanced security.

Moving forward with legislation will ensure that employers have the time they need to prepare for the ORPP.

Q: What will be included in upcoming legislation?

A: The government intends to introduce further legislation on the ORPP in the spring of 2016. The legislation will set out the comprehensive requirements of the ORPP, plan sustainability and the compliance and enforcement regime.

Further legislation in 2016 would establish an Office of the Chief Actuary to provide independent actuarial advice and valuations of the ORPP to government and the ORPP Administration Corporation.

Plan Sustainability

Q: What accountability mechanisms exist to ensure that plan members' benefits will be there for them when they retire?

A: Through extensive actuarial modelling, the government has designed the plan to be sustainable over the long term. To ensure continued plan sustainability, a formal funding policy would be established that provides for appropriate adjustments to be made to plan benefits and/or contributions.

Background

Q: What is the Ontario Retirement Pension Plan (ORPP)?

A: The ORPP is a mandatory provincial pension plan that is scheduled to launch on January 1, 2017, with employer and employee collections beginning in 2018.

The ORPP would:

- Include eligible employees who are employed in Ontario and not participating in a comparable workplace pension plan;
- Aim to replace 15 per cent of an individual's pre-retirement earnings up to maximum earnings threshold of $90,000 (in proposed 2017 dollars);
- Require eligible employers and employees each to contribute up to 1.9% of employee earnings
- Require benefits to be earned as contributions are made; and
- Be managed by the ORPP Administration Corporation – an independent, arm's length entity, which will be responsible and fully accountable for administration and investment in the best interest of plan members.

Q: Why is the ORPP needed?

A: Experts generally recommend that individuals aim to replace 50-70% of their pre-retirement income to maintain their standard of living in retirement. However, studies show that a significant number of Ontarians are concerned they will not have sufficient income in retirement.

Two-thirds of Ontario's workers do not participate in a workplace pension plan. Moreover, three-quarters of younger workers – aged 25 to 34 – do not participate in a workplace pension plan.

Q: What are the anticipated impacts of the ORPP on the Ontario's economy?

A: The government commissioned the Conference Board of Canada to conduct a cost-benefit analysis on the economic impact of the ORPP that was tabled in the legislature in December. The report's conclusion is clear – accounting for all factors and opportunity costs, both consumers and the economy are better off under the ORPP. This is good news for Ontarians.

The report reiterates that in the long-term, the ORPP is expected to add over $39 billion to Ontario's economy by ensuring that future retirees have adequate retirement savings. It also notes the ORPP is a more cost-effective means of helping individuals save than traditional retirement savings vehicles.

The report does acknowledge a small, short-term impact to the economy. However, this impact is partially mitigated by reductions in employment insurance and WSIB premiums. As well, the government remains committed to taking measures today to strengthen the economy.

ONTARIO FINANCING AUTHORITY

Borrowing and Debt Management – General

Q: Why was total long-term public borrowing $32.1 billion in 2015–16 when the deficit is projected to be $5.7 billion?

A: In addition to financing the deficit, long-term public borrowing refinances debt maturities and debt redemptions, funds the Province's investments in capital assets, and loans to agencies. Subsequent to the release of the 2016 Budget, the Province borrowed an additional $2 billion to take advantage of historically low interest rates. Therefore, total 2015-16 long-term borrowing increased from $30.1 billion to $32.1 billion with the extra $2 billion serving as pre-borrowing for 2016-17.

Q: Why does the Net Debt-to-GDP ratio decrease to 39.6 per cent at the end of fiscal 2015–16, compared to the 39.8 per cent forecast in the 2015 Budget?

A: The decrease in the Net Debt-to-GDP ratio is primarily due to a less than forecast deficit in 2015–16.

Q: How does the Province plan to reduce its net debt-to-GDP ratio to its pre-recession level of 27 per cent?

A: Debt is incurred primarily for two reasons: to finance deficits and invest in capital assets. Ontario is making public infrastructure investments of more than $137 billion over the next 10 years, or about $160 billion over 12 years, starting in 2014–15.

One of the objectives of investment in capital is to improve the economic growth of the Province, supplementing GDP growth. As a result, the net debt-to-GDP ratio will come down more quickly than it would have without these investments in capital assets.

The government's plan therefore hinges on first balancing the budget, and continuing to make investments in capital assets which will add to economic growth, resulting in GDP growing more quickly than debt, and lowering the net debt-to-GDP ratio to our 27 per cent target.

Q: The Province is projected to borrow $24.4 billion in 2016–17. Will the Province eventually run into a debt wall and be forced to raise taxes and cut services?

A: There is strong demand for Ontario bonds in both the domestic and international markets. In addition to completing the 2015-16 borrowing requirements, the province was able to pre-borrow an additional $2 billion for 2016-17.

Q: Why do debt maturities fluctuate? Is this pattern consistent with the OFA's goal of a smooth debt maturity profile?

A: While the OFA aims for a smooth debt maturity profile, market conditions such as investor demand and the cost of borrowing in different terms result in fluctuations in debt maturities.

Q: Has it been difficult to complete the Province's borrowing program?

A: The Province continues to have steady access to both domestic and international bond markets. The Province was able to complete the 2015-16 borrowing program and pre-borrow $2 billion for the 2016-17 program.

Q: What is the difference between total debt, net debt and accumulated deficit?

A: Total debt represents all borrowing.

Net debt is all borrowing plus other liabilities, minus the Province's financial assets.

By analogy, think of a family's finances. A mortgage, car loans and lines of credit represent total debt. Total debt partially offset by money the family has in the bank, in RRSPs and in RESPs represents the family's net debt.

Accumulated deficit is the sum of all past Provincial surpluses and deficits, adjusted for changes in accounting rules.

Q: What does non-cash adjustments of $5.8 billion in 2016–17 represent?

A: Non-cash adjustments convert accounting accruals into cash requirements. Cash and accruals primarily differ due to accrued expenses that do not result in a cash outlay. These include the reserve of $1.0 billion, $0.4 billion in grants that forgive existing student loans and $2.6 billion in Alternative Financing Procurements (AFPs) funded by third parties, partly offset by payments to be made in 2016–17 upon substantial completion of prior AFP projects. Another significant adjustment is amortization that is currently over $5 billion but is partly offset by general timing adjustments that always arise between the Province's inflows and outflows on a cash versus accrual basis. A notable example of the latter is the variance between the net incomes earned by Government Business Enterprises and the dividends they pay to the Province.

Q: Why is Loans to Infrastructure Ontario (IO) projected to be $0.5 billion lower than the 2015 Budget forecast for 2016–17?

A: Projected loans by the Province to IO will be offset by IO's partial repayment in 2016-17 of the 50-year subordinated loan provided by the Province in 2003.

Q: Why is Other Net Loans/Investments projected to be $1.2 billion lower than the 2015 Budget forecast for 2016–17?

A: The Province made prudent assumptions at the time of the Budget for cash inflows it expected to receive through asset optimization. Since that time, and given the recent Hydro One IPO, the Province has built in higher cash amounts expected from the asset optimization initiatives.

Q: What is the status of Ontario's Green Bond program?

A: On January 22, 2016, Ontario successfully launched its second Green Bond of $750 million. There was strong international interest, with 35 per cent of investor participation from the United States and Europe. The issue was also made available to retail investors through Canadian financial institutions. To date, total Green Bond financing amounts to $1.25 billion, with up to $1.2 billion allocated to Metrolinx for clean transportation projects.

Q: What are unrestricted liquid reserves, and how do they ensure that Ontario will have sufficient liquidity to meet its financial obligations?

A: Liquid reserves are cash and temporary investments that can easily be converted to cash.

In the normal course of doing business, the Province enters into transactions that may require it or its counterparties to pledge collateral. Although the pledged collateral is technically owned by the Province, it is deducted from the total liquid reserves figure to arrive at unrestricted liquid reserves. This provides a more conservative measure of the liquidity available to meet the Province's financial obligations.

The Province ensures it always has a prudent level of unrestricted liquid reserves to cover all obligations in the short term.

Interest on Debt (IOD)

Q: What is the impact on IOD of a $1.0 billion change in deficit?

A: The 2016–17 impact is forecast to be approximately $31 million.

Q: What is the impact on IOD of a one percentage point change in interest rates?

A: The 2016–17 impact is forecast to be approximately $350 million.

Q: What is your forecast interest rate for the IOD forecast in the 2016 Budget?

A: The forecast ten-year interest rate is 3.1 per cent for 2016-17.

Q: Ontario's debt has more than doubled since Premier McGuinty was first elected. When interest rates begin to rise, won't interest costs displace spending on the Government's priorities?

A: Ontario has a realistic plan to balance its budget while investments are made in the priorities of Ontario families – health care, education, the environment and infrastructure.

Investor demand has allowed the Province to extend the term of its debt in recent years and lock in low interest rates for a longer period. This term extension reduces the Province's refinancing risks and helps offset the impact of expected higher interest rates on its IOD costs. Since 2010, the province has borrowed $53.5 billion in the 30-year term.

The 2010 Budget forecasted that, by 2016–17, the Province would have to spend 11.7 cents of every revenue dollar received on interest. The current forecast is 2.7 cents lower, at 9.0 cents of interest costs for every dollar of revenue. This ratio is lower than it was in the 1990s, and is forecast to remain lower through the outlook period in 2018–19.

Q: How much more does the Government of Ontario pay annually to service its debt than it did prior to the two downgrades to Ontario's debt?

A: On April 25, 2012, the day before the Moody's downgraded Ontario from Aa1 to Aa2, Ontario's 10-year spread vs. the federal government was 1.00 per cent (100 basis points). On July 3, 2015, the day before the S&P downgraded Ontario from AA- to A+, Ontario's 10-year spread was 76 basis points. Between July 6th, 2015 and the end of July 2015, the province borrowed $3.8 billion. At the end of July, the spread was 74 basis points.

More recently, however, Ontario's cost of borrowing relative to that of the federal government has increased as a result of global financial market volatility, a phenomenon that has affected other Provinces even more than Ontario. For

example, in early 2015, Alberta's 10-year debt traded about 15 basis points below Ontario debt, but now trades about 10 basis points above the equivalent Ontario bonds in early April 2016.

Credit Ratings

Q: What are the Province's current credit ratings?

A: The Province is rated:

	Long-Term	Short-Term
Moody's Investors Service:	Aa2 (N)	P-1
Standard & Poor's:	A+	A-1+
DBRS:	AA (low)	R-1 (mid)
Fitch	AA-	F1+

Q: How will the credit rating agencies respond to the 2016 Budget?

A: Ontario currently maintains a double-A rating with three of its four credit rating agencies. Ontario continues to outperform its deficit projections and is on track to a balanced budget by 2017–18. Moreover, Ontario's net debt-to-GDP ratio is expected to peak in 2015–16 at 39.6 per cent, remain unchanged in 2016–17, decline to 38.9 per cent in 2017–18 and 38.5 per cent in the 2018–19.

We met with the rating agencies following the 2016 Budget and expect to hear back from them over the next few months.

Q: What impact will a rating downgrade have on your borrowing costs?

A: Credit ratings are one of a number of factors that contribute to borrowing costs.

Effective Management of Debt

Q: Why is it important to manage the growth in debt?

A: An uncontrolled increase in net debt would result in increased interest costs. These interest costs could squeeze the overall amount of funding available for future healthcare, education and social programs. Once balanced budget is achieved in 2017–18 however, the increase in debt will be limited to the net funding required for investments in capital assets. These investments will meet government priorities while also contributing to the economic growth of the Province allowing the government to lower net debt to GDP to its pre-recession level of 27 per cent.

CORPORATE AND ELECTRICITY FINANCE DIVISION

Trillium Trust

Q: What's the current status of the funds in the Trillium Trust?

A: The Public Accounts of Ontario 2014-2015, published in September 2015, show that $1.35 billion has been dedicated to the Trillium Trust.

These are the net proceeds from the sale of the Province's remaining General Motors common shares in early 2015, combined with net proceeds from a September 2013 GM share sale and the redemption of preferred shares in late 2014.

Under the Trillium Trust Act, Hydro One shares have been designated as assets for which the net revenue gains from a sale are dedicated to the Trillium Trust. Once the Province has received all of the final financial inputs to fully assess and account for the net revenue gains associated with the Hydro One IPO, it will introduce a regulation to designate the net gain amount from the Hydro One IPO to be dedicated to the Trust and prescribe the other net revenue benefits resulting from Hydro One's recognition of a deferred tax benefit, to be dedicated to the trust.

Q: Since the Hydro One IPO was completed several months ago and now the government has announced a secondary share offering, why haven't you made any regulations to dedicate the fiscal benefits of the Hydro One IPO to the Trillium Trust? When will you make these regulations and when will we see these amounts in the Trillium Trust?

A: Under the Trillium Trust Act, Hydro One shares have been designated as assets for which the net revenue gains from a sale are dedicated to the Trillium Trust.

The determination of the net revenue gains related to the Hydro One IPO depends in part on Hydro One's audited, year-end financial statements. Hydro One released its 2015 Annual Financial Statements on February 12, 2016. Once the Province has received the financial information to fully assess and account for the net revenue gains, including the determination of a deferred tax benefit impact on the Province's net revenues, it will introduce regulations to designate the amounts to be dedicated to the trust.

Q: Why have no amounts been spent from the Trillium Trust yet, not even from the GM share gain amounts from 2014-15? And why are there only $1,000 in placeholder expenditure numbers for the Trillium Trust lines in Estimates?

A: The Province is on track to generate $5.7 billion in net revenue benefit from asset optimization to be dedicated to the Trillium Trust to help support investments in transit, transportation and other priority infrastructure projects under the $31.5

billion Moving Ontario Forward initiative over 10 years to create jobs, boost productivity and revitalize communities.

Like most large infrastructure investments, initial spending on Moving Ontario Forward projects such as GO Regional Express Rail is focused on planning, design, property acquisition and other activities to get projects construction-ready. The government plans to begin drawing down on the balance in the Trillium Trust starting in 2016-17, as it is expected that spending will ramp up significantly once this preliminary work is completed and construction activity is underway. This will allow for identification for cash flow timing requirements from the Trillium Trust during 2016-17 and subsequent years.

Q: When will the government actually be able to start using funds from the Trillium Trust to pay for transit and infrastructure?

A: The government plans to begin drawing down on the balance in the Trillium Trust in 2016-17 to support the largest investment in public infrastructure in Ontario's history. Based on planned expenditures, in 2016-17 the Trillium Trust would support Moving Ontario Forward initiatives, such as

- Regional Express Rail (RER);
- Hurontario Light Rail Transit (LRT); and
- Ontario Community Infrastructure Fund.

Q: Isn't the deferred tax benefit just an accounting entry? How can the government dedicate this to the Trillium Trust if it is a non-cash item? Will the government have to borrow for the non-cash amounts dedicated to infrastructure?

A: The *Trillium Trust Act, 2014*, provides for all fiscal benefits related to the Hydro One IPO to be directed to the Trillium Trust. This includes the gain on the sale of shares and the deferred tax benefit.

By providing for the deferred tax benefit to be dedicated to the Trillium Trust, the government is ensuring that a projected $4 billion in net revenue gains from the IPO is dedicated to the Trust to support investments in transit and infrastructure.

The deferred tax benefit provides an up-front revenue gain to the Province through consolidation of Hydro One's financial results in the Public Accounts, which increases the book value of Hydro One's shares and reduces the accounting gains for subsequent sales for a given amount of gross sale proceeds.

Q: The government has said that it anticipates that an additional $1.149 billion in net revenue will be generated over the 2015 Budget asset optimization target for 2015–16 of $1.6 billion, and is on track to generate $5.7 billion from asset optimization over time. So, what is the amount that the Province expects will be placed into the Trillium Trust?

A: The Province is on track to generate $5.7 billion in net revenue benefit from asset optimization.

It is estimated that a total of more than $4 billion will have been credited to the Trillium Trust from the broadening of Hydro One ownership in 2015-16 and from the sale of the Province's shares in General Motors in prior years.

Additional net revenue benefits are anticipated from the secondary offering of Hydro One shares scheduled to close on April 14. 2016; as well as from the Hydro One Brampton transaction, subject to approval of the proposed merger by the Ontario Energy Board; and from announced real estate asset sales: the LCBO and OPG head office properties and Seaton and Lakeview lands.

The *Trillium Trust Act, 2014*, provides for all net revenue benefits related to the Hydro One IPO to be directed to the Trillium Trust. This includes the gain on the sale of shares and the deferred tax benefit.

Asset Optimization – Hydro One IPO (General)

Q: How much was raised from the Hydro One IPO?

A: From the November 2015 IPO and related share sales, the Province raised about $1.9 billion in gross proceeds before expenses and fees.

- In the November 2015 IPO, the Province sold 89,250,000 common shares at the IPO price of $20.50 per share for total gross proceeds to the Province of approximately $1.83 billion.
- Including other related share sales at the IPO price, the gross proceeds were $1.9 billion, including approximately $116 million in gross proceeds from shares sold to separate trusts established respectively by the Power Workers' Union (PWU) and the Society of Energy Professionals (SEP).

The determination of the net revenue gains from the gross proceeds depends on the finalisation of the book value of the shares sold at the time of the IPO and expenses and fees related to the IPO. The net gain from the November 2015 share sales is currently estimated at about $0.8 billion.

There are other associated benefits, aside from the sale of shares.

- An expected revenue benefit to the Province due to the revaluation of its fixed assets as a result of the IPO, resulting in Hydro One recognizing a deferred tax benefit. Based on the Prospectus, the Province communicated that it expected to realize a benefit of about $2.2 billion, which is subject to update and finalisation in Public Accounts.

- The Province also received cash (non-revenue benefits) of $1 billion in special payments from Hydro One, including $800 million in a special dividend paid prior to the IPO, and about $200 million in additional payments in lieu of taxes to the Ontario Electricity Financial Corporation (OEFC).

Q: How much of Hydro One did the Province sell through the IPO?

A: The Province sold 15 per cent of the common shares in Hydro One through the IPO, and about 0.95 per cent through related share sales, totalling about 15.95 per cent.

The Province will continue to move forward with broadening Hydro One ownership in a staged and prudent manner, including through the most recently announced secondary offering of shares.

The Province plans on selling up to 60 per cent of the voting securities in the company with the Province remaining the largest shareholder with 40 per cent of the voting securities.

Asset Optimization - Hydro One Secondary Offering

Q: What amount of proceeds will the Province receive from the secondary offering?

A: In this secondary offering, the Province has offered about 72.4 million common shares, or about 12 per cent of the common shares, at $23.65 per share, for total gross proceeds of approximately $1.7 billion

The Province has granted an option to the underwriters to purchase up to an additional approximately 10.86 million common shares, or just under 2 per cent of the common shares, which if exercised in full, would result in total gross proceeds of approximately $2 billion.

If the overallotment option is exercised in full, the Province will have sold 14% of its shares outstanding in this offering.

The government is committed to dedicating the net revenue gains from the secondary offering to the Trillium Trust. The *Trillium Trust Act, 2014* ensures that all net revenue gains from the sale of Hydro One shares will be credited to the Trillium Trust for investments in priority infrastructure projects.

The Province is also committed to using the cash amount of the proceeds related to the book value of the Hydro One shares sold to pay down the Province's electricity sector debt and other payables, helping to reduce the debt of the Ontario Electricity Financial Corporation (OEFC).

Q: How much will be generated from the secondary offering for the Trillium Trust?

A: All net revenue gains (gross proceeds less fees/expenses and less the book value of the shares sold) generated from the sale of this secondary offering will be dedicated to the Trillium Trust to support infrastructure investments under Moving Ontario Forward.

Net proceeds received by the Province will be determined based on the final transactions costs and underwriting fees, which are dependent on allocation of shares to retail/institutional investors, as well as the book value of the shares at the time of the sale.

[Net proceeds are currently estimated at about $0.5 billion based on the about 12% of shares offered in the base amount. If the over-allotment is fully exercised, the net proceeds are estimated at about $0.6 billion.]

Q: What amount of share sales / gains did the Province build into its 2016 Budget outlook?

A: In the 2016 Budget, the Province noted that it remains on track in its multi-year asset optimization initiative to generate $5.7B over time. This includes the Province's progress with its plans to unlock value from its real estate assets, including the LCBO head office lands, OPG's head office building, and the Seaton and Lakeview lands. Net revenue gains from the Province's asset optimization strategy are included in the "Sales and Rentals" other non-tax revenue line.

Q: The 2016 Document includes $71 million for strategic asset management and transformation related to Hydro One in 2016-17. How does this relate to the recent offering of Hydro One shares?

A: The $71M included as a line item under Ministry of Energy Estimates, and is a preliminary planning assumption. Actual costs will depend on size, price and associated fees. Underwriting fees associated with the transaction are 3 per cent for retail investors and 1 per cent for institutional investors. This is significantly lower than what underwriters have typically earned on firm commitment offerings and consistent with the fees earned in the Initial Public Offering.

For additional information on governance and oversight over Hydro One, your question may be more appropriately directed to the Ministry of Energy.

Q: With this transaction, is the Province still on track to hit its targets from broadening Hydro One ownership?

A: The government remains on track to generate, over time, $4 billion in net revenue gains to be invested in transit and infrastructure, along with $5 billion to reduce debt, from broadening Hydro One's ownership.

Q: What benefits from the offering will be provided to the Ontario Electricity Financial Corporation (OEFC)?

A: The government will provide the OEFC with a benefit under Section 50.3 of the Electricity Act. Section 50.3 allows the Province to meet its obligations to OEFC by, for example, relieving OEFC of certain debt obligations that it currently owes to the Province. This means that the net proceeds will go to infrastructure as indicated, while also allowing for a reduction in stranded debt.

Q: What is the expected amount of the benefits that will be directed to OEFC from this secondary share offering?

A: The total net benefits from this secondary offering of Hydro One shares will be finalized after the Province has assessed all of the final financial inputs associated with the transaction. Once these amounts have been assessed, the benefits from the secondary transaction would be able to be provided to OEFC.

Q: What was the process involved in selecting the underwriters involved for the secondary offering

A: RBC and Scotiabank were chosen as the co-lead underwriters for the secondary offering. These same two firms were chosen to lead the IPO underwriting through a competitive and transparent process, overseen by Denis Desautels, the former Auditor General of Canada.

The price discount offered by the underwriters to purchase shares from the Province through the "firm commitment offering" was also very competitive, representing an approximate 2% discount compared to the closing trading price of Hydro One shares on April 5th. Underwriting fees of 1% for institutional investors and 3% for retail investors is significantly lower than what underwriters have typically earned on firm commitment offerings and consistent with the fees earned in the Initial Public Offering.

Asset Optimization – Hydro One IPO (General Fiscal)

Q: Is the total amount raised from share sales from the IPO going into the Trillium Trust? Isn't the Province also using money to pay down debt?

A: The government is committed to dedicating the net revenue gains from the Hydro One IPO to the Trillium Trust. The *Trillium Trust Act, 2014* ensures that all net revenue gains from the sale of Hydro One shares will be credited to the Trillium Trust for investments in priority infrastructure projects. This includes the gain on the sale of the shares and the deferred tax benefit recorded by Hydro One

The Province has also committed to using the cash amount of the proceeds related to the book value of the Hydro One shares sold to pay down the Province's electricity sector debt and other payables, helping to reduce the debt of the OEFC.

The government is on track to generate, over time, $4 billion in net revenue gains to be invested in transit and infrastructure, along with $5 billion to reduce debt, from broadening Hydro One's ownership.

- The Province also received $1 billion in special payments from Hydro One, including an $800 million special dividend paid prior to the IPO. The special dividend has been used to pay down the Province's electricity sector debt and payables. This will allow OEFC to reduce its overall debt, and contribute towards the Province's targeted $5 billion debt pay down.

- *[Technical note: the dividend payments are fiscally neutral; they do not constitute revenue or income as this is already recognized at consolidation of Hydro One's net income]*

Q: The government has revealed that the benefit from the Asset Optimization Strategy in 2015-16 is $1,149 million higher than forecasted in the 2015 Budget. How did the government achieve this better than expected result?

A: This increase over and above the previous target is primarily the result of higher than expected up-front benefits from the first phase of broadening Hydro One ownership. This includes the estimated impact of a deferred tax benefit recognized by Hydro One, which will provide an upfront net fiscal benefit to the Province on consolidation of Hydro One results. This deferred tax benefit is due to the revaluation of Hydro One's fixed assets as a result of the IPO.

Q: The Province expects benefits from asset optimization in 2015-16 to be $1,149 million above the 2015 Budget target of $1.6 B, totalling about $2.7 billion from asset optimization. Since Hydro One's recent financial statements included a deferred tax benefit of about $2.8 B, an amount higher than in the IPO prospectus, shouldn't the Province be expecting more?

A: The estimated impact of asset optimization included an estimate of the deferred tax benefit impact. This is subject to update. Based on the Prospectus, the Province communicated that it expected to realize a benefit of about $2.2 billion. The actual impact on the Province will be determined through the 2015-16 Public Accounts process, where the Province records its revenues from government business enterprises, including Hydro One, which the Province owned about 84% of the common equity in 2015-16, following the IPO.

Q: If the Province expects to realize about $3 billion from Hydro One in 2015-16, why does the Budget suggest about $2.7 billion from asset optimization?

A: The estimated total of about $3 billion are the gain on sale and deferred tax benefit from Hydro One. The $2.7 billion includes other impacts to arrive at the net revenue impact. In addition, Budget 2015 had projected that the sale of LCBO head office lands would close by March 31, 2016. The transaction is now expected to close in spring 2016.

Q: While I understand that the timing of Hydro One's annual report may not have allowed for Hydro One's reported results to be reflected in the interim numbers in the 2016 Budget, what impact will the reported amounts have on the total benefits from Asset Optimization and 2015-16 and in later years?

A: The total net benefits from asset optimization for 2015-16 will be finalized as part of the Public Accounts process and will take into account the final financial inputs associated with the Hydro One IPO. This includes a final determination of fees and expenses related to the IPO, in addition to the book value of the shares as of the date they were sold. The Province is working with Hydro One to finalize the amount.

Q: What was the amount of expenses incurred by the government in moving forward with the Hydro One IPO? The 2016 Document includes $52 million for strategic asset management and transformation related to Hydro One in 2015-16.

A: Underwriting fees associated with the IPO transaction were 3 per cent for retail investors and 1 per cent for institutional investors. These were substantially below typical private IPO rates. Of the shares allocated through the IPO Hydro One, 60 per cent were allocated to institutional investors, while 40 per cent was allocated to retail investors.

For additional information on governance and oversight over Hydro One, your question may be more appropriately directed to the Ministry of Energy.

Q: In moving forward with a Hydro One IPO, and secondary offerings, isn't the government giving up future revenues from the company?

A: While broadening ownership in a revenue generating asset means that there may be an impact on revenues over the longer term, the fiscal impact of an asset sale includes upfront gains that the government will reinvest into public infrastructure, improving the lives of Ontarians where they live, work and play. In turn, this will create jobs, generate economic growth and additional revenues for the Province.

- The Province would also retain 40 per cent of Hydro One, following the IPO and subsequent share offerings, which would continue generating revenue for the Province.

Q: How will the government guarantee that proper oversight and governance mechanisms will be in place for Hydro One?

A: The Province has ensured Hydro One oversight measures are in place. The government will remain, by law, the largest single shareholder in Hydro One – and no other single shareholder or group of shareholders working in concert will be permitted to hold more than 10 per cent of the company's shares.

For additional information on governance and oversight over Hydro One, your question may be more appropriately directed to the Ministry of Energy.

Q: Isn't it possible that the government could end up diluting its ownership stake to less than 40 per cent?

A: Legislation has passed that restricts the Province from selling down to less than 40 per cent of the voting securities in Hydro One.

For additional information on governance and oversight over Hydro One, your question may be more appropriately directed to the Ministry of Energy.

Asset Optimization – Hydro One IPO (Departure Tax / Capital Contribution / Deferred Tax Benefit)

Q: What is the deferred tax benefit that is resulting from broadening Hydro One ownership?

A: The deferred tax benefit recorded by Hydro One is a consequence of Hydro One leaving the payment in lieu of tax regime and entering the corporate tax regime at closing of the IPO.

As a result of entering the corporate tax regime, Hydro One is revaluing the tax basis of its fixed assets at fair market value and recognizing eligible capital expenditures.

The revaluation of the tax basis of Hydro One's assets results in higher future deductions from taxable income for depreciation of its assets for tax purposes. This benefit is reflected as a deferred tax benefit, as Hydro One expects to see a reduction in cash taxes payable as a result. This deferred tax benefit will provide a net fiscal benefit to the Province on consolidation of the results of Hydro One into the Public Accounts.

Further details are provided in the IPO prospectus document and Hydro One's 2015 Annual Report, both documents are available in SEDAR and Hydro One's website.

Q: What is the amount of deferred tax benefit that the Province will recognize?

A: The estimated impact of asset optimization included an estimate of the deferred tax benefit impact. Based on the Prospectus, the Province communicated that it expected to realize a benefit of about $2.2 billion. The actual impact on the Province will be determined through the 2015-16 Public Accounts process, where the Province records its revenues in 2015-16 from government business enterprises, including Hydro One, which the Province owned about 84% of the common equity in 2015-16, following the IPO.

Q: What is the "departure tax" that resulted from broadening Hydro One ownership?

A: A company that exits from a tax regime may be deemed to have disposed of its assets for proceeds equal to the fair market value of those assets at that time, which could result in a tax payment in respect of the income and capital gains that arise as a result of this deemed disposition. The amount payable is generally referred to as a "departure tax".

- Hydro One paid $2.6 billion in "departure tax" to OEFC prior to the closing of the IPO as part of its transition to a broadly held, publicly traded company.
- OEFC also received an additional about $200 million in payments-in-lieu of taxes as a result of the IPO.

Q: What is the amount of departure tax that was received and how this amount determined?

A: The Minister of Finance provided a letter to Hydro One confirming the Minister's consent to the payment of the departure tax amount under the application of Ontario Regulation 207/99, and confirming the total amount of the departure tax payable by Hydro One would be $2.6 billion as a result of the planned IPO.

- Under Ontario Regulation 207/99, the Minister of Finance can consent to a departure tax amount that, in the Minister's opinion, reasonably approximates the amount of the departure tax that would be payable.

Q: What is the anticipated fiscal impact of the departure tax? The impact on OEFC and stranded debt?

A: The departure tax has no net fiscal impact for the Province as the Province records both the departure tax amount as payments-in-lieu of tax (PILs) revenue and Hydro One's net income, which is reduced due to the recognition of the departure tax expense.

The upfront impact of the departure tax on the OEFC's unfunded liability will be fully offset over time by their impact on reducing dedicated revenues to the OEFC in 2015–16, and in future years related to Hydro One net income.

Q: What is the capital contribution that the Province made in support of broadening Hydro One ownership?

A: Before the IPO, the Province, as shareholder, made a capital contribution into Hydro One and received new common shares of Hydro One Limited for a total of $2.6 billion. This provided Hydro One funds that it used to pay the "departure tax".

Q: What is the anticipated fiscal impact of the capital contribution?

A: The capital contribution has no fiscal impact for the Province, since the capital contribution also increased the Province's investment in Hydro One by the same amount.

Asset Optimization – Hydro One IPO (Fiscal Reporting)

Q: How are the impacts of the Hydro One IPO reported in the 2016 Budget? Where are these amounts recorded?

A: The estimated gain on sale is recorded in the "Sales and Rentals" other non-tax revenue line.

The estimated net fiscal benefit resulting from Hydro One's recognition of a deferred tax benefit is reflected as an increase in "Income from Government Business Enterprises", partially offset by lower Hydro One Net income through the Province's reduced ownership levels.

The $2.6 billion departure tax, as well as about $200 million in one-time additional PILs from Hydro One, are recorded in the "Electricity Payments-In-Lieu of Taxes" revenue line. These amounts are offset by an equal reduction in "Income from Government Business Enterprises".

The capital contribution has no fiscal impact for the Province, since the capital contribution also increased the Province's investment in Hydro One.

Asset Optimization – Hydro One IPO (OEFC Benefits)

Q: Isn't the government obligated to dedicate any proceeds for a share sale to OEFC to pay down stranded debt? Shouldn't ratepayers benefit from a transaction?

A: The government will dedicate the net revenue gains from the Hydro One IPO and future subsequent shareholder offerings to the Trillium Trust.

The *Electricity Act, 1998*, also allows the Province to meet its obligations to OEFC by, for example, relieving OEFC of certain debt obligations that it currently owes to the Province.

This means that the cash will go to infrastructure as indicated, while also allowing for a reduction in stranded debt.

- The Province has also committed to using the cash amount of the proceeds related to the book value of the Hydro One shares sold to pay down the Province's electricity sector debt and other payables, helping to reduce the debt of the OEFC.

- The Province also received $1 billion in special payments from Hydro One, including $800 million in a special dividend paid prior to the IPO, and about $200 million in additional payments in lieu of taxes to OEFC. The special dividend has been used to pay down the Province's electricity sector debt and payables. This will allow OEFC to reduce its overall debt, and contribute towards the Province's targeted $5 billion debt pay down.

- OEFC has also received $2.6 billion in departure tax.

Q: Will the gain on sale of Hydro One shares from the IPO credited to the Trillium Trust be the same as the benefit to OEFC?

A: Under Section 50.3 of the *Electricity Act, 1998*, the amount to be paid to OEFC is calculated as the proceeds from a sale of Hydro One shares, less transaction costs and other obligations, costs and amounts in connection with the Province's ownership stake in Hydro One,.

Only if pushed:

The Province has also been transferring to OEFC the "Electricity Sector Dedicated Income" (ESDI) in respect of Hydro One and OPG net income and has been doing so since 1999. In other words, the government has been allocating the value created in Hydro One to OEFC since 1999.

Q: When will OEFC receive benefits from the Hydro One IPO ownership?

A: OEFC will be benefiting from the Hydro One IPO in a number of ways.

OEFC has already received $2.6 billion in departure tax and about $200 million in one-time additional payments-in-lieu of tax (PILs), as Hydro One exited the PILs regime.

OEFC will also receive the benefits prescribed under section 50.3 of the Electricity Act.

The Province has also provided OEFC $800 million in cash in respect of the pre-IPO special dividend of $800 million

The Province has also committed to dedicating to OEFC the cash amount of the share sale proceeds related to the book value of the Hydro One shares.

If Pushed

Hydro One released its 2015 Annual Financial Statements on February 12, 2016. The total net benefits from asset optimization for 2015-16 will be finalized after the Province has assessed all of the final financial inputs associated with the Hydro One IPO. Once these amounts have been assessed, all of these additional benefits from the transaction will be able to be provided to OEFC.

Q: Why is there no Financial Benefit to OEFC currently included in the Estimates for Hydro One share sales?

A: The determination of the net benefit to the OEFC under section 50.3 of the Electricity Act depends in part on information to be provided by Hydro One associated with the IPO transaction, including a final determination of fees and expenses. Once the Province has assessed all of the final financial inputs associated with the Hydro One IPO, it will be in a position to report on the benefit to be provided to OEFC, which is expected to be included as part of reporting in the 2015-16 public accounts. The benefit to OEFC for any future offerings would be assessed after those offerings, once the final financial inputs associated with those transaction have been finalized.

Q: Why did your government amend section 50.3 of the Electricity Act? Isn't it true that before the amendment, all proceeds of the IPO would have gone to OEFC?

A: Under section 50.3, before and after the amendments, proceeds net of prescribed deductions are to be paid to OEFC.

The amendments that the government made to the *Electricity Act, 1998* as part of the 2015 Budget allow the Province to meet its obligations to OEFC by, for example, relieving OEFC of certain debt obligations that it currently owes to the Province.

This means that the cash will go to infrastructure as indicated, while also allowing for a reduction in stranded debt.

Only if pushed:

The Province has also been transferring to OEFC the "Electricity Sector Dedicated Income" (ESDI) in respect of Hydro One and OPG net income and has been doing so since 1999. In other words, the government has been allocating the value created in Hydro One to OEFC since 1999.

As part of the Budget Measures Act, 2015, introduced at the time of the Fall Ontario Economic Outlook and Fiscal Review the government also amended the Electricity Act, 1998 to provide for future Provincial corporate taxes paid by Hydro One Inc. to be allocated to OEFC.

Asset Optimization – Hydro One IPO (PWU/SEP Share Purchases)

Q: Why were agreements made with the unions to purchase shares in Hydro One?

A: These agreements mean the employees and unions are all-in on Hydro One's future success. As shareholders, they have a strong incentive to see the company's performance continue to improve.

The loans, which are for a 15 year term, will be secured by the shares purchased with the loan and held in the separate trusts established respectively by the Power Workers' Union (PWU) and the Society of Energy Professionals (SEP). The Province will also charge interest above its cost of borrowing on these loans, at the Ontario government rate plus 0.15% resulting in additional revenue to the Province.

Q: What is the value of the loans that were extended to the Unions to purchase shares in Hydro One?

A: The government extended a $75 million loan to a trust established for the benefit of the Power Workers Union (PWU) and a $36 million loan to a trust established for the benefit of the Society of Energy Professionals (SEP) to purchase shares in Hydro One. The loans are to the separate trusts, not to individual employees.

Q: What is this going to cost the government?

A: The Province received the same price for shares sold to the trusts as it received in the IPO. The loans are secured by the shares purchased with the loans and held in the trusts. The Province also charges interest at a 0.15% spread above its cost of borrowing on these loans, resulting in additional revenue to the Province.

Q: Could the unions default on these loans?

A: The loans are secured by the pledged shares, minimizing the risk to the Province of a default.

Q: How many shares were purchased by the PWU/SEP Unions and how much did the government raise through those shares sales?

A: PWU and SEP have been provided with $75 million and $36 million loans, respectively, to purchase shares, with PWU purchasing an additional $5 million and SEP purchasing an additional $3 million worth of shares.

This gives the unions' trusts about a 0.95% stake in Hydro One Limited.

Asset Optimization - Hydro One Brampton

Q: What is the status of the potential merger between Hydro One Brampton and a group of urban local distribution companies (LDCs)?

A: The proposed merger of Hydro One Brampton with PowerStream, Enersource, and Horizon Utilities, continues to move forward. The municipal councils for the cities of Barrie, Markham, Vaughan, Mississauga, Hamilton and St. Catharines have all voted to proceed with the merger. Ontario has now executed a Share Purchase Agreement with PowerStream, Enersource, and Horizon. Commercial closing of the transaction would be subject to certain closing conditions, including Ontario Energy Board (OEB) approval.

- The proposed merger of these three strong performing utilities with Hydro One Brampton would create the second-largest electricity distributor in Ontario by number of customers. The merged entity would deliver efficiencies and economies of scale while continuing to provide safe, reliable and clean electricity.

Q: Would the Province realize any up-front benefit from the sale or merger of Hydro One Brampton with other local distribution companies (LDCs)? Would these benefits go to the Trillium Trust or to the Ontario Electricity Financial Corporation (OEFC)?

A: The *Trillium Trust Act, 2014*, ensures that net revenue gains from the sale of Hydro One Brampton shares would be credited to the Trillium Trust.

The *Electricity Act, 1998*, also allows the Province to meet its obligations to OEFC by, for example, relieving OEFC of certain debt obligations that it currently owes to the Province.

Asset Optimization – Real Estate

Q: The 2016 Document talks about the LCBO head office lands, OPG's head office building, and the Seaton and Lakeview lands, but is the government looking at other real estate assets?

A: The government owns a range of valuable assets directly and through its agencies and operational enterprises. A number of these are not required to deliver public services but are located on valuable commercial land such as Toronto and surrounding municipalities.

Q: The government has mentioned that it is optimizing real estate assets for a while but nothing has been sold - is the government actually moving forward with any sales?

A: The Province is in the final stages of the process to sell the LCBO's head office lands. Negotiations with a potential purchaser are ongoing, with the transaction expected to close in the spring of 2016.

As announced on January 7, 2016, the Province is moving forward with the sale of the Seaton Lands. The lands will be marketed to prospective purchasers and are being sold on the open market to support a new urban development in the City of Pickering. By selling approximately 800 acres of employment lands and 269 acres of residential and mixed-use lands, upon completion Seaton will be a sustainable community that will be home to 70,000 people and support 35,000 jobs.

The Province also continues to move forward with the sale of OPG's head office building, and the former Lakeview generating station lands in south Mississauga continues to be reviewed under a longer-term revitalization plan for the property and adjacent lands. The Province is focused on realizing the potential of the Lakeview lands, with an opportunity to create a new and sustainable, mixed-use community along Mississauga's eastern waterfront, with arts and culture districts, housing, employment, and retail and recreational uses.

Reducing Electricity Costs for Businesses

Industrial Consumers

Q: What is the government doing to help industrial consumers with rising electricity costs?

A: The government is committed to reducing electricity cost pressures on businesses and industrial consumers, supporting economic growth for the benefit of the people of Ontario.

The government has put in place a number of initiatives to help industrial consumers, including a fixed, legislated end date for the debt retirement charge, the Industrial Electricity Incentive for reduced pricing for eligible incremental electricity consumption, the Industrial Conservation Initiative that provides large industrials an incentive to shift electricity demand and save them and the electricity system costs, the Industrial Accelerator Program, and continued funding for eligible large northern industrials currently in the Northern Industrial Electricity Rate program.

Debt Retirement Charge: The government has introduced legislation, passed in December 2015 that will end the DRC as of April 1, 2018 – nine months earlier than previously estimated. The fixed end date would provide certainty to commercial, industrial and other electricity users, and help them to plan their investment decisions more effectively.

Industrial Electricity Incentive: In the 2014 Budget, Ontario announced an expanded Industrial Electricity Incentive (IEI) program to further capitalize on the province's strong supply of electricity by incenting industrial expansion through rate mitigation.

As part of this enhancement, eligibility for the IEI program was expanded to encourage participation from more diverse economic sectors throughout the province.

As of April 2015, 14 industrial companies have signed contracts capitalizing on the IEI program. These new business expansions will create hundreds of new jobs.

Industrial Conservation Initiative (ICI): The ICI program encourages Ontario's largest energy users to reduce their electricity use during peak periods, which not only saves them money, but also lowers costs and improves reliability for the electricity system as a whole. Since July 1, the expanded ICI program has helped over 280 of Ontario's largest energy consumers save an average of about 25 per cent on their electricity bills.

Other programs and incentives are already available to support industrial consumers:

Northern Industrial Electricity Rate (NIER) Program: On April 7, 2015, the government announced on-going support for qualifying large northern industrial consumers, with continued investment of up to $120 million per year.

The Province had earlier extended the NIER Program with $360 million over three years (2013-14 to 2015-16) to provide a rebate of two cents per kilowatt-hour to qualifying large northern industrials. As well, the government will undertake a review of the efficiency and effectiveness of the program and options for a sustainable approach.

Industrial Accelerator Program (IAP): The IAP has been extended for an additional five-year period from 2015 to 2020. The IAP is designed to assist eligible transmission-connected companies to fast-track capital investments in major energy conservation projects. The IAP provides financial incentives to encourage investment in innovative process improvements and equipment retrofits to reduce electricity consumption and help companies become more competitive.

Companies have the opportunity to participate in demand response programs administered by the Independent Electricity System Operator (IESO).

Industrial Electricity Incentive (IEI) Program

Q: What is the status of the expanded Industrial Electricity Incentive (IEI) program?

A: As of April 2015, 14 industrial companies have signed contracts capitalizing on the Industrial Electricity Incentive (IEI) program, which was designed to provide incentives for industrial expansion through reduced electricity costs. These new business expansions will create hundreds of new jobs.

In the 2014 Budget, Ontario announced an expanded Industrial Electricity Incentive to further capitalize on the province's strong supply of electricity by incenting industrial expansion through rate mitigation.

This new stream made available up to four terawatt-hours of electricity per year for industrial companies that start or expand operations.

Eligibility was extended to other energy intensive sectors, such as greenhouses, data processing and refrigerated warehousing. Previously, eligibility was limited to the manufacturing and resource extraction (mining, quarrying, oil and gas) sectors.

Five-Point Business Energy Savings Plan

Q: What is the government doing to help small businesses with rising electricity costs?

A: The government knows that local entrepreneurs are focused on growing their business. The government is ensuring small businesses have the tools they need to understand their bill, conserve energy, manage costs and save money through the five-point business energy savings plan.

- Working with energy agencies, local distribution companies and the Retail Council of Canada, the government will promote the use of Roving Energy Managers.
- Roving Energy Managers will be available to small businesses to provide support and assistance every step of the way on an energy-savings project – from applying for incentives to installing energy-efficiency measures.
- The saveONenergy for Business Conservation program will be better tailored to small businesses to ensure they can benefit from the programs to help them manage and reduce their energy bills.
- The saveONenergy for Business Conservation program is also being expanded to provide increased incentives to businesses. Participation will be made easier and faster for small businesses by simplifying and automating application processes.
- To help small businesses cover the upfront capital costs of conservation projects, the Province will work to make on-bill financing available for the sector, beginning in 2015, and allow repayment through the utility bill.
- To ensure conservation incentives continue to be available for small businesses, Ontario will commit to another six years of conservation programs through the new Conservation and Demand Management Framework.

Northern Industrial Electricity Rate (NIER) Program

Q: What are the eligibility requirements for participation in the NIER program?

A: Each of the participant's individual facilities must purchase and consume a minimum of 50,000 MWh of electricity annually from the Independent Electricity System Operator or a local distribution company.

Companies eligible to participate in the NIER program must be classified as being within one of the following North American Industry Classification System industry sectors:

- Mining and Oil and Gas Extraction, and
- Manufacturing, with the exception of facilities that are designated as Sawmills and Wood Preservation which would not be eligible for the NIER program.

Companies must implement, and new companies are required to develop, an Energy Management Plan (EMP) that includes targets and benchmarks. The EMP provides information regarding reduced electricity costs and energy consumption, planned capital investments, energy savings, and efficiency measures, including company-specific targets.

Q: How much price relief does the NIER program provide to participants?

A: Qualifying participants receive two cents per kilowatt-hour (kWh) up to one terawatt-hour (TWh) per year, resulting in a maximum of $20 million per year per company. Rebates for existing participants are also capped at the lesser of 2011-12 consumption levels or $20 million per year.

On average, industrial electricity prices may be reduced by up to 25 per cent through the program. To date as of March 31, 2015, the NIER program has disbursed about $567 million.

New applicants would be accepted if funds are available up to the program cap of $120 million per year on a first come, first serve basis.

Q: What are the details of a NIER program beyond 2016?

A: The government is committed to an ongoing program to support large northern industrial facilities beyond March 2016, with continued investment of up to $120 million per year.

The government will undertake a review on the efficiency and effectiveness of the program and options for a sustainable approach. This will support and retain large electricity users, as well as promote global competitiveness and jobs in northern Ontario for the benefit of all Ontarians.

Energy Infrastructure

Reliable and Clean Energy Supply

Q: What has the government done to ensure a reliable and clean supply of energy?

A: A clean, reliable and affordable supply of electricity is a critical element for sustainable job creation and economic development.

Since 2003, the government has made significant progress transforming the electricity system into one that Ontarians can count on for reliability and clean energy.

- More than $34 billion has been invested in cleaner generation. About $15 billion has been invested in transmission and distribution infrastructure by Hydro One alone.

- Over 16,000 megawatts (MW) of new and refurbished capacity have come online, including more than 7,000 MW of wind, solar and other renewable energy supply, and an additional 2,400 MW in renewable capacity contracted for and under development.

Q: How is OPG contributing to new renewable energy supply?

A: In 2015, OPG and Coral Rapids Power Corporation (CRP), a company wholly owned by Taykwa Tagamou Nation (TTN), began the construction of the Peter Sutherland Sr. Generating Station, a new 28 MW hydroelectric station on the Abitibi River near New Post Creek. The $300 million project is expected to employ 220 workers at its peak and be completed in 2018.

Ontario is now home to North America's largest power plant fuelled completely by biomass; converted from using coal, the Atikokan Generating Station has a capacity of over 200 MW. The station is now generating electricity and helping meet local power needs in northwestern Ontario.

In addition, the Thunder Bay Generating Station is leading the electricity industry with exciting new technology, in service as of early 2015. The station can meet changes in electricity demand using a clean and renewable fuel with its conversion to advanced biomass.

Six new generating units on the Lower Mattagami River have come online, with the last unit coming into service in December 2014. These units have added 438 MW of emission-free electricity to the previous 486 MW — or enough incremental capacity to meet twice the peak demand of Greater Sudbury.

FIT4 and LRP I

Q: What is the status of procurement of the new renewable supply projects?

A: Ontario remains committed to building a cleaner and more sustainable energy system. The first phase of the Independent Electricity System Operator's (IESO) competitive Large Renewable Procurement (LRP I), where large is generally over 500 kilowatts (kW), is targeted to procure up to 300 MW of wind, 140 MW of solar, 50 MW of bioenergy, and 75 MW of waterpower.

On March 10, 2016 the IESO released the list of 16 contracts that have been offered under the Large Renewable Procurement (LRP), representing 454.885 megawatts (MW) of clean renewable energy capacity.

For LRP Phase II, Ontario has set targets of up to 600 MW of wind, up to 250 MW of solar photovoltaic, up to 50 MW of hydroelectricity and up to 30 MW of bioenergy.

The recent round of the Feed-In Tariff 4 (FIT4) application window closed in October 2015, with over 1,968 applications received, representing a total of 582 MW. Contracts for the FIT4 program will be awarded up to the procurement target of about 241 MW.

Energy Storage

Q: What progress has Ontario made with the emerging new, more cost-effective energy storage technologies?

A: In November 2015, the IESO completed its plan to secure a total of 50 MW of energy storage in Ontario. The IESO offered contracts to five companies for nine separate energy storage projects totalling 16.75 MW. This is in addition to the approximately 34 MW in storage capacity previously secured.

Nuclear Refurbishment

Q: A retired nuclear scientist argued that the proposed $12.8 billion refurbishment of four nuclear reactors at the Darlington generating station is an ill-advised make-work project that will end up soaking taxpayers. Do you have any concerns about that possibility?

