Québec's auditor general is not so much focused on the accounting issue of 'recipient capital transfers' and the definition of a liability, but rather on the issue of 'authority to pay', which is another accounting grey area. The PSAB 3200 Liabilities standard provides guidance on what a constructive obligation is to meet the criteria to record a liability and the guideline allows a government to have a recorded liability before it provides all legal approvals, but exactly where this line is in each jurisdiction is different and a matter of judgment.

On the issue of 'recipient capital transfers' and the requirement to meet the definition of a liability, as per British Columbia's qualified opinion, the concept of a liability is much more difficult to define in public sector accounting compared to private sector accounting. The differing interpretations are leading to different accounting treatments.

As we dug deeper into this accounting issue, we found that in contrast to British Columbia, Alberta and Ontario received a pass by their auditor generals on the basis of deferring revenues. In Alberta, grants for capital purposes and donated assets are deferred and recorded in revenue over the useful life of the tangible capital assets. The Auditor General is of the view that what defines a liability is, in the case of a hospital for example, the contractual commitment to provide health services, and not the completion of the construction project itself.

Meanwhile, Ontario's explanatory notes state that, "Deferred capital contributions represent the unamortized portion of tangible capital assets or liabilities to construct or acquire tangible capital assets from specific-purpose funding received from the Government of Canada, municipalities or third parties. Deferred capital contributions are recorded in revenue over the estimated useful life of the underlying tangible capital asset once constructed or acquired by the Province. Most federal transfers have been reclassified to deferred capital contributions."

The PSAB standard on government transfers (PS 3410) stipulates that grants are to be recognized as revenue in the period during which the transfer is authorized and eligibility criteria are met, except when and to the extent that the transfer stipulations give rise to an obligation that meets the definition of a liability. Transfers meeting the definition of a liability are recognized as revenue as the liability is settled. That is where we enter a 'grey area', as judgment is rendered as to what constitutes a liability according to the contractual provisions

of each grant.

It is interesting that while several provinces are deferring recognition but are getting different audit opinions, most local governments (i.e. cities, municipalities) choose not to defer. Principal explanations for this are that municipalities in their budget planning exercises count on grants to meet balanced budget requirements and are more accustomed to a 'cash basis' approach to fiscal management. Grants could either be for operational purposes, for which immediate recognition is easily justified, for capital purposes or, in some cases, unspecified.

It took almost a decade to develop PS 3410. The standard was established to provide some flexibility for interpretation in order to accommodate the differing circumstances and perspectives of the various stakeholder groups – predominantly the preparers.

The Dilemma From Financial Statement Users' Perspective

The problem with Transfer Accounting from a financial statement user's perspective is that the financial statements are being prepared differently for the financing of the same types of assets (i.e. hospitals, transit, etc.). Consequently, the financial statements are lacking comparability.

We draw a parallel with this dilemma to the IASB project on leases that led to the issuance of a new IASB Lease Standard – IFRS 16 – earlier this year.

From *IASB Shines Light on Leases by Bringing them onto the Balance Sheet* (published January 13, 2016): "The International Accounting Standards Board today issued a new accounting Standard, called IFRS 16 Leases. It replaces accounting requirements introduced more than 30 years ago that are no longer considered fit for purpose, and is a major revision of the way in which companies account for leases."

The new lease standard eliminates the arbitrary off-balance sheet treatment of operating leases, instead requiring them to be recognized on-balance sheet. Under the old method of having only 'finance leases' on balance sheet, it was difficult to compare companies in similar industries (i.e. airline, retail, transport).

Arguments For and Against Deferral

There are strong arguments on either side of the deferral or non-deferral issue. No matter what path this accounting issue progresses on, it is evident that another conceptual framework, along with revised standards and guidelines, is needed to reduce diversity in practice and render financial statements more directly comparable.

There are many arguments for and against the deferral of revenue from capital grants, and stakeholders are polarized in their views. Arguments in favour of deferral include:

- The funding is for long-life capital assets.
- The approach is consistent with the private sector accounting approach. Importantly, institutional investors who buy government debt securities are the same investors who buy the debt securities of private sector corporations, and they would expect to see a conceptual framework of accounting that is consistent for both groups.
- Government assets can be revenue-producing (i.e. power generation facility) or non-producing (public road), but in the case of non-producing, tax-payer revenues are the de facto revenue source. The deferral of revenue and capitalization of costs achieves better matching of revenues and expenses, as the assets are depreciated over their useful life.
- Immediate recognition of capital grants can give rise to revenue volatility as capital plans and government grants vary from year to year.
- Immediate recognition of capital grants can have a masking effect on fiscal results. Grants can fill gaps when underlying trends in fundamental own-source revenues, such as corporate, personal and sales tax, are weak; and
- Deferring of grant revenue reduces the risk of revenue uncertainty should the transferee fail to meet its obligations to the transferring government.

Proponents for non-deferral of revenue cite the following arguments:

- Financial statements for governments are not aimed at 'sophisticated' investors that are evaluating the possible return of investing in a business and its prospects of increasing wealth to shareholders. They are instead explaining to taxpayers (and legislators) what elected politicians and public service figures have done with their money (i.e. taxes, etc.) in providing public services on an annual basis. Thus, the cycling of sources and uses of funds through the income statement is a more practical approach. Public sector accounting in general and historically has tended to emphasize the income statement rather than the balance sheet. Budgeting cycles are more in tune with this income statement approach and there is more comfort with looking at things from a cash perspective (i.e. budgeting for cash in and cash out). Therefore, moving the definition of 'revenue grants' to an asset and liability based definition would shift the focus to the balance sheet.
- Emphasis on sources and uses of funds within the fiscal period holds governments to account for their spending. Whereas businesses try to earn profits and grow wealth, governments have unaccountably spent more than they take in and, in fact, have lowered government (i.e. taxpayers', and future taxpayers') wealth through borrowing.
- A corporation can justify capitalizing and amortizing expenditures on a one-time expense basis to build an asset that will generate revenue over a long period of time (i.e. an auto plant). Government capital spending, on the other hand, is fairly consistent over time, so this rationale is less relevant. While there is an argument that better infrastructure leads to higher income (i.e. GDP, economic growth), there is no direct income from the asset to 'match' the amortization expense. *[Although there are exceptions to this argument, such as capital spending to build revenue-producing assets, i.e. a power generation plant, a gas distribution facility, or toll roads.]* Moreover, infrastructure leads to higher maintenance and operating costs, a factor which is often absent or downplayed when decisions to build more assets are made, and this has implications for operating and maintenance budgets several years out.
- The provision of public services includes both operating costs (primarily salaries and grants to various ministries) and capital costs associated with adequate and safe infrastructure. These are integral and inseparable to the provision of public services and, therefore, should not be treated differently under accounting. There is no difference between investing in a hospital facility or in human capital (i.e. doctor or nurse) in order to provide public services.
- Does it make sense to capitalize assets only to recognize revenues later according to an arbitrary amortization allocation schedule? ***This point leads to another option for transfer revenue, the concept of netting revenues against capital costs in the fiscal period in order to reduce the carrying value of the tangible capital asset. This option would neutralize the issue of deferral versus non-deferral, but would affect the balance sheet value of tangible capital assets.***
- When the capital grant is for a project that requires the design, construction, operation and maintenance of a facility for specific services, the operation and provision of services over many years defines the liability as much as the construction of the facility. The provision of healthcare and education to citizens, with both capital and operating components, is necessary to fulfill the liability, yet there is no recognition of liability for the operating portion. The deferral of the capital grant for the design and build of the facility leads to a non-symmetrical or inconsistent accounting treatment.

An important side discussion to the issue of deferral and non-deferral is the related treatment of tangible capital assets in the calculation of net debt. Most credit rating agencies or other stakeholders assess governments on the basis of net financial assets, not tangible capital assets, because most assets of governments are not readily saleable for their stated value and are difficult to sell (i.e. roads, bridges, hospitals, schools, etc.). As such, a government's

net financial asset or debt position as reported under PSAB is not reduced by the value of tangible capital assets. This way of presenting net debt, which is used in calculating net debt-to-GDP or net debt-to-revenues, is viewed as a more meaningful metric in evaluating a government's sustainability. The exclusion of tangible capital assets is in contrast to private sector accounting where tangible capital assets are presented on the balance sheet and are factored into the measurement of shareholders' equity and credit metrics such as net asset coverage of outstanding debt (i.e. real estate property development and management company). Another difference is that these assets are recorded at fair value whereas governments record their tangible capital assets at cost.

PSAB and IPSASB Involvement

As one would expect, transfer accounting is a hot accounting issue. It has been an important topic at past PSAB Discussion Group meetings, a regular public forum at which issues arising on the application of the CPA Canada Public Sector Accounting (PSA) Handbook are discussed. PSAB is currently working on a new Conceptual Framework (CF). The CF project started a few years ago, and is expected to be finished by 2020 as articulated in the Board's new Strategic Plan. The new CF and potential future developments may resolve this contentious issue.

At the international level, the International Public Sector Accounting Standards Board (IPSASB) is currently tackling this issue as well and their work could inform the work at PSAB. The IPSASB standard, IPSAS 23, Revenue from non-exchange transactions (taxes and transfers), deals only with the aspect of grants from the recipient side. IPSASB is now looking to broaden their standard to encompass the grantor side. Two active projects that could affect accounting for government transfers are:

- Revenue, which covers exchange and non-exchange transactions. The objective of this project states: "The scope of this project is to develop new standards-level requirements and guidance on revenue to amend or supersede that currently located in IPSAS 9 (Revenue from exchange transactions), IPSAS 11 (construction contracts) and IPSAS 23, Revenue from non-exchange Transactions." *https://www.ipsasb.org/projects/revenue*
- Non-Exchange Expenses, which considers issues related to providing transfers from the grantor perspective. *http://www.ipsasb.org/projects/non-exchange-expenses*

PS 3410 – Government Transfers

Section PS 3410 – Government Transfers (revised 2010) in the CPA Public Sector Accounting Handbook establishes standards on how to account for and report government transfers to individuals, organizations and other governments from both a transferring government and a recipient government perspective. Government transfers are transfers of monetary assets or tangible capital assets for which the transferring government does not:

- Receive any goods or services directly in return, as would occur in a purchase/sale or other exchange transaction
- Expect to be repaid in the future, as would be expected in an investment, or
- Expect a direct financial return, as would be expected in an investment

PSAB has undertaken a post-implementation review of Government Transfers, Section PS 3410, to review the reasons for the diverging interpretations. The comment period deadline was May 15, 2015, and the post-implementation review results were presented to PSAB at the December 2015 meeting.

Prior to the post-implementation review, PSAB had cautioned that stakeholders should not expect or conclude that the current standard will be modified as a result of the post-implementation review. PSAB also asserts that it considers the authorization provisions in the standards to be clear, but given the various types of transfers, the need for professional

judgment is acknowledged.

At the March 23-24, 2016 board meeting, PSAB approved a feedback statement on the post-implementation review of Section PS 3410. In response to its findings, PSAB decided to explore whether an authoritative accounting guideline will help to clarify interpretations of the standard, and reduce diversity in practice. At the board meeting on June 16-17, 2016, PSAB considered issuing an accounting guideline to clarify interpretations of Section PS 3410, Government Transfers. After considerable deliberation, PSAB concluded that Section PS 3410 is a principles-based standard. On balance, it meets the original public interest objectives. Issuing an accounting guideline would not be the right approach because it could be perceived as overriding due process. Given the other priorities of PSAB, it was decided that it would not be appropriate to initiate a new project to amend Section PS 3410. PSAB plans to communicate considerations that led to this conclusion.

In the initial development of the standard, stakeholders had polarizing views of how recipient capital transfers should be treated. The post-implementation review confirmed that these views have not changed.

[1] The advance Fiscal Stabilization payments to Newfoundland and Labrador ($31.7mln) and to Alberta ($251.4mln) for 2015-16 are not included. One-time recoverable payments to Ontario ($150mln) and Prince Edward Island ($1mln) for 2011-12 are not included either.

[2] Canada Health Transfer includes transition protection payments from 2007-08 to 2008-09. It includes Canada Health Transfer transition protection payments to Newfoundland and Labrador and Nunavut in 2014-15. It also includes separate payments to Ontario in respect of the Canada Health Transfer for 2009-10 ($489mln) and 2010-11 ($246mln) to ensure Ontario receives the same Canada Health Transfer cash support as other Equalization-receiving provinces.

[3] Canada Social Transfer includes transition protection payments from 2007-08 to 2009-10. It excludes $31.9mln from Budget 2008 transition protection payments to Saskatchewan ($31.2mln) and Nunavut ($0.7mln) notionally allocated over five and three years respectively beginning in 2008-09.

[4] Includes payments and additional amounts. Also includes 2009-10 transitional Equalization protection to Nova Scotia and Manitoba. From 2007-08 onward, reflects the 2007 formula for all provinces except Newfoundland and Labrador (NL) which remained under the previous Equalization formula until 2010-11, when NL elected to enter into the 2007 Equalization formula.

[5] Offshore Offset Payments include cash amounts from the 1985 and 1986 Accords and cash and notional amounts from the 2005 Arrangements. Includes $37mln in 2015-16 and $33mln in 2016-17 in 2005 Arrangements. Also include $83mln in 2011-12, $297mln in 2012-13, $260mln in 2013-14, $131mln in 2014-15, $88mln in 2015-16 and $16mln in 2016-17 in Cumulative Best-of Guarantee payments to Nova Scotia.

Cumulative Best-of Guarantee payments in 2016-17 are preliminary.

[6] Subject to approval by Parliament, TFF payments include an additional $67mln to Yukon ($17mln), Northwest Territories ($24mln), and Nunavut ($26mln) in 2016-17, stemming from the legislative amendments to be proposed to enhance the stability and predictability of the program.

[7] Total Transfer Protection was provided between 2010-11 and 2013-14 to ensure that a province's total major transfers in one of these years are no lower than in the prior year.

For the purpose of calculating Total Transfer Protection, total major transfers comprise Equalization, Canada Health Transfer, Canada Social Transfer and prior year Total Transfer Protection.

[8] 2009-10 transition adjustment payment to Nova Scotia ($74mln).

Federal Transfers Heading Higher

The level of federal government transfers for infrastructure is expected to increase in the years ahead as the Liberal government delivers on its pledge to stimulate the economy through deficit spending. A total of $120bln is earmarked over the 10-year infrastructure plan. During last year's election campaign, the Liberals pledged $60bln of additional infrastructure spending, effectively doubling the infrastructure investment program assumed from the former Conservative government.

In January, at a Toronto Region Board of Trade event, Federal Minister of Infrastructure and Communities, Amarjeet Sohi, released some preliminary details of a two-phase approach to infrastructure investment which will underpin the comprehensive 10-year infrastructure plan. The $60bln dollars of additional spending will be allocated evenly – $20bln each – between public transit, social infrastructure, and green infrastructure (Macro Strategy *Federal Stimulus to Deal First with Infrastructure Backlog*, January 22, 2016). Federal participation in infrastructure projects will be up to 50% (up to 75% in the territories). Phase I of the plan entails $11.8bln in spending, including $3.4bln for the Public Transit Infrastructure Fund (allocation based on ridership), and $2bln for the Clean Water & Wastewater Fund (allocation based on a per-capita basis, in addition to $50mln for each province and territory). Phase 2 details will be announced within the next year.

Federal Infrastructure Plan $120bln

Phase 1: Infrastructure funding		
Green	Social	Public Transit
Supporting a resilient and strong Canadian economy by creating jobs and business opportunities, promoting sustainable development and reducing greenhouse gas emissions.	Investing in Canada's communities by funding social infrastructure to promote inclusive growth and lift more Canadians, including children and seniors, out of poverty.	Connecting people and supporting strong and sustainable communities by improving reliability, efficiency, safety and accessibility of public transit systems.
$5bln	$3.4bln	$3.4bln
• Modernize water and wastewater infrastructure, including First Nations communities • Improve alternative transportation fuel infrastructure • Faster regional electricity cooperation	• Affordable housing • Early learning and childcare • Cultural and recreation infrastructure • Community healthcare facilities on reserves • $1.2bln tailored for First Nations communities	• Refurbish or purchase transit vehicles • Replace or enhance transit stations • Support designs and plans to improve public transit systems
Streamline and Improve Existing Programs		
• Create flexibility for highway and road projects across Canada • Commit all remaining funding within the next two years	• Expand funding categories to include: culture, recreation, tourism, civic assets, passenger ferries • Reduce administrative burden through removal of P3 screen	
Phase 2: Details to be announced within the next year		

Source: Infrastructure Canada http://www.infrastructure.gc.ca/plan/index-eng.html

During his speech, Minister Sohi made reference to the 2016 Canadian Infrastructure Report Card, which estimates the value of core municipal infrastructure assets at $1.1tln, of which nearly 35% ($385bln) is in fair, poor or very poor condition, and therefore in need of attention. This compares to the 2012 report card, which shows a 30% infrastructure deficit with a total estimated replacement cost of $172bln. Minister Sohi noted that the study warns that, at current reinvestment rates – which are lower than recommended – national infrastructure will continue to deteriorate.

Proponents who argue against the deferral of transfer revenue worry that the new federal infrastructure program will mean receiving and spending hundreds of millions of dollars, but not reporting it in the income statement until each related project is completed. It could take several years to commence income recognition and then it would occur over a long period of time as the income is amortized into revenue. On this basis, it would be difficult for taxpayers to understand the implications of the federal government's infrastructure funding program on the financial statements.

Other PSAB Initiatives

P3 Accounting

In other public sector accounting developments, PSAB approved a project proposal to develop a standard on public private partnerships at its December 14-15, 2015 meeting. In our September 2015 issue of Canadian Government Central, we provided an overview of P3 accounting issues and developments at the international level. Click here for report.

Employee Benefits

Shared-Risk Retirement Benefit Arrangements are a relatively new development, and accounting standards have not kept pace with the rate of change. Modifications to employment benefit plans at the provincial level have taken on many forms, including joint sponsorship, contingent indexing, changes to contribution rates – all with the objective of fostering the long-term sustainability of these plans while addressing rising fiscal pressures.

The Auditor General of New Brunswick wrote, "Public Sector Accounting Standard on pensions (PS 3250 – Retirement Benefits) does not fully address unique arrangements such

as shared risk pension plans. PS 3250 also states that, 'because benefit plans are often complex, careful analysis and professional judgment are needed to determine whether the substance of particular plan makes it a defined benefit or a defined contribution plan.'"

New Brunswick is the third province we listed as having a qualified opinion. The province was flagged for their 'defined contribution accounting' approach. In March 2015, New Brunswick transitioned its four largest defined benefit pension plans to a shared risk model (i.e. target benefit plans) in order to improve the plans' long-term "sustainability, affordability and security while ensuring inter-generational fairness." The plans represented about 95% of its pension liabilities. New Brunswick's Auditor General concluded, however, that the "financial statements do not reflect the risk inherent in the design of a Shared Risk Pension Plan." In the end, the Auditor General concluded that there was not enough analysis done to justify a change in accounting treatment from defined benefit to defined contribution, whereby the province could de-recognize its obligations in the financial statements. It is the first time in 17 years that New Brunswick has received a qualified opinion.

The issue of shared risk plans was first discussed at the PSAB Discussion Group forum on January 15, 2015. PSAB established an Employment Benefits Task Force in the fall of 2015 and has approved a project. It will be issuing an Invitation to Comment (ITC) on the scoping of the project later this year.

What Are International Investors Saying?

In this issue, we provide an overview of the investor feedback gleaned from our meetings in **Europe** and **Asia**. Types of accounts we met with included multi-lateral organizations, central banks, foreign reserve agencies, commercial banks, life insurance companies, general insurance companies, and asset management firms. Investor client meetings covered a wide range of single- and multi-currency mandates, as well as active benchmarked, total return and buy-and-hold types.

The investor base for Canadian government securities continues to broaden. We held meetings with several investors who were looking to add exposure to Canada for the first time and extending term at current higher interest rate levels. This is coinciding opportunistically with several provinces increasing their international borrowing programs. The province of Alberta, for example, completed its US SEC registration and, in its recent second quarter Fiscal 2016-17 update, announced a Fiscal 2017-18 borrowing requirement of $19.8bln, targeting 30-40% internationally. This is up from the 'outside Canada' target range of 20-30% that was articulated in 2015. Alberta issued its first fully SEC-registered global bond debt offering on December 1 (1.9% Dec 6, 2019).

Key topics of interest to investors were:

- Trump win and implications for Canada, including NAFTA and Softwood Lumber
- Implications of Trump win on the US's AAA ratings
- Canada/US monetary policy, rates and foreign exchange outlook
- Inflation (RRBs vs. TIPs)
- Québec sovereignty risk in light of Brexit
- Canadian economy and Federal fiscal position
- Federal infrastructure spending initiatives
- Canadian housing market risk and implications of recent regulatory developments, particularly on Vancouver and Toronto
- Energy sector outlook (oil, gas, pipeline, LNG)
- Provincial economies, fiscal positions and borrowing programs
- Alberta wildfires impact
- Manufacturing in Ontario and the rest of Canada (and competitive tax structure)
- Canadian political and institutional framework
- Government credit ratings and rating agency views
- Government spread product performance, trade flows, outlook and top sector picks
- Canada Mortgage Bond Program
- Canadian household credit
- Municipal bond sector
- Impact of Equity Synthetic Swaps on CMBs

Investor Feedback

Political and Market Expectations

- Most accounts were surprised by the Trump win, and questioned why the polls and media were so wrong in predicting the outcome.
- Accounts wondered if Canada was expecting a wave of immigration from the US given the Trump win.
- Many investors were surprised by the sudden and sharp run-up in rates, leaving them cautious and side-lined into year-end notwithstanding that yields are now closer to their targets. Investors talked about wanting to better understand the implications of a new Trump era before committing more capital.
- We learned that a few accounts were strongly defensive against rising rates ahead of the Trump win, and were sticking with provincial exposures in the 3Y area of the curve.

Portfolio Management & Trading Tactics

- Notwithstanding the cautiousness on rates, some accounts were looking to add exposure in longer dated provincial bonds (10+) given the back-up in yields. At the same time, other accounts were focused on playing short dated provincials for carry and roll-down with the expectation that the Bank of Canada will remain on hold for some time (with possible easing bias).
- Following the Trump win, some accounts were favouring reducing and underweighting European SSA's to move into Canadian provincials. Many Canadian provincials are viewed as stronger than their European sub-sovereign counterparts where they see heightened political and banking sector risk (i.e. Populist movements, Italian banks, etc.). Also, CMB and provincial spread product in USD is considered cheap to domestic or relative to other SSAs.
- The Canadian dollar portion of foreign currency bonds for some accounts is quite high, especially for those with unconstrained mandates. Canada continues to look attractive relative to jurisdictions with low or negative yields. In general, however, accounts are market-weight to modestly overweight Canada vs. their benchmarks/targets.

  There was growing interest internationally in learning more about the Canadian municipal sector, especially for low-risk, high-grade accounts.
- International accounts continue to favour liquidity, even buy-and-hold types that hedge currency with short-dated swaps (3-6m rolling basis). Although under no pressure to sell

and strongly adverse to capital losses, these buy-and-hold investors want the option to unwind their positions if, when rolling their currency hedges, the all-in yields fall short of their targets.

- Accounts have specific minimum yield targets (mid-swaps +50-100bps) or minimum 1-2% all-in-yield in the 5-10Y tenor.
- Certain clients – such as bank treasuries – are governed by repo eligibility and liquidity guidelines and, therefore, have a need to be in shorter term bonds that are benchmark size and are in eligible currency. Insurance companies have less restrictions and have different tenor needs driven by the average life of their liabilities. Life insurance companies have preference for longer tenors and can take private placements. Property and casualty insurance companies will take shorter terms.
- There is growing preference for axe trading (i.e. Bloomberg-run manager).
- There was some interest in CAD vs. USD box trades, with Canada expected to outperform and steepen less on more bearishness ahead.

Market Outlook and Relative Value Perspectives

- Many clients see a lot of uncertainty in 2017 and expect that markets will remain choppy and volatile.
- Some accounts prefer CAD bonds to USD bonds because of concern over a Trump inflationary effect and more rapid rate hike risk. With this bearish outlook, they expect Canada to outperform the US on rates (with Canada's yield curve also steepening less). They also expect only modest incremental Canadian dollar depreciation going forward. However, with CGB rates low relative to USG, they are looking to provincials and covered bonds for higher spreads.
- CMB spreads were viewed as stable given the expectations for reduced mortgage origination activity in Canada, which will limit supply.
- Some accounts found Québec expensive vs. Ontario.
- Some investors continue to harbour ongoing concern about oil-levered provinces in the current weak oil price environment, notwithstanding more attractive spread levels and recent rises in oil prices. Others, on the other hand, have been opening lines in anticipation of supply.
- Some accounts see additional CAD currency risk, with the next major move occurring when the Federal Reserve increases its benchmark rate for the first time (this, combined with relatively low yields, has made the carry trade in CAD unattractive).
- There was recognition of improving credit quality and strong liquidity in Ontario and Québec. There was also strong comfort with British Columbia given its leading economic performance and improving credit profile (budgetary surpluses, low and declining debt ratio).
- Some accounts with more alpha-focused mandates are investing in high quality/liquid Canadian corporate bonds. They view these securities as offering better value and liquidity than government credit.
- International investor sentiment continues to be enthusiastic towards Canada as a politically safe place to invest, having a strong institutional framework, a sound financial sector, and a high-quality accounting and reporting framework. Canada's AAA rating – supported by its low Federal debt position – is viewed as a substantial factor. The Federal government's current fiscal and economic policies, which call for modest deficits, are not considered by international investors to be a risk to Canada's strong fiscal position and AAA status.

Investor International Currency Preferences

- In the majority of cases, the CAD is not a natural currency, although some clients do hold CAD assets.
- In Asia, the clients have strong demand for JPY and other Asian currencies. Now that CNY has been approved in the IMF SDR basket, Asian central banks have been increasing their holdings in CNH. Besides JPY and other Asian currencies, Asian clients also have interest in USD and EUR.
- On our European leg, there was a strong preference for Euros, followed by Sterling and then US dollars. Regulatory considerations are a strong factor for Canadian government credit eligibility and currency under Bank of England regulations and European Union regulations. These regulations include European Central Bank (ECB) operations, Basel III for financial institutions and Solvency II for insurance companies.
- In the European Union, the ECB does accept Canadian government debt for all categories (federal, agency, provincial, and municipal), as well as private sector debt including covered bonds, for example. These debt securities, which are subject to various haircuts, are eligible collateral in the category of 'Marketable Assets', but only in Euros which are settled in the Euro Area. Hence the reason why most European accounts prefer euro-denominated bonds.
- For Bank of England (BOE) operations, sovereign-backed issues are the only eligible collateral. The BOE also accepts G10 Government Guaranteed Agency Bonds such as EDC. Canada Mortgage Bonds were recently added as eligible collateral as well. Canadian provincial bonds, however, are not eligible. The BOE accepts a basket of securities, including Canadian dollar-denominated securities, but Sterling-denominated instruments are easier to post.

Note: This research article was prepared by Maria Berlettano, Head of Canadian Government Credit Strategy. It highlights the major investment themes gleaned from recent investor meetings in Europe and Asia. We wish to acknowledge the valuable contribution to this research article and to the success of our meetings by the participating members of our Sales & Trading teams in Hong Kong, Japan, London, New York, and Toronto.

1 Market Outlook

Outlook Brightens on Trump and OPEC – Still Cautiously Defensive on Rates From Here

Our portfolio strategy is grounded on our base case for a gradual move higher in rates, and a firmer global economy heading into 2017. However, we are still 'cautious and measured' on duration risk given uncertainties in this outlook, particularly the downside risk to Canada's economic recovery. On the plus side, Trump's win holds promise that the US economic recovery will pick up, and this will benefit Canada. Also positive is the recent move higher in oil prices. On the downside is a possible overcorrection in the Canadian housing market given regulatory changes and tighter financial conditions. Also at risk is the pace at which exports and business investment will increase. Globally, there are ongoing Brexit negotiations, Italian referendum implications, and elections coming up next year in Germany, France, and the Netherlands. On Trump's pledge to overhaul trade agreements (important for Canada are NAFTA and the Soft Wood Lumber Agreement), we believe that it would be imprudent to rush to judgement that developments would be deeply negative for Canada. We point out that President-Elect Donald Trump was deliberate in not calling out Canada with respect to NAFTA, but rather focused on Mexico. The United States' goods deficit with Canada in 2015 was an estimated -US$15bln, whereas Mexico's was -US$49.2bln. In services, the United States had an estimated surplus of US$27.1bln, putting its overall goods and services trade position with Canada in surplus.

Ian de Verteuil, our Equity Portfolio Strategist, points out that, "Equity markets have responded well to a Trump victory, focusing on the pro-business aspects of the campaign. Tax cuts, less regulation, and fiscal stimulus are likely in the medium term and all seem to have been priced into equity markets quite quickly. The negative side effects of these moves, namely bigger fiscal deficits, more risk, and high inflation, so far have been ignored, and the back-up in rates seems to have forced money flows out of bonds into equities. This is reasonable in the short term, but do not expect a smooth ride higher, as global growth remains mundane though inflation does seem to be tracking higher."

On policy rates, CIBC Economics is still expecting a gradual tightening move by the Fed, with one hike in December and then two in 2017. This view is held given that financial markets have responded favourably to the election outcome. In Canada, CIBC Economics is forecasting that the BoC will be on hold longer, at least until mid-2018, as Canada's central bank postures between the desire for a weak Canadian currency to support export growth, and containing elevated housing market risk. The BoC is also leaning on fiscal stimulus. However, the risks are somewhat tilted to the downside if growth is weaker than expected with the fiscal stimulus effect.

Our Macro Strategy Oil Analyst Joan Pinto states: "Historic output cut agreement from OPEC last week of 1.2mb/d for 6m effective Jan17, with an additional 600kb/d supply cut pledge from non-OPEC. Russia has reportedly agreed to trim 300kb/d. Market scrutiny turns to execution, which in the past has been fraught with cheating and non-compliance. Despite the extreme reaction in time-spreads –WTI sliding into backwardation with intensified Cal17/18 producer hedging, we would be cautious in extrapolating the recent euphoria in oil prices given the deal is for a 6m horizon and contingent on producer nations honouring their commitments. The impetus for investment to flow back into US shale at improving prices under a Trump pro-energy presidency also bears consideration. As such, we could expect WTI prompt to range between $50.50–55.00/bbl over the next three months and Brent between $52.00–57.00/bbl."

We also present CIBC Institutional Equity Research Oil Analysts' (Arthur Grayfer and Jon Morrison) oil price forecasts (avg.) as follows: WTI 16F US$45 (increased by ~6% on stronger-than-expected Q2), while they are also projecting WTI F17 US$60 and WTI F18 US$70/bbl. Their base case for 2017 is for the crude market to tighten due to falling supply and steady demand growth, driven by both the US and Asia, with India leading the charge in terms of global oil demand. They view the OPEC agreement in as more positive than expected with the cartel managing to bring a collective deal together with Member Nation production targets for H1/17, and incremental Non-OPEC participation. Accordingly, they are forecasting global stock draws to average at least 650 MBbls/d over H1/17 and, assuming that this agreement holds firm throughout all of 2017 (currently deal is for 6m), global inventory levels would decrease by >600 MMBbls/d compared to what they otherwise would have been in the coming year.

A gradually improving oil price should be supportive for the Canadian loonie, which is already off the lows on firmer oil prices. However, our Macro Strategy FX Strategist Bipan Rai believes that, "While oil prices should see an updrift next year, correlations with the CAD will deteriorate as monetary policy divergence and foreign investment flows will continue to be the determining factors for the loonie. We expect USD/CAD to trade with a USD bid bias on average for much of next year. Our expectation is that the USD/CAD will be in a range of 1.25-1.40." **Both our FX Strategist and our CIBC Economics team believe that the USD/CAD will strengthen modestly from here, reaching about 1.39 by Q1 2017.**

We remain in favour of a corporate overweight vs. provie for better yield shifting to maximum corporate overweight, but security selection will be key in navigating through choppy spreads in both sectors. We see higher risk in the energy sector, if the oil price recovery takes longer than expected; and note that the recent move higher in oil prices is encouraging, but the sustainability of the uptrend is still questionable on many fronts. We also see higher risk in the financial sector with the housing market adjustment, but this view applies mainly to the less diversified, monoline players who have concentrated exposures to the slowing housing market.

2 Trading Biases

Portfolio Strategy Near-Term Trading Biases (3-6M outlook)

Target Benchmark Weights

- Near maximum corporate weight based on constraint or target

FTSE TMX Canada Universe Bond Index	Sector Weight November 30, 2016 %	Near-Term Trading Bias %**
Index	100.00	100.00
Federal*	36.78	23.00
-Canada (Non-Agency)	24.73	13.00
-Agency	11.66	10.00
Provincial	34.16	24.00
Municipal	1.93	3.00
Corporate	27.13	50.00
-AAA/AA	7.68	10.00
-A	9.26	20.00
-BBB	10.19	20.00

Source: PC Bond, Bloomberg.
*Federal sub-group includes supra-national which is not displayed.
**Not adjusted for cash holdings to be 'Modest and Measured' short
Note: Table may not add due to rounding

Top-Down Strategy

- Duration: 'Modest and Measured' short

We still believe a cautious duration stance is warranted at this time. We are proposing only a 'modest and measured' short over the next 3-6 months until we have more clarity on the global economy, oil prices, and the impact on Canada's housing markets as a result of tighter mortgage regulation and financial conditions. As we've seen since the start of the year, being nimble on tactical shifts (i.e. being able to cover-in shorts to capitalize on rallies or tactically increasing the short position in the recent sell-off) will be the key to avoiding value destruction in a market that is volatile and prone to react to global events (i.e. Brexit, Turkey attempted coup, US elections, etc.) and other market developments. We do see risks tilted to the downside for Canada's economy arising from moderating activity in the housing market, a slower than expected recovery in exports and business investment as well as the potential for tighter trade conditions with the US following the win by President-Elect Donald Trump.

- Curve: Bullet (emphasis on yield maximization; note that 10-30s yield curve at ~61bps not compellingly steep – calling for bear steepening)
- Sector Allocation: Overweight corporates (near max. constraint or target)
- Under-market weight Canadas
- Underweight provincials
- Small position in the less liquid municipal sector

Premise

- 'Modest and measured' defensive position in the context of historically low yields and expectations for an improving global economy, but vulnerable to shocks and geopolitical risk
- Gradual normalization of policy rates with the Fed Reserve moving way ahead of the Bank of Canada
- With the strong correlation between the US and CAD yield curves, the CAN10Y and US10Y are expected to move higher together
- Our Equity Strategist, Ian de Verteuil, expects equity markets to continue to be choppy over the remainder of the year, with negative rates, deflation concerns, slow growth and disappointing earnings periodically weighing on equity prices. Stocks have been moving higher on valuations without earnings growth seen moving a lot higher. Funds flow has been distorting valuations, moving things around in such a way that's driven by central bank activity supporting low or negative bond market yields. Markets are vulnerable to central bank support. Earnings and valuations have not been seen as going much higher. Based on fair value fundamentals that underpin our Strategist's targets, equity markets have moved ahead of year-end targets: SPTSX target 14,000;

SPX target 2,100. **We note that the SPTSX ex-Energy forward multiple is ~14.6x, above its five-year average of 13.5x.** *We expect Ian de Verteuil's 2017 equity targets early in the New Year.*

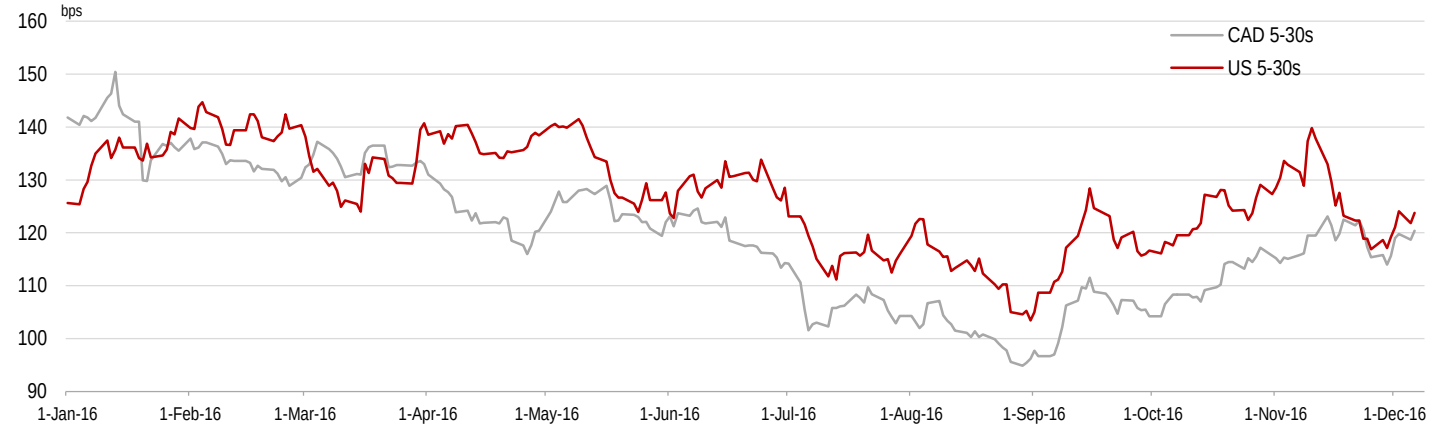
- We favour the risk/reward trade-off in corporate vs. government bonds at these wider spreads (especially given the narrower spread tolerance in government bonds). **We've changed our corporate weight to maximum in October on the belief that credit spreads will remain well bid and benefit next year from a more stable-to-improving global economy.**

Government Sector Security Selection Biases*

- Near-term >5Y security bias CAN, CMB, BC, SK, ONT, QC
- Near-term ≤5Y security bias CAN, CMB, BC, ALTA, MAN, SASK, ONT, QC, NS
- Favouring mostly core liquid non-Energy names in mids and longs

**Qualified by fundamental credit trends (fiscal/economic) as well as supply and liquidity.*

Trading Range Targets (vs. Curve)



ONT 30Y +95-110bps (current ~96.5bps – at tight end of our range)

QC 30Y roll* +3-6bps (current ~2.5bps – through our range and viewed as rich)

CMB 5Y +40-50bps (current ~41.5bps – at tight end of our range)

3 Market Recap

Market Highlights*

Since our last issue of Canadian Government Central (published November 16), Trump fever has continued to permeate financial markets, with bonds selling off more and equities moving higher. Since the November 8 Election Day, US 10Y and 30Y yields are up +52bps and +46bps to 2.37% and 3.07%, respectively. CAD 10Y and 30Y were up a lesser +36bps and +33bps to 1.63% and 2.24%, respectively. The 10-30s curves in both markets flattened moderately: US -6bps, CAD -3bps, respectively.

The SPX and S&P/TSX are currently at 2,241 and 15,237 respectively, moving higher still above our Portfolio Equity Strategist's year-end targets of 2,100 and 14,000. Since the US election, these indices have climbed by +4.7% and +3.9%, respectively. The Canadian broad S&P/TSX index got an additional shot in the arm from rising oil prices with the November 30 agreement by OPEC and Non-OPEC members to cut production. Since the OPEC announcement, WTI has climbed +US$5.22 to US$50.20/bbl and the USD/CAD has slipped by a modest two ticks to 1.32.

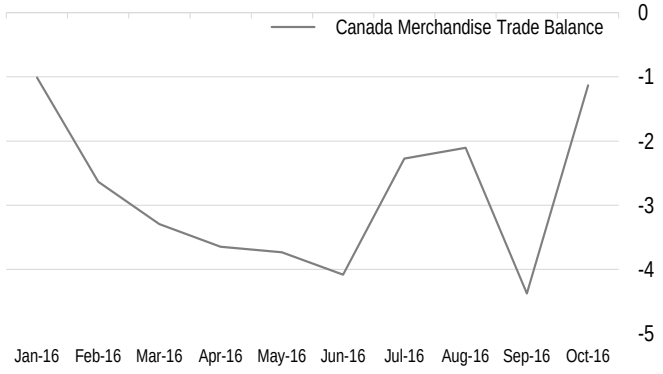
While US elections have materially altered forward-looking market and economic expectations, real economies continue to move along their pre-existing paths, with mixed data on balance. Below, we provide an overview of the latest economic developments in Canada, the US, and globally.

**NB: Levels discussed are at time of writing on December 8.*

CANADA *(figures in CAD)*

October Employment Report – Not Bad All Things Considered

- Canada gained a surprising +10.7k jobs in October (way above consensus of -15k), but the underlying details were weak. The breakdown showed -8.7k full-time jobs and +19.4k part-time jobs. The participation rate moved down two ticks to 65.6%, which supported a similar drop in the unemployment rate to 6.8%. On the plus side, private sector job creation outpaced the public sector. Also, Paid was up while Self-Employed was down. ON saw a big gain while AB experienced a large drop.
- CIBC Economics (Avery Shenfeld): "It was more of the same for Canadian employment, with plenty of jobs in the offing, but not the kind of work we'd like to see. In the past year, we've added almost +215k part-timers, but shed -31K full-time workers. This month's gains were skewed mostly to lower-paying sectors in services (other than a gain in financial services), with job reductions in manufacturing and construction."



2016	Nov.	Oct.	Sept.	Aug.	July	June	May
	----------Change in Employment----------						
CAN	10.7	43.9	67.2	26.2	-31.2	-0.7	13.8

Bank of Canada Rate Decision December 7 – No Rate Change, but More Dovish Stance

- The BoC kept its overnight rate at this month's meeting. CIBC Economics (Nick Exarhos): "A better run in Canadian data gave reason for the Bank of Canada to stand pat, but today's statement continued to highlight that a hike is still a distant proposition. The Bank noted that although growth is evolving more or less in line with its expectations, given the bounce-back in Q3 from a weak first half, non-energy exports and investment "continue to disappoint". More precisely, the statement highlights that there is a "significant" amount of slack in the Canadian economy. That is contrasted explicitly with developments stateside, an apparent attempt to highlight the economic, and more importantly, the rate divergence expected between the two nations ahead of the Fed's likely hike next week. There's not much to move markets, but we continue to see any tightening as a late-2018 prospect for Canada, with the door still open to a cut in the near-term if the data disappoints materially."

- Merchandise Trade Deficit Narrows on Drop in Record High Imports

. Source: Statistics Canada, Bloomberg.

CIBC Economics: BoC on hold until mid-2018

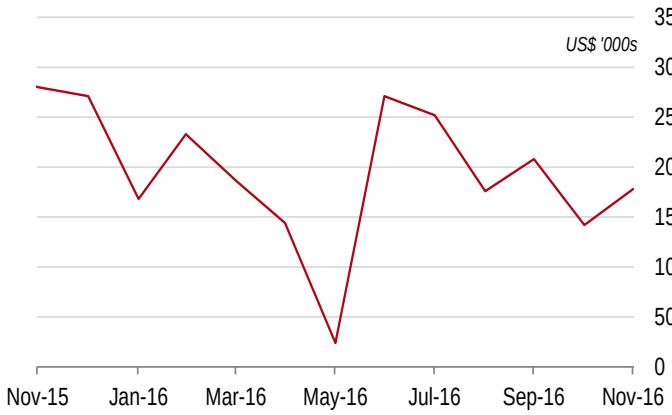
Other Key Canadian Data

- Canadian retail spending in September rebounded somewhat increasing +0.6% m/m after rising only +0.1% m/m in August, but this reflected mostly strength in autos. Retail Sales ex-Auto were flat, after climbing +0.2% previously. Sales have not shown any meaningful gains since May, when they were up a stronger +0.8%. Canadian retail spending has been on a slowing trend since starting off strong at the beginning of the year. CIBC Economics was expecting that the second half of the year may get a boost from Federal Child Care Benefit cheques, but there has been little evidence of that so far.
- September GDP picked up to +0.3% m/m, following August's GDP growth reading of +0.2%, capping off a +3.5% third-quarter growth rate (versus -1.3% in Q2). Canadian economic growth continues on the slow track, moving slower than the gains seen in June and July of +0.5% and +0.6%, respectively, but these months were set-up for a rebound after May's -0.6% contraction caused by the Alberta wildfires. Nonetheless, the steady positive growth is still encouraging against the choppy growth seen at the start of the year and there were a few positive surprises. CIBC Economics (Nick Exharos): "Canada's Q3 bounce in output was confirmed this morning, and a strong September reading suggest that the final quarter of the year is set to start on a better footing as well. As expected, the largest contributor to the +3.5% increase in quarterly GDP was the gain in exports, which recovered most of the ground lost from the May wildfires in Alberta. **There were a few surprises in the report.** Household consumption grew at a +2.6% pace, stronger than the trend in real retail sales would have suggested. That strength was offset by softer results in residential investment. As a result, final domestic demand still decelerated to a +0.9% growth pace – roughly in line with what we were expecting. The key signpost for where the fourth quarter might be heading is September GDP, which grew by a consensus-beating +0.3%. It's worth noting that the beat in September was driven by a two-tick contribution from mining/oil and gas, which tends to be a more volatile category. Still, with other sectors showing decent growth, and given the handoff to Q4, there's some upward pressure on the Bank of Canada's +1.5% forecast. That should diminish the near-term chances of a rate cut from Governor Poloz, which is bullish for the C$ and bearish for the front end of the curve."
- Headline CPI picked-up a tick in October, up +0.2% m/m (not seasonally adjusted). On a y/y basis, the CPI rate moved up two ticks to +1.5%, for the second month in a row, but that was influenced by higher gasoline prices.
- Core CPI was unchanged at up +0.2% m/m, and slipped back a tick to +1.7% y/y. The core inflation rate was previously running above 2%, a sign that inflation continues to be well anchored and that business conditions remain soft, consistent with the Bank of Canada's recent interest rate decision highlighting that there is significant slack in the economy.
- Canadian housing starts decelerated for the second month in a row in November to a pace of +184.0k, down from +192.3k in the previous month. This follows a much stronger pace of +219.4k in September. November's data brings housing starts closer to the projected rate of annual household formations of +175-180k. Meanwhile, October's building permits showed strength moving up +8.7% m/m, after falling -4.6% in September. Meanwhile, October's existing home sales climbed +2.4% m/m, a continuation from September's positive 0.8% m/m. Canada's housing market has been defying expectations for a moderation in activity, but is forecasted to see some slowing with tighter mortgage regulations and financial conditions.
- The Teranet/National Bank HPI showed that the average price of homes accelerated again by 11.8% y/y in October subsequent to a gain of 11.7% y/y in September. The price acceleration remained concentrated in the Vancouver (+22.5% y/y) and Toronto (+17.4% y/y) areas.
- Canada's September survey of Manufacturing Sales (value of shipments) built on an August gain (+0.9%), advancing 0.3% m/m. However, in real terms, the news was not as promising as volumes fell 0.2% m/m and have essentially been moving sideways since mid-2014. The biggest gainers for the month in nominal terms were transportation equipment and metal products.
- Canada's Trade Deficit Narrows in October. CIBC Economics (Nick Exarhos): "The Canadian trade deficit narrowed by over $3bln in October in reaching $1.1bln, as higher oil prices, and a more normal track to imports helped the balance recover from record-wide levels in September. A single shipment related to the Hebron oil project was responsible for $2.9bln of the now-revised $4.4 bln September deficit. In October, the narrowing from the adjusted baseline, which excludes that mammoth piece of equipment, was driven by firmer prices – particularly for oil – as export volumes declined on the month. As a result, even if the trade balance looks to be in much better shape for October, the GDP outlook isn't off to the best of starts."

UNITED STATES *(figures in USD)*

FOMC November 2 Decision – No Change As Expected Before US Elections, But Hawkish Tilt

As expected, the FOMC kept its overnight benchmark rate range unchanged at 0.25-50% (at the November 2 decision meeting), but there was a hawkish tilt to the announcement.



CIBC Economics (Royce Mendes): "No action was expected, and none was taken. In line with the broad consensus of private sector forecasters, the Federal Reserve decided to keep interest rates unchanged today. That said, there was a slightly hawkish tilt to the announcement. Two members of the rate setting committee continued to dissent in favour of an immediate hike. While that's down from the three that were in favour of tightening policy at the last meeting, it's likely that Boston Fed President Rosengren simply felt that, prior to the election and without a press conference, it was best to take a pass in favour of December. Moreover, in a minor but perhaps indicative shift, the statement suggested that the Fed is now only waiting for 'some' further evidence of progress. Overall, barring a material weakening of the economic outlook or significant volatility in financial markets, we continue to see the FOMC raising interest rates at its December meeting. Market reaction will likely be limited, because the number of dissenters decreased, and the more hawkish language was largely expected."

Following the US election, on policy rates CIBC Economics is still expecting a gradual tightening move by the Fed with one hike in December and then two in 2017. This view is held given that financial markets have responded favourably to the election outcome and the US economic recovery is expected to unfold in a constructive manner.

October Payroll Report – A Good Month Overall

- November US Non-Farm Payroll picked-up to +178k, inclusive of a gain of +156k in Private Payrolls versus +135k in October. The two-month payroll net revision was -9k. The six-month moving average moved up to +204k from +179k, as the very weak month of May, which saw only the creation of +24k jobs, moved out of the average.
- Average hourly earnings growth slipped back to +2.5%. In October, this was up a very strong +2.8% y/y, the fastest pace in nine months. Average weekly hours was unchanged at 34.4.
- The unemployment rate dropped further to 4.6% from 4.9%, this time on only a small drop in the participation rate to 62.7%. The Household Survey saw a gain of +160k jobs after showing a drop of -43k jobs in the previous month. The underemployment rate improved again by two ticks to 9.3%.
- The Federal Reserve's Labour Market Conditions Index came in at a strong 1.5, with the previous month's reading revised up to 1.4 from 0.7. The index had been below zero for most of 2016.

US Non-Farm Payrolls Report

Source: US Bureau of Labour Statistics

Other Key US Data

- US retail sales in October (Advance Estimate) accelerated to +0.8% m/m after an upward revised +1.0% m/m previously. This was ahead of consensus expectations for an increase of +0.6%. Ex-Autos and Gas, the number also showed improvement, up +0.6% m/m from +0.5% m/m previously. CIBC Economics (Royce Mendes): "A robust retail sales report for October combined with healthy revisions to the prior month showed that household spending remains on a solid track. Consumption continues to be relied upon as a major driver of US economic growth, and with job gains only slowing modestly, it should continue to provide that support."
- ISM Manufacturing picked up again in November climbing to 53.2 from 51.9, after briefly dropping below 50 in August, which was a big negative surprise. The ISM New Orders reading picked up to 53.0 from 52.1. A negative surprise in October was a big pull-back in the ISM Non-Manufacturing Composite to 54.8 from 57.1, but this rebounded strongly in November to 57.2.
- The US trade deficit widened to a four-month high in October to -$42.6bln from -$36.2bln the prior month on stronger demand for imported merchandise. The result reflected a rise in imports (+1.3%) vs. a drop in exports (-1.8%). This is a reversal of the previous trend which saw net exports make a solid contribution to third quarter GDP for the first time since the end of 2013. Since 2014, the trade deficit has been volatile and generally under pressure from the strong dollar amidst weak global growth.

- Housing activity has picked up strongly, after a pull-back that ensued over the months following a seasonally strong spring period: Housing Starts (Oct. +25.5% m/m to 1.323mln units, the strongest pace in nine years), Building Permits (Oct. +0.3% m/m to 1.229mln units), Existing Home Sales (Oct. +2.0% m/m to 5.6mln units), New Home Sales (Oct. -1.9% m/m to 0.563mln units), and Pending Home Sales (Oct. +0.1% m/m). The 3Q FHFA Seasonally-Adjusted House Price Index extended its gains advancing at a pace of 1.5% q/q (vs. 1.3% in Q1). Overall activity is supporting a high degree of confidence as evidenced by the National Association of Home Builders Confidence Index, which rose to 65 in September (although slipping back slightly from 63 in October and November) – levels indicating that builders view conditions as very favourable. More forward momentum is expected on pent-up demand and increasing new household formations.
- Consumer confidence indicators were strong in November buoyed by the promise of Trump's victory to accelerate economic growth. The University of Michigan Index of Consumer Sentiment preliminary November reading increased to 91.6 vs. 87.2 last month, while the Conference Board Consumer Confidence Index powered ahead to 107.1 from 100.8. We also note that the US Investor Business Daily and TechnoMetrica Market Intelligence indicator advanced strongly in December to 54.8 from 51.4 (a reading above 50 signals a positive outlook).
- The Second Estimate of 3Q GDP reading was revised up to +3.2% from 2.9% q/q, above the consensus estimate of +3.0%. This follows a slower 2Q GDP growth reading of +1.4% q/q. CIBC Economics (Royce Mendes): "The market finally got what it wanted with today's solid US GDP print. Over the first half of the year, headline GDP appeared to be restrained by some transitory factors, but Q3 broke that trend. The economy showed its true colours, with growth coming in ahead of already healthy expectations." **CIBC Economics is still calling for 1.5% growth for 2016 (vs. 2.6% in 2015), even after the better than expected 2.9% for Q3. Next year, they are forecasting growth of +2.1%. Now with the US elections over, they predict that a rate hike will occur as early as December as economic data unfolds favourably and the financial markets reacted positively to Trump's win.**
- US inflation readings for October were once again mixed, with headline showing up stronger, but core coming in soft. Headline CPI moved up a tick to +0.4% m/m on the back of healthy gains in gasoline prices (+7.0%). As a result, inflation moved up to +1.6% y/y, from +1.5% previously, the fastest reading since 2014. Core CPI (Ex Food and Energy) was flat at +0.1% and down a tick to +2.1% y/y. CIBC Economics (Royce Mendes): "For the second consecutive month, headline CPI showed more strength than core. That said, the annual rates of both inflation metrics continue to converge. Moreover, the slight miss on the stripped down measure of inflation won't do much to alter the Fed's path toward raising rates later this year." The Core PCE for Q3 (Second Estimate) was unchanged at +1.7%.
- September's reading of Real Average Weekly Earnings advanced a stronger +0.8% y/y following the previous month's pace of +0.4% y/y, suggesting some wage inflation building.
- US total auto sales remained strong in November although declined slightly. Total Vehicle Sales came in at 17.75mln units, down from 17.91mln units in October (Wards Total Vehicle Sales SAAR).
- Federal Reserve Beige Book (October 19): "Reports from the twelve Federal Reserve Districts suggest national economic activity continued to expand during the reporting period from late August to early October. Most Districts indicated a modest or moderate pace of expansion; however, the New York District reported no change in overall activity. Compared with the previous report, the pace of growth improved in the St. Louis, Kansas City, and Dallas Districts. Outlooks were mostly positive, with growth expected to continue at a slight-to-moderate pace in several Districts. Labour market conditions remained tight, with modest employment and wage growth noted over the reporting period. Most Districts characterized input costs and/or output prices as fairly flat, but prices increased slightly on net."

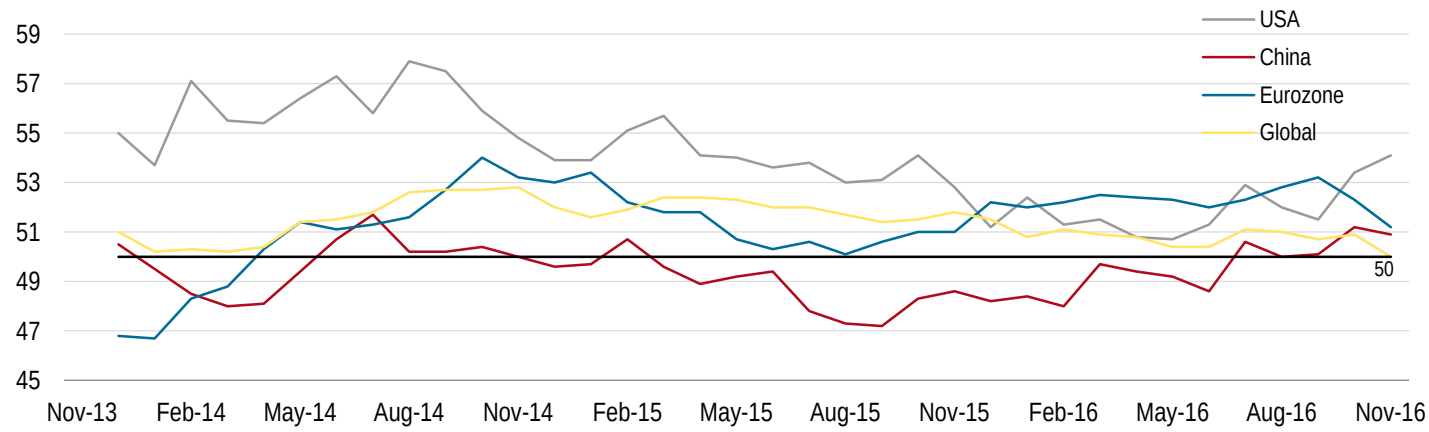
GLOBAL

Eurozone

- British Prime Minister Theresa May announced on October 2 that the UK would invoke Article 50 of the 2007 Lisbon Treaty by the end of March 2017. This will set in motion the procedures to leave the EU within a two-year timeframe. However, the Prime Minister faces a legal challenge in being able to invoke the article without a parliamentary vote. The challenge is currently being appealed at the Supreme Court. Initially, when Prime Minister May made her announcement, Sterling was sent tumbling and bond yields moved higher to compensate for higher inflation. The legal challenge, which could move things along a slower track, caused sterling to gain some modest ground. In the meantime, German Chancellor Angela Merkel has warned that the UK should not expect any favoured treatment once it leaves the European Union.

- At its December 8 meeting, the ECB left its main refinancing rate unchanged at 0%. It also kept the rates on its marginal lending facility and deposit facility unchanged at 0.25% and -0.40%, respectively. In doing so, however, it extended the QE program until the end of 2017, signalling the willingness to go beyond if necessary. It also announced the beginning of QE tapering early next year. Effective April 1, the ECB would reducing the pace of monthly bond purchases from €80bln to €60bln. The ECB's announcement sent stocks higher and bonds lower. **Macro Strategy's FX strategist Bipan Rai: "The ECB felt it was necessary to send a message of stability post the Italian referendum (re: banking sector concerns) and ahead of the upcoming elections in the Netherlands, France and Germany. By extending the purchase program to Dec. 2017, they have avoided market debate about tapering through the key election cycle. Given the political and banking risk ahead, that is the right message to convey (i.e. forget about tapering!). Still, it's hard to ignore the rise in producer, consumer prices along with inflation expectations. Additional momentum in crude prices will also add an another layer of uncertainty that implies that the tapering argument could be revisited late next year."**
- More on the ECB: Looking ahead, the ECB expects to keep the key ECB interest rates at present or lower for an extended period of time, and well past the horizon of its net asset purchases. It is still early to quantify the effectiveness of the ECB's measures to combat deflation, and the UK decision to exit the European Union injects an additional serious level of uncertainty. Governor Mario Draghi has been appealing to governments to play a bigger role in reinforcing regional growth, highlighting the limitations of monetary policy as the sole means to invigorate growth. **The ECB is projecting that its conventional and unconventional monetary policy measures will see euro-area growth continue at a steady pace. It projects growth of: 2016 1.7%, 2017 1.7 %, 2018 1.7%, with inflation similarly trending up from 0.2% to 1.3% and 1.5%, respectively.**
- Markit Eurozone PMI (November): Euro area business activity was relatively steady in November. The Markit Eurozone Manufacturing PMI was unchanged at 53.7. The Markit Eurozone Services PMI decreased slightly to 53.8 from 54.1. Both readings are showing improvement since the weak start to the year. Business confidence indicators also improved in the month, but consumer confidence remained weak.
- Other Data: October Unemployment Rate 9.8% (down from a revised 9.9% in Sept.), 3Q Preliminary GDP +1.6% y/y (+0.3% q/q), October CPI +0.5% y/y (Core +0.8% y/y), October Retail Sales rebounded to +1.1% m/m and +2.4% y/y (rebounded from -0.4% m/m, +1.0% y/y).

United Kingdom



- In a unanimous decision at the November 3 decision meeting, the BoE left its benchmark rate unchanged at a record-low 0.25% as well as its Asset Purchase Target unchanged at £435bln, but announced that it no longer expects to cut interest rates again this year, instead indicating that concern about accelerating inflation may warrant tightening at some point. The BoE now sees consumer-price inflation rising above its 2% target early next year and staying there throughout its forecast period, eventually hitting 2.5% in late 2019, overshooting its target. "There are limits to the extent to which above-target inflation could be tolerated", the Monetary Policy Committee said. **This is an abrupt change in stance.** At its previous meeting on August 4, it had cut the rate a quarter point to 0.25%, increased its Asset Purchase Target to £435bln from £375bln, and expanded eligible securities to include corporate bonds. The Bank also cut its growth outlook for 2017 to 0.8% from 2.3%, but kept 2016 at 2%. Inflation expectations (CPI) seen at 2.4% at the two-year horizon, looking through the currency-induced inflation spike. Just following the June 23 Brexit vote to leave the EU, the BoE assured financial markets that it is well prepared with extensive contingency plans to deal with the inevitable period of uncertainty and adjustment. The BoE stands ready to support the functioning of the market including the ability to provide more than £250bln of additional funds through its normal facilities.
- The BoE is building a team to co-ordinate its work to handle Britain's withdrawal from the European Union.
- BoE business conditions survey shows companies are scaling back investment and hiring plans, confirming the central bank's worry that the 'Yes' vote on Brexit (June 23) would undermine confidence. The weak Sterling, however, down about -14% since Brexit, is giving a lift to exports.
- UK 3Q Advanced Estimate +0.5% q/q (+2.3% y/y). Overall growth is tracking better than previously expected. This has led some economists to revise up their forecasts (2016 consensus growth +2.0%); but next year's performance will be more important as Brexit negotiations unfold (2017 consensus +1.0%).
- Other UK Data: Markit UK PMI Manufacturing (November) 53.4 vs. 54.2, Markit PMI Services (November) 55.2 vs. 54.5, Headline CPI (October) +0.1% m/m (+0.9% y/y), Core CPI +1.2% y/y, Retail Sales Ex-Auto +7.6% y/y.

Asia

- China's economy is showing signs of stabilization and very modest improvement as the November Manufacturing PMI advanced further to 51.7 from 51.2 in the previous month. It had been in contractionary territory six months ago. The Non-Manufacturing index was a solid 54.7, up from 54.0 in October. Many economists, analysts and state officials are calling for more bold measures by the People's Bank of China (PBOC) and the government to boost economic output and investor confidence, as data are still far below the peaks seen in 2009-10. However, officials are concerned about fuelling asset bubbles or spurring capital outflows as China's economic health remains under scrutiny following strong historical growth that was fuelled by a long period of rapid credit expansion and fixed asset investment. China is gradually transitioning to a consumer-based economy and is targeting growth of 6.5% in 2016.
- China's economy grew at +6.9% in 2015, and the consensus growth estimate is +6.7% in 2016, +6.4% in 2017, and +6.0% in 2018. These are far below the 10-15% levels seen prior to 2012. The latest 3Q y/y growth in China was +6.7%. Inflation is projected to remain relatively stable over the next few years at around +2%.
- The latest Chinese trade data for November show Exports up a modest +0.1% y/y (rebounding from -7.5% y/y in October) and Imports up +6.7% y/y (rebounding from -1.4% y/y in October). The latest trade data is increasing confidence that China's economy is recovering – giving support to commodity prices.
- China has initiated several cuts in interest rates and the Reserve Requirement Ratio (RRR) over the past few years, and its most recent cut of 0.5% on February 29, 2016 (most recent PBOC meeting), sent equity markets higher. However, with the RRR cut to 17% effective March 1, 2017, there is still more room to cut, and the markets are showing an eagerness for more cuts rather than fewer. Fiscal stimulative deficits are also part of the equation.
- At its October 31 meeting, the Bank of Japan kept its overnight policy rate unchanged at -0.10% and its 10-year JGB target at 0%. It also pushed back the timing for its 2% inflation target to around the fiscal year-ending March 2019, positioning for a longer-term effort to restore inflation – beyond Governor Kuroda's term through March 2018. It also said that it would maintain its annual pace of JGB accumulation more or less in line with the current pace of about 80tln yen as well as ETF purchases around 6tln yen. The BOJ lowered its inflation outlook for the current fiscal year to -0.1%.
- Japan's economy shrunk by -1.7% q/q in 4Q15 in real terms, but then rebounded to +2.1% in 1Q16 due to a pick-up in consumer spending and strong public consumption. Japan's growth has continued on a positive, but uneven trend. Growth in 2Q16 and 3Q16 came in at 0.7% and 2.2% q/q, respectively. Third quarter growth beat expectations on a strong pick-up in exports at +8.1%, with imports down -2.4%, but weak domestic activity (consumer spending +0.2%, private investment +0.1%), still raises doubt as to the sustainability of Japan's recovery.
- According to Macro Strategy's F/X strategist Bipan Rai, Japan's currency has been appreciating for much of the year, which is not constructive for exports or business investment. Additionally, the BoJ has adjusted their easing program to target the shape of the yield curve by anchoring the 10Y yield at zero. Such a program could lead to a situation whereby the BoJ wavers on its commitment to buy JPY80trln worth of assets a year into the medium-term. For now, the stability in the yield curve has brought some semblance of calm to JPY markets.

4 Market & Benchmark Analysis

Stocks head higher, while bonds move lower in November

Trump's victory propelled stocks higher in November and triggered a broad sell-off in bonds on expectations that US economic growth and inflation would accelerate under his economic policies. The S&P500 (SPX) returned +3.70% vs. -1.82% in the previous month. The S&P/TSX equity index extended its advance returning +2.19% vs. +0.62% in October. The Canadian FTSE TMX Canada Universe Bond Index returned -2.07% compared with -0.91% the previous month.

Equity Markets

The S&P/TSX extended its gains in November returning +2.19% (vs. +0.62% in October). The move higher was led by Industrials (+6.29%), Financials (+5.06%) and Energy (+4.63%). Financials got a boost from better-than-expected Q3 results from Manulife Financial (+21.35%) and some solid earnings results from early reporting banks. Financials also benefitted from expectations that higher US economic growth, lower corporate taxes and fewer regulations will accelerate bank earnings and dividend growth — particularly companies with significant US operations. Energy got a boost on optimism that the November 30th OPEC results would make additional progress in curbing oil supply. Consumer Discretionary (+2.02%) and Info Tech (+1.90%) saw more muted gains. Other sectors experienced losses, especially the interests-sensitive dividend yielding stock sectors such as Real Estate (-0.62%), Telecom (-4.24%) and Utilities (-4.73%). Materials (-4.74%) saw losses led by gold stocks reacting to Trump's win and being displaced by more confidence in the strengthening dollar. Investors also tucked-in their bullion gains after seeing bullion reach lofty levels in previous months. Health Care (-8.46%) – continued to be rattled by the legal problems at Valeant Pharmaceuticals.

The S&P500 (SPX) rebounded in November up +3.70% after falling -1.82% in October. This brought the year-to-date return to a lofty +9.76%. With the appreciation of the USD/CAD exchange rate, the return in Canadian dollars was slightly more positive +3.80% (YTD +6.53%). Leading the index higher was (Doctor) Copper (+37.30%) and Steel (+27.31%), as investors were encouraged by recent Chinese economic data. Diversified metals and natural resources company Freeport-McMoran was up +37.48%. Oil stocks were also up on higher oil prices with Marathon Oil (+37.48%) leading the way. The best performing stock, however, was US car audio and automobile accessory company Harman International (+37.77%) on the Samsung Electronics takeover news.

The S&P/TSX Preferred Share Index returned -0.65% following a return of +2.32% in October, as preferred share prices adjusted to the move higher in interest rates. The year-to-date return is +3.27%. The robust returns in the current year are a stark contrast to the dismal returns last year. In 2015, the index returned -14.95% as preferred shares suffered from the re-pricing of fixed/floating resets and floating rate issues at historically low rates. Towards the end of last year, tax-loss selling exacerbated losses.

Bond Markets

The FTSE TMX Canada Universe Bond Index extended its losses returning -2.07% in November, after returning -0.91% in October. The yield curve sold-off and bowed out. Yield changes by term were: 2Y +15bps to 0.70%; 5Y +35bps to 1.05%; 10Y +38bps to 1.68%; and 30Y +32bps to 2.22% (PC Bond Constant Maturity). By term, Long Canadas (-4.89%) underperformed Mid-Canadas (-2.45%) and Short-Canadas -0.54%). Credit spreads were better across all credit sectors moving into the December 1 FTSE TMX Canada Universe Bond index extension (coupon), helping to partially offset the rise in yields. Short Corporate (-0.32%) was the best performing sub-sector, outperforming on shorter relative duration as the curve sold-off and was relatively anchored on the short-end, and spreads tightened as well. **The overall benchmark yield increased +26bps to 2.05%.**

Looking at the **Long-Term Bond Sub-Index**, Long Canada's (Non-Agency) underperformed all credit sectors. Overall credit spread performance in secondary markets was primarily driven by increased economic confidence post the US Elections, higher oil prices as well as lack of supply during most of the month leading into the December 1 index extension/coupon.

In the long-end, the Long-Term Bond Sub-Index overall return was -4.16% with the sub-components performing as follows: Long Canada–Non Agency (-4.89%), Long Canada–Agency (-4.67%), Long Provincial (-4.35%), Long-Municipal (-4.11%), Long Corporate (-2.97%). In the **Long Provincial sector**, the 30Y Long Ontario spread tightened slightly by around -1.5 bps to the area of +96.5bps (spread to curve), grinding tighter throughout the month. The 30Y rolls to Ontario were also tighter across the board by about -1.5bps. In the **Long Corporate** sector, Financial (-1.09%) was the best-performing credit class on tightening credit spreads and somewhat shorter duration. Financials benefitted from the perception that Trump's economic policies (faster economic growth, corporate tax cuts, less regulation) would benefit them.

Corporate debt issuance in November was focused more towards the latter half of the month post the U.S. election, US Thanksgiving and corporate earnings releases (i.e. Corporate 3Q and Canadian Bank Y/E). There was $10.2bln in supply (from Oct. 31–Dec. 2), but the week ended December 2 was the heaviest with $6.1bln in supply from six transactions. Issuance was mostly focused on the Canadian Banks. Bank of Nova Scotia issued $3bln in deposit notes across two tenors and Royal Bank issued $1.25bln 7-year deposit notes. YTD supply (through to Dec. 2) is up 8% y/y to $104.3bln. We highlight that in the high-grade, short-dated financials' space, 5Y Senior Deposit notes grinded tighter again by about -4bps m/m to the area of +90bps. With strong demand, on the new issue front, high-grade, new-issue concessions – which have been grinding lower for the past couple of months due to strong demand – were flat to small positive.

Provincial supply in November was decent at $7bln, a pick-up from the $7.2bln in October. Over the past couple of months, supply has been more domestic-focussed, a shift from heavier international issuance in previous months.

The RRB Canada Index (ModDur 15.71) returned -2.11%, once again strongly outperforming Long Canadas (ModDur 15.20) which returned -4.89%. The generic 30Y break-even richened +19bps on the month to 1.81%. According to Macro Strategy Rates Analyst Luke Ostapiak, in the past month, RRB break-evens have increased steadily, in line with the reflation theme. The rally has extended across the curve, with 10Y break-evens now at 1.55%, up from around 1.15% at the lows in the summer. The US election has extended this theme after a brief pause and profit taking as OPEC deal headwinds weighed on the market, although turned out supportive as well with oil prices once again above $50. We continue to like holding inflation outright, or real-yields as opposed to nominals, as the reflation and steepening themes continue to play out. We have a stronger bias towards shorter-term linked notes, however, as the inflation curve remains very steep and implied 5Y5Y inflation expectations (i.e. what the 5Y BEI would need to be 5Y from now to make an investor indifferent between two 5Y inflation bets or a single 10y position) in Canada exceed 1.90%, higher than 30Y break-evens and mostly a product of the steepness of the 5Y/10Y BEI curve with 5y BEI still low around 1.20%.

The High Yield Bond Index (ModDur 4.26) advanced more slowly returning +0.73% in November after returning +1.20% in October, but handily outperformed both Short and Mid Corporates, which returned -0.32% and -1.56%, respectively. The year-to-date return is a strong +14.98%. By sub-industry, Energy (+1.21%) was up the most followed by Industrial (+0.72%). Energy was helped by higher oil prices. Communication (+0.28%) and Real Estate (-0.09%) lagged which tend to do so when interest rates rise. Overall risk sentiment in the high-yield space during the month was good and secondary flows were moderate. There was one primary deal marketed towards the end of the month: Source Energy Services priced a $130mln 5-year issue (Announcement Date December 1, 2016).

Prince Edward Island Reduces F2015-16 Deficit by $6.8mln

(CIBC Macro Strategy Research Note, December 7, 2016, Complete story click here)

The Province released its Public Accounts for Fiscal 2015-16 revealing a deficit of $13.1mln, a reduction of $6.8mln from the original budget. The Finance Minister, Allan Roach, says the improved results are due to "strong economic performance and sound financial management as we continue to work towards a balanced budget in the next fiscal year."

The Province incurred the same incremental increase for net debt as the previous fiscal year, increasing $35.8mln, with ending net debt now totalling $2,170mln. Net debt to GDP has been on a declining trend, going from 36.6% in 2013 to 35.8% in 2015, and forecast to be 35.1% in 2016.

Prince Edward Island's results prove that the Province is working towards a budget balance, further evident by its forecasts for F2016-17, F2017-18, and F2018-19 Budgets, which portray an improving fiscal position of $9.6mln deficit, $9.2mln surplus, and $24.5mln surplus, respectively.

Mexico Overtakes Canada as No. 2 U.S. Exporter Ahead of Trump

(Bloomberg, December 6, 2016) – Amounts USD

Mexico is overtaking Canada as the No. 2 exporter of goods to the U.S. this year, in a sign of how economic ties have deepened between the two countries even as the relationship is being questioned by President-elect Donald Trump.

Shipments from Mexico totaled $245bln in the first 10 months of the year, according to Commerce Department figures released, ahead of Canada's $230bln. If the trend continues, it would be the first time ever the U.S. bought more imports from its neighbor to the south. The two countries ended 2015 tied in exports to the U.S.

The trend of catching up to Canada puts China and Mexico as the top two exporters to the U.S. just as Trump prepares to take office in January, reflecting the strong pull of lower cost jurisdictions for the U.S. economy. Canada, which has one of the highest cost bases in

the Americas, has seen its share of U.S. imports fall to about 13% from around 20% two decades ago.

The growing links between Mexico and U.S. hinge on motor vehicles. Mexico has won new factories over the past six years from Toyota Motor Corp., Volkswagen AG's luxury Audi unit, Kia Motors Corp. and BMW AG – up to $25.9bln in new auto investments since 2010, according to the Center for Automotive Research in Ann Arbor, Michigan – fueling car shipments totaling $90bln in the first 10 months. That's versus $54bln from Canada.

City of Toronto's 2017 Preliminary Budget Unveiled

(CBC News, December 6, 2016, Complete story click here)

Budget Chief Gary Crawford said the $10.4bln preliminary budget unveiled Tuesday proves the city is getting leaner and more efficient, but critics say painful cuts are on the way for the city's most vulnerable.

City manager Peter Wallace said the proposed budget doesn't include major tax increases or serious service reductions, however city council still needs to find some $91mln in savings to balance the budget — something the city is required to do under the law. City staff have already made a number of cuts and deferrals in an effort to clear more money to put toward the $33bln worth of unfunded capital projects. Crawford said while there will be some jobs lost as a result of the tighter budget, most of the savings have been found from modernizing systems.

Toronto's red-hot housing market was among the biggest benefits for the budget, as the city raked in some $101mln from the land transfer tax — growth of 19%. Wallace did note that the government is "concerned about the froth of the Toronto housing market," but staff are anticipating another strong year of revenue.

Torontonians will be paying more for some things in 2017, including a 10% per TTC trip. Meanwhile, Mayor John Tory's plan for road tolls on the Gardiner Expressway and Don Valley Parkway has been approved by the executive committee.

Vancouver Housing Tax Pushes Chinese to $1mln Seattle Homes

(Bloomberg, December 4, 2016)

Just a few days after Vancouver announced a tax on foreign property investors, a Seattle real estate broker received a WeChat message from a wealthy Chinese businessman who wanted to sell a home in Canada and buy in the area. After a week of showings, he purchased a $1mln property in Bellevue, across Lake Washington from Seattle. He soon returned to buy two more, including a $2.2mln house in Clyde Hill paid for with a single cashier's check.

A broker says she has been inundated with similar requests from China and Hong Kong after Vancouver's provincial government enacted a 15% tax on foreign homebuyers in August to help cool soaring real estate values. With Chinese investors – the largest pool of foreign capital – looking for a place to put their cash, the unintended consequence of the fee has been to push demand to cities such as Seattle and Toronto.

Home-purchase inquiries from China have jumped in Seattle and Toronto since the Vancouver tax was announced, according to Juwai.com, the country's largest overseas property website.

Vancouver Home Sales Decline for 5th Straight Month in November

(Bloomberg, December 2, 2016)

Vancouver home sales plunged 37% in November from a year earlier, extending the slowdown in Canada's most expensive property market for the fifth straight month. Transactions in the Pacific coast city fell to 2,214 in the month, from 3,524 a year earlier, the Real Estate Board of Greater Vancouver said Friday. That was 7.6% below the 10-year average for November.

Sales have been falling year-on-year since July, with buyers sitting out as the price of a typical home skyrocketed to more than 12 times the median household income of residents in Vancouver. It topped a list of global cities identified by UBS Group AG as most at risk of a housing bubble.

Further policy measures aimed at cooling the market contributed to the slowdown, including a 15% tax on foreign buyers imposed by British Columbia's provincial government in August, tighter Federal mortgage insurance eligibility requirements in October, and plans by the city to start taxing vacant homes next year.

The effect on prices remains muted. The benchmark price for a single-family detached house in Vancouver rose 23% in November from the same month last year to $1,511,100. The benchmark price for all residential properties in metro Vancouver climbed to $908,300, a 21% increase from a year earlier and a 1.2% decline from the prior month.

No Sign of Toronto Housing Let-Up as Prices Jump 23% in November

(Bloomberg, December 2, 2016)

Sales in Canada's biggest city rose 17% to 8,547 transactions last month from a year earlier, while average prices jumped 23% to $776,684, the Toronto Real Estate Board said in a statement.

The figures suggest little effect so far from new government rules designed to bring stability to the market. Finance Minister Bill Morneau unveiled new Federal rules in October tightening mortgage qualification requirements, specifically to cool the Toronto market. Some analysts have argued the pace of gains won't slow by much without new supply hitting the market.

"Recent policy initiatives seeking to address strong home price growth have focused on demand," Jason Mercer, the board's director of market analysis, said in the statement. "Going forward, more emphasis needs to be placed on solutions to alleviate the lack of inventory for all home types, especially in the low-rise market segments."

The average price of a detached home was $1.06mln, up 28% on the year. New listings rose 10% to 10,518 homes.

Don't Blame Canada Price Surge on Foreigners, Housing Chief Says

(Bloomberg, November 30, 2016)

Foreign buyers aren't the main culprit behind skyrocketing home prices in Canada, said the head of the nation's housing agency. "Foreign investment is a thing, not the thing that's driving demand," Evan Siddall, president of Canada Mortgage and Housing Corp., said in an interview with Bloomberg.

Siddall's comments come amid a public outcry in Canada, where home prices are rising the fastest in the world after New Zealand when adjusted for inflation. In Vancouver, the nation's priciest market, the provincial government imposed a 15% tax on overseas buyers in August in an effort to curb gains. Foreign ownership in condominium apartments is declining in Vancouver and Toronto, and overseas landlords still only represent 2.2% and 2.3% of ownership respectively, according to a survey released by the Ottawa-based agency.

"Everything we see suggests that there is a whole lot more domestic investment activity in the real estate sector than foreign investment activity," Siddall said. "This buy-and-flip mentality that happens in higher priced markets like Vancouver and Toronto only makes the affordability problem worse."

The recent slowdown in the Vancouver market isn't the result of the tax on foreign investors, but more likely "the belief" among local buyers that the tax would take the froth out of the market, Siddall said. "One of the real challenges of housing is that people don't necessarily behave rationally," he said. "Making policy that affects behaviors is a tricky thing to do."

The bigger factor influencing short-term price gains in markets like Toronto and Vancouver is lagging supply response, he said.

"We're calling for more action on the supply side," he said. "In places like British Columbia and Ontario it's actually more important to have a more aggressive supply response."

Recent measures announced by the Federal government, including a proposal for banks to share the burden of mortgage defaults, were necessary, Siddall said. "We can't regulate markets completely," he said, but the steps at least ensure that the government doesn't "fan the fires."

The new Federal rules also imposed stricter eligibility requirements for those seeking mortgages. Some say the rules will hit first-time homebuyers inordinately hard, shutting them out of the market. Surging home prices are distorting the economy by diverting money into houses rather than more productive uses like businesses, Siddall said. "Doing things to make it not quite so easy to invest in homes is good for our economy."

British Columbia's Mid-Year Update Projects Increased Revenue and Reduced Debt

(CIBC Macro Strategy, November 29, 2016, Complete story click here)

The Province of British Columbia released its Mid-Year Fiscal and Economic update today, projecting a modestly higher surplus of $2.242bln, up $301mln from the Q1 update and $1.978bln higher than the F2016-17 Budget.

As a result of the improved operating surplus projections, provincial debt is projected to decrease by $762mln from Q1 and $1.934bln from the budget, now forecasted at $65.756bln. The updated gross borrowing requirement for 2016-17 is now $2.5bln, including a provision of $350mln for the forecast allowance. With this revision down from $3.2bln in Q1, the Province now has nothing remaining in its 2016-17 borrowing requirements.

British Columbia remains the best rated province in Canada. As its debt ratio improves, it moves closer towards achieving a AAA rating from DBRS, placing it in an unparalleled position as an unequivocal AAA-rated province.

Financial Accountability Office Warns of Continued Budget Deficits in Ontario

(The Canadian Press, November 28, 2016)

Ontario's government spending watchdog warns there is "significant risk" the Liberals will not eliminate a $4.3bln deficit next year, but Finance Minister Charles Sousa insists the books will be balanced as promised. In his fall economic statement November 14, Sousa announced he would dip into the reserve fund to ensure a balanced budget in F2017-18, in part because of an accounting change in the way pension liabilities are calculated.

The Financial Accountability Office (FAO) issued a report insisting the Liberals were relying on "optimistic assumptions for revenue growth and program spending restraint." The FAO said the government's revenue projection is $2.8bln higher than its estimate for F2016-17, and $5.2bln higher by F2018-19.

"The government has a variety of tools that it could use to temporarily improve the budget balance in F2017-18," concludes the FAO report. "Beyond F2017-18, maintaining a balanced budget will likely require additional measures to raise revenues or reduce expenses."

The FAO questioned how the government will pay for new promises it made in September's throne speech to discount the 8% provincial portion of the HST from hydro bills and to create 100,000 new child care spaces. FAO assumed program spending would increase $1.8bln annually to fund the hydro rebate and to create the child care spaces, but Sousa's fall economic statement reported program expenses only $400mln higher in F2018-19 compared to the 2016 Budget. "That suggests that these new initiatives may be partially funded though reallocations from existing programs or the contingency funds," concluded the FAO's report.

Alberta Mid-year Fiscal Update Shows Little Change

(CIBC Macro Strategy, November 28, 2016, Complete story click here)

Projected deficit for F2016-17 has fallen slightly to $10.811bln, down $78mln from the Q1 update. F2017-18 and F2018-19 projected deficits are $10.131bln and $8.351bln, respectively, unchanged from budget.

Borrowing requirements for the F2016-17 are now $14.845bln, up $697mln from budget due to higher borrowings for the fiscal plan partially offset by lower borrowings for capital purposes. However, the borrowings are down $967mln from the Q1 update reflecting a combination of cash changes, including higher cash energy royalties. As of today, the Province has borrowed $10.0bln, with $4.9bln remaining. The target borrowing requirement for F2017-18 is $19.8bln, with the Province aiming to borrow 60-70% domestically and 30-40% internationally.

The Province continues to cope with the collapse in global oil prices and the fiscal impact of the Wood Buffalo Wildfire, which is estimated at $520mln. As per the original budget, the fiscal adjustment is projected to increase in F2017-18 and F2018-19 to $1.5bln and $2bln, respectively, reflecting the uncertainties ahead, although the province has expressed optimism that Alberta's economy is showing signs of stabilization.

Alberta to Pay $1.36Bln to Coal Plants; Settlement for Closing Plants Early

(Financial Post, November 25, 2016, Complete story click here)

The Alberta government will pay three coal-fired electric generating companies $1.36bln for the province's decision to close their plants early, while also potentially avoiding a lawsuit with other power companies in the province.

The province's Energy Minister Marg McCuaig-Boyd announced Thursday the province will pay Capital Power Corp., TransAlta Corp. and ATCO Ltd. a total of $97mln per year, beginning next year and payable every year until 2030, to shut down six of their 18 power plants early.

The other 12 coal-fired electric generating stations in the province are all scheduled to close, or convert to natural gas, before 2030. Alberta's NDP government has mandated that all coal-fired power plants either cease operations or eliminate all their emissions by that date as part of sweeping climate change legislation announced last year.

The payments will be made out of revenues collected from the province's newly implemented price on carbon and were announced at the same time that the government announced it had settled lawsuits, initiated by the province, with other power companies .

Two Sets of Books at City Hall? Grading the Financial Reports of Canada's Cities

(C.D. Howe Institute, November 24, 2016, Complete story click here)

In nearly all Canada's larger cities, obscure financial reports – notably inconsistent presentations of key numbers in budgets and end-of-year financial reports – hamper legislators, ratepayers and voters seeking to hold their municipal governments to account.

By presenting net rather than gross figures in their budgets, most cities understate their revenue and spending and obscure key activities. The differences in accounting methods in most cities' budgets as compared to the presentations of their financial results are large, and have real-world consequences. By using cash rather than accrual accounting, cities exaggerate the costs of investments in infrastructure, hide the cost of pension obligations, and make it hard to match the costs and benefits of municipal activities to taxpayers and citizens. Moreover, many cities present their budgets late, after significant money has already been committed or spent, do not publish their financial results in a timely way, and bury key numbers deep in their reports.

Our key recommendations are that municipal governments should present their annual budgets on the same accounting basis as their financial statements, and that budgets should show gross, not net, revenue and spending figures. Budgets should use accrual accounting, recording revenues and expenses as the relevant activities occur over time. Provincial governments exercise decisive control over cities, so those that impede accrual-based budgets at the municipal level should stop doing so.

Falling Tax Revenue Nearly Doubles Saskatchewan's Forecasted Deficit

(CIBC Macro Strategy, November 22, 2016, Complete story click here)

Saskatchewan released its mid-year Fiscal 2016-17 update projecting a deficit of $805.6mln, up $371.4mln from the Budgeted forecast. The deficit is actually $1041.1mln on the balance sheet. However, there is an adjustment of $235.5mln for Net Worker's Compensation Board (WCB) Earnings Distribution.

The larger deficit will require $500mln in additional borrowing for government operations, bringing the total for the fiscal year to $2.5bln. This additional amount, combined with other forecasts changes, has public debt projected to be $15.2bln at fiscal year-end, up $447.7mln from the F2016-17 budget.

The Province is projecting a return to black in next fiscal year, having a surplus of $6mln, and then remaining positive through the following two years with surpluses of $55mln and $97mln, respectively.

Manitoba Government Focusing on Economy, Finances in Throne Speech

(The Canadian Press, November 21, 2016)

Manitoba's Progressive Conservative government will focus on the economy and provincial coffers in a throne speech that will outline the province's agenda for the coming year.

Premier Brian Pallister has said the throne speech will have three prongs: chipping away at the provincial deficit, boosting the economy and preserving front-line services. One of the first items to be on the agenda is a new balanced-budget law to replace one Pallister scrapped in the spring. The former law forced pay cuts on cabinet ministers whenever the government ran a deficit – something Palllister has said "may or may not be" part of the new law. The legislation also is expected to restore the right of citizens to vote on major tax increases. The former NDP government sidestepped that requirement when it raised the provincial sales tax in 2013 by changing the law. The Tories took the matter to court, but a judge sided with the New Democrats and said governments are free to change laws if there are no constitutional or charter violations.

Pallister has given himself eight years to wipe out the deficit, which stood at $846 million last year. He has also promised to cut the provincial sales tax to 7% from 8% before the end of his first mandate.

$1.2 Trillion 'Wolfcamp' Discovery Means Canada's Oilsands Should Fear Texas

(Huffington Post, November 18, 2016, Complete story click here)

The oilsands suddenly have a real reason to fear Texas. The United States Geological Survey (USGS) announced this week that a massive deposit of shale oil had been discovered in west Texas, the largest such field yet found in the U.S.

Known as the Wolfcamp formation, it contains an estimated 20bln barrels of oil and 16trn cubic feet of natural gas. At current prices, the oil alone is worth around $1.2tln (US$900bln). But it's unlikely all of that oil could be extracted. Wolfcamp is three times as large as the Bakken formation in North Dakota — a field so large it has been blamed for depressing Canadian oilsands prices.

Oilsands product sells at a "discount" compared to the benchmark North American price, in part due to difficulties transporting the oil to markets, and in part due to the explosion of oil production in the U.S., which briefly made the country the world's largest producer of oil. (It fell behind Russia and Saudi Arabia after oil prices crashed.)

The possibility that an oil field three times as large as North Dakota's Bakken could one day be fully exploited presents a threat to the future of Alberta's oilsands, already struggling with low oil prices that have halted investment in new projects.

Canada's Diversified Economy and Strong Institutions Support Economic Resiliency

(Moody's Investors Service, November 18, 2016)

Canada's Aaa rating with a stable outlook reflects the country's large and diversified economy, as well as its high wealth levels and benign trends in Federal government finance. The country's economy is also supported by a number of other factors such as a transparent monetary policy and well-developed and well-regulated financial markets.

With a nominal GDP of US$1.6tln in 2015, Canada's economy is the third largest in Moody's Aaa-rated category, after the US and Germany. "In line with other large, high-income economies, Canada's economy is well diversified," said William Foster, a Vice President and Senior Credit Officer at Moody's. "This enables it to absorb shocks, for example following the financial crisis and, more recently, the downturn in oil prices."

However, an increase in household debt that is being driven by rising house prices could pose a threat to growth. In Moody's view there is a low probability of a housing market collapse similar to the one experienced in the US during the crisis, but a major downturn in the housing market could affect the government's balance sheet.

While Canada's general government debt burden is somewhat higher than that of its Aaa-rated peers, Federal government debt levels are moderate. The ratio of general government debt to GDP, was at 78.3% for year-end 2015, more than twice the 38.1% median level for Aaa-rated sovereigns. However, excluding sub-sovereign debt, the federal government's own ratio was a more moderate 34.5%.

The stable outlook on the rating indicates Moody's view that Canada's rating is unlikely to move down in the near future. Over the long term, should the political consensus on maintaining sound public finances erode and government debt ratios rise further, the government's rating could come under pressure. Material deterioration in Canada's economic potential and resilience to shocks that impair affordable financing from international investors and the health of the financial system would be credit negative.

CMHC Stress Testing Confirms Ability to Withstand Extreme Scenarios

(CMHC, November 17, 2016, Complete story click here)

In 2016, CMHC tested its mortgage loan insurance and securitization businesses against several extreme scenarios including:

- Global economic deflation
- Sustained low oil price shock
- High-magnitude earthquake
- Reverse stress test
- U.S. style housing correction

This year's tests confirm that CMHC's capital holdings are sufficient for even the most extreme scenarios.

"Stress testing involves searching out extreme scenarios that have a very remote chance of happening and planning for them," said Romy Bowers, CMHC's Chief Risk Officer. "Rigorous stress testing is an essential part of our risk management program and allows CMHC to evaluate its capital levels against these scenarios."

New Brunswick Reports Improved Budget Forecast for 2016-17

(CIBC Macro Strategy, November 15, 2016, Complete story click here)

The Province released its economic and fiscal update for the second quarter, improving the forecasted deficit from the 2016 Budget by $15.5mln to $331.6mln. This was also an improvement from the first quarter update by $10.8mln, when the Province forecasted a deficit of $342.4mln.

Net debt is projected to increase by $445.8mln for the fiscal year, a decrease of $22.7mln from budget. If the Contingency reserve is not required, net debt will be $14.0bln by March 31, 2017, $14.1bln if required.

As a result of the improved revenue outlook, the contingency reserve has been restored to its budgeted level of $100mln. This reserve was reduced last quarter to $80mln, to account for weakened revenue, which has now rebounded.

Fiscal Developments Tracker

- Fiscal Updates: Canada, BC, Alta., Man., Ont., NB, NS, N&L.
- F2015-16 Public Accounts: Canada, BC, Alta., Sask., Man., Ont., Québec, NB, NS, and N&L.

The surprise Trump win in the US election that clinched Republican control in both chambers of Congress had little impact on the day for provincial spreads. Flows were moderate on the back of a big back-up in yields (CAN 30Y +10bps, US 30Y +23bps), and there was a sharp rebound in a volatile session for equities. After starting the day modestly wider, the benchmark ONT 30Y finished the day 1-2bps tighter to the area of +95bps (currently +97.5). Markets clearly shrugged off any concerns or previously held biases over the election outcome. Have markets become accustomed to these types of surprises only to shrug them off? With campaign pledges to overhaul trade agreements in a more protectionist way, a Trump government could have negative consequences for Canada's economy. With 77% of Canadian exports going to the US, it's no wonder that Justin Trudeau is championing inclusive globalization and negotiated hard for CETA. Fresh in the minds of Canadians are the rows over Keystone XL, softwood lumber, and country-of-origin labelling for food products. However, an advanced democracy is built on the foundation of strong institutions and engaged citizens over many generations – not just one person. Although Donald Trump will have strong flexibility given the Republican grip on Congress, we know too well that policy implementation will be a gradual process, and it would be irresponsible to rush to the conclusion that the impact on Canada would be deeply negative. On the plus side, Trump's policies may spur stronger US economic growth (which would benefit Canada), Keystone XL may finally get the Presidential Permit, and trade agreements may be improved for the benefit of all parties.

Federal Fall Fiscal Update Downgrades Growth Outlook

We don't see any risk to Canada's AAA-rating given its very low debt ratio, but we note that the Federal fall fiscal and economic update that was tabled on November 1 projects a modestly weaker economic outlook. This revised trajectory will erode the cushion built into the original Budget 2016 plan that was tabled in March, leaving less flexibility for negative surprises and/or increasing spending programs without running higher deficits. 1 Market Outlook

Still Cautiously Defensive on Base Case for Higher Rates

Our portfolio strategy is grounded on our base case for a gradual move higher in rates, and a firmer global economy heading into 2017. However, we are still 'cautious and measured' on duration risk given uncertainties in this outlook, including the opaque outlook for oil prices, Brexit negotiations, the adjustment unfolding in Canada's housing market as a result of tighter regulation, and the potential negative implications of the US election on Canadian trade. We also point out that our Institutional Equity Strategist believes that equity markets are overvalued based on year-end targets and, therefore, at risk to any earnings misses in the current low-growth environment.

Following the US election, on policy rates, CIBC Economics is still expecting a gradual tightening move by the Fed, with one hike in December and then two in 2017. This view is held given that financial markets have responded favourably to the election outcome and the US economic recovery is expected to unfold in a constructive manner. Trump's policies may drive up growth, but the details and pace of implementation are still unknown. In Canada, CIBC Economics is forecasting that the Bank of Canada will be on hold longer, at least until mid-2018, as Canada's central bank postures between desires for a weak Canadian currency to support export growth and containing elevated housing market risk. The BoC is also leaning on fiscal stimulus. However, the risks are somewhat tilted to the downside if growth is weaker than expected, and more support is needed beyond fiscal stimulus. Circumstances that could lead to weaker growth are a sharp correction in the housing market, and/or a slower recovery in oil prices.

An important variable for the Canadian economy is oil prices. Our Macro Strategy Oil Analyst states**:** "November 30 continues to be poised as decision day for oil markets as the energy complex rebounds from the weight of bearish monthly agency forecasts, record OPEC and Russian October output, and USD pressure since Trump's election victory. Based on OPEC October crude supply of 34.155mb/d, a production cut to the mid-range of the proposed 32.5–33.0mb/d level amounts to 1.4mb/d – almost double the initial Algiers estimate. Market skepticism towards a successful agreement out of Vienna has increased on the long road from Algiers, with WTI Managed Money futures and options long interest dropping below pre-Algiers levels, and short interest climbing sharply. With crude benchmarks trading around pre-Algiers levels, it is in the cartel's best interests to effect an agreement on November 30. Markets will likely be unforgiving of anything short of a substantial supply cut, be it at the higher end of the range (33mb/d) as discussed at Algiers. We maintain our price forecasts for 2016 and will review 2017 estimates post the November 30 outcome." Forecasts: WTI: $43.50/bbl (2016E avg.), WTI: $51.25/bbl (2017E avg.), Brent: $46.50/bbl (2016E avg.), Brent: $52.50/bbl (2017E avg.), WCS: $30.50/bbl (2016E avg.), WCS: $38.00/bbl (2017E avg.), NYMEX: $2.45/mmbtu (2016E avg.), NYMEX: $3.65/mmbtu (2017E avg.).

We also present CIBC Institutional Equity Research Oil Analysts' (Arthur Grayfer and Jon Morrison) oil price forecasts (avg.) as follows: WTI 16F US$45 (increased by ~6% on stronger-than-expected Q2, with their quarterly progression as follows: US$33.41/Bbl for Q1/16, US$45.60/Bbl for Q2/16, US$47.50/Bbl for Q3/16E, and US$53.40/Bbl for Q4/16E. They are also projecting WTI F17 US$60, WTI F18 US$70/bbl. Their base case for 2017 is for the crude market to tighten due to falling supply and demand growth, driven by both the United States and Asia.

A gradually improving oil price should be supportive for the Canadian loonie, which is already off the lows on firmer oil prices. However, our Macro Strategy FX Strategist Bipan Rai believes that, "While oil prices should see an updrift next year, correlations with the CAD will deteriorate as monetary policy divergence and foreign investment flows will continue to be the determining factors for the loonie. We expect USD/CAD to trade with a USD bid bias on average for much of next year. Our expectation is that the USD/CAD will be in a range of 1.25-1.40." **Both our FX Strategist and our CIBC Economics team believe that the USD/CAD will strengthen modestly from here, reaching about 1.39 by Q1 2017.**

On sector allocation, we remain in favour of a corporate overweight vs. provincials underweight for better yield. We've shifted to maximum corporate sector overweight, but security selection will be key in navigating through what we expect will be choppy spreads in both sectors. We see higher risk in the energy sector, if the oil price recovery takes longer than expected. We also see higher risk in the financial sector with the housing market adjustment, but this view applies mainly to the less diversified, monoline players who have concentrated exposures to the slowing housing market.

*Federal sub-group includes supra-national which is not displayed.
**Not adjusted for cash holdings to be 'Modest and Measured' short
Note: Table may not add due to rounding

Top-Down Strategy

- Duration: 'Modest and Measured' short

We still believe a cautious duration stance is warranted at this time. We are proposing only a 'modest and measured' short over the next 3-6 months until we have more clarity on the global economy, oil prices, and the impact on Canada's housing markets as a result of tighter mortgage regulation. As we've seen since the start of the year, being nimble on tactical shifts (i.e. being able to cover shorts, and capitalizing on rallies) will be the key to avoiding value destruction in a market that is volatile and prone to react to global events (i.e. Brexit, Turkey attempted coup, US elections, etc.) and other market developments. We do see risks tilted to the downside arising from the housing market correction, as well as the potential for tighter trade conditions with the US following the win by Republican Party Leader Donald Trump.

- Curve: Bullet (emphasis on yield maximization; note that 10-30s yield curve at ~68bps not compellingly steep – calling for bear steepening)
- Sector Allocation: Overweight corporates (near max. constraint or target)
- Under-market weight Canadas
- Underweight provincials
- Small position in the less liquid municipal sector

Premise

- 'Modest and measured' defensive position in the context of historically low yields and expectations for an improving global economy, but vulnerable to shocks and geopolitical risk
- Gradual normalization of policy rates with the Fed Reserve moving way ahead of the Bank of Canada
- With the strong correlation between the US and CAD yield curves, the CAN10Y and US10Y are expected to move higher together
- Our Equity Strategist, Ian de Verteuil, expects equity markets to continue to be choppy over the remainder of the year, with negative rates, deflation concerns, slow growth and disappointing earnings periodically weighing on equity prices. Stocks have been moving higher on valuations without earnings growth seen moving a lot higher. Funds flow has been distorting valuations, moving things around in such a way that's driven by central bank activity supporting low or negative bond market yields. Markets are vulnerable to central bank support. Earnings and valuations have not been seen as going much higher. Based on fair value fundamentals that underpin our Strategist's targets, equity markets have moved ahead of year-end targets: SPTSX target 14,000; SPX target 2,100. **We note that the SPTSX ex-Energy forward multiple is ~14.5x, above its five-year average of 13.4x.**

- We favour the risk/reward trade-off in corporate vs. government bonds at these wider spreads (especially given the narrower spread tolerance in government bonds). **We've changed our corporate weight to max. on the belief that credit spreads will remain well bid, and benefit next year from a more stable-to-improving global economy.**

3 Market Recap

Market Highlights*

Since our last issue of Canadian Government Central (published October 21), the slow global outlook is relatively unchanged, while North American economic data was, on balance, not that bad. More significant, however, were the historic US elections that saw the surprise win of Republican leader Donald Trump. In what was a volatile session, stocks moved sharply higher and bond prices collapsed. The Canada 30Y was up +10bps to 2.01%, the highest level in five months; while the US 30Y increased a more sharply +23bps to 2.84%, the highest level in eight months. The 10-30s curves in both markets steepened modestly.

On October 2, British Prime Minister Theresa May announced that the UK will invoke Article 50 of the 2007 Lisbon Treaty by the end of March 2017, which would set in motion the procedures to leave the EU within two years. This caused the British Sterling to drop and bond yields to move higher, to compensate investors for increased inflation and other risks. The Sterling has since rebounded slightly as the new Prime Minister now faces a legal challenge to her plans to commence proceedings by invoking 'royal prerogative'. The High Court ruled that such action would require a parliamentary vote. The initial High Court ruling will be challenged in the Supreme Court on December 5.

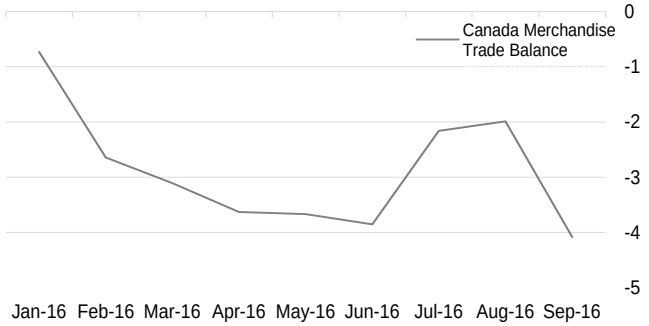
The SPX and S&P/TSX are currently at 2,163 and 14,759, still above our Portfolio Equity Strategist's year-end targets of 2,100 and 14,000. On this historic day after the election vote, they were up +23.70 and +103.07 points. The USD/CAD was unchanged at 1.34.

**NB: Levels discussed are at time of writing on November 9.*

CANADA *(figures in CAD)*

October Employment Report – Not Bad All Things Considered

- Canada gained a surprisingly strong +43.9k jobs in October. The breakdown showed -23.1k full-time jobs and +67.1k part-time jobs. The participation rate moved up one tick to 65.8%; but with the strong employment gains, the unemployment rate held steady at 7%. Much of the jobs gain was in Paid +43.8k, with Self-Employed positions up only +0.2k.
- CIBC Economics (Andrew Grantham): "After a surge in jobs during the previous month, consensus expectations had pencilled in a partial give-back in October. Instead we got another healthy increase of 44k. However, the leaning of jobs towards part-time rather than full-time meant that the details of the report weren't as impressive as the headline gain, and meant that total hours worked were actually down 0.2% on the month. So while the report isn't bad all thing considered, it likely won't stop the BoC from still leaning toward the dovish side in upcoming communications."



2016	Oct.	Sept.	Aug.	July	June	May	April
	----------Change in Employment----------

Bank of Canada Rate Decision October 19 – No Rate Change, but More Dovish Stance

- The BoC kept its overnight rate at last month's meeting. CIBC Economics (Nick Exarhos): "The cuts today from the BoC weren't to rates, but instead to its economic outlook. In a move that was telegraphed in the last rate announcement, its forecast for 2017 and 2018 have been brought down to 2%, a few ticks lower than they had previously anticipated. Although those forecasts are still a touch stronger than we are expecting, the Bank cites that the output gap is now only expected to close by mid-2018, categorized as 'materially' later than previously anticipated, a warning to markets that the BoC is operating with a thin margin of error when it comes to what might prompt another rate cut. The reasons for the growth downgrade are a lower trajectory for exports and more restrained residential investment in the wake of recent regulatory changes in the housing market."

- Merchandise Trade Deficit Widens, Export Volumes Down

. Source: Statistics Canada, Bloomberg.

CIBC Economics: BoC on hold until mid-2018

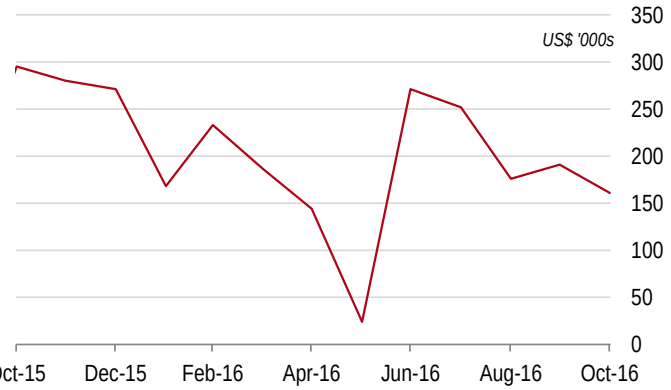
Other Key Canadian Data

- Canadian retail spending took a step back for a fourth month in a row in August, falling -0.1% m/m. Sales have not shown any meaningful gains since May, when they were up 0.8%. Retail Sales ex-Auto were flat. Canadian retail spending has been on a slowing trend since starting off strong at the beginning of the year. CIBC Economics expects that the second half of the year may get a boost from federal Child Care Benefit cheques.
- August GDP was up +0.2%, a bit slower than the gains seen in July and August of +0.5% and +0.6%, respectively. This follows the huge contraction of -0.6% in May when the economy was effected disruptions in the oil and gas sector from the Alberta wildfires. CIBC Economics (Avery Shenfeld): "We're still tracking close enough to our projections to hold on to our 3.5% forecast for Q3 real GDP growth. With that quarter helped by the low base of comparison in Q2 (in which GDP declined due to disruptions in energy), we're likely to see a return to less-than-2% growth by Q4."
- Headline CPI picked-up slightly in September, up +0.1% m/m (not seasonally adjusted) after previously been down -0.2%. On a y/y basis, the CPI rate moved up two ticks to 1.3%. Core CPI was up 0.2% m/m (vs. 0.0% in August, but unchanged at 1.8% y/y). The core inflation rate was previously running above 2%, a sign that inflation continues to be well anchored and that business conditions remain soft.
- Canadian housing starts decelerated in October at a pace of +192.9k. This follows a stronger pace of +219.4k in September. The pace continues to be above the projected rate of annual household formations of +175-180k. September's building permits were down -7% m/m after a strong +11% m/m in August. Meanwhile, October's existing home sales climbed 2.4% m/m, a continuance from September's positive 0.8% m/m. Canada's housing market has been defying expected moderations in activity, but is forecasted to see some slowing with tighter mortgage regulations. However, average home prices in Greater Vancouver and Toronto continue to accelerate, up 3.1% and 0.6% respectively, from September's values.
- The Teranet/National Bank HPI showed that the average price of homes accelerated again by 11.8% y/y in October subsequent to a gain of 11.7% y/y in September. The price acceleration remained concentrated in the Vancouver (+22.5% y/y) and Toronto (+17.4% y/y) areas.
- Canada's September survey of Manufacturing Sales (value of shipments) built on an August gain (+0.9%), advancing 0.3% m/m. However, in real terms, the news was not as promising as volumes fell 0.2% m/m and have essentially been moving sideways since mid–2014. The biggest gainers for the month in nominal terms were transportation equipment and metal products.

UNITED STATES *(figures in USD)*

FOMC November 2 Decision – No Change As Expected Before US Elections, But Hawkish Tilt

As expected, the FOMC kept its overnight benchmark rate range unchanged at 0.25-50% (at the November 2 decision meeting), but there was a hawkish tilt to the announcement.



CIBC Economics (Royce Mendes): "No action was expected, and none was taken. In line with the broad consensus of private sector forecasters, the Federal Reserve decided to keep interest rates unchanged today. That said, there was a slightly hawkish tilt to the announcement. Two members of the rate setting committee continued to dissent in favour of an immediate hike. While that's down from the three that were in favour of tightening policy at the last meeting, it's likely that Boston Fed President Rosengren simply felt that, prior to the election and without a press conference, it was best to take a pass in favour of December. Moreover, in a minor but perhaps indicative shift, the statement suggested that the Fed is now only waiting for 'some' further evidence of progress. Overall, barring a material weakening of the economic outlook or significant volatility in financial markets, we continue to see the FOMC raising interest rates at its December meeting. Market reaction will likely be limited, because the number of dissenters decreased, and the more hawkish language was largely expected."

Following the US election, on policy rates CIBC Economics is still expecting a gradual tightening move by the Fed with one hike in December and then two in 2017. This view is held given that financial markets have responded favourably to the election outcome and the US economic recovery is expected to unfold in a constructive manner. Trump's policies may drive up growth, but the details and pace of implementation are still unknown.

October Payroll Report – A Good Month Overall

- October US Non-Farm Payroll was a bit softer than expected with a gain of only +161k jobs vs. the consensus estimate of +173k, but the previous month was revised up +35k to 191k. The two-month payroll net revision was +44k. This lifted the six-month moving average slipped back to +179k from +176k.
- Average hourly earnings moved up a tick to 0.4% m/m (+2.8% y/y), the fastest pace in nine months. Average weekly hours was unchanged at 34.4.
- The unemployment rate dropped a tick to 4.9% from 5.0%, but this reflected a similar drop in the participation rate to 62.8% from 62.9% on the back of a weak Household Survey which showed a drop of -43k jobs. The underemployment rate improved two ticks to 9.5%.
- The Federal Reserve's Labour Market Conditions Index rebounded to 0.7 from -0.1. The index had been below zero for most of 2016.