A: The planned refurbishments of the four units at the Darlington Nuclear Generating Station, and of six nuclear units at the Bruce Nuclear Generating Stations, in addition to the two units already refurbished at the Bruce site, secures over 9,800 MW of affordable, reliable, and emission free power.

This is part of the government's significant progress in transforming the electricity system into one that Ontarians can count on for reliability and leadership in clean energy, with over 16,000 megawatts (MW) of new and refurbished capacity having come online since 2003, including more than 7,000 MW of wind, solar and other renewable energy supply.

Nuclear refurbishment at Darlington will contribute an estimated about $15 billion to Ontario's gross domestic product (GDP) and the boost to jobs is estimated to average 11,800 over the peak 10 years of the refurbishment. The $12.8 billion budget is about $1.2 billion less than originally projected by OPG.

OPG has put in years of detailed planning, built a state-of-the-art training facility, and assembled an experienced team, positioning itself well to deliver on its budget and schedule commitments for the Darlington Refurbishment.

- Years of extensive project planning includes detailed planning commenced in 2010 and concluding in 2015, with engineering completed before field execution starts, and with lessons learned incorporated; from other major projects.

- OPG has built a training facility including a replica of the Darlington Nuclear station reactor vault. It houses a full-scale, reconfigurable replica reactor suitable for tool performance testing and integration, as well as training workers.

- OPG has also structured contracts so that contractors are accountable for price and schedule to minimize risk to ratepayers.

- OPG and Bruce Power are also collaborating during Ontario's Refurbishment Period to improve both companies' refurbishment programs.

- Two independent oversight organizations have been established, one reporting to OPG's Project Executive and Board, and a second reporting directly to the Ministry of Energy.

To best protect Ontario ratepayers and ensure OPG delivers refurbishment on-time and on-budget, the government has also established off-ramps that require OPG to obtain government approval prior to proceeding with each of the remaining unit refurbishments.

Electricity Price Relief for Ontarians

Q: What is the government doing to help Ontario families with rising electricity costs?

A: The government is committed to reducing electricity cost pressures on individuals and families, and recognizes that Ontario's most vulnerable spend a proportionately higher percentage of disposable income on energy and electricity.

The government has removed the Debt Retirement Charge (DRC) from residential users' electricity bills beginning on January 1, 2016. This would save a typical residential ratepayer about $70 per year and mean ending the DRC earlier for these users than otherwise provided for in the *Electricity Act, 1988*.

The Ontario Energy Board developed the Ontario Electricity Support Program (OESP) to lower electricity bills for Ontario's low-income households. Starting January 1, 2016, the OESP will provide a monthly credit of $30-$50 directly on the bills of eligible low-income households, for a total of $360 to $600 per year. The OESP offers a larger credit to low-income consumers whose homes are electrically heated, and those who rely on certain medical devices. Eligible First Nation and Métis households also qualify for a larger credit. The credit for those receiving a larger reduction is $45 to $75 a month, for a total of $540 to $900 per year.

For low-income Ontarians, electricity costs represents a significantly greater share of their monthly expenses, the OESP could benefit more than 500,000 low-income Ontario households. The OESP is an application-based program, which began accepting applications in fall 2015.

- The Province is also already taking significant steps to support and mitigate future rate increases for Ontario families and seniors.
    - Ontario Energy & Property Tax Credit – for 2016, up to $1,008 in tax relief for non-seniors, $1,148 in tax relief for seniors, or $224 in tax relief if you live on a reserve or in a public long-term care home, to help with the sales tax on energy, including electricity, and with property tax.
    - Northern Ontario Energy Credit – for 2016, up to $146 for single people in the north, or up to $224 for families in the north, to help with the higher energy costs they face.
    - The Strengthening Consumer Protection and Electricity System Oversight Act, 2015, passed on December 1, 2015, will enhance the OEB's role to ensure that it continues to have a robust set of tools to protect consumers and regulate the energy sector.

- Energy Consumer Protection Act, 2010 – tough new rules to protect consumers from unfair practices in the retail energy sector.

Ending the DRC

Q: Why are you setting a fixed end date for the Debt Retirement Charge?

A: Electricity sector reforms in the *Electricity Restructuring Act, 2004*, and others have put the stranded debt recovery plan back on track. This has allowed the government to follow through on its commitment to reduce electricity cost pressures.

This is projected to be the twelfth consecutive year that the stranded debt has been reduced, with interim 2015-16 results for the OEFC showing an estimated excess of revenue over expense of more than $3 billion, reducing the stranded debt to under $5 billion as at March 31, 2016, based on interim numbers.

The government introduced legislation, passed in December 2015, that will end the DRC as of April 1, 2018 – nine months earlier than previously estimated. The fixed end date would provide certainty to commercial, industrial and other electricity users, and help them plan their investment decisions more effectively.

Prior to the *Budget Measures Act, 2015* amendments of the *Electricity Act* and the revocation of Ontario Regulation 89/12, the *Electricity Act, 1998*, provided for the DRC to be paid by consumers until the residual stranded debt is retired.

The estimated residual stranded debt amount and timing for its retirement were subject to uncertainty in forecasting future OEFC results and dedicated revenues to OEFC, which depend on the financial performance of Ontario Power Generation, Hydro One and municipal electricity utilities, and other factors such as interest rates and electricity consumption.

The DRC is one of the dedicated revenues that the Ontario Electricity Financial Corporation (OEFC) receives to service and retire the former Ontario Hydro's debt and certain other liabilities.

Q: After so many years of estimating an end date for the debt retirement charge and residual stranded debt retirement, why is a fixed end date selected only now?

A: Electricity sector reforms in the *Electricity Restructuring Act, 2004*, and others have put the stranded debt recovery plan back on track. This has allowed the government to follow through on its commitment to reduce electricity cost pressures.

This is projected to be the twelfth consecutive year that the stranded debt has been reduced, with interim 2015-16 results for the OEFC showing an estimated

excess of revenue over expense of more than $3 billion, reducing the stranded debt to under $5 billion as at March 31, 2016, based on interim numbers.

The government has introduced legislation, passed in December 2015,that will end the DRC as of April 1, 2018 – nine months earlier than previously estimated. The fixed end date would provide certainty to commercial, industrial and all other electricity users, and help them plan their investment decisions more effectively.

Under the proposal, the OEFC would continue to receive DRC revenues up to April 1, 2018, thus achieving a balance between making progress in paying down the electricity sector stranded debt and mitigating cost pressures for and providing certainty to commercial, industrial and all other electricity users.

Ending the DRC – Residential and Business Users

Q: How much of an impact will removing the debt retirement charge help industrial consumers? Charges for consumers are still going up.

A: The government is committed to supporting a dynamic business climate, drive local economic growth, support job creation and provide competitive electricity rates.

The government introduced legislation, passed in December 2015, that will end the DRC as of April 1, 2018 – nine months earlier than previously estimated. The fixed end date would provide certainty to commercial, industrial and other electricity users, and help them to plan their investment decisions more effectively.

For a large industrial using 3,000 MWh per month, the elimination of the DRC will save up to $21,000 per month, or an estimated about 7 per cent, off the monthly electricity bill.

For a large northern industrial user in the Northern Industrial Electricity Rate program using 3,000 MWh per month, removing the DRC would result in a $21,000 per month saving, or an estimated more than 8 per cent off its electricity bill.

Q: What will be the fiscal impact of removing the DRC cost from residential users' electricity bills?

A: Prior to eliminating the Debt Retirement Charge (DRC) for residential users on January 1, 2016, the DRC has provided annual revenues of about $950 million to the Ontario Electricity Financial Corporation (OEFC), and to the Province on consolidation into Public Accounts. The residential rate class accounts for about a third of electricity load subject to the DRC (varying year-over-year), so, on an annualised basis, the direct DRC revenues forgone from removing the DRC cost from residential bills is estimated to be just over $300 million.

Q: What do you mean by a "residential" electricity user? Will condos and/or mixed use buildings be included? What about long-term care homes and farms?

A: The government has removed the Debt Retirement Charge (DRC) cost from residential users' electricity bills beginning January 1, 2016. This was implemented through regulations, which set out the definition of residential electricity users for the purposes of this initiative:

- All electricity users with a residential rate class account are exempt from the DRC. Users with a general service rate class account that provides electricity to one or more 'eligible residential units' are also eligible for a DRC exemption up to 1,500 kilowatt-hours (kWh) per month multiplied by the number of eligible residential units included in the account.
- An eligible residential unit means a unit that:
  - is a self-contained set of rooms located in a building or structure
  - contains kitchen and bathroom facilities that are intended for the use of the unit only, and
  - is used or intended for use as a residential premises.

Q: The removal of the Debt Retirement Charge (DRC) cost from residential users' electricity bills after December 31, 2015, will save residential users less than half of what the Ontario Clean Energy Benefit (OCEB) is saving them, which is legislated to end January 1, 2016. Why isn't your gov't doing more to assist residential consumers with their bills by extending the OCEB, in addition to removing the DRC?

A: The Ontario Clean Energy Benefit ended on December 31, 2015.

The government is committed to reducing electricity cost pressures on individuals and families, recognizing that Ontario's most vulnerable spend a proportionately higher percentage of disposable income on energy and electricity.

As reported in the 2013 Long-term Energy Plan, government actions have lowered costs in the electricity system, reducing what people would have otherwise paid by about $520 over five years.

The removal of the DRC for residential electricity users after December 31, 2015, would save a typical residential user about $70 per year.

Beginning January 1, 2016, the government implemented the Ontario Electricity Support Program (OESP) to provide a monthly credit of $30 to $50 directly on the bills of Ontario's low income households. The OESP offers a larger credit to low-

income consumers whose homes are electrically heated, those who rely on certain medical devices and eligible First Nation and Métis households. The credit for those receiving a larger reduction is $45 to $75 a month. The size of this benefit would be assessed based on income level and household size, and the program has begun on January 1, 2016.

The government also provides tax credits to help low- to moderate-income families and individuals with their energy costs such as the Ontario Energy and Property Tax Credit and the Northern Ontario Energy Credit.

Ending the DRC – RSD

Q: Why can't you end the DRC now, as opposed to April 1, 2018? The *Electricity Act, 1998*, provides for the DRC to be paid by consumers until the residual stranded debt is retired.

A: The *Budget Measures Act, 2015* amended the *Electricity Act, 2015* and provided a legislated fixed end-date of April 1, 2018 for the Debt Retirement Charge (DRC). The amendments to the *Electricity Act* removed legislative references to the stranded debt and the residual stranded debt.

Ending the DRC on April 1, 2018 provides for OEFC to receive DRC revenues until a specific end date, thus achieving a balance between providing certainty to and mitigating cost pressures for commercial, industrial and other electricity users, while continuing to make progress in paying down the electricity sector stranded debt.

The DRC is one of the principal dedicated revenues that the Ontario Electricity Financial Corporation (OEFC) receives to service and retire the former Ontario Hydro's debt and certain other liabilities. The debt was accumulated by building Ontario's electricity generation and transmission infrastructure.

At the time of the *2014 Ontario Economic Outlook and Fiscal Review*, and as stated in *2015 Budget*, it has been estimated that the residual stranded debt would be retired by the end of 2018. However, the estimated residual stranded debt could extend beyond 2018, such as through to the end of 2019.

As published in the *2015 Ontario Economic Outlook and Fiscal Review*, the residual stranded debt is estimated to be $2.2 billion as of March 31, 2015.

Even after the Debt Retirement Charge ends, there would still be stranded debt remaining, and OEFC would continue to receive PILs and GRC to help service and pay down the stranded debt. Under the *Electricity Act*, OEFC is required to prepare and submit an Annual Report, and OEFC's annual financial statements are included in Public Accounts each year.

Q: What will happen to Residual Stranded Debt once the Debt Retirement Charge (DRC) ends? Does this imply the Residual Stranded Debt will be retired by April 1, 2018?

A: The *Budget Measures Act, 2015* amended the *Electricity Act, 2015* and provided a legislated fixed end-date of April 1, 2018 for the DRC. The amendments to the *Electricity Act* removed legislative references to the stranded debt and the residual stranded debt.

Ending the DRC on April 1, 2018 provides for OEFC to receive DRC revenues until a specific end date, thus achieving a balance between providing certainty to and mitigating cost pressures for commercial, industrial and other electricity users, while continuing to make progress in paying down the electricity sector stranded debt.

Since the government's reforms under the *Electricity Restructuring Act, 2004*, OEFC has reduced its stranded debt for 12 consecutive years, based on interim numbers.

Even after the Debt Retirement Charge ends, there would still be stranded debt remaining, and OEFC would continue to receive PILs and GRC to help service and pay down the stranded debt. The government expects that the stranded debt will continue to decline following the end of the DRC.

The OEFC will continue to report its unfunded liability (often referred to as stranded debt) in its financial statements to provide continued disclosure and transparency.

Under the Electricity Act, OEFC is required to prepare and submit an Annual Report, and OEFC's annual financial statements are included in Public Accounts each year.

If pressed on technicalities related to legislation:

Legislative references to the stranded debt and RSD have been removed from the *Electricity Act*, as a result of Bill 144, the *Budget Measures Act*, as they no longer have a legislative purpose.

At the time of the 2014 *Ontario Economic Outlook and Fiscal Review*, and as stated in 2015 Budget, it has been estimated that the residual stranded debt would be retired by the end of 2018. However, the estimated residual stranded debt could extend beyond 2018, such as through to the end of 2019.

Fiscal Performance and Revenue Outlook

Interim 2015-16 vs. 2014-15

Q: Why is the interim 2015-16 combined net income from Hydro One and OPG projected to be $1,459 million lower than in 2014-15? ($330 million projected for interim 2015-16 compared to $1,789 million in 2014-15.)

A: The decrease is primarily due to the impacts of broadening the ownership of Hydro One and the impact of the one-time extraordinary gain recognized in 2014-15 by OPG related to the newly regulated hydroelectric facilities [i.e. regulatory assets related to deferred income taxes expected to be recovered from customers through future regulated prices]. Other factors leading to the decrease include higher market prices for OPG's previously unregulated hydroelectric facilities in 2014 and, lower nuclear production and higher OM&A costs in 2015 for OPG.

As a result of Hydro One's completed IPO in November, 2015, the interim 2015-16 net income reflects the estimated impacts of the broadening of Hydro One ownership, including positive impacts from the departure tax benefit, negative impacts from $2.6 billion in departure tax and positive impacts of $200 million from additional PILs. The decrease also reflects a reduction to 84% of the Province's proportionate share of Hydro One net income following the IPO and related additional share sales [to trusts with beneficial ownership by unions] due to lower ownership by the Province.

Q: Why is the interim 2015-16 payments-in-lieu of taxes (PILs) from electricity sector projected to be $3,052 million higher than in 2014-15? ($3,232 million projected for interim 2015-16 compared to $180 million in 2014-15.)

A: The increase in 2015-16 is primarily due to significant one-time payments in lieu of tax (PILs) payments related to Hydro One's IPO, i.e., $2.6 billion in departure tax and $200 million in additional PILs, as a result of leaving the PILs regime, and entering corporate income tax (CIT) regime. The increase also reflects higher OPG PILs compared to 2014-15, due to the income tax impact of rate-regulating OPG's previously unregulated hydroelectric stations in the fiscal 2014-15.

Interim 2015-16 vs. 2015 Budget

Q: Why is the interim 2015-16 combined net income from Hydro One and OPG projected to be $682 million lower than in 2015 Budget? ($330 million projected for interim 2015-16 compared to $1,012 million in Budget 2015.)

A: The decreases in 2015-16 reflects a significantly lower forecast income from Hydro One primarily due to the IPO impacts: positive impacts of the deferred tax benefit gain, negative impacts of $2.6 billion in departure tax and $200 million in additional

PILs, and a reduction to the Province's 84% proportionate share of Hydro One net income due to decreased ownership share of the Province. The decrease is partly offset by an increase in OPG's forecast income due to favourable ONFA fair value adjustments lower operating costs.

Q: Why is the interim 2015-16 payments-in-lieu of taxes (PILs) from electricity sector projected to be $2,708 million higher than in Budget 2015? ($3,232 million projected for interim 2015-16 compared to $524 million in Budget 2015.)

A: The increase is primarily due to significant one-time PILs related to Hydro One's initial public offering (IPO), i.e. the $2.6 billion in departure tax and $200 million additional PILs, as Hydro One exited the PILs regime, and entered Corporate Income Tax (CIT) regime as a result of the IPO. This is fiscally neutral, when combined with the impact on reduced net income from Hydro One.

Q: You are reporting a $1.1 billion increase from asset optimization in 2015-16 due to increase in the estimated impact of a deferred tax benefit for Hydro One. What is a deferred tax benefit?

A: The deferred tax benefit recorded by Hydro One is a consequence of Hydro One revaluing the tax basis of its assets to fair market value as it enters the corporate tax regime at closing of the IPO.

This deferred tax benefit will provide a net fiscal benefit to the Province on consolidation of the results of Hydro One into the Public Accounts, based on the Province's proportionate ownership share of Hydro One.

Q: Brampton Distribution Holdco Inc. is included in your electricity company combined net incomes. This company was not there in previous financial reports. Why is this organization shown separately now in this budget?

A: Prior to August 31, 2015, Hydro One Brampton was a subsidiary of Hydro One. To facilitate the potential merger of Hydro One Brampton with Enersource, Horizon Utilities, and PowerStream, on August 31, 2015, Hydro One declared a dividend in kind to the Province of all the issued and outstanding common shares of Hydro One Brampton Networks Inc.

This means that Hydro One Brampton is no longer a subsidiary of Hydro One. It is now a wholly Provincially-owned subsidiary of Brampton Distribution Holdco Inc.

If pushed:

This is only an organizational restructuring. It doesn't have material fiscal impacts as for the time being the Province continues to be the sole owner of Hydro One Brampton.

Q: What should be the reporting treatments for Hydro One Inc.'s (HOI) projected and actual provincial corporate income tax (CIT) for the provincial Budget, Estimates and Public Accounts processes?

A: Following Hydro One Ltd.'s (HOL) initial public offering (IPO) on November 5, 2015, Hydro One has exited the electricity payments-in-lieu of taxes (PILs) regime and will start paying corporate income taxes to both the federal and provincial governments.

Under the amendments made to the *Electricity Act, 1998* in the fall *Budget Measures Act, 2015*, the Minister of Finance will pay the OEFC an amount equal to tax payable under the *Taxation Act, 2007* (i.e., the provincial corporate income tax – CIT) by Hydro One Inc. (HOI), in a taxation year-end during each fiscal year. This will help to service and pay down the electricity sector stranded debt.

Interim 2015-16 vs. 2016-17 Forecast

Q: Why is the projected 2016-17 combined net income from Hydro One and OPG projected to be $719 million higher than interim 2015-16? ($330 million projected for interim 2015-16 compared to $1,049 million projected in 2016-17.)

A: The increase is primarily due to higher estimated 2016-17 earnings from OPG and Hydro One.

The estimated increase in 2016-17 is also due to significantly lower estimated 2015-16 income for Hydro One, as it reflects the upfront impacts of the Hydro One's IPO in 2015, which included one-time expenses of $2.6 billion in departure tax, $200 million in IPO related additional PILs, estimated to be partially offset by a deferred tax benefit.

Projected Impact of the Asset Optimization Strategy

Q: Does the projected future combined net income from Hydro One and OPG and the projected payments-in-lieu (PILs) of taxes from electricity sector include the impacts of the initial public offering (IPO) of the Hydro One common shares?

A: The Hydro One's net income and PILs has reflected the impacts of Hydro One's IPO and the resulting about 84% Provincial ownership share.

As Hydro One is now taxable under the federal Income tax Act and the provincial Taxation Act, Hydro One will no longer pay corporate tax PILs to OEFC. Hydro One is still subject to pay to OEFC incremental property tax PILs under the Electricity Act.

The gains from Hydro One IPO sale and projected impacts from further common shares sales are captured as part of the projected net impacts of the Province's asset optimization strategy in Sales and Rental under Other Non-Tax Revenue.

Medium-Term Revenue Outlook

Q: In your medium-term revenue outlook discussion you discuss a one-time payments in lieu of taxes from Hydro One as a result of the Hydro One initial public offering? What is that payment about?

A: A company that exits from a tax regime may be deemed to have disposed of its assets for proceeds equal to the fair market value of those assets at that time, which could result in a tax payment in respect of the income and capital gains that arise as a result of this deemed disposition. The amount payable is generally referred to as a "departure tax".

Hydro One paid $2.6 billion in "departure tax" to OEFC prior to the closing of the IPO as part of its transition to a broadly held, publicly traded company. Hydro One also paid an additional $200 million in PILs to OEFC as a consequence of the IPO.

OEFC and Stranded Debt

Stranded Debt

Q: Why is the interim Electricity Sector Dedicated Income (ESDI) $0 in 2015-16, and why is the forecast so low for ESDI in the 2016-17 Printed Estimates? Is this because of the Hydro One IPO reducing the Province's future revenues from Hydro One and reducing the amounts to pay for stranded debt?

A: The Hydro One IPO resulted in a significant upfront reduction in the stranded debt of the electricity sector.

For the year ended March 31, 2016, the IPO resulted in very large upfront payments to the Ontario Electricity Financial Corporation (OEFC) towards stranded debt. This included a total of $2.8 billion in departure tax and additional payments-in-lieu of taxes (PILs) paid by Hydro One to OEFC.

As these large amounts were expenses to Hydro One, they had a dollar-for-dollar impact on reducing Hydro One's estimated net income for 2015-16, partially offset by the deferred tax benefit impact on the Province's net income from Hydro One.

Because of these large payments to OEFC, this resulted in an estimated zero Electricity Sector Dedicated Income transfer to OEFC, as the combined net income of OPG and Hydro One to the Province was estimated to fall short of the about $520 million in annual interest expense.

Under the Electricity Sector Dedicated Income, the Province has been dedicating the cumulative combined net income of OPG and Hydro One in excess of the Province's interest cost of its investment in these companies (about $520 million annually, prior to the Hydro One IPO) to OEFC.

As the ESDI commitment is calculated on a cumulative basis over time, the estimated shortfall in the combined net incomes of OPG and Hydro One in 2015-16 compared to the about $520 million in the Province's financing costs, reduces the estimated Electricity Sector Dedicated Income in 2016-17 [and potentially in future years], until the past shortfall is offset by the combined net incomes going forward from 2015-16.

The actual ESDI amounts for 2015-16 and 2016-17 is subject to finalisation, including the actual financial performances of OPG and Hydro One in 2015-16 and 2016-17, and will be reported in OEFC's annual financial statements and Public Accounts.

[Note: For the 2015-16 Printed Estimates, the ESDI was positive, as the projected ESDI did not build in the potential impact of the broadening of Hydro One ownership due to the commercial and market sensitivity of the estimated impacts on Hydro One of the expected departure tax. The potential impact of the broadening of Hydro One ownership was built into the asset optimization component of the Sales and Rental revenue line.]

Q: As at March 31, 2015, in the Ontario Economic Outlook and Fiscal Review, the residual stranded debt was estimated to be $2.2 billion. If the stranded debt is estimated to have been reduced by more than $3 billion in 2015-16, to less than $5 billion as at March 31, 2016, does that mean that the residual stranded debt is now retired?

With the proceeds from the Hydro One initial public offering (IPO) in the billions of dollars, why hasn't the OEFC retired the stranded and/or the residual stranded debt and ended the Debt Retirement Charge (DRC)?

A: OEFC estimated results for 2015-16 show an estimated excess of revenue over expense of more than $3 billion, which would reduce OEFC's unfunded liability (or "stranded debt of the electricity sector") from $8.2 billion as of March 31, 2015, to below $5 billion as of March 31, 2016.

The estimated residual stranded as at March 31, 2015, was $2.2 billion, based on a stranded debt of $8.2 billion and the estimated present value of future, going forward dedicated revenues from March 31, 2015, to OEFC of about $6 billion.

The estimated 2015–16 results reflect the upfront benefits to OEFC of broadening the ownership of Hydro One through an initial public offering (IPO). This includes the OEFC receiving *in* fiscal 2015-16 – that is after March 31, 2015 -- $2.6 billion in departure tax and about $200 million in one-time additional payments in lieu of

taxes (PILs), as Hydro One exited the PILs regime and will no longer pay corporate tax PILs to the OEFC.

The upfront impact on OEFC of the departure tax and one-time PILs payments on the OEFC's unfunded liability will be fully offset over time by their impact on reducing dedicated revenues to the OEFC in 2015–16, and in future years related to Hydro One net income. In addition, as Hydro One is now a taxable corporation, it will no longer pay payments-in-lieu of corporate taxes (PILs) to OEFC, further reducing the estimated present value of future dedicated revenues to OEFC.

There is still stranded debt remaining, to be serviced and paid down by the OEFC's other dedicated revenues, such as other payments in lieu of taxes and the Gross Revenue Charge.

- The government expects that the stranded debt will continue to decline following the broadening of the ownership of Hydro One, as well as the end of the DRC on residential users as of January 1, 2016, and commercial, industrial and all other electricity users as of April 1, 2018.

- The OEFC will continue to report annually on the stranded debt.

Projected 2016–17 OEFC results are an excess of revenue over expense of about $0.6 billion.

Q: What is the status of the old Ontario Hydro's stranded debt?

A: The government dedicates the revenues it receives from the electricity sector to the Ontario Electricity Financial Corporation (OEFC). All OEFC revenues, including the Debt Retirement Charge (DRC) paid by electricity consumers, are used to service and retire its debt and other obligations, as provided for under the *Electricity Act, 1998*.

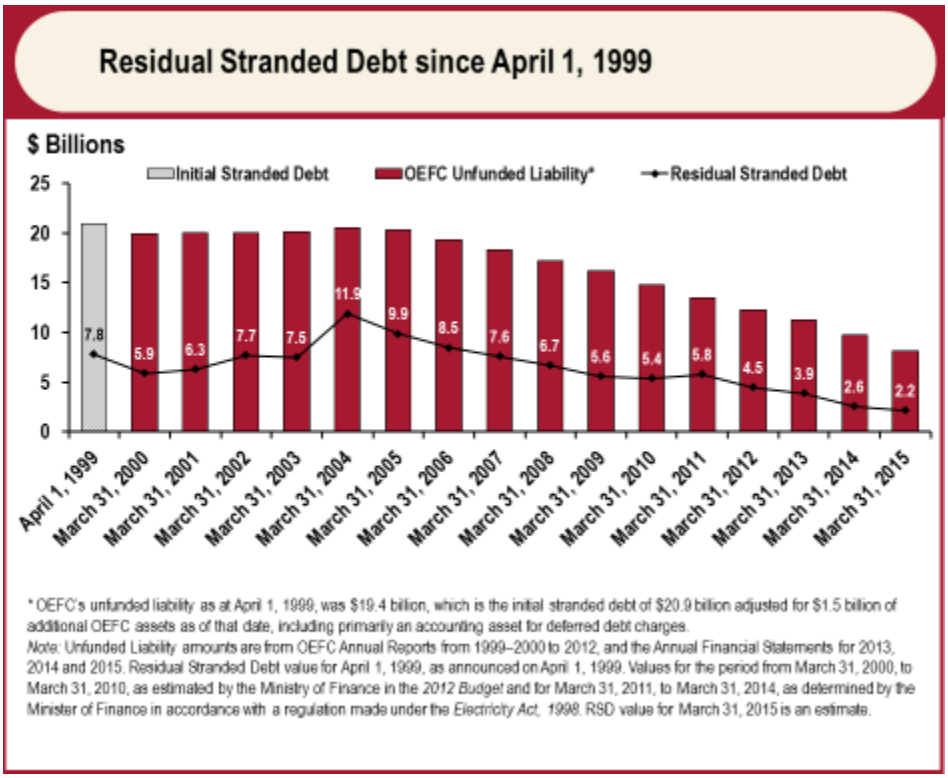
For the twelfth consecutive year, the stranded debt has been reduced, based on the interim 2015–16 results for the OEFC showing an estimated excess of revenue over expense of more than $3 billion. The OEFC has paid down stranded debt by an estimated total of more than $15 billion from its peak in 2003-04, reducing stranded debt to under $5 billion as at March 31, 2016, based on interim numbers.

- The following table shows the unfunded liability (or "stranded debt") of OEFC since the opening amount of $19,433 million on April 1, 1999.

At March 31 ($M unless noted)	April 1, 1999	2000	2001	2002	2003	2004	2005	2006	2007
Unfunded Liability	$19,433	$20,034	$20,016	$20,085	$20,183	$20,550	$20,363	$19,293	$18,289
Increase / (Decrease)		$601	($18)	$69	$98	$367	($187)	($1,070)	($1,004)
At March 31 ($M unless noted)	**2008**	**2009**	**2010**	**2011**	**2012**	**2013**	**2014**	**2015**	
Unfunded Liability	$17,225	$16,182	$14,810	$13,448	$12,321	$11,257	$9,781	$8,185	
Increase / (Decrease)	($1,064)	($1,043)	($1,372)	($1,362)	($1,127)	($1,064)	($1,476)	($1,596)	

Prudent Management of Electricity Sector Debt

Q: What is the current status of the residual stranded debt?



A: The *Electricity Act, 1998* was amended by the *Budget Measures Act, 2015* (Bill 144) and effective December 10, 2015, all reference to the "stranded debt" and "residual stranded debt", including regulation-making authority of Ontario Regulation 89/12, were repealed. This included the removal of the requirement to determine the residual stranded debt from time-to-time and the regulation-making authority for O. Reg. 89/12 – rendering the regulation obsolete.

On February 11, 2016, the government filed Ontario Regulation 20/16 revoking O. Reg. 89/12.

Prior to the amendments of the *Electricity Act, 1998*, the residual stranded debt was estimated to be $2.2 billion as at March 31, 2015 as published in the 2015 Ontario Economic Outlook and Fiscal Review.

- This is a decrease of $0.4 billion compared to the residual stranded debt of $2.6 billion as at March 31, 2014, and a decrease of $9.7 billion from an estimated peak of $11.9 billion as at March 31, 2004.

- The residual stranded debt as at March 31, 2015, is based on the unfunded liability (or "stranded debt of the electricity sector") of $8.2 billion as reported in the OEFC's financial statements for the year ending March 31, 2015, reduced by the estimated present value of future dedicated revenues to OEFC of $6.0 billion. This results in the estimated $2.2 billion of residual stranded debt as at March 31, 2015.

Q: What happened to the residual stranded debt?

A: The *Electricity Act, 1998* was amended by the *Budget Measures Act, 2015* (Bill 144) and effective December 10, 2015, all reference to the "stranded debt" and "residual stranded debt", including regulation-making authority of Ontario Regulation 89/12, were repealed. This included the removal of the requirement to determine the residual stranded debt from time-to-time and the regulation-making authority for O. Reg. 89/12 – rendering the regulation obsolete.

On February 11, 2016, the government filed Ontario Regulation 20/16 revoking O. Reg. 89/12.

Prior to the *Budget Measures Act, 2015* amendments of the *Electricity Act, 1998* and the revocation of Ontario Regulation 89/12, the *Electricity Act*, provided for the DRC to be paid by consumers until the residual stranded debt is retired.

As part of its commitment to reduce the cost of electricity to all Ontarians, the government has removed the Debt Retirement Charge (DRC) from residential users' electricity bills beginning January 1, 2016.

As a further step to mitigate electricity cost pressures for all other users, the government introduced legislation, passed on December 10, 2015, Bill 144, the *Budget Measures Act, 2015* to end the DRC on April 1, 2018, nine months earlier than previously estimated.

- Even after the end of the DRC, there will be stranded debt remaining, to be serviced and paid down by the OEFC's other dedicated revenues, such as payments in lieu of taxes and the Gross Revenue Charge.

- The government expects that the stranded debt will continue to decline following broadening of the ownership of Hydro One, as well as the end of the DRC.

- The OEFC will continue to report annually on the stranded debt.

Q: As published in the *2015 Economic Outlook and Fiscal Review*, why did the residual stranded debt only fall from $2.6 billion to $2.2 billion if the Ontario Electricity Financial Corporation's (OEFC) unfunded liability fell by about $1.6 billion and the DRC collected the same year was $0.956 billion?

A: Prior to the *Budget Measures Act, 2015* amendments of the *Electricity Act* and the revocation of Ontario Regulation 89/12, the residual stranded debt was defined under the Act as the stranded debt minus the estimated present value of future payments in-lieu of taxes (PILs), Gross Revenue Charge (GRC) and electricity sector dedicated income to be paid to OEFC. The DRC would have been charged to consumers until the Minister of Finance determined that the residual stranded debt had been retired.

The residual stranded debt fell by less than the decrease in OEFC's unfunded liability due to a reduction in the estimated present value of future dedicated revenues to the OEFC from $7.2 billion as at March 31, 2014, to $6.0 billion as at March 31, 2015, which reflects the uncertainty of and update to the forecast of future dedicated revenues to OEFC. These forecasted revenues depend on the financial performance of Ontario Power Generation, Hydro One and municipal electricity utilities, regulatory decisions by the Ontario Energy Board, as well as other factors such as interest rates and electricity consumption.

Q: Since you have collected about $12.5 billion in Debt Retirement Charge (DRC) revenue to March 31, 2015, compared to the estimated $7.8 billion in residual stranded debt as at April 1, 1999, why has the residual stranded debt only decreased by $5.6 billion and why hasn't DRC already ended for all users?

A: Since 2004, the government's electricity sector reforms in the *Electricity Restructuring Act, 2004*, and others, have put the stranded debt recovery plan back on track. The Ontario Electricity Financial Corporation (OEFC) has paid down stranded debt by about $12.3 billion from its peak in 2003-04, reducing stranded debt to $8.2 billion as at March 31, 2015.

The residual stranded debt increased from $7.8 billion as at April 1, 1999, to an estimated $11.9 billion as at March 31, 2004, as a result of an increase in stranded debt primarily due to the electricity price freeze, as well as a reduction in the estimated present value of future dedicated revenues to the Ontario Electricity Financial Corporation (OEFC), mainly reflecting the downward revision in 2004 of the previous overestimation of future financial performance of Ontario Power Generation (OPG), and lower tax rates. OPG had significantly underperformed compared to its plans over the previous period of 1999 to 2004.

As confirmed in the Auditor General's 2011 Annual Report, the DRC is used exclusively by the Ontario Electricity Financial Corporation (OEFC) to meet its mandate, as provided for under the *Electricity Act, 1998*, which includes servicing and retiring its debt and other liabilities. This includes payment of principal amounts as well as interest costs. OEFC's interest expense is currently about $1.4 billion per year and has totalled about $30.5 billion between April 1, 1999 and March 31, 2015.

- Prior to the amendments in the fall 2015 *Budget Measures Act*, under the *Electricity Act*, the residual stranded debt was defined under the Act as the stranded debt minus the estimated present value of future payments-in-lieu of taxes (PILs), Gross Revenue Charge (GRC) and electricity sector dedicated income to be paid to OEFC. The residual stranded debt was, therefore, affected by 1) changes in the amount of stranded debt, and 2) changes in the estimated future dedicated revenues.

- Since 2004, the government's electricity sector reforms in the *Electricity Restructuring Act, 2004*, and others, have put the stranded debt recovery plan back on track. The residual stranded debt has been reduced by an estimated $9.7 billion, from an estimated peak of $11.9 billion as at March 31, 2004, to $2.2 billion as at March 31, 2015, as published in the 2015 Ontario Economic Outlook and Fiscal Review.

- The Auditor General audits OEFC's annual financial statements and has provided an unqualified opinion every year since the initial 1999–2000 financial statements.

Subject: RE: Updated Fiscal Scenario Decks

Hi everyone –

We just got out of a meeting with ADMs and direction and numbers are changing once again. We'll need a few minutes to run through the numbers, but the outlook is going to look a lot closer to what we had over the weekend, before we started making changes yesterday. In that case, I'd like to propose that we stick with the IOD estimates from the weekend. We can certainly send you the numbers once we work them out, but my hunch is that you won't have enough time to re-run IOD in time for the 2PM briefing with the SOC, considering also that the DMs would like to see the deck in the next hour.

I'm hoping you can arm Gadi to deliver the message that the IOD and net debt-to-GDP numbers may still be in flux, and perhaps you might even have enough time to re-run you numbers and arm him with the potential changes that he could speak to in the meeting? Happy to hear your thoughts and get your recommendation on what we can do in the next hour or so.

Thanks,

Tara

Hi Alex:

Here is the latest. Thank you for your help with this and apologies again for the tight timelines.

Below are the scenarios that we would like you to run for an IOD forecast. To confirm, there are 9 scenarios in total.

Blue Starting Point (line 45)
- Orange starting point scenario

Blue A - With Regular Program Expense
- blue scenario - with regular program expense (line 69)
- with pensions
- with fair hydro
-with both accounting impacts

Blue B - With Program Expense Efficiencies
- blue scenario - with program expense efficiencies (line 92)
- with pensions
- with fair hydro
-with both accounting impacts

Many thanks!

Hi Alex:

Yes, we're rolling them through right now and will get you something as soon as we can.

Only blue is affected. So it will be the same nine scenarios for an IOD forecast that we requested below. Orange is still not changing.

Will keep you posted,
Sareena

Good afternoon Ken, John, and Alex:

Thank you for your comments on the decks this morning, we have rolled them through.

We also wanted to give you a heads up that there have been some number changes since Friday, accordingly, we're hoping that you can rerun IOD for us tomorrow morning. We can do net debt on this end based on the calculator that John sent on Friday, once we receive IOD, if that's okay with you?

A meeting with the SOC has been scheduled for 2pm tomorrow, so we would ideally like IOD as soon as you're able to send it in the morning (at least by 11am) so that we can roll it through, calculate net debt, and brief up the line here with a complete picture prior to the 2pm meeting.

We will send you our backgrounders before we head out this evening as well as a list of scenarios for IOD (similar to what I sent on Friday). I hope this game plan works, happy to discuss.

Thank you and apologies for the tight timelines,
Sareena

Hi Sareena/Tara

I have the following overall comments, both John and Alex have identified some discrepancies in the numbers which they have communicated directly to Sareena.

Orange Scenario

- The deck refers to the removal of dividends from revenue a couple of time, given that dividends from GBE's are not part of revenues, it is a little confusing as to how they can be removed.
- Net debt scenarios that include the impact of the AG's recommendations should also indicate that accumulated deficit has to be adjusted, hence the increase to net debt is substantially greater than the $5 to $6B presented in the deck. An explanatory sentence could be as follows: "Adopting the Auditor General's recommendation means that the opening net debt for 2017-18 must be restated upwards by $12.4 billion to $314.1 Billion"

Blue Scenario

- Page 10, the IOD seems ok, pls review
- Page 12, same as bullet 2 above, should include the cumulative impact to 2017-18

Thanks

Ken k

Hi Alex:

Yes, we're rolling them through right now and will get you something as soon as we can.

Only blue is affected. So it will be the same nine scenarios for an IOD forecast that we requested below. Orange is still not changing.

Will keep you posted,
Sareena

Hi Alex:

As discussed, attached please find a copy of the outlook for the Blue scenario only (we're not changing Orange). Below are the scenarios that we would like you to run for an IOD forecast. To confirm, there are 9 scenarios in total.

Blue Starting Point (line 45)
- Orange starting point scenario

Blue A - With Regular Program Expense
- blue scenario - with regular program expense (line 69)
- with pensions
- with fair hydro
-with both accounting impacts

Blue B - With Program Expense Efficiencies
- blue scenario - with program expense efficiencies (line 92)
- with pensions
- with fair hydro
-with both accounting impacts

Many thanks!

Good afternoon Ken, John, and Alex:

Thank you for your comments on the decks this morning, we have rolled them through.

We also wanted to give you a heads up that there have been some number changes since Friday, accordingly, we're hoping that you can rerun IOD for us tomorrow morning. We can do net debt on this end based on the calculator that John sent on Friday, once we receive IOD, if that's okay with you?

A meeting with the SOC has been scheduled for 2pm tomorrow, so we would ideally like IOD as soon as you're able to send it in the morning (at least by 11am) so that we can roll it through, calculate net debt, and brief up the line here with a complete picture prior to the 2pm meeting.

We will send you our backgrounders before we head out this evening as well as a list of scenarios for IOD (similar to what I sent on Friday). I hope this game plan works, happy to discuss.

Thank you and apologies for the tight timelines,
Sareena

Subject: FW: Updated Fiscal Scenario Decks

Hi Sareena/Tara

I have the following overall comments, both John and Alex have identified some discrepancies in the numbers which they have communicated directly to Sareena.

Orange Scenario

- The deck refers to the removal of dividends from revenue a couple of time, given that dividends from GBE's are not part of revenues, it is a little confusing as to how they can be removed.
- Net debt scenarios that include the impact of the AG's recommendations should also indicate that accumulated deficit has to be adjusted, hence the increase to net debt is substantially greater than the $5 to $6B presented in the deck. An explanatory sentence could be as follows: "Adopting the Auditor General's recommendation means that the opening net debt for 2017-18 must be restated upwards by $12.4 billion to $314.1 Billion"

Blue Scenario

- Page 10, the IOD seems ok, pls review
- Page 12, same as bullet 2 above, should include the cumulative impact to 2017-18

Thanks

Ken k

Sareena,

Given the tight timelines, we are okay with your team doing net debt once all information is received, but please let us take a look at the deck and/or backup calculations at the earliest time tomorrow. Net debt scenarios in this case requires some extra discernment with respect to including or not including the pension adjustment, so we know what to look for especially.

Thanks.

John

Thanks, we will provide you with the revised IOD, however, with regard to the net debt to GDP we intend to use the deficit number that you have given us that do not take into account the impact of any IOD revisions.

They will be off slightly albeit in the first decimal but that appears to be the best approach given the time crunch. This should allow you to hopefully incorporate both IOD and the ratio in the deck and Gadi can indicate the ratio may be a little off.

Hope this approach works.

Let me know

Thanks

Ken k

Subject: RE: Updated Fiscal Scenario Decks

Hi everyone –

We just got out of a meeting with ADMs and direction and numbers are changing

once again. We'll need a few minutes to run through the numbers, but the outlook is going to look a lot closer to what we had over the weekend, before we started making changes yesterday. In that case, I'd like to propose that we stick with the IOD estimates from the weekend. We can certainly send you the numbers once we work them out, but my hunch is that you won't have enough time to re-run IOD in time for the 2PM briefing with the SOC, considering also that the DMs would like to see the deck in the next hour.

I'm hoping you can arm Gadi to deliver the message that the IOD and net debt-to-GDP numbers may still be in flux, and perhaps you might even have enough time to re-run you numbers and arm him with the potential changes that he could speak to in the meeting? Happy to hear your thoughts and get your recommendation on what we can do in the next hour or so.

Thanks,

Tara

Subject: RE: Updated MMP Materials
Date: Sunday, October 23, 2016 9:50:55 AM

Hi Gadi

Went through the material, looks good. Net debt to GDP ratios reflect what John provided to Tara on Thursday. Lot of work by Tim's group to incorporate all the changes. I have only one suggestion re the narrative on the pension adjustment.

I would include something like; "While the resolution of the appropriate accounting treatment for pensions is dependent on a number of factors including the results of the independent review commissioned by the Government, the Province has adopted a prudent and risk averse approach in the FES by continuing with the legislated accounting basis for pensions. As a result, a pension adjustment based on historical averages is included in the 16-17 and out year expense projections".

As it stands the narrative does not make the point perhaps forcefully enough, that the Government has developed the FES on a prudent, conservative and risk-averse basis.

Thanks

Ken k

Subject: RE: Updated MMP Materials

Good evening

Please find attached MMP materials updated to reflect direction from the Ministers this afternoon. I understand these will be provided tonight in preparation for Monday's meeting.

Thanks for all the input and collaboration.

Tim Schuurman
Assistant Deputy Minister
Office of the Budget, Ministry of Finance
7 Queen's Park Cres.
Toronto ON M7A 1Z1

Subject: Updated MMP Materials

Good evening

Please find attached updated MMP package of materials, based on the discussion/direction earlier this afternoon, and in preparation for the Minister's briefing tomorrow afternoon.

This package includes the following:

- Revised main deck
- Revised Appendix deck (now also includes crosswalk from Budget to FES starting point to Pensions+Tools, for all three options, see slides 10-12)
- A newly developed Summary Placemat outlining/comparing the three options with details on the specific tools employed in each option
- Storyboard/Initiatives Placemat for FES

Thanks to everyone for your ongoing input and collaboration on this important part of FES development.

Tim Schuurman
Assistant Deputy Minister
Office of the Budget, Ministry of Finance
7 Queen's Park Cres.

Subject:	RE: net debt to GDP for 3 scenarios
Date:	Monday, January 16, 2017 12:30:32 PM
Attachments:	Net Debt - 2016-17 -FES- scenario requests (Jan 16 2017) (002).xlsx

Attached are the three scenarios requested. Please note that the most recent GDP that we received was used. This GDP was based on OEP's forecast on January 12th.

Thanks.

Subject: RE: net debt to GDP for 3 scenarios

Hi George, ideally we'd have them by 12:30 to incorporate for a 3pm briefing.

One thing I forgot to mention – scenarios 2&3 reverse the pension adjustment for 2 of the 4 pensions. I'm guessing this would also impact the debt levels, as you would be backing out the debt taken on in 2015 -16 Public Accounts as part of the pension adjustment?

Liane

Approximately when do you need this by in order to incorporate it into the Minister's briefing?

Subject: net debt to GDP for 3 scenarios

Hello George,

There was a SOC briefing this morning where multiple deficit scenarios out to 20-21 were discussed (attached). The SOC asked what net-debt to GDP would look like under each scenario; could I ask you folks to pull these number together for us? We are on a tight timeline as there is a Minister's

briefing schedule for later today that we would like to be able to incorporate this information into. Please let me know if this is too quick of a turnaround and I will let people here know we may be unable to make that timeline (there is another minister's briefing tomorrow morning that we can include the table in).

We would like to represent the three scenarios in the usual chart (p.100 of FES) but with the black line forking off into the three different scenarios (no need for the accumulated deficit to GDP line (red line)). If you are able to pull this together, it would be helpful, but we can also do the chart here once we have the numbers.

Thanks very much and please let me know if you need anything else from us/ have any questions.

Liane

Subject: RE: net debt to GDP for 3 scenarios

Attached are the three scenarios requested. Please note that the most recent GDP that we received was used. This GDP was based on OEP's forecast on January 12th.

Thanks.

Hi George, ideally we'd have them by 12:30 to incorporate for a 3pm briefing.

One thing I forgot to mention – scenarios 2&3 reverse the pension adjustment for 2 of the 4 pensions. I'm guessing this would also impact the debt levels, as you would be backing out the debt taken on in 2015 -16 Public Accounts as part of the pension adjustment?

Liane

Approximately when do you need this by in order to incorporate it into the Minister's briefing?

Subject: net debt to GDP for 3 scenarios

Hello George,

There was a SOC briefing this morning where multiple deficit scenarios out to 20-21 were discussed (attached). The SOC asked what net-debt to GDP would look like under each scenario; could I ask you folks to pull these number together for us? We are on a tight timeline as there is a Minister's briefing schedule for later today that we would like to be able to incorporate this information into. Please let me know if this is too quick of a turnaround and I will let people here know we may be unable to make that timeline (there is another minister's briefing tomorrow morning that we can include the table in).

We would like to represent the three scenarios in the usual chart (p.100 of FES) but with the black line forking off into the three different scenarios (no need for the accumulated deficit to GDP line (red line)). If you are able to pull this together, it would be helpful, but we can also do the chart here once we have the numbers.

Thanks very much and please let me know if you need anything else from us/ have any questions.

Liane

Hi Cindy,

Warren Lovely from CIBC is writing a short piece on the accounting issue. He wants to release very quickly. We are reviewing but please get back to me as soon as possible if you have any concerns.

Thanks,
Bonnie

Quick Hit — How do you spell relief? P-E-N-S-I-O-N

The Ontario government received some good news today, as a specially struck *Pension Asset Expert Advisory Panel* recommended that net assets in two jointly sponsored pension plans (one for teachers, the other for civil servants) "should be recognized as an asset in Ontario's financial statements". This may sound like an esoteric accounting matter, but don't be fooled: there are some non-trivial implications for the Ontario credit. (for Ontario's credit rating?) If you followed the earlier dispute between accountants at the provincial government and the provincial Auditor General you know that "pension adjustments" created some notable changes in Ontario's income statement and balance sheet in the 2016 fall update and the 2015-16 public accounts. By adopting the Panel's recommendation, Ontario will be able to record a smaller deficit for the 2016-17 fiscal year, relative to the AG's more conservative treatment which Ontario temporarily adopted in a fall update. In addition, when the government presents its 2015-16 comparative results in the upcoming Public Accounts, ~~So~~ last fiscal year's shortfall will be adjusted ~~shrink~~ from $5.0 billion to $3.5 billion (just 0.5% of GDP). The fiscal relief will be ~~even more~~ pronounced going forward, with Ontario in a position to sidestep a "pension adjustment" charge that had been pegged at $2.2 billion for 2016-17, $2.8 billion for 2017-18 and as much as $3.7 billion by 2018-19 in the fall (??). Thus, reverting to the province's historical ~~traditional~~ pension accounting treatment removes what could have been something of a fiscal headache for a government seeking to take the long-awaited step out of the red and into the black. And don't forget the corresponding reduction in net debt, as in accepting the Panel's recommendations, Ontario will also ~~we~~ reverse the $10.7 billion of pension-related debt (or writeoff of net pension assets) put on the books in the fall statement, knocking nearly 1.5%-pts from the net debt-to-GDP ratio. Ontario, like all provinces, still has challenges to contend with, but when it comes to pension accounting, this expert panel delivered some welcome news, even if the Auditor General might not fully agree. Stay tuned for

a supplemental report in the coming weeks, exploring accounting treatment on potential future net assets in two separate pension plans (HOOPP and CAATPP).