US Non-Farm Payrolls Report

Source: US Bureau of Labour Statistics

Other Key US Data

- US retail sales in October (Advance Estimate) accelerated to 0.8% m/m after an upward revised 1.0% m/m previously. Ex-Autos, the number also showed improvement, up +0.6% m/m from +0.5%m/m previously. CIBC Economics (Royce Mendes): "Uninspiring Despite Strong Headline: Robust headline retail sales didn't do much to inspire confidence in the US economy today. While sales showed a nice rebound in September, following a soft couple of months for the series, that gain only masked ongoing weakness in core sales, which is a more reliable gauge for momentum in goods purchases."
- ISM Manufacturing picked up again in October climbing to 51.9 from 51.5, after briefly dropping below 50 in August, which had been a big negative surprise. The ISM New Orders reading slipped back to 52.1 from 55.1. A negative surprise in the month was a big pull-back in the ISM Non-Manufacturing Composite to 54.8 from 57.1.
- The US trade deficit narrowed 9.9% in September to -$36.4bln from -$40.5bln the prior month. The result reflected a drop in imports (-1.3%) vs. exports (+0.6%). The trend bodes well for a positive contribution to third quarter GDP, but port traffic may have been distorted by the Hanjin Shipping bankruptcy. Since 2014, trade deficit has been volatile and generally under pressure from the strong dollar amidst weak global growth.
- Housing activity has picked up again after a pull-back that ensued over the past three months following a seasonally strong spring period: Housing Starts (Sept. -9.0% m/m to 1,047 thousand units), Building Permits (Sept. +6.3% m/m), Existing Home Sales (Sep. +3.2% m/m), New Home Sales (Sep. +3.1% m/m), and Pending Home Sales (Sep.. +1.5% m/m). The 2Q FHFA Seasonally-Adjusted House Price Index extended its gains, although advancing at a slower pace of 1.2% q/q (vs. 1.5% in Q1). However, overall activity is supporting a high degree of confidence as evidenced by the National Association of Home Builders Confidence Index, which rose to 65 in September (although slipping back slightly from 63 in October) – levels indicating that builders view conditions as very favourable. More forward momentum is expected on pent-up demand and increasing new household formations.
- Consumer confidence indicators were mixed in October, but still remaining at elevated levels. The University of Michigan Index of Consumer Sentiment increased to 91.6 (preliminary) vs. 87.2 last month, while the Conference Board Consumer Confidence Index slipped back to 98.6 from 103.5. We also note that the October National Federation of Independent Business Optimism index advanced to 94.9 from 94.1, but is still materially below the 2014 peak.
- The Advanced 3Q GDP reading picked-up pace to +2.9% q/q, above the concensus estimate of +2.6%. This follows a slower 2Q GDP growth reading of +1.4% q/q. CIBC Economics (Royce Mendes): "The market finally got what it wanted with today's solid US GDP print. Over the first half of the year, headline GDP appeared to be restrained by some transitory factors, but Q3 broke that trend. The economy showed it's true colours, with growth coming in ahead of already healthy expectations." **CIBC Economics is still calling for 1.5% growth for 2016 (vs. 2.6% in 2015), even after the better than expected 2.9% for Q3. Next year, they are forecasting growth of +2.1%. Now with the US elections over, they predict that a rate hike could occur as early as December if economic data unfold favourably.**
- US inflation readings for September were mixed, with headline showing up stronger but core coming in soft. Headline CPI moved up a tick to 0.3% m/m. As a result, inflation moved up to 1.5% y/y, from 1.1% previously, the fastest reading since October 2014.

Cost of living items, mainly shelter and energy, drove the reading higher. At the same time, CPI ex Food and Energy, pulled back to 0.1% m/m from 0.3% (2.2% y/y, down a tick). CIBC Economics (Royce Mendes): "The slightly softer trend in core CPI over the past few months isn't doing Fed hawks any favours. However, even if the Fed's preferred measure of inflation, core PCE, comes in at a similarly soft 0.1% for September, the annual rate will remain at 1.7%, within shouting distance of the Fed's 2% target. As a result, while soft prices in September will give doves a reason to pass on November, it won't derail momentum toward a Fed rate hike in December." The Core PCE for Q3 (Advanced Estimate) came in a tick softer at 1.7%. The September reading was also 1.7% y/y.

- September's reading of Real Average Weekly Earnings advanced a stronger 0.8% y/y following the previous month's pace of 0.4% y/y, suggesting some wage inflation building.
- US total auto sales remained strong in October coming in at 17.90mln units, up from 17.65mln units in September (Wards Total Vehicle Sales SAAR).
- Federal Reserve Beige Book (October 19): "Reports from the twelve Federal Reserve Districts suggest national economic activity continued to expand during the reporting period from late August to early October. Most Districts indicated a modest or moderate pace of expansion; however, the New York District reported no change in overall activity. Compared with the previous report, the pace of growth improved in the St. Louis, Kansas City, and Dallas Districts. Outlooks were mostly positive, with growth expected to continue at a slight to moderate pace in several Districts. Labour market conditions remained tight, with modest employment and wage growth noted over the reporting period. Most Districts characterized input costs and/or output prices as fairly flat, but prices increased slightly on net."

GLOBAL

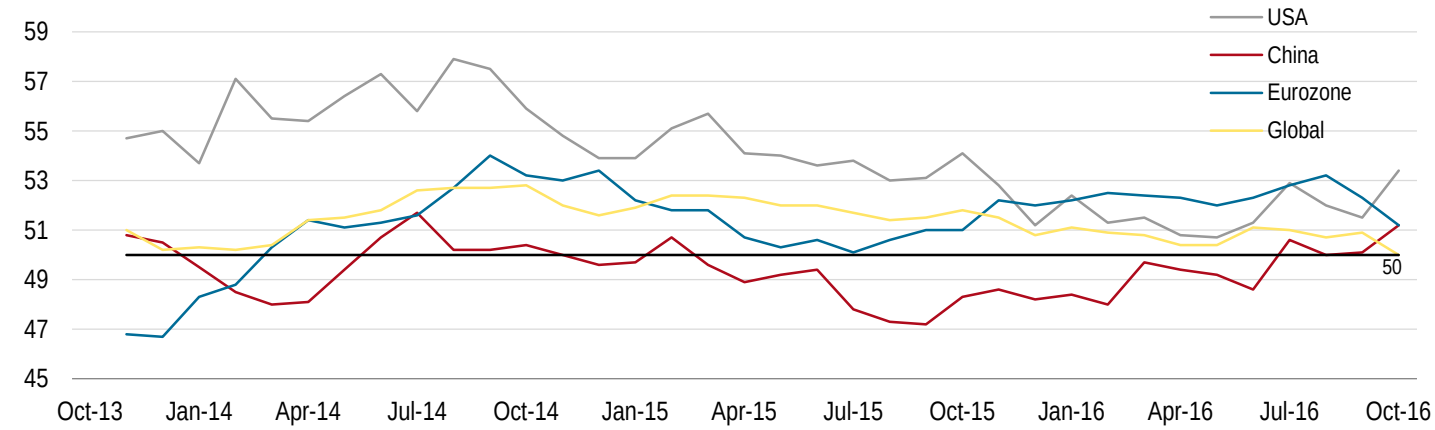
Eurozone

- British Prime Minister Theresa May announced on October 2 that the UK would invoke Article 50 of the 2007 Lisbon Treaty by the end of March 2017. This will set in motion the procedures to leave the EU within a two-year timeframe. However, the Prime Minister faces a legal challenge in being able to invoke the article without a parliamentary vote. The challenge will be appealed at the Supreme Court on December 5. Initially, when Prime Minister May made her announcement, the Sterling was sent tumbling and bond yields moved higher to compensate for higher inflation. The legal challenge, which could move things along a slower track, caused the Sterling to gain some modest ground. In the meantime, German Chancellor Angela Merkel has warned that the UK should not expect any favoured treatment once it leaves the European Union. The Brexit uncertainty is expected to impact business confidence negatively in Europe and the UK, and this is already unfolding in various confidence readings.
- The ECB is projecting that its conventional and unconventional monetary policy measures will see euro-area growth continue at a steady pace. It projects growth of: 2016 1.7%, 2017 1.6%, 2018 1.6%, with inflation similarly trending up from 0.2% to 1.2% and 1.6%, respectively. The ECB left its main refinancing rate unchanged at 0% at its October 20 meeting. President Mario Draghi mentioned in his press conference that there were no discussions regarding tapering at the meeting. Draghi also mentioned that a sudden QE stop is not in anybody's mind right now, and that low rates have worked thus far. No additional measures were announced since the major measures in March. The ECB stated that it expects to keep the key ECB interest rates at present or lower for an extended period of time, and well past the horizon of its net asset purchases. It is still early to quantify the effectiveness of the ECB's measures to combat deflation, and the UK decision to exit the European Union injects an additional serious level of uncertainty. Governor Draghi is appealing to governments to play a bigger role in reinforcing regional growth, highlighting the limitations of monetary policy as the sole means to invigorate growth.
- Market Eurozone PMI (October): Euro area business activity picked up in October. The Markit Eurozone Manufacturing PMI increased to 53.5 from 52.6. The Markit Eurozone Services PMI increased to 52.8 from 52.2. Both readings have been relatively weaker this year than in 2015. Business confidence indicators also improved in the month.
- Other Data: Sept. Unemployment Rate 10.0% unchanged, 3Q Advanced GDP +1.6% y/y (0.3% q/q), October CPI 0.5% y/y (Core 0.8% y/y), September Retail Sales -0.2% m/m (1.1% y/y).

United Kingdom

- In a unanimous decision at the November 3 decision meeting, the BoE left its benchmark rate unchanged at a record-low 0.25% as well as its Asset Purchase Target unchanged at £436bln, but announced that it no longer expects to cut interest rates again this year, instead indicating that concern about accelerating inflation may warrant tightening at some point. The BoE now sees consumer-price growth rising above its 2% target early next year and staying there throughout its forecast period, eventually hitting 2.5% in late 2019, overshooting its target. "There are limits to the extent to which above-target inflation could be tolerated", the Monetary Policy Committee said. ***This is an abrupt change in stance.*** At its previous meeting on August 4, it had cut the rate a

quarter point to 0.25%, increased its Asset Purchase Target to £435bln from £375bln, and expanded eligible securities to include corporate bonds. The Bank also cut its growth outlook for 2017 to 0.8% from 2.3%, but kept 2016 at 2%. Inflation expectations (CPI) seen at 2.4% at the two-year horizon, looking through the currency-induced inflation spike. Just following the June 23 Brexit vote to leave the EU, the BoE assured financial markets that it is well prepared with extensive contingency plans to deal with the inevitable period of uncertainty and adjustment. The BoE stands ready to support the functioning of the market including the ability to provide more than £250bln of additional funds through its normal facilities.



- The BoE is building a team to co-ordinate its work to handle Britain's withdrawal from the European Union.
- BoE business conditions survey shows companies are scaling back investment and hiring plans, confirming the central bank's worry that the 'Yes' vote on Brexit (June 23) would undermine confidence. The weak pound, however, down about 16% since Brexit, is giving a lift to exports, however.
- UK 3Q Advanced Estimate +0.5% q/q (+2.3% y/y) from 0.7% in 2Q. Overall growth is tracking better than previously expected. This has led some economists to revise up their forecasts (2016 consensus growth 1.80%); but next year's performance will be more important as Brexit negotiations unfold (2017 consensus 0.9%).
- Other UK Data: Markit UK PMI Manufacturing (October) 54.3 vs. 55.5, Markit PMI Services (October) 54.5 vs. 52.6, Headline CPI (October) 0.1% m/m (0.9% y/y), Core CPI 1.2% y/y.

Asia

- China's economy is showing signs of stabilization and very modest improvement as the October Manufacturing PMI advanced to 51.2 from 50.4 in the previous month. It was in contractionary territory five months ago. The Non-Manufacturing index was a solid 54.0, up slightly from 53.7 in September. Many economists, analysts and state officials are calling for more bold measures by the People's Bank of China (PBOC) and the government to boost economic output and investor confidence, as data are still far below the peaks seen in 2009-10. Moreover, data are failing to convince markets that China's economy is stable, but officials are concerned about fuelling asset bubbles or spurring capital outflows. China's economic health remains under scrutiny following strong historical growth that was fuelled by a long period of rapid credit expansion and fixed asset investment. China is gradually transitioning to a consumer-based economy and is targeting growth of 6.5% in 2016.
- China's economy grew at 6.9% in 2015, and the consensus growth estimate is 6.7% in 2016, 6.4% in 2017, and 6.0% in 2018. These are far below the 10+% levels seen prior to 2012. The latest 3Q y/y growth in China was 6.7%. Inflation is projected to remain relatively stable over the next few years at around 2%.
- The latest Chinese trade data for September show Exports down -7.3% y/y and Imports down -1.4% y/y.
- China has initiated several cuts in interest rates and the Reserve Requirement Ratio (RRR) over the past few years, and its most recent cut of 0.5% on February 29, 2016 (most recent PBOC meeting), sent equity markets higher. However, with the RRR cut to 17% effective March 1, 2017, there is still more room to cut, and the markets are showing an eagerness for more cuts rather than fewer. Fiscal stimulative deficits are also part of the equation.
- At its October 31 meeting, the Bank of Japan kept its overnight policy rate unchanged at -0.10% and its 10-year JGB target at 0%. It also pushed back the timing for its 2% inflation target to around the fiscal year-ending March 2019, positioning for a longer-term effort to restore inflation—beyond Governor Kuroda's term through March 2018. It also said that it would maintain its annual pace of JGB accumulation more or less in line with the current pace of about 80tln yen as well as ETF purchases around 6tln yen. The BOJ lowered its inflation outlook for the current fiscal year to -0.1%.
- Japan's economy shrunk by -1.7% in 4Q15 in real terms, but then rebounded to +2.1% in 1Q16 due to stronger private consumption. However, growth in Q2 was a modest 0.7% supported mainly by private consumption. The see-saw trend can be attributed to a rebound following the weak Q4 hand-off. It's too early to tell if stimulus policies will have a lasting effect. Since 1997, Japan's economy has been languishing under low growth and low inflation/deflation.
- Japanese data have been showing persistent weakness in industrial production, exports and imports. However, September's industrial production moved up +1.5% y/y, its second consecutive month of a positive increase (August +4.5%), following negative growth for the past two years before August. September exports and imports were down -6.9% and -16.3%, respectively.
- According to Macro Strategy's F/X strategist Bipan Rai, Japan's currency has been appreciating for much of the year, which is not constructive for exports or business investment. Additionally, the BoJ has adjusted their easing program to target the shape of the yield curve by anchoring the 10Y yield at zero. Such a program could lead to a situation whereby the BoJ wavers on its commitment to buy JPY80trln worth of assets a year into the medium-term. For now, the stability in the yield curve has brought some semblance of calm to JPY markets.

4 Market & Benchmark Analysis

Stocks and Bonds Mostly Lower in October

Stocks and bonds were generally lower in October, although the broad S&P/TSX equity index advanced modestly with the help of fewer cyclical stocks outperforming, and with the energy sub-sector extending its gains with Suncor Energy's third quarter beat. The S&P/TSX index returned +0.62% vs. 1.22% in September. The S&P500 (SPX) returned -1.82% vs. +0.02%% in the previous month. The Canadian FTSE TMX Canada Universe Bond Index returned -0.91% compared with +0.25% the previous month.

Equity Markets

The S&P/TSX extended its gains in October returning +0.62% (vs. +1.22% in September) with the more stable Financials (+2.60%), Consumer Staples (+1.87%) and Utilities (+1.52%) outperforming and Suncor Energy helping to extend the gains in Energy (+0.86%). Suncor Energy (SU-TSX) was up +10.52% on stronger than expected third quarter results as its earnings benefitted from strong upstream production, lower operating cash-costs and record crude throughput in its refineries [Previously in September, the broad stock index was also boosted by Energy (+3.92%) as oil prices climbed after OPEC reached an agreement to limit production to a range of 32.5-33mln b/d, implying a reduction of 200-700,000 b/d from current production levels.].

Other sector returns in October were as follows: Telecom Services (-0.23%), Industrials -0.29%, Materials -0.91%, Info Tech -1.35%, Consumer Discretionary (-2.25%), Real Estate (-2.82%) and Health Care (-17.75%). The Health Care sub-index is concentrated in Valeant Pharmaceuticals which was down -25.63% as it continues to contend with legal issues.

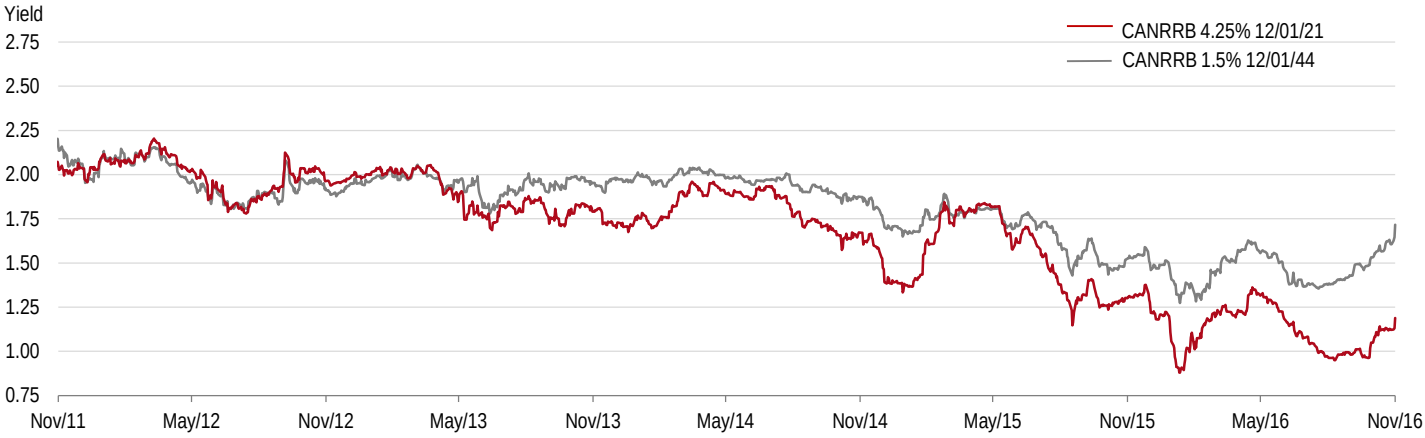
The S&P500 (SPX) fell in October returning -1.82%, down from +0.02% in September. With the appreciation of the USD/CAD exchange rate, the return in Canadian dollars was positive +0.38%. Leading the index higher was the Alternative Carriers Sub-Category (+21.07%) led by Level 3 Communications. Dragging the index lower was Health Care Distribution (-16.01%) led by McKesson Corp.

The S&P/TSX Preferred Share Index returned +2.32% in October following a return of -0.10% in September. The year-to-date return is +3.95%. The robust returns in the current year are a stark contrast to the dismal returns last year. In 2015, the index returned -14.95% as preferred shares suffered from the re-pricing of fixed/floating resets and floating rate issues at historically low rates. Towards the end of last year, tax-loss selling exacerbated losses.

Bond Markets

The FTSE TMX Canada Universe Bond Index returned -0.91% in October, following an advance of 0.25% in September. The yield curve sold off and bowed out. By term, Long Canadas (-2.67%) underperformed Mid-Canadas (-1.03%) and Short-Canadas -0.09%). Yield changes by term were: 2Y +4bps to 0.55%; 5Y +8bps to 0.70%; 10Y +25bps to 1.31%; and 30Y +17bps to 1.91% (PC Bond Constant Maturity). Credit spreads were better across all credit sectors helping to partially offset the rise in yields. **The overall benchmark yield increased +8bps to 1.79%.**

Looking at the **Long-Term Bond Sub-Index**, Long Canada's (Non-Agency) underperformed all credit sectors. Long Corporate was the best performing credit sub-sector, outperforming on tighter credit spreads and a modestly shorter relative duration. The Long-Term Bond Sub-Index overall return was -2.31% with the sub-components performing as follows: Long Canada–Non Agency (-2.67%), Long Canada–Agency (-2.45%), Long Provincial (-2.44%), Long-Municipal (-2.34%), Long Corporate (-1.65%). In the **Long Provincial sector**, the 30Y Long Ontario spread widened slightly by about +1bps after trading in a narrow range throughout the month. The 30Y rolls to Ontario, however, moved tighter across all names, with a more pronounced move (-5-6bps) seen in the oil-producing provinces of AB, SK and NF, as optimism improved around oil prices. In the **Long Corporate** sector, Financial (-1.25%), Energy (-1.42%), and Communication (-1.45%) were the best-performing credit classes on tightening credit spreads and somewhat shorter duration. Credit spread performance in secondary markets was primarily driven by lack of supply.



Although October corporate debt issuance started off with decent supply, there was reduced primary flow towards the second half as issuers entered earnings blackout. This benefitted both the primary and secondary markets in the latter half. In the last week of the month, for example, Bank of Montreal completed a $2.0bln 5-year deposit note offering at a spread of +94bps over the interpolated GoC curve (the tight end of initial guidance), for a coupon of 1.610% and a concession of about +2bps. We highlight that in the high-grade, short-dated financials' space, 5Y Senior Deposit notes grinded tighter by about -6bps m/m to the area of +94bps. With strong demand, on the new issue front, high-grade, new-issue concessions – which have been grinding lower for the past couple of months due to strong demand – were flat to small positive. Overall corporate supply (bank and corporate) was $5.7bln vs. $7.0bln the previous month.

Provincial supply in October was also decent at $7.2bln, a pick-up from the $4.7bln in September. Over the past couple of months, supply has been more domestic-focussed, a shift from heavier international issuance in previous months.

The RRB Canada Index (ModDur 15.89) returned -0.36%, once again strongly outperforming Long Canadas (ModDur 15.47) which returned -2.67%. According to Macro Strategy Rates Analyst Luke Ostapiak, in the past month, RRB break-evens have rallied very hard, in line with the reflation theme. The rally has extended across the curve, with 10Y break-evens now at 1.45%, up from around 1.15% at the lows in the summer. The US election has extended this theme after a brief pause and profit taking as OPEC deal headwinds weigh on the market. The US election is inflationary for a few key reasons. First, both candidates were relatively inflationary with the promise of fiscal stimulus, although Trump's larger plan and GOP control of the White House, Senate, and House of Representatives could mean fewer roadblocks to implementation (TIPS break-evens are up +6-11bps across the curve as of writing). This boost could also spill over into Canada, as our economy has traditionally been closely tied to our neighbours to the south, and also furthers the story of fiscal policy emerging globally. Second, the potential for more protectionist policies (although not necessarily good for the Canadian economy) would raise import prices and CPI – again adding to the inflation theme and global political shift. The market is taking notice immediately, brushing off the brief risk-off move, and RRB implied break-even inflation rates are now +5-7bps higher from yesterday's close. We continue to like holding inflation outright, or real-yields as opposed to nominals, as the reflation and steepening themes continue to play out.

The High Yield Bond Index (ModDur 4.14) extended its advances, returning +1.20% in October following a return of +1.16% in September. The year-to-date return is a strong +14.15%. Once again, the High Yield Bond Index handily outperformed both Short and Mid Corporates, which returned +0.17% and -0.23%, respectively. By sub-industry, Industrial (+1.56%) was up the most followed by Energy (+1.25%), Real Estate (+0.92%), and Communication (+0.54%). Overall risk sentiment in the high-yield space was relatively unchanged over the month, with range-bound spreads and somewhat choppy on relatively light secondary flows. There was no supply following a very strong September that saw a combined $900mln in issuance from four issuers (Air Canada, Parkland Fuel, Iron Mountain and Canexus) – all deals being well subscribed.

Ontario Maintains Projected Deficit of $4.3bln for 2016-17

(CIBC Macro Strategy, November 14, 2016, Complete story click here)

The Province of Ontario's Fall Fiscal and Economic update for 2016-17 maintained its projections of a $4.3bln deficit, unchanged from the 2016 Budget. The Province also maintained its projections to return to balance in 2017-18, while continuing to stay out of the red in 2018-19.

Although the budgeted deficit itself is unchanged, the deficit before reserve actually increased to $3.9bln, up from $3.3bln in the 2016 Budget. The Province had built a $1.0bln reserve into the 2016 Budget to help protect its fiscal outlook from unforeseen adverse changes. This reserve is reduced to $0.4bln in the update. Helping to mitigate the impact of an adjustment related to net pension assets, which was not anticipated at the time of the 2016 Budget, was the reason cited for this reduction.

BC Optimistic for Softwood Lumber Deal with Trump Presidency

(CBC News, November 9, 2016, Complete story click here)

Despite the US president-elect's vocal disdain for trade deals like NAFTA, BC Premier Christy Clark is optimistic a softwood lumber deal can still be negotiated with a Donald Trump presidency. "There are still a lot of free traders in the U.S who know that free trade for Canada has been great for their economy too. It has created thousands and thousands of jobs in BC and Canada and it has done the same on the other side of the border," said Clark.

Softwood lumber is BC's largest export south of the border. Canada exported $3.31bln of softwood lumber to the US in 2015. The US-Canada softwood lumber deal signed in 2006 expired last year, and negotiations have been ongoing since. Clark said she has not seen any change of focus at the softwood lumber negotiating table, despite Tuesday's astonishing election victory for Trump. "I have never heard him talk about softwood lumber particularly. The softwood lumber is vital for BC and not really central to most of the American economic interest," added Clark.

Newfoundland and Labrador's Premier Offers Vision

(CIBC Macro Strategy, November 9, 2016, Complete story click here)

Premier Dwight Ball released his vision for Newfoundland and Labrador (NF) reaffirming the fiscal targets that were tabled on October 27 in the Fiscal and Economic Update. According to the document, all actions outlined in the vision will be achieved within the fiscal targets that were set.

The vision addresses the Province's difficult financial situation and goals to set its financial and economic course towards balanced budgets by 2022-23 and a stronger, more diversified economy. The vision also addresses the strong need to reform the cost structure of government. We point out that the Premier recently received over 90% endorsement at the Liberal Party of NF annual general meeting.

Renewable Electricity Plan to Create Jobs, Spur Investment

(Alberta News, November 3, 2016, Complete story click here)

The Alberta government will set clear timelines for developing renewable electricity like wind and solar, and a competitive bidding process structured to limit costs. The Renewable Electricity Program will add 5,000 megawatts of renewable electricity capacity by 2030 using a competitive process, administered by the Alberta Electric System Operator (AESO). This will put Alberta on a path to achieve its target of 30% renewable electricity by that time.

The government will also soon introduce the Renewable Electricity Act, which will reinforce Alberta's commitment to the "30 by '30" target and provide the legislative framework for the Renewable Electricity Program. The successful projects will be privately funded and will result in new investment of at least $10.5bln into the Alberta economy by 2030, with at least 7,200 jobs created for Albertans.

The first competition will see investors bidding to provide up to 400 megawatts of renewable electricity. The AESO will gather feedback from industry on draft commercial terms starting on Nov. 10, and before the first competition takes place in 2017. Successful projects will be financially supported by reinvesting a portion of carbon revenues from large industrial emitters. In addition, safeguards will be in place to ensure that the process is fair and transparent.

Newfoundland & Labrador Attains New Federal Loan Guarantees for Muskrat Falls

(CIBC Macro Strategy, November 3, 2016, Complete story click here)

The Government of Canada announced additional loan guarantee support for the Muskrat Falls project for an amount of up to $2.9bln for the portion led by crown corporation Nalcor Energy.

We view this as a positive development, not only because it provides funding relief for the Province, but because it also validates the supportive institutional framework that exists between the Federal Government and the subnational levels of government. We highlight that the additional Federal loan guarantee amount of up to $2.9bln offers a $1bln buffer above the projected additional equity contributions.

Federal Government Provides $2.9bln Loan Guarantee Support for Muskrat Falls

(The Canadian Press, November 3, 2016)

The federal government is providing another $2.9bln in loan guarantees for the Muskrat Falls hydroelectric project – a move Newfoundland and Labrador's premier says will slightly ease power bills that are expected to soar.

Thursday's announcement extends the Muskrat Falls loan guarantee first affirmed by former prime minister Stephen Harper in 2012. Among other conditions, it requires that partners in both Nova Scotia and Newfoundland and Labrador remain committed to the project. NL Premier Dwight Ball said he expects the enhanced loan guarantee will cut at least 1.5 cents off rates that are estimated to hit 21.4 cents per kilowatt hour by 2021, before tax. That's almost double the 12 cents consumers paid last year -- potentially adding $150 to an average monthly bill.

The joint venture between Nalcor and Nova Scotia utility company Emera will generate up to 824 megawatts of electricity. Power will be brought from Labrador to the island of Newfoundland and on to Nova Scotia through subsea links and a vast overland transmission network.

Hydro-Québec Working on Acquisitions in Bid to Double Revenue

(Bloomberg, November 2, 2016)

Hydro-Québec wants to acquire power assets in the Americas and Europe as part of a plan to double revenue by 2030, Chief Executive Officer Eric Martel said. Canada's biggest electric utility is working on "six or seven" possible deals, of which "two or three are on the front burner," Martel said Wednesday in an interview in New York, declining to be more specific. He went on to say that at least one transaction may be announced by the end of 2017 and financed with debt.

"Acquisitions will be a key source of growth for us," Martel said. "We want to find interesting assets in areas we know: dams, transmission lines, that sort of thing. We don't want to be in 25 countries, so we are going to be very selective. We're not looking for greenfield projects." More than 99% of the power that the state-owned utility generates comes from renewable sources, according to the company's 2015 annual report.

While Hydro-Québec already has about $43bln of long-term debt, issuing more wouldn't be a problem, Martel said. He said, "tomorrow I could raise an additional $12bln in debt without any problems" to finance acquisitions.

Moody's Affirms Canada's Aaa Rating; Maintains Stable Outlook

(Moody's Investors Service, November 2, 2016)

The main factors supporting the rating affirmation are: 1) Canada's flexible and competitive economy, supported by exceptionally strong institutions and economic policy management, which underpins its capacity to absorb negative economic shocks and bolsters its robust growth potential; 2) Moody's expectation that government debt ratios, including a low federal debt burden, will remain stable in the next two years and decline gradually in subsequent years, alongside the demand for Canadian assets from long-term investors which we expect to continue to foster stable financing conditions; and 3) strong institutions that underpin a well regulated financial system that would absorb a potential housing shock with minimal fiscal costs for the government.

The ongoing adjustment to a prolonged period of low oil and gas prices and somewhat slower growth in the US, combined with financial risks from rising house prices and household debt levels pose, downside risks to our economic and fiscal projections. However, we base our stable outlook on the expectation that continued vigilance by Canadian authorities reflective of very strong institutions will succeed in mitigating such risks, thereby preserving Canada's Aaa sovereign credit profile.

Nova Scotia to Pay "Next to Nothing" for Muskrat Falls Energy: Nalcor CEO

(The Canadian Press, November 2, 2016)

Nova Scotia will be getting electricity for "next to nothing" when the Muskrat Falls hydroelectric project in Labrador starts producing energy, the man in charge of the megaproject says. Nalcor Energy CEO Stan Marshall said the poor arrangement with Halifax-based Emera Inc. is one of the reasons the $11.4bln Muskrat Falls project has proven to be a bad deal for Newfoundland and Labrador. He said Nalcor is talking with Emera about changing the terms of existing contracts for the Maritime Link, the 170-km subsea cable that will eventually carry electricity from Newfoundland to Cape Breton. Emera is paying for the $1.6bln link.

"We only need about one third of (the electricity) on the island (Newfoundland)," Marshall said in an interview this week with the Canadian Press. "So what do we do with the other two thirds? To get it to market, we gave one third to Nova Scotia for 35 years, for nothing – other than it is in return for building the (Maritime Link). The remaining one third was supposed to be sold into the market at a big profit, but energy prices have collapsed in the northeast, and it will be sold for next to nothing." As a result, Marshall said, the project will be an economic burden for Newfoundland and Labrador for at least the next four years.

"This is a project that should not have been done because it's too big for the needs of the province," he said. "We took a risk on what energy prices would be, and we've lost the bet." Still, Marshall said he remains optimistic he can mitigate some of the economic damage over the long term. The federal government's bid to have every province take part in some form of carbon pricing could help Muskrat Falls, particularly in the context of new carbon taxes.

Federal Fall Fiscal Update Downgrades Growth Outlook

(CIBC Macro Strategy, November 1, 2016, Complete story click here)

We don't see any risk with respect to Canada's AAA-rating given its very low debt ratio, but we note that today's Federal fiscal and economic update projects a modestly weaker economic outlook. This revised trajectory will erode the cushion built into the original Budget 2016 plan that was tabled in March, leaving less flexibility for negative surprises and/or increasing spending programs without running higher deficits.

With its first budget, the Liberal government built in an economic buffer that will allow it to come in better than plan for both F2016-17 and F2017-18 with deficits of $25.1bln (vs. –$29.4bln) and $27.8bln (vs. –$29bln), respectively. This follows a better-than-expected result in F2014-15 which revealed a smaller deficit of $1.0bln vs. the $5.4bln deficit forecast in Budget 2015. However, looking beyond F2017-18, the deficits are projected to be higher, such that the cumulative next five years' of deficit is about $1.7bln more, with no buffer built in. The projected debt-to-GDP ratio is expected to peak at 31.9% in F2018-19 and then gradually improve to 30.4% in F2021-22, relatively unchanged from Budget 2016.

Deficit Will Be Higher Than Expected: Saskatchewan Finance Minister

(The Canadian Press, November 1, 2016)

Saskatchewan Finance Minister Kevin Doherty says the province's deficit is going to be higher than projected in the budget. The 2016-2017 budget is projected a $434mln deficit. Doherty is expected to release a mid-year budget update by the end of November and he's warning about significant pressures on the finances.

He says corporate and personal income tax revenue appears to be down, crop insurance claims are expected to be up, more people are using social services and there's an added cost because incarcerations have increased.

Doherty notes that the fiscal year does not end until March, so he says the province has some work to do to get back to being closer to the $434mln figure.

Newfoundland & Labrador Mid-Year Fiscal Update

(CIBC Macro Strategy, October 27, 2016, Complete story click here)

Newfoundland and Labrador provided a mid-year fiscal and economic update today, revising its projected deficit for Fiscal 2016-17 to $1.58bln from $1.83bln, an improvement of $246mln from the initial budget. The modest improvement reflects: an increase in revenue due to slightly higher oil prices and production; a $50mln reduction in the $125mln risk adjustment contingency; and a reduction in program spending, offset by higher debt servicing costs. Notwithstanding this modest improvement, we view the outlook for oil prices and NL's fiscal situation to be opaque. The province's financial flexibility in the current environment is very limited and challenges persist with respect to the Muskrat Falls hydro-electric project.

NL Minister "Disappointed" by Québec's Opposition to Extended Muskrat Falls Loan Guarantee

(CBC News, October 27, 2016, Complete story click here)

"Unneighbourly" and "disappointing" is how Newfoundland and Labrador Finance Minister Cathy Bennett is describing Québec's attempt to block an enhanced loan guarantee for the Muskrat Falls hydro project. The province has asked the federal government to increase the 2013 loan guarantee it gave the province for its multi-billion dollar power project in Labrador. Earlier this week, Québec argued the federal government should turn down that request.

Québec's minister of inter-governmental affairs, Jean-Marc Fournier, said it's unfair that Ottawa is helping Newfoundland and Labrador when it didn't give his province any help to build its hydroelectric projects. The cost of the project – that's been dogged with delays, cost overruns and protests over methylmercury contamination – has ballooned to $11.4bln. That's an increase of $4bln compared to projections four years earlier. Natural Resources Minister Jim Carr confirmed that the federal government is "seriously" considering the province's request to extend the loan guarantee granted by the Conservatives in 2013.

Canada Housing Agency Lifts National Risk Level to Highest Grade

(Bloomberg, October 26, 2016)

Canada's housing agency boosted the risk level in the national market to the highest level for the first time, saying dangers are more widespread than surges in Vancouver and Toronto. Canada Mortgage and Housing Corp.(CMHC) moved up its national reading to "strong" evidence of problems, citing evidence of over-valuation and price acceleration. Toronto and Vancouver still have strong signs of overvaluation, and most markets across Canada are overvalued, the report said.

CMHC is among the last policy makers to identify major concern with the broad housing market, saying in April there was weak evidence of problems before raising the grade to moderate in July. Finance Minister Bill Morneau introduced tougher mortgage lending rules in December and again earlier this month. In 2014, Bank of Canada Governor Stephen Poloz called housing the biggest risk to financial stability and the International Monetary Fund has also said it was a key issue.

Québec Reports Higher Surplus for Fiscal 2015-16

(CIBC Macro Strategy, October 25, 2016, Complete story click here)

The Province of Québec released its 2015-16 Public accounts today, revealing a much larger budget surplus of $3.644bln, far surpassing their updated forecasts of $1.431bln in their 2016 Budget as well as the $1.586bln in their original 2015 Budget. The Province has deposited $1.453bln of this surplus into the Generations Fund, with the remaining $2.191bln going into the stabilization reserve, in accordance with the Balance Budget Act. The government has also stated that they may decide to deposit a portion of this sum into the Generations Fund as well. Today's announcement is constructive for credit spreads.

Catalyst for Government Spreads?

The Ontario 30Y credit spread is tracking close to the low end of our target range of +95-115bps, and is currently in the area of +100bps. Meanwhile, most provincial rolls to Ontario are hovering around their historic wides. We are still waiting for a catalyst to support tighter spreads based on fundamentals. In spite of deliberate and measured monetary, fiscal, and prudential policy initiatives to reduce elevated housing market risk, spur economic growth, and re-align the drivers of growth towards business investment and exports, recent data continue to disappoint. Manufacturing employment in Canada remains a source of weakness, standing below the resource sector for last place. We are expecting brighter skies in 2017. Although there are a few bright spots here and there, the sky is still quite cloudy. *More on p3*

- BC introduces 15% foreign investment residential property tax in Vancouver. *More on p20*

Special Report: Accounting for Government Transfers (August 8, 2016)

Grey areas in the Public Sector Accounting Standard – PS 3410 Government Transfers are leading to differing interpretations and diversity in practice with respect to the treatment of transfer revenue (recipient side), and this outcome – from a financial statement users' perspective – is reducing the comparability of financial statements within the government credit sector.

Enabling legislation that prescribes specific accounting approaches which are not necessarily in line with the Public Sector Accounting Standards Board (PSAB) standards may allow governments to meet the requirements for an unqualified or unmodified audit opinion, because the auditor is thus opining under a different compliance framework. From a financial statement users' perspective, this reduces the quality of the auditor general's opinion.

Also covered in this report are updates on PSAB's initiatives on P3 and Employee Benefits accounting. Click here for report.

1 Market Outlook

Still Positioning for Gradual Move Higher in Rates

Our portfolio strategy is grounded on our base case for a gradual move higher in rates and a firmer global economy heading into 2017. CIBC Macro Strategy's Rates Strategist Richard Gilhooly projects, "As easing moves from overseas Central Banks and widening fiscal policy expansion kicks in to raise global growth and inflation, we expect the extreme scenario that is implied by record low 30Y CAN yields and near record low inflation break-even rates to gradually reverse, bear-steepening the GOC yield curve and raising inflation expectations from their significant discount relative to spot inflation. We expect the latter to actually move higher from the 2% level on core CPI, which would widen the spread to break-evens and emphasize the cheapness of the sector as the Canadian economy responds to low rates and fiscal expansion." On policy rates, CIBC Economics is expecting a gradual tightening move by the Fed in 2016, with only one hike in December and two in 2017. In Canada, CIBC Economics forecasts that the Bank of Canada will be on hold for all of 2016 and likely 2017 as well, as Canada's central bank postures between desires for a weak Canadian currency to support export growth, and containing elevated housing market risk. The BoC is also leaning on fiscal stimulus.

An important variable for the Canadian economy is crude prices which retreated last month on high product inventories and lacklustre demand, especially from a seasonal slack in Asian weather-dependent industrial output and transport/distribution challenges. Run cuts in the face of record product inventories was another factor. Mixed agency short-term forecasts have added to the uncertainty, but OPEC optimism, and unplanned crude and product supply disruptions have potential to change the dial, as was evident in last week's turnaround. With crude benchmarks making higher highs and lower lows, and sentiment reversed to the upside, our Macro Strategy oil analyst expects improved product demand in H2'16 to support prices through the heavy US fall maintenance season. *(We note that there have been comments by OPEC officials about holding informal talks next month ahead of the regularly scheduled OPEC meeting on November 30 to stabilize oil prices.).* CIBC Macro Strategy's oil and gas price forecasts are: WTI: $43.50/bbl (2016E avg.), WTI: $51.25/bbl (2017E avg.), Brent: $46.50/bbl (2016E avg.), Brent: $52.50/bbl (2017E avg.), WCS: $30.50/bbl (2016E avg.), WCS: $38.00/bbl (2017E avg.), NYMEX: $2.45/mmbtu (2016E avg.), NYMEX: $3.65/mmbtu (2017E avg.)

CIBC Institutional Equity Research Oil Analysts' (Arthur Grayfer and Jon Morrison) updated oil price forecasts are (avg.): WTI 16F US$45 (increased by ~6% on stronger than expected Q2, with their quarterly progression as follows: US$33.41/Bbl for Q1/16, US$45.60/Bbl for Q2/16, US$47.50/Bbl for Q3/16E, and US$53.40/Bbl for Q4/16E. They are also projecting WTI F17 US$60, WTI F18 US$70/bbl. Their base case for 2017 is for the crude market to tighten due to falling supply and demand growth driven by both the United States and Asia.

A gradually improving oil price should be supportive for the Canadian loonie, which is already off the lows on firmer oil prices. However, our Macro Strategy FX Strategist Bipan Rai believes that, "While oil prices should see an updrift next year, correlations with the CAD will deteriorate as monetary policy divergence and foreign investment flows will continue to be the determining factors for the loonie. We expect USD/CAD to trade with a USD bid bias on average for much of next year. Our expectation is that the USD/CAD will be in a range of 1.25-1.40."

With significant global economic uncertainties prevailing, we still believe a cautious duration stance is warranted at this time, even though the low level of yields since the start of the year may support the argument for a stronger defensive stance against rising yields. We are proposing only a 'modest and measured' short over the next 3-6 months until we have more clarity on the strength of the global economic recovery. In recent market memory, we've seen periods of extreme volatility and, in these types of markets, being nimble on tactical shifts (i.e. being able to cover-in shorts and capitalizing on rallies) is the key to avoiding value destruction when markets are prone to react to global events (i.e. Brexit, Turkey attempted coup) and other market developments. On our radar is the US election on November 8.

On sector allocation, we remain in favour of a corporate overweight versus provincials for better yield, but security selection will be key in navigating through what we expect will be choppy spreads in both sectors. Provincial bond spreads have tightened since Brexit as both domestic and international issuers have re-emerged after being sidelined during the UK "Brexit" referendum. International investors have looked to Canada as a safe-haven higher yielding jurisdiction, while Europe and Asia contend with negative yields.

Following Brexit, we see the potential for more geopolitical risk and discord within the European Union itself that will pander to investor fears. Another risk we are mindful of is earnings disappointments. Our Institutional Equity Strategist believes that equity markets are overvalued based on year-end targets and, therefore, at risk to any earnings misses – a check back in equity markets would put a bid in yields. These factors notwithstanding, we believe that the North American economy will show more evidence of firming in the quarters ahead and the latest US job numbers and substantial job gains over the past several years support this thesis.

Top-Down Strategy

- Duration: 'Modest and Measured' short

We still believe a cautious duration stance is warranted at this time, even though lower yields since the start of the year may support an argument for a stronger defensive stance against rising yields. We are proposing only a 'modest and measured' short over the next 3-6 months until we have more clarity on the global economy. As we've seen since the start of the year, being nimble on tactical shifts (i.e. being able to cover-in shorts and capitalizing on rallies) will be the key to avoiding value destruction in a market that is volatile and prone to react to global events (i.e. Brexit, Turkey attempted coup, etc.) and other market developments.

- Curve: Bullet (emphasis on yield maximization)
- Sector Allocation: Overweight corporates (gradual leaning into the wides, not at max constraint or target)
- Near-market weight Canadas
- Underweight Provincials (gradually moving to neutral over time)
- Small position in less liquid Municipal sector

Premise

- 'Modest and measured' defensive position in the context of historically low yields and an improving global economy, but vulnerable to shocks and geopolitical risk
- Gradual normalization of policy rates with the Fed Reserve moving way ahead of the Bank of Canada
- With the strong correlation between the US and CAD yield curves, the CAN10Y and US10Y are expected to move higher together
- Our Equity Strategist, Ian de Verteuil, expects equity markets to continue to be choppy over the remainder of the year, with negative rates, deflation concerns and disappointing earnings growth periodically weighing on equity prices. Based on fair value fundamentals that underpin his targets, equity markets have minimal upside into year-end targets: SPTSX target 14,000; SPX target 2,100 (reduced from 2,200)
- We favour the risk/reward trade off in corporate vs. government bonds at these wider spreads, especially given the narrower spread tolerance in government bonds, but not yet at maximum corporate weight and with a strong focus on credit quality. We see provincials moving closer to neutral over time.

3 Market Recap

Market Highlights

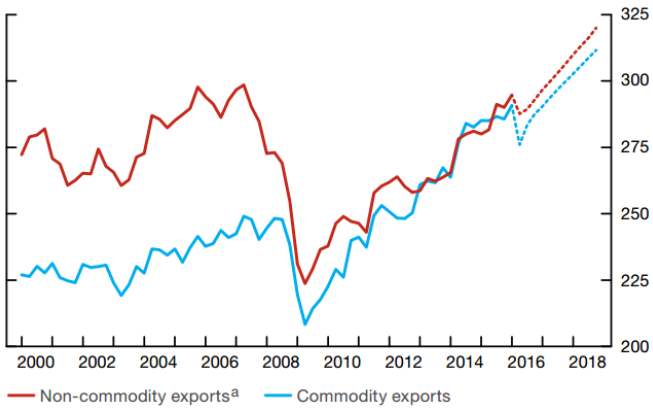
Since our last issue of Canadian Government Central (July 19), economic data has shown more divergence between Canada and the US. Canada's employment figures were weak, in direct contrast to the strong US jobs report. This caused Canada bonds to outperform US. Shortly after the data releases on August 5, the US 10Y yield was up +5.76bps to 1.56%, while the CAN 10Y was up only 0.17bps to 1.05% (CAN 10Y has since briefly pierced through 1%). The front end of the Canadian yield curve rallied, with the 2Y down -1.39bps, while the 30Y sold-off +2.1bps. The front-end bull steepening signalled higher stimulus odds.

The strong US data propelled the US stock market further, with the S&P 500 (SPX) advancing to 2174. The weaker Canadian employment data (and weaker oil prices) did not faze the Canadian stock market as the S&PTSX advanced to 14,766. Both the S&P/TSX and SPX remain above our Portfolio Equity Strategist's (Ian de Verteuil) year-end targets of 14,000 and 2100, respectively, suggesting that the market is fully valued. We highlight recent major economic developments below.

CANADA

July Employment Report – Public sector job losses weigh on employment

- Canada lost -31.2k jobs in July after shedding -0.7k in June. The breakdown showed -71.4k full-time jobs lost, more than offsetting the +40.2k part-time jobs gained. The report was skewed by a big drop of -36.1k jobs in Ontario, some of which was public sector-related. The participation rate ebbed a tick to 65.4%, allowing the unemployment rate to edge up a notch to 6.9%.
- CIBC Economics (Nick Exharhos): "Canadian jobs took a thumping in July, but with the report highlighting an unlikely collapse in public sector employment, we're likely chalking this one up to the underlying volatility in the Labour Force Survey. Although we can discount some of the weakness in any one particular report, the annual trend in employment and hours worked is commensurate with an economy that continues to face headwinds. Indeed, both those metrics are up by a weak 0.4%, a trend that would have left the unemployment rate higher than the current 6.9% had it not been for sliding participation."



2016	July	June	May	April	March	Feb.	Jan.
	----------Change in Employment----------						
CAN	-31.2	-0.7	13.8	-2.1	40.6	-2.3	-5.7
BC	12.1	16	-8.4	13	9	14.1	1.2
AB	-1.4	-1.9	-24.1	-20.8	18.9	1.4	-10
SK	-0.5	1	2.2	-1.6	2.8	-7.8	-1.8

Bank of Canada Rate Decision – BoC raises housing market risk assessment

- The Bank of Canada (BoC) kept its overnight benchmark rate at 0.5% at its July 13 meeting. CIBC Economics: "Rates were held steady, but the Bank of Canada has pushed its forecasts for the economy lower. Part of the downward revision to Q2 growth – which is now expected to contract by 1% – is due to the Alberta wildfires." The next BoC rate decision is September 7.
- The Bank noted that the outlook for business investment and exports has weakened. Despite a forecasted growth rebound in Q3, as oil production comes back online, 2016 as a whole is expected to grow by 1.2%, almost half a percent below the BoC's prior outlook. The output gap still closes within their forecast horizon, albeit later than previously anticipated, and inflation is on track to return to 2% by 2017.
- The Bank expects the underlying trend of export growth to continue, leading to a pick-up in business investment.
- The Bank statement cites that financial vulnerabilities are 'elevated and rising', with Vancouver and Toronto singled out.

• Real Exports Have Been Increasing Steadily

Note: Non-commodity exports includes goods and services.
Source: Statistics Canada, Bank of Canada calculations and projections (Monetary Policy Report, July 2016).

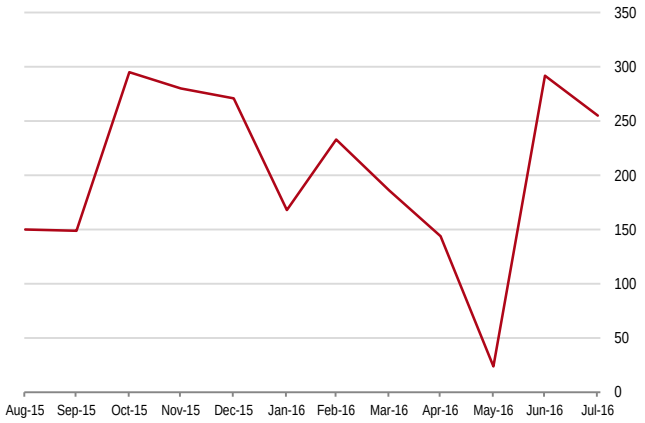
CIBC Economics: BoC on hold for 2016 and likely 2017

Other Key Canadian Data

- Canada's trade deficit (in nominal terms) widened to -$3.6bln in June, the largest on record, from a revised -$3.5bln in May. On a year-to-date basis, the gap reached -$17bln, another record. Energy exports were the primary driver, falling -27% y/y, although non-energy exports were also down -3.5%. On a y/y basis, total exports are down a greater -7.6%, while imports are down only -1.2%. On a month-over-month basis, both exports and imports were up slightly, suggesting some stabilization with Energy exports up +7.2%. The persistently weak trade deficit provides a strong case for a weak Canadian dollar. On a positive note, the recent June manufacturing data gained 0.8% (versus -1% in May) on the back of stronger shipments of machinery and transportation equipment (particularly cars and autos).
- Canadian retail spending took a step back in May, up 0.2% vs.0.9% the previous month, mainly on reduced auto sales. Retail Sales Ex-Auto also slowed, but was still a decent print, increasing 0.9% m/m compared with 1.3% m/m in April. Canadian retail spending has showed much vigour since the start of the year, although March sales took a pause (-0.8% m/m).
- May GDP was down a sharp -0.6% m/m vs. +0.1% in April; economy was impacted by oil and gas disruptions from the Alberta wildfires.
- Headline CPI decelerated in June up only 0.2% m/m vs.0.4% m/m in May. Year-over-year, it held steady at 1.5%. Core CPI was 0.0% m/m and 2.1% y/y. CIBC Economics (Royce Mendes): "Fuel is still cheaper than a year ago, and that's the only reason Canadian inflation is running below the 2% target. Core inflation is stickier than expected, at its above target pace of 2.1%, as the past depreciation in the Canadian dollar continues to provide an offset to the slack that's opened up in the economy."
- Canadian housing starts pulled back to +198.4k in July, down from +218.3k in June, but are still trending above the pace of annual household formations of around +175-180k. CIBC Economics (Avery Shenfeld): "Housing prices might be in a bubble in some Canadian cities, but July data show that starts and construction rest on a firmer foundation tied to population growth and demand. July's 198k level was down somewhat from June's lofty 218k reading, but the broader picture shows a generally sideways trend dating back to 2010. July's retreat included a come-down in both singles and multiples, but left the six-month moving average on a gentle upward path, and year to date starts are up 3% vs. 2015. Virtually all that growth has been in Ontario and BC, with Québec running slightly ahead of last year on a YTD basis. Nationally, with starts already at a healthy level, construction's contribution to GDP growth remains choppy, with limited upside even in this low rate environment."
- Existing home sales slipped back slightly in July (-1.3% m/m), but that didn't keep house prices from accelerating strongly. The Teranet/National Bank HPI showed that the average price of homes increased at a feverish pace of 10.9% y/y. Again, the price acceleration has been concentrated in the Vancouver and Toronto areas.
- In Vancouver, a new 15% foreign investment tax on residential purchases along with a tax measure to address the supply of vacant homes (i.e. vacant home tax) is meant to arrest rampant home price appreciation and low affordability.
- In Toronto, a new report by CIBC Economics, titled, "The GTA Housing Market: Is There Logic Behind the Madness?" by Benjamin Tal with Katherine Judge, discussed the causes of rising home prices. Their report states, "The future trajectory of housing in the GTA is not written in stone. Low interest rates have created the potential for house price inflation. Policy-driven land shortages released that potential, resulting in today's housing affordability crisis. The GTA is in a twilight zone of home prices characterized by a homeownership mentality that is slow to change to the required higher propensity to rent. With interest rates unlikely to rise any time soon, the future of housing in the GTA will be shaped by the ability of these factors to adjust. Policies such as the "Places to Grow Act" have limited the availability of serviced land for ground-oriented houses through setting aggressive intensification and density targets."

UNITED STATES

FOMC Rate Decision – Economic risks downgraded



As expected, the FOMC kept its overnight benchmark rate range unchanged at 0.25-50% (July 27 decision meeting). The FOMC statement downgraded the risks from the previous statement by stating that "near-term risks to the economic outlook have diminished". A change from the June 15 unanimous decision, was one dissenter at the July meeting, with Kansas City Fed President Esther George returning to her previous position calling for a hike. The next decision meeting is September 21.

The statement acknowledged the increase in labour utilization in recent months and strong household spending, but pointed to soft business investment and inflation running below the Committee's 2% long-term inflation target.

July Payroll Report – Non-farm strongly beats for the second time

- US Non-Farm Payroll beat in July with a gain of +255k jobs vs. the consensus estimate of +180k. This was the second consecutive month of robust gains following a very disappointing May. The June data was revised up to +292k from +287k. The two-month payroll net revision was +18k.
- The six-month moving average advanced to +189k from +175k.
- Both average hourly earnings and average weekly hours advanced m/m.
- The unemployment rate held steady at 4.9% as the labour participation rate ticked up to 62.8%.
- The Federal Reserve's Labour Market Conditions Index moved up to 1.0 from -0.1, the first time above 0 since the start of the year.

US Non-Farm Payrolls Report

Source: US Bureau of Labour Statistics

Other Key US Data

- US trade deficit widened in June to -$44.5bln from -$41.0bln as imports (+1.9%) rose faster than exports (+0.3%).
- July was a solid month for housing activity following in strength in June: Housing Starts (+2.1% m/m to 1,211 units), Building Permits (-0.1% m/m, but +5.1% in June), Existing Home Sales (+1.1% m/m in June), New Home Sales (+3.5% m/m in June), Pending Home Sales (+0.2% m/m in June). Housing activity remains elevated and this is mirrored in the National Association of Home Builders Confidence Index which is around 60 – a level indicating that builders view conditions as favourable. More forward momentum is expected on pent-up demand and the expectation increasing new household formations.
- Consumer confidence indicators were little changed in July with mixed readings. University of Michigan Index of Consumer Sentiment advanced slightly while the Conference Board Consumer Confidence Index was relatively unchanged. However, both are near multi-year highs.
- An advanced reading of 2Q GDP growth missed expectations at 1.2% q/q, but personal consumption remained strong at +4.2% q/q. CIBC Economics (Royce Mendes): "After another soft Q1 south of the border, the second quarter was supposed to show a rebound in growth. That didn't happen. Today's data revealed that the economy couldn't even keep up with subdued estimates of the potential growth rate during the first half of the year. That said, with a big chunk of that weakness coming from a decline in inventories, the headline number hides the fact that final demand was healthy and should support growth during the second half of 2016." Other soft spots were reduced residential and non-residential investment and a drop in government spending.
- CIBC Economics lowered its annual real GDP growth expectations given the slow start to the year and projects +1.6% for all of 2016 (vs. 2.6% in 2015). Now with the Brexit vote over, they predict that a rate hike could occur as early as December if economic data unfolds favourably.
- US inflation remains in check. The Fed's preferred measure of Core PCE q/q was 1.6% in Q2 (Advanced), below the Fed's target of 2%. The July CPI reading ebbed two ticks to 0.8% y/y. CPI Ex-Food and Energy it dropped to 2.2% y/y from 2.3%. However, the July reading of Real Average Weekly Earnings advanced 1.4% y/y from 1.2% y/y in June, more signs of tighter labour markets.
- US total auto sales remain at a strong multi-year pace. Wards Total Vehicle Sales for July were 17.77mln vs.16.69mln (SAAR) in June.
- July ISM Manufacturing (52.6 vs. 53.2 m/m) and ISM Non-Manufacturing (55.5 vs. 56.5) both slipped back in July, but remained in expansion territory. Meanwhile, July Capacity Utilization advanced 0.5% to 75.9% as industrial production picked-up 0.7%.
- US retail sales disappointed in July decelerating to 0.0% from 0.8% the previous month and missing expectations for a 0.4% rise. Ex-Autos, the number was similarly weak pulling back -0.3% m/m from 0.9%. However, both indicators in the previous month were revised higher. CIBC Economics notes (Royce Mendes): "The retail sales control group (sales ex-autos, gas, food services, building, materials) didn't gain any ground either, with weakness showing up as relatively broad-based. One area that continues to post gains, however, has been non-store sales (i.e. online retailers). A gain of 1.3% leaves the level of retailing in the sector more than 10% higher than a year ago as the secular transition towards increased online shopping continues."

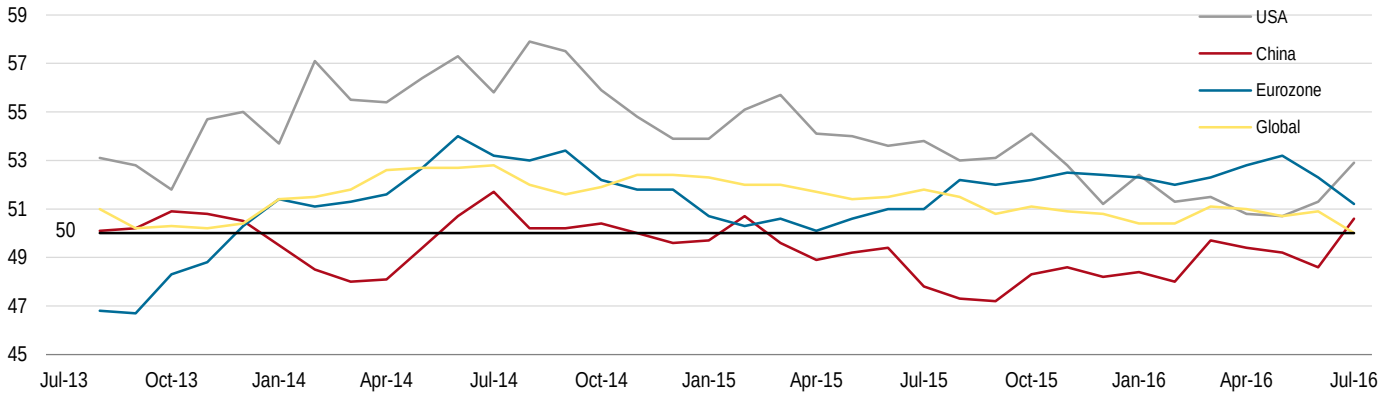
GLOBAL

Eurozone

- EU is pressuring the UK to move swiftly to invoke Article 50 of the 2007 Lisbon Treaty, which sets in motion the procedures to leave the EU within a two-year timeframe. However, new British Prime Minster Theresa May (former Home Secretary) appears happy to wait, and doesn't plan to invoke formal proceedings this year. German Chancellor Angela Merkel has warned that the UK should not expect any favoured treatment once it leaves the European Union. The uncertainty is expected to negatively impact business confidence in Europe and the UK.
- The ECB is projecting that its conventional and unconventional monetary policy measures will see euro-area growth rising from 1.6% this year to 1.7% in 2017 and 1.7% in 2018, with inflation similarly trending up from 0.2% to 1.3% and 1.6%, respectively. The ECB left its main refinancing rate unchanged at 0% at its July 21 meeting as well as its Asset Purchase Target at €80bln. No additional measures were announced since the major measures in March. It is still early to quantify the effectiveness of the ECB's measures to combat deflation. Governor Draghi is appealing to governments to play a bigger role in reinforcing regional growth.
- Market Eurozone PMI (July): Euro area business activity growth edged lower in July according to the Markit Eurozone Flash PMI dropping to an 18-month low.
- Other data: June unemployment rate unchanged at 10.1%, 2Q Advanced GDP +1.6%, July CPI Estimate 0.2% y/y, June retail sales flat 0.0%, Construction Output May -0.8% y/y. The ZEW Survey on Expectations of Economic Growth surprised edging up to +4.6 in August from -14.7 in July.
- Markets reacted to concerns about the health of European banks (including UK) after the European Banking Authority released its stress tests.

United Kingdom

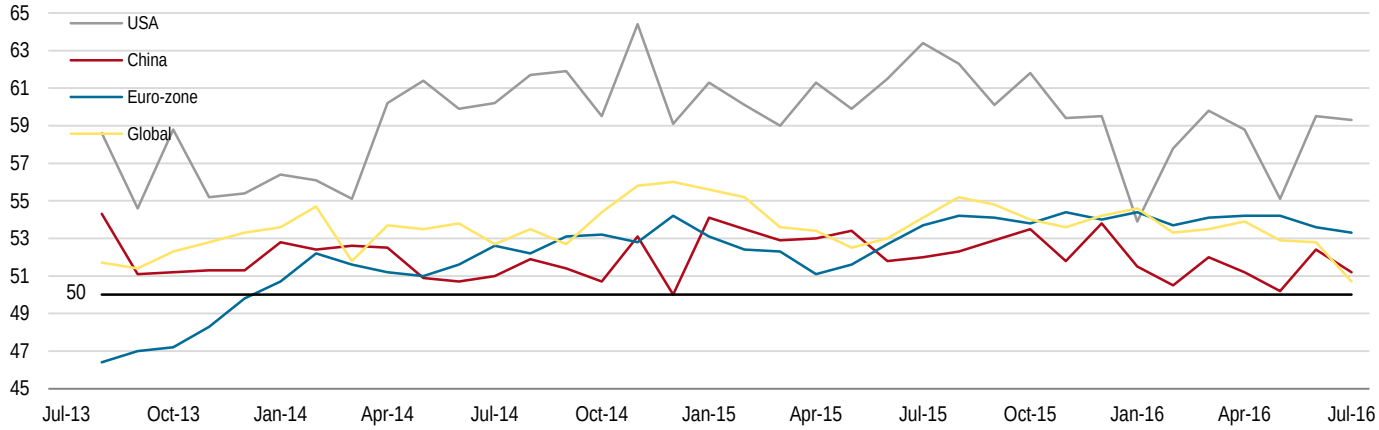
- BOE cut its benchmark rate a quarter point to 0.25% on August 4, and increased its Asset Purchase Target to £435bln from £375bln, also expanding eligible securities to include corporate bonds. The Bank also cut its growth outlook for 2017 to 0.8% from 2.3%, but kept 2016 at 2%. Inflation expectation (CPI) seen at 2.4% at two-year horizon, looking through inflation spike. Just following the June 23 Brexit vote to leave the EU, the BOE assured financial markets that it is well-prepared with extensive contingency plans to deal with the inevitable period of uncertainty and adjustment. The BOE stands ready to support the functioning of the market including the ability to provide more than £250bln of additional funds through its normal facilities.
- BoE business conditions survey shows companies are scaling back investment and hiring plans, confirming the central bank's worry for the negative consequences to the "yes vote on Brexit" (June 23). The weak pound is giving a lift to exports, however.
- UK 2Q Advanced growth estimate picked-up slightly to 0.6% q/q from 0.4% in 1Q.



Asia

- China's economy is showing signs of stabilization as the Manufacturing PMI remains relatively unchanged, but the July reading slipped to 49.9 from 50.0 and is now into contraction territory once more. Meanwhile, the Non-Manufacturing index remains solid and advanced to 53.9 in July from 53.7. Many economists and analysts are calling for more measures to boost economic output and investor confidence, as data are still far below the peaks seen in 2009-10 and are failing to convince markets regarding the stabilization of China's economy.
- China's economic health is also under scrutiny as historical momentum was fuelled by a long period of rapid credit expansion and fixed asset investment, which is decelerating, as China has been transitioning to a consumer-based economy. Contributing to China's health worries was the recent default by a unit of Guosen Securities – China's eighth-largest investment bank – on an off-shore 'dim sum', renminbi-based bond, the first time a state-owned enterprise is in default.
- The latest Chinese trade data for July show Exports are down -4.4% y/y and Imports are down -12.5% y/y.
- China has initiated several cuts in interest rates and the Reserve Requirement Ratio (RRR) over the past few years, and its most recent cut of 0.5% on February 29 (last PBOC meeting) sent equity markets higher. However, with the RRR cut to 17% effective March 1, there is still more room to cut, and the markets are showing an eagerness for more cuts rather than fewer. Fiscal stimulative deficits are also part of the equation.
- China's economy grew at 6.9% in 2015, and the consensus growth estimate is 6.5% in 2016, 6.3% in 2017, and 6.3% in 2018. These are far below the 10% plus levels seen prior to 2012. The latest 2Q y/y growth in China was 6.7%. The latest reading for July inflation was +1.8% y/y. Inflation is projected to remain relatively stable over the next several years around 2%.

- At its July 28 meeting, the Bank of Japan kept its overnight benchmark rate unchanged at -0.10%, and maintained its monetary base expansion at ¥80trl in spite of disappointing economic conditions. The market was expecting this to increase to ¥90trl (i.e. helicopter money). The BoJ did, however, expand its ETF purchases to ¥6trl from ¥3.3trl, but this underwhelmed the market.
- Japan's economy shrunk by -1.7% in 4Q15 in real terms, but then rebounded to +2.0% in 1Q16 due to stronger private consumption; it's too early to tell if stimulus policies will have a lasting effect. Growth for 2Q16 was 0.2%, slightly weaker than had been expected, suggesting that the first quarter rebound was mostly driven by the weak hand-off. The market is still hoping for more stimulus. The BoJ has vowed to take more action if its 2% inflation target is under threat. The most recent data show industrial production along with exports and imports are weak. Additionally, prices are still lingering in deflation territory.
- According to Macro Strategy's F/X strategist Bipan Rai, Japan's currency has been appreciating for much of the year, which is not constructive for exports or business investment. Both Japanese exports and imports have been declining in percentage terms y/y since the start of 2015. Though Prime Minister Shinzō Abe won a majority in the upper house in early July, both monetary and fiscal expansions announced since have underwhelmed markets. As global uncertainty carries on, the Yen proves to gain strength as Japanese investors draw money out of external markets and repatriate home to preserve capital preservation amidst increasing risk aversion.



GLOBAL ECONOMIC CONDITION INDICES

Manufacturing Index

Source: Bloomberg, Markit, Caixin, JP Morgan Reading above 50 denotes expansion, 50 denotes no change, below 50 denotes contraction

4 Market/Benchmark Analysis (July 2016)

Both stocks and bonds produced decent returns in the month

Since the surprise Brexit vote which caused both bond yields and stock market values to collapse, US and CAN bond yields have traded in a relatively tight lower range. The Canada 10Y has remained near the lows (around 1%), while the US 10Y has bounced about 20bps off the lows to ~1.55%, benefitting from stronger economic data as of late, including a strong July job report. Meanwhile, equity markets have shrugged off any previous geopolitical risk concerns and have recovered strongly. In the end, both bond and stock markets delivered decent returns in July.

Equity Markets

The S&P/TSX returned 3.91% in July, powering ahead after remaining relatively unchanged in June. **With the exception of Energy (-0.40%), all sectors had positive returns.** Energy was impacted by a re-weakening of oil prices. The US oil benchmark WTI fell -US$6.73 to US$41.60/bbl. Meanwhile, Canada's heavy blend benchmark WCS was down a sharper -US$7.68 to US$26.85/bbl with the differential widening by -US$0.95 to -US$14.75. According to CIBC Macro Strategy, the factors behind the drop in oil prices and widening differentials were higher global supply – in part due to stronger OPEC production – high inventories, and some softening in demand. With respect to Alberta oil production, our Institutional Equity Research Group estimates that 100% of previous shut-in production caused by the Alberta wildfires was back online by month-end.

By sector, leading the market higher was **Info Tech (+9.20%), buoyed by Blackberry's turnaround** and other technology growth stocks. Also near the top of the leader board were Industrials (+7.67%) and Materials (+6.95%). All remaining sectors had decent returns as well: Health Care (+6.37%), Consumer Discretionary (+5.56%), Consumer Staples (+5.29%), Telecom (+4.45%), Financials (+3.40%) and Utilities (+2.99%). Interestingly, though, while Info Tech was the best performing sub-sector, the top performing stock was energy company Birchcliff Energy (+37.21%) and the majority of the top 10 were gold and silver mining companies (i.e. Materials stocks).

The S&P500 (SPX) returned 3.69%. **In Canadian dollars, the return was 4.29% on US dollar strength driven more by diverging monetary policy rather than oil prices.** Leading the index higher was the S&P 500 Consumer Electronics Sub-Industry which includes Garmin Ltd. and Harman International Industries. **However, the top performing stock overall was eBay Inc. (+33.11%) on its second quarter beat, upgraded forward-looking guidance, and share buyback; meanwhile the worst performer was Murphy Oil (-13.61%).**

The S&P/TSX Preferred Share Index returned 3.61% in July, lifting the six-month return to a strong +12.25%. The 12-month return is still negative at -2.41%, reflecting the steep losses in 2015. Last year, the index returned a dismal -14.95% as preferred shares suffered from the re-pricing of fixed/floating resets and floating rate issues at historically low rates. Towards the end of last year, tax-loss selling exacerbated the losses.

Bond Markets

The FTSE TMX Canada Universe Bond Index returned 0.84% in July with yields extending their fall following the Brexit vote. The overall benchmark yield dropped -6bps to 1.71%. **By term, Long Canada's (+1.36%) outperformed Mid-Canada's (+0.17%) and Short-Canada's (+0.00%), as curve flattening carried on and the front end of the curve was well-anchored.** The yield changes were: 2Y +2bps to 0.536%; 5Y +2.6bps to 0.595%, 10Y -3.4bps to 1.025%, 30Y -7.4bps to 1.640%.

During July, previously side-lined domestic and international investors were in buying credit spread product, which made the month busy in both primary and secondary markets, in what is usually a quiet time of the year. For international investors, particularly European and Asian that are contending with negative yields, Canada is an attractive place to find high quality bonds (safety) with higher yields. Credit spreads moved tighter, back to the tighter end of the ranges seen in early spring which mark the lows on a year-to-date basis. New issue concessions also moved in tighter.

Looking at the Long-Term Bond Sub-Index, the Provincial (2.43%) and Municipal (2.44%) sub-sectors outperformed Corporates (+1.88%) because of their relatively longer durations and on the tightening of their credit spreads. Credit spreads moved tighter on the month overall. In Corporates, the Communication (+2.42%) and Energy (+2.28%) sub-industries were the best performing industry sectors. Short dated financials were tighter as well with the 5Y Senior Deposit notes in -5-6bps (New Issue Indicative level for a 5Y senior deposit note is now around ~100bps). In July, there was substantial corporate supply in what is

seasonally a quieter month. This has brought the new issue calendar flat on a year-to-date comparison to last year with bank issuance now ahead by about 6% and pure corporates behind 10%. Pure corporates were previously closer to 25% lower than last year. New issue concessions are lower also – in the area of mid-single digits.

In the Provincial sector, ONT 30Y bond spreads were tighter by about -6-7bps after initially moving +5-7bps wider post-Brexit. There was some re-pricing of the rolls (range of widening 0.5-2bps) across the board. **Total provincial supply in July was up substantially at CAD $7.05bln with total combined issuance (inclusive of international foreign currency transactions) at $8.2bln.**

The RRB Canada Index (ModDur 16.03) returned +0.62%, extending its positive streak since February, but again vastly underperforming Long Canadas (ModDur 16.01), which returned +1.36%. Break-evens cheapened further (Bloomberg Generic 30Y breakeven 'CDGGBE30') decreasing -4bps from 1.41% to 1.37%, notwithstanding inflation readings that have remained relatively steady (CPI June held steady at 1.5% y/y). Inflation forecasts from the Bank of Canada and the private sector point to a gradual increase over time in the headline rate as the impact of falling oil tapers off and the Canadian dollar strengthens. The cheapening of RRBs reflects the de-risking by some accounts that have reduced or exited this higher beta segment and the resulting poorer secondary market liquidity from the increased risk aversion, manifesting into much wider bid/ask spreads. **We note that the 10Y RRB break-even is near 1% showing dislocation from much higher realized inflation fundamentals reflecting both investor aversion and apathy in secondary markets.**

The High Yield Bond Index (ModDur 3.87) extended its advances, returning 2.48% in July bringing the six month return to a strong 11.64%. Once again, the High Yield Bond Index handily outperformed both Short and Mid Corporates, which returned 0.25% and 0.56% respectively. Riding on the confidence of firming oil prices (and industry-specific events, i.e. mergers and acquisitions), the Energy sub-sector again was the primary driver (+4.30%) with Paramount Resource bond prices popping 17.37%. Bonds reacted to the sale by Paramount Resources of certain of its oil producing assets to Seven Generations Energy. This strengthened Paramount's balance sheet and liquidity and prompted Moody's to put its Caa2 rating under review for possible upgrade. Other high yield sectors performed as follows: Real Estate (1.71%), Industrial (+2.11%), and Communication (+0.91%). Risk sentiment in the high yield space overall was relatively unchanged over the month.

Long Communication and Energy Bonds Outperform

Federal Conservative Party and New Democratic Party leadership races ground game taking shape

(Macro Strategy, August 17, 2016)

Just under a year since the federal election, when Prime Minister Justin Trudeau's Liberals won a sweeping majority, and the ground game is taking shape for the Conservative Party and New Democratic Party (NDP) leadership campaigns. The Conservative Party of Canada leadership vote will take place on May 27, 2017. So far, there are five declared candidates (Maxime Bernier, Michael Chong, Tony Clement, Kellie Leitch, Deepak Obhrai). Nine more potential candidates have expressed interest, while the media has named five more as prospective candidates. The nomination period closes February 24, 2017. Member of Parliament Rona Ambrose is currently serving as interim party leader following the resignation of former Prime Minister Stephen Harper. Meanwhile, the NDP has announced that the leadership election will take place between October 1 and October 29, 2017. There are no declared candidates. The media has named 18 potential candidates. The last date candidates may register is July 3, 2017. At the April party convention in Edmonton, the NDP voted not to renew Thomas Mulcair's bid as leader after a major defeat in last year's federal election. Both the Conservative Party and NDP will have new leaders in place about two years ahead of the next federal election.

Rural Governments Out Tax Revenue From Struggling Resource Sector

(CBC News, August 15, 2016, Complete story click here)

The impact of low oil prices and a sluggish economy in Alberta continues to spread. The organization representing Alberta's 69 rural governments say some resource companies aren't paying their taxes. Alberta Association of Municipal Districts and Counties (AAMDC) President Al Kemmere says rural municipalities are out hundreds of thousands of dollars in missed payments from resource companies that are insolvent, or that just walk away.

He doesn't have an overall figure, but in Kemmere's own county of Mountain View north of Calgary, there is at least $300,000 outstanding from resource companies. He says the county of Stettler is even taking legal action to seize the assets of a resource company that owes it about $500,000.

The shortchanging by some resource operators is also hitting landowners. Already, 2016 is on track to see a record number of applications from landowners seeking compensation from missed land lease cheques. The Alberta Surface Rights Board (SRB) says this year alone, it has received four times the number of applications compared to a typical year. As of August 3, there were 780 applications opened by landowners who weren't being paid and another 400 applications are in a backlog waiting to be processed.

Federal Briefing Paints Grim Picture of NL Fiscal Woes

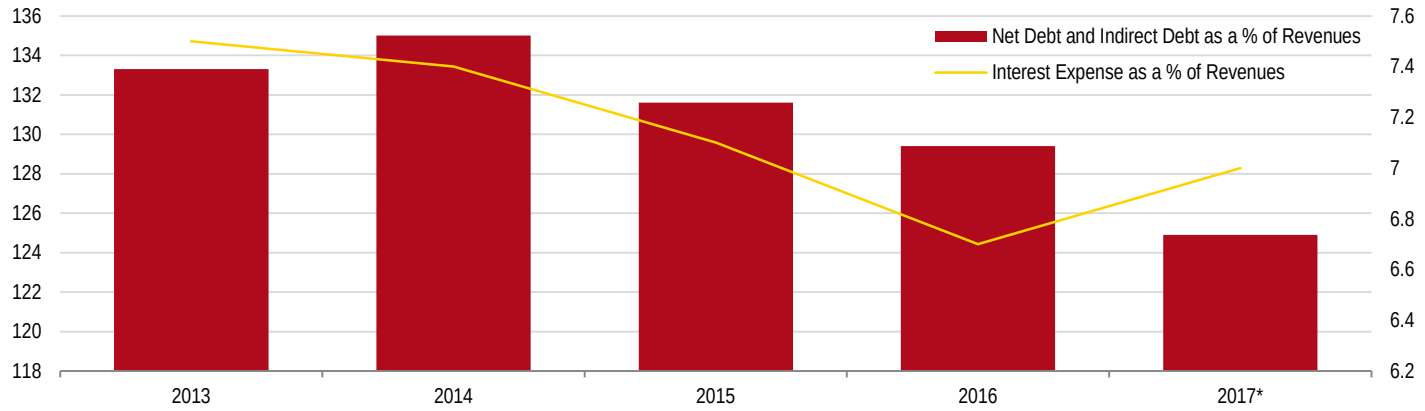
(CBC News, August 15, 2016, Complete story click here)

Briefing materials prepared for federal Finance Minister Bill Morneau in March help crystallize the dire financial situation facing the Newfoundland and Labrador government. The briefing states that, "the sharp drop in commodities prices is further exacerbating the province's economic difficulties by dampening prospects for future projects." They also go on to say that the fiscal outlook "has deteriorated significantly, largely due to the fall in oil prices." While the commodities crisis has directly pummelled the province's finances, its effects out west have been a type of double whammy for the local economy. "The labour market is coming under additional stress as a result of layoffs in Alberta of (Newfoundland and Labrador's) itinerant (i.e. 'fly-in, fly-out') workforce. In fact, the total number of the province's residents that are employed in Alberta, either working directly in the energy sector or in positions strongly tied to it, is nearly double the number of (N.L.) resident workers employed in the energy and mining sector in the province itself." Ottawa estimates that, in 2013, nearly 6% of all employment income reported in Newfoundland and Labrador was actually earned in Alberta.

Quick facts from the report:

- The ratio of net debt to GDP is expected to nearly double to 60% within five years;
- The 2015 unemployment rate was 12.8 %, the worst in the country, and 2.5 percentage points higher than June 2014;
- Newfoundland and Labrador had the lowest ratings of any province in the country among the three major credit ratings agencies.

The briefing note was written on March 10, a month before the Ball administration's inaugural provincial budget jacked up an array of taxes and fees in an attempt to staunch the flow of red ink. Even with all of those new revenue grabs, Newfoundland and Labrador's projected deficit is still expected to come in at $1.83bln. The province has signalled that a series of cost-cutting measures could follow later this year.



Nova Scotia's Aa2 (Stable) Rating Affirmed by Moody's

(Moody's, August 11, 2016)

Moody's has affirmed Nova Scotia's Aa2 (Stable) rating. The long-term debt rating of Aa2 for the Province of Nova Scotia reflects strong debt management practices and policies, considerable policy flexibility over budgetary outcomes and relatively significant levels of funding coming from reliable federal transfers which help stabilize otherwise slightly unpredictable own-source revenues. These elements are offset by low levels of liquidity and a relatively weak economy that constrains revenue growth as well as limiting the debt capacity at the same credit level compared to other wealthier provinces.

As outlined in Budget 2016, Nova Scotia forecasts a return to consecutive balanced budgets beginning in 2016-17. However, Moody's notes that the size of forecasted surpluses are relatively small. As such, the province remains at risk of recording small deficits although if these were to arise, we do not expect them to exert pressure on the province's financial profile. The province's debt burden, measured as a percentage of net debt to revenues, registered 129.4% as of March 31, 2016 and is forecasted to remain fairly stable over the medium term.

Nova Scotia Reports Lower Than Forecasted Deficit for 2015-16

(Nova Scotia, Finance and Treasury Board, August 9, 2016, Complete story click here)

The Following is a press release from the Minister of Finance and Treasury Board

The Province of Nova Scotia reported a deficit of $10.7mln in its Public Accounts for the year ended March 31, 2016. This deficit was $86.9mln lower than the budgeted deficit of $97.6mln and $133.0mln lower than the prior year's deficit.

Government is working to manage revenues and control expenses where it can in order to invest in the priorities of Nova Scotians, such as health care and education. Departments are showing spending restraint as we work to keep controllable expenses on track. I am pleased that progress continues to be made towards meeting our goal of a sustainable balanced budget.

Total consolidated revenues were $10.94bln, an increase of $164.6mln from estimate primarily due to higher than expected revenues from income taxes, provincial recoveries, net income from government business enterprises, and other revenues generated by the province's governmental units.

Total expenses on a consolidated basis were $10.95bln, an increase of $77.7mln from estimate mainly due to costs to establish the new Nova Scotia to Portland ferry, as reported in the final forecast issued in April 2016, and the requirement to record additional liabilities for contaminated sites. These increases were partially offset by savings from delays in projects and lower than expected requests for certain services.

The Province's Net Debt as at March 31, 2016 was $15.1bln. Nova Scotia's growth in real GDP was 0.8% in the calendar year 2015 and an expected 1.3% in the calendar year 2016. Net Debt as a percentage of nominal GDP for 2015-16 was 37.9%, 0.6 percentage points lower than the prior year.

Emails Detail Enron's Role in Setting Up Alberta's Energy Fight

(The Globe and Mail, August 8, 2016, Complete story click here)

As Alberta began deregulating its electricity market in late July, 2000, Enron's chief lobbyist in Canada was getting kudos from head office in Houston for this influence over the entire process. Robert Hemstock was Enron's Canadian head of government relations, the front man in talks with regulators over the structure of Alberta's power purchase arrangements (PPA). The PPAs were the centrepiece of Alberta's landmark move away from a regulated market. A small but crucial provision within them, added at the behest of Enron's Mr. Hemstock, is now at the heart of the Alberta government court action aimed at preventing the holders of now money-losing contracts from walking away from them. The Alberta government says it was unaware of this clause until the spring and that Albertans face up to $2bln of costs being offloaded to consumers as a result of the provision. Late last month, the government launched a lawsuit against three electricity companies who have relinquished PPAs, as well as the provinces own power regulator, among others.

E-mails provided to The Globe and Mail by the Alberta government detail last-minute machinations before the province's first deregulated energy auction began on August 2, 2000. They show the request from Enron to have the provision inserted, followed by memos between Alberta bureaucrats and, finally, celebratory letters sent within Enron. Larry Charach, the bureaucrat in charge of electricity for the energy department at the time, is the central figure in the e-mails. His ministry spearheaded the market deregulation, which Ralph Klein's Progressive Conservative government promised would lead to competition and fairness for consumers. Premier Rachel Notley's government says the documents prove its case that the clause is not valid because it was improperly slipped in at the 11th hour without following necessary protocol.

The government has taken to calling it the 'Enron Clause'. The clause revolves around the insertion of three words: 'or more unprofitable'. After extensive public hearings in 1998 and 1999, the fine print in the pending power contracts stated that companies could back out of the 20-year deals if government policies made them unprofitable. However, the words "or more unprofitable" were added on July 28, 2000, among a shopping list of what were supposed to be quick and relatively minor fixes, according to an internal ministry memo.

Before the change, companies would have only been able to walk away when a government action, such as a heavy carbon tax or large change to the labour code, was solely responsible for making a contract unprofitable. With the change, a company holding a money-losing PPA due to weak market conditions could now abandon it when a government act made it the least bit more unprofitable.

This year, three electricity companies have cited the clause in their decision to hand back PPAs to a public agency known as the Balancing Pool, saying the government's new carbon legislation will cause major losses. The first to do so was Enmax, the City of Calgary's power utility. Mr. Hemstock, formerly of Enron, is now part of Enmax's legal team. The companies contend they have followed the rules and that the government appears to have been ignorant of the policies it is in charge of. The court action names Enmax, TransCanada and Capital Power. It also names electricity generator Atco Ltd., the Balancing Pool, which is a public body and its own power regulator as defendants.

Ontario Releases 2016-17 First Quarter Finances

(Province of Ontario, August 4, 2016, Complete story click here)

The Ontario government released the 2016-17 First Quarter finances and the report confirms Ontario is on track to balance the budget next year, in 2017-18, which will also continue to lower the province's debt-to-GDP ratio.

All expense changes have been accommodated within the current fiscal plan, reflecting the government's commitment to manage growth in spending while protecting services that Ontarians rely on. Changes include increases to support children and youth with autism through the new Ontario Autism Program, funding to support disaster relief for both the Fort McMurray wildfires and Ecuador earthquakes and funding to address urgent health care needs and improve access to care for First Nations peoples primarily focused in the North.

Ontario's net debt-to-GDP ratio is expected to peak at 39.6% in 2015-16, remain level in 2016-17 and begin trending downward in 2017-18. Private-sector forecasters project that, on average, Ontario's real GDP will grow by 2.6% in 2016, up from 2.3% at the time of February's 2016 Budget.

Ontario posted higher real GDP growth in the first quarter of 2016 than Canada, the U.S. and all other G7 countries. While uncertain global growth expectations remain a challenge, Ontario's diversified economy means the province is well positioned to respond to changing global economic conditions. In addition, the government continues to put in place a strategy that promotes economic growth and stability, through investments in business and innovation that allow for Ontario to remain globally competitive.

The government remains on track to generate $5.7bln in net revenue gains over time from its asset optimization initiative. All net revenue gains from the sale of qualifying assets will be dedicated to the Trillium Trust to help fund investments in transit, transportation and other priority infrastructure under Moving Ontario Forward.

Key indicators from the report include:

- Total revenue projected at $130.6bln, unchanged from the 2016 Budget.
- Provincial program expense projected at $122.1bln, unchanged from the 2016 Budget.
- Interest on debt projected at $11.8bln, unchanged from the 2016 Budget.
- A projected deficit of $4.3bln in 2016-17, unchanged from the 2016 Budget.

Foreign Ownership of Residential Properties

(Province of British Columbia, July 26, 2016, Complete story click here)

Updated data on foreign investment show more than $885mln in foreign investment flowed into Metro Vancouver's residential real estate market in just five weeks, representing 86% of the capital invested in the sector by foreign purchasers throughout the province. Beginning August 2, 2016, an additional property transfer tax rate of 15% will apply in Metro Vancouver to purchasers of residential real estate who are foreign nationals or foreign-controlled corporations.

As part of Budget 2016, government began collecting data to identify foreign purchasers, and better understand whether and to what extent foreign capital is having an effect on residential real estate prices. Data collection began June 10, 2016. From June 10 through to July 14, data for all of BC show:

- 19,383 residential property transactions in British Columbia
- 1,276 transactions involved foreign nationals
- This shows a rate of 6.6% of transactions involved foreign nationals
- The total investment by foreign nationals was $1,024,031,118 representing 7.9% of the total investment

Data specific to Metro Vancouver show:

- Metro Vancouver accounted for 49.7% of the real estate transactions in B.C., and 73.3% of transactions by foreign buyers
- By value, Metro Vancouver accounted for a total $8.8bln worth of transactions; foreign purchasers accounted for $885,393,373.
- The average investment by Canadian citizen or permanent resident buyers in Metro Vancouver was $911,425, while the average investment by foreign buyers was $946,945.

While foreign investment in residential real estate markets is only one factor driving price increases in Metro Vancouver, it represents an additional source of pressure on a housing market struggling to build enough new homes to meet demand. The Province's additional tax on foreign purchases will help manage foreign demand while new homes are built to meet local needs.

Action on Foreign Investment, Consumer Protection and Vacancy Puts British Columbians First

(Province of British Columbia, July 25, 2016, Complete story click here)

Legislation introduced creates new measures to help make home ownership more affordable, establishes a fund for market housing and rental initiatives, strengthens consumer protection, and gives the City of Vancouver the tools it requested to increase rental property supply. "Owning a home should be accessible to middle-class families, and those who are in a position to rent should be able to find a suitable home," Premier Christy Clark said. "These changes are about helping to make sure that British Columbians can continue to live, work and raise their families in our vibrant communities.

An additional property transfer tax rate of 15% will apply to purchasers of residential real estate who are foreign nationals or foreign-controlled corporations. The additional tax will take effect August 2, 2016, and will apply to foreign entities registering their purchase of residential property in Metro Vancouver, excluding the treaty lands of the Tsawwassen First Nation. For mixed-use property, the additional tax would apply on the residential component of the foreign interest in a property. For example, the additional tax on the purchase of a home valued at $2mln will amount to $300,000.

The government is creating a new Housing Priority Initiatives Fund for provincial housing and rental programs, which will be announced in the near future. The fund will receive an initial investment of $75mln. It will receive a portion of revenues from the property transfer tax, including revenues from the new additional tax on foreign buyers.

The Province is amending the Real Estate Services Act to substantially implement the key recommendations of the independent advisory group report, and to end self-regulation of the real estate industry. Government has accepted all the recommendations in the report. These changes will increase significantly the superintendent of real estate's authority and oversight.

Amendments to the Vancouver Charter provide the legislative authority for the city to implement and administer a tax on vacant homes. The City of Vancouver will design the framework of the vacancy tax, including details like the tax rate, when it will apply and any necessary exemptions.

"The issue of housing supply and affordability is impacting British Columbians and the livability of our Province, especially the Metro Vancouver region," said Minister Peter Fassbender. "The City of Vancouver has identified the need for a vacancy tax in order to meet rental supply issues. We are taking action by introducing legislation today that enables them to do this work."

The Province is working on additional measures to address the complex causes of rising housing prices in Metro Vancouver, as well as other regions of the province. This work focuses on ensuring the dream of home ownership remains within the reach of the middle class, increasing housing supply, smart transit expansion, supporting first-time home buyers, strengthening consumer protection and increasing rental supply.

Legal Action, New Approach on Power Purchase Agreements

(Province of Alberta, July 25, 2016, Complete story click here)

The following is a press release from the Province of Alberta:

The Alberta government is taking legal action to protect everyday Albertans from having to pay for the business losses of Alberta's biggest and most profitable power companies. These companies have long-term Power Purchase Arrangements (PPAs) with electrical power generators. Under these arrangements, the PPA Buyers have done very well in our province. In fact, since these PPAs were created, the buyers have made an estimated $10bln in profit. Now, because low electricity prices are eating into their profits, the buyers want to walk away from a handful of now-unprofitable PPAs early – which will leave Albertans to cover the cost of their contracted obligations to power generators. Between now and the expiry of the PPAs, those obligations could amount to $2bln.

The PPA buyers believe they can do this because of a secret clause inserted into the arrangements by Enron and the previous government. After months of public hearings and review, the Enron Clause secretly modified what's known as a 'change-in-law' provision that had been developed properly in an open process. The change-in-law provision was originally designed to permit companies to return a PPA to the Balancing Pool if government action made a profitable PPA into an unprofitable one.

Our government believes that regular Albertans shouldn't be on the hook for secret back room deals between companies like Enron and the previous PC government. We think this is not only unfair to Albertans, it's also unlawful. That's why we're going to court. We are asking to the Court to declare that the Enron clause was created unlawfully and is therefore void in law. As a result, we are also asking the Court to overturn the Balancing Pool's use of the Enron clause to accept the return of Enmax's Battle River PPA. The former government worked with lobbyists from Enron, and secretly accepted the clause in question.

First, they omitted the clause in question from over a year of public hearings, consultation and stakeholder review. Then, at the last possible moment – the day before the PPA auction commenced – they inserted the Enron clause into the PPA contract language by way of a letter to the Minister from the Board. Finally, the government and board took steps to hide what they had done from the public by exempting the so-called regulation from standard public disclosure. Their actions were deliberate and we believe unlawful. Most importantly, they were clearly not in the best interests of Albertans. The government knew the public was watching their deregulation of the electricity system closely. They had sold deregulated electricity as a way to transfer financial risk to the private sector in return for giving them the chance to earn greater profit. In secret, they did the opposite – setting up a system where consumers bear all the risk.

We are going to court to protect Albertans as much as possible from the financial burden of these now-unprofitable PPAs. That is our highest priority. To be clear, we know that power companies are major job providers in Alberta, and they are essential to developing a greener electricity system. But market changes that affect profits are part of being in business…and cannot be the grounds for abandoning contracts and passing on the costs. Lower electricity prices are a market response to over-supply. And the fact is that in every case, the PPAs that were returned were profitable in the past, but now unprofitable as a result of market conditions. In closing, Albertans elect governments to protect their interests. The former government forgot that. We won't.

Saskatchewan Reports Fiscal 2015-16 Results

(Macro Strategy, July 22, 2016, Complete story click here)

The province reported a deficit of $1.52bln in F2015-16, a $1.58bln deterioration from the $62mln surplus reported in the previous year and a $929mln erosion from the Adjusted Budget projection of $591mln. The year-over-year decline was mainly due to an increase in pension expense, lower revenue from non-renewable resources and the growth in health care funding costs. The decline was partially offset by higher net income from Government Business Enterprises and higher taxation revenue.

The amounts presented in the F2015-16 budget were adjusted to be consistent with the presentation in the Summary Financial Statements that include a $821mln decrease in the budgeted results, to account for pension costs on an accrual basis, and a $123mln increase to represent 15 months of operations for certain government organizations that changed their year-end from December 31 to March 31 during the year.

The higher pension expense reflects changes in interest rates and other actuarial assumptions that can fluctuate with small changes. The province stated that, "in the prior year, interest rates were at all-time lows and pension mortality studies showed increased life expectancy of plan members. These factors resulted in a significant increase in the pension liability that is being expensed over a short duration starting in F2015-16. The year-over-year increase to pension expense primarily due to these factors is $895 million."

The province projects a smaller deficit of $434mln in F2016-17 and returning to balance in F2017-18. More details are expected in the fall update.

Premiers Strike an Agreement in Principle on Internal Trade

(Canada's Premiers, July 22, 2016, Complete story click here)

Premiers reached an agreement in principle on a new Canadian Free Trade Agreement (CFTA). The CFTA is a ground-breaking agreement that will support their vision for promoting trade, investment and labour mobility across provincial and territorial boundaries, as part of a broader economic vision for Canada

Its achievements include broad coverage of the Canadian economy, reduced regulatory burden and enhanced procurement opportunities. Unlike the previous Agreement on Internal Trade (AIT), this agreement will be based on a "negative list" approach, where all government measures will be covered unless specifically excluded.

Premiers noted the agreement includes the establishment of a working group on alcoholic beverages, which will explore opportunities to improve trade in beer, wine, and spirits across Canada. This agreement will replace the AIT and enhance trade between provinces and territories.

The previous agreement only covered specific sectors, while the new agreement will apply to virtually the entire Canadian economy, with any exceptions explicitly identified. This will bring unprecedented transparency to how provinces, territories and the federal government regulate the movement of goods, services, investment and labour across the country

Key highlights include:

- Support for Innovation - The new agreement ensures open access to new products and services that will benefit Canadians. Since the initial internal trade agreement was signed more than 20 years ago, technology has advanced and commercial innovations have multiplied. Trade in new goods and services will be supported by the rules of the new agreement, promoting long-term economic development.
- Increased Consumer Choice - The agreement's rules will apply to the entire Canadian economy. As a result, consumers can expect to access a wider range of goods and services that are produced in other provinces and territories. This will benefit consumers by providing them with more choice in Canadian-produced goods and services.
- Improved Access for the Services Industry Across Canada - The agreement will result in better and more transparent access to services (e.g., real estate, telecommunications, and engineering). For instance, residency requirements in a number of provinces and territories will be improved to provide greater access, making it easier for service suppliers to expand their operations

Provinces and territories have agreed to reduce unnecessary differences in regulations identified as barriers to trade which can raise operating costs for companies. The agreement will establish a new mechanism to address these barriers, which will help eliminate burdens in a range of areas. These could include the hours truckers can operate their vehicles in other provinces, the shipping of equipment across Canada, and the freer flow of gasoline across the country. The agreement contains a robust process to address these barriers. It has rules to promote regulatory cooperation that will enable common approaches to new regulatory areas, such as emerging technologies.

Overall, provinces and territories have agreed to substantially expand access to their individual government procurement. This will provide a more level playing field for Canadian suppliers by expanding access to contracts tendered by all levels of government and will open up procurement markets to competitive bidding by Canadian businesses, increasing choice and value for taxpayers. Provinces and territories have also agreed to a more transparent and effective dispute resolution process for procurement for provincial, territorial and federal government purchases.

Power Plant Boondoggle Tests Trudeau's Green Energy Commitment

(Bloomberg, July 22, 2016)

Canadian Prime Minister Justin Trudeau is considering a request to guarantee new debt offerings to finish an over-budget and delayed hydroelectric project, a test of his support for low-emission energy development. The estimated cost of the Muskrat Falls project in Newfoundland and Labrador has ballooned to $11.4bln from $7.4 bln – meaning, on a per-capita basis, Canada's lightly populated easternmost province is spending more on a single electricity project than the U.S. government is projected to spend in its entire 2017 budget. That's on top of a large deficit and heavy debt load that prompted Moody's Investors Service to downgrade the province.

Canada's federal government already guaranteed $6.3bln in initial bonds for Muskrat Falls. Now Trudeau, whose predecessor made the decision to back the debt, is being asked to extend the guarantees for all or part of $4bln needed to finish it. Yet Muskrat Falls has become, by the admission of the man now tasked with finishing it, a boondoggle. The power plant still has no firm export contracts for the surplus power, said Stan Marshall, CEO of Nalcor Energy, the provincial Crown corporation behind the project.

In December 2013, the federal government guaranteed $5bln in bonds for Muskrat Falls and the Labrador Island Link transmission project. In April 2014, it guaranteed another $1.3bln for the Maritime Link. That backing has made a difference–the bonds are above-average performers in 2016, returning between 6.2% and 6.7%.

"We certainly are looking for the federal government now to see if they would be willing to revisit the loan guarantee" and add to it, Newfoundland Finance Minister Cathy Bennett said in an interview. "Hopefully we'll hear something later on this year as to the federal government's position. I'd certainly be very optimistic." A spokeswoman declined to say whether the province wants the full $4 billion guaranteed.

The request puts Trudeau in an awkward spot – saying yes may provoke a backlash among voters already concerned about the federal government's debt, or from other regions looking for guarantees; saying no could lead to the collapse of the project and leave the feds on the hook to bondholders. Trudeau's debut budget earlier this year pledged nearly $120bln in deficit spending over six years in a bid to spur growth. He has also made green power a priority, announcing alongside U.S. President Barack Obama and Mexican President Enrique Pena Nieto last month in Ottawa that the three nations hope to generate half the continent's electricity from emissions-free sources – including hydro – by 2025.

That pledge will put pressure on Trudeau to support Muskrat Falls, even as Newfoundland's economy slumps amid low oil prices and a substantial forecast debt load – the highest in Canada, according to Moody's.

Moody's Downgrades Newfoundland and Labrador to Aa3 Negative

(Macro Strategy, July 21, 2016, Complete story click here)

Credit Implications: Negative

Credit Ratings: DBRS A(low) stable, Moody's Aa3 negative, S&P A negative

Moody's downgraded the Province of Newfoundland and Labrador's long-term debt rating to Aa3 from Aa2. The rating outlook remained "negative".

The rating action reflects the province's weak fiscal forecast over the medium-term. Moody's states, "The principal driver of the downgrade to Aa3 from Aa2 is the weak fiscal forecast the province faces over the medium-term and resulting increase in debt burden and interest expense. The province is facing deep deficits caused by the significant decline in the price of oil starting in mid-2014. Newfoundland and Labrador is expected to have posted a very high deficit of $2.2bln (37.3% of revenue) in 2015-16, and has budgeted for deficits of $1.8bln (27.0% of revenue) and $1.1bln (14.3% of revenue) in 2016-17 and 2017-18 respectively."

The negative outlook reflects "…the execution risk the province faces in achieving its budget targets, which could lead to further fiscal deterioration from lower than anticipated deficit reduction or higher than expected debt accumulation. The negative outlook also reflects the forecast that Newfoundland and Labrador will have fully exploited its fiscal flexibility across the medium-term, once the budget plan is fully exercised."

Ontario and First Nations Announce Agreement-in-Principle for Sale of Hydro One Shares

(Province of Ontario, July 12, 2016, Complete story click here)

The Province and First Nations in Ontario, as represented by the Chiefs-in-Assembly, announced an agreement-in-principle for the province to sell to First Nations for their collective benefit, up to approximately 15mln shares of Hydro One Limited (2.5% of the total current outstanding common shares), depending on the level of First Nation participation.

This agreement-in-principle demonstrates the goodwill envisioned by the Political Accord to promote stronger economic relations and is one of many steps on Ontario's journey of healing and reconciliation with Indigenous peoples. If ratified, this new arrangement will provide meaningful opportunities to First Nations for collective wealth creation and to advance economic development initiatives. Each First Nation will have up to two years from signing of binding agreements to decide whether to participate in this arrangement. All First Nations in Ontario are invited to participate. A minimum threshold of 80% First Nation participation by the end of 2017 is required for this transaction to close.

If the agreement is ratified, Ontario would sell the shares to a new investment vehicle owned collectively by First Nations. This purchase would be financed with a 25-year loan from the Province of up to approximately $268mln, depending on the level of First Nation participation. The interest rate for the loan would be at the Province's relevant borrowing rate, plus 15 basis points. The shares would be sold at $18 per share, which is above the Province's book value for the shares. Ontario would also provide seed capital to a new First Nation investment fund of up to $45mln in cash, depending on the level of First Nation participation, over the initial three years.

Ontario and the Chiefs Committee on Energy, on behalf of First Nations, began engaging in discussions regarding potential equity ownership as part of the initial stages of the Initial Public Offering (IPO), as described in the October 2015 Hydro One Limited Supplemented PREP Prospectus.

Quick facts:

- The Chiefs-in-Assembly established a Chiefs Committee on Energy to undertake this initiative on behalf of the 133 First Nation communities in Ontario.
- The Ontario government will remain the largest shareholder of Hydro One Limited, and by law no other shareholder or group of shareholders is permitted to own more than 10%.
- Hydro One rates will continue to be set by the independent regulator, the Ontario Energy Board.
- Net revenue gains from the Province's public sales of Hydro One Limited common shares will be dedicated to the Trillium Trust to help fund infrastructure projects that will create jobs and strengthen the economy.
- Ontario is making the largest investment in public infrastructure in the province's history – about $160bln over 12 years for projects such as roads, bridges, transit systems, schools and hospitals. This investment is supporting 110,000 jobs every year across the province. In 2015, the government announced support for more than 325 projects that will keep people and goods moving, connect communities and improve quality of life.

Attachments:	Copy of Net Debt - Scenarios- incl revised TCA pension hydro adj May 30 2018.xlsx

Hi Gadi

Because the base now includes the cumulative effect of the pension adjustment which accounts for the difference. However, there appears to be an error since the attached, pls refer to the "Lead" tab), is what we provided this morning and that is not reflected in the PP presentation. We will touch base with Fiscal to see why our numbers were not included or whether they made any adjustments on their own.

Thanks

Ken k

Subject: CIN Note

Hi Serena

Can you pls email me the CIN note from last week.

Thanks

Ken K

~~August~~ October 6~~1~~9~~8~~9, 2016

BORROWING AND DEBT

What is the status of Ontario's borrowing and debt management plan? And how does Ontario's debt compare to other jurisdictions?

SUGGESTED RESPONSE

Debt-to-GDP

- The legislated pension adjustment for the 2015-16 Public Accounts resulted in the n~~N~~et debt-to-GDP increasing to ~~was~~40.9 per cent. ~~in 2015–16 as per the 2015–16 Public Accounts.~~ If not for this adjustment the ratio would have remained level with 2014-15 at 39.4 percent. ~~The ratio is~~ forecast to be~~expected to peak remain at 39.656 per cent in 20156–167, remain unchanged in 2016–17, and begin to decline in 2017–18, based on revised estimates per 2015-16 Public Accounts.~~ Based on the 2016 Budget the net debt-to-GDP ratio is expected to peak in ~~Fiscal years~~2016–17 and begin to decline from 2017-18 onwards.~~onwards are 2016 Budget projections and will~~ These projects will be updated with the release of the 2016 Fall Economic Statement.
- The legislated pension adjustment that increased accumulated deficit and in turn net debt by $10.7 billion in 2015-16 has no impact on the Province's total debt or current and future borrowings.
- The government is forming an independent expert panel to deliver advice and recommendations to the government as to the application of public sector accounting standards to Ontario's pension assets. The report is expected later this year.
- Compared to other Provinces, Ontario's net debt-to-GDP was one of the lowest in 2001-02, and worsensed after the financial crisis with the second highest net-debt-to-GDP ratio in 2011–12. However, Ontario has sinced improved with the ratio falling back to mid-range levels, and is expected to rank fourth in 2016–17.
- **We will maintain a rigorous approach to control program spending to reduce Ontario's net debt-to-GDP ratio to its pre-recession level of 27 per cent.**
- **The first very important step in returning to a 27 per cent ~~the~~ net debt-to-GDP ratio ~~to its pre-recessionary levels~~ is to balance the budget in 2017–18.**
    - **Debt is incurred primarily for two reasons: to finance deficits and invest in capital assets.**

Commented [KK1]: I am not including the actual ratio since its lower than the 40.9 so using "peak" may not be appropriate.

Commented [KK2]: I have taken this straight from the News Release yesterday

- In the first few years after the global recession in 2008–09, the increase in net debt was primarily due to the deficit.
- As outlined in the 2016 Budget, the government is committed to eliminating the deficit by 2017–18 and remaining balanced in 2018–19.
- Once a balanced budget is achieved, the increase in net debt will be limited to the net investment in tangible capital assets.

- **We are making the biggest investment in public infrastructure in Ontario's history. We have a plan to invest more than $137 billion over the next 10 years, or about $160 billion over 12 years, starting in 2014–15. This is a strategic investment will grow the economy and create jobs.**
  - In June 2016, the International Monetary Fund (IMF) released a report recommending that Canadian "fiscal policy should be pro-growth." ~~It stated that "the federal government has fiscal space and its plans to increase infrastructure spending in the 2016 Budget are appropriate."~~ Christine Lagarde, Managing Director (IMF) also expressed her support for the government's growth strategy and agreed that investment in infrastructure should be an essential element of the strategy.
- **Our plan is to first balance the budget while continuing to make strategic investments in capital assets. These infrastructure investments will stimulate economic growth, resulting in GDP growing more quickly than debt, and thereby lowering the net debt-to-GDP ratio.**
- **With capital investments, the net debt-to-GDP ratio will come down more quickly than it would have without these investments in capital assets.**
- **Capital investments are amortized over the useful life of the assets. Once a balanced budget is achieved, the increase in debt will be limited to the difference between the cash investment to build assets, and the amortization, which is a non-cash amount.**

Commented [KK3]: Isn't this point stated earler, if so can be deleted.

Borrowing Program

- **Long-term borrowing for 2016–17 is forecast to be $24.4 billion when factoring in $2.0 billion pre-borrowed in 2015–16. This will be the Province's smallest borrowing program since 2007–08. As of ~~August~~ October 6~~1~~9~~8~~9, 2016, the Province had borrowed $13.3~~1~~0~~.6~~ billion for the fiscal year.**

- **Through prudent and cost-effective debt management, we have consistently kept interest on debt costs below budget projections.**
- **Canada and Ontario 10-year interest rates have fallen to record lows recently. As well, Ontario interest rate spreads relative to Canada have fallen since the 2016 Ontario Budget.**
- **Term extension has allowed us to take advantage of and lock in low interest rates for a longer period, which reduces refinancing risks and helps offset the impact of expected higher interest rates on interest on debt costs. As of ~~August~~ October 6~~1~~9~~8~~9, 2016, the average term for new borrowing in 2016–17 was 15.36~~7.1~~ years compared to 8.1 years in 2009-10.**
- **Going back to the beginning of fiscal 2010–11, we have issued $59.1 billion of bonds longer than 30 years to lock in low rates. We are consistently making strategic and prudent decisions that will benefit the Ontario economy and ensure fiscal security.**

CURRENT STATUS

Ontario versus Other Sub-Sovereigns

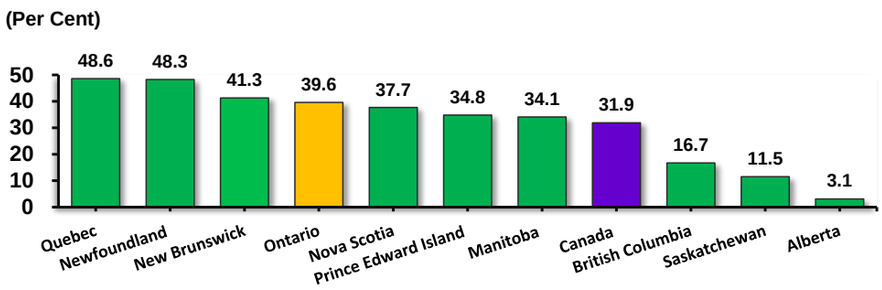
On October 6, 2016, the Globe and Mail published an article comparing the debt situation of Ontario and interational sub-sovereigns.

Ontario and other sub-national governments are not directly comparable. Canadian provinces are, in many ways, more like small sovereign nations than other regional governments. For example, Ontario has a governance and legislative structure that provides it with more flexibility to manage its fiscal situation. Moreover, Ontario has more diverse, broad based sources of revenues, which means that the revenue base is much less volatile than other sub-sovereigns.

In a Moody's report dated October 3, 2016, the rating agency agreed that "Canadian provinces' substantial fiscal flexibility allows them to support higher debt burdens than regional governments in many other countries. Ontario's debt as a proportion of revenues remains below the upper limit of about 300% for German Länder."

Moody's also stated that even though Ontario's "debt issuance will continue, the growth of debt will be reduced and will be lower than that of revenue growth over the medium-term, resulting in a declining trend for the province's debt burden." They also believe that "Ontario's debt burden and debt service costs will remain manageable thanks to low interest rates, as well as the province's improving fiscal position and conservative debt management policy."

FAO Commentary on Ontario's Provincial Debt



On July 19th, the Financial Accountability Officer released a commentary on Ontario's Provincial Debt, the commentary's key messages were as follows:

- The Government of Ontario's debt burden is one of the highest among provincial governments in Canada

    - Response: The FAO's commentary is based on data from 2014–15. Using more recent information, Ontario's net debt-to-GDP ratio ranks 4th after Quebec, Newfoundland & Labrador and New Brunswick in 2016~~65~~–17~~67~~.

    - Ontario's net debt as a share of GDP is projected in the 2016 Budget to ~~remain at~~be 39.~~66~~5 per cent ~~through~~ in 2015~~56~~–16~~67~~ and ~~into~~begin to decline in 2016~~67~~–17~~78~~, ~~based on revised estimates per 2015-16 Public Accounts~~as per 2016 Budget forecasts.

Projected Net Debt-to-GDP Ratio by Jurisdiction, ~~2015-16 and~~ 2016–17

Source: Budgets. Updates and Public Accounts; Conference Board of Canada.

- The Province's market debt consists of publicly held bonds, treasury bills, and US commercial paper issued in Canadian dollars and foreign currencies. The effective interest rate on the publicly held debt is 3.6 per cent.

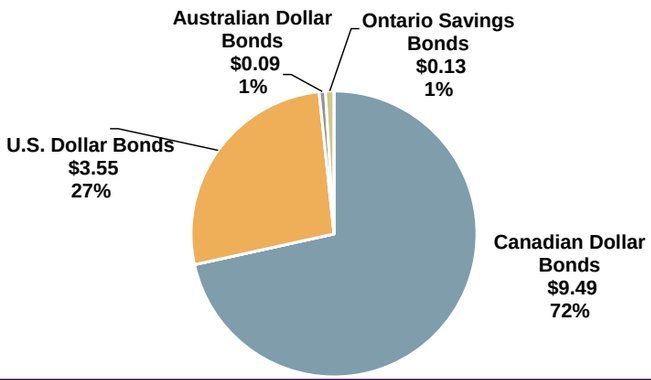
    - Response: Going back to the beginning of fiscal 2010–11,the Province has issued $5~~98~~.1~~4~~ billion of bonds longer than 30 years to lock in low rates. Term extension has allowed us to take advantage of and lock in low interest rates for a longer period, which reduces refinancing risks and helps offset the impact of expected higher interest rates on interest on debt costs. As of ~~AugustJuly~~ October 6~~19~~8, 2016, the average term for new borrowing in 2016–17 was 15.3~~6.1~~ years compared to 8.1 years in 2009~~–~~-10.

- There is uncertainty surrounding the future level of interest rates due to market fluctuations and Ontario's credit risk. All else equal, an increase in interest rates would lead to higher interest payments, which would reduce the Province's fiscal flexibility.

    - Response: Through prudent and cost-effective debt management, the Province has consistently kept interest on debt costs below budget projections.

Commented [KK4]: Comment for Bonnie, Do we need to include the teram "credit risk" I would prefer to take it out.

- Canada and Ontario 10-year interest rates have fallen to record lows recently. As well, Ontario interest rate spreads relative to Canada have fallen since the 2016 Ontario Budget.

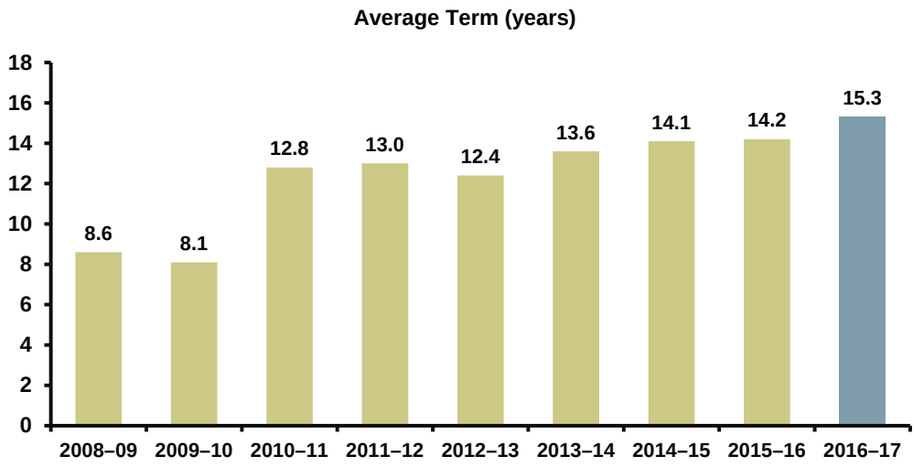


Borrowing Program

Long-term borrowing for 2016–17 is forecast to be $24.4 billion when factoring in $2.0 billion pre-borrowed in 2015–16. This will be the Province's smallest borrowing program since 2007–08.

As of ~~August~~ October 6~~1~~98~~9~~, 2016, the Province had borrowed $1~~1~~3.3~~0~~.~~6~~ billion for the fiscal year. Approximately 73~~65~~.5 per cent~~%~~ of this year's borrowing-to-date has been completed in Canadian dollars. The remainder of the Province's borrowing-to-date has been completed in international currencies through U.S. dollar global bonds, and Australian dollar Kangaroo bonds.

Canada and Ontario 10-year interest rates have fallen to record lows recently. As well, Ontario spreads relative to Canada have fallen since the 2016 Ontario Budget.



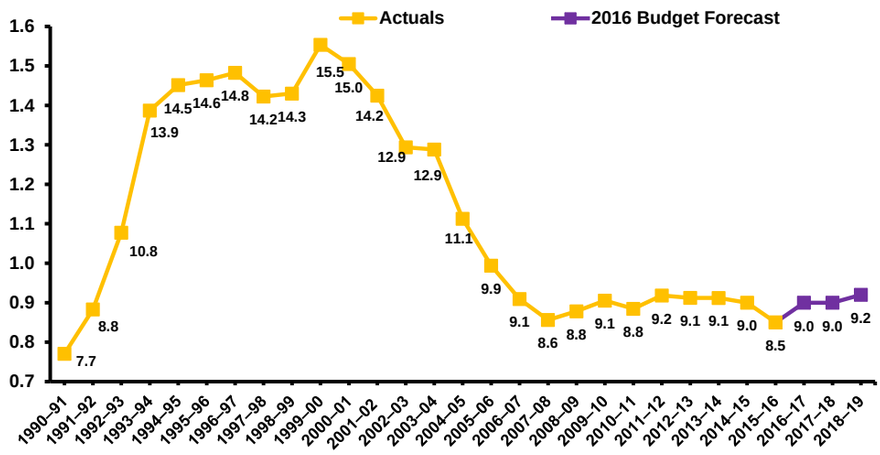
2016–17 Borrowing Completed: $13.3~~1~~0~~.6~~ billion

Note: Numbers may not add due to rounding

The Province may revise its Canadian dollar borrowing target of 75 per cent published in the 2016 Budget if international demand for Ontario bonds outpaces domestic demand.

Going back to the beginning of fiscal 2010–11, we have issued $59.1 billion of bonds longer than 30 years to lock in low rates. Term extension has allowed us to lock in low interest rates for a longer period, which reduces refinancing risks and helps offset the impact of expected higher interest rates on interest on debt costs. As of ~~August~~ October 6~~1~~8~~9~~, 2016, the average term for new borrowing in 2016–17 was 1~~6~~5.3~~7.1~~ years.

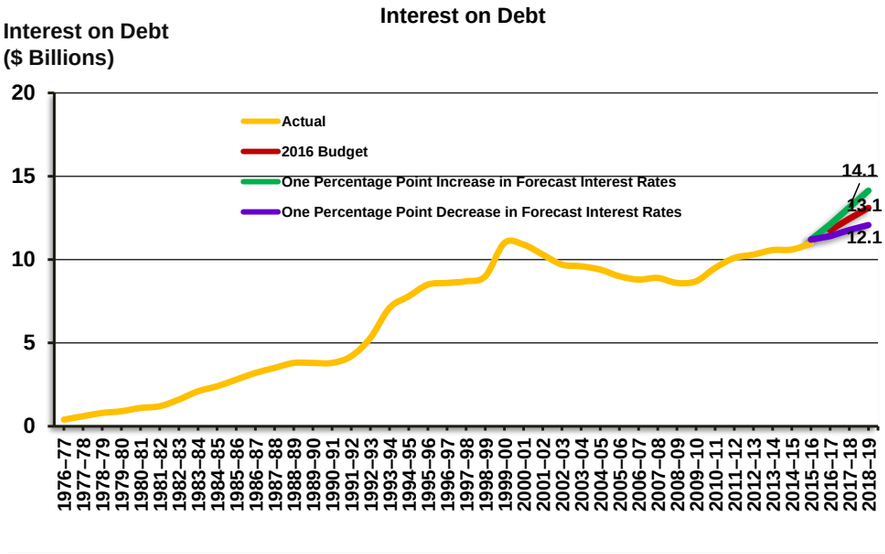
Interest on Debt



Ontario's interest on debt (IOD) is projected to remain at $11.8 billion for 2016–17, rising to $12.5 billion and $13.1 billion for 2017–18 and 2018–19, respectively.

Although IOD increases from 2014–15 to 2017–18, it remains relatively constant as a percentage of government revenue. IOD-to-revenue falls to 8.~~9~~95% in 2015–16 and is projected to remain at 9.0% over 2016–17 and 2017–18. As such, the increase in IOD has no impact on the Province's path to balance since its proportionate share of revenue is relatively constant. This ratio remains well below the peak reached in the mid-1990s because of the low interest rate environment over the past decade. IOD as a percentage of revenue is lower today than it was 10 years ago, in spite of more than a $1~~4~~5~~0~~3 billion increase in net debt over that period.

The *2010 Budget* forecasted that, by 2016–17, the Province would have to spend 11.7 cents of every revenue dollar received on interest. The current forecast is 3.5~~2.7~~ cents lower, at 8.5 ~~9.0~~ cents of interest costs for every dollar of revenue. This ratio is the lowest it has been after 1990-91 ~~lower than it was in the 1990s and 2000s,~~ and is forecast to remain lower through the outlook period to ~~in~~ 2018–19.

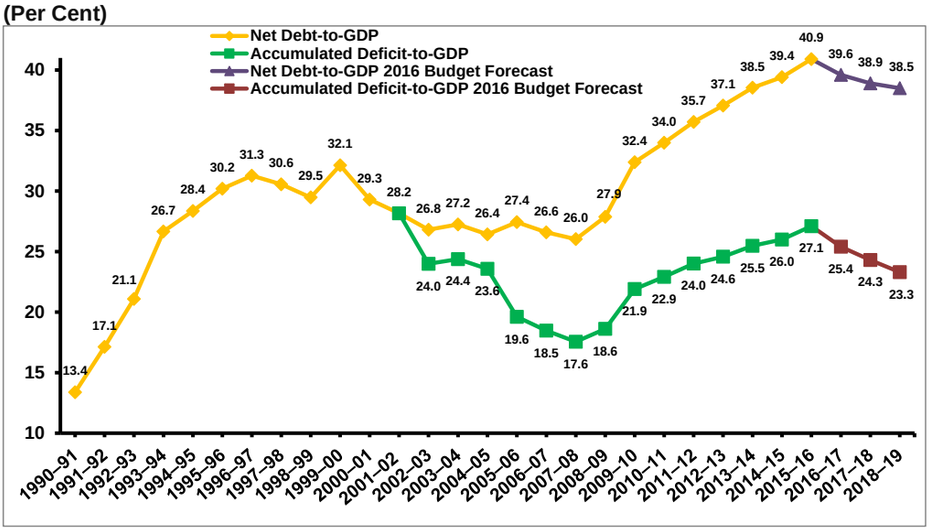


Interest on Debt-to-Revenue Ratio

(Per Cent)

The Province's IOD is sensitive to interest rate fluctuations. A one percentage point change in interest rates would result in a change in Interest on Debt (IOD) of approximately $350 million in 2016–17, rising to $1.03 billion in 2018–19 alone. Rising IOD costs could crowd out spending on government priorities.

Interest on Debt



Net Debt-to-GDP

The government's strategy of enhancing GDP growth by investing in capital infrastructure has contributed approximately $90 billion to the increase in net debt over the last 13 years. Over the medium-term, net investments in capital assets will contribute over $26 billion to the total increase in net debt of close to $311 billion, based on ~~revised estimates per~~ 2015-16 Public Accounts.

Commented [SL5]: To be confirmed.

Net Debt-to-GDP and Accumulated Deficit-to-GDP

(Per Cent)

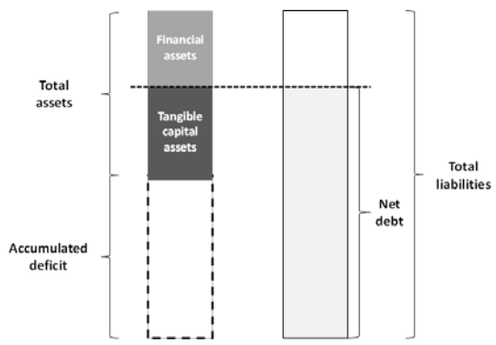
Debt Management

The Ontario Financing Authority uses a number of financial instruments, including options and swaps, to prudently manage risk. These financial instruments, or derivatives, are used primarily for hedging purposes and do not create net leverage. They are used to transform the cost of borrowing into Canadian dollars and foreign currency exposure from bond issues not denominated in Canadian dollars.

BACKGROUND

The three commonly used indicators of a government's financial and debt position are net debt, total debt, and accumulated deficit. Credit rating agencies and investors place the greatest emphasis on net debt. 2015–16 numbers are as of Ontario's 2015–16 Public Accounts and include the impact of the legislated pension adjustment. Fiscal years 2016–17 onwards are 2016 Budget projections and will be updated with the release of the 2016 Fall Economic Statement.

Net debt is the difference between the Province's total liabilities and financial assets. Ontario's net debt is projected to increase from $~~296.14.9~~305.2 billion as at March 31, 2016 to $30~~78.38.13~~ billion as at March 31, 2017, and $31~~66.95.97~~ billion as at March 31, 2018 and $32~~66.85.86~~ billion as at March 31, 2019~~, based on revised estimates per 2015-16 Public Accounts~~. ~~-~~The increase in net debt primarily reflects the projected deficit, plus the increase in tangible capital assets of the Province. Financial markets use Net Debt as their primary measure because it represents the Province's future revenue requirements to pay for past transactions and events.



Total debt is the sum of the Province's total borrowings including Ontario Electricity Financial Corporation and agencies. Total debt ~~is projected to~~ increased from $315.0 billion as at March 31, 2015 to $~~325~~327.~~43~~ billion as at March 31, 2016. This increase w~~as~~~~ill be used~~ mainly due to fund the ~~projected~~

deficits and the government's capital investments. Canadian dollar denominated debt represents 81 per cent of the total debt ~~projected~~ as at March 31, 2016.

Accumulated deficit represents the sum of all deficits and surpluses. The accumulated deficit ~~is projected to increase from~~was $~~193~~2.~~4~~202.7 billion as at March 31, 2016. ~~-~~As per 2016 Budget projections, accumulated deficit is forecast to be~~to~~ $~~197~~197.86.~~87~~ billion as at March 31, 2017~~, based on revised estimates per 2015-16 Public Accounts,. Also, based on the revised estimates,~~ A~~accumulated deficit is projected to be~~ $~~197.7~~197.7~~6.6~~ billion as at March 31, 2018 and remain unchanged as at March 31, 2019.

Accumulated deficit is not widely used in the financial markets, as it excludes debt raised for capital expenditures.

Net debt, Accumulated Deficit and Tangible Capital Assets

NET DEBT AND INTEREST ON DEBT: 1993-2018

	Net Debt ($ billions)	Net Debt (% of GDP) [5]	Interest on Debt ($ billions)	Interest on Debt (% of Revenue)[1]

Thanks Gadi, no material changes from the previous version.

As per Tim's request yesterday, Daniel provided all of the Pension adjustment references in our chapter to Ronald Jaikaran. Apparently all references from all chapters will be provided to you, Tim and a few others to review for consistency.

Subject: Cabinet FES Deck

Hello

Please find attached a revised FES deck that could track into Cabinet next week, reflecting edits from our joint DM briefing this morning and feedback from Ali and Liz late this afternoon.

Note that the plan right now is to have Minister Sousa present the entire deck, but end at the last chart in the deck and turn it over to Minister Sandals to make some comments.

I'll be forwarding this deck to TBS and mentioning that approach as well.

Briefing for the Minister is planned for late Monday and we will have speaking notes ready for that.

Subject: RE: Changes from MMP
Date: Tuesday, October 25, 2016 12:09:19 PM

Correct, in this instance the reserve decreases by $600 and non-cash also decreases by the same amount, hence all else being equal borrowing should increase by $600.

However, because the Pension Adjustment has no cash impact, non-cash actually increases by a net of $1.6B (2.2 less 0.6) and theoretically we can decrease borrowing by the same amount.

But because of the risk I mentioned in my previous email, for now and subject to your instructions, we have limited potential changes to the 16-17 borrowings to a max of the $1.5 billion, again detailed in my previous email..

So if, based on the results of the independent review, the Government simply reverses the Pension Adjustment and the additional flexibility converts to a smaller 16-17 deficit, we have essentially pre-funded to the tune of approximately $1.6B.

Our pre-funding will of course decrease on a dollar for dollar basis dependant on how much of the flex is used for funding other priorities.

Happy to discuss, Gadi

Thanks

Ken k

But we're using the reserve to reduce the deficit in scenario 3, so, if all else remained the same and this was the only change, wouldn't the borrowing program have gone up?

>> On Oct 25, 2016, at 10:14 AM, Ken Kandeepan <Ken.Kandeepan@ofina.on.ca> wrote:
>>
>> Agreed Gadi, when I look at the placemat that you forwarded today, for 16-17 it makes sense to assume that the CIT and HST increases ($600M) will translate into actual cash as will the almost $400M decrease in IOD. When combined with the revenue increases in 15-16 that will flow in this year there is around $2 billion offset by the $500M increase in capital investments for net $1.5B.
>>
>> The risk here is if the independent review supports the Government's position re pension adjustment (as I fully expect it to), suddenly there is considerable flexibility in the 16-17 fiscal plan and with it the temptation to use this flexibility in addressing government priorities, most if not all of which will require actual cash.

Not really Gadi, re the reserve, we never borrow for the reserve (its removed in the non-cash adjustments) we do however, borrow for the C- Fund so no change there.

Thanks

Ken k

I agree with all of that, particularly leaving the future borrowing programs untouched. One other offset for this year is the reduction in the reserve, which will result in another partial offset to the reduction in this year's borrowing program, won't it?

Agreed Gadi, when I look at the placemat that you forwarded today, for 16-17 it makes sense to assume that the CIT and HST increases ($600M) will translate into actual cash as will the almost $400M decrease in IOD. When combined with the revenue increases in 15-16 that will flow in this year there is around $2 billion offset by the $500M increase in capital investments for net $1.5B.

The risk here is if the independent review supports the Government's position re pension adjustment (as I fully expect it to), suddenly there is considerable flexibility in the 16-17 fiscal plan and with it the temptation to use this flexibility in addressing government priorities, most if not all of which will require actual cash.

With regard to 17-18 and 18-19 the prudent approach may be to wait till the Document to make changes in borrowings.

Thanks

Ken k

Cc: Christina Zhang <Christina.Zhang@ofina.on.ca>
Subject: RE: Changes from MMP

Correct, in this instance the reserve decreases by $600 and non-cash also decreases by the same amount, hence all else being equal borrowing should increase by $600.

However, because the Pension Adjustment has no cash impact, non-cash actually increases by a net of $1.6B (2.2 less 0.6) and theoretically we can decrease borrowing by the same amount.

But because of the risk I mentioned in my previous email, for now and subject to your instructions, we have limited potential changes to the 16-17 borrowings to a max of the $1.5 billion, again detailed in my previous email..

So if, based on the results of the independent review, the Government simply reverses the Pension Adjustment and the additional flexibility converts to a smaller 16-17 deficit, we have essentially pre-funded to the tune of approximately $1.6B.

Our pre-funding will of course decrease on a dollar for dollar basis dependant on how much of the flex is used for funding other priorities.

Happy to discuss, Gadi

Thanks

Ken k

But we're using the reserve to reduce the deficit in scenario 3, so, if all else remained the same and this was the only change, wouldn't the borrowing program have gone up?

Press Releases

[dbrs.com]

DBRS Comments on New Brunswick's 2015-16 Results and Impact of Accounting Changes on Debt

DBRS Limited (DBRS) has today commented on the Province of New Brunswick's (the Province or New Brunswick) recently released 2015-16 Public Accounts, which show a modest improvement in fiscal performance; however, accounting changes related to the recognition of pension plan obligations and the consolidation of not-for-profit nursing homes have led to a higher debt burden. DBRS currently rates the Province at A (high) and R-1 (middle) with Stable trends and notes that these accounting changes do not alter the medium-term outlook for New Brunswick's credit profile.

For the year ended March 31, 2016, final results, including accounting changes noted below, point to a DBRS-adjusted debt burden of 43.9% of gross domestic product (GDP) compared with 41.8% of GDP anticipated at the time of the last review. Despite the step-up in debt, DBRS's medium-term expectations have not changed. DBRS continues to expect a gradual improvement in fiscal results and a stabilization of the debt-to-GDP ratio just above 44% in 2017-18; however, should the economy underperform expectations or fiscal targets prove challenging to achieve, this would present downside risks to the ratings.

The 2015-16 Public Accounts, released on September 30, 2016, show that fiscal performance exceeded expectations. For the year ended March 31, 2016, the Province reported a deficit of $260.5 million compared with an estimated shortfall of $466.4 million at the time of DBRS's last review in April 2016. The bulk of this improvement is the result of a $100 million contingency reserve that was not required. In addition, after accounting for the impact of consolidation changes, revenues were largely on track with plan while spending was lower. After making adjustments to recognize capital spending as incurred rather than as amortized, this equates to a DBRS-adjusted shortfall of approximately $405 million, or 1.2% of GDP.

In recent years, the Province has made substantive changes to its primary public-sector pension plans to address concerns around longer-term sustainability. Most significantly, the Province converted them to a shared-risk, or target-benefit, model from the traditional defined-benefit model. The effect of these changes has been to provide greater certainty and predictability to annual pension expenses and to reduce the pension-related risks borne by taxpayers. Notwithstanding that the plan structures did not change in 2015-16, the Province has revised its accounting treatment for the plans after receiving a qualified audit opinion in 2014-15. New Brunswick is now using defined-benefit accounting instead of defined-contribution accounting as used in the previous year, resulting in a $220 million increase in pension liabilities and a corresponding increase in DBRS-adjusted debt. As noted in DBRS's April 11, 2016, rating report on the Province, the Public Sector Accounting Board is undertaking a review of pension accounting standards with an emphasis on seeking agreement about how to account for hybrid pension plans. A resolution is not expected for several years.

In addition to the pension plan accouning change, the Province now includes not-for-profit nursing homes in the government reporting entity. The effect of this change has been an increase to both revenues and expenditures as well as the recognition of $448 million in third-party mortgages, which has resulted in a corresponding increase in the DBRS-adjusted debt burden. In practice, third-party nursing home debt was already being serviced through the Province's nursing home funding model. To DBRS's knowledge, other provinces do not consolidate not-for-profit nursing homes, although it does appear that the Province exercises somewhat greater control over this sector relative to peers.

I have made some edits plus a couple of comments for your consideration. John and team pls review my edits and if you haven't done so pls check the net debt numbers and ratios. Perhaps we should include another footnote for the table at the end indicating that the 2015-16 net debt includes $10.7 billion by way of the legislated pension adjustment.

Thanks

Hello everyone,

Here's an updated Debt CIN, using PA numbers for 15-16 and Budget 2016 numbers for 16-17 onwards.
If everyone could please review by EOD, that'd be great. Revisions could be made directly on the document:

http://portal.ofina.on.ca/sites/ceo/CIN%20Central/Debt%20Management%20CIN%20-%20October%206%202016.docx

Thank you!
Serena

Subject: Debt CIN

Hello everyone,

Here's an updated Debt CIN, using PA numbers for 15-16 and Budget 2016 numbers for 16-17 onwards.
If everyone could please review by EOD, that'd be great. Revisions could be made directly on the document:

http://portal.ofina.on.ca/sites/ceo/CIN%20Central/Debt%20Management%20CIN%20-%20October%206%202016.docx

Thank you!
Serena

Subject:	RE: Debt CIN
Date:	Friday, October 07, 2016 2:39:01 PM

We just noticed that the IOD section refers to an increase of net debt by over $15 billion. In response, we added a zero, so that it now reads $150 billion.

Best regards

Alex

Subject: RE: Debt CIN

I have made some edits plus a couple of comments for your consideration. John and team pls review my edits and if you haven't done so pls check the net debt numbers and ratios. Perhaps we should include another footnote for the table at the end indicating that the 2015-16 net debt includes $10.7 billion by way of the legislated pension adjustment.

Thanks

Ken K

There's a small error in slide 9, George will fix it and provide you with the revised numbers, once you get them pls incorporate and forward to Gadi.

Thanks

Ken k

Hi Gadi,

Please find attached the debt deck and the provincial comparison deck for this afternoon's meeting.

Thanks,
Serena

					2016-17 FES - Excluding Pens
			Scenario		What is the change in GDP that wi
2016-17 GDP			797,623		
2016-17 Net Debt to GDP %			0.3853		
2016-17 Net Debt			307,353		
			Net Debt to GDP		Scenario GDP
by up	0.10%		307,353	=	797,284.00
	38.55	0.3855	0.3855000		
by down	0.10%	0.3844	307,353	=	799,482.00
	38.44		0.3844402		

Scenario		What is the change in net debt hol result?
		Change in Net Debt
Projected ND	+	131
Projected ND	-	-715

Draft wording for slide 4:

For 2016-17, the net debt-to-GDP ratio is

An increase of $131 million to net

A decrease of $715 million to net

Since the 2016-17 net debt-to-GDI
38.6% versus the larger changes re

ion Adjustment (adj 2015/16)

ll make the Net Debt ratio change by 0.1%?

Actual Projected GDP	GDP Variance	GDP Variance %
797,623.42	(339.42)	-0.04%
797,623.42	1,858.58	0.23%

lding GDP constant that will yield the same

Scenario Net Debt	Scenario Net Debt to GDP	Rounded	Target
307,484	38.550022%	38.55%	38.55
306,638	38.443956%	38.44%	38.44

38.53%

debt or a decrease of $399 million in nominal GDP would increase the net-debt-to-GDP ratio to 38.55%

debt or an increase of $1,859 million in nominal GDP would decrease the net-debt-to-GDP ratio to 38.4

P ratio was 38.53% smaller changes to net debt or nominal GDP resulted in changing the net debt-to-GD
equired to lower the ratio to 38.4%.

.

4%.

The Expert Panel on pensions (I believe unofficially) will side with the government, but I don't know when they'll release their report as it was kind of confidential around OPCD last week. Furthermore, while it's assumed that we will reverse out the pension adjustment, it might not happen automatically, given we will face another unqualified opinion if we do. Senior management and political staff will have to make that decision soon.

Subject: Debt Management CIN

Good morning,

There has been a request to update our Debt Management CIN.

I don't think there have been any changes to the debt/IOD numbers (current numbers as of FES 2016), but please review and confirm by end of day **Thursday**.

The bullet referencing the independent expert panel on Ontario's pension assets may need a refresh.

Date: Sunday, January 22, 2017 9:46:31 AM
Attachments: image001.png

Hi Gadi

Went through the 2 slides, the pension adjustment is still included as an expense and the second slide indicates that DRC is not available from 19-20 onwards, it should be from 18-19 onwards since the industrial portion is eliminated as of April 1, 2018. IOD savings are accurate for 18-19, as expected nothing is listed for the final out year.

Thanks

Ken K

Subject: Details of 18-19 and 19-20

Hello

Part of moving the fiscal conversation forward to the next step will be helping people better understand the fiscal composition of 18-19, as well as what we are facing in 19-20. Think I've spoken to all of you about this around MMP and subsequent to that.

We've prepared the attached piece to help acclimatize people to it and to help answer some basic fiscal architecture questions.

Could you please review and let me know by Monday if there things we need to tweak, or additional details worth highlighting? I'd like to share with DM's and our MO early next week.

Have a great weekend

Subject: RE: Estimates Briefing Book Part I and Part II Review - Due Friday

Hi John,

RE: **STATUS OF ONTARIO DEBT Financial Tables**

Is OFA in position to share the financial tables on the Status of Ontario Debt financial tables. These are to be included under the Treasury Section in Part II of the Estimates Briefing Book. (Starting on Page 147 of the attached)

We are planning on sharing the final edits to the EBB with all program areas for a final review as soon as possible as we are anticipating the final printed estimates will be tabled early, possibly next week, at which point we will have 10 working days to submit the final EBB.

Can you please provide the updated financial tables before the end of this week (Friday).

Please let us know if any questions or concerns.

Regards,
Luxman

Hi John,

Thank you for the updates. We will incorporate the changes you've shared.

Quick question - Can you please confirm if there are no changes for Treasury Section, (starting on page 147), if those approvals are coming separately can you please advise when we can expect that piece.

Thanks again,
Lux

Luxman,

Apologies for the delay. We had Budget crunch this weekend.

Please see attached.

Thanks.

John

Subject: Estimates Briefing Book Part I and Part II Review - Due March 9

Hi everyone,

Further to Resource Management Committee's review of the structure for Part 1 (Public portion) of the 2018-19 Estimates Briefing Book (EBB), we are now proceeding to incorporate program input to the narrative for Part I and Part II.

The Part I themes align with the ministry's 2018-19 Program Review, Renewal and Transformation (PRRT) submission. Outcomes have been extracted from the Program Notes and highlights and achievements, also submitted by program areas, have been used to populate the 2017-18 Annual Report.

Program areas should review the narrative and provide edits to the relevant sections of the book, including:

- Ministry Overview
- Program Outcomes Supporting the Ministry's Plan
- Highlights of 2017-18 Achievements
- Agencies, Boards and Commissions
- 2017-18 Achievements

For Part II, please review and provide edits to each of your Vote/Item and program descriptions and functions. Note that Vote descriptions should match those provided

for Stage 1 of the Pro Forma, and CPFB has incorporated edits to the Vote descriptions received to date.

Financials will be added by CPFB following the 2018 Budget, and the full book will again be provided to programs for a final review of narrative and allocations.

We ask that you provide Program Head approved edits on both parts of the EBB, in 'track changes', to Luxman Paramasivam and myself by **Friday March 9, 2018**.

Please don't hesitate to contact us if you have any questions.

Cheers.

Barry S. Misener

Ministry of Finance

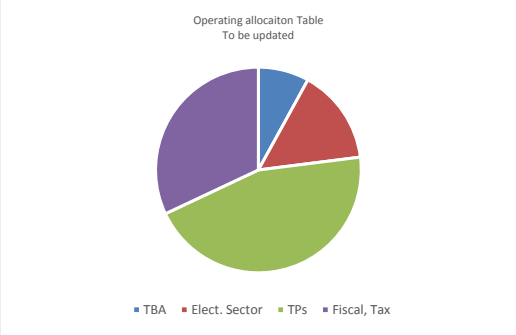
MINISTRY OVERVIEW

MANDATE

The Ministry of Finance's mandate is to help foster a dynamic, innovative and growing provincial economy and to manage the government's fiscal responsibilities as well as financial and related regulatory affairs of the province.

MINISTRY CONTRIBUTION TO PRIORITIES AND RESULTS



Through its mandate, the ministry works to support government's priorities which include fairness for Ontario families, creating a dynamic and competitive business environment and investing in people's talents and skills.

Commented [MB(1]: FES pgs. Vi, xi.

The ministry works with the Treasury Board Secretariat to manage the Province's $XXX.X billion[1] in annual expense and oversees $XXX.X billion[2] in revenue raised through taxation, Government of Canada transfers, provincial business enterprises, and other non-tax revenues. It also manages the Province's $XX.X billion[3] borrowing program.

In addition, the ministry supports government-wide initiatives and provides key fiscal, taxation, statistical and economic policy advice to the Minister of Finance, Cabinet committees and the Premier. It also regulates the financial services sector through its agencies.

The ministry provides leadership in transforming Ontario's public services, helping to develop new strategies, policies and processes designed to drive government-wide efficiencies and enable modernization initiatives, while also remaining focused on implementing measures that meet annual budget targets.

[1] 2018 Ontario Budget
[2] 2018 Ontario Budget
[3] 2018 Ontario Budget

PROGRAM OUTCOMES SUPPORTING THE MINISTRY'S PLAN

Financial/Economic Stewardship

Office of the Budget

- Works with other program areas and central agency partners to provide analysis and advice to the Deputy Minister, Minister, and government on the development of the fiscal plan, federal-provincial fiscal arrangements, and policy initiatives.
- Supports the development of fiscal assumptions, narratives and underlying initiatives that effectively articulate / balance the government's policy and fiscal priorities in the context of the annual Budget, the Economic Outlook and Fiscal Review, the Quarterly Finances and other key publications.

Office of Economic Policy

- Provides timely advice to government on emerging economic trends and issues.
- Ensures increased access to relevant information, evidence-based analysis, research and advice on matters that impact Ontario's economic and fiscal agenda. This includes providing better economic information available for long-term planning purposes.
- Develops new Ontario level data and datasets to support research. This ensures more effective research, analysis and policy advice on Ontario's economy.
- Works to ensure a sustained "top ten" ranking for the Toronto region's financial services sector among international financial centres.

Ontario Financing Authority

- ~~Initiates~~ Develops and manages the ~~the~~ ~~successful execution of the~~ Province's borrowing requirement. This includes managing the Interest on Debt (IOD) expense which in previous fiscal years up to 2017-18 has consistently generated ~~and in the process~~ consistently generating savings in relation to the budget.
- Issues Green Bonds of approximately $1 billion per annum to fund capital initiatives that are aimed at reducing greenhouse gases.
- Supports the servicing and paydown of OEFC's legacy debt and liabilities related to the former Ontario Hydro, including the reduction of OEFC's unfunded liability ("stranded debt") as reported in OEFC's annual financial statements.
- Dedicates and tracks net revenue gains raised through asset optimization and to track the drawdown of those amounts for allocation to the government's infrastructure investment program.

Policy/Program Delivery Leadership

Office of Tax, Benefits and Local Finance

- Increases the effectiveness of compliance by using a risk-based approach to focus appropriate resources on the right taxpayers.
- Integrates benefits delivery to improve client access and drive administrative efficiencies.
- Increases the overall effectiveness of the collections process at recovering outstanding accounts receivable.
- Ensures the CRA is accountable for administration of Ontario's taxes and benefits including costs recovered for enhanced services.
- Optimizes revenue integrity largely through fee-for-service investments for enhanced compliance activities.
- Ensures broad compliance and compatibility with the Tobacco Tax Act (TTA) while supporting First Nations economic development and diversification.
- Ensures only tax compliant businesses will be able to enter into agreements or receive financial assistance from the provincial government, resulting in greater confidence that public funds are rewarding legitimate operators, and not contributing to underground economic activities.
- Ensures the reduction in underground economy activity, through new avenues of investigation into noncompliance, particularly in high-risk sectors, through partnering with other regulatory / compliance organizations (such as the Ministry of Labour).
- Achieves education property tax gross revenue growth of at least 0.50% annually.
- Provides advice to the Minister of Finance on fiscal arrangements with municipalities, as well as oversight with respect to provincial-municipal financial strategies and policy priorities.
- Ensures that the OMPF grant is responsive to changes in municipal circumstances and continues to target funding in a fair and transparent manner. Targeted funding is provided to support Ontario municipalities facing the most challenging fiscal circumstances.
- Provides informed, evidence-based advice and options on matters that impact Ontario's corporate, commodity and personal tax system.
- Ensures the strengthening of Ontario's tax competitiveness for business investment, while enhancing and modernizing supports for individuals and families.

Office of Regulatory Policy and Agency Relations

- Advise the government on matters related to income security and pension policy so that they can make informed policy decisions.

- Ensures the Province satisfies its investment and governance obligations with respect to Hydro One.
- Provides recommendations and policy and financial analysis with respect to multiple sectors including Steel sector negotiations, affordable housing and artificial intelligence.
- Continues to generate significant revenue through OLG while supporting the government's commitment to create a dynamic business environment and stronger economy while delivering gaming in a socially responsible manner.
- Ensures the selling of beverage alcohol in a socially responsible manner, while providing funds that have been used to support key government priorities such as health care, education and skills training, and infrastructure and transit investments.
- Implements Ontario's cannabis retail and distribution model, ensuring safe and controlled sales that keep cannabis products away from youth, reduce the illegal cannabis economy and control cannabis price in order to advance policy goals.

Other key transformational activities include:

- Providing program areas, line ministries and central agency partners with additional support in priority-setting, policy development and longer-term planning.
- The creation of a new Ontario Statistics Office which provides leadership on data management, modelling and analytics, and statistical policy.
- Innovatively mitigating the risk of debt issued in foreign currencies.
- Initiating administrative improvements to support the ongoing integrity of the $7B in provincial Education Property Taxes (EPT) by further enhancing the tracking and analysis of these revenues.
- Reengineering revenue processing, image capture and data entry business processes that enables e-services and procuring a new system solution to support transformation.
- Establishing the Financial Services Regulatory Authority — a new, flexible and innovative financial services and pension regulator that will strengthen consumer, investor and pension plan beneficiary protection.

HIGHLIGHTS OF 2017-18 ACHIEVEMENTS

The Ministry of Finance performs a variety of critical roles, focused on supporting effective economic, fiscal and financial management for a stronger Ontario. Its 2017–18 achievements include:

Delivering on the Balanced Budget Plan

The ministry was active in a variety of sectors that enabled the government to restore balance to the Province's finances in 2017–18. Through targeted, measured and fiscally responsible decisions, the province's fiscal and economic strength has been restored.

Supporting a Dynamic Business Climate

To improve the province's overall business climate, the ministry supported a variety of initiatives that make Ontario an attractive environment for business investment.

Strengthening the Financial Services Sector

The ministry led a variety of initiatives focused on enhancing the province's financial services sector.

Building Retirement Security

The ministry led the implementation of a variety of pension reform measures aimed at improving the adequacy and coverage of pensions in Ontario.

Addressing the Underground Economy

The ministry led several innovative pilots and projects aimed at ensuring all citizens pay their fair share of taxes as well as enhancing the competitiveness of legitimate businesses.

Working with Indigenous Partners

The ministry continued to take the lead in government dialogue with First Nation communities and leaders on tobacco, gasoline and the energy sector for mutually beneficial outcomes for the province and First Nation communities.

Facilitating Openness and Accountability

The ministry continued to further strengthen transparency, financial management and fiscal accountability to ensure Ontarians receive the best value for their tax dollars.

Further detail of the ministry's achievements can be found in the Appendix: 2017-18 Annual Report.

Appendix: 2017-18 Annual Report

Ministry of Finance

2017-18 ACHIEVEMENTS

In 2017-18, the Ministry of Finance engaged in a number of activities to achieve its key priorities. These highlights of the ministry's achievements include:

1. Delivering on the balanced budget plan

Fiscal Framework

- Led the development, and provided strategic oversight of the fiscal plan including tracking the government's progress in meeting fiscal targets with key partners at the Treasury Board Secretariat and Cabinet Office. Reported on the fiscal plan through the Budget, Quarterly Finances, Economic Outlook, and Fiscal Review and Public Accounts.
- Delivered the 2017 Ontario Economic Outlook and Fiscal Review, the 2017-18 First and Third Quarter Finances and the 2018 Budget that supports the government's commitment to a balanced budget.
- Advised on Ontario's fiscal relations with the federal government and maintained contact with federal, provincial and territorial finance partners to advance Ontario's fiscal priorities.
- Completed the final share offering of Hydro One which exceeded its objective to raise $9 billion in gross proceeds and other revenue benefits. This includes $4B in net revenue gains that will be invested in infrastructure and $5B to reduce debt.

Transforming Government and Managing Costs

- Implementation and administration of the Ministry of Community and Social Services Basic Income Pilot program which will assess whether a basic income can better support vulnerable workers, improve health and education outcomes for people on low incomes, and help ensure that everyone shares in Ontario's economic growth.
- Development of a Benefits Finder online tool which is intended to provide streamlined online access to user-specific program and eligibility information for many provincial income-based benefit programs. Client research was initiated Spring 2016, and the results are being used to inform the next steps of the Benefits Finder. Launch is anticipated for Winter 2017-18.

Taxation Policy

- With other provinces, territories and the federal government, improved the Tax Collection Agreement to ensure it reflects Ontario's interests.
- Implemented a Senior's Public Transit Credit to help Ontario's seniors participate in community life, making public transportation more affordable for them.

- To support the ongoing integrity of education property tax revenues, MOF maintained the adjustment to education property tax rates, as announced in the 2016 Budget.
- Provincial Land Tax reform has significantly increased tax fairness and reduced inequities in how services are paid for in the North, and changes to rates have generated a revenue increase of about $15 million by 2017.
- Implemented measures to address unsustainable demand, support housing affordability and modernize the Land Transfer Tax (LTT) including:
  - introduced a 15 per cent Non-Resident Speculation Tax as part of Ontario's Fair Housing Plan.
  - doubled the maximum LTT refund to $4,000 for eligible first-time homebuyers
  - restricted eligibility criteria for the LTT refund for first-time homebuyers to Canadian citizens and permanent residents to better target the refund, and
  - increased certain LTT rates and adjusted parameters to better reflect the real estate market.
- The province has provided Transition Mitigation Payment assistance to eligible municipalities where revenue implications of the tax exemption of all charitable and non-profit long-term care homes represents a more significant proportion of the municipality's total revenue base.

Borrowing and Debt Management

- Through the Ontario Financing Authority (OFA), continued to efficiently manage the Province's borrowing program.
- Completed the government's annual borrowing program, capitalizing on low interest rates and a strong demand for Ontario's bonds in 2017-18, borrowing $33.9 billion, an increase from the $26.4 billion forecast in the 2017 Budget. As of March 5, 2018, the Province had pre-borrowed $~~8.1~~11.5 billion for 2018–19.
- ~~Completed the government's annual borrowing program, capitalizing on low interest rates and a strong demand for Ontario bonds in 2017-18, borrowing $XX.X billion, and increase/decrease from the $XX.X billion forecast in the 2017 Budget.~~
- Issues Green Bonds of approximately $1 billion per annum to fund capital initiatives that are aimed at reducing greenhouse gases. To date, total Green Bond issued amounts to $~~23~~.05 billion, of which $~~1.77~~2.27 billion allocated to Metrolinx for clean transportation projects, including $~~1.2~~1.6 billion allocated to the Eglinton Crosstown LRT project.
- Through prudent and cost-effective debt management and the projected surplus ~~lower than forecast deficits,~~ interest on debt expense savings of $~~0.X~~ 281 million of which $209 million was fiscally neutral, ~~billion~~ was achieved in 2017-18.

2. Supporting a dynamic business climate

Policy/Taxation Measures

- The Renewed Advisory Outreach Strategy was developed to help educate the public and to make it easier to understand Ontario's tax laws and benefits programs.
- The current agreement with the CRA for enhanced audit activities to address aggressive tax planning and the underground economy has generated over $1B to date as of Q1 2017-2018 since 2013, a 5.3:1 return on investment.
- Ran a successful, large scale, open competitive procurement to establish new contracts with four private collection agencies which allows MOF to focus on newly delinquent accounts. In fiscal 2017-18 PCAs collected over $XX.XM for the province.
- As a result of collections efforts, $XXX.XM in outstanding tax receivables and $XXX.XM in outstanding non-tax receivables were collected in fiscal 2017-18 on approximately $X.X billion in outstanding receivables and overpayments across the OPS.
- Led implementation of the new Student Loan Rehabilitation Program on behalf of the Ministry of Advanced Education and Skills Development (MAESD) to help student loan debtors bring their loans back into good standing. A total of 2,348 student loan debtors enrolled in the program as of September 2017.
- Operationalized the expansion of the Refund Set-Off (RSO) program to include tax statutes for individuals (e.g. RST, Gas Tax, Tobacco Tax, Land Transfer Tax, etc.) In 2017-18 Ontario recovered $XXM through RSO and has 18 active programs registered including Ontario Student Loans and Ontario Disability Support Program.
- As part of Ontario's Fair Housing Plan, the Province is introducing legislation to empower the City of Toronto, and potentially other interested municipalities, to introduce a vacant homes property tax to encourage property owners to sell unoccupied units or rent them out.
- Initiated a review of the property taxation of multi-residential apartment buildings to improve housing affordability in the rental market. While the review is under way, the Province has frozen the municipal property tax burden for existing multi-residential properties in communities where these taxes are high.
- Conducted a review and consultations on the property tax treatment of small-scale value-added and commercial activities on farm properties.
- Engaged former Cabinet Minister John Wilkinson to lead consultations and develop recommendations on the valuation and tax classification of landfills. The ministry developed complex new regulations and worked with MPAC and municipalities to support the successful implementation of this new approach in time for the 2017 tax year.
- The Ontario Municipal Partnership Fund (OMPF) has been redesigned to target funding to municipalities with the most challenging fiscal circumstances.
- Implementation of the 15% Non-Resident Speculation Tax (NRST) on the purchase or acquisition of an interest in residential property in the Greater

Golden Horseshoe (GGH) by individuals who are not citizens or permanent residents of Canada or by foreign corporations and taxable trustees.
- Partnered with the CRA and Airbnb to educate Ontarians who engage in home-sharing about their rights and responsibilities and raise awareness of tax obligations.
- Support the restructuring of Stelco through 3 loans, providing funding assistance to OPEB, Stelco and Landco.

Alcohol and Gaming (Ministry, LCBO and OLG)

- Continued the modernization of the alcohol and gaming sectors and increased provincial revenues within a framework of social responsibility.
- Continued to introduce the sale of beer, cider and wine into grocery stores, giving consumers more choice and convenience. There are now up to 275 grocery stores authorized to sell beer and cider.
- Announced the Ontario Small Cidery and Small Distillery Support Program, which will invest $7.2 million over three years to support small cider and small spirits producers.
- To balance opportunities for Ontario's domestic wine suppliers, the bag-in-box assortment is being expanded at the LCBO.
- Continue work on legislative amendments to permit the sale of International-Canadian Blends (ICB) wine at all on-site stores.
- Implemented the Spirits Tax which replaces the LCBO's mark-up commission structure for spirits and spirits coolers sales at on-site distillery retail stores.
- The Ministry of Finance is proposing a safe and sensible approach to the retail and distribution of recreational cannabis, overseen by the LCBO through a subsidiary corporation. Ontario`s approach would meet high standards of control and social responsibility, while responding to consumer demand and eliminating the illegal market.
- The modernization of OLG's land-based gaming sector will expect to have assumed control of six (6) bundles, with procurement for other regions in progress.
- Continuing with the integration of horse racing with OLG's gaming strategy by providing policy support and oversight over the Horse Racing Partnership Plan (HRPP), and sectoral consultations regarding a future long-term funding model that will help drive sustainability within the industry.

Economic Analysis, Reporting and Policy Advice

- Provided analytical, policy and research support to the Premier's Office, Cabinet Office and ministries on a number of priorities, including the Business Growth Initiative, the Highly Skilled Workforce Expert Panel Report, the Poverty Reduction Strategy and the Changing Workplace Review Panel.

- Renewed a three-year agreement with the Toronto Financial Services Alliance to support the organization's strategic objective to grow the Toronto region as a global financial hub and cluster.
- Reviewed investment proposals under the government's Jobs and Prosperity Fund and regional programs.

3. Strengthening the financial services sector

- Led support of the multi-phased transition to the Financial Services Regulatory Authority of Ontario (FSRA).
- Led the development of legislative amendments regarding the structure and powers of the Financial Services Tribunal (FST) based on government's commitment in the *2017 Ontario Budget*.
- As part of implementing the recommendations from the review of the Credit Unions and Caisses Populaires Act, 1994 (CUCPA), released a consultation paper on a proposed capital adequacy framework for adopting internationally accepted (Basel III) capital standards for Ontario credit unions.
- Work to implement recommendations to reform the auto insurance system to improve health outcomes and lower costs to achieve more affordable auto insurance for Ontarians.
- Advanced work towards finalizing the Cooperative System legislation and initial regulations, governance structure and accountability framework.
- Consulted with stakeholders and the public on a report by Ontario's advisor on auto insurance, David Marshall, that recommends transformative steps to reduce auto insurance costs and improve health outcomes for those injured in collisions.
- Worked with partner ministries and stakeholders on developing a new women's economic empowerment strategy that addresses the gender wage gap and accelerates greater representation of women on boards.

4. Building retirement security

- Provided analysis and advice on the government's review of federal and provincial income security programs.
- Worked closely with the Ministry of Community and Social Services to support the development and launch of a Basic Income Pilot.
- Developed, managed and phased-out the Transition Fund that provided health benefits to retirees of United States Steel Canada as part of the Stelco Companies' Creditors Arrangement Act process.
- Introduced legislative and regulatory amendments to the rules governing the merger of single employer defined benefit pension plans that provide additional flexibility to plan administrators structuring mergers.

- Announced a comprehensive package of pension reforms to help make workplace pension plans more sustainable, including the Solvency Funding Framework and the Target Benefit Multi-Employer Pension Plan Funding Framework.
- Strengthened the powers of the Superintendent of Financial Services, including making regulatory changes to set out a regime for administrative monetary penalties in the pension sector.
- Brought forward regulatory changes necessary to support the Superintendent in managing the cash flows in the Pension Benefits Guarantee Fund.

5. Addressing the underground economy

- A project office was established to implement a sales integrity pilot project to combat electronic sales suppression.
- Currently working with the Ministry of Health and Long Term Care and Public Health partners on a cross–designation pilot project to take enforcement action under the Tobacco Tax Act and/or the Smoke Free Ontario Act.
- Provincial oversight of Raw Leaf Tobacco (RLT) has also been enhanced to more effectively monitor its movement through the supply chain by implementing raw leaf tobacco baling or packaging and labelling requirements to impede its flow to unlicensed manufacturers. In July 2016, regulations regarding the tagging of RLT bales came into effect.
- Negotiated new fee-for-service agreements with the Canada Revenue Agency to protect Ontario revenue including enhanced compliance measures (e.g., auditing) and a service level agreement for underground economy specialist teams.
- New risk models were developed and implemented in the Flexible and Integrated Risk System (FAIRS) that enhance the risk analysis methodologies used to conduct evidence based decision making for the effective allocation of resources to high risk areas in audit and inspections.
- Addressed underground economic activity through a public awareness campaign targeting multiple high-risk sectors, including home renovation, and partnered with the Ministry of Transportation on a pilot project to determine the tax compliance of construction subcontractors the ministry procured.

6. Working with Indigenous partners

- Continued engagement with First Nations to identify mutually-beneficial solutions to tobacco on-reserve. This includes discussions on self-regulation and revenue-sharing.

- The Ministry continues to work closely with various law enforcement agencies such as the RCMP and the OPP to reduce the presence of unregulated tobacco in Ontario.
- Signed definitive agreements with First Nations in Ontario to sell to First Nations for their collective benefit, shares of Hydro One Limited.

7. Facilitating openness and accountability

- Provided advice and support to other ministries to ensure an open and productive relationship with the Financial Accountability Office.
- Initiated the development of new ways to deliver data and statistical services that are efficient, cost-effective and transparent in support of evidenced-based decision-making and advancing the government's commitments to Open Government and collaboration with external experts and academic institutions on difficult policy challenges.
- Capitalized on new methods of public and stakeholder participation in the Ontario pre-budget consultation and budget development processes.
- Implemented the recommendations of the Special Purpose Business Property Assessment Review report for the 2016 reassessment (2017 tax year) in collaboration with the Municipal Property Assessment Corporation, municipalities and other stakeholders. These are expected to increase the transparency, accuracy and predictability of property assessments, reducing the number and impact of appeals, and promoting greater revenue stability from the $27 billion shared property tax base.
- Provided additional property tax flexibility to enable municipalities to better tailor programs to reflect their local needs and circumstances, while ensuring the property tax system continues to remain fair and competitive.
- Reported on the Trillium Trust to help support public transit, transportation and other priority infrastructure projects.

Part II: 2018-19 Detailed Financials

Ministry of Finance

12 – MINISTRY OF FINANCE

The Ministry of Finance supports the economic, fiscal, financial, and taxation policies and strategies of the Government of Ontario, and oversees the Province's borrowing and debt management program. The ministry administers a number of tax statutes, tax credits and benefit programs, and produces the provincial budget. In conjunction with Treasury Board Secretariat, the ministry also manages the Consolidated Revenue Fund and fiscal and financial policies of the Government of Ontario, and reports on financial matters. The ministry also develops policies for Ontario's financial services sector and supports the regulation of financial services institutions and intermediaries carrying on business in the province. In addition, the ministry manages Ontario's fiscal relationship with the federal government, other provinces and Ontario's municipalities, reports on the Trillium Trust, and oversees agencies accountable to the Minister of Finance. The Ministry also reports on economic and demographic developments in the province and provides analytical support and policy adXCZavice on these topics as well as statistical issues and trends that affect Ontario's economic growth and job creation.

[Table to be inserted by CPFB]

VOTE/ITEM: **1201-1 Sub-Item 1**

VOTE: **Ministry Administration**

ITEM: **Main Office**

TYPE: **Operating Expense**

SUB-ITEM DESCRIPTION

This sub-item includes the offices of the Minister of Finance, the Parliamentary Assistant and the Deputy Minister. The staff provide professional and technical support for the legislative policy making and administrative responsibilities of the Minister and the Deputy Minister.

FUNCTIONS

The Main Office is responsible for:

- overseeing ministry operations and adherence to corporate policies and directives;
- providing a leadership role in supporting broader government priorities including transformational policy changes that would help sustain longer term delivery of core public services;
- coordinating policies developed in the ministry for the approval of the Minister and the Deputy Minister;
- coordinating the preparation of replies to correspondence to the Minister and Deputy Minister;
- the preparation of verbal and written briefings for the Minister's presentations to Cabinet, Committees of Cabinet and other meetings such as pre-budget consultations, federal-provincial conferences and stakeholder/interest groups.

SUB-ITEM DESCRIPTION

This sub-item provides ministry strategic support for Program Review, Renewal and Transformation and Estimates, executive decision support, financial controllership, risk management, corporate accounting, emergency management and security services, accommodation management, coordination of corporate and ministry-specific modernization programs and administration of the *Freedom of Information and Protection of Privacy Act*. This sub-item represents the ministry's point of contact with central agencies.

FUNCTIONS

These offices are responsible for delivering the ministry's obligations for the following:

- leading the controllership function, including the accountability framework, strategic procurement advice, loan administration, the Trillium Trust framework, and Public Accounts;
- coordinating, preparing and providing strategic support to the Program Review, Renewal and Transformation planning process and the annual Estimates process;
- in-year risk management and planning, monitoring and reporting of financial and other resource management strategies including preparing and/or reviewing all central agency submissions, for example TB/MBC submissions;
- managing the ministry's accommodation portfolio, including development of strategic options analysis and lease management to ensure optimal space utilization;
- administering the Freedom of Information and Protection of Privacy Act for the ministry, its agencies, boards and commissions, including processing requests for access to records, and ensuring compliance with the privacy provisions of the Act;
- leading strategic and operational planning to promote compliance with records and information management requirements;
- developing and implementing the ministry's Emergency Management Program and Physical Security Program, including leading, coordinating, testing, updating and maintaining the ministry's Continuity of Operations Plans and Physical Security Plans and providing security services;
- coordinating the ministry's compliance with the Ontarians with Disabilities Act, 2001 and the Accessibility for Ontarians with Disabilities Act, 2005; and
- coordinating corporate and ministry modernization programs including Employee Engagement and Recognition, Inclusion, Mental Health and Wellness, Workplace Violence Prevention, Service Excellence, Summer Experience Opportunities, Greening, and Open Government.

SUB-ITEM DESCRIPTION

This sub-item represents the Strategic Human Resources Services Branch which provides strategic and advisory human resources services to ministry senior executives to ensure they have the right people, in the right place, at the right time to achieve their business objectives.

FUNCTIONS

The Strategic Human Resources Services Branch is responsible for:

- providing senior executives with strategic advice and support in the areas of organization design and effectiveness, strategic labour relations and workforce planning/analysis to ensure the alignment of people strategies and build organizational capacity and engagement;
- implementing and supporting talent, performance and succession management programs and strategies;
- designing and implementing human resources change management and organizational development initiatives that support ministry business commitments;
- liaising with OPS human resources organizations to lead the implementation of corporate HR initiatives at the ministry level; and
- liaising with all operational elements of the OPS HR Service Delivery Model to ensure the delivery of integrated HR services to support the achievement of ministry business goals.

SUB-ITEM DESCRIPTION

This sub-item represents the Legal Services Branch. The branch provides legal services to the Ministry of Finance and the Ontario Financing Authority.

FUNCTIONS

The Legal Services Branch is responsible for:

- advising the ministry and other clients, as required, with regard to legal issues in respect of borrowing and investment of public money, government finance, fiscal, economic and taxation matters, loans and guarantees, insurance, pensions, alcohol and gaming policy and regulation, securities and financial services sector regulation; and procurement;
- providing advice to Office of the Budget;
- advising on agencies for which the Minister has responsibility;
- representing the ministry in tax collection activities, including bankruptcy and insolvency proceedings;
- advising the ministry in respect of the implementation of government policy in the electricity sector and programs;
- preparing legislation, regulations, Orders in Council, contracts, agreements, memoranda of understanding and other instruments;
- providing counsel for provincial tax prosecutions;
- representing the Minister on tax appeals and providing litigation support on other non-tax actions;
- preparing agreements between federal and provincial governments relating to tax collections, transfer payments and other matters; and
- providing advice to the ministry on the interpretation of statutes and regulations, preparation and review of proposed legislation, regulations, and other legal documents.

SUB-ITEM DESCRIPTION

This sub-item represents the Finance Audit Service Team (FAST) of Treasury Board Secretariat, which provides risk-management and consulting services, as well as independent assurance services to the Ministry of Finance and some of its agencies. FAST's overall objective is to ensure that the ministry's financial and risk management plans and processes meet the highest standards of integrity, accountability and transparency.

The FAST Audit Director reports functionally to the Finance Audit Committee (FAC), which is chaired by the Deputy Minister of Finance. FAC is responsible for ensuring that FAST has sufficient resources to carry out its responsibilities. FAST is primarily funded by the Ministry of Finance based on actual cost recovery basis.

FUNCTIONS

The services provided by FAST include:

- value-for-money, financial and internal control audits;
- compliance reviews;
- risk assessment and control reviews;
- forensic and fraud investigations;
- advice on governance, controllership, accountability and sound business practices, including advice and liaison to ministries related to Office of the Auditor General of Ontario audits;
- training and education on risk and control; and
- specialized audit, risk assessment and advisory services for information management and information technology projects.

The Financial Services Policy Division (FSPD) provides advice on and advances financial services regulation and policy initiatives, including initiatives related to capital markets, securities and derivatives and initiatives related to the regulation of credit unions, mortgage brokers, co-operative corporations and insurance.

FUNCTIONS

The Financial Services Policy Division:

- represents Ontario in federal-provincial-territorial discussions regarding financial services policy;
- represents Ontario and advances Ontario's interests in the implementation of a cooperative capital markets regulatory system (CCMR), including leading the development of uniform capital market laws underpinning the CCMR and related legislation;
- acts as policy lead in the ongoing work to establish a regulatory framework to oversee the activities of individuals who offer financial planning services in Ontario;
- represents the Ministry of Finance in the ongoing inter-ministerial work to improve the representation of women on boards of directors and in executive positions;
- participates as a regulatory policy lead to support the ongoing work towards developing an Ontario financial technology (FinTech) strategy;
- continues to support the government's work to keep auto insurance affordable for Ontario's over ten million drivers while ensuring that claimants get the treatment they need;
- provides support for the implementation of the recommendations stemming from the five-year review of the Credit Unions and Caisses Populaires Act, 1994;
- provides support for the establishment of the new Financial Services Regulatory Authority of Ontario, including the development of necessary legislation and regulations and the establishment of an appropriate oversight and governance framework;
- provides analysis and advice on the regulatory framework for financial institutions and the financial services sector;
- implements initiatives to modernize the Insurance Act and its regulations, including work to integrate new sharing economy business models for providing transportation services into Ontario's auto insurance system; and

- works with the Financial Services Commission of Ontario (FSCO) and the Ontario Securities Commission (OSC) on issues relating to regulation of syndicated mortgage investments.

ECONOMIC, FISCAL AND FINANCIAL POLICY PROGRAM

1203-1 – Economic Policy

1203-8 – Office of the Budget

1203-12 – Ontario Electricity Financial Corporation Dedicated Electricity Earnings

Statutory Appropriations

Bad Debt Expense, the Financial Administration Act
Guarantees and Indemnities, the *Financial Administration Act*
Ontario Electricity Financial Corporation, the *Electricity Act, 1998*

1203-24 – Strategic Assets – Loans and Investments

1203-14 – Capital Expense

Statutory Appropriations

Amortization, the Financial Administration Act

1203-13 – Capital Assets

1203 – ECONOMIC, FISCAL AND FINANCIAL POLICY

This program develops and implements sound economic and fiscal strategies to raise revenue and stimulate economic growth and job creation; forecasts, monitors and reports on the performance of the Ontario economy; provides expertise and advice on sound economic design of and financial and implementation support for government initiatives; develops demographic forecasts for Ontario and its 49 census divisions; develops and provides strategic oversight of and advice related to the government's fiscal plan; assists the Minister of Finance and the government in formulating Ontario's finance policy and strategies with respect to federal-provincial fiscal arrangements; and provides policy advice to clients, managers, and decision makers in the areas of fiscal and financial management. The program is also responsible for facilitating engagement with central agency and line ministry partners to provide fiscal and budgetary policy advice and support policy development and prioritization. The program leads the Statistics Transformation Initiative to enhance how government collects, uses, and disseminates data and is responsible for leading statistics policy. In addition, the program reflects the transfer of dedicated electricity earnings from the province to the Ontario Electricity Financial Corporation.

This program assists the Minister, Deputy Minister of Finance and the government in formulating the fiscal plan and reporting the results of the Province through the Ontario Budget, Ontario Quarterly Finances, Ontario Economic Accounts, Economic Outlook and Fiscal Review, and Ontario's Public Accounts. The program undertakes annual population projections for use in resource allocation and planning, leads preparation of the Long-term Report on the Economy and contributes to the Pre-Election Report on Ontario's Finances required by the Fiscal Transparency and Accountability Act.

ITEM DESCRIPTION

The Office of Economic Policy (OEP) provides the Minister with:

- forecasts and analysis of the economy and revenues;
- advice and information on economic issues and trends and the development of sound economic strategies that foster economic growth and job creation;
- economic analysis of policy proposals;
- recommendations regarding individual project proposals coming forward through economic development programs;
- leadership advice and analysis on the use of statistics and statistics policy;
- population projections and analysis of demographic issues; and
- research and quantitative analyses to support the development of tax, pension, alcohol fee, income security and benefits policy.

The OEP also represents Ontario in federal-provincial-territorial discussions regarding economic analysis and forecasting, fiscal planning as it relates to revenue forecasting, reporting and federal payments and in discussions with Statistics Canada on matters related to statistical policy.

FUNCTIONS

The Office of Economic Policy:

- develops, researches, monitors, forecasts and reports on economic, financial, demographic, labour market, social issues and risks;
- reviews and assesses the economic impacts ministry policy proposals within the context of the economic and fiscal framework;
- supports decisions on project proposals coming forward through economic development programs;
- conducts research and policy analysis on a broad range of issues related to economic performance and growth;
- advances the use and integration of data and statistics in government decision-making;
- conducts research and policy analysis on labour market issues;
- develops long-range population projections; and
- supports the development of tax, pension, income support and benefits, and alcohol policies through: partnerships, research and quantitative analysis; the identification, development and utilization of quantitative models, methodologies and data; and the management of data holdings.

1204 – FINANCIAL SERVICES INDUSTRY REGULATION

The Financial Services Commission of Ontario (FSCO) regulates the province's financial services sector, including insurance companies, health service providers for auto insurance, pension plans, credit unions, caisses populaires, mortgage brokers, agents and administrators, loan and trust companies, and co-operatives. FSCO makes recommendations to the Minister of Finance on matters affecting these sectors. In addition, FSCO is responsible for the administration of the Motor Vehicle Accident Claims Fund (MVACF) which compensates people injured in automobile accidents in Ontario where there is no other insurance available to respond to the claim. FSCO is also responsible for the administration of the Pension Benefits Guarantee Fund (PBGF). The PBGF pays a minimum level of pension benefits if a plan is wound up with insufficient assets.

FSCO works with the Ministry of Finance, consumers and industry stakeholders to protect the public interest and enhance public confidence in the regulated sectors.

ITEM DESCRIPTION

The Financial Services Commission of Ontario (FSCO) regulates the province's financial services sector, including insurance companies, health service providers for auto insurance, pension plans, credit unions, caisses populaires, mortgage brokers, agents and administrators, loan and trust companies, and co-operatives. FSCO makes recommendations to the Minister of Finance on matters affecting these sectors. In addition, FSCO is responsible for the administration of the Motor Vehicle Accident Claims Fund (MVACF) which compensates people injured in automobile accidents in Ontario where there is no other insurance available to respond to the claim. FSCO is also responsible for the administration of the Pension Benefits Guarantee Fund (PBGF). The PBGF pays a minimum level of pension benefits if a defined benefit plan is wound up with insufficient assets.

FSCO works with the Ministry of Finance, consumers and industry stakeholders to protect the public interest and enhance public confidence in the regulated sectors.

FUNCTIONS

FSCO has established the following goals:

- be risk based, proactive, evidence based, balanced, transparent, service orientated, and collaborative in our work;
- further a coordinated national approach to regulatory issues; and
- be a recognized thought leader in regulatory policy.

To achieve its goals, FSCO is guided by its strategic and operational outcomes. These outcomes help FSCO's to achieve its core regulatory responsibilities to administer the laws and regulations governing the activities of the regulated sectors.

FSCO is also responsible for providing the administrative resources necessary for the proper functioning of the Financial Services Tribunal. The Financial Services Tribunal is an independent, adjudicative body that conducts hearings arising from regulatory and proposed regulatory decisions of the Superintendent of Financial Services.

1209 – TAX, BENEFITS AND LOCAL FINANCE

This program develops the policy and legislative framework for Ontario's taxation and benefits systems; administers Ontario tax statutes and a number of benefit programs; maintains the integrity of Ontario's tax system; and manages the province's fiscal relationship with municipalities. The program objective is to maintain a tax system that is competitive and transparent for business to support economic growth, while ensuring tax supports and structure are fair and effective for individuals and families in Ontario. As part of this work, it conducts tax compliance activities including audit, inspection, investigation and collection, and delivers key benefit programs for low-income seniors and families, as well as income verification services to other benefit programs. Accountability for managing the relationship with the Canada Revenue Agency, which collects the majority of the province's taxes on its behalf, also rests with this program. The program provides advice on the development of policies and regulations governing municipal property taxation in Ontario, manages education property taxes and provincial land tax, establishes the policy and legislative framework for Ontario's property assessment system, and provides oversight of the Municipal Property Assessment Corporation. It also provides oversight of the Ontario Municipal Partnership Fund, the province's main transfer payment to municipalities. The program provides strategic analysis and advice on personal, corporate, mining, commodity, sales, estate administration and payroll tax policy and design. It also supports a fair and efficient tax system by leading the province's efforts to address the underground economy.

ITEM DESCRIPTION

This program is responsible for the efficient and effective administration of Ontario tax statutes, tax incentive and benefits programs. It strives to support the sharing economy and ensure the integrity of the tax system through measures aimed at reducing participation in the underground economy and maintaining tax fairness. The program is also responsible for examining ways to reduce the taxation burden on participating businesses and citizens. The province encourages compliance through client services and independent objections review, while discouraging non-compliance and tax evasion through collections activities, audits, inspections and investigations. The fairness of tax incentive and benefits programs is protected through systematic eligibility verification and validation reviews.

FUNCTIONS

- encouraging voluntary compliance through client services such as registration, tax roll and account maintenance and processing tax returns, processing application based refunds, client education, and outreach;
- providing remittance, data and image capture and revenue accounting processing services;
- maintaining data integrity in sustaining an efficient tax administration system and collections function for all Ministry of Finance administered tax statutes;
- leading transformation initiatives to streamline the delivery of Ontario benefits, administering ministry benefits programs and providing benefits administration services to partner ministries;
- managing inter-jurisdictional relationships with the Canada Revenue Agency, and monitoring the related service provisions;
- strengthening efforts to address the underground economy, contraband tobacco, and other measures aimed at maintaining tax fairness;
- supporting the sharing economy through coordination and development of key policy initiatives in partnership with the Sharing Economy Advisory Committee;
- providing strategic management services including tracking, analyzing and reporting on TBA's performance measures, service standards and revenue commitments;
- developing proactive and effective tax administration policy that supports the government's competitive business environment; and
- directing and executing excellence in the audit, investigations including forensic accounting and forensic data recovery, regulatory inspection and collection functions using risk based techniques, modern technology and best practices.

SUB-ITEM DESCRIPTION

The Strategy, Stewardship and Program Policy Division is responsible for program policy, strategic planning, relationship and risk management, and benefits transformation initiatives.

FUNCTIONS

- providing policy advice and leadership on key government priorities related to tax and benefit administration, including addressing the underground economy, contraband tobacco, and other measures aimed at maintaining tax fairness;
- providing advice and assistance to the Minister of Finance and the government in developing policy options for tobacco taxation and the oversight of raw leaf tobacco, based on analysis of the revenue, economic, health, social impacts of various options, and input from industry and health advocates;
- developing proactive and effective tax administration policy that supports the government's competitive business environment and Open for Business priorities;
- managing relationships, service provisions and fee-for-service arrangements and develops accountability frameworks for tax and benefit administration involving partnerships with other governments (most notably the Canada Revenue Agency) and the broader public sector, and First Nations;
- identifying opportunities to improve client access to Ontario's income-based benefits programs and making their delivery more efficient through efforts such as leveraging MoF's automated income verification and other benefits administration processes;
- providing data analysis to support the transformation of tax and benefits programs;
- providing strategic planning services including tracking, analyzing and reporting on TBA's performance measures, service standards, and revenue commitments;
- evaluating and reporting on TBA's performance including our success in meeting strategic and operational objectives;
- developing TBA's strategic plan, operational business plans and related work activities, including inter-jurisdictional research and analysis, environmental assessments, planning sessions, and benchmarking;
- operationalizing a risk management framework for TBA that proactively identifies and responds to risks; and
- supporting the sharing economy through coordination and development of key policy initiatives in partnership with the Sharing Economy Advisory Committee.

SUB-ITEM DESCRIPTION

The Tax Compliance and Benefits Division plays a key role in promoting public confidence in the fairness and integrity of Ontario's tax system. The division provides a wide range of tax and non-tax enforcement functions to ensure compliance such as auditing, investigations, inspections and collections. The division is responsible for providing registration services, responding to client inquiries, managing tax client accounts and processing benefit payments, processing application refunds, and providing public education and interpretative services, reviewing and resolving objections and appeals, and providing imaging and revenue processing services.

This sub-item focuses on operational and service delivery of tax and benefits programs, revenue administration, and the implementation of current transformational projects to support the ministry's commitment to continuous improvement and modernization.

FUNCTIONS

- directing and executing excellence in the audit function using risk based techniques, modern technology and best practices;
- conducting effective investigations including forensic accounting and forensic data recovery and regulatory inspections;
- partnering with other ministries, agencies and other jurisdictions to provide technical information, resolve issues and identify opportunities to collaborate;
- strengthening efforts to address contraband tobacco products;
- providing revenue collections functions to manage accounts receivable, collect delinquent tax and non-tax debt, and administer insolvencies;
- providing leadership and expertise in the areas of Centralized Collections;
- administering tax statutes as well as a number of tax incentive, revenue and benefit programs;
- encouraging voluntary compliance through client services such as registration, account maintenance and processing tax returns and application based refunds;
- providing remittance, data and image capture and revenue processing services;
- providing benefits administrative services to partner ministries; and
- providing an inexpensive administrative review of tax assessments and refund disallowances through the objection process.

ITEM DESCRIPTION

The Taxation Policy Division provides strategic analysis and advice on personal, corporate, mining, commodity, sales, estate administration and payroll tax policy and design.

FUNCTIONS

The Taxation Policy Division is responsible for:

- providing tax and benefit policy advice and analysis for the annual Ontario Budget, the fall Economic Outlook and Fiscal Review and other major statements;
- providing policy advice and analysis on tax issues (i.e., personal taxation, business taxation, mining, sales and commodity taxation, estate administration taxation, and payroll taxation and negotiating Canada-Ontario tax agreements);
- providing legislative design advice to implement taxation measures and support government bills relating to taxation through the legislative process;
- advising tax administrators on proper implementation of taxation measures in accordance with legislation and policy intent;
- developing and preparing the tax expenditure report, “Transparency in Taxation”; and
- leading negotiation and coordination of tax agreements and initiatives with the federal government and other provinces.

ITEM: **Provincial-Local Finance**

TYPE: **Operating Expense**

ITEM DESCRIPTION

The Provincial-Local Finance Division provides advice to the Minister of Finance and the Government of Ontario on policies, legislation and operational initiatives that support the province's fiscal arrangements with municipalities, including the $27 billion property tax system. The Division administers the Ontario Municipal Partnership Fund (OMPF), the government's main unconditional transfer payment to municipalities.

In support of the government's priority to develop effective policies, legislation and regulation governing the property assessment and taxation system, the Division continues to examine ways to ensure the property tax and assessment system is fair, accurate, and predictable while ensuring municipalities have the financial tools they need to give Ontarians the quality of life they deserve.

FUNCTIONS

The Provincial-Local Finance Division:

- provides analysis, develops options and designs policies that support a property tax and assessment system that is fair, accurate, and predictable;
- designs assessment and property tax legislation and regulations that meet the government's policy objectives;
- maintains a productive working relationship with the Municipal Property Assessment Corporation (MPAC) that preserves access to valuation expertise and information;
- provides analysis and advice related to $7 billion in provincial Education Property Taxes, including support for the Minister of Finance's role in setting Education Property Tax rates;
- maintains an effective liaison with stakeholders to discuss possible enhancements to the property tax and assessment system and to the provincial/municipal financial arrangements;
- assists municipalities and taxpayers to better understand their responsibilities with respect to the property tax and assessment system;
- administers transfer payment programs to municipalities, including the OMPF, and recommends options and refinements to grant and/or program redesign;
- provides advice to the Minister of Finance on fiscal arrangements with municipalities, as well as oversight with respect to provincial-municipal financial strategies and policy priorities; and
- supports the Provincial Land Tax, Education Property Taxes and taxes for local roads and services boards in the Unincorporated Areas where applicable.

ITEM: **Municipal Support Programs**

TYPE: **Operating Expense**

ITEM DESCRIPTION

The Municipal Support Programs provides funding support to municipalities through the Ontario Municipal Partnership Fund (OMPF), Special Payments to Municipalities, Transitional Mitigation Payment and One-Time Municipal Assistance. The OMPF, the province's main unconditional transfer payment to municipalities, will provide $505 million to Ontario municipalities in 2017. Special Payments to Municipalities is a mitigation program related to property tax on hydro-electric generation facilities. Transitional Mitigation Payment is a mitigation program related to the property tax exemption for non-profit long-term care homes. One-Time Municipal Assistance provides one-time funding to municipalities facing special circumstances.

FUNCTIONS

The Division is responsible for OMPF policy including:

- developing options and refinements to grant or program design;
- supporting the policy announcement of annual OMPF allocations;
- issuing quarterly payments to eligible municipalities; and
- developing supporting materials and providing municipalities with assistance in understanding grant design and calculations.

Special Payments to Municipalities is a program that provides mitigation to municipalities related to the property tax revenue that each municipality received from hydro-electric generating stations (power dams) prior to 2001 when these properties became exempt from taxation.

Transitional Mitigation Payment is a program to provide transitional assistance to municipalities related to the exemption from property taxation of non-profit long-term care homes. The program targets assistance to eligible municipalities where revenue implications of this exemption represent a more significant proportion of the municipality's total revenue base.

~~This program is responsible for the development, direction, operation and formulation of policies for the management of the Province's debt, investments, credit rating, investor relations, and related financial administration activities; providing centralized banking and cash management services to the Province; reporting on the financial position of the Province to investors and the public to facilitate borrowing activities; providing to the electricity sector financial analysis and support for any direct or indirect provincial liabilities and monitoring fiscal implications; advice to government and broader public sector on financing initiatives and policies; provision of guarantees and loans by the Province and assistance in investments to its Crown Corporations and agencies; and arranging custodial and fiscal agency services for the Province and certain agencies. It is also responsible for the issuance of Ontario Savings Bonds. The Ontario Financing Authority (OFA) provides a broad range of financial services to Ontario Electricity Financial Corporation (OEFC) and Ontario Infrastructure and Lands Corporation (Infrastructure Ontario).~~

FUNCTIONS

The program:

- conducts borrowing in the capital markets in a cost-effective and prudent manner, including the issuance of Ontario Savings and Green Bonds;
- manages the provincial debt and investments;
- manages financial risks such as interest rates, currency, credit and liquidity to minimize interest on debt (IOD) and variations from the budget target;
- manages and supports the credit rating review of the Province;
- manages relations with the fixed-income community (domestic and foreign);
- provides centralized banking and cash management services for the government;
- provides settlement and payment services, and financial reporting services;
- supports the implementation of the government's electricity industry policy decisions, and monitors its fiscal implications;
- effectively manages Ontario Electricity Financial Corporation's debt and derivatives portfolios, providing timely and accurate risk, cash management and financial reporting services;
- provides a broad range of financial services to Infrastructure Ontario;
- advises ministries, crown agencies and other public bodies on financial policies and projects; and
- acts as intermediary for the Province in lending to or investing for certain public bodies.

SUB-ITEM DESCRIPTION

The Canada Pension Plan Investment Board (CPPIB) invests funds in the Province of Ontario's non-marketable securities. Effective July 1, 2005, under a side-letter agreement signed between the CPPIB and the Province, CPPIB offered the Province upon maturity of the debentures held to the credit of the Canada Pension Plan Investment Fund (CPPIF) that were issued before January 1, 1998, an option of issuing new replacement debentures to the CPPIB with a maximum term of 30 years (minimum term of five years and with subsequent roll over options subject to the 30 years maximum from the date of issue of the first replacement debenture) at a rate based on the capital market rates at the time of roll over. These debentures are not negotiable or transferable and are assignable only to a wholly-owned subsidiary of the Canada Pension Plan Investment Board. On April 1, 2007, all debentures held to the credit of the CPPIF or purchased by the Minister of Finance of Canada in accordance with Section 110 of the Canada Pension Plan were transferred to the CPPIB.

CHANGE FROM THE 2017-18 ESTIMATES $ 1,882,000

The increase in interest expense is mainly due to higher interest rate than forecast in the 2017 Budget.

VOTE/ITEM: **S**
VOTE: **Treasury**
ITEM: **Interest on Debt**
Payable to the Ontario Electricity Financial Corporation
TYPE: **Statutory**

SUB-ITEM DESCRIPTION

This item provides for interest on Provincial Purpose Debt issued as part of a debt-for-equity swap with Ontario Power Generation Inc. and Hydro One Inc. effective April 1, 1999. The Province assumed $8,885 million of the debt issued by these two government business enterprises to OEFC in exchange for $5,126 million in equity from Ontario Power Generation Inc. and $3,759 million in equity from Hydro One. In addition, OEFC owed Hydro One for a working capital adjustment in the amount of $122 million, and Hydro One agreed to settle this amount as a reduction of the equity in 2002, and the Province reduced one of its payables to OEFC by $122 million. In 2017, $1,122 million was redeemed and in March 2018, $861 million was redeemed.

CHANGE FROM THE 2017-18 ESTIMATES $ (36,000,000)

~~Program area to provide explanation.~~The decrease in interest expense is due to partial retirement of the outstanding debt.

Anna,

Please find attached my comments. For the most part, the FAO is factually correct for the net debt section. I am therefore not able to either refute, disagree or agree with the choice of words used such "overly optimistic assumptions" and "string of" consecutive balanced budgets.

We are not able to verify the second half of the document about capital investments nor GDP. When we calculate net debt, we have some capital acquisition data, and it's not matching exactly the investments/GDP chart. I would urge therefore the subject matter experts CPD and OEP to take a look at the capital infrastructure chart and GDP commentary respectively.

Thanks.

John

Hi John, David,

Attached for your review and comment is an embargoed copy of the FAO's commentary on Ontario's debt reduction commitment. We've been asked to provide comments/edits to Office of the Budget by **noon on Tuesday, August 22**.

Thank you, Anna

Hi All,

As per below, the FAO has asked for comments on their embargoed debt burden commentary. Can your areas please review and share any comments/edits by **noon on Tuesday, August 22**? Note, when providing comments, it is important that they be written for the FAO as opposed to an internal audience.

Please copy Daniel Tiburcio when you respond with your comments. OB/FPCU will be consolidating edits.

Let me know if you have any questions.

Thanks,
Ryan

Subject: FW: FAO Commentary on Debt/GDP Target

FYI – the FAO has provided us with an preliminary draft of their upcoming commentary on Ontario's debt burden and targets - -see David's email below and the attached.

Ryan will work with your EA's to operationalize this, but we'll consolidate edits and feedback for the FAO into one document – so please plan on providing us with ADM approved edits by noon next Tuesday, August 22 so we can consolidate for the FAO end of day.

Please let me know if you have questions about process.

Hello Tim,

Please find attached a draft FAO Commentary: 'Ontario's Debt Reduction Commitment Based on Optimistic Assumptions'.

We are hoping that you can have the appropriate staff review this short note (just 700 words!) and provide us with comments/concerns by end of day Tuesday, August 22.

Portions of the note are based on discussions with staff from the OFA while the data behind the infrastructure spending chart was provided by TBS (Artur Arruda and Karen Hughes). Karen also indicated (in an email) that she believed we would be able to publish the total annual infrastructure spending estimates (which are included as a share of GDP in this note).

As always, please treat this note as confidential until it is released on the FAO's website.

I have not used a password for this document, since all (or at least essentially all) of the information is already public (either in the FAO's Spring EFO or the 2017 Budget).

Thanks for your continued support and assistance.

Dave

FAO Commentary

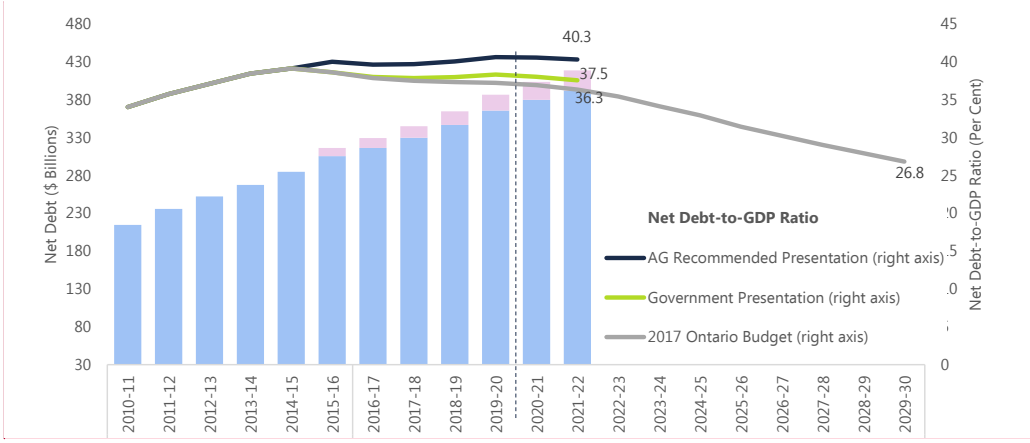
TBD, 2017

Ontario's Debt Reduction Commitment Based on Optimistic Assumptions

The FAO projects that Ontario's net debt will increase by $76 billion over the next five years to approximately $392 billion in 2021-22, resulting in the net debt-to-GDP ratio rising to 40.3 per cent.[1] In contrast, in the 2017 Budget, the Province projects a small decline in the net debt-GDP ratio to 36.3 per cent by 2021-22.

In the 2017 Budget, the government also restated its commitment to reduce the net debt-to-GDP ratio to its pre-recession level of 27 per cent. The Province projects that this 27 per cent target will be achieved by 2029-30, based on three key assumptions:

- on-going balanced budgets over the next 12 years;
- future capital spending as laid out in the long-term infrastructure plan; and
- a continuation of strong economic growth.



However, if any of these relatively optimistic assumptions fall short of expectations, the government's 27 per cent debt-to-GDP target would not be achieved.

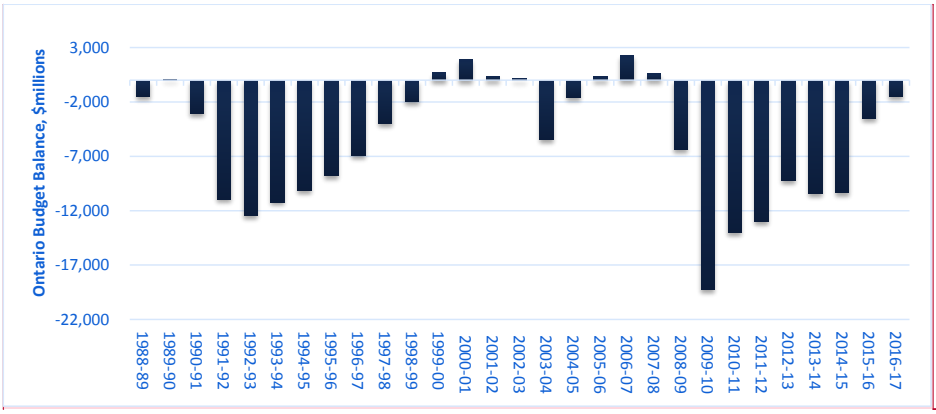
Commented [JP1]: Not able to verify how this was calculated or what method was used.

Commented [JP2]: resulting in GDP growing more quickly than debt

Commented [JP3]: not achieved by 2029-30 presumably.

Achievement of 27 Per Cent Debt-To-GDP Target Based on Optimistic Assumptions

Note: AG recommended presentation based on FAO estimates of the pension adjustment.
Source: Ontario 2017 Budget and FAO



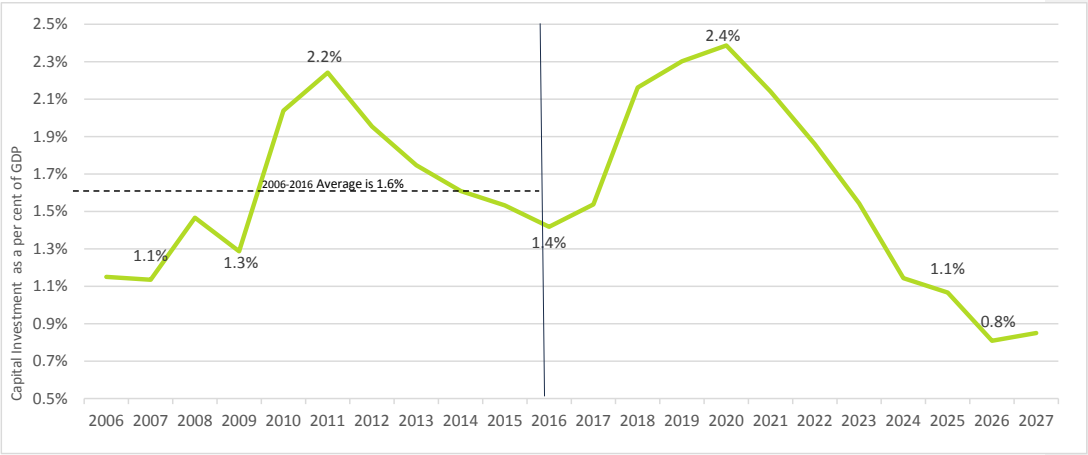
Commented [JP4]: While inclusion of the AG recommended presentation is fair, some mention of the conclusions of the independent Pension Asset Expert Advisory Panel in February 2017 should be disclosed in this document to give some additional perspective to the reader. The panel concluded that the province reporting of net pension assets was in accordance with PSAB standards. Such inclusion therefore has an impact on net debt and net debt projections. Also, not able to verify the FAO's 40.3%. Not sure what "Government presentation" means as opposed to the Budget % of 36.3, which is correct.

The government's forecast for a gradual decline in the net debt-to-GDP ratio depends critically on achieving a string of consecutive balanced budgets each year over the next 12 years. Over the past thirty years, Ontario has rarely achieved successive surpluses or balanced budgets. In contrast to the 2017 Budget, the FAO continues to project a steady deterioration in the budget deficit over the next five years, due to moderating revenue growth combined with higher expenses.

Commented [JP5]: Not able to verify this.

[1] Based on the FAO's application of the Auditor General's recommended accounting treatment for pension assets - see the FAO's 'Economic and Fiscal Outlook, Spring 2017'. By comparison, based on the government's accounting presentation, the FAO projects Ontario's net debt will rise by $62 billion to roughly $365 billion by 2021-22 and that the net debt-to-GDP ratio will fall modestly to 37.5 per cent.

Ontario has Rarely Achieved Balanced Budgets in Consecutive Years



Source: Ontario Budgets 1988-89 to 2017-18

Commented [JP6]: The 2014-15 deficit value on the graph above is 10,314. However, the Net Debt spreadsheet indicates 10,315. (right click then hover over the chart to see)

The government's debt reduction commitment is also linked to the Province's 13-year, $190 billion infrastructure plan which includes significant reductions in capital investment in the 2020s. After peaking in 2019-20 at 2.4 per cent of nominal GDP, the Province is projecting capital spending to fall to just 0.8 per cent of GDP by 2027-28 – half of the historical average of 1.6 per cent.

Investment in Capital Assets as a share of GDP to Decline Sharply in the 2020s

Source: Investment in Capital Assets, 2017 Infrastructure Update, Ministry of Infrastructure, FAO

Since the Province has made substantial investments in public sector assets (such as hospitals) over the last 10 years, some pullback is to be expected.[2] However, given the government's focus on new and large transit and highway projects, it is likely that the Province will need to augment its capital plan and increase spending in the latter part of the next decade. Higher than planned capital spending in the future would add to the Province's net debt, increasing the net debt-to-GDP ratio.[3]

Finally, the government's debt-to-GDP projection relies on nominal GDP growing at an average pace of 4 per cent per year over the long-term.[4] However, nominal GDP growth has averaged just 3.6 per cent per year over the past 15 years, and given Ontario's aging population and slower expected growth in its labour force, 4 per cent annual growth may prove to be too optimistic for the next decade.

Given the risks associated with the government's assumptions, a fiscal plan that focuses only on achieving balanced budgets may not be enough to lower Ontario's net debt-to-GDP ratio to 27 per cent by 2029-30.

Subject: RE: FAO Fall outlook vs FES slides

Hi Liane

With regard to the IOD we believe the FAO projections are lower possibly due to

- Differing interest rate assumptions including those relating to the spread between the Province and the Bank of Canada
- Potentially a different Financing Table for the increase in debt, some variances could arise from their lack inclusion of the 44% equity injection to OPG which is included in the Province's FT
- The AO savings; that are included in both IOD and Revenues in the Province's projections and obviously not part of the FAO's outlook
- The BPS line by line consolidation, while this has no fiscal impact, from 2017 FES onwards, it is part of the Province's IOD projections. Given that this is around $600M it may contribute to the discrepancy.

It is difficult to be more specific since we don't have the details of the FAO projections.

Thanks and pls don't hesitate to contact Chi-Wa (in Alex's absence) or me if you have any questions.

Hi Everyone – Happy New Year!

We've been asked to pull together a deck that compares the FAO's 2017 Fall Economic and Fiscal Outlook with the FES. My understanding is that the deck will be used with the SOC on Jan 10th.

The attached deck is based on the note we all had a hand in drafting when the report was first released earlier in December. Can you please take a look at the attached and provide us with feedback by **Thursday Jan 4th EOD**?

Here's a link to the FAO's report: http://www.fao-on.org/en/Blog/Publications/EFO-Fall_2017[fao-on.org]

Thanks everyone.

Liane

Bharat,

We can't vouch for the 40.3% and the 37.5 % as the FAO is using a different method of calculating net debt to get to the 40.3. They have included the pension adjustment, I believe. However, the 38.6% in 2015-16 is correct.

Thanks.

John,

Can you confirm following statement in FAO draft report is correct?

Based on the AG's recommended accounting presentation, the FAO expects Ontario's net debt-to-GDP ratio will edge higher over the outlook, rising to 40.3 per cent by 2021-22, reflecting the projected increase in net debt and the FAO's forecast for nominal GDP growth. In contrast, based on the accounting treatment adopted by the government in the 2017 Budget, net debt-to-GDP is projected to fall slightly from 38.6 per cent in 2015-16 to 37.5 per cent by 2021-22

Subject: FAO vs. FES

As you all know, the FAO will be reviewing the FES and developing questions for us to review and answer when we meet with them on Wednesday.

To help us all prepare for this, we've done a cross-walk from the FAO fiscal plan to the fiscal plan outlined in the FES today. The table is attached for your reference.

In summary, the FAO Outlook shows higher deficits than outlined in the Fall Statement. Key factors include:

- The FAO's revenue forecast is significantly lower than what is outlined in the Fall Statement (more than $5B in 18-19).
- The FAO's estimate of new government initiatives (child care, HST rebate, etc) are higher than what are built into the Fall Statement, particularly in 17-18 and 18-19.
- Combined, these two elements, which result in a deterioration in the fiscal outlook, are partially offset by higher IOD savings assumed by the FAO.

As we already know, the FAO underestimated the Pension Adjustment in each year, which reduced the variance between the FAO's deficit projection and the FES. Presumably their updated forecast in their commentary (to be released next week) will increase the Pension Adjustment, and also, the resulting deficit projection.

Subject: Re: FAO vs. FES

Their IOD forecast is very low, and I'm not sure how they got there, so if you could find out their assumptions on that, it would be interesting to know. I think Bonnie may have some insights on that.

While our interest rate assumptions looked pretty conservative until last Tuesday, 10 and 30 year rates are 40 basis points higher now than they were then, so we'll have to see how the markets continue to react between now and next spring when we lock down numbers.

Subject: RE: FAO vs. FES

Thanks Gadi, nothing much to comments other than the FAO's revenue assumptions are considerably lower than that of the Province despite the nominal GDP uptick. Expenses are close enough though they assume a much lower pension adjustment and a lower IOD.

Be interesting to see what their assumptions were for IOD, of course our 18-19 forecast for IOD will also reduce once we move from the 15 year average to the OEP forecast.

Thanks

Hello Anna;

The total revenue number on page 4 of the note does not appear in the pdf; the total revenue number on page 27 of the pdf document is $149.4 billion and $147.4 billion w/ FHP adjustment on page 4 of the note. Hence, the FAO IOD-to-revenue for 2017-18 of 7.9% on page 21 of the document cannot be replicated using the total revenue number on page 4 of the note.

Best regards

Alex

Hi All,

As a follow up to my message yesterday, I'm attaching an embargoed copy of the FAO's final EFO report. Please **limit circulation of the report** as it's not being released officially until Monday.

Can you please ensure that your ADM approved input/edits to the summary note reflect this latest version of the report **by EOD today**?

Please let me know if you have any questions.

Thanks,
Ryan

Subject: The FAO's Fall 2017 Economic and Fiscal Outlook

Good morning,

The FAO will be releasing a 'Fall 2017 Economic and Fiscal Outlook' report on Monday, December 11, 2017 at 10:00 am.

We have scheduled technical briefings of the embargoed report for MPPs at 9:00 am on Monday. The Temporary FAO, the Honourable David Wake and I will provide a media statement at 10:00 am.

A pre-release copy of the report is being delivered to Ministers Sousa and Sandals this morning, as required by the FAO Act.

Please find attached a copy of the final report for your reference.

Please treat this document as embargoed until its release on Monday at 10:00 am.

As always, we greatly appreciate your assistance and support for the work of the FAO.

Best regards,

David

FAO's 2017 Fall Fiscal Outlook – OB Summary

ISSUE

The Financial Accountability Office is set to release its 'Fall Economic and Fiscal Outlook' report. This note summarizes the fiscal chapter of the report.

TOP MESSAGES

- I would like to thank the Financial Accountability Officer (FAO) for releasing his fall economic and fiscal outlook for Ontario. We value the FAO's independent assessment and projections of the province's fiscal plan.
- As outlined in the 2017 Ontario Economic Outlook and Fiscal Review, the government is projecting a balanced budget for 2017–18 and to remain balanced in 2018–19 and 2019–20.
- The FAO report also projects a balanced budget for Ontario this year.
- The government has a strong track record of beating its fiscal targets. In fact, the Public Accounts of Ontario reported that the 2016–17 deficit was $1.0 billion, beating our annual deficit target again, for the eighth year in a row.
- The 2017 Ontario Economic Outlook and Fiscal Review builds on the government's track record of fiscal management that has resulted in $29 billion in accumulated deficits being avoided over the past seven years, relative to the 2010 Budget forecast.
- We are also targeting a net debt-to-GDP ratio of 35 per cent by 2023–24 and reducing Ontario's net debt-to-GDP ratio to its pre-recession level of 27 per cent, with current projections showing that this will be achieved by 2029–30.
- Since 2014, Ontario's real GDP growth has strengthened, positioning Ontario as a growth leader, not only in Canada, but among G7 countries. In fact, over the 2014-17 period, Ontario's real GDP growth is on pace to exceed that of all G7 countries.
- Private-sector economists are projecting continued growth for Ontario over the forecast horizon; the FAO's real GDP projections are aligned with the 2017 Fall Economic Statement over the 2017 to 2020 period.
- This shows that our plan to make strategic investments in Ontario to grow the economy is working.
- A balanced budget is providing the Province the fiscal flexibility to invest more in health care, education, support for seniors and small businesses and other public services that matter most to Ontario families. It also adds stability to Ontario's finances and positions the government to better respond to demographic challenges and unexpected global economic shocks that the province will face over the next decade.

Commented [SM1]: Unable to verify how the $29 billion is calculated. The 2010 Budget only goes up to 2012-13.

KEY POINTS

Fiscal Outlook

- The FAO is projecting a budget deficit of $3.9 billion in 2017–18 using the **Auditor General's recommended accounting treatment for both the Fair Hydro Plan and the net pension assets of jointly sponsored pension plans.** In the absence of any fiscal policy changes this grows steadily to $9.6 billion in 2021-22.
- Under the **government's accounting presentation (excluding the AG's recommendations)**, the FAO projects a small surplus for 2017–18 of $0.3 billion (excluding the reserve) and a return to deficits beyond 2017–18 driven by revenue factors - loss of temporary revenues combined with more moderate tax revenue growth.
- The FAO suggests that by not adopting the AG's recommended accounting presentation, the 2017 Budget and the 2017 FES reduced transparency and clarity of Ontario's fiscal position and as a result Ontario will continue to receive qualified ~~options~~ opinions from the AG.

Budget Balance - FAO's Fiscal Outlook ($ Billions)	2015-16	2016-17	2017-18	2018-19	2019-20	2020-21	2021-22
AG Presentation	-5.0	-2.5	-3.9	-7.2	-7.9	-8.9	-9.6
Government Presentation	-3.5	-1.0	0.3	-1.9	-2.0	-2.6	-3.5
2017 FES -- Excluding Reserve	-3.5	-1.0	0.5	0.5	0.8	N/A	N/A

Revenue Outlook

- Using the AG presentation, the FAO is projecting average annual revenue growth of 2.6 per cent from 2016-17 to 2019-20 as compared with the government's projections of 4.0 per cent. The main drivers are:
    - The FAO projections for taxation revenues are $2.9 billion lower by 2019-20 than the projections in the 2017 FES due to lower projected growth in household spending, labour income and corporate profits.
    - The FAO projects that, based on the AG presentation, the Fair Hydro Plan will lower net income from OPG by $3.4 billion lower by 2019-20.
    - In addition, the FAO continues to highlight a number of one-time 2017-18 revenues, including: increase to sales and rentals from sale of final tranche of H1, higher federal transfers for infrastructure (PTIF), one-time boost from extra Cap and Trade auction. Taken together the FAO estimates that these amount to $4.5 billion in additional one-time revenues in 2017-18.

Expense Outlook

- From 2017–18 to 2019–20 the FAO's outlook adopts the government's 2017 FES projections for program spending, **adjusted to reflect the AG's recommended accounting presentation.** Beyond 2019–20 the FAO projects program spending will grow faster -- at an average annual rate of 4.1 per cent – due to population pressures.

Borrowing and Net Debt

- Using the **government's accounting presentation** net debt-to-GDP is expected to reach 38.4 per cent by 2019–20 and 38.6 per cent by 2021–22. This increases to 41.3 per cent by 2021–22 **under the AG's accounting presentation**.
    - The 2017 FES projected a net debt-to-GDP ratio of 37.0 per cent by 2019–20.

Comparison: 2017 Fall Economic Statement and the 2017 Fall FAO Fiscal Outlook

Cc: George Sakura <George.Sakura@ofina.on.ca>; Kevin Hwang <Kevin.Hwang@ofina.on.ca>; Shemin Meralli <Shemin.Meralli@ofina.on.ca>; John Psinas <John.Psinas@ofina.on.ca>; Bonnie Lemcke <Bonnie.Lemcke@ofina.on.ca>; Ken Kandeepan <Ken.Kandeepan@ofina.on.ca>
Subject: RE: FAO's Fall 2017 Final EFO Report / Request for Input by EOD

Hello Anna;

The total revenue number on page 4 of the note does not appear in the pdf; the total revenue number on page 27 of the pdf document is $149.4 billion and $147.4 billion w/ FHP adjustment on page 4 of the note. Hence, the FAO IOD-to-revenue for 2017-18 of 7.9% on page 21 of the document cannot be replicated using the total revenue number on page 4 of the note.

Best regards

Alex

Hi Ken,

Please see attached, embargoed copy of the FAO's final report. Please let me know if this has any impact on our comment on the summary note.

Thank you, Anna

Hi All,

As a follow up to my message yesterday, I'm attaching an embargoed copy of the FAO's final EFO report. Please **limit circulation of the report** as it's not being released officially until Monday.

Can you please ensure that your ADM approved input/edits to the summary note reflect this latest version of the report **by EOD today**?

Please let me know if you have any questions.

Thanks,
Ryan

Subject: The FAO's Fall 2017 Economic and Fiscal Outlook

Good morning,

The FAO will be releasing a 'Fall 2017 Economic and Fiscal Outlook' report on Monday, December 11, 2017 at 10:00 am.

We have scheduled technical briefings of the embargoed report for MPPs at 9:00 am on Monday. The Temporary FAO, the Honourable David Wake and I will provide a media statement at 10:00 am.

A pre-release copy of the report is being delivered to Ministers Sousa and Sandals this morning, as required by the FAO Act.

Please find attached a copy of the final report for your reference.

Please treat this document as embargoed until its release on Monday at 10:00 am.

As always, we greatly appreciate your assistance and support for the work of the FAO.

Best regards,
David

FAO's 2017 Fall Fiscal Outlook – OB Summary

ISSUE

The Financial Accountability Office is set to release its 'Fall Economic and Fiscal Outlook' report. This note summarizes the fiscal chapter of the report.

TOP MESSAGES

- I would like to thank the Financial Accountability Officer (FAO) for releasing his fall economic and fiscal outlook for Ontario. We value the FAO's independent assessment and projections of the province's fiscal plan.
- As outlined in the 2017 Ontario Economic Outlook and Fiscal Review, the government is projecting a balanced budget for 2017–18 and to remain balanced in 2018–19 and 2019–20.
- The FAO report also projects a balanced budget for Ontario this year.
- The government has a strong track record of beating its fiscal targets. In fact, the Public Accounts of Ontario reported that the 2016–17 deficit was $1.0 billion, beating our annual deficit target again, for the eighth year in a row.
- The 2017 Ontario Economic Outlook and Fiscal Review builds on the government's track record of fiscal management that has resulted in $29 billion in accumulated deficits being avoided over the past seven years, relative to the 2010 Budget forecast.
- We are also targeting a net debt-to-GDP ratio of 35 per cent by 2023–24 and reducing Ontario's net debt-to-GDP ratio to its pre-recession level of 27 per cent, with current projections showing that this will be achieved by 2029–30.
- Since 2014, Ontario's real GDP growth has strengthened, positioning Ontario as a growth leader, not only in Canada, but among G7 countries. In fact, over the 2014-17 period, Ontario's real GDP growth is on pace to exceed that of all G7 countries.
- Private-sector economists are projecting continued growth for Ontario over the forecast horizon; the FAO's real GDP projections are aligned with the 2017 Fall Economic Statement over the 2017 to 2020 period.
- This shows that our plan to make strategic investments in Ontario to grow the economy is working.
- A balanced budget is providing the Province the fiscal flexibility to invest more in health care, education, support for seniors and small businesses and other public services that matter most to Ontario families. It also adds stability to Ontario's finances and positions the government to better respond to demographic challenges and unexpected global economic shocks that the province will face over the next decade.

Commented [SM1]: Unable to verify how the $29 billion is calculated. The 2010 Budget only goes up to 2012-13.

KEY POINTS

Fiscal Outlook

- The FAO is projecting a budget deficit of $3.9 billion in 2017–18 using the **Auditor General's recommended accounting treatment for both the Fair Hydro Plan and the net pension assets of jointly sponsored pension plans.** In the absence of any fiscal policy changes this grows steadily to $9.6 billion in 2021-22.
- Under the **government's accounting presentation (excluding the AG's recommendations)**, the FAO projects a small surplus for 2017–18 of $0.3 billion (excluding the reserve) and a return to deficits beyond 2017–18 driven by revenue factors - loss of temporary revenues combined with more moderate tax revenue growth.
- The FAO suggests that by not adopting the AG's recommended accounting presentation, the 2017 Budget and the 2017 FES reduced transparency and clarity of Ontario's fiscal position and as a result Ontario will continue to receive qualified ~~options~~ opinions from the AG.

Budget Balance - FAO's Fiscal Outlook ($ Billions)	2015-16	2016-17	2017-18	2018-19	2019-20	2020-21	2021-22
AG Presentation	-5.0	-2.5	-3.9	-7.2	-7.9	-8.9	-9.6
Government Presentation	-3.5	-1.0	0.3	-1.9	-2.0	-2.6	-3.5
2017 FES -- Excluding Reserve	-3.5	-1.0	0.5	0.5	0.8	N/A	N/A

Revenue Outlook

- Using the AG presentation, the FAO is projecting average annual revenue growth of 2.6 per cent from 2016-17 to 2019-20 as compared with the government's projections of 4.0 per cent. The main drivers are:
    - The FAO projections for taxation revenues are $2.9 billion lower by 2019-20 than the projections in the 2017 FES due to lower projected growth in household spending, labour income and corporate profits.
    - The FAO projects that, based on the AG presentation, the Fair Hydro Plan will lower net income from OPG by $3.4 billion lower by 2019-20.
    - In addition, the FAO continues to highlight a number of one-time 2017-18 revenues, including: increase to sales and rentals from sale of final tranche of H1, higher federal transfers for infrastructure (PTIF), one-time boost from extra Cap and Trade auction. Taken together the FAO estimates that these amount to $4.5 billion in additional one-time revenues in 2017-18.

Expense Outlook

- From 2017–18 to 2019–20 the FAO's outlook adopts the government's 2017 FES projections for program spending, **adjusted to reflect the AG's recommended accounting presentation.** Beyond 2019–20 the FAO projects program spending will grow faster -- at an average annual rate of 4.1 per cent – due to population pressures.

Borrowing and Net Debt

- Using the **government's accounting presentation** net debt-to-GDP is expected to reach 38.4 per cent by 2019–20 and 38.6 per cent by 2021–22. This increases to 41.3 per cent by 2021–22 **under the AG's accounting presentation**.
    - The 2017 FES projected a net debt-to-GDP ratio of 37.0 per cent by 2019–20.

Comparison: 2017 Fall Economic Statement and the 2017 Fall FAO Fiscal Outlook

Subject: The FAO's Fall 2017 Economic and Fiscal Outlook

Good morning,

The FAO will be releasing a 'Fall 2017 Economic and Fiscal Outlook' report on Monday, December 11, 2017 at 10:00 am.

We have scheduled technical briefings of the embargoed report for MPPs at 9:00 am on Monday. The Temporary FAO, the Honourable David Wake and I will provide a media statement at 10:00 am.

A pre-release copy of the report is being delivered to Ministers Sousa and Sandals this morning, as required by the FAO Act.

Please find attached a copy of the final report for your reference.

Please treat this document as embargoed until its release on Monday at 10:00 am.

As always, we greatly appreciate your assistance and support for the work of the FAO.

Best regards,

David

David West
Chief Economist

FAO's 2017 Fall Fiscal Outlook – OB Summary

ISSUE

The Financial Accountability Office is set to release its 'Fall Economic and Fiscal Outlook' report. This note summarizes the fiscal chapter of the report.