John and George reviewed same and the numbers are fine. Sentence structure could be improved. The reduction in the ratio is actually 1.4% but Warren qualifies himself by the word "nearly", so that's ok.

Thanks

Quick Hit — How do you spell relief? P-E-N-S-I-O-N

The Ontario government received some good news today, as a specially struck *Pension Asset Expert Advisory Panel* recommended that net assets in two jointly sponsored pension plans (one for teachers, the other for civil servants) "should be recognized as an asset in Ontario's financial statements". This may sound like an esoteric accounting matter, but don't be fooled: there are some non-trivial implications for the Ontario credit. If you followed the earlier dispute between the provincial government and the provincial Auditor General you know that "pension adjustments" created some notable changes in Ontario's income statement and balance sheet in the fall update and public accounts. By adopting the Panel's recommendation, Ontario will be able to record a smaller deficit for the 2015-16 fiscal year, relative to the AG's more conservative treatment which Ontario temporarily adopted in a fall update. So last fiscal year's shortfall will shrink from $5.0 billion to $3.5 billion (just 0.5% of GDP). And the fiscal relief will be even more pronounced going forward, with Ontario in a position to sidestep a "pension adjustment" charge that had been pegged at $2.2 billion for 2016-17, $2.8 billion for 2017-18 and as much as $3.7 billion by 2018-19 in the fall. Thus, reverting to the traditional pension accounting treatment removes what could have been something of a fiscal headache for a government seeking to take the long-awaited step out of the red and into the black. And don't forget the corresponding reduction in net debt, as Ontario we reverse the $10.7 billion of pension-related debt put on the books in the fall statement, knocking nearly 1.5%-pts from the net debt-to-GDP ratio. Ontario, like all provinces, still has challenges to contend with, but when it comes to pension accounting, this expert panel delivered some welcome news, even if the Auditor General might not fully agree. Quick Hit — How do you spell relief? P-E-N-S-I-O-N

The Ontario government received some good news today, as a specially struck *Pension Asset Expert Advisory Panel* recommended that net assets in two jointly sponsored pension plans (one for teachers,

the other for civil servants) “should be recognized as an asset in Ontario’s financial statements”. This may sound like an esoteric accounting matter, but don’t be fooled: there are some non-trivial implications for the Ontario credit. (for Ontario’s credit rating?) If you followed the earlier dispute between accountants at the provincial government and the provincial Auditor General you know that “pension adjustments” created some notable changes in Ontario’s income statement and balance sheet in the 2016 fall update and the 2015-16 public accounts. By adopting the Panel’s recommendation, Ontario will be able to record a smaller deficit for the 2016-17 fiscal year, relative to the AG’s more conservative treatment which Ontario temporarily adopted in a fall update. In addition, when the government presents its 2015-16 comparative results in the upcoming Public Accounts, ~~So~~ last fiscal year’s shortfall will be adjusted ~~shrink~~ from $5.0 billion to $3.5 billion (just 0.5% of GDP). The fiscal relief will be ~~even more~~ pronounced going forward, with Ontario in a position to sidestep a “pension adjustment” charge that had been pegged in the Province’s Fall Economic Statement at $2.2 billion for 2016-17, $2.8 billion for 2017-18 and as much as $3.7 billion by 2018-19 ~~in the fall (??).~~ Thus, reverting to the province’s historical ~~traditional~~ pension accounting treatment removes what could have been something of a fiscal headache for a government seeking to take the long-awaited step out of the red and into the black. And don’t forget the corresponding reduction in net debt, as in accepting the Panel’s recommendations, Ontario will also ~~we~~ reverse the $10.7 billion of pension-related debt (or writeoff of net pension assets) put on the books in the fall statement, knocking nearly 1.5%-pts from the net debt-to-GDP ratio. Ontario, like all provinces, still has challenges to contend with, but when it comes to pension accounting, this expert panel delivered some welcome news, even if the Auditor General might not fully agree. Stay tuned for a supplemental report in the coming weeks, exploring accounting treatment on potential future net assets in two separate pension plans (HOOPP and CAATPP).

Subject: RE: 2016-17 FSD&A Process

Alicia,
We were looking at the latest FSD&A. There are some minor rounding discrepancies throughout, starting from Table 1 and Table 2.

On page 20, the sentence that starts with "Interest expense grew from $11.6 billion in 2015-16…. We would need to verify the BPS IOD for 16-17, to confirm the amount.

Regarding references to net debt, we will need the final acc. deficit and TCA before completing it. Also, we are getting discrepancies for prior year net debt on Table 7.

Can one of OPCD's analysts who populate the FSD&A call Shemin Meralli, as it will be easier to go over the FSD&A, given the salmon-coloured protocol.

Thanks.

John

Subject: 2016-17 FSD&A Process

Hello everyone,
As OPCD initiates the process for compiling the Financial Statement Discussion and Analysis (FSD&A) section of the Annual Report, I am reaching out to you as key partners in this year's process. In light of everyone's busy schedule, we would like to share some details regarding our planning timelines. Please note that there will be fewer distributions of the draft FSD&A than last year, so it will be more important to ensure that our initial drafts reflect our best efforts.
The first draft of FSD&A will be made available on broad distribution during the second week of July (scheduled for July 11th). To help facilitate your input to the document, my staff will prepare an extract of last year's sections applicable to your area, populated with preliminary actual expense numbers (placeholders will be included for revenues until available in late July). The extracts will be provided in late June/early July and password protected. We will require your edits provided EOD July 7th in order for us to compile the complete document and perform an quality review and formatting prior to release on July 11th. In the meantime, if you would like a non-updated version of your area's extracts (based on the 2015/16 FSD&A), please contact me directly.
Please provide your updated extracts to: Daria Zaslaver (Daria.Zaslaver2@ontario.ca<mailto:Daria.Zaslaver2@ontario.ca>), Senior Analyst of BPS Reporting Unit of OPCD.
Below are currently planned key dates for your information.

* July 11th 1st distribution (reflecting preliminary expense numbers and placeholders for revenue numbers)
* July 18th 2nd distribution (same content as above and edits from 1st distribution)

- July 27th Copy of FSD&A shared with OAG

* August 4th 3rd distribution (both expense and revenue numbers)
* August 9th 4th distribution (for Manager/Director sign-off on August 11th)

- August 10th Copy of FSD&A shared with OAG

* August 14th 5th distribution (for ADM sign-off on August 15th)

- August 15th Copy of FSD&A shared with the OAG

* August 17th 6th distribution (for DM/MO sign-off on August 21st)

Please note that the AG reviews the FSD&A as part of the audit of the Public Accounts and requires support for any figures, statements, variance analysis and narratives reflected in the document, including both financial and non-financial. OPCD will provide support for the details included in the financial statement tables; however, please plan to send the relevant support for any non-financial data (e.g. performance or TCA related), variance explanations as appropriate. Please include these details at the same time as you provide your initial narrative.
Following the first distribution of the FSD&A, we will also initiate the process for compiling Q&As related to expenses. Similarly, Q&As for capital, debt and revenue-related matters will also be initiated at the appropriate times in the FSD&A compilation cycle. By incorporating the FSD&A support requirements and Q&A processes as part of the FSD&A compilation exercise, we hope to minimize the amount of time and effort on your teams.
If in case I have missed any key partners, please feel free to forward as appropriate.
We look forward to working with you throughout the Public Accounts process. Please feel free to contact me if you have questions related to the document, timeline and the process.
Thanks,
Alicia

A few questions/comments:

In the introduction, I think that the second line should have "to be" added, in the line: "this is the smallest amount **to be** borrowed since 2008-09", given that we haven't completed the year yet.

On page 7, first sentence, third line, I'd like to replace "...lower deficit for 2015-16..." with "lower borrowing requirements". That way we don't have to be specific to 15-16, as this year also has a lower borrowing requirement.

On pages 9 and 10, why don't we have the cost of debt as at September 30, 2016, instead of just leaving the March 31st number in there? My recollection is that in past FESs we've had a September update, even if the rate has remained the same as in March, and the September wording was in place in previous versions of this year's 3C, but without numbers. If memory serves correctly, the chart in last year's FES had a footnote, indicating that the current year was as of September 30th, while the other years were as of March 31st.

It would be best if we could incorporate these changes before ADM signoff on Wednesday, so that we can speed up that process with everyone having the most up-to-date version as we sit around the table. Maybe we could have Bud Sec do that at the same time as whatever changes come out of the Pension Extract review meeting tomorrow? Speaking of which, on 3B, page 5, third paragraph, I'd like to make the IOD paragraph consistent with what we have in 3C, paragraph 2 of page 7, so it would read (leaving the numbers out given that this email isn't password protected):

"Interest on debt expense for 2016-17 is forecast to be $x billion, $y billion lower than forecast in the *2016 Budget,* continuing a trend that has been in place since 2010, through a combination of lower deficits and borrowing requirements, and lower than forecast interest rates."

Could someone please pass that change on to whomever is responsible for updates to 3B, or should Ken and I just do this at tomorrow's meeting on the Pension Extract, given that's one of the pages that we'll be going over?

Thanks for everyone's hard work on getting 3C, and anything else related to debt and IOD elsewhere in the document, to this point. Almost there!

Yes, that change makes sense. Given that it's directly related to the pension adjustment, I think that it's best for you to bring it up at the meeting tomorrow, rather than changing it in advance.

Thanks,
Gadi

Hi Gadi

Thanks, John is liaising with Daniel and one of them will make these changes today.

I do have one more edit for your consideration in the attached document. The current wording is the FES which was actually mine, appears upon second thought, a little bit contradictory so I have provided an alternate. If you are ok with it then John/Daniel can input this edit as well.

Thanks

Ken k

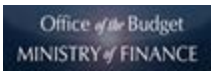
Hello

Please find attached a revised FES deck that could track into Cabinet next week, reflecting edits from our joint DM briefing this morning and feedback from Ali and Liz late this afternoon.



Note that the plan right now is to have Minister Sousa present the entire deck, but end at the

last chart in the deck and turn it over to Minister Sandals to make some comments.

I'll be forwarding this deck to TBS and mentioning that approach as well.

Briefing for the Minister is planned for late Monday and we will have speaking notes ready for that.

I agree with all of that, particularly leaving the future borrowing programs untouched. One other offset for this year is the reduction in the reserve, which will result in another partial offset to the reduction in this year's borrowing program, won't it?

> I'm rethinking what I want to do about LT Borrowing. Given that a big chunk of the deficit is, under scenario 3, the accounting change, I'd like to reduce the borrowing program and have a short, pithy explanation about how it's non-cash, so the amount we have to borrow is down. Given how far ahead we are in the borrowing program, that probably means that we'll be able to prefund, and maybe we should, in the narrative, talk about that, too.
>
> What do you think? If you agree with my proposed approach, we should bring Mike and Erica/Daniel into this conversation to make sure Mike agrees, and so that Daniel can help write the narrative. I'd also like to involve Bonnie, as a large part of what I'm trying to do with this strategy is to satisfy the rating agencies, and, through them, investors.

But we're using the reserve to reduce the deficit in scenario 3, so, if all else remained the same and this was the only change, wouldn't the borrowing program have gone up?

>>
>> I'm rethinking what I want to do about LT Borrowing. Given that a big chunk of the deficit is, under scenario 3, the accounting change, I'd like to reduce the borrowing program and have a short, pithy explanation about how it's

non-cash, so the amount we have to borrow is down. Given how far ahead we are in the borrowing program, that probably means that we'll be able to prefund, and maybe we should, in the narrative, talk about that, too.
>>
>> What do you think? If you agree with my proposed approach, we should bring Mike and Erica/Daniel into this conversation to make sure Mike agrees, and so that Daniel can help write the narrative. I'd also like to involve Bonnie, as a large part of what I'm trying to do with this strategy is to satisfy the rating agencies, and, through them, investors.

Yes, OPCD's restatement is more accurate. Gadi hope you agree.

Thanks

Ken k

As some of these questions are for detailed background data, we may need to provide those post-tomorrow's meeting so we can gather it up in a way that works best to answer the question. But we'll come prepared with as many A's as possible and together we can map out a plan to get you the details you need following the meeting as well. We'll do our best to have all the right people in the room tomorrow.

We’re happy to accommodate your request for a meeting….guess I’d suggest maybe late Wednesday so that folks have time to follow-up on the questions we’d get from you guys Tuesday afternoon. Also Wednesday mornings are filled with regular check-in meetings folks need to be at, so maybe we can find time Wednesday afternoon.

> • Right now the plan is for the Minister to rise and present the FES at 1pm on Monday. So I'm wondering if it is ok for you guys to come at 11am. We would expect you to stay in the boardroom we assign to you until the Minister stands up to deliver the speech – like a lock-up of sorts. Please let me know if you have any issues with that.
>
>
>
>
>
>
>
> • I'm working hard to get you guys bound copies for your secure reading, but it may be a challenge as they are under OPP guard until the Minister stands (and we have no official lock up so I need to pull a few favours). If not, we'll print out copies on paper for you.

>
>
>
>
> • As far as answering questions, we'll try and have a few people around but it's a crazy day around here for us and we'll probably be scrambling. If its ok, I prefer to not make it a merry-go-round of people going in and out of the boardroom where you are. If possible, can we agree that you guys will spend the first hour or so going through all the documents, compiling your questions into a list, and then we'll ask people to come around for a chat? That way it's abit more organized, and I can tell people to make themselves available around noon for q's rather than stay on stand-by for 2 hours not knowing. Let me know what you think. If we can't get someone in the time you're here, of course we'll arrange for any follow-up.

As some of these questions are for detailed background data, we may need to provide those post-tomorrow's meeting so we can gather it up in a way that works best to answer the question. But we'll come prepared with as many A's as possible and together we can map out a plan to get you the details you need following the meeting as well. We'll do our best to have all the right people in the room tomorrow.

We're happy to accommodate your request for a meeting….guess I'd suggest maybe late Wednesday so that folks have time to follow-up on the questions we'd get from you guys Tuesday afternoon. Also Wednesday mornings are filled with regular check-in meetings folks need to be at, so maybe we can find time Wednesday afternoon.

We would expect you to stay in the boardroom we assign to you until the Minister stands up to deliver the speech – like a lock-up of sorts. Please let me know if you have any issues with that.
>
>
>
>

If its ok, I prefer to not make it a merry-go-round of people going in and out of the boardroom where you are. If possible, can we agree that you guys will spend the first hour or so going through all the documents, compiling your questions into a list, and then we'll ask people to come around for a chat? That way it's abit more organized, and I can tell people to make themselves available around noon for q's rather than stay on stand-by for 2 hours not knowing. Let me know what you think. If we can't get someone in the time you're here, of course we'll arrange for any follow-up.

>
> Attached is the draft budget commentary. It's somewhat longer than in past years – we're doing longer commentaries for all the provincial budgets based on investor feedback. **Please provide your feedback, if any, by 10:00 am.**
>
> There are a few items I want to draw to your attention.
>
> <!--[if !supportLists]-->• <!--[endif]-->The highlighted capex number on page one – I've used the 14.2, 15.7, 15.8 outlined in the budget (p. 232) and assumed 15.8 for the three subsequent years.
> <!--[if !supportLists]-->• <!--[endif]-->The DBRS-adjusted debt figures are a crude first estimate based on the tables in the budget and what David shared yesterday. Seems like debt (our basis) is relatively stable in the 42-43 range. We'll solidify that when we meet later in April.
> <!--[if !supportLists]-->• <!--[endif]-->Qualified financial statements – second paragraph. As discussed yesterday, this was my paragraph going into the budget. I was subsequently given the actual amounts for the net pension asset, which suggests the AG would state the deficit is understated by 4.0 to 5.0 billion. I will include something about the qualifications in the commentary, though I'm open to recasting somewhat to avoid disclosing anything confidential. From my perspective, the risk is that a new government could

make changes to accounting policy/fair hydro structure that would then have implications for credit metrics.

<!--[if !supportLists]-->• <!--[endif]-->We're still bouncing around on the title with no decision. It will be critical of the government.

We did not take this to rating committee. Our initial view is that this is negative, but without immediate rating implications. It increases the downside risk over the medium term though.

The document hasn't been through editing/layout. Forgive any lingering typos/awkward format.

Feel free to give me a call to discuss.

Paul

Subject: RE: Details of 18-19 and 19-20

Hi Gadi

Went through the 2 slides, the pension adjustment is still included as an expense and the second slide indicates that DRC is not available from 19-20 onwards, it should be from 18-19 onwards since the industrial portion is eliminated as of April 1, 2018. IOD savings are accurate for 18-19, as expected nothing is listed for the final out year.

Thanks

Ken K

Subject: Details of 18-19 and 19-20

Hello

Part of moving the fiscal conversation forward to the next step will be helping people better understand the fiscal composition of 18-19, as well as what we are facing in 19-20. Think I've spoken to all of you about this around MMP and subsequent to that.

We've prepared the attached piece to help acclimatize people to it and to help answer some basic fiscal architecture questions.

Could you please review and let me know by Monday if there things we need to tweak, or additional details worth highlighting? I'd like to share with DM's and our MO early next week.

Have a great weekend

> Please find attached a potential draft deck that attempts to reflect the direction coming out of FPC today to support an MMP discussion on Monday on the fiscal strategy for FES.

Also find attached an appendix deck that could accompany the main strategy deck to further explain some of the details in the strategy deck. Please note that these decks include information on confidential measures under consideration and distribution should be restricted.

There is a post-FPC meeting regroup scheduled for Thursday at which this deck will be discussed.

Thanks for everyone's participation in developing these options over the past few weeks.

Subject:	Re: FAO vs. FES
Date:	Tuesday, November 15, 2016 9:16:07 AM

Their IOD forecast is very low, and I'm not sure how they got there, so if you could find out their assumptions on that, it would be interesting to know. I think Bonnie may have some insights on that.

While our interest rate assumptions looked pretty conservative until last Tuesday, 10 and 30 year rates are 40 basis points higher now than they were then, so we'll have to see how the markets continue to react between now and next spring when we lock down numbers.

Subject: RE: FAO vs. FES

Thanks Gadi, nothing much to comments other than the FAO's revenue assumptions are considerably lower than that of the Province despite the nominal GDP uptick. Expenses are close enough though they assume a much lower pension adjustment and a lower IOD.

Be interesting to see what their assumptions were for IOD, of course our 18-19 forecast for IOD will also reduce once we move from the 15 year average to the OEP forecast.

Thanks

Ken K

Subject: FAO vs. FES

As you all know, the FAO will be reviewing the FES and developing questions for us to review and answer when we meet with them on Wednesday.

To help us all prepare for this, we've done a cross-walk from the FAO fiscal plan to the fiscal plan outlined in the FES today. The table is attached for your reference.

In summary, the FAO Outlook shows higher deficits than outlined in the Fall Statement. Key factors include:

- The FAO's revenue forecast is significantly lower than what is outlined in the Fall Statement (more than $5B in 18-19).
- The FAO's estimate of new government initiatives (child care, HST rebate, etc) are higher than what are built into the Fall Statement, particularly in 17-18 and 18-19.
- Combined, these two elements, which result in a deterioration in the fiscal outlook, are partially offset by higher IOD savings assumed by the FAO.

As we already know, the FAO underestimated the Pension Adjustment in each year, which reduced the variance between the FAO's deficit projection and the FES. Presumably their updated forecast in their commentary (to be released next week) will increase the Pension Adjustment, and also, the resulting deficit projection.

>
> Ken,
> We are basically running into the same issue as last year. The FAO is using a different method and is thus calculating different net debt amounts than to our published references, so much so that our variance on increases in net debt is approximately $35 billion by 2021-22 as per page 5 of the fiscal outlook document. (The FAO projects an increase of $87 billion by 2021-22, while we project an increase of $52 billion). Again, we cannot ascertain how valid their net debt assumptions underlying the document are without further information.
>
> The FAO seems to be taking a neutral position on the pension adjustment dispute and this is causing some confusion in the document in some of their references. The Chart on page 6 is confusing for example as there is a top line called AG recommended net debt to GDP, a bottom line called 2017 Budget but also a middle line called government presentation. We are not exactly sure why it's called the "Government Presentation" alongside another line called "2017 Budget".
>
> Lastly, the FAO is needlessly presenting balanced budget information throughout the document before the Reserve. It is not clear what the rationale in doing this, as doing it will always have a variance from Budget. Having a reserve for emergencies is a hallmark of a prudent and accountable government.

> Please find attached our consolidated feedback to the Economic Outlook and Fiscal Outlook draft reports. We have focussed on the factual components of this, and have tried to keep an eye on the cabinet confidentiality issue as well. With that in mind, here are a few high-level points to help guide your review of our comments:
>
> -- As in past reports, it is really important for us that you clearly distinguish what is an FAO projection vs. what is a Budget or government projection. This is applied somewhat inconsistently in the draft report. As such, we've provided some advice on where we think that distinction is important to have clearly articulated.
>
> -- Since the Budget forecast horizon only is provided out to 19-20, we think it is important that you make it more clear that you have provided two additional years beyond what is provided for in the Budget documents.
>
> -- With respect to Cabinet Confidentiality, we think that, overall it has been well-respected -- with two exceptions.
>
> 1. In a footnote about the child care spaces, you note that "ministry of finance officials indicated that its not fully funded in the fiscal plan" -- a point that is protected under Cabinet Confidence and cannot be disclosed as such. We've provided the deletion in the comment and some alternative wording.
>
> 2. The pension adjustment numbers (ie, the impact of the AG's pension accounting treatment) is not something used for the purposes of building the fiscal plan in the Budget -- and as such, cannot be considered a government projection (even though the government did disclose the potential impact of the pension adjustment in the 2016 FES, it did not do so as part of the 2017 Budget). As such, the underlying multi-year pension numbers provided to you by OPCD should be considered advice to Cabinet and protected. We think that perhaps a further conversation is required on this to make sure we are respecting Cabinet Confidentiality -- but in the interest of giving you feedback today, we thought it was important to provide a potential alternative for consideration. If you consider making it clear that those projections of the pension adjustment are FAO projections -- and not a government projection -- then perhaps we may be able to avoid a breach of Cabinet Confidentiality. We understand from OPCD that they did provide you with the underlying data, and instructions on how to calculate -- but the pension adjustment itself, as presented in the tables, is an FAO estimate of the pension accounting impact and not the government's. As such, you should clearly label it as such and be held accountable for explaining and owning the calculation as well, if asked. If you feel these need additional conversation with us, please let us know....happy to have a follow-up discussion. Hope that makes sense.
>
> Thanks to everyone across MOF/TBS world who worked hard and collaboratively to make sure we could get you something by eod today. We appreciate the opportunity to review and provide feedback. We are happy to have more conversations in the lead-up to the provision of the report to Ministers. If you could also let us know when you expect the release date to be, that would help us plan as well.

Thanks, Ken. If the review goes against the Province, I think we have a problem, no matter how we describe it in the FES.

Thanks again, and have a very happy Thanksgiving.

Gadi

Subject: FES Fiscal Strategy #4

Hello

Please find attached an updated FES fiscal strategy document, that takes into account the feedback from both Wednesday's FPC and the Minister's briefing yesterday, to move it along to the next stage of discussion. This could be considered an agenda item for upcoming FPC-lite meetings next week or other venues to move the decision-making forward.

Happy to take feedback or comments.

Hi John

I spoke to Tim and he suggests that for 15-16 we provide the net debt to GDP on both basis but reverse the pension adjustment for the out years

On Oct 4, 2016, at 12:17 PM, Christina Zhang <Christina.Zhang@ofina.on.ca> wrote:

Thanks, Ken. As you point out, there are no easy answers or what I'd call "good" solutions given the box that we find ourself in following the auditor's opinion and views on pension accounting. I'd really like to know who the independent third party was that she used to confirm her views on this, and why they're so contrary to OPCD's.

On Oct 18, 2016, at 10:14 PM, Ken Kandeepan <Ken.Kandeepan@ofina.on.ca> wrote:

> Thanks Gadi, with the exception of the option that shows the pension impact as a narrative, the others present risks for the government. If the review results are aligned with the Government's position then we are effectively balancing in 16-17 (a very small deficit of approximately $2B) and presenting surpluses in 17-18 and 18-19. These commitments need to be met in order to preserve credibility.
>
> Alternatively, if the review results are against our position the requirement to balance and all that entails still exists, and slippage represents a loss of credibility. If we are going to go this route, I would recommend that we present the pension adjustment separately instead of including it in the program expense.

Please find attached an updated version of the FES Fiscal Strategy Deck following our meeting earlier this afternoon – reflecting as many of the comments and suggestions as we could, and incorporating amended numbers where applicable.

We propose this deck be tabled as part of tomorrow's FPC discussion.

Please note the deck includes confidential information, including on tax measures, and as such, distribution should be restricted.

In one way Gadi I am a little cheered by her refusal to release whatever external opinion she has obtained.

If it was from one of the big four and was clear and unequivocal she probably would have released it, not only to buttress her position but to limit the government's options.

The fact that she has not done so increases the probability that the independent review would opine in our favour.

Hopefully this not just wishful thinking on my part.

Thanks

Ken k

Subject: FES Fiscal Update Deck for MPC

Please find attached an updated version of the FES Fiscal Outlook Strategy deck that would track to MPC tomorrow, as discussed earlier today, reflecting the feedback and discussion.

Please note that this deck contains information on tax and other financial information and that circulation of this deck should be limited.

It is also the internal FES password.

Yes, we need to make sure that the pension adjustment is described exactly that way, and that the explanation is included in the narrative in the fiscal chapter, not just introduced and first described in the narrative in 3c as it currently is.

I see that we're doing the financing table meeting tomorrow's 9:45 before my weekly with you. I assume Jim and Dave came to you with their objection to the way I wanted to reduce the LT borrowing program, and with the compromise that I agreed to?

Also, I don't think we'll have time for your weekly after that, as I have to be at FPC for the final kick at the can on the fiscal plan before we lock down numbers, so should we move it to the afternoon, or to Thursday?

Thanks,
Gadi

Hi Gadi

Yes I did have a conversation with Jim and Dave and the FT that we will be presenting to you today does reflect that discussion.

We can move the bi-weekly to the afternoon

Thanks

Ken k

Thanks, Ken. I noticed that they've got the IOD target as a low risk for this year, but a medium for the out years. I'm fine with that characterization.

Hi Gadi

Just saw this email; no significant changes from the previous version. The pension adjustment comprises around one third of the gap in 17-18, growing to well over 40% in 18-19, hopefully the review will provide some relief.

Thanks

Ken k

Subject: Fiscal Overview Deck for FPC

Deputies

Please find attached an updated Fiscal Overview deck that could track to FPC this week (and Minister Sandals' briefing first thing tomorrow morning).

This reflects updated numbers on both the revenue and expense side since we discussed it on Thursday with the MO's. It also attempts to capture the various feedback and requests made at that meeting.

Caveat and disclaimer: Please note that while folks have been working very hard at getting the numbers scrubbed and reviewed, that there is still a significant degree of work that needs to be done to add precision and accuracy to the numbers. In addition, when we discussed this deck as a group late yesterday, there are some tweaks that we would like to make to the way some of the numbers are shown which we will pick up on Monday.

Thanks again to all who have participated over the past few days to get us to this point.

Tim Schuurman
Assistant Deputy Minister

Office of the Budget

Ministry of Finance

Just to expand on my quick response from this morning, there is, as you're very well aware, a parallel discussion going on about electricity mitigation that potentially wouldn't affect the deficit, but would increase debt. I know from discussions that you and I have had that there is the possibility under certain structures for total debt to go up, without net debt rising, but I'm concerned that even if that were to become the selected approach and met the accounting parameters, others, such as rating agencies, would still, in their calculations, add this debt back in, so I'd like to, at least for now, hold that flat-lined net debt to GDP box on slide 5 in place.

The numbers you provided to Scott and me on Wednesday as to the amount of room we'd have to flat-line were very helpful. Another alternative if the off-income statement approach doesn't work for accounting or other reasons, although this is an alternative that our Minister is nowhere near comfortable with at this time, is that the amount of electricity relief could hit the fiscal plan, and we would, if that were to be the case, run deficits that were explicitly, and very publicly, tied to the electricity price relief. At that point the flat-line on the ratio would be a potential constraint on how much price mitigation would be available. The Government is still a long way from making that choice, but Tim is, I believe, trying to give MMMP an idea of what the trade offs are.

Probably more than you want to know, but I hope that puts slide 5's boxes into some context for you.

On your second point on slide 5, I know from the discussion that we had late on Friday, as well as from past experience, that Tim and Karen are very clear on these investments needing to be operational, as opposed to capital. The government tends to view much of what they spend on operations as investments, and that's even more the case this year with cap and trade proceeds, so this is an attempt to speak in language they're comfortable with. Of course, if the choice in the red box on flat-lining the ratio becomes the operative constraint, capital delays work, too.

On the pension adjustment, the AG's response to the report when it was presented to her was not supportive. Slide 8 has it being taken off, still, though, which is a big part of why the Q3 Outlook is where it is, and why the gap for 17-18 is only 1.2, as compared to 5.2 in the slides in the appendix that you are concerned about. That's what the second full bullet is trying to explain, maybe not clearly enough. Don't worry about the appendix slides, as they're just showing the magnitude of the problem before we began finding solutions.

Hope that makes things a little clearer. Hard to do these things over the weekend when we don't have a chance to talk, and for me to give you the context I've gleaned from meetings at QP.

Thanks again for your very useful analysis.

Gadi

TBS is developing a deck this weekend and we're continuing to develop a fiscal deck. The latest version is attached. Wanted to give you all an opportunity to review, as it cuts across all your areas of responsibility....and interests.

Happy to take feedback over the weekend or into Monday morning. Just note that we have a Joint Ministers' meeting on Monday where this will need to be walked in, and I expect that Scott and the MO will be looking to review perhaps as early as tomorrow.

Cheers

Tim

> Hi Bonnie,
>
> Please see attached for some detail on our projection. The first part of the table shows

the FAO's projection for net debt, TCA and accumulated deficit on an AG basis. As you can see, the identity holds pretty well for each year. There's a small, under $1 billion variance, and I think it's due to a small adjustment in public accounts, which I commented in the Excel sheet.

The second table breaks down the net debt variance between the projection in the FES and our projection on an AG basis. As discussed, the difference is due to the pension asset for the jointly sponsored pension plans, the FHP, the differences in the deficit projections and the reserve. The last table will probably be interesting for you. It shows that, on the government accounting basis, we're only $3.6 billion higher than the 2017 FES projection – and this is entirely due to differences in the underlying deficit (abstracting from any accounting differences).

As discussed, for the purposes of the AG presentation, which we adopted based on the recommendation in her recent FHP report, we're assuming that:

- The elimination of the IESO market asset would reduce the net income of OPG;
- This would then reduce the Province's total revenue and increase the deficit by an equivalent amount; and that
- Ontario's net debt would increase by the stock of that market asset (since the elimination of the market asset would reduce OPG's equity, which the Province records as a financial asset)

However, there would be no impact to borrowing and gross debt relative to the government's FES presentation because the government already incorporates the provincial portion of FHP borrowing in its fiscal plan.

Anyway, have a look and we'll be happy to meet on Monday to discuss further.

Hi Ken. I like the wording that you've proposed, actually, even though you're reluctant to use the last sentence. I know that you're reticent to insert it because of the possibility of the accounting reversal, but that's not the approach that the PO/CO or the MO have been leaning towards as we've come to a conclusion on how the numbers and narrative will look for the FES. While their preferred approach may change by the time we get to next year's Budget, in the meantime we shouldn't hesitate to use the ratios as they currently are, and, I suppose particularly in this case where the trend in the out years, if not the absolute numbers, goes in the direction we want to show.

Regards,
Gadi

Hi Ken, John, - understand Ken, you couldn't make it to sign-off today and John you came – thank you.

Im signing off on 3b now as the director responsible for the chapter and noticed that John, you inserted language regarding what's happening to net debt to GDP for 2016-17 in the fiscal outlook section. However, because this insertion just refers to 2016-17 it is seems out of context from the remainder of the section and wondering if you could propose a revision that speaks to the trend of declining after balance or what's happening over the medium term.

Here's the insertion per John pen edits:

The net debt to GDP ratio is projected to increase slightly in 2016-17 primarily as a result of marginally lower than forecast nominal GDP when compared to the 2016 Budget forecast.

Let me know. Thanks.

Hi Selina

Had a discussion with Gadi, he prefers that we include the following given that the overall direction from the MO/PO is to move forward on the basis of the legislated accounting for pensions and address the results of the independent review at that time.

"The net debt to GDP ratio is projected to increase slightly in 2016-17, primarily as a result of a nominal GDP that is forecast to be marginally lower than what was forecast in the 2016 Budget. Over the medium term the ratio is projected to decline progressively".

Thanks

Thanks very much Cindy, as always a very clear and concise explanation. This is adequate for our purposes and we take note of your point that the Province has not mentioned HOOP and CAATT as yet.

As such, if the question is ever asked by investors as to why the expenditure offset and of course it's reversal increases materially from 15-16 to 18-19 we shall respond that in addition to the amortization and the net interest income of the two plans in question other pension plans of the province are also moving in to an asset position.

As they do so the expenditure offset and its reversal increases. All of these are being reviewed by the Independent Panel and we await its report with bated breath. Well perhaps that's an exaggeration but certainly with great interest.

Thanks again

Subject: Pension Adjustment

Hi Nadine

As Mike Manning meets investors including financial institutions the pension adjustment questions does come up on a regular basis. Thanks to the explanations previously provided by you, including the briefing note that you shared we are able to adequately respond to all questions so far.

However, on a pro-active basis I do have one more. The PA increases to $3.7 billion in 2018-19 from $1.5 billion in 2015-16. As I understand it a major component of the PA is the amortization of the gain on the assets over an appropriate period. So our question is; does it mean that the gain on assets has increased to such an extent that the resulting amortization of the gain has also increased by more than two-fold over 3 years.

I am including Cindy as well in this questions since she has provided me with some explanations on other aspects of this issue and she may also be able to shed some clarity.

Thanks and if you believe this can be best answered by a short meeting between you and Mike and myself, we will be happy to schedule one.

Subject: RE: Pension Extract

Many thanks to Ron and Alana for pulling the pension language extracts from the yellows for us to review altogether in one package. I've read all the references to the pensions across all the chapters and have the following observations. Ron is setting up a meeting for us on Tuesday to for 30 minutes to talk about this so we can avoid revisiting this constantly during ADM sign-off later in the week.

Key observations:

· Accountability and Transparency Chapter – talks all about 2015-16 Public Accounts process and outcome, but makes no reference to what we're doing in the out-years. I'd recommend we mention something about how we're treating in the out-years for consistency. Right now it reads as if we're awaiting the outcome of the Panel and then will decide what to do after that.

o This chapter also refers to "conservative treatment" which was language Cindy wanted removed to be replaced with "cautious".

· Chapter 3b – makes explicit connection to the draw down of the reserve and the impact of the pension accounting change. This is a decision point and we should discuss. It calls the pension change "unbudgeted" and "unexpected."

· Chapter 3B – in referencing the 2016-17 change in pension expense, it describes it as "reflecting the most recent actuarial valuations of the pension plans" which I didn't realize the numbers did. Thought these numbers were based off of what we did in January/February of this year for budget? This is the only place where we reference this updated valuation in the whole document. Is this accurate and should we be saying it at all?

· Borrowing Chapter – has very different language than the other chapters on this. Refers to "prudent and risk-averse approach" (instead of conservative or cautious) and calls it a "pension adjustment" rather than an accounting change, and calls it a "legislated change" rather than a "regulated change." Will need to align it with other chapters

once we land that language.

· Miscellaneous – the language in the footnotes and the text is not always consistent and is challenging to cross reference. Is it a change in accounting treatment, or a pension adjustment; is it accounting for pension assets or pension expense?

Hoping a meeting will help us create some symmetry across all the papers on this.

Ron, Alana

Wondering if, as part of landing today's distribution, if we could request a pull of all the paragraphs and language across the fiscal, debt and other chapters (responsible management) that talk about the pensions accounting change. This is something that both Cindy and I would like to review across the whole document to make sure we're treating it consistently, accurately, and effectively.

· Tara can help locate all the references in the fiscal chapter

· Ken K can help locate all the references in the debt chapter

· Nadine can help locate all the references in the Financial Accountability chapter.

We can make sure that Cindy, myself, Gadi, and Karen receive a copy of this pull later tonight for weekend review.

Subject: RE: Pension Extract

Many thanks to Ron and Alana for pulling the pension language extracts from the yellows for us to review altogether in one package. I've read all the references to the pensions across all the chapters and have the following observations. Ron is setting up a meeting for us on Tuesday to for 30 minutes to talk about this so we can avoid revisiting this constantly during ADM sign-off later in the week.

Key observations:

· Accountability and Transparency Chapter – talks all about 2015-16 Public Accounts process and outcome, but makes no reference to what we're doing in the out-years. I'd recommend we mention something about how we're treating in the out-years for consistency. Right now it reads as if we're awaiting the outcome of the Panel and then will decide what to do after that.

o This chapter also refers to "conservative treatment" which was language Cindy wanted removed to be replaced with "cautious".

· Chapter 3b – makes explicit connection to the draw down of the reserve and the impact of the pension accounting change. This is a decision point and we should discuss. It calls the pension change "unbudgeted" and "unexpected."

· Chapter 3B – in referencing the 2016-17 change in pension expense, it describes it as "reflecting the most recent actuarial valuations of the pension plans" which I didn't realize the numbers did. Thought these numbers were based off of what we did in January/February of this year for budget? This is the only place where we reference this updated valuation in the whole document. Is this accurate and should we be saying it at all?

· Borrowing Chapter – has very different language than the other chapters on this. Refers to "prudent and risk-averse approach" (instead of conservative or cautious) and calls it a "pension adjustment" rather than an accounting change, and calls it a "legislated change" rather than a "regulated change." Will need to align it with other chapters

once we land that language.

· Miscellaneous – the language in the footnotes and the text is not always consistent and is challenging to cross reference. Is it a change in accounting treatment, or a pension adjustment; is it accounting for pension assets or pension expense?

Hoping a meeting will help us create some symmetry across all the papers on this.

Subject: Pension Extract

Ron, Alana

Wondering if, as part of landing today's distribution, if we could request a pull of all the paragraphs and language across the fiscal, debt and other chapters (responsible management) that talk about the pensions accounting change. This is something that both Cindy and I would like to review across the whole document to make sure we're treating it consistently, accurately, and effectively.

· Tara can help locate all the references in the fiscal chapter

· Ken K can help locate all the references in the debt chapter

· Nadine can help locate all the references in the Financial Accountability chapter.

We can make sure that Cindy, myself, Gadi, and Karen receive a copy of this pull later tonight for weekend review.

Hi Gadi,

Here are the questions – this is **not** directly related to Ontario's rating. They are related to the governance and legislation around public pensions. I think I should send to Elizabeth Doherty (ADM Income Security and Pension Policy) to start.

Please let me know if you think I should send to someone else.

Subject: RE: Pension questions

Hi Bonnie,

To follow up from Marcy's email, our colleagues in Fitch's non-bank financial institutions group are looking at the credit quality of public pension funds and pension asset managers as it pertains to their own direct debt obligations. As part of that assessment, they review the nature and extent of powers that a sovereign or sub-sovereign sponsor has to affect the performance of a pension. Canada's public pensions are on this list given their global prominence.

We have found a tremendous amount of online data and information on Canadian public pensions (authorizing laws, public accounts, actuarial valuations), but much of it addresses or references the powers and duties of the pension plans themselves, as opposed to what powers the sponsoring governments retain or could exercise in certain circumstances. The questions below are really

intended to address that sovereign/provincial perspective. I should also note also that the questions are not necessarily Ontario-specific, but I did modify some of them in view of the many different institutional/governance structures for public pensions in Ontario.

--In the event of a sovereign/provincial default, what is the legal basis by which a public pension fund retains its capacity to pay its own debt obligations?

--In the event of a sovereign/provincial default, what legally prevents the sovereign/province from restricting the ability of a public pension fund to pay its obligations?

--Who owns the assets held by the pension fund—the pension fund itself, the contributing employers, retirees, the pension plan sponsors/sponsors, or the sovereign/province that originally authorized the pension? Do the assets have a legal status that protects them in the event of a bankruptcy by a contributing employer?

--Can the sovereign/province, pension fund sponsor/sponsors, or participating governments make use of pension assets in the event of their own fiscal distress?

--Can the sovereign/province compel a pension fund to buy government debt or take responsibility for public capital investment (separate from the investment choices that the pension fund is authorized to make by itself)?

--Can the sovereign/province restrict or eliminate its own employer contributions to a pension fund if it faces fiscal distress?

--Can a pension plan sponsor or contributing employer remove its assets and sever its relationship with the pension fund without sovereign/provincial approval?

To the extent there are legal/statutory or judicial references, I would welcome them; I've already downloaded the Pension Benefits Act and other available financial, actuarial and legal information for CPP and for several other plans like HOOPP, MERS and OTPP. I've also attached a copy of our published criteria for "non-bank" financial institutions, for your reference. If it makes more sense for you, we would be happy to schedule a phone call to discuss!

Subject: Pension questions

Bonnie,

Good afternoon. I am reaching out on Doug's behalf to solicit assistance regarding the province's employee pension plans. Separate from our discussions related to Ontario's economy and finances, some colleagues of ours at Fitch who focus on "non-bank" financial institutions are developing a framework for looking at pension funds globally; given the size and scope of Canada's public pensions, Doug would like to ask some general questions to understand Ontario's relationship to its pensions plans. A possible start could be Doug sending you questions directly and asking you to put him in touch with the correct individual after you have had a chance to review them. Please advise and thank you.

Best,
Marcy

Hi Tim and Gadi

As Gadi points out the reason is primarily accounting adjustments related to the translation of OPG's and H1's results from US GAAP to IFRS and a new Pension Adjustment plus of course the deficit offset by the unrealized gains relating to the Ontario Nuclear Funds.

Note that the PA itself has a schedule detailing all of the above, BTW its CPA now, not CA :)

Thanks

Ken K

There are some accounting changes that OPCD has included that make the difference. I'm copying Ken as he can give the specifics, but the thing to remember is that accumulated deficit is the sum of all surpluses and deficits since Confederation (that's the part that we all remember) plus, or minus, any accounting changes (that's the part that everyone that isn't an accountant usually forgets).

If you get a chance, can you call me at 5-8001? I have a question about the FAO debt to GDP report.

Thanks,
Gadi

Subject: Q on AD

Hey Gadi! Think you're back today……hope you had some nice time off.

Scott dropped by with a few Q's for me this morning, one of which I wasn't able to answer.

The change in accumulated deficit from 15-16 to 16-17, in the Public Accounts financial statements and in the summary tables is $1.5B. But if the deficit was only $1.0B, should it be changing by only $1.0B? I wondered if the line by line was having an impact, but I can't tell. The math isn't working for me, but I'm no CA. :)

Subject: Q3 FPC Deck and Q3 Document Template / Request for Input
Importance: High

Hi All,

OB is in the process of preparing a draft Q3 deck that will track to FPC this Wednesday. The deck lays out the key 2016-17 building blocks that could be updated as part of the Q3 publication. In addition, we're updating a draft Q3 document template. We'll need input from your areas on both these products this week. I'm including additional information below.

For the **FPC Q3 deck**, it would be appreciated if we could get the following information from TBS by **noon/early afternoon tomorrow (apologies for the tight timelines)**:

- **16-17 post-FES Expense Update (TBS):** We have included placeholder for an expense slide. The intention is for the slide to provide an updated list of initiatives that were not included in the FES expense outlook.
- **Recommended Expense Update/Signature Initiatives (TBS):** We may build in options for what the outlook could look like – it would helpful if you could provide a recommendation for the expense changes that should be taken on/profiled.
- **16-17 C-Fund Update (PEMD):** We have included a c-fund slide that was used in the Q1 finances briefing materials (attached with current PW). We would like to include an updated version of this slide in the appendix of the FPC deck. It would help to have this out to 19-20.
- **Pension Narrative (OPCD):** High level bullets on the pension adjustment.

For the **Q3 Document Template** (attached), we're looking for input from **PEMD, OPCD, OEP and OFA** by **10am on Friday, January 27**:

- Attached is a draft of Q3 finances template that is based heavily off of the 2016 First Quarter Finances. **We've highlighted the sections that we would like your respective areas to update in the enclosed.**
- Note, there will be some highlighted content that is *not possible* to update for Friday, however there will be a formal distribution process where additional information can be incorporated.

Please feel free to send input directly to Liane and Emma (in copy).

Many thanks,
Ryan

Subject: RE: Q3 update

Hi Everyone – just wanted to share with you the latest on the strategy for Q3. We are headed back to FPC next week with a further 2 scenarios on the deficit target that could be published. In addition to the ones we took earlier this week – two new options are proposed – one is to reverse the pensions only (option 1 in the materials), and the second is to take on a certain amount of ministry pressures we think will materialize (option 4 in the materials).

In terms of the materials – there is both a deck and a placemat that we are proposing to take forward. The placemat illustrates the 4 options and includes how the revenue/expense change table would appear relative to Budget and some proposed narrative for each scenario.

The deck is very similar to what we took forward last week but has a couple of new slides. Tim has also just circulated to your ADMs

Can I ask that you specifically take a look at slide 8 to ensure you are comfortable with the wording as well as the narrative on the placemat that would be helpful. But happy to hear any comments on the rest of it as well. We are looking for any comments back by 3:30pm today so we can finalize and send up to our DM/MO today.

And – we are continuing to track for a release on Feb 13 and we will be in touch to request your assistance.

Happy to discuss.

Thanks.

Subject: RE: Q3 update
Importance: High

Hi All,

Following up on my email from last week, we received relatively recent direction regarding the release of Ontario's Third Quarter Finances – the tentative plan is to publish Q3 finances ahead of the February 15 deadline. We are tentatively tracking a release date of Monday February 13.

As you can imagine, timelines are very compressed, and includes a possible trip to FPC this week. In order to meet this week's deadlines, while also preparing for the release of the actual publication, we're asking for input from you in stages:

EOD Today:
We have prepared the draft of a deck, which we are working towards tabling at this Wednesday's FPC (TBC). The deck lays out the key 2016-17 building blocks that could be updated as part of the Q3 publication. It would help if we could get the following from you folks by the end of today:
16-17 post-FES expense update: We have included placeholder for an expense slide. The intention is for the slide to provide an updated list of initiatives that were not included in the FES expense outlook.
Recommended expense update/signature initiatives: We may build in options for what the outlook could look like – it would help if you could provide a recommendation for the expense changes that should be taken on/profiled.
16-17 c-fund update: We have included a c-fund slide that was used in the Q1 finances briefing materials (current PW). We would like to include an updated version of this slide in the FPC deck (appendix). It would help to have this out to 19-20.
Pension Narrative: Nadine – I'll connect on the pension adjustment and some high level bullets that we could use.

Noon Friday January 27:
Template: I've attached a draft of 3q finances that is based heavily off of the 2016 First Quarter Finances. We've highlighted in green the sections that we would like you to update. While I'm not 100% certain this structure will be exactly what the Q3 document will look like, I think it's safe to say that the substantive content we'll have to cover is captured here. There will be some highlighted content that is not possible to update for Friday, however there will be a formal distribution process where additional information can be incorporated.

Thanks everyone, and please feel free to send your input directly to Liane and Emma. Im hoping to be able to share a draft deck with you late this evening.

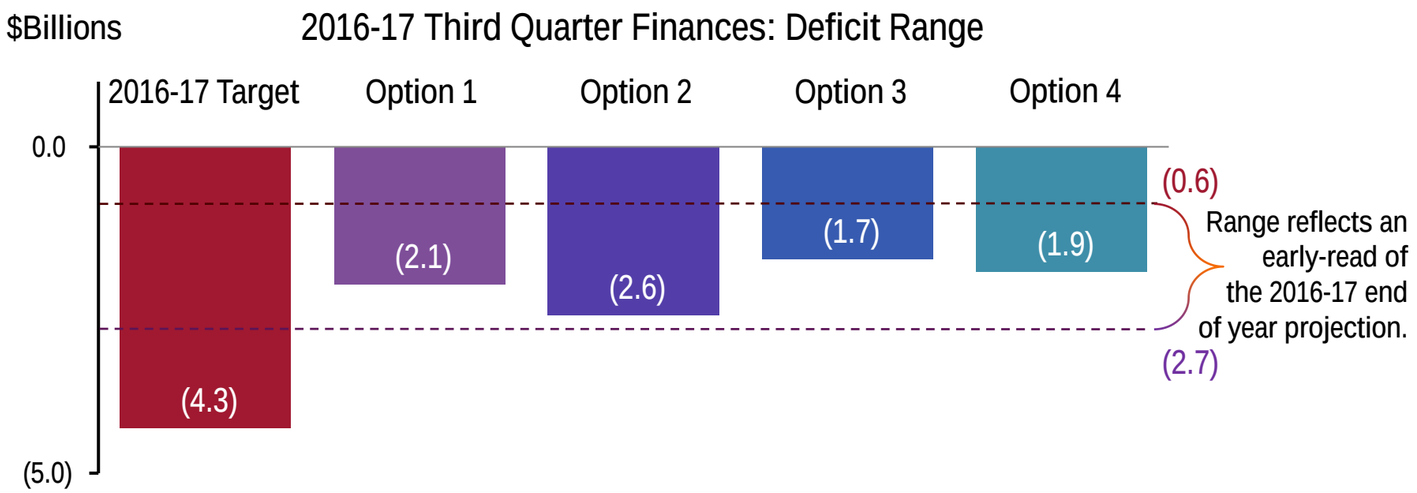
Subject: Q3 heads up



Hi Everyone – Wanted to send a quick message that we are hearing there is a desire to proceed with the release of a Q3 update around the time we are expecting the Pension Panel panel to release their report. We are going to

assume mid feb prior to the house coming back for our planning purposes.

My team is going to work together to put together a list of things we need to start working on/think about along with a calendar to determine and get direction on an approach to coincide with this timeframe.

More details to follow tomorrow.

Thanks.

Options 1 through 4 build on each other. All options assume the pension reversal and progressively take on additional changes relative to FES.

Option 1	Option 2	Option 3	Option 4
Pensions: $2.2 billion	**Pensions**: $2.2 billion	**Pensions**: $2.2 billion	**Pensions**: $2.2 billion
	Cap and Trade: $(0.5) billion	**Cap and Trade:** $(0.5) billion	**Cap and Trade:** $(0.5) billion
		Asset Optimization: $(0.1) billion	**Asset Optimization:** $(0.1) billion
		HST & Other Taxes: $0.9 billion	**HST & Other Taxes:** $0.9 billion
			Expense Pressures: $(0.2) billion

Overall Narrative: *The strength of the Ontario economy, together with the government's approach to fiscal management, is supporting strategic investments, while allowing the government to continue to beat its fiscal targets.*

Option 1
Reversal of Pensions

$ Billions	Budget 2016-17	Change	Outlook 2016-17
Revenue	130.6	*2.1*	132.7
Expense			
Programs	122.1	*0.9*	123.1
Interest on Debt	11.8	*(0.4)*	11.4
Total Expense	133.9	*0.5*	134.4
Surplus/(Deficit) Before Reserve	(3.3)	*1.6*	(1.7)
Reserve	1.0	*(0.6)*	0.4
Surplus/(Deficit)	(4.3)	*2.2*	(2.1)
Net Debt-to-GDP (Per Cent)	39.6	*(1.3)*	38.3

- *The government is projecting a **deficit of $2.1 billion in 2016-17**, an improvement of $2.2 billion since the 2016 Budget.*
- *The Pension Asset Expert Advisory Panel recently released its report on the treatment of pension assets, including a recommendation that jointly-sponsored net pension asset be recognized in the Province's financial statements. The government is adopting this recommendation, which aligns with the treatment originally included in the 2016 Budget plan.*
- *With this reversal, together with stronger revenue and lower interest on debt, the government is projected to beat its fiscal target.*

Option 2
Option 1 + Cap and Trade

$ Billions	Budget 2016-17	Change	Outlook 2016-17
Revenue	130.6	*1.7*	132.2
Expense			
Programs	122.1	*0.9*	123.1
Interest on Debt	11.8	*(0.4)*	11.4
Total Expense	133.9	*0.5*	134.4
Surplus/(Deficit) Before Reserve	(3.3)	*1.1*	(2.2)
Reserve	1.0	*(0.6)*	0.4
Surplus/(Deficit)	(4.3)	*1.7*	(2.6)
Net Debt-to-GDP (Per Cent)	39.6	*(1.3)*	38.3

- *The government is projecting a **deficit of $2.6 billion in 2016-17**, an improvement of $1.7 billion since the 2016 Budget.*
- *Cap and Trade is a cornerstone of the Province's fight against climate change. Ontario's first Cap and Trade auction is scheduled for March 22, 2017, and establishes Ontario's partnership in the largest carbon market in North America.*
- *Revenues from Ontario's first auction will be certified and settled at the beginning of the 2017-18 fiscal year. As such, the Third Quarter Finances reflect the re-profiling of auction proceeds from 2016-17 to 2017-18.*

Option 3
Option 2 + Assets + HST & Other Taxes

$ Billions	Budget 2016-17	Change	Outlook 2016-17
Revenue	130.6	*2.5*	133.1
Expense			
Programs	122.1	*0.9*	123.1
Interest on Debt	11.8	*(0.4)*	11.4
Total Expense	133.9	*0.5*	134.4
Surplus/(Deficit) Before Reserve	(3.3)	*2.0*	(1.3)
Reserve	1.0	*(0.6)*	0.4
Surplus/(Deficit)	(4.3)	*2.6*	(1.7)
Net Debt-to-GDP (Per Cent)	39.6	*(1.4)*	38.2

- *The government is projecting a **deficit of $1.7 billion in 2016-17**, an improvement of $2.6 billion since the 2016 Budget.*
- *Ontario's economy continues to grow in an uncertain global environment. Stronger 2015 income tax assessment results and the continued strength of Ontario's economy and housing market resulted in higher than forecasted taxation revenues.*
- [Suggest not addressing AO downward estimate in narrative.]

Option 4
Option 3 + Expense Pressures

$ Billions	Budget 2016-17	Change	Outlook 2016-17
Revenue	130.6	*2.5*	133.1
Expense			
Programs	122.1	*1.1*	123.3
Interest on Debt	11.8	*(0.4)*	11.4
Total Expense	133.9	*0.7*	134.6
Surplus/(Deficit) Before Reserve	(3.3)	*1.8*	(1.5)
Reserve	1.0	*(0.6)*	0.4
Surplus/(Deficit)	(4.3)	*2.4*	(1.9)
Net Debt-to-GDP (Per Cent)	39.6	*(1.3)*	38.3

- *The government is projecting a **deficit of $1.9 billion in 2016-17**, an improvement of $2.4 billion since the 2016 Budget.*
- *The government's fiscally sound approach to managing the Province's finances will help grow the economy, create jobs and ensure the sustainability of programs and services that help Ontarians in their everyday lives.*
- *[This includes supporting strategic investments, such as funding for social assistance, and increased enrolment in schools.]*

Ontario's Third Quarter Finances: Fiscal Strategy

Office of the Budget
MINISTRY of FINANCE

Presentation to FPC on February 1, 2017

Preliminary Draft

Draft – January 27, 2017 6:00 PM

Context

Under the *Fiscal Transparency and Accountability Act, 2004* (FTAA), the Third Quarter Finances is required to:

- Be released on or before February 15th (publication can be delayed if a letter is sent to the Clerk).
- Include updated information about the major components of revenue and expense **for the current fiscal year only.**

It also provides an **opportunity for the government to reiterate key fiscal messages** from the Budget or pre-condition for future updates.

A Third Quarter Finances has only been published once in the last eight years (in 2012-13).

Key stakeholders like the Financial Accountability Officer and rating agencies will assess the fiscal outlook and narrative.

- Both have acknowledged that balance is within reach in 2017-18, but have also highlighted key risks to the 2016 Budget fiscal plan.

Purpose and Key Decisions

Currently working towards **a release date of February 13, 2017** – need to **confirm the approach to publishing Ontario's Third Quarter Finances**, including:

- The core updates to **the fiscal outlook and supporting revenue and expense details** to be published, as well as the **fiscal narrative and messaging**.
- Positioning the content and the rollout of Third Quarter Finances relative to the release of the Pension Panel's Report and recommendations, and other publicly available information.

Evolution of the 2016-17 Outlook

- The Third Quarter Finances will present a fiscal update relative to the 2016 Budget and address changes since FES in narrative only.
- The 2016 FES highlighted Ontario's stronger economy and the government's approach to fiscal management, which supported strategic investments in new child care spaces, hospitals and electricity cost relief for consumers.
- To support these investments while accommodating the Pension Adjustment, the government took on a number of fiscal tools in order to meet its targets.

2016 Budget Fiscal Plan $ Billions	2016-17	Change to FES 2016-17	FES Outlook 2016-17
Revenue	130.6	*2.1*	132.7
Expense			
Programs	122.1	*3.1*	125.3
Interest on Debt	11.8	*(0.4)*	11.4
Total Expense	133.9	*2.7*	136.6
Surplus/(Deficit) Before Reserve	(3.3)	*(0.6)*	(3.9)
Reserve	1.0	*(0.6)*	0.4
Surplus/(Deficit)	(4.3)	*(0.0)*	(4.3)

Total revenue changes of $2.1 billion, consisting of:

- Base Forecast Change $1.0 billion
- Reversal of Homecare $(0.2) billion
- Federal Agreements $0.4 billion
- Higher assumed revenue to accommodate pensions $0.9 billion

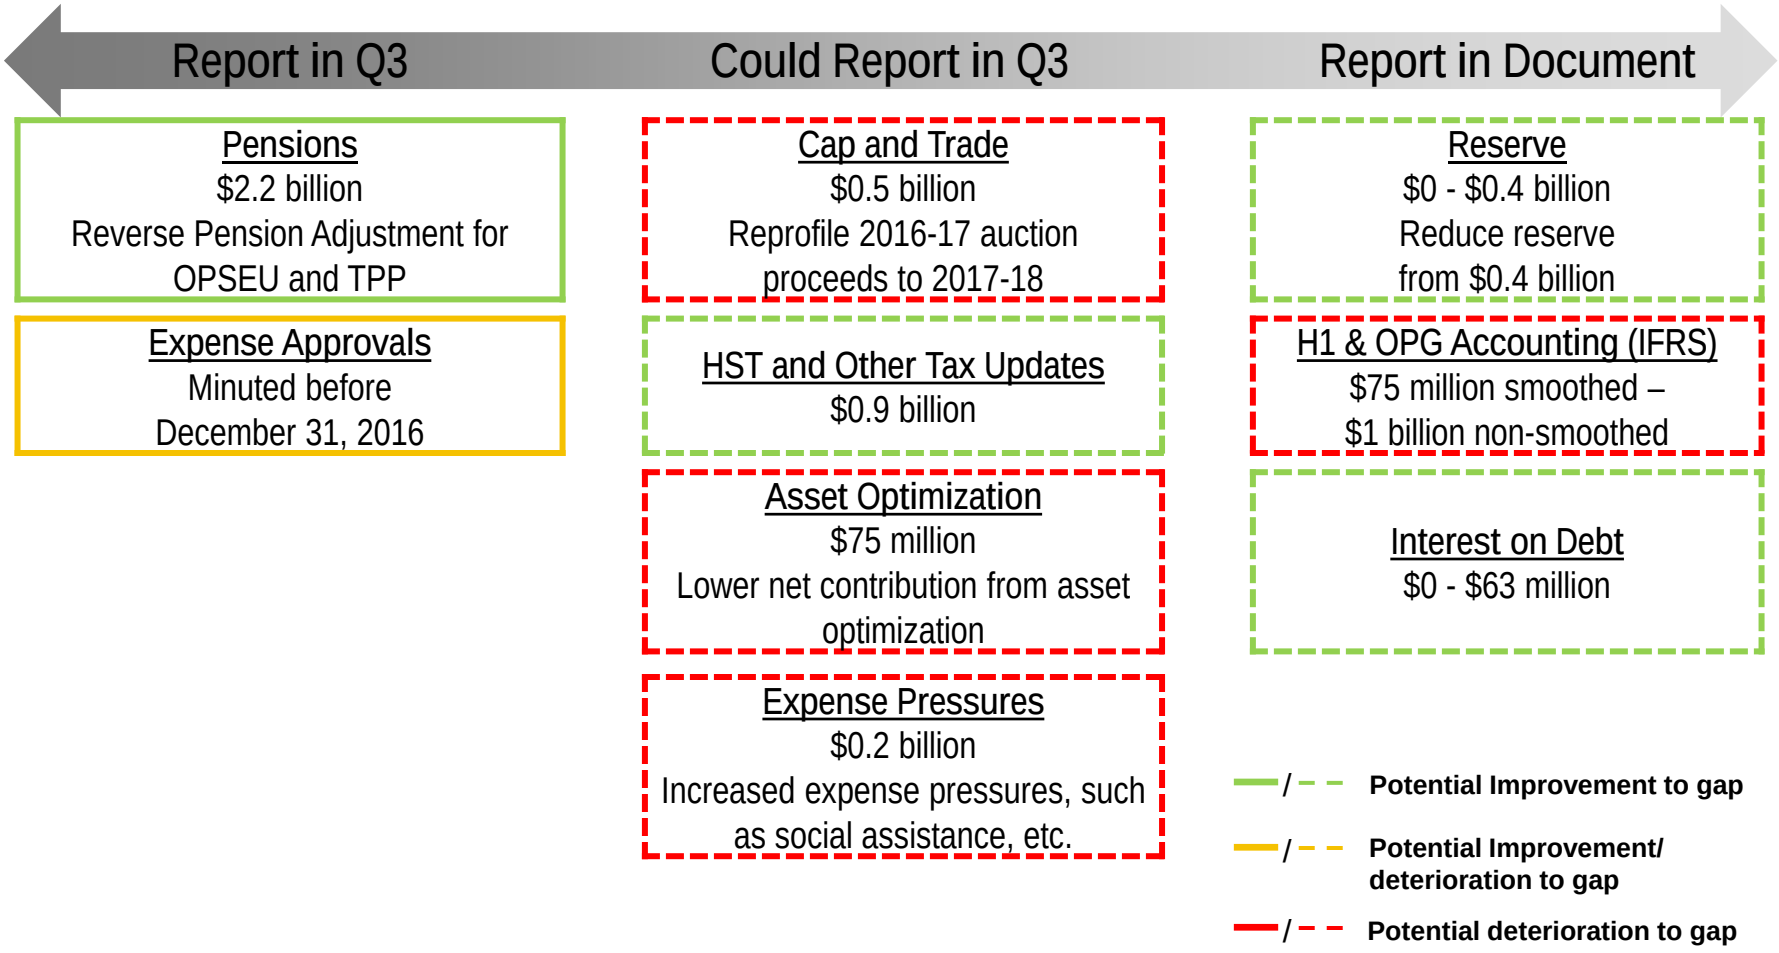
Total expense changes of $2.7 billion, consisting of:

- In-Year Approvals $0.2 billion
- Pension Adjustment of $2.2 billion
- Electricity Cost Relief $0.3 billion
- Support for Hospitals $0.1 billion
- Green Investment Fund $0.3 billion
- New Federal Agreements $0.4 billion
- Contingency Fund Offsets $(0.5) billion
- Interest on Debt Savings $(0.4) billion

Change to the Reserve $(0.6) billion

Treatment of Pension Adjustment

Panel Recommendation



- The Pension Asset Expert Advisory Panel will be releasing its findings in the coming weeks.
  - The report is expected to include advice that government jointly sponsored pension plans should be recognized in the Province's financial statements.
  - If taken on, this would result in a positive fiscal impact to the government's outlook in all plan years.

Treatment of Pension Adjustment

- The Third Quarter Finances provides the government with an immediate opportunity to align its fiscal strategy with recommendations of the panel, and frame the pension narrative in advance of the 2017 Document.
- While the reversal of the pension adjustment to the Ontario Public Service Employees Union Pension Plan (OPSEUPP) and the Ontario Teachers' Pension Plan (OTPP) will result in an improved 2016-17 deficit, expectations may need to be tempered about how much fiscal room is created in the out-years.
- For consistency and comparability, an adjustment to the 2015-16 actuals will be made to reflect the government's decision to adopt the Panel's recommendations. The adjustment to historical results impacts the previously reported net debt and deficit results as well as the net debt to GDP ratio.

Key Building Blocks

- In addition to the reversal of the Pension Adjustment, other key building blocks will either need to be reported in the Third Quarter Finances or be considered for the 2017 Document.

Building Block Considerations

There are a number of considerations for whether key building blocks should be taken on in the Third Quarter Finances or deferred to the 2017 Document.

Could Report in Third Quarter Finances

Cap and Trade

- The Cap and Trade auction notice that was released on January 20 stating that certification will occur on April 3, 2017, and settlement shortly thereafter.
- Stakeholders (e.g. FAO and Auditor General) may question why the government has not updated its fiscal plan to reflect this change.

HST and Other Tax Updates

- HST updates have been received since the FES, and no further significant updates are expected in advance of the 2017 Document. Other tax information is not as certain and could require additional updates in the 2017 Document.
- Stakeholders are aware of the timing of these information flows and may question if updates are not taken on in Third Quarter Finances.

Asset Optimization

- Updating for revised estimated net contribution from Asset Optimization would build some deterioration into the outlook.
- There are changes / uncertainty on the expected potential gains and/or timing for the H1 Brampton (which has not yet closed), and Seaton Lands sales (still pending), and uncertainty on the final accounting net gains reported for H1 shares purchased by OPG, potentially necessitating additional updates in the 2017 Document.

Expense Pressures

- Ministry risks represent potential pressures in the fiscal plan, and are not typically included in Quarterly updates.
- However, it may be prudent to address risks which may materialize before the 2017 Document, such as increased expense pressures associated with social assistance etc.

Report in Document

Reserve

It is recommended that the reserve be maintained at its current level of $0.4 billion, in order to mitigate any pressures that may arise before year-end.

H1 & OPG Accounting (IFRS)

Updated information on the potential fiscal impact of the move from U.S. GAAP to IFRS for Hydro One and OPG, is expected at the end of February.

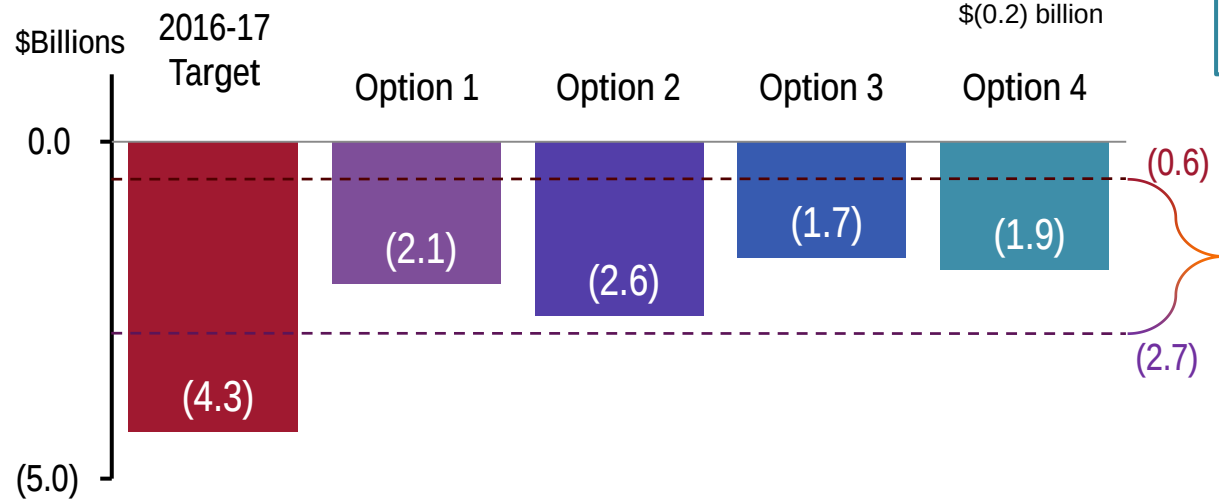
Interest on Debt

Deferring improvements in the interest on debt forecast allows for upside potential in the 2016-17 interim results of the 2017 Document.

Outstanding Information

- **Outstanding Information** could materially impact the **2016-17 outlook** in advance of the 2017 Document.

Revenue
Revisions to economic outlook
Ongoing provincially-administered tax receipts
Non-tax revenue updates from Ministry PRRT submissions
Net income updates from government business enterprises
Revisions to IFRS - US GAAP impacts for OPG and Hydro One

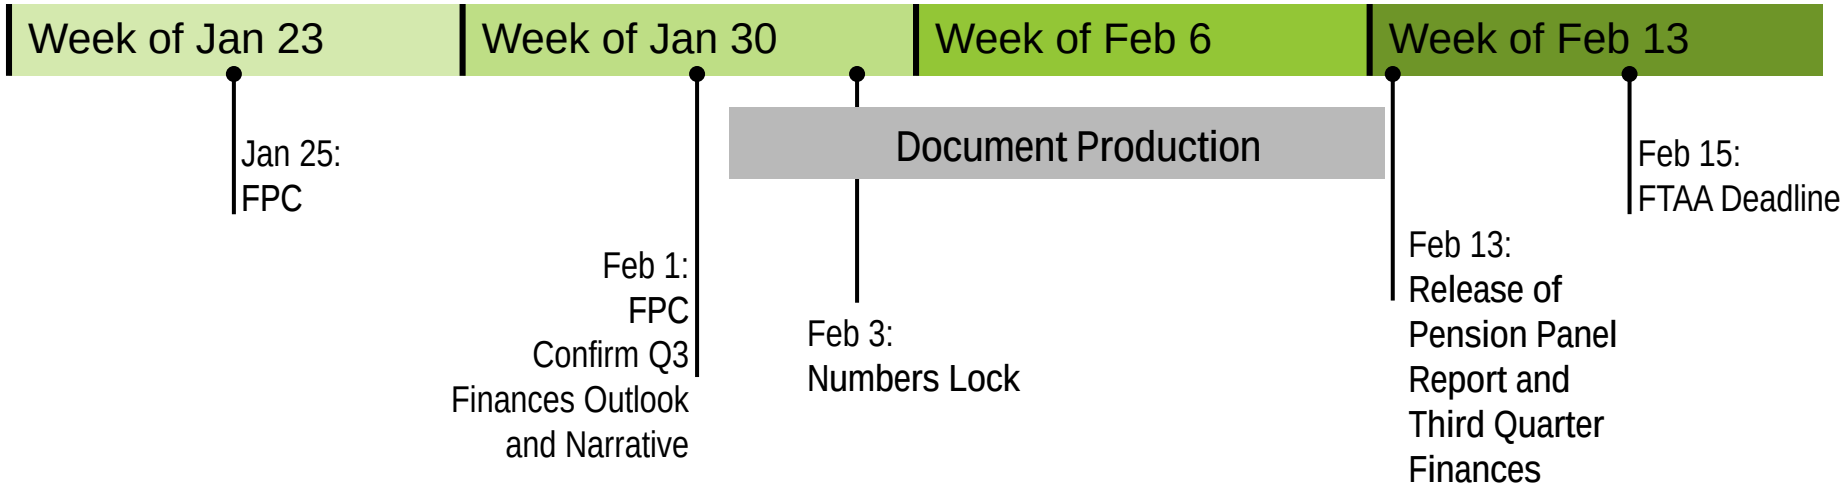


Expense
Ministry Q3/interim submissions
Consolidations and other technical adjustments
Interest on debt forecast updates
Contaminated sites liabilities
Updated pension expense forecast

- Potential improvement to gap
- Potential improvement or deterioration to gap
- Potential deterioration to gap

2016-17 Third Quarter Finances: Deficit Range

Options 1 through 4 build on each other. All options assume the pension reversal and progressively take on additional changes relative to FES.



Option 1	Option 2	Option 3	Option 4
Pensions: $2.2 billion	**Pensions**: $2.2 billion	**Pensions**: $2.2 billion	**Pensions**: $2.2 billion
	Cap and Trade: $(0.5) billion	**Cap and Trade:** $(0.5) billion	**Cap and Trade:** $(0.5) billion
		Asset Optimization: $(0.1) billion	**Asset Optimization:** $(0.1) billion
		HST & Other Taxes: $0.9 billion	**HST & Other Taxes:** $0.9 billion
			Expense Pressures: $(0.2) billion

Range reflects an early-read of the 2016-17 end of year projection.

- Based on an early-read of end of year projections, the government may want to report an outlook that protects against risks or other changes between now and the Budget.
- Based on current information and taking into account key building blocks, there are a number of options for presenting the Q3 deficit, ranging from $2.6 billion to $1.7 billion. These are on the medium-to-low end of what is being tracked for the interim outlook for the 2017 Document.

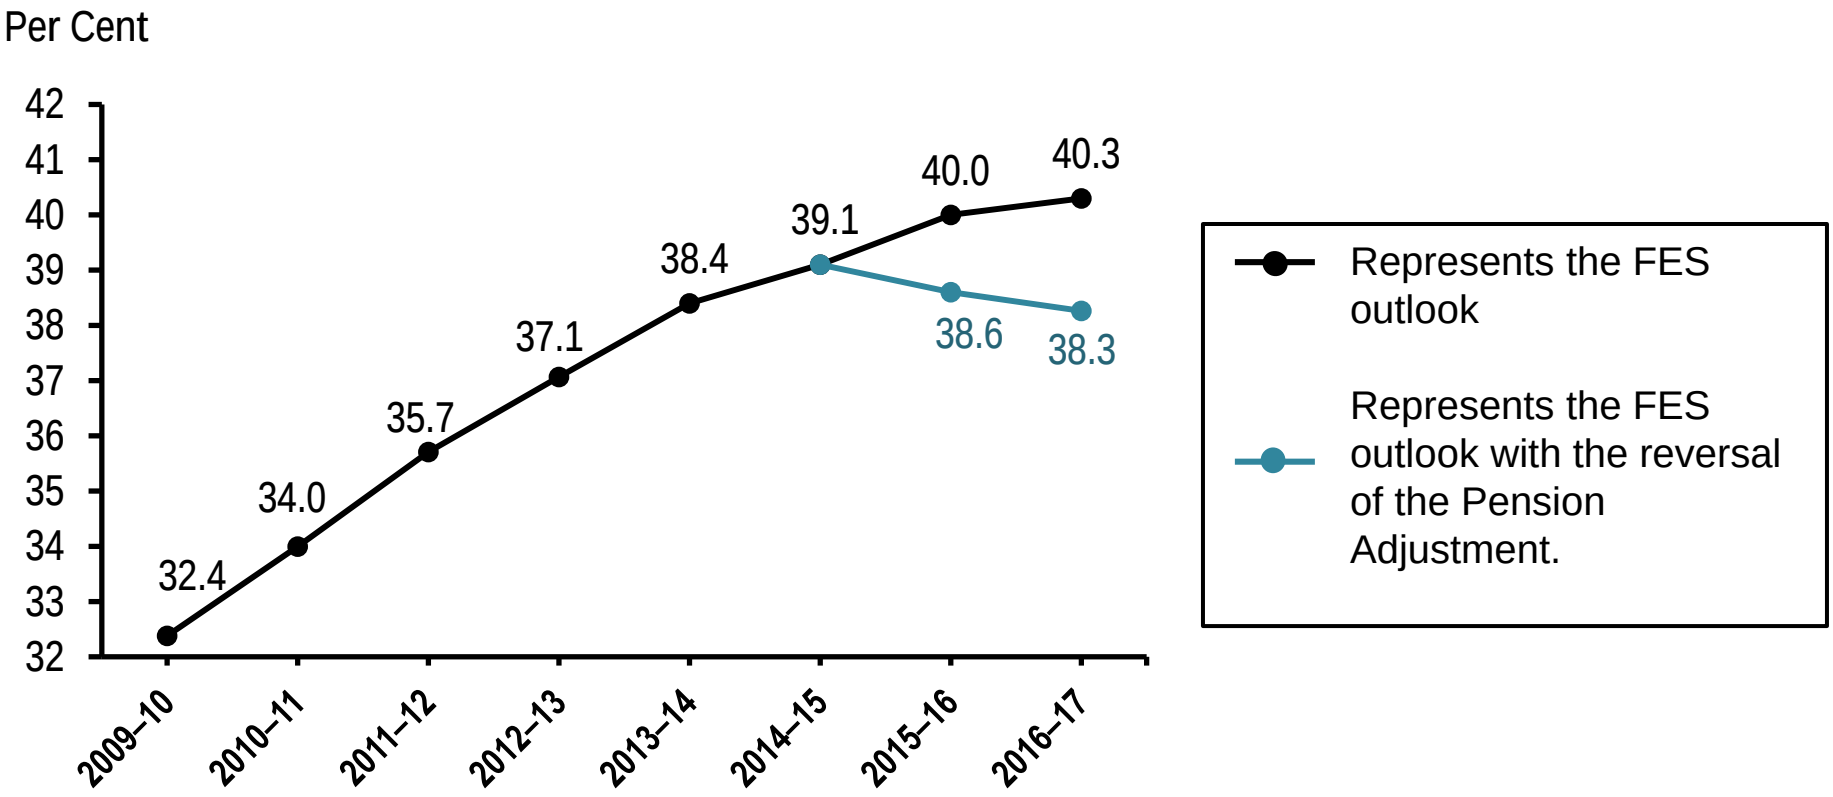
Appendix

End of Year Projection for 2016-17

- An early-read indicates that end of year projections for the 2016-17 deficit could range from $0.6 billion (if there is a significant improvement to the outlook) to $2.7 billion (if there is a moderate improvement to the outlook).

Significant Year-end Improvement

2016 Budget (4.3) billion
+ Pension Adjustment and Tools
2016 FES (4.3) billion
+ Higher Revenue ***1.7 billion***
– Re-profiling Cap and Trade Proceeds ***0.5 billion***
– Lower Net Contribution from Asset Optimization ***75 million***
– Accounting Adjustments: Accounting Framework (IFRS) ***75 million*** Unchanged Contaminated Sites
Unchanged Program Expense
+ Reverse Pension Adjustment ***2.2 billion***
+ Lower Interest on Debt ***0.1 billion***
+ Reduce Reserve ***0.4 billion***
Early-Read (0.6) billion

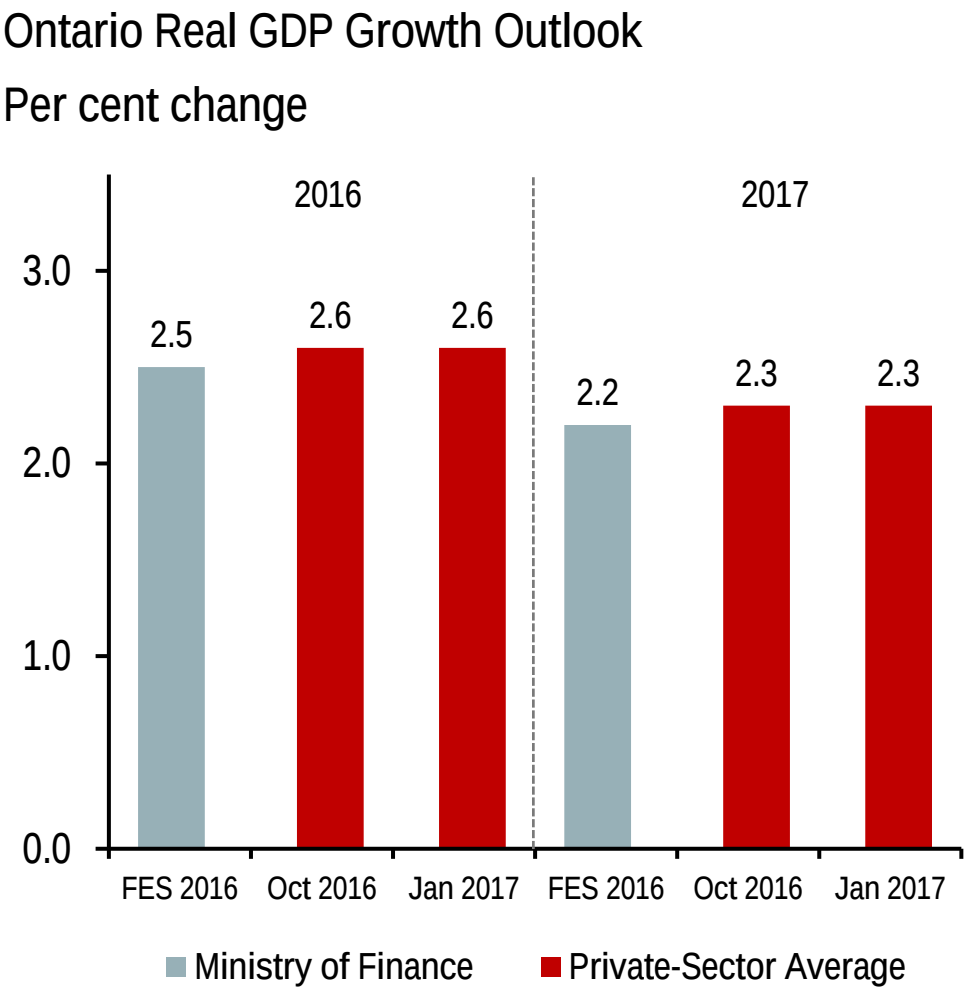


Moderate Year-end Improvement

2016 Budget (4.3) billion
+ Pension Adjustment and Tools
2016 FES (4.3) billion
+ Higher Revenue ***0.7 billion***
– Re-profiling Cap and Trade Proceeds ***0.5 billion***
– Lower Net Contribution from Asset Optimization ***75 million***
– Accounting Adjustments: Accounting Framework (IFRS) ***75 million*** Contaminated Sites ***50 million***
– Higher Program Expense ***1.0 billion***
+ Reverse Pension Adjustment ***2.2 billion***
Unchanged Interest on Debt
+ Reduce Reserve ***0.4 billion***
Early-Read (2.7) billion

Net Debt-to-GDP With Pension Reversal (Option 1)

Narrative: *The impact of the reversal will change the net debt projection for 2016-17 by $12.8 billion. As a result, the government is projecting a net debt-to-GDP ratio of 38.3 per cent, an improvement compared to the 2016 FES projection of 40.3 per cent*



- Reflects the reversal of the Teachers Pension Plan and OPSEU Pension Plan adjustments, including reversal of the $10.7 billion debt adjustment made in the 2015-16 Public Accounts

Recent Economic Developments and Outlook

Economic Update

- Real GDP increased by 0.7% in the third quarter (July to September) of 2016, after rising 0.2% in the second quarter.
  - Higher exports and continued growth in household spending were the primary drivers of growth
- Information available so far for the fourth quarter (October to December) of 2016 suggest growth at a more modest pace.
- Ontario's economic growth outlook remains consistent with the 2016 FES forecast

Other Accounting Issues

Other Accounting Issues

- The move from U.S. GAAP to IFRS for the consolidation of Hydro One and OPG results in a fiscal impact starting in 2016-17, of either:

Basis of Consolidation of OPG and H1 (US GAAP vs. IFRS)	Fiscal Impact Relative to FES				
	2016-17	2017-18	2018-19	2019-20	2020-21
Preferred Approach (smoothed IFRS impact)**	**$75M**	**$425M**	**$525M**	**$675M**	**$675M**
High Impact (non-smoothed IFRS impact)**	$1B	$375M	$400M	$400M	$400M

*** OPG's estimate of cumulative impact for 2015-2020 is $2.5B under the preferred approach, and $2.6B under the high impact approach. Note: Amounts are based on estimates currently available, and are subject to updates by OPG. Revised estimates are expected by March 1, 2017.*

> **Subject:** RE: Q3 update

Hi Everyone – just wanted to share with you the latest on the strategy for Q3. We are headed back to FPC next week with a further 2 scenarios on the deficit target that could be published. In addition to the ones we took earlier this week – two new options are proposed – one is to reverse the pensions only (option 1 in the materials), and the second is to take on a certain amount of ministry pressures we think will materialize (option 4 in the materials).

In terms of the materials – there is both a deck and a placemat that we are proposing to take forward. The placemat illustrates the 4 options and includes how the revenue/expense change table would appear relative to Budget and some proposed narrative for each scenario.

The deck is very similar to what we took forward last week but has a couple of new slides. Tim has also just circulated to your ADMs

Can I ask that you specifically take a look at slide 8 to ensure you are comfortable with the wording as well as the **narrative on the placemat** that would be helpful. But happy to hear any comments on the rest of it as well. We are looking for any comments back by 3:30pm today so we can finalize and send up to our DM/MO today.

And – we are continuing to track for a release on Feb 13 and we will be in touch to request your assistance.

Happy to discuss.

Thanks.

Hi Everyone – sending along the most current draft of the deck we are planning to take forward to FPC tomorrow.

Comments welcome – if you could let me know asap if you have them. Heads up that timing of release of the Q3 may be even sooner as noted in this deck

Subject: RE: Q3 update
Importance: High

Hi All,

Following up on my email from last week, we received relatively recent direction regarding the release of Ontario's Third Quarter Finances – the tentative plan is to publish Q3 finances ahead of the February 15 deadline. We are tentatively tracking a release date of Monday February 13.

As you can imagine, timelines are very compressed, and includes a possible trip to FPC this week. In order to meet this week's deadlines, while also preparing for the release of the actual publication, we're asking for input from you in stages:

EOD Today:
We have prepared the draft of a deck, which we are working towards tabling at this Wednesday's FPC (TBC). The deck lays out the key 2016-17 building blocks that could be updated as part of the Q3 publication. It would help if we could get the following from you folks by the end of today:
16-17 post-FES expense update: We have included placeholder for an expense slide. The intention is for the slide to provide an updated list of initiatives that were not included in the FES expense outlook.
Recommended expense update/signature initiatives: We may build in options for what the outlook could look like – it would help if you could provide a recommendation for the expense changes that should be taken on/profiled.
16-17 c-fund update: We have included a c-fund slide that was used in the Q1 finances briefing materials (current PW). We would like to include an updated version of this slide in the FPC deck (appendix). It would help to have this out to 19-20.
Pension Narrative: Nadine – I'll connect on the pension adjustment and some high level bullets that we could use.

Noon Friday January 27:
Template: I've attached a draft of 3q finances that is based heavily off of the 2016 First Quarter Finances. We've highlighted in green the sections that we would like you to update. While I'm not 100% certain this structure will be exactly what the Q3 document will look like, I think it's safe to say that the substantive content we'll have to cover is captured here. There will be some highlighted content that is *not possible* to update for Friday, however there will be a formal distribution process where additional information can be incorporated.

Thanks everyone, and please feel free to send your input directly to Liane and Emma. Im hoping to be able to share a draft deck with you late this evening.

Subject: Q3 heads up

Hi Everyone – Wanted to send a quick message that we are hearing there is a desire to proceed with the release of a Q3 update around the time we are expecting the Pension Panel panel to release their report. We are going to assume mid feb prior to the house coming back for our planning purposes.

My team is going to work together to put together a list of things we need to start working on/think about along with a calendar to determine and get direction on an approach to coincide with this timeframe.

More details to follow tomorrow.

Thanks.

> Hi ken - thank you so much for following up on this. We need to go back to FPC next week for additional scenarios on the deficit we could publish in Q3 and so we haven't landed on anything definitive yet. At minimum it appears at this point we will be reversing the pension adjustment but there may be other variables that impact the deficit figure. Not sure if that helps you get started. So for now, don't worry about the noon deadline and we will be in touch with you/your team as soon as we can on something more definitive.

Hi Selena

Any further update on whether the FES numbers will be used for Q3, or will the pension adjustment be reversed resulting in a revised deficit and net debt.

Much appreciated if you can get back to us EOD, since we have to get back to you by tomorrow 12 pm with the financing table and the ratios.

Thanks

Ken k

NP, I believe we do have Q&A in the FES package that addresses this very issue, so happy to flip it to you later on, do note that Gadi released an additional $63M (in relation to the IOD number in the FES) in IOD savings for 16-17 to Tim a couple of weeks ago.

Thanks

Ken k

Hi Selena

The reversal of the pension adjustment does not impact IOD since it's a non-cash adjustment, i.e., it decreases expenses on a PSAB basis not on a cash basis hence the total borrowing does not change which means that IOD also remains unchanged.

Thanks

Ken K

Hi All,

Following up on my email from last week, we received relatively recent direction regarding the release of Ontario's Third Quarter Finances – the tentative plan is to publish Q3 finances ahead of the February 15 deadline. We are tentatively tracking a release date of Monday February 13.

As you can imagine, timelines are very compressed, and includes a possible trip to FPC this week. In order to meet this week's deadlines, while also preparing for the release of the actual publication, we're asking for input from you in stages:

EOD Today:
We have prepared the draft of a deck, which we are working towards tabling at this Wednesday's FPC (TBC). The deck lays out the key 2016-17 building blocks that could be updated as part of the Q3 publication. It would help if we could get the following from you folks by the end of today:
16-17 post-FES expense update: We have included placeholder for an expense slide. The intention is for the slide to provide an updated list of initiatives that were not included in the FES expense outlook.
Recommended expense update/signature initiatives: We may build in options for what the outlook could look like – it would help if you could provide a recommendation for the expense changes that should be taken on/profiled.
16-17 c-fund update: We have included a c-fund slide that was used in the Q1 finances briefing materials (current PW). We would like to include an updated version of this slide in the FPC deck (appendix). It would help to have this out to 19-20.
Pension Narrative: Nadine – I'll connect on the pension adjustment and some high level bullets that we could use.

Noon Friday January 27:
Template: I've attached a draft of 3q finances that is based heavily off of the 2016 First Quarter Finances. We've highlighted in green the sections that we would like you to update. While I'm not 100% certain this structure will be exactly what the Q3 document will look like, I think it's safe to say that the substantive content we'll have to cover is captured here. There will be some highlighted content that is not possible to update for Friday, however there will be a formal distribution process where additional information can be incorporated.

Thanks everyone, and please feel free to send your input directly to Liane and Emma. Im hoping to be able to share a draft deck with you late this evening.

Subject: RE: Q3 update
Importance: High

Hi All,

Following up on my email from last week, we received relatively recent direction regarding the release of Ontario's Third Quarter Finances – the tentative plan is to publish Q3 finances ahead of the February 15 deadline. We are tentatively tracking a release date of Monday February 13.

As you can imagine, timelines are very compressed, and includes a possible trip to FPC this week. In order to meet this week's deadlines, while also preparing for the release of the actual publication, we're asking for input from you

in stages:

EOD Today:
We have prepared the draft of a deck, which we are working towards tabling at this Wednesday's FPC (TBC). The deck lays out the key 2016-17 building blocks that could be updated as part of the Q3 publication. It would help if we could get the following from you folks by the end of today:
16-17 post-FES expense update: We have included placeholder for an expense slide. The intention is for the slide to provide an updated list of initiatives that were not included in the FES expense outlook.
Recommended expense update/signature initiatives: We may build in options for what the outlook could look like – it would help if you could provide a recommendation for the expense changes that should be taken on/profiled.
16-17 c-fund update: We have included a c-fund slide that was used in the Q1 finances briefing materials (current PW). We would like to include an updated version of this slide in the FPC deck (appendix). It would help to have this out to 19-20.
Pension Narrative: Nadine – I'll connect on the pension adjustment and some high level bullets that we could use.

Noon Friday January 27:
Template: I've attached a draft of 3q finances that is based heavily off of the 2016 First Quarter Finances. We've highlighted in green the sections that we would like you to update. While I'm not 100% certain this structure will be exactly what the Q3 document will look like, I think it's safe to say that the substantive content we'll have to cover is captured here. There will be some highlighted content that is not possible to update for Friday, however there will be a formal distribution process where additional information can be incorporated.

Thanks everyone, and please feel free to send your input directly to Liane and Emma. Im hoping to be able to share a draft deck with you late this evening.

Subject: Q3 heads up

Hi Everyone – Wanted to send a quick message that we are hearing there is a desire to proceed with the release of a Q3 update around the time we are expecting the Pension Panel panel to release their report. We are going to assume mid feb prior to the house coming back for our planning purposes.

My team is going to work together to put together a list of things we need to start working on/think about along with a calendar to determine and get direction on an approach to coincide with this timeframe.

More details to follow tomorrow.

Thanks.

Hey ken - one thing to consider is if the pension adjustment is being reversed there may be a desire to show progress on IOD - assuming it impacts that. Thoughts?

Thanks agreed, keeping the FES forecast makes sense since we don't want material changes before the interim in the Document, but pls do confirm.

Ken k

Hi Selena

Couple of quick question, the 16-17 IOD forecast was revised downwards from the FES number and provided to Tim. Do you want us to use this revised version or stick with the FES forecast with the revision being presented in the Interim section of the 2017 Budget.

Let me know, and in order to complete the Financing Table we need to know the 16-17 deficit that you will be projecting in the Q3, will be the same as the FES?

Thanks

Ken k

Subject: RE: Q3 update
Importance: High

Hi All,

Following up on my email from last week, we received relatively recent direction regarding the release of Ontario's Third Quarter Finances – the tentative plan is to publish Q3 finances ahead of the February 15 deadline. We are tentatively tracking a release date of Monday February 13.

As you can imagine, timelines are very compressed, and includes a possible trip to FPC this week. In order to meet this week's deadlines, while also preparing for the release of the actual publication, we're asking for input from you in stages:

EOD Today:
We have prepared the draft of a deck, which we are working towards tabling at this Wednesday's FPC (TBC). The deck lays out the key 2016-17 building blocks that could be updated as part of the Q3 publication. It would help if we could get the following from you folks by the end of today:
16-17 post-FES expense update: We have included placeholder for an expense slide. The intention is for the slide to provide an updated list of initiatives that were not included in the FES expense outlook.
Recommended expense update/signature initiatives: We may build in options for what the outlook could look like – it would help if you could provide a recommendation for the expense changes that should be taken on/profiled.
16-17 c-fund update: We have included a c-fund slide that was used in the Q1 finances briefing materials (current PW). We would like to include an updated version of this slide in the FPC deck (appendix). It would help to have this out to 19-20.
Pension Narrative: Nadine – I'll connect on the pension adjustment and some high level bullets that we could use.

Noon Friday January 27:
Template: I've attached a draft of 3q finances that is based heavily off of the 2016 First Quarter Finances. We've highlighted in green the sections that we would like you to update. While I'm not 100% certain this structure will be exactly what the Q3 document will look like, I think it's safe to say that the substantive content we'll have to cover is captured here. There will be some highlighted content that is not possible to update for Friday, however there will be a formal distribution process where additional information can be incorporated.

Thanks everyone, and please feel free to send your input directly to Liane and Emma. Im hoping to be able to share a draft deck with you late this evening.

Subject: RE: Q3 update

Hi Everyone – just wanted to share with you the latest on the strategy for Q3. We are headed back to FPC next week with a further 2 scenarios on the deficit target that could be published. In addition to the ones we took earlier this week – two new options are proposed – one is to reverse the pensions only (option 1 in the materials), and the

second is to take on a certain amount of ministry pressures we think will materialize (option 4 in the materials).

In terms of the materials – there is both a deck and a placemat that we are proposing to take forward. The placemat illustrates the 4 options and includes how the revenue/expense change table would appear relative to Budget and some proposed narrative for each scenario.

The deck is very similar to what we took forward last week but has a couple of new slides. Tim has also just circulated to your ADMs

Can I ask that you specifically take a look at slide 8 to ensure you are comfortable with the wording as well as the narrative on the placemat that would be helpful. But happy to hear any comments on the rest of it as well. We are looking for any comments back by 3:30pm today so we can finalize and send up to our DM/MO today.

And – we are continuing to track for a release on Feb 13 and we will be in touch to request your assistance.

Happy to discuss.

Thanks.

Hi Lynsey

I spoke to Cindy and she indicated our DMO had a copy of the report. Can you pls request Chris to forward same to you.

Not only do I want to read it for professional reasons but as per a previous email from Gadi, Bonnie will be letting the Rating Agencies know about this on Feb 13th the day of release. Usually, I am the one who is then pulled in to the tele conferences to respond to complex accounting questions, if any of course.

So reading the report ahead of time will be useful.

Thanks

Ken k

Hi Tara

With regard to IOD, your characterization of the two versions is accurate. However since our runs were done to meet deadlines we will review the results once more tomorrow morning and confirm.

With regard to the net debt to GDP ratio, as John has pointed out, the version that includes the AG's adjustments should also incorporate the cumulative impact of reversing the pension adjustment and that should not be limited to 16-17 onwards.

We have requested the cumulative impact from OPCD and should be able to provide revised ratios tomorrow.

Thanks

Date:	Tuesday, May 29, 2018 9:28:38 PM

Hi Tara

With regard to IOD, your characterization of the two versions is accurate. However since our runs were done to meet deadlines we will review the results once more tomorrow morning and confirm.

With regard to the net debt to GDP ratio, as John has pointed out, the version that includes the AG's adjustments should also incorporate the cumulative impact of reversing the pension adjustment and that should not be limited to 16-17 onwards.

We have requested the cumulative impact from OPCD and should be able to provide revised ratios tomorrow.

Thanks

Ken k

I like that wording, Ken, and it, or something very similar to it, should make it into the yellows, if this is the route decided upon for the the FES at tomorrow's MM&P meeting, and at FPC later in the week.

Hi Gadi

Went through the material, looks good. Net debt to GDP ratios reflect what John provided to Tara on Thursday. Lot of work by Tim's group to incorporate all the changes. I have only one suggestion re the narrative on the pension adjustment.

I would include something like; "While the resolution of the appropriate accounting treatment for pensions is dependent on a number of factors including the results of the independent review commissioned by the Government, the Province has adopted a prudent and risk averse approach in the FES by continuing with the legislated accounting basis for pensions. As a result, a pension adjustment based on historical averages is included in the 16-17 and out year expense projections".

As it stands the narrative does not make the point perhaps forcefully enough, that the Government has developed the FES on a prudent, conservative and risk-averse basis.

Thanks

Ken k

Good evening

Please find attached MMP materials updated to reflect direction from the Ministers this afternoon. I understand these will be provided tonight in preparation for Monday's meeting.

Thanks for all the input and collaboration.

Subject: Updated MMP Materials

Good evening

Please find attached updated MMP package of materials, based on the discussion/direction earlier this afternoon, and in preparation for the Minister's briefing tomorrow afternoon.

This package includes the following:

- Revised main deck
- Revised Appendix deck (now also includes crosswalk from Budget to FES starting point to Pensions+Tools, for all three options, see slides 10-12)
- A newly developed Summary Placemat outlining/comparing the three options with details on the specific tools employed in each option
- Storyboard/Initiatives Placemat for FES

Thanks to everyone for your ongoing input and collaboration on this important part of FES development.

Subject: Report of the Independent Panel on the Pension Adjustment
Date: Thursday, February 02, 2017 4:57:59 PM

Hi Lynsey

I spoke to Cindy and she indicated our DMO had a copy of the report. Can you pls request Chris to forward same to you.

Not only do I want to read it for professional reasons but as per a previous email from Gadi, Bonnie will be letting the Rating Agencies know about this on Feb 13th the day of release. Usually, I am the one who is then pulled in to the tele conferences to respond to complex accounting questions, if any of course.

So reading the report ahead of time will be useful.

Thanks

Ken k

Attachments:	Copy of Net Debt - 2016-17 -FES-subseq scenarios (Dec 5 2016).xlsx

---

Hi Gadi

Thanks to Shemin and George, as requested pls find attached the file with the additional scenario where the ratio decreases by 0.2% over each of the two out years. As to be expected, the flexibility, in comparison to what was published in the FES does decrease.