TOP MESSAGES

- I would like to thank the Financial Accountability Officer (FAO) for releasing his fall economic and fiscal outlook for Ontario. We value the FAO's independent assessment and projections of the province's fiscal plan.
- As outlined in the 2017 Ontario Economic Outlook and Fiscal Review, the government is projecting a balanced budget for 2017–18 and to remain balanced in 2018–19 and 2019–20.
- The FAO report also projects a balanced budget for Ontario this year.
- The government has a strong track record of beating its fiscal targets. In fact, the Public Accounts of Ontario reported that the 2016–17 deficit was $1.0 billion, beating our annual deficit target again, for the eighth year in a row.
- The 2017 Ontario Economic Outlook and Fiscal Review builds on the government's track record of fiscal management that has resulted in $29 billion in accumulated deficits being avoided over the past seven years, relative to the 2010 Budget forecast.
- We are also targeting a net debt-to-GDP ratio of 35 per cent by 2023–24 and reducing Ontario's net debt-to-GDP ratio to its pre-recession level of 27 per cent, with current projections showing that this will be achieved by 2029–30.
- Since 2014, Ontario's real GDP growth has strengthened, positioning Ontario as a growth leader, not only in Canada, but among G7 countries. In fact, over the 2014-17 period, Ontario's real GDP growth is on pace to exceed that of all G7 countries.
- Private-sector economists are projecting continued growth for Ontario over the forecast horizon; the FAO's real GDP projections are aligned with the 2017 Fall Economic Statement over the 2017 to 2020 period.
- This shows that our plan to make strategic investments in Ontario to grow the economy is working.
- A balanced budget is providing the Province the fiscal flexibility to invest more in health care, education, support for seniors and small businesses and other public services that matter most to Ontario families. It also adds stability to Ontario's finances and positions the government to better respond to demographic challenges and unexpected global economic shocks that the province will face over the next decade.

Commented [SM1]: Unable to verify how the $29 billion is calculated. The 2010 Budget only goes up to 2012-13.

KEY POINTS

Fiscal Outlook

- The FAO is projecting a budget deficit of $3.9 billion in 2017–18 using the **Auditor General's recommended accounting treatment for both the Fair Hydro Plan and the net pension assets of jointly sponsored pension plans.** In the absence of any fiscal policy changes this grows steadily to $9.6 billion in 2021-22.
- Under the **government's accounting presentation (excluding the AG's recommendations)**, the FAO projects a small surplus for 2017–18 of $0.3 billion (excluding the reserve) and a return to deficits beyond 2017–18 driven by revenue factors - loss of temporary revenues combined with more moderate tax revenue growth.
- The FAO suggests that by not adopting the AG's recommended accounting presentation, the 2017 Budget and the 2017 FES reduced transparency and clarity of Ontario's fiscal position and as a result Ontario will continue to receive qualified ~~options~~ opinions from the AG.

Budget Balance - FAO's Fiscal Outlook ($ Billions)	2015-16	2016-17	2017-18	2018-19	2019-20	2020-21	2021-22
AG Presentation	-5.0	-2.5	-3.9	-7.2	-7.9	-8.9	-9.6
Government Presentation	-3.5	-1.0	0.3	-1.9	-2.0	-2.6	-3.5
2017 FES -- Excluding Reserve	-3.5	-1.0	0.5	0.5	0.8	N/A	N/A

Revenue Outlook

- Using the AG presentation, the FAO is projecting average annual revenue growth of 2.6 per cent from 2016-17 to 2019-20 as compared with the government's projections of 4.0 per cent. The main drivers are:
    - The FAO projections for taxation revenues are $2.9 billion lower by 2019-20 than the projections in the 2017 FES due to lower projected growth in household spending, labour income and corporate profits.
    - The FAO projects that, based on the AG presentation, the Fair Hydro Plan will lower net income from OPG by $3.4 billion lower by 2019-20.
    - In addition, the FAO continues to highlight a number of one-time 2017-18 revenues, including: increase to sales and rentals from sale of final tranche of H1, higher federal transfers for infrastructure (PTIF), one-time boost from extra Cap and Trade auction. Taken together the FAO estimates that these amount to $4.5 billion in additional one-time revenues in 2017-18.

Expense Outlook

- From 2017–18 to 2019–20 the FAO's outlook adopts the government's 2017 FES projections for program spending, **adjusted to reflect the AG's recommended accounting presentation.** Beyond 2019–20 the FAO projects program spending will grow faster -- at an average annual rate of 4.1 per cent – due to population pressures.

Borrowing and Net Debt

- Using the **government's accounting presentation** net debt-to-GDP is expected to reach 38.4 per cent by 2019–20 and 38.6 per cent by 2021–22. This increases to 41.3 per cent by 2021–22 **under the AG's accounting presentation**.
    - The 2017 FES projected a net debt-to-GDP ratio of 37.0 per cent by 2019–20.

Comparison: 2017 Fall Economic Statement and the 2017 Fall FAO Fiscal Outlook

	Actual		Outlook					Avg. Annual Growth

Ken,

We are basically running into the same issue as last year. The FAO is using a different method and is thus calculating different net debt amounts than to our published references, so much so that our variance on increases in net debt is approximately $35 billion by 2021-22 as per page 5 of the fiscal outlook document. (The FAO projects an increase of $87 billion by 2021-22, while we project an increase of $52 billion). Again, we cannot ascertain how valid their net debt assumptions underlying the document are without further information.

The FAO seems to be taking a neutral position on the pension adjustment dispute and this is causing some confusion in the document in some of their references. The Chart on page 6 is confusing for example as there is a top line called AG recommended net debt to GDP, a bottom line called 2017 Budget but also a middle line called government presentation. We are not exactly sure why it's called the "Government Presentation" alongside another line called "2017 Budget".

Lastly, the FAO is needlessly presenting balanced budget information throughout the document before the Reserve. It is not clear what the rationale in doing this, as doing it will always have a variance from Budget. Having a reserve for emergencies is a hallmark of a prudent and accountable government.

Thanks.

Good Morning,

Please find attached drafts of the Economic Outlook and Fiscal Outlook chapters from the FAO's upcoming 'Economic and Fiscal Outlook' report.
The chapters are password protected using the same password as in the past.

The FAO's fiscal forecast incorporates the tax revenue adjustments that we received on Friday afternoon -- and which brings our short-term forecast much closer the Budget 2017 forecast.

Unfortunately, we are on a very tight schedule to enable us to release this report at the end of the May.

So, we are asking for your comments/concerns including any potential cabinet confidentiality issues by end of day tomorrow (Tuesday, May 9)

Thanks again for your support and assistance.

Hello,

Thanks again for our meeting on Tuesday. We appreciate the information you have provided as well as the responses to our questions at the meeting.

On Monday morning (as early as possible) we plan to provide you with draft copies of the Economic Outlook and Fiscal Outlook chapters (including Forecast Tables) from the FAO's upcoming EFO report.

We would hope you would be able to provide us with any comments or concerns on these chapters by Tuesday (May 9), end of day.

As in the past, the FAO will provide a final copy of the report 48 hours prior to release to both Ministers. I would email you a copy at the same time.

Thanks,

David West

Subject: Follow-Up on the 2017 Budget

Good Morning!

Congratulations on delivering yesterday's big, black budget!

I wanted to follow-up on the FAO's requests for some additional information.

First, as we have discussed, we have three requests for specific data/tables:

1. We would like to obtain the detailed revenue and expense tables (Tables 6.14 and 6.15) extended to 2019-20.

- Are these detailed tables available to 2020-21? If so, then please include (:))

2. As staff have been discussing, we would like to obtain more detailed information on the one-time adjustments to taxation revenues beginning in 2015-16 and extending over the forecast. This is basically additional information to that provided in tables 6.7, 6.8 and 6.9.

3. As detailed in the letter and background documents sent to Deputies Thompson and Angus on April 3, we are requesting pension expense and employer contribution details for the OTPP and OPSEUPP.

We would also appreciate a meeting early next week (preferably Tuesday afternoon) to allow you to respond to a number of questions that we have with regard to the 2017 Budget.

We'll provide a list of specific questions later this afternoon, but these questions will cover a number of areas, including:

- Clarification on where the Fair Hydro Plan appears in the expenses

- Additional details/clarification on new health spending, including the new pharmacare plan

- Clarification on future assumptions for asset sales and any details behind the 'Sales and Rentals' line in the detailed Revenue table.

- Clarification on the assumptions behind new federal funding announced in the 2017 federal budget (e.g. affordable housing, child care, home care)

- Some background on the decision to reduce the estimate of 'Carbon Allowance Proceeds' and assumptions on associated expense

- Additional details/clarification on new infrastructure spending

- Assumptions behind the plan to reduce net debt-to-GDP to 35% and eventually to 27%.

We'll provide a list later this afternoon that expands somewhat on these question topics.

Happy to discuss any of these requests.

Thanks again for your support,
David

Subject: Follow-Up on the 2017 Budget

Good Morning!

Congratulations on delivering yesterday's big, black budget!

I wanted to follow-up on the FAO's requests for some additional information.

First, as we have discussed, we have three requests for specific data/tables:

1. We would like to obtain the detailed revenue and expense tables (Tables 6.14 and 6.15) extended to 2019-20.

- Are these detailed tables available to 2020-21? If so, then please include (:))

2. As staff have been discussing, we would like to obtain more detailed information on the one-time adjustments to taxation revenues beginning in 2015-16 and extending over the forecast. This is basically additional information to that provided in tables 6.7, 6.8 and 6.9.

3. As detailed in the letter and background documents sent to Deputies Thompson and Angus on April 3, we are requesting pension expense and employer contribution details for

the OTPP and OPSEUPP.

We would also appreciate a meeting early next week (preferably Tuesday afternoon) to allow you to respond to a number of questions that we have with regard to the 2017 Budget.

We'll provide a list of specific questions later this afternoon, but these questions will cover a number of areas, including:

- Clarification on where the Fair Hydro Plan appears in the expenses
- Additional details/clarification on new health spending, including the new pharmacare plan
- Clarification on future assumptions for asset sales and any details behind the 'Sales and Rentals' line in the detailed Revenue table.
- Clarification on the assumptions behind new federal funding announced in the 2017 federal budget (e.g. affordable housing, child care, home care)
- Some background on the decision to reduce the estimate of 'Carbon Allowance Proceeds' and assumptions on associated expense
- Additional details/clarification on new infrastructure spending
- Assumptions behind the plan to reduce net debt-to-GDP to 35% and eventually to 27%.

We'll provide a list later this afternoon that expands somewhat on these question topics.

Happy to discuss any of these requests.

Thanks again for your support,

David

Subject: RE: FAO"s Upcoming EFO Report
Date: Monday, May 08, 2017 4:18:19 PM

Ken,

We are basically running into the same issue as last year. The FAO is using a different method and is thus calculating different net debt amounts than to our published references, so much so that our variance on increases in net debt is approximately $35 billion by 2021-22 as per page 5 of the fiscal outlook document. (The FAO projects an increase of $87 billion by 2021-22, while we project an increase of $52 billion). Again, we cannot ascertain how valid their net debt assumptions underlying the document are without further information.

The FAO seems to be taking a neutral position on the pension adjustment dispute and this is causing some confusion in the document in some of their references. The Chart on page 6 is confusing for example as there is a top line called AG recommended net debt to GDP, a bottom line called 2017 Budget but also a middle line called government presentation. We are not exactly sure why it's called the "Government Presentation" alongside another line called "2017 Budget".

Lastly, the FAO is needlessly presenting balanced budget information throughout the document before the Reserve. It is not clear what the rationale in doing this, as doing it will always have a variance from Budget. Having a reserve for emergencies is a hallmark of a prudent and accountable government.

Thanks.

Subject: RE: FAO's Upcoming EFO Report

Good Morning,

Please find attached drafts of the Economic Outlook and Fiscal Outlook chapters from the FAO's upcoming 'Economic and Fiscal Outlook' report.
The chapters are password protected using the same password as in the past.

The FAO's fiscal forecast incorporates the tax revenue adjustments that we received on Friday afternoon -- and which brings our short-term forecast much closer the Budget 2017 forecast.

Unfortunately, we are on a very tight schedule to enable us to release this report at the end of the May.

So, we are asking for your comments/concerns including any potential cabinet confidentiality issues by end of day tomorrow (Tuesday, May 9)

Thanks again for your support and assistance.

Hello,

Thanks again for our meeting on Tuesday. We appreciate the information you have provided as well as the responses to our questions at the meeting.

On Monday morning (as early as possible) we plan to provide you with draft copies of the Economic Outlook and Fiscal Outlook chapters (including Forecast Tables) from the FAO's upcoming EFO report.

We would hope you would be able to provide us with any comments or concerns on these chapters by Tuesday (May 9), end of day.

As in the past, the FAO will provide a final copy of the report 48 hours prior to release to both Ministers. I would email you a copy at the same time.

Thanks,

David West

Subject: RE: FES Fiscal Strategy #4
Date: Saturday, October 08, 2016 8:25:10 AM
Attachments: image001.png

Thanks Gadi, the footnote option or the one showing the impact of the pension adjustment on the deficit/surplus as a below the line item makes the most sense to me.

Any option that seeks to absorb the pension adjustment in 16-17 and the out-years is quite risky since if the independent review is in the Province's favour, then the Government is stuck with the revised revenues and expenditure profiles which is not only challenging to achieve but effectively leads to almost balance in 16-17 and surpluses in the out years.

There is also a credibility issue as to if this level of flexibility was available why it was not previously included in the out year numbers.

The footnote option has its own risks if the review goes against the Province, however, having read both sides of the argument I am cautiously optimistic.

Here's wishing you and the family a fun and happy thanksgiving

Correct, however, it's unlikely that the review will be completed in time for the publication of the FES.

At this point in time, the direction that we've been given is that the FES will report the $5.0 billion deficit for 2015-16.

Hi Tara

Not sure whether these scenarios capture an essential issue. Let's say the government is successful in the review of the pension adjustment, the expert panel agrees with government's position. In that case and correct me if I am wrong John, the 15-16 numbers will be restated and the its as though this accounting change never happened.

So my suggestion is for scenarios 1 and 3 the accounting change be ignored. Happy to discuss, 647-202-4373

Let me know

Ken K

Hi John,

Here are the deficit numbers.

To be clear, we are requesting 4 different net debt-to-GDP outlooks:

1. Based on 2016 Budget fiscal outlook and capital profile – takes into account the net debt impact of $10.7B in 15-16 from PAs, but does not carry that accounting change impact forward (i.e., accumulated deficit spikes in 15-16 but returns to normal levels in 16-17 onward).

2. Based on 2016 Budget fiscal outlook and capital profile – takes into account the net debt impact of $10.7B in 15-16 from PAS, and carries the accounting change impact forward

3. Based on FES fiscal outlook and capital profile – takes into account the net debt impact of $10.7B in 15-16 from PAs, but does not carry that accounting change impact forward (i.e., accumulated deficit spikes in 15-16 but returns to normal levels in 16-17 onward).

4. Based on FES fiscal outlook and capital profile – takes into account the net debt impact of $10.7B in 15-16 from PAS, and carries the accounting change impact forward

Please give me a call if that's unclear 5-8174. Thanks,

Tara

Subject: RE: FES Fiscal Strategy Update at FPC Tomorrow

Hi John,

Sorry – a bit of confusion with the email below. Let me clarify.

We got added last minute today for tomorrow's FPC because TBS's allocations work fell off. We're going to bring the "final" proposed fiscal outlook (no longer multiple options), and the DM would like to include the net debt-to-GDP outlook associated with it.

At this point, we've asked CPD to update their TCA profile, as there has been a change to a child care item with capital impacts, and we've asked OEP if they want to update their nominal GDP forecast for the FES outlook as opposed to their spring

outlook for PAs. In addition, we're doing one last check of our bottom-line numbers, but can send along shortly.

You're right, there's no mention of 15-16 in the deck. I think what we're looking for help on is what the net debt should be for 16-17 to 18-19 to calculate this net debt-to-GDP profile? For the FES, we're currently planning to report the fiscal outlook for 16-17 to 18-19 based on *not* taking on the change in accounting for pension assets that was taken on as part of the 15-16 PAs. I'm not sure what that means for you and what report in FES for net debt?

Let me know if you want to chat. We'll need to turn this around tonight, unfortunately, as FPC is planned for tomorrow morning at 10am. Thanks,

Tara

Subject: RE: FES Fiscal Strategy Update at FPC Tomorrow

Ryan,

There does not appear to be references to 2015-16 in the deck with respect to net debt. If there is, can you point them to me. The actual net debt with the pension adjustment this year, based on the unaudited annual report issued last night, is 305,233 in case you want to insert it in.

In any event, the numbers in the deck do not reflect this year's highly controversial pension adjustment in the out-years. I've been instructed though, to leave it as is for the purposes of your deck as there may be a high chance that the pension adjustment may be reversed next year, which will lead us back to the numbers in the deck (assuming all of the assumptions Tara gave us are unchanged). You may thus want to put a qualifier in the deck that the out-years do not reflect the pension adjustment in net debt.

Thanks.

Importance: High

Hi Christina,

I just wanted to flag that there will be a FES Fiscal Strategy update tracking to FPC tomorrow. As a reference, I'm attaching the latest iteration of the deck that was prepared last week. Note, we'll be using a shortened version of the deck for tomorrow's FPC meeting.

Can OFA confirm if there are any updates to net debt to GDP as a result of yesterday's release of 2015-16 Annual Report that should be included as soon as possible?

Thanks,
Ryan

Hi John,

As discussed, we'll get you numbers as soon as we can, but timing will be contingent on others also working through the numbers. And as I mentioned below, it's the DM that would like net debt-to-GDP to be included. Thanks,

Tara

Subject: RE: FES Fiscal Strategy Update at FPC Tomorrow

Hi John,

Sorry – a bit of confusion with the email below. Let me clarify.

We got added last minute today for tomorrow's FPC because TBS's allocations work fell off. We're going to bring the "final" proposed fiscal outlook (no longer multiple options), and the DM would like to include the net debt-to-GDP outlook associated with it.

At this point, we've asked CPD to update their TCA profile, as there has been a change to a child care item with capital impacts, and we've asked OEP if they want to

update their nominal GDP forecast for the FES outlook as opposed to their spring outlook for PAs. In addition, we're doing one last check of our bottom-line numbers, but can send along shortly.

You're right, there's no mention of 15-16 in the deck. I think what we're looking for help on is what the net debt should be for 16-17 to 18-19 to calculate this net debt-to-GDP profile? For the FES, we're currently planning to report the fiscal outlook for 16-17 to 18-19 based on *not* taking on the change in accounting for pension assets that was taken on as part of the 15-16 PAs. I'm not sure what that means for you and what report in FES for net debt?

Let me know if you want to chat. We'll need to turn this around tonight, unfortunately, as FPC is planned for tomorrow morning at 10am. Thanks,

Tara

Ryan,

There does not appear to be references to 2015-16 in the deck with respect to net debt. If there is, can you point them to me. The actual net debt with the pension adjustment this year, based on the unaudited annual report issued last night, is 305,233 in case you want to insert it in.

In any event, the numbers in the deck do not reflect this year's highly controversial pension adjustment in the out-years. I've been instructed though, to leave it as is for the purposes of your deck as there may be a high chance that the pension adjustment may be reversed next year, which will lead us back to the numbers in the deck (assuming all of the assumptions Tara gave us are unchanged). You may thus want to put a qualifier in the deck that the out-years do not reflect the pension adjustment in net debt.

Thanks.

Subject: FES Fiscal Strategy Update at FPC Tomorrow

Importance: High

Hi Christina,

I just wanted to flag that there will be a FES Fiscal Strategy update tracking to FPC tomorrow. As a reference, I'm attaching the latest iteration of the deck that was prepared last week. Note, we'll be using a shortened version of the deck for tomorrow's FPC meeting.

Can OFA confirm if there are any updates to net debt to GDP as a result of yesterday's release of 2015-16 Annual Report that should be included as soon as possible?

Thanks,
Ryan

Subject: FES Fiscal Strategy Update at FPC Tomorrow
Importance: High

Hi Christina,

I just wanted to flag that there will be a FES Fiscal Strategy update tracking to FPC tomorrow. As a reference, I'm attaching the latest iteration of the deck that was prepared last week. Note, we'll be using a shortened version of the deck for tomorrow's FPC meeting.

Can OFA confirm if there are any updates to net debt to GDP as a result of yesterday's release of 2015-16 Annual Report that should be included as soon as possible?

Thanks,

Ryan

Hi John,

Sorry – a bit of confusion with the email below. Let me clarify.

We got added last minute today for tomorrow's FPC because TBS's allocations work fell off. We're going to bring the "final" proposed fiscal outlook (no longer multiple options), and the DM would like to include the net debt-to-GDP outlook associated with it.

At this point, we've asked CPD to update their TCA profile, as there has been a change to a child care item with capital impacts, and we've asked OEP if they want to update their nominal GDP forecast for the FES outlook as opposed to their spring outlook for PAs. In addition, we're doing one last check of our bottom-line numbers, but can send along shortly.

You're right, there's no mention of 15-16 in the deck. I think what we're looking for help on is what the net debt should be for 16-17 to 18-19 to calculate this net debt-to-GDP profile? For the FES, we're currently planning to report the fiscal outlook for 16-17 to 18-19 based on *not* taking on the change in accounting for pension assets that was taken on as part of the 15-16 PAs. I'm not sure what that means for you and what report in FES for net debt?

Let me know if you want to chat. We'll need to turn this around tonight, unfortunately, as FPC is planned for tomorrow morning at 10am. Thanks,

Tara

Ryan,

There does not appear to be references to 2015-16 in the deck with respect to net debt. If there is, can you point them to me. The actual net debt with the pension adjustment this year, based on the unaudited annual report issued last night, is 305,233 in case you want to insert it in.

In any event, the numbers in the deck do not reflect this year's highly controversial pension adjustment in the out-years. I've been instructed though, to leave it as is for the purposes of your deck as there may be a high chance that the pension adjustment may be reversed next year, which

will lead us back to the numbers in the deck (assuming all of the assumptions Tara gave us are unchanged). You may thus want to put a qualifier in the deck that the out-years do not reflect the pension adjustment in net debt.

Thanks.

Ken,

Do you mean you want us to have out years without the pension adjustment (already reflected in the deck) and one with the $10.7 Billion adjustment so Tara's folks will have multiple slides? The slides don't have 2015-16 but out-years only.

The deck seems to be based on the information we sent to Tara that did not have the pension adjustment in any year, but based on the 3,515 deficit. We can revise it:

(A) Provide information "with the pension adjustment" .ie. provide information to reflect the 5,029 deficit and $9.1 B equity adjustment, which will affect the carry forward 2016-17 accumulated deficit and thus net debt, and/or

(B) leave the deck information as is as the 3,515 (with no equity adjustment) would reflect a carry forward 2016-17 accumulated deficit with the adjustment as if it was reversed.

Or both.

Thanks.

Correct, however, it's unlikely that the review will be completed in time for the publication of the FES.

At this point in time, the direction that we've been given is that the FES will report the $5.0 billion deficit for 2015-16.

Sorry – a bit of confusion with the email below. Let me clarify.

We got added last minute today for tomorrow's FPC because TBS's allocations work fell off. We're going to bring the "final" proposed fiscal outlook (no longer multiple options), and the DM would like to include the net debt-to-GDP outlook associated with it.

At this point, we've asked CPD to update their TCA profile, as there has been a change to a child care item with capital impacts, and we've asked OEP if they want to update their nominal GDP forecast for the FES outlook as opposed to their spring outlook for PAs. In addition, we're doing one last check of our bottom-line numbers, but can send along shortly.

You're right, there's no mention of 15-16 in the deck. I think what we're looking for help on is what the net debt should be for 16-17 to 18-19 to calculate this net debt-to-GDP profile? For the FES, we're currently planning to report the fiscal outlook for 16-17 to 18-19 based on *not* taking on the change in accounting for pension assets that was taken on as part of the 15-16 PAs. I'm not sure what that means for you and what report in FES for net debt?

Let me know if you want to chat. We'll need to turn this around tonight, unfortunately, as FPC is planned for tomorrow morning at 10am. Thanks,

Tara

Ryan,

There does not appear to be references to 2015-16 in the deck with respect to net debt. If there is, can you point them to me. The actual net debt with the pension adjustment this year, based on the unaudited annual report issued last night, is 305,233 in case you want to insert it in.

In any event, the numbers in the deck do not reflect this year's highly controversial pension adjustment in the out-years. I've been instructed though, to leave it as is for the purposes of your deck as there may be a high chance that the pension adjustment may be reversed next year, which will lead us back to the numbers in the deck (assuming all of the assumptions Tara gave us are unchanged). You may thus want to put a qualifier in the deck that the out-years do not reflect the pension adjustment in net debt.

Thanks.

Hi Christina,

I just wanted to flag that there will be a FES Fiscal Strategy update tracking to FPC tomorrow. As a reference, I'm attaching the latest iteration of the deck that was prepared last week. Note, we'll be using a shortened version of the deck for tomorrow's FPC meeting.

Can OFA confirm if there are any updates to net debt to GDP as a result of yesterday's release of 2015-16 Annual Report that should be included as soon as possible?

Thanks,
Ryan

Correct, however, it's unlikely that the review will be completed in time for the publication of the FES.

At this point in time, the direction that we've been given is that the FES will report the $5.0 billion deficit for 2015-16.

Hi Tara

Not sure whether these scenarios capture an essential issue. Let's say the government is successful in the review of the pension adjustment, the expert panel agrees with government's position. In that case and correct me if I am wrong John, the 15-16 numbers will be restated and the its as though this accounting change never happened.

So my suggestion is for scenarios 1 and 3 the accounting change be ignored. Happy to discuss, 647-202-4373

Let me know

Ken K

Hi John,

Here are the deficit numbers.

To be clear, we are requesting 4 different net debt-to-GDP outlooks:

1. Based on 2016 Budget fiscal outlook and capital profile – takes into account the net debt impact of $10.7B in 15-16 from PAs, but does not carry that accounting change impact forward (i.e., accumulated deficit spikes in 15-16 but returns to normal levels in 16-17 onward).

2. Based on 2016 Budget fiscal outlook and capital profile – takes into account the net debt impact of $10.7B in 15-16 from PAS, and carries the accounting change impact forward

3. Based on FES fiscal outlook and capital profile – takes into account the net debt impact of $10.7B in 15-16 from PAs, but does not carry that accounting change impact forward (i.e., accumulated deficit spikes in 15-16 but returns to normal levels in 16-17 onward).

4. Based on FES fiscal outlook and capital profile – takes into account the net debt impact of $10.7B in 15-16 from PAS, and carries the accounting change impact forward

Please give me a call if that's unclear 5-8174. Thanks,

Tara

Subject: RE: FES Fiscal Strategy Update at FPC Tomorrow

Ryan,

There does not appear to be references to 2015-16 in the deck with respect to net debt. If there is, can you point them to me. The actual net debt with the pension adjustment this year, based on the unaudited annual report issued last night, is 305,233 in case you want to insert it in.

In any event, the numbers in the deck do not reflect this year's highly controversial pension adjustment in the out-years. I've been instructed though, to leave it as is for the purposes of your deck as there may be a high chance that the pension adjustment may be reversed next year, which will lead us back to the numbers in the deck (assuming all of the assumptions Tara gave us are unchanged). You may thus want to put a qualifier in the deck that the out-years do not reflect the pension adjustment in net debt.

Thanks.

Hi Christina,

I just wanted to flag that there will be a FES Fiscal Strategy update tracking to FPC tomorrow. As a reference, I'm attaching the latest iteration of the deck that was prepared last week. Note, we'll be using a shortened version of the deck for tomorrow's FPC meeting.

Can OFA confirm if there are any updates to net debt to GDP as a result of yesterday's release of 2015-16 Annual Report that should be included as soon as possible?

Thanks,
Ryan

Subject: RE: FES Fiscal Strategy Update at FPC Tomorrow

Hi John,

Sorry – a bit of confusion with the email below. Let me clarify.

We got added last minute today for tomorrow's FPC because TBS's allocations work fell off. We're going to bring the "final" proposed fiscal outlook (no longer multiple options), and the DM would like to include the net debt-to-GDP outlook associated with it.

At this point, we've asked CPD to update their TCA profile, as there has been a change to a child care item with capital impacts, and we've asked OEP if they want to update their nominal GDP forecast for the FES outlook as opposed to their spring outlook for PAs. In addition, we're doing one last check of our bottom-line numbers, but can send along shortly.

You're right, there's no mention of 15-16 in the deck. I think what we're looking for help on is what the net debt should be for 16-17 to 18-19 to calculate this net debt-to-GDP profile? For the FES, we're currently planning to report the fiscal outlook for 16-17 to 18-19 based on *not* taking on the change in accounting for pension assets that was taken on as part of the 15-16 PAs. I'm not sure what that means for you and what report in FES for net debt?

Let me know if you want to chat. We'll need to turn this around tonight, unfortunately, as FPC is planned for tomorrow morning at 10am. Thanks,

Tara

Hi Ghufran,

We're also trying to update the net debt-to-GDP forecast for FPC tomorrow. In previous FPC decks we've been using the spring nominal GDP forecast as the denominator (provided by OEP to the OFA, and used for Public Accounts), but given how far along we are in the FES process, we were wondering whether OEP wants to update this nominal GDP forecast for whatever is tracking for FES.

Let us know what Brian would like to do. If the desire is to update, then we'd need the outlook asap so that we can work with the OFA and TBS to land the net debt-to-GDP outlook before end of day.

Thanks,

Tara

Ryan,

There does not appear to be references to 2015-16 in the deck with respect to net debt. If there is, can you point them to me. The actual net debt with the pension adjustment this year, based on the unaudited annual report issued last night, is 305,233 in case you want to insert it in.

In any event, the numbers in the deck do not reflect this year's highly controversial pension adjustment in the out-years. I've been instructed though, to leave it as is for the purposes of your deck as there may be a high chance that the pension adjustment may be reversed next year, which will lead us back to the numbers in the deck (assuming all of the assumptions Tara gave us are unchanged). You may thus want to put a qualifier in the deck that the out-years do not reflect the pension adjustment in net debt.

Thanks.

Subject: RE: FES Fiscal Strategy Update at FPC Tomorrow

Tara,

Please find the 4 scenarios attached. We did the scenarios where we followed your directions about acc. deficit spiking this year, and then would be back to normal in the out years, which we have interpreted as no restatement.

Thanks.

John

Hi Ken and John,

Do you have an ETA on the net debt-to-GDP numbers?

Tim is ready to send the deck and this is one remaining piece. Thanks,

Tara

Correct, however, it's unlikely that the review will be completed in time for the publication of the FES.

At this point in time, the direction that we've been given is that the FES will report the $5.0 billion deficit for 2015-16.

Hi Tara

Not sure whether these scenarios capture an essential issue. Let's say the government is successful in the review of the pension adjustment, the expert panel agrees with government's position. In that case and correct me if I am wrong John, the 15-16 numbers will be restated and the its as though this accounting change never happened.

So my suggestion is for scenarios 1 and 3 the accounting change be ignored. Happy to discuss, 647-202-4373

Let me know

Ken K

Subject: RE: FES Fiscal Strategy Update at FPC Tomorrow

Hi John,

Here are the deficit numbers.

To be clear, we are requesting 4 different net debt-to-GDP outlooks:

1. Based on 2016 Budget fiscal outlook and capital profile – takes into account the net debt impact of $10.7B in 15-16 from PAs, but does not carry that accounting change impact forward (i.e., accumulated deficit spikes in 15-16 but returns to normal levels in 16-17 onward).

2. Based on 2016 Budget fiscal outlook and capital profile – takes into account the net debt impact of $10.7B in 15-16 from PAS, and carries the accounting change impact forward

3. Based on FES fiscal outlook and capital profile – takes into account the net debt impact of $10.7B in 15-16 from PAs, but does not carry that accounting change impact forward (i.e., accumulated deficit spikes in 15-16 but returns to normal levels in 16-17 onward).

4. Based on FES fiscal outlook and capital profile – takes into account the net debt impact of $10.7B in 15-16 from PAS, and carries the accounting change impact forward

Please give me a call if that's unclear 5-8174. Thanks,

Tara

Subject: RE: FES Fiscal Strategy Update at FPC Tomorrow

Hi John,

Sorry – a bit of confusion with the email below. Let me clarify.

We got added last minute today for tomorrow's FPC because TBS's allocations work fell off. We're going to bring the "final" proposed fiscal outlook (no longer multiple options), and the DM would like to include the net debt-to-GDP outlook associated with it.

At this point, we've asked CPD to update their TCA profile, as there has been a change to a child care item with capital impacts, and we've asked OEP if they want to update their nominal GDP forecast for the FES outlook as opposed to their spring outlook for PAs. In addition, we're doing one last check of our bottom-line numbers, but can send along shortly.

You're right, there's no mention of 15-16 in the deck. I think what we're looking for help on is what the net debt should be for 16-17 to 18-19 to calculate this net debt-to-GDP profile? For the FES, we're currently planning to report the fiscal outlook for 16-17 to 18-19 based on *not* taking on the change in accounting for pension assets that was taken on as part of the 15-16 PAs. I'm not sure what that means for you and what report in FES for net debt?

Let me know if you want to chat. We'll need to turn this around tonight, unfortunately, as FPC is planned for tomorrow morning at 10am. Thanks,

Tara

Subject: RE: FES Fiscal Strategy Update at FPC Tomorrow

Ryan,

There does not appear to be references to 2015-16 in the deck with respect to net debt. If there is, can you point them to me. The actual net debt with the pension adjustment this year, based on the unaudited annual report issued last night, is 305,233 in case you want to insert it in.

In any event, the numbers in the deck do not reflect this year's highly controversial pension adjustment in the out-years. I've been instructed though, to leave it as is for the purposes of your deck as there may be a high chance that the pension adjustment may be reversed next year, which will lead us back to the numbers in the deck (assuming all of the assumptions Tara gave us are unchanged). You may thus want to put a qualifier in the deck that the out-years do not reflect the pension adjustment in net debt.

Thanks.

Subject: FES Fiscal Strategy Update at FPC Tomorrow
Importance: High

Hi Christina,

I just wanted to flag that there will be a FES Fiscal Strategy update tracking to FPC tomorrow. As a reference, I'm attaching the latest iteration of the deck that was prepared last week. Note, we'll be using a shortened version of the deck for tomorrow's FPC meeting.

Can OFA confirm if there are any updates to net debt to GDP as a result of yesterday's release of 2015-16 Annual Report that should be included as soon as possible?

Thanks,
Ryan

Thanks Gadi, with the exception of the option that shows the pension impact as a narrative, the others present risks for the government. If the review results are aligned with the Government's position then we are effectively balancing in 16-17 (a very small deficit of approximately $2B) and presenting surpluses in 17-18 and 18-19. These commitments need to be met in order to preserve credibility.

Alternatively, if the review results are against our position the requirement to balance and all that entails still exists, and slippage represents a loss of credibility. If we are going to go this route, I would recommend that we present the pension adjustment separately instead of including it in the program expense.

The credibility issue goes away if the pension adjustment is presented as a narrative. If the review result is favourable then we revert to the presentation in slide 3, and all is well. If not then the problem has to be addressed as part of the 2017 Budget.

Thanks

Ken K

Thanks Gadi, numbers and options remain unchanged from the last version on Friday. I would recommend the footnote option for the Pension Adjustment.

The fact that the FAO's draft fiscal outlook, (assuming that the final version is the same) provides their assessment of the deficit, net debt, etc., both with and without the pension adjustment provides credibility to the Government's position that the results of the independent review can well reverse this adjustment. This point is not well brought out in the slides so perhaps it can be included.

Based on that premise the footnote option seems viable, so is the "below the line" but the footnote at least to me is cleaner.

Thanks

Ken k

Thanks Gadi, other than the re-ordering the slides as per Tim's email, no other changes. Hopefully, the FAO's approach in providing projections with and without the pension adjustment, at least in their draft, will be pointed out at the meeting as something that will lend credibility to the use of option 2.

After a conversation with Karen at TBS this morning, I've moved the "fiscal gap" slide in the FES deck to the appendix – as there is also a fiscal gap slide in the allocations deck that may cause some confusion between the two universes being discussed this morning. Its still there, but its in the appendix. I've added language up front to say that the FES strategy does not solve the gap, that is for PRRT and Document processes.

I recommend we use the attached for the fiscal update meeting at 1230.

Cc: Shemin Meralli <Shemin.Meralli@ofina.on.ca>
Subject: RE: FES scenarios

I will leave it to you guys but the way I understood Tara's request is that the accumulated deficit increases in each scenario in 15-16 by the full 10.7 billion. In 1 and 3 it is reversed in 16-17 and in 2 and 4 it is not reversed. Not sure whether that is reflected in George's numbers.

Happy to be corrected.

Thanks

Ken k

Thanks Gadi, appears no changes in numbers and narrative. My only comment is that the pension adjustment narrative should emphasize the that Government's prudent and risk averse approach based on the legislated basis of accounting that was implemented in 2015-16 and include a reference to the independent review.

Thanks

Ken K

Subject: RE: FT

Hi Alex and Team

I just came back from a meeting with Gadi and we agreed that the FT be developed as follows. Change Non-Cash Adjustments by the net impact of the pension adjustment and the reserve. Kevin will provide you with the revised non-cash spreadsheet shortly. Happy to provide an explanation but would like to do so in person, so pls drop in tomorrow.

You will see that non-cash increases by $1.6 billion, Gadi would like the long term borrowing to also reduce by the full $1.6 billion. No changes to 17-18 and 18-19, as we discussed, Gadi agrees that the prudent course of action is to wait till the 2017 Document.

We also need to offset the $500M increase in capital investments, pls do so via an equivalent cash reduction.

Once you receive the outlook from Tara pls prepare the FT accordingly and pls provide a link for me to review. We can the present same to Gadi.

Thanks

Ken k

Hi

I understand that Tara will be providing you with the FES outlook sometime today. Can we try and have a draft FT for the end of the day for me to review and present it to Gadi sometime tomorrow. I suggest that for now we decrease cash by $1 B offset to some extent by the $500M increase in capital investments with the balance reducing the short term borrowings. There will be no change in the deficit.

For the out years Fiscal is still projecting balance so my suggestion is we don't make any changes in the FT until the 2017 Budget.

Thanks

Subject: RE: Fiscal Overview Deck for FPC
Date: Monday, December 05, 2016 9:00:44 AM

Hi Gadi

Just saw this email; no significant changes from the previous version. The pension adjustment comprises around one third of the gap in 17-18, growing to well over 40% in 18-19, hopefully the review will provide some relief.

Thanks

Ken k

Subject: Fiscal Overview Deck for FPC

Deputies

Please find attached an updated Fiscal Overview deck that could track to FPC this week (and Minister Sandals' briefing first thing tomorrow morning).

This reflects updated numbers on both the revenue and expense side since we discussed it on Thursday with the MO's. It also attempts to capture the various feedback and requests made at that meeting.

Caveat and disclaimer: Please note that while folks have been working very hard at getting the numbers scrubbed and reviewed, that there is still a significant degree of work that needs to be done to add precision and accuracy to the numbers. In addition, when we discussed this deck as a group late yesterday, there are some tweaks that we would like to make to the way some of the numbers are shown which we will pick up on Monday.

Thanks again to all who have participated over the past few days to get us to this point.

Thanks, Ken. I noticed that they've got the IOD target as a low risk for this year, but a medium for the out years. I'm fine with that characterization.

Subject: Fiscal Overview Deck for FPC

Deputies

Please find attached an updated Fiscal Overview deck that could track to FPC this week (and Minister Sandals' briefing first thing tomorrow morning).

This reflects updated numbers on both the revenue and expense side since we discussed it on Thursday with the MO's. It also attempts to capture the various feedback and requests made at that meeting.

Caveat and disclaimer: Please note that while folks have been working very hard at getting the numbers scrubbed and reviewed, that there is still a significant degree of work that needs to be done to add precision and accuracy to the numbers. In addition, when we discussed this deck as a group late yesterday, there are some tweaks that we would like to make to the way some of the numbers are shown which we will pick up on Monday.

Thanks again to all who have participated over the past few days to get us to this point.

Tim Schuurman
Assistant Deputy Minister

Anna,

Our Net Debt assumptions have many moving parts and are from several sources, namely OEP and CPD. They were factored into our net debt calculations as follows:

1 Pension is reversed and deficit for 2016-17 is $1,524

2 The denominator annual nominal GDP that goes into the net debt calculation % is per latest information received from OEP used for the 2017 Budget

3 A major component of the net debt calculation in the numerator, the book value of tangible capital assets, is per the latest information received from CPD used for the 2017 Budget

4 Our Net Debt amount is not adjusted for prepaid expenses and inventory. Such an adjustment will be done for the 2016-17 Public Accounts onwards going forward (new this year per OPCD request)

5 The balanced budget continues through to 2030-31

6 The Tangible Capital Asset book value is the same from 2026-27 to 2030-31, i.e. no change

7 GDP annual growth is 4% from 2021-22 to 2030-31 per direction from OEP.

Thanks.

Subject: FW: Follow-Up on the 2017 Budget / Meeting on Tuesday

Hi Ken, John,

ADMs are meeting with the FAO next week (likely Tuesday afternoon) to discuss the 2017 Budget.

The FAO has provided a preview below of some of their questions, with more specific questions to follow later today. I've highlighted the one area that falls to the OFA (do you see any others?). And I note, for Gavin, that questions 1 and 3 would seem to be for CEFD.

I'll send along the detailed questions as soon as we receive them, but just a head's up that Gadi will be looking for material to support him in answering the question on net debt-to-GDP targets.

Thanks, Anna

Hi All,

As a follow up to these questions on the 2017 Budget, I wanted to hold an hour block of time on Tuesday (May 2) to meet with the FAO.

Would **1:30pm-2:30pm** in the Aquarium on **Tuesday** work for your ADMs? If you could confirm before EOD, it would be appreciated.

Thanks!
Ryan

Subject: Follow-Up on the 2017 Budget

Good Morning!

Congratulations on delivering yesterday's big, black budget!

I wanted to follow-up on the FAO's requests for some additional information.

First, as we have discussed, we have three requests for specific data/tables:

1. We would like to obtain the detailed revenue and expense tables (Tables 6.14 and 6.15) extended to 2019-20.
   - Are these detailed tables available to 2020-21? If so, then please include (☺)

2. As staff have been discussing, we would like to obtain more detailed information on the one-time adjustments to taxation revenues beginning in 2015-16 and extending over the forecast. This is basically additional information to that provided in tables 6.7, 6.8 and 6.9.

3. As detailed in the letter and background documents sent to Deputies Thompson and Angus on April 3, we are requesting pension expense and employer contribution details for the OTPP and OPSEUPP.

We would also appreciate a meeting early next week (preferably Tuesday afternoon) to allow you to respond to a number of questions that we have with regard to the 2017 Budget.

We'll provide a list of specific questions later this afternoon, but these questions will cover a number of areas, including:

- Clarification on where the Fair Hydro Plan appears in the expenses
- Additional details/clarification on new health spending, including the new pharmacare plan
- Clarification on future assumptions for asset sales and any details behind the 'Sales and Rentals' line in the detailed Revenue table.
- Clarification on the assumptions behind new federal funding announced in the 2017 federal budget (e.g. affordable housing, child care, home care)
- Some background on the decision to reduce the estimate of 'Carbon Allowance Proceeds' and assumptions on associated expense
- Additional details/clarification on new infrastructure spending
- Assumptions behind the plan to reduce net debt-to-GDP to 35% and eventually to 27%.

We'll provide a list later this afternoon that expands somewhat on these question topics.

Happy to discuss any of these requests.

Thanks again for your support,
David

Subject: FW: Follow-Up on the 2017 Budget

Hi Everyone.

As you can see below, the FAO has reached out to make a formal request for information in follow up to yesterday's release of the Budget (BTW we are looking to set up a mtg on Tuesday from 1pm to 2pm with the FAO).

You may have already been forwarded this email from your ADMs but we've also just now received the list of specific additional questions (attached). I've attempted to identify in the attached and below which area is responsible for what, and if I have this wrong, please let me know (and sorry!).

I thought we could do a quick touch base Monday, just to check in on what we might have readily available to be in a position to provide at Tuesday's meeting and what we may need to get back to the FAO on (but pls note that we should not be doing any new analysis to provide a response). I will send out an invite/teleconf so we can discuss.

For reference I have attached an excerpt from our protocol for interaction with the FAO in case folks need a refresher on what information can/cannot be shared. We can discuss further on Monday at our call/meeting.

Thanks and pls let me know if you have any questions.

Hi Ken,

Mike had a follow-up meeting with Great West Life, and they'd like to have a follow-up call on pensions. Would that be Leah Myers area?
Also, was this the question GWL had?

The discount rate used to calculate the present value of future pension obligations by:

- *the Teachers' Pension Plan (TPP);*
- *the Public Service Pension Plan (PSPP);*
- *the OPSEU Pension Plan.*
- *Healthcare of Ontario Pension Plan (HOOPP)*
- *and the Colleges of Applied Arts and Technology (CAAT)*

Thanks,

Erica

Subject: Here is the reference to the accounting change

18. Change in Accounting for Pension Assets of Jointly Sponsored Pension Plans

For 2015-16 fiscal, the government legislated the accounting treatment for pension assets of its jointly sponsored pension plans. The legislation impacts the accounting for both the Ontario Teachers' Pension Plan and the Ontario Public Service Employees' Union Pension Plan. The legislation requires a full valuation allowance be recorded against the pension assets, therefore writing off the value of the assets.
As described in Public Sector Accounting Standards (PSAS), a pension asset arises when the government's total contributions to a plan, including income earned thereon, are greater than the cumulative retirement benefit expense recognized since the start of the plan. Contributions reflect the funding objectives of the plan. The benefit expense reflects the estimated cost of the pensions earned during the year that will be paid out to retirees in the future. In prior years, the government recorded pension assets to the extent the government expected to benefit from the asset through future reductions in contributions to the plan.

These plans are now accounted for in accordance with PSAS and legislation requiring a full valuation allowance be recorded. The change was made to reflect the Auditor General of Ontario's view that a full valuation allowance is required if the government does not have the legally enforceable right to unilaterally access the assets of the jointly sponsored pension plans, or in absence of that right, an irrevocable agreement in place at year-end with the joint sponsors of the plans to reduce contributions.

Subject: RE: MMMP Decks and Agenda Revised
Date: Tuesday, February 07, 2017 8:33:47 AM

Hi Gadi

Few comments. MMP and Cabinet Fiscal Tools Deck; Slide 8; the key sources of prudence to review suggests that the IOD forecast which incorporates higher interest rate assumptions in the out-years be reviewed. While we do add a prudence spread, the higher rates come from OEP.

Q3 Finances Deck, no comments other than it may benefit from one line in slide 3 on the pension adjustment reversal of $10.7 plus $2.2 that contributes to the reduction in the net debt to GDP. It's a pretty crowded slide so may be difficult

MMP and Cabinet Fiscal Strategy deck. You and I have had a pretty good discussion on this so nothing more to add; I do note that they have included my edit on pension adjustments in the net debt to GDP graph (slide 16)

I like the Storyboard, especially the fact that the balanced budget is right at the top.

Thanks

Ken k

We've taken another run at the various MMMP decks this evening. Please find attached:

1. Fiscal Update Deck

2. Fiscal Tools Deck (we've built the "illustrative scenario" that shows impact on program spending into this deck).

3. Updated MMMP agenda (reflects the fact we now have 3 decks)

4. Q3 Finances -- summary deck that can be used as per agenda.

5. Revised Storyboard for Document as per themes.

Happy to discuss in the morning -- I'm meeting with Karen and Maria first thing to align our products. We'll make sure these are available at our weekly Document planning meeting tomorrow.

Subject:	RE: MMP Deck (Fiscal deck only)
Date:	Sunday, February 05, 2017 7:00:41 PM

Thanks Tim took a quick look numbers are fine I suggest a small edit as follows to the narrative:

Depending on the fiscal anchors chosen for the government's fiscal plan, reversal of the pension adjustment, as well as any changes made to the borrowing (e.g. electricity relief, changes in capital spending), net debt to GDP could be in decline.

Given that the forked line is based on reversing the pension adjustment plus of course balance it maybe useful to mention the former. Now I am back to the game, rooting for the Pats.

Thanks

Ken k

Subject: FW: MMP Deck (Fiscal deck only)

You'll note I've added a net debt to GDP slide in the appendix. Happy to take any edits. Just seemed like a part of the story was missing.

Scott, others;

As I know folks are quickly gearing up for an evening of pigskin, thought I'd just send out the revised fiscal update deck as it currently exists, based on input received over the weekend and today. TBS continues to develop the back half of the deck that focussing on scaleable initiatives and investments. We're also still waiting for a slide on program review from them.

In case folks want an early morning review and opportunity to make edits, here is the working version at this point.

Tim

Hi Gadi

Few comments

Slide 5: flat lining net debt to GDP as a fiscal anchor seems to be an euphemism for deficits, since balance over the 3 out years will more or less ensure that the ratio is declines, unless of course there are significant increases in capital investments. That is unlikely since the $160B over 12 years appears to be a firm target.

Slide 5: "The fiscal envelope can also be augmented through additional tools and levers, as well as trade-offs between investments (including delaying some investments for the 2018 Document)" presumably this refers to operational investments, delaying capital investments does not help achieve the balance target, may be useful to make that distinction.

Slide 8: "A stronger outlook for revenue and lower interest on debt expense are currently tracking against the Budget forecast – however, spending pressures, new strategic investments, and the pension adjustment have also materialized – together creating a fiscal gap". Why is there a reference to pensions adjustments here, the decision to reverse has been made. Likewise and maybe I am not reading the bar chart in the slide correctly but the pension adjustment appears to be added on to the negative outlook.

Slide 18: looking at the 15-16 revenues and the projection for 18-19, revenues have increased from 126.5B to 142.2B, an increase of $16B, its sobering to note that expenses appear to have increased even more, leading to the challenge to balance.

Slide 19: I am very confused as to why the pension adjustment continues to be an issue since we are reversing it in 16-17. Likewise in Slides 20 and 22.

Bottom line appears to be if the pension adjustment is reversed and the "Potential Additional Electricity Relief" is addressed via a mechanism that minimizes the fiscal impact balance over the three out years may be possible. I am of course assuming that the HST removal is already factored in the base expense.

Thanks

Ken K

Hi Ken,

For the MMP prep session later today. As per the attached agenda, today's session will really be on the expense side and TBS is planning to provide an update on the pension accounting issue. TBS is also planning to provide a short verbal update on the non-tax revenue item, as it's a TBS lead.

The revenue levers will be discussed tomorrow, with a formal agenda being shared later tonight or tomorrow morning.

Thanks,
Christina

Subject: FW: MOF FOI Request A-17-189 (Economic and Fiscal Outlook FAO Report) - Request Narrowed

Hi Ken,

Office of the Budget is releasing the attached note in response to an FOI request. The request was for final documents related to the FAO's Fall Economic and Fiscal Outlook. The attached summary note was provided to the DMO and MO. We've been asked to review to determine whether anything needs to be redacted (i.e., advice to Cabinet).

I've reviewed and only see two areas for the OFA to consider:

Borrowing and Net Debt (p. 3-4)

- Using the **government's accounting presentation** net debt-to-GDP is expected to reach 38.5 per cent by 2019–20 and 38.7 per cent by 2021–22. This increases to 41.4 per cent by 2021–22 **under the AG's accounting presentation for jointly sponsored pension plans and the Fair Hydro Plan**.

    - The 2017 FES projected a net debt-to-GDP ratio of 37.0 per cent by 2019–20.

This information is already public – I see no need for redaction.

Chart on page 5 compares the 2017 FES fiscal table with the FAO's outlook

While we have not published the delta, all of the inputs to the table are public – I see no need for redaction.

Could you please have a quick review and let me know if you agree with my assessment?

Thanks, Anna

Subject: FW: MOF FOI Request A-17-189 (Economic and Fiscal Outlook FAO Report) - Request Narrowed

Hi Ghufran, Sarah, and Anna,

We received an FOI request for final documents related to the FAO's Fall Economic and Fiscal Outlook (EFO). OB is planning on providing the attached final summary note to the FOI office. We're just in the process of verifying whether any of our components of the summary note need to be redacted.

Can your areas please review the note and flag whether any of the information should be redacted in line with FIPPA exemptions **by noon on Tuesday, January 16**? Exemptions should be limited to information that is not publically available (e.g. internal analysis/advice for government officials).

Please let me know if you have any questions.

Thanks,
Ryan

Subject: FW: Meeting on Monday

Hi Bonnie,

Please see attached for some detail on our projection. The first part of the table shows the FAO's projection for net debt, TCA and accumulated deficit on an AG basis. As you can see, the identity holds pretty well for each year. There's a small, under $1 billion variance, and I think it's due to a small adjustment in public accounts, which I commented in the Excel sheet.

The second table breaks down the net debt variance between the projection in the FES and our projection on an AG basis. As discussed, the difference is due to the pension asset for the jointly sponsored pension plans, the FHP, the differences in the deficit projections and the reserve. The last table will probably be interesting for you. It shows that, on the government accounting basis, we're only $3.6 billion higher than the 2017 FES projection – and this is entirely due to differences in the underlying deficit (abstracting from any accounting differences).

As discussed, for the purposes of the AG presentation, which we adopted based on the recommendation in her recent FHP report, we're assuming that:

- The elimination of the IESO market asset would reduce the net income of OPG;
- This would then reduce the Province's total revenue and increase the deficit by an equivalent amount; and that
- Ontario's net debt would increase by the stock of that market asset (since the elimination of the market asset would reduce OPG's equity, which the Province records as a financial asset)

However, there would be no impact to borrowing and gross debt relative to the government's FES presentation because the government already incorporates the provincial portion of FHP borrowing in its fiscal plan.

Anyway, have a look and we'll be happy to meet on Monday to discuss further.

Great. I can read it. Can I ask for one more scenario? It's like option 3, but assumes that we find most of the savings for this year, just not the two out years, so this year's deficit, as per the deck under that scenario would be $4.8 (and then we go with 2.8 and 3.7).

The final 15/16 ratio is 40.9, right?

Subject: FW: Net Debt - 2016-17 -FES (Oct 20 2016) v2 .xlsx

Hi Gadi

As requested, while John and team have included the detailed calculations, the "Leadsheet" tab provides a nice summary of the ratio for all three options. The trend continues to decline, however, the ratios themselves, as expected, increase over the 2016 Budget.

FES password and I know you are off-site, so if you have difficulty in accessing the file, let me know and we can copy and paste the info in the Leadsheet tab on the email itself. See you at the meeting.

Thanks

Ken k

Thanks for the quick turnaround, and I saw when I went beyond the leadsheet to the actual spreadsheets that the 40.9was the right number.

As requested, pls see attached and you are correct the 2015-16 ratio, including the pension adjustment is 40.9.

Thanks

Ken k

Great. I can read it. Can I ask for one more scenario? It's like option 3, but assumes that we find most of the savings for this year, just not the two out years, so this year's deficit, as per the deck under that scenario would be $4.8 (and then we go with 2.8 and 3.7).

The final 15/16 ratio is 40.9, right?

Hi Gadi

As requested, while John and team have included the detailed calculations, the “Leadsheet” tab provides a nice summary of the ratio for all three options. The trend continues to decline, however, the ratios themselves, as expected, increase over the 2016 Budget.

FES password and I know you are off-site, so if you have difficulty in accessing the file, let me know and we can copy and paste the info in the Leadsheet tab on the email itself. See you at the meeting.

Thanks

Ken k

Hi Ken. I like the wording that you've proposed, actually, even though you're reluctant to use the last sentence. I know that you're reticent to insert it because of the possibility of the accounting reversal, but that's not the approach that the PO/CO or the MO have been leaning towards as we've come to a conclusion on how the numbers and narrative will look for the FES. While their preferred approach may change by the time we get to next year's Budget, in the meantime we shouldn't hesitate to use the ratios as they currently are, and, I suppose particularly in this case where the trend in the out years, if not the absolute numbers, goes in the direction we want to show.

Regards,
Gadi

That's a good point, however, in the Debt chapter we have intentionally tried to refrain from any mention of the medium term as it relates to the net debt to GDP. There is a reason for our reticence, if the independent review of the pension adjustment supports the Government's position, there is a strong possibility that the accumulated deficit and the net debt will reduce by at least $10.7 billion with an equally material reduction in the ratio.

However, if you strongly feel that a reference to the medium term is required pls consider the following – I have slightly edited John's version plus added a reference to the medium term.

"The net debt to GDP ratio is projected to increase slightly in 2016-17, primarily as a result of a nominal GDP that is forecast to be marginally lower than what was forecast in the 2016 Budget. Over the medium term the ratio is projected to decline progressively".

Thanks

Ken k

Hi Ken, John, - understand Ken, you couldn't make it to sign-off today and John you came – thank you.

Im signing off on 3b now as the director responsible for the chapter and noticed that John, you inserted language regarding what's happening to net debt to GDP for 2016-17 in the fiscal outlook section. However, because this insertion just refers to 2016-17 it is seems out of context from the remainder of the section and wondering if you could propose a revision that speaks to the trend of declining after balance or what's happening over the medium term.

Here's the insertion per John pen edits:

The net debt to GDP ratio is projected to increase slightly in 2016-17 primarily as a result of marginally lower than forecast nominal GDP when compared to the 2016 Budget forecast.

Let me know. Thanks.

Hi Selina

Had a discussion with Gadi, he prefers that we include the following given that the overall direction from the MO/PO is to move forward on the basis of the legislated accounting for pensions and address the results of the independent review at that time.

"The net debt to GDP ratio is projected to increase slightly in 2016-17, primarily as a result of a nominal GDP that is forecast to be marginally lower than what was forecast in the 2016 Budget. Over the medium term the ratio is projected to decline progressively".

Thanks

We also included this in the 2017 FES:

Chart 3.3 Factors for Growth in Net Debt

Net Debt ($ Billions)	169.6	193.6	214.5	236.2	252.8	268.0	285.4	295.4	301.6	311.7	323.0	335.6
% Change Due to Deficit	58.8	75.7	65.1	66.7	53.1	63.0	62.7	45.1	24.3	–	–	–
% Change Due to Net Investments in Capital Assets	41.2	24.3	34.9	33.3	46.9	37.0	37.3	54.9	75.7	100.0	100.0	100.0

Source: Ontario Financing Authority

Larger version of image

About 62 per cent of the increase in net debt from 2008–09 to 2016–17 was due to the deficit. The remaining net debt increase was a result of investments in capital assets. Balanced budgets from 2017–18 onwards will ensure that increases in net debt will be limited to net investments in capital assets such as roads, bridges, hospitals and schools.

Subject: FW: Next Steps on Deck

Hi Shemin,

We've fact checked the ON numbers on slide 29 and they are fine. They do quote the following:

- Borrowing for both deficits and infrastructure investments accounts for the increase in net debt, with borrowing for infrastructure making up approximately [40% of the increase].

We used to have a quote in the 2017 Budget referring to this (see below) but I wonder if the percentage still holds if we extend it to include 2017-18 and 2018-19?

About 61 per cent of the increase in net debt from 2008–09 to 2016–17 is due to the deficit. The remaining net debt increase is a result of investments in capital assets.

Thanks,

Erica

Subject: RE: Next Steps: Base Case & Alternative Fiscal Scenarios

Hi Alex:

Based on our discussion, here is a new summary of all of the scenarios that we will need... 20 in total.

Orange Starting Point (line 45) (NEW since last email)

- Orange starting point scenario
- with pensions
- with fair hydro
-with both accounting impacts

Orange Alternative Scenario 1
- Orange Alternative Scenario 1 (line 67)
- with pensions
- with fair hydro
-with both accounting impacts

Blue Starting Point (line 45) (NEW since last email)
- Orange starting point scenario
- with pensions
- with fair hydro
-with both accounting impacts

Blue A - With Regular Program Expense
- blue scenario - with regular program expense (line 67)
- with pensions
- with fair hydro
-with both accounting impacts

Blue B - With Program Expense Efficiencies
- blue scenario - with program expense efficiencies (line 89)
- with pensions
- with fair hydro
-with both accounting impacts

Thanks a million!
Sareena

Hi John:

Just to confirm, here are the scenarios we are hoping to get a net debt and IOD forecast for. I think there are 12 in total:

Orange:
- Orange scenario
- with pensions
- with fair hydro
-with both accounting impacts

Blue A
- blue scenario - with regular program expense
- with pensions
- with fair hydro
-with both accounting impacts

Blue B
- blue scenario - with program expense efficiencies
- with pensions
- with fair hydro
-with both accounting impacts

Thank you!!
Sareena

Good afternoon:

Per Tara's email below, we have the scenarios ready for you to run IOD and net debt forecasts. The scenarios are divided into blue and orange (one attachment for each). Please note that for the blue scenario, there are two program expense options (one with program expense efficiencies/savings, and one without).

As Tara mentioned, we are looking to circulate the deck to the DMs tonight. Do you think it's possible to get us an IOD and/or net debt forecast before EOD? Apologies for the tight timelines. Please let us know if you think this is feasible.

Many thanks for all of your help with these decks!
Sareena

Subject: Next Steps: Base Case & Alternative Fiscal Scenarios

Hi Ken, Anna and John,

Coming out of yesterday's briefing with the SOC, we're working to revise the base case and alternative scenarios - which obviously will require new IOD and net debt-to-GDP forecasts. The deck is also being split into two - one orange, one blue.

There's a fair amount of work that needs to be done to re-estimate the scenarios, in particular with respect to expense, and so we're still unclear about when we'll be able to provide you with new outlooks for your calculations. I don't expect we'll be able to provide anything before earliest noon tomorrow.

We're trying to turn drafts of these decks for end of day tomorrow, but I think we've managed expectations that the numbers will likely still be in flux at end of day tomorrow (especially in terms of IOD and net debt).

We'll keep you posted on our progress and any additional direction we get.

Thanks,

Tara

Subject: RE: Next Steps: Base Case & Alternative Fiscal Scenarios

Hi John:

Just to confirm, here are the scenarios we are hoping to get a net debt and IOD forecast for. I think there are 12 in total:

Orange:
- Orange scenario
- with pensions
- with fair hydro
-with both accounting impacts

Blue A
- blue scenario - with regular program expense
- with pensions
- with fair hydro
-with both accounting impacts

Blue B
- blue scenario - with program expense efficiencies
- with pensions
- with fair hydro
-with both accounting impacts

Thank you!!
Sareena

Good afternoon:

Per Tara's email below, we have the scenarios ready for you to run IOD and net debt forecasts. The scenarios are divided into blue and orange (one attachment for each). Please note that for the blue scenario, there are two program expense options (one with program expense efficiencies/savings, and one without).

As Tara mentioned, we are looking to circulate the deck to the DMs tonight. Do you think it's possible to get us an IOD and/or net debt forecast before EOD? Apologies for the tight timelines. Please let us know if you think this is feasible.

Many thanks for all of your help with these decks!
Sareena

Subject: Next Steps: Base Case & Alternative Fiscal Scenarios

Hi Ken, Anna and John,

Coming out of yesterday's briefing with the SOC, we're working to revise the base case and alternative scenarios - which obviously will require new IOD and net debt-to-GDP forecasts. The deck is also being split into two - one orange, one blue.

There's a fair amount of work that needs to be done to re-estimate the scenarios, in particular with respect to expense, and so we're still unclear about when we'll be able to provide you with new outlooks for your calculations. I don't expect we'll be able to provide anything before earliest noon tomorrow.

We're trying to turn drafts of these decks for end of day tomorrow, but I think we've managed expectations that the numbers will likely still be in flux at end of day tomorrow (especially in terms of IOD and net debt).

We'll keep you posted on our progress and any additional direction we get.

Thanks,

Tara

Subject: Non Cash Adjustments

Hi Ken,

We had an investor meeting today and one of their questions was on what "non-cash adjustments" in the financing table represents.

I showed Jim the response we have in the FES Q&A's, but he was wondering whether we could get a more complete breakdown. Would it be fine to share the breakdown below with investors?

Details	2016-17 ($ Billions)
Reserve	(400)
Total BPS Timing Differences	(407)
Total AFP Timing Adjustments	(678)
Amortization expense	(5,137)
H1 Tax Shelter*	-
Student loan - grant expenditures	(446)
Pension adjustment	(2,240)
General timing adjustments	1,864
Non Cash Adjustments in Financing Table	(7,444)

*offset 85% of Hydro One tax shelter gain included in deficit

Q: What does non-cash adjustments of $7.4 billion in 2016–17 represent?

Non-cash adjustments convert accounting accruals into cash requirements. Cash and accruals differ primarily because of $2.6 billion in Alternative Financing Procurements (AFPs) funded by third parties plus the reserve of $0.4 billion, partly offset by payments to be made in 2016–17 upon

substantial completion of prior AFP projects. The total non-cash adjustment also reflects the impact of the pension adjustment. Another significant adjustment is amortization that is currently over $5 billion but is, partly offset by general timing adjustments that always arise between the Province's inflows and outflows on a cash versus accrual basis. A notable example of the latter is the variance between the net incomes of the Government Business Enterprises and the dividends they pay to the Province.

Thanks,
Serena

Pls respond as follows:

Moody's newsletter refers to current borrowings whose weighted average term to maturity have increased from 8.1 to 15.3 years as of September 30, 2016. Mario is correct in that the weighted average term to maturity of the outstanding publically borrowed debt stock excluding OEFC is lower at close to 12 years.

Hi Sarah,

Thank you for this.

I have one question. I noticed in the Moody's release a reference to the weighted average of the Province's debt being 15 years. Looking at the maturity schedule provided in the Quarterly Program Status, etc. report provided to us at the ARMC, it appears that the average maturity would be less than that. I did a very cursory calculation eyeballing the numbers and arrived at a lower number (closer to 13 years). I'm clearly missing something or maybe my eyesight is faulty. Could you please clarify?

Thanks,

Mario

News Release

Last Year's Ontario Deficit $3.5 Billion Lower Than Projected[news.ontario.ca]

October 3, 2016

Province Remains Committed to Balance the Budget Next Year in 2017-18

Ontario's Annual Report and unaudited Consolidated Financial Statements for 2015-16 show Ontario's deficit is $3.5 billion lower that the $8.5 billion projected in the 2015 Budget, with the province's deficit for 2015-16 at $5 billion. This is $0.7 billion lower than the $5.7 billion in the 2016 Budget interim projection.
This marks the seventh year in a row that Ontario has beaten its deficit target. Ontario remains committed to balancing the budget in 2017-18, and remain balanced in 2018-19.

In preparing the Annual Report and unaudited Consolidated Financial Statements, the Province's professional accounting staff and the Auditor General have engaged in discussions regarding the treatment of pension assets. Pension accounting requires the application of professional judgment. Despite best efforts to resolve concerns, the Province's professional accounting staff and the Auditor General continue to have differences of opinion about the appropriate application of public sector accounting standards as they relate to pension accounting. This ongoing discussion has delayed the tabling of the Province's financial statements.

A regulation was made to allow the public service to sign-off on the impact of the Auditor General's view on accounting for pension assets in Ontario's 2015-16 financial statements. The Province has filed a time-limited regulation, which legislates the accounting for pension assets of two jointly-sponsored pension plans for 2015-16 in a manner that is consistent with the fiscal outcome proposed by the Auditor General.

To ensure openness and transparency, the government is releasing its unaudited financial statements to provide the public with the Province's financial position.

The unaudited statements show the government is beating its deficit targets through sound financial management. The Government of Ontario currently has the lowest program spending per capita among Canadian provinces and ranks the lowest among provinces in terms of public-sector employees per capita. At the same time, Ontario's economy continues to grow. Over the last two years, Ontario's economy has grown by 6.1 per cent[news.ontario.ca]. Last year, growth was double the national average[news.ontario.ca]. In the first quarter of this year, Ontario's growth was greater than that of the United States and the G7[fin.gov.on.ca finances/2016/ofin16_1.html].

The Public Sector Accounting Board has set up a task force to review the current accounting standards for retirement benefits. The Province will ensure that the task force is made aware of this area of difference in interpretation. In addition Ontario willalso be engaging an expert panel to support a full understanding of the basis and nature of the differences. The Province will consult individuals with a range of backgrounds and experience, including preparers, joint sponsors and auditors of public

sector financial reports.

Responsible financial management is part of the government's economic plan to build Ontario up and deliver on its number-one priority to grow the economy and create jobs. The four-part plan includes helping more people get and create the jobs of the future by expanding access to high-quality college and university education. The plan is making the largest infrastructure investment in hospitals, schools, roads, bridges and transit in Ontario's history and is investing in a low-carbon economy driven by innovative, high-growth, export-oriented businesses. The plan is also helping working Ontarians achieve a more secure retirement.

QUICK FACTS

- The 2015-16 unaudited Financial Statements compare Ontario's actual performance to what was planned in the 2015 Budget.
- Ontario is a recognized leader in financial reporting. The C.D. Howe Institute, an independent research organization that assesses the fiscal planning and reporting of governments in Canada, has commented positively on the financial reporting practices of Ontario, including Public Accounts, the annual Budget and Estimates.
- The unaudited Financial Statements are prepared by the Government of Ontario in accordance with legislation and the accounting principles for governments recommended by the Public Sector Accounting Board (PSAB) of the Chartered Professional Accountants of Canada (CPA Canada).

BACKGROUND INFORMATION

QUOTES

"The Annual Report and unaudited Consolidated Financial Statements for 2015-16 show that our government's plan to achieve fiscal balance next year in 2017-18 is working. We will continue to build on our track record of responsible fiscal management, while investing in vital government services such as health care, education and infrastructure that are important to the people of Ontario."

— *Liz Sandals, President of the Treasury Board*

"Our government is dedicated to a fiscally sound approach to managing the Province's finances. The Ontario economy continues to grow in a challenging global environment. In fact, Ontario posted higher real GDP growth in the first quarter of 2016 than Canada, the United States, and all other G7 countries. The government's path to a balanced budget next year is being achieved through responsible fiscal management, which involves managing growth in program spending, and maintaining the integrity of Provincial revenues."

— *Charles Sousa, Minister of Finance*

Hi Sarah,

The average term of debt issued in 2015-16 was approximately 14.0 years, whereas year-to-date for 2016-17 is 15.3 years. So, I would suspect it is the current year.

However, I have copied Bonnie on my reply as she may be able to provide more insight on the Moody's figures.

Bonnie, any feedback would be appreciated.

Thanks,
David

Subject: Re: Ontario High Debt and Province's Financial Statements - press releases

Hi Sarah,

Thank you for this.

I have one question. I noticed in the Moody's release a reference to the weighted average of the Province's debt being 15 years. Looking at the maturity schedule provided in the Quarterly Program Status, etc. report provided to us at the ARMC, it appears that the average maturity would be less than that. I did a very cursory calculation eyeballing the numbers and arrived at a lower number (closer to 13 years). I'm clearly missing something or maybe my eyesight is faulty. Could you please clarify?

Thanks,

Mario

On Oct 3, 2016, at 6:21 PM, Sarah Neville <Sarah.Neville@ofina.on.ca> wrote:

Dear Board Members – Gadi has requested that I forward to you two press releases issued today. They are a Moody's release on Ontario's debt burden (attached) and a Provincial release about the financial statements (below). I am advised that Bonnie has spoken to the rating agencies and they haven't expressed any concerns.

Please let me know if you have any questions.

Thanks very much, and best regards,

Sarah

Subject: Last Year's Ontario Deficit $3.5 Billion Lower Than Projected

News Release

Last Year's Ontario Deficit $3.5 Billion Lower Than Projected[news.ontario.ca]

October 3, 2016

Province Remains Committed to Balance the Budget Next Year in 2017-18

Ontario's Annual Report and unaudited Consolidated Financial Statements for 2015-16 show Ontario's deficit is $3.5 billion lower that the $8.5 billion projected in the 2015 Budget, with the province's deficit for 2015-16 at $5 billion. This is $0.7 billion lower than the $5.7 billion in the 2016 Budget interim projection.
This marks the seventh year in a row that Ontario has beaten its deficit target. Ontario remains committed to balancing the budget in 2017-18, and remain balanced in 2018-19.

In preparing the Annual Report and unaudited Consolidated Financial Statements, the Province's professional accounting staff and the Auditor General have engaged in discussions regarding the treatment of pension assets. Pension accounting requires the application of professional judgment. Despite best efforts to resolve concerns, the Province's professional accounting staff and the Auditor General continue to have differences of opinion about the appropriate application of public sector accounting standards as they relate to pension accounting. This ongoing discussion has delayed the tabling of the Province's financial statements.

A regulation was made to allow the public service to sign-off on the impact of the Auditor General's view on accounting for pension assets in Ontario's 2015-16 financial statements. The Province has filed a time-limited regulation, which legislates the accounting for pension assets of two jointly-sponsored pension plans for 2015-16 in a manner that is consistent with the fiscal outcome proposed by the Auditor General.

To ensure openness and transparency, the government is releasing its unaudited financial statements to provide the public with the Province's financial position.

The unaudited statements show the government is beating its deficit targets through sound financial management. The Government of Ontario currently has the lowest program spending per capita among Canadian provinces and ranks the lowest among provinces in terms of public-sector employees per capita. At the same time, Ontario's

economy continues to grow. Over the last two years, Ontario's economy has grown by 6.1 per cent[news.ontario.ca]. Last year, growth was double the national average[news.ontario.ca]. In the first quarter of this year, Ontario's growth was greater than that of the United States and the G7[fin.gov.on.ca finances/2016/ofin16_1.html].

The Public Sector Accounting Board has set up a task force to review the current accounting standards for retirement benefits. The Province will ensure that the task force is made aware of this area of difference in interpretation. In addition Ontario willalso be engaging an expert panel to support a full understanding of the basis and nature of the differences. The Province will consult individuals with a range of backgrounds and experience, including preparers, joint sponsors and auditors of public sector financial reports.

Responsible financial management is part of the government's economic plan to build Ontario up and deliver on its number-one priority to grow the economy and create jobs. The four-part plan includes helping more people get and create the jobs of the future by expanding access to high-quality college and university education. The plan is making the largest infrastructure investment in hospitals, schools, roads, bridges and transit in Ontario's history and is investing in a low-carbon economy driven by innovative, high-growth, export-oriented businesses. The plan is also helping working Ontarians achieve a more secure retirement.

QUICK FACTS

- The 2015-16 unaudited Financial Statements compare Ontario’s actual performance to what was planned in the 2015 Budget.
- Ontario is a recognized leader in financial reporting. The C.D. Howe Institute, an independent research organization that assesses the fiscal planning and reporting of governments in Canada, has commented positively on the financial reporting practices of Ontario, including Public Accounts, the annual Budget and Estimates.
- The unaudited Financial Statements are prepared by the Government of Ontario in accordance with legislation and the accounting principles for governments recommended by the Public Sector Accounting Board (PSAB) of the Chartered Professional Accountants of Canada (CPA Canada).

QUOTES

"The Annual Report and unaudited Consolidated Financial Statements for 2015-16 show that our government's plan to achieve fiscal balance next year in 2017-18 is working. We will continue to build on our track record of responsible fiscal management, while investing in vital government services such as health care, education and infrastructure that are important to the people of Ontario."
— *Liz Sandals, President of the Treasury Board*

"Our government is dedicated to a fiscally sound approach to managing the Province's finances. The Ontario economy continues to grow in a challenging global environment. In fact, Ontario posted higher real GDP growth in the first quarter of 2016 than Canada, the United States, and all other G7 countries. The government's path to a balanced budget next year is being achieved through responsible fiscal management, which involves managing growth in program spending, and maintaining the integrity of Provincial revenues."
— *Charles Sousa, Minister of Finance*

Hi Christina,

I made a couple of small additions to Q57 and 58 (see attached). Please wait until Mike/Jim confirm the last point before we send.

1. Are you concerned about how the credit rating agencies will view this issue?

The Province's financial results show that the government has once again beaten its deficit targets and remains on track for a balanced budget by 2017-18 and remaining balanced in 2018-19.

Our government remains committed to balancing the budget in 2017-18. At the same time, we will continue to invest in vital government services, such as health care, education and infrastructure that are important to the people of Ontario.

~~In 2016 the C.D. Howe Institute, an independent research organization that assess the fiscal planning and reporting of governments in Canada, also commented positively on the financial reporting practices of Ontario relating to its fiscal reporting activities that include Public Accounts, the annual Budget and Estimates.~~

The legislated pension accounting change has no impact on the province's total debt, which is one of the key numbers the rating agencies focus on.

2. Can credit rating agencies adjust their ratings based on this new development? What about bondholders?

The government remains committed to balancing the budget by 2017-18.

The deficit for 2015-16 is $5 billion, a $3.5 billion improvement compared to the 2015 Budget. The deficit is also a $0.7 billion improvement compared to the interim results for 2015-16 contained in the 2016 Budget, which formed the basis for three rating agencies to confirm the Province's credit rating, and the fourth to improve their assessment of the Province's credit outlook.

This marks the seventh year in a row that Ontario has beaten its annual deficit target, reflecting the government's responsible and balanced approach to fiscal management.

The rating agencies and bondholders will understand that the change in the Province's accounting treatment for pension assets of jointly-sponsored pension plans, while increasing net debt, has no impact on the Province's borrowing requirements or total debt outstanding.

Since the province released its financial statements, Ontario's 10-year spread (how much interest we need to pay above a comparable Government of Canada bond) has remained unchanged and is slightly lower than it was when we released our budget in February.

Hi Cindy and Nadine

As you may expect there is considerable interest on the part of the Rating Agencies in obtaining more detail on the Province's pension adjustment. We had a tele-conference yesterday with Fitch where the questions were very high level and since over the last couple of weeks I had access to most of OPCD's material on this issue I was able to respond, I believe to their satisfaction.

I do have a couple of questions though:

- Looking at the PP presentation from yesterday, based on the Province's interpretation of PSAB, for 2016-17 the TPP Pension Expenses are offset by $452M. My question; is this our share of the surplus with regard to this jointly sponsored plan or simply the PV of the reduction in future contributions because plan assets exceed liabilities, or a combination.

NPP - Please see attached Q&A prepared by staff for the FES. Essentially it is the PSAB calculation of net expense (which is a recovery for 16/17) because of the cumulative effect of past investment gains which were more than sufficient to offset the Province's share of the cost of pension benefits that were earned by the members of the Teachers' Pension Plan during the period.

- Again, under the Province's accounting approach, the 2016 Budget on page 284 has a foot note indicating that that the cash payments related to the Province's contribution to the TPP are $1,664 million (revised to $1,672 in yesterday's presentation). What is the debit for this transaction, it is Pension assets? Yes, cash contributions would add to the asset value on the Province's books (eventually once the updated actuarial funding valuation is received).

- Finally, I understand that the AG contends that the Province cannot access surpluses on the TPP in the absence of an MOU. My question; I understand that the Province's contributions to the TPP is already reflected as a pension asset in the Province's Balance Sheet, if the AG is agreeable to these contributions being presented as an asset why distinguish the surplus. This is similar to an individual depositing $1000 in a savings account and at the year of the year seeing it grow to $1,050 and being told that he/she has access to only the original $1,000 and not the growth. NPP – The AG's issue relates to the amount of '*excess*' contributions reported on the Province's books over the amount of cumulative pension expense reported to date. It is a technical computation, for which the Province and the AG have different perspectives on how PSAB should be applied in relation to jointly sponsored pension plans.

John and I will be happy to come meet with you if that is more useful. If there are any written questions from the Rating Agencies we will be sure to run our responses by you.

Thanks very much

Ken K

Teachers' Pension Plan (OTPP)

Q: Why is the 2016-17 Teachers' Pension Plan expense forecast to decrease from an expense of $1,590M in 2015-16 to a recovery of $452M in 2016-17?

A: Teachers' Pension Plan expense is calculated in accordance with Public Sector Accounting Standards which takes into account the costs of benefits earned by members during the reporting period, as well as performance of the plan and other factors. A major factor in the observed recovery results is the fact that the OTPP has experienced favourable investment returns in the past several years (i.e. 2009 to 2015). The cumulative effect of those investment gains is more than sufficient to offset the Province's share of the cost of pension benefits that were earned by the members of the Teachers' Pension Plan during the period, resulting in a recovery of $452M in 2016-17.

In addition, 2015-16 actuals reflect the impact of a time-limited regulation which changed the accounting treatment for pension assets for OTPP for 2015-16 Public Accounts only and resulted in the same expense as would be calculated according to the Auditor General's interpretation of the accounting standards. The Province's future accounting treatment for pension assets will be informed by the results of the Pension Asset Expert Advisory panel.

Q: Why did the 2015-16 Teachers' Pension Plan expense increase to $1,590M in 2015-16 from $564M in 2014-15?

A: During the 2015-16 Public Accounts audit, the Auditor General (AG) raised issues regarding the Province's accounting treatment for pension assets related to jointly sponsored pension plans which challenged the accounting treatment followed by the Province for the past 14 years. The current AG's view is that the government does not have a legally enforceable right to unilaterally access the assets of the OTPP or OPSEUPP which are jointly sponsored pension plans. As such, with no agreement in place with the respective co-sponsors to benefit from reduced contributions, the AG believes that the pension assets should be removed from the Province's balance sheet. Given the differences in interpretation of accounting standards, the Province filed a time-limited regulation

which changed the accounting treatment for pension assets of OTPP and OPSEUPP for the 2015-16 Public Accounts.

The regulated accounting change resulted in exact same fiscal impact as the AG's recently communicated interpretation of PSAB standards for fiscal 2015-16 The year-over-year increase in expense from 2014-15 to 2015-16 is a result of the time-limited regulation which resulted in the 2015-16 OTPP expense being increased from its original estimate of $110M to $1,590M.

To inform the Province's decision on future accounting for the pension assets for jointly sponsored pension plans, the Province is establishing an Expert Panel to assess the application of PSAB's pension accounting standards to Ontario's jointly sponsored pensioned plans, including a valuation assessment of the pension assets in question.

Q: Does the 2016-17 recovery of $452M factor in the time-limited regulation?

A: No. The 2016-17 forecast recovery of $452M reflects the Province's accounting of pension assets prior to the time-limited regulation, reflecting the Province's interpretation of PSAB accounting standards and consistent with the accounting practices in place for pension assets since 2001.

Q: Does the 2016-17 recovery of $452M indicate a reduction in the Province's annual cash contributions in the plan?

A: No. Employee and employer contributions are determined by a funding valuation undertaken by OTPP. Funding and accounting valuations serve different purposes and therefore also use different assumptions.

The purpose of a funding valuation is to assess the long-term financial health of a pension plan and is intended to gauge whether the plan will have sufficient assets to cover the costs of future pension benefits. In contrast, an accounting valuation is intended to calculate the actuarial present value of benefits earned by to employees to a particular date.

A recovery calculated in accordance with PSAB standards does not imply a reduction in pension contributions, but reflects the situation that earnings in the plan (including the amortization of unrealized gains related to asset performance) are more than sufficient to offset the Province's share of the cost of pension benefits that were earned by the members of the Teachers' Pension Plan during the period, Only through a funding valuation, and negotiations between the co-sponsors in accordance with the Partners Agreements, could an adjustment in contribution rate be realized.

Hi Cindy and Nadine

As you may expect there is considerable interest on the part of the Rating Agencies in obtaining more detail on the Province's pension adjustment. We had a tele-conference yesterday with Fitch where the questions were very high level and since over the last couple of weeks I had access to most of OPCD's material on this issue I was able to respond, I believe to their satisfaction.

I do have a couple of questions though:

- Looking at the PP presentation from yesterday, based on the Province's interpretation of PSAB, for 2016-17 the TPP Pension Expenses are offset by $452M. My question; is this our share of the surplus with regard to this jointly sponsored plan or simply the PV of the reduction in future contributions because plan assets exceed liabilities, or a combination. NPP - Please see attached Q&A prepared by staff for the FES. Essentially it is the PSAB calculation of net expense (which is a recovery for 16/17) because of the cumulative effect of past investment gains which were more than sufficient to offset the Province's share of the cost of pension benefits that were earned by the members of the Teachers' Pension Plan during the period.

- Again, under the Province's accounting approach, the 2016 Budget on page 284 has a foot note indicating that that the cash payments related to the Province's contribution to the TPP are $1,664 million (revised to $1,672 in yesterday's presentation). What is the debit for this transaction, it is Pension assets? Yes, cash contributions would add to the asset value on the Province's books.

- Finally, I understand that the AG contends that the Province cannot access surpluses on the TPP in the absence of an MOU. My question; I understand that the Province's contributions to the TPP is already reflected as a pension asset in the Province's Balance Sheet, if the AG is agreeable to these contributions being presented as an asset why distinguish the surplus. This is similar to an individual depositing $1000 in a savings account and at the year of the year seeing it grow to $1,050 and being told that he/she has access to only the original $1,000 and not the growth. NPP – The AG's issue relates to the amount of '*excess*'

contributions reported on the Province's books over the amount of cumulative pension expense reported to date. It is a technical computation, for which the Province and the AG have different perspectives on how PSAB should be applied in relation to jointly sponsored pension plans.

John and I will be happy to come meet with you if that is more useful. If there are any written questions from the Rating Agencies we will be sure to run our responses by you.

Thanks very much

Ken K

Nadine is off sick, so a couple of quick comments, remembering that the estimates from the prior year originally forecast increases in the assets each year and the impact of the $1.5 and $3.7 are to take the assets down to NIL.

1) As you noted, based on the estimate generated last year for the budget and public accounts for OTPP, the amortization of the unrealized gains is expected to increase (e.g. $400M to $1 Billion between 15-16 and 18-19). In addition, the excess of the interest income generated on the assets as compared to the interest in the obligation is forecast to continue to increase (e.g. $900M to $1.3 Billion between 15-16 and 18-19)
2) The $3.7 includes 4 plans vs. 2 plans – both HOOPP and CAATT are expected to move into an asset position by 2018-19. The governance structure for these plans differs from OTPP and OPSEU, so the results of the Panel review may differ on the treatment of these plans. We have never disclosed that HOOPP and CAATT may be impacted by name.

Hope that helps,

Cindy

Subject: Pension Adjustment

Hi Nadine

As Mike Manning meets investors including financial institutions the pension adjustment questions does come up on a regular basis. Thanks to the explanations previously provided by you, including the briefing note that you shared we are able to adequately respond to all questions so far.

However, on a pro-active basis I do have one more. The PA increases to $3.7 billion in 2018-19 from $1.5 billion in 2015-16. As I understand it a major component of the PA is the amortization of the gain on the assets over an appropriate period. So our question is; does it mean that the gain on assets has increased to such an extent that the resulting amortization of the gain has also increased by more than two-fold over 3 years.

I am including Cindy as well in this questions since she has provided me with some explanations on other aspects of this issue and she may also be able to shed some clarity.

Thanks and if you believe this can be best answered by a short meeting between you and Mike and myself, we will be happy to schedule one.

Subject: Re: Pension Adjustment

Thanks very much Cindy, as always a very clear and concise explanation. This is adequate for our purposes and we take note of your point that the Province has not mentioned HOOP and CAATT as yet.

As such, if the question is ever asked by investors as to why the expenditure offset and of course it's reversal increases materially from 15-16 to 18-19 we shall respond that in addition to the amortization and the net interest income of the two plans in question other pension plans of the province are also moving in to an asset position.

As they do so the expenditure offset and its reversal increases. All of these are being reviewed by the Independent Panel and we await its report with bated breath. Well perhaps that's an exaggeration but certainly with great interest.

Thanks again

Tim/Cindy,
I understand that the extracts were provided in hardcopy to the ADMO, so unfortunately I don't have a copy. In order to facilitate a discussion on the pension related extracts I have prepared the attached table which captures the terminology that was likely signed off last week. The actual wording will be confirmed tomorrow when I am back in the office, but in the meantime, just wanted to share this summary and proposed edits for your consideration.

Will plan to update the table with current versions of the extracts tomorrow. Any comments back on suggested edits/consistency would be appreciated.
Please note that I did not have access to the extract from the borrowing section in soft copy, so copying Ken and Gadi on this note for reference purposes.

Subject: RE: Pension Extract

Many thanks to Ron and Alana for pulling the pension language extracts from the yellows for us to review altogether in one package. I've read all the references to the pensions across all the chapters and have the following observations. Ron is setting up a meeting for us on Tuesday to for 30 minutes to talk about this so we can avoid revisiting this constantly during ADM sign-off later in the week.

Key observations:

- Accountability and Transparency Chapter – talks all about 2015-16 Public Accounts process and outcome, but makes no reference to what we're doing in the out-years. I'd recommend we mention something about how we're treating in the out-years for consistency. Right now it reads as if we're awaiting the outcome of the Panel and then will decide what to do after that.
    - This chapter also refers to "conservative treatment" which was language Cindy

wanted removed to be replaced with “cautious”.

- Chapter 3b – makes explicit connection to the draw down of the reserve and the impact of the pension accounting change. This is a decision point and we should discuss. It calls the pension change “unbudgeted” and “unexpected.”

- Chapter 3B – in referencing the 2016-17 change in pension expense, it describes it as “reflecting the most recent actuarial valuations of the pension plans” which I didn’t realize the numbers did. Thought these numbers were based off of what we did in January/February of this year for budget? This is the only place where we reference this updated valuation in the whole document. Is this accurate and should we be saying it at all?

- Borrowing Chapter – has very different language than the other chapters on this. Refers to “prudent and risk-averse approach” (instead of conservative or cautious) and calls it a “pension adjustment” rather than an accounting change, and calls it a “legislated change” rather than a “regulated change.” Will need to align it with other chapters once we land that language.

- Miscellaneous – the language in the footnotes and the text is not always consistent and is challenging to cross reference. Is it a change in accounting treatment, or a pension adjustment; is it accounting for pension assets or pension expense?

Hoping a meeting will help us create some symmetry across all the papers on this.

Ron, Alana

Wondering if, as part of landing today’s distribution, if we could request a pull of all the paragraphs and language across the fiscal, debt and other chapters (responsible management)

that talk about the pensions accounting change. This is something that both Cindy and I would like to review across the whole document to make sure we're treating it consistently, accurately, and effectively.

- Tara can help locate all the references in the fiscal chapter
- Ken K can help locate all the references in the debt chapter
- Nadine can help locate all the references in the Financial Accountability chapter.

We can make sure that Cindy, myself, Gadi, and Karen receive a copy of this pull later tonight for weekend review.

SECTION EXTRACT	EXTRACT (may not be final signoff version)	Comments/considerations
2A Path to Balanced Budget	In October, the *Public Accounts of Ontario 2015–2016* reported that the 2015–16 deficit was $5.0 billion, an improvement of $3.5 billion from the $8.5 billion projection in the *2015 Budget*. The reported deficit of $5.0 billion includes an additional $1.5 billion in unbudgeted/unexpected(?) expense resulting from the government regulating the Auditor General's accounting treatment for pension assets of jointly sponsored pension plans for 2015–16 (see Chapter II, Section B: *Transforming Government and Managing Costs*). Looking forward, the government is projecting a deficit of [$4.3 billion] in 2016–17, a return to balance in 2017–18, and continued balance in 2018–19, consistent with the *2016 Budget*. This includes investing in things that matter most and that help Ontarians, such as electricity cost relief to Ontario consumers, health care, and opening up additional child care spaces. Consistent with the regulated accounting treatment adopted in the 2015-16 Public Accounts related to pension assets, the outlook reflects a ~~conservative~~ cautious approach to forecasting pension expense each year,	

	reflecting the Auditor General's interpretation for pension accounting which eliminates the amount of pension assets which otherwise might have been reported for the Ontario Teachers' Pension Plan and the OPSEU Pension Plan. As announced by the government, a Pension Asset Expert Advisory Panel is being established to assess the application of public sector accounting standards to Ontario's joint defined pension plans. The results of the Panel will help inform the Province's future accounting treatment for jointly sponsored pension plans. In the meantime, in order to be transparent and financially prudent, the government has taken a ~~conservative~~ cautious approach and reflected the Auditor General's interpretation in its fiscal projections over the fiscal planning period. Estimated fiscal impacts are based on the most recent valuations for the Province's ~~of~~ jointly sponsored pension plans. Even after reflecting the pension-related impact in the fiscal outlook, the government is still on track to balance the budget in 2017–18 and 2018–19. Key factors contributing to this forecast result are higher than expected revenue projections, mainly arising from stronger 2015 tax revenue performance and a	'based on valuations as at December 31, 2015' (to be confirmed by Pauline Fong)

	strong 2016 housing market outlook for Ontario. In addition, to mitigate the potential impact of the adopted pension treatment, the government has forecast a reduction in the reserve which is included in the fiscal plan to protect the Province from unexpected changes. (see Chapter III, Section B: *Fiscal Outlook*).	
• Accountability and Transparency Chapter – talks all about 2015-16 Public Accounts process and outcome, but makes no reference to what we're doing in the out-years. I'd recommend we mention something about how we're treating in the out-years for consistency. Right now it reads as if we're awaiting the outcome of the Panel and then will decide what to do after that. o This chapter also refers to "conservative treatment" which was language Cindy wanted removed to be replaced with "cautious".	Earlier this fall, the Auditor General raised issues with the government's longstanding approach to accounting for pension assets of its jointly sponsored pension plans Quite unexpectedly, we found ourselves in the middle of an accounting disagreement over how the government has accounted for these assets over the past 14 years. Previous Auditor Generals have accepted this accounting treatment as has the current Auditor General for the past two years. To help provide clarity and to inform our decision on future accounting treatment for pension plans, we announced the formation of a Pension Asset Expert Advisory Panel to review the application of public sector accounting standards to Ontario's pension plans. We are expecting the Panel's report by the end of the calendar year Given how recently this came to our attention,	OTB to insert reference to approach taken to FES forecasts (see Chapter 2A reference above).

	and the inability to achieve agreement with the Auditor General on the appropriate accounting treatment, the government regulated accounting for its jointly defined benefit plans to reflect the Auditor General's interpretation of the standards for 2015-16. The government has estimated the potential impact of the Auditor General's interpretation on the Province's finances based on the most recent valuations of the jointly sponsored defined benefit plans which were completed almost a year ago. Pension expense in the future will be subject to change based on the results of the Panel's deliberations as well as asset performance, changes to economic assumptions and agreements reached with the co-sponsors of the plans regarding changes to contribution rates. Consistent with the approach taken in preparing the 2015-16 Public Accounts, the government has taken a cautious ~~and conservative~~ approach to its fiscal forecast and incorporated an increased pension expense each year reflecting the Auditor General's interpretation {The result is a higher deficit than originally planned for 2016-17 ($4.8B).} Even after accounting for the Auditor's new interpretation, we are on track to {meet out 2016-17 deficit target} and balance the budget in 2017-18 and 2018-19.	

	We are able to manage the potential impact as a result of: • Higher than expected revenue projections, mainly arising from a stronger economic outlook for Ontario, and • By using the reserve, which is included in the fiscal plan to protect the Province from unexpected changes in the numbers. In the absence of the impact of the Auditor General's accounting treatment of pension assets, for the eighth consecutive year the Provinces was forecasting a lower deficit target than outlined in the Budget. Our prudent approach to fiscal management coupled with stronger than expected economic growth in the first half of this year is supporting our strategic investments in new childcare spaces, hospitals and the HST rebate on electricity costs. This is our mid-year update for this year. We will provide an updated account of our fiscal plan in the 2017 Budget. <u>Reserve</u> What: Using a portion of the reserve Why:	

	- The regulated change in accounting treatment for pension assets to reflect the Auditor General's interpretation of PSAB was an unbudgeted /unexpected (?)change to the accounting treatment for net pension assets of jointly sponsored pension plans. The issues raised by the Auditor General had not been raised in the previous 14 years since the pension accounting standard was adopted in 2001.	
• Chapter 3b – makes explicit connection to the draw down of the reserve and the impact of the pension accounting change. This is a decision point and we should discuss. It calls the pension change "unbudgeted" and "unexpected." • Chapter 3B – in referencing the 2016-17 change in pension expense, it describes it as "reflecting the most recent actuarial valuations of the pension plans" which I didn't realize the numbers did. Thought these numbers were based off of what we did in January/February of this year for budget? This is the only place where	Program expense is projected to grow from $125.3 billion in 2016–17 to $131.7 billion in 2018–19, and is forecast to be higher in each year compared to the 2016 Budget plan. This includes investing in things that matter most and that help Ontarians, such as electricity cost relief, additional investments in hospitals, and opening up new child care spaces. Consistent with the regulated accounting treatment for pensions reflected in the *2015–2016 Public Accounts*, the outlook also reflects a ~~conservative~~ cautious treatment of the pension expense each year consistent with the Auditor General's interpretation of public sector accounting standards for pension assets of jointly sponsored pension plans (see Chapter II, Section B: *Transforming*	

we reference this updated valuation in the whole document. Is this accurate and should we be saying it at all?	*Government and Managing Costs*). Total expense is also projected to be higher in each year compared to the 2016 Budget, but is partly mitigated by lower-than-forecast interest on debt expense resulting from lower-than-forecast interest rates. The *2016 Budget* included a reserve of $1.0 billion in 2016–17, $1.1 billion in 2017–18 and $1.2 billion in 2018–19, to protect the fiscal outlook against unforeseen adverse changes. The reserve is being reduced to $0.4 billion in 2016–17, $0.7 billion in 2017–18 and $0.8 billion in 2018–19 to offset the unexpected change to the accounting treatment for net pension assets of jointly sponsored pension plans. The government has reflected the described treatment of the pension expense each year over the forecast period without jeopardizing spending in key priority areas. Instead, the impact of the change in accounting treatment for pension assets is being managed through higher than expected revenue projections and reducing the reserve. The 2016–17 program expense outlook is $3.1 billion higher than the projection in the *2016 Budget*. This is mainly the result of	

	[placeholder for language on key expense changes] and incorporating an $ X billion in increased pension expense to reflect the Auditor General's interpretation of public sector accounting standards for jointly sponsored pension plans. **[Framework_OB, PEMD_TBS, OPCD_TBS]** The 2016–17 outlook also includes a $0.4 billion reserve to protect the fiscal outlook against unforeseen adverse changes in the Province's revenue and expense, including those resulting from changes in Ontario's economic performance or the impact of natural disasters. The reserve is reduced by $0.6 billion from the 2016 Budget plan to mitigate the fiscal impact of the unbudgeted/unexpected? change in accounting treatment reflected for pension assets of jointly sponsored pension plans. **[Framework_OB]** A $2.2 billion pension expense increase to reflect the impact of the Auditor General's accounting treatment of pension assets of jointly sponsored pension plans. This impact reflects a consistent approach taken in the 2015–2016 Public Accounts, and is based on the most recent actuarial valuations for the Ontario Teachers' Pension Plan and the	'actuarial valuations as at December 31, 2015' (to be confirmed by Pauline Fong)

OPSEU Pension Plan.

Medium-Term Expense Outlook

Program expense is projected to be $3.5 billion higher in 2017–18 and $4.1 billion higher in 2018–19 compared to the 2016 Budget projections. Program expense outlook over the medium term is higher than forecast due to [placeholder for key expense changes] and also incorporates the impact of a change in forecast pension expense each year as a result of adopting the approach taken in the *2015-2016 Public Accounts* which reflected the Auditor General's interpretation of the accounting standards for pension assets of jointly sponsored pension plans. **[Framework_OB, PEMD_TBS, OPCD_TBS]**

Fiscal Prudence

As required by the *Fiscal Transparency and Accountability Act, 2004*, Ontario's fiscal plan incorporates prudence in the form of a reserve to protect the fiscal outlook against unforeseen adverse changes in the Province's revenue and expense, including those resulting from changes in Ontario's economic performance or the impact of natural disasters. The current fiscal outlook includes a reserve of $0.4 billion in 2016–17, $0.7 billion in 2017–18 and $0.8 billion in 2018–19, reduced from the *2016 Budget* to mitigate the impact of the unbudgeted/unexpected?

Formatted: Highlight

	change to the accounting treatment for net? pension assets of jointly sponsored pension plans. **[Framework_OB]**	
• Borrowing Chapter – has very different language than the other chapters on this. Refers to "prudent and risk-averse approach" (instead of conservative or cautious) and calls it a "pension adjustment" rather than an accounting change, and calls it a "legislated change" rather than a "regulated change." Will need to align it with other chapters once we land that language.		Extract not available – To be reviewed
• Miscellaneous – the language in the footnotes and the text is not always consistent and is challenging to cross reference. Many thanks to Ron and Alana for pulling the pension language extracts from the yellows for us to review altogether in one package. I've read all the references to the pensions across all the chapters and have the following observations. Ron is setting up a meeting for us on Tuesday to for 30 minutes to talk about this so we can avoid revisiting this constantly during ADM sign-off later in the week.

Key observations:

- Accountability and Transparency Chapter – talks all about 2015-16 Public Accounts process and outcome, but makes no reference to what we're doing in the out-years. I'd recommend we mention something about how we're treating in the out-years for consistency. Right now it reads as if we're awaiting the outcome of the Panel and then will decide what to do after that.
    - This chapter also refers to "conservative treatment" which was language Cindy wanted removed to be replaced with "cautious".

- Chapter 3b – makes explicit connection to the draw down of the reserve and the impact of the pension accounting change. This is a decision point and we should discuss. It calls the pension change "unbudgeted" and "unexpected."

- Chapter 3B – in referencing the 2016-17 change in pension expense, it describes it as "reflecting the most recent actuarial valuations of the pension plans" which I didn't realize the numbers did. Thought these numbers were based off of what we did in January/February of this year for budget? This is the only place where we reference this updated valuation in the whole document. Is this accurate and should we be saying it at all?

- Borrowing Chapter – has very different language than the other chapters on this. Refers to "prudent and risk-averse approach" (instead of conservative or cautious) and calls it a "pension adjustment" rather than an accounting change, and calls it a "legislated change" rather than a "regulated change." Will need to align it with other chapters once we land that language.

- Miscellaneous – the language in the footnotes and the text is not always consistent and is challenging to cross reference. Is it a change in accounting treatment, or a pension

adjustment; is it accounting for pension assets or pension expense?

Hoping a meeting will help us create some symmetry across all the papers on this.

Ron, Alana

Wondering if, as part of landing today's distribution, if we could request a pull of all the paragraphs and language across the fiscal, debt and other chapters (responsible management) that talk about the pensions accounting change. This is something that both Cindy and I would like to review across the whole document to make sure we're treating it consistently, accurately, and effectively.

- Tara can help locate all the references in the fiscal chapter
- Ken K can help locate all the references in the debt chapter
- Nadine can help locate all the references in the Financial Accountability chapter.

We can make sure that Cindy, myself, Gadi, and Karen receive a copy of this pull later tonight for weekend review.

Tim/Cindy,
I understand that the extracts were provided in hardcopy to the ADMO, so unfortunately I don't have a copy. In order to facilitate a discussion on the pension related extracts I have prepared the attached table which captures the terminology that was likely signed off last week. The actual wording will be confirmed tomorrow when I am back in the office, but in the meantime, just wanted to share this summary and proposed edits for your consideration.

Will plan to update the table with current versions of the extracts tomorrow. Any comments back on suggested edits/consistency would be appreciated.
Please note that I did not have access to the extract from the borrowing section in soft copy, so copying Ken and Gadi on this note for reference purposes.

SECTION EXTRACT	EXTRACT (may not be final signoff version)	Comments/considerations
2A Path to Balanced Budget	In October, the *Public Accounts of Ontario 2015–2016* reported that the 2015–16 deficit was $5.0 billion, an improvement of $3.5 billion from the $8.5 billion projection in the *2015 Budget*. The reported deficit of $5.0 billion includes an additional $1.5 billion in unbudgeted/unexpected(?) expense resulting from the government regulating the Auditor General's accounting treatment for pension assets of jointly sponsored pension plans for 2015–16 (see Chapter II, Section B: *Transforming Government and Managing Costs*). Looking forward, the government is projecting a deficit of [$4.3 billion] in 2016–17, a return to balance in 2017–18, and continued balance in 2018–19, consistent with the *2016 Budget*. This includes investing in things that matter most and that help Ontarians, such as electricity cost relief to Ontario consumers, health care, and opening up additional child care spaces. Consistent with the regulated accounting treatment adopted in the 2015-16 Public Accounts related to pension assets, the outlook reflects a ~~conservative~~ cautious approach to forecasting pension expense each year,	

	reflecting the Auditor General's interpretation for pension accounting which eliminates the amount of pension assets which otherwise might have been reported for the Ontario Teachers' Pension Plan and the OPSEU Pension Plan. As announced by the government, a Pension Asset Expert Advisory Panel is being established to assess the application of public sector accounting standards to Ontario's joint defined pension plans. The results of the Panel will help inform the Province's future accounting treatment for jointly sponsored pension plans. In the meantime, in order to be transparent and financially prudent, the government has taken a ~~conservative~~ cautious approach and reflected the Auditor General's interpretation in its fiscal projections over the fiscal planning period. Estimated fiscal impacts are based on the most recent valuations for the Province's ~~of~~ jointly sponsored pension plans. Even after reflecting the pension-related impact in the fiscal outlook, the government is still on track to balance the budget in 2017–18 and 2018–19. Key factors contributing to this forecast result are higher than expected revenue projections, mainly arising from stronger 2015 tax revenue performance and a	'based on valuations as at December 31, 2015' (to be confirmed by Pauline Fong)

	strong 2016 housing market outlook for Ontario. In addition, to mitigate the potential impact of the adopted pension treatment, the government has forecast a reduction in the reserve which is included in the fiscal plan to protect the Province from unexpected changes. (see Chapter III, Section B: *Fiscal Outlook*).	
• Accountability and Transparency Chapter – talks all about 2015-16 Public Accounts process and outcome, but makes no reference to what we're doing in the out-years. I'd recommend we mention something about how we're treating in the out-years for consistency. Right now it reads as if we're awaiting the outcome of the Panel and then will decide what to do after that. o This chapter also refers to "conservative treatment" which was language Cindy wanted removed to be replaced with "cautious".	Earlier this fall, the Auditor General raised issues with the government's longstanding approach to accounting for pension assets of its jointly sponsored pension plans Quite unexpectedly, we found ourselves in the middle of an accounting disagreement over how the government has accounted for these assets over the past 14 years. Previous Auditor Generals have accepted this accounting treatment as has the current Auditor General for the past two years. To help provide clarity and to inform our decision on future accounting treatment for pension plans, we announced the formation of a Pension Asset Expert Advisory Panel to review the application of public sector accounting standards to Ontario's pension plans. We are expecting the Panel's report by the end of the calendar year Given how recently this came to our attention,	OTB to insert reference to approach taken to FES forecasts (see Chapter 2A reference above).

	and the inability to achieve agreement with the Auditor General on the appropriate accounting treatment, the government regulated accounting for its jointly defined benefit plans to reflect the Auditor General's interpretation of the standards for 2015-16. The government has estimated the potential impact of the Auditor General's interpretation on the Province's finances based on the most recent valuations of the jointly sponsored defined benefit plans which were completed almost a year ago. Pension expense in the future will be subject to change based on the results of the Panel's deliberations as well as asset performance, changes to economic assumptions and agreements reached with the co-sponsors of the plans regarding changes to contribution rates. Consistent with the approach taken in preparing the 2015-16 Public Accounts, the government has taken a cautious ~~and conservative~~ approach to its fiscal forecast and incorporated an increased pension expense each year reflecting the Auditor General's interpretation {The result is a higher deficit than originally planned for 2016-17 ($4.8B).} Even after accounting for the Auditor's new interpretation, we are on track to {meet out 2016-17 deficit target} and balance the budget in 2017-18 and 2018-19.	

	We are able to manage the potential impact as a result of: • Higher than expected revenue projections, mainly arising from a stronger economic outlook for Ontario, and • By using the reserve, which is included in the fiscal plan to protect the Province from unexpected changes in the numbers. In the absence of the impact of the Auditor General's accounting treatment of pension assets, for the eighth consecutive year the Provinces was forecasting a lower deficit target than outlined in the Budget. Our prudent approach to fiscal management coupled with stronger than expected economic growth in the first half of this year is supporting our strategic investments in new childcare spaces, hospitals and the HST rebate on electricity costs. This is our mid-year update for this year. We will provide an updated account of our fiscal plan in the 2017 Budget. <u>Reserve</u> What: Using a portion of the reserve Why:	

	- The regulated change in accounting treatment for pension assets to reflect the Auditor General's interpretation of PSAB was an unbudgeted /unexpected (?)change to the accounting treatment for net pension assets of jointly sponsored pension plans. The issues raised by the Auditor General had not been raised in the previous 14 years since the pension accounting standard was adopted in 2001.	
• Chapter 3b – makes explicit connection to the draw down of the reserve and the impact of the pension accounting change. This is a decision point and we should discuss. It calls the pension change "unbudgeted" and "unexpected." • Chapter 3B – in referencing the 2016-17 change in pension expense, it describes it as "reflecting the most recent actuarial valuations of the pension plans" which I didn't realize the numbers did. Thought these numbers were based off of what we did in January/February of this year for budget? This is the only place where	Program expense is projected to grow from $125.3 billion in 2016–17 to $131.7 billion in 2018–19, and is forecast to be higher in each year compared to the 2016 Budget plan. This includes investing in things that matter most and that help Ontarians, such as electricity cost relief, additional investments in hospitals, and opening up new child care spaces. Consistent with the regulated accounting treatment for pensions reflected in the *2015–2016 Public Accounts*, the outlook also reflects a ~~conservative~~ cautious treatment of the pension expense each year consistent with the Auditor General's interpretation of public sector accounting standards for pension assets of jointly sponsored pension plans (see Chapter II, Section B: *Transforming*	

we reference this updated valuation in the whole document. Is this accurate and should we be saying it at all?	*Government and Managing Costs*). Total expense is also projected to be higher in each year compared to the 2016 Budget, but is partly mitigated by lower-than-forecast interest on debt expense resulting from lower-than-forecast interest rates. The *2016 Budget* included a reserve of $1.0 billion in 2016–17, $1.1 billion in 2017–18 and $1.2 billion in 2018–19, to protect the fiscal outlook against unforeseen adverse changes. The reserve is being reduced to $0.4 billion in 2016–17, $0.7 billion in 2017–18 and $0.8 billion in 2018–19 to offset the unexpected change to the accounting treatment for net pension assets of jointly sponsored pension plans. The government has reflected the described treatment of the pension expense each year over the forecast period without jeopardizing spending in key priority areas. Instead, the impact of the change in accounting treatment for pension assets is being managed through higher than expected revenue projections and reducing the reserve. The 2016–17 program expense outlook is $3.1 billion higher than the projection in the *2016 Budget*. This is mainly the result of	

	[placeholder for language on key expense changes] and incorporating an $ X billion in increased pension expense to reflect the Auditor General's interpretation of public sector accounting standards for jointly sponsored pension plans. **[Framework_OB, PEMD_TBS, OPCD_TBS]** The 2016–17 outlook also includes a $0.4 billion reserve to protect the fiscal outlook against unforeseen adverse changes in the Province's revenue and expense, including those resulting from changes in Ontario's economic performance or the impact of natural disasters. The reserve is reduced by $0.6 billion from the 2016 Budget plan to mitigate the fiscal impact of the unbudgeted/unexpected? change in accounting treatment reflected for pension assets of jointly sponsored pension plans. **[Framework_OB]** A $2.2 billion pension expense increase to reflect the impact of the Auditor General's accounting treatment of pension assets of jointly sponsored pension plans. This impact reflects a consistent approach taken in the 2015–2016 Public Accounts, and is based on the most recent actuarial valuations for the Ontario Teachers' Pension Plan and the	'actuarial valuations as at December 31, 2015' (to be confirmed by Pauline Fong)

OPSEU Pension Plan.