Thanks and let us know if you require further details.

Ken k

Scenarios vs. FES 2016-17 - Summary

	Scenario 1			FES 2016-17	
	2016-17	2017-18	2018-19	2016-17	2017-18
Deficit/ (Surplus) ($m)	4,324	(18)	(12)	4,324	(18)
Net Debt/GDP %	40.3	40.3	40.3	40.3	39.8
Net Debt - Net flexibility	317,948	330,938	344,472	317,948	326,551

Tim,
Further to the discussion this morning, below is the revised text for Chapter 2B on Transparency and Accountability. This version has been reviewed by Cindy.
Nadine

Pensions reporting

In preparing the *Public Accounts for Ontario 2015-16*, the Province's professional accounting staff and the Auditor General's Office engaged in discussions about the appropriate interpretation of public sector accounting standards in relation to pension accounting. The Province's interpretation of the standards had been applied consistently since they were first implemented 15 years ago.

The government adopted the Auditor General's accounting interpretation for the treatment of net pension assets for 2015-16 through a time-limited regulatory amendment ('the pension adjustment').

The impact of the change resulted in an additional $10.7 billion being added to the net debt and accumulated deficit and an increase of $1.5 billion to the annual deficit for 2015-16.

Consistent with the regulated accounting treatment adopted in the *Public Accounts of Ontario 2015-16*, the medium term Outlook also reflects a cautious approach to forecasting pension expense each year as well as the corresponding net debt and accumulated deficit amounts. [np1]

The government has established a Pension Asset Expert Advisory Panel to assess the interpretation of public sector accounting standards as related to Ontario's pension plans. The Panel will also provide advice on how to value pension assets reported on the Province's books, taking into account future decisions that might be made by the plans' sponsors. Specifically, the Panel will help to inform the amount of net pension assets which should be reflected on the Province's financial statements. A net pension asset arises when the government's total contributions to a plan, including interest earned thereon, are greater than the pension expense recognized since the start of the plan.

The Panel's recommendations will help inform the preparation of the Budget and the Province's future accounting treatment for net pension assets.

[np1]OFA to confirm if wording appropriate

OFFICE OF THE BUDGET

Q. Will you still be able to balance if Ontario's economy does not perform as strongly as you forecast? Even the FAO has said that your forecast is optimistic.

A. The government is dedicated to a fiscally sound approach to managing the Province's finances, and remains committed to balancing the budget in 2017-18 and 2018-19.

The Ontario economy continues to grow in a challenging global environment. In fact, Ontario posted higher real GDP growth in the first quarter of 2016 than Canada, the U.S. and all other G7 countries.

While uncertainty in the global economy has increased, along with increased volatility in global financial and currency markets, Ontario has a diversified economy – meaning the Province is well positioned to respond to changing global economic conditions.

From a fiscal planning perspective, Ontario incorporates prudence in its projections.

- As required by the Fiscal Transparency and Accountability Act, 2004 (FTAA), the fiscal plan incorporates includes a reserve to protect the fiscal outlook against unforeseen adverse changes in the Province's revenue and expense, including those resulting from changes in Ontario's economic performance. The reserve has been set at $1.0 billion in 2016–17, $1.1 billion in 2017–18, and $1.2 billion in 2018–19.

- The fiscal plan also includes contingency funds to help mitigate expense risks that may otherwise negatively impact Ontario's fiscal performance.

With the economy expected to continue to growth, and the Province's ongoing commitment to transform government programs and services, Ontario is well positioned to achieve balance.

Q. From your perspective, why is it important that the government has consistently beaten its deficit targets, in terms of the province's finances?

A. The government remains committed to balancing the budget by 2017-18 and is taking deliberate and responsible steps to achieve this goal.

The government recognizes that a fiscally sound approach to managing the Province's finances will:

- Provide the foundation for the long-term well-being and prosperity of Ontarians; and

- Protect the public services that Ontarians rely on.

For 2015-16, Ontario is on track to beat its deficit target for the seventh year in a row. By continuing to beat its fiscal targets, Ontario's accumulated deficit is $30 billion lower than it otherwise would have been.

Beating our deficit targets helps to keep interest on debt at a manageable level and protects future generations from rising interest costs, which could otherwise crowd out spending on government priorities.

OFFICE OF ECONOMIC POLICY

Revenue Questions and Answers

2014-15 Actual Vs. 2015 Budget Interim

	2015 Budget Interim ($M)	2014-15 Actual ($M)	Variance ($M)	Variance (%)
Taxation Revenue	82,654	82,275	-379	-0.5
Government of Canada Transfers	21,713	21,615	-98	-0.5
Income from Government Business Enterprise	5,311	5,615	304	5.7
Other Non-Tax Revenue	8,839	9,041	202	2.3
Total Revenue	**118,517**	**118,546**	**29**	**0.0**

Q. Can you explain the $29 million increase in revenue since your 2015 Budget?

A. The modest $29 million improvement in revenues is largely due to higher net income of Government Enterprises and revenues from Other Non-Tax Revenues mainly offset by lower Taxation Revenues and Federal Payments.

- Net income from Government Enterprises is $304 million higher mainly due to higher revenue from OPG (including favourable nuclear fund financial market performance) and OLG's higher numbers of large jackpots late in the fiscal year.
- Higher Other Non-Tax revenues of $202 million came from a variety of sources, including consolidated agencies and electricity sector.
- Taxation revenues are $379 million lower largely due to lower Corporations Tax revenue (-$591M) partially offset by higher Personal Income Tax revenue (+$285M).
- Lower Federal Payments (-$98M) is largely due to a decline in transfers to consolidated government agencies.

Q. **Why are Taxation revenues $379 million below your Interim estimate?**

A. Most of the weakness in Taxation revenues is due to lower Corporations Tax (-$591M) because 2014 corporate profits turned out to be lower than estimated at the time of the 2015 Budget. This is partially offset by higher Personal Income Tax revenue (+$285M) based on results from the processing of tax returns for 2014 and prior years.

2014-15 Actual Vs. 2014 Budget Plan

	2014 Budget Plan ($M)	2014-15 Actual ($M)	Variance ($M)	Variance (%)
Taxation Revenue	83,365	82,275	-1,090	-1.3
Government of Canada Transfers	21,882	21,615	-267	-1.2
Income from Government Business Enterprise	5,026	5,615	589	11.7
Other Non-Tax Revenue	8,598	9,041	443	5.2
Total Revenue	**118,871**	**118,546**	**-325**	**-0.3**

Q. Why are revenues $325 million lower than your 2014 Budget projection?

A. Revenues were $325 million below the 2014 Budget Plan largely due to lower Taxation revenues and lower Federal Payments partially offset by higher net income from Government Business Enterprises (mainly OPG) and higher Other Non-Tax Revenues.

- Taxation revenues were $1,090 million lower and Federal Payments were $267 million weaker than projected.

- Partially offset came from higher net income from Government Business Enterprises (+$589M) and Other Non-Tax Revenues ($443M).

Q. What accounts for the $1,090 million decrease in Taxation revenues from your 2014 Budget projection?

A. Taxation revenues were $1,090 million lower due mostly to lower Corporations Tax (-$697M) and lower Sales Tax (-$248M).

- The $697 million decrease in Corporations Tax revenue is due mainly to lower 2014 profits, lower 2013 corporate income tax assessments and higher refunds to corporations for years prior to 2009.
- The $248 million decrease in Sales Tax Revenue is due largely to revisions to HST entitlement estimates for 2013 and prior years.

Q. **Why were Federal transfers $267 million lower than your 2014 Budget projection?**

A. Lower Federal transfers were largely due to revised timelines for Building Canada Fund projects and lower transfers to government agencies, including Agricorp and Toronto 2015. These lower transfers are largely offset by lower spending associated with these transfer programs.

Q: How did net income from Government Business Enterprises increase by $589 million from your 2014 Budget projection?

A: This was mostly attributable to Ontario Power Generation Inc., reflecting lower operating costs and better financial market performance of its nuclear funds.

Q: What accounts for the $1.1 billion decrease in taxation revenues from your 2014 Budget projection?

A: Taxation revenues were $1.1 billion lower due largely to lower corporations tax revenue (-$0.7 billion) and lower sales tax revenue (-$0.2 billion).

- Lower 2013 corporate income tax assessments resulted in a higher repayment to the Canada Revenue Agency for amounts already paid to the Province for the 2013 tax year and, refunds to corporations for tax years prior to 2009 were also higher.
- Sales tax revenue was lower due to revisions to harmonized sales tax entitlement estimates for 2013 and prior tax years.

2014-15 Actual Vs. 2013-14 Actual

	2013-14 Actual ($M)	2014-15 Actual ($M)	Variance ($M)	Variance (%)
Taxation Revenue	79,966	82,275	2,309	2.9
Government of Canada Transfers	22,276	21,615	-661	-3.0
Income from Government Business Enterprise	5,337	5,615	278	5.2
Other Non-Tax Revenue	8,331	9,041	710	8.5
Total Revenue	**115,911**	**118,546**	**2,635**	**2.3**

Q: How did revenues perform in 2014-15 compared to 2013-14?

A: In 2014-15, revenues increased by $2.6 billion or, or 2.3 per cent, from 2013-14.

- Taxation revenue increased by $2.3 billion over the previous year. The increase was across most taxation revenue sources, partially offset by a $1.9 billion decrease in Corporations Tax reflecting adjustments in respect of prior years.
- The combined net incomes of Government Business Enterprises were up $0.3 billion from the previous year.
- Federal Payments declined by $0.7 billion mainly because of a reduction in Equalization Payments, partially offset by increased health and social transfers
- Other Non-Tax revenue increased by $0.7 billion largely due to the gain of the sale of the Province's remaining General Motors shares during 2014-15.

Q: **Why is year-over-year growth in Taxation revenue 2.9 per cent when nominal GDP growth was 3.6 per cent?**

A: Growth in Taxation revenue of 2.9 per cent is lower than 2014 nominal GDP growth of 3.6 per cent largely due to a $1.9 billion decrease in Corporations Tax reflecting prior year adjustments. This included:

- a repayment of -$1.3B, due to a Federal government overpayment of 2013 corporate income tax during 2013, and
- a projected repayment to the Federal government of $0.5B for an overpayment to the Province for the 2014 tax year.

Q: **What explains the fairly strong year-over-year growth in Personal Income tax revenues of 8.9 per cent?**

A: The higher Personal Income Tax revenues growth reflects growth in personal incomes as well as the impact of the high-income measure introduced in the 2014 Budget and the net impacts of one-time prior-year adjustments in both 2013-14 and 2014-15.

Q: **Given the recent poor results for Quebec and California allowances auctions, is the Government still expecting to meet revenue targets set out in the 2016 Budget?**

A: The poor auction results suggest a risk to cap and trade revenues. However, it is too early to determine what actual impact on revenues will be.

In three joint WCI auctions held so far in 2016, allowances have gone unsold.

- In February, 94% of the allowances offered by Quebec were sold; California sold 95% of the total allowances it offered.

- In May, both Quebec and California sold about 11% of the total allowances they each offered.

- The August auction performed relatively better though still undersubscribed, selling 35% of offered allowances.

It is possible, however, that emitters are holding off on buying allowances until they get closer to the end of the compliance period (current compliance period from 2015 through 2017).

The uncertainty related to legal challenges to California`s cap and trade program may have contributed to the poor sale of allowances at the May and August auction. In joint auctions prior to 2016, all the allowances that were offered for sales were sold.

Ontario is planning to hold stand-alone auctions starting in March 2017 before linking with California and Quebec in 2018. Initial stand-alone auctions could result in a higher-than-WCI domestic carbon price.

The medium-term revenue outlook includes projected cap-and-trade proceeds from the auctioning of carbon allowanced beginning in 2017. The current estimate for proceeds is:

- $478 million in 2016-17; and

- Between $1.8 billion and $1.9 billion annually starting in 2017-18.

ONTARIO FINANCING AUTHORITY

Borrowing and Debt Management – General

Q. Why was total long-term public borrowing $32.1 billion in 2015–16 when the deficit was $5.7 billion?

A. In addition to financing the deficit, long-term public borrowing refinances debt maturities and debt redemptions, funds the Province's investments in capital assets, and loans to agencies. The Province also pre-borrowed $2.0 billion of its 2016-17 requirements.

~~**Q. Why did the Net Debt-to-GDP ratio decline to 39.6 per cent at the end of fiscal 2015–16, compared to the 39.8 per cent forecast in the 2015 Budget?**~~

~~A. The reduction in the Net Debt-to-GDP ratio was primarily due to lower than forecast deficits and investment in capital assets in 2015–16.~~

Q. The Province is projected to borrow $24.4 billion in 2016–17. That's approximately $1,753 for every person in Ontario. When will the Province eventually run into a debt wall like Greece, Portugal and Ireland and be forced to raise taxes and cut services?

A. There is strong demand for Ontario bonds in both the domestic and international markets. Last fiscal year Ontario was able to borrow $32.1 billion in long-term debt while our spread, or the margin that we have to pay over the equivalent Government of Canada bond, tightened, indicating ongoing strong demand for Ontario bonds.

We expect that the liquidity of Ontario benchmark bonds and continuing confidence in the value of Ontario debt will allow us to cost-effectively complete the 2016–17 borrowing program. As of ~~August 31~~September 30, 2016, $13.3~~2.5~~ billion or 5~~4~~1 per cent, of this year's long-term borrowing requirement has been completed.

Q. Has it been difficult to complete the Province's borrowing program?

A. The Province continues to have steady access to both domestic and international bond markets. As of ~~August 31~~September 30, 2016, the Province had borrowed $13.3~~2.5~~ billion for the fiscal year. Approximately 69~~71~~ per cent of this year's borrowing-to-date has been completed in Canadian dollars. The remainder of the Province's borrowing-to-date has been completed in international currencies primarily through U.S. dollar global bonds, and two small Australian dollar Kangaroo bond issues. In 2015–16, the Province borrowed $32.1 billion, with $2.0 billion in pre-borrowing.

Q. What is the difference between total debt, net debt and accumulated deficit?

A. Total debt represents all borrowing.

Net debt is all borrowing plus other liabilities, minus the Province's financial assets.

By analogy, think of a family's finances. A mortgage, car loans and lines of credit represent total debt. Total debt partially offset by money the family has in the bank, in RRSPs and in RESPs represents the family's net debt.

Accumulated deficit is the sum of all past Provincial surpluses and deficits, adjusted for changes in accounting rules.

Q. Is the Province planning to issue any more Green Bonds in the future?

A. On January 22, 2016, the Province of Ontario successfully priced its second Global Canadian Dollar (CAD) Green Bond for $750 million. There was strong demand for Ontario's second Green Bond issue, with 52 investors participating in the trade. Eight projects were selected as eligible and are expected to receive funding from the second Green Bond, with an emphasis on clean transportation and energy efficiency and conservation.

To date, total Green Bond financing amounts to $1.25 billion, with up to $1.2 billion allocated to Metrolinx for clean transportation projects.

As the first Canadian province to issue Green Bonds, Ontario continues to lead the way in establishing and developing a Canadian dollar Green Bond market with investor participation from around the world.

Q. What are unrestricted liquid reserves, and how do they ensure that Ontario will have sufficient liquidity to meet its financial obligations?

A. The Province maintains liquid reserves in the form of cash and temporary investments, which can immediately be converted to cash.

In the normal course of doing business, the Province enters into transactions that may require it or its counterparties to pledge short term investments. Although the pledged investments are technically owned by the Province, they are deducted from the total liquid reserves figure to arrive at unrestricted liquid reserves. This provides a more conservative measure of the liquidity available to meet the Province's financial obligations.

The Province ensures it always has a prudent level of unrestricted liquid reserves to cover all obligations in the short term.

Interest on Debt (IOD)

Q. What is the impact on IOD of a $1.0 billion change in the deficit?

A. The 2016-17 impact is forecast to be approximately $30 million.

Q. What is the impact on IOD of a one percentage point change in interest rates?

A. The 2016-17 impact is approximately $350 million.

Q. What is your assumed interest rate for the IOD forecast in the 2016 Budget?

A. The assumed ten-year interest rates are 3.1 per cent for 2016-17 and 3.8 per cent for 2017-18, based on the forecast for Government of Canada bonds that OEP collects from the private sector, plus a spread for the Ontario credit. For 2018-19, the forecast is 4.8 per cent and is based on the average Ontario interest rates over the past 15 years. This is the same methodology that we have used for the last number of years in putting together our IOD forecast. These rates are cautious and prudent, above current market rates.

Q. Will IOD costs crowd out other expenditures as interest rates rise and debt continues to climb? How can you address this problem?

A. Ontario has a realistic plan to balance its budget while investments are made in the priorities of Ontario families – health care, education, the environment and infrastructure.

Investor demand has allowed the Province to extend the term of its debt in recent years and lock in low interest rates for a longer period. This term extension reduces the Province's refinancing risks and helps offset the impact of expected higher interest rates on its IOD costs. The 2010 Budget forecasted that, by 2016-17, the Province would have to spend 11.7 cents of every revenue dollar received on interest. ~~The current forecast is 23 per cent lower, at~~Currently, the Province spends ~~only~~ 8.5~~9.0~~ cents of ~~interest costs for~~ every dollar of revenue on interest. This ratio is the lowest~~r than it was in the 14 fiscal years from 1992–93 to 2005–06~~it has been since 1990-91, and is forecast to remain low~~er~~ through the period to balance in 2017–18.

Q. We understand that the proposed new standards by the Public Sector Accounting Board on Financial Instruments would affect IOD. Would it also affect other financial indicators of the provincial government?

A. Yes, Annual Deficit, Net Debt, Accumulated Deficit and their ratios as a percent to GDP would also be affected.

Q. If the proposed accounting change indicates savings, will the government be able to spend them?

A. The proposed accounting change introduces fair value measurement and prohibits hedge accounting. If implemented as planned, the Province's reported financial results would not accurately take into account the value of its derivatives. As a result, substantial accounting gains or losses could occur. These changes in value would be accounting changes only and not real changes in cash. This gain would only have been reflected in the Province's accounting statements, with no actual change in the cash available for program spending.

Credit Ratings

Q. What are the Province's current credit ratings?

A. The Province is rated:

	Long Term	Short Term
Moody's Investors Service:	Aa2	P-1
Standard & Poor's:	A+	A-1+
DBRS:	AA (low)	R-1 (mid)
Fitch	AA-	F1+

Q. What impact did Moody's removal of the negative outlook have on your borrowing costs?

A. Credit ratings are one of a number of factors that contribute to borrowing costs. Since the 2016 Ontario Budget was released, Ontario's credit spreads have narrowed modestly. This in part reflects the fact that all four credit rating agencies have affirmed Ontario's ratings reflecting their confidence in our plan to eliminate the deficit, with Moody's improving their outlook for Ontario's credit rating.

ONTARIO ELECTRICITY FINANCIAL CORPORATION

Stranded Debt and Residual Stranded Debt Qs&As

Q. What is the impact of broadening ownership of H1 on Stranded Debt?

A. The interim 2015–16 results reflect the upfront benefits to OEFC of broadening the ownership of Hydro One through an initial public offering (IPO). This includes the OEFC receiving in fiscal 2015-16 – that is after March 31, 2015 -- $2.6 billion in departure tax and about $200 million in one-time additional payments in lieu of taxes (PILs), as Hydro One exited the PILs regime and will no longer pay corporate tax PILs to the OEFC.

The upfront impact on OEFC of the departure tax and one-time PILs payments on the OEFC's unfunded liability was partly offset by lower Electricity Sector Dedicated Income. In addition, the one-time departure tax reflects that Hydro One is now a taxable corporation, so it will no longer pay payments-in-lieu of corporate taxes (PILs) to OEFC, which reduces the estimated present value of future dedicated revenues to OEFC.

The government recognizes its commitment to electricity ratepayers under section 50.3 of the *Electricity Act, 1998*, and has taken steps to clarify and ensure that the benefits of selling shares in Hydro One are recognized by OEFC to contribute to the continuing reduction of its unfunded liability.

As part of the government's commitment to using the proceeds from broadening Hydro One ownership for infrastructure investments and paying down debt, proceeds related to the book value of the shares sold and the pre-IPO special dividend payment of $800 million paid by Hydro One to the Province will be used to pay down the Province's electricity sector debt and other payables. This will allow the OEFC to reduce its overall debt, and contribute towards the Province's targeted $5 billion debt paydown. This debt paydown does not affect OEFC's stranded debt, as OEFC's receivables from the Province will be reduced by an equivalent amount.

[Note, Provincial payables to OEFC are notes payable to OEFC from the Province's acquisition of the equity in Hydro One in 1999, and in respect of cumulative net income since 1999.

Note this portion of the proceeds would have no net impact on OEFC's unfunded liability, as the cash asset would be offset by the reduction in the OEFC's receivable from the Province.]

Additional details

Under a Hydro One disposition, two future dedicated streams are affected:

1. Lower Hydro One earnings: The Province has committed to direct the income it earns from Hydro One (and OPG) in excess of the interest cost of its investment in the company. Upon a divestment, the Province would only be able to dedicate the portion of the net income that reflects its ownership stake. For example, in the case of a 15 per cent divestment, only 85 per cent of Hydro One's earnings less the associated interest cost, would be dedicated to OEFC. Currently, the Province owns about 70 per cent of Hydro One.

   Loss of federal portion of Payments in Lieu of Taxes: Prior to the IPO, Hydro One was exempted from regular federal and Ontario income tax and instead made payments in lieu of taxes to OEFC which helped service and paid down the stranded debt of the electricity sector. Payments in lieu of taxes to OEFC were equal to the federal and Ontario income tax Hydro One would pay if it were a taxable corporation. Following the beginning of broadening of ownership in Hydro One in November 2015, the Province's ownership of Hydro One fell below 90 per cent and the company ceased to be exempt from federal and Ontario income taxes and started to pay actual federal and provincial corporate income tax (CIT). As a result, OEFC would no longer receive the PILs from Hydro One equivalent to federal CIT. Under the amendments made to the *Electricity Act, 1998* in the *Budget Measures Act, 2015*, the Minister of Finance will pay the OEFC an amount equal to tax payable under the *Taxation Act, 2007* (i.e., the provincial CIT) by Hydro One Inc. (HOI), to continue to help service and pay down the electricity sector stranded debt. HOI is composed of Hydro One Ltd.'s regulated Ontario distribution, transmission and remotes businesses.

Q. What is the status of the old Ontario Hydro's stranded debt?

A. The government dedicates the revenues it receives from the electricity sector to the Ontario Electricity Financial Corporation (OEFC). All OEFC revenues, including the Debt Retirement Charge (DRC) paid by electricity consumers, are used to service and retire its debt and other obligations, as provided for under the *Electricity Act, 1998*.

For the twelfth consecutive year, the stranded debt is projected to be reduced, based on the interim 2015–16 results for the OEFC showing a projected excess of revenue over expense of more than $3 billion. The OEFC has paid down stranded debt by an estimated total of more than $15 billion from its peak in 2003-04, reducing stranded debt to under $5 billion as at March 31, 2016, based on interim numbers.

- The following table shows the unfunded liability (or "stranded debt") of OEFC since the opening amount of $19,433 million on April 1, 1999.

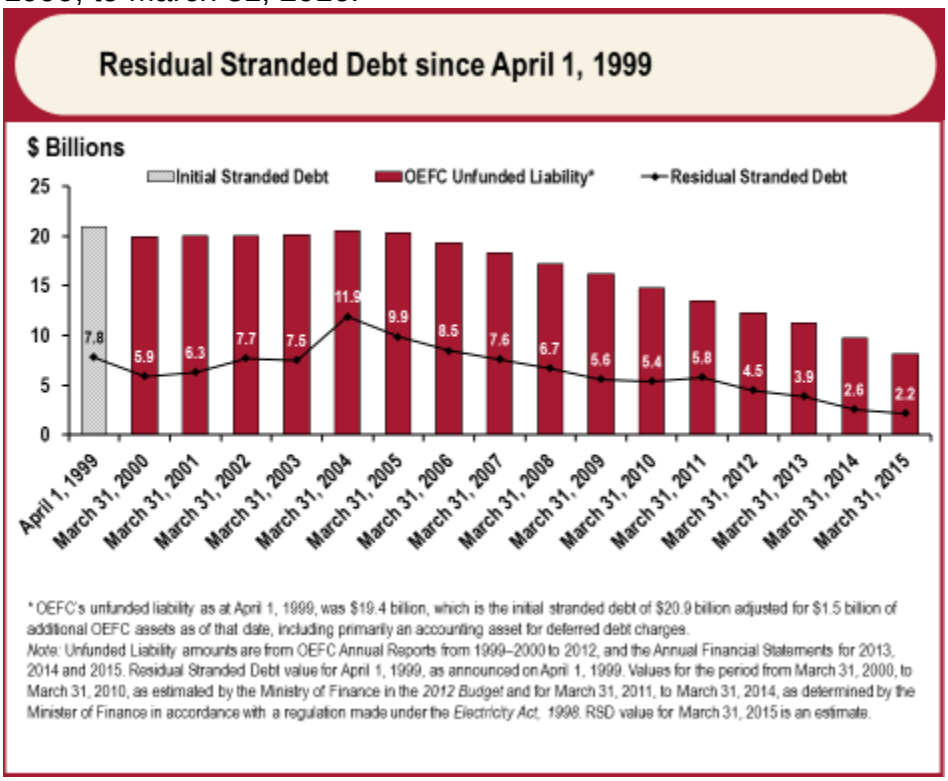
At March 31 ($M unless noted)	April 1, 1999	2000	2001	2002	2003	2004	2005	2006	2007
Unfunded Liability	$19,433	$20,034	$20,016	$20,085	$20,183	$20,550	$20,363	$19,293	$18,289
Increase / (Decrease)		$601	($18)	$69	$98	$367	($187)	($1,070)	($1,004)
At March 31 ($M unless noted)	2008	2009	2010	2011	2012	2013	2014	2015	Interim 2015-16
Unfunded Liability	$17,225	$16,182	$14,810	$13,448	$12,321	$11,257	$9,781	$8,185	<$5Bn
Increase / (Decrease)	($1,064)	($1,043)	($1,372)	($1,362)	($1,127)	($1,064)	($1,476)	($1,596)	>$3Bn

Residual Stranded Debt

Q. What is the residual stranded debt as at March 31, 2016?

A. The *Electricity Act, 1998* was amended by the *Budget Measures Act, 2015* (Bill 144) and, effective December 10, 2015, all reference to the "stranded debt" and "residual stranded debt", were repealed. This included the removal of the requirement to determine the residual stranded debt from time-to-time and the regulation-making authority for O. Reg. 89/12 – rendering the regulation obsolete. On February 11, 2016, the government filed Ontario Regulation 20/16 revoking Ontario Regulation 89/12.

Q. What is the current status of the residual stranded debt or what was the residual stranded debt the last time it was determined or estimated?



A. Prior to amendments in the *Budget Measures Act, 2015* under the *Electricity Act, 1998* the residual stranded debt was defined as the stranded debt minus the present value of projected future payments in-lieu of taxes (PILs), Gross Revenue Charge (GRC) and electricity sector dedicated income to be paid to OEFC.

In the *2015 Ontario Economic Outlook and Fiscal Review*, the residual stranded debt was estimated to be $2.2 billion as at March 31, 2015. This was a decrease of $0.4 billion compared to residual stranded debt of $2.6 billion as at March 31, 2014, and was a total estimated decrease of $9.7 billion from an estimated peak of residual stranded debt of $11.9 billion as at March 31, 2004. Residual stranded debt was initially estimated as $7.8 billion as at April 1, 1999.

Residual stranded debt is estimated to have increased to a peak of $11.9 billion as at March 31, 2004, primarily due to the electricity price freeze, the downward revision in 2004 of the previous overestimation of future financial performance of Ontario Power Generation (OPG) which lowered the estimated future dedicated revenues to OEFC from the sector, and lower tax rates, resulting in lower projected future PILs to OEFC. OPG had significantly underperformed compared to its plans over the previous period of 1999 to 2004.

The estimated residual stranded debt amount and timing for its retirement were subject to uncertainty in forecasting future OEFC results and dedicated revenues to OEFC, which depend on the financial performance of Ontario Power Generation, Hydro One and municipal electricity utilities, and other factors such as interest rates and electricity consumption. The changes to the levels of unfunded liability to-date, based in part on the upfront impact on OEFC of the departure tax and one-time PILs payments, also reflect the fact that OEFC will have reduced dedicated revenues as a result of reduced ownership in Hydro One going forward.

The following chart illustrates the path of residual stranded debt from April 1, 1999, to March 31, 2016.

Q. When will the residual stranded debt be retired and the DRC end?

A. The *Electricity Act, 1998* was amended by the *Budget Measures Act, 2015* (Bill 144) and, effective December 10, 2015, all reference to the "stranded debt" and

"residual stranded debt" were repealed. This included the removal of the requirement to determine the residual stranded debt from time-to-time and the regulation-making authority for O. Reg. 89/12 – rendering the regulation obsolete. On February 11, 2016, the government filed Ontario Regulation 20/16 revoking Ontario Regulation 89/12.As originally enacted, the *Electricity Act, 1998*, previously allowed for the Debt Retirement Charge (DRC) to be paid by consumers until the Minister of Finance determines that the residual stranded debt is retired.

The residual stranded debt determination was not a one-time determination. It was based on actual financial performance to-date and forecasting future OEFC results and future dedicated revenues to OEFC, which was subject to uncertainty and depended on the future financial performance of Ontario Power Generation, Hydro One and municipal electricity utilities, as well as other factors such as interest rates and electricity consumption.

As part of its commitment to reduce electricity cost pressures, the government has removed the DRC from residential electricity users' bills as of January 1, 2016.

This would save a typical residential user about $70 each year and would mean ending the DRC earlier for these users than otherwise provided for in the *Electricity Act, 1998*.

As a further step to mitigate electricity cost pressures for non-residential users, the government introduced legislation the *Budget Measures Act, 2015*, passed in December 2015, to end the DRC for all other users on April 1, 2018, nine months earlier than previously estimated.

Ending the DRC on a legislated fixed date provides certainty to commercial, industrial and other users, and helps them more effectively plan their investment decisions.

Even after the end of the DRC, there would still be stranded debt remaining, to be serviced and paid down by OEFC's other dedicated revenues, such as payments in lieu of taxes and the Gross Revenue Charge.

Q. Why did the residual stranded debt only fall from $2.6 billion to $2.2 billion between March 31, 2014, and March 31, 2015, if the Ontario Electricity Financial Corporation's (OEFC) unfunded liability fell by about $1.6 billion and the DRC collected the same year was $0.956 billion?

A. Prior to the *Budget Measures Act, 2015* amendments of the *Electricity Act, 1998* and the revocation of Ontario Regulation 89/12, the residual stranded debt was defined under the *Electricity Act, 1998* as the stranded debt minus the estimated present value of future payments in-lieu of taxes (PILs), Gross Revenue Charge (GRC) and electricity sector dedicated income to be paid to OEFC. The Debt

Retirement Charge would have been charged to consumers until the Minister of Finance determined that the residual stranded debt had been retired.

The residual stranded debt fell by less than the decrease in OEFC's unfunded liability due to a reduction in the estimated present value of future dedicated revenues to OEFC from $7.2 billion as at March 31, 2014, to $6.0 billion as at March 31, 2015, which reflected the uncertainty of and update to the forecast of future dedicated revenues to OEFC. These forecasted revenues depend on the financial performance of Ontario Power Generation, Hydro One and municipal electricity utilities, regulatory decisions by the Ontario Energy Board, as well as other factors such as interest rates and electricity consumption.

The residual stranded debt was not a fixed, one-time determination. Under the *Electricity Act, 1998*, and Ontario Regulation 89/12, the estimated amount of residual stranded debt depended on actual OEFC results to-date and a forecast of future revenues to OEFC.

Q. Why has the residual stranded debt only declined by $5.6 billion since April 1, 1999, to March 31, 2015?

A. The residual stranded debt increased from $7.8 billion as at April 1, 1999, to an estimated $11.9 billion as at March 31, 2004, as a result of an increase in stranded debt primarily due to the electricity price freeze, as well as a reduction in the estimated present value of future dedicated revenues to the Ontario Electricity Financial Corporation (OEFC), mainly reflecting the downward revision in 2004 of the previous overestimation of future financial performance of Ontario Power Generation (OPG), and lower tax rates. OPG had significantly underperformed compared to its plans over the previous period of 1999 to 2004.

Since 2004, the government's electricity sector reforms in the *Electricity Restructuring Act, 2004*, and others, have put the stranded debt recovery plan back on track. The residual stranded debt has been reduced by an estimated $9.3 billion, from an estimated peak of $11.9 billion as at March 31, 2004, to $2.2 billion as at March 31, 2015.

Prior to the *Budget Measures Act, 2015* amendments of the *Electricity Act, 1998* and the revocation of Ontario Regulation 89/12, the residual stranded debt was defined under the *Electricity Act, 1998* as the stranded debt minus the estimated present value of future payments in-lieu of taxes (PILs), Gross Revenue Charge (GRC) and electricity sector dedicated income to be paid to OEFC. The Debt Retirement Charge would have been charged to consumers until the Minister of Finance determined that the residual stranded debt had been retired.

The *Electricity Act, 1998* was amended by the *Budget Measures Act, 2015* and, effective December 10, 2015, all reference to the "stranded debt" and "residual stranded debt" were repealed. This included the removal of the requirement to determine the residual stranded debt from time-to-time and the regulation-making

authority for O. Reg. 89/12 – rendering the regulation obsolete. On February 11, 2016, the government filed Ontario Regulation 20/16 revoking Ontario Regulation 89/12.

Q. Since you have collected more than $12.5 billion in Debt Retirement Charge (DRC) revenue to March 31, 2015, why hasn't stranded debt declined by more?

A. Since 2004, the government's electricity sector reforms in the *Electricity Restructuring Act, 2004*, and others, have put the stranded debt recovery plan back on track. The Ontario Electricity Financial Corporation (OEFC) has paid down stranded debt by an estimated total of about $12.3 billion from its peak in 2003-04, reducing stranded debt to $8.2 billion as at March 31, 2015. As confirmed in the Auditor General's 2011 Annual Report, the DRC is used exclusively by OEFC to meet its mandate, as provided for under the *Electricity Act, 1998*, which includes servicing and retiring its debt and other liabilities.

- Servicing costs to the OEFC include interest expense, which is currently about $1.4 billion per year and has totalled about $30.5 billion between April 1, 1999 and March 31, 2015.

- Stranded debt increased by over $1 billion between April 1, 1999, and March 31, 2004, primarily as a result of the 4.3 ¢/kilowatt-hour (kWh) price freeze, which cost OEFC about $900 million.

- The Auditor General audits OEFC's annual financial statements and has provided an unqualified opinion every year since the initial 1999–2000 financial statements.

Q. After the removal of the DRC what is the government's plan to pay into the OEFC, to make up for that money? With the lower revenue going into the OEFC, isn't there a danger of it becoming insolvent?

A. The government has removed the Debt Retirement Charge (DRC) from residential users' electricity bills as of January 1, 2016. As a further step to mitigate electricity cost pressures for commercial, industrial and all other users, the government introduced legislation, passed on December 10, 2015, the *Budget Measures Act, 2015* to end the DRC on April 1, 2018, nine months earlier than previously estimated.

Prior to the *Budget Measures Act, 2015* amendments of the *Electricity Act, 1998*, the DRC would have been charged to consumers until the Minister of Finance determined that the residual stranded debt had been retired.

Even after the end of the DRC, there would still be stranded debt remaining, to be serviced and paid down by OEFC's other dedicated revenues, such as payments

in lieu of taxes and the Gross Revenue Charge. The government expects that the stranded debt will continue to decline following the end of the DRC.

Background

Q. What is OEFC?

A. The Ontario Electricity Financial Corporation (OEFC) is an agency of the Province and was established by the *Electricity Act, 1998* as the legal continuation of the former Ontario Hydro.

OEFC's mandate includes servicing and retiring the former Ontario Hydro's debt and certain other liabilities.

- OEFC inherited $38.1 billion in total debt and other liabilities from the former Ontario Hydro when the Ontario electricity sector was restructured on April 1, 1999. The debt was accumulated by building Ontario's electricity generation and transmission infrastructure.

- A portion of the $38.1 billion was supported by the value of the assets of Ontario Hydro successor companies, leaving $20.9 billion of stranded debt not supported by those assets

OEFC receives dedicated revenues to service and retire the stranded debt from a number of sources, including payments in lieu of taxes (PILs) from Ontario Power Generation (OPG), Hydro One and municipal electricity utilities (MEUs); Electricity Sector Dedicated Income from the Province in respect of the net incomes of OPG and Hydro One; and the Debt Retirement Charge paid by electricity users, as provided for by the *Electricity Act, 1998*.

Q. When will the OEFC's 2015-16 Annual Report be released publicly?

A. The 2015-16 Annual Report is currently being prepared. Under the Electricity Act, 1998, the time frame for preparing and submitting the Annual Report may be extended to reflect the timeframe for Public Accounts. Given the changes to the Electricity Act and significant activities during 2015-16 that affected OEFC, it was prudent to take additional time to review the impacts on OEFC in preparing the financial results for 2015-16..

- OEFC's annual reports contain OEFC's audited financial statements which are also released as part of the Province's Public Accounts

    - OEFC's audited 2014-2015 financial statements, including the notes to the financial statements, were released on Sep 28, 2015 in Volume Two of the 2014-15 Public Accounts.

- The Auditor General audits OEFC's annual financial statements and has provided an unqualified opinion every year since the initial 1999-2000 financial statements.

- Public Accounts may be downloaded from the Ministry of Finance web site (http://www.fin.gov.on.ca/en/budget/paccts/).

- OEFC's past Annual Reports (1999-2000 to 2014-2015) can be downloaded from the OEFC website. (http://www.oefc.on.ca/publications.html).A spreadsheet containing OEFC's historical financial statements can be accessed on OEFC's website (http://www.oefc.on.ca/pdf/OEFC_financials_historicals_en.xls)Q. What is the difference between stranded debt and unfunded liability?

A. The Ontario Electricity Financial Corporation (OEFC) inherited $38.1 billion in total debt and other liabilities from the former Ontario Hydro when the Ontario electricity sector was restructured on April 1, 1999. The debt was accumulated by building Ontario's electricity generation and transmission infrastructure. This amount included $30.5 billion in total debt.

A portion of the $38.1 billion was supported by the value of the assets of Ontario Hydro successor companies, leaving $20.9 billion of stranded debt not supported by those assets.

OEFC's initial unfunded liability of $19.4 billion as at April 1, 1999, was the stranded debt adjusted for $1.5 billion of additional assets, including primarily an accounting asset for deferred debt charges.

Q. What was the origin of the residual stranded debt?

A. The Ontario Electricity Financial Corporation (OEFC) is one of five entities established by the *Electricity Act, 1998*, as part of the restructuring of the former Ontario Hydro. OEFC's mandate includes servicing and retiring the debt and other liabilities of the former Ontario Hydro.

- OEFC inherited $38.1 billion in total debt and other liabilities from the former Ontario Hydro when the Ontario electricity sector was restructured on April 1, 1999. A portion of the $38.1 billion was supported by the value of the assets of Ontario Hydro successor companies, leaving $20.9 billion of stranded debt not supported by those assets.

- As of April 1, 1999, the present value of future payments-in-lieu of taxes and electricity sector dedicated income was estimated at $13.1 billion. Subtracting the $13.1 billion from stranded debt of $20.9 billion resulted in a difference of $7.8 billion, the initial estimated residual stranded debt.

The *Electricity Act, 1998* was amended by the *Budget Measures Act, 2015* and, effective December 10, 2015, all reference to the "stranded debt" and "residual stranded debt", including the regulation-making authority of Ontario Regulation 89/12, were repealed. This included the removal of the requirement to determine the residual stranded debt from time-to-time and the regulation-making authority for O. Reg. 89/12 – rendering the regulation obsolete. On February 11, 2016, the government filed Ontario Regulation 20/16 revoking Ontario Regulation 89/12.

Q. How does OEFC provide financial assistance to the successor corporations of Ontario Hydro? Are these loans added to residual stranded debt/outstanding liabilities?

A. Consistent with its mandate, OEFC provides financial assistance to the successor corporations of Ontario Hydro, namely Ontario Power Generation (OPG) and the Independent Electricity System Operator (IESO). For example, financing is provided by OEFC for new generation development projects such as the Niagara tunnel project.

OEFC borrows to provide these loans, thereby increasing its debt portfolio, but with an offsetting asset (Notes and Loan Receivables) from the companies, thereby not affecting the unfunded liability ("stranded debt") on OEFC's balance sheet.

Q. What is the "due from the Province of Ontario" payment?

A. Due from Province

The Due from Province of Ontario that appears in OEFC's financial statements represents the cumulative value of the Electricity Sector Dedicated Income (ESDI) since April 1, 1999.

ESDI reflects the Province's commitment to dedicate its cumulative combined net income of OPG and Hydro One in excess of the Province's interest cost of its investment in its electricity subsidiaries to OEFC.

- For example, the combined net incomes of OPG and Hydro One in 2014-15 was $1,558M, and the Province's interest cost in acquiring the equity in the two companies totals about $520 million annually. This resulted in an ESDI of $1,038 million in 2014-15, so the ESDI Due from Province of Ontario increased from $3,865 million as of March 31, 2014, to $4,903 million as of March 31, 2015.

The ESDI commitment is reflected in Public Accounts as a transfer payment to OEFC from the Province's Consolidated Revenue Fund and is authorized by a voted appropriation.

CORPORATE AND ELECTRICITY FINANCE DIVISION

Asset Optimization and the Trillium Trust

Q: What asset optimization initiatives did the Province move forward with in 2014-15?

A: On February 4, 2015, the Province completed the sale of its remaining 36.7 million GM common shares for total proceeds of $1.55 billion, resulting in a fiscal gain of $1.08 billion.

General Motors also redeemed the Province's preferred shares on December 31, 2014, for total proceeds of $0.16 billion, including a gain of $0.02 billion.

The $1.1 billion gain on the sale of the common and preferred shares exceeded the $900 million asset optimization target included in the 2014 Budget for 2014–15 Net Revenue Gains from Asset Optimization.

The Ontario government directed the gain from the sale, including the additional $200 million generated above the 2014 target, to the Trillium Trust. The Province also directed to the Trillium Trust the $249 million net proceeds from the September 2013 sale of the Province's interest in 10 million shares of GM.

Q: The 2014-15 Public Accounts showed that the sale of GM shares provided revenue benefits to the Province. Is the Province selling assets to improve the path to balance?

A: The government's plan to balance the budget is centred on:

- Responsibly Managing Spending
- Transforming and Modernizing Government
- Addressing the Underground Economic and Tax Compliance
- Investing Strategically to Grow the Economy

The government's plan to eliminate the deficit does not depend on the revenues from asset sales. Maximizing the value of these assets is part of the government's economic plan for Ontario. The net revenue gains from these transactions are helping the government to deliver on its plan by investing in infrastructure.

The *Trillium Trust Act, 2014*, provides for the dedication of net revenue gains associated with the sale of designated assets to the Trust to help fund investments in transit, transportation and other priority infrastructure under Moving Ontario Forward.

Q: What's the status of the funds in the Trillium Trust?

A: The Public Accounts of Ontario 2014-2015, published in September 2015, show that $1.35 billion has been dedicated to the Trillium Trust.

These are the net proceeds from the sale of the Province's remaining General Motors common shares in early 2015, combined with net proceeds from a September 2013 GM share sale and the redemption of preferred shares in late 2014.

On August 30, 2016, the Province announced the dedication of $3.2 billion from the sale of Hydro One shares in 2015 to the Trillium Trust.

This brings the total balance of the Trillium Trust to over $4.5 billion, to help fund further investments in transit, transportation and other priority infrastructure as part of Moving Ontario Forward.

- The $3.2 billion credit to the Trillium Trust comes from:
    - About $0.8 billion in gains on sale from the sale of Hydro One shares in November 2015.
    - The net benefit to the Province of about $2.4 billion from Hydro One's recognition of the deferred tax benefit.

Q: When will the government actually start using funds from the Trillium Trust to pay for transit and infrastructure?

A: As outlined in the 2016 Budget, the government plans to begin drawing down on the balance in the Trillium Trust in 2016-17 to support the largest investment in public infrastructure in Ontario's history. Based on planned expenditures, in 2016-17 the Trillium Trust would support Moving Ontario Forward initiatives, such as

- Regional Express Rail (RER);
- Hurontario Light Rail Transit (LRT); and
- Ontario Community Infrastructure Fund.

Like most large infrastructure investments, initial spending on Moving Ontario Forward projects is focused on planning, design, property acquisition and other activities to get projects construction-ready. This will allow for identification for expenditures, as this preliminary work is completed and construction activity

becomes underway, and for cash flow timing requirements from the Trillium Trust during 2016-17 and subsequent years.

Q: What is the current status of broadening Hydro One ownership?

A: The Province completed the Hydro One initial public offering (IPO) in November 2015 and raised approximately $1.83 billion in gross proceeds and about $116 million from related share sales. As announced in early May, a secondary offering of Hydro One shares raised approximately $1.97 billion in gross proceeds, and as announced in July, the Province has an agreement in principle to sell to First Nations in Ontario up to 2.5% of Hydro One shares at a price of $18 per share.

There were other associated benefits in connection with the IPO, including a positive impact to the Province's income from Hydro One as a result of a deferred tax benefit recorded by Hydro One. The Province also received cash of $1 billion in special payments from Hydro One, including $800 million in a special dividend paid prior to the IPO, and about $200 million in additional payments in lieu of taxes to the Ontario Electricity Financial Corporation (OEFC).

On August 30, 2016, the Province announced the dedication of $3.2 billion from the sale of Hydro One shares in 2015 to the Trillium Trust, bringing total balance of the Trillium Trust to over $4.5 billion. The net revenue gains from the secondary offering in April 2016 will be credited to the Trillium Trust in the future.

The Province will proceed with future offerings in a staged and prudent manner, over time reducing its stake to 40 per cent while remaining the largest shareholder.

Through this initiative, the Province expects to generate $4 billion in net revenue gains that, through the Trillium Trust, will be reinvested in infrastructure under Moving Ontario Forward, and $5 billion to reduce debt.

Q: In April 2015, the Premier's Advisory Council on Government Assets estimated Hydro One's valuation at between $13.5 billion and $15 billion; using this estimate, the province could realize up to $9 billion from the sale of 60% of Hydro One. Does the Province still expect these benefits?

A: The Province is on track to generate approximately $9 billion in gross proceeds and other revenue benefits from broadening the ownership of Hydro One, while remaining the largest single shareholder.

Through this initiative, the Province expects to generate $4 billion in net revenue gains that, through the Trillium Trust, will be reinvested in infrastructure under Moving Ontario Forward, and $5 billion to reduce debt.

Q: In moving forward with broadening Hydro One ownership, isn't the government giving up future revenues from the company?

A: While broadening ownership in a revenue generating asset means that there may be an impact on revenues over the longer term, the fiscal impact of an asset sale includes upfront gains that the government will reinvest into public infrastructure, improving the lives of Ontarians where they live, work and play. In turn, this will create jobs, generate economic growth and additional revenues for the Province.

- The Province would also retain 40 per cent of Hydro One, following the IPO and subsequent share offerings, which would continue generating revenue for the Province.

Q: Why did the government remove certain oversight powers of the Office of the Auditor General over Hydro One?

A: To support Hydro One's transition from being wholly-owned by the Province to being publicly traded, the government agreed with the Premier Advisory Council's recommendations that the company should operate, to the extent possible, in the same legislative and regulatory environment as other publicly–traded, rate-regulated entities.

However, the Province has ensured Hydro One oversight measures are in place. Hydro One continues to be subject rate regulation by the Ontario Energy Board (OEB) and as a publicly traded company Hydro One is subject to requirements of the Business Corporations Act (Ontario) and the Securities Act (Ontario).

To further ensure the protection of ratepayers, the government required Hydro One to create a dedicated Ombudsperson, similar to those found at other publicly traded companies. The Ombudsperson is able to receive and investigate customer complaints.

The government has also put in place a governance agreement and registration rights agreement with Hydro One to clarify the Province's role as investor, including the process through which the Province nominates 40 per cent of the board of directors and the Province's rights related to future share sales by the Province or Hydro One.

The government will remain, by law, the largest single shareholder in Hydro One – and no other single shareholder or group of shareholders will be permitted to hold more than 10 per cent of the company's shares.

Q: What is the status of the potential merger between Hydro One Brampton and a group of urban local distribution companies (LDCs)?

A: The proposed merger of Hydro One Brampton with PowerStream, Enersource, and Horizon Utilities, continues to move forward.

The municipal councils for the cities of Barrie, Markham, Vaughan, Mississauga, Hamilton and St. Catharines have all voted to proceed with the merger. Ontario has also executed a Share Purchase Agreement with PowerStream, Enersource, and Horizon.

Commercial closing of the transaction would be subject to certain closing conditions, including Ontario Energy Board (OEB) approval. The proposed merger is currently being reviewed by the OEB.

- The proposed merger of these three strong performing utilities with Hydro One Brampton would create the second-largest electricity distributor in Ontario by number of customers. The merged entity would deliver efficiencies and economies of scale while continuing to provide safe, reliable and clean electricity.

Q: Will the Province realize any up-front benefit from the sale / merger of Hydro One Brampton with other local distribution companies (LDCs)? Would these benefits go to the Trillium Trust or to the Ontario Electricity Financial Corporation (OEFC)?

A: The purchasers have agreed to pay $607 million for Hydro One Brampton, subject to post-closing adjustments and regulatory approval from the Ontario Energy Board (OEB).

The *Trillium Trust Act, 2014*, ensures that net revenue gains from the sale of Hydro One Brampton shares would be credited to the Trillium Trust. Under the Act, the net revenue gains would take into account the gross proceeds less the book value of the asset and costs incurred in the disposition of the asset.