Medium-Term Expense Outlook

Program expense is projected to be $3.5 billion higher in 2017–18 and $4.1 billion higher in 2018–19 compared to the 2016 Budget projections. Program expense outlook over the medium term is higher than forecast due to [placeholder for key expense changes] and also incorporates the impact of a change in forecast pension expense each year as a result of adopting the approach taken in the *2015-2016 Public Accounts* which reflected the Auditor General's interpretation of the accounting standards for pension assets of jointly sponsored pension plans. **[Framework_OB, PEMD_TBS, OPCD_TBS]**

Fiscal Prudence

As required by the *Fiscal Transparency and Accountability Act, 2004*, Ontario's fiscal plan incorporates prudence in the form of a reserve to protect the fiscal outlook against unforeseen adverse changes in the Province's revenue and expense, including those resulting from changes in Ontario's economic performance or the impact of natural disasters. The current fiscal outlook includes a reserve of $0.4 billion in 2016–17, $0.7 billion in 2017–18 and $0.8 billion in 2018–19, reduced from the *2016 Budget* to mitigate the impact of the unbudgeted/unexpected?

Formatted: Highlight

	change to the accounting treatment for net? pension assets of jointly sponsored pension plans. **[Framework_OB]**	
• Borrowing Chapter – has very different language than the other chapters on this. Refers to "prudent and risk-averse approach" (instead of conservative or cautious) and calls it a "pension adjustment" rather than an accounting change, and calls it a "legislated change" rather than a "regulated change." Will need to align it with other chapters once we land that language.		Extract not available – To be reviewed
• Miscellaneous – the language in the footnotes and the text is not always consistent and is challenging to cross reference. Is it a change in accounting treatment, or a pension adjustment; is it accounting for pension assets or pension expense?	**Chapter 2A** *Chart 2.1, p. 4:* "2015-16 actual results reflect the regulated accounting treatment adopted in the Public Accounts of Ontario related to net pension assets. Hi Gadi, please see attached. I'll have hard copies for you at the office.

Ken, could you please ask John to update the borrowing and debt CIN to reflect Public Accounts figures?

For the technical briefing, and Minister Sousa's briefing before that, I'll need a copy of today's FAO Report, and our response to it.

Thanks,
Gadi

Hi-

Please find attached PO approved news release and backgrounder for tomorrow's release of Public Accounts. They tinkered with Minister Sousa's quote so I'm sending you tracked changes.

Please let me know if these are okay.

BORROWING AND DEBT

What is the status of Ontario's borrowing and debt management plan?

SUGGESTED RESPONSE

Debt-to-GDP

- **The interim net debt-to-GDP ratio for 2016–17 was forecast at 37.8 per cent in the 2017 Budget, an improvement compared to the *2016 Budget* projection of 39.6 per cent. This ratio is projected to continue to decline to 37.5 per cent in 2017–18.**

- **The first very important step in reducing debt is to balance the budget. Balanced budgets from 2017–18 onwards will ensure that the increase in net debt is limited to net investments in capital assets.**

- **We are making the biggest investment in public infrastructure in Ontario's history. We have a plan to invest more than $190 billion over 13 years, starting in 2014–15. These strategic investments will not only create jobs but will also contribute to the economy growing at a faster rate than the debt.**

- **The positive impact of capital investments on the Province's economy was confirmed by the Centre for Spatial Economics which reported recently that, over the long term, real GDP in Ontario increases by $6 for every dollar of public infrastructure spending.**

- **The government is setting an interim net debt-to-GDP ratio target of 35 per cent by 2023–24 and continues to maintain a target of reducing the net debt-to-GDP ratio to its pre-recession level of 27 per cent, currently projected to be achieved by 2029–30.**

- **In June 2016, the International Monetary Fund (IMF) released a report recommending that Canadian "fiscal policy should be pro-growth." Christine Lagarde, Managing Director (IMF), also expressed her support for the government's growth strategy and agreed that investment in infrastructure should be an essential element of the strategy.**

<u>Borrowing Program</u>

- **The Province successfully completed its annual borrowing program in 2016–17, borrowing $27.0 billion including $3.2 billion in pre-funding for 2017–18. As of September 5, 2017, the Province has borrowed $16.3 billion for the 2017–18 fiscal year.**

- **Through prudent and cost-effective debt management, we have consistently kept interest on debt costs below budget projections.**

    - **Interest-on-debt-to-revenue is forecast to have been 8.4 per cent for 2016–17. This ratio is the lowest it has been for 25 years. It is forecast to decline to 8.2 per cent in 2017–18 and remain low throughout the outlook period to 2019–20.**

- **Term extension has allowed us to take advantage of and lock in low interest rates for a longer period, which reduces refinancing risks and helps offset the impact of expected higher interest rates on interest on debt costs. As of September 5, 2017, the average term for new borrowing in 2017–18 was 12.7 years compared to 8.1 years in 2009–10.**

- **Going back to the beginning of fiscal 2010–11, we have issued $66.5 billion of bonds with maturities longer than 30 years to lock in low rates. We are consistently making strategic and prudent decisions that will benefit the Ontario economy and ensure fiscal security.**

CURRENT STATUS

FAO's Commentary

On September 6, 2017, the FAO released a commentary on Ontario's debt reduction commitment. Their central argument is that Ontario is basing its debt reduction strategy on three assumptions that the FAO believes are unrealistic:

- Sustained balanced budgets, on average, over the next 12 years. The FAO argues that historically, Ontario has rarely achieved successive surpluses or balanced budgets;
- No further increases to capital spending beyond the long-term infrastructure plan. The FAO argues that the province's 13 year $190 billion plan is expected to peak in 2019-20, but that capital infrastructure will likely need to be supplemented in the latter half of the next decade, which will only increase net debt; and
- A continuation of strong economic growth. The FAO argues that Ontario's aging population and slower expected growth in its labour force will not support the expected 4% average growth of GDP.

Suggested response: The government made a commitment in the 2010 Budget to balance and eliminate the deficit by 2017-18. Since then, the government has reduced the deficit from its peak in 2009-10 of $19.3 billion, to a projected $1.5 billion in 2016-17 and a projected balanced Budget in 2017. Furthermore, the Government consistently overachieved on its deficit targets and forecasts for net debt-to-GDP. The Government's track record therefore provides evidence of fiscal discipline and the likelihood of achieving on-going balanced budgets in the future.

With respect to capital spending, approximately 61 per cent of the increase in net debt from 2008–09 to 2016–17 was due to the deficit, with net investments in capital assets responsible for most of the balance. Infrastructure expenditures do not therefore have as large an impact on net debt as that of a balanced budget.

Moreover, additional capital investment in the latter half of the next decade will stimulate the economy. A recent report from the *Centre for Spatial Economics* confirms that over the long term, real GDP in Ontario increases by $6 for every dollar of public infrastructure spending. This stimulus in GDP may help to offset the effects of an aging population and slower growth in the labour force and maintain the 4% average GDP growth required to bring net debt to GDP down to 27% in 2029-30.

Fraser Institute Reports

On August 3rd, 2017 the Fraser Institute published a report entitled *Wishful Thinking: An Anlysis of Ontario's Timeline for Shrinking its Debt Burden*. The key arguments in the paper are as follows

- Since the province plans to continue adding debt, it does not expect to make any meaningful progress in reducing its debt-to-GDP ratio in the near term. In fact, between the 2015–16 and 2020–21 fiscal years, the

government's plan calls for this ratio to fall at an average annual rate of just 0.4 percentage points.

Response: The rate of increase of the Province's net debt is anticipated to be below that of its GDP, due to a combination of balanced budgets and appropriate levels of capital investments. These investments also contribute to the Province's GDP growth as affirmed by the Centre for Spatial Economics which reported recently that, over the long term, real GDP in Ontario increases by $6 for every dollar of public infrastructure spending.

- The government projects it will achieve its much closer target date of 2029–30 only by assuming a rapid increase in the pace of debt reduction in the later years of its timeline—for which no revenue or expenditure plans are available. In fact, the government forecasts that the rate of reduction in the province's debt-to-GDP ratio will approximately triple in the final eight years of its timeline, rising to 1.1 percentage points annually.

  Response: In later years, the rate of increase in net debt is expected to be lower than that of GDP due a combination of balanced budgets and investments in capital assets that will contribute to GDP growth, allowing the Government to realize its net debt to GDP target of 27 per cent by 2029-30.

On March 30, 2017, the Fraser Institute published a report entitled *Hold the Celebration: A Balanced Budget Won't End Ontario's Fiscal Challenges.* The key arguments in the paper are as follows:

- Ontario's public finances have deteriorated in recent years as net debt has approximately doubled since 2007 to over $300 billion this year (2016-2017).

  Response: About 61 per cent of the increase in net debt from 2008–09 to 2016–17 is due to the deficit, with net investments in capital assets responsible for most of the balance. The balanced budget from 2017–18 onwards will ensure that the increase in net debt is limited to the difference between cash investments in capital assets and amortization, which is a non-cash expense and as such, does not represent cash outflow. These investments will work to increase economic growth and will result in GDP growing more quickly than debt, thereby helping to lower the net debt-to-GDP ratio to its pre-recession level. The government is therefore setting an interim net debt-to-GDP ratio target of 35 per cent by 2023–24 and continues to maintain a target of reducing the net debt-to-GDP ratio to its pre-recession level of 27 per cent, currently projected to be achieved by 2029–30.

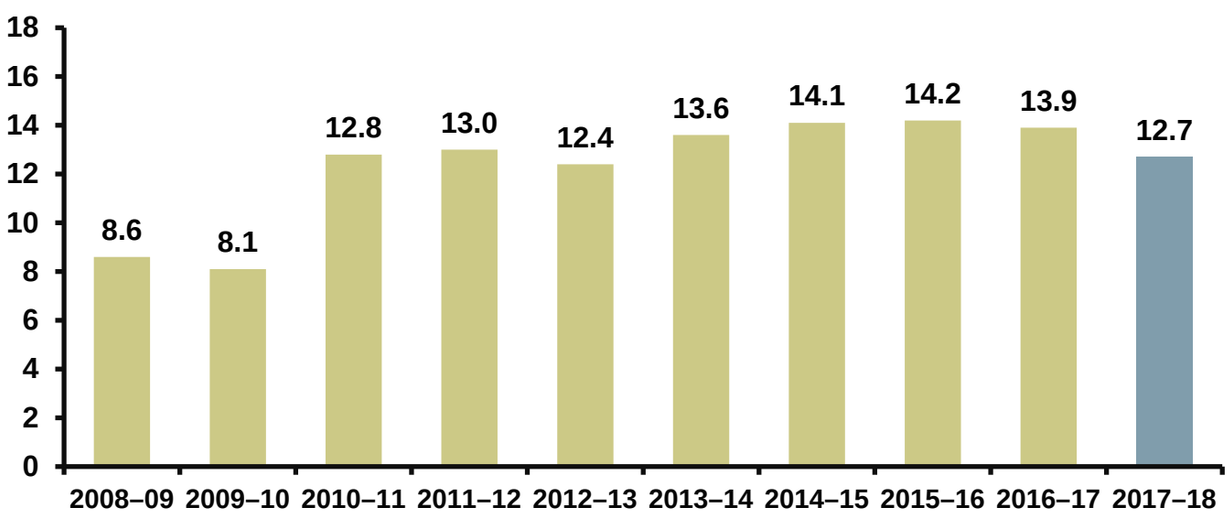
- A balanced budget is not an indication that Ontario's fiscal problems are solved as the Province plans to continually add debt in the years ahead.

  Response: The Province's position has been to eliminate the deficit as a first step in returning to a 27 percent net debt-to-GDP ratio. Despite increases in debt, Ontario's economy continues to grow. Real GDP increased 1.0 percent in the first quarter of 2017, after rising 0.5 percent in the fourth quarter of 2016.

Earlier reports argued that growth in debt is negatively correlated with economic growth. However, this point is contradicted by a recent report by the Centre for Spatial Economics which confirms that over the long term, real GDP in Ontario increases by $6 for every dollar of public infrastructure spending.

Borrowing Program

The Province successfully completed its annual borrowing program in 2016–17, borrowing $27.0 billion. This was the Province's smallest borrowing program since 2008–09. As of September 5, 2017, the Province has borrowed $16.3 billion for the 2017–18 fiscal year.

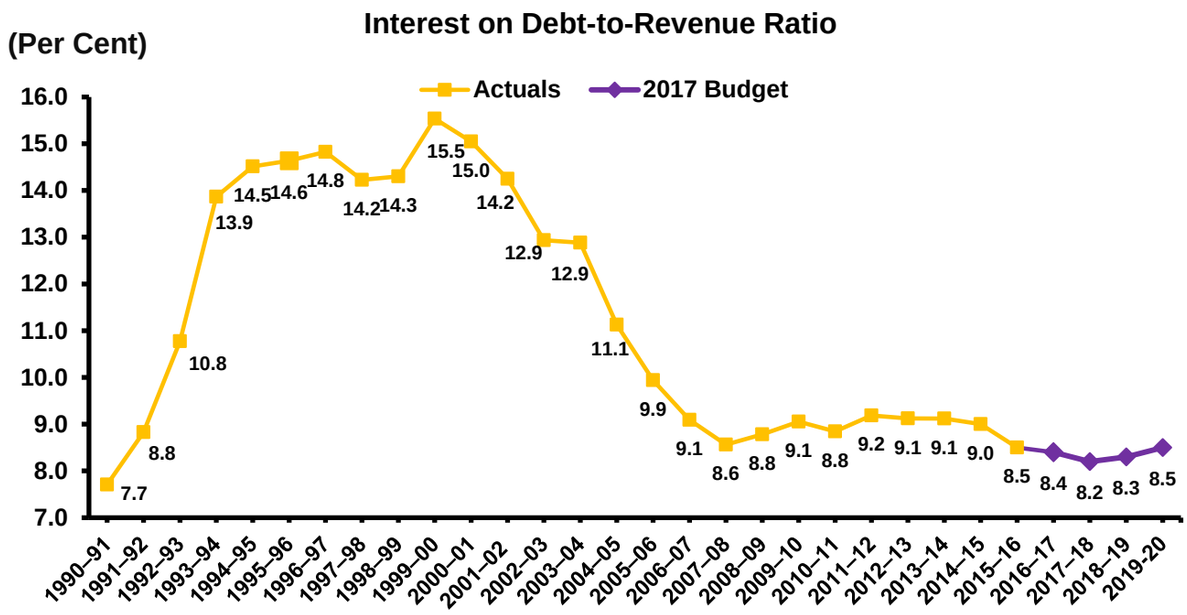


2017–18 Borrowing Completed: $16.3 billion

Note: Numbers may not add due to rounding

Going back to the beginning of fiscal 2010–11, we have issued $66.5 billion of bonds longer than 30 years to lock in low rates. Term extension has allowed us to lock in low interest rates for a longer period, which reduces refinancing risks and helps offset the impact of expected higher interest rates on interest on debt costs. As of September 5, 2017, the average term for new borrowing in 2017–18 was 12.7 years.

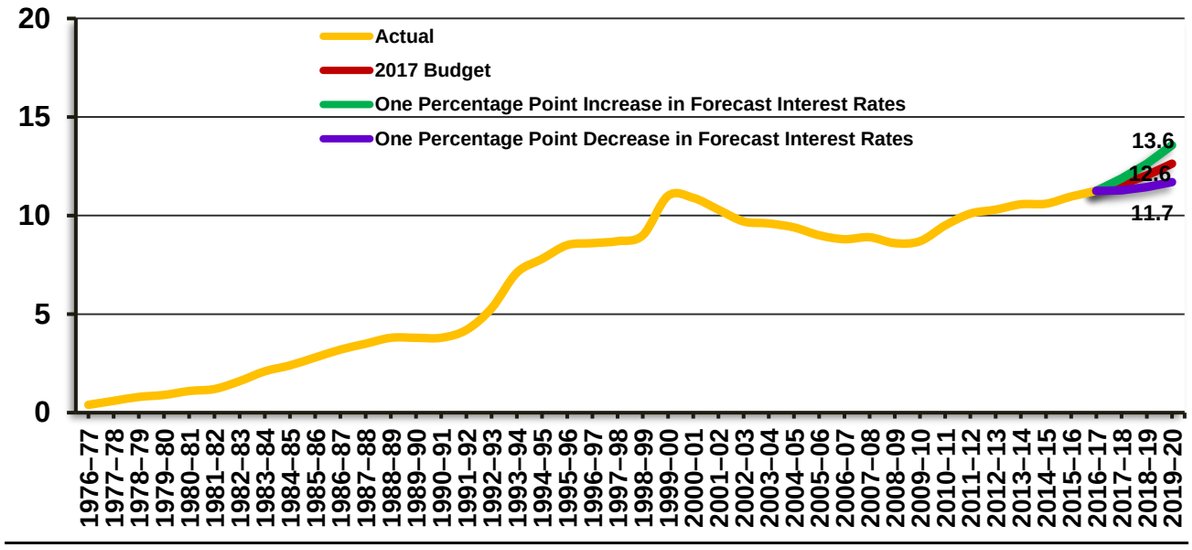
Average Term (years)



Interest on Debt

Ontario's interest on debt (IOD) is projected to be $11.6 billion for 2017–18, rising to $12.0 billion and $12.6 billion for 2018–19 and 2019–20, respectively.

IOD-to-revenue fell to 8.5 per cent in 2015–16. This ratio is the lowest since 1990–91 and is forecast to remain low at 8.4 per cent in 2016–17, 8.2 per cent in 2017–18, 8.3 per cent in 2018–19 and 8.5 per cent in 2019–20. As such, the increase in IOD has no impact on the Province's path to balance since its proportionate share of revenue is relatively constant. This ratio remains well below the peak reached in the mid-1990s because of the low interest rate environment over the past decade. IOD as a percentage of revenue is lower today than it was 10 years ago, in spite of more than a $148 billion increase in net debt over that period.

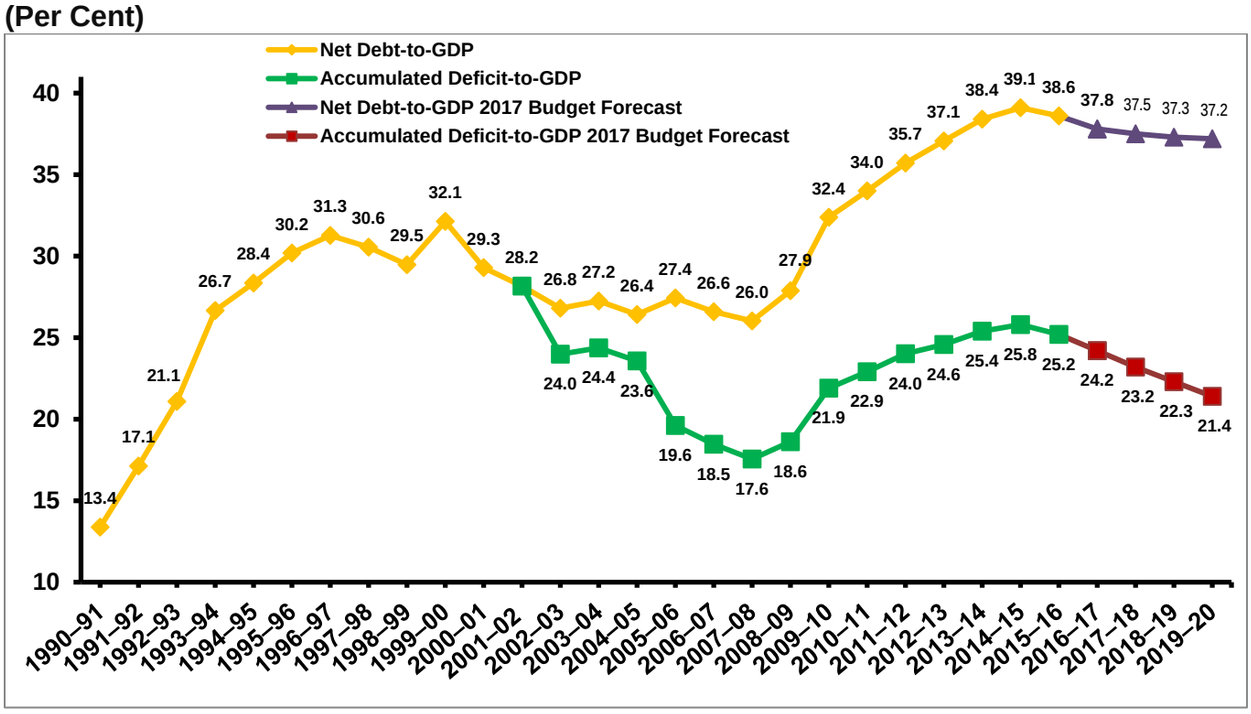


The *2010 Budget* forecasted that, by 2017–18, the Province would have to spend 11.3 cents of every revenue dollar received on interest. The current forecast is 3.1 cents lower, at 8.2 cents of interest costs for every dollar of revenue.

The Province's IOD is sensitive to interest rate fluctuations. A one percentage point change in interest rates would result in a change in Interest on Debt (IOD) of approximately $300 million in 2017–18, rising to $0.94 billion in 2019–20 alone.

Interest on Debt
($ Billions)

Interest on Debt



Net Debt-to-GDP

The government's strategy of enhancing GDP growth by investing in capital infrastructure has contributed over $93 billion to the increase in net debt over the last 13 years. The government commenced recording of tangible capital assets in 2002–03. The balanced budget from 2017 onwards will ensure that the increase in net debt is limited to net investments in capital assets. Over the medium-term, net investments in capital assets will contribute over $33 billion to the total increase in net debt.

Net Debt-to-GDP and Accumulated Deficit-to-GDP

(Per Cent)

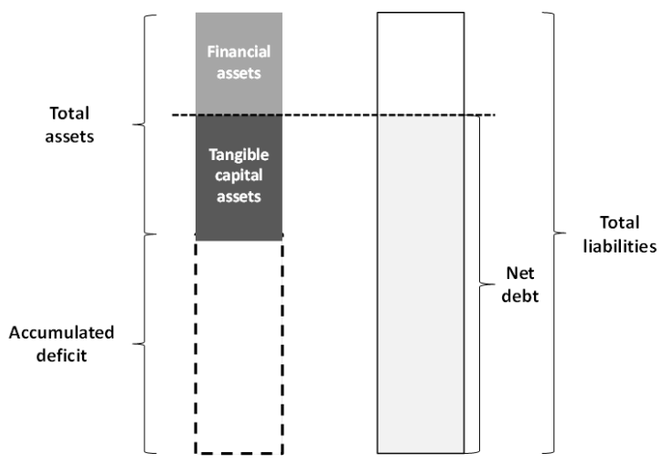
Debt Management

The Ontario Financing Authority uses a number of financial instruments, including options and swaps, to prudently manage risk. These financial instruments, or derivatives, are used primarily for hedging purposes and do not create net leverage. They are used to transform the cost of borrowing into

Canadian dollars and foreign currency exposure from bond issues not denominated in Canadian dollars.

BACKGROUND

The three commonly used indicators of a government's financial and debt position are net debt, total debt, and accumulated deficit. Credit rating agencies and investors place the greatest emphasis on net debt.



Net debt is the difference between the Province's total liabilities and financial assets. Ontario's net debt is projected to increase from $294.6 billion as at March 31, 2016 to $301.9 billion as at March 31, 2017, to $311.9 billion as at March 31, 2018 and to $323.3 billion as at March 31, 2019. The increase in net debt primarily reflects the projected deficit, plus the increase in net tangible capital assets of the Province in 2016–17 and, thereafter, increases in net tangible capital assets only. Financial markets use net debt as their primary measure because it represents the Province's future revenue requirements to pay for past transactions and events.

Total debt is the sum of the Province's total borrowings including Ontario Electricity Financial Corporation and agencies. Ontario's total debt increased from $327.4 billion as at March 31, 2016 to $332.4 billion as at March 31, 2017. This increase was mainly due to fund the deficits and the government's capital investments. Canadian dollar denominated debt represents 83 per cent of the Province's total debt as at March 31, 2017.

Accumulated deficit represents the sum of all deficits and surpluses. The accumulated deficit was $192.0 billion as at March 31, 2016. As per the 2017 Budget, accumulated deficit is forecast to be $193.5 billion as at March 31, 2017, and remain the same as at March 31, 2018 and March 31, 2019, reflecting a balanced budget.

Accumulated deficit is not widely used in the financial markets, as it excludes debt raised for capital expenditures.

Net debt, Accumulated Deficit and Tangible Capital Assets

NET DEBT AND INTEREST ON DEBT: 1993-2020

	Net Debt ($ billions)	Net Debt (% of GDP)[5]	Interest on Debt ($ billions)	Interest on Debt (% of Revenue)[1]

Sources: 2015–16 Public Accounts, Ontario Budgets from 1993 to 2017.
1. In the 2009–10 Public Accounts, education property taxes were included in provincial revenue and no longer netted against education expense. To facilitate comparisons, the Province's historical revenues and expenses have been restated to account for this reporting change.
2. Starting in 1999–2000, the net debt includes the unfunded liability (stranded debt) of OEFC and interest on debt includes interest on OEFC debt.
3. Starting in 2005–06, the net debt includes the net debt of hospitals, school boards, and colleges that were recognized upon consolidation.
4. Starting in 2007–08, the net debt includes the unrealized gains and losses in the Ontario Nuclear Funds Agreement.
5. Historical Net debt-to-GDP were revised to reflect historical GDP released by Statistics Canada in November 2015.
6. Net debt in 2015–16 excludes the legislated pension adjustment of $10.7 billion.

Hi Gadi, please see attached. I'll have hard copies for you at the office.

Ken, could you please ask John to update the borrowing and debt CIN to reflect Public Accounts figures?

Hi-

Please find attached PO approved news release and backgrounder for tomorrow's release of Public Accounts. They tinkered with Minister Sousa's quote so I'm sending you tracked changes.

Please let me know if these are okay.

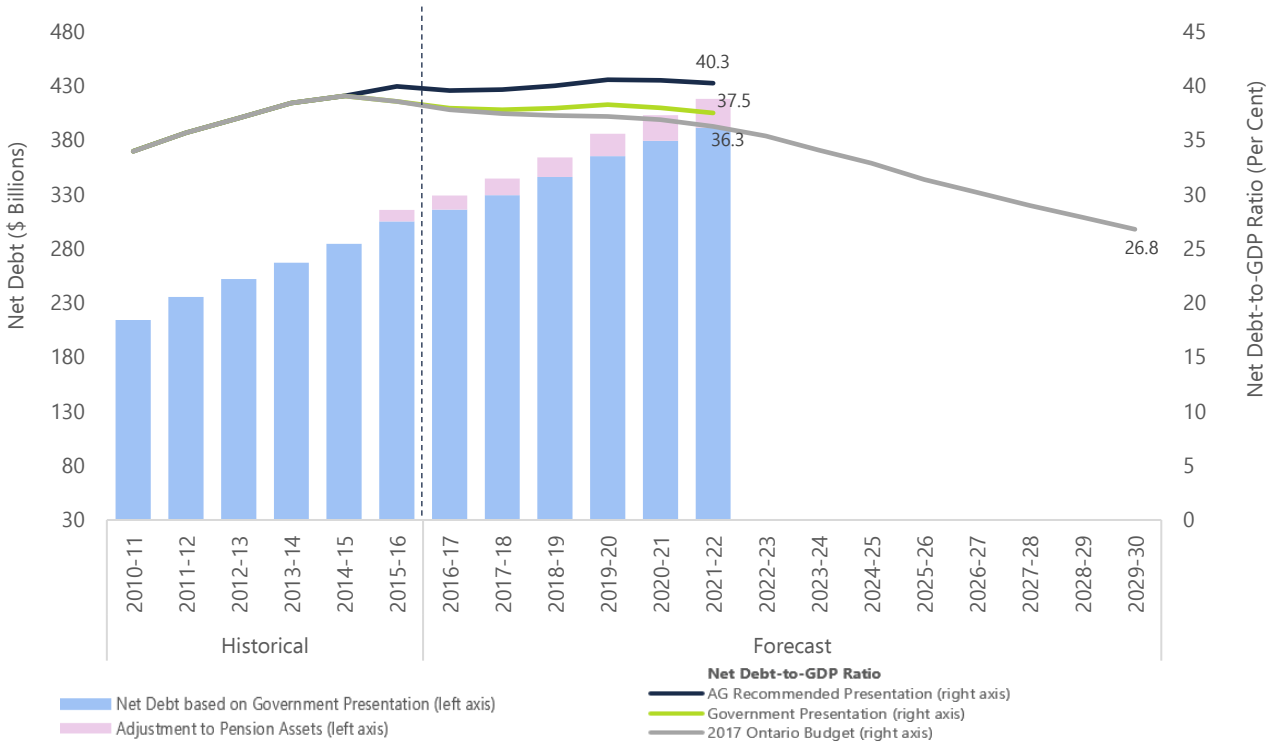
Ontario's Debt Reduction Commitment Based on Unlikely Assumptions



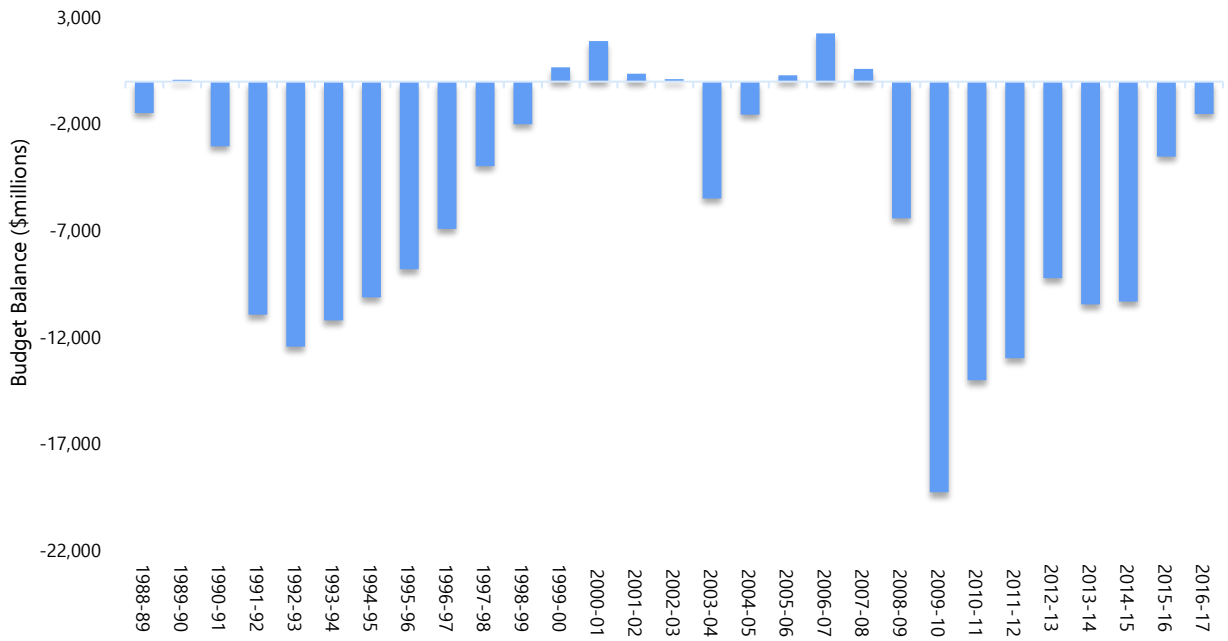
The FAO projects that Ontario's net debt will increase by $76 billion over the next five years to approximately $392 billion in 2021-22, resulting in the net debt-to-GDP ratio rising to 40.3 per cent.[1] In contrast, in the 2017 Budget, the Province projects a small decline in the net debt-GDP ratio to 36.3 per cent by 2021-22.

In the 2017 Budget, the government also restated its commitment to reduce the net debt-to-GDP ratio to its pre-recession level of 27 per cent. The Province projects that this 27 per cent target will be achieved by 2029-30, based on three key assumptions:

- on-going balanced budgets, on average, over the next 12 years[2];
- future capital spending as laid out in the long-term infrastructure plan; and
- a continuation of strong economic growth.

However, if any of these relatively optimistic assumptions fall short of expectations, the government's 27 per cent debt-to-GDP target would not be achieved.

Achievement of 27 Per Cent Debt-To-GDP Target Based on Unlikely Assumptions



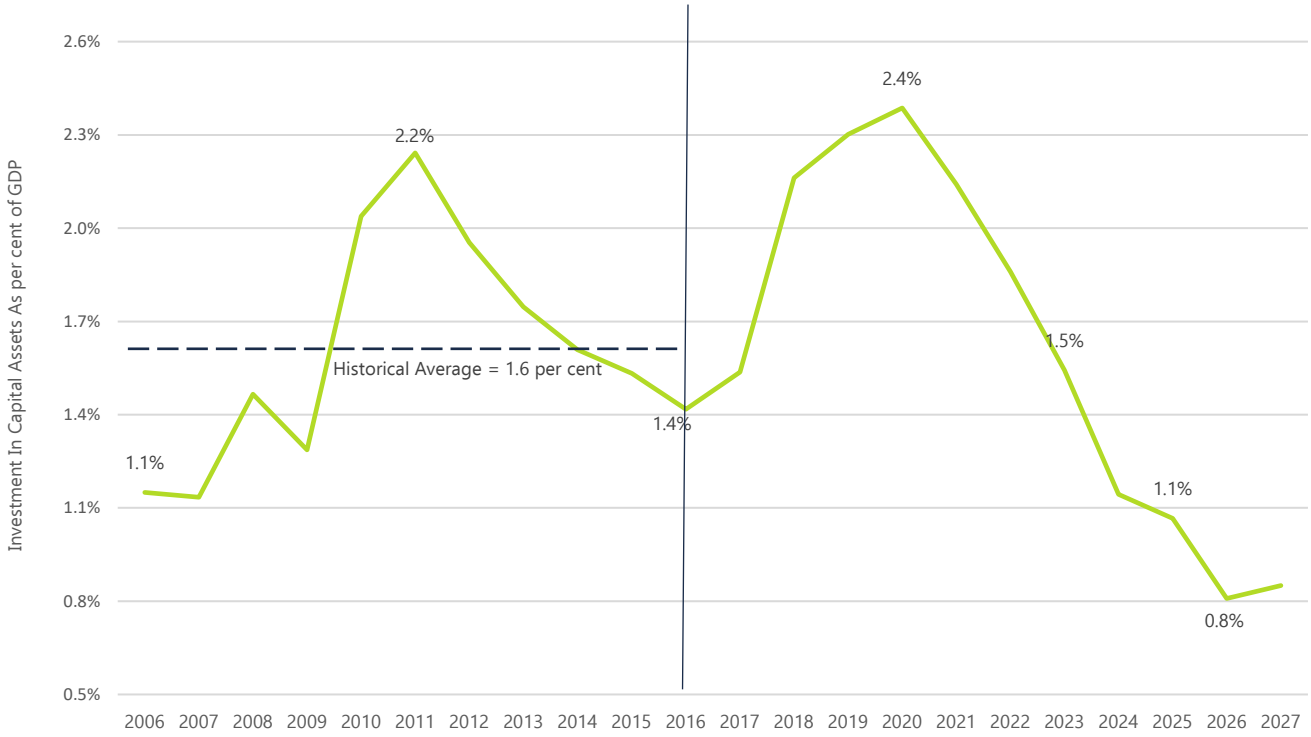
Note: AG recommended presentation based on FAO estimates of the pension adjustment.
Source: Ontario 2017 Budget and FAO

[1] Based on the FAO's application of the Auditor General's recommended accounting treatment for pension assets - see the FAO's 'Economic and Fiscal Outlook, Spring 2017'. By comparison, based on the government's accounting presentation, the FAO projects Ontario's net debt will rise by $62 billion to roughly $365 billion by 2021-22 and that the net debt-to-GDP ratio will fall modestly to 37.5 per cent.

[2] This does not imply that the province necessarily has to achieve balanced budgets in each year. Alternatively, it could post balanced budgets on average, with some years in surplus and some in deficit.

The government's forecast for a gradual decline in the net debt-to-GDP ratio depends critically on achieving a string of balanced budgets on average over the next 12 years. Over the past thirty years, Ontario has rarely achieved successive surpluses or balanced budgets. In contrast to the 2017 Budget, the FAO continues to project a steady deterioration in the budget deficit over the next five years, due to moderating revenue growth combined with higher expenses.

Ontario has Rarely Achieved Balanced Budgets in Consecutive Years



Source: Ontario Budgets 1988-89 to 2017-18

The government's debt reduction commitment is also linked to the Province's 13-year, $190 billion infrastructure plan which includes significant reductions in capital investment in the 2020s. After peaking in 2019-20 at 2.4 per cent of nominal GDP, the Province is projecting capital spending to fall to just 0.8 per cent of GDP by 2027-28 – half of the historical average of 1.6 per cent.

Since the Province has made substantial investments in public sector assets (such as hospitals) over the last 10 years, some pullback is to be expected.[3] However, given the government's focus on new and large transit and highway projects, it is likely that the Province will need to augment its capital plan and increase spending in the latter part of the next decade. Higher than planned capital spending in the future would add to the Province's net debt, increasing the net debt-to-GDP ratio.[4]

[3] See Infrastructure Ontario's list of major projects, http://www.infrastructureontario.ca/Major-Projects/, August 16, 2017.
[4] The government's capital spending projection may also prove to be too conservative given a number of announced but unfunded initiatives including high-speed rail and subway expansion in Toronto.

Investment in Capital Assets as a Share of GDP to Decline Sharply in the 2020s

Source: Investment in Capital Assets, 2017 Infrastructure Update, Ministry of Infrastructure, FAO

Finally, the government's debt-to-GDP projection relies on nominal GDP growing at an average pace of 4 per cent per year over the long-term.[5] However, nominal GDP growth has averaged just 3.6 per cent per year over the past 15 years, and given Ontario's aging population and slower expected growth in its labour force, 4 per cent annual growth may prove to be too optimistic for the next decade.

Given the risks associated with the government's assumptions, a fiscal plan that focuses only on achieving balanced budgets may not be enough to lower Ontario's net debt-to-GDP ratio to 27 per cent by 2029-30.

Hi Tim

The schedule is actually part of the Consolidated Financial Statements (CFS) which is part of the same volume as the FSD&A and presented immediately thereafter. We have only bits and pieces of the CFS, so I am including Mark Donaldson who in Cindy's absence should be able to provide you with the schedule in question.

Thanks

Ken k

Hi Tim and Gadi

As Gadi points out the reason is primarily accounting adjustments related to the translation of OPG's and H1's results from US GAAP to IFRS and a new Pension Adjustment plus of course the deficit offset by the unrealized gains relating to the Ontario Nuclear Funds.

Note that the PA itself has a schedule detailing all of the above, BTW its CPA now, not CA :)

Thanks

Ken K

There are some accounting changes that OPCD has included that make the difference. I'm copying Ken as he can give the specifics, but the thing to remember is that accumulated deficit is the sum of all surpluses and deficits since Confederation (that's the part that we all remember) plus, or minus, any accounting changes (that's the part that everyone that isn't an accountant usually forgets).

If you get a chance, can you call me at 5-8001? I have a question about the FAO debt to GDP report.

Thanks,
Gadi

Hey Gadi! Think you're back today..hope you had some nice time off.

Scott dropped by with a few Q's for me this morning, one of which I wasn't able to answer.

The change in accumulated deficit from 15-16 to 16-17, in the Public Accounts financial statements and in the summary tables is $1.5B. But if the deficit was only $1.0B, should it be changing by only $1.0B? I wondered if the line by line was having an impact, but I can't tell. The math isn't working for me, but I'm no CA. :)

Hi Tim

The schedule is actually part of the Consolidated Financial Statements (CFS) which is part of the same volume as the FSD&A and presented immediately thereafter. We have only bits and pieces of the CFS, so I am including Mark Donaldson who in Cindy's absence should be able to provide you with the schedule in question.

Thanks

Ken k

Thanks Ken. Can you tell me what page of the fsda the schedule detailing these changes is on? Or is it in a volume I don't have? Could you please forward to us?

Hi Tim and Gadi

As Gadi points out the reason is primarily accounting adjustments related to the translation of OPG's and H1's results from US GAAP to IFRS and a new Pension Adjustment plus of course the deficit offset by the unrealized gains relating to the Ontario Nuclear Funds.

Note that the PA itself has a schedule detailing all of the above, BTW its CPA now, not CA :)

Thanks

Ken K

Subject: RE: Q on AD

There are some accounting changes that OPCD has included that make the difference. I'm copying Ken as he can give the specifics, but the thing to remember is that accumulated deficit is the sum of all surpluses and deficits since Confederation (that's the part that we all remember) plus, or minus, any accounting changes (that's the part that everyone that isn't an accountant usually forgets).

If you get a chance, can you call me at 5-8001? I have a question about the FAO debt to GDP report.

Thanks,
Gadi

Subject: Q on AD

Hey Gadi! Think you're back today……hope you had some nice time off.

Scott dropped by with a few Q's for me this morning, one of which I wasn't able to answer.

The change in accumulated deficit from 15-16 to 16-17, in the Public Accounts financial statements and in the summary tables is $1.5B. But if the deficit was only $1.0B, should it be changing by only $1.0B? I wondered if the line by line was having an impact, but I can't tell. The math isn't working for me, but I'm no CA. :)

Subject: RE: Q3 Deck for FPC

No Gadi, Slide 13 should reflect the latest ratios: 2015-16 at 38.6 and 2016-17 at 38.3. this represents the latest GDP forecast from OEP and the removal of the 10.7B from 15-16 with the 16-17 deficit unchanged from the FES number.

John has already passed on the above to Selena. I also suggested that I may be a good idea to include one line in slide 10 indicating that the reversal of the pension adjustment reduces the 15-16 accumulated deficit and net debt by $10.7 billion.

Thanks

Subject: Q3 Deck for FPC

Please find attached a deck we're tracking into FPC tomorrow. This will travel together with a piece TBS is preparing on the Pension Panel.

Walked Scott through it a few minutes ago, and he's continuing to review but gave it an initial thumbs up. We'll probably walk this in to FPC tomorrow.

Wanted you all to have a look – this is based on input from many of your areas already, so staff have provided input, let me know if you have any edits or comments.

- Gadi, we'll need to touch on the net debt to gdp piece. You'll see we've included something in the appendix. Folks are working with Ken to see if there are other nuances we should add, but this is an important consideration as part of Q3.
- Cindy – we'll be discussing the pension piece at 4pm, but any suggested edits on this and IFRS are welcome.
- Andrea/Artur – think your folks are pulling together the list of in-year approvals we'd report. Hopefully we can get that list in the next day or so to help populate the details.
- Brian – this should reflect your input as well.

Hi Tim, this isn't significant enough to bother everybody with, but I just wanted to point that on slide 13, the debt to GDP ratios that you've got representing the FES outlook are actually the FES outlook on debt with current, updated nominal GDP numbers, which would explain why you've got 39.9% for 16-17, while we printed 40.3% in the FES. Given that it's now below 40, Andrew, Steve and Scott are likely to remember that it's different than what we had in FES, so maybe the legend could read "Represents FES debt outlook with updated GDP forecast". Alternatively, you could just take the numbers from Chart 3.11 on page 157 of the FES and put them in (maybe that's a better solution). The last four years up to and including 16-17 are slightly different than you've currently got on your chart, because of GDP revisions since FE,S and were 38.4, 39.1, 40.0 and 40.3 in Chart 3.11

As for the blue line, Ken and I think that it should start in 15-16, as the $10.7 billion will get reversed for that year as a prior period adjustment, and that ratio would now be 38.6%.

One last suggestion from Ken, and maybe it doesn't fit because it's already a crowded slide, but do you want to add a line on slide 10 indicating that the pension reversal reduces net debt and the net debt to GDP ratio? It might fit in at the end of the third bullet where we're already speaking about supporting additional investments in 17-18 and beyond.

Gadi

We're adding a point on updating 15_16 to the deck, so good catch.

On the other details, we plan on going back next week on the rest of the details and fiscal picture we would print - so we can definitely save that for next week but foreshadowing it this week works too.

Thanks Tim.

A question… would we update our 15-16 numbers to reflect the pension accounting, or wait until public accounts? Is that a decision point?

A comment… I think I inserted a box for a decision on whether we would report other tax revenue changes beyond

HST. These net to zero, but we know about them now, and there won't be any new information on them before the Doc, so it is a bit awkward to not report them now and pick them up in the Doc. So I see that as a decision point.

Glad to discuss.

Brian

Hi All,

OB is in the process of preparing a draft Q3 deck that will track to FPC this Wednesday. The deck lays out the key 2016-17 building blocks that could be updated as part of the Q3 publication. In addition, we're updating a draft Q3 document template. We'll need input from your areas on both these products this week. I'm including additional information below.

For the **FPC Q3 deck**, it would be appreciated if we could get the following information from TBS by **noon/early afternoon tomorrow (apologies for the tight timelines)**:

- **16-17 post-FES Expense Update (TBS):** We have included placeholder for an expense slide. The intention is for the slide to provide an updated list of initiatives that were not included in the FES expense outlook.
- **Recommended Expense Update/Signature Initiatives (TBS):** We may build in options for what the outlook could look like – it would helpful if you could provide a recommendation for the expense changes that should be taken on/profiled.
- **16-17 C-Fund Update (PEMD):** We have included a c-fund slide that was used in the Q1 finances briefing materials (attached with current PW). We would like to include an updated version of this slide in the appendix of the FPC deck. It would help to have this out to 19-20.
- **Pension Narrative (OPCD):** High level bullets on the pension adjustment.

For the **Q3 Document Template** (attached), we're looking for input from **PEMD, OPCD, OEP and OFA** by **10am on Friday, January 27**:

- Attached is a draft of Q3 finances template that is based heavily off of the 2016 First Quarter Finances. **We've highlighted the sections that we would like your respective areas to update in the enclosed.**
- Note, there will be some highlighted content that is *not possible* to update for Friday, however there will be a formal distribution process where additional information can be incorporated.

Please feel free to send input directly to Liane and Emma (in copy).

Many thanks,
Ryan

OB is in the process of preparing a draft Q3 deck that will track to FPC this Wednesday. The deck lays out the key 2016-17 building blocks that could be updated as part of the Q3 publication. In addition, we're updating a draft Q3 document template. We'll need input from your areas on both these products this week. I'm including additional information below.

For the **FPC Q3 deck**, it would be appreciated if we could get the following information from TBS by **noon/early afternoon tomorrow (apologies for the tight timelines)**:

- **16-17 post-FES Expense Update (TBS):** We have included placeholder for an expense slide. The intention is for the slide to provide an updated list of initiatives that were not included in the FES expense outlook.
- **Recommended Expense Update/Signature Initiatives (TBS):** We may build in options for what the outlook could look like – it would helpful if you could provide a recommendation for the expense changes that should be taken on/profiled.
- **16-17 C-Fund Update (PEMD):** We have included a c-fund slide that was used in the Q1 finances briefing materials (attached with current PW). We would like to include an updated version of this slide in the appendix of the FPC deck. It would help to have this out to 19-20.
- **Pension Narrative (OPCD):** High level bullets on the pension adjustment.

For the **Q3 Document Template** (attached), we're looking for input from **PEMD, OPCD, OEP and OFA** by **10am on Friday, January 27**:

- Attached is a draft of Q3 finances template that is based heavily off of the 2016 First Quarter Finances. **We've highlighted the sections that we would like your respective areas to update in the enclosed.**
- Note, there will be some highlighted content that is *not possible* to update for Friday, however there will be a formal distribution process where additional information can be incorporated.

Please feel free to send input directly to Liane and Emma (in copy).

Many thanks,
Ryan

Subject: FW: Q3 update

Hi All

Pls note preferred option and the proposed Q3 date. Once Gadi confirms today that FPC has indeed approved both we can proceed towards finalizing the Financing Table. Note that option 4 which is the preferred option, projects a deficit that is lower than simply removing the pension adjustment. If I remember correctly the maturities are also lower by $282M.

My preference is to offset the lower maturities through cash and reduce the long term borrowing by the reduction in the deficit that is over and above the removal of the pension adjustment. Having said that, the latter is relatively small so Gadi may choose maintain the long term borrowing at FES levels and adjust this as well through cash. Once I hear back from him we can target say Friday or Monday to present a first cut of the FT and the revised net debt to GDP ratios.

Kevin if you have not yet done so, pls revise the non-cash by the amount of the pension adjustment.

Thanks and happy to discuss.

Ken k

Hi Everyone – I'm attaching for you, the materials for tomorrow's FPC discussion, including:

- Q3 Finances background (updated for new proposed release date, recommended option highlighted, and additional information on letter to Clerk)
- Q3 Finances option placemat (also updated to highlight recommended option)
- One-pager highlighted key dates for various deliverables and confirmation of timing (LTR, Q3, Pensions Panel, letter to clerk, new electricity relief, tentative Document track)
- One-pager with proposed agenda for Feb 9th MMP.

Thanks for your own going support and cooperation.

Subject: RE: Q3 update

Hi Everyone – just wanted to share with you the latest on the strategy for Q3. We are headed back to FPC next week with a further 2 scenarios on the deficit target that could be published. In addition to the ones we took earlier this week – two new options are proposed – one is to reverse the pensions only (option 1 in the materials), and the second is to take on a certain amount of ministry pressures we think will materialize (option 4 in the materials).

In terms of the materials – there is both a deck and a placemat that we are proposing to take forward. The placemat illustrates the 4 options and includes how the revenue/expense change table would appear relative to Budget and some proposed narrative for each scenario.

The deck is very similar to what we took forward last week but has a couple of new slides. Tim has also just circulated to your ADMs

Can I ask that you specifically take a look at slide 8 to ensure you are comfortable with the wording as well as the **narrative on the placemat** that would be helpful. But happy to hear any comments on the rest of it as well. We are looking for any comments back by 3:30pm today so we can finalize and send up to our DM/MO today.

And – we are continuing to track for a release on Feb 13 and we will be in touch to request your assistance.

Happy to discuss.

Thanks.

Subject: RE: Q3 update
Importance: High

Hi All,

Following up on my email from last week, we received relatively recent direction regarding the release of Ontario's Third Quarter Finances – the tentative plan is to publish Q3 finances ahead of the February 15 deadline. We are tentatively tracking a release date of Monday February 13.

As you can imagine, timelines are very compressed, and includes a possible trip to FPC this week. In order to meet this week's deadlines, while also preparing for the release of the actual publication, we're asking for input from you in stages:

EOD Today:
We have prepared the draft of a deck, which we are working towards tabling at this Wednesday's FPC (TBC). The deck lays out the key 2016-17 building blocks that

could be updated as part of the Q3 publication. It would help if we could get the following from you folks by the end of today:
16-17 post-FES expense update: We have included placeholder for an expense slide. The intention is for the slide to provide an updated list of initiatives that were not included in the FES expense outlook.
Recommended expense update/signature initiatives: We may build in options for what the outlook could look like – it would help if you could provide a recommendation for the expense changes that should be taken on/profiled.
16-17 c-fund update: We have included a c-fund slide that was used in the Q1 finances briefing materials (current PW). We would like to include an updated version of this slide in the FPC deck (appendix). It would help to have this out to 19-20.
Pension Narrative: Nadine – I'll connect on the pension adjustment and some high level bullets that we could use.

Noon Friday January 27:
Template: I've attached a draft of 3q finances that is based heavily off of the 2016 First Quarter Finances. We've highlighted in green the sections that we would like you to update. While I'm not 100% certain this structure will be exactly what the Q3 document will look like, I think it's safe to say that the substantive content we'll have to cover is captured here. There will be some highlighted content that is *not possible* to update for Friday, however there will be a formal distribution process where additional information can be incorporated.

Thanks everyone, and please feel free to send your input directly to Liane and Emma. Im hoping to be able to share a draft deck with you late this evening.

Ontario's Third Quarter Finances: Fiscal Strategy

Office of the Budget
MINISTRY of FINANCE

Presentation to FPC on February 1, 2017

Preliminary Draft

Draft – January 27, 2017 9:30 AM

Context

Under the *Fiscal Transparency and Accountability Act, 2004* (FTAA), the Third Quarter Finances is required to:

- Be released on or before February 15th (publication can be delayed if a letter is sent to the Clerk).
- Include updated information about the major components of revenue and expense **for the current fiscal year only.**

It also provides an **opportunity for the government to reiterate key fiscal messages** from the Budget or pre-condition for future updates.

A Third Quarter Finances has only been published once in the last eight years (in 2012-13).

Key stakeholders like the Financial Accountability Officer and rating agencies will assess the fiscal outlook and narrative.

- Both have acknowledged that balance is within reach in 2017-18, but have also highlighted key risks to the 2016 Budget fiscal plan.

Purpose and Key Decisions

Currently working towards **a release date of February 13, 2017** – need to **confirm the approach to publishing Ontario's Third Quarter Finances**, including:

- The core updates to **the fiscal outlook and supporting revenue and expense details** to be published, as well as the **fiscal narrative and messaging**.
- Positioning the content and the rollout of Third Quarter Finances relative to the release of the Pension Panel's Report and recommendations, and other publicly available information.

Evolution of the 2016-17 Outlook

- The Third Quarter Finances will present a fiscal update relative to the 2016 Budget and address changes since FES in narrative only.
- The 2016 FES highlighted Ontario's stronger economy and the government's approach to fiscal management, which supported strategic investments in new child care spaces, hospitals and electricity cost relief for consumers.
- To support these investments while accommodating the Pension Adjustment, the government took on a number of fiscal tools in order to meet its targets.

2016 Budget Fiscal Plan $ Billions	2016-17	Change to FES 2016-17	FES Outlook 2016-17
Revenue	130.6	*2.1*	132.7
Expense			
Programs	122.1	*3.1*	125.3
Interest on Debt	11.8	*(0.4)*	11.4
Total Expense	133.9	*2.7*	136.6
Surplus/(Deficit) Before Reserve	(3.3)	*(0.6)*	(3.9)
Reserve	1.0	*(0.6)*	0.4
Surplus/(Deficit)	(4.3)	*(0.0)*	(4.3)

Total revenue changes of $2.1 billion, consisting of:

- Base Forecast Change $1.0 billion
- Reversal of Homecare $(0.2) billion
- Federal Agreements $0.4 billion
- Higher assumed revenue to accommodate pensions $0.9 billion

Total expense changes of $2.7 billion, consisting of:

- In-Year Approvals $0.2 billion
- Pension Adjustment of $2.2 billion
- Electricity Cost Relief $0.3 billion
- Support for Hospitals $0.1 billion
- Green Investment Fund $0.3 billion
- New Federal Agreements $0.4 billion
- Contingency Fund Offsets $(0.5) billion
- Interest on Debt Savings $(0.4) billion

Change to the Reserve $(0.6) billion

End of Year Projection for 2016-17

- An early-read indicates that end of year projections for the 2016-17 deficit could range from $0.6 billion (if there is a significant improvement to the outlook) to $2.7 billion (if there is a moderate improvement to the outlook).

Significant Year-end Improvement

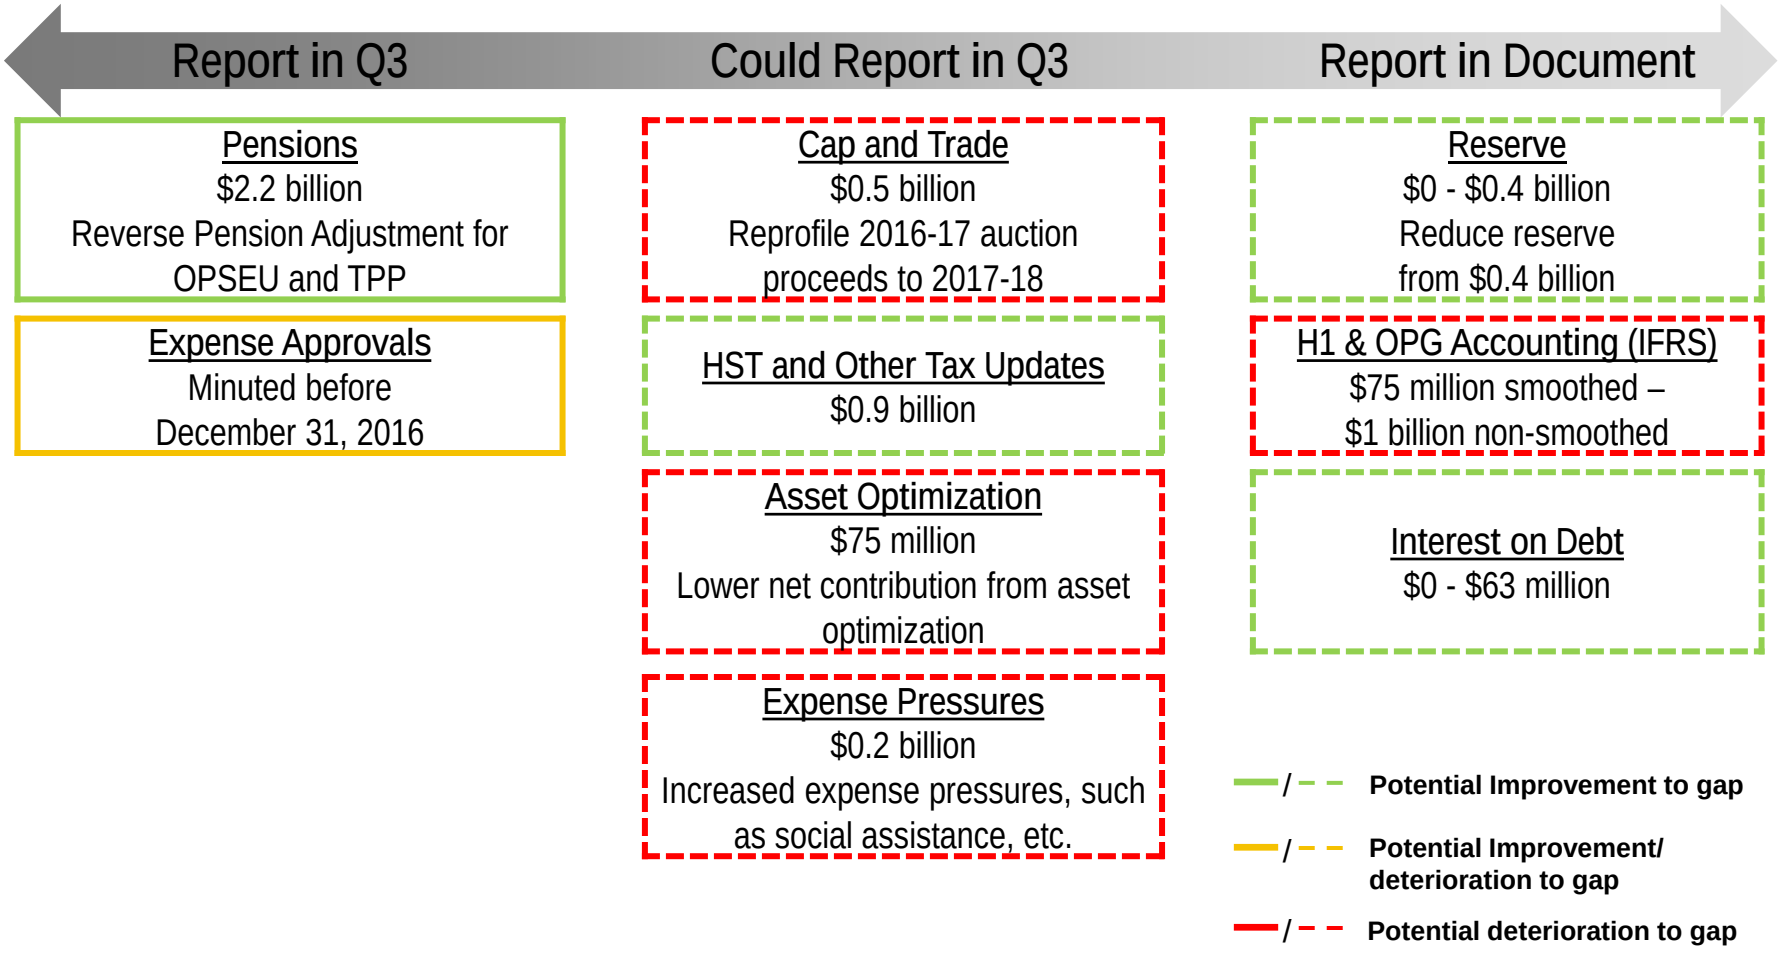
2016 Budget (4.3) billion
+ Pension Adjustment and Tools
2016 FES (4.3) billion
+ Higher Revenue ***1.7 billion***
− Re-profiling Cap and Trade Proceeds ***0.5 billion***
− Lower Net Contribution from Assets Optimization ***75 million***
− Accounting Adjustments: Accounting Framework (IFRS) ***75 million*** Unchanged Contaminated Sites
Unchanged Program Expense
+ Reverse Pension Adjustment ***2.2 billion***
+ Lower Interest on Debt ***0.1 billion***
+ Reduce Reserve ***0.4 billion***
Early-Read (0.6) billion

Moderate Year-end Improvement

2016 Budget (4.3) billion
+ Pension Adjustment and Tools
2016 FES (4.3) billion
+ Higher Revenue ***0.7 billion***
− Re-profiling Cap and Trade Proceeds ***0.5 billion***
− Lower Net Contribution from Assets Optimization ***75 million***
− Accounting Adjustments: Accounting Framework (IFRS) ***75 million*** Contaminated Sites ***50 million***
− Higher Program Expense ***1.0 billion***
+ Reverse Pension Adjustment ***2.2 billion***
Unchanged Interest on Debt
+ Reduce Reserve ***0.4 billion***
Early-Read (2.7) billion

Treatment of Pension Adjustment

Panel Recommendation



- The Pension Asset Expert Advisory Panel will be releasing its findings in the coming weeks.
  - The report is expected to include advice that government jointly sponsored pension plans be recognized in the Province's financial statements.
  - If taken on, this would result in a positive fiscal impact to the government's outlook in all years.

Treatment of Pension Adjustment

- The Third Quarter Finances provides the government with an immediate opportunity to align its fiscal strategy with recommendations of the panel, and frame the pension narrative in advance of the 2017 Document.
- While the reversal of the pension adjustment to the Ontario Public Service Employees Union Pension Plan (OPSEUPP) and the Ontario Teachers' Pension Plan (OTPP) will result in an improved 2016-17 deficit, expectations may need to be tempered about how much fiscal room is created in the out-years.
- For consistency and comparability, an adjustment to the 2015-16 actuals may be required to reflect the government's decision to adopt the Panel's recommendations. The adjustment to historical results would impact the previously reported net debt and deficit results.

Key Building Blocks

- In addition to the reversal of the Pension Adjustment, other key building blocks will either need to be reported in the Third Quarter Finances or be considered for the 2017 Document.

Building Block Considerations

There are a number of considerations for whether key building blocks should be taken on in the Third Quarter Finances or deferred to the 2017 Document.

Could Report in Third Quarter Finances

Cap and Trade

- The Cap and Trade auction notice that was released on January 20 stating that certification will occur on April 3, 2017.
- Stakeholders (e.g. FAO and Auditor General) may question why the government has not updated its fiscal plan to reflect this change.

HST and Other Tax Updates

- HST and other tax information has been received since the FES, and no further significant updates are expected in advance of the 2017 Document.
- Stakeholders are aware of the timing of these information flows and may question if updates are not taken on in Third Quarter Finances.

Asset Optimization

- Updating for revised estimated net contribution from Asset Optimization would build some deterioration into the outlook.
- There is uncertainty on the timing and potential gains for the H1 Brampton and Seaton Lands sales, and uncertainty on the final net gains reported H1 shares sold to OPG, potentially necessitating additional updates in the 2017 Document.

Expense Pressures

- Ministry risks represent potential pressures in the fiscal plan, and are not typically included in Quarterly updates.
- However, it may be prudent to address risks which may materialize before the 2017 Document, such as increased expense pressures associated with social assistance etc.

Report in Document

Reserve

It is recommended that the reserve be maintained at its current level of $0.4 billion, in order to mitigate any pressures that may arise before year-end.

H1 & OPG Accounting (IFRS)

Updated information on the potential fiscal impact of the move from U.S. GAAP to IFRS for Hydro One and OPG, is expected in mid-February.

Interest on Debt

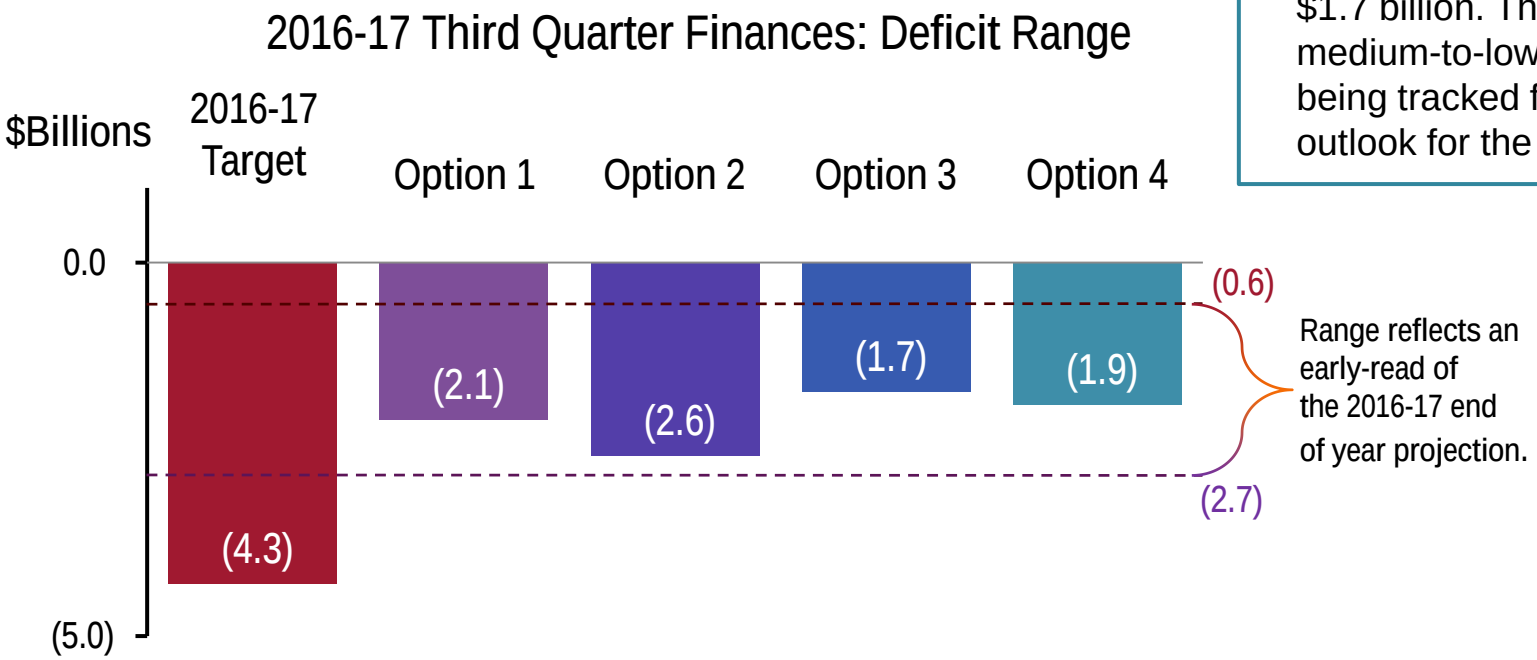
Deferring improvements in the interest on debt forecast allows for upside potential in the 2017 Document.

Outstanding Information

- **Outstanding Information** could materially impact the **2016-17 outlook** in advance of the 2017 Document.

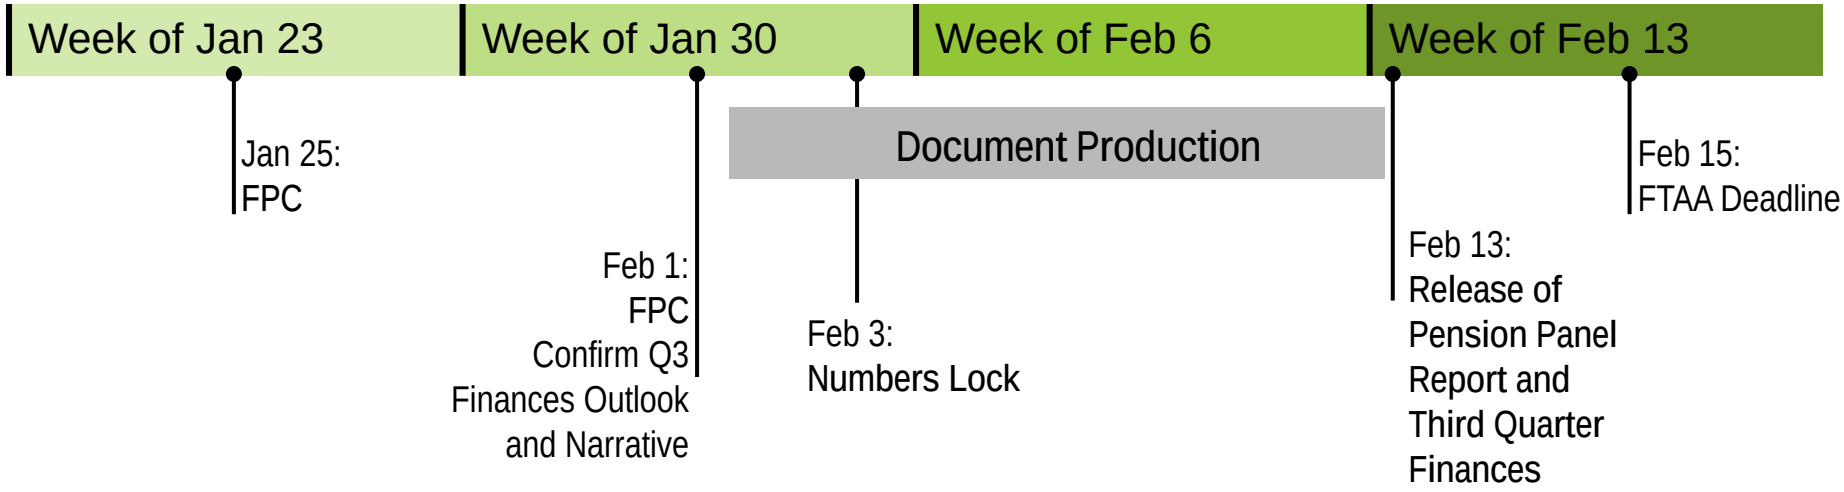
Revenue
Revisions to economic outlook
Ongoing provincially-administered tax receipts
Non-tax revenue updates from Ministry PRRT submissions
Net income updates from government business enterprises

Expense
Ministry Q3/interim submissions
Consolidations and other technical adjustments
Interest on debt forecast updates
Contaminated sites liabilities
Updated pension expense forecast



- Potential improvement to gap
- Potential improvement or deterioration to gap
- Potential deterioration to gap

Principles for the 2016-17 Outlook



Options 1 through 4 build on each other. All options assume the pension reversal and progressively take on additional changes relative to FES .

Option 1	Option 2	Option 3	Option 4
Pensions: $2.2 billion	**Pensions**: $2.2 billion	**Pensions**: $2.2 billion	**Pensions**: $2.2 billion
	Cap and Trade: $(0.5) billion	**Cap and Trade:** $(0.5) billion	**Cap and Trade:** $(0.5) billion
		Asset Optimization: $(0.1) billion	**Asset Optimization:** $(0.1) billion
		HST & Other Taxes: $0.9 billion	**HST & Other Taxes:** $0.9 billion
			Expense Pressures: $(0.2) billion

- Based on an early-read of end of year projections, the government may want to report an outlook that protects against risks or other changes between now and the Budget.
- Based on current information and taking into account key building blocks, there are a number of options for presenting the Q3 deficit, ranging from $2.6 billion to $1.7 billion. These are on the medium-to-low end of what is being tracked for the interim outlook for the 2017 Document.

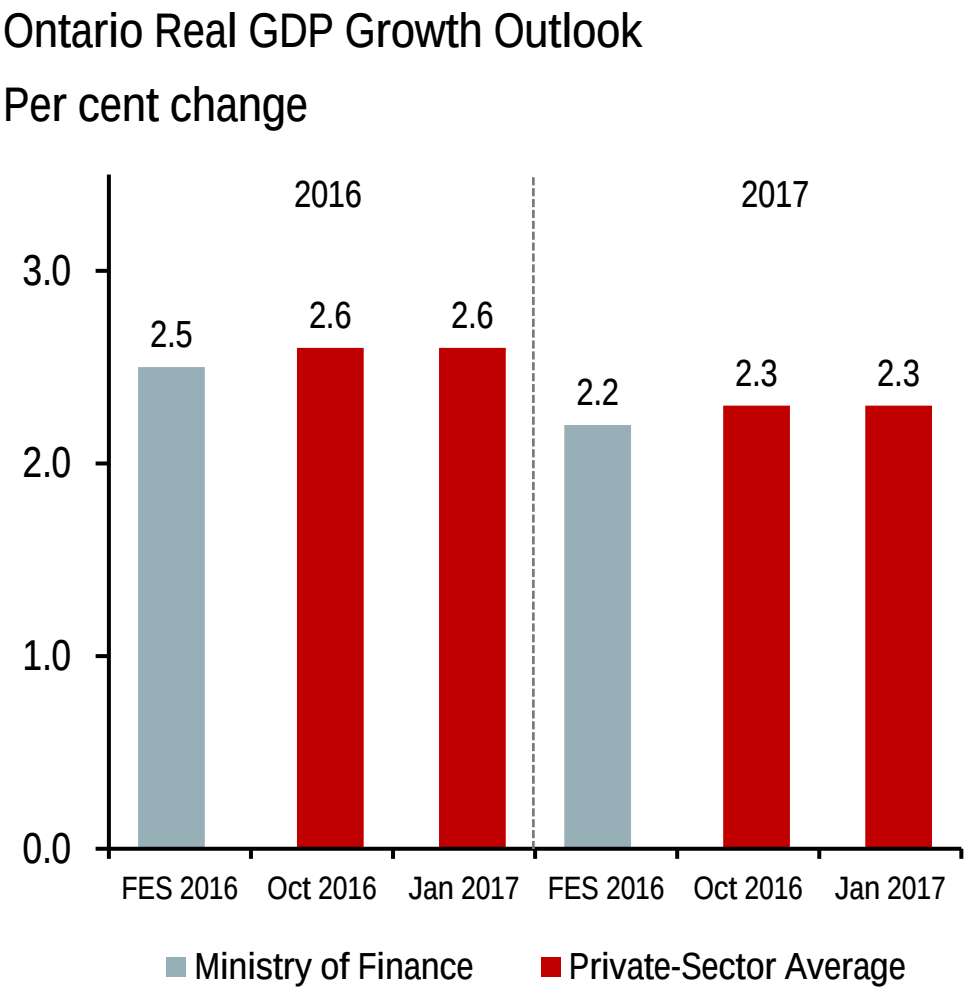
Feb 13:
Release of
Pension Panel
Report and
Third Quarter
Finances
Feb 15:
FTAA Deadline

Appendix

Net Debt-to-GDP With Pension Reversal

Narrative: *The impact of the reversal will change the net debt projection for 2016-17 by $X.X billion. As a result, the government is projecting a net debt-to-GDP ratio of X.X per cent, an improvement compared to the 2016 FES projection of 40.3 per cent*

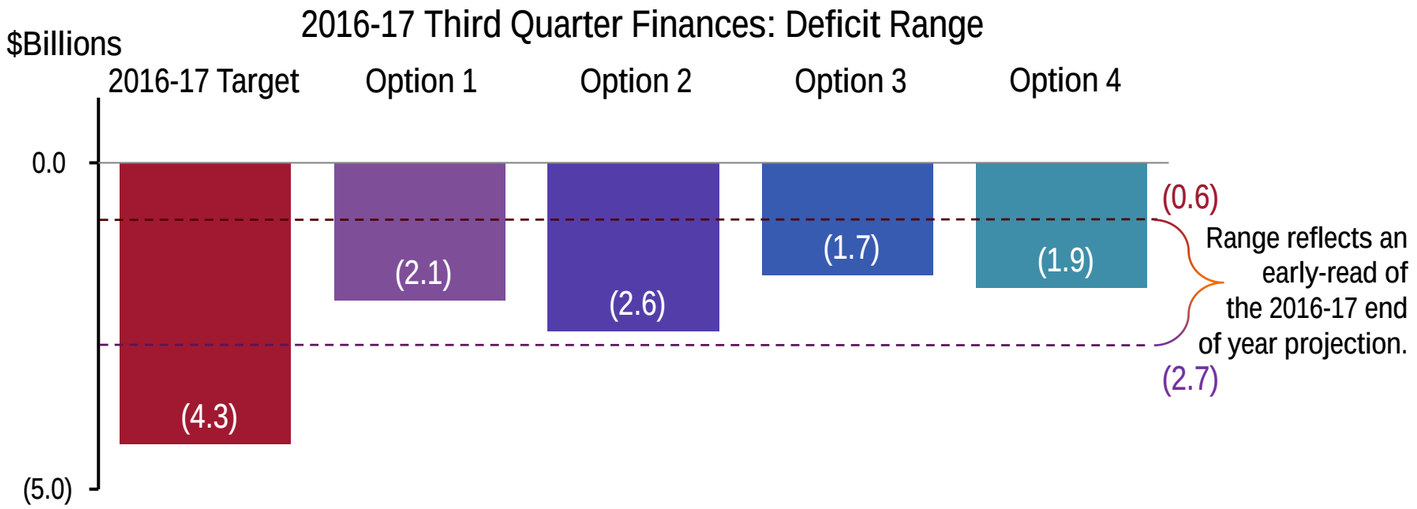


- Reflects the reversal of the Teachers Pension Plan and OPSEU Pension Plan adjustments, including reversal of the $10.7 billion debt adjustment made in the 2015-16 Public Accounts

Potential Third Quarter Economic Outlook

Economic Update

- Real GDP increased by 0.7% in the third quarter (July to September) of 2016, after rising 0.2% in the second quarter.
  - Higher exports and continued growth in household spending were the primary drivers of growth
- Information available so far for the fourth quarter (October to December) of 2016 suggest growth at a more modest pace.
- Ontario's economic growth outlook remains consistent with the 2016 FES forecast



Other Accounting Issues

Other Accounting Issues

- The move from U.S. GAAP to IFRS for the consolidation of Hydro One and OPG results in a fiscal impact starting in 2016-17, of either:

Basis of Consolidation of OPG and H1 (US GAAP vs. IFRS)	Fiscal Impact Relative to FES				
	2016-17	2017-18	2018-19	2019-20	2020-21
Preferred Approach (smoothed IFRS impact)**	**$75M**	**$425M**	**$525M**	**$675M**	**$675M**
High Impact (non-smoothed IFRS impact)**	$1B	$375M	$400M	$400M	$400M

*** OPG's estimate of cumulative impact for 2015-2020 is $2.5B under the preferred approach, and $2.6B under the high impact approach. Note: Amounts are based on estimates currently available, and are subject to updates by OPG. Revised estimates are expected by March 1, 2017.*

Options 1 through 4 build on each other. All options assume the pension reversal and progressively take on additional changes.

Option 1	Option 2	Option 3	Option 4
Pensions: $2.2 billion	**Pensions**: $2.2 billion	**Pensions**: $2.2 billion	**Pensions**: $2.2 billion
	Cap and Trade: $(0.5) billion	**Cap and Trade:** $(0.5) billion	**Cap and Trade:** $(0.5) billion
		Asset Optimization: $(0.1) billion	**Asset Optimization:** $(0.1) billion
		HST & Other Taxes: $0.9 billion	**HST & Other Taxes:** $0.9 billion
			Expense Pressures: $(0.2) billion

Overall Narrative: *The strength of the Ontario economy, together with the government's approach to fiscal management, is supporting strategic investments, while allowing the government to continue to beat its fiscal targets.*

Option 1
Reversal of Pensions

$ Billions	Budget 2016-17	Change	Outlook 2016-17
Revenue	130.6	*2.1*	132.7
Expense			
Programs	122.1	*0.9*	123.1
Interest on Debt	11.8	*(0.4)*	11.4
Total Expense	133.9	*0.5*	134.4
Surplus/(Deficit) Before Reserve	(3.3)	*1.6*	(1.7)
Reserve	1.0	*(0.6)*	0.4
Surplus/(Deficit)	(4.3)	*2.2*	(2.1)

- *The government is projecting a **deficit of $2.1 billion in 2016-17**, an improvement of $2.2 billion since the 2016 Budget.*
- *The Pension Asset Expert Advisory Panel recently released its report on the treatment of pension assets, including a recommendation that jointly-sponsored net pension asset be recognized in the Province's financial statements. The government is adopting this recommendation, which aligns with the treatment originally included in the 2016 Budget plan.*
- *With this reversal, together with stronger revenue and lower interest on debt, the government is on track to beat its fiscal target.*

Option 2
Option 1 + Cap and Trade

$ Billions	Budget 2016-17	Change	Outlook 2016-17
Revenue	130.6	*1.7*	132.2
Expense			
Programs	122.1	*0.9*	123.1
Interest on Debt	11.8	*(0.4)*	11.4
Total Expense	133.9	*0.5*	134.4
Surplus/(Deficit) Before Reserve	(3.3)	*1.1*	(2.2)
Reserve	1.0	*(0.6)*	0.4
Surplus/(Deficit)	(4.3)	*1.7*	(2.6)

- *The government is projecting a **deficit of $2.6 billion in 2016-17**, an improvement of $1.7 billion since the 2016 Budget.*
- *Cap and Trade is a cornerstone of the Province's fight against climate change. Ontario's first Cap and Trade auction is scheduled for March 22, 2017, and establishes Ontario's partnership in the largest carbon market in North America.*
- *Proceeds from Ontario's first auction will be certified at the beginning of the 2017-18 fiscal year. As such, the Third Quarter Finances reflect the re-profiling of auction proceeds from 2016-17 to 2017-18.*

Option 3
Option 2 + Assets + HST & Other Taxes

$ Billions	Budget 2016-17	Change	Outlook 2016-17
Revenue	130.6	*2.5*	133.1
Expense			
Programs	122.1	*0.9*	123.1
Interest on Debt	11.8	*(0.4)*	11.4
Total Expense	133.9	*0.5*	134.4
Surplus/(Deficit) Before Reserve	(3.3)	*2.0*	(1.3)
Reserve	1.0	*(0.6)*	0.4
Surplus/(Deficit)	(4.3)	*2.6*	(1.7)

- *The government is projecting a **deficit of $1.7 billion in 2016-17**, an improvement of $2.6 billion since the 2016 Budget.*
- *Ontario's economy continues to grow in an uncertain global environment. Stronger 2015 income tax assessment results and the continued strength of Ontario's economy and housing market resulted in higher than forecasted taxation revenues.*
- [Suggest not addressing AO downward estimate in narrative.]

Option 4
Option 3 + Expense Pressures

$ Billions	Budget 2016-17	Change	Outlook 2016-17
Revenue	130.6	*2.5*	133.1
Expense			
Programs	122.1	*1.1*	123.3
Interest on Debt	11.8	*(0.4)*	11.4
Total Expense	133.9	*0.7*	134.6
Surplus/(Deficit) Before Reserve	(3.3)	*1.8*	(1.5)
Reserve	1.0	*(0.6)*	0.4
Surplus/(Deficit)	(4.3)	*2.4*	(1.9)

- *The government is projecting a **deficit of $1.9 billion in 2016-17**, an improvement of $2.4 billion since the 2016 Budget.*
- *The government's fiscally sound approach to managing the Province's finances will help grow the economy, create jobs and ensure the sustainability of programs and services that help Ontarians in their everyday lives.*
- *[This includes supporting strategic investments, such as funding for social assistance, and increased enrolment in schools.]*

Thank you for the update, Kevin;

We will have to act very fast then since numbers will be locked the same day.

Best regards

Alex

Subject: RE: Q3 update

Hi Alex,

If we remove the pension adjustment:

- Non-cash in 2016-17 would be ($5,204). Presently, in the FT it is ($7,444) per the FES.
- There would be no changes to the 2017-18 to 2020-21 out-years.

As discussed with Ken, we are waiting for the outcome of next Wednesday's FPC meeting before making changes to the non-cash.

Thanks,
kevin

Subject: FW: Q3 update

Hello Kevin;

How will the pension adjustment affect the cash timing adjustments for the FT?

Thank you

Alex

Hi ken - thank you so much for following up on this. We need to go back to FPC next week for additional scenarios on the deficit we could publish in Q3 and so we haven't landed on anything definitive yet. At minimum it appears at this point we will be reversing the pension adjustment but there may be other variables that impact the deficit figure. Not sure if that helps you get started. So for now, don't worry about the noon deadline and we will be in touch with you/your team as soon as we can on something more definitive.

Thank you again.

Hi Selena

Any further update on whether the FES numbers will be used for Q3, or will the pension adjustment be reversed resulting in a revised deficit and net debt.

Much appreciated if you can get back to us EOD, since we have to get back to you by tomorrow 12 pm with the financing table and the ratios.

Thanks

Ken k

Liane,

One more thing, can you round up the pension adjustment to 10.7, not 10.6 on that slide.

Thanks.

Sure John. By changing the 15-16 number the table starts to fork in 14-15, which is a bit odd because the change occurs in 15-16. Not sure how to get around that, though... see attached slide. Let me know if this works.

Liane,

In that case, we can go with the new GDP numbers; 38.3 for 2016-17. If you're so inclined, may we suggest a second dash for 2015-16 as well and use 38.6 for that year. Please see the attached.

Thanks.

Thanks John - we used numbers provided to us last week for a few scenarios we pulled together, but you're right - that top line should definitely correspond to the FES numbers, so we'll make that change. On the outlook with pensions reversed - the 38.3 we have is from the attached Jan 16th spreadsheet (scenario 2), so it incorporates a more up to date GDP forecast - which I think is why our number are slightly different.

Happy to defer to you folks on whether we go with the 38.3 or the 38.9.

Liane

Hi Selena

I have to be at Bud Sec shortly, however, John Psinas will provide you with the revised net debt to GDP ratio from the reversal of the pension adjustment. For 16-17 we will use the FES outlook in the ratio and update same when you land on the projected deficit for the current fiscal.

I would also suggest that slide 10 include a line indicating that the reversal of the pension adjustment reduces the 2015-16 accumulated deficit and net debt by over $10.6 billion.

Thanks

Ken k

Hi Selena

The reversal of the pension adjustment does not impact IOD since it’s a non-cash adjustment, i.e., it decreases expenses on a PSAB basis not on a cash basis hence the total borrowing does not change which means that IOD also remains unchanged.

Thanks

Ken K

Subject: RE: Q3 update
Importance: High

Hi All,

Following up on my email from last week, we received relatively recent direction regarding the release of Ontario's Third Quarter Finances – the tentative plan is to publish Q3 finances ahead of the February 15 deadline. We are tentatively tracking a release date of Monday February 13.

As you can imagine, timelines are very compressed, and includes a possible trip to FPC this week. In order to meet this week's deadlines, while also preparing for the release of the actual publication, we're asking for input from you in stages:

EOD Today:
We have prepared the draft of a deck, which we are working towards tabling at this Wednesday's FPC (TBC). The deck lays out the key 2016-17 building blocks that could be updated as part of the Q3 publication. It would help if we could get the following from you folks by the end of today:
16-17 post-FES expense update: We have included placeholder for an expense slide. The intention is for the slide to provide an updated list of initiatives that were not included in the FES expense outlook.
Recommended expense update/signature initiatives: We may build in options for what the outlook could look like – it would help if you could provide a recommendation for the expense changes that should be taken on/profiled.
16-17 c-fund update: We have included a c-fund slide that was used in the Q1 finances briefing materials (current PW). We would like to include an updated version of this slide in the FPC deck (appendix). It would help to have this out to 19-20.
Pension Narrative: Nadine – I'll connect on the pension adjustment and some high level bullets that we could use.

Noon Friday January 27:
Template: I've attached a draft of 3q finances that is based heavily off of the 2016 First Quarter Finances. We've highlighted in green the sections that we would like you to update. While I'm not 100% certain this structure will be exactly what the Q3 document will look like, I think it's safe to say that the substantive content we'll have to cover is captured here. There will be some highlighted content that is not possible to update for Friday, however there will be a formal distribution process where additional information can be incorporated.

Thanks everyone, and please feel free to send your input directly to Liane and Emma. Im hoping to be able to share a draft deck with you late this evening.

Subject: Q3 heads up

Hi Everyone – Wanted to send a quick message that we are hearing there is a desire to proceed with the release of a

Q3 update around the time we are expecting the Pension Panel panel to release their report. We are going to assume mid feb prior to the house coming back for our planning purposes.

My team is going to work together to put together a list of things we need to start working on/think about along with a calendar to determine and get direction on an approach to coincide with this timeframe.

More details to follow tomorrow.

Thanks.

Hi Selena

I have to be at Bud Sec shortly, however, John Psinas will provide you with the revised net debt to GDP ratio from the reversal of the pension adjustment. For 16-17 we will use the FES outlook in the ratio and update same when you land on the projected deficit for the current fiscal.

I would also suggest that slide 10 include a line indicating that the reversal of the pension adjustment reduces the 2015-16 accumulated deficit and net debt by over $10.6 billion.

Thanks

Ken k

Subject: RE: Q3 update
Importance: High

Hi All,

Following up on my email from last week, we received relatively recent direction regarding the release of Ontario's Third Quarter Finances – the tentative plan is to publish Q3 finances ahead of the February 15 deadline. We are tentatively tracking a release date of Monday February 13.

As you can imagine, timelines are very compressed, and includes a possible trip to FPC this week. In order to meet this week's deadlines, while also preparing for the release of the actual publication, we're asking for input from you in stages:

EOD Today:
We have prepared the draft of a deck, which we are working towards tabling at this Wednesday's FPC (TBC). The deck lays out the key 2016-17 building blocks that could be updated as part of the Q3 publication. It would help if we could get the following from you folks by the end of today:
16-17 post-FES expense update: We have included placeholder for an expense slide. The intention is for the slide to provide an updated list of initiatives that were not included in the FES expense outlook.
Recommended expense update/signature initiatives: We may build in options for what the outlook could look like – it would help if you could provide a recommendation for the expense changes that should be taken on/profiled.
16-17 c-fund update: We have included a c-fund slide that was used in the Q1 finances briefing materials (current PW). We would like to include an updated version of this slide in the FPC deck (appendix). It would help to have this out to 19-20.
Pension Narrative: Nadine – I'll connect on the pension adjustment and some high level bullets that we could use.

Noon Friday January 27:
Template: I've attached a draft of 3q finances that is based heavily off of the 2016 First Quarter Finances. We've highlighted in green the sections that we would like you to update. While I'm not 100% certain this structure will be exactly what the Q3 document will look like, I think it's safe to say that the substantive content we'll have to cover is captured here. There will be some highlighted content that is not possible to update for Friday, however there will be a formal distribution process where additional information can be incorporated.

Thanks everyone, and please feel free to send your input directly to Liane and Emma. Im hoping to be able to share a draft deck with you late this evening.

Subject: Q3 heads up

Hi Everyone – Wanted to send a quick message that we are hearing there is a desire to proceed with the release of a Q3 update around the time we are expecting the Pension Panel panel to release their report. We are going to assume mid feb prior to the house coming back for our planning purposes.

My team is going to work together to put together a list of things we need to start working on/think about along with a calendar to determine and get direction on an approach to coincide with this timeframe.

More details to follow tomorrow.

Thanks.

16-17 post-FES expense update: We have included placeholder for an expense slide. The intention is for the slide to provide an updated list of initiatives that were not included in the FES expense outlook.
Recommended expense update/signature initiatives: We may build in options for what the outlook could look like – it would help if you could provide a recommendation for the expense changes that should be taken on/profiled.
16-17 c-fund update: We have included a c-fund slide that was used in the Q1 finances briefing materials (current PW). We would like to include an updated version of this slide in the FPC deck (appendix). It would help to have this out to 19-20.
Pension Narrative: Nadine – I'll connect on the pension adjustment and some high level bullets that we could use.

Noon Friday January 27:
Template: I've attached a draft of 3q finances that is based heavily off of the 2016 First Quarter Finances. We've highlighted in green the sections that we would like you to update. While I'm not 100% certain this structure will be

exactly what the Q3 document will look like, I think it's safe to say that the substantive content we'll have to cover is captured here. There will be some highlighted content that is not possible to update for Friday, however there will be a formal distribution process where additional information can be incorporated.

Thanks everyone, and please feel free to send your input directly to Liane and Emma. Im hoping to be able to share a draft deck with you late this evening.

Sure John. By changing the 15-16 number the table starts to fork in 14-15, which is a bit odd because the change occurs in 15-16. Not sure how to get around that, though... see attached slide. Let me know if this works.

Liane

Thanks John - we used numbers provided to us last week for a few scenarios we pulled together, but you're right - that top line should definitely correspond to the FES numbers, so we'll make that change. On the outlook with pensions reversed - the 38.3 we have is from the attached Jan 16th spreadsheet (scenario 2), so it incorporates a more up to date GDP forecast - which I think is why our number are slightly different.

Happy to defer to you folks on whether we go with the 38.3 or the 38.9.

Liane

Hi Selena

I have to be at Bud Sec shortly, however, John Psinas will provide you with the revised net debt to GDP ratio from the reversal of the pension adjustment. For 16-17 we will use the FES outlook in the ratio and update same when you land on the projected deficit for the current fiscal.

I would also suggest that slide 10 include a line indicating that the reversal of the pension adjustment reduces the 2015-16 accumulated deficit and net debt by over $10.6 billion.

Thanks

Ken k

Hi Selena

The reversal of the pension adjustment does not impact IOD since it’s a non-cash adjustment, i.e., it decreases expenses on a PSAB basis not on a cash basis hence the total borrowing does not change which means that IOD also remains unchanged.

Thanks

Ken K

Subject: RE: Q3 update
Importance: High

Hi All,

Following up on my email from last week, we received relatively recent direction regarding the release of Ontario's Third Quarter Finances – the tentative plan is to publish Q3 finances ahead of the February 15 deadline. We are tentatively tracking a release date of Monday February 13.

As you can imagine, timelines are very compressed, and includes a possible trip to FPC this week. In order to meet this week's deadlines, while also preparing for the release of the actual publication, we're asking for input from you in stages:

EOD Today:
We have prepared the draft of a deck, which we are working towards tabling at this Wednesday's FPC (TBC). The deck lays out the key 2016-17 building blocks that could be updated as part of the Q3 publication. It would help if we could get the following from you folks by the end of today:
16-17 post-FES expense update: We have included placeholder for an expense slide. The intention is for the slide to provide an updated list of initiatives that were not included in the FES expense outlook.
Recommended expense update/signature initiatives: We may build in options for what the outlook could look like – it would help if you could provide a recommendation for the expense changes that should be taken on/profiled.
16-17 c-fund update: We have included a c-fund slide that was used in the Q1 finances briefing materials (current PW). We would like to include an updated version of this slide in the FPC deck (appendix). It would help to have this out to 19-20.
Pension Narrative: Nadine – I'll connect on the pension adjustment and some high level bullets that we could use.

Noon Friday January 27:
Template: I've attached a draft of 3q finances that is based heavily off of the 2016 First Quarter Finances. We've highlighted in green the sections that we would like you to update. While I'm not 100% certain this structure will be exactly what the Q3 document will look like, I think it's safe to say that the substantive content we'll have to cover is captured here. There will be some highlighted content that is not possible to update for Friday, however there will be a formal distribution process where additional information can be incorporated.

Thanks everyone, and please feel free to send your input directly to Liane and Emma. Im hoping to be able to share a draft deck with you late this evening.

As you can imagine, timelines are very compressed, and includes a possible trip to FPC this week. In order to meet this week's deadlines, while also preparing for the release of the actual publication, we're asking for input from you in stages:

EOD Today:
We have prepared the draft of a deck, which we are working towards tabling at this Wednesday's FPC (TBC). The deck lays out the key 2016-17 building blocks that could be updated as part of the Q3 publication. It would help if we could get the following from you folks by the end of today:
16-17 post-FES expense update: We have included placeholder for an expense slide. The intention is for the slide to provide an updated list of initiatives that were not included in the FES expense outlook.
Recommended expense update/signature initiatives: We may build in options for what the outlook could look like – it would help if you could provide a recommendation for the expense changes that should be taken on/profiled.
16-17 c-fund update: We have included a c-fund slide that was used in the Q1 finances briefing materials (current PW). We would like to include an updated version of this slide in the FPC deck (appendix). It would help to have this out to 19-20.
Pension Narrative: Nadine – I'll connect on the pension adjustment and some high level bullets that we could use.

Noon Friday January 27:
Template: I've attached a draft of 3q finances that is based heavily off of the 2016 First Quarter Finances. We've highlighted in green the sections that we would like you to update. While I'm not 100% certain this structure will be exactly what the Q3 document will look like, I think it's safe to say that the substantive content we'll have to cover is captured here. There will be some highlighted content that is not possible to update for Friday, however there will be a formal distribution process where additional information can be incorporated.

Thanks everyone, and please feel free to send your input directly to Liane and Emma. Im hoping to be able to share a draft deck with you late this evening.

Subject: Q3 heads up

Hi Everyone – Wanted to send a quick message that we are hearing there is a desire to proceed with the release of a Q3 update around the time we are expecting the Pension Panel panel to release their report. We are going to assume mid feb prior to the house coming back for our planning purposes.

My team is going to work together to put together a list of things we need to start working on/think about along with a calendar to determine and get direction on an approach to coincide with this timeframe.

More details to follow tomorrow.

Thanks.

Subject: RE: Q3 update

Hi Everyone – just wanted to share with you the latest on the strategy for Q3. We are headed back to FPC next week with a further 2 scenarios on the deficit target that could be published. In addition to the ones we took earlier this week – two new options are proposed – one is to reverse the pensions only (option 1 in the materials), and the second is to take on a certain amount of ministry pressures we think will materialize (option 4 in the materials).

In terms of the materials – there is both a deck and a placemat that we are proposing to take

forward. The placemat illustrates the 4 options and includes how the revenue/expense change table would appear relative to Budget and some proposed narrative for each scenario.

The deck is very similar to what we took forward last week but has a couple of new slides. Tim has also just circulated to your ADMs

Can I ask that you specifically take a look at slide 8 to ensure you are comfortable with the wording as well as the **narrative on the placemat** that would be helpful. But happy to hear any comments on the rest of it as well. We are looking for any comments back by 3:30pm today so we can finalize and send up to our DM/MO today.

And – we are continuing to track for a release on Feb 13 and we will be in touch to request your assistance.

Happy to discuss.

Thanks.

Subject: RE: Q3 update
Importance: High

Hi All,

Following up on my email from last week, we received relatively recent direction regarding the release of Ontario's Third Quarter Finances – the tentative plan is to publish Q3 finances ahead of the February 15 deadline. We are tentatively tracking a release date of Monday February 13.

As you can imagine, timelines are very compressed, and includes a possible trip to FPC this week. In order to meet this week's deadlines, while also preparing for the release of the actual publication, we're asking for input from you in stages:

EOD Today:
We have prepared the draft of a deck, which we are working towards tabling at this Wednesday's FPC (TBC). The deck lays out the key 2016-17 building blocks that could be updated as part of the Q3 publication. It would help if we could get the following from you folks by the end of today:
16-17 post-FES expense update: We have included placeholder for an expense slide. The intention is for the slide to provide an updated list of initiatives that were not included in the FES expense outlook.
Recommended expense update/signature initiatives: We may build in options for what the outlook could look like – it would help if you could provide a recommendation for the expense changes that should be taken on/profiled.
16-17 c-fund update: We have included a c-fund slide that was used in the Q1 finances briefing materials (current PW). We would like to include an updated version of this slide in the FPC deck (appendix). It would help to have this out to 19-20.
Pension Narrative: Nadine – I'll connect on the pension adjustment and some high level bullets that we could use.

Noon Friday January 27:
Template: I've attached a draft of 3q finances that is based heavily off of the 2016 First Quarter Finances. We've highlighted in green the sections that we would like you to update. While I'm not 100% certain this structure will be exactly what the Q3 document will look like, I think it's safe to say that the substantive content we'll have to cover is captured here. There will be some highlighted content that is *not possible* to update for Friday, however there will be a formal distribution process where additional information can be incorporated.

Thanks everyone, and please feel free to send your input directly to Liane and Emma. Im hoping to be able to share a draft deck with you late this evening.

Ontario's Third Quarter Finances: Fiscal Strategy

Office of the Budget
MINISTRY of FINANCE

Presentation to FPC on February 1, 2017

Preliminary Draft

Draft – January 31, 2017 5:00 PM

Context

Under the *Fiscal Transparency and Accountability Act, 2004* (FTAA), the Third Quarter Finances is required to:

- Be released on or before February 15th (publication can be delayed if a letter is sent to the Clerk).
- Include updated information about the major components of revenue and expense **for the current fiscal year only.**

It also provides an **opportunity for the government to reiterate key fiscal messages** from the Budget or pre-condition for future updates.

A Third Quarter Finances has only been published once in the last eight years (in 2012-13).

Key stakeholders like the Financial Accountability Officer, the Auditor General and rating agencies will assess the fiscal outlook and narrative.

Both have acknowledged that balance is within reach in 2017-18, but have also highlighted key risks to the 2016 Budget fiscal plan.

Purpose and Key Decisions

Currently working towards **a release date of February 21, 2017** – need to **confirm the approach to publishing Ontario's Third Quarter Finances**, including:

- The core updates to **the fiscal outlook and supporting revenue and expense details** to be published, as well as the **fiscal narrative and messaging**.
- Positioning the content and the rollout of Third Quarter Finances relative to the release of the **Pension Panel's Report and recommendations**, and other publicly available information.

Publishing after the February 15th deadline will require that a **letter be sent to the Clerk of the Legislature** advising of the delayed release.

- Letter could be sent on **February 13th** to coincide with the release of the Pension Panel's Report.

Evolution of the 2016-17 Outlook

- The Third Quarter Finances will present a fiscal update relative to the 2016 Budget and address changes since FES in narrative only.
- The 2016 FES highlighted Ontario's stronger economy and the government's approach to fiscal management, which supported strategic investments in new child care spaces, hospitals and electricity cost relief for consumers.
- To support these investments while accommodating the Pension Adjustment, the government took on a number of fiscal tools in order to meet its targets.

2016 Budget Fiscal Plan $ Billions	2016-17	Change to FES 2016-17	FES Outlook 2016-17
Revenue	130.6	*2.1*	132.7
Expense			
Programs	122.1	*3.1*	125.3
Interest on Debt	11.8	*(0.4)*	11.4
Total Expense	133.9	*2.7*	136.6
Surplus/(Deficit) Before Reserve	(3.3)	*(0.6)*	(3.9)
Reserve	1.0	*(0.6)*	0.4
Surplus/(Deficit)	(4.3)	*(0.0)*	(4.3)

Total revenue changes of $2.1 billion, consisting of:

- Base Forecast Change $1.0 billion
- Reversal of Homecare $(0.2) billion
- Federal Agreements $0.4 billion
- Higher assumed revenue to accommodate pensions $0.9 billion

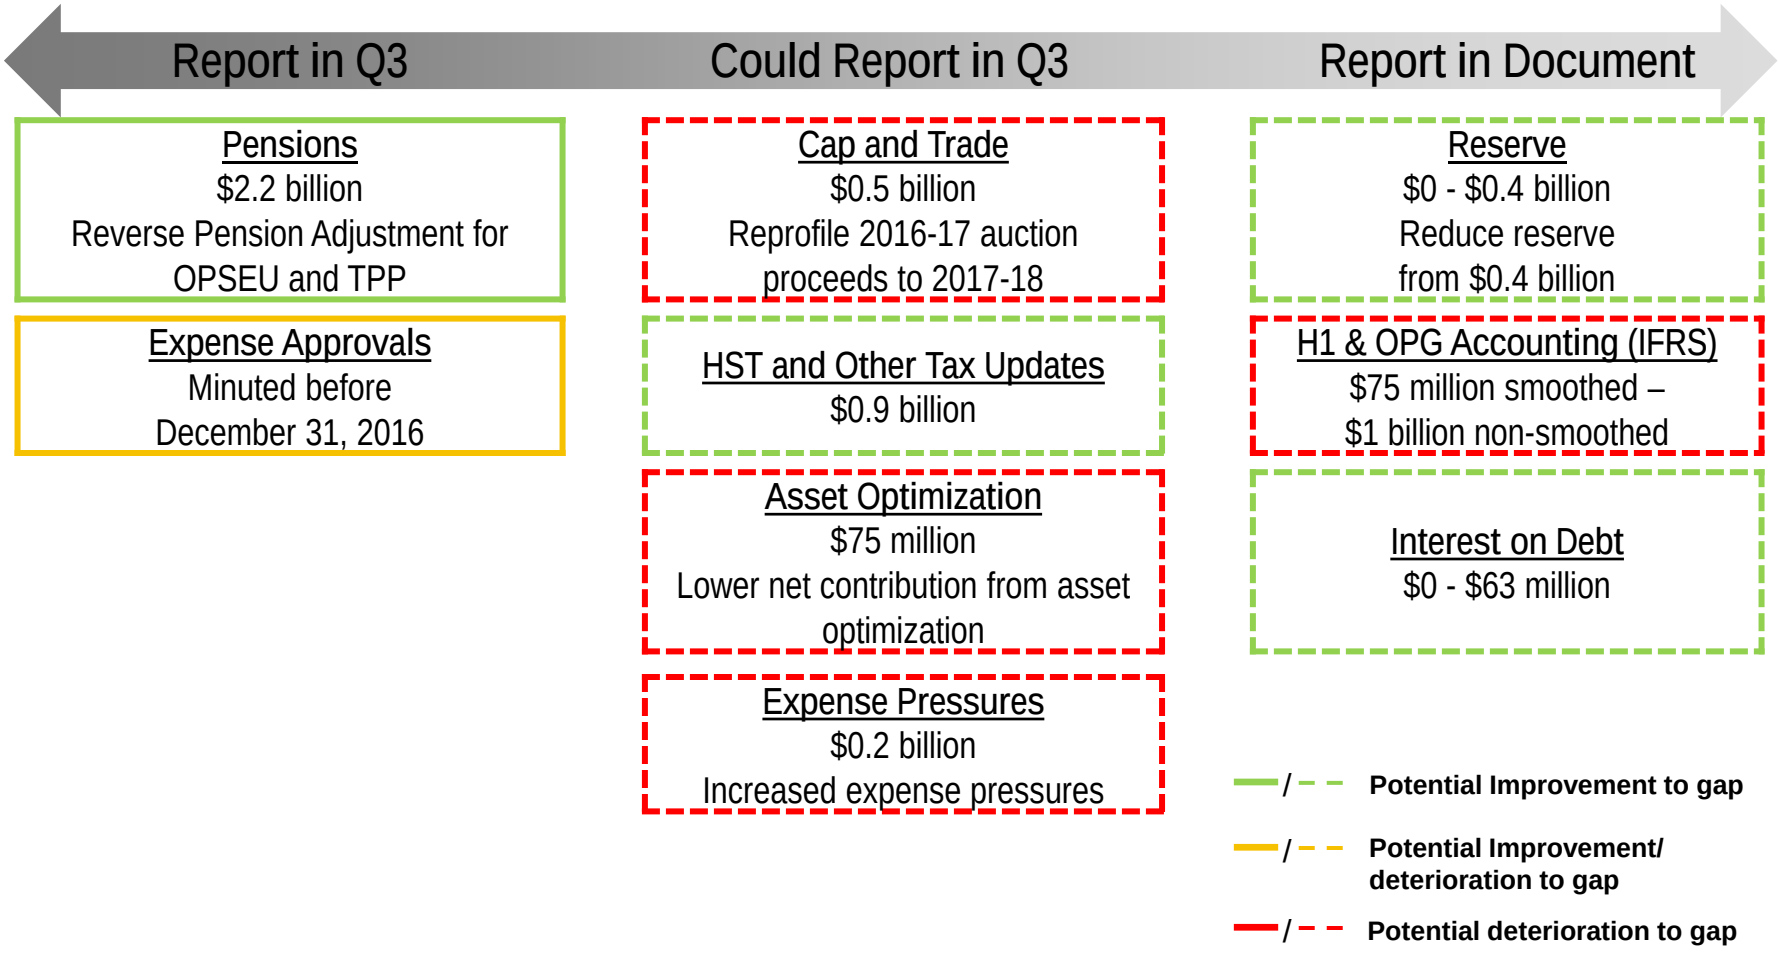
Total expense changes of $2.7 billion, consisting of:

- In-Year Approvals $0.2 billion
- Pension Adjustment of $2.2 billion
- Electricity Cost Relief $0.3 billion
- Support for Hospitals $0.1 billion
- Green Investment Fund $0.3 billion
- New Federal Agreements $0.4 billion
- Contingency Fund Offsets $(0.5) billion
- Interest on Debt Savings $(0.4) billion

Change to the Reserve $(0.6) billion

Treatment of Pension Adjustment

Panel Recommendation



- The Pension Asset Expert Advisory Panel will be releasing its findings in the coming weeks.
  - The report is expected to include advice that the net assets of government jointly sponsored pension plans should be recognized in the Province's financial statements.
  - If taken on, this would result in a positive fiscal impact to the government's outlook in all plan years.

Treatment of Pension Adjustment

- The Third Quarter Finances provides the government with an immediate opportunity to align its fiscal strategy with recommendations of the Panel, and frame the pension narrative in advance of the 2017 Document.
- While the reversal of the pension adjustment to the Ontario Public Service Employees Union Pension Plan (OPSEUPP) and the Ontario Teachers' Pension Plan (OTPP) will result in an improved 2016-17 deficit, expectations may need to be tempered about how much fiscal room is created in the out-years.
- For consistency and comparability, an adjustment to the 2015-16 actuals will be made to reflect the government's decision to adopt the Panel's recommendations. The adjustment to historical results impacts the previously reported net debt and deficit results as well as the net debt to GDP ratio.

Key Building Blocks

- In addition to the reversal of the Pension Adjustment, other key building blocks will either need to be reported in the Third Quarter Finances or be considered for the 2017 Document.

Building Block Considerations

There are a number of considerations for whether key building blocks should be taken on in the Third Quarter Finances or deferred to the 2017 Document.