The *Electricity Act, 1998*, also allows the Province to meet its obligations to OEFC by, for example, relieving OEFC of certain debt obligations that it currently owes to the Province.

Q: Why is Hydro One Brampton being merged with three other urban local distribution companies – Powerstream, Horizon Utilities, and Enersource? Why wasn't there a competitive process for the sale/merger of Hydro One Brampton?

Together these utilities can take advantage of efficiencies of scale and resources sharing, which in turn could translate into savings for their respective ratepayers.

In the course of its Phase 2 consultations, the Premier's Advisory Council received a strong pre-emptive bid from the consortium of local distribution companies (LDCs) at the higher end of the indicative values identified in the Council's market soundings.

Such a merger will provide a much needed catalyst for wider Local Distribution Company consolidation.

As noted by the Auditor General in her 2015 Annual Report, based on information provided to the Office of the Auditor General (OAG) by Hydro One and the Ministry of Energy, the OAG's estimates that the purchase price is reasonable for Hydro One Brampton Networks, and would provide the province with a fair return on its investment.

TREASURY BOARD

Office of the Provincial Controller Divison

Technical Q&As

Q: Why has the Province found it necessary to deviate from Public Sector Accounting Standards (PSAB) for its own financial statements and for controlled entities?

A: To be clear, although the Auditor General's report includes references to legislated accounting standards, the measurement and reporting of the province's results has continued to be in accordance with Public Sector Accounting Standards. The only legislated accounting that has ever impacted the Province's Public Accounts is the Investing in Ontario Act which stipulated accounting treatment which was in alignment with PSAB standards. The Act only applied to the 2008-09 Public Accounts. Otherwise, legislated accounting has never impacted the Province's Public Accounts either before or after that date.

In all other cases where we have used legislated accounting to support the organizations that are provincially controlled in reporting consistently, our decisions were always made in the public interest. Our goal has always been to ensure that our financial reporting supports transparency and accountably of the government and controlled entities' results.

Furthermore, our direction has always been based on independently established, generally accepted accounting standards. For example, under the Investing in Ontario Act, the government's obligation to provide funding to municipalities was accounted for in accordance with PSAB, and the Act explicitly stated how the government was going to account for the transfers. The AG of the day confirmed that our accounting was in accordance with PSAB in his annual report.

Again, the legislation was not intended to override PSAB, but rather to ensure a clear understanding of how the province intended to account for the government's liability. Some of the changes reflect our desire to ensure consistency in accounting for similar transactions. As such, the government directed school boards and other controlled entities to follow accounting practices which mirror those of the Province related to accounting for capital transfers.

The province also directed Hydro One and OPG to follow US accounting standards at a time when these government business enterprises would have otherwise been required under PSAB standards to adopt international financial reporting standards (IFRS). This was done to mitigate risks related to uncertainty regarding the future of rate regulated accounting under International Financial Reporting Standards.

A number of other rate regulated entities in Canada also decided to adopt US GAAP at that time for this same reason. Both OPG and Hydro One are regulated based on US GAAP, which allows the regulator to rely upon the audited financial statements for regulatory submission purposes. User needs and public interest are both served by the direction given by the government for these entities to adopt US GAAP.

These limited instances of legislated accounting direction have been in the public interest and as noted earlier, do not impact the Province's consolidated financial results which are based on PSAB.

[Note – Questions 2 and 3 relate to an issue currently under discussion with the AG in connection with the 2015-16 Public Accounts and therefore, the content will require updating once resolved.]

Q: Accounting standards related to rate regulated entities changed on January 1, 2015 but the Province didn't reflect them in its books as at January 1st. Will you be reporting OPG and Hydro One on an IFRS basis in your 2015/16 Public Accounts?

A: Both Hydro One and OPG are government business enterprises and have December 31st year-ends, whereas the Province's fiscal year ends on March 31.

Under the government's accounting policy, any changes to accounting policies impacting GBEs with different year-ends are reflected in the province's consolidated financial results in the subsequent reporting period. This policy allows us to maintain consistency in the basis upon which the budget and actual results are prepared and therefore best supports transparency and accountability in financial reporting. Otherwise, the actual results would reflect the impact of an accounting entry which wouldn't have been reflected in the approved budget against which the Province's results are reported. Ontario's policy for these sorts of changes is also consistent with the practices of other jurisdictions like Manitoba.

As such, the earliest date that the change in accounting standards applicable to rate regulated entities would be reflected in the Province's consolidated financial statements would be in next year's Public Accounts.

We are concerned with the continued uncertainty that remains regarding the future of rate regulated accounting under IFRS. It was because of that uncertainty that the Province directed both Hydro One and OPG to report based on US GAAP, because it does include rate regulated accounting. By adopting US GAAP, we essentially maintained the status quo for both of these entities because US GAAP is very closely aligned with the former Canadian GAAP.

(NOTE - We are not in a position to confirm/commit that we will reflect the results of OPG and Hydro One on an IFRS basis in our future Public Accounts. Rather, we will continue to monitor the progress of the International Accounting

Standards Board's project on rate regulated accounting to help inform us on decisions respecting our future accounting policies.)

Q: What are the impacts on reporting by Hydro One and OPG if the Province consolidates them based on IFRS?

A: Directing Hydro One and OPG to follow US GAAP under O.Reg 395/11 essentially maintained the status quo in financial reporting for the two entities at a time when PSAB would have required them to adopt International Financial Reporting Standards which didn't have rate regulated accounting. This is because US GAAP is very similar to Canadian GAAP which recognizes that the economic inflows and outflows resulting from rate regulation should be reflected on the books to present a proper financial picture of the organization and its results from operations. The Ontario Energy Board also regulates these entities based on US GAAP and is able to rely upon independently audited financial statements of these entities for assessing cost of service. Many other Canadian rate regulated entities also follow US GAAP.

From a Public Accounts perspective, the AG's focus is on how the Province consolidates the entities on our books, not with the basis upon which the entities themselves report. Both Hydro One and OPG are audited by reputable public accounting firms and continue to receive clean audit opinions which say that they are fairly stated. Whether or not the Province changes the basis upon which it reports the results OPG and Hydro One on our books for 2015/16 will not have any impact on OPG or H1's reported results which are expected to continue to be on a US GAAP basis.

Q: In what ways does Ontario's reporting differ from that of other Canadian governments?

A: Most senior governments in Canada issue financial statements based on accounting standards issued by the Public Sector Accounting Board (PSAB). Most have adopted PSAB as their basis of reporting although they are not compelled to do so. That said there are inconsistent treatments among governments in how they account for capital transfers. There continues to be significant debate among the preparer and auditor community on when transfer revenue should be reported. Ontario is one of the few jurisdictions in which both the Preparer and the Auditor agree that capital transfers can be deferred and amortized under the standard.

Ontario also differs from other jurisdictions in the consolidation presentation we follow for the Broader Public Sector which includes hospitals, school boards and colleges. We have chosen to consolidate these sectors on a one-line basis on the Province's consolidated financial statements to better represent the accountability relationship between the Province and the sectors which are expected to operate to a break even. Under our hybrid approach, expenses for the sectors are shown net of any third party revenues which avoids the inter-

mingling of third party revenues (like money transferred from a foundation) with government tax and non-tax revenues. The balance sheet however, is consolidated on a line-by-line basis.

Ontario does not consolidate universities. This accounting treatment is consistent with PSAB standards and reflects the fact that Ontario does not have power to govern the financial and operating policies of Universities in Ontario. Accountability relationships between governments and universities vary in different jurisdictions, so other governments might consolidate universities but we do not. For example, in Manitoba, universities are consolidated primarily because of the roles and power of the Minister of Education and Advanced Learning (EAL) over the universities, which is exerted in areas such as budgeting, financial reporting, program of study, tuition fees and the ability to borrow for capital purposes.

Ontario presents its budget and Public Accounts on exactly the same basis. Both are prepared on a fully-consolidated, PSAB basis. Since both are prepared on a consistent basis, users which include the public and the legislature, can easily compare the actual results of the government to see if we carried out our activities in accordance with the approved plan and expectations. A single basis for reporting both budget and actuals without the need for reconciliations and reporting different values for key measures like the deficit in different documents, best supports transparency and accountably to our users.

Q: What has Ontario done to improve the quality of its Financial Statement Discussion and Analysis?

A: The province continues to strive to provide high-quality financial reports that support transparency and accountability in reporting to the public, the legislature and other users.

The Auditor General recommended that government consider the guidance outlined in the Public Sector Accounting Board's Statement of Recommended Practice in preparing its Financial Statement Discussion and Analysis for its Annual Report.

In preparing the Annual Report for the 2015-16 fiscal reporting period the government reviewed reporting practices of other senior Canadian governments and referenced recommended practices issued by the Public Sector Accounting Board.

A number of enhancements to both the Annual Report and the province's accompanying data visualization will improve the transparency and accountability in the government's financial reports, including:

- An expanded comparison of the current year's results to those of the prior year, including analysis of the trends over a five year period as related to several financial items, including an expanded discussion on balance sheet items.
- A description of the Province's capital assets, reflecting their importance in service delivery and their impact on the Province's financial condition.
- A description of risks and uncertainties which impact the government's financial results and details on how the government manages those risks.
- Supplementary data visualization on the Ontario.ca website which will graphically present more details on the financial information contained in the Annual Report and supporting volumes.

Q: Why doesn't the government consolidate the WSIB on its books?

A: The Auditor General has discussed the WSIB in her report for a couple of years, suggesting that the government reconsider the exclusion of the WSIB's financial results from the Province's consolidated financial statements. Her suggestion is based on the risk that the province might have to provide funding to ensure the WSIB remains viable.

Under public sector accounting standards the province only consolidates those organizations which are assessed as controlled. Where province has the power to govern the financial and operating policies of an entity with expected benefits of risk or loss, it is consolidated on our books. This is not the case with the WSIB, and furthermore the Province doesn't have any legal liability for the debts of the WSIB.

In fact, the WSIB is really a non-controlled trust in nature, and such trusts are not consolidated on the basis that it would distort the Province's books if the trust's assets, liabilities, revenues and expenses were shown on our books. Since the government does not have any legal responsibility for the unfunded liability, and does not control the entity, we feel that it should remain non-consolidated.

The current exclusion of the entity from our books best serves transparency and accountability. Otherwise, the public and legislature would assume that the WSIB debt is taxpayer debt and that any net operating income/loss of the WSIB would somehow impact the taxpayer.

Q: The Auditor General has discussed concerns over Ontario's debt burden in her report for a couple of years. What has the government done to address this concern?

A: The government remains committed to achieving its target of reducing the net debt-to-GDP ratio to its pre-recession level of 27% after eliminating its annual deficit in 2017-18.

The AG also remarked that while strategies to pay down the debt are a matter of government policy, this should not prevent government from providing information to promote a greater understanding of the province's debt. We agree, and our FSD&A will contain a more robust discussion of Ontario's total debt, including multi-year trend information related to the debt of the province.

Q: How does the Province account for capital assets procured via AFP in the Public Accounts?

A: Alternative Financing and Procurement (AFP) refers to the Province using private-sector partners to procure and finance infrastructure assets. The Province is committed to transparency and accountability in financial reporting, and the accounting treatment for assets procured via AFP reflects the economic substance of the transaction. The Province prepares its financial statements following Public Sector Accounting Standards (PSAS). AFP projects are a public-private partnership model and the accounting is based on the level of risk transferred to the private partner during construction. All AFP projects to date have been considered shared risk projects during construction. Accounting treatment for capital assets is not affected by financing or procurement method. Assets procured traditionally or via AFP are recognized as tangible capital assets and the related obligations are recognized as liabilities in the provincial consolidated financial statements as the assets are constructed.

Q: Why was there a large increase in the liabilities for contaminated sites in 2014-15?

A: In June 2010, the Public Sector Accounting Board issued the liabilities for contaminated sites standard effective for fiscal years beginning on or after April 1, 2014. Contaminated sites are a result of contamination being introduced into the air, soil, water or sediment of a chemical, organic or radioactive material or live organism that exceeds an environmental standard.

In the past, the Province has reported environmental liabilities based on its obligations resulting from federal legislation. The new PSAB standard requires that provincial legislation or regulation also be considered when reporting environmental liabilities even if no order for remediation has been issued but the contamination is in excess of the standard. Environmental cleanup is often linked to past industrial activities.

Incremental liabilities reportable under the new PSAB accounting standard are reflected in these financial statements. For 2014–15, the year of transition, the Province has reported $1,683 million as an increase in its accumulated deficit in the Consolidated Financial Statements.

Remarks by Gadi Mayman

CEO

Ontario Financing Authority

to the Standing Committee

on Public Accounts

Toronto, Ontario

~~September 21~~October 5, 2016

Word count: 835~~740~~

Check against Delivery

Thank you, Deputy Minister Thompson and Deputy Minister Orencsak.

Good afternoon.

My name is Gadi Mayman, and I am the Chief Executive Officer of the Ontario Financing Authority.

In this role, I am responsible for overseeing Ontario's:

- borrowing and debt management strategy;
- corporate and electricity finance projects and;
- banking relationships.

I also manage the province's relationships with credit rating agencies, bond underwriters and investors.

Before I continue, I would like to thank the committee for the opportunity to discuss what we have been doing to address the points raised by the Auditor General regarding Ontario's debt.

[Net debt]

~~Ontario's net debt-to-GDP is expected to peak at 39.6 per cent in 2015–16.~~

~~This compares to the forecast of:~~

- ~~39.8 per cent in the 2015 Budget;~~
- ~~40.8 per cent in the 2014 Budget and;~~
- ~~40.4 per cent in the 2013 Budget.~~

~~We expect Ontario's net debt-to-GDP ratio to remain unchanged at 39.6 per cent in 2016–17, and decline further in 2017–18.~~

The government is committed towards ~~target continues to be to~~ reducinge the net debt-to-GDP ratio to its pre-recession level.

A government's net debt increases primarily for two reasons: to finance its deficits and invest in capital assets.

In the first few years after the global recession in 2008–09, the increase in the province's net debt was primarily due to Ontario's deficit. Over this period the Government continued investing in much needed improvements to the Province's capital infrastructure.

The government plans to invest more than $137-billion in capital over 10 years, and $160 billion over the 12-year period starting in 2014-15.

Investments in capital, supplement GDP growth and the net debt-to-GDP ratio will come down more quickly than it would without these investments.

Once a balanced budget is achieved, the increase in net debt will be limited to difference between the cash investment to build the assets and the amortization, which is a non-cash amount.
~~Ontario's deliberate choice to invest in the economy during the recession did increase the deficit, but also resulted in Ontario experiencing the recession less harshly than we might have otherwise.~~

~~The strategy was successful-- the economy rebounded and since then, the government has been committed to eliminating the deficit by 2017–18, and remaining balanced in 2018–19.~~

~~Once balance is achieved, the increase in Ontario's net debt will be limited to its net investment in tangible capital assets.~~

This means that achieving balance will put net debt-to-GDP on a declining track.

Moody's notes in a report issued October 3, 2016 that Ontario's debt burden and debt service costs will remain manageable thanks to low interest rates, as well as the province's improving fiscal position and conservative debt management policy.

The report also states, "The policy decision to borrow for infrastructure spending at a time of historically low interest rates, combined with the prudent debt management practices outlined above, has helped to support the province's Aa2 rating."

[

~~Moody's notes that the government's policy decision to borrow for infrastructure spending at a time of historically low interest rates, combined with the prudent debt management practices has helped to support the province's rating.~~

Formatted: Font: (Default) Arial, 14 pt

Formatted: Font: Not Bold

[Borrowing Program]

Ontario conducts a robust and responsible borrowing program that protects the public interest.

In 2015–16 the government successfully completed its annual borrowing program, borrowing $32.1 billion.

As of September 30, ~~August 31,~~ 2016, the province has borrowed $13.3 billion of its
$24.4 billion requirement for fiscal 2016–17.

The recently released 2015-16 unaudited Financial Statements of the Province included a legislated pension adjustment that increased net debt by $10.7 billion.

The pension adjustment was non-cash and does not impact either the Province's total debt or its borrowing requirements.

Through prudent and cost-effective debt management, Ontario has consistently kept interest on debt costs below budget projections.

Employing term extensions has allowed the Province to lock in low interest rates for longer periods, which has reduced Ontario's refinancing risks.

It also helps offset the impact of expected higher interest rates on the interest-on-debt costs.

As of ~~August 31,~~September 30, 2016, the average term to maturity for new borrowing in 2016–17 was 15.~~6~~3 years.

In fact, since 2010 Ontario has issued $59.1 billion of bonds longer than 30 years' duration to lock in low rates.

As a result, we have extended Ontario's weighted-average term to maturity of long-term provincial debt significantly.

In 2009-10 it was 8.1 years; last year it was 14.2 years.

As I mentioned a moment ago, it was 15.~~6~~3 years as of September 30th ~~August 31~~ this year.

The 2010 Ontario Budget forecast that, by 2016–17, the Province would have to spend 11.7 cents of every revenue dollar on interest.

Currently, the Province spends 8.5 cents of every revenue dollar on interest, ~~The current forecast is~~ ~~23~~.~~75~~ cents lower than what was forecast in 2010. ~~We are currently tracking at nine cents of every revenue dollar.~~

This ratio is the lowest~~r than~~ it h~~w~~as been since ~~in the~~ 1990~~s and 2000s~~, and is forecast to remain low~~er~~ through the outlook period in 2018–19.

The Province takes a very prudent approach to managing the risks associated with its borrowing program.

Ontario limits itself to a maximum net interest rate resetting exposure level of 35 per cent of debt issued for provincial purposes.

It also limits itself to a maximum foreign exchange exposure level of five per cent of debt issued for provincial purposes.

As of September 30, ~~July 31,~~ 2016, the actual values for Ontario's net interest rate resetting exposure and~~-~~ foreign exchange exposure were 10.6 ~~9.35~~ per cent and 0.33 per cent, respectively.

As you can see, this is well below the policy limit levels.

The Province will remain flexible in its borrowing approach.

The approach includes monitoring all major markets and seeking the most cost-effective means, over the long term, to finance Ontario's borrowing program.

It also includes reaching out to investors and investment banks, domestically and globally, to ensure that Ontario bond issues remain highly attractive, liquid and sought after, as they have been since Ontario began accessing public markets almost 25 years ago.

I am happy to answer any questions you may have.

Friendly Questions

1. Q. ~~Our government has a target for reducing the net-debt-to-GDP ratio. Can you tell us more about the target and how our government is doing in terms of reaching that target?~~

A. ~~Net debt, as of March 31, 2016, is forecast to be $296.1 billion, $2.8 billion lower than forecasted in the *2015 Budget*. Net debt was $284.6 billion as of March 31, 2015. The net debt-to-GDP ratio is forecast to peak at 39.6 per cent in 2015–16, remain level in 2016–17, and decline to 38.9 per cent in 2017–18 and 38.5 per cent in 2018–19.~~

~~Ontario conducts a robust and responsible borrowing program that protects the public interest. The government successfully completed its annual borrowing program in 2015-16, borrowing $32.1 billion. Long-term borrowing for 2016–17 is forecast to be $24.4 billion when factoring in $2.0 billion pre-borrowed in 2015–16. This will be the Province's smallest borrowing program since 2007–08.~~

~~As of August 31, 2016, the Province had borrowed $12.5 billion for the fiscal year. Approximately 71per cent of this year's borrowing-to-date has been completed in Canadian dollars. The remainder of the Province's borrowing-to-date has been completed in international currencies primarily through U.S. dollar global bonds, and two small Australian dollar Kangaroo bond issues.~~

~~Through prudent and cost-effective debt management, the Province has consistently kept interest on debt costs below budget projections. The *2010 Budget* forecast that, by 2016–17, the Province would have to spend 11.7 cents of every revenue dollar received on interest. The current forecast is 2.7 cents lower, at 9.0 cents of interest costs for every dollar of revenue. This ratio is lower than it was in the 1990s and 2000s, and is forecast to remain lower through the outlook period in 2018–19.~~

~~Term extension has allowed the Province to lock in low interest rates for a longer period, which reduces refinancing risks and helps offset the impact of expected higher interest rates on the Province's interest on debt costs.~~

~~Going back to the beginning of fiscal 2010-11, Ontario has issued $59.1 billion of bonds longer than 30 years to lock in low rates. As a result, the weighted-average term to maturity of long-term provincial debt issued has been extended significantly, from 8.6 years in 2008-09 to 15.6 years as of August 31.~~

2. Q. ~~Noting that a key indicator of the government's ability to carry its debt entails examining the level of debt relative to the size of the economy, can you please explain further what the forecasted net debt-to-GDP ratio is for Ontario?~~

Formatted: Indent: Left: 0", Hanging: 0.47", Space After: 0 pt

Formatted: QA_Question, Indent: Left: 0", Hanging: 0.47", No bullets or numbering

Formatted: QA_Question, Indent: Left: 0", Hanging: 0.47"

~~What effect does this have on the government's commitment to balancing the budget by 2017-18?~~

~~A. The Province's net debt-to-GDP ratio is expected to peak in 2015-16 at 39.6 per cent, remain unchanged in 2016-17 and begin to decline in 2017-18.~~

~~The government continues to maintain a target of reducing the net debt-to-GDP ratio to its pre-recession level. Net Debt increases primarily for two reasons: to finance deficits and invest in capital assets. In the first few years after the global recession in 2008-09, the increase in net debt was primarily due to the deficit. However, the government is on track to eliminate the deficit and balance the budget by 2017-18. Once a balanced budget is achieved, the increase in net~~ debt will be limited to the net investment in tangible capital assets.

3. Q. Why was the deficit lower than projected? Where does the government stand when it comes to reaching a balanced budget?

A. Since the last time the Office of the Auditor General reviewed these statistics in its 2013 Annual Report, the province's net debt-to GDP ratio has improved from 39.1 per cent to 38.~~6~~5 per cent for 2013-14 and remained relatively unchanged for 2014-15 at ~~40~~39.~~1~~4 per cent. This improvement is a direct result of better than forecast deficits. ~~, although the ration for the out years has been impacted, primarily by decreases in the GDP forecast~~.

With regard to debt management, the government's support for and commitment to economic growth will maintain debt at sustainable levels and achieve its target of reducing the net debt-to GDP ratio to the pre-recession level of 27 per cent.

The province has consistently beaten its annual deficit targets over the last five years. ~~, resulting in borrowings and accumulated deficits that are $ 25 billion lower that they would otherwise have been~~. A major contributor toward beating annual deficit targets has been the focus on annual expenditure management limiting the growth in program spending to an average of 1.5 percent from 2010-11 to 2013-14. The government has also addressed Ontario's infrastructure needs through targeted capital investments.

4. Q. Chapter 2 of the Auditor General's 2015 annual report speaks to the increased vulnerability of Ontario with respect to interest rates. She points to the possible rise in rates related to borrowing.

However, I am also aware that the Province has consistently kept interest on debt costs below budget projections.

What steps has the government taken to reduce borrowing and keep interest on debt costs low?

A. Through prudent and cost-effective debt management, the Province has consistently kept interest on debt costs below budget projections. The 2010

Formatted: QA_Answer

Budget forecasted that, by 2016-17, the Province would have to spend 11.7 cents on interest for every revenue dollar received. The current forecast is 2~~3~~7 per cent lower, at ~~9~~8.5~~.0~~ cents of interest costs for every dollar of revenue. This ratio is lower than it was in the 1~~4~~5 fiscal years from 199~~2~~1–9~~3~~2 to 2005–06, and is forecast to remain lower through the period to balance in 2017–18.

Extending the term of the debt that the Province issues has locked in low interest rates for a longer period, which reduces refinancing risks and helps offset the impact of expected higher interest rates on the Province's interest on debt costs.

Going back to the beginning of fiscal 2010–11, Ontario has issued $59.1 billion of bonds that do not mature for at least 30 years to lock in low rates. As a result, the weighted-average term to maturity of long-term provincial debt issued has been extended significantly, from 8.6 years in 2008-09 to 15.~~6~~3 years as of September 30~~August 31~~.

5. Q. The stranded debt arose under the *Energy Competition Act of 1998*, and its schedule, the *Electricity Act, 1998*. The *Electricity Act, 1998*, also enabled the implementation of the Debt Retirement Charge (DRC) on electricity ratepayers.

Since May 2002, residential and other electricity users have been paying the DRC of 0.7 cents per kilowatt hour (kWh) on their electricity bills. The DRC is paid to the Ontario Electricity Financial Corporation (OEFC) to help service and pay down the stranded debt that arose because of the restructuring of Ontario's electricity sector under the *Energy Competition Act, 1998*.

However, I know that the government eliminated the DRC from residential bills as of January 1, 2016.

This legacy charge from the Harris government was eliminated from residential bills about 2 years earlier than previously estimated – saving the average residential user about $70/year.

Can you please inform the committee of the commitment that the government has to eliminating the debt retirement charge cost for commercial, industrial and all other electricity users by 2018?

A. Thank you for the question.

As part of its commitment to reduce electricity cost pressures, the government has removed the Debt Retirement Charge (DRC) from residential electricity users' bills as of January 1, 2016.

This would save a typical residential user about $70 each year and meant ending the DRC earlier for these users than otherwise provided for in the *Electricity Act, 1998*, as originally enacted. As a further step to mitigate electricity cost pressures

for commercial, industrial and all other users, the government introduced legislation, passed on December 10, 2015, the *Budget Measures Act, 2015* to end the DRC on April 1, 2018, nine months earlier than previously estimated.

- A large industrial using 3,000 megawatt-hours (MWh) per month could save $21,000 per month, or about seven per cent off its electricity bills;
- For a large northern industrial in the Northern Industrial Electricity Rate program, this could be more than an eight per cent savings; and
- A small business using 20,000 kilowatt-hours (kWh) per month could save $140 per month, or about four per cent.

Ending the DRC on a legislated fixed date provides certainty to commercial, industrial and other users, and helps them more effectively plan their investment decisions.

I would note the following context. The government's electricity sector reforms in the Electricity Restructuring Act, 2004, and others, have put the stranded debt recovery plan back on track. Based on interim numbers in Budget 2016, this is projected to be the twelfth consecutive year that the stranded debt has been reduced, to under $5 billion as at March 31, 2016, from $20.6 billion as at March 31, 2004. This allowed the government to follow through on its commitment to reduce electricity cost pressures.

6. Q. Deputy Minister Orencsak, you mentioned that the C.D. Howe Institute has given positive feedback about the government's reporting practices. Why is that significant?

A. The C.D. Howe document "By the Numbers: The Fiscal Accountability of Canada Senior Governments, 2015" notes that Ontario along with Ottawa have "long stood out for relatively good financial presentations. " When evaluating the reporting practices and fiscal documents across Canada, the document rated Ontario an "A" grade.

The "A" grade was based on presentation criteria, as well as timeliness in their reporting schedule and timeliness of the public accounts audit. Ontario's public accounts and budget exhibited the following positive qualities per the C.D. Howe institute:

1. PSAB-consistent revenue and spending balances in public accounts
2. Revenue and spending figures that match the earliest budget figures in public accounts
3. Prominent comparison of actual results with budget plans
4. Estimates on the same bases as the budget and public accounts
5. The Province provides interim reports toward Budget targets and
6. No major audit reservations in public accounts.

Ontario and several other provinces were praised for having their budgets prepared on the same accounting basis as their end-of-year public accounts. In having budget and public accounts on the same basis, Ontario and the other such provinces have increased transparency and comparability to their citizens.

7. Q. Everyone has been doing more with less, and that includes the government. For example there are 6% fewer full time employees in the civil service now, compared to 2008. What else is the government doing to ensure its bringing costs down? What results have been achieved so far?

A. The Ontario Economic Outlook and Fiscal Review in fall 2014 announced Program Review, Renewal and Transformation (PRRT) as a key element of the government's plan to achieve a balanced budget.

PRRT is a fundamentally new approach to multi-year planning and budgeting, and is designed around four key principles:

- Examining how every government dollar is spent
- Using evidence to inform better choices and improve outcomes
- Looking across government to find the best way to deliver services, and
- Taking a multi-year approach to find opportunities to transform programs and achieve savings.

At the same time, the government is making tough choices to end programs that are not performing, do not link to key priorities or no longer serve a clear public interest.

The 2014 Budget announced that the government was implementing an annual program review savings target, and set the target at $250 million for 2014-15. The target was met through a number of initiatives that achieved the reductions while continuing to support front-line services.

An additional year-end savings target of $1.1 billion built into the plan was also achieved.

The government met its program review savings target through initiatives such as:

- Negotiating lower prices for goods and services
- Finding internal efficiencies in information technology data centre, desktop and service management operations
- Modernizing the delivery of natural resources management programs

- Restraining compensation growth in line with the government's "net zero" policy

- Finding operational and administrative efficiencies across government, including reducing the government's office footprint and prudent management of discretionary costs, such as supplies and travel.

In the 2015 Budget, the government announced a number of opportunities identified through PRRT to improve outcomes while supporting fiscal objectives. They included:

- Changing business tax credits

- Modernizing programs delivered through ServiceOntario

- Reducing the government's office footprint

- Getting better value for money invested in health care programs and services.

8. Q. Why is it important that the government has consistently beaten its deficit reduction targets in terms of the province's finances?

A. The government is dedicated to a fiscally sound approach to managing the Province's finances, which will provide the foundation for the long-term well-being and prosperity of Ontarians.

The government remains on track to eliminate the deficit by 2017-18. By continuing to beat our fiscal targets, ~~Ontario's accumulated deficit is $30 billion lower than it otherwise would have been~~.

Through prudent and cost-effective debt management, the Province has also consistently kept interest on debt costs below budget projections.

Term extension has allowed the Province to lock in low interest rates for a longer period, which reduces refinancing risks and helps offset the impact of expected higher interest rates on the Province's interest on debt costs.

In addition, we have maintained a rigorous approach to control program spending to reduce Ontario's net debt-to-GDP ratio to its pre-recession level.

Our path to a balanced budget is being achieved through responsible fiscal management, which involves:

- Managing growth in program spending, and

- Maintaining the integrity of Provincial revenues.

Our plan is to first balance the budget while continuing to make strategic investments in capital assets. These infrastructure investments will stimulate economic growth, resulting in GDP growing more quickly than debt, and thereby lowering the net debt-to-GDP ratio.

9. Q. There's been concern about Ontario's net debt-to-GDP being significant; however the government is making large-scale infrastructure investments. How are these investments helping the people of Ontario?

A. The government's position is that the renewal and expansion of public infrastructure supports Ontario's industries, creates jobs and provides long-term benefits and improves the lives of Ontarians.

Large investments have been announced and made for improvements in the province's infrastructure. The province is making public infrastructure investments of more than $137 billion over the next 10 years. This builds on the 2014 Budget commitment to invest in infrastructure – resulting in about $160 billion of investment over 12 years, starting in 2014-15.

The revenues allocated to the Trillium Trust will be used to support building transit, transportation and other priority infrastructure as part of the Moving Ontario Forward plan.

A September 2015 report by the Broadbent Institute and the Centre for Spatial Economics showed that, on average, investing a dollar in public infrastructure in Canada raises gross domestic product (GDP) by $1.43 in the short term and up to $3.83 in the long term.

Ontario's planned investments in public infrastructure are expected to support over 110,000 jobs per year on average.

Building and revitalizing public infrastructure are essential to strengthening Ontario's economy.

10. Q. Given that compensation accounts for half of government spending, what has the government done to help alleviate the strain on finances as it works toward balancing its budget?

A. The government remains committed to balancing the budget by 2017-18 and managing compensation costs has been a key element of achieving this goal.

The 2016 Budget emphasized that all public-sector partners must continue to work together to control current and future compensation costs.

Since then, collective agreements have been reached in a number of key sectors, including the education sector, Ontario Public Service and provincial energy corporations that are consistent with the government's fiscal plan.

From July 2012to September 2016, the provincial public sector annual wage increases have averaged 0.6%, compared to the municipal sector at 1.7%, the private sector at 1.9% and the federal public sector in Ontario at 1.7%.

The Government has achieved a number of net-zero deals, including:

In August 2014, the Government reached a new net-zero four-year agreement with AMAPCEO, which produced savings of approximately $45 million. The agreement included zero across-the-board increases in the first two years and modest increases in the third and fourth years that were offset by savings elsewhere in the collective agreement.

On Oct. 30, 2015, the Government ratified a new net-zero three-year agreement with the Unified Bargaining Unit in OPSEU.

The Unified agreement includes no wage increases in 2015 and 2016. In 2016 there will be a modest 1.4 per cent one-time lump sum payment that does not form part of employees' base salaries, and in 2017 there is a 1.4 per cent pay increase.

The agreement is consistent with the fiscal plan. The lump-sum payment in 2016 and pay increase in 2017 are offset through changes to employee benefits and entitlements over the three-year term of the contract, including a freeze on salary progression in 2016 and 2017 and capping of termination payments.

In May of 2016, the government was able to achieve a net-zero negotiations and arbitration settlement outcome with OPSEU Corrections.

The government has a reached a tentative agreement with the Provincial Engineers Government of Ontario (PEGO) that still needs ratification by members. As such we cannot comment on the details of this deal.

11. Q. There are changes ahead for retiree benefits, how will they help the government's bottom line and how do they compare with what is happening in the private sector? How important are these kinds of changes to our plan to balance the budget?

A. Currently, persons in receipt of a pension from the Public Service Pension Plan (PSPP) or OPSEU Pension plan who have a minimum 10 years of pension credit are entitled to post-retirement group health, dental and life insurance coverage. The Ontario government pays 100% of monthly premium costs.

On Feb. 18, 2014, the government announced that the post-retirement benefits eligibility criteria and cost-sharing terms would be changing in 2017.

PSPP and OPSEU Pension Plan member employees who do not have 10 years of pension credit as of Jan. 1, 2017 would be required to have at least 20 years of pension credit to retire to an immediate unreduced pension in order to be eligible for post-retirement benefits.

Also, eligible persons who have not commenced receiving a pension before Jan. 1, 2017, would be required to pay 50% of the life, health, dental and vision and hearing aid premiums.

Employees who commenced receiving a pension before Jan. 1, 2017 will not be affected by these changes.

Announcement of the changes led to a reduction of the retiree benefit program liability by over $1 billion and brings Ontario Public Service retiree benefits more in line with other public sector organizations.

Some other public sector workers pay 100% of their benefits premiums.

Eligible retirees include former employees of the OPS, as well as former employees of other employers which participate in the OPS pension plans.

Retired judges, justices of the peace and Ontario Provincial Police Association (OPPA) members have independent retiree benefit terms.

By transitioning to a new cost-sharing model for retiree benefits, the government is moving in line with the private sector and other public sector organizations.

12. Q. The Auditor General identifies significant accounting issues related to her audit of the Province's consolidated financial statements. Some of the issues are related to accounting standard changes. Since both Ontario's budget and actual results are based on PSAB accounting standards, such changes could impact the transparency and accountability of the government's financial reports as well as fiscal policy decisions. Can you please describe if these issues are ongoing and what has been done to rectify them?

How long will it be before this is resolved?

A. As your question points out, in addition to adopting PSAB as the basis to present its actual results, Ontario has also made a **policy decision** to adopt PSAB as the basis for the government's fiscal planning process which means that changes in PSAB's accounting standards can implicitly impact fiscal policy decisions.

As has been mentioned already, the **CD Howe Institute** has given Ontario an "A" grade for the quality of our financial reporting, based on a number of factors including the fact that we present PSAB-consistent revenue and spending balances in public accounts, and the timeliness of our reporting schedule. The fact that the actual results have been independently audited by the AG and that

we have received unqualified audit opinions over the past 22 years now, means that the public and legislature can rely upon the results reported by the government.

There is tremendous value in **independently established accounting standards**, and especially for standards which are prepared taking the unique accountability and transparency needs of the public sector in mind. In this regard, Ontario has continued to support the public sector accounting standard setting process. Input to the process by stakeholders is critical to ensure high-quality standards which meet user needs and which serve **the public interest.** And we take this responsibility very seriously.

Ways that we support the standard setting process include:

- **Monitor communications** from the Public Sector Accounting Standards Board related to upcoming projects to identify potential areas of interest/concern
  Similarly, we also monitor accounting standard developments which may impact our **GBEs** (for example, potential changes in standards impacting OLG, LCBO, H1 or OPG).

- Attend as **observers meetings of the Accounting Standards Oversight Council** to hear presentations by the Chair of the Public Sector Accounting Board and the Accounting Standards Board related to current projects and issues that they are dealing with. In the past we have had Deputy Minister representation on the Oversight Council with specific background in fiscal policy (Phil Howell). Such participation helped to ensure a more robust discussion of potential standard changes on governments.

- Participation by past **Provincial Controllers** as members of the Public Sector Accounting Standards Board. For example, our recently retired ADM and Provincial Controller, Murray Lindo, still sits on PSAB, although his 3 year term will be coming to an end next March. Although this position requires that the individual represent himself and his own views (and not represent the views of the government), it is nonetheless valuable to have a voice at the table to ensure that the real impacts of any potential changes on the quality of financial information are identified and discussed. It has been valuable for example to know that the continuing debate about Financial Instruments and Government Transfers is informed by both the accounting and fiscal perspective that Ontario's Provincial Controller would bring to the table.

- Ontario provides **input to PSAB's strategic plan** to help inform decisions on key areas that PSAB should focus.

- We also provide **input on an individual project by project** basis for each standard change that PSAB issues for comment. Occasionally, such projects could require several responses over the course of the project. For example, the PSAB standard on government transfers took 9 years to develop and input continues to date as part of PSAB's on-going review of issues related to the consistency of application related to the standard.

- Occasionally, we **stakeholder with PSAB staff** on specific matters like concerns related to the Financial Instruments standard. In this case staff from both OPCD and the OFA participated in discussions with PSAB.

- We **observe PSAB Accounting Discussion Group** meetings to hear representatives from the Board, audits and preparers discuss specific issues identified by public sector entities.

- Depending on the significance of a particular item, **Ontario has often played the lead in championing inter-jurisdictional dialogue and joint action plans** to support the quality of PSAB's standard setting process. For example, the OFA has collaborated with other members of the Canadian borrowing community to compile analysis and feedback to PSAB on its Financial Instruments standard. A past DM of Finance (Colin Anderson) Co-Chaired an inter-jurisdictional PSAB/Deputy Minister of Finance Joint Working Group which was formed in 2007 in light of key concerns being raised by governments related to PSAB's direction.

- Most recently, Ontario is **Chairing a Fiscal Expert Panel** which will be meeting later this week to discuss PSAB's current project on its Conceptual Framework in an effort to gather views and valuable input to share with PSAB on this foundational and critically important project. The outcome of the project will influence the direction of future public sector accounting standards.

This list is **not exhaustive**, but I hope that it gives you the sense of the significant time and effort that Ontario invests in supporting the quality of public sector reporting. We are committed to meeting user needs for transparency and accountability in public sector reporting. We will continue to invest the time and effort required to provide valuable input to PSAB's standard setting process.

13. Q: Moody's just released a report noting that Ontario's debt burden and debt service costs will remain manageable thanks to low interest rates, as well as the province's improving fiscal position and conservative debt management policy. Can you explain how your conservative debt management policies are keeping debt service costs manageable?

A: According to Moody's, "low interest rates will keep interest costs in line with current levels." Moody's also states that "Ontario's strategy of issuing debt across a variety of maturities and markets helps ensure good access to funding and low financing costs. To protect against unfavorable market conditions, Ontario has in recent years increased its liquidity reserves. The province has also extended its weighted average debt maturity to take greater advantage of low interest rates."

This term extension reduces the Province's refinancing risks and helps offset the impact of expected higher interest rates on its IOD costs.

The 2010 Budget forecasted that, by 2016-17, the Province would have to spend 11.7 cents of every revenue dollar received on interest. Currently, the Province spends 8.5 cents of every revenue dollar on interest, 3.5 cents lower than what was forecast in 2010.

This ratio is lower than it was in the 1990s and 2000s, and is forecast to remain lower through the outlook period in 2018–19.

14. Q: Moody's just released a report noting that Ontario's policy decision to borrow for infrastructure spending at a time of historically low interest rates, combined with the prudent debt management practices has helped to support the province's Aa2 rating. Can you explain how borrowing for infrastructure helps support the province's credit rating?

A: According to Moody's although Ontario's debt will continue to increase over the medium term as it funds its 10-year infrastructure plan "any negative impact on the province's credit strength will be counterbalanced by rising revenues and a return to budgetary balance."

The government plans to invest more than $137-billion in capital over 10 years, and $160 billion over the 12-year period starting in 2014-15.

Investments in capital, supplement GDP growth and the net debt-to-GDP ratio will come down more quickly than it would without these investments. Once a balanced budget is achieved, the increase in net debt will be limited to difference between the cash investment to build the assets and the amortization, which is a non-cash amount.

WSIB QAs from last year – WSIB to review and advise.

15. Q. The Auditor General has discussed the WSIB in her report for a couple of years, suggesting that the government reconsider the exclusion of the WSIB's financial results from the Province's consolidated financial statements. Her suggestion is based on the risk that the province might have to provide funding to ensure the WSIB remains viable. Why hasn't the government consolidated the WSIB on its books?

A. Under public sector accounting standards the province only consolidates those organizations which are assessed as controlled. Where province has the power to govern the financial and operating policies of an entity with expected benefits of risk or loss, it is consolidated on our books. This is not the case with the WSIB, and furthermore the Province doesn't have any legal liability for the debts of the WSIB.

In fact, the WSIB is really a non-controlled trust in nature, and such trusts are not consolidated on the basis that it would distort the Province's books if the trust's assets, liabilities, revenues and expenses were shown on our books. Since the government does not have any legal responsibility for the unfunded liability, and does not control the entity, we feel that it should remain non-consolidated.

The current exclusion of the entity from our books best serves transparency and accountability. Otherwise, the public and legislature would assume that the WSIB debt is taxpayer debt and that any net operating income/loss of the WSIB would somehow impact the taxpayer.

16. Q: What progress has the WSIB made on its target to be fully funded by 2027?

17. Q: Can you please give us an update on the status of the WSIB review of its long term financial viability?

---

Hi Matt,

As discussed, attached are the revised Q&As, scrubbed of any numbers based on yesterday's unaudited consolidated FS. We went back Budget 2016 numbers on the IOD as a % of Revenue.

I've made edits to Qs #4, 13, and 14.

Thanks,
Christina

Friendly Questions

1. Q. ~~Our government has a target for reducing the net-debt-to-GDP ratio. Can you tell us more about the target and how our government is doing in terms of reaching that target?~~

A. ~~Net debt, as of March 31, 2016, is forecast to be $296.1 billion, $2.8 billion lower than forecasted in the *2015 Budget*. Net debt was $284.6 billion as of March 31, 2015. The net debt-to-GDP ratio is forecast to peak at 39.6 per cent in 2015–16, remain level in 2016–17, and decline to 38.9 per cent in 2017–18 and 38.5 per cent in 2018–19.~~

~~Ontario conducts a robust and responsible borrowing program that protects the public interest. The government successfully completed its annual borrowing program in 2015-16, borrowing $32.1 billion. Long-term borrowing for 2016–17 is forecast to be $24.4 billion when factoring in $2.0 billion pre-borrowed in 2015–16. This will be the Province's smallest borrowing program since 2007–08.~~

~~As of August 31, 2016, the Province had borrowed $12.5 billion for the fiscal year. Approximately 71per cent of this year's borrowing-to-date has been completed in Canadian dollars. The remainder of the Province's borrowing-to-date has been completed in international currencies primarily through U.S. dollar global bonds, and two small Australian dollar Kangaroo bond issues.~~

~~Through prudent and cost-effective debt management, the Province has consistently kept interest on debt costs below budget projections. The *2010 Budget* forecast that, by 2016–17, the Province would have to spend 11.7 cents of every revenue dollar received on interest. The current forecast is 2.7 cents lower, at 9.0 cents of interest costs for every dollar of revenue. This ratio is lower than it was in the 1990s and 2000s, and is forecast to remain lower through the outlook period in 2018–19.~~

~~Term extension has allowed the Province to lock in low interest rates for a longer period, which reduces refinancing risks and helps offset the impact of expected higher interest rates on the Province's interest on debt costs.~~

~~Going back to the beginning of fiscal 2010-11, Ontario has issued $59.1 billion of bonds longer than 30 years to lock in low rates. As a result, the weighted-average term to maturity of long-term provincial debt issued has been extended significantly, from 8.6 years in 2008-09 to 15.6 years as of August 31.~~

2. Q. ~~Noting that a key indicator of the government's ability to carry its debt entails examining the level of debt relative to the size of the economy, can you please explain further what the forecasted net debt-to-GDP ratio is for Ontario?~~

Formatted: QA_Question, Indent: Left: 0", Hanging: 0.47"

~~What effect does this have on the government's commitment to balancing the budget by 2017-18?~~

~~A. The Province's net debt-to-GDP ratio is expected to peak in 2015-16 at 39.6 per cent, remain unchanged in 2016-17 and begin to decline in 2017-18.~~

~~The government continues to maintain a target of reducing the net debt-to-GDP ratio to its pre-recession level. Net Debt increases primarily for two reasons: to finance deficits and invest in capital assets. In the first few years after the global recession in 2008-09, the increase in net debt was primarily due to the deficit. However, the government is on track to eliminate the deficit and balance the budget by 2017-18. Once a balanced budget is achieved, the increase in net debt will be limited to the net investment in tangible capital assets.~~

3. Q. Why was the deficit lower than projected? Where does the government stand when it comes to reaching a balanced budget?

A. Since the last time the Office of the Auditor General reviewed these statistics in its 2013 Annual Report, the province's net debt-to GDP ratio has improved from 39.1 per cent to 38.~~6~~5 per cent for 2013-14 and remained relatively unchanged for 2014-15 at ~~40~~39.~~1~~4 per cent. This improvement is a direct result of better than forecast deficits. ~~, although the ration for the out years has been impacted, primarily by decreases in the GDP forecast~~.

With regard to debt management, the government's support for and commitment to economic growth will maintain debt at sustainable levels and achieve its target of reducing the net debt-to GDP ratio to the pre-recession level of 27 per cent.

The province has consistently beaten its annual deficit targets over the last five years. ~~, resulting in borrowings and accumulated deficits that are $ 25 billion lower that they would otherwise have been~~. A major contributor toward beating annual deficit targets has been the focus on annual expenditure management limiting the growth in program spending to an average of 1.5 percent from 2010-11 to 2013-14. The government has also addressed Ontario's infrastructure needs through targeted capital investments.

4. Q. Chapter 2 of the Auditor General's 2015 annual report speaks to the increased vulnerability of Ontario with respect to interest rates. She points to the possible rise in rates related to borrowing.

However, I am also aware that the Province has consistently kept interest on debt costs below budget projections.

What steps has the government taken to reduce borrowing and keep interest on debt costs low?

A. Through prudent and cost-effective debt management, the Province has consistently kept interest on debt costs below budget projections. The 2010

Formatted: QA_Answer

Budget forecasted that, by 2016-17, the Province would have to spend 11.7 cents on interest for every revenue dollar received. The current forecast is 23 per cent lower, at 9.0 cents of interest costs for every dollar of revenue. This ratio is lower than it was in the 14 fiscal years from 1992–93 to 2005–06, and is forecast to remain lower through the period to balance in 2017–18.

Extending the term of the debt that the Province issues has locked in low interest rates for a longer period, which reduces refinancing risks and helps offset the impact of expected higher interest rates on the Province's interest on debt costs.

Going back to the beginning of fiscal 2010–11, Ontario has issued $59.1 billion of bonds that do not mature for at least 30 years to lock in low rates. As a result, the weighted-average term to maturity of long-term provincial debt issued has been extended significantly, from 8.6 years in 2008-09 to 15.~~6~~3 years as of September 30~~August 31~~.

5. Q. The stranded debt arose under the *Energy Competition Act of 1998*, and its schedule, the *Electricity Act, 1998*. The *Electricity Act, 1998*, also enabled the implementation of the Debt Retirement Charge (DRC) on electricity ratepayers.

Since May 2002, residential and other electricity users have been paying the DRC of 0.7 cents per kilowatt hour (kWh) on their electricity bills. The DRC is paid to the Ontario Electricity Financial Corporation (OEFC) to help service and pay down the stranded debt that arose because of the restructuring of Ontario's electricity sector under the *Energy Competition Act, 1998*.

However, I know that the government eliminated the DRC from residential bills as of January 1, 2016.

This legacy charge from the Harris government was eliminated from residential bills about 2 years earlier than previously estimated – saving the average residential user about $70/year.

Can you please inform the committee of the commitment that the government has to eliminating the debt retirement charge cost for commercial, industrial and all other electricity users by 2018?

A. Thank you for the question.

As part of its commitment to reduce electricity cost pressures, the government has removed the Debt Retirement Charge (DRC) from residential electricity users' bills as of January 1, 2016.

This would save a typical residential user about $70 each year and meant ending the DRC earlier for these users than otherwise provided for in the *Electricity Act, 1998*, as originally enacted. As a further step to mitigate electricity cost pressures

for commercial, industrial and all other users, the government introduced legislation, passed on December 10, 2015, the *Budget Measures Act, 2015* to end the DRC on April 1, 2018, nine months earlier than previously estimated.

- A large industrial using 3,000 megawatt-hours (MWh) per month could save $21,000 per month, or about seven per cent off its electricity bills;
- For a large northern industrial in the Northern Industrial Electricity Rate program, this could be more than an eight per cent savings; and
- A small business using 20,000 kilowatt-hours (kWh) per month could save $140 per month, or about four per cent.

Ending the DRC on a legislated fixed date provides certainty to commercial, industrial and other users, and helps them more effectively plan their investment decisions.

I would note the following context. The government's electricity sector reforms in the Electricity Restructuring Act, 2004, and others, have put the stranded debt recovery plan back on track. Based on interim numbers in Budget 2016, this is projected to be the twelfth consecutive year that the stranded debt has been reduced, to under $5 billion as at March 31, 2016, from $20.6 billion as at March 31, 2004. This allowed the government to follow through on its commitment to reduce electricity cost pressures.