Could Report in Third Quarter Finances

Cap and Trade

- The Cap and Trade auction notice that was released on January 20 stating that certification will occur on April 3, 2017, and settlement shortly thereafter.
- Stakeholders (e.g. FAO and Auditor General) may question why the government has not updated its fiscal plan to reflect this change.

HST and Other Tax Updates

- HST updates have been received since the FES, and no further significant updates are expected in advance of the 2017 Document. Other tax information is not as certain and could require additional updates in the 2017 Document.
- Stakeholders are aware of the timing of these information flows and may question if updates are not taken on in Third Quarter Finances.

Asset Optimization

- Updating for revised estimated net contribution from Asset Optimization would build some deterioration into the outlook.
- There are changes / uncertainty on the expected potential gains and/or timing for the H1 Brampton (which has not yet closed), and Seaton Lands sales (still pending), and uncertainty on the final accounting net gains reported for H1 shares purchased by OPG, potentially necessitating additional updates in the 2017 Document.

Expense Pressures

- Ministry risks represent potential pressures in the fiscal plan, and are not typically included in Quarterly updates.
- However, it may be prudent to address expense pressures which may materialize before the 2017 Document.

Report in Document

Reserve

It is recommended that the reserve be maintained at its current level of $0.4 billion, in order to mitigate any pressures that may arise before year-end.

H1 & OPG Accounting (IFRS)

Updated information on the potential fiscal impact of the move from U.S. GAAP to IFRS for Hydro One and OPG, is expected at the end of February.

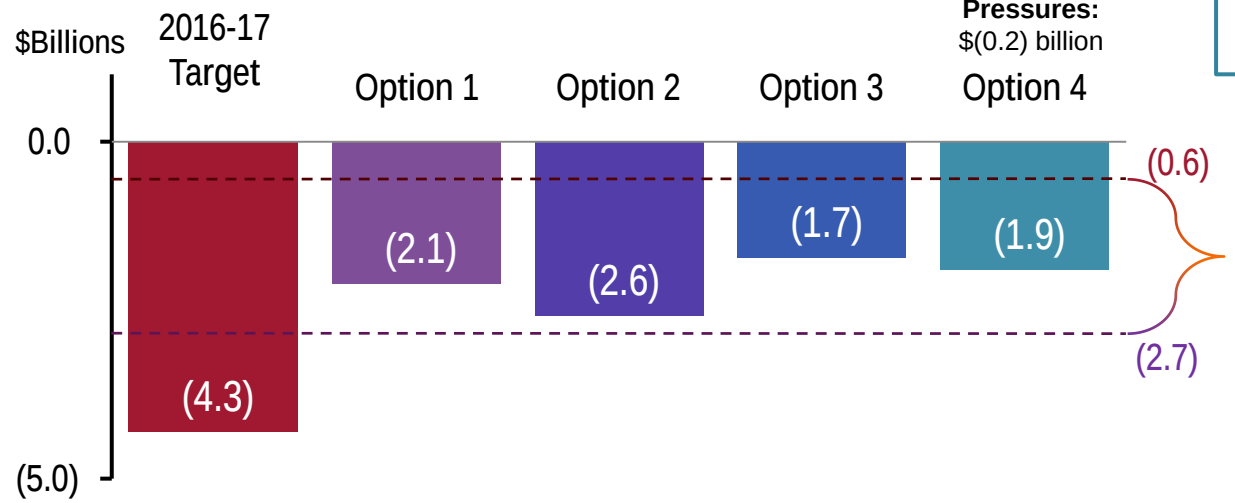
Interest on Debt

Deferring improvements in the interest on debt forecast allows for upside potential in the 2016-17 interim results of the 2017 Document.

Outstanding Information

- **Outstanding Information** could materially impact the **2016-17 outlook** in advance of the 2017 Document.

Revenue
Revisions to economic outlook
Ongoing provincially-administered tax receipts
Non-tax revenue updates from Ministry PRRT submissions
Net income updates from government business enterprises
Revisions to IFRS - US GAAP impacts for OPG and Hydro One

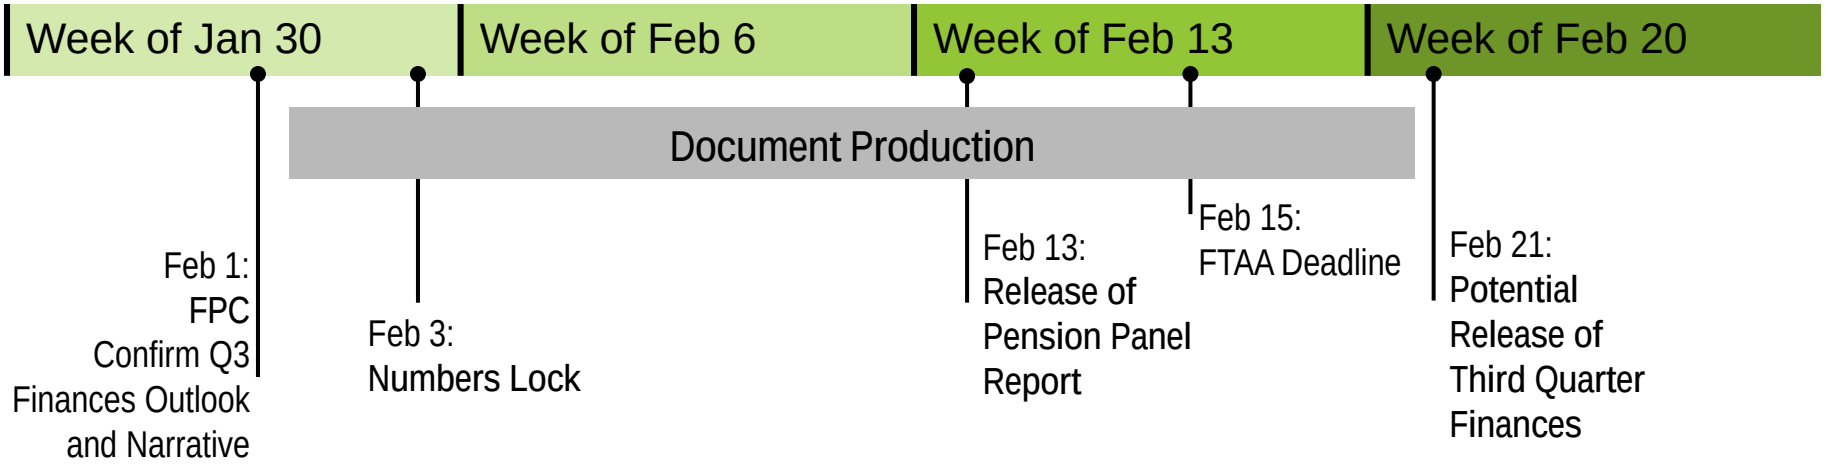


Expense
Ministry Q3/interim submissions
Consolidations and other technical adjustments
Interest on debt forecast updates
Contaminated sites liabilities
Updated pension expense forecast

- Potential improvement to gap
- Potential improvement or deterioration to gap
- Potential deterioration to gap

2016-17 Third Quarter Finances: Deficit Range

Options 1 through 4 build on each other. All options assume the pension reversal and progressively take on additional changes relative to FES .



Option 1	Option 2	Option 3	Recommended Option 4
Pensions: $2.2 billion	**Pensions**: $2.2 billion	**Pensions**: $2.2 billion	**Pensions**: $2.2 billion
	Cap and Trade: $(0.5) billion	**Cap and Trade:** $(0.5) billion	**Cap and Trade:** $(0.5) billion
		Asset Optimization: $(0.1) billion	**Asset Optimization:** $(0.1) billion
		HST & Other Taxes: $0.9 billion	**HST & Other Taxes:** $0.9 billion
			Expense Pressures: $(0.2) billion

Range reflects an early-read of the 2016-17 end of year projection.

- Based on an early-read of end of year projections, the government may want to report an outlook that protects against risks or other changes between now and the Budget.
- Based on current information and taking into account key building blocks, there are a number of options for presenting the Q3 deficit, ranging from $2.6 billion to $1.7 billion. These are on the medium-to-low end of what is being tracked for the interim outlook for the 2017 Document.

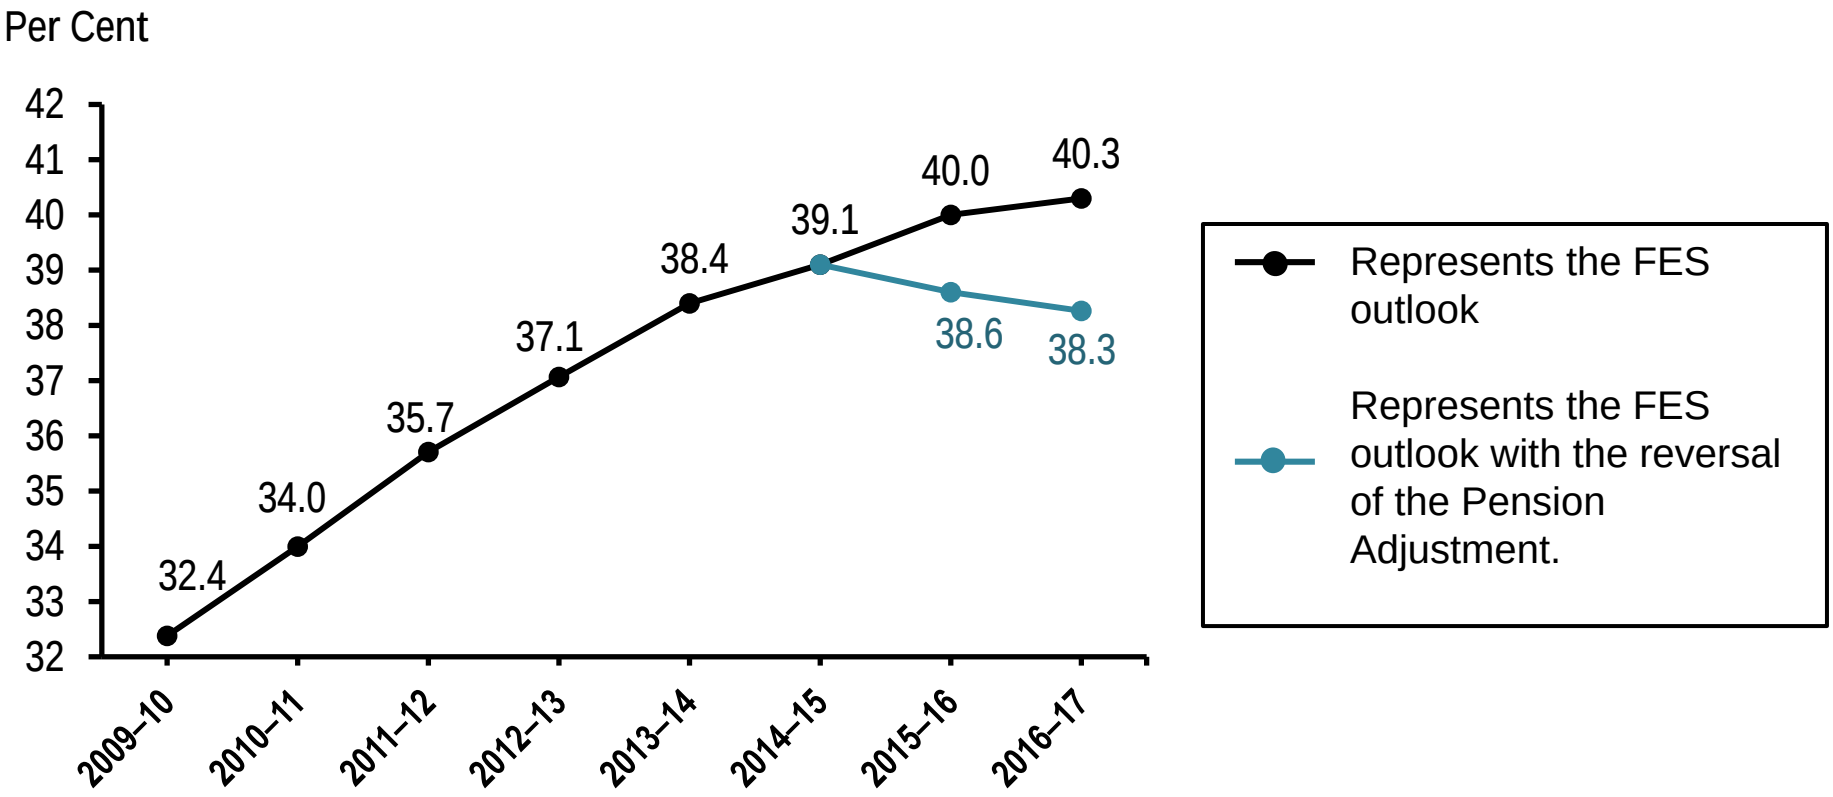
Appendix

End of Year Projection for 2016-17

- An early-read indicates that end of year projections for the 2016-17 deficit could range from $0.6 billion (if there is a significant improvement to the outlook) to $2.7 billion (if there is a moderate improvement to the outlook).

Significant Year-end Improvement

2016 Budget (4.3) billion
+ Pension Adjustment and Tools
2016 FES (4.3) billion
+ Higher Revenue ***1.7 billion***
– Re-profiling Cap and Trade Proceeds ***0.5 billion***
– Lower Net Contribution from Asset Optimization ***75 million***
– Accounting Adjustments: Accounting Framework (IFRS) ***75 million*** Unchanged Contaminated Sites
Unchanged Program Expense
+ Reverse Pension Adjustment ***2.2 billion***
+ Lower Interest on Debt ***0.1 billion***
+ Reduce Reserve ***0.4 billion***
Early-Read (0.6) billion

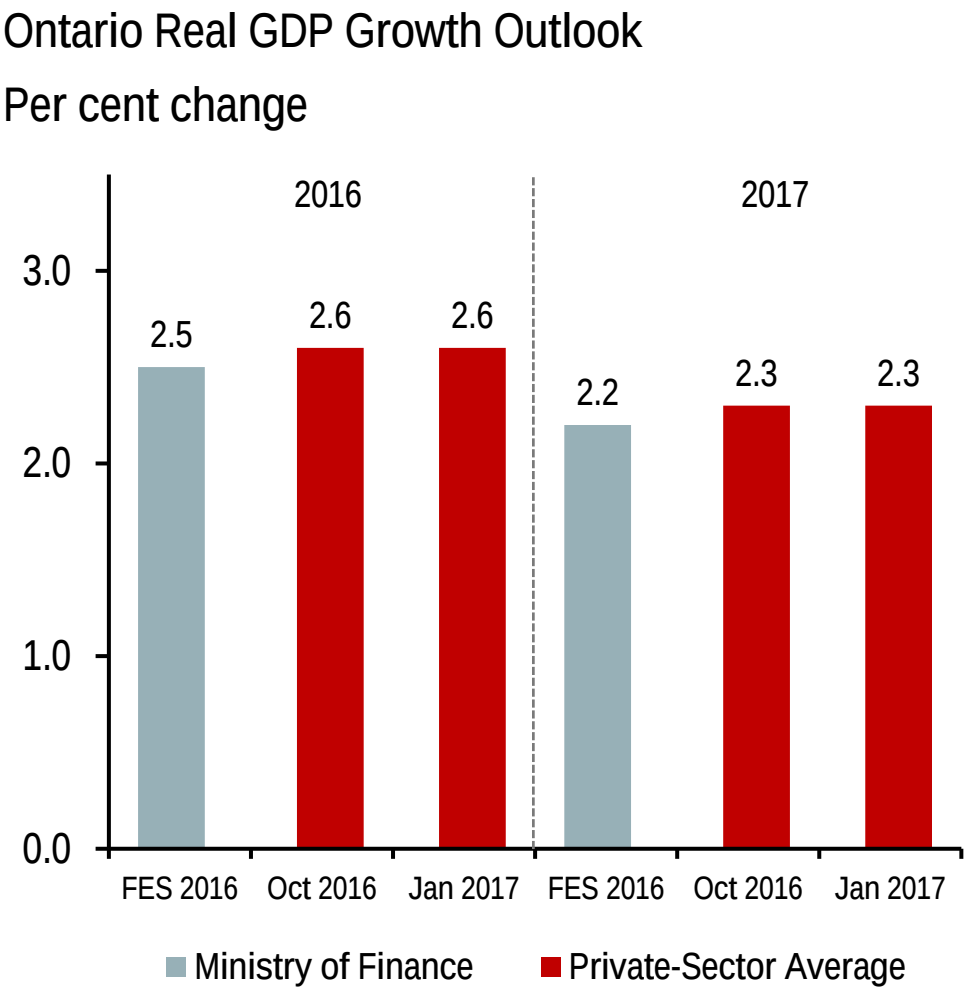


Moderate Year-end Improvement

2016 Budget (4.3) billion
+ Pension Adjustment and Tools
2016 FES (4.3) billion
+ Higher Revenue ***0.7 billion***
– Re-profiling Cap and Trade Proceeds ***0.5 billion***
– Lower Net Contribution from Asset Optimization ***75 million***
– Accounting Adjustments: Accounting Framework (IFRS) ***75 million*** Contaminated Sites ***50 million***
– Higher Program Expense ***1.0 billion***
+ Reverse Pension Adjustment ***2.2 billion***
Unchanged Interest on Debt
+ Reduce Reserve ***0.4 billion***
Early-Read (2.7) billion

Net Debt-to-GDP With Pension Reversal (Option 1)

Narrative: *The impact of the reversal will change the net debt projection for 2016-17 by $12.8 billion. As a result, the government is projecting a net debt-to-GDP ratio of 38.3 per cent, an improvement compared to the 2016 FES projection of 40.3 per cent*



- Reflects the reversal of the Teachers Pension Plan and OPSEU Pension Plan adjustments, including reversal of the $10.7 billion debt adjustment made in the 2015-16 Public Accounts

Recent Economic Developments and Outlook

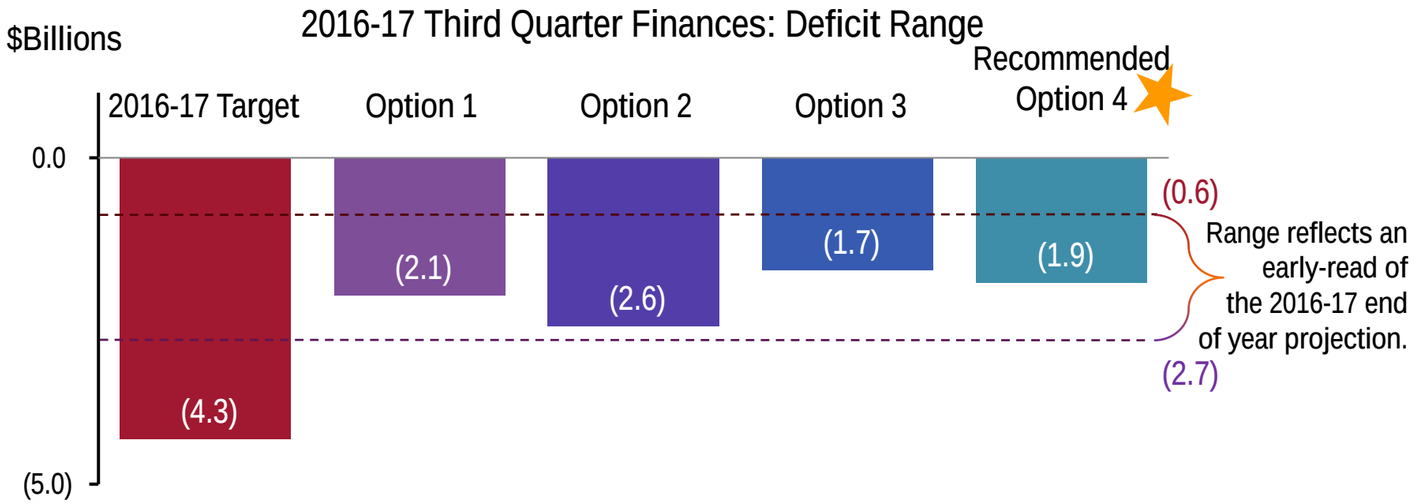
Economic Update

- Real GDP increased by 0.7% in the third quarter (July to September) of 2016, after rising 0.2% in the second quarter.
  - Higher exports and continued growth in household spending were the primary drivers of growth
- Information available so far for the fourth quarter (October to December) of 2016 suggest growth at a more modest pace.
- Ontario's economic growth outlook remains consistent with the 2016 FES forecast

Other Accounting Issues

Other Accounting Issues

- The move from U.S. GAAP to IFRS for the consolidation of Hydro One and OPG results in a fiscal impact starting in 2016-17, of either:



Basis of Consolidation of OPG and H1 (US GAAP vs. IFRS)	Fiscal Impact Relative to FES				
	2016-17	2017-18	2018-19	2019-20	2020-21
Preferred Approach (smoothed IFRS impact)**	**$75M**	**$425M**	**$525M**	**$675M**	**$675M**
High Impact (non-smoothed IFRS impact)**	$1B	$375M	$400M	$400M	$400M

*** OPG's estimate of cumulative impact for 2015-2020 is $2.5B under the preferred approach, and $2.6B under the high impact approach. Note: Amounts are based on estimates currently available, and are subject to updates by OPG. Revised estimates are expected by March 1, 2017.*

Program Expense Changes to Highlight

$ Millions	2016-17	
Program Expense Changes since the 2016 FES		
MOHLTC Pausing planned increases to drug cost contributions*	106.0	*(pressure with no offset)*
MOHLTC Stem Cells and other priorities	95.4	*(pressure with no offset)*
MCYS: First Nations Prevention Services support	5.8	*(federal flow-through)*
MAG/MCSCS: Corrections Reform	10.4	*(offset from contingency fund)*
MCSCS: First Nations Policing Wage Parity	6.5	*(offset from contingency fund)*
Cabinet Office: International Disaster Relief Program – Haiti	0.3	*(offset from contingency fund)*
Contingency fund	(17.2)	
Program Expense Changes since the 2016	**207.2**	

* Alternatively, Social Assistance pressures of similar magnitude could be reported

Options 1 through 4 build on each other. All options assume the pension reversal and progressively take on additional changes.

Option 1	Option 2	Option 3	Recommended Option 4
Pensions: $2.2 billion	**Pensions**: $2.2 billion	**Pensions**: $2.2 billion	**Pensions**: $2.2 billion
	Cap and Trade: $(0.5) billion	**Cap and Trade:** $(0.5) billion	**Cap and Trade:** $(0.5) billion
		HST & Other Taxes: $0.9 billion	**HST & Other Taxes:** $0.9 billion
		Asset Optimization: $(0.1) billion	**Asset Optimization:** $(0.1) billion
			Expense Pressures: $(0.2) billion

Overall Narrative: *The strength of the Ontario economy, together with the government's approach to fiscal management, is supporting strategic investments, while allowing the government to continue to beat its fiscal targets.*

Option 1 — Reversal of Pensions

$ Billions	Budget 2016-17	Change	Outlook 2016-17
Revenue	130.6	*2.1*	132.7
Expense			
Programs	122.1	*0.9*	123.1
Interest on Debt	11.8	*(0.4)*	11.4
Total Expense	133.9	*0.5*	134.4
Surplus/(Deficit) Before Reserve	(3.3)	*1.6*	(1.7)
Reserve	1.0	*(0.6)*	0.4
Surplus/(Deficit)	(4.3)	*2.2*	(2.1)
Net Debt-to-GDP (Per Cent)	39.6	*(1.3)*	38.3

- *The government is projecting a **deficit of $2.1 billion in 2016-17**, an improvement of $2.2 billion since the 2016 Budget.*
- *The Pension Asset Expert Advisory Panel recently released its report on the treatment of pension assets, including a recommendation that jointly-sponsored net pension asset be recognized in the Province's financial statements. The government is adopting this recommendation, which aligns with the treatment originally included in the 2016 Budget plan.*
- *With this reversal, together with stronger revenue and lower interest on debt, the government is projected to beat its fiscal target.*

Option 2 — Option 1 + Cap and Trade

$ Billions	Budget 2016-17	Change	Outlook 2016-17
Revenue	130.6	*1.7*	132.2
Expense			
Programs	122.1	*0.9*	123.1
Interest on Debt	11.8	*(0.4)*	11.4
Total Expense	133.9	*0.5*	134.4
Surplus/(Deficit) Before Reserve	(3.3)	*1.1*	(2.2)
Reserve	1.0	*(0.6)*	0.4
Surplus/(Deficit)	(4.3)	*1.7*	(2.6)
Net Debt-to-GDP (Per Cent)	39.6	*(1.3)*	38.3

- *The government is projecting a **deficit of $2.6 billion in 2016-17**, an improvement of $1.7 billion since the 2016 Budget.*
- *Cap and Trade is a cornerstone of the Province's fight against climate change. Ontario's first Cap and Trade auction is scheduled for March 22, 2017, and establishes Ontario's partnership in the largest carbon market in North America.*
- *Revenues from Ontario's first auction will be certified and settled at the beginning of the 2017-18 fiscal year. As such, the Third Quarter Finances reflect the re-profiling of auction proceeds from 2016-17 to 2017-18.*

Option 3 — Option 2 + HST & Other Taxes + Assets

$ Billions	Budget 2016-17	Change	Outlook 2016-17
Revenue	130.6	*2.5*	133.1
Expense			
Programs	122.1	*0.9*	123.1
Interest on Debt	11.8	*(0.4)*	11.4
Total Expense	133.9	*0.5*	134.4
Surplus/(Deficit) Before Reserve	(3.3)	*2.0*	(1.3)
Reserve	1.0	*(0.6)*	0.4
Surplus/(Deficit)	(4.3)	*2.6*	(1.7)
Net Debt-to-GDP (Per Cent)	39.6	*(1.4)*	38.2

- *The government is projecting a **deficit of $1.7 billion in 2016-17**, an improvement of $2.6 billion since the 2016 Budget.*
- *Ontario's economy continues to grow in an uncertain global environment. Stronger 2015 income tax assessment results and the continued strength of Ontario's economy and housing market resulted in higher than forecasted taxation revenues.*

Option 4 — Option 3 + Expense Pressures

$ Billions	Budget 2016-17	Change	Outlook 2016-17
Revenue	130.6	*2.5*	133.1
Expense			
Programs	122.1	*1.1*	123.3
Interest on Debt	11.8	*(0.4)*	11.4
Total Expense	133.9	*0.7*	134.6
Surplus/(Deficit) Before Reserve	(3.3)	*1.8*	(1.5)
Reserve	1.0	*(0.6)*	0.4
Surplus/(Deficit)	(4.3)	*2.4*	(1.9)
Net Debt-to-GDP (Per Cent)	39.6	*(1.3)*	38.3

- *The government is projecting a **deficit of $1.9 billion in 2016-17**, an improvement of $2.4 billion since the 2016 Budget.*
- *The government's fiscally sound approach to managing the Province's finances will help grow the economy, create jobs and ensure the sustainability of programs and services that help Ontarians in their everyday lives.*
- *This includes supporting strategic investments, such as funding for healthcare.*

KEY PUBLIC REPORTING AND PLANNING DATES

The following provides an outline of upcoming planning and publication dates:

- **February 8**: Long-Term Report Release
- **February 13**: Pension Panel Report Release
- **February 13**: Letter to the Clerk for Q3 Finances
- **February 15**: Electricity Relief Announcement (TBD)
- **February 21**: Q3 Finances Release
- **April 11**: Tentative Document Release

MINISTERS & PREMIER MEETING

Date: February 9, 2017 | Time: 3:30PM – 5:00PM
Location: Room 275, Cabinet Room, Main Legislative Building

Proposed Agenda

1. Proposed Agenda for Cabinet Retreat (5 mins)

2. Update on Fiscal Plan for Budget 2017 (20 mins)
    - Challenges
    - Fiscal Anchors
    - Tools/levers

3. Budget Themes/Storyboard and Proposed Investments and Sector Spending (45 mins)

4. Update on Pension Accounting (10 mins)

5. Update on 2016-17 Fiscal Position including Q3 Finances (5 mins)

6. Next Steps in Preparation for Cabinet Retreat (5 mins)

Hi Everyone – sending along the most current draft of the deck we are planning to take forward to FPC tomorrow.

Comments welcome – if you could let me know asap if you have them. Heads up that timing of release of the Q3 may be even sooner as noted in this deck

Subject: RE: Q3 update
Importance: High

Hi All,

Following up on my email from last week, we received relatively recent direction regarding the release of Ontario's Third Quarter Finances – the tentative plan is to publish Q3 finances ahead of the February 15 deadline. We are tentatively tracking a release date of Monday February 13.

As you can imagine, timelines are very compressed, and includes a possible trip to FPC this week. In order to meet this week's deadlines, while also preparing for the release of the actual publication, we're asking for input from you in stages:

EOD Today:
We have prepared the draft of a deck, which we are working towards tabling at this Wednesday's FPC (TBC). The deck lays out the key 2016-17 building blocks that could be updated as part of the Q3 publication. It would help if we could get the following from you folks by the end of today:
16-17 post-FES expense update: We have included placeholder for an expense slide. The intention is for the slide to provide an updated list of initiatives that were not included in the FES expense outlook.
Recommended expense update/signature initiatives: We may build in options for what the outlook could look like – it would help if you could provide a recommendation for the expense changes that should be taken on/profiled.
16-17 c-fund update: We have included a c-fund slide that was used in the Q1 finances briefing materials (current PW). We would like to include an updated version of this slide in the FPC deck (appendix). It would help to have this out to 19-20.
Pension Narrative: Nadine – I'll connect on the pension adjustment and some high level bullets that we could use.

Noon Friday January 27:

Template: I've attached a draft of 3q finances that is based heavily off of the 2016 First Quarter Finances. We've highlighted in green the sections that we would like you to update. While I'm not 100% certain this structure will be exactly what the Q3 document will look like, I think it's safe to say that the substantive content we'll have to cover is captured here. There will be some highlighted content that is *not possible* to update for Friday, however there will be a formal distribution process where additional information can be incorporated.

Thanks everyone, and please feel free to send your input directly to Liane and Emma. Im hoping to be able to share a draft deck with you late this evening.

Subject: Q3 heads up

Hi Everyone – Wanted to send a quick message that we are hearing there is a desire to proceed with the release of a Q3 update around the time we are expecting the Pension Panel panel to release their report. We are going to assume mid feb prior to the house coming back for our planning purposes.

My team is going to work together to put together a list of things we need to start working on/think about along with a calendar to determine and get direction on an approach to coincide with this timeframe.

More details to follow tomorrow.

Thanks.

Fiscal Strategy:
Ontario's Third Quarter Finances

Office of the Budget
MINISTRY of FINANCE

Presentation to FPC on January 25, 2017

Preliminary Draft

Draft – January 24, 2017 12:00 PM

Context

Under the *Fiscal Transparency and Accountability Act, 2004* (FTAA), the Third Quarter Finances is required to:

- Be released on or before February 15th (publication can be delayed if a letter is sent to the Clerk).
- Include updated information about the major components of revenue and expense **for the current fiscal year only.**

It also provides an **opportunity for the government to reiterate key fiscal messages** from the Budget or pre-condition for future updates.

A Third Quarter Finances has only been published once in the last eight years (in 2012-13).

- The infrequent publication provides the government with some flexibility on how to present its fiscal update (i.e., update could be presented relative to the 2016 Budget, 2016 FES or both, as was done in 2012-13).

Key stakeholders like the Financial Accountability Officer and rating agencies will assess the fiscal outlook and narrative.

- Both have acknowledged that balance is within reach in 2017-18, but have also highlighted key risks to the 2016 Budget fiscal plan.

Purpose and Key Decisions

To **confirm the approach to publishing Ontario's Third Quarter Finances, including:**

- The core updates to **the fiscal outlook and supporting revenue and expense details** to be published, as well as the **fiscal narrative and messaging**.
- Positioning the content and the rollout of Third Quarter Finances relative to the release of the Pension Panel's Report and recommendations.
- **Confirm release date** and determine if a letter to the Clerk is required.

Evolution of the 2016-17 Outlook

- The Third Quarter Finances could present a fiscal update relative to the 2016 Budget or FES.
- The 2016 FES highlighted Ontario's stronger economy and the government's approach to fiscal management, which supported strategic investments in new child care spaces, hospitals and electricity cost relief for consumers.
- To support these investments while accommodating the Pension Adjustment, the government took on a number of fiscal tools in order to meet its targets.

2016 Budget Fiscal Plan $ Billions	2016-17	Change to FES 2016-17	FES Outlook 2016-17
Revenue	130.6	*2.1*	132.7
Expense			
Programs	122.1	*3.1*	125.3
Interest on Debt	11.8	*(0.4)*	11.4
Total Expense	133.9	*2.7*	136.6
Surplus/(Deficit) Before Reserve	(3.3)	*(0.6)*	(3.9)
Reserve	1.0	*(0.6)*	0.4
Surplus/(Deficit)	(4.3)	*(0.0)*	(4.3)

Total revenue changes of $2.1 billion, consisting of:

- Base Forecast Change $1.0 billion
- Reversal of Homecare $(0.2) billion
- Federal Agreements $0.4 billion
- Higher assumed revenue to accommodate pensions $0.9 billion

Total expense changes of $2.7 billion, consisting of:

- In-Year Approvals $0.2 billion
- Pension Adjustment of $2.2 billion
- Electricity Cost Relief $0.3 billion
- Support for Hospitals $0.1 billion
- Green Investment Fund $0.3 billion
- New Federal Agreements $0.4 billion
- Contingency Fund Offsets $(0.5) billion
- Interest on Debt Savings $(0.4) billion

Change to the Reserve $(0.6) billion

End of Year Projection for 2016-17

- An early-read indicates that end of year projections for the 2016-17 deficit could range from $0.6 billion (if there is a significant improvement to the outlook) to $2.7 billion (if there is a moderate improvement to the outlook) by year end.

Significant Year-end Improvement

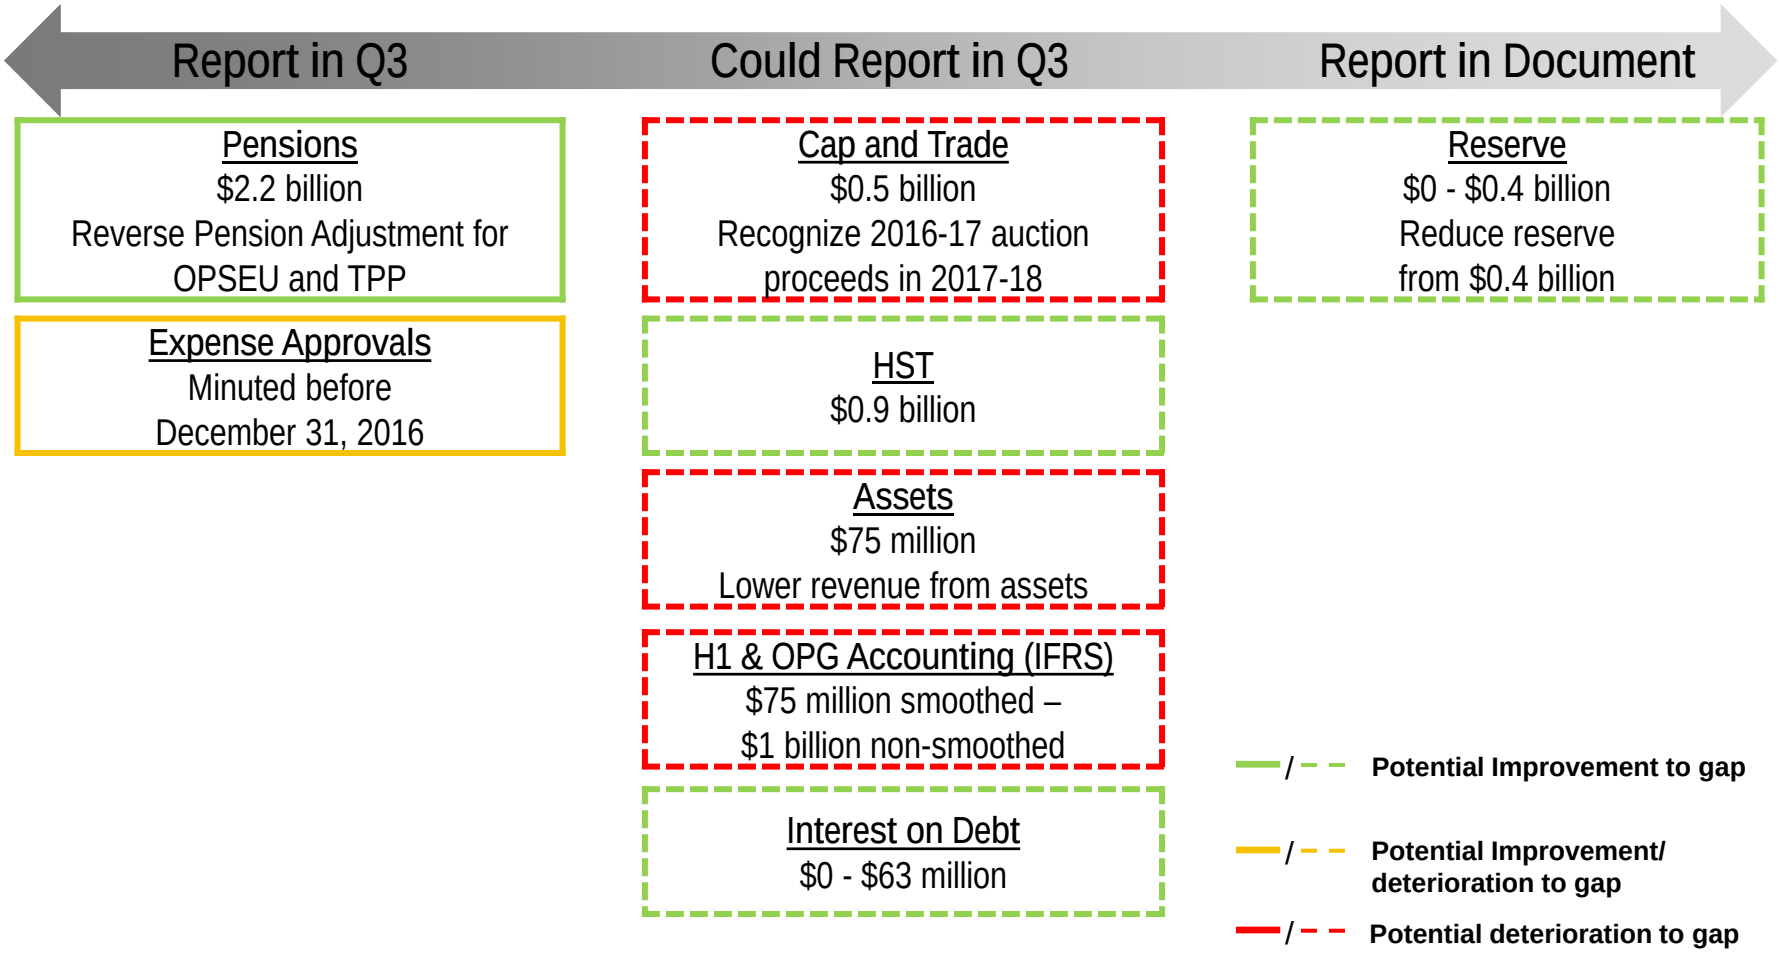
2016 Budget (4.3) billion
+ Pension Adjustment and Tools
2016 FES (4.3) billion
+ Higher Revenue ***1.7 billion***
– Re-profiling Cap and Trade Proceeds ***0.5 billion***
– Lower Revenue from Assets ***75 million***
– Accounting Adjustments: Accounting Framework (IFRS) ***75 million*** Unchanged Contaminated Sites
Unchanged Program Expense
+ Reverse Pension Adjustment ***2.2 billion***
+ Lower Interest on Debt ***0.1 billion***
+ Reduce Reserve ***0.4 billion***
Early-Read (0.6) billion

Moderate Year-end Improvement

2016 Budget (4.3) billion
+ Pension Adjustment and Tools
2016 FES (4.3) billion
+ Higher Revenue ***0.7 billion***
– Re-profiling Cap and Trade Proceeds ***0.5 billion***
– Lower Revenue from Assets ***75 million***
– Accounting Adjustments: Accounting Framework (IFRS) ***75 million*** Contaminated Sites ***50 million***
Higher Program Expense ***1.0 billion***
+ Reverse Pension Adjustment ***2.2 billion***
+ Unchanged Interest on Debt
+ Reduce Reserve ***0.4 billion***
Early-Read (2.7) billion

Treatment of Pension Adjustment

Panel Recommendation



- The Pension Asset Expert Advisory Panel will be releasing its findings in the coming weeks.
  - The report is expected to include advice that the net pension asset be recognized in the Province's financial statements.
  - If taken on, would result in a positive fiscal impact in all years.

Treatment of Pension Adjustment

- The Third Quarter Finances provides the government with an immediate opportunity to align its fiscal strategy with recommendations of the panel, and frame the pension narrative in advance of the 2017 Document.
- While the reversal will result in an improved 2016-17 deficit, expectations may need to be tempered about how much fiscal room is created in the out-years due to growing pressures.

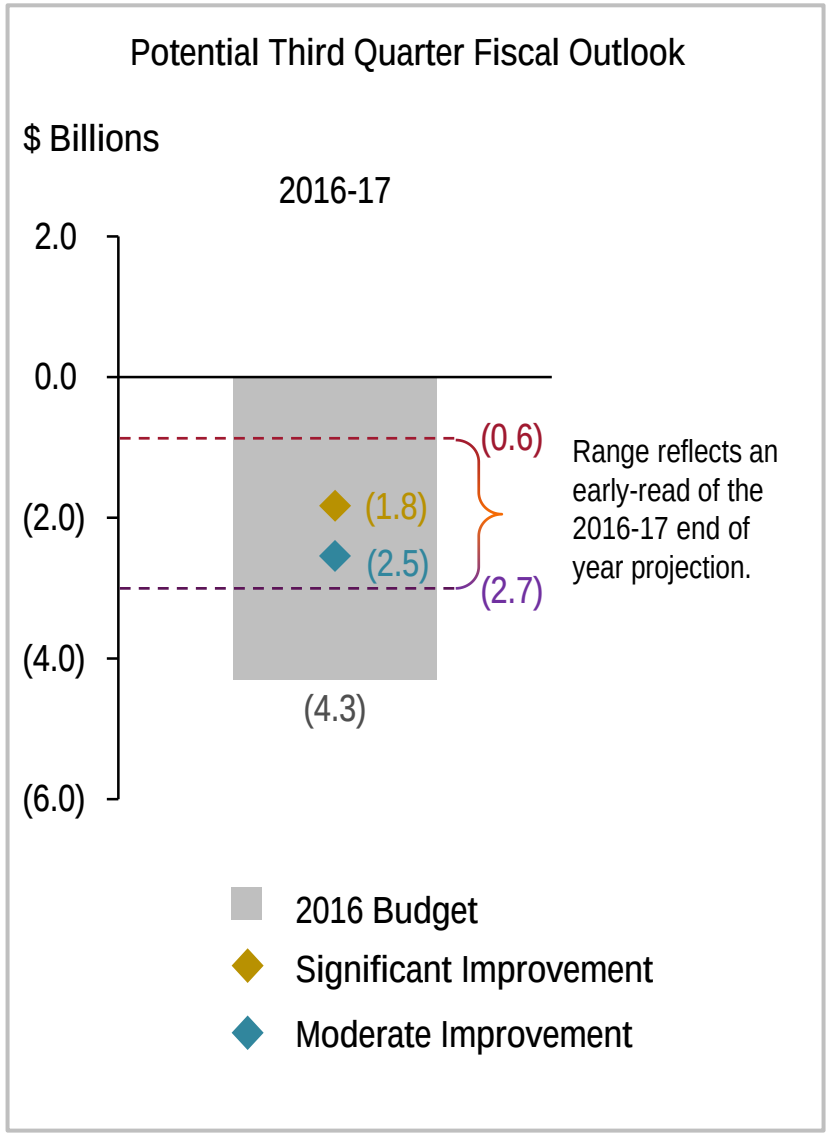
Key Building Blocks

- In addition to the reversal of the Pension Adjustment, other key building blocks will either need to be reported in the Third Quarter Finances or be considered for the 2017 Document.

Outstanding Information

- **Outstanding Information** could materially impact the **2016-17 outlook** in advance of the 2017 Document.

Revenue
Revisions to economic outlook
Ongoing provincially-administered tax receipts
Non-tax revenue updates from Ministry PRRT submissions
Net income updates from government business enterprises



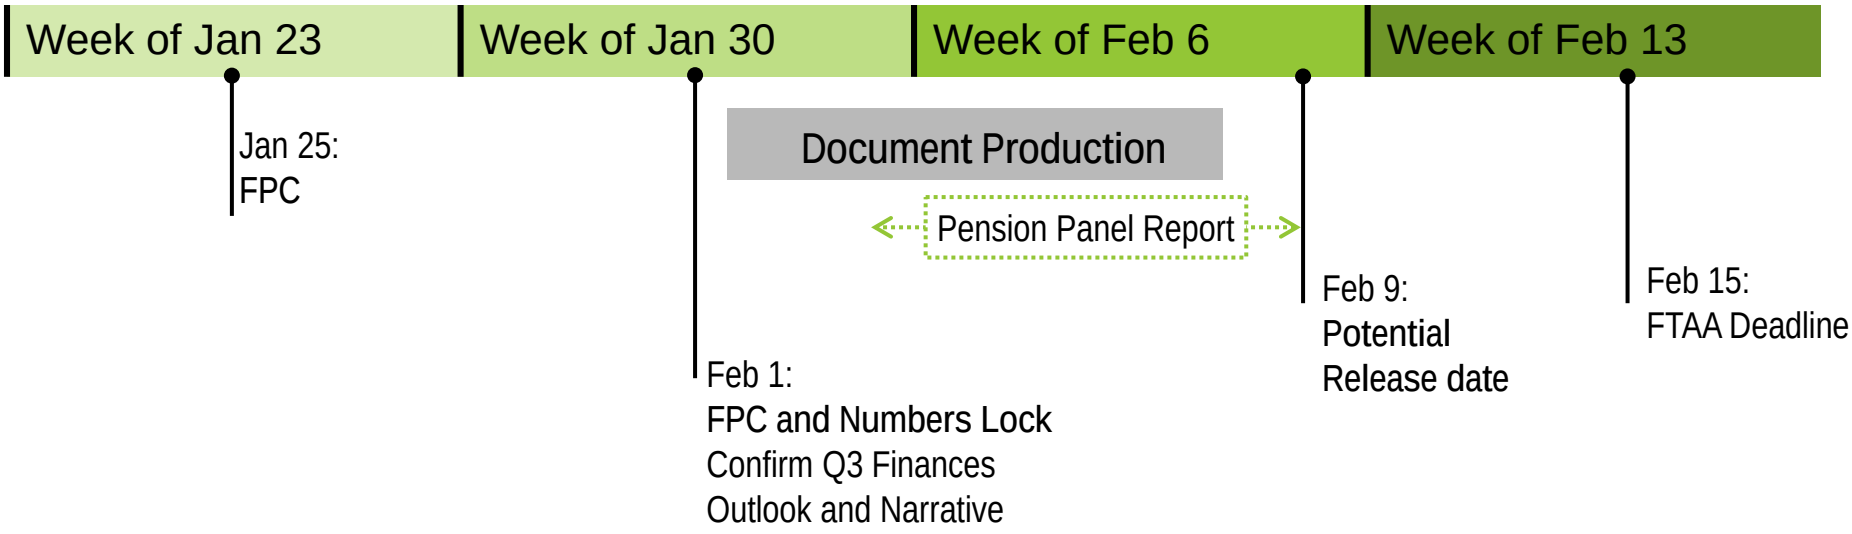
Expense
Ministry Q3/interim submissions
Consolidations and other technical adjustments
Interest on debt forecast updates
Contaminated sites liabilities
Update pension expense forecast

- Potential improvement to gap
- Potential improvement or deterioration to gap
- Potential deterioration to gap

Principles for the 2016-17 Outlook

- Based on an early-read of end of year projections, the government may want to report an outlook that protects against risks or other changes that could adversely impact the Province's fiscal performance between now and the Budget, and ultimately, Public Accounts.
- For example, based on current information and taking into account key building blocks, Q3 could present a deficit ranging from $2.5 billion (moderate improvement) to $1.8 billion (significant improvement).

Moderate Improvement	Significant Improvement
Takes on the following key building blocks: • **Pensions** $2.2 billion • **Cap and Trade** $(0.5) billion	Takes on the following key building blocks: • **Pensions** $2.2 billion • **Cap and Trade** $(0.5) billion • **Interest on Debt** $0.1 billion • **HST** $0.9 billion • **Assets** $(0.1) billion • **H1 & OPG Accounting (IFRS)** $(0.1) billion

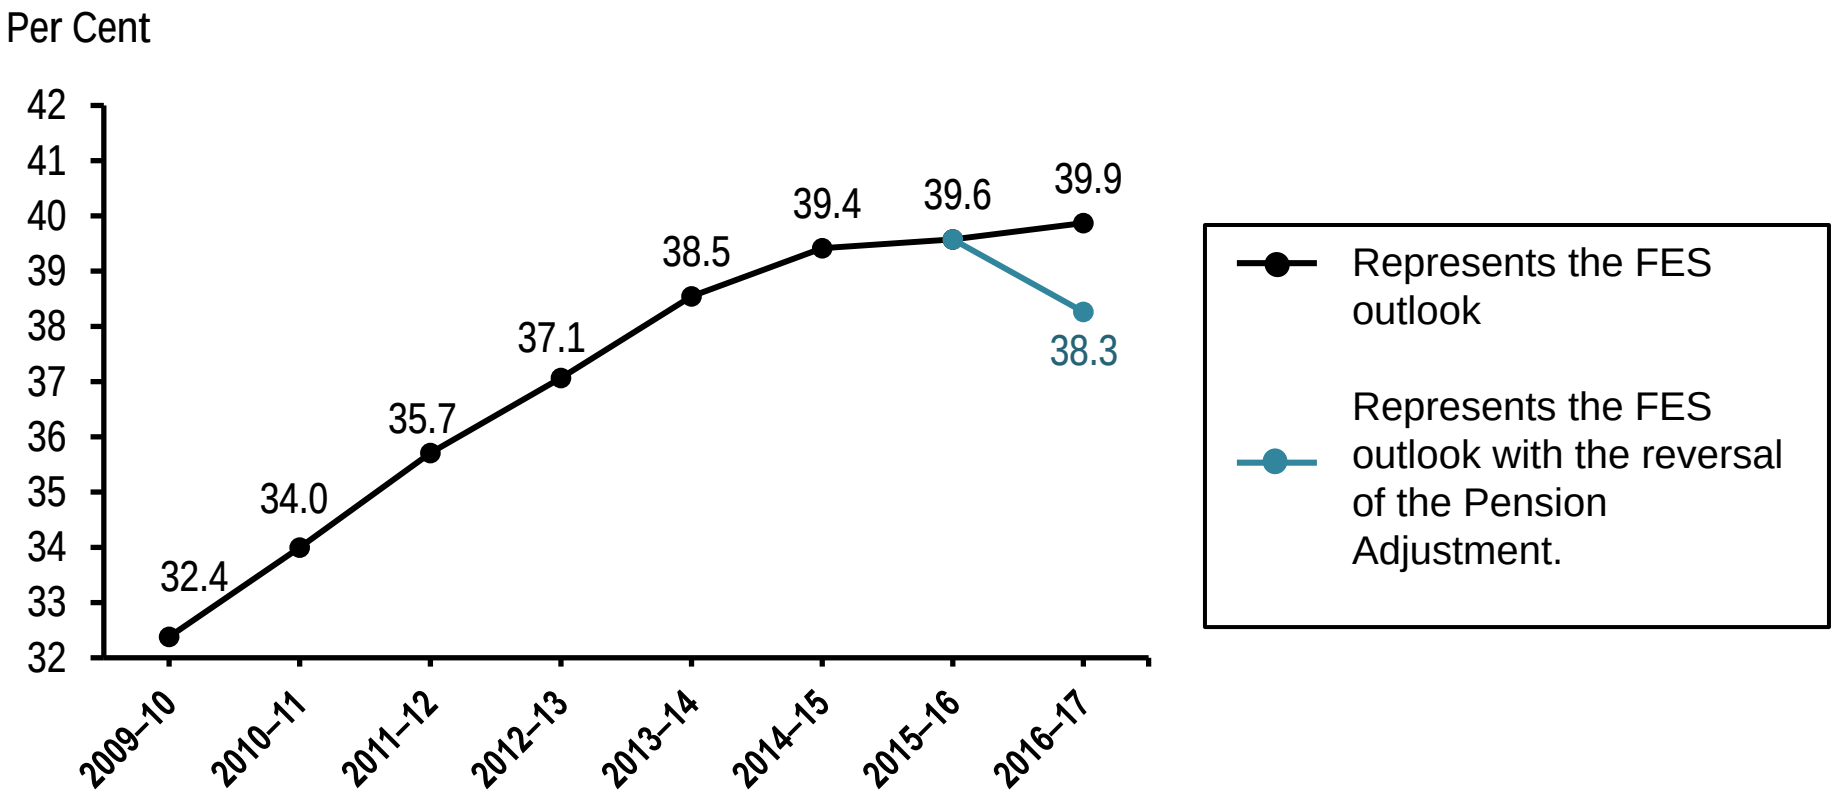


Fiscal Narrative to Support Pension Reversal

The narrative could build on the 2016 FES, focusing on the investments the government is making in priority areas while remaining committed to balance the budget in 2017-18. This narrative would be further supported by highlighting the reversal of the pension adjustment, and could make room for announcements leading up to the release of the 2017 Document.

- *The government is projecting a **deficit of $X.X billion in 2016-17**, an improvement of $X.X billion since the 2016 Ontario Economic Outlook and Fiscal Review forecast.*
- *The Pension Asset Expert Advisory Panel recently released its report on the treatment of pension assets, including a recommendation that the net pension asset be recognized in the Province's financial statements.*
- ***The government is adopting the Panel's recommendation** by reversing the Pension Adjustment included in the 2016 Ontario Economic Outlook and Fiscal Review outlook. The reversal of the Pension Adjustment will result in a significant improvement in the 2016-17 outlook and could support additional investments in 2017-18 and beyond.*
- *The government is projected to beat its deficit target for the **eighth year in a row**.*

Next Steps



Decision on Third Quarter Finances fiscal strategy:

1. Seeking decision on the fiscal outlook and narrative to publish in the Third Quarter Finances.
2. Confirm **release date** (currently tracking to February 9th) and determine if a letter to the Clerk is required.
3. Communication and rollout approach with regards to the timing of the release of the Pension Panel's report and recommendations.

Appendix

Net Debt-to-GDP With Pension Reversal

- Reflects the reversal of the Teachers Pension Plan and OPSEU Pension Plan adjustments, including reversal of the $10.5 billion debt adjustment made in the 2015-16 Public Accounts

Other Accounting Issues

Other Accounting Issues

- The move from U.S. GAAP to IFRS for the consolidation of Hydro One and OPG results in a fiscal impact starting in 2016-17, of either:

Basis of Consolidation of OPG and H1 (US GAAP vs. IFRS)	Fiscal Impact Relative to FES				
	2016-17	2017-18	2018-19	2019-20	2020-21
Preferred Approach (smoothed IFRS impact)**	**$75M**	**$425M**	**$525M**	**$675M**	**$675M**
High Impact (non-smoothed IFRS impact)**	$1B	$375M	$400M	$400M	$400M

*** OPG's estimate of cumulative impact for 2015-2020 is $2.5B under the preferred approach, and $2.6B under the high impact approach.*

Thanks John - we used numbers provided to us last week for a few scenarios we pulled together, but you're right - that top line should definitely correspond to the FES numbers, so we'll make that change. On the outlook with pensions reversed - the 38.3 we have is from the attached Jan 16th spreadsheet (scenario 2), so it incorporates a more up to date GDP forecast - which I think is why our number are slightly different.

Happy to defer to you folks on whether we go with the 38.3 or the 38.9.

Liane

Selena,
Please find attached a pdf of slide 13 with our edits. Budget password in effect.

Not sure why we are off considerably as the graph notes it's based on FES numbers. Can you share the data you used for the slide?

Thanks.

Hi Selena

I have to be at Bud Sec shortly, however, John Psinas will provide you with the revised net debt to GDP ratio from the reversal of the pension adjustment. For 16-17 we will use the FES outlook in the ratio and update same when you land on the projected deficit for the current fiscal.

I would also suggest that slide 10 include a line indicating that the reversal of the pension adjustment reduces the 2015-16 accumulated deficit and net debt by over $10.6 billion.

Thanks

Ken k

Ken - Im attaching the current version of the Q3 deck -if you could take a look through. In particular - can you have a look at slide 13 and provide a few bullets on the impact of the reversal of the pensions on net debt to GDP?

Happy to discuss. Let me know if you have any other comments as well - happy to take those too. If you could get back to me as soon as possible, that would be much appreciated. Thanks.

Deck has new document psswrd.

Ok -. Thanks for confirming. Tim said that may be true and we may need to have a technical Q and A on this as part of Q3 comms prep. So for now we are going to leave it as a decision point about whether to take on the fes outlook or show a more up to date forecast and we may get direction from the dm today or fpc tomorrow. I hope to be able to share a draft deck with you shortly. Thanks for your help.

Hi Selena

The reversal of the pension adjustment does not impact IOD since it's a non-cash adjustment, i.e., it decreases expenses on a PSAB basis not on a cash basis hence the total borrowing does not change which means that IOD also remains unchanged.

Thanks

Ken K

Hi Selena

Couple of quick question, the 16-17 IOD forecast was revised downwards from the FES number and provided to Tim. Do you want us to use this revised version or stick with the FES forecast with the revision being presented in the Interim section of the 2017 Budget.

Let me know, and in order to complete the Financing Table we need to know the 16-17 deficit that you will be projecting in the Q3, will be the same as the FES?

Thanks

Ken k

Subject: RE: net debt to GDP for 3 scenarios
Date: Monday, January 16, 2017 13:30:31
Attachment 1: Net Debt - 2016-17 -FES- scenario requests (Jan 16 2017) (002).xlsx

---

Attached are the three scenarios requested. Please note that the most recent GDP that we received was used. This GDP was based on OEP's forecast on January 12th.

Thanks.

Subject: RE: net debt to GDP for 3 scenarios

Hi George, ideally we'd have them by 12:30 to incorporate for a 3pm briefing.

One thing I forgot to mention – scenarios 2&3 reverse the pension adjustment for 2 of the 4 pensions. I'm guessing this would also impact the debt levels, as you would be backing out the debt taken on in 2015 -16 Public Accounts as part of the pension adjustment?

Liane

Subject: RE: net debt to GDP for 3 scenarios

Approximately when do you need this by in order to incorporate it into the Minister's briefing?

Subject: net debt to GDP for 3 scenarios

Hello George,

There was a SOC briefing this morning where multiple deficit scenarios out to 20-21 were discussed (attached). The SOC asked what net-debt to GDP would look like under each scenario; could I ask you folks to pull these number together for us? We are on a tight timeline as there is a Minister's briefing schedule for later today that we would like to be able to incorporate this information into. Please let me know if this is too quick of a turnaround and I will let people here know we may be unable to make that timeline (there is another minister's briefing tomorrow morning that we can include the table in).

We would like to represent the three scenarios in the usual chart (p.100 of FES) but with the black line forking off into the three different scenarios (no need for the accumulated deficit to GDP line (red line)). If you are able to pull this together, it would be helpful, but we can also do the chart here once we have the numbers.

Thanks very much and please let me know if you need anything else from us/ have any questions.

Liane

Selena,

Please find attached a pdf of slide 13 with our edits. Budget password in effect.

Not sure why we are off considerably as the graph notes it's based on FES numbers. Can you share the data you used for the slide?

Thanks.

Hi Selena

I have to be at Bud Sec shortly, however, John Psinas will provide you with the revised net debt to GDP ratio from the reversal of the pension adjustment. For 16-17 we will use the FES outlook in the ratio and update same when you land on the projected deficit for the current fiscal.

I would also suggest that slide 10 include a line indicating that the reversal of the pension adjustment reduces the 2015-16 accumulated deficit and net debt by over $10.6 billion.

Thanks

Ken k

Ken - Im attaching the current version of the Q3 deck -if you could take a look through. In particular - can you have a look at slide 13 and provide a few bullets on the impact of the reversal of the pensions on net debt to GDP?

Happy to discuss. Let me know if you have any other comments as well - happy to take those too. If you could get back to me as soon as possible, that would be much appreciated. Thanks.

Deck has new document psswrd.

NP, I believe we do have Q&A in the FES package that addresses this very issue, so happy to flip it to you later on, do note that Gadi released an additional $63M (in relation to the IOD number in the FES) in IOD savings for 16-17 to Tim a couple of weeks ago.

Thanks

Ken k

Ok -. Thanks for confirming. Tim said that may be true and we may need to have a technical Q and A on this as part of Q3 comms prep. So for now we are going to leave it as a decision point about whether to take on the fes outlook or show a more up to date forecast and we may get direction from the dm today or fpc tomorrow. I hope to be able to share a draft deck with you shortly. Thanks for your help.

Hi Selena

The reversal of the pension adjustment does not impact IOD since it’s a non-cash adjustment, i.e., it decreases expenses on a PSAB basis not on a cash basis hence the total borrowing does not change which means that IOD also remains unchanged.

Thanks

Ken K

Hey ken - one thing to consider is if the pension adjustment is being reversed there may be a desire to show progress on IOD - assuming it impacts that. Thoughts?

Thanks agreed, keeping the FES forecast makes sense since we don't want material changes before the interim in the Document, but pls do confirm.

Ken k

Hi ken - thanks. Not sure yet on whether we will keep the fes forecast or update for the latest but I'll speak to tim about it. Tim mentioned earlier that we shld retain the fes forecast but I just want to confirm with him.

Thanks again.

Hi Selena

Couple of quick question, the 16-17 IOD forecast was revised downwards from the FES number and provided to Tim. Do you want us to use this revised version or stick with the FES forecast with the revision being presented in the Interim section of the 2017 Budget.

Let me know, and in order to complete the Financing Table we need to know the 16-17 deficit that you will be projecting in the Q3, will be the same as the FES?

Thanks

Ken k

Subject: RE: Q3 update
Importance: High

Hi All,

Following up on my email from last week, we received relatively recent direction regarding the release of Ontario's Third Quarter Finances – the tentative plan is to publish Q3 finances ahead of the February 15 deadline. We are tentatively tracking a release date of Monday February 13.

As you can imagine, timelines are very compressed, and includes a possible trip to FPC this week. In order to meet this week's deadlines, while also preparing for the release of the actual publication, we're asking for input from you in stages:

EOD Today:
We have prepared the draft of a deck, which we are working towards tabling at this Wednesday's FPC (TBC). The deck lays out the key 2016-17 building blocks that could be updated as part of the Q3 publication. It would help if we could get the following from you folks by the end of today:
16-17 post-FES expense update: We have included placeholder for an expense slide. The intention is for the slide to provide an updated list of initiatives that were not included in the FES expense outlook.
Recommended expense update/signature initiatives: We may build in options for what the outlook could look like – it would help if you could provide a recommendation for the expense changes that should be taken on/profiled.
16-17 c-fund update: We have included a c-fund slide that was used in the Q1 finances briefing materials (current PW). We would like to include an updated version of this slide in the FPC deck (appendix). It would help to have this out to 19-20.
Pension Narrative: Nadine – I'll connect on the pension adjustment and some high level bullets that we could use.

Noon Friday January 27:
Template: I've attached a draft of 3q finances that is based heavily off of the 2016 First Quarter Finances. We've highlighted in green the sections that we would like you to update. While I'm not 100% certain this structure will be exactly what the Q3 document will look like, I think it's safe to say that the substantive content we'll have to cover is captured here. There will be some highlighted content that is not possible to update for Friday, however there will be a formal distribution process where additional information can be incorporated.

Thanks everyone, and please feel free to send your input directly to Liane and Emma. Im hoping to be able to share a draft deck with you late this evening.

Subject: Q3 heads up

Hi Everyone – Wanted to send a quick message that we are hearing there is a desire to proceed with the release of a Q3 update around the time we are expecting the Pension Panel panel to release their report. We are going to assume mid feb prior to the house coming back for our planning purposes.

My team is going to work together to put together a list of things we need to start working on/think about along with a calendar to determine and get direction on an approach to coincide with this timeframe.

More details to follow tomorrow.

Thanks.

Hi Selena

I have to be at Bud Sec shortly, however, John Psinas will provide you with the revised net debt to GDP ratio from the reversal of the pension adjustment. For 16-17 we will use the FES outlook in the ratio and update same when you land on the projected deficit for the current fiscal.

I would also suggest that slide 10 include a line indicating that the reversal of the pension adjustment reduces the 2015-16 accumulated deficit and net debt by over $10.6 billion.

Thanks

Ken k

Ken - Im attaching the current version of the Q3 deck -if you could take a look through. In particular - can you have a look at slide 13 and provide a few bullets on the impact of the reversal of the pensions on net debt to GDP?

Happy to discuss. Let me know if you have any other comments as well - happy to take those too. If you could get back to me as soon as possible, that would be much appreciated. Thanks.

Deck has new document psswrd.

Hi Selena

The reversal of the pension adjustment does not impact IOD since it's a non-cash adjustment, i.e., it decreases expenses on a PSAB basis not on a cash basis hence the total borrowing does not change which means that IOD also remains unchanged.

Thanks

Ken K

Hi Selena

Couple of quick question, the 16-17 IOD forecast was revised downwards from the FES number and provided to Tim. Do you want us to use this revised version or stick with the FES forecast with the revision being presented in the Interim section of the 2017 Budget.

Let me know, and in order to complete the Financing Table we need to know the 16-17 deficit that you will be projecting in the Q3, will be the same as the FES?

Thanks

Ken k

Subject: RE: Q3 update
Importance: High

Hi All,

Following up on my email from last week, we received relatively recent direction regarding the release of Ontario's Third Quarter Finances – the tentative plan is to publish Q3 finances ahead of the February 15 deadline. We are tentatively tracking a release date of Monday February 13.

As you can imagine, timelines are very compressed, and includes a possible trip to FPC this week. In order to meet this week's deadlines, while also preparing for the release of the actual publication, we're asking for input from you in stages:

EOD Today:
We have prepared the draft of a deck, which we are working towards tabling at this Wednesday's FPC (TBC). The deck lays out the key 2016-17 building blocks that could be updated as part of the Q3 publication. It would help if we could get the following from you folks by the end of today:
16-17 post-FES expense update: We have included placeholder for an expense slide. The intention is for the slide to provide an updated list of initiatives that were not included in the FES expense outlook.
Recommended expense update/signature initiatives: We may build in options for what the outlook could look like – it would help if you could provide a recommendation for the expense changes that should be taken on/profiled.
16-17 c-fund update: We have included a c-fund slide that was used in the Q1 finances briefing materials (current PW). We would like to include an updated version of this slide in the FPC deck (appendix). It would help to have this out to 19-20.
Pension Narrative: Nadine – I'll connect on the pension adjustment and some high level bullets that we could use.

Noon Friday January 27:
Template: I've attached a draft of 3q finances that is based heavily off of the 2016 First Quarter Finances. We've highlighted in green the sections that we would like you to update. While I'm not 100% certain this structure will be exactly what the Q3 document will look like, I think it's safe to say that the substantive content we'll have to cover is captured here. There will be some highlighted content that is not possible to update for Friday, however there will be a formal distribution process where additional information can be incorporated.

Thanks everyone, and please feel free to send your input directly to Liane and Emma. Im hoping to be able to share a draft deck with you late this evening.

Fiscal Strategy:
Ontario's Third Quarter Finances

Office of the Budget
MINISTRY of FINANCE

Presentation to FPC on January 25, 2017

Preliminary Draft

Draft – January 24, 2017 12:00 PM

Context

Under the *Fiscal Transparency and Accountability Act, 2004* (FTAA), the Third Quarter Finances is required to:

- Be released on or before February 15th (publication can be delayed if a letter is sent to the Clerk).
- Include updated information about the major components of revenue and expense **for the current fiscal year only.**

It also provides an **opportunity for the government to reiterate key fiscal messages** from the Budget or pre-condition for future updates.

A Third Quarter Finances has only been published once in the last eight years (in 2012-13).

- The infrequent publication provides the government with some flexibility on how to present its fiscal update (i.e., update could be presented relative to the 2016 Budget, 2016 FES or both, as was done in 2012-13).

Key stakeholders like the Financial Accountability Officer and rating agencies will assess the fiscal outlook and narrative.

- Both have acknowledged that balance is within reach in 2017-18, but have also highlighted key risks to the 2016 Budget fiscal plan.

Purpose and Key Decisions

To **confirm the approach to publishing Ontario's Third Quarter Finances, including:**

- The core updates to **the fiscal outlook and supporting revenue and expense details** to be published, as well as the **fiscal narrative and messaging**.
- Positioning the content and the rollout of Third Quarter Finances relative to the release of the Pension Panel's Report and recommendations.
- **Confirm release date** and determine if a letter to the Clerk is required.

Evolution of the 2016-17 Outlook

- The Third Quarter Finances could present a fiscal update relative to the 2016 Budget or FES.
- The 2016 FES highlighted Ontario's stronger economy and the government's approach to fiscal management, which supported strategic investments in new child care spaces, hospitals and electricity cost relief for consumers.
- To support these investments while accommodating the Pension Adjustment, the government took on a number of fiscal tools in order to meet its targets.

2016 Budget Fiscal Plan $ Billions	2016-17	Change to FES 2016-17	FES Outlook 2016-17
Revenue	130.6	*2.1*	132.7
Expense			
Programs	122.1	*3.1*	125.3
Interest on Debt	11.8	*(0.4)*	11.4
Total Expense	133.9	*2.7*	136.6
Surplus/(Deficit) Before Reserve	(3.3)	*(0.6)*	(3.9)
Reserve	1.0	*(0.6)*	0.4
Surplus/(Deficit)	(4.3)	*(0.0)*	(4.3)

Total revenue changes of $2.1 billion, consisting of:

- Base Forecast Change $1.0 billion
- Reversal of Homecare $(0.2) billion
- Federal Agreements $0.4 billion
- Higher assumed revenue to accommodate pensions $0.9 billion

Total expense changes of $2.7 billion, consisting of:

- In-Year Approvals $0.2 billion
- Pension Adjustment of $2.2 billion
- Electricity Cost Relief $0.3 billion
- Support for Hospitals $0.1 billion
- Green Investment Fund $0.3 billion
- New Federal Agreements $0.4 billion
- Contingency Fund Offsets $(0.5) billion
- Interest on Debt Savings $(0.4) billion

Change to the Reserve $(0.6) billion

End of Year Projection for 2016-17

- An early-read indicates that end of year projections for the 2016-17 deficit could range from $0.6 billion (if there is a significant improvement to the outlook) to $2.7 billion (if there is a moderate improvement to the outlook) by year end.

Significant Year-end Improvement

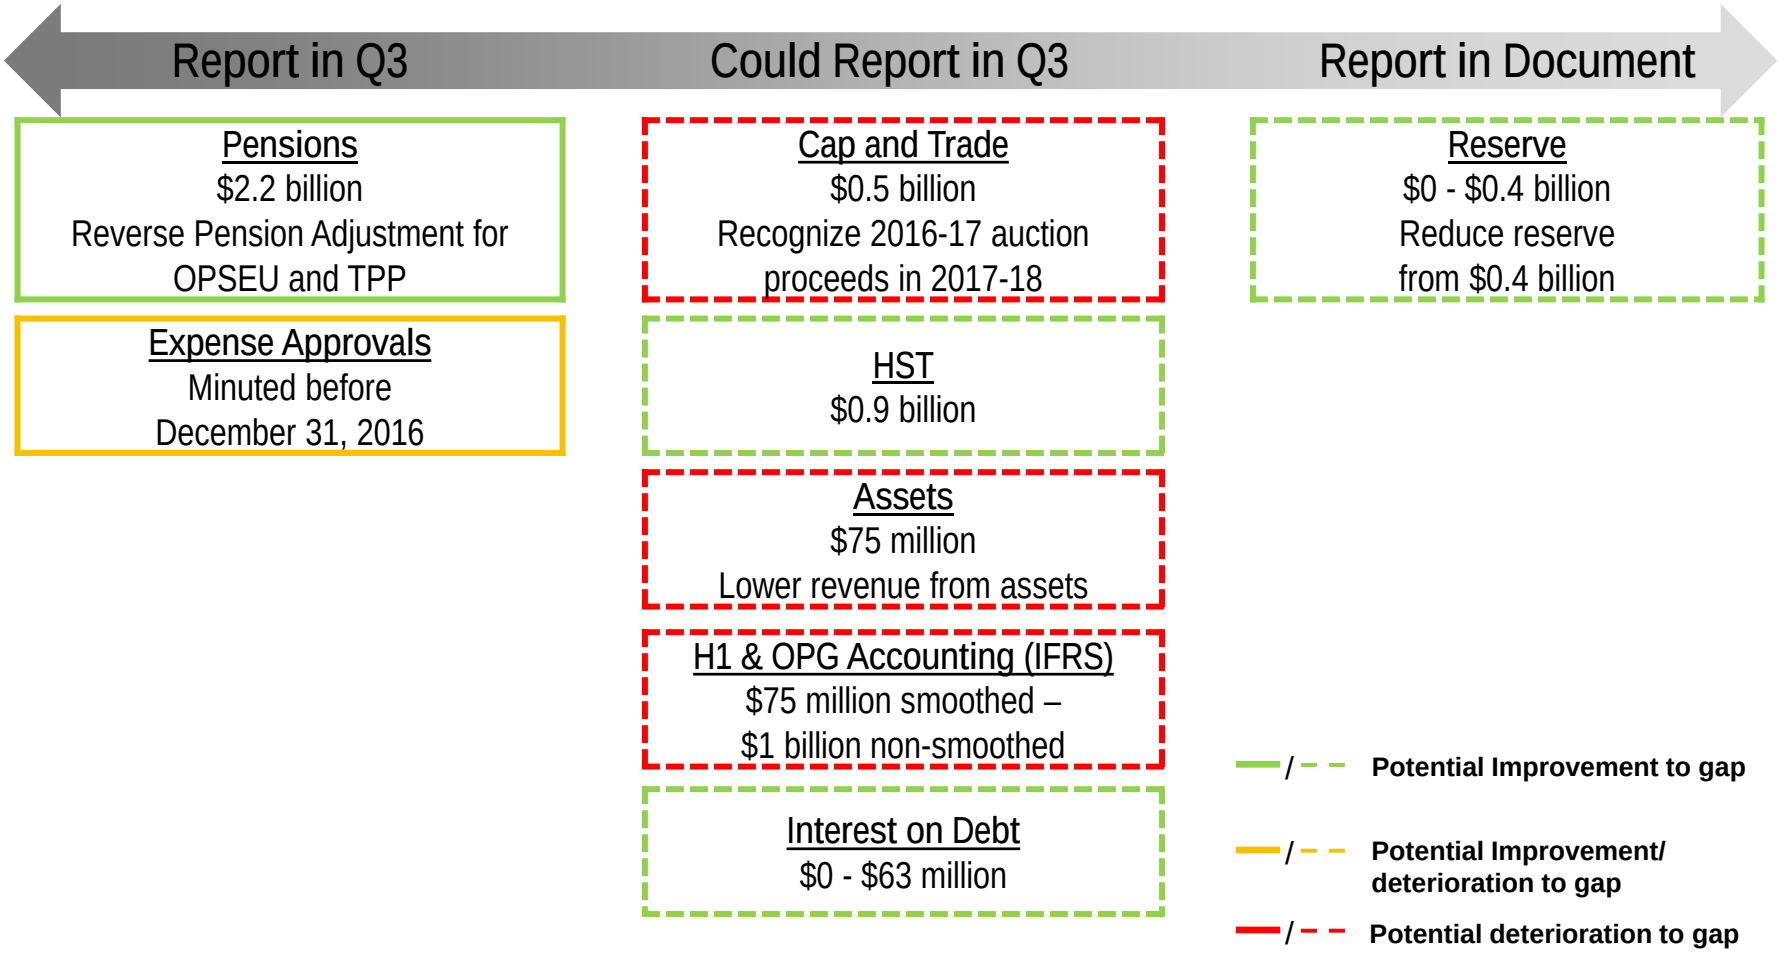
2016 Budget (4.3) billion
+ Pension Adjustment and Tools
2016 FES (4.3) billion
+ Higher Revenue ***1.7 billion***
– Re-profiling Cap and Trade Proceeds ***0.5 billion***
– Lower Revenue from Assets ***75 million***
– Accounting Adjustments: Accounting Framework (IFRS) ***75 million*** Unchanged Contaminated Sites
Unchanged Program Expense
+ Reverse Pension Adjustment ***2.2 billion***
+ Lower Interest on Debt ***0.1 billion***
+ Reduce Reserve ***0.4 billion***
Early-Read (0.6) billion

Moderate Year-end Improvement

2016 Budget (4.3) billion
+ Pension Adjustment and Tools
2016 FES (4.3) billion
+ Higher Revenue ***0.7 billion***
– Re-profiling Cap and Trade Proceeds ***0.5 billion***
– Lower Revenue from Assets ***75 million***
– Accounting Adjustments: Accounting Framework (IFRS) ***75 million*** Contaminated Sites ***50 million***
Higher Program Expense ***1.0 billion***
+ Reverse Pension Adjustment ***2.2 billion***
+ Unchanged Interest on Debt
+ Reduce Reserve ***0.4 billion***
Early-Read (2.7) billion

Treatment of Pension Adjustment

Panel Recommendation



- The Pension Asset Expert Advisory Panel will be releasing its findings in the coming weeks.
  - The report is expected to include advice that the net pension asset be recognized in the Province's financial statements.
  - If taken on, would result in a positive fiscal impact in all years.

Treatment of Pension Adjustment

- The Third Quarter Finances provides the government with an immediate opportunity to align its fiscal strategy with recommendations of the panel, and frame the pension narrative in advance of the 2017 Document.
- While the reversal will result in an improved 2016-17 deficit, expectations may need to be tempered about how much fiscal room is created in the out-years due to growing pressures.

Key Building Blocks

- In addition to the reversal of the Pension Adjustment, other key building blocks will either need to be reported in the Third Quarter Finances or be considered for the 2017 Document.

Outstanding Information

- **Outstanding Information** could materially impact the **2016-17 outlook** in advance of the 2017 Document.

Revenue
Revisions to economic outlook
Ongoing provincially-administered tax receipts

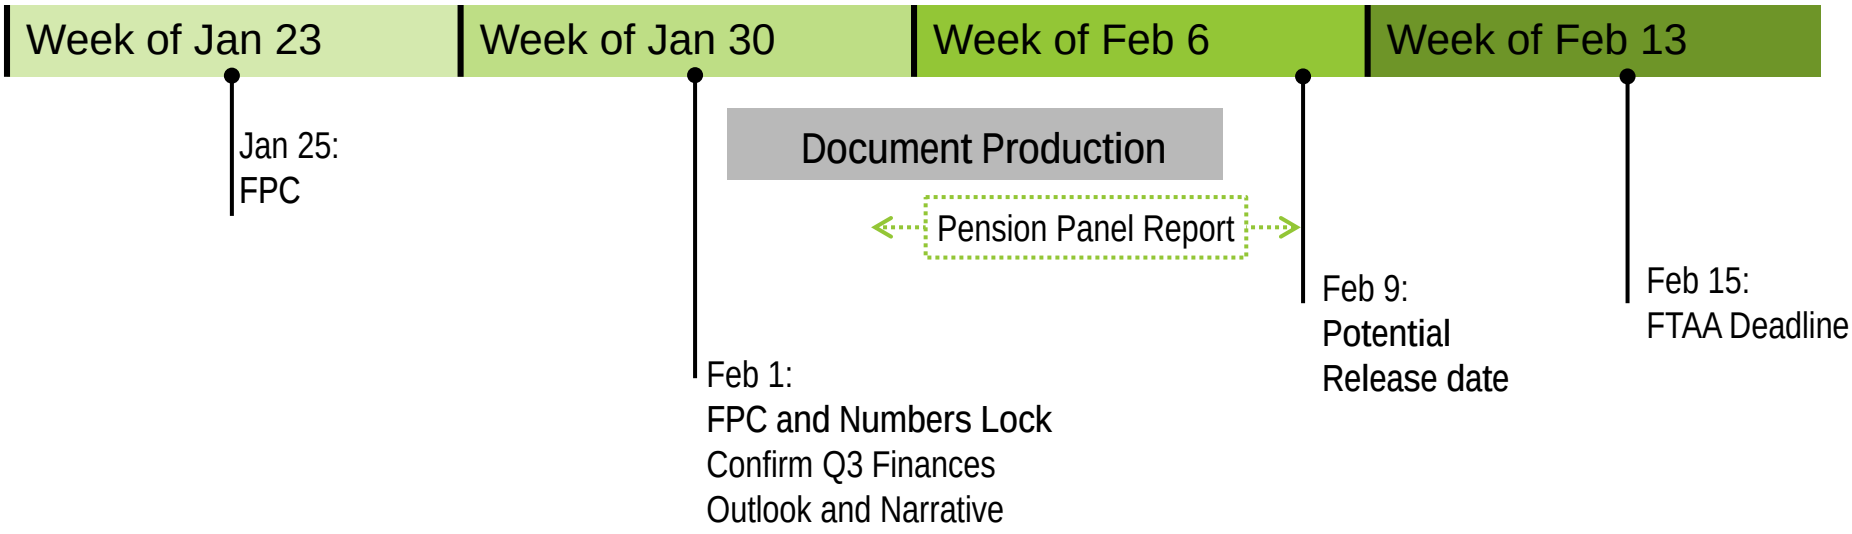
- Potential improvement or deterioration to gap
- Potential deterioration to gap

Principles for the 2016-17 Outlook

- Based on an early-read of end of year projections, the government may want to report an outlook that protects against risks or other changes that could adversely impact the Province's fiscal performance between now and the Budget, and ultimately, Public Accounts.
- For example, based on current information and taking into account key building blocks, Q3 could present a deficit ranging from $2.5 billion (moderate improvement) to $1.8 billion (significant improvement).

Moderate Improvement	Significant Improvement
Takes on the following key building blocks: • **Pensions** $2.2 billion • **Cap and Trade** $(0.5) billion	Takes on the following key building blocks: • **Pensions** $2.2 billion • **Cap and Trade** $(0.5) billion • **Interest on Debt** $0.1 billion • **HST** $0.9 billion • **Assets** $(0.1) billion • **H1 & OPG Accounting (IFRS)** $(0.1) billion

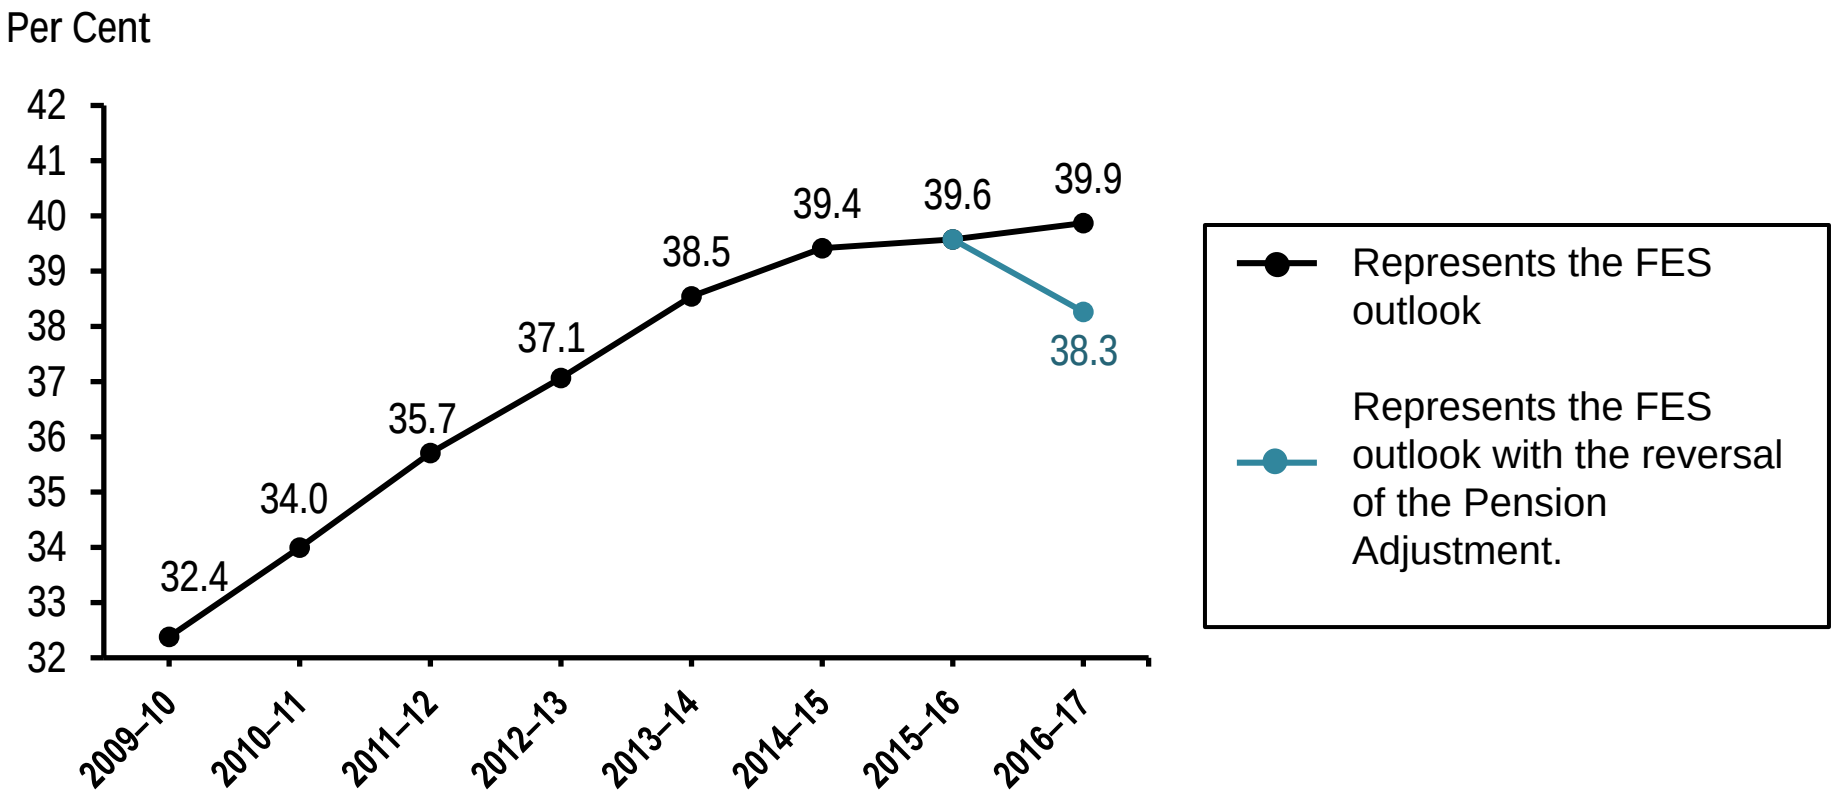


Fiscal Narrative to Support Pension Reversal

The narrative could build on the 2016 FES, focusing on the investments the government is making in priority areas while remaining committed to balance the budget in 2017-18. This narrative would be further supported by highlighting the reversal of the pension adjustment, and could make room for announcements leading up to the release of the 2017 Document.

- *The government is projecting a **deficit of $X.X billion in 2016-17**, an improvement of $X.X billion since the 2016 Ontario Economic Outlook and Fiscal Review forecast.*
- *The Pension Asset Expert Advisory Panel recently released its report on the treatment of pension assets, including a recommendation that the net pension asset be recognized in the Province's financial statements.*
- ***The government is adopting the Panel's recommendation** by reversing the Pension Adjustment included in the 2016 Ontario Economic Outlook and Fiscal Review outlook. The reversal of the Pension Adjustment will result in a significant improvement in the 2016-17 outlook and could support additional investments in 2017-18 and beyond.*
- *The government is projected to beat its deficit target for the **eighth year in a row**.*

Next Steps



Decision on Third Quarter Finances fiscal strategy:

1. Seeking decision on the fiscal outlook and narrative to publish in the Third Quarter Finances.
2. Confirm **release date** (currently tracking to February 9th) and determine if a letter to the Clerk is required.
3. Communication and rollout approach with regards to the timing of the release of the Pension Panel's report and recommendations.

Appendix

Net Debt-to-GDP With Pension Reversal

- Reflects the reversal of the Teachers Pension Plan and OPSEU Pension Plan adjustments, including reversal of the $10.5 billion debt adjustment made in the 2015-16 Public Accounts

Cc: John Psinas <John.Psinas@ofina.on.ca>
Subject: RE: Q3 update

I guess the question should be reworded as follows:

Q. Based on the recommendations of the Independent Review Panel the Government has reversed the pension adjustment recommended by the Auditor General. How is borrowing and IOD impacted by this reversal?

A. The pension adjustment is a non-cash amount, as such both borrowings and total debt remain unchanged.

I have eliminated the portion of the response relating to net debt since we don't know the what the deficit projection will be for Q3.

Thanks, feel free to edit, John is the name of the panel accurate?

Hi Selena

The reversal of the pension adjustment does not impact IOD since it's a non-cash adjustment, i.e., it decreases expenses on a PSAB basis not on a cash basis hence the total borrowing does not change which means that IOD also remains unchanged.

Thanks

Ken K

Hi Selena

Couple of quick question, the 16-17 IOD forecast was revised downwards from the FES number and provided to Tim. Do you want us to use this revised version or stick with the FES forecast with the revision being presented in the Interim section of the 2017 Budget.

Let me know, and in order to complete the Financing Table we need to know the 16-17 deficit that you will be projecting in the Q3, will be the same as the FES?

Thanks

Subject: RE: Q3 update
Importance: High

Hi All,

Following up on my email from last week, we received relatively recent direction regarding the release of Ontario's Third Quarter Finances – the tentative plan is to publish Q3 finances ahead of the February 15 deadline. We are tentatively tracking a release date of Monday February 13.

As you can imagine, timelines are very compressed, and includes a possible trip to FPC this week. In order to meet this week's deadlines, while also preparing for the release of the actual publication, we're asking for input from you in stages:

EOD Today:
We have prepared the draft of a deck, which we are working towards tabling at this Wednesday's FPC (TBC). The deck lays out the key 2016-17 building blocks that could be updated as part of the Q3 publication. It would help if we could get the following from you folks by the end of today:
16-17 post-FES expense update: We have included placeholder for an expense slide. The intention is for the slide to provide an updated list of initiatives that were not included in the FES expense outlook.
Recommended expense update/signature initiatives: We may build in options for what the outlook could look like – it would help if you could provide a recommendation for the expense changes that should be taken on/profiled.
16-17 c-fund update: We have included a c-fund slide that was used in the Q1 finances briefing materials (current PW). We would like to include an updated version of this slide in the FPC deck (appendix). It would help to have this out to 19-20.
Pension Narrative: Nadine – I'll connect on the pension adjustment and some high level bullets that we could use.

Noon Friday January 27:
Template: I've attached a draft of 3q finances that is based heavily off of the 2016 First Quarter Finances. We've highlighted in green the sections that we would like you to update. While I'm not 100% certain this structure will be exactly what the Q3 document will look like, I think it's safe to say

that the substantive content we'll have to cover is captured here. There will be some highlighted content that is not possible to update for Friday, however there will be a formal distribution process where additional information can be incorporated.

Thanks everyone, and please feel free to send your input directly to Liane and Emma. Im hoping to be able to share a draft deck with you late this evening.

Subject: Q3 heads up

Hi Everyone – Wanted to send a quick message that we are hearing there is a desire to proceed with the release of a Q3 update around the time we are expecting the Pension Panel panel to release their report. We are going to assume mid feb prior to the house coming back for our planning purposes.

My team is going to work together to put together a list of things we need to start working on/think about along with a calendar to determine and get direction on an approach to coincide with this timeframe.

More details to follow tomorrow.

Thanks.

We have this:

Q: The Government has adopted the accounting treatment recommended by the Auditor General resulting in a pension adjustment expense over the medium term outlook. How has this impacted borrowing?

A: The pension adjustment is a non-cash amount, as such both borrowings and total debt remain unchanged. There is also no impact on net debt over the medium term outlook given that the forecast deficits over the period remain unchanged from the 2016 Budget.

Hi Selena

The reversal of the pension adjustment does not impact IOD since it's a non-cash adjustment, i.e., it decreases expenses on a PSAB basis not on a cash basis hence the total borrowing does not change which means that IOD also remains unchanged.

Thanks

Ken K

Hi Selena

Couple of quick question, the 16-17 IOD forecast was revised downwards from the FES number and provided to Tim. Do you want us to use this revised version or stick with the FES forecast with the revision being presented in the Interim section of the 2017 Budget.

Let me know, and in order to complete the Financing Table we need to know the 16-17 deficit that you will be projecting in the Q3, will be the same as the FES?

Thanks

Ken k

Subject: RE: Q3 update
Importance: High

Hi All,

Following up on my email from last week, we received relatively recent direction regarding the release of Ontario's Third Quarter Finances – the tentative plan is to publish Q3 finances ahead of the February 15 deadline. We are tentatively tracking a release date of Monday February 13.

As you can imagine, timelines are very compressed, and includes a possible trip to FPC this week. In order to meet this week's deadlines, while also preparing for the release of the actual publication, we're asking for input from you in stages:

EOD Today:
We have prepared the draft of a deck, which we are working towards tabling at this Wednesday's FPC (TBC). The deck lays out the key 2016-17 building blocks that could be updated as part of the Q3 publication. It would help if we could get the following from you folks by the end of today:
16-17 post-FES expense update: We have included placeholder for an expense slide. The intention is for the slide to provide an updated list of initiatives that were not included in the FES expense outlook.
Recommended expense update/signature initiatives: We may build in options for what the outlook could look like – it would help if you could provide a recommendation for the expense changes that should be taken on/profiled.
16-17 c-fund update: We have included a c-fund slide that was used in the Q1 finances briefing materials (current PW). We would like to include an updated version of this slide in the FPC deck (appendix). It would help to have this out to 19-20.
Pension Narrative: Nadine – I'll connect on the pension adjustment and some high level bullets that we could use.

Noon Friday January 27:
Template: I've attached a draft of 3q finances that is based heavily off of the 2016 First Quarter Finances. We've highlighted in green the sections that we would like you to update. While I'm not 100% certain this structure will be exactly what the Q3 document will look like, I think it's safe to say that the substantive content we'll have to cover is captured here. There will be some highlighted content that is not possible to update for Friday, however there will be a formal distribution process where additional information can be incorporated.

Thanks everyone, and please feel free to send your input directly to Liane and Emma. Im hoping to be able to share a draft deck with you late this evening.

Subject: Q3 heads up

Hi Everyone – Wanted to send a quick message that we are hearing there is a desire to proceed with the release of a Q3 update around the time we are expecting the Pension Panel panel to release their report. We are going to assume mid feb prior to the house coming back for our planning purposes.

My team is going to work together to put together a list of things we need to start working on/think about along with a calendar to determine and get direction on an approach to coincide with this timeframe.

More details to follow tomorrow.

Thanks.

Subject: Q3 heads up

Hi Everyone – Wanted to send a quick message that we are hearing there is a desire to proceed with the release of a Q3 update around the time we are expecting the Pension Panel panel to release their report. We are going to assume mid feb prior to the house coming back for our planning purposes.

My team is going to work together to put together a list of things we need to start working on/think about along with a calendar to determine and get direction on an approach to coincide with this timeframe.

More details to follow tomorrow.

Thanks.

Hi Selena

I went through the products, looks pretty good, all of our suggestions have been incorporated, many thanks. Have requested John to review as well and he will let Liane know if there are any issue, very unlikely though. Hope you are enjoying your weekend.

Ken K

Subject: RE: Q3 update

Hi Everyone – just wanted to share with you the latest on the strategy for Q3. We are headed back to FPC next week with a further 2 scenarios on the deficit target that could be published. In addition to the ones we took earlier this week – two new options are proposed – one is to reverse the pensions only (option 1 in the materials), and the second is to take on a certain amount of ministry pressures we think will materialize (option 4 in the materials).

In terms of the materials – there is both a deck and a placemat that we are proposing to take forward. The placemat illustrates the 4 options and includes how the revenue/expense change table would appear relative to Budget and some proposed narrative for each scenario.

The deck is very similar to what we took forward last week but has a couple of new slides. Tim has also just circulated to your ADMs

Can I ask that you specifically take a look at slide 8 to ensure you are comfortable with the wording as well as the narrative on the placemat that would be helpful. But happy to hear any comments on the rest of it as well. We are

looking for any comments back by 3:30pm today so we can finalize and send up to our DM/MO today.

And – we are continuing to track for a release on Feb 13 and we will be in touch to request your assistance.

Happy to discuss.

Thanks.

Importance: High

Hi All,

Following up on my email from last week, we received relatively recent direction regarding the release of Ontario's Third Quarter Finances – the tentative plan is to publish Q3 finances ahead of the February 15 deadline. We are tentatively tracking a release date of Monday February 13.

As you can imagine, timelines are very compressed, and includes a possible trip to FPC this week. In order to meet this week's deadlines, while also preparing for the release of the actual publication, we're asking for input from you in stages:

EOD Today:
We have prepared the draft of a deck, which we are working towards tabling at this Wednesday's FPC (TBC). The deck lays out the key 2016-17 building blocks that could be updated as part of the Q3 publication. It would help if we could get the following from you folks by the end of today:
16-17 post-FES expense update: We have included placeholder for an expense slide. The intention is for the slide to provide an updated list of initiatives that were not included in the FES expense outlook.
Recommended expense update/signature initiatives: We may build in options for what the outlook could look like – it would help if you could provide a recommendation for the expense changes that should be taken on/profiled.
16-17 c-fund update: We have included a c-fund slide that was used in the Q1 finances briefing materials (current PW). We would like to include an updated version of this slide in the FPC deck (appendix). It would help to have this out to 19-20.
Pension Narrative: Nadine – I'll connect on the pension adjustment and some high level bullets that we could use.

Noon Friday January 27:
Template: I've attached a draft of 3q finances that is based heavily off of the 2016 First Quarter Finances. We've highlighted in green the sections that we would like you to update. While I'm not 100% certain this structure will be

exactly what the Q3 document will look like, I think it's safe to say that the substantive content we'll have to cover is captured here. There will be some highlighted content that is not possible to update for Friday, however there will be a formal distribution process where additional information can be incorporated.

Thanks everyone, and please feel free to send your input directly to Liane and Emma. Im hoping to be able to share a draft deck with you late this evening.

Hi Selena

The reversal of the pension adjustment does not impact IOD since it's a non-cash adjustment, i.e., it decreases expenses on a PSAB basis not on a cash basis hence the total borrowing does not change which means that IOD also remains unchanged.

Thanks

Ken K

Hi Selena

Couple of quick question, the 16-17 IOD forecast was revised downwards from the FES number and provided to Tim. Do you want us to use this revised version or stick with the FES forecast with the revision being presented in the Interim section of the 2017 Budget.

Let me know, and in order to complete the Financing Table we need to know the 16-17 deficit that you will be projecting in the Q3, will be the same as the FES?

Thanks

Importance:	High

Hi All,

Following up on my email from last week, we received relatively recent direction regarding the release of Ontario's Third Quarter Finances – the tentative plan is to publish Q3 finances ahead of the February 15 deadline. We are tentatively tracking a release date of Monday February 13.

As you can imagine, timelines are very compressed, and includes a possible trip to FPC this week. In order to meet this week's deadlines, while also preparing for the release of the actual publication, we're asking for input from you in stages:

EOD Today:
We have prepared the draft of a deck, which we are working towards tabling at this Wednesday's FPC (TBC). The deck lays out the key 2016-17 building blocks that could be updated as part of the Q3 publication. It would help if we could get the following from you folks by the end of today:
16-17 post-FES expense update: We have included placeholder for an expense slide. The intention is for the slide to provide an updated list of initiatives that were not included in the FES expense outlook.
Recommended expense update/signature initiatives: We may build in options for what the outlook could look like – it would help if you could provide a recommendation for the expense changes that should be taken on/profiled.
16-17 c-fund update: We have included a c-fund slide that was used in the Q1 finances briefing materials (current PW). We would like to include an updated version of this slide in the FPC deck (appendix). It would help to have this out to 19-20.
Pension Narrative: Nadine – I'll connect on the pension adjustment and some high level bullets that we could use.

Noon Friday January 27:
Template: I've attached a draft of 3q finances that is based heavily off of the 2016 First Quarter Finances. We've highlighted in green the sections that we would like you to update. While I'm not 100% certain this structure will be exactly what the Q3 document will look like, I think it's safe to say that the substantive content we'll have to cover is captured here. There will be some highlighted content that is *not possible* to update for Friday, however there will be a formal distribution process where additional information can be incorporated.

Thanks everyone, and please feel free to send your input directly to Liane and Emma. Im hoping to be able to share a draft deck with you late this evening.

From: Esmail, Selena (MOF)

Subject: Q3 heads up

Hi Everyone – Wanted to send a quick message that we are hearing there is a desire to proceed with the release of a Q3 update around the time we are expecting the Pension Panel panel to release their report. We are going to assume mid feb prior to the house coming back for our planning purposes.

My team is going to work together to put together a list of things we need to start working on/think about along with a calendar to determine and get direction on an approach to coincide with this timeframe.

More details to follow tomorrow.

Thanks.

Contingency Fund Outlook and Expense Risks

Contingency Fund Outlook

$ Billions	2014-15	2015-16	2016-17	2017-18	2018-19
Opening contingency fund balance	**0.5**	**0.7**	**1.2**	**1.7**	**3.5**
Less: Approvals to date[1]	0.0	0.0	0.3	0.5	0.6
Current contingency fund balance	**0.5**	**0.6**	**0.9**	**1.2**	**2.9**
Less: Compensation Risks set-aside	-	-	0.4	0.9	1.6
Less: Moving Ontario Forward set-aside	-	-	-	0.0	0.4
Contingency fund balance incl. set-asides			**0.5**	**0.3**	**0.9**

Includes Drug Program changes, Child Welfare, Northern Health Action Plan, Action Plan for Reconciliation, School Renewal Funding

Accommodates approximately 1.4% increases in next round of bargaining

[1] For 2014-15 and 2015-16, approvals through Q3 are shown.

- Of the remaining 2016-17 contingency fund, $0.6 billion is encumbered for education capital appropriation, leaving $0.3 billion to cover any contingencies.
- The 2016 Budget included a larger contingency fund, primarily due to funds set aside for future compensation increases and outside the GTHA Moving Ontario Forward projects.
- There have been more draws from the contingency fund in the current fiscal cycle, compared to recent years.
- The remaining contingency fund balance would be used to offset risks.

Expense Risks: Items to be managed

$ Billions	2016-17	2017-18	2018-19
Identified high-likelihood risks	0.4	0.7	1.0
PRRT boulder risks	0.1	0.3	0.3
Cap and trade not applied against in-plan items as assumed	-	0.0	0.6
Other likely funding requests	0.6	0.7	0.7
Total items to be managed*	**1.0**	**1.7**	**2.6**

Pressures such as: Health, Social Assistance caseloads, emergencies, Complex Special needs

Risks include: Business Supports, Benefits Transformation and NTR/full cost recovery

Health, MTO (including UP Express), Business Growth Initiative request, Drive Clean.

* Does not include a remedy for the Bill 115 court decision

$ Billions	2014-15	2015-16	2016-17	2017-18	2018-19
Year-end Savings Target	**1.1**	**1.0**	**0.8**	**1.0**	**1.0**
Total Risks to be managed			**1.8**	**2.7**	**3.6**

- In past years, unspent contingency funds have been used to meet the year-end savings target.
- An initiatives envelope for the 2017 or 2018 Budgets has not yet been incorporated into the fiscal plan.

Note: Numbers may not add due to rounding

F. Ontario's 2016–17 Financing Program X

Introduction

The Ontario Quarterly Finances contains updated information about Ontario's 2016–17 fiscal outlook, including updated information about the major components of revenue and expense as set out in the *2016 Budget*.

Section A: 2016–17 Fiscal Outlook (OEP, TBS, OFA, Framework)

The government is projecting a deficit of $[X.X] billion in 2016–17, [an improvement of $X.X billion] compared to the 2016 Budget.

As outlined in the *2016 Budget,* the government is [on track to balance the budget by 2017–18 and is projecting to remain balanced in 2018–19. The government's path to a balanced budget is being achieved through responsible fiscal management, which involves managing growth in program spending and maintaining the integrity of Provincial revenues. The strengthening of the Ontario economy, together with the government's approach to fiscal management, is supporting strategic investments in new child care spaces, hospitals and electricity cost relief for consumers.]

NP Selena, one small additional comment, based on Liane's request John and team have provided the net debt to GDP ratio for all four options, you may wish to include these in the Placemat under each option, given that there is usually considerable interest at FPC on the ratios.

Thanks

Ken k

Hi Selena

Our comments are as follows:

Slide 6: Cindy made an edit to the final bullet, we are suggesting the following addition to her edited

version. “The adjustment to historical results impacts the previously reported net debt and deficit results as well as the net debt to GDP ratio”.

Slide 8: “Deferring improvements in the interest on debt forecast allows for upside potential in the 2016-17 interim results of the 2017 Document”.

Finally, Slide 13 in the Appendix, the 15-16 ratio in the forked line is revised by removing the $10.7 billion in pension adjustments if so it makes sense to remove the $2.2 billion in 16-17 as well (Option 1). As per the attached, we have computed the revised ratio on this basis and made the relevant edits in the narrative as well.

Pls feel free to call me or John Psinas if you have any questions.

Thanks

Ken k

Subject: RE: Q3 update

Hi Everyone – just wanted to share with you the latest on the strategy for Q3. We are headed back to FPC next week with a further 2 scenarios on the deficit target that could be published. In addition to the ones we took earlier this week – two new options are proposed – one is to reverse the pensions only (option 1 in the materials), and the second is to take on a certain amount of ministry pressures we think will materialize (option 4 in the materials).

In terms of the materials – there is both a deck and a placemat that we are proposing to take forward. The placemat illustrates the 4 options and includes how the revenue/expense change table would appear relative to Budget and some proposed narrative for each scenario.

The deck is very similar to what we took forward last week but has a couple of new slides. Tim has also just circulated to your ADMs

Can I ask that you specifically take a look at slide 8 to ensure you are comfortable with the wording

as well as the **narrative on the placemat** that would be helpful. But happy to hear any comments on the rest of it as well. We are looking for any comments back by 3:30pm today so we can finalize and send up to our DM/MO today.

And – we are continuing to track for a release on Feb 13 and we will be in touch to request your assistance.

Happy to discuss.

Thanks.

Subject: RE: Q3 update
Importance: High

Hi All,

Following up on my email from last week, we received relatively recent direction regarding the release of Ontario's Third Quarter Finances – the tentative plan is to publish Q3 finances ahead of the February 15 deadline. We are tentatively tracking a release date of Monday February 13.

As you can imagine, timelines are very compressed, and includes a possible trip to FPC this week. In order to meet this week's deadlines, while also preparing for the release of the actual publication, we're asking for input from you in stages:

EOD Today:
We have prepared the draft of a deck, which we are working towards tabling at this Wednesday's FPC (TBC). The deck lays out the key 2016-17 building blocks that could be updated as part of the Q3 publication. It would help if we could get the

following from you folks by the end of today:
16-17 post-FES expense update: We have included placeholder for an expense slide. The intention is for the slide to provide an updated list of initiatives that were not included in the FES expense outlook.
Recommended expense update/signature initiatives: We may build in options for what the outlook could look like – it would help if you could provide a recommendation for the expense changes that should be taken on/profiled.
16-17 c-fund update: We have included a c-fund slide that was used in the Q1 finances briefing materials (current PW). We would like to include an updated version of this slide in the FPC deck (appendix). It would help to have this out to 19-20.
Pension Narrative: Nadine – I'll connect on the pension adjustment and some high level bullets that we could use.

Noon Friday January 27:
Template: I've attached a draft of 3q finances that is based heavily off of the 2016 First Quarter Finances. We've highlighted in green the sections that we would like you to update. While I'm not 100% certain this structure will be exactly what the Q3 document will look like, I think it's safe to say that the substantive content we'll have to cover is captured here. There will be some highlighted content that is *not possible* to update for Friday, however there will be a formal distribution process where additional information can be incorporated.

Thanks everyone, and please feel free to send your input directly to Liane and Emma. Im hoping to be able to share a draft deck with you late this evening.

Subject: Q3 heads up

Hi Everyone – Wanted to send a quick message that we are hearing there is a desire to proceed with the release of a Q3 update around the time we are expecting the Pension Panel panel to release their report. We are going to assume mid feb prior to the house coming back for our planning purposes.

My team is going to work together to put together a list of things we need to start working on/think about along with a calendar to determine and get direction on an approach to coincide with this timeframe.

More details to follow tomorrow.

Thanks.

NP Selena, one small additional comment, based on Liane's request John and team have provided the net debt to GDP ratio for all four options, you may wish to include these in the Placemat under each option, given that there is usually considerable interest at FPC on the ratios.

Thanks

Ken k

Hi Everyone – sending along the most current draft of the deck we are planning to take forward to FPC tomorrow.

Comments welcome – if you could let me know asap if you have them. Heads up that timing of release of the Q3 may be even sooner as noted in this deck

Subject: RE: Q3 update
Importance: High

Hi All,

Following up on my email from last week, we received relatively recent direction

regarding the release of Ontario's Third Quarter Finances – the tentative plan is to publish Q3 finances ahead of the February 15 deadline. We are tentatively tracking a release date of Monday February 13.

As you can imagine, timelines are very compressed, and includes a possible trip to FPC this week. In order to meet this week's deadlines, while also preparing for the release of the actual publication, we're asking for input from you in stages:

EOD Today:
We have prepared the draft of a deck, which we are working towards tabling at this Wednesday's FPC (TBC). The deck lays out the key 2016-17 building blocks that could be updated as part of the Q3 publication. It would help if we could get the following from you folks by the end of today:
16-17 post-FES expense update: We have included placeholder for an expense slide. The intention is for the slide to provide an updated list of initiatives that were not included in the FES expense outlook.
Recommended expense update/signature initiatives: We may build in options for what the outlook could look like – it would help if you could provide a recommendation for the expense changes that should be taken on/profiled.
16-17 c-fund update: We have included a c-fund slide that was used in the Q1 finances briefing materials (current PW). We would like to include an updated version of this slide in the FPC deck (appendix). It would help to have this out to 19-20.
Pension Narrative: Nadine – I'll connect on the pension adjustment and some high level bullets that we could use.

Noon Friday January 27:
Template: I've attached a draft of 3q finances that is based heavily off of the 2016 First Quarter Finances. We've highlighted in green the sections that we would like you to update. While I'm not 100% certain this structure will be exactly what the Q3 document will look like, I think it's safe to say that the substantive content we'll have to cover is captured here. There will be some highlighted content that is *not possible* to update for Friday, however there will be a formal distribution process where additional information can be incorporated.

Thanks everyone, and please feel free to send your input directly to Liane and Emma. Im hoping to be able to share a draft deck with you late this evening.

Subject: Q3 heads up

Hi Everyone – Wanted to send a quick message that we are hearing there is a desire to proceed with the release of a Q3 update around the time we are expecting the Pension Panel panel to release their report. We are going to assume mid feb prior to the house coming back for our planning

purposes.

My team is going to work together to put together a list of things we need to start working on/think about along with a calendar to determine and get direction on an approach to coincide with this timeframe.

More details to follow tomorrow.

Thanks.

Subject: RE: Q3 update

Hi Everyone – just wanted to share with you the latest on the strategy for Q3. We are headed back to FPC next week with a further 2 scenarios on the deficit target that could be published. In addition to the ones we took earlier this week – two new options are proposed – one is to reverse the pensions only (option 1 in the materials), and the second is to take on a certain amount of ministry pressures we think will materialize (option 4 in the materials).

In terms of the materials – there is both a deck and a placemat that we are proposing to take forward. The placemat illustrates the 4 options and includes how the revenue/expense change table would appear relative to Budget and some proposed narrative for each scenario.

The deck is very similar to what we took forward last week but has a couple of new slides. Tim has also just circulated to your ADMs

Can I ask that you specifically take a look at slide 8 to ensure you are comfortable with the wording as well as the **narrative on the placemat** that would be helpful. But happy to hear any comments on the rest of it as well. We are looking for any comments back by 3:30pm today so we can finalize and send up to our DM/MO today.

And – we are continuing to track for a release on Feb 13 and we will be in touch to request your assistance.

Happy to discuss.

Thanks.

Hi Everyone – just to let you know, and sorry for the delay in the feedback – we are tracking for the release of the Q3 on Feb 21 going with the recommended option (option 4)

We expect to be able to get something out on distribution tomorrow and I understand that folks have been in touch to determine who should get access to the papers.

For my TBS colleagues – I understand that the Q3 information is due today from ministries. I understand various roll ups are planned for tomorrow and hopefully we can then get a sense of how much in additional pressures are expected to materialize (ie. for the Q3 we are taking on $200M in expense pressures, how much more is expected?). We have a joint minister's briefing Monday morning at 9:30am and if we could get a sense of where things are at in time for that, that would be really helpful.

Happy to discuss. Thank you again.

Hi All,

As mentioned yesterday, attached are the FAO's draft Economic Outlook and Fiscal Outlook chapters (pw: FAO1616), along with appendix tables in the attached spreadsheet, for review. OB/Framework will lead the consolidation of comments for these chapters.

Can your areas please review and send any comments/edits in tracked changes to myself (with a copy to Liane) by **2pm tomorrow?**

In addition, the FAO has flagged that there's still awaiting FES program spending information. **Patrick and Caleb, can this information please be shared with the FAO as soon as possible?**

Please let me know if you have any questions.

Thank you,
Ryan

Tim, Brian Karen

Please find attached drafts of Economic Outlook and Fiscal Outlook chapters from the FAO's upcoming 'Economic and Fiscal Outlook' report.
The chapters are password protected using the same password as in the past.

As in the past, we are on a very tight schedule to enable us to release this report in early December, before the Legislature rises for the holiday break.

However, please note that we are still waiting for the detailed program spending projection consistent with FES (see attached email request from last week). This information is essential to calibrate our models and ensure consistency with the government's projections. If we do not receive that information shortly, we will be forced to proceed with our own estimates which could impact the results and conclusions presented in the report. Please be aware that we will need to be clear with MPPs, during our technical briefing, that we did not receive all the additional background information that we requested. (We did, however, receive the detailed revenue information from FES last week. Thanks)

We are asking for your comments/concerns by end of day Friday (November 24).

Happy to set up a phone call to discuss.

Thanks again for your support and assistance.

Subject: FAO's Fall 2017 EFO

Hello Tim, Brian,

As you are aware, we are preparing our Fall EFO for release in early December.

As in the past, we are planning to send you drafts of the 2 core chapters of the report (economic outlook and fiscal outlook) on Wednesday morning, for your comments. We will also provide the supporting data tables, providing additional details on the projection. The current report follows the basic template of our earlier EFOs, and may be a little shorter.

We would greatly appreciate receiving the Ministry's comments by Friday (November 24) end of day.

Thanks, as always, for your assistance.

David

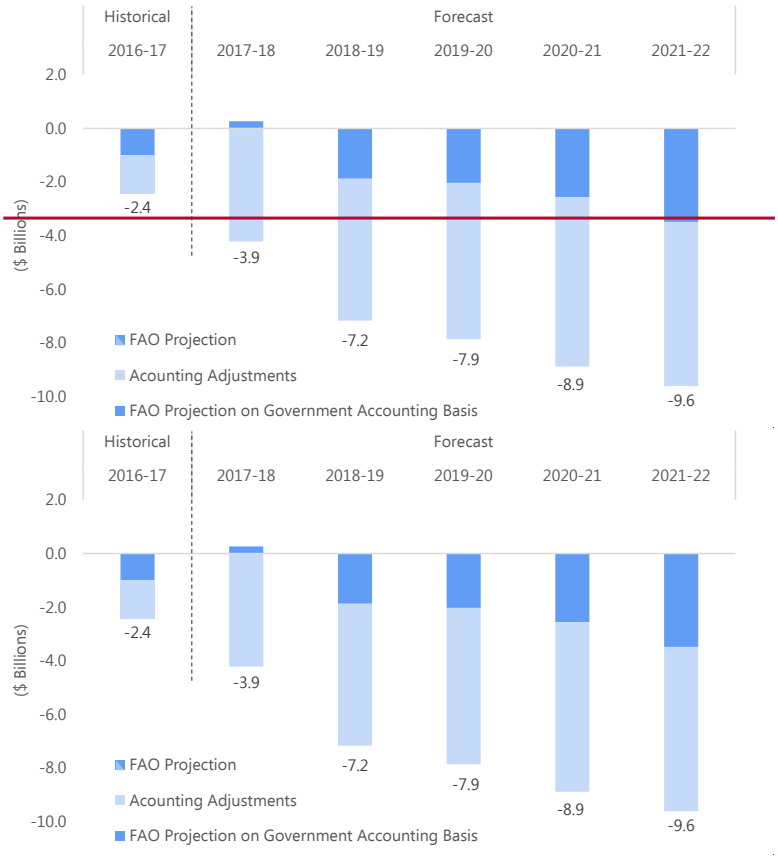
1. Fiscal Outlook



FAO Projects a Return to Significant Budget Deficits

Despite a strong increase in revenues, the FAO is projecting an Ontario budget deficit of $3.9 billion in 2017-18, entirely the result of the Auditor General of Ontario's (AG) recommended accounting treatment for both the government's Fair Hydro Plan and the net pension assets of jointly-sponsored pension plans.[1]

Beyond 2017-18, the FAO is projecting a significant deterioration in the budget deficit due to the loss of time-limited revenues, a more moderate pace of tax revenue growth, and the growing fiscal impact of the AG's recommended accounting framework. By 2021-22, the FAO is projecting an Ontario budget deficit of $9.6 billion in the absence of any fiscal policy changes.

Ontario Budget Balance

[1] See *The Fair Hydro Plan: Concerns About Fiscal Transparency, Accountability and Value For Money; Auditor General of Ontario, October 2017* and *Independent Auditor's Report, 2016-17 Consolidated Financial Statements, Auditor General of Ontario, 2017.*

Note: Budget Balance before reserve.
Source: Ontario Public Accounts, 2017 Ontario Economic Outlook and Fiscal Review, and FAO.

In the *2017 Ontario Economic Outlook and Fiscal Review* (also referred to as the Fall Economic Statement or FES), the government projected balanced budgets for 2017-18 through to 2019-20. However, the government's fiscal projection relies on an overly optimistic revenue forecast and does not adopt the AG's recommended accounting framework.

For comparison, under the government's accounting presentation, the FAO projects a small budget surplus for 2017-18 – approximately equal to the government's own budget projection. However, there are a number of time-limited and one-time revenues in 2017-18. Going forward, the loss of these temporary revenues combined with more moderate tax revenue growth results in a return to deficit in 2018-19 and a steady deterioration in the budget deficit over the outlook.

The Accounting Presentation of Ontario's Financial Statements

The government's fiscal plan, as presented in both the 2017 Ontario Budget and Fall Economic Statement, does not adopt the Auditor General's recommended accounting presentation, reducing the transparency and clarity of Ontario's fiscal position.

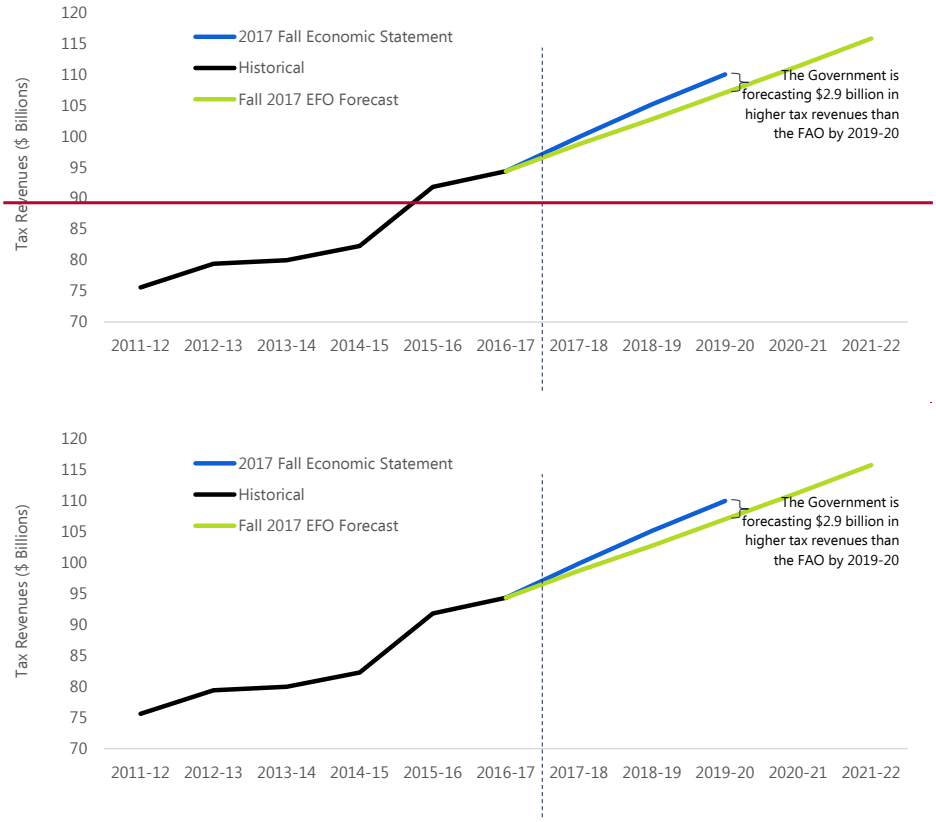
In addition to the existing disagreement over the appropriate accounting treatment for the government's jointly sponsored pension plans, the AG recently reported that the government is not correctly accounting for the full cost of the Fair Hydro Plan in its financial statements.[2] As a result, the government's fiscal presentation is expected to continue to receive qualified opinions from the AG.

Commented [KK1]: There is no mention of the findings of the independent Pension Asset Expert Advisory Panel. Even if the FAO disagrees with the findings there should be a reference that the Government has followed the Panel's recommendation in accounting for pension assets.

Revenue Outlook

The FAO is projecting average annual revenue growth of 3.1 per cent over the forecast. In 2017-18, revenues are supported by strong growth in taxes, as well as a number of time-limited or one-time revenues. Beginning in 2018-19, the FAO is projecting more moderate revenue growth as:

- time-limited revenues end (including the debt retirement charge and federal equalization payments);
- economic growth moderates, following several years of stronger than average growth; and
- the fiscal impact of the Fair Hydro Plan increases, reducing electricity-sector revenues.



Tax Revenue Growth Expected to Moderate

Nominal GDP, the broadest measure of the tax base, is projected to grow by a strong 4.7 per cent in 2017, supporting a 4.6 per cent increase in tax revenues in 2017-18. From 2018 to 2021, annual GDP growth is expected to moderate to 4.1 per cent, leading to similar slowing in tax revenue growth to 4.1 per cent on average over this period.

In the government's Fall Economic Statement, tax revenue is projected to grow by 5.2 per cent on average from 2017-18 to 2019-20, much higher than the FAO's projection of 4.3 per cent over the same period. The government's expectation of higher growth results in an additional $2.9 billion in tax revenues by 2019-20, relative to the FAO projection.

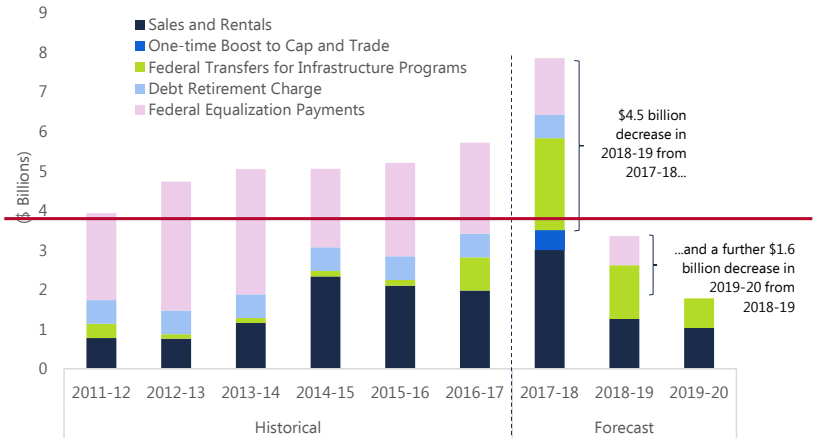
While the FAO expects incomes and household spending to grow somewhat faster than recent historical trends,[3] the government's tax revenue forecast is based on significant and sustained above-trend growth for each of the three key tax drivers.

The Loss of Time-limited Revenues

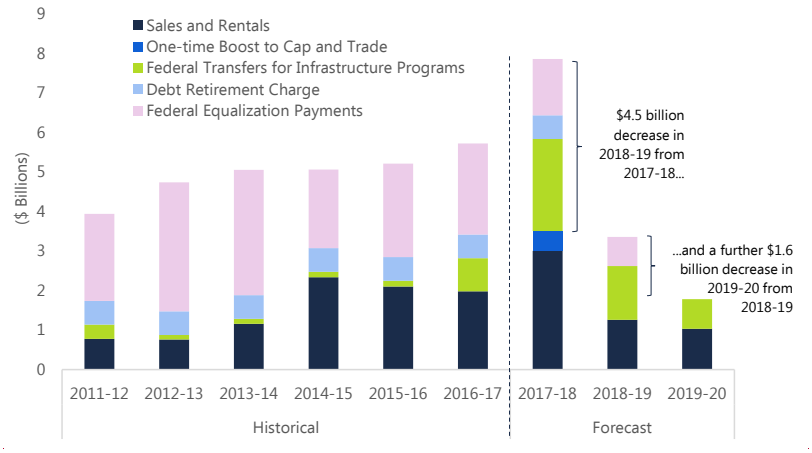
The Province's 2017-18 revenues incorporate a number of one-time or time-limited revenues that are set to expire. These include:



- a temporary increase to sales and rentals revenue, reflecting additional asset sales[4];
- higher federal transfers for infrastructure;

3 Labour income is expected to grow above trend in part due to the increased minimum wage over the outlook (which is also expected to boost household spending). Estimates of Ontario corporate profits over the first half of 2017 imply very strong growth.
4 Asset sales include the Province's 22 per cent sale of Hydro One equity in 2017-18, which the FAO estimates would generate about $0.8 billion in revenue.

- the final year of the debt retirement charge[5];
- federal Equalization payments, which the FAO estimates will end in 2019-20; and
- revenue from an additional cap-and-trade auction that occurred in March 2017, which will be recognized in the 2017-18 fiscal year.[6]

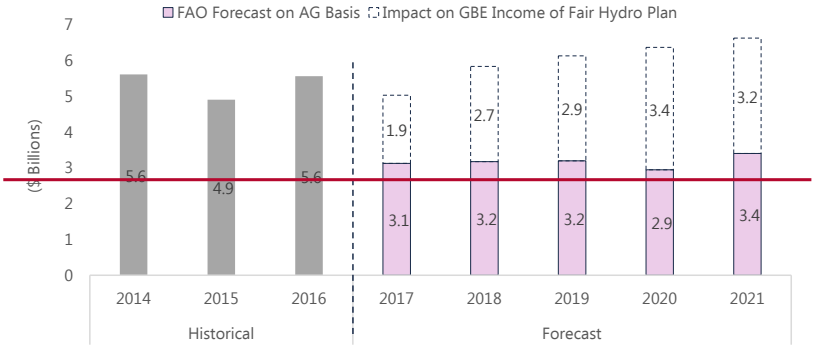


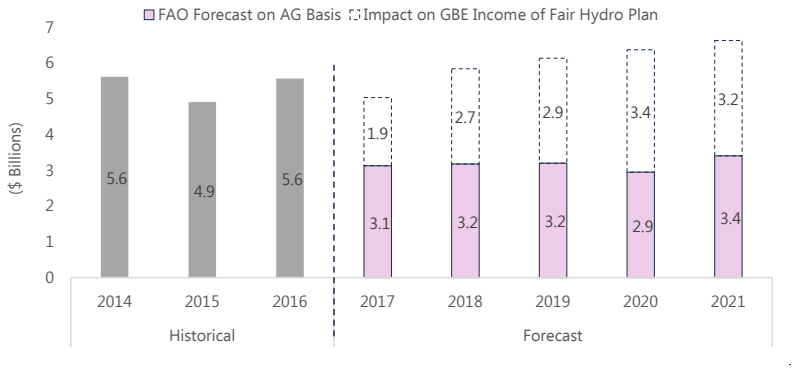
Taken together, these time-limited revenues will decrease by $4.5 billion in 2018-19, and by an additional $1.6 billion in 2019-20.

Many Time-limited Revenues are Set to Expire Beyond 2017-18

5 The debt retirement charge (DRC) is a charge payable on electricity consumed in Ontario and replaces a portion of debt servicing costs previously included as part of electricity bills before the restructuring of the former Ontario Hydro. The DRC will remain on electricity users' bills for electricity consumed before April 1, 2018.

6 In fiscal year 2017-18, there were five cap and trade auctions. Going forward the Provinces expects to have four auctions per year.





Source: Ontario Budgets, Ministry of Finance and FAO.

Government Business Enterprises and the Impact of the Fair Hydro Plan

The government introduced the "Fair Hydro Plan" to reduce electricity bills for residential customers by an average of 25 per cent. The government's plan includes subsidizing electricity prices for ratepayers through provincial and Ontario Power Generation (OPG) borrowing. Consistent with the AG's recommendation, the FAO captured the fiscal impact of this borrowing by reducing the net income of OPG by $1.9 billion in 2017-18, and by $3.2 billion by 2021-22.

Impact of the Fair Hydro Plan on Ontario's Revenue from 'Government Business Enterprises'

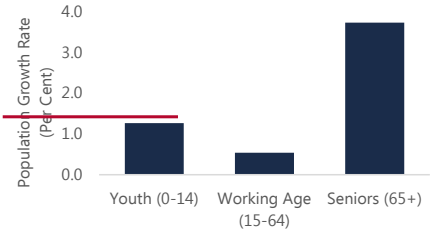
Source: Public Accounts, 2017 Ontario FES and FAO.

FAO Revenue Assumptions and Forecast

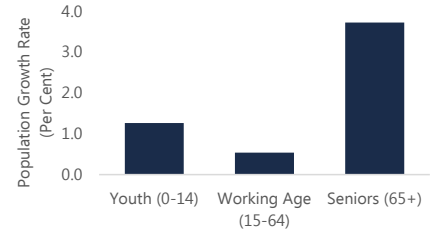
Revenue Source	Assumption	Forecast
Taxation Revenue	Grows with key economic drivers including labour income, corporate profits and household spending	Averages 4.2 per cent growth per year from 2017-18 to 2021-22[7]
Federal Transfers	Based on legislated growth rates and economic forecasts for Ontario and Canada	Federal transfers are expected to grow by 1.6 per cent per year from 2017-18 to 2021-22
Government Business Enterprises (GBE)	Based on government projections, and adjusted for the impact of the Fair Hydro Plan as recommended by the Auditor General	Income from GBEs are projected to fall from $5.6 billion in 2016-17 to $3.1 billion in 2017-18 and remain roughly stable at that level to 2021-22
Other Revenue	Based on government projections, and includes asset sales, and proceeds from the sale of cap and trade allowances	These revenues are projected to increase from $16.3 billion in 2016-17 to $19.4 billion in 2017-18, before declining to $18.0 billion by 2021-22

Expense Outlook

Program Spending



The FAO projects program spending to grow by 3.9 per cent from 2017-18 to 2021-22. [8]



7 The reduction in the Small Business Corporate Income Tax rate is reflected in the FAO's tax revenue projections.
8 Excluding the pension adjustment, the FAO projects program spending to grow by 3.5 per cent on average from 2017-18 to 2019-20, largely unchanged from the FAO's Spring EFO.

Over the 2017-18 to 2019-20 period, the FAO's outlook adopts the government's 2017 Fall Economic Statement's projections for program spending, adjusted to reflect the Auditor General's recommended accounting presentation.[9] The projection for program spending is largely unchanged from the 2017 Ontario Budget, aside from $200 million of new spending in 2017-18, declining to $100 million by 2019-20.[10]

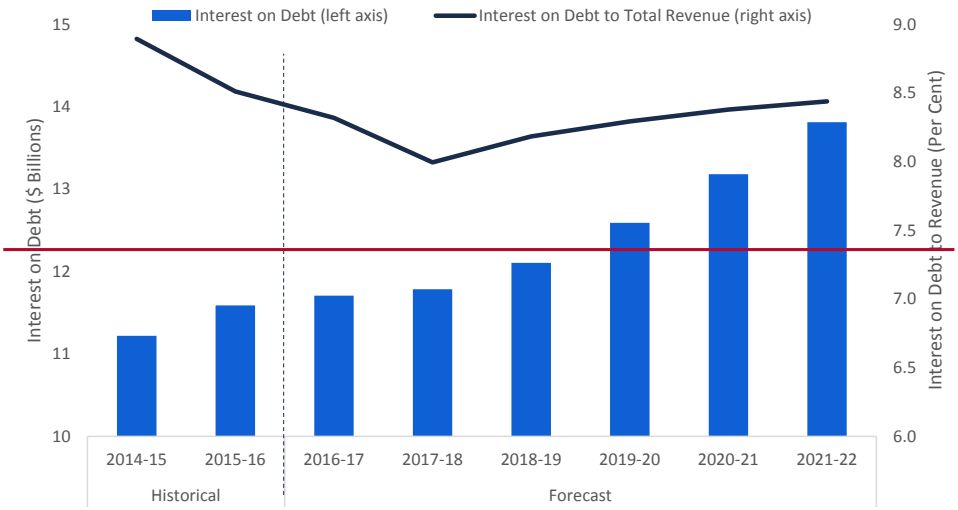
Beyond 2019-20, the FAO projects program spending will grow at an annual average rate of 4.1 per cent. This stronger pace of growth reflects additional spending to meet two demographic pressures: the aging baby boomer cohort and the growing youth population. The growth in these two population groups will place added spending pressures on Ontario's health care and education systems.

Population Growth by Age (2016-2021)

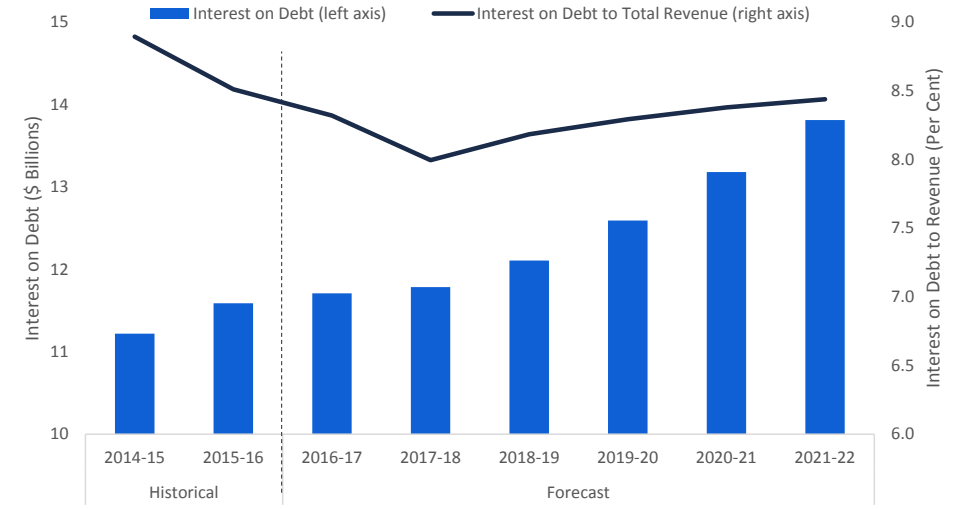
Source: Statistics Canada and FAO

Interest on Debt

Interest on debt (IOD) payments are expected to increase at an average rate of 3.4 per cent per year over the outlook due to elevated borrowing levels and rising interest rates.



The decline in IOD as a share of revenues over the past three years was due to stronger revenue growth, lower borrowing and maturing debt being refinanced at much lower rates of interest. However, this trend is expected to reverse over the outlook as revenue growth moderates while IOD payments accelerate. By 2021-22, Ontario's debt interest payments will account for 8.4 per cent of total revenue, slightly higher than the 8.~~1~~ 2 per cent share in 2017-18.



Commented [AK2]: 2017 FES; it appears that the FAO does not use BPS-consolidated IOD; this choice also affects the IOD chart on page 6.

9 Based on information provided by the Ministry of Finance, the FAO's projection for 'Other Spending' includes $2.3 billion in 2017-18 for the valuation allowance on jointly-sponsored pension assets, growing to $2.9 billion by 2021-22.

10 In the 2017 FES, the government announced new funding for additional spending for small businesses, seniors and child care. However, the additional expenses for child care is fiscally neutral since it is funded by a corresponding increase in federal transfer revenue.

Interest on Debt

Source: Ontario Public Accounts and FAO.

Borrowing and Net Debt

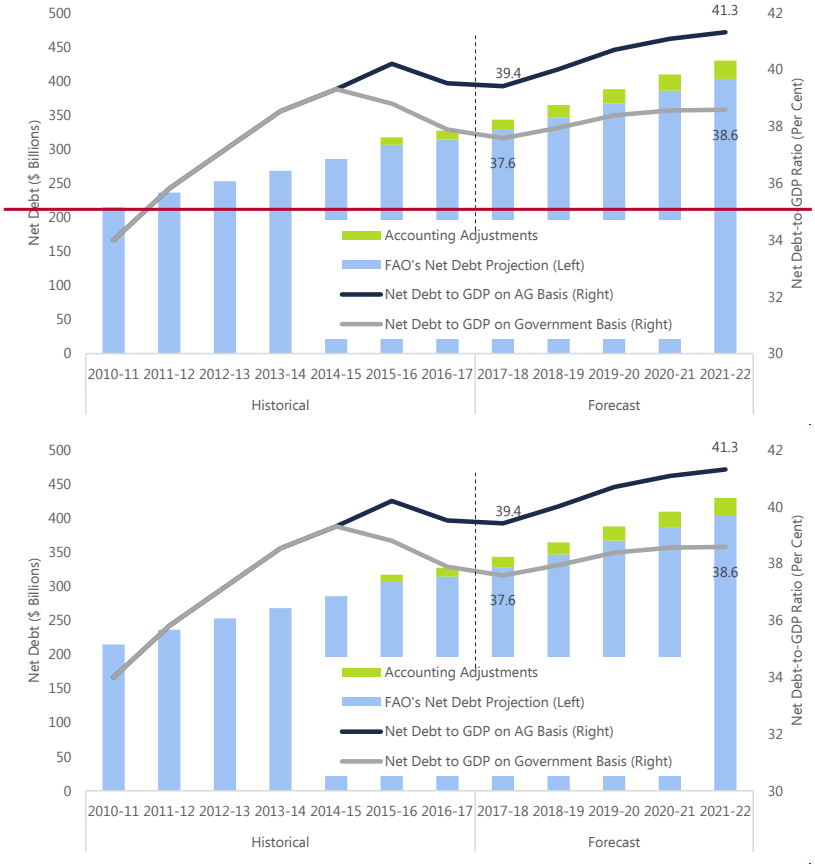
Despite higher funding requirements for capital expenditures and the Fair Hydro Plan, Ontario's borrowing is expected to decline to $~~23~~25.8 billion in 2017-18, the lowest level of borrowing since 200~~78~~-

09. The relatively low level of borrowing in 2017-18 is largely the result of debt maturities falling by $~~4.1~~3.5 billion to $17.4 billion.[11]

Beginning 2018-19, borrowing requirements are expected to increase significantly due to higher annual debt maturities~~, additional funding requirements for the Fair Hydro Plan~~ and rising capital expenditures. By 2021-22, the FAO expects borrowing to increase to $42 billion – nearly double the borrowing requirement in 2017-18.

In 2017-18, the FAO projects that Ontario's net debt-to-GDP ratio will edge down, reflecting lower borrowing and strong economic growth. However, over the next five years, the FAO projects that nearly $90 billion will be added to net debt – increasing the net debt-to-GDP ratio to 41 per cent by 2021-22.[12]

Commented [AK3]: 2016-17 maturities of 20.9 (from Q1 Finances) minus 2017-18 maturities of 17.4 (from FES FT)



Commented [JP4]: The Province has already factored in all borrowing requirements, including the debt burden projections for the Fair Hydro plan for that year, in consultation with OPG and retained consultants. The $42 billion therefore is in excess of Ontario's projection by a significant amount.

Commented [BL5]: The change in net debt reflects the change in the deficit and the change in Net Investment in Tangible Capital Assets – it should not be attributed to lower borrowing which is really the outcome

Commented [JP6]: With regard to the 41% by the FAO in 2021-22, the Province projects it to be 36.1% for that year as published in the Fall Economic Statement. In the Province's opinion, the FAO is likely factoring in a budget deficit that the government does not project for that year given the balanced budget commitment The FAO's projections include the addition of the 2015-16 Pension adjustment despite the pronouncements of the Expert Panel that confirmed the correctness of the Government's accounting treatment of this asset The reversal of the pension adjustment is correct and in line with the recommendations of the Independent Pension Asset Expert Advisory Panel. The FAO also includes additional Fair Hydro Plan debt that is not in line with provincial projections already incorporated in the Province's Borrowing Program for 2017-18 and the two out years. The incremental borrowings for funding the Province's equity injection to OPG over the FES outlook period is a small fraction of the Province's borrowings and have no impact on the Province's net debt.

11 When debt matures the government must roll over the maturing debt with new borrowing. Declines in maturities result in lower borrowing and vice versa.
12 The FAO's estimate of net debt incorporates the AG's recommended accounting framework.

Net Debt Outlook

Source: FAO and 2017 Ontario Economic Outlook and Fiscal Review, Ontario Public Accounts

The government continues to maintain a net debt-to-GDP target of 35 per cent by 2023-24 and 27 per cent by 2029-30. However, the FAO's net debt-to-GDP projections under both accounting presentations suggest that additional fiscal measures would be required for the government to achieve its net debt-to-GDP targets.

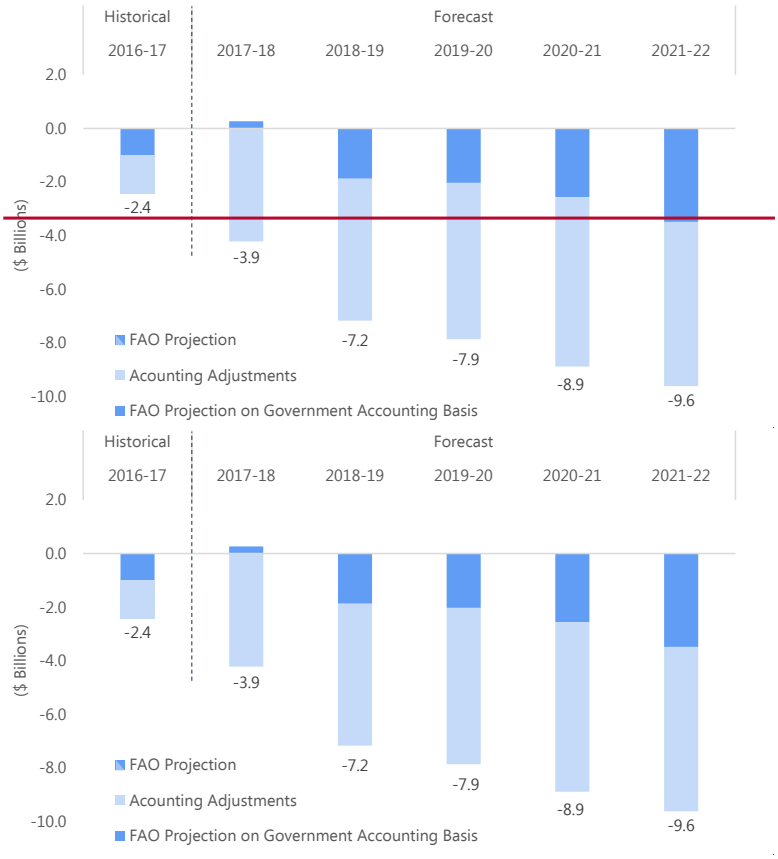
1. Fiscal Outlook



FAO Projects a Return to Significant Budget Deficits

Despite a strong increase in revenues, the FAO is projecting an Ontario budget deficit of $3.9 billion in 2017-18, entirely the result of the Auditor General of Ontario's (AG) recommended accounting treatment for both the government's Fair Hydro Plan and the net pension assets of jointly-sponsored pension plans.[1]

Beyond 2017-18, the FAO is projecting a significant deterioration in the budget deficit due to the loss of time-limited revenues, a more moderate pace of tax revenue growth, and the growing fiscal impact of the AG's recommended accounting framework. By 2021-22, the FAO is projecting an Ontario budget deficit of $9.6 billion in the absence of any fiscal policy changes.

Ontario Budget Balance

[1] See *The Fair Hydro Plan: Concerns About Fiscal Transparency, Accountability and Value For Money; Auditor General of Ontario, October 2017* and *Independent Auditor's Report, 2016-17 Consolidated Financial Statements, Auditor General of Ontario, 2017.*

Note: Budget Balance before reserve.
Source: Ontario Public Accounts, 2017 Ontario Economic Outlook and Fiscal Review, and FAO.

In the *2017 Ontario Economic Outlook and Fiscal Review* (also referred to as the Fall Economic Statement or FES), the government projected balanced budgets for 2017-18 through to 2019-20. However, the government's fiscal projection relies on an overly optimistic revenue forecast and does not adopt the AG's recommended accounting framework.

For comparison, under the government's accounting presentation, the FAO projects a small budget surplus for 2017-18 – approximately equal to the government's own budget projection. However, there are a number of time-limited and one-time revenues in 2017-18. Going forward, the loss of these temporary revenues combined with more moderate tax revenue growth results in a return to deficit in 2018-19 and a steady deterioration in the budget deficit over the outlook.

The Accounting Presentation of Ontario's Financial Statements

The government's fiscal plan, as presented in both the 2017 Ontario Budget and Fall Economic Statement, does not adopt the Auditor General's recommended accounting presentation, reducing the transparency and clarity of Ontario's fiscal position.

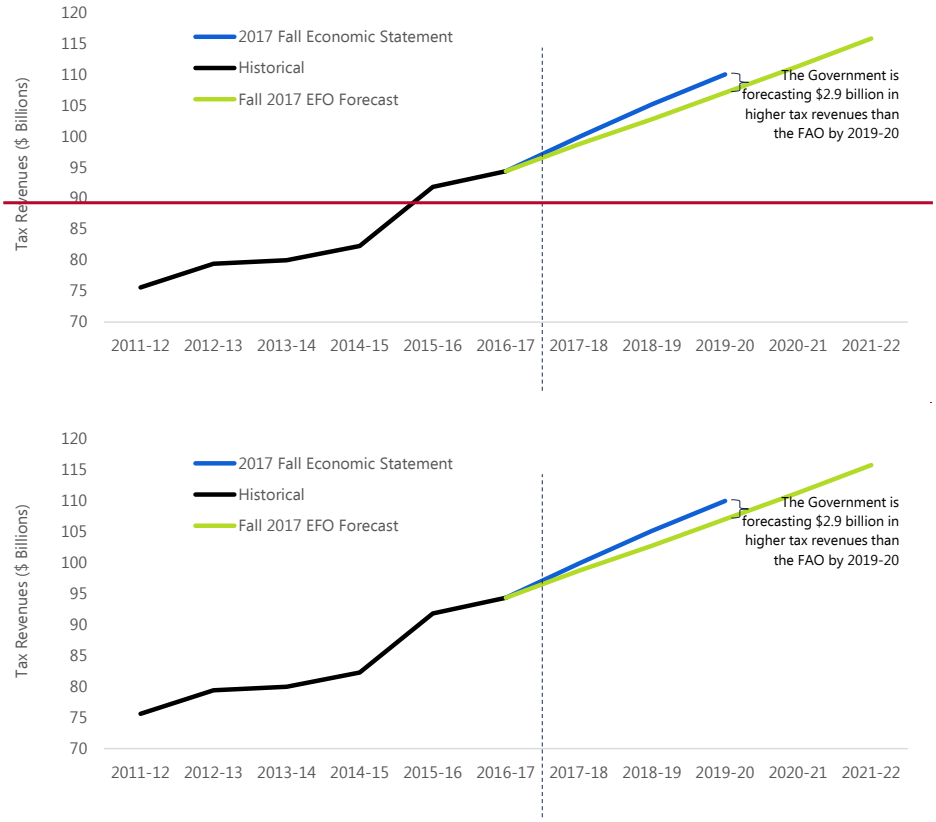
In addition to the existing disagreement over the appropriate accounting treatment for the government's jointly sponsored pension plans, the AG recently reported that the government is not correctly accounting for the full cost of the Fair Hydro Plan in its financial statements.[2] As a result, the government's fiscal presentation is expected to continue to receive qualified opinions from the AG.

Commented [KK1]: There is no mention of the findings of the independent Pension Asset Expert Advisory Panel. Even if the FAO disagrees with the findings there should be a reference that the Government has followed the Panel's recommendation in accounting for pension assets.

Revenue Outlook

The FAO is projecting average annual revenue growth of 3.1 per cent over the forecast. In 2017-18, revenues are supported by strong growth in taxes, as well as a number of time-limited or one-time revenues. Beginning in 2018-19, the FAO is projecting more moderate revenue growth as:

- time-limited revenues end (including the debt retirement charge and federal equalization payments);
- economic growth moderates, following several years of stronger than average growth; and
- the fiscal impact of the Fair Hydro Plan increases, reducing electricity-sector revenues.



Tax Revenue Growth Expected to Moderate

Nominal GDP, the broadest measure of the tax base, is projected to grow by a strong 4.7 per cent in 2017, supporting a 4.6 per cent increase in tax revenues in 2017-18. From 2018 to 2021, annual GDP growth is expected to moderate to 4.1 per cent, leading to similar slowing in tax revenue growth to 4.1 per cent on average over this period.

In the government's Fall Economic Statement, tax revenue is projected to grow by 5.2 per cent on average from 2017-18 to 2019-20, much higher than the FAO's projection of 4.3 per cent over the same period. The government's expectation of higher growth results in an additional $2.9 billion in tax revenues by 2019-20, relative to the FAO projection.

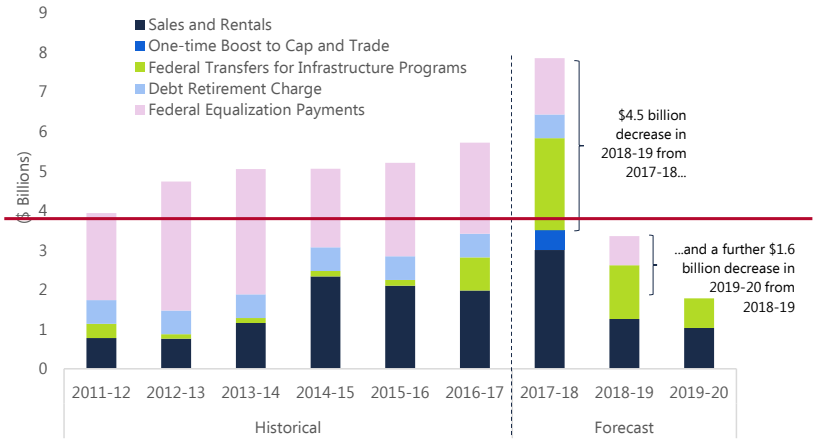
While the FAO expects incomes and household spending to grow somewhat faster than recent historical trends,[3] the government's tax revenue forecast is based on significant and sustained above-trend growth for each of the three key tax drivers.

The Loss of Time-limited Revenues

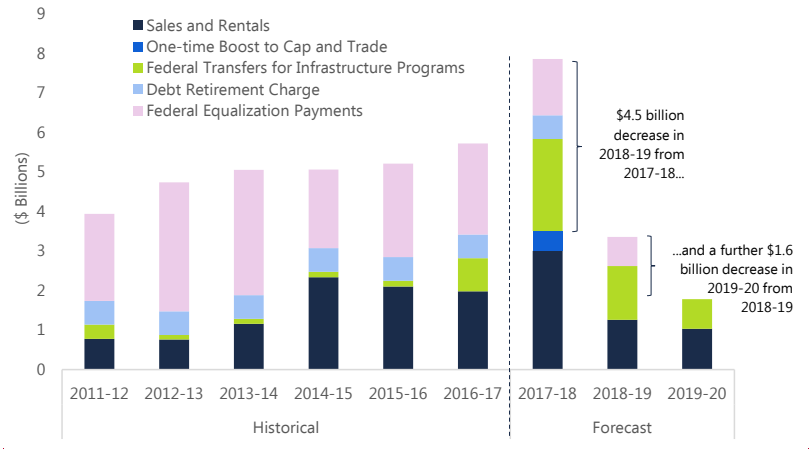
The Province's 2017-18 revenues incorporate a number of one-time or time-limited revenues that are set to expire. These include:



- a temporary increase to sales and rentals revenue, reflecting additional asset sales[4];
- higher federal transfers for infrastructure;

3 Labour income is expected to grow above trend in part due to the increased minimum wage over the outlook (which is also expected to boost household spending). Estimates of Ontario corporate profits over the first half of 2017 imply very strong growth.
4 Asset sales include the Province's 22 per cent sale of Hydro One equity in 2017-18, which the FAO estimates would generate about $0.8 billion in revenue.

- the final year of the debt retirement charge[5];
- federal Equalization payments, which the FAO estimates will end in 2019-20; and
- revenue from an additional cap-and-trade auction that occurred in March 2017, which will be recognized in the 2017-18 fiscal year.[6]

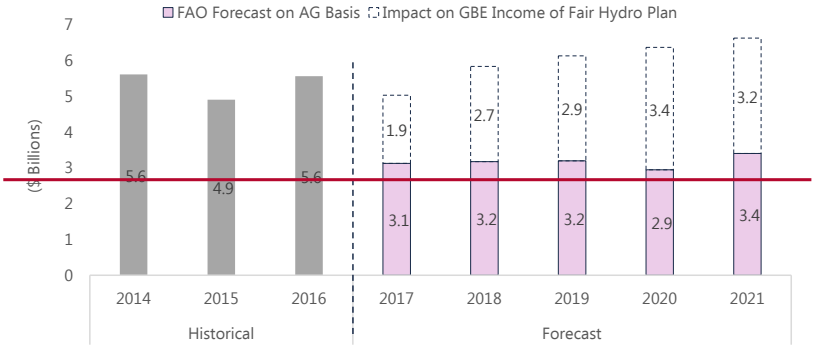


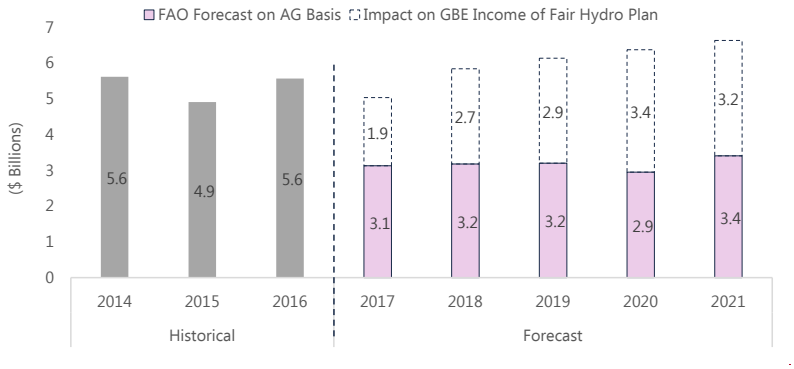
Taken together, these time-limited revenues will decrease by $4.5 billion in 2018-19, and by an additional $1.6 billion in 2019-20.

Many Time-limited Revenues are Set to Expire Beyond 2017-18

5 The debt retirement charge (DRC) is a charge payable on electricity consumed in Ontario and replaces a portion of debt servicing costs previously included as part of electricity bills before the restructuring of the former Ontario Hydro. The DRC will remain on electricity users' bills for electricity consumed before April 1, 2018.

6 In fiscal year 2017-18, there were five cap and trade auctions. Going forward the Provinces expects to have four auctions per year.





Source: Ontario Budgets, Ministry of Finance and FAO.

Government Business Enterprises and the Impact of the Fair Hydro Plan

The government introduced the "Fair Hydro Plan" to reduce electricity bills for residential customers by an average of 25 per cent. The government's plan includes subsidizing electricity prices for ratepayers through provincial and Ontario Power Generation (OPG) borrowing. Consistent with the AG's recommendation, the FAO captured the fiscal impact of this borrowing by reducing the net income of OPG by $1.9 billion in 2017-18, and by $3.2 billion by 2021-22.

Impact of the Fair Hydro Plan on Ontario's Revenue from 'Government Business Enterprises'

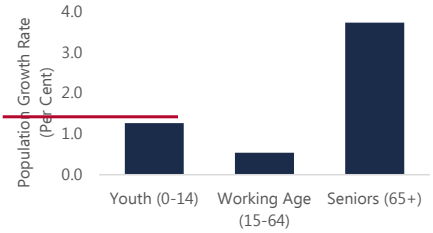
Source: Public Accounts, 2017 Ontario FES and FAO.

FAO Revenue Assumptions and Forecast

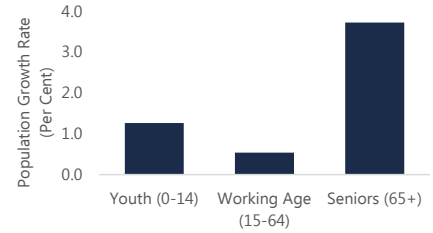
Revenue Source	Assumption	Forecast
Taxation Revenue	Grows with key economic drivers including labour income, corporate profits and household spending	Averages 4.2 per cent growth per year from 2017-18 to 2021-22[7]
Federal Transfers	Based on legislated growth rates and economic forecasts for Ontario and Canada	Federal transfers are expected to grow by 1.6 per cent per year from 2017-18 to 2021-22
Government Business Enterprises (GBE)	Based on government projections, and adjusted for the impact of the Fair Hydro Plan as recommended by the Auditor General	Income from GBEs are projected to fall from $5.6 billion in 2016-17 to $3.1 billion in 2017-18 and remain roughly stable at that level to 2021-22
Other Revenue	Based on government projections, and includes asset sales, and proceeds from the sale of cap and trade allowances	These revenues are projected to increase from $16.3 billion in 2016-17 to $19.4 billion in 2017-18, before declining to $18.0 billion by 2021-22

Expense Outlook

Program Spending



The FAO projects program spending to grow by 3.9 per cent from 2017-18 to 2021-22. [8]



7 The reduction in the Small Business Corporate Income Tax rate is reflected in the FAO's tax revenue projections.
8 Excluding the pension adjustment, the FAO projects program spending to grow by 3.5 per cent on average from 2017-18 to 2019-20, largely unchanged from the FAO's Spring EFO.

Over the 2017-18 to 2019-20 period, the FAO's outlook adopts the government's 2017 Fall Economic Statement's projections for program spending, adjusted to reflect the Auditor General's recommended accounting presentation.[9] The projection for program spending is largely unchanged from the 2017 Ontario Budget, aside from $200 million of new spending in 2017-18, declining to $100 million by 2019-20.[10]

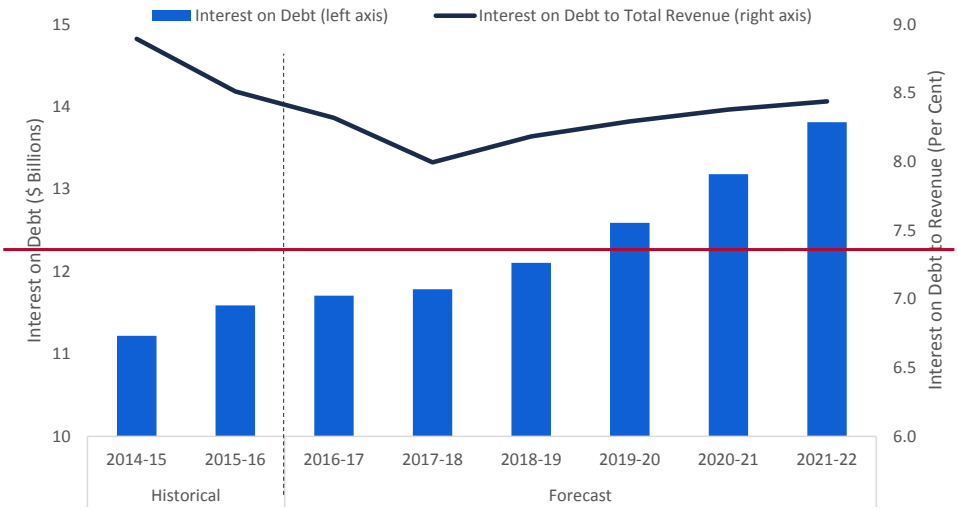
Beyond 2019-20, the FAO projects program spending will grow at an annual average rate of 4.1 per cent. This stronger pace of growth reflects additional spending to meet two demographic pressures: the aging baby boomer cohort and the growing youth population. The growth in these two population groups will place added spending pressures on Ontario's health care and education systems.

Population Growth by Age (2016-2021)

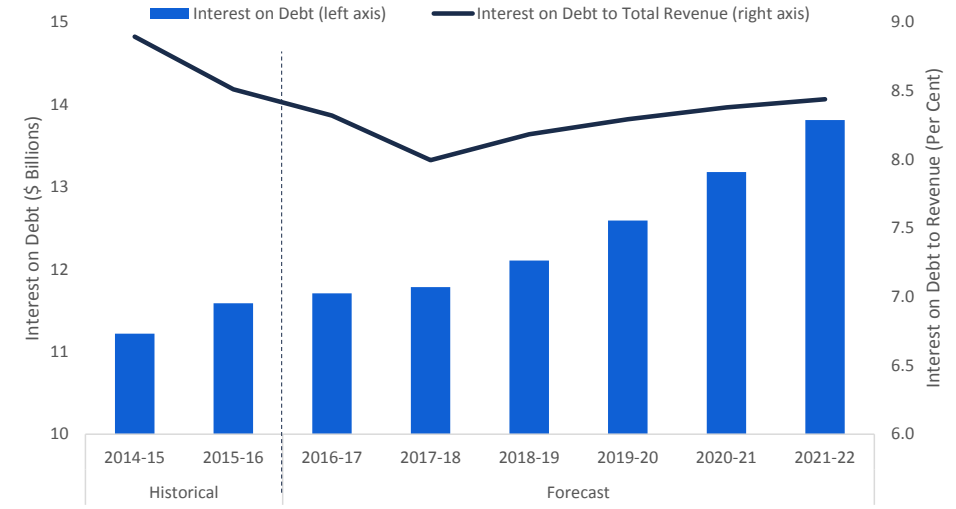
Source: Statistics Canada and FAO

Interest on Debt

Interest on debt (IOD) payments are expected to increase at an average rate of 3.4 per cent per year over the outlook due to elevated borrowing levels and rising interest rates.



The decline in IOD as a share of revenues over the past three years was due to stronger revenue growth, lower borrowing and maturing debt being refinanced at much lower rates of interest. However, this trend is expected to reverse over the outlook as revenue growth moderates while IOD payments accelerate. By 2021-22, Ontario's debt interest payments will account for 8.4 per cent of total revenue, slightly higher than the 8.~~1~~ 2 per cent share in 2017-18.



Commented [AK2]: 2017 FES; it appears that the FAO does not use BPS-consolidated IOD; this choice also affects the IOD chart on page 6.

9 Based on information provided by the Ministry of Finance, the FAO's projection for 'Other Spending' includes $2.3 billion in 2017-18 for the valuation allowance on jointly-sponsored pension assets, growing to $2.9 billion by 2021-22.

10 In the 2017 FES, the government announced new funding for additional spending for small businesses, seniors and child care. However, the additional expenses for child care is fiscally neutral since it is funded by a corresponding increase in federal transfer revenue.

Interest on Debt

Source: Ontario Public Accounts and FAO.

Borrowing and Net Debt

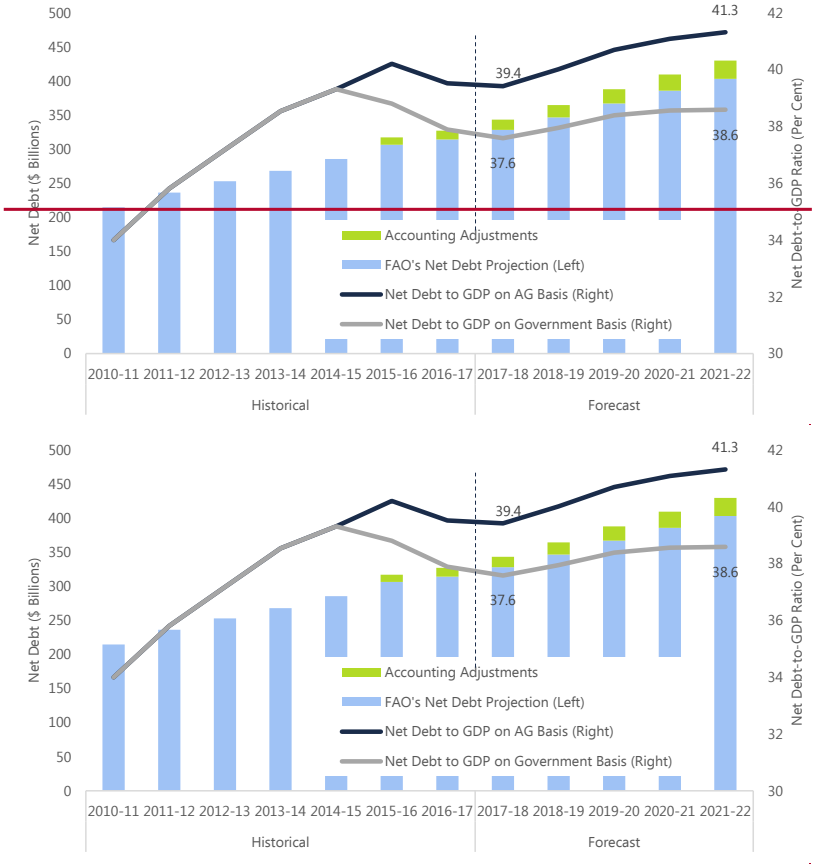
Despite higher funding requirements for capital expenditures and the Fair Hydro Plan, Ontario's borrowing is expected to decline to $~~23~~25.8 billion in 2017-18, the lowest level of borrowing since 200~~78~~-

09. The relatively low level of borrowing in 2017-18 is largely the result of debt maturities falling by $~~4.1~~3.5 billion to $17.4 billion.[11]

Beginning 2018-19, borrowing requirements are expected to increase significantly due to higher annual debt maturities~~, additional funding requirements for the Fair Hydro Plan~~ and rising capital expenditures. By 2021-22, the FAO expects borrowing to increase to $42 billion – nearly double the borrowing requirement in 2017-18.

In 2017-18, the FAO projects that Ontario's net debt-to-GDP ratio will edge down, reflecting lower borrowing and strong economic growth. However, over the next five years, the FAO projects that nearly $90 billion will be added to net debt – increasing the net debt-to-GDP ratio to 41 per cent by 2021-22.[12]

Commented [AK3]: 2016-17 maturities of 20.9 (from Q1 Finances) minus 2017-18 maturities of 17.4 (from FES FT)



Commented [JP4]: The Province has already factored in all borrowing requirements, including the debt burden projections for the Fair Hydro plan for that year, in consultation with OPG and retained consultants. The $42 billion therefore is in excess of Ontario's projection by a significant amount.

Commented [BL5]: The change in net debt reflects the change in the deficit and the change in Net Investment in Tangible Capital Assets – it should not be attributed to lower borrowing which is really the outcome

Commented [JP6]: With regard to the 41% by the FAO in 2021-22, the Province projects it to be 36.1% for that year as published in the Fall Economic Statement. In the Province's opinion, the FAO is likely factoring in a budget deficit that the government does not project for that year given the balanced budget commitment The FAO's projections include the addition of the 2015-16 Pension adjustment despite the pronouncements of the Expert Panel that confirmed the correctness of the Government's accounting treatment of this asset The reversal of the pension adjustment is correct and in line with the recommendations of the Independent Pension Asset Expert Advisory Panel. The FAO also includes additional Fair Hydro Plan debt that is not in line with provincial projections already incorporated in the Province's Borrowing Program for 2017-18 and the two out years. The incremental borrowings for funding the Province's equity injection to OPG over the FES outlook period is a small fraction of the Province's borrowings and have no impact on the Province's net debt.

11 When debt matures the government must roll over the maturing debt with new borrowing. Declines in maturities result in lower borrowing and vice versa.
12 The FAO's estimate of net debt incorporates the AG's recommended accounting framework.

Net Debt Outlook

Source: FAO and 2017 Ontario Economic Outlook and Fiscal Review, Ontario Public Accounts

The government continues to maintain a net debt-to-GDP target of 35 per cent by 2023-24 and 27 per cent by 2029-30. However, the FAO's net debt-to-GDP projections under both accounting presentations suggest that additional fiscal measures would be required for the government to achieve its net debt-to-GDP targets.

Subject: RE: RUSH MO Question: IESO Accounting Standards

Hi Sarah,

Here is my response below:

During the 2015-16 Public Accounts audit, the Auditor General (AG) raised issues regarding the Province's accounting treatment for pension assets related to jointly sponsored pension plans which challenged the accounting treatment followed by the Province for the past 14 years. The current AG's view is that the government does not have a legally enforceable right to unilaterally access the assets of the pension plans which are jointly sponsored. Given the differences in interpretation of accounting standards, the Province filed a time-limited regulation which changed the accounting treatment for pension assets of OTPP and OPSEUPP for the 2015-16 Public Accounts.

The one-time regulation only applies to provincially jointly sponsored plans, and does not apply to the pension liabilities reported by Independent Electricity System Operator.

Regards,

Pauline

Importance: High

Hi Pauline,

Rush MO Question on a change in accounting standards on the calculation of pension liabilities.. Can we provide in basic terms what the change was, and why it would affect the IESO?

Energy will also be providing a response, so ours can focus on the accounting practices piece.

Happy to discuss

Thanks
Sarah

Subject: RUSH MO Question: IESO Accounting Standards
Importance: High

Hi Sarah and Patrick,

We have a rush question from the Minister's Office this morning. There is has been some media and opposition attention on the IESO's reported loss of $80M due to a change in accounting standards. The story below and attached detail the story.

> **>Ontario<**'s energy minister says an $80 million actuarial loss reported by the Independent Electricity System Operator was due to a change in accounting practices on the calculation of pension liabilities.
>
> The IESO, which oversees **>Ontario<**'s electricity market, says the accounting changes were implemented in 2011, and it recovers the loss by increasing fees for its accumulated **>deficit<** by up to $5 million a year.

The Minister is asking for very basic lines to talk about the accounting in the instance she needs to answer a supplementary in Question Period today. We have also reached out to Energy as well for messaging. I apologize for the rush on this.

Many thanks,
Emilie

IESO reports $80M loss from accounting change (Canadian Press)

- **Section**: News/Ontario
- **Ad Value**: $35
- **Tone**: **Neutral**

TORONTO - Ontario’s efforts to ease the upward pressure on electricity rates has been dealt a setback by a change in accounting practices.

In the government’s public accounts for 2015-16, the Independent Electricity System Operator reported a “previously unrecognized actuarial loss and past service costs” of just over $80 million.

The provincial agency which oversees Ontario’s electricity market says it will raise fees it charges the power industry to recover the losses as part of its accumulated deficit charge.

Progressive Conservative researchers discovered the $80 million loss in the public accounts and the Opposition plans to raise the issue in the legislature today.

The Tories point out the loss more than offsets the $70 million the Liberals said would be saved over seven years under Ontario’s new deal to purchase two terawatt hours of electricity annually from Quebec.

The Liberals are also removing the eight per cent provincial portion of the HST from electricity bills, and scrapping plans for more wind and solar power projects, to reduce system costs and ease upward pressure on rates.

The IESO, which combined operations with the now-defunct Ontario Power Authority in January 2015, had an accumulated deficit of $74 million and a net debt of $184 million, with revenues of $187 million.

Hi Lynsey

I spoke to Cindy and she indicated our DMO had a copy of the report. Can you pls request Chris to forward same to you.

Not only do I want to read it for professional reasons but as per a previous email from Gadi, Bonnie will be letting the Rating Agencies know about this on Feb 13th the day of release. Usually, I am the one who is then pulled in to the tele conferences to respond to complex accounting questions, if any of course.

So reading the report ahead of time will be useful.

Thanks

Subject: Request for nominal GDP estimates
Importance: High

Hi Ghufran,

I spoke with David earlier today and gave him some context re. our request. Gadi will have a briefing with Scott next week regarding the Debt chapter in the next Budget, and we need to update some net debt-to-GDP estimates per Scott's request. Our Finance and Treasury division runs a scenario analysis to see when we would be able to bring down the ratio to 27%. **For that reason, we need the latest estimates you have for nominal GDP for 2016 as well as the out years, going all the way out to 2030.**

Rest assured that numbers won't be shared, they will be used for the analysis and ratios. Since there are many slides to update, and the analysis to run, **we would appreciate getting the numbers by EOD or tomorrow morning at the latest.**

Thank you,

Erica

Subject: FW: Request for nominal GDP estimates

Hi Shemin,

Here are the new GDP numbers, please use it for the analysis and send to Serena and I as soon as ready.
Thanks,

Erica

Subject: FW: Request for nominal GDP estimates

Hi Erica,

Please find attached the current, best estimate nominal GDP forecast. Included is the FES forecast for reference.

Please note this is subject to revisions in coming weeks as we work towards the Budget forecast.

Don't hesitate to contact us if you have questions.

Cheers,
Mark

Subject: Request for nominal GDP estimates
Importance: High

Hi Ghufran,

I spoke with David earlier today and gave him some context re. our request. Gadi will have a briefing with Scott next week regarding the Debt chapter in the next Budget, and we need to update some net debt-to-GDP estimates per Scott's request. Our Finance and Treasury division runs a scenario analysis to see when we would be able to bring down the ratio to 27%. **For that reason, we need the latest estimates you have for nominal GDP for 2016 as well as the out years, going all the way out to 2030.**

Rest assured that numbers won't be shared, they will be used for the analysis and ratios. Since there are many slides to update, and the analysis to run, **we would appreciate getting the numbers by EOD or tomorrow morning at the latest.**

Thank you,

Erica

Attachments:	DRAFT Public Accounts 2016-17 QA August 31 OFA JP.docx

Matt,

Please find attached my edits. To summarize:

Question 10 (page 8) and question 39 (page 30) . Added a sentence about BC and Quebec qualified opinions not affecting their Credit Rating. However, David Cross may have further edits for question 39.

Question 29 (page 25), added "lower than forecast deficit" and deleted the phrase about IOD staying low to 2019-20 (It actually slightly rises).

Question 30 (page 26) added the phrase from the Budget that for every $1 spent on infrastructure, GDP rises by $6. (This is $6 reference is mentioned in question 27 already)

Thanks.

John

Hi All,

Attached are Media Q&As for PA, the timeline for the response is EOD Friday. It looks like there have been a lot of questions added since the ADM signoff on Tuesday.

David, questions 40 and 41 related to credit ratings (also looking confirmation on Q29 stating Ontario being most indebted sub sovereign in the world, which I recall being the case).

Darren, questions 32 and 47 relate to the Hydro rebate plan and the Hydro One sale, I believe that's something you'd take a look at in Francisco's absence?

John as we discussed 29, 30, 31 are IOD related.

Please also take a scan through in case there is anything else not mentioned.

Thanks,
Matt Breadner on behalf of Anna Strathy

Hi everyone –

Sorry for the slow share, been a crazy day. I'm not sure if folks received this through other channels – the email below suggest you may have – but being cautious and ensuring.

Not the timelines to respond by EOD Friday.

Thanks,

P.

Importance: High

Hi Sarah, Patrick,

In follow-up to the ADM approvals of communications products for Public Accounts yesterday (Aug 29) morning, we have updated our comprehensive media Q&A document.

Please see attached for the comprehensive media Q&A document, which includes "top media questions" (approved by TBS/MOF ADMs yesterday), as well as other questions related to accounting changes, debt, deficit, Trillium Trust, etc. While the document is long, many of the questions re-iterate key information that is included in the already-approved top media questions section.

For your reference, I will also be sending this document to MOF Communications for their review, as well as to Energy (for questions related to Fair Hydro).

Can you please review the document and **provide your feedback/approval** for the questions relevant to OPCD and OTB **by Friday September 1st end of day**. We appreciate your work on this as we continue to work toward deadlines for DMO/MO approvals.

David- cc-ing you for your review on the Trillium Trust questions in particular (and to confirm will also be sharing this with MOF).

Thank you, and please do not hesitate to let us know if you have any questions.

Best,

Alisha

DRAFT

Top Media Qs&As

Top media Qs&As have been approved by TBS & MOF ADMs on August 29, 2017

1. **The Auditor General has issued a qualified opinion for the second year in a row. Is this a sign of fiscal mismanagement?**

   We continue to move forward and present the Province's finances fairly and accurately and in accordance with Canadian Public Sector Accounting Board standards. Ontario has a strong track record of producing high-quality financial reports on a timely basis. The Auditor General's qualified opinion is based on a different interpretation of Public Sector Accounting Board standards for net pension assets and recognition of market accounts.

   Last year there was a disagreement among the Province's professional accounting staff and the Auditor General's Office on the appropriate application of Public Sector Accounting Board standards regarding pension accounting.

   As a result, the Pension Asset Expert Advisory Panel was established to deliver independent advice and recommendations on the issue to the Province.

   The independent panel members concluded the Province's share of the net pension assets of both the Ontario Teachers' Pension Plan and the Ontario Public Service Employees' Union Pension Plan should be recognized in Ontario's financial statements.

   After significant deliberation, including consideration of the recommendations of the panel, Ontario confirmed that the accounting for these plans prior to 2015-16 was appropriate, and are prepared in accordance with public sector accounting standards for pension asset accounting. Further, Ernst & Young LLP provided additional analysis and concluded that no valuation analysis was required for either plan. The 2016-17 financial statements include these pension assets, and we continue to apply the accounting treatment of pension assets that the Province has used consistently since 2001.

   This year the Independent Electricity System Operator (IESO) began recognizing its market accounts' assets (amounts due from power distributors) and liabilities (amounts due to power producers) in their financial results. IESO has chosen to recognize these markets accounts on its books for transparency reasons, as it better reflects its net financial position on behalf of the IESO-administered markets at year-end. This change was supported by the IESO's audit committee, an independent external auditor, and finally by the Office of the Provincial Controller. This change also has no impact to the province's annual deficit, net debt or accumulated deficit.

   This accounting is consistent with the presentation used previously by the Ontario Power Authority (which was merged with the IESO on January 1, 2015)

in its financial statements, which was not subject to qualification from the Office of the Auditor General at that time.

2. The Auditor General is critical of the IESO accounting changes. Is this another example of Ontario's 'funny math'?

No. The Independent Electricity System Operator (IESO) began recognizing its market accounts' assets (amounts due from power distributors) and liabilities (amounts due to power producers) in their financial results. IESO has chosen to recognize these markets accounts on its books for transparency reasons, as it better reflects its net financial position on behalf of the IESO-administered markets at year-end.

Public Sector Accounting Board standards encourage preparers and auditors to consider guidance in other accounting frameworks to address transparency and accountability:

- This accounting change was accepted by the IESO's independent external auditor, which issued an unqualified, or "clean," audit opinion. These accounting changes were highlighted in the IESO's annual report which was published online in March 2017.
- Further, this accounting is consistent with the presentation used previously by the Ontario Power Authority (which was merged with the IESO on January 1, 2015) in its financial statements, which was not subject to qualification from the Office of the Auditor General at that time.

This change has no impact to the province's annual deficit, net debt or accumulated deficit.

As such, this accounting change has been supported by the professional accounting staff of the Office of the Provincial Controller.

We will continue to work with the Auditor General to build on the government's track record of responsible fiscal management and high quality financial reporting.

If pressed on rate-regulated accounting:

The IESO made the decision to adopt rate-regulated accounting because it better reflects the economic substance of certain types of expenses that may not be directly recovered through the normal revenue requirement model.

The IESO, like Hydro One and Ontario Power Generation (OPG), is regulated by the Ontario Energy Board. The IESO adopted rate-regulated accounting for its year ended December 31, 2016. The impact on the financial statements of the

DRAFT

Province is a decrease of $82 million in the 2016-17 opening accumulated deficit and an increase in the 2016-17 annual deficit by $24 million.

This accounting change was accepted by the IESO's independent external auditor, which issued an unqualified, or "clean," audit opinion. These accounting changes were highlighted in the IESO's annual report which was published online in March 2017.

3. Why are you still fighting with the Auditor General over pension accounting?

In preparing last year's Public Accounts, the Province's professional accounting staff and the Auditor General's Office engaged in discussions about the appropriate application of Public Sector Accounting Board standards regarding pension accounting for the Province's jointly sponsored pension plans.

As a result, the Pension Asset Expert Advisory Panel was established to deliver independent advice and recommendations to the Province on the issue. The independent panel members concluded the Province's share of the net pension assets of both the Ontario Teachers' Pension Plan and the Ontario Public Service Employees' Union Pension Plan should be recognized in Ontario's financial statements.

After significant deliberation, including consideration of the recommendations of the panel, Ontario confirmed that the accounting for these plans prior to 2015-16 was appropriate. Further, Ernst & Young LLP provided additional analysis and concluded that no valuation analysis was required for either plan. The 2016-17 financial statements include these pension assets, and we continue to apply the accounting treatment of pension assets that the Province has used consistently since 2001.

We will continue to work with the Auditor General to build on the government's track record of responsible fiscal management and high quality financial reporting.

4. How were you able to beat your deficit target in 2016-17?

In 2016-17 we maintained our focus on responsible fiscal management and investing in the right priorities. We are making progress on our economic plan by making investments to spur growth, transforming government and responsibly managing spending.

Average annual growth of total government spending has been held to 2.3 per cent for the past five years. As a result of growth in revenue that exceeded growth in program expense, as well as lower than forecast interest on debt, the

deficit is $3.3 billion lower than projected in the 2016 Budget. It is also $0.5 billion lower than the interim projection in the 2017 Budget.

This is the eighth year in a row the government has beaten its deficit target.

5. **The government is claiming the deficit has been reduced to $1B deficit for 2016-17 and that the budget will be balanced over the next three years. However, the AG is saying that the deficit for 2016-17 was more than $2B due to the treatment of pension assets, and the FAO has stated that the government's revenue forecast is more than $1B too "optimistic". Isn't the government really hiding a $3-4B deficit instead of a balanced budget?**

Commented [AT1]: From MOF; updated Aug 29

There is no hidden deficit. In the *2010 Budget*, the government committed to eliminating the deficit and returning to a balanced budget by 2017-18. Through targeted, measured and fiscally responsible decisions, Ontario has restored its fiscal and economic strength.

Today we are confirming that the 2016-17 deficit of $1 billion is $3.3 billion lower than projected in the 2016 Budget and $0.5 billion lower than the interim projection in the 2017 Ontario Budget. This marks the eighth year in a row that Ontario has beaten its deficit target.

The success in eliminating the deficit is supported by a strong track record in managing spending -- having held average growth in spending to 2.3 per cent over the past five years.

In addition, over the last several years, the government's investments to strengthen economic growth have paid off. Ontario is a leader in economic growth, with our real GDP having outpaced that of all the G7 countries for the last three years. The strengthened economy has resulted in increased revenue for the Province – in fact, over the past two fiscal years, revenue has come in higher than projected, supporting Ontario's return to a balanced budget.

It is also important to point out that private sector forecasters have revised upward their expectations for the Ontario economy since the 2017 Budget, reflecting the growing strength of the Ontario economy. The government is also taking steps to improve tax fairness and address the underground economy in order to ensure the integrity of the Province's revenues.

Finally, Ontario's fiscal plan incorporates prudence in the form of a reserve to protect the fiscal outlook against unforeseen adverse changes in the Province's revenue and expense. The reserve has been set at $0.6 billion in 2017-18, $0.6 billion in 2018-19, and $0.9 billion in 2019-20.

Balancing the budget means that the government can invest more in the programs and services that people rely on.

DRAFT

6. **Interest on debt is still massive and the Bank of Canada is expected to raise interest rates again this fall. How is the government preparing for this and will this affect your ability to maintain a balanced budget?**

   The increase in the Bank of Canada's policy rate reflects the growing strength of the Canadian and Ontario economy. Ontario's economy remains strong and has continued to grow and create jobs in an uncertain global environment.

   A quarter-point increase in the policy rate is not likely to have a material impact on the Ontario economic outlook. The 2017 Ontario Budget anticipated that the interest rates would rise modestly.

   As noted in the 2017 Budget, the Province's average cost of 10 year borrowing in 2017-18 is forecast to be 3 per cent. The impact of a 100 basis point increase in borrowing rates is forecast to be approximately $300 million. The interest rate forecast used in the Budget was prudent, and anticipated that long-term interest rates would rise as we progressed through the fiscal year.

7. **You claim to have balanced the budget yet you keep piling on more debt. How do you plan to pay down the debt?**

   Commented [AT2]: From MOF/OFA; updated Aug 30

   We maintain a target of reducing the net debt-to-GDP ratio to its pre-recession level of 27 per cent, with current projections showing that this will be achieved by 2029-30. In the balanced 2017 Budget, the government is setting an interim target to reduce the net debt-to-GDP ratio to 35 per cent by 2023–24.

   In a balanced budget environment, debt would be incurred primarily to invest in capital assets. We are making progress on our economic plan by making investments to spur growth, transforming government and responsibly managing spending – including addressing the underground economy and maintaining tax fairness. Our strategic investments in infrastructure provide economic benefits: a recent study by the Centre for Spatial Economics (C4SE) finds that, over the long term, real GDP in Ontario will rise up to $6 on average per one dollar of public infrastructure spending.

   These strategic investments are creating jobs and contributing to economic growth. Ontario's GDP grew one per cent in the first quarter of 2017, outperforming that of Canada, the U.S. and all other G7 countries.

8. **Spending for hospitals, school boards and colleges seems to be much higher in Public Accounts than in the 2017 Budget. Why is this?**

   To increase transparency, this year we have made a simple change to how we are reporting third party revenues for broader public sector organizations.

DRAFT

For the first time, Public Accounts are presenting third party revenues for hospitals, school boards and colleges with provincial revenue. Third party revenues earned by these organizations, such as tuition fees, patient fees, research grants and donations, are no longer netted against the respective sectors' expenses, as they were in prior years for Public Accounts and the 2017 Budget.

This is simply a presentation change for Public Accounts. It is fiscally neutral, i.e. there is no change to the annual deficit, net debt or accumulated deficit. To ensure consistency in year-to-year and to Budget comparisons, we are reclassifying all previous years and the 2016 Budget. The 2017 Fall Economic Statement and 2018 Budget will also reflect this presentation change.

The Auditor General supports the Province's decision to adopt this presentation change. It is consistent with the accounting principles for governments issued by the Public Sector Accounting Board, and the reporting practices of other senior Canadian governments.

9. The Public Accounts show a drawdown of $260 million from the Trillium Trust. What did you spend the money on?

The government began allocating proceeds from the Trillium Trust in 2016-17 to help support infrastructure initiatives such as GO Regional Express Rail (GO RER), the Hurontario Light Rail Transit (LRT) and the Ontario Community Infrastructure Fund (OCIF).

We expect the Trillium Trust to be drawn down by about an additional $400 million in 2017–18.

Our strategic investments in infrastructure provide economic benefits: a recent study by the Centre for Spatial Economics (C4SE) finds that, over the long term, real GDP in Ontario will rise up to $6 on average per one dollar of public infrastructure spending.

10. Does a qualified opinion impact the Province's credit rating?

The Province's financial results show that the government has once again beaten its annual deficit targets. In April 2017, we delivered our first balanced budget since the global recession and we are on track to do so again next year and the year after.

The rating agencies will assess whether the underlying factors that lead to a qualified opinion directly affect the creditworthiness of the Province. However, there were no credit rating implications in 2016 when the Province received a qualified audit opinion on its 2015-16 Public Accounts. Qualified opinions by the Auditor Generals of British

DRAFT

Columbia and Quebec have been made in their respective provinces in the past, with no negative impacts on their province's credit ratings.

In 2017 the C.D. Howe Institute, an independent research organization that assesses the fiscal planning and reporting of governments in Canada, also commented positively on the financial reporting practices of Ontario relating to its fiscal reporting activities that include Public Accounts, the annual Budget and Estimates.

11. The Auditor General has some serious concerns about how you're accounting for the Fair Hydro Plan. What do you say to this?

The accounting for the Fair Hydro Plan is a separate and distinct issue to the Public Accounts for 2016-17 that we're here to talk about today.

However, under the Fair Hydro Plan accounting structure, the Province's net debt and annual surplus/deficit won't be negatively impacted since all costs are expected to be recovered through future rates.

The Ministry of Finance continues to work closely with Treasury Board Secretariat, the Ministry of Energy, Ontario Power Generation (OPG), the Independent Electricity System Operator (IESO) and external advisors to address the outstanding accounting related considerations which will be key to managing the fiscal impact of the Global Adjustment refinancing.

The Auditor General has also been briefed on the government's refinancing structure.

For further questions, I direct you to contact my colleague at the Ministry of Energy.

12. Program spending increased again this year. Why?

Program spending in 2016-17 was $141.7 billion, down $0.1 billion from the 2016 Budget. Average annual growth of total government spending has been held to 2.3 per cent for the past five years.

Healthcare represents the largest share of government program spending at $56 billion. Transformation efforts continue to make the sector more effective and sustainable while continuing to improve access for patients, especially the increased demands from an aging and growing population. The government has invested in new drugs, technologies, community and home care, long term care homes, mental health, physicians' services and specialized cancer treatments.

Other increases include:

DRAFT

- $26.6 billion in education, mainly due to the introduction of full-day kindergarten;
- $16 billion in children's and social services, due to increased annual social assistance rates as well as investments in developmental services, autism and complex special needs programs, as well as the Ontario Child Benefit;
- $10.1 billion in post-secondary and training, due to enrolment growth in colleges and universities along with increased student financial assistance programs and increases in capital funding for post-secondary institutions;
- $4.6 billion in justice sector expenses due mainly to the upload of court security costs from municipalities, compensation for the Ontario Provincial Police and correctional services programs, as well as improved access to legal aid.

DRAFT

Media Qs&As – Comprehensive List

General Public Accounts Information

1. **What is Public Accounts?**

   The Public Accounts of Ontario is a key accountability and transparency document in the government's financial cycle. It's a look back that compares Ontario's actual performance to what was planned in the Budget.

   The Public Accounts present the financial statements of the Province, provide financial highlights of the past fiscal year, and report on performance in priority areas.

   Public Accounts is audited by the Auditor General and is typically released in the fall of the following fiscal year.

2. **Why can't I find some organizations' financial statements in the Public Accounts?**

   Volume 2 contains the individual financial statements of government organizations, business enterprises and other financial statements. At the time of print, some organizations may not have had time to provide their financial statements. When this happens, we post them to Ontario.ca/publicaccounts as soon as they're available. The omission has no impact on the financial results reported in Public Accounts.

Accounting Changes

3. **Why have you restated prior year's financial statements?**

   When preparing the 2016-17 Public Accounts, Ontario's professional accounting staff adopted accounting changes to further enhance accountability and transparency.

   These changes include:
   a. **Accounting for hospitals, school boards and colleges** - third-party revenues (i.e. tuition fees, patient fees, research grants and donations) are now reported together with provincial revenue. This change increases transparency and is supported by the Auditor General.
   b. **Accounting for energy sector government business enterprises** - the financial results of investments in Hydro One and Ontario Power Generation (OPG) now reflect International Financial Reporting Standards. Previously, these results were reported using U.S. Generally Accepted Accounting Principles. This change was made to meet Public Sector Accounting Board standards and is supported by the Auditor General.

DRAFT

c. **Accounting for the Independent Electricity System Operator (IESO)** - the IESO has adopted rate-regulated accounting, and is now recognizing its market accounts assets and liabilities in its financial results.
d. **Accounting for net pension assets of jointly sponsored pension plans** - the Province is reporting net pension assets for jointly sponsored pension plans. This is in line with Public Sector Accounting Board standards and the recommendations of the independent Pension Asset Expert Advisory Panel.

- **Broader Public Sector Accounting Presentation Change**

4. Spending for hospitals, school boards and colleges seems to be much higher in Public Accounts than in the 2017 Budget. Why is this?
(Has been approved by TBS & MOF ADMs on August 29, 2017)

Commented [AT3]: Top Ten; updated Aug 29

To increase transparency, this year we have made a simple change to how we are reporting third party revenues for broader public sector organizations.

For the first time, Public Accounts are presenting third party revenues for hospitals, school boards and colleges with provincial revenue. Third party revenues earned by these organizations, such as tuition fees, patient fees, research grants and donations, are no longer netted against the respective sectors' expenses, as they were in prior years for Public Accounts and the 2017 Budget.

This is simply a presentation change for Public Accounts. It is fiscally neutral, i.e. there is no change to the annual deficit, net debt or accumulated deficit. To ensure consistency in year-to-year and to Budget comparisons, we are reclassifying all previous years and the 2016 Budget. The 2017 Fall Economic Statement and 2018 Budget will also reflect this presentation change.

The Auditor General supports the Province's decision to adopt this presentation change. It is consistent with the accounting principles for governments issued by the Public Sector Accounting Board, and the reporting practices of other senior Canadian governments.

5. What is consolidated reporting?

This presentation change may also be referred to as line-by-line consolidated reporting. This type of reporting is a more transparent way of presenting the details in the Broader Public Sector (BPS).

This change means that both expenses and revenues will be shown as separate items (on a gross basis), as opposed to being reported together (on a net basis).This affects what you see in the reporting breakdown of figures for hospitals, school boards, colleges and universities. However this has no impact to the annual deficit, net debt or accumulated deficit.

DRAFT

Line-by-line consolidated reporting is in keeping with Public Sector Accounting Board standards and will mean that our presentation for Public Accounts is consistent with other governments across Canada. The Auditor General is supportive of this change.

- ## Ontario Power Generation and Hydro One Accounting Change

6. Why is there a change to the accounting for Ontario Power Generation (OPG) and Hydro One?

In the 2016-17 Public Accounts, the financial results of Ontario's investments in Hydro One and Ontario Power Generation (OPG) now reflect International Financial Reporting Standards. Previously, these results were reported using U.S. Generally Accepted Accounting Principles. This change was made to meet Public Sector Accounting Board requirements and is supported by the Auditor General.

7. What is the impact of this change to their bottom line?

Energy and OPCD to provide details

- ## Pension Asset Accounting

See section: Auditor General – Qualified Opinion for more information.

- ## Independent Electricity System Operator (IESO) Accounting Changes

8. What accounting changes were made by the Independent Electricity System Operator (IESO)? Why?

Commented [AT4]: Updated Aug 29 using content approved byTBS/MOF ADMs

The Independent Electricity System Operator (IESO) began recognizing its market accounts' assets (amounts due from power distributors) and liabilities (amounts due to power producers) in their financial results. IESO has chosen to recognize these markets accounts on its books for transparency reasons, as it better reflects its net financial position on behalf of the IESO-administered markets at year-end.

The IESO also made the decision to adopt rate-regulated accounting because it better reflects the economic substance of certain types of expenses that may not be directly recovered through the normal revenue requirement model.

This accounting change was accepted by the IESO's independent external auditor, which issued an unqualified, or "clean," audit opinion. These accounting changes were highlighted in the IESO's 2016 annual report which was published online in March 2017.

DRAFT

See section: Auditor General – Qualified Opinion for more information.

Auditor General – Qualified Opinion

9. The Auditor General has issued a qualified opinion for the second year in a row. Is this a sign of fiscal mismanagement?
(Has been approved by TBS & MOF ADMs on August 29, 2017)

Commented [AT5]: Top Question; updated Aug 29

We continue to move forward and present the Province's finances fairly and accurately and in accordance with Canadian Public Sector Accounting Board standards. Ontario has a strong track record of producing high-quality financial reports on a timely basis. The Auditor General's qualified opinion is based on a different interpretation of Public Sector Accounting Board standards for net pension assets and recognition of market accounts.

Last year there was a disagreement among the Province's professional accounting staff and the Auditor General's Office on the appropriate application of Public Sector Accounting Board standards regarding pension accounting. As a result, the Pension Asset Expert Advisory Panel was established to deliver independent advice and recommendations on the issue to the Province.

The independent panel members concluded the Province's share of the net pension assets of both the Ontario Teachers' Pension Plan and the Ontario Public Service Employees' Union Pension Plan should be recognized in Ontario's financial statements.

After significant deliberation, including consideration of the recommendations of the panel, Ontario confirmed that the accounting for these plans prior to 2015-16 was appropriate, and are prepared in accordance with public sector accounting standards for pension asset accounting. Further, Ernst & Young LLP provided additional analysis and concluded that no valuation analysis was required for either plan. The 2016-17 financial statements include these pension assets, and we continue to apply the accounting treatment of pension assets that the Province has used consistently since 2001.

This year the Independent Electricity System Operator (IESO) began recognizing its market accounts' assets (amounts due from power distributors) and liabilities (amounts due to power producers) in their financial results. IESO has chosen to recognize these markets accounts on its books for transparency reasons, as it better reflects its net financial position on behalf of the IESO-administered markets at year-end. This change was supported by the IESO's audit committee, an independent external auditor, and finally by the Office of the Provincial Controller. This change also has no impact to the province's annual deficit, net debt or accumulated deficit.

DRAFT

This accounting is consistent with the presentation used previously by the Ontario Power Authority (which was merged with the IESO on January 1, 2015) in its financial statements, which was not subject to qualification from the Office of the Auditor General at that time.

10. **This year it's IESO accounting. Last year it was pension assets. Before that it was government advertising. Why are you still fighting with the Auditor General? This seems to be a pattern of behavior where you try and undermine her authority.**

    Our government has the utmost respect for all independent officers of the legislature, and we value the important perspective they bring.

- **Pension Asset Accounting**

11. **Why are you still fighting with the Auditor General over pension accounting?**
    (Has been approved by TBS & MOF ADMs on August 29, 2017)

    In preparing last year's Public Accounts, the Province's professional accounting staff and the Auditor General's Office engaged in discussions about the appropriate application of Public Sector Accounting Board standards regarding pension accounting for the Province's jointly sponsored pension plans.

    As a result, the Pension Asset Expert Advisory Panel was established to deliver independent advice and recommendations to the Province on the issue. The independent panel members concluded the Province's share of the net pension assets of both the Ontario Teachers' Pension Plan and the Ontario Public Service Employees' Union Pension Plan should be recognized in Ontario's financial statements.

    After significant deliberation, including consideration of the recommendations of the panel, Ontario confirmed that the accounting for these plans prior to 2015-16 was appropriate. Further, Ernst & Young LLP provided additional analysis and concluded that no valuation analysis was required for either plan. The 2016-17 financial statements include these pension assets, and we continue to apply the accounting treatment of pension assets that the Province has used consistently since 2001.

    We will continue to work with the Auditor General to build on the government's track record of responsible fiscal management and high quality financial reporting.

12. **What was the panel's rationale for its decision?**

Commented [AT6]: Top Question; updated Aug 29

DRAFT

The Pension Asset Expert Advisory Panel recommended that the Province's share of the net pension assets of both the Ontario Teachers' Pension Plan (OTPP) and the Ontario Public Service Employees Union Pension Plan (OPSEUPP) should be recognized as an asset in Ontario's financial statements.

The panel said that:

- Recognizing the asset will provide a faithful representation of the Province's financial position.
- The accounting surplus in the plan has a future economic benefit.
- The government controls access to that accounting surplus.
- The accounting surplus exists as the result of past transactions and events.
- It would be misleading not to recognize the Province's share of the assets in Public Accounts.

In addition, the panel concluded that the government will be able to benefit from the full amount of each net pension asset, and as a result, no reduction in the value is necessary.

Ernst & Young LLP provided additional analysis and concluded that no valuation analysis was required for either plan, confirming the independent panel's recommendation.

13. The Auditor General was critical of the panel's authority and credibility. What's your response to this?

The panel members are all highly-qualified experts in their field. They were carefully chosen for their expertise in the areas of jointly sponsored pension plans, actuarial modelling for pension plans and public sector accounting standards:

- **Patricia O'Malley (panel chair)** is a Chartered Professional Accountant. She has been a member of the Canadian Accounting Standards Oversight Council since 2013, was Chair of the Canadian Accounting Standards Board and was a member of the International Accounting Standards Board from 2001 to 2007.
- **Murray Gold** is a leading legal practitioner and senior pension and benefits partner at Koskie Minsky LLP.
- **Uros Karadzic** is a senior actuary at Ernst and Young's People Advisory Services Reward practice, which includes pension, benefit and compensation consulting.

DRAFT

- **Paul Martin** is a Chartered Professional Accountant, Comptroller with the Government of New Brunswick and previously a partner with the national accounting firm of Grant Thornton LLP.

The panel was completely independent from government, and arrived at its advice based on its own analysis of this complex issue.

14. How much did you pay the panel members? Do you think that money was justified?

The total cost of the panel was $221,113. This included compensation and travel expenses for the four panelists, as well as procurement. These rates are consistent with the Agencies and Appointments Directive, which specified up to $2,000 per day for appointees with unique and specialized expertise, or urgent issues affecting government priorities and requiring intense time commitments over a short period of time.

The panel members have expertise in the areas of jointly sponsored pension plan governance, actuarial modelling for pension plans and public sector accounting standards, and provided independent advice on how to move forward with how Public Sector Accounting Board standards should be applied to current and potential future net pension assets.

Commented [AT7]: Need to confirm with OPCD

- **IESO Accounting**

15. The Auditor General is critical of the IESO accounting changes. Is this another example of Ontario's 'funny math'?
(Has been approved by TBS & MOF ADMs on August 29, 2017)

Commented [AT8]: Top Question; updated Aug 29

No. The Independent Electricity System Operator (IESO) began recognizing its market accounts' assets (amounts due from power distributors) and liabilities (amounts due to power producers) in their financial results. IESO has chosen to recognize these markets accounts on its books for transparency reasons, as it better reflects its net financial position on behalf of the IESO-administered markets at year-end.

Public Sector Accounting Board standards encourage preparers and auditors to consider guidance in other accounting frameworks to address transparency and accountability:

- This accounting change was accepted by the IESO's independent external auditor, which issued an unqualified, or "clean," audit opinion. These

DRAFT

accounting changes were highlighted in the IESO's annual report which was published online in March 2017.

- Further, this accounting is consistent with the presentation used previously by the Ontario Power Authority (which was merged with the IESO on January 1, 2015) in its financial statements, which was not subject to qualification from the Office of the Auditor General at that time.

This change has no impact to the province's annual deficit, net debt or accumulated deficit.

As such, this accounting change has been supported by the professional accounting staff of the Office of the Provincial Controller.

We will continue to work with the Auditor General to build on the government's track record of responsible fiscal management and high quality financial reporting.

If pressed on rate-regulated accounting:

The IESO made the decision to adopt rate-regulated accounting because it better reflects the economic substance of certain types of expenses that may not be directly recovered through the normal revenue requirement model.

The IESO, like Hydro One and Ontario Power Generation (OPG), is regulated by the Ontario Energy Board. The IESO adopted rate-regulated accounting for its year ended December 31, 2016. The impact on the financial statements of the Province is a decrease of $82 million in the 2016-17 opening accumulated deficit and an increase in the 2016-17 annual deficit by $24 million.

This accounting change was accepted by the IESO's independent external auditor, which issued an unqualified, or "clean," audit opinion. These accounting changes were highlighted in the IESO's annual report which was published online in March 2017.

16. What is the Auditor General's argument with these changes?

Commented [AT9]: Updated Aug 29 using content approved byTBS/MOF ADMs

The Auditor General claims that the change to the IESO's accounting policy to recognize market account assets and liabilities is inappropriate, as these market accounts are not assets and liabilities of the Province.

However, the IESO has chosen to recognize these markets accounts on its books for transparency reasons, as it better reflects its net financial position on behalf of the IESO-administered markets at year-end.

DRAFT

Public Sector Accounting Board standards encourage preparers and auditors to consider guidance in other accounting frameworks to address transparency and accountability:

- This accounting change was accepted by the IESO's independent external auditor, which issued an unqualified, or "clean," audit opinion. These accounting changes were highlighted in the IESO's annual report which was published online in March 2017.
- Further, this accounting is consistent with the presentation used previously by the Ontario Power Authority (which was merged with the IESO on January 1, 2015) in its financial statements, which was not subject to qualification from the Office of the Auditor General at that time.

This change has no impact to the province's annual deficit, net debt or accumulated deficit.

As such, this accounting change has been supported by the professional accounting staff of the Office of the Provincial Controller.

We will continue to work with the Auditor General to build on the government's track record of responsible fiscal management and high quality financial reporting.

17. Between IESO and the pension issue from last year it seems like you just make up new rules when you don't like what you hear from the Auditor General. How do you respond to that?

We continue to move forward and present the Province's finances fairly and accurately and in accordance with Canadian Public Sector Accounting Board standards. Ontario has a strong track record of producing high-quality financial reports on a timely basis. The Auditor General's qualified opinion is based on a different interpretation of Public Sector Accounting Board standards for net pension assets and recognition of market accounts.

In many cases the application of accounting standards requires professional judgment. The Province's professionally accredited accounting staff are highly qualified practitioners, with a high degree of expertise in their field. A difference of opinion on the interpretation of accounting standards is not unique to this situation. Other jurisdictions have also experienced differences of opinion between preparers and auditors on complex accounting matters.

Commented [AT10]: Need OPCD to provide examples of jurisdictions.

18. Will you strike an expert panel to study to IESO issue, like you did last year for pension accounting?

We have no plans to establish a panel at this time.

The changes made to the IESO accounting were accepted by the IESO's audit committee, board of directors, and their independent external auditor. These changes were outlined in the IESO's 2016 annual report, which was published in March 2017. The Office of the Provincial Controller supports these changes.

19. Your reasons for change are yet again at odds with the Auditor General. Why should we believe you, when she is an independent officer of the legislature?

The Auditor General's responsibility is to conduct an independent audit and provide her audit opinion based on her own professional judgment. A difference of opinion on the interpretation of accounting standards is not unique to this situation. Other jurisdictions have also experienced differences of opinion between preparers and auditors on complex accounting matters.

Commented [AT11]: Need OPCD to provide examples of jurisdictions.

- **Fair Hydro Accounting (Other Matters)**

20. The Auditor General alleges the government withheld information from her on the accounting treatment for the Fair Hydro Plan. Why would she say that?

First, I would note that the accounting for the Fair Hydro Plan is separate and distinct from the Public Accounts we're here to talk about today.

Having said that, we respectfully disagree with the Auditor General's claim that the government withheld information from her or her office.

In March, the Ministry of Energy provided the Auditor General's Office with Cabinet documents from February and March related to the Fair Hydro Plan. These documents together provided a comprehensive overview of all elements of the plan that were known at that time, including accounting memos from both the Independent Electricity System Operator (IESO) and Ontario Power Generation (OPG).

On April 19, 2017, senior ministry officials from Treasury Board Secretariat, Finance and Energy met with the Auditor General and her staff to provide a briefing on the accounting for the Fair Hydro Plan.

Since that April 19 briefing, ministry officials from Treasury Board Secretariat have met with the Auditor General several times. At each meeting, officials included the Fair Hydro Plan and IESO accounting on the agenda. However, in each case the Auditor declined those requests to discuss this issue with her.

21. The Auditor General has some serious concerns about how you're accounting for the Fair Hydro Plan. What do you say to this?
(Has been approved by TBS & MOF ADMs on August 29, 2017)

Commented [AT12]: Top Question; updated Aug 29

The accounting for the Fair Hydro Plan is a separate and distinct issue to the Public Accounts for 2016-17 that we're here to talk about today.

However, under the Fair Hydro Plan accounting structure, the Province's net debt and annual surplus/deficit won't be negatively impacted since all costs are expected to be recovered through future rates.

The Ministry of Finance continues to work closely with Treasury Board Secretariat, the Ministry of Energy, Ontario Power Generation (OPG), the Independent Electricity System Operator (IESO) and external advisors to address the outstanding accounting related considerations which will be key to managing the fiscal impact of the Global Adjustment refinancing.

The Auditor General has also been briefed on the government's refinancing structure.

For further questions, I direct you to contact my colleague at the Ministry of Energy.

22. Why did you set up the Fair Hydro Plan accounting in this way?

Again, I would note that the accounting for the Fair Hydro Plan is separate and distinct from the Public Accounts we're here to talk about today.

However, in order to meet the needs of users, including the legislature and the public, for accountability in government reporting and decision making, it is essential that public sector financial statements reflect the economic substance of the government's activities.

All of the agreements necessary for the Global Adjustment (GA) Refinancing are not yet complete. The final accounting for the GA Refinancing will be completed once all of the elements are complete.

In analyzing the appropriate accounting treatment for the GA refinancing component of the Fair Hydro Plan on the province's consolidated financial statements in 2017-18 and forward, the province considered authoritative guidance issued by the Public Sector Accounting Board, as well as the accounting assessments of the Independent Electricity System Operator (IESO) and Ontario Power Generation (OPG) management, including the accounting opinions of their external auditors.

DRAFT

The complexity and unique structure of the GA Refinancing structure requires the use of professional judgment to ensure that key financial reporting objectives of transparency and accountability are best served.

Any further questions about the Fair Hydro Plan should be directed to my colleague the Minister of Energy.

Ontario's Fiscal Position

- **Balanced Budget**

23. The government is claiming the deficit has been reduced to $1B deficit for 2016-17 and that the budget will be balanced over the next three years. However, the AG is saying that the deficit for 2016-17 was more than $2B due to the treatment of pension assets, and the FAO has stated that the government's revenue forecast is more than $1B too "optimistic". Isn't the government really hiding a $3-4B deficit instead of a balanced budget?
(Information provided by MOF on August 29, 2017)

Commented [AT13]: Top Question; updated Aug 29

There is no hidden deficit. In the *2010 Budget*, the government committed to eliminating the deficit and returning to a balanced budget by 2017-18. Through targeted, measured and fiscally responsible decisions, Ontario has restored its fiscal and economic strength.

Today we are confirming that the 2016-17 deficit of $1 billion is $3.3 billion lower than projected in the 2016 Budget and $0.5 billion lower than the interim projection in the 2017 Ontario Budget. This marks the eighth year in a row that Ontario has beaten its deficit target.

The success in eliminating the deficit is supported by a strong track record in managing spending -- having held average growth in spending to 2.3 per cent over the past five years.

In addition, over the last several years, the government's investments to strengthen economic growth have paid off. Ontario is a leader in economic growth, with our real GDP having outpaced that of all the G7 countries for the last three years. The strengthened economy has resulted in increased revenue for the Province – in fact, over the past two fiscal years, revenue has come in higher than projected, supporting Ontario's return to a balanced budget.

It is also important to point out that private sector forecasters have revised upward their expectations for the Ontario economy since the 2017 Budget, reflecting the growing strength of the Ontario economy. The government is also

taking steps to improve tax fairness and address the underground economy in order to ensure the integrity of the Province's revenues.

Finally, Ontario's fiscal plan incorporates prudence in the form of a reserve to protect the fiscal outlook against unforeseen adverse changes in the Province's revenue and expense. The reserve has been set at $0.6 billion in 2017-18, $0.6 billion in 2018-19, and $0.9 billion in 2019-20.

Balancing the budget means that the government can invest more in the programs and services that people rely on.

24. The Financial Accountability Office (FAO) just released a commentary saying your balanced budget is in question because it's based on optimistic revenue forecasts. Will you decrease spending or increase taxes to make up for this potential shortfall?

The government stands by the revenue forecast presented in the 2017 Budget. As recently presented in the 2017-18 First Quarter Finances, revenues are on track and the government is continuing to project a balanced budget in 2017-18.

Taxation revenue growth projected in the 2017 Budget aligns with growth actually experienced in recent years.

The government builds prudence into its economic forecast. Since the time of the 2017 Budget, private sector forecasters have revised up their economic growth projections for Ontario over the 2017-20 period, reflecting the strength in the Ontario economy.

25. How were you able to beat your deficit target in 2016-17?
(Has been approved by TBS & MOF ADMs on August 29, 2017)

Commented [AT14]: Top Question; updated Aug 29

In 2016-17 we maintained our focus on responsible fiscal management and investing in the right priorities. We are making progress on our economic plan by making investments to spur growth, transforming government and responsibly managing spending.

Average annual growth of total government spending has been held to 2.3 per cent for the past five years. As a result of growth in revenue that exceeded growth in program expense, as well as lower than forecast interest on debt, the deficit is $3.3 billion lower than projected in the 2016 Budget. It is also $0.5 billion lower than the interim projection in the 2017 Budget.

This is the eighth year in a row the government has beaten its deficit target.

26. You beat your deficit targets again. Aren't you just padding your estimates so you can beat them at the end of the day?

No. The government's fiscal projections are based on the best economic and fiscal information available at the time. They reflect a realistic and responsible plan to manage the Province's resources, while still protecting the vital services that Ontarians rely on.

Beating our deficit targets helps to keep interest on debt at a manageable level and protects future generations from rising interest costs, which could otherwise crowd out spending on government priorities.

The government recognizes that a fiscally sound approach to managing the Province's finances will provide the foundation for the long-term well-being and prosperity of Ontarians, and protect the public services that Ontarians rely on.

- **Debt**

27. You claim to have balanced the budget yet you keep piling on more debt. How do you plan to pay down the debt?
(Provided by MOF/OFA on August 30, 2017)

Commented [AT15]: Top Question; Updated by MOF/OFA Aug 30

We maintain a target of reducing the net debt-to-GDP ratio to its pre-recession level of 27 per cent, with current projections showing that this will be achieved by 2029-30. In the balanced 2017 Budget, the government is setting an interim target to reduce the net debt-to-GDP ratio to 35 per cent by 2023–24.

In a balanced budget environment, debt would be incurred primarily to invest in capital assets. We are making progress on our economic plan by making investments to spur growth, transforming government and responsibly managing spending – including addressing the underground economy and maintaining tax fairness. Our strategic investments in infrastructure provide economic benefits: a recent study by the Centre for Spatial Economics (C4SE) finds that, over the long term, real GDP in Ontario will rise up to $6 on average per one dollar of public infrastructure spending.

These strategic investments are creating jobs and contributing to economic growth. Ontario's GDP grew one per cent in the first quarter of 2017, outperforming that of Canada, the U.S. and all other G7 countries.Interest on Debt

28. Interest on debt is still massive and the Bank of Canada is expected to raise interest rates again this fall. How is the government preparing for this and will this affect your ability to maintain a balanced budget?

Commented [AT16]: Top Question; updated Aug 29

DRAFT

(Has been approved by TBS & MOF ADMs on August 29, 2017)

The increase in the Bank of Canada's policy rate reflects the growing strength of the Canadian and Ontario economy. Ontario's economy remains strong and has continued to grow and create jobs in an uncertain global environment.

A quarter-point increase in the policy rate is not likely to have a material impact on the Ontario economic outlook. The 2017 Ontario Budget anticipated that the interest rates would rise modestly,

As noted in the 2017 Budget, the Province's average cost of 10 year borrowing in 2017-18 is forecast to be 3 per cent. The impact of a 100 basis point increase in borrowing rates is forecast to be approximately $300 million. The interest rate forecast used in the Budget was prudent, and anticipated that long-term interest rates would rise as we progressed through the fiscal year.

29. The government is paying an enormous amount of money just paying the interest on its debt. How are you addressing this?

Interest on debt expense was $11.7 billion, which was $0.7 billion below the plan of $12.4 billion, due mainly to lower-than-forecast interest rates, lower-than-forecast deficit and cost-effective borrowing and debt management.

While interest costs have grown in absolute terms, they have steadily fallen as a percentage of Ontario's revenues since 2013-14. The interest on debt-to-revenue ratio is now at its lowest level from the peak of 15.5 per cent in 1999-2000.

Interest on debt-to-revenue is forecast to have been 8.4 per cent for 2016–17. This ratio is the lowest it has been in 25 years. It is forecast to decline to 8.2 per cent in 2017-18~~ and remain low throughout the outlook period to 2019–20~~.

We incurred increases to Ontario's debt during the recession for two reasons: to finance deficits and invest in capital assets. However we are making progress on our economic plan by making investments to spur growth, and are managing spending responsibly.

These strategic investments are creating jobs and contributing to economic growth. Ontario's GDP grew one per cent in the first quarter of 2017, outperforming that of Canada, the U.S. and all other G7 countries.

DRAFT

Our fiscal plan is working. Ontario is on track to balance the budget this year while making investments in the programs and services people and families rely on most.

30. You are spending more on interest payments for the debt than what you spend on post-secondary education. In fact, the payments equal more than 20 per cent of the health budget. How can you justify this?

Our priority following the 2008-09 recession was to achieve balance. In the first few years after the recession, the increase in net debt was primarily due to the deficit.

Approximately 61 per cent of the increase in net debt from 2008–09 to 2016–17 was due to the deficit, with net investments in capital assets responsible for the balance.

With balanced budgets, from 2017-18 onwards, the increase in net debt will be exclusively from investments in capital assets. In addition, the government is investing in public infrastructure which is vital to growing the economy and ensuring a high quality of life, whether people live in large, small, urban, northern or rural Ontario communities. Every $1 spent on public infrastructure can increase GDP by up to $6 in the long term. The balanced budget is giving the government the fiscal flexibility to do more to help people and spur economic growth.

Formatted: Normal, Line spacing: single, Don't adjust space between Latin and Asian text, Don't adjust space between Asian text and numbers

- **Most Indebted Subsovereign, Future Generations**

31. This government has a spending problem and Ontario is now the most indebted sub-sovereign borrower in the world. Why should we trust your plan?

With a growing economy and a balanced budget, this is the time to make investments in key services that matter most to people, like health care and education, while at the same time lowering costs for necessities like electricity and child care.

Ontario is on track to balance the budget this year while making investments in the programs and services people and families rely on most. This year and last, Ontario's debt-to-GDP ratio has improved from 39.6 per cent in the 2016 budget, to a forecasted 37.8 per cent in 2016-17, and it continues to track downward.

Our plan is also helping to grow the economy, with the largest investment in public infrastructure in the Province's history — more than $190 billion over 13 years starting in 2014-15. New schools, hospitals and transit projects are

DRAFT

improving quality of life and creating jobs in communities across Ontario.

Supporting ongoing economic growth is a top priority and we are encouraged by the influx of many innovative and dynamic businesses that are investing across the Province, bringing good jobs, higher wages and greater prosperity to our communities. We will continue to implement our balanced plan to build a healthy and sustainable economy for all of Ontario.

32. Some say you are unfairly placing the burden of debt on future generations through things like your Hydro rebate plan and your failure to address the Province's growing debt. How do you respond?

With a growing economy and a balanced budget, this is the time to make investments in key services that matter most to people, like health care and education, while at the same time lowering costs for necessities like electricity and child care.

We have heard from people across the Province that investing in greener generation, transmission and distribution have increased electricity bills too quickly, which is why our plan will ensure costs are distributed more fairly over time. The plan significantly reduces rates today and ensures fairness and predictability for tomorrow.

Most of Ontario's electricity generators are under 20-year contracts, but many of these facilities are expected to generate power after their contracts end. These are long-term assets for our electricity system. We are bringing forward some of the net value of these assets by spreading a portion of the costs of these contracts over a longer period.

With respect to debt, we remain committed to reducing the net debt-to-GDP ratio to its pre-recession level of 27 per cent, with current projections showing that this will be achieved by 2029-30. In the balanced 2017 Budget, the government is setting an interim target to reduce the net debt-to-GDP ratio to 35 per cent by 2023–24

- **Revenue**

33. How much money did you bring in in 2016-17?

Provincial revenues increased by $4.6 billion, or 3.4 per cent over the previous year. This increase was due in part to nominal GDP growth of 4.6 per cent in 2016, which contributed to higher taxation revenues. There were also higher

DRAFT

transfers from the federal government – including the Canada Health Transfer, Canada Social Transfer and funding for infrastructure projects.

Taxation revenues were $2.5 billion, or 2.8 per cent higher-than-projected in the 2016 budget. Corporate tax revenues were $2.8 billion higher. This was due to stronger-than-expected revenues from tax returns. Sales tax revenues were $0.8 billion higher, due to Ontario's larger share of the HST, and the strong housing market contributed $0.7 billion more in land transfer tax revenues.

Transfers from the Government of Canada were $0.6 billion lower than the 2016 Budget forecast. This was mainly due to lower-than-expected funding for infrastructure projects and other payments for government agencies, hospitals, school boards and colleges.