6. Q. Deputy Minister Orencsak, you mentioned that the C.D. Howe Institute has given positive feedback about the government's reporting practices. Why is that significant?

A. The C.D. Howe document "By the Numbers: The Fiscal Accountability of Canada Senior Governments, 2015" notes that Ontario along with Ottawa have "long stood out for relatively good financial presentations. " When evaluating the reporting practices and fiscal documents across Canada, the document rated Ontario an "A" grade.

The "A" grade was based on presentation criteria, as well as timeliness in their reporting schedule and timeliness of the public accounts audit. Ontario's public accounts and budget exhibited the following positive qualities per the C.D. Howe institute:

1. PSAB-consistent revenue and spending balances in public accounts
2. Revenue and spending figures that match the earliest budget figures in public accounts
3. Prominent comparison of actual results with budget plans
4. Estimates on the same bases as the budget and public accounts
5. The Province provides interim reports toward Budget targets and
6. No major audit reservations in public accounts.

Ontario and several other provinces were praised for having their budgets prepared on the same accounting basis as their end-of-year public accounts. In having budget and public accounts on the same basis, Ontario and the other such provinces have increased transparency and comparability to their citizens.

7. Q. Everyone has been doing more with less, and that includes the government. For example there are 6% fewer full time employees in the civil service now, compared to 2008. What else is the government doing to ensure its bringing costs down? What results have been achieved so far?

A. The Ontario Economic Outlook and Fiscal Review in fall 2014 announced Program Review, Renewal and Transformation (PRRT) as a key element of the government's plan to achieve a balanced budget.

PRRT is a fundamentally new approach to multi-year planning and budgeting, and is designed around four key principles:

- Examining how every government dollar is spent
- Using evidence to inform better choices and improve outcomes
- Looking across government to find the best way to deliver services, and
- Taking a multi-year approach to find opportunities to transform programs and achieve savings.

At the same time, the government is making tough choices to end programs that are not performing, do not link to key priorities or no longer serve a clear public interest.

The 2014 Budget announced that the government was implementing an annual program review savings target, and set the target at $250 million for 2014-15. The target was met through a number of initiatives that achieved the reductions while continuing to support front-line services.

An additional year-end savings target of $1.1 billion built into the plan was also achieved.

The government met its program review savings target through initiatives such as:

- Negotiating lower prices for goods and services
- Finding internal efficiencies in information technology data centre, desktop and service management operations
- Modernizing the delivery of natural resources management programs

- Restraining compensation growth in line with the government's "net zero" policy

- Finding operational and administrative efficiencies across government, including reducing the government's office footprint and prudent management of discretionary costs, such as supplies and travel.

In the 2015 Budget, the government announced a number of opportunities identified through PRRT to improve outcomes while supporting fiscal objectives. They included:

- Changing business tax credits

- Modernizing programs delivered through ServiceOntario

- Reducing the government's office footprint

- Getting better value for money invested in health care programs and services.

8. Q. Why is it important that the government has consistently beaten its deficit reduction targets in terms of the province's finances?

A. The government is dedicated to a fiscally sound approach to managing the Province's finances, which will provide the foundation for the long-term well-being and prosperity of Ontarians.

The government remains on track to eliminate the deficit by 2017-18. By continuing to beat our fiscal targets~~, Ontario's accumulated deficit is $30 billion lower than it otherwise would have been~~.

Through prudent and cost-effective debt management, the Province has also consistently kept interest on debt costs below budget projections.

Term extension has allowed the Province to lock in low interest rates for a longer period, which reduces refinancing risks and helps offset the impact of expected higher interest rates on the Province's interest on debt costs.

In addition, we have maintained a rigorous approach to control program spending to reduce Ontario's net debt-to-GDP ratio to its pre-recession level.

Our path to a balanced budget is being achieved through responsible fiscal management, which involves:

- Managing growth in program spending, and

- Maintaining the integrity of Provincial revenues.

Our plan is to first balance the budget while continuing to make strategic investments in capital assets. These infrastructure investments will stimulate economic growth, resulting in GDP growing more quickly than debt, and thereby lowering the net debt-to-GDP ratio.

9. Q. There's been concern about Ontario's net debt-to-GDP being significant; however the government is making large-scale infrastructure investments. How are these investments helping the people of Ontario?

A. The government's position is that the renewal and expansion of public infrastructure supports Ontario's industries, creates jobs and provides long-term benefits and improves the lives of Ontarians.

Large investments have been announced and made for improvements in the province's infrastructure. The province is making public infrastructure investments of more than $137 billion over the next 10 years. This builds on the 2014 Budget commitment to invest in infrastructure – resulting in about $160 billion of investment over 12 years, starting in 2014-15.

The revenues allocated to the Trillium Trust will be used to support building transit, transportation and other priority infrastructure as part of the Moving Ontario Forward plan.

A September 2015 report by the Broadbent Institute and the Centre for Spatial Economics showed that, on average, investing a dollar in public infrastructure in Canada raises gross domestic product (GDP) by $1.43 in the short term and up to $3.83 in the long term.

Ontario's planned investments in public infrastructure are expected to support over 110,000 jobs per year on average.

Building and revitalizing public infrastructure are essential to strengthening Ontario's economy.

10. Q. Given that compensation accounts for half of government spending, what has the government done to help alleviate the strain on finances as it works toward balancing its budget?

A. The government remains committed to balancing the budget by 2017-18 and managing compensation costs has been a key element of achieving this goal.

The 2016 Budget emphasized that all public-sector partners must continue to work together to control current and future compensation costs.

Since then, collective agreements have been reached in a number of key sectors, including the education sector, Ontario Public Service and provincial energy corporations that are consistent with the government's fiscal plan.

From July 2012to September 2016, the provincial public sector annual wage increases have averaged 0.6%, compared to the municipal sector at 1.7%, the private sector at 1.9% and the federal public sector in Ontario at 1.7%.

The Government has achieved a number of net-zero deals, including:

In August 2014, the Government reached a new net-zero four-year agreement with AMAPCEO, which produced savings of approximately $45 million. The agreement included zero across-the-board increases in the first two years and modest increases in the third and fourth years that were offset by savings elsewhere in the collective agreement.

On Oct. 30, 2015, the Government ratified a new net-zero three-year agreement with the Unified Bargaining Unit in OPSEU.

The Unified agreement includes no wage increases in 2015 and 2016. In 2016 there will be a modest 1.4 per cent one-time lump sum payment that does not form part of employees' base salaries, and in 2017 there is a 1.4 per cent pay increase.

The agreement is consistent with the fiscal plan. The lump-sum payment in 2016 and pay increase in 2017 are offset through changes to employee benefits and entitlements over the three-year term of the contract, including a freeze on salary progression in 2016 and 2017 and capping of termination payments.

In May of 2016, the government was able to achieve a net-zero negotiations and arbitration settlement outcome with OPSEU Corrections.

The government has a reached a tentative agreement with the Provincial Engineers Government of Ontario (PEGO) that still needs ratification by members. As such we cannot comment on the details of this deal.

11. Q. There are changes ahead for retiree benefits, how will they help the government's bottom line and how do they compare with what is happening in the private sector? How important are these kinds of changes to our plan to balance the budget?

A. Currently, persons in receipt of a pension from the Public Service Pension Plan (PSPP) or OPSEU Pension plan who have a minimum 10 years of pension credit are entitled to post-retirement group health, dental and life insurance coverage. The Ontario government pays 100% of monthly premium costs.

On Feb. 18, 2014, the government announced that the post-retirement benefits eligibility criteria and cost-sharing terms would be changing in 2017.

PSPP and OPSEU Pension Plan member employees who do not have 10 years of pension credit as of Jan. 1, 2017 would be required to have at least 20 years of pension credit to retire to an immediate unreduced pension in order to be eligible for post-retirement benefits.

Also, eligible persons who have not commenced receiving a pension before Jan. 1, 2017, would be required to pay 50% of the life, health, dental and vision and hearing aid premiums.

Employees who commenced receiving a pension before Jan. 1, 2017 will not be affected by these changes.

Announcement of the changes led to a reduction of the retiree benefit program liability by over $1 billion and brings Ontario Public Service retiree benefits more in line with other public sector organizations.

Some other public sector workers pay 100% of their benefits premiums.

Eligible retirees include former employees of the OPS, as well as former employees of other employers which participate in the OPS pension plans.

Retired judges, justices of the peace and Ontario Provincial Police Association (OPPA) members have independent retiree benefit terms.

By transitioning to a new cost-sharing model for retiree benefits, the government is moving in line with the private sector and other public sector organizations.

12. Q. The Auditor General identifies significant accounting issues related to her audit of the Province's consolidated financial statements. Some of the issues are related to accounting standard changes. Since both Ontario's budget and actual results are based on PSAB accounting standards, such changes could impact the transparency and accountability of the government's financial reports as well as fiscal policy decisions. Can you please describe if these issues are ongoing and what has been done to rectify them?

How long will it be before this is resolved?

A. As your question points out, in addition to adopting PSAB as the basis to present its actual results, Ontario has also made a **policy decision** to adopt PSAB as the basis for the government's fiscal planning process which means that changes in PSAB's accounting standards can implicitly impact fiscal policy decisions.

As has been mentioned already, the **CD Howe Institute** has given Ontario an "A" grade for the quality of our financial reporting, based on a number of factors including the fact that we present PSAB-consistent revenue and spending balances in public accounts, and the timeliness of our reporting schedule. The fact that the actual results have been independently audited by the AG and that

we have received unqualified audit opinions over the past 22 years now, means that the public and legislature can rely upon the results reported by the government.

There is tremendous value in **independently established accounting standards**, and especially for standards which are prepared taking the unique accountability and transparency needs of the public sector in mind. In this regard, Ontario has continued to support the public sector accounting standard setting process. Input to the process by stakeholders is critical to ensure high-quality standards which meet user needs and which serve **the public interest.** And we take this responsibility very seriously.

Ways that we support the standard setting process include:

- **Monitor communications** from the Public Sector Accounting Standards Board related to upcoming projects to identify potential areas of interest/concern
  Similarly, we also monitor accounting standard developments which may impact our **GBEs** (for example, potential changes in standards impacting OLG, LCBO, H1 or OPG).

- Attend as **observers meetings of the Accounting Standards Oversight Council** to hear presentations by the Chair of the Public Sector Accounting Board and the Accounting Standards Board related to current projects and issues that they are dealing with. In the past we have had Deputy Minister representation on the Oversight Council with specific background in fiscal policy (Phil Howell). Such participation helped to ensure a more robust discussion of potential standard changes on governments.

- Participation by past **Provincial Controllers** as members of the Public Sector Accounting Standards Board. For example, our recently retired ADM and Provincial Controller, Murray Lindo, still sits on PSAB, although his 3 year term will be coming to an end next March. Although this position requires that the individual represent himself and his own views (and not represent the views of the government), it is nonetheless valuable to have a voice at the table to ensure that the real impacts of any potential changes on the quality of financial information are identified and discussed. It has been valuable for example to know that the continuing debate about Financial Instruments and Government Transfers is informed by both the accounting and fiscal perspective that Ontario's Provincial Controller would bring to the table.

- Ontario provides **input to PSAB's strategic plan** to help inform decisions on key areas that PSAB should focus.

- We also provide **input on an individual project by project** basis for each standard change that PSAB issues for comment. Occasionally, such projects could require several responses over the course of the project. For example, the PSAB standard on government transfers took 9 years to develop and input continues to date as part of PSAB's on-going review of issues related to the consistency of application related to the standard.

- Occasionally, we **stakeholder with PSAB staff** on specific matters like concerns related to the Financial Instruments standard. In this case staff from both OPCD and the OFA participated in discussions with PSAB.

- We **observe PSAB Accounting Discussion Group** meetings to hear representatives from the Board, audits and preparers discuss specific issues identified by public sector entities.

- Depending on the significance of a particular item, **Ontario has often played the lead in championing inter-jurisdictional dialogue and joint action plans** to support the quality of PSAB's standard setting process. For example, the OFA has collaborated with other members of the Canadian borrowing community to compile analysis and feedback to PSAB on its Financial Instruments standard. A past DM of Finance (Colin Anderson) Co-Chaired an inter-jurisdictional PSAB/Deputy Minister of Finance Joint Working Group which was formed in 2007 in light of key concerns being raised by governments related to PSAB's direction.

- Most recently, Ontario is **Chairing a Fiscal Expert Panel** which will be meeting later this week to discuss PSAB's current project on its Conceptual Framework in an effort to gather views and valuable input to share with PSAB on this foundational and critically important project. The outcome of the project will influence the direction of future public sector accounting standards.

This list is **not exhaustive**, but I hope that it gives you the sense of the significant time and effort that Ontario invests in supporting the quality of public sector reporting. We are committed to meeting user needs for transparency and accountability in public sector reporting. We will continue to invest the time and effort required to provide valuable input to PSAB's standard setting process.

13. Q: Moody's just released a report noting that Ontario's debt burden and debt service costs will remain manageable thanks to low interest rates, as well as the province's improving fiscal position and conservative debt management policy. Can you explain how your conservative debt management policies are keeping debt service costs manageable?

A: According to Moody's, "low interest rates will keep interest costs in line with current levels." Moody's also states that "Ontario's strategy of issuing debt across a variety of maturities and markets helps ensure good access to funding and low financing costs. To protect against unfavorable market conditions, Ontario has in recent years increased its liquidity reserves. The province has also extended its weighted average debt maturity to take greater advantage of low interest rates."

This term extension reduces the Province's refinancing risks and helps offset the impact of expected higher interest rates on its IOD costs.

The 2010 Budget forecasted that, by 2016-17, the Province would have to spend 11.7 cents of every revenue dollar received on interest. The current forecast is 23 per cent lower, at 9.0 cents of interest costs for every dollar of revenue. ~~Currently, the Province spends 8.5 cents of every revenue dollar on interest, 3.5 cents lower than what was forecast in 2010.~~

This ratio is lower than it was in the 1990s and 2000s, and is forecast to remain lower through the outlook period in 2018–19.

14. Q: Moody's just released a report noting that Ontario's policy decision to borrow for infrastructure spending at a time of historically low interest rates, combined with the prudent debt management practices has helped to support the province's Aa2 rating. Can you explain how borrowing for infrastructure helps support the province's credit rating?

A: According to Moody's although Ontario's debt will continue to increase over the medium term as it funds its 10-year infrastructure plan "any negative impact on the province's credit strength will be counterbalanced by rising revenues and a return to budgetary balance."

The government plans to invest more than $137-billion in capital over 10 years, and $160 billion over the 12-year period starting in 2014-15.

Investments in capital, supplement GDP growth and the net debt-to-GDP ratio will come down more quickly than it would without these investments. Once a balanced budget is achieved, the increase in net debt will be limited to difference between the cash investment to build the assets and the amortization, which is a non-cash amount.

WSIB QAs from last year – WSIB to review and advise.

15. Q. The Auditor General has discussed the WSIB in her report for a couple of years, suggesting that the government reconsider the exclusion of the WSIB's financial results from the Province's consolidated financial statements. Her suggestion is based on the risk that the province might have to provide funding to ensure the WSIB remains viable. Why hasn't the government consolidated the WSIB on its books?

A. Under public sector accounting standards the province only consolidates those organizations which are assessed as controlled. Where province has the power to govern the financial and operating policies of an entity with expected benefits of risk or loss, it is consolidated on our books. This is not the case with the WSIB, and furthermore the Province doesn't have any legal liability for the debts of the WSIB.

In fact, the WSIB is really a non-controlled trust in nature, and such trusts are not consolidated on the basis that it would distort the Province's books if the trust's assets, liabilities, revenues and expenses were shown on our books. Since the government does not have any legal responsibility for the unfunded liability, and does not control the entity, we feel that it should remain non-consolidated.

The current exclusion of the entity from our books best serves transparency and accountability. Otherwise, the public and legislature would assume that the WSIB debt is taxpayer debt and that any net operating income/loss of the WSIB would somehow impact the taxpayer.

16. Q: What progress has the WSIB made on its target to be fully funded by 2027?

17. Q: Can you please give us an update on the status of the WSIB review of its long term financial viability?

Hi Gadi

Some decisions made today at the above meeting.

The head of WSIB Tom Teahan will be also part of the group presenting to the SCOPA and will be speaking as well. SO the DM's and you will have to reduce the length of the remarks by a few minutes each.

Corresponds well with the next decision, which for obvious reasons, is to minimize all current references as much as possible and focus the remarks on 2014-15. The strategy appears to be to rely on the Chair of the Committee to rule as out of scope on questions not directly pertaining to the 2014-15 PA and the related Chapter 2 of the AG's Annual report.

Having said that some questions related to the current situation may slip through and there was some but not a conclusive discussion on net debt to GDP. The consensus appeared to be to refer to the 2015-16 number and indicate that out years are difficult to determine given that the pension adjustment will be put to an expert panel.

I will edit your remarks Gadi and try to minimize current references as well and reduce the length and will forward a copy shortly.

Thanks

Ken k

2. Will the government issue a regulation confirming the source of reference for the Pre-Election Report and the timeline for issuance of the report that will be subject to the Auditor General's review?

Under the *Fiscal Transparency and Accountability Act, 2004*, the government may file a regulation that would require it to release a Pre-Election Report on Ontario's Finances. Should the government file such a regulation, the Auditor General would be required to issue a statement based on a prompt review following the release of such a Pre-Election Report.

The government remains committed to meeting the legislative requirements of the Act, and working constructively with the Auditor General.

DRAFT

PROVINCE'S FISCAL SITUATION

Recommendation #7: Province's Debt Burden

- The balanced budgets from 2017–18 onwards will limit the increase in net debt-to- net investments in capital assets. These investments will contribute to the economy growing at a faster rate than net debt, allowing the government to reduce Ontario's net debt-to-GDP ratio to its pre-recession level of 27 per cent.
- There is a strong demand for Ontario bonds in both the domestic and international markets. Last fiscal year, Ontario was able to borrow $27 billion in long-term debt while our spread — or the margin that we have to pay over the equivalent Government of Canada bond — tightened, indicating an ongoing strong demand for Ontario bonds.
- We expect that the liquidity of Ontario benchmark bonds, and continuing confidence in the value of Ontario debt, will allow us to cost-effectively complete the 2017–18 borrowing program.

3. What is the government doing to manage the province's debt burden?

The very important first step in reducing debt is to balance the budget. We are projecting a balanced budget for 2017-18 and the next two years, which will ensure that the increase in net debt is limited to net investments in capital assets.

As the result of a balanced budget, and Ontario's strong economic growth, the net-debt-to-GDP ratio is declining.

The government has set an interim net debt-to-GDP ratio target of 35 per cent by 2023–24, and continues to maintain a target of reducing the net debt-to-GDP ratio to its pre-recession level of 27 per cent, currently projected to be achieved by 2029–30.

4. What is the status of the province's borrowing plan?

Through prudent and cost-effective debt management, we have consistently kept interest on debt costs below budget projections. Interest on debt to revenue is forecast to be 8.2 per cent in 2017-18, 8.3 per cent in 2018-19 and 8.4 per cent in 2019-20.

Term extension has allowed us to take advantage of and lock in low interest rates for a longer period, which reduces refinancing risks and helps offset the impact of expected higher interest rates on interest on debt costs.

As of ~~November 22, 2017~~January 31, 2018, $~~25~~28.6 billion (or ~~97~~111 per cent) of this year's long-term public borrowing of $25.8 billion has been completed.

Financial Accountability Office (FAO) Reports

- The government remains on track to balance the budget this fiscal year as well as in 2018–19 and 2019–20.
- The Ministry of Finance is committed to a responsible fiscal plan. We build prudence into the economic forecast.
- Since the time of the 2017 Budget, private sector forecasters have revised up their economic growth projections for Ontario over the 2017-20 period, reflecting the strength in the Ontario economy.

5. **What is the government's response to the FAO's fall 2017 report, which states that the government will run a deficit in 2017-18 and the following years?**

   Ontario's deficit for 2016-17 was $991 million — $3.3 billion lower than projected in the 2016 Budget and $0.5 billion lower than the interim projection in the 2017 Budget, according to public accounts.

   The Ministry of Finance is projecting a balanced budget.

6. **Why are the FAO's revenue forecasts lower than the government's revenue forecasts?**

   The government is projecting total revenue to grow from $140.7 billion in 2016–17 to $158.2 billion in 2019–20. This represents an average annual growth rate of 4.0 per cent.

   Growth in revenues over the medium term is driven mainly by taxation revenue which is projected to increase by $15.6 billion between 2016–17 and 2019–20, or at an average annual rate of 5.2 per cent. The projected taxation revenue growth aligns with growth actually experienced in recent years, and projections for the Ontario economy.

Credit Ratings

- Ontario currently maintains a double-A rating with three of its four credit rating agencies.
- We continue to update the rating agencies on a regular basis on economic and fiscal developments.

7. **What are the credit rating agencies' views on Ontario?**

   Following the release of the 2017 Budget, all four rating agencies — Moody's, DBRS, Fitch, and S&P — confirmed Ontario's long-term credit ratings.

   This reflects rating agencies' confidence in our government's fiscal plan.

DRAFT

8. How have rating agencies responded to the qualified opinion on the public accounts and the recent report from the Auditor General?

The rating agencies make their own assessment of the Province's finances.

However, there were no credit rating implications either this year or last when the government received a qualified audit opinion on its Public Accounts.

Hi Marilyn,

Please find attached our edits to the Friendly Q&As for SCOPA. Edits are tracked.

Thanks,
Christina

Friendly Questions

1. Q. ~~Our government has a target for reducing the net-debt-to-GDP ratio. Can you tell us more about the target and how our government is doing in terms of reaching that target?~~

A. ~~Net debt, as of March 31, 2016, is forecast to be $296.1 billion, $2.8 billion lower than forecasted in the *2015 Budget*. Net debt was $284.6 billion as of March 31, 2015. The net debt-to-GDP ratio is forecast to peak at 39.6 per cent in 2015–16, remain level in 2016–17, and decline to 38.9 per cent in 2017–18 and 38.5 per cent in 2018–19.~~

~~Ontario conducts a robust and responsible borrowing program that protects the public interest. The government successfully completed its annual borrowing program in 2015-16, borrowing $32.1 billion. Long-term borrowing for 2016–17 is forecast to be $24.4 billion when factoring in $2.0 billion pre-borrowed in 2015–16. This will be the Province's smallest borrowing program since 2007–08.~~

~~As of August 31, 2016, the Province had borrowed $12.5 billion for the fiscal year. Approximately 71per cent of this year's borrowing-to-date has been completed in Canadian dollars. The remainder of the Province's borrowing-to-date has been completed in international currencies primarily through U.S. dollar global bonds, and two small Australian dollar Kangaroo bond issues.~~

~~Through prudent and cost-effective debt management, the Province has consistently kept interest on debt costs below budget projections. The *2010 Budget* forecast that, by 2016–17, the Province would have to spend 11.7 cents of every revenue dollar received on interest. The current forecast is 2.7 cents lower, at 9.0 cents of interest costs for every dollar of revenue. This ratio is lower than it was in the 1990s and 2000s, and is forecast to remain lower through the outlook period in 2018–19.~~

~~Term extension has allowed the Province to lock in low interest rates for a longer period, which reduces refinancing risks and helps offset the impact of expected higher interest rates on the Province's interest on debt costs.~~

~~Going back to the beginning of fiscal 2010-11, Ontario has issued $59.1 billion of bonds longer than 30 years to lock in low rates. As a result, the weighted-average term to maturity of long-term provincial debt issued has been extended significantly, from 8.6 years in 2008-09 to 15.6 years as of August 31.~~

2. Q. ~~Noting that a key indicator of the government's ability to carry its debt entails examining the level of debt relative to the size of the economy, can you please explain further what the forecasted net debt-to-GDP ratio is for Ontario?~~

Formatted: Indent: Left: 0", Hanging: 0.47", Space After: 0 pt

Formatted: QA_Question, Indent: Left: 0", Hanging: 0.47", No bullets or numbering

Formatted: QA_Question, Indent: Left: 0", Hanging: 0.47"

~~What effect does this have on the government's commitment to balancing the budget by 2017-18?~~

~~A. The Province's net debt-to-GDP ratio is expected to peak in 2015-16 at 39.6 per cent, remain unchanged in 2016-17 and begin to decline in 2017-18.~~

~~The government continues to maintain a target of reducing the net debt-to-GDP ratio to its pre-recession level. Net Debt increases primarily for two reasons: to finance deficits and invest in capital assets. In the first few years after the global recession in 2008-09, the increase in net debt was primarily due to the deficit. However, the government is on track to eliminate the deficit and balance the budget by 2017-18. Once a balanced budget is achieved, the increase in net debt will be limited to the net investment in tangible capital assets.~~

3. Q. Why was the deficit lower than projected? Where does the government stand when it comes to reaching a balanced budget?

A. Since the last time the Office of the Auditor General reviewed these statistics in its 2013 Annual Report, the province's net debt-to GDP ratio has improved from 39.1 per cent to 38.~~6~~5 per cent for 2013-14 and remained relatively unchanged for 2014-15 at ~~40~~39.~~1~~4 per cent. This improvement is a direct result of better than forecast deficits. ~~, although the ration for the out years has been impacted, primarily by decreases in the GDP forecast~~.

With regard to debt management, the government's support for and commitment to economic growth will maintain debt at sustainable levels and achieve its target of reducing the net debt-to GDP ratio to the pre-recession level of 27 per cent.

The province has consistently beaten its annual deficit targets over the last five years. ~~, resulting in borrowings and accumulated deficits that are $ 25 billion lower that they would otherwise have been~~. A major contributor toward beating annual deficit targets has been the focus on annual expenditure management limiting the growth in program spending to an average of 1.5 percent from 2010-11 to 2013-14. The government has also addressed Ontario's infrastructure needs through targeted capital investments.

4. Q. Chapter 2 of the Auditor General's 2015 annual report speaks to the increased vulnerability of Ontario with respect to interest rates. She points to the possible rise in rates related to borrowing.

However, I am also aware that the Province has consistently kept interest on debt costs below budget projections.

What steps has the government taken to reduce borrowing and keep interest on debt costs low?

A. Through prudent and cost-effective debt management, the Province has consistently kept interest on debt costs below budget projections. The 2010

Formatted: QA_Answer

Budget forecasted that, by 2016-17, the Province would have to spend 11.7 cents on interest for every revenue dollar received. The current forecast is 2~~3~~7 per cent lower, at ~~9~~8.5~~.0~~ cents of interest costs for every dollar of revenue. This ratio is the ~~lowe~~lowest it has been~~r than it was~~ in ~~the~~ 2~~1~~4~~5~~ fiscal years ~~from 1992~~1 ~~93~~2 ~~to 2005-06~~or since 1990-91, and is forecast to remain low~~er~~ through the period to balance in 2017–18.

Extending the term of the debt that the Province issues has locked in low interest rates for a longer period, which reduces refinancing risks and helps offset the impact of expected higher interest rates on the Province's interest on debt costs.

Going back to the beginning of fiscal 2010–11, Ontario has issued $59.1 billion of bonds that do not mature for at least 30 years to lock in low rates. As a result, the weighted-average term to maturity of long-term provincial debt issued has been extended significantly, from 8.6 years in 2008-09 to 15.~~6~~3 years as of September 30~~August 31~~.

5. Q. The stranded debt arose under the *Energy Competition Act of 1998*, and its schedule, the *Electricity Act, 1998*. The *Electricity Act, 1998*, also enabled the implementation of the Debt Retirement Charge (DRC) on electricity ratepayers.

Since May 2002, residential and other electricity users have been paying the DRC of 0.7 cents per kilowatt hour (kWh) on their electricity bills. The DRC is paid to the Ontario Electricity Financial Corporation (OEFC) to help service and pay down the stranded debt that arose because of the restructuring of Ontario's electricity sector under the *Energy Competition Act, 1998*.

However, I know that the government eliminated the DRC from residential bills as of January 1, 2016.

This legacy charge from the Harris government was eliminated from residential bills about 2 years earlier than previously estimated – saving the average residential user about $70/year.

Can you please inform the committee of the commitment that the government has to eliminating the debt retirement charge cost for commercial, industrial and all other electricity users by 2018?

A. Thank you for the question.

As part of its commitment to reduce electricity cost pressures, the government has removed the Debt Retirement Charge (DRC) from residential electricity users' bills as of January 1, 2016.

This would save a typical residential user about $70 each year and meant ending the DRC earlier for these users than otherwise provided for in the *Electricity Act,*

1998, as originally enacted. As a further step to mitigate electricity cost pressures for commercial, industrial and all other users, the government introduced legislation, passed on December 10, 2015, the *Budget Measures Act, 2015* to end the DRC on April 1, 2018, nine months earlier than previously estimated.

- A large industrial using 3,000 megawatt-hours (MWh) per month could save $21,000 per month, or about seven per cent off its electricity bills;
- For a large northern industrial in the Northern Industrial Electricity Rate program, this could be more than an eight per cent savings; and
- A small business using 20,000 kilowatt-hours (kWh) per month could save $140 per month, or about four per cent.

Ending the DRC on a legislated fixed date provides certainty to commercial, industrial and other users, and helps them more effectively plan their investment decisions.

I would note the following context. The government's electricity sector reforms in the Electricity Restructuring Act, 2004, and others, have put the stranded debt recovery plan back on track. Based on interim numbers in Budget 2016, this is projected to be the twelfth consecutive year that the stranded debt has been reduced, to under $5 billion as at March 31, 2016, from $20.6 billion as at March 31, 2004. This allowed the government to follow through on its commitment to reduce electricity cost pressures.

6. Q. Deputy Minister Orencsak, you mentioned that the C.D. Howe Institute has given positive feedback about the government's reporting practices. Why is that significant?

A. The C.D. Howe document "By the Numbers: The Fiscal Accountability of Canada Senior Governments, 2015" notes that Ontario along with Ottawa have "long stood out for relatively good financial presentations. " When evaluating the reporting practices and fiscal documents across Canada, the document rated Ontario an "A" grade.

The "A" grade was based on presentation criteria, as well as timeliness in their reporting schedule and timeliness of the public accounts audit. Ontario's public accounts and budget exhibited the following positive qualities per the C.D. Howe institute:

1. PSAB-consistent revenue and spending balances in public accounts
2. Revenue and spending figures that match the earliest budget figures in public accounts
3. Prominent comparison of actual results with budget plans
4. Estimates on the same bases as the budget and public accounts
5. The Province provides interim reports toward Budget targets and

6. No major audit reservations in public accounts.

Ontario and several other provinces were praised for having their budgets prepared on the same accounting basis as their end-of-year public accounts. In having budget and public accounts on the same basis, Ontario and the other such provinces have increased transparency and comparability to their citizens.

7. Q. Everyone has been doing more with less, and that includes the government. For example there are 6% fewer full time employees in the civil service now, compared to 2008. What else is the government doing to ensure its bringing costs down? What results have been achieved so far?

A. The Ontario Economic Outlook and Fiscal Review in fall 2014 announced Program Review, Renewal and Transformation (PRRT) as a key element of the government's plan to achieve a balanced budget.

PRRT is a fundamentally new approach to multi-year planning and budgeting, and is designed around four key principles:

- Examining how every government dollar is spent
- Using evidence to inform better choices and improve outcomes
- Looking across government to find the best way to deliver services, and
- Taking a multi-year approach to find opportunities to transform programs and achieve savings.

At the same time, the government is making tough choices to end programs that are not performing, do not link to key priorities or no longer serve a clear public interest.

The 2014 Budget announced that the government was implementing an annual program review savings target, and set the target at $250 million for 2014-15. The target was met through a number of initiatives that achieved the reductions while continuing to support front-line services.

An additional year-end savings target of $1.1 billion built into the plan was also achieved.

The government met its program review savings target through initiatives such as:

- Negotiating lower prices for goods and services
- Finding internal efficiencies in information technology data centre, desktop and service management operations
- Modernizing the delivery of natural resources management programs

- Restraining compensation growth in line with the government's "net zero" policy

- Finding operational and administrative efficiencies across government, including reducing the government's office footprint and prudent management of discretionary costs, such as supplies and travel.

In the 2015 Budget, the government announced a number of opportunities identified through PRRT to improve outcomes while supporting fiscal objectives. They included:

- Changing business tax credits

- Modernizing programs delivered through ServiceOntario

- Reducing the government's office footprint

- Getting better value for money invested in health care programs and services.

8. Q. Why is it important that the government has consistently beaten its deficit reduction targets in terms of the province's finances?

A. The government is dedicated to a fiscally sound approach to managing the Province's finances, which will provide the foundation for the long-term well-being and prosperity of Ontarians.

The government remains on track to eliminate the deficit by 2017-18. By continuing to beat our fiscal targets~~, Ontario's accumulated deficit is $30 billion lower than it otherwise would have been~~.

Through prudent and cost-effective debt management, the Province has also consistently kept interest on debt costs below budget projections.

Term extension has allowed the Province to lock in low interest rates for a longer period, which reduces refinancing risks and helps offset the impact of expected higher interest rates on the Province's interest on debt costs.

In addition, we have maintained a rigorous approach to control program spending to reduce Ontario's net debt-to-GDP ratio to its pre-recession level.

Our path to a balanced budget is being achieved through responsible fiscal management, which involves:

- Managing growth in program spending, and
- Maintaining the integrity of Provincial revenues.

Our plan is to first balance the budget while continuing to make strategic investments in capital assets. These infrastructure investments will stimulate economic growth, resulting in GDP growing more quickly than debt, and thereby lowering the net debt-to-GDP ratio.

9. Q. There's been concern about Ontario's net debt-to-GDP being significant; however the government is making large-scale infrastructure investments. How are these investments helping the people of Ontario?

A. The government's position is that the renewal and expansion of public infrastructure supports Ontario's industries, creates jobs and provides long-term benefits and improves the lives of Ontarians.

Large investments have been announced and made for improvements in the province's infrastructure. The province is making public infrastructure investments of more than $137 billion over the next 10 years. This builds on the 2014 Budget commitment to invest in infrastructure – resulting in about $160 billion of investment over 12 years, starting in 2014-15.

The revenues allocated to the Trillium Trust will be used to support building transit, transportation and other priority infrastructure as part of the Moving Ontario Forward plan.

A September 2015 report by the Broadbent Institute and the Centre for Spatial Economics showed that, on average, investing a dollar in public infrastructure in Canada raises gross domestic product (GDP) by $1.43 in the short term and up to $3.83 in the long term.

Ontario's planned investments in public infrastructure are expected to support over 110,000 jobs per year on average.

Building and revitalizing public infrastructure are essential to strengthening Ontario's economy.

10. Q. Given that compensation accounts for half of government spending, what has the government done to help alleviate the strain on finances as it works toward balancing its budget?

A. The government remains committed to balancing the budget by 2017-18 and managing compensation costs has been a key element of achieving this goal.

The 2016 Budget emphasized that all public-sector partners must continue to work together to control current and future compensation costs.

Since then, collective agreements have been reached in a number of key sectors, including the education sector, Ontario Public Service and provincial energy corporations that are consistent with the government's fiscal plan.

From July 2012to September 2016, the provincial public sector annual wage increases have averaged 0.6%, compared to the municipal sector at 1.7%, the private sector at 1.9% and the federal public sector in Ontario at 1.7%.

The Government has achieved a number of net-zero deals, including:

In August 2014, the Government reached a new net-zero four-year agreement with AMAPCEO, which produced savings of approximately $45 million. The agreement included zero across-the-board increases in the first two years and modest increases in the third and fourth years that were offset by savings elsewhere in the collective agreement.

On Oct. 30, 2015, the Government ratified a new net-zero three-year agreement with the Unified Bargaining Unit in OPSEU.

The Unified agreement includes no wage increases in 2015 and 2016. In 2016 there will be a modest 1.4 per cent one-time lump sum payment that does not form part of employees' base salaries, and in 2017 there is a 1.4 per cent pay increase.

The agreement is consistent with the fiscal plan. The lump-sum payment in 2016 and pay increase in 2017 are offset through changes to employee benefits and entitlements over the three-year term of the contract, including a freeze on salary progression in 2016 and 2017 and capping of termination payments.

In May of 2016, the government was able to achieve a net-zero negotiations and arbitration settlement outcome with OPSEU Corrections.

The government has a reached a tentative agreement with the Provincial Engineers Government of Ontario (PEGO) that still needs ratification by members. As such we cannot comment on the details of this deal.

11. Q. There are changes ahead for retiree benefits, how will they help the government's bottom line and how do they compare with what is happening in the private sector? How important are these kinds of changes to our plan to balance the budget?

A. Currently, persons in receipt of a pension from the Public Service Pension Plan (PSPP) or OPSEU Pension plan who have a minimum 10 years of pension credit are entitled to post-retirement group health, dental and life insurance coverage. The Ontario government pays 100% of monthly premium costs.

On Feb. 18, 2014, the government announced that the post-retirement benefits eligibility criteria and cost-sharing terms would be changing in 2017.

PSPP and OPSEU Pension Plan member employees who do not have 10 years of pension credit as of Jan. 1, 2017 would be required to have at least 20 years of pension credit to retire to an immediate unreduced pension in order to be eligible for post-retirement benefits.

Also, eligible persons who have not commenced receiving a pension before Jan. 1, 2017, would be required to pay 50% of the life, health, dental and vision and hearing aid premiums.

Employees who commenced receiving a pension before Jan. 1, 2017 will not be affected by these changes.

Announcement of the changes led to a reduction of the retiree benefit program liability by over $1 billion and brings Ontario Public Service retiree benefits more in line with other public sector organizations.

Some other public sector workers pay 100% of their benefits premiums.

Eligible retirees include former employees of the OPS, as well as former employees of other employers which participate in the OPS pension plans.

Retired judges, justices of the peace and Ontario Provincial Police Association (OPPA) members have independent retiree benefit terms.

By transitioning to a new cost-sharing model for retiree benefits, the government is moving in line with the private sector and other public sector organizations.

12. Q. The Auditor General identifies significant accounting issues related to her audit of the Province's consolidated financial statements. Some of the issues are related to accounting standard changes. Since both Ontario's budget and actual results are based on PSAB accounting standards, such changes could impact the transparency and accountability of the government's financial reports as well as fiscal policy decisions. Can you please describe if these issues are ongoing and what has been done to rectify them?

How long will it be before this is resolved?

A. As your question points out, in addition to adopting PSAB as the basis to present its actual results, Ontario has also made a **policy decision** to adopt PSAB as the basis for the government's fiscal planning process which means that changes in PSAB's accounting standards can implicitly impact fiscal policy decisions.

As has been mentioned already, the **CD Howe Institute** has given Ontario an "A" grade for the quality of our financial reporting, based on a number of factors

including the fact that we present PSAB-consistent revenue and spending balances in public accounts, and the timeliness of our reporting schedule. The fact that the actual results have been independently audited by the AG and that we have received unqualified audit opinions over the past 22 years now, means that the public and legislature can rely upon the results reported by the government.

There is tremendous value in **independently established accounting standards**, and especially for standards which are prepared taking the unique accountability and transparency needs of the public sector in mind. In this regard, Ontario has continued to support the public sector accounting standard setting process. Input to the process by stakeholders is critical to ensure high-quality standards which meet user needs and which serve **the public interest.** And we take this responsibility very seriously.

Ways that we support the standard setting process include:

- **Monitor communications** from the Public Sector Accounting Standards Board related to upcoming projects to identify potential areas of interest/concern
  Similarly, we also monitor accounting standard developments which may impact our **GBEs** (for example, potential changes in standards impacting OLG, LCBO, H1 or OPG).

- Attend as **observers meetings of the Accounting Standards Oversight Council** to hear presentations by the Chair of the Public Sector Accounting Board and the Accounting Standards Board related to current projects and issues that they are dealing with. In the past we have had Deputy Minister representation on the Oversight Council with specific background in fiscal policy (Phil Howell). Such participation helped to ensure a more robust discussion of potential standard changes on governments.

- Participation by past **Provincial Controllers** as members of the Public Sector Accounting Standards Board. For example, our recently retired ADM and Provincial Controller, Murray Lindo, still sits on PSAB, although his 3 year term will be coming to an end next March. Although this position requires that the individual represent himself and his own views (and not represent the views of the government), it is nonetheless valuable to have a voice at the table to ensure that the real impacts of any potential changes on the quality of financial information are identified and discussed. It has been valuable for example to know that the continuing debate about Financial Instruments and Government Transfers is informed by both the accounting and fiscal perspective that Ontario's Provincial Controller would bring to the table.

- Ontario provides **input to PSAB's strategic plan** to help inform decisions on key areas that PSAB should focus.

- We also provide **input on an individual project by project** basis for each standard change that PSAB issues for comment. Occasionally, such projects could require several responses over the course of the project. For example, the PSAB standard on government transfers took 9 years to develop and input continues to date as part of PSAB's on-going review of issues related to the consistency of application related to the standard.

- Occasionally, we **stakeholder with PSAB staff** on specific matters like concerns related to the Financial Instruments standard. In this case staff from both OPCD and the OFA participated in discussions with PSAB.

- We **observe PSAB Accounting Discussion Group** meetings to hear representatives from the Board, audits and preparers discuss specific issues identified by public sector entities.

- Depending on the significance of a particular item, **Ontario has often played the lead in championing inter-jurisdictional dialogue and joint action plans** to support the quality of PSAB's standard setting process. For example, the OFA has collaborated with other members of the Canadian borrowing community to compile analysis and feedback to PSAB on its Financial Instruments standard. A past DM of Finance (Colin Anderson) Co-Chaired an inter-jurisdictional PSAB/Deputy Minister of Finance Joint Working Group which was formed in 2007 in light of key concerns being raised by governments related to PSAB's direction.

- Most recently, Ontario is **Chairing a Fiscal Expert Panel** which will be meeting later this week to discuss PSAB's current project on its Conceptual Framework in an effort to gather views and valuable input to share with PSAB on this foundational and critically important project. The outcome of the project will influence the direction of future public sector accounting standards.

This list is **not exhaustive**, but I hope that it gives you the sense of the significant time and effort that Ontario invests in supporting the quality of public sector reporting. We are committed to meeting user needs for transparency and accountability in public sector reporting. We will continue to invest the time and effort required to provide valuable input to PSAB's standard setting process.

13. Q: Moody's just released a report noting that Ontario's debt burden and debt service costs will remain manageable thanks to low interest rates, as well as the province's improving fiscal position and conservative debt management policy. Can you explain how your conservative debt management policies are keeping debt service costs manageable?

A: According to Moody's, "low interest rates will keep interest costs in line with current levels." Moody's also states that "Ontario's strategy of issuing debt across a variety of maturities and markets helps ensure good access to funding and low financing costs. To protect against unfavorable market conditions, Ontario has in recent years increased its liquidity reserves. The province has also extended its weighted average debt maturity to take greater advantage of low interest rates."

This term extension reduces the Province's refinancing risks and helps offset the impact of expected higher interest rates on its IOD costs.

The 2010 Budget forecasted that, by 2016-17, the Province would have to spend 11.7 cents of every revenue dollar received on interest. Currently, the Province spends 8.5 cents of every revenue dollar on interest, 3.2~~5~~ cents lower than what was forecast in 2010.

This ratio is ~~lower than it was in the 1990s and 2000s~~the lowest it has been since 1990-91, and is forecast to remain low~~er~~ through the outlook period in 2018–19.

14. Q: Moody's just released a report noting that Ontario's policy decision to borrow for infrastructure spending at a time of historically low interest rates, combined with the prudent debt management practices has helped to support the province's Aa2 rating. Can you explain how borrowing for infrastructure helps support the province's credit rating?

A: According to Moody's although Ontario's debt will continue to increase over the medium term as it funds its 10-year infrastructure plan "any negative impact on the province's credit strength will be counterbalanced by rising revenues and a return to budgetary balance."

The government plans to invest more than $137-billion in capital over 10 years, and $160 billion over the 12-year period starting in 2014-15.

Investments in capital, supplement GDP growth and the net debt-to-GDP ratio will come down more quickly than it would without these investments. Once a balanced budget is achieved, the increase in net debt will be limited to difference between the cash investment to build the assets and the amortization, which is a non-cash amount.

WSIB QAs from last year – WSIB to review and advise.

15. Q. The Auditor General has discussed the WSIB in her report for a couple of years, suggesting that the government reconsider the exclusion of the WSIB's financial results from the Province's consolidated financial statements. Her suggestion is based on the risk that the province might have to provide funding to ensure the WSIB remains viable. Why hasn't the government consolidated the WSIB on its books?

A. Under public sector accounting standards the province only consolidates those organizations which are assessed as controlled. Where province has the power to govern the financial and operating policies of an entity with expected benefits of risk or loss, it is consolidated on our books. This is not the case with the WSIB, and furthermore the Province doesn't have any legal liability for the debts of the WSIB.

In fact, the WSIB is really a non-controlled trust in nature, and such trusts are not consolidated on the basis that it would distort the Province's books if the trust's assets, liabilities, revenues and expenses were shown on our books. Since the government does not have any legal responsibility for the unfunded liability, and does not control the entity, we feel that it should remain non-consolidated.

The current exclusion of the entity from our books best serves transparency and accountability. Otherwise, the public and legislature would assume that the WSIB debt is taxpayer debt and that any net operating income/loss of the WSIB would somehow impact the taxpayer.

16. Q: What progress has the WSIB made on its target to be fully funded by 2027?

17. Q: Can you please give us an update on the status of the WSIB review of its long term financial viability?

Subject: RE: Q3 update
Importance: High

Hi All,

Following up on my email from last week, we received relatively recent direction regarding the release of Ontario's Third Quarter Finances – the tentative plan is to publish Q3 finances ahead of the February 15 deadline. We are tentatively tracking a release date of Monday February 13.

As you can imagine, timelines are very compressed, and includes a possible trip to FPC this week. In order to meet this week's deadlines, while also preparing for the release of the actual publication, we're asking for input from you in stages:

EOD Today:

We have prepared the draft of a deck, which we are working towards tabling at this Wednesday's FPC (TBC). The deck lays out the key 2016-17 building blocks that could be updated as part of the Q3 publication. It would help if we could get the following from you folks by the end of today:

16-17 post-FES expense update: We have included placeholder for an expense slide. The intention is for the slide to provide an updated list of initiatives that were not included in the FES expense outlook.

Recommended expense update/signature initiatives: We may build in options for what the outlook could look like – it would help if you could provide a recommendation for the expense changes that should be taken on/profiled.

16-17 c-fund update: We have included a c-fund slide that was used in the Q1 finances briefing materials (current PW). We would like to include an updated version of this slide in the FPC deck (appendix). It would help to have this out to 19-20.

Pension Narrative: Nadine – I'll connect on the pension adjustment and some high level bullets that we could use.

Noon Friday January 27:

Template: I've attached a draft of 3q finances that is based heavily off of the 2016 First Quarter Finances. We've highlighted in green the sections that we would like you to update. While I'm not 100% certain this structure will be exactly what the Q3 document will look like, I think it's safe to say that the substantive content we'll have to cover is captured here. There will be some highlighted content that is *not possible* to update for Friday, however there will be a formal distribution process where additional information can be incorporated.

Thanks everyone, and please feel free to send your input directly to Liane and Emma. Im hoping to be able to share a draft deck with you late this evening.

Subject: Q3 heads up

Hi Everyone – Wanted to send a quick message that we are hearing there is a desire to proceed with the release of a Q3 update around the time we are expecting the Pension Panel panel to release their report. We are going to assume mid feb prior to the house coming back for our planning purposes.

My team is going to work together to put together a list of things we need to start working on/think about along with a calendar to determine and get direction on an approach to coincide with this timeframe.

More details to follow tomorrow.

Thanks.

Contingency Fund Outlook and Expense Risks

Contingency Fund Outlook

$ Billions	2014-15	2015-16	2016-17	2017-18	2018-19
Opening contingency fund balance	**0.5**	**0.7**	**1.2**	**1.7**	**3.5**
Less: Approvals to date[1]	0.0	0.0	0.3	0.5	0.6
Current contingency fund balance	**0.5**	**0.6**	**0.9**	**1.2**	**2.9**
Less: Compensation Risks set-aside	-	-	0.4	0.9	1.6
Less: Moving Ontario Forward set-aside	-	-	-	0.0	0.4
Contingency fund balance incl. set-asides			**0.5**	**0.3**	**0.9**

Includes Drug Program changes, Child Welfare, Northern Health Action Plan, Action Plan for Reconciliation, School Renewal Funding

Accommodates approximately 1.4% increases in next round of bargaining

[1] For 2014-15 and 2015-16, approvals through Q3 are shown.

- Of the remaining 2016-17 contingency fund, $0.6 billion is encumbered for education capital appropriation, leaving $0.3 billion to cover any contingencies.
- The 2016 Budget included a larger contingency fund, primarily due to funds set aside for future compensation increases and outside the GTHA Moving Ontario Forward projects.
- There have been more draws from the contingency fund in the current fiscal cycle, compared to recent years.
- The remaining contingency fund balance would be used to offset risks.

Expense Risks: Items to be managed

$ Billions	2016-17	2017-18	2018-19
Identified high-likelihood risks	0.4	0.7	1.0
PRRT boulder risks	0.1	0.3	0.3
Cap and trade not applied against in-plan items as assumed	-	0.0	0.6
Other likely funding requests	0.6	0.7	0.7
Total items to be managed*	**1.0**	**1.7**	**2.6**

Pressures such as: Health, Social Assistance caseloads, emergencies, Complex Special needs

Risks include: Business Supports, Benefits Transformation and NTR/full cost recovery

Health, MTO (including UP Express), Business Growth Initiative request, Drive Clean.

* Does not include a remedy for the Bill 115 court decision

$ Billions	2014-15	2015-16	2016-17	2017-18	2018-19
Year-end Savings Target	**1.1**	**1.0**	**0.8**	**1.0**	**1.0**
Total Risks to be managed			**1.8**	**2.7**	**3.6**

- In past years, unspent contingency funds have been used to meet the year-end savings target.
- An initiatives envelope for the 2017 or 2018 Budgets has not yet been incorporated into the fiscal plan.

Note: Numbers may not add due to rounding

Introduction

The Ontario Quarterly Finances contains updated information about Ontario's 2016–17 fiscal outlook, including updated information about the major components of revenue and expense as set out in the *2016 Budget*.

Section A: 2016–17 Fiscal Outlook (OEP, TBS, OFA, Framework)

The government is projecting a deficit of $[X.X] billion in 2016–17, [an improvement of $X.X billion] compared to the 2016 Budget.

As outlined in the *2016 Budget,* the government is [on track to balance the budget by 2017–18 and is projecting to remain balanced in 2018–19. The government's path to a balanced budget is being achieved through responsible fiscal management, which involves managing growth in program spending and maintaining the integrity of Provincial revenues. The strengthening of the Ontario economy, together with the government's approach to fiscal management, is supporting strategic investments in new child care spaces, hospitals and electricity cost relief for consumers.]

Total revenue is projected to be $[X.X] billion, [an improvement/deterioration of $X.X billion compared to the 2016 Budget.] — [placeholder for high-level revenue change explanation]

The outlook for Provincial program expense, at $[X.X] billion, is [an improvement/deterioration of $X.X billion compared to the 2016 Budget.] — reflecting [placeholder for high-level program expense change explanation]

The Province's interest on debt expense forecast, at $X.X billion, is [an improvement/deterioration of $X.X billion compared to the 2016 Budget forecast.]

The 2016–17 outlook also maintains a $[X.X] billion reserve to protect the fiscal outlook against unforeseen adverse changes in the Province's revenue and expense, including those resulting from changes in Ontario's economic performance or the impact of natural disasters.

Further details on the Province's fiscal plan, will be provided in the upcoming 2017 Budget.

Section B: Details of In-Year Changes (OEP, PEMD, OFA, Framework)

Revenue (OEP)

The 2016–17 revenue outlook, at $[X.X] billion, is [an improvement/deterioration of $X.X billion compared to the 2016 Budget]. Since the *2016 Budget,* the following changes have been made to the revenue outlook for 2016–17:

Subject: RE: Q3 update
Date: Monday, January 23, 2017 14:06:16

Hi Selena

Couple of quick question, the 16-17 IOD forecast was revised downwards from the FES number and provided to Tim. Do you want us to use this revised version or stick with the FES forecast with the revision being presented in the Interim section of the 2017 Budget.

Let me know, and in order to complete the Financing Table we need to know the 16-17 deficit that you will be projecting in the Q3, will be the same as the FES?

Thanks

Ken k

Subject: RE: Q3 update
Importance: High

Hi All,

Following up on my email from last week, we received relatively recent direction regarding the release of Ontario's Third Quarter Finances – the tentative plan is to publish Q3 finances ahead of the February 15 deadline. We are tentatively tracking a release date of Monday February 13.

As you can imagine, timelines are very compressed, and includes a possible trip to FPC this week. In order to meet this week's deadlines, while also preparing for the release of the actual publication, we're asking for input from you in stages:

EOD Today:

We have prepared the draft of a deck, which we are working towards tabling at this Wednesday's FPC (TBC). The deck lays out the key 2016-17 building blocks that could be updated as part of the Q3 publication. It would help if we could get the following from you folks by the end of today:

16-17 post-FES expense update: We have included placeholder for an expense slide. The intention is for the slide to provide an updated list of initiatives that were not included in the FES expense outlook.

Recommended expense update/signature initiatives: We may build in options for what the outlook could look like – it would help if you could provide a recommendation for the expense changes that should be taken on/profiled.

16-17 c-fund update: We have included a c-fund slide that was used in the Q1 finances briefing materials (current PW). We would like to include an updated version of this slide in the FPC deck (appendix). It would help to have this out to 19-20.

Pension Narrative: Nadine – I'll connect on the pension adjustment and some high level bullets that we could use.

Noon Friday January 27:

Template: I've attached a draft of 3q finances that is based heavily off of the 2016 First Quarter Finances. We've highlighted in green the sections that we would like you to

update. While I'm not 100% certain this structure will be exactly what the Q3 document will look like, I think it's safe to say that the substantive content we'll have to cover is captured here. There will be some highlighted content that is *not possible* to update for Friday, however there will be a formal distribution process where additional information can be incorporated.

Thanks everyone, and please feel free to send your input directly to Liane and Emma. Im hoping to be able to share a draft deck with you late this evening.

Subject: Q3 heads up

Hi Everyone – Wanted to send a quick message that we are hearing there is a desire to proceed with the release of a Q3 update around the time we are expecting the Pension Panel panel to release their report. We are going to assume mid feb prior to the house coming back for our planning purposes.

My team is going to work together to put together a list of things we need to start working on/think about along with a calendar to determine and get direction on an approach to coincide with this timeframe.

More details to follow tomorrow.

Thanks.

Hi Dave,

As discussed in our 12:00pm meeting with the Secretary of Cabinet, we've revised the wording in the attached Status Table for SCOPA that pertains to recommendation #7 (debt). I've included our edits in track changes (p. 10-11).

If the Deputy is comfortable with this version, I'll send it along to OPCD to incorporate our changes.

Thanks, Anna

Summary Status Table in Response to the
Report of the Auditor General of Ontario

Chapter 2 2017 Annual Report of the Auditor General
Treasury Board Secretariat, Ministry of Finance, Ministry of Energy

Auditor's Recommendation	Completed Undertaking	Outstanding Undertaking (including timeline)
AG Recommendation #1 *We recommend the government record valuation allowances to offset the net pension assets it has recorded from the Ontario Teachers' Pension Plan and the Ontario Public Sector Employees' Union Pension Plan until such time as it obtains formal written authorization from their pension plan co-sponsors that they are able to lower minimum contributions or withdraw surpluses from the pension funds within the next 12 months.*	The Office of the Auditor General communicated its interpretation of Public Sector Accounting Standards (PSAS) requiring a full valuation allowance on the Province's two jointly sponsored pension plans in September 2016. At that time, the government passed a time-limited regulation on the accounting treatment for its joint defined benefit plans to align with the Auditor General's interpretation of PSAS, which enabled officials from Treasury Board Secretariat and the Ministry of Finance to sign the Statement of Responsibility for the 2015-16 Public Accounts. During the 2016-17 year, the professional staff conducted further research and analysis, and determined that PSAS does not require a valuation allowance on either of the jointly sponsored pension plans. This conclusion is supported by: • The conclusions reached by an independent Pension Asset Expert Advisory Panel (the 'Panel'), established by the government to provide advice on the interpretation of PSAS with respect to the reporting of net pension assets of these two joint defined benefit plans. The Panel, comprised of accredited accounting, actuarial and legal professionals with extensive background in pension accounting and plan governance, released its report in February 2017 which supported the government's position that a valuation is not required for these two plans under PSAS. Two key findings of the Panel were: 1) there is no requirement under PSAS that any formal agreement exist between the joint sponsors regarding the timing or amount of a reduction in contributions to record an asset, as the existing agreements in place between the parties support the recognition of an expected benefit, and 2) unilateral control is not	The government will evaluate the need for a valuation allowance annually taking into consideration (a) changes, if any, in the governance structures of the plans, (b), decisions, if any, of the joint sponsors that impact the need for a valuation allowance, and b) changes, if any, in Public Sector Accounting Standards. The government is open to continue to discuss the matter in the hopes of resolving this matter.

DRAFT

	required for asset recognition; joint control with each party having the ability to deny the actions of the other sponsor, provides evidence of shared control, supporting recognition of an asset. • An opinion from Deloitte LLP on aspects of the Province's accounting as at March 31, 2016 for the Ontario Teachers' Pension Plan. The opinion, which was dated October 2, 2016, concluded that it was permissible to recognize a pension asset under Canadian Public Sector Accounting Standards, even though the Province did not have under a unilateral right to reduce contributions. The opinion did not address the value at which the asset should be recorded. • Analysis completed by EY as to whether any valuation allowance is required to be recorded for OTPP or OPSEUPP as of March 31, 2017. EY confirmed no valuation allowance was required for either plan. The government respectfully disagrees with the Auditor General's interpretation of the accounting standards on this issue as PSAS neither requires unilateral control to record an asset, nor does it include a requirement to obtain a letter from the co-sponsor of the plan agreeing to reduce future contributions within 12 months.	

DRAFT

Summary Status Table in Response to the
Report of the Auditor General of Ontario
Chapter 2 2017 Annual Report of the Auditor General
Treasury Board Secretariat, Ministry of Finance, Ministry of Energy

AG Recommendation #2 *We recommend that the government remove the Independent Electricity System Operator's Market Accounts from the Province's consolidated financial statements.*	The Province consolidates the entities it controls, in accordance with Public Sector Accounting Standards (PSAS) and its internal reporting policies. Each consolidated entity produces its own stand-alone financial statements and is subject to its own financial statement audit. In 2016, the Independent Electricity System Operator (IESO) changed the accounting for the market accounts and recognized these balances on its financial statements. The financial statements of the IESO for the year-ended December 31, 2016 were subject to an external audit and received an unqualified (or clean) opinion. The government supports this enhanced reporting and greater transparency for the economic activities of the IESO. Additional comments with respect to IESO's accounting for the Market Accounts are included in the response to Recommendation #5 of this report.	The government supports the enhanced reporting and greater transparency for the economic activities of IESO resulting from the recognition of the market accounts. The government is open to continue to discuss the issue in the hopes of resolving this matter.
AG Recommendation #3 *We recommend the government follow the accounting standards established by the Public Sector Accounting Board and the Province's historical accounting precedent, and implement the recommendations in the Special Report issued*	The government prepares its financial statements in accordance with PSAS. The proposed accounting for the Ontario Fair Hydro Plan reflects the economic substance of the transaction by differentiating costs borne by taxpayers versus those borne by ratepayers. PSAS is silent on the recognition, measurement, presentation and disclosure of rate-regulated activities. In absence of a clear position on an issue, standard accounting practice dictates that an entity should consult other accounting standards. This guidance for PSAS is included in PS1150.07. Regarding the Office of the Auditor General's (OAG's) recommendation that the financing for Ontario's Fair Hydro Plan (OFHP) be pursued at the lowest cost to Ontarians, the government reiterates its concerns with this characterization, which were previously provided in the October 4, 2017 government response to the OAG's special report on OFHP (see	The government intends to continue to prepare its financial statements in accordance with Public Sector Accounting Standards (PSAS). The Fair Hydro Trust will raise financing through a combination of 3rd party senior debt and subordinated debt funded by OPG for which the cost will be primarily driven by the credit ratings assigned by Moody's and DBRS. The ultimate cost of this program will be dependent on the quantity of Global Adjustment that will be financed, prevailing market interest rates over the next 30 years, the availability of capital to invest in this type of structured debt and the

DRAFT

by our Office and tabled in the legislature on October 17, 2017, titled The Fair Hydro Plan: Concerns About Fiscal Transparency, Accountability and Value for Money, as follows: • *Record the true financial impact of the Fair Hydro Plan's electricity rate reduction on the Province's budgets and consolidated financial statements; and* • *Use a financing structure to fund the rate reduction that is least costly for Ontarians.*	Government Response to OAG Report on the Fair Hydro Plan in Appendix 5 of the Auditor General's Special Report). With respect to the Global Adjustment Refinancing (GA Refinancing) component of the OFHP, the policy objective is to more fairly allocate the cost to ratepayers over the useful life, not the contractual term, of the electricity generating assets. Therefore, it was a primary policy objective to ensure that the costs are borne by the beneficiaries of the electricity system – the ratepayers – and not the tax-base. The government believes it is appropriate for ratepayers to pay for the financing of electricity assets. The rate-base has a different risk profile than the tax-base, which would be reflected in different interest costs. The various entities that operate in the electricity industry have different financing costs that are specific to their risk profiles. The industry does not operate and is not financed through the Province. Ontario Power Generation (OPG) was identified as the Financial Services Manager responsible for the financing plans and the financing entity (i.e., Fair Hydro Trust) that will manage the debt obligations. OPG has the necessary financing and commercial expertise to assist with refinancing the Global Adjustment (GA) and will ensure that it is done in an efficient and cost-effective manner. OPG has a demonstrated track record in the financial markets with its Corporate Debt platform, private placement of insurance linked bonds, participation in securitization program and highly successful project debt issuances tied to new hydroelectric developments. OPG is beginning the process of raising funds to finance the deferred costs, and while total borrowing costs will not be known until the program is complete, accumulated interest is projected to be less than the estimates in the May 2017 report of the Financial Accountability Office (FAO). The figures referenced in the FAO's report was based on initial Ministry of Energy estimates from March 2017. Subsequent analysis	credit stability of the OFHP program which would be reflected in credit ratings assigned to this debt over time. Each of these factors will need to be managed and monitored closely. The government is open to continue to discuss the issue in the hopes of resolving this matter.

DRAFT

	conducted by the Ministry of Energy refined a number of variables, including the cost of borrowing and the quantity of GA to be refinanced. A number of variables, including interest rates, electricity demand and electricity costs, will change over the thirty-year life of OFHP. Government will continue to revise cost estimates to reflect these variable conditions. In addition, as outlined in the 2017 Long-Term Energy Plan, the government will continue to identify and implement initiatives to take costs out of the electricity system, which would reduce the cost of GA refinancing.	
AG Recommendation #4 *The Office of the Auditor General is the appointed under the Auditor General Act as the auditor for the consolidated financial statements of the Province of Ontario. We recommend that the Treasury Board Secretariat:* • *Proactively supply copies to the Auditor General of all contracts it enters into for accounting advice and opinions in order to ensure that*	Treasury Board Secretariat's use of external expertise for accounting and financial reporting matters supplements its own resources on complex or emerging accounting and reporting matters. External advisors are generally engaged to provide advice and guidance to supplement internal analysis. Treasury Board is committed to working with the Office of the Auditor General to discuss issues, once the professional staff has completed its analysis of the issue. In addition, Treasury Board believes frequent communication with the Office of the Auditor General is important and to that end, requested additional meetings with both the staff and the Auditor General during the 2016-17 audit. Where required by the CPA Ontario Code of Professional Conduct, the Auditor General has been, and will continue to be, advised of external advisor involvement.	Treasury Board Secretariat will continue to take a proactive approach to raising issues with the Office of the Auditor General. Where required by the CPA Ontario Code of Professional Conduct, the Auditor General will continue to be advised of external advisor involvement.

DRAFT

our Office is aware of the work the advisers are performing, can assess significant issues in a timely manner, and can determine the impact on the Province's consolidated financial statements and our annual audit; and • *Build into its contracts with external advisers the requirement that the advisers engaged to provide accounting advice and opinions that affect the consolidated financial statements notify our Office of*		

DRAFT

their engagement as required under the Code of Professional Conduct of the Chartered Professional Accountants of Ontario.		
AG Recommendation #5 *We recommend that the Independent Electricity System Operator (IESO), an "other government organization," use the Canadian Public Sector Accounting Standards (PSAS) in the preparation of its financial statements. Specifically, it should:*	The Independent Electricity System Operator (IESO) prepares its financial statements in accordance with Public Sector Accounting Standards (PSAS) and the financial statements are audited by a firm of independent external auditors whose responsibility is to express an opinion on whether the financial statements are fairly presented in accordance with PSAS. On its 2016 financial statements, IESO received an unqualified (clean) audit opinion. In its role as market administrator, IESO operates and settles approximately $17 billion through the electricity market. The change to include market account assets and liabilities in the financial statements provides increased transparency with respect to the value of transactions that flow through Ontario's electricity market, that otherwise would go	The IESO intends to continue to prepare its financial statements in accordance with Public Sector Accounting Standards, and will report on the results of its accounting firm's audit in its 2017 financial statements, to be published March 30, 2018. The IESO will continue to regularly review its accounting policies to ensure they are best suited to the reporting requirements of its business and the users of its financial statements. This includes providing transparency into the value of transactions that flow through Ontario's $17 billion electricity market and reflecting the economic substance of certain types of expenses that may not be directly recovered through normal revenue requirement

DRAFT

• *Remove market accounts recorded on its financial statements; and* • *Discontinue the inappropriate use of rate-regulated accounting in the preparation of its financial statements.* *To ensure that the members of the Legislative Assembly receive financial information on the operations of the IESO prepared in accordance with Canadian PSAS, the Office of the Auditor General will conduct an attest audit of the December 31, 2017, financial statements of the IESO as permitted under the Electricity Act, Subsection 25.2(2), which*	unreported in IESO's financial statements. These changes were extensively discussed with IESO's external auditors, its Audit Committee and its Board of Directors. The decision was supported by the Office of the Provincial Controller and IESO's external audit firm. Rate-regulated accounting better reflects the economic substance of certain types of IESO expenses (like those related to the Smart Metering Entity) that may not be directly recovered through normal revenue requirement models, and instead are recovered through rate regulation. This change is in line with accounting practices followed by six out of eight other independent system operators in North America and provides IESO financial statement users greater transparency into the substance of the variance accounts it holds and its right to collect an amount in the future.	models, and instead are recovered through rate regulation. The IESO recognizes the Auditor General's statutory role and authority to perform an audit of the IESO. The IESO is cooperating with the Office of the Auditor General to provide information, including the 2017 financial statements prepared by management, and for access to management for assistance in understanding such information. The IESO has likewise instructed its audit partner to cooperate with the Auditor General's audit.

DRAFT

states: "The Auditor General may audit the accounts and transactions of the IESO. 2014, c. 7, Sched. 7, s. 3 (1)."		
AG Recommendation #6 *We recommend the government follow the accounting standards established by the Public Sector Accounting Board, rather than using legislation and regulations to prescribe accounting treatments.*	The Province is committed to provide high-quality financial reports that support transparency and accountability in reporting to the public, the legislature and other users. For the 2015-16 Public Accounts, the government passed a time-limited regulation prescribing the accounting treatment for net pension assets in order to allow Treasury Board Secretariat and Ministry of Finance officials to sign off on Public Accounts consistent with the fiscal impact of the Auditor General's interpretation of Public Sector Accounting Standards (PSAS). This regulation is the only example of where the accounting treatment was legislated, and the legislation did not align with the requirements of PSAS. With respect to the Ontario Fair Hydro Plan Act and its regulations, there are no provisions in that legislation that prescribe the accounting treatment required to be followed by the Province. It is important to distinguish legislating the accounting from legislating the right of the government to recover amounts from specified ratepayers in the future,	The government intends to continue to prepare its financial statements in accordance with Public Sector Accounting Standards.

DRAFT

	which in the absence of the legislation, would have been collected from specified ratepayers as the costs were incurred. The accounting for the transactions resulting from the Fair Hydro Plan will be recorded in accordance with PSAS.	
AG Recommendation #7 *We recommend that in order to address the Province's growing total debt burden, the government work towards the development of a long-term total-debt reduction plan linked to its target of reducing the net debt-to-GDP ratio to its pre-recession level of 27% as measured using proper accounting for net pension assets and the projected costs of the Fair Hydro Plan. The government should also discuss publicly how it plans to pay down the debt.*	~~The 2017 Budget and the 2017 Fall Economic Statement stated that the government continues to maintain a target of reducing the net debt-to-GDP ratio to its pre-recession level of 27%, currently projected for 2029-30, together with an interim target of 35% by 2023-24. From 2017-18 onwards, the balanced budget environment will limit increases in debt to the difference between annual investments in infrastructure improvements and the amortization of such investments.~~ The government is making strategic investments in programs and services that will generate economic growth, while minimizing interest on debt costs. The forecast balanced budget in 2017–18 will limit the increase in net debt to net investments in capital assets. These investments will contribute to the economy growing at a faster rate than net debt, allowing the government to manage Ontario's net debt-to-GDP ratio. The government's long-term infrastructure plan to invest about $190 billion over 13 years, starting in 2014-15, will contribute to the growth of the economy. The Centre for Spatial Economics found that for every $1 spent on public infrastructure, GDP increases by $6, on average, in the long term.	Continue to monitor progress. ~~Estimated implementation by FY 2029-30.~~

Formatted: Normal

DRAFT

	Therefore, while overall debt will rise to fund these infrastructure investments, measurements of relative debt such as the net debt-to-GDP ratio, a recommended practice by the Public Sector Accounting Board, will gradually diminish due to the Province's GDP increasing at a faster rate than net debt. This will allow the Government to continue to move towards its 27% net debt-to-GDP target. The ratio has already commenced declining ~~, falling to 37.3% in 2017-18~~ from its 2014-15 peak of 39.3%. As discussed more thoroughly in responses to other recommendations in this report, the government prepares its financial statements in accordance with Public Sector Accounting Standards, including the net pension assets for its jointly sponsored pension plans and the transactions resulting from the Ontario Fair Hydro Plan.	
AG Recommendation #8 *We recommend that the Office of the Provincial Controller undertake thorough planning involving all stakeholders, including Treasury Board Secretariat, ministries and provincial government agencies, to identify the barriers and key areas to be addressed to achieve*	Treasury Board Secretariat and the Ministry of Finance are supportive of the timely delivery of the Public Accounts. The Office of the Provincial Controller works closely with the Office of the Auditor General to identify audit issues early and to ensure that stakeholders are engaged in discussions regarding risks and resolution. The Office of the Provincial Controller will continue to collaborate with the Office of the Auditor General to support the timely delivery of the Public Accounts. The Province will work with the Canada Revenue Agency on this recommendation, as reporting Personal and Corporate taxation revenues is highly dependent on information they provide.	Planning discussions for the 2017-18 Public Accounts have begun between the Office of the Provincial Controller and the Office of the Auditor General. As well, the Office of Economic Policy has been engaged in discussions on risk considerations related to economic models used to estimate personal and corporate tax revenues.

DRAFT

earlier finalization of the Province's consolidated financial statements, including the estimation risks associated with corporations tax and personal income tax revenues.		
AG Recommendation #9 *We recommend that the government avoid establishing arm's length trusts in order to record an expense in its consolidated financial statements before it is necessary, given that it loses the ability to ensure that funds are ultimately provided to the appropriate beneficiaries.*	The government works with its transfer payment recipients to ensure it receives good value for the money it provides in the form of grants. Government policy on the structured approach to program delivery takes a risk-based approach with respect to transfer payment oversight. Grants are provided to thousands of organizations annually that the government deals with at arms-length and is able to demonstrate proper oversight. A Trust structure was selected to implement the Affordability Fund in order to provide an effective solution to distributing funds to electricity distributors. With approximately 70 distributors across Ontario, it was not feasible for the Province to enter into agreements with each distributor. The Trust structure establishes an independent entity with expertise from the electricity distributor and community sectors. While the Affordability Fund was established at arm's length to the government, there are report-back requirements on the use of funds	The government will continue to assess the most appropriate vehicle for meeting its policy objectives, which include appropriate oversight of how transfer payments are spent.

DRAFT

	transferred as well as the ability for the government to conduct an audit to gain assurance that the funds have been used for the purposes intended.	
AG Recommendation #10 *We recommend that the government determine when it will issue a regulation as outlined under subsection 11(1) of the Fiscal Transparency and Accountability Act, 2004 confirming the source of reference for the Pre-Election Report and the timeline for issuance of the report that will be subject to our review under the Act.*	Under the *Fiscal Transparency and Accountability Act*, 2004, the government may file a regulation that would require it to release a Pre-Election Report on Ontario's Finances. Should the government file such a regulation, the Auditor General would be required to issue a Statement based on a prompt review following the release of such a Pre-Election Report.	The government remains committed to meeting the legislative requirements of the Act and working constructively with the Office of the Auditor General.

Treasury Board Secretariat, Ministry of Finance, Ministry of Energy

AG Recommendation #2 *We recommend that the government remove the Independent Electricity System Operator's Market Accounts from the Province's consolidated financial statements.*	The Province consolidates the entities it controls, in accordance with Public Sector Accounting Standards (PSAS) and its internal reporting policies. Each consolidated entity produces its own stand-alone financial statements and is subject to its own financial statement audit. In 2016, the Independent Electricity System Operator (IESO) changed the accounting for the market accounts and recognized these balances on its financial statements. The financial statements of the IESO for the year-ended December 31, 2016 were subject to an external audit and received an unqualified (or clean) opinion. The government supports this enhanced reporting and greater transparency for the economic activities of the IESO. Additional comments with respect to IESO's accounting for the Market Accounts are included in the response to Recommendation #5 of this report.	The government supports the enhanced reporting and greater transparency for the economic activities of IESO resulting from the recognition of the market accounts. The government is open to continue to discuss the issue in the hopes of resolving this matter.
AG Recommendation #3 *We recommend the government follow the accounting standards established by the Public Sector Accounting Board and the Province's historical accounting precedent, and implement the recommendations in the Special Report issued*	The government prepares its financial statements in accordance with PSAS. The proposed accounting for the Ontario Fair Hydro Plan reflects the economic substance of the transaction by differentiating costs borne by taxpayers versus those borne by ratepayers. PSAS is silent on the recognition, measurement, presentation and disclosure of rate-regulated activities. In absence of a clear position on an issue, standard accounting practice dictates that an entity should consult other accounting standards. This guidance for PSAS is included in PS1150.07. Regarding the Office of the Auditor General's (OAG's) recommendation that the financing for Ontario's Fair Hydro Plan (OFHP) be pursued at the lowest cost to Ontarians, the government reiterates its concerns with this characterization, which were previously provided in the October 4, 2017 government response to the OAG's special report on OFHP (see	The government intends to continue to prepare its financial statements in accordance with Public Sector Accounting Standards (PSAS). The Fair Hydro Trust will raise financing through a combination of 3rd party senior debt and subordinated debt funded by OPG for which the cost will be primarily driven by the credit ratings assigned by Moody's and DBRS. The ultimate cost of this program will be dependent on the quantity of Global Adjustment that will be financed, prevailing market interest rates over the next 30 years, the availability of capital to invest in this type of structured debt and the

DRAFT

by our Office and tabled in the legislature on October 17, 2017, titled The Fair Hydro Plan: Concerns About Fiscal Transparency, Accountability and Value for Money, as follows: • *Record the true financial impact of the Fair Hydro Plan's electricity rate reduction on the Province's budgets and consolidated financial statements; and* • *Use a financing structure to fund the rate reduction that is least costly for Ontarians.*	Government Response to OAG Report on the Fair Hydro Plan in Appendix 5 of the Auditor General's Special Report). With respect to the Global Adjustment Refinancing (GA Refinancing) component of the OFHP, the policy objective is to more fairly allocate the cost to ratepayers over the useful life, not the contractual term, of the electricity generating assets. Therefore, it was a primary policy objective to ensure that the costs are borne by the beneficiaries of the electricity system – the ratepayers – and not the tax-base. The government believes it is appropriate for ratepayers to pay for the financing of electricity assets. The rate-base has a different risk profile than the tax-base, which would be reflected in different interest costs. The various entities that operate in the electricity industry have different financing costs that are specific to their risk profiles. The industry does not operate and is not financed through the Province. Ontario Power Generation (OPG) was identified as the Financial Services Manager responsible for the financing plans and the financing entity (i.e., Fair Hydro Trust) that will manage the debt obligations. OPG has the necessary financing and commercial expertise to assist with refinancing the Global Adjustment (GA) and will ensure that it is done in an efficient and cost-effective manner. OPG has a demonstrated track record in the financial markets with its Corporate Debt platform, private placement of insurance linked bonds, participation in securitization program and highly successful project debt issuances tied to new hydroelectric developments. OPG is beginning the process of raising funds to finance the deferred costs, and while total borrowing costs will not be known until the program is complete, accumulated interest is projected to be less than the estimates in the May 2017 report of the Financial Accountability Office (FAO). The figures referenced in the FAO's report was based on initial Ministry of Energy estimates from March 2017. Subsequent analysis	credit stability of the OFHP program which would be reflected in credit ratings assigned to this debt over time. Each of these factors will need to be managed and monitored closely. The government is open to continue to discuss the issue in the hopes of resolving this matter.

DRAFT

	conducted by the Ministry of Energy refined a number of variables, including the cost of borrowing and the quantity of GA to be refinanced. A number of variables, including interest rates, electricity demand and electricity costs, will change over the thirty-year life of OFHP. Government will continue to revise cost estimates to reflect these variable conditions. In addition, as outlined in the 2017 Long-Term Energy Plan, the government will continue to identify and implement initiatives to take costs out of the electricity system, which would reduce the cost of GA refinancing.	
AG Recommendation #4 *The Office of the Auditor General is the appointed under the Auditor General Act as the auditor for the consolidated financial statements of the Province of Ontario. We recommend that the Treasury Board Secretariat:* • *Proactively supply copies to the Auditor General of all contracts it enters into for accounting advice and opinions in order to ensure that*	Treasury Board Secretariat's use of external expertise for accounting and financial reporting matters supplements its own resources on complex or emerging accounting and reporting matters. External advisors are generally engaged to provide advice and guidance to supplement internal analysis. Treasury Board is committed to working with the Office of the Auditor General to discuss issues, once the professional staff has completed its analysis of the issue. In addition, Treasury Board believes frequent communication with the Office of the Auditor General is important and to that end, requested additional meetings with both the staff and the Auditor General during the 2016-17 audit. Where required by the CPA Ontario Code of Professional Conduct, the Auditor General has been, and will continue to be, advised of external advisor involvement.	Treasury Board Secretariat will continue to take a proactive approach to raising issues with the Office of the Auditor General. Where required by the CPA Ontario Code of Professional Conduct, the Auditor General will continue to be advised of external advisor involvement.

DRAFT

our Office is aware of the work the advisers are performing, can assess significant issues in a timely manner, and can determine the impact on the Province's consolidated financial statements and our annual audit; and • *Build into its contracts with external advisers the requirement that the advisers engaged to provide accounting advice and opinions that affect the consolidated financial statements notify our Office of*		

DRAFT

their engagement as required under the Code of Professional Conduct of the Chartered Professional Accountants of Ontario.		
AG Recommendation #5 *We recommend that the Independent Electricity System Operator (IESO), an "other government organization," use the Canadian Public Sector Accounting Standards (PSAS) in the preparation of its financial statements. Specifically, it should:*	The Independent Electricity System Operator (IESO) prepares its financial statements in accordance with Public Sector Accounting Standards (PSAS) and the financial statements are audited by a firm of independent external auditors whose responsibility is to express an opinion on whether the financial statements are fairly presented in accordance with PSAS. On its 2016 financial statements, IESO received an unqualified (clean) audit opinion. In its role as market administrator, IESO operates and settles approximately $17 billion through the electricity market. The change to include market account assets and liabilities in the financial statements provides increased transparency with respect to the value of transactions that flow through Ontario's electricity market, that otherwise would go	The IESO intends to continue to prepare its financial statements in accordance with Public Sector Accounting Standards, and will report on the results of its accounting firm's audit in its 2017 financial statements, to be published March 30, 2018. The IESO will continue to regularly review its accounting policies to ensure they are best suited to the reporting requirements of its business and the users of its financial statements. This includes providing transparency into the value of transactions that flow through Ontario's $17 billion electricity market and reflecting the economic substance of certain types of expenses that may not be directly recovered through normal revenue requirement

DRAFT

• *Remove market accounts recorded on its financial statements; and* • *Discontinue the inappropriate use of rate-regulated accounting in the preparation of its financial statements.* *To ensure that the members of the Legislative Assembly receive financial information on the operations of the IESO prepared in accordance with Canadian PSAS, the Office of the Auditor General will conduct an attest audit of the December 31, 2017, financial statements of the IESO as permitted under the Electricity Act, Subsection 25.2(2), which*	unreported in IESO's financial statements. These changes were extensively discussed with IESO's external auditors, its Audit Committee and its Board of Directors. The decision was supported by the Office of the Provincial Controller and IESO's external audit firm. Rate-regulated accounting better reflects the economic substance of certain types of IESO expenses (like those related to the Smart Metering Entity) that may not be directly recovered through normal revenue requirement models, and instead are recovered through rate regulation. This change is in line with accounting practices followed by six out of eight other independent system operators in North America and provides IESO financial statement users greater transparency into the substance of the variance accounts it holds and its right to collect an amount in the future.	models, and instead are recovered through rate regulation. The IESO recognizes the Auditor General's statutory role and authority to perform an audit of the IESO. The IESO is cooperating with the Office of the Auditor General to provide information, including the 2017 financial statements prepared by management, and for access to management for assistance in understanding such information. The IESO has likewise instructed its audit partner to cooperate with the Auditor General's audit.

DRAFT

states: "The Auditor General may audit the accounts and transactions of the IESO. 2014, c. 7, Sched. 7, s. 3 (1)."		
AG Recommendation #6 *We recommend the government follow the accounting standards established by the Public Sector Accounting Board, rather than using legislation and regulations to prescribe accounting treatments.*	The Province is committed to provide high-quality financial reports that support transparency and accountability in reporting to the public, the legislature and other users. For the 2015-16 Public Accounts, the government passed a time-limited regulation prescribing the accounting treatment for net pension assets in order to allow Treasury Board Secretariat and Ministry of Finance officials to sign off on Public Accounts consistent with the fiscal impact of the Auditor General's interpretation of Public Sector Accounting Standards (PSAS). This regulation is the only example of where the accounting treatment was legislated, and the legislation did not align with the requirements of PSAS. With respect to the Ontario Fair Hydro Plan Act and its regulations, there are no provisions in that legislation that prescribe the accounting treatment required to be followed by the Province. It is important to distinguish legislating the accounting from legislating the right of the government to recover amounts from specified ratepayers in the future,	The government intends to continue to prepare its financial statements in accordance with Public Sector Accounting Standards.

DRAFT

	which in the absence of the legislation, would have been collected from specified ratepayers as the costs were incurred. The accounting for the transactions resulting from the Fair Hydro Plan will be recorded in accordance with PSAS.	
AG Recommendation #7 *We recommend that in order to address the Province's growing total debt burden, the government work towards the development of a long-term total-debt reduction plan linked to its target of reducing the net debt-to-GDP ratio to its pre-recession level of 27% as measured using proper accounting for net pension assets and the projected costs of the Fair Hydro Plan. The government should also discuss publicly how it plans to pay down the debt.*	~~The 2017 Budget and the 2017 Fall Economic Statement stated that the government continues to maintain a target of reducing the net debt-to-GDP ratio to its pre-recession level of 27%, currently projected for 2029-30, together with an interim target of 35% by 2023-24. From 2017-18 onwards, the balanced budget environment will limit increases in debt to the difference between annual investments in infrastructure improvements and the amortization of such investments.~~ The government is making strategic investments in programs and services that will generate economic growth, while minimizing interest on debt costs. The forecast balanced budget in 2017–18 will limit the increase in net debt to net investments in capital assets. These investments will contribute to the economy growing at a faster rate than net debt, allowing the government to manage Ontario's net debt-to-GDP ratio. The government's long-term infrastructure plan to invest about $190 billion over 13 years, starting in 2014-15, will contribute to the growth of the economy. The Centre for Spatial Economics found that for every $1 spent on public infrastructure, GDP increases by $6, on average, in the long term.	Continue to monitor progress. ~~Estimated implementation by FY 2029-30.~~

Formatted: Normal

DRAFT

	Therefore, while overall debt will rise to fund these infrastructure investments, measurements of relative debt such as the net debt-to-GDP ratio, a recommended practice by the Public Sector Accounting Board, will gradually diminish due to the Province's GDP increasing at a faster rate than net debt. This will allow the Government to continue to move towards its 27% net debt-to-GDP target. The ratio has already commenced declining ~~, falling to 37.3% in 2017-18~~ from its 2014-15 peak of 39.3%. As discussed more thoroughly in responses to other recommendations in this report, the government prepares its financial statements in accordance with Public Sector Accounting Standards, including the net pension assets for its jointly sponsored pension plans and the transactions resulting from the Ontario Fair Hydro Plan.	
AG Recommendation #8 *We recommend that the Office of the Provincial Controller undertake thorough planning involving all stakeholders, including Treasury Board Secretariat, ministries and provincial government agencies, to identify the barriers and key areas to be addressed to achieve*	Treasury Board Secretariat and the Ministry of Finance are supportive of the timely delivery of the Public Accounts. The Office of the Provincial Controller works closely with the Office of the Auditor General to identify audit issues early and to ensure that stakeholders are engaged in discussions regarding risks and resolution. The Office of the Provincial Controller will continue to collaborate with the Office of the Auditor General to support the timely delivery of the Public Accounts. The Province will work with the Canada Revenue Agency on this recommendation, as reporting Personal and Corporate taxation revenues is highly dependent on information they provide.	Planning discussions for the 2017-18 Public Accounts have begun between the Office of the Provincial Controller and the Office of the Auditor General. As well, the Office of Economic Policy has been engaged in discussions on risk considerations related to economic models used to estimate personal and corporate tax revenues.

DRAFT

earlier finalization of the Province's consolidated financial statements, including the estimation risks associated with corporations tax and personal income tax revenues.		
AG Recommendation #9 *We recommend that the government avoid establishing arm's length trusts in order to record an expense in its consolidated financial statements before it is necessary, given that it loses the ability to ensure that funds are ultimately provided to the appropriate beneficiaries.*	The government works with its transfer payment recipients to ensure it receives good value for the money it provides in the form of grants. Government policy on the structured approach to program delivery takes a risk-based approach with respect to transfer payment oversight. Grants are provided to thousands of organizations annually that the government deals with at arms-length and is able to demonstrate proper oversight. A Trust structure was selected to implement the Affordability Fund in order to provide an effective solution to distributing funds to electricity distributors. With approximately 70 distributors across Ontario, it was not feasible for the Province to enter into agreements with each distributor. The Trust structure establishes an independent entity with expertise from the electricity distributor and community sectors. While the Affordability Fund was established at arm's length to the government, there are report-back requirements on the use of funds	The government will continue to assess the most appropriate vehicle for meeting its policy objectives, which include appropriate oversight of how transfer payments are spent.

DRAFT

	transferred as well as the ability for the government to conduct an audit to gain assurance that the funds have been used for the purposes intended.	
AG Recommendation #10 *We recommend that the government determine when it will issue a regulation as outlined under subsection 11(1) of the Fiscal Transparency and Accountability Act, 2004 confirming the source of reference for the Pre-Election Report and the timeline for issuance of the report that will be subject to our review under the Act.*	Under the *Fiscal Transparency and Accountability Act*, 2004, the government may file a regulation that would require it to release a Pre-Election Report on Ontario's Finances. Should the government file such a regulation, the Auditor General would be required to issue a Statement based on a prompt review following the release of such a Pre-Election Report.	The government remains committed to meeting the legislative requirements of the Act and working constructively with the Office of the Auditor General.

Assumptions /Notes

1 - deleted for this scenario -

2 GDP - per latest information rec'd (see GDP tab)

3 TCA - per info rec'd May 29, 2018 from M Reghabi

After 2027-28 TCA increases are equal to annual amortization

4 Net Debt adjusted for prepaids starting 2014-15. From 2017-18 and onwards - same amount as prior month assumed.

5 Balanced budget continues through to 2035-36

6 GDP annual growth is 4% from 2031-32 to 2035-36

7 Revenue restated to include BPS (Hospitals, colleges, school boards) from 2012-13

8 Revenue from 2017-18 to 2019-20 has been restated for BPS

9 Revenue for 2016-17 was revised down by approx $1 million from $140,735m to $140,734.

10 Accumulated deficit for 2016-17 now incorporates the pension valuation adjustment of approx $12.4b

Net Debt for 2016-17 has
opinion of the 2016-17 P

Assumptions /Notes

1 - deleted for this scenario - m

2 GDP - per latest information rec'd (see GDP tab)

3 TCA - per info rec'd May 29, 2018 from M Reghabi

After 2027-28 TCA increases are equal to annual amortization

4 Net Debt adjusted for prepaids starting 2014-15. From 2017-18 and onwards - same amount as prior month assumed.

5 Balanced budget continues through to 2035-36

6 GDP annual growth is 4% from 2031-32 to 2035-36

7 Revenue restated to include BPS (Hospitals, colleges, school boards) from 2012-13

8 Revenue from 2017-18 to 2019-20 has been restated for BPS

9 Revenue for 2016-17 was revised down by approx $1 million from $140,735m to $140,734.

10 Accumulated deficit for 2016-17 now incorporates the pension valuation adjustment of approx $12.4b

Assumptions /Notes

1. Surplus for 2017-18 is $ 642 m
2. GDP - per latest information rec'd (see GDP tab)
3. TCA - per info rec'd March 3, 2018 from David Hodes
   After 2027-28 TCA increases are equal to annual amortization
4. Net Debt adjusted for prepaids starting 2014-15. From 2017-18 and onwards - same amount as prior month assumed.
5. Balanced budget continues through to 2035-36
6. GDP annual growth is 4% from 2031-32 to 2035-36
7. Revenue restated to include BPS (Hospitals, colleges, school boards) from 2012-13
8. Revenue from 2017-18 to 2019-20 has been restated for BPS
9. Revenue for 2016-17 was revised down by approx $1 million from $140,735m to $140,734.

Hi Everyone – in follow up to my message on Friday, I am setting up this check in to see what materials/answers to the FAOs questions folks will have ready and to answer any questions you may have about what can/cannot be provided.

If you have materials/answers ready, please feel free to forward them in advance and we will consolidate this information.

Thanks a lot
Teleconf details to follow later this morning.

Attachment 2: FAO protocol excerpt.docx
Attachment 3: 2017 Budget Qs_FAO specific Qs.docx

Hi Everyone.

As you can see below, the FAO has reached out to make a formal request for information in follow up to yesterday's release of the Budget (BTW we are looking to set up a mtg on Tuesday from 1pm to 2pm with the FAO).

You may have already been forwarded this email from your ADMs but we've also just now received the list of specific additional questions (attached). I've attempted to identify in the attached and below which area is responsible for what, and if I have this wrong, please let me know (and sorry!).

I thought we could do a quick touch base Monday, just to check in on what we might have readily available to be in a position to provide at Tuesday's meeting and what we may need to get back to the FAO on (but pls note that we should not be doing any new analysis to provide a response). I will send out an invite/teleconf so we can discuss.

For reference I have attached an excerpt from our protocol for interaction with the FAO in case folks need a refresher on what information can/cannot be shared. We can discuss further on Monday at our call/meeting.

Thanks and pls let me know if you have any questions.

Subject: Follow-Up on the 2017 Budget

Good Morning!

Congratulations on delivering yesterday's big, black budget!

I wanted to follow-up on the FAO's requests for some additional information.

First, as we have discussed, we have three requests for specific data/tables:

1. We would like to obtain the detailed revenue and expense tables (Tables 6.14 and 6.15) extended to 2019-20.

- Are these detailed tables available to 2020-21? If so, then please include (☺) **– OEP Table 6.14/TBS – PEMD&CPD 6.15**

2. As staff have been discussing, we would like to obtain more detailed information on the one-time adjustments to taxation revenues beginning in 2015-16 and extending over the forecast. This is basically additional information to that provided in tables 6.7, 6.8 and 6.9. **- OEP**

3. As detailed in the letter and background documents sent to Deputies Thompson and Angus on April 3, we are requesting pension expense and employer contribution

details for the OTPP and OPSEUPP.- **TBS-OPCD**

We would also appreciate a meeting early next week (preferably Tuesday afternoon) to allow you to respond to a number of questions that we have with regard to the 2017 Budget.

We'll provide a list of specific questions later this afternoon, but these questions will cover a number of areas, including:

- Clarification on where the Fair Hydro Plan appears in the expenses **– CEFD/ TBS - PEMD**

- Additional details/clarification on new health spending, including the new pharmacare plan **– TBS PEMD**

- Clarification on future assumptions for asset sales and any details behind the 'Sales and Rentals' line in the detailed Revenue table. **OFA CEFD, OEP**

- Clarification on the assumptions behind new federal funding announced in the 2017 federal budget (e.g. affordable housing, child care, home care) **OEP/TBS PEMD & CPD**

- Some background on the decision to reduce the estimate of 'Carbon Allowance Proceeds' and assumptions on associated expense – **OEP, TBS PEMD**

- Additional details/clarification on new infrastructure spending **TBS CPD**

- Assumptions behind the plan to reduce net debt-to-GDP to 35% and eventually to 27%. **OFA**

We'll provide a list later this afternoon that expands somewhat on these question topics.

Happy to discuss any of these requests.

Thanks again for your support,

David

FAO
Financial
Accountability
Office of Ontario

- Approval of the Order In Council (OIC) on October 5, 2016, authorizes ministries and public entities to disclose to the FAO, financial, economic and other information contained in Cabinet records that relates to:
    - The Province's finances, budget and trends in the provincial and national economies;
    - The estimates and supplementary estimates submitted to the Legislature;
    - The financial costs or benefits of any public bill before the Assembly; and,
    - The financial costs or benefits of any proposal made by the Government or any member of the Assembly.

- This OIC authorizes ministries and public entities to share information contained in Cabinet records when the following conditions are met:
    - The information has been requested by the FAO;
    - The information is not available through other sources;
    - The policy or fiscal decisions to which the requested information relates have been announced to the public or tabled with or disclosed to the Legislative Assembly;
    - The information is provided in a format that does not reveal other information protected by subsection 12(1) of FIPPA;
    - The information would not reveal personal information or personal health information; and,
    - The FAO agrees not to disclose the information further without the consent of the Executive Council.

<u>Disclosure of Third Party/Commercial Sensitive Information</u>

- Third party/commercial sensitivity is not a valid justification for withholding information from the FAO.
- The only valid justifications for refusing to provide information to the FAO are the personal information and personal health information exceptions set out in subsections 12(2) and (3) of the FAO Act as well as any terms and conditions laid out in the OIC.
- However, the FAO has limitations on what information he can further disclose and make public.
    - The FAO cannot further disclose third party/commercially sensitive information obtained solely from a record covered by s17 of FIPPA.
    - Ministry and public entity senior management should proactively advise the FAO in writing of any sensitivity on the disclosure of information provided to the FAO. This includes specifically identifying information contained in records such as third party information, information on relations with other governments, or information on the economic and other interests of Ontario, as described respectively in sections 15, 17 and subsection 18(1) of FIPPA, information subject to solicitor-client privilege, litigation privilege or settlement privilege, and information contained in Cabinet records, when providing information to the FAO in accordance with section 12 of the Act.
    - The FAO typically consults with ministries/public entities during the development of draft reports on any disclosure restrictions related to any information provided to the FAO.

FAO Questions for MOF

April 28, 2017

Economics

- Why is the growth rate for labour compensation running significantly above the growth for primary household income, particularly in 2018 and 2019? **- OEP**
- Do you use Compensation of Employees on a 'National Basis' (from Table 11 of the OEA) as the principal PIT driver? In 2016, Labour Compensation on a national basis grew at 4.4% while on a domestic basis it grew 4.2%, which is an unusually large gap. **- OEP**

Revenue

- In Table 3.14, sales and rental revenues are projected to increase by $1 billion in 2017-18. Can we can get details about the assumptions behind this increase? **– OFA- CEFD & OEP**
- The 2017 federal budget announced new funding for affordable housing, child care, infrastructure, home care and labour-market training. To what extent are these new revenues (and the associated expense) built into the fiscal plan? **– OEP/TBS – PEMD&CPD**
- Expected revenues from Carbon Allowance Proceeds have been reduced by $0.5 billion beginning 2018-19 (Table 6.10). Any explanation of the lower revenue projection?
    - Is the annual forecast for Carbon Allowance Proceeds $1.4 billion? If so, does the higher amount in 2017-18 of $1.8 billion just reflect the shifting of proceeds from the first auction in 2016-17 (that is there is an extra auction in 2017-18 than in future years)? **– OEP**
    - Are the associated expenses from the Green Initiative Fund being reduced as well, to reflect the lower revenue forecast? **– TBS - PEMD**
- Base revenue growth for Corporations Tax and Sales Tax are noticeably stronger than the growth of their underlying drivers. What are your elasticity assumptions for Personal Income Tax, Corporations Tax and Sales Tax with respect to their drivers? **- OEP**
    - For HST, could you break out the revenues expected from housing and nominal consumption over the forecast? **- OEP**
- The federal government's 2015-16 Annual Financial Report indicated that stronger 2015 federal PIT returns partly reflect "…tax planning by high-income individuals to recognize income in the 2015 tax year before the new 33 per cent tax rate came into effect in 2016". What assumptions were made on the impact of income shifting on Ontario's PIT revenue? **- OEP**

Expense

- The anticipated fiscal impact of the Fair Hydro Plan is approximately $1.8 billion based on information provided to the FAO (roughly $1 billion for HST rebate and $800 million for the electricity social programs). However, the 2017 Budget indicates that the total cost would be around $1.4 billion in 2017-18 (Table 6.15). Can you explain the discrepancy? **– TBS - PEMD**

- A number of new programs were announced in the budget. Can you provide the fiscal impact for these new initiatives (e.g. children and youth pharma-care, child care spaces expansion) by completing the following table? Are these fiscal impacts in the plan? **– TBS PEMD&CPD, TPD**
    - The September Throne Speech announced the expansion of 100,000 new child care spaces. The budget announced 24,000 additional spaces. What is the progress in the rollout plan for the remaining spaces? Is there additional fiscal impact from the Throne Speech that have not been incorporated?

Cost of Announced Programs

	2017-18	2018-19	2019-20	2020-21
Children and Youth Pharmacare				
100,000 Child Care Spaces Expansion				
Fair Hydro Plan				
Caregiver Tax Credit				
Other major programs?				

Debt

- The budget indicated that the government aims to reduce the net debt to GDP target to 35 per cent by 2023-24 and 27 per cent by 2028-29. What assumptions are built into this projection for nominal GDP, the budget balance, and capital expenditure? **- OFA**
- What's the explanation for the increase in cash reserves? Is it related to recent changes in rating criteria requiring more liquid reserves covering the issuance of commercial paper debt? **- OFA**
- What is a Designated Purpose Account? **– TBS OPCD**