Fees, donations and other revenues from broader public sector organizations were $0.6 billion higher than the budget forecast, mainly due to higher-than-expected revenues from non-provincial sources for hospitals, and higher international tuition fees.

- **Asset Sales**

34. One-time asset sales are a way to bring in money, but isn't this burning the furniture to heat the house when it comes to a long-term revenue strategy?

We are committing money made from any asset sales to the Trillium Trust, which is helping to fund transit, transportation and other key infrastructure projects across Ontario.

The government made more than $200 million from the sale of the LCBO head office lands, along with $2 billion in gross proceeds from the second offering of Hydro One common shares in April 2016. In addition, the sale of the government's interest in Hydro One Brampton Networks resulted in a gain of $109 million.

These proceeds have also been committed to the Trillium Trust for infrastructure projects that help the economy grow, and create jobs for Ontarians.

See section: Trillium Trust for more information.

- **Transfers from the Federal Government**

35. Transfers from the federal government were lower than expected. Aren't you banking on another entity to get your fiscal house in order?

DRAFT

The Government of Ontario, like all Provinces in Canada, receives funding from the federal government. These transfers are done on an ongoing basis to help provide programs and services.

Transfers from the Government of Canada were lower than the 2016 Budget forecast by $0.6 billion. This was mainly due to lower-than-expected funding for infrastructure projects and other federal payments including transfers to government agencies, hospitals, school boards and colleges. This decline was partially offset by new transfers under the strategic investment fund for affordable housing and post-secondary education and training.

- **Revenue from International Tuition Fees**

36. International tuition fees helped the Province's bottom line but isn't this on the backs of young people who want to learn here?

MAESD to provide response

- **Program Spending**

37. Program spending increased again this year. Why?
(Has been approved by TBS & MOF ADMs on August 29, 2017)

Commented [AT17]: Top Question; updated Aug 29

Program spending in 2016-17 was $141.7 billion, down $0.1 billion from the 2016 Budget. Average annual growth of total government spending has been held to 2.3 per cent for the past five years.

Healthcare represents the largest share of government program spending at $56 billion. Transformation efforts continue to make the sector more effective and sustainable while continuing to improve access for patients, especially the increased demands from an aging and growing population. The government has invested in new drugs, technologies, community and home care, long term care homes, mental health, physicians' services and specialized cancer treatments.

Other increases include:

- $26.6 billion in education, mainly due to the introduction of full-day kindergarten;
- $16 billion in children's and social services, due to increased annual social assistance rates as well as investments in developmental services, autism and complex special needs programs, as well as the Ontario Child Benefit;

DRAFT

- $10.1 billion in post-secondary and training, due to enrolment growth in colleges and universities along with increased student financial assistance programs and increases in capital funding for post-secondary institutions;
- $4.6 billion in justice sector expenses due mainly to the upload of court security costs from municipalities, compensation for the Ontario Provincial Police and correctional services programs, as well as improved access to legal aid.

38. You finally balanced the budget and now you're spending more on expensive election promises like free pharmacare. Why aren't you paying down debt instead?

With a growing economy and a balanced budget, this is the time to make investments in key services that matter most to people, like health care and education, while at the same time lowering costs for necessities like electricity and child care.

Providing more access to vital services isn't just an investment in our future. It's the right thing to do.

- **Credit Rating**

39. Does a qualified opinion impact the Province's credit rating?
(Has been approved by TBS & MOF ADMs on August 29, 2017)

Commented [AT18]: Top Question; updated Aug 29

The Province's financial results show that the government has once again beaten its annual deficit targets. In April 2017, we delivered our first balanced budget since the global recession and we are on track to do so again next year and the year after.

The rating agencies will assess whether the underlying factors that lead to a qualified opinion directly affect the creditworthiness of the Province. However, there were no credit rating implications in 2016 when the Province received a qualified audit opinion on its 2015-16 Public Accounts. Qualified opinions by the Auditor Generals of British Columbia and Quebec have been made in their respective provinces in the past, with no negative impacts on their province's credit ratings.

In 2017 the C.D. Howe Institute, an independent research organization that assesses the fiscal planning and reporting of governments in Canada, also commented positively on the financial reporting practices of Ontario relating to its fiscal reporting activities that include Public Accounts, the annual Budget and Estimates.

DRAFT

40. What do you say to the credit rating agencies that have highlighted provincial debt as an area of credit weakness?

According to our first quarter finances released last month, we continue to project a balanced budget in 2017-18, unchanged from the 2017 Budget.

With stronger-than-expected first quarter economic growth and the government's responsible approach to fiscal management, we can continue to invest in programs and services that help people across the Province.

Ontario's economy continues to grow at a steady pace despite an uncertain global environment. Most key economic indicators show that growth continues in the second quarter. Our plan is working.

We remain committed to reducing the net debt-to-GDP ratio to its pre-recession level of 27 per cent, with current projections showing that this will be achieved by 2029-30. In the balanced 2017 Budget, the government is setting an interim target to reduce the net debt-to-GDP ratio to 35 per cent by 2023–24.

41. What is your credit rating as it stands today?

Following the release of the 2017 Budget, all four rating agencies have confirmed Ontario's long-term credit ratings. This reflects rating agencies' confidence in our government's plan to grow Ontario's economy and create jobs for Ontarians.

If pressed:
Ontario's ratings are:

	Long-Term	Short-Term
Moody's:	Aa2	P-1
DBRS:	AA (low)	R-1 (mid)
Fitch:	AA-	F1+
Standard and Poor's:	A+	A-1

- **C.D. Howe Institute**

42. Why does the C.D. Howe Institute weigh in on the government's fiscal situation?

The C.D. Howe Institute is an independent not-for-profit research institute that supports economically sound public policies. It is widely considered to be Canada's most influential think tank and is a trusted source of essential policy

DRAFT

intelligence, distinguished by research that is nonpartisan, evidence-based and subject to definitive expert review.

Each year the C.D. Howe Institute produces a report on its assessment of the fiscal planning and reporting practices of senior Canadian governments. The institute observes that financial reports are a vital tool for understanding governments' plans and activities.

43. Why does this matter?

We consider reports like the C.D. Howe's Fiscal Accountability of Canada's Senior Governments important because they are written by independent experts. Studies such as this are essential for governments to continuously assess and improve their financial planning and reporting.

Ontario has received high marks for prominently presenting revenue and expense projections in the Budget that are on the same Public Sector Accounting Basis as the Public Accounts and Estimates.

The C.D. Howe Institute has recognized Ontario as one of the leading jurisdictions in Canada when it comes to fiscal accountability

Trillium Trust

44. What is the Trillium Trust?

The Trillium Trust was introduced in the 2014 Budget and provides for the dedication of prescribed net proceeds from the sale of designated assets to support key infrastructure priorities, such as roads, bridges and public transit.

The Trillium Trust is appearing for the first time in Public Accounts because the first drawdowns were made in 2016-17. The Trillium Trust Act, 2014 requires that all expenditures made under the act to support infrastructure investments are to be reflected in the Public Accounts.

Designated assets include the Province's shares of Hydro One and Hydro One Brampton, as well as the LCBO head office lands, the OPG head office building and the Lakeview lands.

We expect the Trillium Trust to be drawn down by about an additional $400 million in 2017–18.

DRAFT

The Ministry of Finance shows spending out of the Trillium Trust, and ministries that are benefitting from projects that are funded from the trust are reflected in this year's Public Accounts. These figures are included in Volume 1 of Public Accounts.

The funding will help support initiatives, such as GO Regional Express Rail (GO RER), the Hurontario Light Rail Transit (LRT) and the Ontario Community Infrastructure Fund (OCIF).

45. The Public Accounts show a drawdown of $260 million from the Trillium Trust. What did you spend the money on?
(Has been approved by TBS & MOF ADMs on August 29, 2017)

Commented [AT19]: Top Question; updated Aug 29

The government began allocating proceeds from the Trillium Trust in 2016-17 to help support infrastructure initiatives such as GO Regional Express Rail (GO RER), the Hurontario Light Rail Transit (LRT) and the Ontario Community Infrastructure Fund (OCIF).

We expect the Trillium Trust to be drawn down by about an additional $400 million in 2017–18.

Our strategic investments in infrastructure provide economic benefits: a recent study by the Centre for Spatial Economics (C4SE) finds that, over the long term, real GDP in Ontario will rise up to $6 on average per one dollar of public infrastructure spending.

46. How much is currently in the trust?

Commented [AT20]: To confirm figures

In March 2017, the government credited the Trillium Trust with an additional $538 million in net revenue gains from the sale of Hydro One shares in 2016, bringing the total amount in the Trust to $5.3 billion.

The Trillium Trust was also credited with $246 million from the sale of the LCBO head office lands, and $1.35 billion in net proceeds from the sale of Ontario's shares in General Motors.

Like most large infrastructure investments, initial spending on projects is focused on planning, design, property acquisition and other activities to get projects construction-ready.

DRAFT

As this preliminary work is completed and construction activity gets underway, further project requirements will be identified that will be funded from the Trillium Trust in subsequent years.

The government is committed to investing the full amount from the Trillium Trust to support transit, transportation and other priority infrastructure.

47. If the Province raised about $2 billion in the secondary offering of Hydro One shares in 2016, why was only $538 million credited to the Trillium Trust?

Commented [AT21]: Updated Aug 30

The *Trillium Trust Act, 2014*, provides for the dedication of net revenue gains to the Trillium Trust associated with the sale of designated assets to support investments in transit, transportation and priority infrastructure across the Province.

The net revenue gains credited to the Trillium Trust from the secondary offering of Hydro One shares are derived from the gross proceeds, less fees/expenses incurred and less the book value of the shares sold, not including the shares purchased by OPG.

The government will move forward with regulations to credit the Trillium Trust with the net revenue gains from the shares purchased by OPG in the future.

The Province also used the $1.3 billion in proceeds related to the book value of the Hydro One shares sold to pay down the Province's debt and other payables with the Ontario Electricity Financial Corporation (OEFC).

Through the broadening of Hydro One ownership, the Province is meeting its target to generate $4 billion in net revenue gains that, through the Trillium Trust, will be reinvested in infrastructure under Moving Ontario Forward, and $5 billion to reduce debt.

Digital Tools/Open Government

Commented [AT22]: Updated Aug 30

48. What is the government doing to be transparent in regards to Public Accounts?

As part of our commitment to openness and transparency, we are using data visualization tools to help Ontarians better understand the Province's finances.

This year's tools are available at Ontario.ca/publicaccounts and include:

DRAFT

- Interactive data visualization tools that graphically present details on asset and expense information contained in Volume 1;
- Fully sortable data tables that summarize the financial statements from Volume 2, and the detailed scheduled payments from Volume 3; and
- Downloadable open data sets that provide the five-year trend for government revenue by source, revenue by sector, and statement of operations. This year's total number of open data downloads is 11, up from five last year.

These tools help make the Province's finances easier to understand, access and use, and are part of Ontario's commitment to creating a more open and transparent government.

49. How does this help the average Ontarian?

The more information we can provide to Ontarians about where their tax money is going, the better. That is why the government is providing new digital tools online to help Ontarians better understand their government's finances. Presenting the Public Accounts data in innovative, visual formats is part of Ontario's commitment to Open Government.

50. What are Open Data sets?

The Ontario government is committed to leading the most open, transparent, and accountable government in the country. Public access to information and opening up government data supports this commitment. Ontario is the first province in Canada to adopt the International Open Data Charter.

The International Open Data Charter contains a set of six principles that will build on Ontario's open by default data policy to increase civic participation, openness and accountability.

To date, we have released more than 585 open data sets and the Open Data sets for Public Accounts are being added to the catalogue. It can be found at www.ontario.ca/opendata

Subject: Revised wording for Pension Asset Narrative

Tim,
Further to the discussion this morning, below is the revised text for Chapter 2B on Transparency and Accountability. This version has been reviewed by Cindy.
Nadine

Pensions reporting

In preparing the *Public Accounts for Ontario 2015-16*, the Province's professional accounting staff and the Auditor General's Office engaged in discussions about the appropriate interpretation of public sector accounting standards in relation to pension accounting. The Province's interpretation of the standards had been applied consistently since they were first implemented 15 years ago.

The government adopted the Auditor General's accounting interpretation for the treatment of net pension assets for 2015-16 through a time-limited regulatory amendment ('the pension adjustment').

The impact of the change resulted in an additional $10.7 billion being added to the net debt and accumulated deficit and an increase of $1.5 billion to the annual deficit for 2015-16.

Consistent with the regulated accounting treatment adopted in the *Public Accounts of Ontario 2015-16*, the medium term fiscal outlook provided in this Document also reflects a cautious approach to forecasting the pension adjustment in each year. This cautious approach to forecasting the pension adjustment results in an estimated potential impact of $2.2 billion in 2016-17, $2.8 billion in 2017-18 and $3.7 billion in 2018-19. [np2]

The government has established a Pension Asset Expert Advisory Panel to assess the interpretation of public sector accounting standards as related to Ontario's pension plans. The Panel will also

provide advice on how to value pension assets reported on the Province's books, taking into account future decisions that might be made by the plans' sponsors. Specifically, the Panel will help to inform the amount of net pension assets which should be reflected on the Province's financial statements. A net pension asset arises when the government's total contributions to a plan, including interest earned thereon, are greater than the pension expense recognized since the start of the plan.

The Panel's recommendations will help inform the development of the 2017 Budget and the Province's future accounting treatment for net pension assets.

Tim,
Further to the discussion this morning, below is the revised text for Chapter 2B on Transparency and Accountability. This version has been reviewed by Cindy.
Nadine

Pensions reporting

In preparing the *Public Accounts for Ontario 2015-16*, the Province's professional accounting staff and the Auditor General's Office engaged in discussions about the appropriate interpretation of public sector accounting standards in relation to pension accounting. The Province's interpretation of the standards had been applied consistently since they were first implemented 15 years ago.

The government adopted the Auditor General's accounting interpretation for the treatment of net pension assets for 2015-16 through a time-limited regulatory amendment ('the pension adjustment').

The impact of the change resulted in an additional $10.7 billion being added to the net debt and accumulated deficit and an increase of $1.5 billion to the annual deficit for 2015-16.

Consistent with the regulated accounting treatment adopted in the *Public Accounts of Ontario 2015-16*, the medium term fiscal outlook provided in this Document also reflects a cautious approach to forecasting the pension adjustment in each year. This cautious approach to forecasting the pension adjustment results in an estimated potential impact of $2.2 billion in 2016-17, $2.8 billion in 2017-18 and $3.7 billion in 2018-19. [np2]

The government has established a Pension Asset Expert Advisory Panel to assess the interpretation of public sector accounting standards as related to Ontario's pension plans. The Panel will also provide advice on how to value pension assets reported on the Province's books, taking into account future decisions that might be made by the plans' sponsors. Specifically, the Panel will help to inform the amount of net pension assets which should be reflected on the Province's financial statements. A net pension asset arises when the government's total contributions to a plan, including interest earned thereon, are greater than the pension expense recognized since the start of the plan.

The Panel's recommendations will help inform the development of the 2017 Budget and the

Province's future accounting treatment for net pension assets.

Pls note that given that the pension adjustment does not impact on the forecast deficit over the medium term outlook, I don't believe we require the phrase: "as well as the corresponding net debt and accumulated deficit amounts".

The impact on the accumulated deficit and net debt is limited to the $10.7 B in the Public Accounts

Thanks

The government has established a Pension Asset Expert Advisory Panel to assess the interpretation of public sector accounting standards as related to Ontario's pension plans. The Panel will also provide advice on how to value pension assets reported on the Province's books, taking into account future decisions that might be made by the plans' sponsors. Specifically, the Panel will help to inform the amount of net pension assets which should be reflected on the Province's financial statements. A net pension asset arises when the government's total contributions to a plan, including interest earned thereon, are greater than the pension expense recognized since the start of the plan.

The Panel's recommendations will help inform the preparation of the Budget and the Province's future accounting treatment for net pension assets.

Subject: RE: Revised wording for Pension Asset Narrative

This cautious approach to forecasting the pension adjustment results in an additional estimated potential impact of $2.2 billion in 2016-17, $2.8 billion in 2017-18 and $3.7 billion in 2018-19 from the 2016 Budget forecast for pension expense. [np1]

A couple of additional edits to one sentence copied above (in green) – I don't think it was clear that the amounts we are referring to are in addition to those included in the 2016 Budget.

Subject: Revised wording for Pension Asset Narrative

Tim,
Further to the discussion this morning, below is the revised text for Chapter 2B on Transparency and Accountability. This version has been reviewed by Cindy.
Nadine

Pensions reporting

In preparing the *Public Accounts for Ontario 2015-16*, the Province's professional accounting staff and the Auditor General's Office engaged in discussions about the appropriate interpretation of public sector accounting standards in relation to pension accounting. The Province's interpretation of the standards had been applied consistently since they were first implemented 15 years ago.

The government adopted the Auditor General's accounting interpretation for the treatment of net pension assets for 2015-16 through a time-limited regulatory amendment ('the pension adjustment').

The impact of the change resulted in an additional $10.7 billion being added to the net debt and accumulated deficit and an increase of $1.5 billion to the annual deficit for 2015-16.

Consistent with the regulated accounting treatment adopted in the *Public Accounts of Ontario 2015-16*, the medium term fiscal outlook provided in this Document also reflects a cautious approach to forecasting the pension adjustment in each year. This cautious approach to forecasting the pension adjustment results in an estimated potential impact of $2.2 billion in 2016-17, $2.8 billion in 2017-18 and $3.7 billion in 2018-19. [np2]

The government has established a Pension Asset Expert Advisory Panel to assess the interpretation of public sector accounting standards as related to Ontario's pension plans. The Panel will also

provide advice on how to value pension assets reported on the Province's books, taking into account future decisions that might be made by the plans' sponsors. Specifically, the Panel will help to inform the amount of net pension assets which should be reflected on the Province's financial statements. A net pension asset arises when the government's total contributions to a plan, including interest earned thereon, are greater than the pension expense recognized since the start of the plan.

The Panel's recommendations will help inform the development of the 2017 Budget and the Province's future accounting treatment for net pension assets.

---

Hi Ken,

I made some further minor edits to the Friendlies. Similar to the other edits, I amended the wording to show that the 8.5 cents is the lowest It has been in 25 fiscal years or since 1990-91.

I've also checked with DMO and that the two Moody's Friendlies that we added is all we need thus far.

If you're okay, I'll send these along to DMO.

Thanks again.
Christina

Revised as discussed.

Ken k

Friendly Questions

1. Q. ~~Our government has a target for reducing the net-debt-to-GDP ratio. Can you tell us more about the target and how our government is doing in terms of reaching that target?~~

A. ~~Net debt, as of March 31, 2016, is forecast to be $296.1 billion, $2.8 billion lower than forecasted in the *2015 Budget*. Net debt was $284.6 billion as of March 31, 2015. The net debt-to-GDP ratio is forecast to peak at 39.6 per cent in 2015–16, remain level in 2016–17, and decline to 38.9 per cent in 2017–18 and 38.5 per cent in 2018–19.~~

~~Ontario conducts a robust and responsible borrowing program that protects the public interest. The government successfully completed its annual borrowing program in 2015-16, borrowing $32.1 billion. Long-term borrowing for 2016–17 is forecast to be $24.4 billion when factoring in $2.0 billion pre-borrowed in 2015–16. This will be the Province's smallest borrowing program since 2007–08.~~

~~As of August 31, 2016, the Province had borrowed $12.5 billion for the fiscal year. Approximately 71per cent of this year's borrowing-to-date has been completed in Canadian dollars. The remainder of the Province's borrowing-to-date has been completed in international currencies primarily through U.S. dollar global bonds, and two small Australian dollar Kangaroo bond issues.~~

~~Through prudent and cost-effective debt management, the Province has consistently kept interest on debt costs below budget projections. The *2010 Budget* forecast that, by 2016–17, the Province would have to spend 11.7 cents of every revenue dollar received on interest. The current forecast is 2.7 cents lower, at 9.0 cents of interest costs for every dollar of revenue. This ratio is lower than it was in the 1990s and 2000s, and is forecast to remain lower through the outlook period in 2018–19.~~

~~Term extension has allowed the Province to lock in low interest rates for a longer period, which reduces refinancing risks and helps offset the impact of expected higher interest rates on the Province's interest on debt costs.~~

~~Going back to the beginning of fiscal 2010-11, Ontario has issued $59.1 billion of bonds longer than 30 years to lock in low rates. As a result, the weighted-average term to maturity of long-term provincial debt issued has been extended significantly, from 8.6 years in 2008-09 to 15.6 years as of August 31.~~

2. Q. ~~Noting that a key indicator of the government's ability to carry its debt entails examining the level of debt relative to the size of the economy, can you please explain further what the forecasted net debt-to-GDP ratio is for Ontario?~~

Formatted: Indent: Left: 0", Hanging: 0.47", Space After: 0 pt

Formatted: QA_Question, Indent: Left: 0", Hanging: 0.47", No bullets or numbering

Formatted: QA_Question, Indent: Left: 0", Hanging: 0.47"

~~What effect does this have on the government's commitment to balancing the budget by 2017-18?~~

~~A. The Province's net debt-to-GDP ratio is expected to peak in 2015-16 at 39.6 per cent, remain unchanged in 2016-17 and begin to decline in 2017-18.~~

~~The government continues to maintain a target of reducing the net debt-to-GDP ratio to its pre-recession level. Net Debt increases primarily for two reasons: to finance deficits and invest in capital assets. In the first few years after the global recession in 2008-09, the increase in net debt was primarily due to the deficit. However, the government is on track to eliminate the deficit and balance the budget by 2017-18. Once a balanced budget is achieved, the increase in net debt will be limited to the net investment in tangible capital assets.~~

3. Q. Why was the deficit lower than projected? Where does the government stand when it comes to reaching a balanced budget?

A. Since the last time the Office of the Auditor General reviewed these statistics in its 2013 Annual Report, the province's net debt-to GDP ratio has improved from 39.1 per cent to 38.~~6~~5 per cent for 2013-14 and remained relatively unchanged for 2014-15 at ~~40~~39.~~1~~4 per cent. This improvement is a direct result of better than forecast deficits. ~~, although the ration for the out years has been impacted, primarily by decreases in the GDP forecast~~.

With regard to debt management, the government's support for and commitment to economic growth will maintain debt at sustainable levels and achieve its target of reducing the net debt-to GDP ratio to the pre-recession level of 27 per cent.

The province has consistently beaten its annual deficit targets over the last five years. ~~, resulting in borrowings and accumulated deficits that are $ 25 billion lower that they would otherwise have been~~. A major contributor toward beating annual deficit targets has been the focus on annual expenditure management limiting the growth in program spending to an average of 1.5 percent from 2010-11 to 2013-14. The government has also addressed Ontario's infrastructure needs through targeted capital investments.

4. Q. Chapter 2 of the Auditor General's 2015 annual report speaks to the increased vulnerability of Ontario with respect to interest rates. She points to the possible rise in rates related to borrowing.

However, I am also aware that the Province has consistently kept interest on debt costs below budget projections.

What steps has the government taken to reduce borrowing and keep interest on debt costs low?

A. Through prudent and cost-effective debt management, the Province has consistently kept interest on debt costs below budget projections. The 2010

Formatted: QA_Answer

Budget forecasted that, by 2016-17, the Province would have to spend 11.7 cents on interest for every revenue dollar received. The current forecast is 2~~3~~7 per cent lower, at ~~9~~8.5~~.0~~ cents of interest costs for every dollar of revenue. This ratio is the ~~lowe~~lowest it has been~~r than it was~~ in ~~the~~ 2~~1~~4~~5~~ fiscal years ~~from 1992~~1 ~~93~~2 ~~to 2005-06~~or since 1990-91, and is forecast to remain low~~er~~ through the period to balance in 2017–18.

Extending the term of the debt that the Province issues has locked in low interest rates for a longer period, which reduces refinancing risks and helps offset the impact of expected higher interest rates on the Province's interest on debt costs.

Going back to the beginning of fiscal 2010–11, Ontario has issued $59.1 billion of bonds that do not mature for at least 30 years to lock in low rates. As a result, the weighted-average term to maturity of long-term provincial debt issued has been extended significantly, from 8.6 years in 2008-09 to 15.~~6~~3 years as of September 30~~August 31~~.

5. Q. The stranded debt arose under the *Energy Competition Act of 1998*, and its schedule, the *Electricity Act, 1998*. The *Electricity Act, 1998*, also enabled the implementation of the Debt Retirement Charge (DRC) on electricity ratepayers.

Since May 2002, residential and other electricity users have been paying the DRC of 0.7 cents per kilowatt hour (kWh) on their electricity bills. The DRC is paid to the Ontario Electricity Financial Corporation (OEFC) to help service and pay down the stranded debt that arose because of the restructuring of Ontario's electricity sector under the *Energy Competition Act, 1998*.

However, I know that the government eliminated the DRC from residential bills as of January 1, 2016.

This legacy charge from the Harris government was eliminated from residential bills about 2 years earlier than previously estimated – saving the average residential user about $70/year.

Can you please inform the committee of the commitment that the government has to eliminating the debt retirement charge cost for commercial, industrial and all other electricity users by 2018?

A. Thank you for the question.

As part of its commitment to reduce electricity cost pressures, the government has removed the Debt Retirement Charge (DRC) from residential electricity users' bills as of January 1, 2016.

This would save a typical residential user about $70 each year and meant ending the DRC earlier for these users than otherwise provided for in the *Electricity Act,*

1998, as originally enacted. As a further step to mitigate electricity cost pressures for commercial, industrial and all other users, the government introduced legislation, passed on December 10, 2015, the *Budget Measures Act, 2015* to end the DRC on April 1, 2018, nine months earlier than previously estimated.

- A large industrial using 3,000 megawatt-hours (MWh) per month could save $21,000 per month, or about seven per cent off its electricity bills;
- For a large northern industrial in the Northern Industrial Electricity Rate program, this could be more than an eight per cent savings; and
- A small business using 20,000 kilowatt-hours (kWh) per month could save $140 per month, or about four per cent.

Ending the DRC on a legislated fixed date provides certainty to commercial, industrial and other users, and helps them more effectively plan their investment decisions.

I would note the following context. The government's electricity sector reforms in the Electricity Restructuring Act, 2004, and others, have put the stranded debt recovery plan back on track. Based on interim numbers in Budget 2016, this is projected to be the twelfth consecutive year that the stranded debt has been reduced, to under $5 billion as at March 31, 2016, from $20.6 billion as at March 31, 2004. This allowed the government to follow through on its commitment to reduce electricity cost pressures.

6. Q. Deputy Minister Orencsak, you mentioned that the C.D. Howe Institute has given positive feedback about the government's reporting practices. Why is that significant?

A. The C.D. Howe document "By the Numbers: The Fiscal Accountability of Canada Senior Governments, 2015" notes that Ontario along with Ottawa have "long stood out for relatively good financial presentations. " When evaluating the reporting practices and fiscal documents across Canada, the document rated Ontario an "A" grade.

The "A" grade was based on presentation criteria, as well as timeliness in their reporting schedule and timeliness of the public accounts audit. Ontario's public accounts and budget exhibited the following positive qualities per the C.D. Howe institute:

1. PSAB-consistent revenue and spending balances in public accounts
2. Revenue and spending figures that match the earliest budget figures in public accounts
3. Prominent comparison of actual results with budget plans
4. Estimates on the same bases as the budget and public accounts
5. The Province provides interim reports toward Budget targets and

6. No major audit reservations in public accounts.

Ontario and several other provinces were praised for having their budgets prepared on the same accounting basis as their end-of-year public accounts. In having budget and public accounts on the same basis, Ontario and the other such provinces have increased transparency and comparability to their citizens.

7. Q. Everyone has been doing more with less, and that includes the government. For example there are 6% fewer full time employees in the civil service now, compared to 2008. What else is the government doing to ensure its bringing costs down? What results have been achieved so far?

A. The Ontario Economic Outlook and Fiscal Review in fall 2014 announced Program Review, Renewal and Transformation (PRRT) as a key element of the government's plan to achieve a balanced budget.

PRRT is a fundamentally new approach to multi-year planning and budgeting, and is designed around four key principles:

- Examining how every government dollar is spent
- Using evidence to inform better choices and improve outcomes
- Looking across government to find the best way to deliver services, and
- Taking a multi-year approach to find opportunities to transform programs and achieve savings.

At the same time, the government is making tough choices to end programs that are not performing, do not link to key priorities or no longer serve a clear public interest.

The 2014 Budget announced that the government was implementing an annual program review savings target, and set the target at $250 million for 2014-15. The target was met through a number of initiatives that achieved the reductions while continuing to support front-line services.

An additional year-end savings target of $1.1 billion built into the plan was also achieved.

The government met its program review savings target through initiatives such as:

- Negotiating lower prices for goods and services
- Finding internal efficiencies in information technology data centre, desktop and service management operations
- Modernizing the delivery of natural resources management programs

- Restraining compensation growth in line with the government's "net zero" policy

- Finding operational and administrative efficiencies across government, including reducing the government's office footprint and prudent management of discretionary costs, such as supplies and travel.

In the 2015 Budget, the government announced a number of opportunities identified through PRRT to improve outcomes while supporting fiscal objectives. They included:

- Changing business tax credits

- Modernizing programs delivered through ServiceOntario

- Reducing the government's office footprint

- Getting better value for money invested in health care programs and services.

8. Q. Why is it important that the government has consistently beaten its deficit reduction targets in terms of the province's finances?

A. The government is dedicated to a fiscally sound approach to managing the Province's finances, which will provide the foundation for the long-term well-being and prosperity of Ontarians.

The government remains on track to eliminate the deficit by 2017-18. By continuing to beat our fiscal targets~~, Ontario's accumulated deficit is $30 billion lower than it otherwise would have been~~.

Through prudent and cost-effective debt management, the Province has also consistently kept interest on debt costs below budget projections.

Term extension has allowed the Province to lock in low interest rates for a longer period, which reduces refinancing risks and helps offset the impact of expected higher interest rates on the Province's interest on debt costs.

In addition, we have maintained a rigorous approach to control program spending to reduce Ontario's net debt-to-GDP ratio to its pre-recession level.

Our path to a balanced budget is being achieved through responsible fiscal management, which involves:

- Managing growth in program spending, and
- Maintaining the integrity of Provincial revenues.

Our plan is to first balance the budget while continuing to make strategic investments in capital assets. These infrastructure investments will stimulate economic growth, resulting in GDP growing more quickly than debt, and thereby lowering the net debt-to-GDP ratio.

9. Q. There's been concern about Ontario's net debt-to-GDP being significant; however the government is making large-scale infrastructure investments. How are these investments helping the people of Ontario?

A. The government's position is that the renewal and expansion of public infrastructure supports Ontario's industries, creates jobs and provides long-term benefits and improves the lives of Ontarians.

Large investments have been announced and made for improvements in the province's infrastructure. The province is making public infrastructure investments of more than $137 billion over the next 10 years. This builds on the 2014 Budget commitment to invest in infrastructure – resulting in about $160 billion of investment over 12 years, starting in 2014-15.

The revenues allocated to the Trillium Trust will be used to support building transit, transportation and other priority infrastructure as part of the Moving Ontario Forward plan.

A September 2015 report by the Broadbent Institute and the Centre for Spatial Economics showed that, on average, investing a dollar in public infrastructure in Canada raises gross domestic product (GDP) by $1.43 in the short term and up to $3.83 in the long term.

Ontario's planned investments in public infrastructure are expected to support over 110,000 jobs per year on average.

Building and revitalizing public infrastructure are essential to strengthening Ontario's economy.

10. Q. Given that compensation accounts for half of government spending, what has the government done to help alleviate the strain on finances as it works toward balancing its budget?

A. The government remains committed to balancing the budget by 2017-18 and managing compensation costs has been a key element of achieving this goal.

The 2016 Budget emphasized that all public-sector partners must continue to work together to control current and future compensation costs.

Since then, collective agreements have been reached in a number of key sectors, including the education sector, Ontario Public Service and provincial energy corporations that are consistent with the government's fiscal plan.

From July 2012to September 2016, the provincial public sector annual wage increases have averaged 0.6%, compared to the municipal sector at 1.7%, the private sector at 1.9% and the federal public sector in Ontario at 1.7%.

The Government has achieved a number of net-zero deals, including:

In August 2014, the Government reached a new net-zero four-year agreement with AMAPCEO, which produced savings of approximately $45 million. The agreement included zero across-the-board increases in the first two years and modest increases in the third and fourth years that were offset by savings elsewhere in the collective agreement.

On Oct. 30, 2015, the Government ratified a new net-zero three-year agreement with the Unified Bargaining Unit in OPSEU.

The Unified agreement includes no wage increases in 2015 and 2016. In 2016 there will be a modest 1.4 per cent one-time lump sum payment that does not form part of employees' base salaries, and in 2017 there is a 1.4 per cent pay increase.

The agreement is consistent with the fiscal plan. The lump-sum payment in 2016 and pay increase in 2017 are offset through changes to employee benefits and entitlements over the three-year term of the contract, including a freeze on salary progression in 2016 and 2017 and capping of termination payments.

In May of 2016, the government was able to achieve a net-zero negotiations and arbitration settlement outcome with OPSEU Corrections.

The government has a reached a tentative agreement with the Provincial Engineers Government of Ontario (PEGO) that still needs ratification by members. As such we cannot comment on the details of this deal.

11. Q. There are changes ahead for retiree benefits, how will they help the government's bottom line and how do they compare with what is happening in the private sector? How important are these kinds of changes to our plan to balance the budget?

A. Currently, persons in receipt of a pension from the Public Service Pension Plan (PSPP) or OPSEU Pension plan who have a minimum 10 years of pension credit are entitled to post-retirement group health, dental and life insurance coverage. The Ontario government pays 100% of monthly premium costs.

On Feb. 18, 2014, the government announced that the post-retirement benefits eligibility criteria and cost-sharing terms would be changing in 2017.

PSPP and OPSEU Pension Plan member employees who do not have 10 years of pension credit as of Jan. 1, 2017 would be required to have at least 20 years of pension credit to retire to an immediate unreduced pension in order to be eligible for post-retirement benefits.

Also, eligible persons who have not commenced receiving a pension before Jan. 1, 2017, would be required to pay 50% of the life, health, dental and vision and hearing aid premiums.

Employees who commenced receiving a pension before Jan. 1, 2017 will not be affected by these changes.

Announcement of the changes led to a reduction of the retiree benefit program liability by over $1 billion and brings Ontario Public Service retiree benefits more in line with other public sector organizations.

Some other public sector workers pay 100% of their benefits premiums.

Eligible retirees include former employees of the OPS, as well as former employees of other employers which participate in the OPS pension plans.

Retired judges, justices of the peace and Ontario Provincial Police Association (OPPA) members have independent retiree benefit terms.

By transitioning to a new cost-sharing model for retiree benefits, the government is moving in line with the private sector and other public sector organizations.

12. Q. The Auditor General identifies significant accounting issues related to her audit of the Province's consolidated financial statements. Some of the issues are related to accounting standard changes. Since both Ontario's budget and actual results are based on PSAB accounting standards, such changes could impact the transparency and accountability of the government's financial reports as well as fiscal policy decisions. Can you please describe if these issues are ongoing and what has been done to rectify them?

How long will it be before this is resolved?

A. As your question points out, in addition to adopting PSAB as the basis to present its actual results, Ontario has also made a **policy decision** to adopt PSAB as the basis for the government's fiscal planning process which means that changes in PSAB's accounting standards can implicitly impact fiscal policy decisions.

As has been mentioned already, the **CD Howe Institute** has given Ontario an "A" grade for the quality of our financial reporting, based on a number of factors

including the fact that we present PSAB-consistent revenue and spending balances in public accounts, and the timeliness of our reporting schedule. The fact that the actual results have been independently audited by the AG and that we have received unqualified audit opinions over the past 22 years now, means that the public and legislature can rely upon the results reported by the government.

There is tremendous value in **independently established accounting standards**, and especially for standards which are prepared taking the unique accountability and transparency needs of the public sector in mind. In this regard, Ontario has continued to support the public sector accounting standard setting process. Input to the process by stakeholders is critical to ensure high-quality standards which meet user needs and which serve **the public interest.** And we take this responsibility very seriously.

Ways that we support the standard setting process include:

- **Monitor communications** from the Public Sector Accounting Standards Board related to upcoming projects to identify potential areas of interest/concern
  Similarly, we also monitor accounting standard developments which may impact our **GBEs** (for example, potential changes in standards impacting OLG, LCBO, H1 or OPG).

- Attend as **observers meetings of the Accounting Standards Oversight Council** to hear presentations by the Chair of the Public Sector Accounting Board and the Accounting Standards Board related to current projects and issues that they are dealing with. In the past we have had Deputy Minister representation on the Oversight Council with specific background in fiscal policy (Phil Howell). Such participation helped to ensure a more robust discussion of potential standard changes on governments.

- Participation by past **Provincial Controllers** as members of the Public Sector Accounting Standards Board. For example, our recently retired ADM and Provincial Controller, Murray Lindo, still sits on PSAB, although his 3 year term will be coming to an end next March. Although this position requires that the individual represent himself and his own views (and not represent the views of the government), it is nonetheless valuable to have a voice at the table to ensure that the real impacts of any potential changes on the quality of financial information are identified and discussed. It has been valuable for example to know that the continuing debate about Financial Instruments and Government Transfers is informed by both the accounting and fiscal perspective that Ontario's Provincial Controller would bring to the table.

- Ontario provides **input to PSAB's strategic plan** to help inform decisions on key areas that PSAB should focus.

- We also provide **input on an individual project by project** basis for each standard change that PSAB issues for comment. Occasionally, such projects could require several responses over the course of the project. For example, the PSAB standard on government transfers took 9 years to develop and input continues to date as part of PSAB's on-going review of issues related to the consistency of application related to the standard.

- Occasionally, we **stakeholder with PSAB staff** on specific matters like concerns related to the Financial Instruments standard. In this case staff from both OPCD and the OFA participated in discussions with PSAB.

- We **observe PSAB Accounting Discussion Group** meetings to hear representatives from the Board, audits and preparers discuss specific issues identified by public sector entities.

- Depending on the significance of a particular item, **Ontario has often played the lead in championing inter-jurisdictional dialogue and joint action plans** to support the quality of PSAB's standard setting process. For example, the OFA has collaborated with other members of the Canadian borrowing community to compile analysis and feedback to PSAB on its Financial Instruments standard. A past DM of Finance (Colin Anderson) Co-Chaired an inter-jurisdictional PSAB/Deputy Minister of Finance Joint Working Group which was formed in 2007 in light of key concerns being raised by governments related to PSAB's direction.

- Most recently, Ontario is **Chairing a Fiscal Expert Panel** which will be meeting later this week to discuss PSAB's current project on its Conceptual Framework in an effort to gather views and valuable input to share with PSAB on this foundational and critically important project. The outcome of the project will influence the direction of future public sector accounting standards.

This list is **not exhaustive**, but I hope that it gives you the sense of the significant time and effort that Ontario invests in supporting the quality of public sector reporting. We are committed to meeting user needs for transparency and accountability in public sector reporting. We will continue to invest the time and effort required to provide valuable input to PSAB's standard setting process.

13. Q: Moody's just released a report noting that Ontario's debt burden and debt service costs will remain manageable thanks to low interest rates, as well as the province's improving fiscal position and conservative debt management policy. Can you explain how your conservative debt management policies are keeping debt service costs manageable?

A: According to Moody's, "low interest rates will keep interest costs in line with current levels." Moody's also states that "Ontario's strategy of issuing debt across a variety of maturities and markets helps ensure good access to funding and low financing costs. To protect against unfavorable market conditions, Ontario has in recent years increased its liquidity reserves. The province has also extended its weighted average debt maturity to take greater advantage of low interest rates."

This term extension reduces the Province's refinancing risks and helps offset the impact of expected higher interest rates on its IOD costs.

The 2010 Budget forecasted that, by 2016-17, the Province would have to spend 11.7 cents of every revenue dollar received on interest. Currently, the Province spends 8.5 cents of every revenue dollar on interest, 3.2~~5~~ cents lower than what was forecast in 2010.

This ratio is ~~lower than it was in the 1990s and 2000s~~the lowest it has been since 1990-91, and is forecast to remain low~~er~~ through the outlook period in 2018–19.

14. Q: Moody's just released a report noting that Ontario's policy decision to borrow for infrastructure spending at a time of historically low interest rates, combined with the prudent debt management practices has helped to support the province's Aa2 rating. Can you explain how borrowing for infrastructure helps support the province's credit rating?

A: According to Moody's although Ontario's debt will continue to increase over the medium term as it funds its 10-year infrastructure plan "any negative impact on the province's credit strength will be counterbalanced by rising revenues and a return to budgetary balance."

The government plans to invest more than $137-billion in capital over 10 years, and $160 billion over the 12-year period starting in 2014-15.

Investments in capital, supplement GDP growth and the net debt-to-GDP ratio will come down more quickly than it would without these investments. Once a balanced budget is achieved, the increase in net debt will be limited to difference between the cash investment to build the assets and the amortization, which is a non-cash amount.

WSIB QAs from last year – WSIB to review and advise.

15. Q. The Auditor General has discussed the WSIB in her report for a couple of years, suggesting that the government reconsider the exclusion of the WSIB's financial results from the Province's consolidated financial statements. Her suggestion is based on the risk that the province might have to provide funding to ensure the WSIB remains viable. Why hasn't the government consolidated the WSIB on its books?

A. Under public sector accounting standards the province only consolidates those organizations which are assessed as controlled. Where province has the power to govern the financial and operating policies of an entity with expected benefits of risk or loss, it is consolidated on our books. This is not the case with the WSIB, and furthermore the Province doesn't have any legal liability for the debts of the WSIB.

In fact, the WSIB is really a non-controlled trust in nature, and such trusts are not consolidated on the basis that it would distort the Province's books if the trust's assets, liabilities, revenues and expenses were shown on our books. Since the government does not have any legal responsibility for the unfunded liability, and does not control the entity, we feel that it should remain non-consolidated.

The current exclusion of the entity from our books best serves transparency and accountability. Otherwise, the public and legislature would assume that the WSIB debt is taxpayer debt and that any net operating income/loss of the WSIB would somehow impact the taxpayer.

16. Q: What progress has the WSIB made on its target to be fully funded by 2027?

17. Q: Can you please give us an update on the status of the WSIB review of its long term financial viability?

Hi Anna,

Sorry for the delay. See the DM's edits attached. He would like to keep the first line about the Budget and FES language on the 27%. Other than that, just some minor wording changes.

Thanks
Dave

Hi Dave,

As discussed in our 12:00pm meeting with the Secretary of Cabinet, we've revised the wording in the attached Status Table for SCOPA that pertains to recommendation #7 (debt). I've included our edits in track changes (p. 10-11).

If the Deputy is comfortable with this version, I'll send it along to OPCD to incorporate our changes.

Thanks, Anna

Summary Status Table in Response to the
Report of the Auditor General of Ontario

Chapter 2 2017 Annual Report of the Auditor General
Treasury Board Secretariat, Ministry of Finance, Ministry of Energy

Auditor's Recommendation	Completed Undertaking	Outstanding Undertaking (including timeline)
AG Recommendation #1 *We recommend the government record valuation allowances to offset the net pension assets it has recorded from the Ontario Teachers' Pension Plan and the Ontario Public Sector Employees' Union Pension Plan until such time as it obtains formal written authorization from their pension plan co-sponsors that they are able to lower minimum contributions or withdraw surpluses from the pension funds within the next 12 months.*	The Office of the Auditor General communicated its interpretation of Public Sector Accounting Standards (PSAS) requiring a full valuation allowance on the Province's two jointly sponsored pension plans in September 2016. At that time, the government passed a time-limited regulation on the accounting treatment for its joint defined benefit plans to align with the Auditor General's interpretation of PSAS, which enabled officials from Treasury Board Secretariat and the Ministry of Finance to sign the Statement of Responsibility for the 2015-16 Public Accounts. During the 2016-17 year, the professional staff conducted further research and analysis, and determined that PSAS does not require a valuation allowance on either of the jointly sponsored pension plans. This conclusion is supported by: • The conclusions reached by an independent Pension Asset Expert Advisory Panel (the 'Panel'), established by the government to provide advice on the interpretation of PSAS with respect to the reporting of net pension assets of these two joint defined benefit plans. The Panel, comprised of accredited accounting, actuarial and legal professionals with extensive background in pension accounting and plan governance, released its report in February 2017 which supported the government's position that a valuation is not required for these two plans under PSAS. Two key findings of the Panel were: 1) there is no requirement under PSAS that any formal agreement exist between the joint sponsors regarding the timing or amount of a reduction in contributions to record an asset, as the existing agreements in place between the parties support the recognition of an expected benefit, and 2) unilateral control is not	The government will evaluate the need for a valuation allowance annually taking into consideration (a) changes, if any, in the governance structures of the plans, (b), decisions, if any, of the joint sponsors that impact the need for a valuation allowance, and b) changes, if any, in Public Sector Accounting Standards. The government is open to continue to discuss the matter in the hopes of resolving this matter.

DRAFT

	required for asset recognition; joint control with each party having the ability to deny the actions of the other sponsor, provides evidence of shared control, supporting recognition of an asset. • An opinion from Deloitte LLP on aspects of the Province's accounting as at March 31, 2016 for the Ontario Teachers' Pension Plan. The opinion, which was dated October 2, 2016, concluded that it was permissible to recognize a pension asset under Canadian Public Sector Accounting Standards, even though the Province did not have under a unilateral right to reduce contributions. The opinion did not address the value at which the asset should be recorded. • Analysis completed by EY as to whether any valuation allowance is required to be recorded for OTPP or OPSEUPP as of March 31, 2017. EY confirmed no valuation allowance was required for either plan. The government respectfully disagrees with the Auditor General's interpretation of the accounting standards on this issue as PSAS neither requires unilateral control to record an asset, nor does it include a requirement to obtain a letter from the co-sponsor of the plan agreeing to reduce future contributions within 12 months.

Chapter 2 2017 Annual Report of the Auditor General
Treasury Board Secretariat, Ministry of Finance, Ministry of Energy

AG Recommendation #2 *We recommend that the government remove the Independent Electricity System Operator's Market Accounts from the Province's consolidated financial statements.*	The Province consolidates the entities it controls, in accordance with Public Sector Accounting Standards (PSAS) and its internal reporting policies. Each consolidated entity produces its own stand-alone financial statements and is subject to its own financial statement audit. In 2016, the Independent Electricity System Operator (IESO) changed the accounting for the market accounts and recognized these balances on its financial statements. The financial statements of the IESO for the year-ended December 31, 2016 were subject to an external audit and received an unqualified (or clean) opinion. The government supports this enhanced reporting and greater transparency for the economic activities of the IESO. Additional comments with respect to IESO's accounting for the Market Accounts are included in the response to Recommendation #5 of this report.	The government supports the enhanced reporting and greater transparency for the economic activities of IESO resulting from the recognition of the market accounts. The government is open to continue to discuss the issue in the hopes of resolving this matter.
AG Recommendation #3 *We recommend the government follow the accounting standards established by the Public Sector Accounting Board and the Province's historical accounting precedent, and implement the recommendations in the Special Report issued*	The government prepares its financial statements in accordance with PSAS. The proposed accounting for the Ontario Fair Hydro Plan reflects the economic substance of the transaction by differentiating costs borne by taxpayers versus those borne by ratepayers. PSAS is silent on the recognition, measurement, presentation and disclosure of rate-regulated activities. In absence of a clear position on an issue, standard accounting practice dictates that an entity should consult other accounting standards. This guidance for PSAS is included in PS1150.07. Regarding the Office of the Auditor General's (OAG's) recommendation that the financing for Ontario's Fair Hydro Plan (OFHP) be pursued at the lowest cost to Ontarians, the government reiterates its concerns with this characterization, which were previously provided in the October 4, 2017 government response to the OAG's special report on OFHP (see	The government intends to continue to prepare its financial statements in accordance with Public Sector Accounting Standards (PSAS). The Fair Hydro Trust will raise financing through a combination of 3rd party senior debt and subordinated debt funded by OPG for which the cost will be primarily driven by the credit ratings assigned by Moody's and DBRS. The ultimate cost of this program will be dependent on the quantity of Global Adjustment that will be financed, prevailing market interest rates over the next 30 years, the availability of capital to invest in this type of structured debt and the

DRAFT

by our Office and tabled in the legislature on October 17, 2017, titled The Fair Hydro Plan: Concerns About Fiscal Transparency, Accountability and Value for Money, as follows: • *Record the true financial impact of the Fair Hydro Plan's electricity rate reduction on the Province's budgets and consolidated financial statements; and* • *Use a financing structure to fund the rate reduction that is least costly for Ontarians.*	Government Response to OAG Report on the Fair Hydro Plan in Appendix 5 of the Auditor General's Special Report). With respect to the Global Adjustment Refinancing (GA Refinancing) component of the OFHP, the policy objective is to more fairly allocate the cost to ratepayers over the useful life, not the contractual term, of the electricity generating assets. Therefore, it was a primary policy objective to ensure that the costs are borne by the beneficiaries of the electricity system – the ratepayers – and not the tax-base. The government believes it is appropriate for ratepayers to pay for the financing of electricity assets. The rate-base has a different risk profile than the tax-base, which would be reflected in different interest costs. The various entities that operate in the electricity industry have different financing costs that are specific to their risk profiles. The industry does not operate and is not financed through the Province. Ontario Power Generation (OPG) was identified as the Financial Services Manager responsible for the financing plans and the financing entity (i.e., Fair Hydro Trust) that will manage the debt obligations. OPG has the necessary financing and commercial expertise to assist with refinancing the Global Adjustment (GA) and will ensure that it is done in an efficient and cost-effective manner. OPG has a demonstrated track record in the financial markets with its Corporate Debt platform, private placement of insurance linked bonds, participation in securitization program and highly successful project debt issuances tied to new hydroelectric developments. OPG is beginning the process of raising funds to finance the deferred costs, and while total borrowing costs will not be known until the program is complete, accumulated interest is projected to be less than the estimates in the May 2017 report of the Financial Accountability Office (FAO). The figures referenced in the FAO's report was based on initial Ministry of Energy estimates from March 2017. Subsequent analysis	credit stability of the OFHP program which would be reflected in credit ratings assigned to this debt over time. Each of these factors will need to be managed and monitored closely. The government is open to continue to discuss the issue in the hopes of resolving this matter.

DRAFT

	conducted by the Ministry of Energy refined a number of variables, including the cost of borrowing and the quantity of GA to be refinanced. A number of variables, including interest rates, electricity demand and electricity costs, will change over the thirty-year life of OFHP. Government will continue to revise cost estimates to reflect these variable conditions. In addition, as outlined in the 2017 Long-Term Energy Plan, the government will continue to identify and implement initiatives to take costs out of the electricity system, which would reduce the cost of GA refinancing.	
AG Recommendation #4 *The Office of the Auditor General is the appointed under the Auditor General Act as the auditor for the consolidated financial statements of the Province of Ontario. We recommend that the Treasury Board Secretariat:* • *Proactively supply copies to the Auditor General of all contracts it enters into for accounting advice and opinions in order to ensure that*	Treasury Board Secretariat's use of external expertise for accounting and financial reporting matters supplements its own resources on complex or emerging accounting and reporting matters. External advisors are generally engaged to provide advice and guidance to supplement internal analysis. Treasury Board is committed to working with the Office of the Auditor General to discuss issues, once the professional staff has completed its analysis of the issue. In addition, Treasury Board believes frequent communication with the Office of the Auditor General is important and to that end, requested additional meetings with both the staff and the Auditor General during the 2016-17 audit. Where required by the CPA Ontario Code of Professional Conduct, the Auditor General has been, and will continue to be, advised of external advisor involvement.	Treasury Board Secretariat will continue to take a proactive approach to raising issues with the Office of the Auditor General. Where required by the CPA Ontario Code of Professional Conduct, the Auditor General will continue to be advised of external advisor involvement.

DRAFT

our Office is aware of the work the advisers are performing, can assess significant issues in a timely manner, and can determine the impact on the Province's consolidated financial statements and our annual audit; and • *Build into its contracts with external advisers the requirement that the advisers engaged to provide accounting advice and opinions that affect the consolidated financial statements notify our Office of*		

DRAFT

their engagement as required under the Code of Professional Conduct of the Chartered Professional Accountants of Ontario.		
AG Recommendation #5 *We recommend that the Independent Electricity System Operator (IESO), an "other government organization," use the Canadian Public Sector Accounting Standards (PSAS) in the preparation of its financial statements. Specifically, it should:*	The Independent Electricity System Operator (IESO) prepares its financial statements in accordance with Public Sector Accounting Standards (PSAS) and the financial statements are audited by a firm of independent external auditors whose responsibility is to express an opinion on whether the financial statements are fairly presented in accordance with PSAS. On its 2016 financial statements, IESO received an unqualified (clean) audit opinion. In its role as market administrator, IESO operates and settles approximately $17 billion through the electricity market. The change to include market account assets and liabilities in the financial statements provides increased transparency with respect to the value of transactions that flow through Ontario's electricity market, that otherwise would go	The IESO intends to continue to prepare its financial statements in accordance with Public Sector Accounting Standards, and will report on the results of its accounting firm's audit in its 2017 financial statements, to be published March 30, 2018. The IESO will continue to regularly review its accounting policies to ensure they are best suited to the reporting requirements of its business and the users of its financial statements. This includes providing transparency into the value of transactions that flow through Ontario's $17 billion electricity market and reflecting the economic substance of certain types of expenses that may not be directly recovered through normal revenue requirement

DRAFT

• *Remove market accounts recorded on its financial statements; and* • *Discontinue the inappropriate use of rate-regulated accounting in the preparation of its financial statements.* *To ensure that the members of the Legislative Assembly receive financial information on the operations of the IESO prepared in accordance with Canadian PSAS, the Office of the Auditor General will conduct an attest audit of the December 31, 2017, financial statements of the IESO as permitted under the Electricity Act, Subsection 25.2(2), which*	unreported in IESO's financial statements. These changes were extensively discussed with IESO's external auditors, its Audit Committee and its Board of Directors. The decision was supported by the Office of the Provincial Controller and IESO's external audit firm. Rate-regulated accounting better reflects the economic substance of certain types of IESO expenses (like those related to the Smart Metering Entity) that may not be directly recovered through normal revenue requirement models, and instead are recovered through rate regulation. This change is in line with accounting practices followed by six out of eight other independent system operators in North America and provides IESO financial statement users greater transparency into the substance of the variance accounts it holds and its right to collect an amount in the future.	models, and instead are recovered through rate regulation. The IESO recognizes the Auditor General's statutory role and authority to perform an audit of the IESO. The IESO is cooperating with the Office of the Auditor General to provide information, including the 2017 financial statements prepared by management, and for access to management for assistance in understanding such information. The IESO has likewise instructed its audit partner to cooperate with the Auditor General's audit.

DRAFT

states: "The Auditor General may audit the accounts and transactions of the IESO. 2014, c. 7, Sched. 7, s. 3 (1)."		
AG Recommendation #6 *We recommend the government follow the accounting standards established by the Public Sector Accounting Board, rather than using legislation and regulations to prescribe accounting treatments.*	The Province is committed to provide high-quality financial reports that support transparency and accountability in reporting to the public, the legislature and other users. For the 2015-16 Public Accounts, the government passed a time-limited regulation prescribing the accounting treatment for net pension assets in order to allow Treasury Board Secretariat and Ministry of Finance officials to sign off on Public Accounts consistent with the fiscal impact of the Auditor General's interpretation of Public Sector Accounting Standards (PSAS). This regulation is the only example of where the accounting treatment was legislated, and the legislation did not align with the requirements of PSAS. With respect to the Ontario Fair Hydro Plan Act and its regulations, there are no provisions in that legislation that prescribe the accounting treatment required to be followed by the Province. It is important to distinguish legislating the accounting from legislating the right of the government to recover amounts from specified ratepayers in the future,	The government intends to continue to prepare its financial statements in accordance with Public Sector Accounting Standards.

DRAFT

	which in the absence of the legislation, would have been collected from specified ratepayers as the costs were incurred. The accounting for the transactions resulting from the Fair Hydro Plan will be recorded in accordance with PSAS.	
AG Recommendation #7 *We recommend that in order to address the Province's growing total debt burden, the government work towards the development of a long-term total-debt reduction plan linked to its target of reducing the net debt-to-GDP ratio to its pre-recession level of 27% as measured using proper accounting for net pension assets and the projected costs of the Fair Hydro Plan. The government should also discuss publicly how it plans to pay down the debt.*	The 2017 Budget and the 2017 Fall Economic Statement stated that the government continues to maintain a target of reducing the net debt-to-GDP ratio to its pre-recession level of 27%~~,~~ ~~currently projected for 2029-30, together with an interim target of 35% by 2023-24. From 2017-18 onwards, the balanced budget environment will limit increases in debt to the difference between annual investments in infrastructure improvements and the amortization of such investments.~~ The government is making strategic investments in programs and services that will generate economic growth, while minimizing interest on debt costs. ~~The forecast balanced budget in 2017–18 will limit the increase in net debt to net investments in capital assets.~~ These investments ~~will~~are intended to grow ~~contribute to~~ the economy ~~growing~~ at a faster rate than net debt, allowing the government to manage Ontario's net debt-to-GDP ratio. The forecast balanced budget in 2017–18 will limit the increase in net debt to net investments in capital assets. The government's long-term infrastructure plan to invest about $190 billion over 13 years, starting in 2014-15, will contribute to the growth of the economy. The Centre for Spatial Economics found that for every $1 spent on public infrastructure, GDP increases by $6, on average, in the long term.	Continue to monitor progress. ~~Estimated implementation by FY 2029-30.~~

DRAFT

Summary Status Table in Response to the Report of the Auditor General of Ontario

Chapter 2 2017 Annual Report of the Auditor General

Treasury Board Secretariat, Ministry of Finance, Ministry of Energy

	Therefore, while overall debt will rise to fund these infrastructure investments, measurements of relative debt such as the net debt-to-GDP ratio, a recommended practice by the Public Sector Accounting Board, will gradually diminish due to the Province's GDP increasing at a faster rate than net debt. This will allow the Government to continue to move towards its 27% net debt-to-GDP target. The ratio has already commenced declining~~, falling to 37.3% in 2017-18~~ from its 2014-15 peak of 39.3%. As discussed more thoroughly in responses to other recommendations in this report, the government prepares its financial statements in accordance with Public Sector Accounting Standards, including the net pension assets for its jointly sponsored pension plans and the transactions resulting from the Ontario Fair Hydro Plan.	
AG Recommendation #8 *We recommend that the Office of the Provincial Controller undertake thorough planning involving all stakeholders, including Treasury Board Secretariat, ministries and provincial government agencies, to identify the*	Treasury Board Secretariat and the Ministry of Finance are supportive of the timely delivery of the Public Accounts. The Office of the Provincial Controller works closely with the Office of the Auditor General to identify audit issues early and to ensure that stakeholders are engaged in discussions regarding risks and resolution. The Office of the Provincial Controller will continue to collaborate with the Office of the Auditor General to support the timely delivery of the Public Accounts.	Planning discussions for the 2017-18 Public Accounts have begun between the Office of the Provincial Controller and the Office of the Auditor General. As well, the Office of Economic Policy has been engaged in discussions on risk considerations related to economic models used to estimate personal and corporate tax revenues.

DRAFT

Formatted: Normal

barriers and key areas to be addressed to achieve earlier finalization of the Province's consolidated financial statements, including the estimation risks associated with corporations tax and personal income tax revenues.	The Province will work with the Canada Revenue Agency on this recommendation, as reporting Personal and Corporate taxation revenues is highly dependent on information they provide.	
AG Recommendation #9 *We recommend that the government avoid establishing arm's length trusts in order to record an expense in its consolidated financial statements before it is necessary, given that it loses the ability to ensure that funds are ultimately provided to the appropriate beneficiaries.*	The government works with its transfer payment recipients to ensure it receives good value for the money it provides in the form of grants. Government policy on the structured approach to program delivery takes a risk-based approach with respect to transfer payment oversight. Grants are provided to thousands of organizations annually that the government deals with at arms-length and is able to demonstrate proper oversight. A Trust structure was selected to implement the Affordability Fund in order to provide an effective solution to distributing funds to electricity distributors. With approximately 70 distributors across Ontario, it was not feasible for the Province to enter into agreements with each distributor. The Trust structure establishes an independent entity with expertise from the electricity distributor and community sectors.	The government will continue to assess the most appropriate vehicle for meeting its policy objectives, which include appropriate oversight of how transfer payments are spent.

DRAFT

	While the Affordability Fund was established at arm's length to the government, there are report-back requirements on the use of funds transferred as well as the ability for the government to conduct an audit to gain assurance that the funds have been used for the purposes intended.	
AG Recommendation #10 *We recommend that the government determine when it will issue a regulation as outlined under subsection 11(1) of the Fiscal Transparency and Accountability Act, 2004 confirming the source of reference for the Pre-Election Report and the timeline for issuance of the report that will be subject to our review under the Act.*	Under the *Fiscal Transparency and Accountability Act*, 2004, the government may file a regulation that would require it to release a Pre-Election Report on Ontario's Finances. Should the government file such a regulation, the Auditor General would be required to issue a Statement based on a prompt review following the release of such a Pre-Election Report.	The government remains committed to meeting the legislative requirements of the Act and working constructively with the Office of the Auditor General.

Subject: Status Update

Ken,

A status update from the last two weeks:

1. The Fair Hydro Plan seems to have stalled a bit. In order to reach the Treasury Board meeting in late September, Matt informs me that Gadi needs to sign the submission by next Wednesday but there are still issues that are awaiting decision or input from OPG, Energy, MoF (legal) and OPCD. Cindy has provided some edits (item # 1 attached). The current plan, in discussion with Matt, is that it is crucial that the TB meeting on the Fair Hydro Plan is done in September, as the October TB meeting may jeopardize the ability to go to the market in a timely manner. I venture at this point that that the TB submission may have to be 'walked in" to TB at their meeting, provided all the issues can be resolved in the next little while. While ordinarily TB is strict on the protocol about receiving documents weeks in advance, they may be more lax given the importance of the Fair Hydro Plan. Barring that, then the TB submission will have to be signed by Wednesday in draft form, with issues that are unresolved/to be clarified. John Kim has called for meeting on the Fair Hydro Plan on Tuesday afternoon.

2. Public Accounts is scheduled, pending approval from the Minister, for September 7th. I spoke to OPCD this morning, and they confirm the AG made the two qualifications of her opinion that were expected. The last of the media Q&As have been edited, and there is nothing further for the OFA to do, apart from some web publishing after September 7. We are arranging physical copies to come to the office after publication. The last legal day for the PA to be published is September 27th.

3. I attend the SCOPA pre-brief yesterday and was asked to talk about our plan to reduce debt. Karen was fine with our wording on reaching the 27% net debt to GDP goal in 2029-30. However, she anticipated questions from SCOPA on details of formal "funding strategy" for contaminated sites.

RECOMMENDATION 5 Treasury Board Secretariat provide the Committee with the plan for funding the liability for contaminated sites for $1.79 billion.	**Fully Implemented** • The Inter-ministerial Contaminated Sites Assistant Deputy Ministers' Steering Committee has implemented a risk-based model for site prioritization to make recommendations to Treasury Board for annual funding and resource allocation priorities. • Guided by the prioritization model, annual drawdowns on sites with existing liabilities will be cash management issues for the government, while ministries are using the annual PRRT process to identify funding risks related to using their fiscal envelope for remediation work on new liabilities which require appropriations, to revise historical liability estimates or for costs to manage contaminated sites not covered under PSAB 3260. • For example, ministries' fall 2017 Program Review submissions outlined funding requirements for the remediation of 65 specific high-risk sites. The Program Review submission includes annual and long-term funding strategies for remediating the province's contaminated sites, focusing on those assessed as higher priority for the next eight year period.	• N/A

While she admitted this is not likely the OFA's responsibility, she did indicate that a pre-meeting may need to happen to discuss the funding plan. I asked her if she meant the plan of the ADM Steering Committee that decides what sites get prioritized with expenditures first, but she seems to think SCOPA might inquire just on the multi-year clean- up funding plan in place for these future expenditures. I did not mention that we don't borrow for specific programs like cleaning up contaminated sites given her previous comments that this is not likely the OFA's responsibility, but a meeting may be called on this regardless. When I lead

the Contaminated Sites project several years ago, we accrued a nearly $2 B liability.

4. The next PSAB board meeting is September 21 and 22. PSAB meetings, unlike the oversight committee that is responsible for PSAB, are closed to the public and as such, I don't know what the agenda is. It is possible that some report back may be made to the board on the stakeholder exercise with municipalities and not-for-profits on Financial Instruments. As requested though, we have updated our old submission with March 31, 2017 information. We have simply replaced four year old quantitative data with new, and have kept the wording to be sent to Charles Antoine (item 2a and 2b) for your review. I have left a binder of the document with reference material on your chair. I have also attached Deloitte's observations (item 2c) of the Borrower's Conference, and their presentation that day (2d).

5. Perhaps Risa and I can have a discussion with you next week on what sort of support and accountability is needed with respect to new MoF loans. They are asking for OFA for loan repayment templates and (IT) procedures for receivables that will be on MoF's books.

6. We had an FAO request. They asked for a slew of historical information from ourselves, OEP, *et al* going back to 1981. They wanted us to replicate the financing table with historical information but I told them we couldn't do that as a large portion of the information on deficits, TCA, should come from OPCD and treasury board. We did however, provide them new issues and redemptions lifted from the public accounts volume 1 (or equivalent) going back 35+ years. Please see item # 3 in the attachment.

7. We had a teleconference with MAG legal and their consultants. They are trying to calculate the cost of capital to the province from 1954 to 2017 using public accounts information, in order to determine possible damages incurred by the province on health care due to tobacco consumption, and levy it on cigarette manufacturers should they win their lawsuit. They will sift through Public Accounts (minus electricity debt, etc, that cannot easily be linked to their claim) and ask us to take a look at their calculation.

8. We have just received some Estimates Defence documentation and we are updating it now.

9. Our internal audit specialist who is documenting our internal controls needed to ask the OFA Board some governance questions. I said no, he can't talk to the board, but he agreed instead that a simple discussion with yourself can be sufficient. He has the questions ready, but also drafted potential answers that he gleaned from his other interviews and documents read. In order to mark off this requirement, may I ask if you can spare 20 minutes in the next while to discuss it with him.

   If you recall, OPCD instigated this request, but I am still not sure if they want COA attestation different than what Siva provides. Perhaps we can discuss this next week as well as I asked Lydia Zhu to take a look at his final documents and to discuss the audit plan next year. I plan to meet with her in late September/early October and give OPCD our internal control documentation shortly after if IAD finds the work sufficient.

10. If you recall, the OAG will start their Green Bond audit in two weeks (the last two weeks of September). I have not heard back yet from the OAG to finalize their plans, but I have already warned cash management and capital markets to please get ready.

Thanks.

John

RECOMMENDATION 5 Treasury Board Secretariat provide the Committee with the plan for funding the liability for contaminated sites for $1.79 billion.	**Fully Implemented** • The Inter-ministerial Contaminated Sites Assistant Deputy Ministers' Steering Committee has implemented a risk-based model for site prioritization to make recommendations to Treasury Board for annual funding and resource allocation priorities. • Guided by the prioritization model, annual drawdowns on sites with existing liabilities will be cash management issues for the government, while ministries are using the annual PRRT process to identify funding risks related to using their fiscal envelope for remediation work on new liabilities which require appropriations, to revise historical liability estimates or for costs to manage contaminated sites not covered under PSAB 3260. • For example, ministries' fall 2017 Program Review submissions outlined funding requirements for the remediation of 65 specific high-risk sites. The Program Review submission includes annual and long-term funding strategies for remediating the province's contaminated sites, focusing on those assessed as higher priority for the next eight year period.	• N/A

Yes, the reversal of the pension adjustment reduces the net debt published in the 2015-16 Public Accounts by $10.7 billion.

Is the $10.7 number accurate? OB has asked that the line Ken refers to is removed completely as this would be in Q3 finances that is released later in Feb.

Sorry Lynsey, just got back from Whitney Block, hope its not too late. Two comments:

No mention of net debt

“For 2016-17, the province’s fiscal position will improve by $2.2 billion”. This

statement should be caveated as follows; Assuming no other changes, the Province's fiscal position when compared to the FES will improve by $2.2 billion"

Thanks

Well that's a fait accompli, at least until the external review. So my only request would be for the FAO, if it has not already done so, to include a comment that the impact of the pension adjustment will be subject to external review by an independent panel.

Thanks

Subject: RE: The FAO's Fall Economic and Fiscal Outlook Report

Hi Christina

Pls see below our summary comments, thanks to Alex and George and their respective teams.

- The FAO's IOD forecast for 2016-17 and 2017-18 is more aggressive than the Province's own projections. The FAO is also more aggressive for 2018-19, however, that appears to be a result of the Province's time tested practice of using the 15 year average of interest rates as the basis of its forecast for the final out-year. This approach is more prudent than relying on current historically low interest rates and rate forecasts. The FAO is no doubt applying a different basis.

- The net debt numbers 2018-19 onwards differ from the Province's own projections due to the FAO assuming that the Province reverts back to deficits from 2018-19 onwards. Another reason for the net debt variance appears to be the FAO's capital investments assumption for the out years which differs from that of the Province.

Thanks

Ken K

Subject: FW: The FAO's Fall Economic and Fiscal Outlook Report

Hi Christina and Thomasz,

I just wanted to connect with you about providing comments to the attached FAO report (password: FAO1616). There are sections on Interest on Debt and Ontario's Net Debt in the Fiscal Outlook note that are of relevance to OFA.

OB is going to lead providing comments on the fiscal outlook. We've looped in OEP and TBS (PEMD, OPCD and CPD). Below is our proposed approach for feeding in comments:

Friday, October 7:

- OB will work with EAs to ensure the report is circulated, as appropriate (note: distribution will be limited).
- OB will review the report and provide a **high-level summary to TBS and MOF Deputies by end of day**.
- Divisions begin to review draft report.

Tuesday, October 11:

- Each division should do their own review, analysis, and fact check of the report and **provide consolidated comments to Framework by noon on Tuesday**. This review should include any concerns with facts and figures as well as any general concerns related to the approach (e.g. issues with assumptions underlying revenue, expense and economic forecasts).

Wednesday, October 12:

- Framework will consolidate all feedback received and create an integrated note that includes a summary, analysis, and fact check of the report. This **note will be circulated to ADMs on Wednesday morning**, and will support an afternoon meeting for ADMs to prep for Thursday's meeting with the FAO. Due to the tight timelines there may not be an opportunity to circulate the consolidated note at a staff level in advance of sharing with ADMs.
- OB to **submit consolidated feedback to the FAO by end of day**.

Thursday, October 13

- ADMs meet with FAO.

Given the tight timelines, we will focus on producing the one product necessary for Thursday's meeting (i.e. Note with summary, analysis, fact check and key messages). Post-Thursday's meeting with the FAO, we will then need to produce a CIN, Qs/As, and key messages for the DMs/Minister.

Please let me know if there are any issues with this approach.

Thanks,

Ryan

Subject: The FAO's Fall Economic and Fiscal Outlook Report

Good morning Tim, Karen and Brian,

As you know, the FAO will be releasing a fall economic and fiscal outlook (EFO) report, updating our projections from the spring.

The fall report will incorporate economic and fiscal information released since our spring report. The new information includes recently released economic data, updated economic projections of external forecasters as well as the new spending commitments included in the September Throne speech and the recent release of unaudited public accounts for 2015-16.

Our plan (and hope) is to release our report in advance of the Government's fall economic statement, to provide the Legislature with some context that may help in interpreting the government's updated fiscal outlook. As a result, and because of the delayed release of the public accounts, we have had to condense the schedule for our work.

I plan to provide you with a draft of the main content of our report on Friday. That is, I'll send you drafts of the economic outlook and fiscal outlook chapters, as well as the appendix with the detailed economic and fiscal projections. Early next week, I'll also send you an executive summary chapter that will accompany the economic and fiscal chapters.

We would ask for your comments by end of day Wednesday, October 12. We would be available to meet with MoF and TBS staff on Thursday morning to discuss the draft if you think that would be helpful.

As in the past, we are sharing these drafts to allow for comments at a staff level and to facilitate the preparation of any internal government briefing materials that may be required. We ask that you treat the document as confidential and restrict distribution to OPS staff.

As always, we greatly appreciate your assistance and support for the work of the FAO.

Best regards,
David

Hi,

We have two suggestions in the attached. First, there's a small typo in the Issue box. It should be "eliminated" not "eliminate".

We also suggest that wording on the IOD bullet on page 3 be changed.

Currently: The IOD outlook grows faster due to the FAO's forecast of higher projected net debt leading to larger debt interest payments.

Suggestion: The IOD outlook grows faster due to the FAO's forecast of higher projected deficits leading to a larger borrowing program and larger debt interest payments.

Thanks,
Christina

Subject: FW: The FAO's Spring 2018 Economic and Budget Outlook Report

I would say this in yellow is wrong.. the peak was in 2014-15

- The FAO is also projecting that net debt-to-GDP ratio will continue to increase over the medium-term and beyond 2020-21 reaching 44.4 per cent by 2023-24. The 2018 Budget projects that the net debt-to-GDP ratio to peak in 2021-22 before beginning a downward trend.

Good morning

The FAO will be releasing its spring 2018 Economic and Budget Outlook (EBO) report on Wednesday May 2nd at 10:00 am. There will be separate technical briefings for media and MPPs on Wednesday at 9:00 am. The Temporary Financial Accountability Officer, David Wake, and myself will be making a media statement and responding to questions at 10:00 am.

The report along with the attached letters are being delivered to Ministers Sousa and McMahon later this morning – and are attached for your reference.

Please treat this document as embargoed until its release on Wednesday at 10:00 am.

As always, your assistance and support for the work of the FAO are greatly appreciated.

Best regards,
David

FAO's 2018 Spring Economic and Fiscal Outlook

ISSUE

On May 2, 2018 the Financial Accountability Office will release its '2018 Spring Economic and Fiscal Outlook' report. The report adopts the AG's accounting treatment of both the Fair Hydro Plan and Pension Assets and indicates that the government is facing persistent budget deficits over the medium-term that will continue to grow well into the government's deficit recovery phase, unless spending growth slows dramatically beginning in 2021-22. It also suggests that the deficit cannot be eliminated by economic growth alone, but will require fiscal policy changes to raise revenue or reduce spending.

KEY MESSAGES

- I would like to thank the Financial Accountability Officer (FAO) for releasing his spring economic and fiscal outlook for Ontario. We value the FAO's independent assessment of the province's fiscal plan.
- The government is committed to a responsible fiscal plan that provides the conditions for all Ontarians to thrive.
- The FAO's deficit projections include the Auditor General's interpretation of how the government should be accounting for net pension assets and the Fair Hydro Plan. The disagreement in accounting is the main driver of the difference between the FAO's projections and the 2018 Budget.
- It is important to note that with the exception of the two accounting disagreements, the Auditor General has determined that the majority of the province's estimates regarding revenue, program expenses and interest on debt are based on cautious assumptions, as required by the Fiscal Transparency and Accountability Act.
- And while there is uncertainty in any future-oriented forecast, what we do know is that this government has a strong track record of beating its fiscal targets. As outlined in the *2018 Budget*, the government is projecting a surplus of $600 million for 2017–18, beating its fiscal target for the ninth year in a row.
- Ontario's fiscal policy is based on cautious assumptions and recognizes the need for flexibility to respond to changing circumstances. During this period of rapid economic change, the fiscal plan considers the impact of today's choices on different groups within the province and on future generations.
- While Ontario's economy has been growing steadily, the government knows that more must be done to ensure that the benefits of a solid economy are being shared equally by all Ontarians.
- The government believes that the best way to deliver prosperity to more people is by continuing to invest in the economy, and in public services that promote greater fairness and opportunity across the province.

- As a result, the province is projecting modest deficits over the medium term of $6.7 billion in 2018–19, $6.6 billion in 2019–20 and $6.5 billion in 2020–21, or 0.8 per cent of GDP in 2018–19, declining to 0.7 per cent by 2020–21.

BACKGROUND

Economic Outlook

- The FAO forecast for real GDP growth to average 2.0 percent annually between 2018 and 2021 is 0.1 percentage points faster than the *2018 Budget* forecast of 1.9 percent.
- The FAO forecast is consistent with the private sector economists' view that housing and consumer spending will slow over the next four years while exports and business investment will grow at a faster pace.
- The FAO recognizes similar economic risks identified in the *2018 Budget*. The possibility of stronger U.S. growth could boost Ontario's economy. However, protectionist trade policies in the U.S., and associated business uncertainty, could place Ontario at a competitive disadvantage. As well, high levels of household debt have left Ontario households vulnerable to rising interest rates.
- Over the extended period 2021 to 2025, FAO's long-term economic outlook is similar to the unpublished Ontario Ministry of Finance projection. In particular, the FAO projects Ontario nominal GDP growth of 3.9 percent annually, on average, between 2021 and 2025, 0.1 percentage points lower than the *2018 Budget* recovery plan projection of 4.0 percent.

Fiscal Outlook

- The FAO is projecting a deficit of $3.6B in 2017-18, rising to $12.7B by 2020-21. The FAO projects the deficit to further deteriorate over the government's recovery plan period, reaching $16.6B by 2025-26 under a 'status quo' scenario of 3.5 per cent program expense growth. However, the report suggests balanced budget is possible by 2025-26 if the government constrains program spending to 2.1 per cent beginning in 2021-22.
- Unlike its Fall report, the FAO is now only presenting projections that include the impact of the Auditor General's (AG) recommended accounting treatment for both the Fair Hydro Plan and the net pension assets of jointly sponsored pensions plans.
    - Taken together, the adjustment for these two accounting differences add between $4B and $6B to the deficit in each year.

Interim and Medium-Term (2017-18 to 2020-21)

- The FAO is projecting a deficit of $3.6B in 2017-18 and deficits of between $11B and $13B over the medium term.

- The FAO's **revenue forecast** is approximately $1B lower than the government's in each year of the medium-term outlook, mainly due to a lower outlook for personal income tax revenue.
- Similar to past reports, the FAO adopts the *2018 Budget* **program expense outlook** (other than the accounting treatment differences).
- Similar to past reports, the FAO also continues to project **interest on debt expense** that is slightly below the government's projection over the medium-term – by between $0.1B and $0.2B per year.

Overall, the difference between the FAO's and government's medium-term fiscal outlook is largely driven by the impact of the AG's recommended accounting treatment for both the Fair Hydro Plan and the net pension assets of jointly sponsored pensions plans .

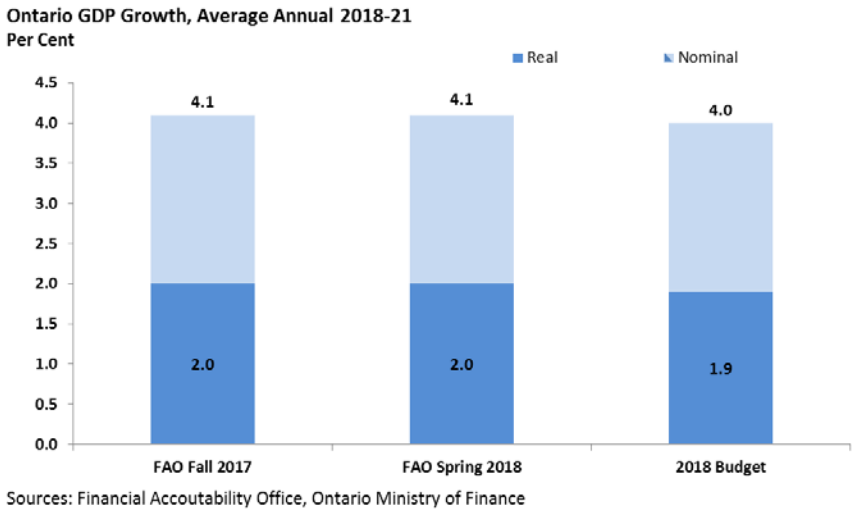
Differences Between the FAO's Fiscal Outlook and the *2018 Budget* ($ Billions)	2017-18	2018-19	2019-20	2020-21
2018 Budget Projected Deficits (Excl Reserve)	0.6	(6.0)	(5.9)	(5.8)
FAO Projected Deficits (Excl Reserve)	(3.6)	(11.8)	(12.4)	(12.7)
Difference between FAO and 2018 Budget	*(4.2)*	*(5.8)*	*(6.5)*	*(6.9)*
Difference Due to Accounting	*(4.2)*	*(5.0)*	*(5.6)*	*(6.0)*
Difference Due to Other (Lower revenue offset by lower IOD)	-	*(0.8)*	*(0.9)*	*(0.8)*

- In addition to its assessment of the government's current fiscal plan, the FAO developed a "baseline" budget projection that excludes the new revenue and spending measures announced in the 2018 Budget. This baseline scenario projects budget deficits of $8.1B in 2018-19, $7.2B in 2019-20, and $6.1B in 2021-21.

Recovery Plan (2021-22 to 2025-26)

- The 2018 Budget projects a return to balance by 2024-25 and a small surplus in 2025-26. This is premised on:
  - Projected average annual growth in revenue of 3.3% over the recovery plan period and managing program expense to an average annual growth rate of 2%.
- In contrast, the FAO's "status quo" projection assumes program spending will grow by about 3.5 percent per year from 2020-21 to 2025-26 resulting in deficits that reach $16.6 billion by 2025-26. Compared with the 2018 Budget projections:
  - The revenue outlook is higher due to a higher outlook for taxes and other revenue.
  - Given an aging and growing population and price inflation, the FAO projects program spending would need to grow at the rate of these core cost drivers, 3.5%

annually over the outlook, so that "the quality of public services would be maintained".



- The IOD outlook grows faster due to the FAO's forecast of higher projected net debt leading to larger debt interest payments.

Commented [CZ1]: Suggest rewording to "…FAO's forecast of higher projected deficits leading to a larger borrowing program and larger debt interest payments."

- The FAO is also projecting that net debt-to-GDP ratio will continue to increase over the medium-term and beyond 2020-21 reaching 44.4 per cent by 2023-24. The 2018 Budget projects that the net debt-to-GDP ratio to peak in 2021-22 before beginning a downward trend.

The FAO also included a "spending restraint" scenario that holds program expense growth to 2.1 per cent beyond 2021-22, consistent with the 2018 Budget projection. Using this method the FAO projects Ontario's budget deficit would improve rapidly, reaching a small surplus by 2025-26, however they caution that this projection relies on a dramatic slow-down in spending growth and implies that the government would have to find $15 billion in permanent savings by 2025-26.

Note: All surplus/deficits exclude the reserve. Numbers may not add due to rounding.

MEDIUM-TERM REVENUE:

- The FAO projects Personal Income Tax to be significantly lower than the 2018 Budget projections ($0.4 billion in 2018-19, $0.7 billion in 2019-20, and $0.9 billion in 2020-21).
- FAO estimates that Ontario will no longer qualify for Equalization payments after 2018-19, where as the 2018 Budget assumes Equalization ends in 2020-21.
- The FAO reduces H1 net income by $0.4 billion in 2018-19 to reflect the recent decision by the OEB to allocate a portion of tax gain to rate payers.

RECOVERY PLAN REVENUE:

- Over the recovery plan, the FAO projects significantly stronger growth (3.6%) in other non-tax revenues, compared to the 2018 Budget (2.0%).

RECOVERY PLAN PROGRAM EXPENSE:

The FAO assumes program expense to grow at 3.5% over the recovery plan (closer to population and inflation), versus the 2018 Budget projection of 2.0%.

INTEREST ON DEBT EXPENSE:

- Despite projecting larger deficits and potentially larger borrowings, the FAO's IOD grows on average by 4.7% over the medium-term, in contrast to 5.1% in the 2018 Budget.

FAO's 2018 Spring Economic and Fiscal Outlook

ISSUE

On May 2, 2018 the Financial Accountability Office will release its '2018 Spring Economic and Fiscal Outlook' report. The report adopts the AG's accounting treatment of both the Fair Hydro Plan and Pension Assets and indicates that the government is facing persistent budget deficits over the medium-term that will continue to grow well into the government's deficit recovery phase, unless spending growth slows dramatically beginning in 2021-22. It also suggests that the deficit cannot be eliminate by economic growth alone, but will require fiscal policy changes to raise revenue or reduce spending.

KEY MESSAGES

- I would like to thank the Financial Accountability Officer (FAO) for releasing his spring economic and fiscal outlook for Ontario. We value the FAO's independent assessment of the province's fiscal plan.
- The government is committed to a responsible fiscal plan that provides the conditions for all Ontarians to thrive.
- The FAO's deficit projections include the Auditor General's interpretation of how the government should be accounting for net pension assets and the Fair Hydro Plan. The disagreement in accounting is the main driver of the difference between the FAO's projections and the 2018 Budget.
- It is important to note that with the exception of the two accounting disagreements, the Auditor General has determined that the majority of the province's estimates regarding revenue, program expenses and interest on debt are based on cautious assumptions, as required by the Fiscal Transparency and Accountability Act.
- And while there is uncertainty in any future-oriented forecast, what we do know is that this government has a strong track record of beating its fiscal targets. As outlined in the *2018 Budget*, the government is projecting a surplus of $600 million for 2017–18, beating its fiscal target for the ninth year in a row.
- Ontario's fiscal policy is based on cautious assumptions and recognizes the need for flexibility to respond to changing circumstances. During this period of rapid economic change, the fiscal plan considers the impact of today's choices on different groups within the province and on future generations.
- While Ontario's economy has been growing steadily, the government knows that more must be done to ensure that the benefits of a solid economy are being shared equally by all Ontarians.
- The government believes that the best way to deliver prosperity to more people is by continuing to invest in the economy, and in public services that promote greater fairness and opportunity across the province.

- As a result, the province is projecting modest deficits over the medium term of $6.7 billion in 2018–19, $6.6 billion in 2019–20 and $6.5 billion in 2020–21, or 0.8 per cent of GDP in 2018–19, declining to 0.7 per cent by 2020–21.

BACKGROUND

Economic Outlook

- The FAO forecast for real GDP growth to average 2.0 percent annually between 2018 and 2021 is 0.1 percentage points faster than the *2018 Budget* forecast of 1.9 percent.
- The FAO forecast is consistent with the private sector economists' view that housing and consumer spending will slow over the next four years while exports and business investment will grow at a faster pace.
- The FAO recognizes similar economic risks identified in the *2018 Budget*. The possibility of stronger U.S. growth could boost Ontario's economy. However, protectionist trade policies in the U.S., and associated business uncertainty, could place Ontario at a competitive disadvantage. As well, high levels of household debt have left Ontario households vulnerable to rising interest rates.
- Over the extended period 2021 to 2025, FAO's long-term economic outlook is similar to the unpublished Ontario Ministry of Finance projection. In particular, the FAO projects Ontario nominal GDP growth of 3.9 percent annually, on average, between 2021 and 2025, 0.1 percentage points lower than the *2018 Budget* recovery plan projection of 4.0 percent.

Fiscal Outlook

- The FAO is projecting a deficit of $3.6B in 2017-18, rising to $12.7B by 2020-21. The FAO projects the deficit to further deteriorate over the government's recovery plan period, reaching $16.6B by 2025-26 under a 'status quo' scenario of 3.5 per cent program expense growth. However, the report suggests balanced budget is possible by 2025-26 if the government constrains program spending to 2.1 per cent beginning in 2021-22.
- Unlike its Fall report, the FAO is now only presenting projections that include the impact of the Auditor General's (AG) recommended accounting treatment for both the Fair Hydro Plan and the net pension assets of jointly sponsored pensions plans.
    - Taken together, the adjustment for these two accounting differences add between $4B and $6B to the deficit in each year.

Interim and Medium-Term (2017-18 to 2020-21)

- The FAO is projecting a deficit of $3.6B in 2017-18 and deficits of between $11B and $13B over the medium term.

- The FAO's **revenue forecast** is approximately $1B lower than the government's in each year of the medium-term outlook, mainly due to a lower outlook for personal income tax revenue.
- Similar to past reports, the FAO adopts the *2018 Budget* **program expense outlook** (other than the accounting treatment differences).
- Similar to past reports, the FAO also continues to project **interest on debt expense** that is slightly below the government's projection over the medium-term – by between $0.1B and $0.2B per year.

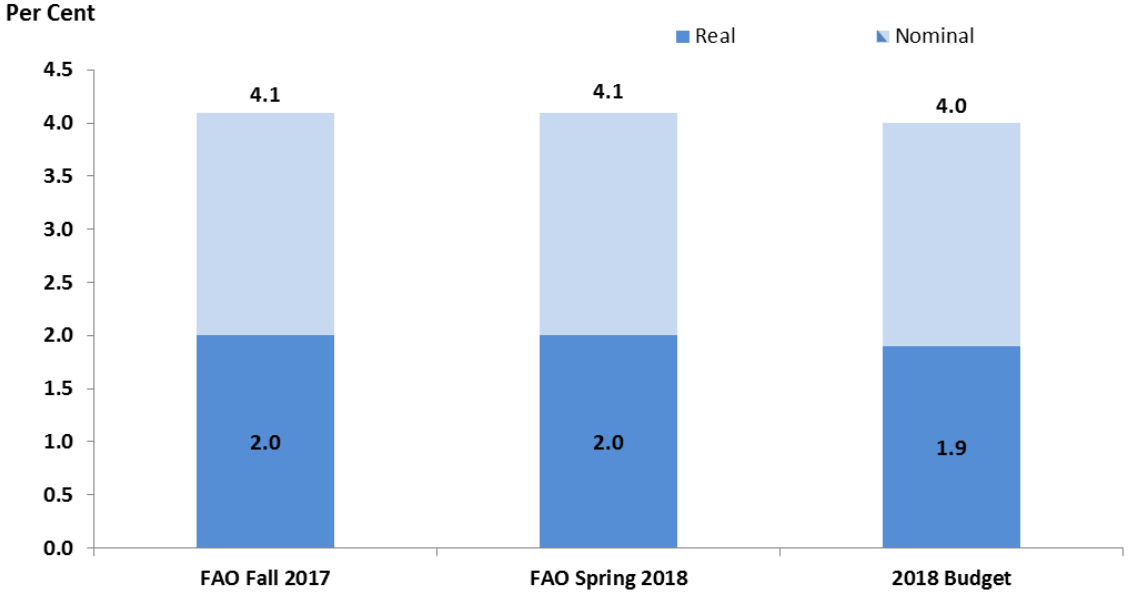
Overall, the difference between the FAO's and government's medium-term fiscal outlook is largely driven by the impact of the AG's recommended accounting treatment for both the Fair Hydro Plan and the net pension assets of jointly sponsored pensions plans .

Differences Between the FAO's Fiscal Outlook and the *2018 Budget* ($ Billions)	2017-18	2018-19	2019-20	2020-21
2018 Budget Projected Deficits (Excl Reserve)	0.6	(6.0)	(5.9)	(5.8)
FAO Projected Deficits (Excl Reserve)	(3.6)	(11.8)	(12.4)	(12.7)
Difference between FAO and 2018 Budget	*(4.2)*	*(5.8)*	*(6.5)*	*(6.9)*
Difference Due to Accounting	*(4.2)*	*(5.0)*	*(5.6)*	*(6.0)*
Difference Due to Other (Lower revenue offset by lower IOD)	*-*	*(0.8)*	*(0.9)*	*(0.8)*

- In addition to its assessment of the government's current fiscal plan, the FAO developed a "baseline" budget projection that excludes the new revenue and spending measures announced in the 2018 Budget. This baseline scenario projects budget deficits of $8.1B in 2018-19, $7.2B in 2019-20, and $6.1B in 2021-21.

Recovery Plan (2021-22 to 2025-26)

- The 2018 Budget projects a return to balance by 2024-25 and a small surplus in 2025-26. This is premised on:
  - Projected average annual growth in revenue of 3.3% over the recovery plan period and managing program expense to an average annual growth rate of 2%.
- In contrast, the FAO's "status quo" projection assumes program spending will grow by about 3.5 percent per year from 2020-21 to 2025-26 resulting in deficits that reach $16.6 billion by 2025-26. Compared with the 2018 Budget projections:
  - The revenue outlook is higher due to a higher outlook for taxes and other revenue.
  - Given an aging and growing population and price inflation, the FAO projects program spending would need to grow at the rate of these core cost drivers, 3.5%



annually over the outlook, so that “the quality of public services would be maintained”.

- The IOD outlook grows faster due to the FAO’s forecast of higher projected net debt leading to larger debt interest payments.
- The FAO is also projecting that net debt-to-GDP ratio will continue to increase over the medium-term and beyond 2020-21 reaching 44.4 per cent by 2023-24. The 2018 Budget projects that the net debt-to-GDP ratio to peak in 2021-22 before beginning a downward trend.

The FAO also included a “spending restraint” scenario that holds program expense growth to 2.1 per cent beyond 2021-22, consistent with the 2018 Budget projection. Using this method the FAO projects Ontario’s budget deficit would improve rapidly, reaching a small surplus by 2025-26, however they caution that this projection relies on a dramatic slow-down in spending growth and implies that the government would have to find $15 billion in permanent savings by 2025-26.

Note: All surplus/deficits exclude the reserve. Numbers may not add due to rounding.

MEDIUM-TERM REVENUE:

- The FAO projects Personal Income Tax to be significantly lower than the 2018 Budget projections ($0.4 billion in 2018-19, $0.7 billion in 2019-20, and $0.9 billion in 2020-21).
- FAO estimates that Ontario will no longer qualify for Equalization payments after 2018-19, where as the 2018 Budget assumes Equalization ends in 2020-21.
- The FAO reduces H1 net income by $0.4 billion in 2018-19 to reflect the recent decision by the OEB to allocate a portion of tax gain to rate payers.

RECOVERY PLAN REVENUE:

- Over the recovery plan, the FAO projects significantly stronger growth (3.6%) in other non-tax revenues, compared to the 2018 Budget (2.0%).

RECOVERY PLAN PROGRAM EXPENSE:

The FAO assumes program expense to grow at 3.5% over the recovery plan (closer to population and inflation), versus the 2018 Budget projection of 2.0%.

INTEREST ON DEBT EXPENSE:

- Despite projecting larger deficits and potentially larger borrowings, the FAO's IOD grows on average by 4.7% over the medium-term, in contrast to 5.1% in the 2018 Budget.

Attached is the FAO Economic and Fiscal Outlook Report that will be delivered to Ministers by noon today.

We'll do a more detailed look at the numbers but it looks like the only significant change relative to the last version we saw was the addition of a new "scenario" over the recovery plan where the FAO shows what would happen if the government restrained spending – and it shows the Province would return to balance. They do talk abit about what that would entail, and do piggy back on historical experience to show that it has been done in the past.

My division will coordinate a rolled up note and speaking notes – we'll need to figure out when and if a briefing would be required.

Subject: The FAO's Spring 2018 Economic and Budget Outlook Report

Good morning

The FAO will be releasing its spring 2018 Economic and Budget Outlook (EBO) report on Wednesday May 2nd at 10:00 am. There will be separate technical briefings for media and MPPs on Wednesday at 9:00 am. The Temporary Financial Accountability Officer, David Wake, and myself will be making a media statement and responding to questions at 10:00 am.

The report along with the attached letters are being delivered to Ministers Sousa and McMahon later this morning – and are attached for your reference.

Please treat this document as embargoed until its release on Wednesday at 10:00 am.

As always, your assistance and support for the work of the FAO are greatly appreciated.

Best regards,
David

FAO's 2018 Spring Economic and Fiscal Outlook

ISSUE

On May 2, 2018 the Financial Accountability Office will release its '2018 Spring Economic and Fiscal Outlook' report. The report adopts the AG's accounting treatment of both the Fair Hydro Plan and Pension Assets and indicates that the government is facing persistent budget deficits over the medium-term that will continue to grow well into the government's deficit recovery phase, unless spending growth slows dramatically beginning in 2021-22. It also suggests that the deficit cannot be eliminated by economic growth alone, but will require fiscal policy changes to raise revenue or reduce spending.

KEY MESSAGES

- I would like to thank the Financial Accountability Officer (FAO) for releasing his spring economic and fiscal outlook for Ontario. We value the FAO's independent assessment of the province's fiscal plan.
- The government is committed to a responsible fiscal plan that provides the conditions for all Ontarians to thrive.
- The FAO's deficit projections include the Auditor General's interpretation of how the government should be accounting for net pension assets and the Fair Hydro Plan. The disagreement in accounting is the main driver of the difference between the FAO's projections and the 2018 Budget.
- It is important to note that with the exception of the two accounting disagreements, the Auditor General has determined that the majority of the province's estimates regarding revenue, program expenses and interest on debt are based on cautious assumptions, as required by the Fiscal Transparency and Accountability Act.
- And while there is uncertainty in any future-oriented forecast, what we do know is that this government has a strong track record of beating its fiscal targets. As outlined in the *2018 Budget*, the government is projecting a surplus of $600 million for 2017–18, beating its fiscal target for the ninth year in a row.
- Ontario's fiscal policy is based on cautious assumptions and recognizes the need for flexibility to respond to changing circumstances. During this period of rapid economic change, the fiscal plan considers the impact of today's choices on different groups within the province and on future generations.
- While Ontario's economy has been growing steadily, the government knows that more must be done to ensure that the benefits of a solid economy are being shared equally by all Ontarians.
- The government believes that the best way to deliver prosperity to more people is by continuing to invest in the economy, and in public services that promote greater fairness and opportunity across the province.

- As a result, the province is projecting modest deficits over the medium term of $6.7 billion in 2018–19, $6.6 billion in 2019–20 and $6.5 billion in 2020–21, or 0.8 per cent of GDP in 2018–19, declining to 0.7 per cent by 2020–21.

BACKGROUND

Economic Outlook

- The FAO forecast for real GDP growth to average 2.0 percent annually between 2018 and 2021 is 0.1 percentage points faster than the *2018 Budget* forecast of 1.9 percent.
- The FAO forecast is consistent with the private sector economists' view that housing and consumer spending will slow over the next four years while exports and business investment will grow at a faster pace.
- The FAO recognizes similar economic risks identified in the *2018 Budget*. The possibility of stronger U.S. growth could boost Ontario's economy. However, protectionist trade policies in the U.S., and associated business uncertainty, could place Ontario at a competitive disadvantage. As well, high levels of household debt have left Ontario households vulnerable to rising interest rates.
- Over the extended period 2021 to 2025, FAO's long-term economic outlook is similar to the unpublished Ontario Ministry of Finance projection. In particular, the FAO projects Ontario nominal GDP growth of 3.9 percent annually, on average, between 2021 and 2025, 0.1 percentage points lower than the *2018 Budget* recovery plan projection of 4.0 percent.

Fiscal Outlook

- The FAO is projecting a deficit of $3.6B in 2017-18, rising to $12.7B by 2020-21. The FAO projects the deficit to further deteriorate over the government's recovery plan period, reaching $16.6B by 2025-26 under a 'status quo' scenario of 3.5 per cent program expense growth. However, the report suggests balanced budget is possible by 2025-26 if the government constrains program spending to 2.1 per cent beginning in 2021-22.
- Unlike its Fall report, the FAO is now only presenting projections that include the impact of the Auditor General's (AG) recommended accounting treatment for both the Fair Hydro Plan and the net pension assets of jointly sponsored pensions plans.
    - Taken together, the adjustment for these two accounting differences add between $4B and $6B to the deficit in each year.

Interim and Medium-Term (2017-18 to 2020-21)

- The FAO is projecting a deficit of $3.6B in 2017-18 and deficits of between $11B and $13B over the medium term.

- The FAO's **revenue forecast** is approximately $1B lower than the government's in each year of the medium-term outlook, mainly due to a lower outlook for personal income tax revenue.
- Similar to past reports, the FAO adopts the *2018 Budget* **program expense outlook** (other than the accounting treatment differences).
- Similar to past reports, the FAO also continues to project **interest on debt expense** that is slightly below the government's projection over the medium-term – by between $0.1B and $0.2B per year.

Overall, the difference between the FAO's and government's medium-term fiscal outlook is largely driven by the impact of the AG's recommended accounting treatment for both the Fair Hydro Plan and the net pension assets of jointly sponsored pensions plans .

Differences Between the FAO's Fiscal Outlook and the *2018 Budget* ($ Billions)	2017-18	2018-19	2019-20	2020-21
2018 Budget Projected Deficits (Excl Reserve)	0.6	(6.0)	(5.9)	(5.8)
FAO Projected Deficits (Excl Reserve)	(3.6)	(11.8)	(12.4)	(12.7)
Difference between FAO and 2018 Budget	*(4.2)*	*(5.8)*	*(6.5)*	*(6.9)*
Difference Due to Accounting	*(4.2)*	*(5.0)*	*(5.6)*	*(6.0)*
Difference Due to Other (Lower revenue offset by lower IOD)	-	*(0.8)*	*(0.9)*	*(0.8)*

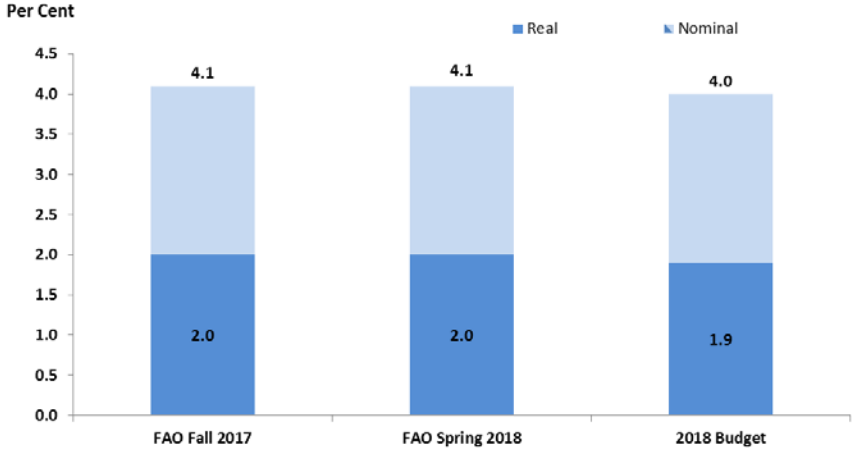
- In addition to its assessment of the government's current fiscal plan, the FAO developed a "baseline" budget projection that excludes the new revenue and spending measures announced in the 2018 Budget. This baseline scenario projects budget deficits of $8.1B in 2018-19, $7.2B in 2019-20, and $6.1B in 2021-21.

Recovery Plan (2021-22 to 2025-26)

- The 2018 Budget projects a return to balance by 2024-25 and a small surplus in 2025-26. This is premised on:
  - Projected average annual growth in revenue of 3.3% over the recovery plan period and managing program expense to an average annual growth rate of 2%.
- In contrast, the FAO's "status quo" projection assumes program spending will grow by about 3.5 percent per year from 2020-21 to 2025-26 resulting in deficits that reach $16.6 billion by 2025-26. Compared with the 2018 Budget projections:
  - The revenue outlook is higher due to a higher outlook for taxes and other revenue.
  - Given an aging and growing population and price inflation, the FAO projects program spending would need to grow at the rate of these core cost drivers, 3.5%

annually over the outlook, so that "the quality of public services would be maintained".

- The IOD outlook grows faster due to the FAO's forecast of higher projected net debt leading to larger debt interest payments.
- The FAO is also projecting that net debt-to-GDP ratio will continue to increase over the medium-term and beyond 2020-21 reaching 44.4 per cent by 2023-24. The 2018 Budget projects that the net debt-to-GDP ratio to peak in 2021-22 before beginning a downward trend.



Commented [CZ1]: Suggest rewording to "…FAO's forecast of higher projected deficits leading to a larger borrowing program and larger debt interest payments."

Commented [JP2]: The 2018 Budget actually depicts the net debt to GDP ratio peaking in 2014-15 and resuming a downward trend in 2022-23.

The FAO also included a "spending restraint" scenario that holds program expense growth to 2.1 per cent beyond 2021-22, consistent with the 2018 Budget projection. Using this method the FAO projects Ontario's budget deficit would improve rapidly, reaching a small surplus by 2025-26, however they caution that this projection relies on a dramatic slow-down in spending growth and implies that the government would have to find $15 billion in permanent savings by 2025-26.

MEDIUM-TERM REVENUE:

- The FAO projects Personal Income Tax to be significantly lower than the 2018 Budget projections ($0.4 billion in 2018-19, $0.7 billion in 2019-20, and $0.9 billion in 2020-21).
- FAO estimates that Ontario will no longer qualify for Equalization payments after 2018-19, where as the 2018 Budget assumes Equalization ends in 2020-21.
- The FAO reduces H1 net income by $0.4 billion in 2018-19 to reflect the recent decision by the OEB to allocate a portion of tax gain to rate payers.

RECOVERY PLAN REVENUE:

- Over the recovery plan, the FAO projects significantly stronger growth (3.6%) in other non-tax revenues, compared to the 2018 Budget (2.0%).

RECOVERY PLAN PROGRAM EXPENSE:

The FAO assumes program expense to grow at 3.5% over the recovery plan (closer to population and inflation), versus the 2018 Budget projection of 2.0%.

INTEREST ON DEBT EXPENSE:

- Despite projecting larger deficits and potentially larger borrowings, the FAO's IOD grows on average by 4.7% over the medium-term, in contrast to 5.1% in the 2018 Budget.

$322.9-billion

Ontario net direct and indirect debt

Ontario holds a rather dubious distinction when it comes to outstanding debt: It has more of it than any sub-national government outside the U.S., Moody's Investors Service says.

Of the 250 non-U.S. regional and local governments it rates, Ontario tops that list, at a projected $322.9-billion in net direct and indirect debt as of March 31.

Ontario would likely still come out on top even if the U.S. were included, Moody's says.

That $322.9-billion, or about 240 per cent of revenue, has ballooned from $150.5-billion, or 137.9 per cent of revenue, in 2008. The province has the highest debt in terms of total amount, rather than as a percentage of revenue.

Ontario "has more outstanding debt than any Moody's-rated sub-sovereign, reflecting a succession of significant debt-funded deficits since 2008," Moody's said in a report this week, adding it expects that level to swell further still, given spending plans for its hefty 10-year infrastructure program.

If that seems Greece-like, Moody's said the province's rising debts should be manageable in this era of low interest rates and an improving fiscal position.

"The current low-interest-rate environment has been beneficial to Ontario," Moody's senior analyst Michael Yake said in an accompanying statement.

"Despite the material increase in debt, Ontario's interest expense has remained relatively stable and is forecast to continue to remain so."

He cited the fact that interest payments now are 8.9 per cent of revenue, not far off from the 8.8 per cent of eight years ago.

The province's budget plan calls for balanced books by 2017-18

"Ontario's low financing costs also reflect the province's conservative debt management," Moody's said.

"The province typically pre-borrows some of the funds that will be required the following fiscal year," it added.

"Given the current expectation that interest rates will rise, this allows it to lock in lower rates."

Ontario, which is rated Aa2, stable, by Moody's, ran up its debt in the wake of the financial crisis and along with infrastructure spending.

"Higher debt levels created downward credit pressure for Ontario," Moody's said.

"Nonetheless, the policy decision to borrow for infrastructure spending at a time of historically low interest rates, combined with the prudent debt management practices outline above, has helped to support the province's Aa2 rating."

As The Globe and Mail's Adrian Morrow reports, the governing Liberals are in a tiff with Auditor-General Bonnie Lysyk over a $10.7-billion discrepancy in the net-debt category,

which relates to the fact that Ontario is counting that amount, in two pension plans, as an asset.

The AG says that should stop because the province can't touch that money.

Put that aside, though, because there's some encouraging information in the unaudited provincial statements that were released this week, said Warren Lovely, National Bank's head of public sector research and strategy.

Those statements reveal a $5-billion deficit for the past fiscal year, which Mr. Lovely described as a "noteworthy" improvement of $3.5-billion from the budget forecast.

"The deficit would have been even narrower, down to just $3.5-billion, or less than half that originally planned, were it not for a disagreement with the AG over pension accounting," he said, noting the complex nature of what's going on because the the province has temporarily adopted Ms. Lysyk's recommendation.

And there's good news on the revenue front.

"A stronger prior-year revenue hand-off, and an upbeat economy, bolster the province's 2016-17 fiscal outlook and give the government confidence that its key commitment of erasing the deficit by 2017-18 remains within reach," Mr. Lovely said.

"The fiscal commitment should remain front and centre as we go through a fall update and ultimately digest a 2017 provincial budget."

Stocks mixed, Twitter in spotlight

Global markets are mixed as investors await Friday's key U.S. jobs report.

Investors, of course, will be watching for what that report could tell them about the timing of the Federal Reserve's next interest rate hike.

"Despite an incredible start to the week, we are seeing hesitancy creep in ahead of the week's main event, with the chances of a December hike likely to be dictated by forthcoming data," said IG market analyst Joshua Mahony.

Tokyo's Nikkei gained 05 per cent, and the Hong Kong Hang Seng 0.7 per cent, while European stocks are largely down at this point.

London's FTSE 100 little changed by about 7:40 a.m. ET, while Germany's DAX and the Paris CAC 40 were down 0.1 per cent.

New York futures were also down.

Keep an eye on shares of Twitter Inc., which are down sharply, by almost 18 per cent, in premarket action.

"Shares of Twitter are likely to see a difficult start after dropping in after-hours trading on reports neither Google nor Disney are interested in acquiring the social media firm," said CMC Markets analyst Jasper Lawler.

"Microsoft has its LinkedIn purchase to deal with and Apple is an unlikely suitor," he added.

"That just leaves Salesforce with a possible interest in Twitter. With all the bidders taking flight, it's beginning to look like corporate buyers think Twitter is as much of a difficult buy as investors have over the past three years."

How markets ended Wednesday

I think we'll need to update our CIN given this headline and the lead to the story. Given that MO and PO are always after me to say that we don't have the highest sub-national debt, I think that we may also need to rephrase the question at the top of the CIN, or at least in the opening somewhere, or maybe it's a Q&A, or maybe I should just talk to Saad (please tell me the best route).

Thanks,
Gadi

Good point Alex, the response is of course because the primary reason for the Q3 deficit declining was the removal of the pension adjustment, a non cash item with no impact on borrowing or IOD.

Thanks

Ken k

Hello Ken;

While it is certainly correct to point out that IOD remains unchanged from FES, it also raises the issue of why IOD did not decline with the deficit.

Hence, Ricky, would you please prepare a corresponding Q&A in case you have not done so already?

Thank you

Alex

The change in nomenclature for the FES is fine by me, we would prefer to have the version I sent you instead of a Q&A, I will request Gadi to let the DM know and circle back to Tim.

Thanks

Ken K
